UNITED STATES DEPARTMENT OF AGRICULTURE
Agricultural Stabilization and Conservation Service

BOISE, IDAHO
Issued - March 1973

F O R E W O R D

This annual report is prepared by the Idaho State Office of the Agricultural Stabilization and Conservation Service to summarize the participation of Idaho farmers in Federal farm programs during the past year.

It was prepared for the purpose of furnishing a source of information for ASCS personnel, committeemen, agricultural agencies, and others interested in Idaho agriculture.

The Idaho State ASC Committee sincerely appreciates the work of the persons involved in the preparation of the report.

Much credit is due the dedicated service of County Executive Directors together with the program assistants throughout the State for the tireless effort put forth in the fulfillment of their duties. To them also, our sincere thanks.

IDAHO STATE ASC COMMITTEE

George L. Blick, Chairman

ADMINISTRATIVE

Congress appropriates money each year for the operation of county offices.

The Administrative Section has the responsibility of allocating the money to the counties. The amount allocated to each county office is determined by the workload report.

The Data Processing Center in Kansas City summarizes expenses and personnel information by computer from information furnished by the State and county offices.

The staffing of the county office also depends on the workload report. Periodic national reviews are made to determine whether changes should be made in standards for county office personnel ceilings.

The Administrative Section has a number of duties which are routine, but most of the duties are varied and interesting.

Idaho has 41 county offices; three are combined offices. There are 138 regular employees in the counties and 22 in the State office.

RURAL ENVIRONMENTAL ASSISTANCE PROGRAM

The Rural Environmental Assistance Program is the principal channel through which the Federal Government, in the national interest and for the public good, shares with farmers and ranchers the cost of carrying out approved soil, water, woodland, and wildlife conservation and pollution abatement practices on their land that are directed to:

1. Help maintain the productive capacity of American agriculture.
2. Help assure the Nation's growing population an increased supply of clean water, reduced air pollution, an enhanced natural beauty, more opportunities for the enjoyment of outdoor recreation, improvements in the quality of the environment, and better ecological balance.

The Soil Conservation Service and the Forest Service are responsible for providing technical program guidance to ASC committees as well as technical aid to farmers in carrying out conservation practices.

In carrying out REAP provisions, county ASC committees encourage persons responsible for any aspect of performing practices to promote public benefits by improving or preserving environmental quality and ecological balance when the practices are being installed, including:

1. Preventing or abating pollution and other environmental degradation.
2. Benefiting the community by means such as outdoor recreational opportunities, preserving open space, or enhancing the appearance of the area.
3. Benefiting wildlife and other desirable life forms.

4. Preserving historic, archaeological, or scenic sites of interest.
5. Avoiding the creation of hazards to persons or animals.

In approving requests for REAP cost-sharing, highest priority is given to practices which, individually or collectively, will:

1. Result in significant public benefits.
2. Materially assist in the solution of community-wide pollution and conservation problems.
3. Significantly contribute to the prevention or reduction of specific farm-based pollution problems.
4. Result in the application of enduring conservation measures.
5. Support the installation of pilot demonstration projects.
6. Assist low-income farmers with pollution abatement or enduring conservation practices and with participation in community-wide projects.
7. Involve youth and minority groups and individuals in program activities.

EMERGENCY CONSERVATION MEASURES

This phase of the Rural Environmental Assistance Program was made applicable to Elmore, Custer and Lemhi Counties due to the flood in 1972. Federal cost-sharing under the Emergency practice provision is only offered for replacing a conservation practice or restoring land to its normal productive capacity. Program principles set forth under the Rural Environmental Assistance Program were applicable to the administration of the flood emergency in the three counties.

CROPLAND ADJUSTMENT PROGRAM

The Cropland Adjustment Program (which included Greenspan) was a voluntary program, offered on only a limited scale during 1966 and 1967. Agreements were entered into for periods of up to ten years. The cropland diverted was devoted to protective conservation uses. The program supplemented the annual commodity acreage diversion programs. Specific incentives were offered to farmers if they shared their land facilities with the public (public access). Emphasis was given to the development of hunting and fishing areas through conservation practices designed to foster wildlife.

Under the Greenspan provision, the Cropland Adjustment Program assisted local, State and other government agencies to acquire cropland for non-farm use such as preservation of open space and natural beauty, prevention of air and water pollution and recreational opportunities.

Existing CAP agreements shown in the following tabulation will expire not later than 1976.

WHEAT PROGRAM

The Earth is the Lord's . . .

The Wheat Program for 1972 began the second year of a change in the direction for farm program policies toward a market-oriented agriculture. The new direction for farm policies was made possible by provisions of the 1970 Agricultural Act. One of the key features of the Act is that rigid acreage allotments have been eliminated as production controls. With allotments no longer dictating production patterns, farmers have the opportunity to grow the crops they can grow most efficiently. They will be better able to react to demands and changes in the market, as well as to market prices. They can seek better prices and higher sales volume and reduce their costs for higher incomes.

Participation and payment data for Idaho wheat producers are shown in the following tabulations.

FEED GRAIN PROGRAM

AW-80

The Feed Grain Program for 1972 has been a continuation of a change in direction for farm program policies toward a market oriented agriculture. The new direction for feed grains was made possible by provisions of the 1970 Agricultural Act. One of the key features of the Act was elimination of rigid acreage allotments and bases as production controls. Thus farmers can react to demands and changes in the market, as well as to market prices.

A summary of participation in the Feed Grain Program by Idaho farmers is shown in the following tabulations.

SUGAR PROGRAM

The United States Sugar Program has a three-fold purpose:

- 1 To protect the welfare of the U. S. Sugar Industry.
- 2 To provide U. S. consumers with ample sugar at reasonable prices.
- 3 To promote and strengthen the export trade of the U. S.

To achieve these goals, the Sugar Act establishes a quota system (share of the U. S. market), thus regulating supplies of sugar sold in the U. S. The largest part comes from domestic areas. (Sugar produced in the U. S.)

To help maintain farm income from sugar crops and provide an incentive to growers to adjust their production to quota and carry-over needs, "conditional payments" are made. In addition to adjusting production, producers must also comply with minimum wage and child labor requirements.

Payments to growers are financed out of the general funds of the Treasury. An excise tax on all sugar marketed within the quota system provides funds for the Treasury which more than offset all costs of the program. The revenue from this tax from 1938 through fiscal year 1970 exceeded total sugar program expenditures by about \$630 million.

"Conditional payments" to Idaho sugarbeet producers in return for their compliance with the production adjustment and other provisions of the program are shown in the following tabulation.

COMPLIANCE

Purpose of Compliance

In all production adjustment and conservation programs, the farmer receives certain benefits from the Government. In return, the farmer agrees to do or refrains from doing certain things. Compliance is the process of determining the eligibility of the farmer for benefits under ASCS programs.

How Compliance is Determined

Compliance is determined by farmer certification. This is a do-it-yourself honor system whereby farmers report program acreages and requirements to the county office by a specified date. Producers are furnished photocopies of their farm showing field acreages. Administrative control visits or "spot checks" are made on a percentage of the farms selected at random to insure that acreage certifications are accurate.

Measurement Service

This service is available to any farmer for any program purpose such as measuring and staking areas to be planted or set aside, measuring after planting or measuring total cropland. A nominal charge is made for this service and any acreage measured is guaranteed. The service can be of great benefit to the farmer in planning and carrying out his plantings since he will not underplant or overplant the program acreage, thus eliminating costly acreage adjustments.

Aerial Photography

The most economical method of determining acreages on the farm is by use of accurately scaled photographs. Photographs are used in all of our agricultural counties.

Aerial photography is continually updated to keep up with changes due to improvement in farming methods, conservation practices being carried out, new highway construction and new land brought into cultivation.

Up-to-date photography is one of the main keys to the success of the certification method of determining compliance.

WOOL PROGRAM

The National Wool Act of 1954, as amended, provided a support program on wool and mohair. The intent of the program is to support wool at the level determined necessary to encourage an annual domestic production as a measure of national security and for the economic welfare.

The Agricultural Act of 1970 established for the three marketing years beginning January 1, 1971, and ending December 31, 1973, the support price for shorn wool at 72 cents per pound, grease basis, and the support price for mohair at 80.2 cents per pound. In April each year, payments are made to bring the national average price for wool sold during the previous calendar year up to the support price.

In 1971 the national average price received for wool was 19.4 cents per pound. The net sales receipts for 1971 were increased by 271.1 percent to adjust the average sales price to the support level. The unshorn lamb payment rate was \$2.10 per hundred weight -- the amount determined necessary to give the producer or feeder essentially the same net return he would receive if he sheared the animal and obtained the payment on shorn wool.

The total amount of payments under the program is limited to 70 percent of the accumulated total of duties collected on imports of wool and wool manufactures.

BEEKEEPER INDEMNITY PAYMENT PROGRAM

The Agricultural Act of 1970 provided indemnification to beekeepers for losses sustained by them since January 1, 1967, through no fault of their own, because of applications of registered pesticides in areas nearby or adjacent to their beeyards. The Act recognized the importance of honey bees in the pollination of fruit and seed crops in our agricultural production for foods.

Beekeepers participating in the program are required to furnish:

- 1 - proof of the loss of the bees,
- 2 - evidence that registered pesticides were applied adjacent or nearby to the beeyards,
- 3 - proof that if he were notified that pesticides were to be applied that he took reasonable steps to protect his bees if possible,
- 4 - and proof that he took reasonable steps, if possible, to improve the condition of the colonies after they had been damaged by pesticides.

The Act provided retroactive payments for the years 1967 through 1970. The procedures for loss occurring after 1970 varied some from the four previous years.

Indemnifications were made on the basis of \$20.00 for destroyed colonies, \$15.00 for severely damaged colonies and \$5.00 for moderately damaged colonies. (Indemnity is also authorized for queen nuclei destroyed or severely damaged.)

LOAN PROGRAMS

Price-support operations have been carried out for specified commodities by the Commodity Credit Corporation since 1933. One phase of the price support operations is accomplished by commodity loan programs.

In Idaho commodity loans carried out by CCC include wheat, barley, oats, rye, corn, honey, and dry edible beans. Farmers producing wheat or feed grain must comply with the applicable set-aside program to be eligible

for a price support loan on the crop.

Usually the market prices are lowest at harvest. The loan program permits farmers to secure loans at low interest rates and hold their crops for more advantageous prices. By holding their crops in storage farmers are able to spread their marketings throughout the marketing year thereby helping to stabilize market prices.

Loans can be made on crops stored on the farms in suitable storage or in approved warehouses. Loans on most commodities mature May 31. Loans can be issued only on those grains meeting suitable standards.

CCC loans are also available to help farmers finance new facilities needed to store price supported commodities. Loans are made up to 85 percent of the out-of-the-pocket costs to producers. The loans are for five years with four equal annual installments. The interest rates are low and vary from time to time.
