AGRICULTURAL EXPORTS OF THE UNITED STATES, 1851-1902.

INTRODUCTION.

Recent successes of the United States in competing for the world's markets have aroused unusual interest in the history of the export movement. As a result of this interest numerous requests are received for statistics of exportation covering a long series of years. To meet the demand for such information, so far as products of agriculture are concerned, the compilations embodied in the present bulletin have been made. These compilations embrace the annual export returns, as officially^a reported, from 1851 to 1902, inclusive. They show the value of the agricultural produce exported from the United States during the years mentioned in comparison with the total exports of domestic merchandise (see diagram, fig. 1) and also separately the quantity and value annually shipped of each one of the numerous products of agriculture for which official export statistics were recorded.

Notwithstanding the great increase in population, and the consequently larger demands of the home market, the development of agricultural productivity in the United States during the past fifty years has far outstripped domestic requirements, leaving an increasing surplus to be disposed of in foreign markets. According to the returns for 1851, which comprise the earliest record given in the present report, our agricultural exports for that year were valued at \$147,000,000, while in 1902, the latest year for which statistics are available, the value amounted to \$857,000,000. The striking difference between these two records shows how rapidly this branch of our commerce has developed. The present value of the trade is nearly six times as large as the value fifty years ago.

While our export trade in agricultural produce has grown marvelously, a still larger growth proportionately has occurred in the exportation of manufactured products, and thus the percentage that agricultural produce comprises of all merchandise exported is considerably less to-day than it was a half century ago. Of the merchandise sent abroad in 1851 products of agriculture formed about 82 per cent, whereas in 1902 the proportion agricultural was only 63 per cent. The change indicated by these percentages has been particularly rapid

^aThe statistics given in the present bulletin are based upon the official export returns published annually by the Bureau of Statistics, United States Treasury Department.

during the last two decades. It is explained in part by the more extensive manufacture in the United States of certain raw materials of agricultural origin previously shipped in larger quantities to foreign countries.

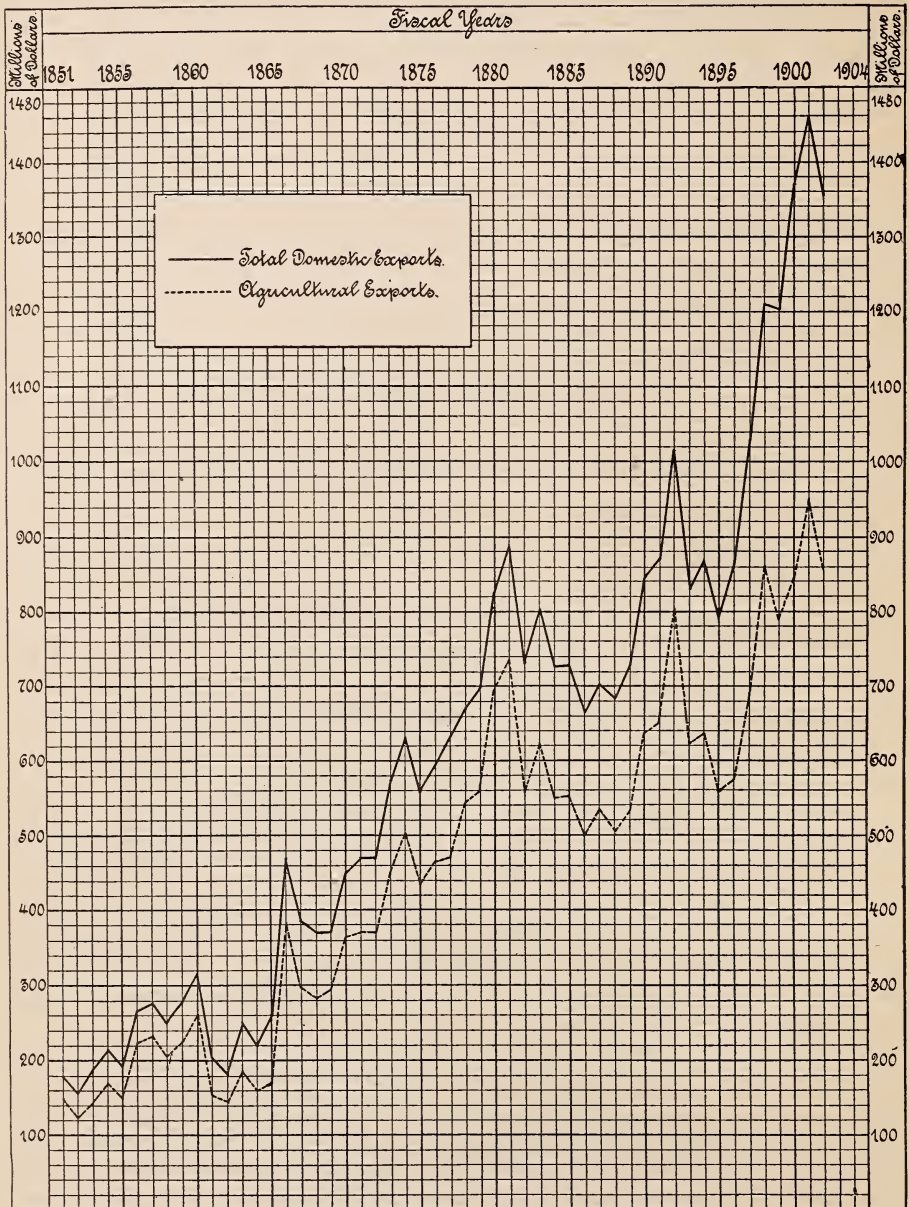

FIG. 1.—Diagram showing the course of the value of agricultural exports and of total domestic exports from the United States during the period 1851-1902.

An interesting feature disclosed by the records of our agricultural export trade for the past fifty years is the increased importance of animal products in that trade as compared with vegetable products. In 1851, 95 per cent of the agricultural exports consisted of vegetable

matter and only 5 per cent of animal matter. Of the exports for 1902 vegetable matter comprised about 71 per cent and animal matter about 29 per cent. These figures show the extent to which our export trade has been affected by the growing prominence of stock raising in American agriculture.

SUMMARY STATEMENT OF DOMESTIC EXPORTS, TOTAL AND AGRICULTURAL.

Following is a table that shows the value ^a of our agricultural exports, and also the value of the total exports of domestic merchandise, during each year from 1851 to 1902, inclusive:

^a In the accompanying table, and also throughout the present report, statistics of values for the fiscal years 1862 to 1879, inclusive, represent mixed values, partly currency and partly gold, exports from the Pacific ports having been returned in gold, while exports from other ports were returned in currency. The average annual value in currency of a dollar in gold for the years in question was as follows: 1862, \$1.016; 1863, \$1.371; 1864, \$1.562; 1865, \$2.019; 1866, \$1.404; 1867, \$1.41; 1868, \$1.399; 1869, \$1.375; 1870, \$1.233; 1871, \$1.127; 1872, \$1.118; 1873, \$1.146; 1874, \$1.12; 1875, \$1.127; 1876, \$1.139; 1877, \$1.079; 1878, \$1.025; 1879, \$1.002.

^b Exclusive of exports from San Francisco, amounting to \$1,343,064, that were not reported in time to be included in the original returns.

^c Including exports from New Orleans and San Francisco for the six months ended June 30, 1865, valued at \$17,436,429 (\$2,001,192 representing agricultural produce), the returns of which were not published until the succeeding year.

^d Exclusive of \$2,144,916 worth of exports from San Francisco that were not reported in time to be included in the original returns.

^e Exclusive of \$550,000 worth of silkworm eggs erroneously reported in the original returns as shipments of domestic, instead of foreign merchandise.

STATEMENT OF AGRICULTURAL EXPORTS CLASSIFIED AS ANIMAL AND VEGETABLE MATTER.

The extent to which our annual exports of agricultural produce consisted of animal matter and vegetable matter, respectively, during the years 1851-1902 will be seen from the following table:
