Whatever may be said of the management of the international yacht races, the victories in all cases have been so unquestionably on the side of the American yacht that Americans can fairly claim the championship of the seas. Those who would dispute this claim must come here, it is mere idle talk to demand that the champion should set out in search of new battles.

It is most unfortunate that the recognized emblem of the ehampionship, the America's Cup, has been withdrawn from the field of fair and open competition, but the challenge of the seventy-footers is in itself an attempt to repair this wrong, and to offer to foreign challengers the rights donied them by the New York Y. C. That this has not been recognized and properly acknowledged, is little to the credit of the British yachting journals.

As matters stood last fail, American wachismen did not feel that it was languaged to the credit of the British yachting journals.

As matters stood last fail, American graft, and at the same time British yachtsmen were unwilling to continue the battle for the credi

THE CLARISSA.—This 20-rater cutter, building in Ireland at Messrs. Rogers & Co.'s yard, Garrickfergus, Belfast Lough, for the owner and designer, Mr. H. M. McGildowny, completes the list of no less than six vessels which have been constructed during the winter for the 20-rating class. The Clarissa will carry a sail area of about 2,000sq, tt., and will measure 46ft, on the l.w.l., which, compared to the two twenties. Siola and Chiquita, building at Southampton, appears as if Mr. McGildowny has hit off a happy medium in this important dimension, as the two abovementioned boats are 46ft. Sin. and 45ft, Sin. respectfully. The Irish design may be described as a large and powerful boat, and of great strength in construction, with a view of being converted into a cruiser should she not be successful as a racer. But calling to mind the performances of a previous design of Mr. McGildowny's, the McBiss, there is little doubt that the new ship will be able to hold her own against her rivals. Like the new Scotch twenty, the Clarissa will make the passage around the Lizard, and take part in the south coast regattas.—Field.

MASSACHUSETTS Y. C.—The new club house on Rowe's

MASSACHUSETTS Y. C.—The new club house on Rowe's Wharf, Boston, will soon be completed, and will prove a great convenience to the members. The five-story brick building has been fitted up in hard wood, with an office, locker room and bath of the word of the reception rooms, one for ladies, on the second floor; a billiard room and pantry on the third floor; above which is a hall for dancing or dining, with a kitchen in the upper story. The rooms are handsomely furnished, and the entire building is fitted with electric lights.

NOT IN THE PROCESSION.—Designer McVey, of the Boston Herald, has made a little list of forties that are "not in it" with Minerva this year as follows: Nymph, Chiquita, Verana, Helon, Awa, Maraquita, Gorilla, Chispa, Tomahawk, Choctaw, Louded, ana, Xara, Pappoose, Baboon, and others. Liris is not included, but he says "Liris is fast, she has shown it; and it is remarkable to see her stand up and carry her immense sail spread. A good showing is also prophesied for the Adams Gossoon,"

NEW BRITISH YACHTS.

NEW BRITISH YACHTS.

ONE result of the general change of rule that has been going on in most yacht clubs for the past ten years is that American and British models have approached much more closely than ever before, and the contests between the two nations are apt to be carried out in the future on much more even terms than were possible between the old sloops and narrow cutters. As some of the new British craft will be seen this year in American waters, and also as the course of design abroad is specially important just now in its bearings on the classification by corrected length, the finterest of the mean particular than the state of the particular than the state of the particular than the properties of the particular than the properties of the particular than the properties of the particular than the particular than the particular than the particular than the number of new craft, a conclusive proof that the new rule has not stopped building abroad, as its opponents claimed that it would do here if adopted. The list of new craft is a long one, and includes a large fleet of racers. Another point is that the building of very large racing yachts has practically ceased abroad, only two over 70ft. Thiste and the new Iverna, having been built in five years. At the same time the smaller classes are filling up rapidly with the best efforts of the leading designers, with plenty of sport in the way of match salling. In the 20, 10, 5 and 2½-rating classes good fleets of modern craft, similar to our forties and thirties, are found; with the closest competition in each class. In nearly all cases the yachts are built to the full limit of the class, and thus no time allowance is given or asked, adding much to the interest in the racing. As yet the dimensions of the new boats are not fully known, but we have heard of no very narrow craft, and the proportions are practically the same as last year, from 4 to 4½ beams. The yachts which will be seen in America are, besides Vreda, built in 1888, the new Uvira and Jessica, both 2

cannot be contrived which shall have qualities in the highest degree for performing in light winds and strong winds. Green canvassed so far as very light winds are concerned, a class race canvassed at our coust regattas. Mr. Payne has also designed a square-sterned larger for Mr. F. Smith, to compete in the Thames 2Rf. Class of the control of the co

CORINTHIAN NAVY.—A large and attentive audicnce gathered in one of the parlors of the Hotel Marlborough on April 25 to listen to the second lecture delivered before the Corinthians Navy. Mr. J. F. Tams piloted the assembled Corinthians on a preliminary cruise, explaining the compass, charts, etc., and giving agood deal of excellent and practical advice. A movement is on foot to establish a board of examiners within the navy, who shall have power to grant certificates as able Corinthian senmen and as masters to all members who can qualify. A new squadron has been formed on the St. Lawrence River, with headquarters at Clayton, New York. Mr. Frank Taylor has been elected vice-commodore, and Mr. J. Graham Fraser secretary. A port station has been established at A. Bain's boat livery, Clayton, New York. A flag raising will take place on Saturday atternoon next at the port station foot of 152d street and the Hndson River, at 3 P. M. Mr. John Johnson has been appointed a member of the regatta committee. The Staten Island Squadron will hold a regarta at Seawaren, New Jersey, on June 14. The following are proposed for membership: Capt. Thomas I. Miller, Edward Willard Brown, Daniel Manning, T. Hubert Boyd, A. B. Boyd, Jabez Harris, H. G. Q. Dunham, A. L., Clark.

K.NICKERBOCKER, Y. C.—The arrangements for the Knickerbocker Y. C. regatta for May 30 are now complete, and are of a nature to guarantee an event which will surpass any regatta ever given by the club. The entries show six good full classes, and it has been decided to give prizes to the first and second boats in each class. The steamheat Co., will go over the course. The committee baving the regatta in charge for the current year is composed of Oscar H. Chellborg, chairman; C. F. Smith, deorge Gage, James H. Sparkman and Charles M. Connolly, Tickets for the regatta may be obtained from Mr. A. Varian, 22 Broadway, at fifty cents apiece.

HAMILTON Y. C. - Officers, 1859: Com, Mr. Sanford; Vice-Com. S. O. Greening; Capt., Æ. Jarvis; Sec., J. H. Fearnside; Treas., G. F. Birely; Meas., H. Ambrose; Gen. Com., J. F. Monck, Harry Lee and John Stwart; Delegates to L. Y. L. A., Capt., Jarvis, J. F. Monch and Stwart; Delegates to L. Y. L. A., Capt., Jarvis, J. F. Monch and 19th y Lee. Ex-Com. Monck has presented a \$200 cup for the 25 and 30ft. classes.

THE SKIPPER IN THE ARCTIC SEAS.—The author of

Marguerite have presented a \$150 cm for the 25 and 30ft. classes. THE SKIPPER IN THE ARCTIC SEAS.—The author of "Three in Norway," Mr. Walter J. Clintterbuck, has lately published through the press of Longmans, Green & Co. another interesting volume of sport afloat in the story of a five months' cruise on a sealing vessel between Greenland and Spitz Bergen. The story of life aboard ship is varied by trips ashore in search of game, and the book is interesting to both yachtsmen and sportsmen. The illustrations are very good.

ROYAL CANADIAN Y. C.—At the annual meeting on April 26 the following officers were elected: Com., A. R. Boswell; Vice-Com., T. McGaw; Capt., C. A. B. Browo; Hon. Sec'y, S. B. Harman. Committee, L. D. Percival, H. Blake, F. Arnold, G. Boulton, A. M. Cosby, G. E. Evans, J. Mitchison, A. Piddington, J. E. Robertson, R. F. Strupart. The club has a membership of 646 and is In a very satisfactory condition.

SOUTH BOSTON Y. C.—The house committee of the Boston Y. C. has evidently had the ladies in mind in maki the following programme: May 50, hop at the cinb bouse, 8 June 26, ladies' day and review, hop in club house at 8 P. M. (10, hop at club house at 8 P. M.; July 31, moooligbt suit; Arhop at club house at 8 P. M.; Aug. 23, bop at club house at 8

Viator, schr., has been sold by E. A. Weyen to W. G. Brokaw.

A GOOD RUN.—The schooner Helen, Com. Middleton, Quaker
City Y. C., on her return from ber winter cruise ran from Havana
to Charleston, 756 miles, in 117 hours' continuous running. Helen
is a centerboard yacht, 62ft, l.w.l.

LIRIS.—This cutter left Norfolk on April 23 and arrived off Bay
Ridge two days later. She still carries her winter rig, but will
soon refit for racing and bend the new Lapthorne canvas.

Canoeing.

Secretaries of canoe clubs are requested to send to Forest and Stream their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Cancelst and all interested in canoeing are requested to forward to Forest and all interested in canoeing are requested to forward to Forest and Stream their address swith logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

1,500 MILES IN AN ADIRONDACK BOAT.

1,500 MILES IN AN ADIRONDACK BOAT.

PART XVIII.—CONCLUSION.

DELAWARE AND RARITAN CANAL, October 25, Saturday, —With daylight my landlady's coulidence seemed to have been restored, but from her appearance, and the fact that two barns near by had been burned during the night, I judged that hers had not been a specially peaceful slumber. Having breakfasted and written up my log, I started off at 9 with a strong head wind from the west. My hostess did not relinquish her pet idea, that I was a genuino tramp of some kind, following me to the boat as though to make sure that I purloined nothing, but otherwise she was a kind and hospitable soul. The river flows just beyond the canal here, mnot smaller than at New Brunswick, and on its smooth surface several wild ducks were disporting themselves. Instead of appropriating any of the old ladv's effects, I had left accidentally my companionablo Buckeye in her house, but I had not proceeded more than two miles, just getting warmed up to my work, when there came tearing along the road near the canal her young son in a wagon, bolding aloft my helowed lantern which had lighted up my course on so many dark nights, shining oo miles of strange waters, and by which I had whiled antern which had lighted up my course on so many dark nights, shining oo miles of strange waters, and by which I had whiled away many a stormy evening by reading. The boy expressed surprise a finding mes so much advanced in such a short time; not by any means the first who had been struck by the speed of the little Adiron on showing my clearance papers was promptly admitted, and on showing my clearance papers was promptly admitted, and on showing my clearance papers was promptly admitted, and on showing my clearance papers was promptly admitted, and on showing my clearance papers was promptly admitted, and on showing my clearance papers was promptly admitted, and on showing my clearance papers was promptly admitted, and on showing my clearance papers was promptly admitted, and on showing my clearance paper

and either blew against or partly across my course, retarding me a great deal. After reaching the next lock, there came a mile level. This passed, a 14 mile stretch began, which ends at Trenton.

I settled down to hard work, and the miles slipped away rapidly, though falling leaves hindered the hoat not alittle. The surrounding region became very pretty indeed, and more hilly, there being not far off some high ranges with lovely pastoral valleys between. About sunset, while running through a considerable extent of woodland, the cold bracing air had such an effect on my spirits that I relieved them by singing, and I have dim recollections of having acted rather hoisterously, which behavior quite electrified the good people along the banks. Some small villages lined the canal in the afternoon, Rocky Hill and Kingston, near Princeton Junction, where the Pennsylvania R. R. has a branch crossing the canal on a bigh bridge above a gully through which the canal runs.

While rowing through some thick woods, no sound breaking the silence except the dip and splash of my oars, I was suddenly alarmed by hearing immediately behind me a load and deep whistle, and looking around in haste I behild the how of a huge steamer looming up in the darkness. Quickly urrning my boat to the side of the canal, the vessel forged ahead, having slowed up at the sight of my lamp, and I could distinctly bear the bells in her engthe room, "Go ahead;" directly after a gruff role, twenty feet overhead, from the wheel house, shouted out. Why don't you blew your whistle?" When her stem swung by, a passenger leaning over the hurricane deck railing inquired, "How many fish did you catch?" The steamer's cutwater, not more than 40tt. away, was hearing directly down upon me when my attention was first called to it, thus scoring another narrow escape.

In the early afternoon I met some Pennsylvania canalboats, plump, well painted, and comfortanle looking, a remarkable contrast to those heretofore seen up North. Greeting the first one with the early afte

ore netween tremm and me water to be miles. The lamile level is the summit of the canal, the water ling to east and west from it to the Raritan and Delaware ivers respectively. Delaware River, Oct. 26, Sunday.—Lindley was to have met me is, but \$3:03 arrived before him. We drove \$\frac{3}{2}\$ of mile to the ck, and then, loading the boat in, drove one mile to the river. I say that sucual, amidships, the populace looked at us with conderable astonishment. Lindley was perched on the bow while viving, and he encountered on the way many familiar acquainness who took the opportunity of chaffing him to their heart's metnt. In fact it scemed that everybody in town had a word for indley. The latter generally replied with much feeling, "This sat's come all the way from Canady, I'd have you understand." tercepting a milkman, I seized the opportunity to fill my cannec at the Delaware, a crowd of willing hands helped us off with the boat, it soon being launched; and bidding goodhye to a mixed isemblage standing on the stoamboat pier, I pulled the first roke at \$20 and glided out on the leaware River with a swelligheart to think that this was the last stage of my voyage.

side, in Bucks County, and just beyond on the Jersey shore Burlington and Beverly. There were a few wild ducks on the water, and some fiving about, but several boats were continually after the search of the property of the

follows: Leaving Albany on Sept. 6, 52 days have been spent altogether, and about 1,500 miles, allowing for discrepancies, have been made with the boat. The actual time, deducting all stoppages oxcepting those for meals, is 42 days: and dividing the length of the trip by this gives an average of about 35 miles per day. Forty miles would have been accomplished, however, had it not been for the extraordinary opposition experienced from head winds, locks and various obstructions. After passing Buffalo the weather was not settled for three consecutive days at any time. All the fair wind, favorable tides and currents do not by actual calculation counterbalance these odds by 25 per cont. Without the boat, 1 traveled 400 miles in going to Quebec, returning to Montreal, etc.

Philadelphia, Pa.

A WAR CANOE CHALLENGE.

A WAR CANOE CHALLENGE.

Editor Forest and Stream:

We dislike very much to dispute the claim of our up-river brethren, as to the ownership of the first war canoe in this country, but it is too much; we had ours out on April 9. Now, if the aforesaid brethren will carry out their most excellent intention, of bringing their canoe to Philadelphia, next Saturday, we will endeavor to have the first war canoe race in this or any other civilized country.

The Red Dragon is a beauty and in every respect a credit to her builders, too St. Lawrence River Company; in model and finish they have left nothing to be desired. See is 30ft, in length, 53in, beam, and bas accomodations for 18 paddlers. The initiatory cruise of the soason was made in the Dragon on April 27, trom the Public Boat House, Fairmount Park, to the club house at Gooper's Point, Camden, a distance of 18 miles. The start was made at 11:30 o'clock, crew numbering 8, commanded by Vice-Com, Kramer. Stop was made at Red Bank, where a very large and elegant lunch was discussed, and a war jig performed. The paddle was then continued without incident.

They arrived at the club house at 4:55 P.M. The Dragon ship will be at the meet if we can bring a sufficiently large crew to man her.

Many new canoes are now dropping in and we have about as many members as we can conveniently accommodate, having been obliged to turn away several applicants for membership.

There is a rumor of a Delaware River Meet to take place about midsummer.

There is a rumor of a Delaware River Meet to take place about midsummer.

POINTE CLAIRE C. C. FIXTURES.—The Pointe Claire C. C. fleet has had five first-class racing canoes added to it during the winter, and now numbers eight or ten decked and twice as many open canoes. Three of the additions to the fleet are new boats, all of which are being built by the Ontario Canoe Company. One, Mr. McLane's new racer, is from the moulds of the new Hyla, designed by Mr. D. B. Jacques. The other new boats, the Isis and the Izza, are sisters, 16x28, designed by Mr. David A. Poe for himself and Mr. W. S. Kenney; another of the additions is the old Dawn, which as the Una won the Orillia cup last year, Mr. Chas. Archibald having bought her from Mr. Colin Fraser, of Toronto. The other is the Mona, ex-Viee-Com. Richards's canoe which has been out of commission since 1885, but is now the property of Mr. M. L. Williams. A handsome silver cup, to be beld as a trophy, to be raced for annually, has been subscribed for, and the following fixtures for the season of 1890 have been arranged for: May 3i, first trophy race; June 21, second tropby race and club paddling regatar, June 28 to July 1, cruise to Lake of the Two Mountains, camp at site Northern Division A. C. A. meet, scratch races on July 19, fifth trophy race; July 12, fourth trophyrace; July 19, fifth trophy race; July 12, fourth trophyrace; July 19, fifth trophy race; July 12, fourth trophyrace; July 19, fifth trophy race; July 12, fourth trophyrace; July 19, fifth trophy race; July 12, fourth trophyrace; July 19, fifth trophy race; July 12, fourth trophyrace; July 19, fifth trophy race; July 12, fourth trophyrace; July 19, fifth trophy race; July 12, fourth trophyrace; July 19, fifth trophy race; July 12, fourth trophyrace; July 19, fifth trophy race; July 12, fourth trophyrace; July 19, fifth trophy race; July 26 and Aug. 9, Northern Division A. C. A. meet, camp there.

REEFING A LEG-O'-MUTTON SAIL — Editor Forest and Stream: If the preference expressed by Mr. Stevens for leg

nut handler.—MRRAMCHL. [Tbis method of reefing has been used to a limited extent in canoes.]

A NEW RACER.—Mr. W. G. Mackeudrick received his new racing canoe from Peterborough yesterday. She is a decked eraft, lift, long, with 30th, beam and 10½ in, deep amidships. Her floor shows considerable rise, with an easy turn to the bilge and sligbtly rockered at the stern. The fore and aft lines are very easy, and she should keep up the reputation that previous Macs have won. The deck, of prettily grained curly butternut, is a handsome bit of canoe builder's art and reflects considerable credit on her builder, Mr. Wm. English, of Peterborough. Mr. Mackendrick intends taking her to the Montreal and New York canoe meets during the season. She will fly the colors of the Royal Canadian Y. C.—Toronto Empire.

GALT C. C.—A meeting of the Galt C. C. was held on April 21, when the following officers were elected for the ensuing year: Com. W. J. Millican; Rear-Com., J. H. MacGregor; Sec'y, H. F. MacKendrick; Treas., Geo. M. Gibbs. Committee, Chas, Turnbull, C. H. R. Warnock, J. N. MacKendrick. The club has now about 50 members on the roll and about 30 canoe owners. The club house is being made double the former size, and the prospects for the coming soason are very encouraging. Several new canoes have heen ordered, and a grand regatta open to all amateurs is to the held on June 12 in connection with the summer curvival and band tournament, at which gold and silver medals will be offered as prizes.

IANTHE C. C.—The following officers for 1830 have been elected. Cont. W. J. Stowent New T. Propriet and the properties of the condition of the content of the condition of the condit

IANTHE C. C.—The following officers for 1890 have been elected: Capt., W. J. Stewart; Mate, B. Fredricks; Purser, R. Hobart; Meas., Joseph Stewart. Executive Committee, officers ex-office, J. McFarlane, W. F. Marvine, Regatta Committee, L. B. Palmer, chairman; R. Hobart, W. J. Stewart. House Committee, w. P. Dodge, chairman; R. H. S. Farmer, J. Duguid. HOLLOW SPARS FOR CANOES.—Mr. J. W. Mansfield, maker of the paper wrapped spars, has lately reduced the price on the size used by canoeists, as advertised elsewhere.

A. C. A. MEMBERSHIP.—Northern Division: G. A. Duggan, Lachine; A. G. Kohl, D. Robertson, Montreal.

ANSWERS TO CORRESPONDENTS.

T gives us much pleasure to print from advance sheets an important report which Hon. W. W. Thomas, Jr., our Minister to Sweden, has sent to the State Department, respecting the adaptability of the capercailzie and black game for introduction into this country. Minister Thomas is a devoted sportsman and angler, and having enjoyed the pursuit of these grand species of game in Sweden, has with true patriotic feeling been prompted to add the birds to the game supply of his own land. There are indeed few things our foreign representatives can do more useful to their country than to add to its fauna a valuable animal or fish. In suggesting the enterprise so well represented in his report, and in urging it upon his home government, Minister Thomas is performing a distinctively public service.

His report is very full. He gives the history of both birds, their habitat, food, haunts, habits, results of shipping and acclimatizing them in other lands, with the mode and cost, and points out the sections of our country fitted for them.

The birds would certainly be a most desirable acquisi-The habits of the capercailzie are much like those of the ruffed grouse; and the foreign bird is about ten times as large. Old cocks weigh from 10 to 12 pounds, and sometimes exceed the latter figure. They lie fairly well to the dog early in the season, about the same as the ruffed grouse. The flesh is like that of our prairie chicken. There is no gamier bird than the black cock; its weight is 3 pounds, and it lies like a stone to the dog. Its flesh is much the same as that of the capercailzie.

Minister Thomas has occupied much of his leisure

time, during several years of residence abroad, in studying the fitness of these birds for America and the practicability of their introduction here. He may be considered then as a safe guide, and his favorable opinion of the feasibility of the undertaking should be accepted as conclusive. He reports that after this thorough investigation of the subject he is convinced that the birds will stand the voyage and thrive in all our Northern forests from Maine to Oregon; down the wooded slopes of the Rockies and Pacific Coast ranges to the southern border; and down the Alleghanies, Cumberland Mountains and Blue Ridge, through Virginia, Kentucky, Tennessee and

His suggestion that the Government might legitimately undertake the importation of these species, putting the birds out in the National Park, commends itself. If within the province of the Government-as it most assuredly is-to protect and conserve the native varieties of game, it is no less a proper field of enterprise for it to add to the indigenous stock in the way here recommended.

The transplanting of the capercailzie and the black game is not experimental. It has been done with success in other lands; no reason presents itself for the presumption that it cannot be accomplished with similar good results here. It is worthy of trial. Congress should be induced to act in the matter. The commendable enterprise of Minister Thomas in laying before the State Department this project for increasing the game food supply of his native land should receive indorsement and practical adoption.

MR. SAMUELS'S WORK ON ANGLING.

DURING the present month, the Forest and Stream Publishing Company will issue a new work on angling under the title, "With Fly-Rod and Camera." Its author, Mr. E. A. Samuels, President of the Massa chusetts Fish and Game Protective Association, is one of the most devoted and expert salmon fishermen of America. For more than a quarter of a century he has made annual excursions to the salmon rivers of Canada and the trout lakes of New England. He is a polished writer of long experience, and besides this possesses exceptional skill as an amateur photographer. to the woods and streams, his camera has been as much a part of his outfit as his rod or his note book.

The results of his long experience are given in the present stately volume, and while its reading matter is full of interest, it is really as an art volume that the book merits special distinction. The illustrations comprise 150 full-page plates, which are direct reproductions by a halftone process from Mr. Samuels's photographs. In the number and quality of its illustrations, "With Fly-Rod and Camera" is the most elaborate book on angling ever issued from the American press. The subjects include views of the picturesque scenery of Canada, the famous salmon rivers and pools, incidents of travel and camp life, and numerous instantaneous pictures of actual

If this book is remarkable as an example of the photographer's art, it is not less interesting to him who is seeking for information on the art of taking trout and salmon with the fly. The text, with not less graphic effect than the illustrations, pictures everyday experience in what is beyond question the grandest angling in the world; it fairly bristles, too, with hints and instruction, interspersed with incident and anecdote. While not professing to prepare a manual of angling, the author of "With Fly-Rod and Camera" has given us a work so full of interest and of practical guidance that no salmon or trout fisherman, angler or novice, can afford to leave it unread.

The work, which is a super-royal octavo, page $7 \times 9\frac{1}{2}$ in., will contain 480 pages, 150-full page illustrations, and will be ready for delivery May 27.

THE DEATH OF "NESSMUK."

THE sad intelligence, which came to us last Saturday, announcing the death of "Nessmuk," was not altogether unexpected. For several months past it had been known to his friends that Mr. Sears was in a very feeble condition, and his death was regarded as a contingency by no means remote. Last summer, too weak to make a camping excursion to the woods, yet powerless to withstand the longing for a taste of the old life, he pitched his tent beneath the hemlocks of his home yard, and there with his grandson "played," at an outing. After the long and weary confinement of the winter just past, he craved outdoor life; and on the last day of April, supported by loving arms, he went out for a little while under the same trees. The next morning at 2 o'clock, May 1, he passed away. Last Saturday, in the spot he had selected beneath those same hemlocks, they laid him His age was sixty-nine years.

His death brought to its close a life which was in many respects singular and worthy of note. George W. Sears, in the character of "Nessmuk," by which he was known to readers of this journal, was the product of peculiar circumstances

His was a woods life. In fact, as he once humorously

put it, "he took to the woods for very life." When at an early age, being of consumptive tendencies, he was told by his physicians that but a year or two of life lay before him, with pluck and resolution undaunted, he sought healing and strength from the forests and the moun-From that day he was for much of the time annually a woods dweller, sleeping under canvas, in "brush camp" or beneath the rough bark lean-to; following the deer and the bear, studying the secrets of the wilder-ness; and all the while proving the blessed influences of the simple outdoor existence to build up a fragile constitution and restore to health. But while dwelling thus apart from society, there was nothing of the spirit of the recluse in him; he was in touch with his fellow men, alive to the questions of the day, concerned with the problems of society, a student of human nature. He was gifted with a superior intellect, and it did not stagnate in the woods. Uneducated in the schools, he was yet selftaught, and well taught. He knew the best authors. That was no idle boast of his, on being asked what books he took into the woods, that he found it necessary to take none, seeing that he carried Shakespeare and other poets under his hat. He possessed a rich store of mother wit, a vast fund of practical common sense, a philosophy of his own. He commanded the respect of intellectual men with whom he came in contact. A distinguished clergyman once wrote us after spending a fortnight in camp with "Nessmuk," "Of all the men I have ever met, Sears is the best worth knowing."

It was some ten years ago that our correspondent "Awahsoose," R. E. Robinson, the author of the "Uncle Lisha's Shop" series, wrote to the Forest and Stream asking what had become of that one of the old Spirit of the Times contributors who over the signature of "Ne muk" had charmed the readers of that journal with his descriptions of wild woods life. This published inquiry brought out a response from "Nessmuk" himself—George W. Sears—and shortly thereafter he wrote for these columns a series of "Rough Notes from the Woods." The papers attracted immediate attention, and by them the name of "Nessmuk" was made as familiar to the sportsman of the present as it had been to those of *Porter's Spirit* days. Mr. Sears speedily took his rightful place among the most popular of the FOREST AND STREAM'S many contributors, and held it so long as he continued to write. His abundant experience, his rich store of information in all branches of woodcraft, his familiarity with the ways of wild creatures and sympathy with the wood-folk, a never-failing fund of anecdote, shrewd insight into human nature, the terseness and compactness of his quaint style, his command of English and sturdy assertiveness—all these combined to win for him an interested and devoted following. Whether he wrote of the hack-neyed, fashion-plagued Adirondacks, the remote wilds of the Northern Michigan Peninsula, the dense forests of Pennsylvania, or the swamps and hamaks of Florida, it was all one; each locality was invested with a new interest when seen through his eyes, and made fascinating by the charm wrought of his personality.

Perhaps the best specimen of "Nessmuk's" prose is the little manual of "Woodcraft," published in 1884, containing the "boiled down" information and lore he had spent flows from the press a never ceasing flood of empty books manufactured by literary charlatans, to read the terse, suggestive chapters of "Woodcraft" is as refreshing as to inhale the perfumed air of the old woods lot after a June shower.

It is by the volume of poems, "Forest Runes," that the name of Mr. Sears is destined to be longest remembered. He was a genuine poet; his was the verse that comes to the brain and presses for utterance. In his poems he speaks to many a responsive soul. There are touches deep and pathetic, and others in lighter mood. The "Runes" came from the pen of one who was used to call himself only a "ragged woodsman," but in truth they had their origin in the heart of one who knew human life in all its phases of joy and love and toil and bereavement; and who had a deep sympathy with humanity in its every condition, but more than all in its humbler aspects. This is one of the noteworthy points of his career, that "Nessmuk" the woods-dweller, the haunter of forest fastnesses, was yet a poet of the people. Nor is there in this any occasion to wonder, for it in his solitude amid the pines and the hemlocks that he found time to ponder and study the great questions

of human life; and yet did not, as others have done, lose sympathy with those who in the heat and dust and per-plexity of the day were cheered and encouraged by the

words he wrote and sent forth from his woodland camps.

The salient points of "Nessmuk's" life are best told in these modest notes which he himself prepared as a preface to the "Runes," published in 1887:

these modest notes which he himself prepared as a preface to the "Runes," published in 1837:

It is a sad necessity that compels a man to speak often or much of himself. Most writers come to loathe the first person singular, and to look upon the capital I as a pronominal calamity. And yet, how can a man tell aught of himself without the "termal ego?"

I am led to these remarks by a request of my publishers that I furnish some account of myself in issuing this little volume of verse. Readers who take an interest in the book will, as a rule, wish to know something of the author's antecedents, they think. It might also be thought that the man who has spent a large share of the summer and autumn months in the deep forests, and mostly alone, for fifty years, ought to have a large stock of aneodote and adventure to draw on.

It is not so certain, this view of it. The average person is slow to understand how utterly monotonous and lonely is a life in the depth of a primal forest, even to the most incorrigible hunter. Few city sportsmen will believe, without practical observation, that a man may hunt faithfully in an unbroken forest for an entire week without getting a single shot, and one wet week, especially if it be cold and stormy, is usually enough to disgust him who has traveled hundreds of miles for an outing at much outlay of time and money.

And yet this is a common experience of the most redent still-hunter.

In the gloomy depths of an unbroken forest there is seldom a song bird to be heard. The absence of small game is remarkable; and the larger animals, deer, bears and panthers, are scarce and shy. In such a forest I have myself hunted faithfully from Monday morning till Saturday night, from daylight till dark each day, and at the end of the first day brought the old double-barreled muzzleloader into camp with the same bullets in the gun that I drove home on the first morning. For I knew that, sooner or later, the supreme moment would come, when the black, satiny coat of a back round, for an instant, offer

meeting all the wild animals in New York and Pennsylvania.

These facts will explain why I have so little to relate in the way of adventure, though my aggregate of camp life, most of it alone, will foot up at least twelve years. I can scarcely recall a dozen adventures in as many years' outings, culled from the cream of fifty seasons. Incidents of woods life, and interesting ones, are of almost daily occurrence; and these, to the ardent lover of nature, form the attraction of forest life in a far greater degree than does the brutal love of slaughter for the mere pleasure of killing something just because it is alive.

the mere pleasure of killing something just because it is alive.

Just here my literary Mentor and Stentor, who has been coolly going through my MSS., remarks sententiously, "Better throw this stuff into the stove and start off with your biography. That is what the editor wants." I answer vaguely, "Story? Lord bless you; I have none to tell, sir. Alas! there is so little in an ordinary humdrum life that is worth the telling. And there is such a wilderness of biographies that no one cares to read."

"Well, you've agreed to do it, you know, and no one is obliged to read it. It will make "filling" anyhow; and probably that's all the Editor wants." Which is complimentary and encouraging.

"Well, you've agreed to do h, you know, and no one is obliged to read it. It will make 'filling' anyhow; and probably that's all the Editor wants." Which is complimentary and encouraging.

"I must say it's the toughest job of penwork I ever tackled; I don't know where to begin."

"Pooh! Begin in the usual way. Say you were born in the town of ——"

"There's where you're out. I wasn't born in any town whatever, but in what New Englanders call a 'gore'—a triangular strip of land that gets left out somehow when the towns are surveyed. They reckon it in, however, when it comes to taxes; but it rather gets left on schools."

"Ah, I can believe it. Well, fix it up to suit yourself. I suppose the editor keeps a 'balaam box'."

Taking this leave and a handful of my Lone-Jack, C. saunters off to the village, and I am left to myself. Perhaps his advice is good. Let's see how it will work on a send-off. For instance, I was born in a sterile part of sterile Massachusetts, on the border of Douglas Woods, within half a mile of Nepmug Pond, and within three miles of Junkamaug Lake. This startling event happened in the "South Gore" about sixty-four years ago. I did not have a fair average start in life at first. A snuffy old nurse who was present at my birth was fond of telling me in after years a legend like this: "Ga-a-rge, you on'y weighed fo' pounds when you wuz born'in' we put ye inter a quart mug'n' turned a sasser over ye."

I could have killed her, but I didn't. Though I was glad when she died, and assisted at her funeral with immense satisfaction.

Junkamaug Lake is six miles long, with many bays, points and islands, with dense thickets along its shores at the time of which I speak, and a plentiful stock of pick-

erel, perch and other fish. It was just the sort of country to delight the Indian mind; and here it was that a remnant of the Nepmug Indians had a reservation, while they also had a camp on the shores of Nepmug Pond, where they spent much time, loafing, fishing, making baskets, and setting snares for rabbits and grouse. They were a disreputable gang of dirty, copper-colored vagabonds, with little notion of responsibility or decency, and too lazy even to hunt.

There were a few exceptions, however. Old Ja-ha was past ninety, and the head man of the gang. He really had a deal of the oldtime Indian dignity; but it was all thrown away on that band of shiftless reprobates. There were two or three young squaws, suspiciously light of complexion, but finely formed and of handsome features. "I won't go bail for anything beyond."

The word Nepmuk, or as it is sometimes spelled, Nepmug, means woodduck. This, in the obsolete lingo of the once powerful Narragansetts. The best Indian of the band was "Injun Levi," as the whites called him. He was known among his tribe as "Nessmuk;" and I think he exerted a stronger influence on my future than any other man. As a fine physical specimen of the animal man I have seldom seen his equal. As a woodsman and trusty friend he was good as gold, but he could not change the Indian nature that throbbed in every vein and filled his entire being. Just here I cannot do better than reproduce a sketch of him and his tribe which appeared in the columns of Forest and Stream in December, 1881. I will add that Jumkamaug is only a corruption of the Indian name, and the other names I give as I had them from the Indians themselves:

Nessmuk means in the Narragansett tongue, or did mean, as long as there were any Narragansetts to give tongue, Woodduck, or rather Wooddrake.

rom the Indians themselves:

Nessmuk means in the Narragansett tongue, or did mean, as ong as there were any Narragansetts to give tongue, Woodduck, or rather Wooddrake.

Also, it was the name of the athletic young brave who was wont osteal me away from home before I was five years old, and carry me around Nepmug and Junkannaug lakes, day after day, until I mbibed much of his woodcraft, all his love for forest life, and las, much of his good-natured shiftlessness.

Even now my blood flows faster as I think of the rides I had on its well-formed shoulders, and a death-grip on his strong, black name. Or rode "belly-bumps" on his back across old Junkannaug, lugging him tightly around the neck, like the selfish little Egotist hat I was. He tire? He drown? I wonld as soon have thought o tire a wolf or drown a whale. At first these excursions were not fairly concluded without a final settlement at home—said setlement consisting of a head-raking with a fine-toothed comb, hat left my scalp raw, and a subsequent interview, of a private lature, with "Par" behind the barn, at which a yearling apple ree sprout was always a leading factor. (My blood tingles at hat recoflection too).

Gradually they came to understand that I was incorrigible, or, as a maiden aunt of the old school put it, "given over;" and, so hat I did not run away from school, I was allowed to "run with hem dirty Injuns." as the aunt aforesaid expressed it.

But I did run away from school, and books of the dry sort, to tudy the great book of nature. Did I lose by it? I cannot tell, ven now.

As the world goes, perhaps yes.

But the reat book of nature. Due the study the great book of nature. As the world goes, perhaps yes.

As the world goes, perhaps yes.

No man can transcend his possibilities.

I am no believer in the supernatural; mesmerism, spiritualism and a dozen other isms are, to me, but as fetish. But, I sometimes ask myself, did the strong, healthy, magnetic nature of that Indian pass into my boyish life as I rode on his powerful shoulders or slept in his strong arms beneath the soft whispering pines of Douclas Woods?

Poor Nessmuk! Poor Lo! Fifty years ago the remnant of that tribe numbered thirty-six, housed, fed and clothed by the State. The same number of Dulchmen, under the same conditions, would have overrun the State ere this.

The Indians have passed away forever; and when I tried to find the resting place of my old friend, with the view of putting a plain stone above his grave, no one could point out the spot.

And this is how I happen to write over the name by which he was known among his people, and the reason why a favorite dog or cance is quite likely to be called Nessmuk.

The foregoing will partly explain how it came that,

The foregoing will partly explain how it came that, ignoring the weary, devious roads by which men attain to wealth and position, I became a devotee of nature in her wildest and roughest aspects—a lover of field sports—a hunter, angler, trapper and canoeist—an uneducated man withal, save the education that comes of long and close communion with nature, and a perusal of the best English authors.

English authors.

Endowed by nature with an instinctive love of poetry, I early dropped into the habit of rhyming. Not with any thought or ambition to become a poet; but because at times a train of ideas would keep waltzing through my head in rhyme and rhythm like a musical nightmare, until I got rid of measure and metre by transferring them to paper, or, as more than once happened, to white birch bark, when paper was not to be had.

I never yet sat down with malice prepense to rack and wrench my light mental machinery for the evolution of a poem through a rabid desire for literary laurel. On the contrary, much of the best verse I have ever written has gone to loss through being penciled on damp, whity-brown paper or birch bark, in woodland camps or on canoeing cruises, and then rammed loosely into a wet pocket or knapsack, to turn up illegible or missing when wanted. When

"Hooked in unlikely places

'I looked in unlikely places

wanted. When

"I looked in unlikely places
Where lost things are sure to be found,"
and found them not, I said, all the better for my readers,
if I ever have any. Let them go with the thistle-down,
far a-lee. (The rhymes, not the readers.)
I trust that the sparrow-hawks of criticism, who delight equally in eulogizing laureates and scalping linnets,
will deal gently with an illiterate backwoodsman who
ventures to plant his moccasins in the realms of rhyme.
Maybe they will pass me by altogether, as
"A literary tomtit, the chickadee of song."
There must be a few graybeards left who remember
Nessmuk through the medium of Porter's Spirit of the
Times, in the long ago fifties; and many more who have
come to regard him kindly as a contributor to Forest
AND STREAM. If it happens that a thousand or so of
these have a criosity to see what sort of score an old
woodsman can make as an off-hand, short-range poet, it
will be a complimentary feather in the cap of the author.

The Christian Union is to be congratulated for having added to its corps Mr. William B. Howland as publisher. We know of no one of the religious journals more deserving of the highest talent in its business office, nor of any one more worthy of the place than is Mr. Howland, As the founder of the Outing magazine, and for several years the editor and publisher of the Cambridge, Mass., Tribune, Mr. Howland has given abundant proof of the possession of unusual enterprise and ability, and in the broader field now opened to him these will surely tell to the advantage of the Christian Union and its widening circle of readers.

The Sportsman Tourist.

CAMP LIFE IN COLORADO.

ANY times when on hunting trips and in camp I have thought how fortunate I was in my boyhood in having a kindly old grandfather—a vetern of 1812—His talks around the fireside in the long winter evenings will always be remembered as among the pleasantest experiences of my boyhood life. This was at an age when the deadliest uenon I was allowed to handle was a bow and arrow, and I tell you there was no one who could make an arrow quite fouls to grandfather.

By father was a lumberman, and after a constant of the deadliest of the property of the deadliest of the property of the property of the deadliest of the property of th

way to kill the beaver. Remembering we had a trap in our outfit, I told him that if the boys would consent to stop over a few days I would try my hand at catching them. I told him not to disturb the dam next morning until we could look the ground over. The boys consented to lay over, and the next morning saw us all gathered at the dam, but not a soul in the party had ever trapped a beaver. Remembering the stories of my grandsire, I undertook the leadership. Taking a short axe I went out on the dam and cut a section about a foot square out of the center, letting the water pour through. The ditch at this point was about 9ft. wide and 4ft. deep, then taking a short pole I set the butt end securely into the bank under water, and springing the small end around, I fastened it to the trap, sticking willows through the trap to hold it in position till loosened by the struggles of the beaver when he would be swimming around under water. The trap must always be fixed so as to keep the beaver under water, since if left high and dry he will proceed to gnaw his foot off, which is all you'll get for your pains.

The first one we caught was the largest beaver I ever saw. We carried him to the ranch and made out his weight by the old-fashioned steelyards to be just 40lbs. After that they grew smaller, until we caught the last one, which was about the size of a large muskrat. Poor little fellow, he had tried to do the work left him by his fathers, as a bunch of willows the size of a lead pencil drawn up on the dam attested. The ranchman was profuse in his thanks, and nothing was too good for us. I believe he would have considered a pony apiece small pay for the work done. We had lost nearly a week's time, but the pack mules had rounded out in great shape on the luscious grass in the river bottoms.

We had done a little hunting and fishing, and antelope, grouse and trout had been on the bill of fare almost every day. But all were anxious for a start, so we lost no time in getting ready for the trail again, and it was a jolly cro way to kill the beaver. Remembering we had a trap in our outfit, I told him that if the boys would consent to

A BIT OF ADVICE.

A BIT OF ADVICE.

If you have not laid out your vacation for the season, begin now, and you will enjoy it in anticipation from now until you go. I always get a year's pleasure out of my summer vacation, in anticipation, participation and retrospection. Now a word to those who cannot spare the time for a summer outing. It is a well known and generally accepted fact that the aggregate results of a year's labor will be greater in the case of the man who works ten months and plays two in the year than in the case of the man who works twelve straight months. And from an economical point of view such outings are cheaper than staying at home; also when looked at from a physiological standpoint, see the grand results. The recuperation of vitality and rest for brain and body is worth more than many times the cost of the trip—paid out for medicine and doctors' bills.

I do not mean for you to go to some fashionable summer resort, have your mail come from the city every day, and indulging in dancing, bathing, dinners and all other sorts of social dissipations. This would only be jumping from the frying pan into the fire. What I mean is to go to some quiet farmhouse in the mountains, or with your family or a few jovial friends go and campout in the pine woods, on the banks of a clear pure spring or lake, where you can get good fishing and hunting. Take along your rod and reel, gun and dog, leave behind your mail, except your FOREST AND STREAM, and all business matters. What you want is change—a change from the din, rush and worry of city life, to quiet rest and enjoyment. Try it once, and I know you will not miss taking a regular summer vacation every season if it is possible to do so. FOREST CITY, Iowa.

What you want is change—in change from the din, rush and worry of city life, to quiet rest and enjoyment.

FOREST CITY, Iowa.

Hatunal History.

FOREIGN GAME FOR AMERICA.

FOREIGN GAME FOR AMERICA.

In a report to the Department of State, our valued correspondent, Hon. W. W. Thomas, Jr., Minister to Sweden, recommends the introduction of the capercailzie and black game in America. This interesting report is given in full below:

I have the honor to call your attention to the importance and practicability of introducing the capercailzie and black game of the Old World into the United States. The capercailzie and black game are the two most important wild birds in Sweden and Norway, and make a valuable addition to the food of the Scandinavian people. These birds are excellent upon the table, their flesh resembling that of our prairie chickens.

Throughout the fall and most of the winter you may see the capercailzie and black game hanging up in large bunches or lying heaped up in great piles along the market-places of Stockholm: scattered about as profusely as wild ducks in the markets of Chicago and Minneapolis in the month of October.

THE CAPERCAILZIE.

The capercallzie is the largest and noblest of the grous family—the family to which our pinnated grouse (prairichicken) and ruffed grouse (partridge or pheasant) be

family—the family to which our pinnated grouse (prairie chicken) and ruffed grouse (partridge or pheasant) belong.

The full-grown male capercailzie weighs from 10 to 12lbs., and some specimens considerably exceed this weight. These birds, in fact, approach very nearly the size of the wild turkey of America.

The home of the capercailzie extends over a wide range of latitude and temperature in two continents. From the wooded, mountainous regions of northern Spain and Greece, northward throughout Europe, this bird is found in most of the lofty forest districts suitable for his abode, and where he has not been exterminated by man. This grouse is abundant in the great pine and spruce forests of the Scandinavian peninsula, Finland and Russia, and the vast forest stretches of northern Asia.

The capercalizie is an extremely hardy bird. In Sweden and Norway he is found in large numbers up to and beyond the arctic circle, as far as the seventieth parallel of north latitude. He can endure the severest cold and deepest snows of the longest winters. He often avoids the bitterest cold by burrowing into the snow, thus obtaining warmth and shelter.

This bird subsists on the coarsest and commonest food, He feeds upon the buds and leaves of trees, the needles

or leaves of the pine and spruce, young pine cones, clover and grass, berries of all sorts, seed and grain, and insects of every kind. In the depth of winter a capercailzie has been known to live for more than a week in the same pine tree, subsisting entirely upon pine leaves and young pine cones.

The capercailzie is preëminently a bird of the pine woods, or pine mixed with birch, spruce, maple and other growths.

pine cones.

The capercailzie is preëminently a bird of the pine woods, or pine mixed with birch, spruce, maple and other growths. He loves wooded hillsides better than wooded plains, and he must have fresh water near by—either a brook or pond or a piece of swampy ground.

He is a local, not a migratory bird, though sometimes lack of food or other causes may drive him to extensive wanderings. In his habits he much resembles our American ruffed grouse—though in size he is nearly ten times as large—and, I believe, will thrive anywhere in the United States where our ruffed grouse (called partridge in New England and pheasant in the Middle States) is found.

The black game inhabits nearly the same regions as the capercailzie. He is equally hardy, and can withstand the cold and snows of the most rigorous northern winters. His weight is about 3lbs.—about the same as our prairie chicken. The male bird is a lustrous, metallic black in color; hence the name. He has, however, a white stripe in his wings, and his jet black, outward-curving tail feathers are much prized as a hat ornament in the Tyrol.

white stripe in his wings, and his jet black, outwardcurving tail feathers are much prized as a hat ornament
in the Tyrol.

The black game is also a grouse, and he is often found
in company with the capercailzie, or at least in close
proximity. The black game is also a bird of the woods,
but the birch is preëminently his tree, though he is met
with in mixed growths of almost every variety. He does
not frequent the deep woods so much as the capercailzie;
he loves better the borders of the forest, and woods and
groves with frequent openings. He is also fond of cranberry swamps, and in swampy lands is often found miles
away from any forest.

His food is much the same as the capercailzie, though
not quite so coarse. It consists chiefly of the buds and
leaves of trees, berries and insects. In summer the black
game is very fond of blueberries, raspberries and cranberries; in winter he feeds principally upon the buds of
the birch, hazel, alder, willow and beech, and when
pressed for food will eat the young green cones of the
pine. This bird seems to be equally fond of animal food,
and readily eats snails, worms, the larvee of ants, flies,
beetles, etc.

beetles, etc.

He is a more social bird than the capercailzie, and comes out more into the fields and clearings and nearer the abodes of man.

WILL THEY THRIVE IN THE UNITED STATES?

comes out more into the fields and clearings and nearer the abodes of man.

WILL THEY THRIVE IN THE UNITED STATES?

Hundreds of times when traveling through the forests of Scandinavia I could scarcely resist the conviction that I must be back again in the woods of New England. Here im Sweden are the same hillsides and mountains, the same swift, clear brooks foaming in their rocky beds, and the same forest trees—the pine and spruce, the birch, maple and beech, the oak and ash. Here are the same wild berries, too; and in Sweden you may pick wild strawberries, raspberries, blueberries and blackberries, just a with us in America.

Then take the two grandest and most useful of the wild animals of Scandinavia. The reindeer of the fjelds is almost identical with our own caribou, and the most expert naturalists have been unable to distinguish any substantial difference between the Swedish elk and the moose of America. The fact is that a great portion of the United States—at least one-third, perhaps one-half—is fitted to be the home of the capercailzie and the black game, for there is a suitable climate, a suitable broken country of hill and dale, well watered and covered with a suitable forest growth; and this forest growth, together with its underbrush and bushes, will not only provide shelter for these birds, but will furnish them with all the food they require until they become as plenty as European sparrows now are in our streets and public parks. It is my firm conviction that these valuable birds will thrive throughout all the wooded districts of New England, New York and Pennsylvania, and westward through the greater portion of the States of Michigan, Wisconsin and Minnesota. They will also find a congenial home along the wooded slopes of the Rocky Mountains for their entire length, as well as in the wooded ravines and declivities of the mountain ranges of California, Oregon and Washington. And not only here. The fact that these birds are found among the hills and mountains of Europe as far south as Greece, Italy

THEIR INTRODUCTION INTO THE UNITED STATES.

There in the control of the control of the control of the cases and cheapest way would be by obtaining their eggs, sending them to America and having them hatched out there. I am sorry that I cannot recommend this course. Eggs have repeatedly been sent to Germany and Great Britain, but every such attempt has turned out a complete failure. The only other method is to procure and ship adult birds. This method has also been tried, and the results are such as to give us great encourancement.

cure and smp adult brus. Inis method has also been tried, and the results are such as to give us great encourangement.

The capercailzie was originally found in Scotland. His great size and fine flesh caused him to be keenly hunted and some generations ago he was utterly exterminated. About fifty years since some 150 capercailzie, adult birds, were shipped from Sweden across the North Sea to Scotland. They arrived safely, were liberated in a suitable locality and lived and increased. Their descendants are living and increasing to this day, and the capercailzie is again added to the food birds of Scotland.

I find there have been several shipments of both capercailzie and black game of late years from Sweden to various parts of Germany, Austria and Hungary to localities where these birds have been shot out or where they had never existed. In the instances where proper care has been exercised most of the birds have arrived in good condition, have taken kindly to their new homes and are breeding well there.

Within four years a considerable shipment of black game was made from Sweden to southern Austria, near the Italian boundary, and, notwithstanding the birds were ten days upon the road, and that there were many changes of trains, they all arrived sound and well, not a bird dying on the passage. There are now direct steamers from Gothenburg, Sweden, also from Copenhagen, just across the sound, in Denmark, to New York and Bostom. The passage in the summer time occupies some twelve or thirteen days. Surely the fatigue and hardship of this passage would be less than ten days in freight cars. Neither will the salt air have any bad effect upon the birds. Both love to inhabit the wooded islands along the coast, and fly readily from one to the other across great reaches of water. I think the best time for transportation would be late in August or early in September.

THE COST.

I find the birds recently shipped to Germany have cost \$12 each for capercailzie and \$7 for black game. These prices seem to me high. I found, however, that many of the birds are injured in snaring, and many more die after a few days' confinement. Birds suitable for export, and for which the above prices are asked, are all strong, full-grown birds, without injury or blemish. They are kept for a considerable time in captivity, and are, in fact, nearly half domesticated before they are considered suitable to ship on a long voyage, so that the prices may, perhaps, be only a fair compensation for labor and time and the inevitable large mortality among the birds during the earlier part of their captivity. I believe that at least one hundred birds of each species should be shipped to give the experiment a fair trial. In case we can obtain no reduction in the price this will make—

One hundred capercaizie, at \$12 \$1,200
One hundred black game, at \$7. 700

WHERE SHALL THE EXPERIMENT BE TRIED?

WHERE SHALL THE EXPERIMENT BE TRIED?

It seems to me the National Yellowstone Park is the proper place to first liberate these birds, and to make the first attempt to acclimatize them on American soil. I have never had the pleasure of visiting this grand park, but if the accounts I have read are correct, there are to be found within its borders hillside forests, well watered, which will furnish these birds with all needed shelter and food. In the National Park, also, the birds can be protected by the Government against poachers. The only objection to the park is the long journey by land necessary to reach it; and this, added to the long sea voyage, might be more than the birds could endure. However, upon the arrival of the birds in New York, a proper person could decide whether they were in a fit condition to stand the western trip. If they were not, there are hundreds of places within twenty-four hours of the Atlantic where the birds could be liberated with advantage.

there are hundreds of places within twenty-tour hours of the Atlantic where the birds could be liberated with advantage.

Should our Government be willing to try this experiment with a liberal hand, other shipments could be made, and separate flocks of capercallzie and black game be set free in different sections of the Union. The great forests of northern Maine, the Adirondack region in New York, the Allegheny Mountains, and the woods of eastern Minnesota would be especially adapted for this purpose,

I have made the matter of the introduction of the capercailzie and black game into my native land the study of leisure hours for many years, and have sought information which would throw light upon the undertaking from every available source. And it is only now, when I am convinced that success is reasonably certain, that I venture to recommend the experiment.

It appears to me that if we take into consideration the value of these birds as articles of food, the great size of one of them, the hardy qualities of both species, their power to withstand cold and snow and the utmost rigors of our climate, and their ability to live and thrive upon the coarsest of products of our forests which products now largely go to waste—it appears to me, I say, that all these considerations together are amply sufficient to warrant our giving the acclimatization of the capercailzie and black game in America a fair and thorough trial.

For my own part, it will be a labor of love to assist, in every way in my power, any effort to add these noble birds to the fauna of America.

W. W. THOMAS, JR., Minister. W. United States Legation, Stockholm.

Evening Grosbeak in Pennsylvania.—Montoursville, Pa., May 1.—Editor Forest and Stream: Early in last January a friend described to me a flock of strange birds he had seen the day before. From the imperfect description given I concluded they were snow buntings, and so paid no further attention to the matter. A few weeks later he killed three of them, and then I saw at once they were unlike any bird I had ever seen here. Upon investigation I found them to be evening grosbeaks. They have never before been recorded as appearing east of Ohio, and but seldom east of Lake Superior, but as is well known a number of specimens have been taken in this State and in New York during the past winter. The birds numbering about forty, have kept together in a single flock all through their stay. Their food seems to consist entirely of wild cherry pits. They readily crack the stones with their stout bills, and a flock feeding on these makes a noise resembling a miniature Fourth of July celebration. The male has a loud, clear and beautiful song, while both birds have a peculiar piping whistle, which is apparently used as a call note, and is kept up constantly. Two or three weeks ago the birds became quite uneasy, keeping well to the tops of the trees and ranging for miles up and down the river; but they finally returned to their old haunts, and now seem to have lost in a measure their tribal organization, and to-day, April 30, they are to be found in all parts of the grove, making love to each other in much the same manner as turtle doves, seemingly well contented with what I believe will prove to be their summer home,—F. F. Castlebury.

BIRDS FROM DEEP WATER.

BIRDS FROM DEEP WATER.

WE are indebted to Dr. G. Brown Goode for the following interesting items extracted from a letter recently received by him from a correspondent in Cleveland. Cormorants are said occasionally to take, in deep water, hooks baited with pieces of fish. The letter given below tells of three other species of birds taken at considerable depths:

"Lake Erie was free from ice during the winter, so that the fishermen never lost a day's fishing from this cause. Gill-net fishing is carried on here in the lake through the entire season in waters from two to thirty miles off shore in depths varying from 20 to 60ft. Last spring (March 15) a female red-breasted diver (Colymbus septentrionalis, Linn.) was taken ten miles off shore in 40ft. depth; this season (March 15) another like specimen from about the same locality; both stomachs contained partially digested fish bones. April 20 one of the lake fishermen brought in a full plumaged red-breasted or red-throated diver, which was caught in 45ft. of water ten miles off shore. April 12a fine male long-tailed duck (Anas glacialis, Linn.) was brought me, taken twenty miles off shore in 55ft. depth of water, an unusual depth, it seems to me, for this bird to reach. I have known the loon (C. glacialis, Linn.) to be taken on hooks and gillnets set in 100 to 150 it, of water quite often.

"Some fifteen years ago a mound was excavated at Black River, thirty miles to the west; it was covered with the stumps of our largest forest trees. The usual amount of bones, cinders and stone implements were found, but the most noticeable of all was a very large whelk shell (Fulgur carica, Linn.).

"The fishes taken here are mostly yellow perch, pikeperch, saugers (Stizostedion canadense), herring (Coregonus artedi) and occasionally a whitefish. The fishermen have brought in daily through the winter from eight to twelve tons of fish, caught in this locality. Dr. E. S."

An Ancient Hatchet.—Editor Forest and Stream: I now have in my possession an ancient Indian tomahawk

men have brought in dany through the winter from eight to twelve tons of fish, caught in this locality. Dr. E. S."

An Ancient Hatchet.—Editor Forest and Stream: I now have in my possession an ancient Indian tomahawk or pipe of peace. It is made of blue steel and is inlaid with silver. On one side are the moon and seven stars. On the reverse side is a diamond with the letters I. D. W., both sides having two bands of silver running up from near the edge of blade to the handle. Around the bowl of the pipe is a band of silver, with a silver mouth piece to stem or handle. Where the stem enters the hatchet or pipe it is bound with a band of silver with a silver screw going through the eye and screwing into the handle. The history of this tomahawk as given me by my father is as follows: On my father's place, about fourteen miles from this town, stood the famous Indian gallows, which was about the center of the territory owned and occupied by the Tuscarora tribe of Indians. When they sold out their lands and left here a part of them went to Alabama (near Tuscumbia). In the year 1836 my father visited friends in that section, and while there this tomahawk was found by a farm hand while plowing on the farm of a Mr. Malone, who purchased it of the man and presented it to my father, who had a new stem or handle put in, as of course the old one was decayed. He always kept it in good order, and it is a very pretty relic, the silver parts being as bright to-day as they possibly were two hundred years ago. The handle which was put in by my father is of hickory, and is a beautiful dark color from age. It was supposed to have been the property of the head chief of the Tuscaroras, as it was too costly for a warrior.—Cashie (Windsor, N. C., April 28).

European wideson by Mr. W. D. Carnander in our issue

EUROPEAN WIDGEON.—The note of the capture of a European widgeon, by Mr. W. D. Carpender, in our issue of last week, requires revision. It appears that the bird was not killed on Long Island, as we were informed, but in Maryland. Mr. Carpender writes us as follows: "I killed a very good male specimen of the European widgeon (Anas penelope). on the 25th of last February, at the Carroll's Island Club, Baltimore county, Maryland, of which I am a member. I fired at a flock of about nine widgeons, and dropped three. When the dog brought them ashore I saw that one was different from the others, so took good care of it and have had it mounted. It can be seen at the office of Mr. L. S. Foster, 35 Pine street, in this city." We are informed by Mr. Sam'l W. Fairchild that last November Mr. R. H. Robertson, of this city, at the Narrows Island Club, Currituck county, N. C., shot a handsome specimen of the European widgeon, which he has had mounted.

TEN CENTS WELL INVESTED.—In April, 1889, I happened to be, one morning about 7 o'clock, in a bar-room. A tramp entered with a young robin in his hand and offered it for a drink. I gave him the drink, took the robin home, put the bird in a spare room, fed it with bread and milk, worms, etc., and along in the early part of June, when the bird had gathered good strength, set him adrift to fight his way in the world. This spring he has reappeared (alone as yet) and eats from a cup set in the garden with bread and milk in it, is afraid of no one about the house, comes within 10ft. of whoever chirps to him and makes himself perfectly at home. Although there are three other pairs who frequent our grounds, he is the only one who will eat out of the cup.—A STEADY READER (Buffalo, April 26).

A MAY TRAGEDY.—Standing in the mill door a few minutes ago I was witness to a scene that caused me to feel as if I had seen a murder done. Carelessly glancing out the door I saw a small hawk, with meteor-like swiftness, descend on a pair of mated robins, which were contentedly feeding on the green. Descending two flights of stairs, three or more steps at a time, I was certainly less than a minute in reaching the place, but found to my regret that I was too late. The bird of prey had already done his work and retreated with his captive. The only traces of it that I could see were a few tail and breast feathers of the victim, showing the spot of the fatal encounter.—CHONIATA (Thompsontown, Pa., May 2).

THE President has signed the bill making the appropriation for the National Zoological Park, and the future of that institution is thus assured. All friends of science will rejoice that the Government has at last undertaken this important educational work.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawwee Hero Stories and Folk Tales," givine a table of contents and specimen illustrations from the volume.—Adv,

CHICAGO AND THE WEST.

CHICAGO AND THE WEST.

CHICAGO, III., May 1.—The lagging duck season of this State is now ended legally. It practically ended, at least for all thoughtful shooters, weeks ago, and was even then long enough in all conscience. The winter was mild, and the ducks came up unusually early this season. Some of the best shooting of this year was nad away back in February. The bluewing teal, among the latest of the flight, have been scattered all over this section for a long time, and they and many other ducks are paired and nesting on the larger marshes.

It is prob ble that most of the jacksnipe bave now gone north. We have had no rain of consequence lately, and the ground in many localities formerly good has grown too dry for them, and the grass also is now getting too hligh. The snipe have acted very queerly this spring, and no one has been able to figure very much on them. Some good bags have been made in localities where not much was expected, some of the best localities have yielded poorly, and others have afforded shooting alike tantalizingly good and poor. For instance, Charlie Willard a week or so ago got 127 snipe near Willow Springs, on the Des Plaines River, and many other good bags were made down that way. Yet, at Water Valley on the Kankakee, the birds seem to have been very scarce. I think the Water Valley boys stick too close to the river. There were birds there, but they were five or six miles north, nearer Lowell, and in the edges of the fields on the North Shore.

Messrs. C. D. Gammon and Geo. T. Farmer took 7,000 shells and a wagon down to Cumberland marsh. They figured that they had the best natural snipe marsh on earth, and that the birds were now due to be there. They hunted two days and got seven snipe. The birds were past due, but allowed their paper to go to protest.

A week ago last Wednesday, the snipe were swarming on Mak-saw-ba marsh, as has been duly recorded: yet when the night came, where were they? Three days ago the aforesaid abundance was conspicuous by its absence, or by its local p

latter stream, however, the land rises more quickly, and spreads out into the wide fields of wealthy farmers. On these fields the golden plover are to be found, usually in greater plenty than anywhere else in the State of Illinois. Summit is a favorite resort of the actual or would be plover shooters, and every Sunday that station and Riverside, two miles higher up, are filled with young, old, and uniformly beer-loving shooters, who would be charmed to kill a jacksnipe, delighted to kill a plover, pleased to kill a meadowlark and quite content to kill a robin, a thrush, a bluebird or a sparrow. This rabble does not usually get so far down as Willow Springs, and often there is good shooting at that point. Still further down, on the Chicago & Alton road, there is a place called Romeo, and yet further down is Joliet. I always thought that this place was meant to be called Juliet on account of Romeo, but I am no anciquarian and probably I don't know. At any rate, there is good snipe and plover shooting near either of those towns and also near Lamont, which is a sort of cousin to Romeo—though they say the farms are posted very generally in that section.

Hearing that Italian Joe, the market-hunter who devotes most of his time to plover shooting, was getting a good many birds near Summit, I ran down there the other day, stopped at Jack Wilburn's place on the bank of the malodorous canal, and got directions which enabled me to find Joe and also to find the best of the snipe grounds. Shooting with Joe, we had no trouble in getting some plover, although the birds were not so plentiful as they had been earlier in the week; but when we started out to try for a dozen snipe or so, we discovered that hardly a dozen snipe were left in the conntry. Persistent hunting, or low water, or warm weather, or all of these, had within four days caused these vexatious birds to forsake that locality. Some shooters who came in from the Feeder that evening had three dozen, and said the birds were thick over there. Reports also came up from

from Lamont which said the birds were on hand there in good numbers. We certainly worked a good territory around Summit.

The Des Plaines River all along the points named is lined with low warm covers which in season abound in woodcock. On the "Island," just above the bridge, a number of woodcock are now nesting within eleven miles of the center of Chicago. I regret that I cannot say we find woodcock on the paved streets here, as they do in New York and Brooklyn, but challenge any other city of over one million to show woodcock nests any closer in toward the sound of the church-going bell.

While hunting over the fields about Summit I started a hen prairie chicken out of a fence row. I saw two other single birds flying across the country, and while in the plover blind saw a little flock of seven chickens cross over and light on some spring wheat. The residents told me that the prairie to the south of us was a great "booming ground," and that a good many chickens were there mornings and evenings. We heard them once or twice while we were shooting. It is probable that we will have some chickens again in Illinois this year.

Our shooting on this little trip was done on the great farm of that eccentric genius, "Long John" Wentworth, one of the earliest and wealthiest citizens of Chicago, who died about a year ago. Mr. Wentworth had for a number of years kept a flock of wild turkeys, and there are about 200 to 300 of these great birds left in his woods now. This has been a great flock. As high as 200 birds have "swarmed" and gone off in a season, scattering all over the country, from Wisconsin to Indiana. Many of these have been killed, but of the great majority no accounting has ever been made. Considerable poaching has been done on the home farm, but this is promptly punished if detected, and I understand the flock is to be kept together.

My friend, the daily reporter, comes out this week with a long funny story about a certain respected citizen, who is alleged to have been out recently and to have met an acciden

then, seeing that he was running out or sheuls, went to shooting golden plover, of which he killed 120 during the day. It was on account of this run of birds that word quick.

May 3—In describing the general lay of the region bereaboutis, more especially in reference to the location between the location of the lo

BY MOONLIGHT.

BY MOONLIGHT.

THIS is a case of "meet me by moonlight alone," but has nothing whatever to do with the tender passion nevertheless. The deer creature in this case is deer indeed, and the passion it inspires is that fierce one, instinct in the human breast that leads man to destroy that which they admire. In other words, this is an attempt to portray an evening's delight in a Sierra Nevada foothill alfalfa field, warching for deer.

I never took kindly to the watching of a deer lick, believing that it was taking an unfair advantage of the game. In that case the hunter is up in a tree, far above the ground, where a deer always looks for danger. Again, his elevation prevents the animal from catching the scent, and the advantages are all on the side of the man. In this case also the hunter chooses the most favorable point of outlook, and stations himself at a distance where it is simply murder to shoot at his game. On the other hand, in an open field chances are qualized. The deer has a show for his life, which is what every true sportsman desires. The hunter is on the ground where he can be both seen and smelled; and the deer has the choice of any part of the field to feed in, and is not confined to one particular spot in close proximity to the hunter, where the choice of positions gives the latter the best light. Here, then, matters are evened up, and the deer has even odds with the man, as the Irishman said when he whittled the duck's bill to a point, to "give the crather even odds wid the hins."

At the lick, if a deer conces at all he comes surely to his death unless the watcher is a novice and gets the buck fever; but in the field the bunter may sit all the night and watch one or more deer, as the case may be, daintily feeding on the flowers and tender tops of the alraft, now approaching a little nearce, bringing the watcher's interest to fever point; again going further away, and sending expectations of a shot down to zero or below. This, to my mind, constitutes the charm of this account of the watcher is ac

with the weeds on its sides. On three sides it was surrounded with fine oak and pine timber, with the usual manzanita and chapparal undergrowth; just the place for deer.

Dusk found me safely ensconced in a depression caused by the stream, protected by a warm overcoat and a heavy robe wrapped around my nether limbs; for be it known that any one who wants to sit motionless for hours in comfort must be well wrapped up. The field was a "flatiron" in shape, and from my station could not be nearly all commanded with certainty by the rifle, even in day-light. The field was nearly all under my vision, the moon at my back and the chances for a shot favorable.

The day and its noises departed, and gentle night stepped in, with Cynthia slowly climbing the starry arch. The cicada commenced his shrilling cry, the nighthawk circled noiselessly overhead, and the owl hooted his melanchly serenade to the moon.

By the way, does the western nighthawk ever fall through the air with the booming sound that the eastern does? I have never observed it do so, and would like to know if any one else has ever noted the fact. I mean the specific differences between this and C. popetue are so slight that one would expect their habits to be the same. Certainly their flight and call notes are similar, though the latter are less often uttered. But to resume.

As the last rays of daylight fade away, and this side of our globe is left to the sovereignty of the moon, now rapidly approaching its full, familiar objects become deceitful and weird. That little clump of chapparal on the bank of the arroyo, which was plainly a bush a few moments ago, is now endowed with seeming motion and ever-changing shape, and needs close scrutiny, oft recurring, to keep it from becoming a buck with branching antlers. The shadows of the encircling timber become living creatures, and the straining vision shapes out many a moving form that takes a long hard wink to change back to its original guise. The light daylight green of the alfalfa changes to deep blue, and th

comes! What is it that makes this rhythmical beat like a fever-pulse in ears? Too-o-o-t, and the shrill whistle of a locomotive, mellowed into music by night and distance, explains the mystery, as it winds its way with many a devious twist and turn among the obstructing hills, and pulfs and labors with its load, up a gradient of 116ft, to the mile, on its way to the effete East.

But hush! surely there is a ghostly form standing where nothing stood a moment ago; yes, a deer surely, but only a doe, for there comes stealing out of the shadows after her two smaller copies of herself. Quietly and aintily they step around, nibbling here a mouthful, but surely and gradually coming nearer and nearer. In an instant these are forgotten, for there, broadside on, with his blue coat and branching anters gleaming in the rays of the moon, stands a noble buck. How proudly and slowly he advances, scanning every object with a careful eye, until evidently satisfied that all is well, he too plunges his delicate muzzle into the cool dew-laden clover. Then comes a moment of hope, then despondency, as he advances or recedes in his dainty roppings of the fragrant tips of the herbage. Confound this jade of a doe, she is almost upon me, and will surely get my scent and then the jig is up for this night. But no, after coming so close that I could see the moisture gleaming on her coal black nose, she gradually edges off toward the side of the field and the buck is almost within certain may friend that a band of wild hogs had found a weak spot in his fence and had been visiting his field every night, and here they come—a dozen strong.

Now, give me a wild hog to scent danger before any other living creature that I know anything about! They came rushing into the green feed, and commenced munching and champing their jaws, after the manner of hogs, for a few minutes, seemingly oblivious to everything but gorging themselves. Suddenly one of them stopped munching, threw up his head for an instant in a listening attitude and then in a plain and

Dark night, that from the eye his function takes, The ear more quick of apprehension makes; Wherein it doth impair the seeing sense, It pays the hearing double recompense.

Hints of the coming moon soon made themselves apparent in the eastern horizon, and soon she peered through the pines that crowned the hills in that direction; and field, hill and tree again took shape under her soft rays. The cicada's monotonous shrilling music filled all the sleeping world, and again the wordsof the immortal bard describe the scene:

How sweet the moonlight sleeps upon this bank! Here will we sit and let the sounds of music Creep in our ears.

Here will we sit and let the sounds of music Creep in our ears.

The hares came and played about my feet; a little burrowing owl, Speotyto cunicularia hypogea, alighted on the woodpile, within a foot or two of my head, and crooned out his peculiar harlequin-like utterances. A small black object presently caught my attention, and soon I was in a shiver of fear, as a large Mephitis americana, vulgarly known as a skunk, came galloping down the road, now and then stopping to pick up a cricket. He came close to the bank on which I was sitting, and when opposite stopped and sniffed deliberately at my feet, and then rising up took a smell at the muzzle of my rifle which rested upon them. I could plainly hear the sniffing noise he made as he pursued his investigations, and actually held my breath in apprehension lest he might take umbrage at my presence and dose me with his nauseous scent. After a second or two he dropped down again, and whirling around and elevating his tail to a perpendicular, raised his hind parts as though they were on stilts, and began to very slowly straggle off, evidently ready for action. I nearly swooned for a moment, and after he had gone sat in a cold perspiration for some time. I got a dose of skunk medicine once when a boy, which has given me a half horror of the animal, and Heaven forbid I should ever get another.

The hours wore on and no deer appeared on the scene. When within about one hour of midnight, being cold and tired, I leaned forward to take a careful survey of all my surroundings, preparatory to giving up in despair. Judge of the thrill of excitement that pervaded me, as I looked toward my left, to see, standing ghost-like in the full rays of the moon and within ten feet of me, an enormous buck. How he ever got so close without making a sound will always be a mystery to me. There was something so actually uncanny about his appearance that it startled me. I sat in motionless amazement watching his stately

form, and unable, from my nearness, to make even the slightest movement, or scarcely to breathe. Why he did not scent me I cannot tell to this day, for the breeze, what little there was, was blowing directly toward him. and by stretching out my arm at full length, I could have touched him with the muzzle of my rifle. After what seemed a very long time, he stepped forward into the clover and began quietly feeding within twenty steps of me. The tension of my nerves gave way as I saw that the noble fellow had not scented me, and slowly raising the rifle to a level, I aimed for his heart and fired. The smoke hung low in a dense cloud in the damp moonlit air, but surely, through the bellowing echoes of the night I could hear the thump of his hoofs as he bounded off. A clean miss, by all that's unlucky! Bnt surely no; I had splendid aim, and he was so close that it cannot be. And just then came a dull sound as of a falling body, and following this came a rattling gurgle, as of a creature breathing in sore distress. Guided by the sound, I advanced about a hundred yards, and lying in the dewy clover was a magnificent buck giving his last spasmodic gasp, shot through the heart. Taking out my knife I attempted to bleed him, but no blood came. Every drop of blood in his veins had escaped into the chest cavity, through the ragged hole in the heart, and he had run until it was spent, and then dropped dead. He was the finest specimen of the blacktailed deer I ever shot, weighing 211lbs, and with fat on his rump 1½in. thick. When opened, his paunch was full of acorns, which accounted for his fine condition. I have had many other nights, both before and since, spent in like manner in different fields, but the hunter and the hunted have a fair show. This cannot be said of the detestable jack-light.

Arefar. AUBURN, Cal.

LOG OF THE LAUNCH GREENWING.

LEFT Vicksburg 9:30 A. M., Monday, Jan. 13, 1890; out West Pass 10 A. M. Entered the old river at 11 A. M.; passed Steele Bayou at 1 P. M., the bridge 2 P. M. Entered Little Sunflower River at 4:20, tied up at 5:30,

Entered Little Sunflower River at 4:20, tied up at 5:30, two miles above the Mounds.

Started on 9 A. M. Tuesday up river. Where we couldn't see one way we saw-ed it through drifts, and rode logs where too deep to saw. Stopped about a mile above Coon Bayon for camp. Lawrence located and Polk shot a young gobbler with his rifle, and after a hard race Lawrence ran him down and retrieved him. All were much elated over the good start made.

Wednesday, Jan. 15.—Although raining hard all were up and out soon after daylight. Got our rubbers washed and saw nothing. Rained nearly all day. P. and L. went down the river just before night and saw lots of turkeys near Coon Bayou, and made one shot without getting anything.

and saw nothing. Raned nearly all day. P. and L. went down the river just before night and saw lots of turkeys near Coon Bayou, and made one shot without getting anything.

Jan. 16.—P. and L. were out early to get turkey while roosting. L. shot at two, wounding one, but not finding it. P. and I went on down the river, he hearing and seeing a flock just above old upper camp, but not near enough for a shot. At night P. went up the river two miles and I down below lower camp, neither seeing anything. It was a very cold day. The ice was over in thick, and the frost like a young snow.

Jan. 17.—P. and I went down to the old camp and out to the lake, flushing a flock of turkeys there, but not near enough for a shot. L. went out back of camp and flushed a flock there. After dinner we moved camp two miles down the river. Three days without getting anything makes us fear we will go home without being burdened with game, as turkeys killed Tuesday will hardly keep, as it is getting warmer again.

Jan. 18.—Bright, warm and pleasant. P. and L. went down to the bayou. They saw deer and flushed turkeys, but did not get a shot at them. P. went up to the lake toward night, turkeys ran almost over him within 10yds. of the boat, and went to roost near by. P. got in his work on one, bringing a nice gobbler back to camp, making all cheerful, and elating him so he beat the others badly at cards for the first time.

Jan. 19.—Cloudy and warm in the morning and sunshine in the afternoon. P. went out early in the morning. L. and I slept until 8 o'clock, bathed, put on clean clothes, hung out bedding to air, moved the boat closer to the bank, and had breakfast ready by 11 o'clock, by which time P. had gotten in. P. went out in the evening hunting a mythical lake east of camp, which trappers lad told us of last year, and found it. Quiet and pleasant day.

Jan. 20.—Monday—Pilot went to old camp after squir-

had told us of last year, and found it. Quiet and pleasant day.

Jan. 20.—Monday—Pilot went to old camp after squirrels. On the way up he flushed a flock of turkeys and shot a hen from it. Spent the day up there but got nary squirrel. Nearly ran over a big moccasin. P. and L. went to run out. Saw plenty deer signs and flushed some turkeys; got none.

Jan. 21.—All out prospecting but got nothing. L. located a flock of turkeys going to roost just above run out.

located a flock of turkeys going to roost just above run out.

Jan. 22.—All up at 4 A. M. to sneak on the turkeys while at their morning nap. Got there about 6 o'clock, found them all there. P. took a position on the right bank watching the sentry on that side. L. and Pilot went to attack the main body located in a tree on the left bank. Thinking to surprise them before they woke, we got out of boat and were creeping up the bank, as we thought, very quietly, when the sleepy, unsuspicious turkeys took wing and left, proving their reputation for sharpness, and out witting us completely. P. then dropped down and killed one on his side. Nothing else was seen that day. Jan. 23.—All were out in the morning. Saw nothing. Moved camp below the big drift. P. and L. paddled back to Coon Bayou, which was prospected for three or four miles. Nothing was seen.

Jan. 24.—Left camp at 8 A. M., arrived at anchorage at 3:30 P. M., running slowly most of the way. Killed a duck in Old River, and crippled and chased another. Brought in three turkeys, having consumed one in camp. All well after a charming trip, which all enjoyed, although but a small bag was obtained. Estimated distances: To Steel's Bayou, 19 miles; L. N. O. & T. bridge, 7 miles; mouth of Little Sunflower, 18 miles; Mounds, 5; Coon Bayou 10; Run Out, 10; Howlett Bayou, 5; total, 74 miles.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be maited free on request. The book is pronunced by "Nanit," "Gloan," "Dick Swiveller," "sylliene" and other competent authorities to be the best treatise on the subject gatant.

SMALL GAME IN NORTHERN MEXICO.

What anticipations were indulged in on the ever who do a protracted trip in the Northern States of Mexico! A trip, not by rail, but "outside a mulet." camping out free from restraints of origing and so far from population or towns that the rife and shorgum must sublities for hunting and observation of game, known and unknown. Since boyhood, for thirty years resident of several States from New York to Texas, accustomed to hunting of small game when the cares of business would allow, which many middle-aged persons think passed forever.

A good rifle was purchased, a good shotgun was already passessed, and what is better, a full knowledge of how to use it, for as a rifle shot! I reely confess that in shoot ing at game I am not a success judging from the hunting.

I shall confine myself in this article to the small game to be found in the States of Chilushus and Sonora. We had protracted camps on the rivers San Pedro and San Barnardino, and other waters in the Sierra Madre, which range is merely a continuation of our Rocky Mountains of Artzona. On these waters were killed the usual varieties of birds of plumage, mallard, widgeon and teal predominating. Nearly all varieties of waterfowl, from the swan to the ox-eye snipe, are common to the elevated plains of Backies, where water is abundant and may be had a succession of the swan to the ox-eye snipe, are common to the elevated plains of Backies, where water side look upon a shotgun as a curiosity. A bunch of mallards will at any life of the success of the system of the swan to the ox-eye snipe, are common to the continuent the breechloader is practically unknown.

The resident varieties of small game and look upon a shotgun as a curiosity. A bunch of mallards will at any life of the system of the syst

and a load of shot. This bird compares in size and general appearance with the long-billed curlew, only the bill is about one-half length, and plumage is a jetty bronze black in color. It was dressed, but unfortunately lost from a pack before camping time, so its game qualities were lost to me. It has no local name.

In this same San Pedro River numerous beavers can be found, especially in its upper waters, where they seriously interfere with attempts to use the water for irrigation, for the beavers, according to Western usage, exercise the prior right of possession and dam up the acequias regularly every night. One was killed by our party, but as we were tenderfeet and fully provisioned at the time, did not test its edible qualities. Whether this is the southern limit of beaver in Mexico—lat. 31°—I cannot say, but I have seen none in other streams.

This list of game is not large, nor is mention made of new species, but what we saw afforded much sport, and when this country is once opened will attract visitors from all sections, for I have only given a plain statement of the small game found, leaving my impressions of the climate, scenery and the actual experience of the trip for future articles if they may be desired.

B. Austin, Texas.

A BEAR HUNT IN TENSAS.

climate, scenery and the actual experience of the trip for future articles if they may be desired.

AUSTIN, Texas.

A BEAR HUNT IN TENSAS.

DOINT PLEASANT, La, April 15—In the latter part of December, 1886, Mr. A. A. Skinner and myself started from home to meet W. R. and T. S. Osborn at our old camping grounds on Mill Bayon.

We arrived there about the middle of the day, some time before the Osborns. About 1 o'clock we heard their horses, and shortly afterward they came into camp. After a hasty lunch we took the dogs, some thirty-six in number, and drove the bear-den cane. We soon found that the bears had eaten all the mast around that cane and had moved off. Back to camp we went, packed up and struck out for the Tight-paper Cane, some six or seven miles distant.

On our way Trueman and Lucy, our start dogs, struck the trail of a traveling bear. They began giving tongue, and it was no time before the whole team were in full cry after the bear, a large he. T. S. Osborn unloaded his horse and followed the dogs. The bear led them a lively race of about a mile, when he stopped to fight, but the dogs soon made it too hot for him, and he took to a tree, where he was killed by Osborn.

The sun was getting low by the time we got the bear dressed, but we made it to our camping ground on Spring Bayou in time to get up wood enough to last us during the night. The night was very cold and we had no tents, so we had to have wood enough to keep up big fires. We ate a hearty supper of broiled bear ribs, liver and provisions brought from home, washed down by coffee such as only campers know how to make.

We had a good night's sleep, and next morning before it was light were up and preparing for the day's hunt. By the time we had eaten a hearty breakfast, the sun was up and we were off for the drive. We had not got more than a quarter of a mile from camp before the dogs struck a fresh trail where the bears had been feeding on overcup acoms. They trailed only a short distance into the sand, about three-quarters of a mile. I got t

New Brunswick Big Game.—Fredericton, N. B., April 29.—Editor Forest and Stream: The moose are increasing here very fast, and if properly protected will soon be very numerous. There are now plenty of caribou and red deer. I was informed the other day that the wolves had put in an appearance, but cannot vouch for the correctness of the report. I hope that I was misinformed, as the deer are getting very plentiful in certain localities, and if these pests come among them there will soon be an end of them.—H. B. R.

The Spangler crimper, advertised in another column, receives the highest commendations from those who have used if, for its regular and even work. Every part of this crimper is made by machinery, thus insuring the utmost accuracy, and all parts are interchangeable. Special tools are now being made for its manufacture, and will be completed soon, when Mr. Spangler will be able to fill all orders, many of which have been unavoidably delayed by reason of improvements in the crimper and the tools used to make them.—Adv.

A CALIFORNIA SPRING DAY.

A CALIFORNIA SPRING DAY.

WHILE driving along in the warm sunshine and in the midst of the beautiful green grass, blooming roses, and many varieties of wild flowers in the fields, we could look away to the eastward some sixty or eighty miles and see the snow covered Sierras rearing their white heads heavenward, and we could scarcely realize that the snow upon the range in many places is now lying to a depth of fifteen or twenty feet. Calling at the home of a friend on our way, the writer was permitted to pick some beautiful ripe oranges from a tree in the garden, and growing close under the branches of the orange trees, heavy with golden fruit, was a bed of beautiful white tilies in bloom. I gazed from the fruit and flowers away to the cold white mountains in the distance, and my thoughts made a sudden journey to my far away Eastern home, where the mercury hovered between twenty and thirty degrees below zero, and a full-grown blizzard presided over all only last week, and I thought, "who would not be content to dwell in the land of the far-famed and deadly tarantula and centipedel" We saw farmers at work making gardens, plowing, etc., and the much-loved Celestial stiligently at work pruning vineyards; and upon all hands a busy scene of industry.

The first creature we encountered in the way of game was a little prairie owl, sitting demurely by the roadside and twisting his head nearly off in his endeavors to keep his eyes on us; but he looked so very wise that we concluded he belonged to a different family from the villainous creatures described by Fannie Pearson Hardy, and deeming his innocence worthy of protection we couldn't harm him.

We were driving along enjoying the beautiful scenery and listening to the joyous songs of the larks, when my husband suddenly called a halt in a mysterious undertone, and when I stopped the buggy he hastily dismounted, and taking the shotgun out proceeded to load it. He was somewhat disappointed to find upon opening the cartridge box that he had brought only No. 64, and this l

THE PROFITS OF TRAPPING.

Editor Forest and Stream:

THE PROFITS OF TRAPPING.

Editor Forest and Stream:

Doubtless there never was more sense and pith given in so few words as is contained in the last sentence of the article under the heading "Snap Shots" in the issue of March 6. Why, there is searcely a boy in the back farming settlements who has not his traps and uses them for all they are worth, even where there is no fur larger than mink and muskrat. Then, as you go further back to the newest settlements the grown up sons and even heads of families have lines of traps ten and even twenty miles, with outlying camps, and lateral lines extending to lines of other trappers in adjacent settlements. Then there are those who go still further, even as far as the furthest lumber camps, where they make their home camp, with outlying camps beyond; and should an outsider set up a line of traps on such grounds he will soon find his traps, if found at all, "hung up," but most likely they will be in the bed of some stream if not confiscated. This is according to the unwritten law that obtains in the woods. Let the boys take their outing, all the same. Take tent and provisions for camping not far from some back settlement fairly easy of access. Always there are plenty of partridges, and in nearly all the back settlements of western Maine deer and caribou can be found in easy distance, which the nearest settler will be glad to pilot to for a reasonable recompense.

Don't be ambitious of big scores, but go for a fairly good enjoyment of camp life in the woods and you will not be disappointed. On the other hand, if you go thinking of dollars and cents in the way of trapping you will come back sadder and wiser men. I am led to these remarks by being almost constantly in receipt of letters of inquiry as to best places to go to trap; to all such I would emphasize the ultimate of the article referred to at the head of this—don't.

GAME Prospects.—Paola, Kan.—Editor Forest and Stream: I have noted with interest notes on the welfare.

GAME PROSPECTS.—Paola, Kan.—Editor Forest and Stream: I have noted with interest notes on the welfare of game after the past winter. In this locality I do not think game ever fared better. Quali are very abundant here now, principally females, and as the nesting season is approaching, and there is no danger now to the lives of the quail, I predict a great crop this season. The fall shooting here was fine, and after the 1st of January but few quail were killed, as the law is pretty universally respected. The migrating ducks are now upon the rivers and creeks near here, and all sportsmen are happy. The principal kinds killed are scaup, mallard, pintail (red, brown and blue), and a few woodduck. Pinnated grouse are rapidly being exterminated in this county, as they are hunted with such perseverance as the quail had never known. A good many spring birds have arrived, chewinks, field and wood sparrows principally. Robins, tits, woodpeckers and bluejays, crows and hawks stayed with us all winter.—J. W. M.

FOWL IN MICHIGAN.—Newaygo, Mich., May 1.—Editor Forest and Stream: Ducks and geese are plentiful, with an occasional white swan. All are now moving northward, but their fate is only postponed.—Limbo.

A REVOLVER REST.

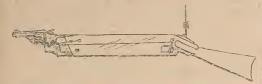

A REVOLVER REST.

THIS is a sketch of a revolver rest I made not long ago.

The total length of the contrivance, including the pistol, is 33in., and the distance between the peep sight on the rest and the end sight is 21in., which is about the average distance between the sights on a rifle.

I was led to the construction of the rest by a desire to ascertain, if it was possible, for a revolver with a 3in. barrel, to throw a bullet with any degree of accuracy.

I knew, from experience, that I could not do any creditable shooting with it off hand and I wanted to find out whether (leaving out the factor of marksmanship) this was due most to the extreme closeness of the sights or the shortness of the barrel.

With this end in view, I secured the revolver firmly at one end of a piece of half-inch board and at the other end fitted a stock, shaped after the model of the stock of the Winchester rifle.

Having screwed on a peep sight and adjusted a lever connected by a piece of twine with the revolver trigger, in such a manner that it served for a hair trigger, and having carefully lined the revolver sights with the peep sight, the contrivance was ready for use. Then came the test. Just outside my window, about 10 yds. off, was a maple tree on which was a white spot, possibly 1½ in. in diameter, At this I aimed and succeeded in putting three successive bullets in it. A number of other shots proved that the revolver with the rest was almost as accurate as a rifle up to 30 yds., and that the short barrel of itself was not responsible for any misses.

Having demonstrated to my satisfaction that the revolver would shoot straight, I decided next to test the practical value of the combination as an outdoor arm on woodchucks. I walked south from Hartford for about three miles before I got my first shot. Then, just after crossing a log ridge at the edge of a piece of woods, I came suddenly upon a woodchuck some distance from his hole. Aiming carefully, I tumbled him over at about 25 yds. A little further on, across the road, I spied another woodchuck making for his hole. As I expected, he stopped at the mouth of the hole, and I gave him a shot at a distance of 40 yds. The woodchuck disappeared and I walked toward the hole, uncertain whether I had hit him or not. When about 30 yds, off, however, he stuck his head out of the hole. I fired quickly and saw the bullet strike just over him. I cocked the revolver again and walked a little closer, stopping between 15 and 20 yds, from the hole with the pistol at my shoulder. "Give me another shot," I thought, "and I'll do better."

An instant after I saw the brown snout of the chuck appear. I aimed a trifle lower than I had before, fired, and when I ran up to the hole there lay the old f

TYCHO.

THE KENTUCKY CLUR,—Louisville, Ky., May 1.—The present game laws of the State are very loose, and are very poorly enforced. In the Legislature, however, the following bills have been introduced: An act to establish the fish and game warden system, etc. An act for the protection of fish in the waters of Kentucky. An act to amend chapter 46, General Statutes, title, "Game and Small Birds," An act to amend the law in regard to posting lands. All four of these measures were prepared by the Kentucky Fish and Game Club, and this organization is using every endeavor to have them become laws. Those who have no interest either way are unanimous in the opinion that the proposed acts are decidedly in favor of the farmer in every way, and the latter, though he at first objected to be dictated to by the "city chaps," as he called them, is beginning to realize the value of them both to himself and the game, and has instructed his representative to do his best in assisting to make the bills a law. The first three bills passed the Senate almost unanimously, and when all four of them were introduced into the House they were made a special order. Other matters interfered, however, but they will come up next week. The laws will be strictly enforced and all violations will be punished with the assistance of the now great club that framed them.—C. A. D.

SPRING IN MINNESOTA.—McHugh Station, April 23.—Spring has finally made an appearance, much to the discomfiture of snow and ice, which are rapidly disappearing. Ducks are coming in abundance and are being bothered very little, and as much also can be said of the snipe, which are quite plentiful; the other migratory birds have most all arrived except a few dilatory ones that seemingly care nothing for the early worm.—J. G. N. SPRING IN MINNESOTA.-McHugh Station, April 23

Editor Forest and Stream: I call on you and your many
readers to lament with me the untimely end of a bird
born to die game before dog and gun. A poor woodcock,
being too venturesome, met his death at the hands of
that foul assassin, the electric wire. It is a male bird in
fine feather and condition, weighing within a fraction of
7½oz.—Thos. Chalmers.

Green River and Corn Island.—Louisville, Ky., May 1.—Green River, of this State, winds its way through the dark chambers of Mammoth Cave and breeds fish without eyes. Great flocks of ducks make their winter home on its clear, deep waters. The river has never been known to freeze over, consequently the web-footed tribe

have no trouble in finding an easy living there when other streams are not fit for winter quarters. In the fall and spring the little bayous along its course are overflowed. These are generally fertile, low spots that have been cultivated, and never become so inundated that a pair of rubber boots would not be a safeguard against a wetting. In February these swamps are black with ducks. Corn Island, in the Ohio River, just above Owensboro, is a great gathering place for geese and pigeons, and when scarce everywhere else they may be found there. For many years a famous pigeon roost has been located there, and still is a retreat, although pigeons are rapidly disappearing from all parts of the South.—C. A. D.

Camp-Hire Hlickenings.

"That reminds me." 302.

That reminds me."

302.

In one of the old mining towns of this part of California, away up on the slope of the Sierra Nevadas, there lived several years ago, during the active working of the hydraulic mines, a celebrated character, whose modesty, as he is still in the land of the living, forbids my giving his name. His justly celebrated fame arose from his remarkable power of narration. He could take any trivial occurrence that happened in town, dress it up in such glowing colors and throw so many vivid sidelights upon it, that not even the participants themselves could recognize it. G. B. undoubtedly wore for years the belt as the champion liar of that mining region, and one of his stories, that I happened to hear him relate, I think is worth preserving in the columns of the Forest and Stream. I will let him tell it in his own words:

"It was in the spring of '50 that a train of sixty-five on us started across the plains for Californy. The most on us were young men an' able to rough it, but we had three famblys, with about a dozen young uns among us, an' one baby was born on the way. Wal, of course, fresh meat soon got mighty sease, as there was so many trains on the trail ahead on us that all the game had been killed or scairt away. The young mother she kept kind o' pindlin like, after her kid was born, and got sick o' bacon, an' sich like, an' the young fellers that had hosses o' their own to ride, there being half a dozen on 'em in the train, used to scour out on the plains for fresh meat for her. One day three on us got arter a couple o' an telope early in the mornin' when our hosses was fresh an' we jest took after 'em, a yellin' like Comanches, jest to see 'em run. There was a couple o' hills on the plain that stood seprit, with about twenty rods o' ground between 'em at the fur end, and the critters made a break to go between 'em. We was comin' on arter 'em like we meant to catch 'em, when they see that this open place between the hills had grown up with tall chapparral. Now an anatelope won't run up a

Sea and Biver Hishing.

CHICAGO AND THE WEST.

CHICAGO. Ill., May 1.—There will be a few mascallonge and a few bass and a few trout taken by Chicago anglers in the month of May, but the angling season proper will not be on until the first of June. This is a late spring, and it will be some weeks before the fishing is at its best. The bass are spawning in May, and it is wrong to take them before about June 1, no matter what the law says.

ing is at its best. The bass are spawning in May, and it is wrong to take them before about June 1, no matter what the law says.

Mr. C. D. Gammon and his party will start on a mascallonge trip, probably within a couple of weeks, if the weather warms up in Wisconsin. May is naturally the best month for mascallonge, at least until fall, taking the seasons as they average, and there may perhaps be fair fishing this month. This party was very successful at Vieux Desert last year. The writer may possibly be with them for a day or so this year, as it isn't polite not to accept an invitation two years in succession.

Speaking of mascallonge reminds one that a specimen of that fish was caught a week ago in the Grand Calumet River, below Chicago, where they were supposed to be unknown. Mr. Booth, the veteran fish dealer, pronounced the fish a genuine mascallonge, but doubted its being caught in that stream. Yet this is the third mascallonge caught there of late years. Talking of this last night with Henry Kleinman, who has hunted and fished all over the Calumet country for thirty years, he said that twenty years or more ago they used often to take mascallonge in the Calumet River, and frequently very large ones in their nets out in Lake Michigan. I never knew that the latter water ever had a mascallonge in it, but it cannot now be doubted.

Henry Kleinman told of one way to distinguish a mascallonge that may be of service to some fellow who doesn't know what he has caught. "A mascallonge, said he, "always has a split in his tail, so that the top part is divided clear from the rest of the tail. Now a pike, or pickerel, never has its tail split that way. A mascallonge is darker, too."

Mr. W. H. Comstock, of this city, yesterday showed me a singular photograph. It was taken on March 15 last, the opening day of the Castalia, Ohio, trout season. Doubtless most of the Forest And Stream readers know of that wealthy club and its well stocked stream. The picture showed Mr. Comstock, Mr. A. C. E y and Mr. Preston Ely standing i

tographs showed the trout taken, a very fine lot. Mr. Comstock says that the club now has nine miles of water. Mr. Henry L. Smith, of the Wisconsin Central road, writes to Spalding's that he has been out trout, fishing 147 miles north of Milwaukee, but he is painfully silent as to results. Mr. W. F. White, of the Santa Fé system, and long time ago general passenger agent of the A. T. & S. F., the same a very genial man and ardent sportsman, is in town outfitting with some friends for trout, and I understand they go to that lovely water, the upper Pecos, above Las Vegas, New Mexico.

No very definite news has come in by way of actual angling results, except an unconfirmed rumor from Fox Lake that a large-mouthed boy had caught a small blackmouthed bass, the kind that have horns on them. This was near Col. Lippincott's pier. Col. Lippincott's mascallonge is still alive this year, and is said to have chased the steamer all the way across the lake from Lake Villa. If this thing is not destroyed it will kill all the sheep in the neighborhood, moreover frighten the summer hotel trade, I t grows yearly larger and larger.

This business of waiting for the fishing season to begin is hard on the constitution. I know where there is some grayling fishing, and some bass fishing, and some trout fishing, all of it not so very far from this city, and all of it new to the general public, the writer included. In consequence of which I have been casting a fly at a bit of paper 30ft. distant on the office floor. This is better than nothing, if you don't raise anything more than a splinter or two. I have invented a fly for bass this season, and am very anxious to try it. It has a yellow body, tinsel wound lightly, with a red tail. The wings are turkey brown, and the hackles mixed red and cinnamon, brown or ginger. This approaches a cross between the Montreal is one of our best bass flies for Western waters, and the professor is a good all-around fly. The new pattern makes a good-looking fly, though what it will do remains very larg

NEW ENGLAND NOTES.

NEW ENGLAND NOTES.

THE Quincy smelt case is attracting considerable attention among both the friends and enemies of fish and game protection. The case first came up before the District Court at Quincy two years ago, where the defendants, C. L. Prescott, Samuel Gregory and H. Thurber, were complained of for taking 1,000 smelts with seine or net. The statute provides that each person so taking smelts shall forfeit \$\frac{1}{2}\$ for each smelt so taken. The defendants were taken in the act and with the smelts in possession, and were acting together, and were each liable for every smelt, but Judge Humphrey was lenient and fined each for only 330 smelt, or \$530. The defendants appealed, however, and the case came before a jury at the Norfolk county Superior Court at Dedham last fall, when they were round guilty of taking \$50 smelts. But again the defendants were not satisfied, and through their counsel, J. L. Eldridge, appeared before Judge Aldrich last week at Dedham and moved an arrest of judgment on the ground that the defendants were originally found guilty before the District Court of taking by seine 330 smelts and no more, whereas the said judgment substantially acquitted them of taking the revented of the 1000. This appeared in the record, and judgment on the ground that the defendants were originally found guilty before the District Court of taking by seine 330 smelts and no more, whereas the said judgment substantially acquitted them of taking the remainder of the 1,000. This appeared in the record, and consequently there could be no judgment in the record. The motion of Lawyer Eldridge has been overruled by the Superior Court, and it will now be sent to the Supreme Court, where the exact wording of the law will doubtless be sustained. The point taken by the counsel is a mere quibble, and is doubtless employed to stave off judgment as long as possible. The decision of the Supreme Court will be watched with interest. The defendants have tried to create a sentiment in Quincy and Dedham that should be strong enough to get the law repealed at the present session of the General Court. But in this they have utterly failed. The best people in Quincy are fully in favor of sustaining the law against the illegal taking of smelt in the river there. They have seen a great increase in smelt under the amount of protection the law has given, though it has been a hard struggle. Each season the stealing of smelt is carried on. By moonlight, by torchlight and in various ways the work is attempted, and woe be to the quiet citizen who attempts to interfere. Still, arrests and fines have been frequent. The decision of the case now before the Supreme Court will, if decided against the illegal smelt fishers, as it doubtless will be, strike something like terror to others. The fine is a heavy one, and makes the stealing of smelt rather dear business.

There are no especially new features in regard to the breaking up of the ice in the Maine trout lakes. A letter from Rangeley on Saturday, May 3, states that unless the

stealing of smelt rather dear business.

There are no especially new features in regard to the breaking up of the ice in the Maine trout lakes. A letter from Rangeley on Saturday, May 3, states that unless the weather is very warm, the ice will not go out before the 12th to the 15th. Another letter from Richardson Lake on Monday says that the ice will hardly get out of that lake before the 15th, though if the weather should be very warm, matters might be hurried three or four days. A letter from Moosehead on Friday says that the ice will probably leave that lake somewhere from the 8th to the 10th. The ice is out of Sebago Lake, but I have not heard of any landlocked salmon being taken, though some parties are there fishing. The Maine trout streams are yielding sone good strings. Several parties were out from Lewiston and Auburn on Saturday, and were well satisfied with the day's sport.

Where to Get Anchovies.—Our east coast as far north as Cape Cod is reasonably well supplied with anchovies, which would serve a useful purpose for the angler in bait-fishing. The west coast, also, has a great store of them; but in Asia Minor there is a stretch of Black Sea coast, east of Trebizond, whereon, Consul Jewett says, "anchovies are so abundant that they sell at the rate of less than one cent per pound. At certain seasons the catch of these fish is so large that they are used as a fertilizer in the fields."

GEO. PRICE, whose uptown fishing tackle store is at 1438 Third avenue, New York, is well-known to anglers in that vicinity, and having succeeded in giving satisfaction in the local field, Mr. Price now asks wider patronage through an advertisement which appears in another column.—Adv.

THE WEAKFISH.

THE WEAKFISH.

ONE of the best known of our marine fishes, because so frequently fished for with success, is the subject of our present sketch. Whether or not you will associate the name with the species to which it belongs will depend on your locality. This name is attributed to the Dutch colouists, of Manhattan, and is current in New York and the adjacent region. In New England the Narragansett Indians bestowed upon it the name squeteague, which has undergone modifications into squettee, scuteeg and squit. The Mohegans called it checouts. Chickwick has been applied to it in Connecticut. On Cape Cod the term drummers is given, in reference to the sound produced by the fish. In Buzzard's Bay large weakfish are known to some persons as yellow-fins. Great Egg Harbor Bay, true to its reputation for confounding names, has transferred the term bluefish from the rightful owner to its weak victim. Along the coast of the Southern States we have the appellation trout with its variations, sea trout, gray trout, sun trout and shad trout.

trout.

De Kay tells us that the species is called weakfish "from the feeble resistance it makes on the hook and the facility with which it breaks away from it, by reason of its delicate structure." The angler who has to deal with a fish of 3 or 4lbs. will not complain of the amount of resistence it offers, but he must use skill in handling his

line. Distribution.—The weakfish is occasionally taken in the Bay of Fundy; but its normal range is from Cape Cod to East Florida. The supply has fluctuated greatly in Northern waters. In 1803 weakfish were abundant in southern Massachusetts and Rhode Island. About 1816 they disappeared from Provincetown and did not return until 1847. In 1832 they left Vineyard Sound and were rarely seen until 1867 or 1868, when they increased in numbers, and in 1871 hundreds of them were taken at a time in the weirs. In the latter year millions of weakfish appeared in Narragansett Bay, showing up in great shoals between Point Judith and Providence. In 1845, according to the late Capt. N. E. Atwood, the weekly supply in New York market did not exceed 1,000lbs. There seems to be a re-

common shrimp of the coast (Crangon vulgaris), varying their diet in July with rock crabs and squids.

Game Qualities.—For snap and vim the weakfish takes high rank among our game fishes and its beautiful colors make it a favorite with the angler. It is a bold and very free biter, swift as an arrow in its movements, and makes desperate efforts to escape from the hook, but lacks the endurance of the striped bass and the bluefish. The tender tissues around the jaws of the fish are liable to give way during the struggle and permit its escape. Our Northern weakfish has not the vigor of its relative, the spotted weakfish or "sea trout," of the South, and it has not yet, like its Southern congener, developed a susceptibility to the artificial fly.

Capture.—In many of the New Jersey bays a float and light sinker are attached to the line and the hooks are kept within 2 or 3ft. of the surface. In Great Egg Harbor Bay this rig is in use on flood tide when 6 to 10ft. of water cover the flats on which the fish are feeding. As a rule only small fish are taken in this way. The rod should be 7½ to 8ft. long and supplied with a multiplying reel of medium size and a drag. A bass bait rod will answer admirably if sport be the chief object. The reel should hold 100yds. of braided linen or silk line of the desired size. Some advise "E" line for fish averaging 2 or 3lbs. The hooks vary in size according to the taste of the angler, from 1 0 or 2-0 to 3-0 or 4-0. The lower hook should be the smaller of the two and kept near the bottom, at tached to the line by a single snell at a snell's length above the sinker. The upper hook is placed several feet above the lower on a 2 or 3ft. leader or a single-length gut, as preferred by the angler. The sinker may be hollow and weigh 10z., or solid and increase in weight with the depth of the water and the strength of the tide. If you are fishing for count a short, heavy rod, with a reel that will handle the line rapidly, and a sinker heavy enough to find the bottom promptly, are prime requisit

sometimes attains to a length of 6ft, and a weight of

he sometimes attains to a length of 6ft, and a weight of 75lbs.

In the books he figures as Cynoscion nobile and is referred to the subgenus Atractoscion—a formidable name for a mammoth weakfish. To the fishermen and anglers he is the sea bass, white sea bass, corvina or caravina, and the banded young are sea trout. The color is dull silvery, the upper parts bluish, and the whole fish finely spotted. The general resemblance to our common northern species is very striking.

In California this fish ranges southward from San Francisco to the southern boundary of the State and is most abundant in spring and summer, coming from deep water as the spawning season approaches. Early in October we have seen hundreds of very large size (above 30lbs.) in the markets of San Francisco, day after day, and the price often fell as low as one cent per pound, or below the actual cost of placing them on the stalls.

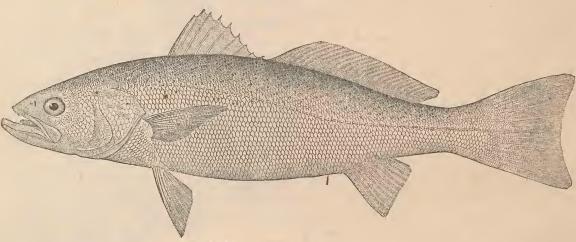

It occurs in small schools and is erratic in its movements. Crustaceans and fish constitute its food. Anchovies are especially included among its favorites.

The smaller weakfish of California is commonly called corvina or caravina and sometimes bluefish, from the steel blue color of its upper parts. This handsome fish reaches a length of 30in. and weighs up to 8lbs. Its food is about the same as that of the larger weakfish and its flesh is very fine when first taken, but deteriorates rapidly as in the case of our own well-known species.

Anglers of the west coast may begin their angling for weakfish a little later than those of the east, but in fishing for weight the east must give them the front rank. What a royal battle a weakfish of 75lbs. would-wage.

STRIPED BASS IN CALIFORNIA

HAVE been accustomed to visit the fish markets with more or less regularity when in port, and have seen striped bass almost every day since my return from Washington. They were noticed increasing in these waters for several seasons, but now they are to be seen in the markets regularly. On Fridays, when the fishermen make their best displays, there are usually thirty or forty specimens to be found scattered over the city, but

THE WEAKFISH, OR SQUETEAGUE.

lation between the variations of the weakfish are abundant. Movements.—During flood tide they are to be found in the channels feeding on shrimp, crabs and small fish. Near Longport, New Jersey, we have taken them in large numbers in the inlet preying upon anchovies, which, at that season, were unusually large and fine. In running up the channels they enter the mouths of rivers falling into salt bays, and make frequent side excursions over the flats. When the tide begins to ebb, they seek deep water. In Great Egg Harbor Bay, as the spawning season draws near, the fish cease biting, and the gravid fish disappear until this period is ended.

Season.—Females nearly ready to spawn will take the hook at Cape May early in May. The earliest arrival known in the vicinity of New York appeared May 12, 1889, at Great Kills, Gifford's, Staten Island. In the Chincoteague waters they begin biting in June, but take the hook more freely later in the season. During the latter part of August, 1889, great numbers of weakfish were caught in the West Channel of Great South Bay. The fish are in their best condition and furnish the greatest sport in their fall migration late in September and continuing into November. On Sept. 21, 1887, two men caught 200, many of them very large, in the ocean not far from Ocean City, N. J., on a single tide.

Where to Go.—The thoroughfares about Cape May are recommended for early fishing, say near the middle of May. Sometimes large fish are caught about the same date, or even earlier, in Great Egg Harbor Bay. Mr. Spangler mentions Slaughter Beach, in Delaware Bay, Fortescue Beach and the "Shell Beds" opposite Fishing Creek for later fishing. Aug. 15, 1887, the catch in Great Egg Harbor Bay was very large, some boats taking 150 on a tide, the fish scarcely averaging 1lb. in weight. Tuckerton and Barnegat are favorite fishing places. All of the bays north to Cape Cod yield a goodly supply of these fish during the summer months.

Tide.—The flood is usually considered the most favorable tide, or the latte

attractive, and pieces of the silvery harvest fish, or butter fish, answer equally well. The eye of the weakfish is often used successfully. Pieces of clam and even the common mussel are frequently effective. Small shiners make good bait, and the anchovy is one of the best natural baits for this fish.

Edible Qualities.—Small weakfish are not worth much for eating; but in the larger ones the flesh is white, flaky and well flavored. It should be bled as soon as caught and used while fresh; transportatiou is difficult because the fish deteriorates rapidly. A fresh weakfish, either boiled, baked or broiled is delicious and easy to assimilate.

ilate.

Precautions.—Weakfish are favorites with many person because of the ease of making a good eatch. Do not, however, rush off for a few hours' fishing without learning beforehand whether the fish are present and biting. We have seen much bitter disappointment among anglers on the coast who seemed to think that it is possible to drop a line into any bay from Cape Cod to Virginia at any time of the day and tide and pull out weakfish until their arms ache. Drop a line if you will, but let it be addressed first to some friend who is posted about the fishing, and you will save yourself much waste of time and money and preserve your serenity of disposition—a prime requisite for the successful angler.

THE WEAKFISHES.

THE WEAKFISHES.

The fishes of the genus Cynoscion, popularly known as weakfish, sea trout, sea bass and by various other names, are found principally in North and South America. Our east coast has four species, one or more of which extend into the West Indies; the Pacific coast has five, two of them ranging north to California; there are three on the east coast of South America and one in Peru. All of these are noted for their large size and many are beautifully colored. They are esteemed for food and renowned for their swift and graceful movements and their game qualities. The young in most cases are vertically banded and differ so much in appearance from the adults as to lead inexperienced persons to consider them as distinct species. The mouth is always large and well supplied with sharp strong teeth of formidable size; but the flesh of the jaws is tender and does not hold the hook securely.

The giant among these fishes is a distinguished inhabitant of California waters. It is true that the doctors of science, because of certain differences in the teeth of this animal, have set it apart from its near relatives in a little section of its own, but you and I care little about this method of dealing with our favorites. To us he is a weakfish and almost equal to a tarpum in fighting ability, for

one would have to visit several markets to see that number. They are generally of 2 or 3lbs. in weight. A very few of half a pound are to be seen. A few days ago a 20-pounder was taken at Vallejo, and one of 30lbs. is reported from further up the river; but fish of that size are very rare. The Albatross took one at Monterey last week, which is, I believe, the first reported from south of San Francisco. We got it by seining along shore; this was a half-pound specimen.

Carp are now very abundant in the Sacramento. Hundreds of them are to be seen in the Chinese district of San Francisco every day; most of the catch goes to "Chinatown." I have seen none but the scale carp in California, but, if I remember rightly, it was one of the other varieties that I saw in the Willamette, at Portland.

CHAS. H. TOWNSEND.

U.S. STEAMER ALBATROSS, San Francisco, April 14.

SCARCITY OF CONNECTICUT SHAD.

SCARCITY OF CONNECTICUT SHAD.

Editor Forest and Stream:

In reading your article of the 24th inst. in relation to the depletion of shad in the Connecticut River by the pounds at and near the mouth of the river. I was reminded of another cause for the scarcity of shad in the river, given me by an old gill-net fisherman a few days ago. He said he had used the gill net for about eighteen years at the mouth of the river and at other points along up the same for twenty miles, and while he knew the pounds to be a great and continual barrier against the entrance of shad into the river, he said, in his opinion, this was not the only one; he thought the breakwater extending out into the Sound was a serious obstruction to the entrance of shad to the river, for as the fish followed east along the north shore of the Sound they met this obstruction, turning them south out into the Sound, and when having reached its limit so that they could again take their eastern course, the circle of their turn carried them beyond the mouth of the river. While this, if true, perhaps cannot be well averted, it may be worthy of mention in assigning reasons for the growing scarcity to almost annihilation of shad in the Connecticut River. The writer remembers when it was no uncommon thing for one haul of a seine to take 500 shad, and has known of twice that number being taken. It seemed strange to him while spending three weeks of the present month in that section to find those fisheries abandoned and not to be able to get a single shad during that time. Truly the Connecticut River has lost the glory of her shad.

Brooklyn, April 24. BROOKLYN, April 24.

To Salmon Anglers.—T. J. Conroy, 65 Fulton street, N. Y., has a lot of fine salmon rods, assorted kinds, which he will sell at a sacrifice until stock is reduced. Don't miss the opportunity,—Adv.

CLUB MEETING.

The Mastigouche Fishing Club of this city held its annual meeting a few days since, when the following officers were duly elected for the ensuing year, viz.: Henry W. Atwater, President; E. H. Botterell, Vice-President; George Kemp, Treasurer; Herbert B. Ames, Secretary; Messrs. James Slessor, John Kennedy, J. A. Cantlie, I. H. Stearnes and Robert W. Paterson, Board of Directors. The annual report shows the club to be in a prosperous condition. It has no debts, and a substantial balance in the bank, besides owning a large amount of property.

prosperous condition. It has no debts, and a substantial balance in the bank, besides owning a large amount of property.

It is now five years since the club was started, and its membership, which was limited to fifty, is now complete. They have just obtained from the Quebec Government a renewal of the lease of their fishing rights for nine years, and they have also renewed their arrangements with Mr. E. M. Copeland, who will keep the Mastigouche House open to the public and take charge of all visitors to the lakes, as heretofore done.

A few special permits to fish in some of the reserved waters of the club will be issued to a limited number of sportsmen during the season. Such permits can be had on application to Mr. Copeland. The club is about to become incorporated, and has applied to the Government for a charter.

A larger number of guests visited the club lakes last season than in any previous year, and the fishing seems to be just as good as it was the first year. The territory under lease to the club is so extensive and comprises such a great number of lakes and streams that it will be almost impossible for any number of sportsmen, fishing in a legitimate manner, as allowed by the club, to have any appreciable effect in the quantity of trout inhabiting these waters. Some of the largest trout ever caught in these lakes were taken out last season, the honors being carried off by a lady visitor.

MONTREAL, April 29.

BROOK TROUT IN MINNESOTA.

Editor Forest and Stream:

Editor Forest and Stream:

I must add one more laurel to the piscatorial possibilities of Minnesota's "Lake Park" region, adjacent to Detroit Lake. I recently happened near the east ond in a small lake, as yet unchristened, and in size about 200 yds. in diameter by from 50 to 75ft. deep, fed wholly by springs and with an outlet into Detroit Lake of about a mile in length, six feet wide by a foot deep. Having thought for several days past that the weather was sufficiently mild for the pickerel, pike and bass to begin biting, I laid in a small stock of tempting shiners preparatory to a regular slaying expedition, to occur the first warm morning. This came yesterday, April 22. Having had partly fair luck in hooking the pike and pickerel to the number of a half dozen in half an hour, and while thinking it peculiar that I could not raise a bass, I was suddenly surprised to see the line "zip" through the water rather faster than usual. Imagining the fish to be a bass, I proceeded to slowly reel in, and after thoroughly tiring him out I landed the fish, when, behold! it was as nice a brook trout for its size as has ever been my lot to see. It weighed a trifle over 2lbs., and was richly diversified with red and yellow spots and beautifully mottled. I have fished all over this section for the pa-t five years, and this is the first trout that has come to my notice in this part of the State. If there are similar instances from this section I would be glad to hear of them, and if not, can the editors advance any theory as to how this fellow happened to be so far from home and the bo-om of his family and in spring water? Where there is one fish there must surely be more, and May 1 will shortly be with us with license for all hands to hie to the streamlets and lakelets with their hackles, coachmen, cow-dung and divers other favorites, to lure the finny denizens from neath mossy banks to willow baskets and the pan.

McHugh Station, Minn., April 23.

McHugh Station, Minn., April 23,

ANGLING NOTES.

ANGLING NOTES.

A LARGE delegation of lake trout fishermen have left for the North Woods to enjoy their favorite sport, which is now at its height, and as soon as the weather gets a little warmer the lovers of fly-fishing will be able to join them; but it will hardly be safe to expect the trout to rise well to the fly before the 20th of this month. For the benefit of those who would like to enjoy good trout fishing, and who are prevented from going to the Adurondacks by reason of not knowing where to find open waters, we print the following hints. In the first place, though, we warn them that very little fishing can be expected in the waters on or near the main lines of travel generally followed by the army of tourists. To get good sport they must be willing to rough it and tramp over some pretty hard trails.

Some of the best fishing for speckled trout as well as lakers will be found at Smith's and Albany Lake; Clear Pond, on the route to Mud Pond, affords speckled trout fishing. These ponds are reached by way of Lowville. The well-known Fulton Chain of Lakes is a good locality, reached by way of North Creek, the last station on the Adia.

fishing. These ponds are reached by way of Lowville. The well-known Fulton Chain of Lakes is a good locality, reached by way of Booneville.

By the way of Booneville.

By the way of North Creek, the last station on the Adirondack R. R., the angler can reach a number of excellent trouting waters. The best way is to drive to North River, four or five miles from North Creek. From this point the ponds in the vicinity of Eleventh and Thirteenth lakes are easily reached. Seven Chain Lakes, where Harvey Barney has a good camp, furnishes good fishing, and Cedar Pond, near by, contains large speckled trout. To get at these waters, take the stage from North Creek to the Blue Mountain Lake and get off at Indian Lake P. O., about half way to Blue Mountain Lake. Near Indian Lake P. O. the angler can amuse himself a day or two in fishing Squaw Brook. Minerva, a little town on the road from North Creek to Tahawus, is a good point to stop at, as Minerva Creek affords fair trouting. Further on near Newcomb, Zach's Pond is a good place to fish, and Moose Pond can be reached from Aiden Lair.

On the other side of the Adirondacks, good fishing may be had near Brush's Mills, and comfortable quarters and fair trouting at Meacham's Lake. These are reached by the way of Malone. Later in the season the small ponds in the vicinity of the St. Regis Lakes afford big speckled trout, provided the angler will camp out and fish late in the evening with large flies.

One of the famous points for large speckled trout is Cranberry Lake, reached, we think, by the way of De Kalb Junction. This lake is on the Oswegatchie Rivera famous trout stream. One of the largest brook trout killed in the Adirondacks for many years was caught here last season, weight 5lbs. 9oz. The upper waters of the Black River, reached by way of Remsen on the Utica and Black River R. R., contain some fine trout, but they are rather difficult to get at, and one must either take a boat or build a raft, and it will be necessary to camp out. West Canada Creek is easily reached from Remsen, but is much fished.

The best flies for the Adirondacks for the early fishing are the light and dark Montreals, coachman, Abbey, silver-doctor, professor, Brandreth, Beatrice, Howard, brown and black palmers, great dun, cowdung, grizzlyking, Canada, Lottie, black-gnat, brown-hen and sometimes the scarlet-ibis. Size of hooks, 8 and 8 Sproat. It would also be well to take a few large bright flies on No. 4 Sproat, such as the white-miller and Parmachene-belle for evening fishing.

The salmon fishing at Bangor continues fairly good, notwithstanding the great number of nets at the mouth of the river. It is a shame that the salmon do not have at least one day in the week free run of the river. Both netting and rod fishing should be stopped for twenty-four, or better forty-eight hours every week. Mr. Fred. W. Ayer has killed the biggest salmon on record, viz, 30ths.

RANDOM CASTS.

THE conditions being equal as between fine tackle and the pin, string and pole, the latter does not take the largest fish, the country boy to the contrary notwith-

In the woods, more than in any other place that I ever knew of, a man's true character reveals itself. Triding inconveniences are magnified into disagreeable opportunities by the selfish, he making use of them to the annoyance and discomfort of those about him. Better by far be alone with your guide, than run the risk of being paired with a mean fellow. It is too late to make your choice when far along on the trip, the mischief is done then, but study your would-be companion well before starting. You may possibly have to eat out of the same plate and sleep under the one blanket before getting back.

In surf fishing, the fishawk is your friend. If he flies out to sea for his meal you might as well quit fishing until the fish come nearer in shore again. This you will soon know by his following them in.

Angling is not an adjunct to the whisky bottle, as many seem to think, and if less were heard of it from quarters where it should have no place, the uninitiated would not so frequently connect the two when preparing for an outing to the woods or shore. Some papers look upon it as a great joke to introduce the "bait bottle" on frequent occasions. To have to wade through the experiences of Pat and Mike as they tell us of how they "then took a drink after each fish" is not calculated to inspire confidence in the class of material these papers draw upon to entertain their readers. This kind of reading is vulgar, to say the least, and certainly not in keeping with the impressions a sportman should receive when with nature. The bottle leads to lying, and those who habitually carry it with them, for other than medical needs, are generally the ones given to telling "fish lies."

The breaks in the otherwise regular stripes of the bass are the result of wounds caused by contact with others of their kind when schooling. In chasing the mullet. etc., they do so with dorsal erect.

BIG REEL.

MISSOURI ANGLING.—St. Louis, Mo., April 25.—A few more days like the past week and fishing will open with a vengeance in these parts. Considerable dampness has fallen in this locality of late and the lake, sloughs and streams have been quite muddy, but they are clearing very fast. The anglers are holding themselves in readiness, and just as soon as they are satisfied that the water is in condition, there will be an exodus such as has never been known before. Reports from Current River are to the effect that a few bass and jack salmon were taken down there the past week. If the weather remains settled till next Wednesday, a party, consisting of about ten members of the above club, will go down to the club house to remain several days, "yanking" out members of the finny tribe.—UNSER FRITZ.

TROUT WASTE.—Newaygo, Mich., May 1.—Editor Forest and Stream: The law for the protection of trout is a dead letter in this section of the country, in consequence of which the fish are scarce and wild. Their destruction has been great recently, owing to the open winter, and the poachers have been in the habit of openly selling them to the public, which is a direct violation of the law. and those who were not handy with the rod used other means, such as nets, water-shells and spears, and complaints made to the game warden were ineffectual. Two brook trout, that weighed \$\frac{1}{2}\text{ and }\frac{3}{2}\text{ bls. respectively, were speared near here and were viewed by a number of persons.—Limbo.

Canadian Waters.—Quebec, April 26.—The weather is cold to-day, consequently the lakes are still frozen over. I presume from all appearances fly-fishing will not be on till about the 15th or 25th of May. Usually the Queen's birthday, May 24, is looked forward to by all anglers as the first day's fly-fishing. Some of my friends of the Laurentian Club went out to their lakes in March. One of them cast a fly in some open water at the outlet of the lake, in the rapids, and was fortunate enough to rise a halfpound trout, which took the fly and was captured. Rather an unusual thing, I presume, because no one would think of making such a trial.—J. U. Gregory.

Wakeman's improved skeleton bait is a device ingeniously arranged of silver wire, within which a live minnow is inclosed in a manner which prevents its loss, and retains the natural look of a harmless minnow. The bait can be used with success without the minnow, but used in connection with one, is said by those who have tried it, to have unequaled catching power, a single minnow having been said to catch twenty-live bass before being rendered useless. The advertisement appears in this issue, and full particulars will be given on application to the manufacturer.—A.du,

NET RESULTS.—We have received from Mr. Thomas Sedgwick Steele, No. 71 Woodlawn street, Hartford, Conn., a copy of the proof edition of the gravure etching reproduction of his famous oil painting "Net Results." The subject is a catch of speckled trout, and they are painted with rare fidelity and most pleasing effect. It is so difficult to find really truthful pictures of game and fish, that we take pleasure in giving Mr. Steele the praise he has won for his paintings of game and fish. "Net Results" is a highly artistic piece of work.

MOVEMENTS OF FISH.—Scup, tautog and butterfish are becoming abundant in the Cape Cod traps. Mackerel and bluefish also are taken in small numbers.

Hishculture.

THE MIDLAND COUNTIES FISHCULTURE ESTABLISHMENT.

THE MIDLAND COUNTIES FISHCULTURE

ESTABLISHMENT.

A N American in London writes: "The supply of fish ova
this season in England seems to have been unusually
plentiful, judging by the appearance of the hatcheries at
some of our fishcultural establishments. I this week visited
the Midland counties fishculture establishment at Malvern
Wells, England, over which I was conducted by Mr. John
Burgess, who courteously supplied me with every information regarding some waters which I wished to stock with
trout. I found the hatcheries full of Salmonidæ ova and
young fish, and the sight presented by the masses of finny
life was one which I never shall forget. Within a large
building of brick were ranged side by side a series of tanks,
through which a stream of water coursed, oxygenated by
miniature sluices, which are fixed at the entrance of each
tank. Here we have a perfect stream, which gently ripples
over the little nurseries where the young fish lie in perfect
ease and safety. What a contrast is this peaceful scene to
that of the spawning beds in open waters, which are subjected to destruction by flood, pollution and hundreds of
owners of gaping jaws, which fall, upon them and devour the
eggs. In the inclosed hatchery there are no enemies, no
floods, no noxious ingredients to destroy the ova. Here I was
shown that only a few dozen ova had perished, and not a
single young fish had died out of the millions that are being
propagated. Here is a triumph over nature, a triumph so
complete that I doubt whether in any other art we can find
its equal. On all sides I encountered masses of fish life,
waiting to be poured forth into the waters. Each variety
is kept in separate tanks, great care being exercised not to
mix them. Some of the trout are adapted for rivers, some
for lakes, some for ponds and some for streams. On no occasion does he turn them into rivers, streams or ponds until
he has ascertained the exact nature of the water, the fish inhabiting it and the amount of food available therein. Having done so, he f

WORK OF THE U. S. FISH COMMISSION.

Station made the following exhibit:

Lobster eggs collected during the week 1,252,147

Lobster eggs now hatching 3,3,290,820

Largest number of eggs from one lobster 22,848

(This lobster was 13in, long).

Smallest number of eggs from one lobster 3,049

(This lobster was 9in, long).

Lobsters stripped during the week 109

Average number of eggs . 11,487

The apparatus used in hatching are the McDonald and Chester jars, in which the eggs can be cleaned more rapidly than in the boxes. Mr. Maxwell considers the jars superior to the boxes for developing these eggs.

SHIPPING SMELT EGGS.—The first attempt at shipping eggs of the smelt, as far as we know, was a success recently under the management of Mr. Fred Mather, Superintendent of the Cold Spring Harbor station of the New York Fish Commission. Commissioner H. Burden wanted some eggs for the Sacandaga hatchery, in the Adirondacks, to supply food in waters which are to be stocked with lake trout. These trout would be obliged to come into shoal waters in summer for lack of food in the depths. The smelt are intended to remedy this unfavorable condition. When the hatching of smelt eggs was inaugurated a few years ago, nothing was known about the subject, and until recently the limit of successful hatching was not over 50 per cent. Packing the eggs for transportation is a new undertaking, and, as we have said, a successful one under Mr. Mather's direction. Mr. E. F. Baehm, who received the consignment, estimated that 95 per cent. of the eggs were good. When the box was opened the temperature inside was 48 degrees, the eggs were pronounced a fine lot and have been doing well up to last accounts. SHIPPING SMELT EGGS.—The first attempt at shipping

AMERICAN FISHERIES SOCIETY.—The nineteenth annual meeting of the American Fisheries Society will be held at Put in Bay, Ohio, May 14, 1890. THE CARE OF PUPPIES.

THE CARE OF PUPPIES.

[By a Lady Contributor.]

It is very hard to have to "pay premiums to experience."

Int to the lives of all of us such is often the case, especially in the bringing up or treatment of animals.

Who has not lost a horse, cow or dog through want of knowledge, perhaps sending for the veterinary when the animal was beyond his skill? The books on dogs' diseases are so full of disorders that to look them over a novice would fear to accept the revery allment human feah is subject to besides those of his own, and being dumb, harder to treat. The novice need not hesitate, however, the great thing is to keep him well, and to do so, diet, cleanliness and exercise are all that are needful.

There is an absurd notion in this country that a plain diet must be a sign of povery.

The third of the country that a plain diet must be a sign of povery, healthy condition of her children she said, "Yes, m'am, they are always well; I keep them upon porridge and potatees; not that I cannot afford pies and cookies as well as Mrs. O'Leary, who gives hers freedom of the same, and of the melon patch, and they do forever be alling."

I know a Mrs. Million, one of when alms in life is to left. I know a Mrs. Million, one of when alms in life is to left. "How one will be a subject to the melon patch, and they do forever be alling."

I know a Mrs. Million, one of when alms in life is to left her. "Yes," she said, "I got him from Mr. —", the celebrated dealer in England, giving a lot of money for him. The vet. says he is a most rare dog the is there now, as he is dreadfully lib. His seems the servants have been giving him woodcock—just fancy, we found a whole one in his basket, to domonistrate that woodcock were as plenty in her house as bectsteaks were in mine. Be it as it may, the dog died, it seemed a pity that a valuable and rare dog should be secrificed to the oscientation of a silly woman. Now, I hope that none of my readers are equally foolish about their dogs, reading the money of the single seemed a pity that a val

I had a large dog who learned to eat off a fork, and drink out of a spoon without spilling.

A piece of sulphur kept in the bowl of water is of no use whatever save to give it a nasty taste: an animal appreciates a drink of cool, fresh water as much as a person does. Sulphur should be given about once a fortnight in summer; for a grown one a level teaspoonful of flower of sulphur smoothly mixed in milk before breakfast. A friend of mine who had recently "set fp" a terrier came to me in a great fright saying that he had eaten the tips off a lot of parlor matches; on inquiry I found he had been stuffed with meat, and nothing else. Was it not a remarkable case of instinct that led him to discover the sulphur matches, and make a medicine of them?

Sweet things, and above all sugar, losen a dog's teeth, and injure the gums, which may be proved by the number of ladies' pets one sees with only a few crooked teeth in their mouths.

of instinct that lied him to discover the sulphur matches, and make a medicine of them?

Swet things, and above all sugar, loosen a dog's teeth, and injure the gums, which may be proved by the number of ladies' pets one sees with only a few crooked teeth in their mouths.

I did not intend to discuss fleas, as I fancied every one knew how to dispose of them, but seeing a query upon that subject I will say that picking and combing vill not exist the subject I will say that picking and combing vill not exist the Dalmatian powder, fresh, and put it on the back along the spine, working from tail to head, using the arrangement provided for blowing it on. He should be washed once a week in summer with carbolic soap study, rinsed and dried very dry with a large burlap towel, then tie him so that he will not roll on the grass while damp. It improves a white dog's color to put a little bluing in the water. Never put him in a tub, it should be used, the summer with a subject of the dealer. For any supprison of skin disease tar soap or sulphur soap should be used, Pears' soap when he becomes dirty or dusty between the regular wash days. A dog likes to be clean, and when washed will jump around as he feels so nicely, and seemingly to show his improved condition to the family.

Ezema is not difficult to manage if you live in the country, but in a city it may become a tax promenading a dog and the subject of
THE CINCINNATI SHOW.

THE CINCINNATI SHOW.

CINCINNATI, O., May 3.— Editor Forest and Stream:

The judges announced by the Cincinnati Kennel Club, for their show, to be held June 3-6, are Major J. M. Taylor, for setters, pointers, foxhounds and beagles, and Mr. Jas. Mortimer for all other classes. Inquiries for premium lists are numerous and the prospects are the show will be a very fine one.

GEO. H. HILL, See'y.

For the principal breeds the premiums are, \$10 for challenge, \$10 and \$5 for open, and ribbon for pupples, with \$10 for best kennels. For Newfoundlands, toy terriers, other than Yorkshires, King Charles spaniels, Italian greyhounds and miscellaneous, \$5 and \$3.

CINCINNATI, O., May 5.—Editor Forest and Stream: Our coming bench show promises to be a success in every way. To do all I can to help it and to oblige some of my friends, many of whom have written me. saying they would send their dogs if I would handle and care for them, I have concluded to handle and show a few of any breed, outside of my string of pugs. This being my home and having a good kennelman, those who send can restassured that their dogs will be treated right. Entries close May 20.

Al. G. Eberhart,
Manager Eberhart Pug Kennels, 212 Main street.

NATIONAL COURSING ASSOCIATION.—The spring meetings of the National Coursing Association will be given at St. Louis, Mo., May 11, 14, 16, 18; and Kansas City, Mo., June 19, 20, 21, 22. The stakes at St. Louis will be open for all grayhounds east of Kansas, and a hot class will compete. A large number of imported dogs will be entered, and the local cracks are in fine condition to hold them down.

INDIANA FIELD TRIALS.

INDIANA FIELD TRIALS.

INDIANAPOLIS, Ind., April 25.—Editor Forest and Stream: The following gentlemen have been selected to judge the Indiana Kennel Club's fourth annual field trials, beginning Monday, November 3, at Carlisle, Ind., viz.: Dr. J. B. Alexander, of Louisville, Ky.; Mr. Gib D. Jay, of Kokomo, Ind., and Mr. M. R. Williams, of Denver, Col. The club has secured ample grounds where there are plenty of birds. The hotel and livery accommodations at Carlisle are first-class, and the prices will be liberal in the extreme. Although the entries for the Derby do not close until June 1, several have already been received. Every indication points to the most successful meeting the club has ever held. The running rules have been thoroughly revised, and we think they are about perfect. The committee on rules had in view the sole object of giving each dog sufficient time to show what there was in him, and to enable the judges (without being handicapped) to give the prizes to the best dog. You will see by a perusal of the rules (a copy of which I inclose herewith) that we do not recognize any dog as a runner-up.

The running will begin with the Derby, Nov. 3, for all setter and pointer pups, whelped on or after Jan. 1, 1889. Four purses: First prize, 40 per cent.; second, 30 per cent.; third, 20 per cent. and fourth, 10 per cent. Forfeit \$10, and \$20 additional to fill. Entries close June 1.

All-Aged Pointer Sake.—Open to all pointers that have never won a first prize in an all-aged stake at any recognized field trial in America. First prize, 50 per cent.; second, 30 per cent., and third, 20 per cent. Forfeit \$10, and \$20 additional to fill. Entries close Oct. 1.

All-Aged Setter Stake.—Open to all setters that have never won a first prize in an all-aged stake at any recognized field trial in America. First prize, 50 per cent.; second, 30 per cent., and third, 20 per cent. Forfeit \$10, and \$20 additional to fill. Entries close Oct. 1.

Members' Stake.—A members' stake will be run beginning Friday, Oct. 31, open t

was adopted at our previous trials and gave entire satisfac-tion.

The new rules are prefaced by this note to the patrons of field trials:

The new rules are prefaced by this note to the patrons of field trials:

The chief obstacle to the full accomplishment of the legitimate purposes of field trials in the past has been the faulty methods by which the comparative merits of the dogs were determined. The comparative merits of the dogs were determined. The chief the comparative merits of the dogs were determined. The chief the comparative merits of the dogs were determined. The chief the comparative merits of the dogs were determined. The chief the comparative merits of the dogs were determined. The chief the comparative merits of the notion and the comparative merits of the notion of the continuous of the thing that the so-called "Spotting System" must be an important faces not believe that the time is ripe for its adoption without modification, or that any practical method for its application has been formulated.

Rule 4 of the present issue is a combination of the good features of the old and new systems, and under its workings we hope and believe the desired end may be reached.

When called upon to apply the "spotting system" the judges shall set up a high standard of excellence, and dogs must reach it or be cast out.

The club wants the competition to be between dogs of courage and stamina, with confidence in their own ability to find birds and seuse enough in hunting for them to take advantage of the conditions under which they are working; dogs that will point promptly, accurately and stanchly, and show by their belowing the thoroughness of their training. While no time limit is adopted, every dog will be given ample time to demonstrate his natural and acquired abilities.

Rule 1.—The management of the field trials is intrusted to the directors of the club on the grounds, and with them lies the interpretation of the rules. They shall also decide upon all matters not covered by the rules.

Rule 2.—Entry blanks filed with the secretary of the club must show the name, pedigree, date of birth, colors and distinguishing marks of each dog entered. A

only running, in accordance with the result of the heat already run like 4.—Dogs shall run in braces, and when the first series is ended the judges shall announce which dogs are to compete for the prizes. The dogs selected shall continue the running, the reaction of the prizes. The dogs selected shall continue the running, the reaction of the control of the contro

the regular judges and with or without a viace mass, a direct, ay direct.
Rule 6.—No dog shall be withdrawn except by permission of the freetors. Such permission being granted, the heat shall be given the opposite dog by default. He must, however, run a side beat s provided for bye dogs in Rule 5. Should it be proved to the irectors that the withdrawal of any dog had been brought about y bribery or other corrupt means, the dog and all persons having uilty knowledge of the transaction shall be disqualified and arred from participation in tuture trial under the auspices of sisclub.

guilty knowledge of the transaction shall be disqualified and barred from participation in tuture trial under the auspices of this club.

Rule 7.—Dogs shall be called in the order obtained by the drawing, and any dog absent more than twenty minutes after being called may be disqualified by the judges and the heat given to the opposing dog. The dog taking the neat must run a side heat as provided for bye dogs in Rule 5.

-Rule 8.—The owner or his deputy may work a dog, but when down the owner must not interfere with his dog if he has deputed another person to handle him. In the members' stake the dogs must be handled by their owners. The person handling a dog may work him as he may deem proper, but he shall be called to order by the judges for making unnecessary noise or for any disorderly conduct, and if after being cautioned he persists in such noise or disorderly conduct they shall order his dog taken up and adjudged out of the stake. The two handlers must keep up and adjudged out of the stake. The two handlers must keep together during the continuance of a heat and work their dogs in the direction indicated by the judges.

Rule 9.—When, In the opinion of the judges, a dog scents game, he shall be allowed a reasonable time to locate it. Discretion is left to the judges to order the opposing dog held in check meanwhile. Dogs shall be brought up to back only when the opportunity is favorable to determine if they will back voluntarily at sight of the pointing dog. Both dogs must, however, be started together after birds have been flushed from a point. When birds are flushed from a point. When birds are flushed to order the handler shall fire one shot unless otherwise directed by the judges. Guns must not be loaded until the point is established.

Rule 10.—All dogs shall be required to run three successive heats

Rule 10.—An adog shall be required to run three successive heats in one day without the consent of his handler.
Rule 12.—No person other than the judges and reporters shall

be permitted to accompany the handler of dogs competing in any host except owners of dogs running in charge of a handler, and they must retire at the termination of the heat until their dogs again come into competition. Spectators shall be kept at least fifty yards to the rear of handlers. Bitches in sesson, or dogs afflicted with any contagious disease, shall not be allowed on the crounds.

grounds
Rivel 13.—All stakes shall be run to a finish if practicable; if Rot, the judges shall select the winners and award the prizes according to the work done by the dogs remaining in the stake. The judges shall decide if it is practicable to finish and their decision shall be final.

THE OGDENSBURG DOG-KILLING CASE.

THE OGDENSBURG DOG-KILLING CASE.

OGDENSBURG, April 28.—Editor Forest and Stream:
In your issue of March 6 was an account of the shooting of Troy my pointer (A. K., R. 6630) by my next door neighbor, A. K. Strong, and his subsequent arrest, trial and discharge by Recorder Derwin's decision that, although "the case of cruelty was proven, the man was justified."
On March 20 appeared an article signed by W. Wade, Hulton, Pa. From it I saw that the writer had apparently overlooked the fact that the offender was tried simply on the ground of cruelty to animals, and not for injury to my property, and the comments could only be construed as applying to the latter mentioned sort of a case. Considering the gentleman inclined to be fair-minded, I wrote a good straight acount of the affair to Mr. Wade, referring him to gentlemen who would corroborate what I said, and defining the difference been "injury to property" and of "cruelty to animals," and received an answer which satisfied me that he understood how far from right the recorder's decision was and that he would make the proper correction in your columns.

I was not a little surprised to read in your issue of the 17th inst., a long drawn essay by Mr. W., which he probably intended to have reference to the shooting of my dog, and which contained no reference whatever to the outrageous decision of the recorder on the trial of the offender. In a very pretty way he describes what a paragon of a dog should be, and at the same time writes as if he had heen accustomed to owning a dog. Well, I will wager him that he never owned a dog that wouldn't desert the finest dog hiscuit known and seek the mystery of a new replenished swill barnel, or that would not panse to meditare over a pile of garden stuff in front of a grocery. Dogs are dogs, and to many people a good dog is like what Phil Sheridan said a good Indian was—"good when he is planted"—but for all that there are many people who dislike dogs who tolerate them because a person who owns and loves a dog is usually possess

at the hands of the human race in spite of their shortcomings.

Now, I wish to make a statement, and I will take issue with any lawyer in the country. I deny that any person has the right to injure in a cruel manner any dog on earth, no matter how much of a nuisancethe dog is, unless the person so injuring the dog had a firm intent to kill the dog, and in the face of the fact that the dog was there with his ear shot off and his neck terribly mutilated, the recorder acquitted him of cruelty to animals.

From the item in Mr. Wade's letter referring to the Johnstown flood subscription, I am inclined to think somebody has been gulling him. That certainly had no reference to any one in this city, as the largest subscription was \$25.

W. H. Murphy

RUNS WITH THE FOXES.

to any one in this city, as the largest subscription was \$25.

W. H. MURPHY

RUNG WITH THE FOXES.

BUNG WITH THE FOXES.

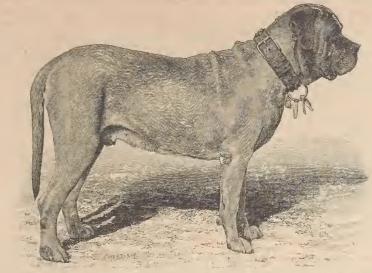

II.—A CHASE IN THE ALLEGHENIES.

PITTEBURGH, Pa., Jan. 13.—Editor Forest and Stream.

In the dense hemlock forests and laurel thickets on the North Fork, a branch of Red Bank Creek, an affluent of the Allegheny River way up in Jefferson county, Pa., foxes are still numerous. The country is rough and rocky abounding in ruffed grouse, field mice, ground squirrels and rabhits, on which the foxes feed, and being little hunted are on the increase. On any tracking snow you can find their straight tracks intersecting each other in all directions, and many a glorious releding comes over a man when transping through the primeval forest on a beautiful winter day the lungs filled with the pure invigorating ozone-laden mountain air, every muscle and nerve tingling with vigor with that feeling of strength and health pervading the whole being, a sensation of which a man who has always followed a sedentary life has no conception, and which is the reward of vigorous, manly, outdoor exercise. Three kinds of foxes are found, the fittle wood gray, the red and the cross fox, with an occasional wildcar.

With old Leader, the veteran foxhound, and four of his descendants, we started out one beautiful winter morning. There was three of four inches of soft tracking snow on the gareealthe, and little or no wind—an ideal fox an interestical control of the strength of the day for the service of the control of the service of the party.

The hounds were diligently hunting through the thicket trying to find a track fresh enough to work out, but up to dinner time we had started nothing. The chances looked very small for the day, for unless we could jump reprand from the rock or stump on the sunny side of the hill, where he is wont to take his day nap under such circumstances, we were about sure to draw a blank. After lunch 1 proceed to follow the creek of the bluffs over house of the work of the country

THE MASTIFF DOG BEAUFORT-THE PROPERTY OF MR. W. K. TAUNTON, LONDON, ENG.

times, stamping the ground in anger, but the cap was wet and it missed fire, and that fox went on without a scratch. Not a drop of blood did we find, and in all my fox hunts I never knew a fox to run such a gauntlet and escape unharmed. Down the creek went the chase a couple of miles, with us after the hounds, until we struck a dense laurel thicket, where the fox tried its favorite tactics of short, sharp curves and circles to throw the hounds off. They kept him running around more than an hour without any of us getting a shot, when finally Ed caught a glimpse of him through the brush and gave him a load of BB. We found blood, and the fox ran down the creek a couple of miles, the blood spurting over the snow at every jump, and sought refuge under a big boulder. I never before could understand the endurance and wonderful tenacity of life of this animal and the amount of blood lost by such a small creature. By this time it was getting dark. We were several miles from home, tired, cold and hungry. We stopped the hole with rocks and earth, and the following day Hank dug out the quarry, still alive, but weak from loss of blood. I was sorry we could not put if out of misery the day before, but we had no tools to dig it out. This ended one of the most exciting fox chases I have enjoyed, the memory of which sends a thrill through my whole frame even now while I am sitting here in my city office. In my next I will give you an account of a wildcat chase, which did not end quite as well for one of us.

THE ST. BERNARD CLUB MEDAL.

THE ST. BERNARD CLUB MEDAL.

NEW YORK, April 23.—Editor Forest and Stream: We send you a photogravure of the design for the medal of the St. Bernard Club of America, which has been competed for at the difference shows during the season.

The head on the obverse will readily be recognized as representing the one of Otho; it is from a photograph of the late

champion and rests on the center of a Swiss cross, the arms of which are protruding, giving the medal a very unique shape. On the reverse are two sprigs of edelweiss, the im

mortelle of the Alps, with space for the name of the winner.
The well known silversmiths, the Whiting Manufacturing Company, of New York, are getting up the medal, which is a guarantee that it will be first-class in every respect. It will he of solid silver and the same size as the photogravure.

COMMITTEE ON PRIZES (K. E. HOPF, Chairman).

EASTERN FIELD TRIALS CLUB.—The governors' meeting of the E. F. T. C. will be held at 44 Broadway, New York city, at F. R. Hitchcock's office, on Tuesday, May 13, at 3 P. M.—W. A. COSTER, Scc. and Treas,

BEAUFORT.

BEAUFORT.

THE mastiff dog Beaufort, of which a cut is given this week, was recently imported from England, making his first appearance in this country at New York. He was whelped July 29, 1884, and is by Bean and out of The Lady Isabel. His career in England was a brilliant one, both on the show bench and as a sire. His winnings there were too numerous to mention, some of the more important are wins in challenge classes at Crystal Palace, Brighton, Portsmouth, Warwick, Barn Elms, Ilford and Birmingham. In addition to these he has won firsts at many other shows, besides specials innumerable, including cups and gold medals of the Old English Mastiff Club. At New York last Fehruary he won first in the open class and the challenge cup of the American Mastiff Club, and at Boston in Anril he also won first in the open class. These are the only shows at which he has made his appearance in this country. He is the property of Mr. W. K. Taunton, London, Eng., who has placed him in the hands of Mr. J. Winchell, Fair Haven, Vt., during his sojourn in this country.

COLOR IN ST. BERNARDS.

Haven, Vt., during his sojourn in this country.

COLOR IN ST. BERNARDS.

Editor Forest and Stream:

In attending the circuit of shows the past winter I have frequently heard the remark that nothing hut orange-colored St. Bernards stood any chance of winning. To be sure, I heard such remarks more from admirers than from breeders; but the fallacy is quite prevalent and should be corrected.

Neither in Switzerland nor England can an orange-colored dog beat a nearly all white or brindle that is its superior in other respects.

It frequently happens that all the prizes at a show are won by orange-colored'dogs, but it is only hecause they possessed superior character, massiveness of skull, etc. To prove my assertion, I would mention champion Miranda, Gemma, Merchant Prince and our new acquisition, Watch; though it is well to bear in mind that all winners of renown, three-fourths or more white in color, have orange or brindle heads, properly marked.

In England there is champion Peggotty and champion Plautius three-fourths white, and champion Angelo a dark brindle. Champion Leonard was nearly all white; but I will speak of the "dogs of the day."

That grand bitch of Dr. Inman's, Haidee, I think, is a dull brown, with no white at all worth mentioning. Most of these have won championship honors—by no means as easy a task as in this country—and must surely be admitted by the most ignorant to be first-class specimens. I will admit that orange and orange tawny are the most popular colors, but the preponderance of white should not he despised by any means. One of our best-made specimens, a son of champion Save, is pure white.

While on this subject of color I will touch on breeding for color, and would like to read the views of breeders on this subject. In my experience the sire has been the reproducer of color. That is, you are far more apt to get orange puppies from a white and orange bitch than from an orange bitch mated to a white and orange dog if there is no inbreeding. In inbred puppies there is a much greater tenden

inbreeding prove so disastrous.

NAMQUOIT.

ONE REASON WHY.—Editor Forest and Stream: Your vivacious, spicy and always readable correspondent, Mr. W. Wade, in his letter the other day asked why a man had not a perfect "right" to shoot a dog, when the dog annoyed him by trespassing and other nuisances. There is at least one good and sufficient reason, as I see it: and this is that, being a "man," with the God-given privilege of being a manly man, no individual should arrogate to himself the "right" or claim privilege to do a demeaning act. I am not particularly fond of dogs; in fact I detest those that bark at night and munder my sheep. But to shoot a dog, not for the purpose of killing it, but as in this case, with intent to wound and cause suffering, I hold to be an unmanly, demeaning act. And I repeat, cannot see how any "man" can claim the "right" to do an unmanly act. Do we not all of us owe it to ourselves and to each other to be manly? and is not humanity to dumh brutes a quality of true manliness? I submit that it is startling doctrine for a person to preach in print, this contention of Mr. Wade's that any man has a "right" to lower himself to the brutal level of a dog shooter.—GEO. B. MANSON.

SMOOTH ST. BERNARD IMPORTATION.—Mr. Poag.

SMOOTH ST. BERNARD IMPORTATION.—Mr. Poag, of Toledo, O., has concluded his arrangements and cabled Friday last for the smooth-coated St. Bernard bitch Sunrise. Mr. Smith, of whom she is purchased, says she is a grand hitch, one he selected particularly to breed to Watch. He has bred her to Keeper, and she will be shipped immediately. She stands 30in. at shoulder and weighs about 150lbs. If nothing happens to her she will be a great addition to the Poag Kennels.

DOGS OF THE DAY.

A FEW weeks ago reference was made to the very apparent fact that the position of the associate members was not thoroughly understood by all the members, and their standing was more clearly defined. It now appears that at 44 Broadway there is also a misunderstanding, and the advisory committee made a serious blunder at its meeting held on April 7. In the Kennel Gazette for that month which makes its appearance on May 1, and reminds one of the first October race meeting at Newmarket which is always held in September), the following appears in the report of that meeting:

"6. The American Kennel Club vs. Associates in arrears for dues, 1890.

"Resolved, That all members whose dues are in arrears for dues, 1890.

"Resolved, That all names of members, who having received this notice, fail for sixty days thereafter to pay their dues be dropped from the roll of membership.

"Resolved, That all as so in these resolutions attached to said notice.

"Resolved, That as dues for the current year were payable January 1st, resignations will not be considered offered since that date, until after the payment of current dues."

I wonder who the wit was that suggested that to get a resignation accepted one must pay \$5. If the \$5 are paid it is hardly likely the person who does so will give up his quid pro quo—the Gazette and Stud Book.

The fact of the matter is that the members of the advisory committee forgot to refer to the constitution on the subject of associate members, or they would never have made the mistake they did. My friend Dr. Perry will allow me to express surprise that he was so led astray, and Mr. Vredenburgh ought also to have detected that the resolutions were all out of order. Messrs, Belmont, Anthony and Wise did not have occasion to know the constitution as did Dr. Perry and Mr. Vredenburgh, and whatever palliation there is in being forgetful or ignorant of the law is theirs. In Mr. Vredenburgh's case I am at a loss to understand how he failed to see the mistake, for he it was who suggested the amendment to Sec. 3 of Art. IV. of the constitution, whereby its present force is proposed to be altered by substituting "may" for the word "shall," which I have italicized in quoting the section, which is as follows: "Art. IV. Sec. 3. The annual dues of \$5 shall be payable on the first of January of each year to the secretary of the American Kennel Club, and any person whose dues are not paid on or before January 20 shall thereby forfeit his right to be included in the list of members eligible for election to office and to vote for officers for the ensuing year; and if his dues shall remain unpaid at the next annual meeting of the associate members his name shall be stricken from the roll, provided, however, that upon remitting the \$5 dues with an application for membership be shall be reinstated upon the indorsement of his application by the two presidents as hereinbefore provided."

It is easy to see now how ineffectual the action of the ad-

It is easy to see now how ineffectual the action of the advisory committee is. We can take it for granted that not one of the members present at the meeting would pass any resolution so diametrically opposed to the constitution as those regarding associate members. The only thing, therefore, for them to do is to correct the minutes in some way, for of course when they come before the A.K.C. for acceptance they will have to be amended by striking out the unconstitutional portions of the proceedings. You see not one of the persons to whom application is directed to be made for dues for 1890 is a member of the club, nor has he been since the annual meeting of the associates held during the New York show. Every one who has paid his money in since that date, if he did not file an application and get it indorsed by Mr. Belmont and Dr. Perry, is not in reality a member. I do not suppose this has been done in a single instance, and it is just as I said at the associates' meeting at Boston, that the most exasperating thing in connection with the A.K.C. is the disregard of the plain and definite requirements of the constitution. Ninety-nine per cent, of the errors made by the A.K.C. since its organization would have been avoided if it had occurred to some one to see what the constitution called for.

In the case before us we have an instance which is a long.

In the case before us we have an instance which is a long way from being an exception, and it will be seen at a glance that the passing of the resolutions by the advisory committee was a waste of time. None will acknowledge such to be the case sooner than the members of that body, mortifying the case sooner the though it may be.

the case sooner than the members of that body, mortifying though it may be.

There is another resolution the committee passed to the effect that hereafter official notices of the A. K. C. would only appear in the Gazette. That I understand to be that the secretary will send no notices of expulsion or reinstatements to club members of the A. K. C. or to the kennel press. Presumably the object is to boom the Gazette, but will it do so? I doubt it for the reason that if the kennel papers choose they can quote from the Gazette within a day or two of its publication. Is it a wise step? I doubt it. Let us take, for instance, the Albany Kennel Club case, which appears in the report of this same advisory committee meeting. The A. K. C. was advised by Mr. Gallup, of the Albany Club. that checks for all unpaid premiums, for which he and his brother officials had been expelled and his club suspended. had been remitted to the winners at the show of 1889 The committee decided that he must file a statement of premiums so paid, and thirty days thereafter, if no further complaint is made, reinstatements will follow. No such statements appearing in the April Gazette it is to be presumed that none had been received before going to press. Supposing it has already been received it was possible for it to be received by May 2, presuming that the secretary gave the Albany people no more notice than he gave other members. On May 31 the Gazette for the present month is sent out with the statement, and the thirty days expiring on June 1 the Albany Club is duly reinstated before any one gets a chance to check the account in such manner as the advisory committee desired. Such a case occurred to me as soon as I read the report, and it would be easy to add many others, such as expulsions during the show season, which ought to be publicly announced at once.

Ought to be publicly announced at once.

There is another case, notice of which appears in this same committee meeting report, which will bear looking into. At the Baltimore show an exhibitor was disqualified for taking his dogs out contrary to a specific refusal to permit his doing so, for which he was disqualified. The case has been taken up by the advisory committee, how yet remains to be seen. If the exhibitor appealed, the rules provide a definite method of procedure, which is that the case goes to the president, who may grant temporary reinstatement or allow the penalty to continue in force, but in either event it goes to the executive committee and that committee alone. There is nothing in the rules about the advisory committee deciding these appeals. Altogether I must reluctantly confess that about the only commendable thing done by the committee was to order the money so long due mr. "Billy" Graham paid to him at once. I suppose the case "Watson vs. Rochester Kennel Club," will eventually be determined. It was started last June, and my evidence as called for respecting request for reserve numbers for the special prizes has been furnished, and now Secretary Yates must put in any evidence he has or lose the case by default.

I don't want that at all, but a decision on the merits of the case as submitted. I don't know that it affects the Rochester Club at all, the specials being donations. This was a case in which an objection was lodged before the show closed, with a request to have reserve numbers taken. The club overruled the protest, which, upon appeal to the A. K. C., was sustained, and we have been backing and filling since last September over the reserve number business.

R. C., was sustained, and we have been backing and filling since last September over the reserve number business.

Nothing funnier has turned up in the kennel world for many, a long day than the report of the general meeting of the Scottish Dandie Dinmont Terrier Society, held at Glasgow last month. It is to be hoped that Mr. Læuder, Hon. Sec. Scottish D. D. T. Society, will not be removed from his position, for he is the "Bill Nye" of dogdom as represented in our English exchanges. It was only a week or two since he was boiling over with indignation at Mr. D. J. Thomson Gray, president of the society, for having in an off-hand manner referred to it as the Dandie Club instead of its full name. D. T. and all. Lauder's latest is the official report of the Glasgow meeting. What it is in toto may be judged from the following "bits":

"The hon. sec. pointed out that the programme in his han was only partially through. However, the president began reading and commenting on some document, which he styled 'A memorial'. * * * The hon. sec. * * * asked for and proceeded to hand the same to Mr. Cook to read also, but to this Mr. D. J. Thomson Gray objected, strongly supported by Mr. Houleston gracefully flourishing a loosely tied umbrella. with which he threatened to knock down the hon. sec. * * The president then vacated the chair, declaring the meeting finished, at which the hon. sec. protested. * * * The responsibility for this unparalleled episode in the society's affairs must rest with the president for the follow three numbered reasons, the third of which is "By the insult leveled at that official [hon. sec.] [and Mr. Cook, when wishing to read jointly in the meeting's presence this extraordinary concoction."

Then follow three numbered reasons, the third of which is extraordinary concoction."

this extraordinary concoction."

The foregoing is the comedy side of the rather dry reports of club meetings held in England. What strikes one accustomed to parliamentarily conducted meetings is the peculiar looseness of doing business at these English meetings. At the Basset Hound Club meeting Mr. Millais was chairman, and yet of the three resolutions acted upon, one was proposed by the chairman and another seconded by him. The bulldog men are a lot worse than that, however. At one meeting they decided to alter the weights, making class VIII. for bitches 38lbs. and under 45lbs. weight. At the next meeting, when these minutes came up for approval, a proposition was made to alter them, substituting 35lbs. for 38lbs. Extraordinary as such a proposition was, yet nine voted to alter the minutes and only ten to have them stand. Of course the proper way in such a case is to move a reconsideration, but not to alter minutes except to make them a true transcript of what took place.

Mr. Frank Dole has just received the appointment to take charge of the Athletic team of Columbia College, which will represent the college at the international athletic meeting. In addition to this he has also been appointed to a similar position by the Berkley Athletic Club of New York. It is likely he will have to abandon his proposed trip across the Atlantic this summer.

Premium lists are ready for the Cincinnati show of June 3 to 6. Mr. George H. Hill advises me that the committee has secured the services of Major Taylor as judge of setters, pointers, foxhounds and beagles, while Mr. Mortimer will handle the remainder of the classes. Mr. Hill says that the prospects of a successful show are most flattering.

Official notice is given of the disqualification of the beagle Belle of Woodbrook, wrongly entered in the challenge class at New York. Mr. W. D. Hughes's Lou thereby moves up a peg into first place.

Can a person who is suspended for violation of rule 25 of the A. K. C. code, still remain an associate member in good standing? Also, can a person who has been expelled by a club, of which he was a member, and who therefore cannot be employed in an official capacity at any show, be accepted as and remain an associate member?

Has "Ashmont" gone in for bulldogs? I see his Atossa has been bred to Harper. Mr. Sawyer has already received the bitch Dolly Tester from England and bred her to Harper. Thereon hangs another conundrum. Can any medical reader explain why or give a reason for an ocean trip sending a bitch back from two or three months in her period. It has occurred in every case in which I have been interested, Nesta once and Mavis twice. On the other hand Dolly Tester comes over and is bred at once. Probably she was in season when shipped, and I should like Mr. "Harper" Sawyer to let me know if such was not the case.

The Stock-Keeper asks Mr. Fred Hinks to say whether he did not sell Beryl as a deaf dog. I know he told Mr. Dole he had a deaf dog, "the best in Eogland," and quoted him at a temptingly low figure. Mr. Dole told me so at New York, and added that he would not buy another deaf dog, "Ashmout" has written one of his excellent articles on the subject of deaf dogs and its hereditary tendency. It is not for me to dispute such an authority, but is it not strange that deafness should be so frequent in white bull-terries and white cats? Text-books say that white cats with blue eyes are almost invariably deaf, but I had one that was not.

Mr. Fred. Kirby has just had the hard luck to lose all but one out of a litter of fourteen St. Bernards. "A bitch, of course, Fred?" "No. I did have one little bit of luck; it is a nicely marked dog."

The Gazette for April contains a list of twenty-two "Round-headed Bull-ferriers." As they are under a different caption from "Bull-terriers" they are a different breed. Precisely. Then what recognized breed are they? Could an R. H. B. T. win in the miscellaneous class, and if it could not, what will the Stud Book committee do about registering the winners?

Roslyn Queen, the nice collie bitch puppy shown by the Chestnut Hill Kennels at Boston, has a bit of a history. Months ago she went astray and was bought by a farmer for \$2. This farmer sold off shortly after and the collie fetched \$1.50. About this time Jarrett in his clever way was advertising in the country papers for a "light-brown shepherd slut," with a \$5 reward as a bait. Some fellow who was at the sale saw the "ad," went to the man who had made the purchase at the auction sale, got her for \$2, and sold her to the man whose name appeared as the advertiser, I see Jarrett is now advertising for a "brown shepherd with a leather collar and a piece out of an ear, answers to the name of Mavis." I hope he will have equally good luck and get her back soon, for she was bred a month ago to The Squire.

As the first litter by The Squire has made its appearance it is evident that his age has not interfered with his virility. Dublin S ot and Charlerof II. are at Mr. Stretch's Ormskirk Kennels by this time. It is a great pity the latter was so neglected by our breeders.

THE RIFLE IN CALIFORNIA.

THE RIFLE IN CALIFORNIA.

LOS ANGELES, Cal., April 23.—Inclosed please find score sheets of manches held at a rifle tournament under the auspices of Co. A. 7th Infantry National Guard of California, April 19 and 20. The matches were open to any kied of rifles and sights, except telescopic sights; the military rifles and rifles with open sights having a trigger pull of 6lbs, or over teceiving 2 points on the Creedmoot, 4 points on the Amorican and 10 points on the Grana 25-fine target. The wind was apparently froublesome to the sporting rifles, as few could allow for the same. The low scores of mosts of the members of Co. A were occasioned by the boys having to busy themselves during the day with the targets and helping the strangers all thoy could. This was the first time in souther California that a rifle is urnament of that kind and ever been held, and it was a great success in all ways. Everybooy was satisfied and no disputes arose. We contemplate arranging another tournament some time during the fail.

down to \$4\$ for the most bulkeyes, \$\$ for the first and \$1\$ for the last red flag each day. The bullseye will be \$4\$ in.

CREEDMOOR,—Capt. John S. Shepherd, seer tary of the National Rifle Association, says that the transfer of the range at Creedmoor to the ownership and control of the State would probably be effected during the present week, Attorney-General Tabor having officially informed the Adjutant-General, who is the head of the commission created in the hill appropriating \$25,000 for the acontrement of the property, that the title of the National Rifle Association is unassailable. Military shooting has already been begun at the range, under the direction of the General Inspector of Rifle Practice, by the infantry organizations of the First and Second Brigades, and will continue until the end of June, or until the opening of the State Camp of Instruction at Peckskill. In the meantime Secretary Shopherd is engaged in preparing a programme of matches of the National Rifle Association, to conform with the radical clianges in the system of military rifle shooting announced in orders from general headquarters at Albany. The first of these natches is to be shot on the Fourth of July. It will be open to all members of the National Guard in uniform, who will then have an opportunity of securing the State marks man's decoration and winning substantial prizes in cash and trophies.

NEW YORK,—White Elephant Rifle Range,—The off-hand Creedmoor target rifle match, which was commenced at this match were seven shots with .22-cal. rifles, position off-hand, the highest saggrague of three targets to count. Three medials were awarded in this competition, two gold and one silver. Mr. W. E. Carlin 108, Geo. E. Jantzer for the second and Mr. J. C. Taylor for the third. The following is a list of some of the best, the possible being 105: W. E. Carlin 108, Geo. E. Jantzer 101, J. C. Taylor for S. Frotbingham 88, F. W. Ediredge 88, J. N. Ostron 97, C. H. Simpson 95, R. E. Burhank 82, A. R. Page 91, D. Fosdick 84.

The rest matc

ing, May 6, when a new semi-annual contest opens.—Dapping.

BAYONNE, N. J., May 3.—Half a dozen clay-pigeon matches were shot to-day on the New Jersey Athletic Cluh grounds by members of that organization. Three events were for trophies contested for during the whole year. The traps worked hadly, More than half the bluerocks were smashed by springing into the air, and good results were accomplished under disadvantages. In the seventh match for the club's gold emblem G. DeWittSmith was victorious. The conditions were 20 singles, with usual allowance. The score shows the number of birds broken: G. D. Smith 15. E. V. Lawrence 14, C. A. Pope 12, A. F. Compton 10, G. S. Virden 18, E. Warrington 12, R. Sunderman 12. The fourth match for the Virden medal was shot under the same conditions and won by E. V. Lawrence. The score: E. V. Lawrence 18, G. S. Virden 14, R. Sunderman 16, E. E. Bigoney 17, C. A. Fope 11. Two by a single point. Each man had 30 bluerooks. Score: Team No. 1 won by a single point. Each man had 30 bluerooks. Score: Team No. 1—E. V. Lawrence 14, E. O. Schuyler 7, G. D. Smith 7, J. M. Taylor 18; total 46. Team No. 2—E. E. Bigoney 7, C. A. Pope 9, G. S. Virden 14, R. Sunderman 15; total 45. E. F. Compton won the walking match at 10 singles, only missing one. He bad four competitors. C. A. Pope took the prize in a swepstake at 10 singles, breaking 7. A prize match at 20 singles was won by G. S. Virden, who broke 15 and defeated C. A. Pope on a tie.

THE TRAP.

Scores for pullication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

NEW YORK TOURNAMENT.

NEW YORK TOURNAMENT.

I YONS, N. Y., May 6.—Editor Forest and Stream: All clubs now members of the Now York State Association for the Protection of Fish and Game, and those contemplating joining the Association are requested to send complete lists of their delegates to R. J. Parshall, Secretary, Lyons, N. Y., as soon as perfected. The annual meeting of the Association will be held in the parlors of the Lyons Clmb, Jan. 9, 1890, at 8 P. M. A full attendance of delegates is requested. Reduced fares on railroads have been arranged, for particulars of which address the undersigned.

Two sets of traps will be used in the regular sweepstakes shooting. Open to all. One set will be run under the American Association rules using five traps, rapid firing system. Kingbird targets will be used in all contests. The management regard it unnecessary to guarantee contests, as in any event the surplus would go to the contestants. The large attendance assured makes this entirely unnecessary. In addition to the regular sweepstake contests there will be a set of traps for amateurs, to be under their direction and for their exclusive use. The Club grounds will be open Monday, June 9, at 12 M. for practice shooting.

Lyons is situated mid way between Rochester and Syracuse, and is considered the most important transfer line of the New York Central & Hudson River Railroad. The hotel accommodations are ample for any crowd that may be present. The rates will be made satisfactory to all. The grounds of the Spencer Club are large and pleasantly located, being within the corporate limits of the village and easy of access. Carriages will be run from the hotels at regular intervals each day during the week. Upon the grounds a large tent will be erected for the comfort and pleasure of sportsmen. All sportsmen are invited to take part in the sweepstakes, which promise to be an interesting teature of the meeting. This programme will exceed anything that has been presented in several years, and the success of the coming convention is now assure

Match 10-Twenty targets, open to all, entrance \$2.50, 16 entries: Fayette and Pumphrey first, Heikes and Bandle second. King and Courtney third.

Match 11-Ten targets, open to Classes B and C, entrance \$2,25 entries: See, King, Krueger and Penn first, North, Edwards and Pumphrey second, Bird, Frank and Jack third.

Match 12-Ten targets, open to Class C, entrance \$2,23 entries: Miller and Ross first, Shepard, Aston, Ball and Murphy second, Underwood and Reams third, Miller fourth.

BALTIMORE. April 30.—Aoton's new shooting park at Brooklyn, Anne Aruudel country, Md., but a short distance from Baltimore city limits, was formally thrown open to the public to-day and the season inaugurated by a series of evonts in which live birds only were used. W. Fred Quimby. of New York, C. and R. Irwin and Wm. H. Wolstencroft, of Philadelphia, were present; and with a few of our own braves managed to dispose of over 500 birds and have a pretty good time.

Master of Cereinonies Fred Quimby announced the first event at 4 birds, \$3 entrance, two moneys, which had six entries; Capron 4, Wolstencroft 4, Quimby 3, C. Irwin 2, Williar 2, R. Irwin 2. First div., Quimby second.

Second event. same as first: Quimby 4, Capron 4, Wolstencroft 4, Irwin 3, Williar 8. Ties decided in next shoot.

Third event, same again: Capron 4, Quimby 3, Irwin 3, Wolstencroft 3. Capron first in this and No. 2, the s for second held over till next match.

Fourth event, same as others: Quimby 4, Capron 4, Wolstencroft 4, Irwin 3. Irwin second. Ties ou first in this and second in third event shoot off, miss and out; Quimby 1, Wolstencroft 1. Capron 0, Quimby and Wolstencroft div.

Fifth event, miss and out; Quimby 1, Wolstencroft 1. Capron 0, Wolstoncroft 4, Malone 6, Williar 8, Quimby 8. Ties referred to next event for results.

Sevent event, Sentrance, 6, Williar 6, Quimby 8. Ties referred to next event for results.

Sevent event, same as last: Quimby 6, Capron 6, Wolstencroft 6, Franklin 6, Irwin 5, Malone 6, Kell 3, Williar 8, Ties aroin resevent.

Eighth event, Same as last: Quimby 6, Capron 6, Wolstencroft 6, Franklin 6, Irwin 5, Malone 6, Kell 3, Williar 8, Tes aroin resevent.

1111, Franklin III.

Sept. 111, Franklin 6, Irwin 5, Malone 5, Kell 3, Williar 3. Ties again reterred.

Chimbre 4, Walsteneroft 6, Capron 6,

o, Frankint, Itvin o, Maione S, Reil 3, William 3. The again referred.

Ninth event, same again: Quimby 6, Wolstencroft 6, Capron 6, Irwin 5, Malone 5, Franklin 5, Kell 4. Ties again referred.

Tenth event, same again: Quimby 5, Wolstencroft 5, Irwin 5, Malone 5, Capron 4, Franklin 4. Quimby and Wolstencroft shot out Irwin and Malone and div. moneys from eighth, winth and tenth events, second money div. by Capron and Franklin.

Thus ended the initial shoot of the season. Froper advertising of such events and proper support by the local and visiting sportsman cannot fail to make meetings at this charming resort a great success.—Prous.

PHILA DELPHIA. May 1.—The more boars of the Darke Care.

man cannot fail to make meetings at this charming resort a great success.—PIOUSES.

PHILADELPHIA, May 1.—The members of the Darhy Gun Club engaged in their monthly shoot this afternoon, on their grounds at Collingsdale. Five traps were used, 25 bln rocks per man. Following is the individual score of the glub:

Chew. 15 GW Urian. 11 F Whitcomb. 8

J Hentek. 8 WW James. 15 C Wedig. 5

L Haldt. 18 H Urian. 18 F Whitcomb. 18

J Hentek. 8 WW James. 16 C Wedig. 7

Following the club shoot came a sweep, at 5 birds. Association rules, a miss and lay off, in which L. Haldt won first by breaking 10 straight. C. Chew, second, hreaking 4 straight. C. W. Urian broke 8 straight, but was outshot by Haldt.

About a dozen well-known gunners of the First Ward have organized a gun club, to be known as the Silver Lake Gun Club. A club house is to be erected on grounds near the Point House read and Pennsylvania railroad. All the equipments of a first-class gun club will be included. Among the members are W. Deshl, G. Fregory and T. McLaughlin. The club organized by electing the following officers for the ensuing year: Chas. Wedig. President and Field Captain; David Gregory, Treasurer; Harry Dick, Secretary. The club at its first practice shoot, at 15 bluerocks per man, 5 traps being used, made the following scores:

W Deshl. 13 D Gregory 12 G Gregory. 9

G Flomerfield. 12 J Lynch. 9 T McLaughlin. 8

H Dick. 8 C Wedig. 15

that the club seems to have taken a new and prosperous lease of life.

ROCKY MOUNTAIN TOURNAMENT.—The programme for the annual shooting tournament of the Rooky Mountain Sportsmen's Association, at Cheyenne. Wyo., has been arranged by the committee and approved by the officers and directors. The dates are Tuesday, Wednesday, Thursday and Friday, June 17, 18, 19 and 20. Monday of that week will witness the commencing and Saturday the close of the meeting. The cash prizes amount to \$1,700, all but \$500 of which is subscribed by Cheyenne people. The attendance will be not less than 300 shooters. The officers of the association are: C. M. Hampson, Pros., Denver, Col.; Dr. A. A. Holcombe, Vice-Pres., Cheyenne, Wyo.; W. E. Ostrander, Acting See'y and Treas., Denver, Col. Board of Directors, Geo. H. Bradley, Utah; Hon. Ralph F. Twitchell, Mew Mexico; Dr. D. H. Bradley, Utah; Hon. Ralph F. Twitchell, Mew Mexico; Dr. D. H. Bradley, Leadville, Col., delegate at large. Tournament Managers: Dr. A. A. Holcombe, Chairman; John Schuneman, See'y; George Fast, P. Bergerson and E. Schuneman; Ground Manager, Frank Parmelee.

Or. A. A. Holcombe, Chairman; John Schuneman, Sec'y; George Fasit, P. Bergerson and E. Schuneman; Ground Manager, Frank Parmelee.

MILLER'S FALLS, Mass., May 3.—Miller's Falls Gun Club. Second weekly shoot of this club, and as the score will tell they are not much at wing-shooting. Match at 10 Keystones, 1 Keystone frap. 16yds. rise:

P E Amiden. 3. FA Lanfair. 3 G Scott. 2
S Henry Amiden. 5 H D Lanfair. 2 N W Smith. 2
S Henry Amiden. 5 H D Lanfair. 1 E J Wheeler. 5
E L Lanfair. 2 F H Rytber. 1
Ties on 5 at 4 birds, 16yds. Amiden 3, Wheeler 2.
LANSING, Mich., April 30.—The Lansing Rod and Gun Club held a shoot at the Michizan avenue grounds for the first time in two weeks, as the weather before had been untavorable. The next shoot will be held at their grounds at Pine Lake, as the roads have become good, so they can drive there and back. The result for the 30 singles and 5 pairs doubles was as follows: Chatterton 23, Cooley 30, Nichols 37, Hall 24, Whitehead 23, Wright 28, Shubel 21.—G, McK., Jr.

KANSAS CITY, Mo., May 1.—The South Side Gun Club shot today: M. Doran 11, W. J. McCristle 10, Lee Kritser 12, F. Wittlen 10, A. E. Ashbnook 13, M. K. Kelley 12, F. H. Caroll II. A. E. Ashbrook 13, M. K. Kelley 12, F. H. Caroll II. A. E. Ashbrook 13, M. K. Kelley 12, F. H. Caroll II. A. E. Ashbrook 50, and a first a stream reless gun, 15 single bluerocks, 3 traps, American Association rules. J. V. Cowles, referee.

BEEVILLE, Texas, April 21.—The Beeville Gun Club is composed of amateurs as faras trap shooting goes, Match at 20 claypigeous, No. 2, one trap. American rules: Stephens 4, Beasley 15, Cook 12, McCurdy 13, Skaggs 15, Klipstein 9.

LONG BRANCH, May 3.—The regular weekly shoot of the Central Gun Club was held this afternoon. The following records were made for the Daly & Price gold badge at hluerocks: George Cubberly hroke 6 out of 10, Si William P. Taber 5 out of 10, Elisha West Price 25 out of 30. Jeptha Vandyke I. out of 30, Capt. Chas. Morris 24 out of 30, Charles Woollev 13 out of 30, Arthur Newman 15 out of 30, Edwin Taber 15 out of 20. Wm, Joline 5 out of 10, J. L. Price 20 out of 30, Edwin Taber 15 out of 20. Wm, Joline 5 out of 10, J. L. Price 20 out of 30, Edwin Taber 15 out of 20. Wm, Joline 5 out of 10, J. L. Price 20 out of 30, Edwin Taber 15 out of 20. Wm, Joline 5 out of 10, J. L. Price 20 out of 30, Edwin Taber 15 out of 10, Philip Daly, Jr., 9 out of 10. This shooting up gives Elisha West Price a big lead for this medal. In a sweepstakes of 10 bluerocks each Capt. Morris and Elisha West Price ach broke 9, Frederick Beale 8, Jobn L. Price and Charles Woolley 6 each, D. Slocum 5 and Arthur Newman 4. The last event was a sweepstakes of 10 bluerocks, with 7 menethered. Elisha West Price took first money with a record of 9; Philip Daly, Jr., and Charles Woolley divided second money with 8 each; John L. Price broke 7, Frederick Beale 6 and William C. Price 2. The regular weekly shoot of the Occanville Gun Clubrought out a bic crowd of spectators. Whitney I. Cook carried off the gold badge. He only missed 1 bluerock out of 15. The loather medal went to George H. Schaick.

May 5.—About 500 people witnessed the live pigeon shoot which took place this afternoon between teams from the Riverside Gun Club, of Red Bank, and the Central Gun Club, of Long Branch team scoring 56. The birds were swift and strong flyers, and few of them were incomers. American Association rules governed the shooting was superior to that of the opposition team, and they won with a score of 61 killed out of a possible 80, the Long Branch team scoring 56. The birds were swift and strong flyers, and few of them were incomers. American Association rules governed

RED BANK, May 2.—The Riverside Gun Club shot to-day, Live birds and clays were both used as targets. The opening event at 10 live birds was won by A. Ivens with a clean score. John Cooper was second with 9. Fred Bealo was third with 8. Jas. Cooper, Oscar Hesse, E. Throckmorton, M. F. Cornwall and J. B. Bergen each killed 7, and Dave Belshaw. E. M. Cooper and H. C. White each 6. Second event, misses out, live birds: H. C. White, James Cooper, F. Beale, John Cooper and E. M. Cooper cach killed 3 straight and the hirds gave out, so they divided. Iyens and M. E. Cornwell were shot out on the third round. Third event, at 9 single bluerocks: John Cooper and A. Ivens divided first with a clean score. E. M. Cooper, F. Beale and Jas. Cooper each got 8 and shot off for second place, E. M. Cooper winning. E. Bussell got 6 and H. C. White 4. Fourth event, 9 single bluerocks: F. Beale and John Cooper divided first with clean score. E. M. Cooper divided first with clean score. A. Ivens, Jas. Cooper and H. C. White 4. Fourth event, 9 single bluerocks: F. Beale and John Cooper divided first with clean score. A. Ivens, Jas. Cooper and H. C. White each broke 8 and shot off for second, White winning. E. M. Cooper broke 7.

MARION, N. J., May 1.—Judging from the large gathering of

There was a moderate attendance at the weekly shoot of the club, Saturday, May 3. A strong southwest wind made high scores the exception rather than the rule. The merchandise match for May was begun on this day, 10 singles and p.irs bluerocks; 15 was the highest score placed on record, as the doubles pulled the scores down, they being rather hard to secure. The weekly shoot on the grounds will be omitted the coming week, as the club propose making quite extensive improvements on the house and grounds, which will take some two weeks to complete.

THE NEW YACHTS OF 1890.

THE accompanying list of new yachts of 1890 offers an interestment of American yachting; and especially to those who, as
officers of the yacht clubs, have in thoir hands the moulding of
the future fleet. The list has been made as complete as possible,
but in some cases builders have neglected to teply to inquiries.
We will be glad to receive notice of any errors or omissions. The
steam latunch from 60ft, downward, including the naphtha craft,
has become so common, being used for cruising, hunting and
mixed purposes of pleasure and trade in all parts of the country,
that no complete list is possible. We have included some of the
larger craft of this class built purely for pleasure use, but the
list by no mans represents the amount of building in this
firect of this class built purely for pleasure use, but the
list by no mans represents the amount of building in this

hoats, plenty of now boats, and plenty of raching, plenty of good
hoats, plenty of now boats, and plenty of raching, plenty of good
hoats, plenty of now boats, and plenty of raching he country, with an in
oreased interest in activity is a properties of the country of the country of the country of the country of the properties of the country of the country of the country of the country of the countr

dition to the class is an 86ft, cruiser, a wooden craft designed by Mr. Burgess, and intended for off-shore cruising. Her name, Fleur de Lis, revives old memories of the schooner fleet of twenty years ago, of Tarolluta, Tidal Wave, Idler, Meta, Columbia and others now half forgotten. The owner of the new craft, Mr. George Trotter, proposes to try her on some long cruises, with no thoughts of racing. The 81ft. class has taken no more definite form than it has had for some time, and numbers no additions, with little promise of racing among its present members. Marguerite is for sale, leaving only Denone, Iroquois and Halcyon. It is somewhat suprising that no one has been tempted to copy the handsome little 55ft. Quickstep which showed so well in the racing last year, as she is of a very convenient and economical size and combines racing and cruising qualities in a very fair degree. No one has tbough it worth while, however, to build to beat her.

In the single-stack neet the Fort. class is still among the was-to-have-beens, apparently further off this year than it was two seasons ago. It still boasts of a middle and a tail, Volunteer and Puritan, but no one bas shown the least inclination to endow it with a head in the shape of a real steel racer of 90ft. waterline. Even in Eorland, where single stick craft of large size were once common, but one large yacht has been built in three years, and

The 70ft. class, although one of the most active in the racing, also shows no additions this year, the sum total of progress being the hipping and pulling out of Shamrock and the minor altributes in Katrina. These, with the absence of Captain Haff from Titania, will serve to infuse a little uew life into the races of the class, but yachtsmen will regret that Mr. Maxwell is not in it with a new flyer, rather than in the old craft, and that some new men have not gone in to help in lowering Titania's colors. It is specially to be regretted that the only large racer of the year, and she is a Burgess keel of light built, should come just-between the two classes where she might find worthy competitors. Titauia's success last year should have brought two or three uew men and boats in to beat her, there can be no question of the premanency of the 70ft. class, the most firmly fixed of any, and it is likely that in addition of plenty of sport at home it will before long be collyered by some international racing. The new vaccht Wave.

The continued and-unbroken success of Clara is a challenge that American yachtsmen can no longer afford to disregard, as she has headed her class since 1885. Not only should it be an esy task to beat her under the present rules and with the latest advances, but the class itself is an excellent one; a steel racer of 58tt waterline and of modern type giving excellent accomodations for the usual snumer work and at the same time affording plenty of sport on the regatta courses. Clara is now nearly ready, and with new sails and copper will be in the carly races, but with nothing to meet her. The sole addition to the class, the Ventura, or the Broncho of the Bronx, is hardly to be considered, as neither

The 46ft, class is just now coming to the front about Boston, and new and old together will furnish some good racing. Of the two new additions, the centerboard Millicente was included in our list of last year, being started for Mr. C. D. Owens, but not finished in time. She was sold last fall to Mr. A. B. Turner, of Boston, and was lately launched at Lawley's. She is similar in a general way to the forties Nymph and Verena. The new boat of the class, the Thelma, is a keel craft for a Boston yachtsman, Mr. F. B. McQuesten, a similar craft to Alga and of wooden build. The fleet now includes Alga, Millicente, Bayadere, Fanita and Vixen, the latter two well known to yachtsmen. There should be some very fair racing for this year at least, all of the boats being of moderate proportions, but sooner or later some one will jump into the class with an enlarged forty, leaving the moderate craft far astern and setting a page that they caving the moderate craft

As it now stands the class has been compared very favorably with the 40ft, as being less expensive and at the same time giving greater accommodations, but these merits are not due to any intrinsic virtues in the length, 40ft, but merely to the fact that rearraing in the class has not yet begun. It may be that the crew of a 40 is also sufficient for a 46-footer, but the main point is that the extreme of the smaller class has not yet been reached in the larger, when it does, and we see a 40ft. Liris carrying a rig as large as Hildegarde, Wenonah or Tbetis, there will be less hearr about the advantages of the class. The fact is that as long as they are kept within moderate limits both the 40 and 46-footers are excellent craft, well suited to a very large number of yachtsmen If both classes can be maintained with plenty of entries in each so much the better, but unless this proves to be the case it is folly to pit one against the other with the result that racing suffers in both. This year the 40ft. class will have a good trial about Boston but in New York it is practically dead. The forties wil, monopolitize all of the racing west of Cape Cod, besides some trafter east The fall regatta of the Eastern Y. C. will be confined to these two

The additions to the 40th class are fewer than was expected; but, on the other hand, the dire lamentations that were heard at the end of last season over the dissolution of the class have proved to be groundless; it still has plenty of vitality, and is now the backbone of yacht racing in America, as the 20-rating class, its parallel, is in England. The three American forties are all from the board of Mr. Burgess, but varying from each other and also from all of his previous boats. The principal one is naturally the Gossoon, her owners, the Adams brothers, having already owned two of the notable boats of the class, and standing in a measure as godfathers to it. After their experience with Pappoose in 183 and Baboon in 1838, they spent last season in English waters sailing on the crack 20-rater Dragon. On their return last fall the new Gossoon was planned, her chief mission being to beat Minnew Gossoon was planned, her chief mission being to beat Minnew Gossoon was planned, her chief mission being to beat Minnew Gossoon was planned, her chief mission being to beat Minnew Gossoon was planned, her chief mission being to beat Minnew Gossoon was planned, her chief mission being to beat Minnew Gossoon was planned, her chief mission being to beat Minnew Gossoon was planned, her chief mission being to beat Minnew Gossoon was planned, her chief mission being to beat Minnew Gossoon was planned, her chief mission being to be the control of the control of the chief mission being the

Minerva and also the Burgess loads of last year, Maraquita and Chispa—about 9ft. 3in. The beam, 12ft, is midway between last year's boats, 13ft. 6in., and Minerva, 10ft. 6in. The midway between last the strong hollow near the garboards being filled out proportionately. The same tendency is seen in the sheer plan, a strong rake to the sternpost, a cutting away of the keel below the mast, while the lead keel is greatly increased in width. The ends above water, with the sheer, remain much the same. Like her two sisters, Gossoon is flush decked, but the construction is quite different, the scanting being reduced and steel frames substituted at each third space, with steel floors. The planking is single-skinned, and deck of one thickness also, the example of Liris not being followed in these respects. The mast will be a solid stick, but the boom and gaff will be hollow. Blocks and fittings will be lightened as much as practicable. The lightening process is seen in many places, as in the head of the sternpost, which is cut away above the horn timbers, leaving just enough wood to form the foreside of the radder trunk. This reduction, however, does not extend clear aft, the transom and quarter timbers being large and heavy, of white oak.

described in the FOREST AND STREAM, a centerboard craft about a foot barrower and fin. deeper than the Nympb type, but with the same easier section and reduced bilge that marks the Gossoon. The construction is the same, estel frames and finsb deck, but in this case the tail is lightened by the use of yellow pine for the transom in place of oak. A still more extreme step in the same direction is the new Foster Ventura, the responsibility for which is shared, we believe, by both owner and designer. She is a very deep centerboard craft, drawing about the same as Chiquita, but with 12tt. beam, nearly 1½ft. less than the older boat. Of course, the bilge is very light and the whole sweep from keel to planksheer is casy, no marked hollow or round. She is of the same construction as the other two, and like them with flush deck. Gossoon and the Morgan boat will carry moderate rigs, considerably larger than Minerva, but not like some of last very screations.

The 301t, fleet is just now experiencing a decided boom in the East, no less than a dozen new crait being on the list. Some of these are only in the second flight, being intended for local racing, but a number are for the vicinity of Marblehead, the nursery of the class. Of course the successor to the two Saracens claims first attention, as she is likely to be the best the owner and designer can concoct, and to be as well manned and salled as any. Saladin is an improved Saracen, the diminisions being about the same, 30×10×7. She shows a fair and easy form, with more take to post and less forefoot than the older boat, also an easier sweep to her section. She will be flush decked with a very long opening down the center, 9tt. 6in.x3ft., covered by a combination slide and skylight, and by a light hatch in racing. While this plan is convenient, it has the disadvantage of a loss of strength, so many main beams being cut. Below she has one long cabin and a forecastle, the room not being equal to Katbleen's. The frame is similar to Kathleen's, two steamed timbers between each pair of sawn frames, the latter being double, but the scantling is considerably heavier. The cockpit is quite small and there is a good deck for working, but little obstructed by it or the long companion. The boat will carry a large rig, though still smaller than Kathleen's. The other keel thirties are similar to Saladin in dimensions

Besides the keels there are several centerboard racers of the

summer, hence not included in last season's list, the same being the case with the 40 Choctaw, also a ceuterboard boat. These little craft are note wide and deep, lift, 6in, beam and 5ft, 6in, draft. It is worth noting that in this class Mr. Burgess has taken a foot of beam as equiva'ent to a foot of deptn, the centerboard models being lift, 6in, wider and the same amount shealer than the keel; equal amounts being thus taken from the draft and added to the beam. We believe that as a conclusion from some experiments carried out some years since Mr. Dixon Kemp placed about the same relative values on beam and depth. In the same class will be two or three new Cape cats, or boats of the Harbinger type; and altogether there will be pienty of 30ft, racing in the East. One proposed addition to the class, a sort of 30ft. Minerva, designed by Mr. Gardner, has not been built, the owner using a design of his own which he modestly and not inappropriately named Chaos. She is a keel craft with a peculiar afterbody, the quarters flaring out, wide and flat. She is built very lightly on the McIntyre system of composite construction, the frames of light steel angles reversed, with a wood backing on which the planking fays. The keel is a cast-iron trough in which the lead is stowed, the heels of frames being rivefed to the sides of the trough by W. B. Smith, builder of Their The arrangement below is peculiar, there being one with the rails and battens which form the above the being construction and the sides, one above the surgests the interior arrangements of a chicken house. The construction are present the sone as a construction of the sides of the trough and strengthene of which with the rails and battens which form the provention of the sone as a cast-incorned by the sides of the si

there are fewer new craft than there should be, and of these none for New York, the home of the small craft heing about here are fewer new craft than there should be, and of these none for New York, the home of the small craft heing about New York, the home of the small craft heing about New York, the home of the small craft heing about New York, who would welcome the establishment of a 20 and 25ft, class, with fromein received the stable of the country of sport. There is no disputuing the fact that yachting does not receive the support which it should about Now York, when the number of young men who have both time and money for it is taken into account. A great seaport like New York, with all its wealth of yachting history and traditions to sustain, should show a racing fleet of four times the present numbers if she would have up to her reputation, and the way in which such a fleet must be poult up is from the bottom, on a foundation of fast and able little ships, manned by Corinthians who can and do sail them. To be sure there are natural drawbacks to be met, in spite of its miles of water there are fow spots on the shore where railways have leff a foot of ground for a club house, or where an anchorage is possible, and the craising ground is none of the best, but at the same time there is a chance to do more than has yet been done for the skipper of the 25 or 30ft, racer.

Taking the new ficer is a whole, there is a fair number of new craft for the local racing on the lates and in various localities away from the Atlantic coast, and while this scattered division of the fleet is by no means up to the standard of the coast gandron. Taking the new ficer is a whole, there is a fair number of new craft for the local racing on the lates and in various localities of the resign and construction. Wishle, and at

st active and useful season is promised, and the result is ely to be highly advantageous to the lake yachting in the one very striking feature of the new fleet is the reaction from one very striking feature of the new fleet is the reaction from he heavy powered craft of last year and the more moderate proritions now in fashiou, together with some improvements in tail, such as more careful fairing of designs, better distribution ballast, and the cutting down of useless weight. The ordinary hold construction in vogue for half a dozen years or more was a head of the old spikenail and flitch build of the shoal sloop; e material was much tetter distributed and more thoroughly stened. At the same time this construction, all double sawn amnes of heavy scantling, is capable of much improvement, and ere is a wide margin to work in betore a dangerously light achino is produced. The careful selection of only the best timer; a thorough study of the strains developed in a yacht, and of e best means of meeting them; neat and accurate workmanship the fitting and faying of all parts, and though fastenings as sall and strong as possible, will add to the first cost of a boat, it will pay in the end in speed, if not in durability over the ugher and heavier construction.

As matters now stand, there is uo likelibood that at the end of e season there will be heard the same outcry against the big aft as last year, this bas hoen postponed probably for a year or or, and the need for a different classification to stop the building "brutes" is not so imperative as it seemed last spring. At the me time the leaven is steadily working, and it will be no surise to see the clubs at tho end of the season, or pernaps a year ter, swing into line together in favor of a classification such as a proposed last fall.

THE CHANGES IN MARAQUITA.—During the past week Mr. Behm.nu's 40, Maraquuta, has been on the ways at Wintringham's yard, where extensive alterations have been made. The yacht was securely blocked up and the entire load keel was removed, being sawn indo sections a couple of feet long. Some of the keel being shawn indo sections a couple of feet long. Some of the keel being shawn indo sections a couple of feet long. Some of the keel being shawn was solded up under the oak keel after the lend was removed, and then a strong box mould was built under ine boat, the new keel bolts being mrst driven. The pieces of the old keel were then metted and run into use mould, the operation being very successful and giving a sold casting. The draft of the yacut remains practically the same as before, out the keel has been lowered 25 in. At he top and increased from 5 to lum, in which out the bottom, thus lowering the weight. The alterations would probably have been still more effective if the lead had been mare still wider below and at the same time not deep. The forefoot has been cut away at the leef as much as possible to increase the rake. Maraquita has now a good mast, put in late last year; and with the lowering of the bahast she should show up considerably better than last season, but it is doubtful whether she will yet be near the head of the procession and able to hold with Lims and the new hoats.

THE NATIONAL MUSEUM.—The section of naval architecture in the U.S. National Museum, at Washington, has recently been enriched by the acquisition of a beautiful node) of a typical British cutter yacut, the gift of Capt. Geo. M. McClain, of Gloucester, Mass. The mouel has been rigged complete in all details, cluding balloon saits, under the direction of Capt. J. W. Colling, Honorary Cutator of the section. The miniature yacut is \$4.1, bor over all, \$84 in. on load waterline, extreme beam 64 in. After collection of photographs of yacuts has also been presented to the Museum by the well-known Boston artist, N. L. steebolns. These ha

LARCHMONT Y. C.

THE measurement committee of the Larchmont Y. C., after being engaged on the subject since early in the winter, bay lately made public the following report. Though the last of the large clubs to adopt the Seawanhaka rule, the Larchmont has gone further than any in the direction of a 60 per cent. allowance table. The report also recommends the adoption of corrected instead of waterline length as a basis for classification. The reports of the committees of other clubs on the same subject were published in the Forest and Stream stollows: Seawanhaka, Nov. 14; New York, Dec. 5; Eastern, Dec. 12. The Larchmout report is as follows: Vour special committee appointed at the annual meeting to consider and report whether any change, and if so, what, should be made in the system of measurement of yachts for rucing, and in the scale of time allowance, hereby respectfully report: That they have ascertained that every other leading yacht club in this country and in England has now arrived at the common position of taking into consideration both waterline length and sail area in measuring yachts for the purpose of time allowance in racing, and the leading yacht clubs have come to a substantial agreement upon the proportion that each of these elements of measurement should bear to the other. This result has been arrived at after many years of discussion and experiment, and the mere fact that it has heen so universally reached is of itself sufficient to lead us to recommend that the Larchmont Y. C. should now join its sister yacht clubs in adopting this system of measurement. We therefore recommend that for the future yachts should be measured and rated for time allowance as follows:

To the square root of the sail area is to be added the length on load warerline. The sum thus obtained having been divided by two, the result will be the yacht's measurement for time allowance and shall be known as "racing length."

We recommend that the calculation for sail area shall be based on the length of the spars. Experience has shown that

In its confidently hoped by your committee that this will result in reviving the interest and increasing the entries in the small classes, as the moderately-rigged host will, it is believed, be given a far better chance of winning than they have had under our former rummittee further recommend that all cabin yachts shall be classed according to their "racing length," and open yachts according to their waterline length, as at present. There seems to be no sufficient reason for, and many reasons against, taking into account it we lements in measuring for time allowance, and the measured we do not recommend any changes, for the present so measured. We do not recommend any changes, for the present so measured, in the limits of the several classes. A subject which impressed your committee as one requiring serious attention is that the entirely of time allowance. It is a well-recognized rule that the entirely account in the commendation of the scale of time allowance. It is a well-recognized rule that the entirely account in the commendation of the scale of time allowance. It is a well-recognized rule that the entirely account of the scale of time allowance. It is a well-recognized rule that the entirely account of the scale of time allowance. It is a well-recognized rule that the entirely account of the scale of the scale of time allowance. It is a well-recognized rule that the entirely account of the scale of allowance as the scale of allowance is sufficiently large, and we recommend that it has come to be an axiom among yachtsmen that ordinarily the larger boat could more than give her time to the smaller.

The scale of allowance as sufficiently large, and we recommend that is scale of allowance and tents of a foot. For the purpose of carrying into effect our recommendations, we hereby propose the

bereinafter prescribed, and it all open yacht, the easier power waterline length also, which measurements shall be verified by the measurer of the club before any prize shall be awarded to such yachts.

Yachts shall be measured and rated for time allowance and classification according to the following method: To the square root of the sail area add the load waterline length, and divide the sum by two. The result is the measurement for the time allowance, and shall be known as the racing length. The measurement shall be obtained as follows: A base line shall be taken from a point midway between the jib topsail stay and the jib stay on the bowsprit, or between the flying jib stay and jib topsail stay, on the jibboom in a straight line to the end of the main hoom. To this measure shall be added that length of main gaif which will remain after 80 per cent. of the topmast has been subtracted from it. The gaff, for this purpose, shall be measured from the after side of the mast to the end, and the topmast from hounds to the lower side of sheave in topsail halliard block. The length of base line as above defined shall be modified in any case where the spinaker hoom measures more than the distance from the fore side of the foremast in a schooner, or mainmast in a single-masted vessel, to the forward point of the base line as previously defined. Any excess in the length of the spinaker boom beyond this point shall be added to the base line.

The length to be measured for a spinaker boom shall be the extreme distance, when in use, of its outer out from the center of the foreside of the mast npon which it is carried. For yawis the base line shall be taken from the same point forward as in vessels of other rig, to the after end of the misst, or of the foremast if there shall be more than one mast.

Time allowance shall be calculated upon the racing length according to the table of allowances of the club, which is calculated and to protunities for speed vary as do the square roots of the lengths of vessels of different size

THE MORGAN NAVY.—For the past two days it has been whispered about that E, D. Morgan, owner of the Constellation, has bought a big English steam yacht, and that the crew of the Constellation has quietly gone across to get her. Capt. Craven and Mate Cochraue left Port Jefferson, L. I., a few days ago, without the latter have come to the conclusion that the before mentioned captain and mate lave gone abroad to bring this steam yacht home. Meanwhile, Mr. Morgan and his confidential advisers will not talk about the matter; so all the public can do is to wait and see if the steam yacht in question materializes,—Boston Globe.

TRENTON Y. C.—The following officers were duly elected at the annual meeting in April: Com., Alfred Wilson; Vice-Com., Wm. H. Leavitt; Rear Com., Thos. H. Thropp; See'y, Robt. Farrell, Treas., C. F. Aaronson; Pres., J. H. Wilson; Meas., Jas. B. Taylor. Trustees, President, Secretary, Treasurer, John Guitck and Peter Thropp. Regatta Committee, Nate Mickel, Walter West and Arthur Manning. Commissary, H. J. Harris. The trustees were instructed to fournish the room. The club is in a prosperons condition. The offices of Fleet Surgeon and Fleet Captain were not filled.

AN EARLY RACE AT MARBLEHEAD.—A proposal is on

Captain were not filled.

AN EARLY RACE AT MARBLEHEAD.—A proposal is on foot to open the season at Marblehead on Memorial Day by a sweepsiakes race for the 30ft., 40ft. and 46ft. classes. Although some of the new boats will not be ready there will be enough to make good racing with the older craft,

MINERVA.—Yachtsmen of the Hub have been feasting their eyes on the shapely curves of the swift Minerva, as she rests upon her candle at Lewley's. Her lines reveal little that was not surmised by our best-informed yachtsmen. It was supposed that she was a craft of hig displacement and full sections, and this she provae to be. If anything, the Scotch boat draws more water than she has got credit for, and she is not so much cut away in her profile as many expected. A photographer who tried to take a shot at the Fife boat was foiled by the crew, who hung canvas from the bobstay, thereby protecting that much-prized midecetion from the over-curious lens,—Boston Globe. At Lawley's yard the 40-footer Minerva is hauled out on the ways, and the new 40 foosoon is in the big shed ready for her priming coat. It is but a few steps from one to the other, so yachtsmen who visit Lawley's yair now get a good look at both yachts. The Minerva is a "toy," delicate fair, and shows the band of an expert, with her egg-like shaped midsection, giving good displacement and small wetted surface; wide lead keel and long bow, almost straight for many feet. In looking her over many would think she has no power and that she would not be able to carry her sall-apread. The Gessoon appears large when compared with the Fife boat, and while she looks to have considerably more displacement she really has not as much as her looks would seem to indicate, she has easy form compared with the other Burgess forties, and is still more powerfal. The mast of the Gossoon will be stepped in about the same place as the Minerva's. While comparing these two crafts, one of this year's forties might be mentioned. The Ventura will bear watching, and a few look for her to carry off the palm.—Buston Heradu.

CHANGES OF OWNERSHIP.—Navod, steam yacht, has been sold by G. Dorant to J. H. Hanna and E. H. Andrews. Stranger, steam yacht, has been chartered for the season to Herman Octrichs, former owner of Hildegarde, Oriva, cutter, has been sold by C. C. Monroe to George

kinds.

KATRINA.—While sailing up the Lower Bay a short time since the yacht Katrina rescued a man who had fallen from the steamer fluron. The yacht's boat was dropped and the man picked up. There was a strong breezo and somo soa at the time.

NYDIA.—The new steam yacht Nydia, designed for Dr. R. V. Pierce by H. J. Giolow, and built by Wintringham, was successfully launched on May 3. The Jiner work is well advanced and she will soon be ready for sea.

CORONET, schr., A. E. Bateman, is now off Bay Ridge, her old master, Capt. Crosby, being still in command. She is now painted white. She will sail in a few days on a Southern cruise, touching first at Norfolk.

VOLUNTEER—The report is current in San Francisco and New York that Volunteer has been sold by Gen, Paine to Com. Philip Caduc, of the Pacific Y. C.; to be sailed around the Horn next fall.

next fall.

DUNRAVEN'S LETTER.—A letter from Lord Dunraven was received on Monday by Secretary Oddie, but the contents have not yet been made public.

AZALEA AND AGNES.—A special match between these schooners, owned by Edmund Blunt and J. N. Winslow, will be sailed on May 30, under the management of the Larchmont Y. G. LARCHMONT Y. C.—The formal opening of the club house will take place on May 10, the colors being hoisted at 4 P. M. Dinner will be served in the evening.

A WOMAN AS A PILOT.—Mrs. Eliza E. Poole, of Chelsea, Mass, has lately passed an examination and received a license as pilot of the steam yacht Isis.

Canoping.

Secretaries of canoe clubs are requested to send to Forest and Stream their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to Forest and Stream their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

VIKINGS ON THE CRUISE.*

VIKINGS ON THE CRUISE.*

BY THE DECK HAND.

"WHAT a vile day!" ejaculated the captain of the Viking, a remark that never possed the lips of any old-timo marander; but a vile day it is, and the modern Viking is on pleasure bent, bound for a cruise on the Trent. The wind is blowing doed into S. Ferriby Creek, heavy with squalls of rain, and as the crew peer with cold and rain-heaten faces into the offing, a picture whose keynote is lead color, a decided bankeriug is telt after the warm freside they have just left. "No; if we can only beat out and weather the Whitton Light Boat we'll boom up Trent with a fair wind and a flowing sheer," is the sturdy resolve.

The canoes are just beginning to feel their legs on the flowing tide: so after a great consultation with the usual Ancient Marnnor cased in the usual pair of Fearnought incomprehensibles, ho advises for the best course, although he hurts the Viking's pride with the remark, "He'd as soon go in a coffin and split the lid for sculls," All things are sungly stowed and a couple of reefs taken in; we are towed up a little by creek under the Ancient's orders, so that we can get plenty of way on to tack, when we come to the surf; and now, giving strict orders to the White Wings' captain to follow us, we are cast off.

Now she feels it, and with a staggering rush we're away, heading to clear the point on the lee, dead close hauled. "Don't nip her," howls old Fearnought, "keep her full." On we rush through the narrow bit of smooth water, but the point suddenly seems to run out on our weather bow. "We are in the tide; board her!" yells the Deck Hand. "No, we'll do it," sconnfully answers the Captain, wi'th a conquer-or-die sort of gleam in his eye and nipping her close and closer in the wind. Now we are in the herach ers. "What's that' Down helm!" Grind, thumpa grind. "Upenterboard." "Too late; we are ashore." Another grinding crash, and the canoe is laid over on the hard chalk bank, rolling the

and the canoe is laid over on the hard chalk bank, rolling the pennant in the mud with each spiteful breaker that washes over us.

Poor human nature, to find trouble lighter when others are

nd in as bad or just a little worse case; for there astern, washed the same mud bath, is the White Wings, obeying orders to the er—"Follow us." He afterward informs us very loftly, that could have go' out if he had not trusted in such superior sea-

out a narrow cockpit is not the tuing for comfort when ends.

out a narrow coexpit is not the tang for commor when hids, and rollowing his usery, piteously sighs the Captain, and following his gaze, the Deck Hand finds the top of the bank adorned by of sympathetic damsels in waterproofs, letting off the screams, apparently of delight, as each sea washes crest-fallen Vikings. "All what! Ho! To the rescue!" Captain! How! pens of joy, oh, Deck Hand! Rear not, in old Frarnought, for there he comes, leading on and of other Frarnought incomprehensibles, who at a salvage corps and battle gallantly with the surfinghy sculls and floor boards and fire them wildly at grey subjects. "Should have kept her in practice at rolling objects. "Should have kept her

ng in practice at rolling objects. "Should have kept her sold Fearnought's greeting, but the crew indignantly retat she is rull—of water! rusty ter now plants a 20tt. spar in the lee channels, and to his band to "lay along here," which they do with a will, wh's head is hove off the bank inch by inch; but it is no sk, as each wave bursts over her, trying to drive her back, but surely, they rain, nnil at last the hoat's afloat, auill" "Bowse tack!" What a tangle ropes are in; mainsheet and jamined in halliards, the anchor rope a perrified serpent, embracing everything on board; but this is not as to clear things, for we move. "In mainsheet!" "Now it is expent, embracing everything on board; but the rises supremely to the danger, for the king astern?" The dingly is drægging along the chalk trying to hold us back; but the us beck Hand is raised on high; one flash from the glitter-le and the dingly is abandoned. (Curtain, slow music.) that set, and hands holding on like grim death to the uniansheet, we plurage clear of the point, under old Fears's parting benediction to "keep her full," and out into a squall that flings the singing drift into our faces; the sick-sensation of the water on board as it swirls fore and afting the boat to every sea. "We must bring up and baill" sthe Capt'n, and the beck H. looks with approving eyes, ath is precious when holding on to a one-part mainsheet all. Reed's Island lies ahead, forming a weather shore for the Vikings look with longing eyes; patience, this can't ever, and at last the water is easier; so are the Vikings and to clear the cable, the mud-hook is fished out from its naccessible berth—under the ballast deck, and hen on the mander while the tide that seemed easy, now boils furive the abale is iron bar, while the tide that seemed easy, now boils furive.

what is that strange craving that makes itself felf? A cl. That's it. Out come toe pipes, and what a picture of tenss is the Captain as he folds the Deck H, in his oilskin to the match from the wind. Poor, poor Yikings of the past, a dreary time it must have been without tobaccol. Painful his, away, for actually the rain has exhausted itself. More are, a little patch of blue breaks the gloomy sky; more, and mrst she sam. How we do boom along with the stern wave the rudder head.

let Daily Telegraphs rave as they please. How we could moralize but we won't. Hush, the Captain bursts out into song.

(Music by Signor Decci 'Andi). Restless Vikings, bold are we, Loud calls the wind.

Ont on our gray and rolling sea,
Leave peace behind,
Harvests of grain we toil not for,
Leave that to maids;
Stores of silver and jewels galore
Are what we raid.
So what care we,
Hurrah for the sea!
The sea, the sea—

The sea, the sea—

Crashl and the restless Vikings are feeling if their heads are o just a simple jibe. This innocent merriment is evidently not it thing while running before this wind, but speed is the Viking idea, so out with a reeft a ticklish operation, but care and it safely done, and the bit of steep bank literally flies by as Burto Stather grows larger and larger ahead, its warm brown tiles we with the rain, glint cheerfully in the sunshine, that sparkles o the deep green woods beyond; "Jolly in't it"—puff puff—lazily remarks the Cap'o, reclining full length on the cabin slide, an jolly it is too, with one's special pipe in full blast, the sunshin playing over you, whilo the music of the water foaming under thows, fulls you to dreams of coral isles, deep blue seas and to tonners—at least that is the Cap'ns style of thing. Deat H.

the river to prevent a jibe, a thing not to be thought of. Onward rushes the lide and over the tide flies the Viking, while banks and trees shoot dizzly past, until ahead looms the curse of Trent-Kidby bridge. "Up skipper, we must shoot the with mast down." "Which looks the most likely arch?" "That one?" "Nol what are you thinking of?" "There, that's the one." "All right, let go the balland." 'Look where she is running to." "Now down with the mast." It is proposed, but the mast strongly objects; force fails, persuasion is useless, the crew feel the cold persperation on their heroic forms, and think their down is sealed. Kram-mering how the bridge rushes on. "Shove all you can." "Jerk it." 'Haumeri." 'Now again so;' the bridge shows its dark shadow the bridge rushes on. "Shove all you can." "Jerk it." Haumeri." 'Now again so;' the bridge shows its dark shadow the bridge rushes on the top to prevent him rebounding overboard to the best H. and fondly embracing it is lying on his back, while the Cap'h repear on the top to prevent him rebounding overboard (so be explanse on the top to prevent him rebounding overboard (so be explanse on the top to prevent him rebounding overboard (so be explanse on the top to prevent him rebounding overboard (so be explanse on the top to prevent him rebounding overboard (so be explanse on the top to prevent him rebounding overboard (so be explanse and the set tength; but he ouly indulges in strong remarks with the flust breath of gets.

But we lose time I U must be gets.

But we lose time I U must at an afoin out vote discretion and shake out another reef. They only peak in wilspers, the pace gives an icy touch to the blood at questions of nieske waters, trims ropes and mops around generally give on finishing little peats to unruly coils like a sweet sevention to form the give and the points to our destination, and as the Vicins sees something white futtering in the breeze, pull themselves together, sigh in vain for a dry collar, as with a swirling sweep the craft rushes head to wind

A. C. A. CENTRAL DIVISION MEET.

l have inst returned from a trip to Lake Chautauqua, where I met F. for the purpose of selecting a camp site. W. telegraphed us to go ahead without him, as he could not come. With the Lady Elise-nee Flora—I landed on the dock at Point Chautauqua Saturday morning, in a gale of cold wind and a driving rain. Nody in sight but two small boys, whom I employed to move my coods and chattels to a perfect camp spot under a large tree, at the edge of the water, while I took shelter in a descried boat house and looked on. After everything was moved, I put up the old awning as a shelter tent over the goods, and got underneath myself and gazed at the surf coming in; my only comfort being cigarettes. It reminded me of Lake Champlain, Finally I got my tent up, the wind having gone down, my cot rigged, the goods put in place, and then I cooked a substantial lunch of fried ham.

A. C. A. MEMBERSHIP.—Atlantic Division: Dr. Joseph R. Bomann, Brooklyn, N. Y.; Henry L. Harris, Passaic, N. J.; James R. Lake, Washington, D. C.; Major G. M. Bellasis, Plainfield, Ont.; W. S. Keimedy, Montreal, Que. Eastern Division: Howard Gray, Aaron S. Thompson, Chas. D. Rolfe, Dr. Robert E. Bell, Edward Ellingwood, Frederick C. Church, Albert E. Swapp, Lowell, Mass.

SOUTH BOSTON C. C.—Owing to the Eastern Division meet coming on May 30 and 31, at Haggett's Pond, the South Boston C. Chas decided not to hold its race on May 30, not wishing to interfere with the meet. Quite a number of canoes from South Boston will be at the meet.

Answers to Correspondents.

A. T., Rhinebeck, N. Y.—Beatrix's number is 9,496. W., New York.—Write to Spratts, 239 E. 56th street, New

F. W. R., Chatham, N. Y.—The pointer dog Scott's Ned is not gistered.

dress.

J. R., Woodstock, Ont.—We know of no paper that is devoted exclusively to spaniels. The address yon wish is Mr. J. F. Farrow, The Fountains, Ipswich, Eng.

P. F. Buffalo, N. Y. —A has a fox-terrier dog. B has a fox-terrier bitch. B's bitch has five pups There was nothing said about choice of pups when A's dog lined B's bitch. A and B want the same pup. Who is entitled to first choise, according to custom? Ans. A is.

ame pup. Who is entitled to first choice, according to custom? Ans. A is.

R. M. D., Lowell, Mass.—A and B have scored 139 in shooting for prizes and C has scored 137. I would like to know who is entitled to second prize; there are two prizes? Ans. In a rifle match the two leaders should shoot off if the order of the shots does not fix their rank.

A. S. S., Ellisburg, N. Y.—Is the whitefish here in Lake Ontario, which is taken in scines, the same as that spoken of in Mr. Phinney's article in Forest and Stream of April 24? Ans. Yes. The common whitefish varies a good deal according to its supply of food and the nature of the waters containing it.

A. E. W. Union Center, Broom County, N. Y.—Will you please tell me if there is a bounty paid on hawks, and if so where shall I go to get if? Is the control clerk's office the place? Will you please tell me if there is an otharge in the partridge law. I uncerstand there has been lately. Ans. No bounty on hawks. No change in the ruffed grouse law.

D. J., Detroit.—Can you inform me of any one who has wild every seed for sale, and if so, if any success has attended planting the same from seed? If it has been successfull would like to purchase some. Ans. We know of no one who has the seed or hubs for sale. The plant has been successfully introduced in certain waters. See back files of Forest and Street.

G. P., New York.—I. Is there a Blooming Grove Park Hotel in Blooming Grove Park, Wayne county, Pa.?

Ans. I. There is a hotel in Blooming Grove Park kept by the Westrooks, and one ontside kept by the same people. 2. We do not know.

Hybrid.—In the proof of the proof was wayner ameans to be and the thing that interested me most way wayner ameans to be and the high that interested me most way wayner ameans to be and the bung that interested me most way wayner ameans to be and the thing that interested me most way wayner ameans to be and the thing that interested me most way wayner ameans to be and the ching that interested me most way wayner ameans to be and the ching the s

not know.

Hybrid and the thing that interested me most was what appeared to be a real whippet race with genuine Yorkshire whippets, and it did me good to see this exciting and innocent sport. Wby not introduce it over here? Ans. Whippet racing has been introduced into this country, and is pretty well established in some localities.

WEBSTER'S UNABRIDGED ANCIENT EDITION.

A so-called "Webster's Unabridged Dictionary" is being offered to the public at a very low price. The body of the book, from A to Z, is a cheap reprint, page for page, of the edition of 1847, which was in its day, a valuable book, but in the progress of language for over FORTY YEARS, has been completely superseded. It is now reproduced, broken type, errors and all, by photo-lithograph process, is printed on cheap paper and filmsily bound. A brief comparison, page by page, between the reprint and the latest and enlarged edition, will show the great superiority of the latter. These reprints are as out of date as a last year's almanac. No honorable dealer will allow the buyer of such to suppose that he is getting the Webster which to-day is accepted as the Standard and THE BEST,—every copy of which bears our imprint as given below.

227 If persons who have been induced to purchase the "Ancient Edition" by any misrepresentations will advise us of the facts, we will undertake to see that the seller is punished as he deserves.

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST.—It will wind up the line a hundred times as fas i as any other reel in the world.

SECOND.—It will wind up the line slowly if the angler chooses.

THIRD.—No fish can ever get slack line with it.

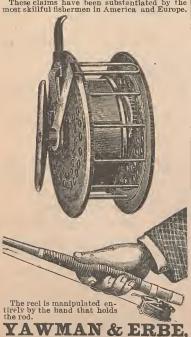

FOURTH.—It will save more fish than any other

reel.

Fifth. It will prevent tips, lines and snells from being broken by large fish.

Sixth.—It enables the angler, and makes it desirable, to use lighter tackle.

These claims have been substantiated by the most skillful fishermen in America and Europe.

Answers to Correspondents.

THE LANDOWNER'S VIEW.

THE question of the moral right of sportsmen's associations to buy up or lease large tracks of lands for their own exclusive use is one that is more and more forcing itself on the attention of the public. We have had in these columns a good deal of correspondence on this subject within the last few years, and almost all of it on one side of the question. It has been and still is rather the fashion to talk of these large associations as monopolists and oppressors of the poor, and to speak of them and their action in securing and preserving large tracts of land as little less than criminal. There are few questions to which there are not two sides, and it is quite clear that this one is no exception to the general rule.

It may be taken for granted that the game of any State belongs to the people of that State at large, and not to a few individuals nor to any restricted class of this people, but it is also well established that this common ownership is limited in one important particular. While the game may belong to whomever can take it, the person who has the first right to attempt its capture is the man on whose land the game is. Further than that, the statutes provide a legal remedy for this landowner against any one who may venture on his property for the purpose of taking game or for any other purpose.

Of course, it seems very hard, in sections where the shooting and fishing have always been free, that those of us who have been accustomed to wander over the country without let or hindrance should now be prevented from going where we please; but there is another view to be taken of this matter. There seems to be no good reason why the acres owned by the farmer should not return him all the income he can get out of them, provided he does not use the land for any purpose which is in conflict with the laws of the State. He may dig potatoes from his field, may cut timber from his woodland, quarry building stones from his rock ledges, may catch

and sell fish which swim in his brooks and ponds, and may capture the birds which feed in his stubble fields. If he has a right to do all these things, he also has the undoubted privilege to lease this right to any one else. If by leasing the shooting on his land he can add to his income \$20 or \$25 a year and a like amount by leasing the fishing, why should he not be at liberty to do so?

When a joint stock company leases an immense tract of land for the purpose of growing wheat upon it, as is done in Minnesota or Dakota, no one hears the cry of monopoly raised against the stockholders. That is regarded as something perfectly legitimate, a mere business enterprise. They purchase or lease the land with the expectation of making money. But when a joint stock company or an association leases 100,000 acres in Virginia or North Carolina for the purpose of preserving the game and fish which are found upon it, people cry out that the public is being robbed of its rights.

One thing seems very clear, that if we are to have game and fish in this country much longer, it is necessary that game and fish must be preserved. The universal experience is, that this protection will not be undertaken unless it is looked after by a few people who are directly interested in it and deeply interested, because they expect in the sport which they are likely to have on this protected territory, a direct reward for their efforts. Such people incidentally benefit the country which surrounds their preserve by protecting the game, and the overflow from the preserve stocks the adjacent country.

It is popular just at present to talk against this system of preserves, but it is just as well for people to remember that there are two sides to the question.

A QUESTION OF ETHICS.

↑ T the meeting of the American Fisheries Society, in Philadelphia, a year ago, it was proposed to hold the next meeting of the society at Put-in-Bay, Ohio. There was a difference of opinion among the members present as to where it should be held, some of them preferring Washington to any other place. After spirited debate, during which Mr. Osborn, President of the Ohio Fish Commission, assured the Society, that if the next meeting was held at Put-in-Bay, the members should have the finest bass fishing in America, the vote was taken and it was decided, by a majority of one, to meet in 1890 at Put-in-Bay, Ohio.

An interesting question presents itself in this connection. In the debate above referred to, a member asked whether they took black bass in Ohio during the month of May, and the reply was made that there was no law

The black bass are spawning in this month, and in many States they are protected by law, as they ought to everywhere. Members of the American Fisheries Society may be supposed to be acquainted with the habits of the bass, and to know whether it is or is not wise and proper to take them at this season, whether the lawmakers of the State have seen fit to protect them or not. The example of such a body of men as the American Fisheries Society ought to have weight with anglers generally, and a good many people will be interested in their action in this matter.

Without ourselves expressing any opinion on the point we submit it to our readers as a question of ethics: Should a self-respecting angler take a game fish from the spawning beds, providing such taking is not in violation of any

MR. CAREY'S RESPONSIBILITY.

THERE is a bit of history with regard to the report of the Public Lands Committee which has yet to go on record. It has to do with the position taken on this bill by Mr. Carey, the delegate from Wyoming Territory.

The people of that Territory are very anxious that the National Park bill should pass. The Park lies almost wholly within Wyoming and the bill gives Wyoming courts jurisdiction over the reservation. A very few citizens of Wyoming are financially interested in the railroad project and want it to pass; many thousands are interested in agriculture, see the danger which threatens their water supply if a railroad should enter the Park and so are bitterly opposed to the Public Lands Committee amendment. There is thus a strong feeling among Mr. Carey's constituents that he ought to use every means in his power to pass the bill without a railroad amend-

We have already stated that in committee it was decided by a majority of one, to add to the bill the amendment granting a right of way to the Montana Mineral Railway, the minority desiring to report the bill just as it came from the Senate. And we have it on the authority of a member of the committee that Mr. Carey voted for the amendment, in other words, for the railroad.

By his vote in the Public Lands Committee, Mr. Carey has arrayed against the bill all those friends of the Park who are opposed to the railroad, and unless the House cuts out the amendment recommended by the Public Lands Committee these people will do all they can to kill the bill. Moreover, his vote in the committee will oblige Mr. Carey to speak on the floor of the House in favor of the amendment. He will thus have to take openly a position which is directly opposed to the wishes of the people of Wyoming, and it cannot be doubted that his taking such a ground, without being able to give any reason for it which will appeal to the common sense of people generally, will greatly injure him in Wyoming

Now Mr. Carey, besides being Delegate from Wyoming Territory, hopes to be elected Senator when that Territory is admitted to Statehood. He is a candidate for a seat in the upper house of Congress, and was thought to have fair prospects of being elected, but it is quite possible that when the people of his Territory find that he has allied himself with a railway corporation and has thus endangered the passage of the Park bill, his popularity may not be so great among the people of Wyoming as it has been. It is quite possible that his vote in this matter may seriously jeopardize his Senatorial prospects.

SNAP SHOTS.

WE present as an object lesson the complete record of VV the game legislation at Albany this year. The list shows that fifty-five bills were introduced, of which forty-six were not passed, six became laws, and three were passed but remained in the Governor's hands at the close of the session. This is the last time such an exhibit should be made. The newly appointed commission on game law codification, it is hoped, will put the statutes into such shape that future legislation in this field will be simplified. The commission is empowered to "revise and codify the laws" and "report such codification to the Legislature" by Jan. 15, 1891. The members of the commission are E. G. Whitaker, from the Attorney-General's office; Gen. R. U. Sherman, from the Fish Commission; Hon. Robt. B. Roosevelt, from the New York Association for the Protection of Game. The act, with characteristic Albany shiftlessness, calls it the "New York Society for the Protection of Game."

From a member of the U. S. Fish Commission who has just visited the Delaware we learn that the shad fishermen are destroying the "mamoose" in large numbers on that river. They are caught in the gill-nets and killed merely out of spite. When told that the fish so destroyed are the young of the commercial sturgeon, one of the most valuable species in the river, they declared them to be a distinct kind of sturgeon without value and simply a nuisance. This is all wrong, and the State authorities should stop it at once, for the "mamoose" is really the young of the species which adds so much to the revenues of the Delaware River fisherman.

We are told that the Michigan game warden system is working well. Arrests are being made in all parts of the State, and everything is done to prevent violations of the law. Since January, 1889, the total amount of fines and costs are about \$1,989.00, and about 200 arrests have been made. Success is reported in preventing the shipment of game from the State thus far.

The ice on the lakes of the Province of Quebec still holds, and there is yet a great deal of snow in the woods. It is probable that anglers will not get at the trout there before June 1. A correspondent writes: "Our season is short, but what there is of it is awfully good."

Here is a sign of the times. There have been taken at Tuxedo Park 5,600 trout up to Saturday night, May 10; 5,000 trout have been sold from the hatchery, and the club has on hand 25,000 two-year-olds, 40,000 yearlings and a large number of this year's hatching.

The Sportsman Tourist.

IMMUTABLE.

IMMUTABLE.

THE old man sat on an empty soap box, slowly winding a waxed string around the fractured butt of a fishing rod. The porch, overhead profusely covered with a luxuriant creeper, ran each side of the door and had for flooring puncheons laid directly upon the ground. On one side of the door stood a rough bench with a battered tin pail with the neck of a long gourd, used for a dipper, just sticking up over the rim. On the other side, just over the old man's head, hung a banjo, which, judged by its looks, was not kept for ornament alone. The little boy stood by the old man's side watching almost impatiently every movement of the sable fingers as they slowly repaired his misfortune.

"Got it most done, haven't you, Uncle Thuse?"

"Yes, honey, mos' dun; doan yer go bruck um agin, Marse F'od, kase ef yer do it's dun gone pass anuder mendin'."

"Il let the next snake go without hitting him." said

'I'll let the next snake go without hitting him," said

"Till let the next snake go without hitting him," said the boy.
"You's got ter, honey, else fish wid a cut pole," replied the old man.
"What makes you always say 'got ter,' Uncle Thuse?"
"Why; Marse F'od, got ter, deys der strongest words dat yer can fine in dat big book in ole Marse's lib'ry, what's cotched um all for der white foks ter pick outer. Now, deres yer rod and took keer of um. Wait a minit, honey, ise gwine ter gib yer a touch of der ole Cremony and tell yer all about dat ar 'got ter'."

The old man rose from the box and took down the banjo, and after tightening a string here and there, put one foot on the box, and with a preliminary flourish, struck up a broken sort of a chant, not unmelodious, as follows:

Co'n cob in er pile, got er meat ter smoke;
Hick'ry stick a-stannin' dar, got er fire ter poke.
Ole dog blinkin' in der sun, got er coon ter tree,
Danderlion by der paff, got ter feed er bee.
Der growin' co'n jus' showin' silk, got er crow ter feed,
End er baccer fiel' a-leafen out, nigger got ter weed.
Der cherry tree cotton white, got ter bear der fruit,
Shotes a-runnin' roun' der swamp, it's shore deys got ter root.
Der highest buzzard in der sky has got ter drap ter feed,
Ef yer want gyarden truck yer've got ter plant der seed.
Watermillions gittin' ripe, got ter watch 'em close,
Little chickins fryin' size, it's high deys got ter roos'.
When Marse Gabrel blo's er horn, got ter com' ter time,
To der mansion in der sky got er sta'r ter clime.

The old man finished, hung up the banjo in its place by the door, and without a word passed down the path to the creek, with the little boy by his side carrying the repaired rod.

FRED. R. SHATTUCK.

ANGOSTURA.-I.

ANCOSTURA.—I.

THE Mexican Central Railway has completed its branch from San Luis Potosi to Tampico. Regular trains will be running in a few weeks. This is the second road connecting the Gulff with the central plateau, which, in spite of its dryness and general forbidding aspect, is and will continue the chief home of the Mexican people and the center of their commerce. A railway which establishes communication between this plateau and the outer world by the highway of the sea, is hardly less than an epoch in the country's history. Connection with the Pacific Ocean has not yet been made. We are to have on April 21 a grand demonstration over the inauguration of our new road, the President of the Republic being engaged to attend. Mexico loves a fiesta of whatever class. But as somebody might accuse me of having real estate to "boom," should I continue to tell of the commercial importance of this recent enterprise, I will come more directly to my story.

Fabulous accounts had long been given me of the game to be found along the line of this road, and I was of course rather excited. Construction trains were running some twenty-five miles from here, going out and coming in daily. I had for some time been looking for a loophole in my daily tasks, when a friend invited me to go with him down near "the front" to an hacienda on a hunting trip. Thinking I could spare two days I agreed. Then, in order to make the trip a little more complete, I said two and a half. Mr. Hampson, son of the chief contractor, and in charge of the work, kindly supplied us with passes. The party consisted of Mr. C., a Mexican gentleman, Principal of the State Military and Technical School, familiarly known (after the manner of Mexico) as "Don Ramon," an Anglo-Spanish dentist and his wife, Mrs. E., who is an American, and your scribe, who, notwithstanding his name, is an ordinary American citizen. I must not forget either the good-humored, faithful "mozo," of Don Ramon, with a name so odd that, though I listened attentively whenever it was calle

is one of the backbones separating the central plateau from the slopes of the Gulf. While standing here an obstreperous Texas norther that had trespassed on Mexican territory began to whisk its tail in our faces. Following the cool breeze came a rolling huge mass of fog, and the change from the dry, crisp air behind us was delicious. This mountain range serves as a barrier against the moisture of the Gulf, nearly all of it being precipitated on the eastern side. The lines may be distintly noted in the vegetation. A similar change may be seen in crossing the Cascade range in Oregon, or, on a smaller scale, the Coast range in California. Seeing the setting sun behind us we at last started down. It is a long, winding 3 per cent. grade, and the cars had only handbrakes. The train hands were evidently a little nervous, and the chief brakeman, a long, big-footed, blue-eyed negro, would work off his excitement occasionally by dancing a shuffle by the side of his wheel. We went down safely, however, enjoying (some of us, at least) the scenery, which, though not bold, is pretty and interesting. While on a long stretch of a lighter down grade and running about 30 miles an hour we had an exciting episode. One of the wheels under a flat car loaded with rails broke square into two pieces. It did not leave the track, but at every revolution made the car jump as frunning on the ties. The negro, who was sitting on a bale of telegraph wire just behind the broken car, tore through the caboose yelling with fright and actually pale. The engineer went careering serenely on, and we expected momentarily to go into the ditch in the undesirable company of two or three carloads of steel rails. Presently somebody uncoupled the caboose and we put on the brakes and slowed up. It was down grade, and we followed at our leisure, soon overtaking the train which had stopped. We patched up and pulled into the next station.

There we changed trains. That is, our engine and caboose stopped and a new engine without a caboose took charge of the trai

almost interminable climb we got to the top and followed the ridge around to where the trail must cross. It then being too late for Nate to go back alone, he determined to go on to a little town some distance down the mountains where we could both stay all night, and then he could return next day. He was a tall, powerful fellow, considerably over 6ft. in height, broad-shouldered and lathy, and looked as if he could stand more hardship than a dozen ordinary men; but he was young—not yet twenty, and age had not, as it proved, hardened his strength to that toughness that only comes with years.

It was late in the afternoon when we crossed the range, and we hurried on, for we knew we had a hard struggle before we got down through the snow, and were both tired. We started up a couple of bighorn sheep just after we had started downward, but what would have made my heart jump at any other time hardly stopped me now, for I could see that Nate was giving out. I was carrying all the load, and often lightened myself by starting the grip rolling down a steep incline, when it would go hundreds of feet before stopping. A crust that had frozen on the snow during the latter part of the afternoon made it all the harder for us, for it was not strong enough to hold us up and broke through at every step. Just before dark Nate gave up entirely and sat down in the snow. I tried to get him to come on, but he said he had to rest. Then I tried to build a fire, but there was nothing near us but sage bush, and the dead bushes seemed all soggy and wet, and I failed entirely. I finally got Nate up, and with one of his arms over my shoulder, in my desperation I almost carried him a mile further, when I saw that this could not last, I would soon be as badly off as he was. Again Itried to kindle a fire, but this failed, and I was about to give up in despair, when I saw way shead of us down the mountain a light, twinkling. It was stationary, and knowing there must be some one there, I covered Nate, now unconscious, with my overcoat and struck

of a beaten track.

The thought sometimes comes to me now, what would I have done if the window had been left out of that side of the shanty? And a queer sinking of the beart always follows, for I could not have deserted my comrade.

J. M. R.

THE WOODS AND THE WATERS.

bon Kamon on the strength of a life-long intimacy with common to vice who we should not be a strength of a life-long intimacy with the family who we soon came to know and esteem as "Don Luis," has charge of the hacienda and lives there alone, the rest consecuency of the hacienda and lives there alone, the rest consecuency of the hacienda and lives there alone, the rest consecuency of the hacienda and lives there alone, the rest consecuency of the hacienda and lives there alone, the rest consecuency of the hacienda and lives there alone, the rest consecuency of the hacienda and lives there alone, the rest consecuency of the hacienda and lives there alone, the rest consecuency of the hacienda and spend the rest of the night sleeping comfortably indoors.

"A LIGHT IN THE WINDOW."

M'CCH reading of Forest Abb Syfikana and its many interesting stories of adventure, not founded on romance, but drawn from the actual circumstances of roughing it over mountain and in forest; and perhaps an account of one of the incidents may prove of interest. For them must be others who, like ma, look forward to roughing it over mountain and in forest; and perhaps an account of one of the incidents may prove of interest. For them must be others who, like ma, look forward to mount of the provident of the provident of the life of the provident of the life of the provident of the life of the

down with cabins on them, in which the raftsmen lived,

down with cabins on them, in which the raftsmen lived, cooked and slept on their slow passage down the river. Sometimes they tied up to the bank opposite the village over night, and were a great resort for all the boys for bathing and fishing. Then in the summer great flatboats, impelled by sails when the wind was from the south, and by poles when it was not favorable, came up the river from Hartford, Conn., bringing rum, salt fish and molasses, hardware and lime for the country traders, and were carried back on the rafts when empty.

For one or two summers a steamboat ran on the river from Bellows Falls to Windsor, Vt. Nothing of the sort can be seen now. The only boats are an occasional ferry-boat or the skiffs in which the farmers on the opposite side of the river cross to the village for their mail or the boys use for bass and pike fishing. The huge pines have all disappeared from the upper Connecticut valley, and the axe of the lumberman is fast stripping the spruces from the forests at the headwaters of the river, which the State foolishly sold some twenty years since to lumber speculators, and for two or three weeks in June the river is full of floating logs, from a decent stick of timber down to those the size of a man's leg, and which should not be cut these forty years to come. At the rear of the drive of logs come 80 or 100 men, with their tents, and boats, horses and oxen, pulling the logs off the shoals and bars and from around the bridge piers where they have stuck, and sweeping them all down to the great steam mills at Northampton and Holyoke. I had a long chat a few days since with Mr. Russell, the owner of the great paper mills at Bellows Falls, who deplored this waste of lumber, and said this small spruce was too small to be profitable even to grind up into paper pulp. Still, this same reckless and ruthless waste goes on.

When a very small boy, sixty years ago, I went with my father to see a great conflagration on a hillside near the village, where to make a convenient cow pasture the great p

as soon as possible.

Nor is this destruction confined to the Northern States. I have seen as I traveled through Virginia, the Carolinas and Georgia, the red soil of the abandoned "old fields," seamed and scarred with innumerable gullies, the water in once clear streams red with mud, and the fire-scorched soil showing no symptom of a return to a valuable forest growth.

It is to the fire, more than the ax, that the barrenness s due. A piece of woodland, simply cut and left as 'sprout land," will soon reclothe itself, but when the fire

soft snowing in symptomic a team to a variance variance receives frowth.

It is to the fire, more than the ax, that the barrenness is due. A piece of woodland, simply cut and left as "sprout land," will soon reclothe itself, but when the fire has been over it the vegetable soil, the growth of centuries, has been destroyed, together with any seeds that may have lay dormant in it. I have no faith in these "dormant seeds" after a scathing fire. The letter you sent me from Mr. A. C. Sikes, of Springheld, Mass., was duly received, but with all respect to him, I am too near the psalmist's limit of "three score and ten" to waste much time with a pickaxe (or spade) on distant hill pastures or to expect to see anything better grow from them if I did, than their present crop of sweet fern and hardhack.

It would take a regiment of strong-backed, short-bodied navvies to produce an impression, in all summer, on the first range of hills east of our village, and I do not propose to waste my remaining strength in any such effort. It is a question of national interest, although the right to do what is needed may be one of those "reserved to the States," but it is time something was done to keep our once well-wooded country from falling into the barren condition of the hills of Judea or the table lands of Spain, My attention was turned to these questions long since by the writings of the late Hon. Geo. P. Marsh, of Vermont, our former Minister to Italy: and when in Concord a dozen years ago getting appropriations for the Fish Commission through the Legislature, I had a number of conversations on the subject with my old friend, the late Hon. Geo. G. Fogg, who had just returned from a term of diplomatic service abroad as Minister to Switzerland. He insisted that it was useless to attempt to restock our waters until we first restored the forests which fed them, and he was to some extent right.

It is often claimed that there are more acres growing up to woodland annually in New England than are being cut off, which may be true; bu

natural gas, which was so loudly proclaimed a few years since as the "fuel of the future," and electricity is not a motor of itself, only a transmitter, and depends on water and steam to furnish the original energy.

When New Hampshire and Vermont were frontier States, they were cleared up as Mr. Belknap describes, then the tide of emigration flowed westward, and my first recollections are of the wheat flour which we ate coming from Genesee Valley. Now it comes from Minnesota, then au unbroken wilderness.

It is amusing to read the very absurd theories, to return to my former topic of the "Hill Farns," which are broached by different people and papers for their abandonment, ignoring the simple fact that the scanty soil, once made fertile by the ashes of years of forest growth, has been worn out, and must be restored by nature's slow process after the lapse of years, or even ages!

One very usually well-informed New York paper charges it to the tariff. Now, the tariff has no more to do with it than the Code of Justinian or the Institutes of Menn. The greatest exodus I ever saw from New Hampshire was in 1835-6, under the Compromise Tariff of 1832, when the duties on foreign goods were reduced to the lowest point they had ever been since the country adopted the policy of raising revenue in that way. Those were the days of wildeat banks and cities on paper. The fertility of the prairies of Indiana and Illinois had been discovered, and the young men of New England started for them in droves, as they did to California in 1849.

The emigration from New England has been due, not to any tariff, but to the old Berscker blood of the old northern Vikings, who repeopled Old England from the shores of the Baltic, and crossing the Atlantic founded a New England in a new continent. Spanning that continent in its ever westward march, it is now building cities on the shores of the Pacific. Daniel Webster well said, speaking of England and her progress, that "her morning drum-beat, following the sun and keeping company with the h

perity.

Incidentally with this comes in the restoration of her fisheries and the preservation of her game, thus offering continued attraction to the inhabitants of the cities who annually seek her mountains in thousands for health and

recreation.

The above remarks are equally applicable to New York and Pennsylvania, for the headwaters of the Hudson, the Lehigh, the Delaware, the Susquehanna and the Ohio are being equally impoverished and at equally worthy of preservation with those of the Merrimac and the Connecticut.

Finally—A friend suggests to me that I should urge as a beginning a moderate appropriation by the Legislatures of New Hampshire and Vermont for the purchase at such nominal value as they now can be purchased at of some of these abandoned farms lying around the headwaters of the streams and their restoration to forest. Such action would tend to improve the water power, to furnish timber to be judiciously cut in future, and to increase the fish and game, which make these States a desirable summer resort.

mer resort.

It will be far more useful than a spasmodic effort to restock them with Scandinavian emigrants, whose children will be sure to take early trains for the West, if the parents stay on the soil long enough to raise any.

NESSMUK

Editor Forest and Stream:

Editor Forest and Stream:

I opened my Forest and Stream with the usual delight this morning, to be saddened at once, when my eyes fell on the announcement of the death of "Nessmuk."

I feel as if I had lost an old friend, for although I never saw him bigs.

nouncement of the death of "Nessmuk."

I feel as if I had lost an old friend, for although I never saw him, his well-known signature has been familiar for many long years, and I have tramped and camped with him in spirit, if not in the flesh. I can hardly agree with you, that his "Forest Runes" will be his chief memorial, for there is poetry in all his prose, and a true flavor of old Izaak Walton himself in his simple narrative. What can be more pathetic and touching than the acount in "Woodcraft" of his carrying the apples and peaches to the two poor sick children in the Michigan wilds? What more perfectly sketched and more fascinating to the angler, than "Meeting Them on the Jnne Rise?"

The true child and lover of nature, he leaves many mourners behind him and a gap in our forest literature which few can fill It needs not to say, "Peace to his ashes." Nothing else could ever rest upon them. It only remains to wish that his gentle spirit may find "happy hunting grounds" in some one of those "worlds beyond this," to which we all look forward, when the eyes that look on this one are closed forever and the unfathomable vell which conceals the future is lifted at last. He has but like a good woodsman gone before!

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—Adv.

FOREST AND STREAM, BOX 2,332, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanti." "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

Matural History.

BLANCHARD ON NOMENCLATURE.*

THIS production from the pen of a French savant, appearing in Bull, Zoöl, Soc, of France, Vol. XIV., 1889, pp. 87-157, is a most notable one. The recumé, under seven heads, may be briefly summarized as fol-

under seven heads, may be briefly summarized as follows:

1. Of the nomenclature of living organisms. Here Dr. Blanchard is binomial, yet giving trinomialism a place, from its utility, and not discarding the word varietas or its abbreviation var.

2. Of generic names. These should be either Latin or Latin in form and unique in character, avoiding in zoology those preoccupied in botany, and vice versa. Geographical names are reserved for specific use.

3. Of specific names, The genetive is the proper case for these, and they should be either a word recalling some characteristic of the species or its habitat, or derived from the names of persons for whom the species is called.

4. Of the manner of writing generic and specific names, Generic names require a capital for the first letter. Specific names, declares Dr. Blanchard, and here he is at variance with American zoologists, simply follow the usual capitalization of ordinary writing. Readers of scientific literature know to what diverse capitalization this tends.

5. Of subdivision and union of genera or species. In

this tends.

5. Of subdivision and union of genera or species. In these cases the law of priority should so prevail that the original name follows the type elements. Where doubt exists, the writer has some liberty of choice, but his action is final.

exists, the writer has some liberty of choice, but have is final.

6. Of family names. Such are to be formed by adding idæ to the root of the type genera, or inæ where a subfamily name is sought.

7. Of the law of priority. This grand law, the firm ground upon which we gladly plant our feet, is emphasized; the limit being binomialism, founded by Tournefort in 1700, used by Lang in 1722, and followed by Linnæns in 1758. All pre Linnæan names to be employed, subject to some limitations. Names to be rejected sparingly; cases of barbarisms or of words from their similarity likely to cause confusion excepted.

L. S. FOSTER.

NEW YORK, May 10.

*De la nomenclature des êtres organisés, par le Dr. Raphaël Blanchard, 1889.

AN OLD GRAVEXARD.—Considerable interest has recently been taken by the daily press of this city over a supposed Indian mound discovered near Inwood—about 205th street—and on Monday last the discoverer, Mr. Chenowith, and Dr. Seeburg gave a description of it before the New York Academy of Sciences. A number of human remains were exhibited, together with fragments of pottery and a few stone implements, the impression being given that the bones and the undoubted Indian remains were of the same age and were closely associated. This impression appears to be wholly erroneous. There was undoubtedly an ancient hearth, or fireplace, adjacent to the spot from which the human bones were removed, and from this hearth have been recovered interesting remains, as shells, pottery, deer bones, arrow points, and so on. But while this is true, it is also true that the human bones found were taken from an old graveyard. Persons now living can recollect when wooden crosses marked these graves, hand-wrought nails with fragments of wood fibre, preserved by the oxide of iron, have been marked these graves, hand-wrought nails with fragments of wood fibre, preserved by the oxide of iron, have been taken from at least one grave, and with one skeleton a lot of buttons were found. The mold of the coffins was seen in taking out the skeletons. It is claimed by the discoverers that the mound in which these skeletons were found is an artificial one, and an attempt is made to connect it with the mounds of the Mississippi Valley. This is wholly fanciful. The mound is a natural one, the site of an old white man's graveyard, and there does not appear to be a particle of evidence to connect the human remains with the Indian hearth. The discovery of this last is interesting, but in no sense warrants the conclusions attempted to be drawn by the amateur archæologists who made the find.

conclusions attempted to be drawn by the amateur archæologists who made the find.

HARE COURSING.—Your issue of March 6 contains a little description of a coursing match on the ice—a mink chasing a hare. Your correspondent asks, did he catch him? I think he did. It called to mind a little thing I witnessed 20 years ago. I had mounted my pony one frosty winter morning for a two mile ride to school. For about half a mile the road ran parallel and 100yds. distant from a grove. Riding along here, and slackening to look toward the grove, I noticed a rabbit acting queerly. He was running back and forth, round and round, and in every way acting like a lunatic. I could not discover the cause of his queer actions until he headed directly toward me, when I noticed a little white weasel at his heels. Every rod or so the weasel would make a desperate jump at him, but until they got close to me the weasel did not succeed in holding him. Just as bunny struck the road ahead of my pony the weasel landed on his back and caught him back of the ears. The rabbit bounded into the air and all over but could not shake him loose, and after a moment or two gave it up and dropped his head like a sheep when caught by a coyote or tog. At this stage of the game I interfered, and as the weasel was so intent on his victim, I killed him the first blow with my riding whip. The rabbit was not injured badly, but was so tired and frightened he did not attempt to leave me and I picked him up in my arms. Now, then, how long had it taken this little bloodhound to run him down and tire him out. I had always supposed they only caught rabbits in brush holes or burrows. I have hunted many kinds of big game and had a few thrilling experiences, but never got more excited than when watching this chase.—W. E. W. (Fox Lake, Wis.).

PHILADELPHIA ZOOLOGICAL SOCIETY.—The eighteenth annual report of the Philadelphia Zoological Society, just issued, contains interesting information. The additions for the year were 223 mammals, 218 birds, 533 reptiles and 1,103 amphibians. An unusually large number of specimens, not previously represented in the collection, has been received during the year, and lists of these, with notes on some of the rarer species, are given in the report, which is an interesting document.

CALIFORNIA'S FIRST FISH COMMISSIONER.

THE leading spirit of the first Fish Commission of the I state of Caffornia was the late B. B. Redding, one of the most interesting of widers on fish topic now, one neight rruthfully say, to hundreds of hundreds low, one neight rruthfully say, to hundreds of hundreds low, one neight rruthfully say, to hundreds of hundreds low, one neight rruthfully say, to hundreds of hundreds low, and to Cream the state of the common when the common the late of the common when the common the late of late of the late of late

fell suddenly dead in the midst of his work, not only San Francisco flags went at half-mast, but after awhile, when the news was told along the McCloud, the Indian tribes came to the Fish Station to ask if it was truly so, and then said: "There never again will be any one so good and wise to come here among us." Five years later, a pioneer of the Southwest who had often written to Mr. Redding to "come down and explore the Colorado Cañon," said: "Inever asked any one else to take a trip." In hundreds of homes the sense of personal loss felt when Mr. Redding died has never ceased to exist. The Wintoons and Pitt River Indians, I make no doubt, remember the grave, kindly, broad-shouldered man who studied their customs, and listened to their traditions. And times innumerable, since the State lost this outdoor citizen, there has been need of that cheerful, sweet-tempered readiness to use a well-trained pen for the public benefit.

CHARLES HOWARD SHINN.

A Large Set of Crow's Eggs.—While on an ornithological tramp on April 24 I found my first nest of the season—a common crow's, containing five eggs. I did not then disturb the eggs, but as I happened to be there again on the 29th ult., I again climbed to the nest and was much surprised to find nine eggs. Thus in the four days since my first trip, four more eggs had been deposited. I resolved to see the end of this curious set, so left everything as it was and returned once more on May 2, when I found ten eggs. Evidently the birds were satisfied with their extraordinary efforts, so I took the eggs for my collection. After leaving the nest I spent nearly two hours at some distance from the grove watching to see if more than one pair of crows were interested in the nest. The male and female soon came, and after some hesitation the latter went to the nest, looked in and returned to her mate with loud cawing. He seemed wholly unmoved by her sorrow and they soon flew away. But no other crows came. In markings the eggs are not uncommon, varying from dense fine markings to the usual dashes and spots of brown and umber. Neither do they differ much in size, the measurements of which I will cheerfully furnish to any interested party. These facts seem to show that the eggs all belong to the same crows, Is not this the largest set of crow's eggs on record?—A. C. Kempton (Wolfville, N. S.).

Wapiti in Germany.—In the current number of the Zoologist it is stated that a wealthy Berlin manufacturer has a shooting near Luckenwald, where the wapiti (Ccrvus canadensis) has been arclimatized. Between Jan. 20, 1899 and Jan. 20, 1890, seven of these animals were shot there, one of them having a head of fourteen points.—Nature (London).

Note of the Snowy Owl.—Edgar, Neb., May 9.—Some time ago a correspondent asked about the call made by the snowy owl. There are a couple in captivity here, and they seem to be doing well, eat heartily and are apparently healthy. The only noise they have been heard to make is a kind of whistle.—H.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN APRIL.—Received by purchase—One jaguar (Felis onea) t, one douvoucoul (Nyctipitheous trivirgatus), one six-banded armadillo (Dasypus sezcinctus), one grison (failette vittatus), two nylphae (Dose)pus pictus) two toque monkeys (Macaus pileatus), one night neron (Nyctiorax griscus nowius), one yellow-bellied songster (Liothric intens), one preater tit (Parus major), two whitstiling swans (Cyprus americanus), one purpie gallinule (Porphyrio martinta), one lon (Colymbus bryundus), one ariel toucan (Ramphastos ariel), two Indian pythons (Pylhon molurus), twelve iguanas (Uguana tobotopha), one hand, one horned iguana (Iguana tuberculata rhinolopha), one alligator snapping turtle (Macrochelys lucertina), one water mocassin (Anestrodon piscivorus, five ground rattlesnakes (Crotalophorus miliarius), one osament (Intervitatiorus), one sacriet snake (Cotalophorus miliarius), one osament studentas (Intervitatiorus), one social sake (Intervitation), one social shake (Intervitation), one social shake (Intervitation), one cornado, fourteen kine snakes (Ophobus gatulus), nine black snakes (Bascanium constrictor), one corn snake (Coluber gualatus), two indigo snakes (Spilots erebennus), two common water snakes (Tropidonobus sipedon), one brown water snake (Tropidonobus laxispidons), one posenla's snake (Oscoola elapsoidea), and one pine common opossum (Didelphys virginiana), one screech owl (Scops Julvius), one Oscoola's snake (Oscoola elapsoidea), and one pine common opossum (Didelphys virginiana) one screech owl (Scops Julvius), one opiny aligator snakes (Philophis melanoleucus). Received by presentation—One common opossum (Didelphys virginiana), one screech owl (Scops Julvius), one opiny sundulatus), three elegant uta (Uta elegans), one garter snake (Diuber audarius), one pennet (Sula bassana), one king vulture (Gipparchus popa), one white-throaded sparros (Philophis melaneleucus), three elegant uta (Uta elegans), one garter snake (Crutenia strialis), one Foria terrapin (Pesudem

MASSACHUSETTS GAME LAW.

MASSACHUSETTS GAME LAW.

CHAPTER 249.—An act to amend an act for the better preservation of birds and game. Be it enacted by the Senate and House of Representatives in general court assembled, and by the authority of the same, as follows: Sec. 1. Chap. 232 of the acts of the year 1888, amending section 1 of chapter 276 of the acts of the year 1888, is hereby amended so as to read as follows: Sec. 1. Wheever takes or kills a pinnated grouse at any time, or a woodcock, or a ruffed grouse, commonly called a partridge, or a qualt, between the fifteenth day of December and the fifteenth day of September, or a wood or summer duck, black duck or teal, or any of the so-called duck species, between the fifteenth day of April and the first day of September shall be punnshed by a fine of \$20 for every bird so taken or killed.

Sec. 2. Whoever at any time takes or sends, or causes to be taken or transported beyond the limits of the Commonwealth any woodcock, quall or ruffed grouse, taken or killed within the Commonwealth or has in possession any such bird or birds with intent to take or cause the same to be taken out of the Commonwealth shall be punished by a fine of \$10 for every bird so had in possession or taken or caused to be taken or sent beyond the limits of the Commonwealth as aforesaid. Approved April 30, 1890,

JACKSNIPE IN NEBRASKA.

JACKSNIPE IN NEBRASKA.

O MAHA, Nebraska, May 5.—This has been a great spring for Wilson's snipe, and bigger bags have been made than for a long series of years. There is no accounting for this remarkable flight of the birds, however, and I haven't even a conjecture to offer. I am bold enough to express the belier, though, that Nebraska shooters will not see another such season for many a long year to come, if ever again.

No one who has ever indulged in the sport will deny that spring snipe shooting is about the most enjoyable and exhilarating of all outdoor sports, and still I stoutly hold, as with wildfowl shooting of all descriptions, it should be prohibited by law. This precious little bird only drops down in our marsbes and meadows in the warm mellow days of April and early May, to make love and tryst, and secure a little rest and nourishment before continuing its weary flight on to the north. They are on the way to the hatching and breeding grounds, where the sound of man's footfall is seldom heard, and should be allowed to reach here for the brief period that marks their stay, and then proceed unmolested on their way. This would always assure us magnificent fall shooting, when the birds would be as plump and fat as veritable butter-balls, a hundred fold superior to what they are found to be in the spring. But there is no law whatever in Nebraska for the protection of this bird, and any of the water fowl either for that matter. When the jack comes, either in spring time or hazy autnum, you can take your breechloader, go down in the bogs and knock him right and left—that is if you know how—with impunity. Why is this?

The jacksmipe (Gallimago wilsonii) is, in my estimation, the choicest of all our feathered game. The quail or the woodcock cannot be mentianed in the same breath, at least in my opinion. As plenty as they are here, now, they command to §2 and §2.25 in the market. They are little, but they deserve as much attention at the hands of the Legislature as the quail, duck, dove or any bird of insect

would bail with satisfaction supreme the enactment that should compel all to forego this spring slaughter and give the persecuted jacks an opportunity to recuperate and multiply.

There are magnificent snipe grounds within easy reach of this city. To the west, stretching away up the beautiful Elkhorn Valley, is a low-lying wild meadowland of the richest and blackest soil, corrugated and broken with unfted nigger-heads and trickling rills, making one of the choicest feeding grounds the hungry snipe ever struck. This loamy reach, too. is dotted here and there with clumps of blood-twigged maples, with bunches of wild rose and acres of liliputian cane, pucker brush, flags and slender-speared buffalo grass, which makes a favorite home for song birds, for turtles, frogs, gartersnakes and an occasional rattler of the prairie breed. In July and August this, too, is a famous rendezvous for woodcock, and I have made many and many a famous bag here. Still it is the jacks' paradise, and as there is more genuine pleasure and excitement in an hour's snipe shooting than there is in a whole day's woodcocking, I will give you my experience out there of ten or twelve days ago.

The Doctor and I went here together, and what a glorious day we did have! South breezes were blowing warm and balmy, the yellow sunshine flooded the forest, field and wallow, and all the conditions were superb for a successful shoot.

Once upon the ground, and Fan, the Doctor's old Gordon, was ordered about her business. I do not usually take a dog for snipe, but on this occasion the Doctor was anxious that his setter should have experience, and as they never come amiss in assisting you in recovering the killed, of course I offered no objection. A dead snipe is about as hard an object to find as the proverbial needle in a haystack. Without a dog much care must be exercised in marking down the fallen bird, and they should be recovered at the earliest possible moment, as the homogeneousness of a well-ordered snipe ground is a wonder and a perplexity always.

other side.

"Skeap! skeap! skeap! and away, here and there, and thither and yon, darted little brown and white shapes, twisting and convoluting in the dazzling sunshine like so many feather lunatics, and although taken at a decided disadvantage, astraddle the top-most rail of the old zigzag fence, I got in two shots, grassing a bird with each, while the Doctor, with language entirely inexcusable, was extricating his rubbered limbs from the agglutinative loam.

At least fifteen birds had flushed, and they had dropped all about us in the undergrowth and grassy slough. Fan still stood crouching, gazing back at us with a wistful, impatient look, but at the irate Doctor's "Go fetch!" she

sprang forward and in a jiffy the two defunct jacks were at his feet.

sprang forward and in a jiffy the two defunct jacks were at his fect.

We were not slow in getting to work I can assure you, and as the aid of the Gordon's keen nose was entirely unnecessary, if not a downight hindrance, the Doctor ordered Fan to heel. She followed meekly, with an injured look in her great eyes, as all well-broken dogs will, and we were soon at it.

The freshness, the picturesqueness and the romance of the whole scene were delightful. A few yards on we jumped another flurry of birds, and we both got in two barrels, only killing a jack apiece, however. As luck would have it we both shot together at the last bird, and I had scored a clean miss with my first barrel—overshot the zigzaging little rascal. But the next moment I made up for it by a corking double. "Great shot!" cried Doc from the other side of the swale.

As I reached my lost bird I gazed upon him with queer emotion, as he lay there at my feet in all his delicate beauty—lay there amidst a cluster of peeping dandelions and curling cresses, a glossy, high-bred, high-fed cock.

With what little reference and thought to man exists the greater part of the Deity's creation. Some things appear to be made for his use, but what myriads of others, grand and beautiful, have no connection with him or his presence.

The snipe and the glossy blades of the tiger lily glisten alongside each other in the solitude of the gloomy slough. The graceful birds, the budding vegetation waving in curves of matchless loveliness, the limpid pools, the grandeur of the whole wild landscape, a.l ask not the eye of man to admire them. Yet he thinks the world created especially for him, instead of being but one of the countless expressions of the Almighty, one of the atomic links in the infinite series of creation. All, from the vasty heavens to the squirming ephemera, are but portions of the mantle which the inserutable Master wraps about Him for purposes of his own.

Skeap! from the crypt of straggling flags at my very feet, and but a step from his dead mate, flushes

Skeap! from the crypt of straggling flags at my very eet, and but a step from his dead mate, flushes an unfeet, and

feet, and but a step from his dead mate, flushes an unwary bird.

Where are the influences of my sentimental musings—where the fruits of my moralizing? My Lefevre is to my shoulder—a puff of azure smoke, a sharp report, and the snipe plunges dead into the mud!

Crack! crack! echoes the Doctor's gun.

He has worked off to the right and is beating up a favorite ground of mine down along a tortuous slough, half hidden by spreading splatterdock, the lurking place of the pinkeye and the piping batrachian, where the jacks are found when nowhere else.

Finally the distraught birds became so scattered and wild that it was only at infrequent intervals that we got a shot. I was thinking seriously of getting out of the bottoms, as I had noticed a cloud in the west drop its gauzy ladder to the rim of the horizon, and felt that one of those creatic April showers so common here was about to catch us. The Doctor, however, was in his element, and insisted on staying, and nothing loth, I floundered on.

and insisted on staying, and nothing loth, I floundered on.

An April storm! Soon the distant bluffs mingle grayly, then the whole perspective was swallowed. The shadowy groves of willow and maple melted, the further line of puckerbrush was next in the misty mingle, and then with a rush the shower was upon us.

The marshes, so soft and tender and pleasant in the sunshine of the morning, became in a moment sticky and recking wet. But this preliminary deluge was of but short continuance. To the wand of sunbeam the misty curtain lifted and there was the instantaneous glitter all about. In a few moments, however, a second installment of the shower came, engulfing the already dripping groves and swaying reeds, and changing again into jewel work under the sun. For the next hour there was a quick intervening of rain and sunlight. The former would streak the scene, then blue eyes would open in the sky. The arcades of the woody groves would glow, darken, be masked in the shower, only to flash again into gold.

gold.

Things continued thus for an exasperating length of the time. The Doctor and I were long since drenched to the skin and bubbling over with disgust, but at last the dingy, lead color above whitened, broke into large fragments and then, as if by magic, the vault overhead was one smiling expanse of blue. Again we started forth, leaving the clump of maples in which we had sought shelter, and working over toward the oozy meadows that ran clear down to the bed of the Elkhorn.

How the blackbird chirped and the robin sang, the whole scene putting on a look as sweet as a fairy face I know.

As enthusiastic as ever, amid such entrancement, we reached the meadow lands and here jumped the birds again, probably 30 or 40 getting up simultaneously and whirling and tumbling away in the glistening air in all directions, some dropping down again, like ghosts, among the nigger-heads, not 100yds, away, while others, perhaps the ones that had been oftenest flushed, rise into space until mere specks, when they circle and dart, and flutter and whir in the most erratic flight, until we grow tired of waiting to mark them down. All about us, in the soft, black soil, we saw where the birds had been boring for angle worms, while their graceful tracks, crossing and recrossing like net-work, showed how they had been disporting themselves during the spasmodic storm. We continued our shoot, with varying success, for an hour or two longer, and then, as our game pockets were bulging with birds, our clothes soggy and steaming, our legs weak and unsteady, and our stomachs empty, we started for the city, which we reached just as the tender tints in the April sky were trembling away into the soft gray of the deeping twilight.

Sandy.

PROTECTION AGAINST RUST.—Elmira, May 5.—Pure lard and mercury (three parts lard, one mercury) will preserve your guns from rust for any length of time. To save trouble, you can get it already prepared at any drug store. It is nothing more nor less than anguintim. Apply as you would oil. A light coating is sufficient. Leave barrels open if you like.—NILMAH.

ES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A articularly interesting to gunners, for by its use they can without question all the American game birds which ay kill. Cloth, 220 pages, price \$2.50, For sale by FOREST PERAM.

A MEMORY OF JERSEY.

A MEMORY OF JERSEY.

PERUSING my favorite journal, Forest and Stream, I came across "Ruffles in New Jersey," which reminded me so vividly of a few days' sport I had there shooting partridge, quail and rabbits, that it occurred to me that it might interest some of my fellow sportsmen to read a short account of our outing.

There were four in our party, the senior member, "Uncle," a hale and hearty good fellow, true sportsman from tip to toe; his little one-year-old setter bitch Fan; Jack, a whole-souled model of manhood, ever ready to please and oblige any one, and the writer, full of love for the woods and nature—never tircd, when with his gun, satisfied to hear the whirr of a quail or partridge, to get a glimpse of the game and an occasional shot.

A clear bright November morning saw us in a boggy brush, a favorite haunt of little Bob White. Fan soon roaded and suddenly froze in his tracks, when whirr, whirr, up sprang a bevy of about fifteen full-grown birds, out of which two fell to the report of our guns. A wounded one dropped some distance away and was speedily found and pointed by Fan. It was my fortune or rather misfortune to drop her dead within about 5yds, from where she got up by a snap shot, but so badly mangled that she was hardly fit to be taken home. Right here I made up my mind never to use a 12-bore close-choke for brush shooting again; and I have since used a very light 14-bore Clabrough, moderate choke, with just as much success, and have the pleasure besides of securing my game in nice presentable shape instead of being torn out of recognition.

Having marked some of the birds down we went to the bank for a chat, rest and smoke. While there I suddenly noticed Fanny, lying at her master's fect, act in what I thought a very queer manner, turning her head from one side to the other, then holding it rigidly. Fearing she would take a fit, which I had seen begin in a similar way, I called Uncle's attention to it. He turned, glanced at her, grabbed his gun and exclaimed, "Fit! why, boy, she is on a

not fly very far after she got up, as Uncle never misses (if he can help it).

I have never seen a dog, a mere puppy, work the way Fanny did; hunting all day, she never flushed a single hird, and kept right on close to us in the brush, hunted carefully and thoroughly. She was very sensitive, the least change of expression in her master's commands would instantly be noticed by her. Her actions and the way she would turn around and look from one to the other with her true brown eyes seemed to say, "Why don't you get to your place?"

With varying success we hunted for three days; we did not get any great big bags to brag of, but we had a royal good time which will linger in our memory for years to come.

The unwont exercise told on us, and on our way going home the last day Jack said, "Boys, this is the last time I will be with you." How true it did come. Scarcely a few months afterward at the terrible hotel collapse at Hartford he was killed, and my heart never ached so much in all my life as when I pressed my hand on his forehead and said, "Good bye" to my old true friend Jack forever.

August.

BAY SNIPE SHOOTING.

A TELEGRAM from our game keeper at Currituck, dated April 21, saying "Bay snipe have arrived," reminded us of the fun we had last spring and fall, so we dropped our pens and paper, said to our trusted partners and clerks, "We'll bring you a great bunch of graybacks," and away we drove to the Martin's Point Gun Club.

dropped our pens and paper, said to our trusted partners and clerks, "We'll bring you a great bunch of graybacks," and away we drove to the Martin's Point Gun Club.

This club is a new one, situated about twenty miles south of the pleasant summer and winter resort, Virginia Beach, and is, as we think some bags we have made will attest, the finest bay snipe grounds on the face of the earth. Sept. 15, 1889, two of our members, Messrs. Taylor and White, shot 440 golden plover, yellowlegs, grayhacks, willets, curlew and grass plover, between 7 A. M. and 1 P. M., with two guns. August 1, 1889, Messrs Camp, Todd and White bagged 520 of the same kind of birds with three guns. We think for recent dates these bags will be hard to beat. But wait until we tell you about this April 23 hunt, which is much earlier than we generally go for bay snipe. Having packed in our handbags just as few articles as it is possible to navigate with, we are driven to the Virginia Beach depot at 6 A. M. Richard B. was the life of the party, and the cause of some amusing little incidents which we will relate. When we landed at the club, after a pleasant drive along the Atlantic—with an occasional shot at a plover, a little experience with a 12lb, bluefish near Station No, 16, in which case the victory way not to the fish—we found what we were led to hope for, that game was abundant and easy to shoot. Getting out our tin decoys each man selects a sandhill, sets out his decoys and begins to build a blind. But neither one of the four of us succeed, for winter yellowlegs and graybacks were flying in every direction. G. W. T. is the first man heard from. A flock of four big winters came down among his decoys, but the powder was bad and none of them remained. Saying to him in a fearless sort of way, "Tweedle-decdee-dee," they go straight to Dick. Now while "Richard is himself," on the banks of Gloucester River in Ware county, among the quail, he had never shot yellowlegs before, but George had. But the battle raged until sunset, and the air smelt s

yellowleg, for there was never one known to pass his blind and not give him a shot. When four hig, fat, handsome fellows swoop down there are two reports from his 10-gauge Greener, and none of them are left to tell their tale of woe. He had hardly time to reload, when down came a flock of ten graybacks and alight among his decoys. With that cool, calm determination of a man who knows he can do it every time, he takes deliberate aim and fires. This was a case of "no shot," or that was the tale he told us, at any rate no harm came to the graybacks.

By this time, 6 A. M., every man had gotten down to business. The sight to the eye of a sportsman was cheering indeed. They just came to our decoys fast enough to keep us doing something all the time, either shooting, gathering our dead birds, or setting them out for decoys, which we have found by experience adds very much to this kind of shooting. The bird should have a stick, say 18in. long, stuck in his month, the other end in the ground; and it should be made to stand on tip toe, so that if there is a little breeze blowing the wings will flutter slightly, which gives it a life-like appearance. Billie C. is an old hunter. We never see his smiling countenance, but we are reminded of the many pleasant hunts we have had with him. He is a very industrious young man, and thinks he must constantly be doing something. He can kill more birds in one day at the Virginia Club in Norfolk than any man we know.

Returning to the club for dinner, we count up and find we have bagged 270 winter yellowlegs and graybacks, with a sprinkling of golden plover and curlew.

We have not many cartridges left, and Dick must return to town the next morning. We concluded that Billy and I should shoot an hour or two and then drive up to the depot for the early train. We bagged fifty-one winter yellowlegs before breakfast, and were soon on our journey home.

The duck shooting has not been as good here this season as usual, on account of the extremely warm winter; but we had some very good duck s

favorable.

To make our last trip more enjoyable we carried with us a freezer, and although some of our birds were four days old when we received them at Norfolk, they were as perfect as when they were first shot. This freezer is a simple one and a perfect success. It is a new whisky barrel, with a zinc or iron pipe 8in. in diameter running from top to bottom, with a patent drip, so all waste water may escape but no hot air can enter. Fill this pipe with ice and salt, with a cap on top of the pipe. Pack birds around the pipe, double head the barrel, and they are good for four days certain.

JOSH.

they are good for four days certain.

Josh.

Increasing Fish and Game in Massachusetts.—
President Edward A. Samuels presided at one of the most enthusiastic meetings held during the season by the Massachusetts Fish and Game Protective Association, at Hotel Thorndike, Boston, May 8. Some 125 lovers of the rod and gun sat down to an excellent dinner, after which the subject of stocking Massachusetts with fish and game was very fully discussed. The committee on game importation made a very excellent report of what has been done this season, and are making extensive arrangements for continuing the work. Already twenty-seven lots of live quail, besides four lots of the Arizona mountain quail have been let loose. The Association is receiving applications for grain for these birds to feed upon from farmers in different localities, many of whom are planting fields of it specially for them, showing that not only sportsmen but farmers upon whose lands the birds feed are becoming interested, and see the importance of protecting them. Very encouraging letters were read from different sections, stating that many of the birds let loose have been seen, and that they were thriving, and promising to see that they are protected. A very liberal offer was received from the cditor of one of our leading sporting papers, offering the Association 3,000 brook trout with which to stock some of our streams, and our committee will probably make the proper arrangements to accept this kind offer. The following gentlemen were elected memhers: Clifford R. Weld, Chas. F. Rice, W. N. Lockwood, A. E. Felch, Frank C. Childs, E. T. Milton and Herhert M. Howes. Four new names were proposed for membership. The Association now has on its books 400 members, having added over 150 new names during the past year.—RICHARD O. HARDING, Sec'y.

CARTWRIGHT.—Among our visitors last week was Mr. T. T. Cartwright, well known as an expert rifle shot, and lately connected with the Whitney Safety Fire Arms Co. He has severed his connection with that company and is now identified with the American Arms Co., of Boston. They are now putting on the market two new fire arms, one the Whitmore hammerless doublebarrel shotgun, and a revolver called the American Arms Co. safety hammerless revolver. The company has been reorganized and intend to push the sale of these arms vigorously. Mr. Cartwright will represent them on the road, and is now on his way West to visit the trade and meet the boys at the tournaments. He reports favorable criticism from the dealers already seen on the merits of the new arms. It is probable that the company will change the location of their factory and offices, making a long jump to Alabama, where flattering offers have been made them to settle.

ERIE, Pa.—At a recent meeting of the Presque Isle Gun Club, the officers elected for the year were: President, Jas. Heydrick; Vice-President, Geo. Russell; Captain and Secretary, Wm. Siegel; Treasurer, Chas. Siegel; Trustees, Russell, Abell and Siegel. The club is in good condition, but it lacks support from the sporting people in this beautiful city. We are thoroughly organized and will come "down hard" on three of the businessmen in this city for breaking certain game laws. Will let you know when we do it.—Hey.

CHICAGO AND THE WEST.

CHICAGO AND THE WEST.

CHICAGO AND THE WEST.

CHICAGO, Ill., May 5.—In my letter of last week, and of the duck season for Illinois as closing May 1. It formerly did so, two weeks later than Indiana: but under the present law closes. April 15, the same date as that of the Indiana law. I hardly dare profess being able to keep track of the Illinois game law in all its phosphorescent gleams of wisdom, and it isn't always easy to determine the date of a law by the way it is observed, but April 15 is correct, I am credibly informed, and I see it so printed. Shooters will please put back all the ducks they have killed since then.

May 9.—The shooting for the season is over, as well as the season for shooting. There are a few scattered snipe lingering in parts of the country, but their numbers do not amount to anything. Henry Kleinman found about a half dozen over on the Little Calumet marsh this week, but they were about the last. I saw two snipe get up on a wet meadow back of Bhe Island Junction this morning as the railway train passed by. The snipe are pretty much all mated before this. These birds seem to have been scattered all over the State of Iowa this spring, and were killed within the village limits in a number of the smaller towns. Weather has lately been much drier in that State, and it is probable the year will be an average good one for prairie chickens. Iowa has had four years of dry weather. It may be that this fact and the supposed extinction of the prairie chicken in many sections have had something to do with the slight increase of the bird in many localities where it has not been hunted or seen for a long time. For instance, there are a few coveys of chickens almost certain for this year on some farms in Jasper county, near the center of the State, where no one has thought of going hunting for them for eight or the years at least. This was once a grand chicken country, but the market shooters cleaned it out. It is remarkable how a few birds will hang about the old haunts, and how these, if left undi

THE NEW YORK ASSOCIATION.—The last meeting of the New York Association for the Protection of Game, for this season, was held last Monday evening at Pinard's in this city. A very important letter from Chief Game Warden Drew was read announcing the fact that the net fishermen who were defeated in the highest court of the State, were about to take the case to the Supreme Court of the United States. He stated that in order to meet this unusual expense to fight this matter, he would be obliged to ask the assistance of the various clubs and anglers generally. The Society for the Protection of Game voted \$250 for this purpose and passed a resolution urging every club in the State to help Mr. Drew in this matter. Mr. Thos. N. Cuthbert, the treasurer of the association, will be glad to receive subscriptions. If the illegal netters win this suit it will put an end to all endeavors to stop unlawful netting. Messrs. E. S. Auchincloss and Dean Sage were elected members of the association. The Hon. Robt. B. Roosevelt, president of the club, was elected to act as one of the commission to codify the game laws under the authority of the new law recently approved by the Governor.

THE TOWERLANKA FLIGHT.—Edgar, Neb., May 9.—Editor Forest and Stream: Our hunters have been having plenty of good shooting for some time. First came ducks and geese in large numbers, and then about three weeks ago the annual flight of the Eskimo curlew (Numenius borealis) commenced. The birds have been in great abundance this season. At first they were poor, but later were very fat and fine; they are leaving now. Edgar appears to be in the center of a small piece of country in which they light, and they do not appear to visit other parts of the State. Snipe shooting has also been good.—H.

New York Game Seasons.—Of the new laws enacted, Chap. 91 makes Sept. 1 to Jan. 1 the open season for ruffed grouse and woodcock, and forbids shipping these birds from the Forest Preserve, save when accompanied by the owner. Chap. 54 relates to Cortland county and makes stringent provision against killing game birds for market. The open season for ruffed grouse and woodcock is made Sept. 1 to Jan. 1.

AN AMERICAN IN AFRICA.—London, April 29.—Editor Forest and Stream: Our Mr. Rowland Ward thought you would like to know that Mr. Aston Chanler, of New York, has recently returned from a shooting expedition in East Africa, including Mount Kilimpjaro and Masailand, where he met with some excellent sport. All the trophies are now in the hands of Mr. Rowland Ward, of Piccadilly, London, for the purpose of mounting, and when finished will be sent to New York. Mr. Chanler went right round Mount Kilimpjaro. There have been large bags of game had lately in these parts.—Rowland Ward & Co.

W. R. Schaefer & Sons. — A reorganization of this well-known and old-established gun house has just occurred, caused by the withdrawal of Richard F. Schaefer. The business will be continued as heretofore at the same address, 61 Elm street, Boston, by W. R. Schaefer and J. F. K. Schaefer, under the old firm name of W. R. Schaefer & Sons.

NEW YORK GAME LEGISLATION.

THE final adjournment of the New York Legislature took place at noon on Friday, May 9. The bills relating to forestry and game introduced during the session were disposed of as follows at the hour of adjournment:

NOT PASSED.

At noon on Friday, May 9. The bills relating to forestry and game introduced during the session were disposed of as follows at the hour of adjournment:

NOT PASSED.

Senator Sloan—To authorize the Forestry Commission to rent to parties who wish to be in the woods, dive-acre lots for a period not to exceed five years. This was to form a good police force for the woods.

Assemblyman Husted—To estahlish a commission of the Adirondack Park, consisting of five members, residents of the State, to be appointed by the Governor and confirmed by the Senate. The term of office is five years. This hill was not passed because Senator Sloan wished the Forest Commission to undertake the work instead of a new commission.

Assemblyman Nixo—To appoint a commission to examine the Adirondack forests for the purpose of designating what lands, if any, shall be taken for a State park, and making an appropriation for the expenses of the same; to decide what is for the best increases of the State; to locate the park and to serve without pay. All State, county and town officials are to furnish whatever information is wished. \$25,000 appropriated for expenses.

IN THE GOVERNOR'S HANDS.

Senator Sloan—To amend the act in relation to the collection of taxes on the lands of non-residents so that within two years of the sale the occupant must give notice to the Compiroller that he is an occupant in order to hold his claim.

SIGNED BY THE GOVERNOR.

Chapter 11. Senator Sloan—To amend the law of 1885 establishing a Forestry Commission so as to secure payment of \$1 a day to those who help extinguish forest fires, and also to make the law more explicit.

Chapter 67. Senator Sloan—To amend the forest preserve. The Forest Commission may buy lands at not to exceed Sl.50 per acre. Lands may be appraised by not to exceed three appraised. Chapter 18. Senator Sloan—To amend section 183 of the code of the seate seate as a party to recover a penalty for trespass to the commission of the commission of the seate of the seate officer, State Commission of th

Senator Coggeshall—The general bird bill of last year relating days.

Senator Coggeshall—The general bird bill of last year relating to woodcock and other game.

Senator McCarren—To make the close season for quall or partridges from Jan. 15 to Nov. 15; and for hare or rabbit from Jan. 15 to Nov. 15.

o Nov. 15.
Senator McCarren—To make the close season for quail, part-idge, hare or rabbit in Queons and Suffolk counties trom. Jan. 15 o Nov. 15.

o Nov. 15.
Senator Sloan—Amending the Cayuga county Lake Ontario ishing act of 1889 so that it will not be lawful to kill or catch auy ish except minnows, ecls, snekers, bullheads and pickerel, in that is known as the pond, immediately east of Fair Haven Bay, in in Sodus Creek, within two miles of its mouth, except by hook and line; and making it lawful to have in possession, cels, suckers, bullheads and pickerel taken contrary to the act.

Senator Chase—To make the close season for woodcock Jan. 1 to Senator Chase—To make the close season for woodcock Jan. 1 to Senator Chase—To make the close season for woodcock Jan. 1 to Senator Chase—To make the close season for woodcock Jan. 1 to Senator Chase—To make the close season for woodcock Jan. 1 to Senator Chase—To make the close season for woodcock Jan. 1 to Senator Chase—To make the close season for woodcock Jan. 1 to Senator Chase—To make the close season for woodcock Jan. 2 to Senator Chase—To make the close season for woodcock Jan. 2 to Senator Chase—To make the close season for woodcock Jan. 2 to Senator Chase—To make the close season for woodcock Jan. 2 to Senator Chase—To make the close season for woodcock Jan. 2 to Senator Chase—To make the close season for woodcock Jan. 2 to Senator Chase—To make the close season for woodcock Jan. 2 to Senator Chase—To make the close season for woodcock Jan. 2 to Senator Chase—To make the close season for woodcock Jan. 2 to Senator Chase—To make the close season for woodcock Jan. 2 to Senator Chase—To make the close season for woodcock Jan. 2 to Senator Chase—To make the close season for woodcock Jan. 2 to Senator Chase—To make the close season for woodcock Jan. 2 to Senator Chase—To make the close season for woodcock Jan. 2 to Senator Chase—To make the close season for woodcock Jan. 2 to Senator Chase—To make the close season for woodcock Jan. 2 to Senator Chase—To make the close season for woodcock Jan. 2 to Senator Chase—To make the close season for woodcock Jan. 2 to Senator Chase—To make the close season for woodcock

Senator Chase—To make the close season for woodcock Jan. 1 to Sept. 1.

Senator Chase—To make the close season for woodcock Jan. 1 to Sept. 1.

Senator Emerson—To allow fishing for suckers, bullheads and pickerel with nets and fykes and shooting and spearing the same through the ice and catching the same in any of the streams in Warren county, except Lakes George, Schroon and Long Pond. Senator Linson—To provide the person, resident or non-resident of either of the counties of Ulat, Greene, Dutchess, Delawire, Chemung, Columbia or Orange shall catch, take or kill in any manner, within the limits of either of acts, take or kill in any manner, within the limits of either of wild duck, trout, black hass, Oswego bass or Gernan carp, for the puckes, commonly called partridge, snipe, plover, rail or wild duck, trout, black hass, Oswego bass or Gernan carp, for the puckes, commonly called partridge, for or any fee, hire or reverse of sell ring or marketing the same, or for any fee, hire or reverse of sell ring or killing any of said birds, fish or game, nor shall any person, firm, company or corporation market, sell or have in possessiou for sale, or offer to sell or dispose of, in any manner directly or indirectly, either in or out of caid counties, any of the said birds, fish or game, caught, taken or killed within the limits of either of faid counties.

Senator Fassett—To prohibit the killing in Chemung county of any wild duck, quail, woodcock, snipe or partridge for market or sale.

Senator Fassett—To prohibit the killing in Chemung county of any wild duck, quail, woodcock, snipe or partridge for markot or sale.

Senator Hawkins—To change from the first ten to the first five days of October the time of hounding in the counties of Queens and Sufolk.

Assemblyman Hitt—To amend the laws relating to fish in the St. Lawrence River and Lake Ontario adjacent to Jefferson county, so as to forbid all nots.

Assemblyman Peck—To prohibit the hounding of deer in all parts of the State.

Assemblyman Stevens—To prohibit the possession of speckled trout, etc., taken by nets; the possession of nets is evidence of guili. Vetoed by the Governor.

Assemblyman Lame—A compromise bill between the fishermen and the anglers of Jefferson county bordering on Lake Ontario.

Assemblyman Peage—To forbid the taking of fish in the Hudson Rives may other way than by angling.

Assemblyman Hubouth of September; to forbid hounding deer to So days, and hound in September; to forbid hounding female deer, and to forbid hound a September; to forbid hounding female deer, and to forbid hounding without a permit.

Assemblyman Johand—Word of the transfer of the State in lands under water to Smithtewick that interest of the State in lands under water to Smithtewick to deep the interest of the State in lands under water to Smithtewick to deep the interest of the State in lands under water to Smithtewick to consist of five memicra, the first is the chief fish and game protector, the second a deputy attorner-general selected by the attorner-general, the third a member of the Commissioners of Fisheries selected by them are the fifth a member of the New York State Assentian for the Frotection of Fish and Game, selected by themselves, and the fifth a member of the New York State Assentian for the Frotection of Fish and Game, selected by themselves, and the fifth a member of the New York State Assentian for the Frotection of Fish and Game, selected by themselves, and the fifth a member of the New York City Association, selected in the samw

Assemblyman Bridges—To strike out from Section 8 of Chapter 534 of the Laws of 1879 the prohibition against the killing of hares

and rabbits.

Assemblyman Lane—To exempt Bonaparte Lake, Lewis county, from the general law forbidding fishing with nets for hullheads, suckers and eels, in the months of November and December.

Assemblyman Stevens—To provide that sign-boards to protect private parks or waters must be placed not more than one-fourth mile apart and at least two shall be placed on the boundaries of any land or water used as a private park; and such property shall be inclosed by an effective fence.

Assemblyman Rose—To permit the hunting of deer in Sullivan county with dogs during October and November, and at no other time.

Assemblyman Barton—To allow the second.

tenent own tens, who shan destroy the same and make a indavit of such destruction to the person making such delivery; the
latter shall then make a sworn statement as to the time and place
of the seizure; and for his work he shall be entitled to a bounty
of \$10.

Assembly man Stevens—To amend the law of 1889 so as to allow
fishing for bulbeads with nets in the outlet of Cayuga Lake between July 1 and May 15.

Assemblyman Cornell—To amend the law of 1889 so as to allow
fishing for bulbeads with nets in the outlet of Cayuga Lake between July 1 and May 15.

Assemblyman Cornell—To amend the law of 1889 so as to allow
fishing for bulbeads with nets in the office of the Commissioner of Fisheries in the city of New York.

Assemblyman Nolan—To amend the general game act of 1879 so
so to add Albany, Kensselaer, Columbia and Green counties to
Oneida and Delaware counties. wherein woodcock cannot be
killed, sold, exposed for sale or had in possession between Jan. 1
and Sept. 1.

Assemblyman DePeyster—To protect partridge, meadow lark,
snipe, plover, woodcock, quail, hare or rabbit, squirrel, rail or
will duck, so that no person shall kill these birds or sell them
within the limits of Dutchess, Orange, Ulster, Greeu, Columbia or
will duck, so that no person shall kill these birds or sell them
within the limits of Dutchess, Orange, Ulster, Greeu, Columbia or
of them shall take or kill in any manner, within the limits of said
counties, or either of them, any woodcock, quail, hare or requirrel,
ruffed grouse (commonly called partridge), meadow lark, snipe,
plever, rail wild duck, for the purpose of selling or marketing
of tkilling any of said birds or game for such other person,
nor shall any person, persons, company or corporation, market,
soll, of the protection of said birds or game for such other person,
nor shall any person, persons, company or corporation, market,
soll, of the protection of game in certain counties.

Assemblyman for the device of the said mentioned birds or
nor shall any person persons, company o

Treek.

Assemblyman Lane—To amend the Jefferson county act of 1884 o as to prevent any kind of fishing except by book and line (not neluding minnows for bait to sell and not to use) from Henderson Say or from the St. Lawrence River between Tibbitt's Point and he St. Lawrence county line or from any inland waters of Jefferous county.

semblyman Johnson—To amend the fish and game protector, so that the Court may, in its discretion, change the place of

laws, so that the Court may, in its discretion, change the place of trial was not that the Court may, in its discretion, change the place of trial seemblyman Pierson—To make the open season for deer from Aug. 15 to Nov. 1, and to permit hounding from Sept. 1 to Oct. 10. The great mortality among game bills was owing to the vetoes by the Governor, in one of which he stated that the Commission created by the new law of this year is compelled to make its report in January next, until which time such legislation as was proposed by the several vetoed bills could casily be deferred.

IN THE GOVERNOR'S HANDS.

Senator Cantor—To protect fish in the waters of Jamaica Bay, in Kings and Queens counties, by prohibiting the use of any other description; use of any other appliance for the catching of menhaden or any other fish, except rod, book and line.

Assemblyman Townsend—To allow any five parties to incorporlate as an ichthyological society. This bill reached the Governor last year, but was not signed by him.

Assemblyman Townsend—To protect fish in the waters of Jamaica Bay, Queens county, hy providing that it shall not be lawful by day or night to put, place, draw or in any manner use any purse net, pound, weir or other device (except hook and line) for the capture of menhaden or other fish.

Jamile Bay, queens county, apper and the any manner use any purse net, pound, weir or other device (except hook and line) for the eapture of menhaden or other fish.

SIGNED BY THE GOVERIOR.

Chapter St. Assemblyman Peck—To protect the game in Cortland county, so as to prevent the killing of partridges and quait for sale in murket; but these birds may be killed for the hunner's. own use. This is the only bill that became a law for any particular county in the State.

Chapter St. Assemblyman Stevens—To prohibit the killing or shipment of partridge, prairie chickens and woolcock, between Chapter St. Assemblyman Stevens—To prohibit the killing or shipment of partridge, prairie chickens and woolcock, between Chapter St. Assemblyman Stevens—To prohibit the killing or shipment of partridge, prairie chickens and woolcock, between Chapter St. Assemblyman Stevens—To prohibit the killing or shipment of partridge, prairie chickens and woolcock, between Chapter St. Assemblyman Gardinter—To protection and preservation of fish and shellfish and of hirds and quarrpeds, as follows: The Attorney-General shall select from anong his Leputy Attorney-General son; the Commissioner of Fisheries shall select from among their number, one; are so a fisheries shall select from among their number, one; and the three persons so elected shall continue the said commission. THE YELLOWSTONE PARK.

THE YELLOWSTONE PARK.

The Yellowstone National Park, the Rocky Mountain realm of the northwest part of Wyoning, the wildest and most interesting domain ever set apart by any government for the enjoyment of its people, seems to be in danger of defacement and defilement by a speculators' railroad project.

No railroad should be permitted to enter the Yellowstone Park. But the Public Lands Committee of Congress has been led, it is said, to decide upon a report, which, while defining the limits and boundaries of this wonderful domain—limits which have not been hitherto accurately defined—also permits a right of way to a railway; a scheme devised by speculators, whose corporation does not expect to build any railway, but to sell the right to some other corporation.

way; a scheme devised by speculators, whose transfer expect to build any railway, but to sell the right to some other corporation.

This scheme should be squelched by Congress. A railroad through the Yellowstone Park would be a defacement and defilement of the one great domain which the nation has set apart for the enjoyment of its wild beauty by the people generally. The design has been, by common consent, to keep it a wild and natural domain; a veritable fairy land of wonders; a resort for the American people, and the most interesting place which tourists from other lands can visit. Up to the present time its boundaries have not been exactly determined. Bills have been passed in the Senate, in two or three recent years, but no precise and accurate boundaries for this unique mountain domain have ever been defined by the concurrent action of both houses of Congress. The Public Lands Committee now have a bill, which not only defines the limits of this wild and wonderful mountain park, but provides for its interests in the near coming years; for the Yellowstone Park is soon to take its place among the world's wondersif indeed it has not already reached one of the highest places in that select company. But the committee has permitted a set of conscienceless speculators to mar their report by inserting a permit for the construction of a speculators' valload through the Park.

The setting up of a buckster's shop and hot sausage stall in the wit for the construction of a special mit for the construction of a special mit for the setting up of a hu kster's shop and hot sausage stall in the chapter-house of Westminster Abbey would not be a greater desceration.

oration.

It would be too bad—it would be a national shame, to graut, in this final bill of definitions, a charter to a set of conscienceless speculators to build a railroad through the midst of that mountain region. It is the very wildness of the Yellowstone Park which constitutes, and is to constitute, its chief charm. It is too elevated a field for other uses; its purpose, as designed by nature, would seem to point out this mountainous region in "the Rockies" as a domain to be preserved for the pleusure of tourists and visitors.

elevated a field for other uses; its purpose, as designed by nature, would seem to point out this mountainous region in "the Rockies" as a domain to be preserved for the pleusure of tourists and visitors.

We ought to have in the United States one such place, which, unfavorable to farming or manufacturing enterprises, "fills the bill" as a health and pleasure-giving resort. The Yellowstone Park does this. No other country possesses such a domain as this great section of mountains and vales, and natural wonders. It takes a fortnight to a month for the visitor to see it fully and get a true idea of it. It extends from the 4th to the 45th parallel of latitude, and longitudinally, east and west, from the 10th meridian to a point beyond the 11th. Its bounds will be accurately defined in this new bill from the Public Lands Committee.

The elevation of this large domain is in a general way, as compared with the level of the sea, about that of the summit of Mount Washington, or about 6,300ft. In some places the monnains reach heights of 11,000 or 12,100ft.—nearly equal to the higher peaks of the Rockies and the Alos. But the general clevation is such that, taken in connection with the latitude, will forever unfit this wild and picturesque realm for agricultural purposes, the vident natural use is just what the country has chosen it for —a wild and picturesque resort for the people. Its air, in that saddleback region between the oceans, and so far removed from either sea, is dry and invigorating; in July and August it is delightful.

Through this wild and picturesque realm, the wonder of all tourists, a speculative corporation, calling itself the Montau Mineral Railway, is permitted by the committee's report to lay its tracks. It is said the vote in committee was very close—the speculators gaining their point by a majority of one. They should have been beaten and their plan rejected unanimously. No valiway should be permitted in the National Park. What makes this permission contained in the committee's report, particula

"Those who wish to obtain such a tranchise should ask congress the privilege they desire fairly and squarely on the merits of their proposition. They should not try to sanuggle it through as a rider to a good bill.

"To grant a right of way to a railway to run through the National Park is to destroy it. Should such a right be granted to one road, a similar right cannot be denied to another. There will be a race between corporations to reach points of interest in the Park, the reservation will be gridironed with tracks, disastrous fires will destroy the pine forests which clothe the mountain sides, springs will dry up, the great reservoirs, like the Yellowstone Lake, will no longer supply waters to fill the mighty rivers which now irrigate the plains of Montana, Dakota, Idaho, Oregon and Washington.

That Saturday, in the House, was devoted to eulogies of the late. S. S. Ox., who was an ardent advocate of the integrity of the National Park. Three years ago his eloquence defeated, by a vote of the late. The property of the states and the late of th

Sea and River Hishing.

NOTES FROM CAPE COD.

NOTES FROM CAPE COD.

The harbor of Woods Holl has been full of small sea herring (Clupea harengus) all winter—a thing I never saw before. The name "sperling" is applied to them by nearly all the fishermen. Codfish have come in quite abundantly this spring, both small and large. Some are caught every day in the fish traps about Woods Holl. From Quisset to Cuttyhunk they are caught in fish traps and lobster pots. In Vineyard Sound they are getting them in the same way from Falmouth Heights to Quick's Hole. This is something entirely new. In a little funnel bass trap on Nonamesset, belonging to Capt. Spindle, on Saturday, May 3, the first day they hauled, twenty-three large cod were taken. May 5 they got fifteen. May 6 they had eight, the traps in Quisset Harbor had one each, and the lobstermen brought in some from their pots. The fishermen about Woods Holl think these must be fish that were hatched here by the Fish Commission. It is a new experience to catch cod along shore in fish traps. Never before since traps were put in has this been known to occur; but once in a great while they would catch a logy or sick cod. Those that are taken now are very nice plump fish weighing from 5 to 15lbs. each. I am trying to get some of the fishermen here to try them with hook and line. Other fish have not come along yet to any extent. We are getting plenty of lobster eggs. From April 16 to May 6 I have collected upward of 3.500,000 of them.

White wing coots, or scoters, have not begun to fly yet; they come along about May 15. The winter has been so mild that they did not come in to feed.

V. N. Edwards.

THE MOON'S EFFECT ON FISHING.

THE MOON'S EFFECT ON FISHING.

N the fall of 1888, a friend and myself were relating to each other the noteworthy incidents which had occurred in our respective angling careers, and among the numerous anecdotes and some fish stories, I asked my friend the following question: "How do you account for the varying success of anglers, and of the same angler at various times?" He looked at me as though surprised at such a curious question, but said that he thought it was due to luck, or chance, or good fortune. I then said that although luck may have some influence on the success of an angler, I thought it was due to a more substantial cause. This cause I told him I thought to be the moon; and I also said I thought the moon must in some unknown way influence the number of fishes; but beyond this, as I had only looked superficially into the question, I could give him no information. However, it was from this conversation that I determined to investigate the relation existing between the moon and salt-water fishes.

I therefore devoted a considerable portion of this past season, beginning with early spring and ending late in November, to salt-water angling, and, as is usual with anglers, have met with varying success.

I shall have very little or nothing to say of season, winds, rain, storms, tides, hot or cold waves, kinds of bait, etc., except as they influence what I have to say in reference to the moon. The effect of each upon the different species of fishes varies so much, and is so well known to practical anglers, that it would be fruitless for me to write of them.

But now we come to a very important question: In

to practical anglers, that it would be fruitless for me to write of them.

But now we come to a very important question: In what quarter is the moon? Upon the snawer of this question will depend the weight of your basket in going to and coming from your fishing resort. Thus, if you go angling at a time when the phase of the moon is unfavorable you are apt to bring home your basket very light. On the other hand, if the phase of the moon is favorable, you probably will have as many fish as you can comfortably carry.

I have divided the success with which an angler may meet into the best, medium and poor; and have discovered a corresponding phase of the moon for each. These various phases, together with their degree of success, are the following:

1. The best success will be met with on those days between the first quarter of the moon and four or five days after this period.

2. Medium success will be met with two or three days before the first quarter and that period of time intervening between the four or five days following the first quarter and two or three days before the last quarters,

3. Poor success will be met with from the two or three days before the last quarter. Evidently there is a cycle, beginning at or soon after the first quarter of the moon, when we have the best fishing, this passing into fair fishing, this into poor, then fair again, and finally getting back to the starting point. This cycle occupies a period of about four weeks, in two weeks of which we have good, including the best fishing, and this is succeeded by two weeks of comparatively poor fishing.

The fishes seem to increase in number from the new

tide also has its influence, varying not only with each species of fish, but also with each and every angling resort. I could mention a number of other examples, but these will suffice to show what I mean by outside in-

fluences.

There is one other point which I have noticed, and this is, that as the season opens for each species of the saltwater fishes they first appear at or near the first quarter of the moon; and conversely, that as the season ends they finally disappear between the last quarter and new

moon.

There are certain deductions to be drawn from the above observations:

1. That there is a direct or indirect relation from week to week and from day to day between the moon and the number of fishes. I say direct or indirect because I think the height of the tide, as it varies from day to day, has some influence upon this subject; and inasmuch as the tides are caused by the moon, this relation is direct as regards the moon, and indirect as regards the height of the tide.

2. That the state of the weather, etc., has a certain in-

some influence upon this subject; and inasmuch as the tides are caused by the moon, this relation is direct as regards the moon, and indirect as regards the height of the tide.

2. That the state of the weather, etc., has a certain influence upon the number of fishes.

3. That the angler can calculate as to when he will meet, barring outside influences, with the best success.

4. That if the angler proposes to spend one or two weeks at a fishing resort, which is situated at some distance from his home—say Florida, or one of the striped bass clubs, or any one of the numerous fishing resorts along the coast—it will be to his advantage to arrive at his destination two or three days before the first quarter of the moon. Thus he will arrive just prior to the days when he may expect the best success.

5. I have seen it stated that there is, in addition to the spring and fall runs, a summer run of striped bass. This is true, and corresponds with my observations. This run will commence two or three days prior to the first quarter of the moon, and continue for from ten to fourteen days; and as this phase of the moon occurs either the latter part of June or early part of July, it has been termed a summer run.

6. Incidentally, I may mention that what I have said in reference to the fishes also may be applied to the common edible or blue crab (Callinectes hastatus Ordway).

In closing, I may say that my observations have been confined entirely to salt-water angling; but I have had enough experience in lake, pond and river angling to convince me that this same influence is at work upon the fresh as well as the salt-water fishes. This latter statement I cannot verify, except so far as memory goes; and I remember that in some weeks I had first-class or fair success, while in other weeks it was poor. This part of the subject deserves careful investigation.

Finally, there is one other question which I should like very much to see answered, and this is: In what manner does the moon influence the fishes that it should cause the

RANDOM CASTS.

AS a rule, your tackle will suffer more during the close seasons than when in actual use, simply because you fail to give the little time necessary to have the repairs made when you return from your outing. A dollar spent in the fall for this purpose will save two in the spring. And don't put your flies away without something to keep the moth out, or when next needed there will probably be nothing but the bare hooks.

The manner in which our food fishes are wasted by the menhaden fishermen is a crying shame, and every one who has the welfare of the poor at heart should do his share toward getting the National Government to restrict their methods. Fish will never be cheap food until something is done to prevent these corporations from taking everything that comes to their huge nets and turning the catch into fertilizers.

The expensive enameled silk line is only necessary to facilitate casting the fly; when fishing where the fish run large and more than 25yds, is likely to be needed, splice on 50 or 100yds, of nine-thread linen line behind the enameled one. In Florida the channel bass of large size takes the fly, and when fast to one of 15 or 20lbs, considerable line will be found necessary to capture him on a trout red

When fishing a salmon pool to clear out the trout, don't use a light leader on your trout rod; I was unfortunate enough to see a big salmon break away after having played him for upward of half an hour, by not knowing any better at the time.

or which we have good, including the best fishing, and this is succeeded by two weeks of comparatively poor fishing.

The fishes seem to increase in number from the new moon up to the first quarter; they then remain about stationary in number for four or five days and they then begin to decrease, until they seem to be fewest two or three days prior to the new moon.

In order to bring out the above apparently cloudy points more clearly and forcibly, I have introduced the above diagram, representing a lunar month of twenty-eight days and the interval between the quarters of the moon occupying a period of seven days. This is not exact for each month, but it is approximately correct and will serve my purpose. The diagram is simple and needs, I think, very little explanation. The four quarters of the moon are represented opposite the horizontal and perpendicular lines. The numbers, as well as the spaces in which they are printed, represent days, and not days of the month. The success with which the angler will meet is printed between two dark oblique lines.

There are exceptions to the above, but I have found them to be due, more particularly, to outside influences. For example, I may cite that in striped bass angling, a northeasterly storm after raging for two or three days, will increase the number of fishes the day or two following in the former period of time, is only slightly marked. On the other hand, a similar storm occurring during the weakfish season, would, for a day or two following, decrease the number of fishes, as compared with the former period of time, is only slightly marked. On the other hand, a similar storm occurring during the weakfish season, would, for a day or two following, decrease the number of fishes, as compared with the former period of time, is only slightly marked. On the other hand, a similar storm occurring during the weakfish season, would, for a day or two following, decrease the number of fishes, as compared with the former period of time, is only slightly marked. Woods Holl, Mass., May 6,

TROUT AT SYLVAN LAKE.

"TROUT or no trout," this was a serious question. Below the form of the control o

fish. I could not resist the sight, and hastily bolting the last mouthfuls I made for that point again, accompanied by Provo, who would land my fish and take a lesson in the art. And here for a brief time till dark I cast and caught, and cast and caught till satisfied, and we then returned to our camp-fire.

As the enthusiasm ran so high that night and we would be here a week, I foresaw we would soon have more fish on hand than could be consumed, and so I suggested to our packers that the next day they should build a fish corral, into which our prizes could be conveyed alive and from which we could take them as needed and release the surplus at our departure. This notion tickled them mightily—horses and cows and sheep they had impounded, but fish were a novelty.

The next day Provo and I took a long trip, climbing the mountain facing our camp; on our return toward evening the corral had been built, the men had been fishing all day with flies I gave them, using slender poles cut in the forest for rods. There were already a goodly number of speckled fellows swimming round in the corral and now and then rubbing their noses against the stakes and looking up as if wondering what in the world they were doing there. None were above half a pound in weight and very few under a quarter, and this average obtained among all those we caught during our week's stay in this delightful spot.

We had hot trout for supper that night—we had had them cold for dinner, some of those that were hot at breakfast—and we decided they were better hot than cold, though we thought it well to eat them cold, as we enjoyed the hot ones more. This rule established, the spectre of bacon that had pursued us to this point sank to rest in the frying pan, where it aided the trout to cook, and not once for that three week's trip did it arise again. And at the end of three weeks when we had eaten trout three times every day, we still voted trout—were better than bacon, which proves what very good trout they were.

After supper, as the fish were rising

And at the end of three weeks, when we had eaten trout three times every day, we still voted trout were better than bacon, which proves what very good trout they were.

After supper, as the fish were rising all over the lake as before, Provo and I took the rod and went down to the little point, and here, after catching a half dozen all too quickly I gave the rod to him, and he started in for his first lesson in fly-casting. He proved a very ant beginner and was highly interested, as indeed what beginner would not be? no matter whether his casts were good or bad, when they were nearly every one attended by a rise. And this also showed that striking properly is a beginner's chief difficulty, as although so many rose to his flies he hooked very few. However, he caught a fair number, which along with mine were carried back in the bucket and placed in the corral, and expressed himself as highly pleased at the sport.

And this experience we repeated every evening, limiting our number to six each. We tried experiments also, and to make it all the more difficult to catch these six, which always happened too quickly in the vast number of rises one received, I chose delicate flies, English midges, tied on No. 20 hooks. When the little hooks got a fair chance, however, they held like iron, and no more fish escaped them than from the larger sizes.

Once here, also, I saw a curious sight which will interest anglers who argue on the insensibility to pain question. In a tiny little bay, where the limpid water was about a foot in depth, we saw from the bank above a large trout slowly circling round, and now and then rising in a languid way to suck in some unwary insect. Provo stole around in the forest fringe and crept down the bank behind a little troe, while I remained in the gallery, so to speak, to watch the action on the stage. After a cast or two the trout woke up, and took the fly cast gently out at him with a sudden and savage rush, very different indeed from his former method of feeding. There was a fierce struggle on

dering.

How to Catch Big Trout.—A veteran Wilkesbarre (Pa.,) angler tells the following incident of his own experience: "Several years ago Ernest and I took the train to Tobyhanna station on a fishing trip. While on the way to the stream we met an elegant gentleman, all rigged out with fine split-bamboo rod, velveteen suit, flybook, creel, landing net and everything as bright as a new pin. He showed us his catch, which included a beautiful trout fully 18in, long and weighing over 2lbs, With the fullest details he related the history of its capture after a struggle lasting a half hour. His sensations when the net encircled its glorious prize were duly set forth. Of course we congratulated him on his superb success. Two or three days later I landed a very nice trout from the same stream, some distance below where we met the skillful angler with the immaculate outfit, and I remarked to Ernest, "That's a fine trout." At this moment a boy who lives in the neighborhood, overhearing my remark said, 'Why, mister, he ain't no touch to the fish my brother caught here a few days ago.' 'How big was it?' 'Why, it was more than 18in. and weighed over 2lbs., and a blamed fool from New York came along and gave him a five dollar bill for it.'"

PENOBSCOT SALMON.—Bangor, Me., May 12.—The Penobscot River is at flood now. Will be good fishing at the pools as soon as water commences falling, the middle or last of the week. Many fish are seen jumping in the stream below the dam. Water too foul for fishing.—S.

To Salmon Anglers.—T. J. Contoy, 65 Fulton street, N. Y., has a lot of fine salmon rods, assorted kinds, which he will sell at a sacrifice until stock is reduced. Don't miss the opportunity.—Adv.

CHICAGO AND THE WEST.

CHICAGO, Ill., May 9.—Fishing news remains mostly with the future so far, especially for trout. Cold weather and heavy rains and even five inches of snow within the past week, have kent back the trout season protty much all over northern Wisconsin. News of this kind prevented Mr. C. S. Burton, of the Kankakee, and Fred C. Donald, General Passenger Agent of the Chicago & Atlantic, from a sample run up the Milwaukee & Northern to either Floodwood, Witch Lake, the Paint or the Fence River country. In this trip the writer was to have been to-night, but that is all off, for it would not be worth while to go. The streams are very high and muddy, all over the country now, and Mr. Tabberner, General Agent of the M. & N., who is just back from a trip through that country, says it would be best to wait a week or two before going in. There is a very strong sporting element among the officials of that road. Mr. C. F. Dutton, General Manager, and Mr. W. B. Sheardown, General Passenger Agent, are also very ardent anglers, and just now cant 'si still, they want to go trout fishing so bad. I believe I mentioned Mr. Dutton's catch of 400 trout on the Pike last season, and this season he claims he has a spot located where he is going to break all previous records.

The Witch Lake country is no longer a secret, for that water was fished pretty well last summer. Mr. Sheardown took one trout there which weighed 3#lbs. Another was caught weighing 3#lbs. These big trout are frequelar in their humor and were taken on live bait. There have come down stories of some big trout taken on the Fence this spring, but I do not know where, and no one claims that the season has fairly beyen yet.

Thave not heard from the Middle Inlet and Ellis Junction as good many trout will be taken in the inlets of Nequebay, in the Peshtigo, or all there were a not not in any of that region. They want em all themselves.

I have not heard from the Middle Inlet and Ellis

2,000 to c,000 to the control of the control of the control of the control of a week or so probably to Vieux Desert. When they came back last year they had about thirty of these

Two Wisconsin Central men went out from Milwaukee two weeks ago to some place up that road, near Waupaca, I heard, and got forty trout in a day. I hear mysterious stories also of a swamp on the White River, Wisconsin, where 125 beautiful trout were taken by one party this spring, and of another lot of eighteen trout shipped to Chicago from there, of which every fish was over 3lbs. Great Scott!

It is very probable that the bass fishing reported by the contract of the contra

spring, and of another lot of eighteen trout shipped to Chicago from there, of which every fish was over 3lbs. Great Scott!

It is very probable that the bass fishing reported by Mr. Ed Howard as being good at Fox Lake is spawningbed fishing, and it is to be hoped that our anglers will wait awhile before they go up after bass. Large quantities of bass are taken from the spawning grounds annually in the Fox Lake district, as these fish will often snap at anything that comes near them at that season. The feat of taking fifty or sixty bass by one boat in May is not, therefore, anything to be particularly proud of. Better wait till June or July at any rate, and then try for the bass in the pockets of Grass Lake, or along the channel. Last year the bass were not done spawning even in late July, and this year one need hardly expect an earlier season, as the weather is unspeakably rainy, cold and generally abominable. To-day it is like a bad sample of November.

A correspondent writes me from Kalkaskia, Mich., that a good many trout are being taken in the streams about there, and that within 10 miles of that point there is good bass fishing. The east shore of Lake Michigan is in many part, wild and unsettled, and offers good territory to the angler. Mr. Britton, division superintendent of the B. & O. here, tells me of a whole township over there which had only one inhabitant. There was a nice lake there which the State stocked about ten years ago with landlocked salmon, and this man was appointed a warden to see that no one came there and fished for these new fish. He watched it, and so far as known, nobody else ever fished there. He just sat down by the lake and in course of time caught out and sold about all the landlocked salmon there were in there, he drawing a salary all the time. A warden like that ought to succeed in life.

fishing in the old stream Skunk River, near Newton, where I squandered a good deal of time when I was a boy. It seems that low water and persistent seining in the past have about done for the fishing in that river. One string of about a dozen bass and wall-eyed pike had been taken near the "Four Forks." I heard of a lake about 17 miles below Newton, which lies on the land of a farmer who has not allowed it to be seined. There were a great many bass there last year, and it is thought that a few favored anglers will have some good fun there this season as soon as the law is out. Small-mouthed bass used to run up the Skunk River in good numbers. Years ago mascallonge were taken there of very large size. These were not caught very often, but were nearly always over 201bs. in weight. Several of these fish were taken in the deep water between Colfax and the old Reed's mill, near the Slaughter coal mines; others were found in the "Hickory Bend," and several were hooked or taken in the Four Forks deep water. The old settlers thought that these big fish all came up together years ago in a season of exceptionally high water. Skunk River would always have been a good fishing stream if it had been treated right, and the Iowa Fish Commission can find no better one to restock with bass and pike, for most of the old lawless practices along it have died of themselves. The stream, indeed, ought to be restocked from Colfax down to Reasnor at least, between the two branches of the Rock Island road. There are no dams now in that reach of water.

Spirit Lake and Okeboji will this summer claim an unusually large amount of summer tourist and angling travel. Black bass fishing there, I am told, is not so very good, "White bass," perch, pike, wall-eyed pike and the usual run of inland lake fish are still numerous.

The country through Illinois and Iowa is now beautiful in the extreme. The rolling hills are of a lovely green and the trees along the streams are in full and fragmant blossom. The leaves on the oak trees are "bigger than a

ANGLING IN CANADA.

ANGLING IN CANADA.

THE story that I have to tell treats of the grounds of the Tourilli Fish and Game Club of Canada. This club is the immediate result of the association of Commodore J. U. Gregory and Mr. George Van Felson, of Quebec, and of Mr. E. A. Panet, M. P. for St. Raymond, of the Province of Quebec. These gentlemen secured certain grounds, including lakes and rivers, teeming with brook trout and winnish, and abounding with moose, caribou, ruffed grouse and ducks. The charter members include the following gentlemen: President, J. U. Gregory, Quebec; Vice-President, E. A. Panet, St. Raymond; Secretary, Geo. Van Felson, Quebec; Treasuret. Alex Lauin, Quebec. Committee of Management: Dr. E. A. Lewis, Brooklyn; Hoa. Smith P. Glover, Sandy Hook, Conn.; Richard S. Harvey, New York, N.Y. The remaining members being: J. H. Botterill, Quebec; A. G. Demers, Quebec; C. H. Carrier, Levis; James H. Work, New York; W. S. Downs, Birmingham, Conn.; John W. Masson, New York; Dr. W. H. Thomson, New Haven, Conn. Last season I made a trip to these grounds in company with my friend the Commodore, and our journey began in the parlor car of the Quebec & Lake St. John express train. We were soon on our way to St. Raymond, our destination, thirty-six miles from Quebec. We passed the foaming waters of the famed Jacques Cartier River and beautiful Lake St. Joseph, twenty-one miles in circumference, and bordered by the Laurentian Range. It is a favorite summer resort. "Very fine black bass are found there" said the Commodore, as we passed a pretty sheet of water called Lake Sergeant. It was a vision only, and soon out of sight. The Commodore having collected his traps now seemed to await some important event, and it came, as a most picturesque spot suddenly attracted our attention; two beautiful streams meander through a pretty mountain village with its neat and cosy cottages and handsome Norman church, all uniting to form a picture never to be forgotten; it was St. Raymond.

We no sooner reach the platform than the sun-bronzed fe

The best pools we fished to the mouth of the Tourilli River were "Godins," the "Leaning Birch," the "Island," the "Big Rock," the "Spring," the "Grande" and "Carriers." The latter is certainly one of the most remarkable in Canada and has a record of a 64lb. Salmo fonti-

nalis. Our catch here was most satisfactory, as may be imagined when I say that our catch consisted of 2 fish of 5lbs., 5 of 44lbs., 2 of 34lbs., and a number from 3lbs. down, all with a clean fly, no bait being needed on any of these waters of the St. Anne.

Our next move was to the forks of juncture of the St. Anne and Tourilli. From the latter the club takes its name, it being an Indian name meaning rushing waters. Our guides dashed the cances boldly through the turbulent waters, and our rods were laid aside, for we were kept busy helping the canoemen in their efforts to mount the rapids. One mile of the exciting work and we reach the Tourilli Falls, one of the prettiest sights imaginable. The falls consist of a succession of cascades, at the bottom of which lies a most tempting pool. Our success here was most satisfactory, and though we did not break its record of a 7lb. Salmo fontinalis, we touched the scale at 44lbs., and friend Edward lost his enameled silk line. Above the falls we did not go, but I know the sport to be good, for some 20 lakes are tributary to this river, and when we make a trail they will be quite accessible. A continuous shooting of rapids brought us once more to the St. Anne. The most tempting boulders and each of the 5 or 6 pools have increased our stock of fish considerably, and like true sportsmen we resign our rods and contemplate the scenery as we travel up stream and soon enter the discharge of Lake Cimon. A good trail here brought us to lakes Evangeline and Cimon. We found them to be swarming with tront averaging 4lb. weight, and my advice to members is to visit these lakes by all means, as every good cast tempts a victim. A chain of lakes known to be excellent are further on, but not yet open. not yet open.

Returning to the main river we take the trail to the head of the big rapid, the cance making good headway by the river with baggage only. As the rise is almost imperceptible the walk is a pleasant one, and one hour brings us to the Mauvaise Riviere. Being well fitted with suitable wading shoes, we tried a little wading to refresh ourselves and while away time, awaiting the arrival of our cance; the stream is 25ft. broad and affords good fishing. We soon came to a halt, however, as we reached the foot of the mountain, 1,100ft. high, down the side of which dashes the stream in a number of falls and cascades. The headwaters of this stream is a chain of five lakes, better reached by Lake Cimon.

Walking back we were greeted by our guides, who took us across to the Lake Jambon trail A stiff walk of three-quarters of a mile brings us 1,000ft. above the St. Anne; 100ft. below us lies a lovely sheet of water, Lake Jambon, six miles in circumference; the water is of a greenish hue and so remarkably clear as to enable us to see, the bottom at a depth of 30 to 40ft.; the lake is very deep and cold.

Anne: 100rt. below us lies a lovely sheet of water, Lake Jambon, six miles in circumference; the water is of a greenish hue and so remarkably clear as to enable us to see, the bottom at a depth of 30 to 40ft.; the lake is very deep and cold.

We found good boats awaiting us, and soon were skimming over its waters. One can well imagine the quality of fish we got, and certainly they are not to be surpassed on this continent, as in all these waters nothing but brook trout are found. What sport we enjoyed when alluring these beauties, but on account of the remarkable clearness of the water most careful and artistic casting is required; when a flash of silver was to be seen darting toward the tempting fly, it was visible at 30ft. distant. The cast is not in vain, and quicker than lightning your line is spinning off your reel, the sport has begun, and you imagine a monster has hold of your line, so vigorous is a 2lbs. fish in this water. The average for Lake Jambon on this trip was 14lbs. They are known to run as large as 4lbs., but none larger have been captured here.

Our next move was toward Little Jambon, a lake as large but not so deep as the big lake. It is swarming with fish averaging 4lb. weight. It was here that the crowning event of our journey took place when Edward and 1, having imprudently stood up in our birch bark cance, upset, were immersed rather suddenly and had to swim for our lives. We lost \$50 worth of tackle, but did not leave our carcasses for the fish to feed upon. The good old Commodore gave us a jovial lecture that evening about fishing on Sundays. At the head of this lake is a trail leading to seven other lakes running toward the head of the Tourilli. Going back to the St. Anne, with rods mounted, we head upstream. A lovely pool is before us, and I captured a 5-pound trout by casting under the low overhanging boughs which line its banks. Several pools are crossed, when a mountain of great height looms up in the distance. It is the Fale Tourte—Pigeon's Breast—2,500ft. above the river and muc

trance, and are called the "Gates." Between them is an enormous boulder, against which the water dashes with tremendous force.

Under the ledges of rock in the small pool we caught five fish, one, weighing 7lbs., was the prize of friend Edward, and on account of the tremendous current, it required careful handling and took out 75yds. of line before it was landed in a small pool outside the Gates. Col. Johu Panet, my friend's father, has a record of a 9lbs. Salmo fontinalis taken here.

A short distance below we found the trail to the head of the falls, here a chain of 15 lakes were crossed in birch bark canoes. All these lakes were full of trout, giving us much sport. The largest of these lakes, St. Anne, is 3½ miles long, the carries between them being short.

This being the height of land, it is level for several miles. It is a good hunting ground and abounds in large game. It is the watershed from which flow the Chicoutimi, Metabetchouan, Batiscan, Jacques Cartier, Little Saguenay, Tourilli and St. Anne rivers, each running in a different direction. It is the feeding ground of moose,

caribou and other game, the bush being low and marshy. Game was seen all over the limits that we crossed and we ascertained that many a fine buck has ended his days quite close to the guardian's house.

Our return trip now commenced in earnest. Our destination was Lake St. John, the home of the winninish, the king of the game fish, a fresh water salmon that yields not to his salt-water brother in his fierceness of play. The train speeds on towards the Peribonca. At Lake Edward a long stop is called. A pleasant time may be had here by a fisherman who does not care for hardships, as the lake is not 20ft. from the hotel, and good sport is generally to be had with the fly, and always with bait or troll. At Lake St. John we make preparations to cross the lake to the mouth of the Grand Peribonca. It, as well as the Little Peribonca, have become Tourilli Club's limits, and so we have made up our minds to go over them and find what we have and what we have not. As we expect to have some grand sport with the landlocked salmon, the Commodore good-naturedly entertains us with his experience at the Grande Décharge, of which he was formerly a part owner.

The mouth of the Grand Peribonca being entered, a

a part owner.

The mouth of the Grand Peribonca being entered, a short sail of one mile distance brings us to the mouth of the Little Peribonca, a stream a half mile wide at this point. To give an idea of the extent of this Peribonca I will tend to the the stream of t point. To give an idea of the extent of this Peribonca I will merely state that it is nearly two miles broad at its mouth, 50 miles up it is fully one mile wide, and continues so for over 150 miles, the entire length being about 300 miles. We found these rivers to be very grand as far as sight-seeing is concerned, and as for fly-fishing, why we got enough of it to satisfy the most ardent angler. Our guides informed us that fly-fishing is good on the river's whole length, as well as all its tributaries and lakes. This fact leads me to believe the Peribonca to be the feeder of Lake St. John's enormous supply of winninish. A hatching station is to be placed at the mouth of the river.

Ouebbc. April 20.

QUEBEC, April 20.

ANGLING NOTES.

THE time has now arrived when the fly-fisherman will have his inning. The gold with the fly-fisherman will Thave his inning. The cold, rainy weather and high water, such as we usually have during the first few weeks of the trouting season, and which are so favorable to those who use the slimy crawling worm, have departed, and the soft balmy air, laden with the sweetest perfume of thousands of wild flowers and apple blossoms woos the angler to the wild mountain stream, where he

perfume of thousands of wild flowers and apple blossons wooes the angler to the wild mountain stream, where he can forget the noise and turmoil of the dusty city and cast his flies with a good chance of success.

Making all due allowance for "fish stories," the reports of the catches of trout throughout the county is most encouraging; the trout seem to be very plentiful and of excellent size, showing the wisdom of the 6-inch law in those States where it obtains.

The slaughter of baby trout for count is out of fashion, and now the man who brags of killing his hundreds of fingerlings in so many hours and minutes is no longer a subject of admiration, but rather finds himself pounced upon by all true anglers. The killing of half a dozen big trout is much more creditable to the fisherman, and it is the size and not the number that marks the expert.

We are often asked what combination of flies is best to use at this season of the year. This is a difficult question to answer, unless one can first see the stream and note the color and conditions of the water. In a general way we would advise the use of three flies entirely different, say, for instance, a brown-hen, a queen-of-the-water and a Cahill. If the trout show a preference for one or the other, the angler can fish with two or three alike. The sizes used on the streams of the Middle States are Nos. 8, 10 and 12 Sproat. Should the water happen to be high and discolored, bright flies on a No. 8 hook will do the best work; but if low and clear, 10 or 12 will be found the better sizes and they should be quiet in color. With the latter size the lightest weight leaders obtainable and as long as the rod will allow. That is with a rod 10ft. in length or over, one should fish with a 9ft. leader, but if the rod is shorter, use leaders in proportion. It is better to carry a small short-handled landing net hung on a button under the back of one's collar; many a good fish is lost for want of this precaution and many a good rod ruined by trying to lift out a big fish.

The angler should take care of his fish after he has caught them. It is discreditable to fetch back a lot of sun and wind dried trout, all curled up and stiff. Put a handful of grass or ferns in the bottom of the creel and kill the fish as coon as caught, by hitting them a sharp blow on the back of the head. If the weather is hot, clean the morning's catch at noon, and every few hours dip the creel in the stream. The best way to keep trout to take home is as follows: Clean them thoroughly, taking care to remove the gills and the blood under the back bone, wipe dry inside and out, but do not wash them, sprinkle them inside with black pepper, but on no account use salt. Pack in cool, fresh grass and keep them in the shade. If ice is used it should be put in a tin can or at least at the bottom of the creel, for it spoils the flavor of trout to have them soaking in water.

The best stream fishing we know of is to be found at White Cloud, Mich. Easily reached by railroad from Grand Rapids. Excellent trout and grayling fishing can be obtained here with fair accommodations.

Col. Alfred J. Hobbs, of Bridgeport, Conn., recently caught a female trout full of ripe spawn, which flowed freely when he took the fish off of the fly.

A 10lbs, salmon was taken in the Hackensack River, N. J., last week, with a net unfortunately. Some seven or eight years ago a lucky angler killed one in the upper waters of this river while fly-fishing for black bass.

Weakfish have made their appearance at Gifford's.

EARLY WEAKFISH.—At Fitzgerald's, Giffords, Staten Island, the first weakfish were taken May 4. The average weight of the fish caught was 1lb.

MAINE TROUT SEASON.

MAINE TROUT SEASON.

The ice went out of Rangeley Lake on the 9th and out of Moosehead on the same day. Engeley was clear ten days later than last year, but three or four days earlier than the average. An extensive thaw, with the melting some, started the ice in the lakes and came very near starting some of the dams. The lakes below Rangeley, in the Androscopric chain, were a day or two later about clearing; but the cleaning of Rangeley started the aportsmen, and since that time the rod and reel exodus has been considerable. The first gentleman to be on the wing was Edwar W. Curtis, a preminent Meriden, Conn., merchant. He started for the Upper Dam on the 7th. He has had wonderful success on the lake in previous seasons, and he is bound to be in season this year. The Tuttle narty left boston on Saturday for Lake Point Cottage, Rangeley Lake. This party is a long-time one, and has generally started as soon as the ice has left that lake. Among the prominent business men included are Mr. R. A. Tuttle, a Boston commission merchant; Mr. C. F. Hutchins, of the wool firm of Hutchins & Kitchen; Mr. K. M. Gillmore, of Semerville: Henry Milliken, of Deering, Milliken & Co., Portland, Me.; Peter Reid of New York; Moses Worthen, also of New York, and O. H. Sampson, of the same city.

Col. H. T. Rockwell, of Rockwell & Churchell, printers: John A. Lowell, the well known lithographic printer, and H. A. Priest, of Priest, Page & Company, all of Boston, will make up a part of the Priest party, soon to start for Rangeley. C. W. Loring will follow some time next week. C. C. Basset, of the well-known fishing tackle firm of Geo. C. Appleton & Company, with Mr. G. M. Smalley, will start for an extended trip in the Rangeleys, about May 20. Mr Basset goes largely to see the country and get acquainted. Mr. E. G. Patritige, of Boston, will start for Moosehead about May 20. The Dennison party, including Mr. Henry B. Dennison, of the Pangeleys, about May 20. The about a party of prominent Boston grain in the Rangeleys, about May 20. The

SALMON AS BAIT FOR CODFISH.

SALMON AS BAIT FOR CODFISH.

Editor Forest and Stream:
Your correspondent "Big Reel" has been so awfully and horribly shocked by the "utter depravity of the fellow" who fished for salmon with codfish bait, as shown in one of his "Random Casts" published in to-day's issue, that I can't resist the temptation to shock him again—I hope not fatally, for I rather enjoy his casts, but just enough to make him squirm a little. I've had lots of fun in my time by shocking some companion of the angle, one in particular, a "genial tellow," whose name I will not, unless forced so to do in due course of law, reveal, by fishing from the same boat and by the same brook bank with good fat worms, and catching trout—nice ones, and lots of them—while he pursued a course of calisthenics with his fly-rod, the exercise and the pleasures of hope being his only reward. The shock never affected his appetite, and he ate his full share of those foully deceived speckled and fried beauties without a murmur of protest.

If catching salmon with codfish stamps a man as

If catching salmon with codfish stamps a man as "utterly deprayed," what epithet is left to crush into the veriest atom the blanked person who not only has, but would again if he got the chance, caught codfish with salmon for bait? Is the English language sufficiently copious to do justice to that man, this man—me?

I'll tell you about it, and in advance will say that the adventure has upon many occasions saved me from all necessity of drawing upon my imagination, in the manner which is commonly supposed to be held in common by fish story tellers and Ananias. The true history of an hour's work off Killus-inoo, in Alaska, has on these occasions frequently earned for me a first-class reputation as one of the aforesaid.

It was as I have said in Alaska. I was sitting in the

one of the aforesaid.

It was as I have said in Alaska. I was sitting in the stern sheets of my gig. Dick Willoughby sat in the bow. I call him "Dck," and am thus familiar with him because he had not at that period arisen to heights of fame as "Professor Willoughby," the discoverer, photographer and describer of a mystic marble city at times visible among the glaciers of Glacier Bay. It was while on the cruise of the Favorite, fully described in your columns years ago. We were fishing for halibut. Dick, than whom no man knew more of the peculiarities of the

Siwash and his country, or of prospecting, or lovemaking to klootchmen, or of running a dance-house, had among his good points a fondness for fishing; and while the Favorite was anchored in Killissino Harbor offered to take me to a bank near by where the wild halibut was tame, so tame that there was hardly any sport in catching him. So we went, and within three miles of the little steamer and within half a mile of the shore we anchored in seven fathoms and went to fishing. Had we been provided with an automatic apparatus that would lower our hooks to the bottom and immediately haul them up again, we would have had better fun, for then we could have simply looked on and not got ourselves wet. The bottom must have been paved three or four deep with chicken halibut, weighing from 15 to 30lbs.

Pretty soon Dick proposed a fishing match with me for a large wager. If Iremember aright it was 500 shares in the Silver Island Mine, worth at that time an indefinite price. We had just discovered and located the mine and posted our claim notice. It is worth now—anything it will bring. The terms of our match were: Each to fish with two lines. Each to have an assistant. Each to bring his fish to the surface and hold him there until the assistant, who while waiting had baited the other hook, had hooked the fish with the gaff. We were to fish just one hour. At the end of the hour time was called and Dick was pronounced the winner. He had caught twenty-four and I but twenty fish, whose weights we estimated at about 20lbs. each, or over 800lbs. of fish.

The bait we used was salmon—red fleshed, beautiful, lordly kings of fishes, etc., and we got our bait on the spot. While we were halibutting, the men, of whom we had two or three besides our assistants, were fishing for salmon. Their apparatus was that commonly used by the Indians, being duck-shaped buoys, to the under surface of which were fastened lines about 4ft. of 6ft. long, the hook baited with a herring; the buoys were fitted with lines so that they could float some little

Hishculture.

NEW YORK FISH COMMISSION.

NEW YORK FISH COMMISSION.

The eighteenth report of the Commissioners of Fisheries of New York contains many items of general interest. The distribution of fish eggs and fry during the year ending Sept. 30, 1839, was 31,439,638, representing chiefly fishes of the salmon, cod and shad families. The output of the Calledonia hatchery was over 13,000,000 and of the Cold Spring Harbor nearly 10,000,000. The planting of yearling trout was begun. Most of the applications for fry were for waters in the Adirondacks and Catskills. Plenty of evidence was to batined of the success of artificial propagation. The management of Mr. Drew as chief protector of game and fishes is highly complimented. Attention is called to the necessity of codifying the conflicting and contradictory game laws. Through the efforts of the oyster protector, Joseph W. Mersere m., the injuries from deposits of refuse and acids from oil refineries upon cyster beds has been mainly stopped; but the gas companies continue to pollute the waters of the want of efficient law to prevent it.

The Commissioners have examined the waters of the Adirondack region, and have instituted a thorough exploration of Lake Ronkonkoma and the Great Ponds of Southampton, Long Island, by Professor Dean and Mr. Fred Mather. The illustrated report of this examination is extremely interesting and valuable.

The present policy of the Commission to send fish fry to all persons who apply for them to stock public waters and will pay the transportation seems to them unjust. Fish for public waters should be deposited at public expense. A car is asked for to distribute eggs and fry, and would undoubtedly prove a profitable investment.

The Commissioners recommend the passage of a law to prevent the destruction of young salmon under the mistaken belief that they are trout. The shad and the game fish of the Delaware also require protection.

An appropriation of \$41,500 is estimated to be needed for the current year.

In addition to the Commissioners will be found a revised account of th

The Rennel.

FIXTURES.

DOG SHOWS.

June 3 to 6.—The Cinciunari Kennel Club's Fourth Annual Show at Cinciunati, O. Geo. H. Hill, Superintendent. Sent. 2 to 5.—Third Annual Dog Show of the Michigan Kennel Club, at Detroit, Mich. M. V. B. Saunders, Secretary. Supt. 15 to 18.—International Dog Show of the Dominion of Catada Kennel Club, in connection with the Industrial Exhibition at Toronto. Canada, H. J. Hill, Secretary. Sent. 23 to 26.—Second Annual Dog Show of the Central Canada Exhibition Association, at Ottawa, Alfred Geddes, Chairman Committee.

Committee.
Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricul-tural Society, at Danbury Conn. B. C. Lyues, Secretary.

tural Society, at Danbury Conn. B. C. Lyues, Secretary.

FIELD TRIALS.

November.—Second Aunual Field Trials of the Brunswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Auburndale, Mass.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratogo Springs, N. Y., Secretary,

Springs, N. Y., Secretary.
Dec. 1.—Second Annual Field Trials of the Central Field Trials
Club, at Lexington, N. C. C. H. Odell, Mills Building, New York,
Secretary.

Jan. 19.—Eighth Anuual Field Trials of the Pacific Kennel Clnb, at Bakersfield, Cal. H. H. Briggs, Secretary. Feb. 2.—Third Annual Field Trials of the Southern Field Trials Clnb. T. M. Brunby, Secretary, Marietta, Ca.

ENGLISH FIELD TRIALS.

THE National field trials of England were runnear Shrewsbury April 22 to 25.

POINTER PUPPY STAKES

There were 22 starters in the Pointer Puppy Stakes. The

There were 22 statuets in the revine reapy winners were:
First, Rev. W. J. Richardson's liver and white Rompish, 13mos. (Molton Banker-Milton Ringlet).
Second, Mr. Hayward-Lonsdale's liver and white Tyke, 11mos. (Ightfield Dick-Perdita).
Third, Mr. Scratton's lemon and white Nepthys, 13mos. (Gough-Nannie).
Fourth, Mr. J. Bishop's liver and white Brave Duke of Salop, 15mos. (Brave Duke of Wellington-Juno).

SETTER PUPPY STAKES.

There were the same number of starters, 22, in the Setter Puppy Stokes. The winners were:
First, Messrs. Bulled & Turner's white and liver Devonshire Daisy, 14mos. (Prince Rupert II.—Devonshire Fan).
Second, Sir R. Sutton's lemon and white Benham Jewell, 10mos. (Bradford Ben—Minnie).
Equal third, Mr. A. P. Hayward-Lonsdale's black and white Phoness and Ian, 14mos. (Woodhill Bruce—Lucy).

ACTON REYNALD STAKES.

ACTON REYNALD STAKES.

There were 14 starters in the Acton Reynald Stake, 9 setters and 5 pointers. The winning pointers were:
First, Baron Oscar Dickson's liver and white Rustem, 2yrs. 11mos. (Susex Don—Ringlet).
Reserve, Messrs. F. C. Lowe and A. Bertrand's Belle des Bordes, 6yrs. 1mo. (Young Bang—Polly).
The winning setter was Mr. R. Li, Purcell Llewellin's lemon and white Satin Bondhu, 1yr. 8mo. (Dashing Bondhu—Duchess Placid).
Absolute winner, Satin Bondhu. Second best of both breeds, Belle des Bordes.
CLOVERLY STAKES.
There were 9 brace that started in the Cloverly stakes.

There were 9 brace that started in the Cloverly stakes.

There were 9 once that states. The winners were:
The winners were:
First, Mr. F. Bibby's liver and white English setters Randolph, 4yrs. (Tory II.—Border Nell) and Sabot, 3yrs. 10mos. (Slap Bang—Fleet).
Second, Col. C. J. Jones's lemon and white pointers Polly Jones, 1yr. 3mos. (Carlo—Jenny Jones) and Jenny Jones, 6yrs. Smos. (Young Dick—Di Vernon).

THE KENNEL CLUB FIELD TRIALS.

The annual field trials of the English Kennel Club were run near Savernake, April 29 to May 1. There were twenty-six starters for the Derby, sixteen pointers and ten setters. The winning pointers were:
First, Mr. Barclay Field's liver and white dog Fordcombe Luck, lyr. (Gough—Larkspur).
Second, Mr. F. Warde's liver and white dog Kent Pear, lyr. 2mos. (Taw—Kent Fairy).
Third, Mr. E. C. Norrish's liver and white bitch Sandford Lark. lyr. (Saddleback—Whim).
The winning setters were:
First, Mr. T. Lauder's black, white and tau bitch Sweep the Green. lyr. (Monk of Furness—Kate Auburn).
Second, Messrs Bulled & Turner's white and liver bitch Devoushire Daisy, 14mos. (Prince Rupert II.—Devonshire Fan).
Third, Mr. C. C. Ellis's Irish setter bitch.

ran). Third, Mr. C. C. Ellis's Irish setter bitch Dartrey, lyr. 3mos. (Dan Moriarty—Mac's Little Nell). Absolute winner, Fordcombe Luck.

THE ALL-AGED STAKES

There were twelve starters for the All-Aged Stakes. The

There were twelve starters for the An-Aged Data.

There were twelve starters for the An-Aged Data.

First, Messrs. F. C. Lowe & A. Bertrand's liver and white pointer bitch Belle des Bordes, 6yrs. 1mo. (Young Bang—Polly).

Second, Mr. T. Lauder's black and white English setter dog Earl of Moira (Jock—Little Bess).

Third, Sir T. Lennard's liver and white pointer dog Polites (Priam—Duchess).

Fourth, Messrs. Bulled & Turner's liver and white pointer dog Devonshire Nero (Molton Baron—The Village Star).

THE NATIONAL BEAGLE CLUB

THE NATIONAL BEAGLE CLUB.

M. I would like to extend through the columns of Forest and Stream:

Est and Stream an earnest invitation to all interested in the running, breeding and exhibiting of beagles to join the National Beagle Club. a club formed for the improvement of the breed both in the field and on the bench. All who join us will assist in advancing their favorites to the front rank of sporting dogs, where by nature they belong, and being members they can compete for the valuable silver and other special prizes that have been offered for our first semi-annual field trials, which will be run some time next October or November. We have placed our initiation fee and dues so low that every owner of a beagle cannot afford to omit joining and sending some of his dogs to our trials. Any information regarding the club can be had by writing to the Secretary.

CONSTITUTION.

CONSTITUTION.

ARTICLE I.

This association shall be known as and called The National Beagle Club.

Beagle Club.

ARTICLE II.

The object of the club shall be to promote improvement in the field and on the bench of the beagle hound in America.

Sec. 1. Applications for membership to the club must be presented in writing to the secretary, signed by at least two members of the club and the secretary, referred to the executive committee for investigation, to be balloted for at the next meeting.

Sec. 2. A person to be a member must be recorded in a book provided for the purpose by the secretary. The date of his becoming a member, also the time of his ceasing to be such, shall be recorded.

Sec. 3. Any member can resign from the club have at the content of the content.

coming a member, also the time of his ceasing to be such, shall be recorded.

Ser. 3. Any member cau resign from the club by sending his resignation to the president or secretary in writing, and upon the acceptance of such all his interests in the property of the club cases from the date of such resignation.

Sec. 4. Any member whose dues shall remain unpaid for two months after the same have become due shall cease to be a member and forfeit to the club all claims and benefits to which he would have been entitled as a member; provided that the executive committee may consider his case, and upon sufficient cause shown reinstate him to membership upon payment of his dues.

Sec. 5. Any member acting courrary to the provisions of the constitution or in violation of the by-laws or rules of the club, or in any way tust may tend to the riptry or destruction of the club, or neglecting his duy as an officer or a member, or being convicted of crime in a court of justice, may be expelled, and shall forfeit to the club all moneys paid, all property, claims and benefits to which he would have been entitled as a member of the club.

Sec. 6. A member can be expelled only by a vote in favor of his expulsion of two-thirds of its members after thirty days' notice has been given to him personally of the charges against him, when action shall be taken thereon by a vote,

ARTICLE IV.

Sec. 1. The officers of the club shall consist of a president, three vice-presidents, a secretary-treasurer and an executive committee, said committee to consist of the above-named officers and three active members chosen by the club.

Sec. 2. Any office vacated during the year shall be filled by the executive committee.

executive committee.

ARTICLE v.

Sec. 1. Nominations for officers shall be made at the quarterly meeting, previons to the January meeting, and a copy of the names of the nominees sent to each member of the club.

Sec. 2. An election of officers for the club to serve one year shall take place at the January meeting of each year, and the majority of the votes cast for a candidate shall elect him.

Sec. 1. There shall be quarterly meetings of the club held at Boston, Mass., in January, April, July and October.
Sec. 2. Members unable to attend these meeting may vote by mail by sending ballot to the secretary previous to the meeting for election.

Sec. 2. Members unable to attend these meeting may vote by mail by sending ballot to the secretary previous to the meeting for election.

BY-LAWS.

Article I.—President.—It shall be the duty of the president to preside at all meetings of the clib, to enforce the observance of the by-laws, and he may vote on amendments to the constitution or alterations of the by-laws, also on the expulsion of a member, but on all other matters shall vote only in case of a tie and then give the deciding vote.

Article II.—Vice Presidents.—It shall be the duty of the vice-presidents to preside in the president's absence according to rank as elected, brist, second and third vice-presidents.

Article III.—Secretary and Treasmer—It shall be the duty of the secretary-breasmer to have charge of all official correspondence to keep copies of all letters sent by him and file since has he can be compared to the compared the committee of the clib. To keep a record of the members, their admissions and dissontinuances. To collect and receive all money due the duto, and keep a correct account of the same. He shall pay all orders drawn on him by the executive committee out of the funds of the clib, in his hands, when countersigned by the president, and to every three months to the clib.

Article IV.—Executive Committee—Shall make all purchases ordered by the club, audit the accounts of the treasurer and report of the condition of affairs in his department to the clib, and transact all business not otherwise provided for. They have power to appoint sub-committees for any special purpose, and to delegate to such sub-committees for any special purpose, and to delegate to such sub-committees the powers and functions of the committee relating thereto. The president shall be the chairman of the executive committee.

Article V.—The initiation fee shall be \$2, due and payable at the time of joining the club.

Article VI.—The miniation fee shall be \$2, due and payable at the time of years and
Mr. O. W. Brooking, President; Messrs, F. E. Keith, W. P. Whitman and W. F. Ruter, Vice-Presidents; Mr. F. W. Chapman, Secretary and Treasurer. Executive Committee, the above named officers and Dr. W. A. Power, Mr. W. S. Clark and Mr. H. F. Jamieson.
Following is a list of the charter members; W. Stewart Diffeuderfler, E. R. Watrous, S. B. Arthurs, E. C. Barrett, John Chapman, F. W. Chapman, O. H. Clapp, W. P. Whitman, George P. Berry, F. E. Keith, H. H. Donnell, W. F. Rutter, R. A. Smith, W. S. Clark, J. R. Beebe, H. H. Brown, R. J. Stephenson, H.V. Jamieson, R. E. Rowley, O. W. Brooking, John J. Wilson, A. R. Crowell, Wm. Ledyard, Dr. W. A. Powers, H. S. Gilbert, F. W. CHAPMAN, Secretary.

AN ENGLISH SETTER CLUB.

Editor Forest and Stream:
Several gentlemen interested in the English setter met at the office of the American Stock-Keeper on Friday evening, May 9. It was voted that a club be formed for the improvement of the breed, and that a meeting for organization be held at Parlor G, Quincy House, Boston, on Friday, May 23, at 7 P. M. A committee of three were appointed to prepare a constitution and by-laws, and it is hoped that all sportsmen and breeders of the English setter will be present to join the club as charter members. Those who cannot be present will please send their applications to the secretary pro tem. Nearly all variety of dogs have specialty clubs to champion their cause, and it is a mystery to many why the English setter men have remained inactive so long. Here is a long-looked-for opportunity, and we earnestly hope for the hearty co-operation of all. For further particulars address the secretary pro tem..

MELROSE, Mass.

Melrose, Mass.

SHOOTING DOGS.—Editor Forest and Stream: Mr. Geo. B. Manson's communication suggests to me two remarks. First, I never referred to the Ogdensburgh case in particular (except on one side issue), but was entirely general on the subject of the rights a man had in protecting himself against annoying dogs. As to this I know that one of the ablest judges in Pennsylvania decided some years since that an owner had a right to shoot trespassing dogs. Second, I do not remember that I ever argued in favor of a man's shooting with intent to wound only, in fact, I had in mind the shooting of the dog to kill. Nor can I admit that there is anything "unmanly" in a man shooting a dog, in any way, when other means have been tried and the nuisance remains unabated; and Mr. Manson will pardon me if I suggest that he is drawing perilously near the lines of the inaninities of "A Brutal and Cowardly Act." a company I fancy he would feel sadly uncongenial in. I again insist that the rot about dogs, "thorough sportsmen," etc., attaching a totally false value to the life of the animals and the pursuits of men, is most mischievous to each, and it is high line that common sense be allowed a hand in the game. I wish some of your dog-loving lawyers would say if it is correct as stated in a Western paper, that it has been decided that it is unconstitutional to kill dogs whose owners do not pay a tax imposed on them? This strikes me as arrant rot. If the State deems necessary to that end. I think it comes within what lawyers call "the police power." If it is unconstitutional to kill dogs whose owners do not New York, had earned a century of imprisonment and the National debt in fines. It does not seem to be known generally, that the late Legislature of Pennsylvania passed an act relating to dogs, which while it contains many absurd and impracticable provisions, does what should have been done long since, makes dogs personal property and the subject of larceny. Mr. Manson will please understand that all general observations I ma

CINCINNATI DOG SHOW.—Editor Forest and Stream: The prospects are that the Cincinnati Kennel Club's fourth annual bench show, to be held here June 3 to 6, will be a magnificent success. A large number of entries have already been received at this early date (May 9) and inquiries for premium lists are numerous. Should there be six (6) or more entries in classes made for dogs or bitches only, the classes will be divided. Music Hall, the building in which the show is to be held, is centrally located and splendidly adapted for the holding of a bench show, being all on one floor, with ample light and ventilation. Spratts Patent will bench and feed the dogs. There are good hotels directly opposite the building for the accommodation of exhibitors and visitors. Entries close May 20. Premium lists can be had upon application to Geo. H. Hill, Supt. (6 East Fourth street, Cincinnati, O.).

DOGS.—NALDIRES medicated SOAP for washing dogs, destroys all irritating insects, removes doggy smell and leaves the animal refreshed and happy. This prize medal soap, used by all the leading owners in Europe, is now sold by Park & Tillord, McKesson & Robbins, E. Fougera and all Druggists.— Adv_i

NEW JERSEY KENNEL CLUB.—At the annual meeting of the New Jersey Kennel Club last Tuesday evening there was no quorum and the meeting was adjourned to Tuesday, June 3. At the regular monthly meeting, held on the same date, a strong disposition was evinced to hold a dog show somewhere in Orange, either this year or early in next, and to that end an energetic movement will shortly be put on foot to recruit the ranks and build up the membership of the club. Dog men throughout Jersey, and especially in Orange are collectively and individually invited to join hands with the club, become members (at the nominal fee of \$5) and help further the interests of the canine race in Jersey, and at the same time make this club what it has been heretofore, one of the foremost dog clubs in the country.

EASTERN FIELD TRIALS CLUB.—There was a meeting of the Board of Governors of the Eastern Field Trials Club on Tuesday at the office of Mr. F. R. Hitchcock, No. 44 Broadway, New York. Messrs, Geo. W. Ewing, Ft. Wayne, Ind., and W. Hay Bockes, Saratoga Springs, N. Y., were elected members. A letter was read from Mr. F. I. Stone, Chattanoga, Tenn., accepting the invitation of the club to judge at the trials next November. It was voted that the secretary write to Col. Arthur Merriman, Memphis, Tenn., and Mr. H. B. Duryca, New York, inviting them to judge. A letter from the secretary, who was unable to be present, states that there are 84 nominations for the Derby, 21 more than last year; 6 of them are from England, 3 pointers and 3 English setters.

MEMPHIS & AVENT KENNELS.—Memphis, Tenn., May 8.—Editor Forest and Stream: By mutual consent the Memphis & Avent Kennels was dissolved on April 1, Messrs. Arthur Merriman and W. B. Gates wishing to retire permanently. The dissolution notice has been delayed for business reasons, pending some unsettled kennel maters. The dogs of the kennels will be offered for sale, full particulars of which will be given in your next issue. Till further notice the dogs will remain as they are, and persons wishing the services of our stud dogs will please address us here as before.—Memphis & Avent Kennels.

THE FRENCH FIELD TRIALS.—The French field trials were run near Rouen, April 18 and 19. There were 11 starters, 10 pointers and 1 setter. The winners were: First, M. D'Halloy's pointer dog Young Priam; second, M. Novette's pointer bitch Sol; third, M. Stevenart's setter dog Stop; fourth, M. Macresse's pointer bitch Jilt of the Tahn.

A SOLDIER DOG.—A French painter named Bloch shows this year an incident of the Franco-Austrian war, which will amuse those who are fond of dogs. The regiment's dog named Mustache is dragging from the hands of an Austrian officer the colors of the regiment. It is an incident from the battle of Solferino.—New York Times.

THE LOS ANGELES DOG SHOW.—There were 136 entries at the second annual dog show of the Southern California Kennel Club, held at Los Angeles, Cal., last week. A report of the show with a list of the awards will appear next week.

PHILADELPHIA KENNEL CLUB FIELD TRIALS.— The annual field trials of the Philadelphia Kennel Club will be held at Deatonsville, Va., Dec. 15.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

retaining duplicates, are sent for 30 cents.

The first practice of the Cumberland Rife Association, the shooting organization lately formed hy members of the Royal Grenadiers, was held on Saturday afternoon, May 8, at the garrison common. About 100 members were present at the butts, out of which number some 25 participated in the shooting. The ranges shot over were 200, 500 and 600yds. The atmospheric conditions were not as favorable as they might have been, a strong unsteady wind blowing all the time. Much interest was manifested in the competition. Several of the officers of the regiment were present and encouraged the contestants. Col. J. Bedson, of the First Colorado U. S. Cavalry, was a spectator and participant, and succeeded in making a creditable score. Owing to the shooting point at the 600yds. range being in an unfinished state many of the competitors were unable to complete their scores, Appended is a score of the first six who finished the series:

240, T. Fitzpatrick 218, J. Goerlitz 209,—H. W. STEFFAN, Sec'y. MARION, N. J., May 7.—The brisk atmosphere of this atternoon made the members of the Marion Rifle Club feel at home on their range, and they kept exercising themselves at the butts until their shoulders felt somewhat sore, due to the recalcitrancy (kick) of the firearms. The work accomplished may be classed as medium, the following scores being made on the 25-ring target at 200 ds. distance: J. Autenreith 206, Wm. Wehber 197, H. Hoersch 193, L. P. Hansen 183, J. Rebhan 187, J. Speicher 183, L. W. Sutton 188, G. C. Varick 180, C. Bauchle 150, J. Diehl 134, and T. Stiff 129.

ENCOURAGING MARKSMEN.—The Dominion Government has decided to grant free ammunition to the teams who enter the Canadian Military Rife Leggue, and any corps who may wish to enter may do so yet hy telegraphing the secretary, to enable him to forward their score sheets. There are 42 teams entered to date, and the first match is on May 17.

HAMILTON, May 9.—At the annual meeting of the Victoria Rifie Association the following officers were reflected: Major J. J. Mison. President; Lieut.—Col. J. M. Gibson, Past President; Major McLaren, First Vice-President; Capt. E. G. Zealand, Second Vice-President; Albert Pain, Secretary-Treusurer; Managing Committee—Capt. J. Adam, Capt. F. B. Ross, W. M. Goodwin, W. H. Clarke and P. T. Robertson.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are reques to keep us advised of the dates of their shoots, so that we notice in our column of fixtures.

THE PITTSBURGH SHOOT.

THE PITTSBURGH SHOOT.

DITTSBURGH, May7.—The shoot here ending to-night was a fight against the elements and Brunot's Island was far from a pleasant spot. The shooting, however, was sharp and close, and the first day some of the most noted marksmen of the country were present; the local men did not show to any great disadvantage when they made a bid for any of the prizes offered. The results of the eight matches were as follows:

First match, 12 birds entrance \$1, 21 entries—First money div. by Wolstencroft, E. Tully, Heikes, Richardson and E. E. Shaner with 11, second div. by Courtney, Krueger and Wampler with 10, third T. Tully with 9, fourth Sutton with 8.

Second match, 12 birds, entrance \$1,50, 28 entries—First Courtney with 12, second div. by Helkes, Arden, A. King, Kelsey, Brown and A. Sutton with 11, third div. hy Krueger, Hoffman, Miller and Richardson with 10, fourth Wolstencroft with 9.

Third match, 32 entries, 18 birds, 33 entrance—First Wolstencroft with 18, second div. by Hunter and Krueger with 17, third div. by Courtney and Helkes with 18, fourth div. hy Richardson and Levis with 15.

Fourth match, 34 entries, 6 singles and 8 pairs, entrance \$1.50—First Levis with 12, second div. by Farmer and Kelsey with 11, third div, by Helkes and Crow with 10, fourth div. by Krueger and Brown with 9.

Fifth match, 57 entries, 12 birds, \$1.50 entrance—First E. Tully, 12 straight, \$34.20; second div. by Wolstencroft, Krueger, Dippold, Crable, Coebran, S. Shaner and Fry, 11 out of 12, \$25.55.

Sixth match, 44 entries, 18 hirds, entrance \$3: First money divided by Wolstencroft, Miller, Richardson, Hoffman, Arden, Brown and E. E. Shaner with 18, second divided by Wolstencroft, Levis, Ges and McPherson with 14, fourth money divided by McKinght and Mack with 18, second divided by Wolstencroft third, third wided by Richardson, Brown, A. King, Miller and Arden with 10, fourth divided by Penrose, First money divided by Heikes, Courtney and Krueger with 12, second money Wolstencroft with 18.

Eighth match, 12 birds, \$

the preceding lay. In weather was no Improvement, and the sperit excellent.

Match 9, 21 entries, '12 single standards, entrance \$1: First money divided by Wolstencroft and Krneger with 12, second divided by Penn and T Tulley with 1, third divided by Heikes and T Tulley with 1, third divided by Heikes 12 singles, \$25 guaranteed, entrance \$1: First money divided by Kelsey and Miller with 12, second divided by Kenger and Heikes with 11, third divided with 10, Wolsten-cot fourth on shoot off with 9.

Match 11, 23 entries, 18 singles, \$50 guaranteed, entrance \$3.50: First money Penn with 17, second divided by Krugger, Levis, Wolstencroft and Dippold with 16, third Heikes with 15, fourth Richardson with 14 in the shoot-off.

Match 12, 27 entries, 6 singles and 3 pairs, entrance \$1.50: First money Miller with 11, second divided by Levis and Heikes with 10, third divided by Krugger and T. Tully with 9, fourth divided by Hunter, McKnight, Black and Crane with 8.

Match 13, 25 entries, 12 singles, \$55 guaranteed, entrance \$1.50: First money divided by Heikes and Wolstencroft with 12, second divided by Richardson, Kelsey and Kruger with 11, third divided by McHardson, Kelsey and Kruger with 11, third divided by Kelsey, Krugger and Courtney with 18 straight, second divided by Kelsey, Kruger and Courtney with 17. third divided by Penn, Tully, Miller and E. E. Shaner with 16, fourth Farmer with 16 in the shoot-off.

Match 16, 38 entries, 12 singles, entrance \$1: First money Leys with 12 straight, second divided by Wolstencroft. Kelsey, Kruger, Penn and Brother Bill with 11, third divided by Brown and D. Ewing with 10, fourth Miller with 9 in the shoot-off.

Match 16, 38 entries, 12 singles, entrance \$1: First money divided by Penn, Miller with 19 in the shoot

snaner. Crow and D. Ewing with 10, fourth Miller with 9 in the shoot-off.

Match 17, 35 entries, 12 singles, entrauce \$1: First money divided by Penn, Wolstencroft, Crow and Miller with 12 straight, second divided by Mac Brown. Ward, T. Tally and Brother Bill with 11, third A. King with 10 in the shoot-off, fourth Brown with 9 in the shoot-off.

It is generally conceded that this has been the best and most successfully-managed shooting tournament that has ever taken place in Pit'sburgh. Local and visiting trap-shooters agree on this point, and the latter will be pleased to return when occasion offers.

CLAREMONT, N. J., May 10.—The shooting on the Claremont grounds to-day was enjoyed by a large number, and the traps were busy all along the line from noon to dark. Open sweep, Keystone rules, 50 cents entry includes birds: 2 3 4 5 6 7 8 9 10 11

BROOKLYN EVENTS.

May 7.—The Fountain Gun Club held its month oodlawn Park, Gravesend, L. I., to-day, and the be one of the best shoots ever held by this pop-reganization. In addition to the regular shoot t 100 live birds between L. Davenport, of the Fou-and Theodore Peck, of Hayerstraw, N. Y., drew

NEW YACHTS OF 1890.

NEW YACHTS OF 1890.

[Concluded.]

I view of the vast difference between Minerva and Liris, it is rather suprising that the two have exerted a very strong influctover the entire fleet, both new and old; but the fact is appatto any one who visits the yards of Boston and New York and pects the building of the new yachts and the alteration of the old. After Minerva's uniform success through the season it nly natural that the general verdict should be in favor of here rather than of the high-powered craft best represented by its; but at the same time the latter was the only one of the ge fleet of American forties which had made a tolerable show-against the Fife boat. Taken altogether, the performances of two Gardner boats, Liris and Kathleen, were too conspicuous, spite of many failures, to be disregarded; and while no one has n found to follow Mr. Gardner in the direction of power, there be no doubt that Liris and Kathleen have brought in a new in construction.

Thile Minerva is light compared with many American craft, at same time she is by no means exfreme in this direction as far by I had allowed would have had little influence on construction. The chare craft, however, are conspicuous for their light build, and his salient feature their success has been mainly ascribed in popular mind. The result, then, of the advent of these three red craft last year is shown in the cutting down of bilge and m together will the adoption of several other features from nerva, and at the same a reduction of weight of hull and an rease of ballast on the lines blocked out be Mr. Gardner last, T. Two notable examples of that imitation which is the sinestifiatery on the part of leading designers are found in the rations to Maraquita and Helen, the cutting sway of dead od as far as practicable in stem and sternpost, and the widenday schools and concentration of hallast.

I the new boats the influence of Minerva is visible in many sections; beam is cut away boldly, the midship section shows a contining out of the bilge above and the s

been constructed during a winter for too 20-tons or 20-rating class, and if they are at all equally matched and up to the standard of Dragon, the sport in the class will not only be highly interesting, but enduring."

The moral of this condition of affairs on both sides of the Atlantic tie is very plain. Rading in its perfection can only be carried on in the most perfectly designed, built, rigged and handled craft,

INTERNATIONAL RACING.

HOUGH the letter of Lord Dunraven has been in the hands of the New York Y. C. for over a week, its contents are still thheld, and its exact nature is unknown. The English papers ude to it as containing a statement of the objections to the deed gift which is satisfactory to British yachtsmen as representing elevations.

ft which is satisfactory to British yachtsmen as representing rivew of the disputo. e following letter, however, appears in the Fleld of May 3, and been marked to New York on April 25; each at min receipt of your letter of April 3, and have to thank New York Y. C., and the committee appointed by them, for consideration given to my letter of March II. In their telen of Aug. 4 last the Royal Yacht Squadron said that "chale holds good, providing cup can be held subject to challenges er Volunteer-Thistle conditions." they undonbtedly referred to the is of the deed subject to which the Volunteer-Thistle matches e sailed, and I used it in the same sense in my letter of the of last month. I am exceedingly sorry to learn that the New k Y. C. are unable and unwilling to recede from the position tho cup, if won by the club challenging, must be held under subject to the full terms of the deed of sift of Oct. 24, 1887, ch superseded the deed of gift of Jan. 4, 1882, under which the esta-Puritan. Mayflower-Galatea, and Volunteer-Thistle ches were sailed.

superseded the deed of gift of Jan. 4, 1882, under which the a-Puritan. Mayflower-Galatea, and Volunteer-Thisties were salled, and the second of the second

tom the correspondence of last year that the Royal Yacht Squadron would refuse, and I believe their refusal would be approved by the Yacht Racing Association and yacht clubs generally over here.

As regards your desire that the Royal Yacht Squadron should bave given fuller particulars of their objections to the new deed of gift, they would doubtless consider any communication on this subject from the New York Y.C. I canudo, of course, say wbether they would deem thomselves justified in criticising that document, and, even if they were to do so, I fall to see what benefit would result, as the New York Y.C. The Inter can nor will depart from the position taken up by them last year, viz., that the cup, it is the property of the

in in its condemnation as the Forest AND Stream has been in the first. The Commercial Advertiser discusses the matter as over:

It is to be regretted that there is not to be an international that race this season; still more to be regretted is the reason for a failure. Both sides wish a race. Great Britain has the kyrie, a challenger last year, and the untried lyernaterial and the Siammock, eager to show their mettle. But a race into the made because, as it appears, each side distrusts the er. The New York Y. C. fears that the Englishmen would be advantage of the liberal conditions which governed the erica's Cup when the Genesta, the Galatea and the Thistle cessively tried to capture it. This Royal Yacut Squadron deres that the Americans have imposed new conditions which untair. Whatever may be the merits of the cause of different of opinion, surely the yachtsmen of both countries should be rest to remove the stigma of mutual distrust which now seems exet upon them. Yacht raceing is essentially a sport of gentlem. With no other contests is the very spirit of fairness more sely albed. The honor of victory is alone sought for. Fair y is as necessary to a good yacht race as wind. Yet here are yet since who cannot arrange a trial of skill because of quibbles the very good farms is goes, all that the opponents of the vice of the control of the proposition of the present who cannot arrange a trial of skill because of quibbles were good afterns is good yacht race as wind. Yet here are viced have asked farms is goes, all that the opponents of the viced have asked farms is goes, all that the opponents of the viced have asked farms is goes, all that the opponents of the proposition of the present holy of American yantsmen will be in our of absolutely fair and equal conditions between all parties. Times handles the subject much more in detail in the follow-language:

The New York Y. C. has again been informed that the follow-language:

of absolutely fair and equal conditions between all parties, mes handles the subject much more in detail in the following handles the subject much more in detail in the following tage:

3 New York Y. C. has again been informed that British men decline to compete for the America's Cup under the ions laid down by the instrument known as the 'new deed.

4. The first section of the act of incorporation of this club that it is formed 'for the purpose of encouraging yacht may and naval architecture and the cultivation of naval e. The original deed of git of the America's Cup conthese words: 'It is to be distinctly understood that the Cup e the property of the club, and not of the members thereof, are sot the vessel winning it in a match; and that the conditions with the condition of the case of the conditions of the fact that the deed of gift, refused to compete under these conditions, uncing them unsportsmanlike and unfair to the challenger, which is not be conditions of the fact that the deed of gift, provides that the challenge of the challenge of which any satisfactory to both as to the dates, courses, numering them unsportsmanlike and unfair to the challenger of the club knows, for it has been repeatedly ned, that there can be no mutual cousent as to any or all times of a match, the present position of the New York of the conditions of the match, the present position of the New York of the conditions of the Amer

terms, and the Englishmen have had to accept them or to race.

original deed of gift contained a clause stipulating that cleriby party should give six months' notice in writing, tice to embrace the length, Custom House measurement, name of the vessel. In the second deed of gift this was to read as follows: 'Accompanying the six months' notice must be a Custom House certificate of the measurement atement of the dimensions, rig and name of the vessel.' initioant change is trom 'length' to 'dimensions.' In the did of gift now in force the clause reads thus: 'Accompany-ten months' notice of challenge there must be sent the 'the owner and a certificate of the name, rig and followensions of the challenging vessel, namely: Length on terribus, beam at load waterline and extreme beam, and

The letter alluded to is as follows:

Arthur Warren, Esq., London, S. W.:

DEAR SIR-J duly received your wire, but am bound not to make any disclosures with regard to the proposed new cutter for America Cup contest. I may, howevor, say that I havelprepared the necessary plans, and hope to put a boat in hand on due course. I may also add that my client is as well known over in New York as he is over here. Yours, very truly,

Hendert Wynne Fairbrass, A. I. N. A.

The name of Mr. Charlos Sweet, former ownor of Clara, is mentioned in connection with this letter, but Mr. Sweet has had one experience with the legal luminaries of the New York Y. C., and is hardly likely to wish another.

THE LAUNCH OF THE IVERNA.

tiched in connection with another.

The LAUNCH OF THE IVERNA.

The Launch of the new Jameson yacht Iverna is described as follows in Land and Water of April 26:

There was evidence last Saturday morning, in the attendance at Fay's yard, Southampton, of the great amount of interest that is centred in the new Iverna. She was successfully launched at I.A. M. that day, and prior to the time of being put atlost its centred in the new Iverna. She was successfully launched at I.A. M. that day, and prior to the time of being put atlost its centred in the new Iverna. She was successfully launched at I.A. M. that day, and prior to the time of being put atlost the control of the cont

haps writing Hibernia by some analogy with the Iberi and Iberia.

—G. K."

CORINTHIAN MOSQUITO FLEET,—The open spring regatta of the Corinthian Mosquito Fleet will be sailed on May 17 on Echo Bay, the conditions being as follows: A pleasure boat of any model or rig will be eligible, if said boat be not longer than 20ft.

Lw.I. There shall be no restriction on sail area, and any kind of a sail may be carried, but no two sails of the same name shall be set at the same time. No boat entered shall carry more than two persons. After the preparatory signal no ballast or dead weight of any kind shall be taken on board or put out. No ballast shall be shifted during the race, or any out-rigger used for moving out-board (canose sxcepted). All boats, except canoes, will be classified according to their rig and l.w.l. measurement, time allowance being given in their re pective classes on l.w.l. measurement. Canoes will be classified and sailed according to the rules governing regatas of the American Canoe Association, except when in competition with other boats for fastest time over the course, in which event they will sail on the corrected time of this association. St. Lawrence skiffs will be classed as such (and not as canoes) and will receive special prizes. Tho classes are: 1, Ifft. 6in. to 20ft.; 2, 15ft. to 17ft. 6in.; 5, 12ff. 6in. to 15ft.; 4, under 12ff. 6in. The course for all classes will be around a triangle, from starting line off Echo Bay to red and black spar buoy north of Execution Light, thence to red spar buoy east from starting line one unile, theuce back to starting line, leaving all buoys on port land, crossing the finishing line in the same direction as when starting, two rounds, 8 milles. The start will be made at about 11 o'clock. This regata will take place rain or shine. Regatta committee: Dr. F. M. Wilson (chairman), 327 State street, Bridge-port, Coun.; Dr. F. S. Grant, 120 Brondway, N. Y.; Mr. James M. Motley, 43 John street, N. Y. The next regatta of the deet will be sailed off Larebmont on Ma

adopted by them.

THISTLE—Thistle, cutter, has been fitted out on the Clyde for the coming yealt-racing season. She is now owned by Mr. James Bell, of Glascow, and will be under the charge of Robert Duncan, who sailed Mr. Coacle, that the all her matches. The Thistle has had her wings clipped, but the all her matches the content of the season of the

Water.

PORT TACK GIVES WAY.—If the following amendment to the sailing rules of the New York Y. C. is approved at the meeting to-night some sailor men will have to study up the question, which is the port tack. The proposed rule is due to the flagrant violation of the rules of the road, and the disregard of the rights of smaller vessels on the part of some of the larger schooners last year. It reads: "Any yacht violating the racing rules of this club, or the Government regulation as to the rules of the road, shall, at the discretion of the regatta committee, be debarred from entering any race of the club, or races held under its management, for such time as shall, at the discretion of the regatta committee, be debarred from entering the race of the club, or races held under its management, for such time as shall in the discretion.

CORINTHIAN NAVY.—The board of managers of this association will shortly be called upon to admit a new squadron. Steps are now being taken to form a Middla Long Island Sound Squadron, with territory extending up about the Thimbles and down to cowak. The regatta committee will shortly issue a circular stand where they will be fall. Eight good extracts or promised. Mrs. Thos. G. Clapham has presented a silk fag to the navy, the same to be contested for on May 3l. The flag goes to the boat which makes the best run from New Rochelle to Cold Spring. Time allowance will be given. Mr. Philip C. Sies has been appointed a member of the regatta committee. The following gentlemen are proposed for membership: L. A. Clark, Henry B. Mitchell, W. H. Smithers.

. H. Smithers.

NEW YACHTS.—Among the additions to our list is a new cutr, 30ft. I.w I., 10ft. beam and 7ft. draft, with 6 ton iron keel, built
r F. E. Rarnes, of New York, by J. B. Loring, Rockland. Me.,
but a design by Z. S. Crocker. Her name is Canta. A catboat
om Mr. Burgesy's designs is building at Camden, N. J., for a
mber of the Quaker City Y. C., by J. J. Beckett. She will be
t, 9in. over all, 28ft. 3in. l.w.l., 12ft. beam, 4ft. draft, with lead

cel. OANARSIE Y, C.—The Canarsie Y, C. has been incorporated vith the following officers: Com. D. J. Brinsley; Vice-Com., F. J. Callenbach; Sec'y, C. E. L. Hinrichs, Jr.; Treas., A. H. Ackerman; feas., H. T. Rigby. Executive Committee, I. F. Fisher, James turpleses, W. F. C. Ninderman, Eugene X. Karr, J. R. Walker. ANOTHER YACHT FOR THE MORGAN SQUADRON.—2aptain Harry Craven and his crew arrived at Southampton on aturday to take charge of the steam yacht Sans Pear, just purhased by Mr. Morgan from the Duke of Sutherland.

KNICKERBOCKER Y. C.—At 4 P. M. on May 10 Com. Rousseau red a gun and declared the season open, a dinner following in he evening. The club has a large fleet now in commission off ort Morris.

SHARK.—Dr. Morton Prince's 30-footer, launched last summer.

Port Morris.

SHARK.—Dr. Morton Prince's 30-footer, launched last summer, is now being modernized by a reduction of her forefoot, increased draft aft, and the shifting of lead to after part of keel.

THE NAVAL RESERVE—On May 1 the first company of the Massachusests Battalion was organized, and since then three more companies have been made up.

ELECTRA, steam yacht, with Com. Gerry and family on board, as been on a cruise to Charleston and Southern ports, returning b New York this week. MINERVA, cutter, after a week on the ways at Lawley's, sailed r New York on May 10 under her trysail, reaching New York on

May 13,

AVENEL.—The name of the steam yacht Narod has just been changed as above for her new owner, J. H. Hanan.

UVIRA.—Mr. Jas, Frazer's new 42ft, cutter has been under way at Southampton, and will sail shortly for Halifax.

SEAWANHAKA C. Y. C.—The fourth regular meeting will be held on May 17 at the club house.

ŒNONE, schr., will be coppered this year.

Canoging.

The list of officers and directions for joining the A. C. A. and W. C. A. will be found in the first issue of each month.

W. C. A. will be found in the first issue of each month.

WAR CANOES ON THE DELAWARE.

THE Red Dragon C. C. held the last smoker for the season on May 5. An invitation was extended to the Park Island Canoe Association to smoke and discuss with us the question of a Delaware River meet for A. C. A. men this season.

They arrived on Saturday evening on the steamer Edwin Forest, bringing with them their war canoe Wah-wah-tah-see, and were met at the dock by the Red Dragon.

They arrived on Saturday evening on the steamer Edwin Forest, early stated of the passengers on the ferryboats, the rared novel synaptic of the passengers on the ferryboats, the rared novel synaptic of the passengers on the ferryboats, the rared novel synaptic of the passengers on the ferryboats, the rared novel synaptic close and hurled an enormous comber, over which they rode so lightly as not to ship a drop of water. These large canoes prove themselves to be excellent see boats.

The evening passed very pleasantly with the usual round of maste, speeches and canoe talk. A collation was served in the new dining-room, our latest acquisition.

Ex-Secterary Carter arrived in the evening, bringing with him Messrs, Wilkin, Dunnell and Brokaw of the Brooklyn C. C. the intention being to cruise part of the way home in the war canoe and to show the Brooklyn canoeists our camping ground at Delanco, it having been suggested as a future site for the Atlantic Division meet.

The start was made from the club house under the most fayor-

ision meet.

setart was made from the club house under the most favorconditions, but soon the angry clouds did gather, and when
one mile from our destination the rain did fall with a ven-

geance.

The Wah-wahs found shelter in a hospitable boat house, but the Dragons spurted for Delanco, where one of the members has a summer residence. When this was reached the rain had ceased, and we were rejoined by the missing craft, the crew of which had been very much refreshed by a light lunch provided by the hospitable boatmen—one pie for fifteen.

Here, much to the regret of all, Mr. Dunnell was obliged to take train for New York, and was escorted across the river in the

the train for New York, and was escorted across the river in the Wah-wah.

When the boys returned dinner was served in as near genuine camp style as possible under roof. The afternoon was spent very pleasantly inspecting the camp grounds, etc. The time for parting came only too soon, the Trentons to take the steamer and the Dragons to paddle to their separate destinations. This we believe is the first time that two such canoes have cruised in company. By a strange coincidence they are painted the same color, gray within and red without. The distance from the club house to Delanco is about 15 miles, and was covered each way in less than 2 hours, using an easy stroke.

The Delaware River meet will be held July 4 to 7. An invitation is extended to all A. C. A. men to attend.

PASSAIC RIVER MEET.

THE cance clubs of the Passaic River will hold their fourth annual meet on Newark Bay, near Bayonne, the same camp grounds as in 1888. The meet will begin on Thursday, May 29, and continue over Sunday, the races being on Friday and Saturday. An invitation is extended to all canceists. The programme is as follows:

day. An invitation is extended to the state of the sax follows:
 Event 1. Sailing (record), 4½ miles.

*A junior is one who prior to Jan. 1, 1890, has not been awarded a first prize in a similar event.

A. C. A., EASTERN DIVISION.

A. C. A. EASTERN DIVISION.

THE Eastern Division Meet will be held on May 30, 31 and June 1, at Willow Dale. The camp site will be located in a grove on the shores of Tyng's Pond, two miles long by one-balf mile wide, situated four miles from Lowell, and reached by electric cars running half-hourly. The grove is owned by the railroad, is fenced in and will be devoted to the exclusive use of the canoeists during the moet, thus insuring the usual camp privacy. At a quarter mile from camp is a dining-hall, where meals will be funished at 31 per day, and free transportation to and from camp will be furnished to those who desire. The lake will permit of a good mile and a half triangle being laid out, with quiet water for paddling. All boars and duffle should be sent to Lowell, in care of purser early in the week, and will be transported to and from the camp free of charge. Lowell can be reached by both divisions of B. & M., by the Old Colony, connecting with Albany at Framingham, and by the Stony Brook, connecting with Fitchburg at Ayer Junction. Members are invited to come to camp Thursday night and remain until Modday if possible.

Races will be sailed on Friday and Saturday; the zcyular events ccurring on Saturday as far as possible. Facilities for holding the camp promise to be unusually good, and it is boped that the meet may be the largest ever held by the Division.

An early reply is requested, stating how many men will be present from each club, and whether they will make use of the mess.

mess.

Tents can be furnished in the camp at cost for those who desire to rent them, if notice is received beforehand.

Application blanks are inclosed, and members are requested to send in the names of any one desiring membership.

PROGRAMME OF RACES.

PROGRAMME OF RACES.

Regatta Committee: Fred T. Walsh, Lowell; J. W. Cartwright, Jr., Boston: Jas, Craddock, South Boston.

Regular Events.—I. Paddling, half mile straightaway. 2. Combined paddling and salling, 4½ miles. 3. Salling, 4½ miles, unlimited. 4. Tandem, double blade. 5. Tandem, single blade. 10. Paddling in fours. 7. Salling upset. 8. Maneuvering race, 9. Tandem paddling, standing, single blade. 10. Novice race, Jif three entries, nullmited.

Other Events.—I. Visitors' race, 4½ miles, sailing, unlimited (Prize to be offered by Vespers). 2. Consolation, sailing, 3 miles. 3. Paddling, any man, any boat.

A. C. A. rules to govern. Replies to be sent to purser.
R. F. BRAZER, Purser. J. ARTHUR GAGE,
47 Central Street, Lowell. Vice-Com., E. D. A.C.A.
LOWELL, Mass., May 1.

LOWELL, Mass, May 1.

LAKE ST. LOUIS C. C.—The annual cruise of the Lake St. Louis C. C. will take place, as usual, on the Queen's Birthday and following day. The route chosen is the same as taken in 1885, from Huntingdon, on the Chateauguay River, to Lachine, about sixty-tive miles. This river is full of rapids and broken mill dams, and these features are particularly attractive for canceists who paddle. Arrangements have been made for a concert at Huntingdon on Friday night. Sixty-four members of the club have aiready asked for car space for cances, and I believe this will be the largest gathering ever seen of a single club for a cruise. Canceing is booming on Lake St. Louis this year, and we hope to see a good representation of A. C. A, men at the Northern meet this year at Lake of Two Mountains.

GALT C. C.—Editor Forest and Stream: Last week the annual meeting of the Gals C. C. was held, and the following officers were elected for the ensuing year: Com. W. J. Millican; Rear-Com, J. H. MacGregor; Treas, Geo. M. Gibbs; See'y, Harry F. MacKendrick, Committee, C. R. H. Warnock, Chas. Turubull, John N. MacKendrick. The club has now about seventy-five members and thirty cance owners (with more to follow), and a good club house. A regatta will be given on June 13, open to all amateur canceists. A. C. A. rules to govern. There will be \$100 worth of prizes given, and several noted canceists have already entered.—CHUM.

A. C. A. MEMBERSHIP.—Eastern Division: Robert E. Western Stream and thirty cancellant of the content of the canceists have already entered.—CHUM.

Chium.

A. C. A. MEMBERSHIP.—Eastern Division: Robert E. Wescott, Joseph F. Talbot, Thomas Talbot, Josiah C. Norcross, Edward F. Quinlan, J. Nelson Dennis, Andrew G. Swapo, Edward Martin, Frederick P. Marble, James Bayles, Henry Salmon, Geo. E. Lull, Arthur D. Prince, Stephen T. Whittier, Arthur W. Sherman, Lowell, Mass. (Vesper Boat Club); George E. W. Armstroug, J. W. Skillings, Boston, Mass; John R. Martin, Wm. H. Gerrish, Lowell, Mass. (Vesper Boat Club); George E. W. Armstroug, J. W. Skillings, Boston, Mass; John R. Martin, Wm. H. Gerrish, Lowell, Mass.; Chas. E. Whitten, Lynn, Mass. Atlante Division: William E. Rothery, Philadelphia, Pa.: Richard H. Kretzmer, Louis C. Kretzmer, Hoboken, N. J.; Ed. E. Morcelis, Paterson, N. J.; W. I. Middleton, H. Morgar, Arlington, N. J. PINE CREEK, Pa.—Editor Forest and Stream: A party of six of the Athens C. C. would like to take a cruise down Pine Creek, Starting at Gaines, Tioga county, Pa., and running into the West Branch of the Susquebanna. Can any of the readers of the Fox-Est AND STREAM give us information about this stream? We expect to start about the last of July, and may run as far as Harrisburg.—W. K. Park (Athens, Pa.).

burg.—W. K. PARK (Athens, Pa.).

A. C. A. REGATTA PROGRAMME—Buffalo, May 5.—Editor Forest and Stream: Please state that on the A. C. A. regatta programme, event No. 14, paddling, club fours, any canoe, the words "any canoe" means any canoe not over 16ft, long, with a beam of not over 30in. for that length, which is the maximum size under the A. C. A. rules.—Edwin L. French, Chairman.

ANSWERS TO CORRESPONDENTS.

ANSWERS TO CORRESPONDENTS.

CASHIE, Windsor, N. C., will please send his address.

O. C.—You will probably do more wisely if you go in for a new gun, instead of trying to patch up the old sbaky one.

S. L. F., Danvers, fil.—There are no rifle competitions held at the tournaments of the American Shooting Association.

E. E. T., Scranton, Ia.—Can you inform me as to a method to capture blackbirds alive to be used for shooting matches? Ans. We presume that when they are flocking in the fall they could be baited and caught with a clap-net, as wild pigeons are taken.

When a sportsman finds anything which adds to his leasure, without increasing his labor, he wants all his rother hunters and anglers to know of it and share ith him the newly discovered "helper,"

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST.—It will wind up the line a hundred times fast as any other reel in the world.

SECOND.—It will wind up the line slowly if the

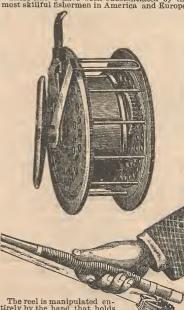

angler chooses.

THIRD.—No fish can ever get slack line with it.
FOURTH.—It will save more fish than any other

FOURTH.—It will prevent tips, lines and snells from being broken by large fish.

SIXTH.—It enables the angler, and makes it desirable, to use lighter tackle.

These claims have been substantiated by the most skillful fishermen in America and Europe.

The Forest Waters the Farm

The Value of Woodlands as Reservoirs. BEING THE LES ÉTUDES DE MAITRE PIERRE SUR L'AGBICULTURE ET LES FORETS.

PAR M. ANTONIN ROUSSET.
Translated by

REV. S. W. POWELL.

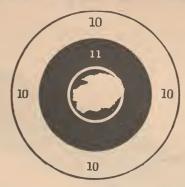

The introduction reviews the extraordinary movement of torrent taming in France, in preparing public sentiment for which the Studies of Master Peter played a noteworthy part. The book was written as a sort of science primer, setting forth the first principles of the relations existing between woodlands and agriculture. The principles and reasoning are not less applicable to the United States to-day than to France then.

Possessing peculiar facilities for publishing new books on field sports, adventure, travel, and open air life, the Forest and Stream Publishing Company begs to invite the attention of authors to its book department. Correspondence solicited and estimates furnished.

CANTOR

By C. B. VAUX ("DOT.")

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Freetything is made intelligible for beginners and besides this A B C teaching there are so the any hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the indy of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, \$1.00.

A WESTERN NUMBER.

The issue of June 12 will be a Western Number. It will be brimful of good things picturing sport with rod and gun in the Great West.

TROUT.

THE trout season is now at its best; and reports that have reached us from many sections agree that the present season is the best one for many years. Lucky is he who can snatch a few days from business cares, to visit the old familiar scenes of his childhood, and again wander along the banks of the well-remembered streamlet in quest of the shy beauties that lurk in its depths. With what ardent hope is the fly cast upon the bosom of each well-known pool; and as the eager rise is followed by successful strike, what satisfaction fills the heart. Truly one moment like this is worth all the year of

The past two winters have been remarkably favorable for the increase and preservation of trout life; and many streams, especially the smaller ones, that had been nearly depleted, now teem with an abundance of young fish and if these infants are properly protected, coming sea sons will amply repay in increased sport far more than the trifling cost and self-denial entailed in preserving "Spare the fingerlings" has ever been the watchword of the FOREST AND STREAM; and we are pleased to note that "fishing for count" is no longer tolerated by the angler who makes any pretensions to be a master of the gentle craft; and it is sincerely to be hoped that the slaughter of the innocents will soon cease altogether. Eight solid ounces of gleaming gold and brown at the end of one's line gallantly fighting with frantic desperation for life and liberty are worth ten times, nay a hundred times more than are eighty ounces represented by

as many little fellows that have not the strength to cause that electric thrill so dear to the angler's heart, nor to stir a single nerve. For the sake of glorious sport in the future then, spare the little ones; and in after years they will rise and you-or some brother angler-will indeed be blessed.

JOHN ELLIOTT CURRAN.

N FOREST AND STREAM of Nov. 17, 1887, was published a paper entitled "Maid of Beech," which was marked for the rich poetic fancy which ran through it, and for the suggestiveness of its compact sentences. Subsequent and very recent allusions to it, and inquiry concerning its author, have proved that it was given by the more thoughtful of our readers a degree of attention not often accorded to the ephemeral literature of the weekly press. The pen that wrote that paper has now been laid aside forever. A life of creditable literary work was closed, and the promise of yet brighter achievements was blighted, when John Elliott Curran died at his home in Englewood, N. J., last Sabbath.

Born at Utica, N. Y., May 25, 1848, he entered Yale in 1866. While at college he was known as an athlete, and also as a thoughtful writer. He rowed on the freshman crew against Harvard and was an adept in all sports that called for the exercise of manly strength. His taste for writing was manifested even as an undergraduate by essays and sketches contributed to the Yale Literary

Magazine, the oldest and best of the college periodicals.

After his graduation in 1870, Mr. Curran spent a year in Europe, and then returning entered the Columbia Law After his admission to the bar he practiced law in New York for a number of years, but gradually abandoned his profession and turned his attention more and more to writing, contributing many short stories to Harper's, Scribner's and the Century. He wrote a successful novel, "Miss Frances Merley," which was published by a Boston firm, and received high encomiums from the press. But it was not only as a writer of fiction that Mr. Curran was known-He had devoted much careful study to social problems, and had written a number of thoughtful essays upon the questions of the day. His was a philosophic mind; it is believed by those who knew him most intimately that had his life been spared the world at large would have been benefited by the results of his riper years. But over against the unfulfilled promise of a future, however bright that promise may have been, set the actual life that a man has lived. For the influence of such a life as that of John Elliott Curran -whether it be long or brief—the world is better. He was a man of singular honesty of character. he had once made up his mind as to what he ought to do, no consideration could swerve him one hair's breadth from his course. From the standpoint of material success this rugged honesty sometimes stood in his way. desire to do exact justice to all made him slow to oriticise or condemn any one unless he knew all the cir-cumstances of the case. His nature, as known to those most intimate with him, was most gentle and tender. He had the broadest possible sympathy for humanity at large, and the widest charity for the erring and the unfortunate.

NATIONAL GAME LEGISLATION.

TTENTION was directed in these columns the other day to the recent decision of the United States Supreme Court relating to the Iowa prohibition law. The decision was in the case of a Kansas firm, which had sent barrels and sealed cases of beer into Iowa, and there offered the beer for sale in its original unopened barrels and cases. The beer was seized under the Iowa liquor prohibition law. The dealers contended that the beer was an article of inter-State commerce, and as such was an arricle of inter-state commerce, and as such could not be legislated upon by a State. The case was carried up to Washington, and the court of last resort sustained the contention of the dealers. The Supreme Court said that the beer which had been so imported from one State into another was an article of inter-State commerce and that it remained such until the receptacles having been opened it was merged in the common property of the citizens of the State. The Constitution of the United States vests in Congress the exclusive power to regulate inter-State commerce; and accordingly the Supreme Court ruled that Iowa had no authority to forbid the sale of liquors nor of any other commodities

so long as they remained articles of inter-State commerce. The right to import from one State into another carries with it the right to offer for sale. A former ruling of like effect was made by the Supreme Court in March, 1888, in an Illinois case, in these words:

It is easier to think that the right of importation from abroad

and of transportation from one State to another, includes, by necessary implication, the right of the importer to sell in unbroken packages at the place where the transit terminates: for the very purpose and motive of that branch of commerce which consists in transportation, is that other and consequent act of commerce which cousists in the sale and exchange of the commodities transported. Such, indeed, was the point decided in the case of Brown v. Maryland, 12 Wheat. 419, as to foreign commerce, with the express statement in the opinion of Chief Justice Marshall, that the conclusion would be the same in a case of commerce among the States.

Now, as we pointed out the other day, it is quite plain that the principles here laid down must apply with equal force to those game animals and fish, which by being transported from one State to another become articles of inter-State commerce. Most States prescribe that in the close season for its own game no game at all shall be sold, no matter whether killed within its own boundaries or in another State. Such laws are held to be essential to effective game protection. But if the Supreme Court ruling is to prevail, it is clear that game and fish dealers may lawfully sell at any time of the year and all through the close season, game and fish imported from other States and retained in its original packages. If the sale of such game is to be stopped this can be accomplished only by a national law of direct specific application or one generally exempting from the operations of the inter-State commerce law such articles as are the subject of State legislation under the police

A bill of specific application to liquors only has been introduced in the House by Congressman Boutelle, to add to the Inter-State Commerce Act this amendment:

That nothing contained in this Act shall be construed to author-ze the sale or traffic in intoxicating liquors in any State contrary to the laws thereof.

A similar amendment substituting "game or fish" in place of "intoxicating liquors" would remedy the present

weak point in game legislation.

A bill introduced by Senator Wilson of Iowa, favorably reported by the Committee on Inter-State Commerce, and now under discussion in the Senate, is more comprehensive. It is entitled, "A Bill to Protect the States in the Exercise of their Police Powers," and provides:

That any article of commerce, the manufacture or sale of which is prohibited within any State by the laws thereof, in the exercise of its police powers, shall not be transported or conveyed into such State from any other State, Territory, District of Columbia, such State from any other State, Territory, District of Columbia, or foreign country, by any railroad company, express company, or other common carrier; but this shall not be held to prohibit the transportation of such articles of commerce as aforesaid to persons in such State authorized by the laws thereof to receive the same, or through such State as aforesaid prohibiting the sale or manufacture thereof to any other State or Territory in which such manufacture or sale is not prohibited.

As the enactment of game laws are within the police

As the enactment of game laws are within the police powers of a State, this bill, if it shall become a law, will have a direct bearing to uphold the statutes forbidding the sale of imported game in the close season.

SNAP SHOTS.

THE recently organized Indiana State Fish and Game Protective Association will hold its first mid-summer meet at Cedar Beach, June 25 to 27, under the management of the Cedar Beach Club. It will be a combina-tion affair, with a regatta, a fly-casting tournament and other attractions. One contest which will be watched with breathless interest by the doctors of angling ethics will be a fishing match between the Cedar Beach Club bait-fishermen and the Indianapolis Fly-Fishermen's Club, to determine which mode is the most potent with the bass of Turkey Lake. Secretary Jesse T. Blair and President W. T. Dennis evidently set great store by this event, and have issued formal subpoenas to fish commissioners and others, believers and unbelievers in fly-fishing.

It appears that the question of the right of a Legislature to declare illegally set nets public nuisances and to provide for their summary destruction as such, without due process of law, is not yet settled. In the New York case it was recently decided by the Court of Appeals that the law was constitutional and could be enforced. The announcement is now made that the case will be carried up to the Supreme Court of the United States for final

adjudication. State Game Protector Drew, who is the defendant, appeals for financial aid to carry the case through. Fish protective associations can do no more good than to sustain the protector by contributing such funds as may be necessary. Practical experience demonstrated that fishing nets and fish conserva cannot go together; and unless nets are to be classed as public nuisances and treated as such, they cannot be reguated by any executive machinery as yet devised. Upon the outcome of this suit there will in large measure depend the efficient protection of the food fish supply. The principles involved are of general application in all States where laws similar to that of New York are in

In his letter relating to the America's cup race, published in our yachting columns to day, Lord Dunraven has redeemed his blunder of silence last season, and has stated plainly a number of specific objections to the socalled third deed of gift. These objections are the same in substance as those made by the opponents of the deed in this country; but they are far more important in that, coming from such a source, they cannot be quietly ignored, but must be recognized and answered in some way by the New York Yacht Club. When the objections have been disposed of the next task for the sponsors of the new deed will be to answer to American yachtsmen for their breach of trust, and for the injury done to yachting by the locking up of the premier trophy of the world by means of conditions which are both unfair and impracticable.

Mr. W. T. Hornaday, superintendent of the National Zoölogical Park at Washington, has tendered his resignation of that office to the Secretary of the Smithsonian Institution, to take effect June 15. Mr. Langley has accepted Mr. Hornaday's resignation in a flattering letter, and the latter will remove next month to Buffalo, N. Y Since the inception of the Zoological Park Mr. Hornaday has been deeply interested in it and has worked for it with unflagging energy, contributing much to the success of the enterprise. Mr. Hornaday's energy and push made him a valuable man, and his loss will be severely felt in Washington.

The new book, "With Fly-Rod and Camera," will be ready next Monday. In our notice already made we have spoken of the scope and character of this work, notable for the profusion and character of its illustrations, has been an open secret among the friends of the author, Mr. Edward A. Samuels, of Boston, that he has been for several years collecting materials for this book; but we predict for them and for the public a genuine surprise when they realize the success attained in so vividly picturing the phases of angling life.

Another organization has been added to the list of those which propose to care for the Adirondack forests. the Adirondack Park Association, with headquarters in this city and these officers: Pres., Dr. Alfred Loomis; Vice-Pres., John Claffin; Sec., Martin Burk; Treas., Charles E. Coon.

The Senate has delayed to pass the bill to protect fish in the Potomac River. The subject is now under consideration in the House. In the meantime the destruction of shad and black bass is shameful, even the down-river fishermen are howling for protection of spawning beds.

A 22-pound Atlantic salmon caught at Gloucester, New Jersey, was presented to Commissioner McDonald yester-day, May 21, by Mr. Thompson; and being a royal representative of its race, the Commissioner has sent it to the President.

The Sportsman, Tourist.

SLIDE ROCK FROM MANY MOUNTAINS.

VI.-A TALE OF BLOOD.

VI.—A TALE OF BLOOD.

It is not pleasant to witness a tragedy. To have taken part in one is horrible. This horror is intensified when the victims are mothers and children. And yet, perhaps, it were better that such a tragedy should be complete: that death should embrace all the members of the family, rather than that a part should have fallen before the destroyer, while others survived to mourn their lost ones.

I suppose that every criminal has an excuse for his misdeeds and can justify them to himself, on one pretext or another. The burglar may plead that he was driven to housebreaking by actual starvation, or that he needed the plunder for the purpose of making some special investment, or that his victim's house was so badly protected that no one could have resisted the temptation to enter it. The criminal's excuse may be a very flimsy one, but it serves his purpose.

I have been the chief actor in a bloody tragedy, and like other guilty persons, I have an excuse for my dark deed. A strong pen has already sketched in general terms the outline of a hunt in which four white goats, two mothers and two kids, were killed by me in about forty-five seconds, and has indicated the reason for this wholesale slaughter. It remains for me to fill in this outline with the details which shall make up the picture. In some ways the occurrence was rather remarkable.

Two or three years ago the directors of a great museum, who know that I am a goat hunter, applied to me for a series of properly prepared skins of this animal. from which to set up a mounted group of white goats. I had been informed that what were especially desired were a monster male, two females and two young ones—in short, a family. I had made vigorous efforts to supply these desiderata, and besides my own hunting, had employed men who live the year round in a goat country and who frequently hunt the animals, to look out for and secure the desired specimens. Through the efforts of one of these men the large male had been procurred, but the kids were still wanting. I was becoming discouraged.

In order that the unities might be preserved, it was essential that all the individuals to be brought together in the group should be killed at the same season of the year. Nothing could be more ridiculous than to have the different members of this family group wear the coats of different seasons. A male in the snmmer pelage guarding a band in which the females should wear a January coat, while the kids were of the size and in the dress of early autumn, would excite the mirth of the hunter and would bring discredit on the museum where such an incongruous group was on exhibition. The difficulty of obtaining the specimens was therefore not the only one to be overcome. They must be secured at approximately the same season of the year.

After my friend, resisting all my persuasions to accompany me, had sent me off with Chinook Tom, we set out to approach the game. At that time we had seen only two goats, and these were 600 or 700yds. above us, on the mountain side across the creek. To approach them it was necessary to go up the stream, cross it and then to clamber almost as far above them as they were now above us. Then working along the mountain side, until we were directly above, we could creep down to a low shoulder beneath which they were lying. From that point it was thought that we could get a shot. After following u

and sprawled, and noisily hit against the rocks and trees, in a way that must have been quite as annoying to my companion as it was to me.

At length, after many pauses for breath, the weary climb was over, and we passed out of the timber far above the goats. We could see them, still lying in the same place, on the other side of a wide ravine, thick with dead timber, standing and fallen, which we must cross before we could descend to a point from which we could shoot. At the foot of a high cliff we stopped for a moment to rest. We had hardly seated ourselves when we saw two other goats come running out of the timber below those which were lying down. These two I at once recognized as a female and kid. Climbing steadily up the slope they soon joined the two which were lying down. These rose to their feet, and for a few moments all four stood looking out over the valley below them; then they turned and began to clamber up the hill. At first, when the second pair of goats made their appearance. I had supposed that they had come up from water, and would lie down with the others; but it was now evident that they had been alarmed by something in the valley, and that all four were about to seek the heights for safety. They clambered up the side of the ravine until they had reached the shoulder from which I had hoped to shoot, and then, turning to the right, passed out of sight behind it, taking a course which led toward some vertical cliffs, which we had noticed from the other side of the stream.

As soon as they were out of sight, Tom and I started across the ravine after them. To pass this was tiresome work, for the timber was very thick. And this, with the underbrush and the slippery rocks, made our progress slow and noisy. The footing was uncertain and the labor of constantly stepping over logs severe. Having crossed, we kept down the other side until we reached the shoulder beyond which the goats disappeared. Here we found their tracks, and followed them along the narrow ledges of the cliffs, under low-growing pi

goat, a mountain sheep or a bird should have passed along them.

We had followed the scattered traces for perhaps half a mile, occasionally clambering up or down the cliff to look into some little pocket in the rocks, which might possibly harbor our game, when on a bit of soft ground we saw the tracks of several goats, and felt sure that our band was still before us. A few moments later Tom, who was a little in advance, suddenly threw himself flat on the ground and excitedly whispered, "You see um? Shoot." I could see through a thick tree that overlung the trail a dim white shape, which could only be a goat, but I could not tell whether the animal's head or tail was toward me, nor whether it saw us or not. Tom was so excited, however, that I felt bound to shoot. He wriggled about on the ground and kept whispering, "You shoot. You shoot." So, though I could not myself see any necessity for haste, I took it for granted that the case was urgent. It was manifestly useless to fire through a mass of branches at a shadow, and I noiselessly scrambled up on a mass of rock lying above the trail. From this point I found among the branches of the tree an opening, through which I could get a clear view of a patch of white hair about three inches in diameter. At this patch I fired, and as the smoke cleared away I saw that the white shadow had disappeared.

Springing forward 15 or 20ft., I passed the tree and had a clear view of the trail ahead. On a great rock, which was dotted with blood, stood a white goat with its head up and expressing in its attitude more alertness than I had ever before seen in an animal of this species.

At the foot of the rock on the down hill side, standing on the slide rock of a little ravine, was another goat wounded, with its head down. These two, both old ones, were the only goats in sight. Of course, immediately after my shot I had slipped another cartridge into my gun, and the instant that I sprang into the open, the old rifle jumped to the shoulder and a ball tore through the heart of the goat on the rock. It half reared, fell over backward near its wounded companion and went rolling down the hill over the slide rock. At the sound of the shot a kid, hitherto hidden behind the great rock, sprang into view on a lesser pinnacle. Again the fatal crack rang out, the kid sprang outward and downward, and tumbled over and over down the hill after its mother.

While all this was going on, Tom had appeared on the scene and was dancing about on a point of rock near me like—to use a vulgar but expressive phrase—a hen on a hot griddle. Little whoops and chuckles of delight sounded from him, and now, as he saw the wounded goat at the foot of the rock, which until this moment had seemingly been too dazed to do anything, begin to hobble off, he called out, "Shoot um again," It seemed unnecessary to do this, for I could see that the first ball had ranged lengthwise through the body; but I neither wished to lose the animal nor to follow it far, so I shot it again, and it joined the procession, which I could see out of the corner of my eye still tumbling over and over down the hillside.

But the end was not yet. Just as the last shot echoed among the crags, there dashed down the trail and its.

to lose the animal nor to follow it far, so I shot it agam, and it joined the procession, which I could see out of the corner of my eye still tumbling over and over down the hillside.

But the end was not yet. Just as the last shot echoed among the crags, there dashed down the trail and into view about a point of rocks, another kid, which had apparently started at the first alarm to climb the hill, but, finding itself alone, had come back to look for its mother, running to meet its death. It came bounding along from rock to rock, with head erect, and quick, springy motions, resembling in its actions a mountain sheep far more than a sluggish goat. It ran quite close to me, and with a feeling of pity for the poor thing I killed. it. There were no more.

Although so long in the telling, the time which elapsed between my first shot and my last was probably not more than a minute, perhaps even less, for I had loaded and fired as rapidly as possible, and there was always something in sight to shoot at.

To convey any adequate motion of Tom's enthusiasm and delight is quite beyond my powers. He danced, and gurgled and crowed like a delighted infant. For a little while articulate speech seemed to fail him, and he could only whoop and chuckle, and sing, and pat me on the shoulder. At last, however, he burst forth in praise of my shooting and of my gun:

"Oh you, Huyu, huyu good shoot. Get 'em all. O shookum mushket. Good for goosly bear;" and many other enthusiastic words.

As a matter of fact, I had done no good shooting. At that distance, and with the opportunities I had had, it would have been disgraceful to fail to kill as many of this little band as I had wished to. Tom, however, was probably accustomed only to guiding young men whose feelings overcame them at the sight of game, and who shiver and tremble when they put their cheeks down against the stocks of their rifles. Such young men require to be braced and supported before they can hit anything. Then they hit their game usually in the foot or in the car, and s

man.

To get the animals down to the creek bed, where we could take their skins off, did not occupy much time, and it was only 11 o'clock when we sat down to smoke a pipe before beginning this work. As each animal had to be measured with exactness, and the skins removed with peculiar care, this task took us about three hours; so that it was nearly 4 o'clock before we had packed the loads on the horses and started for camp.

Yo.

ANTOINE BISSETTE'S LETTERS. III.

M'sieu Fores' Strim:

Wen M'sieu Mumpsin was read in Fores' Strim 'baout all dat man's brag, how it been shot dem leetly bird dey call it evelin groosbik, Ah 'll beegin for tink 'f Ah'll can' mek masef disteenguish for mek some colleck, me.

Ah 'll rembler Ah 'll took a notice w'en Ah chawp de hwood for seekty-five cent a cord (dat was too cheaps, an' Ah do' know what poor mans goin' comin' to), dar was gre' deal of leetly bird, cheekledee an' cardy bird an' hwoodpeckit, come all raoun' me every day.

He was all of it veree shocibly an' he kan o' was be some company of me w'en Ah was all lone on de hwood, mebby not see somebodee all day, 'cep' dog barkin' 'way off or prob'ly man hollerin' way off.

But w'en mans goin' for make some colleck, he ant g at no deeff'ence haow moch bird was be shocible, honly it was more easier for mek colleck an' be some science.

Nex' morny, w'en A'll go on de hwood, same tam Ah'll took mah haxe, mah pall provishin dat was veree comfortably whedder you goin' chawp or mek some colleck, Ah'll took mah gawn (Ah'll goin' tole you hees name of it w'en you tole me de bes' kan for call it. N. B., not a bean, M'sieu Mumpsin say dat letters meant—dat was privately).

Ah 'll ant mos' more as gat to mah chawpin' 'fore more as feefty, prob'ly forty chickledee come all raoun' of me, some close of mah head, some on top limb of it, some hangin' on it wid hees back bottom up, an' all of it seeng-in' Chic-le-dee dee, same he was glad for see me.

An' dey was four, fave, ten. Ah guess, cardy bird

come, walkin' hees tail top en' of it, daown tree an' say Kyank-yank-yank t'rough hees nose of it jus' lak dey was leetly Yankee, tol' me "good morny."

But Ah' can' help it, Ah 'll was be work for science

come, walkin' hees tail top en' of it, daown tree an' say Kyynk-yank-yank' trough hees nose of it jus' lak dey was leetly Yankee, tol' me "good morny."

But Ah' can' help it, Ah 'll was be work for science to-day.

So Ah 'll scratter lot of crumb bread an' fat meat Ah can' heat, for dat bird sem Ah done before Ah was be a science colleck, an' it ant be great many while 'fore lot of it come for heat hees deenay jus' sem as hees usual.

Den was de tam for some colleck.

Ah 'll pant mah kan o' gawn raght on de long of de row, an' "Poong!" Ah' ll swept mos' all of it. What Ah' ll ant swept ant mos' on'stan' what was be mean, dey ant know of de science man biffore, an' tink it was acciden' prob'ly. An' 'fore Ah 'll gat load mah gawn, he 'll come back for hees deenay.

Den Ah 'll shut gin an' keel mos' all of it.

What Ah 'll ant keel was beegin for fan' aout Ah was science, an' he 'll all flewed away an' de hwood be all steel, no nowse of some bird nowhere 'cep' beeg black hwoodpeckit chawp mos' loud Ah do, way off, and holler ''Keyak!' keyak!" but he 'll ant come for de-vote heesef for science.

Den Ah 'll beegin for peek up mah colleck an' Ah 'll gat mah pail full of it, full, full up.

Den Ah 'll beegin for chawp, an' mek it all de nowse, "Pluck! pluck!" an' de chip flew lak flock of bird, till de tree beegin for tumble, an' squeal, an' groaned, an' "sweecsh.—whoom!" down he come.

Dey ant no bird come for be company of me, 'cep' blue-jay stan' off on tree an' scol' worse as mah mudder-law, an' be jus' baout so good company. It ant no fun for me vist mah mudder-law when he 'll come see mah fam'ly, an' Ah ant never go see it for invite, 'cep' w'en mah fam'ly goin' growed leetly bligger evree year.

W'en Ah 'll chawp all day an' pile meh cord so Ah won't cheat mahsef, an' dey ant no chickledee an' cardy bird visit me same he' ll used to. Ah beegin for feel kan' o' lonesick, mos' wen Ah 'll will fires and seet daown for heat mah deenay for not have any of it come for heat 'long to me. Mos' all dead, de res' of it 'f

know. You' frien', ANTOINE BISSETTE.

SCRIPFOS—Ah wish you tol' dat Louis Frenchman what gat hees haoun eat up of wolfs, haow Ah was do w'en Ah leeve in Can'da. Ah guess he be glad for save it so.

Ah 'll goin' tol' you.

Ah 'll rub mah dog wid red pepper, sometam, an' w'en wolfs gat hol' of it he sneeze heesef loose raght off an den sneeze heesef to death mos'. Nex' tam he see mah dog, he ant want tase of it.

One tam Ah 'll tie skin of hell hog on mah dog, an' w'en wolfs took fus' bite dat was 'nough. It was very satisfy kan o' meat, de meat of dog, dress wid sauce piquant de hell hog.

Ah wish Ah could visit of dat Louis. Ah pre-sume Ah can' on'stan' heem veree well w'en he try for talk Angleesh, 'cause dey ant be many Frenchmans can ever learn for spik it so preffeck as Ah was; but Ah 'll ant freegit mah natif languaish, an' prob'ly Ah can tol' heems sometings.

Ah heep leave in de Ilwite State were seef out.

Man fath tangent tings.

Ah been leeve in de Unity State more as forty year, Ah 'll know good deal w'en Ah come in it, an' Ah been learn sometings everee year sin' Ah 'll come.

Ant it probly Ah can' tol' sometings, hein?

A. B.

ANGOSTURA.-II.

ANGOSTURA.—II.

MORNING dawned cloudy and moist, much to our satisfaction. We were almost half way down from the rare, cool air of the tableland to the tropical coast, and had been dreading the hot sun. But the cold snap along the Gulf had condensed oceans of moist air, and the gray, foggy clouds came tumbling in unbroken procession over the hills.

The house, like nearly all the Mexican structures, is built around a court, this one being some 40yds. square. Along the front, which is eastward, runs a broad corridor, upon which we stepped out, hunter like, to look at the weather. We were called in by a servant to our morning coffee, where we were met by Don Luis. He is a rather slender young man with a bright, frank look that wins one's regard at once. With a manner much simpler than is usual for a Mexican he cordially informed us that we were in "our house," and must feel and act accordingly. We saw no reason afterward to think that he meant any less than he said. The conversation naturally drifted to the subject of game, and we heard enough to make our nerves tingle. Plenty of deer, turkey, sandhill cranes, coyotes, and an occasional lion (panther, of course), while as for ducks and quail, why, the woods were full of them.

Breakfast over, it was decided to give the ducks the first round. While the Doctor and I were quietly investigating among the servants, clerk, mayor domo, etc., of whom a number had assembled about the corridor and in front of the steps, as to where were the best places, how far it was, and such other particulars, the coach came rolling around to the door. Duck hunting in a coach! We consented, though with some fear of being demoralized. Mr. C. had no shotgun, and Don Luis, though he had a magnificent Manton muzzleloader, is a devotee of the rifle. Of these he has quite a collection, a fine Ballard target, .32-40 a Wesson .22, a half-dozen Winches-

ters, one of them sighted for his personal use, and Winchester and Remington carbines enough to arm quite a little troop of men if necessary, as it has sometimes been. Giving his Winchester to Mr. C. (he must figure as D m Ramon hereafter) we were in and bowling down the slope to the ducking ground. A little stream coming from higher grounds is divided up as it crosses the fields into various irrigating ditches. These make their way through a brushy flat between the upper and lower fields. In these flats they spread out into a series of little lakes and ponds, flanked with good brush cover and full of vegetable foods. These were almost covered with ducks of various kinds. They were not used to shotguns, and when we opened up on them they flew around in a sort of dazed way, while we just gave our Mexican friends a little show of what kind of a combinatian a "gringo" and a breechloading shotgun is. It was fun to see the ducks tumble, but more to see the satisfaction of our host. As we had neither boat, boots, nor dog, I was wondering how we were going to secure those of our victims that were in the water, when I saw one of the three or four men who half followed us on horseback ride his pony into the shallow water after the game. The pony pointed dead quite well, but a wing-tipped baldpate rattled him a good deal. Well, "there are more ways of killing a dog, etc." Come to Mexico to see odd things. But who ever thought of hunting ducks with a maa on a pony for a retriever? The Mexican rule for hunting, as for most things, is never do anything that your man can do for you. The abundance and cheapness of human labor here is a thing that is a constant wonder to a Northerner. After we had about emptied our shell pockets, and had covered the floor of the coach with an assortment of baldpates, shovelers, teal—greenwing and cinnanno—sprigatils and a redhead or two, the rest took the hint and left. It being some time till noon, we got into the carriage for a drive down into the cypress and cedar grove. On our way our host

"The groves were God's first temples."

me. It was not vainly said,

"The groves were God's first temples."

Leaving the coach we took our guns for a little tramp, warned to be on the lookout for either deer or turkey. We saw neither, but abundant indications of both. But we had a glorious walk. Each had a guide, as it is easy to lose oneself in the thick wood. I managed to get away from mine, though. Lose me in such a place as that? Not much. Next day a horseback party, visiting the place to see a wonderful double-trunk tree, saw a magnificent flock of turkeys just where we left our carriage, but had no guns adequate for the occasion. That tree was a good deal of a curiosity. The two trunks were perfectly united by a cross-piece at the height of about thirty feet, though some fifteen feet apart at the ground. It was a very old cypress, and had been recently burned and killed. Don Luis gave a queer account of the burning. A peon found wild bees in the hollow, and in climbing for the honey fell and was killed. His family in childish resentment, and thinking there was something diabolical in such a tree anyhow, set fire to it.

At dinner Don Luis apologized for what he considered slender fare by saying that his cook was away on a visit and that he had ordered a calf butchered, but that the hacienda padre had interfered as it was Lent. Of course we were all sure that there would be no lack of meat, and there wasn't. But it was mostly meat of that same calf, for a little extra pressure overruled the dignity of the church.

In the afternoon we went after deer. At a certain place they were in the habit of coming down from the

In the afternoon we went after deer. At a certain place they were in the habit of coming down from the hills into the green barley. There were plenty of tracks

place they were in the natural coming above the plants of the process around.

The Doctor stationed himself to watch, while Don Luis and I finding that we agreed in considering that sort of hunting irksome, started on a tramp. He is the first Mexican gentleman I have found who will take his rifle in hand and "foot it" after game. He is a capital shot, too. President Diaz is said to be a famous walker. The customary style here, however, is to wait for men to drive the deer by a stand. I stretched my legs over some 7 or 8 miles of good honest mountain walking, but saw nothing but a skunk, which I sbot out of spite and to hear my gun crack. One deer was seen by Don Luis and I heard one on my return after dark.

Don Luis was our driver, and going across the ditches of the field one of our horses balked. The man who can handle a balky horse, after dark, when he is hungry and there is no road, and keep his temper, deserves a little extra attention. This he succeeded in doing, so far as we could see. (There are not many 'cuss words' in Spanish, however.) Our outrider hooked his ever-present rope around the coach tongue and with his wiry little black pony "yanked" us out of the ditch, and then we went booming home.

This is enough this time. Besides, FOREST AND STREAM

pony "yanked" us out of the ditch, and then we went booming home.

This is enough this time. Besides, FOREST AND STREAM has just come, and who could expect one to sit here spinning my yarn with it right under my nose?

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronunced by "Nantix," "Gloan," "Diok Swiveller," "Spillene" and other competent authorities to be the best treatise on the subject extant.

Hatural History.

CURIOUS GROUSE DRUMMING.

A CURIOUS GROUSE DRUMMING.

CHENECTADY, N. Y.—On one occasion while out shooting in Clifton Park I fired at a grouse, which fell to the ground and fluttered over it for some distance, but before I could reach him the bird rose again, and flying high, disappeared over the tops of the trees in the woods. Pursuing, I looked the ground well over, but was unable to find him. It so happened that two or three days after this occurrence I was again on the same ground, and remembering the wounded grouse, went in search of him. I had not gone far, when I heard a grouse drum; and moving cautiously, I finally got behind an old moss-covered stonefall that ran through the woods. I had often, when out bunting, heard grouse drum, but had never seen one perform the act; and I was very desirous to do so. After a while he drummed again, and I moved along the fence nearer, having by this time got his bearings. Upon looking over the wall I saw the bird standing on what I supposed to be a stone about five or six inches in height. After he had drummed he pecked at the supposed stone, and then bobbed his head and tail up alternately, the latter being spread out. Then he jumped off the object and walked in a wide circle around it, after the manner of the turkey cock, with wings lowered. After an interval he got on the stone again and drummed and performed as before. About this time something alarmed the drummer and he disappeared into the covert.

Upon going to the spot where he had drummed I was astonished to find what I supposed a stone to be a dead male grouse. Upon it the drummer had stood and drummed, and about it he had paraded as described. The dead bird had one shot only through his head. It was the same I had shot a couple of days before, which had flown here and fallen dead.

I have read that the drumming of the ruffed grouse is a demonstration of love and courtship, but from this incident I conclude it is also either one of rivalry and triumph, or sounding a knell or requiem of a departed mate or friend.

Dorr.

NEW BIOLOGICAL LABORATORY.

A NEW BIOLOGICAL LABORATORY.

THE Brooklyn Institute Laboratory of Biological Research, located at Cold Spring Harbor, Long Island, announces its first season to open July 7 and continue eight weeks. This promises to become one of the most effective organizations of its kind, springing into existence, as it does, with a strong board of managers, presided over by Mr. E. G. Blackford, a staff of lecturers of more than national reputation, a location scarcely surpassed on the coast, and the free use of the fine buildings and grounds of the New York Fish Commission. There will be a bountiful supply of pure water from the Cold Springs and salt water will be pumped from the harbor into a stone reservoir from which it flows into the laboratory. All the apparatus and appliances for general biological work are provided, and boats, nets, dredges, a steam launch, and other means of collecting are at hand. The main laboratory room is 36ft. wide, 65ft. long, and amply lighted.

Dr. Bashford Dean is the director of the station, and Prof. Franklin W. Hooper, secretary of the Brooklyn Institute, will answer applications for admission as students. The course of biology includes instruction in the use of the microscope, photography and photomicrography, and field work. The tuition fee is \$24, and the cost of board and room will be from \$8 to \$10 per week.

There is a great field for institutions of this kind, and we wish they might be greatly increased in numbers. The amount of knowledge we have of the life histories of most of our common marine animals is pitifully small. It is noteworthy in the case of the fishes that until a species becomes the subject of fishcultural operations scarcely anything is known of it except its scientific name, its relationships, and, perhaps, the limits of its range. The laboratory of the Brooklyn Institute, originating under most favorable auspices and exhibiting exceptional strength, will doubtless achieve eminent success.

IN THE SONORA COUNTRY.

IN THE SONORA COUNTRY.

BARRANCA, Sonora, Mexico.—The Yasui Indians we have here in Sonora are a fine race of savages as savages go; they are tall, stout, and the fact that the Mexican Government has been trying to conquer them for the past hundred years and has always failed proves them good fighters above the average. Uncle Sam tries to keep his wards temperate, but there are no restrictions here, and a Yasui loves his muscal and buys it whenever he can get money. The squaws and bucks get drunk together on a perfect equality, and stay drunk until the money is all gone. Muscal is distilled from the root of the aloe; and if well made is equal to whisky. It is generally written "fiery mescal," but if well made is not at all fiery.

erally written "fiery mescal," but if well made is not at all fiery.

The poor Mexican here is several grades above the Indian, but he cares not for luxuries nor fine furniture; a hovel, with dirt floor and roof that never keeps out water, is good enough. One room is all he wants; and the pig, the burro and the chickens share that, making themselves familiar and poking their noses into any water or tood that the room may contain. No chair, bedstead nor table graces the room; and beans and tortillas with a little jerked beef are all they have to eat. That is satisfactory if a man buys it himself, but if you hire him, including his grub, he becomes very fastidious in short order, and wants coffee, sugar and everything good.

Game is not abundant here, but there are plenty of jack rabbits, a few quail, a few doves, and some small deer in the hills close by. Hunting is unpleasant because of the thorny brush and cactus of all sorts and kinds, that compel one to go very carefully. A bird dog is of no use.

Last night while four of us were sitting around a card table, a large tarantula in the clutch of a tarantula hawk fell in the center of the table, and had a great battle, the hawk finally killing his antagonist. That is one of the beauties of the country, having a tarantula, scorpion or cent-pede drop on to you from the roof or crawl into your blankets. There are lots of other equally beautiful things in this country, but I haven't time to enumerate, so one audios!

THE ALBATROSS AT HOME.

THE poet Coleridge declared he had good authority in old Shevlocke's voyages for all the natural details of his masterpiece "The Ancient Mariner," and that only the supernatural features were fanciful. I am inclined to think, however, that he indulged a poet's license, or else that his authority misled him, when he placed his immortal albatross amid the frozen terrors of the Antarctic pole.

The ice was here, the ice was there.

The ice was here, the ice was there, The ice was all around; It cracked and growled, and roared and howled, Like noises in a swound!

At length did cross an albatross, Through the fog it came; As if it had been a Christian soul, We hailed it in God's name.

Coleridge's albatross, in fact, had several peculiar habits which ordinary albatrosses, according to my observation at least, do not possess. For instance:

In mist or cloud, on mast or shroud, It perched for vespers nine;
Whiles all the night, through fog smoke white, Glimmered the white moonshine

Whites all the night, through fog smoke white, Glimmered the white moonshine.

There are two palpable blunders in this stanza. The albatross cannot possibly perch on mast or shroud or anything else. It is not a perching bird at all but is so awkward and ungainly on its great, flat, webbed feet that it can scarcely maintain its footing on a ship's deck. The integument of the feet is so tender, too, that it is very quickly injured by contact with the planking, and when an albatross is caught with hook and line, it is necessary to lay down a table cloth or some other soft material for the bird to stand on if the feet are to be preserved, as they often are, for making tobacco pouches. Secondly, the albatross has no nocturnal habits, but when night falls it quits the ship which it has followed all day, and vanishes into the mystery of darkness and distance that shrouds the face of the deep in southern latitudes. Sailors have a belief, which they fondly cherish, as they do many other improbable or impossible theories, that the albatross sleeps upon the wing. That, however, is a mere delusion. I have spent many a moonlight night on deck in the South Sea, and have always been a very close observer of the birds; but I never saw any albatrosses about much after sundown. Where they do sleep cannot readily be explained, for they are often seen in great numbers around a ship toward sundown, at an immense distance from any land and where the water is too rough for them to rest upon it. Strange as it may seem, albatrosses are easily drowned. I have many times seen them brought on board after a long pull in a rough sea, actually at the point of death from drowning, and they are then easily killed without ruffling their plumage, by a slight pressure from the knee on their breast. Sometimes they have strength enough left to vomit a huge volume of salt water and oil, which, running all over the clean deck, leaves it stained and greasy for a long time; and then they may recover their breath and give their own accord. So, they cann There are two palpable blunders in this stanza.

plumage.

If, therefore, Coleridge was wrong about the albatross a regular attendant at If, therefore, Coleridge was wrong about the albatross perching and about its being a regular attendant at vespers, he may also have been wrong about its frequenting the frozen regions. I was once as far south as 62°, quite among the ice for weeks together in the summer time, but we lost the albatrosses before we saw any ice, and though we were always on the lookout for natural objects of interest, we saw them no more until we were again in clear water.

And a good south wind sprung up behind:

ice, and though we were always on the lookout for natural objects of interest, we saw them no more until we were again in clear water.

And a good south wind sprung up behind:
The albatross did follow,
And every day, for food or play,
Came to the mariner's hollo!

The home of the albatross, in short, is not at the antarctic, but considerably to the north of it. All the albatrosses in existence probably come from a very small area comprised in two or three isolated groups of islands or rocks, the chief of which are the Antipodes Islands, the Crozets and Tristan D'Acunha. A British ship, called the Strathmore, was wrecked some years ago at the Crozets, and a large number of her passengers and crew lived for many months on those desolate islands. They at ealbatross flesh and albatross eggs; they dressed in albatross skins, and they slept on albatross feathers. Whether they would have eventually learned to fly and swim like albatrosses was not proven, but when they were rescued they looked very much like albatrosses, and as for the smell—well!

But the place to see albatrosses in the greatest numbers and under the most favorable conditions, is at the Antipodes Islands. This remote group, which is one of many uninhabited scraps of land far out in the ocean that are included in the political boundaries of New Zealand, is called Antipodes because it is almost exactly antipodal to London. It is as nearly as may be 180° east or west of London, and it is as far south of the equator as London is north of the equator. When it is noon in London it is midnight at the Antipodes Islands, and vice versa. The longest day in London is the shortest day at the Antipodes Islands, and when it is midwinter there it is midsummer in London. To complete the coincidence, the area of the Antipodes Islands is pretty much the same as

that of London. The population, moreover, is as dense in one place as in the other, though of a very different character. If there are five millions of human beings in the modern Babylon, there must surely be five millions of seals, penguins and albatrosses in the Antipodes Islands.

the modern Babylon, there must surely be five millions of seals, penguins and albatrosses in the Antipodes Islands.

The New Zealand Government have a humane and sensible practice of maintaining depots of provisions, blankets, matches and other necessaries, on all the outlying islands of the colony where there is a possibility of shipwreck occurring and castaways needing supplies; and once or twice a year they send a steam yacht, or lighthouse tender, the Stella, to visit these lorely spots for the purpose of rescuing any poor wretches who may be sojourning there, and of inspecting or renewing the depots. Many lives have been saved by this means, and even where there is no such sensational romance of the sea, a trip in the Stella is one of the most agreeable and interesting that could be imagined. Starting from Bluff Harbor, the southernmost part of the Middle Island, the Antipodes are nearly eleven degrees to the eastward, about five days' steady steaming, with a short stop at one or two intervening islets. The first appearance of the Antipodes is very pleasing—and very deceptive. The land rises boldly from the ocean to a height of 400 or 500ft, and gives the impression of being covered with bright green turf, while in parts there seem to be chalk cliffs or snow drifts.

As the yacht approaches the islands, however, and cautiously feels her way among the reefs that lie off the only landing place, they are seen to consist entirely of rocks very rugged at the top, but cut into terraces and smoothed on the surface lower down by the wash of the ocean during no one knows how many ages. The islands are undoubtedly volcanic in their origin and have evidently been uplifted from the sea by a succession of earthquakes or other causes in comparatively recent times. Thus the terraces which were formerly awash are now high above the surf, though in stormy weather the spray still dashes over them. The green appearance is given not by turf, but by long, dark marine grasses and thick mats of seaweed, while the white patches o

or brids which crowd them like the immates of an east side tenement house.

The moment you step ashore on the Antipodes and climb up on the terraces, you discover that there is not a dry spot below the rocky cliffs, but that the whole area is slippery and sloppy, with clear pools at every step, and water dripping or flowing in all directions. It rains there more than half the year, and when it is not raining the moisture from the surf keeps the place in a constant state of sop. This just suits the creatures that congregate there. The seals think it a perfect paradise. Hundreds of them are to be seen flopping awkwardly about on the rocks, or lying in heaps on the terraces, basking in the sun, while among them, and perfectly indifferent to their presence, are thousands of albatrosses and penguins of all sizes and ages, occupying every available standing place, or sitting on their eggs among the sea weeds, or gravely padding in the shallow pools. The rocks above are simply alive with seagulls, petrels and cormorants: but the albatrosses and penguins alone appear to share the terraces or sloping hillsides with the seals.

The wandering albatross, Diomedea exulants, so called

cormorants: but the albatrosses and penguins alone appear to share the terraces or sloping hillsides with the seals.

The wandering albatross, Diomedea exulaus, so called by Linnaeus in fanciful allusion to the lost sailors of Diomedea, is the largest of all sea fowl and, indeed, one of the largest birds in the world. It often measures 4 feet from beak to tail, and specimens have been obtained measuring 17 feet across the wings. I have myself seen many measuring 14 feet across, but a more usual measurement is about 12 feet. Any one who has only seen the albatross soaring in the air with its vast pinions outstretched like the sails of a windmill, or resting gracefully on the surface of the sea, is disappointed by the first sight of the bird on land. It looks curiously short and stumpy, rather suggestive of a very fat goose, and its enormous beak, with a great sharp hook on the end of the upper mandible, seems out of all proportion to the rest of the bird. It recalls ludicrously the figure of the dodo, the extinct, gigantic bird of Mauritius. The stupendous wings, in fact, are so closely folded against the body that while they give the albatross a bulky appearance, they altogether belie its real character as a bird of unequalled power of flight.

The birds and beasts at the Antipodes Islands are so unaccustomed to human beings that they display not the slightest fear nor any other emotion. The albatrosses will even allow themselves to be lifted off the nest with no more decided demonstration than spreading out their great webbed feet or opening their huge gaping beak and reaching round for a bite. If they do get hold of your arm they give you an ugly nip, for the sharp point of the hook at the end of the upper mandible goes through a thick oilskin and coat-sleeve easily. But the birds are by no means vicious and offer little resistance to being bound round the wings and body with rope yarns and carried on board the steamer, where they are placed on wet sails under a netting on the fore deck.

I had often read tha

white, rather rough on the surface and about as large as a swan's egg.
The young albatrosses are most comical little creatures, covered with dusky down, which has a curled or frizzled appearance, not unlike a little negro's wool, only much softer; and their great goggly eyes and huge, wide open beaks, alway's craving for food, give them a singular look of juvenile voracity and alertness. Numberless attempts have been made to take them half-fledged and rear them in captivity, but they invariably die. Penguins, on the other hand, are easily reared and domesticated, and make very pretty and amusing pets.

The flesh of the albatross, like that of all other sea fowl within my experience, not excepting even the fetit cormorant, is perfectly eatable and wholesome and not at all unpalatable, if only the precaution is observed of skinning the bird the moment it is killed, before the rank oil which lies at the roots of the feathers can permeate the body. It is brown in color and very glutinous, like the knuckle end of a leg of mutton, and it has a peculiar flavor like that of a larded chicken, that is to say it has a dash of bacon. The eggs are very rich and strong, not very pleasant to eat, till you get used to them, but unsurpassed for cookery or omelettes. The long, slender wing bones make excellent pipe stems, for which they are commonly used in the colonies, and even in England. They "color" dark brown or black, and polish just as well as the meerschaum bowl itself.

The most valuable part of the albatross, however, is its plumage. The neck, breast and belly are snow white, shading delicately into gray and dusky brown at the sides and back, and the feathers are so curled and elastic that the skin with the plumage on it, is an inch or an inch and a half thick. No finer material can be got for muffs, cuffs, collarettes, capes or the trimming or lining of cloaks and robes. It is very light, yet exceedingly warm, while for appearance its dovelike smoothness and purity cannot be excelled. It has the advantage too, of being very durable, the natural oil of the bird preserving the skin and feathers for many years, while the characteristic musky odor is easily overcome by camphor. It is a wonder that some enterprising furrier or modiste does not set the fashion of wearing albatross plumage and send to Antipodes or the Crozets for a season's supply. There would be money, in it, not only by its novelty but by its usefulness. At the same time, I hope it will not be done, because if once the skin of the albatross acquired a commercial value and the ruthless hand of fashion were laid on its smooth white neck, the poor bird wou

SOME ENEMIES OF GAME.

SOME ENEMIES OF GAME.

The wastes of nature, as they may be justly called, are enormous. Myriads of living things seem to be brought into life for the sole purpose of becoming the prey of useless vermin, and more perish in embryo. This is especially true of game, both fish and birds.

A correspondent (page 287) mentions the otter, and desires some information about its habits. About thirty years ago, when in the Lake Superior region, otters were abundant and hundreds were trapped for the fur—then very valuable—in the numerous streams, which abounded with speckled trout. The otter feeds largely on fish, which he takes as they lie in the deep pools. I had an opportunity once of witnessing his manner of feeding. I was watching a shoal of trout at the bottom of a steep rock on the bank of a river through the clear water, when an otter floated down the stream along the bottom until he reached the fish, when he seized one and swam to the bank, up which he crawled, and then devoured his prey. I was perfectly still, and he evidently missed seeing or noticing me. He then quietly sunk down along the bank above the rock, and repeated his performance, after which he disappeared in a hole in the bank. The place where he came out of the water was a well-worn path, an "otter slide," as it is called by trappers. I had a man then trapping fur on the Escanaba River, and I sent him to the place, a rock well known to fishermen there as a sure place to get a few fish; and he caught the fellow. Otters feed all day long. It was a little before sundown when I saw this one. One was shot a few days ago in one of my mill ponds here in the afternoon as he was swimming along the bank. This animal destroys more fish than any other enemy.

The mink is another destructive pest to fish, but more so to ducks, while both he and the otter will take frogs. One mink killed forty-two ducks last year on one of my ponds, when I trapped him with the forty-third. There is no better bait for a mink or an otter than a freshly-caught trout. Pheasants and p

and old, as well as to game; but not more so than the siy possum.

The ways of this creature are remarkable. One made a disturbance in my poultry house one night, but on search I found nothing. I closed the small door, however, and in the monning I found the beast curled up in a hen's nest hiding for all he was worth. This animal kills many game birds. Very frequently I find the feathers where a pheasant has been eaten. A trap set there and baited with a dead chicken or a piece of "gamy" meat invariably catches a possum. He will kill and partly devour a grown turkey, while a couple of half-grown ones will disappear from a brood in a night, the feathers and head being left as the possum's card with his compliments. Coons are mischievous in the same way, but in this dense wilderness, where my next neighbor on one side is four miles away in an air line, I have captured a dozen possums for each single coon.

A few weeks ago I planted several thousand eggs of the rainbow trout in a small shallow gravely-bottomed brook. A mink was seen soon after picking up the eggs, and I succeeded in shooting him while busy at the mischief. What proportion of game animals survives these and other numerous enemies? Counting the prolificacy of the trout in the streams, it was probable that not more than one-tenth of the eggs produce fish, while a still smaller proportion of birds are hatched from the nests and come to maturity.

Last season seventeen nests of the quail (partridge) were found in one of my hayfields of seven or eight acres. These nests were the second brood, for I flushed a covey of very young birds that were sitting around one nest, and had seen several very young birds, like bumble bees in the grass, some weeks previously. Hay is out late in July or in August here. But for all these nests and young, mature birds are not so plentiful here as I have found them in New Jersey, a dozen miles from New York city. Minks, possums, snakes, hawks, owls, consume vast numbers of the eggs and young birds, while the fish disappear possum.

The ways of this creature are remarkable.

Golden Plover.—Scranton, Ia., May 10.—The golden plover are just leaving us. They are going north to their breeding grounds. These birds have made an unusually long stay with us, as the first ones were seen about March 25. They have also been much more numerous than usual. Although it has been a very dry season, they are in excellent condition; in fact, the fattest I have ever seen. These birds are generally very wild, especially on cold days. It is only on very warm days that the hunter can have any success among them. Not very many have been killed, as there is as yet not much interest taken in them. A few of the members of our sporting association have made pretty good bags, among others the writer, who bagged 23 in about an hour. Jacksnipe have been very scarce this season, few have been killed. Augling is the order of the day, and several fine strings of black bass have been taken.—E. E. F.

Live Antelopes for Parks.—Cimarron, Kan., May 4.—Editor Forest and Stream: I think I can furnish any one who wants antelope for a park or zoölogical garden with fawns at \$30 a pair, well-boxed separately and delivered at the express office at this place on or about Oct. I. I am busy and cannot afford to catch fawns and take care of them four months till they can eat hay, at those figures, but I can find some claim holders that will undertake the job. The postmaster tells me he has received several letters inquiring about fawns and wishing to buy. I can probably procure five or ten pair. I know one boy who is protecting eleven head on his father's claim, six does heavy with fawn, four bucks and one dry doe. He promises to catch the kids and raise them.—W. J. DIXON.

EVENING GROSBEAK IN NEW HAMPSHIRE.—Editor Forest and Stream: A handsome evening grosbeak (Coccothraustes vespertina) was captured by Mr. T. Edward Bishop in Francestown, N. H., March 27, 1890. The bird was a male, in perfect plumage, and when killed was accompanied by a female, which escaped. Francestown is in Hillsborough county, in the southern part of the State, and some twelve miles north of Milford, where Mr. Melzer secured the first specimen of this species that was reported in the Forest and Stream last winter.—W. W. Colburn (Springfield, Mass., May 10).

DUCKING REMINISCENCES.

TO-NIGHT a little book lies open by my side, the contents of which show the result of many pleasant days spent in the open air. It is my game record book, and this evening I have been running it over, each different page bringing to mind some pleasant, though not invariably successful, expedition. Under date of March 20, 1886, an entry is made which calls to memory an incident in my ducking career which it affords me great pleasure to relate to the many readers of the FOREST AND STREAM.

Spring made its appearance very abruptly that year, for

cident in my dicking career which it affords me great pleasure to relate to the many readers of the FOREST AND STREAM.

Spring made its appearance very abruptly that year, for one evening about dusk in the early part of March, after a thaw of two or three days' duration, I strolled down to the lake, distant about half a mile and which was yet covered with its icy mantle, to find that a mighty disturbance was taking place. A gentle wind was blowing from the south and the whole ice field was in motion. Already borne on by that resistless power, the ice had been forced back several feet upon the banks, carrying with it heavy layers of sand and earth. The air was filled with a medley of sounds. The creaking and grinding of the oncoming mass mingling with the muffled reverberations from further out in the lake. As I stand watching the awe-inspiring work of nature (not so much in reverential fear, perhaps, as in wonder regarding the probable length of time that would elapse before the ducks would be among us), away up in the now darkened sky I hear that vibrating sound so gladly welcomed by the hunter after the long, eventful winter, viz., the sound of ducks' wings in rapid motion. A heavy mist is falling, despite which I stand there upon the bank in the fast gathening gloom, long enough to count twenty or more flocks of ducks as they wing their way overhead, and as I make my way homeward a mallard crosses the road just ahead of me. I hear him quack, and although my eyes cannot pierce the mist and darkness, that mellow note comes to my ears like a promise to be fulfilled at no future day. From a marshy pond hard by, thickly bordered by hickories, sounds an answer to the call, and with a responsive note there comes a gentle swish followed by vociferons quackings and chucklings as the resting birds welcome the fresh arrival. As I turn in the gate leading to the house, a jacksnipe pitches by, flying low down and ever and anon uttering the derisive little note of his. I enter the house with a quickened pulse and after lo

for the night, but not to rest, as phantom ducks besiege my dreams.

The morning of March 20 dawns upon a cloudy and threatening sky. The scudding gray clouds are driven by a strong N. W. wind, and a few flakes of snow come sifting by, but it is just the morning for ducks, and by 9 o'clock a well-muifled party of three might have been seen driving in the direction of Bark River, which was to be the scene of the day's campaign, and which lies some six or seven miles to the southward.

Our party consisted of A. A. E. (better known among the fraternity as "Old Baldy"), L. J. S. and the writer, and as we jog along the muddy roads our eyes are continually gladdened by the sight of numerous flocks of ducks high up in the air. At 10:30 we are unloading our beats on the river bank, or rather where the river bank

should have been, for the melting snows and the heavy rains during the past few days have raiced the usually tranquil stream to overflow its banks, and to-day instead of a placid stream coursing its way between narrow bunks there is a sea of tossing water in places half a mile wide, out of which protrudes here and there a haystack or a clump of battered willows. As we unload our boats we note a flock of mallards sitting out of shot among the willows, the males with their glossy green heads erect and ever on the alert for danger. Looking closer one could see the dusky forms of the females as they swam about among their more gorgeously colored mates, or paused for a moment to snatch a mouthful as it came drifting by. We launch our boats about a quarter of a mile north of where the Northwestern Railroad track crosses the highway, and leaving word with the man to call for us at dusk, drop down the river, the writer in the advance. Some twenty rods behind him came L. J. S., while still further back the rear is brought up by "Old Baldy." In this order we pass by the first bridge and under the second one, around the timbers and abutments of which the muddy waters eddied and swirled. Huge ice cakes came floating down the stream, only to be broken in pieces as they came in contact with the massive piles under the track. Using great care the bridge is safely passed, although there is scanty room to use the paddle, which has to be dropped and the hands used in place, pushing from one timber to another.

We drop down past the Big Slough and Poplar Point, and as the river broadens, redwelling in the shelter of the order flock. Running the bow of my boat into the bank for a moment I lay down my poling paddle, taking in its place a shorter blade; then with gun balanced across my shell box, Jupush off. There is a broad bend shead, and as the point, in the stream of the shelt of the cover. Canticusly and with scarce a ripple the sharp bow of my boat into the bank for a moment I lay down my poling paddle, taking in its place. Ju

flock, and yet another, all flying nearly in the same track.

Thinking this a good omen, I hastily drop down the river and set out my decoys a few rods below the point where the preceding flocks had turned off only a minute before. The banks are devoid of cover save for a few straggling wisps of marsh grass, but pulling my boat up on the shore, I prop it up on its edge and scatter an armful of hay taken from a stack conveniently by over the bottom and sides, and my blind is complete. Of course on a calm sunshiny day this sort of cover would not have answered at all, but on this occasion it served the purpose admirably, as the birds were flying low and were not cautious. I am hardly behind my impromptu blind, with shell box open, when the flight begins. Down the river through the mist I see a small bunch of bluebills coming. They are making slow progress against the wind, and do not see the decoys until within a few rods of them. Without an instant's hesitation they sail in and bow their wings over the open space I have left in the center of my flock. Two drop to my shot and the balance of them pass on up stream. During the next half hour there is a brisk flight, and when it slackens I push out and pick up a dozen blnebills and goldeneyes. Several other dead birds were carried away by the drifting ice, which closed in around them before I could get to where they lay.

In the hour following I have time to eat my lunch and load a few shells, as my supply of the latter is running low. Presently the wind veers around into the west, and a drizzling rain begins to fall. Happening to look down the river through the air, heavy with moisture, I see a pair of large ducks beating up wind that cause me to make sure there is no mistake. Now I catch a side view of them, and all doubts are settled. They are canvasbacks, but will they come to my decoys? Alas for human hopes! When within twenty rods of me they leave the river channel and strike the marsh. Straight for the blind of L. J. S. they fly, and every instant I expect to

the cause of S.'s silence, for way back out of shot in the stnuted and blackened marsh, whither he has gone in search of a dead bird, crouches a familiar figure, which is now making frenzied demonstrations indicative of anger and despair. Onward the coveted pair of birds wing their flight, and are soon out of harm's way, as they do not offer to stop at the stand of our venerable friend on the way up. About 4 o'clock we have one more little flight, and for a few minutes the sky is darkened with birds. Bluebills and goldeneyes, butterballs and mergansers, all in indescribable confusion. First I would have a shot over the decoys. then a bunch carried by the wind would swing in behind me over the marsh. Looking around to follow their motions, birds would drop in and light with the decoys.

This only lasted a few minutes, and as soon as there came a lull as dusk was approaching I picked up my decoys (no light undertaking in the teeth of a driving wind), and making everything as snug as possible in my little boat, now heavily overloaded, I start on my way back up the stream. I find L. J. S. in the act of winding up his last decoy, and together we pole up to the blind of our chaperon, whom we find in readiness to depart. Before us is a long stretch of river and slowly we work up against the current. The fine sleet that has fallen for the last hour is beginning to make itself felt through our clothing. At last we near the railroad bridge, and what follows I feel quite sure the wrinkled and relentless hand of time will never wholly erase from my memory. It is growing dusk, and we are numb from our long struggle up the stream, facing the biting sleet and wind. The strong dark current comes gurgling and rushing along among the timbers and butments of the bridge as we approach it. Fearing a collision with the other boats on the further side, I follow up the east bank in order to pass under above the others. Unmindful of any particular danger I draw near the low lying timbers of the bridge under which the shadows of night h

back, as using my utmost strength I force my heavily loaded boat into the vortex. I can hear the exclamations of the "boys" as they are passing under below me where the current is much slower, but have no time to speculate on the subject they are discussing, as my entire attention is required in my own behalf. I am only fairly in the whirlpool when, regardless of my most vigorous strokes, the bow swings around and wedges itself under a projecting brace, and despite my utmost efforts the stern swings around and follows the example set by the bow: a wave ripples in over the undecked side of my frail craft, and a second one, larger than the first, gurgles in after it.

Thinking by lightening my load somewhat I might possibly get out of my embarrassing position without a wetting, I called aloud to the boys in mild and deliberate accents, "Gentlemen I shall need a little help," but at this point an incomer, hitherto unseen, suddenly envelops me, and with a lurch my craft unceremoniously settles under the water, carrying me with it. As the muddy waters, chilled by their contact with the floating ice, close in around me and penetrate my clothing, I draw a shuddering sigh and add, so the story goes, "and—quick, too." I settle to the shoulders in that rushing flood, then grasping the 10-gauge in one hand and a railroad tie with the other I struggle a moment before finding a foothold. Finally I manage to lay my gun across the ties and next to crawl up between, and at last stand there in the dim and uncertain light, dripping from head to foot and with chattering teeth. My first move is to empty the water out of my boots, and while I am doing this my companions are rescuing such of my outfit as did not sink. While they are engaged in this work of mercy, I can hear their smothered bursts of laughter, which, through consideration for my feelings, I presume was not intended for my ears. My boat, lightened of all weight, now drifts out from under the bridge and is hauled up on the bank and turned over.

The boys both suggest g

THE TEXAS TURKEY RECORD.—Jayton, Kent County, Texas, May 9.—Seeing that "T. J. S.," of Beeville, had killed 3 sandhill cranes and that "H. M. D.," of Piedros Negros, goes him one better with 3 turkeys, I have but to say, that my son, a lad of fourteen years, killed 3 big gobblers at one shot, with an old muzzleloader, but a good gun. They were on the run at the time and were shot within 75yds. of the house.—J. W. A.

"Sport."—Minneapolis, Minn.—I recently saw on the cover of a fine catalogue of sportsmen's goods issued by a Chicago house a spirited (?) picture of a dude sportsman in correct regalia, standing in a boat handled by a guide, pumping lead into a swimming deer apparently 20ft, from the boat. What noble ideas of sport those dealers must have!—W, W, L,

NATIONAL GAME LEGISLATION

NATIONAL GAME LEGISLATION.

Editor Forest and Stream:

The theory upon which this Government was administered from 1800 to 1860 was that the States should do nothing for the people that the people could do for themselves, and the general Government should do nothing for the States that the States could do for themselves, a year or two ago Forrst and Stream urged State legislation to prevent spring duck shooting, in order to save the remnant of that rapidly disappearing game fowl. The writer suggested at the time that Congressional aid should be invoked, and the reply was that Congress could do nothing, lacking constitutional power. I was not convinced, if silenced.

Since that time by study and inquiry I have been still further convinced that the suggestion then made was a good one. Congress has the power to legislate on the subject, and it is the only power that can do so effectually. Concerted action on the part of the States is impracticable, for many reasons. In sections of the country where pot-shooting in spring is carried on, State laws would not be enforced on account of public sentiment. A law of Congress could and would be enforced, Laws embodying the same principle are now on our statute books, and have been affirmed by our highest courts. Such an act as is here asked for would certainly "promote the public good."

Suppose Forest and Stream calls for the opinion of some of our public men. President Cleveland is a genuine sportsman, and ex-Attorney-General Garland is fond of rod and gun: so is Senator Vest, Congressman Bynum, of Indiana, and there are many others.

If spring duck shooting is not soon stopped there will be no fall duck shooting. Something should be done, and that speedily. If not grown weary in the good work, I hope Forest and Stream will take the matter up and agitate it until the desired result is accomplished. Large bodies move slowly. It requires a vast deal to move the great American people, but when once put in motion public sentiment is all powerful.

J. P. Appleedate.

THE ELUSIVE CARIBOU.

THE ELUSIVE CARIBOU.

Editor Forest and Stream:

I notice that a correspondent of your paper in describing his caribou hunt speaks of locating the herds of caribou beforehand, and on seeing a caribou at 2 P. M. held his fire for the next day, so as to give his friends a chance. Now, as I know a man who was equally generous, I am prompted to tell my story.

It was perhaps Dec. 10 some eight or nine years ago, and just at dusk, that I struck the shore of Lake Parmacheene and made a bee-line for the light in the window of Camp Caribou. My errand was to make my friend John Danforth a little visit, and if he was agreeable to the idea, take a little turn over around the boundary range of mountains to see what we could see for "hair," and I had come fully prepared.

Soon after leaving the shore of the lake I came to tracks made by animals, which I soon made out to be caribou. There were a great many, and sometimes for rods it would feel to my feet as though I was going through a farmer's barnyard instead of friend John's usually spotless front yard. The tracks reached up to within a half mile of the camp, and I naturally thought that John must have had some fun, and that caribou meat would be in order for supper, which after an all day's hard tramp with rifle and pack did not taste bad in my imagination.

I was soon in the camp shaking hands with Bill Whitte-

that John must have had some fun, and that caribou meat would be in order for supper, which after an all day's hard tramp with rifle and pack did not taste bad in my imagination.

I was soon in the camp shaking hands with Bill Whittenore, glad to see him, but disappointed as could be to learn that John had gone down river three days before for a two weeks' trip. After the first gush of diappointment had passed, I said, "Well, Bill, it can't be helped; and now if you want to cheer me up and make me feel first-rate, you want to slice me off a piece of sirloin, about as large as a horse's upper lip, from the fattest caribou that you've got hung up on the island."

"I hain't got no caribou hung up," said Bill.

"The deuce you haven't!" said I. "Ain't they plenty enough or haven't you got firearms enough?" looking from Bill to the corner where stood two Winchester and two Ballard rifles and a double-barrel shotgun.

"Yes," said Bill, "firearms enough and caribou enough. Five of them on the lake here yesterday all day long, but I didn't disturb them. I thought I'd let them hang around till John got back."

"Well, Bill, you are the most considerate man for your employer that I ever heard of; but I guess that if you have no objections we will play that John has come, in the morning, and if there are any caribou hanging around we will see what we can do for them."

Bill had no objection to this plan, so early in the morning I started out with my rife and a biscuit in my pocket. I soon found where the game had left the lake and taken a zigzag course up the Moose Brook valley, feeding for a while as they went. Soon the tracks drew together, and then in single file they seemed to take a direct line to the east. I followed them till well into the afternoon without oming to a place where they had lain down or stopped to feed, and it was an hour after dark before I got back to camp. Then I related to Bill what I knew about caribou hanging around; and I would advise, if any on ewants caribou, to use the old bear hunter's phras

glistening white snow for a background. Could artist ask for more in order to take an instantaneous photograph of the group? That picture lasts in memory yet."

CHICAGO AND THE WEST.

CHICAGO AND THE WEST.

CHICAGO, Ill., May 17.—No shooting news now except that of the trap. On the whole the season has been good. Even at the present date the Kankakee and all other northern Indiana streams are very high, and all altogether out of the banks.

Mr. J. W. McCauley, of this city, is lately back from a three months winter trip in the mountains of New Mexico, and has been benefited so much in health by the trip that his friends did not know him. Mr. McCauley killed one black bear and made a very fine collection of birds which he has had mounted, and among which were specimens of the white swan, pelican, night heron, glossy ibis, etc. His parties also killed wildcats and wolves. The Springer (N. M.) Rod and Gun Club has, according to this gentleman, the finest preserves for alkinds of hunting there is on earth. Mr. Charles Springer alone has 47,000 acres under fence. Mr. Robert Steep, of Springer, Mr. William Gibson, of Las Vegas, and many others, seem to linger, in the mind of the Chicago man, as examples of that rare and generous product of nature, the genuine sportsman.

I was talking with Abe Kleinman the other day, and he says that the ducks, especially the mallards, never went south of Illinois all this winter, or at least the bulk of the flight did not. Abe says that this is more often the case than is generally supposed, the birds clinging along the warm and sheltered streams all winter. Knowing something about this Abe has just bought about 200 acres of marsh in the lower part of the State, and will start a little preserve for himself. The ducks stayed in that section about all winter this year.

I was around at Billy Mussey's place the other day and heard of a story there which I commend to ardent talkers on gun topics. It seems that one Mr. Eddie Price frequents Mr. Mussey's resort habitually, and he is habitually unable to hear any one tell a biggerstory than he can. On a late occasion the boys were talking about close shooting guns, and among them they had some pretty good gun stories. B

marked:
"Why, that's nothing. Say, I used to have a gun that shot closer'n that. Say, that gun was a muzzleloader, and I only shot an ounce of shot in her. One day I was in my blind, and a mallard drawded in over the decoys, and made me a pretty close shot. I just waited till he got in pretty well over the decoys, an' then I let him have it."

have it."

"Well, what of that? Did you get him?"

"No. Lost 'im."

"How'd that happen?"

"Why, you see, that gun shot so close I filled him so blamed full of shot he sunk, and so I didn't get 'im. Some guns shoot almost too close. Say—" E. HOUGH.

Some guns shoot almost too close. Say—" E. Hough.

Metropolitan, Mich.—On May 8, a man came into the office and reported that a bear had been seen four nights in succession at Kirby's camp. He said the bear was a large one and came around every night. Within half an hour I had one of my No. 30 bear traps in a sack and a 45-90 Winchester on my shoulder, and started for the depot. I took the train eight miles down the road; the conductor being promised a quarter bear, kindly stopped the train and let me off in a cedar swamp. Shouldering my trap and gun, I had seven miles to walk on a pole trail to Kirby's camp. Before I got there, considerable of the enthusiasm had oozed out of me and the last drop was lost completely, when on arriving at the camp I was informed by the foreman that the only bear seen was when one night a man had gone to the door and heard something run through the brush, which he thought might be a bear or deer, or some other animal. After making a careful examination of the ground for bear tracks and signs, I decided that there had been none around. However, I selected a suitable place and set the trap, baiting it with some spoiled whitefish which the cook gave me. After a hearty supper the foreman gave me part of his bed. The lights had not been out fifteen minutes before the porcupines made a raid on the camp. Some got on the roof and others gnawed at the door. Then a couple of owls held a long debate in a tree near by. I slept, and woke and listened for the bear several times, and at daylight I was out to look at the trap, which I found just as I had left it the night before. After breakfast I put that trap into the sack again, threw it into the boat which was going up river in a day or two, took my gun and started for home, 15 miles. On the rock I saw eight porcupines, one deer and several partidige. But I was after bear and did not molest them. At 10:30 o'clock I reached home pretty tired and considerably wiser about bear stories. They are not nearly so plenty here this year as last spring.

to camp. Then I related to Bill what I knew about caribou hanging around; and I would advise, if any one wants caribou, to use the old bear hunter's phrase, to "take them when they are around," for they are rovers, liable to start up, either in storm or sunshine, and go for miles without making a halt, and often, like the Indian's otter, they are 'here to-day, to-morrow nowhere."

CAMP BEMIS, Me. F. C. BARKER.

"Cap Lock" writes of the memories suggested by a recent illustration of the caribou in these columns: "My mind reverted back to the day I bagged my last specimen of this noble game from a drove of three. Not as might have been expected was he the leader but the talesman of this little band. The night preceding had been stormy, snow falling to a depth of twelve inches. The trail was struck fresh and was followed slowly for three hours, when game was sighted at fifty yards, leading off to the right hand, from a moss-covered dry spruce top. A low bleat was given and the pack instantly halted, throwing up their heads as they turned them towards me, with ears erect to catch the sound. Now was the golden opportunity. There they all stood with

SHORE BIRDS ON THE VIRGINIA COAST.—New York, May 14.—I have your favor of the 6th inst. in answer to mine of an earlier date in reference to woodcock and European widgeon. I beg to advise that I have just returned from a shooting trip to the Accomac Club at Wachapreague Inlet, Virginia, and perhaps it may be of interest to you to know that the curlew snipe are very plentiful there at the present time, also plover, calicobacks and dowitchers. If any of your readers should care to have a few days' good sport, they should go at once to Fowellton by the N. Y., Phila, and Norfolk R. R., via Keller, Va. I am a reader and admirer of the FOREST AND STREAM, and I have enjoyed so much the reports of trips from other sporting friends, I thought I might do a little something in the way of reciprocation.—S. W. F.

THE PITTSBURGH QUAIL CASE.—Pittsburgh, Pa., May 16.—Editor Forest and Stream: The case of J. W. Hague, game warden of Pennsylvania, vs. Noamie Sassara, alias Noamie Jones, came up for trial in the Court of Quarter Sessions of Allegheny county. Defendant had pleaded "not guilty," but withdrew that plea and plead nolle condentere to having in her possession twenty-five quail out of season, and was fined \$250 and costs. She had been found with 115 quail, but the warden did not insist upon the full penalty, and she promised to observe the law in the future. The warden's position met with general approval.—X.

WYOMING NON-RESIDENT HUNTING.—Mr. John G. Worth, of Cheyenne, Wyo., sends us a notice of a projected camping and hunting tour, which he contemplates making as a guide for a party of sportsmen from other parts of the country; but Mr. Worth does not inform us as to how he proposes to circumvent the law, which forbids game hunting by non-residents in that Territory. This is a point camp-hunt organizers cannot very well overlook.

AIMING THE GUN.—I am not a professional shooter, but have done a great deal of shooting with a shotgun for the last twenty-five years. It was nearly all wing shooting, mostly duck shooting, and I found I could kill more birds when I was sighting down over the barrels than I could otherwise. I see a great many sportsmen and some fine shots here, and the sportsman that gets the game is looking over his gun barrels for it.—G. M. W.

A CHANCE TO MAKE MONEY.—Mr. Editor: I bought one of Griffiths machines for plating with gold, silver or nickel, and it works to perfection. No somer did people hear of it than I had more spoons, knives, forks and jewelry than I could plate in a month. The first week I cleared \$31.30, the first month 167.85, and I think by July first I will have \$1000 cash and give my farm considerable attention too. My daughter made \$27.40 cents in four days. Any person can get one of these machines by sending \$3 to W. H. Griffith & Co., Zanesville, O., or can obtain circulars by addressing them. You can learn to use the machine in an hour. As this is my first lucky streak I give my experience, hoping others may be benefited as much as I have been. Yours truly, M. O. MOREHEAD.—Adv.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—Adv.

Camp-Hire Hlickenings.

"That reminds me."

303.

YER talkin' about nateral pictur's, but I reckon the one I once had beat anything you ever sat eyes on, or any one else. But I lost it, and it was the worst slap I ever had, knowin' as I do about the price some pictur's

I ever had, knowin' as I do about the price some pictur's fetch.

In my young days I was mighty fond of hunting, and I would let go the plow tail when my hounds wus yelpin' after a fox, and I could set under a hickory tree watchin' fur a squirrel half a day without complainin'. One day I told Sally—that was my wife—that I believed I'd shoulder old Tom and take a hunt. But the only thing I could get was a rabbit, after half a day's tramp. When I got home who should I see but a long-haired, crazy-looking coot of a feller settin' on the grass eatin' what Sally had give him for his dinner. She never turned a beggar away, but I never took any stock in tramps. As I came up he said, "How de do." like a gentleman, and I could tell by his way that he was nobody's fool, if he did look crazy-like.

"That's a fine hare you have," says he, "and it wouldn't make a bad picture. You'd better let me paint a likeness of him."

"You're a pictur' painter, hey?" says I.

"Yes, sir, I am an animal painter."

"Well," says I, "I've got a pictur' of game in the house that I don't reckon any one can beat," and so I went in and brought it out.

"Nonsense, neighbor," says he, "that is very inferior work. If you should see what I can do you will say I am right. Come, now, what will you give me to paint a picture of the hare, so natural that your dogs will bark at it?"

"I aint got nothin' to spend on pictur's," says I.

"Will you give me two dollars?" savs he.

it?"

"I aint got nothin' to spend on pictur's," says I.
"Will you give me two dollars?" says he.
"No, I won't give you a dollar."
"Well," says he, "I'll make a bargain with you. I'll paint it, and if it suits you, you can have it for fifty cents. If it don't suit you, I'll keep it."
"I agree."

paint it, and if it suits you, you cents. If it don't suit, you, I'll keep it."

"I agree."

He had some materials, and at it he went. The way he drawed off that rabbit and slashed on the paint wus jest boy's play. He'd pick up a little paint here and a little there off the board he held on his thumb, and almost before I knowed it he had a likeness of that dead rabbit hung up by the heels as true as very natur' itself. As soon as he got it done I said, "Boss, here's your money." He pocketed it and away he went. After a while Squire Sikes came in. The Squire was a great man for pictur's, and when he sat eyes on it he said, "I declare! where did you get that?"

"Why?" says I.

"Well, sir, that's a wonderful imitation," says he.

"What'll you give me for it, Squire?" says I. H

studied a while—Squire was sharp, he was—and finally said, "I'll give you ten dollars."

Well, I way surprised, for I thought his offer was a big one, but I didn't let on that I thought so, for I knowed he was good in a bargain and wouldn't offer mor'n it was worth, so I told him I would think about it. After he left Sally and I took supper off the rabbit I had shot, and then sat down and looked at the picture till we got tired a lookin'. She said, laughin', that if it wasn't worth so much she might cook it for breakfast.

Well, I went to bed, and rabbits and dollars danced in my head all night. The first thing in the morning I sat it up and looked at it, and couldn't hardly get off to work. I was a mighty hot day. When I came home at night there was an awful smell in the house.

"What on airth smells so, Sally!" says I.

"I don't know," says she; "I've smelt something all the afternoon, and have hunted high and low. It must be a dead rat somewhere."

"Well," says I, "we've got to find out what it is, fur I won't eat any supper till we do."

So we looked and looked, but it was no use. After a while my wife says, "Maybe something has got behind the pictur', let me see."

So she went to it as it sat on the floor face to the wall, and would you believe me, it was the pictur' of that rabbit that had spiled, and wus all fly-blown. But wusn't I sick! I never heed of any pictur' painted so nateral as to spile in that way. Now if that painter had painted the rabbit settin' up as if he wus alive and not hung him up by the heels as dead as a door nail, you wouldn't see Ben Stokes here with his breeches patched, but walkin' down Broadway with, Jay Gould and the Vanderbilts. Talk about your Angelus—pshaw! it can't tech that rabbit pictur' fur nateral appearance.

FISHING IN THE HOMOSASSA.

the gentleman effecting it, on being asked how he managed to land so many active fish in so short a time—about five hours—remarked that he "just yanked them in." Up to that time he was the champion in the black bass department. Whether his record was subsequently beaten I have not learned. It was not during my stay. I tried trolling and still-fishing in the same creek three days thereafter, my companion, a lady, succeeding in getting only a single strike, which resulted in the severing of her line and the loss of her spoon. For my part, I was forced to content myself with a single heavy strike, which completely demoralized my phantom minnow.

On that special occasion I could not plead ignorant guidance, for I had for my boatman the most experienced fisherman on the river, and every advantage was taken of his experience. The other boats came in with better showing, but none of an unusual character. It was what was called an "off day," which was in some degree comforting to me.

of his experience. The other boats came in with better showing, but none of an unusual character. It was what was called an "off day," which was in some degree comforting to me.

Better success attended the two other days I devoted to fishing. Our boat came in with a fair share of spoils, though they were all made with the troll. Still-fishing again proving abortive, we took some fine channel bass, a number of good-sized cavalli and sea trout, together with a garfish some 4 or 5ft. in length, which was captured by my companion. These garfish are ugly things to handle, and as the river literally abounds with them, and they take the troll readily, they are sources of much annoyance.

During our stay of five days only two small sheepshead were brought in. Various theories accounting for their remarkable scarcity were offered, but none that were accepted as generally satisfactory. The time was, and not very long since either, when sheepshead were the most plentiful fish in the Homosassa, and in point of size outranked all others taken in Florida waters. The largest weighed 22lbs, and others of less, but still unusual weights have been taken there. Of late years, however, sheepshead in the Homosassa appear to have diminished in size as well as numbers, though at times they are said to be very plentiful. A long talk with Dr. Ferber, whom I subsequently met at Sarasota, satisfied me that the fish products of that river had materially decreased, a fact which he attributes largely to net-fishing, though I saw none of it. Fifteen years ago the Homosassa literally swarmed with fish. This is attested by the evidence of such true sportsmen as Dr. Ferber, Dr. Trowbridge, Jos. Wilcox, Henry C. Ford and others with whom I have conversed on the subject. There are still a good many fish taken in it, but unless the statements of those who fished it fifteen years ago are exaggerations the numbers of to-day will not compare with those of earlier days.

There have always been and still are tarpum in the Homosassa. A number have been

	ANGLIN	G NOTES -Unward of twenty	brook tro	ut were

Angline Notes.—Upward of twenty brook trout were recently taken in the Brandywine, Pa., by an angler familiar with the stream. A catch of twenty-nine silver trout was taken at Conshohocken, Pa., by Mr. Charles Vogel about the middle of April. He found them elegant game fish of fine edible qualities. Croppies were seen in small numbers in the Susquehanna and Tide Water canal at Havre de Grace, Md., last year. Now they are more plentiful; specimens 10in. long are not uncommon, and everybody is delighted with the new fish. How it got into the canal is a pleasant mystery.—George H. Moore.

Young Shad in Rivers.—We have recently stated that small shad sometimes enter rivers in the spring and are probably destroyed by fine-meshed seines used for the capture of alewives, from which they are not readily distinguished. In our issue of May I we recorded a case of this kind. Now we have learned, through the reports of Mr. S. G. Worth to the Commissioner of Fisheries, that young shad have been observed on three occasions recently at Fort Washington, Maryland, in the Potomac River. A specimen selected for preservation measured only 5in. in length, yet it was caught in one of the seines of the common pattern.

Anglers' Association of the St. Lawrence River.—W. H. Thompson, Secretary of the Anglers' Association of the St. Lawrence River, organized a raid on the netters in the river and succeeded in capturing twentynine nets, four of which were large trap-nets and one a large seine. Hon. H. H. Warner, President of the Association, loaned his beautiful steam yacht for the occasion.

SILKWORM GUT.

SILKWORM GUT.

Tew people outside of angling circles seem to know what the gut used by fishing tackle manufacturers to snell hook and flies with, and to make leaders or casting lines of, is really made from. Some believe it to be catgut, while others believe it is taken from the intestines of fish, and many who have given the matter considerable attention have very erroneous ideas on the subject. Even the various works on angling have published articles that are far from correct.

We therefore take pleasure in calling the attention of all those of our readers interested in this subject to the excellent and exhaustive article just published in the last supplement of "Appleton's American Encyclopedia," written by Mr. Chas. F. Imbrie, of the old fishing tackle firm of Abbey & Imbrie. Mr. Imbrie has given the matter careful attention, and having long been identified with the manufacture of silkworm gut, is well able to describe the process from beginning to end. We quote the following extracts from his paper and regret that we have not space to publish the whole article:

"The province of Murcia. Spain, has always enjoyed a practical monopoly of the manufacture of silk-worm gut. Though the industry is small, it has long attracted the attention of silk culturists all over the world. Gut is still made in Sicily; but the quality of the Sicilian product is invariably poor, and as it can therefore compete only with the very lowest grades of the Spanish article, it is hardly possible that there can ever be a profit to the manufacturers. Silk culturists in China, Japan, France, Italy and the United States, have done their best to produce a marketable quality of silk-worm gut; but they have never succeeded, unless the fortuitous manufacture of a few strands of a fair quality can be considered success. In the United States, China and Japan, a long, heavy gut has frequently been made; but in no instance has the strand had the tensile power of much lighter Spanish gut. The numerous and invariable failures to produce a good qu

and insurmountable objects to its manufacture elsewhere.

"When the worms are quite ready to spin, not an hour before or after, they are thrown into a tub half filled with a strong mixture of vinegar and water. This kills them instantly. They are left in this pickle about twelve hours—generally over one night. This gives a consistency to the silk-bags, of which there are two in each worm. The next morning the worms are taken out of pickle and broken in two, cross-wise. The gut sacks are, with a little experience, easily removed. Each of the sacks is taken at either end, while it is soft, and stretched as far as it will go. If the pickle is strong, the gut is to a certain extent shorter and thicker; if it is weak, the gut is longer and thinner. If it is too strong, the gut pulls out crooked and lumpy and cracked; if it is too weak, the gut has not enough consistency to draw out. When the gut is stretched out as far as it will go, it is thrown on the floor, and the extreme ends almost inmediately curl up. The gut is covered with a thin filament called carne, or flesh. Toward the end of the day the gut is washed in pure water and hung up where a current of air will pass through and dry it. When it is thoroughly dry the strands are tied in bundles of from 5,000 to 10,000, and in this state it is sold by weight to those who prepare it for the market.

"The quality of gut is determined chiefly by its fresh-

those who prepare it for the market.

"The quality of gut is determined chiefly by its freshness, color and roundness. The freshness can generally be determined by the fuzzy end. If this is a clean, clear white, and not parched, the gut is probably new. The color of the gut itself should be a pearly white, without the faintest tinge of yellow, and should be very lustrous. The roundness can be determined by the eye and touch. The hank should be slightly twisted toward the sunlight (not any artificial light), and this will generally bring out the "flecks" or flat dead white spots, which reduce the quality. By passing the second finger and thumb up and down a strand, any roughness or flatness will instantly be felt. The rough strands of good gut are never worth more than three-quarters what the round ones are, and are sometimes worth only half. There should not be over 15 per cent. of rough strands, and the gut is unusually good if there are not more than 7 per cent. of rough strands. It is customary for tackle-makers to stain gut before using it. When the gut is stained it should be what is known as "mist coler;" that is, it should be the color of clouds (without any rainbow tints). There should not be the faintest tinge of blue or green. Gut appears smaller after it is stained, though it is if anything larger. Before attempting to knot gut it should be soaked in pure water. Thirty minutes should render regular gut pliable, forty minutes will soften padron, maraña should be soaked at least an hour, and double thick maraña not less than three hours. Hebra will require six hours."

CANADIAN SALMON LEASES.

THE following letter, for copy of which we are indebted to Mr. Henry P. Wells, is self-explanatory. Its publication has been delayed, but we put it on record as a part of the history of the case. Mr. M. Duhaued is the Commissioner of Crown Lands for the Province of Quebec; Mr. E. E. Tache the Assistant Commissioner

Quebec; Mr. E. E. Tache the Assistant Commissioner:
QUEBEC, March 21, 1890.—Henry P. Wells, Esq., New
York: Sir.—The Honorable M. Duhaued, C. C. L., directs
me to tender you his best thanks for your substantial
article "Canadian Fishing Leases," which he has read in
the edition of Forest and Stream of the 18th inst. As
regards the protest of the Federal Government, the Commissioner authorizes me to say, for the information of all
whom it may concern, that the Government of the Province of Quebec hold themselves responsible for the
leases of fishing privileges issued by the Commissioner of
Crown Lands. Herein inclosed is a copy of the resolutions introduced to the House of Assembly by the Honorable the Prime Minister, in connection with our pro-

vincial inland waters. I have the honor to be, sir, your most obedient servant, E. E. TACHE, Asst. Com. C. L.

The resolutions are as follows: "Resolved, 1. That this House deems it its duty to assert, in the most solemn manner possible, the rights of the Province of Quebec to the fish in the rivers and lakes aforesaid, which right it has, possesses and enjoys in virtue of the British North America Act, of the decision of the Supreme Court in re Regina vs. Robertson and of the above mentioned Provincial acts.

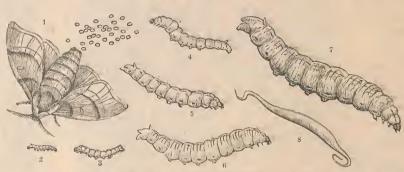

Regina vs. Robertson and of the above mentioned Provincial acts.

"2. That this House hopes that the Executive of the Province will take all constitutional and legal means to resist such encroachment of the Federal authorities upon the rights of the Provinces, and to remove the uneasiness which the Order in Council of the 26th December last and the subsequent proceedings of the Federal authorities might cause to the free and complete enjoyment of such fishing rights."

NEW ENGLAND TROUT AND SALMON.

NEW ENGLAND TROUT AND SALMON.

TILL the trouting parties are in order, and it seems as though the interest was never nearly as great. Saturday morning the railway stations were actually thronged with persons bearing fishing rods. At the stations of the Boston and Maine over thirty rod cases were counted at the departure of the 9 A. M. train. On Monday morning there were eleven rod cases at the Eastern Division at the same hour. The fishing parties are numerous, and they are starting every day. But thus far the results have been disappointing. Very high water has been encountered on most of the Maine lakes and streams. At Moosehead the water has been two feet higher than it should have been for several days,

1, Female Moth and Eggs (Bombux mori), produces about 200 eggs. 2. Worm 3 days old. 3, Worm 7 days old. 4, Worm 14 days old. 5, Worm 21 days old. 6, Worm 20 days old. 7, Worm 42 days old, and quite ripe for drawing or spinning. 8, Gut-sack, there being two in each worm.

mildays old. 5. Worm 2i days old. 6. Worm 20 days old. 7. Worm awing or spinning. 8. Gut-sack, there being two in each worm.

with the result that very few trout had been taken up to Saturday night. Indeed, some of the sportsmen who were the first to be off when the ice left, have come home in disgust. But others who have started later and who can afford to stay until the waters subside, are pretty sure of good luck. Neither are there any reports of good catches yet from the Rangeley waters, and others will follow this week. It now looks as though the later fishermen will be the more fortunate this year. Cold and rainy weather is not conducive to comfort in the early springtime, neither does it bring trout in abundance. The Stevens camp party, the owners of Campe Vive Vale, at the Narrows, Richardson Lake, will start in a day or two, and from them there will be likely to be reports of good catches. Last year Mr. Shattuck, of that party, landed a 9lb. brook trout.

The reports from the trout streams in this State continue to excite the wonder of everybody. More than double the usual number and weight of trout are being taken this year. Rev. Mr. Jaynes, of Newton, who is a lover of the woods, the stream and the rod, fished the trout streams of the Cape last week with remarkably good luck. He made a score of 30 in one day, with 14lbs. his largest. Even the streams of little Rhode Island are panning out more trout than usual. Mr. E. M. Gillam, commercial editor of the Boston Advertiser, and Mr. Fottler, statistical clerk at the Chamber of Commerce, took a trouting trip down to Providence on Saturday. Their point of destination was East Greenwich, where the Saturday before the gentleman who was to guide them had taken 19 trout from one stream. They reached the fishing ground late in the afternoon, in the midst of a scalding sun, and hence their score was poor, though a couple of 4lb. trout were taken among a lot of smaller ones. They consider the trip not abd one, since they left Boston about noon and were back agai

DINGMAN'S FERRY, Pike Co., Pa., May 17.—Dr. Fulmer and two guests of the High Falls Hotel took seventy-three trout to-day from Dingman's Creek, between Beaver Dam and Fulmer Tannery, most of them measuring from ten inches upward. Our streams here are giving better sport than ever before.

KENTUCKY WATERS.

KENTUCKY WATERS.

DEDFORD, Ky., May 2.—Editor Forest and Stream: The angling fever would be high here, but for the prevailing cold east wind. There are said to be unore fish in the streams this spring than here were the control of the stream of the stream this spring than here were the control of the cont

ANGLING NOTES.

ANGLING NOTES.

A N angler just returned from Maine states that there is considerable snow and ice about Moosehead Lake, and the water was entirely too high for good fishing. He had the good luck to kill a 20lbs, salmon at Bangor, but at that point he also had to give up fishing on account of high water. He thinks that between the sawdust and the nets the salmon on Penobscot are having a hard time of it.

From the Restigouche come reports of plenty of ice and snow yet, so that the fishing will be unusually late on that river. A letter just received from St. Stephen states that salmon are now being taken on the fly in the St. Creix Piron.

Trout fishing on the famous Beaverkill is excellent this spring. It was fairly good last summer, but a letter recently received states that it is better than it has been for the last ten years. The water there is rather high, but if we have no more heavy rains it will be at its best the last of this week.

The black bass anglers are getting ready for May 30; and judging from reports received the sport will be unusually good. The guides at Greenwood Lake and Lake Hopatcong expect a great many visitors on Memorial Day, and they are making preparations for an ample supply of bait and boats.

Old anglers say, "Put not your trust in splicing cutty-hunk or twisted lines of any kind to braided lines. The 'lay' of the twisted line runs down to the leader and is apt to twist it off close to the hook, and large fish have been lost in that way."

THE JAMAICA BAY. BILL.—The bill passed by the New York Legislature respecting nets in Jamaica Bay has not been signed by Gov. Hill, and it is said that the Governor does not intend to sign it. A petition is in preparation urging him to give it his approval.

HINTS FOR SALMON ANGLERS.

HINTS FOR SALMON ANGLERS.

To the tyro salmon fisher no better advice can be given than to avoid prejudice and learn something from every guide you have. For instance, you will be almost universally told not to fish when it lightens and thunders. Don't believe it. Take a showery, squally summer day. After the heaviest peals of thunder and flashes of lightning, let the sun come out, cast your fly, and, if it is a good pool, the salmon will rise. If you have any doubt of this, go to the Restigouche Salmon Club and see the record of two fish killed on a July day in the midst of the most violent storm and vivid lightning and heavy thunder. On that day the writer killed two in the same storm about the same time, fifty miles higher up, in the heaviest thunder, lightning and rain, so thick you could not see where to cast.

est thunder, lightning and rain, so thick yes see where to cast.

When you fish a good pool, and the season and water suit and you know the fish are there, and they won't rise day after day, make up your mind it's your fault. Put a quard on a night and watch your pool and the fish will rise when you try again. No man until he has cast a fly for a quarter of a century will believe what cunning a poacher has. Often the man you employ as guardian even will be in league with the poachers and worry your

Never fish for a salmon so that he will have to rise at the fly in quiet water to take it in swift water. If you will examine all the places where they take the fly, you will find this rule holds. When the fish has been in fresh will find this rule holds. When the fish has been in fresh water a while he becomes lazy, and will not make the exertion to rush at a fly into swift water. He will, if you fish on either side of the swift current, take it the reverse way. If you cast to the right, he will take it on his left, and if you cast to the left, take it on his right. I know of men, Canadians, fishing twenty years, ignorant of this rule so necessary to follow.

PISCATOR.

RANDOM CASTS.

SALT PORK, beans, molasses, bread and tea, as prepared by the lumbermen, is a bill of fare not to be despised where hard tramping is the order of the day. You can travel further and over rougher country than on anything known to the culinary chefs of Delmonico's. Fancy additions to the meal may be necessary to tickle the palate, but they add nothing to the muscle-making and health-giving qualities of these great standbys of the wilderness.

Did you ever feel the peculiar sensation accompanying the first time of sleeping in a bedroom after returning from a trip of six or eight weeks in the woods, where the trees and rocks were nature's furniture? To me it seemed as if I should suffocate for want of air and room. And this only shows how quickly man accustoms himself to circumstances.

In pickerel fishing in New Jersey, where the fresh-water ponds are often within a mile or two of the sea, the salt-water minnow is the best of all baits. It is tougher on the hook than the fresh-water species and will stand abuse far better. I have kept them alive for five hours in nothing but a basket filled with wet sea salad. Of the many varieties that are to be found in the creeks and inlets, those having a golden tinge to their scales have proved the most attractive. The striped ones, however, are the longest lived.

For snapping mackerel hook the bait through the lips and pass the hook to and through the tail. If not done in this manner it will be bitten off close to the hook and then left. The fish always attack their prey from behind, With a light fly-rod much sport may be had, as they are very strong and gamy for their size. Occasionally a gaudy fly will capture them.

BIG REEL,

CHICAGO AND THE WEST.

CHICAGO AND THE WEST.

CHICAGO, Ill., May 17.—Lake Calumet has claimed one more victim for its long score. Two young men, Earnest Hudson and James Grant, upset a half mile from shore and the latter was drowned in the shallow but treacherous lake.

Messrs, Fargo, Shaler, Botsford, Douglas and Auger, all of the Gaylord Club, departed a week ago for some trout fishing on the club grounds of that favored organization. They should by this time have had some good trout fishing in the Pike, as there may have been a few warm days. Advices from the north say that the Republic and other streams near by in northern Wisconsin are very low, but the water is so cold the tront will not bite yet. There was three inches of snow there four days ago. The trout season seems unspeakably slow, and the suspense is something terrible. Most parties are postponing their dates. Charlie Burton has letters out; in Wisconsin, whose replies he awaits breathlessly, but so far the man who wants a good lot of trout would better stay at home and wait a while.

I have often heard about there being "landlocked salmon" in Trout Lake, Wisconsin, and much surprise has been expressed that they should be found there, since this lake is out of the trout country, is south of the big divide and among the mascalloinge waters. I never fished that country, but yesterday I hunted up Mr. Ryder, of the Lake Shore & Western R. R., who knows all about it, and asked him about these fish.

"They are not the landlocked salmon," said he, "but they are salmon trout landlocked salmon," said he, "but they are salmon trout landlocked. They are just the same fish as the big trout of the Great Lakes. They have been caught in Trout Lake weighing 28lbs., and a fish lighter than 4 or 5lbs, is rare. They bite a spoon."

There are bass in Trout Hole also. Mascallonge Lake, near by, is a good one for mascallonge, and the short river running up to Boulder Lake is alive with magnificent bass. That is a great country.

Mr. J. S. Cooper, an attorney of this city, soon starts on a ju

So far the mascallonge news remains mighty scarce. Except the 30-pounder that came down last week from the C. M. & St. P. Railway country, I have not heard of any mascallonge of consequence being taken. The "trout" or "landlocked salmon" are biting now at Trout Lake. They never bite at all except very early in the spring and very late in the fall. I have not heard any results from Crosby's place on Twin Lakes. This is summer resort weather with a vengeance.

The pickerel have been biting in the Grand Calumet River lately, Three rods took twenty-two fish two weeks ago to-day, and some were caught last week. The Grand Calumet is higher now than it has been for a long time. The in-shore winds seem to force the water through the sand strip which fences the mouth of that stream and so back it up.

sand strip which fences the moun of that stream that back it up.

The Little Calumet is said to have bass in it, and good ones, though I do not know of anything definite as to results in that stream. Away up in the flat country toward its head there is another confluent stream called Salt Creek. In this, so a farmer told me, there are sometimes bass. On the strength of this single assurance my friend, A. H. Harryman, and myself will to-day run down there about twenty or thirty miles and try to see what there is in the rumor and the creek. This will do to wet the lines anyhow, and avert an attack of congestive want-to go-fishing. It is a shame not to go fishing when the very hooks in the box cry out against the delay.

tive want-to go-lishing. It is a sharp the delay.

Mr. Fred C. Donald informs me that an engineer on the C. & A. road often gets fine strings of small-monthed bass with the fly, fishing the Tippecanoe River, Indiana, between the two crossings which that railway makes on that stream. I think it must be the Cedar Lake on the C. & A. where the Crown Point boys catch their bass. The other Cedar Lake I have heard of as not being so very good of late for bass, but perhaps I am wrong. I have never fished in either.

Billy Mussey and some friends will make their summer fishing trip on the lakes near Madison, Wis.

A party of which Mr. Babeouf is one starts soon for a trip up Mackinaw way.

Dr. Buechner is on his way to Coleman Lake and the Pike at the Gaylord Club.

Mr. Hawley, of insurance circles here, has had good fishing northwest of St. Paul this spring, and may lead a party of friends back there soon.

The weather to-day remains cold and raw, but it is brighter, and we hope for a warmer time before long. Until then we will have no good fishing in this country.

E. Hough.

[For "Ohio," in last week's fishing letter please read

"Iowa."]

A New Minnesota Association.—At St. Paul was recently organized the Game and Fish Protective Association of Minnesota. The dues are \$2 a year, payable the first of June of each year, and the executive committee is empowered to levy assessments not exceeding \$2 per annum for special occasions. W. M. Brackett, Dr. J. B. Dunn, of Shakopee, and Sheriff Ege were prominent in arranging the organization. Pres., J. M. Regan; Cor-Sec., W. P. Andrew; Rec.-Sec., F. H. Jones; Treas., W. M. Brackett: A. G. Strong and W. W. Leonard were elected vice-presidents from Minneapolis, the balance of the vice-presidents from Minneapolis, the balance of the vice-presidents to be reported by the nominating committee at the next meeting. About thirty charter members were placed upon the roll, and there is every indication that the membership will reach large proportions. Sportsmen all over the State recognize the necessity for such an organization, and many state that they stand ready to help it with their time and money. From present indications there is room for hope that the game and fish of the State will be so protected in future that Minnesota will remain the paradise for sportsmen and fishermen that it has been in the past. The following resolution was unanimously adopted: Resolved, That this association invite the hearty co-operation of all organizations in this and adjoining States which are interested in the preservation of game and fish, and request their members to become members of this association. Resolved, That we recommend the organization of local clubs in all game and fish centers, where no club now exists, for the purpose of becoming auxiliary to this club in the work for which it is formed.

Lake Erie Anglers and Netters.—Cleveland, Ohio, May 13.—Four wholesale coinpanies are now engaged in the fisheries at this point. They employ a great number of gill nets, but as the warm weather advances the fish will move to the shore for spawning purposes. To meet them in time, pound nets are being set to the east and west of the city. Tons on tons of fish are being taken daily, composed mostly of pike perch, yellow perch and saugers, a few whitefish of goodly size and many herring. A half, at least, of the first mentioned are far below the suitable weight for market, selling for 75 cents per 100lbs., and must be a drug, as many are salted for want of ready sale while fresh. During the warm seasons, for many years off this port, a noticeable feature has been the swarms of small boats, carrying from five to twenty anglers each, engaged in this healthful recreation, which, at the present time, gives many a long string of fish and wholesome dinners. A large number of men, also, receive hand-ome returns in money from the hire of boats, fishing tackle and sale of bait. If this wholesale netting here be not soon restricted, within four or five years we will see this fishing entirely exhausted.—Dr. E. Sterling. five years we will Dr. E. STERLING.

WOODMONT CLUB.—Washington, D. C., May 14.—At the regular annual meeting of the Woodmont Rod and Gun Club, the following officers were elected for the ensuing year: Andrew McCallum, Pres.; Judge Jeremiah M. Wilson, Vice-Pres.; Dr. W. S. Harban, Secy-Treas.; A. R. Tichenor, Auditor. Executive Committee, Andrew McCallum, Jas. P. Willet, Dr. R. B. Donaldson, B. K Plain and Dr. W. S. Harban.

J. B. Chook & Co., who have for more than fifty years catered to the wants of anglers all over this country, doing business at their well-known stand, 52 Fulton street, bave just opened a new store at 1191 Broadway, to meet the demands of up-town customers. The new store is a large one and is well stocked with a general line of goods for sportsmen, not alone in fishing tackle, which is the firm's specialty, but in camping goods, traveling outfits and numerous other lines of general interest to those who delight in outdoor life,—Adp.

A Large Jewesh.—A jewfish, 6ft. long and 6ft. in greatest girth, was recently caught by a fisherman at Port Tampa, Florida. This is said to be the largest one taken on the Gulf coast; its weight was 348lbs. Three fishes of the sea bass family are styled jewfish. One reaches a weight of 300lbs. and has been captured as far north as Block Island, but is uncommon in that latitude; this is the Epinephelus nigritus of Holbrook. The other, Promicrops itaiara, has the reputation of being the largest scaled fish in the Atlantic, attaining, in Cuban waters, according to Prof. Poey, the enormous weight of 600lbs. This jewfish is common in the Gulf of Mexico, and young examples, at rare intervals, find their way to northern waters near New York. There is a closely-related fish, stereolepis gigas, of very great size, on the coast of California, to which the same name is applied; this species reaches a length of 5ft. As these giant fishes are voracious biters, anglers who seek them seldom fish for count.

A FINE DISPLAY OF TARPON, artistically mounted, is now to be seen at Mr. E. Vom Hofe's establishment, No. 95 Fulton street, New York. Mr. Vom Hofe has a peculiar way of treating this fish—a preparation which he alone knows of and uses, which faithfully preserves the silvery, sheeny tints exactly as seen in the live fish when jumping from the water. There are ten or eleven tarpon in this collection, varying from 70 to 150lbs, in weight. They will be on exhibition for a few days, and will then be sent to their respective owners. All visitors will be made welcome, and anglers should view this large collection.

LARGE PERCH AND PICKEREL.—More than one hundred years ago Blackbird Creek, Delaware, had a dam thrown across its head, and the pond thus formed became a famous fish preserve. Charles Vogel has lately received from that pond white perch said to weigh 91bs, and pickerel weighing 211bs. Mr. Vogel finds no difficulty in catching shad with a hook in all places where a dam stops the ascent of the fish to its spawning grounds.—GEO. H. H. MOORE (U. S. Fish Commission, Washington).

That is So.—The Booneville (N. Y.) Herald remarks: "The law prohibits the transportation of trout unless accompanied by the owner. It should also attach a penalty to offering speckled trout for sale, as many persons strip the small streams of all trout to sell in market. Trout fishing should be followed as a diversion, not a business."

MARYLAND.—Great Falls, Md., May 15.—The fishing here this season is very poor and no good catches have been made thus far. Black bass used to be plentiful, but are leaving the Potomac, owing, it is said, to the introduction of carp.—PATUXENT.

SPOTTED SHAD.—In the Delaware River and in the Susquehanna at Havre de Grace shad are showing an unusual number of black spots along the sides. Capt. Platt counted as many as thirty-five in some Delaware River specimens, and they covered the whole length of the body.—Geo. H. H. MOORE.

LAKE St. JOHN.—There is no free fishing at Lake St. John, Quebec. Permits must be had through Mr. Beemer.

Hishculture.

WORK OF THE U. S. FISH COMMISSION.

WORK OF THE U. S. FISH COMMISSION.

THE hatchery at Gloucester, Mass., was closed May 7, after collecting 30,322,093 eggs of haddock, 47,556,000 of cod and 40,166,394 of pollock—a total of more than 118,000,000 eggs of staple fishes.

At the Woods Holl station the first cod eggs were taken Nov. 18, 1889, and the last Jan. 26, 1890. The fish were kept in live cars until their eggs were ripe; 3,545,722 eggs were collected from 91 gravid females and 102 males were employed in their fertilization. Sixty-seven per cent, of the eggs were successfully hatched. The improved McDonald tidal hatching box was the most satisfactory apparatus for this species. Mr. Richard Dana, who had charge of the cod hatching operations, reported that the winter was very favorable for cod work, the temperature ranging from 47 to 33deg. without sudden changes, and the water free from slime and sediment. Eggs, however, were scarce. Eggs transported to Woods Holl from the Gloucesterstation fared best in carboys. The period of incubation at Woods Holl varied from 107 to 696 hours; the average time was 357 hours, or about 15 days.

Two hundred thousand embryo cod placed in the aquarium did well for thirteen days, until the yelk sac was absorbed and then all of them died from starvation. Mr. Dana tried to feed them soft clams, crushed very fine, but they would not take them. 4 607,760 flatfish were developed at the station during the season.

The Delaware River shad hatching station to which we referred April 3, was ready for work May 10, and received the first eggs May 12, 2,950,000 were obtained from Capt. Platt, and 553,000 came from Rice's fishery, Howell's Cove. The season promises to extend through the first week in June. At Lackawaxen dam many thousands of shad have been caught. An average catch of 300 nightly is being made at Milford, where the river does not exceed 400ft. in width. At this place 50 fish were formerly counted a good catch. Platty and 553,000 came from Rice's fishery, Howell's Cove. The season promises to extend through

From our latest advices the Fish Hawk and the new station have already handled about 35,000,000 eggs.

CONNECTICUT RIVER SHAD.—Game Warden A. C. Collins, of Hartford, made a raid Sunday, May 10, on the shad pounds at the mouth of the Connecticut River, in Long Island Sound. The law prescribes that the leaders which drive the fish into the pound, must be raised from 6 o'clock Saturday night to 6 o'clock Monday morning, so that the fish may have in that time an unobstructed passage up the river. Mr. Collins found that several of the pound men had raised false leaders, in the heart of the pounds, but kept down the real leaders which forced the fish into the heart. It was a cunning scheme. Mr. Collins discovered enough evidence to arrest six Saybrook fishermen; and they will be put through a course of sprouts.

AMERICAN FISHERIES SOCIETY MEETING.

AMERICAN FISHERIES SOCIETY MELTING.
TOLEDO, O., May 11.—Radior Forest and Stream: The Interest have innecessing the state of the American Fisheries Society, was held at Put-In-Bay, Wednesday and Thursday. The attendance was quite large and much interest taken in the proceedings. Nearly all of the States were represented either by members or invited guests, and so got all the process of parliamentary authority made him an ideal chairman. In the absence of F. W. Brown, of Philadelphia, the secretary, Hon. E. P. Doyle, of the New York called philaths of the process of parliamentary authority made him an ideal chairman. In the absence of F. W. Brown, of Philadelphia, the secretary, Hon. E. P. Doyle, of the New York and the programme of the process of the Society of the doings of the association, briefly reviewing the work accomplished by the various departments of the Society (Ino. C. V. Osborn, chairman of the programme as had been arranged by the committee for the reading of the papers. Pred Mather, New York, read the programme as had been arranged by the committee for the programme as had been arranged by the committee for the programme as had been arranged by the committee for the programme as had been arranged by the committee for the programme as had been arranged by the committee for the program and incively of decidal and read as if the author's soul was in the work. Hoye Press, Michigan Pish Commission, to an experience in the catching and handling this fish for the market joined in the discussion of the program of th

ne running cheap that the people."

The following are officers elected for ensuing year: President, Hon. Eugene G. Blackford, New York: Vice-President, Dr. James A. Henshall, Ohio; Treasurer, Hon. Henry C. Ford, Pennsylvania; Recording Secretary, Hon. E. P. Doyle, New York; Corresponding Secretary, Dr. T. H. Bean,

Washington, D. C.; Executive Committee, Hon, W. L. May, chairman, Fremont, Neb.; Hon. Herschell Whittaker, Detroit, Mich.; Hon. Calvert Spensely, Mineral Point, Wis.; Dr. H. H. Carey, Atlanta, Ga.; Dr. Wm. M. Hudson, Harrford, Conn.; Hon. Jas. V. Long, Pittsburgh, Pa.; Dr. R. O. Sweeney, Duluth, Minn.

The twentieth annual meeting will be held in Washington, D. C. on the last Wednesday in May, 1891.

The general discussion throughout the meeting was indeed very interesting, particularly so as coming from experienced gentlemen, and for the good of the cause there should have been a short-hand reporter employed by the Society that the minutes might have been complete.

G.

Another correspondent writes: On Thursday, the officers and executive committee visited the Pelee Island Club, where they were handsomely entertained by the President, Mr. Turner, and Mr. Marshall Field of Chicago. On Friday, by the invitation of Mr. Hosbrouck, a visit was made to the famous Castalia Creek, where they met the president of the Castalia Trout Club, Mr. Dollinger, and they were welcomed in hearty Ohio style. The visitors were each supplied with light trout tackle, and a couple of hours were spent quite pleasantly in casting the fly. After lunching with the club, a meeting of the Society was held, and a vote of thanks was passed to the Pelee Island and Castalia Trout clubs for the courtesies extended to the association. On motion of Commissioner Long of Pennsylvania, it was resolved that the Pelee Island Club, and the Castalia Trout Club be made honorary members of the American Fisheries Society.

DELAWARE RIVER FISHING.

DELAWARE RIVER FISHING.

Editor Forest and Stream:

The Susquehanna salmon (wall-eyed pike) are rapidly increasing in the Delaware. The first plant of 60 mature fish, brought from the Susquehanna River, was made in 1886 by the Pennsylvania Fish Commission; and 120 more were placed in the river in 1887 at Port Jervis and at Easton. The fish then weighed from 1½ to 41bs. each. During the past season numbers of wall-eyed pike were caught within a range of 100 miles that measured from 10 to 12in. These evidently were the progeny of the two first plants.

In the spring of 1889, several millions of fry were brought from the United States Fish Commission station on Lake Erie and placed in the upper waters of the Delaware, and during the present season 2,000,000 more of fry, hatched by the Pennsylvania Fish Commission at the States Fish Cornission, were also deposited at favorable points on the river; 1,200 maturerock bess were deposited in the upper pools of the Delaware in 1887, and a good many fish of this species were taken during the summer of 1889 weighing about ½1b, each, showing that they are doing well in their new habitat. The upper Delaware, from Trenton to the New Jersey State line, is full of black bass. These fish are the result of stocking the river in 1870 with 200 mature bass brought from Lake Erie, through the liberality of several private gentlemen of Philadelpinia. My informant tells me that on a trip from Trenton to Delaware Water Gap, a distance of seventy miles, last summer, he counted 168 boats fishing for black bass, and probably not more than one-third of the river was visible from the cars in that distance. A low estimate would place double that number of boats from Trenton to Hancock, a distance of 170 miles. Allowing an average of 101bs, to the boat, the total would be about 1,600bs, per day. This estimate is very low; and, supposing the market value is ten cents per pound, \$160 worth of bass are taken daily—a very moderate estimate of the value of the catch of this fish alone. In the vicin

ECHO LAKE, N. J.—Plainfield, N. J., May 19.—Ten thousand landlocked salmon trout fry have been deposited in Echo Lake near Branchville, between Westfield and Springfield, Union County. The young fish were obtained by Fish Wardens W. L. Force and E. P. Thorn of Plainfield from Fred Mather of the United States Fish Hatchery at Cold Spring Harbor, Long Island.

OHIO COMMISSION.—Governor Campbell has appointed Dr. Jas. A. Henshall, of Cincinnati, State Fish and Game Commissioner for five years, in place of Hon. John H. Law, whose time has expired. This is one good man succeeding another. Dr. Henshall's ability and interest in this field are so well known that his appointment will be received with general satisfaction.

Bitches: 1st, J. B. Martin's Golden Lily; 2d, C. A. Summer's Warren Truthful; 3d; D. McFarland's Clochette.

BLACK AND TAN TERRIERS.—1st, C. F. Mananing's McGinty

BLACK AND TAN TERRIERS.—1st, C. F. Manning's McGinty SCOTCH TERRIERS.—1st, Capt. Janes's Monkey; 2d, C. S. Campbell-Joinston's Tatters; 3d, S. Tyler's Pepper. Puppies: 1st, Capt. Janes's Shorty.

TOY TERRIERS.—1st, J. Horner's Midget, JAPANESE SPANIELS.—1st, Mrs. Alex. McBear's Frou Frou. PUGS. Doug: 1st, Capt. A. B. Anderson's Bobby; 2d, C. Krempel's Mops. Bitches: 1st, Mrs. H. E. Biewend's Patti; 2d, C. Krempel's Bella.

POMERANIANS.—1st, withheld; 2d, M. Fitzgerald's Fanny; 3d, Mrs. K. Short's Flossy.
Kennel greyhounds, Valley Hunt Club; foxhounds, the same; English setters, West Coast Kennel.

DOG TALK.

WE learn that Mr. Diffendersfer's offer of a piece of plate to be awarded at the first field trial of the National Beagle Club is only a forerunner, several prominent members having given us to understand that they will support a trial in more ways than one. We fail to see how a specialty club can do much toward the advancement of a breed on an annual membership payment of only \$2.00 (without the membership is very large), unless individual members open their hearts and purses.

members open their hearts and purses.

The number of English setters scattered throughout the States is doubtless greater than that of the Irish and Gordon combined, and it is indeed singular that the breed has existed so long without a representative club. The interested parties that I have met signify their intention of being present at the meeting at the Quincy House, Boston, the 23d inst., and the prospect is that a club will be started with the largest charter membership of any specialty club. As the club will be a "national" one it would be well to make it true to its name. We would suggest that the object of the club should be to promote the improvement of the English setter in America, both on the bench and in the field; to define and publish a description of the true type and urge the adoption of such by breeders, competitors at field trials and bench shows as a standard by which all English setters should be judged; to suggest to all field trial associations and bench show committees the names of qualified and competent judges, and to offer prizes and plate to such as recognize the same.

New York will have to look to its laurels. Boston dog men are awakening. What with a Beagle Club, a Setter Club, a Kennel Club, a proposed Club Kennel and its exten-sive private kennels, it certainly is coming to the front.

Several prominent Dorchester (Mass.) men are about to start an extensive club kennel with a well-known handler to care for the dogs. Mr. F. W. Connelly is the originator of the scheme.

Mr. Jasa. F. Hall, of the Fairbill Kennels, Philadelphia, will start for his former bome in "Merric England" on the 28th inst. on the S. S. Ohio. He will bring back with him on his return in the fall his St. Bernard blich Lady Lowden, by champion Plinlimmon out of Lady Linton. As we remember ber she is a rich orange in color, with grand head and nuzzle, perfectly straight in limb, with good blaze and shadings, young but a little on the small order. This is a move in the right direction. We have a number of England's best stud dogs, but good brood bitches are very scarce.

The much talked of bull-terrier White Wonder has brought from the pen of Dr. A. J. Sewell an article in the English Stock-Keeper that we agree with perfectly. What reader would care to go around with a gun to attract his dog's attention with when he wished to call him. A dog that will not answer Dr. Sewell's tests, namely, a whistle and call from the lips of his beloved master, is practically deaf, and should be considered so by the judge and veterinary.

The reports of the Schipperke class at Boston show were very meagre. Having made a study of this interesting breed we wish to make a few comments on the judging. Rather late in the day, but it is never too late to mend a wrong. Midnight, the winner, is wide at base of ear. much too long and soft in coat, crooked in front. Darkness, second, is very thick in skull, short coat, not of proper texture, otherwise good. Pick, Jr., third, might be a little more narrow at base of the ear, coat is correct, being harsh, about an inch long the whole length of back, short at the sides and with considerable frill, straight in limbs. Othello, reserve, has the only correct ear in the lot, but is not right in texture of coat. The three winners are of three distinct types. The winners of third and reserve are the best by long odds. Midnight, the winner, shows considerable character in head, but back of his ears he is not a Schipperke. If the winner of second is a nondescript. If a judge sticks to type we cannot complain, but for a man to place three types and the winner of third the best and most typical in the lot, is all wrong.

Mr. Richard Barry, of Peabody, Mass, denies the report

Mr. Richard Barry, of Peabody, Mass., devies the report that his St. Bernard bitch Dina is a "total wreck" from her premature whelping while en route from England.

Dr. J. Frank Perry ("Ashmout") has about abandoned the mastiff and is making a specialty of bulldogs. His Atossa, while being a fair show bitch, is what but few bull bitches are, i. c., a rare good brood bitch.

The anniversary banquet of the Massachusetts Kennel Club, at Cadet Hall, Lynn, May 13, was a decided success. Some forty members and their friends gathered around the heavily laden tables. The menn was excellent. After the cigars had been lighted a brief history of the club was given by the president, Mr. Robert Leslie. Mr. E. B. Sears, of Melrose, spoke in defense of the mastifi; Mr. T. O. Faxon, of Braintree, on the collie; Mr. F. L. Weston, of Medford, on the spianiel, and Mr. R. L. Newcombe, of Salem, on his "first and only love," the setter. The Winnepurkitt Quar-

tette entertained us with most excellent music, one of the pieces composed for the occasion was teeming with rich hits on dogs owned by several of the members present. The well-known reader, Mr. F. E. Heod, proved himself a master of his art by keeping the company in a continual "gale of laughter" whenever he arose from his chair. The committee on arrangements deserved special credit for their neat and tastily printed programme. At the special meeting of the club Mr. Robert Leslie was elected as delegate to the club Mr. Robert Leslie was elected as delegate to the A. K. C. for the ensuing year. Mr. E. B. Sears resigned as a member of the bench show committee, and Mr. J. F. Williams was elected in his place. The club is in a prosperous condition financially and numerically, having forty-six members in good standing, and a "rousing big show" for next spring is the talk in Lynn at present.

Mr. W. H. Walton, proprietor of the High Rock Cocker Kennels, Lynn, Mass., is selling out all of his cocker spaniels preparatory to a trip across the Atlantic. He will sail in company with Mr. A. Russell Crowell, May 28 or June 4. His well-known stud dog Black Duck (Obo II.—Althea) has been purchased by the Gordondale Kennels, Readville, Mass., and we understand the entire lot are sold or engaged.

Mr. Richard Barry's St. Bernard Kennel at Hartford will hereafter be known as the Homestead Kennels. Mr. Barry has some remarkably well bred stock, and we are pleased to hear of the flourishing condition of his kennel.

DOGS OF THE DAY.

JUST an hour too late to advise you, for your last issue, of Mr. Mitchell Harrison's new departure. I met that gentleman last Wednesday. To a man who has had about twelve years of daily newspaper work, a thing like that is the aggravating part of weekly journalism, for it becomes difficult to get any exclusive news. Not that in this particular case it would have been a "beat," but instances occur weekly where the "beat" is lost before the next issue comes out.

When I had the conversation with Mr. Harrison respecting the purchase of Christopher and his leaving him in England, I then made the remark that I didn't see why he might not keep a kennel of dogs there and bring them over for our brief show season and then send them back. From his reply I am certainly warranted in saying that the idea of doing such a thing had not been formed at that time, and it looks as if my remark must have set Mr. Harrison thinking, for within a month it has become an accomplished fact.

Mr. Harrison has bought out the Wellesbourne kennel of collies, owned by Mr. Charles, and made arrangements with that gentleman to take charge of and exhibit the dogs in England. In Mr. Charles, the proprietor of the Chestnut Hill Kennels has secured a most excellent representative, a man of experience with the breed, as his show record testifies, and who has also at all times stood high in the estimation of the "fancy." In the kennel are some promising youngsters, one of which I learn from a gentleman who was at the late Kennel Club show is one of the most promising young dogs yet brought out.

The possibilities of this move to our collie breeders can hardly be overestimated. Without being in any way aware of what Mr. Harrison's intentions may be, I presume that we shall see something of these dogs over here. Not till next spring, possibly, but we can wait till then, if we must. We then will have two grand opportunities, first to breed to them and next to note the highest type of the breed in England. Those who cannot afford the first will be able to attain the second by visiting the shows they are exhibited at.

Since I referred a few weeks ago to the appearance of the A.K.C. Stud Book for 1889 I have received quite a number of letters regarding it, and some of my friends seem to think that I am responsible for some of its shortcomings. Perhaps Iam, but I must draw attention to the fact that I was not appointed to the Stud Book committee until the February meeting of the A.K.C., and the volume just issued closed on Dec. 31. I admit that the printing of the book was not not done till I was a member of the Stud Book committee, and that there might be laxity on my part. I can see, for instance, that if in February all the members of the retiring Stud Book committee were replaced by new men there would be. if my first allegation is accepted, no committee in charge of the forthcoming Stud Book after that date. I am, however, the junior member of that committee, both Mr. Terry and Mr. Lewis having been re-elected, and the presumption is that they have not troubled me with matters they have had experience in. I will frankly say that I am not at all satisfied with occupying a position which is so purely nominal as the Stud Book committee seems to be. Some one must be directing the work, and I have had no say whatever in the matter.

That there is work to be done by the Stud Book Committee is self-evident after an inspection of the Stud Book just issued. A dog stud book is not only a record of pedigress, but of performances, and the preceding volumes of the series have been such. This one, however, ignores the records altogether, and merely inserts such information as was given at the time of entry. It is evident that nearly all of these entries were made before the dogs were shown, if they were shown at all, and the result is that as a record the book is valueless. Who is responsible for not continuing the system in vogue hitherto is a question which will probably be asked at the next meeting of the A. K. C. Records of winnings in England are not enough for an American stud Book. What we want to do is to improve upon the English Stud Book, and not be a bad second, such as the one just issued is.

I have also had many mistakes pointed out to me, but I am fully aware after my five years' experience on the American Kennel Register, that perfect accuracy is impossible. The Register had this advantage, however, being a monthly there was every opportunity to make the correction before the volume was completed and indexed. With the present annual Stud Book, however, a mistake must go uncorrected. All the more necessity, therefore, for the work of a committee when the matter goes to the printer, but so far as I am concerned I have had nothing whatever to do up to the present time as a committeeman.

Miss Whitney, in her report of the St. Bernards at New York, says: "Zara * * * called American-bred, because she was whelped soon after her dam arrived this side the Atlantic." If that is all, then she is not American-bred. The A. K. C. has got no further than that a bitch owned in this country may be sent to England and bred to a dog there, and that her progeny born here will be American-bred. That was the decision in the case of my dog Clipper, whose winning of an "American-bred" medal I protested, in order to get an A. K. C. decision on a subject on which there was a diversity of opinion.

The Beryl case has attracted much attention in England, and the editor of the Stock-Keeper, after asking Mr. Fred Hinks to say whether he sold the dog as a deaf one and receiving no reply, has addressed a letter to him, drawing attention to the request which appeared in the Stock-Keeper. Further than that, Mr. Sewell, the eminent veterinary sur-

geon, who is recognized authority on dogs in England, was applied to as to the proper test for deafness. His reply was as follows: "I should have the dog removed from the show to a quiet place, either a vard or a fair sized room, and then, if possible, get the owner to stand some few yards right behind him, and then call the dog by name or whistle. If either of these means did not succeed in attracting afterior I would make use of a good loud whistle; this falling, I would try to attract attention by making a noise with a whip; this also failing, I should declare the dog deaf. I have sometimes tried a dog by leiting off a pistol, taking, of course, care that the dog did not see the flash, but this is seldom necessary."

This is the reply of a practical man, not a theorist such as resorted to the gun test at Boston and turned a dog out which had a dried up blotch sore, as baying mange. The tests given by Mr. Sewell are exactly in the line of my remarks of several weeks ago, when I said, "What is total deafness as contemplated by the rule? Is it not such a degree of deafness as prevents the dog being under control? Is it not that the dog's sense of hearing shall be acute enough to enable him to respond to a call?"

Before Forest and Stream reached Philadelphia last week, but after it had gone to press, I met Mr. Mitchell Harrison, who advised me of the death of Roslyn Queen, the young bitch about whom I told the story of her several sales for \$2. The cause was distemper, an attack of which she had last December. Another of the Chestnut Hill Kennels' collies has gone, but in a pleasanter way for her late owner. This is the young dog Roslyn Exile, first in puppy novice class at Boston. Senator Spooner's check for a good sum was the cause of his taking off.

Another collie sale which has just taken place is that of the young bitch Hera, by Strephon out of Juno II. The pur-chaser is General H. S. Huidekoper, for his brother, Edgar Huidekoper, of Meadville, Pa.

The pointer Sachem, "Beaufort's best son," has also changed owners, so I fancy Mr. Harrison is getting out of pointers, with which breed he has not had any such pleasant experience as with collies. Beaufort, it will be remembered, died very soon after he gave \$600 for him to Mr. Mason.

Mr. Louis A. Berger, of Langhorne, Pa., has cleared out his mastiffs in one lot to the Associated Fanciers. There were about ten of them, mostly puppies, by Clement out of the bitch Nell, second at Boston about three years ago, the dam being one of the lot as well.

Mr. Weiss, of Bethlehau, Pa., has purchased from Mr. Frank Hope a promising field spaniel puppy, by Glencairn out of Lady Daffodyl, an imported bitch. This is a nice puppy, and it was not the seller's intention to part with him, but the price he asked was at once handed over and the spaniel had to change owners. This puppy looks like growing on into a prize winner.

Ayr show, which was opened on April 29, is now the record show of the Land o' Cakes, there having been 1,200 entries. Collies mustered in great force, they being nearly one-fourth of the show. I notice that, not before it is needed, the Fanciers' Guzette suggests that if collie men don't look out they will have to provide classes for prick-cared collies. I know from experience that it takes very little to overstep the line. The bitch Hera, whose sale is noted above, was one of the most perfect eared youngsters I ever saw up to the time of the New York show of 1859. When she returned to her home the boys of the family invested in a pair of pigeons and erected the cote above Hera's kennel. There, while on chain, she would sit and watch the birds with head thrown back. The extra tilt sent the ears straight, and after a while they seemed up for good. By dint of persistent use of plaster one finally did assume a less glaring attitude, but the other is up for good.

I wonder how near all this manipulation of collies' and fox-terriers' ears is to faking. A well-known collie man said to me a few weeks ago. "I am certain they have a new wrinkle as to faking collies' ears in England. They are getting them so high, even breeding from prick-eared bitches to get them up, that I am convinced there is a bit of faking we haven't got the inside of yet." If there is any such thing going on I suppose it is the kennelman who is doing it, and quite unknown of course to the owners. So little do some English owners know about their dogs that it is surprising they know them at all.

Did it ever occur to our exhibitors that we allow the most bare-faced "faking" in our judging ring? We would laugh at German Hopkins holding down a pair of stiff ears, or at Jarrett holding up a pair of drops, but we look on complacently at Ben Lewis making four holes in the sawdust to put his pointer's feet in, pulling down his lip, chucking up his head and holding his stern out straight.

Mr. German Hopkins is, I suppose, back at the Blemton Kennels again by this time, as he left England on May 1. Rachel was left to be bred to Venio.

Mr. Sheffield, the Birmingham pug fancier, announces his intention of rething, only retaining Stingo Sniffles and Set Set, which have earned a home with him till they go to the happy hunting grounds. Stingo Sniffles was quite at the top of the breed when I saw him in 1884.

Mr. C. D. Hughes has sold the beagle champion Lou to Mr. Wm. Rutter, Jr., of Lawrence, Mass. The price was high, but not more so than she is worth.

I learn that a show by the Washington Kennel Club is a certainty for next spring. As soon as the dates can be decided upon the fixture will be announced, but as the selection will depend upon how the other clubs choose dates we shall probably have to wait some months yet before we know any more than the above.

With Washington and Cleveland in the line in 1891, we will have some of the gaps filled up. How like unto the parable of the sower is the history of dog shows in this

Mr. J. D. Shotwell, secretary of the Collie Club, has forwarded me the following official communication: "In consequence of the small number of nominations for the second section of the Collie Club stakes, the executive committee, with the consent of those who made entries, have decided to declare the contest off and return the entry fees. In future there will be one grand competition for the various stakes, the dates of birth for the competing dogs being so arranged as to include a period of twelve months, say from July 1, 1889 to July 1, 1899 for the spring show of 1891, it being generally conceded that a 9mos. old collie is as good as one of 18mos. At the next meeting of the committee this point will be definitely settled and aunonneed." By the way, Mr. Shotwell has changed his residence and is now to be addressed at 113 Highland avenue, Orange, N. J.

The gentlemen of the Massachusetts Kennel Club, of Lynn, have, in the words of the Hon. Bardwell Slote, been having a "h. o. t." On Tuesday of last week they met to celebrate the second anniversary of the birth of the club. Members

and guests to the number of thirty-five found places around the festive, board, including such well known dog men as Robert Leslie, president of the club; F. L. Weston, T. C. Faxon, P. B. Sears, A. Russell Crowell, E. K. Hood and Seretary D. A. Williams. There was plenty of speechmak-and singing between whiles, the chorus of one of the orig-inal songs prepared for the occasion going as follows:

Then, men of Lynn, don't spare the tin, Keep dogs of high renown; Don't let it be said we're far from the head As long as the world goes round.

A special meeting of the club was held before the dinner, and President Robert Leslie was appointed delegate to the A. K. C. Mr. Leslie will, I think, be found to be quite an important factor at the meeting of the A. K. C. to be held on Thursday of this week.

on Thursday of this week.

It is a pity that the committee will not give the semiannual stakes a chance. The fault does not lie with the making of semi-annual stakes, but in not giving them a chance to fill. The only way to do this is to make them close early and awaken interest in the stakes through the press. This has never been done since the first sweepstakes, which was an unqualified success so far as entries were concerned, though some people have not ceased to blush at the mention of it. Now, however, a sweepstakes worth \$50 would be a big thing. Then deciding to hold the second section of the stakes this year at out-of-the-way Hempstead was enough to kill off entries. New York is the place and the only place to have them decided unless there is a convenient show held at about the right time. The decision in favor of Hempstead was made before we heard of Cincinnatiat all, and that show would have done well enough, affording an equal chance for the Canadians as for Eastern men. I say now to the committee as I have said repeatedly to Mr. Shotwell, "the sweepstakes will never be successful until you close entries early." This must be done while there is yet uncertainty as to the future of the pupples, and three or four are entered to make sure of having the best engaged. When entries close a month before the decision is to be rendered then the best only is entered, and a man contributes \$5 in place of the \$15, \$20 or even \$25 he would have contributed four or five months before.

Mr. J. H. Winslow has had a bit of hard luck with a litter of pointer puppies by Graphic out of Golden Rod. There were eleven, but eight will never be champions, for they now wear wings, if such exist in dog paradise. Three remain on this mundane sphere to buoy up their owner with hopes of leading one out with a blue ribbon and an "I bred-him-myself" smile of satisfaction.

I notice that Mr. Mayhew takes the same view that I do of the duties of the A. K. C. in regard to seeing that the rules are carried out at the various shows. Mr. Mayhew expresses surprise at what he finds out about the anomalous workings of the A. K. C. He ought to have been here three or four years ago to have seen how things were carried on. Comparing now with then it is almost hypercritical to find fault. Still I do agree with Mr. Mayhew that there is great laxity in not seeing that the rules are properly observed; and I further agree with him that the Westminster Kennel Club had no right to disqualify Belle of Woodbrook without objection being lodged as provided in the rules. We will probably know the rights of this case before the week is over.

Mr. Charles Chapman, a drawing-room car conductor on the Lebigh Valley road, told me a peculiar thing that happened on his train a few weeks ago. He was on the day express from Suspension Bridge to Philadelphia, and it was evening as the train was coming along slowly for some siding (he gave me the name but I forget it). Suddenly a "pheasant" rose about twenty-five yards from the train and flew straight for it. Smash it went against one of the windows and came clean through into the car. Fortunately no one was on the seat by the way, but a gentleman opposite had his face cut by a piece of the flying glass. The "pheasant" fluttered to the bottom of the car, walked down the aisle and back again, apparently unconcerned, and then keeled over dead. Mr. Chapman tried to get the bird from the man who picked it up, but in his case findings were keepings.

The Stock-Kceper, just to hand, will be found to be more than usually interesting to American readers, as quite a number of purchases for this side are recorded.

The Fanciers' Gazette contains a copy of plagiarist Huscroft's alleged retraction of the Salisbury pedigree libel. Like his so-called apology to "Ashmont," it leaves Huscroft worse off than he was before. No apology has yet been seen from Mr. Millais for publishing Huscroft's repetition of the libel about three months ago—months after its falseness had been so clearly demonstrated. I should like to see Mr. Wade tear the falseness of this apology to pieces. He has all the facts at his fingers' ends to do it with.

J. W.

RABBIT HUNTING ON CAPE COD.

RABBIT HUNTING ON CAPE COD.

THERE were four hunters in the party, and as they jogged drawn by an old black horse, there was nothing in their appearance to excite comment or interest. Yet a sportsman or any lover of dogs would have taken a second look at the beagles, Peggy and Clyde, as they sat impatiently in B.'s' lap. They are only puppies, not yet nine months old, but their beautiful eyes, long satin ears and strong, handsome bodies make them a pair hard to beat either in the field or on the bench.

Three of the hunters, L., B. and J., are ordinary every-day gunners, but the fourth member of the party, the Captain, does not come in that class. He stands by nimself. He seldom gets a chance to hunt, as he is at sea most of the time, and so when an opportunity does come he makes the most of it. He intends to see the whole hunt, to be present at the start, follow the dogs and shoot the rabbit. If you put him on a stand you will be sure to find him somewhere else within three minutes; if he starts for a certain crossing place you will be sure he will go elsewhere, and if the dogs in full cry are coming directly to you, and you stand expecting exery instant to get a shot, you may be sure he will come dashing through the bushes, turn the rabbit back to the swamp and ask in surprise, "Why didn't he come out?" As the party drive down the "nor'rd lane" a light mist begins to fall, but that will only make the following better, and the horse is hurried along by B.'s house, where on the piazza sits Boz, the Irish setter, with a wistful look in his brown eyes as he watches the party out of sight.

After a ride of fifteen minutes through the scrub pines and oaks, the party get out at the edge of a cedar swamp not far from Long Pond. Here is a chance for a cotton-tail or a hare. J. stops to tie the horse, while B. puts the dogs in; at once they strike a cold track, and as they work it up disappear in the cedar. J., coming to the edge of the swamp, by accident kicks out a rabbit. The dogs are called, and with much difficult

gone through the swamp and is coming back. The quick, eager voices of the dogs sound nearer and nearer, and their beautiful notes ring out close upon the hunters and then die away in the distance. The underbrush has saved the rabbit, though he came close to B. Away he goes out of the swamp, on to the upland, under the pines, where he circles and twists and turns, now carrying the dogs almost out of hearing, again coming nearly to the swamp, and once more going back. The dogs are young and without much experience, but they cling to him nobly, and the Captain, parting and perspiring, keeps as near the dogs as he can. At last bunny enters the swamp again, and in a small thicket he dodges back and forth till the dogs are hadly bothered. "If we had Jip now," says L., "we would got him. No rabbit could throw him off." But Jip—poor old dog—sleeps under the rose bushes in the garden now. However, the run isu't over yet; Pezzy once more picks up the track, the rabbit shows himself for an instant at the edge of the swamp, and B, promptly knocks him over. Peggy is first in closely followed by Clyde, and together they shake the first rabbit of the day. The run has lasted an hour and five minutes; the Captain has torn his overcoat and wet his feet, and as he sits on a stump for a minute's rest he declares that "those little fellows can sail all around anything."

The hunters now take the horse, and after a short ride, put the dogs in at the edge of a round swamp. The beagles strike a cold track, work it around the swamp, carry it to the upland, where it grows warmer, and across a small field into the oaks that skirt the profit of he dogs work eagerly, first Clyde and then Peg is ahead, as they follow the track into a bull-brier thicket. Out jumps the cottontail, and as he crosses the road the Captain gives him both barrels—just to hall him, he afterward explains—but unharmed, he runs straight down the shore of the pond for a half mile or more, and the dogs voices die out in the distance. Just as the party decide that the ga

even champion Frank Forrest, their sire, could have done better.

After a short rest the party follow the edge of the pond, and soon come to another swamp. As they go to leeward of it Peg stops, sniffs the breeze, and with head high in the air disappears in the bushes; a minute more and she has the rabbit going. The dogs work well, but the underbrush saves the cottential, for none of the party see him, though he comes so near to B. and L. that they hear him. At last he goes into the ground and there they leave him.

The men now ride to the other side of the pond where there is a promising swamp. As B. goes to put the dogs in a rabbit jumps from a pile of brush at his feet; the dogs see him and away they go around the swamp, through the bull-briers, under the pines, back to the swamp, and then the rabbit, finding the pace too hot, takes to the water. The dogs are bothered, and the party starts for the wacon, "Stop! what is that?" "By Jove! it's Peggy." True enough, the little girl has crossed the swamp, swimming part of the way, picked up the rabbit on the opposite shore and now has him up in the pines. J. and the Captain burry around the swamp, and by rare good luck the rabbit runs by J. and is neatly bowled over. That ends the hunt; both dogs and men are tired, and it is time to go home. The Captain declares he has run twenty miles. The old horse jogs slowly al ng toward the village and so the day ends.

THE ENGLISH FIELD TRIALS.

THE ENGLISH FIELD TRIALS.

THE third annual field trials of the English Pointer Club were run near Wrexbam May 6 to 8. There were 25 that filled for the Pointer Puppy Stake and 15 for the All-Aged Stakes. The winning puppies were:

First, Col. C. J. Cotes's lemon and white bitch Polly Jones, 16mos, (Carlo—Jenny Jones).

Second, Mr. F. Warde's liver and white dog King Pear, 14mos. (Taw—Kent Fairy).

Third, Mr. Barclay Field's liver and white bitch Fordcombe Daisy, 1yr. (Lake—Dingle).

Fourth, Mr. A. Richard's's liver and white dog Rapid Bang, 16mos. (Amor—Belle des Bordes),

ALL-AGED STAKES.

First, Mr. A. P. Heywood-Londale's liver, white and ticked bitch Clio, January, 1837 (Plum—Cassandra).

Second, Mr. A. P. Heywood-Lonsdale's liver and white dog lightfield Eaton, June, 1839 (Ightfield Dick—Bess).

Third, Baron Osear Dickson's liver and white dog Rustem, March, 1839 (Sussex Don—Ringlet).

Fourth, Messrs, F. C. Lowe and A. Bertrand's liver and white bitch Belle des Bordes, 6yrs, 2mos. (Young Bang—Polly).

Polly).

THE FRIENDSHIP OF A DOG.—Have you ever been so fortunate as to have the friendship of a dog? The feeling of love and friendship is attributed usually to human beings alone, but any one who has ever been loved by a dog will bear me out in the statement that there is no tenderer devotion than his, no deeper affection or more unselfish attachment. He obeys like a child, defends like a tiger, is happy when you are happy and miserable when you are sad. Look at him as he lies there at your feet while you read your evening paper. He watches every motion with those steadfast, heartitld eyes. He is on the alert for any order you may give, sensitive to your slightest movement. You go away and leave him, he waits patiently your return. A long separation breaks his heart. He even refuses food and is restless and unhappy until your face smiles down upon him again. And when you meet once more with what unchecked enthusiasm, what frank and innocent delight be greets you! Suppose misfortune overtakes your pathway, friends forsake you at the lowering of the cloud, you may be in disgrace with all the world, but your dog still loves, still trusts, still abides in friendship as firm as the everlasting hills. You can never be quite forsaken while he lives. Oh, this is something worth the having, is it not? Do you think the e-arth holds any reasoning affection of your dog.—Mrs. Carrie M. Ogilvue in the Saturday Review.

THE NATIONAL FIELD TRIALS.—We have received from Mr. Edward Armstrong the last portion of his report of the National Field Trials, run last mouth at Shrewsuury, Eng. The first portion has not yet come to hand, but we hope to receive it in time for publication next week.

THE OLD MAN'S COON DOG.—Bob H. is a stable keeper up in New Hampshire. Bob is also quite a coon hunter and keeps a pair of coon dogs, which he thinks are not to be beat. One night some parties caught a fine large coon alive and brought it to Bob's stable and put it in a barrel. Bob brought out the dogs to show what they would do with Mr. Coon. The barrel was turned down on the side and one of the dogs told to take him out. The coon was not in the mood to come out just then, and Zin got the worst of it and could not take him out. Old Zack was brought up and told to take him out, and in went bis head. The coon was there and after a desperate tussle the dog gave up the job as a bad one. The crowd here became jubilant over the defeat of Bob's dogs. Just then Farmer H. comes along and asks, "What's the matter?" On being told he said, "That'er dog of mine can take him out," pointing to a cross between a shepherd and inst dog for the other part. "Bet you \$50 be can't," says Bob. "I guess I can kiver that; put up the pictures," the old man sars, and to Bob's astonishment out come the greenbacks. The money was put in a third party's hands. On time being called farmer H. takes his dog by the collar and head and backs him into the barrel. When he comes in contact with the com the coon just fastens to the dog's rear. With a howl of astonishment the dog gives a jump, and out comes Mr. Coon before he knows what's up. The dog turns on him, and before he gets over his astonishment he is a gone coon. "Well, I never squeal, old man," says Bob. "The money is yours. But I'll be hanged if there aint more than one way to get a coon out of a barrel."—Coon.

NATIONAL GREYHOUND CLUB.—Following is a list of the officers of the National Greyhound Club. elected to serve until the annual meeting to be held July 1: President, Mr. N. Q. Pone; Vice-Presidents, Messrs. L. C. Whiton. N. Rowe, D. C. Luce, M. Phiste and Dr. Q. Van Hummel: Secretary, Mr. H. W. Huntinston; Treasurer, Mr. L. M. Batee; Board of Directors, the officers above named and Messrs. J. H. Watson, C. L. Griffith. Dr. F. Hanshow, W. B. Growtage and C. D. Webber. BOSTON, May 17.—The regular weekly shoot of the Massachusetts Riflle Association was held at its range to-day. The shooting conditions were good except a changeable wind from 3 to 8 o'clock. A good attendance of riflemen made the shooting lively. Mr. Foster won the bronze membership badge. The spring meeting of this association is to be held June 14, 16 and 17, with a large list of valuable prizes. Following are the scores made to-day, distance 200 yds., Standard American Larget:

serior's Central Park. The shooting festival will last from July to 13. The New York Central Schuetzen Corps, as well as the shoot work or prizes to be distributed at the end of the estival.

STATEN ISLAND, N. Y.—The match between the Leonia and Spring Hill gun clubs took place on abe Leonia's grounds at Staten the \$100,000 worth of prizes to be distributed at the end of the estival.

NEW YORK RIFLE CLUB.—At the last meeting of the New York Corps and preparations for a new programme for the gunner season were negun. Some of the members misuncers of the summer season were negun. Some of the members misuncers of the summer season were negun. Some of the members misuncers of the summer season were negun. Some of the members misuncers of the summer season were negun. Some of the members misuncers of the shoot was made by Mr. Welsh, a remarkabity quick first stead of to Wissel's Park, Cypress Hill, L. L., yesterday. The only two marksmen who put in an appearance at the 2049ds, and were 1. J. Dolan, the crack shot of the club, and Major G. along were 1. J. Dolan, the crack shot of the club, and Major G. Toled the contest until atter 8 o'clock without being able to reak the fet. The scores:

"J Dolan 999988997889." 8-851 | J. L. Price 20, J. Van Dyke and P. Duly, Jr., broke 6 out of 10, C. Morris 7 out of 10, W. R. Joline II out of 20, E. Taber and Wm. D. Campbell each 8 out of 10, E. W. Price 21, E. W. Price 20, J. Van Dyke 19, G. Cubberly 13, and Chas: Morris 12.

SAN FRANCISCO, May 11:—The rifle range at Shell Mound was well patronized to-day. Besides the Schuetzen Verein, several companies of the National Guard held practice and medal shoots. The Nationals, an independent rifle club, composed of members of companies C and G, First Infantry, were at the butts early in the day, and made some unusually high scores. The club is divided into four classes. The scores in to-day's contest were as follows: Champion class: C. Myer 48, F. Young 46, J. Kletn 44, A. Johnson 44, First class: O. F. Peterson 42, W. Alexader 41, J. Hult 40, E. Shicm 40, Second class: F. A. Eevre 48, J. Pumbull 49, J. Parnelle 28, V. Dodd 33. Third class: C. Sparrow 39, C. Gilbert 38, Wm. McNell 36 J. Morton 38. Fourth class: J. D. Mansfield 38, W. S. Jones 36, L. H. McKee 28, G. J. Betty 30.

39, C. Gilbert 33, Wm. McNeil 36 J. Morton 36. Fourth class: J. D. Mansfield 38, W. S. Jones 35, L. H. McKee 38, G. J. Betty 30. NEW YORK PISTOL CLUB.—The formation of a new club in this city is underway. Mr. Henry Oebl, the well-known marks man, and Mr. A. P. Hunt being the promoters. The club will be composed principally of professional and business men, a number of gentlemen having already sirnified their intention of joining the new organization. The headquarters of the club will probably be at the gallery of the Zettler Rifle Club. 31 Bowery, where a pistol range is now in course of construction. A plan of a constitution and by-laws has been drawn up and will be submitted at a meeting to be called in he near future. The club will probably shoot a club mateb during the summer season, and a handicate of the gentlemen who will erroll their names on the list of membership it is expected that the prizes will be both handsome and valuable.

ORILLIA, Ont., May 13.—At the monthly shooting competition of the Orillia Off-hand Rifle Association, the scross were as follows, 10 shots each range: George Whitten 66, L. Day 46 C. Fortier 78. T. Millichamn 79, W. Hone 81, W. W. Wood 82, A. Harvie 82, C. Wood 80, J. P. Soarling 77, W. M. EDonald, S. Owing to the higher score at the 200yds range Mr. Hammoud 62, G. Tortier 78. T. Millichamn 79, W. Hone 81, W. W. Wood 82, A. Harvie 82, C. Wood 80, J. P. Soarling 77, W. M. EDonald S. Owing to the higher score at the 200yds range Mr. Hammoud took the cup, which is competed for monthly. The cup was presented by Mr. Thomsen, of the Long Ford Lumber Co.

TORONTO, May 13.—There was a good attendance at the Cumberland Rifle Association practice on the garrism common to-day. The changeable light and wind was just what was desired, and afforded a splendid opportunity for the younger shot to gain experience. The following were the top scores, 7 shots per gange: Wun Mowatt 84, W. G. Fowler 81, J. Davis 77, J. Dent 76, J. Bruce 75, J. Mildred 74, D. Spence 67, J. Maddox 67, PHILADELPHIA,

PHILADELPHIA, May 16.—William Talbot, Edward Betson and Daniel Delaney, of the Frankford Gun Club, met Stephen Hothersall, B. Bradbury and Wm. Bradbury, of the Kensington Bitle Club, this evening, at the latter's room, in a canallenge rifte target sboot. The conditions were: 38ft range, kin. target, 10 shots per man, scratches not counted. The result was a victory for the Kensington team by 7 points,

THE TRAP.

MASSACHUSETTS RIFLE ASSOCIATION.

MASSACHUSETTS RIFLE ASSOCIATION.

DOSTON, May 14.—The shotgun enthusiasts, who form a large portion of the members of the Massachusetts Rife Association, have already hegun to make preparations for next Christmas, for to-day they opened a series of matches which will be contested at forthightly competitions until Dec. 24. The new match is called the Diamond Pin match, for the reason that the first four prizes are handsome scarfpins set with diamonds, rubies and sapphires. In all there are 24 prizes, of an aggregate value of \$558, and in addition a handsome gold medal is offered for the highest aggregate in the 17 competitions. The match will he shot on alternate Wednesdays, viz.: May 28, June 11 and 25, July 11 and 25, Ang. 6 and 20. Sept. 3 and 17, Oct. 1, 15 and 29, Nov. 13 and 20, Dec. 10 and 24. The Massachusetts Rifle Association will in addition to the regular practice and sweepstake matches, offer for competition of all sbotgun shooters the prizes named below on the following conditions:

Match to be known as the Diamond Pin match. Total number of competitions I7; entrance fee, 25 cents each day; score to consist of 20 Keystone targets and 5 pairs Standard targets; sweepstakes optional. Choice of prizes to be won on the aggregate of each competitor's score, taken in the order made as follows: 1st. 24, 3d and 4th choice, on 15 scores; 5tb, 6tb, 7th and 8tb choice, on 12 scores; 19th and 10th choice, on 12 scores; 19th and 10th choice, on 12 scores; 19th and 17th choice, on 10 scores; 18th 14th and 15th choice, on 11 scores; 20th and 21st choice, on 8 scores; 22d and 23 choice, on 7 scores; 24th choice, on 6 scores. A gold champion medal, to the competition making the highest aggregate in the total number of competitions. Ties to be shot off at 10 single Keystone targets and 5 pairs of Standard targets. Competitors to have choice of prizes in the order of the ranking of their scores. No competitor, except the one winning the champion medal, an win more than one prize. The competitor in the main event to th

ONEIDA, N. Y., May 16.—The Oneida Gun Club was defeated to-day by the Rome Gun Cluh at the Rome Driving Park by the following score, at 25 single kinghirds, American Association rules. After the match the Oneida Club was entertained by the Rome Club:

D Monsees. 7 Korigan. 6 Schmadeke. 5
D Monsees. 7 Korigan. 6 Squire. 4
D Monsees. 7 Korigan. 6 Mc Laughlin. 2
Courtney. 6
In shooting off the ties in the first class, miss and out, the contest narrowed down to Plate and Monsees. The latter missed his 12th bird and Plate won, which made his score 19 straight killed. In the second class shoot-off Anderson won, killing 5straight, making his score 11 straight killed. Mr. Voorlis stuck it out well with Anderson, but missed on a comparatively easy shot. Mr. Squires was the lucky member in class & killing 9 straight.

Many members of the Parkway Gnn Club participated in that organization smorthly shoot at Dester Park to-day. No less than 16 marksmen stopped to the score, and all present enjoyed a very pleasant atternoon's sport. The birds were a fair lot and the shooting very good, although some of the best marksmen fell below their usual average. Mr. W. Levens, who can always be depended on for making a good score, killed only 4 and tied with President Bookman for the leather medal. The the was not shot, as Mr. Bookman ould not remain any longer. Five shooters, R. Phister, Jr., J. L. Savage, M. Meyer, J. Bennett and Col. H. Schover tied on 7 straight. In the shoot off at 3 birds Meyer and Selover dropped out; then it was miss and out between the remaining three. Bennett was the first to score a goose egg, Phister winning ultimately from Savage on the fifth round with a straight score of 15. A sweepstake, miss and out, followed, hut no fies were shot off. Before the regular shoot Mr. H. Ehrichs and J. Haller shot a special match at 10 live hirds, modified Hurlingham rules, 25yds. rise, for \$50 a side. Ehrichs won with 6 to 4 for Haller. The match was the result of a discussion at the recent team race botween the Newark and Parkway Gun Club, in which the latter were heaten by only 6 birds. The score: 010220020-4
Club shoot, modified Hurlingham, 7 birds each, club handicap: J Blake (29yds). 5 A Andrews (25). 5 W Levens (27). 5 H Benwell (21). 6 H Bramwell (21). 6 H Bram

BROOKLYN, May 15.—The Falcou Gun Club of Brooklyn held chel ast of its monthly shoots for the scason of 1889 and 1880 on Dexter Park Ground this afternoon. Owing to the tact that the competition for the club badge and the handsome extra prizes offered for the year has dwindled so that only five membors remained practically in the race, only six marksmen put in an appearance to shoot out the old year. Those who had come were in oway disappointed, for the birds were a good lot, considering the season, and the afternoon's sport was enjoyed to its fullest execut. The club shoots under Long island rules, with one exception, birds may be killed with the second barrel, but count only is half a bird, a rule formerly in force also with the Fountain Ann Club. The shooting was good throughout, Mr. Van Staden, the veteran of the club, and Mr. Moller tieing on 9 out of the possible 10. On the shoot-off Moller defeated Van Staden by 3 to 2. A sweepstakes at live birds followed the regular event, Miller, Van Staden, Vaght and Botty being the winners. Glass ball chooting took up the rest of the afternoon, the scores in the two races varying in the most surprising manner. Miller, who was one of the winners in the first shoot at the green globes, took the ast place but one in the second, and Botty, who was last in the irst contest, carried off first honors in the final race. The scores: 30th shoot, modified Long Island rules, 10 live birds, club handiap;

20yds.

LONG ISLAND, May 13.—The Northside Gun Club held its second monthly shoot in the new year at the Queens County Driving Park this afternoon, the attendance being very large, and fine weather and good birds contributing their quota to a good afternoon's sport. Mineteen members participated in the race, each man'trying at 7 birds under modified Long Island rules. The handicaps were allotted according to the club classification. Q. Meyer won in Class A on's straight, Bolmke in Class B also with 1, and Bergen in Class C with 5 out of the possible 7. The scores:

RED BANK, N. J., May 16.—The Riverside Gun and Rifle Club held its weekly shoot this afternoon. Live and clay-pigeons were the targets used. Following are the results:

First event.—Sevon live birds, 9 ontries, 3 moneys: Ed Cooper and Al Ivins killed their 7 cach and divided first money, Mel Cornwell was second with 6, Fred Beale, David Belshaw and Jas. Cooper killed 5 each, John Cooper, H. C. White and Chas, Noble killed 4 each. In shoot off for third Jas. Cooper won.

Second event.—Miss and out, live birds, 5 entries, 1 money: Beale 4, Capt. D. Stewart 3, John Cooper 3, Cornwell 3, White 1.

Third event.—Ten bluerocks, 11 entries, 3 moneys: Beale 8, White 6, John Cooper 8, Hosse 7, Jas. Cooper 6, Stewart 6, Ed Cooper 5, Belshaw 3, Ivins 3, Asa Whymer 3. Mouey in each oase divided.

Final event.—Ten bluerocks, 7 entries, 3 moneys: Beale 9, Ivins 8, John Cooper 7, E. Cooper and White 5, Jas. Cooper and Belshaw 4 each.

4 cach.

OMAHA, Neb. May 10.—The Raymond Gun Olub held their weekly shoot this afternoon. The weather was unfavorable for fine scores, still some good shooting was done. The shoot was 25 single and 5 pair of double targets. The score: Jones 32, Perkins 34, F. Montmoreney 30, E. Montmoreney 17, Reynolds 19, McCaffrey 20, Loomis 17, Dickey 26, Kenron 19, Misner 27, Cavanaugh 23.

OTTAWA, May 15.—The St. Huber'ts Gun Club held a shoot today at the Rideau range, and some excellent work was done. The club put out three teams for the Queeu's Birthday tournament, and the first two will be pretty even. The scores made to-day at 25 birds each look promising, and all the boys are in good shape. Score: A. Throop 21, P. Trudeau 20, R. S. Dalton 19, G. White 18, J. Stewart 18, J. Doslauriers 18, C. L. Panet 18, A. Lett 18, Dr. Martin 18, W. J. Johnstone 17, G. White 12, B. Rathwell 8, W. P. Lett, Jr., 8.

J. Stewart 18, J. Deslauriers 18, C. L. Panet 18, A. Lett 18, Dr. Martin 18, W. J. Johnstone 17, G. White 12, B. Rathwell 8, W. P. Lett, Jr., 8.

PHILADELPHIA, May 16,—Six members of the champion North End Gun Club, of Frankford, met on the grounds of the club this afternoon in a friendly shoot, at 24 bluerocks per man, three traps heling used, and Association rules governing. This score was made: H. Jacobs 17, W. Wilson 16, Samuel Richards 15, Nathaniel Swope 10, Wm. Howe 17, James Wolstencroft 22.

NEW HAVEN, May 13.—The Yale Gun Club shot a match with the Harvard Gun Club this afternoon, and won by a score of 102 to 99.

HOOSIOK FALLS, N. Y.—At annual meeting of Independent Gun Club the following officers were elected: Pres., C. H. Palmer, Treas., Wm. Rich; Sec., C. A. Johnson. The club will shoot from 5 traps, Keystone system.—C. A. Johnson. The club will shoot from 5 traps, Keystone system.—C. A. Johnson. The club will shoot from 5 traps for all shoots, as we used up the clays to-day, Mercen 15 traps for all shoots, as we used up the clays to-day, Mercen 15 traps for all shoots, as we used up the clays to-day, Mercen 16 10, Smith (C) 12, Bowman (C) 12, Borlelph (C) 11, Beatry (B) 10, Cadwalador (C) 13, Poque (C) 15, Perrings 9, Smith 8, Bowman 8, Burleigh 7, Poque 7, Cameo 7, Perrings 9, Smith 8, Bowman 8, Burleigh 7, Poque 7, Cameo 7, Perrings 9, Smith 8, Bowman 8, Burleigh 7, Cad 6, Bowman 8, Harmer 18, Lett.
ren 7, Perrings 8, Smith 9, Pogue 6, Burleigh 6, Cad 6 Bowman 8. Sweep, 9 clays: Cameo 7, Beatty 8, Dunsdon 8, Warren 8, Perrings 7, Smith 5, Pogue 8, Burleigh 7, Cad 6, Bowman 6.—HAMMER-LESS.

LITTLE ROCK, Ark., May 9.—The Little Rock 6nn Club had a shoot at their grounds yesterday afternoon. The club has had two or three shoots since its organization, but yesterday more interest was manifested, and the turnout of membership yesterday was large. Match at 20 clay-pigeons, 16 and 18yds.: Gilmore 2, Jenkins 4, Walters II, Trumplor 8, Forster 9, Bond 3, Geyer 3, Jenkins 4, Walters II, Trumplor 8, Forster 9, Bond 3, Geyer 3, Jenkins 4, Walters II, Trumplor 8, Forster 9, Bond 3, Geyer 3, Jenkins 4, Walters II, Trumplor 8, Forster 9, Bond 3, Geyer 3, Jenkins 4, Walters III, Trumplor 8, Forster 9, Bond 3, Geyer 3, Jenkins 4, Walters III, Trumplor 8, Forster 9, Bond 3, Geyer 3, Jenkins 4, Walters III, Trumplor 8, Forster 9, Bond 3, Geyer 3, Jenkins 6, Willis 3, Haile 10, Stone 7. This is the second shoot held by this club, and already shows marked improvement. We have secured six new members since organization, and have several applications on file. We are going to have a live-bird shoot in about three weeks, and may get up a match.—A. J. H.
PEEKSKILL, N. Y.—The Rayrine Gun Club, of Peekskill, N. Y., has changed its name to the Peekskill Gun Club, and has elected officers for the ensuing year as follows: President, B. C. Everinghim; Vice-President, D. H. H. Wygant. Treasurer, J. M. Dyckman: Secretary and Captain, Wim. I. Pierce.

ATLANTIC CITY, N. J., May 14.—The Atlantic City Gun Club held their regular weekly shoot to-day and the following scores were made at 35 birds each: C. Minerd 22, R. C. Griscom 22, C. Sanders 21, A. C. Griscom 19, J. Tuber 18, T. Wilson 13, Dr. Sanders 21, A. Wilson 14, Monday 14, Author 22, R. C. Griscom 22, C. Sanders 21, A. C. Griscom 19, J. Tuber 18, T. Wilson 13, Dr. Sanders 21, A. Wilson Match, J. J. W. Hamer III, On Monday the Atlantic City Gun Club accepted a challenge from the Yale Gu

Score: William Barney Zl. A. Barton 23, Amateur 0, J. Mooney 10, R. Bissett 19, J. Pallister, drawn, 14.

OORRY, Pa.—The Corry Club will hold its first monthly tournament May 27 and 28.

BORDENTOWN, N. J., May 15.—The third shoot between the Bordentown and Newhampton gun clubs took place here to-day, will the following result, each man shooting at 20 targets: Bordentown—H. Quigley 17, H. Smith, W. Quigley 16, L. Soutbard 15, W. Dalley 14, S. Jones 12, H. Smith, W. Quigley and E. Connor II each, H. West 10, F. Woodington 9, G. Dally 8; total 149. Mount Holly—C. H. Gibbs 14, J. Lamb 14, A. Willotts 13, J. Throckmorton 18, J. Danley 12, J. A. Froke 11, W. Simmons 12, C. B. Gibbs 10, J. T. Nippens 10, H. Quicksall 9; total 140. This is the third consecutive victory for the Bordentown Club, There was a large attendance and the shooting was often applauded.

NORTHPORT GUN CLUB—The Northport Gun Club, of New York city, bas been incorporated with Ernest C. Goeting, D. William Mattenheimer, Ferdmand T. Schmidt, August H. Tremel and Nicholas Engel as trustees. The particular nature and objects of the citb are the enforcement of the game and fish laws, the propagation of game and fish, and the purchasing, hiring and leasing or lauds and waters for shooting, fishing and hunting purposes.

Wachting.

A CRUISE IN THE FROLIC.

"H! there, Loo! Mind your helm, my boy, or you'll drop some the of those bundles, as sure as you're a sinner, and woe to you if you drop that box of Havannas, we'll keel-haulyou, snie!" "All right, sar, I dunno wat keel-haulen is, but l's goin' to be mighty partic'lar bow! I hangs on to dese good tings," and balancing first to one side and then the other of the stringpiece of the wharf. Lon finally reached the yacht and deposited his many bundles on one of the bunks in the cabin.

"Peers to me, Captin, yous got a powerful lot ob stuff here—I guess we's goin' to libe high, we is!" and his black face fairly shone with perspiration and pleasure as he looked fondly around upon the numerous hoxes, buskets and bundles of various shapes and sizes that littered the cabin and bethought of how be and the little Monitor oil stove would make things hum later on.

Alonzo (called Lon for short) was a negro not one of your pert, lazy kind, hut respectful, obedient and of a cheery disposition, ready to buckle to auything and withal a very fair cook—at least before we got back from that cruise we voted him a chef of the litest water.

In this year the Fourth of July came on a Saturday, and the Prospect of two holidays (Saturday and Sunday) coming together

Itst water.

In this year the Fourth of July came on a Saturday, and the prospect of two holidays (Saturday and Sunday) coming together was too great a chance for a cruise to let slip, so I invited my best two yachting friends and Lon as cook to participate in the cruise with me, and the reader finds as busy as beavers loading my yacht Frolic cbock-a-block with good things, and happy with the prospects of a good time.

self and crew to the reader, I will simply say

that it would be hard to find two better fellows than my friends, Homer and Bert. Gifted by nature with manly forms and manly hearts, blessed with goed voices and good appetites, they have contributed to many of my most enjoyable yachting trips a lasting pleasure, which good companionship always enhances.

Of myself the least said the better. So long as the boys don't skylark ahoard ship my countenance is as beaming as the sun's. I like fun and encourage it. Were my physique as robust as my appetite I should be a bouncer—there! I was going to give you a flattering description of myself, but Homer has east off the shore lines and it is necessary forme to take the tillor. "Ready about" and having cleared the dock we come about and aro fairly off on our orules up the bay.

We have accepted an invitation from some of Bert's rolatives to spend the Fourth at Great Neck, Long Island, and as there are two very nice girls—beg pardon—young ladies, in the family, were tookeen; but it did seem rather shabby of the wind to dee out so and leave us bobhing around in the East River, first bowing to this side and then that, like a gawky conntryman in a hall-room. Thanks to the flood tide, however, we managed to drift through Hell Gate, but not until a counter current had made it an like everture and some of the content of the provers, we managed to drift through Hell Gate, but not until a counter current had made it an like everyther dreams.

covery nice girls—bee pardon—young ladies, in the family, we antleipated a very pleasant visit. Possibly of the wind to die out so and leave us bobbing around in the East River, first bowing to this side and then that, like a gawky conntryman in a hall-room. Thanks to the flood tide, however, we managed to drift through Hell Gate, but not until a counter current had made it an interesting question whether we should end our cruise on the rocks. After passing Throgg's Neck the waters widen abruptly into Little Neck Bay to starboard and Pelham Bay to port. A light heeze sprung up from the south'ard, and as the moon, a huge deep red bull, rose from Long Island's hills we settled ourselves for a quiet sail.

Hark' Methinks I hear a queer sound coming from the cabin. I peek in and sure enough, our black treasure is monkeying with the frying-pan, and whew! but how my mouth waters as I sniff the frying-pan, and whew! but how my mouth waters as I sniff were you ever aboard a yacht? Have you have you ever aboard a yacht? Have you have you an appetite before which two-penny nails and sole leather wouldn't stand the ghost of a chance? If not, you have something to live for. Such as have know that the 'plainest of vilands, served on wooden plates and eaten with no other sance than the fresh, pure air, becomes a feast worthy the gods.

"Below here bon! When supper's ready fetch it up and we'll eat the moon's mellow rays may illumine our feast. And the breeze from the south give it relich."

"Bravo. Oapt'n! When supper's ready fetch it up and we'll eat it he moon's mellow rays may illumine our feast. And the breeze from the south give it relich."

"Bravo. Oapt'n! When supper's ready fetch it up and we'll eat it he moon's mellow rays may illumine our feast. And the breeze from the south give it relich."

"Bravo. Oapt'n! We didn't know you were a poet."

"Only when I'm hungry, boys, I can stoop to anything then—but Isay Homer, suppose you find a new borth—our did approaches."

"Anc, age Capt'n, only one more snill—ah-hell' and

With sented hreath the southern winds our lullaby shall coo. The waves shall rocks us gently, as our mothers used to do; The moon shall guard our slumber and sweet shall be our sleep Until the morning's greetings into our cabin creep.

Naxt morning I was up hetimes and on deck to see which was the earlier riser, the orb of day or myself, and to and hehold, as meaning over the eastern himse and his visible eye seemed to wink me a "Good morning."

"Ahoy, shipmates! Tumble out and see the sun rise!" but the enly response! got was, "The sun be hanged; this bunk's good enough for me," in a half sleepy voice from one of the trio, an indignant snort from another, and dead silence from the third. I think the sunrise and the early morning air on the water something grand, and seldom miss them when cruising. The peace which at that hour usually porvades all nature and the pure coone are things little known to the city-reared chap.

On this morning the waters were almost as smooth as a mirror, as more considered immense as it slowly see and land. The trees and hills took upon the south and, and the sea and land. The trees and hills took upon the south and, and the sea and land. The trees and hills took upon the south and, and a large three-masted schooner crawling up the a golden hou, and a large three-masted schooner crawling up the a golden hou, and a large three-masted schooner crawling up the agolden hou, and a large three-masted schooner crawling up that a golden hour nature and I communed as only old lovers can. The reverie into which I had fallen was abruptly brought to an end hy a slap on the back that almost made my teeth rattle, and sent my cigar overboard with such rapidity as would lave made a dynamite gun cartridge turn green with envy. I turned to see whether a neighboring hill or only the mast had fallen upon me, and beheld Bert's open palm extended for a shake.

"Oh, no, Bert, only next time you want to pat anything go ashore and pat a rock."

"Presently the others appeared and for the next half hour all h

"Bell ahead, Capt'n, two points off starb'd bow!"

"Aye, aye; I hear it," and the boat was brought up a little closer to the wind. Presently we glided past Stepping Stone Lighthouse, and bow dreary it did look.

"My goodness, Capt'n, how lucky for those poor devils in that lighthouse we didn't run them down!"

"Yes, yes, Bert, it was lucky—mind your eye, there forward, and if you see any more of those little fellows, warn them off."

"Yes, Mister Bert, warn dem way off. We don' wan' it run hoses wid no such hard-lookin' fellers as dem—warn dem way off." chimed in Lon.

Deeming prudence the better part of valor, I ordered the peak lowered, for by this time the breeze was decidedly fresh and somewhat squally, and our speed too great for safety. The next mile was passed almost in silence, all eyes and ears being strained to catch the first warding of danger, when suddenly, as though the fog had been cleft with a knife, we ran into a clear atmosphere.

to eatch the first warding of danger, when suddenly, as though the fog had been cleft with a knife, wo ran into a clear atmosphere.

A general shout went up, as also did the peak, and I couldn't repress an "I told you so" as Throgg's Neck Light bore dead ahead, half a mile distant, proving my reckoning correct.

Behind is rose the fog bank, a solid wall, and before and around us the sun's brightness seemed increased by contrast with the fog from which we had just emerged. After passing Throgg's Neck we had the sun's trightness seemed increased by contrast with the fog from which we had just emerged. After passing Throgg's Neck we had the sun's trightness as the stream of the beam, and the way the Francisck man enthuse.

North Brothers Light, our next objective point, bore due west five miles. Between these two lights is a splendid stretch of water, but few points being less than a mile apart. So direct was our course that not a sheet was touched, and but for an occasional lift our wake was as straight as a bowstring. The wind was more than a wholesail breeze, but the Froite being staunoh and stiff, we kept on every stitch. She seemed to feel that she was being put to her mettle, and as the white-capped waves threw themselves against her bow, they were dashed aside, a broken, tumbling mass of foam, to be again buffeted by the blige and finally left astern, a boiling, frothy wake. Now and then a wave more saucy or spiteful than its fellows, bounded into the air, burst into spray, and, as it were, lapped our good boat and ourselves in the face for our temerity.

With a list to starboard that often brought our rail under we

a boiling, frothy wake. Now and then a wave more saucy or spiteful than its fellows, bounded into the air, burst into spray, and, as it were, lapped our good boat and ourselves in the face for our temerity.

With a list to starboard that often brought our rail under we romped along, over this wave and through that; now gently lufting to avoid a knockdown, and again crawling to windward as we drove her through it. That was a jolly sail, and it was with regret that we passed the Brother Islands and hauled in sheets for a bout to windward.

Passing Randall's and Ward's islands, and squirming through Hell Gate we decided to try the channel to the eastward of Blackwell's Island. The tide was about half flood and running swift. We made several autempts to beat up the nurrow passage, but made such slow headway against wind and tide that we decided to 'bout ship and try the northern channel. Just as was about to give the order "Ready! shout!" a tremendous star was about to give the order "Ready! shout!" a tremendous star was about to give the order "Ready! shout!" a tremendous star was about to give the order "Ready! shout!" a tremendous and the core of the should be the star which we foolishly had not lashed, slid overboard as though the deck had been greated and with a big splash sank for or Boths, spare anchor, which had been resting shaft the mast, and which we foolishly had not lashed, slid overboard as though the deck had of all sorts, cushions, nots and pans and a miscellaneous assortment of articles tumbled to lee'ard, and incorporate and a quick helm some of us might have follow for prompt action and a quick helm some of us might have follow for prompt action and a quick helm some of us might have follow for prompt action and a quick helm some of us might have follow for prompt action and the anchor which lies beneath those rushing waters.

Having pricked ourselves up as it were, wore around and made for the westward passage, which after much nursing we managed to get through, and once more treathed freely as

THE CHALLENGE OF THE SEVENTIES.

LORD DUNRAVEN'S reply to Mr. Peabody, in relation to the challenge of Titania, Kutrina, Shamrock and Gracie, has not been made public in New York, but a copy of the letter appears in the Field of May 10, as follows:

n the Field of May 10, as follows:

Cowes Roads, April 26.

Dear Sir: I have received a letter date: April 3 from the chairnan of the committee appointed by the Now York C. to answer
ay letter of March II, staring that the New York Club "neither
an ner will depart from the position taken by them last year,
iz, that the Cup, if wo, by the club challenging, must be held
nder and subject to the full terms of the deed of gift, under
thich the New York Club now holds it, viz., that of the 24th Octoviz, 1857."

when the New York Club now holds it, viz., that of the 2sth Octor, 1857."
From the correspondence of last year, with which you are doubtses familiar, you will see that I am, therefore, precluded from
alling for the America Cup.
You are quite right in quoling me as saying that I attached no
mportance to the nature of the prize to be sailed for; but you will
ear in mind that I was referring the arace for the championship.
Vhat I said was that "I attach no importance to the nature of
the prize. All I care for is the interest belonging to a fair comtettion between the two vessels, and, if the New York Y. C. find
hemselves unable to offer the America Cup as a prize, I shall be
eady on my part to sail against whatever yacht would have been
elected to defend it either for a prize of equal value or for nothg at all."

any on hiv part to sail against wintever yacht would have been letted to defend it either for a prize of equal value or for nother gar all."

If a race for the championship could have been arranged, I all gardy have sailed any private matches afterward, as far time permitted, but there is a vest difference between crossing e Atlantic and back, to fulfil a challenge, and sending a vessel 60 miles to meet a challenger.

Under the circumstances of my challenge having finally fallen the ground, I presume the gentlemen challenging will scarcely pect me to meet them in their waters. I should be obliged if u would inform Mr. Iselin, Messrs. Auchincloss, Mr. Rogers axwell and Mr. Earl that if, following the usual custom in such atters, they will send their vessels over here, I will gladly sail yor all of them, for any sum in moderation, and upon condimisto he mutually agreed upon on the basis of the terms mension to the mutually agreed upon on the basis of the terms mension in a acceptance meet with your approval, as I hope it ay, and should the fortunate enough to defeat Titania, Katrina, lamock and Gracie, or any of them, I will undertake that like shall sail a return match or matches at New York next landerstance owned ror ownersso desire.

Inderstance of the control of the vessels above mentioned. And Gracie of sport should any of the yachts mener, for which I may remm que your yachts are now eligible. Gere would be no lack of sport should any of the yachts menered one across, and I can assure the owners of them a very Though I think a vessel challenged is entitled to expect to be a control of the party welcome.

come across, and I can assure the owners of them a very welcome.

Igh I think a vessel challenged is entitled to expect to be ther own waters, I should have been disposed to waive that if it were in my power to substitute a scason's racing on the for a season's racing here; that, however, is quite imle. To accept your challenge and sail matches at New York involve the loss of nearly all the racing over here, and I not be able to cross myself until August. I am not discomake so great a sacrifice of sort for anything short of iginal intention to sail for the America's Cup.

I remain, dear sir, yours truly, hen Peaboby, Esq.

DURRAVEN.

Stephen Peaboby, Esq.

Tremain, dear sir, yours truly,

DUNRAVEN.

Although it has been known for some time that Lord Dunraven would not cross this year, the latter part of his letter, suggesting that some of the American yachts cross this season and promising to return the visit with Valkyrie next year, will be news to come over, the reasons he gives are certainly good ones. It, is little likely that any of the American seventies will cross this year, and the last hope has disappeared for any international racing in the classes above 40ft.

SIESTA.—The keel sloop Siesta, Vice-Com. J. C. Uhler, Staten Island Athletic Olub, has lately fitted out and overhanled at Storm's Railway, Staten Island, and left for the Delaware River, where she will be stationed this season.

LAKSHIMI.—This yacht, a large Cape Cod cat, owned by Chas. McKlosker, left Port Jefferson on May 17, and when off Eaton's Neck her mast went over the side. The oyster steamer Addie B, towed her into Nerwalk, and later ever to Port Jefferson.

The state of the Field which arrived on Monday contained the letter in full, as follows:

Owess Roats, April 23, 1890.—Dear Sir—I should bave thought the causes of our dislike to the new deed of gift were clearly indicated in the correspondence of last year, but, in view of your letter of the 3d inst., it might seem discourteous if I did not mention my personal objections to it.

I object to the deed of Oct. 24, 1887, mainly in so far as it differs from the deed of Jan. 4, 1882, under which the last, three matches were sailed, and I consider it altogether too complicated a document to govern a matter of sport such as yacht racing.

I object to the substitution of ten for six months notice; six months notice is, I think, sufficient, and ten would lead to much in the continuous states of the following dimensions, which must not be exceeded namely, length on the Lwl., beam at Lwl., extreme beam and draught of water, on the ground that too much advantage is given to the party challenged, and also because it might be impossible to find a vessel's proper trim without exceeding the calculated dimensions.

I object to the condition that there shall be no time allowance, because I think it calculated to put an end to intornational racing so far as this country is concerned.

Holding these views, I could not challenge under the condition that the cup, if won, must be held under the terms of a document which I do not think fair, or likely to create friendly competition.

The New York Y. C. appear to hold that by mutual consent all the conditions laid down in the new deed may be waived. Even so I should refuse to challenge, because the mere fact of anybody or any club undertaking to hold a cup according to the terms of a certain deed, must of necessity commit them to the opinion that all the terms of that deed are sufficiently reasonable and fair

Moreover, I must remark that the interpretation of the "matual consent" clause is a matter that legal experts only can decide. If mentions that the date, courses, number of trial

the challenging yacur. As the trivial of the interestic of can be dispensed with is particularly mentioned, the interest of the trivial consent clause can be made to bear a larger interpretation than that which I have attached to it, and is intended to override all the ferms and conditions contained in the new deed of gift, a club challenging would find itself in this position: It would be liable to have to accept a challenge under circumstances which it considered much more unfavorable to the challenger than those under which it challenged. It would have to solemily declare for itself, and on the part of all other clubs, that the cup, if won, should be held under, and subject to the full terms of the deed of gift of October 24, 1887; and, at the same time, it would be obliged to make an equally solemn declaration that it considered those terms unfair, and that it would never adhere to them. Such a position would not, I think, commend itself to yeach clubs over here.

Briefly, such are my principal grounds of objection to the New Deed. I do not wish it to be inferred that, in my opinion, the terms of the old deed, that of January 4, 1882, are in every respect satisfactory, but I will not trouble you with my personal ideas as to the best possible conditions for arranging and conducting international racing.

I am, of course, not addressing you on this subject in your capacity of Chairman of the Committee, as I have personally no concern with the matters lattly in cispute between the New York Yacht Club and the Royal Yacht Squadron, but you are quite at liberty to make any use of this letter you think fit.

I remain, dear sir, yours truly.

J. R. Busk, Esq.

Lord Dunraven covers the hearter pretty thoroughly, brinxing

capacity of Chairman of the Committee, as I have personally no concern with the matters lately in dispute between the New York Yacht Chin and the Royal Yacht Squadron, but you are quite at liberty to make the Royal Yacht Chin and the Royal Yacht Chin will take with this bill of naticulars before it.

The Times, of May 14, contained an interview with Mr. George L. Schuyer, the surviving one of the five owners of America, as follows:

"When Mr. Schuvler was asked about the demand for the dimensions of a challenging yacht, he said:

"When I consented to the making of the new deed, this provision was considered by me to be of minor importance. We were some years of the Phistle. That yacht wen over the vitue dimensions of the Phistle. That yacht wen over the vitue dimensions of the Phistle. That yacht wen over the vitue dimensions of the Phistle. That yacht wen over the vitue dimensions by her owners by about 18in, load waterline measurement, but when I was called upon to decide her eligibility to race the Volunteer, I said I believed Mr. Bell had acted in good faith, and I consequently decided that she could sail. The main reason we ask for the load waterline length, draught of water, beam at the waterline and extreme beam, is to know what kind of a vessel we have to meet. I believe the challenged party has a right to know what the yacht challenging is like, so it can meet her with a yacht of the yacht challenging is like, so it can meet her with a yacht of the yacht challenging is like, so it can meet her with a yacht of the yacht challenging is like, so it can meet her with a yacht of the yacht challenging is like, so it can meet her with a yacht of the yacht had been yellowed the yacht challenging in the yacht of
CLASSIFICATION BY CORRECTED LENGTH.

THE New York Times has lately criticised the recent action of the Larchmont Y. C. in adopting the classification by corrected length, against the wishes of the Times. In interviewing Mr. Jobn Hyslop on the subject the Times makes the following statement:

THE New York Times has lately criticised the recent action of the Larchmont Y. C. in adopting the classification by corrected length, against the wishes of the Times. In interviewing Mr. Jobn Hyslop on the subject the Times makes the following statement:

"Mr. Hyslop, when questioned by a Times reporter, said that theoretically he believes a racing-length classification is the only correct one, but that practically it would not work harmonically in the largest clubs. This is precisely the argument which has been price to the times against the racing-length classification. It has been repeatedly asserted that the new-fangled idea is based on theories, and has no practical advantage; that it would throw into a tangle the fleet of racing yachts built up on a waterline classification. It appears from Mr. Hyslop's statement that committees have recommended measures in clubs which they knew were impracticable, and that himself, while believing in uniform rules, signed the Larchmont report favoring a measure to depart from uniformity. The truth is the fuss over the classification business has been incensistent, has been based on mere theories, and has been carred on by men who have no vote in the clubs one way or another."

The remark credited to Mr. Hyslop, however well it suits the Times' views, is not correct, and the conclusions are equally wrong. The work of the committee of the New York and Seawanhaka clubs last winter resulted in a series of classes that could have been adopted with very little friction or disturbance; less than might be expected from so great a change. The only hand point in the whole single-stick fleet was the two Gardner boats, Liris and Kathleen, whose corrected length was much greater than any of their fellows. In the sectioner classes there was some difficulty in making a satisfactory point of division, but the racing schoolars this year are so few in number that the new classification, were highly and the section of the present system of classification, even within the sections of the pr

clubs.

CORINTHIAN MOSQUITO FLEET.—Secretary Ledyard has just sen out a neat little club book containing a list of 77 members and 38 boats, together with the constaining a hist of 77 members and 38 boats, together with the constaining a hist of 77 members and 38 boats, together with the constaining a list of 77 members and 38 boats, together with the constaining and sailing rules. The following names are proposed or membership. Charles P. Buchanan, John B. Rogers, Gouverneur burget, Thomas Manning, Thomas B. Clarke, W. B. Dinsmore, Invited, Thomas Manning, Thomas B. Clarke, W. B. Dinsmore, Invited, Cleenge Thompson, H. W. Banks, T. E. D., Power, Dr. Ramon Guiteras.

MINNETONKA Y. C.—We have received a copy of the new club book of the Minnetonka Y. C., of Minneapolis, Minn. The club numbers 145 members and 41 yacbts, stoops and cars of 16 to 26tt. It has prospered greatly since its organization in 1882, and few miles from the city.

YACHTSMAN'S GUIDE.—The twelfth volume of Kiley's yachtsman's guide is just published, making a large book, while the useful features of the book have been improved. It is well illustrated by photo-engravings of a number of yachts, while the duced reproductions of the principal Coast Survey charts will be found very useful.

UVIRA.—Mr. Jas. Fraser's new 42tt. cutter has been sailing about Southampton and is considered a success thus far. She has lett for Hailfax in charge of Capt. Ross.

CORINTHIAN MOSQUITO FLEET, MAY 17.

regatta season was opened by the Corinthian Mosquito let on May 17, its spring regatta being sailed over a tri-reourse off New Rochelle, on the Sound. Six boats started one-gun start at 12 o'clock with a fair salling breze from the and on the first of the ebb, making a lee tide and wind-rork down the first mark. The following boats started:

CATS.

MONTGOMERY SAILING CLUB.—Third race, May 18. Norstown to Indian Creek and return. Weather clear, wind strong untherly:

ton to W. M. Harriman. Galatea, sloop, has been sold by Mr. N. L. Stebbins. .. Dolphin, sloop, has been sold by Henry Beebe to H. F. Allen.

YACHT CANNON.—The Winchester Arms Company have at their New York store this week a very handsome specimen of the Lawine yacht cannon, built to order for the new steam yacht Alicia, Mr. Frederick Gallatin. The gun is 32ln. long and is mounted on a low carriege of teak, with rubber thred wheels. It takes a No. 2 short carriedge, 2½u. dlameter and 5in. long, the same as used on the Hotchkiss rapid firing guns, on the new crulsers. The ammunition case and fittings are also of teak. The new guns have found a good sale this year, one has just been sent to San Francisco for the steam yacht Mascotte, Mr. George A. Pope; and a 2½u. gun, mounted on a field carriage, is building for Mr. Henry W. Putnam, Jr., to be used on a bluft in front of his residence on Lake Champlain.

AMERICAN AND BRITISH YACHTS.—A fact that has a very important bearing on the conditions for international races, especially for the America's Cup, is the very close assimilation of the two nations in all the leading points of yacht racing. The rule and time allowance of the British Y. R. A. are substantially the same as that of the American clubs, the centerboard is admitted to all races in British waters, and is being tried in British yachts, while the types and classes that were once so widely different, are now very similar. This is shown by the new 40-rater Castanet, designed by Mr. Soper, of Fay's yard, Southampton, and just launched. She is 59tt, l.w.l. and 14tt, beam, while the new Birgess boat, Wayward, is 61tt, l.w.l., and 14tt, 6in. beam. Both are keel craft, and probably not far apart in draft.

THE SKIFF CHAMPIONSHIP OF THE ST. LAWRENCE.—
Editor Forest and Stream: The claim has been several times made through your columns that the championship of the river this season, lee question, first because the information requested will be interest made and from whom this championship was won? I ask this questi

the disself, and secondly because as there promises to be organized skiff racing for the championship of the river this season, the question is an opportune one.—DAVID A. POG. Sec'y St. Lawrence Y. C.

OLIVETTE AND ANNIE.—The new catboat Olivetie, lately illustrated in the Forest and Stream, is matched to sail the catboat Annie, Mr. George Hindle, of Fall River, on May 31, for \$100 per side. The race will be to windward and leeward, 18 miles, around the coal mine buoy, with shifting ballast. The 20-23 teet class will be a very lively one this year about Fall River, and includes some of the fastest boats in the country. The first important event is the big regatta on May 30.

NEW YACHTS.—The 20tl, l.w.l. racer on which Mr. Gardner is now engaged is for Mr. Gouverneur Kortright, owner of the sloop Walf. Builder H. C. Lumbert, of Hyannisport, Mass., has completed a centerboard sloop for Mr. Henry F. Crosby, of New York, her dimensions being: Length over all, 34tt.: l.w.l., 3ft. 195in.; beam, 13tt; draft, 3tt. 6in.

CURINTHIAN NAVY.—An informal cruise will take place on May 30, 31, and June 1 and 2. The cruise will to short runs from port to port, and is given in order to bring the feet together for the first time, and to enjoy the holidays ensuing on the dates selected. All boats must be in position in New Rochelle Harbor by 6A. M., May 31.

A STOLEN YACHT.—About three weeks since the sloop from 1521 street, North River, New York. On May 14 the yacht put into Gl Jucester, and the two men on board were arrested. She had been painted black instead of white.

YONKERS C. Y. C.—This club will hold its opening on May 30, saling to Fort Lee. In the evening a reception will be held at the club house and on Saturday a chowder party will be given. IRON BOLTS IN LEAD KEELS.—The Scotch 6-rater Rover was lately hauled out at Kingstown, Ireland, when her iron keel bolts were found to be completely eaten away.

TRIAL PRIPS.—The new Boston beats arejust going into commission. Wayward, Ventura, Hawk, Millicente, Camilla, Thelma an

THE A. C. A. MEET.

COM. STANTON has issued the following notice:

Headquarters A. C. A.—New York, May 17.—To the Members of the A. C. A., Please take notice that, first, Mr. Edward W. Brown is hereby appointed chief signal officer for the camp of 1890; second, Mr. L. W. Seavey is hereby appointed director of amusements for the camp of 1890; third, on the recommendation of the regatta committee the executive committee have amended that part of Rale V. of the Sailing Regulations which reads: "There shall be a race for the paddling race, as follows: The first six at the finish and two at the discretion of the regatta committee," so as to read as follows: "There shall be a race for the paddling tropby. The interpretation of the regatta committee," so as to read as follows: "There shall be a race for the paddling tropby, distance one mile straightaway. The number of entries for this race shall be unlimited. This race shall be exempt from the provision in Rule II., that a member can enter but one cance for races at any one meet."—HENRY STANTON, Com.

A signal code, for use in the A. C. A. camp, is now being preared, mainly for the purpose of giving notice of races, meetings and the like.

The owner of Jessup's Neck, the place where the camp was expected to be held, do not seem to be able to agree among themselves as to some of the matters relating to the camp, und the reamp site committee is therefore looking at other places in Peconic Bay.

The question has just been submitted to the executive committee of the A. C. whether the caterer at the camp this coming summer should be permitted to serve beer and wine at meals. The result of the vote was five in favor of granting the privilege and thirteen against it.

H. LLOYD THOMAS.—The inevitable changes which time thrings laye to a great eyient by down the places which time the signal was to a great eyient by down the places which time the payed to a great eyient by down the places which time is the place of the place is the place of the place is the place of the place

H. M. Spraque, Boat Buil ler, Parishville, N. Y.:
DEAR SIR—I can hard y say on paper how well
like your boats, and your Patent Rubber Improvement is just the thing, at least that is the
way I find it by use of two of your boats the last
summer on the river by all my family, and any
boat that can stand the hard usage a boat gets
with six or eight children in and out of same two
months in summer every hour of day and have
the boats stand the tear, is good enough and better than words.

Respectfully,
S. B. MERRILL.

Now is your chance to buy a Sprague Patent Rubber-Packed Hoat. Over fifty now
ready for immediate delivery, from 10 to 16ft.
Over 50 in use giving perfect satisfaction; whereever known and used they are the established
favorite. I am determined to have them placed
before sportsmen more generally. Don't fail to
send 2-cent stamp for 1880 catalogue. Address

for Sale.

To Sportsmen & Fishing Clubs.

FOR SALE.

One of the Thousand Islands, St. Lawrence River. This island is located about 2½ to 3 miles below the town of Alexandria Bay, the head-quarters of the Thousand Islands, and where all supplies can be obtained. It is located on the American side and quite close to the celebrated fishing and ducking waters of Goose Bay. The island contains about? or 8 acres and is thickly covered with trees of different kinds, including oak, birch, pine, etc., and has a beautiful little bay running into it, making a splendid safe harbor for yachts, skiffs, etc. There is a good summer house of 9 or 10 rooms, also an ice honse with cooling room and a boat house in the bay. This island is one of the best locations for a summer home to be found in this country, and is one of the most attractive locations for the summer outing of a club in the United States. This is an exceptional opportunity for such a club. Reason for selling, owner has no further use for it. This island could be occupied this season. The island is well known and described on mans. Further particulars can be obtained from CORNWALL BROS. Alexandria Bay, N. Y., or from E. K. STEPHENSON, Lewis Block, Pittsburgh, Pa.

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST.—It will wind up the line a hundred times s fast as any other reel in the world.
SECOND—It will wind up the line slowly if the ngler chooses.
THERD.—No fish can ever get slack line with it.
FOURTH.—It will save more fish than any other

reel.
FIFTH. It will prevent tips, lines and snells
from being broken by large fish.
SIXTH.—It enables the angler, and makes it
desirable, to use lighter tackle.
These claims have been substantiated by the
most skillful fishermen in America and Europe.

A WESTERN NUMBER.

The issue of June 12 will be a Western Number. It will be brimful of good things picturing sport with rod and gun in the Great West.

OLD STORIES RETOLD.

THERE is a well recognized tendency among tellers of old stories, to rehabilitate their tales and give them an air of truthfulness, by assigning them to some familiar locality or fastening them upon some individual known to possess the traits of character they illustrate. Thus, many of the old stories about dogs and dog owners are periodically revamped and retold with circumstantiality of name and place and date, like the story told in England of a guardsman who evaded the dog-muzzling law by fastening the muzzle on to the dog (but on its tail), the same thing being related in this country of Ben There is that venerable legend, related in all the ancient English works on sporting, of the faithful pointer or setter, as the case happened to be, which pointed its game, and the sportsman not coming, remained steadfastly on point, to be discovered long afterward a skeleton, still faithfully pointing the bones of the covey of This very yarn, as familiar as Æsop's fables, has within the last year been told in the Providence, R. I., Journal, of a pointer dog "Leo," owned by a well-known sportsman of Providence, and by the Atlanta, Ga., Constitution, of a white pointer, owned by the father of Capt. W. W. Lawson, a famous hunter of Burke county,

We received the other day a copy of the Des Moines News, in which Judge Kavanagh, of that city, who is well known to be a dog fancier, is credited with having one day returned home with a covered basket on his arm; to be met at the door by his mother, who was told: "'Mother, I have just made \$25 the easiest you ever saw.'

Of course the good lady wanted to know how and he said I have just bought a \$35 dog for \$10, and here he is, pulling from the basket a bull puppy to the disgust of his mother, who detests all kinds of dogs." This will be recognized as an old story which has been current for years and years, and has probably been told of every prominent dog lover in every county in the Union. Judge Kavanagh belongs to a vast army of men who have made equally advantageous dog trades.

Very many of the "good stories" of hunting and fishing are told over and over again, each locality having its particular "sporting character" of whom or by whom the tale is related. An amusing illustration of this recently came to notice. It was the story of the man who, while hoeing corn or cradling wheat, saw the big buck in the field, chased it and captured it floundering in a snow drift. There came to the FOREST AND STREAM not long ago a version of this story, sent us by a Kinsman, Ohio, contributor; the hero being "Uncle Charlie Kellogg," who was said to have captured the buck in a hay field in July, in the eastern part of Ohio. A day or two after the receipt of this communication came another from an Ithaca, N. Y., correspondent, written on the same day, and relating the same story of a certain "Uncle Dick E.," a Forty-Niner of that town. Subsequent correspondence developed the fact that each of these men had told and retold this tale, each one making himself its hero. If the census takers should note all the old sportsmen in this country who have captured big bucks in July snow drifts, the regiment of them would perhaps outnumber the surviving veterans of the Mexi-

THE COMMISSIONER CAN STAND IT.

THE New York Press has recently made a rabid political attack on U.S. Fish Commissioner McDonald, which will excite for him the sympathy of all who have kept track of the Fish Commission's work in recent years. Much of what is said by the *Press* is true, but is so put that it has all the effect of falsehood. The Commissioner is bitterly attacked because under his rule expenses are much larger than they were in the past under Professor Baird, but nothing is said of the fact that the work done at present is vastly greater than formerly. It is stated that the Commissioner has doubled his force, but it is not stated that more men are constantly needed to run a Commission of which more and more service is demanded by the people.

Besides statements which are true, the Press makes many that are false, and the whole article bears every evidence of having been concocted in the interest of the bill before the Senate to turn over the Fish Commission to the Agricultural Department, and to make it a bureau of political rewards for hangers on of Congressmen and Senators.

The people of the country are perfectly capable of judging whether this most efficient Commission ought to be used for political purposes. If they do not wish it to be so used, let them speak out all over the country as they have already done on the Massachusetts coast and along the Great Lakes.

SNAP SHOTS.

To the tarpon record given in our issue of last week may now be added the further score of Mr. Thomas J. Falls, of this city, who between May 8, the last date given, and May 15, took sixteen more fish. His total score for the season was sixty-eight fish, weighing 6,975lbs. The first twenty fish were caught successively, none being lost; and the entire catch was made with rod and reel and without assistance except in gaffing. This marks the change in tarpon fishing within a comparatively brief period. It was only a few years ago that "Al Fresco" and others were expressing doubt about the probability of capturing these fish with rod and reel, and were offer-ing to pay the traveling expenses of any one who would accomplish the feat. From that primitive stage tarpon fishing has now developed into a competition for big scores, individual fishermen taking as many as three, four and five fish in a day. Tarpon fishing is no longer a novelty; but it is a form of angling which is most decidedly growing in popularity.

At a meeting of the Appalachian Club in Boston last Saturday a movement was discussed looking to the purchase, for public possession, of parts of the picturesque New England coast, Mr. J. B. Harrison pointed out that

very soon there would be a continuous town all along the New England coast, where all the cliffs and beaches ing been taken up for cottages and hotels, the public is even now practically shut out. It must be conceded that there is good reason for this view; no one understands that more clearly than the man with the gun, who has been wont in years past to range these beaches unimpeded, but now finds his passage barred by trespass notices. The same holds true of much of the Atlantic coast. Hardly a week goes by without press announcements of enterprises undertaken by capitalists and syndicates to "improve" shore properties, and convert present wastes into summer or winter resorts. Between the hotel resorts, private cottagers and shooting club preserves, the area of free country is annually diminishing, and the available coast shooting grounds are becoming beautifully less. Meanwhile there is no flagging of interest in shore-bird gunning and wildfowl shooting; and judging from the growth of clubs to take up game grounds, and the eagerness with which memoership in these clubs is sought, it is evidently believed to be a case where every man should act on the principle of "save himself who can." A Norfolk correspondent wrote the other day of a club on the Virginia coast, where the members enjoyed unusual sport with the bay snipe. His paper was published in our issue of May 15; on May 17 he had received, from readers of the article, fifty-four letters about it, most of them from persons who wished to join the club. This country of ours is so large, that at first thought it appears ridiculous to talk about there being little available free shooting territory left, but on the other hand, when the situation is examined, the free grounds are found to have diminished to an alarming degree.

William N. Steele, of Clayton, N. Y., was for several years a State game protector, whose special district was the St. Lawrence River and adjoining Lake Ontario waters. His services as game protector were far from satisfactory to the officers of the Anglers' Association of the St. Lawrence River, under whose direction he largely worked, and he was discharged. Recently Steele was arrested for illegally using nets in Eel Bay, and after a trial lasting nearly a week was convicted and sentenced to pay a fine of \$25 and to be incarcerated in the county jail for fifty days. In case the fine of \$25 is not paid, he is to serve twenty-five days longer. The secretary of the Anglers' Association, Mr. W. H. Thompson, of Alexandria Bay, N. Y., has shown very great and commendable zeal during the past winter in seizing nets illegally set in the St. Lawrence River, and particularly in the arrest and conviction of this man Steele. In the last seizure of nets made by the Anglers' Association about ten days ago it was found that the nets were filled with pike, bass and muscalonge; thousands of small fish had become entangled in the meshes of the nets and were destroyed. The larger fish were replaced in the river. Owing to the vigilance exercised by the officers of the Anglers' Association in destroying nets placed in the river, it is believed that legitimate fishing this summer with rod and line will be better than it has been for very many years past.

An "original package" game case came up in Pitts-burgh, Pa., last Monday. William Wilkinson was on trial for having sold quail out of season. His counsel proved that the quail had been lawfully killed in Missouri, and had been brought into Pennsylvania in their original The plea was not accepted by the judge, packages. Ewing, who refused to be governed by the United States Supreme Court decision; and Wilkinson was convicted. Wilson Senate bill, of which note was made last week, has been so amended as to apply only to liquors. In the absence of any specific or general exception by which the sale of imported game would be forbidden in the several States, such a plea as that of the Pittsburgh dealer would, we presume, hold good, unless the judge should share the opinion of Judge Ewing that the Supreme Court decision was wrong, and refuse to accept it.

We have taken occasion in times past to commend the sensible and praiseworthy stand taken by the Western railroads which instruct their freight agents carefully to observe the laws respecting killing and shipment of game. The Union Pacific system has just sent out a circular to its agents directing attention to the Wyoming law of 1880, which forbids shipping large game or its hides on horses. When freight and baggage managers thus work in co-operation with game law enforcement, the problem is in large measure solved.

The Sportsman Tourist.

THE BRIDAL TOUR OF THE KENNEDYS.

THE BRIDAL TOUR OF THE KENNEDYS.

WHEN the question arose as to where we should go. Henry strongly urged our going off without having any particular place in view. He said it would give so much more zest to the journey. Furthermore, that if our honeymoon was to be an epitome of our future, while we should seek for pleasure and good, we should not hope to fix in advance the precise place we should find them in. Nevertheless I could hardly wait until the train had started until I said:

"Now, Henry Kennedy, where are we going?"
They were almost the first words I, his wedded wife, had spoken to him. He looked straight at me for a great many seconds, as though feeling the weight of the question; but retained his composure and said that we were going to Pueblo, Colorado. I could not help thinking that, for a person who had started away from home without any knowledge of his destination, the manner of its acquirement since head been mysterious, to say the least. "Of course." he said in explanation, "there had to be some initial objective point."

"But of all the initial objective points on earth, why Pueblo? I exclaimed."

"My dear," evidently sighting white-caps, "why not? It lies directly in our way, and, besides, it is accessible by rail."

It is needless to remark that this excited sarcasm,

"My dear," evidently sighting white-caps, "why not? It lies directly in our way, and, besides, it is accessible by rail."

It is needless to remark that this excited sarcasm, which in turn drew out such arguments in favor of Pueblo as, that there was nothing in the Constitution of the United States prohibiting our going there. Meanwhile, our train moved rapidly westward. Once, when we were rolling along over the beautiful prairies of Kansas, our books lying unheeded in our laps, he turned and asked me if I had in my trunk an old dress that I did not care anything about. Thunder-struck, I replied that I had not.

out from one of his trunks a bed tick which the driver took back with him. I had wondered at my husband's bringing two trunks; but he now opened one of them and took out: One 12x14 wall tent, one rubber blanket, sheets and pillow cases, two rubber pillows, three pairs of woolen blankets. The other things he said he would unpack in the morning.

Then it began to rain.

The partner of my joys and sorrows brought me a gossamer and an umbrella, perched me on top of my trunk with all my precious wedding things in it, shut the bedding up in the other trunk, and then laughed at me. I couldn't help thinking it was not connubial in him. He then proceeded to pitch the tent, calling on me for assistance at the critical stage, which showed that he could not have gotten on without me, and which restored my self respect. And when the tent gradually shaped itself into a shelter, my courage came back. Then the rain stopped, and the wagon returned with the remainder of the boxes and with the tick, now filled to extravagant rotundity with fine mountain hay. Spreading the rubber blanket in one corner of the tent, they placed the mattrass upon it, carried the trunks and boxes in and ranged them on the other side, and then the driver left us alone. Next came the twilight, and, before I knew it, the bed was all made, with the clothes turned down, showing the tempting little pillows and the white home-like sheets, a drink of clear water brought from the river, the tent flaps closed for the night against the cold, the candles burning cheerily, casting fantastic shadows against the white walls, and we were laughing at the odd experience of using trunks for dressing tables. The lights were put out, and soon the sound of the turbulent river hard by had sung us to sleep.

When I awoke, the sun was shining and I could see Henry building a fire in the stove on the grass outside.

rock, and I could see that my husband's attitude became more spellbound. The enslaved and obedient flies took wing, circled far back over our heads and then dropped on the dry rock. And then, whether from the sag of the line or the spell they were under, they began to move down into the water, and, in an instant, had fallen into the placid pool as gently as a snowflake touches the earth. There was another gulp, a quick motion, and the line straightened far out into the river, the rod curved into the segment of a circle, the point dipping toward the water in quick, successive jerks.

For the time being I had lost my husband.

"Now, Elizabeth," he said, when the brief struggle was ended, "you must catch one." Noble, ingenious Henry! The flies had a strong tendency to climb trees, but, when they did fall into the water, it was amusing to see them float quickly past me, in their bedraggled holiday dresses. And all of a sudden. I know not how, the water gurgled and startled me and I raised my hand, and something began to invite me, by means of a rapid series of pulls, to come out and ride on the dancing waves. But my husband!

"Gad Zooks I" (from Lorna Doone) "you've got him. Don't let him get away. Let it go. Keep it stretched tight. TIl turn the reel for you. Not too hard. Whew! He's coming, and he's no slouch of a trout either. Good for you!" And the fish was landed.

I grieve to say that at some past time, some evil-minded person has taught my husband an undignified and exaggerated movement from the ballet; and he executed it at that time in all its wicked abundon.

Mr. Pranklyn had every good horses and we took many rides and drives up and down the stage road. This road is an especially attractive feature of the place. Below the Gap, where the mountains are close to the river, it extends along their slopes, now descending to the bank of the rocky stream, now making its rugged way up its heavily wooded sides, or winding through some thicket of quaking app.

Above the Gap, the mountains are close to the river, it Service of the control account for the control account of the contro

impossible to follow the tracks far; there was no blood. Convinced at length that the deer were up, though it was long past their accustomed hour; took my rife edge of an open grass-plot, recently burnt over, I saw standing broadside on another magnificent doe. As I coolly brought my rifle up, she as coolly stared at me, accustomed to shooting in the rare clear air of the mountains and being "fooled" as to distance, I deliber at the mountains and being "fooled" as to distance, I deliber accustomed the was been persuaded it was possible, and can scarcely believe it now. On an easy shot I usually sim of the spinal column, a shot there downs the animal on the spot; I thought I was shooting from ilso to löyda; it was shoot in the spot; I thought I was shooting from ilso to löyda; it was shoot in the spot; I thought I was shooting from ilso to löyda; it was shoot in the spot; I thought I was shooting from ilso to löyda; it was shoot in the spot; I thought I was shooting from ilso to löyda; it was shoot in the standard of the shoot of the clear open mountain at no phere of Mexico and the West. The rule of "Yo," as stated in his 'lbecord of Nineteen Shots,' is a pretty good one I believe, i. c., take only near shots. I have been rather lucky at long shoot been the Doctor's "maiden" deer, we drove back for dinner. Entering the wood at about 6 o'clock the party had seen cight deer, supposing that none were seen twice. I never saw a lovelier place for the ponning still-hunter, the best and most satisfactory among all the modes of deer killing. A great array of sandidit oranes thaig at a large pond in the field back of the house. This is an unnaturally shy bird. We drew in the coach behind a little wooded hill, and dismounting crept up among the trees. We down the middle was the short of the coach behind a little wooded hill, and dismounting rores had been shorted in the fool was a state of the coach behind a little wooded hill, and dismounting rores had been shorted with a state of the coach behind a little wooded hill,

Hatural History.

CANADA GROUSE IN CAPTIVITY.

CANADA GROUSE IN CAPTIVITY.

Editor Forest and Stream:

Having had some experience with Canada grouse in captivity, I will attempt a description of their habits. These birds are not plentiful in any part of this Province. They are chiefly found scattered through the central part, which is a barren rocky district, thinly settled and abounds with rivers, lakes and swamps. These swamps are usually covered with a thick growth of fir, spruce and hackmatack, which constitutes the chief part of the birds food, especially in winter.

I began my experiments in domesticating these birds, in order to procure a few sets of their eggs, as it is almost impossible to find the nests while the birds are at liberty. With this object in view, I built a pen of strips of boards, 3in. wide, leaving space between them for the admission of light. I then gave out word that I wanted a number of these birds and the price I would pay for them. It was not long before a bird was brought, but it was a male and my chances for eggs were not very much increased by its receipt. Not long after this, however, a man brought me three females. This was in September, 1885. The question to be solved then was how to feed them, which I soon learned was rather a difficult matter, as two of them sickened and died within three weeks from the time I got them. When I found they were aling I bried every means I could think of to restore them to health, but without avail. I did not get discouraged by this loss, however, but had them replaced by others as soon as I could get them, which was not long, as I had offered a liberal price. Through the winter I lost several, while, at the same time, a few were coming in; and when the nesting season came I had three females and one male. During this time I had made every effort to determine what was mecessary to the health of these birds, what was their proper food, etc. I carefully examined the contents of the crops of specimens sent me to be mounted. In this way, and by introducing different kinds of food, I learned w

Leon the table, or on my shoulder, and not snow the least fear.

When a bird is first caught and placed in this inclosure it is quite shy, and keeps hidden away among the spruce limbs for several days, only coming out occasionally long enough to feed; but he soon grows bolder, and in a few weeks will come and eat with the rest as the food is put

weeks will come and eat with the rest as the food is put down for them.

As the nesting season approaches I prepare suitable places for them by placing spruce boughs in such a way as to form cozy little shelters where the birds will be pretty well concealed from view. I then gather up some old dry leaves and grass and scatter it about on the ground near where I have prepared a place for the nest. The bird pays no attention to this until she wants to lay. She will then select one of these places, and after scratching a deep, cup-shaped place in the ground, deposits in it her eggs. When the hen is on the nest she is continually making a kind of cooing sound, a sound that I have never heard them make on any other occasion. If there should be sufficient material within easy reach of the nest the bird will sometimes cover the eggs up, but not in all cases.

nest the bird will sometimes cover the eggs up, but not in all cases.

No nesting material is taken to the nest until after three or four eggs are laid. After this number has been deposited the hen, after laying an egg, and while leaving the nest, will pick up straws, grass and leaves, or whatever suitable material is at hand, and throw it backward over her back as she leaves the nest, and by the time the set is complete quite a quantity of this litter is collected about the nest. She will then sit in her nest and reach out and gather in the nesting material and place it about her, and when completed the nest is very deep and nicely bordered with grass and leaves.

So strong is the habit or instinct formed of throwing the nesting materials over their backs that they will sometimes throw it away from the nest, instead of toward it, as the hen will sometimes follow a trail of material that will turn her right about so that her head is toward the nest, but all the time she will continue to throw what she picks up over her back. This, of course, is throwing the material away from the nest. Discovering her mistake, she will then "right about face" and pick up the same material that an instant before was being thrown away, and throw it over her back again toward the nest.

The way they will steal eggs from one another would do credit to a London pickpocket. Two hens had their nests near together, perhaps two feet apart, and as each hen laid every other day, one nest would be vacant while the other would be occupied. The hen that laid last would not go away until she had stolen the nest egg from

the other nest and placed it in her own. I once saw a hen attempt to steal an egg from another nest that was twenty feet away. She worked faithfully at it for half an hour or more, but did not succeed in moving the coveted egg more than about eight feet, it being uphill. The egg so frequently got away from her and rolled back a foot or more each time that she at last got disgusted and gave up the task. I had no fear of getting the sets mixed, as each was so different from every other, in color and shape.

On going to the pen one evening I found one of the hens on the nest, and I knew she was beginning to sit, as all the others had gone to roost. Slipping my hand under her I found three eggs, the nest egg, the one just laid and the one stolen from the other nest. I picked two of them up and held them before her, when she all at once placed her bill over the one held between my thumb and forefinger and tried to pull it out of my hand; I did not let her have it, however, and she immediately stepped upon the side of the nest and placing her bill over the remaining egg, drew it up out of the nest and pushed it back under her out of sight, as much as to say "You have two, and that is all you can have." I must confess that it was with great reluctance that I took these eggs from her, she pleaded so hard for tnem.

Any one who has only scen eggs of the Canada grouse after they have laid in the nest till the whole set is com-

under her out of sight, as much as to say "You have two, and that is all you can have." I must confess that it was with great reluctance that I took those eggs from her, she pleaded so hard for tuem.

Any one who has only soen eggs of the Canada grouse after they have laid in the nest till the whole set is complete, can have no idea of the beauty of a fresh-laid egg. I have now in my collection about eighty of these eggs, all perfect specimens.

The male bird begins to strut in March. I remember very well the first time I saw one strutting. I had obtained the bird in the fall, and he used to sit about bunched up almost in a round ball as the female did, until one morning, when I went to feed them I found him strutting. His attitude was so different that one would scarcely know it was the same bird. I went in the house and told my wife to come and see him, remarking that whether the females laid any eggs or not I was well paid by this sight for all my trouble. I was so interested in seeing him strut that I had the photographer bring his camera in and take some stereoscopic views of him while strutting. I have some on hand now and can supply any one who may want one.

I will describe, as nearly as I can, his conduct and attitude while strutting. The tail stands almost erect, the wings are slightly raised from the body and a little dropped, the lead is still well up and the feathers of the throat and breast are raised and standing out in regular rows which press the feathers of the nape and hind neck well back, forming a smooth kind of cape on the back of the neck. This smooth cape contrasts beautifully with the untilled black and while feathers of the head. This comb the bird is able to enlarge or reduce at will, and while he is strutting the expanded tail is moved from side to side. The two center feathers do not move, but each side expands and contracts alternately with each step as the bird walks. This movement of the head in the trusting all makey by flying from the ground up on a perch and back to the ground

in the same pen, but in July they may be all turned together again, and they will agree very well until the following March.

I have always attributed the scarcity of the Canada grouse in the haunts of the ruffed grouse to the fact that they were more exposed to gunners, and as they are quite tame compared with the latter, they would stand but little chance of escape. This I still think is true as far as it goes, but an incident occurred a short time ago among my birds that leads me to believe there is still another cause. That is, the male ruffed grouse kills the male Canada grouse. Last fall a boy brought me a male ruffed grouse, and I put him in the pen with the others. All went well until a short time ago, when the Canada grouse began strutting, he then seemed to think he had charge of the whole place and should run it to suit himself. The ruffed grouse seemed to be very much in his wev, he tried every means in his power to get up a row with him, but the stranger tried to avoid him, that is, he would walk away rather than quarrel. This did not seem to satisfy the smaller bird, and he went on teasing until one day he came to grief. The ruffed grouse turned or, him, and judging from the appearance of things when I went in, he made very short work of him, for he lay dead under a bush, badly torn up, while his antagonist had scarcely a ruffled feather. This is the second one I have lost in this way, and it is my opinion that instances like this occur in their native wilds when they come in contact with each other in the nesting season. The ruffed grouse still lives and is doing well.

In August last I put a pair of golden pheasants in the pen with the partridges. They agree very well. I have seen the whole flock feeding on a little piece of board a foot square. The female pheasant died early in the fall, from what cause I do not know, but the male bird is doing well, and is in fine plumage. He has no protection from the cold and storms of the winter other than that provided by the slat pen before mentioned, fro

AN ELK HUNT IN WYOMING.

AN ELK HUNT IN WYOMING.

In the fall of '86, Kin D. B. and myself, with the hunter Jo James, spent parts of two weeks hunting elk in Deer Creek Park, Wyoming. We reached the park early one afternoon after a twenty mile ride from Deer Creek Ranch. The park, contrary to our expectations, was a treeless, comparatively level plain. It was surrounded by mountains, from two to three miles wide, and about twenty miles long. On the east, in the direction from which we had come, the hills were low, and, to a certain extent, regular. On the west, where our hunting ground lay, however, they were jagged and pinnacly, and looked like sections of a Gothic church roof. They presented a vast surface of bare rock; trees, as a rule, grew only in the narrow valleys or "draws" that separated mountain from mountain.

wast surface of bare rock; trees, as a rule, grew only in the narrow valleys or "draws" that separated mountain from mountain.

Arrived at camp, we ate a hasty dinner and then set out for a short hunt before supper. A half hour's walk around the base of a craggy peak brought us to the mouth of a "draw." Here we struck an old elk trail, leading up the draw, which we followed.

At first the trail led through a thicket of quaking asp, but presently this was left behind and we found ourselves in a little arena, clear, except for a few pine trees that grew here and there at intervals. Just as we left the quaking asp we saw a blacktail doe. It was 150/ds. off, bounding down the hillside toward the bottom of the vally, with easy, graceful jumps. Both the tenderfeet hesitated at the shot, but James raised his rifle and simultaneously with the report the deer fell in its tracks.

The next day we set out from camp early. For a mile or two the way was easy, but soon we were well in among the mountains, and began to realize that we had a hard day's work before us. In the only places where climbing was possible the mountains were obstructed by a tangle of fallen trees. These trees had managed to grow to a height of from 20 to 25ft., and to a butt measurement of from 4 to Sin., and then had died, the soil falling to supply their increasing wants. They madvery acceptable fence rails for the nearest ranches, for they were tough, light and perfectly seasoned, but they played the mischief with climbing.

Despite all obstructions James set a good pace, his object being to cover as much ground as possible before night. Along the base of one mountain we went, then circled around it and began climbing for the top. From below it looked an impossibility ever to gain the summit; but after a three hours' scramble with tooth and nail success finally crowned our efforts. Once on the top we took a short breathing spell, and then set out for the next peak of the little range.

Scarcely a hundred yards had been covered over the rough, shrub-

seemed to think it the proper thing never to take out any lunch.

It may have been that he doubted our ability to climb and carry the lunch in addition to our guns, but, at any rate, it was his principle and he stuck to it. Breakfast had been eaten at daylight that morning, and we were pretty well used up by the hard climbing. Taking it altogether, we had good reason to be cross and dejected with the prospects.

"There are no elk within a hundred miles," we thought. "They could not climb these precipices, and, even if they could, they would starve to death before they could collect enough food for a meal."

Such were our thoughts, and we were on the point of calling for a retreat, when suddenly, from a little point 70yds. to our left where some stunted pines grew, a tall, brownish-red animal clumsily rose, hindfeet first, like a cow.

"By George, there's an elk!" said Kin, and fired.

In an instant a thrill of life shot through us. Dinner and disgust were forgotten. We ran toward the spur with the stunted pines. The elk had disappeared over it, but we had seen the hair on his shoulder fly and had neard the welcome "pud" of the bullet, and we knew he was hit.

was hit.

In our scramble we each tried to outdo the other, but finally all arrived at the point together. Just below, finally all arrived at the point together. Just below, within thirty yards, was the elk, stumbling along with a broken shoulder. And scarcely ten yards further we saw a second elk in the act of rising to his feet. All three of us fired simultaneously, and then for about sixty seconds we kept two Winchester repeaters and a Marlin working till the hills reëchoed and there was no more occasion for shooting.

till the hills reëchoed and there was no more occasion for shooting.

Both elk lay dead. The first had fallen almost directly in his tracks. The second had stumbled on after receiving his mortal wound, and finally had fallen in an exceptionally steep place, from which he had rolled eighty feet down the mountain side. He now lay held back by a little clump of quaking asp. If he had not caught just as he did, he would have fallen into the gorge 500ft, below and been ground to mince meat. Both were bull elk, and both fine specimens. One had four and the other six prongs to his antlers, and James estimated that together they would weigh a good half ton.

This trip met our expectations so well that we determined on another. This time we hunted unsuccessfully one day. The next we climbed to a snow-water spring high up on a commanding mountain, Here, in the coarse

grass we found depressions where eight elk had made their beds: all around the spring were fresh tracks. We followed up the trail left by this band for some time, but then lost it. About the middle of the day we took a siesta under some dwarf pines, and then set out for camp, but by a different route from that by which we had come. Soon we ran on a fresh trail. It led in just the direction we were going. It had been made by a small band of seven or eight elk, who were traveling Indian fashion. In about ten minutes we came to a place where a second trail from the left had joined the first. This too had been made by a small band of eight or ten. Then we came to where a third band of about twenty had joined the other two. At the same time the trail began to descend into a "draw" that was thickly wooded.

The prospect, to say the least, was growing interesting. Like hounds we followed the trail—now broad and resembling a well-beaten cow-path. The walking was easy and we made good progress. Half a mile further we were again surprised. A new trail, still from the left, came into our path. It was nearly as well defined as the one we had been following. Our hearts beat faster still. When was this to stop?

In some bad ground the trail separated, and part flowed on one side and part on the other of a little island of rocks and trees. Soon, however, it united again. A little further we met with the first indications that we were nearing the band. Every now and then we could faintly distinguish whistling cries.

"It's the calves," James whispered as we pressed on. Soon the whistling was all around. We stepped into a little glade, and at the same instant a large elk showed its head at the other side. Two of us fired, and the elk fell and began thrashing about the quaking asp. In an instant a wild commotion arose. C.lves crede with terror, and on all sides we could hear elk tearing through the saplings. We stood with rifles ready. Several elk ran across the open space, but as they were all cows or calves we did not shoot. F

fell.

The "draw" was very narrow at the point where we had taken our station. On the opposite side from us, not wore than a hundred and twenty yards off, was a low, treeless ridge. Happening to look across at this we saw that the elk were all taking up their position on it. As they came out of the thickets, in small bands of six or eight, they ran down the line of those who were already on the ridge, and when they came to the end stopped and fell in.

It was a curious and at the same time a very wetty.

on the ridge, and when they came to the end stopped and fell in.

It was a curious, and, at the same time, a very pretty sight. No old bulls were in the band, and about half the line was formed by calves. These calves were the handsomest animals I have ever seen. They were something like Jersey calves, and had markings, contrary to the mature animals. The elk were within good range, but none of us felt like shooting. We stood and watched, till, finally having satisfied their curiosity or whatever teeling it was that made them stop, they g adu lly left in the same small bands in which they had come.

We counted seventy elk in all. James said that this herd was the largest he had seen for several years, and that it comprised all the elk in that section of the country, who were banding up for the winter.

J. B. BURNHAM.

WILDCAT CHASE ON THE NORTH FORK,

"HELLO, Julius! how do you do?" I was sitting at my desk at the office working for dear life, for it was the busy season, and looking up, there stood old Hank in his ragged hunting suit, his old muzzleloader slung over his shoulder and his two lean hounds at his

heels.
"Hello, Hank! Glad to see you, old fellow. Sit down
and make yourself at home until I am through with this
account."

As was his habit once a week Hank had come in to

As was his habit once a week Hank had come in to town from his mountain cabin to sell his game and baskets. Business over, he would drop in and smoke a cigar, the only ones he ever smoked—under ordnary circumstances an old clay pipe was good enough for him, I could see the twinkle in his keen old gray eyes, for I knew what was coming, and the old rascal knew very well the weak spot in me. I could ill afford a day's hunting in the busy season, but how could I resist such temptations? Old Hank and his dogs and his old rifle brought back to me the recollection of many a glorious tramp after reynard.

"Fine tracking snow, Julius. Saw a wildcat track a little above the North Fork mill—a dogoned big one, too! What do you say about taking old Leader and the pups and giving it a tus-le to-morrow morning?"

"I can't go, Hank; I have too much work."

"Well, all right, I will get Steele, or tackle him alone. Let me have old Lead; he is a capital dog to work out a cold trail."

Hank had finished his cigar, and was standing before

"Well, all right, I will get Steele, or tackle him alone. Let me have old Lead; he is a capital dog to work out a cold trail."

Hank had finished his cigar, and was standing before me, his big, bony, muscular frame the personification of bodily strength and endurance; and visions of the tramps and camps I had enjoyed with him came back. That was too much; work could wait a day. "Well, Hank, I will try and get Steele to come along. Meet us at the mouth of Red Lick at half-pastsix."

What a glorious winter morning it was! Calm and cold; the snow, which had fallen during the night, had draped the dark evergreens in a mantle of pure white; not a breath of air was stirring. Steele and I walked silently in the rugged mountain path, drinking in the magnificence of the scene. Hank was on time. We crossed the creek on the ice and went among the rocks toward the wildcat den. Uncoupling the hounds, old Leader soon gave sign of scent, and upon investigating I found it was a tolerably fresh wildcat track. Trailing slowly, for the scent of the wildcat is not as strong or as enjoyable to the foxhound as that of the fox, the dogs giving tongue occasionally, we crawled after the dogs over rocks and fallen trees, until the old dog gave full tongue, and that opened the ball. The chase went toward Mill Creek. Steele ran up the creek, Hank down to the crossing below, while I kept my position and waited. I waited for more than an hour with my back against a rugged old hemlock, long before the dogs had gone out of hearing.

The scene before me was magnificent. A woodpecker was hammering away on an old tree, and the sun shining on the snow-covered pines and hemlocks made them glimmer as if covered with diamonds.

I heard a shot down the creek. That long, whiplike crack was old Hank's rifle. Soon I heard the dogs coming toward my crossing. I got ready, peering through the trees and down the creek to catch a glimpse of the quarry, when not a hundred yards away the cat broke cover. It was loping; and aiming a foot ahead I pressed the trigger. At the crack of the rifle I saw it tumble over. Quick as lightning it was on its feet again and off. I sent another bullet after it, but without avail. Going toward the spot where the cat was when shot at first, I found plenty of hair and blood; evidently it was hard hit. By this time the dogs had come up, and the seent of the blood made the pursuit, if possible, more ardent. Such music as rang through those hills.

The dogs were soon gone, and I after them more cautious than before, for to encounter a wounded wildcat at bay is no small matter. Hank had come up after my shot, the strange cry of the hounds convincing him the cat was wounded, and together we went as best we could over fallen logs, over rocks, up and down ravines. After a mile or two of this work we heard the dogs howling or barking; and coming up found one of the young dogs literally disemboweled, and the cat up a small sapling hissing and spitting at the hounds, which were all around at a respectable distance. I cautioned Hank not to go near, but to let me finish him with one more shot. But the sight of the dog had put the old fellow's blood up, and going about ten yards he blazed away. He ne ver hit her, and quick as lightning the cat was on bim, clawing and growling, and then ran. My first shot had broken a front leg, and it could hardly run fast. I took deliberate aim and killed it. Hank was badly clawed about the hands and arms, but with no mortal wounds; and a few days of care put him on his feet again. The skin of the cat made a handsome rug, which now embelli-hes my sanctum.

Pritisurgh, Pa.

PITTSBURGH, Pa.

STEWED PARROT.

STEWED PARROT.

ONE of my long cherished anticipations was at last to be realized by a trip in Mexico, in making acquaintance with the parrot tribe in its natural state.

Since boyhood I had ch-rished an antipathy against all the squalling, whistling, sluggish, stupid race, and I fully intended to even up on some unfortunate if I could once get him before my gun and fairly flying.

My first protracted trip in eastern Sonora and western Chihuahua, being p incipally in the plain country, or in mountains not heavily timbered, was fruitless, although I never failed to look for the game.

On returning to the city of Chihuahua, and during preparations for a trip to western Durango, I happened to call one morning at the rooms of one of the first conductors of the M. C. R. R., and there found either even or nine of the usual green-bodied, yellow-headed Mex can pirrots, ranged on a pole on one side of the room, but none of the family at home. Returning to the street I met Mr. L., the conductor, talking to some of our mutual acquaintances. After the u-ual greeting, I explained to Mr. L. my having been at his rooms, and not finding him or any of the family, and innocently queried, "By the way, why do you have so many parrots?"

He answered, truthfully I hope, "On, because I like them."

"Why, Mr. L., are they good eating?"

way, why do you have so many parrot-?"
He answered, truthfully I hope, "On, because I like them."
""Heat! I would just as soon eat a baby as one of my parrots."
Our friends laughed, as Mr. L.'s parrot hobby was well known to them, but his answer did not deter me in the least from my full purpose of some day dining off parrots, even at the risk of being considered canni alistic.
At last the home of the parrot was reached and we were encamped in the Arroyo de los Friales, directly at the castern base of the Sierra Madre, in Durango, with frowning bluffs on either side and the mountain hights as a background, riven by the arroyo, whose sparkling waters flowed past our camp. The hights were well covered with large pines, while around us was a grove of oaks, furnishing fine shade and plenty of fuel, for fire is necessary for comfort at this altitude of over 6,000ft., even in the months of April and May.

The repeated calls, "Parrots," "Parrots," from some of our men had several times induced me to grasp my gun, but the birds were invariably passing high in the air, for the sleepy, sluggish, crawling parrot in his native wild is a bird of action, strong of wing as a hawk, and circles for hours in the blue ether of the mountain hights, his discordant cries reverberating from cliff and crag, and what is more, he is a wary bird, not usually to be caught napping, as I found by after experience.

One morning, however, just as we were at breakfast, a flock descended in a small pine tree and began tearing apart the cover in search of pine nuts, their favorite food. Snatching my gun, I was soon under cover of some bushes and wending my way down the arroyo, reaching shooting distance just as they were alarmed by a Mexican returning with our horses and mules. As they arose I made a fine double and with my game returned to camp, more elated than I remember having heen, even when a boy, just after a successful shot at ducks or grouse.

The boys, after a short examination, wanted to undress the birds, having a natural curiosity t

The boys, after a short examination, wanted to undress the birds, having a natural curiosity to see how a parrot looked without his gorgeous plumage, and a further desire to decorate themselves with the long green

ther desire to decorate themserves with the long green feathers.

Naked, a parrot might—minus head and feet—be mistaken for some variety of the duck family; a duck that had been unfortunate when young in being reared on dry land, which had crooked and destroyed the symmetry of its legs, and in being stepped on, which misfortune had acted very unfavorably on its graceful figure.

The game was finally turned over to Dr. Allen, the colored cook, with orders to prepare for dinner by cooking thoroughly, as they might be old; for an examination of their beaks and tongues had been made without finding any teeth, and neither the Doctor nor I could be positive in regard to a parrot's age from other evidence.

Returning from field work at midday, dinner was soon on the table before us; stewed parrots entire, dark with richness and exuded juices, occupying a prominent place.

My assistants looked longingly toward the tempting morsels, so in generosity they were asked to share both the birds and my realization of the long-expected day of triumph when I could make game of the parrot, instead

of being the fool game of some poll whose cracked voice had misled my attention.

Dr. Allen solemnly averred that they had been cooking some four hours, but fork and knife would not make an impression; and while anxious to know how the Doctor had cleaned them, I asked no questions, but strongly suspect that the Doctor must have bored through some soft spot with a gimlet to have made an opening.

The Doctor was ordered to keep them simmering until supper time, and did so, for remaining in camp with some calculations, I knew the fire was kept up. At supper the birds appeared again. This time a sharp knife and skillful management would leave a mark, but were insufficient to furnish a taste around. Further orders kept the stew pot on the fire until bed time, and from daylight until breakfast, and them our game was not overdone, although thoroughly cooked. Success crowned our efforts at mastication this time, and the victory was gained, but as to the distinctive flavor, now that several years have passed, I cannot be positive, but think a piece of vulcanized raw-hide would resemble it, especially if the hide was smoked, for the parrots certainly were. Several pollies were killed afterward, but no attempt made to use them as game by any of the party, as their curvosity and my antipathy had both been appeased.

Several varieties of parrots are to be found in the Sierra Madre, some of them not larger than sparrows, all frequenting the immense pine forests, and feeding on the pine nuts.

The climate is remarkably even, with summer cool and

pine nuts.

The climate is remarkably even, with summer cool and wet and winter dry, but ice and snow are not infrequent, and the parrot has chosen a favored spot to live out his century. Some of the summer varieties I would consider preferable as game birds, inasmuch as there would be less of them to dispose of.

J. V. B.

AIMING THE SHOTGUN.

JONATHAN DARLING, of Nicatous Lake, Me., who was arrested last November on the two charges of hunting deer on Sunday and hounding deer, was convicted and fined. From this he appealed to the Supreme Judicial Court, held in April. In the meantime he endeavared to persuade the principal witness for the prosecution by an offer, in writing and otherwise, to not appear against him; but the warden was not purchasable; and when the case came on, Darling was tried on one of the complaints and found guilty. He then settled up the whole matter, paid his fine and went home.

A Loon in a Cornfield.—Windsor, N. C., May 20.— Editor Forest and Stream: One day last week Mr. Wat-son Tayloe, a farmer living two miles from this place, found in his cornfield a loon. The question is, how did he get there? The field is a mile from Cashie River and thirty miles from Albemarle Sound, which is the nearest point where they are found. It was brought to town and liberated in the river.—Cashie.

A BOOK ABOUT INDIANS,—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—Adv.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM,

Sea and River Hishing.

FISHING NEAR NEW YORK.

POCONO.

POCONO.

WE were off for the 1:10 P. M. train at Hoboken—Dr. Levering, Dr. Hornung, Counsellor W. C. Spencer and the subscriber. Visions of large trout had been dancing before our eyes all the winter, and where better to find them than in the streams of Canadensis and the Pocono range? Dr. Chas. E. Denhardt, little less successful in the mountain brook than he is in the sick chamber, with Messrs. Kraft and Imhoff, well known druggists in New York city, had preceded the party a couple of days as awant couriers to prepare the way and let the denizens know that we were coming. How the professions do like to get away from the cares of business and indulge in the gentle art—more especially they of the medical and dental professions. And it is a good thing to have them along, as will be explained later on.

We were cosily fixed in the smoking car and bowling along speedily and almost noiselessly on this well-conducted road, when we were approached by a fine-looking gentleman who evidently had Fontinals in his eye largely developed. Upon hearing our destination he informed us that he had been up that way the week before and had caught to his own rod 200 trout, not one of which he saved less than the 5in, Walton regulation. He told us of his fishing in Norway and Canada and Maine, and of the Paradise Club, of which he is a member, and of the Paradise Club, of which he is a member, and of the big trout in those celebrated regions; but he said that in no case witbin access of New York city had he found any trouting equal to the streams around Canadensis. We soon found that he knew considerable about trout. He showed us his fly-book, and picking out the smallest in the large and varied collection, a little mite of a thing, a light brown body with dun-colored wings on a No. 12 hook—a gnat and nothing else—he said he had caught all his fish on that. He gave us one of the midgets, and we found it the very thing. Pennsylvania trout, at least early in the season, will not take a large fly, no matter how made, colored or thrown

ward.

But few fish, and those small, were caught before the bell sounded for supper. About this time Messrs. Kraft and Imhoff and Dr. Denbardt came in. They had been down the Broadhead after big fish. They showed some fine ones, but not nearly as many as they had captured in the Bushkill the day before. Dr. Denhardt is a successful fisherman, and his skill as a physician also now comes in good play. Miss Jenny Crane had been complaining all day. He pronounced it tonsilitis. He succeeded in breaking the fever and rescuing our fair invalid from what might have been a severe and protracted sickness.

ceeded in breaking the fever and rescuing our fair invalid from what might have been a severe and protracted sickness.

In the morning Drs. L. and H. started for the Bushkill. Counsellor Spencer and the undersigned were driven up the road some three miles to fish down Goose Pond Run. We found a good many trout in this brook, but small, something like half we were compelled to throw back, being fingerlings only and under the regulalation size. We tried our new \$3 split-bamboo. It proved a good fly-rod in open water when kept dry, but a poor thing in the brush, as what fly-rod is not.

Our expedition the next day was a buckboard ride toward the headwaters of Bright's Creek or the little Bushkill, some seven miles over the roughest and most abominable road ever cut through a wood. We reached Mud Creek, a small'stream that empties into Bright's. Here we proposed to commence operations; but what did our eyes see on a board on a tree close by the bridge but this: "Notice. All persons are forbidden trespassing by fishing or hunting on any grounds owned or leased by Joseph Brown." Just then another fisherman came along from up the brook. We asked him if Mr. J. Brown owned or leased the land thereabouts and contiguous to said brook. He said that "the didn't know." As Mr. J. Brown's domicile was some mile and a half distant through the woods we concluded that Mr. B. might own or lease land somewhere, but that there was not sufficient evidence, so our Counsellor Spencer averred, to show that this particular stream was covered or intended to be covered by said J. B. A fly tossed lightly over the bridge was eagerly seized; a five-incher was landed and the die was cast. We found the fish numerous, but small, until we struck the fork below, where they increased in weight very materially; but no very large ones were captured—they ran about 6 to 80z, only.

We left the stream about 5 P. M. with very satisfactory creels. What we might have done had we gone earlier and fished down the main stream, or Bright's Creek

proper, there is no telling, but I have no doubt each one could have more than filled a No. 3 creel with good-

one could have more than filled a No. 3 creel with goodsized fish.

Dr. Hornung had left us the day before with 46 trout,
his own catching, and he went off proud enough, determining to return again in May; and so say we all of us.
The next and last day the Counseller and Dr. L. took in
the main or Broadhead Creek. The subscriber had had
enough and as he had in his possession the largest fish,
13½in., with two of 12in., he merely looked on and
awaited developments. On this day happened one of the
richest episodes of our trip. The Counseller is not exactly
sylph-like in his proportions, in nautical phrase he would
be called square-rigged, and with his immense rubber
boots up to his waist and his little Dutch wool hat stuck
full of leaders and flies, over a round jolly face, is rather
an interesting specimen on land; but when he slips off a
boulder and takes a header in a deep pool, to come up
blowing like a porpoise, and getting a footing on the
treacherous rock only to go over again over his head in
that pool—well justice cannot be done to the scene. How
Dr. L.'s cachination did echo in that resounding glen.
The Counseller is a too enthusiastic fisherman to mind
such little things, and he kept right on down the stream
in his phlegmatic way; no audible language escaped his
lips to our ears, what he thought or said mentally is
another thing.

They day was cold and raw, and but a few trout would
rise to a fly. They got a few to add to our already ample

lips to our ears, what he thought or said mentally is another thing.

They day was cold and raw, and but a few trout would rise to a fly. They got a few to add to our already ample supply. Had we had better weather, like the week before (but then it is proverbial that Dr. Levering always brings a storm for himself and party when he is on an outing), we might perhaps have caught a few more fish but we had enough for home consumption and several packages to friends. We all propose another trip in May.

Mr. Kureau, teller in the Bowery Savings Bank and one of our part last year, has an engagement with Turner, the bear and deer hunter of that region, for a rattlesnake hunt in June. Turner knows of a den where, he informs Kureau, he can capture or kill from 100 to 500 in an hour. Levering, who loves snakes so well (a great way off), will not be of the party. We think some of joining the party, as we have not interviewed a rattler since our sojourn among the Chippeway Bluffs, in Wisconsin, more than 30 years ago. They say the oil is a great specific for rheumatism.

A CAPE FEAR FISHING POINT.

Editor Forest and Stream:

The warm summer days now upon us bring to mind the summer vacation and serious attacks of spring fever. It is a little problematic whether I will get my vacation this summer, but I had one last summer that I will not soon forget. In search of health for my wife I went to North Carolina, and first tried Asheville, a beautiful city and a noted health resort. We soon grew tired of the monotony of a place whose daily routine was eat, sleep and ride, and we set out for the coast, our destination being Wilmington. Apparently no one ever goes to Wilmington of his own free will, for no facilities are furnished for getting there. The trains all miss connection, and a ninety-day note would be barred by limitations before the trip was over. But we will pass over the dreariness of that trip through pine woods, occasional occasional tobacco fields, and patches of bumblebee cotton, so called because a bumblebee could sit on the ground and suck the top blossom, and assume that we have arrived at Wilmington, and being strangers are piloted to the worst hotel in the universe. There is a good one there, the Orton; but alas for us, we did not find it the first night. After a night spent on a mattress stuffed with pine straw and containing more inhabitants than ancient Jerusalem at the Passover, we started on a neat little steamer to Southport. This is a little town at the mouth of Cape Fear River that had brilliant prospects at the beginning of the revolutionary war and has never changed since. The Government has built a telegraph line to the life-saving station, and that and the steamer are the sole connecting links between it and the outside world. As soon as the steamer landed it was overrum with Senegambians of all shades of blackness seeking for baggage, and after a little swearing at the too officious volunteer porters we find ourselves at Miss Kate Stuart's hotel. This establishment i

his catch will have variety enough about it to sausty any one.

The shooting is said to be good in the winter. The marshes then had a considerable quantity of water fowl in them, but I was not familiar with the game laws and did not shoot any. I was content to sail and fish with Capt. Pinner, and hope that fate will soon give me another vacation with him for a companion.

UNO.

To Salmon Anglers.—T. J. Conroy, 65 Fulton street, N. Y., has a lot of fine salmon rods, assorted kinds, which he will sell at a sacrifice until stock is reduced. Don't miss the opportunity.—Adv.

NEW ENGLAND FISHING.

NEW ENGLAND FISHING.

PROSPECTS are brightning concerning the Maine fishing season. The weather has been very cold thus far, and the sportsmen who went off early have suffered from the elements, while the fishing has been backward. But better news begins to come in. In the first place, a run of salmon began at Bangor on Saturday. A gentleman from Boston—I did not get his name—an enthusiastic salmon angler, returned from that point on Sunday. He had taken two salmon on the day previous, making three for him this season, and he was very happy over it. Mr. Mitchel, also of this city, was also having good sport. In fact, some six salmon were taken there on that day. A good run is expected there this week, and Mr. Mitchel and Mr. Fred Ayer are on the ground.

The trout fishermen are beginning to have good sport. Moosehead waters and the waters of the upper Kennebec are getting down to a more reasonable pitch, and the records of trout will soon begin to pour in. Mr. E. H. Clapp, a long-time fishermen at the Rangeleys, took a 5ilbs. trout from Mooselucmaguntic, last Tuesday, almost the first trout of any size taken from that lake this year. A few days later, Mr. E. G. Rice, of Lawrence, Mass., took a 7lbs. trout at Bemis, followed by one of 6lbs. and several smaller ones. But the banner catch thus far this season came out on Monday, and was on display in Appleton's window, on Washington street. It was a 104lbs. perfect brook trout, 27iin. in length. It was a male fish and wonderfully brilliant for a spring trout. It was taken last week by Mr. G. W. M. Guild, of Boston. He, with Mr. Walter H. Fox, of New York, and last, but by means least, the well-known sportsman Mr. Edgar W. W. Curtis, of Meriden, Conn., have been stopping at the Middle Dam, Richardson Lake, for a couple of weeks; they were the first ones in to this lake. They had to waithree days at Andover for the ice to go out of the lake. The house at the Middle Dam was not opeu when they got there, but with the riguides they made themselves as comfortable as pos

No more genial and thorough sportsman lives than Mr. Whitney, and yet he finds no sport that pleases him more than at the mouth of Mosquito Brook, on the spet where he has camped nearly every season more or lers for 30 years.

Hon. E. B. Stoddard goes to Lake Mooselucmaguntic this week. He goes to the home of the Oquossoc Angling Association, of which party of anglers he is a member. Senator W.P. Frye, of Maine, with Senator Chandler and the Hon. Arthur Sewall, are at Senator Frye's camp on Lake Mooselucmaguntic. Even the tariff bill has to be dropped by honorable senators for a week at the dear old camp. Hon. E. B. Haskell, one of the senior proprietors of the Boston Hervald, is at the Oquossoc Association camps, and at his own camps on the same lake, as the case may be. E. A. Wheelock and party, from Putnam, Conn., went in to Rangeley last week. Harry Gardner, of the dry goods commission firm of Smith, Hogg & Gardner, with F. C. McDuffee, of the Everett Mills, Lawrence: Charless McDuffee, of the New Hampshire Print Works, and Mr. W. M. Smith, of New York, left for Rangeley Lake on Saturday. Mr. Gardner is a sportsman of experience in those regions, but for a couple of years business has kept him at home.

Mr. R. Foster, of the firm of Foster & Weeks, with his partner Mr. Weeks, Mrs. Weeks, Mrs. Foster and a daughter of Mr. Foster, made a successful catch of tautog last week. The party went down to Oak Bluffs, just below Rocky Point on the Shore Line. They chartered a boatman to take them out. "Such fishing," to use the words of Mr. Foster, "I never dreamed of." It seems that they caught more than they knew what to do with in one afternoon, and they went again the next morning with equally good luck. The ladies caught tautog weighing up to 50lbs. The party was very much pleased with the trip, the entertainment and the skill of the owner of the craft. They were having fine sport on the second day, but he warned them to "up lines," and they were soon away and comfortably quartered an hour later at the house of t

streams, several of them, in that vicinity the other day.

Mr. Smith is a good sportsman, and has a record
of a 6-pound trout at the Rangeleys; but on this
trip he did not get a trout that he had the face to show.
They were such little two-year-old fingerlings that he
threw them back again, and gave up pool after pool in
disgust. But on his return to the village he found a
record of 75 trout taken that day by another party, and
hardly one that was over six inches in length. He also
learned of a party a few day before having scoured the
streams in that vicinity, with a record of 700 trout, all of
them very small. Mr. Smith naturally asks if New
Hampshire has a law regarding the size of trout caught,
and if to, where are the fish commissioners?

The tackle trade is good and the sportsmen are happy.
"It costs like the mischief though!" was the remark of a
salmon fisherman at Litchfield's yesterday. The lease of
a stream costs from \$400 to \$1.000, and Mr. Litchfield
mentions a salmon outfit sold costing over \$900.

SPECIAL.

THE NEW HAMPSHIRE SEASON.

COLEBROOK, N. H., May 17.—Fishing in this vicinity is off, decidedly off, too: the "indications" of an early season have failed to materialize. We have had nothing in the shape of weather but cold rain storms this month, and as a consequence streams are high, ponds are high and hardly clear of ice, though the past few days have pretty much done up the ice.

A trip to Diamond Ponds Thursday, found mine host Noyes on hand with one of his famous trout dinners. He reports very few trout taken as yet, one or two good catches have been had from the small pond, but there was still quite a quantity of floating ice on the large pond, and fishing was out of the question. It will be several days before good fishing will be had and the fishermen there are impatiently waiting the good time coming. We do not hear a sound from Connecticut lakes, so conclude that the same condition of things prevails in that quarter.

fishermen there are impatiently waiting the good time coming. We do not hear a sound from Connecticut lakes, so conclude that the same condition of things prevails in that quarter.

Quite a number of fishermen have been here this week, on the way to one or another of the resorts reached from this place. Among the number I noticed Messrs. D. A. Heald, of New York, and M. R. Emerson, of Boston, who with "Spoff" Flint, for guide, left here this morning for their cosy little camp at the Greenough Ponds, in Errol; and the Messrs, Farr, of Holyoke, Mass., in their annual pilgrimage to Camp Diamond; while one or two parties have gone through the Notch to the Magalloway and Rangeleys.

I understand that Mr. Walter Aikers, of Errol, has opened a sportsman's camp at the Greenough Ponds. I have often wondered why some one did not open such accommodations there, as there is excellent trout fishing during the earlier part of the season.

COLEBROOK, N. H., May 24.—Fishing in the Diamond Ponds has begun in good earnest. Parties from there yesterday and to-day report excellent sport, and every one is correspondingly happy. Landlord Noyes's accommodations were taxed to their utmost last night, and to-day a party of ten from Manchester, N. H., and vicinity left here for the Ponds. They will be well cared for, however, as "Mart" can always find room for "one more." The fish in these ponds are not large, running from 4lbs. to 34lbs. Most of them were taken with bait, but yesterday afternoon and evening a few good ones were taken with the fly. In a week, with favorable weather, fly-fishing will be good. Up to yesterday very few fish have been taken at Second Connecticut Lake, but doubtless the same favorable weather has brought about the desired results there as well. Uncle Tom has quite a family of anglers there waiting the first run. Fred Flint from Wilson's Mills, Me., is in towr and reports the logs nearly out of the Magalloway, and that the river will be clear of them above Azescohos Falls by the middle of next week, and proba

CHICAGO AND THE WEST

CHICAGO AND THE WEST.

CHICAGO, Ill., May 9.—The austerity of the season shows some signs of mitigation, and there is a probability that during the week there will be some fishing done and some fish caught. Indeed, the season for the Fox Lake district is already open, and baskets of bass are beginning to come down. Of these none worth mention come to mind, except that reported by Mr. J. M. Clark, of 20 bass taken in one day at Crystal Lake, total weight 45lbs. By June 1 the fishing in the lower Wisconsin lakes should be good.

I saw a letter to-day from the M. & R. station agent at Republic, Wis. He says that as he was writing (May 17) a heavy snowstorm was raging. Up to this time the streams had all been high and cold, with no fish taken on several trips by residents of the region. He counsels holding off till after the first of June at least.

Some days ago I asked Mr. J. F. Lee, agent of the Canadian Pacific at Chicago, something about the country above Duluth and northeast of Vermilion Lake. Mr. Lee wrote to Mr. Robt. Kerr, general passenger agent of the C. P. R. at Winnipeg, and to-day received his reply as follows:

"Yours of 30th April relative to fishing ground in western Ontario. Please see the inclosed from Mr. Tel-

the C. P. R. at Winnipeg, and to-day received his reply as follows:

"Yours of 30th April relative to fishing ground in western Ontario. Please sea the inclosed from Mr. Telford, who is a genuine sportsman, regarding this fishing ground. Guides can be readily got at Rat Portage, etc., and camping outfits can be purchased in Winnipeg at reasonable prices."

Mr. Telford's letter, written from the Treasurer's Office of the C. P. Ry., at Winnipeg, is below:

"Relative to attached inquiry, Lake of the Woods abounds with lake trout, black bass, whitefish and other less valuable varieties. Rainy River the same, but up the river clearer water and finer fish. Vermillion Bay much the same as the Lake of the Woods, while Summit Lake, Lake Barclay and Clear Lake have what we know as 'landlocked salmon trout,' very fine fish, and all the other varieties besides. No speckled trout west of Fort William till you get to the Saskatchewan River."

There is a refreshing railroad brevity about this, but it seems likely there is some fishing up there, although I did not learn what I wanted at all. There is some country up there off the old Hudson Bay water trail which is certainly better than these well known waters. Readers may note the "landlocked salmon trout" item, however.

A year or two ago I made mention of this fish as being found in Burntside Lake, near Ely. That is in the same region practically. I wonder if this is the same fish as the "landlocked salmon" found in Trout Lake. Wisconsin,

A year or two ago I made mention of this fish as being found in Burntside Lake, near Ely. That is in the same region practically. I wonder if this is the same fish as the "landlocked salmon" found in Trout Lake. Wisconsin, which only bites in the early spring?

I believe I mentioned that my friend Mr. Harryman and myself were about to finish the explorations of the mystic Salt Creek begun by Mr. Loyd and myself late last fall. There is always a pleasure in hunting out a new stream which nobody knows anything about, and here was a stream right near Chicago : "but which diligent inquiry could develop no information at all. Mr. Loyd and I had thrust ourselves late one night upon the hospitality of a delightful old couple of Swedish folks whose pretty little farm lies back in the hills from he Little Calumet. The old farmer told us there were bass in Salt Creek, and the stream looked like it. We memembered that he spoke of Chesetron as being a few miles distant from his farm, but we neglected to learn whether there was a station nearer, and we did not have any idea how to find the farm from Chesterton: but we thought we would just take a lay out in the country and try to find those very pleasant old people, and go fishing in the creek above their farm. Accordingly we bought it ickets to Chesterton, which is just forty miles southeast of Chicago, and on the Lake Shore & Michigan Southern, instead of the B. & O., as we had supposed.

I had never been down in that country over the Lake Shore road before, and it all looked strange to me, although I was vaguely conscious that we were probably getting a good way further down than Mr. Swanson's farm. At length we asked a farmer boy on the train which way it was to the junction of Salt Creek, and he said there were best shere half as long as his arm, especially at the mill dam at Gossburg. That was about seven or eight or ten miles from Chesterton, but if we would get off at the next station, Porter, we would save a mile or so. He could not give us definite directions as t

whole set tement—and were directed to Mr. Henry Trowe, who kept the creamery on the hill just above the will dam.

"Creamery?" exclaimed my friend. "Did I hear cream? Cream—milk—butter—come on!"

We came on, and finally argued Mr. Trowe into a consent to kee a us over night. Mr. Trowe keeps a little store beside the creamery, and also keeps the post-office, which is about as big as a hat-box. It seems that this post-office is now called Salt Creek instead of Gossburg. All in all, here was a delightfully quiet and beautiful country corner, and we blessed our lucky stars since starting out for no one knew where, we were now arrived at so pleasant and happy a place as this. When Mr. Trowe's good-looking helpmate had called us to supper, and we had eaten three or four dozen eggs and a ham and a few pounds of gold-fine butter, we looked at each other in silent bliss, and arose as one man to go out and dig angle worms, for the voice of the water was calling from below the hill, and neither of us had wet a line this year.

Alas, when we went down to the stream to try for a little of the fishing that couldn't wait till morning, we found the gates of the dam raised and all the stream below a boiling flood. There was a leak in the dam to be repaired and the water had to be drawn off. We were disconsolate, but took heart of grace when they told us that the gates would be closed in the morning and that the fishing would then be better than if they had not been opened.

This we found to be the case. All night long the roan of the waters sounded in our ears. Once we heard it raining in the night and groaned exceedingly; but our luck staid with us, and in the morning it was warm and clear. Long before breakfast we were on the banks of the pool we had selected, and we actually had a bite of two and caught the first fish of the season, a small but healthy sunfish. After breakfast we were not hee banks of the pool we had selected, and we actually lad a bite of two and caught the first fish of the season, a small but healthy sunf

The gates were shut down at about 10 o'clock, and after that the water fell five feet in a few minutes. As had been predicted, numbers of fish had run up with the high water, and these now began to bite freely. We caught about one hundred, and then began to quit fishing and go to fooling around. We took no bass, although we tried frog and spoon very thoroughly. We saw bass in the stream three or four times, but they refused the frog even when it was drawn across their noses. They were feeding on minnows. If we had had some good creek minnows the could have caught some bass, but we had no way of taking minnows since we could catch none on the hooks. On two different occasions bass bit at our worm bait. I lost a good small-mouthed bass which bit at the worm. The fly tied on the leader above the bait got snagged on a timber, and although the bass snapped the hook of the fly square off, he tore his jaw so badly doing it that he finally flopped off, after we had him fairly killed and were admiring him as he lay on top the water.

the book of the fly square off, he tore his jaw so badly doing it that he finally flopped off, after we had him fairly killed and were admiring him as he lay on top the water.

At dusk I fell to fishing the pool with a fly, using a single coachman bass fly. I caught six croppies in four minutes, and then they called me and made me come in to supper, which I did not want to do. It was too dark when I got back to the water, but I believe one could catch bass there with the fly in the evening.

Now about the bass in this stream—for it is really and truly a bass stream that we have discovered. Two years ago the mill dam broke here and the pond was drained dry except the creek bed. What a slaughter of fish was there! Thousands and thousands of bass, many weighing as high as 7lbs., died on the mud flats, and the stench of the dead fish filled the air almost unbearably. For it is true that all this time, for no one knows just how many years, these bass had been growing and multiplying in this wild pond; and this pond here within 40 miles of Chicago, unknown, so far as I can learn, to any Chicago angler, was really a finer bass water than any to-day lying within that distance of the city! The country people told us about the strings they used to catch, and every one knows how crude are the methods of many of these anglers. They told us, beyond all, of the tons of bass that met their death on the dried up pond. There is no question that they were full of large bass. Mr. Trowe told us that a few anglers, from what city he did not know, had told him that in all their travels they had found no such bass fishing as there was in the old pond.

A great many of these bass went down the stream when the dam broke. Where are they now? They are either in the Little Calumet or Salt Creek. We saw a few of them. We thought that there were a good many in the pool, from the way the schools of minows acted. I believe that in the summer, or even better in the fall, these bass will fall back down the creek which lie for six or eight miles

folks do.

Detroit, Mich., May 20.—The bass have not yet begut to run on the St. Clair Flats above here to any exten They are reported to be biting on the main lake below about Pelee Island. Every one here complains of the col and backward spring.

E. HOUGH. -The bass have not yet begun

PENNSYLVANIA ANGLING.

PENNSYLVANIA ANGLING.

A CIRCULAR has been issued by the Pennsylvania Fish Protective Association calling attention to the important changes in the State law relative to fishing, which were approved about a year ago. The use of nets of all kinds is everywhere and at all times prohibited except for the capture of shad, herring and sturgeon. Fish baskets and all other fixed appliances for taking fish are unlawful and may be destroyed by any Commissioner, warden, deputy warden, sheriff, deputy sheriff, constable, policeman or any special officer of the Commonwealth, and any of these representatives of the State may arrest violators of the law and bring them before any Justice of the peace, magistrate or other legally constituted authority. The penalty for violating the law is a fine of \$600, or six months' imprisonment, or both, and the prosecutor is to receive one half of the fine. Rock bass (Ambloptites rupestris) and wall-eyed pike, or Susquehanna salmon (Stizostedion vitreum) cannot be lawfully canght or killed within two years from the date of the passage of theact, May 22, 1889, under a penalty of \$10 for every fish of these kinds caught or had in possession.

On Wednesday, May 21, Wissahickon Creek was opened for fishing on Wednesdays and Saturdays thereafter. Black bass, however, cannot be taken until May 31, the limit of the close season. Between May 1 and Sept. 1 carp cannot be lawfully caught. Rainbow trout and sunfish are the only game fishes available for the angler until May 31, and in addition to these, catfish and eels may be captured.

Schuylkill River and its tributaries have been thoroughly stocked with fry of the wall-eyed pike, nearly 2,000,000 having been deposited in these streams May 15 and 16. Coal dirt is a very serious source of pollution in the Schuylkill and forces innumerable black bass and carp out of this river and into the Delaware. On this account the Tulpehocken, Perkiomen, Manatawny and Pigeon creek received two-thirds of all the fry deposited and the main river only 800,000. Th

the species is an old inhabitant and probably native to the stream. The white pike mentioned by DeWitt Clin-ton in his description of the Otsego bass appears to have been the wall-eyed pike of the present day.

THE BARRACUDA OF CALIFORNIA.

THE BARRACUDA OF CALIFORNIA.

PEADERS of Forest and Stream will recall a graphic account of barracuda fishing by J. C. Van Hook in our columns Oct. 31, 1889. We are now able to supplement this article by some notes on the life history of the fish, recently published by Dr. C. H. Eigenmann. According to Dr. Eigenmann the barracuda (Sphyrcan argentea) is one of the most important food fishes of California. In snmmer it frequents the entire coast, but seems to be most common southward. In winter it leaves the California coast almost bodily and is found in Lower California. At San Diego, in January, 1890, the species was not seen. In February, after a few days of especially fine weather, a few were taken on several occasions. In March, 1889, few were caught until the 27th, when they were abundant and continued so, except at intervals, during the summer. The spawning season is in July. The adults seldom enter San Diego Bay, but the young, measuring about a foot in length, come into it in large schools in spring, and great numbers are destroyed by scines or Chinese bag-nets. The troll, consisting of a piece of bone to which is lashed a hook holding a piece of white rag, is the only implement used in this fishing. The lines are dragged behind a boat resembling a Columbia River salmon boat, and in light winds the catch is always small. The largest take in one day was 1,100, by two men. The average catch is about 40 to a boat. The average weight of the fish varies from 6 to 12lbs., and length from 2½ to 4ft. The barracuda is a surface feeder and subsists principally on the anchovy (Stolephorus ringeus). rus ringeus).

WATER LIFE.

Occasional Observations on the Fishes in the Aquaria of the U.S. Fish Commission.

CARNIVOROUS FISHES IN CAPTIVITY.

CARNIVOROUS FISHES IN CAPTIVITY.

THE confining of carnivorous fish of different species and of varying sizes in one aquarium is at times unavoidable from want of room. Two large-mouthed black bass (one about 10 and the other 12in. long), were from this necessity kept with a number of fish of other species, such as white bass, crappie, red-eye perch or rock bass, sunfish, etc. From time to time individuals of the group were found in the mornings dead, often without outward evidence of injury, and sometimes badly bitten, but always having been in good condition the previous evening.

The black bass were transferred to brackish water occasionally, to rid them of fungus, and it was remembered afterward that on these occasions the mortality ceased. Recently they were transferred to brackish water, and after some time white perch were put in with them. The next morning about a dozen of the perch were dead and the remainder gave evidence of rough usage. The bass were immediately transferred to fresh water, and the next morning a white bass about 8in. long was dead, and another about the same size injured. All the small fish were then removed. Two days later a fine red-eye, 8jin. long, in the best condition, and evidently a male from the development of deep purple margins on the ventral and anal fins, evidently nuptial coloration, and which it was thought could hold its own with the black bass, was found dead, badly lacerated, and giving evidence of having been swallowed and again ejected. The larger black bass was also evidently a male, as it nau developed creamy margins to the ventral and anal fins which were undoubtedly sexual characteristics. The smaller black bass has its lower jaw broken. The bone has never reunited, and at every movement of the mouth the broken ends of the jaw, now covered with skin, wobble up and down without much regard for one another, and apparently without cause, are due to the voracity or pugnacity of individuals, the manifestations of which are often not apparent throughout the day, when

THE EGGS AND YOUNG OF THE TOADFISH.

The eggs of the toadfi-h are generally attached to the under side of a stone not resting on the bottom. They are about as large as a small pea or a buckshot. When the young are hatched they still remain attached to the stone, by the sac, for some time, one or both (it is probably not known which) of the parents remaining near to protect them. They present an amusing sight, looking as though glued to the stone, with the head and tail free and wriggling about, as if learning to swim. Sometimes a hollow vessel or drain-tile, which has been lost or thrown overboard, will be fished up at Woods Holl with a lot of the eggs or young attached and will be put into an aquarium, where they are a novel sight.

THE OYSTER CRAB.

At a late meeting of the Philadelphia Academy of Natural Sciences Dr. Benjamin Sharp stated that the commensal crab of the oyster (Pinno theres) could not support life independently if separated from its host. On reading this it was remembered that on Nov. I, 1889, quite a number of these crabs were brought to the Central Station aquaria by a Mr. Rau, a Washington dealer in oysters, who very kindly saves what interesting things he may encounter in his oyster heaps. They were all at the time full of eggs. It appears that it is only the female crab which lives in the oyster, the male hanging around outside. These female crabs were placed in three hatching jars holding about one gallon of water each, and having a little seaweed (Ulva). No attention has since been paid to them, but it was apparent from time to time that they were decreasing in number. In two of the jars there were crabs of a small species common on the oyster beds, but with hard shells. In these jars all the oyster

crabs have disappeared, but in the third there is still one specimen that has lived from Nov. 1, 1889, to May 20, 1890, almost seven months, and is now in fine plump concondition. The only food available for it during this period was some minute vegetable organisms, which are so abundant in the water as to render it opaque and the other crabs. It is as white as when it came from the oyster, and if it had fed on the green organisms it would most likely be tinted by them. Can it be possible that it has devoured the others? Those in the other jars were devoured no doubt by the hard crabs.

WM. P. SEAL.

THE NORTH WOODS.

THE NORTH WOODS.

NORTHERN NEW YORK, May 18.—The weather has been very cold and wet, causing very high water, which has been a drawback to good fishing. The water at Albany Lake is over 2ft. higher than is usual at this season, and a party just returned from there do not agree very well on the size of the catch, from which I am led to believe that it was quite small, especially as one of the party remarked to me that "it was rather a long trip to take just to see the scenery at this season of the year." Something like ten days ago two gentlemen from Low-ville returned from a trip to Woods Lake, which was very successful, they bringing out about 40lbs. of trout that would average nearly a pound. I picked one at random from the basket, and the scales showed that it weighed 14lbs.

random from the basket, and the scales showed that it weighed 14bs.

B. B. Miller, of Lowville, who is at Seventh Lake, Fulton Chain, caught a brook trout last week weighing over 3lbs., and sent it out to his family.

Two gentlemen from Utica who had been stopping with "Jim" Dunbar at Stillwater, reported a good catch below the dam, and had 20lbs. with them to show for it when they stopped at Lowville on their way home.

A party from Watertown who came out last week from Smith's Lake reported a good catch.

A guide who went to Big Salmon Lake had 30lbs. for sale in Lowville last Wednesday.

I am included in a party which expects to spend two days on the Salmon River the latter part of this week, providing the weather moderates, and we expect great sport.

providing the weather moderates, and we caped sport.

I have made several trips to ponds and streams without noteworthy success, except in the entire lack of it.

My advice to those about starting for the North Woods on a fishing trip, is to chew the bit until the last of this month, then start with all the extra vim you have stored up meanwhile.

Possibly these are the last notes I shall pen from this region in some time, as I expect to remove to Syracuse in the near future, but I hope to be able to visit this region about twice a year and enjoy the opportunities it affords the sportsman.

OSCEOLA.

affords the sportsman.

Henrik Dahl, of Aalesund, Norway, was a reader and follower of Darwin. Wishing to apply his theory of the limit of adaptability of a species to its environment, he procured a herring from a neighboring fjord and carried it home in a tub of sea water. He renewed the water daily for some time, and gradually reduced the quantity, with so little inconvenience to the herring that he concluded that the fish might, in time, learn to breathe air undiluted with water, like the cat and the man. It turned out as he expected, and the water was finally turned out of the tub of the herring, never to be replaced even for bathing. Henrik next removed the fish from its tub and placed it on the ground, where it flopped about very awkwardly at first, but soon learned to move freely and rapidly. In a little while the herring was able to follow its master without difficulty, and then it became his constant companion about the streets of the city. On a certain unfortunate day Henrik had occasion to cross a dilapidated bridge which spanned an arm of the harbor. The herring coming gracefully along, heedless of danger, now and again springing at the ephemera, for which it had acquired an especial fondness, missed its footing, slipped through a crack into the water beneath and was drowned.

Curious Facts About Fishes—Mr. Geo, H. H. Moore

CURIOUS FACTS ABOUT FISHES—Mr. Geo. H. H. Moore has called our attention to the fact that shad have been abundant at and near the mouths of many of our Northern rivers, but scarce in the upper waters. This may be largely due to the great increase in the number of traps and pounds in the bays and at the mouths of the streams, but there is no doubt that other causes have helped to produce this result. The number of large shad is remarkable; the Delaware furnished one weighing 13½lbs., and at Saybrook, on the Connecticut, Mr. Dickinson took a specimen three feet long that weighed 11½lbs., said to be the largest one ever caught in the river. It is not an nunsial thing to find 13lb, shad in the rivers of Califora specimen three feet long that weighed 114los,, said to be the largest one ever caught in the river. It is not an unusual thing to find 13lb. shad in the rivers of California, but we have not until this year heard of such enormons ones in the Eastern streams. Mr. Moore informs us, also, that yellow perch have been caught in the dirty water of the harbor of Baltimore. Perhaps they are forced into brackish water by polution of their favorite

haunts.

A LAZY MACHINE.—No matter how lazy, by nature, a fisherman may be, if only he is ingenious—to use a popular technical phrase he gets there all the same. The latest device of the lazy anglers is pictured on the membership card of the Caledonia Fishing Club. It pictures a 800lbs. fisherman lying prone on the bank and above him a contrivance, which looks like an artificial target trap. In this is secured the rod, with line out, and one of the fisherman's boots. When a fish take the bait, the rod releases a spring, which brings the toe of the boot in violent contact with the recumbent fisherman, who is then expected to wake up and hustle to save his fish.

A BAKER'S DOZEN.—Charlestown, N. H., May 19.—Too cold and too mnch water for good trout fishing yet; but many have been taken. I got a baker's dozen May 1, from 6in. to 9in. long, with at least a dozen fishermen ahead of me on the brook. They began at 4 A. M., so report says. I did not go until noon.—Von W.

St. John, N. B.—The first salmon of the season was taken on Monday, May 12.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leftingwell's book, "Wild Fow! Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

"NESSMUK."

FROM an appreciative sketch of "Nessmuk" in the Wellsville, Pa., Republican-Advocate, we take these

TROM an appreciative sketch of "Nessmuk" in the Wellsville, Pa., Republican-Advocate, we take these paragraphs:

Mr. Sears early learned the shoemaker's trade and pursued it save when enjoying the solitude of the forest. When a young man he shipped ahoard a whaler for a three years' cruise, but the vessel put in at Fayal Islands, and he, sick with development of the test of t

CRAGS AND PINES.
Who treads the dirty lanes of trade
Shall never know the wondrons things
Told hy the rugged forest kings
To him who sleeps beneath their shade.

Only to him whose coat of rags Has pressed at night their royal feet, Shall come the secrets, strange and sweet, Of regal pines and beetling crags.

For him the Wood-nymph shall unlock The mystic treasures which have lain A thousand years in frost and rain, Deep in the bosom of the rock.

For this and these he must lay down The things that worldlings most do prize, Holding his heing in her eyes, His fealty to her laurel crown.

No greed of gold shall come to him, Nor strong desire of earthly praise; But he shall love the silent ways Of forest aisles and arches dim.

And dearer hold the open page Of nature's book than shrewdest plan By which man cheats his fellow man, Or rols the workman of his wage.

A correspondent, "A. L. L.," who in our issue of Jan. 20 last mentioned "Old Jim Injun," tells us that this Indian was connected with that same remnant of the tribe, the Nepmuks, that "Nessmuk" wrote of. He adds: "I think there are a very few members of the gang still living scattered around in that part of the State and in Connecticut. A number of years since an old squaw named Rhoda Ja-ha, daughter of old Chief Ja-ha, was living with some other Indians but a few miles from where "Nessmuk" was born, but I have not seen nor heard anything about her for a long time. Some of the Indians amalgamated with the whites in our vicinity up there, and one in traveling through that section will now often come across persons having more or less Indian blood in their veins. I never blamed the Indians for hanging around old Junkamaug, for it is one of the most beautiful sheets of water that I ever saw; clear as crystal, and a splendid place for fishing or bathing. I have spent many happy days on its bosom, and always had good luck in catching fish there. Even now, when I go back to my old home on a visit I always have at least one fishing excursion over there. Last August during my vacation I was up home, and on the very last day of my stay two old cronies and myself put most of the time in

fishing in the pond. After catching a suitable number we ran our boat up to one of the headlands that jut out into the pond from the Gore, spoken of by 'Nessmuk,' built a stone oven, set our camp kettle, got the ingredients all fixed for a chowder and started the fire. How it ents all fixed for a chowder and started the fire. How it rained after we got that pot of chowder agoing! By taking our rubber overcoats we improvised a shelter and under it cooked and ate our meal. How good it was! and what a lot of it we managed to dispose of! The camp kettle was about all that was left when our feast was concluded. The weather turned out that day to be very disagreeable, but we had a jolly good time of it in spite of the rain. By the way, here is another form of the name of the pond, said to be the real old 'Injun' name: Chargoggagoggmanchauggagoggagungamaugg."

Tarpon Springs, Fla.—Rare old "Nessmuk." He was a man whom it was good to know. In the long months that we spent together, in fields and woods, and on the waters, there is nothing to recall but pleasant memories, no regrets, save that the pleasant hours spent together can never be repeated. Genial old "Nessmuk," may the earth rest lightly on him. And may his sleep be sweet beneath the hemlocks he loved so well.—Tarpon.

Hishculture.

ON THE RED SNAPPER BANKS.

THE U.S. Fish Commission schooner Grampus left Key West, Fla., Feb. 14, 1889, bound for the grounds of that famous fish, the red snapper. We put out the towing net off Fort Taylor and towed from here at intervals, catching jelly fishes, Portuguese men-of-war, several species of copepods, and many small fishes. Two green turtles which we attempted to catch from the dory escaped from us, although the iron was put into one of them. Several large pelicans were seen.

front Taylor and towed from here at intervals, catching jelly fishes, Portuguese men-of-war, several species of copepods, and many small fishes. Two green turtles which we attempted to catch from the dory escaped from us, although the iron was put into one of them. Several large pelicans were seen.

From 12 to 4 the wind blew from the S.E., decreasing in force from a gentle to a light breeze. The weatherwas clear and hot. At 6:30 we made Rebecca Light, bearing N.½W, it miles distant. At 7:40 we changed the course to W.N. W. with the vessel on the starboard tack and under full sail at the end of the watch.

The implement used in the fishery for red snappers and groupers is an ordinary cotton line, with two codlish hooks attached, which is thrown from the moving vessel by a man standing on the rail by the fore rigging. In trying for fish the fisherman holds a large coil of line to which a heavy sinker is attached; this sinker enables him to throw the line a considerable distance ahead, and he then follows it to the after part of the vessel, keeping the bait as long a time near the bottom as possible. The baits used are bluefish, porgies and groupers.

When a fish is caught the vessel is luffed and allowed to drift; a buoy is put out to mark the spot where the fish are found, and then the fishing commences.

We found that the bottom on these grounds varies, mud, sand, gravel, broken shells and coral, and hard bottom occurring within a limited area. The most life, both animal and vegetable, is found on the hard and shelly bottoms. Algæ form the principal vegetable life. Sponges, hydroids, bryozoans, starfishes, sea urchins, worms, crustaceans, mollusks, tunicates and small fishes, the animal

The red snapper moves from one ground to another, which makes the trials above mentioned necessary. As a rule, the fishermen do not go much outside of 15 fathoms for this fish, We commenced fishing on the 15th at 8:30 A. M. in 15½ fathoms of water about 20 miles north of the Tortugas, and did not catch anything until noon, dur

of 25in. The siappers were each 27in, long and weighed 94lbs.

Trials made on the 13th, 15th, 16th, 17th and 18th of March yielded only a few fish. On the 21st, three black groupers and three red groupers were captured, the former being largest. They were full of parasitic worms in the flesh and intestines. These worms infested nearly all of the groupers taken by us. On the steamer from Key West to Tampa boiled grouper was served, which I looked over and found to be full of these little worms, shrunken to very small proportions by the boiling process, and it is needless to say I did not eat grouper.

March 22, two red snappers were taken. At 6 P. M. we caught four red groupers and ten black ones. They took the hook voraciously and bit even at the sounding lead. The stomachs of the groupers contained trunk fish and crabs in various stages of digestion. Their intestines were covered with black parasitic worms. Some of the fish were very lank and lean, owing, no doubt to the presence of the parasites.

The Grampus carried on this work by running parallel lines east and west, ten miles apart, making continuous trials for fish by means of lines. The dredge was used every ten miles.

The temperature of the air and water, at the surface and on the bottom, was regularly taken. The average temperature of the air during our trip was about 70° Fahr. The water at the surface averaged 65°, and on the bottom very nearly the same. Sometimes the surface water was cooler than that at the bottom in from 15 to 50 fathoms.

There was no exceedingly rough weather; one moderate gale was encountered during the night of March 12; the vessel dragged the anchor for about six miles.

When leaving Tampa Bay two flying fishes and three devil fishes (Manta) were observed close to shore. They were going through a pass opposite Egmont Light. Three porpoises (spotted dolphin) and several sharks were captured during the cruise. The sharks did not interfere with the fishing.

While lying in Charlotte Harbor we were surrounded by drumfish, and a very novel entertainment it was to the stranger. The drumming of this fish reminded me very much of the noise made by the great American bullfrog.

The vessel staid out about three weeks at a time and then ran into port for supplies. While in port we would seine and collect on the beaches, and in this way many good things were obtained; among them were: Squirrel fish, white grunt, sailor's choice, yellow-spotted gruut, sheepshead, mullet, young bluefish, pompano, yellow-tails, channel bass, garfish (Tylosurus), sardines (Harcnqula), gizzard shad, menhaden and catfish. The sardines and catfish were plentiful. Sheepshead, pompano and yellow-tail were very scarce at Charlotte Harbor. Angel fish were quite abundant in Tampa Bay and are very good eating. We ate garfish (Tylosurus) with much relish. Large quantities of silversides, anchovies and young sardines were seined. Porpoises were seen destroying schools of the last species. Spanish mackerel were among the fishes taken in the seine. We took the cero, or kinglish (Scomberomorus sp.) by trolling with a piece of white rag for a lure. The best time for this fishing was during a light breeze, when the water was rippled. Flying fishes were often seen in the act of flying and the rapid vibrations of the pectoral fins were evident enough. The frigate mackerel is not very good to eat, because of the dark color of its flesh; but it gives the angle rare sport. We took it by trolling as in the case of the cero. They could not be caught during calm weather, but the f

PROPOSED TRANSFER OF THE FISH COM-MISSION.

PROPOSED TRANSFER OF THE FISH COMMISSION.

A Ta meeting of the American Fisheries Society, held on
Wednesday, May 14, at Put-in-Bay, Orio, a committee
consisting of Herschel Whittaker, of Michigan, C. V. Osborn, of Ohio, and W. L. Powell, of Pennsylvania, appointed
for the purpose, reported the following preamble and resolution, which, upon motion, was unanimously adopted by
the Society:
Whereas, There is now pending before Congress a proposition to change the organization of the U. S. Fish Commission, attach it, and make its chief and employees of every
grade and position subject to the appointment and removal
of the Sceretary of Agriculture, which legislation we feel to
be directly inimical and prejudicial to the progress and
proper consummation of the original intent and present
practical and efficient work of the Commission, therefore be it
Resolved. That the American Fisheries Society, which
for the past twenty years has been actively interested both
in the science and practical development of fishculture,
does most earnestly and emphatically protest against such
legislation, and therefore does most respectfully urge our
Senators and Representatives by every proper means to oppose and defeat such obnoxious enactment, and be it further
Resolved, That this preamble and resolution be printed
and sent to every Senator and Representative in Congress.

EUGENE G. BLACKFORD, Pres.,
EDWARD P. DOYLE, Sec'y,
American Fisheries Society.

UTILITY OF TROUT CULTURE.

EDWARD P. DOVILE, Sec'y,
American Fisheries Society.

UTILITY OF TROUT CULTURE.

Editor Forest and Stream:

Several weeks ago you published a brief communication from me, relative to the failure of twoit culture. As an addenda to the article a brief reply was published by you. In response to this I sent you another article on the same subject, which seems to have been mislaid. In the meantine, some geutleman, I think in one of the Territories, has also replied to my communication. I regret that neither of the papers containing these article are where I can now see them, and I will consequently have to depend upon memory in order to prepare a brief response, which I trust you will find room for.

T believe that you referred me to two different parties who you thought could cite instances of success in trout culture. Your Western correspondent cited a case in his region which he regarded as a success, principally because Eastern trout had been brought there and were to be found in a certain stream in considerable numbers. I believe he did not claim that any great quantity had been taken, but had simply been seen darting about the stream.

Now, in regard to this subject, I wish to say that I have had many more years experience in this business, and particularly in research, than any other American, and any of the hundreds of my correspondents will, I think, give me credit as an earnest worker, but in no sense a theorist. I have several hundred letters from parties who have tested trout culture, and in no instance among them all has there been a case of success reported, beyond hatching and planting them. This, I beg to say, does not constitute success-ful trout culture. There has never been a pound of frout raised in America which has not cost a dollar, and no domestic trout is worth to exceed twenty-flye cents per pound, and very few persons indeed would pay that price for them for table use. Very few persons at this day pretend that the stocking of streams sin the interest of sport, pure and simple. Most of this

given credit for the gradual improvement which has been observed, when the other streams in the region which have been restocked have given still better results. In one case the streams have been overstocked; in the other, the increase has been natural.

There is another matter not generally understood, except by those who make the subject a life study, and that is the constant fluctuations in the yield of fish in all waters, from sea to the most insignificant pond, from the largest river to the smallest trout stream. Writers with no practical knowledge or experience upon the subject are continually divining the most absurd reasons for this fluctuation. I could, if necessary, give pages of this visionary and misleading matter by simply selecting from communications in past volumes of Forest and Stream. Have for years maintained and in some cases made plans whereby trout streams could be made to give improved yields, but not by artificial restocking, which has been thoroughly tested in this country for the past thirty-five years and found wanting.

AMERICAN KENNEL CLUB.

AMERICAN KENNEL CLUB.

PECIAL meeting of the American Kennel Club, held May 22, 1830. President A. Belmont, Jr., in the chair. Present: Associate Members, J. L. Anthony; A. P. Vredenburgh; American Beagle Club, H. F. Schellhass; American Pet Dog Club, Dr. M. H. Cryer; American Spaniel Club, J. Watson; Massachusetts Kennel Club, R. Leslie; Mascoutah Kennel Club, J. Mortimer; Pointer Club of America, G. W. LaRue; Virginia Field Sports Ass'n, J. S. Wise; Westminster Kennel Club, T. H. Terry; St. Bernard Club of America, J. Lohman; Collie Club of America, H. B. Cromwell.

Mr Peshall: I desire to move that no quorum appearing, this Club do now adjourn.

The President: I rule the motion out of order as Mr. Peshall: I am here representing the Maryland Kennel Club.

Mr. Peshall: I am here representing the Maryland Kennel Club. This is a meeting of the Club. I rise as representing the Maryland Kennel Club, and I move you now that the meeting be adjourned.

The President: I refuse to entertain the motion.

Mr. Watson: I move that the Club adjourn in order to call a meeting of the Executive Committee to take action upon the credentials presented to the American Kennel Club.

Mr. Peshall: Mr. President—

The President: I cannot recognize you as a delegate.

Mr. Peshall: Mr. President— The President: I cannot recognize you as a delegate. Mr. Watson's motiou seconded and carried.

MEETING OF THE EXECUTIVE COMMITTEE.

The President: I cannot recognize you as a delegate. Mr. Watson's motion seconded and carried.

Mr. Watson's motion seconded and carried.

President Belmont, Jr., in the chair. Samc clubs represented as recorded at special meeting.

The President: The Chair rules that the delegates of the associate membership do not come under Section II. of the Constitution, Article IV., and recognizes Mr. Anthony as a delegate.

The minutes of the last meeting of the executive committee read and approved.

The secretary's quarterly report was read as follows: MAY 21, 1890. Gentlemen: I have to submit applications for admission to the American Kennel Club from the following clubs and associations: Youngstown Kennel Club, of Youngstown, Ohio; the Louisiana Poultry and Pet Stock Association of New Orleans, La.; Northern Illinois Poultry and Pet Stock Association, of Rockford, Ill.; Wilmington Agricultural and Industrial Association, of Wilmington, Del.; the Chesapeake Bay Dox Club, of Baltimore, Md.; the Eastern Greyhound and Coursing Club, of New York. The applications of these clubs were received in due form and time, as provided for in our Constitution, and action at this meeting is desired. The application of the Eastern Greyhound and Coursing Club was withdrawn, and an application of the California Kennel Club, which has been substituted.

The application of the California Kennel Club, which has been in abeyance since August 15, 1889, has been renewed, and action at this meeting is urged. The facts in this matter can be briefly stated as follows: At the Septeml er meeting of this club, the application was laid over until the next meeting, with instructions that your secretary should put himself in correspondence with the Pacific Kennel Club, requesting it to advise this club, its opinion as to the expediency of two clubs from the same city being admitted to membership. The reply from the Pacific Kennel Club was that ue-oriations were pending towards a consolidation of the two clus, and asked that action might be delayed, un

five officers and twelve members of the Executive Committee of the California Kennel Club has been received, in which they state that they have fifty members in good standing; they desire to hold annual bench shows, and which they state that they have fifty members in good standing; they desire to hold annual bench shows, and president this motivar is here on Ele and will be correspondence this motivar is here on Ele and will be correspondence this motivar is here on Ele and the Correspondence will be considered and the correspondence of the show of the Correspondence of the Show. Under date of March 12, 1800, the president of this club informed your same, within ten days of the close of the show. Under date of March 12, 1800, the president of this club informed your state the time of its first show, did not arrive until two days after the show had been open, otherwise there would have been strictly under American Kennel Club rules. Under these circumstances, and also in view of the prompt business-like way that they have conducted the second show, your scenarious that they have conducted the second show, your scenarious for the conduction of the conduction of the show of 1880 is recognized by the ment the club, with they have conducted the second show, your scenarious for the conduction of the conduction of the show of 1880 is recognized by the ment of the Changes upon our records. As such changes are made by resolution, such action is collected at this meeting.

The American Engrish Bergle Club notifies this club of its change of name to the Cincinnati Kennel Club, with requests to make such changes upon our records. As such changes are made by resolution, such action is collected at this meeting.

The American Engrish Bergle Club, in neelecting to publish in the premium list, the list of recognized shows, and asking immediate action by the American Kennel Club to have such as serious error rectified. A copy of this letter was forwarded to the Bench Show Committee of the New Committee of the Show Committee of

of delegates.

Motion seconded and carried. The secretary stated that credentials were presented by Mr. Lohman, of the St. Bernard Kennel Club; by Mr. Watson, of the Southern California Kennel Club, and Mr. Peshall, of the Maryland Kennel Club. The credentials presented by Mr. Watson to represent the Southern California Kennel Club were then read, and Mr. Wise moved that Mr. Watson be accepted as representative of the Southern California Kennel Club, provided his credentials were amended so as to conform with the rules.

his credentials were amended so as to conform with the rules.

Mr. Watson: For the present I will withdraw the credentials of the Southern California Kennel Club and represent the Spaniel Club.
On motion, Mr. Lohman's credentials being regular, were accepted. The credentials of C. J. Peshall to represent the Maryland Kennel Club were read.

Mr. Leslie: I move those credentials be accepted.
Mr. Anthony: I rise to a point of order that, the club having appointed Mr. Malcolm for the year 1890, had no right, in the absence of the resignation of Mr. Malcolm, to send another delegate.

Mr. Leslie: Mr. Peshall responded to the roll-call for the Maryland Kennel Club and he was recognized.
The President: He was not recognized. He choose to occupy the floor in spite of my refusal to recognize him.

Mr. Wise: This is a question of power with me. On April 5, 1890, this Maryland Kennel Club met, and it elects da delegate and duly authorized him for twelve months to represent it as a delegate, and his name is H. Malcolm, and no stands here as the duly authorized representative of that club for twelve months. Of course if there is a resignation there is a vacancy, but it is the principle of law that a delegate has no power to delegate his authority.

The President: I desire to state for the information of the meeting that that was the ground on which I ruled. When I first saw the certificate, it such it can be called—I had not heard of it before—I saw Mr. Peshall had no authority to

stating so when I ruled because Mr. Peshall did not wish to take my ruling, and to silence his interruption, I was obliged to go on with another motion in order that the meeting might proceed. I think it is very indelicate that Mr. Pershall should remain in the room during this discussion, so long as the chair has ruled that he is not a member or developed the process of the constitution does not recognize the possibility of a substitution. In othing had been said about Mr. Malcolm in the certificate, I certainly should have been obliged to recognize Mr. Peshall, no matter whether the regular delegate previously appointed had restricted the regular delegate previously appointed had restricted to the social desertation. It is so distinctly stated in the social desertation of the state of the social desertation. It is so distinctly stated in the social desertation of the state of the social desertation. It is so distinctly stated in the social desertation of the state of the social desertation of the state of the social desertation of the state of the social desertation of the social desertation of the state of the state of the social desertation of the state

Balance on hand.

\$2,041.18

The following clubs have not yet paid their aunual dues for the current year: Chattahoochee Valley Exposition Company, Connecticut State Kennel Club, Elmira Poultry and Pet Stock Association, German Mastiff or Great Dane Club, Hartford Kennel Club, German Mastiff or Great Dane Club, Hartford Kennel Club, Syarcuse Kennel Club, By resolution at the last meeting these clubs were given thirty days in which to pay this year's dues, under the penalty of being dropped from the roll of membership. They were duly notified of this resolution, and have failed to respond. Exception is made in the case of the German Mastiff or Great Dane Club, which, by an oversight, I neglected to include in my report at the last meeting and consequently did not communicate with. (Signed) A. P. VREDENBEGH, Treasurer. Adopted.

The minutes of the last meeting of the Advisory Committee was reid, and motion made to accept them. Mr. Watson moved that sections six and seven be stricken from the minutes of the meeting of the Advisory Committee held April 7th, 1890, Motion seconded and lost. The motion to accept was then put and carried.

Mr. Watson: I give votice that I will make a motion at the next meeting which will give the Advisory Committee he power of suspension which they have not at present.

The following clubs, candidates for membership in the American Kennel Club, were elected, their applications being in proper form: Youngstown Kennel Club, of Youngstown, Ohio: The Louisiana Poultry and Pet Stock Association, of New Orleans, La.; Northern Illinois Poultry and Pet Stock Association, of Rockford, Ill; Wilmington Agritutural and Industrial Association, of Wilmington, Del.; the Chesapeake Bay Pog Club, of Baltimore, Md.; the National Greybound Club, of New York, and the California Kennel Club, of San Francisco, Cal.

The question of the wins of the Southern California Kennel Club. of Los Angeles, Cal., was then brought up, and Mr. Anthony moved that as the rules and the secretary's letter did not reach the club until two days after their show of 1889, and as they complied as near as possible with those rules, that those wins be recognized by the American Kennel Club. Motion seconded and carried.

The requests of the American English Beagle Club and the Cincinnati Sportsmen's Club to have their names changed upon the records to "The American Beagle Club' and "The Cincinnati Kennel Club" were, on motion, granted, and the secretary instructed to make the changes desired. On motion, Mr. W. T. Levering, of Baltimore, was granted the prefix "Dundee" for his Chesapeake Bay dogs, against which a protest had been filed by Mr. H. T. Drake of St. Paul, Minn.

Concerning the special prize of \$50 awarded by the Westminster Kennel Club to Mr. L. Gardner's English setter dog Roger, which was protested by Mr. Max Wenzel on the ground that his Irish setter dog Tim was eligible to compete, and which protest was aflowed and the prize awarded to Tim, from which decision Mr. Gardner appealed, Mr. Watson offered the following resolution: Resolved, That it is the opinion of this committee that the term "field trial record" applies only to public trials for competition open to all, and that the appeal by Mr. L. Gardner in the case of the special prize for the best setter with a field trial record be sustained, and the prize awarded to his English setter dog Roger. Resolution seconded and carried.

In regard to the suspension of Mr. Edwin H. Morris, under Rule XXV., of which notice was received by the American Kennel Club, the secretary stated that Mr. Morris had deposited with the club \$14, which covered entry fees and protest fees on protested check; that he had wired the Buffalo Kennel Club, the secretary stated that Mr. Morris had deposited with the club \$14, which covered entry fees and protest fees on protested check; that he had wired the Bu

on notion of Mr. Vatson the clubs named were dropped from the roll.

On request of Mr. Leslie the secretary read the charges beaught by Mr. Leslie against the New England Kennel Club.

Mr. Leslie I I think this is a serious breach of the rules, and something should be done to punish them for such a breach. I move that the New England Club be suspended for the compliance of the compliance

THE MEMPHIS & AVENT KENNEL will have at the Cincinnati show next week a descriptive price list of their dogs that are offered for sale.

DOGS.—NALDIRES medicated SOAP for washing dogs, destroys all irritating insects, removes dogsy smell and leaves the animal refreshed and happy. This prize medal soap, used by all the leading owners in Europe, is now sold by Park & Tilford, McKesson & Robbins, E. Fougera and all Druggists.—Adv.

DOG TALK.

MY note rc the Homestead Kennels, last week, was rather mixed. It should have read Mr. H. S. Pitkin's kennels, instead of Mr. Richard Barry's. I doubtless got mixed from thinking of Mr. Pitkia's Prince Barry.

thinking of Mr. Pitki.'s Prince Barry.

It has been reported in several papers that Mr. Richard Barry's St. Bernard bitch Diva (ch. Plinlimmon—Aello) lost all her puppies on the S. S. en route. I called on Mr. Barry to-day, and to my surprise found Diva with one puppy, and she is decidedly the best St. Bernard puppy I have seen yet. Diva is out of coat and was injured in one of the last joints of the tail while on the steamer, but otherwise she is as good as ever. Mr. Evans has written to Mr. Barry regarding the shipment, and it seems he is not so much to blame after all. The bitch was provided with a commodious kennel, but the Inman Line refused to take the dog at all, and it was solely through the influence of Mr. Green, the owner of Sir Bedivere, that they finally consented to take her, but even then would not take the kennel.

Parties in Pittsburgh write me that Mr. Paul Heicke's Barzois are expected daily from Russia.

It is rumored that Mr. J. J. Scanlon is negotiating with partier in England for an Irish setter puppy. We think it was born in the neighborhood of Borstal House.

There will be a bench show at New Haven this fall. Mr. Geo. W. Neal has it in charge, and we may expect something good from his hands. We hope it will be under A. K. C. rules.

Mr. Michael Flynn, Jr., writes that it is not all smooth sailing in the dog business. His Irish setters Tramore and Lulu V. contracted distemper at the Buffalo show and Lulu has succumbed to the disease.

The R. I. Poultry and Pet Stock Association will hold a ench show in connection with their poultry show Dec. 29 to
Mr. C. K. Wesbrook, proprietor of the Cynophile Kennels, N. wark, N. J., has been visiting the kennels in and about Lynn the past week; he expresses considerable surprise at he number of "dog cranks" in that community. He carries away with him a promising English setter puppy from the kennels of Capt. A. J. Hoyt.

Dr. Sawtelle, Melrose, Mass , has lost the entire litter of is St. Bernard bitch Clytie, by Mr. Sears' champion his St. Hesper.

Mr. W. L. Washington, Pittsburgh, Pa., intends to enter his Irish setters Winnie II. and Ruby Glenmore in the field trials next fall.

Mr. Watsou is mistaken regarding the St. Bernard bitch Zara. Her dam, Lady Wellington, was the property of Mr. Sears when bred, consequently Zara is American-bred, ac-cording to the St. Bernard Club rules.

The organization meeting of the English Setter Club was not as well attended as was expected. Great enthusiasm was expressed by those prescut, however, and the new club is, I think, founded on the proper basis. Those interested are many of them purely sportsmen that own but one dog and are interested in the breed, and will work for its advancement. Specialty clubs are too apt to be run by cliques. The following officers were elected: President, Mr. F. W. Whitlock, Waterbury, Conn.; 1st Vice-President, Mr. F. W. Whitlock, Waterbury, Conn.; 1st Vice-President, F. A. Frazier, Lynn, Mass.; 2d Vice-President, Dr. W. A. Power, Boston, Mass.; Secretary-Treasurer, H. H. Brown, Melrose, Mass. Executive Committee: The aforementioned officers and A. Russell Crowell, Lynn, Mass.; T. C. Crittenden, Lynn, Mass.; Geo. W. Neal, Westville, Conn.; W. H. Case, Lockport, N. Y.; John Jarvis, Indian Orchard, Mass. The other members elected are: C. K. Westbrook, Newark, N. J.; J. W. Wood, Poughkeepsie, N. Y.; C. B. Dubois, Nashua, N. H.; W. C. Paterson, Lockport, N. Y. A letter from Major Taylor was read by the secretary, stating that he had been writing interested parties for some time past in regard to organizing an English setter club: and that it would be made public about June I, adding that he hoped the interested parties present would join hands with him in his endeavor.

The English Setter Club of America was the original

ested parties present would join hands with him in his endeavor.

The English Setter Club of America was the original idea of Mr. H. H. Brown, aided by Dr. W. A. Power and A. Russell Crowell. The object of the club is solely the advancement of the English setter. Its officers are living in the Eastern States, simply because would-be officers living in other States have falled to respond to the call. The invitation to become a charter member before July 1 is extended to every setter man in the United States. If there is anything in the constitution that you don't like come and vote for an amendment at the July meeting. Application for membership has been forwarded to the A. K. C.

New England kennel owners that are about to build a new building can get an excellent idea of a cheap, convenient roomy and healthy kennel by visiting that of Mr. Chas. G. Wheelock, at Arlington Heights, Mass. For \$200 he has built him a fine kennel to accommodate six St. Bernards at all times, and accommodations for brood bitches, or bitches in season, a spacious washing and drying room with stove, a loft for straw and utensils, and five wire-inclosed runs about 6x80ft. Mr. Wheelock's Scotch Bonivard, second at Boston, is well known. His two Hesper puppies are doing splendidly; the bitch Aello is a remarkably roomy bitch with considerable quality. His Hesperard (champion Hesper—Cologne) is very good in head, and like all the Hesper pups we have ever seen, is remarkable in his development of chest. He is beautifully marked, and we think will be heard from next year. His latest importation, Home Ruler, is a very massively built dog, with great skull and muzzle, and much of the Swiss type. Mr. Wheelock's dogs are not numerous, but the quality and breeding is excellent. The proprietor's reputation for hospitality is unequalled. Visitors are always welcome.

Messrs. Teague and Tilton, at the Elmwood Kennels, South Framingham, are doing quite a business. They have enlarged their kennel by adding five more stalls, and purchasing the St. Bernard bitch Stella, imported by William Sandberg from Switzerland, another dark horse. She stands a good thirty inches at shoulders, with grand skull, big bone, straight and strong limbs and good body. Under Mr. Teague's care and management she will be in the money at the coming shows. They have also purchased Lady Melrose, by Merchant Prince out of Bernie V., and Elouise, another daughter of Merchant Prince. Beauchamp and Queen, of Scotland, are showing grand form; but the pride of the kennel is Zenith, by champion Plinlimmon out of LaPucelle, a grandly-bred bitch, with beautiful coat and excellent hone, recently purchased of J. H. Ruthergien, Chiswick, England. She was bred to Sir Bedivere, but has failed to prove in whelp.

I do not think there is any one man in America that nows the disposition of champion Hesper better than the

writer, except Mr. Sears and Mr. Loveland. I saw him on the bench, on the street and in the kennel in England, and I have seen him on the bench at New York, Chicago, Rochester, Baltimore and Boston, and many a time at his kennel in Melrose, and I have yet to see the first evidence of an uncertain temper, except with his kennel companion, Plinlimmon, Jr., who he is jealous of. In all the cases of his biting that came under my notice the parties bitten were more to blame than the dog.

Mr. Fred Bowers has purchased the cocker spaniel stud dog Pompey, by Obo, Jr., out of Black Bess II., of Mr. J. J. Scanlon, Fall River, Mass.

Scanlon, Fall River, Mass.

The Bulldog Club of America will not give specials to any bench show that provides a class for round-headed bull and terriers. We cannot quite see the policy in that action. Only one club is affected, i. e., the New England Kennel Club. And why should the bulldog men wish to boycott the round-head? It is not a bulldog; it is a cross-bred non-descript, and it looks to me as if the Bulldog Club were going a long way out of their way to tread on a snake. Boston always brings out a strong class of bulldogs.

NAMQUOIT.

THE ST. LOUIS COURSING MEET.

THE National Coursing Association held their first spring meeting at St. Louis, May 11, 14, 16 and 18. The first event on the card was the

ST. LOUIS DERBY.

Entry, \$5. First prize, silver cup, with \$50 added by the association; second, \$20; third and fourth to save their ntrance; 16 starters. Following is the summary:

First Scrics.

F. W. Benton's Dandy beat Dr. L. G. Taudy's Lady Re-

A. M. Cheeney's Alex. Jordan.
J. Russell's Barmaid beat A. M. Cheeney's Alex. Jordan.
E. Burgess's Spring beat T. V. Brown's Dick V.
Col. R. S. MacDonald's Elk beat C. Clark's Handy Andy.
R. J. Rothwell's Belfast beat I. Bambrick's Jake Kilrain,
A. Haigh's Nip beat C. McConty's Go Slow.
Dr. L. G. Tandy's Miss Beatrice beat P. Rohan's Fola.
E. C. Haywood's Cygnus beat J. Eagan's Ponta.

Second Series.
Barmaid beat Dandy.
Spring beat Elk.
Mip beat Belfast.
Miss Beatrice beat Cygnus.
Third Series.

Barmaid beat Spring. Nip beat Miss Beatrice.

Final for First.

Barmaid beat Nip and won first, Nip second, Miss Beatrice third, Spring fourth.

LACLEDE STAKE.

Entry \$5. First prize, silver cup, with \$25 added by the Association; second, \$15; third and fourth to save entrance; 15 starters. Following is the summary:

First Series.

N. G. Wilson's Queen beat Dr. L. G. Tandy's Lady Re-

ecca.
W. A. Burgess's Dick Kline beat B. O. Keefe's Speed.
C. Clark's Handy Andy beat W. A. Burgess's Gazelle.
N. G. Wilson's Jumbo beat T. V. Brown's Dick V.
T. O'Keefe's Let-Me-Go beat L. Bambrick's Topper.
T. O'Keefe's Surprise beat J. A. Pohlman's Eberly.
J. Egan's Conta a bye.
B. O'Keefe's Jim K. beat J. A. Pohlman's Fola.

Second Series.

Dick Kline beat Queen. Handy Andy beat Jumbo. Let-Me-Go beat Conta. Surprise beat Jim K. Third Scries.

Dick Kline beat Let-Me-Go.
Surprise beat Handy Andy.
Final for First.
Dick Kline beat Surprise and won first, Surprise second, Handy Andy third, Let-Me-Go fourth.

DEATH OF DUKE OF LEEDS.

DEATH OF DUKE OF LEEDS.

Editor Forest and Stram;

I regret to announce the death of my rough-coated St. Bernard champion Duke of Leeds. He was born May 1, 1881 and died very suddenly May 18, being a little over 9 years old. He was imported by Mr. E. R. Hearn of Mr. Sydney W. Smith as the most promising young dog in England, and was considered the best dog of his day in America. Merchant Prince was the only dog placed over him and that by only one judge. St. Bernard people generally did not approve of the decision. Mr. Smith, who formerly owned both dogs, said the award was wrong, for Duke was the better dog. Many others, including Rev. J. C. Macdonna and Mr. Chas. H. Mason, expressed themselves to the same effect. I am sorry he was not in condition in February as I should have shown him at New York to determine how he compared with the later importations.

He was more than an ordinary show dog. He had a beautiful dispositiou and as many times as he has been exhibited he never showed the slightest indication of ill temper. Mr. Hearn has said "Duke never had an evil thought." He was the highest ideal of a St. Bernard. When I heard of the intention of the Boston show committee to invite the blind children and have specimens of the different breeds brought into the ring for them to feel over, I remarked that a better dog than Duke could not be found, as any one could handle him with perfect safety. He was dignified, and as courageous as he was gentle, slow to show resentment and uever sought a quarrel, would never attack another dog, but if attacked would fight like a good one.

I was awakened by his barking one night a couple of weeks ago and I found him under my window. The barn door had opened and as soon as I fastened it he showed plainly he was perfectly satisfied, and I heard nothing more of him that night.

He was a grand dog in every respect and I shall never see his equal again. I loved him as Mr. Peshall loves Old Jimmie.

BLOOMFIELD, N. J.

SALISBURY'S PEDIGREE.—Editor Forest and Stream: In response to Mr. Watson's suggestion that I expound on the last "explanation" of Mr. Huscroft on the matter of his charge that Salisbury was furnished with a bogus pedigree, let me say that I really think that communication should be allowed to pass without comment; I really believe it was as frank an explanation as Mr. H. could make, he being apparently gifted with a most unfortunate objection to coming right out with the whole story or making a frank confession of having been wrong. The affair has resulted in demonstring that there are two chances to one in favor of the pedigree being genuine; and far more to blame than Mr. Huscroft is the sneaking coward who put him up to it and hides in the dark.—W. WADE (Hulton, Pa., May 23).

THE CINCINNATI DOG SHOW.—Cincinnati, O., May 26.—Editor Forest and Stream: The entries for the Cincinnati Kennel Club's fourth annual show, to be held June 8t 06, closed with 290 entries as follows: Mastiffs 10. St. Bernards 18, Newfoundlands 2, Great Danes 7, deerhounds 2, greyhounds 6, foxhounds 24, pointers 31, English setters 42, Irish setters 25, black and tan or Gordon setters 12, collies 4, Irish water spaniels 3, cocker spaniels 10, poodles 5, bull-terriers 1, basset hounds 1, dachshunde 4, bedgles 10, smooth fox terriers 14, Irish terriers 1, Bedlington 2, Scotch terriers 1, Dandie Dinmont 1, Skye terriers 1, Yorkshire 2, pugs 25, King Charles spaniels 4, Italian greyhounds 7, uniscellaneous 2.—Geo. H. Hill, Supt.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

KENNEL MANAGEMENT.

No Notice Taken of Anonymous Correspondents.

J. P. De C., Pittburgh, Pa.—St. Bernard, male dog, two years old, scratches a good deal and has small eruptions on the front left leg and undertaw. Dog in good condition and spirits and not overtat. Has been fed nearly all he wanted in dog biscuit and table soraps. I think the dog ears to much, and does not have enough exercise. I do not think it is mange, as the hair does not fall ont. Ans. Feed less. Exercise more. Physic with syrup buckthorn, two tablespoons daily, or three compound cathartic pills hidden in a bit of ment. Use diachylon ointment, and give five drops Fowler's night and morning for two weeks.

Bifle and Tray Shooting.

RANGE AND GALLERY.

THE ZETTLER SHOOT.

THE ZETTLER SHOOT.

MAY 20.—The weather to-day interfered materially with the shooting of the marksmen who assembled at Cypress Hill 2nrk, to take part in the first day's contest of the Zettler Rifle Club's opening shoot. Although it rained during the greater part of the atteruoon, the attendance was all that could be desired. The shooting was, of course, not up to the usual standard, thanks to the rain and the shifting wind.

On the target of honor, where only one target of three shots is allowed to each competitor, eleven marksmen tried their skill, with President Bernard Walther in the lead so far.

On the bullseye target, sin. center, Mr. G. Zimmermann leads, so to the total number of flags scored, with 43. Dr. Boyken being econd with 27, and B. Walther third with 22. Who the winner of he first prize will be cannot be ascertained until to-morrow night, when the measurement will take place. M. Dorrler scored he first grid flag yesterday and G. Zimmerman the last.

Only thirteen of the shooters present tried their skill on the Jerman ring target, 25 half-inch rings, G. Zimmerman leading of ar with 71 and 72, M. Dorrler being in second place. The score; larget of honor, off-hand or rest at option of the shooter, three hots only on the German ring target, 25 half-inch rings; twenty ritzes. B. Walther 68, Dorrler 68, Busse 66, Dr. Boyken 57, Ross 5, Joiner 54. C. Zettler 53, G. Zimmermann 53, B, Zettler 45, C. Vissel 37, Gensch 30.

Bullseye target, 4in. center, the bullseye made during the

of their two days's shoot on the 201yds, range at Cyark. Of course the Zettlers turned out in force, and were also well represented by skillful and experienced the Barry Rifle Club of this city, the Williamsburg ociety, the Onondaga Rifle Club of Syracuse, the Rifle Club, the Miller Rifle Club of Jersey City, and Shooting Society all sent representatives. the Zettler marksmen had something entirely new to ime in the shape of a tørget, the like of which has seen before on this side of the Atlantic. It is the new target, with 25 ½in, rings, and it differs from the olderman ring target therein that the center is only ½in,

wide and 3in, long, the other rings forming an ovoid instead of a circle. There were two reasons for the adoption of this target, first, its novelty, and then the fact that our American marksmen will have to fire away at a similar tarret during the international shooting festival at Berlin on July 2 and 3, and that they would have a chance of getting used to an entirely strange object, which is best deserthed as a combination of the man and ring target, of course the scores made were not as large in figures as they would have been on the old target, but, in fact, they left nothing to be desired.

G. Zimmermaun carried off first prize on the ring target, and scored also the largest number of billseyes on the point target, Coppersmith taking first prize on the latter by actual measurement.

B. Walther retained his lead on the target of honor, no body being able to overcome his 83 points to-day. The scores:

Target of honor, Berlin ring target, possible 75, 3 shots only, 20 prizes—B. Walther 62, Holges 67, M. Dorrler 68, R. Busse 64, L. Vocel 62, Dr. Keller 62, M. Engel, 61, J. Walsh 61, V. Steinbach 60, H. Oehi 53, W. Harges 59, D. F. Plaisted 58T. J. Dolan 57, C. Rein 57, Dr. Boyken 57, Coppersmith 56, Flach 56, W. H. Beardly 55, F. Koss 55, W. Vorbach 53, G. Krauss 55, G. Joiner, 54, C. J. Da'ley 54, A. Stabl 54, W. B., Hanson 54, C. Zettlier 54, G. Zimmerman, 54, C. Frankie 52, F. Fabrius 51, Kohlmetz 51, B. Zettler 45, D. Miller 42, M. Muller, 42, C. Wissel 37, C. E. Genst 30 V. Dittmar 24, A. P. Hunt, the efficient Secretary of the club and a shooter of great ability, was so busily occupied with his official duties during the afternoon that he did not get proper time and opportunity even for the shooting ot the above-named target therefore his low score.

Berlin ring target, for the first four prizes, the best two wickets to count for the following prizes, one ticket, three shots, possible 25 points, no limit to tickets, 20 cash prizes—G. Zimmerman, 17, 71—134, W. Hayes 69, 69–137, M. Dorrler 72, 61–136, Dr.

NEWARK, May 24.—Many members of the Newark Shooting Society attended the practice on Thursday and to-day, ten members competing for the members' trophy. The winner of the trophy for the week was C, H. Townsend, who scored 206 points, John Coppersmith secured 22, J. T. B. Collins 201, F. C. Knotie 196, W. Yaufman 194, F. P. Laute 187, J. H. Hucgel 183, Ferd, Freiensehner 160, F. A. Freiensehner 147. Few tickets were shot in the expert match, Coppersmith's 63 and 64 and Yaufman's 61 being bigh.

ing nigh.

BOSTON, May 24.—The regular weekly shoot of the Massachusetrs Rifle Association was held at its range, with a good attendance of riflemen. The shooting conditions were good, and some fine scores made. Mr. Bond won the silver and gold military

medal.

MERIDEN, Conn.—The date of the second annual rifle shoot of the Citizens Rifle Club, of Meriden, has been changed from June 3, 4 and 5, to May 28, 29 and 30.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

Match 10, 10 live birds, \$75 guaranteed—First Budd, Thomas. Spencer and Elliott, second Stewart, Endes and Paster, third Hickey, Mead and Halliwell, fourth Dallmeyer and Underwood. Match 11, 15 targets, open to all—First Mead and Bachelor, second Stewart, North, Budd and Rickman, third Paneut Match 2, 7 live birds—First Taylor, Riley and McGhee, second Knoche and Smith, third Lang.

WHITE HOUSE, N. J., May 23.—White House vs. Flemington. H. Bishop won the day, only missing two targets out of 45 in all. The race was rather close at the start, but the White House boys forged ahead and won by a score of 179 to 186. Both teams have won a match, and the shoot-off will, no doubt, be very close and interesting, and the boys all say they will do or die. Ten men a side, at 25 Keystones each, American Association rules to govern:

Rusch), at a straight. Whisteneroft and White were he only oneseft, and they divided. This was the last event of the day.

First average, \$6, was won to-day by Kelsey; second, \$4, was liv. by Wolsteneroft and Clover.

Second Day, May 22,

The weather, which on the day previous had not been of the been cleared incely and was delightful throughout the day. A dense crowd lined the space about the traps. It was a great day. The first event of the day was the FOREST AND STREAM FURTANTEEP DISTRIBUTION OF \$100. MESSIR. PLIKER BYOS. HAD Offered an \$80 hum.

ı	tee purse of 5100. Messis, Parker Bros	s. nau onered an \$80 nam-
ŀ	merless gun as a special prize, and this in this contest, the \$100 being divided Scor 25 Keystones, \$2 entrance:	was made the first prize

The prizes for dally and total averages have not been awarded at this wiriting.

May 2b.—The tournament practically closed last night, all the programme having been shot out, and most of the shooters then left for home. A few of 'he faithful gathered at the club house to-day, however, and put in half a day or so at sweep shooting.
Among these were Messrs. Courtney, Heikes, Miller. Parker, Wherry, Penrese, George and Louis Hilscudegen, etc., enough in and the boys had a pleasant time.
Thus ends a very memorable and noteworthy shoot, and all shooters may keep Detroit and the Peoria Club in mind and come there if they go to any shoot, for they may there he assurred of a smooth and systematic shoot under the most beautiful surroundings, and may, moreover, he assured of treatment not only fair and square, but full of genuine and abundant courtesy.
One instance may be added to show the rapidity of the firing at this shoot. Messrs. Courtney, Heikes, MaDonald, Wolstencroft, Whitney and Richardson—known on the grounds as the "Big Six" squad—broke 14 birds (out of 150 shot at) in 12 minutes. At that rate the scores pile up very tast, and that fact should excuse concensation in presenting them.
This was a shooters' should ad no one man made much money. Nearly everything was divided except the special prize consisting of a pair of pants. Still, everybody went away very well pleased, and when that is said the whole ground of praise for a tournament is covered. The features of long the shout everything he wanted. His running mate, big sort have been Heithes, Wolstencroft, Kelsey and a few thers close to them. Rolla Heikes struck a terrib

soon. A good many of the boys go on to the Milwarkee shoot next week, and some will be at Chicago the week following. Over 33,000 birds were broken during the shoot, counting sweeps and all.

S.AN FRANCISCO, May 17.—The first match for the "live-bird challenge medal of 180" was shot off to-day at the Oukland Race Track, Suborting commenced at 10 o'clock, and though the hour was their early for a full attendance of sportsmen, outside of those directly interested, the number of those present gradually interested the day wore on.

The medal given is open 170 competition to all residents of the Pacific Coast, and is emblematic of the Coast championship. All matches are to be shot under the rules of the American Shooting Association, at 40 single live birds. Each time a competitor wins the medal he will be set back one yard in the next match in which he may again compete for it. The entrance fee for each match is \$30, with cost of birds and trapping extra. If the number of entries in any match are such as to require it the squad shooting system can be used. or the number of birds reduced. In the first match the 1830 medal constitutes the first prize, 30 per cent of the entrance fee made up the second and 20 per cent the third prize. The conditions under which the medal is offered state that the compotitor winning the first match shall bold the medal, subject to challenge against all comers, one week's time being given him, upon being challenged, to name the time for the next match, which has to take place within one month from the date of challenge, challing challenged, to name the time for the next match, which has to take place within one month from the date of challenge, exceeding the conditions will mame the time and place for the next match the medal in the championship of the Pacific Coast for 1890, at 100 the prize, and the championship of the Pacific Coast for 1890, at 100 the prize, and the championship of the Pacific Coast for 1890, at 100 to 100 the prize, and the shooting throughout was well up to the ma

PHILADELPHIA, May 19.—There was a shooting match this afternoon between the Pleasantville and Atlantic City Gun clubs on the grounds of the former, at Pleasantville. The shoot resulted in favor of the Atlantic City Club by the following score. Twenty-five birds per man:

each, then miss and out, both Gilman and Winchester missed their second bird; Gilman killed his fourth whilo Winchester missed.

LONG BRANCH, N. J., May 22.—The Central Gun Club ha accepted an invitation from the Fountain Gun Club of Brooklyu to take part in a shooting tournament for a \$100 silver cup on the grounds of the Fountain Club on Thursday, June 5. The Centrals have selected the following team: William D. Campbell, Elisha W. Price, Philip Daly, Jr., George Cubberly and Jophia Van Dyke; substitutes, William C. Price, Fred Beale, William R. Joline and Edward E. Theer. The competing teams will be composed of five men each, each man to shoot at ten live birds.

HARRISBURG, Pa., May 22.—Harrisburg, Pa., gives another of its popular shooting tournaments on June 5, 6 and 7, and if the replies to the invitations are any indication of its success, it will be more largely attended than the one held last fall, Every shooter was well pleased last year, and if smashing 12,000 inanimates, killing 800 live birds, with prizes aggregating nearly \$3,000 afford any amusement, the crowd must have been happy. One feature of these shoots is, that the boys are constantly at the score, and there are no long delays in starting fresh events or in settling those shot off. An efficient committee is always in charge, Harrisburg is fortunately situated for holding large meetings of any kind on account of its excellent railroad facilities. Being but a fow hours' ride from New York, Philadelphia and Baltimore, a good representation trom those cities is always here, and its surrounding towns have a large shooting element big enough for any ordinary shoot. The association grounds inclosed, and a few minutes' ride in the street cars from all depots, with first-class hotel accommodations at special rates to shooters, but a stone's throw from the score, are a fow features that help to make these shoots reapplace and successful. A good prograume is always made up, and lots of traps, birds and, targets, and entries of 65 to 70 to any event

attend next week.

LINCOLN, III.—The following scores were made at the last regular badge shoot of the Lincoln Gun Club of this city, held May 12.

Conditions, 25 single Peoria blackbirds, 3 traps; unknown angles, American Shooting Association revised rules: L. C. Schwerdteger 24, Robert Schuster 18, Harry Webber 17, Henry Abrens, II., 16, Robert M. Wildman 15, Hiram S. Stansell 14, Thomas Moran 14. Schwerdtiger wins gold medal, and on sboot-off Moran lost and now carries the leather medal.—SACHEM.

JEANNETTE GUN CLUB, May, 23.—The members of the Jeannette Gun C, ub are noted for the fact that they would much rather shoot at good, strong, flying birds than at duffers, and that they always wish to have a sufficient lot of pigeons at hand. Last Friday when the regular monthly shoot of the club should have taken place, birds of good quality were so scarce that the Jeannette marksmen were forced to postpone their meeting for one week until to-day.

The prizes were the three class medals which have to be won three times before they can be retained, besides an extra medal given by the President, Capt. Cordts, which will go to the shooter who kills the most birds during the year by the use of one barrel only. Modified Long Island rules governed; that is, the gun must be held below the elbow until the bird is on the wing, but both barrels may be used. In ties a bird killed with the second barrel counts as half a bird only.

In the first class which shoots at 28 yards' rise, H. Otten and Chas. Brunie tied, each one having killed 6 pigeons with the first barrel and 3 by firing twice, with one bird missed. On the shoot-off Otten Killed his first bird with one barrel, the other 2 with both, while Brunie brought all 3 down by fring twice. In class B, which stands 25 yards, F. Baar was the winner, with 9 killed and in class C. 21 yards' rise, H. Winter captured the emblem for the second time, with 8 ont of the possible 10. Mr. J. F. Rottmann and F. Baar tled for the Cordis badge on 8 pigeons killed with the first barrel, Baar defeating Rottmann on the shoot-off. A sweepstakos at 5 birds each man followed the regular event. Messrs. Brunie and Loeblo divided first money, H. Otten, J. Rottmann and C. Meyer second, and Messrs. Christen and Eibsen, third prize.

CLAREMONT SHOOTING ASSOCIATION, May 24.— The monthly tournament took place vesterday and to-day, and though

and Eibsen, third prize.

CLAREMONT SHOOTING ASSOCIATION, May 24.—Tho monthly tournament took place yesterday and to-day, and though favored with fine weather, the attendance both days was rather small. A fine lot of birds was provided for Friday, and over 400 were shot. About 250 are now on hand, well cared for in the new inclosure just completed for live birds. This is a large space adjoining the pigeon house, wired on top and sides and having gravel bothom. The management intend using these birds on Decoration Day, May 30. There will be no regular programme, but the grounds will be open for sweep and practice shooting all day. Live birds from 9 to 10 clock, bluerocks only the rest of the day. Sweeps will be made up for such amounts as majority of shooters desire. Lunch on grounds—AD VANCE.

May 23.—Matches at 4 live birds, \$2 entrance. Match 6 at 5 birds, \$3 entrance. All ties div.

in an appropriet in an appropriate pointed. A number of sweeps, and pointed. A number of sweeps, and the third between the Major and Mr. Raynor and J. Erb, and the third between the Major and Mr. Raynor. Raynor had the misfortune to come out loser every time. The sweepstakes were usually at four birds, with the exception of the last, which was at eight birds each man. The scores were: First series—Jones, killed 19, missed 5; Van Bracken, killed 2!, missed 3; Dermert, killed 18, missed 5; Terk, killed 19, missed 5; Mewhouse, killed 5, missed 7; Raynor, killed 8, missed 6; G. Cadded, killed 5, missed 7; G. W. Raynor killed 19, missed 5; J. Erb, killed 30, missed 7; G. W. Raynor killed 21, missed 16; G. Castle killed 24, missed 1.

PRINCETON, N. J., May 24.—The '91 Gun Club of Princeton College shot a match with the Yale Gun Club this morning at 11 o'ciock. The shoot was contested under the following conations: Four men from each side, each man to shoot at thirty Blue Bocks thrown from three traps, sixteen yards' rise, National Gun Association rules. The Yale men were Wuite, Farwell, Clay and Burrell. Princeton was represented by Adams, '91; Gladwin, '91; Williams, '92, and Phillips, '99. The Princeton men allowed eight more of the clay pigeons to sail off and nestle unbarmed in the high growth of grass on Stockton's field than did the Yale men,

RED BANK, N. J., May 23.—The final shoot between the Contral Gun Club of Long Branch and the Riverside Gun and Rifle Club of Red Bank, to determine the championship of Monmouth County, took place this afternoon. The shoot was witnessed by a large number of pireon shooters from all parts of the State. During the afternoon the wind blew hard from the northwest, making it difficult to hit the birds. The clubs were represented by teams of eight men, who each shot at twenty-five blue rocks. The match was shot under the Americau Shooting Association rules, five traps. Douglass Storm of Eatontown was referee. The following was the result: Riverside—O. Hoss, 18; James Cooper, 13; Fred Beale, 20; A. L. Ivins, 20; E. W. Throckmorton, 22; H. C. White, 15; John Cooper, 22; E. M. Cooper, 20. Total, 150. Central—E. W. Price, 18; G. Cuberly, 20; E. E. Taber, 16; W. C. Price, 21; E. W. Reid, 19; Chas. Spilnning, 15: Phil Daly, Jr., 13; F. Van Dyke, 20. Total, 142.

BREWER.—Captain Jack Brewer, who bas been making a tonr

Jr., 13; F. Van Dyke, 20. Total, 142.

BREWER.—Captain Jack Brewer, who bas been making a tonr of Australia, arrived a short time ago in San Francisco, and will remain thore for a few weeks, and will probably get on some matches with prominent California shooters. The Captain seems to have met with excellent lnck in Australia, as diamonds adorned his shirt front, and his manly form is incased in the finest of raiment. He is shooting a very strong galt, and will make it warm for any opponents.

IOWA STATE SHOOT.—The 13th annual shoot of the lowas State Association will take place at Davenport on June 10 to 13. The events are many, and the programme gives many inviting prizes. J. W. Howard, Davenport, is the secretary.

Wachting.

MAKING THE HARBOR LIGHT.

Editor Forest and Stream:

The following poem was found quoted in "Sketches of Life in Newfoundland," by Col. R. B. McCrea, British Army, London, 1869, without the name of the author, but it appears from internal evidence to have been written by Rev. Walter Mitchell, author of "Tacking Ship off Shore," in Vol. I. of the Atlantic Monthly, about 1858. The poem is, I tbink, little known—less than is merits deserve.

The snow falls thick, so you may not see
Tho foresail gleam from the break of the poop,
The long-boat looms like a rock on the lee
And the drift lies a foot on the hatch and coop.

Long glimmering lines of dark and light Mingle in wavy dance up aloft, And the topmast head goes into the night Capped with a headdress white and soft

Phantom-like figures grow in the tops,
And the bunts of the furled up sails are piled
With a heavy freight that sullenly drops
When the good ship bends to a gust more wild.

And the clues of the courses, stiff as a board, Catch up the flakes into bossy hoaps, Till a flap and off whirs the sparkling hoard, Startling the tars in their standing sleeps.

Still, stoutly onwards we hold our course, Hugging the wind with a bear-like grip, Holding each inch we gain with a force And passing the credit to our good ship.

The belmsman's eye, from nuder the rim Of his slouched sou'wester, beams aglow, No matter how braggart the wind to him, And little matters the fall of snow.

Hand, eye and ear aro serving his soul, He feels the flap of the topsail leach; And steadily over, watching the roll, He whirls tho wheel to an arm-long reach.

Grasping the weathermost mizzen shrouds, As grimly as if were gript in his hands Our fifteen lives, and swathed in a cloud Of sleet-stuff and snow, the master stands.

loto the darkness and whirling flakes, Into the beart of the brooding bank, A long dim alley bis calm eye makes, And the world outside is all a blank.

No voice, save bis, on the midnight stirs, No sounds, save the plash, and the swish and swirl, As under her bows one ceaselessly hears The slush-covered water part and curl.

With the quiet flakes on his stiffened feet. Searching his neck and nipping his eyes, On the rounded coils of the spanker sheet, A youngster, half dreaming, shapeless lies.

He knows, that true to his will, his hand Would promptly obey the masters shout: Brt his thoughts are far away on the land, Nor heeds he for any perils without.

He dreams of a valley broad and fair,
With grand old mountains upon each side.
He dreams of a red lamp's cheerful glare
Welcoming ships to the harbor wide.

Of a little room, with its walls ablaze On happy faces, all bright with joy! And he hears the voices of olden days Before he went as a sailor boy.

Dear, kind, brown eyes seem him to greet, "God bless and guard her," he prays, 'tis she, When a cry, "Ease off that spanker sbeet, "Hard up the helm and keep her free!"

One glare, one flare of flashing light, And the visions die with its sudden ray, The lee-braces fly with a circling light, And the sheets spin out as she gathers way.

The water seethes at the bluff of the bow, And the helm churns it to hissing wrath, And the strain on the ship and the master's brow, Relax to welcome the well-known path.

With a snrge and a bound the yards swing square, And the night's alive with our cheering cries, As before the snowstorm, free aud fair, Merruy homeward our good ship flies.

SEAWANHAKA C. Y. C SPRING RACES.

SEAWANHAKA C. Y. C SPRING RACES.

The Seawanhaka Corinthiau Y. C. has this year improved on thorogramme of last season, and now will give a series of three races in June, the leading feature of which will give a series of the many and the leading feature of which will of course be the 40 and 30-ft. classes. The larger craft will as neval be provided for in the annual race, but to meet the wise as of the many racing men in the smaller classes, two special races of the many racing men in the smaller classes, two special races of the many racing men in the smaller classes, two special races of the many racing men in the smaller classes, two special races of the many form of the state of the series of the serie

Sandy flook, leaving it on starouard, and return solve course.

A. One Gun "start will be given at 11 A, M. precisely without a few wind or weather, fog excepted. A preparatory signal will be given at 10.30 A. M. by a blast of the whistle on the committee steamer and the raising of the white ball. At 11 A. M. a blast of the whistle will be given and the red ball raised under the white ball, this will be the starting time for all the yachts. The following exceptions to the racing rules are made for this race.

race.
Full professional crews may be carried and no restriction is placed on their number, but the helmsman must be an amateur. Sailing masters may be carried as mates. Clubtopsails myybe carried. In case of a walk-over in either class the value of the prize will be reduced three-quarters.

Saturday, June 21—Twentieth Annual Corinthian Race.—To be sailed over be regular club courses, the classes and prizes being: Schooners—90tt. class, 15t; 75tt. class, \$100; 53tt. class, \$50; 53tt. class, \$50; 40tt. class, \$100; 46tt. class, \$50; 50tf. class, \$50, 46tt. class, \$100; 46tt. class, \$100; 46tt. class, \$50; 50tf. class, \$50, 46tt. class, \$50; 50tf. class, \$50, 46tt. class, \$100; 46tt. class, \$100; 46tt. class, \$100; 46tt. class, \$100; 46tt. class, \$50; 50tf. cla

In case of a walk-over in any class, the value of the prize will a reduced one-half. Personal prizes will be given to members of

be reduced one-half. Personal prizes will be given to members of the winning Corinthian crews.

The "Leland Corinthian Challenge Cup," open for competition to members of the Seawaohaka Corinthian Y.C. only, and which for this season is put up for contest in the 40ft, class, will be raced for. A prize of the value of \$50 is offered by W.B. Ogden, Esq., in the 30ft, class. A prize of the value of \$50 is offered by Commodore Robert Center to the helmsman of the sloop or cutter, irrespective of class, making the best corrected time over the Scotland Light Ship course. A second prize is also offered by Com. Center.

Scotland Light Ship course. A second prize is also offered by Conn. Center.

Entries must be made in writing, and filed with the chairman of the race committee, W. B. Simonus, Esq., 18 South William street, New York, by 12 o'clock noon on Jnne 19, accompanied by the S. C. Y. C. measuremont of the yacht, certified to by her owner or by the measurer of the club from which she is entered; togethor with a list of the proposed Corinthian members of the crew, their several occupations and addresses.

A register of Corinthians is kept at the Club House. Yacht owners may complete their Corinthian crews by applying to J. F. Tams, Esq., 48 Exchange Place, or to T. C. Zerega, Esq., at the Club House, 7 East 32d Street, of the Committee on Corinthian Crews.

Tams, 1844, 48 Inxonange Frace, of To 1, C. Jerega, 1841, at the Club House, Teast 32d Street, of the Committee on Corinthian Crews.

Special attention is called to Racing Rules XII., XXIII. and XXXVI.

Each yacht must be steered by a member of this club or by some other amateur.

Crews must be composed of amateurs except as herinafter provided: In all classes and without exception, any sailing master who may be aboard must remain below, and must not direct or assist in any way in the management or working of the yacht. The term "crew" in the following paragraphs includes all others on board except that stewards and cooks, if they take no part in handling the yacht, will not be counted as members of the crew. There are no restrictions whatever as to number and nature of crew except as follows: in the 575 and 37t. classes of schooners, and the 61ft. class of sloops, cutters and yawls, the professionals must be limited to one man for each 4ft, or each fraction thereof of Lw.l. length or fraction thereof, inclusive of the helmsman. Two of the crew only in the 53t. class, and only one in the 46, 40, 35 and 30ft. classes may be professionals.

In the 75 and 36ft, classes of schooners, and in the 61, 53, 46 and 40tt. classes of sloops, cutters and yawls, crows on the 46, 40, 35 and 30ft. classes on sepond the extend 40tt. classes of sloops, cutters and yawls, topsalls which extend 40tt. classes of sloops, cutters and yawls, topsalls which extend 40tt. classes of sloops, cutters and yawls, topsalls which extend 40tt. classes of sloops, cutters and yawls, topsalls which extend 40tt. classes of sloops, cutters and yawls, topsalls which extend 40tt. classes of sloops, cutters and yawls, topsalls which extend 40tt. classes of sloops, cutters and yawls, topsalls which extend 40tt. classes of sloops, cutters and yawls, topsalls which extend 40tt. classes of sloops, and the first and and the class of conditions and the first and and the first and and the first and and the first and the first and the first and the first and t

above the truck or beyond the gaff end shall not be carried. No club or head yard on spinakers shall exceed in length 1.20th of the l.w.l. length of the yacht, and no foot yard or club shall be carried.

Boats must be carried as provided by Racing Rule XXV. Each yacht must carry on deck two serviceable life buoys ready for immediate use.

A flying start will be made as near 11 a. M. as practicable, and the time of each yacht will be taken as she passes between the committee steamer and Buoy 18, off Bay Ridge in the Upper Bay Signals will be given from the committee steamer as follows; 1. Preparatory (long blast). The club signal will be lowered on the steamer. (There will be an interval of five minutes between the first and second whistles.) 2. Start for all classes of schooners and for the 70-ft. class of sloops, cutters and yawis. (Long blast). A white ball will be hoisted on the steamer. (There will be an interval of five minutes between the situation of five minutes between the second and third whistles.) 3. Start for all other classes. (Long blast.) A red ball will be hoisted under to white ball on the steamer. Any yacht failing to cross the line within five minutes after the starting signal for her class, will be timed as if she had crossed at the expiration of that time.

Courses.—For all classes of schooners, and for tho 70, 61 and 53-ft, classes of sloops, cutters and yawis, from between the committee steamer and bouy 18 to buoy 10 on S. W. Spit, keeping it on port; thence to and around Sandy Hook Lightship, keeping it on starboard, and return over same course to buoy 15, keeping to a starboard, and return over same course to buoy 15, keeping to a starboard, and return over same course to Buoy 15, keeping to castward of Buoys 9, 11, 13 and 15, on the West Bank, and outside of Buoy 5 on Point of Sandy Hook, going and returning. For the 35 and 30ft, classes of sloops, enters and yawis, from same starting line to Buoy 10 on S. W. Spit, keeping it on port; thence to and around Buoy 5 on the Point of Sandy

MOSQUITO FISHERMAN.

Editor Forest and Stream:

The report published to-day in your paper describing the Mosquito Fleet legatta of May 17th, devotes considerable space to remarks concerning my yawl Bouncer, and as her shape, dimension, rig, etc., as given are not correct, will you permit me to make them 80?

Bouncer is, I believe, the pioneer of an entirely new type of boat.

siou, Fig. etc., as given are not correct, and not correct to some correct as a "scow or pontoon," for they have flat hottoms, while Bouncer is a round bottom boat with deadrise.

Second—Her sides are not "parallel," or straight, but are bent toms, while Bouncer is a round bottom boat with deadrise.

Second—Her sides are not "parallel," or straight, but are bent longitudinally, forming each the segment of a circle, and making her much narrower at bow and stern than amidship.

Third—She has not "square ends," but more properly speaking, her bow and stern also form segments of circles, consequently her sides cannot be nearly as long as her length over all, and she does not sail on the latter length when heeled, as is stated by your reporter.

Fourth—Her rig is not a "combination of canoe and sharpie." but is the simple Roslyn yawl rig as illustrated and named several years ago by Forest and Strieam, except that the mainsail is cut off at after end and bent to a club to lover centre of sail area. Her draught of water is between five and six inches.

It strikes me that this performance of Bouncer is a theme for the supporters of sharp, deep and heavy boats to reflect upoothere are threo little yawls with ix inches of the same length. One of them (Ghoml) is known to be fast. Two have heavily weighted keels. The third (Bonneer) is a centreboard boat, carrying no ballast excepting enough to trim her by the stern, yet in a race of eight miles, requiring about two hours to sail, she beats one of her class competitors more than half an hour and the other 33 minutes, at the same time distancing tho rest of the fleet, all longer boats than herself, and having the admitted advantage of cat rig.

Let us suppose a 14-foot, deep, keel sloop or cutter to have accomplished half as much, what a shout would go up from the faithful!

ROSLYN, L. I., May 22.

A DISASTER TO A STEAM LAUNCH.—On May 25 a party of six, four brothers named Biel, of Jersey City, and two friends, started from Port Morris in the stant launch Keada, which they had purchased, to take to News Kay. At about 8 P, M., when near Robbins Reef Light, the law is struck and snuk by the Cunard steamer Aurania, bound in the struck and snuk by the Cunard steamer Aurania, bound in the water, but four were picked up by the revenuer thrown into the water, but four were picked up by the revenuer washington. The other two, Henry C. and Charles Biel, word downed. The men who were saved say that they did not see steamer until she was almost on them, and from the accounts thus far the blame rests with the launch, as she showed no lights and evidently kept a very poor lookout.

INTERNATIONAL RACING.

INTERNATIONAL RACING.

THE World has the following sensible editorial under date of objected to the new deed:

"Lord Dunraven is the first English yachtsman to give a clear and explicit reason for disliking the new deed of gift of the America Cup. The reason is perfectly sound and the deed ought to be amended if the purpose of the Cup to encourage international vachting is not to be abandoned.

"Dunraven objects to the provision of the deed which requires ten months' notice of the general dimensions of the challenging which is the standard of the purpose of the cup to encourage international importance it's unfair to give to the builder of the Cup defender ten months in which to construct a boat of equal size with the challenger, but with a larger sail area.

"Yachtsmen who are true sportsmen and who are eager that the international contests shall be continued are to be congratulated that so fair-minded a man as Dunraven has takon part in the correspondence, for the attitude of the Royal Yacht Squadronatof some of its leading members has been anything but satisfactory. Now that a clear and explicit objection has been made to the deed it is to be hoped that the response of the Apparatus the factory. Now that a clear and explicit objection has been made to the deed to be used as a due regard for the sponder cannow the such as a due regard for the sponder than the Cup should go to Great Britain, while the conditions of the deed could not be changed, there would be very little chance for an American visitor. Whether our ship shall on shall not have fair play in Euglish waters, however, is not the question. We must accept the fortunos of war, and to Americans the essential thing is that nothing unsportsmanlike shall be done by their yachtsmen and that international yacht races shall be maintained.

"In order to accomplish that desirable end Mr. Schnyler would

thing is that nothing unsportsmanlike shall be done by their yachtsmen and that international yacht races shall be maintained.

"In order to accomplish that desirable end Mr. Schnyler would do well to remove every reasonable objection. Let us go on with the contests. In no long time each side will find it poor policy to be small and tricky. Whatever may happen in the first race in English waters, in the end the victory will be won by the best ships and suilor men."

The Commercial Advertice of May 24 contains an interview with Mr. Schuyler concerning Lord Dunraven's letter. Mr. Schnyler says nothing new, but confines himself to the old platitudes about the need of ten months notice and the wickedness of Thistle's owners. The following statements are credited to him; "American yachtsmen, and especially those of the New York Y O., are firm in the conviction that the terms of the deed are perfectly fair and sportsmanlike. The English yachtsmen want the original deed of gift, which only asked for the custom house tonnage measurement. Now it is a simple thing to find out the dimensions of a vessel by applying the rules of the custom house measurement."

Mr. Schuyler ignores the fact that many American yachtsmen have opposed the deed from the first. The statement about tounage has nothing to do with the issue; the demand is for the same spirit of fair play that dictated the first deed and made the Cup free to all American yachts, instead of the mean and grasping terms of the new deed. Tounage measurement as applied to yachts is entirely obsolete, and if the views of some members of the New York Y. C. should be come dissatisfied with the racing conditions attached to the Cup. it would be necessary for them to return it to me, as they do not possess the power to make any alterations, having accepted the present ones. If they did return it to me I might possibly change some of its provisions, but that is a matter to be determined when they do return it. It has been said that I was willing to make some changes in the las

LARCHMONT Y. C.

THE spring regatta of the Larchmont Y. C. will be sailed on June 7, being open to members of the New York, Eastern, Seawanhaka Corinthian, Atlantic, New York Corinthian, Oyster Bay Corinthian, Oyster Bay Corinthian, Oyster Bay Corinthian, Atlantic, New York Corinthian, Oyster Bay Corinthian, New Haven, New Rochelle and Corinthian of Murulenead yacht clubs. Prizes will be officed in each class where four or more yachts start, a second prize will be given. All cabin yachts will be classified according to their racing length, as follows. Class A, schooners measuring over 9flt; Class B, 9flt, and over 7flt; Class A, schooners measuring over 9flt; Class B, 9flt, and over 7flt; Class A, Schooners measuring over 9flt; Class B, 9flt, and over 7flt, Class A, 8flt, and over 9flt; Class B, 3flt, and over 6flt; Class B, 3flt, and over 6flt; Class A, 8flt, and over 7flt; Class B, 3flt, and over 2flt; Class B, 2flt, and yachts will be classified according to their load waterline length as follows: Class B, 2flt, and over 2flt; Class B, 2flt, and part and classification. All open yacht will be cla

will not award a prize to any yacot unless substrule is com-gatta, committee will call the attention of members to the t the recent change in the system of mossuring for racing s will necessitate a re-measurement of competing yachts, irable that such re-measurement be made, if possible, be-race. The measurer of the club is Mr. John Hyslop, 208 renty-ninth street. New York. Regatta committee: Fran-cott, Oswald Sanderson, Harold S. Forgood.

CHANGE OF BUOYS.

CHANGE OF BUOYS.

THE following notice is of importance to all yachtsmen who will a sail in the June races in New York Bay, as the buoys in questiou, uotably Nos. ½5 and 10, are turning points of the courses. As the changes will be meade during regatta week, special care will be necessary in the event of tog.

Change in Buoyage of Main Ship Channel, New York Lower Bay.

Notice is hereby given that on or about June 19, 1890, the following changes will be made in the buoyage of Main Ship Channel, New York Bay, in order to conform to and obtain full benefit from the recent improvements of that channel.

No 8½—Red can buoy with perch and ball will be moved about 2,150tf, east from its present position into 29tf, mean low water, on the following bearings:—Navesiak Light houses, Sb ½4E; Sandy Hook Lighthouse, SE34S; Romer Shoal Lighthouse, NE ½4E.

No 10—Red Iron spar buoy marking the point of Southwest Spit will be moved about 650tf. NE34E from its present position into 28½tf. mean low water on the following bearings:—Sandy Hook Lighthouse, NE ½4E; Navesiak Light houses, S by E34E; Romer Shoal Lighthouse, NE by E34E; Hook beacon, SE34E; Co—Red can buoy in 23tf. mean low water; Romer Shoal Lighthouse, NE by E34E; Hook beacon, SE34E; Co—Red can buoy in 23tf. mean low water; Romer Shoal Lighthouse, ENE34E; Hook beacon, SE45E.

C3—Red can buoy in 23tf. mean low water; Romer Shoal Lighthouse, ENE34E; Hook beacon, SE45E.

C3—Red can buoy in 23tf. mean low water; Romer Shoal Lighthouse, ENE34E; Hook beacon, SE45E.

No 12—Red can bnoy will be moved about 3,289ft. to the northward of C6 in its new position on the same line at a point half way between it and the junction buoy of the Swash Chanuel in 29tt. mean low water on the following bearings—Sandy Hook Lighthones, SSE½6: Romer Shoal Lighthones, E½3; Fort Tompkins Lighthones, SEE½6: Romer Shoal Lighthones, E½3; Fort Tompkins Lighthones, SyE½6: Princess Bay Lighthouse, W½N.

No 11—Black tron spar buoy marking West Bank will be discontinued.

This arrangement will give a continuous line of red bnoys at regular intervals along the edge of the shoals from the junction of the Swash and Maiu Ship channels to Sandy Hook and to the Bayside Range dredged channel.

Bearings are magnetic and given approximately.

Temporary Change of Vineyard Sound (Sow and Pigs) Light Vessel.

Notice is hereby given that on or about May 26, 1890, Vineyard Sound (Sow and Pigs) Light Vessel No 41 will be removed from her station for repairs and replaced by relief light vessel. No 30.

Three will be no change in the characteristics of the lights and foop iron day mark at each masthead. The hull is painted red, with "No 30" on each quarter.

Light vessel No 41 will be replaced on her station as soon as the repairs are completed.

Change in the Fog Signals on Cornfeld Point and Ram Island Reef Light Vessel, Long Island Sound, Ct., and the Ram Island Reef Light Vessel, Long Island Sound, N. Y., will be discontinued, and thereafter the fog signal on board of each vessel will be red and black horizontal stripes will be placed near Newton Rock, in 9 fathoms of water, on the rollowing bearings (magnetic)—Beavertall Lighthouse, NNE½6. §6, nautical mile; Whale Rock Dighthouse, NNE½6. §6, nautical mile; Whale Rock Dighthous

WE GIVE IT UP.

WE GIVE IT UP.

Editor Forest and Stream:

It is amusing to hear the excuses made as to why wo were beaten by Minerva. It is still more interesting to know that this same Minerva belongs to the same type of boat represented by the Saxon or Kitten, back in the fifties, and the Madge and Maggie in the eighties. It is really ludicrous to hear the talk made about where she gets her speed. Egg-shaped sections, light forefoct, raking stempost, thick keel and copper bottom but little has been said of her balance of sail and good bandling. All of the cracks had a chance to learn a thing or two from Gapt. Barr, that a cutter could sail to windward without a jibtopsail and that a less quantity of sail more concentrated could drive a buil of given tonnage faster through the water than a large amount spread out at each end. Her gaftiopsails are superior to anything from our salmakers in draft.

Be it said, moreover, that they could buil a keel cutter that could outsail any yeach that two could produce with or without the centreboard stands unpersibled in the history of yecht and own boards own of Mnerva is worthy of the greatest admiration. Sailing across the Atlantic in the incredibly snort time of the compositions, a disadvantage that none of our cut detenders since the days of the America and Magie over labored under; she has with comparative ease defeated the latest and best productions from the hands of our best designers, Burgess, Gardner, Smith and McVey. The victories of Purntan, Mayinover and Volunteer sink into insignificance compared with those of Minerva, and the Caledonians may justly feel proud of their success. And now we propose to our-Minerva Minerva, and copy her in detail; and if she should come out one side black the ouncer green, look out for a like competitor. We say that Minerva and potter how much of the American sloop you can find in her. What has become of the American sloop you can find in her. What has become of the American sloop you can find in her, what has become of the American sloop you ca

find the deep, narrow craft, flush deck, raking sternpost, lead keel, light forefoot, channels for the shrouds, and with the exception of the laced mainsail and fixed bowsprit a typical cutter. I say again, what has become of the American centerboard sloop?

LOYALTY.

-THE RACE AROUND REEDY ISLAND.—The sailor meu of Copper's Point Y. C. opened the season on May 10 with a very venturing race of 50 miles down the Delaware Hiver around Reedy island and return, the competitors being all 19-foot catboats. The starters were: First class—Keystone, Captain G. Williams; Burton, Captain E. G. Wilkins. Second class—Clarke, Captain John Maculley; King, Captain Righ King. Third Class—Item, Captain Milliams; Burton, Captain E. G. Wilkins, Scaptain John Maculley; King, Captain Righ King, Third Class—Item, Captain Milliams, Long, Tharke; Anderson, Captain Long.

The cabin sloop Nazigy went along to serve as stakeboat, while the Bertha laid at the starting line. The start was made at 650 r. M. with a strong southwest wind. Near Kaign's For Williams, and Almoud withdrew, arrhag the breeze dropped and the fleet freshening with the day. The Nazig was not at the turn in time, so the Burton anchored and timed the others, Item rounding at 1602 A. M., the Clarke and King together at 1604, and Keystone and Wilkins at 1607. The way home began with a hard beat, the wind blowing heavily and Kicking up a bad sea. The King parted her head stay and withdrow. Most of the boats recfed, but the Wilkins carried full said and passed the leaders. When off Chester the wind dropped and tho fleet anchored again until 4 A. M. on Monday, when the wind came ligut from south, soon shifting to northeast with a heavy fog. The Clarke flash.

A. M., with the Wild Came ligut from south, soon shifting to northeast with a heavy fog. The Clarke flash.

C. Wilkins, went to his namesake. The time of the Valkyrie and Varnan ought to have send to see a staying at home and sending forth challenges broadcast. One is irresistively reminded of the renowned here of reman

ST. LAWRENCE SKIFF RACING.—On May is, a meeting of delegates from the various towns along the St. Lawrence River was held at Prescott, Ontario, to organize a skiff sailing association. There were present Messrs. G. G. Lafayette and G. A. Dana, of Brockvillet A. Bain and J. A. Seeley, of Clayton; C. Pecore and H. E. Walton, of Gananoque; H. O. Wiser, Of Montreal; S. G. Averill and A. R. Porte, of Ogdensburg, and H. G. Wiser. The club was organized with the following officers: Com. H. C. Wiser, Prescott; Vice-Com., A. Bain, Clayton; Scc., A. R. Porte, Ogdensburg; Purser, H. E. Walton, Gananoque; Excurtive Oommittee—Officers and delegates present. Genomer Committee—Officers and delegates present. Genomer Committee—Officers and delegates present. Genomer Capt. D. H. Lyon, Ogdensburg; The dimeuvast he point on which the delegates differed, but after some discussion it was decided that all boats, the product of whose extreme length and breadth did not exceed the sum of 88, would be eligible to sail in all races of the association of the sum of 88, would be eligible to sail in all races of the association of the sum of 88, would be eligible to sail in all races of the association of the sum of 88, would be eligible to sail in all races of the association of the sum of 88, would be eligible to sail in all races of the association of 88, would be eligible to sail in all races of the association of 88, would be eligible to sail in all races of the association of 88, would be eligible to sail in all races of the association of 88, would be eligible to sail in all races of the association of 88, would be eligible to sail in all races of the association of 88, would be eligible to sail in all races of the association of 88, would be eligible to sail in all races of the association of 88, would be eligible to sail in all races of the sail of the sa

as been extended to the members of the Corinhian Navy to enter their boats in the Decoration Day race of the Knickerboar of the Street of the

Stated.

OAKLAND C. C.

As will be seen from the following list of fixtures, the Oakland Canne Club is in the happy position of being able to sail through the entire year, the races beginning on Jan. 12 and ending on Christmas, to begin the new year again. The club has three trophies, the Mayrisch badge, to be sailed for once every quarter; the Huliday cup, six times a year; and the O. C. C. trophy for best annual record, the conditions being as follows:

1 The races shall be under the management of a committee of three, and its decision in all controversies shall be final.

2. Races shall be sailed once a month over the regular club course, 3 miles. Dates and classification of cances shall be announced by Feb. 1 of each year.

3. Cances shall be divided into three classes, viz.; First Class, latest models, plate centerboards, improved rigs, etc. Second Class, old models, inferior centerboards, old rigs, etc. Third Class, beginners, small cances, etc.

4. The classification, dates or course may be altered from time to time, due notice being given to the contestants.

5. R. cord p intes shall be as follows: Every attry completing the course, 2 points; the winner in each class, 3 points; the second in each else. 2 points.

6. Cances shall be sailed by owners only. In case of a bona fide change of ownershry between members of the club, a cance may retain its record as d the trophy go with the boat.

7. The winner in each class alterna ely shall hold the trophy until the next race, but should he meanwhile cease to be a member, it shall be returned to the committee immediately.

8. New boats coming in during the year shall receive an average of the credits in their classes.

9. The owner of the cano scoring the highest number of points in the twelve races shall win the trophy.

10. In case of a tie, a handicap giving liberal time allowance to inferior craft, shall be sailed before the annual meeting.

The programme of races for 1890 is: Jan. 13. Mayrisch badge, (14th); Feb. 9th, O. C. C. trophy, (18t); Feb. 22, the Holiday cup. Washington's Birthdoy; Mar. 9, O. C. C. trophy, (20); April 8, O. C. C. trophy, (31); April 20. Mayrisch badge, (15); May 4, O. C. trophy, (32); April 20. Mayrisch badge, (15); May 4, O. C. trophy, (34h); May 30, the Holiday cup, Decoration Day; June 8th, O. C. trophy, (5th); July 4, the Holiday cup, Independence Day; July 6, O. C. C. trophy, (6th); July 20, Mayrisch badge, (16th); Aug. 3, O. C. C. trophy, (6th); July 20, Mayrisch badge, (16th); Aug. 3, O. C. C. trophy, (6th); July 20, Mayrisch badge, (16th); Aug. 3, O. C. C. trophy, (19th); Oct. 19, Mayrisch badge, (17); Nov. 2, O. C. Mr. Guller was formerly a member of the New York C. C. and his canoe Vitesse was the New York, formerly Jess.

PASSAIC RIVER MEET.—The camp of the Passaic River canoe ists will be on the same site as in 1888, at the foot of W. Fifty-seventh street (old rifitieth street), Newark Bay. The New Jersey Central Railroad, foot of Liberty street, New York, will land canoeists at Pamrapo (East Forty-ninth street) on the New York Bay side; and the Bergen Point and Jersey City borse cars run across Fifty-seventh street within three blocks of the camp. At Bergen Point they connect with the Staten Island ferry. Mail matter may be addressed to "The Passaic Canue Camp," Saltersville P. O., N. J. Two mails will be received and sent from camp each day. Express matter to be sent via U. S. Ex, to Pamrapo, care of committee. Canoeists are requested to register their names at the committee's tent on arrival in camp. The camp will begin to day. Mr. R. H. Peebles has been appointed sec.-trees, Mr. Pennington having resigned. Rear-Com. Dorland, A. C. A. takes Mr. Peebles's place on the camp committee. The subscription for the new cup is closed and it is being made.

BROOKLYN C. C.—The Brooklyn C. C. has lately issued a neat club book, showing a membership of thirty and a fleet of thirty-six canoes and boats. The club has this year been incorporated, the officers being: Com., R. J. Wilkin, J. F. Newman, T. G. Budington, M. V. Brokaw, F. L. Dunnell. Regatta Committee, W. McK. Miller, M. M. Davis, D. H. Nash. The annual regatta will take place on June 2, with 6 events.

A. C. A. MEMBERSHIP.—Eastern Div.: A. C. A. Chamberlin, W. D. Winslow, Boston; C. F. Schuster, Hoyloke, Mass, Ralph L. Morgan, Worcester, Mass.; Wilton L. Richards, Malden, Mass.; Edwin D. Dresser, Winchester, Mass. Atlantic Division—Aucustus W. Mort, Mott Haven, N. Y.; L. D. Huntington, Jr., New Roitelle, N. Y. Northern Div.; J. M. Douglas, V. de V. Dowker, A. W. Morris, Montreal.

IANTHE C. C.—The pening races of the season on May 24 were haroly more than scrub races, b

HOBOKEN C. C.—Officers, 1890; Com., Julius Warnecke; Vice-Com., Richard Beyer; Sec'y, P. C. Gottschalk. The club now has 12 members, with a house at the foot of Fourteenth street, Hobo-ken.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

G. A. C.—The penal code of New York forbids Sunday fishing.
C. W., Brooklyn, N. Y.—Pure white puppies are not uncommon, but generally, as they grow older, patches or spots of color will appear.
E. S. R., Philadelphia—I expect to go out to Red Fork, I. T., by the first of October next. I would like you to inform me what there will be to gun for at that time, and as I have rifle and snot-gun both, would it be advisable to take the both or just the one? Ans. The shooting will be on birds and one should take a shot-gun.

there will be to gun for at that time, and as I have rifle and short gun both, would it be advisable to take the both or just the one? Ans. The shooting will be on birds and one should take a short-gun.

A. B. P.. Providence, R. I.—Can you give me any information about wild rice, where to get it? Is there any trouble to get it started in shallow water? Will it grow in New Brunswick? Ans. Wild rice is supplied by Chas, Gilchrist, Port Hope, Ort., or R. Valentine, Janesville, Wis. Neither of them have any now on hand; will not have it until fall. It will grow in New Brunswick. E. S. T., Thompsontown, Pa.—Kindly inform me if I can purchase and where, something similar to a soldier's knapsack, to use in a tramp, to hold a rubber coat, Junch, matches, etc., to estrapped on the hips. Ans. You can proure it from dealers in sportsmen's goods. See names of firms advertising. These dealers supply everything a sportsman has use for.

A. J. F., New York.—Can you inform me what kind of red silk tackle makers use for tying guides on rods so that it shows the red silk transparent after shelac. I used some regular sewing silk, and after I put shelac on it turned a dark color. Ans. Use best quality sewing machine silk, and wax it before winding, or instead of waxing after winding the silk wet it with hot water and brush it over with thin glue. You will do well to read the work on "Fly-Rods and Fly-Tackle," by Henry P. Wells.

G. DE M. Quebec.—Can you tell whole is to be the adopted designation for the "ouannaische." "winninish." or whatever "ische" or "ish" he may be? The first name looks nice when correctly spelled, but the other appears easier reading. "Landlocked salmon" is expressive, but awkward Ans. In "The Fisberies and Fishery Industries of the United States Fish Commission, the Industries to the Winninish. The same form was employed by P. Forder, first in the "Game Fishes of the United States Fish Commission, the Industries, be heavy enough for my purpose or would the above. The name ouananshe is the French equivalent

CALL OF

By C. B. VAUX ("DOT.")

A complete manual for the management of a canoe. The author begins at the very eginning, describes and explains the rudiments in the simplest and plainest way possible verything is made intelligible for beginners and besides this A B C teaching there are so any hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the ady of these. The book is complete and concise—no useless duffle between its covers. The objects treated are the choice of a cance, paddling, sailing, care of the canoe, recipes and less. The text is further elucidated by numerous practical drawings, and the beauty of the ook is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe uilding." Price, postpaid, \$1.00.

MIAMISBURG, O.

Safest, Lightest, Handsomest Medel, Most Compact.

The only portable boat that combines handsome model with compactness. No bagging; smooth, uniform surface. All parts of frame adjustable to compensate for stretching and shrinkage of canvas. Flooring forms the shipping case. The Acme is endorsed by prominent sportsmen everywhere. Capt. Paul Boyton, the famous swimmer, who has a 12ti. boat, writes: "In all my experience with boats of every description, I never saw anything so compact and perfect. Her strength, lightness and beauty of model surprised me. She is easy to set up and to pack. She will be my companion on all my hunting expeditions, as I can carry her behind on my saddle as easily as I can a roll of camp blankets."

TRANSFER OF THE FISH COMMISSION.

N May 14, 1890, the U. S. Senate Committee on Agriculture and Forestry recommended the passage of a oill providing for the transfer of the U.S. Fish Commistion to the Department of Agriculture. This bill was amended by making the Commissionership a Presidential appointment instead of a departmental one, and the bill is amended is now in the hands of the Senate Committee in Merchant Marine and Fisheries, to whom it should nave been first referred. In recommending the passage of the bill the Committee includes in its report the folowing remarks:

"This measure has for its object an increase in the fficiency of the Fish Commission by allying it with a listinctly scientific executive department in which, while its usefulness shall in no manner be circumscribed or impaired, it may be brought into proper relation with he Executive and Congress,"
The report next sketches briefly the resolution of 1871,

reating the Commission, the amendment to the original esolution providing for a salaried appointment by the resident, and the debate looking toward a permanent rganization. To resume the language of the Committee:

The Fish Commission has now grown to be a powerful and exensive bureau, furnishing employment to more than one hnn-red and forty employees, disbursing annually more than \$800,000, and controlling, in whole or in part, the operations carried on in Il parts of the country and on the sea in connection with the udy of the habits of fishes and with their propagation for hnman odd. * * * * Doubtless independence promotes efficiency in ome exceptional cases, or in the formative stage of an organization like this, where so much depends upon the personal qualities

of the head; but as already shown the formative and exceptional stages with respect to this organization have been passed; it has entered on a career which promises to be perennial; and its continued efficiency cannot wisely be left dependent upon the qualities, attainments and inclination of the individual who may be its temporary head, but should depend rather upon the systematic administration of rules, principles and business methods, sanctioned by law and experience, to be passed down from administration to administration, as in the case with respect to other bureaus of the Government.

It is hardly necessary to say that any relations which this organization may have with other branches of the Government will be in no respect impaired by the change proposed; rather will they be greatly increased in usefulness by the enlistment as its representative of one whose personal relationships with the heads of other Executive Departments are necessarily more intimate and influential.

It is of importance also that the President shall have the opportunity and the furnished if the

mate and influential.

It is of importance also that the President shall have the opportunity of obtaining information, which would be furnished if the Commission were placed under the control of a Cabinet officer, with whom he regularly consults, and to whom he looks for the wise direction which is essential to good administration. And this brings up one of the strongest possible reasons for placing the Fish Commission under charge of one of the great Departments of the Government.

Fish Commission under charge of one of the great Departments of the Government.

The head of the Commission is, and must continue to be, a person of great scientific attainments. It is the work of such which has brought the bureau to its present state of usefulness. But along with this must necessarily go the business ability necessary for the making of contracts, the superintendence of construction, the adjustment of salaries, the control of suhordinates, and that general management which is necessary in all affairs of moment, both private and public. noment, both private and public.

It is evident that the proposed transfer is not in the efficiency, for no mention is interest of economy and made of the former, and the report itself pays tribute to the excellence of the present organization, in which it reflects the mature judgment of the people whose interests have been advanced by the skill and energy of the Commission. This work has been done under the direct and constant supervision of committees of both Houses of Congress; the details of its expenditures have been scrutinized annually; various departments of the Government have contributed to its scope and, in turn, utilized its results. Leaders among business men and scientific associations at home and abroad have expressed their admiration of the very efficiency which has provoked the envy of political greed. From far and near, whereever the Fish Commission is known, protests have come against any experiments with this successful branch of the public service. Clearly this proposition has its origin, not in the public demand, which is unreservedly opposed to it, but in a supposed political necessity. It aims simply to pull down the organization to the level of a fish-distributing machine, double the appropriations, and provide additional places in reward for partisan

SNAP SHOTS.

THE National Geographical Society has sent out an expedition to Alaska for the special purpose of climbing Mount St. Elias. The gentlemen in charge, Messrs. Mark B. Smith and J. C. Russell, expect to leave Seattle by the steamer which leaves for Sitka June 14, and hope to begin their work about July 1. This work will include not only the attempt to climb Mount St. Elias, which has long been regarded as the highest mountain in the United States, but also the mapping of all the glaciers which can be reached from it. The party will consist of about fifteen white men, and of course a contingent of native helpers will be secured when the ground is reached. The money for the expedition has been raised in Washington by private persons, but it is stated that the U. S. S. Pinta will be placed at the disposal of the party on their arrival at Sitka to transport them to Yakutat Bay, and to render any other aid possible.

The opinion is tenaciously held by some people that the solution of the problem of protecting our migratory game may be found in Congressional legislation. It is beyond dispute that a National law might embody wiser and more effective provisions than the contradictory and in-adequate State laws, if Congress had any power to legislate on the subject. Our frequently expressed belief is that game protection, except on the public lands, is some-thing with which Congress has no concern whatever, and national sportsmen's conventions which listen to speeches advocating Congressional action on the subject are simply wasting their time. The only jurisdiction Congress has, it appears reasonable to assume, is when game having been killed becomes an article of inter-State commerce, and as such subject to action of Congress with respect to regulation of that commerce.

THE MAN IN THE HOLLOW TREE.

T happened at the time of the Wyoming Massacre I in Pennsylvania, that a fugitive took refuge in a hollow tree. No sooner had he entered than a spider began spinning her web across the entrance through which he had crawled. The web completed, up came the Indians, peering into every nook for their victim. One look at the hole in the hollow tree showed them the spider web spun across the opening, with the spider snugly ensconced therein, and they passed on. This story, with details of name and place and date, was told to Dr. Henry C. McCook by a descendant of the man who had been saved by the spider. Dr. McCook gives it in his "Tenants of an Old Farm," and says it may have been true, but points out that it is a variant of an old tale. A similar story was told, in the times of the Reformation, of a Protestant refugee, who was concealed in an oven.

Before that, in Arabia, it dates back to the early part of
the seventh century, to the Hijrah, when Mohammed
and his companion Aboo-Bekr, flying from the Koreishites, took refuge in the cave of Thor, and were there
miraculously saved by a spider in the same way. Still further back, in the third century, St. Felix of Nola, hid-ing in a ruined wall, owed his life to a like friendly spider. Finally, a Jewish tradition has it that David, fleeing before Saul, hid in a cave, and was in the same manner preserved by the intervention of a spider. If then the Pennsylvania pioneer did hide from the Indians in a hollow tree, he had no reason for feeling lonely, for he was one of a goodly and distinguished company. If we had the entire list, no doubt it would be found that the story has been told in every corner of the earth where men have ever hidden in caves and hollow trees, and where spiders have spun webs.

But the caption at the head of this paper refers to an.

other man in a hollow tree.

The Saturday Globe, of Toronto, Ont., in its issue of May 17 last, contained a letter written from London, Ont., and signed S. S. Cann, which was briefly this:

May 17 last, contained a letter written from London, Ont., and signed S. S. Cann, which was briefly this:

Mr. James Blackwell, a pioneer of Ops township, but now a respectable retired citizen of Lindsay, gave me on his word of honor a remarkable incident of Canadian bush life in early pioneer days, as happening to himself at a time when bears and wolves were numerous in those frontier townships.

Mr. Blackwell had the misfortune to lose himself in the great forest. Night fell suddenly, and was made more gloomy by the calls and answers of the too well known marauding wolves; and he philosophically concluded to secure the best stateroom provided by nature, and wait for the light of day. He soon found an old stub, about 17ft. high, with a sapling leaning to. This stub, forming at one time part of an immense tree that had been broken pretty squarely off by a storm, he selected. On reaching the top he found it to he hollow, leaving merely a shell. Mr. Blackwell was preparing in the darkness to descend, but slipped and fell feet first into the stub, and to the hottom. Certainly his situation could hardly be more deplorable. To climb out was impossible. Mr. Blackwell, after the first shock had passed, was not long in discovering that he was not alone, for he found himself in a veritable bears' den, though the old folks were not at home.

Now, it might seem that the presence of bears with such surroundings only added to the miseries of the situation, but it proved otherwise, and this seeming misfortune was but a blessing in disguise. Mr. Blackwell was a muscular man, clear-headed and cool. He began to reflect. As smoke is an indication of fire, so fat and frisky cubs were an indication of adult bears not far off, which in the order of things wouldsoon put in an appearance He knew the bear would never descend head first, so here was the first dawn of hope. Soon he had the gratification to hear her bearship, his deliverer, scrambling up the outside of his prison. On reaching the tops were an indication of adult bears no

pened by being surrounded by wolves, but what might have happened if I had not got among the bears."

This hollow tree and bear story may not be so ancient by several hundred years as the hollow tree and spider story, but it is of a respectable antiquity, as we shall

In an interesting account of a canoe trip through the Miramichi wilderness of New Brunswick, published in FOREST AND STREAM of May 31, 1888, Mr. Arthur P. Silver tells this story as related one night by his Micmac

An Indian was chased by an infuriated she bear, whose cub he An Indian was chased by an inturfaced she bear, whose cun he had robbed. His only refuge was a hollow tree, down which he lowered himself with his captive. The old bear descended bear fashion, tall first. The Indian seized her by the stumpy tail, whereupon he was drawn to the top, and giving the bear a thrust off, remained at the summit of the stump master of the situation.

But long before this version, from the Canadian wilds, another variant, from Georgia, had been published in our columns. In the issue of this journal of July 25, 1878, was the following narration, which had been read before the Georgia Historical Society by Capt. W. W. Paine:

the Georgia Historical Society by Capt. W. W. Paine:

Morgan Gillis was a hunter of some renown, and a bold and powerful man. One day, hunting in the piny woods, he killed a fine buck, and while engaged in skinning it he discovered several Indians creeping toward him. There was no time to deliberate or to tarry. Springing to his feet and leaving rifle and venison behind, he ran for life and reached the swamp, where he noticed a large poplar which had been broken off near its top and had the appearance of being hollow. A knarled orknagged hickory which rested against this enabled him to easily climb the tree, when, to his great joy, he found it hollow, with an opening in the top sufficient for him to enter. He entered it, and sliding to the bottom, found it tenanted by two fat cubs, and at once discovered that he was in the den of a bear, which, fortunately for him, was not at home. About three feet from the bottom of the den was a small knot-hole, from which Gillis saw the Indians approaching, and who seemed much puzzled at not finding him.

After hunting around, the Indians disappeared, supposing that Gillis had escaped to the river. Waiting some time, and the Indians not reappearing, Gillis thought it time to leave his hiding place, and, attempting to do so, found to his dismay that he could

Indians not reappearing, Gillis thought it time to leave his hiding place, and, attempting to do so, found to his dismay that he could not climb out, and that he was entombed within the wooden walls of a tree. Our friend was not the first man, nor the last, who had gotten into a scrape and found it difficult to get out. Gillis could not perish with hunger for some days, for he could eat the cubs; but he might perish for water. Having his large hunting knife with him, he commenced trying to cut his way out of the hollow, and while thus engaged he heard, as he supposed, some one climbing on the outside of the tree. He thought of the Indians, and gave himself up as lost. Soon the aperture at the top of the tree was darkened, and an object commenced descending, and, horror of horrors! it was the old bear. Bears always descend a tree backward—and as Mrs. Bruin neared the bottom Gillis, in terror, commenced using his knife vigorously on her, and she, not expecting such a warm reception in her quarters, hastily ascended, and Gillis, taking advantage of her discomfiture and hasty retreat, seized hold of her shaggy hair and was drawn to the top. He escaped and reached home in safety, a wiser if not a better man.

Reading this, at the time, a correspondent wrote that the story of the man and the bear in the hollow tree was an old one, and had been printed years before in a school reader. Not long ago we came across this old school book. It is "The Reader's Guide, by John Hall, Principal of the Ellington School," and was printed at Hartford, Conn., in 1836. Mr. Hall gathered into his "Guide" the delectation of the tender Connecticut mind a jumble of "Lessons for Practice," comprising divers examples of literature, ranging from sermons to bear Among other things is a poem called "Recollecstories. tions of Childhood," credited to an "English paper," and so like Woodworth's "Old Oaken Bucket," that one of them must have been a plagiarism from the other. Here, sandwiched in between a sentimental composition entitled "Melancholy Moments," by Miss Mary E. Jackson, and a moral tale of "Temper," by Mrs. Opie, is the "Story of a Hunter." It is credited to a "Scrap Book," and it must then first have been printed prior to 1836. The "Scrap Book" writer gives the narration as having come "from a friend who actually heard it related by a person in the manner herein described." The original narrator put the date of the occurrence at "about thirtyfive years ago," so the actual date must have been somewhere around 1800. It was winter, and the young pioneer was out for venison, having tramped five or six miles from home without seeing any meat. What happened to him is thus told with the circumstantiality and detail which characterize veracious bear stories the world

At length I arrived at a large cedar swamp, on the edge of which I was struck by the singular appearance of a large stub, 25 or 30ft. high, with its bark off. From its scratched surface I had which I was struck by the singular appearance of a large stub, 25 or 30ft. high, with its bark off. From its scratched surface I had no doubt it was climbed by raccoons or martins, which probably had also a den in it, as from its appearance I judged it was hollow. The stub at its base might have been? or 8ft. through, but 8 or 10ft. higher up its size was much diminished, so that I could grasp sufficiently to ascend it and ascertain what was within. My gun and great coat were deposited in a secure place, and being an expert climber I soon gained the top. As I anticipated, the stub was hollow, the aperture being about 2½ft. in diameter. The day, you will observe, was dark and cloudy, and looking down the hollow I fancied that I could see the bottom at no great distance, but having nothing to put in to ascertain its depth I concluded that I would try to touch bottom with my feet. I therefore placed myself in the hole and lowered myself gradually, expecting every moment that my foot would come in contact with some animal or the foot of the hollow; but feeling nothing I unthinkingly continued letting myself down until my head and hands and whole person were completely within the center of the stub.

At this moment a sudden and strange fear came over me; I know not from what cause, for I am not naturally timid—it

seemed to affect me with a sense of suffocation, such as is experiseemen to anect me with a sense of smoothing, such as its experienced in dreams under the effect of night-mare. Rendered desperate by my feeling, I made a violent attempt to extricate myself, when the edges of the wood to which I was holding treacherously gave way, and precipitated me to the bottom of the hole, which I found extended to a level with the ground. I cannot wholly account for it, but probably from the erect position in wholny account for it, but probably from the effect position in which my body was necessarily kept in so narrow a tube, and my landing on my feet on a bed of moss, dried leaves and other soft substances, I sustained little or no injury from so great a fall; nor were my clothes but little deranged in my descent, owing, proba-bly, to the smoothness of the surface produced by the long and frequent passing of the animals to and from their den-for a den I found it to be

bly, to the smoothness of the surface produced by the long and frequent passing of the animals to and from their den—for a den I found it to be.

After recovering from my fright I had time to examine the interior. All was dark; and putting out my hands to feel my way, they came in contact with the cold nose and then the fur of some beast which I immediately knew was a half-grown cub or young bear. Continuing to examine, I ascertained that there were three or four of these animals, which, aroused by the noise made in my descent, came around and smelt of me, uttering a mourning noise, taking me at first, no doubt, for their dam; but after a little examination, souffing and snorting as if alarmed, they quietly betook themselves to their couch on the moss, and left me to my gloomy reflections. I knew they were too young to do me any injury, but with that knowledge came the dreadful certainty that the mother, whose premises I had so heedlessly invaded, was quite a different personage, and that my life would date but a short period after she arrived, as arrive she certainly would before many hours could pass over my head.

The interior of the den grew more visible after my eyes became accustomed to the darkness; and aided by a little light from the top, I discovered that the den was circular, and on the ground was 5 or 6ft. in dismeter, its circumference diminishing at the height of 7 or 8ft. to a diameter of less than 6ft., owing to the singular formation of the trunk, as I have before remarked. All my attempts to reach the narrow part of the hollow, in the hopes of working my way out, as a chimney sweep might have done, were fruitless. My escape in this way, therefore, was impossible. To cut through the trunk a hole, sufficient to let out my body, with a small pocket knife, the only one I had, would have been the work of weeks and even months, as from the examinations which I made of both the exterior and interior, I knew that it could not be less than a foot hick. The knife was the only weapon which I possessed, a

was no possibility of my friends finding me by searching in a wilderness of many miles in circuit. My situation was indeed hopeless and desperate. As the shades of evening were now fast approaching, I thought of my cheerful home; my wife seated by the fire with our child in her arms, or preparing our evening meal, looking out anxiously from time to time, expecting my return. These and many more such thoughts rushed through my mind, and which way soever they were turned you may suppose they were teeming with horror. At one time I nearly determined to wreak my feeling upon the cubs by destroying them, but the wanton and useless cruelty of the act, as they could be of no service to me then, prevented me. Ohl you know not how mereiful one is when he feels that he himself would willingly be an object of mercy from others.

Two hours had probably elapsed, and to me two of the longest that I ever experienced, when suddenly the little light which had illuminated me from above was gone. I looked up, and could no longer see the sky. My ears, which at the time were peculiarly sensitive, were assailed with a low growling noise, such as a bear makes on discovering an enemy and preparing for an attack. I thought that my fate was at hand, as this was the mother descending to her cubs, having by her acute organs of smell discovered that her den had been entered by some enemy. From the time I had ascertained my true situation I had opened my knife and held it ready in hand for the encounter, come when it would. I now, therefore, braced myself for a grapple with my terrible antagonist, feverishly awaiting her descent.

Bears always descend in the same manner as they ascend trees; that is, the head is always unward; consecuently her most assail-

Bears always descend in the same manner as they ascend trees; that is, the head is always upward; consequently her most assail-able, or rather least formidable part was opposed to me. A thought quick as lightning rushed through my mind that escape

able, or rather least formidable part was opposed to me. A thought quick as lightning rushed through my mind that escape was possible and that the bear might be the means. No time could be afforded, nor was necessary for deliberation. Just as she reached that part where the hollow widened and where by a jump I could reach hor, I made a desperate spring and with both hands firmly caught hold of the fur which covered her extremittes, giving at the same time a scream, which, in this close den sounded a thousand times louder than any human voice in the open air. The bear, and she was a powerful one, taken by surprise, and unable to get at me, frightened, too, at the hideous and appalling noise which I made, scrambled for life up the hollow. But my weight, I found, was an impediment to her; for when about half way up, I perceived that she began to lag, and notwithstanding I continued to scream, at length came to a dead standapparently not having strength enough to proceed. Knowing that my life depended on her going on, I instantly let go with the hand in which I had my knife, driving it to the haft into her flesh, and redoubled the noise which I had already made. Her pains and fears gave her strength, and by another effort she brought me once more to the light of day, at the top of the stub; nor did she stop there, to receive my thanks for the benefit which she had conferred on me; but hastily descended to the ground, and made her way with all speed to the swamp. I sat for some time on the stub, out of breath, and hardly crediting the reality of my escape. conterred on me; but hastly descended to the ground, and made her way with all speed to the swamp. I sat for some time on the stub, out of breath, and hardly crediting the reality of my escape. After giving thanks to that Providence which had so wonderfully preserved me, I descended to the ground, found my hat and gun where I had left them, and reached home after a fatiguing walk through the woods, about nine o'clock in the evening.

The teller of that story told it with a prolixity and a egard for detail which indicate that he intended it to be believed; and no doubt it was implicitely accepted as true by the scholars of the Nutmeg State, who, thanks to the thoughtfulness of Schoolmaster Hall, were nurtured on the bear-story brand of literary pabulum. It is the earliest American version of the tale we have traced; but in going back thus a hundred years little progress has been made toward the original story of the man and the bear in the hollow tree. When and where the tale was first told cannot be surmised; but there is an ancient variant of it which dates back to a period when it is cer-

tain that while there were hollow tree stubs by the score and bears galore, there was not in all the unbroken forest of this North American continent a single white man to fall into the one or to be pulled out by the other. While Cortez was conquering Mexico, there dwelt at Lake Como in Italy a certain Bishop Paulus Jovius, who, from all accounts, were he living in these days, would be an excellent type of the "true sportsman." He was catholic in his tastes, a great lover of nature, and one who believed in getting his share of all the good things there were in life for a man in the years from 1473 to 1550. His chief literary labors were the writing of eulogistic biographies of the great men of the time, who sent their portraits to adorn his elegant home. But he did not disdain to lighten his books with an occasional anecdote; and his writings prove him to have been a gentleman, a scholar and a good judge of bear stories. And here, told by Paulus Jovius three hundred years and more ago, we find a tale given him by one Demetrius, an ambassador to Rome, which is decidedly the best, because briefest, wittiest and quaintest of all the stories of the man in the It was translated from the original Latin hollow tree. by a writer of the last century thus:

by a writer of the last century thus:

A neighbor of mine, searching in the woods for honey, slipped down into a great hollow tree and there sunk into a lake of honey up to the breast, where, when he had stuck fast two days, calling and crying out in vain for help (because nobody in the meanwhile came nigh that solitary place)—at length, when he was out of all hope of life—he was strangely delivered by means of a great bear, which, coming thither about the same business that he did, and smelling the honey (stirred with his striving), clambered up to the top of the tree and then began to let himself down back ward into it. The man, bethinking himself, and knowing that the worst was but death (which in that place he was sure of,) beelipt the bear fast with both his hands about the loins, and withal made an outcry as loud as he could. The bear, being thus suddenly affrighted (what with the handling and the noise), made up again with all speed possible; the man held and the bear pulled, until with main force he had drawn Dun out of the mire. And then, being let go, away he trots, more afeared than hurt, leaving the smeared swain in a joyful fear.

The Sportsman Tourist.

FOREST INTERESTS AND DISCUSSION.

FOREST INTERESTS AND DISCUSSION.

It seems to me that very few people in this country have an adequate idea of the value of popular discussion, or of its necessity under the conditions of life in a democracy. For many years I have observed the work and methods of men who wish to have various things done by the Legislatures of some of the States, New York and others. Most of them appear to depend almost wholly upon direct effort to "influence the Legislature" after it has assembled. Some one stays at the capital of the State during the session and talks to the members, endeavoring to obtain their support. Sometimes a few petitions are presented, and usually there are articles in the leading newspapers in advocacy of the measure proposed. Most members of State Legislatures whom I have known have a courteous manner of promising to give careful consideration to any matter which is urged upon their attention. Soon after the opening of the session nearly all the agents at the capital make favorable reports to their principals regarding the prospects of the various measures which they have in charge. It is natural that they should do so. Most of us probably overestimated our influence, and consent is taken for granted because a man listens to us with apparent interest. (The gentlemen who go to the capital to promote the measures which we favor are agents, or attorneys, and are excellent men; the bad men, who represent those who oppose us are lobbyists, and they are, as is well known, "indescribably corrupt." This is the popular phraseology, but it means very little.)

A hearing before a Legislative committee is a real opportunity for those who know how to improve it. The chance is often thrown away because men do not "speak to the question," do not put the essential matter clearly before the committee, with the chief reasons for the cation desired, but insist on being leducent, and wish to display their own superior ability. After each hearing before a committee the reports of the agents to their principals are apt to

of his constituents. He thereby shows me my real opportunity and work. My business as an intelligent advocate is with his constituents, with the people. If I can convince them they will attend to him. If I can bring my object or plan to their attention and consideration, and can obtain their judgment upon it, that is all I need desire. Either they will pronounce the verdict which I seek, and their representatives will faithfully register it in their action, or, if they decide against me, I must make a new beginning, plan another campaign of popular discussion, and try the case all over again.

But few men have the stomach or patience for such work. They are soon tired of discussion and begin to scold. In our country the real appeal is always to the people, and it is best in every way that it should be so. If legislation for the best objects were obtainable without the support of the people's judgment, no great benefits would result from it. Government in a democracy ought to be government by discussion, and what a majority of the people desire and prefer after adequate discussion should be decreed and done.

I have seen all these ideas illustrated in various ways in the course of effort to secure popular attention to the forest interests of the State of New York, and have observed many other things of interest, not to be fully described at present for want of time. I think as much has been accomplished as could reasonably be expected under all the conditions, and considering especially the amount of effort hitherto devoted to the forestry agitation and its unorganized method and character. There is an organization now, and the New York State Forestry Association is in favor of decided action by the people of the State for the preservation of the mountain forests. which are necessary to the existence and value of the great waterways of the State for their decision. The work for this practically puts the business directly into the hands of the people of the State for their decision. The work for this practically

past, the matter has been referred to John Lin, past is mostly dead and out of reach.

How can such a plan for permanent forest conservancy be most wisely and economically carried into actual practical effect? The State can undoubtedly buy some of the land of the region in question, at prices not unreasonable, and the rest of it could be taken, I suppose, by right of eminent domain, if the people of the States o desire. But I am not a lawyer, and have no materials for an opinion on a legal question. What have the lawyers to say in relation to this subject of eminent domain, in connection with the effort to establish a great State Park in the Adirondack region?

THE BRIDAL TOUR OF THE KENNEDYS.

[Concluded from Last Week.]

A ND now, in the figure of the play actors, the scenes will have to be shifted, for my husband went a hunting, while I remained at the hotel with the B's, fellow tourists, whose acquaintance we made soon after we came to Wagon Wheel Gap, and with whom we took many delightful excursions. His story follows.

I come into this story, not necessarily for publication, but as an evidence of good faith. The incredulity of the nineteenth century is nowhere more pronounced than in the presence of the hunting story; and it is only that the truth of this one may be placed beyond question that I consented to tell it myself. Much, however, is being done by the daily press toward rebuking this spirit of unbelief, by means of a series of hunting stories appearing in the Saturday editions. These articles are carefully prepared by a newspaper union, whose correspondents, owing to their geographical whereabouts, cannot be disputed. Some of us will not soon forget a late and graphic story from South Africa of a boa constrictor who enticed a three-year-old steer to a precipice by means of corn scattered along the ground, whereupon it took a turn around the steer's neck with its tail and a half-hitch about a tree with its head, and with the aid of a boa confederate pushed it over the edge and hung it. Aside from its having happened in Africa, the innate reasonableness of this anecdote carried conviction with it. The boa constructor who furnished the account had a Kodak with him, and the paper was thus enabled to illustrate it.

The boa constructor who furnished the account had a Kodak with him, and the paper was thus enabled to illustrate it.

Selecting a day when my morning meal occurred in the forenoon, attired in my Dutch Renaissance suit, slightly bulged out at the Renaissance with sandwiches, I mounted hat celebrated calico horse Pinto, and, after some premininary antics, succeeded in passing near enough to roung Mr. Franklyn to enable him to hand up my rifle. At the base of the mountain fronting the Gap I found a bridle path, up which Pinto deftly carried me for two nours. And then, for some distance beyond where the bath disappeared, he struggled upward, tacking to and ro on the steep ascents, of his own volition, stopping ocasionally to breathe and to crop a mouthful of grass or bushes, until the climbing became too steep for even Pinto. Here I found a small thicket which stood out well from the timber higher up; and removing the saddle and bridle I tied him securely. I soon had cause to tympathize with him, for the climbing in such an altitude was very laberious.

ympathize with him, for the climbing in such an attude was very laberious.

Going out on to a shoulder of the mountain to where I could command a good view, I sat down against a big ine tree and, with my glass, carefully scrutinized the pproxite slope for game. Now, an object would attract ay attention in that stretch of burnt timber, and long aspection would determine it to be a stump. A bush yould move in a little clump in the ravine below me;

and I would lie there and focus my attention upon it for what seemed an hour until a contain that

and I would lie there and focus my attention upon it for what seemed an hour, until a certain rhythm was discovered in its motion which told of the wind. Then it would be a brown rock in the black timber again. At last I satisfied myself that there was not live thing in a sight and swent on up my own side of the mountain, burnt timber there was a blacktail seemed to the mountain of the mountain

Our camp life was drawing to a close, and Henry had caught no very large fish. The station agent, Mr. Reynolds, had caught a four-pounder the day we arrived there. The local fisherman had made one catch of thirty

fish that averaged over a pound in weight, and several of Mr. Franklyn's guests had caught two and three-prunders. The trouble with us was that when we caught enough for our wants we had to stop. There was no one to give the fish to and they could not be wasted. One day some "valley people" drove into our little meadow and camped near us. They had nothing to fish with but a bare hook. Henry gave them some flies, and seeing that they were likely fish-consumers, we started down the river, he with his rod and I with my waterproof, umbrella and tin bucket, and while I picked some raspberries he caught an even dozen beauties. All the time he was doing it a tourist from the hotel whipped the water in vain. Going home we saw an elderly gentleman, a new arrival, fishing at the foot of a meadow. Henry stopped to look at him. He looked as if he had come two thousand miles to fish that stream. He was so eager. It did one good to see him. Henry faid, "There is the best fisherman I ever saw, barring Northrup. See how he covers his ground and how surely he puts his cast over ever pool in the stream."

It was cloudy, and the current was mild where he was, and we called to him to put on a red-ibis and go further down: but we were dressed so poorly that I fear he undervalued our advice, for he kept on catching "sardines." A few days after that we caught seven fish that weighed just Tibs. One weighed 2½ lbs., one 2, one 1, and four smaller ones. We ate the smaller and better flavored ones and sent the larger to the hotel.

We were going to Antelope Park and Clear Creek Falls, thirty miles further into the mountains, in company with

we were going to Antelope Park and Clear Creek Falls, thrity miles further into the mountains, in company with the Base and so may not morning we broke camp, left our things in the station, and started; Mr. and Mrs. B. and Miss Emil setation, and started; Mr. and Mrs. B. and Miss Emil setation, and started; Mr. and Mrs. B. and Miss Emil setation and the distance of the state of biody and Prion and rifle, we following an hour later on Biddy and Prion.

It was a lovely ride. We overtook the armice at Camp Sterry, deserted now, where I dismounted and Miss B. took my place on Biddy. It was a rather venturesome trip, as we did not know whether or not the Sowards could receive us, and there was no other place to stop. But when we arrived at 2 o'clock, tired and hungry, we found a warm welcome, and, a little later, one of the very best dinners we ever tasted; and this tribute to Mrs. Soward can better be appreciated when it is remembered that she was twenty miles away from a railroad and fifty miles from any store. There were young grouse fried, with cream gravy; ham and eggs, potatoes, delicious rolls, fresh butter, milk, tea and coffee, preserves and cake. How hungry we were! And shall I ever forget the funny things Mrs. B. said, or the surpassing kindliness and geniality—surpassing even for Mr. B.—with which he presided at the feast.

That evening we made the better acquaintance of the Sowards. There were Mr. and Mrs. Soward and their two sons, the oldest, who is married, living further own of the sowards. There were Mr. and Mrs. Soward and their two sons, the oldest, who is married, living further own of the sowards. There were find the two sons did of the sowards with the two sons that of the sowards and their two sons, the oldest, who is married, living further own of the sowards. There were find the next morning with the carriage and the two saddle horses and a backet of provisions in the brings and the sowards. There were some sowards and there was power and the windows, two hours and there was frost without n

Falls.

As we stopped at their brink for our rest and refreshment, the rage of the waters seemed to increase. One speculated upon what great tragedy there was in these upland solitudes giving birth to such tireless fury.

Mrs. B. had lost her shawl out of the carriage, and on

the way home in the evening Henry and I came across it in the middle of the road going up from the lake. It had the appearance of having fallen there the instant before. We had a jolly gallop down the long hill into the park. When the saddle and bridle were taken off the nimble-footed Biddy, Henry, much to my consternation, turned her loose. As she walked briskly away I had a vision of my husband walking back to Wagon Wheel Gap while I rode his Pinto. But after a twenty-five mile run under a side saddle the watering trough was good enough and far enough for Biddy. What a comfort must be a water trough in a dry land!

The next day Henry went hunting again, and I prefer he should tell his own tale and shoulder his own responsibilities.

Frank Seward, the younger of the two sons, had cut his hand and could not work, so, the next day, he joined in my hunt. His brother bade me farewell with grim humor, and vague hints about the way the young man rode; but I had had handshakings before upon occasions of mounting strange bronchos said to "buck," and did not give the weight to this one which, had I better known the temper of this seventeen-year-old Man of the Mountain, I should have given.

Three dogs followed us from the house, but, as we only wanted one of them, he "cut out" the other two rascals as deftly as if they had been a couple of stray cattle, and when they saw what was up, the way they tucked down their tails and scudded for the house, and, what is more, the way he put spurs to his wiry little steed and followed, almost cutting them down at every leap; and the way the dogs hurled themselves into the house, and the way he and his horse spread out their legs and got stopped with their noses barely without the door, gave me some foretaste of what was to come. Mr. B. and the young ladies were going down to the river to fish, and we walked alongside to direct them. But when we had said good-by to them until evoning, my "chaperon" turned to me with a meaning and lively look and said, "Are you ready?"

We were on the bank which overhung the water some

me with a meaning and lively look and said, "Are you ready?"
We were on the bank which overhung the water some 3ft. or so. I saw no ford, but did see the point of his inquiry, and made ready for an immediate test of the mettle of this strange and scrawny little charger beneath me. Touching his horse gently with his spurs, it jumped its forefeet into the stream, stood thus on its head for an instant, and the next was splashing its way across to the opposite bank, where the process was reversed. One could see with half an eye that the two young partners in mischief had done the trick twenty times before. There was a certain smoothness about it that betokened practice. I touched Pinto and he timidly followed suit. Nice little Pinto. He was in a strange land, and would do what he could to keep company with another of his kind. Once upon the bank, he of the spurs disappeared with a rush down a willow-embowered path, Pinto instinctively pursuing. A minute, and horse and rider clambered out of the thicket, up a steep bluff, stopping at its summit. A handsome lad, a gray horse, a blue sky for a background. Then we galloped off over the prairie toward a line of willows, telling of a stream leading up into the mountains.

"Will these animals trip in these gopher holes?" I asked.

"I don't know," he giggled back. He was enjoying

for a background. Then we galloped off over the prairie toward a line of willows, telling of a stream leading up into the mountains.

"Will these animals trip in these gopher holes?" I asked.

"I don't know," he giggled back. He was enjoying omething or other, I know not what.

And then we were beside the little stream, passing along its steep and bushy banks, over places where I would not have tried to drive a cow, and always at that inevitable gallop. Or, if it became too steep for even that, the gait only changed into a momentary scramble. Still, at the very bad places, I soon noticed that he took his uphill foot out of the stirrup and leaned over, trimming ship as it were, and ready to slip off unharmed if his horse's feet went out. Once we slowed up, as the way led through a treetop, and shortly thereafter dismounted and securing our horses, climbed up into one of those mountain pastures so dear to the hunter. It is useless to go over the story. There was nothing there, There was a "spard" there in the trees at its edge where my companion said the elk had tramped the snow down hard the previous winter. A deer track inspired me with short-lived anticipation once, but it had a seedy, last week look about it. Kennedy the Cave Dweller again. After eating our luncheon at the stream, we started homeward, stopping several times thitherward in the foolish endeavor to shoot grouse on the wing with our Winchesters. We took the other bank going home, possibly in order that I might have the benefit of an entire change of programme. For first there was a swamp, smooth enough on its surface, but hilly in its bottom, where Pinto fell. This pleased the two young people in advance greatly, although I kept my seat and Pinto quickly regained his feet. Then he began looking for a certain path into the bushes, and, when it appeared, spurred his horse at it and in they went. There, ahead of us, was the stream, with steep sides down to the deep water. A whether-or-no water-jump of five feet. They did it with that same suggestion

When we had eaten supper at Alimosa, and were sit-

ting at the door of the sleeper, being whirled homeward, the sun set back in the canon of the Rio Grande del Norte, painting the sky and the mountains in the most resplendent hues. Even the rails, as they spun out beneath us, turned into precious metal.

LOST ON RENOUS.

LOST ON RENOUS.

I WAS once foolish enough to rely upon the knowledge of one who, to use his own words, had put an Indian on the trail after he had strayed from it. Taking the risk, I suffered the consequences by letting him lose both of us in the wilds of New Brunswick. It was in July, 1888, when salmon fishing on the Renous River, and happened about as follows:

We left our headquarters one morning as soon after lunch as the demands of our big appetites would permit, on our way to a pool on the North Branch, about four miles distant. After crossing the main river, which at the starting point is not over your knees in depth, and passing through a mile or so of burnt woods with its attendant blackening of hands, face and clothing, we find good walking on an old portage for the remainder of the distance, arriving at the pool in a little over two hours from the time of starting. We saw several fish, but as the water was very low and clear and the sun fell on the pool, we could not get a rise. It was useless to keep thrashing the pool any longer, so after smoking a pipe and talking matters over, we decided to rest the pool until the sun went off of it again. First kindling a smudge, we passed the time pleasantly enough under the shadow of some large spruce trees, watching the parr (which on this branch are exceedingly plenty) continually leave the water in their attempts to capture food. Soon the pool was in good shape again, but for some reason, probably the low depth and clearness of the water, we had no better success than in the morning. Tired of this, we go down the river for perhaps a quarter of a mile to a smaller and deeper pool, and in short order save one fish and lose another.

The sun was now fast declining behind the hills; and as darkness sets in very quickly in these parts after sunset, I thought it would be wise to start for camp. My companion said, "Oh, no; just wait a little longer till I get that other fish; I know the way to the road, and once on it we can find our way in the dark easily enough

"Now," said he," instead of wading back against this strong current to where we came on the river, we will cut in here and strike the road within fifteen minutes, as it runs with the river and is not mere than a quarter of a mile distant."

We had hardly gone a dozen steps through the thick brush, when right ahead of us was a perpendicular bank of at least fifty feet in height. We chimbed it, of course, and for fifteen minutes or so traveled along the edge of a spruce barren, a place where nothing but the spruce grows around and above you, and moss, ranging from a few inches to a foot or two, below. Next to an old piece of burnt timber of say five years' standing, this is about the toughest walking a man can find, and extremely deeptive; for a few paces it is like walking on fur, then without the least warning down you go between the moss-covered roots of some tree almost up to your middle. For variety's sake you next find your feet in the air and your back or side on a nice soft stump, having slipped on some old moss-covered and fallen tree. This charming experience lasted for another fifteen or twenty minutes, when suddenly we find ourselves in a stretch of genuine old burnt woods. Verily 'out of the frying pan into the fire,' "Oh, never mind, we will be out of this in a few minutes,' says my "guide?" but for nearly two of the longest hours I ever remember passing did I struggle and fight against bushes, briers and burnt trees; now balancing myself on some old father of the forest in my endeavor to discover a few feet of even walking, then going down between a couple of others, scratched and bleeding, besmirched from head to foot with the blackness from the charred wood, and almost blinded by the twigs continually striking my face and eyes. My rod of course suffered untold indignities, and it is a marvel to me to this day how it ever went through that ordeal without serious injury. At last we come to the end of this strip, and in a few moments, more from good luck than good management, find the portage.

To m

It now seemed a most appropriate moment for me to venture something on my own responsibility, so I said, "We will go for one-half hour more, by my watch, and if by that time we do not strike the river, will build a shelter, cook our fish and go to sleep until morning, when I will be most happy to put myself in your charge again for the rest of the day," We walked a full hour nevertheless, when suddenly, as if struck dumb, my companion stopped and said, "Why, here is the river. Where in the world are we?" Surely enough, there it was right at our feet, about eighty feet down, and by a miracle only were we saved from going headlong down the steep bank. "Why, this is the main river," said I; but what part of it neither of us knew. Knowing that by going up stream we would sooner or later come to our camp, we scrambled down the bluff and started on our journey home at last. The moon just gave light enough to make those spots along the banks that were not directly in its rays appear darker than ever. To avoid the worst rapids and also the deep holes and pools, we were frequently forced or cross and recross, sometimes in water up to the knees and at others above the waist, slipping many times and occasionally going down on all fours. To travel along the banks was here quite impracticable, for what with the thick brush and large boulders and loose rocks, it would have been altogether too risky and tedious. We trudged and labored in this manner for over three hours, when finally we saw the camp-fire on the bank ahead.

"What time do you suppose it is?" I asked my companion. "Oh, about 8 o'clock I should think." "Well, isn't trather strange that there should not be any one stirring about the camp and that the fire should not be burning brighter if it were not later?" By the time we reached and sat down by the fire, pretty thoroughly tired out, it was 11:30 o'clock and everything fast asleep, of course.

Being naturally somewhat hungry, I was not long in finding something to eat, and after putting fresh logs in

Being naturally somewhat hungry, I was not long in finding something to eat, and after putting fresh logs on the fire turned into my blanket bag and was asleep almost

the fire turned into my blanket bag and was asleep almost as soon as I lay down.

I don't trust myself any more with any one when in the woods, except a native; one such experience is apt to last an ordinary mortal a lifetime. Instead of a four mile walk with two hours to do it in, we disposed of eight and a half hours and covered about twelve miles.

Next morning I found my bed of balsam boughs much the best place, and neither was the anticipation of catching salmon or trout sufficient to get me out for the greater part of the day.

"Sore," did I hear you say? Well just a little, from the top of my head to the soles of my feet.

And the beauty of the whole thing is, that my companion is now so much put out to think that I should have mentioned our being lost twice on the same trip, that he passes me by without a look.

BIG REEL.

"NESSMUK."

"NESSMUK."

JUST a year before the day upon which "Nessmik's" last visit in this life was made to his beloved hemlocks, he wrote the last letter that I ever received from him. It is pathetic in the expression of hopelessness of again enjoying the sports that be so delighted his readers. It is touching in its expression of thankfulness for being once more permitted to behold the miracle of spring, to see the coming of the birds, the opening of the flowers and to hear the rush of the awakened streams:

"WELLSBORO, Pa., April 30, 1859.—My Dear Bruin: I just drop a word to keep in line and ask how you find yourself after sucking your paws all winter, as I assume you have. And how has the "Slang' pulled through, and are the marshes yet green, and is the boating good? I will not ask for the fishing and shooting because there isn't any. But there ought to be clear waters, green grass, spring flowers, etc. As for myself, I have souffled through after a fashion, which is more than I expected. The winter here has been a pleasant one, and the spring is early. I gathered a lot of wild wood flowers, the first of this month, with full intention of sending them to Mrs. Robinson, but procrastinated and dallied till the flowers faded and the good intent went to infernal pavement. Just now we are having a fine flood after a week of rainy weather, which broke up a six week's dry spell and consequent forest fires that were doing much damage.

"After the water gets clear the trout will work their way up stream, for we still have some trout left; but I shall not be able to look after them. I seldom get more than a half mile from my favorite corner, and a little exercise exhausts me for all day.

"Ah, well, the green grass and the birds are here once more, and I am here to take it all in. Bismillah! but it is pleasant.

"Let me hear from you, if only a few lines a let me know you are extant and still able to enjoy the springtime of the year. Fraternally yours, the lame

The withered bunch of wild flowers, Hepaticas and rose-colored (

not have been persuated to give in work his account in the seemed to think it not worth the doing, but what rare reading it would have been one may guess by the little glimpses he has given us of his life.

I never saw him, but I feel as if I had been made acquainted with him by the few characteristic letters received from him within the past ten years, and when the news of his death came to me it was as if a personal friend had passed away.

He fought a brave fight for life at heavy odds, and long kept the inevitable final conqueror at bay. Peace and eternal rest he nuto him.

FERRISBURGH, Vt., April 26.

FERRISBURGH, Vt., April 26.

I was much grieved on seeing in the last number of FOREST AND STREAM that "Nossmuk" is dead. Though not personally acquainted with him, I had for years past enjoyed reading his articles in your pap"r, and always hoped to meet him if I ever again visited America.

There was a peculiar strain in his writings, due, I think, to his sensitiveness to the sounds and sights of wild nature, and to the depth of his sympathies with both the lower animals and human beings. One of the finest instances of his kind and loving nature was that when he sllowed the bear to go away unhurt, as described in "Woodcraft." That little book ought to remain the standard guide for those who go outing in the bush. One of its heat fratures is that it not only shows what it best to take in the waysf "taffle," but also what need not be taken, for the mistake made by most people is incumbering themselves with unnecessary things.

A celebrated Arctic traveler once said that the more nearly he was able to reduce his bagagge to nothing, the more comfortable be found himself, and most of those who have traveled a great deal, with limited means of transport, must have come to the same conclusion. Last year a correspondent wrote in your paper about the "change of heart" which takes place in some sports men, causing them to lose all pleasure in killing animals except when actually required for food. Evidently Mr. Sears had experienced that change. Judging from his writings, he seems also to have thought himself out of some orthodox superstitions in religious matters which cause so much uncharitaselenes, but he had tonnot that "more excellent way" described by St. Paul in the lith chapter of Corinthians, and also with beauty and brevity by a Hindoo writer in an ancient Sanscrit drama, where he says:

"He that to all living crestures naught but bloving kindness shews, Hath the truest, best religion; good men pity e'en their foes."

I think this verse would make an appropriate epitaph for "Nossmuk's" tombstone.

Hatural History.

CAPTIVE CANADA JAYS.

IN his Cambridge museum, Mr. Wm. Brewster has two live Canada jays (Perisoreus canadensis) which he caught while encamped at Umbagog Lake, Me., last fall. I will call one of the birds Jack, a name by which he is locally known in the lake region, and the other Bob. Both are now kept in one large roomy cage, and up to last winter have appeared the best of friends, possibly owing to there having been no cause for a falling out, but recently they had a regular "set too," which I witnessed.

last winter have appeared the best of friends, possibly owing to there having been no cause for a falling out but recently they had a regular "set too," which I witnessed.

Both birds being naturally fond of flesh and having had none for several days, I shot an English sparrow with which to feed them. Cutting off the wings, feet, head and tail, and removing the feathers, I approached the cage with the body in my fingers. Immediately Jack came to the wire bars to receive the present which he unloubtedly believed was meant entirely and solely for him. He graspedition his claws and hopping to a perch began tearing off pieces of flesh, and swallowing them with apparent relish and in great haste, while Bob looked on, evidently astonished at Jack's appetite, and wondering whether enough would be left to "swear by" when his turn came. Jack was at last forced to rest from his greedy efforts, and when this lull came Bob, who had been watching from the corner of his eye, made a dash at his companion and the food fell to the bottom of the cage. Bob was there, however, evidently intending to make the most of the situation, but Jack could not stand by and see Bob thus enjoying himself without making some effort in his own behalf, for like the dog in the manger he did not intend to let Bob have it all, even though he could not eat it imself. So he "jumped on him" and fastened his claws as firmly in Bob's back as he had previously done in the body of the sparrow, began pecking him in the top of the head. At first no attention was paid to this annoyance seyond an occasional shake or flutter of the wings, either nade to dislodge his enemy or else to regain his balance or keep from falling over backward; but Jack pecked viciously, occasionally turning his head to one side after aking a good hold, as if endeavoring to tear out a piece between Bob's ears, and this too every time just as the atter raised his head to swallow. At last Bob could not tand this any longer.

The tremendous pecks received in the back of the head, and more

LARGE SETS OF EGGS.

LARGE SETS OF EGGS.

In your impression of May 15 a contributor notes the finding of ten crows or crow's eggs in a single nest of that bird. While on crnithological tramps I have not infrequently made similar discoveries with different birds. Other parties have informed me that they also have found large sets of eggs. Your contributor is undoubtedly of the opinion that these eggs are those of a single pair of crows, as he says: "These facts," referring to the eggs differing but little in markings and size, as well as to the failure of two pairs of crows to put in an appearance, "seemed to show that the eggs all belonged to the same crows." There are two solutions of the phenomena, either of which to me seems credible. The first is, that there were two female birds, and but one male. It does not, however, seem natural that the two birds should lay so nearly together, as though the one had waited for the other to deposit her eggs before laying her own. This fact—that the last six eggs were laid consecutively each day after the first four—gives great strength to the writer's view in your issue of May 15. For had two crows been laying, it is very probable that two eggs might have been laid the same day, or several days might have elapsed between the two settings of eggs. The most plausible explanation would seem to be that another crow having either lost or been frightened away from her nest, or having failed to construct one, intruded upon the nest in question, where these eggs were discovered.

upon the nest in question, where these eggs were discovered.

That there were two sets of eggs, and not one and a half, would make it the more probable that two crows and not one were the cause of the "large set." A bobolink's nest found by the writer last June contained eight eggs, while a bluebird's, found the same season, had ten eggs. There is no reason to think that a bird which lays more than the number needed to complete a set should not lay a few less or few more than the number ordinarily attributed to two sets. Those readers of Forest and Streem who are interested in ornithology would doubtless by recounting their experience in this matter throw much light on the subject. That I have never known of a nest being found to contain more than the number allotted to a set, or less than two sets, makes it appear to me that two different birds must have deposited there; for it is as probable for a bird to lay two or three eggs more or less than the ordinary number constituting two

sets. To the writer this would seem pretty conclusively to prove the work of two different crows. H. CASPER.

KILLED IN MIGRATION.—Cleveland, May 24.—Editor Forest and Stream: Last night was noted for a general and very late migration of land birds. For twenty-four hours previous the wind had been blowing gently from the south, accompanied with light and warm showers. The evening was dark and lowery, consequently the birds, in their passage north, had to hug the earth close for guidance, as a consequence great numbers must have fallen victims to the deadly telegraph wires, judging from the following list from quite a limited locality that happened to come under my notice. Eighty-three were picked off the pavements at the corner of Water and Superior streets, consisting of fox and white-crowned sparrows, catbirds, vireos, solitary thrushes, summer yellow birds. bay-breasted, cerulean, prairie, chestnutsided and Maryland yellow-throated warblers. Two-thirds were male birds and in their best spring plumage. From the corners of Erie and Euclid avenues, where electric lights hang high and wires are over-abundant, an early boy brought me seventeen migrants, consisting of white-crowned and fox sparrows, white and red-eyed vireos, golden-crowned and hermit thrushes, brownbellied nuthatch, blue, gray, worm-eating and bay-breasted warblers, all male birds.—Dr. E. STERLING.

Unusual Nesting Place of Junco,—The black snowbird (Junco hyemalis) usually nests on the ground, but there are several instances of tree nesting. The following, however, as far as I know, is without precedent. On May 2 I saw a Junco carrying straw to the cornice over one of the windows on the first floor of Chipman Hall, a building occupied by college students. In spite of all the boys and the consequent noise around its strange nesting place, the bird bravely held his own, completing its nest and laying its eggs. It is now very tame, seeming to know that no one could harm so trusting a bird. It comes to its nest when the students are in the windows only a few feet away, and is not in the least alarmed at their presence. The nest is composed of straw, etc., as usual. Who knows but that in a few more centuries, the Junco will have followed the example of the swallow and bluebird, and prefer to place its speckled beauties in the many inviting and protected places offered by our buildings, than to intrust them to the enemy-infested ground?—A. C. Kempton (Wolfville, N. S., May 26).

NATIONAL GAME LEGISLATION.

NATIONAL GAME LEGISLATION.

Editor Forest and Stream:

The suggestion that Congress should enact a national game law is so abhorrent to my ideas of the structure and powers of our Government that it requires some exertion on my part to consider the matter seriously.

I do not propose to enter upon the often fought field of what is meant by the clause of the Federal Constitution in regard to the General Welfare, but I will content myself with the statement that if the dead know anything of the living, Mr. Hamilton himself would be surprised at the claim now advanced that Congress can enact the proposed law.

No one can doubt the Federalism of Judge Story, but he never asserted the power of Congress to legislate as to any but national matters. The idea of a national game law is rather in advance of the most extreme Federalists, as their views have been made public.

It is difficult to imagine any subject more strictly local than the preservation of game.

A national law would be absurd, in view of the variety of climate and conditions obtaining in a country so extensive as the United States. What would preserve game in one State would be ridiculous in another, and Congress would only subject itself to ridicule by the attempt.

I have been devoted to hunting and angling all my life, and would do anything possible to protect the game of our country, but I must confess that this proposition is rather startling.

If the States will not pass and enforce laws upon this subject there is no remedy.

Congress has no such power and ought not to have it.

It would be just as reasonable to ask Congress to pass laws for inspection in the States, together with regulations, of marriage and divorce, and all sorts of police enactments. If we enter upon this we should make a new Constitution and dispense with the States altogether.

G. G. Vest.

UNITED STATES SENATE, May 23.

Editor Forest and Stream:

The right of States to legislate for themselves depends upon the non-compromising character of legal regulations. Upou matters that directly affect the country as a whole, and which may not be rendered uniform by separate and varied action, there is little question concerning the right of regulation by Congress. In the matter of bird protection effective legislation must come from a source that can control the entire boundary of migration. The efforts of the most stringent game protectors of one State are of small value if the birds protected cross in their migrations the territory of other States where they are exterminated. Mr. J. P. Applegate's excellent letter upon national legislation, in your issue of May 22, hits the mark, but I think that a finer aim at longer range may be taken. Why should not Congress protect all migratory birds, and for that matter all widely roving quadruped game and river-ascending fish. A few years ago when the subject of bird protec-

tion was first being agitated with zest, after some correspondence, notably with Mr. John Burroughs and the late Mr. Henry Bergh, I framed a bill to Congress for the protection of migratory birds at large by the Government, and sent the same to an acquaintance of my family, Representative Buchanan of New Jersey, only to receive in reply an opinion that the matter was unconstitutional. As with Mr. Applegate, I was not, and am not convinced of this, for it is surely a matter pertaining to inter-State law. Mr. Applegate's statement that a law of Congress would be better respected than State laws is worthy of belief and has its proofs.

Concerning local variations of the seasons and time of shooting, the national law should notice well-defined areas generally east and west at right angles to the line of migration. And why should not the Government place police surveillance over this jurisdiction? I believe that the non-migratory birds and other game, such as the grouse family, turkeys, quail, with rabbits and squirrels, should be taken care of by the laws of each State. I believe spring shooting should be done away with; the very nature of the thing seems gross and out of place, and the time of shooting being already too long, should of course be curtailed at this end of the season.

Regarding the inter-State law and the shipping of game, it seems to me as if the section wherein game was killed should have the say as to its distribution, but it is a subject for suggestions from wiser heads than mine.

S. FRANK AARON, PRILADELPHIA, Pa.

PHILADELPHIA, Pa.

THE BLACK PARTRIDGE.

Editor Forest and Stream:

Form an article in Forest and Stream:

From an article in Forest and Stream of May 8 there seems a probability of efforts being made to introduce the capercailzie and black game into the Northern States. Will you allow me through the columns of your paper to strongly recommend that attempts may be also made to supply the Middle and Southern States with one of the most beautiful of game birds, the black partridge (Francolinus vulgaris) of northern India.

It is common in some of the large plains covered with tall grass near the banks of rivers, and is found in the Valley of the Doon between the Sewalik Hills and the Himalayas. It is plentiful for a long distance into the interior of those mountains, and I have often shot it at a height of probably 5,000ft. above the sea, where there is a considerable amount of frost in winter. There is, therefore, little doubt but that the bird would flourish in the United States from Virginia southward, and also in California in any districts where streams are fairly plentiful. There are minute descriptions of the black partridge in Dr. Jerdon's work on Indian birds, and in the book upon the feathered game of India written by Mr. A. O. Hume of Calcutta. The latter is illustrated with colored engravings.

of Calcutta. The latter is illustrated with colored engrayings.

If introduced into the States the black partridge would certainly become a favorite with American sportsmen, as it is remarkably handsome, requires quick and straight shooting to make a good bag, and is excellent for the table.

The crow of the cock bird is a series of hisses in something like this time: Hiss-s-s-s, hiss hiss, hiss hiss hiss-hiss-his-s. The recollection of it brings back to my mind days which will never return, spent amid the grand scenery of the glorious Himalayas, among mountains and valleys bathed in sunshine or shadowed by dense thunder clouds, the slopes covered with forests or built into terraces so as to allow of cultivation. Often when marching from one camping ground to another the crow of the partridge would be heard in front. I used then to send one of the natives in the direction of the sound and walk in a parallel line 50yds, below him. When flushed, the bird would spring up about 20yds, into the air, then make a long downward swoop toward the opposite side of the valley, giving me a shot as he passed overhead.

NORTH DEVON, England.

J. J. MEYRICK.

GROUSE SHOOTING INCIDENTS.

GROUSE SHOOTING INCIDENTS.

The easiest and surest way to kill the ruffed grouse is while he is flying. This is my opinion. The main difficulty, to the beginner, appears to be to shoot the first one. After that the way is usually comparatively simple. But one is fortunate if, after he has shot his bird, he always gets him, as the following incidents will show: On my father's farm in Clifton Park I fired at a grouse which rose close and flew high, and although I saw him falling, yet when I sought him he was not to be found. I laid the gun carefully on the ground and renewed the search, going over a stone wall and on both sides along it in vain. When I returned for my gun there sat the grouse on the stock; he was alive. I took him up gently and he finally died in my hands. I shall never forget the look he gave me; his large hazel eyes almost spoke forgiveness.

On another occasion I fired at a grouse as he made a quick bolt from under an old scrub cedar. He was probably four feet from the ground when I shot, and although I was pretty positive I had hit my bird, yet when I sought him he was not to be found. I looked the ground well over to no purpose, and finally I set my gun up against another cedar, next beyond the one from under which the grouse had flown, and renewed the search. On coming for my gun, there sat the grouse just above it on a limb about five feet from the ground. Only one shot had hit the bird, and that had gone through his eye. I inclosed him gently with my hands, and when I afterward took him by the legs he fluttered loud enough to be heard a half-mile.

Scheneccady, N. Y., May 15.

SCHENECTADY, N. Y., May 15.

COEYMANS JUNCTION, N. Y.—A rod and gun club has been organized at Coeyman's Junction, N. Y., for the protection of fish and game. The following is a list of officers: Prest., John Bishop; Treas., S. E. Crane; Sec., Geo. W. Post; Captain, Chas. J. McEntee. Directors, F. F. Wendell, Geo. Shear and Geo. Van Wie.

OMAHA, Neb., May 26.—The upland plover shooting has been capital here for two weeks past. I was out yester-day from 3 o'clock until 6 and bagged 21. The snipe have about all gone, but there are plenty teal here yet, and a few geese continue to linger along the Platte.—Sandy.

The first steel pens were all made with fine points. In addition to these they are now made with blunt, broad and turned-up points. Esterbrook makes them all in great variety,—dw.

The Pittsburgh Quail Case.—In the case of Comvs. Wm. Wilkinson, charged upon oath of J. W. Hague, fish and game warden, with having 20 quall in his possession after the lawful season ended, there was a trial in the Quarter Sess. Court of Allegheny county, Pa., before his Honor Judge Thos. Ewing. The warden testified that the lawful season for killing quail in Pennsylvania expired Dcc. 15. That the law allowed 15 days after that date to dispose of quail killed in the lawful season. That on the 8th of January, 1890, he went to the stand of the defendant and counted 20 quail in his possession. Defendant admitted these facts, but testified that he brought them by express from Missouri, and under the law and facts defendant was found guilty. The court directed counsel to prepare for an argument upon whatever points they desired and he would hear them. Hon. Thomas Hewcott represented the warden and the Sportsmen's Association of Western Pennsylvania and presented all the game laws of New York, Michigan, Massachusetts, Illinois and other States that he could find. D. Burleigh, Esq., represented defendant and urged that Missouri statutes allowed quail to be killed in January and the Supreme Court allowed "original packages." The court intimated that the Supreme Court decision in this case would not hold, and they would have to decide it over again.—J. W. HAGUE.

A FLORIDA GAME COUNTRY.—Tangerine, Orange county, Fla., May 12.—I am a devoted reader of your paper and find that when time drags a little on my hands, nothing fills it up quite so well as the columns of the FOREST AND STREAM. This country has clear water lakes, of which there are thousands, alive with fish, the principal kinds being black bass, bream and croppies. Colored people go out every day and bring in thirty or forty, with the rudest kind of tackle. A native caught a black bass a short time ago that tipped the beam at 13lbs. It is nothing uncommon to catch 10 pounders. Quail were never thicker at this time of the year, and "Bob White" is one of the most familiar sounds. The only trouble is there is no game law here that we know of, and if there is it would enlighten a good many to mention the fact in your journal. The people that cannot shoot the birds any other way, go around, listen to their whistle and pot-shoot them. I have a fine Sensation pointer that is hard to beat and when the time comes expect to make good use of him.—C. J. H.

of him.—C. J. H.

Mr. Henry Catalogue, to such an extent, in fact, that he has brought out a supplement telling us what the country thinks about it. A fac simile commendatory note from Grover Cleveland is followed by letters of the same tenor from Havrison, Hayes, Morton, Blaine, Proctor, Wanamaker, Windom, Miller, Noble, Ingalls, Hiscock, Hoar, Vest, Morgan, Frye, Evarts, and most of the other statesmen big and little, who appear for the moment to have thrown affairs of State to the demnition bowwows, while they rambled through the enticing pages of Squires his catalogue. The Army and Navy and Foreign Legations follow: then come letters from artists, clergymen, lawyers, business men and some folks who haven't much of anything to do but to go fishing when they take a notion that way. This collection is a novel and extremely interesting exhibit, and gives abundant testimony that somebody down at 178 Broadway has a great head for catalogues. for catalogues.

Bear, Cow and Trap.—Fredericton, N. B., May 22.—
Last week a bear killed a large cow, the property of a man named Brown, who resides about 4 miles west of Boiestown, on the Miramichi. The first blow that he made was at the animals foreshoulder. After killing the cow and feasting upon her, he left and retired into the woods. Brown set a steel trap for him next day. On that night the bear returned and got caught in the trap, which was a large one. There was a chain with a heavy maple clog attached to it. The bear went off with the whole of these, tearing the trees as he went. At last he got the trap fast, and finally succeeded in getting his hindleg out and freeing himself. The brute was of very large size, as was shown by his tracks, and the effect of his claws and teeth on the trees with which he came in contact.—Edward Jack.

CEDAR PARISH, LA., has passed the following ordinance, which will be strictly enforced: "That no person shall catch, kill, or pursue with such intent, or have the same in possession after it has been caught or killed, any quail, partridge or pheasant between the first day of April and the fifteenth day of November in each year, under the penalty provided by Section 960 of the Revised Statutes of the State." Such a law was rendered necessary by the wholesale slaughter of game which has been going on for some time, both in and out of season, and has nearly depopulated the parish of its game birds.—C. A. D.

UPLAND SHOOTING.

UPLAND SHOOTING.

"GHOOTING ON UPLAND MARSHES AND STREAMS," edition to the by William Bruce Leffingwell is just received from the press of Raud, McNally & Co. Mr. Leffingwell is well known as the author of an excellent book on wildfowl shooting, a book that at once made its way into the libraries of many sportsmen. In the present volume he has associated with him a number of writers well known to the shooting press, and the result is a large volume of 475 pages, to which Mr. Leffingwell has contributed, besides the introduction, only three chapters.

A book made up in this way must of necessity contain articles of varying merit and express widely different views on many subjects. On the whole, however, it must be said that this volume of Mr. Leffingwell's contains matter that is extremely attractive, and it is to be presumed that the work will have a wide circulation. The chapters and their authors are as follows: Bay Snipe, Coot, and other Wildfowl Shooting on the Atlantic Coastistac McLellan; The Woodcock, William Jarvis; The Quails of California, T. S. Van Dyke: the Ruffed Gronse, O. A. Cooper; Inaud Dinck-shooting in the United States, John G. Smith; Bob White, Amory R. Starr; Sharp-tailed Grouse, Spruce Grouse and Piarmigans, Wilter M. Wolf; Plover-shooting, E. Hongh; The Wild Pigeon, William Bruce Leffingwell; Snipe and Snipe-shooting, Thomas G. Abbott; Western Field Sports in Early Days, Samuel C. Clarke; Field Etiquette, F. E. Pona; Prairro Chickens — Phmated Grouse, William Bruce Leffingwell; The Wild Goose, C. K. Timan; Wild Turkey Shooting, George W. Baines; Concerning Pointers and Setters, John M. Tracy; The On invasback Duck, William Bruce Leffingwell; Guns, Arthur W. DuBra; Conresing, C. Irwin Royce, M. D. C. Twom Royce, M. D. C. Start, Shooting in the United State of the well of the well of the press of the properties of the press of the properties of the press of the properties of the prop

The piscatorial delights of the Sioux during my stay at Bayfield, a few seasons ago, were so elaborately pictured to me, that I resolved to make a raid on the golden-hued beauties, and so arranged with a disciple of the guild, whose acquaintance I made while here, to accompany me. He was not so much inclined to the rod as the gun,

It would seem that the proofs of the different chapters were not read by those who contributed them. We notice a number of typographical errors that would not have escaped the notice of the authors, had they read their revises, but might well enough have been overlooked by a proofreader. Such au error is Shunecod or Shinnecock. Again in the chapter of the woodcock, the author speaks of them as a bird of "mighty wanderings and daily rest," while he evid-ntly means to say, "nightly wanderings and taily rest," as was printed when this chapter was published years go in FOREST AND STREAM. There are some rather startling taitements in several of the chapters; thus, we are somewhat assumished when the veteran sportsman I state McClellan expresses the belief that there should be no law forbidding the shooting of sheldrakes, coors and old squaws at any season of the year, because they are not valuable for food in the New York or Long Island markets. He thinks it should be left, to the discretion of the guunar when to shoot them. This is rather a remarkable docrine to come from a sportsman of Mr. McLellan's experience, and for carried out to its legitimate conclusions, would result in the abrogations of all game laws. In the chapter on woodcock, Dr. Jarvis says that this bird does not breed commonly in the Southern States. This we are inclined to think is a mistake, althought it is something which has been repeated for many years. We have, however, found woodcock breeding commonly in North Carolina, and it is well known that it has been found to nest in Florida. We think there is no question but that it is a common breeder in the former State. Dr. Jarvis's paper on this bird is pleasantly written and sometimes contains bits of description that are quite vivid.

In his capital article on the ruffed grouse, we notice that Syllline quotes "Archer" as an excellent authority on this bird, We are startled also by finding Mr. Leffingwell's cnapter on the wild bigoon, headed "The Wild Pigeon" (Columbia livia). The passenger pige

Colamba linia is the rock pigeon of Europe, an entirely different pure, which is supposed to be the ancestor of the familiar tame dove.

It is easy enough to find fault with a book of this kind. Not one man of course can know all about game or shooting and but few sportsmen are familiar with the literature of all game birds. Where the writers of this volume are relating their own experiences, they tell their stories well and with real feeing, and give information that is of value to all sportsmen. Moreover, while the literary merit of the chapters varies greatly, there is in almost each one a great deal of very charuing writing. We may menton especially the chapter on sharp tailed grouse, spruce grouse and ptarmigans by Walter M. Wolf, as one of the most delightful and true to nature in the book.

Mr. Tracy's enapter on poin ers and setters is a valuable controution to the literature of this subject and onght to be carefully read by every shooting man. The illustrations with which he has adorned these pages may be studied with profit by men who own politiers and setters. Exactly what the chapter on coursing has to do in a book on upland shooting, is a little bit hard to say. While the matter in it is quite interesting, it certainly seems entirely out of place in this volume, and we do not exactly understand how Mr. Leflingwell came to admit it. The book is entirely about vird shooting, and Mr. Royce's interesting article is no more appropriate to it than would be a paper on infant baptism in the columns of Fourser and Stream.

It may truthfully be said, that Mr. Leflingwell's new book is well woith reading and that it ought to obtain a very wide circulation among gunners. No matter low well informed he may be, no sportsman can read this book without learning something that he did not know before, and the editor and contributors alike may be congratulated on the attractive form which they have given to this last addition to the herature of the shough.

The volume from the standpoint of the manufacturer is very h

TROUTING ON THE SIOUX.

Give me the babbling brook that plays Sweet music to the ear, And tempts ns there to spend our days All through the live-long year.

All through the live-long year.

All through the live-long year.

All through the live-long year.

All through the live-long year.

All through the live-long year.

All through the live-long year.

Chaquamegon Bay, the Sioux River empties into the great basin of Lake Superior after rippling for thirty miles or more through sunless woods and daised fields. It is a uoted stream for the spangled beauties, that range in size from nurselings to the more pretentious of a pound or more, and attracts many a devotee of the rod to its translucent waters and picturesque banks. No stream in the State of Michigan is fished with more persistency than this each season, and the wonder is that its waters are not entirely depleted, at least such is its deplorable situation when the season closes each year. As soon, however, as the early song birds form their pastoral choir, and the clustered buds upon the silver maples burst in their exuberance and fringe the graceful branches with their silver tassels, the golden-finned and crimson-stained fontunalis from Superior's icy basin again tenant the purling waters of this sinuous stream, which mellifluently murmurs:

I come from baunts of coot and hern, I make a sudden sally, And sparkle out among the fern, To bicker down a valley.

his ambition being just then to bring down the bounding deer, instead of coaxing the speckled trout to feathery lure or baited hook, albeit he was no novice with rod and line, as the sequel of our trip developed. We concluded to start in the afternoon, immediately after dinner, and stop for the night at a farmhouse located on the river, which was a noted place of resort for the anglers who beguiled the lonely trout from this meandering stream. This would give us an entire day's fishing and enable us to return in the evening with the finny spoils, pr '1-d for tune smiled upon us. The distance being ft made it necessary for us to engage driver and ... This was soon arranged with the landlord, who had driver, team and wagon at the door as soon as our dinner was dispatched. Arrived at our objective point, the Angler's Lodge, we dismounted, and taking the hand of the good old matron who presided over it, were given a hearty welcome. As we had no use for the team for our return trip, having engaged a sailboat for that purpose that was to meet us at the mouth of the river, we compensated the driver for his services, and duly remembered him for many a day as one of the most ingenious and charming liars that ever drew the long bow. Did we think it necessary to give you some of his fairy talk, you would join us in the affirmative. He had so long been engaged in driving anglers and hunters, and so earnestly listened to those who dealt in questionable narratives, that he finally set up business in that line with eminent success.

We were charmed with our comfortable quarters, but more so with the good old lady whose every wrinkle was a smile and which satisfied us that we would be well cared for. She stated that her two boys, Mike and Tom, were out hunting and that when they returned they would post us about the trouting. The news thus imparted about the absent ones, somewhat excited my friend Albert, who quickly inquired as to the piece of woods they had chosen for their sport. On receiving the information, he at once sta

he rapidly strode through the meadow, rife in columbine and clover-blow, that separated him from the dense forest.

As the sun was a few hours high, I concluded to prepare for an immediate angle in the stream, which was within a stone's throw of the house. I soon had my rod ready, and was about to take up my creel and depart, when I heard a voice at my back cry out:

"I's a trout."

Turning around, I was confronted with as impish a looking little negro girl as I ever saw. So inexpressibly black was she, that as the boys say, a piece of charcoal well applied would have made a white mark upon her. Her great dark sparkling eyes, thick lips and white teeth, with head defiantly thrown back, made a picturesque whole something akin to the romping Topsy of Uncle Tom fame. There she stood eying me with such a saucy and devil-may-care air, that I was satisfied she was a second edition of that droll and prankish black-amoor of literature.

"A trout are you?" I replied, and then adjusting my line, I sent it sailing toward the little ebon-hued, remarking at the same time, "That's what I am after."

The aim was good, and as the hook was about to alight upon her wooly head, she ducked it back, and catching the hook in her mouth immediately spit it out saying:

"You can't fool this trout!"

"All right. I'll try once more." And lengthening the line a little I sent it on its mission again, and this time it fell on her kinky hair, and giving it a short and quick jerk I had the saucy little imp well in hand, bawling out innumerable "ohs."

"You are a trout, are you? and a big black one you are; so come along this way and have your neck broken to keep you from speiling." And I then reeled her in amid her cries and struggles, and on releasing the hook from her thick and tangled mass of hair she like a flash of lightning endeavored to give me a vicious slap on the face, but dodging her well-aimed blow it fell upon my hat and sent it spinning yards away, and then she darted off like a swallow on wing. The old lady who was standing in

give me near a mile of trouting, more, doubtiess, than it then wanted.

It was a charming brook of rippling water and sylvan shore, and just the place where a jay would build her nest, or the woodpecker find the solitude he so dearly loves. Soft shadows from waving alders stretch across it, while a declining sun beautified it with its rays of glittering gold. It sweetly sang as it murmured along:

I chatter over stony ways, In little sharps and trebles; I bubble into eddying bays. I babble on the pebbles.

As I stood upon the sloping bank, drinking in the beauty of the lovely brook and the charm of woodland arbors, a splash from trout was heard, and dancing ripples at once ran from some lapping bushes, betraying the lurking place of the leaping fish. My ambition was at once aroused, and putting on a "barn-yard" hackle, which was a necessity, owing to the overhanging branches, I sent it where the waters waved, and was soon rewarded with a vigorous bite, and an eight-inch trout was transferred from his azure realm to the grassy turf in my rear. As I turned to release the hook from my finny victim, I was amazed to see the grinning face of the frolicsome imp of the Angler's Ledge peering out from a cluster of bushes.

"What are you doing there, you sneaking Ethiop."

"Done want see you fish."

Immediately after this explanation she darted forward, and before I could wink she had the trout in hand and off the hook and its neck completely broken, after which feat she said: "Dat's de way to fix the trout."

This sudden revelation so upset my gravity that I had to indulge in hearty laughter that must have astonished the lispir could in leafy hannts. I concluded, seeing that so the detail to know something about trouting, to indulge. I know elf. Throwing my creel to her I told her to carry that, make no noise, and keep well away from the stream. She was pleased at my indulgent manifestations and implicitly obeyed my instructions, walking along in my rear with soft and stealthy steps. As I was on no pre Raphaelite trip, I again baited, and casting in the same place, another trout left the brook to join his departed companion in the creel. Once more I sought a victim at the same spot, but it yielded nothing, and so I tramped along till I reached a large and inviting pool, in which I found some debris of brush that had lodged against the exposed roots of a spacious elm that was fast being undermined by the flowing current. Evidently this was the home of trout, and when my bait went in search of them they responded most savagely, for out of this tangled collection I took four, which ran from 6 to 8in. My assistant proved an industrious helper, for every trout I captured she promptly released from the hook, and breaking its neck had it in the basket in a twinkle. She had assuredly picked up much information as to trouting from the anglers that came here to sport, as she displayed a keen knowledge of it whenever the occasion required. She was rapidly growing in favor and would yet prove herself a jewel of no inconsiderable value.

Once more on the move, and this time we halt at an

the occasion required. She was rapidly growing in favor and would yet prove herself a jewel of no inconsiderable value.

Once more on the move, and this time we halt at an old log where the gentle cadence of a willow wren and the symphony of the white-throat are heard. It was an inviting place, and I was positive a golden fin or two was harbored under that prostrate trunk which nearly spanned the stream. Here I had the good luck to basket a tenincher and an eight-incher, and was unfortunate enough to lose one that I was sure was well on to a pound. Of course the big fish are the ones that are always lost. Again I take my "joy-inspiring way" along this lovely brook, picking them out here and there until the count showed a total of twenty. As the sun was sinking fast and the shadows lengthening, I concluded to return to the road and hasten back to the lodge for supper.

As I was about to start on the tramp the little blackamoor came forward and earnestly asked if I would let her catch a trout. I readily assented, and giving her the rod she approached the brook and carefully walked along looking for a pool to her liking, and when such was found she dropped the look carefully in, and soon a trout glittering in the sun as it circled in air sought the grassy lawn in her rear. Not content with this the cimmerian little angler must have another, and so perforce I was compelled to await her movements. She quickly brought one, and a good one at that, it being a half-pounder, to mother earth, and then she was content, and on returning me my rod said, "Dat's de way to ketch 'em."

And then snatching up my creel she was off through the bushes on the home stretch like a flash. She was evidently sui generis and as surprising and amusing in her pranks as a Merry Andrew. I had but a brief walk in which to reach the house, and this through a beautiful woods, the freshness of which was infinitely delicious. Anon as I proceeded, a blackbird's whistle is heard, while a buffinch with a black head and red waistocat is trilling his no

A presence that disturbs me with joy Of elevated thoughts.

quaintances, and to me they were

A presence that disturbs me with joy

Of elevated thoughts.

My walk, alas! was only too brief, as I regretted parting with the sweet warblers and the wood-born violets that edged the path.

On approaching the house I saw Albert and Tom and Mike, as I supposed them to be, and the good old hostess on the spacious porch, while the freakish little angler was bending over a board on the ground industriously cleaning the trout, which I opine were to form part of our supper. I well knew that Albert was drawing a fund of hunting adventures from the boys, and doubtless was on his favorite theme, the bounding deer. It so proved, for as I stepped on the porch and was made acquainted with Tom and Mike, who were stalwart in frame and frank in feature, he had been listening to the recital of a famous shot that one of the boys had made last season, that brought down a deer with antlers of extraordinary size. I was fully satisfied that my friend was now lost to all the charms of trouting.

The hostess now set about preparing the evening meal, and it was but a brief time before she called us to the repast. Everything on the table looked so inviting and scrupulously clean, and the cooking was so delicious, especially the trout, that our appetites were thereby much increased. The tormenting Topsy, who rejoiced in the name of Henrietta, stood at our backs with some leafy branches, and busied herself keeping the flies from the table, as well as occasionally disarranging my thin locks, much to my annoyance and discomfort. I finally turned to her and said, "There are no flies on me."

"One on the shiny place," she responded.

At this sly illusion to the bald area on my caput the old lady gave her a rebuking look, saying at the same time, "You Henrietta, behave yourself."

After supper a smudge was started in the front yard to keep away the mosquitoes, while we sat around it and endeavored to entertain one another. My friend and the two boys again got down to hunting narratives, while I had a good ch

the boys call him to get up, stating at the same time that the hounds were running a deer. At this cheerful news he bounded out of bed, and soon as dressed went rapidly down stairs to join them on the hunt, which they at once organized. Two hours later he returned, but without the quarry. Again I went to sleep and soundly slumbered till time to arise. Albert got up at the same moment I did, and told me while dressing what a fine time they had last night working with the hounds. It evidently takes considerable enthusiasm to tumble out of a comfortable bed at midnight and go tramping through the tangled woods in the dark at the heels of baying hounds. I never got educated to that condition of sporting, though I have at times undergone much weariness and discomfort when there was no avoidance of it.

ALEX. STARBUCK.

[TO BE CONCLUDED NEXT WEEK.]

BLACK BASS FLY-FISHING.

BLACK BASS FLY-FISHING.

OME thirty-five years ago, while the writer was attending school at the village of Canandaigua, situated on the beautiful lake of that name, he happened to see one evening a gentleman standing on the little bridge that spans the outlet, casting a fly for black bass. The angler was the late Senator Lapham, and we believe he was one of the first to kill bass on the artificial fly. Later on that well-known sportsman, Andrew L. Williams, once a great chum of Frank Fores er, initiated the writer in the mysteries of casting a fly, and together we killed many big bass on Canandaigua Lake and outlet. About fiften years ago the sporting papers were full of arguments as to whether bass could be killed on the fly or not, but now fly-fishing for black bass is a recognized brand of angling and stands high in the estimation of fishermen, as well it may, for a small-mouth bass when fast to a fly is a very lively customer and not to be despised even by the vetern angler. He is quick as a flash, jumping about in a manner well calculated to try the nerves of a beginner. If near the boat he will endeavor to dive under it, or if a sunken log or treetop is convenient, he will do his best to get fast to it. It takes a cool and experienced hand to kill a bass of over 21bs. on an 8oz. fly-rod.

Black bass are far more supicious and sly than trout, and the angler should be able to make a long clear cast.

kill a bass of over 2lbs, on an 80z. fly-rod.

Black bass are far more suspicious and sly than trout, and the angler should be able to make a long clear cast and keep it up all day, if he wishes to be successful. They are a very capricious fish and likely to rise when least expected. One may cast for hours without the slightest encouragement, and then kill half a dozen in which succession.

quick succession.

slightest encouragement, and then kill half a dozen in quick succession.

It is very important when fishing for black bass, that the fly should be allowed to sink well under water, for they do not like to take it on the surface; and it is far better to fish with two flies than three, and if the angler is ambitious to kill big fish he will do better yet with only one. Bass, as a rule, prefer large flies, but the size should be in proportion to the depth of the water. In small ponds and streams flies on No. 5 or 6 sproat hooks are large enough, but on lakes or rivers like the St. Lawrence, for instance, No. 3 or 4 would be better, and some even use them dressed on No. 2 sproat.

The following list of flies has been carefully selected and thoroughly tried by good anglers on many waters: Dark-montreal, silver-doctor, Lottie, Holberton, silver-fairy, Dunning, post, Martin, grizzly-king, professor, scarlet-ibis, royal coachman, orange-miller, Lord Baltimore, Governor-Alvord. Seth-Green, Rube-Wood, Brandreth, black-prince, Imbrie, Ferguson, bass-miller, orange-doctor and soldier, sometimes wrongly called Lake-George, In some localities the hackles or palmers are good and on the Delaware River the bumble-bee is excellent.

George, In some localities the hackles or palmers are good and on the Delaware River the bumble-bee is excellent.

Anglers are inclined to use rods too light for this style of fishing. It is very pleasant, no doubt, to be able to fish with 6 or 70c, rods, and there is no doubt that they will kill bass; but it is not fair to expect these little trout rods, however carefully made, to stand the strain of casting 50 or 60ft. of heavy line and big flies, to sav nothing of killing large fish, without getting out of shape.

A rather stiff rod, 10ft. 6in. long to 11ft. and weighing 8 to 90z., is the proper tool. In some waters bass will only take the fly early in the morning or late in the evening, while on others they take best in the middle of the day. This the angler must find out by experiment. The best rule is to keep the line wet.

The cheap flies usually sold as bass flies are of no account, particularly where bass are much fished for, being generally clumsy, coarse things, very gaudy in color and only fit for trolling in new waters where the bass are not educated; and they are dressed on hooks that will not penetrate a fish's mouth. If the angler wishes to kill bass on a fly-rod, he must use sproat hooks and see to it that the points are as sharp as a good file will make them. Nothing is more trying than to have a big bass at the first jump throw the hook from his month and with a firt of his big tail disappear in the cool depths of the water, while your line comes back as limp as your feelings. The small keen barb of a well-made sproat pierces the tough mouth of a bass better than any other hook made.

Names of the Menhaden.—Dr. Hugh M. Smith, while engaged in collecting fishery statistics for the U. S. Fish Commission, has heard some names applied to the menhaden which are not to be found in Dr. Goode's monograph of this species in the 'Fishery Industries of the United States." In Casco Bay, Me., the name blueback is shared by menhaden and one of the species of alewife. At Newburyport, Mass., Mr. Stevenson heard the terms pohagen and pauhaugen used, while in Greenport, L. I., school-fish is commonly employed. Long Island furnishes the term bunker, which extends into Cheapeake Bay, being varied sometimes with banker in the latter locality. About New York, New Jersey and the Cheapeake region we hear the name marsh bunker. At Beaufort and Morehead City, N. C., Dr. Smith heard the menhaden called shad. When we are advised to use the common English name of this fragrant fish we will ask: Which one of the 36 or more shall we adopt? The invention of man has been fertile in framing names for the menhaden and the menhaden has become fertilizer through a different application of man's invention.

To Salmon Anglers.—T. J. Conroy, 65 Fulton street, N. Y., has a lot of fine salmon rods, assorted kinds, which he will sell at a sacrifice until stock is reduced. Don't miss the opportunity.—
Adv.

CHICAGO AND THE WEST.

DETROIT, Mich., May 22.—A recent talk with Mr. F. H. Wherry, who is assistant State warden for Michigan, discloses the fact that there are a few violators of the game laws left yet in this big and templing State. Mr. Wherry says, that one night last week he counted sixteen jack lights on one lake. That meant sixteen boats and about four men to each boat. The men were spearing bass. This water, Devil's Lake, is protected by a special law, but not much attention has been paid to it—not so much as will be when Mr. Wherry for submission to the State warden, but I begged them for publication in Forest And Stream.

The Addison Courier, May 17. says, "Prohibition does not prohibit—fish spearing in Deril's Lake." In another paggraph of the same date, "H. S. Van Etlen and party-care weight of a which was about 5ths. (These cels were illegally speared of which was about 5ths. (These cels were illegally speared) of which was about 5ths. (These cels were illegally speared of which was about 5ths. (These cels were illegally speares on the south arm of Devil's Lake, take due warning! Having in years past been to the expense of planting both fish and cels in the waters of the lake covering land owned by me, and being within the following limits, i. e., from Manitou Beach running north to the north shore, and also from Manitou Beach and running thence east to the highway between Devil's and Pound lakes. Any one found spearing within said limits will be procecuted by me as the owner of said described land covered by water, as a trespasser.—Genore R. Brandsell.

A Hillsdale paper, about the same date, has the following straight and sensible talk. What a lesson it teaches:

"The time is rapidly approaching, says an honest fisherman, when the law-abiding sportsman who visits the many resorts around Adrian will find little to compensate him for the outlay of time and money. There are many residents about Devil's, Round, Sand, Wampler's, Evans and a hots of smaller lakes, who look forward to a more certain har

SOME ENEMIES OF TROUT.

SOME ENEMIES OF TROUT.

WHILE engaged in studying the salmon rivers of Kadiak, Alaska, last summer we frequently saw flocks of gulls catching young trout at the edge of shoals. Some birds that we killed were gorged with trout so that when held head downward the fish would drop out of their mouths. A note in a recent number of the Fishing Gazette, of London, relates the killing of thirty-eight yearling trout by a heron for one meal. Fishes are very destructive to the eggs of trout, and among them is one called the miller's thumb or blob, that is found almost universally in trout waters, and is, perhaps, the worst depredator of all. This is a fresh-water sculpin of widespread distribution and unenviable notoriety. Excessively abundant and inconspicuous in appearance, it carries on its destructive work stealthily, but with sad effect. Mr. E. L. Marks reminds us, also, of another robber of the spawning beds in the 1890 report of the New York Fish Commission: "Nearly all the waters in the Adirondack region are filled with a fish familiar to every one, known as suckers. They are considered harmless to all other fish. I have watched these robbers for the last two falls, and find they make their appearance on the spawning beds soon after the trout arrive and remain there long after the trout have left. They will pick or suck up spawn from among the gravel successfully where it would be impossible for other fish to get at the spawn. I have caught them and examined them, and found them as full as they could hold of salmon and brook trout eggs. The bullheads are nearly as bad, and some way must be contrived to clean them out during the coming spring. I am sure this work would add greatly to the increase of trout in the lake."

Waban Lake, Mass., Fishing.—We have learned from

WABAN LAKE, MASS., FISHING.—We have learned from a gentleman of Wellesly, Mass., that he is taking yellow perch in Waban Lake in great numbers, and the weight frequently reaches 1lb, and over. The fish are in prime condition

RANDOM CASTS.

WAS there ever a leather waterproof shoe really waterproof, after being in use a short time? If any of your readers know of such, from actual experience, he will earn the gratitude of the fraternity by making its whereabouts public. I have tried and tried, paid money enough for a single pair to get a good suit of clothes with, and still am no further advanced in the search than when I first began. Even the cheapest shoe can be made waterproof as long as it stays on the shelf, but it is when in actual use and the strain of the foot in the walking causes the leather and stitches to give, that the weak spots show themselves.

Catfish, although not in themselves detrimental to a lake where trout exist, become so from their great productiveness and consequent enormous amount of food devoured, which means of course, just so much less for the trout. Fish cannot thrive upon an inadequate supply

To preserve your bright hooks from rust when laying them away for the season, obtain a few cents worth of tinc. tolu; dip them in it, shake to get rid of any superfluous moisture and hang up to dry. In half an hour they may be put away until wanted again, when they will be found to be in as good condition as ever.

In snelling hooks, first wax the silk well with shoemaker's wax, then wind tightly and closely, and you will only need to carry the winding about half as far down the shank as is generally done. They are less liable to chafe and, of course, will last longer. Finish with two coats of spar varnish.

For large striped bass and other sea fish, an excellent plan is to first wind half a dozen turns around the gut and hook, as ordinarily done, then raise the gut and wind a few times on the bare shank, now replace the gut flat on the hook as before and wind over both again. Repeat the operation once more and you will have a snell that cannot pull out, for the reason that when the gut gets wet it swells above the windings and perfectly prevents slipping. Finish with spar varnish as before. BIG REEL.

VERMONT WATERS.

VERMONT WATERS.

Lake Dunmore has been yielding lake trout (Salvelinus namayensh) in abundance. Up to May 25 Mr. Ed Thayer took forty-nine, the largest weighing 11lbs. Large-mouthed black bass and pickerel are to be found in this lake, and may be caught readily with minnows and the trolling spoon. Pickerel fishing through the ice is a favorite amusement here. The probability is that some of the so-called pickerel are really pike (Esox lucius), for the size of occasional specimens is too great for pickerel. At Brandon, for example, one weighing files. Was recently taken; this, however, was considered unusually large.

Salisbury is convenient to the Otter Creek and Lake Dunmore fishing grounds, and prices of all necessaries are reasonable. The Lake Dunmore Hotel has become a pronounced summer resort. Otter Creek has been very high for a long time, and the customary pastime of spearing pickerel in its waters has failed for the present. In former years a good many have been captured in this way. At Hancock, May 21, I saw four able-bodied and apparently sane men in possession of 150 very small trout—veritable babies, which had scarcely come out of the shadow of the protective law and perhaps had to be stretched a little to warrant their untimely taking off. And that reminds me of the fact stated by Williams in the "History of Vermont" and quoted by Thompson in his Natural History of the State, that the trout hog flourished in Vermont many, many years ago, when brook trout were scooped out of a certain pond by cart loads and sold at a shilling a bushel. Future historians may write: The trout have mostly gone, but the hog remains.

HARPOONING ALLIGATOR GARS.

HARPOONING ALLICATOR GARS.

Editor Forest and Stream:

I have just returned from a two days' fishing brip to south Alabama, and wish to give you an account of some fine sport my friend Howard Douglas and I had. I have read your valuable paper for the last two years, and have seen no mention of the Southern "alligator gar." This fish inhabits all the large fresh-water streams of southern Alabama, grows to immense size, and is the gamest fish I have ever tackled. Last Monday Howard Douglas and I went to the Bigbee River, in Washington county, Ala., provided with a light canvas boat, three good harpoons and a trot line of the largest size—about 25yds. long—tied securely to our harpoon; this was our outfit and all we needed. The first fish we saw was a beauty, weighing about 225lbs. I was in the paddler's place, and Douglas in the bow of the boat, standing erect, ready to throw the harpoen. I paddled the boat up to within 10ft. of his "garship" and Douglas threw, striking the fish just back of where the head and body join, sending the harpoon several inches into the fish's body. Then, such a rush as I have never seen before—no use to try and stop that mad, headlong plunge; 'twould have done just as much good to have tried to stop an engine, so we just let him charge and plunge and throw water on us until he began to tire. This sport lasted for nearly an hour, and when he showed signs of giving up we cautiously got him up near the top of the water and stuck another harpoon in his body further back, so we could tow it to bank. We reached land after some hard work, and then thought we had our fish safe, but one of those cases of "a slip between cup and lip," occurred; we both caught hold of the harpoons and tried to pull our fish out on the bank, when it gave one big flirt of that magnificent tail, nearly drowning us, broke the line on one harpoon, tore the hold of the other, and went off with our highly treasured harpoon.

poon.
You can well imagine our looks of surprise, chagrin and disgust, after two hours' hard work, to lose our fish just as we thought we had him safely landed. We did better with the next one, landing her safely after a hard struggle of an hour. After worrying this one down we drew her up to the edge of the boat and shot her with our .32 Winchester. We skinned it and preserved the head, which will make a fine specimen. This gar was a female,

weight over 200lbs., and had about a peck of roe in her; she had swallowed a longbill gar weighing about 10lbs. We caught three of these grand game fish, average weight about 200lbs., and I have never before lad such royal sport. These fish come to the top of the water and float about this time of year to get the sunshine. In almost all the eddies, if the fisherman is careful and don't make too much noise, he can see from two to five floating lazily around and frequently throwing their great bodies out of the water.

I. M.

out of the water.

NASHYILLE, Tenn.

[The alligator gar (Lepidosteus tristæchus) is the largest of the gar pikes, reaching a length of 10tt. It inhabits the rivers of our Southern States and extends southward to Mexico and Central America. The great manjuari of Cuba is now considered identical with our species. The chief interest attached to the bony gars centers in their relationship to an order of fishes most of whose representatives are extinct. We have sometimes heard fishermen express a wish that the whole worthless race were in the same state of oblivion. Harpooning alligator gars ought to be encouraged by a generous bounty.]

NEW HAMPSHIRE CAMPS.

NEW HAMPSHIRE CAMPS.

COLEBROOK, N. H., May 31.—I met Mr. Watts, paymaster of the Connecticut River Lumber Co., at West Stewartstown this week. He was just in from the Connecticut Lake, and told me the company would open the hotel at the First Lake early in June; and the sportsmen who contemplate a trip that way will find ample accommodations. The fishing in that section is best through June and July, the best places being Perry and Indian streams and Round Pond, each being in easy distance from the hotel.

There are occasionally some good trout taken below the dam, near the hotel, and not a few lakers are taken by trolling every season. I am told that some good speckled trout are caught in places on First Lake, but I think it is very little fished except for lakers, and that principally in the winter through the ice.

From the Lake House a drive of eight miles takes you to Second Lake, where excellent sport may be had, as doubtless many of the readers of Forest and Stream can testify. There also will be found good accommodations, comfortable cabins ard plenty of "good grub," for with Uncle Tom Chester at the helm, how could it be otherwise?

tions, comfortable cabins and plenty of "good grub," for with Unice Tom Chester at the helm, how could it be otherwise?

Amasa Ward arrived in town from his camps on Dead Diamond Stream, at Hell Gate, last Thursday afternoon, having left his camp at 6:30 in the morning, and with his knapsack (weighing 40lbs.), rifle and axe, struck a bee line for Colebrook. He arrived at Mart Noyes's camp on Diamond Pond at 2 o'clock, having traveled about twenty miles through the woods by a route only known to Amasa and or two guides. He reached here about 5 o'clock in the afternoon. When asked how the traveling was through the woods, Amasa replied with characteristic brevity, "damp," He reports seeing the tracks of three moose on his way out, a cow, yearling and bull, and says that owing to the light depth of snow for the past two winters the deer are plentier than he ever saw them before, all through the northern section. Amasa left here a year ago the first of June, and this is his first appearance since, having spent the whole winter in his camp, only going out for a few days to buy his season's supplies. He reports high water in both streams and ponds, and says that good fishing will hardly begin before the 15th to 20th of June with favorable weather, but is at its best from the middle of July to the last of August; and the writer can testify to having found good fishing there all through the month of September. Amasa owns a fleet of twenty-five or thirty canoes and skifts, scattered about on all the outlying pouds and near to some of his outer camps, everything being always in readiness for business. He has recently added more room to his camps, and can now accommodate about twenty sportsmen and guides. At some later date I would like to relate a little occurrence of two years ago, in which Amasa and a bear were the principals. I should hardly care to do so till Amasa is safe back in his "castle." If any of the readers of this should chance to be guests of his the coming season they might ask him in regard to it, but I w

FISHING AND THE MOON.

FISHING AND THE MOON.

Editor Forest and Stream:

I notice in your columns of May 15 an article on "The Moon's Effect on Fishing." I am glad to see questions discussed that are practical to the angler. In a few words I will give the conclusions drawn from a notebook I have kept for many years, when fishing on ponds, lakes and streams for trout, black bass and pickerel. I have made the best strings when the previous night was dark; either when there was no moon or when a full moon was darkened by heavy clouds. If there was light in the first part of the night the morning has been but medium fishing, but the afternoon would be good. If all night was bright with a full moon, the angling the following day would be poorest. Of course these conclusions are modified by winds, clouds, temperature, etc.; yet as a general rule they hold good. I conceive the influence the moon has on fishing is its light. I do not think the tides on ponds and streams are large enough to be calculated by the finny tribe. We know that cattle in the pastures and large game in the forests feed in the bright moonlight of the night; and the deer, caribou and moose retire the following day to the cover, and while hidden from their enemies enjoy their meal of the night previous.

J. W. T.

Dynamite that Cost Money.—A Steubenville, O., exchange reports: "Of all the persons engaged in poaching and uselessly destroying game and fish, the most despicable are those who engage in blowing out of water the innocent fish. Two boys, Robt. Philibum and Fred Millsack, were arrested to-day on affidavit of James B. Maxwell, deputy game and fish warden in this county, and fined \$100 each by Justice Love and committed to jail until fine and costs are paid. The dynamiting was done on Sunday last, in Cross Creek; although bushels were blown to pieces and floated down the creek, the boys only secured about 25 each, thus there was a useless waste of fish. The fish thus killed are not fit for eating as the dynamite loosens the flesh from the bones and the meat is rendered unfit for the table,"

SMUGGLERS AND POACHERS.—Rat Portage, Lake of the Woods, Ont.—Editor Forest and Stream: There is work for the United States custom and fishery officers to do at Southern Bay on this lake. Southern Bay is wholly in American territory, and is the great spawning grounds for sturgeon and other fish that inhabit this lake. The Indians of "White Earth" reserve, Minnesota, depend almost wholly on fish taken in this lake and Rainy River for their subsistence. A party of Canadians, headed by one Reid, have built a large establishment on an American island in Southern Bay, and are rapidly exterminating the fish by taking them on their spawning grounds, which means starvation for the Indians unless the United States Government comes to their assistance either in the shape of supplies or promptly breaking up this nest of poachers and smugglers. This party make their head-quarters at Rat Portage, Canadian territory, and smuggle all their supplies to their establishment at American Island. This man Reid first began his work of fish extermination in Lake Winnipeg, then transferred his operations to this locality, where he is safe from interference by the Canadian authorities. The White Earth Indians are already complaining about the scarcity of fish where they were formerly abundant, and will soon be obliged to call on the Government for supplies to keep them from starvation. The Canadian deputy minister of fisheries investigated this matter, and when he found that Reid and his party were carrying on their operations in American waters, he could not stop it, and it now remains to be seen what action the American Government will take to protect their rights.—Stanstead.

Calico Bass Spawning.—We have recently mentioned the discovery of calico bass (Pomoxys sparoides) in the Susquehanna and Tide Water Canal at Havre de Grace, Md. We learn from Mr. Geo. H. H. Moore that these fish are found full of eggs in the canal at the present time. It may not be generally known to fishermen that this fish is the "Lake Erie or grass bass," which is especially named in the game and fish laws of Pennsylvania as one that must not be caught or killed in any of the waters of the State between the first day of January and the first day of June. Any violation of this law will subject the offender to a penalty of ten dollars for each and every offense. Give the grass bass or calico bass a chance and it will furnish endless sport for the fisherman. It is a nest builder, very hardy and prolific, but it must be protected during the breeding season. This fish is not well established in eastern streams north of Virginia; it has been taken in the Potomac and the Delaware, but was not considered as a native of the Susquehanna. It is one of the best game fishes of its size (about one foot in length and weighing a pound or two) in our water; in coloration it is beautiful, and for pond culture there are few better fishes.

SOUTHERN VERMONT.—Brattleboro, Vt., June 2.—The fishing about here has been very good for the last three weeks. Some large trout have been taken, among them one by A. M. McDonald from Green River weighin; 2lbs. 7oz. I myself took a good one with a red-hackle last Tuesday from Green River weighing 2lbs. 4oz. The trouble with fishing about here is that fishermen go in for the count and not size, and consequently a great many fingerlings are taken. West River, about twelve miles above Brattleboro, is fished some this year, and good catches are the result. Frank Stoddard and Wood, the gunsmith located here, took 48 weighing about 30lbs. from the river at Newfane last week. It is surprising that no fishermen come here from the cities, for we have as fine fishing as anywhere in western New England. Among the Brattleboro fishermen, Ned Plummer and Jim Menzies left for the Rangeley Lakes last week.—J. F. H.

FISHING AT GLOUCESTER, MASSACHUSETTS.—There appears to be very little angling in this vicinity. At Cape Pond, which is situated between Gloucester and Rockport, white perch and bass are to be had in small numbers. In the brook which runs from Cape Pond and empties into Riverdale mill pond a few small brook trout are reported. White perch, bass and pickerel are found in the pond at Eastern Point, on what was known as the Niles estate, and also at Fernwood Lake, but these places are controlled by private parties. At Magnolia there is a trout brook belonging to Mr. Knowlton, and this contains some trout of good size; I am told that a 3-pounder was taken there recently.—E. F. LOCKE.

Yellow Breeches and Conequoquinet.—Mechanicsburg, Pa., May 23.—The two streams, Yellow Breeches and Conequoquinet creeks, afford as fine bass fishing as any waters in the State. In this section the artificial fly—the only legitimate bait of the true angler—is almost universally used. I have seen strings of bass numbering forty and fitty, and running in weight from ½ to 4½fbs., all taken with a fly on a single rod in one day's fishing. The open winter has been very favorable; there has been no ice on the streams.—Minnie Mingo.

NORTH SHORE OF LAKE SUPERIOR.—Mr. Alex. Starbuck writes: My desire is to take in another section of the North Shore of Lake Superior, for there is evidently the best trout fishing in the world, except of course the famed Nepigon. My choice of trouting grounds is the former, from the fact that it is really an indescribable luxury to there lure and play a trout. The Nepigon, in nearly every instance, presents such a rapid current that it militates much against the angler.

Maine Trout.—Upper Dam, May 25.—Yesterday was the first warm day since the season opened, and we had about the first good fishing. All parties took a good catch. Over 90 trout were brought into camp; they weighed 7, 4 and 3½bs., and lots of 2lbs. were taken. Some very large trout were taken before in the narrows, in Richardson Lake; a Mr. Gould took one of 10½lbs. and one of 6lbs., and the same day his friend one of 7½lbs.—J. A. F.

OMAHA, Neb., May 30.—Marsh Kennard, J. S. McCormick, W. J. Hahn, E. T. Duke, Tom Bruner, Jeff Bedford and Fred Metz are whipping the trout streams of north Minnesota. The writer is indebted for a handsome basket which arrived per express last night. The anglers will be absent until the middle of June.—Sandy.

SEA TROUT.—Fredericton, N. B., May 22.—The sea trout have made their appearance at the head of the tide in the Southwest Miramichi. Five weighing 5lbs, each were caught May 19 in a gaspereaux net, which fish are just now making their appearance in that river. Gaspereaux have been much more plenty than usual in the St. John River this season. Some very large hauls of shad also have lately been made in the harbor of St. John. The river is very high at present and likely to continue so for some time; so that a larger number of shad and salmon than ordinary will escape the nets at the mouth of the river and reach their spawing ground in safety.—EDWARD JACK.

Salmon Caught in a Trawl.—A boat fisherman of Gloucester, Mass., took a 7lb. salmon on a trawl-line May 28. This is said to be the first occurrence of the kind in the Gloucester fishery. The trawl-line is similar to the out-line or trot-line sometimes used in river fishing. We have seen bluefish captured in the same way in Fisher's Island Sound, the bait probably having been taken while the line was going down or coming up. A more remarkable thing is the frequent capture of swordfish on bottom trawl-lines and even on handlines of the George's Bank codfishermen.

COLORADO FISH LAW WARNING.—Denver, Col. May 26.—Editor Forest and Stream: I inclose herewith a copy of warning which the Colorado Sportsmen's Association will post. Should any secretaries of gun and fish clubs in Colorado, Wyoming, Utah or New Mexico desire a supply, they can have same by addressing me.—C. M. HAMPSON, Pres. R. M. S. A.

New Names of the Beshowe.—In the "Annual Report of the Canadian Department of Fisheries" for 1889, recently issued, we find the beshowe (Anoplopoma fimbria) referred to as the blackerel—a trade name for the fish in a salted state. Skil is another name used for the species, and the term black cod has been misapplied by association with the same fish.

QUEBEO STREAMS.—Quebec, Canada, May 27.—All the rivers and lakes are overflowing their banks and fly-fishing is out of question for some time. The same has been the case all over this district. River fishing (it is claimed and I believe) will be better than usual this summer, the fish being washed down from the lakes by the tremendous overflow.—G. VAN F.

MACKEREL FROM A SHARK'S STOMACH.—The schooner Lorna Doone arrived at Provincetown, Mass., from Georges, May 28, killed an 18ft. shark on the cod-fishing grounds and found a 17in, mackerel in its stomach in good order.—Gloucester (Mass.) Daily Times, May 28.

SEINING BROOK TROUT.—In Taunton River, Mass., a number of brook trout were caught with herring in the early part of May.

MAHA, Neb., May 26,—Some big catches of pickerel being made daily at Horneycreek and Horseshoe.—

Of Value to Sportsmen.—Every lover of rod and gan should secure a copy of a book just issued by the General Passenger Department of the Canadian Pacific Railway and entitled "Fishing and Shooting." In it all the best fishing waters and localities for big and small game in Canada are fully described, the best route to each pointed out, and a vast amount of valueble information presented in most interesting snape. The descriptive matter covers a broad and varied field, touching upon every noted sporting locality in Osmada between the Atlantic and the Pacific oceans, and also refers to the States of Maine, Michigan and Wisconsin. It is bound in convenient pocket form and is handsomely illustrated. Other useful books are "The New Highway to the Orient" and "Summer Tours," issued for the benefit of travelers in general. Copies of any or all of these may be obtained free upon application to any agent of the Canadian Pacific Railway, or to E. V. Skinner, 353 Broadway, New York; C. E. McPherson, 211 Washington street, Boston; J. F. Lee, 222 South Clark street, Chicago; C. Sheeby, Il Fort street, West, Detroit, Mich.; or to D. McNicoll, General Passenger Agent, Montreal, Que., Canada. **

NEWFOUNDLAND FISHERIES COMMISSION.

NEWFOUNDLAND FISHERIES COMMISSION.

Editor Forest and Stream:

It may perhaps interest you to know that I caught a squid a few days ago, and another one was taken in March. These were of small size—smaller than the general run of those that come into the bays of Newfoundland in the month of August. I believe that some squid winter in the bays in deep water. Capelin do so I am sure, because what the fishermen catch here in early spring and call whitefish is nothing but the capelin. We find the same thing on the northern coast of Norway. We are about to begin hatching cod, and are collecting fish at present; but the season is late and backward, so that not many fish are caught yet, the water being too cold. At 20 fathoms depth to-day I found it 37 degrees. The Commission intends to go into hatching lobsters in great numbers this year. I expect to hatch about 120,000,000. The hatching of lobsters on a large scale is practicable, and I have not the slightest doubt that the young will get along remarkably well if planted in suitable places. Such I hold to be sheltered localities with rich vegetation on the bottom. I consider places where there is plenty of goose grass best of all. The lobsters feed on insects on these plants, and have plenty of hiding places. If one wishes to find a large number of small lobsters, up to one-half inch and one inch long, he will always find them among the goose grass in the summer; therefore I consider such place to be their home in early life. Mr. Jansen went home to Finland last fall, and will not be back here again.

Added the Added the second of the summer; therefore I consider such place to be their home in early life. Mr. Jansen went home to Finland last fall, and will not be back here again.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—Adv.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth. 220 pages, price \$2.50. For sale by FOREST AND STEERAM.

FOREST AND STREAM, BOX 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fow! Shooting," which will be mailed free on request. The book is pronounced by "Nanit." "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject

FIXTURES. DOG SHOWS.

DOG SHOWS.

June 3 to 6.—The Cincinnati Kennel Club's Fourth Annual Show, at Cincinnati, 0, Geo. H. Hill, Superintendent. Sept. 2 to 4.—Dog Show of the Midland Central Fair Assoctation, at Kingston, Ont. R. W. Meek, Secretary.

Sept. 2 to 5.—Third Annual Dog Show of the Michigan Kennel Club, at Detroit, Mich. M. V. B. Saunders, Secretary.

Sept. 15 to 18.—International Dog Show of the Dominion of Canada Kennel Club, in connection with the Industrial Exhibition at Toronto, Canada. C. A Stone, Secretary.

Sept. 23 to 26.—Second Annual Dog Show of the Central Canada Exhibition Association, at Ottawa. Alfred Goddes, Chairman Committee.

Oct., 8 to 11.—Ninth Annual Dog Show of the Danbnry Agricultural Society, at Danbury Conn. B. C. Lynes, Secretary.

FIELD TRIALS.

November.—Second Annual Field Trials of the Brnnswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Auburndale, Mass.

Nov. 3.—Fourth Annual Field Trials of the Indiana Kennel Club, at Carlisle, Ind. P. T. Madison, Indianapolis, Ind., Secty. Nov. 10.—Second Annual Field Trials of the Canadian Kennel Club, at Othaliam, Ont. C. A. Stone, Toronto, Ont., Secretary.

Nov. 17.—Tweltth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratogo Springs, N. Y., Secretary.

Jec. L.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

Jau. 18.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.
Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.
COURSING.
Oet. 21 to 25.—Fifth Annual Meet of the American Coursing Club, at Great Bend, Kan. I. D. Brougher, Secretary.

EASTERN FIELD TRIALS DERBY.

Editor Forest and Stream:
Below is a list of the entries for the Eastern Field Trials
Derby for 1890. There are 83 in all, 65 English setters, 6
lrish setters and 12 pointers. All were whelped in 1889; ENGLISH SETTERS.

ADAM (H. Merriam, Weston, Mass.), black and white dog, July 25 (Orlando—Royal Myrtle). ALPHA (A. P. Heywood-Lonsdale, Whitchurch, Salop, Eng.), lemon and white bitch, March (Delta—Empress Min-nie).

ANDY (Memphis & Avent Rennels, Memphis, Tenn.), black, white and tan dog, March 29 (Jean Val Jean-Sheena Van).

Nack, white and tan dog, March 29 (Jean Val Jean—Sheena Van).

ATLANTA (L. W. Smith, Morrison, Ill.), black, white and tan bitch, March 29 (Jean Val Jean—Sheena Van).

BABE MOORE (Moorefield Kennels, Philadelphia, Pa.), lemon and white bitch, Feb. 8 (Dick Roy—Caddie M.).

BESSIE HILL (J. H. & J. A. Hunter, Sanborn, Ind.), black, white and tan bitch, June 9 (Ben Hill—Daisy Hunter).

BETTINA (J. I. Case, Jr., Racine, Wis.), black, white and tan bitch, April 27 (King Dan—M'liss C.).

BIJZZARD (Field Trial Kennels, Charlottesville, Va.), black, white and tan dog, May 9 (Roderigo—Belle of Piedmont).

BLUE DAISY (G. C. Gray, Appleton, Minn.), black, white and tan bitch, Jan. 12 (Gladiator—Lady F.).

BOHEMIAN PAUL (F. S. Brown, Philadelphia, Pa.), black, white and tan dog, June 5 (Paul Gladstone—Bohemian Girl).

white and tan dog, June 5 (Paul Gladstone—Bohemian Girl).

BOLD BIDDY (P. Lorillard, Jr., Tuxedo, N. Y.), black, white and tan bitch, April 10 (Paul Gladstone—Belle of Stanton).

BUSTER (J. I. Case, Jr., Racine, Wis.), black, white and tan dog, March 12 (King Noble—Cricket).

CARDINAL (Memphis & Avent Kennels, Memphis, Tenn.), black, white and tan dog, April 30 (Roderigo—Bo-Peep).

CAYOTE (J. I. Case, Jr., Racine, Wis.), black, white and tan doz, March 12 (King Noble—Cricket).

CAVOTE (J. I. Case, Jr., Racine, Wis.), black, white and tan doz, March 12 (King Noble—Cricket).

CELESTE (Elmwood Kennels, Fort Wayne, Ind.), black and white ticked bitch, April 27 (King Dan—M'liss C.).

COMO SU MADRE (B. Crane, Chicago, Ill.), black, white and tan bitch, April 27 (Roderigo—Maud).

DANUBE (E. Huidekoper, Meadville, Pa.), black, white and tan dog, Feb. 23 (Ben Hill—Isabella).

DELILAH (Memphis & Avent Kennels, Memphis, Tenn.), black, white and tan bitch, March 29 (Jean Val Jean—Sheena Van).

DILL (P. Lorillard, Jr., Tuxedo, N. Y.), black, white and tan dog, April 27 (Toledo Blade—Dashing Lady).

EDITH (Elmwood Kennels, Fort Wayne, Ind.), black, white and tan bitch, April 10 (Roderigo—Sue Gladstone).

FOLIY (Memphis & Avent Kennels, Memphis, Tenn.), black, white and tan bitch, March 26 (Dick Roy-Mattia).

FOLLY (Memphis & Avent Kennels, Mempnis, Tenn.), black, white and tan bitch, May 15 (Roderigo—Countess House).

FOXIE MOORE (Moorefield Kennels, Philadelphia, Pa.), black, white and tan bitch, March 26 (Dick Roy—Mattie).

GOSSIP (Field Trial Kennels, Charlottesville, Va.), blue belton bitch, May 9 (Roderigo—Belle of Piedmont).

JENNY MAY (Memphis & Avent Kennels, Memphis, Tenn.), black, white and tan bitch, May 15 (Roderigo—Countess House).

KITTIE MOORE (Moorefield Kennels, Philadelphia, Pa.), black, white and tan bitch, Feb. 8 (Dick Roy—Caddie M.).

LUCERO (B. Crane, Chicago, Ill.), black, white and tan dog, April 27 (Roderigo—Maud).

MCGINTY (J. H. & J. A. Hunter, Sanborn, Ill.), black, white and tan dog, June 9 (Ben Hill—Daisy Hunter).

MEMPHI (P. H. Bryson, Memphis, Tenn.), black, white and tan dog, July 3 (Roderigo—Countess House).

MOFSA (P. Lorillard, Jr., Tuxedo, N. Y.), black, white and tan bitch, April 2 (Gath's Mark—Allie James).

NAHMKE CHATTA (Nahmke Kennel, East Patchogue, N. Y.), black and white bitch, July 1 (Count Howard—Calico).

NAHMKE CHILA (Nahmke Kennel, East Patchogue, N. Y.), black, white and tan bitch, Markhe Enerches (Rohmke Kennel, East Patchogue, N. Y.) black, white and tan bitch, Marcha 31 (Roge—Chintz).

NAHMKE MERCEDES (Nahmke Kennel, East Patchogue, N. Y.) black, white and white bitch, July 1 (Count Howard—Calico).

NAHMKE MERCEDES (Nahmke Kennel, East Patchogue, N. Y.) black and white bitch, July 1 (Count Howard—Calico).

NAHMKE MERCEDES (Nahmke Kennel, East Patchogue, N. Y.)

N. Y.), black and white bitch, July 1 (Count Howard-Calico).

NAHMKE OLGA (Nahmke Kennel, East Patchogue, N. Y.), lemon and white bitch, June 6 (Roy Monarch—Saddle Bags).

NAHMKE WILFRED (Nahmke Kennel, East Patchogue, N. Y.), black, white and tan dog, Feb. 25 (Gene—Belle of Allendale).

NELLY BLY (J. H. & J. A. Hunter, Sanborn, Ind.), orange and white bitch, June 9 (Ben Hill—Daisy Hunter).

PAULA (P. Lorillard, Jr., Tuxedo, N. Y.), black, white and tan bitch, April 10 (Paul Gladstone—Belle of Stanton).

PAUL BO (T. M. Brumby, Marietta, Ga.), black, white and tan dog, June 5 (Paul Gladstone—Bohemian Girl).

PEARLINA (Elmwood Kennel, Fort Wayne, Ind.), black, white and tan bitch, April 17 (King Dan—Wilss C.).

PEG WOFFINGTON (F. S. Brown, Philadelphia, Pa.), black, white and tan bitch, May 13 (Ben Hill—Nora).

PHOENESS (A. P. Haywood-Lonsdale, Whitchurch, Salop, Pag.), black and white bitch, February (Woodbill's Bruce—Lucy).

PRINTANIE (B. Grang Chicago, Ill.), black, white and tan

Eng.), black and white bitch, February (Woodbin's Eng.), black and white bitch, February (Woodbin's Eng.), black and tan Lucy).

PRUELAMIE (B. Crane, Chicago, Ill.), black, white and tan dog, June 9 (Jean Val Jean—Little Gitt).

QUEEN VICK (J. I. Case, Jr., Racine, Wis.), black, white and tan bitch, Jan. 3 (King Noble—Queen Vashti).
QUE SERA (B. Crane, Chicago, Ill.), black, white and tan dog, June 9 (Jean Val Jean—Little Gift).
QUIEN SABE (B. Crane, Chicago, Ill.), black, white and tan dog, June 9 (Jean Val Jean—Little Gift).
RAYON (Memphis & Avent Kennels, Memphis, Tenn.), black, white and tan dog, March 29 (Jean Val Jean—Sheena Van).

tan dog, June 9 (Jean Val Jean—Lattle Gitt).

RAYON (Memphis & Avent Kennels, Memphis, Tenn.), black, white and tan dog, March 29 (Jean Val Jean—Sheena Van).

RAZZLE (H. Merriam, Weston. Mass.). black, white and tan bitch, July 25 (Orlando—Royal Myrtle).

REVELER (W. B. Hill, Frankford, Ind.), black and white dog, March 2 (Gath's Mark—Esther).

ROD GLADSTONE (W. H. Perry, Dallas, Tex.), black, white and tan dog, March 30 (Roderigo—Pet Gladstone).

RUPERT (Memphis & Avent Kennels, Memphis, Tenn.), black, white and tan dog, April 30 (Roderigo—Be Peep).

SALLY LIMA (Field Trial Kennels, Charlottesville, Va.), black white and tan dog, April 30 (Roderigo—Be Peep).

SALLY LIMA (Field Trial Kennels, Charlottesville, Va.), black and white bitch, March 13 (Count d'Or—Midred).

SAMR. (W. W. Titus, West Point, Miss.), black and white dog, March (Dash B.—Daisy Hope).

SAN-RAY (A. Duane, New York), black, white and tan dog, Sept. 6 (Orlando—Ray).

SINTRAM (P. Lorillard, Jr., Tuxedo, N. Y.), lemon and white dog, April 2 (Gath's Mark—Allie James).

SUSIE MOORE (Moorefield Kennels, Philadelphia, Pa.), black, white and tan bitch, Feb. (Dick Roy—Carddie M.).

TAN (A. P. Haywood-Lonsdale, Whitechurch, Solop, Eng.), black and white dog, Feb. (Woodside Bruce—Lucy).

The LL-USED (C. S. Cross, Emporia, Kan.), bltch, May 31 (Roderigo—Lufra Cross).

TORY CAPTAIN (F. R. Hitchcock, New York), black and white dog, Oct. 23 (Wallace's Mack—Hunter's Bride).

TORY CAPTAIN (F. R. Hitchcock, New York), black, white and tan bitch, March 13 (Roderigo—Belle of Bridgeport).

TORY LIEUTENANT (F. R. Hitchcock, New York), black, white and tan dog, Jan. 29 (Jean Val Jean—Princess Helen).

TORY LIEUTENANT (F. R. Hitchcock, New York), black, white and tan dog, March 30 (Roderigo—Belle of Bridgeport).

TRAP, JR, (G. C. Gray, Appleton, Minn.), lemon and white dog, March 30 (Roderigo—Belle of Bridgeport).

TRAP, JR, (G. C. Gray, Appleton, Minn.), lemon and white and tan dog, March 30 (Roderigo—Contec Gladstone).

WHYTE B. (P. H. Bryson, Memphis, Tenn.), bla

white and tan bitch, Jan. 14 (Gem—Victorial).

IRISH SETTERS.

BEN C. (J. L. Crugom, Milwaukee, Wis.), dog, Jan. 29 (Glencho, Jr.—Nellie C.).

BONIBEL (Max Wenzel, Hoboken, N. J.), bitch, June 29 (Chief—Bonnie).

ENNA H. (Dr. Wm. Jarvis, Claremont, N. H.), bitch, May 11 (Elcho, Jr.—Romaine).

PRAIRE Rose (G. C. Gray, Appleton, Minn.), bitch, June 2 (Brian Boroumbe—Biddy).

READY II. (Max Wenzel, Hoboken, N. J.), bitch, April 15 (Red Dash—Ready).

WILLIAM H. (Max Wenzel, Hoboken, N. J.), dog, April 15 (Red Dash—Ready).

POINTERS.

BARNAID (Field Trial Kennels, Charlotteville, Va.), white and black ticked bitch, May 13 (King of Kent—Hops).

BEACON (A. P. Heywood-Lonsdale, Whitchurch, Salop, Eng.), liver and white ticked dog, June 9 (Ightfield Dick—Polly Peachem).

EATON (A. P. Heywood-Lonsdale, Whitchurch, Salop, Eng.), liver and white dog, May 22 (Ightfield Dick—Perdita).

ditta).

LEBANON BOY (Lebanon Kennels, Lebanon, Pa.), lemon and white dog, Feb. 8 (Lebanon—Penelope).

LEBANON, JR (Lebanon Kennels, Lebanon, Pa.), lemon and white dog, Jan. 7 (Lebanon—Virginia).

MAIDA (N. S. Simpkins, New York), liver and white bitch, April 24 (Dexter—Seldom).

MAID OF KENT (Field Trial Kennels, Charlottesville, Va.), liver and white ticked bitch, May 13 (King of Kent—Hops).

Va.), liver and white ticked bitch, May 13 (King of Rene-Hops).

Penelope II. (Lebanon Kennels, Lebanon, Pa.), lemon and white bitch, February (Lebanon—Penelope).

RAZZLE (N. S. Simpkins, New York), liver and white dog, April 24 (Dexter—Seldom).

TAPSTER (Field Trial Kennels, Charlottesville, Va.), liver and white dog, May 13 (King of Kent—Hops).

TYKE (A. P. Heywood-Lonsdale, Whitehurch, Salop, Eng.). liver and white dog, May 23 (Ightfield Dick—Duke of Westminster's Bess).

Zig Zag (Field Trial Kennels, Charlottesville, Va.), liver and white dog, May 13 (King of Kent—Hops).

THE TORONTO DOG SHOW.—Toronto, Ont., June 2.—

Editor Forest and Stream: The second international dog show, to be held here Sept. 15 to 19 in connection with the Industrial Exposition Association, will in all probability be the finest exhibition ever held in the Dominion. The premium list will be out in a few days. It is a very liberal one, with some \$2,000 in cash, medals and plate, besides a number of valuable specials. Friend Stone, the genial and popular secretary of the Canadian Kennel Club, has been appointed secretary and superintendent, and nothing will be left undone that can add to the pleasure and comfort of the exhibitors. The judges appointed are Mr. John Davidson for all setters, pointers, foxhounds and beagles; Mr. E. M. Oldham spaniels and Mr. C. H. Mason the remaining classes. In selecting the judges the committee again had in view the first two qualities necessary to satisfactory judging, viz., competence and integrity, and it is hardly necessary to assure exhibitors that none of the serious blunders that have been committed during the past season will be repeated here. Mr. Davidson is very popular with the dog men here, and is sure of a hearty support. Mr. Oldham, I believe, has never judged, but his large experience during the past four of five years with high-class dogs should well qualify him for the position. Mr. Mason is the best judge we have ever had in Canada, and he is undoubtedly the best all-round judge in America. Up here we want the best dogs—not the best men—to the front, and we feel assured that with these indeps the right end of the chain will get the ribbon every time.—ONTARIO.

THE PACIFIC COAST SPANIEL CLUB.—The spaniel

THE PACIFIC COAST SPANIEL CLUB.—The spaniel fanciers of California have formed a club under the name of the Pacific Coast Spaniel Club. The association will publish a monthly paper, The Spaniel Fancier, which will be edited by Mr. H. P. Rennie, with Dr. A. C. Davenport associate editor. Following is a list of the officers of the club, just elected: President, Dr. A. C. Davenport, Stockton; Vice-President, Mr. John Kerlin, Oakland; Secretary and Treasurer, Mr. H. P. Rennie, Oakland; Executive Committee, Dr. A. C. Davenport, Messrs. H. P. Rennie, Jos. B. McVay, G. W. Rennie, and F. W. Howlett.

OMAHA DOG SHOW.—Omaba, Neb., May 30.—The annual bench show will be held here during the second week of June, from the 10th to the 14th inclusive. The management states that the exhibition—and that is what the show really is—will surpass anything of the kind ever offered in Omaha before. There will be a much larger list of entries and many additional fine dogs from adjoining States. The business men have been exceedingly generous in donating prizes, and are lending much aid to the affair in innumerable ways.—SANDY.

ENGLISH VS. AMERICAN BEAGLES.

WHEN Gen. Rowett visited England to select bearles there were no bench shows of importance had he had here were no bench shows of importance had he had here were no bench shows of importance had he had here were not bench shows of importance had he had here were the were filled upon the select of it may, interest has been taken in bench show beagles in the bright of the season any recent importations of beagles. Judging the beagle shows here have filled up wonderfully. I have not seen any recent importations of beagles. Judging the beagles had been seen any recent importations of beagles. Judging the beagles had been seen any recent importations of beagles. Judging the beagles had been seen any seed up.

I quote what the Stack-Reper says of this world-bearer. "Conference and south-amption, we may say that in bringing before our recei, and emoustasted a Fight and State of the seed of the interest take in this famous, but of late years much neglected, broved, and semanticated his fact of the most intricate tasks of dogsy lore, we limit ourselves from the seed of the most intricate tasks of dogsy lore, we limit ourselves from the seed of the most intricate tasks of dogsy lore, we limit ourselves from the seed of the most intricate tasks of dogsy lore, we limit ourselves from the seed of the most intricate tasks of dogsy lore, we limit ourselves from the seed of the most intricate tasks of dogsy lore, we limit ourselves from the seed of the most intricate tasks of dogsy lore, we limit ourselves from the seed of the most intricate tasks of dogsy lore, we limit ourselves from the seed of the most intricate tasks of dogsy lore, we limit ourselves from the seed of the most intricate tasks of dogsy lore, we limit ourselves from the seed of the seed of the most intricate tasks of dogsy lore, we limit ourselves from the seed of the s

ing they were placed under gunfire at an early age. It is all nonsense to suppose that a beagle or any other hunting dog can be kept as a house pet until two or three years old and then put in the field with the expectation that he will stand the noise of a gun and have a good nose for game. Few setters or pointers are of any use for field purposes after they reach two years of age untrained, and why should beagles be an exception?

TREATMENT OF DOGS AND THEIR BAD HABITS [By a Lady Contributor.] THERE is so much said and done in this nineteenth century civilization to protect all animals from cruelty,

charged the matter was investigated. Now all this lavelesses comes under the bead of crucky to generally a special content of the beat of crucky to generally a special content of the beat of crucky to generally that dogs have had pedigrees, have been fine bred, this in a broad case. In this country it is comparatively recently that dogs have had pedigrees, have been fine bred, the beat in a broad case. In this country it is comparatively recently that dogs have had pedigrees, have been fine bred, but it in a broad case it is only a little less that he beat in the property of the property to his owner, who, as in every a beat of the beat in the property of the owner, who, as in every had a special content of the property to his owner, who, as in every who has been treated. It is a light-dryd horses or human beings do. He also becomes a higher of a value being the property to his owner, who, as in every who has a dog can be the property to his owner, who, as in every who has a dog can be the property of the owner, who, as in every who has had a wider range. The trainer's plan of the property to his owner, who, as in every who has had a wider range. The trainer's plan of the property to his owner, who, as in every who has had a wider range. The trainer's plan of the property of the habits is an old one, cur is almost impossible that the habit is an old one, cur is almost impossible to one, cur is almost impossible to do one, cur is almost impossible to one, and it did not the property of the habits is an old one, cur is almost impossible to the property of the habits is an old one, cur is almost impossible to the property of the habits is an old one, cur is almost impossible to the property of the habits is an old one, cur is almost impossible to the property of the property of the habits is an old one, cur is almost impossible to the property of the proper

turn, and so used to hide in the bushes and not present himself at his home until evening. Let any young fellow put the question to himself when I stay out late and when I get home find a good scolding waiting for me, does the knowledge of this hasten my return? Of course one cannot make a dog understand as you would a boy, that you are worried about his absence. The principal danger of a dog's running off alone is being hurt or injured in some way. The only way to prevent this is taking him to walk, or to drive with you almost every day. Another bad habit is being quarrelsome. It is in some natures more than in others, and is especially annoying in a ladies' dog for him to get into a row with another when out walking with her. A lady, or children, should always be accompanied by a reliable dog when walking or driving alone in the country, for protection sake. It will be found very easy to teach any dog not to commence or join in a quarrel with another one.

Take him to walk with you on the road, if a new dog on the first few times leading him; then when he is loose and running alongside of you, and you see another dog coming, call your own to you, saying, "Quiet, stay by your mistress." If need be the first few times, lead him; take no notice whatever of the other dog, and you will see him turn away. If you say "Go away," or strike at the strange dog, or notice him in any way, you will immediately see your own dog fly at him. If you are riding or driving call him to you alt the same, and he will go close to the horse's feet. After a while yours will come beside you without calling when he sees another, and trot past him without looking. It is not cowardice, it is training. It is said that to stop a dog fight throw smulf in their faces. They will have to sneeze, consequently let go, and thus be separated. Pepper is also used, but it might get into their eye. A short-haired dog is unfairly matched against a long-haired one, the latter's hair protecting him from bites, while the other one stands a poor chance. Fo

physician had told me, and gave him a rew drops of belladona in water. Very soon he fell asleep, sleeping and dozing for nearly twelve hours, awaking to be quiet and cortented, soon becoming a very tractable and perfectly trained dog.

I think enough has been said concerning chastisement, there are I allow occasions when it must be done, and done on the spot, but be sure that you do not do it in a bad temper (they being bright enough to understand the moods of those they are with), more because you are vexed with him than to teach him, if so the lesson is lost. In such a case I would not blame the dog if he would fix his teeth in the hand raised against him.

One afternoon, last summer, I saw a tall, slight figure, dressed in the height of the rural masculine style, as made by a fashionable New York tailor, his soft moustache and fair skin would have marked a gentle nature, had not the slender white fingers held a riding switch, that was being laid upon the back of a poor, pretty little spaniel that was crouched at his feet; with every cut of the whip this cad was saying 'II will teach you,' until satisfied that his manliness had been asserted enough he marched into the house, followed by the little slinking figure.

The other day, down here in Virginia, I saw an athletic man with bronzed face and rough dress walking along, accompanied by a Chesapeake Bay dog and two setters; it was pleasant to see how they ram around him, looking frankly up in his face, showing the perfect friendliness that existed between them. I watched him pick up a stick that had drifted up on the beach. Although he switched it around in his hand they did not shrink, showing the perfect confidence they left that arod was not used on them. The party came to a wreck that was beached high up, one of the masts had broken and fallen over on the sand dunes, making a bridge. The man walked ever it into the wreck followed by two of the dogs, the other, a young one, stoppod irresounte and turned, coaxing being unavailing. The rough man the most of

DOGS OF THE DAY.

WHAT is a novice? is a burning question with people who are defeated in a novice class and some who are only prompted by curiosity. A little over a week ago I received a letter from Mr. Shotwell which contained a sentence running something like this: "What was this dispute you had with Mr. —? I decided against you." As Mr. — and I never had any dispute on any subject, I was puzzled, and sent a protest to the C. C. secretary against deciding any case in which I was a party in interest without giving me a hearing. Back came the answer that it was a question as to the eligibility of Prince Charlie in the novice class at Boston. In my reply to that information I said that Prince Charlie's win of a portion of a Collie Club stake as practically a special and not a prize to debar from a novice class. Mr. Shotwell's rejoinder was quite a warm one on behalf of his club. He isof the opinion that in passing over Collie Club stakes a slight is placed upon the club as a member of the A. K. C.

This question came up in a different shape before the London show committee, the Canadian Kennel Club and Mr. Vredenburgh. The last named never brought the question to the attention of the A. K. C., but simply said that the protested dog had won a Collie Club stake and that that club was a member of the A. K. C., and such wins therefore counted. Unfortunately Mr. Vredenburgh contradicts himself by issuing a list of shows which does not include the one at Rahway he says should be recognized. The little affair at Rahway was in no sense a show, but simply a decision of the club stakes, which are private affairs. It was not announced as a show nor can it be regarded as such.

The case of Prince Charlie differs only in this respect, that the stakes he competed for were decided at the New York show of 1889. At the same place this year he was entered in the novice class with the full knowledge of his previous stake winning and Mr. Vredenburgh's reply to the Canadian query. No objection was made there, nor was there any at Boston, where he did win a prize in the novice class. The object of the novice class is just to give such dogs as him a chance of winning his entrance money. It is a class for which a much more definite and clearer rule is requisite to prevent such misunderstandings as the Roslyn Clara and Prince Charlie cases. Not only should it be made more explicit, but it might be changed with material advantage, making a beaten dog class instead of dogs which have never won, thus admitting a new comer to compete and occasionally sweep off so many prizes.

for regarding the bull bitch Dolly Tester. I had mentioned the peculiar tendency of a sea voyage to retard the usual return of the breeding period, and noted that Dolly Tester's case seemed to be an exception, as she was bred soon after she arrived here. Mr. Sawyer says Dolly arrived on April 10, first showed signs on April 13, and was bred to Harper on the 23d.

Miss Monarch was expected to come over for the River View Kennels, but before Mr. Sawyer completed the pur-chase she broke a stifle. She subsequently had four dead pupples. A new face, however, in the kennels is Carisbrooke, purchased from Mr. E. Sheffield Porter, of New Haven.

An error of mine has been pointed out to me. The associate members are not entitled to get a fourth delegate until the membership is four hundred.

I am still more impressed than ever after reading Mr. A. J. Rousseau's last letter on Barzoi dogs that the abdication of the Emperor of Russia in favor of the only infallible is merely a question of time.

A judge in an English county court decided a suit for un-paid prize money in favor of the show committee on the score that the club did not make any money.

Mr. Perroy, of New York, has purchased Brockenhurst Quick in England, and also wanted to get Loughton Spice, but his offer was declined.

but his offer was declined.

Mr. Ferris, an English detective, says dogs have no honing powers, but that stolen dogs which do find their way back are not taken far from home. Mr. Ferris is singularly at fault in this statement. We do not say all dogs find their way home—we have many a time wished they had the power, but some have the power. A case occurred in my own kennels a few weeks ago. A bitch I had placed out over two years ago was returned to me, being brought some eight or ten miles by a circuitous route to my house. A week later she disappeared and was brought back the following morning by her former keeper. In fact she was returned before we knew she was gone, as she was seen up to dusk. She repeated the trick in about another week. I know of a little rough terrier which has been sent miles away from his home sometimes in wagons and sometimes boxed up, and it wasn't until he was sent across Philadelphia, that he finally concluded to quit his old home.

phia, that he finally concluded to quit his old home.

The many friends of Mr. A. Clinton Wilmerding will be pleased to learn that he has pretty well recovered from the accident he met with two weeks ago. I have not seen any full story of the affair published, so give what Mr. Wilmerding wrote me about it: "I suppose my brother told you that I had had a bad fall from a horse. The brute got frightened, ran away, a stirrup broke and I was thrown and trampled upon. One of his hoofs took considerable skin and most of my heavy corduroy breeches off my right leg above the knee, and the other came dawn on the small of my back. When they got me home there were evidences of some internal injury, as I vomited clots of blood. It was about as near broken bones and 'solving the mystery's as I ever got, and I don't see how I escaped as I did. The horse was a large heavy animal and going at top speed I am pulling out all right now, but slowly." All hands will join in wishing the popular spaniel judge a complete and speedy recovery.

Now that Wilmington has been admitted to the A. K. C. it is necessary for the show to amount to something. Last year it was passably good, being modest and unpretentions, the entering wedge as it were. The committee of the fair saw that the dogs "caught on," and are determined to make a bolder bid this year, and one that will draw the good dogs. Exhibitors have an excellent man at Wilmington in the person of Mr. Frank R. Carswell, who although not officially connected with the show that I know of, is steering it in the right direction.

Mr. Carswell has sent me a rough sketch of the classification, and asked for suggestions, and I think it might be well to afford others an opportanity of doing likewise. The entrance fee is to be \$2. This is right, for there has been a lot of grumbling at the \$3 tariff where the prizes have been a lot of grumbling at the \$3 tariff where the prizes have been as mall. The mastiff classification is as follows: Challenge class, dogs and bitches, \$8; open class, dogs, \$8, \$4 and diploma; bitches the same; puppies under 12 months \$5 and \$3. The same classes and money are given to rough St. Bernards, English, Irish, Gordon setters, collies and fox terriers. Pointers are divided by weight in challenge and open classes, making seven classes. Plus have \$5 for first prizes in challenge and open classes, \$3 for seconds in open and first in puppy classes. Beagles and cocker spaniels have similar classification. Single breed classes are provided as follows: Great Danes, \$8, \$4 and diploma; deer hounds, greyhounds, foxhounds, Newfoundlands, Chesapeake Bay, bull-terriers and miscellaneous, each \$6, \$3 and diploma; bloodhounds, Clumber spaniels, field spaniels, bulldogs, dachshunde, basset hounds, Irish terriers, Dandie Dinmont, black and tan terriers, Yorkshire terriers, Skye terriers, toy terriers, Italian greyhounds, Japanese spaniels, King Charles spaniels and Mexican hairless dogs, each \$4, \$2 and diploma.

I do not see how the amount of cash could be split up to much better advantage and give everybody a chance to get a bit of the money.

By way of a P. S. to the story of the A. K. C. meeting, it would seem to be necessary, in view of statements made respecting Mr. Peshall's credentials not being in correct form, to give a copy of what he presented. Here it is: "A. P. Vredenburgh, Esq., Secretary American Kennel Club. My dear sir: As Mr. H. Malcolm, our delegate, will not be able to be present at your meeting, we hereby appoint Mr. C. J. Peshall to act in his stead at your meeting, to be held this day, May 22. Yours truly, W. Stewart Diffenderfer, Secretary." It is a document that can be judged by everyone, and a good many will, I think, concede that Mr. Anthony did well to withdraw his motion that it was not in proper form.

J. W.

in proper form.

THE ENGLISH SETTER CLUB.—Melrose, Mass., May 29.—Editor Forest and Stream: I would like to extend through the columns of the FOREST AND STREAM an invitatation to all interested in the breeding, hunting and showing of the English setter, to join the English Setter Club of America, a club formed for the improvement of the breed both in the field and on the bench. This club already has quite a list of charter members, and more will be admitted at once. Here is a long-looked-for opportunity, and it should be appreciated. Any information regarding the club will be furnished on application to the secretary. Following is the list of officers elected last evening: Pres., F. W. Whitlock; First Vice-Pres., F. Frazer: Second Vice-Pres., Dr. W. H. Power; Sec.-Treas., H. H. Brown; Executive Committee: A. R. Crowell, T. C. Critchendon, W. H. Case, J. W. Neal, J. Jarvis, and the above-named officers.—H. H. Brown, Sec's.

GREYHOUND OWNER WANTED.—A gentleman re-

xplicit, but it might be changed with material advantage, naking a beaten dog class instead of dogs which have never roon, thus admitting a new comer to compete and occasionally sweep off so many prizes.

Mr. Sawyer has kindly sent me the information I asked

Mr. Sawyer has kindly sent me the information I asked

DOG TALK.

DOG TALK.

By invitation of Dr. Warren H. Beede I have recently visited a number of dogs attacked by a peculiar disease, answering very nearly to that described by Dr. J. S. Niven. Thinking that dog owners wish to know of such epidemics, I will give a description of the disease from my own observations and those of Dr. Beede, who is well known in this locality as a specialist in carine diseases of some fifteen years practice. The owner invariably comes to the doctor with the idea that his dog has a bone in his throat and is choking, but investigation of more than fifty cases has failed to find a bone as yet. The dog first becomes languid, then, as in Dr. Niven's experience, they lose the use of their hindquarters, the throat becomes very much swollen and eventually the jaws become paralyzed, the tongue swells and hangs out of the mouth; the dog cannot swallow and the intense fever causes great thirst, the poor sufferer plunging his head into the water to the eyes. In several cases the doctor forced down a little water through a rubber tube, invariably sending the dog into fits; the bowels are constipated, and the cases that I have seen are at certain stages very restless. Some of them bark a little, but in a very unnatural voice. One bull-terrier that I visited had been sick about two days. She was constantly in motion, and would try to snap at imaginary flies and turn around until she fell over from exhaustion or weakness in the hindquarters. She appeared to be entirely out of her head, and did not recognize any one; the eyes were set and the eyeball greatly inflamed. Most all of the cases that have come under my notice have been cross and snappish during the first stages of the disease. One case in particular would chew anything within its reach, tin cans, chair legs, his kennel or anything. Several persons have been bitten by them, but no bad effects have resulted from the bite. In houses where more than one dog is kept, sometimes both dogs have it and sometimes only one. It is not confined to any particular

The English Setter Club has set the setter men all talking of the combination dog, i. e., a combination of field and bench qualities. A great many are harping on the old saw that the bench dog is of no practical use. How about Mr. O'Bannon's Reverdy, Prince Belton, Father O'Callaghan's Irish setters or a score of others? and I see by the report of the recent English field trials that Sweep the Green, a son of Monk of Furness, has won the Schter Stake. A combination dog is rare at present, but entirely possible, nothing is needed but judicious mating.

"Brittle" "pitched into" the "cuts" of the Barzois in a recent Western paper in a manner quite characteristic of "Blarsted Britisher." I would like to ask how Opromiote or Yasva manage to eat or drink. If their necks are no longer than they are represented they must get down on their knees for that purpose.

The Massachusetts Kennel Club, Lynn, Mass., have decided to hold their next dog show March 24 to 27, 1891, and claim those dates.

NAMQUOIT.

"A DISAGREABLE PERSON."—Editor Forest and Stream: The American Kennel Club at its late meeting decided that Mr. Peshall was so disagreable a person that it would not allow him to appear in its councils. In reply to a suggestion that some utterances as to Mr. Peshall were the outcome of personal feelings, the President disposed of this by the astonishing statement that Mr. Peshall was not worthy of his personal feelings! In other words, Mr. Peshall is too low and despicable an object for the President of the American Kennel Club to have any "personal feelings" toward! Who is this contemptible creature? Some dead beat, vulgar uneducated boor, dirty tricky rascal, or loud-mouthed brawling ruffian? He is an English gentleman born and bred, with more learning and greater accomplishments than nine out of ten delegates to the American Kennel Club. A man of the kindest heart, always ready to help the unfortunate, cheery and kindly in his intercourse with others and a man against whose absolute honesty, perfect uprightness, and thorough sincerity, no one has ever dared to breathe a word. Yet he is too contemptible for an A. K. C. official to associate with! Remember it is not intimated that his manners in A. K. C. meetings were offensive, that he indulged in profanity while participating in a meeting (as others have done who are full worthy of associating with "us") but because he entertained certain views as to the work of the A. K. C. and persisted in carrying them out in his own way, he is "not worthy of personal feelings." Nor was he even allowed to be heard, after a motion by a delegate that permission be accorded to him! And the worst feature in this shameful performance was that it was entirely unnecessary and was a deliberate and malicious determination to humiliate Mr. Peshall. If preventing his participation in the meeting had been the object, it could easily have been accomplished by the evident insufficiency of his credentals. Of course, all independent lookers on laugh to scorn the idea that such a vote cou

THE TAX ON DOGS AND BITCHES.—Eagle Rock, Pa., May 24.—Editor Forest and Stream: In a recent issue cocurs the following paragraph by "J. W." in speaking of a heavier tax on bitches than on dogs: "Wheu will the gentlemen who tultivate hayseed in their whiskers learn that bitches average not over a dozen pups a year, whereas a dog may produce two or three hundred, also that the male, not the female, is the sheep-killer." Now, I think that is just the point aimed at. One bitch and ten dogs in a neighborhood will produce say twelve pups, while one dog and ten bitches will produce ten dozen pups, using "J. W.'s" own figures. Another thing, if a man has to pay for a bitch he won't keep one unless she is pretty good, and will think enough of her to take care of her when in heat and not allow the ten (or twenty) dogs in the neighborhood to form a mob to range the country round killing sheep. In regard to the second clause of the paragraph quoted I think as large a proportion of bitches as of dogs will kill sheep. A bitch, too; if not confined when in heat, will gather all the dogs, good and bad, for miles around, and your pet setter or collie who if alone wouldn't harm a sheep, is liable to meet the fate of Old Dog Tray or you have a bill of damages to pay.—Mc.

WILMINGTON, Del., May 30.—Memorial Day at Healdmornange was unusually lively. The range was open early in the norning for an all-day shoot, and the marksmen brought their unches with them in preparation for a full day's sport. The hooting lasted until evening, with but a short intermission wany very fine scores were out of the quostion on account of the ifficult "fish-fail" wind, besides blowing directly in the faces of the shooters all the afternoon. Following are the scores, standard American target, off-hand.

MONTREAL, May 24.—The Montreal Rifle Association held the first of its present season's monthly competitions at the Cote St. Luc ranges to-day, when there was a large turnout of riflemen, some 200 showing up on the field. With the exception that the light was very variable, which made good shooting somewhat difficult, the day was all that a rifleman could desire. Concerrently with the monthly competition an open match was shot. The matches resulted as under:

UNSER FRITZ.

ZETTLER CLUB, May 23.—The Zettler Rific Club of New York took formal possession of its new quarters at 331 Bowery to-night. The members assembled in front of their old stamping grounds, 207 Bowery, and marched from there to the new stand. After inspecting the many improvements and facilities of the gallery, which promises to become one of the most popular in the city, they sat down to a well-prepared supper in the spacions meeting room. Mr. Gus Zimmerman, the well-known New York rific shooter, was the guest of the evening, and many were the good wishes of his club mates that he might he successful in his efforts at the Berlin competition.

NEWARK, N. J., May 30.—The spring shoot of the Nowark Shooting Society, which took place to-day, was a pleasant affair, though the attendance was not very large. The shoot of the Miller Club, at Uniou Hill, drew quite a number of the experts in the morning, though several of them visited the park and put up some telling scores. The first flag in the morning was made by L. Flach, of the Zettler Rific Club, and was worth \$5 to him. The last flag paid \$1 to J. A. Boyken, B. Walther, C. S. Zettler, George Joiner, C. E. Overbaugh and M. Dorrler, of the Zettler Rific Club, and S. J. Lyon, of Collinsville, Conn., were among the shooters from out of town.

UARVER'S RIFLE TOOLS.—Prof. James W. Carver has a

Rifle Club, and S. J. Lyon, of Collitsville, Conn., were among the shooters from out of town.

UARVER'S RIFLE TOOLS,—Prof. James W. Carver has a whole line of rifle implements on which he has expended all the experience of an expert workman and all the skill of a clever mechanic. There are adjustable sights, loaders, bullet moulds and swages, ball seaters, wind ganges and rubber protectors from screw head hruses. His cartridge loader for rifles is a very ingenious contrivance and includes a re and decapper, an expander, loading chamber and a crimper combined, and all can be carried in the pocket and used in the field as easily as at home. A glimpse into Carver's catalogue will show the rifleman and shotgun man many knick wacks which he could not comfortably get along without.

ROCHESTER, N. Y., May 27.—The Flour City Club, of this city, and a number of picked sharpshooters from Scattsville and its vicinity, had a social contest Thursday, on the grounds of the latter club. Owing to the lateness in getting together, but one string of 5 rounds for each club was shot, by the teams of 11. The distance was 177ds. The following score out of a possible 550 was made: Flour City 402, Scattsville 570. The Scottsville Club will renew the shoot such time as they might choose.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested of keep us advised of the dates of their shoots, so that we may ive due notice in our column of fixtures.

FIXTURES.

June 5-7.—Annual Spring Tournament of Harrisburg Shooting Association, at live birds and unanimate targets. H. M. F. Worden, See'v, Box 468, Harrisburg, Pa.

June 9-13.—New York State Association Tournament, at Lyons, N. Y. W. S. Gavitt, See'y.

Heikes and W. Scott McDonald. \$1,000 guaranteed. July 9-10.—Springfield, Mass, Shooting Club Tournament, with guaranteed purses. H. A. Penrose, or Corry, Pa., Manager.

Aug. 18-23.—Third Annual Keystone Tournament, at Corry, Pa. Sept. 9-12.—Cheinnatt, O.—Al Bandle's Sixth Annual Live and Artificial Shooting Tournament, open to the World. Avenue Ball Park, Sept. 9, 10, 11 and 12. Guaranteed Purse. Wm. E.

THE ILLINOIS SHOOT.

CHICAGO, June 4.—[Special to Forest and Stream].—The Illinois shoot is a screaming snecess. There were 6f entries for the L. C. C. Smith cup race. The cup was won by Black, of Reithsburg, with C. E. Cahoon second. Sixty-eight entered for the diamond badget shooting for that is still progressing. The weather is fine. everything is running smoothly, and the prospects are good for fun all the week. Will send full report for mext issue. E. HOUGH.

THE MILWAUKEE TOURNAMENT.

THE MILWAUKEE TOURNAMENT.

MILWAUKEE, May 28.—To-day opened the fifth annual tournament of the Southeide Grin Club. The wind was the only thing the cortestants complained of, for both live and bluebirds were strongly affected by it. Otherwise the day was perfect and delightful. The attendance at the tournament was large. Some of those who were in attendance have been here before and are well known for their good work. The most notable figure among them was List in, of a blewater, who lost both legs during them was List in, of a blewater, who lost both legs during signate lover of shooting, and has become an expert in the apasionate lover of shooting, and has become an expert in the apasion of the property of the passed through here last spring. S. A. Tucker, who represents a gun manufacturor in New York city, M. A. Keller, of Balavia, and W. T. Don, of New York city, were among those present from the East. G. B. Harris and J. T. Anderson represented Chicago. Others were: G. Sperback, Whifewater; E. C. Sherwin, Brandon, B. Anderson, Fond du Lac; J. H. Westover, Pawaukee; R. Godfrey, Whitewater; E. Wehmhoff, Burlington, Chades Fricker and W. A. Haig were scorers, and Henry A. Manegold referee. When the day's programme had been shot through, John F. Burnham was tho hero and prondest man on the field, having made' four moneys. He proved the crack shot of the day and captured all the first moneys in the second ontest. Twenty-nine entries were made for the first contest at 10 single Peoria blackbirds, three traps, 18 ds. risc.

B. Stewell. 16 J. A Brible. 9 H. F. Stehla. 7 a Meunier. 9 J. Schmidt. 5 J. F. Burnham. 8 P. F. Stennard. 9 J. Schmidt. 5 J. F. Burnham. 8 P. F. Stennard. 9 J. Schmidt. 5 J. F. Burnham. 8 P. F. win, third by John Godfrey, Williamson, Bailey and Ruble, fourth by Carmichael, Buruham, Meixner, B. Anderson and Storey.

May 39.—The elements favored the marksmen at National Park to-day, and gave them as pretty a day as the most fastidious shooter could dosire. The sun shone brilliantly and there was not enough wind to cane the clay hirds to veer from the courses upon which the traps directed them. The principal event of the day was the team shoo! for the championship of Wisconsin, in which the South Side Gun Clin Team No. 2 carried off the trophy, or rather trophies, there being a gold medal for each of the four members of the team. Eight teams contested in this event, and the excitement attending the work of each was more pronounced than at any other time during the day.

The work opened in the morning with a sweepstakes of 25 entries, 31 each, at 18yds. rise, 10 birds. E. C. Sherwin and B. Anderson divided first money; L. J. Petit, G. Sperbeck, J. E. Warner and F. P. Stannard divided second; Geo. Atwell, F. Van Eils, J. Strassburger, F. Sharratr, R. Godfrey and G. C. Rasch divided third, and fourth was divided by John F. Burnham, W. Clement, R. Vedder and H. C. Colt.

The second event, contost No. 4, was 10 single Keystone targets, 3 traps, 18yds, rise, entrance \$2, four moneys, 40, 30, 20 and 10 per cent. Following is the score:

Contest No. 7, the first regular shoot on the day's programme, was a "miss and out," each man dropping out if he missed one of the five. Of the 15 who had entered 5 only were successful: At-	011
which was divided by Seereid and Warnor. Rubel and Alwentied on the shoot-off for second. Contest No. 7, the first regular shoot on the day's programme, was a "miss and out," each man dropping out if he missed one of the five. Of the 15 who had entered 5 only were successful: Atwell, Holt, Brand. S. Meunier and J. Mennier. The team shoot at 10 birds each resulted in Carmichael and Warner, and Ruble and Holt dividing first money on 17. Strassburger and John took second with 16. John Strassberger made a perfect score in No. 9, shooting at 10.	7
Warner, and a Ruble and Holt dividing lirst money on 11. Stress- John Strassberger made a perfect score in No. 9, shooting at 10 single standard target, and Ruble took second money. Interest centered in the shoot at live birds, confest No. 10. This shoot lasted a considerable time, for the reason that a number of ties had to be shot off. The final result was as follows: Chapman, belier and Ruble took first money on 6, and friese, Carmichael, Williamson, Atwell, Marlett, Serfeld, Dickens, Holt and Meunicr divided second on 5. Of those who had made four, five withdrew, and six shot off, F. P. Srannard taking the whole pot. Fourth money was taken by F. C. C. Brand with they would be the standard of the standard	71
ties had to be shot off. The final result was as follows: Chapman, Deiter and Ruble took first money on 6, and Friese, Carmichael, Williamson, Atwell, Marlett, Seefeld, Dickers, Holt and Meunier	1
divided second on 5. Of those who had made four, five withdrew, and six shot off, F. P. Stannard taking the whole pot. Fourth money was taken by F. C. G. Brand with three. Two had withdrawn and three was to ut when the tie was shot off.	1
Before the live shoot began the members of the club were called together in order to witness the presentation of a gold watch to F. P. Stannard, as a testimonial from the club for bis good shoot-	1
ing when the trapshooters' team gave their exhibition early in the spring. They challenged the clin to have one man shoot against one of their team whom they were to select. They chose I.R. Stice of Omaba, while the clin settled on Mr. Stannard.	
The result was that the expert from Omaha was badly beaten by the Milwaukee man. This was the first and only time that a member of the team snifered defeat at the hands of a local marks-	
man during the entire 'rip. At the next tour-ament a stricter enforcement of the rules of the American Shooting Association will be made. Three or four times vesterday arguments were had, owing to the rules not be-	
member of the team suffered defeat at the hands of a local marksman during the entire trip. At the next tour ament a stricter enforcement of the rules of the American Shooting Association will be made. Three or four times yesterday argaments were had, owing to the rules not being observed, but matters were smoothed over. The rules say that a rind must be picked up with one hand and carried off the field. This is to prevent the "retriever" from playing any tricks, the employing of a spear, fastenod to the inside of the hand, for instance, so as to draw blood from the bird. This rule was not enforced at all, the boys often jumping on the birds and wringing their heads before they had them off the field. Several shors rushed out and brought in their own birds, kicking them to death, which is likewise against the rule. Another important rule was not according to the rules of the residue.	1
instance, so as to draw blood from the bird. This rule was not enforced at all, the boys often jumping on the birds and wringing their heads before they had them off the field. Several shots	
rushed out and brought in their own birds, kicking them to death, which is likewise against the rule. Another important rule was lost sight of altogether. It provides that a bird shall be scored as "lost" if it has not been retrieved when the next man steps up to shoot. It is the intention to use dogs for retrieving purposes at	
the next tournament.	- 1
THE CATSKILL TOURNAMENT. (ATSKILL, N. Y., May 27.—The trap shooting tournament held bere to-day was a very successful and pleasant one, but with	
a diminished attendance, due to the threatening aspect of the weather in the early hours of the morning. A number of towns that were counted on for say "betted threatening did not send at the say of	
single shote. This who took part in the fournament were pleased at the capital management of that popular sportsman, George Tolley. The contests were run so smoothly that the ten pro-	
grammed events were carried through and an additional contest and two extra sweeps shot out before the close of the day.	
the visitors and though the sky remained overcast until noon.	
the visitors, and though the sky remained overeast until noon, the light was bright and satisfactory. The last hours of the day were simply delightful, the sun shining brightly, while the fragrant air seemed to infuse life into everybody. Horace B. Derby,	
the visitors, and though the sky remained overeast until noon, the light was bright and satisfactory. The last hours of the day were simply delichtful, the sun shioing brightly, while the fragrant air seemed to infuse life into everybody. Horace B, Derby, of the Albany Argus held the position of referee and scorer, and had an efficient aid in Mr. Ira Gay, of Catskill. The scores follow. THE CATSKILL TOURNAMENT. CATŠKILL, N. Y., May 27.—The trap shooting tournament held here to-day was a very successful and pleasant one, but with a diminished attendance, due to the threatening aspect of the weather in the early hours of the morning. A number of towns that were counted on for sure representations did not send a single shooter, and Albany and Troy bad the best delegations of marksmen. Those who took part in the tournament were pleased at the capital management of that popular sportsman, George Frolley. The contests were run so smoothly that the ten programmed events were carried through and an additional contest and two extra sweeps shot out before the close of the day. The drizzle of the early morning had ceased long before the arrival of the visitors, and though the sky remained overcast until noon the light was bright and satisfactory. The last hours of the day were simply delichtful the sun shioing brightly, while the fragrant air seemed to infuse life into everybody. Horace B. Derby, of the Albany Argus held the position of referee and scorer, and had an efficient aid in Mr. Ira Gay, of Catskill. The scores follow. May 31.—The members of the Parker Gun Club, of Kensington, engaged in a prize shoot on their grounds this afternoon. American Association rules governed. Five traps and Keystone targets were used. Messrs. Martin, Gilder and Whitcomb tied for the three prizes. In the shoot-off, at 5 birds np, Martin won first prize by breaking 13 ont of 15; Whitcomb second, breaking 9 out of 12; Gildner was shot out in the first round. Following the prize was a challenge shoot between Wm. Timmey and Stephen Hothersall, both members of the club, for a purse of \$25, at 30 singles and 5 pairs of doubles. 5 traps, Eastern and Western trapshooting rules governing. The result was a victory for Timmey by 2 binerocks.

by 2 blnerocks.

AT WOODLAWN PARK, Long Island, to-day at noon will be shot a match by teams of 5 each from the Central Gun Club of Long Branch, Coney Island Rod and Gun Club, Glenmore Rod and Gun Club, Parkway Gun Club, and Fountain Gun Club. Each contestant is to shoot at 10 birds, 25yds, rise, 5 traps, Fountain Gin Club rules to govern. The prize is a costly sterling silver tankard of special design, and is furnished by private contribution of individual members of the Fountain Gun Club, to become the property of the club making the greatest score. No entrance the is charged, the purpose being to encourage social intercourse. The special committee, of which Mr. Augustus W. Phelps is chairman, have arranged for suitable music, recitations, etc. and an enjoyable occasion is anticipated.—John A. Carney, Secretary, 38 Nassau street, New York city.

OMAHA, Neb., May 26,—The Omaha Gun Club's weekly shoot took place to-day, 10 live birds, 30yds, rise, modified English rules. The birds were one of the finest lots ever secured for a shoot in this part of the country, strong, swift flyers, every one of them. Frank Parmelee and J. R. Stice used 16-bores and bet \$25 on the side, Stice winning by killing his 10 straight. The score.

BROOKLYN, May 28.—During the last meeting of the Glenmore Rod and Gun Club, it was decided to accept the invitation issued by the Fountain Gun Club for their cup shoot, to be held on Jane 5 at Woodlawn Park. In considering the claims of club members to a position on the team of five, which will represent the Glenmore Club, Dr. Powell thought that Williams Mills would be a good man, while Mr. W. H. Sclover named William Levens, of East New York. The outcome was that a match was arranged to be shot off by Mills and Levens, which came off today on Dexter Park grounds. The conditions were, 25vds. rise, at 25 birds, old Long Island rules: Levens scored 16, Mills 15.

The regular monthly shoot was held after the Levens-Mills match. The scores: W. Levens 6, W. Selvor 4, Dr. Boehm 4, 1. Ochs 4, H. Schlichtner 5, E. Helgans 6, A. Jardin 7, Dr. Powell 7, C. McGee 4, J. H. Schliemann 6, D. Van Wycklen 7, The for badge, at 3 birds, won by D. Van Wycklon. Sweep at 3 birds, 25yds, rise, entries, 2 brizes: Levens 3, Van Wycklen 7, The for badge, at 8 birds, von the Levens, and the woodlawn Park grounds this afternoon. Four of the first Gun Club held a well-attended and guite an exciting shoot on the Woodlawn Park grounds this afternoon. Four of the first competitors field for the club medal and first prize on 7 straight, and the other five for second prize on 6. The shoot-off of the the was close and long protracted, especially which followed the regular event, C. Plate and Schmadicke div. first money on 25 out of 25. In the second sweep Graeff, Domann, C. Detletsen, Clarey and Eleasers were field, the two first named dividing the prize after outshooting their opponents on the eleventh round.

WAVERLY, N. Y., May 31.—The first annual tournament of the Waverly Rod and Cun Club was beld on their grounds near Spansh Hill on May 30, and was a success, norwithstanding the contant rain, which came down all day. Many crack shots were resent from out of town, and Pullney, thea, Ovid, Elmira, ockwood, Wilawana, Dansville, Van Ettenville and Swartwood, is were resent from out of town, and Pullney, thea, Ovid, Elmira, ockwood, Wilawana, Dansville, Van Ettenville and Swartwood, is we'ver ketate, and Towanda, Athens and Sayre, Pu., were repesented. Third weep, Bette and Gettle tie on 5. Fourth sweep, 3 pair doubles nd 4 singles, F. Ward and Manley 10 each, Fifth sweep, in the five singles, wanty led with 10. Sixth sweep, 5 pair and 4 singles, Voodruff 10. Seventh sweep, 5 live birds, Gettle 5. Eighth event, birds, won by T. Ward with 5. No. 9, 7 live birds, fied by Voodruff and T. Ward. The total day's work included 19 events, ith no end of perfect scores.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

ROCKAWAY, N. Y., May 30.—The Rockaway Point Club spent Decoration Day at their Rockaway headquarters shooting sweep-stakes at 10 birds each man. About twenty sportemen attended, First sweep won by Link with 8, Landman second with 7. Second sweep won by Treas with 10, Short and Link second with 8, Third sweep won by G. Treas with 10 out of 12, Link second with 9 out 13. Fourth sweep won by Batch with 8 out of 11, Short second with 7. Fifth sweep won by Short with 9, Berger second with 10 out of 13. Sixth sweep won by Landman with 9, Link second with 8. Seventh sweep won by G. Treas and Short with 9 cach, Treas second with 7 out of 12. Eighth sweep won by Treas with 10, Link, Landman and Short second with 8.

LONG BRANCH, N. J., May 27.—The Central Gun Club did some good shooting here at their fifth monthly shoot at live birds for the Hollywood and Campbell cups Monday. Sixteen participated; and each shot 7 birds under the American Association rules: Campbell killed 6. Beale 7 E. W. Price 5, J. Van Dyke 5, E. E. Taber 6, E. W. R-id 7, J. L. Price 4, W. P. Taher 5, W. C. Price 6, Capr. Charles Spinning 7, Postmasure Joine 4, Woolley 5, E. H. Price 6, Philip Daly, Jr., 6, W. Barber 5, F. G. Leonard 4.

ALBANY, N. Y., May 29.—The weekly competition of the West End Gun Club, held to-day, was of special interest, the usual practice competition being diversified by an individual match between D. W. George and H. M. St. John. The conditions of the match were 25 kingbirds per man, use of three traps under American Association rules. George was the favorite in the race and was an easy winner by 19 to St. John's 14. After the match double bird shooting rounded out the day's sport.

RUTHERFORD, N. J., May 30.—The annual prize shoot of the Boiling Spring Fish and Gun Cluh at Rutherford, N. J., to-day, was well attended, and the competition for the cash and other prizes given by the club was a hot one. Twenty members took partin the regular event, each man firing at 30 bluerocks under Association rules. E. Jeancett carried of first prize with 14 targets broken. Matsen F. Lane and Coss tied on 18 and div. second money. A number of sweeptakes, open to all, followed the clink shoot, and were continued until darkness put a stop to the sport.

word, and were continued until defrates. Put a step to the sports were the continued until defrates. Put a step to the sports and the principal event was the continuation of the merchandise context, each man had a possible 25 clay-pigens, each min's work follows: C. E. Forehand and W. L. Davis 23, E. T. Smith, C. Crompton and C. H. Howe 22, E. S. Knowles, H. W. Webber and George Sampson 21, A. R. Bowdish, A. B. F. Kenney, E. T. Whittaker, A. L. Gilman and F. Forehand 19, M. D. Gilman, W. H. Cole 18, W. R. Dean and E. F. Swan 17, F. M. Harris 14, G. W. R. Dean and E. F. Swan 17, F. M. Harris 14, G. W. W. Brown 8. Sweepstakes, in connection with the merchandise contest and other events, at bluerocks and clay-pigeons followed.

LONG BRANCH, N. J., May 30.—Benjamin Raymond, of Long Branch, and Henry White, of Red Bank, shot at 50 live pigeons on the grounds of the Central Gun Club to-day, for a purse of \$100 a side. The birds were strong flyers, and each mau killed 44. Three sweepstakes at live birds followed. In the first one Raymond and White killed 3 each and divided the money. They also killed 4 each in the second and divided the purse.

ZERO SCORES.—Plainwell, Mich., May 23.—The members of the hunting and fishing club, shot at 15 birds each, at the fair ground Friday afternoon, and made the appended score: O. F. Borroughs 8, S. Heath 6. Louey Soule 6, J. H. Madden 5, Fird Heath 4, John Tomlinson, Frank Heath and W. W. Bisbop 3 each, J. W. Gilkey 2, S. E. Negus 0.

BEEVILLE, Tex., May 17.—Beeville Gun Club shoot at 25 clay-pigeous, one trap, 18 ds. rise. American rules: Stephens 14, Parr 21, Beasley 20, Klipstein 13. Monday, May 19, same rules: Parr 17, Beasley 20, Gugenheim 4, McCurdy 13, Klipstein 8, Stephens 16, Skoggs 19, Suggs 10, Cook 11.

RECKLESS SCOUTING.—Rule 27 of the American Association is a good and safe one, which the management at Claremont ought to heed and enforce.

JAMAICA, L. I., May 30.—The Monahan Gun Club of Long Island had a shoot at Jamaica to-day, and the winners were G. Blake in class A with a score of 8 out of 10. In class B.W. Pouch won with a score of 5 out of 10, and in class C Van Siclen won with 5 out of 10.

ATLANTIC CITY, N. J., June 2—There was a return shoot be-tween the Pleasantville and Atlantic City gun clubs to-day, on the grounds of the latter. Score: Atlantic City 188, Pleasant-ville 178.

SPRINGFIELD, Mass., will have a tonrnament June 9 and 10, given by the Springfield Shooting Club, and managed by H. A. Penrose.

An Important Decision in the U. S. Circuit Court of Interest to Trap Shooters and Dealets in Targets and Trapes to the seven to the Peoria Target Company vs the Cleveland Target Company, which has been pending in the U. S. Court at Cleveland, O., for over two years, has just been decided by Judge Ricks in our favor. The Cleveland Target Co. is perpetually enjoined from making, selling, using or giving away any trap or part thereof, having any kind of arget clamp or oarrier pivoted or daapted to be pivoted to the main arm of the trap. The decision of the Court is broad oand sweeping, and there can be no mist ke as to its meaning. All the claims of the patent in suit on which infringement was claimed are held valid and infringed by the Tripsement was claimed are held valid and infringed by the Divided larget carrier or holder other than the Peoria blacking a pivoted larget carrier or holder other than the Peoria blacking a pivoted larget carrier or holder other than the Peoria blacking to the craps will infringe our patent. We will protect our right to the exclusive use of a pivoted carrier by suit in the U. S. Circuit Courts against any and all pereons using or dealing in unfringing goods. We have already instructed our attorneys, Messrs, Poole & Brown, Chicago, to bring suit against the Keystone Manufacturing Co., and Thorson & Cassade, Chicago, agents for Keystone Manufacturing Co., and Thorson & Cassade, Chicago, agents for Scandard Target Co., and Thorson & Cassade, Chicago, agents for Scandard Target Co., and Thorson & Cassade, Chicago, agents for Scandard Target Co., and Thorson & Cassade, Chicago, agents for Scandard Target Co., and Thorson & Cassade, Chicago, agents for Keystone Manufacturing Co., and Thorson & Cassade, Chicago, agents for Keystone deal in for uses said infringing traps, do so at their own risk, as they are liable equally with the manufacturer. THE EASTERN DIVISION MEET.

JUST 80 men were registered at the spring meet of the Eastern Division, A. C. A., held at Lake Mascuppic, May 30 and 31 and June 1. Thirteen canoe and boat clubs were represented by those who registered; 48 were from Lowell clubs and 47 from other places in New England. The camp site was a grove of old-growth pines on the western shere of the lake. Twenty-four tents were pitched in a semi-circle near the water side and perched upon little knolls to the rear of the later. About 4 miles distant is the city of Lowell, the residence of Dr. J. A. Gage, the vice-commoder, and R. F. Brazer, the purser. By them were the arrangements principally made, including some of the principal features, the free transportation of canoes and duffle arrangements principally made, including some of the principal features, the free transportation of canoes and duffle arrangements principally made, including some of the principal features, the free transportation of the southern end. At the south end of the lake therefore, the base of the triangular course was laid out, giving a long reach up in front of the camp, as it happened in the sailing races, the winds being westerly. A very satisfactory mess was provided at \$1 per day by the Lowell & Dracut Street Raiway at their pavilion on the shore of the lake half a mile to the north-sat of the camp. The company owned the camp ground gave it free, provided gratuitously platform cars for the transportation of boats and duffle, and in many other ways did everything in their power to help the meet along. While every one on the road, from president to the humblest enabloyee, was animated by a desire to promote the success of the project, the impulse was given by Mr. Percy Parker, the treasurer of the company, who is a member of the Vesper Boat Club, and himself thoroughly on rapport with the sport.

Thursday night, the 29th, most of the Lowell men were in camp. Four Lynn boats he'd arrived on the ground. Knappe's from Springfield was reported, Putnam from Wor'e ter was heard from as or route,

Chih men, subsequently awarded Whitten a special prize for his good work.

The upset race, which was to sail, capsize canoe, right it and sail to a stakebout, was contested only by Butler, Gray and Goddard, and was won by Gray, Butler second.

Five good men appeared for the one-man double-hlade paddling race. Knappe, of Sprinzfield, Perkins, of Lowell; Purnam, of Worcester, Gray, of Lowell; Cartright, of Buston. The distance was half a mile. The five started together. Putnam shook them off, except Perkins, who when two lengths behind devel ped great staying powers, crept up and collared Putnam. The last quarter of a mile they paddled neck and neck. The half mile was finished so closely, both men crossing the line apparently together, that Putnam entered a protest against a decision that gave the race to Perkins. A decision was subsequently rendered in favor of Perkins upon competent testimony.

The unfinished programme of Saturday was finished Sunday, the principal event was a 4½ mile sailing race, for a solid silver cup, given by the Lowelt and Dracut Street Railway Company. The starters were: Paul Butler, Lowell, Wasp; Howard Gray, Lowell, V.; C. E. Whitten, Lynn, Alena M.; D. S. Goddard, Lowell, Blanche. The wind was fresh from the N.E. and very puffy. "All the little waves had their nightcaps on," as the boys sing. It was a hard race. Goddard was put out of it by the breaking of his seat, dumping him into the wet to windward. Whitten broke his rudder on the second round. The race was therefore between Gray and Butler. Butler led Gray a pretty race around to the last boy on the second round, when in gibing, bit sliding seat stuck fast and a puff laid him flat. Gray passed him, but himself shared the same tate on at the first buoy on the last round. Butler was able to regain his lead and he kept it to the finish. Time:

chester; A. S. rubban, C. S. full ever held by the Eastern eneet was the most successful ever held by the Eastern ston: camping site, arrangements, everything in connection the camp was satisfactory. Those who could do so, and were about two dozen in number, stayed until Monday mornthen they reluctantly grayed hands in parting and promised the one another at Peconic Bay in August.

THE PASSAIC RIVER MEET, MAY 30, 31.

THE Passaic River plays an important part in the early history of American canoeing as, but a few years after the sport was introduced in New York, it took root on the Passaic in a quiet way, chiefly through the efforts of a few amateur builders of canvas canoes, Mr. J. F. West and others. In 1875 some long cruises were made, and in the following year a party of four or five cruised from the headquarters, the old Triton Boat Club house above Newark, by way of Morris Ganal and Delaware River to the Centennial Exhibition at Philadelphia; returning by the Delaware and Ravitan Canal and Staten Island Sound. In spite of this good beginning so long ago, the growth of canoeing on the Passaic was but slow in the early days of the American Canoe Association; but the last half dozen years have witnessed a revival, and now the Passaic is one of the strong canoeing localities of the Atlantic States. Canoe clubs are numerous and generally in a prosperous condition, ado on any special occasion the river turns out a very creditable representation.

A meet early in the season has been an institution for four years, that of the past week being very successful. The camp fite is the same as that of 1888, on the east short of Newark Buy, just abreast of Pamrapo, where a high bluff overlooks a clear stretch of water 5 miles long and 1½ miles wide, with no interruption from traffic and with usually good brezes. The distance listand and Brooklyn, is only 8 to 10 miles, so that the camp is readily reached. Though nearly all the members are A. C. A. men, the camp was entirely independent of the Association, being managed by a committee chosen by the various clubs on the river. It was not, however, confined to Passaic canoeits only, as a number were present from Yonkers, New York and Hoboken.

The programme contained three record races, open to Passaic canoeits only, the prize for the greatest number of points being the new perpetual trophy cup, to be held for the following year. Unfortunately the terms of the record were not nnderstood

ncl, she and Neriana ran to the front, and after a couple of long bourds on the last leg the order was Neriana. Toltec, Uno and Beta. At the last mark Uno passed Toltec and took second place, finally taking first place on the second leg of the second round. On the last leg of this round Toltec was passed, just at the buoy, by Beta, Nerinan now being fourth. On the final round Uno finished easily ahead, while Beta threatened to go to leeward of the buoy, Toltec being just to windward of her. She weathered it, however, and beat Toltec by several feet overlap, Neriana still being fourth. The full summary of the races is as follows, the prizes, it will be noticed, going largely to Yonkers:

Event No. 1. Unlimited sailing, 3 rounds, 41/2 miles:
Uno, H. L. Quick, Yonkers.
Beta, T. S. Oxholm, Yonkers
Tollec, W. W. Howard, New York
CVrus, E. A. Phillips, Yonkers

Event No. 9. Saining, Unclassified: Not safied.

Event No. 9. Tandem, Paddiling:
Uno. Quick and Simpson. Yorkers.

Water Witch, Collins Bros., Bayonne
Mignon, Edinger and Chable, Crescent.

Event No. 16. Paddling, Any Canoe:
Surprise, L. Simpson, Yorkers.
Aplirodite, C. V. Schuyler, Arlington.
Nerlana, L. B., Palmer, Ianthe.
Red Ant, C. T. Hoof, Arlington.

Red Ant, C. 1. Holy Tank St. Event No. 11. Paddling Upset:
Kisco, W. B. Dailey. Arlington.
Nipsic, C. V. Schuyler, Arlington.
Lieda, S. Schieffelm, New York.

KNICKERBOCKER C. C. REGATTA, MAY 30.

THE annual spring results of the Knickerbocker C. C. was held on Memorial Day off the club house at 152d street on the Hudson, a number of ladies and guests being present. Though there were but few entries the races were well contested in most cases. The paddling race resulted as follows:

Wraith, D. D. Gessler, Knickerbocker. 1
Eros, F. C. Moore, Knickerbocker. 2
Midget, J. K. Hand, Knickerbocker. 3
Juanita, F. B. Smith, Knickerbocker. 4

Eros, F. C. Moore, Knickerbocker.
Salling race:
Bonnie, C. B. Vaux, Yonkers.
Unnamed, P. B. Rossire, Yonkers.
Eros, F. C. Moore, Knickerbocker.
Wraith did not enter; owing to a broken rudder.
Tandem paddling:
Wraith, D. D. and T. A. Gessler.
Eros, F. C. Moore and J. K. Hand.
Mirkara, Nelson Griffin and Hugh Taylor.

Tournament:
Wraitb, D. D. and T. A. Gessler
Midget, F. C. Moore and J. K. Hand....

RED DRAGON C. C.—The spring regatta of the Red Dragon C. C. was held on May 30. The sailing race started at 2:28; Osc-ola, F. W. Noyes. 319 00 Valesca, H. M. Kramer. 319 00 Rambler, B. E. Fortiner 32 20 00 Rambler, B. E. Fortiner 32 20 00 Thetis, D. M. Bond 32 00 Nacoochee, D. A. McCormick 32 00 Enid, A. S. Fenninore. Not timed. Cuckoo, C. Fleischman. Not timed. Triangle course, distance 3 miles.

Traingie course, distance 3 mit s.

Tandem paddling:
Bnid, Fennimore and McCornick
Valesca, Kramer and Bond.
Picnic, Norgrave and Fleischman.
Thetis, Baker and Bender.
Class IV. paddling:
Valesca, Kramer.
Thetis, Boud
Cuckoo, Fleischman.

"NESSMUK."—Trenton, N. J.—Editor Forest and Stream: Sadly I read in your issue of May 8 of the death of the noble-hearted "Nessmuk." How true to the last to the love ergrafted in his being by years of contact and study! It was to me like reading of the loss of a dear friend, for, knowing him as I did through his contributions to the Forest and Stream and in his book "Woodcraft."! took a keen pleasure, in common with many others, in following his accounts of camps and cruices, and will ever remember his kindly features. Many of my own camps have been cheered through the power of his verse and proce, truly the light of a happy disposition aptly caught in printed pages. And as we think of him about the camp-fire, on the cruise or following the trail, communing with phases of nature so dear to him, let us breathe "Peace to the ashes of the noble woodsman."—1640.

SCHENECTADY C, C.—A canoe club has been organized at Schenictady, N Y., with an active membership of about thirty. The following officers have been elected: Com, Everett Smith; Vice-Com. Wm. H. Pecklam; Sec., Edwin G. Condet Treas, August Henke; Capt., Edgar D, Joyner; Lieut., Harry Fowler. Com, Smith has presented the club with a cup, which will be contested every year, and will be known as the Commodore's Cup. The Mohawk at Schenectady offers fine facilities for boating, and much interest is manifested in the new organization.

CRESCENT C. C.—This club, organized last fall at Greenville N. J., includes a number of members of the late kssex C. C. A very grood house, 25×35ft., with a second story over the rear part, has been built on the Newark Bay shore at Greenville, at the foot of Danforth avenue, and was opened on May 29.

NEW YORK C. C.—The new house of this club is nearly com-pleted, and will be formally opened for the regatta of June 21. The old house has been sold to a boat club at Hoboken.

ORANGE C. C.—This young club opened its new house at West Arlington on the Passaic River on May 27, a number of well known canoeists being present.

THE FLYING PONTOON.

THE FLYING PONTOON.

Editor Forest and Stream:
In your issue of May 29, under the head of "Mosquito Fisherman," I find reference to the yawl Bouncer, which the builder "believes is the pioneer of an entirely new type of boat." From the description given she seems to be identical—except in rig—with two boats built by Mr. Geo. W. Shaw of this place, as far back as 1848. He built another tu 1876.

These Shaw boats were—taking description of Bouncer: First—"Round bottom with dead rise."
Second—"Sides not parallel or straight, but bent longitudinally, forming each a segment of a circle, making her much narrower at tow and stern than amidships."

Third—"Had not square ends, bow and stern form segments of circle," etc.

forming each a regiment of at bow and stern form segments of at bow and stern than amidships."

Third—"Had not square ends, bow and stern form segments of circle," etc.

Fourth—Here is where the boats differ. Instead of sharple rig they had the regular jib and mainsail rig.

You will see from the above that the descriptions tally in every respect except as to rig.

These boats were remarkably fast in smooth water, but were not so good in a chop sea.

In the Newburgh regatta of Aug. 1, 1876, with a westerly wind and smooth water, the A. S. Ring—the only boat of this model in the race—easily led the boats of ber class until the skipper let the sheet jam just as a squall struck her, thereby finishing the race as far as sie was concerned. In this race there were such boats as W. R. Brown, Suise S., Coquette, Sophia Emma, etc., thirtyone in all; the Sophia Emma being in same class with A. S. Ring.

I write the above in regard to our Newburgh boat, not to detract from Mr. Clapham's reputation as a designer of small boats, but that my city may have the credit for whatever merit, there may be in this model, which I believe was originated here in 1845 by Mr. Geo. W. Shaw. The last of the line now lies propped up against a shed down at the shipyard.

Should the Bouncer cruise this way at any time I should be pleased to compare the models, and also teuder her captain the freedom of the Newburgh Canoe and Boating Association club house during his stay.

NEWBURGH, May 30.

NO "FIELD" IN THIS.

NO "FIELD" IN THIS.

In the interviews lately reported. Mr. Geo L. Schuyler ascribes all objections to the new deed to Mr. Dixon Kemp and the Field. The following is an editorial from the Marine Journal, an ultra American paper commanded by that veterun tar and yachtsman, Captain Samuels, who has always had a habit of forming his own opinions without help from foreign sources. The condemnation of the new deed is certainly plain and emphatic enough, and from a source whose nationality cannot be questioned. The Marine Journal says:

"Lord Dunraven has written to Mr. J. R. Busk, of the New York Y. C., giving his reasons for decining to race for the America Cup. His objections are summed up in the fact of the excessive demands by the new deed of gift. The Englishman is right enough. Previous conditions were sufficiently exacting, There may be a generous disposition on the part of the members of the New York Y. C. to mutually waive, by common consent, all the later exactions, but even so, the challenger, in winning the cup and championship, would be bound by the "deed" in accepting any future challenge. It will not do to whip the devil around the srump: the matter cannot be condened. New arrangements should be made if international yacht racing is to be continued. The discontinuance of this noble sport is particularly unfortunate just at this time, when shipbuilding and martidime mutters are being discussed so prominently. A race now would be an influence on the right side."

MEMORIAL DAY, MAY 30.

MEMORIAL DAY, MAY 30.

The weather this year throughout the country was by no means fitted for racing, the winds being light and fluky, but at the same time the day was a perfect one for any sort of outing afloat, warm and sunny, hut with a pleasant draft of air to temper the heat. The day was observed everywhere as the graud spring holically of the great army of outers, carneins, canoeists, runners, bull players and pictockers, as we'l as yachtsmen; and if the pleasures of the latter were marred by the gol of the winds, they were least sacrificed to the good of the majority. But for the winds they were least sacrificed to the good of the majority. But for the winds they were least sacrificed to the good of the majority. But for the winds they were of any great interest; in muny cases her vesulted in postponements or mere drifts, but every week to exclude a postponements or mere drifts, but every week the content of the great and all apparently enjoying themselves. Any of the winds, and all apparently enjoying themselves any of the winds, and all apparently enjoying themselves any of the service with a sail and a dinner or reception at the club bause on the work of the sail and a dinner or reception at the club bause of the club is still far from completion inside, the plasterers heing in almost undisputed possession, but the plank walk from the bluff to the bulkhead is completed, the old basin is dredged out, the new one, with a large float in front of the house, is fluished, while the flagstaff is in place with halliards rove, and a gun is mounted on the wide platform in front. The formal opening of the house under these conditions was rather a pirif ceremony, but early on Friday morning the gun was fired and the flag hoisted for the first time, leaving to a later date the house. Warning with which the Atlantics will open their new home. The opening sail, which has always been a feature of the club, was set tor let's, the largery yachts rounding the Southwest Spit and the smaller buoy 14. No times were taken

Class 5, Giggle first, Margie second. The judges were: George Gago, O. H. Shellborg and C. R. Smith. The Taurus carried a large party of ladies and yachtsmen.

HARLEM Y. C. - COLLEGE POINT.

The open regatta of the Harlem Y. C. was a great success so far as entries were concerned, but the light wind effectually spoiled the sailing. The start was made of College Point at 11 A. M. with 33 starters; the courses being around Gangway buoy, Stepping Stones and Sanda Point buoy. The full times were:

The curious sweepstakes race, that by mutual agreement was not to be a race and not to go on record, was sailed on Frica yoff Marblehead, in a light S.E. wind, the course being 8 miles to windward and return from off Marblehead Rock. The starters were Milicente and Tbelma in the 46ft. class, both new Burgess boats, the former a centerboard similar to Nyuph, and Verena, the latter, sailed by Mr. Burgess himself, a keel similar to Algan. In the 40tt. class were the Helen, lately Minervaized and generally improved, sailed by Dr. John Bryant, and Ventura, the new Burgess &0, a deep and narrow centerboard boat. In the 30ft, class were Saladin, Mr. Fowle's new Burgess keel, sailed by her owner and the Saracen crew; Saracen, sailed by Mr. C. F. Adams, owner of Gossoon; Mopsa, a 27ft, keel Burgess boat; Shark, last year's centerboard boat, and Hawk, a new but smilar Burgess craft, and the Cape cat Harbinger, with a new sister, Elmira. Captain Crocker sailed Shark. The two larger boats were started at 10:50, Milicente soon taking the lead and winning easily. The forties were started at 10:55, ventura in the lead, but after a hard fight for eight milos Helen led both her and the larger class around the weather mark, being 4 minutes ahead of Ventura. The soft, class started at 11 o'clock, Saladin leading for a time on windward work, but as the feet scattered in the light wind some picked up flukes, and Shark turned the mark ahead. On the run nome the keel Helen outran her own competitor and the two larger boats, white Saladin beat the entire fleet. The wind was too light for the forties, and of course favored the smaller boats. The two Cape cats were badly beaten, the swell and light airs being aganst them. Although all hands agreed to play that the worter and fleen ead of course favored the smaller boats. The two Cape cats were badly beaten, the swell and light airs being aganst them. Although all hands agreed to play that the worter and fleen ead of leaver the fallowing times were taken, while Milicente and fleen each w

AZALEA-AGNES-LARCHMONT.

AZALEA-AGNES—LARCHMONT.

The first attempt to sail a match for a silver cup between the schooners Azalea, owned by Edmund Bluat, and Agnes, owned by J. N. Winslow, was a failure, the race not being finished within the limit of Thours. The start was made at 11:42 on Friday, the course being 31 miles, around the Hempstead and Stamford stake-boats of the Larchmont Y.C. and back. Azalea easily led all day, being 12 minutes anead at the turn, but she did not finish until 6:49:24, Thintutes over the time. It was agreed to sail again on Saturday, and a start was made at 12 M., Agnes crossing at 12:02:29 and Azalea at 12:03:17, with a moderate breeze. After a beat across to Hempstead Bay spinakers were set to starboard for a time, but at last the wind hauled to the north, so spinakers came in. While carrying balloon jibtopsail an eyebolt in Azalea's rail drew out, letting go the foretopmast backstay, the topmast going

oft, above the cap. The wreck went overboard, but was well managed, and the balloon jibtopsail was quickly set with an Irish reef. Though Agnes gained somewhat owing to this mishap, Azalca led by more than the time she had to give, 4m. 48s., at the turn. On the way home Azalca gained sill more, finally winning by 14m. elapsed, and 8m. 38s. corrected. Mr. E. A. Willard sailed Azalca. A match has been unade between her and Viator, the Burgess keel schooner, for June 14, and one for the same date between the schooners Elfin and Leona.

QUAKER CITY Y. C .- PHILADELPHIA, PA.

QUAKER CITY Y. C.—PHILADELPHIA, PA.

A cruise down tho Delaware was made on Friday, the flagship Helen leading. The fleet included: Schoonera—Flossie, Rear-Com. Brereton Pratt; Arathusa, Capt. H. F. Smith. Sloops—Kathleeu, Capt. J. J. Murphy; Nannie, Capt. R. K. Neff, Jr.; Agues, Capt. L. K. Crump. Yawls—Allee, Cant. C. H. Broek, Playmate, Capt. J. J. Dull. The sream yachts Lillie, Capt. Geo. Geo. B. Kelm, and Lagonda, Capt. S. H. Austin. It is proposed to sail several down-river races during the season, starting off Gloucester and finishing about 30 miles down the Delaware.

Excelsior Y. C.—This young club, started this spring at Forty third street, South Brooklyn, sailed its dirst regatta on Friday' the winners being Black Duck, the Ella S., the Prickly Heat, the Moud I, and the Dot. In the evening a dance was given at the Moud I, and the Dot. In the evening a dance was given at the Moud I, and the Dot. In the sevening a dance was given at the fifteers being: Com., J. J. Smedley; Vice-Com., R. T. Smedley; Rear-Com., Z. L. Norain; See'y, Wm. Iveson; Recording See'y, C. M. Iveson; Treas., G. Lehold, and Meas., Hugh Graham.

Portland Y. C.—The following yachts of the Portland Y. C. took part in the cruise, sailing on Thursday afternoon: Tempus, Frank Jos phs; After, Vice-Com. E. G. Irwin; Viva, W. N. Davis; Dorothy Q., Dr. Woodman; Warreu, Harry Woodward; Grace, Ex. Com. Senter; Clarence, Captaiu Benjamin Joues. On Friday ignt the fiete was at Boothbay.

Essex Y. C.—This club has lately established itself at Bayonne,

Essex Y. C.—This club has lately established itself at Bayonne, the members mostly living in Newark. On Friday the fleet sailed to Perth Amboy and hack.

Yonkers Corinthian Y. C.—The fleet sailed to Fort Lee, where all dined together on shore. A reception was held in the evening at the club house.

New Haven Y. C.—This club opened the season with a short cruise to Brantford Point, returning in the afternoon.

Bay View Y. C., Boston.—The vachts of the Bay View Y. C. made a short cruise on Friday, carrying a number of guests.

Pavonia Y. C.—This club sailed its first race on Friday around Fort Lafayette, starting near Liberty Island. Leader won the Furman cup.

Jersey City Y. C.—This club enjoyed its usual squadron sail down the Bay, returning to dinner at the club house.

Yorkville Y. C.—The annual regatta was started but failed for lack of wind, and will be sailed on June 8.

Sing Sing Y. C .- The race of Friday failed for lack of wind.

ST. LAWRENCE RIVER SKIFF CHAMPIONSHIP.

Editor Forest and Stream:

If you will allow me a few lines of your valuable space, I would like to refer Mr. A. Bain, of Clayton, N. Y., to a letter written by him and published in your issue of Dec. 12, 1889.

In that letter Mr. Bain claimed for the St. Lawrence River Skiff, Cauce and Steam Launch Co., of Clayton, N. Y., the champion salling skiff of the St. Lawrence River; but Mr. Bain forgot or could not state where the Clayton skiffs won this title, when they won it, from whom, and with what skiff they won it. Last year the Yukwa, built by Messrs. Sauve Bros., of Brockville, Canada, won the championship cup offered by the Lake St. Louis C. C. for salling skiffs; later in the soason the Yukwa was matched against the crack Prescott skiff and defeated her, and on Nov. 7 the Yukwa sailed against the champion Gananoque skiff, and over a ten-mile course won by 9m.

Imight here state that on May 23, 1889, I saw this same Gananoque skiff defeat at Prescott the skiff that was sent from Clayton. The record of the Yukwa for 1889 was 12 firsts and 1 second place for 13 starts, and she sailed against all skiffs on the St. Lawrence that ever challenged her. The Claytou men kept very quiet while these contests were being sailed, but as soon as the river froze over and a race was no longer possible Mr. Bain claimed, on paper, the championship of the St. Lawrence.

On May 24, Clayton sent several of the so-called "champion" skiffs to Prescott to compete in the skiff regatta. Sauve, of Brockville, sent two, the Chockaw and Muriel. The Choctaw took the lead at the start and never during the race, which was three times round a 4 mile triangle, was she in danger of losing the race. She finished 6m. abead of the Pcarl, of Gananoque, the second boat while none of the Clayton skiffs were placed.

On the following Monday, the Onoway for clayton, was among the 19 starters at Gananoque, and also the Choctaw inshed 3m. alse of the Schotaw inshed 8m. alseed of the Pcarl, of Gananoque, the second boat while none of the Clayton skiffs w

GANANOQUE, Canada, June 2.

LAUNCH OF THE SAMOA.—Messrs. A. M. Robertson & Sons this morning launched from their yard Mr. 25. Jarvis's new cutter Samoa. A Times reporter was permitted to examine the boat before the launch, and was surprised and pleased at the excellence of the workmanship, which is quite equal to that seen on Clydebuilt boats. The Samoa was built by the Messrs, Robertson from her owner's design. She is intended for the 30ft. corrected length class, her dimensions being: Load waterline 27ft. 6it., beam 8ft. 6iin., draft 6ft., length over all 40ft., sail area (S. C. Y. C. rule) 1,056sq. ft. The racing or corrected length will be 29.98ft. A first sight the boat presents a peculiar aspect to fresh-water sailors, her long, drawn-out overhauging ends and straight she r having hitherto been seen only among the modern racers on salt water. Her forefoot is also cut away more than we have been secustomed to, but all these are indicative of the advancement and progress which is being måde in yacht-bnilding on the lakes. The Samoa is of an entirely new construction, the idea originating with Mr. Jarvis. Instead of having a lead keel holted on to a keelson, the boat is built on a strel trough, to which the frames and garboard are bolted. This trough is in the shape of the ordinary lead keel, and steel floors strapping the heels of the frames together prevent any possihity of its working. In addition to the floors several steel bulkheads give enormous strength to the structure. In this trough is in the shape of the ordinary lead keel, and steel floors strapping the heels of the frames together prevent any possihity of its working. In addition to the floors several steel bulkheads give enormous strength to the structure. In this trough is in the shape of the ordinary lead keel, and the floors good, and the fact that the great weight is where it will do most good, and the fact that the great weight is where it will do most good, and the fact that the great weight is where it will do most good and the fact that

IVERNA AND THE THAMES MATCHES.—The chief event of the opening matches of the British racing season has naturally been the performance of the new Jameson cutter Iverna, which thus far has not been promising. The first match on May 28, the Royal London, brought Thistle in 7m. ahead of the Iverna and 12m. ahead of Valkyrie; Iverna not Insing her board. Next day in the Royal Thames in a moderate breeze Iverna led for some time, but after a bout to windward Thistle headed her, fluishing 6m. 7s. ahead, or 3m. 3's, over her allowance to Iverna. Yarana was but 6m. 33s. astern of Thistle, thus taking first prize. Valkyrie took the ground and was thus delayed. Next day in the New Thames match Iverna withdrew just after the start. Saturday's race of the Royal Thames Y. C., Nore to Dover, was a handicap, Mohawk winning, with Yanduara second. In the Royal Cinque Ports regatu, of Monday, a 59-mile convers in a good breeze, the times were: Iverna (2d prize) 3-49-93. Thistle 33-600, Valkyrie 3:59-32, Yarana (1st prize) 4-601-44. Valkyric was a hut 7s, hehind Iverna on corrected time. It is entirely too soon yet to say how the new boat will turn out, as the Richardson boats as a rule do much better after a few months. On Tuesday the Channel race of the same club was sailed, from Dover around a mark off Boulogne and back, in a strong S.W. wind, Thistle winning as follows: Thistle 415-48, Iverna 423-16, Valkyrie 43-318. Wendur 4:50-59, Yarana 457-50. Iverna as follows: It is entered the content of the same of th

IDLEWILD CLUB.—Jamaica Bay, May Sl.—The Idlewild Club regatta was sailed on May 3l for the prizes given by George Creed, Esq., a handsome silver pitcher and cup for the winner of cathoat class and a silver howl for sharple class. Alice May, Autina and Blonde passed the wrong side of the stakeboat and were disqualified:

Helen S. takes the prize in her class, and Americus in hers.

WENDUR.—The following account of recent changes in the yawl Wendur is of special interest, as she is the present holder of the Cape May Cup: "Mr. West has decided, aided by Mr. Watson's advice, to adopt the rig of a pole-masted yawl this season. Much top hamper and weight will be saved by the absence yoke, cap, crosstrees, blocks, hackstays, etc. Of course, in light airs the want will be felt of the loftier topsails, but in lower sail breezes, especially with a reaching wind, the Wendur may he expected, should the chance offer, to excel the performance of last year, when she accomplished lhe distance of fifty miles over the Bonlogne course under four hours and a quarter. The mainsail, of cotion, will be laced to the boom, which has been reduced lin, in girth. The bottom has been coated with the "International" composition, which was experimented upon on the Wendur last year, and found so satisfactory that Mr. West has resolved to give the composition a fair trial this season. Below the saloon and cabins have been thoroughly renovated by Messrs. Holland, of London. Samuel Randall will, as before, sail her, and is making every effort to he ready for the Royal London match on Wednesday. The Wendur will be raced through the season, taking part in the trish, Scotch, and South Coast regattas."—Field.

A MATTER OF MEASUREMENT.—The usually calm and

of Donon. Samuel Randall Will, as before, sall her, and is making every effort to be ready for the Royal London match on Wednesday. The Wendur will be raced through the season, taking part in the Irish, Scotch, and South Coast regatus."—Filed.

A MATTER OF MEASUREMENT.—The usually calm and quiet basin of the Atlantic Y. C. has been stirred to its lowest epiths during the past week over the measurement of Minerva. She was measured in the basin one day last week by Measurer Hyslop, her owner bring present, and with dry sails and in still water her length was found to be just 40ft. Mr. Carroll determined to trim off as much as was possible from the stem before Thursday's race, and Lawler's railway at Clifton was engaged for Friday. Meanwhile the owner of a rival 40, whose yeach thad just been measured 1½in. over her class, called for a new measurement of Minerva on the ground that two of her crew had held her bowsprit down while she was heing measured. On Friday Ileen was still on Lawler's ways, not yet fully coppered, so Minerva could not haul there. It was determined to lighten her by tearing out the after cabin, which is finished in oak, and this was done on Monday at Wintringham's. On Tuesday she was remeasured in the presence of a volunteer committee stationed on the hulkhead. She was found to be nearly 2in, inside of 40ft. On Wednesday she hauled ont at Wintringham's to scrub bottom. The interesting question just now is, how many 40-footers are not over 40ft. Choctaw and Mariquita were both out at Wintringham's on Tuesday, and by dut of careful dubbing on the stems are probably on the safe side.

A SOUVENIR OF THE MOHAWK—By the kind consent of the Commissioner of Navigation, those two ancient tubs, the Castleton and D. R. Martin, so well-known to all yachtsmen who ever vieited Staten Island, are to be primited to renew their youth ander new names. The after the howard Carroll, while the Castleton has been required as the Howard Carroll with each of the yacht has long since heen lost in the Coast Survey schoo

finish.

YAMA.—The new Fife cutter at Wintringham's yard will be christened Yama. She will be lannched in a couple of weeks, a pair of pontoons being botted under her to float her through the canal between Troy and Oswego. She is a small cdition of Minera, and promises to be equally handsome. She has been delayed somewhat by the marine glue famine that has prevailed or late in New York and Boston, the manufacturers not having filled orders placed several months since. Relief is promised by a steamer now due from London, but the New York agent reports 30 orders on his books for the glue.

NEW YACHTS.—Mr. J. M. Forbes, owner of the steam yacht Shearwater, has commissioned Mr. Burgess to design him a steamer of 140ft l.w.l. and 25ft. beam ... Lawley & Son are at work on a new 30 of their own design for Mr. Wikinson, former owner of the Elf... A small cutter named Yiking is huilding by Collins, of Philadelphia, for Prof. Koenig, of the University of Pennsylvania. She is 24ft. 8in. over all, 17ft. l.w.l., 6ft. heam and 4ft. draft... The new Fungess boat building at Cooper's Point by Beckett for Mr. M. R. Muckle, Jr., has been christened the J. S. M. She is 3fft. 9in. over all, 28tt. l.w.l., 11ft. 10in. beam.

Sue is offt, 9m. over all, 28tt. l.w.l., 11tt. 10in, beam.

CHANGES OF OWNERSHIP.—Rajah, cutter, has been sold by

H. W. Ealon to Walter Hubbard, treasurer of Seawanhaka C. Y.

C... Vangie, cat, has been sold by Tucker Daland to H. G. Penboyy.—Bautam, cutter, has been sold by Dr. W. M. Jameson to

A. H. Davenport.—Nerena, cat, bas heen sold by R. Saltonstall

to W. C. Loring.—Vera, cutter, has been sold by R. Fandall to

Gideon Lull.—Wyandotte, steam yacht, has been sold by A. H.

Davenport to the Massachusetts Biological Lahoratory at Wood's

Holl.

VOLUNTEER is again in commission. Her hottom has been thoroughly scraped and painted and her bulwarks renewed. About 30 rivets were replaced in the hull. A movable cockpit has been fitted to the deck, and some minor alterations have been made below.

CORINTHIAN NAVY.—The following gentlemen are proposed for membership: Peter C. Ritchie, Jr., H. F. Morgan, W. Chamberlain, Jr., W. F. Salter, Thos. Ridele, W. R. Bingham, C. H. Chapman, A. W. Chapman, F. R. Livingston, Joseph Gill,

A STOLEN YACHT.—A number of yachtsmen were in the Conrt of General Sessions yesterday to attend the trial of Charles Leonard, who is charged with stealing the sloop-yacht Irens. The prisoner was well dressed. The yacht was the property of John Radford, of No. 52) West One Hundred and Fifty-inft street, and was stolen April 30. Leonard, who is respectably connected, belongs in Dedham, Mass. He hired a rowboat on the Harlem River, rowed around through Spuyten Duyvi Creek into the North River, where the Irene was lying at One Hundred and Fifty-second street. He went aboard cust the rowboat adrift and a sailed down the bay, intending to go to Boston by the outside route. He got some way down the coast when darkness set in and brought with its aguall which compelled him to drop the sails. He was drifting along when a steamer's crew saw the yacht and took her in tow to Boston, where Leonard cut the line and sailed away. He was arrested in Gloncester Harbor, where he had painted the hull of the boat black, her deck yellow, and her cabin top a bright red. Her name was altered to the Louna stranger named Ward meeting him in South Brooklyn, and hiring him to take the yacht to Boston, and sailing with him only as far as Fort Hamilton. "You are about the most impudent thief I have ever seen," said the Recorder. "I notice that the meanest thieves we have here come from Massachusetts." He was re manded for sentence.—World, May 30.

FOR SALE.—A number of very good boats of the 40tt, class that have been left behind from a racing standpoint in the very rapid rush of improvement are now for sale, though as far as we can learn all are held at good prices.
Baboon, Alec, Pappoose, Alice and Tomahawk. All are new and well built, and save in the matter of draft would make excellent boats for any purpose but racing.

well built, and save in the matter of draft would make excellent boats for any purpose but racing.

HAMILTON Y. C.—The cruising race on May & from Hamilton to Toronto, 25 miles, was spoiled by a fog and rough weather combined. Whitewings won, but was 10 hours on the course. Condor lost her topmast and Cygnet her bowspirt. Ten yachts started.

HELEN, Mr. Prince's 40, towed around to New York, arrived on Tuesday. She has evidently been much improved, and her owner deserves to win for his pluck in sticking to lifs boat in spite of considerable hard luck and not a little ridicule last senson.

THETIS.—On Memorial Day the sloop Thetis, Mr. P. V. Stevenson, was in collision off Land's Point with the tug R. J. Moran, losing bowspirt, stem and all headgear, the tig having her cahin damazed. The tug towed the yach to City Island.

IREX, CUTTER; KRETCHETTE, YAWL.—The identity of the famous Irex is entirely lost with her conversion to the yawl rig and the chauge of name to Kretchette. Her new owner, Count Stroganoff, will use her in the Baltic.

A FIRE IN A YACHT YARD.—On May 20 a very destructive fire occurred in the yards of Black & Co., formerly Hatcher's, and of Payne & Son. One new yacht was burned and a number of new and old craft seriously injured.

TIGRESS.—This name has been given to the new Ellsworth boat building at Lawley's. She is 45tl. over all, 34tf. 7in. Lwl., 13tf. 7in. beam, 5tf. draft without board. She will join the feet of the Atlantic Y. C.

STUDIA.—This house boat, designed by A. Cary Smith for M. F. Todin, is now affoat in New York.

STUDIA.—This house boat, designed by A. Cary Smith for M. F. Tohin, is now aftoat in New York waters. She is 40ft long. 13ft. heam and 4ft. draft, and is very conveniently fitted up. She carries a schooner rig.

PHANTOM.—This new 10-rater, designed by Mr. Watson, is but 7ft. Ilin. beam on 35ft. l.w.l. Should she meet Decima in the South, the contest will be very interesting, as Decima is over 2ft. wider.

South, the contest will be very interesting, as Decima is over 2th, wider.

COOPER'S POINT Y. C.—After some discussion it was decided to admit only the four boats which completed the recent Reedy Island race for the Kinsey challenge cup on June 17.

VREDA, Com. Bosworth's 20-rater, has put back to Falmouth, having lost her bowspit, and after replacing it and shipping a new crew she sailed for Halifax.

SHONA, Admiral Tweed's little cutter, is now fitting out at the Coriothiau Basin, in charge of Capt. Morris, once skipper of the 20-tonner Lenore, Clara's rival.

ILEEN, Mr. Frederick Gebhardt's cutter, is now out on Lawler's railway, at Clifton, Staten Island, for new copper. She is nearly ready for the season.

SARACEN, sloop, was in collision with the sand barge Surah.

SARACEN, sloop, was in collision with the sand barge Sarah, losing bowsprit, figurehead and headgear. She was towed to City Island.

PHILADELPHIA MODEL Y. C.—This club sailed two good races on Memorial Day, on the Centennial Lake in Fairmont Park.

VENTURA, Mr. Foster's new 40, will receive a new mest, the present one being too light. Rosalind will also have a new mast. LACED MAINSAILS.—Creole, Deerhound, Wendur and Vardurar have been fitted with laced mainsails this spring.

MOCCASIN.—This very good name has been chosen for Mr. Morgan's new 40-footer.

CREOLE.—This new Watson 40 is about 59ft, 6in. l.w.l. by 13ft, 3in. beam.
PURITAN is out at the Fairhaven marine railway for cleaning.

No. 182 SIXTH AVENUE, Near Thirteenth Street, NEW YORK.

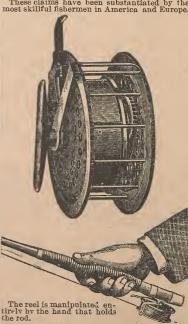

When a sportsman finds anything which adds to his leasure, without increasing his labor, he wants all his other hunters and anglers to know of it and share ith him the newly discovered "helper."

WHAT WE CLAIM FOR

The Automatic Reel.

gler chooses. HIRD.—No fish can ever get slack line with it. OURTH.—It will save more fish than any other

FORTH.—It will prevent tips, lines and snells FIFTH. It will prevent tips, lines and snells from being broken by large fish.
SIXTH.—It enables the angler, and makes it desirable, to use lighter tackle.
These claims have been substantiated by the most skillful fishermen in America and Europe.

INDIAN LIFE. WILD

PAWNEE

HERO STORIES AND FOLK-TALES,

With Notes on the Origin, Customs and Character of the Pawnee People.

Illustrated.

By GEORGE BIRD GRINNELL ("YO.")

Cloth, 417 pages. Illustrated. Price \$2.00.

Pawnee customs and beliefs are richly illustrated by the folk-tales, and in the copions notes Mr. Grinnell gives an uncommonly spirited account of Pawnee life in peace and in war. There is an account of the defense of a Pawnee village by 200 sick men, cripples, old men and squaws, against 600 Sioux warriors, which for sheer gallantry and indomitable pluck will match almost anything in military history. The Pawnee warriors were all away at the time, and the Sioux counted upon an easy victory. But the Pawnee cripples and women actually beat them off after a hard day's fighting, and at last so terrorized them that the bold assailants fled in panic and sustained a heavy loss. Mr. Grinnell also has written a picturesque and vivacious sketch of one of the last Pawnee buffalo hunts, in which the Indians commonly reverted to primitive weapons and usages, often hunting quite naked with no other arms than their bows and arrows. A particularly interesting part of the book is that which treats of the Pawnee doctors or medicine men. The statements of Mr. Grinnell show the possession by some of these men of a kind of skill in sleight-of-hand far beyond that usually attributed to Indians; some of the facts here described are as puzzling and unaccountricks is a close parellel to the East Indian mango jeat. Those who desire to learn of the many other wonders done by the Indian doctors must refer to its pages for themselves. As it is certainly one of the best works on Indian life, legend and character that has been written for a long time, it should obtain a wide circulation.—N. Y. Tribune.

the grouse, the quail and the plover; little birds that one would hardly have thought of shooting twenty years ago, when the arm of traveler and hunter was the rifle. That weapon has given place to the shotgun.

While it is, perhaps, not true to say that the days of big-game lunting in the Western country are over, it is a fact that large game now exists only in isolated localities, and that such localities are so surrounded by settlements that the game cannot get away; its migration to other wilder regions is no longer possible. Large game is easily destroyed, yet usually it is more the settling up of the country that makes it disappear than the actual destruction of the animals. In the past the game has been crowded out rather than killed. This was not true of the buffalo, which were actually destroyed, not driven away; but it is true of many other kinds of large game.

The average hunter must now depend on birds, which, in the case of the non-migratory kinds, at least, are re duced in numbers by actual destruction. They are not driven away; and the supply will continue to exist for a long time. We commonly hear wonder expressed at terrible reduction in numbers of our game birds; to us the fact that there are any birds left at all, seems astonishing. But in a country adapted to its mode of life, and where it is reasonably free from the attacks of natural enemies, any species of bird, even if it has been almost exterminated, will re-establish itself in a short time. A good example of this is the case of the prairie chicken of Illinois, which was a few years ago very scarce, but became after a brief period sufficiently abundant to afford good shooting.

We believe that a time is coming when there will again be good shooting in this country, East and West, but that time will not arrive until sportsmen shall have learned that one sccret of successful game protection lies in thinking for others as well as for one's self.

THE OLD WEST AND THE NEW.

T is difficult, even for one who has seen the process go on under his own eyes, to appreciate the changes which have taken place in the West within a recent period. It is not necessary to go back fifty years to the day when Chicago was a village, to reach a time of great game plenty. Even within the memory of men now young, there was in the West an abundant supply of all the species of big game.

Only ten years ago there was still a West which could fairly be called wild. There was a frontier. In that West, and beyond that frontier, game was abundant. Ten years ago there were still wild Indians living in cow-skin lodges made from the hides of the wild buffalo, which even then in diminished numbers roamed over the plains. But ten years is a short time. Let us go back wenty years. Then, except along the lines of the Union Pacific and Kansas Pacific railways, there were but few settlements on the plains. Then the region of middle Nebraska and middle Kansas was as dangerous an Indian country as one could find. The wild Sioux used sometimes to come down to within one hundred and fifty miles or less of the city of Omaha. Indians were often seen in the streets of Omaha, Council Bluffs and Denver. Then the State of Iowa was more wild and unsettled than is Montana Dakota was a waste. In Montana, away from the mining camps in the mountains, the only settlements were the military posts, and Fort Benton, the cld trading point, from which were shipped down the Missouri by boat the robes and furs collected in the Northwest. In those days there were few range cattle in Nebraska. The Texas drives had penetrated no further north than Colorado. The valley of the Platte River near Kearney, Plum Creek and Grand Island, was often black with buf-The white sterns of the antelope shone in the sun on the yellow hillsides; the white tailed deer lived in the brush of the river bottoms; in the sand hills to the north were the blacktail and the elk.

Almost within the life of FOREST AND STREAM We have seen the wave of settlement roll from this side of the Missouri on to the west, until it broke against the mountains of the main range and then dividing into streams, creep by canon, pass and river valley, up on to the arid plateau of the central region. As the crest of this wave advanced it blotted out the buffalo, the antelope, the elk catalogue of different types of craft adopted by the wild. Sell. It may yet prove practicable to restrict the traffic advanced it blotted out the buffalo, the antelope, the elk catalogue of different types of craft adopted by the wild.

GUN AND ROD IN THE WEST.

S PORT in the great West is a boundless theme. To do it justice in its entirety no single number of a journal, no, nor a bound volume of twenty-six numbers would suffice. And yet our issue of to day, with its added pages, has so many vivid and comprehensive papers picturing the sport of slough and prairie and mountain, that it may well be set apart from the ordinary weekly issue as distinctively a Western number. These papers present in admirable style the use of gun and rifle in the West of to-day.

The several topics are discussed each by an acknowledged master of the subject. Of all the men in the West to-day-and for that matter, in the entire country-best qualified to write of wildfowl shooting, one would not hesitate to name the veteran Henry Kleinman, whose valuable paper giving "Hints and Points on Ducks" cannot be studied too carefully by novice and duck hunter of experience alike.

"Killing Antelope for Market" is a narrative by an 'Old Timer," whose true name has become familiar to the public since he has given over killing game for mar-ket and taken to corraling and breeding it.

Of a like practical character is Prof. R. A. Turtle's essay on "Woodcock and Snipe in the Middle West." These notes manifestly give the results of a long and careful study.

"Italian Joe and 'de Plov'" is a racy account of a Chi-ago market-hunter, a genuine artist in his peculiar

"Prairie Chicken Shooting" furnishes Mr. Alex. T. Loyd a theme for discussing con amore, and the pursuit of that game bird of the prairies has never been written of more instructively. Taking them all together, these papers on Western game birds make up a manual of valnable instruction.

In "La Vega de Capulin," Mr. W. J. Dixon gives a lively account of a skirmish with the Cheyennes, a tribe, by the way, just now demanding the attention of newspaper readers by its movements against the whites.

In the Rockies," by a Connecticut contributor, has in it the exhilaration for which the tired city man must go to the mountains.

"The Fishing Resources of the West" form the subject of an intelligent, feeling and comprehensive paper by Mr. E. Hough.

fowl shooters on Western lakes and rivers. For many of the original sketches from which the drawings were made we owe acknowledgments to Mr. W. K. Reed, President of the Dime Savings Bank, of Chicago, and a member of the Hennepin Club.

Mr. C. W. Lee supplies an interesting review of the history of "Canoeing at Chicago." Mr. Lee is Secretary of the Chicago Canoe Club, the leading club of the Great

"Features of Trap-Shooting in the West," as discussed by Mr. W. P. Mussey, in a thoughtful and well-considered paper, are found to be features of trap-shooting clar.cterizing the sport generally throughout the country, and what Mr. Mussey writes may well be pondered by trap-

shooters everywhere.

This is a special Western number; but while it is notable for the scope and variety and amount of Western material actually contained in it, it is perhaps equally notable, from editorial insight, by reason of the generous supply of other Western papers, for which it has been impossible to find a place to day. In other words, we have on hand a rich store of material relating to the West, which will be published from time to time as space shall permit. This is only in line with what has been done in the past. Our files from the beginning show in each column a wealth of literature relating not only to the West but to every division of the country. In the future we mean to keep the FOREST AND STREAM, as it always has been and is to-day, so broad in its sympathies and so comprehensive in the geographical distribution of its correspondence that it may have no suggestion of sec-

SNAP SHOTS.

M. FRANK W. EMERY sent us one day last week a M 38in. muscalonge, which he had taken from the St. Lawrence River while fishing for bass with an 8oz. rod. Mr. Emery was at the moment combining the two pleasures of fishing and reading the FOREST AND STREAM, holding the rod in one hand and the paper in the other. It appears that this journal is a mascot, and anglers who are ambitious of capturing large fish will do well to follow Mr. Emery's example.

A sequel to our list of stories of the "Man in the Hollow Tree," printed last week, comes from Coaltown, Pa. A "special" to the daily papers from that town reports that two boys who were trout fishing on Black Creek, the other day, discovered in a huge hollow oak the skeleton of a man, and with it a box of gold coins. This manifestly was one instance where the bear failed to come to the rescue.

In his address before the Illinois State Sportsmen's Association at Chicago last week, the retiring president, Mr. Fred C. Donald, related how utterly foolish it was to attempt to hinder under present conditions the unreasonable slaughter of game out of season, which now goes merrily on, game laws or no game laws, wardens or no wardens. Mr. Donald's remedy for this condition of affairs is to stop all market sale of game and provide for enforcing such a system. As he puts it: "It is plain that reformation must come through the strong arm of the law. Then let us deal with cause, not effect; prohibit by law the sale or traffic in game in the State, or its exportation from the State for the purpose of barter or profit. Give to the people of the State the authority of enforcing the act, and if this measure should prove ineffectual, we of this Association may not worthily be termed sportsmen. This may seem a heroic remedy, but I beg that you will have in mind that it is an attempt to prescribe for a most desperate case, which has run the gamut of every species of diagnosis and treatment." There are two schools of game protection extremists.

One believes in letting the game dealers make the laws to suit their business interests. The other believes in shutting off dealing in game entirely. The first plan is much more likely to prevail than the last one in a city like Chicago, where so much money is invested in the business of buying and selling game. Mr. Donald's plan is an ideal one in theory, but practically any attempt to prohibit game selling would be such an interference with large business interests that the prohibition could never be enforced. It is hard business against sentiment; and business will win the day every time. Game will be sold in Chicago so long as there shall be any game left to

GUN AND ROD IN THE GREAT WEST.

LA VEGA DE CAPULIN.

LA VEGA DE CAPULIN.

THAT means Cherry Haymeadow in Mexican, and I remember a very lively experience that I had at the Capulin Ranch in 1874, and one which, though it is very pleasant to look back on, was at the time too dime-novelish to be enjoyed by a young man who had come to Colorado for health and not to participate in fights or indulge in promiscuous slaughter.

I had occasion to go from my ranch on Rita Azul, Colorado, to Ute Creek, New Mexico, to see if I could not make a sale of some cow ponies to Dorsey's foreman, who intended to go to Texas with a party of cowboys and fetch home a herd of cattle. It was sixty miles straight south over the Raton Mountains, and there were runors that the Cheyennes had broken out and were coming over the range to kill off all the cowmen who were crowding the buffalo on the west. So I saddled my black race pony, which was fast and in perfect order, and reached Ute Creek ranch easily that night. The outfit, which was to start the next day, was short of horses and villainously mounted, but the foreman did not seem inclined to buy any horses, and so I devoted myself to taking care of my horse and then went to bed, that is to say, I rolled myself up in my saddle blanket and went to sleep before the fire in the cook house, so that the cook would have to kick me out before he got breakfast, and so insure me an early start.

I was roused before it was light; and after a remarkably good meal I saddled and started for home. My pony Dick, the old black rascal, had gotten loose in the night, and some other pony had kicked him in the leg. He was quite lame, and I hoped he would improve on the road, but he did not, so at dark I had made only fortyfive miles and the horse was dead lame and very tired. It was five miles to the Cavenis Ranch at Capulin Vega, but I could not make it. And so when I came to water I stopped, unsaddled, took a large drink of the alkalistuff and chew of tobacco for supper and lay down, after picketing the black on good grass.

I did not sleep well the first p

"No"

"Well, they are around. We heard of them coming up the Cimarron cañon yesterday. Bill is out with Tige getting a load of wood, and left me to take care of the house; I wish they was back."

By this time I had unsaddled Dick, and Marion told me to put him in the stable and feed him. I soon had the faithful old fellow chewing away at a big feed of corn, and went to the house to get some breakfast. Mrs. Caveniss, who was very hospitable, as all Texas women are, met me at the cabin door, and tranquilly removing her long brierwood pipe from her mouth asked, "Hullo, Dick, have you had any breakfast?" "No. nothing since yesterday morning." She at once seemed to wake up and told Marion to step to the milk house and fetch her a slice of steak, quick. Inside of fifteen minutes I sat down to a big broiled beefsteak, some hot coffee and biscuit, with butter and milk.

rion to step to the milk house and fetch her a slice of steak, quick. Inside of fifteen minutes I sat down to a big broiled beefsteak, some hot coffee and biscuit, with butter and milk.

I had hardly begun eating before I saw a change come over Marion's face. He was looking out of the door in a sleepy way, when suddenly his eyes opened wide, and he gave a bound like a panther for his gun. I jumped and had my Winchester in a second, ran to the door and here they came—Bill Caveniss and Tige Bone, on the running gear of a wagon hitched to two sorrel colts. They had gone to get a load of wood about a mile from the house and had met twelve mounted Indians just before they got to the timber. Of course they whirled round and started for the ranch, and of course Lo started after them. From the house out the ground was smooth for 200yds., and then came a mal pais prairie inal pais means bad place), scattered over with rocks from some as large as a big marble to some as big as one's head; and the wagon road ran through it like a letter S. They had driven out slowly, following the crooked road, but when they came back they came straight. The horses raced at full run, Caveniss on the front part and Tige hanging on for dear life over the hind wheels with his face to the foe—the whole concern bounding about three feet in the air every jump.

The Indians were 400yds, behind them, and running to catch. They seemed not to want to shoot yet; and Tige couldn't, because he was too busy holding on to his Winchester and the bounding running gear. As soon as fhe colts struck level prairie the wagon ran smoothly, and Tige opened fire as fast as he could shoot, and Bill began to yell, "Here we come!" The colts straightened out and came like the wind straight for the stable door, and Marion and I ran out and turned loose. I shot twice at a big buck with a feather war bonnet on his head. The first shot I missed, but when I pulled again I had the satsfaction of seeing him pull his horse around and ride off at a lope, bent over and reeling

they ran right into the stable door. The wagon stopped when it hit both sides of the door. The colts broke loose and banged up against the other side of the stable. Caveniss shot after them and piled up on the colts. Tige flew six feet in the air and landed on his head.

As soon as they pulled themselves together they ran for the house, and just about that time there came a rain of bullets from the Indians and we all went in. I ran to a small window, broke out a pane of glass by poking the muzzle of my gun through it, and commenced shooting whenever I saw anything to shoot at. The Indians were concealed in the rocks at distances of 300 to 400yds., and were shooting occasionally. Don't imagine that the rest were idle. Marion had broken a porthole, and was making it interesting for a big buck behind a rock that was two sizes too small for him; finally it got too hot for Lo, and he ran for a hollow some distance further back, Marion shooting as he went; but I don't think he hit him, though I know that he hut his feelings, for he jumped sideways and yelled every time a ball struck near him. Caveniss was shooting some and rubbing the side of his head, and swearing industriously the rest of the time. He had had a terrible jar when he landed on the colts, and one of them had stepped on his head a little. Fortunately the stable was never cleaned out and the colt was barefooted, so it didn't injure him seriously. At last the Indians stopped firing and we could not get a glimpse of them.

Caveniss said, "Well, old woman, that was a close call; but I am hungry, so get us something to eat."

"All the meat is in the milk house, except that piece on the table and the ball stable beds eather."

Careniss said, "Well, old woman, that was a close call; but I am hungry, so get us something to eat."
"All the meat is in the milk house, except that piece on the table, and that belongs to Dick. He has had nothing to eat since yesterday; and he fights as well on an empty stomach as you uns do on a full one," remarked Mrs. Caveniss smoking. "Till get you some coffee and biscuit though."

Marion said, "I'll go and get meat. I guess the Injuns

Marion said, "I'll go and get meat. I guess the Injuns is gone."

Tige took off his big white hat and put it before the open door on a stick for a reply; and a dozen bullets hit around it in a second. "Do ye want to go out there, Bud?" he asked with a wolfish grin.

"I ain't afraid to," responded Marion, "and I can fix it so I won't get hit neither."

"All right, get the meat then," said Mrs. C., "but I am afraid you will get shot; and we can't afford to lose a man."

"All right, get the meat then," said Mrs. C., "but I am afraid you will get shot; and we can't afford to lose a man."

Marion without reply proceeded to make up a man with a shirt, a pair of overalls and his hat. Then he unfolded his plan to us. Tige was to shove out the dummy and draw the enemies' fire. Caveniss and I were to return it, and Marion was to run to the milk house. When he wanted to come back he was to put his hand out so that we could see it, and we were to go to firing while he ran for the house. He took only a butcher knife. We drew their fire by exposing the dummy, and then we went to cracking away at the smoke of the guns while he ran for the milk house. He got there without a scratch, but when his hand came up and we showed the doll again, Lo wouldn't shoot, and when Marion started they made it very interesting for him. He had a steak in one hand and a can of peaches in the other, and when he got into the house he said with a horrified expression on his face, "I am shot in the hand." He held up the peach can hand and then looked silly. One of the gentle red men had put a ball through the can, not touching him at all, and when the juice ran into his hand he thought it was blood. We joked him a little, but saw he was mortified and Mrs. Caveniss proceeded to get dinner. Two at at a time, and just as all were done Ross Blackburn rode up. He was another cowboy who belonged at the ranch. He had been out horse hunting and no one had disturbed him. So we concluded that the Indians had left. Caveniss got on Blackburn's horse, rode out, reconnoitred and reported all gone.

We then held a council of war; and decided to go to

We then held a council of war; and decided to go to the Mexican town on Cimarron Cañon, six miles distant. The boys put the hayrack on the wagon, then some hay; and made a nest of blankets with a breastwork of sacks full of flour all around it; patched up the harness, which was not much broken; and hitched up the sorrel colts again. Mrs. Caveniss had kept the four children behind the stove during the fight; and they did not cry nor offer to stir, from the time she told them to sit down there till she told them to get up. We put Mrs. Caveniss and the children into the nest on the wagon; locked the house, and started. Caveniss drove; two of us rode on ahead as advance guard; two came behind driving twenty saddle horses. We reached Black Plaza in about half an hour; and found the Mexicans forted up and terribly frightened. A band of twelve Indians, probably the same ones who ran Caveniss in, had charged into the town, killed one man and broken a boy's leg with a ball; and then had flown

We stayed there that night and the next day. The

one man and broken a boy's leg with a ball; and then had flown

We stayed there that night and the next day. The next night I started for home after it was pitch dark, for I was anxious about my horses and Mexicans. I found everything quiet.

The Indians on that raid did all they could in two or three days in the way of killing men and stealing horses, and retreated east toward Camp Supply. There were about two hundred on the warpath, and they struck twenty places simultaneously. I heard of ten men killed by them whom I knew personally; and I don't know of any one that killed an Indian. I do know I tried to.

The timid deer still haunts the hillsides around the Capulin Vega, and the wild turkey gobbles every morning in the lonesome cañon behind the house. I camped in the deserted cabin one night while hunting last November. I knew I was safe from Indians, but the place seemed peopled with whispering ghosts. For Caveniss and Tige were killed long ago at a horse race in Arizona. Ross was killed by a lot of Mexicans and Jews shortly after. Marion Bone is settled in Texas, a rich farmer. Mrs. Caveniss mourned herself to death after Bill was killed. And I—well, I am quite well at present, thank you,

IN THE ROCKIES.

PROVO and I had been camping in the valley for some days. Before our camp ran the stream whose clear cold water ran swiftly along over rock and boulder, with many a leaping fall into purling pools. Its sight refreshed us homeward returning, and its musical song soothed us at night as we lay in our tent. It was an ideal mountain stream, but alas! it was like the great poet's masterpiece with the Prince left out—it contained no trout.

reshed us homeward returing, and its musical song soothed us at night as we lay in our tent. It was an ideal mountain stream, but alsaf it was like the great poet's masterpiece with the Prince left out—it contained no trout.

Our camp was just at the head of the great caffon, into which the stream fell; from a point above the tents, its frowning walls with their sheer descent of 2,000ft, could easily be seen, a gruesome place into which to venture. Behind us stretched a wide valley, guarded round with jagged outline against the clouds and sity of the north, across the little river, the land rose gradually in bevidering swells of foothils, mile after mile, until like waves of the ocean they broke against the mighty beartooth Range. Even at our distance from it the effects of the powerful agents of time and weathering could be plainly seen upon this great range, and the carving of its rugged ribs of greats into cliff and chasmad caffor, the control of the ocean they broke against the mighty had carving of its rugged ribs of greats into cliff and chasmad caffor, the country, climbing the mountains, riding out in the setting of its ancient icefield formed on the orthorer horizon a wondrous picture, of which the cy orthorer horizon a wondrous picture, of which the cy orthorer horizon a wondrous picture, of which the cy orthorer horizon a wondrous picture, of which the cy orthorer horizon a wondrous picture, of which the cy orthorer horizon a wondrous picture, of which the cy orthorer horizon a wondrous picture, of which the cy orthorer horizon a wondrous picture, of which the cy orthorer horizon a wondrous picture, of which the orthore horizon a wondrous picture, of which the orthore horizon as the following the f

not tell. I had selected the center buck as he was the largest.

The deer discovered us at the moment I fired and stood fast, looking wonderingly up the hill. At the second shot one of them turned as if to run, and as he offered so much better a mark I instantly fired again, striking him in the neck and shoulder. He tumbled forward and the other two instantly fled into the wood. This, which takes time in the telling, occurred in a moment, while I was loading and firing as rapidly as possible.

The fallen deer immediately began to struggle, trying to regain his feet. I darted down the hill loading as I ran, and arrived in time to dispatch him before he succeeded. In the meantime Provo had dismounted and now came leading the horses down the hill, singing joyfully a low song of content. We got to work at once and soon had the buck bled and dressed. Then we dragged him to the edge of the woods and hung him up in the shade of a tree. After discussing the matter it was agreed that Provo should take my rifle and continue his exploration, while I rode back to camp and got one of our men and a mule to pack the meat into camp. It would have been very difficult if not impossible to have kept it on behind a horse over such a steep, rough country. The programme was carried out.

Before leaving I paced the distance from the spot at which I fired to where the deer fell, and found it about

try. The programme was carried out.

Before leaving I paced the distance from the spot at which I fired to where the deer fell, and found it about 200 paces or about 175yds. I ought to have obtained the buck with less shooting, but I find it difficult to estimate distances down a steep hill, and under such circumstances I am apt to shoot over. That night we fed on fresh deer's liver with great content.

While we were seated at the table I happened to look up and saw one of those pests, a skunk, headed directly for our larder in some bushes by the stream. The cook in his excitement wished to shoot him, but we gently but

firmly refused to allow him to shoot a skunk in camp. So thrusting our heads cautiously through the bushes we shouted at Mr. Mephitis and invited him to go away, which hint he was very slow to take. Finally, as the cook became very urgent in his entreaties, he consented slowly to retire into a crevice between some large rocks, when the cook ungratefully proceeded to at once wall him up. And unless he had diamond points on his claws with which he could tunnel through rocks he is still corked up there, for I assure you we did not disturb him, and peace reigned in the camp.

PERCYVAL.

KILLING ANTELOPE FOR MARKET.

HUNTING antelope is one thing, and describing how it is done is another. In fact I don't believe it is within the possibilities of the English language to furnish words that would convey even to the most apt scholar the exact methods adopted by successful hunters in barging this of all animals the most unreliable to kill. In fact the hunter makes no definite calculation in advance as to how he will proceed till the reaches the ground to be funded over. Almost all ther animals have certain dear runs with the wind, keeping the beauty of the reaches the runs of the runs with the wind, keeping the beauty of the runs of right; his seen it is a keen that no enemy can pursue him at any reasonable distance, yet by tarrying two hours on the trail the old hunter slips along and soon routs the buck from his lair; then if quick enough he generally gets his meat. The buffalo runs against the wind when he is pursued, looking back, first with one eye then with he other, as they could not keep the course they desire to travel if they continuously kept at any one angle. The same way when they walk, and lay out their trails, they always follow a zigzag course, consequently it makes no difference how thick and shaggy the locks that hang over their thin pates, they can look sideways, descrying an enemy either in the front or rear.

Active the product of the course they are the rearrent of the runs of the ru

stop so quickly that more than broken.

While the sleigh, vehicle or horse, was yet in motion, I was on the ground and had the balls whizzing after the herd, which was well in a group I invariably killed from one to three the first shot. The balls flying low would pass beyond the herd with such a whiz that it always frightened the animals and set them running at right angles to me again. I always used a Winchester

and would then pour in the lead as fast as a ten year-old boy could count. All the while the bullets would be whizzing beyond the herd, and that would press the antelope closer to the shooter. Then by the time my eleven loads were all out, I would calculate on having from six to ten antelope. I could not make certain calculations on either getting up to the game, or even killing them, when in good range while they flew past, until I had had years of experience, but I finally got antelope shooting down to a science, and of late years I would figure as confidently on a herd of antelope as a farmer will on going out to gather in his cattle; in fact, I can drive within 100yds, of any herd of antelope, on the plains, providing the ground is not too rough to get a horse over at a reasonable canter.

the ground is not too rough to get a horse over at a reasonable canter.

I do not know how many I could kill in one day, that would depend altogether on how far I might be compelled to go, and how numerous they were when I found them. If I could find them as plentiful as I have seen them in Kansas, I would not hesitate in contracting to kill one hundred per day. When I made hunting a business I always averaged from ten to twenty per day. To be sure I could have killed many more, but never aimed to kill a single animal that I could not dress and care for on that day. I sold my meat and hides to commission merchants, usually in Kansas City, Topeka, St. Louis and Chicago.

You once asked me how I could calculate how to shoot

merchants, usually in Kansas City, Topeka, St. Louis and Chicago.

You once asked me how I could calculate how to shoot an antelope running at right angles. Well, that is one of the things that cannot be explained, experience alone can teach, and it took many lessons before I could rely on anything of a certainty. Yet in later years I could throw the Winchester a rod or two rods ahead of the lightning velocity of the object with a feeling of assurance that when I chose to pull the trigger an antelope would roll and bound like a rubber ball. Should I pull the trigger at the wrong moment I knew it was wrong before the ball left the barrel of the gun. One rule I always kept in mind, £.e., I would always take a bead on the antelope's knee, then move the gun ahead at the same elevation, so that the ball and antelope would come in contact. The reason for this is, everybody is more liable to overshoot than fall short. The reason is a person must always keep a full view of the movement and velocity of the herd, calculating space, etc., and cannot make as fine a bead as when the object is standing still.

Not expecting to ever again make a business of killing wild game as an occupation, I am willing others should know how it was done, at least by one who always meant to kill and hunt little.

Garden Ctry, Kansas.

GARDEN CITY, Kansas.

WOODCOCK AND SNIPE IN THE MIDDLE WEST.

WEST.

A NY shooter living near the foot of Lake Michigan need not go very far to find good woodcock shooting. I shall not say much as to Wisconsin and Ohio, although there is good shooting in those States, but speak more for the localities where I myself have hunted. Along the St. Joseph River, across the lake from Chicago, there is remarkably fine ground for woodcock, and I have known very good bags made there, although the Michigan law, which opens the season at Sept. 1, of course bars one from the best of the shooting. For other localities, close to the city above named, I have found the Des Plaines River, say between Summit and Willow Springs, or from eleven to seventeen miles from the city, very good territory, bags of one, two or three dozen having been made there, not to say by just every one, but by careful and well posted shooters. Fifty miles south, in Indiana, there is grand woodcock shooting along the Kankakee, varying with the season as to its locality. I am well acquainted with the covers of this stream from Long Ridge, forty miles above Water Valley, to Lake Village, thirty-five miles below. The market-shooters say the ground is still better further up, above Long Ridge.

The Illinois and Indiana law opens the woodcock sea-

am well acquainted with the covers of this stream from Long Ridge, forty miles above Water Valley, to Lake Village, thirty-five miles below. The market-shooters say the ground is still better further up, above Long Ridge.

The Illinois and Indiana law opens the woodcock season at July 1. This is late enough for so fiekle a bird, but this woodcock law is the cause of the practical extermination of the woodducks also, which breed on our streams in the summer. You will see dozens of boxes marked "woodcock," which are really shipments of woodduck, killed by market-hunters who found them while out after woodcock. A friend and I found a box of nearly four dozen woodducks thus killed by a market-shooter uear Water Valley. These summer ducks are young and innocent, and the market-hunters jump them along the bayous and pot them. The market-nunters of the Kankakee are also very destructive on the woodcock. I knew two of them who in one day's floating down the river killed ninety woodcock, for the most part potting them as they sat along the bars near shore, as woodcock are very fond of doing in the evening.

Like many other birds, the woodcock feeds in one place, and rests and roots in another. Birds are more or less irregular in their hours of feed, like human beings. I think young birds feed earlier and eat more, and consequently feed later than old ones—just as young persons do. Roughly speaking, and depending somewhat on the day, woodcock will begin to feed about 4 o'clock in the afternoon. They will feed all night, and perhaps as late as 8 or 9 o'clock the next morning. In our country birch, prickly ash, or puckerbrush seems to be about the best feeding cover for them. The ground is more apt to be damp there and they find worms near the puddles of water. They will eat angle worms, but seem to prefer the little red sand worms, an inch or so long. They find these also on the bars along the river. About two days before or after the water has touched a certain line seems to be the best time for the birds there. They fol

A woodcock, although it likes to be cool and quiet, also likes to be near a warmish place sometimes. If you will find a shady bit of cover on a cool day you will find the birds on the hot or sunny side, but two or three yards back from the line of the sunlight, though sometimes further in. On a hot day you will find them on the shady side, and it is funny enough they will u-ually be within a few yards inside the line of shade, where they get the desired temperature.

Woodcock arrive in this latitude about March 25 to March 31. They come in, like the snipe, on the bright moonlight nights. They look around, locate their feeding grounds, and with warm weather go to nesting. The female woodcock seems to pluck off the feathers from her breast and belly while sitting, whether to impart a directer heat to the eggs or not I cannot say, but she seems to be naked at that time. The nest is usually a mere hollow or little indentation on a high ridge or dry ground. Markethunters tell me it is often made on a stump in low ground. My friend, Mr. Douglass, tells me he found one in Michigan which was ju-t a little hollow scraped on top of an old rotten log. Unless forced to do so, the old woodcock will not leave the young till they migrate south. At migration time the old and young seem to separate and go on each by itself that way. They usually leave at about the first frost, though I have often killed them much later.

Woodcock moult about August 1, and I know a great many shooters who think they then migrate, or leave their old covers. This is not the case at all, if their feeding grounds are not dried up, as I have more than once had occasion to prove. Once I was down at Water Valley with several friends at that season, and I started after woodcock. I hunted close, for a long time without starting a bird, and at length came on a little wet mud bar covered with water-pepper. I put up a bird here, and on examination I found the mud as full of borings as it could stick. I set to work here, and the birds began to go up "Br-r-r-

gets right on to them before they will fly, and you can hardly kick them up. They are too sore to be frisking about. That's all there is to the moulting-migration story.

In woodcock shooting, as the weather is hot and the cover dense, light and strong clothing is most suitable. I usually wear a suit of under-clothing, with overalls instead of trousers, and a light canvas coat. A small, close cap is best in crawling through the briers, etc. If I can I get hold of an old pair of patent leather shoes, because they don't draw when wet like ordinary leather. I cut the shoes full of holes to let the water out. The overalls I tie tight at the ankle. The mosquitoes are pretty bad, etc.; some use tar and oil for them.

I used to shoot a \$400 gun on woodcock. This gun was all shot out and scattered wonderfully. I now shoot a 16-gauge. A big, sawed-off, open, 10-gauge is a good gun. You have got to have scatter. For a 10-gauge I used 3drs. of power and loz. of No. 9. I never used any finer shot. I would not use black powder for woodcock under any circumstances. It scares the birds more and the smoke is bad.

We have good woodcock shooting along the Kankakee, if a bag of 30 to 40 birds a day means good shooting. Doubtless there are many other streams which afford good covers, but I have not found any so regular. The puzzling habits of the bird have always been a favorite study with me; and its abrupt and erratic flight and genally difficult pursuit have for many years tantalized me almost into thinking I would rather hunt it than any other bird.

The snipe shooter who lives in Illinois or Indiana is even better off than the lover of woodcock. The snipe grounds are so numerous that I dare not attempt general mention. All the country about South Chicago, around Calumet Lake, and clear over toward Englewood, is natural snipe ground, or was once. The Little Calumet is good also, and the "Feeder" and the "Sag," which work off west toward the Des Plaines River, are often very good territory, indeed, though much hunted. The Des Plaines about Summit, and clear on down about Lamont and Romeo is snipe territory of the first water. Lower down, of course, the Kankakee offers its great and usually abundant field. There was too much water on the Kankakee this spring.

Last summer and fall, from July 28 to Nov. 15, I killed 1,000 jacksnipe within eight miles of the center of Chicago, and all within the present city limits. This was between the old "Ten-mile Tavern" and Dauphin Station, also between Auburn and Englewood, and from near the end of the State street cable line on down two or three miles south.

The snipe is another peculiar bird. Snipe have two

end of the State street cable line on down two or three miles south.

The snipe is another peculiar bird. Snipe have two grounds to live on, a feeding ground and a sunning ground, which may be miles apart. Some people think the snipe have a sort of playground sometimes, but this is not the case. A snipe's playground sometimes, but this is not the case. A snipe's playground is in the air. They take their exercise in the air. Even the females, full of eggs, exercise so. I have sat and watched them pitch and tumble that way in the air, making that strange booming "whistle," like a nail thrown in the air, all the time, and then come straight back to same spot and go to feeding or else sit down and rest. I think the noise in the air is made by the wings.

Irregularly speaking, snipe come on to the feeding grounds at about 4 or 5 in the evening. They feed all night and into the next morning. Sometimes on a good marsh they seem to come in in flocks, and sometimes a number of single birds scared up will band up into a flock and either light further on or else go off. When much disturbed in the morning they sometimes leave the marsh and go to their sunning grounds. Their time for rest is nominally from about 11 A. M. till 4 P. M. They then hunt out some dry and sunny ridge, and often sit there in the short grass among the daisies and buttercups, and bask in the sun, all cuduled up, with their bills held close

up in front of the breast, like the woodcock. On "Little Hickory," about six miles above Water Valley, I once killed fitteen birds out of a place not 40ft. square, just such a little dry ridge. The birds seemed to be asleep. On a raw day, when you are unable to find the snipe, they are apt to be sitting on the warmest side of some dry knoll. Very often snipe hunters fail by sticking too close to the marsh, not knowing the habits of their bird. In feeding, snipe must of course have soft ground, and like woodcock, they follow the waterline. They too seem to prefer the little sand worms. They are industrious workers, and one juck will bore apparently 400 000 holes in a night, much like the woodcock. I think that snipe sometimes eat red ants. I may be laughed at for this, but I have often found the ants in the stomach and throat of a snipe just killed. They may take them in by mistake, but they certainly do swallow them.

Jacksnipe are the wildest when they are not actively feeding, and tamest when they are fat but busy getting fatter. They lie closest on hot days. The best hours are in the evening or in the morning, but no strict rule can be laid down for a snipe's hours.

The snipe come in chiefly "on the moon," and spread over a country very quickly, sometimes disappearing quite as suddenly. The "second flight" generally comes in about April 10 to 15. They came in on the Kankakee this spring on March 26, and a market-shooter killed twenty five on that day. The next day there was not a bird to be found. In the early spring they frequent warm, boggy pastures and black mud rather than the wider and colder marshes. They must find the worms which make their food. I think the snipe and woodcook have a sort of hearing for the worms that crawl in the ground. If you scratch on the erd of a broom stick you can hear it at the other end if held between the teeth or close to the ear, when you would not catch the sound in the open air. Probably the sensitive bill of these birds acts in somewhat the same way, although to what

PRAIRIE CHICKEN SHOOTING.

PRAIRIE CHICKEN SHOOTING.

THE "chicken territory" is now to be found in Minnesota, Iowa, Kansas, Nebraska and Dakota. Birds are also fairly plentiful in portions of Illinois and Indiana, but here farmers decidedly (i. e., with pitcbforks) object to strangers pirating on their demesnes.

In the States first named, at least in such portions as are not overrun by visiting and native gunners, farmers generally do not forbid hunting on their lands, as they rarely waste much time themselves with guns, and but very few own bird dogs.

It is useless, however, to list specific localities as promising good sport, for the excellent reason that no one can predict the future from the past, as to chickens. The rotation of crops, from wheat to oats, from oats to flax, and the influence of local storms in the breeding season, with attendant high water just when it should be low, are factors which cannot be foreseen. Again, the amount of hunting done in a given year is a most material element in determining the quantity of birds left over for breeding purposes. Hence the very fame of well stocked grounds may have so attracted gunners that it was gleaned much too close, so that next season this paradise will be pretty much barren of feathered angels. On the other hand, the poorer grounds, being left undisturbed, carry over almost their entire stocks of grouse, to reproduce abundantly in the spring. It is therefore evident that the only trustworthy information under this head is that gathered just before each separate season opens.

Chicken shooting, as now practiced, is quite a different matter from what it was in the good old days of muzzle-loaders, when Illinois was considered a part of the Far West. Then one need only "put up" at a convenient farmhouse, with his "scatter gun," and kill what number he chose, without quitting the boundaries of the farms immediately surrounding him.

To-day, the sportsman should select some small town rather than a farmhouse, in known chicken headquarters. Here he can obtain quite passable acco

tion." together (and even more efficient) with a faculty of getting on with the pretty dining-room girls, will secure special favors in the way of extra early breakfasts and correspondingly belated suppers. But avoid overdoing your getting on, or the independent Western damsels will retaliate with the toughest of steaks and muddlest of coffee. For the team and driver the charge will be \$3 to \$4 per day, depending upon the length of time engaged. A party of two shooters to a wagon is the proper caper. More than that number interfere with each other, while a single sportsman cannot work the ground to best advantage. For a trip of two or three weeks it is advisable to provide two does for each gun, as continuous work results in sore and often badly wounded feet, the harsh dry stubble frequently cutting like a knife. Take only one dog per gun afield each day, allowing the others to rest and repair damages.

companion, though the description of the next of all, then rye and barley, next oats, and lastly flax. But exceptions prove rules, and you will occasionally find your best coveys on flax. Buckwheat is commonly sowed in patches in or at the edge of fields of other grain, and is uncut in September. This is the creme de la creme for the chickens. You may

At dawn, or as early as breakfast can be had, bundle dogs, guns, lunch and selves into the wagon, and drive three or four miles from town. It is wasted time to hat closer, for the villagers have gone over the near ground, usually before the season lawfully opened.

And now a preliminary word as to the habits of pinnated grouse. From dawn until about 10 or 11 o'clock the birds remain upon the stubble. They favor the edges of the field rather than its center, and even more the corners, especially the ragged, low lying ones, and those scattered over with patches of tangled, uncut grain. As the morning wears on, the birds are apt to walk a little way into the grass that borders the field, or into standing corn or flax, similarly located. They will do this earlier and more generally on bright hot days. About 10 o'clock, varying say an hour either way, which irregularity depends upon the clearness or cloudiness, warmth or coolness and other qualities of the weather, and whether early or late in the month, the birds quit the stubble and seek shelter in the grass-covered prairie, or the standing crn. On very dry hot days they are apt to spend most of their time here, visiting the stubble for the briefest time if at all. Late in the afternoon, about 4 o'clock, sometimes earlier, and on till dusk, they return to the stubble for supper.

With this much knowledge of the grouse's habits, you stop the wagon a hundred vards or so short of the stub-

to the stubble for supper.

With this much knowledge of the grouse's habits, you stop the wagon a hundred yards or so short of the stubble, which should have been approached at a corner by preference. Come to it against the wind, and so work it, for obvious reasons. The advantage of making your attack at a corner lies in the fact that such spots are favored habitats, and hold runs are together at the start, and so stop the wagon a hundred yards or so short of the studble, which should have been approached at a corner by
preference. Come to it against the wind, and so work it,
for obvious reasons. The advantage of making your attack at a corner lies in the fact that such spots are favored
habitats, and both guns are together at the start, and so
can sing a duet if a covey is found. Once fairly into
the stubble, one hunter, with his dog, takes down the
lower edge to the far side, thence up to the top. His
companion, with dog, of course follows the two remaining sides and both meet at the corner diagonal from the
starting point. The sportsman should keep in the field,
about 20yds. from the edge. His dog should quarter well
into the field on one hand, say 100 or 150yds,, and about
a fourth that distance into the grass or corn on the other.
This course will discover the birds on the field, those
that have strayed into the edges of the grass, and will
pick up the trails of others that have walked still further
into the prairie or corn.

In the meantime the wagon slowly follows up the
center of the field from the starting point to meeting
corner. While birds are more rarely found here, still
occasionally, especially in very large tillings, both coveys
and scattered birds may be far in. It would be a waste
of time to hunt such territory, and the wagon now
serves a useful purpose in putting up these stragglers,
which are marked down by the driver, and followed into
the grass immediately or when the field is finished. The
birds are safe to tarry at or near their alighting place for
some little time.

When one stubble is thus exhausted, hunters and dogs
get into the wagon and ride to the next, which is indicated by the conical stacks of gathered grain standing
out clearly against the horizon.

The farms in these regions are simply cut out of the
native prairie, which stretches, level and grass covered,
on all sides for countless miles. And not a single fence
bars your wanderings. You drive hither and thither at
will, your o

to grass hunting, especially during long dry "spell," when the birds visit the stubble but little and rise wild if so found.

With so vast an area of prairie to wander over, the finding of coveys and scattered birds is generally difficult. One, or better, two very wide ranging dogs are desirable. Remain in the wagon yourselves while hunting at random, until the dog comes to a point; then drive to within say 100yds, of him, and finish afoot. Be ready for unexpected chickens as you advance. A covey may be scattered all about you. If only a single bird rises before the dog, and especially if it be not an old cock, beat about thoroughly before going on.

When a covey is found in, or has been driven to, the grass, the conditions are ripe for the very perfection of sport. The birds are commonly somewhat scattered, and will rise singly, by twos and threes. It is not at all unusual to spend half an hour or more with such a dispersed covey and to bag six or ten birds from it. Deep ravines or gullies, called "draws," are frequently met with. In their grassy bottoms you often come upon coveys, and the conditions are then precisely the same as described above.

When looking for birds in standing corn, go only 10 or 20yds. into it if dense, further if thin, and then up or down the patch. looking with especial care through low-lying corners. Your dog should work very close, or stay at heel. If he ranges wild and points, it may take an hour to find him. In any case, he is out of sight when a short distance away, and so his work is useless. Coveys on corn lie well, are usually more widely scattered than in grass, and when found afford a goodly number of shots. But it is, of course, difficult to discover an unmarked covey, and farmers are apt to object to your tramping through such fields. Yet here is where the birds are for several hours each day, and you may count on finding more or less coveys by searching, and still more surely on making good bags when found. Special care must be taken, however, to avoid accidents. Your com

with certainty expect them to be "at home" here. In standing corn you frequently find considerable so-called wild buckwheat. This is also a choice chicken delicacy, and birds may confidently be looked for thereabouts.

In long continued dry spells, when no dew, even, falls, birds give out but little scent to the dogs, and the best of noses will score more flushes than points. Then make your dog work very close, so you can get shots at many of the flushed birds, and give most of your attention to grass and corn hunting. A rain or succession of heavy dew falls will mend matters.

In "marking down" birds take notice of some object in the line of their flight, as a bunch of weeds, end of a distant corn patch, a hillock, etc., rather than attempt to locate the exact spot of their alighting. If your "hne" is all right the dogs will readily find the game. Govern yourself by this line also if the birds pass over rising ground, a cornfield, or other obstacle, and are so lost to sight. Chickens, when flushed, travel in almost a "bee line" to an alighting place. If a covey scatters, or several separate birds are put up, mark definitely a single one or batch, and trust the rest to Providence, your companion and the driver. One bird marked down with certainty is worth half a dozen inexactly located. B rds flushed into corn are more apt to run some little distance than when dropping into grass. A good dog will readily trail them, however. When the driver bas marked down birds let him remain where he is until you rejoin him. It is much easier to hold a mark down than to pick it up again.

When a covey is found in a field, remember its exact

It is much easier to hold a mark down than to pick it up again.

When a covey is found in a field, remember its exact location. Pinnated grouse seem to have a strong affection for particular spots, often not apparently differing from the other portions of a field. When you return next day, or better after a day's interval, you will generally find your birds in or very near the old homestead.

When a covey has been repeatedly found and shot into, until but two or three pair are left, thereafter avoid that field, and leave the remaining birds for "seed."

If a bird is evidently hit, "dropping his leg," yet does not fall, mark him down carefully. You will often find him "stone dead," having literally flown while life lasted. Provide boots of soft calfskin for the dogs, to lace about the legs. Their feet get worn and often badly cut on the harsh, dry stubble. In such cases a boot protects the wound or worn flesh from dirt, the cut readily heals, and the dog need not give up work. Lift your dogs from the wagon, or stoop over and let them jump on your back and thence to the ground. The high jump from the wagon upon sharp stubble frequently gives a very bad foot wound.

Carry a big jug of water in the wagon for dogs and selves. Water, especially good water is seldom met

the wagon upon sharp stubble frequently gives a very bad foot wound.

Carry a big jug of water in the wagon for dogs and selves. Water, especially good water, is seldom met with, and dogs require it liberally and frequently.

For foot wear, in early morning use leather shoes or boots, with waterproof leggins reaching to the thighs, or an old pair of high-top light rubber boots. The tall grass is dripping with dew, and wets one about as queckly and thoroughly as a mill pond. As the sun dries the moisture, change to leather or stout canvas base ball shoes, preferably the latter, with corrugated rubber soles in either case. The stubble soon makes a leather sole slippery as glass, and walking then becomes very wearisome. Carry an old overcoat, and have the driver provide blankets for lap robes. The early morning and late evening are here quite cold in September. Wear a hat with a wide, rather stiff brim, that it may not constantly flap in your eyes. Shortly after "sun up" daily a strong wind awakens, to die away as regularly at nightfall.

Walk around a field of standing flax, not through it, nor let your dog race in it. Thoughtless or wanton damage done to crops is naturally a source of great irritation to their owners, and has much to do with the hostility farmers bear to sportsmen. "Put yourself in his place" in all cases is also a paraphase of the G-iden Rule, and should ever be kept in mind, if for no better reason than self-interest.

Do not venture near the vast droves of cattle that are

place" in all cases is also a paraphase of the Golden Rule, and should ever be kept in mind, if for no better reason than self-interest.

Do not venture near the vast droves of cattle that are herded upon these plains. An old bull is apt to charge your dog, and so set up a stampede in the entire herd. Then woe betide the luckless hunter on foot, for the whole mass will pass over him in senseless fury.

Shot running about 325 pellets to the ounce (Chicago 7s, Tatham's trap 7s) is not far astray. Late in the month, and for second barrel especially, shot running about 250 pellets to the ounce (Chicago 6-) serve admirably. We would not recommend a smaller shot than the first named, for September shooting. Wood or Schultze powder is an advantage for the first barrel.

In the matter of guns, if you can make choice, select a 12 or 16-gauge, of about 7lbs, weight, or a trifle less. Ounces become pounds and pounds tons as miles are piled up. But if your only choice is that of the famous Mr. Hobson, then that particular gun is just the one to fill the bill. As for dogs, a volume would not serve to set forth the superior qualities of either setter or pointer. Both are good, and each incomparably the better, according as your fancy dictates. The setter is good enough for us, however.

are good, and each imcomparably the better, according as your fancy dictates. The setter is good enough for us, however.

To draw birds, force middle finger up vent, remove most of entrails, then use fore and middle fingers to finish, and wipe out dry with a wisp of soft hay. If you use Preservaline, dust the cavity with the powder, and stuff rather tightly with a fresh wad of hay. Now sprinkle a little among the ruffled-up feathers, smooth them down again, put a pinch of the powder in the bird's mouth, and a little on any very bad wound or broken wing. Such birds will keep for a week in ordinary weather. Hang in a cool place until wanted for use.

September is the golden month for chicken shooting. Now, the tempered rays of the sun, the cool nights and morning, make walking and p easure as lovably disposed one to the other as husband and wife (should be). About the first of October the birds begin to gather in masses, aggregations of many coveys (called "flocking") and are then almost impossible of approach. But during one long delicious month, the "season" is at its prime, and affords a sport so glorious that the hunter's whole catalogue has not one surpassing it.

NAMES AND POERRATS OF BIRDS, by Gurdon Trumbull, A book particularly unceresting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

FISHING RESOURCES OF THE WEST.

Let VERY graduate of a college and every clerk or apprentice in a trade is familiar with the old axiom that "the supply will equal the demand." If potatoes are worth one dollar a bushel, everybody will raise potatoes and offer them upon the market until potatoes become worth only fifty cents a bushel. So says political economy. In the economy of nature the reverse is the case. The greater the demand for nature's rare and choicest products, the less becomes the supply. Hence a war between man and nature, not altogether unequal, because while nature is inexorable man is very patient. For instance, the people desire whitefish as food. That was the demand, and to meet it man pushed further and further out into the inland seas, extended the miles of twine, employed fast steam vessels, and in short made the notion of the palate a matter of business, and worked with all faithfulness to maintain the truth of the old axiom. After a while nature's side of the question came in view. The whitefish began to lessen and to disappear. What does man do, give it up? No indeed. He plants whitefish, humors nature, and to some extent wins the fight.

That is business. When it comes to dollars and cents FISHING RESOURCES OF THE WEST,

in view. The whitefish began to lessen and to disappear. What does man do, give it up? No indeed. He plants whitefish, humors nature, and to some extent wins the fight.

That is business. When it comes to dollars and cents man is ultimately rational. The shrewd summer resort managers plant lish also, for that is business. The matter will ultimately resolve itself to this all over the country. America, shame be the word: America, the grand and once trackless, illimitable apparently, the very heart of nature's heart, now belongs no longer to nature, but to man. We may as well accept the fact. The gates have been held too long open, and into the fold with what should have been America's flock, have crowded wolves, swine, beasts and all uncleanliness. These have begotten and will beget, and it is one of the features of each such creature that it has a mouth and a stomach, ready to devour. These make a demand on every resource of nature, and nature will be drained in every ensiest way until it is no longer business so to drain her. We will see our game and our fish disappear to the very point of extinction, and then will witness a gradual turning to an easier way of feeding the month and stomach of the great unclassified; and after that a gradual struggle on the part of nature, aided by man's possible business efforts, to build back again to some extent the balance in the ever swinging scales. It will be the market that will destroy our fish and game. It may be the market which will replace them. If not, then nothing. But let us await hopefully the day when the doctrines of the best sportsmen's journalism shall be found sensible and true, and when the people shall act intelligently and for the people's good. The game laws of to-day are a farce, and every intelligent man knows that in his heart. Why? Because we have not yet gotten far enough into the artificial day is already far along. If it were not for the restocking of the Great Lakes, how many whitefish would the vast nets take ten years from now? Study this que

artificial day, but it must come to that. The stomach and leart of man are pitiless, thoughtless, animal. There are few men who think, and there is no man who is unselfish.

It would be an unreasonable pessimism which would say that, in all of the great West, world of itself as it is, remain no regions where the angler may meet with success to any reasonable amount. Such a statement to-day would be not only unreasonable but untrue. Indeed, it is toward the West that the eyes of all sportsmen turn. There are few sportsmen in the West who go to the East for their angling or their outling, but there are many East-ern lovers of the rod who long to prove the newer waters of the newer land. The story of the Eastern waters is not so widely interesting, because there the artificial day has begun. The charm of the unexplored, the breath of the untracked woods, the music of a stream whose tongue is foreign still—those are the thoughts that lie closest to the sportsman's heart. What of this, then, lies now in that West of late so fresh and virginal? Much indeed, but not as much as those unacquainted with the West suppose. If with the experience of a man one united the lively sympathies attributed to the feminine nature, he could sit down and weep as he contemplated the change and havoc which the last few years have wrought. I do not know much about the South. I wish I knew more of that charming country and its still more charming people; but it has been my fortune to see a little of the North and West, and I do not think that individual experience differs from others when it is said that those regions wisted have of late steadily and with alarming rapidity deteriorated in the essential features which make them attractive to the real angler. There is still plenty left, to be sure, in many localities, and there should be nothing in the foregoing statement to hinder or change the plans of any who seek to wet a line under the widest and bluest sky of all the earth; but it would be folly to say or think that any plenty can alw

Upon learning that, the anglers philosophically packed their rods and went fishing for something else. A few years more, which brings to-day, we learn that nature has been at work and has now re-populated, to some extent, at least, the streams which once swarmed with that pleasant little fish.

If only man would work with nature, and not against her, this noble Western country would always remain full of boundless charm to the lover of quiet ways by new, unfretted waters. We may not hope for that, because there are so few men who think. Our lesson in the West must be severe. It needed a revolution for France to correct the evils that were destroying her. It will take a cataclysm of mournful fact and a change in the whole history of sportsmanship, before this Western country will be nearly what it once was and should always be for the angler sportsman. Time will prove the truth of this prediction.

will be nearly what it once was and should always be for the angler sportsman. Time will prove the truth of this prediction.

It seems probable that in the West good fishing, variable fishing and poor fishing will be the story, until at last the lowest swing of the balance has been reached there, as it has been elsewhere. The West is not what many think. It has changed. Almost one might say that there is no longer any West. All the wild life will go. Can we not all see that; and how can we see otherwise? Then ultimately, perhaps, the people will begin to apply business methods where hitherto only boy's methods have been used, and perhaps then there will be a business-like treatment of one of the simplest questions in the world. But we must first have our lesson. Thanks to the natural magnificence of the vast, indefinite region long known as the West, that lesson has been long deferred. For the sake of those who do not like this sort of reading, it may be stated that the lesson is not yet at hand in all severity.

HINTS AND POINTS ON DUCKS.

BY HENRY KLEINMAN.

HINTS AND POINTS ON DUCKS.*

BY HENRY KLEINMAN.

I HARDLY see why I should be asked to write anything about shooting ducks, for shooting and writing are two different things, and I am more used to shooting. Even if I should work a long time at it, may be the set down the very things I would like to a the little stand, at best it is hard to put down on paper the little things that you would be careful to do or worth at the standing to say what I can for the younger abooters, who will imposely mere have the chances to learn that I have had, since there are not so many ducks as there were in my younger days.

I have shot ducks ever since I was big enough to carry a gun, and I am now 46 years of age. My father, John Kleinman—I am afraid most of the old shocters about Chicago will remember him better as "old man Kleinman"—came to this country in early days and settled near Calumet Lake, a long distance, by wagon, from what was then the city of Chicago. The towns of Pullman, South Chicago and all the suburbs that are now crowding out toward old homestead, were then unknown, and the duck lands that now are worth \$1,500 an aere went begging for some one to pay taxes on them, then. There were John Jr., Abe, George, Will and myself in the family, and we all grew up big and stout here on the edge of the marsh. Our father was practical and turned his hand to using the natural product of the soil. This was chiefly ducks, in those days, and almost as long ago as I can remember, father used to haud ducks to the Chicago market, while we boys shot on the marsh and kept the wagon loaded. There never was a ground better suited for ducks and all wildfowl than this Calumet Lake country. The big lake is only about 6 or \$ft. at its deepest and is even yet full of wild celery, though the boats have torn it up a great deal. Wolf Lake, Hyde Lake, and all the many streams and slough of the great marsh, helped to make a ground which once simply swarmed with wildfowl, and even to-day the birds show how they love the natural home for memory

*Captain Bogardus considered Henry and Abe Kleinman the greatest duck shooters in the world. This article, from Henry Kleinman, makes the first word ever given to the public by any member of that remarkable family of shooters.

in 218 and 'don't think I was much over two hours in doing it, and I only had 60 empty shells when I got back. I followed one flock around through the grass and rushes, and shooting one barrel on the water and one on the raise I killed and gathered first 22 teal, then 24, then 12, then 6, then 14, then 26, then 32, all in a few minutes. I was in a hurry, for I knew other boats were following me. Teal decoy very readily, and they can also be shot on a flyway, and you can call them if you know how. They will decoy in the evening to a chirping whistle, but their regular call is a sort of cackling call. There is a good deal of fun in teal shooting, and the birds are not so shy as many others.

regular call is a sort of cackling call. There is a good deal of fun in teal shooting, and the birds are not so shy as many others.

After the teal in the fall come the redheads and ringbills. These are deep-water ducks, and are hunted most successfully in this country by the use of decoys, although sometimes you can catch a flyway for them. The mallards and all the slough ducks come before the canvasback and bluebill, and about the same-time as the redheads. The bluebills, canvasbacks and butterballs then come down about the last, about Nov. 1, and they are nunted about the way the redheads and ringbills are, and some of these ducks you can work by just calling them, especially the redheads and mallards. These last birds call better in the fall than in the spring, allards also decoy better in the fall, though a good many shooters think that all ducks decoy best in the spring, in the mating season. That depends altogether on the duck. Any duck that is looking for flocks will decoy best in the spring, and don't care so much for flocks; and so don't decoy so well then. But bluebills decoy best in the spring, and so do pintails, although they are a slough duck. Teal decoy best in the fall. The redheads and canvasbacks and all the flock ducks decoy better in the spring. It will be seen that decoying and calling are two different things.

In the fall, the mallards, pintails, widgeons, gadwall, spoonbill and the greenwing teal come down pretty much at the same time together. On these, which are all marsh or slough ducks, the flyway, the decoys and the call will be used, and often they will be jumped in the marsh. I always shot these ducks any way I could get them best, or as I happened on to them, and will talk about that later on.

Among the last birds to come down are the golden-

Among the last birds to come down are the goldeneyes, the sheldrakes and the little mergansers, which will do to shoot at, anyhow, even if the latter two are not very good to eat.

In the spring the

good to eat.

In the spring the order of coming of the birds is different altogether. The pintails and mallards are the first birds up. These marsh ducks don't seem to be so certain about the weather as the open-water ducks, and sometimes come here in the winter and see-saw up and down. Sometimes they go back further south at night, and push on north again in the morning as far as the ice will let them. Good pintail and mallard shooting is often had in this country in February. About the best mallard shooting was in February in this year, not far from here.

When the deep-water ducks, like the bluebills, etc., come up, it is pretty safe to suppose that the weather is going to stay open. They don't go back south again. The woodduck comes later than the mallards. The bluewing teal are up the latest; the greenwing is up much earlier than the latter, and is usually close along with the mallards.

mallards.

Every man shoots ducks different from everybody else,

mallards.

Every man shoots ducks different from everybody else, and he may even change his own notions sometimes. For instance, I am rather getting out of the notion of liking such heavy guns as I used to shoot, and I now shoot a 12-gauge instead of a 10. For such reason, I find it pretty hard to go to work telling anybody else how to shoot ducks, although my way suits me well enough.

Now, I am sometimes asked what I think is the most important thing in duck shooting, or what is most essential to success. I believe that the first thing a duck shooter wants to learn is to keep still in the blind. A duck is very quick to see the least motion, although it will very often come close in to a shooter who is sitting perfectly quiet. It isn't the size or goodness of a hunter's blind that will get him close shots, but the way he sits in his blind. If he can't keep from bobbing up and down, or twisting around, he needn't expect much shooting. Some hunters can't help twisting their necks around, and screwing their faces up to see where the ducks have gone to when they draw past. That does not work well. If they would keep their heads down and stay perfectly motionless until just the right instant, they would find the ducks paid no attention to them but would come right in. I have many a time shot in a perfectly open boat, with no blind, lying flat on the hay in the bottom of the boat, and have killed plenty of ducks. Once I heard of plenty of ducks over on a wet school section, but the boys said they could not get them because there was no cover and no place for a blind near where they were feeding. I went out there in my open boat, and without any decoys at all I killed 100 ducks the first day I shot.

I have had ducks light right down by the boat. Once

they were feeding. I went out there in my open boat, and without any decoys at all I killed 100 ducks the first day I shot.

I have had ducks light right down by the boat. Once I was eating my lunch and sitting quietly on the boat seat, just within a light fringe of rice, when a mallard came and lit so close to me I could have struck it with a paddle. We looked square in each other's eyes for a minute, and neither of us moved or said a word. Then I reached for my gun. The mallard seemed to know that its best chance for safety was not in flying, so what does it do but make a big dive and swim straight out for the open water. It came up flying, a long way out, and I barely scratched it down. It may be that part of my luck at shooting is due to my ability to keep still and let the ducks do the work of lighting by themselves. An old Irishman who lived near here always called me a "witch," and wanted me to give him my hat, which he said would draw the ducks in close; because they would pass by him in his blind and let me shoot them out of an open boat. The reason was he twisted around to watch the ducks and I sat still and let the ducks do the twisting.

Another thing is about the kind of blind to use. I don't know much about the fancy blinds of an artificial sort, but think each of them might be good under certain circumstances, that is, if it happened to resemble the natural cover of the shooting ground. That is the main thing, that the blind shall look just like the country around it. So you don't want too high or thick a blind. A low, thin blind, with a quiet shooter in it, is better than a thick one with a twister in it. The blind never ought to be heavy enough to attract attention, and it

ought to be a part of the very spot where it is. For instance, my brother George and I were shooting on one of those wet pastures where there wasn't much cover, and we cut some brush and stuff and built a blind, out in the water. We couldn't get the ducks in close enough; so we just tore down that blind and lay in the boat, just putting a little grass and stuff over the ends of the boat, and then we got good shooting. The blind builder should usually not go far from his blind for his material.

should usually not go far from his blind for his material.

There is a great deal in the way the decoys are put out, and many a duck is lost from the bag which would have been saved if the decoys were a little different. You always have to consider the way the ducks are flying, or will be apt to fly. If they are at a certain hour passing on the feed mostly from a certain direction, say from a large body of water to a smaller, so that the flight will be coming nearly all from that side, you should put your decoys out toward that side, and not straight out on a line with the front of your blind, because most ducks will pass in over a flock of decoys, and make as if to alight beyond or back of them. This is the case especially for bluebills and most deep-water ducks, but not so much so for mallards. A mallard will hover all around over a flock of decoys, and nobody can tell where he is going to light. He may light 100yds, away from the decoys, others get up and light right down among them. For mallards I usually put the decoys out straight in front of the blind.

others get up and light right down among them. For mallards I usually put the decoys out straight in front of the blind.

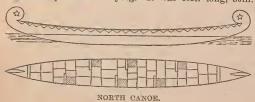

At a different hour of the day or at a change in the wind, the ducks may be coming in the opposite direction, and then you will need to change your decoys over to that side. If the birds are coming about as much from one way as the other, or are working up and down, keep your decoys straight out in front of you.

The use of decoys, and the position of the blind in regard to the decoys, differs much, according to the wind. I never followed any particular order in putting out a flock of decoys, except that if you want to attract the attention of a distant flock of ducks, you naturally will want the long line of your fleet to be crosswise to the line of that direction the ducks are coming from. For instance, if the ducks are coming from the east, you want your decoys kind of strung out north and south. This is the case for most ducks; but if you are shooting bluebills, you want to be careful and not string out or scatter your decoys very much. You want to get a close shot into every flock that draws in, and to do this at bluebills you want to bunch your decoys and keep them pretty close together, for that is the way bluebills light and feed. A close fleet, toward the side where the birds are coming from, is the thing for bluebills. Then they swing in and light, very often just back of the fleet, and therefore just in front of you. A little noise sometimes makes them hold their heads up, and then is your chance for a water shot. The soft tap of a paddle on the side of a boat will sometimes make a flock of teal hold their heads up when you are sneaking up on them.

About any sort of ducks will come to mallard decoys. A mixed flock of mallards and bluebills is good. In putting out such a fleet some shooters would put each sort of duck by itself, the mallards on one side and the bluebills on the other. That is wrong. The best way is to mix them all up as you put them out. Ducks are less suspicious

SOME WESTERN SPORTING BOATS.

N writing on so broad and general a topic as that naming the boats used by Western sportsman, it is manifestly impossible to cover the whole field, for the fancy of the sportsman is as free in the choice or the design of his boat as in any other part of his outfilt; but it may be pleasant to look at a few of the more unique or more useful individuals in the field, preferring those which may be termed types, and which seem to be well fitted to their surroundings, if not, indeed, evolved from the same. Possibly the first sporting boat of the Western country, or that portion of it lying to the north, was the birch cance. Indian, voyageur, trapper, hunter, traveler and explorer used it. Its model is too familiar to need comment. It may be of interest, however, to note one form of the birch cance which, though not a sporting boat in itself, was obviously evolved from it. The old "North cance" of the early fur-trading days was a colossal birch bark, built on such lines as one would hardly deem the material capable of carrying. It was 40ft. long, 30in.

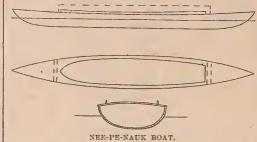

deep, with a beam of 4ft. 6in. Its regular crew was eight to ten men, and its burden eight to ten tons. By its means, therefore, one man may be said to have carried a ton daily on all the long way from Montreal, up the Great Lakes and so on to Winnipeg or beyond. The merchandise in this great craft was packed in square bales, and these bales were arranged so as to leave holes for the paddlers' legs. The paddlers sat on swinging seats, one of which was lashed to the gunwale, the other

resting on the merchandise. There were usually six to eight paddlers (half of whom by choice paddled left-handed all the time), besides the bowman and the sternman. The latter two had thwarts lashed across the bow and stern. The ends of the North Canoe rolled back gracefully, and the builders took pride in ornamenting these boats lavishly. The rows of colored "points" along the sides usually denoted the approximate waterline when loaded. This was a grand seaworthy boat and a great traveler. great traveler.

great traveler.

There are a number of boats which may claim the old Indian birch in their ancestry. Some of the duck shooters of Canada use a "Rice Lake canoe," which is near about a white man's canoe, without the teeteriness and skittishness of the birch, though a light goer among the rushes. Something like a birch is the idea of the Nee-pe-nauk boat, used by the Chicago club men on the Northern Fox

River. This is a smooth-skinned boat, and the skin is made by screwing one longitudinal piece directly upon another, the boat being formed upon a mold. There are no ribs in the boat, and no braces except under the deck fore and aft of the cockpit. The deck is light, and the cockpit ample for paddling, which is the method of propulsion. About the cockpit is a folding canvas coaming, which can be raised in case of a sea. The boat sets low in the water. It is stiff, easy-going and suitable for its purpose, which includes a long journey daily to and from the club house, partly in open water.

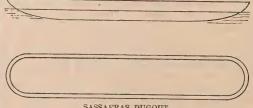

The birch canoe, folded and closed at the ends and provided with cockpit and coaming, a sort of kayak model indeed, may have been in the mind of Mr. Alex. T. Loyd of the grand Calumet Heights, of Chicago, when he devised the racy lines of what we may call the Loyd boat.

LOYD BOAT.

This is a slender and graceful craft, about 18ft. in length. It is provided with out riggers and is very speedy under oars, being really a better river runner than marsh boat. Under sail it is very fast and stiff, being provided with a keel which is detachable at will. At night the captain of the boat usually employs the keel as the ridge pole of his boat tent, simply reversing the position of the rods which fasten it in position. The owner of this boat has two or three air-tight tin cases stowed fore and aft under the decking, and these would float the boat strongly if it were over-turned, which, however, it has not yet been. This boat was born of a necessity which implied long daily journeys over open water which was often rough, and it has often been out when the whole fleet of marsh boats were stormbound. boats were stormbound.

The birch canoe is a creature of the past. The dug-out is the aboriginal boat of the South. A queer little craft is the St. Francis River (Missouri) dug-out, and this is the type, too, of the boats used on the great New Madrid

SASSAFRAS DUGOUT.

duck marsh and in much of Arkansas. This boat is made of sassafras, and its size depends much upon the size of the tree handy to the builder. The boat is only 10ft. long and about 10in. deep, and as wide as the tree was. It is perfectly flat on top, the ends being simply spoonshaped. It has no seats. For leakiness and tipsiness it is hard to beat.

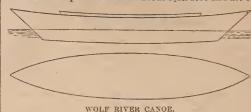

is hard to beat.

A very highly finished and graceful dug-out is the little Mexican pirogue, which parts the water before the paddle of the hunter of the far Southwest. Our illustration is taken from a little boat made by some Latin hand near Vera Cruz, Mexico. This pretty little dug-out—for such a thing is possible—is used by Mr. George T. Farmer, of Chicago, as a marsh and river boat in duck

MEXICAN CYPRESS PIROGUE.

and trapping canoe, for paddling or pushing, which is an odd-looking but serviceable boat. It is 16ft. long and about 20in. deep. It is decked about 3½ft. fore and aft of

the cockpit. which is protected by a coaming. This boat is clinker-built, but has only three strips on each side, the bottom being of one or two boards. This boat does well for the requirements of its locality.

If we should descend the northern waters until we struck the little open sea of Fox Lake, we should find a necessity for a boat which could upon occasion stand a good deal of sea and possibly some ice, and a good deal

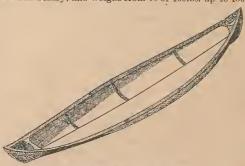

BOB STANLEY, FOX LAKE, ILL.

of wind. Mr. Bob Stanley, an old-timer on that lake, had this in mind doubtless when he constructed the wonder-ful and ponderous inland ship, with which he sometimes

plows the main while in quest of a pot shot at the wily canvasback of that country. It is greatly to the credit of this boat that it can carry sail.

If we drop down the Fox River into the Illinois River country, and among the sturdy duck hunters who shoot early and late each year there, and therefore meet high waters and often fields or floes of tough, keen ice, we will find another type of boat evolved from such environment, and that is the Illinois River or Lake Senachwine sheet-iron skiff, which all shooters of that region pronounce the boat par excellence for their purposes. This boat is well shown in the cut. It is about 16ft. long, stiff and beamy, and weighs from 75 or 100lbs. up to 150.

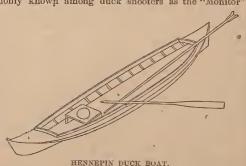

LAKE SENACHWINE IRON SKIFF.

It is sometimes made with air-tight compartments, but the It is sometimes made with air-tight compartments, but the natives scorn this model, which is too heavy. The iron skiff is not hard running, but must be kept free from a breaking sea. It is valuable when it comes to an ice field, and is about as good a sled as it is a boat. The "Wood boys," old-time market-shooters of Swan Lake, use these boats always in cold weather.

The Hennepin duck boat, which is used in much the same waters as the above, is rather more of a fair-weather boat, but is a very good marsh boat for punting, being built with a long and roomy cockpit. It can also be put under oars. This is a local boat, and is built by Mr. Jas. Cunningham, the keeper of the Hennepin Club.

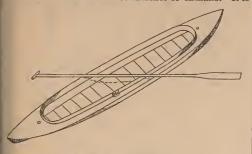

A very popular and very good marsh boat is that commonly known among duck shooters as the "Monitor"

shooting. It is 12ft, long and 14in, deep. The thin edge is strengthened by a light strip for a rail. This is an easy sort of boat to fall out of.

Up on Wolf River, in Wisconsin, they have a hunting

it runs long fore and aft, to give the pusher room. otal weight is 75 or 80bs. This, or Mr. Douglas's wo and not very dissimilar "Waukegan boat," is the nost used on the Kankakee marshes of Indiana.

MONITOR MARSH BOAT.

ayous, and in the covered marsh its well-fashioned bow arts the rushes and rides down the drift about as well sany boat could do. The Green Bay is no deep-water bat, and is not calculated for sail or sea.

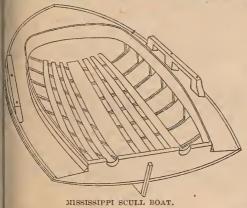

There is a pretty little red cedar boat made at De Pere, Vis., which is also the place where the Green Bay boat made. This latter boat weighs only 64bs., is 15ft. ng, 32in. beam and 9in. deep. The cockpit in this boat

DE PERE RED CEDAR BOAT.

not so long, but the craft is a very tidy one. The draw-gs for this boat, as well as for a number of others, were de by Mr. W. K. Reed, President of the Dime Savings ak of Chicago, who is an ardent sportsman and an apt

Doubtless many readers have perused with pleasure the ges of Mr. W. B. Leffingwell's book, "Wild Fowl Shoots," and have noted there the remarks about his ssissippi River scull boat. It is pleasant to be able to ow a picture of this solid and sturdy craft, from a photo

at on by the author. The manner of its use is well de-titled in the work above mentioned, and the cut will now how able the boat is to carry the heavy load of brush ice which the erection of the floating blind sometimes

es upon it poses upon it. A unique looking "boat" is the Koshkonong (Wis.) "flat-at," but every sinkbox and sneakboat shooter will at ce catch the idea. Twelve feet long and 8ft, across its

KOSHKONONG FLATBOAT.

le "wings," this vehicle lies awash with most of its k beneath the surface. The shooter lies in the box, ow the level of the water. This is a light cover or m water boat, and is usually towed to the shooting

nt.
'he "Koshkonong Monitor" is a businesslike duck boat deep canvas covering can be raised or lowered at will. I forms a protection alike against sea or wind. It is a bad rowing boat and slips easily through the rushes

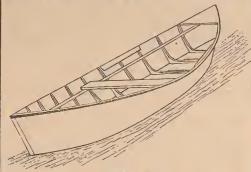

KOSHKONONG MONITOR.

l weeds. The rowlocks are shipped in two upright tions of gaspipe, which offer no entanglements to ss and reeds, and permit of easy unshipping of the s. The deck of this boat is sometimes made of canthough wood or tin may be used. The boat, with load on board, sits low in the water and attracts little ntion. There are two or three varieties of this boat de about Lake Koshkonong, but all conform practity to the type shown. They are a heavy boat, usually athed with tin. They are suitable for their use, on a llow and not very heavily covered inland lake. He Tolleston Club, whose grounds lie on the marshy the Calumet, below Chicago, has a light little three or r-boards boat, on rather a simple, home-made model. as no ribs or knees, and only one thwart, with a seat he stern for a paddler, the latter seat coming pretty lup flush with the gunwale. This boat paddles easily he river and punts well on the marsh. It is a good like just a plain boat, but it is a very well made ap boat.

The shooters at Grand Calumet Heights Club, on Lake Michigan, sometimes use an odd craft in shooting ducks on the open lake. On a low-lying platform, something like the Koshkonong flatboat, they build a deep cockpit, or roofless cabin, whose walls are about 3ft. high. About the sides of this they arrange brush or material for a blind, and anchor the boat out in deep water, the decoys being arranged by means of another boat. This craft is called the "Merganser" boat. It will take a heavy sea, but is unwieldy and unmanageable.

We should be doing a great injustice to many manufacturers of good boats should we close our list here and claim to have named all the Western sporting boats. It has been the purpose to speak of the odd and unknown boats rather than those well-known to all. Mr. Rushton's The shooters at Grand Calumet Heights Club, on Lake

canoes may sometimes get far enough into Western hardships to enter the field here claimed, and so indeed do Mr. Osgood's and other canvas boats. Mr. Douglas's boat has already been mentioned, nor should we forget the little 8ft. "Still-Hunter" sneakboat put out by Messrs. Thos. Kane & Co. This is a modified Koshkonong flatboat, with little of the weight or depth left, and with the stern a fantail instead of sharp. This boat is propelled by oars. The Racine veneered boats are in use in many fishing and pleasure clubs, and the Spring Lake boat, stiff and staunch, is also popular on the open water. Indeed, there are many types, well-known and popular, which will occur to the mind of almost any Western sportsman. sportsman

over on the Canada line they have two or three distinct types of boat. The Point Mouille boat is a double-ender, decked, made of three boards, sides and bottom, built light and shallow, and a bird of a boat on the marsh. The open water shooting of the St. Clair Flats is done from a very light and shallow sneak, much like a condensed and etherealized Koshkonong flat boat. This boat is intended to lie fairly awash in the water, and the shooter lies in it on his back. They call this a "lying-out boat." The fishing and sailing boat most popular on the "flats" is a trim two-master, 18 to 20ft, over all and 5ft, 6in. or more in the beam. She has oars, but the long voyages to the bass grounds, ten or fifteen miles, easily suggest the sail.

There are boats and boats, and to study them is a pleasure even in so brief a way.

KANK.

ITALIAN JOE AND "DE PLOV',"

ITALIAN JOE AND "DE PLOV"."

"LOOK-A! Look a! Dere goin' to come big flock-a de plov!" cried Italian Joe. "Sit-a down, sit-a down, an' I whis?!" And then wide over the green pasture field, and audible down wind three-quarters of a mile, to where the flock was swinging across a field of tender wheat, sped the shrill, plaintive plover call.

"Whit! whit! t'wit! whit-whit-a-whit-whit! whit, whit, whit-a whit! wheet, wheet, a-whe-e-e-t, whit, whit! With marvelous distinctness and accuracy of note the wild call rang out. The moving black specks caught it. A swift turn in their course, and up the wind, bigger and blacker every moment, and now glancing in the bright sun and showing brown and gray and golden yellow, they came rushing on, searching for the source of the call which rang free on the wind.

"Whit! whit! whit-whit-whit!" called Joe industriously, and soon the flock caught the whistle and the decoys at the same instant, and like a long yellow bolt from the sky dropped and swung straight for the decoys.

"No! no! no shoot-a! no shoot-a now! wait, wait-a, I tell. Sit a up. De plov' no look-a on us, he look-a on-a decoy. Now, pull-a de string, make-a de bird jomp!"

So I pulled the string, and the live decoy flapped up and down. And into his mouth of good white teeth Joe jabbed two fingers of Joe's are always clean and devoid of blood and feathers down to the knuckles.

The flock swept swiftly by. I could have knocked down at least a few as they passed, but etiquette of the blind made Joe the master, for these were his decoys, this was his blind, and he was shooting for a business. His wisdom was soon apparent. A low, jumbled call of mingled plover voices was met by Joe's false "ok," apparently from the flock on the ground. Round came the long bolt, glancing again under the sun. They passed the scanty blind unheeded, passed over the decoys down wind like lightning, and nearly drew a shot which Joe frantically whispered me to hold.

"No shoota-a, I tell! Let-a come! Let-a swing in!" And round and in they swung,

are plenty of men who will wager that there is no man on this green earth who can compare with him in this one art. That is his business, and has been for twenty-two years, ever since he was old enough to shoot. He sends into the Chicago market more plover than all the other shooters of the State of Illinois. They don't know how to hunt them, and he does. He is the great and unrivalled plover artist. He has killed 1,500 plover in a week, 300 in a day and thousands in a season. He is the only man in the city of Chicago who seems to thoroughly understand and love the work of plover shooting. Through the winter Joe sells fruit, but he longs for the warm days and the green fields, and April sees him afield early. For twenty years he has shot near Summit, or elsewhere near the Dos Plaines divide, and never until this spring has he thought of making a change. A bag of 40, 50 or 60 birds per day does not suit him, even at \$1.50 to \$1.75 a dozen, which the big hotels pay him for all he can bring in.

"Italian Los" or "Plover Los" as he is interchanceably

has he thought of making a change. A bag of 40, 50 or 60 birds per day does not suit him, even at \$1.50 to \$1.75 a dozen, which the big hotels pay him for all he can bring in.

"Italian Joe," or "Plover Joe," as he is interchangeably called, is a character in his way and is worthy of a graphic and a careful pen. His real name is Joseph Paoli, and he may be Italian or Corsican; certamly he is a Napoleon in his art. Of about middle height, and of a straight, spare frame, he is fair in complexion, with light hair, blue eyes, a clear skin and a singularly frank and pleasant expression of countenance. And he is a genuine good fellow, open-hearted and generous. He can kill more plover alone than by the aid of other guns in his blind, yet time and again he has taken eager novices into his blind, when every shot out of their guns meant a dollar out of his pocket. Let us be fair to all men. When we have been, we will be forced to admit that a market-hunter may still be a man. I know this the better from a day out with Joe. At the close of a rather poor flight, in which neither of us knew which gun had killed the most, but in which Joe had certainly always given me the first best chance, he tied a big bunch of birds on my string and utterly refused to take any pay for them, although they were the same as money to him. And Joe isn't rich.

Let me tell something about how Joe shoots plover, for it will be new to many, and especially so to those who have tramped miles trying to "sneak up" on a flock of these wary birds, with result of a light bag at night. A golden plover is like anybody else. It has a blind side. Italian Joe has simply learned the blind side of his bird. Close study of the habits of the plover has taught him that it decoys readily both to the note and to the decoy birds. Given this fact, he invented a system. It is the originator, the genius, whatever be his calling, that commands our respect.

Like other birds, these plover have a resting and a feeding ground. The decoys are put out on a flyway, where the

Early in the morning is the best time of the flight.

where the birds pass over. The decoys can then be seen further.

Early in the morning is the best time of the flight. Joe is always in his blind at 5 o'clock. He eats no breakfast but a piece of bread that he carries in his pocket. He has no lunch and eats no meal till supper, after dark. His work is not easy. Between 9 and 10 in the morning the flight is also good, and after that Joe goes to sleep in his blind fill about 3 in the afternoon. From then till 5 he may be busy.

The decoys are not very lifelike. Joe has a dozen of the old time decoys, which open out and fold or nest into each other for packing. These are stuck on tops of sticks. Then he has about as many rough wooden profiles stuck up in similar manner. To these he adds a number of dead birds, which he mounts nicely on a stick thrust into the throat. The flock is put out in irregular form, but is always compact, so that when about to alight the plover will huddle together and not string out. The greatest number of birds to the shot is Joe's rule.

The decoys are put out to one side of the blind, and not up or down the wind. This is so that the plover, which alight against the wind, will not then be coming up or over the blind. The distance is about 25yds. Joe uses a side snap scatter gun. A close-shooting gun would be a nuisance to him. The art of flock shooting he has down fine, and with the same gun he will kill half a dozen birds more to the shot than an inexperienced shooter. He always rakes the flock as it comes in, obliquely, and never shoots but one barrel. He says he couldn't kill more than one or two with the second barrel, and besides, the noise would scare the flock more. He usually counts on getting two or three single shots on the same flock, as he calls them back again, and he nearly always drops his birds in about the same place each time.

The blind is very light and simple. A few weeds or willows, a little hay, and there you have it. The birds seem, indeed, to follow Joe's description and "look-a on-a decoys."

One original device

de time? Den he go 'way." Thus he reasons, and doubtless from experience.

To the long stick a second stick is lashed, the two forming the legs of a triangle. The ends of these legs are tied to pegs driven down in the ground. The triangle is thus hinged. A string tied to a peg in front keeps it from being pulled clear over when the "flopping" is going on. A long string runs from the top of the stick back to the blind. The bird and the triangle lie flat on the ground till a flock is discovered coming in, and then the triangle is worked, the bird is pulled up into the air, expands its wings instinctively, and again closes them as it is allowed to drop. This gives the appearance of a bird alighting among the others on the ground, and by means of this simple but killing device the plover are induced to come in again and again, decoying as probably no other bird again and again, decoying as probably no other

Italian Joe has some imitators now, but none equal m. Much of his success is due to his ability to call the him.

birds from a distance. The plover call is not hard to learn, but Joe has the faculty of making it so loud that it is truthful to say the birds can hear him a mile down wind. The above is all there is to the way Italian Joe shoots places.

wind. The above is all there is to the way Italian Joe shoots plover.

There may be some who do not think plover shooting is good sport. These do not understand it. Without wishing to justify the method or the amount of slaughter, one must still be interested in the way of work of one of the most practical naturalists that ever shot a gun; and any one who has passed a warm and mellow day with Italian Joe, in his blind on some wide green field, and who has seen him bring close to hand flock after flock of these swift and strong wild birds, will not fail to say that he has had a new and exciting experience in the field. Joe is a skillful and successful snipe shooter, and he probably kills also more woodcock than all the shooters of Chicago, but his one love is "de plov."

"I tell, I goin' to like-a shoot-a de plov," says he, his eyes shining. "I goin' to whis' 'whit-whit!' and de plov' CHICAGO.

Matural History.

FOX SPARROW IN NOVA SCOTIA.

FOX SPARROW IN NOVA SCOTIA.

A FTER walking several hours without much success in collecting on May 27 I turned homeward. I had only gone a few steps, when a fox-colored sparrow (Passerella iliaca) flew up just in front of me and noise-lessly disappeared in the surrounding woods. I went direct to the spot from which she had flown and there found her nest containing four eggs. I went away and did not return for about an hour. She flushed again and I shot her, thus removing all chance of doubt concerning identification, as her skin is now in my cabinet.

The nest, which is before me as I write, was placed on the ground between a small fir and hemlock, each only about a foot high. It was perfectly concealed by the lower branches. The location was a partially cleared hemlock grove on comparatively high ground. The outside of the nest is composed of spruce twigs, bits of dry rotten wood and coarse grass, the main body consisting wholly of grass, and the lining composed largely of the same, but intermixed with a few cow-tail hairs. The depth is 2.75in.; the diameter of cavity on top is 2.25in.; the average thickness of materials composing nest is about 1,25in. These measurements show that this nest is rather deeper than those made by the white-throated or other common sparrows.

The eggs were four in number and were considerably incubated, so we may consider the set complete. They are almost the exact shade of the ground color of the chipping sparrow's; in other words, they are light blue. They are almost the exact shade of the ground color of the chipping sparrow's; in other words, they are light blue. They are almost the ordinary observer.

Mr. Oliver Davie, after using almost the exact words of Dr. Coues as to colorings, places the size at .94×.71in. The measurements of my eggs are .89×.67, .88×.67.

My observations previous to the finding of this nest led me to believe that fox color occasionally breeds in Nova Scotia and southern New Brunswick. I would like to

.87×.67 and .86×.67in.

My observations previous to the finding of this nest led me to believe that fox color occasionally breeds in Nova Scotia and southern New Brunswick. I would like to hear from others with reference to the nesting of this sparrow. Is there any other account of its nesting so far south?

A. C. KEMPTON.

WOLFVILLE, Nova Scotia.

Hare Coursing.—The articles with the above heading recall an incident of like nature witnessed by me last fall soon after the first snowfall. I had just stepped outside the camp, when a rabbit came along the trail in front of the camp, going at a clipping gait. He went about a hundred yards and doubled, not on, but parallel to his first track, and stopped within a few feet of me and about ten feet distant from his first course. As he crouched low down I saw a sable pass on his track with head low down to catch the scent. "Brer rabbit lay low" till the sable had gotten well by, then took along the way he came, but not in his first tracks, going about eighty yards, then returning in his latest track about half way to the camp, when making a long jump at right angle from the trail he landed in the brush and soon was out of sight. About that time the sable returned on the newest track, nose to the ground and eager, so eager that he overran the turn a little, then came back to where the rabbit left the trail. Here he was at fault, but for a moment, as he struck a circle and hit up the scent and was off again. Did the sable eatch the rabbit? Well, this is how I size it up. Bunny has proved his superiority at running, he also finds his doubling serves him well, and is thus caught napping in fancied security. It is my belief that all the carnivora that seek their prey by a long chase are successful. Instinct never errs.—Hunter.

RED SQUIRRELS ARE CARNIVOROUS.—Carleton, N. Y., June 6.—I had a pair of common bluerock pigeons in a large cage in our back yard. One morning I found one of them on the bottom of the cage dead, and half eaten by some animal. The cage was suspended by a wire between two trees, and was fully five feet from the ground and about ten each way from the trees. The mesh of the wire netting on the cage was too small to allow the entrance of an owl or hawk, and a weasel or mink could not jump so high. The problem was solved sooner than I expected. The very next morning, hearing my mother call me, I ran out just in time to see a full-grown squirrel scampering up one of the trees. My mother, hearing an unusual noise in the cage, went out, and what was her surprise to see a red squirrel fastened to the pigeon's throat like a bulldog. When she called me he let go, slid through the netting, jumped down and ran up the tree. I did not suppose they ever ate flesh of any kind.—F. E. W. ["J. H. F.," writing from Renovo, Pa., asks if red squirrels are ever carnivorous. This is a well-known trait of the red squirrels; they are very destructive of young birds, and young chickens, too; and where their propensities are known war is waged on them.]

BULLETIN AMERICAN MUSEUM NATURAL HISTORY.—
The first 64 pages of Vol. III, of the Bulletin American
Museum of Natural History, dated May, 1890, has just
been received. It contains an article on The Calciferous
Formation in the Champlain Valley, by Ezra Brainerd
and H. M. Seely of Middlebury College, which is illustrated by a diagram showing a section of the rocks; Observations on the Fauna of the Rocks at Fort Cassin,
Vermont, with descriptions of a few new species, by R.
P. Whitfield, with three plates of fossil shells, and two interesting papers by Mr. Allen on North American ground
squirrels.

ADIRONDACK WATERS.

A DECORATION DAY OUTING.

A DECORATION DAY OUTING.

I HAVE seen in the newspapers and have learned from many individuals that the trouting this season is very much better than usual, no doubt owing to the exceedingly favorable winter, and from personal experience I believe this to be true. Last Wednesday evening, in company with a couple of enthusiastic gentlemen, I left for Thirteenth Pond, in the North Woods, where we arrived next afternoon about 4 o'clock. We succeeded in capturing a couple of lake trout from Thirteenth Pond that afternoon; one weighed 5lbs. and the other 2lbs. A great many "lakers" have been taken from Thirteenth Pond this spring, and we saw two taken Saturday morning by a gentleman from Brooklyn, their combined weight being 20lbs. The same gentleman also captured five smaller ones. Our object, however, being speeckled trout fishing, we left Thirteenth Pond very early Thursday morning, and with the guides carried our truck and plunder to Puffer Pond, a distance of nearly five miles and a good part of the way up hill. We were somewhat fatigued with the unusual exertion, but did not allow that to dampen our eager anticipation of sport. We were obliged to fish with bait during the greater part of the day, but at about 4 o'clock in the afternoon the trout began to rise a little, and we then changed from bait to flies.

I had for a short time as fine sport as I ever experi-

the day, but at about 4 o'clock in the afternoon the trout began to rise a little, and we then changed from bait to flies.

I had for a short time as fine sport as I ever experienced, the fich being eager and all of fine size. Indeed there are no small trout, unless one works his way up into the inlet. The fish will average from 9 to 12in, in length and are very fat. They are the handsomest trout I have ever seen. The water of Puffer Pond is about 18in, higher than usual at this season, and in consequence the fishing is not nearly so good as it will be later in the season. I made a great many inquiries of guides and from a number of fishermen whom I met going in and coming out of the woods, and from all I could learn I am convinced that the sport of Puffer Pond can hardly be equalled by any waters near New York. It is an exceedingly easy place to reach from this city. We took the People's Line of steamers at 6 o'clock—though one can leave by train at midnight—and had a good night's rest on the boat with plenty of time for breakfast in the morning, and arrived at North Creek, the terminus of the railway, where we were met by Mr. Maxam, the proprietor of the hotel at Thirteenth Pond. Mr. Maxam's address is North River post office, Warren county, New York. The reports from the many fishermen I met were almost universal that it was too early in the season for good fi-hing, that the waters were too high. The last of this month will undoubtedly be a most excellent time for trouting in the Adirondacks.

New York, June 5.

NEW YORK, June 5.

TROUT AND PICKEREL.

On Tuesday night, May 6, I left the Grand Central Depot for Meachan Lake via Troy, St. Albans and Moira. I spent two days there last spring, and had such a successful trip that I did not hesitate in deciding upon the same again. The railroad journey is interesting and comfortable, and the twelve-mile drive from Paul Smith's station (this name is repeated on the Chateaugay road at a station about fifteen miles from the one on the Northern Adirondack road and is confusing to tourists) to the lake is over a road that is pleasant despite the mud I had going in and the dust coming out.

From the reports I had received before leaving New York, I expected to find all the snow water out of the lake, the streams low, and bright sunny spring days, filled with the hum of nature's loom as she weaves her carpets and tapestries of brightest green. Bel I have not got over shivering yet; for the two weeks and a half that I was there were made up of days that were cold and nights that were freezing, days that blew and nights that howled, days that rained and nights that poured. I do not say anything of a thunder storm fringed by a suspicious-looking white cloud which suggested the idea of land and an upturned boat; and when we were safely underneath the boat eating our luncheon, how this cloud pelted everything with huge ice balls. Neither do I complain of the billows that Boreas raised on the lake about every

other day, effectually preventing trolling for several hours at a time. I can forgive the lake for being at flood tide all the time, and the streams raging torrents, for even they must get full as a result of so much drinking. I did "kick" though when each Sunday morning I was there dawned warm and still and bright, but, of course, no fishing. Looking back seriously now to my trip, I can say it was eminently successful, though we only had three pleasant days.

there dawned warm and still and bright, but, of course, no fishing. Looking back seriously now to my trip, I can say it was eminently successful, though we only had three pleasant days.

The fishing in the lake had not begun, the speckled trout being still too sleepy to rise, and the lakers lurking away down at the bottom, waiting for warm water and suckers. In the outlet below the rapids, where there was good fishing, and every day found one or more boats anchored on the rim of the "pork barrel," near a small island, or dropping down with the current. The riffles above were best fished with waders; that is, if one could keep straight in the tumbling water. The rapids themselves were for the most part as foamy as a wash tub, but contained a goodly number of muscular trout. Fishing of all kinds was indulged in down on the still water Some threw flies alone, some added a "smeller" or a bir of worm put on a fly-hook, still others angled without false pretense of any kind in the old-fashioned way, and some netted their fish from a certain native's creel with bank notes, and almost all allowed their guides to fish it order to swell their count. Now, I don't want to implifut the stream was "hogged," for not more than 200 trout were brought in any day, and most of the time no as many as that.

I fished for once in a purely scientific way, 70z. rown and flies, no worms (except to catch one small trout), in guide to help fill the creel (for the Doctor was content to see my satisfaction besides keeping his boat just in the graph position for casting), no bank notes. The trout were shy and had all the natural food they wanted, but after I had found some alder flies and gray-drakes the fine and was the fish that looked to be a pounder. With thirty or forty such fish any one ought to be satisfied. The last day I fished there, though, only the little fellow were jumping, so out of the fifty-six trout caught thirt went back into the water again.

There was a jolly crowd at Fuller's, the rainy day were spent in swapping fish a

ANGLING NOTES.

MR. SNEDECOR, a young Brooklyn angler recent returned from the Saranac region, also bears we ness to the high water and cold weather in the wood He says that during his visit there a carpenter who wor at the new hotel, now building on Saranac Lake, who rowing home one day had the good luck to hook on to big laker, which after a long struggle he succeeded getting into the boat. It weighed 261bs., and was one the largest killed in these waters in many years. In Snedecor had some fair fly-fishing and killed a 2 speckled trout in the Saranac River in front of Bartlet old place.

Mr. A. W. Dimmock, of whom we have made mentical as spearing the great devil-fish and other monster of the Southern waters, has returned from his annutrip to Florida, where he has enjoyed great sport. It is states that this season he had magnificent fly-fishing taking on one occasion not less than nine different kit of game fish on the fly, including a redfish or chanbass weighing 25lbs. The rod used was a light sphamboo fly-rod. He thinks that this branch of anglic is very much neglected, and that people do not appreciate great sport that may be had with these fish. Where he saw two small tarpon killed on the fly.

We notice another poacher has come to grief at Cl ton, and in addition to a good round fine will have spend fifty days in jail.

It is very amusing to veteran anglers to read the a cles that are printed in the various daily papers and m azines on the subject of shooting and fishing. In a rec number of one of the popular monthlies a writer descri how he goes fly-fishing with a 7-foot rod, on which uses a 12-foot leader. It would be very interesting watch him land a trout in rapid water with such a cobination. He also carries a small book with two doffies on the stream and leaves his stock book at ho This is good advice, but when he states that with this ply of flies he finds it necessary to take along one do leaders, he rather "gives himself away."

Mr. P. B. Acker caught last week at Key East, N. striped bass weighing 11lbs. It measured 31in, in lenguage 11 will have to look to his laurels, as this letterace so far by long odds. The present warm weat should furnish great improvement in salt-water fish which so far has been poor.

The reports of black bass fishing vary very much. anglers at Lake Hopatong, N. J., seem to have done best. The capture of a 5-pound small-mouth bass I the score at present. The Deckers, famous professifishermen, have taken a great many large black bas trolling with a good-sized lake herring on a gang nof four hooks. They claim that dark leaders should used in that lake. Quite a number of bass were known that fly there on Decoration Day.

TROUTING ON THE SIOUX.—The second and conclupart of this sketch is unavoidably deferred until our issue.

TO SALMON ANGLERS.—T. J. Conroy, 65 Fulton street, I has a lot of fine salmon rods, assorted kinds, which he will s a sacrifice until stock is reduced. Don't miss the opportun Adv.

SALMON AT BANGOR.

CORRESPONDENT under date of June 8 reports thus on the salmon fishing in the Penobscot at 3angor, Me.: One of our papers of Saturday says: "The almon took to the fly very readily Saturday, and the ishermen had some fine sport. The following was the esult of the day's fishing as near as could be learned; Arbihald Mitchell, two fish, 21½ and 22lbs; Mr. F. W. Ayer, 20lbs.; Mr. H. M. Prentiss, 20½lbs.: Mr. Dodge, 9lbs.; Mr. P. McCarthy, 10lbs. Dr. Elliot, of Lawrence, 19ks.; Mr. P. McCarthy, 10lbs. Dr. Elliot, of Lawrence, 19ks.; Mr. P. McCarthy, 10lbs. Dr. Elliot, of Lawrence, 19ks.; Mr. P. McCarthy, 10lbs. Dr. Elliot, of Lawrence, 19ks.; Mr. P. McCarthy, 10lbs. Dr. Elliot, of Lawrence, 19ks.; Mr. P. McCarthy, 10lbs. Dr. Elliot, of Lawrence, 19ks.; Mr. P. McCarthy, 10lbs. Dr. Elliot, of Lawrence, 19ks.; Mr. P. McCarthy, 10lbs. Dr. Elliot, of Lawrence, 19ks.; Mr. P. McCarthy, 10lbs. Dr. Elliot, of Lawrence, 19ks.; Mr. P. McCarthy, 10lbs. Dr. Elliot, of Lawrence, 19ks.; Mr. P. McCarthy, 10lbs. Dr. Elliot, of Lawrence, 19ks.; Mr. P. McCarthy, 10lbs. Dr. Elliot, of Lawrence, 19ks.; Mr. Dodge, 10ks.; Mr. P. McCarthy, 10lbs. Dr. Elliot, of Lawrence, 10ks.; Mr. Dodge,
A GAME CARP.—In the latter part of October, 1888, I as instrumental in placing some mirror carp in a little ond hole of some 16,000ft. square in the woods at West armstable, Cape Cod. This little pond is supplied by the un shed of its surroundings and could not have been ver 5ft. deep at its deepest part, and was overgrown ith aquatic plants, grasses and weeds, with only occamal spots of clear water. The carp were none of them n. in length at the time of planting. On May 30 we ok one by means of a hook (a small smelt hook or horse ir, with a 4oz. trout rod), finding her to measure 16in. length, weighing 2½lbs. and full of spawn, and furtherore, after twelve hours (alive) in cold water, it was oked and pronounced of fine flavor, equal to and tasting the chicken halibut. I had five minutes of good sport she made the reel sing, and was game until I gave here butt in earnest, wanting to make the capture more r information than sport, and being fearful of the ength of tackle. Another pond in which I placed rpseven years ago I propose to examine later in the ason, and if they have increased in size equally or prorionately to these I shall expect some monsters if I n catch one.—REIGNOLDS.

WABAN LAKE, Mass.—We have just received information from fishing parties of Wellesley. Two gentlement ught about 100 large yellow perch and four good-sized ekerel in a single day. On May 29 an angler took a biguel full of perch and three pickerel, and declared this be the best fishing he has had this year. There is mething peculiar about the pickerel (Esox reticulatus) Waban Lake; many of them have crooked tails, the sult, apparently, of inherited deformity. We have ied for some time to secure one of these abnormal exples, but so far without success.

THE WISSAHICKON CREEK, Philadelphia, which has en closed for six years, was thrown open to the public me 4, and great crowds of fishermen were in attendance capture some of the fish supposed to be there. But e result was disappointing. Sunfish were found in odly supply, but the black bass caught were few and hall, and there were no rainbow trout.

JAMAICA BAY.—Gov. Hill has signed the bill prohibit-g the use of nets in Jamaica Bay, Long Island. This as in compliance with the recommendation of the game w revision committee, to whom the bill was referred, ie Jamaica Bay Association for the Protection of Fish id Game will undertake to see that the law is enforced.

Dr Value to Sportsmen.—Every lover of rod and gun should cure a copy of a book just issued by the General Passenger Derument of the Canadian Pacific Railway and entitled 'Fishing d Shootine.' In it all the best fishing waters and localities for \(\xi\) and small game in Canada are fully described, the best route each pointed out, and a wast amount of valuable information esented in most interesting snape. The descriptive matter vers a broad and varied field, tonelling upon every noted sporties of all the condity in Canada between the Atlantic and the Pacific 2aus, and also refers to the States of Maine, Michigan and Wishish. It is bound in convenient pocket form and is handsomely netted. Other useful books are 'The New Highway to the lem and 'Summer Tours,'' issued for the benefit of travelers grand and commer Tours,'' issued for the benefit of travelers grand control to the year of all of these may be obtained free on application to the year. The Response of the passenger Agent, Montreal, Que., Canada. **s

Hishculture.

FISH MORTALITY IN MASSACHUSETTS.

With Forest and Stream:
While boating on Charles River, Mass., May 25, 1890, I saw as thumbers of dead fish strewn along the banks or caught on snags. They seemed to be principally suckers, horned uts and chafins (local names, but I trust you will recoge the species), a few black bass, but strange to say, I saw pickerel or perch, although both occur plentifully in the er.

pickerel or perch, although both occur plentifully in the er.
caught a number of fish that were still alive, but dying; and appeared to act in a dazed condition, swimming near surface and moving about in circles. Upon examining real large handsome ones no outward signs of disease re apparent except near the vent, which part appeared ollen and red.

A friend who went fishing to Lower Falls a few days ago orms me the same sight is to be seen there. By follow-the river Lower Falls is at least 15 miles from Wellesley, dif this state of affairs occurs between and also above and ow these two points, as it undoubtedly does, what a trendous slaughter of fish there has been.
Will you or any of your readers kindly inform me the use of this destruction of fish life? If due to sewerage, use paints or dyes, which are poured unhesitatingly into any of our New England streams, is there no law which the celled upon to put a stop to this business?

SHELLEY W. DENTON.

VELLESLEY, Mass.

The common suckers of Massachusetts are the large-

scaled and small-scaled species of Catostomus (C. tcrcs and C. catostomus). The horned pout is Amiurus nebulosus and the chafin is the common fall fish, also known as mock trout (Scnotilus bullaris). No adequate explanation of sudden mortality among fishes has yet been offered. Epidemics of this kind have occurred in streams which were not polluted by modern nuisances such as sewerage and factory refuse. The latter undoubtedly produce mortality among fishes, but there are other unknown causes. The weakened condition following the breeding season is one source of danger, overcrowding is another, and sudden disappearance of food is a third. None of these would explain the case in question.]

UTILITY OF TROUT CULTURE.—In Mr. Milton P. Peirce's paper on this topic, issue of May 29, page 373, the author's comparison of certain stocked streams with streams which have been left to nature was incorrectly printed. This segitence should have read: "Upon one edge of this region, a neighboring, local fishing club have been restocking with trout during the past few years, and to this fact have given credit for the gradual improvement which has been observed, when the other streams in the region, which have never been restocked, have given still better results. In one case the streams have been overstocked; in the other the increase has been natural."

The Rennel.

FIXTURES. DOG SHOWS.

DOG SHOWS.

Sept. 2 to 4.—Dog Show of the Midland Central Fair Association, at Kingston, Ont. R. W. Meek, Secretary.
Sept. 2 to 5.—Third Annual Dog Show of the Michigan Kennel Club, at Detroit, Mich. M. V. B. Sannders, Secretary.
Sept. 15 to 18.—International Dog Show of the Dominion of Causda Kennel Club, in connection with the Industrial Exhibition at Toronto, Canada. C. A Stone, Secretary.
Sept. 23 to 26.—Second Annual Dog Show of the Central Canada Exhibition Association, at Ottawa. Alfred Geddes, Chairman Committee.

Committee.
Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury Conn. B. C. Lynes, Secretary.

COLLIE CLUB STAKES FOR 1891.

COLLIE CLUB STAKES FOR 1891.

Editor Forest and Stream:

The Collie Club Stakes for 1891 will not be divided as was attempted this season, but the entire stake will be competed for at the Westminster Kennel Club bench show, the club reserving the right, however, to select some other show for a portion of the stakes if deemed desirable.

Collies born on or after July 1 will be elligible to compete in all the stakes, provided the conditions heretofore published shall have been compiled with.

Entries for the grand Collie Sweepstakes, entrance fee \$5, will close Sept. 1, 1890. It is expected that this will be the most valuable stake of the series, as any collie born in the United States or Canada within the specified date may compete, whether owned by a member or not. The Collie Club will add \$100 to the Produce Stake, nominations for which will close at same date as the sweepstakes. The fees for the Futurity Stake having all been paid and all being entitled to compete, nominations for this stake will be received up to the date for closing entries at the bench show. It is expected that the A. K. C. will add \$50 to this stake. The usual Stud Dog Stakes will be omitted, but the club medal will be offered as a special prize, to be awarded to the owner of the best stud dog, to be judged by two of his get, out of different dams, which may be the property of different owners. This prize is restricted to dogs at public stud in the United States or Canada, said dogs to be registered with the secretary of the Collie Club. Nominations of progeny to compete will not be required, but owners may select any present at the show which answer the requirements specified above, the same date of birth to govern as in the regular stake.

This club has contracted with the Whiting Manufacturing Co. for a medal, which will be finished during this month, that will be one of the best specimens of such work ever offered by any club. J. D. Shotwell, Secretary. II BHGHAND AVENUE, Orange, N. J.

THIS MAN APPEARS TO HAVE FRIENDS.—Washington. D.

THIS MAN APPEARS TO HAVE FRIENDS,—Washington, D. C., June 6.—Editor Forest and Stream: I know little or nothing of the matter in controversy in the A. K. C. regarding Mr. Peshall; but I do know that Mr. Peshall is a genial, liberal-minded, upright gentleman, good-hearted and jolly, and, as I verily believe, incapable of doing a wrong to any one.—Jerome Burnett.

ANOTHER ENGLISH SETTER CLUB.—Major Taylor informs us that a call will be published next week, signed by many prominent breeders and owners of English setters in the United States, to form a club to promote the best interests of the breed. The date for the meeting has not yet been decided upon, but it will probably be held during the last week of this month.

THE HOMESTEAD KENNELS, owned by Mr. H. S. Pitkin, Hartford, Conn., are going in strong for St. Bernards. The kennels contain the blood of nearly all the noted champions of the present day, and it is expected that the youngsters will give a good account of themselves at the shows next spring.

FUN AT DOG SHOWS.

come in, Jock, take that big arm chair. It is just the sort a fellow wants to drop into after he's been to a dog show and listened to every fellow's "tale of woe." Lots of fun I've had in my day and generation, but none has been more lasting than that enjoyed at some of our dog shows. If I only live a little longer I certainly shall see and hear a great deal to excite my laughter as well as my sometimes indignation. Every breed seems to have helped to make me "laugh and grow fat," one of the funniest episodes having occurred up in Canada.

great deal to excite my laughter as well as my sometimes indignation. Setty reed seems to have helped to make me "Augh and grow tht." one of the funniest episodes baving occurred up in Canada.

SETTERS.

"Once upon a time" Mr. Wenzel's Chief went up to Caudada. He was champion, winning in his class, and special for best Irish setter in show. It and ge and some four or five exhibitors perially the second prize winner in the open three winners are the second prize winner in the open three winners. It is decision by tillustration requested one of the gentlemen to get the dog in question. "The foul fiend" must have taken possession of the messenger, for soon he appeared with Chief instead of the dog desired. The judge didn't discover the difference, for as he was approaching he began his criticism with "Why, the dog walks badly. What else can you expect with such bad legs and feet. His shoulders, too, are all wrong set on." In this strain he continued, fuishing his discussion with his usual "condition" phrase, contending the while that in charity alone he gave the second prize, instead of withholding it, as he should have done. Those present being satisfied with the criticism did there was no dog to make the second prize, instead of withholding it, as he should have done. Those present being satisfied with the criticism did there was no dog to the started to the stall, the other gentlemen following and forming a sort of funeral procession. The chain was fastened to the ring and the dogless collar was tenderly laid on a little mound of straw. The judge had no sooner departed, however, than first came a smile from all present, then a titter, and finally a perfect roar of laughter went up that drowned the music of the dogs.

The champion Tim had a pretty bard row to hoe when he was first exhibited. His owner knowing full well his value was first exhibited. His owner knowing full well his value was first exhibited. His owner knowing full well his value was not content with the hc, and c, cards he was getting at all the

grand field dog, but built on greyhound lines. This breed has suffered terribly, but not more so than the POINTERS.

It is strange that some of us are so slow to learn even with good specimens as guides. We give the highest prices and no doubt get the best that is going, yet every year what awful, unpardonable blunders are made. Some judges have become so overbearing, so almost insolent in the ring that some day there will be a jolly outbreak. Is there a pointer man to-day in these United States who does not know of the Meteor-Beaufort business! What a disgraceful affair it was! The American is supposed to be the exponent of fair play, but he dealt out little of it in this case. It is the one bar sinister upon the escutcheon of our fair fame. We all well remember that grand pointer Faust, of the St. Louis Kennel Club, and how Hon. J. S. Wise made him dip his colors to such pointers as Lady Dufferin and Croxteth. That beautiful Revel III., almost peerjess, I might say, is bowled out by such a dog as Fritz, and that, too, at New York, where, the general impression exists abroad, the best judges are secured, while in fact it is too often the contrary. Graphic, considered in England one of the best, if not the best pointer in recent years, is made to take a back seat to Robert the Devil, where he may quietly look on and see Brake knock Duke of Vernon into a cocked hat. It is fortunate some of our pointers cannot speak our language and express their anger at some of the indignities heaped upon them. Perhaps if they'd accompany their expression with a bite or two it might have a wholesome effect and rid us of some incompetent people whose excessive cheek keeps them afloat. Fancy Messrs. Price, Whitehouse or Arkwright rendering such decisions. What think you the London Field would say of it all?

GREYHOUNDS.

GREYHOUNDS.

Suffered as much by incompetent decisions as other breeds have, none have been so mercilessly handled as the greyhounds, one of the most beautiful creations of the dog world. The judging is no better than it was in 1877, and in some instances it is very much worse. I never shall forget when the judge asked the owner of Clio if her brokeu leg interfered with her coursing, and then gave her first prize with a great flourish of importance, nor how Mr. Mason's Dropping Well received a like ribbon when she was two ribs worse off than the uormal supply, nor how a certain Western dog named Major, pronounced by one of the to-day judges as being a perfect world-beater, was knocked to nowhere by such a dog as Bouncing Boy (a better specimen, however, than the redoubtable Major), a dog that could not get above a c. or a he, card on the other side. It took the judge, Mr. Wise, an hour and twenty minutes to judge Drop-

ping Well, and neither judge nor critics missed the absent this. I never felt so sority, as well as indignant, as I did at New Haven, not many years sgo. That magnifeen bitch Mother Demdike, I think, made her debut there. She was knocked all edgewise by a bitch called Begonia, from which the second prize at New York bad but lately been withheld when there were but two bitches in the class; and I shat never forget the peculiar expression and shother Demdike but the control of the co

these hollow excuses we have had no bot weather and the benches at Baltimore were well nigh empty.

FOX-TERRIERS.

If greyhounds have had such queer treatment, what shall I say of the fox-terrier, the gamest member of the terrier family and a perfect little dandy? Through the rivalry of some of our wealthiest citizens we have now among us some of the finest fox-terriers in the world, but unfortunately they were all imported. We have yet to see a real good home-bred one, and the fault lies not in the stock, but in a lack of knowledge on the part of the owners how to mate them properly. The terrier fancy was startled by the advent of a rare good one yelept Blemton Rubicon. The suffix of that name seems to have knocked out a lot of chaps. This Rubicon has gone the rounds of the shows, knocking all comers edgewise, winning hundreds and hundreds of dollars, winning valuable puppy stakes and medals without number. He was a meteor of wondrous brilliancy, but unfortunately, like the Meteor from St. Louis, his light soon dwindled down to a one-candle power. Mr. Belmont, who has many times officiated as judge of this breed of dogs, selected this specimen to accompany Mr. German Hopkins to England, there to compete for rich prizes and show the "Islanders" the sort of dogs we breed here, and which win great prizes under our most experienced judges. Mr. Mortimer speaks of Rubicon, in one of our Western periodicals, as "not going off but just coming on, and will do lots of winning in the best company," and adds that he "made his debut by beating such acknowledged cracks as Dusky Trap, Raby Mixer and Reckoner. Rubicon is a grand puppy, the exact counterpart of his dam Rackel [the italics mine], with more bone and better legs and feet." But when the dog went to England, Mr. Rawdop Lee, one of the best, oldest, most respected and nost trustworthy dog men in that country, and author of the best book on fox-terriers ever written, criticises Rubicon in the London Field as follows:

Blemton Rubicon, who came with considerable reput

Blemton Rubicon, who came with considerable reputation from New York, is very moderate indeed, and barely deserved his high com. He is wide in front, has a moderate body and coat, an excerable stern, and his head and ears are by no means what one wishes to see in a first-class fox-terrier; the fact of the matter is Blemton Racket is the smarter torrier of the two.

Now it is worthy of note that in a report on this dog, when shown at Chicago last year, Mr. C. H. Mason had expressed substantially the opinion given by Mr. Lee. Mr. Mason's report in the FOREST AND STREAM of April 18, 1859, reads:

Fox-terriers introduced us to Blemton Rubicon, that beat all comers at the Saratoga fox-terrier show. We did not expect to see a first-class dox, because nearly every fox-terrier fancier with whom we are acquainted had told us that Rubicon never deserved the prizes he had won; but we certainly did expect to find a much

better specimen. He is not first-class in head, rather full in cheeks, a trifle weak before the eyes and round in forehead. In middle he is at present decidedly light, and if his stern had not heen docked very shorts, would certainly have been over his back. When given the chain he stands neither better nor worse than a bulldog. He has good feet, good legs from the elbows down, well-carried ears and excellent coat. We are quite prepared to bear that he has grown the wrong way. The fact is he was never right.

For this decision, or rather criticism, Mr. Mason was at nee produnced "incompetent and a know-nothing about

For this decision, or rather criticism, Mr. Mason was at once pronounced "incompetent and a know-nothing about fox-terriers."

Well, Rubicon went abroad with Mr. Hopkins, though why he could not persuade his employer that the dog was "very much no good" passes my understanding. To kill two birds with one great stone, so secure did Mr. Belmont and his brother judges feel in their intimate knowledge of fox-terriers, Rubicon was entered both in the open and novice class at the Crystal Palace, London, where Mr. Redmond, a friend of Mr. Belmont's, was to officiate. The cable advice reached us on a certain Tuesday; and the poor Rubicon was neither first, second, third nor fourth in the novice class, Mr. Pim, another most excellent judge, a few days later at another show dismissed him without a prize. Six thousand miles of journeying is a long way to send a dog and then have him beaten by a cast off that one of the best judges in England sold for \$15. What must Englishmen, and Messrs. Redmond and Pim in particular, think of our judges when such a duffer can win everything here, and is called "a grand puppy, the exact counterpart of his dam Rachel, with more bone and better legs and feet." If we are made the laughing stock on the other side as well as the butt of ridicule, we have no one to blame but ourselves. Think of Valet, that grand dog of Mr. Hoey's, getting an hc. card at Hartford, and at the very next show (Newport) where Mr. Redmond (brought over at a great expense in order to insure correct judging gives this very same hc. dog first prize and special for the best fox-terrier in the show! Methinks I can see Mr. Geo. Raper convulsed with laughter as he sees Valet getting his hc. card, and Mr. Redmond shaking from head to foot as Blemton Rubicou is awarded the special over Dusky Trap. Raby Mixer and Reckoner. What, too, would our clever friend Billy Graham have done when he saw Raffle and Diana being placed over Raby Mixer and Richmond Dazzle. I verily to believe he would have said, "Look a-here, mon, what alo o

KENNEL FARE.

BY HIBERNIA.

ONE of the first problems that confronts a beginner in breeding dogs when the occupants of his kennels become too numerous to be fed on the scraps off the table, is how to feed economically and properly.

Of course, there are plenty of manufactured foods to choose from, but these, while very useful in their place, are unsatisfactory as a steady diet. Dogs, like human beings, to thrive need variety. A man soon gets tired of even beef at every meal, and so does a dog of one kind of diet without change.

need variety. A man soon gets tired of even beef at every meal, and so does a dog of one kind of diet without change.

TABLE SCRAPS.

The reason that dogs do so well on table scraps is because of the variety of foods they contain. If the fancier lives where he can obtain the scraps from a hotel, then he can get his dog feed cheaper and of better sort thau in any other way. In making arrangements for this let me give him a hist. Never go to the landlord, but to the steward. The broken victuals are usually the perquisite of the latter, and if the order is given through the landlord you will get them in a very bad shape, all mixed up with egg shells, fish bones, etc., and often stale and mouldy. Tell the steward you want the meat, poultry, boiled or baked fish (never the small kinds with fine bones), bread and such vegetables as are not "mussy." Have the scraps kept in a covered barrel with which it is well to supply him, and delivered to you daily in summer time and three times a week in cold weather. If the hotel has no wagon the steward can make arrangements for the delivery of the scraps with some of the tradesmen who bring the supplies. I have arranged on this plan with a hotel in my own city for a barrel of scraps daily. The cost is \$3 per week and \$1 for delivering them. This is ample for sixty dogs of 'the size of a setter. Can any one feed dogs cheaper than ten cents a head per week? I am sure there is no food which will keep them in such good health and condition. Their muscle is hard, coat glossy, breath sweet, and I seldom have a case of eczema. If the kennels are situated at a distance from the city or summer resort, of course the feeding of table scraps is out of the question. Even then the fare can be varied with as little outlay as if one kind of food was constantly used.

COOKING UTENSILS.

COOKING UTENSILS.

In the first place, if you have a number of dogs you want to equip your kennels with a farmer's boiler, which comes in various sizes and burns either coal or wood. Be sure to get one rather too large than too small. Have a tinsmith make a galvanized sheet iron pot to fit inside of the boiler proper, so there will be a space of two fiches all around for water. This pot should have a wide, double thick rim all around the top to prevent it from resting on the bottom of the boiler. You can then cook anything without closs watching and constant stirring to prevent the food from burning. In addition you want a watertight trough of wood or metal into which the contents of the boiler can be emptied to cool or to be mixed with bread or other ingredients which do not have to be cooked. For this I know on this word in this trough there is nothing more suitable than broad-tined potato fork. To lite out the meat and bone from the boiler without disturbing the liquor I recommend a shovel made of strips of metal instead of one solid piece. It can be bought at any hardware store. A large strong iron ladle for soup and meat liquors will be the only othe utensil you will require for your cooking arrangements.

FEED AND WATER PANS.

For feed pans I like the ordinary tin wash basins that cal be bought for ten and fifteen cents each: they are light, can be placed one inside of the other when not in use, an therefore require very little space. To prevent them from the recommendation of the ordinary of the recommendation of the ordinary of the recommendation of the ordinary
In the first place, meat of some sort should be an ingred ent of all food for dogs. Without it grown canines will no keep in good health, nor pupples after they are a few month old develop into strong healthy specimens. You can arrang with the nearest butcher for his offal and waste meat, suc as heads, feet, udder, stomach, tails, lungs, etc. The hooft which contain neatsfoot oil, should be taken off, as this oi

is very apt to cause diarrhoa. The stomach or tripe should be thoroughly washed and cleaned before being put into the boiler. As soon as it becomes known that you have a kennel of dogs the farmers will bring you every now and then a horse, owe or sheep that has broken a leg or met with some other accident necessitating its being killed. In cold weather this will form a valuable and cheap addition to kennel fare, as it can be kept for a long time. Even in the summer, if you will take the trouble to salt the meat down, it will come in very useful when it happens that you are disappointed in getting the customary supply from the butcher. Never under any circumstances feed your dogs on the flesh of an animal that has died from disease of any kind. In regard to horse flesh I want to give a word of caution. Be very careful how you use it. When fed fresh and in the same quantity as beef it will cause dogs unaccustomed to its use to scour badly, and their evacuations will have a very disagreeable odor and in color and consistency resemble tar. I always use it very sparingly, never feeding more than one-half of the weight that I would beef, and in addition take the precaution of keeping it four five days before feeding it.

FISH AS DOG FOOD.

In some sections of the country heads, etc., of sturgeon, dog sharks, etc., can be had cheaply. There is no better animal food for dogs, and as they can be bought for a song, they should take the place of meat in a great measure.

PRESERVED MEATS AND FISH.

When the kennels are so situated that it is impossible to procure a regular supply of fresh meat, it is necessary to substitute animal food that has been preserved by heat or pickling. Desiceated meat (meat meal) can be bought from dealers in fertilizers. It consists principally of the flesh of horses, but is none the less valuable for that. Even if the flesh of animals which have died from disease is mingled with it, the great heat to which it is subjected in the process of desiccation kills all the disease germs. This ground flesh is the meat ingredient of nearly all dog biscuit. Beef and pork scraps, often called "cracklings," can be bought cheaply. Before being used they should be soaked at least twenty-four bours, otherwise it will take too long to cook them in the boiler. Pickled pork that is a little "oft," salted beef not up to the standard, fly-blown hams, shoulders, bacon and dried beef can sometimes be had for a trifle, while rusted fish and smoked fish not fit for human food are always to be found by three who will search for them among the grocers. These are all useful, and it soaked twenty-four hours, and the water changed two or three times, and then put in the boiler with a peck of broken charcoal, they will come out sweet, and be much relished by the dogs. This ends the list of all the available animal food I know of.

DOG VEGETABLE FOODS.

DOG VEGETABLE FOODS.

Of course the dog should be fed on something besides animal food. In fact, not over one quarter (in weight) of his fare should be of this sort.

The best of suitable vegetable food is as good for a dog as for a man, and with both, bread stands at the top. If there is no baker in your vicinity you can readily arrange for a supply to be shipped regularly in bags from the nearest city. Of course we are speaking of stale bread, which can be had at prices rauging from 25 to 80 cents per barrel. A two bushel bag will hold a barrel. In hot and muggy weather you should have the baker to cut the bread into slices and thoroughly dry it in his oven, otherwise it will mould, often within 24 hours. Ship biscuit (hard tack) are not expensive, and if placed in a dry place they will keep indefinitely. It is always best to have a barrel of these for a case of emergency. Broken crackers and cakes can sometimes be bought low.

Flour of good enough quality for dogs can be bought at prices varying from \$2.50 to \$3.50 per barrel. Corn meal is valuable in winter, but we advise you to use it very sparingly during the summer, as it is apt to cause skin trouble. Coarse oatmeal, while comparatively expensive, is one of the most valuable cereals that can be fed to dogs. Broken rice, damaged peas, beans, etc., are very valuable dog foods, and can be bought cheaply. Linseed and flaxseed meal are very fattening and make glossy coats, but they should be fed only very sparingly and not oftener than once a week. When I feed either I use a teaspoonful of meal for each dog, putting it into the boiler and cooking it with the regular food.

GREEN VEGETABLES

GREEN VEGETABLES.

Green vegetables are very useful at all times of year, but especially so in the spring. There are scarcely any that cannot be fed with beneficial results.

Onions and onion tops are excellent. In the spring of the year, when you will need them most, sprouted onions can be bought by the barrel at almost any price you choose to offer. Cabbages are cheap and good. I know the owner of a large kennel who every fall buys several thousand soft cabbages, for which he pays \$5 to \$10 per thousand, and puts them in pits so as to secure a sure supply of green vegetables for his dogs during the winter. Beets, mangles and turnips are about the cheapest sort of vegetable food I know of. Spinach and kale too are cheap and wholesome. In the fall it is always advisable to lay in a supply of white and sweet potaces. The small size of the former, known as hog potatoes, can be bought at ten or fifteen cents per bushel, and are just as valuable for dog food as if they cost four times the money. The unmarketable sweet potatoes in the sections where they are grown can be had just as cheaply. I have fed my dogs cooked apples, and they relish them. Carrots and parsnips are two other cheap sort of vegetables. I have mever used pumphin or squash, but I should think they would be most excellent, especially the former, if \$fed\$ to growing puppies, on account of their well-known anti-worm properties.

MILK.

Of course the puppies must have milk, but where the kennels are situated in a dairying country and it can be had cheaply, milk is one of the best possible things a grown dog can have for a change. Skimmed, sour or in clabber, it is all equally relished and beneficial. Dogs can soon be taught to drink buttermilk, and puppies that have it two or three times a week seldom are troubled with worms. If you are near a creamery you can procure it very cheaply.

This closes the list of cheap and available raw materials for kennel fare. Some time, soon, I will tell you how to prepare and serve them.

THE MARYLAND CLUB DELEGATE.—Editor Forest and Stream: When I said last week that Mr. Peshall's credentials from the Maryland Kennel Club were "evidently insufficient" I did so on the strength of the reports of the A.K.C. meeting. Since then, having seen the copies of the original paper, my statement must be qualified. In a body that really and houestly does what the A.K.C. pretends to do—considers the welfare of American dogdom in general; in a word, the A.K.C. of Mr. Elliot Smith or Mr. W. H. Child—such a paper would have been accepted as fully sufficient; but I can see how in the present personal A.K.C., existing for the gratification of personal piques, the narrow technicality that the Maryland K.C. could only be represented by its original delegate until that delegate resigned, could have been used as a shunt to get rid of "a disagreeable person," and with due respect to the Maryland Club, I still think it would have been less intolerable for the meeting to have done this, than to adopt the course they did.—W. WADE (Hulton Pa., June 6).

DOGS OF THE DAY.

THE stories respecting the destruction of the Radnor Hunt foxhounds telegraphed from Philadelphia on Saturday evening had more truth about them than is usually the case, when rabies is the subject on which the daily reporter exercises his imagination and his pencil. The story appeared only in The Call on Saturday afternoon, Mr. Ed. Cole, of that paper, being the lucky man to stumble across the "good story." I have known Mr. Cole ever since I came to the city of Brotherly Love, and to use one of his own expressions, "what he says goes." He is one of the somewhat limited number of reporters who do not handicap the truth by a load of fiction. As by the time The Call story was out it was impossible to see the master of the hunt, Mr. Chas. E. Mather, all the local Sunday, and the New York papers had only Mr. Cole's plain statement of facts to go by and were thus happily confined to the truth.

To-day (Monday) I called upon Mr. Mather, and he gave me a few additional particulars. The hound that started the trouble at the kennel was a native bitch which as long ago as last March was bitten when out hunting. Before she died she ran amuck through the kennel. After her death another bitch showed symptoms of having the disease, and it was then that a new kennel man took charge, Frank Smith, who had taken hold the week after New York show, only remaining a month. Mr. Mather consulted the book authorities on the subject of rabies, and found that he had samples of both dumb and acute rabies. Matters went along from bad to worse, the English hounds showed that they had not escaped, and after more than half the pack of thirty couples had succumbed to the disease, it was decided that nothing but complete annihilation of the entire pack would do. Under the direction of Dr. Rush C. Huidekoper, formerly dean of the veterinary department of the University of Pennsylvania, a powerful poison was mixed with the hounds' food, and soon all was over. Not a dog on the place was left alive, terriers and pets all suffering alike. Happily no one was bitten at the kennels, and from the time of the first attack but one dog got away from the kennels. That was an old dog which was kept to run with the puppies. He never was known to stray away, but when left out one day by himself to let him nibble a bit of grass he started off. He was pursued on horseback and run down after an eighteenmile chase, which distance he covered in two hours. When caught he was at once shot. Mr. Mather said that the marked symptoms in the great majority of the cases was the desire to bite things, nothing that could be destroyed being safe from their teeth.

Within half an hour of leaving Mr. Mather I ran across Frank Smith. Frank is well known to exhibitors as a handler of Philadelphia dogs, though he did not follow the shows this year. He said he did not know anything about the bitch having been bitten when out hunting, but that about a week before he left the kennel she was acting strangely. She wanted to fight every dog in the kennel. The bitches she did not touch so far as he noticed. The next day she was worse, and he got so tired leaving some work he was doing and going to the kennel to stop the fighting that he handly got a lead, put it on her collar and took her to the house, where he fastened her to the staircase. Within two hours he found her dead, but she had meanwhile gnawed great chunks out of the woodwork below the stairs. Smith further told me that she would rush at the biggest dogs in the kennel and knock them over with ease and then tear and bite at the body. He noticed this particularly, because these American hounds always fight at the head. When any of the English dogs got against the iron railing which separated the kennels the bitch would go for them too, biting between the bars.

"How was it that you wrote Mr. Mather that the bitch died in a fit?" I asked. "Well, I did not want to put in writing exactly what I had begun to think was the real cause of her death. I did not think it wise, not knowing who might get the news. When Mr. Mather came out to the kennels, I told him that although I had never seen a case of rabies in my life, I had come to the conclusion that the bitch had died from it. Before I left the kennels, another bitch was beginning to act strangely, and I told the new kennel man, who took my place, about her. I don't know anything more after that. We had 68 dogs all told at the kennels."

I made on effort to see Dr. Huidekoper, but did not succeed, but I hope to be more successful to-morrow (Tuesday). I must say that seems to be a very clear case of rabies judging by what both Mr. Mather and Frank Smith say, and Dr. Huidekoper's action in advising the destruction of all the survivors further strengthens it.

On Tuesday evening I found Dr. Huidekoper at home and heard all he could tell me about the mad dogs. Dr. Huidekoper was only at the kennels on the occasion of his advising that the thirty dogs still living be destroyed. None of them then showed any symptoms of rabies, but matters had come to such a pass that it was unsafe to take any risk with them. "There can be no question, taking the statements of those who saw the dogs, Mr. Mather and his kennel man, that this was a clear case of rabies," said Dr. Huidekoper. "I did not see one of the mad dogs. I have heard about the trouble, and I was promised one of them, but when the next one had it I was unfortunately at Boston, and as a party was going out to the kennels it was decided to destroy the animal to stop his howling."

I drew Dr. Huidekoper's attention to the statement of Namquoit regarding the epidemic down East, which Namquoit thought might be dumb rabies. For answer I got the information that in the Doctor's practice he had had more cases of dumb rabies than the other, probably in the ratio of three out of five or even five out of seven. Dogs affected with dumb rabies cannot bite nor chew things up. "A dog looks as if he had a bone in his throat and cannot shut his mouth when he has dumb rabies. In fact people bringing such dogs to me almost invariably in describing the case say they thought the dog had a bone in his throat." It is therefore pretty evident that the Canadian and Eastern cases are some form of rabies other than dumb.

Regarding the biting at the body, spoken of by Frank Smith, Dr. Huidekoper said: "The disease is dementia, and such things are to be expected. A man brought a dog to me one day on a string. I saw from the look of the dog that he had rabies. The man told me that the dog would sneak behind him and try to bite him, and every time he turned and faced the dog it would lie down, only to sneak away and get behind him again."

Mr. Mather had said to me that in Delaware county in this State there was a good deal of rabies. I asked Dr. Huide-koper if he could verify this, and he said that he had heard that there had been cases there for some time past.

The Maryland Kennel Club held its meeting last week, and its secretary was instructed to write to the A.K.C. secretary and get from him official information in regard to the treatment of the Maryland Kennel Club delegate at the meeting of May 22. A special meeting of the Md. K. C. has been called for July 10 to take up the case. From what I learn as to the feeling of the majority of the members I

gather that a vigorous protest will emanate from the Monn mental City.

For a year or two the New Jersey Kennel Club has not been in a very flourishing condition, members dropping off or being dropped for failure to respond to the call of the treasurer. Within the past few weeks, however, there has been quite a revival among the old members, and already I hear murnurings about a show, some say this fall, some say next spring, and the location is anywhere east of the Orange Mountains and west of the Hudson. The N. J. K. C. was a real liveorganization at one time, but got hard knocks at its Newark and Waverly shows, and dropped out of the business.

This reminds me that I have quite unintentionally hurt the feelings of one of the best of the many good Jerseymeu. the Spaniel Club president, by giving a portion of a letter which was meant as a return for the compliment of my making inquiry after his health and not for me as a newspaper correspondent. The trouble is not with me, but with the popularity of the S. C. president. John Jones, for instance, might have broken every bone in his body and telephoned the consequences across the Styx without a line appearing regarding his troubles, but we all wanted to know, you know, and it would have been cruel not to have drawn upon the personal letter for the benefit of the many who were still in the dark as to cause and effect.

Mr. Secretary Vredenburgh has gone a-fishing. If he doesn't catch anything while away, I understand he will when he gets back, but there is no occasion for him to hurry home.

when he gets back, but there is no occasion for him to hurry home.

Your always interesting correspondent "Namquoit" said a week or two since that I had erred in saying a certain St. Bernard was not American-bred. If "Namquoit" will refer to what I wrote he will find that I was asking for information and not giving any opinion. Miss Whitney, in her report of New York show, said—I quote from memory: "—, having been born in this country, and therefore American-bred." To this I responded by saying that the A. K. C. had not got beyond saying that the produce of a bitch sent abroad to be bred and whelped in this country was American-bred. "Namqnoit" now says that the dam of the St. Bernard Club rules. Perhaps the St. Bernard Club rules. Perhaps the St. Bernard Club rules. Perhaps the St. Bernard Club has a rule as elastic as that, but I do not think it is within the province of any one club to frame such a rule, for the reason that uniformity is essential in such things, and the A. K. C. is the one to make a rule for all. Some members, at least of the collie club committee, held the opinion that Clipper was not American-bred, and for that reason, although opposed to my own individual opinion, I did not show him as such. At the last Philadelphia show, and while I was engaged elsewhere in judging, Mr. Carswell, quite unknown to me, took Clipper into the ring for an American-bred prize. When he so told me I said I doubted his getting it, as I knew Mr. Shotwell had a year or two before said such dogs as he were ineligible. No protest was made, as I had expected, and not wishing to miss the opportunity of getting the point decided by the highest authority, I asked the Philadelphia Club to accept my protest and refer the matter direct to the A. K. C., so as to go before that body without the prejudice of a decision on its part. This was kindly done, and the full facts were given to the A. K. C. Mr. Anthony at once said that in place of throwing obstacles in the way of an owner sending a bitch, to England or anywhere else

Mr. Mayhew has written a long letter to a contemporary regarding a decision of the A. K. C. at its last meeting regarding the disposition of a prize belonging to the St. Bernard Club. He does not hold with the decision, but he has falled to obtain the full facts of the case. We were deciding upon a stated case which precluded investigation. The St. Bernard Club gave the facts and asked for an opinion. The facts were that a prize open to members only had been awarded to a dog owned by the wife of a member, and the St. Bernard Club had decided that the dog was not eligible. The question submitted was whether the prize could now be awarded to a nother competitor, no reserve number having been given, or did it revert to the donor. The A. K. C. decided that the cup could not be given to another competitor in the absence of a reserve, and naturally it reverted to the St. Bernard Club.

Mr. Mayhew draws attention to a case in which he was interested in England, when a judge was subsequently written to for a second award, his first winner being disqualified. Such a course is not admissible, for a judge ceases to be such when a show is brought to a close. It is analogous to a racing judge, having placed three horses, one of which is subsequently disqualified. He cannot then place a third. His term of office is over and the vacancy cannot be filled. Mr. Mayhew also quotes the case of Polyphemus, the one-eyed St. Bernard at Edinburgh show. In this case, however, the judge, Mr. Sidney Smith, changed his award before he had left the ring. I judge from what Mr. Mayhew says that when the case was taken to court it was there ruled that the first award must stand. It must be understood, however, that there was no question as to the eligibility of Polyphemus, nor was there any deception on the part of the owner. The judge was supposed to have been aware of the defect in the dog; if he was not he did not exercise much care in examining the dog. This legal decision, therefore, does not touch the St. Bernard Club case. Another case quoted is that of a collie dog shown as a bitch and awarded a prize. By some means the judge found out his error before the show was over and advised the committee to chauge the award. Here again we have the clear fact of the animal's ineligibility.

Clashing dates will come to the front again this fall when

Clashing dates will come to the front again this fall when on Sept. 2 to 5 we have the Detroit, Youngstown and Wilmington shows. With exhibitions given in connection with fairs this is unavoidable, and we can only make the best of it.

In view of the fuss made about the Maryland Kennel Club delegate at the last meeting of the A. K. C. I would draw attention to an announcement made in the Gazette since to hand. In the list of members and delegates appears "Maryland Kennel Club. Delegate, Alexander Brown, Baltimore, Md."

DOGS.—NALDIRES medicated SOAP for washing dogs, destroys all irritating insects, removes doggy smell and leaves the animal refreshed and happy. This prize medal soap, used by all the leading owners in Europe, is now sold by Park & Thiord, McKesson & Robbins, E. Fougera and all Druggists.—Adv.

PACIFIC COAST FIELD TRIAL DERBY.

Editor Forest and Stream:

The Pacific Coast Field Trial Derby closed on June 1 with 26 entries, 7 pointers, 15 English setters, 2 Irish setters, 1 Gordon setter, and one dog breed not stated. All were whelped in 1889:

whelped in 1889;

POINTERS.

LADY L. (D. A. Leonard, Bakersfield), bitch, Aug. 20 (Professor—Gracie Bow).

MABEL B. (G. W. Bassford, Suisun City), bitch, Aug. 20 (Professor—Gracie Bow).

NED (R. E. Wilson, San Francisco), lemon and white dog, Sept. 4 (Roscoe—California).

NICK WHITE (J. M. Bassford, Jr., Vacaville), white and lemon dog, Aug. 8 (Scout Croxteth—Blossom).

OLD BLACK JOE II. (J. E. Watson, San Francisco), black dog, June 11 (pedigree not stated).

QUEEN'S LAST (J. M. Bassford, Jr., Vacaville), liver and white bitch, July 18 (Mountain Boy—Beautiful Queen).

RENA B. (G. W. Bassford, Suisun City), liver and white bitch, Aug. 8 (Scout Croxteth—Blossom).

ENGLISH SETTERS

bitch, Aug. 8 (Scout Croxteth—Blossom).

ENGLISH SETTERS.

DANDY R. (M. D. Walter, Galt), white, black and tan dog, Sept. 1 (Rodney—Phyllis II.).

DASHING BROLLA B. (A. Peri, Marysville), black and white dog, Oct. 9 (Jasper B.—Pride).

ELITE (G. G. Goucher, Fresno), orange and white dog, May 8 (Loadstone—Enid).

EL RAY (F. B. Dexter, Fresno), orange and white dog, May 8 (Loadstone—Euid).

FRANCE R. (J. S. Dunham, Stockton), white, black and tan dog, Sept. 1 (Rodney—Phyllis II.).

LEO R. (M. D. Walter, Galth, white, black and tan dog, Sept. 1 (Rodney—Phyllis III.).

LORD CHUMLEY (N. Rideout, Marysville), blue belton and tan dog, May 7 (Loadstone—Janet).

MANFRED (California Kennels, Sacramento), black, white and tan dog, July 16 (Harold—Miss Druid).

PETRONELLA (California Kennels, Sacramento), orange and white bitch, May 15 (Harold—Sunlit).

PIERRE (J. W. Harper, Suisun), ozange belton dog, May 16 (Harold—Sunlit).

PIERRE (J. W. Harper, Suisun), ozange and white bitch, June 16 (Loadstone—Sweetheart).

SUBBET (D. M. Pyle, Bakersfield), orange and white bitch, June 16 (Loadstone—Sweetheart).

SUNBET (D. M. Pyle, Bakersfield), orange and white bitch, June 16 (Loadstone—Sweetheart).

SUNBET (C. C. Chipman, Sacramento), orange and white bitch, June 16 (Loadstone—Sweetheart).

IRISH SETTERS.

Rio (E. G. Schmiedell, San Francisco), red dog, July 30 (Mike T.—Lady Elcho T.). Shaun Rhue (E. J. Roy, San Francisco), red dog, May 30 (Nat Glencho—Red Fanny).

GORDON SETTERS.

F'ANNY (R. Liddle, San Francisco), black and tan bitch December (pedigree unknown).

NOT CLASSIFIED.

AL FARROW (C. Studarus, Routier's Station), Nov. 20 (pedigree not given). H. H. BRIGGS, Secretary.

DOG TALK.

THE news from this section this week is mostly bad. Mr. John Williams, of Somerville, while taking a walk Sunday, had the misfortune to lose his promising black cocker spaniel puppy Ardell, by Wilkes Obo out of Gypsey Obo. A horsecar ran over her killing her instantly. He has since purchased Mr. E. L. Crowell's Alda, a bitch of the same breeding of a former litter, in whelp to Prince Obo. He has sent his English setter bitch puppy Princess Royal (Royal Prince II.—Pansy) to his trainer, Mr. Taylor in Virginia.

The Fleet View and Reading Pointer Kennels have had the misfortune to lose five of their pointer pupples the past week, three of them being by Nick of Naso out of Belle Randolph.

The secretary of the English Setter Club reports several more applicants for membership.

Messrs John and D. A. Williams had the misfortune to lose their beagle bitch Trixie last week. She was by Kisco out of Lady, and was in whelp to Frank Forcest. She died in parturition.

Mr. Fred Frazier, vice-president of the Setter Club, and an all-around dog lover, is building and furnishing a room in the rear of his cigar store under Proctor's Opera House, Lynn, Mass., for the benefit of the Lynn dog men. All the leading papers will be on file there, and dog men who visit Lynn are cordially invited to drop in and make themselves at home. I made a short call there the other night, and the air was fairly blue with gunpowder smoke, feathers, No. 8 shot, etc. As I strolled down the street I could still hear the music of C. K.'s yellowleg call.

Another bud of promise in the canine world is young Mr. Kent. He has recently started the Merry Mount Kennels at Wollaston Heights, Mass., and has some excellent rough-coated St. Bernards. Among them Berlin (Hector—Bernie), winner of fourth at Boston; Riola, an orange bitch, and Chequassett Marigold, in whelp to Beauchamp.

The Woburn Fanciers' Club are talking of holding a bench show in connection with their poultry show at Woburn, Jan. 21 to 23, 1891.

In my note re Divas's puppy last week the printer translated my "best Sir Bedivere puppy" into "best St. Bernard puppy."

We think the English Setter Club of America made a judicious selection in offering the presidential chair to Mr. F. W. Whitlock, of Waterbury. He is well known as an officer of the Waterbury Fish and Game Club, and of the Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish, a former member of the Hartford Kennel Club, and city surveyor of the city of Waterbury. He has been from his youth an admirer and breeder of the English setter, and owns at present writing Berkshire (Foremost—Norma), Beauty of Orleans, a fine liver and white bitch in whelp to Paxtang, and a black and white ticked grand daughter of Dashing Monarch, in whelp to Berkshire.

Lynn is fast filling up its ranks with good English setters.
Mr. Henry Wilson has purchased another of the Buckellew
—Vic Vic litter, a promising bitch puppy. Mr. Westbrook
has left an orange and white dog of the same litter with Mr.
Wilson to complete his education.

When Mr. H. B. Tallman't buff cocker bitch Bessie was

bred to Mr. C. G. Browning's red cocker Cherry Boy, I had quite a curiosity to know what color the pups would be. I learn to-day that she whelped six dark red puppies; no blacks or buffs.

I see by the Hunde Sport of May 7 that the Berlin dog show rivals that of the Westminster Kennel Club. The entries number 1,202, of which number the English setters constitute 24, Gordons 26, Irish 12. pointers 58, griffons 20, dachshunde 126, fox-terriers 96, Newfoundlands 25, rough St. Bernards 48, smooth St. Bernards 30, mastiffs 10, bull-dogs 21, Dalmatians 8, poodles 30, spitz 20, schipperkes 2, bull-terriers 8, black and tan terriers 21, schweisshunde 14, windhunde of the various varieties 234. Among the specials I notice one of 200 marks (about \$50) for the best hunting dog in Würtemberg, and others of 100 marks and less. The Germans are not much behind the English in the number of entries.

About everybody else has had a word to say about the Stud Book, and now I think it is my turn. I like to see independence in all things. I would not like to see the American Kennel Club Stud Book the exact copy of the English Stud Book, but I would like to have my own country come somewhere near the mother country in this respect. Frankly, I think the Stud Book a disgrace to the American kennel world. The English Stud Book not only gives the winnings of the dogs entered, but also the winnings for the current year of all former entries, together with a complete list of all winnings at all shows held during the year under K. C. rules, all winners at field trials, a complete list of recognized shows, a list of regular and associate members, and the rules governing bench shows and field trials. And again, what winnings are published in our Stud Book are not correct. I can name several that are in this issue that were won at small "hen shows" not under the rules of any kennel club.

The English Setter Club of America will hold their first annual meeting at the Quincy House, Boston, Mass., on the evening of July 1. There is some very important business to be brought up at this meeting, and every member should be present. The adoption of a standard and amendments to the constitution will be in order.

When one compares Sir Tatton, Belthus, Bohemian Girl, Roger and Roderigo, does it not look as though an English setter club was sadly needed to at least try to secure a more uniform appearance? A foreigner might well ask, which is the setter?

Why is it nobody has brought over any Landseer Newfoundlands? They are a noble breed, black and white in color, nearly as large as the St. Bernard and full as intelligent.

We are sorry to hear of the illness of Mr. Chas. Ackerly, of the Iroquois Kennels, Tonawanda, N. Y. That he may soon be about again is the earnest wish of NAMQUOIT.

COLLIE IMPORTATION.—We received a call last week from Gen. Henry Mac Iver, of England, who brought over the collie dog Brankie, a very nice sable and white of excellent breeding, his sire being the well-known Metchley Wonder and his dam Miss Charlemagne. He was not in first-class condition owing to his recent voyage, but still he looked well enough to give some of the cracks a good fight for a place. He should do good service in the stud as he is closely related to a large number of English winners.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

Bifle and Trap Shooting.

RANGE AND GALLERY.

A WORTHY REPRESENTATIVE.

A WORTHY REPRESENTATIVE.

SAN FRANCISCO, May 24.—Philo Jacoby, the well-known sportsmen and rife shot, left this city this evening in company with Mr. John Utschik, both representatives of the California Schnetzen Club, The gentlemen are on their way to the great Enropean shooting festivals which take place in Berlin, Fraunfeld, Hanover and Bremen. They will shoot as the representatives of the Schuetzen Club of this city, and their many friends expect that they will return home crowned with lanrels of victory, Jacoby has competed with the crack European rifle shots of Germany before, and distinguished himself on more than one occasion by carrying off first benors. A short sketch of the life of the man, who is known by every sportsman in this city, will interest the lovers of rifle-shooting.

Philo Jacoby was born in Pomerania, Prussia, and arrived here June 18, 1859, as a sailor on the clipper-ship Whirlwind. He first learned to handle the rifle as a member of the San Francisco Schuetzen Club in 1864, Joseph Hug and John Baen being his teachers. In nine months after joining the club he took second prize, making most bullseyes in the yearly festivals, Joseph Hook being first. Severin, Moirs, Schneider, George Schmitt, and other good shots, gave him odds, and were beaten even.

In 1865 he shot a 600-yard match (the first long-range match in California) with Moirs and Schneider, and won. He also won the return match, the same distance, in 1866. In 1868 he went to the East and Germany. He took third place at the great shooting festival, and won many of the principal prizes. While in Berlin he competed with the needle gun against military marksmen, and won. He received from the Prussian Government a needle gun, the first very brought to America—which he owns yet—and 200 cartridges. In 1870 he went East and became shooting king of the great festival in Washington, D. C.; won first prize in the New York prize-shooting festival in Breslau; won third goblet in Solothurn, second grand prize in the honovary target, beside

New Jersey and New York will also be well represented at the shooting festival of the North-German Schuetzenbund to be help in Berlin on July 6 to 14. This is expected to be one of the biggest affairs of the kind ever held, and shooters from every country in the world will be represented by its most expert marksmen, and the competitions will be very close. Newark will be represented by August Begerow, first shooting master of the Newark Shooting Society, Otto Itrauss and Fred P. Laute, of the same society. Gottfried Krueger will also go, although not as an active shooter. Mr. Kranss sailed on May 23. Mr. Laute sails with the Independents to-day, as will Mr. Krueger, while Mr. Begerow will start on June 19. The first regular excursion party to start for the Fatherland was the New York Central Schuetzen Corps, which left New York independents will start to-day, and the New York Schuetzens on the 19th.

land was the sort of the Miller New York Schuetzens on the 19th.

With the Independents will start to-day, and the New York Schuetzens on the 19th.

With the Independents will go the experts who will be expected to sustain the honor of the American eagle. These will comprise among others, the following shooters who are well known to Newark rifemen: Bernard Wat.ther, president of the Zettler Rifle Club, who now holds the American record for 100 shots on the Standard American target with a rifle, under N. R. A. rules; David Miller, president of the Miller Rifle Club, of Hoboken, a very fine marksman; Gebhardt Krauss, Willamsborn Schuetzen Verein; Alex. Stein. Seventh Regiment (N. Y.) Rifle Club, an expert military, sporting and pistol shot; Gustave Homrighansen, Baltimore Schuetzen Verein; Fred. P. Laute, Newark Shooting Society. Messrs, Miller, Stein, Krauss, Laute, Begerow and Homsonton.

Verein Alex, Stein, Seventh Regiment (N. 1.7 tones controlled by the pert military, sporting and pistol shot; Gustave Homrighansen, Baltimore Schnetzen Veren; Fred. P. Laute, Newark Shooting Society. Messis, Miller, Stein, Rrauss, Loute, Begerow and Homrighausen will devote themsolves to the various targets whereon they can do deliberate shooting, while Mr. Walther will go in the competition for the houor goblets, to win one of which it is necessary to score 180 points at 175 meters distance inside of from 14 to 18 minutes.

Gus Zimmerman, of the Bullshead Rifle Club, of New York, sailed on Wednesday, May 28, for Germany. For rapidity and accuracy with a single-loader Mr. Zimmorman is undoubtedly the champion of America, his record of 346 shots and 601 121n, bullseyes in three hours never having been approached. He is booked as a sure winner of the premier honor goblet, this being the prize of all others that is coveted. Recently at Cypress Hills Mr. Zimmerman, while shooting under German rules, made three trals on the point target; in his first he scored 180 points in 18 minutes, in his second trial in 12½ minutes, and on his third trial in 13½ minutes. Mr. August Begerow will take his family with him, and will remain abroad until Oct. 1.

The Americans will be hand-omely received on the other side, and innumerable festivals and receptions have been arranged in their honor. At Bremen they will be received by the Bremen Rifle Association. Thenco they will go to Hanover, where they will attend a prize shoot on June 23 to 28. On July 2 the severa corps will go to Berlin, where they will have a grand reception The shooting festival will last from July 6 to 13.

NEW YORK RIFLE CLUB.

NEW YORK RIFLE CLUB.

The New York Rifle Club has concluded its in-door competition on the 100ft. range of the German-American Shooting Society at 12 St. Mark's Place, New York. The long-distance handicap competition will be continued at Creedmoor, i. l., during the summer, and on the following dates: June 7, 14, 28; Ancust 9, 23 and 30. The in-door match was also a handicap match, but as proficiency of the members at the short range was not well known, which all members statted from scratch, the man making the highest score being handicapped 10 points, while the man with the lowest score received an allowance of 10 points and migure plan, after which all members statted from scratch, the man making the highest score being handicapped 10 points, while the man with the lowest score received an allowance of 10 points at the next shoot. The shooter who had the score nearest to the mean between high and low was handicapped 5 points at the next shoot. The prizes were three medals of handsome design, the first, of gold, 66 go to the man making the highest score the greatest number of times the second, of silver, with heavy gold rim, for the shooter who made the score nearest to the mean between high and low the greatest number of times. The shooter who made the score heavy sold rimes, the there medal, not only handsome, but also valuable, to be won by the man who made the lowest score the greatest number of times. The medials were won as follows: Gold medal, T. J. Dolan three times, V. B. Daly twice; M. C. Herrington, J. S. Case, A. H. 1 shell, C. C. King, J. N. Ostrom and Dr. E. Chadbourn one cach, Dolan winning the medal for good. The stiver medal went to M. Ol Herrington, who captured it four times. The other winners were King twice; isbell, Daly, Gensch, Huyler, Dr. Chadbourn, each once.

The winner of the leather medal was Mr. A. L. Huyler, three times; Dolan, Herritegton. Case, isbell, King, Macauley, Daly, Shorkley, all won it once. The only two members who did not get one of the medals at least once during th

BOSTON, June 7.—The Masschusetts Rifle Association held its regular weekly shoot to-day with a large attendance, and some fine scores were made at rest and off-hand. The shooting conditions were good. Mr. Dohrman won the bronze victory medal. Next Saturday the spring meeting of this Association will begin at 7:30 A. M. and close Tuesday, June 17. There will be four matches, with over \$500 worth of prizes, matches for rest, off-hand, pistol and military rifles. Following are the best scores made to-day, distance 200yds, Standard Americau target:

KING CITY, Ont., June 3.—Bradford, Aurora and King City shot an association match under the rules of the O. H. R. A., on the range of the latter, to-day, The day was fine, the shooting was good, and it was the best match of the season. The three clubs enjoyed themselves as only rifemen can. The score is as follows: Bradford 838, King City 827, Aurora (8 men) 564. The next match will be shot at Anrora, Tuesday, Sept. 2.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are par-ticularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

June 9-13.—New York State Association Tournament, at Lyons, N. Y. W. S. Gavitt, Sec'y.
June 10-13.—Thirteenth Annual Convention and Tournament of the Iswa State Association for the Protection of Fish and Game, at Davenport, Iswa. J. W. Howard, Secretary.
June 17.—Middlesex Gun Club All-Day Shoot, at Dunellen, N. J. Live and clay bird race. Ten bird race, \$10 cntry.
June 17-20.—Tournament Rocky Mountain Sportsmen's Association, at Cheyenne, Wyo. W. E. Ostrander, Sec'y, Denver, Colo. June 24-27.—Tournament at Dayton, Ohio, under management of Rollo O. Heikes and W. Scott McDonald, \$1.000 guaranteed, July 9-10.—Springfield, Mass., Shooting Club Tournament, with gnaranteed purses. H. A. Penrose, or Corry, Pa., Manager.
July 4.—The Red Hook Gun Club's Tournament, at Red Hook, N. Y. R. J. Carroll, Sec'y.
July 15-17.—Saratoga Gun Club Tournament, at Saratoga Springs, N. Y. \$1,500 guaranteed. All money prizes, no merchandise. W. A. Coster, Sec'y.
Aug. 18 23.—Third Annual Keystone Tournament, at Corry, Pa. Sept. 9-12.—Cincinnat, O.—Al Bandle's Sixth Annual Live and Artificial Shooting Tournament, open to the World. Avenue Ball Park, Sept. 9, 10, 11 and 12.—Guaranteed Purse. Wm. E. Limberg, Sec'y.

The desired show that part of places and college and a state of the part of th

thorough concentration of the mental faculties then become the attributes of a good shot. Rolieved of the brutality of slaughtering fledglings, pigeon-shooting becomes even more than a sport. It is an art, and as such deserves the appellation it has received, "the sport of gentlemen."

But as the conditions of live-bird shooting vary with the season, and, to a vast extent, with the weather, no accurate classification can be based upon a shooter's record. Therefore, the American Shooting Association's plan will not work on live birds ander existing conditions.

The fact is, that the present system of shooting live birds is, in my opinion, radically wrong. It is based upon the English plan, and is wrong for the reason that the English conditions do not obtain here. In English or this for nigeon shooting are of a peculiar breed, and are trained especially for the sport. Under all conditions the English birds are quick, lively and hard to shoot, comparing favorably with the wild pigeons which we no longer get. None of their birds are incomers, and but tew cross the line of fire. The shooting is difficult and their rules have been framed to favor the shooter. We have copied/their rules as closely as possible, and in many cases adopted them without change. These rules, framed especially for difficult shooting and intended to favor the gunner as far as possible, are not snited to our wants. We, as a rule, have casy birds. We should, therefore, handicap the shooter, not the bird. A fairly good shot, with a 10-gauge gun, leavily loaded and bearing directly on a poor bird while it is being persuaded to open its wings long enough far a charge of shot to treach it, really ought never to miss, especially as he has a second barrel to use if necessary. When a bird gets away the instant the trap is opened, of course the case is different; but such is seldom.

The colly argument that can be advanced in favor of placing the one and attended when the shooter calls "null." is that it avoids

dome.

The only argument that can be advanced in favor of placing the dome.

The only argument that can be advanced in favor of placing the gun at the shoulder when the shooter calls "pull," is that it avoids technicality and possible ill-feeling, owing to poor judgement by a referee. In England, the rule was designed to give the shooter a fair chance to score a bird which was certain to be a rapid flyer as soon as the trap was opened. In this country the rule favors the expert and the practical trap-shooter at the expense of the man whose experience has been gained in the field, and who has not yet learned the knack of covering a bird on the ground and pressing the trigger the instant a wing is spread.

In the old days when the sport of pigeon shooting reached what has so far proven its highest development in America, and when business men traveled hundreds of miles to attend a fournament, a shooter was compelled to hold his guu below the elbow until the bird took wing. Under such a rule, the squab which could barely open its wings and hop up a foot or so could not be rutblessty murdered as at present. The rule insured that the bird be able to fly.

The policy of the rule makers of late years has been to increase

targets from five traps, angles and traps unknown; use of both barrels allowed. It strikes me that this is well worthy a fair trial. At present target-shooting is decidedly monotonous. Some improvement in the system should certainly be not and adopted. Much talk has been wasted and microperson and adopted. Much talk has been wasted and microperson in the various sporting papers occupied in the paper in the various sporting papers occupied in the paper in the various sporting papers occupied in the paper in a futile effort to devise on the various of the paper in the various sporting the money in a sweepstake. The "Tucker system," the "Loyd system," and various other plans and "systems" have been tried and found wanting. Of all these so-called "systems" is strikes me that, under present shooting conditions, the "Keystone system" is the only one which is fair to all. This provides that when a shooter in a tio for any money prize finds that on an equal division with others in the same tie he could realize as much or more than his entrance money to the main shoot, he may withdraw his proportion, leaving the others to shoot out for the balance. This method offers a fair chance to the amateurs or non-professional. Under the usual plan one man could prevent a division and prevent the shooting out of the ties to the end. It is hardly prebable, however, that any "system" except the one in vogue will be commonly adopted for a long time yet.

The country shooters without a doubt are deserting the big tour naments in the cities. A few years since they formed an important part of the attendance. Nowadays but few of this apparance, they formed an important part of the attendance. Nowadays but few of this apparance of the country and much poorer ammunition. The city sportsmen progress in these respects, but the country man has not the same opportunity. He has a heillant future among the sports of the country. Let the wise heads, the experimental trap-shooters, and those having the runs and best interests of the sport at heart

ILLINOIS STATE SPORTSMEN'S ASSOCIATION.

CHICAGO, Ill., Inno 7.—For sixteen consecutive years the chief sportsmen's organization of the State of Illinois has beld annois convention and tournament. The meeting for 1800 is at an end te-night. During these years, covering a period of wide incutation in matters germane to its purposes, this sturdy band of shooters has left on record widely divergent stories of its yearly meeting. The event of the present year's meet was a fricipated with great interest, the more especially as it has of late been thought that shooting at the trap was on the wane. It was believed by some that the day of large attendances and steady shooting in such meets was a thing of the past, and there were a few who found in this or other causes ground sufficient to make them doubt the full success of this year's meet. Now that the meet is over, it cannot fail to please all these that the result has been quite beyond their anticipations; and it certainly is a positive pleasure to any sporting jonraal to chronicle the unqualified and unmistakable snecess of so old and worthy a sporting fixture as this. In the past, for instance in the days of wild-pigeon shooting, there may have been larger entries in one or more main events, but the steadiness of the attendance from day to day has not becu surpassed and in most years has not been capabled. For instance, if memory serves one aright, on the fourth day of last year's shoot there were hut about sevon entries in a live-bird event, while this year, on the same day, there were 63 entries in the great Board of Trade badge shoot high year there were 78. Such things do not year yollent delinquency on the part of the management. They indicate much rather a tendency or a performance which should make all interested in this yearly congregation feel cheertal in the extreme.

The Illinois State meet has long held fast to the customs of the past. There is no more conservative a meet held anywhere in the country. Some of the target-tour and two-fold. The rapid-fi

W. S. Cannon and W. Fred Quimby, of New York, with the old standbys, Messrs. Budd, Heikes, Conntney, Tucker, Benscotten, etc., etc.

The annual convention was held at the Sherman House, Tuesday evening, June 3, and was very well attended. There was something of the old talk and bluster about game protection. This is perfectly harmless and everybody understands it. It is in the play. On motion of Mr. Pierce it was resolved that the president appoint a law and legislation committee of five, with Mr. Wolfred N. Low as chairman of the same. It was further resolved that this committee be empowered to appoint sub-committee all over the State. The object of this was to secure united action in game legislation. It was also resolved to watch carefully and intelligently the efforts of artificial target companies to secure the passage of a law in Illinois prohibiting live bird shooting. The committee on the revision of the constitution failed to report and was discharged. The committee appointed last year to confer with the Fox Kiver Fish and Game Protective Association also failed to report. It probably hadn't conferred very much, or if it had it wouldn't have done much else.

Chicago was selected as the place for the next meet, the latter to be held under the auspices of the Audibou Club.

A vote of thanks was passed to the donors in the different purses, and to the Sherman House for courtesies.

The officers elected for the ensuing year were: Dr. N. Rowe, President; Mr. A. M. Hoffman, of Chicago, First Vice-President; Mr. W. L. Shepard, Secretary and Treasurer.

By far the best feature of the evening, if we may be permitted to the passage of the address of the retiring president, Mr. Fred C. Douald. It so well presents the actual state of affairs in this section that it is given in full. Mr. Donald sid:

Gentlemen of the Association:

As the chief executive of your organization I have the pleasure.

Mr. W. L. Shepard, Secretary and Treasurer.

By far the best feature of the evening, if we may be permitted control of the con

ance of its active members, laws have been enacted in the furtherance of its proposed philanthropy. Its Inductibal membership scattered through the philanthropy is an expression of the unwritten laws of morality, decency and humanity in derision and contempt of the penalties prescribed by the laws of the many of the penalties prescribed by the laws of morality, decency and humanity in derision and contempt of the penalties prescribed by the laws of
The incoming president made a brief and appropriate speech of accoptance.

Below is the record of the shooting. The weather throughout the week was mild and pleasant. The arrangements at the grounds were better than usual. The Gun Club kept open house in a roomy tent. The Audubon and Lake County clubs also had tents. John Watson rarely had a better lot of birds, though he was nearly cleaned out by Friday night. The lunch counfer was very well provided also, and everything was very pleasant.

na roomy tent. The fents, John Watson rarely name and roomy tent. cent. of uext year's curry C. E. Cahoon won second alone, \$70 in cash; L. C. Willard, W. S. Duer and J. J. Kletiuman div. third, \$50, and shot off for the merchandise prizes, Duer being absent when the ties were called, to feited bis rights in the merchandise prizes, all of which went to J. J. Kleinman, who broke 4 out of 5 to Willard's 3 in the tie. S. Harmon, W. G. Payson and H. R. Babcock div. the cash, \$55, on fourth, and shot off for the merchandise prize, Babcock winning with 5 straight in the ties. Babcock, who won the cup last year, this year carries off \$320 cold cash clear for himself and his club. This is believed to be the largest tournament winning of any recent time.

Saturday, Fifth Day, June 7.

The attendance was lighter, especially at the target traps, but a very creditable entrance was shown in the plunge trap race at view proceeds this being the first of the kind in this locality for some time. The change of condition puzzled some of the boys for a while, and there was a manifest tendency to oversion on the birds. Mr. Cannon, who has had the misfortune to lose an arm, proved himself again very good at live birds, and bested some of the shooters who used both hands. "Boog" O'N-Bill, an eight-year-old boy, was another feature out of the ordinary at this tournament. He shot in a race or two at targets, using a Winchester repeater, which by actual measurement came nearly to the top of his head. Mr. Elliott, of Kansas City, and Mr. Beek, of Indianapolis, whom rumor says will soon meet on the foughten field, continued in good form and gave small room for odds on the passible event. The 25-bird race was a great one. On the whole, the day at the live-bird traps was a very good one. The sweep shooting continued until dusk, and the last announcement of the day was the division of a tidy little purse by Messrs. Elliott and Reeves. Scores:

Duer first, Taylor second, Budd won third in shoot-off, Babcock yon fourth in shoot-off.

Sweep No. 3, 15 Keystones, \$3: Morrison and Thylor diversions Duer won second, White won third. There were but nine entries and three moneys.

Sweep No. 4, same conditions: Duer and White div, first, Steck and Willard dlv, second, Babcock won third in shoot-off.

Sweep No. 5, same conditions: Duer won first in shoot-off, Sweep No. 5, same conditions: Duer won first in shoot-off, Messrs, Lovd, Hamline and bloks shot two races at 25 Keystones, \$25 a corner, Mr. Dicks winning in each. These were the last contests of the day at inanimates.

It was the universal to the shooters who crowded the evening train into the city, that the tournament just closed surpasses any bracent shoot whatever. A mixed tournament is a bard once in this one was a success. Much of the gratifying rest was due to the energy and ability of the gratifying result of the shoot whatever. A mixed tournament is a few fall Club, who are good managers as well as good entertainers. Mr. Donald, Mr. Willard and Mr. Burton deserve especial for their labors, and it was due to them that the low rall-visiting sportsmen. Mr. Shepard, secretary, bas been tireless, as usual. Indeed, everything has gone off very smootbly, and there has been no open or concealed dissatisfaction among the gentlemen who were fortunate enough to be present.

The cash prizes offered aggregated \$545, the others \$294.

NEW YORK ASSOCIATION SHOOT.

LYONS, N. Y., June 9.—The open-to-all sboot of the New York State Association for the Protection of Fish and Game began here to-day under very favorable conditions. The results in the different events were as follows:

First event, sweepstakes open to all, \$1 entrance, 3 moneys, 10 single targets each man, American Association rules. This and all mentioned events to-day were run off under what is known as the rapid-firing system. Fifteen entries: Forsyth, Hadley and Whitney each got elean scores of 10 and divided first money; Lyon, Stuart, Keller, York and Watson tied for second on 9 each. On the shoot-off Lyon and Stuart missed and the others divided. Luther, Tassel and Wendel took third money on a division.

Nided. Littley, fasser and vender took both unbely of a divi-lon.
Second event, same as first event in all conditious: Lyon, Scher-aerhora, Watson, Wbitnev and Tee Kay got clean runs off breaks and divided first money; Hadley, Catchpole, Lutber, Keller and Forsytb tied on 9 for second and divided the pot; York and Wen-el won and divided third.
Third event, at 16 single ring targets, \$1.50 entrance. 4 moneys: fadley, Lutber and Stacy divided first money on 15 breaks each; Whitney, Keller, Catchpole, Forsyth and Killick divided second in 16 breaks each; Sheridan, Purcell and Nichols took third on one less each; Wagner, Parshall and Corill won and divided fourth noney.

one less each; Wagner, Parshall and Corill won and divided fourth money.

Fonrth event, at 10 single targets, other conditions same as Nos, 1 and 2, 18 entries: Hadley, York, Lyon, Whitney, Correll, Parshall and Sheridan each broke 10. The tie was shot off and was divided by Hadley, Lyon and Wbitney, after smashing 10 each, Tassel, Wagner, Luther and Keller tiel for second on 9 each and divided, Watson and Knittle divided third, Barnes, Wendell and Purcell did the same with fourth.

Fifth event, 15 singles, \$2 entrane, 50 entries, other conditions as at foregoing sweeps: Hadley and Putnam got olean scores and divided first, Wittney, Keller, Stuart, Laker, Wagner and Purcelled tirst, Wittney, Leller, Stuart, Eaker, Wagner and Purcelles, Whittley, Baster and Purcell divided, For third tulner, Hudsen, Williek and Elliugham tied with 18 per man. On the shoot-off mather won. Fourth money was tied for by Hill, Hookway, Nichols and Paddock, each breaking 12. The tie was shot off and won first money. Second was tied for by Hill, Hookway, Sixth event, at 10 singles and 3 pairs doubles, other conditions same as foregoing sweeps: Wagner made a clean run of 10 and won first money. Second was tied for by Hadlay, Dr. Putnam, Hookway and Hudson. The tie was shot of at 3 more pairs per man and was won by the Doctor, who smashed them all. Whitney, Luther, Stuart and Purcell tied for third on 14 each and divided the money. For fourth money Barnes, Miller, Lyons and Paddock tied on a score of 3 each. The amount was divided.

NEWARK, June 4.—The West End Guu and Rod Club beld its annual meeting and election this evening. Two new members were enrolled and the following officers were elected for the term; President, G. Gemeinder; Vice-President, A. Bratsch; Seerctary, T. Hickey; Treasurer, T. Bratsch; Sergeant-at-Arms, F. Frennd; Captain, E. Astfalk. The next shoot will be held on the new grounds of the club, above Grove street, on Saturday, June 21.

LONG ISLAND CLUBS. Jnne 5.—The Fountain Gun Club, of Brocklyu, held an invitation pigeou-shooting tournament at Woodlawn Park, Long Island, to-day, and in response to their call the Glenmore Rod and Gun Club, the Parkway Gun Club, of East New Yirk; the Centrul Gun Club, of Long Branch, and the Long Island Rod and Gun Club sent teams of five men each to compete against the five men of the Fountain Gun Club. The day was favirable for good shooting and big scores were made, Out of 200 birds shot at only 34 escaped. The tie between the Fountain and Coucy Island Gun clubs was productive of much enthies and Coucy Island Gun clubs on Long Island, and were Phil Dwyer killed bird and bird with the veterun wing shot between the Fountain and coucy Island Gun clubs on Long Island, and were the Island Club. The full score is as follows;

eond, Walters third,—Fox Hide

JERSEY CITY, June 3.—J. Frost and A. C. Ackerman on one side and L. V. Wilson and S. L. Lewis on the other had a double team match here to-day. All of the gentlemen are known as good pigeon shots, and Mr. Wilson and Mr. Frost as field and brush shots rank with the best in the State. It was intended at first to shoot at artificial targets, but as those interested do not care for that kind of shooting, the idea was dropped several days before

PHILADELPHIA, June 7.—Six members of the North End Gnn Clnb, divided into two teams, ongazed in a challenge shoot this afternoon on the club's grounds, at Frankford. Capt. Wm. H. Pack, Frank Enrron and Joseph Thurman were pitted against Jas. Flizgerald, Wade Wilson and Henry Jacobs. The conditions were Association rules to govern, 5 traps. Keystone targets, and 16 birds per man. The match was very close, the latter team winning by only one point. The individual scores follow:

JFitzgerald. 12 WH Peck 9
W Wilson 10 F Baton 12
H Jacobs 10-32 Jos Thurman 10-31
Following this match came a challenge shoot between Capt. Wm. H. Pack and Jos. Thurman, at 24 bluerocks per man, resulting in a victory for Mr. Thurman by one bluerock. The score stood Pack 17, Thurman 18.

TORONTO.—There are steps under way for large inant tournament. The intention at present is to hold a three or days' tournament with seven or eight guaranteed parses of each, each purse being divided so that second and third-class shall have an equal chance of winning with their more exbrethren. Already four purses of \$100 each bave been guarant if the four eity clubs will therefore give their help, not by ding money, but simply by guaranteeing each a ourse, then onto will have a tournament that will equal, if not surpass great Detroit shoot in which the best shots in America compand at which \$3,000 targets were thrown. A noticeable featual this tournament was that the cracks only got their share or burses, and not the whole of the money as in the old style, instance, when a purse of \$100 is offered, tho new division or money is as follows; first prize \$20, second \$20, third \$20, for \$20, fifth \$20, and if fifteen birds be the string and two brea teen each they shoot off or divide the first \$20. The fourteen do the same with the second \$20, and so on down to the elmen, who shoot off or divide the fifth \$20, the usual way beindivide. By this method the amateur who is fond of trap-sho (but not foolish erough to put in his money to be gobbled u some crack nine times out of ten has a fair chance to win string in almost every event, thus enabling him to attend a or three days' shoot at a trifling outlay; wherea if the old me was maintained he would be left out in the cold in every e which means a pile of money in a big shoot. As soon as the are heard from a definite line of action will be taken. The nament will most likely be held in August.

Greiner II, J. Link 12, H. Menkel 7, G. Landmann 8, C. Detbloff 14.

GERMAN GUN CLUB.—The New York German Gun Club
held its monthly shoot at Dexter Park, L. L., June 5. The club
medal went to F. Duff on 12 out of 14, the Pfaender medal was
won by Mr. Klein with 11 out of 14, and the leat ber medal consisting of a leather disk with a small Brazilian monkey prepared in
the most skifful art of the taxictermist, fastened to it, went to the
Vice-President, Mr. P. Hassinger. Score of club shoot, 10 hirds
each man, Long Island rules, both burrels allowed—R. Smith 6,
F. Fluif 9, J. Schmidt 6, J. Fraser 7, P. Hassinger 4. A. Lucas 7,
M. Bonden 5, F. Santer 7, J. Boessnecker 5, H. Greitner 8, J.
Cawein 8, J. Goerlitz 9, Dr. Cantrell 7, F. Pfaender 10, Dannefelser
8, E. Blanch 7, F. Loever 6, J. Klein 9,

WEEHAWKEN N. J., June 5.—The semi-monthly shoot of the Algonquin Gun Club of New York city, occurred this afternoon on the club's grounds at Weehawken. The hot sweltering weather kept many of the marksmen away, only six members of the club facing the traps in the regular event. The scores: Club shoot-pr. Lordly 7, Louis Brenner 9, J. Male 8, P. D. Tomlin 6, H. Otten 7, F. G. Rinn 6. Sweepstakes at 5 birds, same handicap rises; one barrel only-Dr. Lordly 4, L. Brenner 1, J. Male 4, P. D. Tomlin 4, F. G. Rinn 1, H. Otten 2, R. Brenner 1, Second sweepstakes, 4 birds each, same conditions as in first—Lordly 1, L. Brenner 1, J. Male 3, P. D. Tomlin 3, F. G. Rinn 2, H. Otten 3, R. Brenner 3, Referee, Mr. E. H. Fountain; scorer, E. F. Hawkins.

Saturday.

FOUNTAIN GUN CLUB,—Brooklyn, June 4—This club had its regular monthly shoot at Woodlawn Park, Long Island, to-day, and it was productive of some very fine shooting. At the start the ties from the last monthly shoot when five men killed 7 straight each were shot off. Ben West killed 21 straight and beat L. Davenport, who killed 20 out of 21. In the regular shoot that followed five members killed 7 straight and in the shoot off Dr. Shields killed 7 straight and med al. Out of 178 birds shot at 21 got away. The score of the shoot for the first prize of last month was: B. West 21, L. Davenport, 20, W. Stewart 9, Dr. Shiels 1, and J. Voorhees 1. In the regular shoot for the month's prize Dr. Shoils killed 13 straight and won, C. W. Jones 2. L. Davenport 11, C. Wheeler 11, J. Voorhees 8, H. McLaughlin 6, Dr. Schurz 6, J. E. Lake 5, Major Sclover 5, W. Stewart 5, Blankeley 4, C. Blathnashe 4, and W. Boetticher 3. Referee—H. Goodwin.

SAN FRANCISCO, June 1.—Martinez Chick, of San Diego, de-

was referee, and Captain Eddy and Horace Briggs were sovers.

BROOKLYN, June 9.—The Long Island Sportsman's Club held its regular monthly shoo! for the club medal and special prizes at Dexter Park, Long Island, to-day. The club shoots under modified Long Island, to-day. The club shoots under modified Long Island rules. The weather was fayorable and some good scores were made. C. Stuotzel won the club medal, breaking 18 out of 29 blueroeks. C. Bieber, who won the medal at the last shoot, was second, with 15 out of 20. The scores were as follows: C. Stuetzle 18, C. Bieber 18, J. Hass 11, J. Rauch 7, F. Bauch 6, N. Gentzlinger 6, and C. Frese 2.

The three sweepstake shoots at 6 bluerocks each resulted as follows: First sweep—C. Stuetzle 6, Gentzlinger 4, C. Bieber 3, F. Rauch 2, J. Rauch 1, J. Hass 1, C. Frese 1, Second sweep—C. Bieber 3, Stuetzle 4, Hass 2, Gentzlinger 2, Frese 1, J. Rruch 1, and F. Rauch 0. Third sweep—Stuetzle 5, Short 4, Bieber 5, J. Rauch 6, F. Rauch 2, Link 4, C. Frese 2, and Gentzlinger 3. In the shoot-off for second prize Short broke 1, Link 6, and Bieber 0.

BRIDESBURG, Pa., June 7.—Nine members of the Boerokel Gun Club, of Bridesburg, engaged in their third shoot at Keystove targets this afternoon. The following scores were made: Michael Carter 9, Wm. M. Deau 6, Chas. Lefferts 12, Chas. Riotz 5, Wm. Candy 4, E. Penn 4, Jos. Sison 6, John Sison 2, Ben Glen 6

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

I. L. Anderson 5, A. A. Anderson 5, nearly Harmonics.

SEW YORK STATE SHOOT.—Lyons, N. V., June 9.—The brly-second meeting of the New York State Sportsman's Assotion for the Protection of Fish and Game was held here to-day, out forly clubs were represented, and twelve clubs were elected membership. Rome will have the next tournament;

Canoping.

Building to a fixed limit of waterline length has been of increasing importance for some time, but this season it is likely to become a very important factor in the cacing, especially in the classes under 46ft, in which the competition is most keen. The bright steel tape of the official measurer, as rigid and unrelenting as fate itself, has worked dire havoe in the racing fleet within the past ten days, as may be seen by the wrecks along the shore in all places where yachts congregate. At Bay Ridge, Stateut Island, City Island, Tebo's dock and other places, the bulkheads are strewn with fragments of spinaker booms, varying in length from 6in. to 30ft, with cabin bulkheads and joiner work, with tanks, lockers and waterclosets, the latter in particular offering a shining mark for the ruthless hand of the racing man. So much of this work has been done lately that it would be in order for the clubs to replace the official insignia of the measurer, a silver M, by an adze rampant crossed by a handsaw, as an appropriate badge of office.

The racing fleet as a rule was measured early last season, many of the smaller yachts being new and in the water for but a month or so, and theugh some crowded the limit very closely, all were safely under it when measured. As the season advanced it was an open secret that some of the racers were dangerously near being over the limit, but in no case of any important yacht was a protest made ou measurement, the subject being one that nearly all felt a little delicacy in stirring up, as it was not altogether serious of the receive of the racers were dangerously mear being over the limit, but in no case of any important yacht was a protest made ou measurement, the subject being one that nearly fall felt a little delicacy in stirring up, as it was not altogether who are all felt a little delicacy in stirring up, as it was not altogether who are serious for the racers were dangerously mear the certain how any given boat might turn ont. This year, when it became necessary to re-measure nost

WHY THERE IS NO YACHTING AT CHICAGO.

If I were asked to write about a real live sport, if it was nothing more than a race between a dug-out and a yawl. I might possibly enter into the subject with some enthusiasm, but to answer the Foreet and STREAM's question is like digging bones in a graveyard—an entirely dead subject—the bones once had life and so did yachting at Chicago, and in drawing on my memory for the delights and exhilaration of the sport, I am forced to conclude with the beautiful old song, "Memory is the only friend which grief can call its own."

As is well known, Lake Michigan at this point is a wide, deep and entirely open expanse of water, no islands, no bars, no sounds, and I would say with truth, no harbors. This I have no doubt is the immediate reason why there is no yachting. It we were situated as are many of the cities and towns upon the great lakes, with islands lying off shore, as is Toronto, or upon a beautiful but, as is Ashland, or upon a strait, as is Mackinaw, then I am sure our beautiful lake would be dotted with yachts, which in time of necessity could fly for refuge to a safe shelter. As it is, our only harbor is the basin, protected by the Government break water; and during any considerable storm this is no harbor at all, as many a would-be vachtsman has found to his sorrow, to say nothing of the cost. There is a small portion of they basin where yachts can lie in safety, but they must at all times be guarded and protected with proper signals and lights, and this is expensive and keeps away the younger element, from which our enthusiasm and education must be obtained, or we caunot get material from which to organize yacht clubs.

Notwithstanding these disadvantages Chicago has had many a hard contested yacht race and has looked upon as metal as a marker of the cost.

only must learn to love a smart yacht teacher the men wittentuse to any great extent.

One reason why the larger boats have left is that we have bad so few interesting points to visit; but during the last few years many fine summer resorts have sprung up, as at Macinaw and Charleroix and St. Joe, and they are continually increasing in numbers, and some day (I hope it may be soon) we will again get a start, and under better and more favorable conditions we will maintain our foothold and go on until Chicago is known in the yachting world as it is in all others—up near the top.

Chicago.

SEAWANHAKA C. Y. C. SPECIAL, JUNE 5.

SEAWANHAKA C. Y. C. SPECIAL, JUNE 5.

WITH the present deadlock in international racing, and with the lack of competition in the large sebooner class, the coming Season would be but a dull one were it not for the smaller racers. The 70tr. class is likely to furnish some good racing, but besides it the only really live class is the 40tr. and to its races, which promise to both numerous and exciting, yachtsmen must look for most of their amusement this season. Last season the races sailed by the 40tf. class numbered 31, a total far in excess of any class is the past, and this year the number will be still greater, as extre. The Seawanhaka C. Y. C. was one of the irrs to recognic the need of more races in this and the 30tf. class, and last year alcid a very good race on the Monday following the annual regarda. This year the race committee determined to do still be sailed on June 23, announced an earlier race, on June 5, intended to open the season in these two classes.

The prizes offered were a first and second of \$300 and \$100 for the forties, the second being conditional on five starters; and one of \$50 for the thirties, 25 per cent. of first prize being given for more as all-over. It was also announced that the start would be from one gun, and also that this gun would be fired promptly at a sail-over. It was also announced that the start would be from one gun, and also that this gun would be fired promptly at the forties; the thirties rounding Buoy 5, just off Sandy Hook. The race committee furnished to each yacht al lithographed chant of the course inclosed in a small time case; a very excellent channel and by Southwest Spit and around the Scotland Lightship for the forties; the thirties rounding Buoy 5, just off Sandy Hook. The race committee furnished to each yacht al lithographed chart of the course inclosed in a small time case; a very excellent channel and by Southwest Spit and around the Scotland Lightship for the forties; the thirties rounding Buoy 5, just off Sandy were yachts being ready. The only Bo

finally started towing, she parted ber hobstay and was forced to return to Bay Ridge. Tomahawk crossed 22m. 20s. late, and Kathleen, finally towed to the start by the launch Flossie, was 3m. abead of her.

The wind in the Lower Bay was very variable and fluky, and the sailing was correspondingly uninteresting. Minerva passed Buoy 10 with a long lead in time, taking a breeze and setting her spinaker. Choctaw followed, while Liris and Helen made a tack to windward up juto Raritan Bay. Tomahawk was far astern and started for home about noon, while Kathleen, under working topsail, pegged away in the rear. The times at Buoy 10 were:

Minerva. 12 14 15 Helen. 124 0 58
Choctaw. 12 22 48 Kathleen. 102 were:

Liris. 12 88 22
Inside the Hook the wind was still very tricky, Minerva was obliged to shift ber spinaker after setting it to slarbourd, Choctaw finally running up very close to her. Outside, however, the wind drew mp the beach, making a beat to the Scotland, while it was much tresher. With sheets in, Minerva soon drew away from Choctaw, leading her by 4m. 38, at the Scotland. The times at this mark were:

Minerva. 1 33 50 Liris. 14 48 33
Choctaw. 1 33 25 Helen 1 53 49
The fleet ran in with spinakers and balloon jibtopsails set, Minerva hugging the Hook shore, while Choctaw and the others held out further. When around Buoy 5 and inside the Hook, both of the leaders lugged the shore as closely as possible to avoid the tide, thus hauling up so that spinakers would not stand. When Liris came in by Buoy 5 she held on to her spinaker, standing out in the tide to do so, but soing much faster than the two under the beach. The result of this move was that she turned Buoy 10 in the leaders hading sing of the shore as closely as possible to avoid the beach. The result of this move was that she turned Buoy 10 in the lide to do so, but soing much faster than the two under the beach. The result of this move was that she turned Buoy 10 in the leaders hading out of the leaders had followed Liris closely all day, and now came in t

at 11 o'clock, but a moderate breeze at 2. As to the postponement of the start for any other reasons than fog or calm, there can be tittle room for argument; only by obscrving the strictest punctuality can the committee avoid the present annoying delays on the part of a few boats.

There may be rare cases, such as a sudden accident to a boat that is at the line, that will justify a little delay of the start, and that none of the entries will object to; but the practice of waiting for the last lagaard, a dozen boats being ready, is too common, and should be disconraged by promptness on the part of the committee. A rigid enforcement of the rule would be a little hard at first, but a few lessons would teach every one that preparation and qunetnality are the first requisites in yacht racing. It should be asily possible for a racing yacht, after weeks of preparation for a race, to get to the start, not more than there or four miles from her anchorage, and often less than half a mile—as at Larchmont, only's Head or Marblehead—before Il o'clock (if the wind is light an earlier start must be made or a tow taken); and with a few races started to the minute, as on Thursday, there would be no more trouble from this cause. In the race of Saturday at Larchmont, for one reason or another, the case was reversed; nearly all the boats were at the line in good season, but the race was not started until noon. Such long delays are very trying to skippers, the gun may be fired at any moment or it may not begiven for an hour, and the uncertainty and delay are very trying to skippers, the gun may be fired at any moment or it may not begiven for an hour, and the uncertainty and delay are very trying to skippers, the gun may be fired at any moment or it may not begiven for an hour, and the uncertainty and delay are very trying to skippers, the gun may be fired at any moment or it may not begiven for an hour, and the uncertainty and delay are very trying to skippers, the gun may be fired at any moment or it may not begiven for an hour,

LARCHMONT Y. C. SPRING REGATTA, JUNE 7.

LARCHMONT Y. C. SPRING REGATTA, JUNE 7.

A susual the entries for the Larchmont Y. C. Spring Regatla boats eyidently realize that their chances and the consist of deserved, but the old boats eyidently realize that their chances and compared with the modern craft, and only enter what change in the word of their fellows to meet them. The whole racing this weak a level of their fellows to meet them. The whole racing this weak a level of their fellows to meet them. The whole racing this weak a level of their fellows to meet them. The whole racing this weak a level of their fellows to meet them. The whole racing this weak a level of their fellows to meet them. The whole racing this weak a level of their fellows to meet them. The whole racing this weak and the racing. The three old schooners, Agnes, Leona and Elfin, the former two centreboards of the old type, the latter an old keel, lad a very good race among themselves, though beatan on elapsed time by the shorter single stickers, and two open cats were in the smallest class, while Broncho, the centerboard 40-footer built by Cupt. Lou. Tonnes last year, was also in. Thus, out of the country of the two cays, twenty yachts, there were six centerboard boats.

This race was the first under the new classification of the club, but was in no way a test of the merits of the new scheme, to do which thoroughly a series of races and also some building will be necessary. The boats were very fairly empod, except that Minerya, measuring but 45.0fft. corrected length, came under the limit of the other 40s. 47 to 54ft, corrected length, came under the limit of the other 40s. 47 to 54ft, corrected length, simply took the old lasses, 41, 47, 54, 62, etc., moving the boats up two classes, so that the 54ft, class, which, or old, on a basis of waterline length, in-laded Clara, 53ft waterline, now takes in Liris of 49.89ft corrected length, and the others of her class, save Pappoose and the 54ft, class, which, of old, on a basis of waterline length, in-laded Clara, 53ft, waterline, now

tib balloonjibtopsall set and all sails drawing. Clara was the cond boat over, crossing on the leeward end of the line. The cart was timed:

12 05 07 Agnes. 12 09 36

lara. 12 05 15 Broncho. 12 09 36

lara. 12 05 15 Broncho. 12 09 35

lariquita. 12 06 30 Leona. 12 10 10

lareva. 12 07 25 Giggle. 12 10 30

cleen. 12 08 57 Kathleen. 12 13 00

cleen. 12 08 57 Kathleen. 12 13 04

Clara steamed off through the lee of the forties, sailing very

ast, and was soon far abead of the fleet. Liris, with jibtopsal

ct, held her own, while Minerva was overweighted with her bal
oner, being obliged to take it in. The first leg was a reach of 3

files, the wind being moderate,

The race was a close and exciting one from start to finish, there being no flukes, though the boats being in procession were at times favored or hindered by inequalities of the wind. Liris has the honor of beating Minerva for the second time, which is more than any other American forty has done. Mariquita made a very good abowing on the reaching, being greatly improved in stability since last year. Helen, though not able to hold the others, at the same time made a very good race, and is a far better boat than last season. After the race Minera's crew cheered Liris as she can be a summarily bounced by the crew, his agility not being quality and manasisted bandspring, even under such stimulating quality and unassisted bandspring, even under such stimulating conditions. Helen sailed during the afternoon for Boston. Liris, whose bottom is almost innocent of paint, will haul out during the week to prepare for the races of Regatta week.

QUAKER CITY Y. C. ANNUAL, JUNE 9.

QUAKER CITY Y. C. ANNUAL, JUNE 9.

THE Quaker City Y. C., of Philadelphia, sailed its 15th annual regatta on Monday, the event being very successful. The course was from off Gloucester to the Horseshoe budy, keeping it on starboard; theuce around a stakeboat off Marcus Hook, keeping it on port, and return; the yachts keeping of the week was deep of Block House bar and Chester Island, both going and returning, 30 miles. The start was made at 10 A. M., the yachts going over very promptly, as follows:

Juanita. 10 00 22 Venitzin. 10 01 42

Thalia. 10 00 38 Namne. 10 02 20

Mascotte. 10 00 38 Namne. 10 02 30

Mascotte. 10 00 56 Flosten. 10 02 35

Mascotte. 10 00 56 Flosten. 10 03 35

Marina. 10 01 15 Agnes 10 03 35

Helen. 10 01 31 Playmate. 10 03 35

Helen. 10 01 31 Playmate. 10 03 52

Arethusa and Mernaid handicapped. The wind was fresh S.W., making a beat down the river with an ebb tide. The short tacks were against the schooners, and the sloops soon ran away from them. The 45ft. Burgess boat, Nanon, led on the way down, be turn being timed:

Nanon. 12 25 01 Mohican. 12 47 00

Venitzia. 12 27 43 Thalia. 1 00 00

Others not timed. Nauon still led until near Tinicum Island, when after fibing her spinaker boom dropped into the water and broke. After this Venitzia passed her. The wind was quite light toward the latter part of the race. When near the line Venitzia parted her mainsheet in jibing, but still won. The full times were:

Mermald and Agnes are subject to measurement. The winners of class prizes are Helen, Arathusa, Venitzia, Thalia, Narina and Mohican. Venitzia also wins the Ellis cup for best elapsed time, as well as the Middleton cup, and Narina wins the McDaniel cup. The regatta committee, Messrs. Bancoft, Newkirk, N. Wentz and Horace L. Williamson, were on Mr. McDaniel's steam yacht Dione. The large river steamer John A. Warner carried a party of club members and guests over the course, giving them a very fine view of the race.

YACHTING ON THE ST. LAWRENCE.

YACHTING ON THE ST. LAWRENCE.

THE St. Lawrence Y. C. was only organized in the spring of 1888, and it has attained such a measure of successunder such adverse and exceptional conditions as to make it a decidedly interesting organization. Although Montreal is a sea port, it is so because it stands on the banks of a river, and no matter bow great a river is, the facilities which it affords for yachting are not such as to make the development of the sport possible upon a grand scale, or even easy popent of the sport possible upon a grand scale, or even easy top any scale. Practically, the yachtsmen of Montreal are restricted for home cruising and racing to from for a ten mile care or this sheet of water, it is unfortunately so thinly spread on over certain shoaks and shallows that the limit of draft for boaks or certain shoaks and shallows that the limit of draft for boaks intended for general use upon it is between 30 and 40 m. This, of course, prevents the general use of boats as large as those which make up the smaller regular classes on the coast and the lakes, and of course restricts the development of the sport great Lakes by a 12ft. channel, and with the Hudson by a 4ft, channel, the position of the city, the nature of these channels and the character of her yachting waters combine to isolate her yachtsment to a very decided degree. The stimulus of outside racing can never be looked for, and that best of object lessons, a good sound beating from a foreigner, can never be administered to local self satisfaction and ignorance. This isolation also by limiting the market for boats, and by making it difficult to procure yachting supplies, makes the sport a comparatively costly one, and increases greatly the worry and bother of fitting 19 boats, by the other present time also the facilities for hauling out, repairing, fitting out, or building new boats bave been as inadequate as under the general conditions they might be expected to be.

cosily one, and increases greatly the worry and bother of niting up boats. Up to the present time also the facilities for hauling out, repairing, fitting out, or building new boats have been as inadequate as under the general conditions they might be expected to be.

That, bowever, yachting did not make greater progress than it has done in the vicinity of Montreal during the past twenty years, was less because of the disadvantageous natural conditions than because the artificial conditions under which racing was carried on were such as to make devolpment impossible. There was a yacht club with its beadquarters established upon a lower reach of the river, but the principal yearly function was a moonlight excursion on a steamer, while its members were generally speaking so exhausted by their attents members were generally speaking so exhausted by their attents members were generally speaking so exhausted by their attents members were generally speaking so exhausted by their attents members were generally speaking so exhausted by their attents were the was no laid to a subject of the local boat clubs, but there was no classification, few rules and less race management. Shifting ballast was allowed, there was no limit upon anything, dexertly in building a wall of sandbags up to wind you anything, dexertly in building a wall of sandbags up to wind and assign days of Montreal yachting, a left, carrigged boat designed and sailed by the present commodore of the St. Lawrence Y. O made an extraordinary record. She won in two or three years form, and the provided and sailed by the present commodore of the St. Lawrence Y. O made an extraordinary record. She won in two or three years foot.

During its active existence of only two seasons, the St. Lawrence, Y. C. has secured a membership of 108, has enrolled upon its squadron list 30 boats which class as yachts, 28 that class as skiffs and 31 steamers. It has been intended chose in the secure of the provided provided provided provided provided provided provided provided prov

but the Valdo, the 21-footer, Mr. Duggan has designed for himself and had built under his eye by a local builder, is the more interesting craft of the two. She is clinker-built and her hull is extremely light, while it is to all appearance strong as is nocessary. She has a very broad, flat keel, with 8001s, outside and about 1,6001bs, inside, and is probably as roomy, considered and about a little craft as can be built on 21ft, waterline and 30in, draft. The first class skiffs were for the first two year but the olubbs existence the best racing class it had, but this year but the common canoe, which Sauvé has recently finished for Mr. W. J. Wallace, who last year in the Yukwa made such a splendid record for allace, who last year in the Yukwa made such a splendid record for allace, self and his boat. The newly-formed St. Lawrence Skiff Association promise to make their 22tt three-men canoes (they are in build, rig, appearance, fittings and lines racing canoes) a very popular type of boat on the St. Lawrence.

HUDSON RIVER Y. C., JUNE 9,—The spring regatta of the Hudson River Y. C. was sailed on Monday in a fine S.W. breeze, the course being from Ninety-tbird street, New York, to Yonkers and return, 20 miles. Avalon lost her topmast and witbdrew, while the J. T. Corlett parted her throat halliards, but still won easily. The times were:

BEVERLY Y. C.—The first race of the season, the 157th regatta, will be sailed on June 17 off Monument Beach, an open sweepstakes for all boats not over 30ft, waterline, The classes will be: First, cat rigs over 24 and not over 30ft, l. v.l.; second, cats over 20 and not over 30ft, l. w.l.; third, cats over 20 and not over 30ft in the classes will be: First, cat rigs over 24 and not over 30ft, l. v.l.; second, cats over 20 and not over 23ft, l. w.l.; third, cats over 11 and not over 30ft, l. w.l.; fourth, cats of 17ft, l. w.l. and under. The sloop class will include all sloops. The clob book for 180 if and over 20ft in classes 11 include all sloops. The clob book for 180 is summary of the races of last year, 16 in all; 9 being beld off Marblehead and 7 on Buzzard's Bay. The club now includes 159 mmnary of the races of last year, 16 in all; 9 being beld off Marblehead and 7 on Buzzard's Bay. The club now includes 159 mbers and 104 yachts elegible to the races, besides 34 larger yachts. The officers are: Com., J. B. Paine; Yice-Com., Geo. H. Erichardis, Sec'y and Treas, W. Lloyd Jeffries; Meas., R. C. Robbins, Rejettle of the race will be off the club bonse, at Gravesend Bay, and the regatta committee have chartered the salon steamer Crystal Stream for the members of the club and invited guests. Under the new revised racing rules the club due that be as follower. Mainsail—Class A, 16ft, to and including 18ft.; Class B, over 20ft, to and including 23ft. (Class B, over 20ft, to and including 23ft. Class G, over 25ft, to and including 25ft. Class G, o

ATLANTIC Y. C.—The annual regatta will be sailed on Tuesday, June 17. It will be open to yachts of the New York, Eastern, Larchmont, Seawanhaka Corinthian, Corinthian, Corinthian of Marblehead, Beverly, Hull and New Rochelle acht clubs. Entries must be made in writing and be filed with Mr. Geo. F. Barlow, 190 Nassau street, New York city, prior to 9 o'clock in the morning of June 14. The course will be the regular one of the club, and the race will be sailed according to the restrictions and regulations of the club.

OUNCER.—Editor Forest and Stream: Excuse me for troubling n, but I wish Bouncer to sail on her own bottom, so to speak.
Nate S. Smith has misunderstood my previously published ter. The Newburgh boat may or may not be like Bouncer; but, vasy, the mere fact that the former has curved sides, ends and derise, proves nothing as to the type relationship. Other boats a very different kind (for instance, the snakbox) possess all see items, yet Bouncer would send to sown them relatives see items, yet Bouncer would send show them relatives e curves of her sides, ends and dearlise have little to do with speed, and still less with her a ality, so clearly shown, to outnit and outfoot the large carboats she has beaten despite their rantage of rig and crews of you all points is due to the carefully culated longitudinal trails been given to horizontal curves, exign, scarce a thought has been given to horizontal curves, exign, scarce a thought has been given to horizontal curves, exign, scarce a thought has been given to horizontal curves, exign, scarce a thought has been given to horizontal curves, exign, scarce a thought has been given to horizontal curves, exign, scarce at hought has been given to horizontal curves, exign, scarce at hought has been given to horizontal curves, exign, scarce at hought has been given to horizontal curves, exign, scarce at hought has been given to horizontal curves, exign, scarce at hought has been given to horizontal curves, exign, scarce at hought has been given to horizontal curves, exign, scarce at hought has been given to horizontal curves, exign, scarce at hought has been given to horizontal curves, exign, scarce at hought has been given to horizontal curves, exign, scarce at hought has been given to horizontal curves, exign, scarce at hought has been given to horizontal curves, exign, scarce at hought has been given to horizontal curves, exign, scarce at hought has been given to horizontal curves, exign, scarce at hought has been given to horizontal curves, exign, scarce at hought has bee

ORINTHIAN NAVY.—The fleet of this organization assembled the New Rochelle on May 31, and made a two-days' cruise. The toamer, Kittie Welde, Foam, Uno, Germanic, Io, Nanita, Tourist, touncer, Demorest and Cruiser were present. The fleet left New Rochelle at 10 A. M. on May 31, and proceeded to Larchmont, and irecensich, at the latter place the Whim joined the fleet. From ere a good run was made to Cold Spring. Next morning, Sunay, the squadron was disbanded after a thoroughly enjoyable students of the control of

nrs &eet. KULINDA.—George J. March's new catter Kulinda is 7in. over 1e 30ft. limit. This is the reason her entry was not taken for the farbiehead sweepstakes. It will be impossible to lighten her up, 1 she carries her sail none too well.—Boston Globe.

NEW YORK Y. R. A.—A meeting was held on June 6, at which the following arrangements for the cruise were made: Yachts will rendezvous on Saturday afternoon, July 26, off College Point, remaining at anchor during Sunday. On Monday they sail for cyster Bay, on Thuesday for Roton Point, Conn., on Wednesday for Black Rock, on Thursday for Lloyd's Harbor, on Friday for Indian Harbor, and on Saturday for Sea Cliff, where they will dishand. Delegates from the Yonkers Y. C. applied for admission to the association. Their request will be acted upon at the next meeting.

NORTH SHREWSBURY Y. C.—The first race of the season was sailed on May 26, between the cats Nameless, Yum Yun and Clytie, over a 5 mile course. Nameless won, with Yum Yun second. A race for the pennant, held hy Ann Be, was sailed on June 5, over a 5 mile course in light weather The starters were Gem. T. Chadwick: Razzle Dazzle. D. Belshaw; Echo, Edward Terhune; Yum Yum, Win. Nantine; Clytia, F. Fusher. Only Gem finished and the race was postponed to June 10. The racing on the Shrewsbury promises to he very active.

ALMÉ.—The new steel steam yacht Almé, huilding by Harlan & Hollingsworth, for Mr. Frederick Gallatin, of New York, was launched at Wilmington on June 5. Her dimensions are as follows: Length 176t, beam 24th, depth of hold 13ft. Her engines will he of triple expansion, surface condensing type, with cylinders 17, 28 and 42in, in diameter, and 22in, stroke. She will bave one steel boiler with a working pressure of 170hs, to the square inch. Her rig will he that of a two-masted schooner.

NEW JERSEY Y. C.—The nineteenth annual regatta will be sailed to-day. The judges are, Com. A. J. Prime, Yonkers U. Y. C., Theophilus Butts and George E. Gartland. The courses will he the usual ones of the club. The steamboat Fort Lee will accompany the yachts over the course. The regatta committee includes Messrs. John Ortlieb, Richard C. Greten and Gilbert S. Brown.

BUFFALO, July 4.—The following events are announced for the present season: June 7, pennant regatta, all classes; 21, cruising race to Point Albino, second and third classes; 23, third class pennant, postponed from last season; July 4, open regatta; 26, bandicap race to Point Albino; Ang. 2. club regatta; 23, annual cruise; Sept. 13, club cruise to Stone Dock. The regatta committee includes Messrs. F. W. Caulkins, E. F. Bishop and C. B. Graves.

YORKVILLE Y. C.—The postponed race of the Yorkville Y. C with the Gangway Buoy and return, in a light S.W. wind. There were starters. In Class A the winners were Emma and Alice; Clas R. Nettle Tborp and Restless; Olass C, Jessie. Jessie wins the Sultzer cup for hest elapsed time.

PHOTOS OF MINERVA.—We have received from Mr. N. L. Stebbins, of Boston, two excellent photos of Minerva, taken when she was lately hauled out at Lowley's. One shows ber hroadside and the other one head on. Another very interesting photo taken by Mr. Stebbins is from a drawing of the sail plan of the 30th. cutter Elf, made over the sail plan of the Cape cat Harhinger, showing the relative areas of the two.

MASSACHUSETTS Y. C.—This club at a meeting on June 6 adopted the Seawanhaka rule of measurement. Messrs. C. H. Tweed, A. Cary Smith, J. Beavor Webb and William Garciner were elected honorary member. The race set for June 7 was postponed to June 24.

NEW RACERS.—Lawley & Son have the keel out for a 30ft. cutter for Mr. W. H. Wilkiuson, former owner of Elf, from his own design. She will he of 9ft. 9in. beam, 7ft. draft, with 14,700lbs. of lead on keel, with moderate rake of sternbost and rather strong forefoot. The 30ft. racer hullding by Smith is for Mr. Henry for the strong that the strong forefoot.

MASSACHUSETTS Y. C. REGATTA.—The regatta committee of the Massachussetts Y. C. has decided upon the following classification for their open race at Nahant, June 17: First class, 40 to 16tt. l.w.l.; second class; 35 to 40tt; third class, 30 to 35tt.; fourth class, 25 to 30tt.; fifth class, under 25tt.

MOPSA.-Mr. Lyman's 27-footer will have a larger rig this year.

WEST LYNN Y. C.—The following races are announced: June 21, July 19, 26, Aug. 23, Sept. 30. The cruise will take place ou July 4.
WAYWARD.—Mr. Sears's new cutter will have a hollow hoom from Lawley.

CORINTHIAN MOSQUITO FLEET.—In the regatta of May 31 at Larchmont the Clapham yawl Bouncer won easily, heating Clytie and Kittie B. Mr. Whitlock, in the Guenn, won the prize for the hest sailed canoe. Bouncer was sailed by Mr. Clapham alone, the other boats carying crews of two each.

UVIRA.—Like Vreda the new 42ft. Uvira has put back to Fowey on May 22, after sailing from Southampton on May 13.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

T. M. P., Portage, Pa.-We know of no book that gives the positions for fancy rifle shooting.

R. H. M., Brooklyn. We have no information that the New Jersey non-resident law has been repealed.

G. A. S., Pittsburgh, Pa.—You will find good fishing on the line of the Chicago & Northwestern. Passenger Agent Carpeuter, of that line (at Chicago) will send you a pamphiet of information ahout it.

J. A. G., JR., Camhridge.—Will you kindly answer in columns of your paper whether I am right in saying a traises his feet higher if he is shod with weighted shoes? Yes.

S. J. U., City.—Would you kindly give me names of one or two of the nearest good open trout streams in Long Island and New Jersey, and the best point at which to commence to fish? Ans. Go to Glen Cove or Freeport, Long Island; or better to Canadensis, Pa. See paper entitled "Pocono," issue of May 29.

J. K. T., Amhler, Pa.—Kindly inform us where is a good sn shooting meadow most convenient to Asbury Park along N. J. S. R. R., for golden back plover, gray saipe, yellowlegs a curlew? Ans. Toms/River, Barnegat, Warstown or Forked Ristations on Toms River Branch of N. J. So. R. R. Address He Eiseman at Waretown, N. J. Good shooting near any of th stations.

C. W. L., Oneonto, N. Y.—Will you please state in your paper what is the best record of long distance fly-casting made at any of the previous tournaments in this State, also, the best record of bass castine? Ans. In 1889, single-handed fly-casting, R. C Leonard, 079£, 12. B. Mills, 100ft. In 1887, switch fly-casting, R. W. Hawes, 102ft. Fly-casting for black hass, 1889, Jas. L. Breeze

are best taken on the reer running from Katche to the Note Proint and distant from shore 5 to 10 miles.

E. S. W., Garrettsville, O.—1. In next issue will you fully describe the fish known as the "cropple" and give the other name hy which it may be known in various localities? It is a fish the is known in this viciaity by that name, and 1 write for information. 2. Also advise names and addresses of other parties that Annin that have trout fry for sale. Ans. I. The croppie or crapic is variously styled speckled perch, strawberry perch, chinquin perch, bridge perch, Campbellite, New Light, sac-a-lip bachelor, ctc., etc. There are two kinds of crappies, and one them shares the foregoing names with its relative, and has althe following: Sand perch, grass bass, calico bass, barfish, hitte head, tin-mouth, John Demon, shad and goggle-eye. It belong to the sunfish family, but is longer-bodied and larger, reaching front in length. The colors are silvery olive, mottled with dargreen. The tins are usually colored like the body and the fish is green. The tins are usually colored like the body and the fish is very handsome one; it is an excellent food fish and game enoug to suit the average angler. The first one mentioned is common to suit the average angler. The first one mentioned is common and streams of many States. Good illustrations of the crappiare given in the Pishery Industries of the United States, plat 159 and 169, also in Dr. Goode's "American Pishes" and in one the Ohio Fish Commission reports. 2. Col. E. H. Hodge, Fish a Game Commissioner, Plymouth, N. H., has sometimes sold adt rout on account of the State. Write also to Frank N. Clar Nortbville, Micb., for names or establishments in the West.

WHAT WE CLAIM FOR

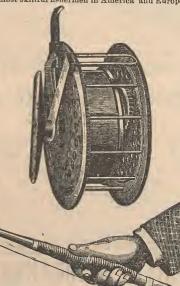

The Automatic Reel.

FIRST.—It will wind up the line a hundred times as fast as any other reel in the world.

SECOND.—It will wind up the line slowly if the angler chooses

ler chooses. HIRD.—No fish can ever get slack line with it. DURTH.—It will save more fish than any other

reel.
FIFTH. It will prevent tips, lines and snells from being broken by large fish.
SIXTH.—It enables the angler, and makes it desirable, to use lighter tackle.
These claims have been substantiated by the most skillful fishermen in America and Europe.

The reel is manipulated entirely by the hand that holds the rod.

What's the News?

The news is that somebody writes us, that we shouldn't call it a photographic trading post, but a photographic exchange. Oho! Well, all right, "exchange" it is, if anybody likes it better. We like "trading post." It seems to suggest 'out of deary, and that's the place for whether post." It seems to suggest 'out of doors,' and that's the place for photographic fun. At any rate it's the place to come for photo goods of all sorts. Scovill & Adams Co., 423 Broome street.

Which Interest Gunners; with descriptions in language understanded of the people.

BY G. TRUMBULL.

Contains the local names in popular use, and eighty-nine illustrations, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game hag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—Troy Press.

To all dwellers by the water and in the country and especially all who shoot, the book will supply a great need, and every one who is interested in hirds will be interested in it—Boston Evening Traveller.

The book should find its way to a choice place in every sportsman's library.—Chicago Inter-Ocean.

Ocean.

There is a delightful dearth of dead language in this book. The sportsman who looks between the covers for a description of some game birdadescription which will enable him to identify the creature should he meet it in the woods or of the water—is not compelled to shut the book drop a bad word or two upon it and go in search of some Greek and Latin ductionaries to find ou what the description means.—New York Herald (SULD) BAY SOLD BY

PAWNEE

HERO STORIES AND FOLK-TALES,

Notes on the Origin, Customs and Character of the Pawnee People.

By GEORGE BIRD GRINNELL ("YO.")

Cloth, 417 pages. Illustrated. Price \$2.00.

Pawnee customs and beliefs are richly illustrated by the folk-tales, and in the copious notes Mr. Grinnell gives an uncommonly spirited account of Pawnee life in peace and in war. There is an account of the defense of a Pawnee village by 200 sick men, cripples, old men and squaws, against 600 Sioux warriors, which for sheer gallantry and indomitable pluck will match almost anything in military history. The Pawnee warriors were all away at the time, and the Sioux counted upon an easy victory. But the Pawnee cripples and women actually beat them off after a hard day's fighting, and at last so terrorized them that the bold assailants fled in panic and sustained a heavy loss. Mr. Grinnell also has written a picturesque and vivacious sketch of one of the last Pawnee buffalo hunts, in which the Indians commonly reverted to primitive weapons and usages, often hunting quite naked with no other arms than their to sa and arrows. A particularly interesting part of the book is that which treats of the Pawnee doctors or medicine men. The statements of Mr. Grinnell show the possession by some of these men of a kind of skill ir sleight-of-hand far beyond that usually attributed to Indians; some of the facts here described are as puzzling and unaccount-those performed by the famous jugglers and fakirs of Hindostan, while one of their sa close parellel to the East Indian mango teat. . . Those who desire to learn any other wooders done by the Indian doctors must refer to its pages for themselves, certainly one of the best works on Indian life, legend and character that has been for a long time, it should obtain a wide circulation.—N. Y. Tribune.

ANSWERS TO CORRESPONDENTS.

OUR SHOT COUNT.

THE table presented in our gun columns is a natural outcome of our work at the gun-testing screen. From the first it was decided not to mislead those who were watching the results of the trials at the Forest and STREAM'S gun-testing range by saying that such and such a charge of this or that number of shot was used and giving no further particulars. Instead of this, accurate count and weight figures were taken in every instance and published in connection with the charges as given by the loader of the cartridges. In not a few cases the shot-gun owner was surprised when he discovered that what he had a notion he was using in the way of quantity of shot was not there at all. There is no end of confusion on the whole subject, and the result has been that many previous gun tests are now shown to have been practically valueless because of their lack of this exact data about the charges used.

It is no new discovery that shot size and shot numbers bear no sort of relation when coming from various fac-The New York State Association some years ago took up the subject, discussed it somewhat, and took some inconsequential action, and then the companies went on making each its shot in its own peculiar way,

being a rule unto itself in the matter of size.

In no other class of manufacture would such an absurd fashion of nomenclature be followed as in shot making. Shoe sizes run even throughout the trade. Collar sizes do not materially vary. In any one of hundreds of callings a general agreement has been reached in the matter of trade sizes, and this is followed from one end of the country to the other; but when a man holding a fine shotgun has after long experience and experiment reached definite conclusions as to the best load, and fixed upon a standard sort of ammunition, it then becomes a mere gamble on his part, when he goes to buy a new supply of shot, whether he gets within 40 per cent. of what he had been using, and upon which his conclusions as to a standard load had been based.

Our investigation is up to date; it is accurate and com-

plete. It shows the status of the shot business, on this question of nomenclature, as it exists to-day. be done, what can be done, we cannot now state. That it would be a satisfaction all around to secure a uniform standard cannot be doubted. A congress of shot makers might do something, State associations might help on toward the desired end, and it certainly looks as though the question is one which the American Shooting Association might take up and on which it could score a success. Our mission now is to give the news side of topic, and when we have completed our series of tables, from No. 10 to No. 6 shot, there will certainly be text enough for the proper action by the proper agency.

FISHING RIGHTS.

THE question of fishing rights in trout streams is exciting much attention in certain districts in Connecticut, as it has done in other States. Clubs or so-called "syndicates" of anglers—in most cases city residents-have leased the fishing privileges in certain streams, paying to the farmers, who own the lands bor-dering on the streams, annual rental for such rights. One case which has recently attracted attention is that of the Muddy River in Wallingford. The fishing rights on that stream were leased by a club or "syndicate" of anglers, and the adjoining lands were posted by the For a while the system worked; but after a time, when, it is said, the rents were not promptly paid, the landowners permitted their friends to fish in the Muddy waters. The club brought suit against the fishermen, seeking to punish them for trespass. The case was tried at Wallingford and the verdict given was in favor of the defendants. The judge held that while the club had leased a right to fish they had not leased the exclusive right; and that under the law the stream must be posted by the proprietors in their own names, not by the club in its name. If this is a correct statement of case, it is plainly seen that a club can still secure to itself exclusive fishing rights in a stream, by leasing the same, and providing for the posting of the waters by the proprietors in their own names.

In a word, the whole problem of maintaining exclusive fishing privileges depends upon the trespass laws. The statutes declare that a landed proprietor, by conforming with certain prescribed rules, may protect his lands from trespass by outsiders. If a person or a club of persons can induce the landowner to post trespass signs and keep all others off, the desired exclusive privilege may be

But while the legal phase is thus perfectly simple and clearly defined, there is another side of the question, which is more complex, and which in reality is that in which the Connecticut anglers are most interested. Aside from the purely legal rights, which must be conceded. has a landowner a moral right to shut out his neighbors favor of the city men who pay for their privileges? This is one of those questions which is viewed altogether differently by the several parties involved. The local man, who has been used for years to fish in a trouthaunted stream, rebels when on repairing to a favorite stretch of these waters he is confronted by a sign forbidding him to trespass. He denounces the lessees as monopolists, and the landowners as selfish, unneighborly and mercenary. On the other hand, the lessee, who has perhaps grown weary of making journeys into a far country without reward, is glad enough to have an interest in a preserve, and stoutly contends that to lease the stream from the landowner, fairly and honestly paying him to post it, is just as legitimate as it would be to buy the land

Perhaps a person who himself never went fishing and cared absolutely nothing for it, and thus being in a position to judge impartially, might suggest that each party had reason for holding to his opinion. The truth is that changed conditions have arisen; under a new order of things, there is inevitable friction; disputes will be fomented until society shall have adjusted itself to the changes. Briefly stated, the new conditions are these: Interest in angling has been enormously stimulated. There are tens and hundreds who go fishing to-day, where formerly there was one. No adequate provision has been made to supply fish for the fishermen. Waters have been depleted, fished out, ruined by pollution. With an everincreasing host of anglers and a steadily diminishing supply of available waters, the individual angler does not enjoy, cannot enjoy, the freedom of old, Those who

can afford to buy or lease fishing privileges, naturally Those who cannot or do not buy or lease are shut out. Both classes are impelled by motives of personal interest. It is asking too much of human nature to demand of the lessees that they shall abandon their system because it works hardship to others. It is equally unreasonable to expect that those who are deprived of their accustomed free fishing shall regard with equanimity the usurpation of these privileges.

The dispute is one which can never been settled by argument about the right and wrong of the leasing system. It will last as long as there shall be more fishermen than waters to fish in. If all the waters of Connecticut, for instance, which were by nature ruited to the support of a fish supply, were redeemed from their present factory pollution, protected from unlawful fishing, and stocked and fished only in a legitimate way in a proper season, it may be that there would be fish for all, and contentment and harmony for all. Is not the present condition of affairs simply an inevitable result of the foolish mismanagement and squandering of fishing resources? And is

sider in what manner the inland fisheries may be restored? A SONG BIRD DECISION.

not the wise and sensible course now to pursue to con-

DECISION of great interest to small bird protectors was recently made by Chief Justice Barnard, of the Supreme Court of New York. Some time ago a suit was brought by the Long Island Game Protector against a Mrs. Fishbough, of Brooklyn, who exposed for sale in her store seventeen living yellowbirds. Before a Police Justice, the Long Island Game Protector charged Mrs. Fishbough with violating Chapter 427 of the laws of 1886, but in that court she was acquitted on the ground that the birds were living, the Justice holding that the prohibition against exposing song birds for sale applied only to those that have been killed. However, the case was carried up, and Judge Barnard decided that Mrs. Fishbough had violated the law; that it is an offense to keep for sale live song birds, and that such action renders the offender liable to fine or imprisonment, or both.

It is to be hoped that this decision may put an end to an abuse which has flourished greatly in and near this city of late years. This is the trapping during the season of migration of numbers of native song birds. These little captives after being taken are either sold for a trifle to the keepers of bird stores, or more frequently are at once destroyed and their skins sold to the dealers in feather millinery.

SNAP SHOTS.

OUR esteemed contemporary, Our Dumb Animals, deprecates the "sad sport" of killing seals as described by some one who had participated in it. We never knew before that any one looked upon the clubbing of seals as a "sport" of any character, sad or joyful. It is an industry followed for profit, to obtain furs or oil, the sealers being actuated by the same motive which govern butchers in an abattoir, and justified by the same considerations of profit and usefulness for mankind. The only people who club animals to death for sport are the summer tourists in the Adirondacks and their guides. Many people besides professed humanitarians consider it an abominable style of "sport," but it will be followed as long as the peculiarly constituted tourists visit the North Woods, or until we have succeeded in reforming the laws.

An innocent correspondent of one of the New York dailies telegraphed from the meeting of the New York State Association for the Protection of Fish and Game at Lyons, one day last week, that the Association had taken a stand against the market sale of game, and that this was a move which would create consternation among the game dealers. As a matter of fact the game dealers are not in the least alarmed by any of the stands taken by this Association. The organization has to do with game protection in its name only; as an association, in its official capacity, it cares not a flip about game protection. The dealers understand this as well as the members. The game protective pretense embodied in the society's name is a harmless fiction. The New York Association is made up of trap-shooters; and in organizing and carrying through a big tournament, it is a rousing success, as the Lyons meeting demonstrated. By the way, what has become of all that brood of sapient soothsayers who were once heard foretelling that artificial target shooting never would draw attendance at State tournaments?

The Sportsman Tourist.

"NESSMUK"-NOT GONE.

A ROUND the old woods-haunter's home Save on one mound of fresh piled mold, The grass is green as ere of old When soft the breath of May had come.

In meshed brown shadows of the woods
Are blooming now the flowers he loved,
As bright as when among them moved
The feet of one, whose happiest moods

Were found when close to nature's heart In forests old, whose shadowed streams Are rarely touched by noontide beams, Far from the world of man, apart.

As blithely now as when he heard,
The hang-bird carols on the elm,
The bobolink rollicks o'er his realm,
And woods with thrushes' notes are stirred.

Calm nature gives no sign of loss, Though it would seem that she must mourn When lover such as he the bourne Of this world's life has passed across.

She feels no loss—his better part
Lives still with her, in sweet commune,
With all her voices in attune,
And taken to her inmost heart.

MAY 24, 1890.

A WAR PARTY.

CLOSE under the shadow of a great mountain, by a little stream, the camp was pitched. On either hand the unbroken prairie stretched away a long distance; and far to the eastward, in a vast expanse of plains and level ground, could be seen the three Sweetgrass Buttes. It was a warm summer day and the children were running about among the lodges and playing in the water of the little brook. Groups of mowers seated in the shade cast by the lodges, smoking and talking, and everywhere the women were busy faming buffalc ownskins for new lodges. Near the outsiking of the days was a small but or shelter, hemispherical in shape, and thickly covered with cowakins. For othere women were standing near it, and close by a fire was smouldering. It, was a sweat-dodge, did not were a number of men taking a medicine evant. If you had drawn near? out could have heard the hiss of steam as the medicine man sprinkled water on the red hot rocks; and you could also have heard him praying to the Sun and other gods for the success and safety of the party.

"Hear now, oh Stur's be safe, "Listen all above persons, we serve the long agreement of the party. "Hear now, oh Stur's be safe, "Listen all above persons, we remound is fait; above us the lodge arches from all directious; thus do we represent the world, your own, as you long ago directed; and as you turther—in the long ago—ads should be done, we now gurryov the perils."

"Even as you sink behind the mountain toos, your children here gathered will depart for war. They will seek to be revenged on your enomes. They will fight our centiles who live in the south to make war with our enomies. Pity then the suryouth party was the sorrow of their leaving us. Pity them, that they may bear the sorrow of their leaving us. Pity them, that they may bear the sorrow of their leaving us. Pity them, that they may bear the sorrow of their leaving us. Pity them, that they may bear the sorrow of their leaving us. Pity them, that they may be a suryour their party of the proposition of the work of the pro

⁴So named because once a number of women were digging natural paint in a cut bank, when the earth gave way above, and many of them were buried beneath it. Many of them being killed the name of the creek in Blackfoot is El-tist'-tist-ots-op,

⁵In Blackfoot ip-im'-an—sit inside place.

they approached the outskirting lodges. In one were seated many persons, for they could see their shadows on the new lodge skins. It was perhaps the lodge of a chief, and there were feasting warriors and principal men. The war party came close to the lodge, most of them stood on each side of the doorway and a few stood round and behind it. Then raising his hand to his lips White Wolf sounded the war cry of his tribe. Shrill and loud it echoed through the still night air and was heard by all the people. It made the mother's heart beat, as she grasped her little child in her arms. Young and old were filled with terror. The warriors grasped their weapons and rushed forth into the darkness.

Now from that Chief's lodge the feasters poured out the doorway, but as fast as they came White Wolf and his warriors shot them down and scalped them, and the rush for the doorway was so sudden that those behind could not get out, so they cut slits in the back of the lodge that they might get out unperceived, but even there the enemy struck them down, and the air was filled with war cries, and groams, and shouts for help. Then came warriors, lurrying from all parts of the camp, and White Wolf cried out, "Enough, run," and they ran swiftly and disappeared in the darkness, and the Crow warriors followed them but a little way, for they could not see them in the dark, and all know it is foolish to chase a person in the dark, for he can stoop in the grass or hide behind a bush without being seen, and so can shoot down the pursuer when he comes along. So the Crows returned to their camp and from afar the Piegans heard the great mourning, wives and children, fathers and mothers crying for their dead; and the warriors shouted war songs and prepared to follow the enemy when day should come.

Now White Wolf and his warriors came to the horses,

moturning, wives and children, fathers and mothers cryang for their dead; and the warriors shouted war songs and prepared to follow the enemy when day should come.

Now White Wolf and his warriors came to the horses, and mounting, they rode swiftly away, driving the many loose horses before them, and when they had gone some way they fired the prairie to hide their trail. All through the night they rode, stopping now and then to change horses, and when the sun rose they stopped by a little creek to rest and eat. All through the day they rode, traveling east, and when the sun was getting low they came to the Big River, near the place the Bear River (Musselshell) joins it, and they crossed to the other side. No, not all of them crossed; there in the deep, dark water live the Sū-yō'-tūp-yō (under water people), and they took the chief. White Wolf was riding a large strong horse, and when in the middle of the river they both sank slowly out of sight. They reappeared, and the horse made some powerful lunges to escape, but again they sank beneath the water and were seen no more.

"White Wolf has sunk" the others cried. "The Sū-yō'-tūp-yō have seized him," they cried, and they sat down and mourned for him. Then after a time they went along the shore, thinking, perhaps, to find his body, and when night came they turned out their horses and built a little fire in the timber and rested. But their hearts were sad; they could not eat; they sat around the fires in silence and mourned. By and by, far off they heard a horse whinny; again and again, nearer and nearer, and then there was a voice saying, "Are you there, my brothers?" Then what a shout went up. What a glad cry was there in the night, and they rushed forth to embrace their friend and leader, who had returned to them. "Strange, strange have been my adventures," said White Wolf. "You saw me sink under the water and you thought I was dead. So did I. I felt my horse sink beneath me, and I tried to rise, but something held me down. My ears rung. The water rungled me, an

had finished the Old Man took the four and put them away.

"Then said the Old Man to me, 'From what direction comes my son?' And I told him all, of our going to war, and I showed him the scalps.

"Give me one,' he said; and I gave it, and my shield, that I also gave him. Then said he, 'My son, you have given me presents. You shall live. You shall return to your people; but after this, you and all your tribe must not cross the rivers until you have given us presents. When you reach the shores throw into the water something for us, and you shall cross safely over. But if you do not this, we will take a person and you will see him no more. And now I have said. Shut your eyes and I will lead you to the shore.'

"Then I did as he said, and he took my hand and led me out and up through the water. Soon I felt the water part. I breathed again. I opened my eyes and I stood upon the shore. Close by fed my horse. There was still a little light. I found your trail and followed on."

In the camp of their people the absent warriors were not forgotten. Often the Bear Man unrolled the sacred pipe and prayed for their safe return. Often he stood outside his lodge and shouted out their names. And every day, as evening came he mounted a horse and rode slowly through the camp shaking a medicine rattle, singing a war song and shouting out their names. Thus were the absent ever in the minds of the people.

One day far out on the prairie were seen a band of swiftly-moving objects, at times half hid by the clouds of rising dust. Nearer they came. Hark! Listen to the war song! See! It is our absent warriors; they return with many horses! And all the people went out to meet them, singing loudly the war song with glad hearts, and

shouting out the warriors' names. Then was there great joy, and to their relations the warriors gave many horses, and to those who had lost relatives by death from the enemy a scalp was given; and they danced the scalp lance and were comforted.

Hatural History.

HABITS OF BEAVERS.

HABITS OF BEAVERS.

In a former number of Forest and Stream inquiry was made as to the practicability of securing some specimens of young beaver for transfer to meadows of the inquirer in Pennsylvania. There is no difficulty in securing as many as required, but it would be at some rouble and expense. When a family of beavers is found in a favorable place the method and labor of getting them are much the same as in getting a family of young voodchucks.

On many of the mountain streams of the West where peaver are still found, there are meadows with dry persendicular banks along the stream. In such places the peaver builds his dam of brush and mud. From the bottom of the pond he makes his hole into the bank, running tup to near the surface of the ground and then a foot or ses under the surface for a yard or two, where the nest will be found. If a mound of earth rising higher and ryer than the surrounding surface lies near by, the nest aill be found there; and generally the nest is only a few neches under the turf. On the margin of one creek I have seen scores of such beaver holes exposed from the ep of the bank to the nest by cattle walking over and complied the proof of the bank to the nest by cattle walking over and complied the proof of the bank to the nest by cattle walking over and complied the turf into the hole. In the nest it is ommon to see a single skeleton of a beaver. It is probable when from old age or other cause a beaver dies in it nest, the other members of the family remove to other unarters.

To secure a family of beavers alive, the whole opening

apping through the turf into the hole. In the nest it is common to see a single skeleton of a beaver. It is probile when from old age or other cause a beaver dies in is nest, the other members of the family remove to other warters.

To secure a family of beavers alive, the whole opening ato the pond must be found and quietly but securely losed up. When that is done, dig to the hole from ear the top of the bank, and close it thoroughly. Preare a wire sack for the kittens and some protection for our hands. The young ones now can be soon uncovered and secured. The old ones will be permitted to escape, ut if caught it will be well to bear in mind the insense cutting power of their teeth. The young ones are of likely to try to leave the nest until they are nearly moovered, and all chance for escape by their road to the ond has been cut off. This method of capture would of do where they live on wet marshes subject to overtow, and where beavers build themselves houses of mud and sticks.

No animal is at more pains to have a dry place to liven, and none live on coarser fare or show so much patience and industry. His sagacity and intelligence are proversial. An example came under my notice while trout shing on a mountain stream a few years ago. A young uan noticed a fresh beaver dam near the house and oaxed me to help him trap a beaver. The dam was of and and alder bush and ran across the creek, some 5yds, wide at that point, with perpendicular banks and boriered on each side with dry land used as pasture land. We broke out one end of the dam by an hour's hard work, and set our trap, using a large green alder bush for a take, which we forced into the mid out in the pond as are as the chain would permit.

The next morning we found that the break in the dam and been carefully repaired and our trap with the stake as woven into the very bottom of the break. The reairs were so well done that it took us about an hour to ecover the trap; and we reset it in another place. The ame result followed for five nights in succession. O

Gold in a Grouses Gizzard.—We have recently revived from Roland Ryder, a resident of British Columbia, be contents of the gizzard of a blue grouse (Dendragagaus bscurus fuliginosus), which is of rather unusual interest. The gizzards of gallinaceous birds commonly contain ravel or small stones, together with the commuted fraguents of the seeds, grains and other food on which the inds have fed. The contents of this gizzard, which had seen washed before we received it, consisted of small late and quartz pebbles, among which are four little luggets of gold. This specimen came from near the 'kagit mines, close to the United States boundary line, and was originally in the possession of Mr. John Chance, he discoverer of the Granite Creek Mines, near the smillkameen River. Mr. Chance killed the grouse high

up on the mountains near the mines. He was alone when he cut the gizzard open, but happening to see one of the little gold nuggets as he did so, he called to him two other miners who were working near by and showed them his odd find. The gold is quite coarse and the pieces range in weight from that of a No. 8 to a No. 4 shot. This gold was no doubt picked up with the quartz on some gravel bar in a river or brook near the spot where the bird was killed.

Western Bird Questions.—Edgar, Neb., June 12.—
Editor Forest and Stream: Your correspondent from Broken Bow, Neb., in issue of June 5, who inquires about a bird captured near there, evidently refers to the black-headed or laughing gull, as about that time a pair of those birds were killed near this place and brought to me. The only difference in the marking of the two brought to me was that the female did not have the narrow rim of white around the eyes. I saw a flock of birds in the mountains of southern Wyoming last fall, which, as I did not succeed in getting a specimen, I have been unable to name. They were pretty well up, and appeared to be feeding on the pine trees. The males were dove-colored, with creat, wings and tail of a cinamon red—as near as I can name it—females solid dove color, and appeared to be about the size of a Baltimore oriole. I only saw the one flock in a month's tramp. Can you name them?—H. [It is of course very dangerous to attempt an identification from so general a description as the one given by "H.," but it is possible that the birds which he saw in Wyoming may have been pine grosbeaks (Phyrrhula enucleator), or perhaps they were red crossbills.]

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL (FARDEN IN MA) 1800.—Furchased—Two wolverines (Gulo luscus), one Rhosus monkey (Macacus cryphraus), two beaver (Gastor fiber canaderists), from water noccasins (Ancistrodon piscivorus), one harlequin snak, (Elags fubrus), one copperhead snake (Ancistrodon contortric) six ground rattlesnakes (Crotalophorus miliatrius), one crowner fantilla (Fantilla coronata), six pine snakes (Phyphis metanoleucus), two Indigo snakes (Spilotes crebennus), eleven blacksnakes (Bascanhum constrictor), one common hog-nosed snake (Heterodon platyphinos), ten king snakes (Ophibolus gelulus), one scarlet king snake (Ancistrodon platyphinos), ten king snakes (Ophibolus gelulus), one scarlet king snake (Ancistrodon), three coachwip snakes (Bascanhum flagelliforme), four water snakes (Tropidonotus sipedon), one cyclope water snake Tropidonotus egicloperum), three chicken snakes (Coluber quadriviltatus), two Allen's snakes (Lidodytes alleni), one garter snake (Eutemia sk talls), three alligator snapping turtles (Macrochelys inecritina) and one striated turtle (Chelopus insculptus). Prochelys inecritina and one striated turtle (Chelopus insculptus). Prochelys inecritina and one striated turtle (Chelopus insculptus). Prochelys inecritina and one striated survey (Carlival and mantens), one black snake (Busconopies), two catary birds (Scrinus canarius), two catbirds (Galcoscopies and carlimensis), three alligators (Alliquor mississippiensis), one diamond rattiesnake (Crotalus adamantens), one black snake (Busconium constrictor), one water snake (Tropidonotus spedon), one Skiiton's skink (Eumeces skiitonianus), one horned lizard (Phryposoma cornuta), two musk turtles (Aromochelys odoratus), two redeared terrapins (Pseudemys elegans) and one diamond-backed terrapin (Malacocliminy), one water snake (Corn ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN IN MAY 1890.—Purchased—Two wolverines (Gulo lascos), one Rhosus more

HINTS AND POINTS ON DUCKS.

BY HENRY KLEINMAN.

[Concluded from Page 410.]

EV HENRY KLEINMAN.

[Conetuded from Page 110.]

ONE thing I have always noticed, and that is, that ducks watch the mudhens very close. A flock of mudhens make the best decoys you can possibly have, and you never want to scare the mudhens away from your blind, for they will draw ducks when nothing else will. The ducks may reason that the mudhens wouldn't be there if there was danger, but there may be a further reason besides that. A duck has the utmost confidence in a mudhen's judgment as to a feeding place. Whereever a mudhen is, there you are going to find feed. Moreover, about all the marsh ducks that don't dive well will hang around the mudhens and feed on the roots and stuff they tear up, or else will rob them of their food as they come up from a dive. You will see widgeons and pintails dart right down and light in among the mudhens. Once my son and I put out about 300 ducks from a little willow cover, and a big bunch of mudhens went out with them. We hid away and waited, and though the ducks came back and circled round, they would not light, and we knew it was because the mudhens had not come back in there. Abe has a lot of mudhen decoys, and says he wouldn't part with them. Naturally, the ducks most apt to come in to mudhens are the widgeon, teal, mallard, pintail, bluebills, ringbills and gadwall. When they are hunting for a place, and ready to decoy, about all the slough ducks will decoy to almost any variety of decoy. I think, in a case like that, they often will turn toward almost any sort of a noise to attract their attention. You can "whistle" teal in the dusk of evening, and you will notice ducks draw into that sometimes whose note is not in the least like that. But usually the note must be very exact, and when you see the birds set and draw in toward you all right, you had better stop your calling and let them come, you keeping perfectly still. You can call some birds without any squawker or duck call, but I always use a call, and find the initation of each birds note a great help in getting a bag

a bag.

It is a good plan in putting out decoys on a feed bed not to shoot at the birds when you drive them out; very often they will be coming back before you get out your flock. This does not always happen just this way, how-

ever.

Another thing I have not mentioned, and which perhaps has as much as anything to do with the big bags of a successful duck hunter, and that is, the hunter should always be watching the flight of the birds and making up his mind where they are going to be later on,

or on the following day. If the ducks keep circling round and going down all day in a certain place, it is sure they have fed there, and if you can get in, you will get shooting there the next day. A knowledge of the flight and habits of the ducks is essential. You want to know where the different kinds of feed are on the marsh and the nature of the spots where the birds are apt to be working in different kinds of weather. For instance, if you know the marsh ducks will be driven off the open and the part of the point of

and threes, or small bunches.

I have been asked how I hold on a duck flying at about the average distance of a shot, whether on or ahead, and if ahead how much. I have read a great deal in the sporting papers about holding ahead, and have seen it all figured out that you have got to hold 5, 10 or 15ft, ahead of a fast duck to hit it. Now, I think the man who did that figuring could figure better than he could shoot. I don't know much of the mathematics of it, but I do know that for any ordinary distance I held right on to my duck. At a very long shot I may hold pretty well up in front of him. But I always follow the bird along with the gun. As you do that you will see the bird double up as soon as you crook your finger, or so soon after it that you can't tell the difference. That is the way all our family shot, and we were all fairly successful. I never saw a good shooter who poked his gun out in the air and blazed away at a spot where he figured the shot and the bird would come together. I think a great many shooters who miss while holding close on do so because they unconsciously flinch or stop just at the instant they pull the trigger, or think they are going to pull it. The act of the

shot should be all on the sweep of the gun as it follows the bird. I don't know why this is, but I know if you shoot my way you can't tell but what you have killed your bird by crooking your finger. I must say that I have at one time tried that holding-ahead business, and as I wasn't killing any ducks I quit it and began to hold close to my bird, and now I get them. On very long shots, as I said, I go a little ahead, but never so much as the "authorities" say is right. I do not shoot a very coarse or slow powder.

In another thing I suppose I am old-fashioned also, and that is in the way I load my shells. It is the fashion now to put very heavy wadding on the powder, and some shooters seem to wish their shells were longer, so they could put in more wads. My regular load for ducks, for a ten-gauge (I shot a Daly, then a Greener, and now one of old uncle Tommy Hasdale's guns) was always 4½drs. of FFG. American Deadshot in a brass shell, with just one pink-edge wad, and that always an Ely pink and not an American wad. On top of this I use just loz. of shot, either No. 5s or No. 7s. I never shot No. 6s very much, because there isn't much difference between them and the 5s on the one hand, or the 7s on the other. No. 7 is a very good duck shot, and plenty heavy enough, especially for teal. The larger and wilder ducks need the 5s.

On top of my shot I always used an Ely black-edge wad. I never use a cardboard wad in my shells at all, and I never shoot an American wad at all. They fly to pieces too easy—unless you should take the extra heavy felt wads they are making now. You will notice how much harder and firmer the Ely wads are. You can't blow them to pieces. I used wads two sizes larger than

the shell, and shot brass shells. You hardly see a shell now not loaded with a card wad on the shot, but I never load mine so. I want my shot held tight till they get out of the barrel, and the tighter the better. I never shoot but an ounce of shot at ducks, and if I can't kill a bird without using an ounce and a quarter, I don't want it. I do not claim to know all about shooting, or all about loading, but that was the way I loaded my brass shells in the old duck-shooting days. In the late match at live-pigeons between Chicago and Kansas City, I won the prize offered for the highest individual score, 47 out of 50, but then I shot paper shells, heavier wadding and 140z. of shot. If my theory of holding is wrong, I must have been favored very steadily with good luck. I have not been shooting very long at the trap, and I do not claim to be very much of a pigeon shot.

I am sometimes asked how far a shotgun will kill a duck, or how far I usually kill the ducks that I shoot. I hear a great deal about shotguns killing 50, 80 or 100yds. The gentlemen owning these guns are very fortunate. I am free to confess that mine is no such gun. The distances at which game is shot are usually over-estimated. It should be borne in mind that a duck rarely falls straight down, and where he falls may be quite a way from where he is shot. Now, the outer edge of your flock of decoys is only about 30yds. from your blind, and you shoot most of your ducks clear inside of that line. I mostly prefer to shoot at a duck when he is about 25yds. off, and then I mostly get him, and don't just scratch him down; but really, taking duck shooting as it actually runs on the marsh, there are a great many more ducks killed at 25 and 30yds. than are at any greater distance. It is quite a way 30yds. up in the air. There are not

many trees that tall, and when you are getting ducks from over the treetops you usually think you are doing pretty well. I will say that where one duck is killed at 50yds. ten ducks are killed inside of 40yds. The distances are not measured, and so are not always known. I suppose a great many shooters would think that I always got out early in the morning, if I made any very good bags. To the contrary. I never was a very early riser when hunting, and I do not believe in either before-breakfast or before-daylight shooting. It is that kind of business, shooting all night, and away before daybreak in the morning, that has done much to drive away our water fowl. The birds have got to have some time to feed, and if they are disturbed all the time, morning and evening, they can't feed and they will leave. I never shot late in the evening as a practice, and never very early in the morning, and I think I really got more birds by it, because I did not drive them out of the country. Seven o'clock in the morning was about as early as I got out usuolly. Some of the clubs here have rules forbidding shooting after sundown. That is all right, too. I have seen some wonderful shooting in my time, and the like of it we will none of us ever see again. We may console ourselves that the flight has gone further west, and all that, but the fact is, there is not one duck now to where there were one hundred when I was younger and was shooting around these lakes. There will always be some birds on the Mississippi if the water is high, but the duck supply in our old spots in this inland country will remain small or uncertain unless such papers as Forest And Stream can devise some way to increase them. I have killed a good many ducks in my life. I wish I could bring some of them back to life again.

SHOT COUNT AND WEIGHT.

SHOT COUNT AND WEIGHT.

In a case in the office of Forest and Stream is a series of bottles. They are filled with shot, and it is about them that we propose to have a talk with our readers. Some months ago a series of heavy little boxes were prepared. They were stoutly made to stand hard travel. They were felt-lined to care for the delicate glass vials placed in them. Each box had fifty of these little bottles, arranged in five rows of ten bottles each, and in the end was placed a standard measure of the American Shooting Association marked 1\{\}\text{oz}\). One row of bottles was marked 10, the next row \(\text{o}\), next \(\text{o}\), next \(\text{7}\) and the last No. \(\text{6}\). These boxes were sent out to every prominent American shot company, and as each company got its box, there went also a note from the office of Forest And Stream asking that the shot company take from a recent dropping of chilled shot a series of charges of the numbers of shot named and that, using the measure sent, one charge of 1\{\}\text{oz}\). De placed in each bottle. There was no explanation of the why and wherefore of the request, but in each case the boxes came promptly back, shot-laden, and in each case, too, a courteous note offering the shot and expressing a readiness to do anything else to assist the leading sportsman's paper in any measure it might have on foot.

Away to England went a commission for samples of shot from the two most prominent makers of shot in the United Kingdom. The shot came in small bags, "original packages," from the manufacturing companies, and the measuring out of the charges was done in this office.

Each charge was accurately weighed on the delicate balances used in our laboratory is all gun test and other trials. Each charge, too, was counted, pellet by pellet, with no small assistance from an infallible but simple

apparatus, specially devised to lighten the task of counting out nearly a thousand charges of shot. This brought out in a strong comparative table the variations of the different makers, but in order to bring the comparison down to a strict mathematical basis, 100 pellets were counted out promiscuously from each lot and a careful weight taken of them. This was repeated three times to gain the advantage of a fair average.

The contributing companies are shown in the first column of the very interesting tabular statement concerning No. 10 shot. In each instance chilled shot was asked for and regular numbers, avoiding those misleading half sizes which have been introduced to meet the demand of trap-shooters. There was no short cut taken by reaching an average on one charge. Each one of the ten charges called for is given in the first part of the table by count of pellets, and in weight by grains, and then the full-face type tells the company's average both in weight and count.

In the case of the Northwestern Shot Co. answer came that the works did not turn out chilled shot, and soft shot was taken in its stead. It has not been placed in conjunction with the other class of shot in making up the averages, nor has the English shot been thrown in with the American product, but placed separate, showing at once the sharp variation which exists on either side the ocean, and also incidentally how English sportsmen get along with a scale of shot sizes which is anything but uniform.

In fixing the order of the companies the one showing the lowest average count has been placed at the head of our own companies. The LeRoy Co. puts but 936 pellets in the measure, while the Chicago Shot Tower Co. gets no less than 1,329 in the same 14oz. receptacle. In a match then where the size and measure of the shot were

specified, the man using the LeRoy shot of this number would handicap himself nearly 40 per cent. as against an antagonist using the Chicago-made shot so far as the shower of shot pellets was concerned. Yet it will be seen that so far as weight of charge was to be regarded, the lesser number of pellets run heavier. In average weight it will be noticed that the charge runs from 610grs, down to 566, nor does the smaller weight go with a smaller count, but just the reverse. In fact the whole subject is full of seeming contradictions, and did we not know that every figure shown is the result of counting or weighing, we should be inclined to doubt their showing.

On the whole the charges run very even from each company, yet show variation of 32 to 87 pellets between the different ones of the ten charges sent and counted. There is so much in handling the measure, in the way of getting more or less into it, that the close count shows good measuring experts in each case.

The variation between the two English samples is something very great. The Newcastle shot passes that made under the Abbey patent by nearly 32 per cent. while the variation between the lowest English average and the highest American is nearly 100 per cent.

Taking the table in its entirety it is worthy of a good deal of study, and those who follow the use of a shotgun, with close regard for its possibilities as a scientific weapon of precision, will find in the table points which may explain some of the apparent contradictions so often met with shot when taken merely by measure and number without knowing that whether a number means much or little depends on the name of the maker. With the results of the work done by Forest And Streeam it is easy to see why it is necessary to make count and take weight of your charges if you care to know just what you are using, and understand your results intelligently.

FLIGHT OF THE RUFFED GROUSE.

Editor Forest and Stream:

Every one conversant with the habits of the ruffed grouse knows that the direction of their flight is almost invariably in a straight line, although they do occasionally take a wide circle to reach a favorite spot, and also a smaller one before they alight on the ground. When they light on a limb, they fly straight for it, and make no noise in striking except they be wounded. On one occasion a grouse flew toward me for 50yds., and then passed within 10ft, in an open field. He must surely have seen me from the start, and once a grouse coming from behind passed so close to my head that I felt the windage. I have never seen a grouse directly change his line of flight but once. While out shooting in company with my brother I was walking on a meadow a short distance from a belt of woods, my brother being within the cover, when a grouse started. He flew toward me. As soon as he got clear of the trees and caught sight of me, he stopped his flight and became almost stationary. It was a glorious sight to see him poised in the air nearly over me. Then he started again in a direction at right angles with his former line of flight; but before he could get fully under way the gun was on him, and he fell on the meadow just 30ft. from me by actual measurement. My brother, coming out, said, "That was the prettiest sight I ever saw."

A NEW LEFEVER.

A NEW LEFEVER.

SYRACUSE, N. Y.—Editor Forest and Stream: We have for a number of months past been earnestly solicited by our patrons to place on the market a hammerless gun of our own manufacture, to be sold at a value less than any of the hammerless guns heretofore manutactured by us. So great has been the demand for our higher grades of guns that we have been unable to entertain the suggestion. It is being constantly urged upon us that there are a large number of sportsmen who are admirers of the Lefever gun and are anxious to become purchasers, but for various reasons are not prepared to order our higher grades of guns. Again, the owners of some of our higher grade guns write us that they have use for such a gun in addition to their present supply of guns. We have concluded, finally, to listen to these requests, and to this end have increased the capacity of our factory, for the production of this medium-priced hammerless gun, in addition to our higher grades. We are now prepared to receive orders for this gun. It is a well finished arm in all its appointments, having good Damascus barrels, English walnut stock, full pistol grip, simply engraved with no attempt at outward ornamentation, has our re-modeled action and all our late improvements. This special gun will be known as our "G" grade, and will be sold through dealers only. We avail ourselves of this opportunity of advising our patrons of our decision to manufacture this special gun and to suggest to such of them as contemplate the purchase of this gun, to confer with their gun dealer regarding it.

"BRIDAL TOUR OF THE KENNEDYS."—St. Louis, Mo.—

"BRIDAL TOUR OF THE KENNEDYS."—St. Louis, Mo.—
Editor Forest and Stream: I have just finished reading that excellent story, the "Bridal Tour of the Kennedys," and have enjoyed every word of it. I know that hundreds of tired and worn office-tied sportsmen have read with delight the story that carries them back to the days when they tramped after deer and followed the stream. I have seen my room mate, an enthusiastic duck hunter, after a hard day's work, tired and worn out, pick up the Forest and Stream and in a minute hear him yell, "Now, just hear that. "Got up at 4 A. M., and after eating a hearty breakfast step out in the cold, clear air, loaded down with gun, shells and paddles, and as we walk down to where the boats are tied, can hear the weevee of duck wings overhead." Ah' now I feel better," he would say; and as soon as the story was finished, instead of going to bed, as he had intended to do, he would start out in the evening air for a walk. The writers of little sketches that carry a man's mind back to pleasant days and off the cares of the world for a time, are the ones who do humanity a kindness.—An Old Reader.

Sea and River Hishing.

FISHING NEAR NEW YORK.

FOR practical and specific directions to reach several hundred fishing resorts within easy distance of New York city, see issues of 1889 as follows: April 18, April 25, May 2, May 9, May 30, June 6, June 13, June 20, June 27.

NEW ENGLAND WATERS.

NEW ENGLAND WATERS.

Boston, Mass., June 10.—The early exodus of the fishermen is about over for this spring, though a few more parties are to take up line and rod before the dreaded black flies and mosquitces hold full sway at the fishing resorts of the North Woods of Maine. J. A. French, landlord at the Upper Dam Camps, Richardson Lake, was in Boston yesterday in search of a good cook. He said that the fishing is good at the dam by spells, but the weather has again been cold and unfavorable. A party of fifteen from Waterbury, Conn., he expects this week. At his house there have been quartered some days of late thirty to forty guests, and mostly trout fishermen. The returning parties are not all satisfied this year, though the majority are pleased. Harry Gardner, of Snith, Hogg & Gardner, did not have any success at all. The weather was very cold and wet when he reached the lakes, and he scarcely went fishing at all before he caught a bad cold, followed by rheumatism, which sent him on the road homeward the second day. His party remained a few days longer, but without much success. Poor Mr. Lane, of Paris, Me., was another unfortunate. He has visited Richardson Lake for several seasons, but this time may be his last. He was fishing in the rapids of Mill Brook, at the head of the lake above named, when his foot slipped from the log he was standing on, and the fall broke his leg badly. There was no surgeon to reduce the fracture nearer than Andover, seventeen miles down the lake, and then twelve miles by buckboard. Mr. Betton's steamer fortunately happened to be in that vicinity for wood, and the poor man was conveyed to the South Arm, where, after considerable delay, a team was secured for Andover. When the injured man reached Andover the limb was so badly swollen that the physician there

did not attempt to reduce the fracture, and the man was transported twenty miles to the rallroad, and finally by train to his home. Report says that the fracture cannot be reduced for several days, or till the swelling subsides. Such are the misfortunes of an unthouty fall in the woods so far from civilization.

But not all of the fishing trips this season have been fraught with disaster. On the contrary, there has been a good deal of rare sport and much enjoyment. The fishing for some of the parties at Moosehead has been very good. Such was the case with the Harry Moore party. They came home last week a set of happy fellowe. The fishing was excellent. The party of seventhal the fishing was excellent. The party of seventhal the fishing was excellent. The party of seventhal lake. The party of the fishing was excellent. The party of seventhal lake. The party of the fishing was excellent. The party of this city; G. C. Moore, of North Chelmsford; G. R. Moore, by T. C. French and J. C. Foullkner, of this city; G. C. Moore, of North Chelmsford; G. R. Moore is Harry's father, and is over 70 years of age. Though a fisherman sometimes on the same waters many years ago, he had not wet a line there for many season, and it was a treat to note his enjoyment. He was a boy again. But he had about the only mishap of the party. He was fishing with Tilu—, one of the most careful guides of the Moosehead region. The old gentleman had caught seven trout, when feeling tired of sitting on the thwart of the boat, he rose up creet, and stretching himself, remarked: "Well, Tim, it does seem good to get up once in a while atter stiting so long." No sooner when the old gentleman, trips to region latel lunch, when the old gentleman was the first to be drawn on board of a dryer craft, followed by Tim, a good deal discomfited. But the old gentleman was the first to break the silence with he remarks: "By gracious, Tin! our seven trout are gone! Where is my brierwood pipe? That's sunk too?" The hale old gentleman mas the first to break the sli

Moody landed one of about the same weight on the same day.

Fish Commissioner Henry O. Stanley is just completing the distribution of the landlocked salmon fry that he, with his colleague E. M. Stilwell, have taken at the Edes Falls hatching works. They have taken some 500,000 which are returned to the Sebago waters, and some 300,000 that are taken to other waters in the State. Mr. Stanley says that the landlocked salmon fishing has been good at the Sebago this spring, for rather moderate sized fish, but very large ones have been scarce. He is gratified, however, at the fact that a great many small fish shy of 1 and 21bs., are being taken, indicating that the recent work of restocking these waters is bearing fruit. There comes still another report of the foolish destruction of small trout taken from the streams in the neighborhood of Bartlett, New Hampshire. The last record, bragged of by a Boston sportsman, was 259 trout, and all of them brought home in a 6lb, basket. He thought that his success had been wonderful.

SARANAC LAKE, N. Y., June 12.—Many are enjoying the trout fishing in the famous Upper Saranac Lake, among whom Mr. J. H. Lockwood, of New York, guest of E. R. McCoy, Rustic Lodge, caught a lake trout weighing 914ths

ANGLING NOTES.

THERE are still a few trout left up in Duchess county, N. Y., it seems. The streams are small there and over-fished, but once in a while a fortunate angler strikes a big one and is made happy. Mr. Wm. F. Sage, a well-known angler of Fishkill-on-the-Hudson, was fishing recently on one of the little brooks a few miles back in the country, when he was agreeably startled by the swirl of a big fish, followed by an exciting ten-minute fight. The rod and tackle were very light, and the fly, a coachman, was dressed on a small book, so that Mr. Sage dared not treat him roughly, for this was the fish he had dreamed of and hoped for for years. After following him 100yds. or more through rapids and pools, he landed a very handsome well-fed trout—164 in. long and weighing just 2lbs.—a monster for such a brook. The fish was exhibited next day at the village drug store, where he attracted considerable attention. It is surprising how many of these old overfished brooks contain trout and how hard it is to exterminate them. If restocked and given half a chance they soon recover and afford fair fishing. For instance, we heard of several very fair baskets of trout having been killed on Decoration Day, in small bubble streams within a few miles of New York city, streams that were supposed to contain only a few shiners or an occasional brook pike. It is impossible to destroy the fishing by fair means. If it were not for the night lines, spears and nets there would be no trouble about the supply. Even the upper waters of the Bronx have furnished quite a number of trout this spring, much to the surprise of every one.

Complaints are made by the visitors to many of our

Complaints are made by the visitors to many of our black bass waters that these fish are decreasing in number and size. To remedy this, it is proposed that the season be made to open July 1 instead of June 1 or rather May 30. Of course that change would put an end to flyfishing, the prettiest and most sportsmanlike way of killing bass. Instead of altering the law, which, if done, would only leave the waters open to poachers, while conscientious anglers staid at home, we would suggest that the law against fish racks and set lines be more strictly enforced. As soon as the shades of night descend on the majority of lakes and ponds the poachers put out their long set lines and slip their fish racks in the sluiceway, "just to catch a few catfish, you," and the result is that the bass get caught—and generally they are the biggest ones. Anglers dislike to complain of these men, because in many cases they are the ones they depend on for boats and accommodations.

Last week witnessed the departure of a goodly number of salmon anglers for different Canadian rivers. Reports from the Restigouche are very flattering. An unusual number of fish were seen spawning last season, particularly just above the head of tide water. Those who are at the upper pools have had no fishing yet, but the salmon are expected daily, as they have appeared in large numbers in the lower pools, where some ninety odd have already been killed. As soon as the water runs down a little the fishing will be at its best. Messrs. Sage, Lawrence, Florence, Dunning, DeForest, Wilson, Ballou, Dr. Baxter and many others are on hand. Dr. Baxter, we believe, leads the score so far with a 374b, salmon.

There are a few salmon still being taken at Bangor, but the river is so crowded with boats and fishermen that it spoils all the pleasure of angling.

There are so many different rod grips and handles advertised nowadays that it is hard for the angler to decide. One who has tried it vouches for the following: Fit a thick piece of chamois skin over your butt or hand piece: it can be sewed on quite smooth and neat, and it makes the pleasantest grip in the world. It can easily be replaced when soiled or worn and never blisters the hand.

Advices from Alexandria Bay just received (June 14) report that bass are taking the fly very well.

TROUT AND MINK.—Dr. Levering and Charlie, with Wm. Kurran and Will Hedden, of Jersey City, returned recently from a short trip to Canadensis and the trout streams thereabout. They report besides a fair share of trout that the brush was fairly alive with woodcock and grouse. Woodcock were continually rising from almost under their feet, while the drum of the grouse was constant. One episode of the trip is worth mentioning. Upon approaching the bridge across Broadhead Creek but a short distance from Crane's, a mink with two young were observed coming out of the water, where they had undoubtedly done their share in thinning out fontinalis. Hedden, who is a capital shot with a revolver, whipped out the instrument, and though across the creek and some 25 or 30yds. away, fortunately planted a ball through the mink's head. The young remained by their dead mother and were easily captured and are now being domesticated in a wired box. When a small trout was thrown to them it was devoured with voracity, and they are continually crying for more. Those of the gentle art who know what destruction a single mink will make in a trout stream in one day and night will breathe their thanks aloud to Mr. Hedden for his fortunate riddance of this three of a kind. Mr. H. will have the body carefully mounted. What he will do with the others should they live we are not informed, but we trust that they will not be allowed to escape.—Jacobstaff.

WITH FLY-ROD AND CAMERA.

WITH FLY-ROD AND CAMERA.

CHICAGO AND THE WEST.

CHICAGO AND THE WEST.

CHICAGO, June 9.—A short time ago some comment was made upon the taking of a mascallonge in the Grand Calumet River, over which some surprise was expressed. This fact is now eclipsed by the taking of a genuine mascallonge of 22½lbs. weight in Lake Mukwanago, in lower Wisconsin, by a Mr. Blackburn and a friend who is an Adams Express Co, agent. Lake Mukwanago is about sixty-five miles north of Chicago. No one seems to remember of any mascallonge ever having been seen there before, but Mr. J. M. Clark, who gave the facts in this case, saw the fish, and assures me it was a genuine mascallonge.

to remember of any mascallonge ever having been seen there before, but Mr. J. M. Clark, who gave the facts in this case, saw the fish, and assures me it was a genuine mascallonge.

Mr. Clark has lately been having a good deal of fun with his old friend the black bass. On Decoration Day and the day following he and Mr. Morell caught 65 bass, running from 2lbs. to 5½lbs. This is the finest basket that has yet come down from Loon Lake. Most of the fish were taken in the upper lake. At one time Mr. Clark caught nine bass along the shore of the lower lake, where he was wading and casting among the rushes, the nine weighing 35lbs., which is a large run. All these bass are of the large-mouth variety.

Mr. Chas. L. Ryder, General Agent of the Milwaukee, Lake Shore & Western Railway, got back Monday evening from a hasty run up over the road to Gogebic, and displayed a dozen or two of good bass. These bass were all small-mouthed, and were a peculiar looking fish, being very dark-colored, indeed nearly black, on back, belly and sides, with no green shades about them.

Mr. John Soderberg, treasurer of Blomgren Bros. & Co., of this city, left last Saturday for a stay of a week or so at the pretty little sheet of water known as Silver Lake, which is his favorite summer haunt. This is one of the many desirable waters of the Fox Lake system, and is only about sixty miles north on the Wisconsin Central. Silver Lake has a game warden, a Mr. Schinnig, who also keeps the summer resort hotel there. He is not on record as having wardened anything, but he has a lot of boarders.

Mr. A, Hirth, the suave gentleman who runs the fish-

Reeps the summer resort noter there. He is not on record as having wardened anything, but he has a lot of boarders.

Mr. A. Hirth, the suave gentleman who runs the fishing tackle end of A. G. Spalding & Bros.' house, in this city, has been fishing with two friends at Lake Maria, near Antioch. He reports having taken 38 black bass and 5 pickerel on one day, but he very prebably means that it took 38 of them to catch a black bass in 5 days. He is unable to give the names of the gentlemen who were with him, or to produce documentary evidence of a reliable character, and moreover, his nose is not legitimately sunburned.

It may be seen that the backward season has at length begun and that the bass are biting. There has also been some trout fishing, though not much. It is very likely that more fish will be taken this week than in all the season up to this date.

A party of railroad men lately got back from a day's fishing on the White River, and they had 51 trout that weighed 53lbs. I could not learn names or the number of rods.

season up to this date.

A party of railroad men lately got back from a day's fishing on the White River, and they had 51 trout that weighed 53lbs. I could not learn names or the number of rods.

A letter just dewn from Wausaukee, Wis., on the Milwaukee & Northern, states that constant rains have kept the river full and that the prospect at date is poor.

Dr. Buechner and party are back from their trip to the Gaylord Club, and report a good catch of small trout in the Pike. An unusually large number of big trout have been taken on bait in the deep waters of the lake this spring, as well as many bass.

Young Armour, of this city, got a 3lbs. trout and a lot of small ones on one of the trout streams not far from Lake Gogebic last week. A number of gentlemen from the South and East are now in at Eagle Waters, Vieux Desert and Gogebic. The mascallonge are reported to be beginning to bute this week for the first time this season.

I have just got back from a very pleasant visit to the St. Clair Flate, above Detroit, where I went in company with Mr. John Parker and Mr. Frank Wherry, both gaine wardens, who were on a hunt for certain violators of the fish laws in the neighborhood of the flats. I shall have to make full notice of this interesting trip later on, but I cannot refrain from saying here that the reports of violations of the law are only too well founded. At the time I left, June I, the bass were just beginning to run on the spawning beds back of the club houses, over toward the old North Channel, and here, right at the time they should have been protected, the native fishermen, mostly Frenchmen, were specing them, and over the Baltimore Bay they were netting and seining them. At the Teninsula Club I saw three great small mouthed black bass brought in by one boat, each cut and gashed by the spear. It looked pretty tough. At the Star Island House, among a lot of speared pickerel a French boy brought in I saw another fine bass with the unmistakeable marks of the spear. It is legal to spear pickerel a French bo

of that county who must detect it. And this he must do chiefly for love, for there is no money it. To be plain, here were John Parker and Frank Wherry and myself, not one of whom was by profession fond of seeing spawning bass speared, and not one of whom but had the plain facts before him of such outrage. What could we do? Nothing at all. The boys had with them a commission from the State warden for the appointment of a warden in that county, vice Mr. Chris. Smith resigned. Chris. Smith, spite of all reports to the contrary, was probably a fair warden, but he could not afford to work for nothing. For the pay of the proposed new warden all the boys could offer was the more or less indefinite promise of a very few club members, who had said they would help raise a salary for a local warden. From what I learned before I came away it seemed likely that the boys would secure a new candidate for game warden honors; and after that the old, old story will be in order.

Now, with the very two men I was with, and the very craft that we had along, the whole region I have mentioned could be patrolled and kept clean of illegal nets and spears, at a less total expense than a decent county warden system would entail. I would agree, if so provided, within one month to sweep every illegal net out of those waters and to catch a dozen illegal spearers every week. A boat whose crew was made up of wardens not known to all the local fishermen, and whose movements up and down the lakes could not be known beforehand and figured on, could stop all that foolishness in just about one season. John Parker and Frank Wherry could save the State of Michigan a good many thousands of dollars, and could insure the clubs and hotels of a continued foreign angling patronage, if the fish law department of the glorious State of Michigan had a reasoning and business head to it. But under the present system all these men could do, all that any one could do, was to sit and look on at the baskets of speared bass, and to hear the stories of lessening spor

shut and one hand tied behind his back.

Milwaukee, Wis., June 10.—Mr. C. D. Gammon and several friends of his left last Thursday for a mascallonge trip on Lake Vieux Desert, where they had such great sport last year. They were so good as to delay their start a few days, in order that I might accompany them upon my return from Detroit, and I have now wiggled out of all sorts of moral responsibilities and have gotten this far north to meet them, where I am unavoidably held over a day. As their party breaks camp next Thursday, it looks as though my privileges would be brief, but I hope to catch them for a day at least before they start home.

E. HOUGH.

E. HOUGH.

HE SAVED THE FLY.—Fredericton, N. B.—A number of years since Captain ——, of the Royal Artillery. was salmon fishing on the southwest Miramichi, above Boiestown. In an unlucky and unguarded moment he was rather hastily and heedlessly swinging around his salmon rod preparatory to easting, his large hook caught in the thin part of an ear of T. P., who was one of the Captain's men, who, as ardent and a better fisherman than his master, was intently watching the motions of a large salmon, which the Captain was endeavoring to secure. Seizing the line with both hands, so as to save his ear, as far as possible, T. P. slowly walked up to his master, to be relieved from the hook. "Break it off, Captain. Break it off!" said one of the party. "No, no," replied the Captain, "I am going to do no such thing. Would you have me destroy my best fly?" And so quietly taking a sharp pen-knife out of his pocket and slitting the lobe of his servant's ear, he thus safely redeemed the favorite fly uninjured. The story was related to me by the sufferer, who bore on his body confirmatory evidence of the truth of his statement.—Edward Jack.

Minnows in Corked Jugs.—Garrettsville, Ohio, June 12.—At intervals during the past two years the feasibility of transporting minnows in hernetically sealed jars, etc., has been discussed in your valuable journal. I recently met in Cleveland that expert fly-caster and enthusiastic angler J. T. Hasbrouck. Upon one occasion he ran across a veritable old Izaak Walton fishing for bass, and observed that he carried his minnows in a bottle securely corked. In conversation upon the subject he was assured that they might be easily transported for long distances if put in a two or three-gallon jug filled two-thirds full of water and tightly corked or sealed. A short time since, upon my recommendation, the plan was tried by a member of our Angling Association, and the minnows, when turned into bait pails at the end of a seventeen-mile drive, were found to be in splendid condition, only one of the entire lot having turned up. As it is of great importance to many of the vast army of anglers throughout the land, I hasten to give the result of the practical experiment.—E. S. Whitaker. MINNOWS IN CORKED JUGS .- Garrettsville, Ohio.

BLACK BASS IN SCHUYLKILL RIVER.—Black bass have recently been taken treely in the Schuylkill at Phoenix-ville, Pa., with a royal-coachman fly. In this river the bass are not yet through spawning; a female was seen in the act of depositing her eggs in the shallows, June 9.

Large Carp.—In Rancocas Creek, near Hainesport, Pa., some large carp have been recently taken. As the spawning season is not yet ended we presume that the fish were pronounced flabby and insipid, as all fish are when out of condition.

TO SALMON ANGLERS.—T. J. Contoy, 65 Fulton street, N. Y., has a lot of fine salmon rods, assorted kinds, which he will sell at a sacrifice until stock is reduced. Don't miss the opportunity.—

Adv.

TROUTING ON THE SIOUX.

[Concluded from Page 391.]

TROUTING ON THE SIOUX.

[Concluded from Page 391.]

We all met at the breakfast table, and after the story of the midnight hunt had been told in various forms until it was threadbare, we gave our prospective trouting some attention. I arranged to take Mike with me and go to the upper ripples on the stream, which could be reached by a short detour through the woods of about a mile and a half and then have three miles of angling. Albert was to take Tom and fish the lower part of the river, starting from the house, provided he and Tom did not get too much enthused about the deer and start for the wild woods. The repast finished Mike and I at once got ready and were off for the ripples. We were soon in the dense wilderness, going over the hills with a radiant sky o'erhead and a bright sun shedding its golden gleams o'er the plants, the bushes, the hedges and the trees, as if nature was rejoicing in her best holiday garb. The woodland songsters were out in full force and plumage bright. The soft note of a nuthatch would break the stillness, then the scream of a family of jays rings out, and a little troop of gold-crests raise their tiny voices, or the missel thrush send forth its note of alarm, while the red squirrel raced o'er the branches or sat on a dead bough with his brush curled over his back It was a pure delight thus roaming through the forest amid the silent shadows, the hum of insect life, the warbling birds and the lovely hues of the flowers that peeped out over the grasses and nodded to the gentle breeze.

Time was lost sight of in this delicious walk, and it appears that Mike had also lost himself for he made the

peeped out over the grasses and nodded to the gentle breeze.

Time was lost sight of in this delicious walk, and it appears that Mike had also lost himself, for he made that surprising announcement after we had gone about the distance that should have brought us to the ripples. He placed his ear to the ground to ascertain if he could catch the sound of the purling stream, but it came not. He said he could strike the river at any time, but it was the ripples he wanted to reach. We concluded to bear to the right for a while and see what would develop. After going about a quarter of a mile in this course we again halted and tried once more to catch the coveted sound of the murmuring waters. It was a flat failure, and so we tramped on a little further and then made another stop and listened. This time it was a success, and all was happy and serene. A few minutes' walk and we are at the stream and ripples, which were lovely in gleam of gold and grace of shadow. Beneath the outstretching foliage, where the alders and the sumac wave, and the violet and primrose in beauty flush, the brook as it gently meanders sweetly sings:

"With many a curve my banks I fret

"With many a curve my banks I fret By many a field and fallow, And many a fairy foreland set With willow, weed and mallow.

"I chatter, chatter, as I flow, To join the brimming river, For men may come and men r But I go on forever."

To join the brimming river,
For men may come and men may go,
But I go on forever."

But a moment or two suffices to prepare for the angle,
and as I was ready to cast the daisied fields of poesy are
for the nonce banished. Yonder where the current is
tossing around a boulder is an inviting place, and to it
the line is gently tossed and the bait immediately gobbled, and then a trout of near half a pound is racing
around much to his dismay, and is soon safely consigned
to the creel as first blood. I obtain one of his fins, and
with this for the attraction I send it into the same place,
and after I have made it quiver a few times, it is greedily
seized, and another of about the same size secured. I
try once more, but the dappled beauties seem scarce; and
then a little further down the ripples I am in luck again,
and two more of about eight inches are captured. Again
I change my base, and this time a nurseling, who knew
nothing of man's subtle strategy, was badly fooled, but
he was returned to the stream to tell his scarlet-robed
brothers, with wondering eyes and aching jaws, of his
visit to another world. The ripples were soon covered,
and when we left them there was a total of ten in the
creel. We were now in quieter waters, and have come
within casting distance of the exposed roots of a hemlock
which soon bids fair to span the brook from the effects of
the undermining current. It is an inviting locality, and
I am confident of coaxing a beauty or two from it.
Away sails the decoying fin, and when it struck the
water and quivered by the roots it was suddenly snatched
by a greedy trout, who never released his hold till assisted
by the crafty assassin at the shore end of the rod. He
was a full half-pounder and as pretty as a pink in his
scarlet jacket. Again the fin is sent on its destructive
mission, and one more foolish trout reaches terra firm
and the basket. The third cast secures still another, and
that is the last the rootlets here yield.

Mike now suggests a walk to a favorite pool just a rod or
two below, a

With here a blossom sailing, And here and there a lusty trout, And here and there a grayling.

And here and there a grayling."

The flowing stream seemed to be fairly alive with trout that morning. From under shelving rocks, around boulders, among graveled roots, by moss-grown logs, in sunshine and in shade, in gentle ripples and in quiet waters the golden fins were liberally taken. The creel was growing heavy, and as we were growing weary and hungry we sought a lovely resting place on the bank under shade of bright maples and towering elms. Here we satisfied the inner man with the lunch the kindhearted old lady had so generously provided for us. After that we lolled in idleness, watching the great velvet butterflies flutter in the bright sunshine, revelled in the beauty of the lovely landscape and listened to the over-

flowing jubilee from the warblers of bush and brake These sweet singers of nature are ever a delight, and i

flowing jubilee from the warblers of bush and brake. These sweet singers of nature are ever a delight, and it seems to me as if there must be a soul in every song of the birds, just as there is gladness in the merry notes of the cricket and the happy hum of bees. As I thought of all the happy years this merry brook had run through deep forests and the bright meadows, I saw a little bird in rainbow wings and breast of gold fly to the water's edge, and with his bill sportively toy with the crystal drops, and then fly to the top of a sedate alder and trill a song to the vernal airs that was "the hidden soul of harmony" itself. The aria ended, it rose on wings and darted through the bending bushes to dispense its sweethnoated roundelay in some sylvan grove near by.

Mike, who was sitting on a log a few feet distant, was not at all enthused with the attractive surroundings, but was just then deeply intent on watching some interesting event that was going on in the insect world. He called me to his side and pointed out what so absorbed him. I noticed on approaching that it was a lot of black ants, that were attacking a large grasshopper and were making sad havoc with him. They were bent upon the dismemberment of their prisoner; at each leg a little workwoman, in a black bodice, pulled and worked with all her might; the rest held the body in place. I never saw efforts more fearful, and at times it looked as if the struggling victim would escape, but they were tigerish and held on with a death grip. It seemed, however, that he must soon succumb to the swarms of infuriated warriors.

With such savage murderers, forever prowling among the shadows, with the nets of the spider spread on every hand, and hungry toads and snakes with their prying eyes seeking out every nook and cranny, it would seem that life among our singing meadows were anything but a round of pleasure. "While 'for our gayer hours nature has a voice of gladness and a smile,' here we look upon her joyless face—an expression grim and mysterious as the silent

The war of weak and strong! i' th' air what plots."

"Not even the fluttering butterfly is safe, but is pounced upon in mid air by the great sand-hornet, its wings torn off in mockery, and, thus shorn of its glory, is lugged off to some dark hole in the ground, and the bee returning to its hive, is waylaid on the wing, its body torn open by this armed mignon, whose progeny would seem to have held in perpetuity the death warrant from Queen Titania,"

"The honey bags steal from the humble bees. And for night tapers crop their waxen thighs

"The honey bags steal from the humble bees,
And for night tapers crop their waxen thighs,"

Mike, having a merciful soul, picked up a twig and drove the attacking ants away, and then taking the wounded grasshopper in hand, threw it in air, that it might sail away from its numerous enemies; but it was too badly wounded, and instead of going into the bushes in our rear, it wheeled around and fell in the brook, where with sputtering wings it went along with the current. Soon there was a vigorous splash, and the grasshopper had made a banquet for some lusty trout of the vermillion dye.

"Great Scott! did you hear that?" says Mike.

"Yes, and saw it, too."

Directing Mike to get me a grasshopper, I joined the savage wanderers of field and forest, eager to stain my hands with the crimson gore of that hungry trout that had dined on the helpless grasshopper. Mike soon secured one, and then impaling it on my hook I gently sought the bank, and measuring the distance with my eye, where the poor insect was grabbed, I sent the fluttering bait with a light throw to the very spot. A silvery gleam, followed by a sudden splash was the result, and then the bend of rod and music of whirring reel commenced. I was at once made aware that it was no baby trout, and so I was alert for the victory. He tried every trick he knew to escape. In his efforts he made for some gnarled roots on the opposite bank, but I held him too taut for the trick, and then he broke for some tangled brush that intruded in the stream, but in this he also failed, and had to fight the battle in a fair field. He made a gallant struggle, but it was of no avail, and soon the dandy of the "crimson stars and golden gleam" was imprinting his symmetrical form against the meshes of the net. He registered in the scales 14bs. Mike said it was one of the largest ever caught so far from the mouth of the outing, though my friend had choice waters in which he was pursuing his pleasures, which harbored speckled beauties of a larger size.

The grasshopper proving such a delici

"And here and there a foamy flake Upon me as I travel, With many a silver waterbreak Above the golden gavel,

"And draw them all along and flow To join the brimming river, For men may come and men may go, But I go on forever."

But I go on forever."

The noonday sun is now beating down and sending her golden shafts upon the rippling brook, its banks of verdure, its aerial flowers, and its mosses which seem as if awakening under the first caress of the glowing orb, Rosy hues of inexpressible softness steal through the forests, and when the open fields are reached it is as if the air is filled with life and joy. The angler's reverie must not allow the quarry tolie in fancied security, and therefore we thread our way along this translucent stream and decoy trout after trout, "that strain at a gnat and then swallow a lady bug," We had just turned a graceful bend in the river when Mike threw up his hands in holy horror and cried out: "There's a young half-breed catching trout." And on looking, I noticed on the

bank ahead of us, perfectly immovable and with stolid feature, a young half-breed of about 12 years, so intently fishing that he did not observe our *entrée* on the scene. Mike strode hastily forward, and on reaching him inquired, "What are you doing here?" quired, "What "Fishing."
"Got any?"

"Got any?"

"You lie, you little savage."

And then Mike commenced looking along the shore to see if the boy had any concealed. Finally he heard a splash by some brush, and on going there found and pulled out a string of about twenty that had been hidden in the drift. About two-thirds of these were under the legal limit by an inch or two, and these Mike released, and handing the boy the remainder told him to "git." The boy did "git," knowing full well that he had violated the law and was amenable to punishment, provided it was meted out to boys. Mike said they seldom came here, as it was too far from town; but sometimes they made a raid on the stream, and then everything that is caught, no matter how small, goes into the pot.

It is the hour now when the trout bite the least, and we, therefore, very leisurely proceed, occasionally picking up one, and then gathering the ripened fruit from the raspberry bushes, which are here in great abundance. I now suggest to Mike that it would be a good plan to clean what trout we have and place them anid cooling grases in the creel. Proceeding with the work, it was completed in a short time. A count showed that we had forty-five, among which was the prize trout, two of one pound each, four half-pounders, and the remainder running from six inches up to those of the last figure.

We were now about a mile from the house, and this distance we fished carefully, resulting in a catch of twenty-five more, which completely filled the basket, and which we cleaned as soon as we had ceased from the sport. We now started for the lodge, arriving there about 3 o'clock, where we found Albert and Tom, who had returned about the noon hour. Albertsaid he had had enough of the stream, for he had fallen into it early in the morning, and in consequence was rendered quite uncomfortable the greater part of the day. He had caught about thirty-five, among which were several of good size, and one in particular that was but a fraction in weight below my largest.

The good mother had the meal ready in a

I slide by hazel covers; I move the sweet forget-me-nots That grow for happy lovers.

I slip, I slide, I gloom, I glance Among my skimming swallows; I make the netted sunbeam dance Against my sandy shallows,"

We were soon by the fields and the clearing, and into the deep forest. Here we had not proceeded far before I heard an earnest voice cry out, "Hello!" Looking to ascertain from whom it came, I espied the black face with rolling eyes of the little barbarian of the lodge, mischievously peeping from some raspberry bushes. "What are you after, you little imp of darkness?" I cried, after I had recovered from my surprise, "Done want see if I can keep the flies off n your shiny place."

place."
With this amusing response she rapidly retreated, sending forth a hearty laugh as she ran, that aroused in affright the woodland warblers from their leafy haunts. We again renew our acquaintance in this wildwood with "the children of the air." The bluebird and the robin, the jay and the thrush, the oriole and the bobolink, the

"Linuet and meadow lark, and all the throng That dwell in nests and have the gift of song,"

"Linuet and meadow lark, and all the throng That dwell in nests and have the gift of song," were spreading their painted wings or chanting a hymn of praise to attest their joy. We were soon through this grove, and then a clearing came in view, and that we soon passed as also another small wood, and then a brief walk and we were at the mouth of the Sioux, and no sailboat near the shore or in view. It was 4 o'clock, and that was the appointed hour for the boat. We concluded to wait awhile, for it was ten miles to town, the road of sand, and we did not relish the idea of returning to the Lodge, or of an attempt looking to so much pedestrianism. We agreed, however, to make the long walk if the boat did not come, rather than see the lovely and toothsome trout decay. The immortal poet says: "How poor are those who have not patience," and so we thought, and therefore possessed our souls with a good stock of it, and endeavored to solace ourselves under a tall elm, that shadowed us with its palatial arms, in looking at the white-winged gulls as they wheeled in the upper atmosphere, in watching the far-away steamers and vessels, and in the cadence of the rippling waves as they gently beat against the rocky shore.

It was a long wait, and when 6 o'clock came we shouldered our baskets, and with rod in hand, started off with earnest hearts and nodding plumes on the long ten-mite tramp. We would walk for a mile or so or until we struck some little rill that was making music in the bushes as it ran, and there rest and take a cooling drink, and then up and onward again. The sun was now declining fast and the hills and valleys were bathed in gold and purple, while the blue arch above had decked itself

with rosy spots, flights of little wandering clouds like unknown birds. Sometimes they were islands of fire—volcanoes—their sides running down with lava, fantastic kinds of vegetation—lofty palms—"enormous crocodiles crawling on a sand of ruhjes, or barks with crimson sails, which passed like luminous shadows in the remoteness of a dream." Then the brilliant fairy scene died away, the sky and the clouds paled and took on subdued pearly tints, the twilight was dying.

"How beautiful is night! A dowy freshness fills the silent air; No mist obscures, nor cloud, nor speek, nor stain, Breaks the serene of Heaven."

From the east the broad and golden moon, "smelling like an orange flower bud," arises,

"And far around the forest and the stream, Bathed in the beauty of her emerald beam.

Bathed in the beauty of her emeradd beam."

Twinkling stars in golden feet and lambent beauty are dotting the dome of blue, while the fleecy clouds now seem to float upon an amber sea. The highway is painted in weird and fantastic shadows, the foliaged sentinels wrapped in solemn glow, and only the tramp, tramp, tramp of the delayed anglers, with the cocasional croak of the frog, the bay of some restless dog, or the hoot of the soft-feathered owl alone broke the deep tranquillity. The dove is cradled in the silent cypress, the glow worm illumes the darkened wood, the rampant fox on rapine bent sneaks along with noiseless footfall, while the whipporwill and bat, the nocturnal ramblers of the air, are scouring the sandy road snapping up the buzzing insects. Amid these eloquent fields of nature we at last felt the toil, and footsore and weary we arrived at the little village in its golden glow of moonlight, with the love of "the contemplative man's recreation" as deep within as ever, and with the memory of the beautiful brook that is still singing:

still singing:

"I murmur under moon and stars In brambly wildernesses; I linger by my shingly bars, I loiter round my cresses;

"And out again I curve and flow,
To join the brimming river,
For men may come and men may go,
But I go on forever."

CINCINNATI.

ALEX. STARBUCK.

LAKE CHAMPLAIN.—Plattsburgh, N. Y., June 18.—Sitting here and watching the whitecaps roll up reminds me of the trip in an Addrondack boat taken by your Philadelphia correspondent. As I read his story it seemed as if I were with him, especially as he spoke of the sandbar at Port Kent, where Mr. Seymour and friends of Burlington, Vt., have such famous times with the geese and black ducks, and then on down to the Four Brother Islands, where one can get some great strings of walleyed pike and bass; then down by Thompson's Point and Long Point, the home of Albany's Rushmore Club, who would have entertained him in great style had they been in camp when he was there. This is where Little Otter and Lewis Creek run into the lake, making a vast marsh, which is quite a breeding place for black and woodduck. The lake is very high, and pike fishing has been poor. I was down to the mouth of Winooske River two days ago, but no fish, where they usually get them by the dozens. Some claim that the natives are seining nights, and the scarcity of fish would seem to justify that supposition.—Dexter.

CAPELIN KILLED BY COLD.—In the Report of the Newoundland Fisheries Commission for 1889, Mr. Nielsen,
Superintendent of Fisheries, mentions the destruction of
capelin by cold. He finds that this excellent bait of the
cod and salmon is easily overcome by sudden changes of
temperature at sea. Iz cold springs, when the upper
strata and the surface water are cooled down to 32°,
great numbers of capelin die as soon as they entr the
cold area, while the large body of the fish, at a depth of
three or four fathoms below the surface, will continue
lively and in good condition. Great quantities of capelin
are sometimes found floating about dead from this cause.
As soon as they enter the area of water at 32° they become feeble, "struggle a little, turn over on their sides
and float up to the surface, stomach up and stone dead."

East Haddam, Conn.—One of the best fishing grounds in the vicinity for small fish, perch, roach, eels and bullheads, is what is known as Pickerel Lake, and immense numbers of these fish, including also fine pickerel, are taken from these waters nearly every day. Bashau Lake, the reservoir for the fifteen cotton mills located in the town, is also fertile with pickerel, black bass and pan fish of every kind. Pickerel Lake is an auxiliary to Bashau, and the two offer to our home fishermen rare sport both in summer and winter.—Kato.

St. Albans Bay, Vermont.—The season for bass fishing at Samson's Lakefield House, on St. Albans Bay, opened well June 2, and excellent sport was afforded. The average for each boat on the first day was nineteen bass, weighing from 1½ to 3½lbs. each, and also eight walleyed pike. On the third day there was a strong wind and some sixty good-sized pike were the result.—R.

Brook Trout in Pennsylvania.—At Allentown, Pa., the Little Lehigh and Cedar Creek are attracting favorable attention for fly-fishing, being almost entirely free from bushes and well supplied with fine fish. The proximity of the famous hatchery of the Pennsylvania Fish Commission will explain the abundance of trout.

THE Duluth Herald offers a split-bamboo "pole," reel and trout line to the citizen of the zenith city of the unsalted seas who captures with rod and line the largest brook trout this season, the weight to be sworn to,

A LARGE EEL.—An eel 3ft. long and 9in. in circumference was taken in a trap in Manchester-by-the-sea recently.

SANDY HOOK reports are that kingfishing is excellent.

FISHING TO SUSTAIN LIFE.

FISHING TO SUSTAIN LIFE.

THE Hartford, Conn., Times of June 11 reports this interesting case: "Last Sunday a young man somewhat widely known in the North Bloomfield section for his eccentricities, dug a box of bait and went fishing in the Farmington River. Two men who were strolling up the stream had to him a suspicious appearance, and fearing arrest for fishing on Sunday, and also for fishing for black bass, which was unlewful up to June 10, the young man fed for his life. He songht a hiding place in a barn. The owner drove into the barnyard, and when questioned saw the hone for fishing of the barnyard with the young man. The owner fielding selectives, sent out by Game Warden on the two men critical to catch him. This was enough. He fine further was heard from the barn and det to the woods. Met fine further was heard from the barn and det to the woods. Warden Colline received a letter should have been supported by the sent of the barn and det to the woods. Warden Colline received a letter should have been been and countined his flight to Westfield, Mass. Sae across the State line he penned this remarkable litter, which we print explain:

"WESTFIEDD, Mass., June 9.—Hon. Mr. A. C. Collens: Dear Sir Westfield, Mass. Sunday I was in East Granby but at present I am hear I went down last. Sunday to the river, I dident take any fish pole with me but I cut one and thought it no harm in catching a few river roach to eat for my own supper as I hadent nothing to eat enoly a few crackers and a pease of salt ports, I caught 2 little bass & I let them go as I dident want them. Two fishermen came up the river & I soon learned that they were spotiers and that sunday was the first Sunday this year that I put a hook into any waters and I shouldent then only I was in want of somethine to eat, My father moved to Windsor Locks & left me all a lone and I was keeping batcheers hall I dident "entend to break any law & dident think I was doing so in calching a few roach to eat fine and its was the set should like to po home & get my

fass'" pears that as these two men were not detectives Talbot was y alarmed, owing no donbt to his having been once already ted by Warden Collins for unlawful trout fishing in Febru

Mishculture.

NEWFOUNDLAND SALMON RIVERS.

NEWFOUNDLAND SALMON RIVERS.

A DOLPH NIELSEN'S report to the Fish Commission on the condition of the salmon rivers contains a useful and timely lesson. Salmon are found to be diminishing in numbers so rapidly that their extermination is a question of only a very little time, unless something is speedfly done to protect and multiply them. The catch on Gander River not many years ago was from 500 to 1,000 tierces annually. Now it is under 20 tierces. In Exploit's River the yield has dropped from over 500 tierces to 50 or 60. Large breeding fish are seldom seen in the rivers; only grilse of 4 or 51bs. and sea trout are taken. The causes of this rapid decline are known. Eggs naturally deposited are destroyed in vast quantities by fish and birds. Stake-nets prevent the salmon from ascending the streams to their spawning grounds. Cod traps around the headlands bounding the estuaries catch most of the adult fish before they fairly leave the sea. Dog Bay River is barred across its mouth by three brothers. The Exploits has suffered chiefly from the operations of the cod traps. Generally speaking, the barring of rivers has almost annihilated the salmon. Naturally enough the superintendent recommends the prohibition of every fishing appliance except rod and line within 1½ miles from the estuary of any river for the period of five years. He nrges, also, the necessity of artificial propagation to restore the depleted waters, and calls attention to the fact that, in Norway, an apparatus capable of holding and developing 300,000 salmon ova can be constructed at a cost of from \$50 to \$100. There is a good deal of doubt as to the spawning season of the salmon in Newfoundland, but in Exploits River it is supposed to occur in the latter part of July and the month of August.

THE UTILITY OF TROUT CULTURE.

THE UTILITY OF TROUT CULTURE.

DENVER, Col., June 12.—Editor Forest and Stream: In your issue of May 29 I observe that Mr. Peirce reiterates his belief that trout culture is a failure. He also manifests a little disappointment because his former article did not provoke or attract more attention. He does remember that the paper replied briefly to his article, and that some one, he "thinks in one of the Territories," answered his communication, but he evidently attaches very little importance to that answer. I suppose that I am the person referred to, as I have seen no other contributed reference to Mr. Peirce's article than mine, but I do not hail from a Territory. Assuming that I am the chap that Mr. Peirce's article than mine, but I do not hail from a Territory. Assuming that I am the chap that Mr. Peirce is after, I now wish to give a little attention to his later communication. He says he believes that I "did not claim that any great quantity had been taken, but that they had been seen darting about the stream." I said nothing whatever about their being seen darting about, nor did I limit my statement to one certain stream as Mr. Peirce assumes I did. I did cite Bear Creek and a day's fishing as an example, in which the fisherman took some sixty-four fish, all of which, except four or five, were "planted" fish. This was simply given as an illustration of what is done in many streams. The improvement in the South Platte River and many of its mountain tributaries is more marked even than it is in Bear Creek. Mr. Peirce can be supplied with a list of fifty or a hundred streams if he wants it.

Mr. Peirce appears to look at the question from a purely mercenary point of view, with returns to be realized directly from the fish. I respectfully submit that when a State becomes sufficiently interested in the fish question as to provide for their propagation and preservation, it relegates (or tries to) the fish hog to the rear, and Mr. Peirce's argument no longer applies. The State puts a special daily "fishing train"

that did not cost a dollar and that was worth more than twenty-five cents when raised. I don't know just the expense of raising trout, but I do know that quite a number of people hereabouts are engaged in the business, and they stick to it. In fact there is a demand for land and water suitable for the purpose by more people who want to engage in the business. I had an application for such a lease within the past week. In our spring water the Eastern trout, with fair care, grows to two pounds weight in two years. I have seen them pull down two and a quarter pounds at twenty months after batching. In some of the little land-locked mountain lakes they grow even faster, and there without artificial feed. The common price for such fish in our market is seventy-five cents per pound.

Mr. Peirce mourns a life wasted trying to raise dollar trout to sell at twenty-five cents. He ought to have confined his ambition to the nurture of "mud cats," or found a better market. If he will come out here we will show him how to raise trout, as well as how to catch, cook and eat both wild and tame ones. He won't even have to risk his life in a Territory.

WM. N. BYERS.

THE LOBSTER IN NEWFOUNDLAND.

THE LOBSTER IN NEWFOUNDLAND.

A CCORDING to the last report of the Fisheries Commission, 5.000,000 lobsters, worth \$180,000, have been caught in a year in Placentia Bay. Forty canneries valued at about \$100,000 are engaged in utilizing this catch. Some of the bays uniformly furnish larger lobsters than others, and a variation is observed in the length of the spawning season. Owing to the want of a close season, and the multiplication of canneries, the lobster is diminishing rapidly in size and abundance. Mr. Nielsen, therefore, recommends a close season, and would fix the time in Fortune and Placentia Bays, from July 15 to Sep. 20, and in Trinity and Conception Bays, from July 15 to Sep. 20, and in Trinity and Conception Bays, from July 15 to Sep. 20, and in Trinity and conception Bays, from July 15 to Sep. 20, and in Trinity and conception Bays, from July 15 to Aug. 15, and the smaller and medium sized once during the latter part of October and in November. The eggs were obtained from the factories, and were thus saved from destruction, and developed in great numbers. In addition to the apparatus copied from that used by the U. S. Fish Commission, the Superintendent has constructed floating hatching boxes, for use at the canneries. As a result of the first season's work, 4,039,600 embryo lobsters were liberated at various localities around the head of Trinity Bay. It is not a fact that this is the greatest number hatched in a single season, by any country. We have already recorded in ForeEst AND Stream a larger output by the U. S. Government from the Wood's Holl station. The first eggs for the Dildo hatchery were obtained in Green's Harbor, Trinity Bay, July 19 and hatched July 24. Others were brought from Long Harbor, Placentia Bay. During August lobsters became scarce, and after the beginning of September none but green eggs were found. To hatch these, it would have required a couple of months. No method of rearing young lobsters in confinement has yet been discovered. They will not eat small crustaceans, ex

ROCK BASS AND CATFISH IN GERMANY.—Max von dem Borne, of Berneuchen, has issued a neat little pamphlet: which bears on its cover and title page a figure of our well-known rock bass (Amblophtes rupestris), and contains a brief account of the successful introduction, in 1887, of this favorite game fish into Germany. In February, 1887, twenty rock bass, neasuring from lin. to 1 1-5in. in length, were sent from Wytheville, Va., to von dem Borne. In 1889 twelve remained alive and bred freely, so that the wider distribution of the species in German waters is practically assured. The pamphlet gives a brief sketch of the nomenclature, habits, food, edible qualities, spawning seasou, spawning habits, and principal baits used in the capture of the fish. A similar pamphlet deals with the Schnylkill cat or horned pout forwarded to Germany by Prof. Baird in the summer of 1885, and now regarded as acclimatized in its waters. The species is the common Amurus nchulosus of the books. Germany can boast of the biggest caffish of the world, so that the American stranger will be overshadowed in size, but it will make up the difference in numbers and longevity, and doubtless will continue to be in Germany, as in America, "bei Damen und Kindern als Sportfisch beliebt."

TRANSFER OF RED-THROAT TROUT.—The first introduction of black-spotted trout from Colorado into Eastern waters was affected by the U.S. Fish Commission June 14, when seventy-six individuals averaging about 10in. in length were safely landed at Wytheville, Va. This is one of the varieties of the red-throat which is characteristic of the Rocky Mountain and Cascade regions and extends into Alaska. It promises to become a favorite game fish, and we trust it will speedily become acclimatized in the East. In weight this variety often reaches 8 or 10bs., and it furnishes wholesome food and rare sport. The East has no native species of black spotted trout.

"SUMMER TOURS, 1890,"

Is the title of the new illustrated summer tourist book of the Michigan Central, "The Niagare Falls Route." It is a practical guide and profusely illustrated. Sent to any address on receipt of 6 cents postage by O. W. RUGGLES, G. P. & T. Agt., Chicago, Ill.

MILK FEVER IN COWS.—There's always a want for a medicine of proved reliability, we thought, observing the great demand among our farmers for Humphreys' Specific A. A. for milk fever in cows: and being interested, having cows of our own, we sent a representative of the press to interview Mr. White, a gentleman well known for integrity and worth, and residing in Dover Plains, N. Y., feeling sure that he would act upon the principle, if you know a good thing tell it, and let your friends have the benefit. "Yes," said Mr. White cheerfully, "thave been using Humphreys' Specific A. A. for milk fever in cows, and with sipendid results, and my belief is that if the directions in Humphreys' Veterinary Book are strictly carried out every case of milk fever could be promptly cured. I am now using the A. A. as a preventive, and do not expect to have another case in a herd of 130 cows."—Delaware Dalryman.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—Adv.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trimbull. A book particularly interesting to guiners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

FOREST AND STREAM, Box 2.832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit." "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

FIXTURES.

DOG SHOWS.

Sept. 2 to 4.—Dog Show of the Midland Central Fair Association, at Kingston, Ont. R. W. Meek, Secretary.

Sept. 2 to 5.—Third Annual Dog Show of the Michigan Kennel Club, at Detroit, Mich. M. V. B. Saunders, Secretary.

Sept. 15 to 19.—Second Annual International Dog Show of the Industial Exhibition Association at Toronto, Canada. C. A. Stone, Secretary.

Industral Exhibition Association at Toronto, Canada. U. A. Stone, Secretary.
Sept. 23 to 26.—Second Annual Dog Show of the Central Canada Exhibition Association, at Ottawa. Alfred Geddes, Chairman Committee.
Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury Conn. B. C. Lynes, Secretary.
Dec. 30 to Jan. 3, 1891.—First Dog Show of the Buckeye Poultry and Pet Stock Association, at Canton, O. James Sterling, Sec'y, 39 North Market street.

FIELD TRIALS.

FIELD TRIALS.

November.—Second Annual Field Trials of the Brunswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Auburndale, Mass.

Nov. 3.—Fourth Annual Field Trials of the Indiana Kennel Club, at Carlisle, Ind. P. T. Madison, Indianapolis, Ind., Sec.y. Nov. 10.—Second Annual Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Toronto, Ont., Secretary. Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterhurn Springs, Va. W. A. Coster, Saratogo Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

Secretary.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.
Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary. Marietta, Ga. COURSING.

Oct. 21 to 25.—Fifth Annual Meet of the American Coursing Club, at Great Bend, Kan. I. D. Brougher, Secretary.

A. K. C. MANAGEMENT.

A. K. C. MANAGEMENT.

Editer Forest and Stream:

The clique which is now controlling the American Kennel Club is endeavoring, and has been for the last year, to impress upon the dog men and breeders of this country that I am fighting the American Kennel Club, and that I am opposed to the said club. Such is not the case. I am now, and always have been, a firm believer in the American Kennel Club. Such a club in this country (if we expect to improve and encourage the breeding and preservation of the pedigrees of thoroughbred dogs, and the successful holding not only of bench shows, but field trials) is an absolute necessity. That is, we should have an American Kennel Club existing, and recognized throughout the country as a governing body—a governing club that not only local clubs, but every breeder and exhibitor should encourage, respect and obey—a club founded by and with the consent of all the local clubs—a club founded upon the theory of right, and whose laws and rules should in all cases be executed with practical and impartial justice.

When Mr. Elliott Smith of New York, was elected president of the American Kennel Club, he entered upon the discharge of his duties as such president, and brought to that chair with himself dignity and grace, which were ever evinced by his impartial discharge of the duties of that office. No delegate could ever determine from the actions or manner of Mr. Smith what his individual feelings were upon any motion or resolution pending before that club.

Mr. Smith never had the impudence to vacate that chair and advocate the adoption or rejection of any resolution or motion pending before that body, and never while he was president (except in one instance) did he ever address the delegates who under the constitution have the management of the club, and that was when he was called upon by reason of a tie vote to cast the deciding vote, when he arose from his chair and standing by it gave his reasons for his vote.

from his chair and standing by it gave his reasons for his vote.

Mr. Smith's impartiality has ever been remembered, not only by his friends, or the delegates who voted for him, but also by those delegates who voted against him for that position.

After Mr. Smith's resignation, Mr. Child, of the Philadelphia Kennel Club, was elected president of the American Kennel Club. The dignity and grace, as well as the impartiality possessed by Mr. Smith, were again brought to the chair during the administration of Mr. Child, and when he resigned from the position to which he had been elected, no delegate could say that during the time he occupied the chair that he ever in any way influenced the action of any delegate upon any motion or resolution pending before that body.

Upon the resignation of Mr. Child, the writer of this ar-

no delegate could say that during the time he occupied the chair that he ever in any way influenced the action of any delegate upon any motion or resolution pending before that body.

Upon the resignation of Mr. Child, the writer of this article nominated the present president, Mr. Angust Belmont, Jr., for the position, which had been so ably filled and impartially administrated by Mr. Smith and Mr. Child. Mr. Belmont was elected, and since that time, the writer is sorry to say that the position of president has become a total stranger to dignity, grace and impartiality. The present president has from that time considered that it is his duty to not only preside and to decide such questions as may come before him, and then to vacate his chair, call some trusty member to fill the position, while he makes a stump speech either for or against almost every resolution or motion that may, can, or does come before the board.

The president of the American Kennel Club is not a delegate, and should not be a delegate, and it never was intended by the framers of the constitution that he should have any of the powers possessed by a delegate, except in case of a tie vote. His duties are defined by the constitution, and the moment he leaves the chair that moment his duties within the board cease. He is not elected the president of this club, or that club, of this delegate, or that delegate; and he should not in any way by word, action or deed, use the influence of his office to influence the action of any delegate upon any motion or resolution pending before the board.

He is young, and with time may improve, and as I consider him in every way worthy of my personal feelings, as I do every animal, be it man, insect or reptile, even the insect with a sting in his tail or the reptile with poison in his mouth, or even the reptile who in a coil of himself makes his own lair and gulps up and emits a slime, which is readily devoured by those of his clan with not only seeming satisfaction, but joy. Even unto this one my personal feel

Auy mongrel dog without pedigree or tail, whose date of birth is as uncertain as Noah's, and whose breeder may have been the Egyptian nurse who wiped the tears away from a Sphinx or the fellow who ties the shoes of King Calico, can be entered and registered among the bluest dogs bred by Norrish, of England, and Hopf, of New Jersey.

A registration should mean something, and it should mean that no dog can, shall or will be registered in the American Kennel Club unless the papa and manman is known even unto the fourth generation.

The conformagement should ever be given to these mongrel of the conformagement should ever be given to these mongrel of the conformagement should ever be given to these mongrel of the conformagement should ever be given to these mongrel of the conformagement should ever be given to these manner, form or place.

I have also opposed the financial management of this club, and for fear that I may have been misunderstood, permit me to now say that the financial management, as evinced by the reports made, are not only false and fraudulent, false because they are not true, and fraudulent, false because they are not true, and fraudulent, false because they are not true, and fraudulent, false because they are not rule, and fraudulent, false because they are not selected. The major portion of the item of \$1,228,28, which appears in the report made to the American Kennel Club at the annual meeting in February, 1850, was never carned by the club, it was juggled and book keeped in there, and I will now give the history of the finances of 1858, as it may prove of interest to your readers.

During the year 1881 I had the honor to be chairman of the stud book committee, Mr. Schellhass and Mr. Terry being the other two members. In March, 1888, Mr. Vredenburgh stated to me that he intended to resign as editor of the stud book, and during that month did so. When he resigned, the arrangement was made whereby the stud book committee appointed Mr. A. D. Lewis as editor of the stud book, and made this contrac

the bank account, and representations the American Kennel Club, money.

At the annual meeting of the American Kennel Club, which was held Feb. 21, 1889, Mr. Vredenburgh as treasurer made two reports, commencing from Dec. 5, 1888, and showing the balance as reported at the previous meeting, \$5.39, and on Jan. 11, \$1,228,28. If any book-keeper will now take these two amounts and examine them, there is only one conclusion that he can come to, and that is this, that they are false.

conclusion that he can come w, and the club, there was are false.

The item of \$1,228.28 was not earned by the club, there was no possible resource from which the club could earn this item, and the club did not earn it, it was either borrowed, book keeped or juggled into the accounts.

I have asked for these items which go to make up this sum, delegates of the club have asked for them, and the request has been refused; and I now state that the treasurer will never, over his own signature, give to any man, woman or child in this country the items going to make up this amount.

quest has been refused; and I now state that the treasurer will never, over his own signature, give to any man, woman or child in this country the items going to make up this amount.

On July 19, 1889, the stud book committee, which then consisted of Mr. Terry, Mr. Schellhass and Mr. Lewis, held a meeting and fanned into life the resolution that was offered by Mr. Vredenburgh, and increased the registration fee from 50 cents to 81, the same to go into effect Jan. 1, 1890.

Several protests appearing in the sporting papers against this unjust and unreasonable increase made by the stud book committee, the stud book committee, in answer to these charges, published a card over their own signatures as an explanation of their action, and in said card they stated:

"The two years' experience of both the secretary and editor shows to them conclusively that the cost of publishing each entry was greater than the amount charged for it, and that this induced the secretary to bring the matter before the American Kennel Club at this meeting, Dec. 6, 1889.

"The reasons for the increase are the following: The cost of composition, printing, electrotying and binding of each volume is about 33 cents for each entry. To this must be added the salary of the compiler of the book, and a proportional amount for office rent, postage and stationery, and these combined swell the total cost for each entry to a fraction of over 81 cents."

Since Jan. 1, 1889, the stud book has paid its editor a stated salary on the last day of each and every month, together with its share of its other residuum expenses, and when the present volume is published and paid for, the result will be that it has beeu published and paid for, the result will be that it has beeu published and paid for, the result will be that it has beeu published and paid for, the result will be that it has beeu published and paid for, the result will be that it has beeu published and paid for, the result will be that it has beeu published and paid for, the result will be that it ha

"Mr. Watson—What was the balauce that was named that was presented last year?
"Mr. Vredenburgh—81,624.09. That was the balance on Feb. 20.

"Mr. Watson—Yon published a statement at one t somewhere, that yon had a balance on hand of \$1,22 Can you tell me where that was?

"Mr. Vredenburgh—That was in the February Gazette, of moneys received by the American Kennel Club from all sources, and of expenses of every description to Feb. 16. Receipts to Jan 11, 1889, as by balance carried over per new book, \$1,228,28, and then the different sources from which we received money from Jan. 11 to Feb. 16, made \$2,375.

'Mr. Watson-I want to know how you bring it up to

hat point.

"Mr. Vredenburgh—Because we had no meeting from Dec, 6, and in the meantime, when I closed my books for

1888, and carried over my balance for Jan. 11, the balance happened to be \$1,228.28."

Mr. Watson utterly failed in his attempt to extract from the treasurer, the items going to make up this amount, and the so-called chairman of the so-called committee, afterward coming to the treasurer's rescue, Mr. Watson for the time being abandoned the search for the lost items going to make up this sum.

Upon his subsequent return to New York he went to the office and again asked Mr. Vredenburgh for these items.

Mr. Vredenburgh evidently imposed npon him by taking advantage of some deficiency in his intellectual organization, or exhibited to him what must have been the private account which had been kept by Mr. Lewis under his contract with the stud book committee in the year 1888.

But there was one thing which Mr. Watson did get from the treasurer, which all of us had been unable to extract, and which the treasurer put down on an envelope in his own hand writing, to wif, the income of the club from Jan. 1 to Jan. 11, 1889, and which amounted to \$122.50.

He also stated to Mr. Watson that this \$1,228,28, or the major portiou thereof, came from the stud book.

Now, breeders and dog men throughout this country, let us sum this up and see what we find.

April 1, 1888, Mr. Lewis takes charge of the stud book under contract with the stud book committee; what he receives is his.

May 8, 1888, the American Kenuel Club treasurer's report shows \$128.01 on hand; secretary goes to Europe, returns Dec. 3, 1888.

Dec. 6, 1888, makes a report dated Dec. 5, balance on hand

May 8, 1885, the cauchy shows \$128.01 on hand; secretary goes to Europe, returns Dec. 3, 1888.

Dec. 6, 1888, makes a report dated Dec. 5, balance on hand \$5.39.

At same meeting asked to have registration fee increased 100 per cent., because stud book was always published at a loss.

At same meeting asked to have registration fee increased 100 per cent., because stud book was always published at a loss.

In same month states to the writer received a large amount of money from the president.

Feb. 21, 1889, makes two reports on one day, which show upon their face fully as much jugglery as could have been gotten into one report in two days.

In August, 1889, stud book committee, over their own signature, claim that the stud book had been published at a loss, and that this was their reason for increasing the tax upon the dog men throughout the country 100 per cent.

Jannary, 1890, secretary and treasurer published an annual statement showing that from and during the year 1889, he had received from the dog men and breeders of this country 88,312.26, and that he and a few others had expended \$7,027.66, and yet he fails to show in any of his reports where the dog men and breeders have received any benefit from the expenditures of this money, for no stud book was published during the year, and for some two months thereafter.

At the so called meeting of Feb. 13, 1890, Mr. Vredenburgh tells Mr. Watson that the balance happened to be \$1,228.28.

A short time thereafter tells Mr. Watson that this money came from the stud book.

Often through the year, in some of the meetings of the club, and in the sporting papers, in reports of officers, and in statements made by them, have claimed that the club actually earned the moneys credited to the club.

Now what I want to know is this:

First—Did the president put any money into the club?

Second—Did he tell the truth when he said he did not put any in?

Third—Did Mr. Vredenburgh tell the truth when he reported only \$5.39 on hand Dec. 5, and did he tell the truth when he offered the resolution to increase the registration?

Fourth—Did he tell the stud when he told me that the president did put the money into the club?

Fifth—What are the items going to make up the sum of \$1,228.28?

Fitth—what are the frems going to make up the sum of \$1,228,23?

Sixth—Did the stud book committee tell the truth when they published their card and gave their reasons for increasing the registration?

Seventh—How could any revenue be derived from the stud book when Mr. Lewis published it under an exhaustive contract?

ing the registration?

Seventh—How could any revenue be derived from the studbook when Mr. Lewis published it under an exhaustive contract?

Eighth—Did Mr. Vredenburgh tell Mr. Watson the truth when he claimed to get the major portion of the item of \$1.238.28 from the stud book?

Ninth—if he told Mr. Watson the truth, and it is the truth, then is it not a fact that Mr. Vredenburgh made a mistatement when he gave his reason for offering the resolution of Dec. 6, and that he also mistated when he told me that Mr. Belmont put the money in, and that the stud book committee misstated when they published their card?

Now, so far as the auditing co-maintee that was appointed is concerned, permit me to now state to the dog men and breeders of this country, that the accounts of the American Kennel Club have not been audited by the said committee, that is, they simply signed the statements made out by the secretary and treasurer. Two of the committee have so said to several parties, and one member of the committee I believe has written a letter to that effect.

I don't want to break up the American Kennel Club, but I do want to break up and release it from the clique that is now managing it not in the interest of the dog men or the breeder, not in the interest of the dog men or the breeder, not in the interest of the dog men or the breeder, not in the interest of the dog men or the breeder, not in the interest of the dog men or the breeder, not in the interest of the dog men or the breeder, not in the interest of the dog men or the breeder, not in the interest of the dog men or the breeder, not in the interest of the dog men or the breeder, not in the interest of the clique that can be gathered into No. 44 Broadway, New York, at the sound of a whistle.

I want to see a club presided over with the impartiality of a Mr. Smith or a Mr. Child. I want to see delegates who belong to the clubs that they represent.

I want to see delegates who can come to a meeting and thoroughly discuss before a presiding officer every resoluti

Twant to see the Local club and breeders, and local club and anot a willing tool for a clique who may be in control.

I don't want any employé of a club to act as a delegate. I want to see "health, wealth and wisdom" enjoyed by all the dog men and breeders, and local clubs throughout the country, and then we will find that enough of these will get into the American Kennel Club to arrange its affairs.

I want to see the American Kennel Club at No. 44 Broadway controlled by the local clubs and breeders throughout the country, and I don't want to see the local clubs and breeders throughout the country coutrolled by the officers at No. 44 Broadway.

I want to see officers of the American Kennel Club who will give information to members of local clubs, in regard to affairs connected with the club, when requested.

I want the opportunity to write the obituary of the present American Kennel Gazette, as I consider it in every way worthy of my personal feelings

NAMIONAL BEAGLE CLUB.—Boston, Mass., June 16.**

NATIONAL BEAGLE CLUB.—Boston, Mass, June 16.—
Editor Forest and Stream: The quarterly meeting of the
National Beagle Club will be held at the Quincy House,
Parlor G, Boston, Mass., Friday, July 11, at 6:30 P. M. All
members are earnestly requested to attend.—F, W, CHAPMAN, Secretary.

THE NATIONAL BEAGLE CLUB.

THE NATIONAL BEAGLE CLUB.

Editor Forest and Stream:

I would inform those intending to join the National Beagle Cluo that their application for membership should be received on or before July 10, 1890, in order to be acted upon at the quarterly meeting, which will be held at the Quincy House, Parlor G. Boston, Mass., on July 11, at 6:30 P. M. It should be remembered that this is the last opportunity beagle men will have of joining this organization until October, and as the entries for our first field trials will probably be closed before the October meeting, they will secure an opportunity of competing for the specials by joining on or before July meeting. Almost every member of the club has promised to send from one to five dogs to our trials, and as we shall have the best judges experience can suggest and money can hire, there should be no reasonable doubt in the minds of those intending to enter dogs that the trials will be a success and an advantage to the beagle, those entering him and the club.

There has been a want felt for a number of years for something of this kind, and now that a club has been organized that will keep awake and push the beagle to the front and keep him there, it should be the duty of every beagle man in America to give this club his support by joining or by sending his dogs to our trials or both, and so far quite a number have done so, but there are those who say "Oh, yes! go ahead, and when you make a success of it we will come in; we have been there once, and don't mean to get nipped again if we know it." To those we would say one swallow does not make a summer, and one failure don't mean everything will be a failure, just try us, and if we don't mean everything will be a failure, just try us, and if we don't mean everything will be a failure, just try us, and if we don't mean everything will be a failure, just try us, and if we don't mean everything will be a failure, just try us, and if we don't mean everything will be a failure, just try us, and if we don't mean everything wi

THE ENGLISH SETTER CLUB.

MELROSE, Mass., June 12.—Editor Forest and Stream:
The annual meeting of the English Setter Club of America will be held at Boston on Tuesday, July 1, at the Quincy Honse, in Parlor G, at 7 P. M. All are cordially invited to be present.—H. H. Brown, Sec.

which to be present.—H. H. Brown, Sec.

Waterbury, Conn., June 14.—Editor Forest and Stream:
It is with much regret that I see in the sporting papers notices to the effect that there will soon be issued a call for the formation of another English setter club. On May 24 of this year, at a meeting held in Boston, there was formed a club called the English Setter Club of America. While not meaning to arrogate to themselves all the interest of the country in the English setter, or all the knowledge upon that important subject, its originators felt the need of a specialty club for that valuable breed of dogs. In forming this club and adopting their constitution and by-laws, they thought their platform, as therein formulated, was broad enough for men from the North, South, East and West to stand upon side by side. Their sole object in forming such a club is the advancement of this breed of dogs, or rather its maintenance in its present position at the head of the list of sporting dogs. I trust that the call mentioned in the notices referred to above will not be issued, but that instead those interested in it will decide to join the club already formed. I can assure them a cordial welcome, and that they will be met half way by the gentlemen composing the club. There will be a meeting of the English Setter Club of America on Tuesday, July 1, at the Qnincy House. Boston, Mass., at 7 P. M., which I hereby invite all who are interested in the English Setter Club of America.—F. W. Whitlock, President English Setter Club of America.—F. W.

PRINCE CHARLIE IN THE NOVICE CLASS.

PRINCE CHARLIE IN THE NOVICE CLASS.

Editor Forest and Stream;

As Mr. Watson has referred to an opinion expressed by me as to the eligibility of his collie Prince Charlie for the novice class at the N. E. bench show of 1890, in which I believe he was the winner, I desire to give my reasons for the opinion I formed.

The role as laid down by the A. K. C. reads as follows: "The novice class shall be understood to be for a recognized breed, for which a regular class has been provided, and for competition in which a dog shall not have won a prize at any American Kennel Cluh show, or which has not won a prize in a recognized show held in England or Canada."

Prince Charlie competed in the Futurity and collie sweep-stakes at the W. K. C. bench show of 1889. These stakes are not special prizes, but regular open classes competed for every year and open to all collies born in the United States or Canada. These stakes or classes were competed for at the W. K. C. bench show of 1889, they appeared in their regular order in the premium list and were a portion of the regular order in the premium list and were a portion of the regular collie classes and have been for several years, to be competed for at said show.

Prince Charlie was awarded a cash prize in these classes, and hence was barred from any subsequent competition as a novice. His competing at New York this year was an oversight on my part. If Mr. Watson was able to bulldoze Mr. Fletcher and the bench show committee at Boston and gobble up the boodle I think he had better refund.

No. 115 Highland Avenue, Orange, N. J.

SALE OF THE MEMPHIS & AVENT KENNEL.—
Memphis, Tenu., June 14.—Editor Forest and Stream: We have sold our entire interest in the Memphis & Avent Kennel to our former partner, Mr. J. M. Avent, of Hickory Valley, Tenn., and the dogs of the kennel have been removed from this city to Mr. Avent's home as above. All communications must be addressed to him in the future. The dissolution of the kennel is the result of our determination to retire forever from any connection whatever, nearly or remotely, in a kennel interest, public or private. The purposes for which the Memphis & Avent Kennel was formed have been, we think—and pardonably so we trust—more than fully realized. Its ambition was to breed a line of field dogs the equal, if not the superior, of any ever bred in England or America. Whether this ambition, somewhat vaulting in its conception, has been realized or not, we now leave it to the kennel's record and to the public to judge. To Mr. J. M. Avent is due, more than to any other member of the kennel, the success it has attained. True that through us the kennel came in possession of its winning blood lines (Juno A. excepted), but Mr. Avent, skillful in handling, more skillful in the exercise of a keen innate perception, trained and handled them to a point almost invincible. It is not to be wonderd that dogs thus bred and handled should achieve such phenomenal and unparalleled success. Now that we do not own, and will never again own any interest whatever, remotely or otherwise, in a kennel, and will never again own any interest in a dog except for private shooting strictly, we trust that no one will accuse us of indelicacy in thus expressing ourselves. We most earnestly commend Mr. Avent to our friends everywhere as a gentleman entirely worthy of their confidence in every respect,—W, B, GATES, ARTHUR MERRIMAN.

CINCINNATI DOG SHOW.

|Special Report.]

ISpecial Report.]

CINCINNATI, June 9.—Editor Forest and Stream: The fourth show of the Cincinnati Sportsmen's Club, held here last week, was a capital show of dogs, notwithstanding the very hot weather. I am informed that the association will hold a show each year in future, and select an earlier date. The management was under the care of Mr. G. H. Hill, of Madeira, who performed his duties in a satisfactory manner. The judges were Messrs, J. M. Taylor and James Mortimer. The former judged the pointers, setters, foxhounds and beagles, and Mr. Mortimer the other classes. The judging was finished the first day and I heard but little grumbling at the awards.

There were nearly 300 dogs entered, many of them being well known prize winners. The quality in some of the classes was very good indeed, the mastiffs, greyhounds, setters and fox-terriers taking the lead. The show of spaniels and collies was very small, as was also the case in some of the terrier classes. The attendance was not what it should have been, although I presume that the club has come out all right, as there was a fair crowd present during a portion of the time.

MASTIFFS.

all right, as there was a fair crowd present during a portion of the time.

MASTIFFS.

The mastiffs were not large classes, but the quality was better than I expected to see. Moses was the only one in the challenge class. He is a big one and was well shown. With better head properties he would be a hard one to beat. The bitch class had no entry. Ormande, the winning dog, is well put together and has a good head except that he is weak in nuzzle. He is under size and small in bone. Pluto, winner of second, is a bigger dog and has better bone. He has a yellow eye and moves awkwardly. Victor and Duke, both commended, are a long way behind the others. Mengladen, the winning bitch, is well known. Duchess of York, second, has the best head of the lot, and when matured she will make it interesting for some of the good ones. Ilford Czariua, vhc., is a big bitch, but too houndy in head and weak in muzzle to win in a good class. Only oue puppy was shown, a poor specimen.

St. BERNARDS.

ST. BERNARDS.

was shown, a poor specimen.

ST. BERNARDS.

There were no eutrics in the challenge classes. Peter, the winning dog, is quite a nice one, but is too houndy in head. Golddust, winner of second, has a good head, but is too small, and is lacking in markings. Vulcan, vhc., was the best in the class, and I should have placed him first, notwithstanding his lack of condition. He is of good size, has a good head, is of nice color and is properly marked. The bitches I did not fancy, and do not think that they will ever get in the challenge class. The two dog puppies are promising. First was withheld in smooth-ccated dogs, and second might as well have been, as the winner is not a good one. Nora, in the bitch class, is well known.

Bruno, the winner, is a dog of more than average merit. Flora, winner of second, is of good size, but lacks character, GREAT DANES.

The well known Brock was the only entry in the challenge class. He was looking well for his years. Melac, the winner in the dog class, won in the puppy class at Chicago last spring. He bids fair to make a very good one. Aside from these two there was nothing up to show form.

DEERHOUNDS.

Only two deerhounds were shown. Both have been often described.

GREYHOUNDS.

Dr. Van Hummel made nearly a clean sween in the conditions.

described.

Dr. Van Hummel made nearly a clean sweep in the greyhound classes, winning every prize except second in the open dog class. His dogs were shown in excellent condition.

FOXHOUNDS.

The foxhounds were a good-looking lot, but why a class was made for so-called shaggy foxhounds I am at a loss to determine, as none of the variety were shown, the class containing only the kind commonly known as the American hound, and no good ones of those.

anning only the kind commonly known as the American hound, and no good ones of those.

POINTERS.

The entries in the challenge class were absent. Chief, the winning dog in the 55lbs, and over class, is just about an average specimen, with a head that is much too short and thick. He has a capital set of legs and feet. All the others in this class are well known. Tempest, unnoticed, Ithought just about good enough in this company for a vhc. card. Phantom, the winning bitch, I do not like, she is bad in head and chest, and is too light in limbs to stand hard work. Both Nell and Lady Jane are better bitches. In the under 55lbs, class, Trinket's Coin won in the dog class. He is coarse in head and lacking in character. Tribulation, the winner of second, is well known. He is a better dog than Coin. Molton Baron, vhc., was the best in the class, except in condition. He shows more true pointer character than all the others in the class combined. Trinket, winner in the bitch class, also shows character and is quite a nice animal, although she is a bit weedy. There was nothing else in the class that will ever do any winning in decent company.

ENGLISH SETTERS

There was only one entry in the challenge class, Dad Wilson. He has filled out since I saw him last, and is a much better specimen than I imagined he would ever be. Ben Hur of Riverside, won in the open dog class. He is a bit lathy and light, but shows lots of character, and is a very taking-looking animal with a capital set of legs and feet. Dad Wilson's Boy, placed second, is fully up to the winner except in quality. There was nothing else in the class that came ueur the winner. Bohenlan Girl had an easy win in the class for bitches. She was in good form. Letty, placed second, is a very pretty bitch, but a bit weedy. Florence, vib. and reserve, shows considerable character, but is lacking in substance and was not in good condition. Dixie, vhc., is a better bitch than Florence, as she has plenty of substance and has no serious faults except that she is getting along in years. None of the puppies give promise of future greatness.

IRISH SETTEES.

IRISH SETTERS.

The challenge class brought out three good ones in Mack N., the winner, Dick Swiveller and Blarney. Dick had the call in my estimation until I compared the two, when the better hindquarters of Mack showed him to be the better dog. Aside from the three mentioned and Winnie II., the winning bitch, there was nothing else in the classes that, was up to show form.

GORDON SETTERS.

GORDON SETTERS.

Little Boy won in the challenge class very easily from Leo'and Dixon, and Rose was the only entry in the bitch class. Rob Roy, the winner in the open dog class, is a nicely made dog with a fairly good head and a capital set of legs and feet. His coat is bad and he is off in color. Reginald, placed second, is not a show dog, being coarse and lacking in character. Meadowthorpe Blossom, winner in the bitch class, is well known, as is Lady Pilot, placed second.

I do not profess to be up in collies, but I know enough of the breed to know that they were the worst lot that I ever saw at a dog show.

aw at a dog snow.

IRISH WATER SPANIELS.

The well-known Patsy O'Connor had the challenge class to himself. King Slash's Boy, first in the open dog class, is a fine upstanding dog, a bit off in skull and lacking in coat. The bitches have often been described,

FIELD SPANIELS.

Black Diamond, the winning dog, is much too heavy in head and short in neck to beat Samson, placed second. The latter has much the best of it in head and neck, and is equally good at other points except in coat.

COCKER FRANIELS.

Brantford Red Jacket was placed over Black Duke in the dog class, a decision that I cannot indorse. Both are well known and have often been described. Sensation was lucky to catch Marguerite out of show form.

POOLES.

to catch Marguerite out of show form.

POODLES.

Haus, the winning poodle, is quite a good specimen of the corded variety. Prince is also of the same strain, and but little inferior to the winner.

BULLDOGS.

Rabagas was absent, and Joker, the only one shown, was given first, which he could not win in decent company.

BULL-TERRIERS.

Sir Jack, the only entry, is rather a nice dog, a bit slack behind the shoulders and weak in jaw.

BASSET HOUNDS.

Babette, the only one shown, is well known.

DACHSHUNDE.

DACHSHUNDE.

The winners, Skelett and Schenke, were the only ones that were worthy of notice. Both are fairly good specimens. The latter is a bit suipy and too tight in skin.

With the exception of Little Duke in the challenge and Ross W. in the open class, there was nothing worth notice. Ross is rather too large and coarse for good company.

As I am not up in terriers I shall not attempt a criticism; were I to attempt it, I might put my foot in it. The foxterriers were not numerous, but looked a very good collection. None of the other terriers were well represented, at least in numbers.

TALIAN GREYHOLDS.

PUGS.

PUGS.

PUGS.

The pugs were one of the features of the show; at least this appeared to be the sentiment of the pug fancy, but as I know less of them than I do of terriers I will pass them without comment. The classes were well filled, and the little beggars were the center of attraction, and so far as I was able to see they were properly placed.

Rena, the winner, is much above the average in head properties, and with better eyes and tan would be a very hard one to beat. Jerry, placed second, is better in color but is behind in head.

The winning dog and bitch are very good specimens. The latter is about good enough for any company. Behind these there was nothing worthy notice.

MISCELLANEOUS.

The winner in the over 251bs, class is a nondescript, and under the rules cannot win a prize. The winner in the class for small dogs is quite a good Japanese spaniel, a little off in coat and eyes. Following is a list of the

AWARDS.

AWARDS.

MASTIFFS—CLALLENGE—1st, C. C. Cook's Moses.—Open—Dogs:
lst, C. E. Bunn's Orniende; 2d, Dr. H. J. Groesbeck's Pluto. Com.,

BUCKEYE.

TO FORM AN ENGLISH SETTER CLUB.

THERE will be a meeting of those whose names are associated in the call below at the rooms of the American Kennel Club, No. 44 Broadway. New York city, Tuesday, June 24, at 1 P. M., to form an English setter club, for the election of officers and transaction of such business as may come up at the meeting.

election of officers and transaction of such business as may come up at the meeting.

New York, Jan. 23.—We, the undersigned, desire to invoke concerted action by persons interested in the English setter, for the organization of an English setter club. Such a club is urgently needed in the common interest to undertake the regulation and better management of those matters affecting this particular breed of dogs, which require the authoritative direction of a central body. Among the principal objects to be observed is a revision of the standard of bench show form to conform to the improved English setter of to-day, as demonstrated by the results of our numerons field trials; to select and suggest the names of men competent to judge the breed at bench shows, to offer prizes at such shows as shall recognize the standard of the club, and the judges selected by it, and to extend its influence to the promotion and improvement of field trials, and to the selection of judges at such trials in such manner as the club may deem most efficient and desirable. It might also be expedient to secure necessary legislation for the better protection of the right of property in dogs, and for kindred purposes which only concerted action can adequately influence. To this end duplicate lists for signatures will be mailed to several sections of our country, where a strong following is assured. When the lists are all returned, a call in the proper papers, with the signatures obtained, will be made for a meeting for the organization and transaction of such business as may come before it. To this we, the undersigned, agree: SIGNATURES.

SIGNATURES.

FUN AT DOG SHOWS. [Concluded.]

FUN AT DOG SHOWS.

[Concluded,I]

OLLA PODRIDA.

WHILE this is the "cussing" side, there is also a funny side to every scene. At one of the shows Miss Van Buren exhibited her, Italian greyhound Cupid, quite a good one. Somehow he wet his mat and a bit of the mat dye came off; so when he appeared in the ring the knowing judge ordered him out in quick order, because "the dog is alive with mange." The poor creature had to go, and our judge no doubt rose fully ten points, in his own estimation. One of the best specimens of the breed ever shown in America had to be content with a second prize, as the officiating person said he was "too small." As the limit is "not over" but "under eight pounds," what in the name of common sense was wanted? The judge didn't know, so the little fellow had to bear the ignominy of being "too small." Not unlike this was the experience of an exhibitor at New York, in the misseellaneous class, a class composed of dogs of accepted breeds but not eligible elsewhere, the exhibits being too few to warrant a class by themselves. First prize went to a dog, and as the owner was leaving the ring with the blue ribbon he asked the judge what breed of dog his was, as he himself didn't know nor had be ever seen a man who did know. The "judge" colored, turned away, not vouch-safing an answer. Now, this is what we have been through and are still sweetly meandering through. Heaven help us!

I never hear the name of Garry Owen but I have to smile audibly. No dog's nose ever caused half the trouble in this world that Garry's has. Poor Garry's was black by nature, but nature took a freak, changed it for a while to white; and while it was in that state one of our canine mentors claimed that the owner had faked it in order to make it the proper color. The result was that there was a grand rush for white nose Irish terriers, and the lucky owners were lappy in their possession, for they said, "The great judge and critic says the noses should be white." Shortly afterward the white nose became black: and Dr. Nive

largh.

BEAGLES.

These little beggars have given lots of amusement to the knowing ones. At one of our shows the judge had to resort to the "point system." Several onlookers watched the score as it was made out, and the winner was landed the happy possessor of 102 points out of a possible 100! Good figuring this, and a mighty smart dog, too! But all in all the dog was worth a dozen such as Storm, who for some reason, never understood, has been placed over, not only good ones but real clinkers. May be immense size and general coarseness win when quality and perfect outline are unseen. In Philadelphia once, in a good class of DACHSHUNDE,

DACHSHUNDE,
Gretchen and Flirt, the very worst specimens in the show, were given the blue and red ribbons. No one kicked, for with the exception of Mr. Mason, nobody seemed competent to show up the farce. It was too funny, so he smiled and then—"smiled" again. That beautiful

Starlight, by one of our "judges" was pronounced to be anything but a bull-terrier. It might be any other sort of a terrier, but bull-terrier it never was nor would be. Yet, somehow, the blue ribbons keep being tacked on to her collar by a competent jadge, and it bothers the incompetent judge and critic to find a better one.

Bulldogs.

Britomartis has never recovered from the terrible gruelling in a Western paper, where it was stated that "her lower jaw is not level." Had the critic's head been as near level as her jaw was right, he would have said she had one of the grandest heads ever seen on a bulldog. Another one of our "judges" and critics finds fault with a certain bulldog because he does not stand like a terrier in front, and has so publicly stated it in his report. I fear the next thing we will have will be a new standard where legs shall be straight as ramrods and jaws as level as a pointer's. I've often wished to hear Billy Graham's laugh, but never more so than when once at Philadelphia, where the

will have will be a new standard where legs shall be straight as ramrods and jaws as level as a pointer's. I've often wished to hear Billy Graham's laugh, but never more so than when once at Philadelphia, where the PRINCE CHARLES SPANIEL.

Napoleon III., was awarded most reluctantly a second prize. The judge refused to give him first prize because "Poor little Nap's noce and the cruel mallet had been made more closely acquainted than the rules of Mr. Bergh's Society would permit." He thought a toy spaniel should have a long face. Those little lively chaps, the RLACK AND TAN TERHERS, have given us lots of fun too. The Meersbrook Maiden business is still fresh in our minds, but what a row that little lady did make for a while! all over the country she went, a long list of first and special prizes won under the best judges in England tacked on to her name, quite covering up her lovely white blaze. Our Scotch friend got the babies weefully mixed up on his trip out, still no one discovered it, no one knew the difference, all kept on handing her out the blue ribbons. The FOREST AND STREAM banged away at the judges for giving first and special prizes to a dog with a disqualifying mark on her as plain as the sun at noonday, but it did no good. There was one judge, and only one, who was equal to the occasion, just as in the case of the fox-terrier Rubieon, the robber dog that took from Mr. Thayer and other owners hundreds of dollars. Turf, Field and Farm, with its juvenile reporter, informed their readers that they had had the great pleasure of giving the peerless Meersbrook Maiden a very careful examination and found her a wonder. The Chicago paper, represented by our Babylonian friend and judge dogs propelly unless he is a born judge dogs propelly unless he is a born judge and has had the practice necessary to mature the innate knowledge. He can't do it. Look how the judges get tripped up the very first time a man brings before them a rank duffer with a long lided dogs propelly unless he is a born judge and has had th

Would-be judges follow the records. Real judges know a good dog when they see one, regardless of newspaper reports and the record. Herein lies the difference. On many occasions we must show our dogs under incompetent judges or keep them at home, but this racket won't hold out much longer, notwithstanding the would-be controllers of dog shows insist that incompetency is the parent of popularity. I know one unfortunate exhibitor who contended with the judge that his dog was better than the Maiden, on account of having no white at all, and was haughtily dismissed with "Why, the Maiden could beat your dog if she was all white!" What a jolly laugh our British cousins must have had when they read the learned article after article devoted to this controversy. If those boys on the other side don't put up a host of "jobs" on us in the near future it won't be from any conviction that we are "up" in all breods. Dan O'Shea was guilty of about as good a joke as ever was perpetrated on any judge. It was at Cincinnati, and here he showed a SPANIEL.

Scarce had he entered the ring ere the poor dog was ordered out in quick metre. Dan went, too, and deftly with a pair of scissors he trimmed the feather all off and boldly entered the ring again with her in another class, and came out a winner. Twas too good to be kept under a bushel, so one after another of the conspirators gave it all away, and at last the full force of it was given to the public. I fear the judge never quite forgave Dan, and Dan is surely too smart to ever give him the chance to again "judge" his dogs. By the way, the Spaniel Club, with the exception of the St. Bernard Club, is about the only one that is entitled to be called a specialty club, for it has spaniel men to judge spaniels. Fewer mistakes have occurred in this breed than in any other, due solely to each man guarding his own and prising against the idea that "anybody can judge spaniels." I never see a

aprising against the idea that "anybody can Judge spaniels." I never see a

MASTIFF

without laughing inwardly at the scenc enacted at Pittsburgh, where a judge gave an hc, card to that lovely Lady Clare. That was quite on a par with Mr. Dana's decision at New York, where he said that Salisbury (winner of some 75 first and special prizes in England) was too large for a mastiff and gave him third prize to a \$75 dog's second. Considering that Salisbury after a season's winning was bought for £200 by Mr. Mason and was never afterward beaten in England, it looks very much as if some of our judges know as little of dogs as they do of cats. Take for instance that grand specimen, Ilford Cromwell. Several times he was shown, yet beaten at every point, sometimes not even getting a mention, and sometimes staggering under the load of a mighty "e." card. Now he is a "champion of record" according to the A.K. C. standard, and has won the title after many a hard fought battle. Then look at Ilford Caution. Some of our judges who had never seen a short-faced mastiff thought he was a mongrel, and had it not been for Mr. Mason's articles and criticisms in FOREST AND STREAM, he would have been buried alive. The novice is all at sea on this year's reports of the world-renowned new-comer Beaufort, and if he wanted to buy a mastiff what would he do and where would he go when the critics of two papers act also in the capacity of judges at most of our shows? One critic, after calling him "one of England's giants," says he is nearly a cripple (though not yet six years old), has a good head, yet plain face, and is inferior to Ilford Chancellor and Melrose Prince. Another critic says he is a mastiff of the first water, while a third says he has a wonderful skull but almost too square a muzzlel and completely smothered his competitors. Such reports from men who enter the judges' rings teach the learner absolutely nothing, and instead of being the educators are in fact the confounders. The stately

most too square a muzzlel and completely sumothered his competitors. Such reports from men who enter the judges' rings teach the learner absolutely nothing, and instead of being the educators are in fact the confounders. The stately strags teach the learner absolutely nothing, and instead of being the educators are in fact the confounders. The stately strags are in the stately stragged to be a stately stragged that the confounders in the state of the state

like a rotten apple in a barrel of sound ones. Favoritism too, goes a great way. They too often judge who has hold of the chain and not what is at the other end of it.

Not long since I attended a show where an exhibitor was asked by a mutual friend what he had entered. He gave the dog's name, which the questioner had never heard before, yet when told who the judge was and without having first seen the dog, offered to bet a box of eigars that he could win first prize with it. He said: "Why I can win with anything under ___," And so he did. The bet was paid, and on the train home we managed to snoke the entire box of eigars, leaving him nothing but the special prize this same dog had won, and which the owner positively refused to take home, vowing he'd be ashamed to tell his brother dog owners with what dog and how he had won it.

One is constantly hearing this "Why I can win with anything under ___." What does all this mean, and why do not exhibitors stop a moment and think what is the cause. They are constantly approached at our shows by friends who say, "Let me take that dog in and I'll land you a winner," and though the speaker may not be a fancier of that breed, may not even know a world-heater from a flat catcher, yet he too often reckous, knowing his hest, and hadds you the blue ribbon. At New York, not many years since, I made a large entry. A friend (the secretary of one of our clubs) offered to take one for me into the ring, betting dinners he'd win with whichever I gave him. I handed him over the poorer (the other being a rare good one) and sure enough I took seeond and he was convulsed with laughter as he waved the blue ribbon under my nose. My dog had won a lot of prizes, his never had nor has since that day. I paid the bet and to this day the laugh is still on me.

I recently read in one of our papers that the falling off of shows and the number of entries was due to the fact that the New York show was held in February, was the first one of the year, and exhibitors winning there were satisfied to r

NEW YORK STATE ASSOCIATION.

NEW YORK STATE ASSOCIATION.

On Monday evening, June 10, the delegates to the thirty-second convention assembled in the bandsome quarters of the Lyons Club, President W. S. Gavitt in the chair. The meeting was called to order at 9 o'clock. The president opened the proceedings by giving a short address regarding the affairs of the association. Among other things he suggested that the words New York be dropped from the name, and it be hereafter simply called State Sportsmen's Association; also that the dness be increased from a sincle dollar, which was far too small an amount, and the money so collected to be used in the purchase of trophies for the regular State events. He was glad to see so large an attendance, which argued well for the prosperity of the club. Mr. Gavitt spoke well and clearly, and was several times in the course of his speech greeted with applause. In conclusion he tendered the delegates the most hearty welcome from the managing club, the Spencer, and from the Lyons Club, whose rooms were tendered in so kindly a manner for the nse of the convention. The following clubs were active members of the association.

Waterville G. C., Waterville—C. M. Felton, H. N. Candee.
Oneida County Sportsmen's Association, Utica—J. M. Markham, I. F. Tuttle, R. J. Peck, T. A. Daniels, G. Markham.

The wind veered to the eastward, skies become overcast and the air was raw and chilly. Thursday, June 12. Thursday morning saw no change, so far as bright prospects were concerned. Rain fell early in the day fitfully and lightly. At noon it was raining hard. Then came a little let up, then a down-pour again. The showers did not last long at a time, and although to late afternoon the down-pour was hard and heavy the two regular events were shot off, as also many of the "rapid firing" contests. The adourned meeting, President Gavitt in the chair, was called to order in the parlors of the Lyons club at 9 o'clock. It
Perris	$ \begin{array}{c ccccccccccccccccccccccccccccccccccc$	was easily seen that something was afont, for many of the delegates were sombre and threatenting visage. The feelings engendered by the hot argnments of Monday evening had left their sting and it only needed a spark to fire the slumbering passions of the contesting factions. The opportunity soon came and it was availed of. Mr. Hadley moved, or rather spoke about the rules under which the trophy, known as the "Dean Richmond cup" was competed for. He said "That the rules were obsolete; that it was the business of the State Association to go ahead, not to stand still, much less to go backward, and he asked that it be resolved that this convention, through its recording secretary, J. B. Sage, inform the donor of the cup, Mr. Henry Richmond, of Buffalo, that it was the desire of the convention to compete for the cup nider American Association rules. Also that they desired that the entrance fee be reduced from 30 to \$15. In all other respects the

Ste	entrance fee be reduced from \$30 to \$15. In all other respects the conditions to remain unaltered, Hudson, Richmond, Fisher and Tolsma spoke in opposition. Bach argued that too much time was taken up if ground traps were used; that the entries would be greater, so great that the event could never be shot off, even if live birds could be procured, which they never could be, as great difficulty had been experienced in getting the 400 to be used in this rontest. (This seems rather ludicrous to those who knew of the number of pigeons used by such clubs as the Westminster, Carleret, Westminster, Country and others.) Mr. Tolsma again rose, and in reply to Mr. Hadley remarked that the convention had better go slow in regard to the matter, as the donor of the cup would like nothing better than to have some good excuse which would enable him to rescue the Dean

WhitneyIIIIIIIIIIIIIIIIIIIIIIIIIIIIIIIIII	Richmond cup from the possession of what Mr. Tolsma said he called "a body of loafers." Mr. Hadley in reply, said "that such language was utterly uncalled for, and that Mr. Tolsma must be mistaken in the statement that had been made; for if such remark could be substantiated, the only recourse of the New York State Association was to return the cup to its donor. No other action could for a moment be considered." Here followed hot argument as to whether the cnp was the property of the Association or of Mr. Richmond, the original donor. Messrs. Kiel and Richmond contended that the trophy was the personal property of the Association, and that Mr. Richmond had no more to say about what should be done with it or how it should be compeled for than a stranger.
Open to all contest No. 2, 10 singles, \$1.50 entrance: Ferriss	$\begin{array}{c ccccccccccccccccccccccccccccccccccc$	Mr. John B. Sage, as recording secretary, was asked if the minutes of the Association showed under what conditions and how the trophy had been presented to the club. In reply, Secretary Sage stated that he only had with him the present book of record, that the old one was at his home in Bnffalo. That the gift was a matter of a dozen years ago. So far as his memory told him, the cup was presented to the Association by Mr. Henry Richmond, president of the Dean Richmond Club, of Hatavia, N. Y. That the conditions were that any club winning it three times, not necessarily consecutive, became its absolute owner. That the entrance fees demanded from olbs who entered a race for a winning of the trophy should be allowed to accumulate, and so the Association would be in a position to purchase a new trophy should a single club be fortunate enough to win it the requisite number of times to become its positive owner. That it

The chair appointed as such committee Mr. Richmond, Dan Lefever and Johu R. Sage. Mr. Fischer, of Buffalo, arose and spoke as to the dissatisfaction on the part of the shooting men with the manner and the rules under which the present shooting meeting had been conducted, and stated that unless something was done whereby the poorer shoots could have a chance, the last of shooting conventions would shots could have a chance, the last of shooting conventions would shot so the seen of adaptical a return to the system of class shooting the seen of labor, and he and his coadjutors had endeavored to find some means to prevent the best shots from taking the most money, but they had been unable so to do.
formal one, nothing being done of any importance save a compli-	Goggins 9 Paddock 9 Crosby 6 A Keller 9 Barnes 9 Stacy, Sr. 55 Tuttle 9 Parshall 8 Mills 5 Ferris 9 Parshall 8 Mills 5 First shot off and div. by all but Mosher, Lefever, Montgomery	Mr. Hadley replied, saying that the arrangement for the present year had heen a matter of a good deal of thought and a good deal of labor, and he and his coadjutors had endeavored to find some meast to prevent the best shots from taking the most money, but they had been unable so to do. Mr. Richmond moved that a committee of five be appointed by the chair, with power to arrange the programme and prescribe the rules for the conduct of the shooting at the next convention. Here was the chance for contention and it was availed of. It was virtually taking the charge of things out of the hands of the club (Rome) which was to manage the shooting, which had guaranteed \$1.500 or \$2.000 in cash prizes, and was to entertain the visiting clubs. Mr. Hadley stated the motion was an outrageous one, unheard of, upprecedented. If the members were dissatisfied why was not the matter brought up before. Rome had been given the arrangement of meeting 1891. When the same thing was brought forward last year the men of Lyons promptly refused to take charge of the meeting if hampered by any resolution. That idea was then promptly squelched, and he saw no reason why this convention should act in a manner that was disgrageful to it as a
little Lyons. On Monday evening a Mr. Tobias was found visiting the town. He fell in with the hoys, and being possessed of a magnificent tenor voice, a glee club was soon formed, which attracted much attention. At a late bour this glee club, attended by a large number of musical enthusiasts, serenaded the town. Did it in handsome fashion, too. I doubt if ever Lyons heard better time in singing than that glee club furnished them. The rending of "My Country 'tis of Thee ' was well worth the listening to. Despite all the fun, all the rattling, not a sportsman of all those assembled domeaned himself by forgetting himself as a man. Indeed all the ill feeling was left hebind in the meeting room of the convention. Wednesday, June 11. Wednesday opened hot and stifling. The air was saturated with moisture. Breathing was difficult in the heated air. At the early hours a dense fog hid everything. As the sun rose this was	Lefever. 14 Tarrell .13 Bronze .9 1 Keller. 14 Smythe .13 Wurtz .7	cinhs. Mr. Hadley stated the motion was an outrageous one, unheard of, unprecedented. If the members were dissatisfied why was not the matter hronght up before. Rome had been given the arrangement of meeting 1891. When the same thing was brought forward last year the men of Lyons promptly refused to take charge of the meeting if hampered by any resolution. That idea was then promptly squelched, and he saw no reason why this convention should act in a manner that was disgraceful to it as a convention, and to the dishonor of every member present. The vote was not demanded riva vocc. The situation was a clear one. A standing vote was called for, and the convention voted as a whole to act in a manner which individually each and every one would have repudiated. It is doubtful, however, if any such depost facto law can govern Home in its way of managing next year's convention. The vote heing in the affirmative the chair appointed Messrs, T. H. Stryker of Rome, Jacoh Koch of Bnffalo, H. N. Chase of Stracuse, E. D. Hicks of Rochester and H. E. Gates of Utica as such committee. It was agreed that it was not the intention to hamper the Rome club in any way. Mr. Richmond moved that a report of the labors of this committee he published in the journals of each of the cities named. Carried, with the remark that it was doubtful if there was money
with moisture. Breathing was difficult in the heated air. At the early hours a dense fog hid everything. As the sun rose this was dissipated so far as seeing it was concerned, the humidity remained for all that. During the morning and early afternoon the sun fairly blazed upon the contending men. Olive skins took on a darker hue. The fair-hided fellows bore the brunt of it, their cuticles became first red, then redder, and then the skin	Hadley, Lefever, A. Keller and Hookway: third shot off and div. by Putnam, Lindsley, Felton, Paul and Goggin. Open to all contest No. 4, 20 singles, 33: Whitney, Hookway, Luther, Waguer, Ferris and Andrews 20 each. Wheaton, Crosby, Montgomery, McCormick, Hadley, Peacock, Levengston, Putnam, and A. Kellar 19 each. Paddock, Lindsley, Tuttle, Betson, Wat-	enough in the treasury to warrant such motion being passed.
