

The Political Economist.

٩.

On August 25 was Published No. 8, Vol. VII., New Series, Price 8d; by post, 9a,

THE INVESTOR'S MONTHLY MANUAL. The INVESTOR'S MONTHLY MANUAL for August gives the Highest, Lowest, and Latest Prices of Stocks, Shares, and other Securities during the Month, the mode in which the Dividend in each case is payable, the last four Dividends, &c, It also contains

A FINANCIAL RECORD OF THE MONTH: New Capital Created and Called; Table of Railway Traffic Receipts; Notices and Reports of Stocks, Failures, Railway, Banking, Insurance, and Miscellaneous Companies. New Companies and New Capital. Prices made up to August 22. Advertisements for the next number, to be published on September 29, must be sent, to insure insertion, on or before September 27.

The December Number of the INVESTOR'S MONTHLY MANUAL gives, in addition to the usual information, the Highest and Lowest Prices of all Stocks and Shares for the last Three Years, the Latest Quotations for 1875 (so as to indicate the Exact Movement during the Twelve Months), a Complete Directory, the Names of the Markets where each Security is chiefly dealt in, a Financial History of the Year 1876 (including a Tabulated Chronicle of Events), besides Memoranda relating to the Financial Position of Foreign and Colonial Governments, to Railways, &c., &c. It is intended, in addition, to furnish the Names of the Chairman and Secretaries, or Managers, of the various Companies. A copious Index is added for purposes of reference. Price 1s 4d; by post, 1s 6d. OFFICE-340 Strand.

THE PROPOSAL FOR A GRANT FROM ENGLAND TO ASSIST INDIA.

MORE than once or twice during the last few days the question has been mooted whether a grant from the Exchequer of Great Britain should not be made in aid of the famine-stricken population of India. The sad chronicle of increasing distress is continued in successive telegrams. Sometimes we are told of opportune showers arriving in time

us, but if the significant hint which the price of food gives is taken as a guide, it is clear that the outlay must eventually be enormous. It must also be borne in mind that the present is by no means the first year of distress from famine, and that, in order to compare the present prices of food-grains with those ordinarily paid, it is needful to go back two years, to be clear of the alteration of prices resulting from the effects of famine. At present every nerve is strained and the energy of every official concerned is directed towards meeting and grappling with the existing suffering. That the resources of India are sufficient to meet the stress laid upon them is doubted by none, but when the facts are examined into, it is clear that the doing so will strain those resources very severely. Much of the outlay must go in direct famine relief, and will thus be necessarily lost,-that is to say, expended in the maintenance of the people, without any profitable return resulting from it. A portion may be spent in reproductive works. This, though a drag on the resources of India at an inconvenient time, will in the end be of service to the country. To carry out now new lines of railway which had been planned before, but which had waited for a more convenient opportunity for execution ; to construct new canals or tanks, which may assist in the distribution or the storage of supplies of water, by means of which future generations may be spared the miseries which the existing inhabitants suffer at the present moment,-these are works which approve themselves by their own suitability, and we are glad to find that some of these are being undertaken in Bombay. But leaving these aside, it is best to examine at once what the state of the resources of India is at the present time. The financial statement of Sir John Strachey, made at Calcutta on March 15 in the present year, supplies the following figures. We quote here from the abstract published with the financial statement, as it gives the information in the most convenient form :-

"Budget Estimates, 1877-78: Revenue, 52,192,7001.; "Expenditure, 56,442,4001., of which for Public Works Extra-"ordinary, 3,628,0001.; Deficit, 4,249,7001., reduced to "621,7001. if Extraordinary Works be excluded. Estimated "cost of Famine, 2,150,0001., making 5,250,0001. in the two "years (1876-77, 1877-78); surplus on ordinary account, ex-"cluding famine, 928,3001."

THE ECONOMIST.

This is the estimate for the coming year, but it is desirable to go back a little further, in order to appreciate the full importance of the present pressure on the resources of India. The accounts for 1875-76, including 595,779*l*. for Famine relief, and 4,270,629*l*. for Public Works Extraordinary, show a deficiency of 2,601,747*l*.

The Regular Estimates for 1876-77, including 3,800,000*l*. for Public Works Extraordinary, and making provision for an estimated cost of Famine of 3,100,000*l*., including loss of revenue resulting from it, show a deficiency of 6,078,300*l*., or excluding Public Works Extraordinary, 2,278,300*l*.

"Public Works Extraordinary" include the outlay for works which it is expected will be remunerative, and may, in consequence, be regarded in the light of capital invested for the use of India. But they include items which cannot by any possibility be excluded from the Indian Budgets, and it will be seen that even leaving them out of the account, the expenditure for the years 1876-77 and 1877-78 is influenced to so great an extent by the famine, that a deficiency is expected for both of those years.

Before going further, it is needful to explain that "the famines" spoken of in the foregoing extract are unfortunately not the same famine, as far as expenditure is concerned, as that which is now exciting the attention of the British public. A famine has existed in India, more or less, since the budget years 1873-4, and the cost to India, including the estimated requirements of the present year, but not including the present famine, appears to have been something close to ten millions for famine relief alone, while the loss to the country from decrease of revenue, and other similar causes, is, of course, considerably more. The amounts stated to have been expended under this head in the statistical abstract relating to British India are, in 1874, 3,864,673*l*.; 1875, 2,237,860*l*.; to which must be added the 5,250,000*l*. mentioned above, and 595,779*l*. included in the accounts for the year 1875-76.

No estimate has yet appeared with any official authority of the probable cost of the existing famine, which in fact is only part of a long-continued and most exhausting series. It is likely that no estimate can at present be made with any degree of certainty. But at the best a severe burden on the resources of India must be expected.

The attention of the Indian Government has been directed for some years to the best method of meeting these calamities, as is shown by the following extract from Sir John Strachey's financial statement, made in Calcutta on March 15 in the present year ; "It cannot be too distinctly stated that charges for the relief " of famine must be looked upon as ordinary charges; they are " so shown in the Accounts of the present year, and in the Esti-" mates now before the Council; and they were shown in the same " way for the Bengal famine by the Government of Lord North-" brook. In the financial statement for 1874-75, Lord North-" brook showed very clearly that whatever means we may take " to obviate or mitigate these calamities, famines cannot, under "present circumstances, be looked upon as occurrences of an ex-"traordinary character." And Sir John Strachey went on to state that the Government of India had "therefore resolved to use its best endeavours to maintain for the future a considerable surplus of income over ordinary expenditure, and thus to make provision beforehand for any calls which were likely to arise on account of famines.

This is the principle which we have contended is the correct one for the Government of India to maintain. Expenditure on account of famines is analogous to Poor Law Relief in England, and should, therefore, be charged to revenue, and not to capital. Having thus made clear to our readers, *firstly*, that the resources of India have been already severely taxed on account of famines during recent years, while famines must be regarded as more or less ordinary events in India; and *secondly*, that the Government of India has adopted the right principle, by regarding expenditure on account of them as part of the ordinary expenditure to be provided from revenue, we now are in a better position to judge whether it is desirable or not that a grant should be made by this country to India in the present calamity.

The latest important precedent in favour of such a course is the grant to Ireland during the Irish famine of 1846-48. The amount of this assistance may be stated in round figures as not less than eight millions. This is a large sum. But what proportion did it bear to the annual expenditure of this country at that date? Sir S. Northcote's volume, "Twenty

Years of Financial Policy," gives the expenditure of the British Government :---

For	1846-7	85	*************	#E1 700 FT
	1847-8	22	******	55,175,042
99	1848-9	22	***************************************	

—including some part of the assistance granted to Ireland, which passed through the Budget statements of each year, and 1,100,000*l*. on account of the Kaffir war of that date. The public expenditure of Great Britain in that period was, therefore, something very similar to the public expenditure of India now, and it is clear at a glance how far smaller a burden the demand for the Irish famine then was in comparison with the enormous strain of the present series of Famines on the Indian Exchequer. As far as severity of distress goes, it is obvious that the claim is far stronger now. And it also has been shown that the Indian Government has resolved to meet such an expenditure in a proper, statesman-like spirit, and not to allow it to be added to the permanent debt of the country.

Should such a grant be made, and we think that the urgency of the case is distinctly stronger than that of Ireland thirty years ago, we also think it should be accompanied by one strong recommendation from the Home Government to the Indian Government,—and that is, that some system of local administration should be adopted in India to make the cost of the preservation of life, in periods of sweeping distress like the present, a charge on the funds administered by local authorities, as the charge for the Poor Law is in England. It is found that only persons on the spot can suitably ad-minister Poor Relief in this country, and the same principle, which is based on the first elements of human nature, must apply elsewhere. Sir George Nicholls's history of the Irish Poor Law shows that though the intervention of the Imperial Government was absolutely required to grapple with the immediate urgency of the Irish famine, yet that it was the establishment of local organisation alone which could effectively meet the difficulties in administration which are continually arising in dealing with local distress. Before that period, dearths, in some years amounting to famines in im-portance, are stated to have occurred annually in Ireland. Since that period, though distress has occasionally, as it must inevitably come, yet the pressure is felt in a totally different manner. The complete solution of the problem must be left to the Government in India to work out. The existence of the village communities in many parts of India may prove one system of organisation ready to hand to be utilised. One of the difficulties in introducing such an organisation is that it would not be wanted in ordinary seasons. But it would have to stand ready, so to say, against the time of need. The conditions of the case appear to point to the execution of a great system of Public Works for the storage or distribution of water. A grant from the British Exchequer might be made in such a manner as not only to be of vast assistance to the Indian Government, but also to draw closer the bond of union between the two portions of the Empire. The value of the gift would be enhanced tenfold if it were accom-The value panied by the establishment of a system of local organisation, which would guard against the recurrence of calamities such as the one we all now deplore. The resources which a Government commands are not money which it has created, but wealth produced by the labour of those over which it rules, which should not be idly expended without some corresponding advantage being gained. Should the Cabinet feel, as the statement just made shows, we think, they may feel, justified in proposing to assist India from British resources, we think they should accompany the gift by the organisation of some system of public works as safeguards against famine. Tanks or canals might be constructed or improved, and it should be made known to the native population that they were the gift of England to India. Works of this kind, which the Indian Government may see the desirability of, but may hesitate to carry out, because of the cost, might be usefully constructed out of such a grant. The knowledge there was a Power which not only ruled justly, but which also protected the population from want, might be of service in maintaining the stability of the British Empire in India.

HOME RULE AND PARLIAMENTARY OBSTRUCTION. THE interesting letter from Mr Butt to a Roman Catholic clergyman, which was published in the *Times* some days ago, will probably excite some misgivings in the minds of Mr Parnell's supporters. It points out the weakness of the obstructive strategy

[Sept. 15, 1877.

THE ECONOMIST.

from a purely Irish point of view. Mr Butt does not waste his time in remonstrance or expostulation. He knows that the Irish electors who admire Mr Parnell are not the men to be troubled by the reflection that they are helping to degrade representative institutions, or tempting majorities to deny freedom of speech to minorities. Mr Butt's argument is directed to show that obstruction can only be a success if it secures the concession of Home Rule, and that it is quite certain that it will not secure this. Irish politicians may conceivably have two objects in view-Home Rule, which is a distant and ultimate object, and the passing of particular Irish measures by the Imperial Parliament in the interval before Home Bule is obtained. An Irish policy may be successful, either because it disposes Parliament to pass these intermediate measures, or because it disposes Parliament to concede Home Rule. The vice of the obstructive policy, according to Mr Butt, is that it does not dispose Parliament to do either one or the other. No doubt it enables those who practice it to make themselves exceedingly disagreeable and inconvenient to other members and to the Government. But if the House of Commons is sufficiently provoked it can always exclude the offending members either from a particular debate or from Parliament-and then what becomes of obstruction ? It is defeated, unless the constituencies are prepared to take violent measures to seat their representative. Obstruction, that is to say, is only for-midable when it has insurrection behind it. But the special characteristic of the Home Rule party is that they disclaim insurrection as one of their weapons. Take away this distinction, and there is nothing to mark them off from the Nationalists, or any other of the Irish parties who have looked to forcible separation from England as the end of their endeavours. If you are minded to rebel, says Mr Butt, you may as well rebel at once, instead of obstructing the course of Parliamentary business for a time, with the prospect of rebelling by-and-bye. If, on the other hand, you are convinced that rebellion would be a fatal blunder, what is the good of pursuing a policy which, if it does not land you in rebellion, lands you nowhere You cannot be so foolish as to think that the English Parliament will let itself be worried into granting Home Rule by a series of petty annoyances, which it can at any moment put an end to. Yet, since the differentia of your party is that you disclaim all thought of resorting to force, you cannot be obstructives without thinking this.

By this time Mr Butt probably hopes that the persons whom he is addressing will have become ashamed of this half of their case, and that they will confine themselves to the plea that obstruction is the way to secure the attention of Parliament to Irish questions. Upon this point Mr Butt appeals to facts. Did Mr Parnell's policy secure the attention of Parliament to Irish questions last Session ? One of the chief of these Irish questions is the University question, and how was Mr Butt's University Bill affected by obstruction? It never was so near success as it was at the beginning of the Session, or so far from success as it was at the end of it. Mr Butt declares that he had promises of support from a considerable number of English members, and these members advanced Liberals. Considering that it was the advanced Liberals who defeated the Irish University Bill of the late Government, Mr Butt is right in saying that this support would have been peculiarly valuable. Anti-denominational sentiment is the backbone of the opposition to Mr Butt's Bill, and if that is broken, the passing of the Bill, or of some other not greatly differing from it, becomes only a question of time. But this advanced Liberal support was completely alienated by Mr Parnell and his friends. "Those," says Mr Butt, "who had promised me " their votes and their speeches came and told me that it was " impossible for them, in the face of the strong feeling that "was produced against the whole Irish party, to give any "support to the Bill." The same fate befell Sir Colman O'Loghlen's intended motion for an address to the Crown to inquire into the working of the Irish Land Act. Some influential Liberal members had promised it their support, but none of them were willing to redeem their pledges in the then temper of the House.

We are disposed to believe that these arguments of Mr Butt's will in the end have great weight with the Irish people. Annoying and impracticable as the Home Rulers may be, it must be remembered that the formation of the party represents a distinct repudiation on the part of a majority of Irishmen of a policy of insurrection. This may not seem a great step in the direction of the pacification of 1087

Ireland; but for all that it is a step. The Home Ruler is less dangerous than the Nationalist, just as the Nationalist was less dangerous than the Fenian. If, therefore, the great body of Home Rulers can be convinced that Mr Parnell's policy is really fatal to the Home Rule policy, because when pushed to its natural and necessary result it must either involve certain defeat, or commit those who pursue it to insurrection, the great body of Home Rulers will not follow Mr Parnell in the hope of gaining a Parliament of their own. If they can also be convinced that Mr Parnell's policy makes any fair discussion of Irish questions in the House of Commons impossible, they will not follow Mr Parnell in the hope of getting any intermediate and subordinate measures passed. And unless they follow him for one of these two reasons they will not follow him at all. We do not see how any reasonable Home Ruler can resist the argument of Mr Butt's letter. Its effect may not be apparent immediately, but the more it is considered, the more forcible it will appear, and before long we have little doubt that it will have commended itself to the great majority of Irish electors. If we are right in this anticipation, there follows from it a very important practical consequence. How can the House of Commons best co-operate in bringing home Mr Butt's arguments to Irishmen? Not by altering the rules of debate. That will not trouble the mass of Home Rulers in the very least. Every such alteration is partly a tribute to the power of the obstructives, and partly a challenge to their ingenuity. What is wanted is something that will make Home Rulers realise that obstruction very soon brings those who practise it to a point at which they can do nothing more unless they are prepared to rebel. This point will be reached so soon as the obstructives are dealt with personally. Make Mr Parnell's constituents understand that a persistence in his peculiar tactics will leave them in effect, if not in name, without a representative ; and as they will not be prepared to seat him by force, they will in the end prefer to have a member who is allowed to speak and vote, rather than a member who by his own obstinacy has cut himself off from doirg either. It is of the utmost importance to insist on these probabilities, because Sir Stafford Northcote seemed inclined, when speaking at Plymouth the other day, to discourage the notion of proceeding against the obstructives personally, and to trust rather to mechanical changes in the rules of debate. But if the popular support, which can alone make the obstructives formidable, is capable of being alienated from them by the arguments used by Mr Butt, the sooner his arguments are proved to be sound, the sooner they will weigh with the Home Rule party; and the best method of establishing their soundness is to show by experiment that when the obstructives have forced the House of Commons to suspend them from taking part in the business of Parliament, there is nothing more that they can do.

POLITICS IN FRANCE.

THE Republican party in France has not been long in recovering from the consternation into which they were thrown by the death of M. Thiers. Resolved not to acquiesce by yielding to panic in the triumphant taunts of their opponents they hastened to show by their acts that they could combine courage with prudence, and patience with perseverance. The funeral of the illustrious statesman whose national fame they had for a long time kept in the foreground of their ambitions gave them an opportunity of proving that Frenchmen, in spite of their proverbial impetuosity, can upon occa-sion be as self-controlled and as cautious as Englishmen. It may, indeed, be doubtful whether Englishmen would have been as long-suffering under the same provocations as the French Republicans have been during the past fortnight. The conduct of the Government in refusing to entertain the conditions which Madame Thiers wished to exact before she assented to the offer of a State funeral was in the highest degree irritating. It was evident that M. de Fourtou wished to thrust the Republicans into the background in a ceremony pretending to honour the acknowledged chief of the Republican party, and the unfounded rumours afterwards circulated, which imputed to Madame Thiers a desire to extort humi-liating concessions from the Cabinet, amounted to so many additional insults. When it became clear that Madame Thiers had only asked leave to fill one side of the Madeleine with the former colleagues and political friends of her husband, leaving the Government free to fill the other side with official personages, the excuses offered by M. de Fourtou in THE ECONOMIST.

his report upon the withdrawal of the decree were seen to be mere pretences. When the Ministers followed up this conduct by treating the respectful homage which Paris and France were esger to pay to the "Liberator of the "Territory" as if it could only have a seditious purpose, the warning against imprudence was complete. The demonstration of military force at once restored their sang froid to the Parisians, and at the same time put them upon their mettle to show that, though they preserved a sagacious coolness, the fire of their enthusiasm was not chilled. The menaces of the Government and the anti-Republican press, the extraordinarily bad weather, the party character inopportunely forced upon what might have been a national tribute—all failed to destroy the impressive spectacle which the French capital witnessed on Saturday last. The demeanour of the people was above all praise, and though it does not prove that the French have yet acquired all the political virtues, it is evidence that they are willing and able to profit by elementary lessons in a hard school.

The same calculated and resolute prudence has been shown in the attitude of the Republican party towards the prosecution of M. Gambetta. The charges, founded upon his speech at Lille, have everywhere out of France been regarded as frivolous and scandalous, and even in France the Conservative newspapers manifestly approved them only on the ground that any stick is good enough to beat a dog with. Even if the expressions used by the leader of the Republican Opposition in criticising his political opponents, and the chief of the State who had identified himself with an anti-Republican policy, had been much more violent and unsparing than those which were actually made the ground of the prosecution, the unfairness of attempting to muzzle the speaker at the moment when the Ministry are professing to appeal to the country, is apparent. If it were possible to conceive that Eoglishmen would ever engage in political controversy with such weapons as those which the Duc de Broglie and M. de Fourtou have chosen to use, the effect upon our politics would be something amazing. It is not too much to say that both Lord Beaconsfield and Mr Bright would have spent the greater portion of their lives in prison, and that Mr Gladstone's career as an independent critic of public affairs would have been brought years ago to a summary conclusion. So flagrant was the defiance of equity, and even decency, upon which the Ministers of Marshal MacMahon ventured, that there was some difficulty in imagining what the motive could be. M. Gambetta, silenced by the judge of a police Court, addressed France with more effective eloquence than if he had been allowed to fulminate a Lille speech every day, while his enforced reticence saved him from the necessity of taking up many compromising positions which would have damaged him with the Left Centre, or with the Extreme Left, or with both. This, it might have been supposed, the Duc de Broglie and his colleagues could hardly fail to perceive. To justify the conduct of the Minister from the point of view of an unscrupulous expediency, the Conservative newspapers now contend that the sentence passed on M. Gambetta will not only silence him during the elections, but will deprive him of his civil rights-including the right of being elected as a deputy, and of taking his seat in the Chamber for five years to come. Under an unrepealed law, it is said, originating in a Presidential Decree issued two months after the coup d'état, the infliction of a sentence of more than one month's imprisonment for a libel upon public functionaries, carries with it the foregoing disability, which, if enforced, would ostracise M. Gambetta during the most important crisis of his political career. The compliant Judge of the Correctional Tribunal has found M. Gambetta guilty on all the counts of the indictment against him, and has sentenced him to a fine of 2.000f and three months imprisonment, and this is sufficient, as the organs of aggressive Conservatism in France maintain, to condemn him to political extinction.

If the assertions of these apologists for the Ministry be founded upon a correct view of the law, the conduct of the Ministry in ordering the prosecution cannot be characterised in any moderate language. It is the conduct of men who have deliberately calculated upon driving the majority of the French people into revolution, with the hope that, in the hour of public confusion and distress, the power which commands the armed force of the nation may be able to dispose of its destinies without consulting the popular choice. The character of Marshal MacMahon for loyalty and uprightness

has been impaired by his ambiguous conduct since the 16th of May, but he has not yet given his countrymen the right to think so ill of him as to assume, until he proves it himself, that he is the conscious accomplice of such an intrigue. Even now the Marshal, who is assiduously labouring to scrape together something like popularity in the Gironde and the Dordogue, might redeem his reputation by declaring that he will be no party to so monstrous a violation of the principles of representative Government. We have little hope, however, that he will do so. He has become completely subject to the influence of a cabinet which has shown that pedantic laudation of Parliamentary institutions is quite compatible with total incapacity to appreciate their spirit or to apply them with common fairness to the Government of the country. The sentence upon M. Gambetta, if it were to have the effect of which the Conservative journals boast, would be far worse than arything that the most illiberal of English Ministries has attempted for nearly two centuries. The treatment of Wilkes was not to be compared with it for injustice; the Cochrane trial was the nearest approach to it that our history records. But neither in Wilkes' case nor in Lord Dundonald's was the charge purely political, or the accused in the front rank of politics. Imagine the conse. quence if any Government had attempted to disqualify Fox from sitting in Parliament for five years ! Even the Tories of the English Court were wiser a century ago than the French Ministers are now.

Sept. 15, 1877.

POLICE COURT OBSTRUCTIVES.

It is useless to grumble any more at the preposterous length of the inquiry now going on at Bow street before Sir James Ingham. All concerned have made up their minds to hear out the case, which cannot, now that several of the prisoners are committed for trial, be extended very much beyond the present point; and the public must endure a little longer what it cannot help suspecting is a waste of time. But it is worth while to consider, with a view to future inquiries, whether a repetition of all this loquacity is inevitable, either from the present state of the law from the requirements of justice. We find it hard to believe that any such necessity exists, for a very simple reason. With the law as to the powers of magistrates and the conditions as to committals the same as they now are, the voluminousness which we have lately seen in the first stages of every cause celebre at Bow street or the Mansion House, was formerly unknown. The chief rules are still those contained in the 11 and 12 Vic. c. 42; and yet magistrates managed to apply these rules and settle the question of committal or non-committal, even in the most intricate cases, in a few sittings, instead of devoting weeks and months to the preliminary inquiry, as is now the fashion. And we have yet to learn that the work was done worse, that frivolous charges were frequently sent on for trial, or that offenders were discharged in face of cogent evidence.

Any one has only to compare the present investigation, and one or two recent inquiries, such as that respecting the Co-operative Credit Bank, with bygone trials of celebrity, to be convinced that the preliminary proceedings are growing, we had almost said in geometrical ratio. Take, for the sake of comparison, one or two of the murders which, in this country, have been most talked of. One of these doubtless was Rush's case. The investigations which took place at Norwich were deemed at the time very protracted ; and yet we find the inquiry before the magistrates lasted only five days, and that which took place before the coroner only about the same period. In Palmer's case most complicated facts had to be inquired into; the effects of a poison then little known had to be considered ; some half dozen murders were supposed to be involved; and yet the coroner's jury at Rugeley required only three whole days, and part of two others, in order to satisfy their minds. The charge against Smethurst apparently occupied the Richmond magistrates a considerable time, for it was opened on the 4th of May, and in consequence of various adjournments it was not finished until the close of the month; but such delay as there was may be ascribed to the necessity of waiting for Dr Taylor's analysis. Lest it should be said that we are drawing our examples from a special class of cases, and ignoring altogether the instances in which, years ago, magisterial proceedings were protracted, let us mention a case in which there was undoubtedly delay-the case of Paul, Strahan, and Bates,

THE ECONOMIST.

tried at the Old Bailey in 1855. The preliminary investigation involved the consideration of many complicated accounts, and, in tact, a pretty close examina-tion of the books of a banking firm doing a large business. The proceedings before the magistrate were also complicated, and in some degree retarded, by the simultaneous proceedings in the Bankruptcy Court. The prisoners were brought up at Bow street on the 22nd of July, The and they were not actually committed for trial until the 12th of September. The counsel for the Crown could plead in excuse, in addition to the intrinsic difficulties of the case, the absence of a material witness; but, in spite of that very intelligible excuse, the delay was then deemed very extraordinary, and counsel for the prisoners, as well as the magistrate, more than once took occasion to protest against the numerous appli-cations for adjournment as unusual and unfair. In fact, putting aside certain very recent investigations, we do not readily recall any investigation comparable in length to that which began on the 12th of July, and is still in progress, without going back to 1844, when Mr Barber, of the firm of Barber and Bircham, was charged with forgery, and fraudulently transferring stock. The prisoner was first brought up at the Police-court on the 18th of December, 1843, and he was not committed for nearly four months; but, apart from the fact that this was deemed an unprecedented extension, the actual number of hearings was small, and the amount of evidence offered at the Police-court did not amount to a tithe of what Sir James Ingham has been obliged to hear. If we shall be reminded that the investigation of the frauds on the West-end branch of the Bank of England, in 1873, occupied as much time as the charge against the detectives, our answer is that the malady of which we complain had broken out by that time, and that as one of the prisoners concerned, Macdonnell, had to be apprehended and brought from America long after his co-defendant Noyes had been charged, there was an excuse for delay which is not present in this case.

The statutory requirements, so far as the magistrate are concerned, are not very onerous. He is bound not to commit a prisoner for trial until he has heard evidence which raises "a strong or probable presumption of guilt." He is bound not to discharge an accused until he has heard all that is alleged against him ; and it is also his duty to see that whatever statements are made by persons conversant with the circumstances of the crime under investigation are committed to writing. In fact, a police magistrate has two distinct functions to fulfil—that of determining whether there is a primâ facie case against a prisoner, and that of recording the evidence, or seeing that the depositions are properly taken down; and the union of these functions in one person tends undoubtedly to prevent him from saying, after listening for one or two hours, "I have heard " enough ; a *primâ facie* case is established to my satisfaction ; " let the prisoner be committed." But it does not, we conceive, necessitate the prodigious inquiries which are now the fashion. No Act of Parliament compels the magistrate to listen as long as counsel ask him. He is not bound to receive gossip or hearsay; to tolerate cross-examination which is speculative or obviously wide of the mark; or to allow adjournments in order to procure the attendance of unnecessary witnesses. He need not be, as many magistrates are, a mere legal reservoir, ready to receive what counsel offer. At the same time, we are not inclined to throw the blame of the change chiefly on the shoulders of the magistrates. Heavier responsibility rests with solicitor and counsel, who are not content, as their predecessors were, to keep their strength for the trial, but examine and cross-examine, call evidence and counter-evidence, just as if the battle was to be fought out at Bow street instead of the Old Bailey. They have found out a way of making one trial go the length of two or three, and they are using their discovery a little too freely.

We have heard one or two apologies offered in explanation of the dimensions of the detectives' case; but they are, one and all, somewhat unsubstantial. Mr Poland, counsel for the Treasury, says that it is highly expedient to get all evidence put down in writing as soon as possible, so that it may be forthcoming, in the event of the death or removal of a witness. Most people, however, will think that the best way to guard against accidents to witnesses is to hurry on the trial as much as possible, and it is surely practicable to record the depositions of witnesses in some less cumbrous mode than that exemplified at Bow street. Sir James Ingham seems to find

an excuse for the ductility of the investigations in the fact that in criminal cases there is not, as in civil cases, a new trial, and that therefore caution is requisite before committing a prisoner. We should be sorry to deprecate caution, but it is weakness to confound caution with procrastination. The only plausible excuse for these protracted investigations is the prisoner's right to know beforehand what he has to meet; and even this right might be satisfied by adjournments at the trial if the defence was manifestly taken by surprise.

THE EARNINGS OF BRITISH RAILWAYS.

THE Board of Trade has published its usual report upon the capital of the railway companies of the United Kingdom, their earnings, working expenditure, and net profits for 1876. The returns are of use as showing first, whether, and to what extent the trade of the country is expanding; second, the nature of the receipts, both from passenger and goods traffic; and third, the tendency of the general policy of the companies in regard to future prospects of dividend upon the immense capital embarked in the inland carrying trade.

1. With respect to the increase of business on the roads, the gross receipts of railway companies in the United Kingdom since 1870, have increased at the following rates year by vear :-

AMOUNT OF GROSS TRAFFIC RECEIPTS OF RAILWAY COMPANIES in the UNITED KINGDOM in each Year from 1870 to 1876; showing also the AMOUNT of the INCREASE, and the RATE of INCREASE per Cent. of each Year over the previous Year

on the	AT COPPER	T OOM	OVOL	eno	provious	TOUT.		
			Gr	neu T	Receinty		Annual	Tn.

		Gross Receip	19.3	-Annual	THO	rease.	
		from Traffic		Amount.		Per	
		£		£		Cent.	
1870		43,417,070		2,341,749		5.70	
1871		47,107,558		3,690,488		8.50	
	**************	51,304,114		4,196,556		8.91	
1873		55,675,421		4.371.307		8.52	
	********	56,899,498		1,224,077		2.20	
1875		58,982,753		2,083,255		3.66	
1876		59,917,868		935,115		1.59	
				. 11			

The average rate of increase, it will be seen, has lately been very low; the rates of increase in the past three years have been 2.20, 3.66, and 1.59 per cent., the mean being 2.82 per cent.; whereas the average increase of each year over the preceding one since 1858, has been 5.26 per cent. Analysing the receipts for the year 1876, it appears that the increased receipts over the preceding year were 449,000l from passenger traffic, and 486,000l from goods traffic, but the goods traffic showed a smaller propor-tionate increase than the passenger traffic, because it comes upon a larger total. This brief summary is full of confirmation of the reports of unexpanding trade during the past three years.

2. The consideration of the nature of the total receipts is considerably helped by Table 7 of the report. It appears that the proportion of receipts from passengers and from goods has remained almost constantly since 1870 at 44 per cent. on the total receipts from passengers, and 56 per cent. from goods; the proportion in 1858 having been as much as 49 per cent. from passengers, and only 51 from goods. The average receip's per mile on each train increased from 61.63d in 1870, to 68.11d in 1874, and has since fallen to 66.66d in 1876, the recent falling off having been in passenger-train receipts.

3. The net receipts of the companies which, if they do not constitute a larger subject, are of near interest to an immense number of railway proprietors, are treated at some length and with very great skill in the report before us. The heads are capital, gross receipts, and working expenditure. The figures relating to the capital per mile of railway opened, since 1871 are as follows :-

	£	
1871	35,943	
1872	35,984	
1873	36,574	
1874	37,078	
1875	37,833	
1876	39.012	

These figures are of the kind which alarm railway proprietors ; but Captain Tyler's assurance that "there is a sufficient " reason for an increase of this sort in the addition of "sidings, and other accommodations to existing lines to "meet the increasing traffic," will go some way to reassure them. The increase of rolling stock is also mentioned as another cause of the increased capital expenditure per mile of line open. We must, however, again state our con-

THE ECONOMIST.

Sept. 15, 1877.

viction that, in the interests of the general body of railway proprietors, the published accounts of the companies should be so amplified as to place a check upon the over-expenditure of capital where revenue ought to be applied in its place.

At present, notwithstanding the quiet state of trade, railways cannot be termed other than a first-class commercial investment. In neither ordinary, preferential, nor debenture capital are there many great extremes of high and low dividends ; though some of the ordinary capital returns no dividend, most of it pays 4 to 7 per cent.; of the preferential and guaranteed capital, by far the greater part pays punctually 4 to 5 per cent., while if the debenture stock returns somewhat less, it is because the railways are in high credit, and not because they fail to pay their full interest. The prospects of a further improvement in the prosperous condition of our railways is so intimately bound up with the state of trade, not only at home, but abroad, that the internal condition of the lines is a matter of secondary moment. Brisk trade in almost any part of the world is a good sign for Eng-lish railways, for the division of labour is continually increasing the demand for carriage; England is a great entrepôt for the produce of the world; and internal traffic, therefore, tends to increase when foreign trade is active. Nevertheless, the condition of the lines, although of secondary interest, has still to be watched; and such reports as those of the Board of Trade are of use in that respect. It is pointed out that the expenditure on the lines is very high, and that consequently a sustained rate of traffic is necessary if dividends are to be kept up. The working expenditure per train mile in 1876, 36-13d, had not fallen much below the maximum of 1874, which was 37.89d; and the report points out that these rates are in strong contrast with those of 32.27d in 1872, and 30.02d in 1870. It is further remarked, however, that the difference of 1d per train mile amounts to about a million sterling, and therefore large savings seem to be probable, even should the business of the railways not immediately increase.

The expenditure on capital is a somewhat different matter, although increased outlay in that respect requires in the same way an addition to the traffic of the lines. There are two passages in the report before us which enforce the necessity of setting out more clearly the application of capital. With regard to the decrease in first and second-class passenger traffic receipts in 1876, accompanied as it was by an increase of the total of passenger-train mileage, it is said that "it might " have been possible to throw more light on this point, if the " companies gave returns of the numbers of the different " classes of passengers carried one mile." Again, on page 10, it is said :--- "Among the lines there selected "for comparison the receipts per passenger-train mile "range between 61.80d on the London and South-Western "Railway, and 52.85d on the Caledonian; and the receipts " per goods-train mile range from 100.67d on the London, Brighton and South Coast to 66.39d on the Great Western. "The working expenses again range between 42.55d per train " mile on the Lancashire and Yorkshire and 31.35d on the " Caledonian, while the proportion of expenditure to receipts " ranges between 57 per cent. on the Lancashire and Yorkshire " and 51 per cent. on the Caledonian. The details and the " causes of such differences would, no doubt, be well deserv-"ing of inquiry. It is possible that the differences in the "rates per train mile are produced to some extent by the " different methods of reckoning the train mileage followed "by different companies, although the Board of Trade " endeavours to obtain uniformity in the statistics on this " point, but there must clearly be many differences as well in " the conditions of working and the ability of the adminis-" trations, to which the attention of railway capitalists should " be directed." The train mile test is evidently insufficient; there may be smaller or larger trains. For many purposes, not the least useful of which would be the check upon capital expenditure in widening and improving the lines for traffic, it is desirable that the railway directorates should endeavour to furnish accounts of receipts and expenditure, of the average number of passengers, and of the weight of goods, not only per train, but per mile.

BUSINESS NOTES.

THE CURRENCY AND TRADE OF RUSSIA.-Among the careful and otherwise comprehensive surveys of the economic

condition of Russia which have lately appeared, the effects of a depreciated currency have not received due attention, Events are showing how severely the fall in the value of the rouble must tell upon the trade and prosperity of Russia. The country, though it has considerable natural riches, besides such resources as spring from the introduction of an immense system of banks, and railways, has for the time exhausted its credit abroad, and the immediate limits of the taxation of its population appear to have been nearly reached. Apart from the annual produce of the soil, Russia has at the moment few resources beyond what can be forced from her people, by such devices as issuing paper currency. For some years past the exchange remained steady at or about 33d per rouble, at the present moment it is scarcely above 24d, and this decline has taken place almost wholly within the past year. The after effects of this decline must be serious, even should it he shecked at its present extent. The causes of the depreciation of a currency invariably lie either in a diminished demand, or an increased supply. Both have contributed to the depreciation in question. There has been a decrease in the demand for currency, mainly because trade has been contracted in Russia. The Strousberg collapse of 1875 was followed by an extreme crisis in the banking system of the country, facilities which had been given to trade were suddenly withdrawn, and it was remarked. figuratively, of course, at the time, another "year without crops and nearly everybody in South Russia will be bank-"rupt." A shock of this description could not fail to have a disastrous influence upon the aggregate trade of the country. The trade demand for money being thus contracted, the paper currency of Russia began to depreciate. Subsequent events had tended in the same direction; the imposition of customs duties on imports, in gold instead of paper money, of course restricted import trade. And while the demand for rouble notes for business purposes was thus diminished, there has been no diminution in the quantity emitted by the Imperial Bank; on the contrary, there has been a quiet enission of rouble notes, which appear under the accounts of the bank as billets de credit émis pour compte des succursales, and which amounts to 160,350,000 roubles (20,000,0001), against which figures a counter entry of 105,647,396 roubles, as "current expenses on account of the "Treasury." We noticed the progress of this issue before.* Last year the Government invited subscriptions to 100 million roubles of 5 per cent. notes. This year the Government has endeavoured to raise 200 million roubles as an Oriental loan, which, it is affirmed, has been partly unsuccessful, and which is not yet fully paid up. Meanwhile these billets de credit have been emitted as above described. Up to the present time, the policy of the Russian Government has naturally been to avoid as far as possible the appearance of pinching the population as a consequence of the war. But paper money has been issued, with the usual effect of raising prices and stimulating exports, which again are results commanding a certain popularity. On the whole, the damage inflicted upon the material prosperity of the nation by the war has hitherto been hidden by devices which for the moment turn that damage into an apparent benefit. But there must come a time when the country at large will feel the strain, the effect of which has been deferred, rather than mitigated, by the policy of its Government. For many years the United S ates have felt what it is to face the uncertainty imported into all business transactions by an inflated paper currency; and Russia could hardly bear such a clog upon her powers of recovery as well as the United States. The state into which Russian trade has fallen is shown by the report recently published by Consul-General Stanley, on the trade and commerce of South Russia. Consul-General Stanley observes that the state of the crops, of political affairs, and of the credit of Russian banks, caused the year 1876 to begin unfavourably. During that year the gold reserve was reduced by exports by 16,250,000l, and very little was imported. At the end of the year there were enormous exports of grain, and the exchange value of the rouble recovered a little, but only for a time. The year 1877 opened with failures in Riga, Petersburg, Revel, &c., and ended by an "epidemic " of failures in many large towns ; in the words of Mr Stanley, "industrial enterprise is languishing "throughout the country," and with a depreciating currency there is still a want of money. There is hence reason to fear that the trade of Russia may have to pass through a period of

* See Economist of July 28, 1877, p. 879.

THE ECONOMIST.

further emissions of paper money, of impaired credit internally, of hurried exports of produce to foreign markets, and of high prices; to be succeeded by the slow and painful process of a return to sound trade and a steady money market, only at the expense of a return movement in the value of the rouble to its normal standard, which must be more acutely felt throughout the country, because a recovery in the value of the currency can mean nothing else than a decline of prices generally.

THE GERMAN MONEY MARKET .- Money has not proportionately risen in market value this week at Berlin, notwithstanding the advance in the Imperial Bank rate to 5 per cent. That movement appears to have been simply an attempt to turn the exchanges in favour of Germany, and to prevent an efflux of gold; and it is not the only device which has been adopted. The German Treasury, it may be remembered, was authorised by a law of April 28th, 1877, to issue 124 million marks (6,200,0001), for the purpose of carrying through the coinage reform and other passing needs. These Treasury bills are renewable at the discretion of the Imperial Chancellor, provided that they do not extend beyond September 30th, 1878. Of the total amount authorised, 80 million marks (4,000,000*l*) are stated to have been issued, of which total 15 million marks have meanwhile matured, and the remainder will mature at various dates between this and the 17th of December. But last week, upon an issue of a million sterling of these Treasury bills, which mature partly on the 7th and partly on the 17th December, being brought upon the market, there was a sudden increase in the discount which the Government had to allow. According to the Berlin Börsen Zeitung, that discount was as low as $2\frac{1}{2}$ per cent. at the beginning of the year, when such bills were comparatively scarce ; last week the rate rose as high as 31 per cent., while the ordinary market rate of discount was only 31 per cent. The demand for Treasury bills having been apparently over-supplied in the German markets, we should perhaps soon find the bills on their way to Lordon, such securities being, however, hardly marketable here, because they are issued in marks instead of sterling. Inasmuch, however, as the French Treasury Bills are dealt in largely upon this market, those of Germany may be brought here too, should the German rates continue to stiffen, and should the present rates of discount hold here and in Paris. The export of these bills would manifestly be more convenient for the German Government than the loss of its newly-coined gold.

THE FACTORS' ACT AS AMENDED .- We print the amendment to the Factors' Act as it has passed into law, placing in italics the additions made to the Bill as it first appeared last Session, and leaving within brackets such words as the Act, in its amended form, omits. The Bill, as it then stood, was printed in the ECONOMIST of June 2, p. 635, and the case which called in question the negotiability of dock-warrants, under the circumstances supposed in par. 3, was remarked upon by us on Feb. 24, p. 241. Everything appears now to have been done to give the holder of dock-warrants, or bills of lading, power to negotiate them, and thus custom in this respect is strengthened by law.

AN ACT TO AMEND THE FACTORS' ACTS.

[10th August, 1877.] Whereas doubts have arisen with respect to the true meaning of certain provisions of the Factors' Acts, and it is expedient to remove such doubts and otherwise to amend the said Acts, for the better secu-rity of persons buying or making advances on goods, or documents of title to goods, in the usual and ordinary course of mercantile business. Be it enceted in a Be it enacted, &c. :--

Be it enacted, &c. :--1. In this Act, the expression "the principal Acts" means the fol-lowing Acts, that is to say: the Act of the 4th Geo. IV. (1823) c. 83; the Act of the 6th Geo. IV. (1825) c. 94; the Act of the 5th and 6th of Her Majesty (1842) c. 39; and the said Acts and this Act may be cited for all purposes as the "Factors' Acts, 1823 to 1877." 2. Where any agent or person has been intrusted with and continues in the possession of any goods, or documents of title to goods, within the meaning of the principal Acts as amended by this Act, any revoca-tion of his entrustment or agency shall not prejudice nor affect the title or rights of any other person who, without notice of such revocation, purchases such goods, or makes advances up on the faith or security of such goods or decuments.

such goods or decuments. 3. Where any goods have been sold, and the vendor or any person on 3. Where any goods have been sold, and the vendor or any person on his behalf continues or is in possession of [the goods, or of] the docu-ments of title thereto, any sale, pledge, or other disposition of the goods or documents made by such vendor or [other person] any person or agent entrusted by the vendor with the goods or documents within the meaning of the principal Acts as amended by this Act, so continuing or being in pos-session, shall be as valid and effectual as if such vendor or [other] person were an agent or person entrusted by the vendee with the goods or documents within the meaning of the principal Acts as amended by er documents within the meaning of the principal Acts as amended by

this Act, provided the person to whom the sale, pledge, or other dispo-sition is made has not notice that the goods have been previously sold.

4. Where any goods have been sold or contracted to be sold, and the vendee, or any person on his behalf, obtains the possession of the documents of title thereto from the vendor or his agents, any sale, pledge, or disposition of such goods or documents by such vendee [or other person] so in possession or by any other person or agent entrusted by the vendee with the documents within the meaning of the principal Acts. as amended by this Act shall be as valid and effectual as if such vendee or other person were an agent or person entrasted by the vendor with the documents within the meaning of the principal Acts as amended by this Act provided the person to whom the sale, pledge, or other dispo-sition is made has not notice of any lien or other right of the vendor in respect of the goods.

[5. In any case in which by the principal Acts as amended by this Act validity is given to any sale, pledge, or disposition of goods, or of documents of title to goods, such sale, pledge, or disposition shall not be affected by, but shall have effect notwithstanding any right of lien, or of stoppage in transitu, which might otherwise exist.]

5. Where any document of title to goods has been lawfully indorsed 5. Where any document of title to goods has been lawfully indersed or otherwise transferred to any person as a vendee or owner of the goods, and such person transfers such document by indersement (or by delivery where the document is by custom, or by its express terms transferable by delivery, or makes the goods deliverable to the bearer) to a person who takes the same bonh fide and for valuable considera-tion, the last-mentioned transfer shall have the same effect for defeat-ing any vendor's lien or right of atoppage in transitu fas if such docution, the mass-mentation of manufactor sharp have the transitu [as if such doen-ing any vendor's lien or right of stoppage in transitu [as if such doen-ment were a bill of lading] as the transfer of a bill of lading has for defeating the right of stoppage in transitu.

6. This Act shall apply only to acts done and rights acquired after the passing of this Act.

A GERMAN OPINION ON M. THIERS .- The Protective proclivities of the late French statesman are well known. Liberator of the Territory was totally opposed to unrestricted freedom of trade; and the remembrance of the stout defence of Protection, which he made twenty-six years ago, against the attacks of St Beuve, have called forth a sympathetic article from the Berlin Börsen Zeitung of September 7. M. Thiers on June 28, 1851, delivered a lively speech in the French Par-liament, which had all the more force because it tended to rebut the assertion that England had attained her greatness simply through laissez faire by taking the history of English policy itself as an argument for protecting native industries. He pointed out that English cotton manufactures had been protected in their infancy against Indian fabrics, that our woollen trade had been stimulated by shutting out Brabantine and Florentine goods ; and that State help had been given to the improvement of the breed of our horses and cattle. M. Thiers found his principles chime in very well with the expediency of liberating French territory by imposing high Protective duties; and he advocated them not only in the infancy of trade, but also when trade could probably have run faster by being allowed to run alone. "Would that we," says our German contemporary, " could 'show a man who takes so closely to heart the good of the " kernel of the population, the working bourgeois class (Bürgerstand) !"

THE BANK OF ENGLAND DIVIDEND .- Although resulting in the same rate of distribution as a year ago, the first half of 1877 has been attended with higher profits than in the corresponding period of 1876. The dividend is $4\frac{1}{2}$ per cent., as it was then, for the half-year, but the profits are 676,6251, age inst 647,9181, being an increase of 28,7071, or an improvement of about 41 per cent. on the net profits of the first working half of 1876. With the current rate of interest for money as low as it was then, and with a diminished amount of resources at command, the maintenance of the Bank's profits argues considerable skill in the management of that great joint stock institution.

GOLD AND THE EXCHANGES .- Mr Ernest Seyd furnishes us with the following statement of the exchange points at which gold comes to or leaves the Bank of England. We propose to continue the statement week by week at the foot of our "City Article," as we think Mr Seyd does a valuable public service in putting the figures in so intelligible a form :-

The current and prospective condition of our money market, i.e. the rate of discount, as far as this is dependent upon the stock of gold bullion in the issue department of the Bank of England, may be estimated to some extent by reference to the four principal gold exchanges, viz., those of France, Germany, the United States, and Australia. The French exchange involves the Belgian, Swiss, Italian, Spanish, and other South of Europe exchanges, including even Egypt; the German

THE ECONOMIST.

[Sept. 15, 1877.

exchange leads that of Austria, Russia, and the North of Europe. The business of arbitrage in foreign exchanges, by means of the rapid intercommunications, is so efficiently conducted by continental bankers, that any differences in rates are absorbed on the way to us, and the effects concentrate notably in Paris and in Berlin and Frankfort. The French and German exchanges therefore represent, us far as we are and German exchanges therefore represent, its far as we are concerned, the European gold market. The United States take the lead in America. Although some South American States occasionally receive coin from here, yet on the whole the current is in our favour. The Californian supplies of the current is in our favour. The Californian supplies of gold, less such portions as the American Treasury and the banks may succeed in retaining, reach us through New York, mostly in the shape of gold coin. Australia is always a source of supply to us, and will continue to be so, until the gold mines are exhausted. (The Indian and Chinese exchanges and others are in the silver valuation, and affect our gold market only in an indirect manner.) The following are the respective pars of exchange with us respective pars of exchange with us :---

France $1l = 25.22$ f	(25.2215497)
Germany $1l = 20.43$ m	(20.4294533)
United States 11 = \$4.867	(4.8665635)
Australia $100l = 100l$	

When the short exchanges deviate from these pars, they indicate the indebtedness of one country to another. When indicate the indectedness of one country to another. When the ll becomes cheaper in foreign money, we are indebted; when it becomes dearer, we have to claim. The first devia-tions are corrected, or kept in abeyance, by the remittance of bills on other countries; when the deviations increase market

Treasury account 28,966,973 Cash ******** * ************************* 1,611,504

An item in the Bank of France return, which had remained unchanged since October last, shows this week a diminution of 28 millions. This reduction is in the Government debt to the Bank (Treasury bonds), and, as will be seen, is of no small importance. An article of M. Léon Say's Budget law of 1876 declares expressly that the Bank shall resume specie payments when the Government debt shall be reduced to 300 millions, on the 1st January, 1878. By the last convention between the State and the Bank the Government debt was to have been on the 1st January, 1878. By the last convention between the State and the Bank the Government debt was to have been reduced to 600 millions on the 31st December, 1875, and sums of 150 millions were to be paid off annually in each of the years 1876 to 1879 inclusively. Under this arrangement the debt, as n entioned above, would have been reduced to 300 millions on the 1st January, 1878. At that moment it was not expected that the revenue would become so buoyant, and the resources of the Treasury so abundant, as to permit the date of the instalments to be anticipated. No provision was therefore made for the eventuality of the debt being reduced to 300 millions before the 1st January, 1878; and it was probably this doubt whether, under that law, the resumption of specie payments should depend on the reduction of the debt to 300 millions, or on the date specified, that has prevented the Minister from reducing the debt to or below that limit many months back. At the commence-ment of 1876 the debt stood at 555 millions, that is to say 45 millions of the sum due in 1876 had already been paid. On the 21st October of the same year the debt had become reduced to 338 millions; not only had the 105 millions of the 1877 instalment. A further sum of 38 millions only remained to be paid to bring the debt down to the point at which specie payments were to be resumed; but from that time to the present, a period of over ten months, no further reimbursements have been made although this from that time to the present, a period of over ten months, no further reimbursements have been made, although this might have been done, as the current account of the might have been done, as the current account of the Treasury at the Bank has constantly remained consider-bly higher than in 1876. It last week amounted to 204 millions, against 72 millions at the same date in 1876. A transfer of 38 millions, which could have been well spared, was all that was necessary to reduce the debt to 30 millions. The Government has evidently preferred to pay interest on those 38 millions in order to preferred to pay interest on those 38 millions, in order to protect the cash reserve of the Bank, by leaving that establishment with the option of refusing to pay in coin. A sum of 10 millions only now separates the Bank from the point at which the forced circulation of notes should cease. The Treasury may still leave that small balance until the end of the year, although the precaution is admitted to be quite unnecessary. It would also derive an advantage from further anticipating the instalments, as the interest paid on the debt to the Bank is 1 per cent., and that allowed by the Treasury on its short dated bonds issued to the public for deposits from three to eleven months, is only $\frac{1}{2}$ or $\frac{3}{4}$ per cent.

The Messager de Paris remarks on the rate of discount at the Banks of England and of France, and the effect of the exports of gold from London for the purchase of corn in the United States. That journal is of opinion that the imports of United States. That journal is of opinion that the imports of Wheat will be much less important than is supposed, and that the greater part of them will be balanced by the transfer of securities, or otherwise, For that reason it does not appre-hend that the Bank of England rate will go higher than 4 per cent., and even at 5 per cent. there would be no reason for the Bank of France to raise its rate also. The only effect of a difference of 2 or 3 per cent. between the discount in Paris and London, would be that the Paris bankers would put a few more long-dated London bills in their portfolio, and that a larger portion of Paris paper would find its way to the Bank of France, of which the shareholders would not the complain. The Messager would see no inconvenience in fifty or sixty millions (frances) of gold crossing the Channel, provided that it was exchanged for safe securities. Should the Bank of England rate rise to 7 or 8 per cent., there then might be matter for consideration what should be done. But, even in that case, it would not like to see the Bank of France depart from its impassibility, unless a change

was absolutely necessary; and of this it can perceive little danger, as the Bank of France can control the exportation by the cours force, with the exception of perhaps a hundred of millions or so, which might be gradually taken from the public. The Bank of France is relieved of all anxiety for its cash reserve, and would have no need to raise its rate of discount unless it saw that there was a tendency towards an exaggerated commercial or financial speculation which menaced a crisis; but at this moment the country is rather suffering from stagnation, and the bill-case of the Bank is composed only of paper nearly mature and sent in to be collected, or bills that cannot be discounted at a lower rate outside. The conclusion at which the Messager arrives is that the Bank of France, with an inconvertible currency, could support for two or three months, a difference of 3 or 4 per cent. between its rate and that of the Bank of England.

The rate of exchange on London has continued firm during the week, and, in expectation of a further rise in the Bank of England minimum, reached yesterday 25f 19½c. To-day, however, on the news that no change had been made, the ex-change receded to 25f 18½c. Money for discount is abundant, and the rates are 1 per cent. for paper of the haute banque, $1\frac{1}{4}$ for ordinary bankers' signatures, and $1\frac{1}{2}$ for trade bills.

There has been more animation on the Paris Bourse this The change of weather is filling the town fast, and the week. week. The change of weather is filling the town fast, and the market is each day better attended. An attempt has been made to turn this revival to account in order to continue the rise which followed the death of M. Thiers. The discounts of purchases of Rente have been reduced. The notice board announced on Monday 116,000 for Rente thus called for, but the manœuvre has so far not succeeded, as it is evidently premature. Although a small backwardation has been paid at each settlement, the return of the inscriptions of Rente at the Ministry of Finance show a large increase in stock floating on settlement, the return of the inscriptions of Rente at the Ministry of Finance show a large increase in stock floating on the market. During the month of July the inscriptions cancelled exceeded the new by 1,192,856f of Rente, equal to a capital of 25 millions, and which is waiting in the hands of the bankers until a recovery in the demands for investment shall clear it off. Prices, nevertheless, show a general rise since last Thursday. Although the discounts of Rente, after falling to an insignificant amount yesterday, have entirely ceased to-day. The Three per Cents. closed at 71f 25c and the Fives at 106.27 $\frac{1}{2}$, an improvement of 62 $\frac{1}{2}$ c and 57 $\frac{1}{2}$ c respectively in the week. Italian rente has gained 70c at 71f 40c; Kussian, 1870, $\frac{3}{4}$ at 80 $\frac{3}{4}$; Bank of France, 5f at 3,110. Other banking companies are in better demand : Banque de Paris has gained 17f 50c at 1,022f 50c, and Credit Foncier, 6f 25c at 725. Egyptian bonds have advanced from 182.75 to 186, and the railway bonds from 298 to 303.75. All railway shares are 5f higher, and Suez Canal shares have a railway shares are 5f higher, and Suez Canal shares have a rise of 12f 50c to 707f 50c.

The Austrian 4 per cent. gold loan is a favourite stock with speculators at this moment, in consequence of the wide fluctuations in it. Issued last year at 56, it has made during the last six months the extreme rates of 68 in April last, and the last six months the extreme rates of 68 in April last, and 53 in the interval of the two coupons. At 64 in the last monthly liquidation, it has since gained $2\frac{1}{4}$, and closed to-day at $66\frac{5}{16}$. The stock is not largely held in Paris, and the price is made rather at Berlin and Vienna. The rise is believed to be a prelude to the issue of an Hungarian gold loan. The only Hungarian stock quoted in Paris is the five per cent. railway bonds of 1868, which have at the same time recovered from 65 to 69.

A valuable contribution to economic literature has been made by M. Legoyt, late chief of the statistical department at the Ministry of Agriculture and Commerce, under the title of Les Forces Materielles de l'Empire de l'Allamagne. The task the author has set before him has been to enlighten his country-men on the reality of the elements of national power in the men on the reality of the elements of national power in the new Empire, in order to dispel the illusion in which they are too ready to indulge, of attributing the supremacy of Germany to accidental circumstances. The principal divisions of this volume of 500 pages are, population, agriculture, trade, finances, and armaments. The third part is very complete, and comprises chapters on the commercial legislation and institutions, credit establishments, monetary circulation, railways, &c., of Germany. Some of the statistical tables are hardly so recent as might be desired, but this is probably the fault of the official documents from which they are compiled. The French Government has proposed at Madrid that Spain should suspend, so far as France is concerned, the application of the new tariff until a new treaty of commerce could be concluded and ratified by the French Chambers. The Spanish Government, however, refused to accede to the

The Spanish Government, however, refused to accede to the demand.

Holders of bonds of the Austrian State railways, drawn for redemption on the 1st September, complain that a deduction of 7f 9e per bond is made by the Crédit Lyonnais, which house is charged with the service. This, however, is only an application of the law voted in the last session, extending the tax of 3 per cent. on interests and dividends to the premium paid on reimbursement of all railway and similar bonds.

The receipts on the railways in Italy during the first six months of the year amounted to 72,918,190f, against 68,644,952f in the same six months of 1876. The return per kilometre were, on the State railways, 11,303f in 1877, and 11,621f in 1876; Upper Italy lines worked by the South of Austria Company, 6,932f, and 6,938f in the two years; Romans, 8,613f, and 7,621f; Meridional, 7,467f, and 6,495f; Sardinian, 2,466f, and 2,653f; Turin-Lanzo, 6,094f, and 7,709f; Turin-Rivol, 5,262f, and 4,584f.

* Quotation of September 8.

Bank securities had for a time stood apart from the general rising movement, but at present the discounts and the circulation of notes both of the Banks of Germany and Austria are tion of notes both of the Banks of Germany and Austria are beginning largely to increase. This circumstance, along with the improvement in the Hungarian Exchequer, and the extraordinary results of the harvest, has encouraged the Minister of Finances to undertake the emission of the Hungarian gold rente, which had been announced a long time ago, and had been sanctioned by the Hungarian Parliament. It is to be issued in a very few weeks. It is said that the Minister has concluded a very favourable contract with a syndi-cate of bankers, who trust that under present circumstances cate of bankers, who trust that under present circumstances both English and French capital will offer itself in abundance. The operation will be one of importance, as the Hungarian Parliament has sanctioned the emission of about 15 million sterling. (We gave the precise sum in a recent number of the ECONOMIST.

Galicia is beginning to take part in the enormous export of corn. Large quantities were sold to Switzerland and the South of Germany, and it is expected that Russian Poland will also be able to export, the harvest having been so excep-tionally rich that, notwithstanding the war, there is more corn than is needed.

The question as to whether the coupons of Austrian and Hungarian railways are to be paid in gold, was decided at the Munich Commercial Court against the railway companies. The Court did not expressly say that the coupons were to be paid in gold, as thalers had been promised. It decided, however, that thalers must be paid while they remained legally in circulation; and as these stand the same as gold, while silver only was promised, the sentence is very much akin to sophistry. All the other commercial courts decided the question in favour of the companies. The Congress of Austrian Economists was opened at Graz

yesterday, and began by debating the standard question first of all. A debate that lasted four hours ended in the reporter withdrawing his propositions; and the Assembly put off the subject, adding that an international arrangement of the question is advisable, and that the Government should promote an international currency conference. How is the Govern-ment, with the responsibility of its decision on its shoulders, to pronounce on a question on which Austrian economists not only cannot agree, but scarcely dare to pronounce an opinion

opinion? The German Chancellor of the Exchequer has published the decree that the fund for putting into effect the Currency Law must be increased by ten million marks, to be obtained by the issue of Exchequer bills, which bear no interest. This mea-sure introduces a kind of gold note. It will serve to with-draw the thalers more rapidly. The bills are to be issued in bate of 1 0000 50 000 and 100 000 marks. They are to lots of 1,000, 10,000, 50,000, and 100,000 marks. They are to

circulate three months, that is, until the 3rd December for the first half, and until the 12th December for the second half. On the 20th inst. the new technical Imperial Committee for Navigation is to meet for the first time at Berlin. Amongst the subjects to be discussed by the committee are the several complaints against the regulations of the New British

Navigation Act (1876), which, it is said, is very disadvan-

Navigation Act (1876), which, it is said, is very disadvan-tagous to the German commercial navy. The German Imperial Railway Board has prepared new regulations for the German railways, which are to improve and simplify the present regulations, so as to do away with a great many existing difficulties, for instance, the faulty conveyance of cattle, &c. These new regulations have been embraited to all the railways for approval.

conveyance of cattle, &c. These new regulations have been submitted to all the railways for approval. The Imperial Sanitary Board, created about a year ago, is beginning to make itself very useful. The first thing it undertook to do, was to prepare exact statistics of epidemics of all kind, and at present it has directed its attention towards the adulteration of food, especially of beer and wine, which latter articles are rarely found pure in Northern Germany. In a circular, published by all the papers, the board warns tradesmen that no new law is required to punish them, but that their present conduct is quite sufficient to bring them under that their present conduct is quite sufficient to bring them under the law, if the authorities be but strict. It is hoped that some of the brewers of Berlin will be on their guard, as they have hitherto been addicted to replacing hops by all sorts of dangerous articles.

dangerous articles. The yearly assembly of the Union of German Co-operative Societies was held last week in Wiesbaden; 2,830 banking associations take part in this union, besides 1,049 associa-tions for daily consumption, 743 trade, and 64 building socie-ties, giving a total of 4,686 societies—with 1,380,000 members. The total of transactions during the last year amounted to 2,650 million marks (132,500,000). These transactions were carried on with a capital of 180 million marks of their own, and with 370 millions, loans and deposits. A Union Bank at Berlin is the means of communication between the different associations, and this bank has a capital of 9 million marks.

associations, and this bank has a capital of 9 million marks. The total of new money coined in Germany up to the 1st September, 1877, was the following :--

	ATA 101 EL (Do	
Gold coins	1,514,818,780

Correspondence.

POSTAL SUBSIDIES AND THE EASTERN SHIPPING LINES.

TO THE EDITOR OF THE ECONOMIST.

Siz,-The important interests involved in Mr Rathbone's question to the Postmaster-General, in the House of Commons. deserve consideration.

One of the greatest drawbacks to the development of our steam trade, a few years ago, was the incubus laid on private enter-prise by the ill-advised extension of the Eastern mail contract. For the India, China, and Japan branch alone, 430,030l per annum was agreed on, a sum far in excess of adequate remuneration for efficient performance under satisfactory guarantees. Postal subsidies should not be the means of providing a lower rate of passage and freight on the main ocean lines than the exigencies of the trades required, for that would be a gross injustice to the rest of the mercantile marine. It may be policy on special routes, which cannot be traversed on their own merits but which are necessary for the postal system, to favour a contract that—in consideration of a small extra remuneration-combines all requirements, in preference toone that serves the mails but cannot accommodate the tax-payer; under this head, however, our India and China lines do not come. The recent change in our Governmental policy, in respect to the Atlantic mail contract, leads us to believe that the carriage of letters a means of fostering monopolies. The day was, when our Government considered that the cheapest and almost the only way of securing a steam navy for the amount of the military securing a steam navy for the emergencies of the military service, lay in subsidising ocean routes. Now, the mercantile marine of Great Britain could almost provide cabin accommodation for every soldier could almost provide *cabin* accommodation for every soldier that we are ever likely to send abroad; therefore, in the interests of Free-trade, it is the duty of our Government to minimise, as much as possible, the distance of *ocean* postal traffic. In all new contracts, the motto of the Government should be :—" The shortest sea route, and favour to that which interferes the least with individual interests." Interference there must be, for a ramified postal service, like the Eastern, requires combination to work the various fractions into one unit, and therefore contracts must naturally fall into into one unit, and therefore contracts must naturally fall into the hands of corporations; but the detriment to private enterprise—which has been the mainspring of British proenterprise—which has been the mainspring of British pro-gress—should be confined within the narrowest possible limits. In these days of telegraphy, great speed for letters is of small importance; regularity of dispatch and regularity of delivery, at not less than the average of ocean passages on the given routes, being all that is required. Let us consider what improvements can be made on the present Iudia and China postal service. To perform the contract, dated 1st August,

1874, the Peninsular and Oriental Company has to run, under the postal flag, 1,306,651 miles per annum, and of this, nearly one-half is useless so far as correspondence is concerned. 685,365 miles of sea carriage would give certainly an equal, probably a better, service. The Southampton and Suez route is utterly useless, Gibraltar and all the Mediterranean ports being served through the continent. Between them and Suez there is scarce any correspondence, and there are practically innunerable opportunities of communication. All the mails should leave Brindisi for Alexandria, and to obtain both a heavy and light service, the former might be made up in London some days before the latter, and be dispatched by slow train. Homeward, the heavy mail should be delayed in a similar manner. Such arrangements could surely be made with the continental railways. So far as regards the Post Office, the Indian Ocean steamers should take their departure from, and arrive at Suez. What port they load from on their outward voyage, or where they end their journey homewards, does not concern our Government. From Suez, all India should be served via Bombay, it being the natural centre for Eastern postal distribution. The mail to and from the Straits and China should depart from and arrive at Calcutta. The existing trade between that port and China affords the certainty of competition for its conveyance, and there are advantages in the proposed change. The sea route is less—land and sea slightly greater, but, measured by time, much about the same. Between China and England by way of Galle, there is, independent of the English postal service, more than one communication per week, amply sufficient for the present travelling community, many of whom would, for business or pleasure, prefer the Calcutta route. We thus arrive at an ocean line of 685,365 miles per annum, affording the same postal facilities as those for which the present contractors have to run nearly double the distance. There now only remains for consideration th

Rebiews.

TRANSACTIONS OF THE MANCHESTER STATISTICAL Society, Session 1876-77.

SOCIETY, SESSION 1876-77. THERE are in this number of the Manchester "Statistical Society's Reports" several contributions of great practical importance. Mr Joseph Spencer traces with much care the comparative growth of the cotton trade both here and at its chief centres abroad. Mr Spencer gives reasors why statistics of the mere weight of cotton consumed in the various producing districts of the world ought not to be regarded as a gauge of their relative progress, and draws attention also to the increased number of spindles at work in different countries. The result of this double investigation is to show that while Great Britain consumed a smaller proportion of the total cotton supply of the world during the five years ended with 1875, than at any previous period of five years since 1830, yet "our spinners have set to work 243 per cent. more spindles than the Americans, and 72 per cent. more than the continental spinners," during the past fifty years. These are, of course, only percentages; the absolute increase of cotton consumed in the fifty years has been 1,016 million 1bs; on the continent, 737 million 1bs; in America, 501 million 1bs. Mr Spencer takes an estimate, which he thinks is below the truth, that there is directly engaged in the production of cotton goods and yarns a capital of 100,000,000, without reckoning the capital indirectly employed by merchants, dyers, machine makers, &c. It may be of use to place by the side of this estimate that of Mr Richard Seyd relating to the Lancashire cotton district. There are about 19 hundred firms engaged in the district, including about 270 joint stock companies under the Limited Liability Act; and Mr Seyd estimates the paid-up capital of these companies at 7,500,000/, the capital of private firms being in addition about 50,000,000/.

An account is issued from the National Debt Office for the year ended November 20, 1876, showing the interest accrued in respect of the securities standing in the names of the Commissioners for the Reduction of the National Debt to the credit of the fund for Friendly Societies; and the interest paid and credited to trustees of Friendly Societies; prepared pursuant to Act 40 Vict. c. 13, s. 17:—Interest accrued on securities standing to the credit of the fund for Friendly Societies, 17,389/13s 6d; excess of interest paid and credited to trustees of Friendly Societies by National Debt Commissioners, 49,648/3s 9d —total, 67,037/17s 3d. Interest paid and credited to trustees of Friendly Societies, 67,037/17s 3d.

THE ECONOMIST.

[Sept. 15, 1877.

Subjoined is our usual table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz. :--

At corresponding dates with the present week.	Sept. 11, 1867.	Sept. 16, 1874.	Sept. 15, 1875.	Sept. 13, 1876.	Sept. 12, 1877.

Price of Consols	911	923	945	957	\$3Q
Average price of wheat	62s 5d	47s 2d	489 8d	46s 81	60s 6d
Exchangeon Paris (sht)	25 20 25	25 174 275	26 15 25	25 223 35	25 15 20
- Amsterdam ditto.	11 19 19	11 174 184	11 191 12 01	12 11 21	12 2 2
- Hamburg (3 mths)	13 101 10	2069	2065	2068	2071
Clearing-house return	54.223.000	128,695,000	107.799.000	72.399,000	77.868.000

The amount of the "other" deposits, compared with the "other" securities, showed in 1867, an excess of 1,794,8351; in 1874, an excess of 1,919,5731; in 1875, an excess of 4,980,8591; in 1876, an excess of 12,248,4121. In 1877, there is an excess of 2,822,8821.

In 1867, the Funds were depressed by the prospects of still dearer wheat. A reduction to 2 per cent. in Exchequer bills had been made, but so low was the current value of money, that they continued to stand at a premium.

In 1874, business in the money market was very quiet, notwithstanding a slight lock-up of money, occasioned by applications for the new issue of about 16,000,000/ Turkish stock. There was renewed buoyancy on the Stock Exchange.

In 1875, there was little change in the previously existing state of the money market, although the effect of the usual autumn demands seemed likely to be assisted by a demand both from Germany and Holland, in connection with the gold coinages of those countries.

In 1876, there was some improvement in the stock markets consequent upon the more moderate attitude ascribed to the Turkish Government in response to pressure from the Powers in favour of peace with Servia.

The account of the Bank of France for the week ending September 13 shows the following changes :--

DISCOUNT AND MONEY MARKET .- Rates of discount in the market have been maintained within a little of the Bank charge, and a further rise in the official minimum having been thought likely on any day of the week, bills have in some cases been taken at provisional rates, and balances have been held back. To-day, however, money is for the moment very abundant, and barely $2\frac{1}{8}$ to $2\frac{1}{4}$ can be obtained on short loans. Three months' bank bills are to-day quoted 27 per cent., and though a rise in the Bank rate is thought possible any day, the market rates are not quoted subject to advance in that event. This week the Paris exchange has become more favourable and the discount rate there is less than 11 per cent. Money in the Berlin market is only 33 per cent., although the Imperial Bank has raised its rate of discount, appurently in consequence of a loss shown in its last return of over a million sterling in gold, which appears to have been exported to Belgium and France. About 137,000l in gold, now arriving from the East, is said to have been already sold to the German Government, and further abstractions of bullion from the Bank of England, for the same destination, are expected. According to the telegram from New York, the surplus of the banks above their legal reserve was last week 2,530,000l, and according to mail advices the value of money is expected to advance to 7 per cent. within a month or two.

A slight increase in the cash reserve of the Bank is shown by this week's return; the sum of 453,000*l* in notes has come in, and 397,000*l* in coin and bullion has gone out—of which 271,000*l* was for export, and therefore 126,000*l* for miscellaneous circulation—the balance of 56,000*l* representing the net increase in the reserve. The increase of 195,000*l* in public deposits is the chief change on the liability side of the account, and there is a net augmentation of the securities held, the Bank having sold or lent 200,000*l* of their Government securities, and invested in 306,000*l* of other securities —probably in the form of discounts or short loans.

So long ago as 1863, the following question was raised :-How can it happen that while so vast an accumulation of national savings is taking place, and a glut of capital is said to exist in Lombard street, a comparatively small demand, such as " an export of treasure to the East, or a forced operation in London on the part of the Bank of France," should produce temporarily an important effect on the market rate of interest here ? The answer was, that "the really unemployed portion of the national capital at any one moment is never There is a striking similarity between the circumlarge." stances of 1863 and the present time, as regards the money market; but while the question has now to be put with a different illustration, the export of treasure being now material because it is likely to be to America, and the forced operation coming from Germany instead of France, yet the It is answer admits of the same words as were then used. only a very small surplus which ever remains really unfruitful, and those who hold money will lend it, on good security, at a very low rate rather than let it lie idle. Take the "difference in amount between the sums deposited with the Bank, and the balances which the joint stock and private banks consider necessary for the ordinary purposes of their business, and add to these what the Bank could well spare from its reserve," and we should get at the amount of unemployed money in the Taking into account such small London market. sums as may be kept by the banks in addition to what is wanted for these ordinary purposes, and in addition also to what was placed as reserve in the Bank of England, the market excess was then reckoned at two millions, and the Bank excess at two millions more. Some addition must doubtless now be made to this sum for the balances at the command of the provincial, including in this the Scotch and Irish, banks, which now stand in a very different position from that they held fifteen years since. No one can say whether the market excess is now much less or much more than the sum then roughly estimated. It is probable that it is more, but it is plain that the Bank excess is very trifling. The Bank reserve twelve months ago was 21,958,000/, and it is now 11,778,0001; and these figures are the best possible proof

THE ECONOMIST.

that the supply of unemployed money in Lombard street has | at last " worked off."

No notice of the sales of India Council drafts having been issued, much uncertainty was felt to-day as to the probable course of the Indian Government. It is now understood that the amount to be offered next week will be reduced from $26\frac{1}{2}$ lacs, which has lately been usual, to 20 lacs of rupees. Silver remains steady at $54\frac{1}{2}d$ per oz standard.

As far as can be gathered from the accounts of the Bank of Russia, it appears that the nominal amount of notes in circulation has been supplemented by an issue of notes " to order" and of notes "issued on account of the branches." We give below the principal items in the returns of that Bank, which show that a rapid addition to supplementary issues of notes has been going on this year. Since June 11, the notes to order have increased 21 millions, and the branch issues nearly 8 millions, the other items remaining without material change with the exception of Treasury current expenses account, which has increased 7 millions sterling. We observe that the diminution of that last item during the week ended Sept. 3, is attributed to the receipt by the Treasury of a call of 16 per cent. on the Oriental loan of 200 million roubles, and if that is so, it is proof that the said loan has not been so unsuccessful as had been reported. At the same time there is an addition of $4\frac{1}{2}$ million roubles to the "public securities belonging to the Bank," which is thought to show that the Bank of Russia is itself no inconsiderable subscriber. The following are the figures :---

BANK OF RUSSIA. (Taking the Rouble at 2s 6d.)

 A report, which is however not generally credited, is spread

that the Russian Government has signified a wish to various land banks and credit companies that a respite should be granted to the debtors of those companies should such debtors) be called away for military service. The Moratorium, it is stated, is to last until July 1st, 1878.

We subjoin our usual quotations for mercantile paper having various periods to run :-

Discount houses at call	2	per cent.
Discount houses at seven days' notice		per cent.
Discount houses at fourteen days' notice	24	per cent.

THE STOCK MARKETS .- Excepting a decline in English railways, which has been persistent during the week, and is on balance considerable, the markets have been steady. The half-monthly settlement, which was concluded on Thursday, had its usual effect in leading to purchases by operators with accounts open for the fall in foreign stocks. Russian were specially firm moreover, because of the reported advantages gained by the invading army in Turkey, the German and Austrian bourses being also still so generally buoyant as to affect prices here. With the ordinary English railway stocks, however, the case is different, for stock at the cattlement was unnearly plantifed for stock at the settlement was unusually plentiful. The stiffer market rates of interest seem to have depressed English railways by the process of weakening the hands of speculative holders of such stocks; and rather than

face the probability of somewhat high charges for the money with which they retain their holdings, the operators in question appear to have begun to realise. The speculative markets being comparatively contracted at present, a small addition to the actual supply of stock for delivery has a considerable effect. Beyond this, the higher rates of interest, which are expected to continue for some little time, have had little effect this week upon the value of public securities, investment stocks being well maintained with some exceptions; but, although there are few investment purchases, we hear of few sales from the miscellaneous public. There has been a partial relapse in American railway securities; as the autumn advances, the money market in America must almost necessarily become tighter, and speculators in the United States will soon be exposed to a much more severe test of their power to carry the stocks which they now hold than has yet been exercised by the easy conditions hitherto of the money market on that side.

The speculative stock markets are beginning to respond much more freely to outside occurrences than for some time past, not because of the nature of political and financial events, but rather because of the state of those markets. For many months we have had cheap money, which, in the slang of the City, is said to "beat politics;" and further, many speculative operations for the fall were long ago begun, which have since been followed by gradual repurchases, in order to close accounts. At present there is no longer the prospect of very cheap money, nor of large speculative repurchases to preserve the somewhat artificial strength we have had so frequently to notice.

ENGLISH GOVERNMENT SECURITIES. -- Consols rose distinctly when Thursday morning passed without a rise in the Bank rate. The immediate connection between the Bank rate and the price of Consols is this : when the Bank advances its charge for interest, it is expected also to put stock upon the market, and so sweep off the excess of money outside, but no advance being made the supply of Consols is the less likely to be so increased. Meanwhile, however, Metropolitan Board of Works stock has given way this week, and the variations in that security are always among the best tests of the current value of money.

COLONIAL GOVERNMENT SECURITIES .- Great firmness has characterised this market. The following have been the chief movements :- New Zealand 6 per Cents., 1891, rose 1; Province of Quebec, 1; Queensland 4 per Cents., 1; and Victoria 6 per Cents., 12.

FOREIGN STOCKS .- The supply of Russian stock at this week's settlement was by no means heavy in relation to the market demand. The nature of that demand we need hardly again describe. Engagements to deliver have to be met or delayed at each settlement, and the approach of a settlement always tends to raise the price of Russian stocks. Hungarian have again shown independent strength partly on the amicable relations which seem to exist to connect the three Emperors, partly on the preparations for making a new issue of Hungarian rente, but also because of the high speculative estimate of the prosperity which must result, more or less, French and from the large harvest in Austro-Hungary. Italian stocks have improved. The favourite rumours about the ill-health of the Pope have fallen into the back ground. In Paris, as elsewhere, hopes of peace and intervention have induced speculative purchases and repurchases, but accounts for the fall having been to a considerable extent covered, prices waver occasionally and appear to be weaker than of late. At the close to-day, for instance, quotations from Paris and the German bourses were flat. On balance.

generally fallen, and the reason of the fall became plain at the settlement this week. Stock was plentiful all round, money was higher than operators have been accustomed to find it, the advantages of holding on are not as yet apparent in the traffic returns published, and sales have been the result. In the cases of some of the heavy lines buyers have lately stood to receive a consideration for not exacting delivery at each settlement; but foreseeing no prospect of further advantages in that way, have closed their accounts, and sold. The fall in Great Northern A stock is again severe, being $4\frac{3}{4}$ per cent. this week upon $2\frac{1}{2}$ last. The stock is of limited amount, and is susceptible of artificial manipulations in an upward, much more readily than a downward, direction. This argument, and the fact that the stock was not scarce at the settlement, go to show that recent sales have been of actual stock. The Caledonian report is looked upon as unsatisfactory, and that stock is 13 down for the week. North British closes flat at a decline of 2 per cent. on a report that the dividend will be smaller than had been expected. The Southern stocks are the least depressed section of the market.

The following shows the principal changes for the week in the quotations of ordinary stocks, comparing the latest unofficial prices :---

FOREIGN AND COLONIAL RAILWAYS.—The feature here is the advance in Lombard railway securities. Readers of our Austrian correspondence will have already become aware of the extensive speculation which the large grain crops in Austro-Hungary, and their probable effect upon traffic, are stimulating on the continental stock markets. The following are the changes for the week :—

AMERICAN SECURITIES.—Although a well-supported market, United States Government stocks have declined under considerable sales this week, some important holders on this side being supposed to be getting quit of their investments. The speculation in railway bonds is on the whole, though irregularly, sustained. The following are the changes for the week :—

	Closing Prices	Cle	osing Price		nc.

TELEGRAPHS .- Considerable depression has shown itself in this department. Anglo-American fell 14, Direct United States, 4; Eastern Extension Debentures, 1; German Union, 4; Submarine 5; and West India and Panama, 5. Eastern im-

proved 1/8. JOINT STOCK BANKS .- The principal movements of the week have been as follows: — Anglo-Austrian rose $1\frac{3}{4}$, in sympathy with the strong tone of the Vienna Bourse, while London and County fell $\frac{1}{2}$, and Union of London $\frac{1}{2}$.

London and County fell $\frac{1}{2}$, and Union of London $\frac{1}{2}$. MINES.—In British undertakings Mwyndy Iron Ore fell $\frac{1}{4}$, and West Chiverton, 1. In foreign mines, Eberhardt fell $\frac{1}{2}$, while St John del Rey rose 10. MISCELLANEOUS.—City of Christchurch Loan rose 1; City of Wellington, 1; New York City, 1; Credit Foncier of Mauritius, $\frac{1}{2}$; Fore Street Warehouse, $\frac{1}{2}$; New Zealand Trust and Loan, $\frac{1}{4}$; United States Rolling Stock, $\frac{1}{2}$; North British Australasian Land, 3; Peninsular and Oriental Steam, 1; Provincial Tramways, $\frac{1}{2}$: London General Omnibus 1. and Provincial Tramways, 1; London General Omnibus, 1; and Native Guano, 1. The second issue of the Foreign and Colonial Government Trust fell 3; and Scottish Australian

Colonial Government Trust ten o; and bootstar analytic Investment, 5. BULLION.—The following is taken from the circular of Messrs Pixley and Abell, dated September 13 :— Gold.—The arrivals since our last circular have been unimportant consisting merely of 112,500/ per Peninsular and Oriental steamer, Nepaul, from Bombay, and 18,000/ (not yet delivered) per Moselle, from the West Indies. The demand is sufficient to absorb any gold on the market. 250,000/ in bars have been withdrawn from the Bank of England for Germany, and 21,000 sovereigns for Egypt. The Penin-

market. 250,000/ in bars have been withdrawn from the Bank of England for Germany, and 21,000 sovereigns for Egypt. The Penin-sular and Oriental steamer Pekin, due on 17th inst., brings 137,000/ from Japan and Bombay. The Peninsular and Oriental steamer Teheran takes 21,000/ for Alexandria. Silver.—Purchases of bar silver have been made to some extent during the past week for the East and for Spain, but the market for a day or two has been somewhat inactive. The amount arrived from Germany is very large, being no less than 670,000/; from the United States the arrival is small. The Britannia, from the Pacific, has brought 53,000/; and the Moselle, from the West Indies, 27,000/. Mexican Dollars.—We have but few transactions to report in dollars ; the price remains as last quoted, 53gd per oz. Exchange on India for banks' drafts at 66 days' sight is 1s 8gd per rupee. India Council drafts, to the amount of 25,60,000 rs, were allotted yesterday on Calcutta, average rate, 1s 8.83d. Tenders for bills and telegraphic transfers, at 1s 8gd per rupee, receive in full—nothing below. About 1,90,000 rs of the amounts advertised on 5th and 12th

and telegraphic transfers, at 1s 813d per rupee, receive in full-nothing below. About 1,90,000 rs of the amounts advertised on 5th and 12th inst. are unallotted. The latest quotations of exchange from the East for banks' drafts at six months' sight, are, from Bombay 1s 94d, and from Calcutta 1s 975d per rupee; from Hongkong, 3s 113d per dollar; and from Shanghai, 5s 43d per tael. Quotations for Bullion.-Gold-Bar gold, fine, 77s 94d per oz std. last price; ditto refinable, 77s 11d per oz std; Spanish doubloons, 74s 6d per oz nominal; South American doubloons, 73s 10d per oz; United States gold coin, 76s 5d to 76s 6d per oz; German gold coin, 76s 33d per oz. Silver-Bar silver, fine, 544d per oz; bar silver, containing 5 grains gold, 543d per oz; Mexican dollars, 533d per oz, last price. Quieksilver, 71 15s. Discount, 3 per ceat. According to the Gazette return this evening the movements

According to the Gazette return this evening the movements of the precious metals during the week ending Septem-ber 12, were as follows: Gold — Import, 131,516/; export, 274,908/. Silver—Import, 730,909/; export, 657,236/.

The sum of 10,000l in sovereigns has gone into the Bank this afternoon from the continent.

NOTICES AND REPORTS.

BANK OF ENGLAND.

A general court of the proprietors of the Bank of England was held at the Bank on September 13 " to consider of a divi-dend." Mr E. H. Palmer, Governor, presided.

The minutes of the last court having been read and confirmed, the Governor said that this was one of the quarterly general courts appointed by the charter, and also one of the half-yearly general courts appointed by the 12th bye-law for the nait-yearly general courts appointed by the 12th bye-law for the making of dividends. He had to acquaint the proprietors that the net profits of the half-year ending the 31st of August last were 676,625l 7s 4d, making the amount of the "rest" on that day 3,684,786l 16s 3d, and after providing a dividend of 4l 10s per cent., the "rest" would be 3,029,901l 16s 3d. The court of directors therefore proposed that a half-year's dividend of interest and profit be made on the 5th of October part of 4l 10s per cent. next of 41 10s per cent., without deduction on account of income tax, and he put the question that the court order the payment of such dividend.

Mr William Botley seconded the motion. Mr William Botley seconded the motion. As to the rates of interest, he thought they might be satisfied with the divi-dend, looking at the state of the money market and the low rate at which money had been for a long time, and he thought the greatest wisdom and caution must have been exercised by the directors of this great institution, with its capital of 14,500,000/, to enable them to pay a half-yearly dividend of 4/ 10s per cent., and he was sure that they might be exceed-ingly well satisfied with such dividende. As to the rates

ingly well satisfied with such dividends. The Governor then put the motion, which was carried unanimously, and afterwards said that the dividend warrants would be paid and delivered on Saturday, the 6th of October next.

A vote of thanks to the Governor, Deputy-Governor, and directors then terminated the proceedings.

STOCKS.

British-Exchequer Bills .- It has been officially announced that the interest on March Exchequer bills for the half-year ending March 1878, will be at the rate of 2½ per cent. per annum, or at the same rate as is now paid on June bills. Danubian ? per Cent. Loan, 1864.—It is notified that the coupons due 1st inst. are in course of payment by the Imperial

Ottoman Bank.

Egyptian Finance.--Advices from Alexandria states on the authority of the Official Journal that the last half-yearly pur-chases of Egyptian stock in open market have reduced the unified debt to 57,380,006l; the 1864-65-67 stock to 3,920,000l; and the railway preference stock to 16,980,000l.

Peruvian Bonds.—It is stated that a meeting of the Inter-national Committee will shortly be held, and Mr. James Croyle's committee invite the support of such English bondholders as have not yet signed protests against the Raphael contract, in order that their interests may be duly represented at the meeting. The agent who was lately sent to Lima is at the meeting. expected to attend. CONTINUED ON PAGE 1102.]

Surplus		*******	6,588
E	£ 9,337,750 154,516	******	Received. £ 9,154,749 91,514

otal, 31st July, 1877 ... 9.492.266 Estimated capital outlay in the current half-year, 189,299/. The agreement to work the new Girvan and Portpatrick Junction Railway has been ratified, and the line is partly in

operation. North British Railway 4½ per Cent. Preference Stock, 1875.— In order to pay off the redeemable debenture stock B, as well as for the general purposes of the company, it has recently been resolved to issue 1,400,000/, representing the balance of the $4\frac{1}{2}$ per cent. preference stock, 1875, with dividend accruing from August 1. The price of issue to the ordinary and preference shareholders is 102 per cent.

Severn and Wye.—At a meeting, the directors were authorised to borrow on debentures a sum not exceeding 60,000l, the interest not to be higher than 5 per cent. per annum.

BANKS.

Australian Joint Stock.—The net profit for the half-year was 39,856l, which was thus appropriated :—To reserve, 10,000l (raising it to 115,000l); to dividend at the rate of 10 per cent. per annum, 25,0001; and to bonus of 1s per share, 3,1251,

leaving 1,731l to be carried forward.
Bank of Australasia.—The bank announces that a dividend of 2l 10s per share for the half-year will be paid on October 9.
Mercantile of Sydney.—At the meeting at Sydney, there was a balance available of 32,813l, out of which the usual dividend

at the rate of 121 per cent. per annum was declared, leaving a

surplus of 12,936l. Ionian.—A dividend has been declared for the half-year at the rate of 6 per cent. per annum, and in addition a bonus at the rate of 2 per cent. per annum.

ASSURANCE COMPANIES.

The company announce a dividend of 2s 6d and Rock Life .a bonus of 1s 6d.

New Zealand Insurance.—At the half-yearly meeting, it was stated that after making allowance for losses the sum of 30,000*l* has been carried to the re-insurance fund, which now stands at 100,000*l*. It is proposed to pay from the available balance of 19,665*l* a dividend at the rate of 15 per cent. per annum, leaving 4,665*l* to be carried forward.

MISCELLANEOUS COMPANIES.

City Offices.—There is a balance available of 5,326*l*, out of which the directors propose 'a dividend of 6s per share (the same as at this time last year), which will leave 225*l* to be carried forward. The rentals for the half-year amounted to 23,2851.

Eastern Telegraph-Indo-European Telegraph.-At meetings of these companies the traffic agreement, the terms of which were

recently given, was duly sanctioned. *Phænix Gas Light and Coke.*—It is announced that the price of gas will be reduced throughout the company's district to 3s 4d from 1st October.

Share Investment Trust.-Notice is given that a sum of 1l per cent. in respect of the half-year's interest due March 15 last, upon the preference certificates, will be paid on the 15th inst., at Messrs Glyn, Mills, and Co.'s

Surrey Commercial Dock.—The tonnage received into the dock during the year ended 1st September was 569,229 tons, against 519,060 tons in 1876. The directors recommend a dividend at the rate of 6 per cent. per annum, for the six months.

United States Rolling Stock.—There is a net profit shown for the half-year of \$207,372, and a dividend of 8s per share is recommended. A rather larger distribution could have been made, but it was not thought advisable. Mention is made of the disastrous half-year through tailsable. Mention is made of the disastrous half-year through which the American railroad companies have passed, and it is regarded as a sign of the growing prosperity of the undertaking that its position has been maintained. Further proceedings will be taken against the Atlantic and Great Western Railway Company, although the report states that "a second decision has been rendered confirming the previous judgment in our favour rendered confirming the previous judgment in our favour, from which we had appealed in consequence of the insuffi-ciency of the amount allowed us."

COMMERCIAL REVIEW.

FRIDAY NIGHT.

A crisis in the cotton trade is often alleged to exist when there is nothing at all critical in the general position of the industry. But at this moment the difference between the cost of production and the selling price of cotton goods is on the wrong side. Messrs Ellison report that "producers cannot obtain remunerative prices," and less careful authorities talk broadly of loss upon production. The term loss is very elastic, and even if correctly applied it will be impossible to say that, because one manufacturer sells at less than he buys, all other manufacturers are in the same unpleasant position. The facts are, however, that many concerns are losing money week by week, while one mill is stated to have stopped for want of funds.

Relief to capitalists can only come in two ways : either the market for yarns and cotton goods must improve, or the cost of production must be reduced. With middling Uplands down to 6d per lb, or thereabouts, it is almost out of the question to expect relief in the latter direction; and the question to expect relief in the latter direction; and as regards an improved demand for goods, prospects are not good. We print an extract from Messrs Ellison's re-port:—" Dulness has been the ruling feature of the (Man-chester) market throughout the month, and the impossibility of making satisfactory sales has led to a further reduction in the out-turn of the mills. On the whole, the sales, in view of the reduced production, have rather exceeded the out-turn of the mills, so that in the aggregate the stocks are not so exces-sive as they were a month since. The difference, however, is so slight that it has not imparted any appreciable strength to the market. Prospects of the Cotton Market—The course of the market during the past month has verified the forecast given in our last report. The available and prospective sup-plies have undergone no change; but consumption has seriplies have undergone no change; but consumption has seri-ously diminished, and yet prices have only given way a very small fraction for cotton on the spot, while 'futures' have actually advanced ; a full proof of how necessary 'short time' was to prevent an important rise. The outlook continues very Was to prevent an important rate of consumption at home has been re-duced from 62,000 to 50,000 bales per week, and probably a proportionate reduction has taken place in the leading manu-facturing districts on the continent; and still the supply of goods and yarns is so far in excess of the demand that pro-ducers cannot obtain remunerative prices. The reduced con-sumption is owing to the diminished wants of the world, caused by the man in Europe, the famine in India, and bad trade at The rate of consumption at home has been reby the war in Europe, the famine in India, and bad trade at home; and no permanent improvement in the market can be witnessed until these adverse influences have ceased to operate."

Matters have not much mended during the past week; the demand for for while a certain improvement in cotton goods is reported, it has only been in response to the rise in the value of the raw material. Short-time, it is found, was necessary to prevent a distinct rise, and the above-mentioned check upon consumption is a considerable one; but short-time has not been sufficiently general to depress the market for cotton at Liverpool. The margin between cost and selling price is now the chief subject of complaint and low though the price of exten still is every of complaint, and low though the price of cotton still is, every of complaint, and low though the price of cotton still is, every slight advance will tend to make the pinch more palpable. Rates have this week scarcely advanced beyond those of last Friday, but the price of cotton is higher. The report that the Government will retain the exclusive use of the Indian railways for the conveyance of grain, &c., into the famine districts from now to the middle of January, is taken to mean the entire suspension of receipts of cotton by rail into Bombay

the entire suspension of receipts of cotton by rail into Bombay for the time, which may make a difference of 100,000 bales. There has been more general business doing in wines and spirits, Messrs Matthew Clark and Sons report, during the past month than is usual at this season, the uncertainty about this wear's vintage, influencing dealars, where stocks are low. month than is usual at this season, the uncertainty about this year's vintage influencing dealers whose stocks are low. In Jerez the vintage is progressing under favourable circum-stances. In the Douro, where the prospects are good, the weather continues so bad that a change is anxiously looked for. In the Medoc the vintage will begin about 25th inst., and promises well. The wines of 1874, at Bordeaux, are nearly all in bottle, and the 1875's are the wines now offering to meet current demand in cask. current demand in cask.

The reports of the coal trade in Lancashire have at present

current demand in cask. The reports of the coal trade in Lancashire have at present a very general interest. The continued depression in the ironmaking and general manufacturing trades, we are told, causes the requirements for common coal to be still only very small. The termination of the brickmaking season, and the strike in the Bolton cotton trade, have, too, a tendency to throw considerable quantities of engine fuel upon the market. New wheat coming upon the country markets this week is reported to have been generally in bad condition, and prices for good samples have been well maintained. Not only is the condition of much home-grown wheat very poor, but the quality of most of the imported wheat appears to have suffered from the unfavour-able weather which has prevailed in this part of the world; and therefore the higher quotations will mean even more than they superficially indicate, for the quality will not be intrinsically so good as last year. Of course the *Gazette* average price of wheat will remain, as usual, a test of the actual and comparative cost of grain in our markets. Sugar closes steady, the market having been firmer during the week. The price of coffee is maintained. In metals a quiet tone is reported. In the other Mincing lane markets there is little speculation, but a fairly steady tone.

there is little speculation, but a fairly steady tone.

Cotton has been in increased request throughout the week, and with rather less offering prices have a hardening tendency. The quotations of some descriptions are advanced, and the market closes with animation. For Sea Island an extensive demand prevails at previous rates. American has been in active request, and prices are raised generally ¹/₃d to ¹/₄d per lb in the middle and lower grades. Brazilian has been in exten-sive demand, particularly the lower qualities, and quota-

1103

THE ECONOMIST.

[Sept. 15, 1877.

tions are advanced $\frac{1}{16}$ d to $\frac{1}{8}$ d per lb. In Egyptian a considerable business has been done at firmer prices, more especially for the medium and lower grades. West Indian and African are in moderate request at previous rates. Rough stapled Peruvian continues dull of sale, whilst soft kinds are in demand at 1d advance for the medium soft kinds are in demand at id advance for the medium quali-ties. East Indian has been in better request, but owing to

ties. East Indian has been in better request, but owing to the recent import a larger supply is offering, and prices have only partially advanced $\frac{1}{16}$ d to $\frac{1}{8}$ d per lb. "Futures" have been in good demand throughout the week, and a considerable business has been done. The improvement this morning for the week was fully $\frac{3}{16}$ d per lb, but this afternoon the market has rather given way, and we close with sellers at $\frac{5}{32}$ d advance on the rates current on Thursday last.

The sales of the week amount to 84,440 bales, of which 7,320 are on speculation, and 5,090 declared for export; the for-warded is 600 bales, of which 320 are American, 30 Pernam, 140 Egyptian, and 110 bales Surat, which makes the takings of the trade 72,630 bales.

SEPTEMBER 14.—The sales to-day will probably amount to about 12,000 bales, with a firm market. PRICES CURRENT.—SEPTEMBER 16, 1875.

The improvement at the Southern markets is well maintained, and we again quote an advance of $\frac{1}{5}$ c at New Orleans, Galveston, and Charleston. The later months of New York futures are $\frac{1}{16}$ c lower, but the market closed steady, Sales, $\frac{55}{16}$ closed steady, Sales, 35.000 bales.

MANCHESTER, Sept. 13.-We have to report a rather better tone in this market, and induced by larger sales in Liverpool, a moderate trade has been concluded. In cloth some extensive

THE ECONOMIST.

sales have been made in fair and best makes of shirtings, at full rates; also jacconetts and Dhooties have been in good demand. Yarns for export have sold freely, more especially in qualities suitable for Bombay, other markets not displaying above an average inquiry. For the home trade, Bolton yarns continue in fair request, and values are higher, and in shirting yarns a good trade has been closed at an advance of from $\frac{1}{3}d$ to a $\frac{1}{4}d$ per lb.

THE WOOL TRADE.

The public sales in London are progressing with good spirit; prices for all kinds are firmer than at any time during the present series, and some sorts show a decided advance.

The home wool trade remains in the same quiet state. There is no alteration in demand, and prices are about the same.

At Liverpool, there has been a little more business done here this week, chiefly in clothing sorts, but coarse descrip-tions still continue very much neglected. On Wednesday next, the 19th inst., about 2,000 bales River Plate sheepskins are to be offered here at public auction.

At Bradford, the demand for wool has been quiet. Consumers are in many cases very bare of stock, but take only very limited quantities. Spinners are not doing an active business, but refrain from conceding upon the low quotations. The stuff trade is very quiet.

The third series of public sales of colonial wool for this year, which opened on the 14th of August, had been arranged to continue till the 9th of October, but will doubtless be curto continue till the 5th of October, but will doubtless be cur-tailed by a week or so; some considerable quantity will most likely be held over for future sale. Opening about on a par with the better range of June sales (though not reaching the highest rates then realised), prices subsequently hardened to the extent of about a 1d per 1b on the average; towards the end of the third week of the sales, however, a reaction occurred, and, with a flat market, values fell below those of the compine sales since then they have again opening sales; since then they have again recovered to fully up to these prices on the average, with a firm tone and an upward tendency. The demand for the home trade has been latterly brisk and animated.—(Jacomb, Son and Co.)

The sales are better attended, and though the foreign buyers still show great reserve, there is a brisker tone in the market. The sales have now lasted over four weeks, and more than half of the available wool has passed into consumption, but though the market has thus been abundantly tested, un-certainty continues to be felt about the further course of prices.—(Helmuth Schwartze and Co., Sept. 13th).

At Huddersfield, on Tuesday, more business was transacted in various branches of the woollen trade. Business throughout the district continues good with wholesale clothiers throughout the country, but the warehouses continue rather quiet both as regards the home and shipping houses. The local wool trade continues to be done with caution.

At Leeds, on Tuesday, business, however, was not equal to what might have been expected with the large attendance. The continued firmness in the price of clothing wools has produced

a corresponding effect in the value of all other material. At Rochdale, there was more business doing, and a general improvement is expected when the winter demand fairly sets in. Merchants are much more confident as to the future than they were before the wool sales began. New wool sells at full rates. There is a better inquiry for Yorkshire woollens.

IRON AND COAL TRADES.

At Middlesborough, on Tuesday, the tone of the market was decidedly better. Makers were asking more money, and kept firm throughout, at about 43s 6d No. 1, 40s 6d No. 3, 39s No. 4 forge, net cash. Buyers did not purchase freely at the enhanced rates; sales, therefore, were rather limited. The manufactured iron trade has been comparatively inactive except in plates, which show no change in price, from 6l 12s 6d per ton. Coal quiet.

In Lancashire, there is still only a very small amount of business doing in the iron trade of the district. Local makers have been able to do a little more business at the reduced prices announced last week, but the orders coming to hand are still comparatively small, and the heavy stocks which Lan-cashire makers now hold will probably remain on their hands for some time to come. Of Lincolnshire and Derbyshire iron there is very little offering in this district, and prices can only be regarded as nominal. Works generally, throughout the district, are very slack, many of the forges are only running about half time, and some of the founders are every week discharging workmen.

At Birmingham, a slight improvement is reported both in he coal and iron trades. Various moderate orders which had the coal and iron trades. Various moderate orders which had been withheld, pending the settlement of the wages question in the coal trade, and the expected revision of prices for iron, have now been placed. The pig iron branch is favourably influenced by the firmness in the Cleveland market, and, though prices in South Staffordshire are not higher, business is declared to be somewhat more profitable since the drop in coal, and preparations are being made for the re-lighting furnaces. At present, less than a third of the furnaces erected, and a half of the number usually in blast at this season, are in active operation. Coal is in improving request. LONDON COAL MARKET.

CORN.

MARK LANE, FRIDAY EVENING.

Harvesting has progressed more steadily during the week, e weather having been more favourable. The deliveries of the weather having been more favourable. The deliveries of wheat from farmers have increased, but are still very moderate. A large portion of these supplies are in poor condition, and consequently sell at irregular prices, as well as slowly and with difficulty. The fine qualities have been taken off with a fair demand, and have ranged fully up to late currencies. In some cases even rather better prices have been obtained, whilst rates have ruled lower for imperfect and badly conditioned parcels. Foreign wheats have been more in request, in con-sequence of the unsuitable character of a large portion of the English, and with increased transactions an of the English, and with increased transactions an advance of 1s to 2s per quarter has been established in most of the leading markets for spot parcels. In cargoes off coast, prices have risen 1s, but in consequence of light arrivals sales have been small, including Marianople at 57s 6d; Taganrog coast Ghirka at 57s; Nicopol Ghicka and Saxonka at 55s; Petersburg at 54s 6d to 57s. A rather con-siderable business has been done in parcels on passage and for saxonka at 55s; Fetersburg at 54s ou to 57s. A latter con-siderable business has been done in parcels on passage and for shipment at a like improvement. Petersburg has been sold at 57s; Ghirka at 54s to 56s; Calcutta at 45s to 51s per 492 lbs; Californian at 59s to 60s to United Kingdom, and 57s 6d to Liverpool direct. American red winter, 53s to 55s; No. 2 American spring, 50s to 52s, usual terms to the United Kingdom. The quantity of wheat now on passage amounts to 868,400 qrs, against 878,500 qrs last year. Flour has sold rather more readily, an occasional advance of 1s to 2s per sack being obtained. Maize on the spot has tended upwards, but only moderate transactions have taken place. For arrival, however, extensive contracts have been made, prices advancing Is per qr, American mixed has been at 278 6d to 29s. For coast cargoes similar rates were obtained. The quantity on the way amounts to 544,200 qrs, against 538,700 qrs last year at this time. Beans have met a strong demand, and have realised stiffer rates. Off coast Casablance sold at 31s; Larache, 19s 9d for shipment; Casablance, 31s and 32s per 480 lbs to the United Kingdom. English malting barley comes forward sparingly, and brings high prices for the finer kinds. Grinding sorts have been in good request and firm. The sales off coast and for arrival, 27s 6d has been the price for American and Salonica, to which purchases are mainly confined. Only 19,400 qrs are now on passage, against 195,300 qrs last year. Oats have continued to arrive freely, but not so heavily as of late; and the market has conse-quently shown a steadier tone, 6d per qr advance having, in some cases, been realised. however, extensive contracts have been made, prices advancing some cases, been realised.

SHIP ARRIVALS THIS WEEK.

NEW YORK, August 31. There was, early in the week, more activity in the market

for flour, at rather better prices; the improvement, however, was in the saleability of stock rather than in values. Shippers took several thousand at \$5 to \$5 25c for common extras for Great Britain, and \$6 50c to \$6 75c for good ditto for the West Indies. There was also a good business done in extreme low grades for the provinces. The local trade also "stocked up" ireely. Later the demand was not so active. The wheat market has been in but limited supply on the spot, and prices which for the fort helf of the spot, but of the spot. and prices ruled firm for the first half of the week; but on Wednesday, under increased arrivals and free offerings for future delivery, there was an irregular decline. Receipts have been large at all points. The new error of spring wheat been large at all points. The new crop of spring wheat begins to move freely, and there is an increase in that of winter wheat. The quality of both spring and winter growths is excellent. Indian corn has been rather quiet at variable prices on the spot, but futures rather tending downward. The scarcity and high rates of occan fraights have been downward. scarcity and high rates of ocean freights have been elements of weakness, to which may be added very large receipts at the West. Rye has been active at 81c for prime State, for early arrival, and 661c fcr No. 2 Western, September and October. There is a liberal export movement for the continent. Oats have declined under free receipts.

The following are closing quotations :- Flour: Superfine State and Western, \$4.15 to \$4.50; extra State, &c., \$5.10 to \$5.50; Western spring wheat extras, \$5.35 to \$5.75; ditto winter X. and XX., \$5.15 to \$7.75; city shipping extras, \$5.10 to \$7.00; city trade and family brands, \$7.40 to \$7.75; Southern bakers' and family brands, \$6.75 to \$8.00; Southern shipping extras, \$5.50 to \$6.50; rye flour, superfine, \$4.00 to \$4.65; corn meal, Western, &c., \$3.00 to \$3.20 per bl. Grain: Wheat, No. 1 spring, \$1.35 to \$1.40; white, \$1.35 to \$1.47. Corn, Western mixed, new, 52c to 57c. Rye, 65c to 80c. Oats, mixed, 29c to 37c. Peas, Canada, bond and free, 80c to Oats, mixed, 29c to 37c. Peas, Canada, bond and free, 80c to \$1.10 per bushel.

The visible supply of grain, comprising the stocks in granary at the principal points of accumulation at lake and

COLONIAL AND FOREIGN PRODUCE MARKETS. FOR REPORT OF THIS DAY'S MARKETS SEE POSTCRIPT.

MINCING LANE, FRIDAY.

SUGAR .- There has been a firmer market, with prices slightly higher SUGAR.—There has been a firmer market, with prices slightly higher for West India, owing to the decreased quantity offering. Crystalised Demerara has risen fully 1s since last Friday, as arrivals will be made for some time. In other kinds no change to report, but low brown sorts remain dull. Austrian beet has sold for delivery at a moderate price. The stock of sugar in the four ports of this kingdom is now only a few thousand tons above that of last year, and remain about 15 per cent. less than in 1875-74. Sales of West India to yesterday 923 casks. Barbadoes, 21s to 27s; other West India, 20s 6d to 22s 6d; crystalised, 31s to 35s per cwt. 4,235 barrels and bags by auction went at above quotations. auction went at above quotations. Imposts and DELIVERIES of SUGAR into LONDON to Sept. 8, with STOCKS on hand. 1877 1876 1875 1874

Other Foreign.—2,137 bags centrifugal Cuba sold at 27s to 29s for brown to good yellow; and one lot at 31s. 194 casks Honduras concrete realised 21s to 22s. Refined.—Prices have ruled lower for Clude conclude bat the enclut

Refined.—Prices have ruled lower for Clyde crushed, but the market is now better. London made pieces are in steady demand for yellow sorts. French loaves are again lower. Say's sold at 32s f.o.b. Other makers 31s 3d to 31s 6d per cwt.

sorts. French loaves are again lower. Log a super-makers 31s 3d to 31s 6d per cwt. Beet Sugar.—Austrian has sold for delivery at 21s to 22s per cwt. MolAsses.—138 casks low Mauritius by auction were taken in at 8s 6d, and privately 7s 6d per cwt accepted. RUM.—The market is inactive, with limited sales in West India; prices not given. Demerara has sold at 1s 8d per proof gallon. There have not been any further sales reported in Mauritius. COCOA.—Supplies continue small, but the public sales next Tuesday will afford a better assortment of Trinidad and Guayaquil. The market is quiet. 276 bags of the latter rather more than half sold at 72s to 84s for current qualities, being last week's rates. 75 bags Grenada 84s for current qualities, being last week's rates. 75 bags Grenada realised 71s to 73s. 328 bags foreign were chiefly withdrawn, a small

realised 71s to 73s. 328 bags foreign were chiefly withdrawn, a small lot of African selling at 53s to 57s 6d per cwt. COFFEE.—Grey and common qualities of plantation Ceylon are rather lower. Good maintain their previous high value. No alteration to report in other kinds, the market being devoid of activity. The next sale of the Netherlands Traing Company, fixed for the 19th inst., will contain 100,200 bags, against 91,220 bags in September last year. At auction here 1,924 casks 232 barrels 1,596 bags plantation Ceylon chiefly sold : low middling to middling colory, 104s to 110s 6d; pale and grey, 98s to 104s; good middling to fine bold colory, 111s to 122s; bold grey and pale, 105s to 112s; small in proportion. 818 bags native Ceylon part sold : good ordinary yellewish, 87s to 87s 6d; bold, 93s to 92s; fine ordinary mixed to middling, 93s to 101s; 2,068 bags other foreign part sold. Guatemala, &c., 85s 6d to 90s; fine ordinary to low middling, 91s to 102s 6d. New Granada, 103s 6d to 105s 6d; the chief part taken in. Privately, 3,000 bags low and ordinary Rio sold at 68s to 72s per cwt. 72s per cwt.

THE ECONOMIST.

TEA.—Four steamers have arrived, and the market remains very quiet by private contract. At the public sales, teas "without reserve" have established lower rates upon common grades of congou, including new season's black leaf at 7_{3} d to 7_{4}^{3} d; old at 7d to 7_{4}^{3} d. Other sorts have sold at uneven rates compared with those current by private have sold at uneven rates compared with those current by private contract. As a rule quotations remain unchanged. The green teas by auction were sold "with all faults," not being inspected as usual, and the rates were low in proportion. The catalogues of China tea contained about 12,000 packages. There have been 9,400 packages Indian brought to auction, the bulk of which sold, all good to fine qualities meeting a steady demand. Inferior are difficult to sell.

meeting a steady demand. Interfor are difficult to sell. RICE.—No decline on late high rates has been established, although the speculative demand has abated. Only one cargo reported sold, viz., Moulmein, at 11s 10gd, late shipment, open charter. Holders have not offered to sell at any reduction. Bengal is firm: 400 tons good white sold at 13s 6d to 13s 9d; about 100 tons Askoolie at 11s 9d per cwt. per cwt.

SAGO is quiet, and there have been further arrivals. 206 bags low and heated small grain, by auction, were taken in at 16s to 16s 6d per cwt.

TAPIOCA.-1,152 bags Singapore were chiefly taken in. A few lots sold at $2\frac{5}{2}d$ to $2\frac{3}{2}d$ per lb.

TAPIOCA FLOUR.-482 bags were withdrawn at 2d per lb for Singapore; a few damaged selling in proportion.

BLACK PEPPER .- Rather more demand has prevailed by private contract, the business including Singapore at 3^f/₃d. The supply at yester-day's public sale was 1,263 bags, which realised 3^f/₃d; a few lots 3^f/₃d for good, and 3^f/₃d to 3^f/₃d for grey. The sound portion of 1,553 bags Penang good, and $3\frac{1}{2}$ d to $3\frac{1}{2}$ d for grey. The sound portion of 1,553 bags Penang was held rather above late low quotations and withdrawn, but since sold at $3\frac{1}{2}$ d 550 bags Aleppy were chiefly withdrawn. A small quantity at 35.d sold at 41b per lb.

WHITE PEPPER.-Of 803 bags Singapore by auction bags sold at easier rates; good at $6\frac{1}{4}d$; superior quality at $6\frac{1}{2}d$ lb. The remainder taken in above the value. 480 per lb.

per lb. The remainder taken in above the value. OTHER SPICES.—There have not been any public sales of mace or nutmegs worth notice. Good qualities of both are wanted. Zanzibar cloves have declined fully $\frac{1}{2}$ d, except for fine. 308 bales by auction yesterday went at ls $1\frac{1}{2}$ d to 1s $1\frac{3}{4}$ d for middling to fair, with a few bales fine at ls $2\frac{1}{2}$ d to 1s $2\frac{3}{2}$ d. 7 cases good Penaug sold at 2s 1d to 2s $1\frac{1}{4}$ d. 8 cases 54 bags Amboyna withdrawn. 94 bales Zanzibar clove stems, more or less mouldy, sold at $3\frac{1}{4}$ d to $3\frac{3}{2}$ d. 830 bags pimento partly sold at about previous rates : common to fine, $3\frac{3}{4}$ d to $4\frac{1}{4}$ d per lb. 611 packages Cochin ginger only partly sold at previous rates for rough sorts. Cut ginger taken in above the value. Business in Jamaica by private contract, of which particulars do not transpire. 65 barrels by auction yesterday sold at 58 to 80s for ordinary to good; a few barrels superior, 105s to 112s. 1,000 boxes unworked Cassia Lignea about half sold at 47s, being a decline of 1s per cwt.

few barrels superior, 105s to 112s. 1,000 boxes universed. Lignea about half sold at 47s, being a decline of 1s per cwt. SALTPETRE.—A further decline of 3d to 6d has been accepted, inclu-ding 1,524 bags Bengal by auction at 21s 6d; refraction, $4\frac{3}{4}$ to 4, at 21s 6d two months prompt. denosit and difference. Other business 21s 6d, two months prompt, deposit and difference. Other business at 21s 3d to 21s 6d short prompt. 50 tons to arrive near at hand at 22, per cwt.

INDIGO .- The next public sales will commence on the 8th proximo. 8,850 chests were declared this morning, and the quantity will pro-bably be increased to 10,000 chests. The Madras crop is likely to be deficient.

A lew sold: silver at is 9d to is offered by a sold: silver at is 9d to is 9¹/₂d; black, is 8d to 2s per lb.
OTHER DENSALTEAN GOODS.—At the public sales 343 bales cubes Gambier part sold at 30s. 50 tons block to arrive reported at 20s 4¹/₂d ex ship, "all faults." Cutch quiet. 500 boxes by auction withdrawn, and since sold, price not reported. 1,141 bags Bengal turmeric by auction part sold at 22s 6d to 22s 9d; "without reserve" at 19s 6d to 20s 6d for low quality. 805 bags Cochin part sold at 13s 9d to 15s for cut bulbs. 200 bags Madras out. No change to report in safflower. LAC DTE.—50 chests by auction part sold: ordinary at 3d. The remainder withdrawn, including D T at 1s 3d per lb.
SHELLAC.—There has been a good supply in the public sales, viz., 1,245 chests, and about 550 chests sold at rather lower rates in some instances: good red orange, 84s to 87s; fine reddish, 95s; A C garnet, 66s to 67s; dark garnet, 64s to 65s; block in proportion.
METALS.—A quiet tone pervades most of the markets, with transactions upon a very moderate scale. Tin showed rather more steadiness in price, but the market barely maintains the slight improvement established during the week. Straits, 64l 15s to 65?; Australian, 63l 12s 6d to 64l; English ingots, 69l to 70l. Scotch pig iron has been more in demand. Latest sales at 54s 6d per ton cash. Market again quiet. Spelter dull. Silesian, 19l 2s 6d to 19l 7s 6d. Of 160 tons sheet zinc rolled at the London mills, offered by auction yesterday, 105 tons sold at 22l 15s, or the same as a fortnight ago. Quicksilver lower, viz., 7l 15s. The market for copper does not show ny change, the tone being steady, but rather quiet. Chili, g.o.b., 6⁷l to 67s 10e. Wallaroo, 80l to 81l; Burra, 74l to 75l. Lead is ab ut the same as last Friday: English, 20l to 20l 5s.
Hemm.—Manila continues dull, and there are not buyers at late quotations. Of 2,416 bales by auction yesterday, the sound was taken in at 27l 10s to 28l 10s. About 1,000 bales sea-dam

23/10s to 27/10s. Some few parcels other kinds were withdrawn. The business in Manila by private contract has been limited, the dealers

business in Manila by private contract has been limited, the dealers holding full supplies. JUTE.—The Dundee trade reports do not show any change for the better, as regards most kinds of jute fabrics. This market is quiet, and very little done on the spot. New jute to arrive steady. A few contracts have been made at prices ranging from 15% to 18% 10s per ton. OHS.—The market for seed oil is firm. Linseed has been in good demand, and higher than on Friday last. On the spot, 31% to 31% 5s; last four months, 30%; January to April, 29% 10s. English brown rape oil, at one time unsettled, is now firmer: latest quotation, 39% on the spot; last four months, 39% 5s to 39% 10s; January to April, 39% 10s to 39% 15s. English refined on the spot, 41%. The market for cocca-nut does not show any change. Good Ceylon has The market for cocoa-nut does not show any change. Good Ceylon has Cochin, on the spot, 43/ 10s to 44/. Sales reported in palm at 40/ per ton for Lagos. Olive firm, and stocks low. For Mogadore, 47/ paid. Nothing done in sperm. Price nominal at 80/. Pale southern per ton for Lagos. Onve ninn, and stoods ton to the southern paid. Nothing done in sperm. Price nominal at 80%. Pale southern quoted 35%; pale seal, 33% per tun. SPIRITS TURPENTINE.—American dull. Latest quotation, 26s 9d to 27s; last four months, 27s 3d per cwt.

PETROLEUM OIL - This morning's price is 103d; next three months delivery, 11d. At one time during the week 113d paid in the latter position. The deliveries largely exceed last year's, but the production of oil in August averaged 40,000 barrels per day, against 25,230 barrels e month last year.

LINSEED.—A firm tone prevails in this market, and prices tend upwards: Bombay, ex warehouse, 58s to 58s 6d; Calcutta, ex ship, 55s. A good business done in the latter to arrive latest quotations being at 54s 6d to 55s per qr, according to dates of shipment.

TALLOW.—There is not any speculative demand, owing to the liberal supply of Russian and of Australian at to-day's public sales. This morning new Petersburg is quoted 42s 6d; October to December, 41s 9d to 42s; old tallow, 42s per cwt. The next return will show an increased stock of imported tallow.

POSTSCRIPT. FRIDAY EVENING. SUGAR.—West India continues firm. Sales 970 casks, including various parcels by auction, making 2,472 casks for the week. 2,395 bags went at previous quotations; crystalised rather dearer. 6,656 bags Mauritius only part sold at full rates, including grainy and crystalised at 29s to 33s. 467 bags China were chiefly taken in; also 2440 here Furtien 2,250 here here here the dearer is the sales 94 2,440 bags Egyptian. 3,250 bags low Bengal withdrawn; also 94 casks. 2,824 bags Penang partly found buyers: soft yellow, 24s to 27s 6d; fine soft grainy white, 29s to 30s 6d. 748 bags Natal sold at 17s 6d to 24s 6d; grainy, 26s to 28s. Privately, 200 tons brown China at 15s 6d. A cargo of 16,000 bags Java syrups at 15s near port. A cargo low China landed at 15s 6d.

cargo low China landed at 155 6d. COFFEE.-225 casks 42 barrels 87 bags plantation Ceylon sold at steady rates. 607 packages Mocha were chiefly taken in, being un-garbled. 70 cases 361 bags East India, in small lots, part sold. 594 bags foreign, included Central American at 90s to 102s 6d. 45 bags Jamaica sold up to 115s 6d for bright colory.

RICE dull.

SALTPETRE .--No sales reported.

JUTE .- Further business done for arrival at previous rate SHELLAC .- 83 cases orange B S L S sold at 91s to 93s per cwt, being lower.

METALS have been quiet, with little alteration in prices. Scotch pig iron 54s 3d per ton, cash.

OLLS.—At auction 143 pipes Cochin part sold at 43/15s to 44/. 100 pipes Ceylon out at 39/ per ton. 105 tons seal part sold : yellow at 30/ per tun.

per tun. Other kinds out. TALLOW.--1,148 casks Australian by auction about two-thirds sold, prices without alteration. Fine mutton quoted 42s 6d; fine beef, 41s per cwt.

ADDITIONAL NOTICES.

TEA. - Very little business doing, but rather better feeling the last ay or two. Indian teas below 1s 10d per lb in value commanding day or two. more attention.

GREEN FRUIT.-Messrs Keeling and Hunt report a few oranges sold at fair prices. Lemons without alteration. First Almeria grapes of this season's growth realised moderate rates. Nuts of all kinds remain dull of sale. Lisbon grapes of good quality sell freely. Oporto onions in request.

In request. DRY FRUIT.—A steady trade in new currants has continued all the week, and business has been commensurate with arrivals. The crop is nearly all rain-damaged, and some of the fruit is very perishable. Valencias sell freely at a small advance on opening figures for ordinary, and selected is selling at former rates. New Sultanas are on show, and sell from 35s to 52s; quality varies. New figs due next week. New Muscatels good, and at low rates. FLAX.—Not much demand this week, but holders are firm at the prices recently naid

prices recently paid.

HEMP .- Russian remains exceedingly quiet, and but little done this week in sound Manilla. At the auction on Wednesday, about 1,000 bales of damaged sold at late rates; all the sound was bought in.

SILK .- Since last week the silk market his been quieter, but there is still a fair business doing, and prices remain very firm.

SEEDS.—The trade continues steady. TOBACCO.—There has been but little business done in American tobacco during the past week; transactions have been limited to purchases made by the home trade for immediate use. Prices generally are in favour of buyers. For export little has been done. Substitutes are in demand.

METROPOLITAN CATTLE MARKET

MONDAY, September 10.--The total imports of foreign stock into London last week consisted of 22,674 head. In the corresponding week of last year we received 21,972; in 1875, 17,452; in 1874, 22,121; in

THE ECONOMIST.

[Sept. 15, 1877.

1873, 14,896; and in 1872, 18,164 head. During the past week, in

addition to the above 245 cattle, 237 sheep and 60 pigs were landed at Liverpool and Southampton, from American and Cauadian ports. The cattle trade has been tolerably fair, but not active. The total supplies of beasts were not so extensive, owing to a contraction in the supplies of beasts were not so extensive, owing to a contraction in the imports. From our own grazing districts, however, the receipts were on a fair average scale, though the qualities was hardly so good as last week. For fine breeds the trade was fine, and full prices were realised. The beat Scots made 6s to 6s 2d per 8 lbs. Other qualities were rather irregular in value. From Lincolnshire, Leicestershire, and Northamp-tonshire we received about 1,600, from other parts of England about 250, from Ireland 500, and from Scotland 11 head. The foreign side of the market was much less freely supplied. There were no American, the show being mainly composed of Danish. The trade was quiet at about late rates. The sheep pens were as usual, sparingly filled. The market was decidedly firm, and for the choicest breeds extreme rates were obtainable. The best Downs and half-breds were disposed of at 7s to 7s 2d per 8 lbs. Calves were quiet, but steady for fine stock. At Deptford there were 2,200 beasts and 7,430 sheep. Supplies on SALE.

[Sept. 15, 1877.

RAILWAY AUSTRIA OF SOUTH

GENERAL ORDINARY MEETING,

HELD 30TH JUNE, 1877.

Baron de Hopfen, President of the Council of Vienna, in the Chair.

REPORT OF THE BOARD OF DIRECTORS.

INTRODUCTION.

INTRODUCTION. GENTLEMEN,—In the report of the general extraordinary meeting held in Paris on the 9th August, 1876, you were informed that the Treaty of Bâle had put an end to the temporary administrative dualism in the management imposed on the Company by the political events of 1859, and that con-sequently by the sale of the Italian network, we were naturally enabled to put in force our original statutes. Nevertheless, these statutes, made some twenty years ago, were to have been revised, and the general extraordinary meeting, held on the 28th February, 1876, had already empowered negotiations for the necessary modifications with the Austrian Government. This has been accomplished to-day. The definite statutes have been approved of by the Government under the date of the 18th November, 1876, and are annexed to this report. In accordance with clause XIX. of these statutes, this general meeting has been convoked at Vienna after an interval of sixteen years. Having shown what results have been obtained sixteen years. Having shown what results have been obtained during the year 1876, we shall tell you under what conditions the contracts, according to the Treaty of Bâle, and those of Paris and Rome, have been accomplished up to the present date.

CHAPTER I.

WORKING OF THE AUSTRIAN NETWORK LINES.

§ I.

§ I. Construction. A second permanent way has been laid down on the section from Lebring to Leibnitz. The central pavilion of the station at Gratz, nearly finished during 1876, has been opened to the public since March last. With the exception of a few trifling details this station is now completed. The improvements going on at the station at Trieste are rapidly advancing, and would proceed still more quickly if the harbour work per-mitted. The new machine-shed has been thrown open, and the workshop building will soon be ready for the me. That part of the station reserved for the accommodation of pas-sengers might have been made use of prior to the commence-ment of the iyear had there been nothing to prevent the excavations connected with the harbour works being carried on, thus enabling the remains of the old station to be cleared away, and the new lines destined for passenger traffic to be laid down. The other outlays made on the Company's account on the different lines of the network of the South of Austria in 1876, refer to the carrying on of some works for filling up and banking the Brenner, and preventing the overflew of che Drave, as also for enlarging the small stations, become absolutely insuf-ficient. According to the desire expressed by the Austrian fovernment, we have consented to undertake to work the line extending 143 kilometres, has been made provisionally for a period of three years, without, in any case, imposing a lia-bility upon us, leaving us a suitable remuneration, while everything connected with this branch line will be carried out with economy for the Government. The station at Divacea has been considerably enlarged, and all the necessary work has been considerably enlarged, and all the necessary work has been executed by us at Government cost, according to the special agreement, for the general use of the station. An identical result has been arrived at, as regards the station at Weegl, junction of the Archduchess Geselle (belonging to the Western Company) with our North Tyrol lin

The rolling mi	Is at Gratz	delivered in	the year	1876 :

The whole outlay in 1876, on all the lines of the S Austria network, amounted to 5,330,762f 60c; previo	outh of

lays, 524,301,047f 50c-total expenditure to 31st December, 1876, 529,631,810f 10c.

Port of Trieste.

The works have gone on regularly, the first dock has been completed, the line of large steamers frequenting this port transferred its business to the new dock as soon as the old one belonging to the Railway Compuny was closed. We have made a provisional arrangement with the Government by virtue of which the expenses are lessened, and additional and incontestable advantages obtained in comparison with previous conditions. Our Company undertakes to law down the line incontestable advantages obtained in comparison with previous conditions. Our Company undertakes to lay down the line leading to the quays securing the traffic of the new port. The Minister of Commerce has long been meditating a scheme for the modification of the original plan of the port, retarding, or even suppressing, the projected dock nearest the town. This modification not interfering with the interests of the Railway Company, we had only to intervene in the capacity of con-tractors for the works. It is possible that the dock done away with on one side of the town, may be replaced on the other and opposite side, by a dock specially devoted to petroleum, the imports of which have been significantly large at Trieste. We are now discussing with the Ministry under what conditions the contract may be modified; we have no doubt the Ministry will take into consideration the costly experience bought by the Company at the commencement of the works of this port, and that a result will be obtained satisfying mutual interests. § II.

§ II.

Rolling Stock and Plant.

Our rolling stock	in Austria	on the 31	st December,	1876,
was composed of-				
Locomotives				547
Passenger carriages				1.177

Goods and other trucks..... 11,254

The expenses in 1876 for rolling stock and plant comprise the purchase of divers machines and plant for the factories of Vienna, Marburg, and Innsbruck; providing apparatus for warming passenger carriages; improvements to goods trucks, and repairs to locomotives, together amounting to 408,832f 8c; previous expenses, 97,639,025f 47c—total to December 31st, 1876, 98,047,857f 55c.

WORKING.

§ III. Receipts

83,716,337 88 83,076,774 78

639,563 10 An increase of

This result is even more pleasing, as there was little reason to expect it during the greater part of the year. At the end of the first half-year there was a decrease of nearly two mil-lion francs, but the following half-year produced compara-tively satisfactory receipts, taking into account the reduced state of the country and the trouble which the political uncer-tainty brought to bear on these affairs.

3	T	¥		

Expenditure.	1 0
The working expenditure amounted to	35,222,535 15
Showing on the corresponding period 1875, which amounted to	36,277,526 95

1,054,991 80 A decrease of

Thus it is shown the gross receipts increased 639,563f 10c, and expenditure decreased 1,054,991f 80c. The comparison of the expenditure to the gross receipts, which was 43.6 per cent. in 1876, only amounted to 42.07 per cent. in 1876.

CHAPTER II.

MANAGEMENT OF THE ITALIAN NETWORK.

§ V. Construction.

It would be superfluous to give very detailed accounts of the working of various lines in Italy, as we have done in previous reports; the expenditure is carried to the general account, and detailed accounts would, therefore, be void of interest. Clauses 13, 14, and 16 of the Treaty of Bâle prescribe the manner of settling what expenses made by the Company from the 1st of January, 1875, to the 30th June, 1876, are to be carried to capital account, as also the plan of reimbursing the Society. We shall call your attention later on to the difficulties and delays militating against the prescribed settlement-With regard to the expenses of a similar nature made on account of the Italian Government during the last half-year in 1876, the 7th Clause of the Treaty of Paris also regulates the manner in which those deductions are to be made. They now amount to the sum of 9,393,329f 10c.

§ VI. Working.

In this respect the position of the Company differs materially during the two half-years in 1876. From the 1st January to the 30th June the Company was still proprietor of the lines in the same degree as it was prior to the Treaty of Bâle, working them at its own risk and expense. The results of this first half-year are less satisfactory, the receipts being only 11,346,774f 15c. From the 1st July the Company ceased to work its old network on its own account, but did so in conformity with the conditions fixed by the Treaties of Paris and Rome. The first year under this new arrangement finishes to-day, and the results will be carried forward to the working account of 1877. In order to obtain the net proceeds of the Italian network in 1876, the underneath figures must be added together :--

Profit on the first half-year	11,346,774	15	Ì
Second half-year Italian Government paid half-year's annuity	16,580,105	56	
			İ.

The receipts in 1876 are more than 4 millions less than those of 1875. Happily, these unfavourable results are attributable to a cause which cannot occur again, and may be regarded as most exceptional.

The falling off in the Italian network was assuredly brought on by Government not having taken possession of the lines before the 1st July, 1876. On all the lines, and particularly those of Upper Italy, where the passenger traffic is of great importance, the receipts of the first half-year are inferior to those of the second half-year, and yet, owing to unfavourable circumstances, expenses were greater. In 1875, for instance, the net receipts for the first half-year were only 10,950,786f, while the second half-year gave receipts amounting to 21,194,070f. Now, in 1876 our Company found it advisable to show in the accounts the small receipts of the first half-year, without, however, being able to offer any compensation by showing better receipts for the second half-year. Instead of doing so, we might have decided to include the half-year's annuity due to us, according to Clause 3 of the Treaty of Bâle, by the Italian Government. If the Italian Government had taken possession of the lines from the 1st January, 1876, the receipts would have been composed of the amount of the annuity, fixed at 33,160,210f; and as the net receipts of 1875 were only 32,144,856f, there would have been an increase of 1,015,354f, instead of so considerable a decrease. Such results were foreseen by the negotiators of the Treaty

Such results were foreseen by the negotiators of the Treaty of Bâle, who resolutely persisted that Government should take possession from January 1st, 1876, in order to avoid any decrease in the receipts; but for Parliamentary reasons the Government could not permit its delegates to concede this point.

CHAPTER	IV.	
SETTLEMENT OF ACCOUNTS	WITH THE	ITALIAN

1113

SETTLEMENT OF ACCOUNTS WITH THE ITALIAN GOVERNMENT.

We should have wished to show the complete and definite financial results of our contracts with the Italian Government, but unfortunately, notwithstanding our earnest appeals to the Ministry, we have not yet been able to obtain a settlement of our accounts, representing the exact amount due to the Company for rolling stock and expenses incurred from the 1st January, 1875, to the 30th June, 1876. This matter is of such importance as to prevent the Company's precise position being known without a settlement having been effected. The Italian Government has already paid sixty-five millions on account of our branch lines, but this payment merely represents the sum due (according to the Treaty of Båle) on the Government taking possession, and prior to the inventory being drawn up. We have spared no efforts to obtain a settlement, as it is essential the Company should seek to avoid similar delays, which must be most prejudicial to its interests. The important preparatory works, which the Government commissioners undertook, are finished, and we have no reason to question the desire of the Ita'ı in Government to fulfil loyally and justly the contract it has entered into. We hope also that tl e negotiations commenced some few days ago may result satisfactorily.

CHAPTER V.

SUMMARY AND CONCLUSION.

Whatever cause for regret may be derived from the feeble results obtained in 1876, they must be regarded in their proper light, *i.e.*, the natural consequences of a very exceptional and transitory state of affairs. If the net proceeds of the Upper Italian lines has been subject to a considerable decrease, for reasons already stated, which are temporary, and only existed during the year 1876, there will be nothing of the kind in 1877, for, according to the Treaty of Bâle, the Company can receive two distinct indemnities from the Italian Government :-

- (1.) An annuity of 33,160,000f.
- (2.) An amount representing :
- (a.) The value of rolling stock.
 - (b.) The amount expended in organisation of the line, and its dependencies during the period from 1st January, 1875, to 30th June, 1876.
 - (c.) The value of stock and supplies in hand.

According to the Treaties of Paris and Rome, the Society places twelve million lires at the disposal of the Italian Government as a lump sum to be applied to improvements and purchase of plant; and, moreover, in accepting the charge of working and improving the lines sold, the Society consented of working and improving the lines sold, the Society consented to grant a delay until the 1st July, 1878, for the payment of the amount due as value of material and supplies. In 1877 and the following years, the Company may depend on a revenue of 33,160,000f. In the year 1876, the net proceeds of the Italian network only amounted to 27,926,000f. The Company will, therefore, benefit by the difference, viz., 5,230,000f, during the year 1877, plus the amount due the Company for rolling stock and expenses incurred in organisa-5,250,0007, during the year 1877, plus the amount due the Company for rolling stock and expenses incurred in organisa-tion, bearing interest from 1st July, 1876. The Company, which only received one half-year's interest on these amounts in 1876, will receive double during 1877. Within a year from this date the contract for working the Italian lines will cease, and the Company will then have to receive the amount due according to the contract and endeavours are being made with according to the contract, and endeavours are being made with a view of obtaining a portion of such amount even before the period fixed on the 30th June, 1878.

The profits made on the South Austrian network fully The profits made on the South Austrian network fully warrant the confidence we have accorded. The gross receipts in 1877 show an increase of more than three million frances over the corresponding period (first five months) in the year 1876; this is undoubtedly due to the absence of natural and atmospherical impediments which hindered the traffic so much last year. Another equally pleasing result may be found in the decrease of the working expenditure during the same period. Consequently, the net proceeds during one period of five months will be found to exceed the gross amount of the other. A consideration of these facts greatly tends to of the other. A consideration of these facts greatly tends to lessen the prejudice which might have arisen from the results shown in 1876, for it is evident that in 1877 the balance is most favourable. Among the things which continue to in-fluence the success of our undertaking is one, which, by its peculiarity of nature, escaped our foresight and notice. We shall have but little to say about it. It is the rate of exchange on Austrian paper money. We are endeavouring as much as possible to compensate for this loss by a supplementary tariff, under the title of "extra rate of exchange," which sufficiently specifies its origin; but these extra rates can only be made in limited proportions, and could not be applied to the carriage of goods without exposing the Company to the consequences of a falling off in the goods traffic, and some other and more advantageous route would be found for merchandise. Under the present circumstances it would be impossible to calculate the probable rate of exchange. It is hoped that a plentiful harvest will give rise to a proportionate and increased exportation traffic during this year, which might be subjected to an

exceptional tariff. This would have a very favourable effect on the railways of the Empire with regard to both traffic and exchange. Our enterprise, gentlemen, has gone through a painful period as regards those whose interests are engaged in it, but to-day we have ceased all responsibility connected with the Italian network which caused so much trouble and dis-satisfaction by losses during the last few years. We can on the other hand, reckon on an income or annuity of a fixed amount other hand, reckon on an income or annuity of a fixed amount payable in gold, and not subject to fluctuations in the rate of exchange, and on indemnities, which will lessen the amount of whatever charges there may be. The future rests entirely with the Austro-Hungarian network, the stability and progress of which are alike, undoubted.

CHAPTER VI.

SUNDRY MATTERS.

The undersigned Commissioners, deputed to audit the ac-counts of the Company of the South Austrian and Upper Italian united railway, testify to the correctness of the 1875 balance sheet, and to its being an exact copy of the Company's books. Signed, The Commissioners, Vienna 8th December 1876

Vienna, 8th December, 1876. LANDAUER, MILDE.

RE-ELECTION OF DIRECTORS.

This year we have had to deplore the loss of our colleagues, MM. the Duc de Galliera, Baron Elio de Morpurgo, and de la Rosiere. A fourth has retired, namely, M. Bartholony. These four directors have been connected with the Company for the four directors have been connected with the Company for the last twenty years, and, since its formation, during this long period of service, they have never ceased devoting their united zeal and experience to the welfare of our undertaking. We have no doubt that you will retain a remembrance of their endeavours, and appreciate the expressions of gratitude we feel it a pleasure to offer in public to-day. According to the 34th Clause of the Statutes, the Committee then proceeded to the provisional nomination of M. le Baron Marco de Morpurgo, in the place of his deceased father. M. le Baron Elio de Morin the place of his deceased father, M. le Baron Elio de Mor-purgo, and MM. le Marquis de Banneville, le Marquis de Lau, purgo, and MM. le Marquis de Bannevine, le Marquis de Lau, and Paulin Talabot, as replacing MM. Bartholony, the Duc de Galliera, and de la Rosierè. The following gentlemen were proposed, subject to general confirmation, to fill the vacancies occuring on the Board through retirement, according to the Statutes :--MM. E. Blount, le Baron de Burg, le Chevalier de Goldschmidt, Jacques, and Cornelis de Witt.

RESOLUTIONS OF THE MEETING.

I.

This meeting unanimously approves of the general accounts for the year 1876, and authorises the deduction of 439,545f 75c from the extraordinary, and 9,274,406f 87c from the ordinary reserve funds, to cover the deficit.

II.

The meeting unanimously resolves to nominate three Auditors to verify the accounts for 1876-1877, and submit their report at the next general meeting.

III.

This meeting unanimously agrees to appoint as Auditors, MM. Sigsmund Landauer, Carl de Milde, and Ludwig Wollheim.

IV.

The meeting unanimously re-elects as Directors, MM. E. Blount, le Baron de Burg, le Chevalier de Goldschmidt, Jacques, and Cornelis de Witt; it also unanimously confirms the nomination as Directors, of MM. le Baron Marco de Mor-purgo, and P. Talabot, the Marquis de Banneville, and the Marquis de Lau, in the place of MM. le Baron Elio de Mor-purgo (deceased), Duc de Galliera (deceased), De la Rosierè (deceased), and M. Bartholony (retired). (deceased), and M. Bartholony (retired).

COMMERCIAL AND MISCELLANEOUS NEWS.

The following passages from Messrs Matheson and Grant's Engineering Trades' Report, dated July 17, 1877, are useful at this time :— "The price of iron rails seems to have ebbed to its lowest point at Christmas 1876, when it touched 5/; and after recovering to 5/ 10s, is now at from 5l to 5l 10s, at which rates some very large orders have been placed, leaving but scant margin for further reduction. The enhanced importance of every item in the cost of manufacture and delivery, which the present keenness of competition involves, seems to have told more to the disadvantage of Cleveland than of South Wales, for makers in the latter district have had the largest share of recent orders. The following table shows the fall of coal, iron, and steel from January, 1876, to July, 1877, which we reprint :—

struggle, only the strongest firms will be left to reap the profits of returning activity. It is satisfactory to find that, even in the present dearth of orders, but few manufacturers have been tempted to a speculative business. In this respect the atmoshere has been cleared by the events of the last few years, and the tendency is rather to restrict long credits and to refuse the terms of deferred payments, which, to the disadvantage of English traders, and with doubtful advantage to them selves, are offered to purchasers by continental manufacturers; and cash payments are, in many branches, becoming more strictly enforced as the basis for contracts. Conditions of this kind justify a hope that trade, when it again revives, will be steady and remunerative."

The Cobden Club dinner, July 21, was marked by the speeches of the foreign guests, which we put on record. The fact that the three gentlemen were representative men in their own countries showed that constituir qui a mis entre les mains de mienes chevaner et de nos autres amis Free-traders de France la hache avec laquelle ils ont pu entamer la forteresse de la Protection. Nous savons, par expérience, quels ont été pour nous les avantages du traité de 1860; ce n'était pas le Freetrade, et nous avons la conscience qu'il faut faire un pas en avant. Pour réussir, nous n'avons qu'a suivre l'exemple qui nous a été donné par Richard Cobden; il faut avoir sa prudence: ce qu'il avait fait, ce n'était pas le Free-trade, mais il avait compris que ce qu'il fallait avant tout, c'était ouvrir la porte. Aujourd'hui il faut faire davantage pour réussir devant le pays et devant le Parlement, il faut agir avec les plus grandes précautions, car il importe avant tout de ne pas reculer. Dans les négociations qui ont eu lieu entre ce pays et le dernier Cabinet Français, nous avons du vous paraître bien timides ; et cependant, mon ami Jules Simon et moi, nous croyons avoir fait tout ce qu'il était possible de faire pour avancer la cause du Free-trade. Nous espérions, d'accord avec le Duc Decazee, attacher notre nom à un traité libéral. J'espère que ce qui se serait fait par nous se fera même sans nous, car, ainsi que l'a fort bien dit Mr Forster, le Libre Echange n'est heureusement pas, en France, la propriété d'un parti. Le Cabinet actuel contient dans son sein le Duc Decazes, qui est dévoué aux idées girondines de la liberté du commerce. Au cours des négociations, mon honorable ami M. Léonce de Lavergne avait, en sa qualité de commissaire, formulé des propositions auxquelles, pour ma part, j'aurais été heureux de m'associer. Elles constituaient le pas en avant dont je parlais tout à l'heure : elles auraient été sans doute la base du traité que nous aurions pu réaliser, et j'espère qu'elles leseront du traité qu'en passera. Nous subissons en ce moment, nous aussi, les effets d'une grande crise commerciale et industrielle, et les Protectionnistes ont cru trouver dans cette situation une raison d'ajourner les modifications libérales du tarif. Cette crise est évidemment la suite des troubles et des guerres récents, qui ont eu pour conséquence la destruction de tant de capitaux. La consommation s'est ralentie dans le monde entier; mais la consommation reprend toujours après les temps d'arrêt de ce genre, et c'est précisément à l'instant des crises qu'il faut se préparer pour la reprise du travail. Nous en profiterons plus largement par le développement du Free-trade. Je dirai à mes amis en retournant à Paris ce que j'ai appris ici, et je leur parlerai des publications du Cobden Club comme d'un arsenal dans lequel trouveront des armes précieuses ceux qui voudront entrer dans la bataille du Free-trade.---Professor Atkinson declined to be considered a stranger in such a company. He was an Englander. His ancestors had chosen to go from old Bury, in Lancashire, and settle in new Bury, in Massachusetts. But what did that matter? He felt himself thoroughly at home. In America and in England there might be on the surface those vulgar prejudices that separated the two branches of the Anglo-Saxon race, but below the surface, where the thinking population existed, there was a sentiment which prevented any separation of Old and New England. Mr Forster had begged him to say a word of encouragement to the advocates of Free-trade, and he could conscientiously say that there was never a time when questions of political economy were so carefully studied as at the present moment. The result, though it might come slowly, he believed would be the conversion of America to Free-trade. (Hear, hear," and a voice, "The sooner the better.")-Mr Forster said he had been in Boston, and he wanted to know why they had not there adopted the principles of Free-trade. Well, the Americans might ask adopted the principles of Free-trade. Well, the Americans might ask the same thing as regarded Australia. The fact was they were in the same position—they were still in the "grizzle." The struggle they had lately gone through was in reality in favour of Free-trade. That incubus of slavery was strangling their institu-tions, and it was their duty to put it down. They had put it down, and they were now beginning to see the dawn of better days.—Mr Hay, of Sydney, New South Wales, said he would overlook the insults which had been offered to the colonies because of the great honour which had been done him in coupling his name with this toast. honour which had been done him in coupling his name with this toast. It was true that in New South Wales they had an *ad valorem* duty on all imports that this all imports, but this was not with a view to Protection, but simply for revenue purposes. He himself had been born a Free-trader, and he believed the principles of Free-trade would ultimately prevail all over the world. Victoria was in a peculiar position; but it had been founded by a real of the franfounded by a rush of working men, who, having been denied the fran-chise in this country, suddenly found themselves in the position of enjoying manhood suffrage, and, in consequence, had been trying to put the burdens of government entirely on those who had distanced them in the race of life. He hoped the Cobden Club would not be disheartened by this exceptional state of matters.

LONDON: Printed and Published for the Proprietors by THOMAS HARPER MEEDITH, of 340 Strand, at the Economism Office, 340 Strand, in the Parish of St Maryle-Strand, in the county of Middlesex.-Saturday, September 15, 1877.
