# THORBURN'S SPECIAL COLLECTIONS OF CHOICE BULBS

 THESE ASSORTMENTS ARE MADE UP OF THE FINEST STANDARD SORTS,  
AND MAY BE RELIED UPON TO GIVE SATISFACTION.

## No. 1. COLLECTION OF CHOICE BULBS FOR HOUSE CULTURE

PRICE, \$2.50.

If ordered by mail, add 30 cents for postage.

12 White Roman Hyacinths,	6 Trumpet Narcissus Princeps,
6 Fine Named Dutch Hyacinths,	6 Double Narcissus Van Sion,
6 Fine Mixed Dutch Hyacinths,	6 Poet's Narcissus,
12 Fine Mixed Single Tulips,	12 Mixed Spanish Iris,
12 Fine Mixed Double Tulips,	6 Campernelle Jonquils,
30 Mixed Crocus,	6 Scilla Sibirica,
6 Polyanthus Narcissus,	6 Freesia refracta.

## No. 2. COLLECTION OF CHOICE BULBS FOR HOUSE CULTURE

PRICE, \$4.75.

Consists of the same varieties as Collection No. 1, but with double the number of each sort.

## No. 3. COLLECTION OF CHOICE BULBS FOR HOUSE CULTURE

PRICE, \$9.

Consists of the same varieties as Collection No. 1, but with four times the number of each sort.

## No. 4. COLLECTION OF HARDY BULBS FOR OUTDOOR CULTURE

PRICE, \$2.

If ordered by mail, add 30 cents for postage.

6 Mixed Double Red Hyacinths,	1 Crown Imperial,
6 Mixed Single Blue Hyacinths,	12 Spanish Iris,
6 Mixed Single White Hyacinths,	6 Double White Narcissus,
24 Mixed Early Tulips,	6 Butter-and-Egg Narcissus,
50 Mixed Crocus,	6 Scilla campanulata,
12 Mixed Double Anemones,	3 Bulbocodium vernum.

## No. 5. COLLECTION OF HARDY BULBS FOR OUTDOOR CULTURE

PRICE, \$3.75.

Consists of the same varieties as Collection No. 4, but with double the number of each sort.

## No. 6. COLLECTION OF HARDY BULBS FOR OUTDOOR CULTURE

PRICE, \$7.

Consists of the same varieties as Collection No. 4, but with four times the number of each sort.

CATALOGUE OF

## *Bulbs and Flowering Roots for Fall Planting*

AUGUST 13, 1902.

**T**HE growing of bulbs for winter and spring flowering is very interesting and very easy. If the directions given in this Catalogue are observed, there need be no disappointment with the results. Many of our most beautiful flowers are produced from bulbs, and they may be grown indoors in the winter months, when flowers are most appreciated. By successive plantings a constant supply of flowers may be had from December till May. The finest outdoor displays of the early spring months are also from bulbs planted in the autumn. There is nothing more refreshing than the first Snowdrop of spring. It appears before the snow is right off the ground, and is quickly followed by the Chionodoxa, or "Glory-of-the-Snow," the bright and variously colored Crocuses and Scillas and the lovely Daffodils. Then come the gorgeous lawn displays of Hyacinths and Tulips. All these are produced from bulbs planted in the fall.

We invite special attention to the collections of bulbs offered on the second page of cover, both for indoor and outdoor cultivation. They contain only sorts that will insure satisfaction. The cultural directions found under the respective headings are also worthy of careful attention.

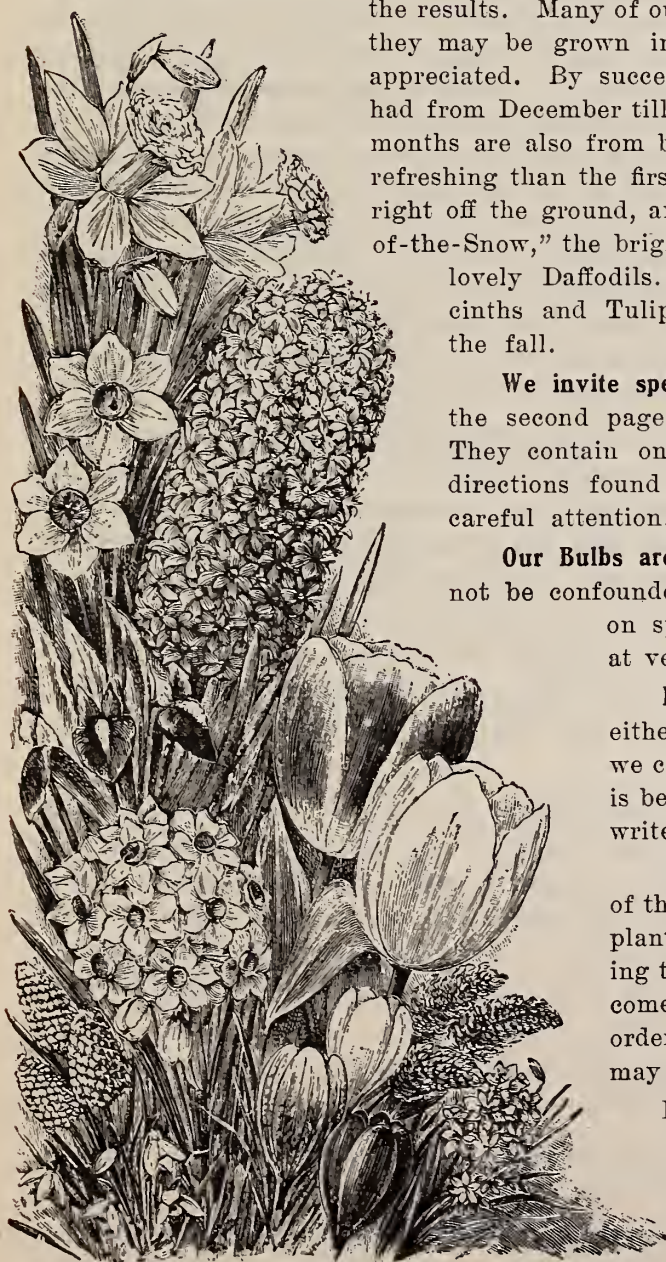

Our Bulbs are all selected, and from the best growers, and should not be confounded with the cheap "ease" bulbs sent to this country on speculation and often sold at auction, and otherwise, at very low prices.

**NAME and ADDRESS.** We often receive orders with either the name or the address of the sender omitted. As we can do nothing with them, the customer thinks his order is being neglected. We therefore beg our correspondents to write on each order their name and full address.

**ORDERS** should be sent as soon as possible after receipt of this Catalogue. The bulbs will be sent in proper time for planting. They are ready from August to October, according to the time of ripening and the country from which they come. Orders booked earliest are surest of being filled as ordered. If left too late, the supply of some of the varieties may be exhausted.

Please address all orders and remittances to

**J. M. THORBURN & CO.**  
36 CORTLANDT ST., NEW YORK

# HYACINTHS.

Hyacinths are ready for delivery in September.

The *Hyacinth* is one of the most popular and beautiful of spring-flowering plants for indoor and outdoor decorations. By careful management in keeping up a succession, they may be had in flower

*Group of Hyacinths.*

from the beginning of winter to the end of May. For a spring display in the open ground they are unexcelled. Brilliant effects can be obtained by massing different colors in varieties that grow about the same height and bloom at the same time. We furnish very large numbers for this purpose to public parks and cemeteries, and we shall be pleased to recommend to anyone suitable sorts, when desired.

**OUTSIDE CULTURE.**—October is the month to plant *Hyacinths* outside. They succeed best in a light soil and in a sunny situation. If the soil is naturally heavy some sand should be mixed with it; and if the beds have been occupied with other plants throughout the summer, some well-rotted cow manure should be added. The soil should be well dug to a depth of 14 inches, and raised from 2 to 4 inches above the level of the walk. The bulbs should be planted evenly, about 6 inches deep to the bottom of the bulb, and from 6 to 7 inches apart; if planted at uneven depths they

will not bloom at the same time, but irregularly. Care must be taken not to press the earth too firmly around and over the bulbs; some successful gardeners follow the plan of setting each bulb in a handful of clean sand, which insures proper drainage. After the ground has become frozen in early winter, cover with a few inches of dry litter, evergreen boughs or coarse manure. If this covering be applied before freezing weather, it renders the bulbs liable to the predations of field mice, which may burrow in it.

**CULTURE IN POTS.** For growing in pots, large, selected, named varieties should be used. They should be potted singly in 5-inch, or 6-inch pots. Three bulbs in a 7-inch pot are very effective. The best potting compost is fibry loam and manure in about equal parts, with some river sand intermixed. The pots should be filled lightly, and the bulb pressed into the soil so that its base is firmly fixed. About one-third of the bulb should remain above the soil. The pots should then be buried in the open ground to the depth of six inches, and left there for five or six weeks, until the pots are well filled with roots. They may then be taken into the house, where the warmth will soon bring them into flower. Where a succession is desired, it is best to pot at intervals from September till the end of November. Plenty of water should be always applied, and manure-water is beneficial after the flower-spikes appear.

**CULTURE IN GLASSES.** Single varieties are better adapted for culture in glasses than double ones. The bulb should be placed so that the base is just in contact with the water. Soft rain-water should be used, and a little charcoal might be placed in it to keep it pure. The glasses should be kept in a cool, dark closet for ten or twelve days, until roots are formed, and then exposed to the light and air as much as possible. Do not place them near gas light. In very cold weather the glasses should be removed from the window, as the bulbs cannot stand frost. The water should never be allowed to freeze, and it should be changed every two or three days.

**Persons unacquainted** with the different varieties will do well to leave the selections to us, only specifying in their orders whether the bulbs are wanted for pot, glass or garden culture.

We invite special attention to the assortments of named *Hyacinths* of our selection offered on page 4, and to the *Hyacinth Glasses* which are described at the end of the Catalogue.

The names of our *Hyacinths* and *Tulips* are those given to them by the originators in Holland.

## SELECT NAMED HYACINTHS.

The Single-flowered varieties are generally more effective than the Double ones. They also, as a rule, succeed better in glasses. The Double varieties are distinguished by an asterisk (\*) and those of them that do well in water by two asterisks (\*\*).

If ordered by mail, please add 15 cents per dozen for postage.

## GROUPS OF HYACINTHS FOR DESIGN BEDDING.

To obviate the disappointment resulting from selecting unsuitable varieties for design beds, we give the following groups of sorts that bloom about the same time and grow to the same height. They will all form most effective combinations. We recommend **named** sorts for design bedding as decidedly better than mixtures.

{	Baron Thuyll, Red.	{	General Pelissier, Red.
{	Alba Superbissima, White.	{	Baroness Thuyll, White.
{	Charles Dickens, Blue.	{	Grand Maitre, Blue.
{	Gigantea, Red.	{	Norma, Red.
{	Grandeur a Merveille, White.	{	La Franchise, White.
{	Baron Thuyll, Blue.	{	La Peyrouse, Blue.
	{		{
	Robert Steiger, Red.		Mad. Vanderhoop, White.
	Marie, Blue.		

## MIXED HYACINTHS IN SEPARATE COLORS.

The very largest size. Suitable either for forcing or bedding.

Our Mixed Hyacinths should not be confounded with the small-sized, low-priced mixtures often sold. Our bulbs are all large size, measuring 6 inches and over in circumference. Being furnished in so many separate colors, splendid bedding effects may be produced with them. They are also admirably adapted for forcing in the greenhouse for winter cut-flowers.

*If ordered by mail, add 15 cents per dozen for postage.*

## ROMAN HYACINTHS.

Extensively used by florists for forcing for cut-flowers. of bulbs. The flowers are pure white, delightfully fragrant, and each bulb will throw up from three to four spikes. For forcing, three or four bulbs are generally planted in a suitable pot, in good soil (as recommended for other varieties). The pots must be kept in a cool and dark place until they fill with roots, when the flower-spikes can be rapidly developed by exposure to light and moderate heat. They are very easily grown and extremely early; and by making successive plantings they may be had in flower all through the winter. The blue and rose Roman Hyacinths flower from one to two weeks later than the white variety.

For this purpose they are the best and most popular

*If by mail, add 10 cents per dozen for postage.*

<b>Single Blue Roman</b> .....	05	45	3 00

## ITALIAN HYACINTHS.

These are grown largely by florists for cutting. The flowers are single, very graceful and fragrant, and produced abundantly. They are hardier than the Romans, and may also be planted outside in the fall for flowers for early spring cutting.

	Each	Per doz.	Per 100
<b>Single White Italian</b> .....	\$0 05	\$0 50	\$3 50

## MINIATURE HYACINTHS.

These are also known as “Dutch Roman” and “Pan Hyacinths.” They are very suitable for growing in groups in pots or earthen pans, as shown in the illustration on page 2. We offer them in separate colors, and also mixed, as follows:

**Pure White, Rosy Red, Light Blue,  
Cream White, Dark Blue, Yellow,  
Dark Red, Mixed, all colors.**

Price, 50 cents per dozen, \$3 per 100.

# TULIPS.

 Tulips are ready for delivery in September.

For beauty of form and brilliancy of coloring, Tulips are unequalled. For bedding they are the most popular and effective of all hardy bulbous plants. In our descriptions we give the color and average height to which they grow, so that purchasers can select suitable sorts for forming display beds in design. The most gorgeous effects can be produced by harmonious massing of contrasting colors. For pot-culture and forcing for winter cut-flowers, they are also invaluable.

**CULTURE.** The cultural directions given for Hyacinths on page 2 are equally applicable to Tulips, except that the bulbs, being smaller, must not be planted quite so deep. Four inches to the bottom of the bulb is deep enough, and a distance of 5 or 6 inches between the bulbs is sufficient. They may be planted in October and November, before the ground freezes. A little sand around each bulb is generally recommended, but in light, sandy soil this may be dispensed with. For pot-culture, a compost of two parts loam to one part light manure, with some sand intermixed, is suitable. From 3 to 5 bulbs, according to size, in a 5-inch pot, are very effective. The pots should be buried until the bulbs are well rooted, in the manner recommended for Hyacinths. Most of the varieties named below are equally well adapted for pot-culture or the open border

## SINGLE EARLY TULIPS.

**DARWIN TULIPS.**

These belong to the class of single late-flowering Tulips (page 8), being in fact modern forms of Gesneriana. They grow very tall, with large flowers of fine form. Being borne on very long stems, they are excellent for cutting to put in vases for house decoration. They are all single, self-colored, and surpass all others in brilliancy and variety of coloring. They are also most effective for bedding. Besides the mixture, we offer the following named sorts :

	Each	Per doz.	100
<b>Baronne de la Tonnoye.</b> Vivid rose.....	\$0 08	\$0 60	\$3 50
<b>Bruno.</b> Glossy dark brown.....	08	60	3 50

<b>Mixed</b> .....	05	40	2 00

*Darwin Tulip.*

**PARROT TULIPS.**

For outdoor cultivation. The petals of these have feathered edges, and in addition to other colors combine shades of green—a peculiarity confined to this class. The flowers are very singular and picturesque, of large size and brilliant color, and form very effective groups for the flower border. *Very late in flowering.*

*If ordered by mail, add 6 cents per dozen for postage.*

MIXED TULIPS.

For bedding. Planted in large masses, these make a magnificent show and, being inexpensive, should be largely used. Our special mixtures of Early Single and Early Double Tulips are made up of the finest bulbs and the brightest colors. If planted in large beds, they will produce an exceedingly beautiful and lively effect.

If ordered by mail, add 6 cents per dozen for postage.

Bed of Tulips.

### TULIP BEDS.

It is to be regretted that the gorgeous displays presented by the Tulip beds of our public parks should so seldom be seen on our private lawns. Tulips are so hardy and of such easy culture that failure to obtain satisfactory results is possible only by selecting unsuitable *sorts*. In order to obviate this difficulty, we give the following groups of sorts that bloom at the same time and are of equal height. Any of these groups will form an effective combination. After the Tulips have flowered, the beds can be used for bedding plants, such as Geraniums, etc., to full advantage. Rich soil is necessary.

It is advisable to order as soon as possible after receipt of this Catalogue, as later on in the season we may be sold out of some varieties, owing to an unusual demand for them. In that case we shall substitute equally fine sorts of same color and time of bloom.

#### GROUPS OF TULIPS THAT WILL FORM EFFECTIVE COMBINATIONS.

##### SINGLE TULIPS.

- { Duc van Thol Scarlet.
- { La Reine.
- { L'Immaculee.
- { Duc van Thol Scarlet.

<b>Ostrowskianum.</b> Deep carmine .....	05	40	2 25

*Types of Narcissi.*

## NARCISSUS.

Narcissi are Ready for Delivery in September.

The very beautiful species and varieties of Narcissus are among the most popular and largely grown of spring-flowering bulbs, and that deservedly, too, for they are certainly "the fairest among them all." Their exquisite grace, beauty and charm of habit have been immortalized in the poetry of all times. No garden should be without them. To know them is to love them, and to love them is a liberal education.

They are all of the easiest cultivation, thriving in almost any soil and situation, and they may be left alone for several years after once being planted. They do best, however, in a deep and somewhat stiff soil, and in a partially shaded position. They are well adapted for planting by the sides of streams, or lakes, or ponds, and in mixed flower or shrubbery borders. They are also suitable for naturalizing in the grass, by the side of woodland walks or in open spaces between trees and shrubs. With the exception of the Polyanthus section, they are all perfectly hardy.

Narcissi are also very suitable for growing in pots, requiring about the same treatment as hyacinths, with 3 or 4 bulbs in a 5-inch pot. Some of the varieties are grown in large numbers by florists for winter cut-flowers.

### SINGLE NARCISSUS, or DAFFODILS.

*If ordered by mail, add 13 cents per dozen for postage.*

	Each	Per doz.	100

Jonquils.

# LILIES.

For stateliness of habit, beauty of form, and variety of coloring, the Lily is without a rival among bulbous plants. Many of the species are delightfully fragrant. Though they may nearly all be called hardy, it is well to protect them against frost in winter by a covering of ashes or litter. They are easily grown, and require little care. With the exception of *L. candidum* and *L. tigrinum*, which prefer a rich, deep loam, they all do best in a light, well-drained soil. Some peat or leaf-mould may be used to advantage. *L. auratum* cannot bear manure, but thrives in ordinary light soil. They all prefer a partial shade, and the taller sorts must have protection from high winds. Many of the stronger-growing kinds are well adapted for planting among shrubs. Most of them make splendid conservatory plants. For pot-culture, a compost of loam and peat in equal parts, with the addition of some sand, is recommended.

*Lilium Thunbergianum.*

*Lilium Harrisii* and *Lilium candidum* ready in August; all others not till November.

If ordered by mail, add 3 cents each for those marked (\*); others from 1 to 2 cents each for postage.

# LILIUM HARRISII.

(BERMUDA EASTER LILY.)

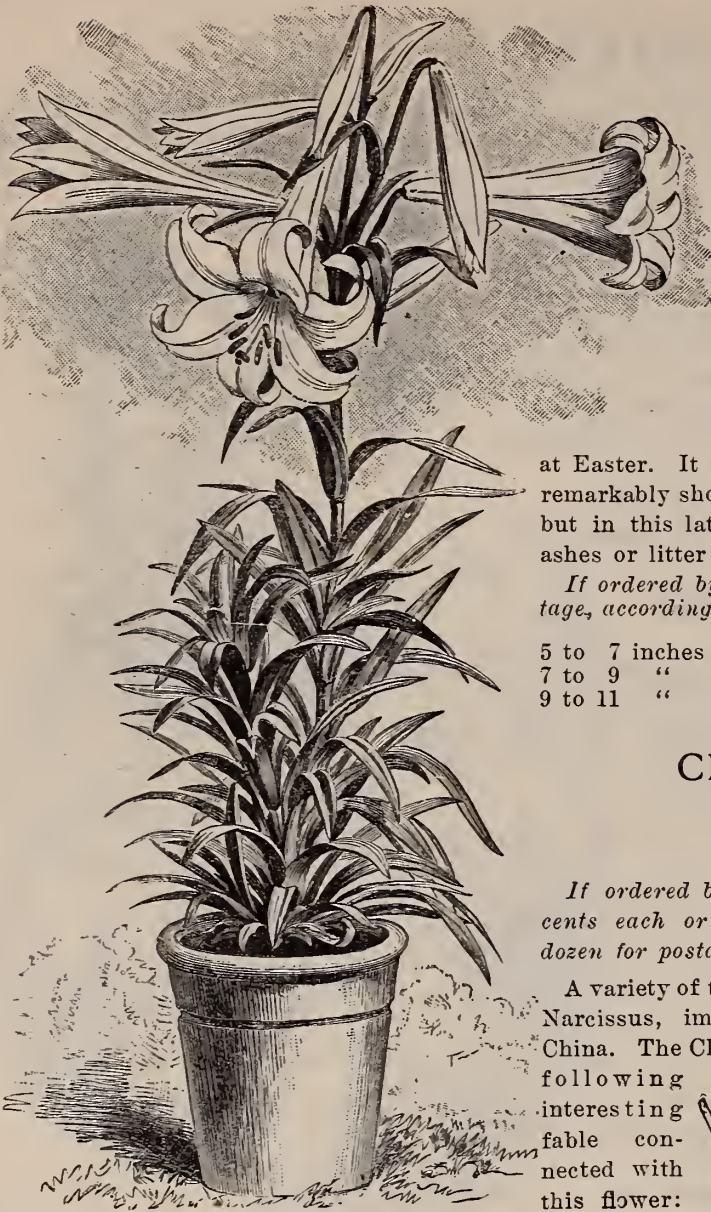

Bulbs ready now.

The Bermuda Easter Lily is perhaps the finest and most popular of winter-blooming plants. The large, handsome, pure white, trumpet-shaped flowers are very sweet-scented and of great substance, and last a long time after cutting. Its stately and graceful habit renders it a perfect pot-plant for table or window decorations. It gets its popular name from the fact that it is so largely used for church decoration

at Easter. It is easily grown and can be forced into flower in a remarkably short time. It is also well adapted to garden-culture, but in this latitude the bulbs should have a good covering of ashes or litter to protect them over winter.

*If ordered by mail, add from 10 to 20 cents per dozen for postage, according to size.*

9 to 11 " " " " .....	40	4 00	

*Lilium Harrisii.*

a father left his property to his two sons, with the understanding that it should be equally divided; but the elder son seized all the tillable land and left the younger nothing but an acre covered with rocks and water. The younger son, failing to obtain justice, sat at the water's edge bemoaning his misfortune. A benevolent fairy appeared, and, giving him these Narcissus bulbs, told him to drop them into the water. Shortly afterwards their flowers were developed, and the neighbors crowded to see the fairy's gift. In the course of a few years the badly treated brother accumulated a fortune by the rapid increase and sale of his bulbs. Then the elder brother, envious of the prosperity of the younger, bought up great numbers of the bulbs—hoping to get a monopoly by getting all of them—at so heavy a price that he was obliged to mortgage his property to procure funds for the purpose. He planted all his good land with bulbs, but they soon begun to die, as they cannot live long out of water. He was ruined, while his brother, who had bought the mortgage, foreclosed it, and became possessed of the whole estate in time to plant some of the dying bulbs in the watery acre."

The bulbs should be placed from three to six in a bowl or glass dish of water which has been partly filled with pebbles, some of which place over the bulb so as to prevent them from floating. The water should be tepid and changed every two days. Submerge the bulb entirely, and place in a sunny window in a cool room.

<b>Leichtlinii, Canary Yellow.</b> Like above, but in color pure canary-yellow.....	40	4 00

## LILY-OF-THE-VALLEY.

(CONVALLARIA MAJALIS.)

Ready in November.

One of the most beautiful and admired spring-flowering plants, and universally sought for its neat and chaste outline and delicate odor. The growth is close, dwarf and compact, and the plant is hardy and permanent. It is now a most popular plant for forcing, which is easily done by planting the pips in pots, from 6 to 12 in each, watering freely, keeping in a cold cellar, and starting from week to week, to keep up a succession. They generally flower in three or four weeks after planting. They require a considerable amount of heat to start them.

**Clumps.** Fine large clumps, with 15 or more flowering pips on each. Fine for planting outside in shaded positions, and for naturalizing by the side of streams or wood walks. 30 cts. each, \$3 per dozen clumps.

**Pips for forcing.** 50 cts. per bundle of 25, \$1.75 per 100, \$14 per 1,000.

*Amaryllis.*

# AMARYLLIS.

Ready in October.

Extremely ornamental greenhouse plants, with large, fragrant, beautifully colored flowers. The most suitable soil is good loam, with one-fourth part of leaf-mould or pulverized manure, and some sand. Good drainage is very important. The growing season is from early spring until about September, when the plants should be kept cool and allowed to rest until February. They require plenty of sunshine, but in the flowering season a light shading tends to preserve the blossoms longer. Frequent disturbance of the roots is to be avoided. Established bulbs in large pots should have a top-dressing each year when starting, and manure water during the growing season.

	Each	Per doz.
<b>Aulica</b> (Lily-of-the-Palace). Very large, handsome flowers; crimson, shaded with green.....	\$1	00
<b>Belladonna.</b> Violet and white; flowers in large umbels; very fragrant..	20	\$2 00

# ARUMS.

Ready for shipment in Sept. and Oct.

A genus of curious and ornamental perennials, with peculiar and distinct foliage and flowers. They make handsome pot-plants, and are also very effective in subtropical gardening. *A. Dracunculus* is hardy, and may be left in the ground over winter, with a little covering. The others should be potted in the autumn and kept dormant till spring. They are all of easy cultivation, requiring rich soil and plenty of water during the growing season. A compost of rich loam, with a third of well-rotted manure and some sand, is very suitable.

If ordered by mail, add 3 cents each for postage.

	Each	Per doz.
<b>Crinitum.</b> Marble stems; broad, flesh-colored, spotted flowers, covered with hairs..	\$0 20	\$2 00

*Brodiaea coccinea.*

# CROCUS.

For pots and borders. A universal favorite, being one of the earliest flowers seen in the spring. They are neat, dwarf and compact in growth, and the blooms are of bright colors. If planted close—say 2 inches apart—and in close rows, they make a very pretty display immediately after the snow goes off in the spring. Do not disturb for several years. Should be largely planted in the grass on lawns. They will flower very early in spring before mowing. The effect is beautiful.

For flowering in pots, baskets, etc., they should be plunged in the open ground for three weeks after planting, precisely in the same manner as directed for hyacinths.

*If ordered by mail, add 15 cents per 100 for postage.*

# HYBRID NAMED CROCUS.

Composed of the most beautiful varieties; remarkable for richness of color and immense size. These varieties are best for forming letters or designs on the lawn, for which purpose they may be planted without disturbing the grass, by the use of a dibble or narrow trowel. The flowers are produced very early, and the mowing later on will not seriously injure the Crocus bulbs.

# CALOCHORTUS.

(MARIPOSA LILY, or BUTTERFLY TULIP.)

Ready in September.

Very handsome bulbous plants from California. They are remarkable for the brilliancy and variety of their coloring, and their gracefulness of habit. They grow freely in light, sandy loam; though hardy, they should be protected during winter with litter. They may also be successfully grown in frames and in pots.

If ordered by mail, add 5 cents per dozen for postage.

Cyclamen giganteum.

# CYCLAMEN.

Most of them ready in November.

When well grown, it is difficult to find a more useful plant than this for greenhouse, room and window decorations. The various species produce flowers varying from deep red to pure white, and of much elegance of form in flower and plant. The *C. giganteum* is an improved strain of the old *C. Persicum*, having much larger and more brilliantly colored flowers, and producing them more abundantly. We offer seed of our superb strain of these at the end of this Catalogue.

# CROWN IMPERIALS.

(FRITILLARIA IMPERIALIS.)

A stately growing plant, with dark green foliage, and flowers of all intermediate shades between yellow and crimson; effective for centers of beds; hardy and permanent, and not so generally planted as they should be.

Their flowers are produced quite early in spring, and are very ornamental and decorative in the center of a bed of other bulbous plants. The old, dull red variety, while handsome, does not give anything like the effect that the newer sorts do. The double varieties are especially conspicuous and desirable in every respect. They are all the better for being planted in good, rich, well-drained soil; the flowers will be larger and of finer coloring, as well as more enduring.

Ready in September.

If ordered by mail, add 3 cents each for postage.

Fritillaria imperialis. See Crown Imperials, above.			

# FREESIA.

The justly popular Freesias are greatly prized for the delightful fragrance of their delicately colored flowers, which, when cut, will remain in good condition for a long time in water. They are easily grown or forced in a light, sandy soil, in a frame or greenhouse, and are excellent for window-culture in winter; one plant will perfume a large room, but not in the persistent manner of a tuberose. The plant has tooth-shaped bulbs and flat, spreading leaves. For the information of all not acquainted with these bulbs, we may say that they are quite small, and produce large blooms in comparison to their size.

**Freesia refracta alba.** Pure white and sweet-scented; very largely forced. The flowers are 2 inches long, and about the same in width, shaped like miniature gladioli, and in clusters of 6 to 10, on depressed horizontal scapes. The body of the flower is pure white, with lower segments spotted lemon-yellow. The fragrance is remarkable and very lasting.

Freesia refracta alba.

## GLADIOLUS.

Ready in November.

The following varieties are the sorts generally to be had at this season of the year, and they are usually planted in pots in autumn, and require to be kept in a warm room or greenhouse, except those prefixed with an (\*), which are hardy, and may be planted out; it is best, however, to give them a slight protection. Some varieties are successfully forced.

The French Hybrids, for spring planting, will be in by November. These form a family of bulbs of rare beauty. Every year is now adding varieties of most exquisite tint and shade; and from the time of year during which these bloom, and the long continuance of their flowers in perfection, they become one of the greatest ornaments of the garden at a season when flowers of vivid tints are scarce. They are valuable for bedding.

Named varieties will be found in our General Catalogue, published January 1.

## GLOXINIAS.

Ready in November.

Gloxinias are among the most beautiful of greenhouse plants, the flowers being remarkable for the intensity and variety of their coloring, and the exquisite manner in which they are often blotched, mottled, penciled and blended. The plants are extremely floriferous and, by making successive pottings, they may be had in bloom the greater part of the year. They thrive best in a soil

composed of leaf-mould and peat in equal parts, with a little sand added. When growing, plenty of water should be supplied, but it should always be tepid. The bulbs we offer are large-sized, and of the erect flowering strain.

## CRINUMS.

Splendid large-flowering bulbs, closely allied to the Amaryllis. The most suitable soil is a compost of turfy loam, cow manure and some sand. They should be grown in large pots or in tubs, about three-fourths of the bulb being out of the soil. In late fall they should be removed to a coolhouse and allowed to rest till new leaves begin to appear in February. The bulbs should receive a top-dressing each year when starting, and manure water during the growing season. They may be placed outside when warm weather begins and will flower all through the summer, making splendid lawn or veranda plants.

<b>Giganteum, Giant White.</b> Immense bulbs; large white flowers; blooms all summer; very fragrant: they should be watered plentifully while growing .....	Each \$2 50
<b>Amabile, Giant Pink.</b> Splendid flowers; extra large, bright pink, with white stripe; enormous bulb. This and the Giant White are unsurpassed for growing in tubs, blooming profusely outside all summer.....	2 50

<b>Powellii.</b> It produces long stems bearing at the top five to eight large, dark rose, bell-shaped flowers 3 to 4 inches long.	40
" <b>album.</b> Pure white .....	1 25
" <b>intermedium.</b> Light rose; hardy.....	3 00

Crinum.

# IRIS (FLEUR-DE-LIS). Ready in October and November.

Iris, the Greek name for the rainbow, was applied to this flower in allusion to the manner in which many beautiful colors are blended together in the flowers. Irises are of easy culture, requiring very little attention

after once being planted. They do best in a light, rich, sandy soil, and in a sunny situation. Good drainage is very important. The newer varieties of *Iris Kämpferi*, recently introduced from Japan, are remarkable for the beauty of their colors and their stateliness of habit. Some of these send up 10 or 12 flower spikes 3 feet high, each bearing 2 to 4 enormous blossoms, measuring 8 to 10 inches across, and of the most delicate and beautiful colors, markings and combinations; no other flowers excel them in richness. These require a liberal supply of water when growing. With the exception of *Morea pavonia* and *Tuberosa*, all the varieties are hardy.

*New Large-Flowered Japan Iris.*

IRIS, Continued—SPANISH IRIS. (*Iris Hispanica*.)

Very profitable for florists, who are planting them largely for cut-flowers. Plant in beds in the open as soon as received in the autumn, and protect slightly in the winter months. In the beginning of April cover the beds with glass, so as to have the flowers ready for cutting in May.

IXIAS.

Ready in October.

The Named Hybrid Ixias are so beautiful and rich in tints that no lover of flowers should be without them. They are equally adapted for pots or the open ground, exceedingly free-flowering, and invaluable for cutting. If planted out, they require rather more covering during winter than hyacinths. In pots their culture is the same as that usually recommended for other bulbs. By reason of their curious forms and strange coloring, the Ixias attract much attention.

ERYTHRONIUMS. (DOG'S-TOOTH VIOLETS.)

Ready in September.

Very ornamental, hardy, bulbous plants, of neat and dwarf habit. They succeed in almost any light soil, but prefer a mixture of loam and peat. They should be planted in groups, and do well in sheltered positions on rockeries, or in mixed flower or shrubbery borders.

	Each	Per doz.	100
<b>Giganteum</b> (Giant Dog's-Tooth Violet). Very large, straw-colored flowers, with orange center, borne on long, slender stems; the foliage is richly mottled in dark brown and its elegant habit makes a very attractive pot-plant for window decoration.....	\$0 05	\$0 40	\$2 50
<b>Grandiflorum.</b> Leaves unmottled; flowers bright yellow, with recurved petals.....	10	1 00	6 50

<b>Dens-canis</b> (Dog's-Tooth Violet). Mixed colors; very pretty; leaves blotched in brown and white .....	05	30	1 50
<b>Mixed</b> .....	05	40	2 50

*Erythronium.*

# LACHENALIAS.

Ready in September.

Very pretty, spring-flowering, greenhouse, bulbous plants, with brightly colored flowers and elegant habit. They should be grown in pots, four to six bulbs in a 5-inch pot, in a compost of two parts loam, two parts leaf-mould and one part each of peat, sand and well-rotted cow manure. Apply but little water until growth is somewhat advanced, but give more freely as the foliage develops; give them plenty of light and air, and keep near the glass to insure sturdy growth. Lachenalias are also excellent subjects for hanging baskets.

Lachenalias.

	Each Doz.	
<b>Luteola.</b> Pale yellow flowers, flushed with green .....	\$0 20	\$2 00

# MONTBRETIAS.

Ready in November.

Hardy, summer-flowering, bulbous plants that are becoming more popular every year. Their brightly colored flowers are borne on long, graceful spikes in the greatest profusion, and they are most valuable for cutting and general decorative purposes. They should be planted in groups and left undisturbed. Ordinary garden soil and a sunny position suit them. The following are the handsomest and most distinct varieties:

	Each	Doz.	100
<b>Bouquet Parfait.</b> Large, bright vermilion flowers, with deep yellow center ...	\$0 06	\$0 60	\$3 00

<b>Arabicum.</b> White, with black center; valuable for forcing .....	\$0 05	\$0 40	\$2 50
<b>Pyramidale.</b> Showy spikes of white flowers .....	30	3 00	
<b>Umbellatum</b> (Star of Bethlehem). Outside green and white striped, inside satiny white; flowers in umbels; very showy .....	2 for 5 cts..	20	1 00

Montbretias.

## NERINE.

Ready in October and November.

Very beautiful greenhouse bulbous plants, succeeding best in pots, in light soil—say a compost of loam, leaf-mould and sand. Frequent repotting is not advisable, but an annual top-dressing of new soil before the flowering season is recommended. During the growing season they succeed best in a frame with some bottom heat. After the leaves die they should be kept quite dry in a cool place until they begin to grow again.

*Nerine Japonica.*

	Each	Per doz.
<b>Crispa.</b> Very handsome scarlet flowers.....	\$1 00	
<b>Flexuosa.</b> Bright crimson-scarlet, tinged with orange.....	1 00	
<b>Fothergillii.</b> Bright, glittering scarlet, in a many-flowered umbel.....	1 00	
“ <b>major.</b> A magnificent plant for house or conservatory. The flowers are of the most intense shining scarlet, and by artificial light the crystalline cells of the petals sparkle like jewels. It flowers very freely.	1 25

## PAEONIES.

Ready in October.

The old-fashioned double Pæonies are too well known to require description. Their popularity is due to their great merits—their easy culture, the handsome appearance of the plant, and the brilliant and striking effect of their massive, finely formed, richly colored flowers. Among hardy herbaceous perennials, the Chinese Pæonies rank about first for lawn or flower-border or shrubbery decoration. They are all hardy.

# RANUNCULUS.

Ready in September.

The main soil for these should be loam or clay, with a good dressing of rotten manure and leaf-mould; if heavy, add a little sand. The soil should be well drained, cool, deep, rich and moist. Plant late in the autumn, claws downward, from 4 to 6 inches apart and 3 inches deep, covering with fine, pulverized soil.

If ordered by mail, add 3 cents per dozen for postage.

# RICHARDIAS, or CALLAS.

Ready in September and October.

Tall-growing, bulbous perennials of exceedingly graceful habit and very handsome foliage and flowers. They are easily cultivated in pots, requiring only a rich soil and plenty of water. A compost of one part good loam and one part cow manure is recommended. It is a good plan to plant them out in the garden each summer, in rich, well-manured soil, giving them plenty of water, taking them up and carefully repotting in September.

White Calla.

	Each	Per doz.	100
<b>White Calla, or Lily-of-the-Nile</b> ( <i>Calla Æthiopica</i> ). Large, white, trumpet-shaped flowers of great substance. One of the most popular and ornamental of house and greenhouse plants..	\$0 20	\$2 00	\$15 00

## SNOWDROPS. (GALANTHUS NIVALIS.)

Ready in September.

Perhaps no spring flower is a more general favorite than the Snowdrop. The earliest-flowering of its varieties is the common single sort, which is also very graceful and beautiful, commencing to bloom before the snow is fairly off the ground in the spring. This is succeeded by the double-flowered variety, with its elegant drooping, snow-white blossoms.

*Tigridia.*

## SCILLAS.

Ready in September.

No garden can be complete without these beautiful flowers. *S. Peruviana* requires slight protection; all the others are quite hardy, and may remain in the ground several years.

If ordered by mail, add 5 cents per dozen for postage, except those marked with a star (\*), to which add 2 cents each.

**Sibirica.** The effect in early spring of the intensely rich blue, early-flowering Scilla, contrasting with the snow-white of the Snowdrop and the varied hues of the Crocus, can hardly be over-estimated; are most valuable for permanent edging. 30 cts. per doz., \$1.70 per 100, \$12 per 1,000.

	Each	Per doz.	100
<b>Sibirica alba.</b> White-flowered variety of the above.....	\$0 05	\$0 45	\$3 00

# ALBERT'S PLANT - FOOD

*The Best Fertilizer for House Plants*

**T**HIS celebrated plant-food, made in Germany, is a scientific preparation containing in a highly concentrated and easily soluble form the food elements required by plants. It is odorless, clean to handle, quick in its action, and unequaled in its effects. It is put up in attractive tins with full directions for use printed on each, and containing inside a small spoon holding the exact quantity required for dissolving in a quart of water. By its application plants acquire a sturdier growth, fuller development, and a manifold increase in bloom. For Palms, Ferns, India Rubber Plants, and all other pot-plants, it is by far the most complete, most effective, most economical fertilizer made.

PRICE: 15 cents per tin

## SPIRAEA, or ASTILBE.

Ready in November.

Tall, graceful, branching, herbaceous perennials, thriving in rich soil and damp positions. Those we list are extensively used for forcing for winter decorative purposes, for which they are eminently adapted, either as cut-flowers or in pots for window and table decoration. They should be potted when received and buried outside till they begin to form roots. They may then be taken in and forced as required. They require abundance of water.

**Japonica (Hoteia).** Excellent pot-plant for winter blooming. Large, branching panicles of pure white, feathery flowers; fine for cutting. Clumps for forcing or outdoor planting. 10 cts. each, \$1 per doz., \$6 per 100.

**Japonica fol. aurea reticulata.** Beautiful gold-striped foliage; large panicles of pure white flowers. 15 cts. each, \$1.50 per doz., \$10 per 100.

**Japonica compacta multiflora.** The neat, compact habit and profusion of large, handsome, pure white flowers make it a most elegant pot-plant. 15 cts. each, \$1.25 per doz., \$7 per 100.

**Astilboides floribunda.** Very large, pure white plumes; neat habit; very abundant bloomer. 15 cts. each, \$1.25 per doz., \$7 per 100.

**Palmata.** Crimson; strong clumps. 15 cts each, \$1.25 per doz., \$8 per 100.

*Spiraea Astilboides floribunda.*

## TUBEROSES. Ready in December.

The purity of color and rich perfume of the Tuberose are well known. In this latitude May 1 is early enough to plant in the open ground, but the bulbs may be started in pots much earlier if desired. They do best in a rich warm soil and in a sunny situation. Cut off about a quarter of an inch from the bottom of the bulb before planting and set so that the top will be one inch below the soil.

**Dwarf Double Pearl.** Dwarf habit; Each Doz. 100  
large fine flowers of great substance. \$0 05 \$0 35 \$1 50

## TRILLIUMS.

(AMERICAN WOOD LILY, or INDIAN SHAMROCK.)

Hardy herbaceous perennials, succeeding best in a deep, well-drained soil and in a somewhat shady situation. They require plenty of water during the summer. All are natives of North America, and are known by various common names in different localities. They have violently emetic roots.

*Trillium sessile Californicum.*

	Each	Doz.	100
<b>Grandiflorum</b> ("Giant American Wood Lily," or "Wake Robin"). Large white flowers, changing to rose; quite hardy, and easily grown in shaded positions.....	\$0 05	\$0 40	\$2 50
<b>Erectum</b> ("Birth Root"). Dark purple flowers; erect habit; about one foot high.....	05	50	3 00
<b>Erectum album.</b> A white-flowered variety of the above.....	08	60	4 00
<b>Erythrocarpum</b> (Painted Trillium). White, striped purple.....	15	1 50	10 00
<b>Ovatum.</b> White, changing to purple....	10	75	5 00
<b>Sessile Californicum.</b> Handsome, pure white flowers; prettily mottled foliage	10	1 00	6 00

*Chionodoxa Lucilliae.*

*Tricyrtis hirta.*

## Miscellaneous Bulbs and Roots.

	Each	Per doz.	100
<b>Achimenes</b> , Mixed. Lovely greenhouse pot-plants.....	\$0 08	\$0 75	\$5 00

# Selected List of Hardy Flower Seeds.

For Autumn Sowing.

Many varieties of Flower Seeds, ANNUALS as well as BIENNIALS and PERENNIALS, may be sown in the open ground in the autumn. We give here a list of such as will succeed in this latitude and southward. The plants from autumn-sown seed become larger and more robust, flowering earlier and more numerous than if sown in the spring.

# STRAWBERRY PLANTS.

*Layer plants can be had in September. Pot-grown plants ready now.*

	<i>Layer</i> per 100	<i>Pot-grown</i> per 100
<b>Beder Wood.</b> Very early, productive; large, conical, bright red color; excellent quality .....	\$1 00	\$3 00
<b>Brandywine.</b> Large, roundish conical, glossy crimson, firm and solid; of fine, aromatic flavor. Plant vigorous and productive; succeeds on any soil. Midseason to late .....	1 00	3 50
<b>Brunette.</b> This variety, in its combination of delicious flavor and beauty, has probably taken a step in advance of any variety now generally cultivated. Its berries are above medium size, round, and almost invariably perfect; of a dark mahogany color when fully ripe, and without any white tip. The plant is a strong grower and as free from rust as any variety now cultivated; flower perfect. The fruit is round in form, handsome, and of exquisite flavor.....	1 00	3 50
<b>Bubach No. 5.</b> A very large berry of dark color. Productive; of fair flavor. Largely grown for market. Midseason.....	1 00	3 00
<b>Clyde.</b> Very regular, bright scarlet berries; large, and of excellent flavor; firm, and a good shipper. Plant remarkably healthy, vigorous and productive. Season early .....	1 00	3 00
<b>Excelsior.</b> This is without exception the most valuable extra-early sort now on the market. A persistent and healthy grower, a cross between Hoffman and Wilson Albany. Twice as vigorous and healthy as either. Will average larger than Hoffman, twice as productive and equal to Hoffman as a shipper, which is saying a great deal, but not too much, and this year it was five days earlier than either Hoffman or Michel's Early. The above is our own experience and is strictly true; it is useless to say more.....	1 00	3 00
<b>Gladstone.</b> Large, early and of good quality; color red, with red flesh; solid.....	1 00	3 50
<b>Glen Mary.</b> Of large size; bright glossy crimson, of fine flavor. Plant is strong and healthy, very prolific, and on good soil the berries are large to the end of the season. Early .....	1 00	3 50
<b>Johnson's Early.</b> A fine new extra-early of large size and deep red color; glossy, firm, sweet, and of excellent flavor.....	1 00	3 50
<b>Kansas.</b> The plant is very vigorous and the fruit is a brilliant crimson, not only on the outside but through and through. This feature, together with its strong Strawberry flavor, will make it very popular when better known. Season late .....	1 00	3 50
<b>Lady Garrison.</b> This is a new one from south Jersey, where the originator and others have been fruiting it for a number of years, and where it has sold for higher prices than any other variety. Last year large quantities of the berries were shipped to New York and Boston, bringing 2 to 4 cents per quart more than others. Large, fine-looking, good flavor, second-early	1 00	3 50
<b>Marshall.</b> Large, dark crimson, good. Plant luxuriant, but needs rich soil and careful culture. Midseason .....	1 00	3 50
<b>McKinley.</b> Large, roundish, crimson; flesh firm and quality good. The plant is vigorous and a great yielder; flowers bi-sexual or perfect. Season medium to late.....	1 00	3 50
<b>New York.</b> The berries are very large, ripening midseason. Color, dark scarlet, changing to crimson when fully ripe. Colors all over at once. Quality first-class. This berry won a prize of \$100 in gold in competition with many other varieties against the Glen Mary.....	1 00	3 50
<b>Nick Ohmer.</b> For market, for home use or for exhibition, this is probably the greatest berry ever offered. It is certainly the most desirable berry that has come under our observation. It is our candid opinion that all who grow the Nick Ohmer will be astonished at its healthy, vigorous growth and great productiveness. The fruit will be a surprise to all who see it, being mammoth size, beautiful in form and color and of excellent quality.....	1 00	3 50
<b>Palmer's Early.</b> After two seasons' fruiting, an experienced and reliable Strawberry grower writes: "Palmer's Early ripened four days before Johnson's Early, or Excelsior. The berry is long, somewhat the shape of Parker Earle; color is dark red when fully ripe. It is very productive and the best-flavored berry I ever tasted".....	1 00	3 50
<b>Sharpless.</b> Demands rich, strong soil. Plant large and vigorous; berries very large, irregular in shape, crimson, moderately firm and of good quality. Mid-season. Layer, \$1 per 100; pot-grown, \$3 per 100.		
<b>St. Joseph.</b> New French Everbearing Strawberry. Fruit of good size; color, a rich glossy crimson, with flesh of same color. The plant is hardy and a continuous bearer, both on the old plants and the young ones as well. Pot-grown plants set out this summer will fruit abundantly next spring, and continue to fruit, more or less, during the summer. In addition to this, if the runners are not severed from the parent plants, they will form new plants, which will fruit the same season, giving a continuous supply of fruit throughout the summer. Layer, \$1 per 100; pot-grown, \$3.50 per 100.		
<b>Success.</b> Early, large, bright crimson color, high flavor, and continues bearing a long time. Layer, \$1 per 100; pot-grown, \$3.50 per 100.		
<b>Wm. Belt.</b> The berries are as large as Bubach, more perfect shape, just as productive, and the color is perfect. Layer, \$1 per 100; pot-grown, \$3 per 100.

## Grass Seeds for Autumn Sowing.

Autumn sowing is recommended from the latter part of August to the end of September, so that the young grass may become well rooted before winter sets in. Our new-crop seed of the leading sorts is ready now.

### THE THORBURN LAWN GRASS.

The **Thorburn Lawn Grass Mixture** is composed exclusively of permanent grasses that make a finer and thicker turf the older they become, and yet give a rich greensward in three or four weeks from the time of sowing. It should be sown at the rate of four to five bushels to the acre (15 lbs. to the bushel). Per qt., 25 cts.;  $\frac{1}{2}$  pk., 65 cts.; pk., \$1; bus., \$3.50.

### THORBURN'S LAWN-RESTORING GRASS SEED.

A mixture of grasses peculiarly suited to take firm hold and grow quickly on hard, worn-out or burned spots. Some **Lawn-Restoring Grass Seed** should be sown on thin places before every rain. Per qt., 30 cts.; bus. of 24 lbs., \$5.

### THORBURN'S LAWN GRASS FOR THE SOUTH.

A mixture of grasses that stand extremes of heat and drought well and that are therefore peculiarly adapted for southern lawns. Per bushel of 20 lbs., \$5.

### THORBURN'S MIXTURE FOR SHADY SPOTS.

A mixture of grasses that thrive in shaded situations, under trees, or close to walls where there is little sun. Price, per quart, 35 cts.; peck, \$1.75; bushel of 24 lbs., \$6.

### PERMANENT GRASS SEED FOR GOLF LINKS.

We have given much attention to this subject, and have seeded most of the finest golf links in the country, among which we may mention the following celebrated links: St. Andrews, Baltusrol, Shinnecock Hills, Garden City, Nassau County, Philadelphia Country Club, Montclair Golf Club, Apawamis, Fox Hills, etc.

**Golf Links Mixture.** For the grounds in general. Per bushel of 20 lbs., \$2.50.

**Putting-Green Mixture.** A mixture of extra fine grasses, that will make a close, firm, green and lasting turf, which will improve with trampling. Per quart, 30 cts.; peck, \$1.75; bushel of 24 lbs., \$6

### GRASS SEED MIXTURES FOR MEADOWS AND PASTURES.

For over a hundred years our house has made a specialty of grasses. The formation of permanent pastures and meadows has for many years been a subject of careful study with us, and the following mixtures for seeding grass-lands have received universal recognition.

#### MEADOW MIXTURES FOR ONE ACRE.

- No. 1. For good land, neither too dry nor too wet. Price per acre (40 lbs.), \$5.
- No. 2. For high and dry land. Price per acre (40 lbs.), \$6.
- No. 3. For wet, late land. Price per acre (40 lbs.), \$5.

#### PASTURE MIXTURES FOR ONE ACRE.

- No. 4. For good land, neither too dry nor too wet. Price per acre (40 lbs.), \$5.50.
- No. 5. For dry land. Price per acre (40 lbs.), \$6.
- No. 6. For wet land. Price per acre (40 lbs.), \$5.50.

**N. B.** We shall be pleased to make special mixtures for particular purposes, or to suit exceptional conditions of soil, situation or climate—for very sandy or clayey ground, for very dry or wet situations, for steep slopes, terraces, tennis-courts, croquet greens, polo-grounds, etc. We invite consultation about any difficulties experienced in getting the right turf for any purpose or in any place.

## MUSHROOM SPAWN.

We have always on hand fresh spawn of the very highest grade. Cultural directions will be found in our General Catalogue. Any one requiring fuller details should get Mr. Wm. Falconer's book on Mushroom Culture, which we can send, postpaid, for \$1.

**English Spawn.** Per lb., 15 cts.; 10 lbs., \$1; 100 lbs., \$9.

**French Spawn.** Per lb., 50 cts.

*Mushrooms.*

## Insecticides and Remedies for Plant Diseases.

### Bug Death.

A fungicide, insecticide and plant-food combined. 1-lb. package, 15 cts.; 3-lb. package, 35 cts.; 5-lb. package, 50 cts.; 12½-lb. package, \$1; 100 lbs., \$7.

Perfection Shaker for applying above, 65 cts. each.

### Copperdine.

A combined fungicide and insecticide, used simply by adding water in proportion of one pound of the paste to 16 gallons of water. 1-lb. box, 25 cts., makes 16 gallons spray; 5-lb. box, \$1, makes 80 gallons spray.

### Fir-Tree Oil.

For greenhouse and house plants. It destroys all plant insects without injuring the plant. Dilute in the proportion of 1 pint to 20 gallons of water. Apply with vaporizer or syringe. ½ pt., 40 cts.; pt., 75 cts.; qt., \$1.25; ½ gal., \$2.25; gal., \$4.

### Fir-Tree Oil Soap.

FINLEY ROTARY LAWN RAKE.

It can be easily adjusted to fit any work by simply turning two nuts. It is simple and strong in construction, durable, and with no intricate parts. It can be adjusted so as to scarify the ground, remove summer grass, worm casts, etc., or raised so as merely to skim the surface of the grass, picking up loose grass, leaves or any loose litter. It is a most efficient machine. Price, free on board New York, \$12.
