ı	Dingt abot off and	in he all had Mark	T

showers fell continually throughout the day, from morning until night. The shooting field was a sea of mud, over which the mentrampled until every blade of grass had disappeared in the sticky paste. Rubber boots and overshoes were at a prenium. Nevey in Lyons had there been such a run npon the shoe stores. Each hour saw the sun shining brightly through a rip in the clouds. These would close together again and then followed a deluge. A lake formed in the outfield deep enough to float a boat. Indeed, where the live bird contest took place a boat appeared with two men in it who scouted for escaping birds or for the wounded ones that dropped near them.

Contest No. 5, \$267 in merchandise prizes, in addition to en-

Williams.

Solitorious of the property of the property of the country in which the elnb is located. Twenty of the State Association, to be shot for by three members of a club with ending the country in which the elnb is located. Twenty single live birds to cach endrestant. Entrance fee, 330 per tam. The birds, in the first place, were an inferior lot of flyrs. Hardly twenty-hye of the whole number killed could be called good, such birds, as one finds at all the principal shooting the special or the first place, were an inferior lot of flyrs. Hardly twenty-hye of the whole and all the principal shooting the special or the first place, were an inferior lot of flyrs. Hardly twenty-hye of the whole and all the principal shooting the special or the first place, were an inferior lot of flyrs. Hardly twenty-hye of the whole and all the principal shooting transmission who have been should be should be should be as the context was the context was the context was the context was the context of the country in which the elnb is located. Twenty single live birds to each end still principal shooting grounds in the neighborhood. This first place, were an inferior lot of flyrs. Hardly twenty-hye of the whole number killed could be called good, such birds as one finds at all the principal shooting grounds in the neighborhood. The fact is, that plunge traps and 2lyds. Its most of, he call the very bird they shoot at under such conditions. Look at the list every bird they shoot at under such conditions. Look at the list every bird they shoot at under such conditions. Look at the list of context and men such and all density of the Donnaga conditions and the such conditions. Look at the list of context and men away past middle age, gray hairs in their beats, and eyes not as good as they once were. Then comes Kooh, Kelsey, Montgomery and Heks, men no longer young. Indeed, the only young men were Hookway, of the Onondaga Club, of Syracuse, and Besser, Jr.

men were Hookway, of the Chinhanga Charlotte, and Des-ser, Jr.

The pigeons were not gathered unless the shot was challenged, compelling the bird to be picked np. A few that fell near the traps were picked up, the others were neglected. Many of the hard hit birds fell in the water and drifted, still living, away with

nard nt bries left in the water and drifted, still fiving, away with the current.

If is to be hoped another contest for the Dean Richmond cup will never he held, if it has to be contested for under the rules that now govern the contest.

the very efficient manner in which the scores were handled and the winners paid by the gentlemen in charge of that department. Not an error did they made from the first contest to the last. While the scorers over and again erred, not an error could be charged to Pres. Gavitt, Burt Hammond and Geo. Kent, who had this department in their charge, President Bennett and M. Van Camp of the Lyons Club, were ever on the alert to make things pleasant for every one, and the rooms of the Lyons Club were always open and at the disposal of the sportsmen.

HARRISBURG.

HARRISBURG.

HARRISBURG, June 18.—The Harrisbnrg Shooting Association's tournament closed at 7 o'clock this evening, with everybody in a good humor and seemingly well pleased. The everybody in a good humor and seemingly well pleased. The attendance was smaller than at any of the previous shoots, but it was due to the fact that the shooters of the previous shoots, but it was due to the fact that the shooters of the previous shoots, but it was due to the fact that the shooters of the cracks present.

The members of the West End Club, especially, were conspicuous by their presence without their guns. Other places were well represented. Pittsburg sent Staner, "Jim Crow," Occiran and genial "Mac Brown," the latter devoting one morning to catching a 6in. black bass. Altoona sent Werner, Clark, Paul Miller, "Doo" Christy and Professor Zeth, the latter helping meterially by refereeling most of the last shoot.

Philadelphia was of course presented by the two Wolstencroft brothers, and the course of the sent of the standard of the well-known cracks like binds, 6frording contents of the well-known cracks like binds, 6frording the pounding them pretty straight, to the sorrow of some of the boys. Enoch was there, of course, with his hand painted curdinal hat and Dutch accent on bis "pull," Little Krueger, the pet of central Feunsylvania, staid till the last shot and left thred with 96 cents. Fieles is always around when shooting is going on and can always be heard.

Saturday brought Milt Lindsley and Mr. Welch from Philadelphia. The weather was all that could be desired with the exception of about two hours on Friday, when a heavy shower kept the crowd huddled in the tent, but it only gave them the opportunity to talk each other to death on guns and amminition, an opportunity to talk each other to death on guns and amminition, an opportunity to talk each othe

Five live pigeons, Association rules: Lindsley. 01101-3 Corgoran 10111-4	ELM CITY. NEW HAVEN, Conn., May 30.—The Elm City Gun Club held a very successful tournament on their grounds to-day. The principal events were the State challenge cup and the prize gun donated by the Colts Patent Fire Arms Co., of Hartford, to the Connecticut Trap Shooters League, to be contested for during the year 1890, all shooters winning it once or more times to meet on some League club grounds at the end of the year and decide who shall be the absolute owner, number of targets, etc., to be decided upon at the fine of final shoot. We used the latest Keystone traps and we think they are corkers, most of the birds landing Toyds, away, which makes them very hard to score. This accounts for the scores being lower than usual. Among the visitors present were Cady and Connor of New London, Burbridge and Willey

D Deacon 8

WHITNEY-PEACOCK.—A match has been made between Henry B. Whitney, of Phelps, N. Y., and Capt. Tom. Pencock, of Westileld, N. Y., at 100 live birds seach, for \$200 a side. A forfeit of \$30 has been posted, and the match is to be shoot at Saratoga Springs, N. Y., on July 18, the day after ending of the Saratoga Gun Olub tournament.

SLATER, Mo., June 10.—Slater Gun Club, gold and silver medals, 3 traps. Shoot No. 1, 9 single Peoria blackbirds; Vaughan. 1101101117-7 Baker. 011010100-5 "Puck". 110110111-8 Perkins. 010110000-3 Three pair Peoria blackbirds; Perkins. 10 00 10-2 "Puck". 10 11 11-5 Baker. 1, 10 00 10-2 Vaughan. 11 10 10-4 "Puck" got gold medal and Vaughan silver.—W. R. R.

BALTIMORE.—The third tournament of the Standard Gun Club will be held at Tolchester, Tuesday. June 24, commencing at 10:30 A. M. Steamer Louise loaves pier 18 Light street wharf, 8:30 A. M. and 2:30 P. M. This will be one of the leading shooting events for the present season in this country, and many times larger than anything of the kind held before in Maryland. The weather will not prevent this shoot. It goes! Standard targets and traps will be used in all events. All shooting will be under American Shooting Association rules. Excursion tickets (Baltimore to Tolchester and return) can he had of gun club scoretaries, members of Standard Gun Club and gun stores. This will surpass anything we have ever attempted before. We are sure of having twenty teams in the first event, in fact, I think 200 shooters in one race will surpass a good many parts of the country.—W. S. CLEMENTS, Capt. S. G. C.

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price \$1. Contains full history of the year storm of March, 1883, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

SEAWANHAKA CORINTHIAN Y. C.

SEAWANHAKA CORINTHIAN Y. C.

COM. ROBERT CENTER has issued the following orders to the fleet:
FLAGSHIP MEDUSA, S. C. Y. C., New York Harbor, May 30.—
General orders No. 1: Mr. J. Frederic Tams is appointed fleet captain, and will enter upon the discharge of his duties at once.
ROBERT CENTER, Commodore S. C. Y. C.
FLAGSHIP MEDUSA, S. C. Y. C. New York Harbor, June 9.—
General orders No. 2: The vessels of the fleet will rendezvous in Black Rock Harbor, one of the club stations, for the squadron cruise on Wednesday, June 25. Captains will report abourd the flagship at half past eight o'clock F. M. The same evening a reception will be given in honor of the club stations, for the squadron cruised the squadron while in Black Rock Harbor to be his guests. The following morning the squadron will get under way for New London, with the intention of being present at the hoat race between the Universities of Harvard and Yale. The subsequent movements of the squadron will be decided upon at the first meeting of the captains, and those vessels whose captains have expressed their intention of continuing the cruise along the New London, with take their departure from Edgartown, where the first part of the cruise will end, in order that the yachts having racing engagements to fuffill may be able to do so. It is proposed that Block Island, Newport and New Bedford be made ports of call on the way to Edgartown. It is also proposed that the division cruising in New England waters return to Marblehead in time to witness the annual regata of the Eastern Y. C. appointed for Thursday, July 10. First and second prizes will be given to the sailing-masters of the yachts declared to be in the best order, by judges to be appointed by the commodore. Rowing and saiing races by the boats belonging to the vessels of the squadron will take place during the cruise. The most convenient place for those intending to join yachts at the rendezvous by rall is Bridgeport, where conveyances can be procured to take them to Captain house. Teast Thirty-seco

CHAIN CABLES.—The hempen cable of former times survived in the Royal Navy as a reserve cable, not as one actually used, till about 1800, and in Lloyd's Rules for the building and equipment of wooden ships, there is still an indication of the old state of things in a section which provides that:—"In all cases where hempen cables are used, one-sixth more in length will be required." One other relic of the hempen cable is seen in the survival of the term "cable's length," which bas nothing whatever to do with the length of the ship's cable or any portion of it in modern times but doubtless originated in the fact that it was about the length of the cable in earlier times. The "cable's length," as all seamen know, is nearly the tenth part of a nautical mile, that is, 607,56ft., or 100 fathoms.—Nautical Magazins.

BUFFALO Y. C. PENNANT RACE, JUNE

THE first pennant race of the Buffalo Y. C. was sailed on the afternoon of June 7. The original conrse was to be five miles to windward and return, but as the first leg would be down wind, and the yachts would outrun the launch in the heavy sea, it was decided to make the course from the club house to the Government hreskwall, zoing twice around the breakwall and back, making ahout a six-mile race. The wind was blowing fresh from the northwest, with a heavy sea.

The Buffalo Y. C. classifies the yachts by their sailing length, and the sailing length of a yacht is the square root of the sail area alone. The sail area is measured according to the rule adopted by the Lake Y. R. A. Time allowance is computed on the, sailing length according to Herreshoff's table of allowances. This rule is found to work admirably in the fleet, comprising as it does so many different types of boats, cance yawls, sharpies, enters and skimming dishes, which no system of waterline measurement can harmonize.

The starters were Alcyone, Charles Forbush; Lonise, F. W. Caulkins; Fanny, F., James Thompson. The start was made at 330 P. M. The times were:

Caulkins; Fanny, F., James Thompson. The start was made at 3:30 P. M. The times were:

Alcyone. Start. Finish. Elapsed. Corrected. Alcyone. 3 31 00 5 10 15 1 39 15 1 24 48

Louise. 3 31 30 5 14 10 1 43 45 1 25 57

Fanny F. 3 30 30 5 14 45 1 43 40 1 27 39

Louise showed very marked improvement in her sailing over last year. Considerable change was made in her during the winter; her ballast was lowered 8in. on the keel and shortened fore and aft. The center of effort of her rig was also carried aft, and her sail plan cut down.

BAD CONSTRUCTION.

A VERY striking example of how not to build yachts has lately come under our notice, the case being aggravated by the fact that the yacht in question is a modern craft; in fact, only launched in 1885. The yacht is a cruiser of moderate size, and has considerable displacement and a very heavy lead keel. Owing to some leakage she was lately docked, when it was found that the lead keel had dropped some distance from the wood. To remedy this a number of dovetail plates of iron were let into the wood keel and garboards on the one hand and the lead keel on the other, each pair of plates being through-holted with iron. When the yacht was set afloat the result was to pull the garboards and sides of main keel down, making her worse than hefore. She was again hauled up and thoroughly examined, when it was discovered that in the first place her keel hotts, of 1½in. copper, were few in number and with very small heads, in addition to which the whole keel construction was weak and insufficient. The main keel is very wide, but of little depth, heside which it is built np of three pleces, a centerplece and two sides. The frames have but little hold on the keel, while the iron floors are entirely too light, there being but little to tit the heavy lead keel to the hull proper. The fore chock, at the fore end of the lead, was built up of small pieces of all sorts, shims, wedges and thin boards being used to make up the required shape. It was found necessary to put in 5in. hackmatac knees, two on each frame, with a heavy oak keelson, through which the new keel bolts will run. The new knees are fastened with screw holts to the futlows and are well bolted to match the strongly to the frames; while the keelson distributes the well will be necessary before the mean and to take out ontwacht to pieces.

There may be some excuss for light construction in the case of racing craft which are not intended for cruising, but there can be no justification for such flimsy work as this, and especially in a cruiser. The yacht is as large as many

YAMA.

YAMA.

The new cutter Yama, hilding for Mr. Allan Ames, of Oswego, N. Y., was launched on June 18 at Wintringham's yard, Bay Ridge, and will leave this week or mer lag voyage by the Hudsou River and the Erie and Oswego or mer lag voyage by the Hudsou was designed by Mr. Will Fife, the analyse of Lake Ontario. Yama was designed by Mr. Will Fife, the advantage of the first boats built for the classification by corrected length now used by the Lake Yadult Racing Association. This classification is really no new thing on the lake, having been in use as a stream of the stream of the mean rement question within the past year that yachtsmen have awakened question within the past year that yachtsmen have awakened question within the past year that yachtsmen have awakened question within the past year that yachtsmen have awakened question within the past year that yachtsmen have awakened question within the past year that yachtsmen have awakened question within the past year that yachtsmen have awakened question within the past year that yachtsmen have awakened question within the past year that yachtsmen have awakened question within the past year that yachtsmen have awakened question within the past year that yachtsmen have awakened question within the past year that yachtsmen have awakened question within the past year that yachtsmen have awakened and within the past year that yachtsmen have awakened and within the past year that yachtsmen have awakened and within the past year that yachtsmen have awakened and within the past year that yachtsmen have awakened and the past year that yachtsmen have awakened and the case of Merle in 1877, the designer followed the conventional model that has been for a wall himself of the privilege of taking model that has been fostered by a length classification, not considering it worth while to avail himself of the privilege of taking model that has been fostered by a length classification, not considering it worth while to avail himself of the privilege of taking model that has been

he shape of the lead keer is such as to get every pounts as toy as e contour of the sheer plan will admit, wasting nothing in a in fin. The lead is fastened to the hull by 1½in yellow metal ints, spaced 18in., and also by diagonal holts of smaller size at introduction. The lead is fastened to the hull by 1½in yellow metal this, spaced 18in., and also by diagonal holts of smaller size at introduction. The stem, keel and sternpost are of oak, the frames are double-wn, spaced 3ft, apart, with two steamed oak frames between neach sawn frame is a strong angle iron knee, with a strap are on each bent trame. The clamps and bilge champs are yellow pine on the topsides, with many pine, the deck beams of oak and hackmarak, the planking oak on the bottom and yellow pine on the topsides, with many pany planksheer and hullwarks. The deak is ye neatly worked to fsolid mahogany up to the rail. The decks are of white the control of the co

a good distribution of parts and plenty of fastenings there is no question of her strength. The fastenings are of copper and yellow metal throughout, iron being used only in the fastenings of the steel floors to the keel and frames. The deck fittings and details are very convenient and complete. Mr. Wintringham has taken especial pains with all parts of the work, and the result is one of the hest constructed yachts that has yet been set afloat ahout New York or Boston. The metal work of the deck and spars, which is all of steel, is particularly good.

As the yacht in racing trim will draw over 2ft. more than the depth of the canals, and it is impossible to lighten her owing to displace about eight tons, have been built on each side of her, being connected by heavy heams beneath the keel. Each pontoon is provided with a separate rudder, in addition to the yacht's. She was lauched with these pontoons in place, and when completed her spars will he lashed on deck and she will be placed in one of the large tows for Albany. She will be fitted out as rapidly as possible on her arrival at Oswego, in order to be in frim by the time of the Lake round in Augnst.

ATLANTIC Y. C. ANNUAL, JUNE 17.

THE annual regatta of the Atlantic Y. C. was sailed on Tuesday in a moderate southeast wind, making a peat out to the lightship and a run in. The full times were as follows:

It was a heat dead to windward two and one half miles in short tacks, and a home run. The wind was very heavy at times, making lively work for the tuckup crews. The sharple, with comparatively flat bottom and almost square blige, stood up like a house, and as the water was not very rough, she walked right away from her class.—E. A. Leopold, Sec'y.

ing lively work for the tuckup crows. The sharpe, with paratively flat bottom and almost square bilge, stood up house, and as the water was not very rough, she walked away from her class.—E. A. LEOPOID, Sec'y.

MINERVA AND GOSSON—The Boston Herald compar two yachts as follows: "The details of the design of the hit the 40-footers Minerva and Gossoon have been published i Herald, and a comparison of the sail and spar plans will he interesting. The Gossoon will be equipped with Scotch wir ging importer expressly for her, having been made by the firm which the firm had the rigging for the Minerva, Alic Holes, The trumbled the rigging for the Minerva, Alic Holes, The trumbled the rigging for the Minerva, Alic Holes, The firm all and over less than the Minerva, and scentify weight ess. Lin, all over less than the Minerva, and scentify weight ess. In all over less than the Minerva, the Gossoon will have had been to the said of the miner and the said of the miner of the pole of the Minerva and lards. The Gossoon the Minerva the Gossoon's. The diameter mast is over a foot longer than the Gossoon's, the diameter minerwa's topmast is less than the Gossoon's, but the latter's hollow is much lighter—a great adaptage. To offset thi jackvard and topsail poles of the Minerva are shorter and less. The height of the perpendicular for racing length is cit of the more on the Gossoon. By the abe twill be seen the latest Burgess 40 has comparatively as bott topmast and mainmast, the icnept of the Minerva's homast and mainmast, the icnept of the Minerva's from the foreside of the stem to the foreside of the mast to the general mainmast, and in a less of the miner and the foreside of the mast to the general main being more equal. The most noticeable thing short both by the stepping of their masts. The distance about both the stempton of the foreside of the mast to the foreside of the mast of the mast of the mast in the foreside of the mast to the gosso

Before the season closes, and especially in moderate weather, the Gossoon will lower Minerva's colors."

ST. LAWRENCE Y. C. Skiff series races was sailed over the regular club course, on the St. Lawrence, off Montreal, on June 7, in something approaching a northwest gale. There were five starters in the first, and three in the second class match, and the boats went across in the following order: First class, Freyia, W. J. Wallacet Allie, R. M. Linton; Gallagher, C. Saunderson; Tara, A. G. Fry, and Vagabond, A. Reford. Second class, Zeta, A. R. Holt; and Dixle, B. R. Kenrick. All the boats but Frey Ja, which crossed the line a minute after the gun, were badly handicapped at the start. All the boats but Frey Ja, which crossed the line a minute after the gun, were badly handicapped at the start. All the boats but Allie, an 18tt. 6in. boat, did surprisingly well, more than holding Freyja. Her rudder broke after rounding the south buoy, and she had to fall out of the race. Vagabond worked up through the ficet and took second place on the windward work; but Freyja increased her lead on the run and finished at 5b. 7m., 6m. 13s. before the second class. Black Fly, which in spite of a bad start, sailed a very plucky race, was second. Freyja is the very finest specimen of a 2lft. canoe-yawl that Sauve has yet turned out. She is 3ft. 11½in. wide, is fully decked, having only a 7tt. cockpit with a pointed combing, and is rigged as a yawl, with domble halliard batswings sails. She has a great deal of deadrise, her lines throughout being very easy, but satonishingly stiff, as with he hoard up a man can stand on her gunwale, and by holding on to her board he can only bring it nothing on her home waters to sail with her.

A YACHT ADRIFT,—On June 8, near Wind Mill Point, on Chesaneake Bay, the sloon Cygnet, was found addit to the process.

nothing on her home waters to sail with her.

A YACHT ADRIFT.—On June 3, near Wind Mill Point, on Chesapeake Bay, the sloop Cygnet was found adrift by the working schooner Engee, Capt. J. M. Meekins. From the log, she had evidently been used by four students of Johns Hopkins University, hut how and why she was abandoned is still a mystery.

JESSIE.—On June 11 the new steam yacht Jessie was launched at the yard of J. M. Boyles & Sons, Port Jefferson, where she was built for C. H. Murray, Larchmont Y. C. The Jessie is of wood, 78t. over all, 66tf. l.w.l. 13ft. sin. beam and 5ft. draft.

WATERWITCH, schr., has been sold by James T. Blandford to David Banks, of the New York Y. C.

STATEN ISLAND ATHLETIC CLUB, YACHTING DEPART-MENT.—The annual regata of the yachting department of the Staten Island Athletic Club will be sailed on June 28 over courses on New York Bay, the start being off Robbins Reef buoy. The regata will be open to yachts owned by members of regularly organized yacht clubs in the vicinity of New York, but as it will be sailed under the rules of the New York Y. R. A., which tax the extreme overhang on each end, the modern boats are not likely to enter in any great numbers. However well this measurement may answer for open boats, it is prohibitive on all the new cabin yachts being allowed one man for every 6tt. of sailing length, and the open boats one man for every 6tt. of sailing length, and the open boats one man for every 6tt. Shifting balliast is allowed only in open boats. The time limit is seven bours. The regatta committee includes Messrs. E. M. Post, R. K. McMurray, R. L. Lippitt, Philip C. Sus and Edgar Hicks. Entries allowed on June 25.

lose on June 25.

OLIVETTE AND ANNIE,—The match on May 31 at Fall River etween the cats Olivette and Annie was started in a light S, W. wind, which shifted to west, blowing quite hard before the finish. until eld by 31s, at the lipe, but though Olivette was delayed by rounding her board and jamming it, she passed Annie in the first our miles, when the shift of wind placed the latter a short distance under Olivette's lee bow. The rest of the eight miles to load Mine Buoy was a long and a short leg. Olivette leading by 52m, at the turn. On the run home Annie's extra length told, nd she finished 15s, ahead of Olivette. The lengths by the old tilantic Y, C, rule are, Annie 24t. 4in., Olivette 21t. 11in., the after thus winning by 4m, 17s, corrected time. The stakes were 125. Olivette will have some of her inside iron replaced by lead un into the after deadwood.

CORINTHIAN NAVY.—A meeting of the New York Bay quadron of the Navy was held at the Hotel Marlborough, on une 12, when it was decided to hold the squadron's regatta, off lifton, Statet Island, on July 3, start at 220 P. M. Entries may e made with C. F. Hicks, 454 Broome street. The New Rochelle . C. has placed the freedom of their house and course at the lavy's disposal for the annual regatta, on June 28. Many entries are been received and the affair promises to be a success. The ect book is now out, members may obtain the same by applicating properties. The following gentlemen are proposed for memorship: Albert Houseman, Mr. Huffington, Theo. W. Davis, E. Lewett, Robert P. G. Bricklin, L. A. Camacho, Frank R. Livsgston, Joseph Gill, J. E. Wnittlesey, Emmet Fay.

DARE.—This old sloop has been put through some radical alterations at Poillon's yard, under the superintendence of Mr. Driscoll. Her keel has been removed and a new one substituted, the bottom at the same time being dropped considerably lower, making a hollow at the garboards instead of the old straight dead rise. The old stern has been sawn off and a new and modern counter of very fair proportions added, so that the yacht would no longer be recognized.

SHINNECOOK BAY Y. C.—This club has filed its certificate of neorporation in the county clerk's offie. The trustees are James 2. Carter, Fraueis Baker, B. H. Howell, Peter Glisey, Wendell Saker, H. B. Howell, Lewis Edwards, George C. Stone, G. orge M. Eddy, William M. Lawrence and L. Dinwiddie Smith.

SEWAREN Y. C.—At the annual meeting of the Sewaren Y. C., held on May 24, the following officers were elected for the ensuing year: Flag Officer, Wm. Rateliffe, Jr.; Sec'y-Freas., Henry Hartshorn; Meas. F. C. Raley. The first regatta of the club will be sailed on July 4, the time of starting to be fixed later on.

GOSSOON, the new Adams 40, made her trial trip on June 11, having Mr. Burgess and Mr. John Quincy Adams on board. She is reported as floating well above her lines and being very stiff. She will not be at New York for any of the June or July races.

WHITE CAP, yawl, David Hall Rice, has been sold to Dr. J. T. Rothrock, of Westchester, Pa., the author of that pleasant book, "Vacation Gruisings."

SHREWSBURY RIVER.—On June 13 a race was sailed for the challenge pennant, Gem winning, with Twilight second and Tam O'Shanter third.

TIGRESS, the Ellsworth 35-footer, was launched at Lawley's on June 12, and will sail in the Boston city regatta of July 4.

ROCHESTER C. C. ANNUAL REGATTA, JUNE 12.

ROCHESTER C. C. ANNUAL REGATTA, JUNE 12.

THE regatta committee prepared the following programme of races for the annual spring regatta of the club and designated Thursday last as the date. The announcement was made that the first race would be called at 1215 P. M. sharp, and an intermission of 15 minutes would be allowed between each race:

1. Sailing, Wilson cup, 8 miles, no limit to rig or ballast.

2. Tandem paddling, ½ mile, single or doubte blade.

3. Sailing, upset and maneuvering, no special appliances allowed, canoe to carry two sails, no limit to ballast, ½ mile and canoe to be tipped over until top of foremast touches the water, canoe to be righted and cross finishing line under sail.

4. Tandem hand paddling, 200yds, to leeward.

5. Paddling upset, no special appliances allowed, at signal every canoe to be turned completely over, righted, and with crew inside paddled across finishing line, 200yds.

All sailing races to be started to windward and finish at regular home buoy, irrespective of distance. All races to be governed by A. C. A. rules.

The first race was called in a hard rain storm, with but little wind. Big sails were the order of the day, and the largest sails won. Surprise secured the best start, but was becalmed under the shore, and so lost her advantage. Marie was delayed 3min. by the parting of her mizen halliards. On the second round Surprise fouled Polly Wiggle, and after breaking her steering gear was obliged to withdraw.

After the races the big canoe Huff was launched and the club and their guests to the number of fifty were transferred to the Newport House, where all partook of one of Sour's famous "fish and chicken" suppers. After supper the presentation of prizes occurred, and then all aboard for home.

A. C. A. MEMBERSHIP.—Eastern Division: W. C. Maynard, Northampton, Mass.

CENTRAL DIVISION MEET.

CENTRAL DIVISION MEET.

Editor Forest and Stream:
Canoeists intending to attend the Central Division Meet at Lake Chautauqua are requested to inform the purser, J. K. Bakewell, Pittsburg, Pa., or the rear-com., E. L. French, 224 Jersey street, Buffalo, N. Y., of the fact, so that camp sites and accommondations for clubs and individual canoeists may be reserved, arrangements for transportation and reduced rates from Pittsburg, Buffalo and Rochester to the camp have been made. Trains on the Lake Chautanqua R. R. from Jamestown and Maysville, will stop for canoeists directly at the camp. Information as to transportation etc., from other points will be promptly furnished upon application, made to the purser. Canoeists coming from Dayton or Cincinnation, made to the purser. Canoeists coming from Dayton or Cincinnation of Dayton, Ohio, or James O. Shiras of Cincinnati, Ohio, members of the committee on transportation.

Contributions of flags for prizes are solicited, flags should be sent to C. F. Holdship, chairman of the regata committee, Pittsburg, Pa., prior to June 28.

The officers and members of the Central Division of the A.C.A., extend a cordial invitation, to all canoeists to join with them in their camp and meet. Geo. A. WARDER, Vice-Com. C. D., A.C.A. J. K. BAKEWELL, Purser.

J. K. BAKEWELL, Purser.

To the Members of the Central Division:

We desire to announce that arrangements have been made with Mr. Hornce Fox, Manager of the Grand Hotel at Point Chautauqua, to furnish meals to members of the A.C.A., and guests of the camp, at the rate of one dollar per day. For canoelsts who may desire to do their own cooking, provisions will be delivered in camp by the steward. Lumber for docks will be furnished upon application to the quartermaster. Few docks will be required however, as the beach is shelving and is composed of sand, free from mud and stones.

Camp will open July 1, and close on July 15. The first week will be devoted to cruising and camping, the races being fixed for the second week.

All races are open to any amateur canoeist, excepting that for the Jabberwock cup, which can only be contested for by members of the Central Division.

E. L. French, Rear-Com.

J. K. Bakewell, Purser.

CANOE CANNON.—One of the neatest pieces of "canoe jew elry" that we have ever seen has lately been placed on sale by the Winchester Repeating Arms Co., a small swivel gan for canoes cance yavis and such musquito craft. It is of the popular Lavisen pattern, very neatly mounted on a guu metal carriage which turns on a mahogany base, the whole being secured to the deek jone screw bolt. It takes a .58 brass shell, can be quickly loaded and fired, and makes all the noise that even a canoeist could ask for.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

J. D. B., Roselle, N. J.—1. When is the law off on gray squirrels in Union Co., N. J.? 2. When is the law off on woodcock in Union Co., N. J.? Ans. 1. Nov. 1. 2. Open season is months of July and October, November and first fifteen days of December.

SUBSCRIBER.—Kindly inform me through your valuable paper that kind and caliber rifle you would advise me to get to shoot lk, deer or bear with. Ans. Select one of the heavier arms, not ess than .45, and burning not le.s than 70gr. powder.

D. W. J., West Milton, O.-1. Do you consider repeating rifles as good for target as single-shots? 2. Is the rifling of a breech-loader liable to become worn with ordinary use, rendering the gun useless? 1. Single-loaders have the preference where fine target work is desired. 2. No.

R. G., London, Ont.—On May 26 I secured a couple of turnstone (Archaria interpres) on the shore of Lake Eric, near Port Stanley Elgin county, Ont. There were two flocks, one containing abon a dozen birds, and the other (from which I secured the specimen about four; are they common visitors to the Great Lakes? Ans The bird is rated as cosmopolitan in the books, but it is chiefly confined to salt water shores.

B. J. F., Lockport, N. Y.—Will you kindly mention the weights of some of the largest black bass that have come under your observation. Ans. There is in the office of FOREST AND STREAM a head of a Florida black bass that weighed 2341bs. This is the large-mouthed species and the biggest specimen of which we have any knowledge. A lish weighing 1946bs. was reported from the lake at Gainesville, Flaa, in March, 1875 (Goode's American Fishes), The average size in the North is about 61bs., and in the South somewhat greater. The small-mouthed species seldom exceeds 81bs. and the average is 4 or 51bs.

ANSWERS TO CORRESPONDENTS

YACHTING ON THE GREAT LAKES.

THE growth of yachting in America has naturally been strongest on a part of the Atlantic coast, and about two or three of the larger seaports, the fleet along the thousand miles of coast between Maine and Virginia outnumbering in size and far surpassing in quality the rest of the pleasure fleet of the entire country. various reasons the growth of yachting along the Atlan-tic coast south of Chesapeake Bay is likely to be slow. the shoal bays, the stretches of exposed coast line and the few harbors being serious obstacles. Though progress be barred in this direction, it is free enough in another quarter, and in a very few years the Great Lakes are likely to be the scene of a growth and development of yachting no less remarkable than that of the last ten years on the coast.

A single glance at a map of the United States is sufficient to show how insignificant are the present yachting centers of the country, Long Island Sound and Chesa-peake Bay, compared with the expanse of even the smallest of the Lakes; while the coast line of the Lakes is nearly three times the length of that portion of the Atlantic coast from Eastport, Me., to Norfolk, Va., which forms the established cruising ground of the Atlantic fleet. In the Western Number of the Forest and Stream Mr. E. J. C. Cleaver discussed very fully the drawbacks and disadvantages which hinder yachting on Lake Michigan; obstacles which, though serious, may be overcome in time as the work of building artificial harbors advances, but more particularly as the love of sailing increases and yachtsmen learn better the style of craft that is necessary for their work.

One cause perhaps of the present condition of yachting about Chicago and Lake Michigan may be found in the fact that none of the yachts on the lake have been specially designed to meet the peculiar conditions which our correspondent so clearly states. The fleet has been gathered from all quarters, from New York and Long Island Sound, from the other lakes, and even from the distant Clyde; and it is by no means surprising that the damages in such cases.

boats have not proved the best possible for such peculiar waters. The revival of yachting on Lake Michigan will probably come at the hands of some of the younger sailormen who are now racing and cruising in such small craft as can be conveniently used on its boisterous waters, and the craft that they will man will be different from all of the old fleet; staunch and sturdy keel craft of moderate draft and sail area, ranging from 40 to 60ft. in length, boats that will give room and comfort and yet will ride in safety the heavy storms of the Upper Lakes.

The problem of turning out such a craft, suited exactly to existing conditions, without regard to those of distant waters, must be solved by the yachtsmen of Lake Michigan, and by no others. Already there are competent designers and builders on its shores who have done much for the sailormen in sizes below 30ft., and who will prove competent to meet the demand for larger craft when the call for them comes. From the nearer lakes, from Erie and Ontario in particular, we hear nothing but promises of more and better yachting, of improvements in all directions, and it is probable that a dozen years more will see a distinct and firmly established system of yachting, with models and rules specially adapted to it that shall extend from the head of Lake Superior to the mouth of the St. Lawrence.

THE PRESERVE SYSTEM.

THE system of buying and leasing territory for shooting and fishing purposes is progressing with great es. The latest and most extensive transaction is the taking up of a hundred thousand acre tract in the North Woods by the Adirondack League Club, articles of incorporation of which have just been filed. The land acquired is a portion of the Blake estate, lying in Hamilton and Herkimer counties. It comprises a number of trout waters, among them Moose, Panther, Deer, Jones, Otter and Jock's lakes, and West Canada Creek. The purchase price is given at \$500,000, which is to be raised by the sale of 500 membership shares at \$1,000 a share. The shares, which are also certificates of membership, will give individual title to five acres of land as a building site, rights of camping, fishing and hunting throughout the club's territory, and a share in the profits of a lum-bering business, which it is said will yield an annual income of \$30,000. The trustees named in the articles of incorporation are Warner Miller, M. W. Barse, O. L. Snyder, Robert C. Alexander, Mark M. Pomeroy, Warren Higby, A. G. Mills, Henry E. Howland, Henry C. Squires, Witt C. LeFevre, Henry Patton and Alexander R

This withdrawal of the Jock's Lake country from the public means a serious diminution of available hunting and fishing grounds in the Adirondacks. It is in line with the coming of a new order, under which the angler or hunter who does not belong to a club will eventually be shut out. These changed conditions are coming with a rapidity little dreamed of a few short years ago.

Everywhere the tendency is toward great fish and game clubs, purchase and control of lands and lakes and streams. Report says that Mr. Austin Corbin of New York has lately consummated the purchase of 4500 acres of land near Sullivan Harbor, Me. This purchase has been made in connection with Mr. Clyde D. V. Hunt, and for the Moose-a-beck Game Club. The property was formerly known as Great Wass Island. It has twelve miles of shore front, and also a long stretch of forest. As soon as the officers of the club are chosen and the preliminaries agreed upon, it is proposed to invest some \$50,000 in game and fish for stocking the preserve. Such a movement is looked upon with open-eyed wonder by local sportsmen, who have hunted over these lands for years unmolested. There are growlings of discontent, the result of which only time can tell. All is not serene in the Parmacheene Lake region, if the voice of guides and hunters is to be trusted. It is true that the party of sportsmen has bought out John Danforth and taken his leases off his hands, and obtained promises of further leases, but the thing is to control the waters of Parmacheene. It has been repeatedly decided by Maine courts that lakes and ponds above a small number of acres in extent—we think it is ten—are open waters, waters open to the public. It is true that the lessees of the land can prevent sportsmen from landing to the extent of the amount of trespass, but the Maine courts have put them-selves on record as often in the past awarding 1-cent

The feeling is very strong among sportsmen who have formerly visited Parmacheene against the attempt to close this region to the public. It is now proposed, we learn, not to attempt to close the preserve to the public this year, but after this year the public will be excluded from the John Danforth camps at least. There is a good deal of under growling expressed among guides and others who have formerly hunted and trapped in winter in the Parmacheene region. They say that if the lessees of the Danforth camps attempt to make a game or fish preserve of the region, they will not be responsible for the consequences.

No reasonable man, however, who thinks that he has an opportunity to secure for himself a desirable game and fish preserve, is apt to be deterred from such an enterprise by the mutterings and vague threats of individuals who have formerly had the free range of the woods in question. The average sportsman differs in no respect from the average man who is not a sportsman, when it comes to a matter of personal advantage as against public benefit. Options on the control of deer forests and trout waters will not be refused for any promptings of philanthropy. Individuals and clubs will go on securing their territory, without regard to the de-privations imposed on the public. As we said last week, it is only human nature to have regard for one's personal interests in such affairs; and the average sportsman and angler has just as much human nature in his make up as his fellow men.

SNAP SHOTS.

CAPT. CHAS. A. BENDIRE has progressed so far in the preparation of his "Oology of North American Birds" that he hopes to put the material of the first volume into the hands of the printer by the close of the year. The initial volume will comprise the Game Birds and the Raptores. This undertaking, in which Capt. Bendire has been engaged for several years, and the completion of which will consume five or six years more, is with him altogether a labor of love; and he is putting into it all the care and thoroughness and devotion characterizing a work of that nature. The patient investiga-tion and untiring industry with which he is gathering and winnowing his material are such as to insure for his completed volumes a first place among works on American ornithology. The text will treat not only of the nest and eggs, but of the range, haunts and habits of each As the Oology will be a Government publication, it is to be hoped that the work may be given a form commensurate with its high character.

Mr. A. C. Collins, of Hartford, Conn., is deserving of great credit for the energy and shrewdness with which he is following up the violations of game and fish laws. His latest exploit was the detection of shad pounds unlawfully set on Sunday, the offenders being staid and prominent citizens of Saybrook, some of them worth very respectable fortunes. Mr. Collins has succeeded in getting convictions in the lower courts, and there is little doubt that he will carry the cases successfully through the higher courts, to which the convicted netters have appealed. Not the least public service accomplished in cases like these is the showing up of the prominent citizens aforesaid as tricksters and dishonest sharpers, who for their own selfish gain have been cheating the com-

The Webster, Mass., Times records the death, at the age of eighty-eight, of Miss Mary Jaha, the last member of the once great tribe of Nipmuks. The Nipmuks were the Indians celebrated by "Nessmuk," and among whom he first imbibed that taste for a woods life which became his life-long passion. It is a curious and striking commentary upon the possible far-reaching influence of even the humblest individual, that thousands of readers of a journal of to-day should have owed the pleasure found in the writings of one of its contributors to the chance impress upon his character of an illiterate woods-haunting Indian in the forests of Massachusetts more than half a century ago.

An illustration of the decadence of rifle shooting is afforded by the action of the New York Rifle Club, which on last Tuesday was, on petition of it trustees, dissolved by the Supreme Court. The petition was based on the decline of interest in the sport.

The Sportsman Tourist.

TWO AFTER TROUT.

TWO AFTER TROUT.

PIFTY years ago trouting in the streams of New England was— But, bless us! Fifty years did I say? That's a long way back. Did I mean to be understood as saying that my memory runs back into the dimness so far as that? Nay, verily, I hardly believe I did, for not so many winters have sifted their snows over my crown, though here and there it has begun to respond to the bleaching process in an unmistabable way. I am very sensitive in regard to my age, so I won't say just how long it has been since first I wet my feet and line in the lovely trout brooks of Vermont; but I will begin at the beginning again, and say, just as though I knew all aboutit, fifty years ago trouting in the streams of New England was a perpetual delight and a joy forever as long as it lasted. There were trout in those days, and streams, and plenty of them, even though they were not generally as large as the Nepigon or Rangeley monsters, and one did not have to go into the next State or Canada to get a thoroughly enjoyable day with the dashing little fighters. Ah! those were the days of unalloyed bliss and stone bruises, heart-thrilling anticipations and yearned-for Saturday afternoons. Talk of the bliss of "love's young dream!" Don't mention it, It isn't a circumstance. A rosy flush, mingled with the odors of Araby and old worm boxes, still hangs over those happy days that linger in the westering sun—

"Dear to my heart are the seenes of my childhood."

"Dear to my heart are the seenes of my childhood."

When I was permitted to "go a fishim" all alone, and came home with a string of trout dried stiff, and dangling from a willow twig, the Prince who slew the Ogre and recaptured his best girl was not more proud and happy than I when I had thus justified the confidence reposed in me, even though I had lost that whopper in the hole where the fence crossed the brook. What mattered it though my line was but 3ft, long, sinkered with lead twisted out of the lining of a tea chest, and tied to a pole cut by the brookside. What though I knew nothing of playing a fish, but jerked him incontinently as far into the empyrean as my budding muscles could send him. I had all the condensed happiness my cuticle could contain, and that is all anybody can bold, though they defish with a bamabaralaneewood rod and silk line and fivedollar reel and sneek bend and sneel and leader and flask. What fishing memories are so sweet as those of brook trout fishing? Go to, ye mud cat, sucker et al fishermen. Where ignorance is bliss you are welcome to it. You haven't got within cannon shot of the suburbs of the trout fishermen's heaven, and are filling up with an exceedingly poor substitute for nectar and ambrosia.

I think of these things and many others related, every spring previous to April 1, when the lens begin to shell out their fruit, carpetis are taken up, the south wind blows warm, the grass shows brighter green and the bluebird and robin askirmishers pipe the sdvance of the legions that you can be suburbed to the properties of the rotters of who in the properties of the rotters of who in the properties of the rotters of who in the properties of the rotters of which are all should be always until I can enjoy without stirt a perfect owait a few days until I can enjoy without stirt a perfect owait a few days until I can enjoy without stirt a perfect day along the rippling water. I would rather far utilize the chilly days when the wind howe raw and the trout are half benumbed, overhauling my tackle, making a list of things to order which

FOREST AND STREAM.

Bay. This thoughtfulness aroused our deepest gratitude, and S. said that from this time forward memories of the Stamp Act would be a shade less bitter. The said agent aforesaid said that it would have been more in accordance with instructions governing such proceedings if the underwear had been colored red and properly stamped, but as this was clearly an unintentional oversight he would pass us. He toyed with our rods a moment, asked how old they were, and whether they had been used, said something about values, looked us over, hefted us financially, concluded it was a hopeless case and left us. He was a good-natured chap, and I hope to meet him on the other shore again.

Now we were off and away again, kicking up a dust and putting the miles behind us until 5 c'clock P. M., when Torouto sent her suburbs out to meet us and conduct us to her busy center. We lost no time in hunting up the Assistant Comissioner of Crown Lands that we might procure a permit to fish for trout in the Nipissing district, there being no restriction in the Dominion except on trout fishing. This being very pleasantly arranged I bethought me after supper that I might need a rubber coat, likewise some pocket scales to weigh the monsters we should catch, also some flies, the like of which we had not, so we set out on the search, only to find to our disgust that places of business except cigar stores were almost invariably closed at 6 o'clock smack. Did you ever hear of the like! But after brisk trotting up and down King and Queen, and Princess, and Duke, and other streets we did manage to find one solitary gents' furnishing store open, or partly open, that the authorities had overlooked in some unaccountable manner when they locked up the rest of the city, and here, though I thought it rather queer, I found a rubber coat. The proprietor said he was out of flies and scales and other hardware, but he had noticed a light just now in a hardware store down the street, which was perhaps yet open. You see it was such an unusal

any one enlighten me? Houses me considerable anxiety and bad dreams, and I wake up in a pecke of trouble a way, way off in the wilderness catching huge trout without any scales.

We found to bacco stores open in plenty though, and having lad in a stork of solace we belook us to an office and the story of the story o

fishing, and we were a little disappointed to find that there were no speckled trout in the lake, but were glad to know that there were two small brooks emptying in, one and three miles below. We did not wish to lose any time so a lunch was put up, tackle prepared, and with the boy for guide and oarsman, we took one of the several fine boats and were scon pulling down the lake, pumping information out of the boy concerning everything that related to fishing, hereabout, until we had him dry, and he stopped to get a clinic at locked upon the lovely sheet of water dotted with islands, and thought of the sport there was in store for us: "Will you excuse me if It explode a little I can't hold in a minute longer." "Here's at you," said he, "with all my heart and lungs."

And then we ripped the welkin until the sun shone through, the wooded shores threw back the clatter and the boy at the oars began to wish that he was anywhere else than in a boat with two lunatics.

Skirting the shore we rowed along past a little clearing on the hillside where (soit seemed to me) some misguided man had built a cabin and was trying to find soil enough between the white boulders to stick in some seed. After a time we came to the mouth of the first stream, hidden by thickets, on low ground. We landed and, by a short cut and trail, struck the brook some way from the mouth and trail, struck the brook some way from the mouth and trail, struck the brook some way from the mouth and trail, struck the brook some way from the mouth and trail, struck the brook some way from the mouth and trail, struck the brook some way from the mouth and trail, struck the brook some way from the mouth and trail, struck the brook some way from the mouth of the first time in many years, a speckled trout. Reader, have you ever been there? Shake! I dropped my od, took the six-inch squirmer in my hand, and looked, and gazed, and gazed, and looked at his beautiful toolors and proportions until he had filled me full, while hosts of lappy memories of their trails while

In rambling over a hillside pasture, how many would know or notice that it had never been plowed or that it "looked very differently from other fallows"? "Here you observe a little hillock rounding over a decayed stump, there a pretty hollow where some large tree has been uprooted by the storm; fern and brake are also seen in patches instead of the thirstle and mullein. Such open illsides bear a kind of heaving, billowy character, which in certain lights becomes very distinct; these ridges are formed by the roots of old trees, and remain long after the wood has entirely decayed."

In a smooth, well-cultivated meadow she reads the same history. All around are foreign grasses and foreign weeds, while in a little hollow, where once was a spring, are still growing as they have grown for years the native plants—moose flower and cohoshes—and on a river bank squirrel cups and gay-wirngs tell her every spring the soil there is still unturned by the plow.

Every child who likes to creep along the meadow knolls in search of flowers or strawberries in these summers, when the click of moving machines is heard in the smallest of hayfields, can attest that this description of a meadow, written forty years ago, is just as truthful now. "A meadow is a delicate embroidery in colors, which you must examine closely to understand all its merits; the nearer you are the better. One must bend over the grass to find the blue violet in May, the red strawberry in June; one should be close at hand to mark the first appearance of the simple field-blossoms, clover red and white, buttercup and daisy, with the later lily, and primrose, and meadow tuft. One should be night to breathe the sweet and fresh perfume, which increases daily until the mowers come with their scythes."

Thoughtful fancies flock around as she comes upon a spring in the forest lying in a "little rocky basin lined with last year's leaves," such a spring as a hunter and his dog are glad to come upon in a thirsty September day. "We feel assured that by every the trunks, the

Wherever her rambles take her she notices the birds

only of the forests, but of small clumps of trees and of solitary ones.

Wherever her rambles take her she notices the birds, the friendly robin, the mewing catbird, "stealing upon us unawares," the humming bird that "brings a message from Cupid" when it flies into a room, the "cheerful, happy-tempered" barn swallow, and the swift-winged chimney swallow. How many of us knew that before chimneys were built this bird made its nest in hollow trees, and that its nest still made of twigs shows it was once a forest bird? It has "little to do with the earth and the plants and the trees, never alighting except within a chimney."

But more than all else, Miss Cooper's "Rural Hours" is pervaded, as it were, by the fragrance of wild flowers, and all who love the savor of old-fashioned names are indebted to her for the preservation of the common names of many of our flowers, sweeter by far with their familiar titles than with the scientific nomenclature.

How suggestive of the woods, of its own gray-furred leaves and stems, is "squirrel cup" (Hepatica triloba), a far prettier name than liverwort for the "tiny lilac cups," hanging from their downy stalks, singly here and there, later on they have "gained courage, standing in little groups." The "white coolwort" (Tiarella cordifolia), with "light and airy tofts," is so called because the broad leaves used to be laid on burns and scalds. "Fringe cup" (Mitella diphylla) at once recalls to mind that five-rayed snowflake "hanging its tiny cups at intervals on a tall, slender two-leaved stalk. As for "gay wrings" (Polygala paucifolia), the name is very appropriate. Clustered together as is the habit of this bright spring favorite, they look like "so many rose colored butterflies resting on the mosses," and "bead ruby" (Convallaria bifolia), suggests its slowly ripened shining ruby berry. "May star" (Trientalis americana), is a fit name for this dainty, starlike blossom. Trillium grandifolium and the other native Trilliums are all "moose flowers."

She mourns that our native flowe

With such few hints and glimpses of "Rural Hours," the book is heartily commended to the attention of all who desire to know what was written of our outdoor life forty years ago, and as well, to all lovers of nature. ROWLAND E. ROBINSON.

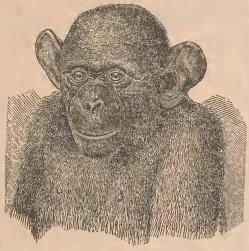

SALLY.

SALLY.

WITHOUT doubt the most popular individual in the London Zöological Gardens is Miss Sally, the bald chimpanzee, known to science as Anthropopithecus calvus. So distinguished a personage has she become that I think many of our American friends will be pleased to study her portrait, and an excellent one it is. The expression of face is perfect and her habitual one, though her intelligence is so remarkable that during her performances one expects every moment to see a smile or a frown, or the raising of eyebrows, some visible response in the way of pleasure or anger; but no, the face wears always this same imperturbable look, as if, however, Sally were considering in her own mind her present life and her future prospects. More especially when spoken to she appears to be mentally deciding whether she will be obliging or the contrary. To her credit be it said that she usually complies, but with the same unchanging expression of physiognomy.

The question has been frequently discussed, "Can animals count?" Sir John Lubbock among others has given much attention to some apparent examples in the case of insects, bees and others, which in feeding their young invariably bring the same number of victims, more to a female than to a male grub. But in passing it may be suggested that a knowledge of quantity rather than number is the guiding instinct, the female grub being larger and requiring more food.

Now there are two animals at present in our Zoological Gardens who are unfallingly correct regarding numbers; and in both cases the comprehension of actual language directs them. First, as being by far the more accom-

SALLY.

plished scholar, comes Sally. It is no regular routine that she goes through, nor one voice only that she obeys. Not only has she two keepers, both being in turn her tutors, but if a casual visitor asks for a straw, six straws, ten straws, or to shake hands with her, as may be, and Sally is in an amiable mood, she complies as if her keeper had spoken the words. For a time, and after much patient teaching, three seemed to be the limit of her calculations. Then she advanced to four and then to five, and here she stopped for a year or two, her keepers almost relinquishing hope of any further advance. But suddenly her intellect seemed to gain strength and now she can count ten correctly. By "counting" we, of course, mean that she comprehends clearly how many straws to pick up if told to give ten to her keeper, or to any one else who requests that number; her compliance toward a stranger being, however, less certain, as Sally resents unwarrantable liberties. Her steady and methodical way of going through "her lessons" is an example to any pupil. Deliberately she selects a straw and holds it in her mouth, and so on, until the required number is collected; she then takes them from her lips, folds the bundle in a compact form and delivers it to her keeper.

But her comprehension of language does not end here. "Give me'a straw through the bars," and she does so. "Put one through the key hole," "now in my pocket," and so on. Not taxing her patience too long, the keeper approvingly says: "Good girl, now you may have this piece of apple," laying several slices on the wood work between the wires. "This piece is for yout os smell;" "this piece of apple," laying several slices on the wood work between the wires. "This piece is for yout os smell;" "this piece of that." To "shake hands" with the right or the left one, to put up her right or left foot as bidden, to collect straws for a "button-hole" and place it there, to take milk from a cup with a spoon "like a lady," and many other small performances are promptly, though deli

being very slow.
Intelligent as this lady chimpanzee undoubtedly Intelligent as this lady chimpanzee undoubtedly is, it must be admitted that her temper, to speak in the mildest terms, is extremely capricious. Affectionate, and fond of one of her keepers to an extent that she is credited with shedding tears if he too abruptly ceases his attentions and departs (it is but polite to attribute the "tears" to fondness and not to anger). She has sometimes gripped his hand and inflicted a sudden bite that has, sad to tell, proved a very vicious nature. Those who venture on any caress must be vigilantly on their guard, for there is

no knowing Sally's freaks of temper; and occasionally, when her attention and her memory have been overtaxed by the exactions of a continuous stream of visitors, she will suddenly dash away to the back or to the top of her cage and offer unmistakable proof that she is but an unutuored savage after all.

One other accomplishment of Sally's must not be omitted, and that is her "singing," Here the monkey quality of imitation is apparent and nothing more. When her keeper says, "Now, Sally, give us a song," and leads off with a strain, "Tra-la-la" or otherwise, the creature lifts up her voice and gives utterance to a succession of discordant screeches, which can be compared neither to the braying of an ass, nor the quacking of an angry goose, nor the language of feline serenaders, but a compound of all, ending in a prolonged cadenza yell and an air of self-satisfaction that is laughable. Sally has done her best, but she cannot be included in the category of the animals with a discrimination of sound, which Mr. R. E. Stearns has lately been enumerating.

As may be supposed Sally has proved an interesting object to scientific men, many of whom have been to witness her capabilities. Had they time to watch her and attempt to instruct her with the patience and perseverance of her keepers (to do the latter justice), or to go through the same routine with some other members of the monkey tribe, they might enable us to ascertain the true workings of Sally's brain and whether it is memory, a comprehension of sound or of words in the human voice, a clear perception of quantity in gathering just so many straws, no more, no fewer, than the required number, induce this obedience or compliance on her part. Memory undoubtedly is an agent, and to this may be added a power of concentrating attention; the anticipated reward is also an incentive, as it is with higher beings in the scale of creation. If we con d only add to these endowments the faculty of speech (but it must be in the English language) we might yet better understand th

THE WORCESTER, MASS., NATURAL HISTORY SOCIETY will open its summer camps at Lake Quinsigamond, July 22 to Sept. 1. Those camps are for boys, girls and families. The president of the society is Mr. Edward H. Forbuch

SHOT COUNT AND WEIGHT.

SHOT COUNT AND WEIGHT.

The examination of No. 9 shot shows the same variations in matters of weight and count as was shown last week in our table of the No. 10 shot. The same companies' output are still under consideration, and the samples as before were gathered direct from the companies themselves in the Forest and Stream sample bottles, except in the case of the English concerns, whence small bags of shot were sent direct to the office. The charges of 1½oz., Am. Shooting Ass. measure, in each instance were counted and weighed, and the figures of each individual charge are given in the body of the table, and then in the heavier full-face figures the average count for each company is given. To obviate any irregularity which might come with various manners of loading and to bring all into a uniform line of comparison, 100 pellets were taken from each lot of shot and their weights taker. In three different samples and the average in the last column struck. As before, the shot from all sources is the regular size and not any of the half sizes made up in many factories on the trap-shooter's demand.

A glance at the table shows the variation between the top and bottom of the list to be over 30 per cent. The Leroy Co., of New York, are still at one end of the list as making the largest shot, but the Collier Co. have gained the other extreme with an average of 951 pellets against the lowest average of 721. In the number of shot the Cincinnati Co. just strike the average, so far as count is concerned, and yet a glance at the weight average shows that they have but 552 grains weight in the charge, while the average reaches over 584. In the 100 pellet division the jump is from 63½ grains weight to 82 grains, or a charge of about 30 per cent, following very closely the general average. The Northwestern Co. still figure all alone as soft shot makers, not having as yet any chilled shot output. The two English companies get very close together, very close indeed, as companies get very close

which existed with the No. 10 shot. The Newcastle shot, however, dropped from 964 pellets in No. 10 shot to 783 in No. 9, while the Abbey patent shot runs only from 732 to 700.

No. 9, while the Abbey patent shot runs only from 732 to 700.

The various droppings run very even, and each company does not materially vary from its average in the 10 charges sent. The lowest count was in the Leroy lot, with 713 pellets, while the highest, 966, was in the Collier exhibit. The shot, as a rule, was very well made, with rarely a pear-shaped or dumb-bell shot; while the color in every instance was bright and attractive. We will not now repeat our query as to where and how an effort should be made to secure uniformity as to size and hence count of pellets. A maximum variation of 10 per cent. would be ample for even the most careless workman to get within the pale, but when it passes 30 per cent, the using of the same number to designate the shot becomes little more than a farce. Take for instance No. 10 from the Leroy factory, with an average of 936 pellets to the 1402. measure, while from the Collier tower we can get pellets of No. 9 which run 951 pellets to the same measure. In other words, a contestant using No. 9 shot of the one make has an advantage in the greater number of pellets over a fellow marksman using No. 10 shot from another factory; and in the weight of metal thrown the advantage is very naturally with the larger number of shot.

PARROT POT-PIE.

PARROT POT-PIE.

Editor Forest and Stream:

In your issue of May 29 "J. V. B." tells us about "stewed parrot." Any one would infer from his report that he did not hanker after that kind of game any more. And that "reminds me."

In the winter of "14 and "75 I cruised in the Bay of Honduras, the most of the time being spent among the Bay Islands. On Christmas morning I found myself at Bonacca, an island whose inhabitants (some fifteen or sixteen families) all lived on small outlying keys, their plantations of bananas being on the main island. I was quite at home, having been there several times that winter.

While taking our morning coffee at Capt. Kirkcannel's (the patriarch of the island) the question was brought up: What shall we do to-day? It was answered by George: "Let's go after parrots." The point was carried by acclamation, and after our coffee we stowed ourselves in one of the crankiest of crank dugouts and started for the island. And by the way, did any of your readers ever have the pleasure of riding in a Carib canoe? If not they have missed something. Narrow, cranky and wet, these craft are still the very perfection of speed and seaworthiness, and some of them show the finest and most perfect lines I have ever seen.

As I said, we got away directly after coffee, and with a fine breeze soon reached the island. We made, a landing in a little cove where a small stream canne rattling and tearing down the hillside, to lose itself in the salt waters at the foot. Now the fun began, for be it known, the land in Bonacca is all set edgewise, and covered with an almost impenetrable growth of vines and bushes. Trees there are in plenty, but so completely covered with all kinds of creeping and climbing vines, orchids and parasites of every description, as to seem of secondary importance. Through this foliage we forced our way, now climbing up a large boulder, only to slide down the other side, then making a flying leap on to a fallen log, just to have our feet slip on the damp mould and find ourselves sprawling i

So we climbed, waded through sloughs, got scratched with briers, wound up in hedge spider webs, bitten by mosquitoes and stung by gnats. When about noon we had reached the top of the island, there came the most merciless driving, pelting rain storm that it has ever been my lot to face. And I didn't face that, but took refuge under a leaning tree, where with the water running down my back, and the mosquitoes putting in their best licks, I tried to fill and light my pipe. But all things have an end, the rain slackened to a drizzle, then a few scattering drops, and, presto! the sun pops out from the thick clouds, the birds spring into life, and the forest is glittering with jewels. To complete our happiness, my companion found some dry matches in an inside pocket, and our cup was full. After our smoke, we decided to keep on across the island to "old man Grant's," where George said we would be sure to get some birds. I was ready for anything, for the old muzzleloading musket that I carried already weighed a ton; and I was eager for anything that promised to take my mind away from my load, and the uncomfortable feeling of my wet clothing. On the way to Grant's, George told me of a tragedy which had occurred there several years before. Old man Grant was the only settler on the island proper, and had by pluck and hard work made himself a home. He had one son grown up. The father and son raised vegetables, caught fish and turtles, and managed to secure a good living. On one of their trips to a neighboring island the son met and fell in love with a young English girl; and after a short courtship married and brought his wife home. They lived happily for a while, until one day, when the old man was away fishing and the son at work in the field, there came a boat from the mainland, with four desperadoes, who had heard or surmised that the Grants had money. They first went to the field, where they shot young Grant; then to the house, where they told Mrs. Grant she must show them where the money was. She denied having any mo

After and sentenced to hard rates which was also at work on the road.

Afterward, in Truxillo, I saw two of the rascals at work on the road.

While George was telling the story we floundered along down the mountain, and as he finished we came in sight of Grant's house. Between us and the house, as we emerged from the wood, was a large cleared field, and in the field were some coons, the most familiar thing I had seen since leaving New England. But coons were not what we came for; we came for parrots; and here it was weil along toward sunset, and not a bird. As we neared the house we saw old man Grant approaching to meet us. He proved to be a hard, wiry old fellow, but his "Good evening, gentlemen; a merry Christmas," sounded hospitable, to say the least.

"Have you seen any parrots?" asked George.

"No, not since morning. But, gentlemen, I have been wishing all day for some one to help me spend Christmas, and I believe the old woman has just got dinner ready."

He did not have to urge us much, as by this time we

were ravenously hungry. After a dip in the brook and brushing the cobwebs out of our eyes, we were ready. As we seated ourselves at the well filled table our host observed, "I think you gentlemen said you were after parrots. Well, here they are," and he pushed toward us an immense tin filled with pot-pie. "I made a lucky shot this morning, got fourteen at one shot, and they are in that pie," We sampled that pie, in fact we sampled it so persistently that there was little but the pan left. Did we like it? Well, we did. And after our dessert of pineapples and bananas, as we were lounging under the veranda with our home-made cigars, we said, "Chicken pie made out of parrot is good enough for us."

Perhaps I have come a long way round to tell a short story, but one thing leads to another, and if I was not afraid of being too tedious, I might tell you how, after staying all night with old man Grant, we accepted his invitation to go around in his boat, caught the turtle, were capsized, etc.; but I think I have said enough for this time. Parrot pie is good and Honduras is a capital cruising ground.

TARPON.

FLORIDA

BRITISH COLUMBIA GAME.

BRITISH COLUMBIA GAME.

VANCOUVER, B. C., June 11.—Editor Forest and Stream: The season here in British Columbia has been very wet and backward, in fact the old-timers do not remember such a cold wet season. The snow is still deep back in the mountains. The game prospects, however, are good. In the vicinity of Victoria the crow of cock pheasants is heard in all directions, and numerous broods of their young are daily seen almost within the city limits. Quail and blue grouse are also abundant there. Friend Maynard and the writer made several attempts to photograph a blue grouse sitting on her nest, and failed each time, not but that we could approach the grouse, for she would allow us to set the camera within a couple of yards of her. The reason of our failure will be truthfully told in a future letter. There is material enough regarding the matter for several columns, and then the tale would be but half told.

Deer and panther are also numerous within a few miles of Victoria, and the trout fishing is excellent in the streams on the island. The provincial Legislature has amended the game laws in several important particulars. The \$50 license is a great mistake and will meet with much opposition throughout the Province, but more of this later.

FIFTY YEARS IN THE GUN TRADE,—On June 13 Mr, John P. Lovell, of the Boston John P. Lovell Arms Co., celebrated the fiftieth anniversary of his business career. Beginning in 1840, Mr. Lovell has been connected continuously with the gun trade, his business growing from year to year and from decade to decade, until it has attained its present very large proportions.

AN OCTOBER REPORT WILL BE IN ORDER.—Camden, N. J., June 5.—If the Jersey law makers don't interfere this year, I know where a seven-snagger has been running through the woods of Atlantic county the last three years. I count the days on my fingers for the last of October.—W. C.

CUTLER AND CROSS ISLAND.—An effort is being made to induce the wildfowl to remain over by planting the shallow lakes of Cutler and Cross Island, Maine, with wild rice and other aquatic cereals and roots,

GAME IN THE NATIONAL PARK.—Yellowstone National Park, June.—A tourist who made an early trip with a saddle horse and guide, saw over two hundred elk in the Alum Creek Country and Hayden Valley, and one buffalo bull within two and a half miles from the Upper Geyser Basin. The government scout, Mr. Ed. Willson, while on a trip down Nez Perce Creek, saw a band of buffalo with 50 cows and 15 young calves in sight. He says the calves were so young he could have caught any of them. After watching them for some time he went around, so as not to disturb them. It was no novel sight to him to see a band of 50 to 100 elk, but the buffalo are not so plenty, and they gladden an old-timer's eyes. I saw on a trip to Soda Butte several bands of elk. None of the bulls had horns much over twelve inches long; this slow growth is caused by the late season I think. One, two and three years ago I saw several bulls with horns much longer and at an earlier date. The cow elk are having their calves. If the rate of increase goes on as it has the past five years the Park will soon be overrum with game. Several bear have been seen this spring. One old silvertip strode pat on two of the Transportation Co.'s herders on Mt. Evarts recently. They were well mounted and wanted to see it run so that they might give it a charge, but they soon changed their mind when the chase proved likely to be the other way. Antelope and blacktail deer are quite numerous in the open country between Mammoth Hot Springs and Soda Butte. From all indications the Park will see more visitors this season than ever before.—H.

LAWRENCEBURG, Ky., June 6.—Anderson county is one of the largest producers of "Bourbon" whisky in Kentucky, and it seems that the whisky interest has almost absorbed all other interests, fishing and hunting included. There is not a shooting club in the county, though the wealth would warrant such recreations. But if a denizen of the hot and dusty city desires a pleasant place to hunt or fish, this town offers many inducements. The county town lies about midway between Salt and Kentucky rivers, each about four miles distant, and each abounding in fine black bass, cat, calico perch and other kinds. There is still a large proportion of forest lands which abound in small game. I am told the season promises well for quail and gray squirrels. There is a number of smaller streams, but in almost every case the waters are ruined and the fish destroyed by the offal from distilleries being emptied therein. Such things are indictable as nuisances, but it would almost paralyze a Grand Juror to mention such a thing, as being a blow at the material prosperity of the county. Such is the power of money and of money making. A distiller can even make whisky, drive his cattle or haul corn or do any work on Sunday, as being a business of necessity.—J. S. M.

ESSEX COUNTY GAME,—Lynn, Mass., June 24.—Judging from the reports of our local sportsmen the number of game birds in this locality far exceeds anything which has been reported in years past. This encouraging state of affairs is principally due to the mild winter weather we have enjoyed of late years. A prominent member of the Mass. Kennel Club, Lynn, Mass., knows about where every bird is located, and to use his familiar phrase that "Ino and I know where to find the birds, at the right time;" but I venture to predict disappointment for him and his faithful companion, as no doubt the butcher's work will commence long before the law-abiding member of the club will venture into the bush, or even before he thinks of getting his trusty breechloader in condition for the fall sport. The birds in this section of the country are wholly unprotected, so far as the watchful eye of a game warden is concerned. To be sure there is a fish and game warden, but methinks he knows not what a game law is, or if he does, he is entirely ignorant as to the protection they require at his hand and which he is supposed to give them, "short lobsters" being his hobby.—R. L.

OF OUR WESTERN NUMBER, June 12, a Massachusetts reader writes: "This is surely a red-line, blue-ribbon, white-star (or what you will) number."

Sea and Biver Hishing.

FISHING NEAR NEW YORK.

FOR practical and specific directions to reach several hundred fishing resorts within easy distance of New York city, see issues of 1889 as follows: April 18, April 25, May 2, May 9, May 30, June 8, June 13, June 20, June 27.

RANDOM CASTS.

THE oil can that will not leak under some even ordinary condition is yet to be made. A small bottle of very thick glass, say about a quarter of an inch thick, made with a metal screw cap and washer, still remains the only safe thing to carry oil in the pocket or valise. Have a piece of metal of the thickness of a knitting needle soldered to the inside of the cap, and long enough to reach to the bottom of the bottle, and in using sufficient oil will adhere to lubricate your reel.

Don't pass unkind remarks about the manner in which the novice handles his rod, but remember that you probably cut just as poor a figure in your first attempt at casting either the fly or from the reel.

In salt-water fishing, for sport choose the striped bass; for eating, the kingfish; for excitement, the bluefish; for disappointment choose the skate. And, as they are frequently found on the same grounds, "you buys your bait and you takes your choice."

For the preservation in good shape of the long tips of surf rods, procure a piece of wood of about 1ft. in length by 2in. in breadth and ½in. in thickness. Cut openings through it, across the grain, lin. long and from ½ to ½in. wide according to the size of the tips at the top. Make these openings 1½ inches apart. Now fasten the wood by screws to the wall, about 6in. below the ceiling moulding, or in a high closet, and luang your rods in the openings, instead of standing them in a corner at an angle of 45-leg., as is so often done. It will assist in straightening those tips that have received a set and keep all in good condi-

tion and away from accidents. But don't hang them up with the reel on or they will be injured by the side strain caused by the weight of the reel. Better still, take off the independent butt with reel attacked, and lay it on a shelf.

Use oil-tanned raw hide for the apron to your reel, instead of the usual hard and rough leather. It preserves instead of injuring the line.

THE NESSMUKS.

THE NESSMUKS.

WORCESTER, Mass.—For a number of years the need of a sportsman's club, which would be more in sympathy with the interests of active field sports, has been strongly felt here, and during the fall shooting of the past season a few congenial spirits who had passed many a pleasant day together in the brush and on the trout streams, decided to organize a club, founded on their ideas of what a sportsman's club should be.

Not until the past winter did the scheme take any definite shape, but before the trout season opened, things were well under way, and by the time the weather was warm enough to make an outing agreeable a club of six was formed and an entire camp kit, including tent, dishes, a refrigerator (about 18x14x20), cooking utensils, and a folding canvas boat, was purchased.

The thought that an account of one of our outings might interest some of FOREST AND STREAM's readers, has prompted me to write this article. First our name. It was decided, after much deliberation, that none more appropriate than the nom de plume of that very fountain head of all that is best in field sports could be chosen. The man who stands preëminently at the head of American woodsmen, and one whose writings will ever hold him in kind remembrance. With what a shock of pain we read of his death so lately. Yet we never saw him or even knew that he was born within a few miles of Worcester. But we knew him well through his contributions to this paper.

And so we are called "The Nessmuks." Of officers we have but one, the "official hustler," self appointed and with authority to get up a fishing trip for any day on which he can be away. We never lack for a "hustler," as some one has a scheme under way about all the while. Our official machinery therefore runs remarkably smoothly.

One Friday one of our members pined for trout. The telephone was brought into play and a gathering was

while. Our official machinery therefore random while. Our official machinery therefore random while. One Friday one of our members pined for trout. The telephone was brought into play and a gathering was arranged for 7 P. M. Every one was on time. "Well, what's up now?" "Up? Well, it's about time something happened, isn't it?" "Sure!" "All right; you take a can of cream in the refrigerator and I'll look out for coffee and salt pork. What time will we meat you for breakfast?" "Oh, say 9 o'clock." "Nine it is. Good night," and the meeting was adjourned.

"Oh, say 9 o'clock."

"Nine it is. Good night," and the meeting was adjourned.

It was arranged that we were to go in two directions; two in one team with the boat and camp truck and three in another with tent and refrigerator.

You are not to meet the club members in their offices, so by what names they are known on the street would not interest you. As they appear for breakfast they are known to the camp as "Hy Hicks," "Little Hicks," "Charley Ross," "The Half-breed," and one who has not earned sufficient distinction as a fisherman to entitle him to more of a handle than "Blondie."

Little Hicks and Blondie had the boat and were started about 1:30 A. M., just the time Hy and Charlie reach the Bay State lunch cart to learn that the hungry Half-breed "had been there" and cleaned the cart out, forcing them to the "open all night" star. The three finally got together, loaded in their effects and got off a few minutes past two. Cold! I did not experience such a ride last winter, and was obliged to wrap myself in the lap robe to keep from freezing, while Charlie drew on his extra pair of heavy woolen socks over his gloves to drive in. Just before daylight we turned down an old wood road and hitched up.

Doing a war dance to start circulation we got into our togs, thrust hands into pockets, and with rods under arms started for the stream. It was almost light enough to

and hitched up.

Doing a war dance to start circulation we got into our togs, thrust hands into pockets, and with rods under arms started for the stream. It was almost light enough to see one's line when we started in, and it was not a minute later when Hy laid the first trout out on the bank without any preliminary landing net business.

This opened the ball; and it was not closed till the end of the stream was reached about 7 A. M. The trout were all in the running water, and were biting like tigers.

The Half-breed struck a big one, and hung back trying to coax him to rise again till Charlie and Hy were out of sight down stream. They were "in it," surely.

Coming to a deep pool, Hy took to the bank for a few rods; and as he stepped in again, Charlie hooked one within two feet of where he stood; and soon he was netted and they proceeded down stream side by side, wading the stream, and nearly every likely looking place yielding one. "Careful how you approach the big pool, Hy; we'll get a nice one there," said Charlie, as he sneaked along under cover of the bank and cast out over the head of the pool, being rewarded a moment latter by a good one, which made the light rod nearly kiss the water as the fish felt the hook and turned down stream. This stream is a favorite of ours, and the fishing being mostly open, we fish it right. That is, with light fly-rods, netting each other's fish.

The flat water below proved unfruitful; but coming to where an old log lay across the brook, Charlie remarked.

we fish it right. That is, with light fly-rods, netting each other's fish.

The flat water below proved unfruitful; but coming to where an old log lay across the brook, Charlie remarked, "Now, a good fisherman would take one there," which he immediately proceeded to do; and striking in a rod or so below Hy, said, "That's a pretty likely looking stretch just opposite me," but failed to fish it, while Hy followed down and took three beauties out of it, and whipping the opposite side where Charlie had just waded down and hooked a half-pounder.

In attempting to walk carefully over the shelving rocks Charlie partially lost his balance and sat down just far enough so that the water flowing over the terrace behind him washed the skirts of his coat, but did not quite touch his trousers where they were nearest the water. Teetering there for about half a minute before he could regain an upright position, he presented a picture which was worth the trip to see.

Something ludicrous occurred at every turn, and such a trip comes to a man but seldom. At one time both rods were floating down stream, while two excited fishermen were trying to basket a 12in, trout, Coming to a par-

ticularly slippery place one was sure to hook a trout just as he began to slip, and do a song and dance over the stones for a rod or so before he could bring up and land his fish.

About 7 o'clock Charlie and Hy turned back to hunt up the Half breed whom they found squatted down behind a bush intent on fishing a deep pool where an old tree grew on the opposite bank. "Hush! I just lost an old lacer in here. He bent my rod double." "Want me to take him out for you?" says Hy. "Yes; he's right under those old roots." Hy strung on one of his "irresistibles" and hooked him the first cast. "Great Scott! he's got him, and he'll weigh two pounds—head him over here away from the roots. Take him up into the swift water and drown him."

take him out for your 'says Hy. 'Yes; nes rigue under those old roots.' Hy strung on one of his 'irresistibles' and hooked him the first cast. "Great Scott! he's got him, and he'll weigh two pounds—head him over here away from the roots. Take him up into the swift water and drown him."

"What, a sucker?" 'No, a dace." 'Oh, dear! Ain't that terrible." This ended it, and the baskets were emptied on the grass and 31 beauties from 8 to 12in. long were counted with the remarkably even respective catches of 10, 10, 11. Upon reaching the team, the horse, which was hitched to a sapling, made a sudden plunge forward followed up with another till she lost her foothold, when her head was down completely out of sight, beneath her body, and blood was seen oozing out through the blanket, which completely enveloped her. It did not take long to whip out a knife, cut the halter, unhitch tugs and holdbacks and throw off the blankets owe could see what shape she was in, and pulling out her head she regained her feet. Not one in the party but supposed her neck was broken. The only damage to the harness was about the brille, and was repaired with a piece of twine. A small cut was found in her side where a stub had broken the skin. This was washed out, and the delay was not more than twenty minutes; but three men had leved from the shore.

A small cut was found in her side where a stub had broken the skin. This was washed out, and the delay was not more than twenty minutes; but three men had leved from the shore of the party but the sear of the coffeeport was soon out. Hungry! Ye shades of Tanner, blush for them. Breakfast over and dishes washed, the half-breed and Blondie started out to fish a brook at the head of the pond, while Charlie and Little Hick took the boat out for a troll, leaving Hy to keep camp and fish for perch from the shore.

Just a word about our boat. It is such a gem I cannot forbear mentioning it. It is the "Acme," advertised in this paper, and seems as near perfection as a folding boat can be. When folded it g

TO SALMON ANGLERS.—T. J. Conroy, 65 Fulton street, N. Y., bas a lot of fine salmon rods, assorted kinds, which he will sell at a sacrifice until stock is reduced. Don't miss the opportunity.—
Adv.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illitated circulars of W. B. Leffingwell's book, "Wild Fowl Shoting," which will be mailed free on request. The book is prounced by "Nanti." "Gloan," "Dick Swiveller," "Spilliane" at other competent authorities to be the best treatise on the subjection.

CHICAGO AND THE WEST.

CHICAGO AND THE WEST.

CHICAGO, Ill., June 20.—Everybody is now out fishing, or has just got back, or is just about to start out. And everybody is catching fish too. This seems to be a great season out this way.

The Fred Taylor and Frank Arrowsmith party got back last week from their annual trip to the headwaters of the Little Oconto, forty miles west of Ellis Junction on the Milwaukee & Northern, and they had 1,800 brook trout with them. I am not saying a single word.

Billy Payson is also just back from a trip up the Milwaukee & Northern. He caught an average of about sixy trout a day, and had 300 in all. I hear he was also on the Little Oconto.

Mr. Fred C. Donald, general passenger agent of the Chicago & Atlantic, Mr. Levings, an engineer on the same road, and Mr. C. S. Burton, of the Kankakee Line, were last week up at Ellis Junction after trout. They did not go very far from town, and seem to have tried fishing in the horribly bushy and much fished little creek right near town. They caught a few trout, but were fairly driven out of the woods by the mosquitoes, which are worse this year than for a long time, owing to the prevalence of high water all the spring. The agent at Wausaukee still writes down reports of high water. He says he can't bet on the trout yet, but he can on the mosquitoes.

It was Mr. Levings who told Messrs, Donald and Bur-

Wausaukee still writes down reports of high water. He says he can't bet on the trout yet, but he can on the mosquitoes.

It was Mr. Levings who told Messrs, Donald and Burton of the fine bass fishing in the Tippecanoe River, in Indiana, and this week the three gentlemen above named are going to take the offishial car, Fredonia, of the C. & A., and go down there and have about the most fun ever was. Scott, the colored boy who belongs to the car, is going along to cook, and there will be great days on the car. The Fredonia will probably lie off at Ora Station. Below there the Tippecanoe runs close to the railway. It is a broad, rocky stream, full of riffles, and can be waded nearly all the way. This luxurious party will have a handcar go along on the track opposite to them, and will thus have transportation for their ice, fish and eatables. The Tippecanoe is here a good stream for flyfishing, and the bass are the small-mouthed, but this party will use some minnows, against which Charlie Burton puts his glass minnow trap on the handcar. The bass will have to come down when a whole corporation goes out after them this way. I came very near going on this trip myself. I told Charlie Burton I was going fishing with a party on the Fox River next Saturday, and then he invited me to go down on the Tippecanoe with them, on Saturday, all of which nearly turned my hair gray. It is matter of grief that one cannot fish all the streams at once, for life is so short.

It seems that Mr. Loeb, of A. G. Spalding & Bros., was out with a picnic party below Aurora, on the Fox River in this State, a week or so ago, and came back with long accounts of the bass they caught on the fly in that stream. His story so fired Mr. August Hirth, who presides over the fishing tackle department of the same house, that he also must go fishing. Mr. Hirth is a celebrated fly-fisherman, his art being fairly equal to charming the birds from the trees. Mr. John Soderberg, Mr. A. H. Harryman and myself will go along to watch him fish, All joking aside, ho

joking aside, however, the bass have been taking the fly in fine shape on the riffles of the Fox, near Oswego, Aurora and Yorkville. The C. B. & Q. is the line to these points.

It is probable that our party will not catch many fish on Saturday, for to night there have been disastrous storms all through this section. Cyclones have wrought destruction through northern Illinois. Torrents of rain are falling to night. Dispatches to the press from Boscobel, Wis., report heavy floods there and say the trout streams are ruined, the trout being swept out into the meadows and left to perish. The streams of this region will doubtless be too high for good fishing for a few days now.

Day before yesterday I met Mr. W. L. Shepard, Secretary of the State Sportsmen's Association, just as he was outlitting for a trip to Crosby's place, on big Twin Lakes. Wis. As I had just gotten in from that same country, I implored Mr. Shepard to procure a head net and a bucket of mosquito "dope" before he went into the woods. He grew pale, and hurriedly purchased those commodities for himself and two friends. A man can have a lot of the wind the mosquitoes up in Wisconsin this season.

Messrs. H. & W. H. Manegold, Julius Roehr, Robert Kretchmar, Jr., and Henry Roethlisberger, all of Milwankee, refirmed last week from a mascallonge weighed only 1616s, but their largest mascallonge weighed only 1616s, but their largest mascallonge weighed only 1616s. Their numes probably stuck out over the boat and scared fife-fish. Mr. Robt. Seidl, of the same city, came down on the same trun from Twin Lakes, with some lunge and the same trun from Twin Lakes, with some lunge and the same trun from Twin Lakes, with some lunge and the same trun from Twin Lakes, with some lunge and the same trun from Twin Lakes, with some lunge and the same trun from Twin Lakes, with some lunge and the same trun from Twin Lakes, with some lunge and the same trun from Twin Lakes, with some lunge and the same trun from Twin Lakes, with some lunge and the same trun from Twin Lake

just about due now. The "fly" was on the Wisconsin lakes in abundance last week.

Mr. C. W. Lee and a friend have had some fun fishing for the big lake perch some distance out in the lake. They caught some weighing a pound and a half, he thought. The secretary of the Grand Calumet Heights Club, Mr. Marshall, says the perch fishing off their beach is now good. The annual meeting of this club, for election of officers, etc., occurs next Wednesday night at the Grand Pacific Hotel, of this city.

The last I heard of myself I was up in Wisconsin, or, rather, in Michigan, and had just finished breakfast at Watersmeet. At this point Mr. Viiet, the general passenger agent of the Milwaukee, Lake Shore & Western Railway, together with his friends, Mr. Kennedy and Mr. Bonnell, bade me good-bye as their train rolled north for Gogebic. I was to go south to State Line and thence seek out Charlie Gammon and his associate pilgrims, who were supposed to be in camp somewhere over on Vieux Desert. Watersmeet is right on the divide, and I was told that I could get some trout fishing there, barring the high water. To the north, bass; to the south, mascallonge, dead oodles of them, according to all accounts.

By and by a freight train came along, and in course of time we got to State Line, and there I shouldered my pack and inquired of the station agent whether he could direct me to a wild-looking man with a side-bar moustache. "Oh! you mean Mr. Gammon, do you? Well, he and all his party have pulled out from Vieux Desert and gone down to Three Lakes, about twenty-eight miles below here."

"Did they have any fish?"

direct me to a wild-looking man with a side-bar moustache. "Oh! you mean Mr. Gammon, do you? Well, he and all his party have pulled out from Vieux Desert and gone down to Three Lakes, about twenty-eight miles below here."

"Did they have any fish?"

"A few. They had one good 'lunge. Some other parties sent down a good lot from Vieux Desert last week. They bit better 'last week than this. Mr. Gammon left here two days ago."

Nothing was left but to climb on the freight train again, which was done, after the conductor had obligingly waited till the agent had learned by wire that the Gammon party was still in camp out at Three Lakes.

It was our fortune to have a sick locomotive on that particular freight train, the way she gasped, groaned was painful in the last degree. The sylinder was worn so that the packing would not stay. At Eagle River we took the engine to pieces and scraped it, but it didn't seem to go any better, and we were devoulty thankful when at about 1 o'clock, P. M., we pulled into Three Lakes. Here I got lunch and learned that the party I sought were in camp on Lone Stone Lake, about 9 miles east. To this spot I got some of the usual complicated directions of the North Woods, I was to go so many miles to such and such a place I had never heard of, and then take an old trail that led off somewhere else, and by and by I would get there. My informant begged me with tears in his eyes to let him take me over with a team, price \$5, but I reasoned that I could make just about \$5 in two hours and so set out on foot, supplied with a lunch or two, some matches and a general idea of which way the stream ran. At first I went along about like Al. Bandle's railroad train, which ran eleventy-leven miles in 'leventy-leven minutes and a half, but after the first five miles of mud and mosquitoes I slowed down a little. My pack, which weighed about 40 lbs. in all, appeared to weigh move thun a four-year-old buck. And there were 400,000,000 mosquitoes that bit me every half mile, in spite of head-net and pennyroyal

MAINE FISHING.

MAINE FISHING.

THE sportsmen have generally returned from their spring fishing trips, and reports are fairly satisfactory. At Moosehead the fishing has been excellent, with the trout rather larger than usual. Fly-fishing there has begun to some extent, though the weather has been cold and the season has been backward. The Kineo Club, of Boston, started on its annual trip to Moosehead last week. The number of sportsmen who have made up the party in former seasons was somewhat reduced, and new men were invited. J. B. Thomas, Jr., the commander of the club, was prevented by press of business from going. He is one of the partners in the Standard Sugar Refinery, organized and owned by his father for many years, and with the Sugar Trust business has been rushing. Mr. Walter Sanborn was also prevented from going with the club by pressure of business. Mr. Lauriat, of Estes & Lauriat, is soon to sail for Germany, and consequently he gave up his trip with the Kineo Club this year. Among those who have gone are Mr. Frank Wise, of Fisher & Wise; Mr. Huinewell, of Doe & Hunnewell, and Mr. Albert Nickerson. Mr. W. S. Hills followed the party after they had been gone several days. Mr. Hills is one of the most genial of sportsmen, and he has the sympathy of all of the clan in his affliction—one of the hardest for the sportsman to bear—that of partial blindness. But his cason to sail for dermany and consequently he gave up his trip with the Kineo Club this year. Among those who have gone are Mr. Frank Wise; Mr. Hills is one of the most genial of sportsmen, and he has the sympathy of all of the clan in his affliction—one of the hardest for the sportsman to bear—that of partial blindness. But his catendary to be a summer of the cursion of the club, was prevented from going with the club by pressure of business. Mr. Lauriat, of Estes & Lauriat, is soon to sail for Germany, and consequently he cursion of the hardest for the sportsman to be a partial of the club, was a probably the complete of the club, was a probably the club, was

still catching some fish of fair size in the Sebago waters, though large fish have been scarce this year. The catch of landlocked salmon in the Rangeley waters has not been remarkable, or even very satisfactory, this year thus far. Mr. C. D. McDuffee, of Manchester, N. H., is reported as taking a salmon from Kenebago Lake the other day weighing 6½lbs. Several smaller fish have been taken from Rangeley Lake, but very few from the

been taken from Rangeley Lake, but very few from the lakes below.

J. H. French, well known to sportsmen as a hotel keeper at Andover, Me., has sold his hotel at that place, or at least the bargain is made, to the Thomas Brothers, Albert and Frank, proprietors of the other hotel at the same place. Mr. French is to give up the hotel, and also the transportation business over the buckboard road in to the lake. He is at present lessee of the Union Waterpower's hotel camps at the Upper Dam, and he proposes to remain there and build a couple of cottages on the lands of the company, one for the better accommodation of ladies visiting this fishing resort and the other for his own home. I understand, from good authority, that he has the permission of the company to build these cottages. He looks upon the undertaking as a safe one, since it is probable that the rathroad from Phillips to Rangeley, now building, will be running by another season, whereby it its expected that travel will be doubled to those lakes.

Jime 24.—One of the members of the Kineo Club has beaten the record in the way of lake trout (aamagusuh) this eason. Mr. J. F. Nickerson, in the wholesale group to the proposed of Bostom, brings back from Moosehead a lake trout year. Though not a pure Salmo fontinuits, and Mr. Nickerson is justly very proud of it.

Another big catch this season was that of Master Willie Clough, of Lynn, Mass., a lad only twelve years of age. In company with his father he made a trip to Mooseheam agauntic and Cupsuptic in May. At noon one day they went up to one of the Cupsuptic camps to dinner. The boy at play in one of the boats at the wharf threw over a hook with a dead minnow on it. Soon he felt a fish, and sinally landed without assistance and Sibs. trout.

It seems that Mr. Fox, of New York, who took a 74-pound trout from the Narrows, Richardson Lake, at the time that Mr. Guild, of Boston, took his 104-pounder, of which the Forers and NT STERAM has already published an account, had rather bad luck. The lake was very rough t

PENNSYLVANIA ANGLING.

PENNSYLVANIA ANGLING.

Editor Forest and Stream:
In "Angling Notes" in your paper much information is given in short form. All anglers should help to enlarge this column. About Aug. I. 1889, the Pennsylvania Fisl Commission, through Mr. W. L. Powell, sent 4,000 California or rainbow trout from the Allentown hatchery to me at Harrisburg, which I placed in the Big Spring, a Newville. On the opening day, April 15, my son tool one on a fly which measured 6in. Two weeks ago caught one 7½in. long. Yesterday I took two 7½in. an one 5in. long. When they were placed there last Augus there were none over 1½in. in length, so they have grown at least 6in. in ten months. The four I caught were al taken where the water was 30in. deep and running swift I caught fifty-nine trout yesterday, but no rainbows, it the quiet, still, running parts of the stream, I also took few brook trout in the same stretch of water that the rainbows frequented: they gave considerable sport, juning out of the water three or four times, and then sulking a little before landing. I took a brook trout yester day about 9in. long that had a sear across the back of it neck and about ½in. of its gill cover gone, exposing this gills. It was evidently struck by some sharp instrumer

in an attempt to jig it at night. Big Spring is frequented at night by plenty of poachers or pot-fishermen; they use all kinds of tactics to take the trout, and it is a wonder that there are any trout left in the stream. Kingfishers, suckers, eels, ducks, geese, muskrats and farmers' boys prey on the spawn and trout, until a person would think that there would be none left; but last evening they were rising by hundreds all along the stream. I took eight after dark with a white-miller, all 10 and 12 in. long, catching the last one at 8:20, and then the flies and mosquitoes were so bad that I had to quit. Last Friday morning between 6 and 7 o'clock I took fourteen bass with a fly on the Susquehanna River, fishing from the shore on the Cumberland county side, with a red and yellow fly.

Harrisage Pat June 10.

HARRISBURG, Pa., June 10.

Fishing is poor in the Susquehanna River at this locality on account of the high and muddy water. At York Haven, Pa., a party of lawyers and leading business men of York have established a fishing club house. A number of black bass and wall-eyed pike have been caught at the falls, but fishing is bad for the reason stated. Prospects are good when favorable weather and water exist. A wall-eyed pike weighing 7lbs. was caught at Collins's, Pa., last week. A fish of this kind was recently taken at Washington Borough, Pa., under very peculiar circumstances. A boy set an outline in the Susquehanna probably to catch eels and catfish, and in going over it he found this large fish tugging to get away. The pike was not fast to the hook, but the hook and line had passed through its gill out at the gill opening, and on the hook was a good-sized eel. It is reasonable to suppose that the eel took the hook first, and later the pike tried to accommodate both, but the eel probably had too much foresight in its tail to venture into his pikeship's abdominal region, and preferred to wriggle through the forest of gill-rakers and thus regain his native element. The pike made the absurdly common mistake of opening his mouth too wide and once too often.

Stehman. BAINBRIDGE, Pa., June 16.

In our issue of May 22 we published Mr. Moore's note on the capture of croppies at Havre de Grace, and on June 5 we mentioned the spawning of the calico bass in the Susquehanna and Tide Water Canal. The two names refer to the same fish and are identical also with the grass bass of the Pennsylvania Fish Commission reports. Two very fine specimens of this handsome game fish were forwarded to the U. S. Commissioner of Fisheries, Juue 17, by Mr. R. E. McClenahan, from the Susquehanna River, at Port Deposit, Md. One of them is 10in. and the other 12in. long, and both are in fine condition. The fishermen supposed the fish to be a cross between the black bass and the white perch. The grass bass, we believe, was introduced into the Susquehanna from Lake Erie, for it is mentioned in the fish laws as the Lake Erie or grass bass. We repeat the fact previously stated that this species is one of the finest pond fishes in our waters. With its white perch, striped bass, wall-eyed pike and rock bass, reinforced by the black bass and the grass bass, the Susquehanna commends itself to the angler as a highly profitable field for his recreation. The praiseworthy efforts of the Pennsylvania Fish Commissioners, to increase the supply of wall-eyed pike and other valuable game fishes, are bringing the river into well-merited prominence, in spite of the strange whim of calling them Susquehanna salmon.

ADIRONDACK WATERS.

ADIRONDACK WATERS.

NEW YORK, June 23.—I left here on the 13th, and after a ride of eleven hours reached North Creek, where I found one of the new six horse stages in waiting. After a ride of 18 miles I met my guide, Harvey Bonney, who from his experience of over thirty years in the Chain Lake region, was, of course, a safe, and I can add with pleasure, a cheerful and amusing guide. Bonney and his log house are known and pleasantly remembered by probably more persons than any of the "old guides" in the Adirondacks. After a trump of 9 miles, over a rather rough trail, we reached his cabin, which is on Chain Lakes. It is dry, cheerfully furnished and very comfortable, with a bed of balsam boughs that would put to shame the odors of new-mown hay. After a supper of good mountain fare and a good night's rest, we stepped into our boat and were on the lake to try our luck for the speckled trout, which find their home in the cold waters of Chain Lakes. Our first day's catch numbered 25 and weighed 16lbs. The following two days it rained, and the two remaining days I succeeded in getting respectively 18 trout that weighed 8lbs. and 13 that weighed 9lbs.

Deer seemed to be very plentiful. On Saturday we saw one come out of the woods and bathe himself in the

tively 18 trout that weighed 8lbs, and 13 that weighed 9lbs.

Deer seemed to be very plentiful. On Saturday we saw one come out of the woods and bathe himself in the cool waters of Deer Pond, and on Monday we came across two in the afternoon feeding on the suckling grass of Grassy Pond. The open winter and the grass being a month earlier than usual has helped to preserve the deer, and they were all in their red coat, which indicates their being in a good healthy condition and unusually fat for this season of the year. If the present game laws are continued in force for a few years there is no doubt that deer and trout in the Adirondack region will be very plentiful.

A great deal of credit is due to the Adirondack Railroad Co. and their associates, the National Express Co., for refusing to carry deer or trout to market, which is a great source of protection to the game of the North Woods. I have traveled the Adirondack region pretty generally and have not seen any point of the woods that looks so well as Chain Lakes. There is no sign of fires here, which is getting to be unusual in this region, now that so much lumbering is done; and nothing destroys the appearances of these woods so much as a lumbering camp and the fires which they are the origin of.

W. S.

GREAT CATCH OF STRIPED BASS.—Where are the striped bass? Early in June a great body of them were in Pamlico Sound, N. C., and 10,000 of them were taken by the fishermen in a single day. Of course the men had more of these fine fish than they could handle, and the probability is that many of them were wasted. The time is not far distant when injurious methods of fishing will be prohibited if the extermination of the fishes is considered worth striving against.

FLORIDA FLY-FISHING.

FLORIDA FLY-FISHING.

LIZABETH, N. J., June 18.—Editor Forest and Stream: As a fisherman has a reputation for accuracy to maintain (or establish), will you permit me to correct a recent item in the Forest and Stream relating to myself? The paragraph gave me too much credit, and at the expense of my companions. There was but one tarpon killed with the fly-rod during the trip, and this was accomplished by J. Herbert Johnson, of New York. Tarpon rose freely to the fly, but owing to the hardness of their mouths a strike was rarely successful; and with a light fly-rod it was frequently impossible to keep the tarpon away from the roots of the mangroves, entanglement in which of course was immediately destructive to the leader.

pon away from the roots of the course was immediately destructive to the leader.

The "35lb, channel bass" was doubtless an allusion to one of 24lbs, 50z., killed previously on a fly-rod by one of my companions, Dr. George Trowbridge. On the trip referred to, although innumerable large bass were caught, there were none of weight approximating this. The "nine varieties of game fish killed on one occasion" were the joint result of the labors of Messrs, Johnson, Trowbridge and the writer. The fish were so large and gamy that a man of ordinary strength could scarcely have endured the physical strain incident to killing the number involved in the performance alluded to.

It seems impossible to exaggerate the fishing possibilities of the west coast of Florida. With a fly-rod the number of fish which may be caught is purely a question of physical endurance. The frequent uncertainty for ten minutes after striking, as to what manner of fish is attached to the line, is pleasurably exciting. Indeed, one frequently starts in with one fish and lands another, the fish originally struck having been swallowed by a larger one.

When one tires of the rod there remain the better

fish originally struck having been swallowed by a largeone.

When one tires of the rod there remain the better
weapon and the manlier sport of the harpoon and harpooning. This sport involves more exercise, demands
more skill, is more truly sportsmanlike, and is vastly
more exciting than the capture of any manner of fish
with any form of hook or rod which the wit of man has
yet devised. But I must not make you the victim of my
hobby. Would you like the cold statistics of the victims
of rifle, harpoon, net and rods in our recent trip? Devil
fish, 2; deer, 4; turtle, 5; alligators, 3; sawfish, 6; whip
rays, 14; jewfish, 7; sharks, 22; tarpon, 21; kingfish, black
grouper, cavalli, ravaille, bluefish, Spanish mackerel,
channel bass, sea trout, skipjack, bonita and nineteen
other varieties in great numbers.

A. W. Dimock.

ANGLING NOTES.

A FINE pair of salmon were seen last week disporting themselves in a pool below the falls near the mouth of Rondout Creek, which flows into the Hudson River. They remained there two days, chasing one another around the pool and even to the very edge of the bank. They were undoubtedly male and female and in search of a spawning bed.

The Hon. Geo. A. Brandreth reports that the bluefish are quite plenty at the inlet at Rockaway Beach. A number have been caught from 8 to 12lbs. in weight, and one was taken that turned the scales at 16lbs. Sea bass are also reported as being very plenty, but weakfish are scarce.

At Manasquan Inlet, on the New Jersey coast near Point Pleasant, large numbers of bluefish have made their appearance and the anglers there are having great sport. A large shad was picked up on the beach, having been chased ashore by the bluefish. Quite a number of striped bass are also being caught by casting from the shore. The most attractive bait seems to be the white sandworm.

The most attractive bait seems to be the white sandworm.

As soon as the weather becomes hot the surfaces of the majority of our lakes get too warm to suit the trout and they retire to the deep cool pools and spring holes. When this occurs it is very difficult to find good fly-fishing. This generally is the trouble in going too late to the Adirondacks or Maine. If the weather happens to keep cool good fly-fishing may be had up to the middle of July, but after that time and until the cool nights of september reduce the temperature of the surface of the lakes, it is almost impossible to coax up decent-sized fish to the fly. There is one notable exception to this rule, and that is in the region of the famous Seven Ponds in Maine. These lakes are so cold that one can enjoy good fly-fishing all through the summer. Prof. Mayer of Stevens Institute spent a couple of months there, and indorses this statement. The fish are not very large, but of good fair size, and afford excellent sport. There is a good camp on Beaver Pond belonging to Ewd. Grant. He will furnish those who wish to visit this region with the necessary information; his post office address is Rangeley, Maine; or Mr. Wakeman Holberton of 18 Vesey street will gladly give further particulars.

Reports from the Restigouche place the number of salmon killed per day at about 200, an average of about two to each rod, as it is estimated that there are not less than 100 anglers on the river at present.

There are many stories told that prove that the killing of fingerlings is yet far too common. Sometimes it is the countryman with a big tin pail full of little fellows, resembling soft soap, snaked out of the side streams and sold at the hotels and boarding houses; and sometimes it is the city angler who imagines he is doing a big thing to fetch in a basket of trout that would run 32 to the pound. What a pity it is that people will be so short-sighted. Just to think what fun each of those little fingerlings would furnish if allowed to grow up and become a 10 or 12in trout! We shall have to adopt the foreign style and have a man go out with every fisherman, who will carry a rule and measure each fish before it is put in the creel.

And now it is becoming the fashion to troll for speck-led trout with the deadly phantom minnow or cruel gang bristling with treble hooks. We ought to copy the laws of Maine and forbid the use of more than one hook. And even better yet would it be to do away with all bait-fishing and stick to the artificial fly, so that the trout would grow up and increase, and there would be plenty for all,

BLUEFISH.—A few bluefish have been taken in the Great South Bay, Long Island,

MICHIGAN TROUT STREAMS.—Our esteemed correspondent, Mr. Alex. Starbuck, is now on the north shore of Lake Superior among the lurge brook trout of that icy basin unless the allurements of Deer Creek have held him a willing captive for a longer time than he intended when writing us from Grand Rapids, June 17. We quote from his letter for the information and pleasure of anglers who are hoping to enjoy an outing in the State wow fannous for trout of several kinds, and particularly the fontinalis: "Trout are reported here and elsewhere as being quite numerous and taking both the fly and bait with avidity. A friend writes me from Boque Falls that two anglers caught in Deer Creek in one day 225 trout running from 6 to 10in. Another one drops me a line that he took out of two holes in a creek within eight miles of Petoskey 75 lovely trout from 6in. up. A merchant of Grand Rapids informed me last evening that in the early part of May he took 55 fair-sized trout out of Pine River, in the northern part of the State, in six hours' fishing, and that when the stream was high and roily. Two of the attachees of Spalding & Co. of this city, caught in one day in May in Bear Creek and the Hersey 22 and 85 respectively, among which were some running over 21bs. In fact, from all inquiries I learn that trout are more numerous this year in Michigan than ever before, and that big catches are the rule."

Stocking Maine Waters.—David Kneeland and John Meade recently made a trip to the Edes Falls hatching house and got some 25,000 landlocked salmon fry, which they turned into tributaries of Anonymous Pond, Harrison and Long Lake, at North Bridgton. Messrs. Frank Bennett and J. F. Libby also procured several thousand fry for Lakin Brook, in Sebago. We learn that there were hatched at Edes Falls this season about 600,000 landlocked, 250,000 sea salmon and about 7,000 brook trout. All excepting the sea salmon eggs were taken from fish caught in the Crooked River weir, and nearly all will be turned into local waters. The increased numof small landlocked salmon taken in Sebago Lake this spring demonstrates that artificial propagation is the right method. Five years ago it was rare to see a smaller fish than 3lbs. taken there. The Sebago Lake fishing has compared well this season with former years, notwithstanding high water and bad weather. The mouth of Stickey River, near the lake station (Sebago Lake) has come into some prominence as a fishing ground, and we predict that there are others to be discovered yet.

PROTECTING CONNECTICUT TROUT.—In the latter part of May president A. C. Collins, of the Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish, learned that three parties had netted West Brook (a famous trout brook) in Windsor. Mr. Collins and Detective W. C. Fielding put their heads together and took up the trail. As a result of their work Lewis Hoskins and Charles McKinney, of Tariffville, were brought before Justice Sidney E. Clarke, of this city, at Windsor to-day. Hoskins and McKinney both entered a plea of guilty on one count, and were fined \$5 and costs, the latter amounting to \$14.69. A Hartford man who was mixed up in the affair with Hoskins and McKinney will be arrested. Law-loving fishermen are invited to assist the Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish, by their financial aid, as this association receives no support whatever from the State. Fifty arrests and forty-eight convictions is the record of the association since September, 1888.

Some Sea Fishing.—On the south side of Martha's Vineyard enormous schools of very large mackerel have made their appearance. Among them are seen individuals measuring 18in, in length. A boat captured 600 in a short time. There is a great deal of sport in hooking mackerel when they rise freely to the bait. Their movements are swift, their form symmetrical and their colors showy. The angler can see hundreds of them darting all around his boat and may become too much excited to bait his hook, as we have learned by experience in the days when mackerel swarmed around our shores. On the shore fishing grounds off Cape Ann an 81bs, salmon was recently taken on a trawl. There is a very gratifying increase in the number of Atlantic salmon, judging free at the reports of the present season.

IRONTON, O.—Our corresspondent, J. D., who spent his three-days' vacation at Bennet's Mill, in the early part of May, reports 4 black bass and a white perch as a remard of a Monday's fishing. He adds: "I read with, much sorrow your account of the death of 'Nessmuk,' he is a man I should liked so much to have known personally. If there were thousands more his him how much better the world would be and how much less same. A love of the woods and of woods life makes a man better for every occupation."

A Park of Trout.—Rangeley, Me., June 16.—Messis. H. C. Kennedy, of New York, and E. W. Blodgett, S. M. Blodgett and W. B. Tanner, of Pawtucket, R. I., while fishing on the Bemis Bar this afternoon, took one trout weighing 7lbs, and one weighing 5. While the 7-pound trout was being landed another large one followed it to the surface several times. Soen afterward the 5-pounder was taken near the same place. The trout proved to be a signal female.—F. C. Barker.

A PITY HE DID NOT HOOK THEM.—Traverse City, Mich., June 19.—Bert Winnie, a sixteen-year-old boy, was spearing from one of the docks in Grand Traverse Bay at this place, when he captured and landed two muscalonge, one 4ft. 9½in. long, weight 57lbs.; the smaller one weighing 24lbs. This was a big haul for a boy.—W. M. C.

NORTHWOOD, N. Y., June 20.—The streams are too high to fish much. Will Lovel caught the largest mess (7lbs. before dressing). Arthur Miller caught the largest trout; it weighed 2 lbs. Partridge are plenty.—Wood-CHUCK.

NEW YORK CITY BASS.—Mr. Franklin caught 7 striped bass, on the first of the flood, at the foot of 126th street, on Monday last. One weighed 3 lbs. The bait was white

POND CULTURE.

SILVER PERCH AND ROCK BASS.

SILVER PERCH AND ROCK BASS.

I SEND you a few lines giving my experience in "perch" culture, with the hope that it may induce others to engage in the rearing of that beantiful, valuable and desirable family of fish, I mean valuable for small ponds and family use, their growth is too slow and weight too light to make them valuable for market. Five years ago, as an experiment, I placed in a pond, of about two acres in area, several undred "silver perch" (Pomoxys annularis); they were then a few inches wide and nearly as thin as silver dollars. In order to supply them with an abundance of food, I constructed a smaller pond, just above that in which the perch were placed, and stocked it well with "mill pond roaches." through the bottom of the dam of the rock pond I put a trunk made of plank Sin, wide, in order to entirely empty it at pleasure into the perch pond. I open this trunk every spring and through it the increase of twelve months passes, amounting to many thousads of minnows, from % to 1% in length; these are all devoured by the next spring, adding much to the growth of the perch.

I am surprised that more attention is not paid to the culture of this truly excellent fish. As a pan fish it is vastly superior to any other in this part of Virginia, being inferior in edible qualities only to the mountain trout. Its growth is not so rapid as could be desired, but it increases in numbers astonishingly and is admirably adapted to small ponds. As a biter it is capricious, sometimes taking the hook about as fast as it can be baited, and at other times refusing any bait that may be offered it. The best bait is a "borer," to be found under the bark on dead pine trees, though a small minnow from one to two inches in length will answer. The largest of my "silver perch" now weighs 1% lbs. and measures 15% in. by 7in. I have also experimented with the "red age" ("Amblophites rupestris) and do not like its owell in some respects. Its growth is very slow, but it is a better fighter, and is much more gamy than the silver per

over Sin. long. P.
LOUISA COUNTY, Va., June 15.
[The red eye perch of Virginia is the well known rock bass of Pennsylvania. In the Stony Creek region of southeastern Virginia, and particularly on the estate of Dr. Overton, we are informed that the red eye often exceeds 3lbs. in weight. Here the black bass and other fishes of its family also thrive and multiply wonderfully.]

MAINE PLANTINGS.

MAINE PLANTINGS.

DANGOR, Me., June 23.—The Maine Commissioners of Game and Fisheries have just closed the disposal of their young sea and landlocked salmon fry, into the different rivers and lakes of the State. The distribution has embraced the whole State, from Aroostook to Lincoln county and Rangeley. They have turned into our rivers and lakes the product of something over 1,200,000 ova. Of our sea salmon, 200,000 were sent to the hatchery at Grand Lake Stream, to be turned into St. Croix waters, under the superintendence of that true brother of the angle, Mr. Frank Todd, of St. Stephen. The remainder were turned in at head waters of Kennebec and Presumpscot rivers. The Luited States Commissioners deemed it not advisable to turn in any more fish into the Penobscot above the poisonous pulp mills, as there is no law in our State prohibiting factories from emptying all their chemical refuse and other waste matter into our rivers and streams. Some hundreds of yearling salmon were contributed by the U. S. Commission to tributary streams of the Penobscot, below the tidal am at the water works, at Bangor, and more are promised us in the near future. The landlocked salmon fry have been divided by us between some thirty odd lakes all over the State. Four lakes have been stocked in Mt. Desert, through the kind assistance of Messrs. Kimbal, of the Kimbal House, and Messrs. Rodick, of the Rodick House. Presque Isle has formed a famous club and received a generous supply. Oxford county visited the hatchery at Sebago and carried off a supply for their different favorite resorts. Rangeley had a hatchery at Rangeley Village, whence in the future both a large supply of her famous trout as well as landlocked salmon will be produced for her famous lakes. A small supply of a few thousand salmon were hatched and turned in from there this year.

NEWFOUNDLAND FISHCULTURE.

NEWFOUNDLAND FISHCULTURE.

THE policy of the Fisheries Commission recently established in Newfoundland is to build at once hatcheries for cod, salmon and lobsters, and to carry on at the same time the study and investigation of the fish and fisheries, and adopt the necessary measures for the regulation and protection of the latter. A cod hatchery with a capacity of 200,000,000 eggs was completed July 18, 1889. The apparatus includes 48 Chester boxes and 4 of the McDonald tidal boxes. The chief difficulty so far experienced has been the securing of ripe eggs. The hatchery was finished after the close of the spawning season. In Trinity and Placentia bays cod are said to spawn in May and June. Occasionally an odd male or female in the gravid condition is seen later in Placentia Bay, but the two sexes are never found at the same time. The successful work accomplished by the United States and Norway has stimulated the Newfoundland Commission to earnest effort, and the rapid decline of the fishery has added a more powerful incentive to prompt action. The selices destroy millions of young cod every year, and the present scarcity of marketable fish is attributed principally to this destructive method of fishing.

STURGEON CULTURE.—The U. S. Fish Commission is experimenting in the artificial propagation of the lake sturgeon. The work is under the charge of Mr. Frank N. Clark and was begun at Fox Island on the Detroit river. Owing to the limited number of ripe males and females obtained at Fox Island, the operations were transferred to Algonac on the St. Clair river, where the spawning season usually begins about June 20, and the fish are caught on hooks, sometimes as many as 40 being taken in a day. The eggs of the sturgeon are free and easily handled in the jars adopted by the Commission. The period of incubation has been about ten days, and the young are said to resemble tadpoles more-than anything else.

ARTIFICIAL HATCHING OF LAMPREYS.—Mr. Alexander Jones, a member of the U. S. Fish Commission, has succeeded in artificially hatching 25,000 eggs of the sea lamprey (Petronyzon mawinus) on car No. 3, at Windsor Locks, Conn. The eggs are free and were hatched in McDonald jars

after an incubation period of ten days. We believe this is the first successful attempt to hatch the eggs of this species artificially. Under natural conditions, the eggs of the lamprey are deposited under heaps of stones, which the eels pile together for the protection of the ova and the young fry. The development of the lamprey, for the study of which an opportunity will doubtless soon be offered, must prove an interesting subject for the embryologist. The sea lamprey is known to deposit its eggs in the fresh waters, and the habit of protecting them by means of piles of rock is well known. The young pass a considerable portion of their early life in the soft mud and are usually toothless, and have rudimentary eyes. To the river fishermen they are familiar as one of the most attractive baits for out-line fishing. Little is known about the length of time occupied in the development of this toothless and blind animal into the formidable parasite of the shad and other anadromous fish. Mr. Wm. Bahme of Pennsylvania, has kept one of the species which live permanently in fresh water, and says that they do not become fully developed until the fourth year of their existence. Lampreys are used more extensively for food than one would at first suppose. There is a steady call for them and the supply is seldom equal to the demand.

DISTRIBUTION OF BLACK BASS.—The Pennsylvania Fish Commission recently sent Superintendent William Buller, of the Western Hatchery at Corry, to Sandusky, Ohio, to collect black bass for distribution in suitable waters of the State. Mr. Buller obtained at North Bass Island a good supply of bass averaging about ½lb, each in weight. He was greatly assisted by Mr. George E. Littlcton, of Sandusky, who takes great interest in collecting small bass for introduction into other waters.

WALL-EYED PIKE AT ERIE, PA.—The hatching of wall-eyed pike at the Erie station of the Pensylvania Fish Commission during the past season was very successful. Owing to the limited supply of tank room everything in the shape of a receptacle was swarming with the fry and thousands of the young fish had to be deposited in Lake Erie for want of room in the station.

"SUMMER TOURS, 1890,"

Is the title of the new illustrated summer tourist book of the Michigan Central, "The Niagara Falls Route." It is a practical guide and profusely illustrated. Sent to any address on receipt of 6 cents postage by O. W. Ruggles, G. P. & T. Agt., Chicago, Ill.

[Concluded.]

COLLIES.

THE awards that have been made in these classes would cause a Shirley or a Thompson to go off in a fit of laughter and die from the effects. Collies, like other breeds, have had their Rubicons, Meersbrook Maidens and Robin Adairs, and quite a number of collie judges have added to their stock of popularity and became famous through the usual channel—incompetence. I think it is almost generally conceded that the most incompetent persons become the most "popular" judges in America. The more outrageously unjust and stupid the awards, and the more liable is the person who made them to be written up as the "ever popular Mr. Greenhorn." I say in America, because such a thing cannot be in England. There a majority of the exhibitors are competent judges, men who know whether a decision is right or wrong. This insures the days of unreliable judges being short. They make two or three bad blunders and the fancy discards them in quick time. Here, the exhibitors, with the exception, perhaps, of a handful, know little, if any, more than the judges; and as a large majority of exhibitors exhibit worthless specimens and do not know they are worthless, it follows that the judge who succeeds in making the most stupenduous blunders becomes the most popular. He pleases the largest number—the grand army of incompetents. If there is one good dog in the class the judge is far less likely to gain popularity by giving that dog bears no resemblance to the bad ones, and the exhibitors argue that if the good dog is right all their dogs must be wrong.

ors argue that if the good dog is right all their dogs must be wrong.

The contemplation of such a state of affairs is anything but honey to these men, and they are only too glad to agree that the good dog is of wrong type. Let the judge spot a real bad one for the prize and then tell the disappointed exhibitors that their exhibits pressed the winner close, being of a similar type, and you will have peace in that show. Why, I have known the exhibitors to take such an award as a compliment. "He's a great deal like my dog is that first prize winner, same type. Didn't take the judge long to see they are two of a kind. Good judge, I guess, but I like my dog for first. "Ill show him again." He does show again, and the good dog that was unnoticed by the incompetent judge on this occasion turns up in the same class. The judge understands his business. He gives first to the dog that was unnoticed, and withholds all other prizes and cards for want of merit. Then there is music in the air,

The man who understood his business and did his duty is denounced, the incompetent judge becomes "popular," especially if the owners of the defeated mongrels are prominent members of a specialty club. These men join hands and bring influence to bear on the unsuspecting managers of bench shows. The result is this: The judges' ring becomes open to anything and everything that is ignorant on. The memorable popularity enjoyed by incompetent judges will continue until the exhibitors and reporters become initiated. To make exhibitors, who have been born minus a natural gift of detecting true form, learn anything about dogs is a most difficult task. They lack what Mr. Wade terms a "dog eye," and it is almost impossible to make them see straight. These men are responsible for what are known in the collie class, and we all know about him giving the queen of mastiff bitches, Lady Clare, highly commended in a very weak class. For this he is frequently styled the "uponiar Harry Goodman." Mr. Mortimer coil not see Guido, a collie, when Robin, dair was in the class, notwithing, and the class, notwith a special of the commendation of the control of the control of the commendation of the control of the

THE ENGLISH SETTER CLUB.

THE ENGLISH SETTER CLUB.

IN response to the call for the purpose of forming an English Setter Club, published in Forest and Stream last week, there was a meeting held on Tuesday, at the rooms of the American Kennel Club. Major J. M. Taylor called the meeting to order, and Mr. J. Treadwell Richards was elected chairman and Mr. Percy C. Ohl secretary. The following named gentlemen were present: Messrs. J. T. Richards, T. H. Terry, George Jarvis, W. Tallman, John E. Long, Percy C. Ohl, Wilson Fiske, A. P. Vredenburgh, Major J. M. Taylor, Capt. Patrick Henry and Dr. H. C. Glover. Nearly all of the signers of the call who were not present sent proxies.

After the adoption of a constitution the club was organized under the name of The English Setter Club, and the following list of officers was elected: President, Mr. Pierre Lorillard, Jr.; First Vice-President, Mr. J. Treadwell Richards; Second Vice-President, election postponed; Secretary, Mr. Percy C. Ohl; Treasurer, Dr. H. C. Glover; Executive Committee, the above-named officers and Messrs. T. H. Terry, Wilson Fiske, John E. Long, J. M. Taylor, P. H. Bryson, J. Shelly Hudson, J. E. Dager and J. A. Graham. Committee on Standard, Messrs. Lorillard, Bryson, Taylor, Tallman and Fiske. A committee consisting of Messrs. Taylor, Vredenburgh and Ohl was appointed to confer with the English Setter Club of America, with a view to the consolidation of the two clubs.

The executive committee was requested to prepare a set of by-laws and to report at the next meeting.

The initiation fee was fixed at \$5 and the same amount for yearly dues. There was considerable friendly discussion of details, and the various measures as finally adopted received unanimous votes.

MR. A. R. CROWELL salled for England last Saturday.

MR, A. R. CROWELL sailed for England last Saturday. We understand that he will return early in August and bring with him a few dogs, if he can find anything to suit him.

DOGS OF THE DAY.

A MONTH ago a gentleman permanently connected with the A. K. C. suggested that I might be of some assistance in endeavoring to revise the constitution so as to get it ready for a new issue of printed copies, which would have it complete up to date. The constitution of a club is not a thing that can be juggled with. It is not a weathercock which chops and changes with every little flaw of the wind, but something that should be like a lighthouse, substantially built, with its beacon ever flashing a warning against foolhardy or ignorant navigators who rush recklessly onward, and if they cannot afford time to steer around the obstacles, go at them nose on, like Missouri River boats at a sand bar. They trust in the numerical strength of the crew to pole them over, little reckoning the damage done by the course pursued.

Most organizations have constitutions so framed that there is deep water all around and it is fair weather sailing, even in stormy times. Some few are different, and worst of all, that I know, is the A. K. C., which is worse than Hell Gate ever was to steer through on a racing tide. When, added to this, we have a disregard of even the plain directions to the sailing masters of this craft, is it any wonder that it is continued struggle to keep it watertight and on an even keel? At the last meeting the president in some of his remarks drew attention to an article, one of this series, and stated that he did not think it proper that I should criticise the club and what was being done. My reply was that the A. K. C. had no warmer supporter than myself so long as its rules were abided by, but that under no circumstances would I retreat one step from my right to criticise any action, whether by pen or voice. It is not fair criticism such as I hold mine to be, that will hurt the A. K. C.—that never hurt any person or any club. Illegal actions, persisted in when their illegality has been plainly demonstrated is what is to be feared, and not fair criticism. But I am steering wide of my destination in regard to the new constitution. As I said, this is not a thing to hurry over, and I have fron time to tune done a good deal of thinking, the result of the suggestion made to me. The conclusion I have arrived at is this:

We have arrived at a stage at which a very radical change is essential as to the executive committee. As at present constituted it is a misnomer and its manner of construction makes it unwieldy and unrepresentative. When the A.K.C. began with a dozen clubs it was all well enough to have every delegate on the committee, but we have now close upon fifty clubs each, one of which has a right to be represented at executive as well as club meetings. One fault conspicuous in this method is that the men who execute or carry out the rules, being also those who form them, they are responsible to no one but themselves, and are therefore indifferent as to the line of demarkation between the widely distinct duties of legislators and executors. If as executors they go wrong, immediately as legislators they can decide that they did right, and this is just what has been done by the A.K.C. Then, again, while it is permissible in a club to be represented or not as it sees fit at a club meeting, it is essential that committeemen should attend to their duties.

be represented or not as it sees fit at a club meeting, it is essential that committeemen should attend to their duties.

These seem to me to be the obstacles to a continuance of the executive committee as at present provided for, and looking around for something as a substitute therefor I find two similar organizations, each of which has a model of executive work and which might be copied with advantage. These are the National Trotting Association and the National Amateur Rowing Association. The former calls its executive committee the board of review, and it is made np as follows: The country is divided into districts, and all districts have an equal number of representatives in the board. At each board meeting one member from each district is entitled to a seat, and the manner of their selection or appointment is for the president to ask each district member in rotation if he can be present. If the answer is negative, then the next one is asked until an affirmative answer is received. The Rowing Association executive committee consists of nine members, three being elected at each annual meeting to serve for three years. The objection to the Troting Association system is that with continued cases there is an absence of knowledge of what has been done before except by official statement, which is only good in the absence of personal knowledge and is necessarily inferior thereto. The Rowing Association system, while admirable for that body, has its disadvantages for the A.K.C., and I am inclined to the idea that a combination of the two would work to the greatest advantage. This, then, is my suggestion, which I would like to have criticised:

work to the greatest advantage. This, then, is my suggestion, which I would like to have criticised:

The executive committee to consist of either twelve or fifteen members, of which of the first committee one-third shall act for three meetings, one-third for two and one-third or one, and every one-third subsequently appointed shall act for three meetings. The method of appointment to be by rotation of clubs in alphabetical order. Should a club decline to be represented, then the offer to be made to the next in order. The associates to always have the right to be represented by one of their delegates, in whichever order they desire. Further, I would suggest the holding of committee meeting more frequently than every three months during the show season; that the present advisory committee be superseded by one consisting of the three senior members of the executive committee; that their duties and powers, as well as those of the executive committee, be purely executive, and as such tlearly defined. Further, to insure the attendance of members, I would have a \$10 fine for every absentee. This to be absolute, and be charged to the club the absentee represents and not the individual. Due notice of inability to attend to alone be a waiver of the fine. In conclusion I would say that this is written without any discussion with any one and are purely my personal views.

conclusion I would say that this is written without any discussion with any one and are purely my personal views.

I think we may all congratulate ourselves on the great improvement for the better in the discussion of kennel subjects. On my part I have avoided personalities, and the same is to be said of Mr. Mayhew and Peregrine, the new man at Boston. There is always room for difference of opinion, and good is bound to result when the tone in which these differences are expressed is unobjectionable. Mr. Mayhew has gone into the Peshall credential case again, but I cannot see but that he has weakened his position. His argument is too brittle to stand any handling, if he will excuse the pun. There is no conflict at all between the appointment of M. Malcolm as delegate for the year and that of Mr. Peshall for the meeting of May 22. The credentials of the latter contained the explanation of Mr. Peshall's appointment for that particular occasion, and limited it thereto. The very verbiage which Mr. Wise held to vitiate Mr. Peshall's credentials was what really gave it effect. Without the Maryland Kennel Club would have had two delegates, but with the explanation came the fact of Mr. Malcolm retiring from office for that particular occasion. It is not the province of the A. K. C. nor any person to criticise the method of Mr. Peshall's appointment, outside of the Maryland Kennel Club, and that club has by its action shown that it fully upholds the validity of the appointment. The proxy held by Mr. Malcolm, which he presented at the A. K. C. meeting in February, was not, as Mr. Mayhew says, "parallel to the case in question." If he will look at it he A. K. C. constitution. One was entirely wrong, yet it was

accepted as correct by Mr. Vredenburgh, and, as I am informed, with full knowledge that it was not good. There is really no necessity to discuss this phase of the case, for Mr. Anthony, as soon as I had replied to Mr. Wise, withdrew his motion. Mr. Anthony is too clear-headed a man not to detect the flaw in the indictment, although I do not doubt that he could have the same vote for his motion had he maintained it as was obtained for his personal motion against Mr. Peshall. While I disagreed with those who voted for the latter, I recognize that it was a call for personal opinions and not subject to criticism, as was the other motion.

In the Collie Club stakes announcement which appeared in FOREST AND STREAM of June 12, there is a slight omission. The date should read, for collies born on or after July 1, 1889. There was also a reference to the probability of the A. K. C. adding \$50 to the sweepstakes. It should have been W. K. C. I think I need only to draw the attention of Mr. Shotwell, the Collie Club secretary, to the fact that the last sweepstakes closed on May 31, and the present might as well be dated back to June 1. Some good dogs might be barred out by omitting the month of June. I do not exactly understand about the Produce and Futurity stakes. Will Mr. Shotwell please give an explanation. What I paid in from June to November, 1889, was refunded.

I understand that that gentleman proposes to again take an active part as an exhibitor. I am advised that he has bought a sister to Purity, in whelp to Christopher, and a youngster by The Squire out of Roslyn Gavlass. Besides these I hear of a Maney Trefoil—Ethel II. bitch puppy at the Orange Kennels, on which the C. C. secretary builds high hopes.

After the close of the Cincinnati Dog Show, Dr. Cryer called upon me with reference to the award of the pug kennel special, which he had been advised was won by the Eberhart Pug Kennels. He had made out a protest, but on looking at the catalogue and noting the dogs which won in competition for the prize, I said, "There is some mistake. Mr. Mortimer could never have made any such decision. I would telegraph him and get his answer before doing anything more." Acting upon this suggestion, Dr. Cryer received trom Mr. Mortimer the following reply: "Dear Sir—I found upon looking over my marked catalogue that the special prize of \$10, offered by the Cincinnati Kennel Club, for the best kennel of pugs, was not awarded. This was due to the fact that this special was not enumerated in the pudge's book. The only pug specials that I awarded were specials No. 27, in catalogue, and No. 32. (Both these were for Cincinnati owned dogs.) I have wired Mr. George Hill, the superintendent, drawing his attention to the unfortunate omission, and will write him by this mail. Of course your kennel wins the open special. Your very truly, JAMES MORTIMER." Prominence ought to be given to this, because in a Chicago paper, containing a report of the show, there appeared a labored attempt at justifying the award to the Rherhart Kennels, which that paper announced had been made.

There was a decision made at Cincinnati which is likely to be brought before the A. K. C., and it is this. Mrs. Frank Smyth, of Germantown, sent her cocker spaniel Toarly Obo, and when the class was called he was awarded first prize. On the following morning (Wednesday) Brantford Red Jacket and Duke Obo turned up. The class was ordered to be rejudged, with the result that Toady Obo was put back to vhe. The show rules contain the following:

I. No dogs will be received before Monday, June 2, or after 8 A. M. Taesday, June 3.

X. The judging will commence promptly Tuesday morning, June 3, at 10 °clock. * * If any dog is not found in its stall when called for by the judge, the judging will proceed without it. This rule will be rigidly enforced.

The italicised word appears so in the catalogue.

As a protest has been made to the A. K. C. I am precluded from doing anything beyond stating the facts as given to me.

In the last issue of Forest and Stream Mr. Shotwell replies as to Prince Charlie and the novice. His reasons for disagreeing with me are doubtless perfectly good—to him, but they are not so to me. One thing he says I do most strenuously object to, and that is his concluding that I bull-dozed Mr. Fletcher and the Boston committee. Such a statement is neither correct nor courteous. I was not present when the dogs were judged, and never had one word of conversation regarding the dog being in the novice class with Mr. Fletcher or anybody else. I had one or two long talks with Mr. Fletcher, and he never even broached the subject. I don't think Mr. Shotwell knows Mr. Fletcher, for he is hardly the man to tackle on a brow-beating mission, especially on a first acquaintance as ours was. As to it being an oversight on Mr. Shotwell's part that he judged the dog at New York, permit me to say that I would have followed the same course as I did in the Glenlivat case, and the dog would have been judged just as Glenlivat was.

As for my sticking to the "boodle," as Mr. Shotwell calls the \$3 the dog won, I will make this proposition to Mr. Shotwell. I will agree to waive the seven days protest clause and the \$5 deposit if Mr. Shotwell can get the Boston Club to accept his protest at this late date and refer it to the A. K. C. Or if he prefers it I will agree to Mr. Vredenburgh making a protest on behalf of the A. K. C., the question to be decided at the September meeting of the A. K. C.

Mr. Frank Dole has not sailed for England as hepurposed, the cause of the postponement being, I regret to say, the serious illness of Mrs. Dole.

Mr. Crowell dropped me a good-bye line before he started last Wednesday across the Atlantic. Mr. Crowell's Londou address is Williamson's Hotel, Bow Lane, London, E. C. It is not unlikely that be may get as far as Switzerland ere he sets his face homeward.

There is quite a kick among the Pacific Kennel Club members over the admission of the California Kennel Club to membership in the A. K. C. They should not be unreasonable, but remember that they are not likely to hold a show this year at least, and exhibitors should not be deprived of the opportunity of getting a show if another club desires to give one. I will guarantee to say that if a club in any Eastern city announced that it would not hold a show in 1801, and another club from the same city appeared for membership, it would be elected by the A. K. C. J. W.

FOX-TERRIER STOLEN.—Editor Forest and Stream:
On or about June 14 there was stolen from my place at Highland Falls, N. Y., the fox-terrier bitch Blenton Forrest, white, with black tickings on body and tan tickings on ears; three years old. All persons are warned from buying or receiving this dog. A liberal reward will be paid for her recovery.—John A. Logan, Jr. (Highland Falls, N. Y.).

DOGS .- NALDIRES medicated SOAP for washing dogs, destroys all irritating insects, removes doggy smell and leaves the animal refreshed and happy. This prize medal soap, used by all the leading owners in Europe, is now sold by Park & Tilford, McKesson & Robbjns, E. Fougera and all Druggists.—Adv.

A. K. C. MANAGEMENT.

Editor Forest and Streum:

I should like to have had Mr. Peshall's letter come to me my regular daily occupation at a time when the night editor was shouting "Swamped again, boys, cut everything down to the lowest notch," I think I could have put it inside a column and made it better every way. Not but what Mr. Peshall carries his render along with him, still the features are not striking enough, betting lest through the leagth of the letter. Boiling the letter we find as a residue this statement. Mr. Peshall was chairman of the stand book committee in 1888, and that committee contracted with Mr. Lewis to take all and pay all during the second six months of the year. This he did up to Mr. Vredenburgh's return in December. This he odid up to Mr. Vredenburgh's return in December. The books then showed a balance of over \$1,000, yet that balance, all but a few dollars, was in Mr. Lewis's pocket.

Holding the position be did, Mr. Peshall ought to know what he is taking about when he makes the foregoing "The cash, however, does not disappear from the books into Mr. Lewis's pocket, but the account is carried on to Jan. II. 1890, when it is balanced, the balance being \$1,238.28. That I can testify to, for Mr. Vredenburgh showed me the book led did not, however, advise me of any such arrangement as Mr. Peshall restifies to, nor did I hear anything of that until after I had seen the books, wrote what I did in Forest AND STREAM a week later and some two or three weeks later show Mr. Peshall, in the presence of Mr. Winslow, the memorandum I had in my pocket, which was in Mr. Vredenburgh's writing. Then Mr. Peshall told us what he stated in his letter last week. That I did not make it public is for the reason I then gave to Mr. Peshall told us what he stated in his letter last week. That I did not make it public is for he reason I then gave to Mr. Peshall then the hold had being and published.

How did the money, if it went into Mr. Lewis's pocket, in the more was a super that he was a larger in the di

or so ago that he more than feared there was a nigger in the fence.

For my part I do not take either side, but await developments. I have endeavored in what I have said to bring out the salient features on the side of the accusation, so as not to let them be clouded over by side issues. And I say these are the things that are to be proved correct or false. Nothing said against Mr. Belmont personally has any place in the issue, nor are Mr. Peshall's peculiarities to be weighed in the balance. The question before the court of canine curiosity is: How did the money that Mr. Peshall says was paid to Mr. Lewis get into the A. K. C. strong box again? I hope the interest in the case will not prompt the editor of Forest AND STREAM to adopt the prevailing newspaper craze and offer \$100 for a solution of the question, answers to be written only on coupons printed in the paper. J. W.

Editor Forest and Stream:

In reply to an article of Mr. Peshall's in your issue of to-day, regarding the Auditing Committee appointed to examine the accounts of the Secretary-Treasury of the American Kennel Club, in which he says: "Now as far as the Auditing Committee that was appointed is concerned, permit me to now state to the dog men and breeders of this country, that the accounts of the American Kennel Club have not been audited by the said committee, that is, they simply signed the statements made out by the secretary and treasurer. Two of the committee, to said to several parties, and one member of the committee, I believe, has written a letter to that effect." We desire to say that every statement contained in above quotation is unqualifiedly false, as we did examine the accounts as directed, and that we made out and signed our own statement, Mr. Vredenburgh taking no part in the examination except when called upon to give any needed explanation of entires, and that he took no part whatever in preparation of our report. We individually deny having made any such statements as are contained in above article personally or by letter.

A. CLINTON WILMERDING,
J. M. TAYLOR,
GEO. W. LA RUE.

New York, June 19.

Editor Forest and Stream:

In Mr. Peshall's standerous letter published in your issue of last week he saw fit to accuse me of fraud, dishonesty and frickery in manipulating the funds of the American Kennel Club, and of submitting an untrue statement of the finances of the club for the year 1889. The charges contained in this letter are too ridiculous and absurd to answer. To all who know me personally a denial is unnecessary. To those who know me only as the secretary of the American Kennel Club, I desire to state publicly that it is only a short time ago that Mr. Peshall urged me to accept a position of trust and confidence under a high railroad official (the president of the Lehigh Valley R. R. Co.), to whom he (Peshall) had recommended me as a person not only competent, but one who would be valuable to him. On consultation with Mr. Belmont I decided to remain with the American Kennel Club. At the time of this high recommendation by Mr. Peshall, he knew as much about my method of transacting

the affairs of the club as be does to-day, and this is sufficient proof that he does not really believe his own statements. He has coined absolutely, and without one particle of truth, phrases and statements never used by me, and the very idea of which never crossed my miud. This is done to build an argument known to him to be false, malicious and without a shadow of foundation, but serving at any cost his hatred of the American Kennel Club and its officers. Mr. Peshall vilifies me and the officers of the club I represent. He maligus and insults the auditing committee, knowing full well before his letter was published that at least one member of the committee had protested against that portion of his statement referring to the personal examination and certification of the correctness of my books and accounts. Therefore, in order that this matter may be sifted to the bottom, I have preferred charges against Mr. Peshall and have asked for his permanent disqualification. A. P. VREDENBURGH.

Editor Forest and Stream;
I am sorry to see such a war going on among the A. K. C. members. Why not stop it at once? The ones now fighting are our ablest and best known breeders. Mr. Belmont, Mr. Anthony and Mr. Vredenburgh should recognize the fact that this is a public club and that their acts as officers of the club should not be private or so considered. A large majority of the breeders are against them in publishing the Gazette and registering their mongrel dogs. In this Mr. Peshall, Mr. Wade and Mr. Malcolm are in the right. While I do not approve all of the articles written by them against the management, yet I am sure most breeders will go a long way with them. Mr. Peshall is a man of great learning and ability, especially so when he confines his article to the animal, but when in a controversy he allows his turgent pen to fill with sarcasm that cuts to the boue, he should curb himself. Let us have a committee, the books opened and a hearing granted to both sides of the question, differences adjusted, and then peace will reign again.

R. E. Stryker.

NEW YORK, June 21.

THE INDIANA DERBY.

INDIANAPOLIS, Ind., June 22.—Editor Forest and forty nominations, twenty-seven English setters, two Irish setters and eleven pointers. All were whelped in 1889:

The Indiana Kennel Club's Derby closed with forty nominations, twenty-seven English setters, two Irish setters and eleven pointers. All were whelped in 1889:

REVELER—W. B. Hill's (Frankfort, Ind.) black and white English setter dog (Gath's Mark—Esther).

BONNE BONDHU—W. A. Neddermeyer's (Columbus, O.) black, white and tan English setter bitch (Count Wakefield—Pearl Bondhu).

RANCHO (F. H. Perry's (Des Moines, Ia.) red Irish setter dog (Claremont Patsy—Nino).

BEN C.—Jos. Cruzom's (Milwaukee, Wis.) red Irish setter dog (Gleneho, Jr.—Nellie C.).

FANCY KING DON—Geo. K. Andrews's (St. Louis, Mo.) liver and white pointer bitch (King Don—Queen Faust).

SPOTTED BOY—Chas. Proctor's (Union City, Ind.) liver and white pointer dog (Trinket's Bang—Nellie Bow).

BLUE DAISY—Geo. E. Gray's (Appleton, Minn.) black, white and tan English setter bitch (Gladiator—Lady F.).

TRAP, JR.—Samuel Grant's (Great Falls, Mont.) lemon and white English setter bitch (Ruby's Druid—Trap).

PICKWICK—Madison & McGuffin's (Indianapolis Ind.) liver and white pointer bitch (Graphic—Marguerite).

JUBILEE—J. M. Freeman's (Bicknell, Ind.) black and white ticked English setter dog (Gath's Mark—Esther).

IVAN—R. B. Morgan's (Akron. O.) black and white English setter dog (Gath's Mark—Esther).

GOV. KLUMP L.—R. B. Morgan's (Akron. O.) black, white and tan English setter dog (Jim Blackburn—Lufra's Ruby).

GAMERTER GLADIATOR—Harry S. New's (Indianapolis, Ind.) black, white and tan English setter bitch (Rush Gladstone—Quail).

SPOKANE—John T. Bartlette's (Edwardsport, Ind.) lemon and white English setter bitch (Rush Gladstone—Quail).

SPOKANE—John T. Bartlette's (Edwardsport, Ind.) lemon and white English setter bitch (Rush Gladstone—Quail).

SPOKANE—John T. Bartlette's (Edwardsport, Ind.) lemon and white English setter bitch (Rush Gladstone—Quail).

SPOKANE—John T. Bartlette's (Edwardsport, Ind.) lemon and white English setter bitch (Locksley—Leddersdale).

PENDE OF ALMA—Hon. J. E. Guinotte's (Kansas City, Mo.) lemon and white English setter bitch (Locks

white Edgiss setter dog (Josephus—Modinty—Hon. J. E. Guinotte's (Kansas City, Mo.) black, white and tan English setter dog (Captain G.—Daisy Deal).

Lebanon Boy—Lebanon Kennels' (Lebanon, Pa.) lemon and white pointer dog (Lebanon—Virginia).

Perelote II.—Lebanon Kennels' (Lebanon, Pa.) lemon and white pointer bitch (Lebanon—Penelope).

Joe L.—J. H. Kerr's (Indianapolis, Ind.) black pointer dog (Joe Pape—Nan).

Rosaline Wilkes—Wm. M. Keer's (Indianapolis, Ind.) black and white ticked pointer bitch (Ossian—Fannie K.).

May—W. B. Allen's (Indianapolis, Ind.) lemon and white English setter bitch (Rush Gladstone—Quiil).

BUSTER—J. I. Case, Jr.'s (Racine, Wis.) black, white and tan English setter odg (King Noble—Cricket).

COYOTE—J. I. Case, Jr.'s (Racine, Wis.) black, white and tan English setter bitch (King Noble—Cricket).

QUEEN VIC.—J. I. Case, Jr.'s (Racine, Wis.) black, white and tan English setter bitch (King Noble—Oricket).

GIPSEY STONE—A. A. Whipple's (Kansas City, Mo.) liver and white pointer bitch (Cornerstone—Dolly Il.).

BALLAHOO—Norvin T. Harris's (New Orleans, La.) liver and white Biglish setter bitch (Paul Gladstone—Bohemian Girl).

HOPE's MARGUERITE—D. E. Rose, agt's (Lawrenceburg, Tenn.) orange and white setter bitch (Gath's Hope—Sue J.). MCBRAYER—A. J. Gleason's (Alma, Kan.) black, white and tan setter dog (Josephus—Clara Windem).

ROSE OF ALMA—A. J. Gleason's (Alma, Kan.) black and white setter bitch (Marksman—Don's Nellie).

HOPE's LUCILLE—A. J. Gleason's (Alma, Kan.) black and white setter bitch (Gath's Hope—Lady May).

SUNOL—E. Cadman's (Kansas City, Mo.) liver and white pointer bitch (Corner Stone—Dianorah).

MINNESOTA—Paul H. Gotzian's (St. Paul, Minn.) English setter bitch (Monk of Furness—Lady Faydette).

NASO OF THE ELMS—Paul H. Gotzian's (St. Paul, Minn.) blue belton English setter bitch (Gath's Mark—Esther).

KING—Royal Robinson's (Indianapolis, Ind.) liver and white pointer dog (Graphic III.—Devonshire Gail).

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—Adv.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FORDET AND STERMA.

ENGLISH VS. AMERICAN BEAGLES.

"H IBERNIA," in last week's issue, has got things sadly mixed regarding the present type of beagles in England. The illustration of champion Little Duke is much nearer the type of those that I saw at Olympia, Darlington, Bangor and Brighton last summer, and the illustration of champion Ringwood is much nearer the type that is doing

ROYAL KRUEGER.

the winning here. I am not speaking of the dogs that these illustrations represent, but of the illustrations themselves. The head of Little Duke (in the illustration) has not the first identical point of the American beagle about it. If the reader will take the cut of Ringwood and compare it with that of Royal Krueger, at the head of this article, they will see a very marked resemblance. The beagles that I saw in England last summer were miniature foxhounds, and those who read my report of the English shows in the Boston Herald will remember that I stated so at the time. "Hibernia" calls Ringwood's head "a caricature of a blood-hound," Barring the long ears and slight throatiness I consider it an excellent ideal of the American beagle; the expression is excellent, the eye, muzale and skull also. "Hibernia" states that Ringwood would take about c. in this country. Well, perhaps he would judge that way, but I can nane at least four judges, that if scoring the cuts as we have them in the FOREST AND STREAN, would give Little Duke just about c. to Ringwood's Ist and special.

I think friend Tallman got the body and limbs of his subject pretty good, but I consider Little Duke's head very much superior to that of the illustration. Oue thing is certain, either "Hibernia" is entirely wrong, or the one that is entirely wrong is

men superior to that of the illustration. Oue thing is certain, either "Hibernia" is entirely wrong, or the one that is entirely wrong is NAMQUOIT.

Editor Forest and Stream:

In last week's issue you publish the pictures of the English beagle Ringwood and the American Little Duke, with remarks furnished by "Hibernia." I will draw attention to the fact, which I think all will admit, that Little Duke as portrayed is as much like Little Duke in the flesh as I am, and though the picture of Ringwood bears a closer resemblance to him than does Little Duke's, yet it is in no way satisfactory, so that allowance must be made in both cases. So much has beeu written on the false impressions conveyed by pictures, that with the additional allusion that it is quite unjust to make comparison in this way, I will dismiss them. "Hibernia." almost at the commencement of his communication, says: "I have not seen any recent importations of beagles." To this I will say, "Hibernia" has only himself to blame, for had he been at the last. New York show he would have seen Ringwood's daughter, Blue Belle, who won first there. Further on he says: "Our English cousins are breeding on different lines from the ideal standard we have set up." My only answer to this is the latest importation, Blue Belle II. Lower down I read the statement: "The American-bred beagle is about the nearest approach to a miniature English forhound that has yet been reached. The English champion Ringwood, judging from the illustration, is simply a caricature of a bloodhound, or a bad representative. * * * But I want to say right here that I do not think the type is correct, and that if champion Ringwood was shown here a c., would be about the highest mention he would get." (I talies mine). With regard to his reference concerning American beagles more resembling miniature foxhounds, this may be so, and herein lies the rift within the lute, for in England the beagle is quite a distinctive type, as is the foxhound and the barrier. Of course in color, carriage, shape a

young shu say, assy, assy or the transport of the less that the stud book, viz., first at Barn Elms, 1887, and first and special, Ilford, as she was disqualified through a clerical error.

"Hibernia" continues: "According to one of the best English authorities there are at present but two practical working packs in all England." The following list, I think he will admit, is a facer "to one of the best English authorities": Mr. Edward Barclay's, 17 couple; Bronwydd. Sir Marteine Lloyd, master, 11 couple; Mr. W. Charley, Jr.'s, 16 couple; Chester, Mr. Chas. W. Smith, master, 16½ couple Christ Church, Oxford, 13 couple; Mr. Seymour Dubourg's, 12 couple; Mr. T. Johnson's, 10 couple; Mr. Niblett's, 12 couple; Mr. T. Johnson's, 10 couple; Mr. Niblett's, 12 couple; the Pen-y-Ghent, Mr. John Foster, master, 12 couple; Royal Rock, Mr. L. R. Stevenson, master, 16 couple; South Camp, Capt. N. A. Bray, master, 12 couple; Stradishall Place, Mr. Richard J. Deskens, master, 12 couple; Stradishall Place, Mr. Richard J. Deskens, master, 14½ couple; Trinty College, Cambridge, 18 couple; Vale of Llangollen, 12 couple; North Worcestershire, Mr. E. H. Humphreys, master, 12 couple. North Worcestershire, Mr. E. H. Humphreys, master, 12 couple. North Worcestershire Mr. E. H. Humphreys, master, 12 couple. North Worcestershire Mr. E. H. Humphreys, master, 12 couple. Turtber on he advocates exporting some to England, and makes the remarkable assertion: "There is no game in England as suitable for the beagle as our so-called rabbits."

"Hibernia"! ob, "Hibernia"! Whither art thou wandering? You are on a false track. However, to return to beagles, I have had the advantage of seeing the prize winners here and those in England, as well as many of those that are never shown, and I am quite satisfied "b' oud' country can more than hold her own. "Hibernia," like many others, has formed a wrong idea of the number of good ones on the other side from the fact of there being so few shown; but let him try to pit the best three couples here against the best three couples from the packs in England, and methinks he would look very small, and, putting size on one side, I have yet to see the beagle that can lower the colors of Ringwood's imported daughter, Blue Belle II. R. F. MAYHEW.

DOG TALK.

IN the last week's issue I notice a short note, headed "This Man Appears to Have Friends." I prefer to keep out of all controversy that is not of vital importance to my readers, and have kept my fingers out of this last A. K. C. duddle. I rise to make but one short remark. If Mr. Peshall is not a "genial, liberal-minded, upright gentleman," than I never met one. Whether he is really an enemy of the A. K. C., or only striving to purify its rank and file, remains to be seen.

Personally I do not care a broken straw whether Major Taylor's English Setter Club or the English Setter Club of America eventually leads. I am only striving for the improvement of the breed in general. It looks in very bad form to see Major Taylor trying to start an opposition club when he cannot find a single objection to the one already formed. It savors very strongly of an attempt to break open old sores between the East and West, the very thing the club already organized is trying to avoid. As one of the organizers of the club, I know that those directly interested knew nothing of Major Taylor's plans until his letter was read at the organization meeting after the call had been published and personal invitations had been sent to parties North, South, East and West. Among the applications received and read that night other parties spoke of Major Taylor's plan, and said that they supposed it had been abandoned, as they had not heard anything of it for months. The club is already a strong one, and many of the names on Major Taylor's list are active members of the club already formed. One thing its sure; we will get a club out of the two, and this opposition will but stimulate interested parties into greater activity.

I notice "J. W.'s" note re the question as to what is an American-bred dog. I agree with him that the A. K. C. should govern all such matters, but if they will not attend to these matters in detail I think the St. Bernard Club has a perfect right to make such rules as it chooses to govern its own specials. There is certainly a marked difference between sending a bitch to England to be bred and purchasing a bitch in England and then having her bred before shipment. But these same A. K. C. rules read that the preeder of a dog is the person owning or leasing the bitch at the time of service. And I fail to see the odds whether the bitch be in England or America.

The first quarterly meeting of the National Beagle Club will be held at the Quincy House, Boston, July 11, at 6:30 P. M. Several important amendments to the constitution and by-laws are talked of. The report of the field trials committee will be acted upon. They will doubtless be held the latter part of October or November. The secretary reports new applications for membership coming right along.

There have been 1,024 dogs licensed in Lynn, Mass., this year. No wonder Lynn can support a bench show.

year. No wonder Lynn can support a bench show.

It is a popular delusion that if a person is bitten by a dog and that dog should develop rabies at any nuture date, the person bitten will have hydrophobia. There is nothing like personal experience to prove that such a delusion is a pure fallacy. Fourteen years ago I was quite severely bitten by a dog that died a few months later of active rabies. Well, I get angry sometimes, but am not "mad" yet. Don't froth at the mouth very often, and never entertained the idea for an instant that I was liable to be smothered between two feather beds. I can readily understand that persons of a very highly excitable temperament can scare themselves into something very similar to hydrophobia without any actual cause. But such absurd notions should have gone into obscurity along with the Salem witches.

The St. Bernard men are asking each other the question: Is the owner of a stud dog liable for damage done to a bitch while temporarily boarding at his kennel? This question applies to all breeds, and in my opinion the owner of the bitch sends her at his own risk. Most owners prefer to be present at the service or send an attendant, and most kennel owners prefer to have the owner of the bitch or his representative present. Not necessarily because of any doubt as to the integrity of the interested parties, but because such an arrangement is more satisfactory in every way. But in case the man ships his bitch any great distance he should inform himself of the social standing of the man he is dealing with, and know that he has a suitable place to keep bitches when in season. If he does not know these facts he runs his own risk. Were the owner of the stud dog liable I can forcese many complicated cases that would inevitably arise. Such as a bitch being injured en route and dying soon after arrival, or like the case in question, the bitch may be stolen through no lack of vigilance on the part of the party keeping her. If a nan keeps a boarding kennel and some one poisons the whole lot, is the handler supposed to pay for the lot? Or should the kennel become infested with rabies is that the keeper's fault?

Mr. W. Stewart Diffenderffer, Baltimore, Md., has pur-

Mr. W. Stewart Diffenderffer, Baltimore, Md., has purchased of the Merry Mount Kennels, Woollaston Heights, Mass., the rough-coated St. Beruard bitch Riola. She is a good-boned bitch of considerable quality.

While in Boston the other day I accidentally ran across Mr. Brewer and a very promising 7-months old Irish setter puppy, by Huntington out of Brownie, the dam of Sunset. He will be heard from if he keeps on as he has started.

He will be heard from if he keeps on as he has started.

"Our Special Commissioner," in a Western contemporary, makes the following statement, speaking of England: "Our most popular judges are the gentlemen who have been most successful as breeders, and who therefore must almost of necessity at some time or other have owned some of the dogs shown under them." Here in America the public raise a great hue and cry against a man judging a breed that he has bred all his life. Is a man that never owned anything but greyhounds competent to judge St. Bernards? Is an Irish setter specialist competent to judge St. Bernards? Is an Irish setter specialist competent to judge the English setter if he never owned one? Are not our judges gentlemen and men of houor? If not, we had better raise a new crop. In England we have Rev. Robert O'Gallagher judging Irish setters, and Messrs. J. F. and Sydney W. Smith judging St. Bernards and giving perfect satisfaction. They are gentlemen, and if they err it is not on the side of the dogs they formerly owned. When we arrive at a similar feeling of trust in our judges our shows will be more of a success and not until then.

The papers this week all contain notes regarding the two

English setter clubs, and oue and all advise uniting the two clubs. That is all very well and exactly what must eventually happen, but why isn't it just as easy a way to settle things for all interested parties to join the club already formed. I notice in the list published by Major Taylor the name of Mr. H. Hulman, Jr., owner of Gath's Mark. Mr. Hulman is a member of the English Setter Club of America.

The Elmwood Kennels' St. Bernard hitch Queen of Scotland whelped nine beautifully marked puppies by Beauchamp last week. We found Mr. Teague rather broken up after losing two nights' sleep, but elated over his good luck, five dogs, all sold.

I was very sorry to hear Mr. A. C. Wilmerding talk of giving up Clumbers. This breed needs the fostering care of just such men as Mr. Wilmerding. He has purchased a very fair black cocker bitch in High Rock Jet, winner of 3d at Boston this spring. I think this is the last but onc of Mr. Walton's kennel of cockers.

CLAREMONT PATSY.

DES MOINES, Ia., June 21.—Editor Forest and Stream:

I would not pay any attention to the communication of R. C. Denning, which appeared in several sporting papers recently were it not that silence might be taken to be an admission of some of his statements. The cut of Patsy was obtained by Mr. E. O. Damon, who says that it is an absolute perfect likeness, and that by looking at it "the fancy sees him just as he is." I have the photograph from which the cut was made, and I say it is as fair and correct a picture as I have seen of any Irish setter; and I can produce affidavits of reliable meu, recommended by our best banks, that the cut fairly resembles the dog. I can also produce letters of reliable meu, recommended by our best banks, that the cut fairly resembles the dog. I can also produce letters of reliable meu, recommended by our best banks, that the cut looks no more like Patsy than a great Dane you have a fair sample of the reckless exaggeration of his letter.

Again the dog was not cracked up by the "Claremout Kennel." He was advertised by F. H. Perry as any one who could read the ad, could see, and there is no prevarication or false statement in the advertisement, as I verily believe.

That I rechristened Patsy to hide his identity is as false as anything cun be, and Mr. Denning, if he had kept posted at all, would have known it. The name was changed and noted in the leading sporting papers, and Patsy was registered in the A. K. C. S. B. This was all I could personally be expected to do, though Mr. Denning thinks I ought to have notified every breeder personally of the fact.

Possibly I don't know anything about Irish setters, but I have seen Elcho and Rose ten times to Mr. Denning's one, and have seen nearly all the leading Irish setters of America to-day.

It was my good fortune to have lived a number of years in

have seen Elcho and Hose ten times to Mr. Denung's one, and have seen nearly all the leading Irish setters of America to-day.

It was my good fortune to have lived a number of years in Claremont, the home of Dr. Jarvis, and I saw and admired his dogs for many years, and have never ceased to be proud of Dr. Jarvis and his dogs.

Now, if Messrs. Denning or Burr think Patsy is such a duffer, I will give them a chance to come out of their holes, and I hereby challenge them to run one of Mr. Burr's red dogs against a puppy by Claremont Patsy and Ninon (which was whelped July 31, 1889) at the Indiana trials this fall, or any time after that that we can agree upon, for a side stake of \$100 each, to be awarded to the best dog by the judges at the Indiana trials, if the race be run there, or by any judge that may be agreed upon between Mr. Burr and the trainer of my dogs.

I have this day sent \$25 to Mr. P. T. Madison, sceretary of the Indiana Kennel Club, for a forfeit. This challenge to be accepted and a deposit of \$25 as a guaranty of good faith to be made by Messrs. Denning and Burr on or before July 15, and the balance to be deposited with Mr. Madison before the entry for the all-age stake closes for the Indiana trials. Messrs. Denning or Burr and myself to name the dog each will run by the 1st of October.

F. H. PERRY.

FIELD TRIALS FOR BEAGLES.

FIELD TRIALS FOR BEAGLES.

Editor Forest and Stream:

I see by the last issue of your paper that the National Beagle Club propose to hold a field trial for beagles during the coming autumn.

An old beagle man, and having some experience with the breed'as hunting dogs, I am free to say that I don't see how a beagle field trial can be satisfactorily conducted so as to do justice to the dogs or credit to the judges. I presume the competing dogs will be hunted in couples as in setter and pointer trials. Now, our little harc (the game I suppose they will be tested on) is found chiefly in briery thickets, in which dense cover the dogs will be cast off. They will at once be lost to the sight of the judge. In duetime one of them may jump a rabbit, he opens on the hot trail; the other dog may hark to him, but most probably will not, as he is a strauge dog. Admit, however, that the competitors pack in and run together, what then? The judge is not familiar with the tongue of either dog. He cannot tell which one is on the line and if a check is made. How is he to know which dog unraveled the tangled mazes of the lost trail and "hit it off" again?

The following synopsis will recall to every beagle man similar experiences, and is about what occurs in nine out of ten hunts. Yourself and friends with your pack are at the cover side, the dogs are thrown in, and with the exception of a momentary glimpse of a busy worker, you are alone on the edge of the thicket. After a time you hear a whimper, and remark, "That is Jingle;" then a prolonged beagle note, and "There goes Jolly, now look out;" and then a burst of music, alto, tenor and bass, tell you the rabbit is bounced from his squat, and the pack are driving him fast and furious. After a time the cry suddenly stops and you know the rabbit has doubled and the dogs have overrun him. You wait and listen curious to see which dog will pick it up, secretly hoping it may be one of the young ones. A long wailing note, Trimmer, the old rascal, has, as usual, "worked the double." Now th

WEST PHILADELPHIA, Pa., June 20.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

KENNEL MANAGEMENT.

KENNEL MANAGEMENT.

KON Notice Taken of Anonymous Correspondents.

K., N. Y.—Will you kindly inform me, in the next issue of your paper, what is the matter with my dog and what to do for her? She will be a year old next month and was in hent, for the first time, this spring. Since then she has been alling. Her appetite is as good as ever, but her spriris are depressed, her bowels loose, and she very frequently coughs up quantities of white mucus. Ans. Bitch is out of condition. Give a 5 grain quinine pill, concealed in a morsel of meat, each day for ten days. Give 5 drops of Fowler's solution of arsenic in the food once daily for three weeks.

weeks.

E. S. E., Binghamton, N. Y.—I have a setter puppy. 18 months old, which has distemper; have been giving her Fowler's solution of arsenic, commencing with 5 drops and increasing one drop a day to 20 drops, and back again, having now got down to 7 drops. She seems better and eats more (feed mostly bread and milk, and scraps, no meat), but she scratches a great deal, the hair coming off on her legs, feet and around the root of her tail; the skin is red and seems sore. I have washed her twice with carbolic soap, letting it dry on, and think it helps her somewhat, but does not stop the itching. Ans. Use the arsente once more in the same manner as before. Get some zinc oxide and diachylon ointment, equal parts of each, and ruh some in gently, once daily, over the affected parts. Keep the bowels open with one or two teaspoons of syrup of buckthorn daily. Give a little cooked meat mixed with other food. Exercise regularly,

THE MISSOURI STATE SHOOT.

CAMERON, Mo., June 17.—The thirteenth annual tournament of the Missouri State Fish and Game Protective Association opened here at the fair grounds to-day with a very satisfactory attendauce of trap-sh-oters, not alone from this State, but from all parts of this broad land. Owing to a heavy rain vesterday the arrangement of the grounds was delayed and shooting was not commenced until near noon. During the early nart of the day it looked very dubious for the shoot. Heavy threatening clouds hung overhead and the prospects were favorable for a downpour of dampness. But fortunately about 11 o'clock the clouds began rising, and "Old Sol" made his appearance at intervals to the delight of the assembled trap-shooters. The afternoon proved every way a model day for the sport, and despite the fact that a late beginning was made, quite a heavy programme was gotten through with. There was a decided rougnness about the management to-day, and the shoot had a drag about it which will no doubt disappear to-morrow. Mr. P. D. Watson, of this place, president of the Association, is confined to his bed by illness, and the shoot is considerably hampered by his absence, and the entire management of the affair devolves upon Mr. C. W. Schneider, secretary, who is bere, there and everwwhere and doing his utmost to make matters pleasant for the visitors.

All of to-day's meets were open to all comers. The live birds trapped were an exceptionally good lot of tournament birds The sparrow shoots were quite a novelity and created much interest to the crowd. The rules of the Association govern all live-bird meets, A. S. A. rucker, W. H. Shimsmore, of Too, Kan. He has instead of the shoot is shorted for the fact of the affair favor fair shot. C. W. Budd. S. A. Tucker, W. H. Shimsmore, of Too, Kan. He has instead of the shoot is shorted for the order of the state of the west field," are here and making things hot for all. The scores to-day follow:

Wednesday, June 18.

There was more push to the short to-day. President Watson made his appearance on the grounds early in the morning and ustiled matters very much. A more beautiful day than was had sould not be wished for. It was clear and a refreshing hreeze from the west made its way over the Fair Grounds all day. For some reason the crowd don't take kindly to inauimate targets, and but a few shoots of them were run off. Charley Budd left for some this morning a fair winner. All non-residents of the State were shut out of the live bird events to-day, and they will also have to take a back seat to-morrow, as nothing but Association events will be shot. Following are the scores for to-day:

Shoat No. 8, for teams of two members of the asseciation only.

The convention of the Missouri State Fish and Game Protective

President, Harry Ackers, St. Joseph, Recovery, and W. Fredericks, Brown, St. Joseph, Corresponding Secretary, and W. Fredericks, Treasurer.

Fred Erb, against whom serious charges were preferred by Frank Smith of Kansas Citv. was forever barred from the convertesies of this convention. The question of rules was also agitated, and although not definitely settled it is very probable that the A. S. A. rules will be adopted in the near future.

Thursday, June 19.

A. S. A. rules will be adopted in the near future.

Thursday, June 19.

The day opened up with rain and it looked very bad for the shoot. Dark heavy clouds overcast the heavens all day, and at intervals let down showers which interfered materially with the sport. The feature of to-day's programme was the St. Louis (on Club medal event, the handsome trophy being valued at \$500. It brought out but 28 entries, of which number eleven succeeded in scoring 10 straight. The conditions specify that the net entrance moneys go to the party or parties last holding the medal. Consequently the \$217 taken in to-day went to J. W. Batcheler, Jock Schaff, J. L. Meade, Sev Mock, W. Anderson and Jim McGee, who made straight scores last year at Kansas City. After agreeing to divide the purse next year, the 11 straight men shot off for possession of the medal, which was captured by J. Elliott, of Kansas City. It was by far the most interesting event of the tournament, and would in all probability have been continued further had not the referee given a wrong decision on Elliott's lost bird.

TATTATTOE T YEAR OF T			

I frwin, 10.

Owing to scarcity of birds the ties were divided.

TORONTO, June 18.—A sweepstake at 100 artificial birds each as shot yesterday afternoon on McDowall's grounds. The scores, the not large, were close all through the match, making it intresting to the large number of spectators: T. Sawdon, Sr. 78, Emond 74, J. Draisy 71, T. Boswell 70, W. McDowall 68, H. Dav-

SPARROWS FOR THE TRAP.—Mount Vernon, N. Y.—
Editor Forest and Stream: I cannot help admiring Mr. Mussey's
article. "Features of Trap-Shooting in the West." I think it is
heautifully written and appropriate, and hits the nail on the head.
I indorse every word. I think, as Mr. Mussey says, that sparrows
will fill the hill exactly, if a live target is required. Perhaps a
word as to how they used to be procured for the London clubs
would interest you. There are two ways, one by daylight and the
other of the stream of the stream of the stream of the stream
word as to how they used to be procured for the London clubs
would interest you. There are two ways, one by daylight and the
other of the stream of the stream of the stream of the
birds pegged to the ground, and stuffied dummies, and plenty of
feed; outside the net are the "call birds" in little cages. The net
is so constructed, that when the flock drops down into it a pull of
a string incloses them all. Suffice it to say that immense catches
are made in this way. "Bat netting" is done after dark. The
roosts are carefully noted (principally thick bushes and the livy on
houses), and after dark, when all is quiet, two men with two batnets set off. These are only large nets, about 8tt, high and 8tf,
wide, fastened to two poles, the tops of which are bent over in the
form of an arch. Now, one goes each side of a bush and holds upthe other net, which the man immediately closes; and so on from
bush to bush till the basket is full. Hundreds are taken in this
way in the long autumn evenings, and it is great fun. I was only
an amateur, but have been pretty successful and it brings many
delightful memories back to my mind. 1, for one, hone to see
trap-shooting put through a thorough refining process. I believe,
I am sorry to say, that when an amateur becomes a clever shot at
the traps and wins a little, it becomes his dammation. It is no
good hoping for a brilliant future, but for each individual to hustle
and work to get it renovated.—HYBRID.

GLOUCESTER. N. J. June 17

Sanbern, Bradbury, three pair hune, maistree, six autor corols and Bradbury. An important event was the challenge of Morse by Grant to shoot 25 hubs for a purse. Morse won by a score of 20 to 15.

FALCON GUN CLUB. June 19.—The first monthly shoot in the new year. of the Falcon Gun Club, took place at Miller's Dexter Park, L. I., this afternoon. Eight members of the organization, which is entering on the twelfth year of its existence wonto the traps, each man firing at 10 birds, under Long Island rules, a pigeon killed with the second barrel counting as 45 bird. See at live birds and blucrocks fellowed the regular event. H. Herrman won the club medal and first prize in the club shoot on 9 ont of 10. and also first in three sweeps. Second prize was div. hy Moller and Miller on 84.

The first number in the score gives the number of points made, the second hirds killed.

Club shoot—Bohling, 25vds., 64.5, 7; Moller, 25vds., 84.6, 9; Doscher, 21vds., 4, 5; Von Staden, 25vds., 75.5, 7; Herrman, 25vds., 9; Miller, 25vds., 84.9; Yaent, 25vds., 8. Schierenbeck, 21yds., 4. First extra race, at 8 live birds, 25vds. rise; Miller 1, Vaght 2, Hass 0, Moller 2, Bobling 2, Herrman 3, Von Staden 2.

Second race, at 10 blucrocks, 18vds rise; Miller 3, Herrmann 8, Vaght 5, Bobling 6, Schierenbeck 3, Hass 7, Herrmann 6, Miller 5, Schierenbeck 4, Von Staden 6, Doscher 5.

SARATOGA, N. 7—The July tournament at Saratoga promises to be a supendons affair. It is to run three days, July 15, 16 and 17, and purses to the amount of \$1,500 are to be divided among the winners. The tournament will be open to all. Each day there will be three \$100 and three \$50 caranteed events; \$150 in cash will be given for five highest averages during the tournament. The Saratoga club, under whose management it is to be held, promise a well-managed and thoronghly satisfactory affair from beginning to end, feeling confident that they are competent to A special feature, which will draw immensely will be a nigeon shooting match b tween Henry B. Whitney, althoug

Canoging.

The list of officers and directions for joining the A. C. A. and W. C. A. will be found in the first issue of each month.

Secretaries of canoe clubs are requested to send to Forest and Stream their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of neetings and races, and report of the same. Canoeists and all interested in canoeing are recuested to forward to Forest and Stream their addresses, with logs of cruises, mans, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

POINTE CLAIRE CANOE TROPHY.—The second of the series of salling canoe races for the Pointe Claire canoe trophy was salled on Saturday afternoon. There were three starters who crossed the starting line in the following order: Isis, D. A. Poer Alaho, H. McLean; Mab, C. Archibald. Mai—once Dawn, then Una—passed the other two on the reach, and continning to increase her lead during the whole race, won by 455 from Isis, which had a lead of 10s. on Alaho. Both Isis and Alaho sailed under jury rigs, very much reefed down. Mab carried all plain sail at the finish.

TORONTO C. C., JUNE 14.

TORONTO C. C., JUNE 14.

The Torontos opened the season on Saturday with a sealed handicap race over a triangular course, the distance covered three trips being about 4½ miles. Most of the cances that ended being cruisers, or their crews being new to the work, the ndicap was arranged with duo regard to those facts. The race is a splendid one, all the fleet getting away well together, William Morse leading in his new cance Spendthrift. She is a fast cer, being an improvement on last year's Cannuck, which won a trophy al. Stave Island, and was built by the same man that its Spendthrift. Another new cance this year is A. M. Rice's xie, which is not the Dixle of 1839, although bearing the same me. She lost ground considerably, owing to her racing sails to being ready, and being consequently sailed with a smaller tift. The time taken over the course by each competitor was as lows:

atfit. The time taken over the contest by each complete billows:
pendthrift, W. Morse.
fel, J. W. Sparrow
ervic, A. Shaw.
ixie, A. M. Ritce
tella, R. E. Matheson
ook, R. Tyson
ritz, F. Rogers.

H. Ford
C. Shaw.
Ret

—, C. Shaw. Retired. As the race was a scaled handicap, Bervie takes first place on me allowance, Dixie second and Stella third. The same evening a most exciting race took place between the mous war cance Unk-ta-hee and the gig of the Argonaut R. C. he start took place sbortly before 6 o'clock, twelve paddles being the Unk and six rowers with a coxwain and three passengers the city.

The start took place sbortly bofore 6 o'clock, twelve paddles being in the Unk and six rowers with a coxwain and three passengers in the sig:

Argonauts—Bow, W. Stewart; 2, A. R. Denison; 3, J. McGee; 4, G. Higginbothum; 5, A. Morphy; stroke, H. Wyatt; coxwain and dassengers, E. Vankoughnet, W. Ince, S. Bogart, and Major Sankers, E. Vankoughnet, W. Ince, S. Bogart, and Major Sankers, and Major Sankers, and Major Sankers, and Major Sankers, and
GALT C. C. REGATTA, JUNE 13.

GALT C. C. REGATTA, JUNE 13.

The cance regatta in connection with the Galt Summer Carnival took place on Friday morning in the presence of 4,000 spectators. The proceedings were enlivened by the delightful music furuished by the Barrie Brass Band. The balcony of the club house and the rising banks of the river afforded a good view of the course.

The first race called was the single blade paddling. After a good race the men finished in the following order: First, H. F. McKendrick; second, R. G. Muntz, Argonants, Toronto; third, F. Frank, Brantford, fourth, H. Frank, Brantford.

The second race, the tandem, was the hardest fought race of the day. The five crows got away to a good start and for some distance lapped one another. Gradually the Frank and McKendrick crows drew ahead, and it was a ding-dong race to the finishing line, the Brantford crow finishing by a short half length. First, H. and F. Frank, Brantford; second, J. N. and H. F. McKendrick, Galt; third, F. Lightbourne and R. G. Muntz; fourth, Hespeler, It is but fair to state that the Hespeler crews were handicapped by padding in much heavier boats than the others. The next race, club fours, brought out representatives from Brantford, Hespeler and Galt. The red and black jerseys of the Brantford, blue and white of the Galt, and white of the Hospeler crews, made a bright picture as they strained every muscle in bending to their work. Neck and neck they came down the course. Several times during the course the Brantfords changed hands like clockwork, not a stroke is missed, and the cance plunges along, sending up a shower of spray. The crowd becomes enthusiastic and cheers the contestants. The Galt crew seems to be paddling well within themselves, not having yet changed hands. Every one is looking for a most exciting finish. Suddenly there is a swimming race, the four Galt paddlers have parted company and oach man is making for the shore, leaving the Brantford crew to win easily, with the Hespeler crew second. The crews were: First, H. Frank, F. Bloomfi

Toronto: second, J. N. McKendrick, Galt; third, H. Rennarde, Galt.
The last race on the programme was one in which a great deal of interest was centered. The rivalry was keen. The paddlers were well-known experts. Everything promised which resulted—an excollent race from start to finish: First, Miss Alice McKendrick and Harry McKendrick, Galt; second, Miss Frances McKonzie and Fred Bloomfield, Brantford; third, Miss Pauline Johnson and Harry Frank, Brantford; fourth, R. G. Muntz and Mrs. Muntz, Toronto. Had the crew stroked by Miss Johnson not eased up before crossing the line the result would probably have heen different. Mrs. Muntz acted as passenger only, but R. G. sent his craft along so fast that he finished well up with the others.

A. C. A. SIGNAL CODE.

A. C. A. SIGNAL CODE.

o Secretaries of Clubs:
GENTLEMEN—A signal code is being drawn up for use at the
C. A. meet, by means of which notices of races, meetings, onrtainments and the like will be given by signal flags, displayed
n a flag slaff in a conspicuous place in the camp.
There are several signals which require club flags in addition to
e signal flags, for example: "The club whose flag is displayed
that his signal invites the members of the A. C. A. to a camp-fire
t their club camp at 8 o'clock this ovening." "The members of
te club whose flag is displayed with this signal will please report
t their club headqnarters to-day at" (then tollows the signal of
he hour). "There is unclaimed property, belioved to belong to
he members of the club whose flag is displayed with this signal,
ow lying at" (then follows the signal as to place). "The club
vhose flag is displayed with this signal has issued a challenge,
he details of which are posted on the notice heard," etc., etc.
The secretary of any club who thinks his cluh may wish to give
my of these signals at the meet is requested to furnish to the
indersigned his cluh flag, 3ft, 6in, in length.

Very respectfully,

EDWARD W. BROWN,
NEW YORK, June 14.

CRUISING CUPS AND CANOE YAWLS.

T the meeting of the Brooklyn C. C., on June 10, Mr. Chas, P. Weeks presented to the club a trophy to be raced for during annual cruise of the club each year, the tollowing rules to

the races: e rules of the A. C. A. each year to govern the race for that

The rules of the A. C. A. each year to govern the race for that 'The trophy to be known as the "Pagan Cruising Trophy," and ll he the property of the members of the cluh as long as they dielpate in an annual cruise. When, however, two successive so elapso without an annual cruise having been taken, the only shall revert te the donor.

The regata committee of each year or their representative ll arrange for each race in camp, the course and time limit to been decided upon.

The maximum sail area of any cance shall not exceed 75sq. ft. The cance and owner winning the trophy shall be given position of the same until the next annual cruise; but should the ual cruise be omitted during any year, the regata committee it be the custodian of the trophy for that year.

All contestants must sail their own cances and must be club nebers.

members. 7. The club will have engraved on the trophy the name of win-

ning canoe, captain and date and location of race, at their own expense.

There being a limited number of boats in the B. C. C. larger than canoes, it has been customary to have a race for this class every year in the annual regatta, and there having been no rules to govern these races, it has been annoying and inconvenient to decide just what might be considered an "unclassified" boat; so the following seneral rules have been adopted:

First All races in the club heretofore known as "unclassified," stall in the future be limited to a class to be known as "canoe stall in the future be limited to a class to be known as "canoe yawls," which shall consist of boats of the following description, vlz.: Sharp at both ends, length not over 18ft., beam not over 48m, adopth not over 24m, amidships.

Second—The crew of each cause yawl shall consist of two men only, unless the programme of the regard to ballast shall apply to this class, except that no ballast shall be sitted.

Fourth—Boats in this class shall be given a time allowance of 2 seconds a foot per milo, to be calculated to the carrest half foot

AN A. C. A. PADDLING CUP.—Mr. H. C. F. Randolph of New York, A. C. A. No. 906, has offered to present to the A. C. A. for competition at the meet in August next a handsome silver mug, to be known as the "Shinnecock cup." It is to be presented to the winner of a special one mile paddling race for decked canoes, and is to commemorate a difficult paddle experienced by the giver in the neighborhood of Shinnecock a season or two ago. He is a veteran cruiser, has made the circuit of Long Island in a canoe, and recommends as far superior to the other the north or Sound side of the island to any one contemplating cruising to the next meet.—W. R. HAVILAND.

SAD ACCIDENT TO A CANOEIST.—A prominent crack of the New York C. C. was airing his large kites on New York Bay one day last week in rather gusty weather. A sudden puff cansed him to slide out to windward, but alas, when the cauce righted and he would fain have slid in, his weather coat tail fouled in the sliding seat, and in less than a moment he was fathoms deep beneath the blue waters of the Bay. To his credit be it said that he held on to his sheet, came up by the canoe and climbed aboard, in spito of a heavy sea, trimming sheets and sailing ou after stopping to bail out a little water in the well.

A. C. A. MEMBERSHIP.—Northorn Division: H. Chas, Sparks, Ottawa; Frank W. McCallum, Wm. H. Warren, Montreal, Atlantic Division: Edward H. Burtlis, W. D. Anderson, Jr., Brooklyn, N. Y. Eastern Division: E. C. Sherwood, Southport, Conn.; A. E. Wiswell, Lynn, Mass.

Dachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U.S. Hydrographic Office. Large quarto, with 28 lithographic plates. Price \$1. Condens full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

be less cause for regret, as a good opportunity is thus given to the ox-racers, and plenty of good racing might have followed; but the dry rot evidently pervades the whole fleet, and those that are not laid up are left to swing at their moorings or to go out at times to follow the forties down the Bay. There were a dozen big schooners off Bay Ridge any day last week, which, profiting by the absence of Sea Fox and Grayling, might have enjoyed some good racing among themselves, at the same time doing something for the clubs they represent, but not one, save the little Azalea, wont so far as to hoist a racing flag. Had half a dozen owners agreed among themselves to enter, with anchors on hows and boats at davits, without stripping ship, there would have been hardly less interest than in the bygone lights of the nineties, as it is an inconstible fact that the interest in a race depends less on the intrinsic speed and excellence of the competitors than on the closeness with which they are matched.

As far as the old-time display goes the whole week must be set down as an utter failure, a fact perbaps of little importance in itself; but then from a purely racing standpoint the result was though with a fair fleet of boats, provided but little sport. Titania was about the course under her small rig; Bedouin is laid up yet at Newburg, and will not race this year; and Gracie was hard and fast ashore by an unlucky accident. Of the three that entered, Shamrock, Kartina and Fanny, only the former sailed the three races, Clara, in the 55ft, class, sailed in all the four races, in but one having a competitor. Even in the 40ft, class the entries were poor, Minerva sailed all the races, Maraquita sailed three, Tomahawk had a look in a couple of times, Choctaw made three starts, while Liris waited until the week opened before hauling ont for work that should have been done last winter, thus missing three races and entering the others hurriedly and with little preparation. In the 30ft, class matters were still worse, as nothing b

mimerous centerooard fleet has disappeared completely since Kathleen's advent.

PAVONIA Y. C.—JUNE 16.

The annual regatta of the Pavonia Y. C. on Monday proved a great success, there being good entries and a fresh S.E. breeze all day. The course for the cahin boats was from off Ellis Island around the Southwest Spit and return, the open boats sailing around Swinburno Island and Fort Lafavette, 30 and 18 knots respectively. The start was given at 12:05. Thio fleet had a beat down, with an ebb tide, the leaders heing timed at Buoy 3½:

Mergus. 2 45 40 Irene. 3 03 50
Phantom 2 48 00 Souter Johnnie. 3 04 22
Ayalon 2 53 08 Forsytho. 3 08 10
Christine. 55 70 Growler. 3 11 42
The small craft were timed at Buoy 13;
J. T. Corlett. 1 37 30 Leader. 1 49 70
The full times were:

vavs a racing forty, has thus far declined to race, her entry deed new zest to the sport in the class.

Not very long ago the 30ft. class was one of the features of the kilanite Y. C., but when Kathleen made her entry this year none of them were to be found. Under these circumstances, having no onnetitor, she demanded the right to go up into the next class, a which were entered the sloops Polly, Eurybia, Volusia and typatia. Her room was much more desired than her company a this pleasant little quartette, and her right to go up a class was isposed of by means of an entry in the 30ft. class of the little cel cruiser Pelican, once the cat yaw! Empress, a 20ft. cut tergged boat with an iron keel. Although his boat did not start a the race, her entry served to keep Kathleen out of the 35ft. that waterline came over from Staten Island to have a look in, and finally defeated all the white sloops on even time. In the 5ft, class were only Frolic and Mouette, and in the cat class the wo very fast boats Eijou and Sirens.

When the start was given at 10:39 there was a light breeze from onleast, with the food tide still running off shore. Katrina, and the still propagal, went over on port tack, with Shamatry of the still propagal, went over on port tack, with Shamatry of the still propagal, went over on port tack, with Shamatry of the still propagal, went over on port tack, with Shamatry of the still propagal, went over on port tack, with Shamatry of the still propagal, went over on port tack, with the flood tide still running off shore. Katrina, and the still propagal, went over on port tack, with Shamatry of the still propagal, went over on port tack, with Shamatry of the still propagal, went over on port tack, with the sunsul fry during all the early over mental class of the still propagal of the still p

The two big sloops were obliged to stand up for Buoy 10, but the others held over to the Cone, Island side, Minerva working out until she caught a breeze well to the eastward, when she bowled dong merrily on port tack, soon leaving Chispa and the rest istern.

At 1 P. M. Katrina and Shamrock were by Buoy 10, drifting about, each alternately in the lead. Clara had picked up on Anconda down the Bay and stood a fair chance of saving her time, they are the condition of the chock, and soon after camo Chispa, Anaconda and Chara, the thork arger ones, Stella and Mirvana, not being in sight. The interdanger ones, Stella and Mirvana, not being in sight. The other larger ones, Stella and Mirvana, not being in sight. The clink of the smaller classes at the markboat off Buoy 8 was Katheon, followed by Hypatia, Eurybia and Shona, the little fellow thing well on the wind a light log, in which Minerva can rapidly the dead, leading Ships by noarly 5a, at the lightship, a gain of 12002. Chispa 125-29. A naconda and the Scotland were: Minerva 12002. Chispa 125-29. A naconda 147-25 Choctaw 125-25, Shona 15008. Minerva had beaten Caspa 145-35. Choctaw 125-35, Shona 15008. Minerva had beaten Caspa 145-35. Choctaw 125-35, Shona 15008. Minerva had beaten Caspa 145-35, Choctaw 125-35, Shona 15008. Minerva had beaten Caspa 145-35, Choctaw 125-35, Shona 15008. Minerva had beaten Caspa 146-35, Eurybia 125-35, Shona 15008. Minerva had beaten Caspa 146-35, Eurybia 125-35, Shona 15008. Minerva had beaten Caspa 146-35, Eurybia 125-35, Shona 15008. Minerva had beaten Caspa 146-35, Shona 15008.

With balloonjibtopsali set and kpinsker to port Minerva showed the way in, while the four large boats eased off for the reach of 36 miles to the Saudy Hook Lightship. The four were timed: Anaconda 147-34, Clara 147-31, Shamrock 233-15, Katrina 204-23.

The run in was made without incident, save that Minerva showed the way in, while the four large boats eased off for the reach of 36 mil

McNulty.

Massachusetts Y. C. annual, june 17.

The Dorchester ruce has been for a long time the special event of June 17, the anniversary of the battle of Bunker Hill, in Boston, and with the growth and expansion of the old club into the Massachusetts Y. C., it is but fitting that the racing should improve as well. The first attempt of the now club was certainly a success, a very fine lot of representative boats being brought to success, a very fine lot of representative boats being brought to success, a very fine lot of representative boats being brought two and of Nahant, the courses being: For the first, second, third and fourth classes. From line between judges' boat and flagbout and fourth classes, from line between judges' boat and flagbout starboard, to and across starting line; 20 miles; limit of time, 6 hours. For the fifth closs, from starting point, leaving Winthrop Bar Buoy on port, Graves Whistling Buoy on port, to and across starting line; 10 miles; limit of time, 34 hours.

The largest yacht cutered was the Burgess 45, Millicente; in the next class were the two forties, the new Yentura, with Mr. Burzess on board, and Helen, while in the 30ft. class were Saladin, Hawk, Shark, Almira, and Harbinger, the two Cape coats, and the new Gape Ann boats, Chieftain and Kultida. The start was from a single gun for each class. The wind was fresh from sonthwest, lavoring all the fleet alike through the day. Hawk had a very poor start, but finally won from Saladin. Helen, in spite of her eson in New York, was again half an lour late. In this ca-c the committee, more fortunate than that of the Seawanhaka C. Y. C., secaped the wrath of Helen's designer by waiting half an hour for her to turn up. Helen made a very fair showing but loss her topmer to turn up, Helen made a very fair showing but loss her topmer to turn up, Helen made a very fair showing on loss bertopmer to turn up, Helen made a very fair showing on loss bertopmer of the seawanhaka C. Y. C., secaped the wrath of Helen by deniura. Harbinger and turni

broken piece was a shackle made in Boston, said to be of phosphor bronze. This left the only feature of the race a family instead of an international affair, robbing it of most of the interest. Clara gogged along with the forties, having no competitor. The wind was very light at times and the race proportionately slow. The yachts were timed at Buoy 10 as follows:

Clara. 12 37 10 Tomahawk. 12 42 00 Choctaw. 12 38 15 Kathleen. 12 52 05 Mariquits 12 39 47 Shona. 12 56 05 Mariquits 12 39 47 Shona. 12 56 06 Mariquits 12 39 47 Shona. 12 56 06 Clara 12 80 30 Mariquits. 13 15 Choctaw. 13 19 19 Tomahawk held along the Sandy Hook shore, the other two being further ont, and when inside the Hook she still hugged the shore, while Choctaw, evidently with her experience of the June 5 race in mind, steered straight for Buoy 10, Mariquita following her. Somehow the weather was no "fittin' nor suitin'" for this maneuver, and instead of coming out ahead of Tomahawk, the tables were reversed, the times being.

of Tuesday. In one way or another she ghosts away from the fleet in light weather in a style that makes it evident that luck alone is not responsible for her success. She passed Buoy 10 at 2:09:45, with Tomahawk a good 10 minutes astern and the rest still further in the rear, the times being:

Minerva. 209 45 Florida. 25 75 50
Tomahawk 242 00 Maraquita. 30 34 45
Tomahawk 244 00 Maraquita. 30 400
The first half of the race, from Buoy 15 to the two lightships was a drift, Katrina and Shamrock salling apart at times, but finally turning the Sandy Hook Lightship but 18s. apart, the times here being:
Shamrock 44 00 Whileaway 44 92 8
Katrina 444 18 Florida. 45 15
Clara 47 15
Minerva turned the Scotland at 33:55, the others heing far astern.

Minerva turned the Scotland at 3:31;55, the others heing far stern. The breeze freshened considerably in the afternoon, and the tter half of the race gave some good sailing between Shamrock and Katrina; as for the forties, Minerva was so far ahead that the lurgess boats were able to ignore her entirely, and have a very xotting little sub-race between themselves. Shamrock led all he way home until near the initsh, when hy a little better handler Katrina headed her, leading over the line hy 3½m., and wining by Im. 38s, corrected time. Tomahawk was the first of the largest forties, being 35m. astern of Minerva. Choctaw and laraquita had a very close brush for last place, Choctaw finally finning it. The full times were:

SERWANHAKA SPECIAL SWEEPSTAKES—JUNE 23.

The third Seawanhaka Corinthian race was a repetition of the first of the sories, on June 6, except that it was a sweepstakes, 25 events. Royal Pholps Carroll and the property of th

MINERVA AND CHISPA.—A match race has been arranged between Minerva and Chispa, to be sailed on the Bayon Saturday next. Captain Joe Ellsworth will be with Com. Lawton in Chispa and a lively race may he looked for.

NO RACE FOR THE SEVENTIES.—The rumor of a match to be sailed soon between Katrina, Shamrock, Gracie and Titania is incorrect, as the four will not meet until the New York cruise.

MOCCASIN.—Mr. Morgan's new 40, lately launched at Piepgrass's, had a trial trip on Tuesday.

BEVERLY Y. C., JUNE 17.

BEVERLY Y. C., JUNE 17.

THE 157th regatta, first open sweepstakes, was sailed at Monnment Reach, on Tucaday, in a good three reef southwester. The club was favored with a porfect day, an excellent entry and a very exciting race. The prefect day, an excellent entry and time and in thirty seconds the old Matting was fired exactly on time and in thirty seconds the old Matting was fired exactly on time and in thirty seconds the old Matting of the first class, closely followed by champion Climax; fired matting the champion Mist led off the second class, followed matting the champion Mist led off the second class, followed matting the champion Mist led off the second class, followed matting the work of the champion Climax and Gymnote.

Climax, Mollie and Gymnote carrying three reefs, the others two; course for these classes was a beat to Bird Island, a short reach to Wings Neck and a run home, Il miles.

Mattle sailed wonderfully, and to the surprise of every one held her own with Climax, while Mollie, Wildcat and Mist were fighting hard in third class.

At 1:15 third class was started, the class par excellence of the day. The entries were the champion Eina, built by Hanley, the 29 champion Daisy and 5 new twenties, built to beat Eina, Etta and Hermione, built by Jenney, Cayuse and Puzzle by Hanley, and Ada by Eben Holmes.

Cayuse got off with the lead, followed very closely by Hermione, Etta, Eina, Ada and Puzzle, all carrying three reefs, their course being 8 miles; a beat to No. 3, a short reach to Abial's Ledge, a run home, then back to No. 3 and return.

They were followed by Rip and Edith in fourth class, Rip being Mr. Jefferson's new boat, just finished by Duna, and the prettiest little boat on the hay, looking very like Klowa, but broader and shallower.

Their course was twice round No. 3 and return, 6½ miles. Rip had an allowance of 15s., but started 27s. ahead. She had not wind enough, and although saling faster did not point with Edith, at the end of first round she was 45s, ahead; but on second round, as

Bullard, J. J. P. Bullard, Wm. O. Elliott.

CORINTHIAN NAVY.—The first annual regatta of this association will be held at New Rochelle, June 23, at 1 P. M. The New Rochelle, V. C. has tendered the courtesies of its house and grounds for the day of the regatta, and the start and liftish will take place just off the club grounds. Members of the New Rochelle, Corinthian, Seawanhaka Corinthian, Larchmont, Riverside and Knickerbocker yacht clubs, the New York Y. R. A., Corinthian Amosquito Fleet, American Canoe Association and the Pequot Yachting and Canoe Association are invited to enter yacats measuring under 32t. Trains leave the Grand Central depot for New Rochelle at two minutes after each hour. Return trains at 4:22, 22, 46:48, 7:15, 7:49, 8:45, 9:43, 10, 1125 P. M. Regatta committee, Jos. W. Gubson, Philip C. Sta, H. M. Love. Over 25 entries have been received up to date. Proposed for membership. J. R. BETH AND 10.—Beth, Mr. E. H. Jewett's Burgess keel sloop, will meet Mr. Barnett's 10 at the Corinthian Navy regata on Juno 25, at New Rochelle. Those two houts represent the best 23-tooters in our waters, and will doubtless make an exciting and interesting contest.

LEONA AND ELFIN,—On June II a race was sailed over the Larchmont Y. C. 21-mile course between these two schooners, the times being:

Start, Finish, Elapsed, Corrected, Elfin. ... 11 16 37 4 27 33 5 11 16 5 11 16 Loona 11 16 37 4 27 33 5 11 16 5 11 16 Loona 11 1

CORINTHIAN NAVY.—Staten Island Sound Squadron regatta, hold June 14. Course off Sewaren, N. J. Sewaren is on the Jersey shore, opposite Staten Island and about 3 miles north of Perth Amiloy. Distance, 5 miles, sailed over twice. Weather, a shower soon after start and then cleared up. Wind, good steady breeze, which started up just about the time of the start, blowing from S.E. Tide ebb:

Volunteer, tuckup	Length.	Elapsed.	Corrected.

Ward, requiring about twenty-five tacks to make 2½ milcs.

COMING RACES.—The races on the Sound this year will be three in number, the Larchmont annual on July 4; New Rochelle annual on July 5; and American Y. C. on July 7. The Larchmont race will be sailed off over the usual conresc, the classes being the same as in the spring regatta. The Connor and Gould cups will be raced for, in addition to the cup won by Clara, on June 7, and redonated by Dr. Barron. The New Rochelle Y. C. will sail the club courses, the classes being based on waterline longth. There will be a special prize for the 40ft, class. The American Y. C. race will be open to all rigs and classes, the measurement being the same as the Larchmont. The start will be off Millon Point. All three races are open to yachts enrolled in the leading clubs.

ing clubs.

"NOT IN THE RACING."—One of the best compliments that Minerva has received, and one that is the more striking because it is entirely unintentional, may be found in the descriptions of the late races in several of the New York dailies. In these accounts the contests of the American fortiers for second and third places are described in detail under such headlines as "Shamroek and Chilspa," or "Mariquita's Great Race," the fact being entirely ignored that Minerva had already finished some time before. As a yachtsman remarked very pithily after seeing the race of Tuesday, "Minerva is not in it; the only fun is the lively battle to second place between the mourners astern."

Second place between the mourners astern."

NEWBURGH C. & B. A.—On June 28 the Newburgh Canoe and Boating Association will sail a race for catboats of 26th, and under, mean length, over a 10-mile course, the race being open to all boats between New York and Albany. The regular boat and canoe races of the club will be sailed on the same day.

ALTERATIONS ABROAD.—Verna is to be hauled out and her centerboard will be removed, the slot being filled with lead. Thistle has proved to have too s'rong a weather helm, so her box sprit will be lengthened 3tt. Her large clubtopsail will not be carried, thus keeping her rating at about the present figure, 121.

WELL DONE.—Some of the best sailing yet done in the 40ft class was that of Mr. Burgess on Saturday at the wheel of Maraquita. The boat was beautifully handled all day, and the great improvement in her stability, that was the subject of general comment, was due less to the recent lowering of her lead than to the trim of her canvas and the handling of the wheel. In the sea outside the Hook she went along dryer and easier, and at the same time faster, than any of her competitors.

UVIRA.—The new Fife cutter Uvira arrived at Halifax on June 17. She left Southampton for Halifax on May 23, and, after put-ting back, made the run across from Southampton to Bay Bulls, N. F., in 18 days. The fastest day's run was 175 miles.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

GEE KAY, Troy, N. Y.-Go to Number Four, Chas. Fenton's.

W. D. H., Jr., Jefferson, O.—The dog mention ϵd is eligible to registry if the pedigree you send is correct.

A. V., Brooklyn, N. Y.—The woodcock season in Pennsylvania will open July 4. Pickerel aro now in season and will be until Jan. I.

G. O. H.—We do not know where Mr. Prince had the good bas fishing. You will do well to go to St. Albans for Vermont black bass fishing. It is as sure fishing ground as we can recommend in the States named. Write to H. L. Samson, Lake View House, St Albans, Vt.

the states named. Write to H. L. Samson, Lake View House, St. Albans, Vt.

C. H. M., New York.—Please give me the definition of a shedder crab. Ans. In different sections along the coast this term is used to indicate different stages of the crab's growth. Sometimes a "shedder" is a crab in process of shedding; that is, a crab whose old shell has already split, but has not yet peeled off. This stage is also called "bustor" and "peeler." In the New York markets a "shedder" is a crab which has passed the "soft" period; that is, has shed its old shell, and whose new shell is hardening. This stage is also called "paper-shell" in some sections.

E. W. R., Yale College.—I expect to spend next year in France. Will you kindly tell me whether it will pay to take a shotgun with me or not? Is there any shooting to be had besides a few wildfowl along the coast and a wild boar or two in the preserves? I have taken La Chase Ilustrie, but the contents of a French paper is so different from that of the English and American papers that I could not form an opinion from it. Ans. Besides the game mentioned yon may happen upon good quail shooting in the autumn, and there are hares and red-legged partridges. If you have a shotgun, take it along on general principles, in France or any other country.

H. B., Lynn., Mass.—Will you please tell me how to make a sleeping bag, or refer me to some instructor of man opinion from the country.

FOR SALE BY ALL BOOK DEALERS

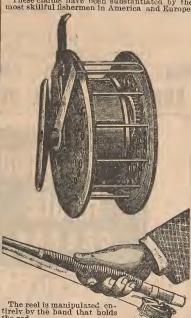

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper".

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST.—It will wind up the line a hundred times a fast as any other reel in the world.
SECOND.—It will wind up the line slowly if the

reel.
FIFTH. It will prevent tips lines and snells
from being broken by large fish.
SIXTH.—It enables the angler, and makes it
desirable, to use lighter tackle.
These claims have been substantiated by the
most skillful fishermen in America and Europe.

ANSWERS TO CORRESPONDENTS.

A BLACK BASS NUMBER.

The issue of "Forest and Stream" of July 24 will be a Black Bass Number. See announcement next week.

GAME IN THE GREAT WEST.

THE time is at hand when the Eastern men who hunt big game are preparing for a start to the Rocky Mountains. There has been much correspondence with guides, each hunter has appealed to such of his friends as make similar trips, to give him information as to localities which they have visited and men with whom they have been in camp. Regions have been looked up where some species of game, unknown to the inquirer, may be found in abundance. Bears, of course, are always in demand, but aside from this—sometimes dangerous—game, the hunter wants variety. If he has been killing elk, deer and antelope, he now wants to find a place where mountain sheep are abundant. If he has had his fill of sheep and goats, then moose and caribou seem to him to be desirable, above all things. Many a hunter of the present day longs to kill a bison.

For the next two months parties of Eastern sportsmen will be starting for the West, and will scatter themselves through the mountains, seeking out the secluded valleys furthest from the settlements, and, so far as possible, cutting themselves off, for the time, from the rest of mankind. Almost each camp of this kind will have a different object in view. One set of men will want to kill elk; another will look for sheep; another will devote its energies to exploration, will try to find new passes across the Continental Divide, or short cuts between lo-calities now connected by roundabout trails; some will fish, some will shoot birds, but all will have a glorious time and will return in the autumn with renewed strength and vigor, and a stock of experiences that will ever be to them a delightful memory.

Never to so great an extent as this year have we been called upon to indicate big game localities in the West, and

merly big game was abundant are now farms, often Where a dozen years ago the antelope, the elk and the deer grazed by thousands, the herbage is cropped by as many sheep, horses and cattle.

The game is actually scarcer and its range is continually contracting. The number of the hunters is increasing, and they of necessity all collect in the country where the game is found. As a rule the hunters of to day kill with far more discretion and judgment than did those of ten years ago, but they are much more numerous. We know a number of men who refuse to kill female deer or We know at least one man—he had never killed a buffalo—who within the last two years found himself within 60yds, of four buffalo in summer, and yet had sufficient control over himself to decline to fire at them, because he did not want to have a hand in the extinction of this grand race. Such a man is entitled to the respect and admiration of all sportsmen.

We may feel sure that a time is coming when the Rocky Mountain region will afford no better hunting than do now parts of Switzerland. There will be a little game left, but it will be shy and hard to get at, confined to the highest peaks of the range, and ever on the lookout for its enemies from below. Then the man who can return from his Western trip and boast that he killed, after a month or two of exhausting work, a couple of elk or sheep

will be regarded with envy by his fellows.

It is true that so long as the Yellowstone Park is efficiently preserved there will be a breeding ground for big game which will furnish sport for hundreds of hunters, but speculators and land grabbers have fixed their greedy eyes on this beautiful spot, and are striving hard to ruin it as a game preserve and deface its natural beauties. The bill for the preservation of the Park has been amended by the Public Lands Committee of the House of Representa-tives, so as to grant a right of way to a railroad to be built through the Park, and if this amendment should become a law, the value of the Park as a game preserve would be destroyed. The passage of this amendment would mean the ruin of the Park.

The storm of protest evoked from newspapers of the better class by the announcement that the Public Lands Committee had agreed upon this amendment has had the effect of delaying the presentation of the report, and it looks now as if the committee intended to postpone it until all the friends of the Park have gone away for the sum-mer. Then it may come up and the railroad lobby will try to force it through.

It is to be hoped that it will fail, and each sportsman or individual who is interested in the big game of the West or in the preservation of the National Park ought to write to his Congressman, urging him to oppose this amendment by every means in his power. The case is

FLY-RODS AND THEIR USE.

SURPRISING change has taken place in the weight and length of rods during the past few years. was but a short time ago that anglers considered it necessary to fish with fly-rods from 12 to 13ft. in length and weighing in the neighborhood of 12 to 14oz. And salmon rods were of enormous size. Think of swinging a 20ft, rod all day. No wonder we used to hear of men confined to their beds with swollen arms and hands. Now a 10ft. trout rod, of 7oz. weight, is considered a fairly heavy rod, and one of 8oz. and 10½ft. long, sufficiently powerful to kill the largest bass or landlocked

The perfect rod for trout fly-fishing should be of either 6 or 8 sections, if of bamboo, and not over 81ft. long. Such a rod need not weigh over 5oz. at the utmost. tip should be quite strong and able to pick up 50ft. of fairly heavy line and cast it in the wind. With such a rod one can cast from morning till night without the slightest fatigue, and feel that fly-fishing is really a pleasure. Mr. Heald, prominent in insurance circles in this city and a veteran fly-fisherman, has just returned from New Hampshire where he has been killing large trout on one of these little rods. He says he never knew what comfort was in fishing before, and the guides could not get over their wonder at seeing him handle 3 trout at once (one weighing over 2lbs.) on what they called a toothpiek. Of course such small rods must be carefully made and are expensive.

The same change has taken place in bait-rods; the exnever has it been so difficult to give such information as it is in this year of our Lord 1890. The regions where for-

fisherman with a long "pole" will hardly get his bait ou

One of the weakest points in the fly-casting of many anglers, in fact we might truly say of the majority of anglers, is the back cast. Of course, it is easy enough to watch the front cast and correct any faults, but the back cast is generally neglected. The result is disaster; fly after fly is cracked at the head or else entirely snapped off, and the fly maker is blamed for the angler's faults. It also frays out the leaders and wears out the lines.

The great trouble is that anglers will not give the line time to straighten out in its backward flight, and unless this is done it is sure to snap. Another mistake is in not lifting the line quick and clear from the water. The flies are drawn too close to the caster before making the next cast. This brings a great strain on the rod, and causes it to be thrown too far back in the effort to plete the cast. It is better to keep the rod down and take up the slack line by drawing it through the rings with Then when the cast is make, let the slack run out with the forward motion.

SNAP SHOTS.

SUGGESTIVE contrast between the value of yearlings and fry for stocking bodies of water is afforded by the experience of Mr. Charles G. Atkins, Superintendent of the Maine stations of the U.S. Fish Commission, as related in a recent letter to Col. M. McDonald, U. S. Commissioner of Fish and Fisheries. Mr. Atkins, on June 17, saw five landlocked salmon, the largest weighing about 2lbs., which were caught in Craig's Pond, and are the first ever taken there. The Commissioner informs us that 6,000 yearling landlocked salmon were planted in this pond in the spring of 1889, and the recent captures are from that source. Meanwhile, according to Mr. Atkins, 73,000 lake trout fry deposited in May, 1886, have as yet showed no trace of their existence.

At the special meeting of the Advisory Committee of the American Kennel Club, held yesterday, there were present Messrs. Perry, Terry, Wise, Anthony and Belmont. Mr. Peshall was not present. His letter declining to appear, published elsewhere, was read. The Committee declined to recognize his claim of unconstitutionality as to its composition and jurisdiction. a protracted discussion it was decided that the Committee had jurisdiction to try the accused on counts two and three. Testimony on these counts was taken; and then the following resolutions were adopted:

the following resolutions were adopted:

Resolved, That it is the sense of this committee that it should decline to act upon the charges this day presented by A. P. Vredenburgh, Secretary, against C. J. Peshall.

Resolved, That it is the unanimous sense of this committee that the recent publications made by Mr. Peshall in the sporting journals concerning the American Kennel Club and its Secretary, Mr. A. P. Vredenburgh, are unjust, untrue and libellous.

Resolved, That the Secretary of this Club be authorized and directed to exhibit the books and accounts and vouchers of this Club to any delegate member of this Club at any time.

Resolved, That we have absolute confidence in the integrity and veracity of the Secretary of this Club.

Resolved, That the conduct and language of Mr. Peshall in the controversy, out of which these charges arose, have been in our

controversy, out of which these charges arose, have been in our opinion so extraordinary and outrageous as to make us seriously doubt whether he is in possession of his normal faculties.

Resolved, That the proceedings this day had and the evidence this day taken be submitted to the American Kennel Club for

such action as it may seem best.

Dr. Perry tells us that in company with Mr. Jas. Watson, he went through the books of the American Kennel Club yesterday, including the bank books, and that they in all respects substantiate the published financial statements made by Secretary Vredenburgh.

The Sundry Civil Service bill authorizes the expenditure in the Yellowstone National Park of seventy-five thousand dollars. This is to be devoted to completing the road from the Upper Geyser Basin to and around Shoshone Lake, thence across the Continental Divide to Yellowstone Lake and River, and down the latter to the Grand Cañon, thence over Mt. Washburne to intersect the Cook City road near Yancey's. The Gibbon and Madison Cañon roads are to be completed, and various others kept in repair and somewhat extended.

Major Taylor informs us that at the conference between the two English setter clubs the most amiable feeling prevailed, and there is not a doubt that the clubs will con-

TWO AFTER TROUT.

. [Concluded from Page 450.]

TWO AFTER TROUT.

[Concluded from Page 160.1]

The next morning I was awakened by the chatter of chickens and falling articles in the kitchen, and on looking out through the sitting room into the kitchen saw the cook of the harem with a half dozen hen wives having a picnic with divers and sundry articles of diet which were not on their menu.

"Jack!" called Mrs. Jessup, "come down and put the chickens out;" whereupon a rustling in the loft and tramping on the stairs heralded Jack's entrée, at which the fowls vamosed cackling derision.

The morning was as nearly perfect as they make them. The sky was clear, a heavy frost had whitened things and a skim of ice inclosed the water in the pail. After breakfast, Jack took the oars and in one of Dick's fine boats we started off for a troll after some of the monsters of the lake. We went down the lake as far as Four-Mile Bay, into which we entered by an inlet across a peninsula; and shortly after emerging a strike at my troll resulted in landing a 7½-pound salmon trout. This was all we got for our trouble. We were now comparatively near the mouth of the stream last fished the day previous, and on motion it was agreed to run up as far as possible with the boat, lunch, and try for trout, which we did. A little shower fell while we vere drinking tea, that invariable accompaniment of a Canadian trip; but it was soon past, and we began operations. It was a beautiful stream, with just enough fall to it, wooded on each side, and having here and there stranded pine logs, reminders of the recent drive. Taking out a trout here and there alternately, and taking in solid chunks of comfort simultaneously, we slowly worked up stream, towing Jack in the rear, until I saw a lovely hole just ahead, into which the water poured over a slanting shelf of rock, with a huge pine log stranded pine going the proceed to work it for all it's worth."

"You can have it," hereby preempt that ranch and shall proceed to work it for all it's worth."

"You can have it," being the present the hole with a

low-lived worm, eh? Anything you like. No fly that I had, and I had many good ones, would a trout notice, so it was worms or nothing, and we voted worms unanimously.

Rain fell that night and the next morning was windy and raw, but soon after breakfast Jack and company with bedding and commissary department were off for North River for big trout. A fine driving rain soon set in, or down, and comfort made itself scarce, but the rain ceased after a while though the air was chilly. We passed a large raft at the mouth of Four-Mile Bay bound for the Ottawa, the pulling power being a crib or small raft anchored some distance ahead of the raft, on which was a sort of capstan, and by means of this the raft or collection of boomed logs was worked up to the crib, which was then towed by a large bateau ahead again and anchored. At the foot of Trout Lake we passed through the outlet several hundred yards long into Turtle Lake, four and a half miles long, a good bass water, into which I put a troll and took in a couple of three-pounders for supper. At the foot of Turtle is a dam or logging camp, where we lunched and then made portage to the outlet below called Lost River, a broad stream thickly settled with boulders and quite picturesque. Some distance down we came to a headland, on one side of which was a rapids, the head of which was choked with logs: the other side was a bay across which was a log boom. We pulled the boat across the boom, and at the foot of this bay, after some search by Jack, was found an old portage across to the stream below the rapids. The stream is called Lost because the waters at the foot of the bay flow underground across to meet the other channel. This portage was a terror. Nothing but down spruces knotted and jagged, and rocks of all sizes, shapes and arrangements. I thought the boat would surely be stove in before we got her across, perhaps a hundred yards, but she was staunch and slid along as easy as she could.

Into the river again we slipped along down a mile or two and reached a point jus

along the bank, and I wished to be there with a Winchester in the season. At the dam Jack left us and went to the boat, while we staid to try the trout at the falls. There were lovely holes here, deep and dark among the rocks, over whose surfaces whirled meringues of foam, and into which poured roaring the flashing waters from above. Frequently we dropped into these holes from quite a distance above, and hooking a big fellow, were compelled to handle him with the utmost care. Meanwhile we got down somehow to where we could get him into hands. We took out here nine handsome fish that would make your mouth water. Then we went to the boat, partook of a bite that Jack had ready, and decided to return that night to the camp at foot of Turtle Lake before the raft reached there and broke up to get through, we might be detained a day or two, and we had not grub enough for that.

Embarking, we rowed up stream, making that ragged portage again with many a heave and grunt and ejaculation, camping about sundown pretty tired. But I was not so tired but that I noticed in the pool 100yds, below the sluiceway at the foot of Turtle Lake a very likely place for bass, and after getting the boat around I took rod, and with worm for bait returned, and wading out in the swift water just at the head of the pool, made a cast, being rewarded at once by a vigorous tug. Then there was sport. The bass was game and a fighter, but the Henshall was equal to the emergency, even in that swift water, and after a few minutes I had him where I could get my hand on him, as I had no landing net with me, taking out a three-pounder. I made tracks for my net, built a pen of stones in shallow water to confine my catch, and until it was pitch dark I had such sport as rarely falls to the lot of the bass fisher. Then I groped my way to the cabin, and we ate a full meal by the light of a candle, while the smoke from the fire on the hearth in the center of the cabin nearly put our eyes out; nevertheless we picked bass and trout bones tolerably clean. We spr

spread our blankets on the hay and browse in the bunks, and in a jiffy floated away into the fisherman's dreamland.

By daybreak next morning I was up and after the fish again, repeating the experience of the previous night until called to breakfast, when I bade a reluctant goodbye to the bass of Goat River. We reached the outlet just in time to get in ahead of the loggers, and then skirting the south shore, trolled nearly all the way home, stopping once for lunch, but catching nothing, probably because the wind rose and the lake was quite rough. At 2 P. M. we reached the landing, and as the trout fishing was not what we wished in that vicinity, we concluded to go to Trout Creek for a day or two and see what we could see. As there was not time to send for the old man and team, Jack consented to back the grips to North Bay so that we might catch the evening train south. We bade good-bye to the Jessups, and taking the boat as far as the head of the lake, took foot the rest of the way, reaching our destination in ample time for supper, and at 7 P. M., on arrival of train on the Canadian Pacific road, we bade Jack good-bye and were off. I hope if any of my readers go to Trout Lake they may have the good fortune to have Jack McKenzie for guide, for he is companionable, modest, gentlemanly and efficient. They will find Dick Jessup and wife cordial, good-natured and anxious to please any who have occasion for their services. Their quarters are limited, but their hearts are big. If they haven't sufficient accommodations for their services. Their quarters are limited, but their hearts are big. If they haven't sufficient accommodations for their services. Here two branches of Trout Creek, a little hamlet of nine houses, and we hunted up the hotel without any difficulty, wherein, if I am not mistaken, the table is a trifle better than the bed—I might say two or three trifles. Here two branches of Trout Creek unite and empty into South River about two miles from the village, which latter stream has the reputation of harbor

they could visit one rapid above and one below the bridge, as there was no good fishing in the sluggish current between rapids.

We concluded to fish down Trout Creek to its mouth, as there was no other boat on the river; so early in the morning we walked down the road a way and then across lots to the stream at a point where a mill had been burned, and there just below the dam with a coachman I took a small trout. S, had the same luck. I believe if we had fished with worms here we might have caught a good string, but encouraged by the first rise we persevered, but neither here nor below did we get another rise, so after a while we substituted the wiggler, taking out a fish here and there as we went down. The stream here is not very good fishing water. It is too sluggish. At length we came to a place where the creek shot down a solid rock face at an angle of about 45°, plunging into a pool "cribbed, cabined and confined" on each side with hewn logs, where evidently it was intended to place a mill. The water swirled and boiled here in great shape, and was deep. I casually dropped in. The water was some ten feet below me as I stood on the crib, and the only way to save a trout when hooked was to lift him clear, as the water rushing from the lower end over rocks precluded the possibility of using a net, had I one with me, which I hadn't. The trout took hold at once, and I trusted to my lancewood, and with reason, though some of the larger fish caused the rod to bend until I thought it would go. Out of that hole I took fourteen fine trout, and S. kept his end up gallantly, while on the other crib across the way stood a native with pole, line about the size of common wrapping twine, inch and a half hook, and a piece of pork, and though he fished all he knew how, when we finished he hadn't begun. He walked down the stream to where he could cross and then came up to examine our rigs. He didn't say much, but walked off into the woods, I hope a wiser man.

We fished along down and pretty soon came to the head of a long

The trout fought like a little tiger and gave me all I wanted to do in that swift water for a spell, but he began to weaken ere long, and I led him to the calmer water at a town of the control of the c

Hatural History.

THE ADVENTURES OF A BLACK DUCK.

I Abl called a Black Duck, but my proper name is the Jusky Duck (Anas obseurus). I was born on the reedy shores of the great and mysterious Lake Mistassini and was one of a family of eleven ducklings. Notwithstance of the present and mysterious Lake Mistassini and was one of a family of eleven ducklings. Notwithstance of the protection of the control of the contro

made a dive and, as long as I could keep my breath, swam away under water. When I came to the surface I heard the sportsman who was out in a boat using fearful language, declaring that he had made a capital shot, that I was dead as a door nail; and with a dreadful bad word he swore he would get me by hook or by crook, Fortunately, I had swum off in an opposite direction to where he was looking for me, and keeping my body well under water, the waves hid me, and I soon left him swearing like a trooper. But me he did not get. I was only stunned by the shot whizzing around my head and soon felt as well as ever.

This was my second experience of man and escape from death at his hands, and my grandmother, to whom I described the danger I had been in, told me I was now out in the civilized portion of the world and my life would be constantly exposed to similar danger and others too; for the king of all animals, the most intelligent, the most generous, and the grandest of all beings, when feeling over-worked, over-fed, or fatigued with city life, where he was engaged in struggling in business or the learned professions, trying to overreach his own species, or in dissipation, and had become blasé, considered it a delightful change and heneficial to his health to leave behind a loving family, beautiful home, luxurics, comforts and congenial companions, mothers, wives, sisters or sweethearts, to rush off to some wild spot, live on coarse food, dress in shabby clothes, sleep on hard and uncomfortable beds, rise before daylight, shiver all day in cold and wet, hide in ambush, use all possible means to decoy us and destroy our innocent lives; this he calls manly sport, and talks about as a splendid outing. North or south, east or west, wherever we go, our enemies exist and seek our extinction. O, noble man't how different are our ways from yours: we never destroy life for food or pleasure. We live on the plants which grow under water, which we dive deep to secure, we never harm any living thing. Unfortunately, our flesh to m

QUAIL INVADING DOMESTIC FOWLS' NESTS.—They have a breed of quail in Ohio which lay more eggs than they can hatch; and call on the neighbors. The Ashtabula Sentinel gives this encouraging report: "Joe Hamilton told us last week that his boys found a turkey's nest with several turkey eggs in it and 15 quail eggs. The turkey was setting on the whole lot, and father and mother quail were standing near her, apparently watching an opportunity to get a chance at the setting business themselves. Royal Edson, who was standing by and heard the story, related one quite similar. He sold a pair of guineas to a neighbor. A few days ago they found the nest, with one guinea egg and 15 or 18 quail eggs. We are able to report that there is going to be a large increase of quail this fall. We hear the whistle of cheery Bob White from our office window any day and are thankful we live so near his kingdom."

THE FOREST AND THEST AND GREEN AND THE SERVICE AND

THE NEW YORK WOODCOCK SEASON,

The New York woodcock season.

To an inquiry from this office sent to the Attorney-General respecting an inconsistency in the New York laws of 1879 and 1890, prescribing the woodcock season, we have received the following reply:

Chapter 90 of the laws of 1890 amends Section 10 of Chapter 534 of the laws of 1879, which is the general act for the protection and preservation of game, etc., and said section, as so amended, provides that "No person shall kill or expose for sale, or have in his or her possession after the same has been killed any * * * ruffed grouse * * * or woodcock between the first day of January and the first day of September, except as is hereinafter provided * * * "

Section 9 of the agt of 1870 as amonded by Chapter 2000.

grouse " " Of woodcock between the host day of January and the first day of September, except as is hereinafter provided * * "."

Section 9 of the act of 1879, as amended by Chapter 269, laws of 1884, provides that "No person shall kill or expose for sale, or have in his or her possession after the same has been killed, any woodcock between the first day of January and the first day of January and the first day of January and the first day of Augustin each year. " " This Section 10, as amended by the act of 1890, is inconsistent with Section 9 of the act of 1879, and being a later enactment, controls and repeals all inconsistent and irreconcilable provisions of Section 9. The mere fact that section 9 was the provision in the laws of 1879 which prescribed the time when woodcock might have been killed, and was the section that more particulary, perhaps, should have been mentioned instead of Section 10 of said act of 1879, which related to other birds than woodcock, does not change the rule that subsequent legislation repeals all prior legislation inconsistent therewith.

Lam therefore of the opinion that it is unlawful to kill

I am therefore of the opinion that it is unlawful to kill woodcock between the first day of January and the first day of September.

Ed. G. Whitaker,
Deputy Attorney-General.

ILLINOIS GAME SEASONS.

ILLINOIS GAME SEASONS.

CHICAGO, June 23.—Editor Forest and Stream: In the latter part of April one of your Chicago correspondents said that the open season on ducks extended in Illinois to May 1, instead of to April 15. The following week he reiterated this misstatement. The third or fourth week he corrected it. In your issue of June 12 another Chicago correspondent announced that the open season on woodcock in this State began July 1 instead of July 15, and I find no correction of the error in your last issue.

The game lawsof Illinois are not very rigidly observed, and there is no adequate provision for their enforcement. At the same time there are many true sportsmen who would as soon think of committing burglary as of shooting a bird out of season. All of these men, I presume, read Forest and Stream, and they are very likely to pin their faith to its statements. If through it they should be misled into shooting woodcock in the close season they would be deeply mortified. It is to save them from making a mistake that I write this letter.

Of course their shooting would not materially affect the result. If they do not kill off the woodcock before the open season begins somebody else will. But where there are men not only willing but anxious to obey the game laws, it is almost criminal to mislead them as to what those laws provide.

The "Session Laws of 1889" contain the present game laws. Copies can be obtained at 50 cents each. Would it not be a good plan for Forest AND Stream to provide each of its regular Illinois contributors with one?

Lake View.

Chicago, Ill., June 28.—"Italian Je," the well-known

each of its regular Illinois contributors with one?

LAKE VIEW.

Chicago, Ill., June 28.—"Italian Joe," the well-known plover shooter of this city, was at my office this morning. Joe is also one of the most successful woodcock hunters of this region, and sends quantities of birds in to the market. He says that the woodcock along the Des Plaines River, ten or twelve miles from here, have done very well. He admits having killed two or three, just for luck, aheady, excusing himself with the old plea, that "everybody shoot-a de bird now." Joe says the weather is too hot to go hunting now, and I should think it was, if it ever gets that way. The past three days have been the hottest known here for a long time. The thermometer is 108° on the street near where I write this, and both business and pleasure are well nigh suspended.

Italian Joe gave me another instance of the beauty of our game laws out here. He told me that yesterday and to-day Chicago market was full of young prairie chickens! He said he thought there were over 100 in the lot he saw, and most of them were about as big as quail. He thought they came from Iowa. "Shame to kill-a de bird so young," said Joe. Well, yes, it might possibly be thought so. But under our law, it is little wonder they are killed, when men can be found brutal enough to kill or to buy them. It should be borne in mind that the game warden, who is the only one having legal eyes to see, did not see the illegal birds that Joe saw. The people can not act. It is only a half-breed foreigner, paid not to act, who can act, and he is not apt to act previous to the arrival of the milch kine in the gloaming. Oh, we've got a daisy law out here; if you're not too blame particular about what kind of a law you like.

COMPANIONS OF THE GROUSE.

COMPANIONS OF THE GROUSE.

COMPANIONS OF THE GROUSE.

In the fall, when the cold rains and high winds come on, the American robin takes refuge in the deep woods and thick coverts, where he spends much of his time on the ground feeding and for shelter. Invariably at this season the ruffed grouse will be found associated with him. The grouse also loves the company of the chipmunk or little ground squirrel; and they are frequently together around stumps in the old woods. While eating my lunch once, seated on a large stone just within the edge of the forest, I discovered a grouse on the hill-side a short distance away. He was standing up beside a stump, the color of which was identical with that of his breast and under feathers. Two chipmunks were running around him. He remained in sight for several minutes, when all three suddenly disappeared.

The grouse seeks the presence of the red squirrel also at times, as the following incident willl show: While I was out among the Glenville Hills, a ruffed grouse broke from the dense cover in front of me among the black alders in the low grounds, and made straight for the top of a very deep gorge. Shortly after I saw in that direction, away up on the hillside, an old decayed stump and a red squirrel frisking about it. I stood for some time taking observations, during which my attention was more and more attracted to the queer antics of the squirrel. At last I caught sight of a small dark object not more than an inch in diameter behind, and about midway up the stump. It was but momentary glimpses, however, that I could get of it, while the squirrel kept up his movements as before. After this object had been seen I began to suspect that another animal was there, and was probably taking advantage of the presence of the squirrel to pass unnoticed. The little red fellow at last took up a position, where he sat very demure and innocent-like, eating a nut. The hidden one did not appear, so I moved up the hill to investigate. As I neared the spot a grouse darted away and the squirrel scrambled up a tree. The

OMAHA. Neb., June 24.—Young doves are now full grown and very plentiful. E. M. Morseman, president of the Pacific Express Company, this city, has just returned from Wauka to Lake, Minn., where he has been muskallonging with a party of Eastern friends. The big catch was a 64-pounder, which fell to the host's luck. Dr. H. A. Morley and a number of others will go to Colorado early next month after bear and blacktail.—Gris.

Connecticut.—Game birds wintered finely in northeastern Connecticut, and the large number of old ones have reared strong broods. I never saw so many quail. They were in the fields, on stone walls and in the roads, whistling for dear life. I shot one—with a "Kodak."—F'lin.

SHOT COUNT AND WEIGHT.

SHOT COUNT AND WEIGHT.

WITH the table of No. 8 shot we come to a sort which reaches the largest circle of interest. It is the shot above all others which is the favorite for so many purposes that more than ordinary interest attaches to its count and weight figures. In this as in all the other cases the charges measured were taken with the American Shooting Association standard 1½oz. measure, and in the American chilled shot list each concern did its own measuring, using a struck measure, excepting only the Robertson shot, which was sent on in bulk and measured in the office here. The same exception applies to the soft shot and the two samples of English shot which came over in original package of about 8lbs. per number. A glance at the table finds the Leroy Company still at one end with the largest shot of the size, while the Collier Company take the other extreme, and the difference from the lowest to the highest is over 30 per cent, on the figures of the former so far as count goes. In the matter of weight the variations are not so great, and the Changes run only through about 40grs. The average nearly reaches the grain to a pellet grade, and the Bailey, Farrell & Co.'s shot runs very close to that average. In order to institute direct comparison the further table of weight for three charges each of 100 pellets is given. The average weight here is 102½ grs. for the 100 pellets, and the variation runs from 91 to 115½, depending presumably upon the sort of "temper" used in making up the melted compound ready for the tower.

We do not find in the 8 shot that wide variation which brings it directly into the domain of another number. The largest No. 8 reaches only 669, quite close enough to be sure, only some 8 per cent, apart. The Cincinnati Shot Co., which has the reputation hereabout of making a very small shot, have no less than four other companies below them on the list. Compared with the New York makers the shot from the Ohio city is small. The two English companies are getting together much better on this

COLORADO.—Berthoud, June.—My boys went up to my mountain cattle ranch last week and report grouse quite numerous; saw a number of fresh deer tracks near the cabin.—A. A. K.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fow! Shooting," which will be mailed free on request. The book is pronounced by "Nanit." "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

CALIFORNIA BEAR RECORDS.

CALIFORNIA BEAR RECORDS.

COME two years ago I wrote an article for one of our local papers, containing a large part of the following. Being desirous of preserving some of these incidents of early California days, I have added some new matter and present the whole to the readers of FOREST AND STREAM, assuring them that all the incidents here narrated are true, to the best of my knowledge and belief. As I have no part in any of the adventures, excepting as a narrator, and as no fish stories will be allowed to slip in, to disturb the peace of the unsuspecting reader, he need have no hesitation in giving credence to every fact herein mentioned. These bear stories nearly all relate to the grizzly, the monarch of the American forests, and depict his ferocity and his foolishness. There is probably not a single grizzly left in the Sierra Nevada, at the present time, from Lessen county on the north to Tuolumne on the south, and perhaps further, both ways. The onward march of civilization has swept him almost out of the State, and, like the bison of the plains, he is surely doomed. His great courage has been a prime factor in his extermination, for, however it may be with members of his race in other places, I have yet to hear of the first case where he ever refused the gage of battle in the early days of this State. For this reason I believe that some of old Ephraim's doings should be rescued from oblivion and preserved in the columns of FOREST AND STREAM. I have endeavored to verify all of the following incidents, and believe them to have occurred almost exactly as related. Many of the participants (not on the bear's side of the battle, however) are still living in this State, and some in this vicinity, and it was from their own mouths that I had the major portion of these chronicles.

"I was with Hercules and Cadmus once, When in a wood of Crete they bay'd the bear

I was with Hercules and Cadmus onc When in a wood of Crete they bay'd the bear
With hounds of Sparta."
(Midsummer Night's Dream.)

With hounds of Sparta."

Midsummer Night's Dream.)

The brown and black bears are still plentiful in our mountains, as any sheep owner will testify, but the grizzly, the terror of the hunter, has disappeared, probably never to be seen here again. His memory, however, still lingers in the stories of the early days, when our rivers and cafions swarmed with hardy miners. Many incidents, some terrible and some laughable, are recounted by our old pioneers about the doings of "Ephraim" in those stirring times. Even at the present day a good bear story crops up. One of these is worth relating. One of our worthy Teutonic citizens, the hero of many a moving accident by flood and field, owns, or did own, a saw-mill near Tamarack siding on the Central Pacific Railroad. A year or two ago some parties found where a bear made his home in a cave in that locality, and a number of men started out one day to capture him. Among them was the hero of this story. On arriving at the spot recent marks gave unmistakable evidence that bruin was at home, and a council of war was held. Some proposed smoking him out, others blowing him out with dynamite, etc., but none expressed a desire to "beard the lion in his den." At last our hero spoke up and said: "You vas all a pack of tam cowarts! I'll show you how to get him from the cave oudt!" Thereupon he took a stout hunting knife and lashed it securely to the end of a long pole, and taking a torch of pitch pine in one hand, with his improvised lance in the other, boldly crawled into the hole. Presently a loud snort and a growl was heard by the anxious onlookers, quickly followed by the reappearance of our hero, safe in wind and limb, but minus his lance and torch and badly

rattled. Said he: "Poys, dat vas a close call! Ven I crawit in dere, eferydings vas as black as ter tuyfel, and all at vonce I poke me mine torch right against de pear's nose, and he shust give one shnort and plow me mine light oudt. I tell you I get me from dere oudt pooty kowick." The scheme was a courageous one, but its ending was ludicrous. He had located the position of the bear, however, and a few rifle shots soon ended the hunt successfully. Of course the bear was a black, for as before stated no grizzlies are now known to exist in this section of the State.

A story of a club-foot grizzly being seen around the neighborhood of Lake Tahoe every now and then crops up and goes the rounds of the local press. On one occasion it came out some eight or ten years ago, and created quite a sensation. A circumstantial tale was told, I think, in the Carson, Nev., papers, how a woodchopper had gone out to his lonely work in the neighborhood of Truckee, and had never returned; and search being made only his axe and his shoes, with his feet still in them, were discovered, but that unmistakable signs showed how he had been surprised by old clubfoot while at his work; how he had climbed a small tree to escape; how he had been shaken out of it like a ripe apple by the enraged brute; and had, then and there, been incontinently eaten up and devoured, all but the aforesaid axe and boots. This created considerable local excitement at the time, and about 100 hunters assembled, from far and near, at Truckee, and organized a hunt for this formidable animal. The mountains were scoured for three days, but without finding either a trace of the bear or any foundation for the story, and since that time old clubfoot has become a tradition only.

In the early days of the State, however, Ephraim was

and since that time old clubfoot has become a traditionally.

In the early days of the State, however, Ephraim was much too numerous, and his sudden appearance has stampeded many a camp of miners on the American River and its branches. For the following incidents I am indebted to C. A. Tuttle (now dead) and G. W. Applegate, two of our most respected pioneers and prominent citizens, whose fund of memories and power of narration were unequaled. The scene of these bygone happenings is sometimes in Placer and sometimes in El Dorado county. To illustrate the ease with which a full-grown grizzly can he killed when struck in the spot where it will do the most good, the following incident is given:

grown grizzly can he killed when struck in the spot where it will do the most good, the following incident is given:

In the autumn of one of the early fifties, Dr. H. W. Nelson, now a prominent surgeon in the city of Sacramento, but then practicing in Greenwood, was out quail hunting. He had a double-barrel gun loaded with the proper charge for that kind of game, and no other weapon or means of defense with him. The doctor was making his way up a ravine, in a narrow trail bordered with dense chaparral, when suddenly a band of hunters from the neighboring mining camp of Georgetown made their appearance on the hill above him, in pursuit of a large bear. Some of the party saw him and shouted a warning that the bear was coming down the ravine, and for him to break for dear life. The doctor was equal to the occasion, however, and coolly shouted back to "let him come, I am ready for him." He had a theory based upon some previous investigations of the anatomy of a bear's head, that a charge of shot in the end of a grizzly's nose must reach the brain and prove fatal. Coolly cocking his gun he awaited events. In a moment or two the bear appeared out of the brush, not over 15ft. away, and on catching sight of the doctor reared up for a charge. The latter has often since averred that when the bear receted himself upon his hams he appeared to be at least 20ft, high. Never for an instant losing his presence of

mind, the doctor took quick aim and lodged the contents of both barrels in old biphraim's snout, and he tumbled over as ignominiously slain as was Goliah with David's pebble.

This seems almost incredible, but is true beyond a peradventure. I wonder how many of us there are that would coolly stand in the presence of such a foe and put a theory to the test? Not many, I ween.

I find a feeling of wholesome respect for the California grizzly dwelling in the uinds of all old-timers who had anything to do with his hearship. They all with ono accord say that these animals were always ready for a fight, and never knew when to quit.

In the summer of 1830, G. W. Applegate and his brother John were mining at Horseshoe Bar on the American River. The nearest base of supplies at that time was Georgetom, eighteen miles distant by trail. One evening in early summer, laving run short of provisions. George and brother started out to walk to that camp to make purchases, and have them brought over by pack train in the ensuing day. Darkness son overtook them, and, while descending into Cañon Creek, they heard a bear snort at some distance behind. In a few moments they heard it again, touder than before, and John rather anxiously remarked that he thought the hear was following them. George thought not, but in a few seconds after crossing the stream and distinctly him and heaven the many and the ensuing them. George thought not, but in a few seconds after crossing the stream and distinctly him and him come—splash, splash, through the water directly upon their trail. It was as dark as Erebus, and they were without weapons larger than pocket knives—a scrious position with an angry grizzly dogging their steps. Their first thought was to climb a tree, but knives—a scrious position with an angry grizzly dogging their steps. Their first thought was to climb a tree, but knives—a scrious position with an angry grizzly dogging their steps. Their first thought was to climb a tree, but knives—a scrious position with an angry grizzly dogging t

wounded the mother, which had escaped. This was evidently the same bear in search of her cubs, hence her curious actions.

One morning, in the same summer, and at the same camp, the miners had just arisen, and had cooked and were eating their breakfast. A large iron pot had been filled with beans to stew over a slow fire during the day, for the common meal in the evening. A liberal slab of bacon had been put in with the beans, and the odor thereof was spreading on the morning breeze. Probably attracted by this a monster grizzly came slouching into the midst of the camp, and began nosing around for something to eat, paying no attention whatever to the affrighted men. The latter, with one accord, stampeded and made for the nearest trees. In a moment some fifty men could have been picked like ripe apples from the tops of the surrounding pines and oaks. Not a man among the lot had even a revolver on his person, and they simply had to sit on their perches and watch Old Ephraim demolish their pot of beans and bacon. This he did in a most deliberate manner. He first knocked the pot off the fire, and spilling its contents over the ground, proceeded to gather them up when cool enough for comfortable eating. After picking up every scrap of food to be found in the camp, and overturning every tent in the place, he walked off as deliberately as he came, followed by the curses of the despoiled miners. As soon as the men had gathered their wits they apprised the men of a neighboring camp, got all the firearms procurable, and followed bruin's track up the mountain. None of them neing expert trackers, the trail was soon lost, and they spread out, forning a wide drive. One of them, a little Irishman named Shea, came to a large cliff of rocks, the face of which he proceeded to climb. When about half way up, and just as he raised his head above a shelf of the rock, he gave a terrified yell, and was seen by the men on his right and left to tumble backward, and roll to the bottom of the rocks. His companions all rushed up to ascerta

Surely enough, the bear was there, and was soon killed by the united fusilade of the whole party.

In the spring of the year, somewhere early in the fifties, a party of five left the mining camp of Coloma for the purpose of hunting dear for the market, in the locality of Mosquito Cainba. Meat of all kinds was the surely of the purpose of hunting was a profitable occupation. On the morning of the second day in camp the party separated, each going his own way to hunt, and at night it was found that one of their members, named Broadus, failed to appear. Thinking that some accident had befallen him, the others started out in different directions to search for him the next read out in different directions to search for him the next read out in different directions to search for him the next read out on the trail of Jabine, was the child of their number, manded Francisco and the surely separated out on the trail of Jabine, he having told them the previous morning what part of the country he was going to travel. Slowly and carefully flowing his tracis, left in the soft soil and broken herbage, they found him about noon, terribly mangled and unconscious, but alive. The flesh on the rail of Jabine, he having told them the previous morning what part of the country he was going to travel. Slowly and carefully flowing his tracis, left in the soft soil and broken herbage, they found him about noon, terribly mangled and unconscious, but alive. The flesh on his face was comarde seated on a boulder, by the side of a small stream, with his head resulting on his federarms, which were supported by a shelf of rock in front of him. His whole under jaw had been bitten off and torn away, and a large pool of clotted blood at his feet showed that he had slowly bled to death, after having been attacked and wounded by a bear. The ground showled evidences of a fearful struggle, being torn up and liberally seprished with his head resulting to the tracked and wounded by a bear. The ground struggle should be supported by a shelf of rock in f

The following encounters had no such happy endings: In 1850 a number of miners were camped on the spot where the little town of Todds Valley now stands. Among them were three brothers named Gaylord, who had just arrived from Illinois. These young men used to help out the proceeds of their claim by an occasional hunt, taking their venison down to the river when killed, where a carcass was readily disposed of for two ounces. One evening, when the sun was about an hour high, one of the brothers took his rifle and went out upon the hills and did not return that night. The following morning his two brothers set out in search, and soon found him dead, bitten through the spine, evidently by a bear. His rifle was unloaded, and the tracks showed where he had fled pursued by the vicious brute, been overtaken and killed. On the succeeding day a hunt was organized, and

some twenty men turned out to seek revenge. The bears, for there were two of them, were tracked into a deep, rocky cañon, running from Forest Hill to Big Bar. Large rocks were rolled down its sides, the bears were routed, and both killed.

Many such incidents could be related, some fatal and all dangerous, but only one more will be given. This occurred in February, 1851, on the divide between Volcano and Shirt-tail cañons, about four miles above the Baker ranch. There was about six inches of snow upon the ground, and it was a pleasant day. A packer with three mules left the Baker ranch with a load for the mining camp at Damascus, and a party of three deer hunters accompanied him half way, intending, if they got any venison, to have him bring it back to the ranch on his mules, when he returned in the evening. The hunters were armed with Kentucky rifles, and after parting company with the packer started off to the right over heavily timbered ground sloping down toward Volcano Cañon. They had not proceeded more than three-quarters of a mile when they perceived, coming up out of the cañon and about 100yds, away, a monster grizzly. One of the party named Wright, an old bear hunter but new to the habits of the grizzly, prepared to fire. His companions begged him to desist, but he, laughing at their fears, fired and wounded the bear in the side. The latter reared upon his haunches, and, after waving his paws in the air two or three times, came directly for Wright with a ferce growl. The party all took to their heels and separated, but the bear soon overtook Wright and with one blow of his paw struck the man, face downward, upon the snow, and began biting him about the head, back and arms. The other hunters, seeing the desperate case of their companion, rushed up and fired at the bear at close range, fortunately killing him with a bullet in the base of the brain. Wright, on being relieved of the weight of his antagonist, sat up in a dazed condition, with the blood pouring in streams down his face. He had received sever

FISHING NEAR NEW YORK.

FOR practical and specific directions to reach several hundred fishing resorts within easy distance of New York city, see issues of 1889 as follows: April 18, April 25, May 2, May 9, May 30, June 6, June 18, June 20, June 27.

THE CONNECTICUT SEASON.

THE CONNECTICUT SEASON.

Editor Forest and Stream:

As the days of trout fishing draw to a close, I look back over the season and come to but one conclusion: It has been a most excellent year for trout fishing. Never in the recollection of the oldest inhabitants were there so many trout taken in any one season; and they have been tay large for this locality too, often reaching 21bs,; and in some instances 3lb. trout have been taken. And the general catch of a day's sport usually shows several of 4lb. and 4lb. All this in a locality where trout have been scarce for a number of years, and caused probably by stocking the streams with small fry.

But the trout-hog abounds wherever trout are to be found. I have a letter before me stating that a "man and his brother caught 239 trout in one day," week before last, and it is added that "they weighed 19lbs.," or an average of 140z. each. Now if they were all of this average weight there was not a trout in the whole lot fit to save. If this was not "hogging," I fail to know the thing when I meet it. This is where the trout go. If we could have laws passed prohibiting the having in possession as well as the offering for sale of baby trout and also have the limit set at 8 inches instead of 6 as at present, it would help matters some.

Now a 5-inch trout from an average of 10 taken from

Now a 5-inch trout from an average of 10 taken from different brooks weighs just a trifle over 10z., while an 8-inch trout weighs a trifle over 20zs., probably averaging 2\fozs. as I weighed some weighing 20zs. and some that weighed nearly as high as 30zs.; and certainly a 50z. trout is small enough for any one to save.

NOTLIKS.

COLEBROOK, Ct., June 23

WATERPROOF BOOTS.—Leavenworth, Kan., June 24.—
"Big Reel" asks, in your issue of June 5, if there was ever a leather waterproof shoe really waterproof, etc. I don't know anything about shoes, but I have a pair of boots built on the cavalry style, only more so, that I have used for ten years, and they were an heirloom at the time they became my property. They originally cost \$25 made to order, and the material is horsehide, with oak-tanned taps sewed on. I have worn out a number of soles on them and the tops are as good as ever, and the boots are absolutely impervious to water, and look to-day as if they would outlast the writer. I generally get a piece of oak-tanned belt leather and take it to my shoemaker, with strict orders to pull out all previous stitches and sew the new tap on through the old holes.—Nomad.

CHICAGO AND THE WEST.

CHICAGO AND THE WEST.

CHICAGO, Ill., June 24.—The gentlemen I met in the to be Mr. C. D. Gammon and Mr. Cribben. These did the hospitalities of the camp, and presently Mr. W. W. McParland and Mr. Tom Smythe came up in the other boat, and we had a pleasant talk before the serious business of fishing was resumed. It did not take long to learn that the old campaigners, Charlie Gammon and "Mac," had fixed up a very comfortable camp.

The guides of the party were Bert Louk and young Blodgett, both of Three Lakes Station. Wis. It is proper to say in advance that a trip to the mascallonge country, if it is to be pleasant or successful, necessitates the employment of a guide. The country is big and difficult, and a tenderfoot alone in it would be an object of pitry, always supposing he wants to leave the railway and get out to where he can reasonably expect good fishing. Boats can be obtained by the guides at less trouble and about the same expense as that implied by taking in one's own boats as this party did. The guides do all the rowing, and a steady all-day gait is what takes the fish. The lig catches are all made with such help, and the anglerneed not expect to go into that country and meet success without a guide to aid him. I presume that Louk and Blodgett are as well known as any of the guides of that region. Certainly our experience with them showed them pleasant, willing and intelligent. To any parties who want mascallonge, I should suggest that they write to either of the above, and leave most of the planning of the trip to them. As their time is taken up often a good way ahead, it would be well to write early and set a date. Then the guides will look around and take the party just where the best fishing is at that time. The regular charge of the guide is \$2.50 per day and board. One guide per boat is about the rule. Bert Louk told me he was always glad to answer questions for any party contemplating a trip into the woods, and I don't think any one would regret trying him. Such points as these are often neg

of opinion, but most of the guides think the dams nurvite fishing. Everybody knows that there are plenty of good fish left in Vieux Desert, which is the largest of the series of lakes.

The truth about the mascallonge country for this season appeared to be this, at the time of my visit to the country: The season was late and the water very high, and the fish were thought to be late in their spawning. The big fish had just began to rise a little, and there was every probability that July would be a better month than June this year. The lower lakes of the Eagle Waters chain were at that time the best. The guides advised anglers not to go to Tomahawk waters, but to keep on the Eagle Waters, cast of the road. As to the branch of the road running up to the northwest from Monico Junction, the Gammon party did not visit that country, and we heard nothing about it, our guides not being familiar with it. As to the abundance of the mascallonge, and the question whether the waters are "fished out," it would look very ill for me, after a limited experience of four or five days, to pass any opinion upon that, and it is usually unwise to take the experience of any one party, either way. The fact is that mascallonge fishing is a good deal like salmon fishing. Now you strike it big, and now you don't. There is no fish more capricious or irregular. You can't bet on a mascallonge a little bit. He is a truly game fish, and like most other aristocrats of his sort, in that you must await his pleasure. If you don't happen to find him at home when you send up your card, don't show bad taste and bad judgment by saying he is no longer in the country, for on the very following day he may receive you with open mouth. The best thing to do is for me to tell what actually befell the members of our party, and the reader may have this comfort, that what he reads is true and untinged with any of the interesting and interested romance which may possibly invest certain local reports, such as those above alluded to, which are injurious to the bes

to, which are injurious to the best interests of a issuing country.

If my memory serves me right, it was six mascallonge that Mr. McFarland had taken before he came to Lone Stone, and that evening he added another to his score, as was testified by the revolver shot we heard from the upper end of the lake. This was a small but very gamy customer, which went out of water again and again, and once, so Mac thought, cleared 20ft. of surface before he struck the water again. The fish in this lake were very gamy, and more were lost than taken. Mr. Smythe, in the same boat with Mr. McFarland, had three strikes in the same day on Lone Stone, and lost them all. He was fast to a fine large fish, a 30-pounder, all the party thought, and held him for over five minutes; but this being his first experience at mascallonge fishing, he made the mistake of thinking these fish should be treated like perch. The

result need not be mentioned, but it cast a gloom over the camp, for this was the first and almost the only heavy fish of the trip.

There is a little bay at the head of this lake, and here on the following morning Mr. McFarland had a beautiful rise, the fish, a fine 10-pounder, going clear out of water as he struck, but not finding the hooks. Mac seemed to have all the luck. Charlie Gammon said he did not have a single mascallonge strike during the trip. This set us to studying, and we wondered if part of this could not be due to the fact that he was using a No. 6 Skinner instead of a No. 8, which latter is the usual bait on the lakes. Certainly the bulk of the strikes came to this No. 6 spoon. I remember that Mr. Skinner once wrote me that he did not think the largest fish were always caught on the largest spoon.

not think the largest fish were always caught on the largest spoa?

This was a silver and red spoon. The guides prefer this pattern, and we had better luck with it than with copper and silver, gold and silver, etc.

Ido not think much of trolling, for it looks too lazy and too easy to suit me, but there is more to trolling for mascallonge than at first might be thought. There is a right and a wrong way. For instance, the guides with the propertion of the your tool with a very long line, but will tell you that method will take no fish. The theory is that they work in the weeds in either case. Usually there are just clear of the weeds in either case. Usually there are your more than both the others. It is they notest, being only about 30ft. I should think. The next line out is directly in the rear of the boat, and is about 10 or 15ft. longer. This is 'usually a handline. I think it might well be dispensed with. I cannot see any conceivable sort of sportsmanship in fishing with a handline, though I suppose two-thirds of the mascallonge taken are yanked on handlines. The third or outside line is on the deep-water side of the boat, and is about 10 ftt. or so longer than the stern line. It is thought that the mascallonge, being disturbed from his bed, dark out beneath the boat. We often saw them do so. After the boat has passed it is thought that fish curiosity leads him to swing in behind to see what the boat was. About that time he sees one or the other of the graduated spoon hooks, and for one reason or another may make a run for it. Just why he does this nobody knows. Bert, one of the guides, said, "Why, he thinks it's something to eat, of course. That's the only thing any fish bities for." Blodget thought the mascallonge to the course from the see, and it is that if ever any in the part of the sheerest and most savage rage. Every line of its muscular body shows anger and impetuous haste to strike its mascallonge. When the mascallonge we have a suppart of the sheerest and most savage rage. Every line of its muscu

as "cranks," "chumps," etc.

From Russell's place on Virgin to the station at Three
Lakes is only five miles. Accordingly Bert, the guide
who was to stay with us, went on in to see his sweetheart,
promising to be on hand early next morning. Therefore
it was Mr. Russell who that evening after supper took us
out for a short experimental row around Virgin Lake, to
test the truth of the common report that there "were no
mascallonge in Virgin."

mascallonge in Virgin."

We had not pulled more than three-quarters of a mile from the house, and were running under a deep green bank of forest, which made the beautifully clear water also look deeply green, when there came a sudden rush

and a great splash, whereat every man in the boat called out simultaneously with the joyful shout "lunge!" Again it was Mac's No. 6, and again Mac's little fall-down, broken-backed, patched-up bit of a lancewood bass rod had to stand a battle with a fish too hig for it. In this bass rod I recognized the duplicate of a rod that I bought and to the stand a battle with a fish too hig for it. In this bass rod I recognized the duplicate of a rod that I bought out of business. I have the rod yet and it is a good one, though too plant for bat-casting.

At once on striking the fish, which we saw to be only about a six or eight pounder. Mac called out to Russell to pull out for deep water, and this was a tonce done, the fish being towed bodily behind the boat on the rod. This was kept up for ten or twelve minutes, I should think, and at last the fish began to break water and to give upsort that the standard of the standar

fare" to Julia, finally traversing its two innes of crooks and mosquitoes.

We had hardly gotten into the main lake and were pulling hard to get clear of the weeds, when a tremendous fish sprang for Mae's spoon, while he was just paying out his line. The impetus of the boat was too great, and the fish missed the spoon or barely struck it, falling back with a splash as great as if a calf had dropped in the lake. This was the largest mascallonge I saw on the trip. We thought it weighed between 20 and 30lbs. We could not get him to rise again.

We now started on around the lake, and in a pretty

could not get him to rise again.

We now started on around the lake, and in a pretty little bay of deep water we got a screaming hot strike on my spoon and at once started for clear water, and after a good "wrassle" we brought up and shot through the head a fine mascallonge of about our average, 5 or 6lbs. In working this, my first mascallonge of this trip, I followed the instructions of the guide implicitly, for I knew he wanted the fish as badly as I did. He directed me to keep the rod with the tip close to the water. These

guides do not like to see a rod held straight up or even at much of an angle at any time, even when trolling; they say the fish breaks away more easily then. I am always willing to learn and have confidence in the fellow whose business teaches him. I could not in this case help noting the difference between the guide's advice and the canons laid down by the angling authorities. For instance, I remember to have read the passage in Dawson's "Angling Talks," where the writer speaks of "instinctively dropping the tip of the rod when the fish leaped from the water." Now, that is just what a mascallonge guide will tell you instinctively not to do. A mascallonge, or some individuals of that fish, may go out of the water as often as a salmon and I don't see why it should be handled differently. Yet Bert told me to keep the rod bent in as much of a curve as the fish would stand, and not to give line except on a cush, always keeping the rod flat down and close te the water. "When a 'lunge comes out of water, he always shakes his head to throw the hook out of his mouth, and if the line is the least slack, he'll do it, sure. Now, if you keep the rod bent and the line lying close along the water, the spring left in the curve of the rod will keep the slack taken up all the time and hold the hook tight. Some fellows get scared when a 'lunge jumps out, and they let the rod go a little or slack down, and right there is about where the fish gets off." I must confess there seems a good deal of reason in this. We followed the advice, at any rate, and I only lost one mascallonge, and that one barely struck the hook and was gone. Mac lost two in the same way; but after we once hooked a fish we usually about counted on him. Another thing. The guides do not believe in a gaff. They say it is apt to tear out or straighten out in a heavy fish. They prefer to coax the fish close alongside and shoot it with the revolver right between the eyes. This seems a brutal and unsportsmanlike way of treating so noble a fish, one which I cannot help

marksmanship to strike the fish right, as the ordinary distance is only two or three feet, and may be only two or three inches.

We rowed around Lake Julia—a beautiful sheet of water it is, two or three miles in length—and every time we went around we caught a mascallonge. This was the best day Mac had had on the whole trip of two weeks, and we felicited ourselves upon the happy result of his staying over. We took six mascallonge that day, and a greater fishing day, or one more truly enjoyable, I hardly remember to have had. We had no fish heavier than 7 or 8lbs., but if the angler's mind were not perverted by hopes of the monster fish which are often taken in these lakes, he would think the landing of a 6lbs. mascallonge a large slice off of heaven. There fell also to my rod that day a monster wall-eyed pike, which two days later weighed 6½lbs., which we thought at the time weighed 8lbs. This fish made a tremendous, boring, pull-down sort of a fight. These "pike" are rarely taken so large as that on these lakes, they told me. Honors were easy on the mascallonge question, for Mac and I each caught three. Mac has been telling ugly stories here in Chicago about how I strangled a mascallonge to death. I presume I ought to explain that. The fact was, the mascallonge turned two or three somersaults the instant he discovered that the spoon hook was not good to eat, and looped the line tightly around his neck, under the gills. Since he made no fight, I thought it was only a pickerel, and so unceremoniously jerked him in. It is a false accusation that I can't land a mascallonge without first strangling him to death. Wait till I come to Mac's way of killing a mascallonge. I'll get around to that after a while, if the paper holds out.

[To be CONTINUED.]

THE ELK CREEK REGION.

THE ELK CREEK REGION.

We were going to Wagon Wheel Gap, but the Sunday before starting the mail brought Forest and Stream of May 29, and with it "The Wedding Trip of the Kennedys." Oh, no," said I, "we will try some other, nearer region along the line of the Denver & Rio Grande." So we rode out of Denver into the darkness of night, not knowing our destination and not caring, so long as the scenery was fine and the trout rise well.

Morning found us at Salida. Then came the slow climb over Marshall Pass and the descent into the valley of the Gunnison. West of the town of Gunnison we saw several fishermen along the banks of the river, and what was most to the point, we saw several strings of fine trout. At length we came to a spot where several mountain streams forced their way through the canon to mingle their waters with those of the swirling, boiling, rushing, white-capped Gunnison. One of these should be our camping ground; so we alighted at Sapinero, the nearest station.

After dinner we secured a team and driver and went

white-capped Gunnison. One of these should be our camping ground; so we alighted at Sapinero, the nearest station.

After dinner we secured a team and driver and went up Elk Creek as far as it was possible to go. There, in a beautiful cañon, we pitched our tent, and "Camp Pinolita" has been our home for two weeks. We are only 7,800ft, above sea level, and only six miles from the nearest log cabin; we have a bed of spruce, camp fare, cool evenings, icy mornings, but we are happy.

Oh, dwellers in cities, toilers by the great sea, this is the place for inspiration and for rest! Every breath is perfume, every sight a picture, every thought a poem, every sound a song. Yes, we have music; not the music of organ or of orchestra, but the matins of thrush and warbler awaken us, the sighing of the breeze in the pine tops rests at noon, and at night we are lulled to sleep by the faraway wail of the whippoorwill and the silvery murmur of the brook. And the flowers! such flowers! Nature seems to have dropped her basket right on this spot. The sage-clad mesa, that stretches away to the bleak cliffs and many-shaped peaks, is red and yellow and creamy with the bloom of cactus and yucca. About us are roses, hawthorn, moss pinks, gilias, lupines and scores more of brilliant flowers about which live pixies and wood elves.

We would be content without rod or rifle, but we brought them and so they have to be used. The trees about our tent are filled with squirrels, and mountain hares are plentiful. In the mountains close by cinnamons and silver-tips make their lairs. Seven bears have been killed within three miles of our camp in the past two weeks. In the quaking aspens and brushy cañons

that open upon Elk Creek, willow grouse are nesting, and near the headwaters of the stream clk and deer are breeding. It is a splendid place to study natural history, but all hunters who are after venison in June ought to

but all hunters who are after venison in June ought to return scalpless.

The trout fishing is superb. When we reached here the water was high and somewhat mnddy. The fish would take nothing but grasshoppers. Then, as the stream went down, they took brown-hackles tipped with fish eyes. Now they rise well to brown-hackles, gray-hackles and coachmen. Local fishermen use live bait for river fishing, but I have had first-rate luck with the coachman and grizzly-king, tipped with fish eyes. In every case peacock bodies should be used, but not gaudy, highly colored flies. Of course, fishing will be better next month than it is now, but we cannot complain. We have taken all we could eat. What more could we ask?

The small streams rush through cañons in rifles and cascades. Then they wander idly through level parks, forming deep pools beneath the willows. In these the fish run from ½ to ½lb. In the Gunnison the trout average 1lb., and sometimes a 3 pounder is reeled in. Never, in the West, have I struck a region where the trout are so wily and require so much skill in securing them. It may be because the season is early, but the sport is all the more enjoyable on this account.

The only thing to destroy the sweet spirit of my dreams is the thought that vacation must soon come to an end. Before it does, we are to have a grand bear hunt, of which more anon.

Ele Creek, Col., June 18.

ELK CREEK, Col., June 18.

Of the "Bridal Tour of the Kennedys" "Nomad" writes from Leavenworth, Kan.: "I will venture the rash assertion that no feminine hand ever wrote a word of it. If I am wrong I am willing to stand corrected and to be forgiven. It is certainly as quaint and concise an article as has appeared in any issue of Forest and Stream that I ever read, and I have perused the latter for years. I must congratulate you upon your original acquisition, and hope to hear more from the same source in your future numbers."

NEW ENGLAND WATERS.

NEW ENGLAND WATERS.

THE fishing trips are not quite all over yet, though the great majority of those fond of the sport, and can afford to indulge in it, have been on their annual trip to the trout waters and have returned. Four of the members of the Inglewood Club have just returned from the club's preserve, and report an excellent trip. The party consisted of Mr. Samuel Shaw, of the Murdock Parlor Grate Co., the scribe of the party; Mr. John Wetherbee, Mr. Geo, W. Walker and E. Noyes Whitcomb. The club's preserve is in the southeasterly part of New Brunswick, and now comprises some 70,000 acres, including the recent additional lease of some 20,000 acres. Although they started on the 28th of May, they found the roads poor and the season very cold and backward. Mr. Shaw reports the trout fishing excellent, he having taken over fifty in one day, after having rejected and returned to the water all under one pound. He is very enthusiastic concerning the game on the club's preserve, and thinks that the shooting this fall will be excellent. He staid longer than the rest of the party to explore the recently leased lands down the West Branch. With his guides he passed many excellent salmon pools—to be, as this river is to be stocked with sea salmon. The club will let loose this seasan 40,000 sea salmon and 55,000 landlocked salmon.

Thus far not many of the members of the Inglewood

salmon.

Thus far not many of the members of the Inglewood have availed themselves of the spring fishing. Mr. Henry Litchfield, the tackle dealer on Washington street, vice-president and treasurer of the club, has been kept at home by business, but he hopes to go later. Mr. Fred Whiting, one of the proprietors of the Boston Herald, was ready to go with the first party in May, but was hindered at the last moment. He will make his trip later and take in the fall shooting, which promises to be excellent.

was ready to go with the first party in Mak, but was hindered at the last moment. He will make his trip later and take in the fall shooting, which promises to be excellent.

It seems that the club lately formed by Mr. Cram, president of the New Brunswick Railroad, has obtained a lease of all the lands on the Tobique River, above The Forks, and that that famous hunting and fishing section, heretofore known only to the more venturesome, is to become private property, and to be opened up to the club. So they go. The lakes and streams in Maine and New Brunswick, and even the woods and fields in Massachusetts, will soon all be leased to private parties, and the public will be excluded. Why, there are two clubs now forming, one to control the shooting on certain lands in Dedham, Mass., and the other will try to lease both the fishing and shooting of a certain tract in Bedford. The farmers, who understand the matter, are said not to be against the leasing of the fishing and shooting rights of their worn-out pastures and meadows, and are inclined to look upon the rental as so much clear gain. But there is considerable opposition from the boys, who have heretofore roamed these lands and fished the waters as it pleased them, and there are some dire threats. Indeed they have already begun to carry some of their threats into execution. In one case on the Cape—I am requested not to publish the name of the owner of the waters—a most diabolical revenge has been carried out. The gentleman in question has a trout pond that he has taken a great deal of pains to stock. Above the pond is a beautiful stream, the source of the water supply. Up this stream the trout are very fond of ascending. Frequently the gentleman has invited friends and sportsmen to fish this stream, with most satisactory results to the invited, and rarely, in his good nature, has he denied any one who has politely asked him, the pleasure of taking a few trout from his waters. He is a very genial gentleman, and one much beloved and respected by all true sportsme

There are still a few of the noted sportsmen at the Maine lakes. Mr. Edgar W. Curtis, of Meriden, Conn., has lately gone back to Richardson Lake, with a friend. He has recovered in part from the illness that destroyed part of the pleasure of his early trip. Good catches of trout continue to be reported from Rangeley. The Stevens Hotel and Excursion Co. of Boston is taking parties up to Tuffts, Grindstone and Dutton ponds in Kingfield. One party has been there ten days and report over 500 trout taken. Six more excursion parties are reported for the camps there. The company has control of 3,100 acres about the pends, and are intending to build a hotel. C. W. Crane, of the Boston leather trade, with Dr. Pratt, went on a fishing trip to Webster, Mass., the other day, and took 12 nice trout, rejecting all not of a respectable size. J. S. Richardson, salesman in the dry goods jobbing house of Jackson, Mandell & Daniel, with a friend, went on a fishing trip last Saturday to a stream in Bedford, and took 17 good trout. The streams in Massachusetts are turning out wonder strings of trout this year. But up in New Hampshire the case is different, especially in the White Mountain region. The streams have been terribly stripped there already.

A gentleman in the dry goods trade of this city has recently been on a fishing trip into the region above mentioned. He hired a teamat the railroad station and drove several miles to what was once a famous trout stream, and where in years gone by he might reasonably have expected a handsome string of good trout in point of size. The day was fine. The season was just right. The gentleman regarded himself as "something of a fisherman," With a friend the stream was faithfully fished. They were not absolutely "skunked," but they did catch one or two fingerlings that they were ashamed to bring home. They were disgusted. What was the trouble? They learned at the hotel, on their way out, something that the guide books do not mention. The boys in the neighborhood made a practice every spring,

GREEN RIVER.

GREEN RIVER.

BRATTLEBORO, Vt.—Friend Mel and I had agreed early in the winter on April 29 as the proper day to take our annual day's outing for trout, so the evening before found us driving out of Brattleboro, destination Greene River.

We took along a liberal supply of provisions intending to make our coffee and cook our meals beside the brook. It was our idea to stop in a sugar house over night and build a good fire in the arch, but after a drive of ten or twelve miles, by which time we were nearly starved, we found the house locked, and on application to the owner he said it was full of sap buckets and wood, but that we could come to the house and be welcome. This offer we declined, as it was our intention to bunk by ourselves. Friend Mel now bethought himself of a school house a mile further up the road, so along we went only to find it locked and no way to effect an entrance without breaking in, so we had to drive a couple of miles further along and put up at the house of one of the men who worked in a saw mill. Here we made our coffee and found a bed for the night. Next morning we were out at 4, and going down to a dam below the house Mel got four trout and i one, not very large but a nice legal size. Then we had breakfast, and our team being at hand drove up the road two miles and struck in on a small brook running into the river. This we fished down with fair success until we were most to the river, when we met a party coming up, who locked very much disgusted to see us on the brook, as they had fished up the river with poor success.

Fastening up our lines we walked down stream without

on the brook, as they had fished up the river with poor success.

Fastening up our lines we walked down stream without fishing until we came to another brook running into the river. We fished up this quarter of a mile and were doing nicely until we met two fishermen who had got up at 3 o'clock to fish the stream before any one else came on it. The look of disgust on their face as they told this can be better imagined than described, but most likely it was a reflection of the one on ours on meeting them. They had fished down three miles and had a nice mess of trout, so we turned and fished down to the river again.

It was a lovely day and many times I would be lost in listening to the drum of the partridge or the scolding of a red squirrel, but when I wished to find MeI I had only to look for a cloud of smoke rolling up through the alders, for he does keep it hot when fishing, with that old brown pipe of his.

We finally struck back on the river again and walked down to the dams, near where we lodged. Then we

We finally struck back on the river again and walked down to the dams, near where we lodged. Then we fished down two miles further, and darkness coming on warned us that we had a ten-mile drive before us, so with the greatest reluctance we reeled up and started for the team, and after a few hours drive over hills and through valleys were back in Brattleboro, with a nice mess of trout, part of which went to Albany; and when eating them with the children at home, my twelve-year-old and I planned a day's trouting of which I may tell at some other time. other time.

other time.

Some Sea Fishing.—A salmon weighing 24lbs, was caught in a trap at Lowell Island, Mass., about the middle of June. Salmon are extremely rare in this locality and this was of unusual size. A salmon of 16lbs, was taken in a trap at Salt Island, near Gloucester, Mass., June 23. Seals are remarkably abundant on the Maine coast and have brought disaster to the salmon fishery, frightening the fish away from the weirs (for which the angler will be truly thankful) and sometimes eating half the salmon before they can be taken from the weirs. Weakfish, striped bass and drum are reported plentiful on the New Jersey coast at present. A great run of striped bass has entered the Susquehanna River and the fishermen's nets have been broken by their immense numbers. Fishermen are catching codfish from the rocks on Baker's Island, Mass. On June 17, two men took over two dozen cod, weighing from 10 to 15lbs. This is a new experience for the anglers of Cape Ann. Along the southeastern coast of Massachusetts good catches have been made. Two men recently took 250 bluefish off Sconticut Neck. Among the large fishes taken in the locality was a tautog weighing 93lbs

ANGLING NOTES.

THE wonderful run of bluefish still continues, and the markets are glutted with them. They are in fine condition, and the price exceedingly low. A few striped bass, weakfish and kingfish have been taken during the past week, but they are yet far from plenty. The young bluefish known as "snapping mackerel" have been seen in large numbers and give promise of fine sport in the fall. Large blackfish are quite plenty around the north end of Long Island, and have been caught weighing as high as 9lbs.

W. Romeyn, the famous Keeseville angler, writes that though high water has greatly interfered with angling in the North Woods, he has killed some fine lake trout from 5 to 16lbs. in weight.

Many anglers are about starting for the famous Nipegon, the land of big waters, big trout and big flies. But even there the fishing has begun to tell on the supply and size. It is seldom a speckled trout is killed of over 3 or 3½lbs. in weight, whereas in years past they were frequently caught weighing from 5 to 8lbs.

FISHING ON ONION CREEK.

FISHING ON ONION CREEK.

A USTIN, Texas.—The people of Austin have sporting proclivities in common with the inhabitants of other sections of our country, and one of our favorite resorts for going afishing is Onion Creek, some six or nine miles from the city—depending upon the particular point aimed at. Why the mellifluous Spanish name of "Arroyo de los Cebollos" (Thay-bol'-los) was finally rendered into plain and unromantic Onion Creek, is now past finding out; but the attractiveness of the locality remains the same, and every fair day of spring and early summer loads of fishers, maidens fair and mature dames, with attendant escort, duly equipped with rods, baskets and the usual camp impedimenta, not forgetting old clothes and straw hats if they are sensible, will be found en route in the early morning and returning with the shades of night, possibly wet, bedraggled, sunburnt and "Oh, so tired!" and without fish, but still satisfied with the day spent amid groves, waters, flowers and in the free open air.

Austin is called, and justly, the "City of Hills," but

spent amid groves, waters, flowers and in the free open air.

Austin is called, and justly, the "City of Hills," but when on the route to Onion Creek the plateau ridge, some two miles from the city, is reached, all parties with eyes for beautiful scenery always halt, for what a panorama is exhibited! Austin, the pride of Texas, is like a magnificent jewel in its setting. Over the foreground of prairie flowers, motts of live oak and spreading elm, this gem of a city, its feet bathed in the shining Colorado, through the clear and brilliant air appears as if spread out before one, for, from this superior height, the minor hills upon which Austin rests are not noticeable. To the right opens up the valley of the Colorado, with its gardens and orchards, while to the left the juniper-clad mountains rise up in their majesty; the nearer foothills distinct in the crystal atmosphere, and the heights and gorges lost in the purple haze. At the gateway of these purple mountains, some two miles above the city, Austin has commenced the stupendous undertaking of damming the Colorado for the purpose of water and electric light, a surplus power of 12,000 h,p. being left available for other purposes. A solid stone dam 50ft, thick and 60ft, high will hold back the waters of a river flowing for 300 miles, forming a mountain-bordered lake for 30 miles above. As the river is now well stocked with bass naturally besides other fish, what visions of fine fishing are opened for the future.

A few miles of travel on the plateau amid farms and

bass naturally besides other fish, what visions of fine fishing are opened for the future.

A few miles of travel on the plateau amid farms and growing crops, then the opening of numerous gates and crossing of pastures, and then the short descent to the creek is made, a camp site selected under a spreading elm and near an overhanging bluff, from the base of which an everlasting spring furnishes cool and palatable water.

In This particular spot selected abounds in beautiful scenery and can fairly be classed as "cañon," for the bluff on the southern side of the creek is fully 100ft. in height and impassable at its base, while on the side we are camped the bluff rises 30ft. or more, and only a narrow strip of land intervenes between it and the water's edge. Trees, vines and ferns have availed themselves of every crevice in the rocks, and the ruggedness of the broken masses from the cliffs are partly hidden from view.

view.

Our camp arrangements are soon made and each of the party starts out as inclination leads, some for flowers, some to view the scenery (especially the young fellow who has a companion addicted to scenery), but the knowing one soon rigs his rod, and with bait and minnow net seeks some pool or whirling eddy, hoping for solitude and filled with hopes of catching a few—dare I say it?—catfish.

Now, brother fishermen of the treut and have

catfish.

Now, brother fishermen of the trout and bass persuasion, don't look down upon me with grief, but rather with envy, when I confess that I like to catch catfish, that is, such catfish as are found in this rock and gravel-bottomed stream. They are the aristocracy of their kind—small generally, but slender, bright and clean-looking, and speckled on their sides until fairly rivaling the trout, and what is more they will sometimes rise to the fly, which is more, than I can say of the bass in this section. But my catfish, aristocrat as he is, in common with your dude trout, prefers the succulent worm or tender minnow.

dude trout, prefers the succulent worm or tender minnow.

Our lone fisherman in the course of two or three, hours, if successful, returns with a string of the "speckled beauties" (e. b. is not copyright and I have privilege to use it), mingled with a few "gasper," perch and possibly a few bass; but the bass as a rule, while quite plentiful in this stream, are only to be caught by the knowing one and he a fisherman, at early morn or late eve by careful fishing of their lurking places.

Dinner is then the order of the day, and while fish are frying baskets are unpacked, cloths spread upon the close turf, and the lazy ones delegated to keep off ants and creeping things. But soon all are deep in the mysteries of the Onion Creek catifish, and no person, whether resident or the stranger from abroad, has ever been known to quit the feast so long as fish were forthcoming.

The afternoon is passed as inclination wills, and the setting sun finds our party on the road home, while soon the cool of evening and the aroma of the dewy prairies revives the spirits of the gorged feasters, and when the point of road is reached where the view of Austin opens,

now sparkling with electric lights, a hurrah from the men and murmurs of delight from the ladies are frequent, the horses are urged to a faster gait, and soon the party, singing and shouting, are upon the iron bridge, which, with its graceful proportions, now in the moonlight appearing like cobwebs, crosses the Colorado and gives access to the city.

At some future time I will give you an account of how the fishermen intent on bass passes his night and day of recreation on Onion Creek, that is, if time can be purloined from business to take the trip.

B.

St. Lawrence River Nets.—Last week Mr. W. H. Thompson, secretary of the Anglers' Association of the St. Lawrence River, secured President H. H. Warner's steam yacht and took with him the game protector and a party on a search for nets. In Henderson Harbor they found a pound net 4 rods square, 22ft. deep, with a leader of the same depth half a mile long. They at once commenced to take it up, and a party armed with several guns came down claiming to own it, and proposed to protect it. The officers took the guns and arrested the parties and took them to Alexandria Bay, where their trial was begun. They asked for an adjournment, which was granted, and later they procured from the county judge an order to take the case before the grand jury. The net was burned the same evening, and was so large that it took from 11 P. M. until nearly morning to destroy it.

A Long Island Pompano.—We are indebted to Mr. E. G. Blackford, President of the New York Fish Commission, for the following interesting note on a rare pompano of very large size: "I received this morning (June 24) from Bay Shore, Long Island, a specimen of the Trachynotus goreënsis weighing 20lbs. It was a magnificent fish, and it is the first that I have ever known to have been caught in this vicinity. The furthest north, previous to this, has been caught in the Chesapeake Bay." This increases the list of pompanoes taken on Long Island to four kinds—the common Carolina pompano, the ovate pompano, the silvery and the African, the last, known also, as the permit. The silvery pompano is a very little known form which we have seen in Great South Bay, Long Island. Long Island.

The Pere Marquette River, in western Michigan, writes "C. H. B.," has trout and grayling for all, if they only knew how to catch them. This is the finest trout and grayling stream I ever chanced to meet. I have been out ten times, a little while each day, since May 1, and my catch numbers 460 speckled trout and ten grayling of various sizes., 7 to 15in. in length, and weighing up to 240z. On May 23 I took eighty-three trout in less than four hours with fly. Could not give it to them fast enough. They would come by twos, and on one occasion three fine trout were brought to creel at one cast. This I never saw before, and do not remember of reading about. They were all nearly of a size, two 10in. and one 9in., combined weight 24lbs. Most are fish with white and creamy-colored flesh, but once in a while a real old salmon-color fellow will fall a victim.

Newport Bass.—Sachuest Neck, R. I., June 28.—Striped bass have made their appearance and quite a number have been taken with rod and reel. Largest reported 35lbs. West Island, I hear, has taken five fish. Graves Point reported three yesterday. Eleven fish have been taken at Sachuest Neck, two of 15lbs., the rest weighing, largest 11lbs., smallest 5lbs. dressed. Indications point toward a very good season's fishing. Conditions as to wind and weather have been very poor for bass fishing. Two of the eleven fish taken at Sachuest were taken during still, hot northwest weather, and water very clear, and as poor a time for bass fishing as could well be selected.—WM. M. Hughes.

CONNECTICUT.—I spent three days of last week in north-eastern Connecticut, most of the time roaming over the fields and through the woods. The trout fishing has been the best that section has seen for thirty years, so an old fisherman told me. A little brook running within a quarter of a mile from our country house was fished by two gentlemen from Rhode Island one afternoon, one catching 35 and the other 28. A few of these were splendid fellows of a pound or over. The bass in a nearby lake were jumping one afternoon very gamy, but only a few have been caught as yet.—F*LIN.

TROUTING IN THE GREENBRIER RIVER, VIRGINIA,—Staunton, Va., June 24.—In our Virginia mountains there are many fine trout fishing streams. The following named gentlemen have just returned from a four days' sport in the head streams of the Greenbrier River, Pocahontas county, West Virginia. The score was as follows: James Bumgardner, Jr., 293, George Beall 267, Chas. L. Cooke 246, R. P. Bell 179, F. R. Webb 62, Mr. Webb was unwell most of the time. About 200 too small were returned to their native element.—CANTON.

OUANANICHE AT LAKE ST. JOHN.—A telegram sent to us from Quebec, June 30, reads: "Party of nine took 200 ouananiche at Grand Discharge, Lake St. John, Friday, Splendid sport.—J. G. Scott." We have in type for next week an interesting budget of angling news from Quebec.

A GRAY DRUM weighing 42lbs, was taken on the New Jersey coast, neat Asbury Park, June 20.

WITH FLY-ROD AND CAMERA.

THE AMERICAN KENNEL CLUB WAR.

Editor Forest and Stream:

In reply to the card, published and signed by Major Taylar, Mr. Wilmerding and Mr. La Rue, in which they deny the statement made by me in a former issue of your paper, so far as said statement applies to them individually, wherein I stated, substantially, that two of said committee had stated that they had not audited the account of Mr. Vredenburgh, but had signed the statement that had been prepared by him, permit me now in reply to said card signed by the aforesaid gentlemen to say that so far as Major Taylor is concerned I have never had any conversation with him in regard to said matter, and that the two members of the committee to whom I referred are Mr. Wilmerding and Mr. La Rue. Mr. Wilmerding has been for the year last past and is now the delegate of the N. J. K. C.

He has known for some time and for a long time before his appointment upon said committee that the accounts of the treasurer of the A.K.C. had been questioned in many ways by several members of the N. J. K. C., and especially the item which has been so often referred to—81,228,28. Mr. Wilmerding knew at the time of his appoinment on said committee and at the time be signed the statement that had charged in all the sporting papers that it was not earned by the club; that it had been book-keeped and juggled into the accounts; that myself and others, members of the N. J. K. C., had had conversations with him regarding this item, and notwithstanding these facts, Mr. Wilmerding, down to and including the time of the last meeting of the N. J. K. C., which was held on the first Thresday in this month, was in total ignorance of the items going to make up this sum. A few days after the publication of the Jannary, 1890, issue of the Kennel Gazette, in fact on Feb. 18, 1896, about 12 o'clock I called at the office of Mr. Wilmerding, down to and including the time of the last meeting of the N. J. K. C., which was held on the first Thresday in

New York. Feb. 18. 1820—A. P. Vredenburgh, Esq., Secretary A. K. C.: Will you kindly give me the items that go to make up the sum of 51.228 balance on hand as appears in your report made to the annual meeting in February, 1839, or in other words the items of receipts from Dec. 5, 1838 to Jan. 11, 1839, also the items of expense between said dates, and very much oblige, C. J. PESHALL, Member of the N. J. K. C.

When J. Intigles, 1. in the

expense between said dates, and very much oblige, C. J. PESHALL, Member of the N. J. K. C.

When I finished this letter Mr. Wilmerding read it and then wrote the following letter to Mr. Vredenburgh.

Mr. A. P. Vredenburgh, Secretary—Dear Sir. The writer of the inclosed letter is the president of the New Jersey Kennel Club. Will you kindly give him such information as he desires, and oblige A. C. WILMERDING, Delegate N. J. K. C.

Mr. Wilmerding then called his clerk, and inclosing both the above letters in one envelope, addressed to Mr. Vredenburgh, sent it to No. 44 Broadway with instructions to bring back the answer. A short time thereafter Mr. Wilmerding's clerk returned and said that Mr. Vredenburgh said, substantially, "that he was so busy he hadn't time to eat his lunch, let alone go over his books."

Mr. Wilmerding and myself smiled upon each other, as we always do when we are together, and parted. The next morning I received the following letter:

Office of American Kennel Club Stad Book, 44 and 48 Broadway.—New York, Feb. 18, 1890.—Mr. C. J. Peshall, Jersey City, N. J.: Dear Sir—Replying to your communication of even date, I beg to refer you to Mr. A. C. Wilmerding, delegate N. J. K. C. for the information you desire, as he again examined my books on the Irl'inst., and is, therefore, in a position to supply it. Yours truly, A. P. Vredenburgh, Sec'y.

The envelope covering the above letter bears on its left upper corner the address of the American Kennel Club, the N. Y. Post Office stamp, as follows, "New York, Feb. 18, 59. M., Y.," and on its back is the following, "Jersey City, N. J., Feb. 18, 739 P. M., 1990, Rec'd," and it is addressed to Mr. C. J. Peshall, Jersey City, N. J.

After reading Mr. Vredenburgh's letter I thought it very strange that if Mr. Wilmerding had, as Mr. Vredenburgh said, "again examined my books on the 17th inst. and is, therefore, in a position to supply it," that he Mr. Wilmerding). one of the auditing committee, could not give me this information. The same morning I received this letter I again called upon Mr. Wilmerding at his office, and after a cordial greeting, I asked him if he had those items for me. His reply was substantially, "No, I have not heard anything more about them." I then took from my pocket Mr. Vredenburgh's letter, handed it to him and he read it. He returned the letter to me, and said substantially, "I have not got the items, I can't give them to you." I then concluded that, as I did not care to become a shuttlecock between the delegate and the secretary, I would pursue the chase no longer in that quarter.

At the last meeting of the N. J. K. C., and in the presence of all the members then assembled, and in reply to a question by me, Mr. Wilmerding stated that "he couldn't get the items."

of all the members then assembled, and in reply to a question by me, Mr. Wilmerding stated that "he couldn't get the items."

Before I sent in my letter, to which the card of the auditing committee refers, I left it with Mr. Wilmerding for his perusal. He objected to that portion referring to the two members of the auditing committee, and I then said to him, "Well, Mr. Wilmerding, I have heretofore understood from you that you did not audit these accounts, and knew nothing about these items," and his reply, substantially, was that Mr. Vredenburgh had presented the annual statement and the books, and that he had gone over them. I asked him if he had looked at the vouchers, etc., and he said no. I then told him that I would leave the letter as it was, as the accounts had not been audited, and that he, in answer to it, could state just what he had done.

So far as Mr. La Rue, the other member of this committee, is concerned, I will say that I have had several conversations with him since he signed that report, and I found from his conversations that he was not present with Mr. Wilmerding and Major Taylor, but went to the office of the A. K. C. by himself and made his examination of the books that were presented to him by the treasurer. I also asked him if he had gone over the vouchers, etc., and had audited give me those items and he said no. I recollect reading a letter written by Mr. La Rue in which he stated, substantifulty, "That he had looked over the books and the statement submitted to him for his examination," and I now affirm that the accounts have never been audited by any commitmittee. The salad was prepared by Mr. Vredenburgh on the day this so-called auditing committee was appointed, for I find in the Kennel Gazette for December, 1889, in the report made by Mr. Vredenburgh, the following:

The secretary suggested that he should make out his statement for the year 1889 for publication, and that the chair appoint a

report made by Mr. Vredenburgh, the following:

The secretary suggested that he should make out his statement for the year 1889 for publication, and that the chair appoint a committee who would indorse on the bottom of his account that they had examined his accounts and found them correct as stated.

This committee evidently ate that salad, and from their card I should judge that it had soured upon their stomachs. That the officers of the A. K. C. imposed upon the committee is evident, for the reason that the salad, which is now nauseating them, was garnished with the private books or accounts which were kept by Mr. Lewis under his exhaustive contract with the stud book committee; that is, if they did not inform this committee of the facts regarding that contract.

tive contract with the stud book committee; that is, if they did not inform this committee of the facts regarding that contract.

In reply to Mr. Vredenburgh's letter, appearing in your last issue, in answer to my article, I will say that I am surprised that he has now at this late day become so indignant at my attacks upon what I have designated repeatedly in the sporting papers for the last year, the reckless clique management of the A. K. C. I have substantially charged that the accounts were juggled and false over and over again. He does not answer in one instance any of the questions which I have often kindly asked him, neither has he, even in his last communication, denied any of the statements that I have made regarding the management. I know that you and your readers will agree with me when I say that his letter is too silly to notice. He has evidently just lost his temper.

In regard to my recommending him for a position of trust and confidence (it was that of private secretary), I will now say that I would gladly do so again, for I consider him in every way qualified for that position. Ever since his return from Europe he has had great experience in that position, and he now possesses one of the most necessary qualifications, which is simply to obey orders and do what he is told. I long ago stated, in the sporting press, that he had ceased to be the secretary of the A. K. C., except in name. If I have made any charges which are untrue, or even distorted, against him or the clique management, and they will convince me of the fact, I will say now, as I have said before, there is no apology too great for him or them to demand, or too abject for me to make. Will Mr. Vredenburgh now give us the items?

Jersey Ctry, June 27.

Editor Forest and Stream:

Were I the enemy of the A.K.C. that I am commonly held to be, I would delight in the prospect of Mr. Peshall's disqualification on the grounds proposed by the secretary of that Institution. Nothing could be more fatal to it than such a disqualification. The dog world will accept a disqualification of Mr. Pershall if it is shown that he has been guilty of falschood, but to base it on his having at last turned on those who have been heaping insult on him for months, charging him with hypocrisy, etc., when he has hitherto shown a forbearance not at all incumbent on him, will just sink the machine. And Messis, "Workers" I just dare you to disqualify Mr. Peshall for any such cause as you have hitherto shown, and I say most unhesitatingly that very many of the leading clubs of America will refuse to recognize your disqualification; if you doubt it, just try it on if you dare. I do not know who is the Westminster Kennel Club now, but if it is still the club of Mr. Smith and Mr. Donner, they will refuse to abide by your action, openly as they opposed Mr. Peshall's action in the past, but they draw the line at honesty, right and manliness. One thing is certain, the day of personal "editorials." personal government, and the constituting of the governing body of American dog affairs a mere social club for the edification of aselect party, has gone forever. Can you learn the lesson of your reign?

Hulton, Pa., June 27. HULTON, Pa., June 27.

Charges have been preferred against Mr. Peshall as

Charges have been preferred against Mr. Pesnan as follows:

OFFICE of American Kennel Club, American Kennel Gazette, American Kennel Club Stud Book, 44 and 46 Broadway, New York, June 27.—Mr. Charles J. Peshall, Jersey City, N. J. Dear Sir. I beg to forward you herewith a copy of the charges and specifications preferred against you, and to advise you that a meeting of the advisory committee has been ordered for Wednesday, July 2, at 1:30 P. M., to be held at the office of the club, for the purpose of considering said charges. I am instructed by the committee to inform you that all the books and papers belonging to the club will be in the custody of said committee, and that you will e afforded the privilege of pointing out such items that ou may find in support of your accusations, as published

iu the sporting papers, of June 19 and 21. The committee will afford you every facility you desire in conducting your defense. Yours etc., A. P. Vredenburgh, Sec'y.

Office of American Kennel Club. American Kennel Gazette, American Kennel Club Stud Book, 44 and 46 Broadwar.

OFFICE of American Kennel Club, American Kennel Gazette, American Kennel Club Stud Book, 44 and 46 Broadway.

A. P. Vredenburgh, Sec'y., vs. Charles J. Peshall.

CHARGE I. That Charles J. Peshall did circulate and continue to circulate false, malicious and libelous letters calculated to impair the authority and usefulness of the American Kennel Club and its publications, and to injure my reputation and standing as an officer of said club. Specifications: In that he caused to be published in the Forest And Stepans, June 19, 1890; Turf, Field and Farm, June 19, 1890; American Field, June 21, 1890, a letter signed by himself containing false statements regarding the management and financial condition of the club.

CHARGE II. That Charles J. Peshall wilfully violated rule 32 of the rules governing bench shows as adopted May, 1887. Specification: In that he exhibited a dog, at a show held under A. K. C. rules, in his own name as owner, at which time said dog was not his property.

CHARGE III. That Charles J. Peshall wilfully violated rule 25 of the rules governing bench shows, as adopted December 6, 1888. Specification: In that he misrepresented the value of a dog, at the time of making a sale. Specification: In that he conspired with one John H. Lewis to give a fictitious value to the dog, for the purpose of enabling said Lewis to offer the dog for sale, at a price beyond its real value.

The subscriber believes that he can substantiate the above charges, and would ask for a sentence of permanent disqualification against said Charles J. Peshall.

(Signed) A. P. VEEDENBURGH, Sec'y.

To this Mr. Peshall sent the following reply:

charges, and would ask for a sentence of permanent disqualification against said Charles J. Peshall.

(Signed) A. P. Vredenburgei, Sec'y.

To this Mr. Peshall sent the following reply:

A. P. Vredenburgh, Secretary A. K. C.:

DEAR SIR—I beg to acknowledge your letter dated June 27, 1890, wherein you inclose charges and specifications made against me and entitled: "A. P. Vredenburgh, Secretary, vs. Charles J. Peshall," which charges are made by you as secretary and so attested. You have failed to inclose to me a copy of a resolution authorizing you, as secretary of the A. K. C., to prefer said charges, or any charges, against me. Permit me to say that without such direction I fail to find either in the constitution or rules of the A. K. C. any anthority for you, as secretary, to prefer charges against a member of the club. Therefore I am constrained to believe that in this matter you have not only exceeded your authority, but you are prostituting your office for the purpose of diverting the attention of the dog men and breeders of this country from the public charges that I have made against the clique management of the A. K. C. I am confident that there has not been a meeting of the A. K. C. held since the publication of the articles by me, to which you have referred in your so-called charges.

You notify me to appear before the Advisory Committee of the American Kennel Club. Ido not recognize that there is any such committee having a constitutional existence. I find nothing whatever respecting an Advisory Committee in the Constitution or Rules of the American Kennel Club as in force Dec. 6, 1857. The Constitution and Rules as then in force have never been altered.

As you may learn by reference to the American Kennel Club as in force Dec. 6, 1857. The Constitution and Rules as the function vested in the club alone. Consequently, as the Guzette states, the amendments, which purported to have been adopted by the Executive Committee, were null and void.

Again, on Dec. 6, 1888, and on Dec. 19, 1889, further amend

void.

Again, on Dec. 6, 1889, and on Dec. 19, 1889, further amendments of the Constitution and Rules were adopted by the Executive Committee, but these likewise, as the Gazette states, were unconstitutional and void.

I find upon examination that it is Rule 25 which provider.

Any person may prefer charges against any other person before the American Kennel Club, provided said charges be in writing, and they shall be heard at the first opportunity by the Advisory Committee, from whose decision, however, an appeal may be taken to the full Executive Committee.

But this is one of these rules which are null and void, even having been adopted by the club but by the Executive

never having been adopted by the club but by the Executive Committee.

As the Kennel Gazette of January, 1890, reports, a "special meeting of the club" was held Jan. 18 to ratify the amendments adopted by the Executive Committee, as noted above. This was under Article XL, adopted May, 1887:

This constitution may be revised or amended at any meeting of the Association, by two-thirds voic, but no such amendment shall be considered unless the same shall have been submitted to the members of the Association at least two weeks prior to such meeting.

be considered unless the same sand have been submitted to the members of the Association at least two weeks prior to such meeting.

If this meeting of Jan. 18, 1890, called to correct the blunders of Feb. 23, 1888, Dec. 6, 1888, and Dec. 19, 1888, had been "a meeting of the association," that is to say, a meeting of a majority of the members of the association, the amendments adopted by it would now be in force. But it was not in any sense a meeting of the club. A quorum was not present. There were but 8 clubs represented out of 45. In the absence of any stated quorum, a majority of the members is absolutely necessary to constitute a quorum. Therefore, the old constitution, which was in force Dec. 6, 1887, still holds good; and that constitution provides neither for an advisory committee, nor for a Kennel Guzette, nor for associate members; nor does it anywhere exempt the treasurer of the A. K. C. from giving a detailed statement of the items that go to make up that entry of \$1,293.28.

This Advisory Committee has no power whatever to act and no authority whatever to try any person, and if they did so it would be at their own individual peril and subject them to an action by any one feeling aggrieved.

Again, at least, four of the members of this so-called Advisory Committee are affected by the charges which you claim I have made, and at least four of them would be used by me as witnesses upon the trial involving said issues.

I am willing to appear before the American Kennel Club at any time and substantate all the charges that I have made against the management.

These being my views, I must respectfully decline to accept your kind invitation to appear before the so-called Advisory Committee on Wednesday afternoon next.

Very respectfully, C. J. PESHALL.

JERSEY CITY, N. J., July 1.

TORONTO DOG SHOW.—Editor Forest and Stream: The premium lists of the Industrial Exhibition Association's second grand international bench show of dogs to be held at the city of Toronto, Canada, S-pt. 15 to 19, are now ready, and cau be had by applying to the secretary. A new building, 200ft. long by 100ft wide, and costing \$8,000, is being erected specially for the show. A large number of inquiries regarding the show are already coming in, and it promises to be the largest and most important ever held in the Dominion. The Toronto Exhibition is annually visited by over 250,000 people, and the majority will undoubtedly want to see the canincs.—C. A. STONE, Secretary and Superintendent, Toronto.

DOGS OF THE DAY.

MR. PESHALL has made certain charges against the prima-facte case. In response Mr. Vredenburgh, a paid employee of the club, takes it upon himself, not to disprove the allegations, but to incontinently denounce the whole statement as false. As a retort to Mr. Peshall's statement this reply falls flat for two prominent reasons. Mr. Peshall is a gentleman who would not state what he knew to be false for any consideration; people who do not believe in his methods at least believe in his veracity. Secondly, because specific statements can only be refuted by specific contradictions. As a method of disproving Mr. Peshall's statements Mr. Vredenburgh has hit upon the remarkable idea of bringing charges against him before the A. K. C.

The case comes under the following clauses of Rule 25

Any person may prefer charges against any other person before the American Kennel Club, provided said charges be in writing, and they shall be heard at the first opportunity by the Advisory Committee, from whose decision, however, an appeal may be taken to the full Executive Committee. No person shall, however, be disqualified without due notice, and formal charges and specifications, and an opportunity given of being heard in his own defense, and the American Kennel Club will not recognize any exparte proceedings on the part of any club.

It is apparent that Mr. Vredenburgh has followed out the form provided by the rules, though there is fair room for exception on the score of specification. The meaning of the word specification is, naturally, specific statement; and certainly such cannot be said of Mr. Vredenburgh's specifications, for they give no name, date nor place.

A pertinent question in connection with the concluding specification is: Has John N. Lewis been likewise indicted for the conspiracy so vaguely set forth. Mr. Vredenburgh seems to have changed his mind since he told me a short time ago that he would not constitute himself a smelling committee to make charges against people. And what a shaking up of old bones there will be if putting a bit on the price is to be a matter for "permanent disqualification." I know of one prominent case in which a leading member of the A. K. C. was concerned. After Mr. Peshall has been railroaded to eternal perdition I may be tempted to assist Mr. Vredenburgh in his crusade in the interest of virtue in dog trades, just to see how the thing will work when a similar case against a different person is presented with a request for a sentence of permanent disqualification.

The pug kennel prize affair at Cincinnati, to which reference was made last week, came up for decision before the local bench show on Dr. Cryer's protest, based upon Mr. Mortimer's statement that he never awarded any such prize. The committee decided that Mr. Mortimer had awarded the prize, stating that it was marked in his book. I hardly think that decision will stand in the face of Mr. Mortimer's letter, of which I gave a copy last week; he said that he never awarded any open kennel prize. The judge will undoubtedly maintain his position, and should it be shown that it is marked in his book while he repudiates it, the A. K. C. will have to decide whether a decision given under a misunderstanding as to the conditions must hold good.

I understand that the case of the rejudging of the cocker spaniel class to accommodate late arrivals will form the ground for an objection lodged by the A. K. C. through Mr. Vredenburgh.

Mr. Stretch, who got Dublin Scot and Charleroi II. in part trade for Christopher, is advertising the former to be sold for \$250.

Several important additions have been made to the well known collie kennels of Messrs. McEwen & Gibson of Byron, Ont. The Stock-Keeper says: "We understand that Mr. R. McEwen, of Alloway Lodge, Byron, Ontario, has purchased from Mr. L. P. C. Astley, Scent, by Setton—Minnie, a young brother of the Champion Metchley Wonders's. This is a very nice young dog, with the head of the strain, plenty of bone, a good coat, and his influence for good on the Canadian bitches should be very great. Mr. McEwen has also bought Mr. Astley's bitch by Christopher—Sweet Phyllis, by The Squire, who goes out, served by Mr. T. H. Stretch's dog, Ormskirk Amazement. Mr. McEwen will thus possess not only a brother to Mr. Megson's champion, but will soon have a litter of pupples by the best son of Christopher, out of one of his best-bred daughters." The dog Scent has been renamed Metchley Wonder H. J. W.

DOG TALK.

THE Warwick Kennels, at Bridgeport, Conn., are again coming to the front. We found Hair's Belton (Yale Belton—Polly Blue) showing good form. Topsy Laverack (Tempest—Pebble) is not looking as well as we have seen, but in Belle Laverack's litter by Ned Laverack (Old Perfection—Lit Laverack) Dr. Hair has a bonanza in six of the finest pure Laverack puppies I ever saw in my life. The kennelman threw two of them out on the dung-heap supposedly dead, but the heat of the manure revived them, and they are as strong as any of them now. The Doctor has recently purchased Rosa Gath, by Gath's Joy (Gath—Gem) out of Rosa (Dashing Monarch—Leila), not a bench winner, but a good fielder. While we went to dinner the new purchase started back to Virginia without a guide. We hope the Doctor succeeded in recovering her.

It is reported that Mr. E. B. Sears has purchased a crack St. Bernard bitch of Sydney W. Smith, Leeds Eng. Mr. Sears not being at his office when we passed through the city en route for old England we could not learn the particulars. He has also purchased the bitch Madam, by Merchant Prince out of Nun, and two puppies by Beauchamp.

While at Bridgeport the other day I ran across the English setter bitch Daisy Foreman II. (Warwick Albert—Daisy Foreman), one of the puppy class winners at New York last season. She is a sight to behold from a bad attack of pneumonia. We certainly hope she will entirely recover, but consider it doubtful.

EASTERN FIELD TRIAL DERBY ENTRIES.

EASTERN FIELD TRIAL DERBY ENTRIES.

ARATOGA SPRINGS, June 25.—Editor Forest and Stream: Mr. George T. Hodgson, Atheus, Ga., one of the members of the E. F. T. C., wrote me just before the closing of the Eastern F. T. Derby not to let him or his four dogs be closed out; that he was going away and would give me particulars on return. Not seeing his name or dogs in published list he at once wrote, sending names of dogs as below:

BLACK JACK—Black and white English setter dog, June, 1889 (Paul Gladstone—Bohemian Girl).

DAVE W.—Orange and white English setter dog, July, 1889 (Gath's Mark—Daisy F.).

HAL—Liver and white English setter dog, July, 1889 (Gath's Mark—Daisy F.).

TRICKSEY—Orange and white English setter bitch, July, 1889 (Gath's Mark—Daisy F.).

WASHINGTON A, COSTER, Sec'y.

THE PUG SPECIAL AT CINCINNATI.—Cincinnati, O., June 29.—Editor Forest and Stream: Considerable comment has been made lately in the sporting papers by the award of the kennel prize at Cincinnati show for best four pugs to the Eberhart Pug Kennels. An item in Fanciers' Journal of June 21 is misleading, and if unexplained would do an injustice to the Cincinnati Kennel Club. It states that "the prize not being in the judge's book was not awarded by Mr. Mortimer," and "that Dr. Cryer will protest the award, as after Mr. Mortimer left the management gave it to the Eberhart Pug Kennels." This is all wrong. The prize was in the judge's book, being on the first page, and was awarded by Mr. Mortimer himself to the Eberhart Kennels. These are the plain facts as the book will show. I was ring steward for Mr. Mortimer, and while assisting him in that capacity) in awarding the specials on the morning of the second day of our show, I saw him write it down in the book to the Eberhart Kennels. I said to him then, "Much obliged, Mr. Mortimer." He replied, "Don't menion it, my boy." Mr. Mortimer's reputation as a judge and of knowing just what he is doing is too well known to us award, and the Cincinnati Kennel Club at a special meeting June 21, decided that the award must stand as made.—AL. G. EBERHART, Manager Eberhart Pug Kennels.

A FOX-TERRIER COURSING CLUB.—Omaha, June 25.—Editor Forest and Stream: A fox-terrier coursing club is being organized in this city, under the auspices of the old coursing club. There are fine facilities here for such a club—cotton-tails and jacks in abundance and the finest coursing stretch in the world. Nor do we lack gentlemen who thoroughly understand the sport. Mr. John Short, proprietor of the grand bakery, has had thirty years' experience, and was the first to introduce the grand sport of coursing in Chicago years ago, having been a slipper of greyhounds in England when a lad. Mr. Evans, the County Auditor, is another rare specimen from the old school, and T. H. Lamb, superintendent of Fairmount Park at the Bluffs, is another slipper, having indulged in coursing extensively years ago in the mother country. It is the purpose to have a course at an early day, when liberal cash prizes will be offered. There are probably seventy-five foxterriers owned by gentlemen in this city, and the club will undoubtedly flourish like a green bay tree.—Sandy.

CORA OF WETHERAL.—This well-known champion English setter bitch died on Monday, June 30, from heart disease. Mr. Windholz will have a hard task to find an animal to replace her, as she was undoubtedly very nearly the best of her breed in this country.

KENNEL NOTES.

NAMES CLAIMED.

**Prepared Blanks sent free on application.

**Maid Marion. By Merry Mount Kennels, Wollaston Heights,
Mass., for orange St. Bernard bitch, whelped Feb. 25, 1890, by Boniyard, Jr. (Bonivard—Judic) out of Madam Barry (Barnard—Faunie).

And W., Rowdy Rod, Jr. and Bell Noble. By N. Wallace, Farmjon, Conn., for black and white English setters, two dogs and
e bitch, whelped April 21, 1890, by Rowdy Rod (Roderigo—Juno
) out of Pearl Noble (Count Noble—Jennie III.),

KENNEL MANAGEMENT.

FOX HUNTER Birmingham, Ala.—I. My hound has a dry barking cough; when he begins to yelp he begins this coughing. 2. Is afflicted with a desire to sneeze, although never successful, drawing his breath through his nostrils, as if something was in masal pipe; otherwise very healthy. Ans. It looks as though the dog had some growth in the posterior nares (back of the nose and upper throat); you had better consult a vet. Nasal polypi sometimes hang down so as to irritate the throat and cause a cough, and also obstruct uose breathing.

Bifle and Tray Shooting.

RANGE AND GALLERY.

THE BERLIN SHOOT,

RANGE AND GALLERY.

THE BERLIN SHOOT.

I AMBURG, June 24.—The American ristemen to-day went to the Schuetzenhof at Baxbeck. In the point shooting competition two Americans won prizes, but in the competition for the silver cup they were casily beaten by the Hamburgers. Fred P. Laute, of the Howard Riste Club of Newark arrived yesterday, and to-day he took part in a shoot of the Hamburg Rifle Club, winning eighth prize on the honor medal target. Fred W. Hofele was first and Geb Kramss second. E., Fisher, W. Weber, E. Schroeder and Barney Walther, all Americans, were among the leading prize winners. The Americans are giving accounts of themselves in all the contests in the different cities. Some heavy bets have been the contest in the different cities. Some heavy bets have been in the rapid-fire contest on July 8. President Weber said that the Independents, although defeated, were not downcast. Jubilee medals of the Hamburg Rifle Association were presented to President Weber, Caprian Diehl, and the five Americans who competed for the cup. Illuminations and fireworks followed and then there was a grand ball. Most of the marksmen will start for Berlin to-morrow

HANOVER, June 29.—In the shooting in houor of the American riflemen the following New Yorkers were successful: At the field target. "Hanover," Walther took first prize and Zimmerman second; at the hutuing target stoin took first prize. Zimmerman, Stein won stars, and Kraus, Busse, Walther. Zimmerman and Stein won stars, and Kraus, Busse, Walther. Zimmerman, S. The Berlin correspondent of the London Times contributes the following preliminary notice of the eig Berlin shoot:

In the second week of July (6th to 136h), Pankow, a suburb of Berlin, is to be the seene of a sort of International Wimbledon, for which great proparations are being made. "International" by courtesy, so to speak, for the gathering itself is but the tenth triennial shooting match (Bundesschiessen) of the German Schuetzenhund, or Federation of Riflemen, which was founded in 1861 by the pre

the disposal of our brave English fellow-shoes:

The disposal of our brave English fellow-shoes:

The forms of the capital of the German Empire, which calls one to them—Welcome, brave English rife-shooters, in Berlin."

America has already responded heartily to a similar appeal, and New York alone is to send over 500 of its best shots, selected from the numerous rifio clubs of that city, to compose in Pankow with the champious of Germany. True, it would seem that the majority of these half-thousand Americans are of German origin, who thus seize upon the forthcoming Bundosselicssen as a velcome pretext for visiting, or revisiting, as the case may be, the land of their origin; and yet the circumstances of their presence here will give the rifle meeting its distinctive estamp and make it a memorable one. Crossing the Atlantic—315 of them by the Fulda and 210 by the Wieland—these American riflemen, wearing their New York uniforms, are, with all the pomp of music and of banners, to make their cntry into Berlin on the 3d of July, marching through the chief streets past the Schloss, where they will salure the Empeon; and thence to the Rathhaus, there to be welcomed by the Regardstor, and report riflemen, with many years of their rountrymen, and to celebrate Independence Day (Fourth of July) by a grand banquet in the Kaiserhof, at which the United States Minister will preside.

The match itself is to be inaugurated (ou Sunday, the 6th of July) by a grand banquet in the Kaiserhof, at which the United States Minister will preside.

The match itself is to be inaugurated (ou Sunday, the 6th of July) by a grand procession, to be devised and arranged by the Berlin Society of Artists (headed by the historical painter, Anton von Werner) at a cost of 60,000 marks. This costumed procession, in which all the competitive riflemen are to take part, will illustrate the period of slings to the present time of repeating rifles, and will also contain allegorical presentments of the various cities where the schitteness of the period of

friendly, and when they would be sure to receive as cordial a wel-come in Berlin as the Burgomaster promises. I may add that all inquiries on the subject of the forthcoming shooting match may be addressed to the "Central-Aussehuss für das X Deutsche Bundesschiessen, 22, Burgstrasse, Berlin."

THE ROCKY MOUNTAIN MEET.

CHEYENE, Wyo., Jnno 20.—Editor Forest and Stream: The section on annual tournament of the Rocky Mounlain Sportsmen's Association closed to-day after a four days' meet, which was not only one of the largest, but also one of the most successful tournaments over held in the United States. The opening day of the teurnamont was one of the fairest in point of weather so far this year. There were about 200 members in attendance and also a good audience, among whom were many ladies. The arrangements by the local committee were most complete, as was attested by the smooth manner in which the shoot progressed, not the slightest hitch occurring. Considering that the first day is usually spent in arranging things, this speaks well for their efforts in that direction.

The big event of the day was at 10 live birds, with an entrance of \$10 and \$100 cash added. All the best shots were entered and made an effort to capture a portion of the \$450 which comprised the pot. Frank Parmalee, of Omaba, killed 10 straight and was disqualified for not being a member of the association, but those in the tie with him very zeneronsly donated him his share of the winnings is this shoot. Following is the assumany of this event and the scores of the other shoots:

Seventh event, 10 live birds, entrance \$10, divided 40, 30, 20 and 10 per cent, \$100 cash added, open to members of the R. M. S. A. only: Bergersen, Marshall, Compton. Tuff and Craig first. 10: Lanterman, Kazabee, J. Schunemau, Jilson, Davis and Holland second, 9; E. F. Thomas, Haywood and S. Schuneman third, 8; Bostwick, Kenuicut, Mechling, Yon Kennel, Chryste, Suydam, Lower and Dr. Holcomb fourth, 7. Thirty-six entries.

First event, preparatory shoot, 15 single standard targets, entrance \$2, four moneys, divided, 40, 30, 20 and 10 per cent. Open to the world—W. M. Holland, Pickett, Lane first money with 15 birds; Haywood event, class A contest, 25 single standard targets, entrance \$7, five moneys, divided, 30, 25, 20, 15 and 10 per cent. Open to the world—W. M. Holland, Pickett,

Twelve entries. ifth event, class A contest, 10 single standard targets, five unwn traps, entrance \$3, four moneys, divided 40, 30, 20 and 10 cent., open to members of R. M. S. A. only—J. Schuneman,

lechling, Craig first, 8; Haywood, Holland, Compton, Lower, thristic, Davis second, 7; Suydam, Kennicut, Bergensen third, 6; 'uff, Bostwick, Stevens fourth, 5. Nineteen entries.
Sixth event, class B contest, at 10 single standard targets, 5 unnown traps, entrance \$2,4 moneys, div. 40, 30, 30 and 10 per cent., pen to members of R. M. S. A. only: Marshall, Christic, Davis 8; V. E. Young, Moorehouse and E. Schumeman second, 7; Jilson and Thomas third, 6; Bostwick, Lanterman, Lewis and Clark ourth, 5; If entries.

Special, open to the world, by standards, 82-39 submates, some Schuneman, first, 15. Lanterman, second, 14; Permanele, Bergersen, Pielett, third, 13. Seventeen cutries.

All 15. Seventeen cutries.

All 16. Seventeen cutries.

All 16. Seventeen cutries.

All 16. Seventeen cutries.

Be class special No. 2, 10 standards, 21 entrance. Dougan, first, 14; Lanterman, second, 3. Nine cutries.

Be class special No. 2, 10 standards, 21 entrance. Christie, first, 9; Clark second, 8. J. Lane, Marshall, Lanterman, 8. Warren, 19; Lanterman, second, 8. J. Lane, Marshall, Lanterman, 8. Warren, 19; Clark second, 8. J. Lane, Marshall, Lanterman, 8. Warren, 19; Clark second, 8. J. Lane, Marshall, Lanterman, 8. Warren, 19; Clark second, 8. J. Lane, Marshall, Lanterman, 8. Warren, 19; Clark second, 8. J. Lane, Marshall, Lanterman, 8. Warren, 19; Clark second, 8. J. Lane, Marshall, Lanterman, 8. Warren, 19; Clark second, 8. J. Lane, Marshall, Lanterman, 8. Warren, 19; Clark second 19; Lane, 19

singles, \$2 entrance: Bergersen first, 15; Pickett and econd, 13; Camp, Mechling and Holcombe third, 12.

es. 10 singles, \$1 entrance: Kazabec first, 10: Haywood, 10 singles, \$2 entrance: Kazabec first, 10: Haywood, 110 singles, \$2 entrance: Pickett, Thomas, Williams, 3 and Davis first, \$1 Sergersen, Lewis and Complete securgan, Morehouse, Stevens and Marshall third, 6. Twelve

ond, 9: Lower, Thomas, Marshall and Sedam unid, 6. Anti-con-ries.
special, 25 singles, \$2.50 entrance: Mechling, Pickett and Hav-olf first, 23; Holand and Thomas second, 22; Tuff and Ellis rd, 21; Holcombe, Christie and Lane fourth, 20. Twelve en-es.
pecial, 10 singles, \$2 entrance: E. Schuneman, Lane and Ellis it, 10; Parmalee, Mechling and Holland second, 8; E. F. Thomas, stwick, Compton and W. L. Thomas third, 8. Nineteen en-use.

tries.

Special, 10 singles, \$2 entrance: Lauterman, Graig, Pickett and Bergensen first, \$1 Tregoning and Jilson second, \$1 Compton, Parmale, Sedam and East third, 7. Twenty-one entries.

Third Day,

The hig attraction for the third day of the tournament was shoulded as follows: Fifteen live birds, entrance \$12. Four moneys divided, 40, 30, 30 and 10 per cent., \$150 cash added, open to members of the Rocky Mountain Sportsmen Association only.

There were tweuty-eight entries and first money was taken by Camp and Ed. Schuneman, who divided \$132.40. They killed 15 straight hirds each. Second money amounted to \$114.30 and was divided by Bostwick. John Schuneman and Christie, each killing tabirds. Metching, Tuff. Holland, Von Kenncl, Dolan, Olsen and Williams each killed 13 and divided \$76.20. Bergensen, Marshall, Craig, Davis, Lower, Suydam, Pickett and Stevens killed 12 each and divided \$38.10, the fourth money.

The nine live-bird contest was declared off. The other event of particular interest was the team shoot, open to three members of any club belonging to the association, 15 single and three pairs of standard targets. Entrance \$9 per team, three moneys, divided 50, 30 and 20 per cent; \$30 cash added to first, \$20 cash added to 50, 30 and 20 per cent; \$30 cash added to first, \$20 cash added to Club No. 2 and Leadville with 50 cach. Magic City team and Cheyenne team No. I divided third money, 46 hirds.

Ten single standard targets, entrance \$2, three moneys, divided 50, 30 and 20 per cent... open to the world, 18 entries—First money went to Heywood and Pickett, 10 cach. Second, Clark Camp, Thomas, Davis and Christie, 9 each. Third, Machling, Ramsey, Craig and Bergensen, 8 each.

Class A contest, 22 single standard targets, 5 maknown traps, cutrance \$5, five moneys divided 30, 25, 20, 15 and 10 per cent., \$76 cash added, open to memhers only, 15 entries—First money went 51. Schumeman and Haywood, 21 each. Second, Bolland, Machling, 20 each. Third, Craig and Tuff, 19 each. Fourth, Kazabee 18. Fifth, Bergensen 17.

Class A contest, at 15 single standards, \$2 entrance, 4 moneys, and to members R. M. S. A. only.

J. Schmemara and Haywood, 21 each. Second, Holland, Machillus, 22 each. Printle, Razabee 18.
Fifth, Bergensen I.; It single standards, \$2 entrauce, 4 moneys, div., 40, 30, 20 and 10 per ent., open to members R. M. S. A. only, 18 entries; First went to Pickett, 15 hirds; second, Bergensen, Ramsey, J. Schuneman and Canp, 14; third, Kazabee and Machilland, Schuneman and Canp, 14; third, Kazabee and Machilland, 15 entries; First went to Pickett, 15 hirds; second, Bergensen, Ramsey, J. Schuneman and Canp, 14; third, Kazabee and Machilland, 15 entries; Prist went to Pickett, 15 hirds; second, 28 entrance, 3 moneys, div. 50, 29 and 20 per cent., open to members R. M. S. A. only, 50, 29 and 20 per cent., open to members R. M. S. A. only, 50, 20 and 20 per cent., open to members R. M. S. A. only, 50, 20 and 20 per cent., open to members R. M. S. A. only, 50 and 15 per cent. 15 per cent

Live birds were shot from King's ground traps.

CLEVELAND, June 6.—The members of the Cleveland Gun Club enjoyed their enstomary bout with the clay targets at Blue Rock this afternoon, and made scores they need in the ashamed to face anybody with. The following are the results: Rudolph. 23 Silsby 2, 23 Williams. 22 WH Tamblyn. 22 Harris. 17 Hibbard. 21 Jones. 19 March. 20 Wilson. 17 Elworthy 22 Frederick. 13 Alherts. 16 Flick. 22 In shooting off ties Silsby won hadge A and Williams badce B. At shoot No. 2,5 traps, Keystone system, the score was follows: Jones. 9 Silsby. 23 Flick. 12 Silsby. 25 Flick. 18 Hibbard. 16 Cathan. 16 Flick. 18 Hibbard. 18 Rudolph. 23 Frederick. 18 Hibbard. 18 Rudolph. 23 Frederick. 18 Williams. 23 Alexander. 22 Wilson. 15 Tamblyn. 23 Rudolph. 10 Asley. 21

TOURNAMENT OF THE NORTHWEST.

TOURNAMENT OF THE NORTHWEST.

PORTLAND, Ore., June 23.—Editor Forest and Stream: The sixth annual trap-shooting fournament of the Sportsman's Association of the Northwest, which ran Thursday, Friday and Saturday last, was a bouncing success, as the attendance and scores will show in this report. Portland, Seattle, Tacoma, Sporane Falls, Walla Walla, The Dalles and Eugene had representatives to the tournament, all told there being about fifty shooters in attendance. H. T. Hudson, secretary of the Association, and Buell Lamberson, secretary of the Multinomah Rod and Gun Club, had made every preparation, in the line of accommodations, for the event. A large tent was utilized as a sort of headquarters room, and also served the further purpose of making a convenient place for the ammunition, gun cases and other traps usually carried by nimrods. Sandwiches and liquid refreshuents were served from the grand stand, and the shooting continued the entire day. There was no interruption from the time the first shot was frequential late in the evening, when it became too dark to see. The five traps used in shooting the regular tournament contests were east of the grand stand, so that the shooting were south of the grand stand, far enough away so that the noise in one place did not interfere with the shooting in the other. The only target used was the Peoria blackbird, with 5 traps.

The following officers were elected to serve during the ensuing year: T. A. Bringham, Tacoma, President; H. H. Lewis, Seattle, President, and Fred McBroom. Spokane Falls, Secord Vice President; H. A. Herrick, Spokane Falls, Secord Vice President, and Fred McBroom. Spokane Falls, Secretary and Treasurer. It was decided to hold the next annual tournament in Spokane Falls next June, the exact time to be decided later.

The first vice-President; H. A. Herrick, Spokane Falls, Secretary and Treasurer. It was decided to hold the next annual tournament in Spokane Falls next June, the exact time to be decided later.

The first match on Thursday was at 10

Lewis and Cooper making a full score, were obliged to shoot off the tie. This gave the victory to Cooper, who brought down 20 more straight, Lewis missing his twentieth bird. The Globe trophy is presented by the Tacoma Globe and is valued at \$350. The following highest average prizes were awarded at the close of the day's shooting: First prize, gold badge, W. A. Eberly; sec-ond, E. S. Barlow; third, F. Conley; fourth, D. Cooper; fifth, A.W. McNaughton; sixth, T. A. Bringham.

DAYTON,

DAYTON,

Dayton, Ohio, June 28.—The four days' trap shooting tournament closed last evening with a brilliant contest for the Pony House purse of \$100 in gold, with 50 participants and a fine audience, by all odds the grandest tourney ever shot here. The committee to whom is due all of the arrangement and management of this very successful affair are Messys. Rolla O. Helkes, Thomas B. Hannah and Scott McDonald, and visitors and local shooters were colious in expressions of gratification all through the week, and Messys. W. H. Wolstencroft, John Ruble, E. D. Miller and others of the crack shots who were here say that the thing to do is to let the FOREST AND STREAM says to the world of traps shooters.

The shooting grounds were located in a broad, level field in the eastern part of the city, street cars running to the grounds, IO traps in line, a broad canvas canopy covering the firing platform, the contestants not facing the sun at any time of day, a dozen tents for dining half, dressing rooms, etc., conveniently located, all matches shot upon the rapid firing system, and the system of checks enabled the cashier, Mr. Hannah, to hand each winner his noney the instant the last shot in any match was fired, whether one man took the pot, or 'twas divided. The record would not be complete without giving credit also for the fact that not an error was made in scoring or paying during the tourney. The contests were open to all the world, \$1,000 in guaranteed purses, \$400 in begun at 9 o'clock each morning and closed at dark, weather fine all the way through.

Vincent and Shorty Bacon; third, Crosby, Wolstencroft, Buntain, Tippy, Lowry and Bennett; fourth, E. D. Miller, Ruble, Pratchett, Parker and Volker; fifth, Osborne, Bandle, Senour, Pumphrey, McDonald, C. Makley, Snyder and Pearson.

The Pony House purse was the last match of the tournament, and as there was no entry fee the boys brought nearly all the guns of the country into the race—old flintlocks, musket, single-barrel and double-barrel scatter guns, muzzleloaders and hammerless, dustshot to buckshot, and they all got a place—in their minds.

Benscotten won the gold medal and first money, \$30, for highest score and general average in the ten guaranteed events by breaking 228 out of 235 targets shot at, 96 per cent.; Rubles econd money, \$30, broke \$218, or 93 per cent.; Wolstencroft third money, \$25, broke \$218, or 93 per cent.; Heikes, fonrth, broke 215, or 91 per cent.; E. D. Miller 210, or 80 per cent. Parker broke 206 and gets a silk hat; Buntain 202 and gets a silk hat; Buntain 202 and gets a silk hat; McDonald 199 and gets a fine clock; Praichett 199 and gets 51bs, of candy; North 198 and gets a prairie dog.

During the dinner hour Dr. Vincent's gun was accidentally discharged and a No. 7 shot struck Benscotten in the leg. When the shot, was picked out of his flesh and he saw his own blood, Benscotten fell to the ground in a faint. Ben isn't hurt much but will eat his meals off the mantelpiece until the next tournament. Brown.

CLAREMONT SHOOTING ASSOCIATION.—Jnne 28.—A most glorious afternoon, a good aftendance, and fair shooting made tho boys very cheerful to-day. The fargets were first attacked, and when tired of them, live birds were brought out and shot until 6:30. The pigeons were some that had been rested and fed in our large coop and were dalsies, some of them jumping three or four feet in the air and off like a flash when trap was pulled. No one could make a clean score with such fivers. There are about 400 left in the house, and those we intend shooting on July 4 and 5, on which days the grounds will be open and shooting take place all day—from 9 to 2 at live birds and the rest of the day at bluerocks. Sweeps made up to suit the majority of shooters present.—Ap VANCE.

HOME TALENT.—The Richmond Gun Club of Michigan gives tournament July 8 to 10, with over \$500 in guaranteed prizes, te. "It is for Michigan men only," says the programme, and in kplanation it is said: "We have made this tournament open to lichigan men only, for following reasons: If you will clance ver the scores in all the large open tournaments held in this tate during the last two years, you will find that professional vooters from other States have carried off the lion's share of the coney. A large majority of Michigan shooters have learned to seen away from tournaments where professional congregate, ander these circumstances we believe that we can have a larger tendance, and that all will be better satisfied if they do not ave to stand in line with the crack shots of the day. Michigan as few (if any) professional shooters to the business man, and all who love to press the trigger occasionally for the sport vitation to attend."

WELLINGTON, Mass., June 28.—The merchandle.

WELLINGTON, Mass., Jnne 28.—The merchandisc match of the cellington Gun Club closed to-day with the following scores: unborn 18, Bowker and George 17, Chase 16, Dodge, Hooper, Benstt, Bond and Perry 14, Bradstreet, Walker and Shumway 18, bywee, Dill and Porter 12. The winners for the month were and first with 49, Bennett and Sandborn second, 48; Bradstreet d Chase tbird, 45; Porter fourth, 38. THE spring regatta of the Ianthe C. C. was held from the club house on the Passate River, June 14. A number of guests, including many hadies, were present. The weather was anything but destrained by the control of the Arterior of the Artington C. C., first in Aipsie; G. P. Douglas, Ianthe C. C., the Artington C. C., first in Arterior paddling; Jas, Duguid, Jr., of the Ianthe C. C., first in Ianthe; W. B. Daile, Arlington C. C., second in Kisco, and Geo. L. Metze, Ianthe C. C., third in Lasata E. W. Edinger, of the Crescent C. C., was the first to cross the finish line, but was disqualified for fouling Dailey.

Third race, tandem paddling, G. P. Douglas and W. R. Burling of the Ianthe C. C. in cance Passaic finished first, and C. T. Hopf and W. B. Dailey of the Arterior of C. C., and C. C., and Arlington C. C. in Kisco second; in Misco, the Arlington C. C. in Kase oscend; an Misco crew composed of Edinger of the Crescent C. C. and Gibson of the Arlington C. C. idnot finish.

Fourth race, paddling, any cance, C. T. Hopf, Arlington C. C., first in Redace; James Duguid, Jr., lanthe C. C., second, in Secot. W. R. Burling, Ianthe C. C., cand C. V. Schuyler, Arlington C. C., in the order named.

The senior and junior sailing races were started together. Seniors: L. B. Palmer, Ianthe C. C., first in Nevine Co.

A MAY CRUISE IN CANADA.

A MAY CRUISE IN CANADA.

TRIDAY, May 23 saw thirty-three members of the Lake Saint Louis C. C., of Lachine, at the Grand Trunk depot en route to Huntington, with two baggage ears loaded with cances, which place is situated sixty-five miles away on the Chateaugas River, I cannot adequately describe this delegation; one would have to meet them on their journey to appreciate fully the different qualities possessed by this party; we had people to suit every body's taste, and it is really impossible to single out cach individual. But as many of our boys, unlike foeir American cousins, have not names for their cauces, I will us some cases where members brought themselves into prominence have to give the sur-names, and the first will be our highly esteemed commodore, Alex, W. Morris, who at the last moment, owing to a business engagement, was unable to go with us, which left the party in charge of the vice, Geo, Auldio. We gave the people on the train an imitation of a few fellows enjoying themselves, by dressing up in our nigger costumes intended for the concert that evening. At every station as the train pulled up crowds of people were on hand to welcome us, and indeed so thoroughly had the local press advertised our trip that all the way down the river people were on the banks to see ns pass.

On arriving at Huntingdon a brass band was on hand and es-

as the train pulled up crowds of people were on hand to welcome us, and indeed so thoroughly had the local press advertised our trip that all the way down the river people were on the banks to see ns pass.

On arriving at Huntingdon a brass band was on hand and escorted us down to Mrs. Moir's hotel, where, having put away our cances and thanked the band, we retired for snpper. The concert that evening I do not think was a complete success, owins, I may fairly say, not to any fault of ours, but simply to the wretched taste of the audience. Those in the upper part of the honse were continually setting off firecrackers. Of course, these people were continually setting off firecrackers. Of course, these people were not expected to behave any better or know anything, but the miscrable ignorance of the balance of the audience, who laughed when there was no jest whatever, and at times when there really was occasion for a langth did not even smile, shows the class of people we were performing before. As an example, Percy Barclay, a reciter of no mean repnte, gave them "The Bells," which many times, before more enlightened audiences in Montreal, has been very well received, but here was langhed at, and when he thought him crazy. Later on in the programme Messrs. Kirkhouse (those at the '89 meet will remember him), White and Hamilton gave most comical illustrations; no one in the audience laughed. Now, in the face of this, who could try to give an entertainment to the people of Huntingdon.

Next morning the working part of our cruise began, and having been reinforced by four members of the Saint Hyacinthe C, C, and three more of onr own men, two of whom drove 18 miles to join us, we slarted at 8 o'clock for Ormstown, with our Rear-Com. Sydney P, Howard and S, Jacksou as whippers in. A nenterprising photographer took our photos just atter feaving, but I am afraid they will not be a success, as the current was swift and 17 is a large number of cances to take at once. Betore we bad gone three miles, word was sent from the r

and the dam in safety, but the Marion L. ran on a rock below the rapids and swamped.

The rapids below here again are the ones full of rocks and very swift, the current running 12 miles per hour, and here om first casualty occurred, the water course is very narrow, and one large rock in the center awaits your arrival and invites you to eall, and unless you have good linek you certainly will spend a few moments there, as three of our canoes did. One had a hole stove in about 8in. equare; we had to cut up the foot boards, get putty and nails, and patch the break.

After leaving Ormstown about 4 o'clock we had a run of 17 miles to Saint Martine, and each man knew it behooved him to extri himself to get there before dark and not to jolly along as we had been doing in the earlier part of the dav.

At seven that evening we arrived at 8t. Martine, the proprietor of the chotel having lighted a bon-fire and brought a host offriends to welcome us. Some of the boys terrified the "habitans" by dressing up in fancy costumes and parading not only the streets, but the houses also, and two went to bed with Ethlopian countenances, much to their own discomfort and to the chagrin of the comfort of sleeping 37 young people in 5 bedrooms, to rest not—

"Hushed by buzzing night-flies to his slumber"—

Not morning, after helping the niggers get their normal color.

"Hushed by buzzing night-flies to his slumber"—
No, by jove, they had no room.
Next morning, after helping the niggers get, their normal color, we started for Chateaugay and before a fair wind made good progress, which was enlivened by a goose hunt, the vice commodore cappining the bird. After going a few miles further some one asked for a drink, and when that occurred we generally got 8 or 10 canoes together and compared notes. While doing this, a happy thought struck some one to hoist a sall in the center and all join in a row and sail down. Imagine a prettier sight it yon can than 17 canoes abreast and sailing down a peaceful river with each man in a colored flannel coat; with a few songs to enlive u the scene, it reminded one of the words:

"And the health-seeker findeth there The wine of life in the pleasant air."

"And the health-seeker findeth there The wine of life in the pleasant air."

But all good things have an end, and a few miles down a mildam makes us separate.

We have now reached our last rapids, and in these the Coquette came to grief, knocked a hole in her which we patched up all right. Our rear commodore had an experience in these rapids; on entering the waves he did not see a large rock, and before he knew it was broadside on, with his bow up stream. Quick as thought he and his mate turned in their canoe and paddled down stern forenest. It was the best piece of canoeing I ever saw, had they not done so their canoe would have been broken to pieces. In a few moments Chateaugrup Village was reached, and after gathering the party together we left for the basin, three miles below, where a separation took place. We bad to cross here a lake about five or six miles wide, and it was blowing a gale of wind. Some went by stage to Caugnawaga and walked over the bridge, others stayed at the basin all night, but it is of those who crossed in canoes that I would speak, and none of them would go through it again for any money.

Coquette left the shore to hoad for an island, but found it too rough to land, and were forced to cross; their experience was terrible, one having to paddle and the other bail all the time. Santie got half way across, swamped, and her crew were saved by the lightship keeper. Pauline and two others reached shore with their crew in an exhausted condition and walked some two miles to Lachine. The balance of the party got home next morning, and even then tound the sea very high, but take it all in all there is not one who would not have liked to start the same trip over again on the following Friday.

MARION L., A. C. A. 966.

TORONTO C. C., JUNE 21.

ON Saturday the spring regatta of the Toronto C. C. was held at the Island Park and was numerously attended, a large proportion of the visitors being ladies, who gave an additional charm to the day's proceedings. Seven events were contested for. The course was a half mile and return. The first event, tandem, the two boats which started held perhaps the four best paddlers in the club, and opinion was considerably divided as to the probable winners. H. Wright and M. F. Johnson were one team and Tilley and De-la-fosse the other. The first named won the toss and chose the inside course. Tilley and De-la-fosse got the best of the start and led by about half a length for a short distance, but at their first change they lost the lead and never regained it. Wright and Johnson were putting in some powerful strokes, and urned their buoy nearly two lengths ahead of Tilley and De-la-fosse who steered a bad course, having made for the wrong buoy. Wright and Johnson, however, had great difficulty in straightening out, and when they had succeeded in doing so, they steered too close in, the result being that Tilley and De-la-fosse closed up. Then a hard race for about 3byds, resulted, but after that Wright sand Johnson moved clean away from their opponents and won easily by three or four lengths, Tilley and De-la-fosse giving up near the finish.

The next event was the decked paddling race for which there were three starters: Matheson, A. M. Rice, and W. Sparrow. Matheson secured the lead at the start, Sparrow second, and Rice third. It was a close race between Matheson and Sparrow to the buoys, with Rice paractically out of the race. On the run home

anoe was sent shead, and he was given the race by about 4ft. Time 7.19. This was the closest race of the day, and created much

cance was sent shead, and he was given the race by about 4ft. Time 7.18. This was the closest race of the day, and created much excitement.

The singles was the next event, and Johnston won this easily at the finish, the other starters being De-la-fosse and Hackburn. At the start Hackburn got a good lead, De-la-fosse being second, and Johnston third. The last named paddled standing but having started with a short paddle be had to discard it for a longer one, losing two lengths doing so. He quickly set to work to cut down the lead the others bad gained, but at the turn De-la-fosse was first. Hackburn in turning upset his cance, and was then out of the race. Johnston and De-la-fosse were about on level terms shortly after turning the buoys, and for about 100yds. It was a great race between them. Johnston them forged rapidly ahead are about one of the race. Johnston, The form of the fours, the crews being. The one of the part of the fours, the crews being. The one of the fours, Hackburn, Morse, Vright, stroke, Jaques, Elgie, Rogers, Tilley stroke, Wright's crew had the best of the start by a length. This year, the finish Wright put on a fast stroke and easily of the wavay from the other boat, Wright's unning dist. About 100yds, from the finish Wright put on a fast stroke and easily of the wavay from the other boat, Wright's cance winning easily by six or seven lengths. The hurry-scurry, had more fun in it than anything else. The conditions were: Run 100yds, swim 20yds to their cances, get in the best way they could and paddle to finish. It was won easily by De-la-fosse, whose swimming ability gave him a long start over the others. Sparrow was second.

The handleap tandems had six starters, and it ended in a win of Johnston and Kelly, Brown and Iredale being second, time 6.25.

6:27.

The last race was the sailing upset, and it was won by W. Lee, W. Sparrow again getting second.

Of the seven events Johnston started in four, the tandems, singles, fours and handicap tandems, and got first in each. W. Sparrow got three seconds.

BROOKLYN C. C.

Bunda, H. H. Smyth.

The senior salling had for starters:
Bat. L. B. Palmer.
Passaic. G. P. Douglass.
Teaser. W. D. Anderson.
Vagabond. C. J. Stevens.
Ianthe. W. T. Stewart.
Uno. H. L. Quick.
Beta. T. S. Oxholm
Echo. George W. Cox.
Nipsic. C. V. Schuyler.
Eclipse. F. L. Dunnell.
Eros. F. C. Moore.
Sealnright. H. C. Ward
Hebe. W. W. W. Whitlock.
Rattier. R. S. Blake...
Uno won at 4:07:28, with Eclipse at 4:07:35.
The next race was for canoe yawls, thre Tonkers Crescent, Ianthe. Brooklyn. Knickerbocker. Brooklyn. Brooklyn. Brooklyn. Course 3 miles. Uno won at 4:07:28, with Eclipse at 4:07:35. Course 3 miles.

The next race was for canoe yawls, three times around, 4½ miles. The starters were:
Restless. H. P. Allen Marine and Field.

Nomad Arthnr Hurst Marine and Field.

Vim John Johnson Brooklyn.

Galloux. D. Dennison. Crescent.

Kuo-ne-She. W. M. Brownell. Crescent.

Galloux started in the lead and kept this position throughout the course.

The salling and paddling race was over a 3-mile course the startcres being:

Passaic. F. P. Douglas Ianthe.

Eclipse F. L. Dunnell Brooklyn.

Eros. F. C. Moore Knickerbocker.

Passaic won.

The course for tandem paddling was 1½ miles, the starters being:

ROCHESTER C. C. WILSON CUP.

Passaic won.
The course for tandem paddling was 1½ miles, the starters being:
100. Quick & Stewart. Yonkers,
1/gipton. Ledinger & Leatt. Crescent,
1/gipton. Schuyler & Hopt. Arlington.

THE second race for the Wilson Cup was sailed on Thursday last, June 26. The starting gun was fired at 4:57 P. M. Marie started first and secured a long lead, but was overlauled by Polly Wiggle, Surprise and Massawippa before turning the first buoy. The turn was made in the following order: Marie, Polly Wiggle, Surprise, Massawippa, Midzet and Toodles, not over 15s. apart. On the run down the wind Massawippa passed Surprise and Polly Wiggle, but was in turn headed by Polly Wiggle at the buoy. The second round was close and exciting, all the canoes being in a bunch and a very hard and gusty wind having sprung up. It was a sec-saw all the way up, first one then another having the lead. The buoy was turned by Marie first, followed by Polly Wiggle, Surprise, Midget and Massawippa; Toodles withdrew.

On the run down the wind to the second buoy Massawippi capsized and withdrew. The buoy being turned by Polly Wiggle, Marie and Surprise, in the order named, with Midget hopelessly in the rear, it was still anybody's race, there only being 14s, between the first and third boats, and 1m, between the third and fourtb; lutt on the run to the home buoy Marie forged ahead, crossing the line 1m, ahead of Polly Wiggle and Surprise, Surprise being obliged to luff across the line, thereby losing to Polly Wiggle. The times were as follows: 1st.

Wiggle. The times were as follow	s: 1st	2d

POINTE CLAIRE CANOE CREW,—The second of the series for the Pointe Claire canoe trophy was sailed on June 21 and resulted as follows. Start at 3:48:

NEW YORK C. C.—The handsome new house of the New York C. C. was used for the first time on June 21, a number of visitors being present to take part in the annual regatta. In consequence of the rain and heavy weather the races were postponed until later in the season. A scub race was sailed, Mr. Schieffelin coming in first and Vaux second,

CHIMMON'S ISLAND,—The Norwalk C. C. will campon Chimmon's Island, off Norwalk, this month. The island has been specially fitted up for camping parties, tents, etc., being to rent there.

there.

A. C. A. MEMBERSHIP.—Eastern Division: William P. Seymour, Holyoke, Mass.; Frank P. Sames, Hartford, Conn.

LAWN TENNIS, baseball goods and exercising machines are set forth at length in the catalogue of Schoverling, Daly & Gales, of 302 Broadway, New York. They also carry a large line of the best bicycles and tricycles.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales." giving a table of contents and specimen illustrations from the volume.—Adv.

NAMES AND PORTRAITS OF BIRDS, by Gnrdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

Wachting.

"West India Hurricanes and the Great March Blizzard." By Event Hayden, U. S. Hydrographic Office. Large quarlo, with 33 lithographic plates. Price \$1. Condens full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

FIXTURES.

June 16—Wind in morning from north-west. Afternoon, wind south-west, moderate with very light sea running. At 10 o'clock in the morning White Head was sighted.

Juno 17—Arrived in Halifax at 9 o'clock in the morning, weather fine. All hands well and hearty. Examined craft and found everything O. K., not even a rope missing. Dishes remained intact and all furniture in first class condition.

BEVERLY Y. C., JUNE 28.

BEVERLY Y. C., JUNE 28.

158TH REGATTA, FIRST CHAMPIONSHIP, MARBLEHEAD.

THE first championship race was sailed in a S.E. wind, which, though light inside the harbor, amounted to a fair sailing breeze with quite a little lump of a sea outside. The entries were few in number, hut good in quality. In first class, Saladin did not have her now mast stepped in time, leaving race to Hawk and Mopsa, the former sailing very fast and winning with ease, the course being a beat to Half-way Rock, a reach to Pig Breaker and a run bome, 10 miles.

In third class the new flagship was missed; she was entered, but did not arrive in time. Wanda and Kathleen got off on the gun, closely followed by Nixie, altered to a jib and mainsail, and Edith. Kiowa tried to shoot across Wanday's stern, but was fouled and badly delayed by Niobe, the result being she was a long way behind at the start. The course was a broad reach to Bowditch Ledge, going outside No. 6; then a run to Curtis Point and a beat to No. 3; where sheets were eased a little for the run in.

Kathleen took the lead, closely pressed by Wanda; Nixie, carrying a balloon jib, which was contrary to the rules, was following them.

Kiowa soou passed Niobe and caught Edith, but found herself

to No. 3. where sheets were eased a liber for the root.

Kathleen took the lead, closely pressed by Wanda; Nixie, carrying a balloon jib, which was contrary to the rules, was following them.

Klowa soou passed Niobe and caught Edith, but found herself in a bad place; she tried repeatedly to pass Edith to windward, but the latter was too much, and a series of lufting matches was the only result; while Niobe was in such a position as to hinder her in going through Edith's lee. The result was, that while the leaders were sailing a straight course the others were going round in a circle; finally Klowa got through Edith's lee at Buoy 6 and started after the leaders.

Kathleen rounded Bowditch first, closely pressed by Wanda, then Nixie. Klowa was nearly two minutes behind Kathleen, with the others at 15-second gaps.

Edith and Niobe held further off shore, gotting a hetter air, and began to gain; Klowa keps after the leaders, steadily gaining and running through lee of Nixie and Wanda, and finally establishing an overlap on Kathleen just before the mark was reached, the boats rounding as follows: Klowa, Kathleeu, Wanda, Edith, Nixie, Niobe.

Once on the wind Klowa had it all her own way, sailing away from the fleet easily, and opening a good gap, though the beat was only about a mite and a half. Edith, while pushing Wanda closely for second place, and well inside her allowance, broke a throat halliard block and withdrew.

Wanda, tbongh a second class boat, sailed in third class by invitation of the class, and her measurement proves the flaws in the B. Y. C. rule, which is boom, gaff, and height of upper peak halliard block, divided by three, the result added to waterline and divided by two. Wanda is 19½th, longer than Klowa on waterline, and her sail is decidedly larger in actual arca, but the shortness of her masthead, owing to comparatively little peak to the sail, brings her racing length the same as Klowa's. Klowa, and Gymnote have cut good sized triangles off the head of the working sails, and the result is the

It was a good day for Cape cats, Hanley's new Madge winning ber first race at Hull, at the same time beating Mabel, Tariar, and Myrtle. Winners of prizes: Class one, Hawk; class three, cats, Kiowa first, Wanda second; class three, sloops, Kathleen; class four, Dolphin. Legs for champiou pennants on actual time won by Hawk, Kiowa and Dolphin. Judge, F. Elliott Cabot.

SMALL STEAM LAUNCHES.

BURLINGTON, Iowa, June 10,—Editor Forest and Stream; It would be to the interest of every owner of a small pleasure steam launch, plying on waters controlled by the U. S. steamboat inspection laws, to use their influence to have the law modified, in regard to licensed officers. A boat which can be efficiently handled by one man ought not be compelled to carry two, as is now the case. If he wishes to go on a trip and his partner is unable to go, he has to hunt up a man who has papers for pilot or engineer, or stay at home. It does not matter whether the said pilot or engineer is under the influence of "original packages" or not, so he has papers. Last winter I made application, through Hon, John H. Gear, to the supervising inspector general, for a special permit to run our little boat without a licensed pilot. I received a very uice letter from the supervising inspector general, John A. Dumont, which you will find inclosed. John J. Oher.

received a very vice letter from the supervising inspector general, John A. Dumont, which you will find inclosed. Joint J. Oher.

Theasury Deperturent.

Office Supervising Inspector-General of Steam Vessers, Washington, D. C., Jan. 16, 1890.

Hon. Geo. C. Tichenor, Assistant Sceretary of the Treasury:

Sire—I have the honor to acknowledge the receipt by your reference of the 15th instant the letter of Mr. John J. Ohrt, of Burlington, low, addressed to the Hon. John H. Gear, M. C., in which Mr. Ohrt requests that he be permitted to act in the double capacity of pilot and engineer on his small steamer Lotus.

In reply you are informed that the requirement for both a pilot and engineer is a statutory one, and is provided for in Section 4,223, Revised Statutes.

In this connection I desire to call your attention to the recommendation of this office as published in the Annual Report for 1888, pages 7 and 8, which I quote as follows:

"I would refer lirst to what I deem a necessary amendment to Section 4,423, Revised Statutes, which now requires that all steam yachts or small craft of like character, etc., shall carry a licensed engineer and a licensed master.

"This was well enough in 1871, because there were, all told, throughout the United States, but twenty-four vessels under five tons burden, while at the present time there are, as shown by the official records, 781 steam vessels under five tons burden, while at the present time there are, as shown by the official records, 781 steam vessels under five tons burden, while at the present time there are, as shown by the official records, 781 steam vessels under five tons hurden, some of them so diminutive that their carrying capacity will not exceed officers were enjoying the actual pleasure of yachting. As such a position is wholly an unreasonable one, the statute referred to should he amended by adding thereto a proviso as follows:

"Provided, however, That vessels described herein of less than five tons hurden may be navigated with one person acting in the double

capacity."
The letter of Mr. Ohrt and certificate of his steamer Lotus are herewith returned.
Respectfully yours,
JAS. A. DUMONT, Supervising Inspector-General.

AMERICAN Y. C.—There will be a special regatta for naphtha launches on July 5, 1890, under the auspices of the American Y. C., at Milton Point. Two prizes will be offered, as follows: First class, all launches 20tt. or more in length on waterline; second class, all launches 20tt. or more in length on waterline; second class, all launches sets than 20tt. on waterline. These prizes are open to all naphtha launches, and owners, whether members of the American Y. C. or not, are requested to enter their launches. The time allowance devised by Chief Engineer B. F. Isherwood, U. S. N., has been adopted, and is as follows: "The speed in knots per hour divided by the cube root of the length on the waterlines of the launches respectively, the quotients represent relatively the merits of the different launches." Tho course will be ahout eight nautical miles, with one turn. Launches will turn from port to starboard. All launches entered for this regatta must recort to tarboard. All launches entered for this regatta must report to the regatta committee at the club house by or before 2. M. on the day of the race, where they can obtain distinguishing numbers, which numbers must be displayed during the run, and returned to the regatta committee directly after the race entering launches are extended the privileges of the club for the day. Members of the club, with their guests, will be present without further notice. Regatta committee: George W. Hall. Ezra S. Connor, Thomas L. Scovill, William S. Alley, J. Howard Wainwright.

THE first championship regatta of the Hnll V. C. was sailed on Saturday, the courses being: Third class, across line between judge's boat and flag boat, leaving flag boat on starboard, around Black Brish Buoy No. I, (one-half mile south, southwest of starting line) leaving it on starboard; thence leaving Wreck Buoy off Paddock's Island on starboard, Wilson's Rock Buoy on starhoard, around Hunt's Ledge Bnoy, leaving it on starboard; thence returning to and leaving Wilson's Rock Buoy on port, across starting line, leaving flag hoat on starboard. Nine miles. Fifth and sixth classes, across line between judge's boat and flag boat, leaving flag boat on port, around Hull Yacht Cinb Bartel off Harry's Rocks (near Prince's Head), leaving it on port, around flag boat (at start), leaving it on port, and repeat. Six miles.

There were no entries in the fourth class. The wind was strong from S.E. The times were:

QUAKER CITY Y. C. PENNANT REGATTAS.

QUAKER CITY Y. C. PENNANT REGATTAS.

The Quaker City Y. C. has this season arranged a series of pennant regattas, for the yachts of the club only, the first of which was sailed on Junc 28, resulting as below. The yachts must be steered by members of the clnb, and manned by amateurs, one professional being allowed on each of the smaller yachts and two on the larger. The races are started from the gnn. On Saturday the wind was from the N.W., with an ebb tide, the course being from off Gloucester to the Horse Shoe Buoy, keeping it on stard-board, thence around Red Buoy at upper end of Chester Island, keeping It on port, and returning over the same course to point of starting, keeping to westward of Red Buoy on Block House Bar, both going and returning. Start was at 2 o'clock. The fines were:

LLOYD'S YACHT REGISTER, 1890.

LLOYD'S YACHT REGISTER, 1890.

YEAR by year this handsome and elahorate volume grows in size and improves in quality, the new book for 1890 numbering a total of *858 pages. Last season it was found next season; in order to keep the size within convenient limits, to separate the rules for building from the register of yachts, issuing them in a separate volume, and the same plan is followed this season, but in spite of this change the register continues to grow, being larger by 50 pages than last year's book. It now includes, nesides much other matter, a list 4,22 yachts-3,707 sail and 1,121 steam—that are regularly recorded, in addition there being a list of 1,151 American yachts not measured by Lloyd's rule. Besides these lists are others of British and other clubs with the club flags, a complete and handsome collection of racing flags, arranged on the plan originated by Lloyd's three years ago, and which has since been adopted by other lists; a list of signal letters, one of alterations in names, a full list of yachts classified by their tonnago, a list of owners, and a complete list of designers and builders with the yachts they have produced. Some very important improvements have been made in the rules for building, which now make a compact volume of over 100 pages. The rules for iron vessels have been entirely remodelled, the changes being in the direction of added strengtb, while the increased use of steel is met with a set of rules for steel construction, an entirely new feature. The rules for anchors and chains have also been greatly improved, the sizes and weights heing apportioned by a new and special rule, which is better than the old tonnage rule formerly employed. On looking over the books it is impossible to ignore the contrast botween them and the substitutes which are provided for American yachtsmen, and to wonder when the time will come that we shall have something as complete, as punctual and as accurate.

STATEN ISLAND ATHLETIC CLUB, JUNE 28.—The Yachting Department of the Staten Island Athletic Club sailed a very successful regatta on Saturday on New York Bay, the start being off Robbin's Reef Light. The wind was strong and puffy from the west. Broncho lost her topmast at the start, Maggie E. capsized off St. George and Spinster lost her must at the deck. The times were:

UVIRA'S LOG.

UVIRA'S LOG.

THE following account of the new Fife cutter Uvira and her recent voyage across the Atlantic is copied from the Mail of Halifax, N. S., of June 18. The new hoat may be seen at Marblehead next week, in which case she will race in the 46tt, class, with Alga, Thelma and Miliceate: As already announced in the Mail, Mr. Fraser's new yacht Uvira arrived from England yesterday in command of Capt. Wm. Ross, who speaks in the highest terms of the splendid sailing and seagoing qualities of the boat, and states that she is the finest craft he has ever sailed in during his Is years experience as captain. The captain also speaks in glowing terms of the seamanship of his crow. The official dimensions of the boat are as follows: Length from fore part of stem under the howsprit; to the aft side of the head of the stern post, 50ft; main breadth to outside of plank. 11ft. 3in.; depth of hold from upper deck to ceiling at midships, 8ft. 6in; depth from top of beam amidships to top of koel, 8ft. 9in.; depth from top of deck at side amidships to bottom of keel, 11ft. 3in; round of beam, 45; tonnage, 10.25; designer, William Fife, 4r., of Fairlie, Ayrshire, naval architect. The ladies' cabin is located in the after part and stvo large sleeping berths. The apartment is finished in white and gold. The saloon, which is situated amidships, is finished in white and gold. The saloon, which is situated amidships, is finished in white and gold. The saloon, which is situated amidships, is finished in white and gold. The saloon, which is situated amidships, is finished in white and gold. The saloon, which is situated amidships, is finished in white and gold. The saloon, which is situated amidships, is finished in white and gold. The saloon, which is situated amidships, is finished in white and gold. The saloon, which is finished on the saloon of the

28—Wind west northwest, heavy sea. Boat running with sall set—90 miles.
29—Wind west southwest, heavy seas running. Boat close I, and going at the rate at 9 knots an honr. In the latter of the day experienced more moderate weather. Total dissailed 173 miles.
30—Heavy gales from south-south west with thick and rainy er, blowing a gale. Boat rode through splendidly. At 2 weather moderated, but a huge swell prevailing. Boat 12 along under two reefed mainsall and two reefed foresails to 82 miles.
31—Varlable winds, foggy, heavy sea from west, winds west north west to south west. All sails set—77 miles. 21—Wind west south west, heavy gale and heavy sea from On this day the cutter showed some magnificent work to windward, making the run for the day 177 miles. She as high as 11 knots an hour.
2—Weather moderate, bordering on a calm with light varidad—66 miles.
3—A snecession of calms with rain accompanied by fog. 16—Winds varying from west south west, beayy sea.

8 miles, Tune 4—Winds varying from west south west to west, heavy sea om south west, all sails set. Signs of a heavy storm approach-

les.
Wind from north east to east, light winds—94 miles.
Heavy gale from east, boat running under a reefed—164 miles.
Weather first part of day moderate. At 6 A. M. a heavy means the north west was experienced, and all sails were wn. Ran this way for two liours, when a reefed foreoreded mainsail were set. Although the weather was the board of the sail was the control of the sail was the sail were set. Although the weather was the made.

e made.
Day opened with stormy winds from west north west.
Day opened with stormy winds from west north west.
s were encountered. Huge clouds appeared in the sky,
indication of the coming of a heavy storm. The sails
d fore and att. Boat passed through the storm withning any damage, and made the very good run of 122

out sustaining any damage, and made the very good run of 122 miles.

June 9—Moderate winds from west, sea quite calm. At 6 P. M. wind increasing from south-west, and changed quickly to west-north-west. Heavy sea prevailing—70 miles.

June 10—Heavy gale from the west, thick weather and rough seas prevailing from the south-west. Running under close recfed foresail and mainsail—120 miles.

June 11—Heavy winds from the south-west, close reefed fore and aft, wind changed to north-west with very heavy seas—82 milos. At 4 o'clock arrived at Cape Royal, Newfoundland, all well. Remained there two days.

June 13—Left Cape Royal at daylight and rounded Cape Race at 8 A. M. Winds north-west, and very heavy sea from the west. At 12 o'clock Cape Pino bore north north-west, distant 12 miles. June 14—Westerly winds and a heavy sea prevailing. Towards evening the wind increased and later on developed into a heavy blow from the south.

June 15—At 1 o'clock P. M. wind south-south-west, thick and rainy, heavy sea. Wind hanled to the north-west, Passed a barque under close reefed sails,

CORINTHIAN Y. C. OF MARBLEHEAD.—The fifth race of the year was sailed on June 17 with but four starters in the two classes, the course being from Jurges' line, leaving Buoy 3 on starboard, Cat Island Rock on port, buoy on Gooseberry Ledge on port, Bowditch Ledge Beacon on port, buoy on Eagle Bar on port, to judges' line; 6½ miles; limit 12h. 30m. the prize in case they came in first.

KNICKERBOCKER Y. C. LADIES' DAY.—The Ladies' Day race of the Knickerbocker Y. C., on June 28, was quite a success, although a calm at the end spoiled the interest in the racing. The yachts started at one gun at 2:30 P. M., the course heing twice around College Point Bnoy: Nyssa, Com. Rousseau; Myra, G. K. Rosenquest, Whim, W. Sainebury; Parole, F. Burg; Ida B., H. Klussenquest, Whim, W. Sainebury; Parole, F. Burg; Ida B., H. Surg; Anatta, Rear-Com. C. Coughtry; Tourist, Vice-Com. Black; Unnamed, E. S. Snyder, Maggie, A. Wagner; Vision, A. N. Norris, Cher, Supervis Griffiths; Mascotte, A. Lefferts; Torino, J. Fonrier, Supervisor, Dr. E. Ringer, and Alice H., A. H. Holden. Tourist worn in her class: a new Cape cat with no name won in hers, and Myra in hers.

EASTERN Y. C. will be sailed on July 10, the start being made off Half-way Rock. Prizes will be given in all the classes of the club from 35tt. up. A very complete programme of the regatta has been issued, with full chart of all courses, and the signals denoting them in colors. It is prohable that Sea Fox and Merlin will start, also (Enone and Quickstep. The 48tf. class will have Alga, Thelma, Milicente, Fanita and possibly Uvira and Bayadere. The forties will include Gossoon, Ventura, Minerva and some of the older hoats. The smallest class is from 30 to 35ft., hut some of the thirties may go up into it.

A CLOSE FINISH.—In the race of the 10-rating class of June 7, Clyde Corinthian Y. C., five yachts started, the new Fife Woodcock, the new Maida, designed by her owner, Mr. Fred Stephens; the new Hife Encore, last year's crack Yvonne, and the ever youthful Doris. After a race of nearly three hours they finished: Woodcock 2:99:10, Maida 2:39:30, Yvonne 2:40:00, Doris 2:40:48, and Encore 2:4433.

ST. LAWRENCE Y. C. OF MONTREAL.—We have received from the St. Lawrence Y. C. a very neat little club book, giving a list of 199 members and 81 boats, 30 being steamers. In spite of disadvantages, in the way of shoal water and isolation from outside competition, the St. Lawrence Y. C. succeeds in keeping up good races each season, and is an active and prosperous club.

THE AUSTRALIAN CHALLENGER.—It is reported that Mr. Walter Reeks does not expect to have his challenger ready in America until 1622. She will sail by way of Sucz, stopping for a few races in England before coming across the Atlantic. This need not deter other yachtsmen who are anxious to build 90t. Cutters.

NORTH SHREWSBURY RIVER Y. C.—Officers for 1800.

CHANGES OF OWNERSHIP.—Lydia, schr., has been sold by rederick Grinnell to Ogden G. Wilkinson of Philadelphia; Helen, utter, has been sold to E. L. Scott of Philadelphia, who will use er for cruising about Bar Harbor; Alice, cutter, has been sold to Ir. Richardson of New York; Columbia, schr., bas been sold by . M. Flagler to J. T. Perkins for \$12,000.

d. M. Flagler to J. T. Perkins for \$19,000.

MINERVA AND CHISPA.—The match between Minerva and thispa for \$250 per side, which was to have been sailed on Saturay, was postponed at Mr. Carroll's request, and will not be sailed t present. The match was arranged after the Atlantic Y. C. egatta, Mr. Carroll challenging Com. Lawton.

PLEON Y. C., Marblehead.—The first pennant regatta of the leon Y. C. was sailed on June 18 with 14 starters in the three lasses, the wind being fresh from S.W. The winners were Minie in the dory class, Unknown in the left, class, and Mr. Crowninfield's new Wasp in the smaller class.

HUBBE'S YACHT AGENCY.—We call attention to the advertisement on another page of Hubbe's Yacht and Steamboat ugency. Mr. Hubbe has had a long experience among yachts and sessels of all kinds, and is prepared to furnish designs or to buy and sell all classes of marine property.

YAMA.—Mr. Ames's cutter left Wintringham's yard on June 27, eing towed to Thirty-fifth street, North River, where she was laced in a tow of canal boats for Troy. She will be fitted out as apidly as possible on her arrival at Oswego.

SEAWANHAKA C. Y. C.—One of the handsomest of the club books which come to us each year is that of the Seawanhaka C. C. C., and that of 1890 is no exception. It contains a list of 330 nembers and 140 yachts.

CORINTHIAN Y. C. OF MARBLEHEAD.—The new book of his very successful young club shows a membership of 361 and a leet of 150 yachts, from Volunteer and Sea Fox down to the IVERNA.—On June 14 Iverna was docked at Southampton and

IVERNA.—On June 14 Iverna was docked at Southampton and her centerboard removed, the slot being filled with lead. The trunk was removed entirely.

SANS PEUR.—Mr. Morgan's steam yacht sailed from South-ampton on June 18 in charge of Capt. Craven. CHIQUITA AND PAPPOOSE.—These two forties are fitting out at Lawley's, the former for a cruise to the Maine coast. GLADYS.—Mr. Vanderbilt's new 30 will be coppered at Lawley's. ANAQUA.—This name has been given to Mr. Thayer's new 30.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

F. OAKDALE, Long Island.—The mouse you sent us is the jumping or deer mouse, sometimes called the Canadian jerboa. Its Latin name is Zapus hudsonius.

B. Brooklyn, N. Y.—Would fish of any size go over Niagara Falls and live? Ans. We can only conjecture the result of such a fall. The probability is that the air bladder would be ruptured and death ensue.

death ensue.

C. H. B., Manistee, Mich.—Please tell me if there is any way to soften a meerschaum pipe so that it will color again after it has been only partly colored (burnt). Ans. It is commonly supposed that a meerschaum can be softened by being boiled in wax. and that then it will color again. Just how this is done is, we believe, a trade secret.

a trade secret.

T. A. T., Rhinebeck, N. Y.—Please state where good black bass fishing may be found in the upper part of the Delaware River? Ans. One of the best places known to us is Egypt Mills, Pike Co., Pa., where bass are plentiful, bait abundant and expenses small. Port Jervis (N. Y., L. E. & W. R. R.) is another good point Between that place and the East Branch of the Delaware Pond's Eddy, Lackawaxen, Cochecton and Callicoon are noted resorts for black bass fishing.

W. H. B., Norfolk, Va.—I. Kindly let me know if there is such an article as gunning boots or shoes of leather which are absolutely water-proof. If so, where can they be obtained? What kind of pants would you suggest to protect one from the briers. Ans. I. We know of no leather boots that are absolutely water-proof unless constantly dressed with grease or some water-proof mixture. 2. Wear canvas overalls outside your trousers. Nothing will always resist the briers, but the canvas is the best thing we know of.

will always resist the briefs, but the chivas is the dest think we know of.

J. E. H., New York.—I have a Gordon that, some three months since, dropped a nice litter, and at the end of seven weeks I separated the mother from the pups. A few days ago I allowed her to get in the pen containing three of them and they tried very hard to get some milk but the fountain was dry. She then seemingly with some effort threw up some partially digested food which the pupples at once devoured. I concluded she was not feeling well. The following morning she again repeated the action, and it struck me at once that this was the way in which, when necessary, they could feed their young. She is a fine breeder, and in raising about forty pups I have yet to lose my first one while with the mother. Ans. It is a very common occurrence for a bitch to feed her offspring in this manner.

J. Sweetland tells us a funny story of how five Siwashes got away with a bear at his camp just across the bay from here. Mr. Bruin intruded himself in among the pots and kettles, picking out a dainty meal. While so engaged he attracted the attention of a Siwash, who at once called his mates to his help. Ground is prettyrocky round the camp, and plenty of loose stones ready to hand. They at once fell on the bear, like the Jews of old did on Stephen, and stoned him to death. He would at first endeavor to follow his assailants, but being surrounded a stone in the rear would turn him. So he fain gave himself up to the flesh-pots of the tenas kluckmens.—Union City Tribune.

ANSWERS TO CORRESPONDENTS.

A BLACK BASS NUMBER.

OUR black bass supplement, which will be published July 24, will contain a variety of material which will be of permanent value to anglers and all who are interested in this famous fish. The supplement will be in character much like those already published devoted to other fish. Illustrations will be given of all the species, with an account of their lives, habits, and the various modes of angling for them. There will be papers specially devoted to black bass fishing, among which will be one by "Kingfisher," recounting "Some Personal Recollections of the Bass Family." This is in "Kingfisher's" best style and will be relished by all who have enjoyed his accounts of the camps of the Kingfishers. There will be a paper by Dr. J. A. Henshall on the "Bass and Bass Islands of Lake Erie." Dr. Henshall will also contribute notes on black bass angling.

SNAP SHOTS.

THE California Sportsmen's Protective Association has issued an address calling attention to the growth of the preserve system in that State, by which various lubs have largely taken up the available shooting and shing territory, and urging united action to frustrate he plans of the clubs for holding their territory and acuiring more. As has already been reported in these olumns, the feeling in California is decidedly strong against the holders of exclusive fishing and hunting ases, and the association was formed primarily for the urpose of combating this system. The introduction of he address is as follows, "This pamphlet is issued by the portsmen's Protective Association of California for the urpose of directing the attention of sportsmen to the

and assumed such formidable proportions that it excites alarm for the future of true sportsmanship in the mind of every man who has its best interests at heart." purpose of the association is stated to be "the abolition of game preserves, the enforcement of existing game laws and to secure the enactment of such further laws as may be deemed necessary and wise; the protection of the game and fish now in the State; the introduction and propagation of such desirable game animals, birds and fish as may flourish in the State, if introduced; the encouragement of field sports among its members, and to secure to all lovers of the rod and gun such rights, priv-ileges and pleasures as come within the province of an association of sportsmen."

The present season has been an unusual one because of the abundance of fresh-water and salt-water game fish, which has everywhere made joyful the heart of the angler. The trouting has been something unprecedented within recent years; reports come from all parts of the country that the fish are of unusual number and size. This condition of affairs may be directly traced to the mildness of the past winter. The brooks were open and there was abundance of food. In severe winters, which freeze small streams and ponds to the bottom, it is to be presumed many fish are destroyed; and such a season as the present may therefore be ascribed in part to the open

The shooting season of 1890 is full of promise. From all parts of the country quail are reported to be exceedingly numerous. Bob White's cheery whistle is heard everywhere piping the prophesy of good things to come; the nests contain unprecedented numbers of eggs; and the outlook for the quail shooter is of decidedly rosy hue. This is largely due to the mildness of last winter. The quail is of our game birds peculiarly susceptible to destruction by heavy snow and ice storms; unusually severe winters are followed by a corresponding scarcity of birds; and after mild seasons the quail supply is abundant. Large numbers of ruffed grouse have been observed in New England; the broods are many and large. This can hardly be credited to the open winter, for the grouse is a bird which is in a large degree independent of weather conditions through the winter. It finds its food without difficulty mostly above the snow, and is not starved out as the quail may be. Woodcock are reported to be less abundant than usual by the trout fishermen, who usually observe the birds while on their trouting expeditions; but this may be accounted for by the fact that it has been a wet season, and the birds have not repaired to the brooks as in dry seasons, and so the anglers have not had an opportunity of seeing them.

Secretary W. O. Bonnie advises us that the Kentucky Legislature has failed to pass the proposed fish and game bill prepared by the Kentucky Fish and Game Club. A portion of the bill passed the Senate but did not find favor with the House. This is the more to be regretted because the game and fish laws of Kentucky are in a most deplorable condition and their reformation is urgently needed. No reasons were given for refusing to adopt the suggestions in the bill prepared by the Club. Club, however, is so strong numerically and has manifested such a determined intention to secure the reform that we confidently look for renewed efforts at the next Legislature, and in time the needed laws will certainly be enacted. Meanwhile, the Club should not lose any time in educating the public by doing missionary work. No game and fish laws are effectual until the public sentiment has advanced to an appreciation of their value; and by keeping this matter alive and discussing it in the papers of the State, Kentucky sportsmen can surely prepare the way for the laws they deem necessary.

Skill in sport is well enough in its way, but after all it is the "duffers" who have the fun. A game of base ball by League teams is a pretty spectacle, and thousands pay their gate-money to see the hired experts go through the performance. But for a real, simon-pure, downright good time commend us to a Fourth of July match in the country played by scrub nines, where every individual player is umpire and captain in his own person, and does the muffing and the shouting with enthusiasm and enjoy-ment unknown to the salaried professional. As men play at ball on the Fourth who would never think of ame-preserve evil which has worked its way among us | playing on any other day of the year, so they are coming

to shoot at the traps. Fourth of July scores are always remarkable for their "goosc-eggs." They tell plainly that the shooters are novices. On no other day in the year would a general average be found so low. Trap-shooting has advantages over baseball as a noise producing pastime; the shooter enjoys in $addition\ to\ the\ excitement\ of\ the\ competition\ the\ patriotic$ satisfaction that he is celebrating the day with a proper amount of racket. And as for the scores, it matters not at all that they make a poor showing compared with those of the experts. The Fourth of July scrub teams have the fun, high totals or low, win or lose. And that is more than can be said of the expert who is in it for what he can make out of it and makes nothing.

The New York woodcock season will open Sept. 1. The time was changed by a law of the last Legislature, which we quoted last week. Like the average New York game statute this one is a decided bungle, since it imposes a new season without any reference to the former section naming the season; and thus leaves open to conjecture the intent of the Legislature. When the codification committee shall have completed its labors, the New York fish and game statutes, let us hope, will be in plain inpeople. Any persons having any suggestions to make respecting the laws, should communicate with the secreof the Commission, Deputy Attorney-General Ed. G. Whittaker, Albany.

We have received from Mr. Frank M. Coleman, of Johnstown, Pa., an unique memento of the great Johnstown flood. This is an artotype engraving of Mr. John town flood. This is an artotype engraving of Mr. John Tracy's painting of the two dogs Croxteth and Sensation. Mr. Coleman tells us that the picture was in his re idence which was swept away by the flood, and the artotype lay at least thirty feet under the water during the deluge. It is certainly an interesting relic. A suit brought to recover damages caused by the flood has recently been decided in favor of the South Fork Fishing Club; and it is stated that no further action will be taken against the club looking to the recovery of damages caused by the breaking of its Conemaugh dam.

No good reason suggests itself why poetry and ornithology should no go hand in hand; there is certainly enough of the poetical in the ascertained facts of bird life to give scope for the versifiers. But here is a poet in the June Century who writes:

And oft is heard the drum of quail.

This is followed by a line,

And meadowlarks are soaring high.

The curious phase of this is that the poem is one inspired by bird music; and its author might justly be thought to be something of an observer of bird life.

The intense heat of the July days that have passed has made the woodcock shooting in those States where summer shooting is still permitted harder and more disagree-able work than usual. While this is bad for the shooter it is good for the birds, and if we are obliged to swelter we may feel that this torrid heat will keep many a gunner from killing the summer birds. The majority good sportsmen believe that summer shooting should be done away with. It is to be hoped that the day is not far distant when public sentiment all over the land will condemn this wasteful practice.

The "original package" decision, which is making trouble with the commodity to which it directly referred and which is capable of making more trouble with respect to game imported into the several States and there sold out of season, will be offset if an amendment now under discussion in the Senate shall be passed. It is to the effect that any article of inter-State commerce shall, when imported into any State, become subject to the laws

Black bass, wall-eyed pike and other game fishes are dying by thousands in Cedar and Leading creeks, the principal tributaries of the Little Kanawha river, West Virginia. The cause of this mortality is utterly unknown as usual, but its effect threatens to be the annihilation of the best fishes of the region. The systematic investigation of phenomena of this serious nature ought to be one of the urgent duties of the Government.

The Sportsman Tourist.

THE LIFE AND TIMES OF OLD JACK.

A Pioneer Dog.

A FOR-SURE STORY.

"WHY, 'Old Jack,' as you call him, was a dog!" ex-claimed my wife.
"Well, what of that?" said I. "Didn't he have a 'Life

and Times?"

"O, now, don't be silly," returned my spouse. "Do you suppose that any editor would be foolish enough to prin such stuff, even if you were—er—did write it? Any de cent editor, I mean."

"Well, that depende "

such stuff, even if you were—er—did write it? Any decent editor, I mean."

"Well, that depends," said I, assuming as dignified a manner as I could, and at the same time rubbing up my spectacles preparatory to an attempt on the life of Old Jack. To speak the truth, I was nettled. I never had a friend during all my boyhood years in whom I believed more thoroughly than I did in Old Jack, and now to hear him spoken slightingly of by one who never saw him, and who, of course, knew nothing of his many noble qualities, was a little too much; and so, after my spectacles were duly polished and my pencil properly sharpened, I deliberately turned my back on the offending woman and wrote as follows:

deliberately turned my back on the offending woman and wrote as follows:

Old Jack was a dog, it is very true, but then he was a pioneer dog, and that goes a great way with most people nowadays. He never saved any little boy from drowning, nor any drunken man from freezing, nor did any other one great and signally heroic act; for he wasn't that kind of a dog. He was what was called in his day a "coon dog;" but surely no coon dog ever made better use of his opportunities, and at the same time established a better reputation for true doghood, than did Old Jack. It was a great many years ago when this story opens, and for that matter, a great many when his entire there is scarcely a half dozen persons living who have any recollection of him outside of myself and an aged aunt who used to live in the family.

Away back as early as 1832, which was before I was born, my father was a "mover"—moving from Kentucky to the new State of Indiana. Four horses were hitched to the great wagon which held the "plunder," and in which, well up to the front, rode the young woman who was in process of time to become my mother. There are no wagons to be seen nowadays like that one. It had a long, crooked bed, which was fringed all around with chains, that jingled and clanked as the wagon pitched and jolted over roots and stones, making a din that could be heard for hundreds of yards away.

The movers had crossed the Ohio River at the then new and promising town of Madison some time in the forenon, and had climbed the big hill and crossed the plateau on which North Madison has since been built, and were I do not know how far on their journey (for my mother, who told me this part of the story, never said), when they heard a peculiar noise, and one so loud, that my father, who was riding the left wheel horse, cried "Whoa!" and the team stopped still.

"What was that noise?" said my father.

"I don't know," answered my mother, "but I have heard something like it several times, though not so loud as just now."

"We'll wait till Wiley comes

the team stopped still.

"What was that noise?" said my father.

"I don't know," answered my mother, "but I have heard something like it several times, though not so loud as just now."

"We'll wait till Wiley comes up," said my father.

"Maybe he'll know."

In a few moments Wiley was heard crying "Hoocy!" to old Boss and the other cattle, which were moving from Kentucky to Indiana also.

"Wiley, have you heard any peculiar noises—any noises like the howls of a dog in a hollow stump or in a barrel or anything, this morning?"

"No sir!" said Wiley, as with his big toe be cut the rim of high land between horse tracks filled with water, thus uniting two little seas by one little strait.

"Well, we have. Do you know what it is?" and my father looked at the lad as though he suspected him of knowing more than he chose to tell.

"No sir!" promptly answered Wiley, as with his great toe he continued his geographical feats.

Wiley was a good boy, as boys went in the days, Mr. Editor, before you and I were born—better, I dare say, than most of the boys of this day were. I have often heard my mother say that bound boy as he was, if you sent him to feed the horses or slop the pigs or salt the sheep you could rely upon him doing it. In all the ordinary affairs of life he was a trusty, truthful boy. But in the extraordinary affairs, and especially when it came to the accounting for strange and mysterious sounds heard while moving, Wiley was not quite so reliable. He was known at least on one cocasion to solemnly declare he didn't know whence came certain strange and mysterious sounds, when it was subsequently demonstrated beyond a reasonable doubt that he did know.

When the noon hour came round the movers stopped for refreshments, and one of the first things to be done was to loosen the chains that held in place the immense "feed box" to the "hind-end gate" of the wagon and place it in position for the use of the horses. No sooner was this done and the cover removed than out popped a lithe, active young dog more than laff gro

put him in the feed box to keep him from following, and under the pressure of cow driving had subsequently forgotten all about it. I am thus particular with this part of my story because it is with dogs, much as it is with men, a good pedigree is everything. Still there have been men who mounted up high in the world without any recorded pedigree at all; and I am proud to say that Old Jack was a notable instance of the like good fortune among dogs.

been men who mounted up high in the world without any recorded pedigree at all; and I am proud to say that Old Jack was a notable instance of the like good fortune among dogs.

From the day he became a member of my father's family Jack made his way in the world. He was, as already intimated, a lithe, active fellow when he jumped out of the feed box; and he ultimately grew to be a medium-sized big dog. His coat was a glossy black, with a white snip down his forehead, with a snowy throat and breast, and also some white on his legs, a white stripe on his belly and a tuft of white on his rather long tail. My father, being an ardent Jackson man, named the dog Andrew Jackson, but that was too great an every-day load for him to carry, and it soon dwindled into plain Jack, which in his old age was turned into Old Jack.

I suppose that like all other young dogs Jack had his ups and downs during the first year or two that he became an inmate of my father's family. No doubt he got into many a scrape chasing the chickens, tugging at the sheets on the clothes line and digging holes in the yard in the wrong places, and the like; and that he received many a good 'flicking' for his mischief. And no doubt he and Wiley were fast friends, and Wiley did his very best to teach him how to track possums and coons and other varmints with which the Indiana woods abounded in the pioneer days. But as to any and all of these matters I have no certain knowledge. My knowledge begins with the day my father died, which was on a mellow September day, when I was just twenty-eight months old. I remember the day well, young as I was, for the unusual commotion in and about the house distressed me so much that I ran off, literally "took to the woods," and soon was a lost boy.

Of course my disappearance created excitement, and it was not long before the neighbors were off in search of me, and when I was found, which was late in the afternoon, I was fairly jubilant at my rescue. Jack was with me—had been with me in all my wanderings, and no one can

to see me well out of it.

After my inther's death there were only four family after my inther's death and may methor, should not may methor, should not may be made the standard of the method of the

tioned it ran a sorry chance. Among my earliest recollections is the "barking" of the foxes in the thickets surrounding the fields. One of the commonest night alarms was the squalling of some poor luckless hen, as she was being carried away bodily by a night prowler to be devoured in the woods. At such times all was excitement, not only in the roost, but in the family at the house, and if Jack was home he of course joined in the chase that was sure to follow, and the mischief doer had to move lively or he was in turn a victim himself.

While the depredations hinted at by the vermin of the woods were being carried on at all the homes in the neighborhood, it is a singular fact that Jack was the only coon dog in it. Old Jesse Young, a noted hunter who lived at the extreme eastern end of the neighborhood, had two dogs, both of them excellent to run down wounded deer, and they had on more than one occasion shown the courage to tackle a wounded bear, but they were both strangely indifferent to the smaller and more pestiferous animals of the woods.

Jack was in no sense a deer dog. I verily believe he would as soon have thought of running down asheep as a deer. Show him the track of one and he would give you a reproachful look and trot off the other way. Once he so exasperated a hunter who wanted him to run down a deer he had wounded, that Wiley Harrell, who was by always claimed great merit to himself for having prevented the hunter from shooting the dog in revenge for what he declared to be his cowardice. Nor was he any better for bears. I remember that a wounded one was once chased through the neighborhood by old Jesse Young, and all the dogs, Jack with them, were brought out to hunt down the beast. But he showed at the very outset that he had no stomach for a tussel with a bear. He not only refused to track, but went straight home. He was not going to be ripped up by an enraged bear—not he. Wise dog!

For he who fights and runs away
May live to fight another day.

For he who fights and runs away

For he who fights and runs away
May live to fight another day.

Jack never fooled away his time, nor wasted his
strength, barking after squirrels, running after rabbits,
nor digging after chipmunks. Nor was he much of a
farm dog, as that term goes now. He could watch a gap,
just as a born woodsman could settle himself down to
steady toil; but does he ever do it? Jack could worry a
pig, or chase a cow or a horse, but he seldom did, especially if old Mink (a homely, good-natured old feiste,
whose very existence would long ago have been forgotten
but for Jack's good company he happened to get into),
was about, and he usually was. At such times it required rather a peremptory command by some one in
authority to set Jack on. Mink might bark and snap, and
snarl and blather around to his heart's content, for what
else was he fit for? Let him chase the cows, and swing
by their tails and be kicked at; Jack didn't care. He
was not going to wear himself out in doing the work of
a common drudge, when the woods were full of game,
and the hen roosts and green corn needed protection so
badly. It is very true, however, that if Mink happened
to be from home, Jack would show prudence as a watch
dog. He would look after the rascally pigs and the mischievous cows, and if company came, he would run down
a chicken with considerable zeal; but he evidently disliked all such work and thought of nothing but rambling
in the woods.

All canine hunters, I suppose, experience pleasure in
the chase, but is it not rare that one should find his great-

trophy to the place where he had got his supper, and exhibited it to the family to receive their praises, at which he never failed to exhibit the greatest pride. More often, I think, he buried his quarry, or left it unburied and went in further search of game. Of course, he frequently treed coons, and generally when this was the case he stayed by the tree till daylight. His bark was sharp and ringing and known to all in the neighborhood, and it was seldom, indeed, that some one did not go to him in the morning with such aid as rifle or ax could give. The night's hunt was followed by the day's rest, usually at the home of the man who had gone to his relief in the morning, or else at the cabin whence he had set forth the evening before. However, he had no uniform habit in this regard. He might return home the second day or he might stay out for two or three days, or even more. He might make one house headquarters for the entire time he was out on any particular hunt, or he might stop in for a longer or shorter period at the houses of two or three persons.

In this manner Old Jack lived and hunted. During the hunting seasons, which to him were in the fall and spring of the year, he seldom failed to take one tramp a week, and some weeks he went forth twice, and he has been known to stay out the whole week. Our own home he very naturally made his beadquarters more frequently and for longer extended periods during his hunting seasons than any home of our neighbors, while during the wintry and the very hot summer he was always at home. Old Jack confined his hunting operations to the Shiloh neighborhood, because, as I suppose, he knew the people in it; and he hunted down the noxious animals that infested its woods and hickets, because, as I further suppose, he loved the sport. I do not accord to him any sentiment of duty. Nevertheless, may I not praise him? Does he not deserve to be mentioned in the history of good dogs?

But alas, alas! Jack fell a victim to his own zeal. He had grown got his hunter had olled "Old Cra

high, and there, side by state, and the possums.

The manner of the dog's death was plain to be seen. He had hunted his game to their den; and digging in atter them had banked up the hole at which he went in. The game unearthed and killed, he found himself a prisoner, but lacked the intelligence requisite to effect his own escape. He had evidently scratched and dug, but without judgment; he had howled for help but no one heard him save a freightened cow-boy, and he had died the lingering, awful death of starvation, with the dead bodies of his victims lying untouched by his side.

By the time this history was finished my wife had sunk into a sound slumber and, as I had not the heart to waken her, it goes to the public without running the gauntlet of her criticism.

THE TRUMPET FISH.

THE TRUMPET FISH.

A LATE issue of the Pensacola, Florida, News reports:

"Capt. Wm. Johnson of the fishing smack G. L.
Daboll was yesterday exhibiting one of the most curiously formed specimens of the fish family ever seen hereabouts. It was caught well off shore in the gulf and its like was never seen either by the hundreds of men who have fished on the gulf grounds for twenty years or more or by many masters of ships now in port and who have seen the strange fishes of every part of the globe. In form it somewhat resembles the garfish, but to no known family of that species does it belong. It has the snout of a sword-fish, the mouth of a sucker, the body of an eel and the tail of a rat. It is scaleless and of varying flesh tints in color. In the works of the United States Fish Commission it has no place; nor may any reference to it be found in the Smithsonian Institution's publications. It is about fit. in length. It snout is about 9in. long, nearly round, being about 4in. in circumference and hollow throughout its length. It was caught with a hook and line."

The curiosity referred to is the trumpet fish (Fistularia), of which the books describe two species, tabaccaria and serrata; it is, however, not certain that the two forms are ceally distinct. We may as well confess that the author of the above graphic description is in error as to the occurrence of these fishes in the publications of the U. S. Fish Commission and National Museum. Both are described in Bulletin 16, National Museum, and we find one of them in the first Report of the Fish Commission and its Bulletin for 1837. From the Bulletin we learn that 5 examples of Fistularia tabaccaria were seined by Dr. Bean near Somers Point, N. J., in 1887, and that the spewers is moderately common in Great South Bay, Long sland, and occasional around Cape Cod. Dr. Storer had a specimen from Martha's Vineyard, which is well fig-

ured in his "History of Mass. Fishes," plate xxv., figure 1, and described in his text under its old name of tobaccepipe fish—a name as venerable as Catesby. Dr. Kay illustrates Storer's specimen in his work on the "Zology of New York." The fish was known, also, to Dr. Mitchell early in the nineteenth century. The trumpet fish is, indeed, a curiosity, but of rather ancient fame, and we wonder at some of our contemporaries for their failure to recognize an old friend in a new dress.

DO SNAKES LIKE MUSIC?

Editor Forest and Stream:

In some recent numbers of The American Naturalist, Mr. Robt. E. Stearns discussed the effects of musical sounds on animals, and gave some interesting details of various cases in which animals were thus affected. Among others Mr. Stearns mentioned some snakes tamed by a gentleman in New York and trained chiefly by means of music. These reptiles were said to comprehend rewards and punishments administered through music, exhibiting either pleasure or anger according to their preference of one or another musical instrument, and a distaste for others. The owner of these highly moral and musical snakes would confer a favor on students of ophiology if he would kindly afford us some insight into his mode of discipline, and of the particular effect on the reptiles. In what manner do they evince displeasure or the contrary? And has he observed them to act in the same manner at other disturbing noises which are not music? This latter is a very important point.

displeasure or the contrary? And has he observed them to act in the same manner at other disturbing noises which are not music? This latter is a very important point.

It is an ancient belief that snakes are sensitive to "music." and the oriental snake charmers have for ages worked on this belief in exhibiting their so-called "dancing" cobras and other snakes. But what kind of "music." Can we call the tum-tumning of the Indian drums or the noise of the bamboo pipes music? That snakes are easily affected by noise, that is by a jarring sound, a sudden knock—any sharp concussion in fact that conveys a vibration through solids—can be verified by any one who observes them closely. And so are some lizards and batrachians. In my work on snakes ("Curiosities and Wonders of Serpent Life") I have devoted a whole chapter to the examination of this subject, and may here be permitted to repeat my conviction that it is music as sound, as noise only, that affects them. Subsequent observations have tended rather to confirm than to negative this impression.

When we consider that snakes have only very imperfectly developed organs of hearing, no tympanic cavity, and no external orifice, we may well doubt the existence of a sensitive ear. But, on the contrary, when we contemplate the form of a snake and of many other reptiles prone upon the ground, we can well conceive the probability of an extreme sensitiveness to sounds as conveyed through solids, or even through fluid mediums, as vibrations. I have seen reptiles start at any heavy article being placed down suddenly near them, or when anything has been dragged along the ground or the shelf where they might be. A sudden bell or outburst of music might affect them similarly.

At the reptile house in our Zoölogical Gardens, where are long passages at the back of the cages, you may observe that the snakes are on the alert at familiar noises, such as the trolly wheels; they listen to the stopping of the trolly on which the keeper mounts to feed them, and recognize the noise caused b

ticking of your watch becomes audible. It ticks no louder than before, but the sound is conveyed to you by a solid conductor.

As for the so-called "dancing" of snakes, the waving of their heads to and fro, that is a common habit when they partly erect thomselves and are unusually excited. They do this, music or no music, only the jugglers take advantage of the action and time their "music" to suit it. Mr. Stearns, I believe, came to the conclusion that it is sound not as melody, but as noise only, that affects animals; and of course unusual and unfamiliar sounds are more disturbing than familiar ones.

Still, as we all have so much to learn, or to unlearn about snakes, any information founded on actual and careful observation is always of value, and I trust we may be favored with further details regarding these tame and intelligent New York snakes alluded to by Mr. R. E. Stearns.

LONDON, England.

Striped Bass in Fresh Water.—A Savannah, Ga., paper reports: "One of the strange freaks of the electric storm at Thunderbolt Sunday morning was the effect the lightning had on two of the eight rock fish in the fountain in the Savannah Yacht Club house grounds. They seem to have been crazed by the shock, each showing a dark line on its back, and they are unable to swim for any length of time in a natural position, but turn over and float as if they were dead. When righted in the water they attempt to swim, but gasp as if out of the water, and soon flop over belly up, and come to the surface. The strangest part of all is that though the fish received the electric shock several days ago they still survive. The rock fish are great pets with the members of the club, and, though a salt-water fish, have lived and thrived in the artesian fountain for the last four years. They will come to the surface and take shrimp and prawn from the hand, and are beautiful specimens, about twenty inches in length." The above extract relates to some rock fish, or striped bass, which were mentioned in this journal March 14, 1889. The fact, well authenticated, that this salt water species has been reared in water from an artesian well is sufficiently interesting and important to warrant its repetition here. In about one year the fish increased in length from 6in. to nearly 20in, on a diet of crabs and oysters. This experiment should justify additional

efforts to raise striped bass in fresh-water ponds and lakes. In this connection we may recall the 45lbs, bass of this species which was found on the shore of Flax Pond, in the village of East Wareham, Mass., last April. While it is not known whether the fish will become sexually mature in fresh water there is no question that it can be profitably grown in such surroundings. As early as 1854 Prof. Baird recorded another successful experiment with the striped bass. Through the kindness of Mr. Thomas Lee we have been able to see a letter from one of his Savannah correspondents relative to the probable method by which the lightning reached the fish. In the tank containing them there is a pipe under which they can go about as far as the dorsal fin, and the two injured fish may have been wedged in there and got a shock. They have a large, round, black spot at the beginning of the dorsal fin. The fish are in the habit of resting under the supplypipe in the position indicated.

A TURKEY CALL.

A TORKET CALL.

Editor Forest and Stream:

I have used different kinds of calls, and for twenty years or more one superior to them all, and superior, I think, to that described by "A. J. W.," if I understand his description.

To make this call, take a piece of dry and straight-grained black walnut, \$\frac{1}{2}\$ in. thick and large enough to be when finished 3\$\frac{1}{2}\$ in. long and 1\$\frac{1}{2}\$ in. wide. With a \$\frac{1}{2}\$ in. centerbit bore a hole \$\frac{1}{2}\$ in. from each end, with other holes between, trimming away the remaining wood until a slot is made \$\frac{2}{2}\$ in. long and 1in. wide, with semi-circular ends,

as in the first figure. This rough block is now worked down until the sides are each \(\frac{1}{16} \) in. and the ends \(\frac{1}{16} \) in. thick the corners being rounded off, as shown by the full lines in the front view. The front of this box is a piece of \(\frac{1}{16} \) in. black walnut, glued fast and with a brad or half a stout pin in each corner. The back is of the same material and thickness, but projects on one side, as shown by the broken line and also in the end view. Before it is fastened on, the top side is cut away, as shown, leaving an opening \(\frac{1}{2} \) in. wide adjoining the projecting portion of the back. The latter is glued and nailed as described for the front. A little rosin on the end of the projecting part completes the call. The object of the varying curve of the projecting part is to change the sound.

To manipulate the call, take the gun across the left arm or across the legs, and one end of the call between the thumb and forefinger of the right hand, and place the edge of that projection perpendicular to the side of the stock and lightly stroke the stock toward the person.

With a good ear and a little practice, the sportsman can deceive the wariest of old gobblers. It is a fine thing for calling when a flock of turkeys have been scattered by a dog or otherwise. A man with a good ear can successfully call with his mouth turkeys that have been scattered; this requires considerable practice. During the latter years of my hunting turkeys my calling was principally done with my mouth.

The wide part of the box projection should be so put on that when the stroke is made the wide part will be between the person and the main part of the box.

Kankakee, Illinols.

Caribou Heads,—Mr. W. Holberton has on exhibition

CARIBOU HEADS.—Mr. W. Holberton has on exhibition at 18 Vesey street, five heads of woodland caribou, that for size and beauty cannot be equalled by any we have ever seen. Most of them carry from 28 to 32 points, and the spades are wonderfully developed. The heads come from Newfoundland, where the woodland caribou are said to be found larger and with finer heads than in any other part of North America. Mr. Holberton intends visiting the hunting and fishing grounds of Newfoundland this coming fall with the intention of finding out what sport can be had there for the benefit of those who wish to visit this far off wilderness.

WOODCOCK IN A TREE.—Baltimore, July 2.—The other day when hunting woodcock, I started one that lit in a tree. Did you ever hear of a like case? I did not.—W. H. F. [No, We have seen English snipe alight in a tree, but have never seen woodcock do so.]

SHOT COUNT AND WEIGHT.

SHOT COUNT AND WEIGHT.

The table of No. 7 shot in our series of examinations of the leading brands of shot now on the market is presented in this number. The same explanations apply to these figures as were given with the other sizes. Each company was invited to use an American Shooting Association standard measure of 140z, shot in filling each of ten vials of the five sizes of shot under examination. Just as the charges came they were counted and weighed, and every result is given, together with an average for each company. Then to bring all to an even basis of comparison a count of 100 pellets was thrice repeated and thus a new weight figure secured. The Omaha Company, making no chilled shot, has been represented by a run of soft shot, and to secure a transatlantic comparison, shot was secured from two of the largest English towers.

The extensive use made of this size shot well make the table particularly interesting to a broad circle of shooters. The largest size shot of this number, it will be seen, comes from the Colwell Lead Co. of this city, though the Leroy Co. is a close follower. The other extreme on the list is occupied by the Robertson shot house, of Baltimore, and the Selby Co. of San Francisco most nearly strikes the average. The difference of the smallest above the largest sized still holds over 30 per cent., as has been the case in each number so far considered. The English shot keep well up the list above the average of the American shot, and the two English companies get very close into line on this size shot. This is the more marked in view of their wide divergence in some of the higher numbered shot. There would seem to be as much or even more need of a revision of English shot screens, than for a similar service on this side the water. The same general praise must be given this as the other shot sent by the contributing companies for the appearance and even run of the product of each works, bright, even shot was the rule, with dumb-bells and pear-shaped pellets few in number.

number. With this table before him, the sportsman can buy his shot supply intelligently. He may also verify his bag labels by a short test with the balance and a count. He will know that a reliance upon mere numbers may lead him astray as to the quantity of his charge over 30 per cent., and may gauge his charge as to quantity and weight in proportion to the powder used.

A CAMP BED.

A CAMP BED.

A FTER many years of camping, both for business and pleasure. I have found that the traditional "saddle blanket," or pair of double blankets, with an arm for a pillow, are not sufficient for the average camper not used to hard life, or even for those used to it, if violent exercise is required.

My latest device, suitable for all service, has been made up as follows: A mattress body, made up of a piece of "hair boiler felting," to \(\frac{1}{2} \) to \(\frac{1}{2} \) in. thick, \(\frac{6}{1} \) to long and \(\frac{2}{1} \) to \(\frac{1}{2} \) in thick, \(\frac{6}{1} \) to long and \(\frac{2}{1} \) to \(\frac{1}{2} \) in thick, \(\frac{6}{1} \) to long and \(\frac{2}{1} \) to zero and \(\frac{1}{2} \) to procure felting not odorous with common glue, or else the odor is very lasting. This is cased in ticking of good quality, to prevent any stiff hair from working through, tied \(\frac{5}{1} \) in apart, mattress fashion, and inclosed in removable slip and washable calico.

calico.

If preferred the mattress can be made in two parts 3 to 3½ft. long, as it is the shoulders and hips that require protection, and one piece will answer when portability is an object, or a friend can be accommodated. The lengths of mattresses, of course, are to be proportioned to the persons using them, but don't get them too wide, and

more, I do not advise double widths, as usually a person is more comfortable sleeping alone, while two mattresses can be joined if desired. A pair of narrow, long, double blankets and a small thin pillow complete the bed proper. Some way my ears could never be induced to fit properly in the seat of a saddle or the inequalities of a folded overcoat, and a sunburned neck does not rest comfortably in a coil of rope or block of wood, as I have used and seen used on many occasions.

Next have made, or rather have it made first, as it is indispensable, a sheet 7½ to 8ft. square of light waterproof duck, the same as is used in the best canvas hunting suits, and also a sack of the same material 18in. long and 12in. wide, the latter to act as a receptacle for extra clothing, toilet articles and the et ceteras always requisite, to be used as a supplemental pillow also.

In packing the articles the canvas is spread out and mattress thrown in the middle, blanket folded in quarters and placed at head of mattress, with pillow and sack on top. Then fold canvas sheet carefully and roll the package, commencing at head, into as neat and compact a bundle as possible, securing it with two straps made up in shawl-strap manner. A light dog chain around the whole, with padlock, passes it as checkable baggage on all railroads with which I have had dealings.

Thus you have all your belonging in one bulk, free from rain, mud, dust and burrs, and ready for boat, wagon or pack, excellent as a substitute for a stool, and with partial opening of the roll it gives a comfortable place for a siesta. At night place the mattress near one edge of the canvas, so the loose part can be drawn over in case it is needed to keep off dew, rain or wind, for it will have to rain very hard indeed to run the sleeper out, if a slightly elevated place for a bed has been chosen, so water will not run under it, and the canvas is properly tucked at foot and side.

Give your bedding all the air and sunshine possible, and if you are in a section where ticks, redbug

SOUTH DAKOTA.—Britton.—We are situated in the northeast corner of the State, in the county of Marshall, and adjoining the military and Indian reservations of the Sisseton tribe, of the Sioux nation. This is a vast tract of beautiful land, and is filled with numerous fresh-water lakes, which are nearly all stocked with pickerel and what I think are yellow perch. These lakes are very popular with the people of this vicinity as camping places, and as the country has only been settled five or six years they still afford abundant fishing. In the spring and fall these lakes and marshes are covered with ducks and geese, which means good shooting. The hills and valleys are full of grouse and plover. Altogether we live adjoining a hunter's paradise. We should be pleased to welcome any of our sporting brethren who should "be moved" to visit our city, and will promise them a royal good time in September.—Rix.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—dv.

MORE PARROT.

MORE PARROT.

Editor Forest and Stream:

For our delectation "J. V. B," and "Tarpon" have served parrot stewed and parrot pot-pie, and with your permission I will add a roast.

Away back in the forties it was my good fortune to accompany a "pienic" excursion managed by "Uncle Sam" to Mexico. This "pienic" is recorded in history as the "Mexican War." Our jolly excursionists left Vera Cruz one morning for a visit to the Capitol City, arriving that afternoon at the river Don Juan, where we camped for the night. After slaking the raging thirst that had possessed me several hours, I lay down beneath a tree in the grove that skirted the river, with my knapsack for a pillow. I was scarcely settled for a good rest when a parrot with labored flight crossed the stream and alighted on a limb above me. It instantly occurred to me that the bird would be an acceptable addition to the bill of fare for supper. To think was to act, and ere the bird had time fairly to scan the intruder of his haunts, he came to the ground minus his head. I soon had him plucked and could but admire his plump form, and my mouth watered at the thought of "quail on toast," as it were, for the menu regularly served consisted principally of bean soup, wormy side bacon and mouldy hardtack. Now, whether it was because I am more selfish than the average man, or the demoralizing influence of surroundings was to blame, I let others judge; but I candidly confess, that instead of taking my prize to the camp-fire, where the company cook was making coffee, where perhaps I would be asked to share the bird with others, I sneaked off to a thick covert to banquet alone. I found plenty of dry twigs and limbs handy, and with whittings, a bit of cotton from the lining of my cap, powder from a cartridge and the flintlock of my musket, I soon had a good fire, and spitting the bird with the ramrod I did him to a turn, and until reading the article by "J. V. B." remembered it as a rare tid-bit. After reading said article I reflected that perhaps my appreciation was enhan

TOOT AND THE BIG BUCK.

TOOT AND THE BIG BUCK.

HERE is a good story told by the veteran Judge Porter in a letter to Dr. E. Sterling, of Cleveland. Judge Porter writes from Toledo: In those days of 1836 you remind me of, deer and turkeys were abundant in the limits of the city; wolves also were plenty, with occasionally a bear. Otter were often found in the vicinity. Ruffed grouse, prairie chicken and quail were as common and numerous as the imported sparrow in your public square in Cleveland. As for fish, there was no end to them; they were as numerous as the hosts of the Philistines encompassed against the armies of Israel, and some of them would bear comparison with that redoubtable chief who was slain with a stone from David's sling—the Esox nobilior and the Acipenser rubicandus—marvels in size, the former turning the scales at 60lbs. and the latter over 160.

In the early days about here the man that carried a shotgun was looked upon as rather a low down pot-bunter. The first double-barreled shotgun I remember to have seen here was brought by a man by the name of Goodsell, in 1835. He brought with him a small black and tan foxhound he called Toot. In mentioning this I am reminded of a most singular incident in deer hunting. Goodsell,

like most sportsmen, would have you believe that his dog and his gun were the best in the world of their kind. We occasionally took a turn in the woods together for deer, seldom missed to start a big buck within a mile of where I am now writing. Toot would give chase, and in twenty minutes time would cease barking and come back to us. This had often occurred, when (4oodsell would declare that the deer had taken to the water (Lake Erie) some six miles away. I did not believe a word of it. One morning, as usual, we started the big buck and Toot went off bellowing on the track. In less than twenty minutes he ceased his barking. "Taken to water again," said Goodsell, when all at once we heard a crashing in the underbrush, and next Toot hove in sight, his tail between his legs, closely followed by the big buck, every hair on his neck and back in reverse order, plunging with his fore feet, and the dog dodging to avoid the sharp hoofs of the deer. When he was within twenty feet of us Goodsell blazed away with one barrel and made a hole clean through the deer as big as your foot. This was the only deer I ever knew him to shoot. He still extolled the virtues of Toot, declaring that it was not every dog that, when failing to hold his game at bay, could escort his quarry into camp.

CHINESE PHEASANTS.

CHINESE PHEASANTS.

MACOMB, Ill, July 1.—Editor Forest and Stream:

I send you the photo of a Chinese pheasant, which was killed in Sinn county, Oregon, and sent to me. These pheasants are natives of China; and eight years ago eleven of them were imported from China to Sinn county, Oregon, and turned loose. It is now estimated that from these there are now a million in the State. They lay twelve eggs at a sitting, and sit three times a year. They wean their young when ten days old, and go to laying again. They are not quite as large as a prairie chicken, but much more a game bird and finer eating. They lay and sit in the grass and wheatfields; and will stand for a dog. They are very shy and will fly very fast and run almost as fast as a dog. The male has a green head with a white ring around the neck, the breast is a maroon, and the back is speckled like a prairie chicken. Their tail is about eighteen inches long and runs to a point like a wild pigeon. They gather together in the fall in large flocks, and will eat wheat, corn, or most anything that a barn fowl will eat. I think they will do well all through the west and south and as far east as Pennsylvania. I sent to Sinn county last fall and got a pair and turned them loose on Mr. Rexroat's farm, near Pennington's Point, McDonough county, Illinois. They have been seen logether frequently until about four weeks ago, since then the female has not been seen and probably she is nesting. Should these birds do well in this State and accumulate as fast as they have in Oregon, it will carry joy to the hearts of sportsmen.

**Proventy were Carlow of the Alexandre Carlow of the learts of sportsmen.

PENNSYLVANIA GAME.—Goshen, N. Y., July 2.—I am just in from a three weeks' outing in the wilds of Pennsylvania over in Pike. I had some very fine sport with the pickerel and took a few bass, but the bass are not hungry or did not like my style of casting. I saw a fine pair of deer and some bear tracks, and I think one night the wildcats had a wake by the racket they made. I had my spaniel, Hornell Sport, with me and he did not like their music a bit, he crept close to my side. This fall I expect to go back again for something larger than fish.—A. V.

HARRISBURG, Pa., July 1.—The annual meeting of the Red House Gunning and Fishing Club was held to-night, at the club room in the Gross House, when the following officers were unanimously elected: President, Fred. W. Ebel; Secretary, John C. Balsley; Treasurer, H. S. Reinhold; Executive Committee, Dr. T. S. Hollinshead, Richard Jones and N. Russ. The club at present has 30 members and is in a flourishing condition.

FISHING NEAR NEW YORK.

FOR practical and specific directions to reach several hundred fishing resorts within easy distance of New York city, see issues of 1859 as follows: April 18, April 25, May 2, May 9, May 30, June 6, June 13, June 20, June 27.

SOME MASCALLONGE EXPERIENCE.

[Continued from page 475.]

heavy moss, this little diamond stream suffuses all the air about with grateful coolness. At the close of each trip around the lake, we cachèd our fish here in the cold moss, and when at night we took them up—a glorious sight they made as we uncovered them—they were stark cold and stiff. It is a blessed little spring.

Near at hand here some one has made a rough attempt at building a "deer fence," to guide the running deer down to a stand near the open runway. I should say that the law against hounding is altogether disregarded all through this country, summer, fall and winter. Bert, our guide, told us that much, admitted having killed a great many deer in summer, and declared his intention of doing so in future whenever he had a chance. That is not my idea of what a guide should be, and I wish the boys up there would look at it differently. They will miss the deer before long. At present there are a great many deer in that country. The party saw four or five over on Lone Stone, we saw four on Lake Julia that one day. I saw one over on Whitefish the next day, and Mrs. Russell saw one on Virgin Lake. One could kill a deer any evening he chose in that country. They come into the water to feed, and hang around until near morning. Mac and Bert nearly finished plans for a combined mascallonge and deer trip next fall, Mac intending to bring his family up to Russell's house, which is a very good point indeed for a central camp. There is an unlished lake about a mile above Julia. Bert and Blodgett also intend cutting a trail from Seven Mile over to Butternut this fall. That is good deer and new mascallonge ground. Let me repeat, for those who want to go into this region and have success, that the way to do is to pull out from the beaten track and "stand in" with men like the above mentioned, who will get to good waters where the tenderfeet are afraid to go.

From the lower end of Lake Julia a half mile trail leads over to Whitefish, and from Whitefish there is a "thoroughfare" to Virgin. From Whitefish there is a "thor

mention last week, came around that way. They had some fish, and seemed to find little difference between the various lakes.

It seems that the South Side Gun Club, of Milwaukee, of which Mr. Mannegold is an officer, contemplates establishing a "deer park," whatever that may mean, on the country between Virgin and Julia, and Mr. Russell acts as their purchasing agent. A few hundred acres have already been purchased, we heard, but just at present the club don't know just exactly what it does want to do about it. It was intended to fence a large tract. That might serve to keep the deer out of the park, I don't believe it would keep them in. It seems to me that if the gentlemen would spend that fence money in stopping illegal killing of deer in that region, they would have far better shooting. The country is swampy, heavily undergrown and very wild about these lakes. From what has been hurriedly noted about the wonderful waterways of the whole region, it may seen that this would be thought a wonderful country, if it were not so ridiculously easy of access.

When we were stowing away our fish that night we spoke of this, and concluding that we had about all the fish we ought to have, we resolved to put in the next day in running over to Whitefish Lake and seeing what more we could of the country.

All day long we noticed some loons flying about over the lake, as indeed we saw them every day on any lake where we happened to be. On this day, as we were running along the willows close in shore, we were surprised to see a fine male loon slip gently out of the grass into the water and two or three yards from the shore, was a shallow nest with two big chocolate-colored eggs in it. The eggs were about as big as goose eggs. Bert wanted to take them, and spoke about killing the old loon and getting the young birds on the next day. For, as we stood peering at the nest, we heard a faint "cheep, cheep, cheep," much like a little chicken, and saw the end of one of the eggs already broken through by young Br'er Loon. Is this a f

on this trip, and I do not think that record is often equalled.

We were going down the "thoroughfare" that evening, talking about luck as we went. Mac attributed all his good luck to a pair of mis-mated striped stockings, which his servant girl had rolled up together and put in his valise. Now, when this happens by pure accident, it is an infallible sign of good luck. Mac knew this, and always kept that pair of stockings on the boat seat where he could make fetish to them. On this evening, the mosquitoes being exceedingly bad, he had drawn these stockings on over his hands and wrists. Thus attired, he presented a unique and picturesque effect. We were just turning a sharp bend of the creek, when we saw another loon, a full plumaged female, slide out of the bushes and into the water. "There's another nest!" cried Bert, and we set out after the old bird.

The water was so shallow that the loon could not take wing. Her attempts to get under were ludicrous in the extreme, she simply standing on end and wildly waving her paddles in the air. I suppose it is human nature to shoot, and Bert fired a shot at her as she started down. I do not think it struck her, for we could find not a drop of blood on her nor a ruffled feather. She went on, industriously trying to dive, and Mac reached out and caught her in his stockinged hands and brought her into the boat. Now, has any one beat that record? Does any one now doubt the efficacy of mis-mated stockings with

We were going down the "thoroughtare" that evening, the continuation of the six and series of Charlie Burron and Hank Smith, who had a picked from the paper beyon block. The forward that a picked sponge" on the spon block. The forward that a "picke tongue" on the paper block to the gills, affords a tought and pearly white bird seminating the sponge of the paper block to the gills, affords a tought and pearly white bird seminating the could make fetable to the spendille that the sponger of the paper block to the gills, affords a tough and pearly white bird seminating the sponger of the paper block to the gills, affords a tough and pearly white bird seminating the could make fetable to the spendille that the sponger of the paper block to the spendille that the sponger of the paper block that the sponger block that the sponge

want it understood that Chicago is the only city of the world that has an Auditorium, a World's Fair, and a man that can catch live, wild loons with stockings on his hands.

We put the poor wild creature on the bottom of the boat. She was perfectly quiet and submissive. Her head was erect and her eyes bright, but she had no challenge in her gaze. She seemed unhurt, but subdued. We pitied her. Bert insisted on killing her and rifling the nest. He said it would be at least \$5 to him. We told him he would have to make that \$5 some other way. There was no resisting the pathos of that gaze. In went Mrs. Loon to the water. On the following day the Mannegold party, fishing on Julia, found a dead loon at the upper end of the creek, a mile from where we caught ours. Could it after all have been our bird? We hoped not. If so, what killed her? We could not find a mark on the bird anywhere. Was it fright, humiliation, or shock of the bullet on the water above her back? We hope still it was not our bird.

I am not yet done with loon stories. We saw a pair of loons going to and from their nest on the island of Virgin Lake the next day, and one of the Mannegold party, a little later, actually picked up the two young birds on the water and brought them to the house. They were tiny black balls of down, much like little chickens. Under persuasion these birds also were returned to the water near the island, and we hope that the old birds, who filled all the air of the dusky evening with their wild and mournful complainings, found their little black babies all safe again. How strange the love of each creature for its young. Nature, they call that, but beautiful, in any view. And where shall we find Nature thus, and feel the beauty and touchingness of it all, unless we go to the woods and streams?

CHAT OF MICHIGAN WATERS.

CHAT OF MICHIGAN WATERS.

CHAT OF MICHIGAN WATERS.

CRAND HAVEN, Mich., June 19.—Editor Forest and Stream: I send you by this mail a photograph of trout caught by Mr. Andrew Gerber, of Fremont, Mich. I saw in one of your late numbers the statement that the best stream fishing was to be had in the vicinity of White Cloud, Mich. While the fishing at White Cloud is excellent, it is by no means the best. I have fished a great deal at White Cloud, but this spring have spent most of my spare time on the streams near Fremont, and always with success. Ever since the middle of May the trout have been ravenous for the fly, and time and again have I fished with a bait-fisherman and beaten and again have I fished with a bait-fisherman and beaten

and again have I fished with a bait-fisherman and beaten him hollow.

In regard to the color of trout. I spent several hours the other day at the State fish hatchery at Paris, Mich., and noticed brook trout in the same pond, of the same age, on the same bottom, fed on the same food, hatched from the same lot of spawn, and their color ranged all the way from the very lightest to a deep black—one individual in fact being so dark that the spots could hardly be seen. It seems clear to me that they are "just born that way."

The mosquitoes are getting so troublesome that the

way from the very fightest to a teep black—one individual in fact being so dark that the spots could hardly be seen. It seems clear to me that they are "just born that way."

The mosquitoes are getting so troublesome that the greatest fishing crank can only enjoy himself by liberal applications of dope.

The woodcock shooting through this part of the State is going to be good this fall, the birds have had a good spring for breeding. I have seen numbers of them while trout fishing. My mind's eye is full of photographs of places where they congregate and I hope to see them all again next September.

A few days ago I fished with a friend of mine at Chippewa Lake. We caught a fine lot of small-mouthed black bass, ranging from 2 to 3lbs. For a long, tough, hard-fought battle, let me recommend the Chippewa Lake bass. You don't see him for several minutes after you hook him, then you get a good look at him in the air. Chippewa Lake is about 10 miles from Big Rapids, Mich., and can be reached by rail. It is not much frequented by visitors, gives fair hotel accommodations, and for any one who wants fish, fish and lots of them, this is the place to go.

I hate to hear any one argue against the artificial stocking of trout streams. Why in this part of Michigan, instead of enjoying the best fishing in the State, we would have none at all if we didn't stock and re-stock ourstreams. Take for example two representative streams, the Cedar and the Cushman, within easy drive of Fremont, neither of them natural trout streams, but both of them, owing to the fact of them having been stocked, furnishing sport and food for hundreds of people. Now I am sure that ten pounds per day is a very small average for the fish taken from either of these streams during the open season, to say nothing of those taken illegally. That would be about 2,400lbs. per year. One of your correspondents would have us believe that the fish from these two streams costs the State \$2,400 a year. With the number of streams in this part of the State and the numbe

CHICAGO AND THE WEST.

CHICAGO, Ill., June 27.—One evening last week, as was announced to be the intention, Mr. A. Hirth, of Spaldings, Mr. John Soderbery, of Blomgren Bros., Mr. A. H. Harryman and myself started for Yorkville, on the Fox River, not far from the scene of Mr. Loeb's picatorial accomplishments. Mr. Hirth also brought along his friend, Dr. Shayne, and we all took the 430 train for Aurora, over the C. B. & Q., changing there for Yorkville, which is 12 miles further and just 51 miles from Chicago. We reached this place at 6:18 P. M.

As soon as we saw the river we knew we should have no fishing, for it was running full of muddy water, tribute of the recent storms. We therefore made no pretense at fishing, beyond catching a few bullheads and rock bass the next day, and three small black bass, so diminutive that we threw them back. We did, however, find what seems to us a very good fishing water when the river is right. There is no dam from Yorkville to the Mississippi, except two corporation dams with good fishways, so we were told, and the bass run up this stream in quantities. There is said to be a fishway in Yorkville dam, though how good a one we could not tell. Below the dam there are two or three islands and several bars, where, without violating the law against fishing under a dam, one can, in proper time, have fine sport with the fly at small-mouthed black bass. Of this we had abundant proof, for we saw numbers of fish, though we could do nothing with them. Mr. Wolfred N. Low tells me he used to go fishing often at Yorkville, but never had any luck there. I presume that, as with all other river fishing, the sport here is capricious, but am nevertheless inclined to class this as one more of the cheap and good fishing trips out of Chicago. I think some day I will write a book and call it "Five Dollar Fishing Trips From Chicago." We left the city one evening, staid two nights at Yorkville and part of the proper three is capricious, but am nevertheless inclined to constitute the proper three is c

story:
"We only went down about three miles in all," said he "We only went down about three miles in all." said he;
"you have to go down stream to jump them. The night
was dark. They ran the boat along, about 8tt. from the
bank, at a little angle to the bank, and the fellow in the
stern kept thrashing the water along the bank with the
pole and stirring up the grass and bushes. They said
the bass lay inshore and went to sleep, and were scared
by the noise, so that when they saw the boat as they
started for deep water they would try to spring over it.
I don't know what the theory is, but I know we caught
an awful lot of bass. I should think that more than half
the bass went clear over the boat. They said they sometimes had a net up on that side of the boat, and held the
shore side of the ooat down close to the water's edge, so
they could get over the edge easier. I had bass hit me in
the face as I sat in the boat. One hit one of the men on
the nose and lurt him. The boat got full of flapping
bass. I didn't mind it at first, but I feel like a horse
thief now. You could clean out all the fish in the river
that way. I thought I would just go and get some fish
for the crowd to take home, seeing they weren't biting
any."

For myself, I do not care about taking home any fish

for the crowd to take home, seeing they weren't biting any."

For myself, I do not care about taking home any fish that I can not catch myself and catch on a rod and line. I have no reputation that suffers badly enough to hurt me if I come home without any fish, and I do not see any use in countenancing any such practice as this, or a worse one, for the sake of getting some fish to take home. But here was really a very curious thing, and I confess I should have liked to see it tried, with my own eyes, and some day I may.

should have liked to see it tried, with my own eyes, and some day I may.

I have no proof to offer on this fish story but the following: Young Reddig, a barber and fisher of Yorkville, was taking me across the river in his boat when we felt a fish strike the side of the boat as we approached a clump of lily pads on a bar. We had just been talking of "jumping" fish. "You see how they do it," said he. When I was a boy, down in Indiana, we used to be ignorant enough to go seining. We never could do much at catching bass in the seine, for they would jump over it. When they got to going over it in that way, we would just reverse the seine, and carry it with the float line in front, and the lead line held up a little behind. The bass would jump over the float line, and we caught them on the seine, not in it."

I have tried to tell this story to several friends, but they the seine, not in it."

I have tried to tell this story to several friends, but they

won't hear it. Charlie Burton said, "If you print that yarn you'll have to leave the town." They all talk about this way. Now, either there's a lot of us awfully fooled, or else we've got a big joke on a good many people.

I consulted Mr. Wolfred N. Low, a prominent attorney and sportsman of this city, as to the illegality of such fishing. "It is probably illegal," said he, "under that clause of the law which prohibits any other device than hook and line."

clause of the law which prohibits any other device than hook and line."

This is my story, and, if it is true, we have found one of the most destructive methods of killing bass yet discovered on Fox River.

June 28.—Anent my fish story, about the bass jumping into the boat: it seems that one of the doubters who scoffed at such an idea lately met a friend of his from Indiana, to whom he told the yarn as a paralyzer. "Well, now," said the Indiana man, "if that man wants to bet you \$50 that you can catch fish that way, don't you take him up, or you will lose. I have caught many a bass in just that way on the Kankakee."

Mr. Hirth has been having a good deal of trouble lately with his customers, to whom he has related the foregoing story of the jumping bass. No one would believe him, and at last he grew desperate and concluded he might as well hang for a sheep as a lamb, and began telling the following, for which he vouched with great solemnity of countenance:

"I lead him my read down on the hank" said he "and

and at last he grew desperate and concluded he might as well hang for a sheep as a lamb, and began telling the following, for which he vouched with great solemnity of countenance:

"I had lain my rod down on the bank," said he, "and the tip was resting on a bush in such a way that the minnow was about four feetabove the water. I stepped away for a moment, and when I came back I heard a splashing in the water, and I hope I may never if there wasn't a string of bass like an endless chain jumping for my minnow! The nose of each fish touched the tail of the one ahead of it, and such was the steadiness of their movement that there was a regular arc of bass in the air. It looked like a stiff string of bass. As fast as one fell it darted back under the water and started in again. I saw I had a chance such as only comes once in a lifetime, and I ran to get my Kodak, so that I could have indisputable photographic proof; but when I got back one of the bass had got the minnow and they were all gone. I was very much disappointed."

This last story I do not more than half believe myself, but a good many people will believe before they will the other, which is true.

Mr. L. J. Marks, of the Board of Trade, has just returned from a week's fishing trip up in Wisconsin. He is pretty well sunburned, and tells some fair to middling stories, but he is a good deal longer on sunburn and stories than he is on fish.

Mr. C. W. Lee, also of the Board of Trade, writes me to-day: "Mr. R. H. Mabbatt, one of the Board, one day last week caught forty-five bass in one of the Oconomowoc Lakes, none of which weighed less than 2lbs.: pretty good, I think, for a place that has been fished to death."

I presume I may mention in this connection as well as anywhere, that Mr. Lee himself starts next week for a long trip of pleasure. He goes first to his former home in Ohio for a visit, then to Montreal, and then takes a trip for England, through which country and France he will make an extended tour, vi-titing the remoter districts especially, and u

WHO ARE THE FISH HOGS?

WHO ARE THE FISH HOGS?

CHEBOYGAN FALLS, Wis., June 30.—Editor Forest and Stream: In your issue of June 26 under the head of "Angling Notes," it is suggested that "it would be better to do away with all bait-fishing and stick to the artificial fly, so that the trout would grow up and increase and there would be plenty for all."

Now, if the circumstances are the same in New York State as in Wisconsin, I beg to differ, for the reason that more "fingerlings" are taken from the trout streams of this State by the exclusive fly-casters than by those who use bait. On my jaunts for brook trout I have noticed, as a rule, that the bait-fishermen throw back all trout under 6in. that are likely to live, while the so-called only true anglers for trout, the fly-fishermen, creel everything they succeed in landing, regardless of size, their sole aim evidently being to make a "big count." On a recent trip an old, well-known and legitimate sportsman of Fond du Lac, in a short time one day, took from one of the streams of the State, on a single hook, baited with angle worms, thirteen speckled beauties that weighed 11lbs, and I venture to say that he had as much real sport and made a far better showing than a party of five elaborately equipped fly fishermen I met on a later trip, who at the time had ninety-two, mostly fingerlings, the whole lot of which would not balance the scales with the Fond du Lac man's thirteen.

Another unjust feature of such a law would be its discriminating tendency in favor of fly-fishermen, who really do more to deplete the trout streams than the bait fishermen do. Another objection is the expense of an outfit such as is necessary for successful fly-fishing, which the farmer's boy or the sportsman of moderate means is as much entitled to take trout streams stocked by the State (providing they use legitimate means) as their brother anglers, the fly-fishermen, who are fortunate in possessing a more plethoric purse. There is, too, a class of pirates that hail from the cities who ought not to be tolerated

of their own catching. Such parties would no doubt be welcome if they would content themselves with taking what trout they require to eat while in camp and a reasonable mess to take home when they break camp. I believe the most effectual and just method for the better preservation of brook trout, in addition to the present provisions, would be to shorten the lawful season for catching, say from May 1 to July 15. W. C. T.

Provisions, would be to shorten the lawful season for catching, say from May 1 to July 15.

EARLY MORNING ON THE STREAM.

"OOME, old man, wake up, if you're going trout fishing with me," This greeting, emphasized by several and sundry hoists of the bed clothes, met my unwilling ens full four hours earlier than any decent man has a right to be out of bed, one beautiful morning not so long ago, a morning the charms of which at a reasonable hour might have been remarkable, but to me at 4 A. M. seemed the very personification of everything to be avoided. However, with a resolute cousin forty pounds heavier than yourself at one end of the sheet, and nothing but an innate sense of modesty at the other, beef will usually tell; and after a hearty breakfast, preceded by a milk punch such as only the fair hands of the aforesaid cousin's wife can concet, life seemed more worthy the living, and the trout brook, eight miles away, nearer than good resolutions on New Year's day.

Immediately after breakfast our caleche came around the corner, and, reader, I wish with all my heart you could have seen the general get-up. It had been originally painted a bright red, body, wheels and shafts, but what with time, mud and accidents, it resembled nothing so much in this world as a very bad case of eczema. I never in all my experience with country turnouts, and I have driven in almost every town in N-w England, saw its equal. Horse strong and well built, but not pretty; and harness with the aid of several ropes, etc., in a fair state of preservation. The driver was a genuine Yankee, with face upon which the ravages of time were plainly visible, also the marks of wind and weather, with hands like a side of mutton, and hard. Harvensi when I was introduced to Zeke Sprague and he gripped my digits as though his case the marks of wind and weather, with hands like a side of mutton, and hard. Harvensi when I was introduced to Zeke Sprague and he gripped my digits as though his experience with general many his provision. The difference of the

somehow I forgot the next morning, to be up with the lark and enjoy the brightest, pleasantest time of the whole day.

Don't smile. I'll wager all my own hats that sometime in your life you've promised yourself the same thing. Have you forgotten those long walks you were going to take before breakfast? Be honest and don't throw a stone at me, until you have gone back 10 or 12 years, waked up at, say, 5:30 A. M., thought "to-morrow will do just as well, I don't feel like getting up this morning." Did to-morrow ever come?

What a curious sensation a man has when, his pole jointed, reel and line ready for business, he carefully creeps to a likely looking spot and gently drops his wiggling worm in just the right place. Nobody ever caught a 100lbs. brook trout, but, by Jove, that pull must mean at least a 50-pounder. You strike and land a measly little fellow, just large enough to have swallowed the hook and, it seems to you, a foot of the leader. Curious, isn't it, but it's always the little fish that are firmly hooked, the big one usually just manages to catch his lip, drop on the bank, and after you have grabbed for him and frightened all the fish within 10 miles, slide back into the brook with a sort of "Come birdie, spring is here," air, and leave you, if you have the passion of a fisherman, the solace of strong language, and mighty poor comfort it is, too.

Still, all the big ones do not escape, and we meet at 11 o'clock to compare notes and fish, and to eat lunch.

Total 42 fish, two of which are considerably over 1lb. It's rather early yet, the meadow flooded and the fish not particularly hungry. Still, 42 fish are not to be sneered at, and, the sandwiches. Did ever two slices of ham with a little bread taste better? The happiest time in a man's life must be when, after a morning's exercise in the open air, he stretches out at full length on the grass, in the shade, and listens to the noises made by God's creatures, with every sense at perfect rest. So ended my first trouting expedition of the year, for busi

ANGLING NOTES.

ANGLING NOTES.

A S both Decoration Day and the glorious Fourth came on Friday this year, very little business was transacted on the Saturdays following; this gave many people a chance to pass three days in the country, and anglers made the most of the opportunity. Last Thursday, notwithstanding the weather, the cars and boats were crowded to their utmost capacity, and fishermen with creels and rod cases were to be seen in every direction. Some were bound for the cool forests and lakes of the Adirondacks, while others were off for the wide waters of the St. Lawrence, with its thousand shady islands and savage maskallonge. The majority, however, had to content themselves with shorter trips and seek the bluefish in the guiet waters of Barnegat or Jamaica bays. The various clubs in the mountains received a big contingent, especially Blooming Grove Park, when the Fourth of July always draws a large number of members and guests, who are glad to escape from the noise and confusion of the hot city, and take a much needed rest among the cool mountains and snady forests of Pike county, to say nothing of enjoying the luvury of a well-appointed club house, and the trout and black bass fishing for which this association is famous. What a change there is between Blooming Grove Park of to-day and the same place ten years ago. Great improvements have been made for the better and the club now is one of the finest in the country.

the better and the club now is one of the finest in the country.

The owners of property on the west branch of the Neversink still have considerable trouble with poachers; nine of them were arrested last week. They consider it smart up there to get the best of one of those "city fellers." They take his money, and a good deal of it, too, for land, taxes, etc., and then take every advantage of him. After people paid a big price for their land, hoping to have a place where they could run up from the city and enjoy a little quiet trout fishing in the streams running through their property, they found that notwith-standing the liberal price paid, the residents refused to recognize their rights, but proceeded to trespass whenever it suited them, and resented any interference. Even after having been repeatedly ordered off and having the law explained to them, they still thought it smart to poach whenever the owner's back was turned. After a number of law suits had been decided against them they began to open their eyes to the fact that people still can own property in this country when they pay for it, yet the temptation is very great, particularly when they find they have ruined the fishing in the public parts of the stream (there are miles upon miles still open) by catching the fingerlings and snaring and set-lining the big ones. The poachers laid great stress on the fact that these streams had been stocked at the public expense. This question, of course, had nothing to do with the right to trespass, even admitting the fact that at one time some trout were put in by the State, it does not affect the question at all. The owners also bought trout and turned them into the stream but no one ever claimed an exclusive right to the fish, they can be caught by any one in the proper season, but it conveys no right for people to go on a person's land without permission. Another point which has been settled by the courts is that the land owner owns to the center of the bed of the stream, so that if he owns both sides he contro

Frank Dunning, a well known sportsman of this city, has just returned from the Restigouche River. He reports the salmon fishing excellent. His best score for one day of about seven hours fishing, was seven salmon, the largest weighed 361bs.

Col. S. N. Martin, of Summit, N. J., reports fine striped bass fishing in Chesapeake Bay. One day having lent his rod to a friend, he killed two striped bass weighing respectively 6 and 10lbs., on a little 6oz. Holberton style of fly-rod.

POSTING AND POLLUTING,

POSTING AND POLLUTING.

MANCHESTER GREEN, Conn.—Editor Forest and Stream: The time has now come to call a halt, and make an impartial examination of our game and fish laws, and to understand just what effect these laws have upon the rights of the many, and if other legislation is necessary to protect these rights then let us have it.

I am led to make these remarks by the attempt which is being made to put the fishing waters of the State into the control of a few so called sportsmen, who, entirely ignoring the rights of others, seek only their own gratification. There are whole-souled men—farmers and others—who have large tracts of land in this vicinity, through which course fine streams, who would scorn the idea of leasing the streams, and who believe in the God-given right of enjoyment for all. There are others who have as little regard for anything but self as can be imagined, men who have as small conception of neighborly amenities as a baboon. I have in mind one who posts the streams through the land occupied by him. and fishes in every other stream attainable. Another sells his meadow to parties for §4 a year and considers he has much gain, but has as little conception of the comfort and pleasure realized by a day's outing as a native of Zambezi. His ideas are purely utilitarian. There is nothing to him in nature's beauties—

"A primrose on the river's brim,

"A primrose on the river's brim, A yellow primrose is to him, And nothing more."

And nothing more."

That there is need of stringent laws, to prevent the taking of game or fish out of season and in an improper manner, no man of ideas denies, and we should also have proper laws to prevent the pollution of streams by any means, either by mills, factories, or in other ways. There are those who cannot be prevented from violating these laws, except by a heavy penalty and that rigidly enforced. For instance, several days before April 1 a person was seen, by one of my neighbors, with over 40 trout. The man who saw the trout would not divulge the name of the person who had them. Now the man who caught those trout took an unfair advantage of those more concientious, who would not fish out of season, and such a man knowing the law deserves punishment. There is no doubt that the fish and game laws could be much more easily enforced, if the majority of people unmuch more easily enforced, if the majority of people un-

derstood that these laws were for the benefit of all. Many of them say these laws are only for the wealthy. The city men lease the streams and woodlands, and prevent others from taking game or fish. I had this very thing said to me yesterday by an intelligent mechanic, who enjoys a day out when his labors will permit. It is better to pass just laws now, than to have these citizens, when they understand their power, pass those that are worse in retailation.

in retaliation.

I was fishing a stream some fifteen miles from Hartford a few days since, and had been quite fortunate in my catch of trout. Then it got late, and I was about starting for home, I noticed an open meadow below the road and thought I would make a few more casts. Before leaving the stream as I stepped into the meadow, a notice confronted me forbidding fishing and signed with the name of a Hartford man. On inquiry of a farmer near by if this man, whose name was attached to the notice, owned the land through which the stream flowed, he said not one foot of it. The land belonged to a farmer living near by. I said, "Very well, unless the owner of the land forbids me to fish I shall keep on." And I did so. This posting streams is the kind of business that brings the laws into disrepute.

If the farmers would take hold with others and oblige the mill owners to cease the pollution of the streams by running abominations into them as they now do, the area of fishing waters would be increased, and the farmers would have pure water for their cattle and other purposes.

The laws passed by the State for the protection of fish

would have pure water for their cattle and other purposes.

The laws passed by the State for the protection of fish are supposed to be for the purpose of increasing the supply, and should apply to any cause which tends to fish destruction except in a legitimate manner. The pollution of streams by the refuse from mills is one great source of destruction. One stream of the many in the State in which the fish are destroyed by this means is the Hockanum River, a stream naturally as pure as any in the Commonwealth. It flows from Snipsic Lake, above Rockville in Tolland county, through the towns of Vernon, Ellington, Manchester and East Hartford, into the Connecticut River opposite the south part of the city of Hartford, From Rockville to its mouth it is a stream of inky blackness, flowing through a large acreage of meadow and pasture land, and is not fit for any purpose except to set machinery in motion. It is a villainous mixture, emitting an intolerable stench, and but for the long time it has run in this condition it would be considered a nuisance. The stream leaves Rockville with pollution enough to create a pestilence.

In some places such matter is utilized for fertilizers, and it could be done here, and undoubtedly made a source of revenue.

No one has the right to destroy the usefulness of the

No one has the right to destroy the usefulness of the water for those on the stream below; and it is due to the people of the State that legislative action be had in this respect, and proper laws passed restraining mill owners from the pollution of streams.

JONATHAN.

HINTS FOR STRIPED BASS FISHING

HINTS FOR STRIPED BASS FISHING.

A FEW facts about the above fish, obtained from personal observation, may be of interest. You see a bass after traveling around some, or in other words, say one that will weigh about 20lbs. has got the deceptive ways of the world down to a pretty fine point, and when you start out to catch him, things have got to be about right, or he shows a lack of interest in hook coverings which is truly discouraging. The most important thing, and at the same time the one most neglected, is to get bait of the same kind as that upon which the bass are feeding at the time. I remember one occasion, when they were feeding on young mullet, which venturing too near the shore, lost control of themselves in the breakers. After trying lobsters, menhaden, mummichogs and live eels, without the slightest success, although the bass breeched for mullet within a few inches of where the bait struck the water, I gave it up for the time, until, finding a few mullet in a creek near by and returning to the ground, almost every cast was rewarded by a strike. In surf fishing with a rod most fishermen make the mistake of casting their bait too far from the shove, which is a bad fault, as the bass are mostly inside the breakers, for the very purpose of taking advantage of the force of the sea, which loosens, for a few seconds at a time, the crabs, small lobsters, etc., from the kelp and cracks in the rocks, and causes the smaller fish to get flurried, when they fall an easy prey to the striped bass, which has a most perfect control of himself, either in a breaking sea or a swiftly running current. So when surf fishing do not cast too far from shore; the bass are generally inside the breakers in the white water.

The most killing bait I have ever fi-hed with, in running water, is live eels. In striking an eel a bass always takes him head on. This is because, having no holding teeth, he would lose the slippery prize most every time if he grabbed it by the tail or in the body. So in fishing for bass, with this bait, h

son for bass not being as plenty as of old is the pollution of our fresh ponds and rivers by sewerage, etc., thus cutting off one of their winter haunts, from which they used to come out much refreshed to meet the fi-hermen in spring.

WILLARD NYE, JR. spring.
New Bedford, Mass.

spring.

New Bedford. Mass.

Courage of Spawning Fish.—Some days, while wading and casting for bass in Lone Stone Lake, Wis., I inadvertently stepped on the spawning bed of a rock bass, or "goggle-eye" as they are sometimes called in the West. The fish ran out, and a moment later came back at me and struck quite a severe blow on my leg as I stood in the water. I stood quiet, and the little creature—it was only about a half or three-quarters of a pound in weight—ran at my leg again and again, bunting quite forcibly with its head. The whole demeanor of the fish was one of great anger. As the water cleared, I could see it very plainly, and it could see me as well, but it showed no signs of moving off, and evidently meant fight. I stepped away from its nest I had unfortunately trodden upon, and its possessor then abandoned the fight. This was June 15, I believe. We could see a good many black bass nests shining on the bottom of the lake near the shore. The men of that country said they often caught bass by leaving the bait lying on the bed or "nest." On finding it there upon their return, one or the other of the bass would seize it and carry it off from the bed, and the fish could then be hooked. I caught only one bass here, a big-mouth. The guides did not know there was a large mouthed bass in the lake, though the small-mouthed were plentiful. I believe the bass were still spawning at that date. There was a small amount of spawn in the fish I caught. Bass do not usually bite much during the spawning season, except on the beds. I found this fish at the edge of a bank of rushes.—E. Hough.

at the edge of a bank of rushes.—E. Hough.

Some Wisconsin Fishes.—The Smithsonian Institution is in receipt of a letter from Mr. W. W. Abbott, of Neenah, Wis., containing sketches of two fish of that locality. One of them was recognized by an old fisherman as a "shovel-nosed sturgeon," which he had seen elsewhere; the other is known at Neenah by the names "shad," "mooneye," "cisco" or "herring." The "shovel-nosed sturgeon" is the paddle fish of the Ohio and Mississippi valleys (Polyodon spathula), and we presume that it was found in Lake Winnebago, which communicates with Lake Michigan through Green Bay. The paddle fish is common in the Mississippi Valley, but it is not often found in Lake Winnebago. The paddle fish is also known as the spoonbill cat and duckbill cat. It is frequently considered unfit for food, but we have often eaten it in Western hotels under the name of salmon and found it very palatable. The species to which the other names are applied is usually called "mooneye." It is the Hyodon tergisus of the books and is placed between the whitefish and herrings on account of its structure. Mr. Abbott states that the flesh of this species is white, fine grained and soft, and tastes slightly muddy. The fish takes the artificial fly readily at sundown and is a game fighter. Its weight ranges from \(\frac{1}{2}\) to 2lbs.

"Two After Trout."—Montreal, Que., June 29.—

"Two After Trout."—Montreal, Que., June 29.—
Editor Forest and Stream: I spent part of to-day reading my Forest and Stream: I spent part of to-day reading my Forest and Stream, and was very much interested in the article signed "O. O. S.," "Two After Trout."
I've been there. The reason that the Toronto hardware dealer was afraid to sell him the spring scales (although his objections could probably be overcome) is that it has been against the law to sell them in Canada for the past few years, because they are unreliable, and any person buying goods weighed on them is liable to be sold. Or perhaps the idea of the Government was to prevent honest fishermen from calling a 4oz. trout a 4 pounder. I guess "O. O. S." struck it about right when he said that "perhaps the scales weren't just on the square." The black bass season is open here now, and we expect to make some great catches during the coming month.—I. L. S.

LAKE DUNMORE (VERMONT) FISHING.—This lake is eight miles from Middlebury. The mountains come down to the water's edge. The lake is about five to seven miles long, one to one and a half miles wide, very deep and well supplied with salmon trout, black bass and perch. The fish so far are more plentiful than usual, the increase being credited to the work of the State Fish Commission. One gentlemen had been out three times and took thirty-eight trout, the smallest 6lbs., largest 15½lbs. A gentleman from Brandon has taken over 100 trout, among which were a number of 18 and 20-pounders.—W. A. WILCOX.

A RESTIGOUCHE SALMON SCORE.—A Bridgeport, Conn., exchange reports: Mr. H. R. Ives, a cousin of E. R. Ives, Esq., of this city, and a prominent manufacturer of Montreal, has recently been salmon fishing with the Restigouche Salmon Club, Matapedia, Quebec, and reports the following catch, which is enough to set any fisherman longing for a chance in such waters: First day, 9 salmon, seven of which weighed as follows: 27½lbs., 22½, 21½, 22, 17 24, 26; in all 160½lbs. In the evening of the same day he killed a 28-pound fish. This report accompanied a fish sent to E. R. Ives, Esq., which arrived in good condition.

Two Fish on One Hook.—Tangerine, Fla.—An uncle of mine was out in a boat fishing for bream with a very small minnow for bait, when a shower came up and he pulled in to shore to get out of the wet, leaving his lines in the water. After the shower he started out again and found that he had hooked a good-sized catfish during the rain: but you can imagine his surprise when unhooking it that instead of its taking the original bait a fair-sized rock bass had been caught first, and the cat had pounced upon the bass.—Tanger.

Bass in the Corn Fields.—Mr. S. F. Denton has just returned from Illnois, where he had gone to do some collecting. He found the Big Vermilion and Illinois rivers beyond their banks and collecting entirely out of the question. While wading in water up to his neck his feet were still on the grassy banks of the river. The people of the country were fishing at Peru for bass with hook and line, and minnow bait, in the cornfields.

CUTTYHUNK BASS FISHING this season is excellent. Some large fish have been taken. Last year, it will be remembered, the fishing was a failure,

SEA FISHING OFF THE MAINE COAST.

SEA FISHING OFF THE MAINE COAST.

HAVING never seen anything about deep sea fishing for cod and pollock in Forest and Stream, I have thought it might interest some of the readers of the paper to read an account of one of a number of days' fishing which it enjoyed during the summer of 1888 in company with two friends, among the men who make a living with their hooks and lines.

Joe S., Lin H. and the writer were camping, or rather staying, aboard of an old pinkle, whose days of usefulness were past, excepting the purposes for which her owners used her, that is, for a temporary stopping place while fishing, and for a place where they could dress down and store their catch until sold. She was anchored in a snug little harbor known as Damis Cove, on an island of the same name, noted all along the coast as a safe place to be when the heaviest storms were raging. The owners had kindly vacated the premises for the time being, leaving us in full possession of a house and all the equipments for comfort; that is a good cooking stove and uten-sils, bunks, beds, etc.

Of the party Joe was the oldest in age and experience having lived on the island the first sixteen years of his life and visited it every two or three years since. He knew all the harbors and most of the fishing sheals, and above all could sail the boats with the best of them, and was also a good cook. Lin was on his first camping trip and expected lots of time to rest, as he expressed it, and he did not get it, which will perhaps partially account for what followed. As for myself, I had camped out several times and was anxious to gain all knowledge possible on the subject, for I expected to be able to use it in the future, so I was ready for anything and took what came and tried to make the best of it.

And now to the twenty-four hous that proved to be the most memorable of our trip. We had enjoyed good fishing on the shoal near by, but were wishing for a chance to go outside, when we heard that pollock were biting freely on the western grounds about 9 miles

sonn Gray, who is about to years old and has been fishing ever since he was strong enough to pull an oar, tells us much about the life of a fisherman and the habits of the fish.

Not many minutes after the sun went out of sight behind the Georgetown hills, we heard the herrings coming toward our station. The sound we heard was like that a heavy shower would make as the rain struck the water, and was caused by the fish as they flipped out of the water, their tails striking with a spat as they went under again. The noise was incessant and could be heard for a long way each side of us. There was a big run, and as at times countless numbers would throw themselves a foot and more above the water in their endeavor to escape the rush of some large fish or seal, it would seem as if every herring in the ocean had gathered together and run into that particular bay. It was a sight never to be forgotten, and one that even those who were in that same place nearly every day during the season saw but once or twice in a year. As they came near we let out about 60ft. of our net, which was 30ft. wide and over 100ft. long, with inch meshes. In less than five minutes after the first fish struck the net the floats commenced to sink, and we hauled it back into the dory and Joe and John rowed back to the dock. After picking out the fish and placing the net in position for auother trip, all done at the same time, we found that we had captured nearly a barrel of bait. Often times the catch is less than a bushel, barely onough to last a man for one day's fishing, and as the herring are very soft and will not last over twenty-four hours, the trip after bait has to be taken every night. By this time it had got to be so late, 11 o'clock, and there being no wind, Joe and I concluded not to try to go back to the island, and accepted Mr. Gray's invitation to stay with him. We went up to the house, and after a light lunch were shown to our room, and for the first time in six weeks I slept in a soft bed.

In the morning we wished we had taken o

island, never thinking but that he would be thankful for the chance of going out with us, although we knew that he did not enjoy such trips as we did. It was nearly daylight before we rounded to beside the old pinkie, and as Joe went down the companion way I took out what blankets and things we did not want, and as I went down the companion way I heard Lin growling, almost swearing at Joe for waking him; he said it was a pretty time of day to get up, and that he would not go out with us. We got out. If we had staid, there would have been music. He never knew what he escaped that day, for Joe kept getting madder every minute, and several times after we were well out of the harbor he swore he would go back and string him up to the masthead by the heels and see if that would wake him up; but as we went along the calmness of the mighty ocean along with the exercise of rowing (for the wind had all died out and we had settled down to the long row ahead of us) soon caused us to think different thoughts, and we afterward set it down as one of the pleasant "episodes o' the trip," as old Sam of the Kingfisher family would have called it.

we had settled down to the long row ahead of us) soon caused us to think different thoughts, and we afterward set it down as one of the pleasant "episodes o' the trip," as old Sam of the Kingfisher family would have called it.

All the same, our well-meant thoughts of doing Lin a favor cost us a nine-mile row, which was no fun, and what to us was worse, the loss of the best part of the fishing, for when we arrived on the ground nearly every boat had a half catch. Notwithstanding the drift of the undertow which that morning was directly opposite the flow of the tide, we found ourselves afoul of another boat and had hooked on to their anchor line before we had caught a fish, and then we had to pick up our anchor, which, as we had about sixly fathoms of line, was no easy job, and then get under, way and try again. This time we did better, and we were soon hauling in some big pollock. It was not long before we felt well repaid for all our trouble. We were fishing in thirty fathoms of vater, using what is called a 61bs. line with a 1lb. sinker. For bait we had on each hook three half herrips. One man could tend to two lines, if he wanted to work hard enough; one was enough for us when the fish were biting. It was exciting when one had hooked a 6 or 8lbs, pollock, for they can make a good fight at the end of 180ft, of line. We dare not let them run, and at times on their way up they would turn head down and sulls, all we could do was to hold hard and wait for them to give in, and then one had to take line pretty fast in order to keep them coming; by the time the fi-h got to the top of the water they were nearly drowned, and often times, when the hook brook loose as we were lifting them over the side of the boat and they dropped back, we would have every handsome fish, and we were told that they were often shipped We t and sold as black salhom.

After we had been fishing an hour or so the sea breeze came up, and as it kept blowing harder and more steady right against the tide, its soon kicked up a bad choppy sea, and

through the mist, and then the lower lying islands became visible.

Just off the mouth of the harbor Joe sighted a splitting knife floating in the water, and tacked about to pick it up; he lost sight of it while tending to the sails, and, as I was lying down at the time, we failed to find it again. However, we kept on for a little sail on this tack; the boat seemed to fairly fly over the waves, and, although we got wet with the spray that dashed into the air from the bow, we thoroughly enjoyed it, and were sorry it could not last longer. As there was no land between us and the other side of the ocean, and as we were not provisioned for a long cruise, we concluded to turn around and head for the island, where we soon found ourselves on board the old pinkie again, and our day's fishing was at an end. As we had had nearly twenty-four hours of a new experience, we concluded that we had fun enough for one day. We made short work of dressing down our half tub of fish. Nearly all of the other boats went in with a tub and a half to two men, and by the time the fishermen had packed away their catch and had their supper it was time to go for bait again. Thus, the men who follow fishing for a living get only three to four hours' sleep out of the twenty-four, unless it is during a spell of bad weather and on Sundays. Still, all the fishermen that I met were, as a rule, the healthiest, most independent and best-hearted men it has been my privilege to meet, and my wish is that they may always be so.

ELMER T. Judd.

Lake Champlain Fishing.—I came up here just as the ice was going out, but in time to catch a few frostfish. I cannot see anything to mark a difference between these and the salt-water smelt (Osmerus mordax), and take it they are identical, but that some stay the year round is certain, as dead ones wash up now and then in summer, although they never take bait after the ice goes. They were ripe and spawning the last of March. They seemed to move in schools and did not bite at all well last winter. The three men I fished with seldom took over twenty dozen a day altogether. Wall-eyed pike would occasionally take the bait (a piece of frostfish) and yellow perch, ripe and spawning also, and now and then a ling. Wall-eyed pike are plentiful this summer, and the black bass have begun to take hold, though not freely, on the rocky shores, that is, with live bait, although I have no doubt they would rise to a fly.—Thomas Lee.

Baltimore, Md.—There is good fishing at present in Bush River. Rock, white perch, yellow perch, catfish and eels are all common. "Peelers" are the most successful bait.—A. L. S.

THE TROUT CULTURE DELUSION.

THE TROUT CULTURE DELUSION.

Editor Forest and Stream:

I have read the communication of Mr. Wm. N. Byers, in your issue of June 19, and desire to answer his points seriatim. And first, I did not in the remotest manner manifest disappointment because my former article did not provoke or attract more attention, as any unbiassed reader will acknowledge who reads said article. Indeed, one of the eldest and most experienced anglers in this country, one who has and continues to angle over a wider range of territory than probably any other person in this country, read my article in question and also the subsequent one, said he was fully convinced that my article could not be successfully controverted, and he is himself an extensive writer of angling literature who was formerly, in common with all of us, enthusiastically in favor of trout culture, but who now acknowledges that it is a delusion, so far as producing a visible increase of mature trout is concerned. This is the verdict of all well-informed men who have no axe to grind. The fact that there were fifteen years ago several hundred persons engaged in tront culture in this country, wheras there is not a baker's dozen so engaged to day, except by virtue of public funds, is of itself sufficient testimony of the futility of the now exploded business.

I have no certain means of knowing whether I have previously heard of Mr. Byers, consequently I am not "after" him any more than others of the rapidly diminishing and already very small circle of ill-informed persons who are either consciously or unconsciously endeavoring to keep alive a gross delusion.

Mr. Byers seems to think that because of an alleged catch of sixty-four fish in one day, most of which were planted fish, that he has sufficient evidence of the success of tront culture. And he says he can give a list of fifty or a hundred streams, impliedly, which have been improved by stocking. How does Mr. Byers know that those streams have been thus improved? Has he fished them all? I have personal knowledge of n

thinks me very green regarding the various types of brook trout.

In next to the last paragraph of Mr. Byers' article, the object of the communication will be apparent to the general reader. He has waters to lease to some embryo trout culturist, providing he can find some one verdant enough to try it, In his last paragraph, Mr. Byers attempts to be sarcastic, by his gratuitous assertation that I mourn a life wasted trying to raise dollar trout to sell at twenty-live cents. I presume this is just as truthful as his other fish stories. Of course I did not even intimate anything of the kind. On the contrary, I take pride in having given the subject of inland many more years of personal attention than any other fishculture, including trout culture (while that branch of the business remained within the pale of respectability,) American.

American.

And finally, Mr. Byers will condescend to show me how to raise trout, as well as how to catch, cook and eat both wild and tame ones, if I will only come out there, and I won't even have to risk my life in a Territory. Very kind of him

even have to risk my life in a Territory. Very kind of him truly!

And now in conclusion, I wish to say to my callow friend, that, judging from the general tenor of his communication, I was probably years in a "territory" before he was born, and knew something of "black-spotted" trout, of native anglers and mouthey tenderfeet. What he does not know about fishculture would make a huge volume, while what he does know could be written on the address-side of a postal card. I speak of his apparent knowledge. Mr. Byers has a "heap" to learn before he will be capable of enlightening any old fishculturist. If he lives long enough in Colorado, he will find that the Eastern trout will conform to the peculiarities of the native trout both as to spawning season and markings. He will also learn that there will be cycles of abundance and scarcity of trout in all waters adapted to them, precisely as in the case of all varieties of fish, and without the least regard to artificial stocking. The fact that more Eastern trout are taken than native ones proves nothing except the probable fact that the Eastern trout were introduced

at the time of greatest depletion and that au overstock was introduced as is generally the case when done at public expense, leaving of course a larger portion of the Eastern types as survivors.

I find that I have passed over the paragraph concerning the "market" fisherman, impliedly the fish hog. Now, while I never raised a trout or caught one for the market, I think I know all about the genus "fish hog." The so-called market fisherman (for trout) is a whisky bummer who hangs around the saloons and goes a-fishing just often enough to keep himself in whisky money for such occasions when he cannot spunge treats.

It is rare that any other character catches trout for sale. This class has not and will not in all time entch as many trout as the professional anglers catch in a single season. The real fish hog is the unprincipled lout who generally under the guise of membership in some club, brings to his creel the scores and hundreds of fingerlings which so often figure in reported scores, like Mr. Byers' sixty-four, but with no mention of weight. I trust that Mr. B. will yet tell us how much the sixty-four fish weighed. I am also desirous to have that list of lifty or a hundred trout streams which have been so improved by stocking. Let him publish it in FOREST AND STREAM. The R. R. Co. which runs that special daily fishing train would doubtless assist in the information, providing a considerable number of them discharge their waters into the South Platte.

There is no doubt that the State of Colorado reaps benefit from the tourists who visit its picturesque scenery, and a small proportion of whom may occasionally go a-fishing, but, I do not think that the fishing racket is well understood by many Eastern tourists, and they too well know that it "plays ont" with the native stock of fishes, and they are constantly seeking "pastures new." One thing more. Will Mr. Byers please publish a list of that number of people in the region of Denver who are engaged in artificial troat culture. There are thousands of readers of

NEW JERSEY FISH LAW VIOLATORS.

NEW JERSEY FISH LAW VIOLATORS.

HERE in the Highlands of New Jersey we have waters of every variety, from streams tumbling and roaring down the mountain sides to those which seem to lazily drift through the meadowland into the swamp, and at times half hiding under the bank overhanging with alder bushesstreams that are small and suitable for fingerlings, to others which are large enough for salmon. What a variety of bothems for streams we find as we pass from the Delaware to the Passaic. Slate, limestone, granite, red shale, clay and muck; each one seeming to have its influence on the water, more especially so in the spring, when it draws color from the soil it goes through. The granite, limestone and shale vary but slightly from each other, while the clay with its yellow, the muck with its black, and the shale with it rosy tint, give an individuality to each which is very pleasant to remember in after times when the season is over. Brooks in the limestone formation, which come into life from a single spring, to those in the granite region, where it takes hundreds of trickling springs to form a stream large enough to be the home of the finny tribe. There is probably not another place of its size in this country where such a variety of streams and lakes can be found that are so well suited to the habits of the game fishes.

Are there trout in the streams and bass in the lakes? Certainly; all the recklessness of the legislature in the past in allowing six months to catch trout against three and one-half now, the man who goes out at night to spear eels and suckers, but also brings back trout to his friend, who goes out to take a walk but also takes a net with him under his coat—all these have not been able to utterly destroy the fishing.

For a few years no fish baskets were allowed, but an old entileman, who had been sent to represent his narry in the

cost—all these have not been able to utterly destroy one fishing.

For a few years no fish baskets were allowed, but an old geutleman, who had been sent to represent his party in the legislature, advocated the replacing of the baskets. He represented that the eels and suckers of Paulens Kill and other streams were getting large and fat and being wasted, and the legislature good-humoredly passed the bill, to please him. These baskets are not supposed to kill trout and bass, but they do kill hundreds every year and I have never known a basket that did not kill trout as well as suckers and eels.

The law has been enforced but a very few times, as you

known a basket that did not kill trout as well as suckers and eels.

The law has been euforced but a very few times, as you may easily tell by the naive way in which the native of Sussex, Warren, and Morris will tell you how many suckers he caught the last time he was out with his net, and then he will hold his hands apart, showing how long were the trout he caught.

The larger lakes, like Hopatcong and Budd's Lake, have their regular sciners, and in some towns, as Morristown and Hackettstown, there are men who have seines and use them whenever they have a chance, for the bass and pickerel of the Passaic and Shongum to the trout of the Musconetong.

them whenever they have a chance, for the bass and pickerel of the Passaic and Shongum to the trout of the Musconetong.

A new fish commissioner has been appointed at Morristown and we have every reason to believe that he will be entirely harmless, as far as the prosecution of those that break the game law is concerned, for he is a member of a club which has a small lake a few miles from Morristown, and some of this club's doings would not look quite correct if viewed impartially. The lake that this club has is but a few miles in area; they want to keep it highly stocked with bass, and as the natural increase is not sufficient they have to adopt other means to keep the fishing up to the standard. One way to keep it stocked is to buy small bass and put them in the lake, but they also have a document from the commissioners giving them authority to net any public stream in the State for stocking public waters, and the public stream is hardly large enough for a good tout stream, and, as there is an impassable dam only a few hundred yards above, the fish must find their way, in a day or two, into the club's private lake. The other way was by making a contract with a well known poacher who agreed to furnish bass of various sizes, which he did, some of them weighing albs. and over. This commissioner may help stock our streams with trout, which is more of a favorite with him than bass, but we can hardly expect him to enforce law.

Hopatcong also has a commissioner, and he has done a great deal of good this summer by preventing illegal fishing, and every person he stops or drives away will deter ten others from attempting it. With strict enforcement of the law and judicious stocking of streams we could in a few years time have sport that would satisfy any reasonable devotee of the rod and line.

SHAD IN UTAH LAKE.—The Commissioner of Fisherias is intermed by May Mycar Fish Convenient of the law and indicious stocking of streams we could in a few parts in the wears time have sport that would satisfy any reasonable devote

SHAD IN UTAH LAKE.—The Commissioner of Fisheries is informed by Mr. Musser, Fish Commissioner of Utah, that more than 100 shad averaging 1½lbs. each were caught in Utah Lake in November, 1889. The experiment of introducing shad may, therefore, be considered worthy of repeti-

INCREASE OF POTOMAC RIVER SHAD.

THE inspector of marine products in Washington, Mr. Gwynne Harris, has made the following report of the shad and herring catch of the Potomac River for the spring of 1890:

Number of shad landed in Washington 430,391
Number of shad landed in Alexandria 21.000
Shipped by steamer Sue to Baltimore 9,300
Shipped by steamer Corcoran to Baltimore 7,340
Sold and salted on the different shores and shipped by gillers and trap-netters 28,900 Total......486,931

Number of herring landed in Washington 8,264,568
Number of herring landed in Alexandria 3,151,450
Shipped by steamer Sue to Baltimore 192,000
Sold and salted on the different shores 3,378,000

DELAWARE RIVER FISHES.—Hundreds of large shad were seen going down the Delaware River July 3. These have finished spawning and are on their way to sea. Hon. Henry C. Ford. while fishing in the vicinity of Delaware, Pike county, Pa., saw a Kennebec salmon leap a rift less than 20tf. from his boat. He thinks the fish was fully 3½tf. long and would weigh 25 or 30lbs. Governor Beaver has just reappointed, for three years, the present Board of Fish Commissioners. Mr. Ford has shown himself to be a most efficient president, a man of liberal and comprehensive ideas, and his successful administration has received the approval and indorsement of the public, which is now reflected in the official act of Governor Beaver.

CHANNEL CATFISH REARED IN PONDS.—Mr. J. J. Stranahan, Superintendent of the Put-in-Bay station of the U. S. Fish Commission, has informed the Commissioner of the successful rearing in small ponds of the channel catfish (Amiurus albidus). In two ponds near Chagrin Falls, Ohio, neither of them containing over a quarter acre, examples of last year's hatch have been taken early in June. It has been considered doubtful by the Commissioner and fishculturists generally whether this species would breed in small inclosures.

BROOK TROUT PLANTING IN MICHIGAN.—Mr. Alexander Starbuck informs us on the authority of Mr. F. G. Heath, a former official of the Grand Rapids and Indiana R. R., that the number of brook trout fry deposited by the State Fish Commission last spring in streams reached by the northern division of that road, amounted to 449,000. The waters have been amply stocked for several seasons and anglers are coming from far and near to enjoy the fruits of intelligent labor.

SUCCESSFUL ARTIFICIAL HATCHING.—Marine fish have been artificially hatched in Norway and afterward kept three years in a salt water pond, where they thrived and grew wonderfully and will soon be matured and ready to

THE A. K. C. AFFAIRS.

THE A. K. C. AFFAIRS.

THE Advisory Committee of the American Kennel Club met at the office, 44 Broadway, July 2, to hear the charges preferred by Secretary A. P. Vredenburgh, on which he asked for the permanent disqualification of Mr. C. J. Peshall. All the members of the committee were present, Messrs. Terry, Perry, Wise, Anthony and Belmont. Mr. Peshall did not appear, but sent a letter (which was published in our last issue) refusing to acknowledge the constitutional existence of the Advisory Committee and its authority to act in this affair. The letter was read, but as the question of constitutionality had already been decided at a previous meeting, no weight was given to Mr. Peshall's contention. The charges, as served on Mr. Peshall were these:

contention. The charges, as served on Mr. Peshall were these:

Charge I. That Charles J. Peshall did circulate and continue to circulate false, malicious and libelous letters calculated to impair the authority and usefulness of the American Kennel Club and its publications, and to injure my reputation and standing as an officer of said club. Charge II. That Charles J. Peshall wilfully violated rule 32 of the rules governing bench shows as adopted May, 1887. Specification: In that he exhibited a dog, at a show held under A. K. C. rules, in his own name as owner, at which time said dog was not his property.

Charge III. That Charles J. Peshall wilfully violated rule 25 of the rules governing bench shows, as adopted necember 6, 1888. Specification: In that he misrepresented the value of a dog, at the time of making a sale. Specification: In that he conspired with one John N. Lewis to give a fletitious value to the dog, for the purpose of enabling said.

Lewis to offer the dog for sale, at a price beyond its real

Lewis to offer the dog for sale, at a price beyond its real value.

There was a prolonged discussion respecting the jurisdiction of the club to try Mr. Peshall on the several charges. It was urged by Mr. Wise that the offense named in charge or field that, and there in connection with dogs, dog shows or field that, and the property of the control of

Editor Forest and Stream:

Not to embarrass the question to be below referred to with any mention of the other features of the attack of Messrs. Peshall, Malcolm and a few others, upon the management of the A. K. C., and Mr. Vredenburgh and myself in particular (I refer only to official duties), I beg to state that I have not at any time or in any manner paid into the treasury of the A. K. C. any money whatsoever to fill a deficit directly or indirectly, nor has any one else.

The accounts of the club have been kept strictly on business principles, and the earnings and expenditures as stated from time to time by the treasurer are the honest and legitimate receipts for the regular and legitimate work rendered and privileges granted by the A. K. C. organization, disbursed for only that which was honestly and legitimately required. There has been no juggling with the accounts. The amount of \$1223,28 rendered as a balance in one of the treasurer's reports, which it has been claimed was not properly obtained, has been explained and proved to the satisfaction of the Auditing Committee, and any delegates who desired to see the books.

August Belmont, Jr., Pres. A. K. C. Hempstead, N. Y., July 7.

Editor Forest and Stream:

Vent, vidt, and if I didn't conquer I at least got down as gracefully off the fence as I could, fully prepared to give my assistance to the A. K. C. in its fight with Mr. Peshall over the accounts. It came about this way: Last Wednesday morning I was engaged with the Spaniel Club committee in an out of the way place to which Mr. Wilmerding bad taken us, when who should walk in but Dr. J. Frank Perry and Mr. Vredenburgh. I do not know whether the sight of them or the reason for their arrival was the greater surprise. They had come to ask me to go down and make as close an examination of the A. K. C. books as I could and convince myself that there was nothing wrong. Dr. Perry was the spokesman and said that he had spent an hour or more in looking into things, but, to use his own expression, he felt a little rusty as to the exact charges that had been made. That he had asked Mr. Vredenburgh to let me make as complete an examination as I thought fit, and together they sallied forth from 44 Broadway to find me. I should say in this connection that Dr. Perry had written from Boston asking whether it was in my opinion essential for him to be in New York at the Advisory Committee meeting. That I sent a postal card in response saying his presence was imperatively necessary, also that I would be in the city and to let me know where I could meet him. His reply I did not get till I returned to Philadelphia. I mention this to remove any suspicion that the request made of me was at all premeditated. The spaniel club business being soon over, I was at liberty to accompany Dr. Perry.

To let my readers know what I proposed looking for I will tell as briefly as I can what Mr. Peshall has repeatedly told me within the past two or three months.

Mr. Peshall said that Mr. Vredenburgh left for Europe at the time the A. K. C. books were balanced in June, 1888. That to make it pleasanter for him while abroad the committee had, out of the balance (about \$700), given him \$500. That then Mr. Lewis took charge under what Mr. Peshall calls the exhaustive contract, whereby he was to take whatever surplus there was over paying expenses, the A. K. C. to pay half the rent of the office. That on Mr. Vredenburgh's return the A. K. C. balance had dwindled down to the Dec. 5 balance of \$5 and some cents, and that there was nothing in the treasury beyond that odd five dollar bill, and there was none except members' dues which then began to be paid in, and that they ran the balance up to about \$232 and that Mr. Belmont, or some one for him, put in \$1,000 so as to bring the cash on hand up to what it would have been had Mr. Lewis not taken all under his exhaustive contract. All this was told me subsequent to my having looked at the books last April. When I was given to understand that the jump to Jan. 12 in the 1889 statement of accounts covered the alleged introduction of the thousand dollars.

I had said when Mr. Peshall gave me the above story that it was all possible to be done, but that a glance at the bank book would settle the matter and that some day I would get an opportunity to look into it.

When I went to 44 Broadway with Dr. Perry I had that object in view as the pivotal point, but there was first of all some talk over the accounts. I asked Mr. Vredenburgh if he had not received \$500 when the books were balanced in June. He said no; that in May he had received two checks, one of \$200 and the other of \$300, which made up the \$500. "That was when you went to Europe?" "Oh, dear, no," was the answer. "I did not go away until September, but during the intervening three months I was not running the stud Book. That Mr. Lewis was doing, and he was drawing the same remuneration I had done, which was \$68.75 a month."

"When I was was on the two all and paid all from th

ing the same remuneration I had done, which was \$68.75 a month."

"Mr. Peshall says he took all and paid all from the time of the June balance until Dec. 5."

"I know he says so, but Mr. Terry and Mr. Lewis will tell you there was no such arrangement."

Then we got to the alleged \$1,000 deposit, and I stated what my information was. Mr. Vredenburzh began explaining and showing the various ledger accounts, including that of Mr. Lewis's salary, when I said: "It is possible to arrange these things, Mr. Vredenburg; you can settle it, however, very conclusively by showing your bank book." Looking at me with a peculiar Do you mean it? sort of look, he got up without a word, walked across the room and returned with the book. While he was doing so I said to Dr. Perry: "I do not say that Mr. Vredenburgh has faked his books in any way, but it is impossible to do that with the bank book, every figure of which is placed in it by other parties."

As soon as Mr. Vredenburgh turned with the book in his hand I knew Mr. Peshall's case was higher than Gilderoy's kite. This is what I picked out of the bank book to tell the story.

The first deposit made by Mr. Vredenburch after his re-

As soon as Mr. Vredenburgh turned with the book in his hand I knew Mr. Peshall's case was higher than Gilderoy's kite. This is what I picked out of the bank book to tell the story;

The first deposit made by Mr. Vredenburgh after his return from Europe was on Dec. 11, and consisted of \$294.50. The previous deposit was made on Sept. 5, the day Mr. Vredenburgh left, and the day book showed ad interim receipts of \$670. So that it will be seen that Mr. Lewis did not have an exhaustive contract, otherwise he would not have handed to Mr. Vredenburgh for deposit \$284.50. To go on with the bank book—Between Dec. 11 and Jan. 11 (the date of the A. K. C. statement for 1889 commencing) there were some six or seven deposits, and the last was on Jan. 3, between which and Jan. 21 no deposit was made. The total amount of those deposits from Dec. 11, and including Jan. 3, was \$807.40, in sums ranging from \$50 to \$200 odd.

Here then were all three of Mr. Peshall's main allegations, completely and conclusively contradicted.

First—Mr. Vredenburgh was not paid \$500 out of the June balance, but before that balance was struck.

Second—Mr. Lewis did not have an exhaustive contract, but turned over to Mr. Vredenburgh's absence.

Third—There was no deposit of either \$500 or \$1,000 or any such sum to the credit of the A. K. C. bank account at any period from Sept. 5, 1888, to Jan. 11, 1890.

I may say that as a further check upon the bank balance—this time as shown on the stub of the check book, because the bank book does not show daily balances, I cast a balance on the day book at an odd date. This was done in round figures, and I made it \$1,050. Then I asked Mr. Vredenburgh my thorough conviction that there was not one glimmer of truth in the suggestion that the books or the bank on that date, and it was within \$10 of the amount. There was nothing else for me to do but to express to Mr. Vredenburgh my thorough conviction that there was not one glimmer of truth in the suggestion that the books or the bank account had been tampered wi

truth in the suggestion that the books or the bank account had been tampered with in any way whatever as had been stated.

Editor Forest and Stream:

Again has the American Kennel Club manifested its unfortunate mania for degrading itself in the public's estimation in the "trial" or attempt to "try" Mr. Peshall. I purposely eschew all suppositions as to the motives leading the actors in this serio-comic drama, motives are among the things that "no fellow can find out," but did kennel history in America ever present so degrading a piece of ruthless arrogance and blind confidence that the public will be ever tolerant? Here is a notice served on Mr. Peshall dated June 27, requiring him to appear before his judges and accusers on July 2. He is accused of low dirty cheating, conspiring in fact, and for his defense he must produce certain other parties, how easily accessible I do not know. It is fair to presume that in the ordinary course, Mr. Peshall got this notice on Saturday June 28. Next day being Sunday, it must be counted out, he must appear on Wednesday morning, so he is given Saturday, Monday and Tuesday to stir round and get his witnesses in shape! There are many lawyers among dog men, Messrs, Smith, Wise and others, and I would ask them how such a hasty pudding as this would be regarded in our courts? One of the gentlemen I name is a member of the court that tries Mr. Peshall, I would ask him how he relishes donning the judicial ermine in such high-pressure proceedings? Then if there is one principle of law (is it law, or equity, or what?) that the lawmen most heartily believes in it is that no judge or jury may sit in judgment in a case wherein they are personally biassed. This is a fixed and recognized principle five hundred years old; yet here is Mr. Peshall required to appear before a court, a majority of whom have just voted that he is a persona ingrata to them! There is an old axiom as to the wisdom of seeing the devil and holding court below—would Mr. Peshall be any wiser in appearing this modern Ve

just. Hulton, Pa., July 2.

Editor Forest and Stream:
Mr. Peshall's letter in last week's issue of your paper seems to be devoted somewhat to me. Now I never for a moment expected to be drawn into this controversy; I hate these things, and would much rather be left out of them.

At a meeting of the American Kennel Club I was appointed one of a committee of three to audit the club's accounts. I did as requested, and did so conscientiously, but did not know that I was appointed for the purpose of gathering facts and figures for my friend, Mr. Peshall.

I was strongly of the impression, that with the dog public in general, that my signature to a statement to the effect that I had examined the accounts and tound them correct was sufficient. But it seems that with Mr. Peshall this was quite the opposite.

I am not a statistician, neither am I a walking vocabulary, "full of wise saws and modern instances," hence of the several score of pages that we examined of the A. K. C. accounts, I could not for the life of me carry in my mind what expenditures occurred between such and such a date, or to small fractions what the receipts were between one week and another, when Mr. Peshall asked me. I made never a note, as the expectations of my being cross-examined in my own office (or anywhere else) were foreign indeed to my mind. I found the books as they should have been, after a most careful examination, and thought that enough. I am a very busy man, as is well known among my friends, my office hours frequently being from nine in the morning till anywhere from seven to ten or eleven o'clock at night, so one can readily imagine that canine matters in general and dog rows in particular do not absorb my attention to any great degree.

When I was asked to examine the A. K. C. books I did so from a sense of duty, devoting considerable time (about two or three hours) of a busy afternoon to it, and as I observed before, did not expect to be called upon for data by anybody. Hence when Mr. Peshall called upon me so many times, buttonholing me in my office during business hours, and haranguing me by the half hour at the time, I have no doubt that I got up that stereotyped answer for him, "I don't know," which after all seems to have been what he was seeking.

I am entirely unbiased in the matter of his disput

know," which after all seems to be the seeking.

I am entirely unbiased in the matter of his dispute with the Kennel Club, and am more than sorry that things should be as they are, but still asseverate most emphatically that our committee did examine the accounts, and that said accounts were absolutely correct in every particular.

A. CLINTON WILMERDING.

KENNEL COOKERY.

KENNEL COOKERY.

BY HIBENNA.

The read "Kennel Fare," published in the FOREST AND Of course I take it for granted that the reader interested in the subject has purchased a farmer's boiler and the other utensils described in the former article, all of which are absolutely necessary in a kennel kitchen. Also that the bins are illied with bread, meal of different kinds, and such other foods as were recommended and could be procured easily to supply you with his waste near the stomen arranged with the subject of th

grains of rice will swell to twice their original size, so this must be taken into consideration. The boiled rice can be mixed with meat, and soup or milk gravy poured over it. When I have a sick or dainty-feeding dog I add some tripe cut into small bits, mix it into the boiled rice and pour some soup or milk gravy over the mixture. Nearly all the dogs I have kept are very fond of this diet. It is very nutritions, easily digested, and is one of the lest foods I know of for a dog recovering from distemper or any other wasting disease.

Outnead Mush. To give the best results oatmeal should be thoroughly cooked, at least two or three hours. The finer it is ground the sooner it will cook. Do not put too much water in the boiler—rather steam than boil it as it will be less likely to get "sticky." I can never get dogs to eat plain oatmeal satisfactorily. It "halls" in the roof of their mouths, and the dogs then stop eating, so I always use plenty of milk, ment, soup or some other food to mix with it.

Corn Meal Mush. Always buy the yellow corn meal, very finely ground, as the white kind usually contains a large percentage of the coh, with which light-colored meal is adulterated. Boil the meal for several hours, stirring it with a pole occasionally.

I do not advise using much corn meal except during cold weather, as at other seasons it is very apt to produce emptions on the skin.

Boiled Beans and Peas. These should be soaked over night before being put into the holler. A few hours' cooking will be sufficient. Both of these are exceedingly rich in introgenous elements, and should never be fed plain, but in a combination of other foods.

DOGS OF THE DAY.

I WAS very glad to see that the advisory committee declined to go into the merits of Vredenburgh, Secretary, vs. Peshall as to the charges respecting the accounts, also to note that the quite illegal and injurious resolution not to permit delegates to look into the books was rescinded. After my look into the accounts I said to Mr. Vredenburgh and Dr. Perry that I was decidedly of the opinion that the best course to pursue was to court and command the fullest investigation. I would even, I said, go the length of accepting any two delegates Mr. Peshall might select and with two named by the advisory committee allow the four to select another for chairman and let them settle the matter at once and for all time. Mr. Vredenburgh said that would be a reflection on the anditing committee, but nothing can be a reflection upon that committee that will show it did look into the accounts a little deeper than is generally imagined.

As to the charges against Mr. Peshall, I think that those who are pushing the matter will regret it. To be candid, it looks like vindictiveness—like trying to get even, and when prosecution merges into persecution the public won't stand it. I just know sufficient of the case to be aware that one can just touch bottom on the sands of truth, but you have to keep your toes stretched to their utmost to do that.

Before the Spaniel Club passes entirely from my mind it will be well to say what was done at the meeting held July 2. Every member of the committee was on hand—Messrs. Wilmerding, president; Whitehead, secretary; West, treasurer, and Kitchel and Watson, full privates. We approved the minutes of the previous meeting after deciding to stirke out the representation of Dr. Kitchel by proxy. While proxies are admissible at club meetings, we agreed that it was a bad precedent to allow it to be recorded at an executive committee meeting. The treasurer reported that he had \$189 31 on hand. After which we decided it would be well to enter into communication with the Spaniel Club of England with a view of having a joint committee appointed to secure uniformity of standards. After examining drawings of cups without arriving at any definite determination we adjourned. It was a very businesslike meeting well presided over.

we adjourned. It was a very businesslike meeting well presided over.

THE PUG SPECIAL AT CINCINNATI.—Babylon, July 5.—Editor Forest and Stream: In reply to Mr. Eberhart permit me to state that if as he says "the prize was in the judge's book—I saw him write it down to the Eberhart Kennels," all I can say is that I wrote it under the impression that I was awarding the special prize for the best kennel of four pugs owned by a resident of Uincinnati. I recollect Mr. Eberhart thanking me, saying, "Much obliged, Mr. Mortimer," which I took as a pleasantry, and replying in the same jocular strain, said, "Don't mention it, my boy," for I considered the prize a cast-iron-bound one on which he, as the only exhibitor from Cincinnati, had the tightest kind of a cinch. I hadn't the remotest idea that I was awarding an open special, neither did I know such a prize had been off-red by the Cincinnati Club. Mr. Eberhart, who very kindly acted as my ring steward, will bear me out when I say that neither his nor Dr. Cryer's pugs were brought into the ring to be judged for any special prize. For any act of negligence or carelessness on my part I offer a sincere apology to Messrs. Cryer, Eberbart and the Cincinnati bench show committee individually and collectively, but I mest positively deny that I wittingly awarded the open special prize for the best kennel of pugs to the Eberhart Kennel or to any other kennel.—Jas. Mortimer.

SPANIELS POISONED.—Britton, S. D., July 1.—Editor Forest and Stream: I sadiv take my pen to write you of the loss of a most promising spaniel puppy and, worse than all, of his grandsire, Prince. After having spent a useful lite of eight years—and no duck hunter need want a more faithful or tireless retriever—he and the puppy were poisoned by meat thrown out by a neighbor who wished to get rid of a miserable cat. The neighbor is a dear friend or he should be made to smart for his criminal carelessness. Knowing I shall have the sympathy of every duck hunting reader of your unequaled paper, I am, very truly—RIX.

INDIANA FIELD TRIALS PUPPY STAKE.— Indianapoits, Ind., July 5.—Editor Forest and Streum; At the earnest request of many of its patrons, the Indiana Kennel Club has decided to give a Puppy Stake, for dogs born on or after Oct. 1, 1889. This stake will begin Thursday, Oct. 30. The purse will be the entrance money less the expenses. Forleit \$5, with \$10 additional to start. Divided 50 per cent. to first. 30 per cent to second, and 20 per cent. to third. Entries will close Aug. 1. Entry blanks are now ready.—P. T. MADISON, Sec⁵y.

A LARGE LITTER.—Mr. J. R. Dennis's spaniel bitch Dolly whelped on June 26 a remarkably line lit.er of thirteen dogs and two bitches, by Mr A. C. Wilmerding's champion Doc This is the largest litter of spaniels that we have any record of, and we are sorry to learn that all of them have since died.

MRS. J. M. NICHOLSON, the proprietor of the Mount Sion Kennels, sails for England this week, to visit some of the principal St. Bernard Kennels there. The rough-coated bitch Juno will be taken to be bred to Sir Bedivere.

DOGS.—NALDIRES medicated SOAP for washing dogs, destroys all irritating insects, removes $\deg_2 y$ smell and leaves the animal refreshed and happy. This prize medal soap, used by all the leading owners in Europe, is now sold by Park & Thifrond, McKesson & Robbins, E. Fougera and all Druggists.—Adv,

Notes must be sent on prepared blanks, which are fur-uished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

OUR RIFLEMEN IN GERMANY.

OUR RIFLEMEN IN GERMANY.

July 3.—At 12:30 this afternoon the New York Shootpros. Capt. George Wehrenberg, the New York Central
forps, Capt. George Siehurg, and the New York City
forps, Capt. John E. Nyers entered Krolls Garten, with
nuers flying, and bands playing martial airs. Accomethree corps were marksmen from verious pairs of
States. At 1:25 the members of the Independen New
thing Corps arrived on the ground. When all the visitn had been formed into one body. City Conneil
formally welcomed them on bebalf of the Municipal
Berlin.

rmany welcomed them in recont of the maintenancial onling then addressed the visitors, dwelling upon pexisting by tween Germany and the United States, i. he called for cheers for the two countries. Head her next we knowed the rifemen on bet all of the festive, and when b had concluded his remarks the visite, and when b had concluded his remarks the visite, and when b had concluded his remarks the visite, and when b had concluded his remarks the visite, and when b had concluded his remarks the visite, and when b had concluded his remarks the visite, and when b had concluded his remarks the visite for the remarks of the constitution of the occasion, and the usands of spectators to sa hearty welcome.

Hall. The innovation of the operators of the occasion, and the use of spectators bearty welcome. It he Town Hall the standard bearer of the party to the reception room, where he was followed of riflemen. Here Chief Burgomasier Forekag to receive the visitors. In welcoming them own Herr Forekenbeck referred to the exertions riceus to attend the rifle competition, and exhaut the fest twell would terminate happily. It is the ties when oin 1 America and G-rnany, he said, are united in their efforts to ma niain at 1 that active intercourse between the two peop further for the promotion of joilization, the concertions would carry away friendly recollect.

risit.

For replied at some length thanking the municipal their reception and dwilling upon the intimate rman-Americans with their mother constry. He sing cheers for Burgomaster Forckenbeck. The the Americans were deposited in the Town Hall, I remain during the festival.

4.—The Independent New York Schuetzen Corps on the baleony of the Kaisenhof Hotel this morner thegan at 9 o'clock and lasted two hours. The ted by the band of the Second Regiment of Guards, for the American colony were present. The proed "Hall Columbia," "Die Wacht am Rhein" and gerekranz."

cans returned the compliment to the verman measure vanitions. The dinner was a sumptions one and was served in the best style.

The spreches were short, bright and to the point. The dreeses of the ladies were much admired, and the manly appearance of the American riflemen won many compliments. At the head of the Chief the dreemen were many compliments, the the head of the center table sat Minister Puelps; next to him were ex-Compirally form of the contertable sat Minister Puelps; next to him were ex-Compirally form of the greatest state of the prediction of Secretary Blaine. Around these were grouped the Chief Burromaster of Berlin, Herr von Forckenbeck; Ernst von Wildenbruch, the Imperial Secretary of Legation and one of the greatest dramstir authors of Germany; Ernst Wichert, Hans von Hopfen, Julius Rodenberg and Puul Lindau, the brightest lights of the German literary world, Dr. Miquel, the new Prussian Minister of Finance; Dr. Stryck, the President of the Board of Aldermen, Berlin. Many other functionaries of state were present to do honor to the great Republic. The genial faces of Capits, Georie Sieburg, Gus Zummerman, J. J. Diebl, Geo. H. Webrinberg and John E. Meyer were also seen to advantage of "The day we celebrate and the President of the Emperor of Germany; we his guests; and now advantage the Emperor of Germany; we his guests; and now advantage the Fourth of July and the President of the United States, and across the sens send greetings. May peace and happiness fill the souls to-day of the seventy millions of freemen who are now celebrating the bright of the United States, and across the sens send greetings. May peace and happiness fill the souls to-day of the seventy millions of freemen who are now celebrating the bright of a nation whose sky is not darkened to-day by a single

NEW YORK STATE CONVENTION.

NEW YORK STATE CONVENTION.

POCHESTER, June 25, 1890—Editor Forest and Stream: Referring to the account of State Convention at Loons I desire to covered myself. I certainly did not mean to say that the foreign myself. I certainly did not mean to say that the food have specified since inanimate targets have been need! Convention and the again. The old have specified since inanimate targets have been need! Convention and the again and the again the old heads fight those battles ever time and time again. The old song, "When we went to Conventional" was always and probably always will be a favorite starting point for hose observing of the same and time again. The old song, "When we went to Conventional" was always and probably always will be a favorite starting point for hose observing standing before a trap with a wild bird in the again. Standing before a trap with a wild bird in the can't say bow it feels, but I do say a person must be dreadfully artial to live bird shooting if he can't get a little pleasure out of inanimate targets. Now, I wish to speak a few words about this same State shoot, and I refer to the only live bird shoot on its programme—the Richmond Tropby. I did offer a resolution looking to a cuance in these rules for this reason. In the first place, a cuance in these rules for this reason. In the first place, and who is such as a choked gun was not known, 21vds, the rice, plunge tran, 80yds, boundary, etc. Now, the charge of the present gun at 21vds, will all be placed inside a very small cile. Ind what is at 21vds, will all be placed inside a very small cile. The whole will contribute the old by one of the resonant than "because." This matter came up in our discussion, also the will clim to old by one ways when they can give a contained which the triphy should be contested for, and the contained when the place in into the association in the following manner.

Mr. Henry Richmond was at the time of its president. The cup which was cusually the Dean Richmond, faber of Mr. Henry Richmond, its presid

under a misapprehension I withdrew, was in reality that which should have prevailed, and was as near as I can remember as I can remember as I can remember as Resolved. That Mr. Sare, secretary of the convention, see Mr. Henry Richmond (the actual donor of this magnificent trophy) and express to him the sense of this convention, that the rules governing this shoot should be charged and that the association desires to contest for the cno hereafter under the American Association rules for live bird shooting, and that the entrance be reduced to \$15 instead of \$30 per team as heretofore; all other conditions as before.

I withdrew this resolution while under the impression, from what was send at that time, that Mr. Richmond had no right to dictate in the metter! Since that time I have changed my mind for the reasons are these: first, when this cup was presented to the Association no doubt the generous donor intended it to be the great feature of the week's shooting, and surely it ought to be; now the most (since I bav. been shooting, in surely it ought to be; now the most (since I bav. been shooting, it has ever entered to contest for it was at Albany where six or seven clibs entered, at Anourn it quite as many, at Rochester three, at Syracuse last time three or four clubs, at Lvons four. All this is wrong and most unjust to Mr. Richmond, who so generously claced this great trop by in the hands of this association. This contest should take up a whole day, and be a thing to be talked about, and should be contested for under such conditions that other clubs could and would unite.

New York is never seen atour Association, or at least I have never heard a delegation from the metropolis mentioned since I have been shooting, and in pely to inquiry I trave been told bat the do not like the rules for live-bird shooting and would not shoot under them. Right here allow me to correct myself. A Mr. Lyon from New York I have mee each year, and a most amiable and genial spot issum he is, and may his white hair and his knully cou

OAK POINT, July 4.—The Bronx Gun Club, of the Twenty-fourth Assembly district, New York city, celebrated the Fourth at Oak Point. The first contest was for a sweepstakes of \$25, six birds each. Four baving tied, they divided the stakes. The second contest was between two teams of six each. It was won by the team headed by E. Miller, score 48 birds to their opponents' 46. A dinner stake match followed between Thomas Jaques and M. Brindenhack, best out of twenty-five shots, Jaques scoring 22 and Brindenback 18.

SLATER GUN CLUB.—Slater, Mo., July 4.—Second annual tournament, Peorla blackbirds, 3 traps, ties divided unless otherwise stated. Match at 6 singles

HIGHLAND GUN CLUB.

DES MOINES, Ia., July 4 Shoot of the Highland Gun Club of this city. All purses were divided into three equal
of this city. All purses were divided into three equa-
moneys, and this again divided into 60 and 40 per cent., making
in all six purses in each match, the intention being to give all
shooters an equal show. The day was as fine as one could wish
and the attendance large.

CLAREMONT SHOOTING ASSOCIATION.—New York, July 5.

—A very pleasant company gathered on these grounds July 4 and 5. The programme included live birds and targets. The birds were a fine lot for this time of year, and fully illustrated the fact that luck is a deciding factor in pigeon shooting. The best of feeling prevailed and all had a good time. Below are the scores.

THE ONONDAGAS WILL CELEBRATE.—Syracuse, N. Y.,
July 7.—The Onondaga County Sportsmen's Club of Syracuse,
N. Y., have just completed their elegant new club house and
grounds at Maple Bay on the shores of Onondaga Lake; and in
honor of this event will give a three-days 'shoot on August 8. 7 and
8, open to all. The new house is unquestionably the finest owned
by any gun club in this country. It is two stories high with broad
piazzas from both floors overlooking the traps. The upper one is
intended for visiting lady guests and is furnished with all toilet
conveniences. The grounds are high and laid out in a pleasing
manner, the background being an excellent one for shooting purposes. Advices received from sportsmen all over the State, indicate that we shall have a large attendance and pleasant time.

—Chas. H. Mowry,

RED HOOK, N. Y., July 4.—Tournament of the lted Hook Gun Club. The morning gave every indication of the Fourth of July thunder storm, with a probability that it would continue for some time when it did come. Most of the shooters from a distance who were expected to attend failed to put in an appearance, probably on account of the threatening weather. The traps were screwed up to throw the bluerocks to the furthest point possible. The elevation was as low as the rules permit. Shooting by the indicator (unknown angles) the conditions were the most difficult it was possible to make them. A good part of the time the black clouds made the light very bad. The scores, therefore, are better than the figures indicate. Shooting at doubles was new to early all; no member of the local club had shot at more than ten pairs

the state of the s
in the year. Following are the scores:

WASHINGTON HEIGHTS VS. JEANETTE, July 1.—The live-bird match between the Washington Heights Gun Club and the Jeanette Club of this city came off to-day on the former organi-zation's grounds on the Hudson, near 170th street. The home club added another to its list of victories, defeating the Jeanette men, or "the German shooters," as they were called, by only 3 birds. The match itself was entirely friendly, simply for the honor of gaining the victory, while the losers had the honor of paying the incidental expenses:

THE SPRING HILL GUN CLUB, of Blauveltville, N. Y., held a holiday shoot July 4. The averages made were good. Geo. Pierson won first medal with straight score of 10. Jas. Bogert won silver medal with 9. Some live birds were on hand and were shot but were a poor let. Among the visiting sbooters were Messrs, Moeller and Lydecker of Nyack. Altogether the day was an enjoyable one.—AD VANCE.

CLEVELAND. July 4.—The tenth annual tournament of the Cleveland Gun Club occurred to-day on the grounds near Blue Rock Springs. The \$350 in prives offered by the club was a sufficient inducement to bring out all the good shoots in northern ohio and as a natural consequence some very creditable scores were made. Eugene Benscotten, the Huron crack shot, fresh from his victories at Chicago and Dayton, was on hand, and though a trifle unsteady at the beginning, got down to business later on and took away more than his share of the pinms. The day was not a favorable one for fine shooting, the wind and the scurrying clouds being the cause of many a miss. The first shoot was at twelve single binerocks, entrance fee \$1.25. The score was formers of the contract of

THE A. C. A. MEET.

CAMP CIRCULAR.

New York, June 25.

To the Members of the American Canoe Association:

Since the executive committee meeting, Nov. 23 1889, at which the camp-site committee were authorized to procure the use of Jesury's Neck for the A. C. A. meet, the work of the committee has been seriously complicated by a long and vexatious course of negotiations among the owners, involving a sale of a part of the property. These negotiations have been closed to-day satisfactorily to our interests, and a lease of the whole property for a nominal consideration to Commodore Stanton for the month of August has been duly executed.

gressed satisfactorily, in accordance with recommondations of this committee in their report.

The Association is most fortunate in obtaining this site, the natural advantages of which are unsurpassed.
Wealtby New Yorkers are beginning to appreciate the heauty and healthfulness of eastorn Long Island, and splendid country seats are numerous in this vicinity. Shelter Island has long been a favorite watering place and its beautiful harbors during the summer are bright with well appointed yachts.

nd its beautiful harbors during the lappointed yachts, te enough to be out of the way of this near enough to be of easy access from hrook, or adjacent points. No buman s native beauty, and the distant white occasional villas on the further shores rimeval land-cape.

millar with this locality, thrin to any adjacent points are strongly did you will notice that the eastern end the opening jaws of a huge saurian, Island is grasped like a large and palth of it are channels large enough to mitty small and crooked to break the cut out the storms and swells of the shand and between the jaws of Long full Peconic Bay, some fifteen miles a land pennisula. In this bay the tide agters for an A.C. A meet was noted.

mmon to ocean beaches, but without dirt or wreckage. The

clear as crystal.

yy the steamhoat trip through the Sound, see the we
at Shelter Island, and gaze upon and bathe in the o

solo, who desire to "camp out" and do their own cooking will shed with all necessities at modorate prices, at the camp hich will he under entirely different management from

cters, on venience of amatenr photographers a photographic with necessary accessories, will be set up, and different dry-plates, etc, obtained at cost. The different dealers outfly will be allowed space and opportunity to snpply fittings.

Particular pains will be taken to have perfect sanitary arrangements.

Transportation.—This matter will he fully set forth in a circular of the transportation committee accompanying this notice to each member of the adjacent divisions. It is sufficient here to note that members of the Eastern Division should come via New London, and those of the Atlantic, Central and Northern divisions by Albany and Now York. They should arrange to send their cances, tet., in time to catch the special A. C. A. steamer from New York. Notice of Intention to Go to the Mect.—If you expect to he present at all or any part of the meet, you will confer a favor by informing the committee at your earliest convenience of your intention to be present, of the length of time you will prohably remain, whether you will occupy a cance tent or a shore tent, whether you will board at the Association mess or camp out, and whether you intend to order a tent, tent floor or "skid." Any other information will be gladly given by the committee.

DELAWARE RIVER MEET, JULY 4-7.

DELAWARE RIVER MEET, JULY 4-7.

THE Delaware River canoe meet at Delanco, under the auspices of the Red Dragen C. C. was one of the pleasantest flairs of the kind ever held on these waters; the only drawback eing the very light and variable winds that made flukes of the salting races in which much interest had been centred as the first est of the new boats; but no idea could be gained of their respective mertis under existing circumstances.

The clubs represented were the Mersey C. C., England, by Mr. eder, Camden Docker Clinb by Com. Dressler and Mr. Carter, and the Red Dragon C. C.

The Dragons came ont strong in numbers, both men and boats. The new cances present were Oscoola and May Fly, Ah-deek nodels the former fitted for racing, and the latter fir cruising, this board well f rward. No comparison of speed could be had nder the existing circum-tances. Valesca, a class four paddler ith folding centerboard, Enid ar Island Nympb model. These boars all being designed and built by the Clavton firm. irloe, a handsome 16×30 cruiser, designed by a club member, unit by James Nignall. Two smateur-built canoes present, uckoo and Coquette, were very creditable attempts, the former specially being a very fine smooth-skin resembling the Fly and in plenty of go.

The events contested were unlimited sailing, started at 5:01, ally 4, over a triangular course, about 3½ miles. Times:

LARCHMONT Y. C., JULY 4.

THE eleventh annual regatta of the Larchmont Y. C. was saile on Thursday, being fairly successful in spite of very unfavorable weather, as the entries were good and the yachts well matched in all of the classes, save that Minerva was obliged to assume bandicap, in order to race with the others of her class, a matter of small importance to her, as it proved. The entries and classe were as follows:

The winners were: First class: Columbia first prize, Aleck second prize. Second class: Sans Souci first prize, So So second prize. The regatia committee included Messrs, George W. Hall, Ezra S. Connor, Thomas L. Scovill, Wm. S. Alley and J. Howland Wainwright, who were on board of Mr. J. P. Kennedy's steam yacht Viola. A fast naphtha launch from the Gas Engine & Power Co.'s works carried the reporters over the course. The sailing regatia took place on Monday. It has since been announced that the launch Accident is the winner, in place of Columbia.

The regatta of Monday was sailed under the measurement rules and allowances of the Larchmont Y. C., but with the following classes:

Cabin yachts, class A, schooners measuring over 75ft.; class B, under 75ft.; class 1, sloops, cutters and yawle measuring over 80ft.; class 2, do., 80ft, and over 45ft.; class 3, 45ft, and over 35ft.; class 4, do., 35ft, and under; Open yachts, class 5, ib and mainsail yachts measuring over 23ft.; class 8, do., 23ft, and under; class 7, mainsail yachts measuring over 23ft.; class 8, do., 23ft, and over 20ft.; class 9, do., 20ft.

The courses were:

For all cabin yachts, from Milton Point around a stake hoat anchored off Hempstead Harbor, passing same on port; thence around stake boat anchored one-half mile S.W. 34 S. of Captain Island Lighthouse, passing same on one-tit thence around stake boat anchored in Hempstead Harbor, passing same on starboard; thence across flishing line at Milton Point. Distance about 20 nautical miles.

For all open yachts, from Milton Point around stake boat anchored in Hempstead Harbor, passing the same on port; thence around the Black Buoy off Matinnicock Point, passing same on port; thence around the Black Buoy off Matinnicock Point, passing same on port; thence around the Black Buoy off Matinnicock Point, passing same on port; thence around the Black Buoy off Matinnicock Point, passing same on port; thence around the Black Buoy off Matinnicock Point, passing same on port; thence around the Black Buoy off Matinnicock Point, passing same on port; thence around the Black Buoy off Matinnicock Point, passing same on port; thence and passing same on passing same on passing same on passing same on pas

TTV: 0 . 1	The state of the s	

The first leg of three miles was to windward, a long and short hitch, the order at the mark being Gevilla, Azalea, Kathleen, Volusia, Aura, Pearl, Lakshmi, Giggle, Rival, Dot, Zelica, Next, Zelda and Monde, Kathleen had made up her start on Velusia, and turned with her, but so close that Kathleen's gaff fouled Volusia's topmast stay, the topmast going at the cap. Kathleen continued the race, but was finally ruled out. Volusia cleared away the wreck and put an Irish reef in her spinaker, completing the course, Gevalla dropped ber spinaker boom on the wrong side, and before Gevalla dropped ber spinaker boom on the wrong side, and before it could be shifted and the sail set Azalea, with Mr. E. A. Willard at the wheel, had passed ber. Gevalla repassed Azalea on this cun, the other blanketed her, and when on the wind after Captain's Island mark was turn Azalea gained some 5m., increasing it on the last leg. Lukshmi was delayed by an accident to her throat balliards. The full times were:

Ratbleen heats Sasqua on corrected time and all the rest of the class by a large margin on elapsed time. Sasqua is a fast Ellsworth sloop that bas never done much racing, the rest are well known. Kangaroo another Ellsworth boat, who is in her class. Muette wins in her class; Edna beat Boston boat Coyote; Rosetta A. whis in her class; Edna beat Bijou; and Marion wins in her class, and Pbyllis in hers. The judges were Goy. Leon Abbett, of New Jersey, J. W. Gibson and Howard D. Bean, in Goy. Abbett's launch, New Jersey. The regata committee included Messrs. E. T. Smythe, A. L. Embury, B. W. Dinsmore.

ST. LAWRENCE Y. C., JUNE 28.

The opening race for a challenge cup, to be raced for by the 28ft. and over class of the St. Lawrence Y. C., presented to the club by Mr. Charles H. Levin, was sailed over the regular club course at Pointe Claire, on June 28. The starting run was fired at 450 and the boats crossed the line in the following orders: Chaperon, E. S. Choustan; Lulu, A. Irving; Black Eagle, C. H. Levin; Yiking, I. L. Smith.

Chaperon carried a big club topsail and jib topsail, the rest club topsails over lower canvas. It was a long and a short leg to the east buoy, and Lulu passed Chaperon and took first place before the sun of the country of the southwest buoy, and Lulu kept her lead with her big balloon, doing well. Chaperon set a owsprit spiraker and up to the buoy kept her lead on Black Eagle. In rounding the buoy Chaperon lost her advantage, and the reach to the north buoy inder balloon jibs did not alter the position of the boats, Lulu landing, Black Eagle second, and Chaperon third. Lulu and Chaperon held on down the center of the lake hunting for the made of the country of the southwest balled her to weather out on her antagonists, and went around the east buoy, and sonared away for home with a lead. The times are as follows:

THIS race was sailed on Friday in a good wholesail sonth-wester.

In first class Mattie had a walk-over.

In second class the new Anonyma, just finished by Dunn, sailed her maiden sail and did well. Her owner being a new hand at racing haudicapped her two minutes at start, and her sail set badly, foreing her to carry a racing reef.

In third class Puzzle, Elna and Cayuse fought it out again, this time Puzzle, who has largest sail of the lot, rushing off with the lead and holding it all through. Elna has not enough masthead and could not hold her gaff in place with a whole sail. She started with a reef, but shook it out at end of first round. Daisy carried a single reef, but seemed to be outclassed by the others. Ada parted throat halvard and withdrew.

In fourth class Rip gained steadily to windward, but carried a reef she did not need, and lost a little running. At the end of the first round she led by eight seconds; going to windward in second round she increased this lead till the race seemed surely hers; but at windward work she tried to shake out the reef and made an awful mess of the operation, tearing sail and nearly capszing the boat. During this operation Eduth passed her and won the race. Courses same as on June 17; 11 miles for larger classes; 8 for third and 6½ for fourth.

160TH REGATTA. OPEN SWEEPSTAKES, THIRD CLASS.

This race was sailed at Marbiehead on Saturday. The boats got off in a very light S. westerly air and worked slowly out to Cat Island, Edith drifting ahead. From here to Gooseberry Ledge there was a succession of dead calms and light fluxes from all round the compass, Edith rounding nearly 20 minutes ahead. From here on they should have had a run to Bowditch and a beat nome. Wanda and Lassie closed up on Edith and almost caught her; but wund came our ahead and gave them a heat to Bowditch and a run home, the leaders of course getting the be-tof it. Summary as follows, Lassie's measurement being only guesswork, as she has not been officially measured, but it is near enough to fix her place in the race:

Winners, Edith first, Wanda second.		

Winners, Laten Irst, Wanda Second.

The felst regatta, second open sweepstakes, open to all boats not over 30ft, waterline, will be sailed off Monument Beach on July 12, at 1 P. M.

FOR SALE-THE BRENTON'S REEF CUP.

WE commend to the notice of American yachismen the following advertisement from the London Field of June 21:
"Genesta.—For sale, this famous racing cutter of 80 tons, in perfect order, and holder of the Brenton Reef Challenge Cup, which goes with her. Price and particulars of — and —."
Here is a fine opportunity for some particle American gentleman to buy a fine challenge cup at a bargain, along with the anchors, chains, furniture and equipment of a first-class racing cutter. Such an opportunity may not soon occur again.

PLYMOUTH REGATTA.—The second annual regatta of the Plymouth Y.C. was sailed over a triangular course in a good breeze, the times being:

entier in figur or neary whites, and more that fullning the expectations of her designer.—Field, June 21.

NEW YORK Y. C. CRUISE.—According to General Order No. 2 just issued by Fleet Captain Stephen Peabody, of the New York Yacht Club, members are insurated that the vessels of the squadron will rendezvous at New London, of the Pequot House, on Wednesday, July 30. Captains will report aboard the flagship on the same evening at nine velock. The race for the cups presented by Captain Goelet, will take place at Newport, date to be decided at the meeting of captains. During the cruise the Owl and the Game Cock colors will be raced for by the four oared gigs and double sculcutters and dinghies belonging to the yachts of the squadron and the owners will be subject to challenge at any time on one day's notice. There will also be a race for the steam and naphtha launches belonging to the squadron, the time, the conditions and prizes for which will be her after announced by the Commodore. There will be special cups given for competition, dates of which will be announced by the Commodore. It is not unlikely that the cruise may be extended to Marblehead, as the New York Y. C, has not been around Cape Cod since 1887.

sland. DAUNTLESS Y. C. OFFICERS, 1890.—Com., John Flaherty; ice-Com., John Clark; Sec'y, Frank Van Winkle; Treas , W. ordner; Sergt.-at-Arms, F. Heins; Cor.-Sec'y, E. Peine; Meas., L. Jones.

Frost.

AMERICAN VS. ENGLISH DUCK.—Wilson & Silsby have used up 22 000yds, of 14-inch duck this season, hesides what silk and cotton they have put into light sails. They have sent for some English duck and proose to try it. The English duck appears to 7nn mee ear than the American make.—Boston Globe. A recent request for samples from a leading English irm, made by a New York rothsman, brought a very polite reply to the effect that as the American fariff on sail duck was practically prohibitory, there was no market for it here, and it would be of no use to send samples.

difficult task to capture the intermediate one. Mr. Will Fife, Jr. proposes to visit America very shortly to see how his boats sail here. The starters in the E. Y. C. reparts to to-day will include Sea Fox, Merlin and Mayslower; and Chone and Quickstep, all schooners. The singlestickers will be Mileente, Thelma, Alga, Bayadere, Fanita, and probably the new 2tt. Fife outer Uvira, in the 48fl. class. The forties will he two thirdes, Shark and Hawk, are likely to go up and enter the 35tt. class, with the new Ellsworth boat Tigress.

UNITED STATES AND CANADIAN YACHT CLUBS.—We have received from the R. S. Howe Publishing Co., 45 Broadway, N. Y., a copy of the new list of United States and Canadian yacht clubs, a neatly made volume containing a complete list of clubs, officers and members, and illustrated by the flags of the various clubs and by pictures of some of the leading yachts. It will he found useful hy all yachtsmen.

TOMAHAWK.—Mr. Morgan has lately sold his steel cutter Tomahawk to Com. B. W. Crowninshield, Corinthian Y. C. of Marhlehead, who will race her in the 40ft, class. Tomahawk can readily be made a better boat than her racing record thus far would indicate, and it is a satisfaction to know that she has fallen into good hands. She went to Boston last week, and will sail in the Eastern Y. C. regatta to-day.

AZTEC.—On July 1 the sleam yacht Aztec, built for Mr. D. A. Loring, of New York, was launched from the yard of Seabury & Co., Nyaek. She is a wooden vacht 73ft. over all, 1lft. 6in. heam and 3ft. 6in. draft, with triple expansion engines of 160 H. P., and a Seabury watertube boiler. She is elaborately finished and furnished helow, the cahins heing lighted by electric lights.

HULLY C. FIXTURES.—At a recont meeting of the regatta of form July 9 and August 20 to August 9 and 11. The reason is the absence of boats eruising, and the Eastern annual regatta of July 10.

absence of boats eruising, and the Eastern annual regatta of Joly 10.

OYSTER BAY Y. C. ANNUAL, July 4.—The annual regatta of the Oyster Bay Y. C. on July 4 was partly sailed and partly drifted over an 8-mile course. The winner in Cless 1 was Mirth, J. W. Beckman, with Indolent, Col. S. V. R. Cruger, second. Nadjy, Mr. A. P. Montant, won in Class 2, with Marion, formerly the Brooklyn, in Class 3.

RULED OUT.—The Boston Herald has decided that Mr. Burgess is a professional yacht sailor, and that as such he may not steer a yacht in Corinthian races. This is not only very hard on Mr. Burgess, but on designers McVey, Gardner and Smith, who will no longer he sllowed to sail their own yachts in races under the Herald's management.

VOLUNTEER —Gen. Psine's yacht has been hauled out at Lawley's for repairs to the cement. It is reported that where the cement was laid on with a trowel it is still firm, but where it was painted on it scales off wherever there is any moisture on the steel.

NEWARK Y. C. ANNUAL REGATTA.—The eighth annual regatta of the Newark Y. C. will be sailed on August 16 over the regular 10-mile course on Newark Bay, starting opposite the handsome new clubhouse. The race will be under the rules of the N. Y. Y. R. A.

the N. Y. Y. R. A.

SEAWANHAKA C. Y. C. CRUISE.—The fleet of the Seawanhaka C. Y. C. spent June 29 at ancuor in Newport Harbor, sailing on Monday morning at 10 o'clock for New Bedford, and arriving ahont 2:39 P. M. On Tuesday the fleet sailed to Edgartown.

SEWAREN Y. C.—The first race of this club was sailed on July 4 over a 10-mile triangular course on Staten Island Sound. The race was started in the morning but failed for lack of wind. In the afternoon a new start was made, Nanket, Mr. Thos, Hawkins, winning.

MASSACHUSETTS Y. C.—The regatta of July 9 has been postponed to July II, thus allowing the yachts that were hauled out in
preparation for the E. Y. C. regatta of Thursday to enter.

BRIDGEPORT CITIZENS' CUP, JULY 4.—A race was sailed
on July 4. at Bridgeport, Conn., for the Citizens' cup, Quaker
City, Mr. Hitcheock, witning the cup for the second time.

ELECTRA, steam yacht, Com. Eldridge T. Gerry, New York Y.
C., is at Tebo's for new crown sheets to her boilers and to prepare
for the coming New York cruise.

(AANNET—This handy little yawl, that was described at some
length in "Small Yachts," by Mr. C. P. Kunbardt, is offered for
sale on another page.

W. S., Brooklyn.—Use a 12-gauge of 7½lbs. weight. If a beginer have modified choke.

powder, no bad results will follow. The only objection is that the variation in the burning of the powder, as it is more or less compacted, may cause irregularity in the elevations of the buillets when fired.

T. H., Washington, D. C.—Will you kindly let me know, either through your valuable paper or by letter, whether I am likely to have any fishing or shooting at Lake George, N. Y., during the month of October. Ans. Lake George contains at least four kinds of game fishes, lake trout, pickerel (which are wall-eyed pike, Susquehanna salmon, etc., etc.), black bass and yellow perch. The lake trout are protected in October. It is said that the trout, in 1889, had become almost extinct owing to the ravaces of the pickerel. \$60,000 fry of the lake trout were deposited in Lake George in the spring of 1889, and pickerel are not so plential. For accounts of black bass in this lake see FOREST AND STREAM, Vol. XXXI., pages M7 and 413.

J. L. B., Elberon, N. J.—I see in the "World Almanac" casting records. The expression is used in reference to striped bass easting—"light" and "heavy." Will you kindly inform me what is meant by the expression, and if it has any reference to the blat is meant by the expression, and if it has any reference to the six at the contest read thus: "Rule 16. Heavy Bass Casting—"load shall not exceed 9ft. in length and may be used with both hands. Alured may be used, but the line shall be of linen not of ass calibrated may be used, but the line shall be of linen not of measured, added and divided by five, and the result shall constitute his scoring testant will be allowed five casts. His casts shall be make from the red with both hands. Alured may be used, but the line shall be of linen not of linen not of sincers in his measured, added and divided by five, and the result shall constitute his scoring or ureaking of his line, but the line may be doubted near the staken. The casts shall be made to any contestant, frach contestant, and any line of uniform caliber may he used."

WILD INDIAN IIIPD.

PAWNEE

HERO STORIES AND FOLK-TALES.

With Notes on the Origin, Customs and Character of the Pawnee People.

By GEORGE BIRD GRINNELL ("YO.")

Cloth, 417 pages.

Illustrated.

Price \$2.00.

Pawnee customs and beliefs are richly illustrated by the folk-tales, and in the copious notes Mr. Grinnell gives an uncommonly spirited account of Pawnee life in peace and in war. There is an account of the defense of a Pawnee village by 200 sick men, cripples, old men and squaws, against 600 Sioux warriors, which for sheer gallantry and indomitable pluck will match almost anything in military history. The Pawnee warriors were all a way at the time, and the Sioux counted upon an easy victory. But the Pawnee cripples and women actually beat them off after a hard day's fighting, and at last so terrorized them that the bold assailants fled in panic and sustained a heavy loss. Mr. Grinnell also has written a picturesque and vivacious sketch of one of the last Pawnee buffalo hunts, in which the Indians commonly reverted to primitive weapons and usagres, often hunting quite naked with no other arms than their tows and arrows. A particularly interesting part of the book is that which treats of the Pawnee doctors or medicine men. The statements of Mr. Grinnell show the possession by some of these men of a kind of skiil ir sleight-of-hand far beyond that usually attributed to Indians; some of the facts here described are as puzzling and unaccountrable as those performed by the famous jugglers and fakirs of Hindostan, while one of their tricks is a close parellel to the East Indian mango reat. . Those who desire to learn of the many other wonders done by the Indian doctors must refer to its pages for themselves. As it is certainly one of the best works on Indian life, legend and character that has been written for a long time, it should obtain a wide circulation.—N. Y. Tribune.

FOREST AND STREAM PUB. Co., 318 Broadway, N. Y. LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

BIRD PORTRAUTS

Some Native Birds for Little Folks. BY W. VAN FLEET, M.D.

A handsome imperial octavo volume of untechnical descriptions of the lives and ways of fourteen American birds. The list comprises:

Robin, Chickadee, Kingfisher, Great Horned Owl, Bebolink, Blue-iay, Woodcock, Nuthatches, Meadowlark, Ruffed Grouse, Cedar Bird, Kildeer, Summer Duck and Crossbills.

Each of chese birds is beautifully illustrated by the photogravure process from drawings by Howard H. Darnell. The paper is substantial, and the 147 pages of large, clear, handsome type contain just the sort of information necessary to make little folks better acquainted with the birds described, and to awaken a taste for extended study. Everything has been done to make the volume one of the most handsome gift books of the year. Price, postpaid, \$3,00. FOREST AND STREAM PUBLISHING CO. 318 Broadway, New York.

The Black Bass and Its Allies.

THE third fishing supplement offered to its readers by FOREST AND STREAM will be published next week, and will be devoted to one of the most popular and widely known families of fresh-water fishes-the black bass family. The illustrations will show the two basses, the blue sunfish, the long-eared sunfish, the warmouth perch, rock bass, Sacramento perch, calico bass, and crappie, besides the stone catfish and the river crayfishtwo of the most important baits for black bass. The young black bass and the stone catfish will here be figured, we believe, for the first time.

Dr. James A. Henshall, the great authority on the black bass, and now Secretary of the Ohio Fish Commission, has again contributed timely and valuable notes on angling for the various species for this number. He has written also a paper on the "Bass and Bass Islands of Lake Erie." "Kingfisher," will recount "Some Personal Recollections of the Bass Family" in the enjoyable style which has enlivened his well known accounts of the camps of the Kingfishers. Mr. W. P. Seal will describe his recent interesting observations on the "Nesting of the Sunfish," and Mr. Lung will contribute notes from historic Wyalusing. Altogether we trust that the black bass supplement will win its way into public favor as the black bass itself has established its glaim on the popular esteem,

POLITICS AND FISH.

N connection with the present investigation of the United States Fish Commission by Congress, there are three points which must not be overlooked nor robbed of their true weight. First, the investigation has been entered upon for the purpose of providing an excuse for making the bureau a political department. Second, this transfer is asked for wholly in the interest of politics. Third, politics will ruin the Fish Commission.

When the place seekers and the patronage mongers shall attain their ends, and the Commission be given over into the hands of politicians, to be run on the same principles as those on which the other departments of the Government are conducted, its usefulness will be destroyed. In the present investigation the real question at issue is not whether the Commission's affairs are conducted in the most economical manner possible; it whether the Commission can be captured by the politicians for what there is in it. And their eagerness to get hold of the bureau is to be accounted for wholly by their belief that it has tremendous opportunities for them and for their jobbery. Political control and economic fishculture cannot go hand in hand.

THE PESTIFEROUS SPARROW.

If the imported English sparrow is really the menace to agriculture that it is claimed to be by intelligent investigators, it must be confessed that the people of this country are displaying a most foolish indifference to the One by one the several Legislatures have removed the protection once accorded to the sparrow, but heretofore in no single instance has any adequate method of campaign been set on foot to reduce the bird hordes by destroying them. The Massachusetts Legislature, after a discussion extending over several weeks, has now passed an act entitled, "An act providing for the extermination of the English sparrow in the Commonwealth,' and reading as follows:

and reading as follows:

SECTION 1. In all cities of the Commonwealth the officers having charge of the public buildings, and in all towns thereof such officers as the selectmen shall designate and appoint, shall take and enforce such reasonable means and use such appliances as in their judgment may be effective for the extermination of the English sparrow therein; but in so doing poisons shall not be used. SEC. 2. Any person who shall wilfully resist the persons in any city or town charged with the execution of the provisions of this act, while engaged therein, or who shall knowingly interfere with the means used by them for said purpose, to render the same less effective, shall be punished by fine not exceeding twenty-five

less effective, shall be punished by fine not exceeding twenty-five dollars for each such offense.

Sec. 3. Nothing in this act shall be so construed as to allow an officer to enter on private property without consent of the owner or occupant thereof.

subject has received considerable attention in Massachusetts; and the Boston papers have discussed it pro and con, with a good deal of energy. During the discussion of this bill a resolution, introduced by Mr. Bicknell of Boston, was passed in the House which provided that the Board of Agriculture be requested to make inquiry and investigation as to the birds that inhabit the State, and report thereon as to their character, habits and value as insect destroying and grain and fruit destroying birds, and to advise such legislation as may be necessary for the protection of private and public interests.

At this late date, it is probably vain to hope that the English sparrow can be exterminated, but there is no doubt that energetic action and unceasing vigilance can reduce this bird from being a great injury to the farmers to one whose influence will be but little felt. We have in mind a number of places near New York city, where, by energetic persecution on the part of the residents, these birds have during the present summer been so thinned out that their presence is scarcely noticeable. In the sections where this has taken place a noticeable increase of native birds has followed, and the results have been so encouraging that householders have determined to continue their efforts in the hope that in the course of a few years the sparrow may be gotten under

The methods which have been followed by these good results consist in destroying the nests as fast as they are built, and in shooting, with tiny loads, the sparrows at all times. While a very great number of the birds have been killed, it is thought by those who have watched the matter that those which have not been destroyed have learned that the places where they are thus pursued are dangerous. At all events, the fact that lawns and yards, once entirely given up to the sparrows, are now entirely deserted by them, is evident.

SNAP SHOTS.

DREPARATIONS are being made to ship to the Yellowstone Park for planting in its waters a large number of the fry of valuable food fishes which are to be turned into lakes and streams which have heretofore supported fish food but no fish. As stated last winter in FOREST AND STREAM, there were set aside for this purpose 30,000 landlocked salmon, 25,000 Loch Leven trout, 100,000 lake trout (namaycush), 25,000 European trout (S. fario), and 25 000 Eastern brook trout. So soon as the snows have sufficiently melted to admit of the passage of pack animals across the range, the car containing these fish will start for the Park. It is understood that if Col. McDonald can get away from Washington he will accompany the car and will himself superintend the planting of these fish.

Just as we go to press we are in receipt of the full text of the decision recently rendered by Judge Craig in the Illinois Supreme Court, in re American Express vs. the People, and shall publish it next week. The Illinois law prescribes that quail may not be killed for sale, nor transported after sale or for the purpose of sale; and the decision is to the effect that the law is constitutional, the State having power to make such a regulation. Judge Craig's conclusions are sound law, but we do not agree with his premise that game is the property of the State. On the contrary, as we think has been satisfactorily shown in these columns, property in game vests in the owner of the land on which it is found, by the term property being meant, however, only the exclusive right to take the game. This principle of private ownership in no way precludes the State from making such regulations, under the police power, as may be deemed proper for the conservation of the game supply. We shall return to this subject next week.

Fish Warden Hague, of Pittsburg, Pa., has created a reign of terror along the Allegheny river. He set out the other day on a campaign of net confiscation and netter prosecution. He discovered that about every resident along the river who cared anything for fish was in the habit of seining illegally. Whole villages professed ignorance of the law; but the fishermen themselves knew enough to elude Warden Hague when they could. Seven men fled from the State. Several thousand dollars' worth of unlawful tackle was confiscated. The outlook is for a radical change in law observance in that district. The warden will now turn his attention to other rivers, and if he shall persevere in the good work, western Pennsylvania rivers will once more have a supply of food fish.

There is money in some of the fish and game preserve enterprises. Members who go in "on the ground floor often find the value of their shares doubled or quadrupled within comparatively short periods. Some years ago a party of three salmon anglers bought Brandy Brook in the Restigouche county of Canada, paying for it \$600. Subsequently they sold a portion of their property for \$15,000. Nearer home, there are Adirondack clubs and Atlantic coast ducking clubs, which have proved to be capital investments.

The initial meeting of the British National Rifle Association is on this week at the new Bisley ranges. There were some misgivings about the change from Wimbledon, but with such a live, energetic body of riflemen as made up the Wimbledon contingent for a score of years past, the chances are that the old record of the Common near London will be repeated and excelled upon the new and commodious ranges.

And now it is reported that the word "woodcock," which appears in an act of the last New York Legislature designed simply to relate to ruffed grouse, was sur-reptitiously inserted. The effect is, as we have already reported, to defer the opening of the season from August 1st to September 1st. If this was a piece of forgery, who did the forging, and why was it done?

Next week we shall publish the rules of some thirty Western railroads respecting the transportation of hunting dogs. The information there given will be of value to sportsmen who are contemplating a shooting excursion

The Sportsman Tourist.

SUMMER SKY AND SEA.

THE great wind that has been tumbling white, frothing billows shoreward all day long, has, with the approach of evening, sighed itself out and stolen away to sea. The bay has resumed its quiet, and only a soft heavy beams and its presence feel; and the faining village lies, still and apparently deserted, as we slip from the shelter of the one solitary dock, borne by the ebbing tide, and the sail barely filled by a soft, slow wind. To the east, where evening is galfering, looms our goal, the silen, may be a soft of the one solitary dock, borne by the ebbing tide, and the sail barely filled by a soft, slow wind. To the east, where evening is galfering, looms our goal, the silen, mirrored in the still, smooth plain of water, that is broken only here and there by dure colored patches where long tangled grasses lie motionless or submerged sand bars hide their yallow backs. The only sign of toil or life is the long irregular line of gloomy black buildings far on the southern sea level. But with the long line of snoke highest seatomer for miles and miles, even they are soft-ened by the dying sun that flashes blood-red in the windows and tips the surrounding stunded swamp cedars with flame.

Now and saain, as our craft ripples slowly on, some fish rises suddenly and breaks from the water, falling back with a sharp, resonnding crash, and leaving only a laugh, wheeling till the white pinions flash like a suntipped cloud. All clse is silence, so we hold our course versallows where bright-inted weeds way, over deep, hurried channels and through winding, placid waterways. The company of the sharp water woods. One last hot, burning glance comes through the green laced boughs, then the dusk steals swiftly over sea and land.

Then Mati's cheery voice sings out with a welcome that and she sun sinks behind the vestern woods. One last hot, burning glance comes through the green laced boughs, then the dusk steals swiftly over sea and land.

Then Mati's cheery voice sings out with a welcome that a sun and strong and pure; and natur

is a mighty surge as my line follows the fish to the surface; a glittering something leaps into the air fifty feet away, then my rod straightens out, and I have lost the first fish. Now the "buck fever" is on us. Eagerly, with quick fingers, another bait is adjusted, and, after what seems an eternity of waiting, the line rests on bottom again. Then suddenly the figure in the stern straightens out, his rod begins to spring and bend and—sourching has leaped at my hook like lightning, and my rod is doubled up under the boat. But this time he is fairly hooked, and as my companion lands his fish, mine comes to the surface, now leaping and thrashing till the water is white with foam, then surging through the water with gills angrily red and fins erect, while all the tints of rainbow and sunrise combined play on his lordly sides. Away, away from the boat, until the rod bends, till further yielding seems impossible, while the line cuts the water like a knife, and swishes and quivers like an overdrawn bow-string. Now he shakes his head savagely, then darts straight away, while rod and arm in unison now yield, and then reover, inch by inch, and every inch is stubborn fight. At last he slowly turns and tries to circle round the boat. As he comes nearer and nearer, he reserves his strength, and suddenly makes one fierce and mighty effort; dashing the tide with his great tail he turns, with each muscle tense, and plunges like lightning down, down, until his shining sides are lost in the black depths, whence a bubbling wake rises to show where he disappeared. It was his last grand, giant effort and well nigh successful: but the slim rod yielded barely in time, and the hook holds fast, while the cruel tireless strain on the line breaks his strength. The reel, that shrieked at the beginning of that savage downward leap, while the handle was but a blurr of light, now speaks slowly and more slowly, until at last the great fish is overcome, and gradually yields with gasping mouth. One last despairing effort and then he lies in th

SLIDE ROCK FROM MANY MOUNTAINS

SLIDE ROCK FROM MANY MOUNTAINS.

VII.—THE LOST SHEEP.

The indefinite is twin brother to the inaccurate. Therefore when I say that my friend has the gift of slumber you may understand, not that he is the eighth sleeper, but merely that on the particular morning of a particular day he kept his couch late.

And to remove any trace of laziness about this friend I will tell you who he is. He is a doctor and a man of science. He is the editor of a newspaper and he speaks the truth. The combination is said to be unique in America, and will surely point him out, for of course it would embarrass him to baldly tell his name.

But my friend slept, and I left him in order to seek for game with Dick as a companion and helper.

The horses were rounded up and a choice of mounts was made. The blind roan (blind but of one eye) was my usual horse, but he had a nature so sociable that he would squeal and whinny for his mates when he found himself alone, and this amiable trait unfitted him for the chase. Then there was the chestnut, but our best packer told me that the chestnut was "skin poor" and "rash," and that only yesterday he had been nearly "packed loose" by that very animal. The "blue" was a tried hunter, but he had a pace of his own, slow to majesty, and you could only induce him to keep even that pace by hard, continuous labor. So I took the little bay and prospered.

Dick went with me because he was a fine hunter and a fine fellow. Besides, our Indian, the only other available comrade, had, after an unusually enormous supper, dreamed the night before that "the man with the windows" (for thus in Chinook he spoke of my spectacles) had shot him, and he therefore was a little sly of my society for the time.

Dick and I rode from our mountain camp down the creek and down the river. We examined various pastures and "licks," and we became pleasantly weary and rather eager for game. The river here, near its source, is a swift mountain torrient, dashing among smooth granite boulders and cutting away the alternate sides of its n

to be a fly.

These clayey banks seem to contain a mixture of those salts called by the general name of "alkali," and at certain spots deer and sheep are wont to come to nibble and lick this, to them, savory appetizer. At these spots, too, the animals paw and scrape the dirt with their front hoofs, so that the amount of excavation may be very great, reaching in some cases to the removal of hundreds of tons of earth,

We sat down to consider. Of course to consider properly you must be calm, and to be calm you must smoke. It was here that the grim truth, that I had left my own tobacco in camp, burst upon me. Now, my own tobacco is tempered to the mildest capacity and manufactured expressly for the use of ladies and infants. I could of course borrow Dick's tobacco, but Dick is a strong man, with corresponding tastes. Once I had tried this plan of the proposition, but the result was not a calm only, but an with corresponding tastes. Once I had tried this plan of borrowing, but the result was not a calm only, but an over-calm, almost a qualm. The loss of this needed smoke disturbed me, but after reflecting on where our best chances would be we pulled ourselves together and

went on.

We rode west up the trail, winding along the top of the bluffs, on the south bank of the river. To the left rose forest-clad hill and cliff, to the right lay the river and, beyond that, a mountain front of varied character, with a strong leaning to the precipitous. Dick, like most tinguish the outline and color of game vice. By the control of the countain of the precipitous of the countain of the precipitous. It myself can at times hardly find these objects when they are pointed out. The coats of sheep and deer harmonizes owell with their surroundings, that when they are for me to catch them again, mless by chance they show the white patches on their sterns or should lappen to move. Let them but wink an ear and I see it.

Let them but wink an ear and I see it.

Let them but wink an ear and I see it.

Let them but wink an ear should lappen to move. The countain of the countain it was my pride as see the game before the countain it was my pride as see the game before the countain it was my pride as the countain of
decoyed me by showing her fatal injury across an icy stream and through much nasty brush; she had arranged things in such a way as to be so shot a second time as only to add to her speed; she had led us over slide rock and break-neck bank until long after sunset, and my disposition was still sweet, but these final straws, I confess, infused a subtle acid into my feelings, and my expressions at that time were not those of unqualified blessing. For the moment I thought that my age and infirmities would look better by the domestic fireside; that hunting and camping were occupations fitted only for the undeveloped, the slightly evolved savage; that after carefully cleaning my gun I would hang it on the wall as an immovable ornament forever.

Did I follow this wise and sudden resolve? Time will show.

H. G. Dulog.

Hatunal History.

A HUMMINGBIRD'S NEST.

A HUMMINGBIRD'S NEST.

MARIN COUNTY, California, which lies just north of San Francisco and the Golden Gate, is beautiful, rich and fertile. It abounds in smooth, rounded hills and mountains, in beautiful, rich-soiled valleys, in swift-rushing crystal trout streams, in ravines and cafions lovely with flowering fragrant shrubs, on some of which every day in the year fresh bloom can be found. This county has the most perfect of temperate climes, where even the broad-leaved tender banana stretches its great fronds up 15ft. in the air without fear of nipping frosts, and the Caladuum esculentum forms great clumps of tropical foliage. Marin county is, as Kate Field wrote of it, a poem. Not an epic nor an heroic poem of blood, war or tragedy, but rather a bundle of love sonnets, a winter's tale with a fair Rosalind in rustic garb, and beaking a shepherd's crook or milk pail. For this fairest home for the lovers of the beautiful is given up to the prosaic cow and the bleating sheep. Where the hills and mountains ought to be covered with the vine and olive, instead we find growers of wool. On the foothills and tablelands where we should see the orchards of apple, pear, plum, prune, cherry, nuts and oranges, the finest in the world, we find those most unromantic things of rural life, the ill-smelling pig sty and the dairy. The rich floors of the beautiful valleys given up to hay, Marin county is nearly one continuous butter dairy over its every acre.

pear. plum, prune, cherry, nuts and oranges, the finest in the world, we find those most unromantic things of rural life, the ill-smelling pig sty and the dairy. The rich floors of the beautiful valleys given up to bay, Marin county is nearly one continuous butter dairy over its every acre.

Marin county seems to be the natural home of those jewels of bird life, the hummingbirds. For full half a century I had striven to find a hummingbird's nest with eggs or young in situ, but somehow I was always a little early or late. At last, however, I have found one.

Two weeks aco we, old Dobbins and I, were plodding along in one of Marin county's most beautiful valleys. On one hand a sparkling, rattling trout stream played hide and seek beneath over-arching learly bowers. On the other side the mountain stretched away upward in dizzy heights. The road, as smooth as any pavement, was nearly overarched with an hundred flowering shrubs. There were the great round-topped "buckeye" with its plumes of snowy white and pink, the spirea with its great cones of creamy white, the elder with its broad sweet umbels tinged with gold—all of these filling the air with their heavy honey, sweet, or spicy fragrance. There were great rounded clumps of ripening crimson gooseberries, large, fine in flavor, but with prickly coats, long banks with the drooping thread-like vines of the wild blackberry arching over them like some smooth waterfall of tender green, sprinkled beneath with their bright red or black fruit. On the mountain side above, all was aflame with the scarlet of the painted cup and the bright gold of California's pride, the golden popy. The setting for these regal beauties of the mountain side was made up of an hundred more moderate yet beautiful flowers of every moderate size and color, and especially in a wealth of the mathwait, from a tiny crimon cup with a golden eye to the great pink and red cup of the school-girl's "wild hollyhock." The whole was interningled with thousands of great fern fronds and delicate maiden hair fer

Driving through such a forest we pass out into the bright sunshine. My eye is closely scanning the bank to the left for ripe blackberries, for in this strange climate of Marin one may find them dead ripe in one shelter and exposure, and then only a few rods away hardly in blossom. From a cluster of drooping swaping blackberry vines a tiny ball of gray goes whizzing up the mountain side. A fire-flash of most brilliant crimson scintillated toward the bushes, and then with arrowy flight followed toward the bushes, and then with arrowy flight followed ings of bright metallic green in the smallowing flicting of bright metallic green in the smallowing flicting of bright metallic green in the smallest of our humbirds. There it was, a tiny little cup of delicate down and fiber, deftly woven, perfect in shape, fastened directly on the side of the slender vine, with many a ligative artistically entwined, covered outwardly with gray and blue lichens and moss-like cryptograms, all placed in their natural growing form with consummate skill. It was directly norfed by a large leaf, and so like its entitle early to make the completely masked, so that the strange of the completely masked, so that the strange of the complete of the strong gray silken fiber of the hop-vine; the inside lined with the softest down from the thiste and willowy, pure white; and away down in its bottom, two tiny eggs, pearl white, translucent, rarely tinted with a glinting of shadowy pink.

The eggs are truly large for so small a bird, somewhat more oblong than usual among small birds.

Taked the bright sons of a settler near at hand if they knew where there was a humming bird snest. "Oh, yes," some blackberry to also me fast up the road there on the strong gray silken fiber of the boys knew how long it took for incubation and rearing, and when have another in the house which we completely the completely with the softest form the distribution of the side of a slender drooping twing of a blue gum (Eucalphus gray and when have another in the house with t

PETALUMA, Cal.

To Raise Beavers.—Editor Forest and Stream: I think I have a plan whereby beaver may not only be raised without loss by straying, but may even be made to pay the breeder a handsome profit on the investment. Find a small, deep lake, around part of which the banks are high and steep. Dig a trench all around it at least 3ft. deep and not less than 50yds. from the water's edge. Set regular fence posts in this trench, and tack to them a woven copper wire fencing of say 10in. mesh and 8ft. deep. All but 3½ft. of it could be made of iron wire, but the lower part should be copper. When the fence is completed fill in the trench and make a gateway large enough to admit a wagon. Now you can put your beaver in the lake and they cannot possibly get away from it unless they climb the fence. I do not think they would do that, but to be doubly sure a wide board could be nailed along the top of the posts. If there should be no suitable food timber growing along the shores of the lake, it could be cut and hauled to the place by wagon as re-

quired; and two or three times a year the debris should be cleared away. I venture to say that with a starter of four beaver in such a place as I have described a person with ordinary luck could raise a large number of them in five years.—J. W. SCHULTZ (Piegan, Montana).

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN,—Exchanged—Three reindeer (Rangifer larandus). Purchased—One grizaly bear (Urus horribile), three black ducks (Anasobscura), sixty-five water mocassins (Ancistrodon placeborus), seven ground rattlesnakes (Crotalophorus mitiarius), one barlequin snake (Elaps fulvius), four pine snakes (Pityophis melanoleucus), four garter snakes (Eutona sirtalis), five black snakes (Buscantum constrictor), three Sacken's garter snakes (Pityophis melanoleucus), four gaverneen banded water snakes (Tropidonotus sakent), thirteen king snakes (Ophibolus getulus), six water snakes (Enophiam, seventeen banded water snakes (Tropidonotus raciatus), tour brown water snakes (Tropidonotus taxispilotus), one green snake (Opelophis vernalis), three indige snakes (Spilotes erchemus), two wiip snakes (Bascanium flagelliforme), one con snake (Coluber guttatus), and one sopher tortoise (Testud radiata). Presented—Two woodchucks (Arctomis monax), one mink (Putorius vison), one coclet (Felis pardalis), ten opossums (Didelphys virginiana), one woodcock (Philohela minor), two barred owls (Sipralum nebulosum), one screech owl (Sopis asio), three hognosed snakes (Heterodon pidiprihimus), one pine shake (Pityophis melanoleucus), two Fox's snakes (Coluber wihipus), one monntain black snakes (Spilotar) one pine snake (Pityophis melanoleucus), two Fox's snakes (Soluber vinjinus), one one pine snake (Pityophis melanoleucus), two Fox's snakes (Coluber obsoletus), three common water snakes (Tropidonotus), engist, one pine snake (Pityophis melanoleucus), two Fox's snakes (Soulae), seven alligators (Alligator missestypicnis), one pine snake (Pityophis sozii mexicana), one Agnassia's gopher (Zerobates agassizi), seven alligators (Alligator missestypicnis), one pine snake (Pityophis melanoleucus), two fox's snakes (Coluber obsoletus), three tognosom argale), one honned lizard (Pinymosoma orgale), one honned lizard (Pinymosoma orgale), one honned lizard (Pinymosoma orgale), one honned lizard (Pinymosoma orgale)

CHICAGO AND THE WEST.

CHICAGO AND THE WEST.

CHICAGO, Ill., July 5.—The following loose and inaccurate paragraph from a recent issue of a Chicago daily contains a reference to a late Supreme Court decision which in some respects appears to be the most interesting and important to sportsmen of any of recent years: "The Supreme Court of Illinois in a recent decision affirms the constitutionality of the game laws of Illinois, and affirms the judgment of the lower court. The law was passed by the last session of the Legislature, and the new feature was the absolute prohibition of the selling of game, as well as its transportation for sale. Last fall the American Express Company received and delivered qualt to a Chicago commission house. The company was fined \$200 in the County Court for the violation, and to test the law the case was taken to the Supreme Court, which has just handed down a paternal decision affirming the judgment of the County Court. Counsel for the company raised two principal points—the unconstitutionality of the law and its violation of the rights of property, holding that the game when killed became private property, and the game law violated that right by destroying the property without the process of law. It is the first test case under the law, and the decision is of great interest to the people as well as to the bench and bar of the State."

In the above, reference is doubtless made to what is known as the "Effingham county case," which has been watched with interest by sportsmen since last December. In this case the Supreme Court has fairly carried the war into Africa, and has taken ground which could not be more satisfactory to the sportsmen of this State. It has always been tacitly admitted in Illinois, Indiana, Wisconsin and Michigan that, in spite of the law, when game was once killed and in possession, the State could not step in and control its disposition. The Supreme Court of Michigan, indeed, is on record directly to this effect. No game warden in Michigan will pretend now to prevent a party from takin

follow its title even into a private game-freezer, in spite of the fact that money may have been paid for its contents.

Mr. Wolfred N. Low, the attorney who has had in charge most of the prosecutions in Chicago for game law violations, himself a prominent sportsman and ex-president of the State Sportsmen's Association, said in regard to this late decision:

"It is all we could ask and more than we could expect as sportsmen. I have purposely delayed pushing the celebrated Smith case, which has lain so long in the courts, until after hearing from the Effinghan county case. You will remember the large seizure of illicit game in the hands of F. Smith, the Chicago commission merchant. We will now have some definite law to go on, and the only thing to prevent our winning the Smith case is the question of search-warrant right. The latter complicated the Smith case and made it harder than the case in hand, so that we were willing to wait and see a thing or two first. Now we will go ahead and win the Smith case in every probability. The State court has taken the position of good sense and justice. Another precedent or two and we can make trouble on South Water street yet. I do not quite understand the quoted bearings of the decision which would make it seem that

the sale of game was illegal, but the actual bearings of the case are plain and important."

A transcript from the record of the Supreme Court will be had as soon as possible, and the matter in its entirety offered to the readers of FOREST AND STREAM. From what is known of the case in this city, at the present time, it appears to be one of singular importance.

SHOT COUNT AND WEIGHT.

E. HOUGH.

SHOT COUNT AND WEIGHT.

The table of No. 6 shot completes our examination of the present state of manufacture of chilled shot. The figures of this number are secured, as were all the others, by the careful weighing and counting of the ten charges of 140x. each measured out by the companies and kindly sent on at our request.

The table, it will be seen, displays about the same run of variation as did all the others from No. 10 shot. The smallest count, and hence the largest shot of the series, goes in this size to the Collier Co. of St. Louis, with the Robertson tower of Baltimore at the other end. Reckoning from the former the latter shows a variation of over 40 per cent., and yet the change is not in the weight, since the smaller number of pellets runs the heavier in weight, and when a perfectly uniform basis of comparison was secured by counting out 100 pellets of each the weight runs as 229 to 160, or in other words the same number of pellets of the same number of shot from one factory would have over 43 per cent. more weight than if procured from the other factory. This means the placing of that additional amount of work upon the charge of powder, and the extra work is altogether too great if anything like careful experiment has, in the first place, fixed the powder charge. The Sparks shot from Philadelphia runs on the average so far as count is concerned, but is out a few grains on weight. The two English companies get together on this size shot very closely in count and weight as well, and the difference between shot used in this country and that from the other side is very clearly shown. It will be noted that the Robertson shot of Baltimore is exactly in line with the English sizes and that average American size is far away, with the difference in favor of the American shot for largeness. A glance down the column of average weights shows a rather large run of weights. The Tatham shot average up 547 grains per charge of 140x., while the Merchant's tower shot of Baltimore reaches 597 grains. The

CHICAGO, Ill., July 9.—Billy Mussey, Joe Card, "Slick" Sharp and several other Mak-saw-ba men have, since the opening of the season, killed a few woodcock on their grounds along the Kankakee. They say that any one with a good dog could get good shooting there, as the oirds are plentiful this year. It is probable that about all the Des Plaines River birds in this State will be killed off before the legal season opens, as the weather is now cooler and more fit for hunting in the thick cover. The birds here are, of course, as far advanced as they are in Indiana, and after a woodcock can fly he is considered about ripe in this sinful world.—E. HOUGH.

NO EXTRA CHARGE for fast time. No transfers. No midnight changes. No missed connections. No appliances but modern ones. No luxuries but the best. No mistake possible if you take the Chicage & Atlantic to Chautanqua, New York, New England and all points East. No trouble to ask your agent for the C. & A. differential rates, which save money to travelers.—Adv.

NEBRASKA PRAIRIE CHICKENS.

NEBRASKA PRAIRIE CHICKENS.

OMAHA, Neb., July 11.—The various gun clubs of this city have concluded to call a special joint meeting to ascertain whether it is not possible to devise some ways and means of preventing the wholesale illegal killing of prairie chickens this season, and it is high time this very work was accomplished. The time will shortly arrive when the pot and market hunters will shoulder their blunderbusses and sally forth to the slaughter, and there is no time to be lost if anything is to be done toward the protection of this season's crop of birds. From all parts of this State and the Dakotas comes the report of an unprecedented hatch, and that the prospects are excellent for the biggest chicken crop in fifteen years. The young birds are now out and nearly half grown, and in the bountiful stubble will be but a few weeks longer in reaching their most delicious condition. The theories for the abnormal hatch this season are both numerous and reasonable. Last winter was one of the mildest periods experienced in these States for years, and the birds left over have been undisturbed in their nesting. This spring, to be sure, there was an excessive rainfall, but it had been preceded by such a long, continued drought that the earth was simply one immeasurable sponge, and the water was absorbed speedily, and inundations and overflows were rare.

This summer more birds are seen in their accustomed

ceded by such a long, continued drought that the earth was simply one immeasurable sponge, and the water was absorbed speedily, and inundations and overflows were rare.

This summer more birds are seen in their accustomed haunts than for many, many years. Even in localities where the birds had been almost exterminated they are now to be found in satisfactory numbers. The localities in question last season were so barren that there was no inducement for the market-hunter to visit them, and the few birds that were left were almost totally unmolested, and this summer every old hen is clucking proudly through the long yellow grass with her fifteen or twenty bright-eyed children. What glorious sport would await the legitimate sportsmen now if effective means could be adopted for checking the market-hunter. Delightful September and golden October would be months of incomparable sport afield, if there was only some way of preventing the devastation of our prairies before the legal season opens. I have grave doubts, however, of anything material being accomplished.

The Legislature is seemingly indifferent as to the fate of both our game and fish. So thoroughly indifferent was this body at their last session that they had not the briefest time for the consideration of a code of excellent game laws drafted by the well-known Judge Kennedy and the Omaha Gun Club, and forwarded to the very members whom it was thought would take a robust interest in the matter. Persistency may win, however, and action on the part of the sportsmen's clubs cannot be too prompt or too decisive. Last season as early as the middle of this month half-grown prairie chickens were being served regularly at our leading hotels, and they were being transported from the State in refrigerator cars by the thousand dozen. It is a certainty that there will be a speedy resumption of this order of things, and in a few years more, at the present rate of destruction, prairie chicken and grouse will be no more a welcome slight along our prairie highways.

Last f

boys they can roundabout the country, but they bring in expert shots from the East, whom they pay a regular salary for their work in the field. Now is not this a sad commentary upon the laws of a great and progressive State like Nebraska; isn't it an unqualified disgrace and an outrage, and does it not call for a loud protest from every true sportsman in the State, and a vigorous remonstrance from all our lovers of nature? I think so.

Woodduck and some mallard are breeding at Honeycreek Lake this season. Just north of this charming ellipse of water is a long reach of low-lying, boggy meadow and woodland, where the birds have secreted their nests. Young squirrels, particularly fox squirrels, are reported in exceeding plentifulness in the timbered bottoms along the Missouri River, six or eight miles below the city. Young squirrels are supposed to be at their best when the alderberry is in bloom, and as this bush is now in the height of its flowering, it is time to go a gunning. And what sport it is, a day's squirreling in the odorous woods.

Gris.

LIFE WITH THE OLD HUDSON BAY CO.

LIFE WITH THE OLD HUDSON BAY CO.

In the spring of 1861 I enlisted for three years as an apprentice in the service of the Hudson Bay Co., that great corporation which for so long fattened on spoils of the savage wilderness lying in what we speak of generally as the British Possessions. I cannot, at this date, give any special reason for this step on my part, unless it were a general love of adventure. I was then not quite 19 years of age. The pay of an apprentice was \$100 in money per year, with board, clothing and ammunition thrown in. If one cared to devote a lifetime to it, he might possibly hope that time and rotation in office would eventually make him a "chief trader," entitled to one share of the company stock, or even a "chief factor," with two shares, in either of which cases he would have a fortune. He might even become a director, if he lived long enough. I question whether I considered all these things very much. I was American born, of Lowell, Mass, but enlisted at Montreal.

Montreal was the initial point of our territory. Up till 1861 the recruits for the service, who came largely from Scotland, the Orkneys or Shetland Islands, usually came by ship direct to Hudson's Bay, then disembarked and crossed to the remote West. There was also the freight route of the great "North canoes," from La Chine, up the Great Lakes and so by water to Winnipeg and the North. In my time the journey was usually overland to La Crosse, Wis., on the Mississippi River, then by steamer to St. Paul, thence to Georgetown. Minn., and so on, either by Burbank's overland route, or by the old steamer Anson Northrup, which plied on the Red River of the North.

The city of Winnipeg is now a great populous place, but in those days there was little to it but old Fort Carry,

Anson Northrup, which piled on the Red River of the North.

The city of Winnipeg is now a great populous place, but in those days there was little to it but old Fort Garry, on the north side of the river, and the old Cathedral of St. Boniface, on the south side. There was a badly mixed population of perhaps 15,000 souls and bodies scattered along the river for about 25 miles. All the trading done at that great post was done inside the stockade of the fort. The wall was about 16ft, high, with bastions at the corners. The stockade would cover about two city blocks. The first frame house in Winnipeg was built in 1861 by Norman Kittson of St. Paul. In that year the great charter of the Hudson Bay Co., known as Prince Rupert's grant, expired, after running its course of 100 years. As this broke the monopoly, other traders began to crowd in. The company till then had had all the Indians over that whole country bring their furs in

to barter. It now had to begin to send out and solicit of the Indians. Norman Kittson laid the foundation of his great fortune here at Winnipeg. Many fortunes have been made on furs.

I lay at Fort Garry some time, waiting an assignment, and was finally sent to Behren's River post, near the north end of Lake Winnipeg, which body of water is about 300 miles long. Prior to my arrival at my post I passed all through the Nelson River country.

The post at Behren's River consisted of two log houses, one dog stockade, one fish house and a trading post. The windows of the house were made of deer-skin parchment, scraped thin and oiled. They let in some light, but you could not see through them.

My duties, at least so far as I remember to have practiced them, consisted in running a bark canoe, hunting, fishing and trapping in the summer, and driving a fourdog team of Esquimaux dogs in the winter. The dog was the draught animal of that country. I was the only white man at the post. There were five other men there, all Scotch or French half-breeds. The pure whites, no matter what their station, always made the aristocracy of that land.

We were allowed by the company 100lbs, of flour per

all Scotch or French half-breeds. The pure whites, no matter what their station, always made the aristocracy of that land.

We were allowed by the company 100lbs. of flour per annum, and some tea and rum. For the rest, we depended upon the reindeer—which is the same animal as the caribou—upon the fish we caught, upon the abundant small game, or the wild rice gathered by the Indians. Wild rice is good to eat, and I sometimes gather and cook it at our marshes even yet.

The first year at our post we traded for four tons, actual weight, of furs. We had 3,600 beaver, also bear, otter, muskrat, fisher, mink, fox and sable.

All the trading of that country was done under what was called the "Made-beaver tariff," There was no money. The Indians didn't know what money was. I saw no money during my life there, except a few silver quarters I carried in my pocket. A full-grown beaver skin, which would weigh about 1lb, was the standard or unit of the fur currency. It took ten muskrats to make one beaver, or four minks to make one beaver, or two sable to make one beaver. Two beaver made one otter, and ten beaver made one silver gray or black fox, between which no difference was made, although the latter was twice as valuable. The company gave one fiint-lock musket—which cost about \$40 a dozen—for ten made-beaver. A blanket was worth from two to five made-beaver. Everything else was in proportion, and the profits may be imagined.

The Indians knew this tariff perfectly, and you could not fool them. When an Indian opened his pack of furs we gave him a goose quill for every made-beaver value. He held his bunch of quills in his hand, on the counter, and signified what goods he wanted. As we delivered him every made-beaver's worth of goods we pulled a quill out of his hand. This was a good sort of C.O.D. arrangement, which pleased both parties. All the trading was done in this way. The Indians were great beggars, however, and we always figured on giving about ten per cent. of the face value of a good big lot of fur by way of gra

etc.

About the middle of September we began our fall fishing, to get in the supply of whitefish, on which we fed the Indians and the dogs all winter. These fine whitefish would hardly be fed to the dogs in that way in this country. At first we fished about nine miles out, using a sort of wooden dory fish boat, such as the half-breed carpenters made. When the ice came we set the gill nets under the ice and kept on fishing till about the first of January. We used the dog sleds then to carry in the fish.

nets under the ice and kept on fishing till about the first of January. We used the dog sleds then to carry in the fish.

We hunted the reindeer in the winter, using snowshoes. We could kill any number, and when we had a lot we cached the meat and got it later with the dog sleds. Black bear were very plentiful in that country, with some brown and cinnamon. We got numbers of them. I have killed one with a tomahawk in the water. Once I shot a bear with BBs as he was going up the bank of a river, where I had surprised him at his fishing. When the shot hit him he turned to snap at his hindquarters, and turned a most amusing somersault clear down the bank. Ruffed grouse and hares we always used to snare. The company furnished us no shot smaller than BBs. In January, when the ptarmigan came down from the north, we would drive these birds up out of the snow, where they roosted, into the willow trees, and if we didn't bag a dozen at a shot then we felt grieved. I have spent hours splitting BBs to shoot ptarmigan with. The Arctic foxes used to follow the ptarmigan down on their winter migration in great numbers. These foxes were very stupid and easily caught.

We used to eat a great deal of beaver meat, and also the kindquarters of muskrats. The muskrat is one of the cleanest animals that lives, it never eats a morsel without first washing it thoroughly, as you may see it do with a bit of root it has dug up. We got our beaver by chiseling them out of their winter lodges, sometimes, or by shooting them as they swam. If a beaver once sees you he will slap his tail on the water with a report like a pistol, then down he goes and you will see him no more. In trapping beaver the trap was always set from a canoe. A runway was picked out, where the beaver went out to his cuttings, and in this the trap was set, 2 or 3in, below the water, to prevent any scent being given off by it. The chain was put under the water and the stake that held it was always driven clear down below the water. The nose of the beaver is very keen, and at

cuf dead trees.

When the beaver can find a high bank it burrows, just like a muskrat, and will not build a lodge. They call these "bank beaver," but they are just the same as the "marsh beaver," which build lodges. You don't see muskrats build houses when they can get to burrow in a bank.

We usually caught otter at a "slide." The trap was nearly always slung on a spring-pole, so that the otter would be thrown out into the water, and could not get to the bank, where he would be likely to gnaw off his foot. The trap was set a few inches under the water, and was always a strong double spring trap.

Foxes we got with strychnine, using fish bait cut into pieces about an inch square. We always left some minced bait lying around to keep the foxes picking till the poison took effect. The holes where we fished through the ice were always much haunted by foxes. We could catch the Arctic fox even in deadfalls. The bulk of our catch was red and cross fox. The blue fox is a cross of the red and white fox. It is not generally known, but it is true that the black and the silver gray fox are not distinct animals. They are the same as the red fox, and there may be blacks or silver grays in the same litter. These rare colors, however, are confined to the far North. A black fox may have red pups. They shift around that way, but the skin depends on the individual.

In the summer and fall the wildfowl were numerous. The mallards breed in the Winnipeg country, and do not or did not then go much further north. The Canada goose also breeds there, and some widgeons and greenwing teal. The bluewing do not breed so far north very often. The laughing goose (called "speckled brant" by some of our shooters), the Norway goose (the white goose with black-tipped wings), the pintail, redhead, bluebill, scaup and canvasback duck, all breed mostly in the country lying between Alaska and the Hudson's Bay, including the Great Slave and Great Bear lakes, Lake Athabasca and the McKenzie's River. The canvasbacks breed on the Yukon, and it is likely that the Pacific Coast flight comes down from the Yukon country, while our flight perhaps comes from McKenzie's River and the Bay.

while our flight perhaps comes from McKenzie's Kiver and the Bay.

The Indians could not shoot very much, and usually snared the waterfowl. They used to gather in the duck eggs to eat, and also many gull and tern eggs, of which there are thousands on the islands of Lake Winnipeg. The pelican eggs we could not eat; they were too fishy. There were a good many cormorants and crested grebes, and of loons there were thousands. We used to detest the loons and ducks, because they got tangled up in the whitefish nets so often. They make a pretty mess of a gill-net, and nearly always have to be cut out. Although Lake Winnipeg was not the main breeding ground of the fowl, it was a great flyway, and seemed to be the last stopping point of the northern fowl in the spring. The Indians said the wildfowl did not stop again till they got away north. Along the McKenzie River they breed in the willows, on the sandbars. They start south as soon as the young can fly.

[To be concluded.]

DAYTON, Ohio, July 7.—Under the Ohio game laws the squirrel season opened July 1, and the hunters have found fair sport, but no big bags are reported. Both gray and fox squirrel are plenty, but leaves on the trees are so large that the game hides securely. Young woodcock are of good size and the marshes are full of birds. The open season begins next Tuesday, July 15, at which time dove shooting will also break out all along the line. Prospectors report more doves even than last year, but young birds are scarcely large enough yet, though all are very fat. By reason of almost universal respect for the law, and the favorable winter, all southern Ohio is occupied by quail. There has been no shooting, and the birds are astonishingly tame and have not been near as careful as is their habit in hiding and guarding their nests, nor have they mated off so sharply. The whistle of the birds is heard along the roads and even in the towns and villages, and nests are found everywhere. Chris Rohrer, a farmer four miles from this city, discovered a nest in a field with seventy-four quail eggs in it, and his neighbor ran upon a nest with thirty-four eggs. John Cosler, a few miles further out, near Byron, Greene county, in mowing, preparatory to starting in his reaper, uncovered a nest from which three quail hens flew, leaving ninety eggs exposed to the astonished farmer.—B.

flew, leaving ninety eggs exposed to the astonished farmer.—B.

CANADIAN WILDFOWL.—53 Victoria, Chapter XX.—An Act to amend the Quebec Game Laws. (Assented to 2d April, 1890). Whereas the law, in limiting to the 15th of April, instead of the 1stof May, as was formerly the case, the time during which the shooting of wild ducks is permitted, is very prejudicial to hunters and the public in general; Whereas, during that time large numbers of ducks called "golden-eyed ducks" (canards cailles) frequent our waters, but do not remain or lay eggs here, but on the contrary they migrate to other countries where they are hunted, and the survivors return here the following year at the same time, as birds of passage, to disappear again immediately, so that the Province is deprived of all benefit, without profit to any one therein, and whereas the same applies to widgeon and teal; Therefore, Her Majesty, by and with the advice and consent of the Legislature of Quebec, enacts as follows: 1. Clause b of the first paragraph of article 1400 of the Revised Statutes of the Province of Quebec is replaced by the following: "b. Any widgeon, teal or wild duck of any kind, except sheldrake, loons and gulls, between the 1st day of May and the 1st day of September in each year." 2. This act shall come into force on the day of its sanction.

Our Western Number.—Portland, Oregon.—Your issue of June 12 was very interesting, indeed. Henry Kleinman's article on duck shooting is intensely interesting and instructive. The Kleinman boys, withoubt doubt, rank among the very best duck shooters in the country. It is to be hoped that you will call upon Abe and John before you get through. Few men have had the opportunity and inclination to hunt and study the habits of ducks as they have almost lived among them all their lives, their home being on the great Calumet Marsh, which is miles and miles in extent and which in years past was annually visited by millions of water fowl. Mr. Loyd's article on prairie chicken shooting is also very good, and is refreshing to all who have enjoyed this rare sport. In the same number there is a very good article by Mr. Mussey on trap-shooting, which the managers of our tournaments, it is to be hoped, will ponder over and govern themselves accordingly, if they wish to make trap-shooting popular. Taken as a whole, this is a banner number.—Northwest.

Wm. Malcolm, known to rifle shots as the manufacturer of rifle telescopes, died at his residence, 101 James street, Syracuse, N. Y., at 2:30 A. M., July 12.

GLOVERSVILLE, N. Y.—Woodcock seem to be abundant. There are lots of birds.—McK.

FISHING NEAR NEW YORK.

FOR practical and specific directions to reach several hundred fishing resorts within easy distance of New York city, see issues of 1889 as follows: April 18, April 25, May 2, May 9, May 30, June 6, June 13, June 20, June 27.

ANGLING NOTES.

WHILE fly-fishing in Lake Laura (Pike county, Pa.) last week, Mr. Alfred Roe, a member of the Blooming Grove Park Association, hooked a black bass weighing about half a pound. As he reeled it in toward the boat, a large pickerel made a savage dash at the bass and fastened his teeth in him. As they passed the boat, the guide, by a lucky and skillful sweep of the landing net, captured them both. The pickerel weighed a trifle over 3lbs. The bass was so badly injured that it could not be returned to the water. One of the club members took a black bass in the same lake that had just swallowed a small bird. The tail and legs were still sticking out of the fishes mouth when it rose to the fly. The bird had evidently fallen out of its nest from some overhanging tree or bush, and, being too young to fly, had fallen a victim to the bass.

Mr. John Codville, a famous Canadian angler and an experienced fly-fisherman, had the good fortune to kill a 4½lb. trout recently. He says that of all stubborn fights he has ever had with bass, trout or salmon, this fish took the lead. He hooked him in the river about half a mile above their club house and fought him for one hour, when it became too dark to see what he was doing. So he allowed the cance to drift slowly down to the club, towing the fish along. Here some members brought out lanterns and by their light he was enabled to get his fish near enough to the cance to allow the landing net to be used. Time 1½ hours.

If reports speak truly, the salmon are having a hard time of it in the upper waters of the Hudson. Jigging and spearing at Mechanicsville, and netting down in the lower part of the river will interfere greatly with the efforts of the fish commissioners.

The trout hog seems to thrive about the Maine waters, judging from the catches published in the local papers in that State. Catches of from 100 to 200 trout per day seem to be in order, and the average weight about 20x. Shades of Izaak Walton! Tothink of people calling themselves anglers that do such things. The writer once had the misfortune to "go out" with such a party. Slinging out trout with bait poles by the hundred and drinking whisky by the quart seemed to be their chief ambition.

Weakfish are now quite plenty, particularly in Barnegat Bay. In fishing for these fish now, it is necessary to use hooks snelled on piano wire, owing to the great number of bluefish in the bays. These rascals cut off the gutsnelled hooks as fast as the angler can put them on. The weakfish prefer the pearl hook to the plain hook; but in using the pear-lmounted hooks a! little bait, either crab or shrimp, should be used, and a good-sized swivel is sinker enough. Many anglers use too much lead, and the result is that their bait is taken by the crabs, toadfish, sea robins, etc., that haunt the bottom.

Mr. J. M. Clark, of Chicago, Ill., has just published an interesting little book called the "Anglers and Sportsman's Guide." It is profusely illustrated and has several maps of Western fishing grounds. It also contains a number of articles on fishing, camping, cooking, fly-casting, bait-casting, etc., etc., by well-known writers. It is particularly interesting to Eastern sportsmen in that it shows the difference in the tackle used by Western and Eastern anglers. For instance: Eastern anglers favor the double multiplying reel, while West the quadruple is all the rage. And in rods as well as in many things there is a marked difference in the articles used.

Angling Hints.—Editor Forest and Stream: In the last issue of Forest and Stream I notice that "Big Reel" sighs for an oil can that won't leak. Has he tried the "perfect pocket oiler." advertised in "our" paper by Cushman & Denison, 172 Ninth avenue, New York? My experience with this oiler has been entirely satisfactory, having used one for about a year I found it perfectly free from leakage. I have persuaded a number of brother sportsmen to use them and have not heard a word of complaint. It is a neat and handy little contrivance, and is exactly what the sportsman needs. They are made in two sizes, either of which are convenient for the pocket. Try one, "Big Reel." Just why the manufacturers of the "American spinner" do not put their address on each box or bait has long been a mystery to me. I had one given to me by a friend a couple of years ago, and when it began to show signs of wear I was in a quandary how and where to duplicate it. Our wholesale houses did not keep them. Finally I got on the trail and now keep them in stock. McHarg & Co. need not be ashamed of them, for No. 6 B is one of the very best artificial baits I ever used for bass. Another killing bait is the new one manufactured by the Syracuse Bamboo Furniture Co., called the "glittering gang bait." I've made some fine catches of black bass on it this spring. It is something quite new and has a very attractive appearance. The above hints are in return for many that I have profited by from "our family," through Forest and Stream.—Koshee (Gravenhurst, Ont.).

M.R. George Price, whose advertisement appears in another column, will recover and not an order and now have a sure of the column will recover and cover and mother column. Will recover a proper and column and the column. Angling Hints.—Editor Forest and Stream.

MR. GEORGE PRICE, whose advertisement appears in another column, will remove his business to larger and more commodious quarters at 171 East Eighty-fourth street in a few days. Mr. Price has been compelled to make this change on account of largely increased business. He is making a specialty of fine fishing lines, and has some excellent Cuttyhunk bess lines now on hand,— Adv_i

SOME MASCALLONGE EXPERIENCE.

[Concluded from Page 493.]

THE morning after our loon adventure, Mac and I walked half a mile through the woods to the bridge over the Whitefish thoroughfare. Bert took the boat around, an hour's journey, full of mosquitoes and crooked water. Then we took a whirl or two around Whitefish didn't raise a 'lunge, got to catching pike, which we didn't want, grew disgusted, and ran back to Virgin in time for lunch at the house. There are good fish in Whitefish, but you take your chance there, as everywhere.

That afternoon we spent on Virgin. The water was very rough. We caught plenty of pike, and some good ones. There was a bit of deep, still water back of the island, among the rocks. We rowed past there, and all at once on Mac's line there came that great, angry, splashing, leaping strike, and we all shouted "'Lunge!" Bert began to pull for the middle of the clear water, but to our surprise the fish, which we had seen to be a good one, made no fight at all. "There's something the matter here," said Mac, as he towed the fish alongside and skated the transport of the was freshly the present and heading from one and to the other, its brid.

here," said Mac, as he towed the fish alongside and skated it into the boat

The matter was plain enough. The fish was freshly bruised and bleeding from one end to the other, its briliant armor broken and crushed in half a dozen places. No wonder it did not fight. We rowed back to where the strike was had, and there we found a large rock, about six inches or a foot below the surface. On this the fish had unquestionably struck as he fell back from his rise. This was one of the most singular incidents I ever saw in fishing, and it certainly shows more clearly than anything I could say, the tremendous blind fury of the mascallonge in striking. This fish was about 81bs., and was perhaps the largest we took. The muscles along the back and shoulder were crushed and broken in. We made great sport of Mac about this, and got even with him on that fish strangling story by telling him he couldn't eatch a mascallonge without first banging him to death on a rock. I will back W. W. McFarland, of Austin, a Chicago suburb, against any man on earth, to catch live wild mascallonge by knocking their brains out on a rock, 31 yds, rise, both men to wear stockings on their hands. I don't want any foolishness about this. Chicago leads the world.

We saw the team arrive that was to take us over to

31yds, rise, both men to wear stockings on their hands. I don't want any foolishness about this. Chicago leads the world.

We saw the team arrive that was to take us over to town, and therefore reluctantly turned our bows inshore. We paused long enough to take a turn around a promising bar which we had discovered, lying hidden away out in the lake. Mrs. Russell had taken a good 'lunge near here the day before, and she told us that she had struck and lost a very heavy one, which she had 'thought was a log or snag at first," We were just turning to leave when I felt something strike my hook or jar my line, I could not tell which. "'Nother pike," I grumbled, and gave the line a snip with the rod, when, just as the spoon left the water, out came a mascallonge, full glory, zebralike, quivering. "Whar is that spoon hook?" said he, anxiously. "Did any of you fellows see it? Did—" but by that time his voice was drowned in the silvery wave, and we sorrowfully and swearfully rowed away. This was about an 8lb. fish. Observe my moderation. I could make it 40lbs, just as easy. He barely nicked the hooks, and we could not make him rise again.

We now bade farewell to our quaint and kindly host and his wife, and indulged in the luxury of a wagon ride over to town. A ride of this sort in that country is not luxurious by reason of its comfort, but because it comes high.

It was now time for Mr. McFarland to go home, and

luxurious by reason of its comfort, but because it comes high.

It was now time for Mr. McFarland to go home, and this he did at 10 P. M. He took a fine box of fish down with him. He had been out a little over two weeks, and had taken, I believe, thirteen mascallonge in all, averaging about 5 or 6lbs. each. He always fished two lines. At Russell's our fish had been buried in a mossy swamp, with a chunk of ice on top of them. We put them on ice at the station, and although it was two days later before I opened my original package, I found the fish in perfect condition. I had just an even barrelful of fish and ice. This was out of what Mac and I caught in a day and a part of a day, and we gave Bert a quantity of pike and a few pickerel. We at once threw back nearly all the pickerel we caught. I don't know what any one would want of any finer fishing than that, and as for the big mascallonge, I'll get him some day sure, so I'm not worrying about that. I must say that I never caught a load of fish so quickly and easily in my life, though I never did care anything for trolling.

I was to have gone up to Gogebic, under Mr. Vliet's invitation to meet him there, but I heard that friends of his had wired him to come on down to Three Lakes, and later I heard he had passed down the line to Milwaukee, suffering from prostration due to overwork. This was hard news to hear, for Mr. Vliet is a genial and hearty gentleman, only less fond of sport than he is addicted to hard work. His early recovery is hoped by many friends, who told me that his illness was really severe.

I mentioned Mr. Bonnell as one of Mr. Vliet's party. It

many friends, who told me that his illness was really severe.

I mentioned Mr. Bonnell as one of Mr. Vliet's party. It seems that the bass fishing was not yet good at Gogebic, and Mr. Bonnell and two friends whose names I could not learn, had come down here to try for mascallonge. They got Blodgett to take them out on the "Main Chain," and they fished Planting Ground and Long lakes the same day that Mac and I fished Julia. We heard that they brought in five fish that weighed 83lbs. That was as near as the hotel keeper's conscience could come to it. We asked Blodgett about it, and he said that the heaviest fish weighed 22lbs., but that all were good ones. His boat caught four fish, he himself landing three out of the four on a hand line, as I heard it. It appears that early in the morning Blodgett's angler, whom he speaks of as the tenderest kind of a tenderfoot, was kicking because a mascallonge did not come and get in the boat, as per contract, until Blodgett got tired of it and calmly rowed him across the lake and put him ashore, telling him he could swim if he wanted to get home. At this the young man made amends and was taken back in the boat. That afternoon they struck seven mascallonge, and owing to bungling, unexperienced and excited handling, the angler lost three, all the largest ones. On one spoon hook two of the hooks were broken off and the fish got away. Another time, such was the strain put on the line by the frantic young man, that the entire gang of three great hooks was torn off from the No. 8 spoon and a magnificent fish lost. This disgusted Blodgett and he took a hand in the game himself. That must have

been high jinks on the lake that day. In the other boat the two anglers tried to land a 15lbs, mascallonge in a landing net. Holy Moses! They will never try it again, on that fish at least. He smiled adieu. How many fine fish these poor people did strike that day I do not know. I am accurate only in giving this story as it was told to me. All this time here had been Charlie Gammon and Mac and Will Cribben and Tom Smythe and myself, some of us, at least, good, plain single-handed fishers, wandering all over the country after just what these fellows, unable to handle it when they got it, had found right under our noses, in old and fished out waters. When I heard of that I could no more go home than I could fly.

ord in w. "I'll row you over that ground to-morrow," said Blod-tt, "and if we don't strike a big 'lunge I won't charge

you a cent."
"I'll go you," said I.

"I'll go you," said I.

On the next morning we walked down to the little round lake which runs up into the edge of the town, crossed it, walked about forty rods, took another boat on the next lake, crossed it, went up the creek to the big sheet of water known as Planting Ground Lake, itself a water that has yielded hundreds of great fish, trolled around its best shore, ascended the short "river" up to Long Lake, fished the latter hard and steadily and faithfully all day long, caught a few little pike—and never saw or heard of the first sign or suspicion of a mascallonge.

Such is life. It may have been the rain of the night before, it may have been one thing or another, or then again it may have been something else, but anyhow, we didn't have a strike all day. And yet those other fishers had a dozen only two days before, on the same water. I talked with Blodgett a good deal that day. He told me that the largest fish ever taken on these waters was caught at the mouth of the river running into Planting Ground. This fish was taken on a handline by a Mr. Saunders, of Wansau, Wis. It weighed 55lbs. Blodgett was rowing, and they shot the fish four times, straightened a gaff on him, and finally got him by the gills, and both lifted him into the boat.

Blodgett told me that these were the waters where that celebrated and execrated angler, Dr. Robert Hunter, of Chicago, used to come four or five years ago. Blodgett told me that he knew Dr. Robert Hunter, of Chicago, to leave 300lbs. of mascallonge to rot in one heap on the bank at one time. Blodgett said that Mr. Winans, of the Wabash road I believe he is, whom I mentioned last year as having "good success," used to come up with Dr. Robert Hunter, of Chicago, and used to fish these waters. In common with Dr. Robert Hunter, of Chicago, in more of those infernal automatic spring boxes for winding up mascallonge, first contrived, so I am informed, by the learned person before mentioned. Mr. Winans, so Jim Clark, of Wilkinson's, told me, was for a time inclined to brag a little about his automatic spring contrivance for winding up mascallonge. It is self-acting, gentlemen. By its means you can catch 300lbs. of mascallonge, so many that you will be obliged to leave them to rot. A child can operate it. Its invention is due to the brain of a fishing philospher whose modest ambition was only to kill every fish in the lakes, if he could. Step up, gentlemen, and by one. Join the ranks of the noble anglers who never go out without bringing in fish. Have a share of our glory, gentlemen. Now, I suppose, if I sat down and tried I could find some prett

175 MONROE STREET, Chicago.

OMAHA, Neb., July 9.—Large quantities of inferior black bass are being taken from Horse Shoe Lake, and the pick-erel at Honeycreek never were more ravenous.—GRIS.

CANADIAN CLUBS AND WATERS.

UEBEC, July 10,—Quite a revolution has been caused among the angling fraternity of the quaint old Rock city of Quebec. The exhibition of some magnificent specimens of ouananiche and brook trout in the show windows of the Chinic Hardware Co., prizes of the members of local chubs, have set our resident and visiting anglers on the qui vive for sport.

Numerous parties left for the fishing grounds in this district within the last two weeks, some in quest of the gamiest fish existing for his inches—the ouananiche of Lake St. John; others after the equally gamy but more beautiful Salmo fontinatis, the speckled denizen of our waters.

beautiful Salmo pontinutis, the speckled denizen of our waters.

Many salmon anglers are now returning to their homes, a delighted with the sport experienced this year. The king delighted with the sport experienced this year. The king delighted with the sport experienced this year. The king of a month. The largest salmon (eaught was the prize of D. C. Yates, Leag., and weighted 33-libs; over 15,000bs. of fish were killed by the party. The Natalquen River is furnishing grand sport this year. Next trip will be sport this year. So the sport this year. Next trip will be sport this year. So the sport this year. The sport this year. So the sport this year. So the sport this year. The sport this year. So the sport thi

prestige of this beautiful sheet of water far above the average yet obtained. A party of three brought home one evening sixty-five most tempting specimens, averaging 14lbs. the largest being 54lbs. This is, however, extraordinary luck. The same luck will reward the angler, who, with the patience of good old Izaak, will await the peculiar and untimely eccentricities of Mr. Trout. He does not always take the fly here, but when he does there is great sport.

The Springfield Club has relapsed once more into quiet and solitude since the departure of its late members from Springfield. Many a pleasant narrative will be the result of the grand sport experienced by these gentlemen on their late excursion to their limits. They will soon be with us again, however.

their late excursion to their limits. They will solve us again, however.

The Q. and L. St. John Co. are doing a lively business on their road, and every day sees the parlor car well filled with anglers bound for the famous onananiche. No less than 50 to 100 guests are continually at the Robeval House. Parties leave daily on the steamer for the Grande Discharge, the Peribonca and Mistassini Rivers. The largest ouananiche killed last week was by Dr. Chas. Parke of this city, and weighed 5lbs. The best tackle and flies to use in our district I will give you in next itsue.

FONTINALIS.

THE RED HOUSE CLUB.

THE RED HOUSE CLUB.

THE grounds of the Red House Gunning and Fishing Club lie around the south end of Shelley's Island, which is situated in the Susquehanna River just fourteen miles east of Harrisburg, Pa. They are reached by the Pennsylvania Railroad on the east, and the Northern Central on the west side. The grounds extend from the island to the north end or head of the Conewago Falls, which are famous for bass and wall-eyed pike (pike-perch). There are at present thirty members in the club, all from Harrisburg. They have leased a small plot of ground upon which there stands a one and a half story log house, weather-boarded and plastered, and one of the oldest houses of the country, having been built in 1787. The house is well furnished. Carpets, easy chairs and beds are in place, and there are plenty of comforts. There are sleeping accommodations for twenty persons, but a much larger number can be dined. A well of excellent water is on the property, the bottom of this well is chiseled from solid rock in the shape of a basin. Dr. H. says the water is so cold that it makes one's teeth ache. A fine grape arbor, 30ft. in length, shelters the well. There is a promenade leading south from the house to the river, on the banks of which are stately elms, around which have been erected two platforms having seats. This forms one of the most attractive retreats of the place, and is reached by a bridge. Great efforts are being made to make the grounds about the house beautiful and attractive. One-half of the property is converted into a park, arbors have been erected, upon which pretty vines are now growing. Walks have been laid out, flowers and numerous varieties of fruit trees have been planted and add to the natural attractiveness of the resort. The balance of the ground is devoted to the raising of vegetables for the use of the club members and their friends. With the present activity and enthusiasm this club is making its retreat a very pleasant place, and it promises to be one of the best in the State. There is a

house with room for twenty-five boats. The club has now a number of canvas canoes, ducking boats and dories.

The fishing here is excellent; bass and pike-perch ("salmon") being the gan-e fish of these waters. The Falls of Conewago are noted for their fine bass and "salmon" fishing, and anglers from other grounds and considerable distances come here when, as they say, they "want to catch fish." The river at this place seems to be especially suitable for the bass and "salmon." In some places the water is 18ft. deep, forming quiet pools; a little further on it will be found shallow, rapid and turbulent. The most remarkable catch for one day that has yet been made off Red House was that by Mr. N. Russ in August, 1889, when he succeeded in landing 160 bass. Mr. R. is said to be one of the most expert anglers in Harrisburg and has been dubbed "professor" by his friends. Dr. Hollingshead is credited with having taken on very light tackle the two largest bass that have been caught in this locality. Both were taken the same day and weighed 6 and 64lbs, respectively. Besides these two monster bass the doctor took twelve which averaged 14lbs, each. The tackle used by the members of the Red House Club is of the latest and most approved patterns. Mr. Russ has a simple, but convenient, way of carrying his flies when he does not wish to be bothered with a bulky fly book. He puts each fly separately into an envelope, which he is careful to seal and plainly label, he writes on each paper the name of the fly it contains and the number of the hook. The envelopes are made two inches long and one inch wide. These can be stowed away in the vest pocket without danger of tangling or getting mixed up, and are easily found when wanted. Mr. R. makes no charge for the hint and only desires that anglers try his way of carrying flies.

The most killing baits used near or at Red House to the state at the atom catfield belarantites and minowy. The last

ing flies.

The most killing baits used near or at Red House are the stone catfish, helgramites and minnows. The last mentioned are not much liked here. Bass and fall-fish (Semotilus) are caught with the artificial fly.

Another of the many attractions of the Red House is the fine collection of stuffed birds gathered together by Dr. Hollinshead. This collection consists of the following game and other birds: Mallard, redneck, bluehead, stiffey, whistler, wood-duck, black duck, teal, bluebill, sprigtail, bufflehead, widgeon, Canada goose, sandhill crane, woodcock, woodpecker, German stork, hawk, quall, jay and others. Squirrels, rabbits and other stuffed animals are also included. The Doctor is adding to this collection and hopes to increase it largely.

STEHMAN.

STEHMAN.

PERTH AMBOY, N. J., July 11.—Trolling for bluefish is all the go just now along the south shore of Raritan Bay between South Amboy and Keyport. The fish weigh from 3 to 5lbs. and give great sport. One boat took 19 in about one hour this afternoon. Weakfish are biting also, and porgies are numerous, while menhaden have appeared in the most astonishing quantities. Several sloops and steamers engaged in catching the latter in purseness were caught last week by the police, and their captains and crews were arrested and fined for illegal fishing.—J. L. Kearney,

CHICAGO AND THE WEST.

CHICAGO, July 3.—Mr. Jack Cudahy, one of the wealthiest of Chicago's young business men, is off at Macinac Island with his yacht and party, and has sent down for a lot of tackle suitable for fishing in Lake

sent down for a lot of tackle suitable for fishing in Lake Superior, whither he contemplates going.

Mr. C. F. Hills, president of the Fox River Fish and Game Protective Association, on having laid before him the matter of the destruction of bass below Yorkville by the "jumping" process described last week, remarked: "It is clearly against the law. We will look into it and prosecute promptly at the first opportunity. Our agent, Mr. Buck, has lately passed through that section, but heard nothing of what you describe. We have to report now that every dam on the whole length of the Fox River is supplied with the proper fishway. This we have accomplished at the expense of much trouble and considerable litigation."

Mr. Hills told me that last week he had a good day

accomplished at the expense of much trouble and considerable litigation."

Mr. Hills told me that last week he had a good day with the bass on Grass Lake, his boat taking fourteen, and being then obliged to stop on account of a storm. During that trip Mr. Hills met with a peculiar accident. He pricked his hand slightly with a fish hook, thinking nothing of it at the time. Blood poisoning set in, and now he has a very bad hand of it.

There have been comparatively few trout caught by parties out of Chicago this season, for those who went brought back discouraging stories of very high water and unusual numbers of mosquitoes. It is probable that the trout fishing will now be shelved till the cold nights of August have made life and fishing in the woods take on pleasanter aspects. Numbers of parties are out after bass now, and the hundreds of trains that leave town tomorrow will be crowded with anglers bent on celebrating the "glorious" in a more or less moist or aqueous way. If luck favors the writer, he will shoot his firecrackers this year on the banks of Cedar Lake, Indiana, in company with a limited number of friends who prefer fish to eloquence. But in front of all this there hangs a tale which needs telling, since few tales ever were happier in the happening.

July 9.—Mr. J. E. Reddock, a fly-fishing resident of

which needs telling, since few tales ever were happier in the happening.

July 9.—Mr. J. E. Reddock, a fly-fishing resident of Yorkville, 51 miles from here, on the Fox River, writes me under date of July 8: "Good fly-fishing here now." I do not believe a fly-fisher would make any mistake in going down there now. Mr. Hoyt, of Aurora, informs Mr. Loeb, of Spaldings, that some of their fly fishers have lately had good sport on the Fox, both above and below Aurora, baskets of 20 and 30 fish having been made.

Mr. De Long, of Brooklyn, N. Y., was lately in this city. He says that this paper last summer reported him as having been fishing up in Wisconsin, when he had never been there at all. The grade of Mr. De Long's refreshments must have resembled the quality of mercy. Certainly he must know that if this paper ever said he had been fishing, he must have been fishing, whether he could remember it or not.

July 12.—The anglers of Aurora, Oswego and other towns along the Fox have had fine fly-fishing for smallmouthed bass for the past week, the water being now in good condition. A Mr. Kendall and his brother caught 18 bass that weighed 30lbs, one day. The former gentleman took fifteen bass on another day, and ten on yet another. Brown-hackle, Gov.-Alvord, jungle-cock and ibis were the flies used, and these were tied on No. 3 hooks.

ANGLING IN COSTUME.

ANGLING IN COSTUME.

A JOLLY party was in camp by Lake Foley, no matter where, having good luck fishing, catching black bass, croppies and pickerel. Inasmuch as two barrels of these fish were caught the last two days, some of the bass weighing 5lbs. and pickerel from 7 to 11lbs. by the scales, it may be accepted as proof of fine sport.

One afternoon, when the boats were in and the boys were constructing dinner, a carriage was driven up on the little by-road and out stepped a gentleman dressed in the altitude of fashion. He proved to be a friend of one of the party and was cordially greeted, notwithstanding his silk hat, swallow-tail coat, low cut vest, expansive shirt bosom, kid gloves, patent leather shoes, silk umbrella and a red pongee kerchief, cunningly showing from a side pocket. The contrast, glancing from this pleasing spectacle to our mud-stained apparel, slouch hats and bronzed countenances, was severe, and there was difficulty in restraining remarks.

The gentleman explained without hesitation that he was going to a wedding, at the railroad station four miles away, and happening to hear that we were at the lake, and having several hours to spare, he forthwith determined to come out. He was sorry to appear in polite society in such incongruous rig, but hoped we would pardon him under the circumstances. No one hated a plug hat more than he did, he had frequently waked up in the night for that especial purpose; but the demands of society are inexorable, and he trusted, in spite of appearances, they would concede his intentions were honorable.

"Say, boys, lend me some tackle and one of these boats,"

Say, boys, lend me some tackle and one of these boats,"

The request staggered the community speechless for a moment, then one who regained composure soonest ex-

claimed:
"What! fish in those robes?"

"What! fish in those robes?"

"Certainly; good enough, ain't they? There's some aristocratic and lordly fishes out there, judging by these strings of yours by the platform, and I want to renew my acquaintance with them—Colonel Bass, you know, Sir John Pickerel, Admiral Croppy, not to mention Jonathan Sunfish, ex-Senator Perch, and Rev. Mr. Pout. I'd dearly love to take 'em by by hand and be sociable, I love to mingle with the throng."

"Mingle is good," said a voice in rejoinder, "and they are all there, even Major Eel and Sergeant Dogfish."

The request was readily granted, and Leather Breeches, our boy of all work, said he would take the gentleman out.

our boy of all work, said he would take the gentleman out.

We sat down to our frugal dinner of baked mallard, boiled pickerel, fried bass, broiled prairie chicken, with mushroom sauce, claret de Maxinkuckee, and yellow-jacket pudding, most of which was formulated by a railroad man among us, and served in a way that would have made John Chamberlain sigh with envy.

While we were attending to these articles the patter of rain was heard on the roof, and, with thoughts of our swallow-tail friend, the door looking out on the lake was

opened. And there was an exhibition. Leather Breeches was holding the silk umbrella over him, and the gentleman hauling in bass, taking the umbrella when a fish was brought to the boat, while the boy unfastened and re-

man hauling the silk umbrella over him, and the gentleman hauling in bass, taking the umbrella when a fish was brought to the boat, while the boy unfastened and rebaited the hook.

It didn't rain much, and in the course of an hour our odd friend came in with five bass, two croppies, and a pickerel that weighed 7lbs.

"Returns all in—population not over-estimated—splendid showing—St. Louis nowhere—card reception"—he went on blithely as he came up. "Gentlemen," he added, brushing off the only speck of dirt on his evening toilet, "T've got to catch the 6:30 train. I certainly am greatly obliged for distinguished consideration. Fish always bite best when it's raining. I'll tell the bride and groom I met you. That pickerel came near getting into this shirt front. I'd rather fish than be married. That's a nice rod, action and balance perfect. There's mycard, and if you'll all dine with me at the Palmer next Wednesday evening I shall feel honored."

Then, thrilling Leather Breeches with a dollar, he took

Then, thrilling Leather Breeches with a dollar, he took is departure amid exclamations of "Come again!" Don't go!" and the like, in which the trees and the reeze participated.

Jerome Burnett.

FISH NOTES FROM CAPE COD.

FISH NOTES FROM CAPE COD.

CODFISH continued plentiful in Buzzard'a Bay and Vineyard Sound during May, large numbers of them having been taken in traps and lobster pots—a thing leretofore unknown in this region. A fish trap at Tarpaulin Cove caught 500 at one haul, weighing from 5 to 101bs. each. Little cod, 3 to 4in. long, left the shore last week; we never catch them when the water gets above 60°. Tautog are almost entirely absent from these waters. A very few small mackerel have been taken in Buzzard's Bay. Some large ones, measuring 18in. in length, were caught south of Martha's Vineyard last week. One Spanish mackerel was taken last week. Kingfish are being caught in larger numbers than 1 have ever seen before. A few small weakfish or squeteague, averaging about 21bs., have been obtained. John Vedder caught one that weighed 151bs. dressed—a very unusual size. The run of scup has been very small. No fish trap in Buzzard's Bay has taken more than a twentieth part of last season's catch, and that was not more than two-thirds of the yield in 1888. I think no trap has secured 50 barrels. The trap at Ram's Head, which took 1,000 barrels last year, has caught 5 barrels this season, and those were obtained this week; they did not get a scup in May. On May 19 lots of small scup struck in; they were 5in. long and fifteen of them weighed 11b. Some mornings there were as many as 60,000 in each of the traps about Wood's Holl. They continued plentiful until last week, when they began to grow less and less, and this morning (June 24) there were very few. These scup are of the size usually taken early in November, when the species leaves us. It seems that they must have hatched somewhere South in December or January. There is a run of these small scup every year, but only a few of them, say from 100 to 300 a morning in the traps for about a week, and then they are gone. Sea bass have been scarce. One trap at Menemsha, on Martha's Vineyard, caught twice as many as last year, but I do not think there is another that has tak

large numbers of sea bass and young lobsters.

Wood's Holl, Mass., June 12. VINAL N. EDWARDS.

[Mr. Edwards has had 20 years experience as a collector at Wood's Holl and is naturally an expert in the field. When he cannot find a single species of fish on a particularly rich shore, where we have often taken 25 kinds at a haul of the seine, the conditions must be unique, and we would be glad to have an explanation of the phenomenon.]

JUMPING BASS.

JUMPING BASS.

Editor Forest and Stream:

Mr. Hough's information about "jumping bass," as given in his last letter (and by the way his letters are always interesting and informing), reminds me of a little experience and considerable sport enjoyed by the writer some thirty years ago on the Little Miami River near Loveland, about twenty miles above Cincinnati. I was stopping with a relative whose farm lay along the river, and I was often in his boat bass fishing. One morning, after a heavy rain the night previous, I went out in company with my cousin, but the water was so muddled that fishing was a failure, and skirting the shore, keeping out of the current, we spent the time "projeckin" around, until the splash of the inshore oar caused a good sized bass to leap fairly into the boat. We "caught on" to the "wrinkle" at once, and going up stream quite a distance floated down stream near shore, striking the water now and then inshore until we had quite a number of bass secured by this new, to us, mode of fishing. I have often thought since that when opportunity offered I should try the same plan to see if it would work as successfully, but have never done so. In this instance I believed and still believe that the fish were feeding in the roiled and higher water, and not that they were asleep as suggested by Mr. Hough's informant. Mr. Hough seems to think that it is a disreputable or question whether it is worse to scare a fish to death than it is to deceive him to the same end. As a means of sport there is no room for debate. We are both in the same lot.

I notice the comment of I. L. S. concerning my experience in Toronto with scales, and am very much obliged to him for enlightenment. I had feared that doubt and uncertainty and nightly visions of scaly disappointment were destined to dog my pilgrimage, but they vanish. It proves anew the potency of the FOREST AND STREAM in disseminating light and happiness. Long may it wave.

KEEPING FISH.—New York, July 14.—Editor Forest and Stream: Often, when having captured a large trout in distant waters, have I longed for some means to preserve my quarry and exhibit it to my friends and "the old folks at home." It has been an easy task to bring home an assorted array of touching finny legends—the kind that go right to the heart, but never damage it in the least. When a man tells a "corking" fish story, and then and there deliberately produces the veritable fish spoken of, his argument is, of course, incontrovertible. This leads to the point. I have found something, after a search of many years, that will really and honestly preserve fish for a long time. By "a long time" I mean that fish I sent home during the warm days of June last, were six days in transit, without ice, and reached New York in perfect condition. Last year, all the fish I sent over the same route, with plenty of ice, were spoiled. Strange that an article of so much real merit, has never been heard of among sportsmen, for it will preserve game of all kinds in absolute perfection. When, in May, I started for the camp of the Paradise Club in Quebec, I took a 5lb. box of "Preservaline." Upon arriving there I dissolved a pound of the white powder in two gallons of water, and all I did afterward was to lay my cleaned trout in the solution for two hours, then pack in moss—wet or dry—and ship home. Ten boxes of splendid trout were thus simply treated, and all reached New York as perfect and bright as on the day they were landed. I take great pleasure in recommending the article to sportsmen in the field or on the water, and I am surprised the manufacturers, whoever they may be, do not advertise it in Forest Ann Stream. It is too valuable an article to be lost to view, and its great merit alone prompts me to thus indorse it.—KIT CLARKE.

Maine Bass, Perch and Trout.—Boston, Mass., July

MAINE BASS, PERCH AND TROUT.—Boston, Mass., July 1.—Many thus far this year have gone from this city to Maine, as the New England angler's reserve for their favorite sport. As a whole, so far as my knowledge goes, those who went early in the season are more pleased with results at Moosehead than at Rangeley. Among the angling vacationists, at the present time, a very large number are at Cobbassecontee and Long Pond for black bass and white perch, and an occasional landlocked salmon. This year I am informed the Commissioners of Fish and Game have had the ponds from Monmouth to Belgrade well stocked with this game and toothsome fish. A number of my friends from the large mercantile houses of this city are now at Harmon's Grove, Cobbasse contee Lake, taking from 24lb. to 5lb. black bass and smaller white perch in out of the wet with great glee. At Chandler's Mills, Belgrade, the enterprising landlord of the hotel has launched a steamboat upon the waters of Long Pond, whose patrons have great success. I fear this boat will still be the cause of depleting the fighting black bass and the very popular white perch. Some of the apostles of rod and reel have just returned from the Dead River region. They are very enthusiastic and report wonderful strings of beautiful trout.—J. W. T.

MAINE WATERS.—Boston, July 14.—The trouting season is about over, and yet nearly every passenger train out of Boston is graced with a number of fishing rods. July 4 came on Friday, and many of the trades voted to close over Saturday, while manufacturers, in many instances, shut down their mills from Thursday night till Monday morning. This gave a good chance to many a sportsman to try the trout for a day or two, and it was surprising to see the way the short holiday season was utilized. Trains were crowded to overflowing on the Boston & Maine, while the shorter lines in Maine were well patronized. Still the record of trout caught is not a very heavy one, though the general report is that the fishing was even better than anticipated. That same week Prof. J. F. Moody, of the Edward Little High School, at Auburn, Me., with his little son Frank, fished the Russell Brook in Summer, with a record of 169 trout in one day, all of them large enough to clear the law, and one weighing 11b. and 13oz. Of the number little Frank, only 16yrs, old, caught 69. Some good records in the way of sea trout are mentioned, taken by Boston merchants and business men from streams on the Nova Scotia shore.—Special. MAINE WATERS.—Boston, July 14.—The trouting season

PIKE-PERCH IN LAKE GEORGE.—Editor Forest and Stream: In answers to correspendents, July 10, you state that Lake George, N. Y., contains pickerel, which are wall-eyed pike, Susquehanna salmon, etc. It is to be hoped, and very possibly this is correct, for some years ago Mr. Myron O. Brown, proprietor of the Sagamore Hotel, purchased and brought from Lake Champlain over 100 spawning pike-perch and planted them in the waters of Lake George, but from the day of planting to this not a single pike-perch, so far as diligent inquiry can determine, has been taken from the lake. The pickerel of Lake George are really pike, Esox hucius. Furthermore, the lake trout had not become almost extiact in 1889. The work of restocking the lake with lake trout was begun in 1873, and almost each year planting of fry have been made until the grand total amounts to over 4,500,000 lake trout that have been planted in Lake George, and the fishing never was better than it is this year.—A. N. C.

MAINE WATERS.—Wilson's Mills, Me., July 8.—Some very handsome specimens of trout have been taken from the waters of the upper Magalloway River, Maine, during the past few weeks. Mr. Jas. G. Menzies, of New York city, brought down a fine string numbering about 18 or 20, and weighing 1 to 2lbs. each, besides quite a number smaller ones. Mr. John P. True. of Boston, also took some in weighing from ½ to 1½lbs. Several parties from Berlin, Milan, and towns near by have taken good catches. One trout weighing 7½lbs. was caught in the Diamond River near its junction with the Magalloway a short time ago.—Sewes.

Albany, July 7.—The boys have returned from the Rushmore Camp on Lake Champlain. Fishing was not equal to last year, owing in part to the high water. They report quite a number of black and wood ducks in the marshes. I hope to help to thin them out in the fall. An engineer on the Fitchburg road caught a 10lb, salmon at Mechanicville last week, he claims on the fly; there are people who think it was jigged. It is a shame they don't put a fishway in the dam, as there are plenty of salmon seen trying to make their way up stream.—Dexter.

Salmon at Bangor.—Bangor, Me., July 11.—The club house is closed for the season. The season has not been a brilliant one. The highest number caught on any one day has been but seven. The river has been in a continued state of flood, from 6 to 8ft. running over the dam. The whole number caught has been 85. The fish taken were mainly of large size: the largest 1 am told 25lbs. The river is still full of fish, but they no longer take the fly. I have no doubt they might be taken readily with the fly at Piscataquis Falls, which is the site of the new pulp mill, known as Montagne, and where the usual procrastinations and evasions of wealthy corporations have still left legal promises of completed fishways unfulfilled. The fish are here left impounded in considerable numbers.—Penobscot.

LAKE CHAMPLAIN.—Albany, July 12.—I was at Burlington, Vt., last week and tried the wall-eyed pike, but it was the day after the tornado and the wind was still blowing a gale, which made it impossible for an ordinary boat to stay out on the reef. No one beside ourselves tried it. We worked hard but only got nine good ones. A few days previous they caught as high as 75 to a boat down off the Queen City Park grounds. This hot weather will send them in deeper water and that will end the shore fishing.—Dexter.

Hishculture.

WATER LIFE.

Occasional Observations on the Fishes in the Aquaria of the U.S. Fish Commission.

A NUMBER of observations, extending over several years, have convinced the writer that there are as great possibilities in the modification or adaptation of the more valuable species of fish as in those of an ornamental nature. It is said that in Japan there are bred small gold fish, perhaps three inches in length of head and body, with this a foot long and with other fins in proportion, and in view of some the species of the property of more ordinary. Japanese stock in this country we have no occasion to doubt this statement, were the authority doubtful. The two species of paradise fish (Macropodas) known to this country and Europe, to which they were introduced from China, are said to be wholly the products of cultivation. The wonderful things that these Asiatic people do in horticulture are well known. Dr. Shufelds stated to the writer that his father, the Admiral. It is not such useless modification as this, however, to which the writer has reference, but rather the gradual adaptation of certain valuable species to modified or restricted conditions. It will be noticed on placing common brook fish into a still-water aquarium that for a number of days there will be very evident distress to the respiratory organs, the restricted of the state of the stream of the service of t

and to be sure that the result was not owing to a want of air in the water the experiment was repeated in the same water when cold, without injurious results." As air is reabsorbed by water in cooling (just as it is expelled in henting, and in the same proportion though less rapidly) the inference drawn is based on false premises. And likewise all experiments of this nature which do not take into account the natural aerating agencies of nature, vegetable life, evaporation, etc., are useless, except as establishing a thermal death point under unnatural conditions.

It is the opinion of the writer that great changes or modifications have already taken place in the trout of various species by means of domestication, for purposes of propagation, and that, in the course of time, they may be adapted to the great rivers of the country, and the purpose of this article is to suggest experiments by the trout culturists of the country in the direction of the gradual adaptation of Salmonidæ to warmer and more sluggish waters. It is a matter worthy of discussion at all events.

It is in trout culture that the greatest advances in methods of artificial propagation have been made, and it is still throughout the world the great fishcultural school, and therein possessing a high value were there no other benefits derived from it; and there are, from recent observations, yet unexplored fields for the trout culturist. W.M. P. SEAL.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Brirgs, Secretary. Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brnnby, Secretary, Marietta, Ga.

COURSING.

Oct. 21 to 25.—Fifth Annual Meet of the American Coursing Club, at Great Bend, Kan. I. D. Brongher, Secretary.

EXT week we shall publish the dog fares charged by thirty Western railroads, and their rules governing the transportation of hunting dogs. This data has been furnished by the passenger agents for the benefit of Forest and Stream readers.

AMERICAN KENNEL CLUB AFFAIRS.

AMERICAN KENNEL CLUB AFFAIRS.

W E said last week that we expected to have for publication to-day the stenographer's report of the advisory committee meeting held July 3 to consider the charges preferred by Secretary Vredenburgh against Mr. C. J. Peshall. Mr. Vredenburgh has advised us, however, that it has been decided to withhold that report, pending a reference of the case to the American Kennel Club.

Meanwhile we have endeavored to get further light on the contract between Mr. Lewis and the stud book committee for the publishing of Parts II., III. and IV. of Vol. V. of the Stud Book, for it is on the alleged exhaustive character of this contract that Mr. Peshall has finally rested his case. The imperfect recollection of the several parties to this contract forcibly illustrates the capacity of a verbal agreement for subsequent dispute. Of the five persons who should know definitely the terms of the Stud Book contract, only two have been positive in their statements. Mr. Peshall has declared that the agreement was that Mr. Lewis should take all the receipts, pay all the bills and retain all the surplus or bear any loss. He has declared that it was thus an "exhaustive contract."

Mr. Vredenburgh, on the other hand, has declared with equal positiveness that Mr. Lewis took the book on the same terms that he himself (Vredenburgh) had managed it, namely on a fixed salary of 868,75 per month.

With a view of determining the exact nature of the contract which Mr. Lewis had with the stud book committee for the publication of the Stud Book, we last week sent the following inquiry to Messrs. Terry and Schellhass:

"Will you kindly advise us whether the statement made by Mr. C. J. Peshall, that for the publication of Parts 2, 3 and 4 of Vol. V. of the American Kennel Club Stud Book Mr. A. D. Lewis had an exhaustive contract; that is to say that the agreement was that he should take all the receipts and pay all the expenses and retain the surplus as his remuneration? If there was such an agreement can you tell us when i

The replies were as follows:

Editor Forest and Stream:
I have yours of the 11th, and in reply beg to say that I have been a member of the Stud Book Committee of the American Kennel Club since its inception, and with my knowledge and consent no such contract has ever been made.

Thos. H. Terry. NEW YORK, July 12.

NEW YORK, July 12.

Editor Forest and Stream:
In reply to your note asking me on what terms Mr. A. D. Lewis was to publish Parts 2, 3 and 4 of Vol. V. of the A. K. C. S. B., I would say that it was understood that, should there be no profits from the said publication, Mr. Lewis was not to hold the A. K. C. for any salary, and in any event his salary was not to exceed any profits that arose from the publication.

HERMAN F. SCHELLHASS.

NEW YORK, July 14.

In order to get more definite information of their under-standing of what the contract actually was, we called upon Messrs. Terry and Schellhass, and also met Mr. Lewis,

Mr. Terry said that his recollection was somewhat indefinite, but his impression was that Mr. Lewis was to have the income or profits from the Stud Book up to the sum of \$1,500, but that any amount which came in above that sum was to go to the club: that is to say, if the profits should amount to \$1,501, the \$1 would not be Mr. Lewis's but the American Kennel Club's. Mr. Schellhass said that at the time of Mr. Lewis's appointment he had been connected officially with the club only a short time, and that he had not known officially what Mr. Vredenburgh's arrangement with respect to the Stud Book was, but unofficially he had always supposed that Mr. Vredenburgh was publishing the hook and taking the surplus as his remuneration. As to the arrangement made with Mr. Lewis, Mr. Schellhass said, his recollection was indistinct; he would only say that his remembrance of the contract was that Mr. Lewis was to take the book for what there was in it; and in the event of any loss he was not to hold the A. K. C. for either salary or loss. As to whether all the profits, however great, were to go to-Mr. Lewis, Mr. Schellhass was not very positive; but he did remember distinctly that in no event was the club to stand any loss.

Mr. Lewis himself being asked what the contract was, said that he could not tell definitely how much he had received from the American Kennel Club, but that Mr. Vredenburgh's books would show; he had, however, taken the publication on the same basis as Mr. Vredenburgh had done. Being given an inquiry similar to that sent to Mr. Terry, already noted, Mr. Lewis replied as follows:

Editor Forest and Stream:

Replying to your letter of this date, in which you ask if I had an "exhaustive contract" with the A. K. C. for editing the A. K. C. S. B., would say, most emphatically, no. I took charge of the book on precisely the same terms as did Mr. Vredenburgh and drew the same remuneration as he did up to Feb. 1, 1889, after which date I drew a stated salary.

Hempstead, July 14

HEMPSTEAD, July 14.

Baltor Povest and Stream:

During the past vear communications have from time to time appeared in the columns of the sporting press containing reflections upon the management of the American Kennel Club, and grave doubts as to the financial soundnesses of that organization. Occasionally denials have come from some officials of the club, but, unfortunately, they have been too gonat to fully refute the statements which drew been too gonate to fully refute the statements which drew been too gonate to fully refute the statements which drew been too gonate to fully refute the statements which drew been too gonate to fully gonate to fully control of the organization of the search of the organization of the statements which drew been too gonate the full gonate of things.

As an officer of the A. K. C. I consider it right and proper for me to put before the breeders of this country certain facts with which I am conversant, that they may be able to judge understandingly whether or not the affairs of the A. K. C. Ac are rightly colladered, and whether it is prosperous or to throw light on certain seeming discrepancies in the financial reports of the club. Those who know me will need no assurance that in writing this I am actuated purely by a sense of duty and a love of fair play. The affairs of men connected with the A. K. C. do not concern me, it is to the club only that I owe allegiance. I shall study to be as consistency to the club only that I owe allegiance. I shall study to be as consistency of the club only that I owe allegiance. I shall study to be as consistency to the constance of determining whether his reported statement, made early in 1800, was a true one or not. Here I will say that, considering the communications already alluded to, there was some reason to suspect that the accounts had been "juggled," or that by connivance some fast, of the constance of the summary of the summary of the constance of the summary of th

And now to the end. On Jan. 1, 1887, the A. K. C. had a capital of less than \$100. It has bought the Kennet Register, for which it paid the sum of \$500. It has never received any financial aid, has had only its legitimate income, and to-day it has a cash balance of nearly \$2,200. Its total debts are less than \$200; and there is due it from parties, every one of whom are believed to be perfectly reliable, over \$1,200. During the present year the Gazette is ahead of its expenses; and probably at the end of 1890 it will have a balance on the right side of \$200 or \$300.

The foregoing statements I submit, without comment, to all interested in the affairs of the A.K.C. The books of the club are open to all delegates, and if there is any one who questions what I have written he can easily reach the truth.

Boston, July 9.

Boston, July 9.

To the many correspondents who have sent me commendatory letters regarding what was published last week over my initials regarding the Kennel Club accounts I desire to express my thanks. To do what is right is only every man's duty, but thanks are always appreciated and these letters have been very pleasant reading indeed. At the same time over the accounts and so remove any doubts then on my mind. I considered it to be no reflection upon myself to say I had doubts, and I will go further and say that I do not see how any fair-minded non-partisan could fail to have doubts on the other of the case at issue. Had I not have on on side or books last April I think I would have been a partisan and that against the A. K. C. My particular line of business, dealing in a great measure with the correctness of records and extending over a long period of years has, or at least it out that the same of the control of the co

Editor Forest and Stream.

If Mr. Watson in his endeavor to answer the charges that I have made against the management of the A.K.C. of juggling and huggermuggering the accounts, would confine himself to the articles or letters that I have sent to the sporting press, and not drag in either casual or convivial conversations, perhaps conclusions reached would, at least, be more satisfactory to not only those interested in the welfare of the A.K.C., but to your readers generally. The conversation to which he refers, if I remember, occurred either very late at night or very early in the morning. We were sitting at opposite sides of the table with glass bottles between us that perhaps were not so full, or were not as needful of stoppers as ourselves; and, if I remember, the end of the table as well as ourselves was not only graced, but en-

tertained by and with the presence of Brother Winslow. In this conversation Brother Watson unfolded to me the envelope which contained thereon the figures made and income given by Mr. Vredenburgh of the A.K.C. accounts from Jan. 2 to Jan. 11, 1889, amounting to \$122 and some odd cents. In this conversation I might have said the month of June, but I evidently intended the month of May, as will appear from the following taken from my letter of June 20, 1890:

"You Level was to assume the control of the control pook, was to compile the policrees, and do all distroct the cities of the stud Book. He was to possible the Stud Book, was to compile the policrees, and do all the Stud Book. He was to possible the Stud Book was to compile the policrees, and do the students of the services between the world and the students of the services between the students of the students of the services between the students of the services of the services of the students of the services of the students of the students of the Students of the Students of the American Kennel Club, which was beld May 5, 188, the students of the American Kennel Club, which was beld May 5, 188, the showing the balance on hand in the American Kennel Club, which was beld May 5, 188, the showing the balance on hand in the American Kennel Club, which was the students of

captious critic? Will Mr. Vredenburgh kindly give us the figures?
JERSEY CITY, N. J., July 12.

Editor Forest and Stream:

It is really unfortunate that the delegate of the New Jersey Kennel Club should be drawn into a controversy over the American Kennel Club finances, but I do not think that by his letter in your last issue he makes his side of the case any stronger. At the meeting of the executive committee of the A. K. C. held Dec. 19, 1889, the following motion, offered by the delegate of the Southern Field Trials Club, was carried: "In order to comply with the snggestions made by Mr. Watson and Mr. Vredenburgh, I will add to my motion that, before publication, an auditing committee, consisting of Messrs, A. C. Wilmerding, Maj. Taylor, and F. B. Fay, be appointed to audit the accounts. I name these gentlemen because they are ex-officio, and I ask that they be appointed to audit the accounts, and to state whether they are correct, whether they have been correctly kept, etc." If the New Jersey delegate will read the above motion, and then recall the certificate, with the word "only" italicized, appended to the A. K. C. statement for the year 1889, and signed by him, I think he will find one reason for his unfortunate position, and if the secretary-treasurer of the A. K. C. referred others, as he did me, to the auditing committee for information concerning his accounts, the delegate may find another reason.

A short time after the A. K. C. account for 1889 appeared I called on the secretary-treasurer, at his office, for some information concerning it, and I will briefly state what took place. The secretary-treasurer answered one or two immaterial questions relative to his accounts, and in fact handed me one or two copies of the Kennel Gazette I wanted for reference, on my putting a further question to the secretary-treasurer, his manner quite changed, told me he didn't propose to be eatechised, didn't know that I had any standing there, advised me to tean something about book keeping, refused me further infor

receipt and items of expenditure of the secretary-treasurer of the A. K. C. from Dec. 5, 1888, to Jan. 11, 1889, both dates inclusive.

Will the New Jersey delegate give me any part or all of the above asked for information?

"J. W.'s'' letter last week is very interesting, particularly so in so far as it refers to the contract under which Mr. A. D. Lewis edited the Stud Book. In Parts 2, 3 and 4, Vol. V., of the book A. D. Lewis appears as editor, so that, instead of Mr. Lewis running the Stud Book between May, when the Secretary-Treasurer of the A. K. C. received his two checks, and September, when he went away, Mr. Lewis, apparently, edited the book from April 1 to Dec. 31, 1888, and if he did not do so why does his name appear as editor in these three narts, which appeared, as a rule, one or two weeks after the date of the closing of their respective entries. Your correspondent "J. W." says that "three of Mr. Peshall's main allegations are conclusively contradicted," and one by reason of the entries in the Secretary-Treasurer's bank book, probatum est. Mr. Peshall, who was chairman of the Stud Book Committee at the time Mr. A. D. Lewis edited the Stud Book (three or nine months), has stated the contract the Stud Book Committee made with Mr. Lewis. The Secretary-Treasurer of the A. K. C. tells "J. W." that Mr. Terry and Mr. Lewis will tell him there was no such arrangement. Will "J. W." tell his readers the deposits appearing in the bank book he examined between April 1 and Dec. 31, 1888, or the deposits made during the time Mr. A. D. Lewis was running the Stud Book, as they will tend, 1 believe, to settle that book.

Jensey Ctry, N. J., July 10.

JERSEY CITY, N. J., July 10.

ENGLISH VS. AMERICAN BEAGLES.

ENCLISH VS. AMERICAN BEAGLES.

MAYHEW, Lacy, "Namquoit" and the editor of the English Stock-Keeper! Now, gentlemen, I protest it isn't fair for three Englishmen and an American to "jump onto" one poor Irishman, because he stated what he thought was true about the heagles of England and America. When I wrote the article I intended to do like the tramp who put a match to a barn and then ran away shouting, "Let the people interested put out the fire." But as none of the members of the Beagle Clinb will come to my rescue and stick up for their standard, £. c., a beagle is a miniature fox-hound, I will give another instalment of my little piece and then drop the matter for good.

For fear that your readers may suppose that all this discussion is either a masked battery loaded to kill somebood else's dog or else one of those harmless bombs that are continually going off in the dog press to boom certain lots of beagles, I will state that I am not a member of a beagle club, never judged in the ring in my life and never used the reading columns of the dog papers to advertise without cost any dog I owned.

I have bred beagles since 1876, but have been one of those short-sighted fellows who insist upon a beagle doing field work, no matter how likely he was to make a sawdust hero. Notwithstanding all this, I have an admiration for the type that General Rowett brought over here, and I want to blow my little whistle in protest against the indiscriminate awarding of prizes to the foxhound or bloodhound types which has been going on since the importation of Bannerman. Both cannot be correct, let the breeders decide which is preferred and decisions be given accordingly.

"Namquoit" in your issue of June 26 says, "The beagles I saw in England last snmmer were miniature foxhounds." Furthermore he states, "Hibernia' calls [English] Ringwood's head a caricature of a bloodhound. Barring the long arm and a slight throatiness, I consider it an excellent ideal of the American beagle."

I am aware that beagles of the type of Ringwood ha

formation I gave came from the paper he edits, he certainly will consider such an error excusable.

Mr. Lacy says, "In the first place, if Little Duke was indeed like the picture represented, we should call him rather like a small harrier, as he should be ditalics mine) than a foxbound, but he is not." The picture of Little Duke, I'll admit, resembles the original about as much as the Little Duke of to-day looks like the Little Duke of three years ago. This engraving was selected especially to set the ball rolling in exactly the direction it is going. My object was to get a picture as much in contrast to Ringwood as possible and thereby create discussion.

To quote further, "He [Ringwood] has really, barring the square muzzle, a great look of the dog Ringwood shown in the picture ** *. Then again as to type, we understand from Mr. Mayhew, who knows the dog Ringwood, that barring size Blue Bell II. is almost a counterpart of her sire." I fail to see even the slightest resemblance between the two pictures, except in body and legs, and all breeds of hounds (except the modern bloodbound) have these in common.

And further: "Mr. Schellhass, when judging the special at New York for best beagle in show, was quoted as saying that had Blue Bell II. been in condition, that is harder and firmer in muscle and condition, he would have placed her over anything in the show, as he considered her, barring muzzle, a little model."

Of course Mr. Schellhass knows his business, but if Blue Bell II. is a fac-simile of Ringwood and the latter a counterpart of his picture, I cannot see how Mr. S. can recommend to the breeders of this country such a type of head as his Trailer, etc., which is entirely distinct from Blue Bell II. If head is not to count, then some of the common rabbit dogs to be met with everywhere should win on the bench, because many of them have the perfection of body and feet, although sadly lacking in head and ear properties.

Mr. Mayhew and I agree at least on one point, and that is that Blue Bell II. is not a mi

iness, is an excellent ideal of the American beagle.

Mr. Lacy informs us that a bcagle should be a small harrier.

Mr. Mayhew believes a beagle ought to be a miniature southern bound (bloodhound).

The English Stock-Keeper says (see reprint in Forest Anderson June 5): "Without going extensively into the subject of the different strains and their origin, which is one of the most intricate tasks of doggy lore, we limit ourselves to-day to mentioning that, making a broad distinction, there are two kinds of beagles, viz., the north country beagle, of whom the 'County Squire,' in his observations on hunting, says: 'He is aimble and vigorous: he pursues the hare with impetuosity, gives her no time to double, and if the scent lies high, will easily run down two brace before dinner;' and the southern beagle, a diminutive type of the old southern hound, and of this variety the subject of our illustration is a splendid specimen."

The Beagle Club's standard emphatically states that a beagle should be a miniature foxhound.

And our judges give their decisions in favor of all three types (foxhound, harrier and bloodhound), in the same class.

Any beagle breeder who will cut out the coupon below and write on it a correct answer of the problem, "Which is the correct type of beagle," will be entitled to a year's subscription to the Forest And Strream. Any one can guess as often as he or she likes, but answers must be written on the printed coupon.

The judges will be Messrs, Mayhew, Lacy, "Namquoit" and "Hithernia," and no prize will be awarded until a unanimous decision is arrived at by these four.

BEAGLE PUZZLE. Which is the correct type of beagle, fox-hound, bloodhound or harrier?

But joking aside. It does not matter a picayune to me whether the type is bloodhound, harrier or foxhound, only set up one standard, breed to it, and judge by it. My experience as to the practical field work of the bloodhound and foxhound types is as follows: The former is almost too keen scented and will follow too old a scent; he has a more melodious tongue but is a potterer and a babbler; that is, he will run a few yards, stop and give tongue, and then run on, and is apt to cry on a cold trail. For hunting where a rabbit (American hare) is likely to hole, he is much preferable to the foxhound type, as the latter is not apt in such a case to stick very long, but will go off after fresh quarry. The foxhound type has more grit and staying qualities, is a better starter and not so afraid of briers. While not so musical, he seldom gives much tongue except after a rabbit (American hare) has been jumped.

Messrs, Mayhew and Lacy both consider me wrong in stating that our so-called rabbit (Lepus something) is better suited for the powers of the beagle than the European hare. It is not probable I can convince them of the truth of my assertion by printed arguments, but I know I can by practical observation. It may appear strange to them, but I can any time after Nov. I show them a pack of beagles on both the European and American hares. The ancestors of the former came from Germany, but they are known as the English hare, and are the same species. There is a sufficient number of them running wild to be a curse to beagle owners and nurserymen in my vicinity. If the gentlemen will take a day off in the proper season, and "gird up their loins," I will furnish beagles, hares of both sorts, and a hill from which they can "stand and watch the little beauties circling round." They will, however, have to take a powerful spy glass to see the English hare circle, because he generally makes that geometrical figure about ten miles in circumference. If they then still believe that the English hare is as suitable quarry as his smal

FOX-TERRIER COURSING CLUB.—Omaha, July 12.—Editor Forest and Stream: It is a settled fact that Omaha has succeeded in finding enough members to start a club for the purpose of coursing wild rabbits with fox-terriers, and on Wednesday evening of next week such an organization will be consummated. There are enough fox-terriers here to start a sixteen dog course, or eight pairs, for there must be four winners to run the final course. The projectors, and they consist of a half dozen of Omaha's best known citizens, are very anxious to have all who own, or expect to own, fox-terrier dogs, to join the club, so that a good start may be made early in September, when rabbits, both jacks and the common hare, will be plentiful.—GRIS.

DOGS OF THE DAY.

CENERAL MACIVER is a Scotchman who has the bump of combativeness so enlarged as to have a continual ache to be using his sword, either on his own account or on that of some other person or persons. He has had the story of his life told in a book entitled, "Under Fourteen Flags," which is full of hair'sbreadth escapes, from the period of the Indian Mutiny down to the Servian War. The general, however, would be little to the readers of Forest AND STREAM did he not own a dog, by name Branckie. I saw a brief notice of the existence of owner and animal in Forest AND STREAM a few weeks ago, which does the latter scant justice. Branckie is a very good dog, indeed, in fact, allowing for not seeing the dogs together, I think he would give Maney Trefoil a hard rub. He is the same style of dog, only a little lighter and brighter in color, and a judge would not put them far apart in the prize list. Branckie is good enough bred for anything, being by Metchley Wonder out of Miss Charlemagne, and was bred by Lady Charles Innes Ker. I fear we will not get much chance to see Branckie at our shows, for when General Maciver was in Philadelphia a few days ago he was talking about starting for South America. Ever since reading his life I have been scanning South America telegrams to see where the war is going to be.

Has any one tried Mossine for dogs? It is a fluid prepara-tion said to be made from dulse, Irish moss and various other things. To the human skin and scalp it is a blessing this warm weather, and I doubt not it is all the labels claim as a dog wash.

as a dog wash.

The dog Millais-nium is announced in England. It is a freak of the kennel director of the Funciors' Guzette whereby we are to have no more distemper at shows. Owners are uever to go about without copies of the revised edition in their pockets, nor to show a puppy that has had distemper within two months, and benches are to be passed through the fire of disinfection seven times. No judge is to be employed who reports for a rival journal. I have not yet received a copy of the by-laws, but it is rumored that the son of a gentleman will open proceedings with prayer, and on Friday night the son of another ten-months-old gentleman will doubtless pronounce the benediction. No more bogus pedigrees, no judging dogs one has recently sold, no sending crooked-legged Irish terriers to foreigners, nor sending mongrels abroad disguised under the name of Basset hounds after this. What happy times are in store for us all.

mongrels abroad disguised under the name of Basset hounds after this. What happy times are in store for us all.

The Spaniel Club committee proposes to make some important changes which it is believed will still further strengthen the pioneer specialty club of America. One change likely to be put in operation will be that in place of offering to give clubs from \$15 to \$25 for the adoption of one of the club classifications, specials for local exhibitors will form a feature, the local exhibitors to be members of the Spaniel Club. By local exhibitors is meant residents of States within hail of the city of the show, not residents of the city itself. This plan, in addition to specials open to all members, should be the rheans of encouraging entries and increasing the club membership. The more members the more specials and rice versa, the committee thinks, more specials, more members. Some people have at times said I run the Spaniel Club. I wish I could lay claim to such an honor, but I am only one of five to do my share toward making it a success. Do you ever hear anything about changes in the Spaniel Club, or of working up a lot of I tickle you, you tickle me judges in fixing up prizes, as is more than hinted at in connection with some other clubs? Just at this time we are hearing a good deal about specialty judges, criticism being based on an article in the English Kennel Guactte. The way the Spaniel Club does is this: It sends a blank slip to all of its members asking them to nestriction whatever as to club members being named. The best judges are what the club needs, and it is in the hands of the members to say who they are. This system of doing all for the best interests of all has always been the method of the American Spaniel Club. Hence its success.

The committee believing that a change in the classification is desirable hose in like apparent and are the result to all of the members to say who they are.

The committee believing that a change in the classifica-tion is desirable has in like manner sent out a request to all members to offer their suggestions. If any non-members would like to make a suggestion it will be perfectly proper for him to do so. Communications should be addressed to the secretary, Mr. George H. Whitehead, Trenton, N. J. J. W.

PHILADELPHIA KENNEL CLUB DERBY.

THERE are eighteen entries for the Derby of the Phila-delphia Kennel Club, eleven English setters, one Irish setter and six pointers. All with the exception of one pointer were whelped in 1889. setter and six pointers. All with the exception of one pointer were whelped in 1889.

ENGLISH SETTERS.

ALBERT'S DUCHESS (Dr. John A. Hartman, Latrobe), white, black and tan bitch, Feb. 14 (Warwick Albert—Princess Belton).

BEVERLY (Francis G. Taylor, Philadelphia), black, white and tan dog, February (Roi d'Or—Mildred).

BUSTER (Col. B. Ridgway, Germantown), black, white and tan dog, March (King Noble—Cricket).

CLEMENTINE (L. Shuster, Jr., Philadelphia), black, white and tan bitch, Oct. 2 (Ezra Noble—Cornelia G.).

JEAN (J. B. Ellison, Philadelphia), black, white and tan bitch, Oct. 8 (Fritz—Hazel).

LARRY NOBLE (H. Fitzgerald, Philadelphia), orange and white dog, Oct. 2 (Ezra Noble—Cornelia G.).

LUCY NOBLE (W. B. Smith, Haverford), black, white and tan bitch (Count Noble—Alphonsine).

MADGE (George Fox, Torresdale), bitch, Sept. 12 (Gun—Victoria).

OLD SMED (L. Shuster, Jr., Philadelphia), black and white dog, Oct. 2 (Ezra Noble—Cornelia G.).

PEG WOFFINGTON (Francis S. Brown, Philadelphia), black, white and tan bitch, March 17 (Ben Hill—Nora).

UNNAMED (G. Schreiber, Philadelphia), orange and white dog, Oct. 2 (Ezra Noble—Cornelia G.).

RISH SETTER.

SPARKLE (Dr. G. G. Davis, Philadelphia) bitch, April 30 (Desmond II.—Lorraine).

POINTERS.

BEAUTY SPOT (I. W. M. Covalina, Philadelphia) bitch, April 30

(Desmond II.—Lorraine).

BEAUTY SPOT (J. W. M. Cardiza, Philadelphia), liver and white bitch, July 4 (Half and Half—Favette).

BESSIE ITEM (H. Fitzgerald, Philadelphia), orange and white bitch, January 19, 1890 (Gambol—Mollie R.).

DUCHESS OF HESSEN (J. H. Winslow, Philadelphia), liver and white bitch, July (Duke of Hessen—Duchess of Waterloo).

DUCHESS OF HESSEN (J. H. Winslow, Philadelphia), liver and white bitch, July (Duke of Hessen—Duchess of Waterloo).

JACK ELLISON (J. H. Winslow, Philadelphia), liver and white dog, Oct. 12 (Victor the Blue Stocking—Charlotte Corday).

LONDON (George Fox, Torresdale), dog, October (Beaumont———).

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

DOG TALK.

MR. ARTHUR FRICKETT, E. H. Moore's efficient kennelman, has purchased for the McIrose Kennels the well-known crack St. Bernard dog Alton (ch. Plinlimmon—ch. Queen Jura). Alton is an excellently-marked, well-shaded dog with a most excellent head. He has won first and cup at Sheffield, Darlington, Windsor and Crystal Palace, and if I mistake not will rub Hesper close for championship honors in the States.

Nero III., the sire of the world's champion St. Bernard, Sir Bedivere, is reported as being very near his goal and his owner expects to be obliged to report his death very soon.

owner expects to be obliged to report his death very soon.

Although I only landed at II:30 this A. M. I could not resist the temptation to take a run over to Wallasey, just across the Mersey from Liverpool, and visit the kennels of Mr. T. H. Green. I found Sir Bedivere in grand form, and while resting in the house I saw what is undoubtedly the largest and finest collection of prizes ever won by one dog, namely, the magnificent Halsey Trophy, which Sir Bedivere must win twice more to claim as his own; the Deakin Chalenge Cup, which he has won twice; a magnificent silvercollar, three gold medals and nine smaller cups. Mr. Green's kennels also contain the excellent smooth coat Baron Wallasey, a full brother of Sir Bedivere. Another full brother by a still later litter, only eight months old, promises to rival the champion; he has a grand head and expression, great depth of muzzle, good markings and shadings, excellent bone and great character. Two bitches of the same litter, a rough and a smooth, also promise remarkably well. The smooth one in particular will undoubtedly be heard from this coming season if shown. In brood bitches Mr. Green has quite a kennel. Bena, the dam of Sir Bedivere, will soon be bred to Keeper; Gitana, full sister to Sir Bedivere, a 30in, bitch of great body, fair in head, but lacking a trifle in muzzle, should prove a great brood bitch; she is u whelp to Keeper. Lady Bernie (ch. Boniface—Hem Queen), is another good bodied one, with excellent bone, good coat and of a serviceable size, weighing 155 to 160lbs. Mr. Green is also boarding for Mr. Halsey the stud dog Jim Blaine (Bryan—Martha Washington, both in America). He is an excellent headed, typical dog, straight and strong, but rather on the small side, though he doubtless weighs 180lbs., and the brindle bitch Griselda, by Valentine, in whelp to Jim Blaine.

The Belfast entries number 455.

The new departure in canine literature, the Canine World, comes out this week with 4 extra pages. Among many other newsy items I notice one stating that 6 'Russian grey-hound' pupples by Krilutt—Elsie were shipped to Mr. W. Wade of Hulton, Pa., from Swansea last week.

other newsy items I notice one stating that 6 "Russian greyhound" pupples by Kriutt—Elsie were shipped to Mr. W. Wade of Itulton, Pa., from Swansea last week.

I visited Mr. Smith's kennels to day, at Leeds, and gave Alton a careful examination. He is a dog with a great deal of character, massive skull and great depth of muzzle, dense shadings, narrow blaze, ears of good size and color, coat a bright rich orange and perfectly flat, bone excellent, straight and strong in front and fairly well bent behind. In short, a "clinker." Hesper is his only rival; he sails from Liverpool Thursday, July 10. Alton was bred by Mrs. Hallivell, and whelped April, 1887. He is by champion Plinlimmon and out of champion Queen Jura. He has been shown nine times, winning first in bis class each time, and taking cups from such noted dogs as champion Guide, Prince Regent, Lord Bute, Angelo, Young Wallace and others.

Mr. Sydney Smith's grand kennel of rough coats are worthy of a brief description. Nearly all of them are well known in America, and some of them are liable to cross the pond at any time. All of the dogs have done a lot of winning here. Mayor of Leeds, by Plinlimmon out of Lady Adelaide, and Aristocrat, his litter brother, are both clinkers, excellent in skull, muzzle, expression and markings, and strong on the limbs. Aristocrat, I judge, is a little the better of the two. Young Wallace, by Pilgrim out of Bessie II., a brother to Plinlimmon, of a later litter, has much the same type of head as Plinlimmon, with great depth of muzzle and good in length of body and depth of chest, not quite right behind but not badly off in that respect.

Young Plinlimmon, by the Pilgrim out of Bessie II., a brother to Plinlimmon, by the pilgrim out of Gessie II., a brother to Plinlimmon, with great depth of muzzle and good in length of body and depth of chest, not quite right behind but not badly off in that respect.

Young Plinlimmon, by the Pilgrim out of Fora of a good in coat, but typical in head and expression, good substance and a good

THE KINGSTON SHOW.

THE Kingston Kennel Club's prize list for their bench show of dogs to be held at Kingston, Ont., September 2d, 3d, and 4th, is now ready for distribution and will be mailed on application to the secretary. We are receiving every encouragement from breeders and owners from all directions and expect to make this show a great success. The prizes are very liberal and everything is being done to encourage entries. Mr. Floyd Vail, of New York, will judge setters and pointers, and J. Otis Fellows all other breeds. As Kingston is so convenient and easy of access from New York State, we trust our American cousins will send their camine pets over the line—especially as we, with the desire to give our show an international character, have engaged real live Yankee judges. C. H. Corbett, See'y and Supt. Kinsston, Ont. KINGSTON, Ont.

THE TORONTO DOG SHOW.

THE TORONTO DOG SHOW.

Toronto, July 10.—Editor Forest and Stream: The premium list of the Industrial Exhibition Association's Grand Second International Bench Show of Dogs, to be held in the city of Toronto, September 15 to 19, are now ready and can be procured by applying to the sceretary, Mr. C. A. Stone, Industrial Exhibition Office, Toronto.

The Association are presenting a very liberal list consisting of cash and silver and bronze medals.

There are one hundred different classes, all cash prizes, composed of challenge, open, novice and puppy classes, besides cash prizes for the best kennels to consist of four or more of the following breeds: St. Bernards, great Danes, greybounds, foxbounds, pointers, English, Irish and Gordon setters, collies, spaniels and fox-terriers, and bronze medals for the best kennels owned in Canada, and silver and bronze medals for the best dog or bitch of the following breeds: Mastiffs, St. Bernards, great Danes, greybounds, pointers, Mastiffs, St. Bernards, great Danes, greybounds, pointers,

English, Irish and Gordon setters, field, cocker, Clumber and Sussex spaniels, collies, fox, black and tan, Irish, bull and Bedlington terriers, pugs, beagles and dachshunde. Mr. F. G. Veriety donates a special valued at \$25 for the best English setter dog or bitch bred in America. In addition to the above the Association are donating two specials, viz., \$35 in cash to the party or gentleman making the largest number of entries at the show, not less than ten, and \$15 for the second largest number of entries, not less than eight.

C. A. STONE, Sec'y and Supt.

and \$15 for the second largest number of entries, not less than eight.

ST. BERNARD IMPORTATIONS.

MELROSE, Mass., July 14.—Editor Forest and Stream: I have purchased the crack rough-coated St. Bernard dog Alton. Arthur Trickett, my head kennel man. left Liverpool Thursday, July 10, on the Cunard steamer Seythia with him, and will arrive home Saturday. He is the best rough dog living, bar Sir Bedivere, and he runs him very close. Arthur has also purchased a fine rough-coated St. Bernard bitch and is leaving her there to be bred.—E. H. MOORE.

MELROSE, Mass.—Editor Forest and Stream: I am just in receipt of another rough-coated St. Bernard dog, Lord Dante, from England, sent me by Mr. Geo. Booth, of Hull. He was represented to me by letter as a little on the small side. but on his arrival last Saturday I measured him up and I is true he is not as tall as some, standing only 32in, high., and not as heavy, weighing on arrival only 140lbs, but his skull measures 26½ in. and muzzle 16½ in. Such limbs I never saw on but one dog, Hesper; they are very massive for such a sized dog. His coat is a perfectly flat, magnificent orangetawny, with absolutely correct white markings and black shadings; his ears and tail are carried perfectly. In fact, I consider him a thoroughly typical St. Bernard. He is only 16 months old, and is by Prince Regent (champion Plinlimon—Miss Meg) and out of Lady St. Gothard (St. Gothard III.—Saffron).—E. B. Sears, Wyoming Kennels.

THE ENGLISH SETTER CLUB.—We are pleased to state that the two English setter clubs have consolidated. The conference committee of the two clubs came to an amicable arrangement to unite as one club to be known as the English Setter Club. All members of each club are members of the new club, and all the funds will go into the common treasure.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

KENNEL MANAGEMENT.

KENNEL MANAGEMENT.

X.—To exercise my beagles I run rabbits in the evening. A beagle dog 14 months old, very nervous, has been affected in this way: After running a few minutes he staggers, falls and struggles on the ground, foams at the mouth, slowly recovers and in ten ninutes is ready to hunt again. Has had three attacks in a week—the first severo and the last slight. What shall I do? Will he be all right to hunt in cold weather? Are the attacks dangerous? Ans. Cause is obesity or stoppage of the howels or worms. For the first the treatment is exercise and depletion. For the second syrup of buckthorn in tablespoon doses. For the third areca nut in 30 grain doses. Give 6 drops of Fowler's solution twice daily in the food; also 5 grain pill of quinine each day for a week.

T. J. P., Germantown, Pa.—I have a fox-terrier mup three

the food; also 5 grain pill of quinine each day for a week.

T. J. P., Germantown, Pa,—I have a fox-terrier pup three months old who on last Thursday had a fit, after which he dragged his hindquarters and with great diffculty could use them. I merely noticed a very slight weakness before the fit. When he sits or lies down he has difficulty in getting on his legs again, his hindquarters appearing very weak. When up he walks with difficulty, in fact limping at times. I have noticed his hind-quarters, when he has turned around sharply, sink under him. There appears to be no pain barring this trouble with his legs. He appears to be in good health. Do you think this is nuscently important the summary of the strength of the streng

Bifle and Tray Shooting.

RANGE AND GALLERY.

OUR MARKSMEN IN GERMANY.

DERLIN, July 8.—This morning twenty-five members of the Independent Schuetzen boarded a special train here and dependent Schuetzen bester between decorated with flags, the Stars and Stipes being conspicuous over the door of the mansion. A fine old genileman, looking the picture of health, was at the station to receive and welcome the guests. He shook hands and spoke to every one of the riflemen. The party comprised Mesrus Diehl, William Weber, Hermann Weber, Ehret, Eisenhauer, Hoepfner, Kochon, Koster, Kruse, G. Kranss, Loewer, Lebing, H. Mabrenholz, Moas, Splitdorf, Stein, Weller, Wintermeyor, Wegeler and Waldschmidt. Chief Fore-ter Lango conducted them to the castle, where Prince Bismarck shook hands with each one. William Weber expressed the thanks of the party for the privilege given them of visiting the great man to whom Germauy owed her unity. Thousands of his associates, he said, would envy his standing at Friedrichsyuhe, and the day would be the pleasantest memory they would carry back to America. The Irou Prince was dressed as usual, with slonch hat and half-uillitary frock coat. He was accompanied by two great boar hounds. He walked with a firm upright military step. There was no sign of decay in his voice, which was strong and hearty. He was evidently proud of the opportunity to show Kindness to Americans and to let them see how rohust he is. He det the way to the mansion, talking freely with the New Yorkers all the way.

led the way to the mansion, talking freely with the New Yorkers all the way.

When the guests arrived at the house they found a sumptuous unch prepared. Bismarck took the head of the table and insisted that all feel at home. William Weber sat on Bismarck's right, and Commercial Councellor Wegeler, as an honorary member of the Independent Corps, sat on his left. The Chancellor proceeded to converse indiscriminately, asked all kinds of questions, avoided politics, showed great interest in American social topics and referred to the wonderful progress made by the United States, how many great men and women had heen produced there and predicted a great future for the country. He spoke of the excellent relations existing between the United States and Germany and said he still took a great interest in union and hoped that every day will draw the feeling of friendship closer. What most interested him was the doings of the ritlemen. He alluded to their wonderful precision and remarked to thoir excellent bearing, accourrements and discipline.

The lunch lasted three hours. Champagne, Rhine wine and beer flowed freely. The Prince was in the bappiest vein and kept up a hrilliant flow of conversation, interspered with bon mots, all the time. He declared that the rest he has had since his retirement, add one bim a world of good and he had began to feel quite young again.

After the repast Prince Bismarck smoked his favorite pipe.

had done him a world of good and he had begnn to feel quite young again.

After the repast Prince Bismarck smoked his favorite pipe, while the guests were regaled with choice cigars. Yesterday the Prince had his photograph taken on horseback, and he promised to give Mr. Weber one of his pictures when they are completed to give Mr. Weber one of his pictures when they are completed to give Mr. Weber one of his pictures when they are completed to give Mr. Weber one of his pictures when they are completed to give Mr. Weber one of his pictures when they are completed in the rifle coutests here to-day Messrs. Busse, Krauss and Schrooder, of New York, won cups.

The American teams feel highly honored at their splendid redeption. They cannot speak too highly of the courtesy and hospitality of the ex-Chancellor. They returned to Berlin after a delightful day, rendered doubly pleasant by glorious westher, charmed with all they had heard and done and had happened.

Berlin, July 9.—Things are not going well with the American ridemen here. Jealously has taken root. The discoutent has been smouldering for some time. The facts have been unattainable till to-day. Foolish expressions of envy made by the St. Louis and San Francisco corps in reference to the action of the New Yorkers caused the trouble.

In all the teams it appears that the New York Independents

ter 'tvalry almos amounting to harred, of the New York Independent Schuctzen Corps. These facts are not yet fully apparent to Berliners, but it is understood partially, and lots of people are talking about it to-might.

The strange attitude taken by the New York Independents causes surprise, because it was supposed that the teams should be on equal footing. Stremous efforts are being made to patch up the quarrel and to prevent the facts getting into the German papers. Wober and the heads of the other teams refuse to talk beyond making wild contradictory assertions.

In to-day's shooting contests the following named Americans won cups: Messrs. Sleburg, Schroeder, Fleken, Vondohler, Jordan and Miller of New York: Mr. Spaeth, of Cincinnati; Mr. Schick, of St. Louis, and Mr. Koenig, of San Francisco.

The good weather to-day compensated the Schuctzen for their wetting yesterday. The Americans keep up their form. Zimmermann, of New York, won another cup to-day, and Laute, another New Yorker, followed suit. Stein captured a cup and landed another prize for good pistol practice.

Telegrams of congratulations from the Kaiser, the Austrian Kaiser and the Italian King will he made known to-morrow.

Brattin, July 10.—Weduesday evening was devoted to the Turner's torchight procession, followed by a grand "Commers" given by the Berlin Schuetzen. Among those taking cups to-day were Schoelke, fischer, Mueller, Scharf, Radloff, Schmidt, Syburg and Engel, all New Yorkers; Bernhardt, of Philadelphia; Kolle, of Engel, all New Yorkers; Bernhardt, of Philadelphia; Kolle, of Engel, all New Yorkers; Bernhardt, of Philadelphia; Kolle, of Engel, all New Yorkers; Bernhardt, of Philadelphia; Kolle, of Engel, all New Yorkers; Bernhardt, of Philadelphia; Kolle, of Engel, all New Yorkers; Bernhardt, of Philadelphia; Kolle, of Engel, all New Yorkers; Bernhardt, of Philadelphia; Kolle, of Engel, all New Yorkers; Bernhardt, of Philadelphia; Kolle, of Engel, all New Yorkers; Bernhardt, of Philadelphia; Kolle, of Engel, all New Yorkers; Bernhard

the apparatus.

Mr. Schroeder, of New York, won a prize at the field target today, and Mr. Fabarius, of New York, won a prize at the fixed
target.

Berlin, July II.—Mr. Hermann Weber, president of the German-American rifemen now here, has received a letter from
Emperor William thanking the riflemen for the resolutions
adopted by them at their hanquet in Berlin on July 4, congratulating His Majesty.

In the rifle shooting to-day, Mr. Engle, of New York, won a
prize at the field target, and Mr. Dreste, of New York, won a
prize at the field target, and Mr. Dreste, of New York, won a
prize at the field target.

Berlin, July 12.—Tho Schuetzenfest ends to-morrow with a
grand breakfast. Among the prize winners to-day were Schuelke,
flickaumari and Laute, of New York; Gilmore, of Cincinnati,
and Count Zio-Baltade, of Bressia.

Berlin, July 13.—Herr Diersch presided at a banquet giveu today on the occasion of the closing of the shooting tournament.
Burgomaster Forekenheck wrote a letter apologizing for his absence, in which he expressed the wish that the national and
friendly ties created by the competitions would ever increase in
strength. The sentiment was received with cheers.

After the reading of greetings from Austria, Hungary, and
laly, Mr. Simon Wolf, of Washington City, formerly American
Consul General at Cairo, made an address, in which he dwalt,
upon the inseparable bond that united the Germans of American
and the Germans of Germany in a common love for the Father-

land.

At the close of the festivities the presiding officer expressed the hope that he would see all the visitors at the next tournament. The Emperor's Cup was then presented to the winner, Herr Musch, of Meran, amid hearty cheers. Prizes in to-day's contest were won by Messrs. Zimmermann, Mueller and Jacoh Scherf, of New York, and Jyareis of Philadelphia.

Rooney. EL PASO, Tex., July 10.—The first summer tournament of the International Gun Club was held July 3 and 4. The days were perfect and more good scores ought to have been made, but as our club is young, having been organized only since April, we consider we did fairly well. As visitors we had Gillet, Boxter, Hornbeck, Rooney and Van Sickle, from Alpine, Tex.; and Chebott from San Antonio, Tex. All matches at singles were shot from five traps under the rapid firing system, and everything worked as smoothly as clockwork, every one declaring they had never seen a finer arrangement. Mr. J. R. Smitt carried off the smoking set for best average first day, and Chas. Layer the gun case and gold badge for best average second day and the two days combined. The targets were Peorias, American Association rules. Thes divided unless otherwise noted. [JULY 17, 1890. TOWANDA, PA. TOWANDA, PA.

THE tournament of the Towanda Rod and Gun Club on July 4
leads and the participants. It called together a number of onr best wing shots on game birds our county produces. For instance, one of those who taced the trap, had in the early morning went into a tangled swamp-thicket and bagged four woodcock. His score at the trap was one out of six and pagain one out of nine. In the last issue of the Forest and the appearance of the oil speaks of the 4th of July shoots and the appearance of the oil and there, where he is known by the number of "goose ergs," still a number who practice each week at flying targets can as a general thing turn out a long row of the same kind of fruit. Events were shot from 3 traps, 16yds, rise, ties div. unless noted. 9 single targets, sweepstakes, entrance 50c:

Park. 11110100-6 Montanye. 101000010-3

Rittenbury 0000101-2 Snider. 001110111-5

Mace. 001000101-3 Hoffman. 111001101-6

WALNUT HILL, July 9-To-day was set apart by the shotgun members of the Massachnsetts Rife Association for their annual "ladies" day," and the weather was all that could have been desired for the occasion. The laddles crowded the piazza of the club house and watched the shooting with the utmost interest, never failing to applaud the completion of a particularly brilliant score. At noon an elaborate collation was served, to which there sat down a company which crowded to the utmost 'he dining hall of the club house. The event of the day was the fifth competition of the "diamond pin match." Mr. Bowker set the pace in this match and finished an easy winner. He will hold the championship badge until the next match, which is booked for July 23. Diamond pin match, at 20 single Keystone targets and 5 pairs of standard targets.

WORCESTER, Mass. July 10.—At this week's meet of the Worcester Sportsmen's Club, at Cool Mine Brook range, the merchandise race was continued. Each man had a possible 25 clay-pigeons. The score of each follows: E. T. Smith. H. W. Webber and C. H. Howe, each 22; C. Compton and W. L. Davis, each 21; M. D. Gilman and E. Whittaker, each 20; A. G. Larking, C. E. Forehand and A. R. Bowdish, each 19; E. E. Hill, 18; E. S. Knowles, G. J. Rugg, E. Welch and W. R. Dean, each 17; E. James, M. A'Delbert and V. F. Prentice, each 16; A. L. Gilman, A. B. F. Kenney and J. B. Garland, each 15; C. A. Parker and F. Forehand, each 14; C. A. Buroett 13, M. Colvin 12, E. F. Swan 9. The winners of the other events of the meet were as follows: First match, 15 clays, Smith and Webber: second, 10 clays, Rangg, M. D. Gilman, Bowdish, Davis and Howe; third, 6 bluerocks, 22 entries, Crompton and Dean; fifth, 10 clays, 20 entries, Whittaker; sixth, 5 pairs bluerocks, 12 entries, Lowis; eighth, 6 bluerocks, 9 entries, A. L. Gilman and Prentice.

SENECA, Mo., July 4.—The Seneca Gun Club held their regular Fourth of July shoot on the grounds, at 10 Peoria blackbirds, for a pnrse divided 40, 30, 30 and 10 per cent. The day was fine, but the attendance was small, only seven members taking part: J L Walkor. 101011111 - 8 R H Fesperman. 111111111-10 Join Tobien. 10101011 - 4 J R Holmes. 000100101 - 4 Isaac Walker. 101001011 - 5 Shooting Jones. 111111111-10 Join Tobien. 10101011 - 7 Jones and Fesperman div. first, John Walker second, J. Tobien third and Isaac Walker fourth.

CHICAGO, Ill., July 9.—On Friday next the Gun Club of Chicago will hold the first shoot at John Watson's new park at Burnside, three miles further out on the Illinois Central than Grand Crossing. The old Grand Crossing Park, for so many years the center of all trap interests here, is now a thing of the past, being counds John Watson's new pa

extant.

A BOOK ABOUT INDIANS,—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—Adv.

CORRY, Pa.—The Keystone Co. announces its third annual August gathering for a week's shoot and a general good time. Nothing has been left undone to make this the best and most successful of tournaments. Twenty traps will be used, 10 in center and 5 on each side. The 5 traps on the left of main set will be used for the shooting, and the 5 on the right, in addition to the 10, will be used in the main events. Electric bells will be attached to all traps, and the Keystone Patent Wire Pull will be used; and, in fact, everything will be arranged as well as money and time can do it. On the grounds will be erected for all manufacturers wishing to display goods, as near the center as possible, either a tent or building as may be desired, and every effort will be made to give exhibitors a chance to display their goods to the best possible advantage without expense. Traps and grounds will be in readiness and all desiring can participate in open sweeps on Monday, Aug. 18, thus allowing all to become familiar with grounds and rules before the regular shoot begins on Tuesday, the 19th.

The programme provides a total of \$1,200 in guaranteed money, \$1,200 in prizes, \$50 each day for averages. Prizes will be 5 in each event equal, aud "dropping into a nest of duffers" will not be the temptation to the cracks. The list of events reads, with entrance fees:

Tuesday, Aug. 19.—Keystone Trophy Day—10 singles, \$1; 15 singles, \$1.50: 10 singles, \$50 gnaranteed, \$2.50; 15 singles, \$75 guaranteed, \$3.50: 15 singles, \$75 guaranteed, \$3.50: 15 singles, \$1.50: trophy contest, \$50 singles, \$1.00 gnaranteed. \$5; 15 singles, \$50 quaranteed, \$1.50; 10 singles, \$10 singles, \$10 singles, \$50 quaranteed, \$2.50: 10 singles, \$1.50; 20 singles, \$2.50: 10 singles, \$1.50; 20 singles,

	REGATTA, JULY 10, 11.	1 2
New York clubs this year i	little more successful than the n its annual regatta, the starters	f

ASTERN Y. C. ANNUAL REGATTA, JULY 10, 11.

THE Eastern Y. C. proved but little more successful than the New York clubs this year in its annual regatta, the starters ing not over numerous and the weather very poor on the day set r the race, Thursday of last week. No New York yachts were tered save Minerva, and nearly all the entries were Burgess ats, making it rather a family affair, but in addition to the fact at the entries were so split up as to insure at least a duel in each the four classes, there were a couple of special features that ore not seen in the New York races; a real live schooner race, at the meeting of Minerva with two of the three new Burgess ats bnilt to beat her. The schooner fleet is now confined to ston, so far as any racing goes, New York heing out of it aprently for some time. Boston has now three out of the four cers in the 90ft. class, the fourth, Grayling, being used for uising only this year. The issue between the new Merlin and e older Sea Fox and Mayflower in new hands is still sufficiently ento excite considerable interest over their first meeting, and did be weather heen favorable on the first day a fine race would we been seen. As it was, the short course of the second day rolly made the race what one looks for between such large boats, the chief feature of the racing was of course the meeting between inerva and the two new Burgess forties, Gossoon and Ventura; dithose who went to see this battle were not disappointed by ujse or weather, both being above the average. The fleet of the awanhaka Corinthian Y. C., including the flagship Medusa, the nooners Miranda and Iroquois, and the cutters Huron and inerva, was in the harbor of Marhelead; but besides those ou eyachts no visitors were present from New York, a marked nitrast to the year 'S5 and '86. The full list of entries is as lowed.

fe cutter Minerva has met her match. For add in heavy breezes, the champion of last year's and in heavy breezes, the could be the property of the could be seen that the second of the secon

with his excellent knowledge of the Minerva's capabilities, Capt. Charles Barr could not coax his pet into a winning position.

The yacht which has wrought this revolution in the 40ft. class is the Gossoon, the new Burgess boat designed for Charles F. and George C. Adams, the well-known amateur yachtsmen. The Gossoon, as indeed also the Minerva, is a compromise between the wide American keel yacht and the narrow English one. The Gossoon inclines to the American type, while the Minerva has a slight leaning toward the English model.

A comparison of the dimensions of the two fastest fortics follows:

L.W.L. Length. Beam. Draft.

39.03 12.60 9.03

arkable thing about the Gossoon is that she is only 39ft, on the waterline, being 9ft, under the class limit. She igned with a good margin, ber designed length being 39ft. it be construction proving even lighter than was expected, bove her line and 4in, shorter than she was designed to be. bas planty of stability it is not likely that any more ball be put into her, so she will sail on short length. Her 9in, length helps her out on time allowance, and in spite of te sail plan the Gossoon allows the Minerva only Im. 18s. mile course.

able above shows that while they are practically the same h and draft the Gossoon is 1½ft, wider than the Scotch-flic two yachts are very similar in the outlines of design plan, but the Gossoon is the first argument which the victory of the Gossoon is the first argument which the course.

rhaps premature to argue from the result of one chavior of the Gossoon in her two days' company the Gossoon in her two days' company n very instructive. It was hardly hoped ends that the "Little Irishman" would stage of the game. The Gossoon's main-rell, and there are many little things before a new boat is fit to do her best, be very start argues well for the future

Minerva at the very start argues well for the future s cutter,
quarters which make a business of disparaging rgess's work, it has been stated that this victory is reat one after all, as it is accomplished only with his valoritor. The fact is that the Gosson is the first Mr. Burgess has designed especially to beat the ishe has "done the trick," a was in certain respects a lucky strike. William sived an order for a cruising boat which should meet ents of American weather. Drilled in the school of n, which tended to very narrow boats, Mr. Fife made bim a big stride in the direction of beam. He promust have seemed to him a very vide cutter, though from an American standpoint.

Tromise' Minerva did the business, and beat all her ican rivals. The Minerva is a beautifully designed.

boat has made, r's Burgess fleet were designed when the Minerva nsidered as a racing possibility, and certainly her niluence on their design. With the Gossoon the rent. The Minerva had a walkover last year, the wbole problem reduced itself to an effort to

vanquisbed is not disgraced. The Gossoon is the be the margin is close. The Ventura may show up he but her performance yesterday put her in company boats.

THE New York Tribune of July 13, has the following plain comments on the actions of the New York Y. C. from 1870 to 1887 in regard to the America's Cup:
"The action of the New York Y. C. in regard to the America's Cup has not met the approval of all American yachtsmen. The cup is looked upon as a trophy in which all Americans are interested, and it is the desire of everyone that there should be no

CLUB CRUISES.

CLUB CRUISES.

JULY is the month of club cruises, and Bay Ridge, Larchmont, or the Seavanhake C. Y. C., one of the first, carried the fleet to Marblehead, where it joined with the Eastern Y. C. The New York Y. C. holds its summer meeting to-day, and on July 30 the fleet will rendezvous, as usual, off the Pequot House, New London, The Massachusetts Y. C. starts on its cruise on Saturday, the following general order having been issued:

ON *SOARD FLASHIP.

CITY ANGIORAGE, July 8, 1890. {

The squadron will assemble off Thompson's Island on Saturday, July 19, at 2 o'clock P. M. The flagship will be at anchor, and when signal is made to pass in review the stiling squadron will pass under the stern of the flagship will be at anchor, and when signal is made to pass in review the stiling squadron will each vessel will be taken the best of the way to Portland. The time of our way to Portland. The time of our way to Portland. The time of acch vessel will be taken the dead by the vice-commodore, and make the best of the way to Portland. The steamers present at the rendezvous will pass in review after the sailing squadron will acrive heart found to a fine the stern of the start of the flagship. The steamers present at the rendezvous will pass in review after the sailing squadron will be given at the confidence of the yachts of the Portland Y. C. will attendant of Triday, the 18th, of which due notice will arrive heart house on Friday, the 18th, of which due notice will race from Boston to Portland, one, to the yachts of both clubs. At Portland the two clubs will race for the Mallet cups, presented by Mr. Mallet of Portland. The commodore offers cups for the race from Portland to Boothbay. The fleet will race from Bosthot by Mr. Mallet of Portland. The commodore offers cups for the race from Portland to Boothbay. The fleet will race from Bosthot by Mr. Mallet of Portland. The commodore offers cups for the Portland to the vacchis of the Portland to the vacchis of the Portland to Boothbay. The fleet will race from Bosthot by

By order of the commodore.

ARPHUR F. SHEPARD, Fleet Captain.

The South Boston Y. C. started on its cruise on July 12, the first stop being at Salem.

The Great Head Y. C. started on the same day and anchored at Marblehead over night.

EASTERN Y. C.

The annual cruise of the Eastern Y. C. began on July 12, the fieet sailing from Marblehead at 3:30 P. M. The fleet included Sea Fox, Com. Tacker, Mayflower, Chone, Gitana, Troubadour, Foam, Meta, Volunteer, Puritan, Wayward, Medusa, Huron, Bayadere, Ajax, Milicete, Gossoon, Ventura and Pappoose. The wind was light southwest and spinakers were set, the fleet reaching Gloucester at sunset. A meeting of captains was held in the evening, at which Col. Cochrane, of Chone, offered to give a \$250 cup to the schooner making the best average runs of the cruise, corrected time, and Bayard Thayer, of Pappoose, made an offer of a cup, of like value, for the sloop showing np best under the same conditions as the schooners. The offers were declined, as it was decided not to make a race of the cruise. Minerva left Marblehead for the westward, not joining the cruise.

LARCHMONT Y. C.

The fleet of the Larchmont Y. C. left the club's anchorage on July 12, at 11 A. M., for Black Rock, the first port on the cruise. The fleet included the flagship Daphne, Com. Lowery; the schooners Leona, Elfin, Clochette, and the singlestickers Dare, Lotowana, Vandal, Trochilus, Harriet and Kelpie. Black Rock harbor was made at 4 P. M.

ALLANTIC Y. C. will be at New Rochelle

wanal, vandal, frochinas, intrict and Keipic. Stack Rock harder was made at 4 P. M.

ATLANTIC Y. C.

The rendezvous of the Atlantic Y. C. will be at New Rochelle this afternoon, the fleet sailing for New London to-morrow morning. The cruise will probably extend to New Bedford, calling at New London, Shelter Island and Newport.

The Knickerbocker Y. C. will rendezvous on July 19 in Hempstead Harbor for the annual cruise, which will extend to New London or Newport.

A meeting of the New York Yacht Racing Association was held on July 11, at which Charles E. Cameron, of the Newark Y. C. was appointed fleet captain by Commodore Prime. The annual cruise was discussed, and it was resolved so to change the programme that one of the stopping places should be at Bridgeport instead of Black Rock.

BEVERLY Y, C.

161st regatta.—third open sweepstakes, monument beach. July 12.

IGIST REGATTA.—THIRD OPEN SWEEPSTAKES, MONUMENT BEACH, JULY 12.

The state of flukes. When the judges' boat got into position at 12:45 the of flukes. When the judges' boat got into position at 12:45 the of flukes. When the judges' boat got into position at 12:45 the ingly, but just as the starting gun should have been fired the wind change death.

As it looked as if it would hold for a couple of hours, the prespectory gun was fired at 1:08, sending 1st and 2d classes to Pines Buoy, then to Wings Cove Buoy, from which they would have a beat across to Wings Neek and a run home—11½m.

Third class went to Pines Buoy, then to 1:2 Ledge back to Pines; a dead beat as wind was at starting and a run home, 7:2 m.

Fourth class apparently had no beat in their course of 0:2 m., twice down to the Pines and back.

In 1st class Mathe, though entered, did not start, while Climax had it all her own way with A.P.L., who needs more wind.

In 2d class Anonyma led off on gun fire, with Mollie a minute behind her, followed by Mist, Gymnote, Widgeon and The Crawford, a new boat just brought round from Quincy.

As they neared Pines Buoy wind shifted to S. and the leaders getting it first had the advantage; off Wings Cove the rear boats and tw.N.W., and there were frequent calms, the boats coming home in a light S.W. air, and there being no beating at all in the race. Anonyma salied well and spun out a long lead.

Third class had a very similar race, no beating, and numerous shitts and calms. Eina, flying light, led off with her large sail and spun out a long lead; The hadren calms, the sail and spun out a long lead. Third class had a very similar race, no beating, and numerous shitts and calms. Eina, flying light, led off with her large sail and spun out a long lead; she was followed by Cayuse, Hermione, Algonquin, Daisy and Puzzle. The latter sailed well and soon took the lead. On the second round they had a fluky beat to windward, Rip making three or four more tacks than Edith:

rounded second, with Elsie third, the balance of the fleet were a long distance astern, and were practically out of it. The leaders did not change their positions from reactive their than the state starting. How Long Is THE ANACONNA?—The Larchmont Y. C. regatta committee has met with as much difficulty in measuring Anaconda as has been found in the case of other sea serpents, and the actual waterline length of her snakeship is still a mystery. On the evening of July 4, while preparations were being made to measure her, she disappeared from Larchmont Harbor as suddenly as the stock sea serpent disappears from the seaside summer resort, and she has since kept out of the way of the official tapeline, there are gred pounds for coubt in the race of the New Rochelle Y. C. In the first place two sets of times were taken on the start, while at the finish, though there is sample testimony that Clara crossed the line ahead of Anaconda, she is down in the official times as finishing astern of her. Before it is accepted as a fact that Anaconda has really beaten Clara, these discrepancies in the starting and finishing times must be explained, and Anaconda must be accurately measured.

BIJOU_MM. Jeannot's fast cathoat was incorrectly reported in our last issue as beaten by Edna in the New Rochelle Y. C. regatta. This is an error, as Bijou was not in the race.

CORINTHIAN NAVY.—The New York Bay squadron of this association held a very successful regatta on July 5 of Stapleton, Staten Island. On July 12 the Hudson River squadron field its regatta of 1152 street. The entry list was very large, and a number of small boats crossed the line. The next regatla of the association will be figure by the beat for squadron on Port. Iorris. Entires for this regatta may be made with A. Dahm-Petersen, 63 East 114th street. The fleet of the navy will assemble at New Rochelle on August 2, to take part in the first annual cruise. The following gentlemen are proposed for membership: L. M. Post. John W. McCarthy, Chas. Ohmeis, T. Irving Woods.

TALASSIT C. C.

ONE of the most notable events which has occurred at Lake Quinsigamond for some time was the launching of the Talassti C. C. war canoe last week, the first one of its kind ever seen in this vicinity. The club has only been in existence a tew months, but already has a membership of 20. The officers are: Fred P. Dean, Com; E. W. Finney, Vice-Com; Fred A. Sears, Captain; A. H. Laing, Purser. The club is at present located at Mr. H. H. Bigelow's private boat house, which is one of the most desirable locations on the Lake, being away from the railroad, highway and steamboat landings. Being on private grounds there is no annoyance from the rougher clement at some times too prominent about youch places. The club members assembled at the club house about 7 P. M., and donning their uniforms were soon on their way across the lake to Coburn's boat house, from whence the launch took place.

At 8 P. M. the twelve paddlers took the canoe from her braces and oepositod her tenderly in the water; and taking their places and pushing off from the landing while Commodore Dean broke a bottle of "Extra Diy" over her prow, and in a happy vein of humor gave a short sketch of the origin of the club, and christened the mammoth cance Wachawewak, which is the Indian for suntower tower the course of the course o

At 8 P. M. the twelve paddlers box. The water and taking their place and opposited her tenderly in the water; and taking their place and pushing off from the landing while Commodore Dean broke bottle of "Extra Dry" over her prow, and in a happy vein chumor gave a short sketch of the origin of the club, and christene the mammoth canoe Wachawewak, which is the Indian for sur flower, the club's totem.

A crowd of several hundred had assembled about the box houses to witness the event, and as the oraft moved swiftly an silently down the lake, propelled by the united strength of twely young braves, she was admired by all.

She is the third largest cance in the country, and reflect great credit on her builder, Mr. D. L. Rigby. The Wachawewa will probably be seen at the annual meet of the A. C. A. th season.

with product, or seem to season.

The proper pronunciation of Wachawewak has been master by but a tew members as yet, the majority contenting ther selves with an original pronunciation which is remarkably particles. Why should we walk?"

N. Y. C. C.—New York, July 8.—The New York Canoe Club proposes (weather permitting) to hold an eight-mile canoe saling race off their citch house Stapleton, S. I., for a first and second prize, on Saturday, July 19. The preparatory signal will be given punctually at 225 P. M., second signal at 229 P. M. and t start at 239 P. M. B. H. Nadal, R. B. Burchard, S. Schieffellin

THE NORTHERN DIVISION MEET.

THE NORTHERN DIVISION MEET.

HE camp site committee has prepared the following circular:
There are so many attractive points on the Lake of the Two
Interest stifed to the A.C. A. camp, and after a careful exnation of the available places, has chosen He Cadieux, which
Alme de Bellevue, about the same distance from Vaudreuil,
all means the best. The camp will be about 4 miles from
Anne de Bellevue, about the same distance from Vaudreuil,
antes from Como. It is the last of the series of islands
classified the shore from He Perce up, and thus offers excepation of the shore from He Perce up, and thus offers excepation of the shore from He Perce up, and thus offers excepation is a broad open stretch of water which narrows

evided the composite of the Cadieux is a fine sheltered by, from
harrow channels lead among the islands, which are thickly
ded and the composite of the Cadieux is a fine sheltered by, from
least of the Cadieux is a fine sheltered by and
all store of the composite of the caces
between He adieux and the mainland, and well protected
all sides. The addieux and the mainland, well protected
all sides. The main camp will be only the side of the caces
are all as short distance from the main camp. The island is
us and is all song, and the lighthouse at the opposite end from
camp is the only dwelling upon it.

The objective point will be Stc. Anne de Bellevue, which is on
main line of hoth Grand Trunk and Canadian Pacific rails, about when y miles west of Montreal, and a point of call
all steamers of the Ottawa River, which have to lock through
his place. From St. Anne's a special steamboat will be run to
camp, managed by this Association, and connecting with the
next many and eveniug. Campers are recommended to take
as agarding at St. Anne's a special steamboat will be run to

easily be made to Oka, Carillon and other points on the lake and Ottawa River, and to the numerous summer resorts along Lake St. Louis, to Lachine and Montreal. The St. Lawrence V. C. has accepted an invitation to visit the eamp, and will probably arrange a cruise in the Lake of Two Mountains during the meet. The Canadian Pacific and Grand Trunk railways have agreed to issue round trip tickets from July 23 to Aug. 7, good to return up to Aug. 21, at single fare; and will also allow each passenger cances and camp kit to the extent of 200bs., free in baggage car. The special certificate required to obtain these tickets may be bad on application to the purser.—A. W. Morris, Hugh McLean, R. Tyson, Committee.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

C. F. D.—Wall street, go to Chas. Fenton's, Number Four.
J. H. K., Boston.—You will find lines of steam yacht in the Forest and Stream of Feb. 16, 1888, which can he reduced to 50ft.
J. G. F., Schome, Wash.—The best plans for a sharple which we have published are those in the FOREST AND STREAM of Sept. 13, 1883.

January I.

T. Benedict.—You will find several rigs for cance yawls in "Cance and Boat Building for Amateurs." The cat yawl or cance rig, mainsail and mizen, is one of the best.

A. T. L. Monroe, N. C.—If "it was decided by the management that the highest scores should take the prize" then the prizes should he distributed after order was fixed by shooting off ties.

The usual plan is to have class shooting and then the tie is sho merely to decide who shall take the prize in his class.

merely to decide who shall take the prize in his class.

W. R., Slater, Mo.—A shooter goes to the score, loads his gun (a hammerless), throws up to shoot but it don't fire; he takes his gun down and finds only one barrel cocked, the one not loaded. Does he get another bird under American Association rules? Ans. The general rule is to penalize the shooter for his own faults, and Rule 18 under live hird shooting of the American Shooting Association code says: "If the gun is not cocked or the safety not properly adjusted and the hird escapes, it shall he scored a 'lost bird.'"

Fraherman Mess—Can you grape of your readers inforce me

code says: "If the gun is not cocked or the safety not properly adjusted and the hird escapes, it shall he scored a 'lost bird." FISHERMAN, Mass.—Can you or any of your readers inform me as to the cause or prevention of worms in the air bladders of trout? I have a pend of some three acres on a spring brook and both are well stocked by nature with trout. The fish in the pend will run from 3 to 80z. in weight. For the last year or more thair air bladders have heen more or less filled with a small white worm about as large as a very fine needle and some quarrer to half inch in length. The fish seem in good condition and are nice flavored, and show no signs of parasites in any other way, some of the hladders seem nearly or quite half full of worms, while others contain only a few. Ans. No way is known of preventing the occurrence of parasitic worms in trout. They are derived from the food and the source is often obscure. There is an eminent authority on fish parasites in the Washington and Jefferson College, Washington, Pa., who will doubtless identify the worm for you, and tell you its habits and development. He is Prof. Edwin Linton, and we advise you to communicate with him either directly or through this office. We shall he interested to know more about this subject. Perhaps some of the small fish on which your trough this office. We shall he interested to know more about this subject.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of fr and share with him the newly discovered "helper."

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST.—It will wind up the line a hundred times as fast as any other reel in the world.

SECOND.—It will wind up the line slowly if the

angler chooses.

THIRD.—No fish can ever get slack line with it.
FOURTH.—It will save more fish than any other

FOURTH.—It will save more fish than any other reel.
FIFTH. It will prevent tips, lines and snells from being broken by large fish.
SIXTH.—It enables the angler, and makes it desirable, to use lighter tackle.
These claims have been substantiated by the most skillful fishermen in America and Europe.
