THIRD EDITION.

LONDON:
BERNARD QUARITCH, 15 PICCADILLY.
1885.

CYCLOPÆDIA OF INDIA

AND OF

EASTERN AND SOUTHERN ASIA.

—o—

O

O is the fifteenth letter and fourth vowel of the English language, in which it has several sounds,—long as in tone, grown, old; short as in lot, not, lodge, rot; a sound as of the Italian or German u or the French ou, as in move, do, booty; a similar but shorter sound, as in wolf, boot, foot; and a longer sound, as in form, mortal. In Sanskrit, o, like e, is always long, but in the southern dialects there is a still more prolated quantity of it.

OAK.

Ballut, ...	Arab.	Dab, ...	Pol.
Eeg, ...	Dan.	Carvalho, . . .	Port.
Eik, ...	Dut.	Roble, Carbalho,	Port., Sp.

Drus, Balania, .	Gr.	Meyshe, ...	Turk.
Quercia, Quercus,	It., Lat.		

The genus Quercus of plants embraces about 150 species, many of them tropical plants, not only abounding at low elevations in the mountains, but descending in abundance to the level of the sea. Though not known in Ceylon, the Peninsula of India, tropical Africa, or South America, they abound in the hot valleys of the Eastern Himalaya, East Bengal, Malay Peninsula, and Indian islands, where perhaps more species grow than in any other part of the world.

In the tract of country from Asia Minor along the north of Persia to China and Japan, also in the Tenasserim provinces, several oaks occur, but in the presence of other valuable timber trees their woods do not attract the same attention as that of English oak. An oak is mentioned in the Hebrew Scriptures, but it is not identical with the British oak, being either the holm oak or evergreen oak (Quercus ilex), or a species nearly resembling it. Near Shechem, also, there stood a tree of the same genus, which probably was remarkable for its size, being called in Genesis xxxv. 4, 'the oak which was by Shechem.' In the war of 1812 to 1814, the people of Spain and the French both frequently fed on the acorns in the woods of Portugal and Spain. In Morocco and Algiers, the acorns of Quercus ballota are sold in the public markets; and the acorns, 'balut,' of some of the oaks are met with in all the Indian bazars. Gamble names 39 species. See Quercus. Wallich found Q. fenestrata, turbinata, velutina, Amherstiana, Tirbbæ, growing in Burma and on the Tenasserim coast, all affording useful timber, though inferior to the English oak. No oaks nor chesnut ascend above 9000 feet in the interior of Sikkim, where they are replaced by a species of hazel (Corylus); in the North Himalaya, on the other hand, an oak (Q. semecarpifolia) is amongst the most alpine trees, and the nut is a different species, more resembling the European. On the outer Sikkim ranges, oaks (Q. annulata) ascend to 10,000 feet, and there is no hazel.

There are three species of oak in the Sutlej valley,—Quercus incana, 'ban;' common hoary oak, Q. semecarpifolia, 'karsu;' Q. dilatata, 'morhu,' which are next in importance to the pines. Vast forests of them occur in various places, as on the east side of Hattu, on the upper track between Muttiana and Nagkanda, in Mandi, Sukhet, etc. The trees are of great size, 80 to 100 feet in height; they prefer dry situations, and are not generally convenient to the river. The logs do not float the first and second years, being in this respect like the black-wood of Malabar. Oak wood has been well reported of by General Cautley at Murree. Oak bark, in Europe, is largely used as a tanning material, and the Quercus suber of Spain furnishes the cork of commerce. It might be introduced into India. The Australian forest oak, she oak, and swamp oak are species of Casuarina. In N. America, the red oak, Q. ruber, and Q. aquatica, occur. Oak galls are produced on different species of oak by the female of the Cynips or Diplolepis piercing the buds, leaves, and twigs, and depositing its eggs. They are produced on the Quercus infectoria, Q. ballota, Q. incana, and others.—*St. John's Forest Trees; Mason; Wight; Hooker; Low.*

OAKUM. Pakal, Pamakal, Malay. Ropes and other fibrous substances pulled loose, and used in the caulking of sailing vessels. Oakum in China is made of the baru, a gossamer-like substance found at the base of the petioles of the Arenga saccharifera.—*Faulkner.*

OANT. Hind. In Central India, accommodation bills. These are termed, on the faces of the

bills, Chelān or current, in opposition to Rokra or ready-money bills. The person who accepts these from the drawers, enters the amount against him in his books at interest.—*Malcolm's India.*

OASIS, a fertile portion of land in the deserts of Africa, Arabia, Persia, and India. Hugh Murray derives this word from the Egyptian, and, quoting Strabo and Abulfeda, makes it synonymous with Auasis and Hyasis; but it is believed by some that it may be a corruption of the Arabic word Wady. A wady is, generally speaking, a rocky valley bisected by the bed of a mountain torrent, dry during the hot season; or any low-lying ground. In such places the Bedouins love to encamp, because they find forage, and water is always procurable by digging. Petra is at the Wadi Musa; Wadi-al-Ghor is south of the Dead Sea; and Wadi-al-Malh, S.E. of Aleppo, is the Salt Lake.

OATH, Kasm, Half, Sogund, HIND., is a religious affirmation, an appeal to witness of the Supreme God. The British races have, in England and Ireland, the custom of kissing the book, pronouncing the words 'so help me God.' The French custom raises the hand, as in Genesis xiv. 22, Deuteronomy xxxii. 40. Jeremiah v. 7 forbids swearing by idols; and in 1 Samuel i. 26, the soul (or life) of the exalted man is invoked. The Greeks and Romans swore by their tutelary gods, and the mediæval Christians by their guardian saints. The oath taken by the servant of Abraham (Genesis xxiv. 2-9) was completed by the servant passing his hand under Abraham's thigh, and Arabs still swear so. The oath administered to the person who erects the boundary pillars, if a Hindu, is the ganga-jul, or the chour or raw hide of the cow, or swearing by his son. By Hindus, the leaves of the tulsi and water are swallowed after an oath. A Muhammadan is sworn on the Koran, or by placing his hands on his son's head. To a Hindu, the chour, and swearing by his own child, are the most binding. The Gao, a cow oath, is by a Hindu swearing while holding a cow's tail; Brahmani oath by swearing while touching the feet of a Brahman.

Among the Kandh race of Orissa peacocks' feathers are used. They are also sworn on the skins of tigers or lizards, also on an ant-hill.

The oath of the Pahari in the Bhagulpur ranges was by planting two arrows in the ground, in the form of the letter A reversed, and the person swearing took in his hand the blade of one and the feather of the other. On solemn occasions salt was put on the blade of a sword, and, after the words of the oath are repeated, the blade being placed on the under lip of the person sworn, the salt is washed into his mouth by the person administering it.

In the Book of the Oath, which a Burmese witness places on his head in swearing, one of the numerous imprecations which it contains is, 'All such as do not speak truth, . . . if they travel by water, whether in ships or boats, may they sink, or may they be bitten or devoured by crocodiles.'

Amongst the Abor, the Sengmung, an interchange of meat food inviolably cements an oath. Dyak and Kyan races in Borneo cement an oath by the parties tasting each other's blood.

The Ojla clan of the Bhil will not use as food any animal with a white skin or white feathers, and their most sacred oath is to swear by a white ram. All Hindus, in British courts of justice, are sworn by placing in their hands a leaf of the tulsi, Ocimum sanctum, and a few drops of water from the Ganges, which they transfer to their mouths and swallow.—*Heber*, i. p. 281; *Hist. of Panjab*, i. 151; *Yule*, p. 24.

OATS, Avena sativa, *L.*

The oat (*βρῶμος* of Dioscorides) was known to the Greeks. The oat is distinguished among cereal grains by its loose panicle. It is a native probably of the Persian region, but several varieties are cultivated in Europe. The grains of oat when deprived of their integuments form groats; when these are crushed, embden and prepared groats; when the grain is kiln-dried, stripped of its husk and delicate outer skin, and then coarsely ground, it constitutes the oatmeal of Scotland. The husk, with some adhering starch from the seed, is sold under the inconsistent name of seeds. Groats and oatmeal are nutrient and demulcent. When boiled with water (3 oz. to 1 pint, boiled down to ½ a pint), gruel is formed, which is useful as diet for the sick. Oatmeal, when of thicker consistence, forms porridge. Oats are in demand for horses in Britain. It is the hardiest of all the cereal grains cultivated in Britain. Oats were introduced into Patna and Monghyr, but the cultivation was not carried on to any great extent. In 100 parts—moisture, 13·52; nitrogenous matter, 10·13; starchy matter, 68·75; fatty or oily matter, 3·63; mineral constituents (ash), 3·93.—*Royle; Hassal; Cat. Ex.* 1862.

OBEID-ALLAH (Abid Allah), claiming descent from Fatima, daughter of Mahomed and wife of Ali, in A.D. 910 made himself master of Egypt, and succeeded in establishing himself as a rival of the Abbasi Khalif at Baghdad. The doctrines, founded on the old Magian faith, which had from time to time appeared among the Shiah Persian party, were now openly professed, under the name of Ismaileyeh, by the Alavi or Fatimite Khalifs and their followers, and were propagated by official agents, of whom the chief was called Dai-ud-Du'at, or supreme missionary; and associations, not unlike freemasonry in constitution, were founded, and held lodges in Cairo under the name of Majalis-ul-Hikmeh, or scientific lodges.

OBLATIONS or offerings have always formed an essential part of public worship and private piety. Jeremiah xliv. 17 says, 'To burn incense unto the queen of heaven, and to pour out drink-offerings unto her.' The Hindus pour out water to the sun three times a day, and to the moon at the time of worshipping this planet. Hindus have many deities and spirits to which they make oblations.

Amongst Hindus, kula means a family, a race, a tribe. Properly the got of a Hindu is his tribe, and kula is the race. But kula among the Rajputs means a tribe, and corresponds to the Afghan khel. Amongst the Hindus there are three kinds of devata or deities to whom worship is given,—the Gramma-deva, or village god; the Kula-deva, the race, household, or family god; and the Ista-deva, the patron or personal deity

of individuals. Adi-deva is the primitive deity; Sthana-deva, local deity. The Aryan Hindu does not recognise the village gods of Southern India, but the non-Hindu Turanian races largely worship them, and even many of those Turanian races who have been converted to Hinduism worship them. They are mostly shapeless pieces of wood or stone smeared with vermilion, and often represent evil spirits or devils. These are the Amma, Ammun, and Amur of the eastern and southern parts of the Peninsula, and the Satwai, Bhairo, Massoba, Chamanda, Asra, Ai, Marri-ai, etc., of the northern and western parts of the Peninsula, all of whom are recognised as causing harm to individuals. In health they are neglected; but when sickness occurs, either to individuals or as an epidemic, these spirits of evil are worshipped with much solemnity, and bloody sacrifices are made to them, of goats and sheep, and bullocks and buffaloes. Gotra and kula mean a family, and they existed amongst Kshatriya and Vaisya as well as Brahmans. The gotra depend on a real or imaginary community of blood, and then correspond to what we call families. No Hindu house is supposed to be without its tutelary divinity, but the notion attached to this character is now very far from precise. The deity who is the object of hereditary or family worship, the Kula-deva, is always Siva, or Vishnu, or Durga, or other principal personage of the Hindu mythology; but the Griha-deva, or household god, rarely bears any distinct appellation. In Bengal, the domestic god is sometimes the saligram, sometimes the tulsi plant, sometimes a basket with a little rice in it, and sometimes a water jar, to any of which a brief adoration is daily addressed, most usually by the females of the family. Occasionally small images of Lakshmi or Chandi fulfil the office, or, should a snake appear, it is worshipped as the guardian of the dwelling. In general, in former times, the household deities were regarded as the unseen spirits of ill, the ghosts and goblins who hovered about every spot, and claimed some particular sites as their own. At the close of all ceremonies, offerings were made to them in the open air, to keep them in good humour, by scattering a little rice with a short formula. Thus at the end of the daily ceremony, the householder is enjoined by Menu, 3. 90, 'to throw up his oblation (bali) in the open air to all the gods, to those who walk by day and those who walk by night.' In this light the household gods correspond better with the genii locorum than with the lares or penates of antiquity.

The Hindu now, as did the Greeks and other nations of antiquity, always make offering of the first portion of each meal to the gods. Anna-deva is the goddess of food.

The Hindu householder, after pouring libations to the gods, sages, and progenitors, is to offer to Brahma oblations, with fire, not preceded by any other rite, with such ceremonies and in such form as are adapted to the religious rite which is intended to be subsequently performed.—*Wilson, Hindu Theatre; Tod's Rajasthan*, i. p. 337.

OBSERVATORY. Of these, there is one at Cape Town, in lat. 33° 56′ 35″ N., and long. 18° 28′ 45″ E.; also one at Madras, in lat. 13° 4′ 6″ N., and long. 80° 17′ 22″ E.; one at Batavia, in lat. 6° 8′ S., and long. 106° 50′ 50″ E.; one at Bombay, and one at Trevandrum, capital of the Travancore kingdom.

OCEAN.

Bahr, Bahr-ul mahit, Ar.	Samudra, . Sansk., Tel.
Weltmeer, . . . Ger.	Oceano, ... Sp.
Kala-pani, Darya, Hind.	Samandr, . . . Tam.
L'oceano, ... It.	Dengiz, ... Turk.

The south and east of Asia is girt by the ocean, portions of which are known as the Red Sea, the Persian Gulf or Bahr-ul-Fars, the Arabian Sea, or N. Indian Ocean, the S. Indian Ocean, the Bengal Bay, and the Pacific. Edrisi says, 'The Ocean Sea is called the Dark Sea, because it is dark, and is almost always in commotion with violent winds, and covered by thick fogs.' So to the ocean near land the Arabs give the name of Bahr-ul-Khazr, or Green Sea; and the natives of India generally style the Great Ocean as the Kala pani or Black Water.

Surrounding the coasts of Southern Asia, patches of the waters become occasionally crimson, brown, black, or white, which, especially in the Indian Ocean, occasionally extend as far as the eye can reach. These are caused by organic matter, but whether it is wholly animal or wholly vegetable, or both, has not been satisfactorily ascertained. The water from pink-stained patches has been found to contain animalcules. The Red Sea has been supposed to be named from the quantities of slimy red colouring matter which it at certain times throws up on its shores, and which consists of a delicate seaweed. Along the coasts of China, yellowish spots are said not to be uncommon, and red and white patches occur on the waters of the Pacific. In lat. 8° 46′ S., and long. 105° 30′ E., Captain Kingman entered a white patch at dusk; he filled a tub with the water, and found it filled with luminous particles, insects and worms, some like a hair, and about two inches long. This patch was 23 miles in length, north and south, with a strip of dark water dividing its centre. The whole appearance was that of a plain covered with snow. There was scarcely a cloud, but the sky was as black as if a storm was raging. A red water was seen by M. Lesson off Lima; and in the vicinity of California there occurs a phenomenon which has been called the 'Vermilion Sea.' Sir E. Tennant has described changes in the sea around Ceylon of similar hue, and which he ascertained to be owing to the presence of infusorial animalcules. The Red Sea is in a riverless and rainless region, and its waters are heavier than any other mere arm of the ocean. The saltest part is in the Gulf of Suez; the saltness diminishes south of Socotra, and again increases eastwards to Bombay; the temperature of its waters for three or four hundred miles from the Straits has been found as high as 95°. This is probably caused by the slight evaporation, as the more saline a fluid is the slower is its evaporation. The observations as to the rate of evaporation on shore have led to many extravagant estimates as to the rate at sea. The mean annual fall of rain on the entire surface of the earth is estimated at about five feet. The area of the Indian Ocean north of the equator, including the Arabian Sea and Bay of Bengal, is about four millions of square miles. The rivers of India are fed by the monsoons, which have to do their work of distributing their moisture in about three months. Thus we obtain 0·065 inches as the average daily

rate of effective evaporation from the warm waters of the N. Indian Ocean. If it were all rained down upon India, it would give it a drainage which would require rivers having sixteen times the capacity of the Mississippi to discharge. Nevertheless the evaporation from the North Indian Ocean required for such a flood is only one-sixteenth of an inch daily throughout the year. The total amount of evaporation that annually takes place in the trade-wind region generally at sea, according to Maury's estimate, does not exceed four feet.

The water of the Indian Ocean is warmer than that of any other sea, therefore it may be inferred that the evaporation from it is also greater. The N. Indian Ocean contains about 4,500,000 square miles, while its Asiatic watershed contains an area of 2,500,000. Supposing all the rivers of this watershed to discharge annually into the sea four times as much water as the Mississippi discharges into the Gulf of Mexico, we shall have annually on the average an effective evaporation from the North Indian Ocean of 60 inches, or 0·0165 per day. The waters of the Indian Ocean are hotter than those of the Carihbean Sea, and the evaporating force there is much greater.

Sir John Herschel gives to the winds the entire right of setting the ocean streams in motion; Lieutenant Maury holds the universal circulation of the sea to be caused by nothing else than the difference in its specific gravity; and Dr. Carpenter (or rather Professor Buff) would bring about a general interchange of polar and equatorial water by the aid of sunshine and frost alone.

These two facts, taken together, tend to show that large currents of warm water have their genesis in the Indian Ocean. One of them is the well-known Mozambique current, called at the Cape of Good Hope the Lagulhas current, which skirts the coast of Natal. Another of these warm currents from the Indian Ocean makes its escape through the Straits of Malacca, and, being joined by other warm streams from the Java and China Seas, flows out into the Pacific between the Philippines and the shores of Asia. Thence it attempts the great circle route for the Aleutian Islands, tempering climates, and losing itself in the sea as its waters grow cool on its route towards the north-west coast of America. Near the shores there is a counter-current of cold water.

There is sometimes, if not always, another exit of warm water from the Indian Ocean. It seems to be an overflow of the great intertropical caldron of India; seeking to escape thence, it works its way polarward more as a drift than as a current. It is to the Mozamhique current what the northern flow of warm waters in the Atlantic is to the Gulf Stream. This Indian overflow is very large. The best indication of it is afforded by the sperm whale curve. In shore of, but counter to, the 'black stream,' along the eastern shores of Asia, is found the cold current of Okhotsk, a streak or layer or current of cold water answering to that between the Gulf Stream and the American coast. This current, like its fellow in the Atlantic, is not strong enough at all times sensibly to affect the course of navigation, but, like that in the Atlantic, it is the nursery of most valuahle fisheries. The fisherics of Japan are nearly as extensive as those of Newfoundland, and the people of each country are indebted for their valuable supplies of excellent fishes to the cold waters which currents of the sea bring down to their shores. There are also about the equator in this ocean some curious currents, which Maury called the doldrum currents of the Pacific, but which he says he does not understand, and as to which observations are not sufficient yet to afford the proper explanation or description. There are many of them, some of which at times run with great force. On a voyage from the Society to Sandwich Islands, Lieutenant Maury encountered one running at the rate of ninety-six miles a day. These currents are generally found setting to the west. They are often, but not always, encountered in the equatorial doldrums on the voyage between the Society and the Sandwich Islands. The Pacific Ocean and the Indian Ocean may be considered as one sheet of water, covering an area quite equal in extent to one-half of that embraced by the whole surface of the earth. There is also at times another warm current running to the south midway between Africa and Australia, of which the whales give indications. These convey immense quantities of highly saline water, which has to be replaced by colder water. The Aleutian Islands are in the tract of the current from the Straits of Malacca. They are as subject to fogs and mists as the banks of Newfoundland. No trees grow on them, and for all household purposes the natives depend on the drift-wood, amongst which camphor-wood and woods of Japan and China are often seen.

The Japan Stream, known as the Kuro-Siwo, sweeps along the outer or eastern shores of the Japanese Islands. This stream carries with it the gulf-weed or Sargossa, with many animal forms, such as Clio, Cavolina, Pteropods, Spirialis, Atlanta, and the Pelagian skeleton shrimps, Alima and Erichthys; also the carapaces of the sailor-crab called Planes. Near Japan a current runs in a thin layer in shore similar to that between the Gulf Stream and the American coast, and, like it, is the nursery of many valuable fisheries. It is in the cold waters which the currents of the ocean bring to its shores that the people of Japan obtain their supplies of fish, there as abundant as those of Newfoundland.

The great equatorial current of the Pacific, when it reaches the south end of Formosa, passes off into the China Sea, while the other part is deflected to the northward along the eastern coast of Formosa until reaching the parallel of 26° N., when it bears off to the northward and eastward, washing the whole S.E. coasts of Japan as far as the Strait of Tsugar, and gaining in strength as it advances. This is called the Kuro-Siwo, or Japan Stream; and near its origin this stream is contracted, and is usually confined between Formosa and the Meiaco-Sima group of islands, with a width of nearly a hundred miles; but to the northward of the latter it rapidly expands on its southern limit, and reaches the Loo-Choo and Bonin Islands, attaining a width to the northward of the latter of about 400 miles. Its average maximum temperature is 86°. The N.W. edge of the stream is strongly marked by a sudden thermal change in the water of from 10° to 20°, but the S. and E. limit is less distinctly defined, there being a gradual thermal approximation of the air and water. Along the borders of the stream, where it chafes against the counter-currents and torpid waters of the ocean, as also in its midst, where

whirls and eddies are produced by islands and the inequalities in its bed, strong tide rips are encountered, often resembling heavy breakers on reefs or shoals. Its average velocity, between the south end of Formosa and Tsugar Strait, has been found to be from 35 to 40 miles in 24 hours. Off the Gulf of Yezo, its maximum strength is recorded as high as 72, 74, and 80 miles respectively on three successive occasions; but local causes give rise to changes in its velocity and its direction. To the northward of lat. 40° N., in long. 143° E., there is a cold counter-current intervening between this stream and the south coast of Yezo, as shown by the sudden thermal change of the water from 16° to 20°, which it is believed sets to the westward through the Strait of Tsugar. The waves of the ocean vary in height, but rarely rise over 16 feet above the level. In the Indian Ocean, the tide follows the moon to the west with a somewhat northerly course.—*Maury's Phys. Geo.; Maury, United States Sailing Directions; Wilson's Science of Ship-building; Adams*, pp. 240, 318; *Horsburgh; Captain Taylor; Heathcote; Tennant's Ceylon; Findlay; Buist.*

OCHNA SQUARROSA. *Linn.; Roxb.*

H'sen, H'sen-way, BURM.	Sunuri Tammi-
Kunuk-champa, SANSK.	chettu, . . . TEL.
Salanthi maram, . TAM.	Yerra-juvi, . . . ,,

A small but handsome tree, growing in the mountainous parts of India. Leaves deciduous in the cool season, and appear with the sweetly-fragrant flowers in February and March. O. nana, *Buch.*, occurs in Gorakhpur; O. Wightiana, *Wall.*, in Travancore; and O. Heyneana, *W.* and *A.*, in the Peninsula of India. O. Wallichii, *Planch*, the Yo-da-ya of the Burmese, O. Andamaniea, *Kurz*, has a hard reddish wood, similar to O. squarrosa and O. Walliehii.

OCHRE, Red.

Ch'ih-t'u, . . . CHIN.	Red chalk, Bole, . ENG.
Hawang-t'u, . . . ,,	Pewdee, . GUJ., HIND.
Yellow ochre, Reddle, ENG.	Sonagaroo, . . . TEL.

An earthy mixture of alumina, silica, oxide of iron, and other substances, found in beds in various parts of India. Ochre occurs in great beds beneath the laterites of S. India. It is generally of a yellow or brown colour, but is sometimes red. It is employed as an ingredient in painters' colours, in the polishing of metals and stones, and for other purposes. Ochre sometimes contains a little calcareous matter and magnesia. The oxide of iron may occur in so large a proportion that the ochre becomes an ore of that metal. In England, ochre is found in beds some feet thick, generally above the oolite, and covered by sandstone and quartzose sands more or less ferruginous, and accompanied by grey plastic clays of a yellowish or reddish colour. All these substances enter into the composition of the ochres. The ochrey earths are ground and elutriated for use; the yellow ochres may be changed into red or reddish-brown by calcination, whereby the iron is raised to a higher degree of oxidation. Ochres are used in China as a dusting powder to burns, scalds, itchy and herpetic eruptions.—*Sm.*

OCHROCARPUS, a genus of plants of the order Guttiferæ and tribe Garcineæ. O. longifolius, *Benth.*, is a large tree of the W. Ghats, whose dried flowers are used for dyeing silk. O. nervosus, *Kurz*, is an evergreen tree of the Arakan Yomah, and O. Siamensis, *T. And.*, of Prome and Martaban, is also an evergreen tree. —*Gamble.*

OCHROSIA, a genus of plants of the order Apocyneæ. O. salubris, *Bl.*, of the Andamans, and O. Borboniea, *Gm.*, of Ceylon, both small trees.

OCHTERLONY, SIR DAVID, a general officer of the Bengal army. He was the son of an American gentleman, who remained a royalist, and lost his estates in that country. Sir David came to India, and distinguished himself in peace and war. For eight days he defended Dehli against Jeswunt Rao Holkar, repulsing repeated assaults, though with open breaches, till on the night of the 15th October 1804, on the approach of Lord Lake, Holkar withdrew. From that time the Moghul emperor of Dehli became a stipendiary of the British. The Nepal war, which ended on the 12th March 1816, was successfully conducted by him, but there had fallen General Gillespie, who relieved Vellore when it was seized by rebels in 1808, and who had distinguished himself in Java in August and September 1811. After the Nepal war, several tracts in the mountain valleys of the Himalaya were ceded to the Indian Government. He was long employed in conducting negotiations with Ranjit Singh. He died at Meerut, 15th July 1825, aged 68 years. The monument raised at Calcutta to his memory is a column 160 feet high, with a Turkish capital and an Egyptian base; it cost £3500. He was Political Agent at Dehli. He found his name placed by his own moonshi, without his knowledge, as a pensioner to the amount of £1200 a year on the civil list of the poor old king of Dehli.—*Tod's Travels*, p. 36.

OCIMUM, a genus of plants of the order Lamiaceæ, *Lindl.*, Labiatæ, *Jussieu*, of which there are about 60 species. Many of them, furnishing useful products, are known to occur in the warm parts of the world.

Ocimum adsceudens, *Willde.*

O. cristatum, *Kon.*	Plectranthus Indicus, *Spr.*
O. Indicum, *Roth.*	Ban-tulsi, . . . BENG.

Grows in the Peninsula of India and in Bengal. It has small, pale, rose-coloured, scentless flowers.

Ocimum basilicum, *Linn.*, common basil, has many varieties, differing in their size, in the form and colour of their leaves, and in minor particulars; in their qualities they are nearly alike; useful for condiments and perfumery. The varieties, α, β, γ, δ, are—

Var. (α) O. pilosum, *Benth.*

O. basilicum, *Burm.*	O. hispidulum, *Schum.*
O. minimum, *Burm.* not *L.*	O. ciliatum, *Horn.*
O. hispidum, *Lam.*	Basilicum Indicum, *Rum.*
Habak, ... ARAB.	Rihan, ... PERS.
Babui-tulsi, . . HIND.	Naz-bu, ... ,,

It grows throughout India. It has small white flowers; the whole plant is aromatic and fragrant; the seeds steeped in water swell into a pleasant jelly, which is demulcent and nourishing, and is used by the natives in cases of catarrh, diarrhœa, and chronic dysentery. The green leaves have a delicious smell, exactly like verbena. The dried plant prevents bugs approaching beds, etc. The seeds are used by women to relieve after-pains.

Var. (β) O. anisatum, *Benth*, sweet basil.

O. basilicum, *L.* not *Burm.*	Basilicum citratum, *Rum.*

A native of Persia, with small white flowers, aromatic and fragrant.—*Roxb.* iii. p. 17.

Var. (γ) O. glabratum, *Benth.*

O. caryophyllatum, *Roxb.*	O. lanceolatum, *Schum.*
O. integerrimum, *Willde.*	Gulal-tulsi, . . BENG.

A native of Guinea, Bengal, and Penang. It has smallish white flowers. The whole plant is very aromatic and fragrant.—*Roxb.* iii. p. 15.

Var. (δ) O. thyrsiflorum, *L.*, *Roxb.*, *Jacq.*

A plant of the Peninsula of India, with small, pale pink flowers, the whole plant very aromatic and fragrant. There are other vernacular synonyms of the above varieties, but it is not possible to discriminate the varieties indicated by them. The varieties differ considerably in their scent.

Ocimum canum, *Sims.*, *Linn.?*

O. album, *Roxb.*	O. Americanum, *Linn.*
O. stamineum, *B.*, *L.*	O. incanescens, *Mart.*

Wild mint, ... ,,	

A native of the Brazils, Madagascar, E. Indies, and China; in India, a shrub about a foot high, chiefly grown in native gardens. Flowers white; leaves have a most pleasant aromatic taste and smell. The juice is given to children in colds to the extent of a teaspoonful twice daily. The dried leaves are used as a substitute for tea.

Ocimum gratissimum, *Linn.*

O. petiolare, *Lam.*, *Rheede.*	O. Zeylanicum, *Burm.*
Ban-jari, . . . HIND.	Ram tulsi, . . . HIND.

This is cultivated near temples. It has white or pale yellow flowers, with a very strong fragrance.—*Roxb.* iii. p. 17; *Gen. Med. Top.*

Ocimum micranthum, *Willde.*

O. frutescens, *Sieb.*	O. montanum, *Hook.*
O. Americanum, *Auctorius.*	O. pubescens, *Mill.*

A fragrant plant of N. America.—*Voigt.*

Ocimum sanctum, *Linn.* Holy basil.

O. hirsutum, *Benth.*	Lumnitzera tenuiflora, *Spr.*
O. tomentosum, *Lam.*	Basilicum agreste, *Rumph.*
O. tenuiflorum, *Lam.*	Plectranthus monachorum, *Spr.*

Purple-stalked basil, ENG.	Nalla gaggeru, . . TEL.
Kala-tulsi, . . . HIND.	

Whole plant slightly aromatic, prescribed by the Hindus in decoction in the bowel complaints of teething children. This tulsi plant is sacred to Vishnu, held in the highest veneration by all his followers; is grown in the courtyard or parterre of almost every Vaishnava house, however small, and it is worshipped morning and evening. Its root is made into beads, and worn round the necks and arms of the Vaishnava Brahmans. The root of the plant is given in decoction in fevers, half a teacupful twice daily. In the Dekhan it is grown in almost every native garden, and is used for various purposes by Europeans, for flavouring sauces, wine, or vinegar. It is seen about the temples of Hindus and burial places, where it

'waves
Its fragrant blossoms o'er their graves.'

The Brahmans use it in their funeral ceremonies. The Malays also strew it over the graves of their dead. In Pegu, it is steeped in water, and drunk as a sherbet. The N. Australian variety smells like anise; that of E. Australia is like cloves. The seeds are mucilaginous, and are used in gonorrhea.

Ocimum villosum, *Roxb.* Woolly basil.

Pen-zeing-blung, BURM.	Arjakarm, . . . TEL.
Safaid-tulsi, . . HIND.	Tella gaggera chettu, ,,

Cultivated in gardens and near temples. An aromatic herb; leaves used for seasonings. In all courts of justice, the Hindus are sworn by these leaves, which are placed on the palm of the hand by a Brahman, who repeats the prescribed oath, and at the termination they are masticated and swallowed. A good number of the species of this genus are used in cookery.—*Roxb.*; *Gen. Med. Top.*; *Jaffrey*; *O'Sh.*; *Ains.*; *Riddell*; *Mason*; *Cat. M. Ex.*, 1857; *Powell.*

OCODOMA, a genus of ants extremely numerous over all India, and comprising several species very nearly alike. Almost all the species have two kinds of neuters, one of them of very large size compared with the ordinary workers, and which are usually called warriors. The chief distinction of Ocodoma from Atta consists in the former having some small spines on the thorax.

Dr. Jerdon mentions O. affinis, diffusa, diversa, Malabarica, minor, providens, and quadrispinosa. O. providens, *Sykes*, live under ground, making, for their size, a large series of excavations. Their common food—animal matter, dead insects, etc. —they take readily, but they also carry off large quantities of seeds, especially small grass seeds, and more especially cabbage, celery, radish, carrot, and tomato seeds, and are particularly partial to the light lettuce seeds, and in some gardens, unless the pots in which they are sown be suspended or otherwise protected, the whole of the seeds sown will be removed in one night. Packets of seeds (especially lettuce) in a room will be completely emptied before aware that the ants have discovered them. They bring the seeds outside their holes, at the close of the rainy season, but in some cases merely the husks, quite in heaps. Their galleries and subterranean passages are often very extensive, and it is no easy matter to dig down to their nest to see what becomes of the seeds.—*Jerdon.*

OCOTEA GLAUSESCENS. *Nees.*

Laurus glausescens, *Roxb.*	L. sylvestris, *Bks.*, *Herb.*

A tree of Sylhet and N. Circars, one of the Lauraceæ. Its timber is used by the people for many useful purposes.—*Roxb.* ii. p. 307.

OCOTEA LANCEOLARIA. *Nees.*

O. lanceolata, *Nees.*	Laurus lanceolaria, *Roxb.*

A tree of Nepal and the Khassya mountains; timber employed for many useful purposes. O. mollis, *Wall.*, is a shrub of Burma. Species of Ocotea extend from Sylhet to Dehra Doon, and ascend to 7000 feet.

OCTOPODIDÆ, a family of Cephalopodous mollusca, which may be thus shown:—

CLASS I.—Cephalopoda, cephalopods.
ORDER I.—Dibranchiata.
SECTION A. Octopoda.
Fam. 1. Argonautidæ.
Genus, Argonauta, argonaut or paper sailor, recent, 4 *sp.*; fossil, 1 *sp.*; syn. Ocythoe nautilus.
Fam. 2. Octopodidæ.
Genera, Octopus, recent, 46 *sp.*, syn. Cistopus.
Sub-genus, Tremoctopus, recent, 2 *sp.*
Pinnoctopus, finned octopus, recent, 1 *sp.*
P. cordiformis.
Eledone, recent, 2 *sp.*
Cirroteuthis, recent, 1 *sp.* C. Mülleri.
Philonexis, recent, 6 *sp.*

Professor Owen divides the octopods into two groups or families, the Testacea and the Nuda. The Testacea consist of the genera Argonauta and Bellerophon. Of Argonauta, several species occur in the seas on the south and east of Asia, viz. A. argo, cornu, cymbium, gondola, hians, thaustrum, tuberculata, and vitrea. A. argo has been from the earliest periods an object of interest to zoologists, in consequence of the accounts of its sailor-like habits handed down to us from Aristotle, Pliny, Ælian, Oppian, and others; and in consequence of the difference of opinion entertained with regard to the inhabitant of the shell by naturalists. In 1836, Madame Jeannette Power laid before the Academy at Catania her Osservazione Fisiche sopra il Polpo de l'Argonauta Argo, in which, after a long and careful course of inquiry, she ascertained that it constructs its own shell. The argonaut is furnished with eight arms, having on each two rows of suckers; the first two arms are more robust than the others, and should be so because they serve as masts to support the sails, which, spread out, act before the wind as such. At the base they have on the inferior sides the double row of suckers, like the other six; but from the inferior row, at about an inch from the base in adults, a rather furrowed membrane begins to develope itself, which extends as far as the tip of the arm, and, holding it bent, it can no longer execute the office of a rowing arm, but is employed by the animal as a sail. These sails are so large that, when turned backwards and pressed against the shell, they can entirely cover and protect it. The true office of these sails is that of keeping themselves applied to the shell at all times, in reserve for the moment when the animal, coming to the surface of the water, removes them, and, spreading them, raises them as sails. In fact, the series of suckers of the sail-arms when the membrane of the sails is wrapped about the shell, is placed exactly over the keel of it, in such a manner that each sucker corresponds to each point in which the ribs of the shell terminate, until they reach the two margins of the spiral. Captain Philip Parker King, R.N., during his passage from Santos to St. Catheriue's, in lat. 28° S., caught a dolphin (Coryphæna), the maw of which was found filled with shells of Argonauta tuberculosa (Arufa of Owen), and all containing the Octopus ocythoe that has been always found as its inhabitant. Most of the specimens were crushed by the narrow passage into the stomach, but the smaller ones were quite perfect, and to some of them was attached a nidus of eggs, which was deposited between the animal and the spire. The shells varied in size from two-thirds of an inch to two and a half inches in length; each contained au octopus, the bulk and shape of which were so completely adapted to that of the shell, that it seemed as if the shell increased with the animal's growth. In no specimen did there appear to be any connection between the animal and the shell. Several species are already known as inhabitants of the seas of warm latitudes, both littoral and pelagic.

Eledone, *Aristotle, Leach.* Arms provided with a single series of sessile acetabula.

E. ventricosa, Octopus ventricosus, *Grant.* Body short, round; the eight arms connected at their base by a membrane.

Octopus, *Lam.*, Πολύπους, *Leach.* Its arms are provided with a double alternate series of sessile acetabula.

O. vulgaris, Sepia octopodia, *Linn.*; Sepia octopus, *Gmel.* Body short and ovid, the eight arms connected at their base by a wide membrane. The octopus is eaten by the Chinese and Japanese.

Madame Power, writing on the habits of the poulpe or cuttle, mentions that into one of her aquaria she had put a living Pinna nobilis adhering to a fragment of rock; this aquarium also contained an Octopus vulgaris and some living testaceous mollusca. One day she saw that the poulpe was holding a fragment of rock in oue of its arms, and watching the pinna, which was opening its valves. As soon as they were perfectly open, the poulpe placed the stone between the valves, preventing the pinna from closing them again, when the octopus set about devouring the mollusc. The next day she saw the poulpe crush some Tellinæ, then search about amongst other shells, and finally stretch itself close to a Triton nodiferum. The triton extended half the body from its shell, no doubt to seek its food, when the poulpe sprang upon it, and surrounded it with his arms; the mollusc retired precipitately into its shell, and in closing this, with its operculum pinched the point of one of the arms of the poulpe, which, by struggling, at last left the tip of its arm in the shell of the triton. The voracity of the poulpe was such, that, notwithstanding the abundance of nourishment with which she furnished it, she was compelled to remove it from the aquarium, or it would have devoured all the mollusca. So great is its voracity, that it even attacks man, tears away his flesh, and eats it. In the port of Messina they occur in great numbers, and of large size. One Octopus Chinensis, measured by Adams, was 6 feet from tip to tip of the arms.—*Adventure and Beagle Voyages; Madame Jeannette Power, Mag. Nat. Hist.; Eng. Cyc.; Woodward's Shells; Indian Field; A. Adams' Tr. in Japan.*

ODDAIKKUTTAR was one of the Tamil poets at the Chola court, who flourished with Kambar in the 11th century. He was noted for his composition on War Chariots, called Parani. His Kalingkattu Parani celebrated the conquest of the Kalinga or Telugu country by Kulotunka Chola. The seventh book of the Tamil Ramayana, Uttara Kandam, was composed by this author.

ODEYA, Carn., in the plural Wodeyar, a lord, a chief, a ruler.—*W.*

ODHA. Mahr. As much grain as can be grasped in both hands; the Scotch goupan.

ODHIYA, a caste of ironsmelters and irou-smiths in Hindustan.

ODIN has been supposed by some to have been the Buddha Sakya Sinha, by others to have been a follower of that reformer. In Scandinavian mythology, he was the chief of the gods; like Zeus, he was the ether. If the same with Sakya Sinha or one of his pupils, there have never in the world been two other religions so diametrically opposed to one another, nor two persons so different as the gentle Sakya Muni, who left a kingdom to alleviate the sufferings of mankind, and Odin, the terrible and severe father of slaughter. Nevertheless the Yggdrasil Ash Tree, in the Norse mythology, with one of its roots over the Well of Knowledge, and with Nidhog

gnawing its stem, suggests obvious analogies, not only with the Tree of Knowledge and Serpent of Eden, but with the Bo Tree of Buddha.—*Darwinism in Morals*, p. 188.

ODINA WODIER. *Roxb.*

This very large tree grows in the warmer parts of the island of Ceylon, up to an elevation of 1500 feet. It is a native of mountainous districts in the Peninsula of India; grows in Coimbatore, in Bengal, Murree, and Hazara, in the coast jungles of the Bombay Presidency. In the Madras Presidency it is grown from cuttings and is planted in avenues, but it yields no shade in the hot weather, being without leaves till June. The tree is rather common on the hills of British Burma, and a valuable timber, much used at Shoay-gween in the manufacture of oil-presses and rice-pounders; the inner heart-wood is red, and is used for sheaths of swords, spear handles, oil presses, door frames, and rice-pounders. A cubic foot weighs 65 lbs. The wood is very difficult to season, requiring to be kept, even in planks, two or three years; but once well seasoned, it is a close-grained, beautiful wood, well adapted for cabinet-making purposes, the central reddish portions in particular. A considerable quantity of gum exudes from the trunk, called Kania or Kuni gond, also gum-jingna, and it resembles the true gum-arabic both in appearance and properties, and is often largely mixed up with the East India gum-arabic of commerce, which contains gums collected indiscriminately from several species of Acacia, and from Odina wodier and Feronia elephantum. The gum is used in cloth-printing, also by weavers for stiffening their thread, and is given in asthma, and as a cordial to women. The tree is lopped for fodder. It ascends the slopes of the mountains in the Babar forests of Kamaon, and attains considerable size. In the Siwalik region of the Panjab, up to near the Indus, and near the Salt Range, to a height of 3500 to 4000 feet, the outer wood is liable to be attacked with worms.—*Cal. Cat. Ex.*, 1862; *Thw.; Roxb.; Voigt; Mason; Brandis; Stewart.*

ODOARDO BARBOSA, a gentleman of Lisbon, who in his youth travelled in the east, and he appears to have visited Malacca before it was taken by the Portuguese in 1511. He wrote a book in 1516. In 1519 he joined Magellan, and was treacherously murdered in 1521 by the natives of Zebu, one of the Philippines, four days after the great navigator had suffered a like fate. —*Bikmore*, p. 100.

ODORICO DI PORDENONE, Minorite friar (born 1281, died 1331), a Beatus of the Roman Catholic Church, travelled in the east and in India between 1316 and 1330. He proceeded by way of Constantinople and Trebizond, Arziron (Erzeroum), Tauris, Soldania (Sultanieh), and the Sea of Bacuc (*i.e.* of Baku, the Caspian), Cassan (Kashan), Iest (Yezd), and the Sea of Sand, the ruins of Comerum (Persepolis), and the kingdom of Chaldæa (Baghdad), to Ormes (Ormuz), whence he took ship to Tanna in Salsette, near Bombay. Here, or at Surat, where Friar Jordanus had deposited them, he gathered the bones of the four missionaries who had suffered martyrdom there in 1321, and took ship again to Polumbum (or Columbum, Quilon). He notices the immense quantity of pepper cultivated in Minibar (Malabar), on which coast he also visited the towns of Flandrina (Pandarani) and Cyngilin (Cynkali, Shinkala, Gingala, Jangli, Cranganore). He then went on to Mobar (the Coromandel coast), 'where lieth the body of St. Thomas;' and thence in fifty days sailed to Lamori (Lambri) and to the kingdom of Sumoltra (Sumatra). From Sumatra he went on to Java, and to another island called Thalamasyn or Panten, which has been thought to be Borneo, and thence to Zampa (Cochin-China). He next notices the island of Nicoveran (Nicobars) and of Sillan (Ceylon), whence his narrative carries us at once to Upper India (China) and the province of Manzi (Southern China), and the cities of Censcalan (Canton), Zayton (Chin-chu), Fuzo (Fu-chu), Cansay (Hang-chu-fu), Chilenfu (Nankin), and Cambaleeh (Pekin), and Sandu (Xanadu, Shang-tu), the summer residence of the Great Khan. He describes 'the lands of Prester John,' and 'the realm of Thibet,' and the Grand Lama, as the pope of that country. He also gives an account of the 'Old Man of the Mountain,' and of his dealings with the 'Devils of Tartary.' He died at Padua A.D. 1331. Lamori has been supposed to be the Arabic Al-Rami. He is known as Odoricus. His account was delivered orally to the person by whom it was written down, but is extremely meagre and unsatisfactory.—*Marsden's Sumatra*, p. 7; *Sir G. Birdwood's Records.*

ŒCOPHYLLA SMARAGDINA, a common green ant of the Malay Archipelago, which lives in large nests formed by gluing together the edges of leaves.

OESAR or Oesaran. Jav. A whirl in the hairs of the head, indicating a good sign or mark.

ŒSTRIDEA, a family of dipterous insects, flies, the larvæ of which live in the bodies of the ox, sheep, horse, dog; also under the skin and in the nostrils of man. They are of the genera Hypoderma, Œstrus, or Cephalæmia.

Œstrus equi occurs in the south of Europe and in Persia. It is a dipterous insect. Its eggs are deposited on the hair of the horse, and licked into the stomach, and when complete the insects pass through the canal.

The Œstrus ovis or Cephalæmia ovis of Europe and the East Indies arises from the larvæ of a fly which penetrate the sinuses of the head, and there become fully developed, setting up a copious discharge from the nostrils, and disease of the mucous membrane lining the air passages, and ultimately influencing the brain through the thin cribriform plate of the ethmoid bone, and through which the olfactory nerve passes out. The ovum of the fly is deposited on the grass, and becomes attached to the nostrils of the sheep while grazing. The parasites annually cause many deaths among flocks. This serious disease affects the sheep most in the rainy season, when grass is abundant. The first symptom is a distressing discharge from the nose, the sheep breathing with great difficulty. If the grubs do not drop, the sheep die.—*Figuier.* See Insects.

OGUNA PANORA, says Colonel Tod, is the sole spot in India which enjoys a state of natural

freedom. Attached to no state, having no foreign communications, living under its own patriarchal head, its chief, with the title of rana, whom one thousand hamlets scattered over the forest-crowned valleys obey, can, if requisite, appear at the head of five thousand bows. He is a Bhumia Bhil of mixed blood, from the Solanki Rajput, on the old stock of pure (oojla) Bhil of Mewar. Besides making the tika of blood from an incision in the thumb, the Oguna chief takes the prince by the arm and seats him on the throne, while the Oondree Bhil holds the salver of spices and sacred grains of rice used in making the tika. Firearms (Travels, p. 34) are only used by the chiefs and headmen, the national weapon being the kumpta, or bamboo bow, having the bow-string (chulla) from a thin slip of its elastic bark. Each quiver contains sixty barbed arrows a yard long. Although they claim descent from every race of Rajput, and prefix the tribe, as Chohan Bhil, Gehlot Bhil, Pramar Bhil, etc. etc., their origin is best evinced in the gods they worship and their prejudices as to food. The Oojla Bhil, or pure Bhil, will eat of nothing white in colour, as a white sheep or goat; and their grand abjuration is, 'By the white ram!' Their ancient position is well illustrated by the circumstance of their claiming the right to instal Rajput princes. When Bappa fled, two Bhils were the companions of his flight, one of Oondree, in the valley of the present capital, the other of Solanki descent, from Oguna Panora, in the western wilds. Their names, Baleo and Dewa, have been handed down with that of Bappa, and the former had the honour of drawing the tika of sovereignty with his own blood on the forehead of the prince, on the occasion of his taking the crown from the Mori. The descendants of Baleo of Oguna and the Oondree Bhil still claim the privilege of performing the tika on the inauguration of the descendants of Bappa. In the early part of the 19th century (Tr. p. 84), taking a section of about sixty miles in the Alpine Aravalli, from the ascent at the capital of Oodeypur (Udaipur), passing through Oguna, Panurpa, and Mirpur, to the western descent near Sirohi, the land was inhabited by communities of the aboriginal races, living in a state of primeval and almost savage independence, owning no paramount power, paying no tribute, but with all the simplicity of republics, their leaders, with the title of rawut, being hereditary. The rawut of the Oguna commune could assemble five thousand bows, and several others could, on occasions, muster considerable numbers. Their habitations are dispersed through the vallcys in small rude hamlets near their pastures or places of defence. In 1882 and 1883 the Bhils of Mewar continued semi-independent.—*Tod, Travels.*

OGYRIS, the modern Ormuz.

OHIND. The continual discovery of Indo-Scythian coins proves that this city was in existence at the beginning of the Christian era, which may perhaps induce us to put some faith in the tradition mentioned by Abul Fada, that Wehand or Ohind was one of the cities founded by Alexander. General Court, Sir Alexander Burnes, and Mr. Loewenthal call this place Hund.

OH ME! The Chinese Buddhist invocation is, Oh me to Fo! Oh me to Fo!

OHUD, a hill about four miles north of Medina, where a battle took place between Mahomed with 1000 and the Koresh with 3000 troops. Mahomed had the hill in his rear, with archers placed on its flanks to annoy the enemy's horse, but the archers quitted their position to plunder, and Mahomed was wounded and defeated.

Oils are found in the animal, vegetable, and mineral kingdoms. Their value as articles of commerce, and their numerous uses in candle and soap making, wool-dressing, food, and medicine, as well as lubricating agents, are well known. Great Britain imports annually to the value of about £3,500,000, the palm and cocoanut oils being to the value of 1½ millions sterling. The oils which form the chief exports from different parts of India to Britain, France, the Mauritius, etc., are cocoanut, gingelly, ground nut, mustard, rape, sandal-wood, grass oil, and fish oil. The value of the exports of oil from all India was in—

1874–75, .	Rs. 32,22,852	1880–81, .	Rs. 35,35,166
1875–76, .	,, 40,42,073	1881–82, .	,, 35,40,439
1876–77, .	,, 35,26,002	1882–83, .	,, 28,33,609

Linseed and rape are consigned mainly to the United Kingdom, while France takes almost the entire quantity of til or gingelly. This branch of Indian commerce in 1852–53 was only of Rs. 9,60,390.

Oils are generally divided into two primary groups, 'fixed' and 'volatile,' the former class being again subdivided into drying, greasy, and solid oils. Above one hundred fixed oils are known in India and Burma; 105 fixed vegetable oils, including drying, greasy, and solid oils; 10 wood oils, 1 mineral oil, and 4 animal oils. Cocoanut, castor, ground nut, gingelly and its variety, with rape, mustard, and linsced oils, form considerable articles of export trade, the first three being exported in the shape of oil, the last two as oil-seed, and gingelly both as an oil and oil-seed. The prices of these products vary considerably in different parts of British India; and lamp, ramtil, kurunj, pinnacottay, illoopoo, piney or doopada, margosa or neem, physic nut, bruma-dundoo, safflower, and poppy are consumed to a large extent. Poppy seed is being exported in yearly increasing quantities, largely to France; in 1882–83, 571,542 cwt., value Rs. 30,26,401.

Fixed oils are composed of carbon, hydrogen, and oxygen. Most of them are composed of two compounds, a liquid called olein and a solid called margarin, or another called stearin. According as the solid substances abound in oils, they are liquid or solid at the ordinary temperatures of the atmosphere. Fixed oil is found in the fat or adipose tissue of animals, and amongst plants, principally in their seeds. In some cases, as in the olive (olea), it is yielded by the fruit. The following table shows the relative proportions of

the three elements in 100 parts of each of the following oils:—

	Carbo.	Hydro.	Oxy.		Carbo.	Hydro.	Oxy.
Olive, .	77·21	13·36	9·43	Whale, .	76·13	12·40	11·50
Almond,	77·40	11·48	10·82	Spermaceti,	78·91	10·97	10·12
Linseed,	76·01	11·35	12·62	Hog's lard,	79·09	11·14	9·75
Nut, .	79·77	10·5	79·12	Suet, . .	78·99	11·70	9·30
Castor, .	74·17	11·03	14·78	Butter, .	65·60	17·60	16·80

Oils are extensively used for candle and soap making, for burning in lamps, for diminishing friction in machinery of all kinds, in wool-dressing, in the manufacture of paints and varnishes, as articles of food, for medicinal purposes, etc. The time of burning of equal quantities of the following oils is found to be—

Oil of poppy, .	Hours,	14	Oil of Camelina sativa, Hrs.,	9½
„ sunflower,	„	13	„ olives, . . . „	9
„ rape, . .	„	11	„ hemp seed, . . „	8
„ mustard,	„	11½	„ tallow, . . . „	10½
„ flax seed,	„	10		

In the seeds of Southern Asia from which varieties of oil are extracted, the proportions of oil per cent. in weight are—

Almond kernels, . .	53	Linseed, ...	38
Ground nut, . . .	52	Cocoanut kernels, .	36
Sesamum, ...	51	Hemp seed, ...	32
Poppy seeds, . . .	45	Cotton seeds, . . .	24
Olive kernels, . . .	44	Sunflower seeds, . .	22
Cacao whole seeds, .	44		

Some families of plants especially abound in oil. Thus among the Cruciferæ we have mustard, rape, and colza seed-oil, with other species cultivated in Europe, India, and Japan, several of which have been exported to Britain. Several of the family of Compositæ secrete oil in quantities large enough to render it desirable to cultivate them for this purpose alone, as some species of carthamus, or bastard saffron, also the Guizotia oleifera, gingelly oil, known in commerce by the name of hutsyelloo oil. Most of the Cucurbitaceæ also, as the melon, gourd, cucumber, and their numerous varieties, cultivated especially in India, contain a large proportion of oil, which is expressed in the East Indies as it formerly was in Europe. The Rosaceæ also store up a large proportion of oil in the kernels of their fruit, as in the almond, which is particularly valued; so also that of the apricot, the Briancon apricot, and other species of prunus. In the Himalaya, oil is expressed from the apricot kernel, and has been made of a fine quality. From among the Cupuliferæ also, nut oil is obtained from the hazel; beech-nut oil, from Fagus sylvatica; and walnut oil, from Juglans regia, one of the Juglandeæ.

Volatile oils are numerous in the vegetable kingdom. They are so called on account of the ready manner in which they may be volatilized under the influence of heat. The facility with which they are diffused in the atmosphere renders them easy of detection, and it is to this class of substances that plants owe their peculiar odours. Many of them are employed in perfumery, others are used as stimulants in medicine, and some are poisonous. Many natural orders of plants are characterized by yielding volatile oils. Thus the Lamiaceæ, Myrtaceæ, and others, embrace species all of which contain volatile oil in their leaves. Many of the Umbelliferæ yield a volatile oil in their fruits. The petals are often the seat of these secretions, and especially those most prized, as the rose, the jasmine, the heliotrope, and many others. Many of the *essential* or volatile oils employed in medical practice are almost all powerful stimulants and carminatives. They are chiefly obtained from species of amomum, amygdalus, anethum, andropogon, anthemis, carum, caryophyllus, dryobalauops, cugenia, fœniculum, illicium, juniperus, laurus, lavandula, melaleuca, mentha, moringa, myristica, ocimum, origanum, pimpinella, piper, rosmarinus, ruta, and sassafras.

The essential oils are obtained from various parts of the odoriferous plants, chiefly by distillation, but also by the chemical perfuming process of enflowering, as also by infusion. The best known in commerce are the oils of almonds, aniseed, bergamot, cajaputi, camomile, camphor, caraway, cassia, cinnamon, cloves, juniper, lavender, lemons, mint, nutmeg, orange, peppermint, pimento, rhodium, rosemary, roses (otto), savine, sassafras.

Scented oils, erroneously termed 'volatile,' obtained by the repeated distillation of fragrant herbs, etc., over into a receiver containing a portion of any fixed oil, to which the aroma is imparted, are prepared to some extent in the E. Indies, but chiefly for native use. Sandal-wood oil and the large varieties of atr, attar, or otto, etc., which form the principal part of native perfumery, are included in this class. The atrs of India contain the essential oils of the plants and substances sufficient to produce a perfume which is perfectly overpowering, even producing headache. The natives of British India have the phrase in their language, 'dimagh mu'attar hona,' to be stupefied with fragrance. These atrs are principally made in Hindustan. Sandal-wood, jasmine, nutmegs, indeed, every odoriferous plant is by the perfumers (attārs) made to yield an essential oil.

In the process of enflowering, layers of flowers, four inches thick and two inches square, are laid on the ground and covered over with equal layers of sesamum or any other oil-yielding seed, over which a second layer of flowers like the first is placed. The seed is wetted with water, and the whole mass covered with a sheet held down at the ends and sides by weights, and allowed to remain for eighteen hours in this form. It is now fit for the mill, unless the perfume is desired to be very strong, when the faded flowers are removed, and fresh ones put in their place. The seeds thus impregnated are ground in the usual way in the Kolhoo or mill, and the oil expressed has the scent of the flower. At Ghazipur, the jasmines are chiefly employed; the oil is kept in leathern bottles or dubbers, and sold for about Rs. 2 a seer. The newest oils afford the finest perfumes. In Europe, a fixed oil, usually that of the ben or moringa nut, is employed for enflowering. Cotton is soaked in this and laid over layers of flowers, the oil being squeezed out so soon as impregnated with perfume.

Mineral oils are obtained in Turkish Arabia, Batku, N. Persia, Northern India, China, Burma. From the oil pits of Burma the Burmese Government used to obtain 93,000 tons annually, the oil on the spot fetching about a shilling per cwt. Chemically treated, it supplies half-a-dozen of products of the greatest beauty, several being oils, one a hard wax of snowy whiteness, and one a rich perfume. In several places in the Jhelum district along the Salt Range, at Kafir Kot, at Jabba in the Shahpur district, and in very small quantities at Shah-ka-Nurpur, in the Rawal Pindi district, a petroleum exudes out of the rocky soil, but efforts to utilize it in a commercial point of

view failed, chiefly owing to the enormous cost of carriage, and to the difficulty of retaining the substance itself with any other vessels than those made of tin or glass. Price and Co., of London, reported favourably upon it, and asked for some tons of it for further experiments. Their application could not be complied with to the extent of the requisition, not more than eight maunds a day being obtainable, and the yield of oil being greater in the hot than in the cold weather. Wood smeared with mineral oil is effectually preserved from the ravages of white ants. The oil burns with a bright flame, but the smoke is insufferable. The natives call it Gandak-ka-tel, and use it only for burning in their lamps. The Jabba spring is the most extensive.

Animal oils are in frequent use amongst the people of India as medicinal substances, for external application, such as that from the pea-fowls' fat, from the neats' foot, the crocodile, and the iguana; also the oils from the sharks, the rays, and the cod-fish, and spermaceti and its oil.

Fish oil is prepared in Malabar and the western coast of the Peninsula of India, whence it is exported to England in large quantities; the demand is also yearly increasing. Fish-liver oil is prepared on the western coast and at Madras. The liver of the white shark is that generally used. The best fish-liver oil is prepared early in January, when the livers are plump, firm, large, white, and full of oil. The livers are sometimes found diseased, and those specifically lighter than water should be rejected. Good livers should cut smooth, and not tear; when cut, none of the substance should flow out in a half-liquid state. The quantity of oil produced by livers depends much upon the time of the year. In the beginning of January 1000 livers were found by experiment to yield 37 imperial gallons, and at the end of February an equal number only gave 23 gallons of oil. In the beginning of January 1000 livers of average size weighed 900 lbs., whilst in the last day of March the same number weighed only 575 lbs. The oil at these different seasons was equally pale, and the livers equally white, although much smaller and more flabby in the latter season. To prepare the oil, wash the liver very carefully, first removing the gall-bladders which adhere to them, and infuse them in rain or other water free from salt. Place them over the fire, and never allow the heat to exceed 120° or 130°. On this head especial care must be taken; a higher degree of heat, although yielding a larger product, communicates a rank, fishy taste and smell, and heightens the colour of the oil, thereby rendering it disgusting to the patient.

The better known vegetable oils of Southern and Eastern Asia are from the following plants:—

Acorus calamus.
Adenanthera pavonina.
Aleurites triloba.
Amygdalus communis.
Anacardium occidentale.
Andropogon Martini.
A. muricatum.
Anethum sowa.
Anisochilos carnosum, *W.*
Arachis hypogea.
Argemone Mexicana.
Azadirachta Indica.
Balanites Ægyptiaca.
Bassia butyracea.
B. latifolia.
B. longifolia.
Bauhinia tomentosa.
Bergera Konigii.
Brassica Chinensis.
B. eruca.
B. juncea.
B. napus.
Buchanania latifolia.
Butea frondosa.
Calophyllum inophyllum.
Canarium commune.
Cannabis sativa.
Carthamus oxyacantha.
C. tinctorius.
Caryophyllus aromaticus.
Cedrus deodara.
Celastrus paniculata.
Cinnamomum, *species.*
C. Zeylanicum.
Citrus aurantium.
C. bergamia.
C. decumana.
C. limonum.
C. medica.
Cocos nucifera.
Coriandrum sativum.
Corylus colurna.
Croton tiglium.
Cucumis melo.
C. sativus.
Cucurbita maxima.
Cuminum cyminum.
Cyperus, *species.*
Datura, *species.*
Didynamia gymnosperma.
Dipterocarpus, several *sp.*
Dolichos biflorus.
Dryobalanops camphora.
Elettaria cardamomum.
Embryopterus glutinifera.
Erysimum perfoliatum.
Euphorbia dracunculoides.
Fœniculum panmori.
Garcinia pictoria.
G. purpurea.
Gossypium, *species.*
Guilandina bonduc.
Guizotia olcifera.
Helianthus annuus.
Hydnocarpus inebrians.
Illicium anisatum.
Impatiens tingens, and *sp.*
Jasminum, *species.*
Jatropha curcas.
Juglans regia.
Kin, of China.
Lepidium sativum.
Linum usitatissimum.
Litsæa, *species.*
Melaleuca cajaputi.
Melia azedarach.
Mentha piperita.
Mimusops elengi.
Moringa pterygosperma.
Myristica moschata.
Nicotiana tabacum.
Nigella sativa.
Ocimum, *species.*
Olea Europea.
Pandanus odoratissimus.
Papaver somniferum.
Pimpinella anisum.
Pinus Gerardiana.
Piper nigrum.
Pogostemon patchouli.
Pongamia glabra.
Prinsepia utilis.
Prunus Armeniaca.
Ricinus communis.
Rosa, *species.*
Salvadora Persica.
Santalum album.
Sapindus emarginatus.
Sarcostigma Kleinii.
Sassafras officinarum.
Semecarpus anacardium.
Sesamum Indicum.
Sinapis, alba, Chinensis, glauca, nigra, toria.
Soja hispida.
Sterculia fœtida.
Stillingia sebifera.
Strychnos nux vomica.
Suchaw, of China.
Symplocos cratægoides.
Terminalia catappa.
Theobroma cacao.
Thespesia populnea.
Trichilia spinosa.
Trigonella fœnum-græcum.
Vateria Indica.
Vatica robusta.
Vernonia anthelmintica.
Vitex negundo.
Xylocarpus granatum.

A. *Chinese Oils.*

Almonds oil, Hang-jin-yu, manufactured in Persia, N. India, and China.

Anise (star) oil, Pah-koh-yu, is of a pale colour, with a warm or sweetish taste. It is made by distilling the fruit in small retorts, a pikul producing about seven catties of oil.

Apricot seed oil, Hang-jin-yu, prepared in the north of China from apricot kernels.

Bean oil, Tau-yu, in the south of China, is prepared in large quantities from the Soja hispida, and is used in food.

Benzoin oil, Ngan-sih-yu, is supposed to be the liquid storax or rose maloes (rasa-mala).

Cabbage or colza oil, Ts'ai-yu, is expressed from the seeds of the Brassica Sinensis, all through the valleys of the Yang-tsze and the Han. It is used in cookery, as a hair oil, a lamp oil, and as a purgative.

Camellia, from the Camellia oleifera, Ch'a-yu, is a thin yellow-coloured oil, used in lamps. It is made in the hilly district of Hunan and Kiang-si, where the camellia grows in abundance. The Chinese call the camellia by the same name as the tea plant, hence this oil is often called tea oil.

Camphor oil, Nau-yu, is obtained from Formosa, where it exudes from vats in which camphor is stored; it is oily or uncrystallizable camphor; is a strong-smelling liquid of a yellow colour; it is scarcely saleable.

Camphor oil, from the Dryobalanops camphora of the W. coast of Sumatra, where the oil drops from the split timber of the trees felled to procure the Barus camphor, and is there sold at the rate of a large quart bottleful for a Dutch guilder; it is a useful embrocation.

Chaulmoogra, Ta-fung-yu, CHIN., is obtained from the seeds of the Gynocardia odorata.

Cinnamon oil, Kwei-pi-yu, is a volatile oil, used as a

perfume and flavouring ingredient, and exported from Canton; it is made from the leaves and twigs of the Cassia or Cinnamomum iners, and resembles the genuine oil of cinnamon prepared in Ceylon.

Clove oil, Teng-hiang-yu, made at Canton, is a heavy oil of a pale reddish-brown oil colour.

Cotton seed oil, Mien-yu, expressed from cotton seeds, is used for lamps, in cookery, and externally as an unguent.

Croton oil, Pa-tau-yu, is a drastic purgative.

Fish oil, Yu-chi, is obtained from the porpoise, which ascends the Yang-tze river as far as Hankow; the oil is used for lamps and to make putty.

Fish oil, Hwang-ku-yu, is obtained from a small fish, the oil has a strong fishy smell, is used to destroy pedicular, parasitic, and other skin affections, and in veterinary practice.

Ground nut or pea nut oil, Hwa-sang-yu, is from the Arachis hypogæa.

Hemp seed oil, Ho-ma-jin-yu, CHIN.

Linseed oil, Hu-ma-yu, from a species of Linum; is used medicinally, internally and externally.

Myrrh oil, Muh-yoh-yu, is a reddish oil, having the smell of myrrh, and used in Cochin-China to dress ulcers.

Olive oil, Yang-kau-yu. The fruit of the canarium is sometimes mistaken for the olive.

Pine oil, Sung-i, a coarse turpentine obtained by heating pine woods; it is used in skin diseases.

Peppermint oil, Poh-ho-yu, is made in Canton from several kinds of mint; used in sweetmeats and as a perfume.

Persimmon oil, Po-tsze-yu, a glutinous oil from the Embryopteris glutinifera. The fruits are of the size of an apple, and are crushed to obtain the dark resinous thick juice. It makes an excellent varnish for the paper umbrellas. An extract from the fruit is an internal and external astringent.

Poppy seed oil, Ying-tsze-yu, is used for culinary purposes.

Roses, oil of, Mei-kwei-yu, an essential oil, used by Chinese women as a scent for the hair.

Sandal-wood oil, Tan-hiang-yu, a thick yellow fragrant oil extracted from sandal-wood, used to colour woods in imitation of sandal-wood.

Sesamum oil, Chi-ma-yu, also Hiang-yu, from the black and white sesamum seed.

Stone chesnut oil, Shih-li-yu, obtained by expression from the fruit of the Aleurites triloba; it is superior to linseed-oil as an economic substance, and is used medicinally, with properties like castor-oil.

Sunflower oil, Kwei-tsze-yu.

Sweet basil oil, Su-tsze-yu, is expressed from the seeds of a species of Ocimum. It is a fine drying oil, used in painting on porcelain and for varnishing.

Tallow tree seed oil, Ts'ing-yu, the Stillingia sebifera, is clear but of a dark colour; about fifteen or sixteen catties of it can be obtained from one pikul of berries. It is used to varnish umbrellas, to dress the hair, to fill lamps, and to mix with the tallow of candles; given internally, it is purgative and emetic.

Turpentine oil, Tuh-nau hiang-yu.

B. *Solid Oils.*

Vegetable butters is a name given to the concrete oils of certain vegetables, from the resemblance to the butter obtained from the milk of animals. The term is also occasionally, but improperly, applied to some vegetable products which are entirely of a waxy nature, such as the wax of Myrica cerifera. The name is likewise bestowed in Siberia on certain Algæ, species of the genus Nostoe, such as N. pruniforme. The most important vegetable butters are produced by species of Bassia, and by certain palms, such as the Cocos butyracea, and the Elais Guineensis; the former is of great utility to the inhabitants of Brazil, where it grows naturally, and to the Negroes of St. Domingo, where it is cultivated; while the latter is very serviceable to the natives of Guinea. The generally known solid oils or vegetable butters are as follow:—

Butter of the great Macaw tree, from Acrcomia fusiformis.

Almond butter.

African butter, also called Shea butter, from the Bassia Parkii or Pentadesmis butyracea of Sierra Leone.

Galam butter or ghi, from Bassia butyracea, Fulwa or Phulwara, HIND., a native of Nepal and Almora in Northern India.

Bassia latifolia and B. longifolia oils separate into two portions, one on the surface, fluid, and of a pistacio green colour; the other of a brownish-green, and almost solid.

Kawan solid oil, of a pale-greenish colour, a good deal resembling the oils of the Bassia in character, though rather harder, and approaching more in properties to myrtle wax, was shown at the Great Exhibition of 1851, from Singapore. It was supposed to be the produce of the tallow tree of Java, called locally Kawan, probably a species of Bassia. It is very easily bleached; indeed, by exposure to air and light, it becomes perfectly white.

Broonga malagum oil from Masulipatam, separates into three portions, the uppermost fluid resembling brown sherry, the middle of the consistence of ghi, and brownish-yellow, and the lowest almost solid, and of a hair-brown colour.

Camujay tree oil of Travancore is a dark gelatinous mass, of the consistence of blanc-mange.

Carap or carab vegetable butter, from Carapa Guianensis, a large tree in Trinidad and British Guiana.

Butter of cinnamon, from Cinnamomum verum or C. Zeylanicum. By strong decoction, the fruit yields a concrete oil, called cinnamon wax, used for candles, and which exhales a fragrant odour while burning.

Butter of cocoanut, from Cocos nucifera, which yields a concrete oil, but perhaps expensive. Cocoanut oil, prepared by rasping the pulp of fresh ripe cocoanut, adding a little hot water, squeezing and boiling the milky juice until the water has evaporated, and filtering through paper, produces an oil which separates into two portions, the one fluid and limpid, the other a solid concrete substance of a pure white colour, which in the shade remains unliquidated at all temperatures.

Butter of palm oil, from Elais Guineensis, a native of Africa and America. The concrete palm oil is much esteemed in Europe for unguents, and has been lately recommended for culinary purposes.

Solid palm oil is an export from the western coast of Africa, of the consistence of hard butter.

Erysimum perfoliatum is cultivated in Japan for its oil-seeds.

Fevillea scandens, the solid oil of the horse eyes and cacoons of Jamaica, is white and hard.

Gamboge butter, a product of the Garcinia pictoria, *Roxb.*, is called Mukke tylum, TAM.; Arasana ghoorghy yennai, CAN. The tree grows abundantly in Mysore and the western coast jungles. Cocum butter is from Garcinia purpurea? or G. pictoria.

The Gamboge butters are solid and of a deep leek-green colour. The G. pictoria grows abundantly in parts of Mysore and the western jungles. The oil is procured by pounding the seed in a stone mortar and boiling the mass until the butter or oil rises to the surface. 2½ measures of seed yield one seer of butter, and it is sold at the rate of annas 1.4 per seer of rupees 24, in the Nuggur division of Mysore, and is there used as lamp-oil and as ghi.

Hibavania oil of Canara, solid, of a clove-brown colour.

Hydnocarpus inebrians oil, the Thortay oil of Canara, a very valuable vegetable solid oil, of the consistence of ordinary hard salt butter, used for sores.

Mooragana butter, or solid oil of Canara, is used medicinally as an ointment for the wounds of cattle injured by tigers. It is said to be produced from a forest tree growing in the Canara jungles. It is dark-brown, and is the most solid of the solid oils.

Butter of nutmeg, from Myristica moschata, from the Moluccas, is obtained by bruising the nutmegs into a paste, which is compressed in bags between hot metallic plates. A solid oil is from Myristica (Virola) sebifera, of British Guiana.

Odul or Adul oil of Travancore, from Jatropha glauca, separates into two portions,—the upper, fluid, of the colour of golden sherry; the lower, reddish-white, of the consistence of ordinary hard salt butter.

Solid oil is obtained from the Demerara butter tree, Saourari, Pekea tuberculosa.

Japan wax, from Rhus succedaneum. Candles used in Japan are made of an oil said to be pressed from its seeds. This oil becomes, when concrete, of the consistence of tallow, and is not so hard as wax. The province of Fetsigo more particularly produces this tree. A vegetable wax is from Shanghai.

Shacotty oil of Canara is used for cutaneous eruptions. It separates into two portions; the upper, yellowish and fluid, and the lower, brownish-red, and of the consistence of ghi.

Mijo or Japan butter is from Soja hispida, Japan and China.

Sterculia fœtida oil, in Tamil Coodiray pusjun yennai, is thick at all seasons of the year.

Chinese vegetable butter from the Stillingia sebifera; much in use in China. The number of these trees in the province of Che-kiang is immense. In the eastern parts of China, the product of the tallow tree, Stillingia sebifera, and in the south, beef and hogs' tallow, are used in the manufacture of candles. Wax is only employed to encase the tallow or lard, which, from the heat of the climate and its unclarified condition, never becomes hard.

Terminalia bellerica oil separates into two portions,—the one fluid, of a pale olive-green colour, and the other white, floccular, and of the consistence of ghi.

Butter of cacao, from Theobroma cacao; 1000 parts of the seed yield 300 parts of a concrete oil or butter, of a most agreeable flavour.

Indian vegetable butter, Piney butter, or Doopada solid oil, is from the Vateria Indica tree, which grows on the western coast of India, and in Canara. It is white or yellowish-white, of the consistence of hard salt butter, and in the shade remains always solid. It can be procured in quantities in Southern India. It is used for lamps principally, but is very suitable for soaps and candles. It is prepared by cleaning the seeds, then roasting and grinding them into a mass. In making it, to five seers of seed add twelve seers of water, and boil until the oil rises to the surface. Remove the oil, stir the contents of the vessel, and allow it to stand until the following day, when more oil will be observed on the surface, which may be collected, and the process repeated.

C. *Wood Oils.*

This class of oils is obtained for the most part from the Burmese coast and the Straits Settlements. They are usually procured by tapping species of the noble order Dipterocarpeæ, and applying heat to the cavity. The oil which flows from the wound is a mixture of a balsam and volatile oil, and when applied as a varnish to wood or other substance, the oil evaporating deposits a hard and durable coat of resin. They are chiefly used as natural varnishes, either alone or in combination with coloured pigments, also as a substitute for tar in paying the seams of shipping, and for preserving timber from the attacks of white ants. They are said also to be useful as an ingredient in lithographic inks.

Wood oil of Malacca is obtained from a large tree of the dipteraceous family, which is very common in the dense jungles of the Malay Peninsula, and grows to a great height. When not lopped too soon, the base of the trunk is of immense girth; the wood is reddish-brown, and has a smell not unlike that of English fir; the bark is smooth, the leaves alternate, pinnate, and exstipulate; fruit a one-seeded drupe; seed angular and anatropal. The oil when permitted to remain at rest divides itself into two layers, the upper consisting of a clear chesnut-coloured liquid balsam, and the lower being in appearance like flakes of granulated sugar, and consisting probably of the surplus resin deposited by the action of the atmosphere.

Miniak kruing, a wood oil of Borneo, extracted by cutting a large hole in the tree, into which, fire being kindled, the oil distils. To obtain wood oil of the Dipterocarpus turbinatus, a large incision is made in the trunk at about 30 inches from the ground, in which a fire is lighted, and kept up until the incision is charred; soon after this, the liquid begins to flow, and is conducted by a little trough into a vessel placed to receive it. The average produce of the better trees in a single season, is 30 gallons. Wood oils are produced by Dipterocarpus incanus, D. alatus, and D. costatus. The first of these three is reputed to yield the best sort, and in the greatest quantity. When filtered, it is a transparent liquid, of a somewhat dark-brown when seen by transmitted light, but appearing opaque and of an obscure green if viewed by reflected light. It possesses, therefore, in a very marked degree, the dichroism observable in all resin oils obtained by the action of fire. This character determines the nature of wood oil, and shows that it is not simply a natural product like copaiba, but that it is in part the result of a liquid modification of the Dipterocarpus resin effected by the agency of heat.

Moulmein wood oil is of somewhat greater consistence than olive oil. It has a sp. gr. of ·964, and possesses an odour and taste very analogous to those of copaiba. It dissolves in twice its weight of absolute alcohol, with the exception of a minute residue which is deposited upon repose. A curious property of this oil is that of solidifying when heated in a closed vial to 266° F.; at this temperature the oil becomes turbid, and so gelatinous, that it is not displaced upon the inversion of the vial. After cooling, the solidification is yet more perfect; but a gentle warmth, assisted by slight agitation, restores its former liquidity.

Teak-wood oil, an opaque, dull, ash-coloured oil, procurable in most of the large bazars of India; when allowed to rest for some time, it separates into two layers,—an upper dark-coloured clear stratum, and a lower and more solid deposit. Its chief use is for applying to wood-work of all sorts, either alone as a natural varnish, or in combination with certain resins.

Deodar or Shemanatahu oil, of the Erythroxylon areolatum, is an empyreumatic medicinal oil.

Wood oil from China is one of the substances of which the much-prized China lacquer is made. It is used in Singapore for painting the beams and woodwork of native houses, and may also be mixed with paint when not exposed to the sun.

Sissoo-wood oil, of Dalbergia sissoo, is an empyreumatic medicinal product.

Camphor wood oil, from the Dryobalanops camphora, belongs to the class of volatile oils. It is used largely in Singapore as a substitute for turpentine, and sells at from 15 to 20 cents a bottle.

D. *Oils alphabetically arranged.*

Aleurites triloba, Belgaum walnut oil—Hidjlee Badam ka tel, HIND.; the Molucca tree produces the Lumbang nut. The nut yields a very large percentage of oil, and the tree is very prolific. The nuts are strung upon a thin strip of bamboo, and when lighted burn like a candle.

Allium sativum, Garlic oil—Vellay-pundoo yennai, TAM. A medicinal oil everywhere obtainable.

Almond oil is that of the common almond, Amygdalus communis; also the oils of the Indian almonds, the fruits of the Terminalia catappa and Canarium commune—Badam-ka-tel, HIND.; Miniak badam, MALAY.; Roughan-i-badam, PERS.; Ingudi-tailam, SANSK.; Badamcottay-yennay, TAM.; Badama vittulu nune, TEL. It is not wholly an article of import, but chiefly so. The almond tree is a native of the Himalaya, and is abundant in Kashmir. The oil is colourless, or very slightly yellow, and is congealed with difficulty. Both varieties of almond, bitter and sweet, are imported into the northern parts of India from Ghorband, and into the southern parts from the Persian Gulf. This oil, as imported into Britain, is principally the produce of the Arzo tree, forests of which grow to the south of the empire of Morocco, which produce an exceedingly hard species of almond. Its fruit consists of two almonds, rough and bitter. In manufacturing the oil, they are well rubbed or shaken in a coarse bag, to separate a bitter powder which covers the epidermis; they are then pounded to a paste in marble mortars, and the paste subjected to a press.

Anacardium occidentale, Cashew-nut oil—Kajoo ka tel, HIND. ; Moondree cottay yennai, TAM. The light-yellow, sweet-tasted, and edible oil obtained from the nut of this tree is in every respect equal to either olive or almond oil. It is, however, very seldom prepared, the nuts being used as a table fruit. Another oil is prepared from the Anacardium occidentale, and called Cashew apple oil. It is a powerfully vesicating oil obtained from the pericarp of the Cashew apple, and has been long known to the native physicians of India. It much resembles in its properties the acrid oil obtained from the marking nut, Semecarpus anacardium.

Andropogon Martini, the Roosa grass oil, differs but little either in appearance or quality from the A. citratum, lemon grass oil, and is used for the same purposes. Roosa grass, a native of the low hills along the base of the Himalaya, at Hardwar and the Kheeree pass, is also found at Asirgarh, and in Malwa generally. The roots are used by the natives of Northern India in intermittent fevers. In habit and taste it comes remarkably near A. citratum. The oil is used as a stimulant internally and externally, much in the same manner as oil of cajaput. Roosa oil is the celebrated grass oil of Nemaur. It is probable that the several species furnish oils of similar characters.

Andropogon citratum — Karpura-pillu-tylum, TAM. ; the Lemon grass oil, is obtained by distillation from this grass, which grows plentifully in many parts of British India. It is much used as a rubefacient for rheumatic affections, as well as in perfumery, for which purposes it is said to be largely exported from Travancore. When newly made, this oil is of a light straw colour, but age changes it to a deep red.

Anethum sowa, Bishop's weed. Its carminative seeds yield by distillation a very useful oil, which is given medicinally as a stomachic.

Arachis hypogæa, Ground-nut oil—Willayati-moong ki phulli-ka tel, HIND. ; Vayr-cuddala-yennai, TAM. ; Manilla noona, TEL. This valuable oil is exported to a large amount. It is obtained by expression from the seeds. The seeds yield about 43 per cent. of a clear straw-coloured edible oil, which is an excellent substitute for olive oil, and makes a good soap. Perfect decolorization considerably enhances the value of this oil.

Argemone Mexicana, the Brumadundoo, or Coorookoo, or Prickly poppy oil, Jamaica yellow thistle oil—Faringi datura ka tel, HIND. ; Brumadundoo yennai, TAM. ; Bramadundi noona, TEL. A pale-yellow limpid oil, almost colourless, may be obtained from the round corrugated seeds of the prickly poppy, which flourishes luxuriantly in all parts of India. It is used in lamps. The seeds are valued for fowls, and the mass from which the seed is expressed is found to be extremely nutritious to cattle.

Azadirachta Indica and Melia azedarach, Margosa or Neem oil—Neem ka tel, HIND. ; Vapum yennai, TAM. ; Vapa noona, TEL. This valuable and much used medicinal oil is obtained by either expression or boiling from the seeds of species of Melia and Azadirachta, which are common throughout Asia. Margosa or Neem oil is made from the pericarp or fleshy part of the fruit. Dr. Maxwell found this oil equally efficacious with cod-liver oil in cases of consumption and scrofula. He began with half-ounce doses morning and evening, which were gradually reduced. It enters much into the practice of native physicians, by whom it is administered internally as an anthelmintic, and externally as a liniment in rheumatism and headache, and as an application to ulcers. The oil is of a deep-yellow colour, has a strong smell, and an unpleasant bitter taste.

Bassia oils. The seeds of three species of Bassia trees, indigenous to British India, and of one of E. Africa, yield solid oils. The trees supply at the same time saccharine matter, spirit, and an oil fit for both food and burning in lamps. They are—

a. The Illepe (B. longifolia) is abundant in the S. parts of Hindustan generally, the Madras Presidency, and the northern province of Ceylon. The oil-cake is rubbed on the body as soap, and seems admirably adapted for removing the unctuosity of the skin caused by excessive perspiration, and for rendering it soft, pliable, and glossy, which is so conducive to health in a tropical climate. The oil is white and solid at common temperatures, fusing at from 70 to 80 degrees. It may be advantageously employed in the manufacture of both candles and soap. In Ceylon and some parts of India, this oil forms the chief ingredient in the manufacture of soap. It is seldom sold in the bazar, but the seeds are collected, and the oil manufactured for private consumption. The seeds contain about 30 per cent. of oil of a bright-yellow colour. Its chief use is, however, for burning in lamps, and as a substitute for butter in native cookery.

b. Mahwa (B. latifolia) is common in many parts of British India. The oil a good deal resembles that last described, and may be used for similar purposes. It is solid at common temperatures, and begins to melt at about 70 degrees.

c. Vegetable butter is obtained from the Choorie or Choonie (B. butyracea). It is common in certain of the hilly districts, especially in the eastern parts of Kamaon ; in the province of Dhoti it is so abundant that the oil is cheaper than ghi or fluid butter, and is used to adulterate. It is likewise commonly burnt in lamps, for which purpose it is preferred to cocoanut oil. It is white and solid, fusible at about 120 degrees, and exhibits very little tendency to become rancid when kept.

d. Shea or Galam butter is obtained in Western Africa from the Bassia Parkii or Pentadesma butyracea, a tree closely resembling the B. latifolia and other species indigenous to Hindustan. According to Park, the tree is abundant in Bambara ; the oil is solid, of a greyish-white colour, and fuses at 67 degrees, and it is used for cooking, burning in lamps, etc.

Bryonia oil—Toomuttikai yennai, TAM. ; Boddama kaia noona, TEL. This oil is used for burning in lamps in those parts of British India where the fruit abounds. It is extracted by boiling in water.

Buchanania latifolia or Cheerongie oil, Chirongia sapida —Cheeronji or Charooli ka tel, HIND. ; Saraypuppo noona, TEL. The kernels of this tree are eaten by the natives to promote fatness ; they abound in a straw-coloured, sweet-tasted, and limpid oil. The tree grows plentifully in Mysore and Cuddapah.

Butea frondosa, Moodooga oil. The seeds of this tree yield a small quantity of a bright, clear oil, which is sometimes used medicinally.

Cabbage seed oil is prepared in small quantities.

Calophyllum calaba ? an oil under the name of Cheroo pinnacottay was sent from Cochin.

Calophyllum inophyllum, Pinnacottay or Poon-seed oil —Surpun ka tel, HIND. ; Pinnay yennai, TAM. ; Pinnay noona, TEL. The fresh seeds of the Alexandrian laurel, when shelled and subjected to pressure, yield a dark-green oil of a peculiar odour. Old seeds yield a higher coloured and thicker product. It is used for lamps and vessels, but it appears to be chiefly valuable as a medicine. It is seldom procurable in the bazar, but is expressed when required.

Cannabis sativa, Hemp-seed oil—Ganja yennai, TAM. — is obtained by expression from the seeds of the common hemp. In Russia, the oil is much used for burning in lamps, but it is unknown to the natives of India.

Cardamom seed oil is well known.

Carthamus tinctorius, Safflower oil—Kurroo, Coosum ka tel, HIND. ; Chendoorookoo yennai, TAM. ; Koosumba noona, TEL. A light-yellow clear oil is obtained from the seeds of the plant.

Tuntapoo oil (Cassia tora ?), an empyreumatic medicinal substance called tuntapoo oil, is known about Masulipatam.

Celastrus paniculata, Malkungunce ; staff tree — Malkungunee ka tel, HIND. ; Valuluvy yennai, TAM. ; Bavungi noona, TEL. The deep scarlet-coloured oil obtained by expression from the seeds of this shrub is used in medicine ; the seeds submitted to destructive distillation yield the Oleum nigrum or Vaylari tylum, TAM., which is used either

alone or in combination with other ingredients in the treatment of Beri-beri.

The Citrus species, aurantium, bergamia, decumana, limetta, limonum, medica, and oils of neroli and bergamot, highly esteemed as perfumes, are distilled from the flowers and rind of the fruit of species of citrus.

Cocos nucifera, Cocoanut oil—Narel-ka-tel, HIND.; Taynga yennai, TAM.; Tencaya noona, TEL. The nut having been stripped of the husk or coir, the shell is broken, and the fatty lining is taken out. This is called cobra, copra, or copperah in different localities. Ninety pounds of it are thrown into a mill with about three gallons of water, and from this is produced 7¾ gallons of oil. The copra in its unprepared state is sold, slightly dried, in the market. It is burned in iron cribs or grates, on the top of poles or torches in processions, and as means of illumination for work performed in the open air at night. In Europe, the oil is used for candle and soap manufacture, for lubricating machinery, etc. etc.; in India, for making soap, anointing the person, for cookery, lamps, and in medicine. Empyreumatic oil and pyroligneous acid are obtained by the destructive distillation of cocoanut shells.

Croton tiglium, Croton or Napalah oil—the Jumalgotay ka tel, HIND.; Neervalum yennai, TAM.; Naypalum noona, TEL. This medicinal oil is a drastic purgative.

Cucumis colocynthis, Colocynth seed oil.

Cucumis melo, Melon seed oil. Pitcha pusjhum, the Tharbooza, Khurbooza, or pumpkin seed oil.

Cucurbita maxima, Cucumber seed oil—Valerikai yennai, TAM.; Thosa noona, TEL. A clear edible oil. Nearly all the species of gourds and melons and cucumbers yield mild, clear, culinary oils; the skin of the seed is removed, and the inside, under the name of maghz, khiyar, dadu, etc., sold, and the oil expressed.

Eriodendron anfractuosum. A dark-brown though clear oil is obtained by expression from the seed of this silk cotton tree, the fibre of which is used as a stuffing for pillows, mattresses, etc. etc.

Garcinia pictoria, Gamboge butter (*Rox.*)—Arasinagoorghy yannai, CAN.; Mukki-tylum, TAM. A solid butter is contained in the seeds of the gamboge tree, a species closely allied to the G. purpurea, which produces the cocum butter. The gamboge tree grows abundantly in certain parts of the Mysore and western coast jungles. The oil is procurable in moderate quantities. It is prepared by pounding the seed in a stone mortar, and boiling the mass until the butter or oil rise to the surface. Two and a half measures of seed should yield one scer and a half of butter.

Ghirgilly oil from Canara is considered an excellent remedy for rheumatic pains.

Guilandina bonduc, bonduc nut oil—Calichi-kai yennai, TAM. This oil is mentioned by Ainslie as being considered useful in convulsions and palsy. The seeds themselves are believed to possess tonic virtues. Used solely as a medicine.

Guizotia oleifera, Ramtil oil—Kala til ka tel, HIND.; Valeesaloo noona, TEL. This sweet-tasted, edible oil is plentiful in the Mysore, Vizagapatam, and Ganjam districts. It is used for nearly the same purposes as sesamum.

Helianthus annuus, sunflower, is raised in Tartary chiefly for the oil expressed from its seeds. The people eat the seeds, which, when boiled in water, taste not unlike boiled Indian corn, are employed in fattening poultry, and are said to increase the number of eggs more than any other kind of grain. Pheasants and partridges eat them with great avidity.

Hura crepitans, sand-box tree, has been introduced from Jamaica. Its seeds yield by expression an oil; but as the whole tree abounds in poisonous matter, this oil probably partakes of its deleterious nature.

Hydnocarpus inebrians? Neeradimootoo oil, Neerada—Jungli badam ka tel, HIND.; Mootoo yennai, TAM. This valuable oil was sent to the Madras Exhibition of 1855 under the various names of Neeradeemootoo, jungle almond, Maroty, Tamana, Maravetti, Neervetti, Shorty, and Soorty. It is in great repute as a medicine amongst native practitioners, and the kernel enters largely into their prescriptions.

Iguana oil, a medicinal oil.

Inga dulcis, Coorookoopilly. Seeds yield by expression a light-coloured oil, about the consistence of castor-oil.

Jatropha curcas, or Curcas purgans, angular-leaved physic-nut oil—Jangli erandi ka tel, HIND.; Cattamanak yennai, TAM.; Adavi amedapoo noona, TEL. This oil has of late been imported into Britain as a substitute for linseed oil; it is expressed from the fruit of a species of Jatropha, which abounds in all parts of the Madras Presidency. The colour is somewhat paler than the best linseed oil. It is now chiefly used in lamps.

Jatropha glauca, glaucous-leaved physic-nut—Addale or Authaulay yennai, TAM. This in appearance approaches castor-oil. It is fluid and light straw-coloured. It is now chiefly used medicinally as a counter-irritant, but, if procurable in sufficient quantity, seems likely to prove a useful oil.

Lepidium sativum, Country cress oil—Aliveri yennai, TAM. This oil is extracted from the seeds of the Chinese wall-cress. It must not be confounded with linseed oil, the Tamil name of which is the same as that of the present article.

Linum usitatissimum, Linseed oil—Ulsee ka tel, HIND.; Aliveri yennai, TAM.; Aveesee noona, TEL. Lint plant has been cultivated to a limited extent in India; the oil is inferior to that imported from England, from having been imperfectly freed from mucilage, which prevents its drying.

Macassar oil is used by the natives as a hair oil. It is supposed to be from Carthamus tinctorius seed.

Mesua ferrea, Naga-sumpunghee oil, is a valuable oil, procurable in Canara. It is used both as a lamp oil and as a healing application to sores.

Mimusops elengi. Mimusops is a medicinal oil, obtainable in tolerably large quantities in some parts of the country. It is known in England. That of M. Kaki, the Bakul oil, is used medicinally.

Mooroogana tallow, even at high temperatures, is perhaps the most solid oil with which we are yet acquainted. It is made in Canara. If procurable in large quantities, and at a moderate cost, it promises to be a valued material for the manufacture of candles, etc. It is used for medicinal purposes, and as a cure for cattle wounded by tigers, etc.

Moringa pterygosperma—Sahujna, HIND.; Morunghy yennai, TAM.; Morunga noona, TEL.; Ben or Moringa oil. Ben nut oil has long been considered valuable on account of the lengthened period which it may be kept without contracting rancidity. The tree is common in all parts of British India; the flowers, leaves, and fruit are eaten by the natives, and the rasped root is used by Europeans as a substitute for horse radish, to which circumstance it owes its common name of horse-radish tree. The oil is seldom made in India, nor does it now form an article of export.

Myristica moschata, Nutmeg butter—Japhul ka tel, HIND.; Jadipootri tylum, TAM.; Jaikkarra noona, TEL. It is obtained by expression from the nutmeg; it has an aromatic smell from the volatile oil it contains.

Neat's-foot oil is used as a softener of leather, etc.

Nigella sativa, Fennel-flower oil—Kulonjee, Siah danah, HIND.; Carun seeragum, TAM.; Nalla gillikarra, TEL. The black aromatic seeds of the Nigella sativa yield by expression a dark-coloured fragrant oil.

Olea dioica or Pootroojie oil, wild olive, obtained by expression from a handsome tree growing plentifully in Canara and Mysore.

Papaver somnifereum, Poppy oil—Khush-khush ka tel, HIND.; Casa-casa noona, TEL.; Casa-casa yennai, TAM. The poppy is largely cultivated throughout Malwa and the opium districts, where the drying oil obtained from the seed is more extensively used than any other, both in lamps and as food. By exposure to the rays of the sun in shallow vessels, this oil is rendered perfectly colourless. It is much prized by European artists.

Polanisia viscosa, viscid Cleome oil—Nahi-cadaghoo,

TAM. This warm and pungent little seed, when subjected to very powerful pressure, yields a moderate percentage of a light olive-green oil, which promises to be useful for purposes requiring a very liquid oil.

Poonga or Kurung oil, or Pongamia glabra — Kurunj ka tel, HIND. ; Kanoogoo noona, TEL. ; Poonga yennai, TAM. This oil, which in some parts of the Indies is used to a large extent in adulterating lamp-oil, is expressed from the seeds of a tree common in most parts of the Madras Presidency, where it is chiefly used as a lamp-oil by the poorer classes.

Ricinus communis, Castor-oil ; small-seeded variety— Barik erundi ka tel, HIND. ; Sitt-amanaku yennai, TAM. ; Chitt-amindialoo noona, TEL. Two varieties of the Ricinus communis, one being small and the other large seeded, are produced all over India. The small-seeded variety yields the better product, and is employed in preparing the oil exported for medicinal purposes. The fresh seeds, after having been sifted and cleaned from dust, stones, and all extraneous matters, and slightly crushed between two rollers, freed by hand from husks and coloured grains, are enclosed in clean gunny. They then receive a slight pressure in an oblong mould, which gives a uniform shape and density to the packets of seed. The 'bricks,' as they are technically called, are then placed alternately with plates of sheet iron, in the ordinary screw or hydraulic press. The oil thus procured is received in clean tin pans, and water in the proportion of a pint to a gallon of oil being added, the whole is boiled until the water has evaporated ; the mucilage will be found to have subsided and encrusted the hottom of the pan, whilst the albumen, solidified by the heat, forms a white layer between the oil and the water. Great care must be taken in removing the pan from the fire the instant the whole of the water has evaporated (which may be known by the bubbles having ccased), for if allowed to remain longer, the oil, which has hitherto been of the temperature of boiling water, or 212°, suddenly rises to that of oil, or nearly 600°, thereby heightening the colour and communicating an empyreumatic taste and odour. The oil is then filtered through blanket, flannel, or American drill, and put into cans for exportation. It is usually of a light straw-colour, sometimes approaching to a greenish tinge. The clean seeds yield from 47 to 50 per cent. of oil, worth in England from 4d. to 5d. per lb. This oil is chiefly used as a mild purgative. Soap of good quality may be made of it, hut the cost, and disagreeahle smell which it communicates, preclude its general use. The qualities of clearness and limpidity do not arise from any superiority of the seed, or care in extraction, but from repeated decolorization with animal charcoal, which, in the opinion of many cminent medical men, considerably detracts from its strength and efficacy. When manufactured in the ordinary native mill, this oil is sometimes used hy the richer classes in lamps. The sun's rays also arc used for decolorizing.

Castor-oil, extracted hot, differs from the preceding only in the mode of preparation. The seeds are boiled for two hours in water, dried for three days in the sun, freed from the shells, pounded, and then boiled in fresh water, until the whole of the oil has risen to the surface. This is the sort generally used in medicine by native practitioners ; it is straw-coloured, and free from any unpleasant taste or smell.

Ricinus communis, Castor-oil or lamp oil ; large-seeded variety — Chiragh-ka-tel, HIND. ; Vullak ennai, TAM. ; Ped-amidam, TEL. The oil which is obtained from the large-seeded variety of the Ricinus communis is sometimes drawn cold ; it is then of a straw-colour, scarcely distinguishablc in quality from the oil of the small-seeded variety. It is, however, more usually extracted by heat, and forms the common lamp-oil of the bazar of S. India. The seeds having been partially roasted over a charcoal fire, both to coagulate the alhumen and to liquefy thc oil, are then pounded and boiled in water until the oil rises to the surface. The roasting process, however, gives it a deeper red oolour and an empyreumatic odour.

Sahocottay oil, from Canara, is used for cutaneous diseases.

Santalum album, Sandal-seed oil—Chundana pusjhum yennai, TAM. The seeds of the sandal-wood tree yield by expression a thick and viscid oil, which is hurnt by the poorer classes in lamps. Sandal-wood oil, Chundana yennai, TAM., is made in Salem, Mysore, and Canara, from sandal-wood.

Sapindus emarginatus, Soap-nut oil—Reethay ka tel, HIND. ; Poovandi cottay, TAM. ; Poongum-kai yennai, TAM. ; Koocoodi noona, TEL. This semi-solid oil is used medicinally, and is extracted from the kernel of the soap-nut. Its cost prevents its general use.

Sarcostigma Kleinii, Poovana or Poovengah oil, made in Tinnevelly, Travancore, and Cottayam, has been long known as medicinal oil ; used largely for rheumatism on the western coast. It seems especially to merit further investigation.

Semecarpus anacardium, Marking-nut oil—Bhilawan ka tel, HIND. ; Shayng cottay yennai, TAM. ; Nellajidi noona, TEL. The acrid and vesicating oil which is contained between the two laminæ of the pericarp of the marking-nut is used as a preventive against the attaoks of white ants, and by native practitioners in rheumatic and leprous affections. By boiling the whole nut not divested of its pericarp, an oil is also obtained which acts as a blister. The preparation or collection either of the oil or acrid juice is liable to cause much irritation and inflammation of the hands, face, etc., of those engaged in the work.

Sesamum orientale, Gingelly oil or Sesamum oil (hlack-seeded variety)—Meetha Til ka tel, HIND. ; Nool ennai, TAM. ; Mundie noona, TEL. This oil is perhaps consumed to a greater extent than any other by the natives of India, and is, moreover, second only to cocoanut oil in its importance as an article of commerce. Two varieties of sesamum are cultivated for the sake of the oil :

The 1st sort of gingelly seed is the produce of the plant which is sown in the month of March, after the ricc crop, and is irrigated twice, once at sowing, and once afterwards. The seed, which is black, and is called 1st sort gingelly, from the fact of its yielding the largest percentage of oil, ripens in May, and in Rajamundry sells at the rate of Rs. 60 per candy of 500 lbs. The oil obtained from hoth varieties scllls there at the same price, viz. Rs. 2.14.6 to Rs. 3 per maund of 25 lbs., according to quality.

The 2d sort of gingelly is sown in June, and produces a red seed. The plant, although a little larger, resembles in most respects the former ; it has, however, a somewhat longer leaf, and the flower differs a shade or two in colour. A candy of 500 lhs. of this seed sells at Rs. 57.8. The price of the oil is the same as that of 1st sort gingelly. This seed about A.D. 1850 began to be largely exported to France, in consequence of which the price doubled.

1st sort gingelly oil. The great disparity of colour observed in the samples of this oil is merely to be attributed to the mode of preparation. The method sometimes adopted is that of throwing the fresh seeds, without any cleansing process, into the common mill, and expressing in the usual way. The oil thus becomes mixed with a large portion of the colouring matter of the epidermis of the seed, and is neither so pleasant to the eye, nor so agreeable to the taste, as that ohtained by first repeatedly washing the seeds in cold water, or by hoiling them for a short time, until the whole of the reddish-brown colouring matter is removed, and the seeds have become perfectly white. They are then dried in the sun, and the oil expressed as usual. This process yields 40 to 44 per cent. of a very pale straw-coloured, sweet-smelling oil, an excellent suhstitute for olive oil, for which indeed it is largely sold. In India it is chiefly used in cookery, in anointing the person, for making soap, and for burning in lamps. In Europe it is chiefly used for the manufacture of soap and for burning in tahle lamps, for which it is better suited than cocoanut oil, owing to the lower temperature at which the latter congeals.

2d sort gingelly oil, in commerce erroneously called rape (Khorasanee yelloo), is expressed from a variety of sesamum, and differs but little from the one above mentioned.

Sinapis species, mustard oil—Rai ka tel, HIND.; Kadaghoo yennai, TAM.; Avaloo noona, Sarsava noona, TEL. Five or six species of Sinapis are cultivated in all parts of India, for the sake of the oils they yield; those most frequently seen are S. glauca, S. toria, and S. racemosa. The seeds of the Sinapis alba yield by expression 36 per cent. of a bright-yellow, pleasant-tasted, edible oil, having a strong smell and slight taste of mustard. The seeds of Sinapis nigra yield only 28 per cent. of an oil in all respects similar to the above.

Sterculia fœtida, fetid sterculia oil—Coodira pasjunyennai, TAM. This semi-solid oil is obtained by expression from the seeds of a large forest tree.

Strychnos nux vomica, Nux vomica oil—Carunjooty, CAN.; Mooyettie cottay yennai, TAM. An empyreumatic oil prepared from the fresh nut, is used medicinally by native practitioners.

Terminalia bellerica, Belleric myrobalan oil—Tanikai yennai, TAM. A medicinal oil obtainable in small quantities from the kernel of the Belleric myrobalan; the drupe is used as a tanning material.

Terminalia catappa, *Willd.*, Indian almond oil, the product of this species of Terminalia.

Terminalia chebula, Chebulic myrobalan oil. A medicinal oil procurable in very small quantities from the kernel.

Thespesia populnea, Portia nut oil—Paras-pipul, HIND.; Poorasam yennai, TAM. This deep, red-coloured, and somewhat thick oil, is obtained from the seeds of this tree, which grows in great abundance in the Peninsula. It is extensively planted as an avenue tree, for which its quick growth and the beauty of its flowers render it a favourite. The wood is used for boat-building and cabinet-work.

Thevetia neriifolia, the 'exile' oil. The kernels of the seeds of this common shrub yield by expression a clear bright yellow-coloured oil.

Vateria Indica, piney tallow or doopada oil—Piney yennai, TAM. This valuable tree, besides its oil, yields a resin nearly equal to copal. It grows plentifully in the jungles of the western coast. The oil is perfectly solid, even in hot climates, and is prepared by cleaning the seeds, then roasting and grinding them into a mass. To 5 seers of seed add 12 seers of water, and boil until the oil rises to the surface. Remove the oil, stir the contents of the vessel, and allow it to stand until the following day, when more oil will be observed on the surface, which may be collected, and the process repeated. The oil is principally used for lamps, but is very suitable for soaps and candle-making.

Wrightia antidysenterica, rosebay oil—Vaipallay yennai, TAM. A thick, scarlet-coloured, medicinal oil, partaking doubtless of the properties of the seed.

Oil manufacture, in British India, by means of the Kolhoo or oil press, is a wasteful process, in so far as there is no press or other contrivance employed to squeeze out residue of oil from the cake; and illustrative of the imperfect manner in which the oil is separated from the seeds, it may be mentioned that while a common pressman only obtained some 6¼ per cent., Boussingault, in his laboratory, from the same seeds actually procured 41 per cent. When the oil-cakes are meant for feeding stock, such loss is of little consequence, inasmuch as the oil serves a very good purpose; but when the cake is only intended to be used as a manure, it is a great loss, inasmuch as the oil is of little or no use in adding any food for crops to the soil. In Europe, to crack the shells of the hard seeds of lint and rape, they are passed between cast-iron rollers, which can be set at varying distances apart according to the size and hardness of the seeds. Rollers do their work rapidly, but they require great power to work them. In some places vertical mill-stones or runners are used, while in others the hard seeds are passed between the rollers on to the runners. When the seed is sufficiently bruised by either or both of these means, it is collected into hair bags and placed in a wedge-press. In olive oil mills a screw press may be used, but the hardness and smoothness of the grains of lint and rape, and the cavities formed by the broken shell, which retain the oil, require the exertion of a stronger force. The hair bags containing the crushed seeds are placed between wedges of wood contained within a strong framing. The wedges are then driven down by a heavy ram or pestle worked by machinery until the pestle rebounds from them three times, when they are judged to be sufficiently tight. The oil thus obtained is of the best quality, and is kept distinct from that obtained by the after-process. The seeds come out of the bags in the form of flat cakes; these are broken up, and pounded in mortars with heavy stampers, which reduce the parenchyma of the seed to a fine meal, so that the oil can escape more freely when subjected to a second compression, which is now aided by heat. The pounded seed or meal is heated in a pan, to the temperature of melting beeswax, and is kept in agitation by a spatula worked by machinery. The meal is again put into hair bags and compressed, and the resulting oil is considered to be the best of the second quality. Another compression produces oil of the ordinary second quality. During the heating of the meal a little water is sometimes added, but in Holland this practice is considered to be injurious. The cakes are still fat and soft, and are sold as food for cattle; but the Dutch break them down and stamp them again. The result is an impalpable paste, which is hard with a very little water, and kept for some time at the temperature of boiling water, with diligent stirring. It is then subjected to the greatest pressure that has yet been applied, and the result is an oil of the lowest quality. The cake is dry and hard like a board, and is used for manure. Some of the small millers in Holland purchase oil-cakes from France and Flanders for the purpose of preparing this inferior oil.

There are, in India, two distinct forms of the native oil mill. One of these is used alternately as an oil or sugar mill; the other, of which there are some modifications, is a mortar with revolving pestle, and is of wood or stone—generally granite. Two oxen are harnessed to the gearing, which depends from the upper end of the pestle; a man sits on the top of the mortar, and throws in the seeds that may have got displaced. The mill grinds twice a day, a fresh man and team being employed on each occasion. When sesamum oil is to be made, about seventy seers measure, or two and a half bushels, of seeds are thrown in; to this ten seers, or two quarts and three-quarters of water, are gradually added; this, on the continuance of the grinding, which lasts in all six hours, unites with the fibrous portion of the seed, and forms a cake, which, when removed, leaves the oil clean and pure at the bottom of the mortar. From this it is taken out by a cocoanut-shell cup, on the pestle being withdrawn. Many seed oils are made almost entirely in the above way.

The oil mills at Bombay, Surat, Cambay, Kurachee, etc., have a very strong woodeu frame round the mouth of the mortar; on this the mau who keeps the seeds in order sits. In Sind a camel is employed to drive the mill instead of bullocks. Castor-oil seed is thrown into the mill like other seeds, as already described; when removed, the oil requires to be boiled for an hour, and then strained through a cloth, to free it of the fragments of the seed.

Castor-oil, made from either the small or large varieties of the Ricinus, is an exception. This is first parched in pots containing something more than a seer each. It is then beaten in a mortar and formed iuto balls; of these, from four to sixteen seers are put in an earthenware pot, and boiled with an equal quantity of water for the space of five hours, frequent care being taken to stir the mixture to prevent it from burning. The oil now floats on the surface, aud is skimmed off pure.

The cocoanut palm nut is first stripped of its husk, which furnishes the substance from which coir and its rope is made, the shell is broken, and the copra, or fatty lining enclosing the milk, is taken out. Three maunds, or ninety pounds of copra, are thrown into the mill with about three gallons (eleven cutcha seers) of water, and from this is produced three maunds, or seven and three-quarter gallons of oil. Copra, in its unprepared state, is sold slightly dried in the markets; it is burned in iron cribs or grates on the tops of poles, as torches in processions, and as a means of illumination for work performed in the opeu air at night. In 1878–79, 325,408 cwt. of oil-cake, value Rs. 9,95,648, was exported from India. In the year 1882-83, the export of oil-seeds from India was 643,184 tons, value Rs. 7,07,12,013; and oils to the value of Rs. 41,62,766. Mr. Edward Loarer's processes for making his vegetable wax, by solidifying castor-oil by sulphuric acid, would admit of that oil being exported in a convenient form. By one process the solidifying cost Rs. 4¼, and by a cheaper process only R. 1–11–3 per ton, and the acid is got rid of by remelting.—*Balfour in Madras Museum Records; Do., Commercial Products; Eng. Cyc.; Simmonds; Roxb.; Voigt; O'Sh.; Cat. Exhib.*, 1851, 1862; *Powell; Low's Sarawak; Indian Field; Madras Ex. Jur. Rep. by Drs. Cleghorn, Scott, and Hunter, and Lt. H. P. Hawkes; Smith's Chin. Mat. Med.; Mr. E. Loarer on Vegetable Wax.*

OIL PAPER, the Yu-chi of the Chinese, is made all over China, by brushing over paper with castor-oil or some other drying oil. It is a very useful waterproof paper, answers all the purposes of oiled silk, and is so cheap that it may be freely used and frequently changed,—no small matter in the treatment of wounds in a warm climate.

OIMA, in Persia, au overcoat used chiefly when on horseback. It resembles a lady's riding habit, fitting tight to the body from the neck to the waist, where it is gathered into plaits or folds, and swells out above the girdle, falling in ample folds to the feet. It is generally made of broad-cloth.

OITR, a lake in Japan, formed in one night, B.C. 280, by the subsiding of the ground.—*Buist.*

OJHA, a snake-catcher. Entrails of birds used by the Munda, the Ho, and Bhumij, in divination. —*W.*

OJHYAL, a Gond tribe, wandering bards and fowlers.

OKELIS, an ancient ruined city, according to Strabo and Pliny, the seaport of the Catabeni or Gebantæ, and long the centre of commerce between Europe and the east. The ruins are situated inside the Straits of Bab-ul-Mandab, about a mile inland, at a place called by the natives Dakua.

OKI-DON-TAKO. The Japanese have numerous festivals and holidays, held in commemoration of ancestors, deities, warriors, and sages, or from some untraced ancient custom. That at the winter solstice, the Oki-don-tako, or great holiday, lasts fourteen days. It is a period of great rejoicing, all mercantile accounts are, if possible, settled, and much friendly intercourse takes place. The Gokats Seku festival at the summer solstice, about the middle of June, is in commemoration of Gongen Sama, a great general, to whom the preseut dyuasty owes its origin, and the Japanese date their births from it. Banners with koi or carp are hoisted aloft with scarlet streamers.

OKKALA or Okkalega, in Mysore and Coorg, and wherever Canarese is spoken, a cultivator, a farmer or tenant-farmer; sometimes written Wokkalu. In Coorg there were two classes of slaves,—the Wokkalu Jamad-alu, predial slaves attached to the individuals owning them, and sold or mortgaged at pleasure; and a second, the Bhumi Jamad-alu, attached to the revenue lands, and only transferable with the lands. The Okkala of the Canarese people, the Valala of the Tamil race, the Kama, Reddi, Naek or Naidu of the Teling, the Kunbi and Kurmi of Maharashtra, the Khasa and Kaibartta of Bengal, and the Jat of N.W. India, are the chief cultivating races.

OLAX SCANDENS. *Roxb.*

Koteke bapana mushte, TEL. | Turka-vepa, . . TEL.
Marike malle, . . . ,, |

A shrub of the Coromandel forests. Olax scandens and O. Zeylanica do not extend, the former beyond Rajmahal, and the latter the Peninsula. O. nana, allied in structure to them, was found by Dr. Hamilton at Gorakhpur, and in large quantities on the banks of the Tons and Jumna, within the mountains, and beyond 31° of northern latitude.—*Roxb.* i. p. 163; *Royle's Ill.*

OLAY, also Ola. TAM.

Puttay, Tar-ka-patta, HIND. | Neriku, Tat-aku, TAM. TEL.

Palm-leaves prepared for writing on. These are made smooth by being damped and then repeatedly drawn between two blocks of wood. The dried raw leaves are called Karak ola, and the finest prepared leaves, Pusk ola; but Ola or Olay is the Tamil vernacular name by which the people designate the leaves, when prepared for being written upon. These are prepared from the leaves of the palmyra (Borassus flabelliformis), the cocoanut tree, and the Talipot palm (Corypha umbraculifera). The oldest Hindu author who alludes to writing on the Olay is Panini, a grammarian who resided at Arittuwarum, near the source of the Gauges. Pliny says expressly (lib. xiii. cap. 2) that the most ancient way of writing was upon leaves of palms, from which it is believed that the leaf (folium) of a book came to be synonymous with that of a plaut. The Olay are written upon with a style, which is pointed with steel, and its handle sometimes highly ornamented. During the operation of writing, the leaf is supported by the left hand, and the letters are cut or scratched upon its

surface with the style, which is kept always in the same position, and the leaf is moved to the left hand side by means of the thumb. To render the characters more legible, the eugraved lines are occasionally filled by smearing the leaves with fresh cow-dung, which is tinged black by rubbing the lines over with cocoanut oil, or a mixture of oil and charcoal powder; and for the same object, in Ceylon, an oil called Doomale is sometimes rubbed on the letters with a burned rag. All the sacred books of the Hindus, Burmese, Singhalese, etc., are still made of these Olay, some of them being highly ornamented. All accounts in the village revenue department, all grants of land, leases, and all the accounts in shops, are still kept on these leaves, and they are likewise sent as letters. Palm-leaf books are never much beyond two feet in length and two inches in breadth; they are said to last from one to four or five hundred years. In the Peninsula of India, the Olay are prepared from the leaves of the palmyra palm; the panam olay, which are taken while tender, and the flat portions being cut into strips, and freed from the ribs and woody tendous, are boiled and afterwards dried, first in the shade and afterwards in the sun. In Ceylon, Olay are also made from the dried strips of the young leaves of the Talipot palm tree. The palmyra palm ola are called by the Singhalese Karak ola, and applied to the more ordinary purposes. But the still finer description, called Pusk olay, is prepared in the temples by the Samanero priests and novices, who, after damping the Karak ola, draw it tightly over the sharp edge of a board, so as to remove all inequalities, and render it polished and smooth.—*Seeman.*

OLD MAN of the Mountain, the name by which the Crusaders designated a follower of the shiah sectarian, Hasan-us-Sabah. It was a translation of Shaikh-ul-Jabal. Al-Jabal, literally the mountain, was the old Asiatic name for the whole of the very mountainous quarter of Irak-i-Ajam, which lies between Hamadan and Kirmanshah. It stretches far to the S.W. of the Caspian range, and comprises Mount Elwund, the Orontes of the ancients, this branch also bearing the appellation Elburz. A colony of the fanatics, under the leading of one of Hasan-us-Sabah's most odious representatives, settled themselves amongst the heights of Lebanon, and have been variously called Ismailans, Bathenians, and Assassins, and during the crusades, he or one of his successors was known as the Old Man of the Mountain.

OLEACEÆ. *Lindley.* The olive tribe of plants, comprising 12 Indian genera, viz. Olea, Linociera, Ligustrum, Syringa, Pachyderma, Myxopyrum, Chondrospermum, Ornus, Jasminum, Nyctanthes, Osmanthus, Schrebera. Oleaceæ occur in Nepal, the Himalaya and the Khassya mountains, the two Peninsulas, Ceylon, Java, and the Moluccas. In most oil plants the oil is yielded by the seed, but in this tribe the oil is contained in the pericarp.

The olive tree of Europe grows easily in India. O. glandulifera, *Wall.*, of the Central Province of Ceylon, grows at from 2000 to 4000 feet elevation, and on the mountains near Dehra Doon and Kamaon. Olive-wood is imported from the Mediterranean countries into Britain. It is veined with dark grey, and resembles boxwood in texture, but is softer. The knotted and curled roots are made into embossed boxes. This is done by means of pressure in engraved moulds of metal. Dr. Wight describes Olea linocieroides, polygama, and robusta. The genus Olea seems opposed to great extremes of heat or cold, as Dr. Royle had only seen species in sheltered valleys and at moderate elevations in the Himalaya,—Olea glandulifera at Suhansudhara and the valley leading to Kuerkuli, as well as near Jurripaui, and Olea ferruginea in the valleys of the Jumna and Sutlej. Olea acuminata extends from Kamaon to Sylhet and Penaug. Olea robusta is Roxburgh's Phillyræa robusta. Dr. Thomson says that near the Cheuab, passing some farmhouses surrounded by fields, he entered a scattered wood of wild olive trees (Olea cuspidata) mixed with zizyphus and wild pomegranate. On the summit of a pass in the Outer Himalayas, which was not more than 6000 feet, he found a beautiful geutiau (G. kurru of Royle) and a yellow spinous astragalus.—*Thomson; Cleg.; Voigt; Thw.; Royle; Gamble.*

OLEA CUSPIDATA. *Thomson.* Olive tree. Kahu, Hind. Grows in the valley of Parbati; varies much in the shape of its leaves, and Dr. Cleghorn says, appears to be O. Europea.

OLEA DIOICA. *Roxb.* i. 106. Indian olive.

Burra nuge, . . . Can. | Atta-jam . . of Sylhet.
Karambu, Parjamb, Mahr. | Koli maram, . . Tam.

This pretty large tree grows in Chittagong, Sylhet, and in Coimbatore, and is common in the forests of Canara and Sunda, on the ghats, but seldom below or inland above. The wood is white, strong, compact, and useful, and might be creosoted with effect. The timber of this tree is

reckoned excellent, and is put to many uses by the inhabitants of Sylhet.—*Wight; Gibson; Voigt.*

This tree is a native of the S. of Europe, of Persia, and of many places in the Panjab and valleys of its rivers. It is abundant in Trans-Indus from the plain's level, and in the Salt Range, common in the W. part of the Siwalik tract, and over a considerable part of Hazara (where it is remarkably fine below Tret), and is found on the Chenab, Ravi, and Sutlej, reaching up to 6000 feet on that river. It is found in the hills of the E. Panjab, but is more common in the Salt Range, Hazara, and the valley of the Indus, from 3000 to 5000 feet, along with Quercus ilex. It is also found in the Jumna basin to the eastward.

Many varieties of this plant are known in the S. of Europe, two of which have been long distinguished, the wild and the cultivated. The former is an evergreen shrub or low tree, with spiny branches and round twigs; the latter is a taller tree, without spines, and with four-angled twigs. The wild olive is indigenous to Syria, Greece, and Africa, on the lower slopes of Mount Atlas. The cultivated species grows spontaneously in Syria, is easily reared in Spain, Italy, the S. of France, and the Ionian Islands. Wherever it has been tried on the sea-coasts of Australia, the success has been complete. The olive tree is also grown in Hong-Kong, along the coast of Morocco, but particularly to the south; the trees are planted in rows. They take care to water them, the better to preserve the fruit.

Olea Europea has 21 Spanish varieties and 13 French varieties. Its fruit yields olive oil. It is obtained by pressure, but the kernels must not be crushed, as then a disagreeable taste is imparted. European olive trees were imported into the Panjab, in order to test the effect of grafting on the Panjab variety. The olive is of slow growth; trees 80 years of age measure only from 27 to 30 inches in circumference at the lower part of their trunks. The produce in fruit and oil is regulated by the age of the trees, which are frequently little fortunes to their owners. One at Villefranche produced on an average, in good seasons, from 200 to 230 lbs. of oil. The wood is hard, heavy, compact, strong, and close-grained, and is the best for cogs of wheels. It is also used for agricultural implements, cotton-wheels, walking-sticks, in turnery, and for combs. The crooked timbers are largely used for the knees of boats on the Indus near Attock. On the Chenab, at one place Dr. J. L. Stewart found the twigs used for the short suspending rope of the jhula (see Parotia), for which purpose, however, the people said it did not answer well. Elphinstone says that the Sherwani tribe eat the fruit, both fresh and dry; but there is little fleshy pericarp to eat, even were it pleasant to the taste, which it is not.—*Powell; Stewart; Cleghorn; Royle, Ill.; Mat. Medica.*

OLEA FRAGRANS, the Lanhoa or Kwei hwa of the Chinese, is a yellow-blossomed variety, largely cultivated in China, and is one of their most favourite flowers. It forms a good-sized bush, about as large as a lilac, and flowers in the autumn. There are three or four varieties, the main difference between them consisting in the colour of their blossoms. Those kinds which produce brownish-yellow flowers are the finest, and are most highly esteemed by the natives. The bushes are seen growing near all the villages in the N.E. provinces of the empire, and are plentiful in gardens and nurseries. When they are in flower in the autumnal months, the air in their vicinity is literally loaded with the most delicious perfume. One tree is enough to scent a whole garden. The flowers are a source of great profit to the Chinese cottages, as well as to the nurserymen, who produce them in large quantities for the market, to meet the great demand for them in all the large towns. Ladies are fond of wearing wreaths of them in their hair; they are also dried and placed in ornamental jars, in the same way as rose-leaves are used in Europe; and they are used largely for mixing with the finer kind of tea, in order to give it an agreeable perfume.—*Royle; Roxb.; Williams' Middle Kingdom*, p. 288; *Fortune's Tea Districts.*

OLEA GARDNERI. *Thw.* A tree of the Central Province of Ceylon, growing at an elevation of 5000 to 8000 feet.—*Thw.*

OLEA GLANDULIFERA. *Wall.* A very large tree of the Central Province of Ceylon, growing at an elevation of 2000 to 4000 feet. It is abundant on the northern slopes of the Neilgherries (Ouchterlony's valley), elevation 4500 feet, also on the Animallays, and it is found in Nepal. It is by far the largest of the genus; but Dr. Wight found it in woods about the Avalanchi as a small tree; this was probably owing to the elevation (6000 feet).—*Beddome; Thw. En. Pl. Zeyl.* p. 188.

OLEANDER, Nerium oleander, is called also the rose-bay and sponge laurel. It is a native of the warm parts of Europe, of Asia Minor, and the Lower Himalayas; common in gardens all over India. The whole plant is impregnated with a dangerous principle, which has not as yet been insulated. Its activity and volatility are very great; it is even a popular belief that the vapour of the flowers in a close apartment will prove poisonous. Externally the leaves and bark have been used (and sometimes even internally) as a remedy in herpes and itch. The rasped wood is employed as ratsbane. The wood itself is used by some eastern nations as the best material for gunpowder charcoal.—*O'Sh.* p. 445.

OLEARIUS was secretary to the Duke of Holstein's embassy to Russia and Persia in 1633–39.

OLEASTER PLUM, fruit of the Elæagnus conferta, which abounds in parts of the Tenasserim jungles. Its sour red plum makes very good tarts and jellies.—*Mason.*

OLEUM NIGRUM. LAT. Malkungunee, TAM. This oil is a stimulant diaphoretie used in Beri-beri. It is made by putting the seeds of Celastrus paniculata, with benzoin, cloves, nutmegs, and mace, into a perforated earthen pot, and then obtaining, by a kind of distillatio per deseensum, into another pot below, a black empyreumatie oil.—*Powell.*

OLGANA, a low caste tribe of Gujerat.

OLI. TEL. A marriage portion.

This was the frankincense used by the ancients in their religious ceremonies. Moses speaks of it in Exodus xxx. 34. There are now three kinds known in commerce,—the African, Arabian, and the E. Indian,—all of which seem to be obtained from species of Boswellia. B. thurifera grows in N. and Central India, and the existence of this kind, as well as of the Arabian, was known to Dioscorides. In commerce, the Arabian is known as male or tear olibanum, to distinguish it from the E. Indian or stalactitic olibanum. Mr. Vaughan mentions that, from Bandar-Mait, the Luban maiti is imported into the Aden market for sale; from Bandar-Angure, the Luban nankar, or angure; and from the ports of Ras Roorree, Khor Bandar, Alholu, Murya, and Bandar Khasooin in the country of the Wursangali and Mijerthen Somali, about Cape Guardafui. The drug is collected in March, April, and May, and chiefly finds its way to Bombay through the entrepots of Maeula and Shehr.

African olibanum is also imported into Vienna and Marseilles from Suez, and is obtained from Arabia and the E. coast of Africa. It is mentioned by Dr. Pereira as occurring in smaller tears than the Indian variety, yellowish or reddish, and intermixed with crystals of carbonate of lime. One kind of African olibanum is no doubt produced on the hills of the Somali coast westward from Cape Guardafui, and carried to the Arabian coast chiefly by native boats from Macula.

The Arabian olibanum tree grows on the side of the mountains in the Nejd or highlands, and near the Sahila or sea-coast, also between lat. 17° 30′ N. and long. 55° 47′ E., where the desert ends and the wooded mountain region begins, and is exported from all the ports in the coast line S.W. to the town of Damkote, in the Alkammar bay, in long. 52° 47′ E. Good olibanum, as met with in Bombay, is in semitransparent tears, of a light yellow colour, sometimes inclining to white; brittle and adhesive when warm; when burnt the odour is very agreeable; its taste is bitterish, and somewhat pungent and aromatic. Olibanum was used in nearly all the religious ceremonies of antiquity, and now is chiefly employed in fumigations, and in the ceremonies of the Greek and Catholic Churches. It is imported into Bombay from the Persian Gulf. The superior or garbled qualities are re-exported to England and France, and the inferior or refuse kinds to China.

OLIOS TAPROBANUS, a Ceylon spider, very common and conspicuous from the fiery hue of the under surface.—*Tennant's Ceylon.*

OLIVE.

Zaitun, Ar., Hind., Pers.	Bua, . . . Maleal.
Oliv, . . . Dan., Sw.	Azeitonus, . . . Port.
Olijf, ... Dut.	Maslitshina, ... Rus.
Oliven, ... Ger.	Aceitunas, ... Sp.
Uliva, ... It.	Keytin, . . . Turk.
Zet, ... Malay.	

The olive tree is noticed under Olea Europea. The fruit is oval, rounded at both ends, about one inch long, smooth, shining green; its sarcocarp fleshy, succulent. Olives, when fresh, have a harsh and extremely bitter taste; and they are edible only after having been steeped for several days in a ley of wood ashes, and then pickled in a strong solution of muriate of soda. They are chiefly valued on account of the oil obtained from them, but are also eaten as an article of dessert. The kernels or stones of the fruit are elaborately carved in China, and set in gold as brooches and bracelets.—*O'Sh.; Faulkner.* See Olea.

OLIVE OIL.

Huile de olives, . . Fr.	Minyak zet, . . Malay.
Baumol, ... Ger.	Oleo das azeitonas, Port.
Zaitun ka tel, . . Hind.	Aceite de aceitunas, . Sp.
Olio d'uliva, . . . It.	

Olive oil, from the fruit of the Olea Europea, is largely imported into Britain from Italy, Spain, France, Turkey, the Ionian Islands, Chili, etc. 23,202 tuns were imported in 1870. The fruit is a drupe about the size and colour of a damson. Its fleshy pericarp yields by expression the olive oil of commerce. Spanish or Castile soap is made by mixing olive oil and soda, while soft soap is made by mixing the oil with potash. It is used largely as an aliment; also extensively for soaps, cerates, liniments, plasters. Five gallons of olive, rape-seed, or other oils are used in the preparation of every pack of wool for cloth (independent of the quantity used for soap applicable to the woollen manufactures). In 1882, Great Britain imported 23,190 tuns, value £937,601. Olive oil may be taken as the type of the fatty or fixed, called also expressed, oils. It is of a pale-yellow or of a light yellowish-green colour, without smell when fresh, having a bland, somewhat sweetish, fatty taste. It is very limpid. Olive oil adulterated with other oils is distinguished by not congealing at the same temperature as olive oil, also by retaining air when shaken up more readily than pure olive oil. The oil of the Sesamum orientale, of the arachis, and of the poppy are perfect substitutes for the olive oil for medicinal and pharmaceutical uses.

OLLI. Tam. Bars of steely iron, drawn out from the vuttom obtained in clay crucibles.

OLLUCK. Tam. A Madras dry measure, the eighth part of a puddy, and the twentieth part of a gallon = 11·719 cubic inches.—*Simmonds' Dict.*

O'M! A mystic monosyllable or ejaculation by Hindus, which is supposed to be uttered in place of naming the Supreme Being. Hindus, from its awful and sacred meaning, hesitate to pronounce his name aloud, and place one of their hands before their mouths and say O'm! A Brahman beginning or ending a lecture of the Veda (or the recital of any holy strain), must always pronounce to himself the syllable O'm. From various passages in the Asiatic Researches, Mr. Colebrooke and other authorities think it may be collected that A.O.M. or A.U.M. is interpreted to signify Brahm, the Supreme Being, under his three great attributes of the creator, the preserver, and the destroyer, the letters standing in succession for the attributes as they are described. O'm is also supposed to express the words of the Gayatri, a passage in the Veda which is imparted to the youthful Brahman at his initiation into the mysteries of his faith. Its words are, — O'm! Bhūrbhuvā ssuvâhā, O'm! Tatsa vit'hru varēnnyâm, B'hargo devâssyâ dhimahi dhiyo yonaha pracho dayath: We meditate on the desirable light of the divine Savitri (the sun), who influences our holy rites. See Gayatri. O'm (A.U.M.) is also imagined to be a monogram of the triad, the initials of Aditi, Varuna, and Mitra.

OMAN is the S.E. region of Arabia, from Ras-ul-Hud on the S. to Zobara or Shargah island on the N.E. It is divided into two principalities,—

Rastag, with Muscat as its capital, and Seer or Julfar, with Ras-ul-Khyma as its chief town. It has from time immemorial been held by two Arab tribes,—the Beni Yemen or Beni Hinavi and the Beni Nasir or Beni Ghafri. Oman was originally peopled from Persia, but the Arab tribe ul-Yesdee, from Nejd, early conquered it. They accepted Islam, and ultimately adopted the Sunni form of religion. The Joasmi are descendants of the Nejd Arabs. Its valleys are occupied by different tribes, each with its own shaikh. The Wahabee Arabs conquered Seer, including Ras-ul-Khyma. The Hinavi and Ghafri are the two Arab tribes who have been most prominent in Oman. The Yarabi and Syudi, to the last of which the family of the present sultans belong, are both branches of the Hinavi. The Joasmi are descended from the Ghafri. Oman, it is said, was colonized four centuries B.C. by the Hinavi tribe, led by Malik bin Fakham, of the province of Nejd. The Ghafri entered Oman after the Hinavi were settled, but the Hinavi continued dominant almost continuously until nearly the close of the 18th century. The tribes and their fighting men are, east and south of Muscat,—

Hurth,	2,000	Jeneba,	10,000
Massakeeah,	4,000	Beni Jaabe, Indahi, Sidbi, and Reh-bewi,	10,000
Beni Boo Hasan,	18,000		
Hajrieen,	1,000	Huddabei,	500
Habbea,	700	Jenadie,	2,000
Beni Rawahiyah,	500	Beni Aamr,	1,200
Beni Riam,	3,000 to 3,500	Jeal-i-Saad,	15,000
Beni Wahibah,	1,200	Wadi Maaweel tribes,	2,000
Hishm,	700	Zahnah tribes,	12,000
Beni Boo Ali,	3,000 to 3,500		

The *Banu Noaimi* tribe could furnish 20,000 effective men; they are mostly shepherds, and live S.W. of Boraimi, with a small number at Ayman, near Shargah.

The *Beni Katab*, within two days of Boraimi, 8000.

Beni Kaab is a branch of the Noaimi, 4000; they dwell in Dhahirah near Obra, one day to the eastward of it.

Durua, 20,000, in Hajar, near Jabal-ul-Akhdar, half a day to the north of this place.

Ali Wahibah, 30,000, 12 miles S. of Rastag.

Beni Mohair, 1000, one day inland, south of Shargah.

Matarish, 500 men, nine miles south of Boo Haile, inland.

OMANDER. SINGH. A variety of Coromandel or Calamander wood of Ceylon.

OMAR, a khalif of the Arab Muhammadans who succeeded Abubakr. On the death of Mahomed, Abubakr was elected as his successor, and after a reign of two years was succeeded by Omar, who was assassinated in the twelfth year of his reign. His khalifat was a period of great extension of Muhammadanism. He sent an expedition into Sind, which was partly overrun. He built Bassora in the 15th year of the Hijira, to secure the trade of Sind, Gujerat, India, Persia, and Arabia. His general, Saad (or, as some say, Abdullah, son of Omar), in A.D. 650 defeated Yezdejird. Yezdejird was then on his return from Khorasan, and for the last time put himself at the head of his subjects at Kadesia, was defeated, and an end put to the Persian empire. He imposed the khiraj on Syria. He was assassinated in a mosque at Jerusalem, and his tomb is still shown there. Omar was succeeded by Othman, and then, in A.D. 656, Ali became khalif. With Ali's rule severe political convulsions ensued. The earliest arose from the intrigues of Ayesha, and after such were settled, the governor of Syria, Moawiyah ibn Abi Sofian, threw off his allegiance to Ali, and had himself proclaimed khalif of the western provinces. An appeal to arms resulted in the defeat of Ali, after a desultory war of 102 days, and Ali then retired to Kuffa in Chaldæa, on the banks of the Euphrates.

OMAR KHAYYAM, a native of Naishapur, in Khorasan, a famous poet, author of Rubaiyat or stanzas. He is said to have been a tent-maker, and Khayyam was his takhallus or literary title.

OMEN. Sagun, Shugun, HIND. Omens are carefully watched for by Hindus. The Tamil people are great slaves to them. Every book hawker carries about works on divination. If a lizard chirp when any undertaking is proposed, this is considered a sufficient reason for its abandonment. They have, however, a proverb, 'The lizard which was the oracle of the whole village, has fallen into the broth.' The following are favourable omens when accidentally met with, viz. fish, curdled milk, full water-pots, the saras (Grus antigone), a pair of Brahmany ducks (Casarca rutila), doves, etc., and the jay (Garrulus), at the beginning of the rent-collecting season. Unlucky omens are a one-eyed person, an empty water-pot, one of the Kahar race without a load, foxes, hares, crows, jackal to his left hand, or a deer, a cow, or Brahman to his right hand, a dead body. Throbbing of the right eye is an unlucky omen in a female, a lucky one in men.

OMICHUND, a Sikh merchant who was conspicuous in the revolution which was crowned by the battle of Plassey.

OMKARA, name of one of the twelve great lingas.—*D.*

O'M MANE PADMA HAUN is a prayer used by the Mongol, the Tartar, and the Tibetan Buddhists. It is commonly translated by the words,—Oh! the jewel in the lotus; but the literal translation is given in the words,—

O'm,	Mane,	Padma,	Haun,
God.	jewel.	lotus.	that is so.

This invocation is quite unknown to the Buddhists of Ceylon or the Eastern Peninsula, and forms the peculiar feature of Tibetan Buddhism. M. Klaproth translates from Mongolian into French a legend that the savage Empire of Snow (Tibet) had for ages been lying beyond the pale of law and religion,—rempli d'une foule d'etres malfaisans,—when, by an intellectual creative act of the great Sakya Muni (Buddha), a certain divinity named Padma-pani was called into being from the flower of the lotus, who successfully undertook the work of conversion. The notion is, therefore, that the mystic words are commemorative of this great act of Sakya Muni, and of the incarnation of the divine Tibetan apostle. It is an invocation of Sakya, who is usually represented holding a lotus flower with a jewel in it. At Tumlong, in an oratory, the lotus, the mane, and the chirki (or wheel) with three rays, emblematic of the Buddhist Trinity, are everywhere introduced. 'O'm mane padma haun' in gilt letters adorn the projecting end of every beam; and the Chinese cloud messenger, or winged dragon, floats in azure and gold along the capitals and beams, amongst scrolls and groups of flowers. At one end is a sitting figure of Gorakhnath in Lama robes, surrounded

by a glory, with mitre and beads. A mythical animal with a dog's head and blood-red spot over the forehead is not uncommon in this chapel, and is also seen in the Sikkim temples and throughout Tibet. Ermann, in his Siberian Travels, mentions it as occurring in the Khampa Lama's temple at Mainaochin; he conjectures it to have been the Cyclops of the Greeks, which, according to the Homeric myth, had a mark on the forehead, instead of an eye. Captain Knight, in the monastery of Hemis, found about a hundred praying wheels,—little wooden drums covered with leather, fitting into niches in the wall, and moved at the slightest push by a spindle running through the centre; and as the scrolls inside them are covered with the mystic sentence, 'O'm mane padma haun,' and contain nothing else, it was calculated that the invocation must occur not less than 1,700,000 times. These sacred words are not only found in the praying wheels, but long mounds of votive stones, similarly inscribed, are scattered far and wide over the face of the country. This habit of promulgating the doctrines of their faith by inscriptions patent on the face of religious edifices, stones, etc., is peculiar to the Buddhists of Tibet. Their constant repetition is also, as M. Huc has explained, extremely meritorious, and capable of securing immediate absorption after death into the universal soul of Buddha.

OMMASTREPHES, a genus of cuttle-fishes belonging to the family Teuthidæ. The cuttle-fishes of this genus closely resemble those belonging to Loligo; they may generally be distinguished by the short rhomboidal termination of the body formed by the fins, combined with the hinder extremity.

OM-NAMO-NARAYANA, the principal mantra of the Vaishnava Hindu sect.

OMOPHAGIA (*ωμοφαγια*), or eating raw flesh with the blood, was a part of the secret mysteries of Osiris, in commemoration of the happy change in the condition of mankind from savage to civilised life, and intended to deter by disgust the return thereto.

ONAGER, the wild ass of Cutch.

Equus hemionus of India. | Asinus Indicus, *Sclater.*

Ghor-khar, Koulan, HIND. | Ghour, ... PERS.

The Onager is supposed by authors to be distinct from the kiang or wild ass of Tibet, the Equus hemionus of Pallas. It is of a pale isabella or sandy colour above, frequently a dark short cross stripe on the shoulders, sometimes two, and limbs barred more or less distinctly. It is found sparingly in Cutch, Gujerat, Jeysulmir, and Bikanir, not south of Deesa nor east of lat. 75° E., long. 75° E. It also occurs in Sind and west of the Indus, in Baluchistan, Persia, and Turkestan, also in the Pat, west of the Indus. They foal in June, July, and August. They are shy, have great speed, but have been run down by a horseman. The voice is a shrieking bray.—*Jer.*

ONAM, a four days' festival amongst the Nairs of Cochin, held about the middle of August, in which the Nair women go from street to street singing songs, and the men join in athletic sports.

ONDATRA AMERICANA. *Tiedemann.* The musk rat or mus-quash; the tail is imported from America into India, and used as an aphrodisiac.

ONESICRITUS of Egina went with the army of Alexander, but advanced farther east than the army, and acquired some knowledge of the Malabar coast and Ceylon. He was the first to mention Taprobane. He was the companion of Megasthenes.

ONG-DES, Ang-des, or On-des adjoins Tibet. The inhabitants call themselves Hungia, and appear to be the Hong-niu of the Chinese authors, the Hun (Hoon) of Europe and India.—*Tod.*

ONG-KHAN, or Aung-khan, prince of Kerait, was the first adversary of any importance overcome by Chengiz. He was defeated in the year 599 (1202), and his fall was followed by the speedy overthrow of the Oyurat, the Kungrat, and the Naiman, scattered Turkish tribes living westwards of the Mongols, and in closer proximity to Buddhist, Christian, and Muhammadan influences, to which they owed a higher degree of general culture probably than the Mongols had attained to, although their military capacities were far inferior to those of the troops trained by Chengiz under a discipline of draconian severity.—*Vambery, Bokhara*, p. 120.

ONION, Allium cepa.

The onion is the betzulim of Numbers xi. 5. It is a common vegetable all over India, and is sown broadcast, at almost all seasons of the year. When about six inches high it is pricked out into beds six fingers' breadth apart; and the plants go to seed without difficulty. It is a favourite pot vegetable of most natives of India, and is a constant ingredient in all their curries, pullaos, etc. With the Brahman, however, and those sects of Hindus generally who abstain from animal food, the onion is not eaten, from a fancy that its structure resembles that of flesh. Onion juice is reluctantly taken when prescribed medicinally, as a powerful stimulant, by those who would reject spirituous liquors. With the Chinese, every part of the onion plant is reckoned to have some special therapeutic property. The bulb is one of their favourite articles of diet; it is rich in nitrogenous compounds. — *Faulkner; Riddell; Ainslie; Mason; Smith.*

ONKAR, HIND., of Kashmir, a bird which supplies feathers for the helmet plume, or kalgi. The lengthened scapular feathers of the Plotus melanogaster are looked on as a badge of royalty by the Khassya, and they are esteemed by all. They were the badge of one of the cavalry regiments of Bengal.

ONOSMA ECHIOIDES. A plant of Kaghan and Kangra, used principally for its colouring matter as a substitute for the alkanet, Anchusa tinctoria, to colour liquids, particularly Rowland's Macassar oil.—*Powell.*

Onosma emodi, Maha-ranga, HIND., has lanceolate triple-nerved leaves. The root is branched, of a dark-purple colour, and is used in dyeing. It is a native of Nepal, in Gosainthan; grows plentifully on the Himalaya, on the Hindu Kush, near the Panjab road, viâ Peembur to Kashmir. It is officinal in Kashmir, where its flower-stem

and root are both of them decmed useful in medicine.—*Eng. Cyc.; Honigberger.*

Onosma macrocephala, O. bracteatum, *Royle.*

Lisan-ul-asar, . . ARAB.	Gao-zaban, . . HIND.

Its rough leaves resemble a cow's tongue, hence the name; but the term Gao-zaban, or cow's tongue, is often applied to a species of Cacalia (C. Kleinii), a composite plant. At the Lahore Exhibition, the flowers which accompanied two specimens clearly belonged to a plant of the natural order Boraginaceæ.—*Powell; Hogg.*

ONYX.

Onix, Onice, . . . FR.	Sang-i-Sulimani, . PERS.

Pa'rmata unam, MALAY.	Onix, ... SW.

The onyx-stone is mentioned in Genesis ii. 12, but the term is said to have been applied also to the shell of a mollusc. This stone is a succession of plates of chalcedony. It is found in great abundance in the great greenstone tract of the Dekhan, and at Rajpipli in Gujerat, along with other chalcedonic and quartzose minerals. The silicious particles are arranged in alternating horizontal layers of opaque, white, and translucent blue, grey, or brown, and because these have a resemblance to the marks on the human nail, the stone was called from the Greek word for nail, ονυξ. It was known to the ancients, and was employed by them, as it is now, for the manufacture of cameos, the figure being cut out of the opaque white, the dark part forming the ground, or the contrary. It is most valuable when the contrast of colours is strong, and when the layer is thick enough to give a high relief to the object to be engraved. In the royal library at Paris there is an antique cameo cut out of an onyx with four layers, representing the apotheosis of Augustus, eleven inches by nine, which is supposed to be the finest in existence. Agates with an onyx structure are not uncommon, particularly among chalcedonies, but the finest are obtained in India. Cameos sold at Rome are made from a thick shell, having different-coloured layers. The onyx-stone is stained black by being boiled in honey, oil, or sugared water, and then in sulphuric acid. For red, protosulphate of iron is added; and for blue, yellow prussiate of potash is added to the protosulphate of iron. The onyx has a peculiar and almost superstitious value in the east, and is especially chosen for amulets. Chaplets of this stone are much esteemed. Colonel Tod had a vase, purchased in Sindia's camp, evidently of Grecian workmanship; and the numerous cameos of the onyx found in the Panjab, and other relics of Alexander's conquests, attest their abundance at times. In such numbers were these cameos found in 1803-4, when Lord Lake dictated peace to Holkar from the altars of Alexander, that the native artists of Muttra and Agra carried on a successful imitation of them for some time, which encouragement might have raised to celebrity.—*Eng. Cyc.; Emmanuel; Tod's Travels.*

OOLOK. HIND. A boat on the Ganges.

OOMIAH, the creative power of Hindu mythology.

OOMRAOTI, a name given to several towns in the Peninsula of India, also written Omrooti, Umraoti, and Amravati. The Oomrawatte of Berar is one of the largest cotton marts; another Oomraoti near Masulipatam is famed for its Buddhist ruins.

OOMUR, or Oomra and Soomra, are races of Sindh from the Pramar or Puar races of Rajputs, and found now chiefly as Muhammadans, though a few, still called Oomra and Somra, are to be found in Jeysulmir and in the t'hul or great desert.

OONAO, a town in the Lucknow division of the N.W. Provinces of Indiа, in lat. 26° 33′ N., and long. 80° 33′ E.; 8 miles from Cawnpur.

OONT. HIND. Camel. Oont-ka-bal, camel's hair. Oont shah, a Maharram fakir. Oontia-bag, a lion.

OOSAKA, the greatest commercial city of Japan, built at the mouth of a small river at the N.E. extremity of the inland sea. It is the seaport of Miako or Kioto, from which it is distant 26 miles.

OOSUR. HIND. Properly soil free from the saline efflorescence called reh, but underlaid at a depth of six to twelve inches by a stratum, more or less continuous, sometimes of considerable thickness, of kankar, sometimes in the form of a block (known as silia), and at other times in strings and nodules. Reh is a general term for all saline effloresceuces. Sometimes it is an impure sulphate or carbonate of soda, sometimes chloride of sodium, and sometimes carbonate or nitrate of potash, but generally more or less a mixture of all. It rises to the surface by capillary attraction. It has occurred to a large extent on the lands along the banks of the Ganges canal, and has greatly injured the soil. See Reh.

OO-TARA and Thau-na, Buddhist missionaries sent, after the third convocation at Pataliputra (B.C. 308), to preach Buddhism to the Talaing in the reign of Asoka.

OOTATOOR and Verdachellum, near Trichinopoly, have limestone rocks containing numerous fossils, the limits of which are supposed to be near Trichinopoly on the south, and near Pondicherry on the north. Professor Forbes arrived at the conclusion that all the beds from which fossils had been obtained were parts or members of one and the same series, and equivalent to the cretaceous series of Europe; the deposits at Trichinopoly and Verdachellum being probably equivalent to the upper greensand and gault divisions of that series, the deposit near Pondicherry being equivalent to the neocomian or lower greensand.

OPAL. This delicate iridescent gem has been known by the name it now bears from the time of Pliny. There is in it the gentler fire of the ruby, the brilliant purple of the amethyst, and the sea-green of the emerald, all shining together. This is produced by the reflection and the refraction of light in certain openings of the mass. Opal seems to have been first brought from the Indus, but Arabia and Ceylon have been named; Saxony, Hungary, Ireland, Iceland, Scotland, and Mexico are now known to yield it. The best oriental opal is from Hungary. Fire opal, in particular, comes from Mexico. In Hungary, its most celebrated locality is the village of Tchervenitza in the trachytic range, extending between Tokaj and Eperies. These mines have been wrought for many ages. The fire opal, of a beautiful topaz-yellow colour, with great lustre, is not obtainable in large masses.

Precious opal is the most beautiful of all gems. Its price depends on the play of colours displayed. The *hydrophane* loses its beauty when

exposed to water. Opal generally contains a little oxide of iron, and a small quantity of the alkaline earths. *Precious opal* scratches glass, but is easily broken, on account of the numerous fissures by which it is traversed, and which probably give rise to the play of colours. Opals are cut with rounded faces. *Common opal, or semi-opal*, has not the hardness of opal, and is easily scratched by glass, which distinguishes it from silicious stones; it is called semi-opal. *Opal jasper* resembles jasper, but contains iron, and is not so hard. Hungarian opals are the more valuable and harder; they present a uniform milkiness of surface, more or less iridescent. The Mexican opals, when recent, present an unmixed globule of green fire, but they become colourless or of an opaque brown if wetted. The opal is only cut in cabuchon. The opal of Nonius, which Mark Antony proscribed, was valued at £20,000 of British money. According to Pliny, India was the source of opal. Common opal occurs in the volcanic rocks of the Dekhan.—*Jam. Ed. Jour.; King; Tavernier's Tr.; Eng. Cyc.; Tomlinson.*

OPERCULUM is the plate which protects the apertures or exposed parts of certain molluscs. In many of the testaceous gastropods it fits the aperture of the shell more or less accurately when the animal has retired within it. Opercula are sometimes horny, as in trochus and murex; sometimes shelly, nay almost stony, as in turbo.

OPH, Heb., a serpent, was pronounced Ope, Oupis, Opis, Ops; in the Egyptian, Ob or Aub; and by Cicero, Upis. The oph was an emblem of the sun, also of time and eternity. The basilisk, or royal serpent, was named Oubaios. The idolatry of the serpent was alluded to in Leviticus xx. 27, Deuteronomy xviii. 11. See Ophis.

OPHELIA ALATA. *Griseb.*

O. angustifolia, *Don.*	Swertia, *sp.*, *Wallich.*
O. chirata, *Griseb.*	
Kasb-ul-zarita, Ar., Pers.	Harun-tutiya, . Hind.
Chiretta, Hatmul, Hind.	Bui . . . of Kangra.

The Ophelia genus of slender plants belongs to the order Gentianaceæ. Dr. Wight gives Ophelia corymbosa, alata, angustifolia, chirata, elatior, elegans, Grisebachiana, and minor. They grow at moderate heights in the Paujab Himalaya, several of them being exported to the plains for use in medicine under the name of chirata, which has undoubtedly tonic properties, and is largely used by natives and Europeans.—*Wight; Stewart.*

OPHELIA ANGUSTIFOLIA. *Don.*

Swertia angustifolia, *Wall.*

Kasb-ul-zarita, . Arab.	Hatmul, . . . Hind.
Pahari chiretta, . Hind.	Harun-tutiya, . . ,,

This species has long been used as a bitter tonic. It is called Pahari chiretta in the hills, and is substituted for the true kind.—*Ind. An.* No. 6; *O'Sh.* p. 460.

OPHELIA CHIRATA. *Griseb.* Chiretta.

Agathotes chirata, *D. Don.*

Hab-ul-mul, . . Arab.	Kirata-tieta, . . Sansk.
Kasb-ul-zarireh, . ,,	Shayraat-koochie, Tam.
Dowa-i-pechish, . Pers.	Shilassuttoo coiello, Tel.

Chiretta or chiraeta is employed throughout Southern Asia as gentian is in Europe. It has long been known to the Hindus. This plant is an annual of from 2 to 3 feet high, with a single, straight, round, smooth stem. Grows in the Himalaya mountains, and is met with in a dried state, tied up in bundles, with its long slender stems of a brownish colour, having the roots attached, and which have been taken up when the plant was in flower. The whole plant is bitter. Mr. Brattley states that it contains a free acid, a very bitter extractive and resinous matter, and much gum, muriates and sulphates of lime and potash; also, that the spirituous extract is more aromatic than that of Gentiana lutea, but that the extractive and the gum are in larger proportion in the latter. Water and spirit take up its active properties. It is a bitter tonic; stomachic, used in dyspepsia or as a tonic in convalescence, either cold or hot infusion; the former is lighter, and well suited to dyspeptics, and not so apt to create nausea in a hot climate. Sometimes a little orange-peel or cardamom is added. A tincture is made like that of gentian with proof spirit; like other bitters, it is best taken half an hour before meals. It acts as a simple bitter tonic, not aromatic nor astringent, and is the best substitute for gentian and quassia. It is used in fever, debility, and dyspepsia. The root is the bitterest part of the plant, and the bitter principle is easily imparted to water or alcohol. It is found to be a very efficacious remedy in India against intermittents, particularly when associated with Guilandina bonduc or Caranga nuts.—*Royle's Ill. Bot.; Wall. Pl. As. Rar.; Powell; Indian Ann. of Med. Sc.*

OPHELIA ELEGANS. *Roxb.; Wight, Ic.* Salaras, Silajitu, Tel. Grows plentifully in several parts of the Madras Presidency, flowering August and September; and a very handsome species when in full flower, forming as it does a rich panicle of light blue flowers streaked with deeper coloured veins. Grows plentifully in the Pulney Hills, in the Jeypore zamindari of Vizagapatam, and is largely exported as salaras or silajit, the amount being valued at about Rs. 2500 a year. It is preferred by the hakims or native practitioners to the Himalayan chiretta, and is considered febrifuge. The samples of the drug, seen as exported in bundles, are about 16 inches long and 4 inches deep, and are always tied up with the tough bark and large leaves of Bauhinia Vahlii (*W. & A.*), which abounds in the Northern Circars. The drug is exceedingly cheap; the amount exported is considerable, and is confounded in the bazars with chiretta. Several plants closely allied to the chiretta are used for the same purposes. Ophelia angustifolia, *Don*, in Northern India is called Pahari (*i.e.* hill) chiretta, to distinguish it from the true or Dakhani (southern) chiretta, also O. multiflora, *Dalzell.* Justicia paniculata, likewise, is one of the chiretta plants. Exacum tetragonum is called Ooda (that is, purple) chiretta. The cold infusion of Exacum bicolor, although a pure bitter, is much milder than that of Ophelia elegans, which possesses a powerful bitterness, remaining for several minutes in the mouth. It exercises a tonic influence on the digestive organs, thereby improving the general health, while it appears also to have a febrifuge property. Ophelia alata and O. chirata seem to be used similarly; they grow in the Himalaya. O. paniculata, O. purpurascens, and O. speciosa are all known as chiretta or cheraeta; they are found in the Sutlej valley, between Rampur and Sungnam, at an elevation of 7000 to 9000 feet. These annual

plants supply the chief portion of the bitter root exported to the plains.—*Cleghorn's Panj. Rep.; Ind. Ann. of Med. Sc.; Cleghorn in M. E. J. R.*

OPHIDIA, in natural history, the order of snakes. It comprises seventeen families in two sub-orders, innocuous snakes and poisonous snakes. See Reptiles.

OPHIOCEPHALIDÆ, a family of fishes, comprising 25 species of Ophiocephalus and one of Chanua. The walking or snake-headed fishes, the Ophiocephalidæ of India, and other amphibious genera, are perhaps the best known of monogamous fishes; some of them reside in ponds, others prefer rivers, where they take up their residence in deserted crab holes, which they find in the banks. The pond species delight in lying at the grassy margins, where the water is not deep enough to cover them; and here they are able to respire atmospheric air direct. The striped walking fish constructs a nest with its tail among the vegetation, and bites off the ends of the water weeds; here the ova are deposited, the male keeping guard; but should he be killed or captured, the vacant post is filled by his partner. The hissar, Callichthys, of S. America, is likewise monogamous, constructing nests, which it also defends.

O. amphibeus occurs in the fresh waters of Burma, but the natives regard them with superstitious awe, and do not eat them. They have a legend that they were formerly men, changed into fish for their sins; and the Pwo Karen of Tavoy say that if people eat them they will be transformed into lions. Frogs do some mischief among the fry,—Hylorana Malabarica, Hylorana florescens, Rana cyanophlyctis (*Schn.*), and an unnamed species of Polypedates,—but they have themselves enough of enemies. In the water, the murrel, a species of Ophiocephalus, feeds almost entirely upon them, generally lying close under the banks for this purpose; and on land, mungooses, snakes, kites, crows, and paddy-birds assist in suppressing them, while water-snakes follow them in both elements. The most troublesome is the common brown frog, Rana cyanophlyctis.

Ophiocephalus striatus, *Bloch.*

Murrel, ... Eng. | Karupu veraul, . . Tam.

This, along with other species of murrel, is found on the Neilgherry Hills. Fish travel, not eels alone, which in all countries can move rapidly over moist land. Theophrastus (De Piscibus), the contemporary of Aristotle, mentions fishes found in the Euphrates, which in the dry seasons leave the vacant channels and crawl over the ground in search of water, moving along by fins and tail. The Ophiocephalus amphibeus of Burma travels over land. The O. striatus, which occurs in the Indian Peninsula, attains a length of upwards of 3 feet; O. gachua, to 1 foot long; and Dr. Day discovered that they breathe air direct from the atmosphere. Hartwig mentions that in several fish the gills communicate with a cellular labyrinth containing water, which keeps the gills moist; by this means the hissar of Guiana, the frog-fish of Ceylon, and the Anabas scandens, a climbing perch of India, are able to remain out of the water. The hissar throws itself forward by springs of its tail, and can move in that way nearly as fast as a man can leisurely walk. The pectoral fins of the frog-fish, supported by the bones of its carpus, perform the office of feet. The climbing perch moves itself up trees by means of its ventral fins.

Ophiocephalus vagus, as the waters retire, burrow into the soft mud. A species of Ophichthys, and Osphromenus olfax of Batavia, also travel.—*Hartwig.*

OPHIOGLOSSACEÆ. *Tindley.* A natural order of acrogenous plants, from two Greek words, Ophis, a snake, and Glossa, a tongue.

Ophioglossum reticulatum, *Linn.*, Bengal, Mauritius, Jamaica.
O. filoforum, *Roxb.*, Bengal, Peninsula of India.
O. pendulum, *Linn.*, Mauritius, Khassya, Moluccas.
Helminthostachys flacinita, Bengal, Peninsula of India, Moluccas.

They are of little or no use.

OPHIOPOGON JAPONICUS. *Smith.* Mehmen-tung, Chin. A liliaceous plant growing in Hankow, Yu-hau-hien, and Hang-chu-fu, in the Che-kiang province. Its tubers, as seen in the market, are shrivelled, pale yellow, soft, and flexible, from 1 to 1½ inch long.—*Smith.*

OPHIORHIZA MUNGOS. *Linn.*

Kajo mar, . . . Jav. | Mendi, . . . Singh.
Naga suganda, . Sansk. | Nakuli, Sarpakshi, Tel.

A native of Ceylon, Java, and Sumatra; all parts are intensely bitter; it has high reputation as a remedy for snake-bites. Roxburgh altogether discredited its supposed virtues. The ichneumon plant is supposed to furnish the mungoose with an antidote when bitten in a conflict with a snake. The Singhalese use it in cases of snake-bites; the leaves and bark are made into decoction, and given in doses of half an ounce. Dr. Wight in Icones gives Ophiorhiza eriantha, grandiflora, Harrisonii, Roxburghiana, and Roxburgh adds O. villosa. The Arabs appear to be ignorant of the virtues of the Ophiorhiza, but they value highly the Aristolochia sempervirens, which they consider not only as a remedy, but as a preservative too, against the bite of serpents.—*Roxb.* i. p. 701; *O'Sh.* p. 400; *Niebuhr's Tr.* ii. 348; *Ainslie.*

OPHIOXYLON, from ὄφις, a serpent, and ξύλον, wood, because it has a twisted root and stems; a genus of plants belonging to the natural order Apocynaceæ. Wight gives O. Belgaumense, Ceylanicum, macrocarpum. O. majus, *Wall.*, is a shrub of Burma.

OPHIOXYLON DENSIFLORUM. *Thw.*

O. Ceylanicum, *W. Ic.* | Tabernæmontana densiflora, *Wall.*
O. Neilgherrense, *W. Ic.*

A native of the central province of Ceylon, up to an elevation of 6000 feet.—*Thw.*

OPHIOXYLON SERPENTINUM. *Linn.*

Chandra, . . . Beng. | Chandraka, . . Sansk.
Chota chand, . . Hind. | Aika-waireya, . . Singh.
Jovana amelpodi, Maleal. | Chivan melapodi, Tam.
Chivan amelpodi, ,, | Patala gandhi, . Tel.
Soovana-umel-podi, ,, | Patala garuda, . ,,

A climbing or twining plant of Ceylon and of British India. The E. Archipelago Ophioxylon serpentinum, O. mungus, Aristolochia Indica, and Mimosa octandra are popularly said to be the plants to which the mungoose resorts in its attacks with snakes. In rich soil it becomes a climbing plant, but in poor soil it is a small, erect shrub. The root is used as a bitter tonic and febrifuge, as an antidote to snake-poison, and to promote delivery in tedious cases. On the Malabar coast, the root in cases of snake-bites and scorpion stings is prescribed in decoction, to the

extent of a pint in the twenty-four hours, and the powder is applied externally to the injured part.

OPHIR. Gold is often mentioned in the Hebrew Scriptures as an article of commerce. In 1 Kings ix. 26, about 1000 B.C., Solomon king of all Israel 'made a navy of ships in Ezion-geber, which is beside Eloth, on the shore of the Red Sea, in the land of Edom.' And these ships brought gold, silver, and precious stones from Ophir and Tharshish in such quantities, that king Solomon 'exceeded all the kings of the earth for riches.' Silver was so plentiful at his court that it was 'accounted nothing of.' The king's drinking cups were made of pure gold, and his shields were covered with beaten gold. It has never, however, been settled where Ophir and Tharshish were situated; but we are distinctly told that the navy of Tharshish brought 'gold and silver, ivory, and apes, and peacocks,' and Ophir has been supposed to have been some district or port in the Red Sea, on the east coast of Africa, the Malabar coast, and the coast of Malacca. Some Portuguese historians have supposed that it was Sofala, or some other place near the mouths of the Zambezi, on the east coast of Africa. The Tharshish fleet is said to have arrived at Ezion-geber only once every three years, from which it may fairly be inferred that the voyage was a considerable one, or that the ships had to go with the S.W. monsoon and return with the N.E. winds, or that they made a trafficking voyage from one place to another until the cargo was sold and another shipped. Ships or boats coasting from the Red Sea to the mouths of the Zambesi would not take three years for such a voyage. Solomon's navigators seem to have crossed the open seas and traded with India. Ezion-geber, on the shores of the Red Sea (1 Kings ix. 26), is a little port at the head of the Elamitic or Eastern Gulf of the Red Sea. This town more naturally belonged to the Midianites of Sinai, or rather to their friends the Egyptians. It was afterwards called Berenies by the Ptolemies; and its place is still pointed out by the Egyptian name of the valley in which it stood as Wady Tabe, the valley of the city, and is no doubt the town known seven centuries later under the name of the Golden Berenice, and not many miles from the modern Souakin. Solomon's ships brought home gold from Ophir, and precious stones and ebony. There are at present in Further India two places called Mouut Ophir,—one of them in Sumatra in Palimbangan district, 9770 feet above the sea, to which the name was given by the Portuguese; and they gave the same name to Guuong Ladang, a mountain 40 miles N. of the town of Malacca, 4000 feet high. In the vicinity of both of them gold has been obtained. Josephus expressly says that the Aurea Chersonesus was the Ophir of Solomon's time. Malacca, as is thought, is the eastern extremity of what was known as Ophir to the ancient Hebrews, or Sophir to the authors of the Septuagint version, whither the fleets of Hiram and Solomon voyaged on their trading expeditions. 'Once in three years came the navy of Tharshish, bringing gold and silver, ivory, and apes, and peacocks.'

Professor Max Müller believes Ophir to be India, and he supports his opinion by a reference to the ancient names for the articles imported by Solomon, which are Sanskrit. The nature and direction of the winds blowing in those quarters would allow of a voyage from the head of the Red Sea to India, stopping at several places on the way, being accomplished by the rude vessels and cautious sailing of those days in a period of from eighteen months to two years. (See 1 Kings ix. 28, x. 11, 22; 2 Chronicles ix. 10, 21.) In Bochart's Geog. Sacr. (Phaleg) lib. ii. c. 27, he affirms that every circumstance required to constitute the Ophir of Hebrew Scripture may be found in the classical Taprobane, the modern Ceylon: 'Quia Taprobanæ insulæ (quam Zeilan esse alibi probabo), omnia ad amussim quadrant quæ de Ophira legere est in libris Regum et Paralipomenon. Ibi enim aurum et ebur, gemmasque et margaritas magna copia nasci nemo est qui nesciat. Scatere etiam pavonibus, scribit steuckius in Arrianum. Et in Chersoneso proxima magni pretii cercopithecos memorat Ludovicus Vartamanus.' In the second part of his sacred geography or 'Chanaan' (lib. i. c. 46), he collects diagrammatically the proofs offered in support of his opinion by classical writers, and modern geographers, travellers, and others. Sir Emerson Tennant has suggested that the Port of Galle may be the Tharshish of the Bible, 'which lay in the track between the Arabian Gulf and Ophir,' and that Ophir itself is Malacca, or the Aurea Chersonesus. Sir Emerson has stated that the names of the articles brought by the fleet are 'identical with the Tamil names by which some of them are called in Ceylon to the present day:' Senhabin, or teeth of elephants, Kophim, or apes, and Tukuni, or pea-fowls. But these are the pure Sanskrit words Ibha, Kapi, and Suka, with the mere addition of the Hebrew plural termination. Sanskrit names in the south of India have not displaced the original Tamil appellations, which still remain the terms in common use, namely, Yana for elephant, Kurangu for monkey, Myle for peacock, and Kilip-pullai for parrot. Sofir is the Coptic name of India at the present day; but the name must have applied originally to that part or parts of the Indian coast frequented by the merchants of the west. In the Septuagint translation of the Bible the Hebrew Ophir is always rendered by Sophir. The earliest mention of the name is in the book of Job, where the 'gold of Ophir' is referred to as of the finest quality. At a later date, the ships of Hiram king of Tyre 'went with the servants of Solomon to Ophir, and took thence 450 talents of gold, and brought them to king Solomon.' The gold of Ophir is referred to by Isaiah, who says, 'I will make a man more precious than gold, even a man than the golden wedge of Ophir.' The word here translated 'wedge' means a tongue or ingot; and General Cunningham suggests that the wedge of gold of 50 shekels weight that was concealed by Achan was one of the ingots of Ophir. At the present day the Aravalli range is the only part of India in which silver is found in any quantity, while the beds of many rivers still produce gold. —*Sharpe's Egypt; Bikmore; Ouseley's Tr.; Cunningham's India; Tennant's Ceylon.*

OPIAN, called Hupian by Baber, is supposed by General Cunningham to be Alexandria apud Caucasum. According to Pliny, the city of Alexandria, in Opianum, was situated at 50 Roman miles, or 45·96 English miles, from Ortospona, and at 237 Roman miles, or 217·8 English miles, from Peucolaitis or Pukkalaoti, which was a few

miles to the north of Peshawur. Ortospana has been identified by General Cunningham with the ancient city of Kābul and its citadel the Bala Hissar. Pliny further describes Alexandria as being situated sub ipso Caucaso, at the very foot of Caucasus, which agrees exactly with the position of Opian, at the northern end of the plain of Koh-i-daman or hill-foot. The place was chosen by Alexander on account of its favourable site at the triodon, or parting of the 'three roads' leading to Bactria. These roads, which still remain unchanged, all separate at Opian, near Begram,—the N.E. road, by the Panjsher valley, and over the Khawak pass to Anderab; the west road, by the Kushan valley, and over the Hindu Kush pass to Ghori; the S.W. road, up the Ghorband valley, and over the Hajiyak pass to Bamian.

The first of these roads was followed by Alexander on his march into Bactriana from the territory of the Paropamisadæ. It was also taken by Timur on his invasion of India; and it was crossed by Lieutenant Wood on his return from the sources of the Oxus. The second road must have been followed by Alexander on his return from Bactriana, as Strabo specially mentions that he took 'over the same mountains another and shorter road' than that by which he had advanced. It is certain that his return could not have been by the Bamian route, as that is the longest route of all; besides which, it turns the Hindu Kush, and does not cross it, as Alexander is stated to have done. This route was attempted by Dr. Lord and Lieutenant Wood late in the year, but they were driven back by the snow. The third road is the easiest and most frequented. It was taken by Chengiz Khan after his capture of Bamian; it was followed by Moorcroft and Burnes on their journeys to Balkh and Bokhara; it was traversed by Lord and Wood after their failure at the Kushan pass; and it was surveyed by Sturt in A.D. 1840, after it had been successfully crossed by a troop of horse artillery. As, however, it is noted that there was a mountain named Aruna at a distance of five miles to the south, it is almost certain that this city must have been on the famous site of Begram, from which the north end of the Siah-Koh or Black Mountain, called Chahal Dukhtar or the Forty Daughters, lies almost due south at a distance of 5 or 6 miles. Begram also answers the description which Pliny gives of Cartana, as Tetragonis, or the Square; for Masson, in his account of the ruins, especially notices some mounds of great magnitude, and accurately describes a square of considerable dimensions. General Cunningham says that if he is right in identifying Begram with the Kiulu-sa-pang of the Chinese Pilgrim, the true name of the place must have been Karsana, as written by Ptolemy, and not Cartana, as noted by Pliny. The same form of the name is also found on a rare coin of Eukratides, with the legend Karisiye nagara, or city of Karisi, which he has identified with the Kalasi of the Buddhist chronicles as the birthplace of raja Milindu. In another passage of the same chronicle, Milindu is said to have been born at Alasandra or Alexandria, the capital of the Yona or Greek country. Kalasi must therefore have been either Alexandria itself or some place close to it. The latter conclusion agrees exactly with the position of Begram, which is only a few miles to the east of Opian. The appellation of Begram means, he believes, nothing more than the city par excellence, as it is also applied to three other ancient sites in the immediate vicinity of great capitals, namely, Kābul, Jalalabad, and Peshawur. Masson derives its appellation from the Turki, be or bi, chief, and the Hindi, gram or city, that is, the capital. But a more simple derivation would be from the Sanskrit vi, implying certainty, ascertainment, as in vijaya, victory, which is only an emphatic form of jaya, and with the prefix in Vigrama would therefore mean emphatically the city, that is, the capital; and Bigram would be the Hindi form of the name, just as Bijaya is the spoken form of Vijaya. The plain of Begram is bounded by the Panjsher and the Koh-i-daman rivers on the north and south, by the Mahighir canal on the west, and on the east by the lands of Julgha, in the fork of the two rivers. Its length, from Bayan on the Mahighir canal, to Julgha, is about 8 miles; and its breadth, from Kilah Baland to Yuz Bashi, is 4 miles.—*Cunningham's India*, pp. 21, 237.

Opium is the concrete inspissated juice of the poppy, Papaver somniferum, obtained by making incisions in the capsules, and collecting the exuding juice. The plant is a native of Western Asia, and probably also of the south of Europe. Opium as a medicine has been used from the earliest ages; but when it was first resorted to as a luxury, it is impossible to state. Such must have happened from very early times, as it happens daily in the present; but it certainly extended with the spread of Muhammadanism, when, by the tenets of the reformer, wine and fermented liquors being discountenanced, opium came in their stead along with the bhang or hasheesh (made from hemp), coffee, and tobacco. From the Arabs the inhabitants of the Eastern Archipelago probably acquired their predilection for opium, and although their particular manner of indulging in it has evidently been derived from the Chinese, China, where at present it is the most extensively used, cannot be said to have indulged long in the practice. The Pharmacographia, without quoting its authority, states that opium smoking only began in China in the latter half of the 17th century. In 1780, the E. I. Company stationed two receiving ships in Lark's Bay, south of Macao.

Hippocrates is supposed to have employed it; Diagoras condemned its use in affections of the eyes and in earache. It was noticed by Scribonius Largus about A.D. 40; by Dioscorides about A.D. 77; also by Pliny and Celsus (A.D. 23; A.D. 38); but it does not appear to have been much employed until the time of the Arabs, except in the form of the confections called Mithridatica, Theriaka, and Philonium. The Arabic name Afyun, the Hindi Afim, and the name O'-fu-yung, by which it is known in China, seem all to have proceeded from the original Greek name, which is itself derived from Opos, juice. The Sanskrit Apaynum may have a similar origin, or it may be the source

of the Grecian name. In more recent times, the opium of India was mentioned by Barbosa, who visited the Malabar coast about 1511. Pyres, in a letter from Cochin to king Manuel of Portugal, 1516, describes the opium of Egypt, of Cambay, and of Cous, the last place being supposed to be Cutch. Garcia d'Orta, writing in the middle of the 16th century, tells of the Malwa opium in Cambay, also of the opium of Aden, of that from Cairo and Upper Egypt; and the Opium Thebaicum is also described by Prosper Alpinus, who visited Egypt, 1580–83. Kaempfer, when in Persia in 1687, described the kinds of opium made there, and also the electuaries or Theriaka, which they made of opium, flavoured with ambergris, cardamom, cinnamon, mace, nutmeg, and saffron. The English East India Company, on becoming rulers in British India, found it one of the maskarat or intoxicating excise articles of the country. In 1773, the contract for the supply of opium was given to Mir Munkeer, to deliver Behar opium at Rs. 320, and that of Oudh at Rs. 350 per maund, say about Rs. 4 the lb.

The poppy is now grown for opium in Asia Minor, Northern Africa, Persia, China, and India, and the last two countries yield the principal supply. Eighteen kinds are, however, known to commerce. In India it is grown in Oudh, the Panjab, in Jammu and Kulu, in the Himalaya, Rajputana, Cutch, Gujerat, Kattyawar, Central India, Central Provinces, Berar, and Mysore; but the opium made for export from India is chiefly in Malwa, Behar, Patna, and Benares. The cultivation of the poppy for the Bengal opium is confined to the large central Gangetic tract, about 600 miles in length and 200 in breadth, which is bounded on the north by Gorakhpur, on the south by Hazaribagh, on the east by Dinapur, and on the west by Agra. This tract is divided into the two agencies of Behar and Benares, the former being presided over by an agent stationed at Bankipur, and the latter by an agent at Ghazipur; both agencies are under the control of the Board of Customs, Salt, and Opium, in Calcutta. There is no extensive poppy cultivation in the Madras and Bombay Presidencies, and the opium received at Bombay is brought under passes from the Native States in Malwa and Gujerat. In the Panjab, opium is not made a government monopoly as it is in Bengal; the people are free to cultivate if they choose, only it ranks as a 'zabti' or specially assessed crop, and has certain higher charges made upon it; the sale of opium, poppy heads (quite a separate thing), bhang, ganja, and charras, which are collectively termed 'maskarat,' is restricted, and these articles are subject to excise duty. Opium used in the Panjab comes principally from Kulu, in the Himalaya, but is grown also in the plains, especially in the district of Shahapur. In 1870–71, opium to the value of Rs. 44,400 was manufactured in the Nundidrug division of Mysore. In the eleven months from April 1871 to February 1872, 8688 lbs. were manufactured in the Bangalore and Kolar districts; and in 1875–76 the quantity exported to British territory was valued at Rs. 2212. In West Berar, the poppy is largely grown in the Buldanah district; between Maiker, Janiphal, and Bassim, the people are busily occupied, and exhibit an expertness betokening full experience. In 1870–71, 544 acres of land in the Buldanah district were under cultivation for opium.

Opium is largely manufactured in the fertile table-land of Malwa in Central India, which is mostly under the rule of native chiefs, of whom Sindia and Holkar take the first rank. Rs. 700 per chest is levied on that which passes through British territory for shipment to China.

In China, the poppy is largely cultivated in Sze-chuen and Yunnan. In Yunnan the poppy fields constitute a third of the whole cultivation, and are yearly augmenting. Mr. Medhurst, Her Majesty's consul at Shanghai, informed the Government of India that the cultivation of opium had increased enormously, but that the consumption had increased *pari passu*, and the market for the Indian drug had been but slightly affected. The province of Sze-chuen seemed to be the greatest producer. The ordinary price of the drug, as prepared in that province, was about Rs. 820 for 133⅓ lbs. avoirdupois. At Hankow it had risen to Rs. 930. Indian opium was an expensive luxury, indulged in by a few rich men and high officials. Mr. Man, writing in 1877, mentioned that the poppy is grown all over Shengkiang, which is another name for the province of Liao-tung, of which New-chang is a part. In Kirin Province, out of every ten acres of available soil, eight acres are devoted to the poppy. In Tse-tsc-har the poppy has been so largely introduced as to cause quite a revolution. In 1873, the Rev. J. Edkins reported in the North China Herald that for 300 miles, between the Yellow River and the city of Tai-na-fee, poppy crops were seldom out of sight. This increase of poppy crops had occurred in the past few years, having spread from Yew-cheu; and Chinese officers were making raids on poppy grounds, but they were spasmodic and inefficient. In many other parts the poppy was also cultivated, and Mr. Edkins was of opinion that, wherever the soil is dry and light, the cultivation would extend, as it had proved to be much more profitable than other crops. By the year 1880, all over the west of China, in the provinces of Yunnan, Sze-chuen, Kwi-choo, and South-Western Hou-pe, opium cultivation was everywhere tolerated, and in most places encouraged by the provincial officials. In Manchuria every farmer and every cottager had their little plot of poppy. To the north of the Yang-tze-kiang, the poppy in many districts was said to be superseding the growth of cereals. In 1875, Manchuria yielded 400,000 pikuls. In 1875, the lands of Yunnan were described as a sea of poppies. Messrs. Soltan and Stevenson, who travelled from Burma through Yunnan to Hankow, found three-fourths of all the land under tillage devoted to its growth. All the good land in Yunnan was taken up with its cultivation. The crop of Western China in 1881 was estimated at 97,000 pikuls, as under:—Western Hou-pe district, 2000 pikuls; Eastern Sze-chuen, 45,000; Yunnan, 40,000; Kwi-choo, 10,000. Price of North China opium, per Chinese ounce, 2·8 to 3·2 taels; Malwa opium, at New-chang, 5·8; Patna, 5·4; Chinese, 2·8. Persia has been trading with China since 1854. In Persia, in 1871, the crop of opium was estimated at 2500 chests, but in 1879–80 the quantity was 7100 chests, and the estimate for 1880–81 was 10,000 chests. The Persian opium imported into China was 684 chests in 1877, and 3446 in 1879. Surgeon-Major Sheppard examined some samples of it, and pronounced it excellent. But

that taken is chiefly from Smyrna, and is employed in adulterating Malwa opium and the better classes of China opium. In the ten years up to 1881, the crop in Asia Minor had averaged 6000 chests, of which about two-thirds finds its way to the Smyrna market, the remainder to Constantinople. This opium contains a high proportion of morphia, and is largely used for medical purposes in Europe.

Indian Manufacture.—The operations of cultivating the poppy and then manufacturing its juice into good opium, require patience and delicate treatment. It has been truly said that the success of an opium crop depends entirely on the care which is bestowed upon it. In 1878–79, the total outturn in British India was 91,200 chests, of which the export value amounted to £12,993,985, and the net profit to the British Indian Government was £7,700,671. Rather more than half this total was derived from the Bengal monopoly; the other moiety was from the transit cess levied on the Malwa product. About £1,000,000 worth of this opium was exported to Burma and the Malay settlements. The Chinese purchased the remainder for nearly £11,000,000.

Rajputana.—In none of the ancient heroic poems of Hindustan is opium ever alluded to; the guest is often mentioned in them as welcomed by the munwar piala, or 'cup of greeting,' but nowhere by the uml-pani, or 'infused opiate,' which in Rajputana has usurped the place of the phul-ra-arrac, or 'essence of flowers.' Rajputs used the opiate in its crudest form, by simply bruising the capsules, which they steeped a certain time in water, afterwards drinking the infusion, to which they gave the name of 'tejarro,' and not unfrequently 'post,' 'the poppy capsule;' and this practice still prevails in the remote parts of Rajputana, and in parts of the Panjab.

Malwa.—The culture of the poppy for opium seems to have been at first confined to the Doab tract between the Chambal and Sepra, from their sources to their junction; whence it spread throughout Malwa, and into various parts of Rajputana, especially Mewar and Harauti. Kunbi and Jat, and Banya and Brahman, try the culture, but the Kunbi extracts one-fifth more from the plant than any of his competitors. In Rajputana the cultivation of opium increased in the inverse ratio of general prosperity; as war, pestilence, and famine augmented their virulence and depopulated the country, so did the culture of the poppy appear to thrive. The predatory system which succeeded Moghul despotism gradually restricted the harvests of barley, wheat, and gram to a bare sustenance for the families of the cultivator, who then found a substitute in the poppy. From the small extent of its culture, he was able to watch it, or to pay for its protection from pillage; this he could not do for his corn, which a troop of horse might save him the trouble of cutting. The maximum of oppression in Mewar was the maximum of the culture of the poppy in Malwa. Emigration commenced in S. 1840 (A.D. 1784); it was at its height in S. 1856 (A.D. 1800), and went on gradually depopulating that country until S. 1874 (A.D. 1818). Its consumption, of course, kept pace with its production, it having found a vent in foreign markets. The districts to which the emigrants fled were those of Mundisore, Kachrode, Oneil, and others situated on the feeders of the Chambal, in its course through Lower Malwa. There they enjoyed comparative protection and kind treatment, under Appa Sahib and his father, who were long the farmers-general of these fertile lands. Appa advanced funds, and appointed them lands, all fertile though neglected, in which they excavated wells for themselves. They abandoned altogether wheat and barley, growing only makki or 'Indian corn' for food, which requires no irrigation, and to which the poppy succeeds in rotation; to these and the sugar-cane, all their industry was directed. From the year S. 1840 (A.D. 1784) to S. 1857 (A.D. 1801), the market price of the crude opium from the cultivator ran from sixteen to twenty-one salimshahi rupees per durri, a measure of five pucka seers, each seer being the weight of ninety salimshahi rupees. This was the price of the drug by the grower in the first stage, and a better criterion than that of the manufacturer in its prepared state. In the year S. 1857, it rose to twenty-five rupees; in S. 1860 to twenty-seven, gradually increasing till S. 1865 (A.D. 1809), when it attained its maximum of forty-two, or an advance of one hundred and seventy per cent. above the price of the year A.D. 1784; after which it gradually fell until S. 1870 (A.D. 1814), when it was so low as twenty-nine. In S. 1873 it had again risen to thirty-three, and in S. 1874–75, when its transit to the ports of Sind and Gujerat was unmolested (whence it was exported to China and the Archipelago), it had reached thirty-eight and thirty-nine, where in S. 1876 (or A.D. 1820) it stood. In Kanthul (which includes Partabgurh Deola), or the tracts upon the Myhie river, opium was, about A.D. 1820, cultivated to a great extent, and adulterated in an extraordinary manner.

Writing about 1842, Dr. Impey reported that for the successful cultivation of opium, a mild climate, plentiful irrigation, a rich soil, and diligent husbandry, are indispensable. In reference to the first of these, Malwa is placed most favourably. The country is in general from 1300 to 2000 feet above the level of the sea; the mean temperature is moderate, and range of the thermometer small. The poppy is always cultivated in ground near a tank or running stream, so as to be insured at all times of an abundant supply of water. The rich black loam, known by the name of cotton soil, is that preferred there for opium. Though fertile and rich enough to produce thirty successive crops of wheat without fallowing, it is not sufficiently rich for the growth of the poppy until largely supplied with manure. There is, in fact, no crop known to the agriculturist, unless sugar-cane, that requires so much care and labour as the poppy. The ground is first four times ploughed on four successive days, then carefully harrowed; when manure, at the rate of from eight to ten cartloads an acre, is applied to it. This is scarcely half what is allowed a turnip crop in Britain. The crop is after this watered once every eight or ten days, the total number of waterings never exceeding nine in all. One bigha takes two days to soak thoroughly in the cold weather, and four as the hot season approaches. Water applied after the petals drop from the flower, causes the whole to wither and decay. When the plants are six inches high, they are weeded and thinned, leaving about a foot and a half betwixt

each plant; in three months they reach maturity, and are then about four feet in height if well cultivated. The full-grown seed-pod measures three and a half inches vertically, and two and a half in horizontal diameter.

Early in February and March the bleeding process commences. Three small lancet-shaped pieces of iron are bound together with cotton, about one-twelfth of an inch of the blade alone protruding; and this is drawn sharply up from the base to the summit of the pod. The sets of the people are so arranged that each plant is bled all over once every three or four days, the bleedings being three or four times repeated on each plant. This operation always begins to be performed about three or four o'clock in the afternoon, the hottest part of the day. The juice appears almost immediately on the wound being inflicted, in the shape of a thick, gummy milk, which is quickly covered with a brownish pellicle. The exudation is greatest over-night, when the incisions are washed and kept open by the dew. The opium thus derived is scraped off next morning with a blunt iron tool resembling a cleaver in miniature. If the scraper be passed heavily over the seed-pod, so as to carry with it a considerable portion of the beard or pubescence, it contaminates the drug and increases its apparent quantity. The work of scraping begins at dawn, and must be continued till ten o'clock; during this time a workman will collect seven or eight ounces of what is called 'chick.' The drug is next thrown into an earthen vessel, and covered over or drowned in linseed oil, at the rate of two parts of oil to one of chick, so as to prevent evaporation. This is the second process of adulteration,—the ryot desiring to sell the drug as much drenched with oil as possible, the retailers at the same time refusing to purchase that which is thinner than half-dried glue. One acre of well-cultivated ground will yield from 70 to 100 pounds of chick. The price of chick varies from three to six rupees a pound, so that an acre will yield from 200 to 600 rupees' worth of opium at one crop. Three pounds of chick will produce about two pounds of opium, from the third to a fifth of the weight being lost in evaporation. It now passes into the hands of the Banya, who prepares it and brings it to market. From twenty-five to fifty pounds is tied up in parcels in double bags of sheeting cloth, which are suspended from the ceilings so as to avoid air and light, while the spare linseed oil is allowed to drop through. This operation is completed in a week or ten days, but the bags are allowed to remain for a month or six weeks, during which period the last of the oil that can be separated comes away; the rest probably absorbs oxygen and becomes thicker, as in paint. This process occupies from April to June or July, when the rain begins. The bags are next taken down, and their contents carefully emptied into large vats from ten to fifteen feet in diameter, and six or eight inches thick. Here it is mixed together and worked up with the hands five or six hours, until it has acquired a uniform colour and consistence throughout, become tough and capable of being formed into masses. This process is peculiar to Malwa. It is now made up into balls of from eight to ten ounces each, these being thrown, as formed, into a basket full of the chaff of the seed-pods. It is next spread out on ground previously covered with leaves and stalks of the poppy; here it remains for a week or so, when it is turned over and left further to consolidate, until hard enough to bear packing. It is ready for weighing in October or November, and is then sent to market. It is next packed in chests of 150 cakes, the total cost of the drug at the place of production being about fourteen rupees per chest, including all expenses. Manipulations so numerous, complex, and tedious as those described, give the most ample opportunities for the adulteration to which the nature of the drug tempts the fraudulent dealer.

British India Process.—In the British provinces the culture of the poppy is carried on solely for its opium product, and is more of a horticultural than an agricultural undertaking; and the goindor gauhani lands near villages are, as a rule, always chosen. It is grown for opium in Bengal, the N.W. Provinces, and Oudh, and has always been a Government monopoly. It can be traced back to the 16th century. Under the British Government, it was originally in the hands of contractors, who monopolized the manufacture, but in 1797 the management of it was entrusted to a covenanted civil servant. In that year the total area of cultivation amounted to 9460 bighas; but it has steadily increased, and in 1878–9 it reached 928,241 bighas. From August to the end of October, the Government enters into agreements with the cultivators, through the agency of one of their number, whom they themselves select, and he receives a licence and is responsible for balances and any shortcomings, and the cultivators receive advances ranging from Rs. 4 to Rs. 6 per bigha. On the completion of the agreements, the fields are roughly measured, and sowings commence about the middle of November, and are continued till the first or second week of December; and on completion, the fields are accurately measured, and the name and caste of every cultivator, and the area of his field, are entered in the licence. During the cold-weather inspection tours, opium officers and their establishments examine the crop and estimate the out-turn.

The poppy seed germinates in from 10 to 15 days, and when about 2 inches high the fields are carefully weeded, watered, and thinned, those to be retained kept 3 or 4 inches apart from each other. After two weeks, these field operations are repeated, all sickly plants and all foreign herbs are carefully removed, and vigorous plants only left standing, at distances of 7 or 8 inches from each other. Watering and weeding are carried on until the plants commence to flower, which they do about the beginning of February, the time varying according to the time of sowing; and a good cultivator will sow portions of his field at intervals of a week, so that the whole of the plants may not become ready to have the drug extracted at the same time.

A short while after the plants have commenced flowering, the petals are carefully watched and collected, in the following manner:—The forefinger and thumb encircle the stem just beneath the pod, and with the other fingers drawn inwards, a kind of tube is formed. This tube is then raised straight over the pod, and if the petals are matured, they come off; they are never plucked off, as that would injure the pod. The petals thus obtained are formed into platters (patti) for

wrapping round the opium cakes or balls. On the removal of the petals, the pods ripen rapidly, and when they become hard in February and March they are lanced with a three-pointed lancet; a milky juice immediately exudes, and oozing out slowly, the fluid portion evaporates; the outer portion of the tear hardens and assumes a rose-red appearance, the inner, semi-fluid part being of a pinkish hue. The incisions are made in the capsule wall in the afternoon, and if the night be still and dew fall, the yield of opium is full. The tears of opium are carefully scraped off in the morning with a small spoon-shaped iron or shell scraper, and the finger or thumb is run over the incisions to close them. The tears thus collected are placed in an earthen vessel, slightly tilted to drain off the dew. A single healthy plant, under favourable circumstances, yields about 75 grains of opium in from 5 to 8 scarifications. The number of scarifications needed for all the juice to exude ranges from 1 to 8 and even 10. The above operations are carried on every second or third day, according to the time of collection, whether late or early in the season, or condition of the plant, whether sickly or healthy, until all the opium has been extracted from the pods. When the whole of the drug has been collected and treated separately as above described, it is carefully manipulated and put into a new earthen pot (kora), and set aside in some well-ventilated and safe place. Should the opium be of low spissitude, it is exposed in some shady place, very carefully turned over, so as not to spoil the grain (dana), and is so treated till it reaches the required consistency (jharti), and remains in the custody of the cultivator until weighed by the opium officers.

The opium balls or cubes are wrapped up in platters made from the petals of the poppy plant. When the petals have been collected in the manner already mentioned, a circular-ridged earthen plate about twelve inches in diameter is placed over a slow fire, the required quantity of petals are placed flat over it, and these are pressed with a damp cloth till they have adhered together; the flower leaf is then removed and left to dry; these platters are, as a rule, from 6 to 12 inches in diameter, and vary in thickness from that of a sheet of thin paper to that of a sixpence, and are in appearance, when well made, like a pancake.

After the opium has been extracted, the pods are allowed to dry, and are, when in this state, broken up and the seeds collected for next year's sowing, and the surplus for sale.

The produce from one bigha of land sown with poppy varies from 1 to 10 and even 15 seers of opium, according to the nature of the soil and the amount of care bestowed on the land by the cultivator. The leaves of the plant are delivered into the opium factory at 12 annas the man (maund), to be used for packing the opium balls in the chests, to prevent them shifting about and becoming crushed. Opium is paid for at rates from Rs. 4 to 5 per seer (2 lbs.), according to its consistency.

Opium of two qualities is made by Government, —one is called *provision*, or that exported to foreign countries; the other is called *abkari*, and is supplied to the different revenue collectors for consumption in the country; the only difference between them being that the former is manufactured at $\frac{70}{100}$ consistency, and the latter at $\frac{80}{100}$ consistency. The two alkaloids, morphine and narcotine, are also prepared by Government, and supplied to their depôts of medical stores. The whole of the poppy plant and its products are of value to the grower; and in making up the opium into balls, in which form it is nearly all permanently kept, nothing remains in contact with it but the products of the poppy plant.

A prickly plant called 'Bhar-bhar,' as also a parasitic plant called 'tokra,' are most destructive to the poppy; several sorts of insects do immense injury to it, and the plant is liable to diseases. Of these, 'murkha' and 'khurka' are the two most fatal, and a blight, called 'ughia,' has latterly proved very fatal to the plant, and hail, frost, rain, and strong winds also occasion loss.—*Carnegy.*

The plants are occasionally destroyed by insects which attack the roots and leaves, and a second even or third sowing becomes necessary, but their produce is generally much smaller. In 1878 the poppies of Behar were attacked by innumerable hordes of Heliothis armigera.

Patna Process.—Dr. R. Lyell, writing regarding the Patna opium, says that the white variety alone is grown. He mentions his belief that the richness and quantity of the poppy juice are greatly influenced by the nature of the soil on which it is grown, by the modes of cultivation as regards the irrigation, and quantity of manure, kind of seed, etc. The lands in the immediate vicinity of a village are preferred, as facilitating attention to the crop and irrigation. With strong soil, it is grown as a second crop, generally after Indian corn; but in weaker soils, the land is allowed to be fallow when the poppies are off the ground, and is as well manured as the cultivators can afford. Towards the end of September and beginning of October, the land is carefully prepared by two or three ploughings, and the clods of earth are broken down by a hangah or clod crusher. About the middle of October, the sowing is generally begun, and the seed is thrown broadcast, from three to four seers being required for each bigha. To facilitate irrigation, the field is divided into compartments 6 feet by 4 feet; the ground is well watered two or three times before the plant springs, water containing a large quantity of saline matter being preferred; and during its progress to maturity the plant is watered when required. After the plants attain the height of 5 or 6 inches they are thinned at intervals. At first a distance of 3 or 4 inches is preserved between the roots, increased to 6 inches as the plants mature. When not sufficiently thinned, the plants are stunted and the capsules are small; great attention is at the same time bestowed on the weeding and loosening the soil. The young plants removed at the first thinning are sold and eaten as salad; those of the second and third thinnings possess narcotic properties, and are seldom used. The plant matures about the middle or end of January, and as soon as the petals of the flower begin to fall off they are carefully collected and used as a covering for the opium cakes. The three kinds of petals are sold by the cultivators at 6, 8, and 10 rupees the maund. When fresh, they contain a large quantity of gummy matter, which is dried up by spreading them over a hot girdle. About the third week in January, the capsules are sufficiently ripe to undergo scarification by a

four or five bladed lancet, with which are made oblique or longitudinal incisions through the epicarp aud pericarp of the capsule. The scarification is made in the afternoon; the exudation of milky juice takes place immediately, and it is collected early on the following morning. Each set of incisions yields, on an average, a grain or two of opium, and they are repeated four or five times, or as long as any juice continues to flow. The most favourable state of the weather is a still atmospherc and a moderate dew, which allow the juice to thicken and collect in irregular tears, these grains being of a higher consistence and of a rose-red colour towards the surface, while towards the centre they are semi-fluid and of a reddish-white colour. Opium in this state is said to be 'raw.' Strong winds, or a cloudy sky preventing the formation of dew, greatly reduce the quantity of the produce, it being found that the scarifications made in the capsules become closed up by the slight oozing of the juice, and a smaller quantity of opium is obtained. On the other hand, an excessive dew opens the incisions, and the juice drops off the capsules on to the ground, and is lost, or it becomes mixed with a large quantity of dew, which retards the evaporation of the general mass, and separates the soluble from the insoluble parts.

In the manufacture of opium, it is an object of the first importance that when first collected it should contain as little moisture as possible, so that it may be raised to the highest degree of spissitude in the shortest time without exposing to the air. The action of the sun's rays is most detrimental to the physical properties of opium, causing it to assume a black ductile appearance. The average consistence of the juice when first collected is from $\frac{51}{100}$ to $\frac{54}{100}$ consistence. The average quantity produced in a bigha is from five to seven seers, according to the quality of the soil.

The easterly winds of Patna are always damp, and their prevalence while the fresh collected opium remains under a consistence of $\frac{60}{100}$ produces a partial solution of it, especially when it contains moisture, and an exudation of drops of a black shining liquid, termed 'pussawa,' occurs on the surface of the opium. This pussawa contains many of the active principles of the drug, particularly the resin of it. The proportion of pussawa is sometimes increased by the fraudulent admixture of water by the growers, donc in the hope that their opium will be purchased by the gross weight, but it is paid for at half the price of standard opium, viz. Rs. 1.10 per seer. The growers keep their opium in shallow earthen vessels, placed at an angle of about 45° to facilitate the draining off of the pussawa, and the direct rays of the sun, dust, and impurities are carefully guarded against. It is turned over in the dishes every week or two. Poppy seeds yield by expression 56 per cent. of a bland oil, of a pale-gold colour, fluid within ten degrees of the freezing point. It sells in the bazar at from 8 to 10 rupees per maund; is used for cooking and burning. The oil-cake remaining from it is highly nutritious for cattle.

Poppy leaves are used to pack the opium cakes or balls. Each chest of opium contains 40 balls, at 1 seer 7 chittak and 2 kutcha of opium per cake. Dr. Lyell says, 'In Smyrna the seed used is obtained from capsules that have not been punctured for opium. Also, by reducing the number of capsules on a plant, the remainder attain a greatly larger size, and yield a greater quantity of opium of the first quality.'

In Asia Minor and Egypt the poppy growers do not pierce thc capsules from below upwards, as is done in India, but make a cut round the capsulo with a knife. In Egypt thc knife is carricd twice round.

China.—Opium has been known in China at least ever since the Mongol dynasty. During the Ming dynasty it came into more general use as an astringent and sedative medicine, in diarrhœa, dysentery, rheumatism, but generally in combination with other medicines. Li-shi-chin in his Pen Ts'au (about A.D. 1550) describes its collection in a very clear manner, and mentions the fact of its regular sale as a drug. All the early writers are silent as to its use, exccpt in medicine; its naturo is very clearly explained in the work of Li-shi-chin. He calls this herb the internal support. That was about the middle of the 16th century. By the 18th century it must have become a luxury, and the mode of using it by smoking is purely Chinese. During the reign of the emperor Kien Lung, who reigned from 1733 to 1796, a tariff was regularly established, and the duty fixed at three taels for 100 catties, and 2 taels 4 mace and 5 candarines for fees. Mr. Hobson of Hankow has shown that opium was a recognised product of the prefecture of Yung-chan in the west of Yunnan in the year 1736. It is said to have been introduced into Sze-chuen from India and Tibet in the middle of the 18th century. Fully one-half the best arable land in Sze-chuen is believed to be now given up in spring to the bearing of an annual crop of poppy; probably seven-tenths of the dwellers in towns in Sze-chuen are habitual opium smokers, and more than one-half of the country people have adopted this seductive habit. Indian opium, Kung-kau or Kwang-t'u, is being competed with by the native drug, although the price of the former, and its name for better flavour, are still kept up by the native preference for it. Sze-chuen opium, called Chuen-t'u, in good years, can be produced at half the price of the Indian drug. The best Sze-chuen drug comes from Kwi-choo and Pi-hien; and of the extract used for smoking, called Yen-kau and Shuh-yen, the Sze-chuen opium yields more than the Indian product. Yunnan opium and that from Kwi-choo are called Nan-t'u, and by the Chinese are all derisively spoken of as dirt, or as Yoh-t'u, medicinal earth. The opium from Kan-su, Shen-si, and Shan-si is called Sī-t'u, and yields a good extract. Since 1839, a large quantity of opium, some of it of a very inferior kind, is produced in Ho-nan province, and largely consumed on the spot. Hing-ching-hien, and places in Hwang-chau-fu, all in Hu-peh, produce the drug. Manchuria, and in fact all parts of the Chinese empire, produce more or less of this crop, which is sown in the tenth month, and is secured by the third month of the next year.

The Portuguese took it as an article of commerce to China, but up to 1767 the average landed was 200 chests. After 1767 it suddenly increased to 1000 chests, and the English East India Company in 1773 made their first venture. They repeated it in 1776; and the drug, which cost in Calcutta Rs. 500 the chest, was sold in China for

500 dollars. In 1794, Indian opium was imported to the extent of 1500 chests.

At this time the Chinese Government began their efforts of repression. In 1796, it was declared a crime to smoke opium. Up till 1842, it was contraband. British adventurers continued to disregard the Chinese prohibition, and in the year 1839 the Chinese authorities seized and destroyed 20,000 chests of opium, the property of British subjects then in Chinese waters. This led to war between Great Britain and China, and the Chinese paid an indemnity for the opium destroyed, and paid also several millions sterling as compensation for the expenses of the war. In 1842, the treaty of Nankin released the trade. In 1844, however, the emperor was still objecting to the national weakness for opium being made a source of revenue. He said, 'It is true that I cannot prevent the introduction of the flowing poison,—gainseeking and corrupt men will, for profit and sensuality, defeat my wishes; but nothing will induce me to derive a revenue from the vice and misery of my people.' In 1800, the emperor Hea King issued a proclamation forbidding its importation, and prohibiting its cultivation in Yunnan. Nevertheless, in 1827 the foreign imports had increased to nearly 10,000 chests per annum; ten years later to 40,000 chests; in 1856-57 the import was 70,000; and in 1881 it was 90,000. From this rapid increase it is but fair to conjecture that the use of the drug was, previous to the 18th century, limited in China to medical purposes, and that, however long it may have been cultivated in the Chinese province of Yunnan, its use as a luxury was limited, and even in that province the cultivation must have been small. On the coast, however, Dampier states that the use of opium in his time was great and widely extended, and could not therefore have been recently acquired. He states that in 1688 he took in at Acheen from 300 to 400 pounds of opium to trade with at Malacca, where he disposed of it privately, as it was prohibited. From Malacca, he says, ships were accustomed to take it to the different Malay states, and exchange it for pepper and other articles of produce.

After the treaties of Tien-tsing and Pekin, opium was declared a legal import at the duty of 30 taels per pikul, *i.e.* about £10 per chest, and transit dues were also arranged. But the treaty of 1876, known as the Chefoo convention, which was negotiated between Sir Thomas Wade and the Chinese Government, has remained unaccepted by the British Government.

In 1880, the export coastwise to Hankow of Szechuen opium was 927 pikuls. At Hankow it pays an ad valorem export and coasting duty of 7½ per cent. It is known in the trade as Chuen-t'u, and sells at 14 taels, against 15·60 taels for Palung and 17 taels for Yunnan opium,—the quantity in each case being 100 Chinese ounces = $\frac{1}{16}$ of 133⅓ lbs. avoirdupois. Yunnan opium is also exported.

Mr. Edkins says that China grown opium is not palatable even to the Chinese. Mr. Caine, British consul at Hankow, writing in 1871, said that no considerations of an inconsiderable temporary excellence will ever induce the rich to purchase so inferior an article as the native drug.

Opium is at present largely consumed in the Archipelago, in China, in the Indo-Chinese countries, and in many parts of India, much in the same way in which wine, ardent spirits, malt liquor, and cider are consumed in Europe. Stupor, reverie, and voluptuous listlessness are the immediate effects produced. In this state the individual can be at once and easily aroused to exertion or business. No sickness, constipation, or any other functional disturbance supervenes on each indulgence. When the habit is but moderately followed, it appears to occasion no greater effect than the proportionate indulgence in wine or other spirituous liquors. Its deleterious character has been much insisted on, but generally by parties who have had no experience of its effects. Like any other narcotic or stimulant, the habitual use of it is amenable to abuse, and, being more seductive than other stimulants, perhaps more so; but this is certainly the utmost that can be safely charged to it. Millions consume it without any pernicious result, as millions do wine and spirits without any evil consequence. There is not known any person of long experience and competent judgment who has not come to this common-sense conclusion. Dr. Oxley, a physician and naturalist of eminence, and who had had a longer experience than any other man of Singapore, where there was a high rate of consumption of the drug, gave the following opinion:—'The inordinate use, or rather abuse, of the drug most decidedly does bring on early decrepitude, loss of appetite, and a morbid state of all the secretions; but I have seen a man who had used the drug for fifty years in moderation without any evil effects; and one man I recollected in Malacca, who had so used it, was upwards of eighty. Several in the habit of smoking it have assured me that, in moderation, it neither impaired the functions nor shortened life, at the same time fully admitting the deleterious effects of too much.' There is not a word of this that would not be equally true of the use and abuse of ardent spirits, wine, and perhaps even of tobacco. The historian of Sumatra, whose experience and good sense cannot be questioned, came early to the very same conclusion; and the question of its superiority over ardent spirits appears to have been for ever set at rest by the high authority of Sir Benjamin Brodie. 'The effect of opium, when taken into the stomach,' he says, 'is not to stimulate, but to soothe the nervous system. It may be otherwise in some instances, but these are rare exceptions to the general rule. The opium-eater,' he adds, 'is in a passive state, satisfied with his own dreamy condition, while under the influence of the drug. He is useless, but not mischievous. It is quite otherwise with alcoholic liquors.' The editor has seen many smokers of the extract; has purposely sat amongst them, for prolonged occasions, in an opium saloon of Madras, and has seen in India numerous children and grown-up people under the influence of opium, without any evils resulting from it.

Opium, as a luxury, is consumed in different ways. In Great Britain it is either used in a solid state, made into pills, or a tincture in the shape of laudanum. Insidiously it is given to children under a variety of quack forms, such as 'Godfrey's cordial,' etc. In India, the pure opium is either dissolved in water and so used, or rolled into pills. It is there a common native practice to give it to children when very young, by mothers

who require to work and cannot at the same time attend to their offspring. In Rajputana, it is dissolved in water, and the solution, called kusumba, is sipped. There, and in the Panjab, a decoction or infusion, called post, is made by steeping the unripe poppy head in water. In China, usually an extract of it is smoked, or is, in some form or other, swallowed. In Bali, it is first mixed with China paper, and when to be used it is rolled up with the fibres of a particular kind of plantain, and inserted into a hole made at the end of a small bamboo, and smoked. In Java and Sumatra, it is often mixed with sugar and the ripe fruit of the plantain. In Turkey, it is usually taken in the form of pills, and those who do so avoid drinking any water after swallowing them, as this is said to produce violent colic; but to make it more palatable, it is sometimes mixed with syrups or thickened juices; in this form, however, it is less intoxicating, and resembles mead. It is then taken with a spoon, or is dried in small cakes, with the words Mā-shā-allāh imprinted on them. When the dose of two or three drachms a day no longer produces the beatific intoxication so eagerly sought by the opiophagi, they mix the opium with other drugs. It then acts as a stimulant. Besides being used in the shape of pills, it is frequently mixed with hellebore and hemp, and forms an electuary known by the name of majun, whose properties are different from that of opium or its extract, and may account for the want of similitude in the effect of the drug on the Turk and the Chinese. The majun electuary in use in India is variously compounded. In the Panjab, Rajputana, Sind, Cutch, Gujerat, Hindustan, the Mahratta country, in Telingana, by some of the various races, also in Assam, in Burma, as also among the Chinese and the Malays, it is being more and more used in various forms as a nervous sedative, and in Rajputana, Assam, Burma, and China to such an extent as to occasion anxiety in the minds of many regarding the future of the races using it. The Tamil, a Dravidian people of the south of India, and the Aryans of India, do not, however, use it in any form. It is a matter of race proclivities, and the Indo-Germanic tribes of Europe have never taken to it.

In China, since the early part of the 19th century, the emperors and the literati have been striving to restrain the people from its use, and the rude efforts to effect their object have twice brought on them unfortunate wars with Great Britain. But the action taken by the Chinese towards foreign importers has neither evinced a knowledge of man's wants, nor has it been in keeping with their treatment of their own peasantry, who are cultivating the poppy all over China, and two-thirds of the opium used in that country is of native manufacture.

The craving for a nervous stimulant to remove fatigue, to allay irritability, to lighten care, and to dispel gloom, is universal, and seeks satisfaction in many ways, as in the use of alcohol, hemp, opium, tobacco, tea, coffee, chloral hydrate, eau-de-Cologne. The mind often seeks a lull,—there is a natural craving for some soothing stuff. The Chinese authorities strove to prevent its importation, but a great national appetite for any article of consumption has its foundation in the real wants of the people, who manifest a predilection for it. So long as man demands temporary confusion of mind and oblivion of his woes and cares, so long will he find means of obtaining these ends, and smugglers in armed opium-clippers landed it along the coast. It would have been possible for them to prevent the poppy being grown in China, seeing that three months are required for its ripening; and the Indian Government adopted this plan with regard to many of its provinces by Act 1 of 1878, which provides that, except in districts specially exempted, no one shall cultivate the poppy, manufacture, possess, or transport opium, under pain of imprisonment and fine.

In excess, as with other excesses, the effect can only be injurious. But, as Consul Lay says, 'in China the spendthrift, the man of lewd habits, the drunkard, and a large assortment of bad characters, slide into the opium-smoker, hence the drug seems to be chargeable with all the vices of the country.' The moderate use of opium is not only not injurious, but has a beneficial effect on the constitution, improving the health, and warding off sickness. And Consul Gardner, who visited many opium saloons, tells us of the Protestant Christians, who are prohibited opium, and are dissuaded from early marriage, that many die from consumption. Chinese told him that they took to opium-smoking to check blood-spitting.

Dr. Frederick Porter Smith, M.B., a medical missionary in China, tells us that the moderate use of the opium pipe is not incompatible with the health of those who practise it. He adds, however, that the positive necessity of improving or increasing the extract used leads to the loss of the volitional, digestive, and sexual powers, or, in other words, to the gradual degradation of the man. Consul Gardner himself smoked opium for a time, but suddenly stopped it, and suffered inconvenience. But a moderate opium pipe soothes the system, lessens coughs and consumptive tendencies, and is a prophylactic against marsh fever and malaria generally. Mr. Storrs Turner characterized it as 'a pacific and polite vice.' Similar to the smoking of tobacco, cigars, or cavendish, opium-smoking entices away from the use of ardent spirits. Before its introduction into China, there was a great deal more of intemperance from alcoholic intoxicants than is now to be seen in the land. Excess of ardent spirits is, in any country, more injurious than excess in tobacco or opium-smoking. On the average European who is accustomed to smoke tobacco, the smoking of opium in the Chinese fashion will not have any perceptible effect.

Maharaja Narendra Krishna says that many of the elderly and old Hindus of Bengal take opium, and that not a few young men wean themselves from drinking habits by betaking themselves to opium. When taken by the camel-feeders in the sandy deserts of Western Rajputana, it enables the men to subsist on scanty food, and to bear without injury the excessive cold of the desert winter night, and the scorching rays of the sun. Opium in Rajputana acts as a preventive of malarious fever. In the fens of England, a whole population use opium as a prophylactic against ague.

Extract of Opium is the form in which, in China, Further India, and the Archipelago, the drug is employed in opium-smoking. This is known in the Straits Settlements as Chandoo. It is called by the Chinese Yen-kau, also Shuh-yen. More of

the extract is said to be got from the Sze-chuen opium than from the Indian product. Chandoo is usually made by the keepers of the opium saloons, who are heavily taxed and squeezed. Rich people and Buddhist priests make their own chandoo.

The opium, as received at Singapore from Calcutta, is in boxes containing forty balls, each of the size of a 32 lb. cannon shot. These balls are enclosed in a husk of compressed poppy leaves, and contain a certain quantity of moist opium inside, but which in this state is unfit for consumption, for which it is prepared by four processes, in the following manner:—About three or four o'clock in the morning, fires are lighted, and, as the *first* process, a ball is divided into two equal halves by one man, who scoops out with his fingers the soft part inside, and throws it into an earthen dish; frequently during the operation moistening and washing his hands in another vessel, the water of which is carefully preserved, into which also is thrown the hardened poppy leaf husks, when all the removeable opium is obtained. In the *second* operation, the husks are boiled until all their adhering opium is dissolved, and then strained through a double filter of cloth and China paper. The strained fluids are then mixed with the opium that was scooped out in the first operation, and boiled down in a large iron pot to the consistence of treacle. The refuse is dried and sold to Chinese, who adulterate good opium with it; and the filter paper is used by the Chinese as an external application in affections of the lower bowels. In the *third* operation, the dissolved treacle-like mass is seethed over a charcoal fire, strong and steady but not fierce temperature, during which it is worked, spread out, and again and again worked up to expel the water, but prevent it burning. When brought to the proper consistence, it is divided into half-a-dozen lots, each of which is spread like a plaster on a nearly flat iron pot, to the depth of from half to three-quarters of an inch, and then scored in all directions to allow the equal application of heat. One pot after another is then placed over the fire, turned rapidly round, then reversed, so as to expose the opium itself to the full heat of the red fire. This is repeated three times, the time and proper heat being judged by the workman from the aroma and colour. In this part of the process the greatest delicacy is demanded, for a little more or less fire would destroy the morning's work, or 300 or more dollars' worth of opium. The head workmen in Singapore are men who have learned their trade in China, and from their great experience are paid very high wages. The *fourth* operation consists in re-dissolving this fired opium in a large quantity of water, and boiling it in copper vessels till it be reduced to the consistence of the chandoo of the shops, the degree of tenacity being the index of its complete preparation, which is judged of by drawing it out by slips of bamboo. The quantity of chandoo obtained by the soft opium is about 75 per cent. But from the gross opium, that is, including the opium and the husk, the proportion is not more than from 50 to 54 per cent. In this lengthened seething process, the chandoo or extract becomes less irritating and more soporific, the vegetable matter, the resin and oil, the extractive matter and a little opium, being all thrown out in the refuse matter. The quantity of the extract or chandoo obtained from opium depends much on the skill of the workman. But the produce from new opium is almost 10 per cent. higher than from old. Malwa and Persian opium yield almost equally; and the opiums of the Chinese districts all vary. In 1881, Surgeon-Major Sheppard analyzed samples of Shan-si and Amoy opium, and found them yielding a better extract than Patna or Behar, but deficient in aroma. The burning of this extract, in an incomplete manner, as is carefully practised by the Chinese, yields a smoke, containing sundry incomprehensible empyreumatic compounds unknown to the chemist, but producing by absorption into the pulmonary vessels a soothing torpor. The person about to use the pipe lies down and lights the drug at the flame of a candle; the shrivelled skin of the emaciated, confirmed opium-smoker fills out with a soft warmth, the breathing becomes full, the pulse slow and full, and in a few minutes there is a seeming loss of consciousness. The habit can be and is frequently broken off. The use of ammoniated valerian tincture, the employment of nux vomica and other tonics, the temporary smoking of the powdered root of the Aucklandia costus, and above all, the regular provision of wholesome food for both body and mind, are among the plans which may be adopted, along with occasional disciplinary measures, for the cure of the habit.

An adulterated chandoo is prepared on a large scale by mixing the ashes of the opium pipe with the raw opium, which facilitate the making of the watery infusion, and this is further filtered and evaporated to the consistence of a thin extract, which is combustible in the opium pipe held in the flame of a small lamp. This extract, when consumed, leaves a refuse, consisting of charcoal, empyreumatic oil, some of the salts of opium, and a part of the chandoo not consumed. One ounce of chandoo gives nearly half an ounce of this refuse, called tye or tinco. This is smoked and swallowed by the poorer classes, who only pay half the price of chandoo for it. When smoked, it yields a further refuse, called sam-shing, and this even is used by the still poorer, although it contains a very small quantity of the narcotic principle. Sam-shing, however, is never smoked, as it cannot furnish any smoke, but is swallowed, and that not unfrequently mixed with arrack. Nothing is lost by the Chinese practised manipulator. From the ash about 50 per cent. of a smokeable extract is obtained. It is this adulterated article that enables the opium saloon to sell opium at apparently cost price, the ash paying for the light, attendance, house rent, and profit. Chandoo has never been analyzed; it is often adulterated; 75 per cent. is obtained from soft opium, 50 to 54 per cent. from the gross opium, *i.e.* including the husk. In the lost portion, what has disappeared of the opium alkaloids—morphia, narcotine, codeia, etc.—has never been shown, nor what is the composition of the resulting chandoo. Sir George Birdwood says that none of the active principles of opium are volatilizable, *i.e.* smokeable; and what chandoo smoke is remains unknown. Chandoo is largely exported from China.

Adulteration.—The value of opium increases for a short time by age; but this soon ceases to be the case, and Turkey opium in particular deteriorates unless carefully preserved from the air. To be enabled to judge of good opium, one must be

well acquainted with the different varieties of it, their respective colours, tastes, and textures, as well as the natural degree of moisture, and see that no mechanical admixtures are apparent, nor left on a filter. The modes of adulterating opium are various. Pounded leaves, catechu, cow-dung, coarse sugar, and many other ingredients, are used for this purpose.

Dr. Royle says the most injurious fraud is that of washing out the soluble and most valuable parts of opium, and bringing the residual mass for sale. In this case the opium loses its translucency and redness of colour, also its adhesiveness. Sand, clayey mud, sugar, molasses, cow-dung, datura leaves, the glutinous juice of Ægle marmelos, and even pounded poppy seed, are employed to adulterate opium. Malwa opium often contains oil and other matters obtained by the expression of the poppy heads. Some kinds of opium from which morphia has been extracted have been occasionally met with in European commerce. Adulteration, in China, is by adding mud, sesamum, and hemp seeds, and an extract from the fruit of the Sophora Japonica; but the Rev. Dr. F. P. Smith, M.B., says it is less tampered with than foreign opium.

In the Indian drying room, the balls of opium are liable to be attacked by weevils during moist winds.

Opium greatly varies as to its alkaloids. Sir W. O'Shaughnessy found that the morphia and narcotine in the Behar opium ranged from 1¾ to 10¾ per cent. The Pharmacographia notices sixteen natural alkaloids.

It may be said that a percentage of the population of the Panjab, of Rajputana, of Telingana, the Central Provinces, and the Mahrattas use opium,—the infants most largely. Deputy Surgeon-General Moore, during 1870, found 6·73 per cent. of the out-patients at Rajputana dispensaries using opium in the form of a solution or cold infusion, called amal-pani. In another inquiry, however, he found the percentage 11·32 out of 36,636 persons to be —males, 63·32; females, 10·74; children, 25·94. He found that all children get amal-pani. Other forms than amal-pani are only ·31. Those using opium in Rajputana do not, as a very general rule, indulge in alcohol.

In Burma it is smoked, and the quantity imported has greatly increased, even more rapidly than the population. The consumption there of 1869 was doubled in 1879, while the population of 1868-69 was 2,395,985, and in 1878-79 it was 3,088,902. There is a continuous flow of immigrants from China (the Chinese in 1881 numbered 11,314), and their use of the opium pipe is without any bad results. Amongst the Burmese, however, the demoralization, misery, and ruin produced by opium-smoking presents a painful picture. The Chinese in Burma are diligently engaged in all the avocations of life. The Burmese, at all times indolent and averse to regular labour, can support themselves by working one day in three, and they have been unable to resist the temptation.

In the British settlement of Singapore, owing to the high rate of wages, and the prevalence of a Chinese population, the consumption is at the rate of about 330 grains a year for each person. In Java, where the Chinese do not compose above one in a hundred of the population, and where wages are comparatively low, it does not exceed 40 grains. In China, Mr. Brereton estimated that, in 1881, out of a population of 400,000,000 the opium-smokers were 3,000,000. Of these, the smokers of foreign opium are estimated at 1,000,000. The total estimated value of the opium smoked is £25,000,000 sterling, viz. Indian, £16,800,000; Chinese, £8,400,000. At these estimates, the smokers of foreign opium spend 11d. per man daily, and the smokers of Chinese opium 2¾d. daily.

Sir Robert Hart's introductory note to the reports and statistics on opium and opium-smoking says:—'In round numbers, the annual importation of foreign opium may be said to amount to 100,000 chests, or, allowing 100 catties to each chest, 10,000,000 catties (the catty is the Chinese pound; one catty is equal to one pound and a third avoirdupois). When boiled down and converted into what is known as "prepared opium," the raw drug loses about 30 per cent. in weight; accordingly, 10,000,000 catties of the unprepared drug imported reach the hands of retailers as, say, 7,000,000 catties of prepared opium. The catty is divided into 16 liang (ounces), and the liang into tenths called mace; in 7,000,000 catties there are, therefore, 1,120,000,000 mace of prepared opium for smokers. Before reaching the smoker, opium pays the Chinese Government import duty and likin taxes amounting to, say, 100 taels, and is then sold at, say, 800 taels of Chinese sycee or silver (£3 = 10 taels) per 100 catties; thus the total quantity retailed—*i.e.* imported—may be said to be paid for with 56,000,000 taels, or £16,800,000, and one mace of prepared opium is consequently worth, say, about 3½d. (English). Divided by the number of days in the year, the quantity of prepared opium smoked daily may be said to be 3,068,413 mace, and the value 11,046,573d. or £46,027. Average smokers consume three mace of prepared opium, and spend about 10¾d. daily. This quantity is the same as 6-15ths of an ounce avoirdupois, and suffices for from 30 to 40 pipes —*i.e.* whiffs, draws, or inhalations. If we divide the total number of mace consumed daily by the total quantity each average smoker consumes daily, we find that there are in round numbers above 1,000,000 smokers of foreign opium. The population of China is spoken of as amounting to more than 400,000,000, and may fairly be pronounced to be something above 300,000,000. Estimating the population at 300,000,000, and opium-smokers at 1,000,000, and proceeding with the calculation, the result is that 3⅓ in every 1000 smoke, —that is, that opium-smoking is practised by one-third of one per cent. of the population. In addition to the foreign drug, there is also the native product. Reliable statistics cannot be obtained respecting the total quantity produced. Ichang, the port nearest Sze-chuen, the province which is generally believed to be the chief producer and chief consumer of native opium, estimates the total production of native opium at 25,000 chests annually; while another port, Ningpo, far away on the coast, estimates it at 265,000 chests. Treating all such replies as merely so many guesses, there are, it is to be remarked, two statements which may be taken as facts in this connection: the one is that, so far as we know to-day, the native opium produced does not exceed the foreign import in quantity; and the other, that native opium was known, produced,

and used long before any Europeans began the sale of the foreign drug along the coast. Granting, then, that the native product equals the foreign import, and that 100,000 chests are produced annually, and granting also that this quantity, when prepared, provides 1,120,000,000 mace of prepared opium for the annual consumption of 1,000,000 additional smokers, the number of opium-smokers in China may be said to be in all 2,000,000, or two-thirds of one per cent. of the population. The native product sells for one-half the price obtained for the foreign drug, and may be estimated to be paid for with, say, £8,400,000 by 1,000,000 smokers, who spend about 5¼d. a-piece daily. The total amount spent by China on this luxury produced at home and imported from abroad is thus, say, £25,000,000 annually.

'Examined in this way, the results arrived at are that 200,000 chests, or almost 13,000 tons (1680 catties=1 ton), of unprepared opium are consumed annually by 2,000,000 opium-smokers; that these smokers expend £25,000,000 on opium; that this is an expenditure of, say, from 5d. to 11d. daily by individual smokers; and that all the smokers amount to only two-thirds of one per cent. of the population. If more than three mace a-piece is consumed daily by smokers, then smokers are less numerous; if less than three mace, then smokers are more numerous, and smoking individually less harmful. The truth is that many smoke more than three mace and many less, but from the statistical point of view it is safe to say that opium-smokers in China constitute simply two-thirds of one per cent. of the population. On the supposition even that the quantity of native opium produced is ten times that of the foreign opium imported, the total will not yet suffice for the consumption of even four per cent. of the population. Four per cent. is a small percentage, but in China it means 12 millions of people. It is hardly credible, however, that native opium is produced in such quantity; but whatever the number of opium-smokers may really be,—and allowing that many people smoke without injury,—there must in any case be a percentage of smokers for whom the habit works nothing but evil.

'Chinese who have studied the opium question are opposed to a traffic which more or less harms smokers, now numbering, say, over two millions, and annually increasing; at the same time, they admit that opium provides a large revenue, that expenditure for opium and liability to the incidence of opium taxation touch an infinitesimally small percentage of the population, and that neither the finances of the State, nor the wealth of its people, nor the growth of its population, can be specially damaged by a luxury which only draws from 5d. to 11d. a-piece a day from the pockets of those who indulge in it, and which is indulged in by only two-thirds of one per cent. of the population. They admit all this, but they do not find in either the revenue produced or the statistical demonstration of its percentage innocuousness, any sufficient reason for welcoming the growth of the trade or for desisting from the attempt to check the consumption of opium.'

The opium sold by public auction in Calcutta is termed 'provision' opium. This is mostly exported to China. But in addition to the quantity exported, about 4000 chests of Bengal opium are consumed in India. This is termed 'abkari.'

During the twenty years up to 1881, the annual average production of 'provision' opium was 50,154 chests, and in that period the price of crude opium varied from Rs. 4.8 to Rs. 5 a seer. The actual cost of a chest of Bengal opium, including interest on the capital and all indirect charges, is as follows:—

	Behar.	Benares. At 70°.
68 seers 2 chittak at 75° consistence, equals 73 seers at 70° consistence, at Rs. 5 per seer, ...	Rs. 365	Rs. 341
Cost of manufacture and packing, interest on capital, charges for pensions, and leave allowances of officers, .	71	66
	Rs. 436	Rs. 407

Being an average of Rs. 421.

The weight of a chest is 140 lbs. avoirdupois. The average price realized on a chest of Bengal opium for the ten years ending 1880–81 may be taken at Rs. 1280; the average profit, therefore, may be taken at Rs. 1280 − 421 = Rs. 859. Malwa opium is a product of that native state, and as it passes through a British Indian port for shipment, the British Indian Government levies a duty on it of Rs. 700 a chest. The average number of chests of Bengal opium sold in the ten years up to 1880–81 was 49,337. But in 1881 the quantity being offered for sale was 56,400 chests. To secure a continuous supply of 56,000 chests of Bengal opium yearly, the Government of India maintain a reserve. The quantity so stored was in 1881 only 21,752 chests, while in 1878 it had been 48,482 chests.

The *British Indian* income from the opium monopoly is obtained by two principal means, namely, by a system of allowing the cultivation of the poppy by the natives of British India on account of Government, and by the impost of a heavy duty on opium grown and manufactured in foreign states, but brought in transit to a British port for exportation. The former system obtains in Bengal, the latter in Bombay. According to the statements published, Bengal opium yields a profit of 7s. 6d. per lb., whilst the duty levied in Bombay Presidency is only equal to a surplus of 5s. 8d. per lb.

The gross revenue, the expenditure charges, and the net revenue on account of opium in the Bengal and Bombay Presidencies from 1870–71 to 1880–81 are as under. The receipts from provision opium and the cost price of opium sold to the excise department are included. The receipts realized by the provincial governments on the sale of opium are not included.

	Gross Revenue.	Expenditure.	Net Revenue.
1871–72, .	£9,253,859	£1,596,646	£7,657,213
1872–73, .	8,684,691	1,814,268	6,870,423
1873–74, .	8,324,879	2,001,280	6,323,599
1874–75, .	8,556,328	2,341,282	6,215,046
1875–76, .	8,470,591	2,217,851	6,252,740
1876–77, .	9,122,428	2,841,644	6,280,784
1877–78, .	9,182,603	2,659,504	6,523,099
1878–79, .	9,397,762	1,697,792	7,699,970
1879–80, .	10,317,300	2,067,492	8,249,808
1880–81, .	10,479,942	2,028,757	8,451,185

The receipts by the Government of India, under the head of opium, include three items, viz. (1) the money realized at the Calcutta auction sales; (2) the receipts from the Malwa pass duty; (3) the cost price money credited by the excise department to the opium department. For the ten years up to 1881, the re-sale under the excise

regulations, on account of the sale of Bengal opium, amounted to £381,000.

The revenue of British India from this source is doubtless a very serious amount to risk, but the following will show that it had risen with a bound since 1840, after the first war, and also possibly since steam-ships replaced the sailing clippers:—

	Gross Revenue.	Expenditure.	Net Revenue.
1800-01, . .	£372,502	£105,381	£267,121
1810-11, . .	935,996	96,188	839,808
1820-21, . .	1,436,432	135,726	1,300,706
1830-31, . .	1,341,988	319,964	1,022,024
1840-41, . .	1,430,499	556,222	874,277
1850-51, . .	3,795,300	1,044,952	2,750,348
1860-61, . .	6,676,759	918,467	5,758,292

The prices obtained for the opium have, as with other products, varied with the demand. Between 1850–51 and 1880–81, the average price per chest of Bengal opium realized in each year at the Government sales has ranged from between £74, 8s. and £184, 13s. 11d.; and as the chest contains 140 lbs., these prices rule from about 10s. 6d. to £1, 7s. the lb. avoirdupois.

The opium monopoly of the British Indian Government is deemed essentially necessary as a source of revenue, but in its present form is a protection of the most intense description. Licensed cultivators are permitted to cultivate the poppy, but the juice must be sold to Government at a certain fixed price. It is manufactured into opium in the Government factories at Patna and Benares, and then sent to Calcutta, and sold by auction to merchants, who export it to China.

This action of the British Indian Government in manufacturing and selling opium knowingly for the Chinese market has been stigmatized as forcing opium upon China against the action of its Government; and the opinion has been advanced that the importation of opium into China by Christian people throws obloquy on the Christian religion, and discourages the efforts of Christian missionaries; also that it is unworthy of a great Government to interfere in commercial matters by exercising the Bengal monopoly, and that it is to its discredit to make profit in this direct manner out of a traffic which is open to grave moral objections.

The monopoly of cultivation is undoubtedly intense, but it is replied that it is limited to certain districts in Bengal; and in the 575,263 square miles of territories of native princes, it is, so far as regards the British Indian Government, wholly free, the fiscal right of taxing it in transit being alone imposed. And it is now known that since many hundred years the poppy has been grown in China for its opium, which is being produced there in quantities in at least double the quantity exported from British India. It has been suggested that the British Indian Government should substitute an excise duty for its monopoly. But the British Indian opium keeps its place in China for its excellence, and under any excise system its position would undoubtedly be lost amongst the Chinese, its greatest consumers.—*Simmonds; Jour. Ind. Archip.* January 1848; *Les Anglais et l'Inde*, p. 251; *Powell's Handbook; Cameron; Tod's Rajasthan*, ii. p. 630; *M'Culloch's Dict.; O'Sh.; Smith's Mat. OPIUM-CLIPPER, a quick-sailing vessel, formerly employed in smuggling opium from India into China. The opium from India was stored in receiving ships, to be trans-shipped into opium-clippers equipped for fighting their way, and partly into Chinese craft; and it was by the latter that the smuggling was conducted, the proceedings of the opium-clippers being more in the way of a traffic at various points on the Chinese coast, carried on openly, and, where necessary, in open defiance of the Chinese authorities.—*Simmonds.*

OPLISMENUS, a genus of plants of the order Panicaceæ. O. Burmanni, *Rom. and Sch.*, grows in Bengal, as also does O. colonus, *Kth.*, called in Bengali, Shama; cattle are very fond of it. Enormous islets of living water-grasses, as Oplismenus stagninus and other plants, float on the Megna river. O. lanceolatus, *Kth.*, and O. strictus, *Sch.*, are also Bengal plants. Oplismenus stagninus is cultivated in gardens at Kotah.

Oplismenus frumentaceus, *Roxb.*

Panicum frumentaceum, *Roxb.*

Damra-shama, . . BENG.	Samaka, ... HIND.
Shama, ... ,,	Sanwak, ... ,,

Several varieties of this grass are cultivated in British India; cattle are fond of it, and the seeds are wholesome and nourishing, and constitute an article of diet amongst the poorer people; in a good soil, it yields about fifty fold. In the Panjab it is a cultivated cereal, uncommon out in the plains except Cis-Sutlej, and common in places in the eastern part only of the Panjab Himalaya, but its grain is considered heating, and it is one of the poorer of the millets.—*Hooker; Genl. Med. Top.; Roxb.; Voigt; Stewart.*

OPOBALSAM, Balsamum Egyptiacum.

Akuyila-semun-i-rumi, AR.	Opobalsamo, ... IT.
Balisan, . . . EGYPT.	Bals. verum album, LAT.
Balm of Gilead, . . ENG.	Judaicum de Mecca, ,,
Balm of Mecca, . ,,	Roughan-i-Balsan, PERS.
Balsamier de la Meque, FR.	

Balm of Mecca is procured from the Balsamodendron Gileadense, a middle-sized tree growing in Arabia, also from the Balsamum Berryanum. There is but little of the true balm of Gilead which reaches Britain. The same may be said of another of the terebinthine resins, B'dellium, which is obtained from India and from Africa. The best Opobalsamum is obtained from the greenish liquor found in the kernel of the Balsamum Berryanum. An inferior quality of Opobalsum is obtained by expression from the fruit of Amyris Gileadensis when the fruit is at maturity. The carpobalsamum

of the ancients was from the fruit of the Amyris Gileadense. It is a liquid gum-resin, obtained from the Amyris Gileadensis, a tree found in Arabia, Abyssinia, and Syria. It is first turbid and white; of a pungent smell resembling turpentine, but sweeter; and of a bitter, acrid, astringent taste. When old, it becomes thin, limpid, of a greenish hue, then of a golden yellow, and at length of the colour of honey. It is chiefly used as a cosmetic by the Turkish ladies.—*M'Culloch.*

OPOIDIA GALBANIFERA, of the tribe Symrneæ; its gum occurs in commerce in agglutinated plastic masses. It is hot, acrid, and bitter, and in properties resembles asafœtida, but weaker. —*M'C.; Royle, Ill.; O'Sh.*

OPONE of Ptolemy, Cape Guardafui, the Jurd-Hafun or Gurd-Hafun of the Arabs.

OPOPONAX.

Jawashir, AR., H., PERS.	Opoponace, ... IT.
Peh-chi-hiang, . . CHIN.	Gawsher, ... PERS.
Panax gummi, . . GER.	Opoponaca, ... SP.

A gum-resin obtained from the stalks of Opoponax chironium, a tall plant. According to Pelletier's analysis, 100 parts contain—resin 42, gum 33, starch 4, extractive and malic acid 4, volatile oil 5, with traces of caoutchouc and wax, and 9 of woody fibre. The sp. gr. 1·622; with water it forms a milky fluid. Opoponax is derived from ὀπος, juice; παν, all; and ἀχος, a remedy,—meaning that it is a remedy for all diseases. In action it resembles asafœtida, but is much feebler. The plant occurs in dry fields in the south of Europe and Asia Minor. The milky juice which exudes from the root when wounded, hardens into a fœtid gum-resin. Jawashir is imported into India from Arabia, and into England from Asia Minor. The resin is found in all the bazars of Bengal, and is even exported from British India to Europe. Jawashir in the bazars of Baghdad sells for 10½d. per lb., and is imported from Persia.—*O'Sh.; M'Cull. Com. Dict.; Powell.*

OPOSSUM of Australia is the Phalangister vulpina. The long-tailed flying opossum of Australia is the Belidens flaviventris. It is also called the flying squirrel, also the yellow-bellied flying phalanger. The opossum is the only marsupial which seems to hold its ground in the presence of animals of the old world. It is found throughout Australia, New Guinea, and the Moluccas, and has become more numerous in the settled districts of New South Wales than when the continent was first settled. This is probably owing to their taking up their abode in the forest trees, whence they also derive their food, so that they are not liable to the attacks of beasts of prey.

OPUNTIA, a genus of plants of the order Cactaceæ, several species of which have been introduced into British India, from the West Indies, Peru, and Brazil.

O. Braziliensis, *D.C.*, from Brazil, with large greenish-yellow flowers.
O. cochinellifera, *Haw.*, syn. of Cactus cochinellifer of S. America, with the petals bright rose-coloured at several seasons of the year. It is one of the plants employed in the W. Indies for rearing the cochineal.
O. curassavica, *Haw.*, syn. of C. curassavicus, *L.*, from Curaçoa, with large yellow flowers, 1½ inch across.
O. cylindrica, *D.C.*, syn. of C. cylindrica, *Lam.*, from Peru, with largish scarlet flowers.
O. Dillenii, *Haw.*, syn. of C. Dillenii, *Ker*, and C. Indicus, *Roxb.*, from S. America, is the Nagphana of Bengal, and the prickly pear of Europeans in India; wild cochineal insect thrives on this plant.
O. elatior, *Haw.*, from S. America, with large purplish-yellow flowers.
O. ficus Indica, *Haw.*, from S. America, syn. of C. ficus Indica, with large sulphur-yellow flowers.
O. leucantha, *Hort.*, *Berol.*
O. nigricans, *Haw.*, *D.C.*, C. tuna, β nigricans, *B.M.*, from S. America.
O. Roxburghiana, syn. of C. Chinensis, *Roxb.*
O. rubescens, *Salm.*, from Brazil.
O. triacantha, *D.C.*, from S. America.
O. tuna, *Haw.*, syn. of C. tuna major, *Roxb.*, from S. America, with large reddish flowers. It is the favourite food of the cochineal in Mexico and Brazil, and is the only species employed in the Canaries.
O. vulgaris, *Haw.*, syn. of Cactus opuntia, *L.*, Southern States of N. America, cultivated in Europe, where its fruit is called the Indian fig.

Dr. Fontana, in the Asiatic Annual Register for 1799 (reprinted in Pennant's Indian Recreations), mentions both the Manilla and Chinese opuntias, and states that the cochineal insect cultivation was extended in Bengal; but in 1795 only 5 rupees a seer, and in 1797, 7 rupees a seer, were given for Bengal cochineal, when Mexican was selling at about 16 to 20 rupees. Dr. Fontana states the Bengal Cocus sylvestris contained only from 9—16 to 10—16 parts of the colouring matter contained in the Mexican, and the cultivation was given up.—*Roxb.; Royle, Ill.; Muller; Voigt; Eng. Cyc.*

ORA, a large tree of the Society Islands; from the bark a brown cloth is made.

ORACHE, or Mountain Spinage, one of the Chenopodiaceæ. Of these there are several varieties, commonly known as red and green sage; the leaves are slightly acid; both sorts are boiled as spinage, but the red is most esteemed. Propagated by seed; no particular soil required.—*Riddell.*

ORAKZAI, a Pathan tribe, residing in Tirah, intermingled with the Afridi, and some of them are found in the hills south of Peshawur. They are to be met with to the north-west of Kohat, near the Hungoo valley. It was a malik or chief of this tribe who conducted Nadir Shah and a force of cavalry by the route of Chura and Tirah to Peshawur, when the principal road through the hills was defended against him.

ORANG, a Malay word meaning a people, a race.

Orang Baju, or Baju Laut, seafaring people.

Orang Binua, the people of the country, the aborigines. The Malay of the Peninsula often designate, by the term Orang Binua, the Udai, Jakun, Mintira, Sakai, and Besisi, the five tribes occupying the lands around the lofty Gunong Bernum, or Bernum Hill.

The Orang Binua of Johore occupy all the interior of Johore over which the Tamungong rules. They also possess the interior of the most southerly portion of Pahang. They occupy the upper branches of the rivers Johore (the Lingiu and the Sayong), Binut, Pontian, Batu Pahat or Rio Formosa (the Simpang Kiri, Pau, and Simrong, with their numerous affluents), and Indau (the Anak Indau, Simrong, and Made), with the country watered by them. By means of these rivers a constant communication is maintained between the families of the Binua on the two sides of the Peninsula. No Binua were found on the river Johore below the junction of the Sayong

and Lingiu. There are none on the Pulai; and the aboriginal families on the Tamrao and Sakodai, which fall into the old Straits of Singapore (Orang Sabimba) were, about A.D. 1840, imported by the Tamungong from the islands of Battam to the south of Singapore, for the purpose of collecting taban (gutta-percha). The river nomades (Biduanda Kallang or Orang Sletar) and the sea nomades (Orang Tambusa), termed also Orang Laut and Ryot Laut, people of the sea, etc., who lurk about the estuaries and creeks of the Johore, Libbam, and other rivers along the southern coast of the Peninsula, are distinct from the Orang Binua, and cut off from all communication with them. Binua have never been known on the upper part of the Sidili, although it has its source in the same mountains where the Johore and the Made rise. On the north-west they do not extend beyond the Simpang Kiri and Pau.

About half a day's walk from the source of the former rises an affluent of the river Muar, called Sungei Pago, which gives its name to a tribe found on its banks and amongst the adjacent hills. The Binua describe the Orang Pago as a wild race, naked, without houses, shunning all intercourse with the Malays, and having very little intercourse even with them. They are probably a secluded and rude branch of the Udai, or of the Jakun.

Orang Gunong, people of the mountains, hillmen of Malay Peninsula and Banca.

Orang Gugu and Orang Kubu are two uncivilised races in the interior of Sumatra.

Orang Laut or sea-people, also called Ryot Laut, are similar in their habits to the Baju Laut, and are found upon the coasts of Borneo and Celebes; but, though belonging to it, they can scarcely be said to inhabit the island, for they live entirely in their little prahus, and sail about the coasts. They subsist principally by fishing, and it is said that they were always ready to give information to the piratical rovers. The arms of the Orang Laut are the limbing, or lance; the tampuling, a large hook; the kujore, a sort of spear with a very broad head, used in fishing; and the serampong, a sort of prong. In Borneo, three distinct tribes live in prahus, and wander about the shores of the island,—the Lanun from Magindanao, and the Orang Baju and Orang Tidong, source unknown. The Dyak are the Orang Binua, or aboriginal inhabitants of Borneo. They are scattered in small tribes over the face of the island, those inhabiting the banks of the large rivers being generally under the dominion of one more powerful than the rest; but the tribes which reside in the depths of the forests, where the communication between them is more difficult, are generally perfectly distinct from each other.

Orang Malayu is the Malay race.

Orang Menangkabau, the people of Menangkabau.

Orang Selat, the Cellates of Valentyn, men of the Straits of Malacca; Selat, MALAY, a strait. These seem the same with the Orang Sletar, originally, with the Biduanda Kallang, joint occupants of Singapore. They speak a Malay dialect with a guttural accent.

Orang Rawa, a people of Rawa, Raw or Ara in Sumatra, immediately to the north of Menangkabau, and penetrated by the large but scarcely navigable river Rakan.

Orang Selong, a maritime people of the Malay Archipelago.

ORANG UTAN, MALAY, lit. wild man, is the name by which the species of Pithecus (Simia of Linnæus) are known to the people of Borneo and Sumatra, and also to Europeans. They live on the low flat plains of those great islands where the forests are densest and most sombre. The Bengal Asiatic Society's museum received from Sir James Brooke of Sarawak, seven skeletons of large adult orang-outangs; and Mr. Blyth distinguished from them the species Pithecus Brookei or Mias rambi, P. satyrus or Mias pappan, P. curtus or Mias chapin? P. morio or Mias kassar, P. Owenii. The different species of these animals do not appear to inhabit the same district; and seemingly P. Owenii represents, in the southern part of the great island, the P. morio of the northern part. Jerdon names only Simia satyrus and Simia morio as from Borneo and Sumatra.

P. satyrus of Geoffroy (Simia satyrus of Linnæus) is the red orang. The muzzle is large, elongated, somewhat rounded anteriorly; forehead sloping backwards, slight supraciliary ridges, but strong sagittal and lambdoidal crests. Facial angle, 30°. Auricles small; twelve pairs of ribs; bones of the sternum in a double alternate row. Arms reaching to the ankle-joint. No ligamentum teres in the hip-joint. Feet long and narrow; hallux not extending to the end of the metacarpal bone of the adjoining toe; often wanting the ungual phalanx and nail. Canines very large, their apices extending beyond the intervals of the opposite teeth. Intermaxillary bones anchylosed to the maxillaries during the second or permanent dentition. Height under five feet. It is an inhabitant of the islands of Borneo and Sumatra.

The orang-outang occupies the third place from the highest in the animal kingdom, the gorilla being first, and the chimpanzee second. The most striking feature of the orang is its great size and general resemblance to man. The chest, arms, and hands are especially human-like in their size and general outline. Each individual differs as widely from his fellows, and has as many facial peculiarities belonging to himself, as can be found in the individuals of any unmixed race of human beings. The faces of the more intelligent orangs are capable of a great variety of expression, and in some the exhibition of the various passions which are popularly supposed to belong to human beings alone is truly remarkable.

The nest of the orang-outang consists of a quantity of leafy branches broken off and piled loosely into the fork of a tree. He usually selects a small tree, and builds his nest in the top; or he builds his nest low down, often within 25 feet of the ground, and seldom higher than 40 feet. It is usually 2 feet in diameter, and quite flat on the top. The branches are merely piled crosswise, precisely as a man would build one for himself were he obliged to pass a night in a tree top, and had neither axe nor knife to cut branches. Upon this leafy platform the orang lies prone upon his back, with his long arms and short thick legs thrust outward and upward, firmly grasping while he sleeps the nearest large branches within his reach. An orang probably uses his nest several nights in succession, but never after the leaves become withered and dry, no doubt

for the reason that the bare branches afford an uncomfortable resting-place.

The orangs of Borneo fight a great deal. All the old ones are covered with scars inflicted by the formidable canine teeth, which these animals use wholly for defence and offence, since they are fruit-eating, and hence do not employ them in chewing. Their effort is always to seize the arm or head of an enemy, and draw the fingers or lips into their mouth, instead of advancing their own heads to bite.—*Mr. Blyth in Ben. As. Soc. Journal; Jerdon's Mammalia; Mr. W. T. Hornaday in Proceedings Amer. Association.*

This is a native of India, being found in the forests on the borders of Sylhet, and also on the Neilgherries and in Orissa, perhaps also in China. The Asiatic names for the orange and lemon also indicate the south and east of Asia as their native country.

The Sanskrit Naga-ranga and the Arabic Naranj are no doubt the Naranja (Spanish), Arancia (Italian), whence we have aurantium and orange; and those for the lemon are Sanskrit Nimbuka, Bengali Nibu, Hindi Nimu and Limbu. Also Persian and Arabian authors do not, as is their wont, give any Greek synonym of either; but of the citron, which is supposed to have been known to the Romans, they say that marseeska is the Yunani, and atrogha the Syrian name, neither of which terms have been traced.

The orange has been largely cultivated, and now includes as varieties, the common sweet orange, the Seville or bitter orange (*var.* Bigaradia), the Mandarine orange of China (*var.* Nobilis, *sub-var.* Mandarinum), the Tangerine (*var.* Nobilis, *sub-var.* Tangerina), Citrus Bergamium, *Risso;* C. dulcis, *Volkmaer*. The Shaddock (C. decumana) and Forbidden Fruit (C. Paradisi) are also sub-varieties. The rind and flowers of C. Bergamium yield the bergamote oil of commerce; and C. Bigaradia, *Duhamel*, yields the neroli oil, so delicious and costly as a perfume.

The orange tree attains a height of 16 or 20 feet, and, like others of the genus, bears the fruit at all ages at the same time with the flowers. Though a native of India, it does not ripen its fruit there until the winter, and hence has been able to travel so much farther north than others of its compatriots. The Coolee orange of China, the Ch'ang of the Chinese, is a large thorny tree, but there is also a small variety. Its fruit has a thin, yellow, closely adhering skin, and fine but rather sharp flavour; marmalade is made of the fruit. The kan or chii or sha-kan of the Chinese is the red-skinned variety, the Citrus nobilis of authors; its rind is connected with the endocarp by many loose threads. It grows in Central China, and its fruit is smaller and sweeter than that of the Coolee orange; it is used as dessert, and its peel is exported to Japan. In the Dekhan the finest sorts are the cintra, cowlah, and a small sweet orange which grows on a tree more like a creeper. The principal method of culture is by budding, the stocks generally being either seedlings or cuttings from the sweet lime. The best cintra, with a thin close rind, is produced upon the seedling stock, and it is said that the fruit grown upon the sweet lime stock is generally loose and soft; this is very perceptible with some of the oranges. The best time for budding is in the cold season. In Tenasserim, the trees are often exceedingly prolific. A seedling planted produced in the ninth year more than two thousand oranges. In the island of St. Michael, in the Azores, a single tree has been said to produce 20,000 oranges fit for exportation.

The leaves are rather bitter, and contain essential oil. The fragrant oil of neroli is afforded by the flowers. The berries while unripe are gathered, dried, and turned in the lathe to the size of peas, and are used in issues on account of their fragrant odour. The rind or peel is bitter and aromatic, and affords a very useful stomachic tincture and syrup. The juice of the ripe fruit contains sugar, malic and citric acids, citrate of lime, mucilage, albumen, and gum. Like the lemon juice, it makes an excellent cooling drink, and is an invaluable specific in the treatment of scorbutic diseases. The fruit is eaten as a dessert, is candied, and is made into marmalade. When of a small size, the fruit which falls off is dried, and forms the Curaçoa oranges, employed in flavouring curaçoa. One variety of the orange fruit is in high estimation amongst the Tamil medical practitioners, who suppose that it purifies the blood, improves the appetite, and cures catarrh. The wood is only met with as an object of curiosity; it is of a yellow colour, but devoid of smell.

Orange Peel, Chin-pi, Hung-pi, CHIN.; Post-i-Turanj, PERS. This is the peel of the various kinds of orange fruit. It is used as a stomachic, stimulant, antispasmodic.

Orange Zest, or orange threads, the Kiuh-peh or Kiuh-lo of the Chinese, are the dried threads of the fruit that cover the pulp of the sweet orange, prolongations of the endocarp.—*Riddell; Mason; O'Sh.; Ainslie; M. E. J. R.; Tredgold; Royle, Ill.*

ORAON, a tribe in the northern and western parts of Chutia Nagpur proper, in the eastern parts of Sirguja and Jashpur, and scattered in Singbhum, Zangpur, Bonai, and Hazaribagh, all in the Chutia Nagpur province, also in Sumbulpore of the Central Provinces. In the Lohardagga district, which includes the whole of Chutia Nagpur proper, they number 362,480; in Sirguja, about 20,000; in Jashpur, 25,000; and diffused through the other districts mentioned above, employed in the tea districts, and in British colonies, about as many more. They were for many generations settled on the Rhotas and adjoining hills, and in the Patna district, and they have a tradition that when driven from the Rhotas hills, they separated into two great divisions; one of these moving to the S.E. formed a settlement in the Rajmahal Hills, and are now known as the Male or Rajmahali; the other sought refuge to the south in the Palamow Hills, and wandered from valley to valley in those ranges, till they found themselves in Burwai, a hill-locked estate in Chutia Nagpur proper. From there they occu-

pied the highlands of Jashpur, and formed the settlements in the vicinity of Lohardagga, on the Chutia Nagpur plateau, where they still constitute the bulk of the population. This tradition is borne out by the evident affinity in language and similarity in customs of the Oraon and Rajmahali; and though the latter do not acknowledge the relationship, their common origin may be considered as established.

The Oraon are now a good deal interposed between the Kharawa and the Mundah; but though the Kharawa and Oraon are in contact, they are very unlike in language, appearance, manners, and customs. Oraon settlements predominate in the western parts of Chutia Nagpur plateau, and each village group has its peculiar flag. The Oraon are known to the people of the plains as the Dhangar, but Khurnkh is the name by which they designate themselves.

The Oraon are a very small race, but well proportioned. The young men have light graceful figures, and are as active as monkeys. Those residing in isolated positions are generally black or dark and ill-favoured. They have wide mouths, thick lips, projecting maxillary processes, nostrils wide apart, no marked elevation of the nose, and low foreheads, though not in general very receding. The Oraon who dwell in mixed communities have more varied features, and colours softer, fairer, and pleasing when young, and improve in appearance with civilisation. The Oraon, according to Colonel Dalton, have more of the African type of feature, he has seen woolly heads amongst them; and the wild Oraon have almost an ape-like physiognomy, the Jashpur Oraon being the ugliest of the race, with very low foreheads, flat noses, and projecting cheek-bones, and approach the Negro in physiognomy; and in manner the Oraon are more like bright-hearted Negroes, are fond of gaiety, decorating rather than clothing their person; whether working or playing, always cheerful; and young Oraon boys and girls are intensely fond of decorating their persons with beads and brass ornaments, which they discard on becoming Christians. Oraon youths and maidens speedily acquire the songs and the dancing steps of the Mundah. The Oraon are more lively than the Mundah, quite as industrious, and the most active and nimble-footed of dancers. The Oraon have small, ill-built, untidy huts, in which the family reside. But they have in each village of old standing, a Dhumkuria, or bachelor's hall, in which all boys and unmarried men of the tribe are obliged to sleep. Any absentee is fined. In the Dhumkuria, also, is placed all the flags, instruments used in their dancing and other festivals, and in front of it is a clear circular space for the dancing ground. In some Oraon villages, also, the unmarried girls have a house to themselves, with an elderly woman to look after them; she has always a stick in hand.

There is no similarity between the language of the Oraon and that of the Mundah and their cognates. The Mundah is soft and sonorous, while the Oraon is guttural and harsh, and the Oraon language of the Rajmahal Hills and the Tamil have a near connection. The Male and Oraon languages are mainly Dravidian; and although the Male are now confined to the N.E. extremity of the Vindhya, where the Ganges washes and bends round the chain, and are separated from the South Dravidian nations by the Kol, their language is more Dravidian than the Kol itself. The explanation is probably to be found in the circumstance of the Oraon and Male having originally formed an uninterrupted extension of the Gond tribes and dialects that extended from the Godavery to the N. extremity of the Vindhya. In villages east of Ranchee, wholly inhabited by the Oraon, the Mundah, not the Oraon, is the language spoken.

The present customs of the Oraon have been derived from the Mundah, and differ therefore from those of the Rajmahali people, whose isolated position has preserved their ancient ceremonies. The Oraon, when driven from the Rhotas Hills, brought with them to the plateau large herds of cattle, and implements of husbandry previously unknown to the Mundah. The Oraon have no gardens or orchards belonging to individual houses, but they have some fine trees, common property, within the village, and outside their groves of fruit-trees form a beautiful feature of Chutia Nagpur scenery.

The Oraon and the Mundah are in tribes, and both are exogamic, not marrying in their own tribe. Also the tribal or family names are usually those of animals or plants, and when such is the case, the flesh of some part of the animal or the fruit of the tree is tabooed to the tribe called after it. Thus the Tirki must not eat Tirki (young mice); nor the Ekhar, the tortoise head; nor the Kirpotas, the stomach of the pie; nor the Lakrar, tiger's flesh; nor the Kujrar, the oil from that tree, neither sit under its shade; and so with the kite, the crow, the eel, etc.

The young people form attachments, but the elders go through the form of selecting the bride already fixed on by the youth. The marriage ceremony represents their former custom of capture. The bridegroom's party comes to the bride's village in arms, real or imitation. The young men of the bride's village turn out, also armed, to repel the invasion, and, after a little show, a dance forms, during which the couple are each carried astride on the hips of a friend. A bower is constructed in front of the residence of the bride's father, into which the bride and bridegroom are carried by women, and made to stand on a curry-stone, under which is placed a sheaf of corn, resting on a plough yoke. Here the Sindurdan is performed, but carefully screened from view, first by cloths thrown over the young couple, secondly by a circle of their male friends, some of whom hold up a screen cloth, while others keep guard with weapons upraised, and look very fierce, as if they had been told off to cut down intruders, and were quite prepared to do so. The bridegroom stands on the curry-stone behind the bride, but in order that this may not be deemed a concession to the female, his toes are so placed as to tread on her heels. In the marriages of the Oraon, a public recognition that the couple have slept together is a part of the ceremony. Mundah and Oraon marriages as a rule are not contracted until both bride and bridegroom are of mature age, the young people often making love and suiting themselves.

Girls form sisterly attachments with each other; interchanging a flower, each becomes gui to the other. They speak of each other as my gui or my flower. Oraon girls in childhood are

tattooed with three marks on the brow and two on each temple. When about to grow up, they further tattoo themselves on the arms and back. Young men in the Dhumkuria burn marks on their forearms.

Immediately in front of the Dhumkuria is the dancing arena, called Akhra, an open circus about forty feet in diameter, with a stone or a post marking its centre. It is surrounded by seats for tired dancers or non-dancing spectators, and shaded by fine old tamarind trees, that give a picturesque effect to the animated scene, and afford in their gigantic stems convenient screens for moonlight or starlight flirtations. During the festive seasons of the year, dancing at the Akhra commences shortly after dark every night, and if the supply of the home-brew hold out, is often kept up till sunrise.

The Oraon worship the sun under the name of Dharmi, as the creator and preserver, and offer white animals to him in sacrifice. Dara, worshipped by the Oraon and Mundah of Chutia Nagpur, is a carved stick, stuck up where the great jatras are held, or in the village dancing-place, and is worshipped with much revel and wassail, with much drunkenness amongst the old, and dancing and love-making amongst the young.—*Dalton*, pp. 134, 198; *Campbell*, pp. 22, 39.

ORAZIO. Fra Orazio, a friar who travelled in Central Asia.

ORCHHA, also written Oorcha and Urchha, is also known as Tehri or Tikamgarh. It is a native state in Bundelkhand, between lat. 24° 26′ and 25° 34′ N., and long. 78° 28′ 30″ and 79° 23′ E. There are some magnificent tanks in the country, many of them constructed by the ancestors of the ruling family. It is the oldest and highest in rank of all the Bundela principalities, and was the only one of them not held in subjection by the Peshwa. Orcha, its chief town, in lat. 25° 21′ N., and long. 78° 42′ E., is built on the banks of the Betwa. Dacoits obtain shelter in its dense forests.—*Imp. Gaz.* vii.

ORCHIACEÆ, the Orchidaceæ of *Lindl.*, the Orchis tribe of plants, comprising 7 genera and about 2000 species. Of these, there are about 1700 species in British India in the several divisions, viz.:

Arethusieæ, genera anthogonium, pogonia, and vanilla; 218 species.
Cypripedeæ, genus cypripedium; 23 species.
Epidendreæ, genera arundina, bletia, cattleya, epidendrum, phaius, spathoglottis; 153 species.
Malaxieæ, genera aporum, bolbophyllum, cœlogyne, oirrhopetalum, dendrobium, eria, liparis, oberonia, octomeria, otochilus, pholidota, pleurophallis, stelis, trias, and Wallichiana; about 390 species.
Neottieæ, genera anoectochilus, goodyera, and zeuxina; total, 270 species.
Ophryeæ, genera habenaria, peristylus, platanthera, and satyrium; total, 449 species.
Vandeæ, genera acanthophippium, acropera, aerides, bifrenaria, batemamia, brassia, camarotis, catasetum, cryptochilus, culanthe, cymbidium, cyrtopera, cyrtopodium, dicrypta, eulophia, geodorum, gongora, grammatophyllum, maxillaria, micropera, œceoclades, phalænopsis, renanthera, saccolabium, sarcanthus, Stanhopea, vanda; total, 487 species.

Many of the Orchiaceæ have very beautiful flowers, and salep, which consists of bassorin, is obtained from a species of Eulophia. Orchidaceous plants are rare throughout the plains of Northern India, and in the Panjab. Only the ubiquitous Zeuxina sulcata occurs generally, while Eulophia is found locally, and only one other was found in the Trans-Indus hills to 8000 feet. Bolbophyllum, species B. auricomum, Careyanum, flexuosum, fuscescens, Jenkinsonii, serpens, and sunipia, occur in Nepal, the Khassya Hills, Burma, and Tenasserim. The most highly valued of the orchid order among the Burmese and Karens, is the sweet-scented bolbophyllum, which Karen youths wear in the lobes of the ear, and maidens in their hair. It abounds in almost every part of the jungles, throwing down delicate straw-coloured racemes over the rough grey bark of old lagerstrœmia. Bolbophyllum Careyanum is a common orchid in the vicinity of Moulmein, easily recognised by a long leaf at the apex of a false bulb, and by its small purplish flower. Many species of dendrobium occur in South-Eastern Asia and Australia. Dr. Wight in his Icones gives thirteen, Dr. Voigt names twenty-five, species of Bolpophyllum, and on the Tenasserim coast there are fifteen or more, viz.:—

album.	Cambridgeanum.	macrostachyum.
alpestre.	candidum.	Paxtonii.
aureum.	calceolus.	pendulum.
barbatulum.	cœrulescens.	pierardi.
denudans.	clavatum.	pulchellum.
filiforme.	crumenatum.	pumilum.
graminifolium.	chrysanthum.	purpureum.
heterocarpum.	densiflorum.	ramosissimum.
Heyneanum.	flavum.	secundum.
humilis.	formosum.	stuposum.
Jerdonianum.	Gibsonii.	sulcatum.
aggregatum.	Jenkinsii.	teretifolium.
bicameratum.	longicornu.	

On the Tenasserim coast is a dendrobium, the flowers of which are white, with a yellow lip, three or four inches in diameter, and exquisitely fragrant. The plant blossoms in March, and its flowers may be seen whitening under the emerald foliage of the groves for nearly six months of the year to the close of October. The Burmese call it the silver flower. Wight gives figures of Epipactis carinata and Dalhousiæ macrostachya. Eria obesa is one of the most abundant of Tenasserim epiphytes, but the flowers are small, and have little to recommend them. Wight gives figures of Eria epiphytes, pauciflora, polystachya, pubescens, and reticosa.

The genera Eulophia, Orchis, Satyrium are believed to produce the salep of commerce, a substance largely used as a restorative and as a dietetic. Orchis mascula, called early orchis, male orchis, and male fool's stones, grows plentifully throughout Europe, Northern Africa, Persia, and the temperate region of High Asia. In Persia the roots are washed and thrown into boiling water to remove the outer skin; they are then dried, strung on cords, and hung in the sun or in ovens until perfectly free from moisture. The dried bulbs, of the size of a cherry stone to that of an olive, are slightly transparent and of a horny colour; they are pounded, being soaked in cold water until they become soft, and then rapidly dried, and the powder is dissolved like other fecula, in water, milk, or broth, requiring sixty parts of liquid to one of fecula. It may be used for the same purposes as sago, tapioca, and arrow-root, and when good is an excellent diet article for convalescents, two drachms being sufficient for a meal for an invalid. O. morio of Great Britain, the meadow orchis, or female fool's

stones, and the O. militaris, or man orchis, also of Britain, all furnish the salep tubers. Orchis biflora, O. commelinæfolia, O. latifolia, and O. papilionacea are also named. Dr. Royle was of opinion that the genus Eulophia furnished the salep of High Asia, Kashmir, and Afghanistan, the Himalaya, the Neilgherries, and Ceylon; and Dr. Bellew found an orchis at Hazara, four marches west of Kurram fort, at a height of 1000 feet, some of the tubers being almost as large as a walnut. Dr. Royle names Eulophia vera of the Himalaya, near the Jhelum, and E. campestris near the Kheree pass, as yielding salep. There are three kinds of salep known in the bazars of N.W. India, viz. Salep misri or Egyptian salep, the genuine salep of Kashmir; salep Kohi or salep Kabuli, the mountain or Kābul salep and Simla salep, and salep Hindustani, which is the worst kind.—*Mason; Eng. Cyc.; W. Icones; Voigt; Roxb.; Hooker*, ii. p. 281.

ORCHILLA WEED, Orchella, Archil.

Purpermos, . . . Dut.	Orsella, ... Por.
Orseille, . . . Fr., Ger.	Orchilla, ... Sp.
Oricello, Orcella, . . It.	Orselj, Orsilja, . . Sw.
Rocella tinctoria, . Lat.	

A lichen of a grey colour; grows in the Cape de Verde Islands and Canary Islands, Madeira, Azores, Porto Santo, from which is obtained the dye called Orchil or Archil, by maceration in urine or other ammoniacal liquid.—*Bennett*, p. 27.

ORDEAL. Divya, Sansk. The earliest mention of the trial by ordeal is contained in the 5th chapter of the book of Numbers, from the eleventh verse, in which the priest gave holy water to a woman to drink, imprecating her with a curse, that if guilty, her thigh should rot and her belly should swell. Trial by ordeal, though forbidden by the Koran, is to be found in some form or other throughout the Muhammadan world. In Sind it is called Toro, and there are several forms in which it is practised. In Hinduism ten ordeals were recognised:—

1. Tola, the balance.
2. Agni, fire.
3. Jala, water.
4. Visha, poison.
5. Kosha, drinking water in which an idol has been washed.
6. Tandula, chewing grains of rice.
7. Tapta masha, taking a masha weight of gold out of heated oil.
8. Phala, holding a hot ploughshare.
9. Dharma, drawing concealed images of virtue and vice out of a vessel filled with earth.
10. Tulasi, holding the leaves of the holy basil, sacred to Vishnu.

Even now, in trivial cases, a few grains of rice that have been weighed with the saligrami are put into the mouth of the suspected or accused person, who is to chew them and spit them out on a pipal leaf. If the person be innocent, the grain appears as if stained with blood, or simply moistened with the natural saliva; if guilty, the rice is dry. In the trial by Kosha, or image water, the accused person drinks some of the water with which an idol has been washed, and if the accused survive free from calamity through the next fortnight, he is innocent. Also in an idol ordeal, two images, one called Dharma or Justice, the other Adharma or Injustice, are placed in a jar, and the accused is allowed to draw. If Dharma image be withdrawn, he is innocent. The ordeal of the balance is applied to women, children, the aged, blind, lame, and sick men, and to Brahmans. After a fast of twenty-four hours, both of the accused and the priest, the accused bathes in holy water, prayers are offered up, and oblations are presented to fire. The beam of the balance is then adjusted, the cord fixed, and the accuracy of the scales ascertained. The accused then sits in the scale, and, while being weighed, the priests prostrate themselves, repeat certain incantations, and, after an interval of six minutes, the paper with the writer's accusation is bound around the head of the accused, who invokes the balance thus: 'Thou, O balance, art the mansion of truth; thou wast anciently contrived by the deities: declare the truth, therefore, O giver of success, and clear me from all suspicion. If I am guilty, O venerable as my own mother, then sink me down; but if innocent, then raise me aloft.' The accused is then re-weighed; if he then weigh heavier, he is found guilty, but if lighter, he goes free.

In the trial by fire, the accused, in India, walks barefoot into a heap of burning pipal leaves (Ficus religiosa); in Siam, over a pit filled with burning charcoal.

In the ordeal by boiling oil, the accused has to thrust his hand into the scalding fluid.

The hot iron ordeal is practised among Hindus, and the Buddhists of Pegu and Siam. Nine circles are drawn, each sixteen fingers in diameter, and each the same distance of sixteen fingers apart. The hands of the accused are rubbed with unhusked rice (paddy), and all marks on them carefully noted; seven pipal leaves are then bound with seven threads on each hand, and saying these words: 'Thou, O fire, pervadest all beings; O cause of purity, who givest evidence of virtue and of sin, declare the truth in this my hand.' The priest gives him a red-hot ball to carry as he steps from circle to circle, keeping his feet within each, until he reach the eighth, when he throws the ball on a heap of dry grass inside the ninth. If his hands, which are then examined, be not burned, he is pronounced innocent.

In Japan, a reputed thief bears on his hand a piece of thin paper having the figures of three deities. On this a piece of red-hot iron is placed, and if his hand escape, he is pronounced free.

Hot oil was a test in the Kandy country by claimant and defendant, and the one whose fingers are burnt loses.

The water ordeal is in vogue in India, in Burma, and in Borneo. In India, the accused stands in water nearly up to his waist, attended by a Brahman, staff in hand. A person near shoots three arrows from a bamboo bow, and a man hurries to pick up the furthermost shaft. As he takes it from the ground, another person runs towards him from the water's edge; at the same moment the accused grasps the Brahman's staff and dives beneath the water. If he remain there till the two arrow-fetchers return, he is innocent, but if any part of his body appear, he is guilty. In Burma, a stake is driven into the water; the accuser and accused take hold, and together plunge beneath the water, and he who remains longer submerged is declared to have truth on his side.

In the poison ordeal, white arsenic and butter in a mixture is administered.

In the snake ordeal, a cobra and a ring are placed in an earthen pot, and the accused has to withdraw the ring.

The Borneo Dyaks place two pieces of salt in the water, to represent the accuser and accused, and the owner of the piece dissolving the first loses the cause. Also, two shells are placed on a plate, and lime-juice squeezed over them, and he whose shell moves first is pronounced guilty or innocent, as may have been resolved on. But the more common mode amongst the Dyaks is for the accuser and accused to plunge their heads beneath the water, and he who remains the longer is free.

The Brinjari people use the branch of a nim tree, the Azadirachta Indica. A husband throws it on the ground, and, turning to his wife, says, 'If thou be a true woman, lift that nim branch.'

In land disputes amongst the Hindus, in the gola or ball test, one of the parties, or a third person, carried a red-hot cannon ball along the alleged boundary, his palms being protected by a layer of pipal leaves. If he remain unscorched, the alleged boundary is determined to be correct.

In the ch'haur ordeal the referee walked the boundary with raw cowskin on his head; this was often strengthened by the imposition of a term twenty-one days, thirty days, etc., and was contingent on the referee's survival for that time.

In other cases, an oath, Kasm sat'h lasi, was administered, and the taker walked twenty-one paces with Ganges water, tulsi leaves, the saligram, and the book of Durga in his hands; if he survived twenty-one days, the truth of his statement was deemed established.

The truth of a man's assertion is still often tested by his being asked to repeat it standing in the waters of some tank of peculiar sanctity, as that of the Lachman Kund in Ajodhya.

Eating paddy, praying imprecations on themselves, is another form in Kandy; also eating a cocoanut in the same manner; drawing white olas is a third. Striking the earth, the reepolle or red-hot iron, and the cobra put into an earthen pot with money, when the parties withdraw the money; if either be bitten, he is esteemed guilty.

Arrows are sometimes used in North-Western India as tests of innocence. The opposite ends of two arrows are held by a rattan laid upon the hands by two persons placed opposite to each other; they are parallel to and just sufficiently apart to allow of the suspected person's hand being held between them. The ends of the arrows merely rest upon the fingers. The arrows are supposed to move towards and close upon the guilty hand.

On the coast of Africa, all criminal charges are tried by the Pynin or judges, who hear and weigh the evidence produced. But if there be no evidence, the cause is decided by a form of ordeal called doom, which consists in administering to the person accused a certain quantity of the bark of a tree deemed poisonous. If he retain it on his stomach, he is pronounced guilty, if otherwise, innocent. The refusal to submit to this ordeal is considered as a decisive proof of guilt, and the judges proceed accordingly.

In Bastar, the leaf-ordeal is followed by sewing up the accused in a sack, and letting him down into water waist deep; if he manage in his struggles for life to raise his head above water, he is finally adjudged to be guilty. Then comes the punishment. The extraction of the teeth, which is said in Bastar to be effected with the idea of preventing the witch from muttering charms; but in Kamaon the object of the operation is rather to prevent her from doing mischief under the form of a tigress, which is the Indian equivalent of the loup-garou.

The ordeal beans of Old Calabar, West Africa, are the seeds of Physostigma venenatum.—*Capt. Burton's Scinde; Wilk's Mysore; Hindu Infanticide; Williams' Story of Nala; Fourth Report of the African Institution; Letter from Mr. Meredith on the Gold Coast*, December 1809; *Asiatic Researches; Ward's Hindoos.*

ORDINARY WORKS, a revenue term in British India applied to public works executed out of ordinary revenue.

OREODOXA OLERACEA. *Endlich.*

Areca oleracea, *Jacq.* | Euterpe caribæa, *Spreng.*

Edible cabbage tree, . . ENG.

A palm of the W. Indies, one of the Cocoaceæ. The green top of the trunk is eaten in the W. Indies both raw and cooked. It has been introduced into India. Oreodoxa regia, *Humb. and Bonpland*, Oenocarpus regius, *Spr.*, is a palm of Cuba, in the vicinity of Havana. It has been introduced into India.

OREOSERIS LANUGINOSA. *D.C.*

Chaptalia gossypina, *Royle.*

Common in the Himalaya up to the Indus, and found in the hills beyond it, from 3200 to 7000 feet. Wherever it grows in any quantity, tinder and occasionally moxas appear to be made from it, sometimes by beating up the body of the leaf with the tomentum on its under-surface, as is done with some other plants, but generally by breaking through the former, and tearing off the latter, to be used alone. Cloth is said to have been made from this, but Dr. Stewart nowhere found such to be the case in the Panjab Himalaya. The plant is quite small, and does not grow closely, so that a wide area would need to be searched to get any considerable quantity of the tomentum; and the process of removing the latter is a tedious one, and would probably be costly.—*Dr. J. L. Stewart.*

ORFA, lat. 37° 10′ N., the capital of a province in Asiatic Turkey of the same name, on the banks of the Kara Koyi, 90 miles S.W. from Diarbakr. The inhabitants, 30,000 in number, are Turks, Arabs, Armenians, Jews, and Nestorians. On a mountain which overlooks the citadel is a ruin which the Arabs call the palace of Nimrud, with several extraordinary subterranean apartments of great antiquity. It is that part of Mesopotamia which contained the Haran of Abraham, is the Osrhoene of the Romans, and the Edessa of the crusades. It subsisted for 843 years as an independent kingdom, when Caracella led Abgarus, its last king, in chains to Rome. It was taken from the emperor Heraclius by Yezd, was retaken in the first crusade by Baldwin, brother to Godfrey of Bovillon, and erected into a Christian principality under one of the branches of the house of Courtney, who were expelled by Zingi, the Atabeg, A.D. 1145. It was included in the empire of Salah-ud-Din (Saladin), and subsequently conquered by the Turks. The capital was called

Edessa by Alexander's successors, and subsequently known as Rhoa.—*MacGregor.*

ORGANJ, Urghanj, or Jarjaniah, formerly the chief city of Khwarazm, the country now known as Khiva. It stood on both banks of the Oxus, with a bridge connecting them. It was the scene of awful devastation and massacre by the Mongols under Chengiz in 1221, and a hundred thousand of the only class spared, the artisans, are said to have been transported to Mongolia.—*Yule, Cathay.*

ORIENTAL, a term in use, in philology, to indicate a class of languages; in geography, it is applied broadly to Asiatic countries east of Europe, but in a more restricted sense to the East Indies or the countries now known as British India. In mineralogy, it is applied to precious stones, the violet oriental amethyst, the green oriental emerald, the red oriental ruby, the blue oriental sapphire, the yellow oriental topaz, all variously coloured varieties of corundum. The oriental amethyst is of a purple colour, and is an extremely rare gem. Its colour can be destroyed by heat, and its purity then resembles that of the diamond. These stones are all found abundantly in the Peninsula of India, but not of great beauty; the ruby of the N.E. of Burma, however, is the true oriental ruby. They are all distinguishable from the other gems of the same names which have not the prefix oriental, by their greatly superior hardness and greater specific gravity. Oriental sapphires are found in gravel and sand in the island of Ceylon and in Pegu, but oriental emerald is the rarest of all the green varieties of corundum.

Oriental languages is a term applied to all the languages of Asia, whether of the Aryan, Semitic, or other class. Formerly, the term meant little more than Hebrew, Arabic, and Persian; it now includes almost every language that is spoken east of Europe.—1. The Semitic, including old Semitic, new Semitic, and cuneiform writings; 2. The Indo-European (or Indo-Germanic, as it it called in Germany), including all Aryan languages, and comparative philology; 3. The African, including Egyptian; 4. The East Asiatic, or Ural-Altaic. With all the oriental languages those who would acquire them encounter their first difficulty in the variety of writing characters in use; and a second difficulty in the discordant manner in which, when a foreign character is used, or indicated by foreigners, the powers of the letters are employed. One mode put forward by Sir William Jones, about the year 1788, was an analogous classification of the letters; another proposed by Dr. John Borthwick Gilchrist, in the early part of the nineteenth century, was the representation of the sounds of the vernacular letters by equivalents of similar enunciation according to the powers of the letters as given by the English people; in other words, the one principle is analogy, the other pronunciation. The latter principle is well adapted for expressing the oriental characters in English letters in such a manner that English readers unacquainted with the oriental characters would be enabled to articulate the words with a very near approach to their correct pronunciation, but it is for the most part unsuitable for all others of the European nations who use the Roman letters. The principle of analogy adopted by Sir William Jones retains the original letters with certain distinguishing marks, and permits the learned men of all Europe to follow the word to its source, and it has been generally followed by the learned. The most recent writer on the subject was Professor Horace Hayman Wilson in his Glossary, and he considered that the characters in the English alphabet had enabled him to represent letters in nine alphabets of thirteen different languages of British India. But to do this he had, by diacritic points and marks, and by compound letters, increased the English alphabet from 26 to 70 characters, 19 of the English letters having two to six forms, b, c, e, i, j, o, p, and u, each two; g, h, and l, each three; d and k, each four; a, r, s, t, and z, each five; and n has six forms; and he has even recommended other additions.

ORIGANUM NORMALE. *Don.*

Mirzan-josh, ARAB., HIND. | Marjoram, ... ENG.

This herb grows commonly in the Panjab Himalaya from 2500 to 10,500 feet. Aitchison states that in Lahoul it is eaten as a pot herb.

Origanum vulgare, *L.*, common marjoram.

An ornamental and aromatic plant, a native of Great Britain in dry uncultivated places, and of Europe, north of Africa, and of Middle Asia and America. It yields what is sold as oil of thyme in the shops, a common remedy for toothache, and frequently mixed with olive oil as a stimulating liniment against baldness, in rheumatic complaints, and against strains and bruises. The dried leaves used instead of tea are very pleasant; they are likewise employed in fomentations. The essential oil is so acrid that it has been used by farmers as a caustic.—*Eng. Cyc.; Dr. J. L. Stewart, M.D.*

ORIOLE is the popular name of several birds having their plumage of a golden-yellow mixed with black. In British India, the orioles are called the mango birds, from their yellow colour resembling that of the mango fruit. There are several species in the E. Indies. Oriolus kundoo, *Sykes*, extends over the whole of British India up to the base of the Himalayas. It lives in large groves of trees, gardens, and avenues, and feeds chiefly on fruits. Its call is a loud mellow whistle resembling pee-ho, and its French name of Loriot answers to its call. O. Indicus, *Brisson*, the black-naped Indian oriole, is rare, though spread throughout India, Arakan, Pegu, Tenasserim, and Malacca, and is more confined to the forest regions. O. melanocephalus, *Linn.*, the black-headed oriole, inhabits the forests, gardens, and groves of Central India, Bengal, Assam, Burma, and the Malay Peninsula; it is a lively and noisy bird, constantly flying from tree to tree, and uttering a loud mellow whistle. This oriole, famous in Indian poesy, is one of the most numerous of Tenasserim songsters. It comes to the garden at early dawn, when its rich mellow notes are heard pealing far through the mango bowers. It is a large yellow bird, with a black head, easily recognised. In Burmese it is called Hgnet-wa, or yellow bird. O. Ceylonensis, *Bonaparte*, occurs in Ceylon and the southern part of the Peninsula of India.—*E. L. Layard in Tennant's Ceylon*, p. 241; *Mason; Jerdon.*

ORISSA, a province of British India, which was occupied in September and October 1803, with Behar, Chutia Nagpur, Bengal proper, and Chittagong, and is under the administration of the Lieutenant-Governor of Bengal. It is at the head of the Bay of Bengal, at its western side, and lies between lat. 19° 28′ and 22° 34′ 15″ N., and long. 83° 36′ 30″ and 87° 31′ 30″ E., with an area of 23,901 square miles, and, in 1872, a population of 4,317,999, partly in the deltas of the river Mahanadi on the south, the Brahmany in the centre, and the Baitarani on the north, and in part in 17 mahals or states which are tributary to the British, and cover an area of 16,218 square miles, and a population of 1,283,309. Orissa table-land rises on the southern side of the Mahanadi, in some places to 1700 feet, backed by the chain of E. Ghats, Amarkantak, jungle table-land, lat. 22° 40′ N., long. 81° 5′ E., 3500 feet. Its delta is fertile; its rivers discharge 2,760,000 cubic feet per second in time of floods, and it has a rainfall of 62½ inches; but it has suffered from floods and from droughts. There was a great famine in 1770, aggravated by the ravages of mutinous Mahratta soldiers. In 1823, a cyclone and storm-wave swept the coast; in 1834–35 and 1837–38, a famine was caused by inundations, and it suffered severely in 1866–67 from deficient rains.

A special inquiry into the mortality caused by the famine in Orissa in 1865-66 was made by deputy collectors, with the aid of corrected returns made by the zamindars. The total population in 1865 was 3,015,826; of these, 814,469 perished, and 115,028 either emigrated or disappeared, making a total loss of 929,497, and leaving 2,086,329 surviving. The percentage of deaths to population was 27, which, added to 3·81, the percentage of emigrants or missing, gives a general percentage of 30·81 as loss of population during the famine. In 1866 a great flood inundated 1052 square miles of the delta. In October 1831 the sea made a breach in the road which passes through the province from north to south, where it is nine miles from high-water mark. All having life—human beings, cattle, wild beasts, etc.—were drowned, and left in heaps eight and ten feet high against the road. This was north of Balasor. South of Balasor, late in the evening, said the sole survivor of a village, the wind was very strong on shore, and the tide rising. Several of the inhabitants went down to the beach. Those who had witnessed the storm of 1823 proposed to go inland; the younger ones would not believe that the sea could harm them, and voted for remaining. All were drowned except one, who was up in the tree under which we were standing, and twice the sea went over him. When he came down, all was dry, but, as he expressed it, not a cat left. In this hurricane 22,500 were drowned in half an hour, and several thousands more died of starvation and exposure. There was another hurricane in 1832, but the wind was off shore when most violent, and no lives were lost. These calamities induced the British India Government to endeavour to prevent their recurrence. The seven rivers—Mahanadi, Brahmany, Byturni, Lahundi, Borabahiny, Subunreka, and the Cossya—are all more or less deltaic in character, and in the case of four rivers almost form one delta during the floods. The point before the engineer was to husband the water that came down at the south-west monsoon, and distribute it so as to save the districts from droughts, from which Orissa has suffered so terribly. At the same time protection against the floods was to be secured. The area of land to be taken up for the scheme comprised the five alluvial districts contained between the frontier in the district of Ganjam and the Hoogly near Calcutta,—in all about 6000 square miles. The operations began in 1862, and much has been effected.

Bhuiya, Bhumij, Bathudi, Gond, Kandh, Khaira, Kol, Pan, Santhal, Savara, and others, form about a fourth part of the population, mostly in the mountainous jungle tract of Morbhanj, Keunjhar, and Bod, and 75,531 are in the tributary states. A record in the Uriya language, preserved in the temple of Jaganath, called the Vansavali and Raja Charita, and supposed to have been commenced in the twelfth century, after the usual detail of the mythology, and of the early kings of India down to Vikramaditya, gives as the first sovereign of this kingdom, in A.D. 142, Bato Kesari, who commenced the Kesari Vansa or Kesari dynasty. After an interregnum of 146 years, during which the Yavana reigned, the Kesari Vansa dynasty was restored in A.D. 473 by Jajati (Yayati) Kesari, capital Jajpur. He was a warlike and energetic prince, but it is not known who he was or whence he came. He was the founder of the Kesari or Lion line, which ruled Orissa until A.D. 1131. The Ganga Vansa dynasty commenced with the invasion of Churang, Saranga Deva, or Chor-ganga, and ended with Raja Narsinh-deo, who in 1277 built Kanarak, the Black Pagoda. The Surja Vansa rajas then reigned from 1451 to 1550. After them came the Zamindari races, Khurda rajas or Bhui Vansa, from 1580 to 1804, when Mukund-deo was deposed by the British.

Buddhism for ten centuries prevailed in Orissa, but its only traces are to be found in the cave dwellings and rock habitations of the priests and hermits, and in recently deciphered inscriptions. Their principal settlement was at Khandgiri, about half-way between Puri and Cuttack. The Snake, Elephant, and Tiger caves here (see Udayagiri), and a two-storeyed monastry, known as the Queen's Palace (Rani-Nur), are the most interesting excavations. They form relics of the three distinct phases through which Buddhism passed. The first, or ascetic age, is represented by the single sandstone cells, scarcely bigger than the lair of a wild beast, and almost as inaccessible; the second, or ceremonial age, is shown in the pillared temples for meetings of the brotherhood, with commodious chambers for the spiritual heads attached to them; the third, or fashionable age of Buddhism, reached its climax in the Queen's Palace, adorned with a sculptured biography of its founder. General Cunningham believes that the kingdom of U-cha, or Oda, spoken of by Hiwen Thsang, corresponds exactly with the modern province of Odra or Orissa. In the time of that Buddhist pilgrim, the province was 7000 li or 1167 miles in circuit, and was bounded by the great sea on the south-east, where there was a famous seaport town named Che-li-ta-lo-ching, or Charitrapura, that is, the 'town of embarkation' or 'departure.' This General Cunningham supposes to have been the present town of Puri, or 'the city,' near which stands the famous temple

of Jaganath. Outside the town there were five contiguous stupa with towers and pavilions of great height, and he supposes one of these to be that which is now dedicated to Jaganath. The three shapeless figures of this god and his brother and sister Baladeva and Subhadra, are simple copies of the symbolical figures of the Buddhist triad, Buddha, Dharma, and Sangha, of which the second is always represented as a female. The Buddhist origin of the Jaganath figures is proved beyond all doubt by their adoption as the representative of the Brahmanical avatar of Buddha in the annual almanacs of Mathura and Benares. The political limits of Orissa under its most powerful kings, are said to have extended to the Hoogly and Damuda rivers on the north, and to the Godavery on the south. But the ancient province of Odra-desa, or Or-desa, was limited to the valley of the Mahanadi and to the lower course of the Suvarna-riksha river. It comprised the whole of the present districts of Khatak (Cuttack) and Sumbulpore, and a portion of Midnapur. It was bounded on the west by Gondwana, on the north by the wild hill states of Jashpur and Singbhum, on the east by the sea, and on the south by Ganjam. These also must have been the limits in the time of Hiwen Thsang, as the measured circuit agrees with his estimate. Pliny mentions the Oretes as a people of India in whose country stood Mount Maleus; but in another passage he locates this mountain amongst the Monedes and Suari, and in a third passage he places Mount Mallus amongst the Malli. As the last people were to the north of the Kalinga, and as the Monedes and Suari were to the south of the Palibothri, the Monedes and Suari must be the Munda and Suar, and the Oretes must be the people of Orissa. Malle is one of the Dravidian terms for a mountain; and as the Oraon, or people of West Orissa, still speak a Dravidian dialect, he thinks it probable that Mallus was not the actual name of the mountains, but may have been the famous Sri-Parvat of Telingana, which gave its name to the Sri-Parvativa Andhras?

The Uriya are Brahmanists, and inhabit the plains and valleys in the western tracts towards Cuttack; the Kol to the northward, also called Ho; the Kandh in the central part, and the Saura in the south. These three last-named races believe themselves to be the aborigines of the districts they now inhabit, and of others more extensive of which they have been dispossessed by the encroachments of other tribes. The Kol are faithful, honest, and of happy, ingenuous dispositions, as strikingly contrasted with the trickery and falsehood of the Hindu; they are hospitable, but very irascible, and so prone to feel injuries acutely, that they frequently vent their resentment or grief in suicide, to which this untutored people are terribly addicted. The Kandh inhabit the central part of Orissa, and until the middle of the 19th century they practised the barbarous Meriah sacrifices, to propitiate the deity of the earth by the slaughter of human victims, generally children stolen from neighbouring districts, and purchased by the Kandh race for sacrifice, as no Kandh can be sacrificed, and no victim was held acceptable unless purchased. The ceremonial differed somewhat. But at the period appointed by their priests a solemn feast was held, lasting two days and nights, which time was passed in the most revolting drunken obscenity. On the third day the hapless victim was brought out, and bound to a stake. The victim's limbs were first broken, and, the priest having given the coup de grace with an axe, the whole set upon it and hewed the quivering body piece-meal, each striving to carry away a bloody fragment to throw upon his own field. The British Government exerted itself successfully to suppress this sanguinary rite, to which the Kandh adhered with obstinate pertinacity.

The Saura, who inhabit the southern part of the province, have the same superstitions as the Kandh. They are even more savage and barbarous; so much so, indeed, that a Saura is said to have no hesitation in depriving a human being of life for a very trifling consideration, or at the command of his chieftain.

Amongst the Uriya race high cheek-bones seem to prevail, with good features and straight hair. Amongst the customs peculiar to this province, Dr. Hunter says, is one that, if a man die childless, his brother, if he have one, must marry the widow. The Brahmans of Orissa differ from all other Brahmans, in some respects as regards their food, and a great many obtain their livelihood as cultivators; they also trade, and follow the occupations of brickmakers, bricklayers, etc.

The Pana of the frontier and south of Orissa are a wild predatory tribe.

The Juanga are a forest race, and until 1871 the sole dress of their women consisted of bunches of leafy twigs. They are also called Pattooah.

Hindol, one of the tributary states, of 312 square miles, and 28,025 inhabitants, mostly aborigines semi-Hinduized. Of these the Taala number 1622; the Kandh, 1611; and Pan, 3680; 18,854 Khasa, Brahmans, and Khandaits, following Hinduism.

Uriya or Ooriah is the language of Orissa, and the country takes its name from the Or or Ordu tribe, who seem to have come from the N.W. In the Orissa district they appear to have had very narrow limits, viz. along the coast line from the Rasikulia river near Ganjam northwards to the Kans river, near Soro, in lat. 21° 10′; but in the process of migration and conquest under the Ganga Vansa dynasty, the limits of Orissa (Ordesa) were extended to Midnapore and Hoogly on the north, and Rajamundry, on the Godavery, on the south. The Uriya tongue is a tolerably pure dialect of Bengali. About Ganjam, the first traces of Telugu or Teling occur, though the Uriya still prevails forty-five miles south of Ganjam, on the lowlands of the sea-shore, beyond which Telugu begins to predominate. At Chicacole, Telugu is the prevailing language; in Vizianagram, Telugu is only spoken in the open country, and Uriya in the mountains runs farther down to the south. Telugu is spoken to within 45 miles south of Ganjam, and at Ganjam Telugu ceases. On the coast line Uriya continues in the direction of Bengal as far as the Hijli and Tumluk divisions on the Hoogly. On the western side of the Midnapore district, it intermingles with Bengali near the river Subunreka. To the westward, the Gond and Uriya languages pass into each other, and at Sonepur, half the people speak the one and half the other language.

The temples at Orissa are more numerous than those of all Hindustan. They were erected between the years A.D. 500 and 1200. That at

Bhuvaneswara was A.D. 637; that at Puri was A.D. 1174; and, with the exception of that of Jaganath at Puri, the ancient Dantapura, all were erected under the great Kesari dynasty, or Lion line of kings, who reigned A.D. 473 till 1131, when they were succeeded by the Ganga Vansa, the third of whom built Jaganath. That called Parasuram Eswara is 20 feet square and 38 feet high, and its sculptures are cut with a delicacy seldom surpassed, and of the most elaborate character. It is supposed to have been built A.D. 450 or 500. Those of the Mukt Eswara shrine are even richer and more varied in detail. Bhuvaneswara temple is supposed by Mr. Fergusson (p. 420) to have been built by Lelal Indra Kesari, who reigned A.D. 617 to 657. It is the finest example of a purely Hindu temple in India. 300 feet long and 60 to 75 feet in breadth, every inch of the surface is covered with carving in the most elaborate manner, and the effect is marvellously beautiful. Its Nat Mandir, or dancing-hall, was erected by the wife of Salini, between A.D. 1099 and 1104. Besides this, there are the Raj Rani temple, and many others.

The Canarac temple is known to the British as the Black Pagoda.

The Jaganath temple at Puri externally measures 640 to 670 feet, and is surrounded by a wall 20 to 30 feet high, with four gates. An inner enclosure measures 420 by 315 feet, and is enclosed by a double wall with four openings. Within this last stands the Bāra Dewul, and the great tower rises to 192 feet.

Jajpur, in Cuttack, on the Byturni river, was once the capital of the province. It has a pillar which was erected in the 12th or 13th century.

The last five hundred years anterior to the Christian era were those in which Buddhism effected its settlements in Orissa. The Ceylon texts place the advent of the Sacred Tooth in Puri at 543 B.C. The Buddhists honeycombed mountains, and excavated the rock monasteries of Orissa. The people now are, even more than the Bengali race, conservative, bigoted, and priest-ridden. The whole territory is sacred ground, to which Hindus perform tirt'h or pilgrimage; but about July is the great period of assembly at Jaganath (yoga-natha). The sun was formerly the object of worship there.—*Colburn's Journal*, 1861; *Thomas' Prinsep's Indian Antiquities*, p. 241; *Wilson's Glossary; Cunningham's India*, p. 507; *Elph. India*, p. 223; *Stirling in As. Res.* xv. p. 254; *Imp. Gaz.; Fergusson's Cave Temples.*

ORITÆ or Horitæ, among the ancient Greeks, a barbarous people to the west of Indus, called Nesteritæ by Diodorus. Curtius notices the Horitæ in India, and Diodorus states that generally they resemble the Indians. According to Arrian, they were an Indian nation who extended west of the Indus for 150 miles parallel to the sea.

They wore the dress and arms of the other Indians, but differed from them in language and manners. General Cunningham supposes them to be the people on the Aghor river. In the bed of this river there are several jets of liquid mud, which from time immemorial have been known as Ram Chandar ki kup, or 'Ram Chandar's wells.' There are also two natural caves,—one dedicated to Kali, and the other to Hingulaj or Hingula Devi, that is, the 'red goddess,' who is now regarded as a form of Kali. But the principal objects of pilgrimage in the Aghor valley are connected with the history of Rama. The pilgrims assemble at the Rambagh, because Rama and Sita are said to have started from this point, and proceed to the Gorakh tank, where Rama halted; and thence to Tonga-bhera, and on to the point where Rama was obliged to turn back in his attempt to reach Hingulaj with an army. General Cunningham identifies Rambagh with the Rambakia of Arrian, Tonga-bhera with the river Tonberos of Pliny, and the Tomerus of Arrian. At Rambakia, therefore, he thinks we must look for the site of the city founded by Alexander, which Leonatus was left behind to complete. He thinks it probable that this is the city which is described by Stephanus of Byzantium as the 'sixteenth Alexandria near the Bay of Melane.' Nearchus places the western boundary of the Oritæ at a place called Malana, which he takes to be the Bay of Malan, to the east of Ras Malan or Cape Malan of the present day, about twenty miles to the west of the Aghor river. The occurrence of the name of Rambagh at so great a distance to the west of the Indus, and at so early a period as the time of Alexander, shows not only the wide extension of Hindu influence in ancient times, but also the great antiquity of the story of Rama. He deems it highly improbable that such a name, with its attendant pilgrimages, could have been imposed on the place after the decay of Hindu influence. During the flourishing period of Buddhism, many of the provinces to the west of the Indus adopted that Indian religion, which must have had a powerful influence on the manners and language of the people. But the expedition of Alexander preceded the extension of Buddhism; and General Cunningham therefore only attributes the old name of Rambakia to a period anterior to Darius Hystaspes. Hingulaj (Khingalatchi) is mentioned by the Tibetan Taranath (see Vassilief, French translation, p. 45) as a Rakshasa in the west of India, beyond Barukacha or Baroch.—*Cunningham's India*, p. 304; *Elphin.* p. 232.

ORLEBAR, A. B., wrote an Account of a Visit to the Town of Sehwan, in Bom. Geog. Trans. vi. p. 95; Account of the Lake Loonar, ibid. i. p. 9; Note on the Ram Ghaut, Bom. As. Trans. i. p. 119; On Muhammadan Architecture in Cairo, ibid. ii. p. 119; On the Geology of the Egyptian Desert, ibid. p. 229; Hygrometric Tables, ibid. p. 309; Report on the Bom. As. Society's Museum, ibid. p. 440; On the Meteorology of Bombay; Observatory Reports, 1845, 1846, Bombay, 4to; in British Association, 1847, and London Athenæum, and Reports of the Association.—*Dr. Buist.*

ORMARA or Hormarah, in lat. 25° 11′ N., and long. 64° 38′ 30″ E., a fishing village on the Makran coast. It is in a desolate region. It is famed for its mud volcanoes. Captain Hart, who saw them in 1840, says that there are eighteen; Colonel Goldsmith saw seven. Probably they vary in number.

ORME, ROBERT, the historian of India, was born at Anjengo. He was educated at Harrow School, and returned to Madras, where he rose to become a member of Council, and returned to England, where he died at the age of 73. He was the first Englishman who wrote on the history of India, and was author of Historical Fragments of the Moghul Empire, of the Mahrattas, and of the English Concerns in Hindustan from 1659,

London 1782 and 1805; also History of the Military Transactions of the British Nation in Indostan from 1745, London 1775.

ORMESBY, Lieut., I.N., wrote Narrative of a Journey across the Syrian Desert in Bom. Geo. Trans. vi. p. 18; Memoir on the Rivers of Mesopotamia.

ORMOCARPUM SENNOIDES. *Beauv.*

Hedysarum sennoides. | H. Nalla-kashina, *R.*
Jungli Munghi, . Dukh. | Katu murunga, . . Tam.
Kanana, Shiguru, Sansk. | Adivi munaga, . . Tel.

The root possesses a considerable degree of warmth, and is prescribed as a tonic and stimulant in certain cases of fever; also, in docoction, it is supposed to be a valuable remedy in rheumatic affections of long standing. With the bark of the root, ground small, and mixed with gingelly oil, a liniment is prepared which the Vyteans recommend as an external application in paralytic complaints and in lumbago.—*Ain.; Roxb.*

ORMOSIA, a genus of plants of the order Fabaceæ. O. glauca, *Wallich*, is a tree of Dehra Doon, and O. robusta, *Wight*, of Assam.

Ormosia Travancoria, *Bedd.*, is a middling-sized tree of Travancore and South Tinnevelly Hills up to 3500 feet, S. Canara Ghats, and probably elsewhere on the Western Ghats of the Madras Presidency. The timber appears to be remarkably good, but at present is almost unknown.—*Beddome, Fl. Sylv.* p. 45.

ORMUZ, Ormaz, or Hormuz, in lat. 27° 5′ 55″ N., and long. 56° 29′ 5″ E., a barren, rocky, volcanic island in the Persian Gulf, about 12 miles off the coast of Kirman, 15 miles N.E. of Kishm. It is the eastern extremity of the chain of volcanic mountains which runs parallel to the coast of Kirman, and at Ormuz it consists of a number of isolated hills of rock-salt and sulphur, which compose a mass of about 15 miles in circumference, destitute of springs and vegetation, but abounding in copper and iron-ore. The island gave shelter to the Parsees when Muhammadanism was preached in Persia. In an ancient history of Persia it is recorded that Ormuz was once on fire; and indeed this island, as well as that of Angar, has every appearance indicative of a former volcanic eruption, and it is thought to be an extinct volcano. Ormuz takes its name from a place on the neighbouring continent in Karmania,—the Harmozia and Armuza or Harmozusa of Greek writers, where Nearchus landed and found one of his countrymen wandering from Alexander's camp, in which, some days after, the admiral was received with well-merited honours by his sovereign. But in Alexander's time, the insulated Ormuz is generally supposed to have been the Organa of Arrian and Ptolemy, and Tyrina or Gyrena of Strabo. It is said that the prior city of this name was taken by the Mongols, A.D. 1290, and the inhabitants fled to this barren volcanic island, which was named Ormuz, in memory of the ancient city. The king of this new Ormuz considered it prudent to send tribute to Timur. The city is described by Abdu Razak, the ambassador sent by Shah Rukh to India in 1442, as a place which had not its equal on the surface of the globe. The merchants of Syria, Egypt, Roum, Fars, Khorasan, Irak, and Mawur-u-Nahar, as well as the inhabitants of Java, Bengal, Socotra, Tenasserim, Malabar, Gujerat, and Arabia, all made their way to this port with rare and precious articles, which the sun and the moon and the rains have combined to bring to perfection. The companions of Alfonzo de Albuquerque in 1507 took Ormuz, after a combat described with much animation by one of his countrymen,—a few hundred Portuguese having contended, as he assures us, for eight hours against 30,000 Persians and Arabians, valiantly defending a place naturally strong and well fortified by art.

> 'High on a throne of royal state, which far
> Outshone the wealth of Ormuz and of Ind;
> Or where the gorgeous East with richest hand
> Showers on her kings barbaric pearl and gold.'

Under the Portuguese it was a place of great trade, but in 1662 (1622?) it was taken by Shah Abbas the Great, with the assistance of the English, and the trade was destroyed. On a plain near the northern extremity of the island are the cisterns and other remains of the once commercial Ormuz, which, in the time of its prosperity under the Portuguese (A.D. 1515), when it was a great entrepot of Indian trade, had 4000 houses and 40,000 inhabitants. The port and anchorage, which gave such importance to the spot, are within two miles of the town. The present inhabitants number about 3000, and are employed in preparing rock-salt, from which the sultan or imam of Muscat as proprietor derives a considerable revenue. The island gives its name to the Straits of Ormuz. The islands of Larrack (or Larek) and Ormuz are 12 miles apart, and Ormuz is about 26 miles north of Ras Mussundum. Larrack is 400, and Ormuz 700 feet high. From Larrack we have specular iron-ore as its characteristic, and from Ormuz, rock-salt, sulphur, gypsum, iron-ore, and pyrites. The people on the neighbouring coast seem to be identical with the races who are known to have dwelt there 2000 years ago, and known to the ancients as Ichthyophagi. It was visited by Ralph Fitch. At present a few ruins, scattered amidst wild deserts of salt, on a dreary islet, alone remain of the former wealth of Ormuz.—*Markham's Embassy*, p. 44; *India in the 15th Century; Clavijo*, p. 94; *Kinneir's Memoir*, p. 12; *Palgrave; MacGregor*, p. 354.

ORMUZD, a name amongst the fire-worshipping Zoroastrians for the Omniscient. It is from Ahura mazda,—Ahura, living, and Mazda, wise,—the all-knowing Lord. The ancient inscriptions almost all begin with the words Baga vazarka, Ahura mazda, Deus magnus (est) Oro mazda.—*Bunsen, God in History.* See Ahriman.

ORNITHOLOGY, the science which teaches the natural history and arrangement of birds, from the Greek words ὄρνις, a bird, and λόγος, a discourse, signifying literally 'a discourse upon birds.'

ORNITHOPTERA BROOKEANA, of Borneo, is one of the most elegant of the butterflies. O. Crœsus, *Wallace*, the bird-winged butterfly, occurs at Batchian. It is 7 inches across the wings, which are velvety-black and fiery orange. O. remus, the largest and most beautiful of all the butterflies, is found in Celebes.—*Wallace*, i. pp. 37, 284.

ORNUS FLORIBUNDA. *G. Don.* Fraxinus floribunda, *Wall.*, is the Nepal ash tree. O. Urophylla, *G. Don.*, is the ash tree of the Khassya mountains.

ORONCHON, a small tribe of the Tunguz, in the Lower and Upper Amur. They use the reindeer.

OROPHEA CORIACEA, a middle-sized tree, grows at Dimboola and Raxawa, in the Ceylon central province, at an elevation of about 3000 feet; O. obliqua, *Hook. f. et T.*, in the Galle and Ratnapura districts, at no great elevation; and O. Zeylanica, *Blume*, in the central province, at an elevation of 2000 to 3000 feet; woods unknown. —*Thw. Zeyl.* p. 8.

OROSIUS, a writer about A.D. 400. In what he says of India he vaguely follows Ptolemy.

OROTALT, the ancient Grecian term for the Arabic Allah Ta' ala.—*Sale's Koran.*

OROTSKO occupy the interior of Saghalin and its eastern coast. They are few in number, their language differs from that of the Aino, and, according to Schrenck, they are Tunguzians. They do not shave the head, but allow the hair to fall over the shoulders, or tie it up in a veil, which hangs down behind. Their women plait or curl the hair. They wear large ear-rings, and, according to Mamia Rinso, a Japanese traveller, are very good looking. The Orotsko have no permanent habitations, but dwell in yurts like the Oronchon of the Upper Amur. Their storehouses are also similar, and are left standing when the owner migrates. The only domestic animal of this tribe is the rein-deer, and a man owning twelve of them is considered well off. Rein-deer carry burdens or draw the sledge.—*Ravenstein's Amur*, p. 398.

ORPIMENT. Ter-sulphuret of arsenic, yellow sulphuret of arsenic, and tri-sulphide of arsenic.

Arsanikoon, . . Arab.?	Zerneik-zard, . . Pers.
Shih-hwang, . . Chin.	Haritalaka, . . Sansk.
Hartal, ... Hind.	Aridurum, . . . Tam.
Auri-pigmentum, Lat.	Yelliekood-pashanam, ,,

This is of a heavy liver-yellow colour. It is obtainable in all the bazars of India, and is found in the Chinese provinces of Ho-nan, Yunnan, and Kan-su, also in Cambodia. It is used as a paint, also in medicine.

ORR, CHARLES ADAM, a general officer of the Madras Engineers, who built the great anicuts across the river Godavery and Kistna. On quitting India, the following order was issued in the Public Works Department, April 25, 1871:—'The Right Honourable the Governor in Council desires to place on record an expression of the high value attached by Government to the services rendered to the State by Colonel Orr during an honourable career of about 40 years' duration, and especially in the Public Works Department, as a talented projector and able and energetic executive officer, and for the last seven years as the confidential adviser and organ of Government in the important branch of the public service to which he has been attached. As a principal executive officer on the irrigation works in the Godavery delta, and as the designer and constructor of the similar works in the Kistna delta, Colonel Orr has perpetuated the memory of his professional ability.'

ORRIS ROOT, Florentine iris.

Ussul-us-sosun, Isra, Arab.	Violen wurzel, . . Ger.
Ussul-ul-manjunie, ,,	Kewra-ki-jar, . . Hind.
Peh-chi, ... Chin.	Beg-banafsha, . . ,,
Iris de Florence, . Fr.	Ireos, ... It.

In Europe, this is the root or rhizome of the Iris Florentina, and of the German and pale Turkey iris obtained from the south of Europe and Asia Minor. It is tuberous, oblong, about an inch thick, white, odour like that of violets; taste when dry, bitter. In India, an excellent kind of orris root is sold in the bazars under the name of Beg-banafsha, literally violet root. An inferior description of orris root is imported into Bombay from the Persian Gulf, which is procurable in most bazars. An iris is cultivated in India, the roots of which are used as the orris root. Orris root is used by perfumers, and in medicine.—*O'Sh.* p. 655.

ORSEDUE, Dutch gold.

Khater goud, . . . Dut.	Oliquant, ... Fr.
Orsidue, ... Eng.	Fittergold, ... Ger.
Manheim gold, . . ,,	Orpello, ... It.
Oripeau, ... Fr.	Oropel, ... Sp.

An article resembling gold-leaf, made of copper and zinc, and largely used in tinselling dolls, toys, images, etc. It is made up into books, and in this state is packed in casks and cases for exportation from Manheim in Germany, where it is chiefly manufactured.

ORTHANTHERA VIMINEA. *Wight.*

Apocyne viminea, *Wall.*

Matti, ... Beas.	Mowa, Lanebar, Tr.-Ind.
Khip, Kip, . . . Sind.	

A twiggy, leafless plant, one of the Asclepiadæ, not uncommon about Dehli and some other parts of Cis-Indus, occasionally in the Siwalik tract and Trans-Indus. It grows luxuriantly along the foot of the mountains. It attains a height of ten feet, and is remarkable for the length and tenacity of its fibres; and its long, straight, leafless, slender, and wand-like stems point it out as seemingly well suited for rope-making. Near Dehli, after four or five days' steeping, its fibre is extracted for making rope. In Sind, also, it appears to be this plant of which unsteeped stalks are made into ropes for Persian wheels, which are said to be very durable, as they do not readily rot from moisture.—*Royle, Him. Bot.* p. 274; *Royle's Fib. Pl.; Stewart, Panjab Plants.*

ORTHOTOMUS LONGICAUDA. *Gmel.* The tailor-bird; its curiously fashioned nest displays marvellous skill and care; it is plentiful in the groves and gardens of India. The male is larger and has a longer tail than the female, but both are yellowish-white below and olive-green above. The call of the male is a frequent repetition of Whee-u, and the male birds in a garden vie with each other.

ORTOLAN, green-headed bunting.

Emberiza hortulana, *Linn.*	Hortulanus, *Gesner.*
E. Buchanani, *Blyth.*	Miliaria pinguescens, *Fr.*
Garten-ammer, . . Ger.	Ortolano, ... It.
Fell-ammer, . . . ,,	Gerste-kneu, Netherlds.
Jam-johara, . . . Hind.	Tordino berluccio, Venice.

The ortolan of Europe is occasionally seen in the west of India. It was in Colonel Sykes' catalogue of Dekhan birds. In Europe they are caught in great numbers, are fattened for the table, and are considered a great delicacy. In India, the social lark, Calandrella brachydactyla, and the Pyrrhulauda grisea, are popularly called ortolans. A kind of lark called an ortolan is mentioned by Dr. Hooker as abundant in the Parwa district; this is a migratory bird. The flocks are large, and the birds so fat, that they make excellent table game; they return from the north in September. —*Hooker's Him. Jour.* i. p. 998.

ORUKZAI, an independent Pathan tribe beyond the N.W. frontier of British India. Their country extends from the Sipah tract (which adjoins the Afridi hills) round the north-western corner of the Kohat district, and then nearly onward to the top

of the Miranzai valley (which belongs to Kohat) till it joins the country of the Zymukht Afghans. The tribe is one of the largest on the N.W. frontier, and numbers 20,000 fighting men, most of whom are good hill soldiers. The Orukzai hills stretch a long distance to the west. In the interior of these hills there is the cool table-land of Tirah, where the clansmen resort in the summer with their cattle, and in the winter return to the pasturage grounds of the lower ranges near the British frontier. The sections of the tribe that have come in contact with the British are the Shekhan, the Mishti, and the Raabeah Khel. The portions of the Kohat district adjoining the Orukzai hills are the subdivisions of Samilzai, Hungu, and Miranzai.

ORYZA SATIVA. *L.* In husk or growing.

Ruz, ... ARAB.	Gabah, in husk, . MALAY.
Dhan, . . BENG., HIND.	Paiera, . . . MALEAL.

Paddy, in straw, MALAY.	

The grain husked.

Pusnee, ... BENG.	Tai, ... JHELUM.
Bhatta, ... CAN.	Dein, Tani, . . KASH.
Kang-mi, Mi, . . CHIN.	Bras, ... MALAY.
Chawal, . DUK., HIND.	Ari, Arisi, Payera, MALEAL.
Rice, ... ENG.	Birinj, Shali, . . PERS.

The Oryza genus of plants belongs to the natural order Panicaceæ. Oryza is the term by which rice was known to the Greeks and Romans, and which has been adopted by botanists as the generic name of the plant yielding that valuable grain. The Greek term would appear to be derived from the Arabic Aruz, and this is allied to Uri, a Telinga name of cultivated sorts; but the Sanskrit names are Anu, Dhanya, and Vrihi, the wild kind being called Nivara; while that of the great tanks is called Arisi in the Tamil language. The European names are evidently all derived from the same sources, but the Malay name, paddy, is applied to the rice in its natural state, or before being separated from the husk. The natives of India call it Dhan in this state, as well as the plant, and the rice itself is called Chawul. The genus Oryza has two glumes to a single flower; paleæ two, nearly equal, adhering to the seed; stamens six, and styles two. Dr. Roxburgh describes two species,—one, O. sativa, distinguished by its diffuse panicle; the other, O. coarctata, has the panicle contracted, the valvulets of the calyx subulate, and the leaves culm-clasping. This species is a native of the delta of the Ganges, and was first discovered there by Dr. Buchanan in 1796, but was not found to be applied to any use. The common rice, O. sativa, unlike many long-cultivated grains, is still found in a wild state, Nivara, SANSK., Newari, TEL., in and about the borders of lakes in the Rajamundry Circars of the Peninsula, though never cultivated, because the produce is said to be small compared with that of the varieties in cultivation. The composition per 100 parts of several rices was as under:—

	Pegu.	Bombay bazar.	Broach.	Bareilly.	Malacca.

In the East Indies, rice is used for food for man, cattle, and fowl; for the manufacture of starch, and the distillation of spirit, etc. Rice is the food of a great number of the human race. The inhabitants of N. and S. America, on the S. of Europe, of N. Africa, of the south and east of Asia, all largely use it. It is the most easily digestible of all vegetable substances, but its bulk is objectionable.

There are in several provinces three distinct crops; the first, grown on somewhat high ground, is the early crop, sown for the most part in June, and reaped in August and September. The Burmese recognise nearly a hundred varieties of rice, but their principal distinctions between the different kinds are, the hard-grain rice, soft-grain rice, glutinous rice. These names are designative.

The Natsung rice of Burma is the hardest grain, and is the rice principally exported to Europe. The Meedo is the chief of the soft-grain varieties; is much preferred by the Burmese to the hard-grained sorts, and it is certainly superior in taste when cooked; but the hard-grained rice is chiefly purchased by the merchants for export, as it keeps better, and the soft-grained rice is too much broken by European machinery in cleaning. This last objection appears to have been overcome, and a demand sprang up for the Meedo rice for the markets of foreign Europe.

The Koung-nyeen, or hill rice, is called glutinous rice by Europeans, from the property it possesses, when cooked, of the grains all adhering in a thick glutinous mass. It is the chief article of food with the Karen and other hill tribes, but is not much eaten by the inhabitants of the low swampy plains, where the common rice is grown.

Many varieties of rice are grown in Oudh, but five kinds are considered among the best. Mihee and Basee are foremost. The peculiarity in the cultivation of these two kinds is, that they are transplanted and placed about 5 inches apart. By this method, if the soil is good, they grow to the height of an ordinary-sized man, and produce a much larger quantity than if otherwise treated. The odour and flavour of these two kinds, when cooked, are superior to those of any other variety. They are only used by such as can afford to buy them. Other esteemed varieties are the Bateesa and the Phool-birinj. They are sown broadcast in June, and left so, and they are mostly used by natives. The first two mentioned, when new, sell for 10 or 12 seers per rupee, and become dearer according as they become older. The other three kinds sell for about 19 seers per rupee, and are dearer if older. Some prefer Phool-birinj, as it swells in boiling, and has an agreeable odour.

Throughout the Panjab, where the soil is low and good, and water abundant, especially in the upper part of the Jullundur Doab, rice is grown. It is also abundantly grown throughout Siwalik tract, and up the valleys to an elevation in places of 6000 or even nearly 7000 feet. In Peshawur the varieties of rices are called doaba, shugha, zafrani, jyotshi, kaneri, and lukh, or coarse rice. In the plain districts the coarse rice commonly grown is called munji; other varieties met with in the bazar, of second and third quality, are begami and samoja, also sohn pat; a fourth class is the red-skinned kind called sathi, also sharbati and chinwa lal,—this is inferior.

In Mysore, rice is extensively grown in the wet

lands irrigated by the canals of the rivers Cauvery, Capila, Hamavety, Lutchman Tirta, and Pennar, at talapiriige or fountain-heads, and under tanks. Nuggur and Astagram divisions have proportionally the largest produce of paddy. It is exported from one part of Mysore to another; but except to the Neilgherries, and a portion to the western coast from Nuggur and North Astagram, little goes out of the territories. There are many varieties. Indeed, almost every village in India has a variety of this grain peculiar to the locality. The ryots do not try to preserve paddy for a length of time, as it rapidly loses in weight.

The ardent spirits prepared from rice are—

Arrack, . . .	Batavia.	Saki, ...	Japan.
Ayet, ...	Burm.	Rij, Tanpo, Sichew,	Jav.
Mandrin, . . .	Chin.	Phaur, . . .	Nepal.
Paniz, . . .	Corea.	Lau, ...	Siam.

The No or glutinous rice of China contains much dextrine, and is rounder in the grain. The best glutinous rice of China is from Kiang-si; it is preferred for making congee, dumplings, wine, but is not so digestible as common rice.—*Ainslie; Roxb.; Stewart; Smith; Powell; Madras Ex. Jur. Rep.; Catalogue Ex.; Simmonds.* See Rice.

OSACA, an imperial city of Japan, pleasantly situated on a river, spanned by a bridge with several arches.

OSARA REWAND. In Tibet, extract of rhubarb, *i.e.* lit. rhubarb juice. In India, gamboge.

OSBECKIA ASPERA. *Blume.*

Osbeckia glauca, *Benth.*	Melastoma asperum, *Linn.*
Choto-phutika, . Beng.	Kaat katali, . Maleal.

This belongs to the order Melastomaceæ; there are several species. A pretty species, having the stamens all of equal length, is in flower on the Moulmein Hills in August.—*Roxb.* ii. p. 224.

OSCILLATORIA RUBESCENS. Ehrenberg, while navigating the Red Sea, observed that the occasional red colour of its waters was owing to enormous quantities of an animal, which has received the name of Oscillatoria rubescens, and which seems to be the same with what Haller described as a purple confcrva swimming in water.

OSHADHI-PATI. Sansk. Lord of herbs, an epithet of the Hindu deity Soma, the moon.—*Dowson.*

O'SHAUGHNESSY, Sir WILLIAM, M.D., a medical officer of the Bengal army, who introduced the electric telegraph into India. Author of the Bengal Dispensatory, Calcutta 1842; Explosion of Gunpowder under Water by Galvanic Battery, in Bl. As. Trans., 1839, iii. p. 851; Preparation of Ganja, etc., ibid. 732, 838; Communication of Telegraphic Signals, etc., ibid. 714; Effects of Sea-Water on Iron, ibid. 1843, xii. part 2; Report on the Establishment of the Electric Telegraph, Pamphlet, Calcutta 1852, published by Government; also author of the Bengal Pharmacopæia.

OSHTERANI. South of the Sheorani hills, conterminous with the Dehra Ismail Khan and Dehra Ghazi Khan districts, the small Pathan tribe of Oshterani dwell, mustering about 1000 fighting men. They are brave and pugnacious, but not predatory. They dwell chiefly in the hills, and are so far independent; but many of them possess and cultivate lands in the plains at the foot of the hills, and consequently within British territory. Before annexation, they used to be quite as violent as their neighbours, especially during the continuance of a deadly feud with the Kasrani. The quarrel was, however, composed by Major Edwardes, before annexation. Subsequently, they never attacked British subjects, or made raids on property, and have evinced a good and friendly disposition. On the border of the Oshterani hills, and nearly opposite to Dehra Futteh Khan, is the Vooch or Korah pass, faced by the British outposts of Doulalwalla and Vehoa. — *Records, Government of India.*

OSIRIS, a god of the ancient Egyptians. He was worshipped as the Lord, the God and Father of each individual soul, the Judge of men, who passes sentence strictly according to right and wrong, rewarding goodness and punishing crime. The worship of animals was not introduced into the established religion earlier than the second dynasty, 200 years after Menes, therefore not much more than 5000 years ago (Bunsen's God in History, i. p. 226). According to some authors, Amun, the King; Neph, the Divine Spirit; Phthah, the Creative Power; Khem, the Reproductive Power; Thoth, the Divine Intellect; and Osiris, the Goodness of God, were all one and the same being. Osiris was the essential personification of divine goodness. Many cities claimed the honour of being his burial-place, particularly Philæ, Sais, Busiris, and Taposiris. At Memphis he became united to Phthah, and was called Phthah-sokar-Osiris; and also to the bull Apis, and then became Osiris-apis or Serapis, who was afterwards the chief god of Egypt. Isis, his queen and sister, held rank before him, and was the favourite divinity of the country. She had the characters of all goddesses in turn. She was sometimes the mother, sometimes the queen of heaven, sometimes Hecate, the goddess of enchantments. Horus, their son, had a hawk's head, and wears the crown. He was the avenger of his father's death. But he sometimes appears with the sun on his head, as Horus-ra or Aroeris, the elder Horus, and he is not then the son of Isis. They had another son, Arrubis, with a jackal's head, whose office was to lay out the dead body and to make it into a mummy. The god Tymphon is in form of a she-bear or hippopotamus, walking on its hind legs. He was the author of evil, and he killed his brother Osiris. Nephthys was the sister and companion of Isis. Of this family, the trinity is sometimes Isis, Osiris, and Nephthys.

OSORIO. Geronimo Osorio, author of the great work, De Rebus Emmanuelis Virtute et Auspicio Gestis, 1571. It is an invaluable compilation on the early Portuguese period of its relations with the East Indies.

OSPHROMENUS OLFAX. *Commerson.* The Gourami at Penang, Malacca, Mauritius, and Madras. This fish has been successfully naturalized. A writer, signing himself 'Z,' in Land and Water of 8th February 1868, calls it the Ikan gorammi of the Malays, and adds: 'Dr. Cantor, in his catalogue of Malayan fishes (Jour. As. Soc. of Bengal, vol. xviii.) remarks that . . . they become tame, so as to appear on the approach of their feeder, and will rise to flies, beetles, and certain flowers, particularly those of a large hibiscus. Among themselves they are pugnacious. Several living ones were imported, and placed in a tank in the Calcutta Botanic Gardens, where they appeared to thrive.' General Hardwicke (Zool. Jour. iv. p. 309) gives an account 'of the breeding of this fish, appar-

cutly monogamous; he observes they commence at six months of age, whilst their fecundity is astonishing. During the breeding season they frequent the sides of tanks, where shelter is afforded them by the grasses and weeds growing in the water. For several days they are very active, passing in and out of their grassy cover, and in some places thickening it, by entangling all trailing shoots, and forming what is generally considered the spot under which the ova are deposited. They continue to watch this place with the greatest vigilance, driving away any interloping fish, and at the end of a month numerous fry appear, over which the old gouramies keep watch many days.'—*Dr. Day.*

OSRHOENE of the Romans, the modern Orfa in the pashalik of Baghdad.

OSTEOCOLLA, an inferior kind of glue manufactured from bones. In Gurief, a fine boiled fish-glue is prepared, perfectly transparent, having the colour of amber, which is cast into slabs and plates. The Ostiaks also boil their fish-glue in a kettle.

OSTIAK. On the river Ket is a tribe called by the Tongusians Gosetiyasek or Ostiak, who possess a number of scattered habitations in the woods on each side of the Ket. They hunt the tiao, and pay a fixed tribute of the skins of this animal. The Ostiak regard it as a crime to marry a woman of the same family, or even of the same name. The same custom prevails among the Circassians, the Chinese, the Rajputs, Brahmans, and the Samoyeds.—*Staunton's Narrative; Pallas*, iv. p. 96; *Lubbock's Civil.*

OSTODES ZEYLANICA. *Thw.*

Desmostemon Zeylanicus, *Th.* | Walka-koona, . SINGH.

There are two varieties, a large and a small. The large tree is common in the dense moist forests of the Wynad, Animallays, Tinnevelly Ghats, Travancore, and Ceylon, up to about 4000 feet elevation. Its timber is in use for ordinary work in Ceylon. The variety O. minor, *Mull.*, is much rarer than the ordinary form. Colonel Beddome observed it only on the Animallays, and it occurs in Ceylon; it differs in no way, except in the size of all its parts, but it is considered a distinct species by Muller.—*Beddome, Fl. Sylv.*

OSTRICH, Struthio camelus, *L.*

Thar-ud-jamal, . ARAB.	Shutr-murgh, . . PERS.
Strudsfugl, . . . DAN.	Abestruz, . . . PORT.
Struisvogel, . . . DUT.	Strouss, ... RUS.
Autruche, ... FR.	Avestruz, ... SP.
Strauss, ... GER.	Struts, ... SW.
Struzzo, ... IT.	

This is the only species of the genus Struthio. It inhabits Central and Southern Africa. It runs with great speed, aided by its wings, which are not sufficiently developed for flight. The length between each stride, when at full speed, is not unfrequently from 12 to 14 feet, moving with a velocity that puts the swiftness of the horse to the trial. They feed on the sprouts of the Acacia mimosa, and on the pulp of the Naras. When hunted by horsemen, the latter surround the troop of ostriches and drive them from one to another, gradually narrowing their circle. In the height of the hot weather, the ostrich makes but little effort, and a single horseman suffices to catch them. The ostrich imitates the lapwing and oyster-catcher in its stratagems to mislead those who approach its nest or its young. It hatches its own eggs, but reserves a few for the food of its young. Its usual cry is a short roar, but when at bay it hisses like a gander. Their long wing-feathers are sold at from £1 to £12 the lb.—from 70 to 90 feathers go to the lb.; the thinner the quill, and the longer and more wavy the barbs, the more it is prized.

Ostrich farming has been successfully introduced at the Cape of Good Hope, in S. America, and on the Pacific side of the United States, from species of Rhea. Buffon mentioned that the feathers of the finest quality are no doubt obtained from living birds. Captain Lyons, who travelled through the northern latitudes of Africa in the early part of the present century, also mentioned that 'at Sockna and its environs they keep ostriches in their yards and enclosures, and collect their feathers three times in two years. From the ostrich skins which I have seen exposed for sale, I fancy that the best plumes we see in Europe are obtained from those thus kept enclosed; for those obtained from wild birds have theirs so broken and soiled, that there are often not a dozen good ones found.' In 1856, it appears to have been suggested by the French that the ostrich might be domesticated in Algeria. According to Marmot, the native tribes of the province of Dara, in Numidia, raised ostriches for their feathers. They were put to graze in troops, so as to secure their feathers in the best possible condition.

M. J. Verran, the naturalist, made a large profit from the feathers derived from the ostriches he raised in his menagerie at Cape Town; and he managed to pluck his birds, without inconvenience, regularly twice a year. And the systematic breeding and rearing of ostriches in South Africa has taken deep and extensive root. In 1860, a pair of ostriches, six months old, could be purchased for 10s.; now, for one bird alone, a few days after hatching, £5 will be given, and for those of three or four months old, £8 to £10; at 12 to 18 months, £12, 10s. to £16; from 2 to 4 years, £20 to £30; a full-grown pair, from £60 to £300, and even £1000. In 1860, the quantity of ostrich plumes exported was 2297 lbs., valued at £19,201; in 1873 it had grown to 31,581 lbs., worth £159,677. An ostrich in full development and plumage, only, however, yields every eight months ¼ lb. of feathers.

The breeding birds are occasionally supplied with chopped meat. The cock birds are viciously pugnacious. They kick forward, and the claw on the end of the bigger toe rips like a knife. The body of the male is jet black, with beautiful white feathers drooping from its wings and tail, and long black feathers slightly overhang them.

They lay from 6 to 14 eggs, and are hatched in 42 days. A full-grown male ostrich, kept for plucking, yields annually about 40 long white and variegated feathers from the wings, called primes and seconds, equal to about 8 ounces in weight. These grow in two rows on each wing. Next in value are the tail-feathers and the long and short black ones. The hen has several long white and variegated feathers, and long and short drab ones, but the former are not of equal value to those of the cock bird. A pair of full-grown ostriches, from 4 years old and upwards, will bring in about £25 per annum by plucking them every 8 months, the average of the male's plucking being £10, and that of the female's £7, 10s. Young birds are plucked for the first time when 10 or 12 months old, but are only worth 7s. 6d. to 15s. the lb.

Their secoud plucking is when about 20 months old. Cutting obtains better feathers than plucking.—*Hartwig.*

OSWAL, a tribe of Rajputs engaged in commerce, and known to Europeans and natives of India as Marwari, also as Baniya and as Saraogi. They are not numerous, but are dispersed through India engaged in their avocations, usually of a banking financial character. They are large made, fair men, and are almost all of the Jaina religion, as also are all the mercantile Agarwal, Bandd'hmati, Jaiswal, Jati, Kharelwal, Lohiya, Sri Mal, Sri Sri Mal, Sri Mali Pattan, Palliwal, Purwal.—*Sherr. Tribes*, p. 289.

OSYRIS, a genus of the Santalaceæ or sanders-wood tribe of plants. O. Nepalensis, *Don.*, is a tree of Nepal, Sirmur, and Hardwar. O. Wightiana, *Graham*, of Kandalla, the lotul, one of the Santalaceæ tribe of plants, is a small tree, with twiggy, erect-growing branches; in flower and fruit most of the year. The fruit, when ripe, is of the size of a small sloe, of a yellow colour, with a mark on the top like a blaeberry. It is sweet and very pleasant when tasted, and is deservedly ranked amongst the wild fruits by Colonel Sykes. O. Nepalensis and Eurya fasciculata are indigenous in the Himalayan valleys, resemble the tea plant, and were mistaken for it.—*Riddell.*

OT or Ota, a Hindi terminal suffix, implying of or belonging to, as Bapote, Gehlot, Mairot. The mountain clans of Albania and other Greeks have the same distinguishing termination, and the Mainot of Greece and the Mairot of Rajputana alike signify mountaineer, or of the mountain; Maina in Albanian, Maira or Mera in Sanskrit.

OTARIA JUBATA, the maned sea-lion, is 11 feet long, has an erect curly hair-tuft at its neck, with a mane flowing completely round its breast, but other parts of its body have only smooth hair or bristles. Otaria Stelleri, the sea-lion of Steller, is found on all the coasts and islands of the Pacific, from lat. 51° N. to the extreme south, but chiefly in Prebelow Island, St. George's. It is hunted by the Aleuth, who use its tawny bristled hide for a boat covering and articles of clothing.—*Hartwig.*

OTHMAN, Usman, or Osman, the 3d khalif of the Muhammadan Arabs.

OTHMAN, the founder of the Turkish empire, from his activity in warfare, was named Ilderim or Yelderm, signifying lightning. He opposed Timur, who in 1403 defeated him at Angora, took him prisoner, and, according to report, confined him in an iron cage. He died soon after. The Turkish race, from Ertoghrul's son Othman, has been called the nation of the Ottoman Turks, and the Osmanli See Ertoghrul; Ottoman; Turkey.

OTIDIDÆ, the bustard family of birds, comprise the genus Otis and three sub-genera, also species of Houbara, Eupodotis, and Sypheotides.

Eupodotis Edwardsii, *Gray*, Indian bustard.

Otis nigriceps, *Vigors.*	O. Lucionensis, *Vieillot.*
Tokdar sohun, . . HIND.	Burra chirath, . . HIND.
Guganbher, . . ,,	Batt-meka, . . . TEL.
Hookna, Gurayin, ,,	Batt-myaka, . . ,,

Length, 4½ to 5 feet; weight, 26 to 28 lbs. Not found in the valley of the Ganges, Bengal, Behar, or the Malabar coast, but is spread over other parts of India. Eupodotis nuba, *Ruppell*, E. Ludwigi, *Ruppell*, E. caffra, *Licht.*, E. Denhami, *Children*, E. Arabs, *Linn.*, and E. kori, *Burchell*, occur in Africa.

Houbara Macqueenii, *Gray*, *Hardw.*, *Gould*, is the O. marmorata, *Gray*, *Hardw.*, and is the Tilaor, female, and Obarra, HINDI. The Indian houbara bustard is 25 to 30 inches long, and weighs 3¼ to 3½ lbs. It is found throughout the plains of the Panjab and Upper Siud, occasionally crossing the Sutlej and the Indus lower down, but it does not occur east of Dehli. It is much hawked both in the Panjab and Sind, the falcon used being the cherrug or Falco sacer.

Sypheotides Bengalensis, *Gm.*, Bengal florikin.

O. deliciosa, *Gray*, *Hardw.*	O. Himalayana, *Vigors.*
Charras, Charaz, . HIND.	Dubar . . . of NEPAL.

Length, 24 to 27 inches; weight, 3¼ lbs. It occurs iu all the north of India, from Calcutta to the Himalaya.

Sypheotides auritus, *Lath.*, black florikin.

Otis auritis, *Latham.*	O. fulva, *Sykes.*
Kan-noul, . . . CAN.	Tan-mor, . . MAHR.
Charas, Charaz, . HIND.	Waragoo-koli, . . TAM.
Chulla charz, . . ,,	Niala-nimili, . . TEL.
Likh, Khar-titar, . ,,	

Length, 18 to 19 inches; weight, 16 to 18 oz.; found throughout India.

Otis tetrax, *Linn.*, the Tetrax campestris, the small bustard of Europe, is said to have been found in the Peshawur valley. It occurs in Central and Western Asia and N. Africa.

The following are bustards of Africa, some of which spread into Arabia, viz.:—O. rhaad, *Shaw;* O. cœrulescens, *Vieill.;* O. scolopacea, *Temm.;* O. afra, *L.;* O. afroides, *S.;* O. Senegalensis, *Vieill.;* O. melanogaster, *Ralph.*

Otis tarda, *Linn.*, great bustard; Avis tarda.

Kodan, Jurz, . . ARAB.	Jungli-kabut, . . HIND.
Asford, ... ,,	Starda commune, . . IT.
Battmiaka, . CAN., TEL.	Ahu bura, . . . PERS.
Ostarde, Houtrade, FR.	Gustard, . . . SCOTCH.
Bistarde, . . . ,,	Abu-tarda, ... SP.
Trapp, Trapp-gans, GER.	Nil-naray, . . . TAM.
Grossetrappa, . . ,,	Batt-miaka, . . . TEL.
Acken-trapp, . . ,,	Bit-miaka, . . . ,,

The bustards live generally in open countries, preferring plains or wide-spreading, extensive downs, dotted with low bushes and underwood,—localities which give them an opportunity of descrying their enemy from afar.—*Ainslie; Eng. Cyc.; Jerdon's Birds.*

OTOLITHUS, a genus of fish on the Malabar coast; excellent isinglass is obtained from two species. They are allied to the perches, but have more variety, and a more complicated structure in their natatory bladders; almost all are good for eating, and many of superior flavour.

Otolithus biauritus, *Cantor.* Total length, 3 feet. Inhabits Sea of Penang, Malayan Peninsula, Singapore, Lancavy, Tenasserim Provinces, and, according to Jerdon, the Malabar coast, where it is called Sille-kora in Malealam. The air-vessel is nearly one-half of the total length, and in shape might be compared with an elongated antique urn with two handles. From the anterior part of each of the latter proceed five branches, four of which give off smaller ones to each side, and the fifth is tortuous and smaller than the rest. It yields a large quantity of isinglass, which in the Chinese market is considered to be of the best quality, and fetches 40 to 50 Spanish dollars per pikul.

Otolithus ruber, *Bloch* and *Schneider.* Jarangigi, MALEALAM. The total length of this fish is 2 feet 6 inches. It yields isinglass,

Otolithus versicolor, *Cuv.* and *Val.* Panan, Panna, TAM. The total length of this fish is only 6⅛ inches. It inhabits the Sea of Penang. Its air-vessel is one-quarter of the total length. Jerdon says this fish is a foot long, and very common at Madras. It is the Perche pierre of Pondicherry.—*Cantor*, p. 1046.

OTONO, a city alderman of Japan. In Japan, a city is divided into wards; for the ten wards there is one lord mayor, who every morning receives the Otono or alderman, hears the cases of minor importance, and decides upon them with the alderman summarily. The Otono post up the public notices in their quarters, and take care of all the poor and sick in their wards.—*Hodgson's Nagasaki*, p. 228.

OTTER, a name for two distinct animals, the land-otter (Lutra vulgaris, L. nair, L. leptonyx, and L. Canadensis) and the sea-otter (Enhydra marina). Both are caught for their fur; of the former, Great Britain receives about 20,000 skins a year. The latter, more like the seal in its habits, is obtained in much smaller numbers, but, being the royal fur of China, is highly valued there and in Russia. The otters of India and S.E. Asia are classed by naturalists under the genus Lutra, and sub-family Lutrinæ.

The common Indian otter, the Lutra nair, *F. Cuv.*, is found throughout India, Ceylon, Burma, and Malayana, from the seashore to considerable elevations, frequenting rivers and salt marshes, making its lair under boulders and rocks. It is trained in Bengal and China to assist in fishing, by driving the fish into the nets. It is easily domesticated.

The hill-otter of India, L. vulgaris, *Erxleben*, is the common otter of Europe, and is found only in the Himalaya.

The clawless otter, L. leptonyx, *Horsfield*, is found throughout all the Himalaya, from the N.W. to Sikkim, also in Lower Bengal and Arakan.

Lutra auro-brunnea, a small otter of the Himalaya, has been described by Mr. Hodgson.

Lutra barang, *Raffles*, is an otter of the Malay Peninsula.

Lutra simung, *Raffles*, is found in Singapore and Borneo.—*Jerdon; Horsfield; Powell; Blyth.*

OTTO OF ROSES.

Atr, . . . ARAB., GUJ. | Gulab-ka-atr, . . HIND.
Mei-kwei-yu, . . CHIN. | Atr-i-gul, . . . PERS.

Otto of roses is a perfume obtained by the distillation of rose petals. It is manufactured in France, Turkey, Tunis, and Persia, and is also made in Hindustan. Dr. Jackson mentioned that in the early part of the 19th century, around the station at Ghazipur, there were about 300 bighas, or about 150 acres of ground, laid out in small detached fields as rose gardens, most carefully protected on all sides by high mud walls and prickly pear fences to keep out the cattle. These lands, which belong to zamindars, are planted with rose trees, and are annually let out at so much per bigha for the ground, and so much additional for the rose plants,—generally 5 rupees per bigha, and 25 rupees for the rose trees, of which there are 1000 in each bigha. The additional expense for cultivation would be about 8 rupees; so that for 38 rupees you have for the season per bigha of 1000 rose trees. If the season is good, this bigha of 1000 rose trees should yield one lakh of roses. Purchases for roses are always made at so much per lakh. The price of course varies according to the year, and will average from 40 to 70 rupees. As soon as the roses come into flower, the zamindar and cultivators of the rose gardens, as well as intending purchasers, meet in the city, and, according to the demand and expected produce, a nerick or market rate is established, and purchasers then enter into agreement with the cultivators for so many lakhs of roses at such a price. This agreement is considered binding, and the cultivator is obliged to deliver the quantity at the contract rate; when that is completed, another can be made, but this latter is always at a much higher rate.

Unlike the propagation of the specimen roses of England, which depend on grafting, these rose trees are raised from cuttings, which are planted out from nurseries after one year's growth, at an expense of 25 rupees per bigha. These slips are watered every five or six days till the setting in of the rains, and when once they have taken root they are finally transplanted to the rose garden. Here each rose tree is planted 3 feet apart from the other, and on an average 1000 shrubs are allowed to grow in each bigha of land. Rose fields are kept scrupulously clean by constant weeding and loosening of the soil round the root. This operation takes place about three times a year. The best sort of manure for roses is sprinkled all over the fields annually, and once a year the fields are irrigated by flooding them with well water. Pruning takes place in the month of January; the flowering season is in February and March, when the blossoms are picked and collected each day before sunrise. The average yield of flowers per bigha is from 30,000 to 60,000. These are sold to the distillers at a rate of from 100 to 125 rupees per lakh of flowers. The total area under rose cultivation in Ghazipur was estimated at about 200 acres, bearing an average rental of 4 rupees per bigha.

The rose trees come into flower at the beginning of March, and continue so through April. In the morning early the flowers are plucked by numbers of men, women, and children, and are conveyed in large bags to the several contracting parties for distillation. The cultivators themselves very rarely manufacture. The native apparatus for distilling the rose-water is of the simplest construction; it consists of a large copper or iron boiler well tinned, capable of holding from 8 to 12 gallons (shaped like the earthen hundi pots in which the gomastahs send in their opium), having a large body with a rather narrow neck, and a mouth about 8 inches in diameter; on the top of this is fixed the head of the still, which is nothing more than an old deghchi, or cooking vessel, with a hole in the centre to receive the tube or worm. This tube is composed of two pieces of bamboo, fastened at an acute angle, and it is covered the whole length with a strong binding of corded string, over which is a luting of earth to prevent the vapour from escaping. The small end, about two feet long, is fixed into the hole in the centre of the head, where it is well luted with flour and water. The lower arm or end of the tube is carried down into a long-necked vessel or receiver, called a bhubka. This is placed in a 'hundi,' or pot of water, which as it gets hot is changed. The head of the still is luted on to the

body, and the long arm of the tube in the bhubka is also well provided with a cushion of cloth, so as to keep in all vapour. The boiler is let into an earthen furnace, and the whole is ready for operation.

The best *rose-water* in the bazar may be computed as bearing the proportion of 1000 roses to a seer of rose-water; this perhaps may be considered as the best procurable. From 1000 roses most generally a seer and a half of rose-water is distilled, and perhaps from this even the attar has been removed. The boiler of the still will hold from 8000 to 12,000 or 16,000 roses. On 8000 roses from 10 to 11 seers of water will be placed, and 8 seers of rose-water will be distilled. This, after distillation, is placed in a carboy of glass, and is exposed to the sun for several days to become puckah or ripen; it is then stopped with cotton, and has a covering of moist clay put over it; this becoming hard, effectually prevents the scent from escaping. The price of this will be from 12 to 16 rupees. This is the best that can be procured.

To procure the pure *attar* or *otto*, the roses are put into the still, and the water passes over gradually as in the rose-water process; after the whole has come over, the rose-water is placed in a large metal basin, which is covered with wetted muslin tied over to prevent insects or dust getting into it; this vessel is let into the ground about two feet, which has been previously wetted with water, and it is allowed to remain quiet during the whole night. The attar is always made at the beginning of the season, when the nights are cool. In the morning early the little film of attar which is formed upon the surface of the rose-water during the night is removed by means of a feather, and it is then carefully placed in a small phial; and day after day, as the collection is made, it is placed for a short period in the sun, and, after a sufficient quantity has been procured, it is poured off clear, and of the colour of amber, into small phials. Another account of it is that in the manufacture of the purest attar of roses, a gallon or half a gallon of the best rose-water is kept in a large copper vessel in the cool night air, with a thin cotton covering over it. Before daybreak the extract floating over the surface of the water is carefully collected with a pigeon's feather, and placed in a phial. The next day fresh flowers are added to the same water, and it is again distilled; and the same process is continued for several days successively, till as much pure attar of roses is collected as is required. The whole quantity thus collected is kept in a phial and exposed to the sun for a few days; and as soon as the watery particles have evaporated, pure oil or attar of roses is left in the phial, which sells by weight at 125 to 130 rupees per tola. This sort of attar being costly, is generally made only to order, and the ordinary quantity purchased each year rarely exceeds five or six tolas. The rose-water left after the eighth or ninth distillation again comes into use, and is sold in the market as the best of its kind. It is, in fact, clear profit to the manufacturer, who is already amply repaid by the attar itself. The prime cost of a tola of attar is fairly estimated at Rs. 72, viz. cost of labour, Rs. 12; value of 50,000 rose-flowers at Rs. 120 per lakh, Rs. 60,—making the total Rs. 72. The margin left to the manufacturer, after covering the cost of interest on outlay, does not fall far short of Rs. 40 or Rs. 50.

The ordinary rose-water is sold in huge spherical glass receptacles, called karabas, each containing 14 quart bottles. The average selling price of ordinary rose-water varies from 2 to 12 rupees per karaba, and in English quart bottles from 8 rupees to 8 annas each. The usual cost of labour for each distillation yielding 24 bottles is 1 rupee. During the season, numerous temporary rose stills are worked by traders from different parts of India. Consequently it is very difficult to make even an approximate estimate of the actual quantity produced, but it is supposed to be somewhere between 200 and 300 maunds.

Pure attar, when it has been removed only three or four days, has a pale greenish hue; by keeping it loses this, and in a few weeks' time it becomes of a pale yellow. The first few days' distillation does not produce such fine attar as comes off afterwards, in consequence of the dust or little particles of dirt in the still and the tube being mixed with it. This is readily separated, from its sinking to the bottom of the attar, which melts at a temperature of 84°. From one lakh (100,000) of roses, it is generally calculated that 180 grains, or one tola, of attar can be procured; more than this can be obtained if the roses are full-sized, and the nights cold to allow of the congelation. The attar purchased in the bazar is generally adulterated, mixed with sandal oil or sweet oil; not even the richest native will give the price at which the purest attar alone can be obtained, and the purest attar that is made is sold only to Europeans. Attars sell at from 50 to 90 rupees the tola of 180 grains.

Native stills are let out at so much per day or week, and it frequently occurs that the residents prepare some rose-water for their own use and as a present to their friends, to secure their being provided with that which is the best. The natives never remove the calices of the rose flowers, but place the whole into the still as it comes from the gardens. The best plan appears to be to have the calices removed, as by this means the rose-water may be preserved a longer time, and is not spoiled by the acid smell occasionally met with in the native rose-water. It is usual to calculate 100 bottles to one lakh of roses. The rose-water should always be twice distilled; over 10,000 roses, water may be put to allow of 16 or 20 bottles coming out; the following day these 20 bottles are placed over 8000 more roses, and about 18 bottles of rose-water are distilled. This may be considered the best to be met with. The attar is so much lighter than the rose-water, that previous to use it is better to expose the rose-water to the sun for a few days, to allow of its being well mixed; and rose-water that has been kept six months is always better than that which has recently been made.

At the commencement of the rose season, people from all parts come to make their purchases. There are about thirty-six places in the city of Ghazipur where rose-water is distilled. The distillers generally put a large quantity of sandal oil into the receiver; the oil is afterwards carefully removed and sold as sandal-attar, and the water put into carboys and disposed of as rose-water. At the time of sale, a few drops of sandal oil are placed on the neck of the carboy to

give it a fresh scent, and to many of the natives it appears perfectly immaterial whether the scent arise solely from the sandal oil or from the roses. Large quantities of sandal oil are every year brought up from the south and expended in this way. The chief use the natives make of the rose-water, or the sandal-attar, as they term it, is on the occasion of their festivals and weddings. It is then distributed largely to the guests as they arrive, and sprinkled in profusion in the apartments. A large quantity of rose-water is sold at Benares, and many of the native rajas send over to Ghazipur for its purchase. Most of the rose-water as soon as distilled is taken away, and after six months from the termination of the manufacture there are not more than four or five places where it is to be met with.

The bulk of the otto of roses of commerce is made in Turkey, where it is almost invariably adulterated with the oil of an Indian andropogon.

In India, all the perfumed oils obtained from all flowers are called atr or otto, but for making adulterated rose otto or atr, sandal-wood is well pounded and mixed with water, and then subjected to the usual process of distillation with roses. This gives a greater quantity of oily substance than could be expected from roses only. The same water is distilled over and over again, with an additional quantity of flowers as many fresh times as suits the fancy of the manufacturer. The value of this alloyed attar rises in proportion to the number of distillations, and the best of the kind is sold for 10 rupees per tola, down to the lowest rate of 2 rupees for the inferior sorts. The process of collection of this attar is the same as that of the other, the only difference between the two being in the admixture or not of sandal-wood. It is difficult to estimate with any degree of accuracy the quantity of alloyed attar annually produced in Ghazipur, for a large number of outsiders come every year, stop for the season only, and then carry off what they produce. Probably a maund would be near the mark; but the value cannot be accurately computed, owing to the great variety of rate for the different qualities manufactured.

Other perfumed oils are manufactured without resorting to distillation. Layers of jasmine or other flowers, four inches thick and two inches square, are laid on the ground and covered over with layers of sesamum or any other oil-yielding seed. These are laid about the same thickness as the flowers, over which a second layer of flowers like the first is placed. The seed is wetted with water, and the whole mass covered with a sheet held down at the end and sides by weights, and allowed to remain for eighteen hours in this form; it is now fit for the mill, unless the perfume is desired to be very strong, when the faded flowers are removed and fresh ones put in their place. The seeds thus impregnated are ground in the usual way in the mill, the oil expressed having the scent of the flower. At Ghazipur, the jasmine and bela are chiefly employed; the oil is kept in dubbers, and sold for about 2 rupees a seer. The newest oils afford the finest perfumes. The process here described is the same as that pursued at Bombay. In Europe, a fixed oil, usually that of the bean or morunga nut, is employed. Cotton is soaked in this and laid over layers of flowers, the oil being squeezed out so soon as impregnated with perfume.—*Monthly Bombay Times*, 25th Nov. to 24th June 1850; *Dr. Jackson in Trans. Ben. As. Soc.* viii.; *Pioneer Newspaper.*

OTTOMAN TURK, the name by which the British designate the Turk tribe dominant in Turkey in Europe and Turkey in Asia,—a name derived from Othman, the founder of the dynasty. They were in their beginning a wandering horde, and even in the time of their greatest dominion they kept up much of the character. They have been a ruling order, a body ready to admit and to promote any one of any nation who chose to join them, provided that he accepted the Muhammadan religion. In this has lain their strength and their greatness, but it has been throughout the greatness of a conquering army bearing rule over other nations. The conquered nations could not throw off the yoke, because those among them who were their natural leaders were pressed into the service of their rulers. Their victories were won by soldiers who were really of the blood of the Greeks, Slavs, and other conquered nations. The chief posts of the empire, civil and military, were constantly held, not by native Turks, but by Christian renegades of all nations.

OUBASHI. Turki. A commander of ten horsemen.

OUCHTERLONY, Captain, Madras Engineers. Wrote Report on Nellore, Cuddapah, and Guntur, Madras 1841; Statistical and Meteorological Report of the Neilgherry Hills, 1848; Bombay Almanac, 1850; Account of Chinese War, etc., Lond. 1844.

OUDH, a province of British India under the administration of a Chief Commissioner, who is also the Lieut.-Governor of the N.W. Provinces. It consists of twelve revenue districts, in four divisions, and it lies between lat. 25° 34′ and 28° 42′ N., and between long. 79° 44′ and 83° 9′ E. Four great rivers traverse or skirt the plain of Oudh in converging courses,—the Ganges, the Gumti, the Gogra, and Rapti, with the smaller rivers, the Babai, Girwa, Katna, Kauriali, Mohana, Sai, Sarda, Soheli, and Ul. All these, except the Ul, Katna, Gumti, and Sai, are hill streams descending from the Himalaya, and subject to sudden freshes. The *Rapti* is a rapid, second-class river, navigable for boats up to Bhinga. It is used for rafting timber in the rains. It swarms with crocodiles. The *Babai* is rapid and shallow in its upper course, and useless for navigation or for rafting. The *Girwa* is a mountain stream with a great fall, rushing in rapids and pools over a stony and sandy bed. It is useless for navigation. It is a branch of the Kauriali, from which it issues by percolation, and to which it is reunited lower down. The *Kauriali* is the largest of the affluents of the Ganges. Its discharge is 13,082 cubic feet per second. It is more than twice the size of the Ganges where it leaves the hills, and is navigable for boats throughout the year within British territory. It is called Karnali in the hills; Kauriali, after it enters the plains to its confluence with the Sarju a little below Bhurtpur; Gogra, thence to Fyzabad; Sarju, about Ajodhya; and Dewa or Gogra again below this, down to its confluence with the Ganges at Revelganj, near Chupra. The *Mohana* is the boundary of the British territory from Gwari Ghat to its confluence with the Kauriali, rather more than half its course in the plains. It is a shallow and rapid stream, not navigable, but

timber is floated down it in the rains to the Kauriali. This river swarms with crocodiles, both the magar or broad-nosed, and the gaurial or long-nosed species. The *Sarda* is a river about the size of the Ganges where it leaves the hills; 9 miles below, its discharge is 6416 cubic feet per second. It is the boundary between British territory and Nepal out of Oudh. It has lost the character of a hill stream, and flows in a sandy bed. The *Gumti* is a river rising in some rice fields, from which its head-waters appear to trickle. Its water is sweet, and its banks are cultivated throughout the province. It is navigable throughout the greater part of its course in Oudh, but it is extremely tortuous, and the navigation is impeded at Sultanpur by rocks. Oudh has no lakes, though some of the jhils are very extensive sheets of water. The country between the Gumti and the Ganges is well supplied with them. They lie in two parallel elevated hollows on either side of the Sai, and about midway between that river and the Gumti and Ganges respectively. They are drained by lateral nalē or branches, which fall mainly into the Sai, and which cause the occasional floods in that river after heavy rain. They are a striking feature of the country, stretching in a continuous series, on both sides of the Sai, from the Shahjahanpur boundary to that of Jounpur and Allahabad, and often connected when the rain has been heavy. They are covered with all kinds of wild fowl, and some of them are fairly stocked with snipe. Behti jhil, in Partabgarh district, is 14 square miles; and the Sandi, in Hardoi, is 10 square miles.

The Oudh forests are in three divisions. The first, or Khairigarh division, lies between the rivers Soheli and Mohana. The reserved trees are Shorea robusta, Dalbergia sissoo, Cedrela toona, ebony, Diospyros melanoxylon, Conocarpus latifolia, Terminalia tomentosa, Acacia catechu, and Nauclea cordifolia. There is a very small tract under sissoo reserved for the use of the gun-carriage agency at Futtehghur. Other trees are Ægle marmelos, Ailanthus excelsa, Bassia latifolia, Eugenia jambolana, Feronia elephanta, Ficus Indica, F. glomerata, Mangifera Indica, Melia azadirachta, Mimusops elengi, Terminalia bellerica, Zizyphus jujuba. Shorea, cedrela, ebony, conocarpus, and terminalia are found in the higher forest, called Bhabar, or, locally, Domar. The other trees are found on the lower ground or terai.

The terai stretches all along the frontier of the province immediately below the forest, and is low and moist. It is more or less settled or cultivated, but the crops are poor, and the country is unhealthy at the first, and there are great difficulties in the way of bringing the soil under cultivation. Throughout this district there are large grassy plains, where numerous herds of cattle are kept, and it is interspersed with old water-courses, the former beds of the rivers, now forming jhils, and swarming with alligators. In the Baraich and Kheeree districts, where the terai changes into the drier land, are two tracts, known as Dhowrera and Nanpara, which have an excellent breed of draught cattle. In the centre of this tract there are a few jhils, especially in the lower part of Sitapur, in Lucknow, and Barabanki, where the soil is more clayey, and the crops more irrigated and finer.

Oudh takes its name from Ajodhya, a sacred city of the Hindus, close to the town of Fyzabad. It was the capital of the ancient Solar dynasty, one of whose rulers was the deified Rama, worshipped throughout India. Also, a few miles north of the Gogra, at Colonelganj, the Hindus point out the burial-place of Agastya, one of the Solar race, a pioneer of civilisation, whom the Tamil people acknowledge as the founder of their literature. The earliest historical information points to Sravasti (Sahet Mahet) under a powerful ruler. In its capital Sakya Muni began his labours; and the city long remained a seat of learning for the disciples of the Buddhist faith. Six centuries after the first promulgation of the Buddhist religion, Sravasti contributed two of the great schools of doctors who attended at the synod convened by the Scythian conqueror Kanishka in Kashmir.

The first Muhammadan invasion of this province took place in the 11th century of the Christian era, when Sayad Salar Masa'ud, a relative of the great Mahmud of Ghazni, fought his way into Oudh at the head of a large army. The history of his invasion, his first success, and his final defeat and death at Baraich, are told in the Mirat-Masa'udi by Saadat Khan, the founder of its last Muhammadan dynasty, who (A.D. 1756) was appointed subahdar of Oudh in the voluptuous reign of Muhammad Shah. He was succeeded by his son-in-law, Safdar Jung, who died in 1753, and was succeeded by his son, Shuja-ud-Dowla, who was created vizir by the emperor Shah Alam. He was defeated at Buxar in 1764, and retreated to his own dominions. He then sought aid from the Mahrattas, but was again defeated, and he then threw himself on the generosity of the British. Shuja-ud-Dowla died in 1775, and was succeeded by his son. During his reign, an interview took place with Warren Hastings, from which a treaty in 1781 resulted. Asof-ud-Dowla died in 1797, and his reputed son, Mirja Ali, succeeded, only to be displaced for Saadat Ali's eldest son, Shuja-ud-Dowla, with whom a treaty was made in 1812. He died 11th July 1814, and was succeeded by his eldest son, Ghazi-ud-Din Haider. Hitherto the family were styled vizir, but in 1819 the ruler was raised to the dignity of padshah or king. His son, Nasir-ud-Din Haider, succeeded him, but died in 1817, and was succeeded by his uncle, Muhammad Ali, who died in May 1842, and was succeeded by his son, Amjad Ali, who, on the 13th February 1847, was succeeded by Wajid Ali, whose misgovernment was such that, after repeated warnings, he was dethroned 6th May 1856. The British Government then assumed the sovereignty of Oudh, and the king was pensioned on 12 lakhs yearly. In the course of the connection of the British with this family, the family lent several large sums to the British.

Oudh has probably the densest population of any equal rural area in the world. The census of 1869 returned a total of 11,220,232 persons, spread over 23,992 square miles, yielding an average of 468 persons to the square mile. At the census of 1881, the N.W. Provinces and Oudh were taken together, and showed a joint population of 44,849,619, viz. Hindus, 38,555,121; Muhammadans, 6,162,900; Buddhists, 103; Christians, 47,673; Sikhs, 3644; Jains, 79,957; Parsees,

114; Jews, 101; and others, 6. Muhammadans are most numerous and powerful in the central districts of Lucknow and Barabanki. Their settlements there were mostly effected in the 13th, 14th, and 15th centuries, and they have generally continued to hold the lands they first acquired. Of the 55 talukdars of these two districts, 34 are Muhammadans, 23 belong to Barabanki, and 11 to Lucknow.

The higher classes of Muhammadans are, Sayad, Shaikh, Milki, Malik, Kuraishi, Pathan, Khandan, Rohilla, Moghul.

The Muhammadan converts from higher castes are, Bhale Sultan, Khanzada, Rajput, Mewati.

The higher castes of Hindus are thus given:—Brahman, Bengali, Jat, Jain, Kshatriya, Kyath, Khatri, Kashmiri, Marwari, Panjabi, Sikh, Saraok, Vaishya.

Of lower Hindu castes the most numerous are, Ahir, Bhunya, Bhat, Barheire, Chamar, Dhobi, Kahar, Kori, Kurmi, Lohar, Lodha, Mali, Murao, Nao, Pasi, Teli.

Aborigines: Dom, Nat, Kanjar, Bhar, Tharu, Paharia, and others.

There are thirty orders of religious mendicants, amongst whom are Gosain, Jogi, Byragi, Sad'hu.

The Ahir are largely agricultural. The Kurmi and Murao are the best tenantry and most industrious cultivators. They form the backbone of the wealth of the province, and have fought well under British officers. The Pasi furnish the greater part of the rural police. Others, like the Bhar and Tharu, live in small isolated groups on the outskirts of the jungle or the hill country, and hold no communication with the outer world. The Nat and Kanjar wander like gipsies over the face of the country, with their small moveable villages or wigwams of matting and leaf-screens. The Kori and Chamar, weavers and leather-cutters, have lean, black, and ill-formed figures, and their stupid faces and their filthy habits reflect the long degradation to which they have been hereditarily subjected.

In consequence of the prevalence of female infanticide amongst certain Rajput tribes in Oudh, this race was carefully enumerated in 1871, and 439 clans or subdivisions of clans were found in 13,066 distinct villages, containing a population of 559,699 souls, of whom were 250,849 males and 184,623 females above ten years of age, and 84,200 boys and 6027 girls under ten. In the five years 1875 to 1879, there were 77,540 births among the proclaimed castes, of whom 39,984 were boys, and 37,556 were girls. They seem to generate more male offspring than female.

OUGEINIA DALBERGIOIDES. *Benth.*

Dalbergia Oojeinensis, *Roxb. Fl. Ind.* iii. p. 221.

Tewas, ...	HIND.	Tunnus, . . .	MAHR.
Sanan, Sandan, .	,,	Tella motku, . .	TEL.

A very valuable, good-sized timber tree, found in the Godavery forests, Jubbulpur, Nagpur, and up to 4000 feet in different parts of the Bengal (from the Jhelum) and Bombay Presidencies. In the Panjab and in the Siwalik up to 4000 feet, it is a smallish tree. The wood is hard, strong, and very tough, heavy and close-grained, and not unlike Dalbergia sissoo, but handsome, and said to be durable, not liable to warp, and not attacked with worms. It is much valued, and is used for building, ploughs, wheels, carriage poles, sugar and cotton rollers, and various other purposes, and it makes very handsome furniture. In N. Konkan, a kind of gum kino is extracted from the bark, which is used by the natives in bowel complaints.—*Roxb.; Stewart; Beddome.*

OULA, a much-prized grass, which grows plentifully on the banks of the Longari, a river of Manchuria, in which the Tartars envelope their feet in lieu of stockings.

OURMIA, a lake in Persia, with saline water; specific gravity, 1·16507, and abounding in sulphates and muriates. It is an inland sea nearly 300 miles in circumference, situated in a volcanic country. The streams flowing into it abound in lime, which is deposited in large quantity in the form of a beautiful travertine. Lake Ourmia, like that of Lunar, contains potash, which Dr. Carter did not detect in the springs running into the latter.

OUSELEY, MAJOR, wrote on Washing of Gold-dust at Hera Khond, Bl. As. Trans. 1839, viii. 1057; Course of the Nerbadda, ibid., 1845, xiv. part 1, p. 354; Antiquities of Jerguja, ibid. xxii. part 1, p. 65.

OUTRAM, GENERAL SIR JAMES, C.B., K.C.S.I., a distinguished, generous-hearted soldier of the Bombay army in the early and middle part of the 19th century; author of Rough Notes, or the Campaign in Sinde and Affghanistan in 1838-39, London, 1840; also Conquest of Sinde, 1846. He took an active part in this campaign, also commanded in the war against Persia in 1856-57, and in 1857-58 in the suppression of the rebellion and mutiny in Northern India. He rose in the 4th Regiment Bombay Native Infantry, and while still a young man, he encamped amongst a Bhil tribe, and induced them to adopt a settled life. He took part in the expedition to place Shah Shuja on the throne of Kābul, and when returning with Sir Thomas Willshire's brigade, he was present at the storm and fall of Kalat, and rode from there to Sonmiani from the 15th-16th November 1839, on a yaboo, in 7½ days, a distance of 355 miles. He was deemed a model for younger men to imitate; was styled the Bayard of the Bombay army, sans peur et sans reproche. Born 29th January 1803, he died at Pau, 11th March 1863. A statue was erected to his memory in London, and Sir Frederick Goldsmith wrote his life in two volumes.

OUVIRANDA FENESTRALIS, a plant of Madagascar, remarkable for the window-shaped structure of its leaves.

OVERLAND ROUTE. This line of communication between Europe and the E. Indies entered into the far-seeing projects of the first Emperor Napoleon, had been kept in contemplation by many a British statesman, and has been effected by a few men of spirit and enterprise. Lord Wellesley, before the close of the 18th century, had a line of the Company's cruisers running fortnightly between Bombay and Bussora, from which port letters were carried on by dromedary-post through Aleppo to Constantinople. Tidings of the victory of the Nile were sent by Nelson to the Bombay Government by way of Baghdad and Bussora. A few officers, from the year 1809 onwards, made their way to and from India by the Red Sea via Cosseir, including Sir Hudson Lowe. Sir John Malcolm came home by it in 1821. A definite proposal for a line of communication by that route was made by Mountstuart Elphinstone as early as 1823, and renewed in

1826, but rejected by the Court of Directors of the English East India Company. In the year 1830, Lieutenant Waghorn, after reaching Bombay by the Red Sea route, was found still to uphold at a public meeting the route by the Cape, in preference to that by the Red Sea advocated by Mr. Taylor; but on the success of Commander Wilson's experimental trip in the *Hugh Lindsay* to Suez and back in the spring of the same year, he threw his undivided energy into the advocacy of the overland passage. A committee of the House of Commons having in the year 1834 formally reported in its favour, a regular mail service was organized by means of the E.I. Company's steam flotilla. The Indian navy, in the person of its energetic representative, Commander Wilson, claim the practical initiation of this important line of ocean communication.

OVIS. Mr. Blyth considers that there are fourteen species of this genus of mammals. M. Gervais reckons only six species. Of Asiatic species, Jerdou describes O. ammon, cycloceros, nahura, Polii, and Vignei, giving O. burhel as a syn. of O. nahura. Blyth mentions O. Gmelini of Armenia, O. cylindricornis of the Caucasus, and O. nivicola, *Eschscholts*, of Kamtschatka. Mr. Hodgson regards the sheep as essentially an alpine animal. The Kirghiz breed has a great tail of 20 vertebral bones, so loaded with fat that a truck is occasionally made to carry it. The Karakul breed has a fine, curled, black, and valuable fleece. Gestation lasts 144 to 150 days.

Ovis ammon, *Linn.*, the argali.

O. argali, *Pallas.* | O. Hodgsoni, *Blyth.*
O. ammonoides, *Hodgs.* |

Hyan, Nuan, Nyan, Niar, Nyund, Gnow, Tib.

On the Tibetan side of the Himalaya. Ovis ammon stands from 4 to 5 feet high, and measures 7 feet from nose to tail. It is quite a Tibetan animal; is seen as high as 18,000 feet, and is seldom seen below 14,000 feet, except when driven lower by snow. Measurement of a male of five years, according to the markings on the horns, 6 feet 5 inches, viz.:—

From nose to base of horns,	.	1 ft.	1	in.
Thence to insertion of tail,	.	5 ,,	1	,,
Tail to end of hair,	.	0 ,,	3	,,
Circumference of horn at base,	.	1 ,,	4¾	,,

Winter pelage, above deep brown, interspersed with grey, with a distinctly marked darker dorsal line passing (as in O. montana) in a narrow stripe through the disc on the croup, even to the tip of the tail. Sides mixed hoary or slaty grey brown; disc on the croup well defined and dirty white, the hair appearing as if rubbed. The throat and neck beneath to the breast, white, sprinkled with scattered brown hair; the hair long, bushy, and pendent, and from 6 to 7 inches in length, while that of the back is barely 2 inches, except on the dorsal line, where it is 3 inches, and on the ridge of the neck above 3½ inches. Tail, above, brown, whitish at the sides, naked beneath. Under parts dirty white; medial line blackish, outside of the limbs with a dark list; lips whitish. Dr. Adams says it is more plentiful on the northern ranges. A few remain about the Tooskee lake and neighbouring hills during summer; the majority, however, migrate to Nubra as the snow melts. The finest horns are to be procured on the chaits. These cairns are mostly made up of horns of tame yak, wild sheep and goats, which are piled up in the shape of a cone, with stones, pieces of quartz, pebbles, and sticks, to which rags are attached. When a Tartar arrives at one, he walks round it several times, repeating a prayer, of which 'Om mani padi om' forms the chief part. An adult male argali stands about 12½ hands high at the shoulders.—*Blyth; Jerdon; Adams.*

Ovis aries, the common sheep, is subject to great variety, and many of its forms have been raised to the rank of species. Dr. Gray, in the British Museum Catalogue, enumerates no less than 33 varieties as under:—

(*a*) The *Spanish sheep*, Ovis Hispanicus, *Linn.*; called also the Merino sheep and the British middle-woolled sheep.

(*b*) The *common sheep* (Ovis rusticus, *Linn.*; O. Gallica, *Desm.*; O. brachyurus, *Pallas*; O. leptura, *Schreb.*); the horuless sheep (O. Anglicana, *Linn.*). Of this variety there are numerous forms, such as the Muggs, Shetland, Southdown, Old Lincoln, Romney Marsh, Cobwold, New Leicester, Cheviot, Old Teeswater, improved Teeswater, Dunky, Zetland, Orkney, Welsh mountain sheep, soft-woolled sheep of Wales, Wicklow mountain sheep, Kerry sheep, Exmoor sheep, blackfaced sheep, blackfaced Heath sheep, and the Rass or Roosh (Ovis Polii, *Blyth*).

(*c*) The *Barwall sheep* (Aries barwal, *Hodgson*); Ovis barwal, *Hodgson*; O. ammonoides, *var.* 1, *Gray.* It inhabits Nepal.

(*d*) The *Huniah sheep* (Ovis hunia, *Hodgson*), the Hunia, or blackfaced sheep of Tibet. Also a native of Nepal.

(*e*) The *Cago* (Ovis cagia, *Hodgson*), the Kago, or tame sheep of Kābul region, the Cago sheep of Gray. A native of Nepal.

(*f*) The *Seling*, a native of Nepal.

(*g*) The *Curumbar sheep* of Mysore.

(*h*) The *sheep* called Garar in India.

(*i*) The *Dukhun sheep.*

(*j*) The *Shaymbliar sheep* of Mysore.

(*k*) The *broad-tailed sheep* (O. laticaudatus, *Erxl.*, *Geoff.*, *Mem. Egypt*, *Lesson*, *Comp. Buffon*, x. p. 812; O. laticauda, Platyceros Arabica, *Linn.*; O. Turcica, *Charlet*; O. cauda obesa, *Ludolf*). It is a native of Barbary. There are several forms of this variety, of which the following are most prominent:—The fat-rumped sheep (O. steatopyga, *Pallas*, the Tartarian sheep of Bewick); the Persian sheep (O. A. caudatus, *Geoff.*); the fat-tailed sheep (O. A. macrocercus, *Schreb.*); the Aora fiyel, or Abyssinian sheep; the Bucharian sheep (O. Bucharica, *Pallas*); the Tibetan sheep (O. Tibetanus, *Fischer*); the Cape sheep (O. Capensis, *Erxleb.*); the sheep of Belkah.

(*l*) *Many-horned sheep* (O. polyceratus, *Linn.*). It is also called the four-horned ram, and the Dumba sheep. It is a native of Nepal.

(*m*) The *Puchia*, or Hindustan Dumba (O. puchia, *Hodgson*).

(*n*) *Caprovis vignei.* This genus embraces the Sha or Koch. It is the mountain sheep of the north of India, and is found in Tibet.

Ovis cycloceros, *Hutton*, *Sclater*, *Blyth.*
O. Vignei, *Bly.*, in part. Uria, Urial, Koch, Kuch, Panj.

The Panjab wild sheep is found all over the Salt Range of the Panjab, the Sulimani range, the Hazara, Peshawur. Mr. Blyth has pointed out that Captain Hutton's Ovis cycloceros had been priorly named by him Ovis Vignei.

Ovis cylindricornis, *Blyth*, a species of the

Caucasus. This is the least satisfactorily established of all the species in Mr. Blyth's monograph, resting on a communication from Colonel Hamilton Smith, relative to a species which must have been very different from either of those known to Mr. Blyth, though described from memory only by Colonel H. Smith, one of the most experienced of zoologists in the history of the ruminantia.

Ovis Gmelini, *Blyth*, a sheep of Armenia, identified with a species long ago rudely figured by the younger Gmelin, and the horn by Pallas; and Gmelin's description of the habits quoted, with further original information. Head figured in Taylor's plate, No. 9.

Ovis musimon, *Linn.*, the wild moufflon sheep of Corsica and Sardinia. Described by Mr. Blyth from life, and a further notice given in J. A. S., x. p. 878.

Ovis nahura, *Hodgs.*, *Blyth.*

O. nahoor, *Hodgson.*	O. burhel, *Blyth.*
Blue wild sheep, . ENG.	Na, Sna, LADAK, TIBET.
Burhel, Bharal, . HIMAL.	Nervate, . . . NEPAL.
Bharur, ... ,,	Wa, War, . . . SUTLEJ.
Menda (male), . . ,,	

Valley of the Sutlej, Sikkim, Bhotan. Described from specimens, amongst which was a hornless female, and clearly established as distinct from O. ammon.

Ovis Polii, *Blyth*, Rass; Roosh of Pamir; found on the plains of Pamir at 16,000 feet. Founded on a magnificent frontlet and horns brought by Lieutenant Wood from the Pamir steppe, combined with the notice quoted from Marco Polo, which refers undeniably to the same animal. Of the distinctness of this superb species, there can be no doubt whatever; and the frontlet is figured in Taylor's plate, figs. 1 and 2. It is to the east of Bokhara. The horns of one specimen were 2⅜ feet long round the curvature, and 14¼ inches in circumference at the base.

Ovis tragelaphus, *Pallas*, Aondad of the Moors, found on the Atlas mountains of N. Africa. A well-known species.

Ovis Vignei, *Blyth*, Indian wild sheep.

O. montana, *Cunningham.* | Sha, Sha-poo, LAD., TIB.

Found in the Hindu Kush, the Pamir Range, west from Ladakh to the Caspian Sea. It is more like a deer than the moufflon of Europe. It is active and courageous. — *Jerdon's Mammalia; Gray's Catalogue; Hooker*, i. p. 244; *Blyth in Bengal As. Soc. Journ.; Adam's Naturalist in India; Jerdon*, p. 298; *Darwin.*

OWAIS-bin-AAMIR never saw Mahomed, but he so loved and revered that reformer, that he caused two of his front teeth to be extracted, because Mahomed had lost two of his front teeth in the disastrous battle of Ohod. Owais affirmed that all who entered his society and performed the mortifications enjoined upon them, would have these two teeth miraculously extracted during sleep, and on awakening find them under their pillows. The example set by him was followed by the khalifs Abubakr and Ali; and to the associations of recluses created by them all the various orders of darvesh which are now scattered over Muhammadan countries, trace back their origin.—*Osborn's Islam*, p. 92.

OWEN, CAPTAIN W. F., an officer of the British navy, who between 1822 and 1826 surveyed the southern and eastern coasts of Madagascar, the shores of Madagascar, and neighbouring islands. Sickness overtook the ill-fated expedition, and nearly all the officers perished.

OWL.

Owlet, ... ENG.	Ghugu, . . . HIND.
Eule, ... GER.	Civetta, ... IT.

The owls are the nocturnal tribe of the order Raptores, or birds of prey. They are arranged by naturalists under the family Strigidæ of the order Raptores, and are subdivided into the subfamilies Striginæ, Syrniinæ, Asioninæ, Buboninæ, and Surniinæ.

Owls are found throughout the world, and many races, alike of Europe and of Asia, continue to entertain superstitious opinions regarding species of this nocturnal genus. The horror of the owl's nocturnal scream has been equally prevalent in the west as in the east. Ovid introduces it in his Fasti, L. vi. l. p. 139, but Tibullus in his Elegies, L. i. El. v. says Pliny, lxi. c. 93, doubts as to what bird produced the hated sound; and the details of Ovid's description do not apply to an owl. The women of India, hearing the hooting of the ghugu, shut the ominous sounds from their ears by wrapping their sarees round their heads. And Shakespeare notices the common superstition, when he says:

> 'It was the owl that shrieked, the fatal bellman,
> Which gives the stern'st good night.'

Of the nocturnal accipitres of Ceylon, the most remarkable is the brown owl, Syrnium Indrani, *Sykes*, which, from its hideous yell, has acquired the name of the devil bird. The Singhalese regard it literally with horror, and its scream by night in the vicinity of a village is bewailed as the harbinger of impending calamity. There is a popular legend in connection with it, to the effect that a morose and savage husband, who suspected the fidelity of his wife, availed himself of her absence to kill her child, of whose paternity he was doubtful, and on her return placed before her a curry prepared from its flesh. Of this the unhappy woman partook, till, discovering the crime by finding the finger of her infant, she fled in frenzy to the forest, and there destroyed herself. On her death she was metamorphosed, according to the Buddhist belief, into an ulama, or devil bird, which still at nightfall horrifics the villagers by repeating the frantic screams of the bereaved mother in her agony. Mr. Blyth, from Calcutta, wrote to Sir J. E. Tennant as to the Syrnium Indrani, *Sykes*, mentioning that there are some doubts about this bird. There would appear to be three or four distinguishable races, the Ceylon bird approximating most nearly to that of the Malayan Peninsula. Mr. Mitford, of the Ceylon Civil Service, also regards the identification of the Singhalese devil bird as open to doubts. He says, 'The devil bird is an owl. I never heard it until I came to Kornegalle, where it haunts the rocky hill at the back of Government House.'

The unpleasant laugh of the fish owl of Ceylon (Ketupa Ceylonensis) is known; no sound grates harsher on the ear, or is more calculated to bring back recollections of hobgoblins, than the loud hollow voice of this otherwise fine bird; nor is it less startling to creep through the bush and come suddenly on an individual moping at mid-day on a branch overhead, flashing his large orange eyes full on your face, as with outstretched wings he snaps his bill, or, hissing defiance, makes straight

off to the nearest cover, pursued by crested bulbuls, jays, etc. This species is not often seen, its mid-day haunts are in impassable parts of the jungle.

The Indian owl (Athene brama) is numerous in the Ceylon jungles.

The Himalaya owl (Athene cuculoides) is common in the woods and jungle, and is diurnal in its habits so far that Dr. Adams killed one at mid-day with a rat in its talons; the bird is, however, most often seen at dusk. Its favourite food consists of mice, shrews, and large coleopterous insects.

The pretty pigmy owlet (Athene Brodiei) is often found in bushes. It is a diminutive little creature. Its call is measured, and composed of two notes frequently repeated. Its egg is white, and generally laid in the hollow of a tree, without any preparation whatever.

The typical owls, of which the barn owl of Europe, Strix flammea, is the type, are nocturnal in their habits, and are often called screech owls from the unearthly screechings of their call.

The Indian screech owl, S. Javanica, *de Wurmb.*, of a pale-yellow buff colour, is found throughout Ceylon, India, Burma, and Malayana. It differs somewhat from the barn owl of Europe. It roosts during the day, comes forth at dusk, and hunts entirely at night, living on rats, mice, shrews, etc. It breeds in holes of trees and buildings. Its names, Karaya, Karail, Buri churi, HIND., Chaao-pitta, TEL., and Chaao-kurani, TAM., mean evil bird, and death bird.

The grass owl, St. candida, *Tickell*, above of a tawny yellow colour, is found sparingly throughout the greater part of India. It lives almost exclusively in long grass, from which it rises heavily, flies a short distance, and drops suddenly into the grass.

Strix Rosenbergii and S. Javanica are owls of the Malay Archipelago, and the latter is in all the islands up to Lombok.

The bay or chesnut-coloured screech owl, the Phodilus badius, *Horsfield*, occurs in Nepal, Sikkim, Burma, Malayana, and the E. Archipelago. The natives believe it is on good terms with the tiger.

The sub-family Syrniinæ comprise the hooting owls. They are birds of rather large size, living in woods and groves, and nocturnal in their habits. The Syrnium Indrani, *Sykes*, the brown wood owl, is 19 to 21 inches long, is found in Ceylon, throughout British India, Burma, and Malayana. It is of nocturnal habits. It is the devil bird of Ceylon.

The Nepal brown wood owl (Syrnium Newarense, *Hodgson*), 2 feet long, occurs in Ceylon, S. India, Central Nepal, N.W. Himalaya, and the Malayan Peninsula.

The mottled wood owl is the very beautiful plumaged Syrnium Sinense, *Latham*, of a rich tawny colour, found in wild wooded districts throughout India, but not yet found in Ceylon and Burma. It has a loud, harsh, dissonant hoot.

Syrnium seloputo, of Burma and Malaya, has even more beautiful plumage.

Syrnium leptogrammica, *Temm.*, is from Borneo.

Syrnium nivicolum, *Hodgson*, is the Himalayan wood owl, mottled dark-brown and fulvus. It is found above 7000 feet up to the snow-line in the Himalaya.

The sub-family Asioninæ has the genus Otus.

Otus vulgaris, *Fleming*, the long-eared owl of Europe, Afghanistan, Kashmir, and Nepal, frequents woods, and feeds on mice, moles, and beetles.

Otus brachyotus, *Gmelin*, is the short-eared owl of great part of N. America, and over all the old world; in India is found in long grass, hunting chiefly at night, though it flies well by day. In India it is migratory, coming in at the beginning of the cold weather, and leaving about March. Its call is a double or treble hoot, not unlike that of the hoopoe.

The sub-family Buboninæ comprises the genera Urrua, Huhua, Ketupa, Ephialtes, and Scops, the great horned owls, or eagle owls, also the scops owls.

Urrua Bengalensis, *Franklin*, the rock horned owl, 22 inches long, is found throughout Afghanistan, India, and Ceylon, wherever it can get rats, birds, lizards, snakes, crabs, and large insects, generally in broken rocky ground, but also in dense groves or gardens. Its cry, durgoon, durgoon, is a loud solemn boot.

Urrua Coromanda, *Latham*, is the dusky horned owl, 22 inches long, found in all India. It frequents thick groves and forest jungle.

Huhua Nepalensis, *Hodgson*, the forest eagle owl, of a dark-brown colour, and 22 inches long, occurs in Nepal, S. India, and Malayana.

Ketupa Ceylonensis, *Gmelin*, the brown fish owl, 21 to 23 inches long, is found throughout Ceylon, India, Burma, perhaps to China, frequenting forests, groves, and gardens, coming forth at dusk to feed, generally making its way to a tank, brook, or river, occasionally uttering its dismal cry, a repulsive laugh like haw-haw, baw-ho. It is said to kill even cats.

Ketupa flavipes, *Hodgson*, the tawny fish owl, is confined to the Himalaya. It is constantly found on the banks of rivers, and flies well by day.

Ketupa Javanensis, *Lesson*, and K. Ceylonensis, extend from Ceylon and Arakan to Java.

Ephialtes pennatus, *Hodgson*, the Indian scops owl, is supposed by some to be the S. zorca of Europe. It is found throughout India and Ceylon, the Himalaya, Burma, and China.

Ephialtes Lempigi, *Horsfield*, is the large scops owl of all India, Ceylon, Burma, Malayana, and China, found in forests.

Scops rufescens, *Horsfield*, a large owl of Malayana, Japan, Celebes, and Philippines.

Scops gymnopodus, *Kaup*, is said to be from India.

The sub-family Syrniinæ has the genera Athene, Glaucidium, Ninox, Syrnium.

Athene brama, *Temm.*, the spotted owlet of Ceylon, India, Panjab, Burma, Persia, and all Asia, is found in dense forests. It is of an earthy grey-brown colour, each feather with a white spot. It is 8 or 9 inches long.

Athene radiata, *Tickell*, the jungle owlet of all India; is probably the Athene cuculoides, *Philips*, of N.W. Provinces.

Athene Malabarica, *Blyth*, the Malabar owlet, 8 inches long, of Travancore, Cochin, and S. Provinces of Malabar.

Athene castanoptera, *Horsfield*, Malayana.

Athene castanopus, *Blyth*, Ceylon.

Athene cuculoides, *Vigors*, the large barred owlet, 9½ or 10½ inches long, occurs in the Himalaya, Panjab, Assam, Arakan, Tenasserim to China. It feeds on mice, rats, beetles.

Glaucidium Brodiei, *Burton*, the collared pigmy owlet, is found at from 3000 to 4000 feet throughout the Himalaya. It is 6½ inches long.

Ninox scutellatus, *Raffl.*, the brown hawk owl, 12 inches long, is found in the wooded parts of all India, extending into Burma, Malayana, China, and Japan; also said to occur in Madagascar. It frequents the skirts of the thick forests also.

Ninox Borneensis, *Schlegel*, and N. Japonica, *Schlegel*, of Borneo and Japan.

—*Jerdon's Birds of India; White's Nat. Hist. of Selborne; Tennant's Nat. Hist. Ceylon.*

OWUND KARI. MAHR. A person cultivating and in a village, but residing in another village.

OX.

Bakara,	ARAB.	Bue,	IT.
Bœuf,	FR.	Buez,	SP.
Ochs,	GER.	Mar,	TAM.
Bail,	HIND.	Ukyuz,	TURK.

The ox is one of the Bovinæ, a sub-family of the family Bovidæ, of the order Ruminantia. The order Ruminantia may be shown as under:—

Cervidæ.	Bovidæ.	Hermitragus.
Cervus.	Antilopinæ.	Capra.
Rucervus.	Portax.	Ovis.
Rusa.	Tetraceros.	Bovinæ.
Axis.	Antilope.	Bos.
Cervulus.	Gazella.	Gavæus.
Moschus.	Caprinæ.	Bubalus.
Memimna.	Nemorrhœdus.	

The Bovinæ, called cattle, also horned cattle, to which this notice is restricted, have always horns in both sexes, usually inclining upwards or forwards, with a large and broad muffle, a moderately long tail, no eyepits, but with four mammæ. The sub-family Bovinæ is divisible into three groups, the Bisontine or bisons, the Taurine or oxen, and the Bubaline or buffaloes.

The *Bisontine* group comprise the bison of Europe and N. America, the musk ox of Arctic America, and the yak or Poephagus grunniens of Central Asia. The true bison of Europe, Bison urus or the Aurochs, has a broad forehead, long limbs, and shaggy mane. The yak, called in Tibetan Brong-Dhong, in Hindi the Banchowr or wild bull, is found wild on the northern side of the Himalaya, but it has been domesticated, and called the Chaori-gao.

The *Taurine* group has been subdivided by Blyth into the Zebu, or humped domestic cattle, the Taurus, humpless cattle with cylindrical horns, and Gavæus, humpless cattle with flattened horns, peculiar to South-Eastern Asia. They have all thirteen pairs of ribs. It is to the Zebus that the common humped cattle of India belong; they have run wild in Mysore, near Nellore, in Oudh, Mozuffurnuggur, Rohilkhand, and Shahabad. Near Nellore, the country they frequent is much covered with jungle, and intersected with salt-water creeks and marine lagoons, and the cattle are as wild and wary as the most feral species. They are of large size, and their horns are long and upright. The genus Taurus contains the cattle of Europe with cylindrical horns, including the feral race of Chillingham. The flat-horned Taurines of Blyth include the genera Gavæus, Gavæus gaurus, *Jerdon*, the Gaur or Gauri-gao of all India, the Pyoung of the Burmese; also the Gayal or Mit'hun, the G. frontalis, compared with the Gaur, a heavy, clumsy-looking animal of the hilly tracts to the east of the Brahmaputra, and at the head of the valley of Assam, the Mishmi hills and their vicinity, and probably extending north and east into the borders of China. It is extensively and easily domesticated, and has bred with the common Indian cattle.

The Ban-teng or Burmese wild cow, Gavæus sondaicus, the Tso-ing of the Burmese, extends from Chittagong through Burma, the Malayan Peninsula, and Siam, into Borneo, Java, and the larger islands of the E. Archipelago. This species resembles the Gaur more than the Gayal, and it wants the dewlap. The young and the female are red.

The *Bubaline* group, the buffaloes, of the genus Bubalus, have large, almost horizontal, angular horns, inclining backwards and sometimes downwards, with a large and spare muffle and thirteen pairs of ribs. The wild buffalo, the Bubalus arni, is largely domesticated, and used for all the purposes of an agricultural population. But it is found in the north and east of Ceylon, from the Godavery to Midnapur and Raepur, in the plains of Lower Bengal as far as Tirhut, and Oudh to the Terai and Bhutan, inhabiting the margins of forests in the most swampy sites. It lives in large herds, but in the rutting season the most powerful males lead off and appropriate several females. They rut in autumn, and the female gestates ten months, producing one or two in summer. The domestic buffalo is often lean and angular; they are used for draught and as milch cattle. But the wild buffalo is uniformly in high condition, and the bull is of such power and vigour as by his charge frequently to prostrate a well-sized elephant. There is an African species, B. brachyceros, *Gray*, and a Cape buffalo, B. cafer, with horns so large as nearly to cover the forehead. In the E. Indies the buffalo is generally used in ploughing up the muddy lands in which rice is grown, often for carriage, rarely for draught for long journeys. The Binjara and other migratory grain merchants, who travel over several hundred miles of India, collecting grain and carrying salt, invariably use the bullock, never the buffalo; and a handsome bullock, ornamented with streamers and a bell, leads the herd. They are the only race that subjects the cow to labour.

Oxen are used by the peasantry of the E. Indies both in ploughing and in tempering the mud in the wet paddy fields before sowing the rice; and when the harvest is reaped they 'tread out the corn,' after the immemorial custom of the east. In many parts of British India and in Burma, the cattle are greatly exposed to the weather. In other parts, as in the Cuddapah district, the utmost care is taken of them as to housing and food. The wealth of the native chiefs and landed proprietors in Ceylon frequently consists in their herds of bullocks, which they hire out to their dependents during the seasons for agricultural labour; and as they already supply them with land to be tilled, and lend the seed which is to crop it, the further contribution of this portion of the labour serves to render the dependence of the peasantry on the chiefs and headmen complete. From their constant exposure at all seasons, the cattle in the E. Indies, both those employed in agriculture and those on the roads, are subject to devastating murrains, that sweep them away by thousands. So frequent in Ceylon is the recurrence of these calamities, and so extended their ravages, that they exercise a serious influence upon the commercial interests of the colony, by reducing the facilities of agriculture, and augmenting the cost of carriage during the most critical periods of the coffee harvest. A similar disease, probably peripneumonia, frequently carries off the cattle in Assam, Burma, and other provinces and districts of India; and there, as in Ceylon, the inflammatory symptoms in the lungs and throat, and the internal derangement and external eruptive appearances, seem to indicate that the disease is a feverish influenza, attributable to neglect and exposure in a moist and variable climate, and that its prevention might be hoped for, and the cattle preserved, by the simple expedient of more humane and considerate treatment, especially by affording them cover at night. The labour for which they are best adapted, and in which, before the opening of roads in India, these cattle were formerly employed, is in traversing the jungle

paths of the interior, carrying light loads as pack oxen in what in Ceylon is called a 'tavalam,' a term which, substituting bullocks for camels, is equivalent to a 'caravan.' The persons engaged in Ceylon in this wandering trade are chiefly Muhammadans, locally called Moors; and the business carried on by them consists in bringing up salt from the Government depôts on the coast to be bartered with the Kandyans in the hills for 'native coffee,' which is grown in small quantities round every house, but without systematic cultivation. An ox will work well seven years, if taken care of.

In Ceylon, to every herd of cattle there is a sacred bull, who is supposed to exert an influence over the prosperity of the flocks; his horns are ornamented with tufts of feathers, and frequently with small bells, and he invariably leads the great herd to pasture. On starting in the early morning from the cattle kraal, the natives address the bull, telling him 'to watch over the herd, to keep the cows from straying, and to lead them to the sweetest pastures, so that they shall give abundance of milk,' etc.—*Tennant's Ceylon; Jerdon, Mammals.*

OXALIC ACID, Saucrkleesaure of the Germans, a vegetable acid, found in considerable quantity in sorrel and rhubarb. It is used in calico printing, and by straw hat makers. It is an object of considerable importance in Switzerland, where it is prepared from the juice of wood-sorrel. Oxalic acid is obtainable from the salt in the leaves of gram, Cicer arietinum, the genera Oxalis, Rumex, Acetosella, and other plants. Accidents have frequently occurred from its being administered instead of Epsom salts, which it resembles in appearance.—*Faulkner; Taylor; Waring; Royle.*

OXALIDACEÆ. *Lindl.* The wood-sorrel tribe comprises the genera Averrhoa, Biophytum, and Oxalis. The genus Oxalis includes upwards of 200 species, excepting about half-a-dozen (the delicate little wood-sorrel [O. acetosella] being one of them) peculiar to S. America and the Cape of Good Hope. Several Peruvian and Chilian species have fleshy roots or tubers, used as potatoes. O. tuberosa is extensively cultivated in Bolivia, and might be introduced into India. The fresh tubers are acid, but, after exposure to the sun for a week or ten days, they lose their acidity, and become but little inferior to the potato. Some of the pinnate-leaved species exhibit irritability on the application of a stimulus.

Oxalis acetosella, *Linn.*, wood-sorrel.

Tsah-tsiang-ts'au,	CHIN.	T'sau-mu, . . .	CHIN.
Tso-tsiang-ts'au, . .	,,		

A small perennial plant, with a subterranean root-stock consisting of many scaly joints, of the N.W. Himalaya, at from 3500 to 9000 feet. It has a pleasant acid taste, dependent on the presence of oxalic acid, and is frequently used in salads; its flavour approaches near to that of lemons or tartaric acid, with which its medicinal effects also correspond, as it is esteemed a refrigerant anti-scorbutic and diuretic. The expressed juice, evaporated and set in a cool place, affords a crystalline salt, which may be used whenever vegetable acids are wanted. It is sold in the shops under the name of essential salts of lemons, and is employed to take iron-moulds and ink-spots out of linen.

Oxalis corniculata, *Linn.*, Indian sorrel.

Oxalis monadelpha, *Roxb.*		Oxalis pusilla, *Salis.*

It is a native of Europe, particularly in Spain, Italy, and Greece, also of India, Malay Islands, Japan, Mexico, N. America, and England. The flowers are yellow. The flowers of the N. American plant are larger than those of the European. This species is common all over India, and in the Himalaya up to 8000 feet. It possesses exactly the same properties, and yields the same products, as the European sorrel. The small leaves, tender shoots, and flowers are given in electuaries by the Hindus as a cooling medicine in fevers, to the extent of two teaspoonfuls daily; is also used in flatulent indigestion. In Peninsular India, it is a common weed on lawns and in gardens, and is used by the natives in making chatni; and in curries it is a good substitute for lime-juice or tamarind, imparting a peculiar acid taste. In Dacca, washermen use its juice to remove iron marks.

Oxalis sensitiva, *Linn.*

Biophytum sensitivum, *Roxb., D.C., Wight.*

Bun maranga, .	BENG.	Toda vadi, . .	MALEAL.
Lak-chana, . . .	HIND.		

Common in India and Java; the plant beaten up and mixed with gingelly oil is given in gonorrhea; and mixed with butter is applied to wounds and boils.—*Dr. Weddell; Smith; Waring; Ainslie; Roxb.; O'Sh.; Gen. Med. Top.; Jaffrey; Useful Pl.*

OXENDON. Christopher and Sir George Oxendon, servants of the English E.I. Company; the former died in 1659, and the latter in 1669.

OX-GALL, Ox-bile.

Niu-tau, . . .	CHIN.	Fel-bovis, Fel-tauri,	LAT.
Pit, ...	HIND.	Pittam, Pittamu,	TAM. TEL.

An inert substance, but used by Asiatics medicinally.

OXIDE of LEAD, Massicot or Murdar sang. The manufacture of this was introduced at Jagadri by Kashmiri and Bakal, two atta sellers, etc., who came from Jalalabad; they manufactured it in secret, and would not let others know the process. This is said to be made at Lahore and Jagadri, and it might be well employed in making lead plaster (strapping) with some of the country oil; other preparations of lead also might be manufactured from it.—*Powell's Handbook.*

OXLEYA XANTHOXYLA. This tree is a native of Australia, and attains a height of 100 feet. The wood is yellow, and employed for building boats. It is called yellow wood.—*Eng. Cyc.; Hogg's Veg. Kingd.*

OX-TAIL. The tails of the ox and of the yak are used in India as whisks; in places as standards. In Indian wars, the ox-tail and umbrella were not unfrequently placed over some chief of consequence, to divert attention and protect the king from danger. In Shakespeare's description of the battle of Bosworth Field, Richmond, in assaulting the usurper, exclaims, 'Three have already fallen who wore that crown.'—*Tod's Travels*, p. 201.

OXUS, the Jihun of the Arabs, and Amu, Abi-ma, of the Persians. North-east of Bokhara is a lofty range of mountains which runs east-

wards to the borders of the Khanate of Khokand, where it converges at right angles to the Bolor or Belur Tagh. This is called the Ak-Dagh, or white mountains, and seems to mark the northern boundary of the high land of Pamir, on the west side of which the Oxus takes its rise. It collects all the drainage of the Great Pamir, through two main head-streams, the Panja or southern rising in Lake Victoria (13,900 feet), discovered in 1838 by Wood; the Ak-Su (Murghab) or northern, flowing apparently from Lake Barkal Yasin (13,100 feet), and receiving the outflow of Lake Kara-Kul above the junction. The united stream flows westwards towards Balkh, from which it runs north-west to the south coast of the Aral Sea. Lieutenant Wood penetrated thither in mid-winter. On reaching a spot elevated 14,400 feet above the level of the sea, some of his escort refused to proceed farther; upon which he pushed forward with the remainder, through deep new-fallen snow. As he neared the head-waters of the Oxus, the ice became weak and brittle. After quitting the surface of the river, he travelled about an hour along the right bank, and then ascended a low hill which apparently bounded the valley to the east; on surmounting this at 5 P.M. of the 19th February 1838, he stood on the Bam-i-Duniah, or 'Roof of the World,' while before him lay stretched a noble frozen sheet of water, from whose western extremity issued the infant Oxus. This fine lake lies in the form of a crescent, about 14 miles long from east to west by one mile in average breadth. On three sides it is bordered by swelling hills about 500 feet high, while along its south bank they rise into mountains 3500 feet above the lake, or 19,000 feet above sea-level, covered with perpetual snow, from which never-failing source the lake is supplied. From observations made at the west end, he found the latitude to be 37° 27′ N., and long. 73° 40′ E., and the elevation, as deduced from the boiling point of water, 15,000 feet.

In the upper part of its course it is called the Wakkan, also Ab-i-Panj, the latter being from a belief that it is formed by the junction of five streams. At the village of Isar, in lat. 37° 20′, at an elevation of 10,000 feet, Lieutenant Wood found two rivers joining, one of which he traced to Lake Sir-i-Kul, at an elevation of 15,000 feet, on the Pamir table-land. It then flows through Wakkan, encloses in an angle Badakhshan, of which it forms the natural frontier, and passes alongside the desert within 40 miles of the city of Balkh. 80 miles below this Afghan outpost is Khojah ferry. At Kunduz, 600 miles from Khiva, the navigability of the river is supposed to cease. Sir Alexander Burnes describes the channel as being 'straight and singularly devoid of rocks, rapids, and whirlpools, and rarely impeded even by sandbanks. The depth varies from 6 feet to 20 feet, with an average current of 3½ miles an hour.' In the spring the river is liable to be flooded with the snows of the Hindu Kush, and in the winter the ice collects on the surface near the Aral sufficiently thick to permit of caravans crossing over it. In its course through the desert from Khulm to the frontiers of Khiva, the Amu fertilizes a narrow strip of country on either bank.

The fruitful oasis of Khiva, with its canals 50 feet broad, its rows of stately elms, its orchards of mulberry trees, apples, apricots, and cherries, and its lovely gardens, is simply a slice of the desert irrigated by the Oxus. Settlements would in time grow alongside the stream if a check could only be placed on the predatory nomades. What Central Asia might be under a secure and peaceful rule, we have evidence in the ruins of Balkh, 20 miles in circuit; in the remains of Merv, which once boasted of a million inhabitants; in the walls of Samarcand, which in ancient days were manned by 100,000 men; and in the 2000 villas which marked a suburb of the city of Bokhara.

According to Sir Henry Rawlinson, the Oxus, from B.C. 600 to A.D. 500, with the Jaxartes, emptied itself into the Caspian, and the Aral as an inland sea did not then exist. Even in A.D. 570, the Aral was only a reedy marsh; and it was not till quite thirty years later that the influx of the Oxus caused it to swell out in the hollow in which it now lies. In 1224 the Oxus again forced its way into the Caspian, and the Aral dried up once more, exposing the ruins of cities which had been swallowed up during its previous expansion. In 1330 the river was described by an eastern traveller as flowing into the Caspian close to the mouth of the Atrek; and the accuracy of this is attested by the remains of the bed which General Abbott saw in 1840. During the whole of the 14th century the Oxus poured itself into the Caspian, while its fellow-stream, the Jaxartes, was swallowed up in the sands. In the 15th century, Ruy Gonzalez de Clavigo describes it as being a noble river, 'three miles in breadth, very deep, and traversing with wonderful force a flat country before falling into the Caspian.' In 1720 a Dutch geographer speaks of the river as having two branches, one flowing into the Caspian and the other into the Aral. Travellers like Anthony Jenkinson, English officers employed last century in Persia, and Russian explorers of recent date, one and all are agreed that the Amu Darya up to very recent times flowed into the Caspian Sea. The river never confined itself to any particular outlet, but during a series of centuries scored one opening and then another in the soft, sandy cliffs that stretch between Persia and Krasnovodsk. Strabo and Pliny both mention that in the early days of the Christian era the merchandise of India used to come down the Oxus to the Caspian, whence it was conveyed up the river Kurr on the one side of the Caucasus, and down the river Rion on the other, till the Black Sea and Europe were finally reached. The deflection of the Oxus is due solely to that normal habit of changing its bed which characterises not only the Oxus but the Syr Darya also, and most of the other and minor rivers of Central Asia. The sands stretching between Persia and Siberia are so soft, and the volume of water poured down from the buttresses of the Pamir so vast at certain seasons of the year, that it is a most natural thing for a river to leave its cutting, and plough a fresh passage through the desert. If the course of the stream be controlled, the merchandise of China and Tibet might once more flow down with the current to the Caspian, thence to be distributed by Russia over Europe. Goods shipped into lighters at Cronstadt could circulate along the northern canal system and the Volga to Krasnovodsk, and thence could be transported up the river Oxus,

either via the Syr Darya branch to Tashkend, Khokand, and Kashgaria, or via the parent stream to Khiva, Bokhara, and Afghanistan.

Alexander crossed the Oxus on inflated skins, but there are now numerous boats at the ferries of Khojah Saleh, 800 yards wide; at Char-Jui, leading to Merv, 650 yards wide; at Kirki, where Vambery crossed on his way to Herat. The boats used on the river are built alike at both ends, with bows projecting very much, so as to stretch easily from the shallows to the shore. They are made of the squared logs of a dwarf jungle tree, fastened together with iron clamps. Most of them attain a length of 50 feet, with a beam of 18, a depth of 4 feet, a displacement of barely 12 inches of water, and a tonnage of about 20 tons, rendering them capable of conveying 150 soldier passengers. Notwithstanding their clumsy build, they are strong and durable, and both Timur and Nadir Shah employed them for making bridges, over which their hosts passed in safety. The river is said to have been known to the Arabs as the Jihun, derived from the Turki Œgus or Œkus, a river. The Greek Okos has been supposed to be from the Wakhsh or Uakhsh.—*Asia, by Keane and Temple*, p. 403; *Vambery's Bokhara*, p. 27; *Trotter's Central Asia; Wood.*

OXYBELES LUMBRICOIDES, a fish of the Indian seas, which takes up its quarters in the star-fish called Asterias discoida.

OXYCANUS, a prince of the Panjab, mentioned by Arrian and by Curtius, whose two chief cities were taken by Alexander. Curtius makes Oxycanus the king of people named Præsti, and states that Alexander captured his chief city after a siege of three days. Diodorus and Strabo call the king Portikanus. General Cunningham identifies Musicanus with the great mound of Mahorta on the bank of the Ghar river, 10 miles from Larkana. Masson describes it as the remains of an ancient fortress, on a huge mound named Maihota. At present Mahorta is within a few miles of the river; but in the time of Alexander, when the Indus flowed down the bed of the Nara, the nearest point of the stream was at Alor, from which Mahorta was distant 45 miles to the south of west. Hence Alexander was obliged to leave his fleet, and to march against Oxycanus.—*Cunningham's Ancient Geog. of India*, p. 259.

OXYGEN. The property of absorbing oxygen belongs to fresh wood, whether taken from the twig or from the inner trunk of a tree. When fine chips of such wood are moistened and placed under a jar of oxygen, the gas diminishes in volume. But wood, dried in the air, and then moistened, converts the oxygen into carbonic acid without change of volume. When villages situated on the banks of rivers become inundated with floods, this property of wood gives rise to much disease. The wood of the floor and rafters of the building become saturated with water, which evaporates very slowly. The oxygen of the air is absorbed rapidly by the moist wood, and carbonic acid is generated. The latter gas exercises a directly pernicious influence, when present in the air to the amount of 7 or 8 per cent.

OXYLOPHUS MELANOLEUCOS. *Swainson.* The edolio or pied crested cuckoo has a piping well-known call, and in the evening sports like a swallow. The crested cuckoos during the rainy seasou are parasitical upon the nests of the Satbhai. It is the Coccystes melanoleucos of Gmelin.

OXYRIA RENIFORMIS, the mountain sorrel, is found in the Sutlej valley between Rampur and Sungnam, at an elevation of 6000 to 8000 feet. Used as a native remedy.—*Clegh.*

OXYSTELMA ESCULENTUM. *Roxb., Br.*

Asclepias rosea, *Roxb.*	Periploca esculenta, *Orr.*
Gharat, Gani, . of RAVI.	Pala kura, . . . TEL.
Chiru pala, . . . TEL.	Pinna pala, . . . ,,
Dudi pala, Nela pala, ,,	Se'pa chettu, . . ,,

A twining, perennial, deciduous plant; flowers in the rains, large, white, with a slight tinge of rose colour, and streaked with purple veins; texture, thin and delicate. Common in India on the banks of rivulets; used by the natives in decoction as a gargle in apthous ulcerations of the mouth, and in sore throat. Cattle eat the roots. The fruit is eaten.—*Roxb.; Riddell; Royle; O'Sh.; Stewart.*

OXYTENANTHERA THWAITESII. *Munro.* This plant—Dendrocalamus monadelphus, *Thw.;* Watte, MALEAL.—is very common on the Animallays at 3500 to 6000 feet elevation, and on the outskirts of moist woods, along the Western Ghats and central parts of Ceylon, at the same elevations. Its leaves are used for thatch.—*Beddome.*

OYSTER.

Hau, ... CHIN.	Ostreæ, ... LAT.
Osters, Oester, DAN., DUT.	Teram, ... MALAY.
Huitre, ... FR.	Ostras, . . . PORT., SP.
Austern, . . . GER.	Ustritsa, ... RUS.
Sipi, Kaloo, . . HIND.	Ostra, Ostron, . . SW.
Ostriche, Ostrica, . IT.	Istridiye, . . . TURK.

The oyster is a well-known and diffused mollusc, occurring in many parts of the eastern seas. At Kottiar, near Trincomalee, the edible oysters are of prodigious size. The shell of one of these measured a little more than 11 inches in length by half as many broad, thus unexpectedly attesting the correctness of one of the stories related by the historians of Alexander's expedition, that in India they had found oysters a foot long. Pliny says, 'In Indico mari Alexandri rerum auctores pedalia inveniri prodidere.' Darwin says that amongst the fossils of Patagonia he found 'a massive gigantic oyster, sometimes even a foot in diameter.' The oyster is much relished as an article of food, and in France and Britain has been cultivated.

Oysters are amazingly fruitful, one of them is said to contain 1,200,000 eggs; so that a single oyster might yield enough to fill 12,000 barrels. The eggs are expelled in the form of spawn, a white fluid resembling a drop of grease, in which the microscope reveals innumerable minute oysters. This substance is called 'spat' by the fishermen, and the matter in which they swim doubtless serves to attach them to various submarine bodies, or to individuals of their own species. In this way are formed innumerable banks of oysters, which are kept up by collecting the spawn at sea and in different places along the coasts of England and France, and depositing it in the sheltered and shallow waters selected for 'oyster layings,' which are usually kept untouched till they have arrived at some size, that is in the course of two or three years. The pearl oyster is the Meleagrina margaritifera.

P

P, in the English language, is the twelfth consonant and the sixteenth letter, and is pronounced by closely shutting the lips and opening them suddenly with an explosive emission of breath, as in part, pop, prop. When an initial or a final, as in play, imp, it gives an abruptness of sound to the consonant next it. P, b, f, m, and v are all labial letters, and are convertible in various tongues. Ph, in representing the sounds of the Indian alphabets, is to be regarded as a simple aspirate, as in up-hill, and not as an f, though this also occurs in the Mahrati, where p'hul, HIND., a flower, becomes fool, and pathar, a stone, fattar. The Tamil letter p ⌴ represents ph, as well as b and bh. The letter p, therefore, is in eastern tongues transmutable into f and b. P and f in Persian names are used interchangeably; the p belongs to the old language, the f to the modern. Thus the ancient Aspadana has become Ispahan, and hence Isfahan. Pars is now Fars. Also, in Turkish, s and p of the Persian become t and b, as in tarband for sar-band, literally head-binder, and tarbūsh for sar-pōsh, or head-cover. The Arabs have neither p nor g before a, o, u, and always substitute for these letters k and b; thus Aigouptios, an Egyptian (a Copt), becomes Kibt.

PA. SANSK. A prince or chief.

PAAK. DUKH., GUJ., HIND. Sharks' fins.

PAAL, a land measure in the Eastern Archipelago, $\frac{1}{16}$ of a statute mile.

PÁB. HIND. A ferment for beer, etc.

PABAR, a river of the Bashahir state of the Panjab, said to rise in lake Charamai, near the Barenda pass. The main stream emerging from the Barenda pass, called by the natives 'Bûren ghati,' is narrow and rocky, presenting a series of small rapids above Shergoan, which renders the transport of timber impracticable. The declivity of the Pabar between its confluence with the Sipun and Shergoan is 254 feet per mile.—*Gerard.*

PABHI HILLS, a range of hills to the east of Jhelum. It is crossed by the Khori pass, 5 miles to the N.E. of Rasul, and by the Kharia pass, 10 miles to the S.E. of Jhelum. The range stretches for 30 miles from the neighbourhood of Bhimbar to Plasal, and is not more than 500 feet above the river.—*Cunningham, Anc. Geog.* p. 166.

PABNA, a town in Bengal, in lat. 24° N., long. 89° 17′ 25″ E., on both banks of the Ichhamati. It is the chief station of the Pabna revenue district, in the Rajshahi Koch-Bahar division, with a population in 1872 of 1,211,594. The people are largely of aboriginal descent, but have adopted Muhammadanism, 847,227; Hinduism, 361,314. The other religions having Chandal, 50,126; Sunri, 29,728; Jaliya, 26,948; Rajputs, 664; Kayasths, 35,359. In 1873, the people, harassed by the landlords, broke out into agrarian rioting.

PACHA, Pasha, or Basha, a title of the Turkish court in the higher grades, equivalent of viceroy. The rulers of Egypt were so designated until the title of Khedive was bestowed.

PACHAD. PERS., PUSHTU. Land irrigated by small streams.

PACHAK. HIND. Cossyphus Aucklandia.

Kust-i-Hindi, . . ARAB.	Sepuddy, . . MALEAL.
Kust-i-Arabi, . . . ,,	Kushtam, . . . SANSK.
Kust, Kustus, . . GR.	Godu mahanel, . SINGH.
Kut, Ooplate, . HIND.	Kushta, . . . SYRIAC.
Costus Arabica, . . LAT.	Changala, ... TEL.
Pucha, ... MALAY.	

Pachak is a fragrant root, so designated in the price-currents of Calcutta and Bombay, whence it is exported to Canton, being highly esteemed by the Chinese as an incense. It is the Cossyphus Aucklandia, and a native of Kashmir. Kuth is described in Persian works on Materia Medica with Kust as the Arabic, Kushta as the Syriac, and Kustus as the Greek name. Dr. Royle was only able to meet with two kinds in India, one called Kust-Hindi, and the other Kust-Arabi. These evidently refer to two of the three kinds of costus described by Dioscorides as the Arabian, Indian, and Syriac. There can be little doubt, therefore, that the Kuth or Pachak is one of the kinds of costus of the ancients which formed an ingredient in their most famous compound alexipharmic confections, such as the Theriaca and the Mithridatium. It was also highly esteemed by them as an incense. When burned, it yields a fine smell. The Chinese beat it into a fine powder, which they burn as incense in the temples of their gods. Of the Pachak, 6697$\frac{3}{4}$ bazar maunds, of the value of Rs. 99,903, were exported from Calcutta in the year 1837-38. Dr. Falconer subsequently found it growing in great abundance all round the elevated summits of Kashmir, and thought it could be produced to an unlimited extent, of the best quality, in the Himalaya at elevations of from 7500 to 9000 feet above the sea, and that the Chur mountain alone might be brought in a few years to produce thousands of maunds of it. He introduced it into the Saharunpur Botanic Garden, and named it Aucklandia, in honour of Earl Auckland. It is a gregarious herb, 6 or 7 feet high. Its roots are dug up in September or October, chopped up into pieces from 2 to 6 inches long, and exported without further preparation viâ the Panjab to Bombay, whence it finds its way to the Red Sea, Persian Gulf, and China, another portion being sent across the Sutlej and Jumna to Hindustan. In Kashmir the cost of its collection and transport to a mercantile depôt is about 2s. 4d. per cwt.; but at Jugadree on the Jumna it has increased to about 16s. 9d. or 23s. 4d. per cwt., and in the Chinese ports it fetches nearly double that price the cwt. The Chinese attach great efficacy to it as an aphrodisiac. The imports into Canton in 1850 were 854 pikuls, valued at 5150 dollars. In Kashmir it is chiefly used for the protection of bales of shawls against insects.—*Royle's Prod. Res.; Royle's Ill.; O'Sh.; Simmonds.*

PACHAMALAI, or Green Mountains, a mountain range in Trichinopoly and Salem districts, Madras, lying between lat. 11° 10′ and 11° 24′ N., and between long. 78° 33′ 30″ and 78° 50′ E.

PACHA-PAT. HIND. Marrubium odoratissimum, white horehound, a well-known article in Bengal. Its source was long doubtful, although extensively used by the natives of the country. The drug is found in every bazar almost throughout Hindustan. The leaf is largely imported by Moghul merchants; it is used as an ingredient in tobacco for smoking, and for scenting the hair of

women; the essential oil is in common use for imparting the peculiar fragrance of the leaf to clothes among the superior classes of natives; the people of the Peninsula are peculiarly fond of this perfume, as are also the Roman Catholic inhabitants of India generally.—*Cat. Ex.*, 1862; *Wallich, Tr. Med. Phy. Soc. of Cal.*, 1835; *O'Sh.* p. 493.

PACHETE HILLS, length 105 miles, breadth 95, lie between lat. 22° 56′ and 23° 54′ N., long. 85° 46′ and 87° 10′ E. North part described as marked by hills from 400 to 600 feet. About lat. 23° 35′ N., long. 85° 50′ E., a mountain, conjectured at from 2500 to 3000 feet. Coal is found near Jeria, lat. 23° 44′ N., long. 86° 25′ E., and iron ore exists at a short distance. The chain unites the north extremities of the West and East Ghats, and forms the base of the triangle on which rests the table-land of South India. By the Moghuls, the country to the north was called Hindustan, and that to the south the Dekhan.

PACHISI. HIND. An Indian game, played with cowry shells on a board or cloth, usually by four persons, each of whom is supplied with four wooden or ivory cones, which are called 'got,' and are of different colours for distinction. Victory consists in getting these four pieces safely through all the squares of each rectangle into the vacant place in the centre,—the difficulty being that the adversaries take up in the same way as pieces are taken at backgammon. Moving is regulated by throwing cowries, whose apertures falling uppermost or not, affect the amount of the throw by certain fixed rules.—*Tr. Hind.*

PACHMARHI, a plateau in the Hoshangabad district of the Central Provinces, round which the Chauradeo Jata Pahar and Dhupgarh hills stand sentinel; it is about 3500 feet high, and 2500 feet above the plain in which Sohagpur lies; and its average temperature is probably from seven to ten degrees lower than that of the valley. There are some interesting ancient temples at Pachmarhi. The jungles lying all about the base of the range bear the same name, and are very dense to the east and west of it, with a great profusion of fine timber. The temperature is nearly 10° F. lower than in the valley, and, though not free from fever, affords an agreeable sanatorium. Pachmarhi chiefship comprises 24 villages, in the heart of the Mahadeo hills. The chief is a Kurku by caste, and the principal of the Bhopa or hereditary guardians of the temple on the Mahadeo hills, in which capacity he receives yearly £75 in lieu of pilgrim tax, less a quit-rent on his estate of £2, 10s.—*Imp. Gaz.*

PACHODY, a waist-cloth of coloured silk and gold and silver weaving.

PACHWAI, an intoxicating liquor forming an item to revenue. It is made either from maize or rice or sorghum. The grain is boiled and spread out on a mat to cool. It is then mixed with a ferment of vegetables called bakar, and kept in a large earthen vessel for some days; warm water may at any time be mixed with it, and in a few hours it ferments, and is ready for use.

PACHYMA COCOS. *Fries.*

Tsein-a-pho-ta-roup, BURM. | Fuh-ling, . . . CHIN.

This fungus of N. America and E. Asia is the hard Tuckahoe truffle, used in China as a diet article and as a medicine. It occurs in the form of large tubers, varying in size up to a peck measure; has a corrugated, blackish-brown skin, and consisting internally of a hard starchy substance of a white colour, but sometimes tinged with pale red or brown, especially towards the outside. They are found connected with living fir plantations, or on the sites of old ones, and they are exported to India and elsewhere as China root. Fu-shin is another kind mentioned in books. It occurs in many parts of China, in Japan and in Shan-tung, also in S. Carolina, where it is called Indian bread. In China it is ground up, mixed with rice flour, and made into small square cakes, which are hawked about in the early morning. They are regarded as beneficial in dyspeptic complaints. P. Hoelen, *Fries.*, of Souchong, and in China, is a large truffle of very agreeable flavour. — *Smith; Chinese Mat. Med.; Von Mueller.*

PACHYRHIZUS ANGULATUS. *Rich.*

Dolichos bulbosus, *Linn.* | Carcara bulbosa, *Rumph.*
Shakr-aloo, . . HIND. | Ingomaas . of MANILLA.

A trailing plant, native of S. America, cultivated in India for its edible tuberous root. It is like a turnip in consistence and taste. No other part of the plant is used for food, but this and Sida tiliæfolia furnish coarse sorts of grass cloth fibre. Rumphius says its root, properly prepared, has been considered in Amboyna as a great delicacy. —*Ainslie*, p. 249.

PACHYRHYNCHI, beautiful beetles of the Philippines, veritable living jewels, gold and green. See Beetles.

PACIFIC OCEAN extends between Asia and America, and is upwards of 10,000 miles in breadth, studded with islands. When Magellan entered this ocean, through the strait that bears his name, he sailed three months and twenty days in a uniform direction to the north-west without discovering land, enjoying such uninterrupted fine weather, with fair winds, that he gave it the name of Pacific. On one side of the equator it is called the North Pacific Ocean, and on the other the South Pacific Ocean.

The eastern part of the Pacific has the Easter and Gomez Islands, and moving farther west are the Low or Paumotu Archipelago, Society Archipelago, Mendana or Marquesas group, Cook or Harvey and Austral Islands, Gilbert Archipelago, numerous islands between the Low and Gilbert Archipelagos, Sandwich Archipelago, and several islands to its south, Samoa or Navigator group, Friendly Archipelago, Fiji group, Ellice group, Marshall group, New Hebrides, Santa Cruz group, New Caledonia, Australia, Louisiade, Salomon Archipelago, New Ireland, New Britain, New Guinea, Admiralty group, Caroline Archipelago, Pelew Islands, Mariana Archipelago or Ladrones, Bonin or Arzobispo group, Java, Macassar, Borneo, Sumatra, and many other islands of the Eastern Archipelago acknowledging the supremacy of the Netherlands.

The islands of the East Pacific extend from New Guinea and the Philippines to within 2500 miles of the western coast of America, and from about the 22° of north to the 47° of south latitude, — thus over 200 degrees of longitude and 70 of latitude, or over a fifth part of the earth's surface. On the west are the innumerable islands of the Indian Archipelago, extending from Sumatra to New Guinea, and the great group of the Philippines. They are inhabited by distinct races of men, as the Malayan, the brown

Polynesian, the insular Negro of several varieties, and the African of Madagascar. Of these, the state of civilisation is so various that some are abject savages, while others have made a respectable progress in the useful arts, and have even attained some knowledge of letters.

The brown race of the Pacific occupy all the islands from the Sandwich group in the northern hemisphere to New Zealand in the southern, and from the Tonga group in the west to Easter Island in the east. The black race occupy the islands extending from the Fiji to New Guinea, both inclusive. Certain physical features distinguish each race. Those with brown complexions have generally lank hair and scanty beards, and speak essentially the same tongue, although divided into many dialects; while the black race, numbering several varieties of men, and speaking several distinct languages, have frizzly but not woolly hair, and abundant beards. French naturalists call the islands which the black race occupy Melanesia, or the islands of black men; while Polynesia is applied to the islands peopled by the brown race. Intermixture has occurred between the black and brown races at their points of junction; 300 miles across the trade wind, from the Fiji Islands to the Tonga Islands, being a voyage of no difficulty to a maritime people. The Polynesians, or brown-skinned race, have been again subdivided into Micronesians and Polynesians proper. The former occupy the Pelew, Caroline, Marianne, and Tarawa Islands, and the latter the Sandwich, Navigator's, Marquesas, Tonga, Society Islands, the Dangerous Archipelago, Easter Island, and New Zealand. The Micronesians are distinguished from the Polynesians proper by their low stature, their language, Mongolian conformation, and absence of the system of Tapu or Tabu. Ethnologists have entertained the opinion that the Polynesians proper are sprung from the Malay family of the human race; and Mr. Hale, the best authority on the migrations of the Polynesians, is of opinion that the Samoa or Navigator's Islands were first occupied, and that from them all the other Polynesian islands were peopled. For ages Malay fleets have habitually resorted to the northern coasts of Australia to fish. Although ignorant of the compass, the Polynesians had names for the cardinal points, and steer by the stars, and it was this grand principle of selecting a course which brought the Malay fleet to Navigator's Islands.

From the remains of some Hindu and Jewish customs among the New Zealand branch of the Polynesian race, and the entire absence of anything like Muhammadan customs, it is inferred that the Malay migration from the Indian Archipelago to Polynesia took place after the Hindu influence began to prevail there, and before the arrival of the Muhammadan traders and settlers from Arabia. Indian colonies were established in Java in the first century after Christ. But, according to Javanese annals, the first arrival of the Hindus in the Indian Archipelago from Western India occurred about A.D. 800, and the Muhammadan tradition to the Archipelago began in A.D. 1278. The date of the last migration is probably correct; that of the Hindus, being more distant, is uncertain. From these two great events, it is inferred that the Malay ancestors of the Polynesians left the Indian Archipelago soon after the commencement of the Christian era.

No trace of a written character has been found in the wide extent of the islands of the Pacific. Most of them are probably too small to have furnished a population, at once sufficiently numerous and concentrated, to generate the amount of civilisation requisite for the purpose.

The history of the nations along the southern borders of Asia has in every era exercised some influence on the Archipelago, and the importance of the international influences of the Archipelago itself may be supposed from the circumstance, that while some writers have derived Malayan civilisation from an original source in Menangkabau, others have referred it to Java, and others to Celebes; whilst two of the ablest, Mr. Marsden and Mr. Crawfurd, have endeavoured to exhume a great nation whose civilisation preceded the Javanese, the Malayan, and the Bugis, and impressed itself more or less, not only on the Archipelago, but over all Polynesia. And the learned now recognise that a great continent, with peculiar forms of animal life, once lay in the sea between Madagascar and the Archipelago.

In the Pacific Ocean, a westerly current fills the whole breadth of the tropical zone, from the coast of America to that of Australia and the Indian Archipelago. The cold Peruvian stream flows with great rapidity along the shores of Chili and Peru, and takes a westerly direction on reaching the neighbourhood of the line. It has everywhere a remarkably low temperature comparative to the latitude. After the current has assumed a westerly direction, its mean temperature does not exceed 20·5° R., but as it advances towards the west its temperature gradually rises to 27° or 28° R. On the western banks of the Pacific, the equatorial stream divides into several branches. Part of its waters flow to the south, a greater quantity penetrates through the channels of the South Asiatic Archipelago into the Indian Ocean, the remainder turns to the north-east, on the confines of the Chinese Sea, leaves the eastern coast of the Japanese islands, and then spreads its warm waters under the influence of north-westerly winds over the northern part of the Pacific. Then the Japanese stream plays here the same part as the Gulf Stream in the Atlantic, and exerts a similar, though less mighty, influence over the climate of the west coast of America, as it is neither so large nor so warm, and having to traverse a wider ocean, in higher latitudes, naturally loses more of its heat during the passage.—*Crawfurd's Malay Dic.; Logan in J. Ind. Arch.*, 1848–1858; *Hartwig; Captain Elphinstone Erskine's Western Pacific*, p. 448; *Marsden; Wilkes' Narrative; D'Urville's Voyages; Captain Blackwood's Survey.*

PACKHAN BED. HIND. of Kangra. A root obtained from Tibet, believed to be an antidote for opium, and used as such in cases of poisoning by that drug, either in powder, in doses of 15 grains, or in infusion.—*Cat. Ex.*

PAD or Paud, as Vasarapad, Nundepad, Mundlapad, written in Tamil Padagai, is a cluster of cottages, situated, for the convenience of farmers, at some distance from the village to which they belong. It is the same word seemingly as the Bengali Para, a village, or part of a village or town, and used in Bengal as a suffix, as in Gokulpara.

PADÆI, an ancient pastoral people, tributary to Darius, supposed to have been somewhere in India, and on the banks of the Ganges, and who, according to Herodotus (Thalia iii. c. 99), eat their aged relatives. See Batta.

PADAL, Pathadi, Pardhan, or Desai, is a Gond tribe who are the bards or religious counsellors of the upper classes of Gonds. From these has sprung a half-caste tribe who speak Mahrati, and occupy themselves in spinning thread and playing on wind instruments.

PADAM is the term by which the races designate themselves, whom the Assamese name Bor and Bor-Abor. The Bor occupy the mountains to the north of the Brahmaputra river, in about lat. 27° 12′ N., and long. 94° to 97° E., on the west or right bank of the Dihong river, on the southern face of the Himalayas, on the borders of Tibet and China. They dwell to the south of the Bor-Abor, and their chief town is Membu. Higher up are the Bor-Abor, whose capital is Semong, of about 300 houses; they are polyandrous, it being not uncommon for an Abor woman to have two husbands, brothers, living under one roof. They do not eat beef, but hunt, and eat the flesh of the wild buffalo. They are more powerful than the Bor. Their bachelors live in the Morang, a large building in the centre of the village for the reception of strangers, and in this custom they resemble some of the Archipelago races. They sacrifice to deities of the woods and hills. Numbers of these people are also found on the shores of the two great northern branches of the Brahmaputra river. When first known, they made periodical descents on the plains. Bor means tribute; hence Abor, free from tribute; and the Padam are so arranged into the payers and non-payers of tribute. They carry bows and arrows, some of which are poisoned. Their dress is made of the bark of the Udhal tree. Bor is also said to mean 'great,' and we find the term of Bor Khamti employed. The Bor-Abor race dwell on the north of the Abor, occupying the mountains on the north of the Brahmaputra river, in lat. 28° N., and long. 95° E., to the west of the Dihong river.—*Indian Annals; Latham's Ethnology; Aitcheson.* See Abor; India.

PADANG. MALAY. A plant, probably the Pandanus odoratissimus, used in the Archipelago for making mats.

PADANG ISLANDS, seven in number, lie on the west coast of Sumatra. Padang is the chief settlement of the Dutch on the west coast of Sumatra.

PAD BAHERA. HIND. A mushroom of the Panjab, said to produce insensibility.—*Powell.*

PAD-DAN. BURM. In Amherst, a timber used for making drums and musical instruments. It is a kind of red sanders-wood.—*Cat. Ex.*

PADDANATTU PILLAIYAR, a rich Chetty merchant, who lived at Kaveripatnam about the 17th century. He acquired great wealth by trading with Ceylon. One day, in his absence, a Saiva mendicant asked alms from his wife, but was refused. The beggar left a little slip, to be given to her husband, containing these words, 'Mind that even a needle with a broken eye will not follow thee in thy last day.' Paddanattu Pillaiyar then became an ascetic, and wandered about, visiting Saiva temples, and composing verses in their honour.

PADDY. ANGLO-MALAY. Oryza sativa.

Bhatt, . . GUJ., HIND.	Nellu, ... TAM.
Padi, ... MALAY.	Vadlu, ... TEL.

Unhusked rice, whether growing or cut, before thrashing, or before the grain is separated. The Malays, like the other people of S.E. Asia, have many varieties of rice, as Adan-padi, Jinjang-padi, Jongko-padi, Kappa-padi, Radin-padi, Sambas-padi, Sampangan-padi.

PADDY BIRDS, an egret; so named from Padi, MALAY, rice, because they often fish in rice fields. See Birds; Cranes; Egret.

PADEEN, a race of Ichthyophagists dwelling near the Indus, whom Herodotus describes as hunters, and eating raw flesh; it is most probable he had heard of the class termed Pardi, the hunters and fowlers to this day of India.—*Tod's Tr.* p. 147.

PADEWAHKAN. The trade of the Bugis with New Guinea and the Eastern Islands, and the trepang fishery on the north coast of Australia, are carried on chiefly in vessels called Padewahkan. These leave Macassar and the other parts of Celebes, for the Eastern Islands, during the westerly monsoon, returning with the S.E. trade wind.

PADI. KARN., TAM.; also Pari. In Madras, a measure of capacity = ⅛th of a marcal, containing 93·752 cubic inches, or about 3 lbs. 6 oz. of water. It is the same as the nali. It is also a measure of weight equal to 100 palam or 125 oz. avoirdupois. As a measure of capacity, 8 olluk make 1 padi.

PADIKASU, a native of Kalandai, who was one of the court poets of Kegunatha Setupati of Ramnad, A.D. 1686–1723. His principal work, Tondamandala Satakam, contains 100 stanzas in praise of the Tonda country.

PADIVIL KOLOM, a round tank of Ceylon of great dimensions.

PADKA, the engraving of the soles of two feet on the top of a tombstone, to mark the tomb or samdi of a Gosain. It is also called Charnpad and Paglan. Paduka, footprints of a Jaina priest.

PADMA. SANSK. The lotus, Nelumbium speciosum. Padma devi, also Padmavati, consort of Vishnu, a title of the goddess Lakshmi. Padmanabba-swami, a name of Narayana in the Malealam country. Padmasana, a lotus seat. Padma-wan, the sacred lily lake of the Hindus.

PADMANABHAM, a village in the Vizagapatam district, Madras presidency, situated in lat. 17° 58′ N., long. 83° 19′ E., near the fort of Bimlipatam. Population (1871), 558. It is a place of religious and historic interest, containing a large endowed Hindu temple of much local celebrity, and marking the scene of a decisive battle fought between Viziaram Raj of Vizianagaram and Colonel Prendergast's force, on the 10th of June 1794. Viziaram Raj was defeated, and fell with most of the principal chiefs of the country.—*Imp. Gaz.*

PADMANI, daughter of Hamir Sank, the Chauhan raja of Chitor in the 13th century. She was very beautiful, and was married to Bhim-si, uncle of the young prince Lakum-si of Chitor, and protector of the kingdom during his minority. In 1275, Bhim-si was lured into the camp of Ala-ud-Din, who had conducted a long unsuccessful siege, and there made prisoner, but was promised release if he would deliver up Padmani. Padmani, after consultation, feigned compliance, and was sent out with seven hundred covered litters, each of which contained an armed warrior. At the last interview allowed to the husband and wife, Bhim-si escaped

under the cover of the warriors, who had to fight their way, and mostly fell, and Ala-ud-Din retired. Ala-ud-Din returned in A.D. 1303, and the Mewar people, despairing of success, resolved on the rite of Johar. In this all their wives, to the number of several thousands, were led to subterranean fires, Padmani closing the train. Her name is hallowed in Rajput song,—her beauty, accomplishments, and destruction.

PADMA PURANA, a religious book of the Hindus. It contains 55,000 slokas or stanzas. It is in five khanda or books, viz. the Sreshti-khanda, which treats of creation; Bhumi-khanda, on the earth; Swarga-khanda, on heaven; Patala-khanda, on the regions below the earth; and the Uttara or last khanda. The tone is strictly Vaishnava, and in the last-named section Siva and Parvati join in worshipping Vishnu.—*Dowson.*

PADOMAN. MALAY. A compass; the word is also written Paduman, Pandoman, Panduman.

PADOUK. BURM. Pterocarpus dalbergioides, also P. Indicus. Several experiments have been made in the ordnance department of Madras to ascertain its fitness for gun carriages. From its large size, its even grain, rendering it susceptible of a high polish, and beauty of colour and pattern, it appears to be well suited to the manufacture of articles of furniture.

PADRI, a Portuguese titulary name given to the religious teachers of all faiths, to the Protestant and Romish clergymen, and in Sumatra to the Muhammadan teachers of Acheen. These last are chiefly Malays of the Menangkabao states, of the interior of Sumatra, who for many years opposed the advance of the Dutch, but are now chiefly congregated in Acheen. The Padhrai of the Bombay side of India is a levied tax or fee for the maharaj and guru, presented at their visits.

PADSHAH. HIND. A king, equivalent to the Arabic sultan; Padshahi, royal; Padshah-zada, a prince; also written Pacha, Pasha, Basha.

PADSHAH SALEP, a commercial term for a drug lately imported from Bombay into England. Its source is unknown, and supposed by Dr. Birdwood to be the root of Asparagus adscendens.

PADUA GURUWA, a small community of untraced origin in the mountains of Udakind, in Western Uvah, in Ceylon, who profess Muhammadanism, but conform to Kandyan customs.

PÆCILONEURON PAUCIFLORUM. *Bedd.* Pudangalli, TAM. A tree abundant on banks of rivers on the South Tinnevelly and Travancore mountains, up to nearly 4000 feet. It yields a valuable hard reddish timber, which is used for building and other purposes, and for walking-sticks.—*Beddome, Fl. Sylv.* p. 93.

PÆDERIA FŒTIDA. *Linn.*

Psychotria volubilis, *Roxb.* | Apocynum fœtidum, *Bur.*
Gandho-bhadhuli, . BENG. | Savirela chettu, . TEL.
Gandhali, ... HIND.

Grows in Bengal and peninsular India. It has a very offensive fœtid smell, and the roots are used as an emetic.—*Roxb.* i. p. 683.

PÆONIA plants were formerly in great repute as a medicine; and Dioscorides gives 16 names by which the drug was known.

Pæonia corallina, Ud-salap, HIND., is one of the Pæonia of Dioscorides. Its root occurs as irregular, flattened, woody masses, with a brownish epidermis, and fibrous, with numerous fissures radiating from the centre. It is used by native physicians for weakness, palpitation, and asthma, and to fasten round the neck of children to prevent asthma. Root believed to be antispasmodic and to stimulate the secretion of milk and menses. It is said to become more efficacious the longer it is kept.

Pæonia moutan, Mau-tan, CHIN., a native of China, is a shrub, of which several varieties, with beautiful whitish flowers stained with pink, are now in British gardens. The Pæonia papaveracea has a broad crimson stain at the base of each petal. It sprouts so early in the spring, that if exposed to the sun, it is very liable to be cut off by the late frosts of England. A very dwarf kind (apparently a distinct species) has finely-cut leaves, and flowers of a dark velvety purple, like the Tuscany rose. This the Chinese call the black moutan, and it is supposed to be the same which Lindley named Pæonia atro-sanguinea. Another kind, called tse, or purple, has double flowers of a large size; this is probably the variety reported to have 1000 petals, and which is said to exist only in the garden of the emperor. The third, called lan, or blue, is a lilac variety, with flowers of the colour of Wistaria Sinensis. There are others of various shades of purple, perfectly distinct from those, and equally fine. The double whites are also numerous and handsome. The largest of these Dr. Lindley has named P. globosa, but there are four or five others nearly as large and double. Some of them have a slight lilac tinge, which gives a richness to the colour. The most expensive is one called wang, or yellow, by the Chinese; it is a straw-coloured variety, rather pretty, but not so handsome as some of the others.

Pæonia rubra.

Chih-choh-yoh, . . CHIN. | Chuen-choh, . . . CHIN.
Tiau-chih, ... ,,

Its root is used in Chinese medicine as a carminative.—*Smith; Fortune's Wanderings*, p. 321; *Riddell; Eng. Cyc.; Powell.*

PAG. GUJ., HIND., MAHR. A foot, a foot-mark. It is variously used and combined to mean intelligence, search. Paggi, a searcher.

PAGADAPU CHETTU. TEL.

Melanthesa rhamnoides, *B.* | P. reticulatus, *Poir.*
Phyllanthus vitis idœa, *R.* | Errapurugudu, . . TEL.

The same name is also given to some others with red berries, as P. turbinatus, etc., and likewise to Sethia Indica, the Telugu name of which Roxburgh assigns to M. turbinata.

PAGAH. HIND., MAHR. State soldiers, household troops; any body of horse under a commander.

PAGAN, a ruined Burmese town, in lat. 21° 10′ N., long. 94° 34′ E. Captain Yule found the details of its architecture of Hindu origin; and it is known that Anoratha Saumen, when he established Buddhism in Pagan, built all its pagodas and temples after the exact models of those then existing in Thatung or Satung, of the same size, and in the same order. Such is the testimony of Talaing tradition, and he believes of Talaing history. The name of this town is also written Paghan, and it was a royal city about A.D. 700. The remains of 800 to 1000 Buddhist temples are to be seen, the most remarkable being the Ananda, Tha-pin-ya or Thai-pin-yu, Gauda-Palen, and Dhamayangyee.

Gauda-Palen signifies the throne of Gaudama. Height, 180 feet. It is cruciform in plan, and is

very conspicuous in approaching Pagan from the southward. It has numerous pinnacles and a tall central spire; it is seen glistening with its white stucco-like plaster far down the Irawadi river, rising like a dim vision of Milan cathedral. It is compact in structure, and elevated in proportion to its bulk. It has a massive basement, with porches, and rising above in a pyramidal gradation of terraces, crowned by a spire Tee. From the top of the terrace, just below the spire, is a fine prospect of the vast field of ruined temples, stretching north-east and south-west.

The *Ananda* temple is supposed to have been built about the time of the Norman conquest. Ananda means the Infinite. The plan of the building is a square of nearly 200 feet, having on each side a projecting vestibule, which converts it into a perfect Greck cross. These vestibules are lower in perpendicular height than the body of the temple, which rises to 35 feet in two pairs of windows. Above this rise six successive terraces, diminishing as they ascend, connected by carved converging roofs, the last terrace just affording space enough for the spire which crowns the edifice. The gilded Tee caps the whole at a height of 168 feet above the ground. The outer corridor is roofed with a continuous flying buttress abutting on to the massive outer walls.

Thai-pin-yu, or Omniscient, is the second great temple of Pagan, and is stated to have been built about A.D. 1100. It forms a massy square edifice of 200 feet on each side, rising to a height of 210 feet from the ground. The characteristic of the Thai-pin-yu is the elongation of the building, before any considerable diminution of spread takes place, and also the position of the principal shrine, which stands high above the ground. There is first a spacious two-storeyed basement, similar to that of the Ananda, then two receding terraces, but here the usual gradation is interrupted. The third terrace, instead of rising by terraces, like the others, projects at one leap aloft to a height of some 50 feet in a truly massive and stupendous cubical donjon, elongated again at the top by a renewal of the pyramidal gradation of terraces, and the usual culminating spire. Colonel Fytche (p. 31) suggests that there was an Upper Pagan, near Pagoung, and a Lower Pagan, in lat. 21° 12′ N., on the banks of the Irawadi.—*Fergusson*, p. 618; *Yule; Fytche*, p. 30.

PAGGI. HIND., from Pag, a foot. A village servant in Gujerat and the N.W. of India, who traces thieves by their footprints. Mr. Elphinstone (p. 192) relates that one was employed to pursue a man who had carried off the plate belonging to a regimental mess at Kaira. He tracked him to Ahmadabad, 12 or 14 miles, lost him among the well-trodden streets of that city, but recovered his traces on reaching the opposite gate, and, though long foiled by the fugitive's running up the water of a rivulet, he at last came up with him, and recovered the property, after a chase of from 20 to 30 miles. The skill of many of the paggi in Gujerat is remarkable. They measure with a string every trace of the impression of the foot, and make observations with a sense which practice renders very acute. The moment the object of their pursuit is traced to a village, the string and all the remarks are delivered to its paggi, who pursues the chase till he finds the thief or murderer, or till he lodges him in another village.

In the Jhalawar district, the property stolen or the thief must be produced, and the paggi who trace the pag or footprints are there the most famous. In Sind, also, the paggi was skilled. A chaprassi, who had gone off with a considerable sum of money, was traced by his pag from Kotree to Bahulpur, where he was arrested, brought back, and punished for the theft. Burckhardt relates some curious facts concerning the sagacity of the Arabs in tracing of footsteps or ath'r, a talent which they seem to possess in common with the free Indians of America, with this difference, that in the American woods the impression is made upon grass, in Arabia upon sand.—*Rob. Tr.* ii. p. 176; *Elphin.* p. 192; *Malcolm, Cent. India.*

PAGLAN. HIND. The sculptured soles of feet on the tombstones of Saddhu Hindus.

PAGODA.

Tse-dee, Po-ya, .	BURM.	Dewal, ...	URDU.
Bhoo-ra, Po-rah, .	,,	But-kadah, . . .	,,
Koil, ...	TAM.	But-khana, Murat,	,,

This is a term by which Europeans designate the religious temples of the Hindus and Buddhists of India, Further India, China, and Japan. The pagodas of Hindus and Buddhists, and the mosques and tombs of Muhammadans, are of importance in the architectural history of these countries, being numerous, and almost the sole structures which have survived through the revolutions of dynasties and religions. The name has been variously derived,—from Muhammadan authority, as Būt-kada, from Būt, an idol, and Kada, a temple. It may have been applied in the S. of India from Dhatugarbha or Deh and Gopa, a Buddhist shrine, a relic receptacle. It may also be from Pe or Pei, TAM., a devil, and Gudi, TEL., a temple. Some of the Hindu and Buddhist temples are magnificent. The most costly pagoda in British India is that built by Bimul Sah on a spur of the Aravalli mountains. The site cost sixty lakhs to level, and it took fourteen years in building, at a cost of eighteen kror of rupees, perhaps in all twenty millions sterling. The more celebrated of those of peninsular India are at Achaveram, Chellumbrum, Conjeveram, Jaganath, Seringham, Tripati, Trivadi, Verdachellum, and Wariore. Trinomally is 222 feet high. The whole exterior of many of the largest of the Burmese pagodas (Buddhist) is gilt. In the capital, some of the most beautiful and elaborate khyoungs or priests' houses are covered with the richest and most ornate gilding from top to bottom; and in some cases the cost of gilding alone, for a single building, has exceeded £10,000 sterling. On the occasion of festivals, also, it is a prevailing custom among the Burmans to attach to their pagodas leaves of gold, even when the building generally is not gilt, which is the origin of the little patches of gilding seen on the temples near every village of any size or wealth.

The prominent parts of the Hindu temples are the Gopura or Torana, the gateway; and the Kalasa, with the Mora and Kangni.

The architectural form of the pagodas of different parts of India have distinctive forms.

The Dravidian temples at Mahavellipur, Tanjore, Madura, are in storeys with cells; those of Bengal present no trace of utilitarianism, no pillars or pilasters, no reminiscence of habitations, but have a polygonal base, and all the lines of the pyramid or sikra are curvilinear.

The chief Dravidian temples are at Chellumbrum, Combaconum, Conjeveram, Ramisseram, Madura, Seringham, Tanjore, Tinnevelly, Tiruvalur, Vellore, Peroor, Vijayanagar, Avadea, Kovil, Veeringepuram, Taramangalam, Mahabalipuram, Ramisser, and others.

The ruined temple at Chellumbrum is supposed to have been dedicated to Subramanya. As it now exists it was built at intervals from A.D. 927 to the year 1685; it has a hall 340 feet by 180 feet, with 1000 columns, each of a single granite stone, and all ornamented. A temple to Parvati is near the hall.

Tiruvalur, 30 miles W. of Madras, has a double shrine of Dravidian form dedicated to Siva and his consort, standing in a cloistered court, which measures 192 feet by 150 feet over all, and has one gopura in frout. This has afterwards been enclosed in a court measuring 470 feet each way, with two gopuras, and containing numberless little shrines and porches; and subsequently the whole was enclosed in a court 940 feet by 701 feet, with five gopuras and several important shrines, amongst them a hall with 688 columns.

Seringham temple, near Trichinopoly, is a small village shrine, but with six enclosures, the innermost enclosing a hall 450 feet by 130 feet, with 1000 (960?) columns, each of a single block of granite, and all elaborately carved. Each enclosure was intended to have four gopuras. The outer wall that encloses all measures 2475 feet by 2880 feet. It has four great outer gopuras. The northern one leading to the river and to Trichinopoly measures 130 feet in width by 100 feet in depth, and is one of the most imposing masses in S. India, and is severe and in good taste throughout. There are in all 14 or 15 great gate towers. This great Vaishnava temple at Seringham owes all its magnificence to buildings erected during the Naik dynasty, A.D. 1532–1742.

Near the Vaishnava temple of Sri Rangam is one dedicated to Jumbukeswara, a title of Siva. In architectural beauty it far surpasses the Vaishnava structure.

The pagoda at Tricullore in S. Arcot is handsome, and many natives of S. India retire to this town to spend the evening of their days.

Conjeveram is said to have been at first founded by Adondai, the illegitimate son of Kolotunga Chola, in the 11th or 12th century, and to have succeeded Combaconum as the capital of Cholamaudalam. Great and Little Conjeveram are contiguous towns. There is a Saiva and a Vaishnava pagoda. The great temple at Great Conjeveram has some large gopuras, also a hall of 1000 columns, several large and fine mantapas. It is said to have been at one time a Jaina pagoda.

Vellore has a temple inside the fort, which has been converted into an arsenal. It has one of the most elegant as well as one of the oldest porches or mantapas in the south, with many Yali and mounted warriors. The porch is supposed to be of date A.D. 1350. The lingam there indicates its dedication to Siva.

Tarputry has two temples, one now in use dedicated to Vishnu, the other, deserted, on the banks of the neighbouring river. It has two gopuras, one of them unfinished, the whole of the perpendicular part covered with the most elaborate figure sculpture, cut with exquisite sharpness and precision in a fine, close-grained hornblende rock in a rich and tasteful style,—two handsome temples elaborately decorated with sculptures representing Hindu mythological events. Among the bas-reliefs is a figure holding a Grecian bow, rarely seen in Hindu sculptures.

Combaconum has a temple dedicated to Sri Rama, and there is a small but fine gopura in the town 84 feet across and 130 feet in height.

Madura has many temples, most of which were erected during the long and prosperous reign of the tenth Naik king, Trimul Naik, A.D. 1621–1657. The most important was a choultry, which he erected at a cost of a million sterling, between 1623 and 1645, to receive the presiding deity when taken in procession. Its hall is 333 feet long by 105 feet wide. The façade of its hall is sculptured with the monster-like Yali and mounted warriors. In front of the choultry is a gopura left uncompleted by the same king. The sanctuary of the great temple is said to have been built by Viswanath, the first Naik king, A.D. 1520, but it owes all its magnificence to Muttu Virappa, the eldest brother of Trimul Naik, and to Trimul Naik, 1622–1657. It has a hall of 1000 (985) columns, whose marvellously elaborated sculptures surpass those of any other known temple hall. There is a small shrine dedicated to Minakshi, the tutelary goddess. The Perumal pagoda at Madura was erected in the 18th century.

The great pagoda at Tanjore was converted by the French armies in 1777 into an arsenal, and has not been re-appropriated to sacred purposes. The temple stands in a courtyard 500 feet square, the distance between the gateway and the temple being broken by the shrine of the bull Nandi. The perpendicular part of its base measures 82 feet square, and is two storeys in height, of simple outline. Above this the pyramid rises in 13 storeys to the summit, which is crowned by a dome, and reaching a height of 190 feet. All the sculptures on the gopuras belong to the religion of Vishnu, while everything in the courtyard is dedicated to the worship of Siva. It is supposed to have been erected by Kadu Vettiya Soran or Cholan, a king reigning at Conjeveram in the beginning of the 14th century. Besides the great temple and the Nandi porch, there are several other smaller shrines in the enclosure, one of which, dedicated to Subramanya, a son of Siva, though small, is as exquisite a piece of decorative architecture as is to be found in the south of India. The bull and this temple are of the 15th or 16th centuries.

At Tinnevelly is a double temple; the great square, being 508 feet by 378 feet, is divided into two equal portions, of which one is dedicated to the god Siva, and the other to his consort Parvati, with three gateways to each. Its great hall has 1000 columns, a forest of pillars.

Ramisseram temple, on the island of Ramisser at Paumben, is enclosed in an outer wall 868 feet long by 672 feet, and 20 feet in height, with four gopuras built entirely of stone, three of them being unfinished. Its corridors extend to 4000 feet in length, are 20 to 30 feet broad, and about 30 feet high. Each pillar or pier is compound, with rich elaborate designs. The central corridor is 700 feet long. It is supposed to have been begun about the year 1550. A small vimana in the west is alone of older date. It is now devoted to Siva.

Vijayanagar is built on the Tumbudra river. A city is said to have been founded there in A.D. 1118 by Vijaya Rayal, but only as a dependency of the Mysore Raj. The Muhammadans in A.D. 1310 had struck down the kingdom of Hoisala Bellala, and destroyed their capital Hullabid; in 1322, Warangal was finally destroyed by them, and Bakka and Harihara, princes of Warangal, re-established themselves at Vijayanagar. For two hundred years it maintained a gallant struggle against the Bahmani and Adal Shahi kings of Ahmadnaggur and Bijapur. The period of its greatest prosperity was between the accession of Krishna Deva, A.D. 1508, and the death of Achutya Rayal, 1542; and it is to their reigns that the finest monuments of the city must be ascribed. In 1565 it was finally taken by the Muhammadans, and it has ever since continued in ruins. There is no other city in India where ruins exist in such numbers. The most remarkable of the remains is an unfinished temple dedicated to Vitoba, a local manifestation of Vishnu. It was commenced by Achutya Rayal, A.D. 1529–1542. The principal part is its porch of granite, carved with a boldness and expression of power nowhere surpassed by buildings of its class.

Mahavellipore, south of Madras, on the sea-shore, is famed for its monolithic temples or raths. There are inscriptions in Sanskrit, and their date seems to have been not later than the 7th century. They have been formed out of the solid rock, and on one of the oldest the Hindu deities are sculptured, the gods being represented with four arms. One of them, the Arjuna rath, is nearly finished, and was intended to contain a cell. There are also some excavated caves; and at Saluvan Kuppam, two miles north of Mahavellipore, is a cave with ten tiger heads at its entrance.

Ellora Kailas cave has a model of a complete temple of the Dravidian style, standing in a courtyard, and consisting of a vimana between 80 and 90 feet in height, preceded by a large square porch supported by 16 columns; before this stands a detached porch, reached by a bridge, and in front of all stands the gateway, which is in like manner connected with the last porch by a bridge, the whole being cut out of the solid rock, standing in a court dug around the temple in the sloping side of the hill, about 100 feet deep at its inmost side, and half that height at the entrance or gopura, the floor of the pit being 150 feet wide and 270 feet in length; and in the centre of this rectangular court stands the temple. There are also two pillars or dipdan (lamp pillars) left standing on each side of the detached porch, and two elephants about the size of life. All round the court there is a peristylar cloister, with cells and some halls. The completeness of this cave never fails to strike the beholder with astonishment.

In the Ganjam district, the Hindu temples are formed by a group of rather low buildings, in some cases detached, in others joined, each with a graduated pyramidal roof, terminating in an ornamental conical cupola.

In Northern India, from Orissa to the foot of the Himalaya, the Hindu temples, with scarcely a single exception, are rectangular in plan and cubical in the form of their body. In Southern India, also, the square temple is the rule.

The Dharmsala temples of the Sikhs are, in general, plain buildings. They are built by rich men, or by several uniting to defray the expense. They have a flat roof, and are sufficiently capacious to accommodate a multitude of attendants, who sit or stand during worship. Images are banished. The bunga or temples at Amritsar, surrounding the holy tank, are fine buildings; each misl or association of Sikhs has a separate bunga.

Pagodas of Burma are chiefly relic receptacles, viz. dat-dau, relics of a Buddha or Rahanda; paree-bau-ga, implements or garments of Buddha or other sacred person; dhamma, books or texts; and the ou-deit-tsa contain statues of Buddha. The Buddhists of Burma, at Prome and Rangoon, have erected magnificent temples for their worship, with much detail, but with a grandeur of dimensions that prevents the thought of puerility. The great colossal figures of the pagodas at Rangoon and Prome are magnificent structures. That at Rangoon, built on the most elevated part of a great laterite ridge, towers majestically above all surrounding objects.

The finest architectural remains in Burma are to be seen in the deserted city of Pagan, but many of the most magnificent have been greatly shattered by earthquakes. The bow and the pointed arch, as well as the flat and the circular, have been in use long before their employment in India. Modern buildings are chiefly of wood. Palaces and monasteries, carved with extraordinary richness of detail, and often gilt all over, present an aspect of barbaric splendour. The dhagobas, relic chambers, which form at once the objects and the localities of Buddhist worship, are almost the only brick structures now erected, and these are often gilt all over; £40,000 are said to have been expended on a single temple. The ordinary buildings are chiefly built of bamboo and thatched with grass, and well raised from the ground on piles. In carving, the Burmese artisans give full scope to the working of a luxuriant and whimsical fancy.

Chinese joss-houses are simple structures, but ornamental from their pleasingly contrasted colouring.

In the common form of a Hindu temple, the adytum containing the object of worship is invariably covered with a 'sikar,' or bell-shaped spire; the mandap, or ante-chamber, is open, and contains in temples of Siva a figure of the attendant bull Nandi. Vaishnava temples, especially, have frequently two ante-chambers, in which case the first is open and the second closed. These, as also the temples of the Jain religion, have occasionally three spires, the centre one rather higher than the other two. The temple is surrounded by a Dharmsala, or house of accommodation for attendants and worshippers. The surrounding structure is, however, still sometimes, especially in Jain temples, formed of numerous small spire-covered shrines, and the lodging-houses are in that case detached, but the whole mass of buildings is frequently encircled by a fortified wall. A large temple presents, in fact, the appearance of a village; the auxiliary buildings look like substantial private houses, but are more liberally adorned with carved woodwork; and sometimes nearly the whole exterior of them is covered with rude paintings, representing marriage or other domestic festivals, or more frequently the achievements of the gods. Small reservoirs of water called koond, circular wells, and more

imposing wav or bowlee, and sometimes majestic tanks, are the more or less indispensable accompaniments of places dedicated to the religion of the Hindus. Like the Christian churches of the middle ages, the Hindu temples of Gujerat are usually placed in situations highly favoured by nature. The awful gloom of the grove, the romantic beauty of the mountain glen, the brightness of the river's bank, the wildness of the cloud-enveloped peak, or the solemn calm of the ocean bay, are accessaries of which the religions of Siva and of Adinath fully avail. The officiating priests are, in the temples of Siva, usually Gosai; in those of Vishnu, Brahmans or Viragi; in temples of Devi, low caste Brahmans or Gosai. The priest in a Jain temple may be of any caste, with the curious provision that he be not a Srawak, or layman of that religion. Low caste Brahmans, especially the class called Bhojak, are frequently employed. The Gosai are members of a monastic order which follows Siva. They wear orange-tawny clothes, and the tilak, or sectarian mark upon their foreheads, is horizontal. The Viragi is a Vaishnava monk, and wears a white dress and a perpendicular tilak. Those who are servants of the Deo add to the tilak a chandlo or red spot, made with a preparation of turmeric. The Jain monk is commonly called a Jati, but the general name applying to all these orders is that of Sanyasi, or ascetic. The Sanyasi are often persons who have lost their property, or have been deprived of their children, or suffered some other calamity, against which they have not had resolution to bear up. The intended recluse having arranged with a guru, or monkish dignitary, for his reception into the order, and having ascertained the favourable day by astrological calculation, breaks the sacred cord, if he be of the regenerate classes, removes the hair of his head, assumes the monastic dress, and with alms and prayers receives initiation. The Sanyasi are, however, sometimes consecrated at an early age; a person who despairs of having children not unfrequently vows to consecrate one son, if two be granted to his prayers; and among the Jains, when disciples are scarce, as they frequently are, the monks purchase children for the purpose of initiating them. The markings which Hindu sects place on their foreheads are alluded to by Moses, Leviticus xix. 28: 'Ye shall not make any cuttings in your flesh for the dead, nor print any marks upon you: I am the Lord.' Bishop Patrick notes that this imprinting of marks or signatures was understood to be fixing a badge or characteristic of the person's being devoted to some false deity.—*Fergusson*, pp. 334-374; *Mason; Moor; Yule; Forbes' Rasamala*, ii. p. 311; *History of the Panjab*, i. p. 123. See Java; Mat'h.

PAGODA.

Hun, ... HIND. | Varaha, Varagan, SANSK.

Pagoda, a gold coin that was current in Madras until towards the middle of the 19th century. The derivation of its name, pagoda, though it is of modern origin, is very obscure. Prinsep derived the term from the pyramidal temple depicted on one side of the coin, and this would appear to be the general opinion. Bartolomeo, who lived in Southern India from 1776 to 1789, called the coin Bhagavadi, and states that it was improperly called by the Europeans pagode or pagoda. Bhagavadi or Bhagavati is one of the names of Durga or Parvati, whose image used to be shown on the coin, and as Bartolomeo was a good linguist, his etymology of the term is probably correct. The East India Company's pagodas, with the figure of a temple on one side, were comparatively modern, and it seems more probable that this device was adopted on account of the prevailing European name for the coin, than that the name arose from the device. The following are the names of the different classes into which the coins described have been divided:—(1) Buddhist coins, (2) Chalukya coins, (3) Nonambavadi coins, (4) coins of the Gajapati dynasty, or elephant lords, (5) the Lingayat pagoda, (6) Vijayanagar or Bijanagar pagodas, (7) the Gandikota pagoda, (8) the Chittuldroog pagoda, (9) the Travancore pagoda, (10) East India Company's pagodas, (11) Adoni pagodas, (12) Mysore pagodas. Latterly, the varieties of these coins became very numerous, so that their discrimination at the present day is a matter of some difficulty. The immediate prototype of the pagoda is a globular punch-struck coin believed to be of Buddhist origin. It was known to some of the people of S. India as the Varaha or Varagan, from the practice of the ancient Chalukya dynasty of stamping their coins with the figure of the boar incarnation or avatar of Vishnu, varaha mudra meaning boar stamped. The same figure appears as the signet of the rajas of that country in some old copper grants of lands in the Mackenzie collection. A pon seems to have been half a pagoda. In Tanjore the revenue accounts were kept in pon, panam, and kasu, but the modern value of a pon was R. 1.9. The Tamil name for gold is ponna. With the Canarese-speaking race the term honnu meant gold; two honna were equal to one varaha; and the term honna (hun) was adopted by the Muhammadan conquerors for the coin which the British call a pagoda. The Hindu name probably varied according to the image of the coin; thus we find the Rama tanka having the device of Rama and his attendants, and the matsya hun of Vijayanagar with four fish on the obverse. Other pagodas have Vishnu, Jaganath, Vencateswar, etc., on them. Those with three swami or figures are of the best gold, and were valued ten per cent. higher than the common pagoda. The canteroy pagoda is named from Kanthirava or Lion, the title of an ancient raja who ruled Canara. The Nayu pagoda probably means a coinage by Timma Nayu, a ruler in the Peninsula.

The hun was subdivided into fanams and kas. Fanam, or more properly panam, is identical with the word pan, known in Bengal as one of the divisions of the Hindu metrical system, now applied chiefly to a certain measure of cowries and copper money. The old fanam was of gold only, and was the one-sixteenth of a hun. In the Lilavati we find 16 pana = 1 dharan; 16 dharan = 1 niskh, where the dharan (or dharam) seems to accord with the hun, which is identical in weight with the Greek drachma. The Ikkeri pagoda contains 16 fanams, that of Vararai and Anandrui 14, and the Kalyan pagoda 28. The division adopted by the British was 42. A pagoda, as a Madras gold coin, was equal to three rupees and a half, and it was about 50 to 52·8 grains weight; 80 pagodas weight is a (cutcha) seer of 24 rupees weight. This corresponded with the average weight of the old native rupee of 175 grains; but after the introduction of the 'Com-

pany's rupee' of 180 grains, the pagoda weight was 54 grains generally.—*Brown's Wars.*

PAGODA THRUSH, Acridotheres pagodarum, is probably the bird referred to in Lalla Rookh,—

> 'Mecca's blue sacred pigeon, and the thrush
> Of Hindustan, whose holy warblings gush
> At evening from the tall pagoda's top.'

PAGRI. HIND. A head-dress, a turban closely folded. This is the only article of dress which indicates the caste and race of the wearer. The Konkani Brahman has on his head a disc of artfully folded red calico, three or four feet in diameter; the Bhatia has the tip of his turban curled up above his forehead, like a rhinoceros' horn; the Sikh has a closely-fitting and neatly-folded turban; the fisherman's turban is usually made out of a piece of old fishing net; and a Mahratta's head-dress looks like a bundle of tightly-twisted snakes.

PAGRUS, a genus of fishes belonging to the family Sparidæ, with four or six strong concave teeth in front, supported by similar conical teeth behind them, with two rows of rounded molar teeth on each side of both jaws.

PAGUMA LANIGER. *Gray.* The Martes laniger, *Hodgs.*, the Terai tree-cat, is an animal of Tibet and the Snowy Himalaya; it is one of the Viverrinæ.

Paguma trivirgata, *Gray.*

Viverra trivirgata, *Reinward, Mus. Leyd.*	Paradoxurus trivirgatus, *Gray.*

This animal is very common in Burma, and occasionally enters houses in the towns in pursuit of rats. When young it is easily domesticated, and valuable as a rat-catcher.—*Mason.*

PAGURIDÆ, the Pagurians or hermit crabs, a tribe of the Crustacea, composed of a considerable number of species, the greater part of which are remarkable for the more or less complete softness of the abdomen, the want of symmetry in the appendages of this part of the body, the shortness of the two posterior pairs of feet, and many other characters. Modern writers recognise several genera of this family. The Pagurus of Aristotle was not a hermit crab, but he describes three kinds of hermit crabs under the name Καρκίνιον. They are termed Καρκίνας by Oppian, Ælian, and Galen. A great resemblance exists among all the hermit crabs, Paguri, properly so called, not only in the details of their organization, but in their habits. The cephalo-thoracic portion of their body is shorter than the abdominal portion. They have stout claws and have a shield in front, but have a long, soft, and utterly defenceless tail. They occupy empty natica and neritina shells.

Pagurus cristatus, *Edws.*, New Zealand.
P. deformis, *Edws.*, Mauritius, Seychelles.
P. punctulatus, *Edws.*, Indian Ocean.
P. affinis, *Edws.*, Ceylon.
P. sanguinolentus, *Q. and G.*
P. setifer, *Edws.*, New Holland.
P. clibanarius, *Edws.*, Asiatic Seas.
P. crassimanus, *Edws.*, South Seas.
P. tibicen, *Edws.*, South Seas.
P. elegans, *Q. and G.*, New Ireland.
P. aniculus, *Edws.*, Mauritius.
P. gonagrus, *Edws.*, China.
P. pilosus, *Edws.*, New Zealand.
P. frontalis, *Q. and G.*, New Holland.
P. gamianus, *Edws.*, Cape of Good Hope.
P. miles, *Edws.*, coasts of India.
P. custos, *Edws.*, coasts of India.
P. diaphanus, *Edws.*, Oceanica.
P. hungarus, *Fabr.*, India, Naples.

Cenobita of Latreille is a genus of the Paguridæ, and, in the opinion of M. Milne-Edwards, establishes the passage between the Paguri, properly so called, and Birgus. Cenobita rugosa, in length about three inches, is found in the Indian Ocean. There are three other species.—*Eng. Cyc.*; *Milne-Edwards.*

PAHAL, or Chaupan Pal, of Kashmir, are shepherds who tend the flocks of other people; there are, besides, several wandering tribes who seem distinct from the settled population.

PAHAL, amongst the Sikhs, the initiatory rite for admitting a candidate into the Sikh religion. The novice must have attained the age of discrimination, and he stands with his hands joined in the form of supplication, and repeats after the priest the articles of his faith. Some sugar and water are stirred in a basin with a double-edged dagger, and the water is sprinkled on his face and person. He drinks the remainder, and exclaims, 'Wah! Guru.' At least five persons have to be present, one of them a priest. Women were sometimes thus initiated. Since the middle of the 19th century, the Sikh sect has rapidly diminished.

PAHANG, on the east coast of the Malay Peninsula, in lat. 3° 31½′ N., the capital of a kingdom, was formerly a place of great trade; the river is small. The southern part of Pahang is inhabited by the same tribe of Binua who are found in Johore. See Jakun.

PAHAR. HIND., MAHR. A division of time, a watch of the day or period of three hours. There are eight in the 24 hours; hence Pahara, a guard, a body of men on guard; Pahari-wala or Pahari-kara, a sentinel.

PAHARI. HIND. A mountaineer; a tribe on the N.W. frontier of India. They are not numerous, and are Hindus.

PAHARIA, of the Santal pargana, number about 41,000. They are arranged into two tribes, those who live in the Rajmahal hills, and the Naiga Paharia on the plains to the west. The former live by grain crops reared on the slopes of the hills, and by bartering in the plains the hill bamboos, and the grass and timber which grow in luxuriant profusion in every direction. The Paharia are addicted to drink. The Bhagulpur hill rangers were principally composed of this people. But since Mr. Cleveland's settlement at the close of the 18th century many of them receive pensions. The Naiga Paharia have no right of forest or well-wooded hills. Both the Paharia tribes are low in the social scale. Their language is called Male or Rajmahali, and its basis is Dravidian. The Male or Rajmahali are low in stature, but stout and well proportioned. There are many less than 4 feet 10 inches, and perhaps more under 5 feet 3 inches than above that standard; but 5 feet 3 inches is about the average height of the men. Buchanan Hamilton says that the features and complexion resemble those of all the rude tribes whom he had seen on the hills from the Ganges to Malabar. Their noses are seldom arched, and are rather thick at the points, owing to their nostrils being circular. Their lips are full, but not at all like those of the Negro; on the contrary, their mouths in general are very well formed. Their eyes, instead of being hid in fat, and placed obliquely like those of the Chinese, are exactly like those of the Europeans. Their

women, though hard worked, are far from having harsh features. The Male head, like that of the Kol, has more of an elongated oval than that of a lozenge shape. The forehead is not narrow, and the lateral projection of the zygomata is comparatively small. The Male or hill man is described by Captain Sherwell as much shorter than the Santal, and of a much slighter make. He is nearly beardless, is not of such a cheerful disposition, nor is he so industrious.—*Cal. Review*, Dec. 1860; *Mr. Logan in Jl. In. Arch.*

PAHLAV or Pahlava is a term supposed by Olshausen to have arisen out of the name of the Parthava or Parthians. They were not the Persians, who are called Parasika, but the Arsacidan Parthians. The term Pahlav, as applied to a people, early fell into disuse in Persia, and came into use in India in the second to the fourth centuries A.D.

Pahlavi is a later Iranian dialect which followed on Zand and the Old Persian of the inscriptions, and led to Parsi or Pazand and the Persian of Firdusi. The origin of the word has also been said to be Balkavi or pertaining to Balkh, and softened into Pahlavi. The term Pahlavi, however, now applied to the official language of the Sassanian dynasty, Dr. Haug traces to Pahlav-Parthia, and holds that from the memory of Parthian rule in Persia, everything connected with antiquity was called Pahlavi, *i.e.* ancient. The term Huzvaresh, as applied to Pahlavi, he explains as a mode of writing and pronouncing a foreign word, generally Semitic being written, and its Persian equivalent pronounced in its stead. Dr. Haug deciphered the Hajjabad, Naksh-i-Rajab, and other Pahlavi inscriptions, and showed that, in the Pahlavi languages, the Semitic element far outweighs the Iranian. The Iranian verbal terminations, found in the Pahlavi MSS., are entirely wanting in the earlier Hajjabad inscription. The Pahlavi of the MSS. is, as written, a Semitic language with an admixture of Iranian words and a prevailing Iranian construction, and is, as read, a purely Iranian tongue. From using the Huzvaresh mode, the Persians came by degrees to write their words as they pronounced them, and thus the Semitic words of the Pahlavi had disappeared from modern Persia as early as the time of Firdusi. In discussing the origin and age of Pahlavi, it cannot be supposed that the Sassanian kings, very zealous promoters of Persian ascendency and restorers of the Zoroastrian religion, would adopt for their official language a Semitic dialect not then existing in Persia. Dr. Haug therefore looks to an earlier period of Persian history, and shows reason for concluding that Pahlavi is identical with that form of the Assyrian language which was spoken at Nineveh, whence it spread, with the Assyrian rule, over all the subject provinces, and among others over Iran. An old Pahlavi-Pazend glossary was edited by Dastur Hoshcngji Jamaspji Asa, revised and enlarged, with an introductory essay on Pahlavi, by Dr. Martin Haug, Ph.D. It comprises the text of the Sassanian Farhang, and a Pahlavi-English glossary arranged as an alphabetical index according to the Roman character, and an important essay on the Pahlavi language by Dr. Haug. The essay comprises a history of the researches made in Europe into the Pahlavi language and literature. Mr. Growse describes it as a dialect of Assyria, and the language of the Persian court.—*Times of India; Growse; Weber*, p. 188.

PAHWAR, the tract of country and districts between the Jhelum and Indus rivers.

PAI. Hind. A small copper coin in Indian currency, the third part of a pice and twelfth part of an anna.

PAI or Pey, also Paisachi, a demon, a disembodied spirit, a goblin. The worship is confined to the extreme south of India, and chiefly among the Shanar race of Tinnevelly; but, under the teaching of Bishop Caldwell and other eminent missionaries, from the middle of the 19th century they largely adopted Christianity. The Bant race of Canara believe that persons who die a violent death become Paisachi.

PAIDI PATTI or Pamidi Patti. Tel. Gossypium acuminatum. Paidi means gold, hence excellent, this species being much prized by Brahmans for making the sacred thread and for the wicks of temple lamps. It is generally found in back yards and gardens, and is known by its coarctate seeds.

PAIGHAMBAR. Hind. Any prophet of the Hebrew Scriptures, also applied to Mahomed. The word is Persian, and is from Paigham, a message, and Bar, a bearer. It is equivalent to the original Hebrew and Greek words meaning messenger, which have been translated angel. The Muhammadans believe in angels. The original word is often applied to men, 2 Samuel ii. 5, Luke vii. 24, and ix. 52. Our knowledge of such beings is derived wholly from revelation, and that rather incidentally. The expression, Matthew xviii. 10, seems to denote the relation which the children of God sustain to him. The term in Arabic is Rasul; Rasul Allah, prophet of God, Mahomed.—*Lane's Koran.*

PAIGHAMBRI GAHOON. Hind. In Gugaira, a huskless or pearl barley; black or purple barley is called the same, literally prophet's wheat, a fine wheat without husk.

PAIJAMA. Hind. Trousers, literally leg dress.

PAIK, Hindu village militia, called Paik, Shetsanadi, and Halab in different parts of the country. Also an infantry soldier, an armed watchman or peon, a village watchman, a messenger.—*W. E.*

PAIKASHT. Hind. Cultivators, persons who, having no land of their own, cultivate other people's land on terms agreed on.

PAILA, among the Ho race a test for witches.

PAILI, a measure of capacity, $\frac{1}{8}$ of a kurawa.

PAI-LOO. Chin. Usually called a triumphal arch; ornamented buildings common in every part of China, some of stone, and others of wood. Most of them have been erected at the public expense. The Toran of the Sanskrit, a triumphal gateway.

PAIN. Hind. Lower. Pain Ghat, land below the ghats, low lands. Pain Ganga, an affluent of the Godavery river. The town of Chanda is built on its bank.

PAINA, bracelets worn by native women of India.

PAINSADI, also Painsi. Hind. Broad cotton cloth, 500 threads in the web.

PAINTED PARTRIDGE, Francolinus pictus, is the Kala-titar of India and the Kakkera-kodi of the Teling people. It occupies the central

parts of India. It delights in grassy plains and fields. The cock bird's call, chee kee kerray, chee kee kerray, is heard in the early morning.

Painted snipe, Rhynchæa Bengalensis, is the R. picta of Gray, and R. orientalis of Horsfield. It is a permanent resident in many parts of India, breeding in June and July, in thick marshy ground. It is found also in Africa, Ceylon, Burma, Malayana, and S. China.

PAINTINGS, pictures, or representations are forbidden in the second of the ten commandments, which Jews and Christians recognise. All the doctors of El-Islam differ on this head, some absolutely forbidding any delineation of what has life, under pain of being cast into hell; others permitting pictures of the bodies, though not of the faces, of men. The Arabs are the strictest of Misiconists, yet even they allow plans and pictures of the holy shrines. Other nations are comparatively lax. The Alhambra abounds in paintings and frescoes. The Persians never object to depict in books and on walls the battles of Rustam, and the Turks preserve, in the Seraglio treasury of Constantinople, portraits by Greek and other artists of their Sultans in regular succession.

Painting as an art has attained to various degrees of excellence amongst the many nations of Eastern and Southern Asia. Hindus have often beautifully illuminated manuscripts, but the other ornaments are better executed than the figures. Muhammadan artists excel them in this art. Painting on wood, a decorative art, is practised in Kashmir, the Panjab, and Hyderabad in Sind, the ornamental designs being in the form of foliage and shawl work; in Sind, all shades of agreeable hues of red, green, and yellow. Sind is famous also for another form of wood painting, in articles from the turning lathe, in which all these shades are used, broken by casting on other colours. It is waved or curled like the grain of marble, by the handiness of the workman, and taken up. Articles of painted pottery were exhibited from India in 1861. At the International Exhibition of 1871, beautiful painted tiles were shown from Hyderabad, Sind; beautiful patterns on painted wood from Kashmir. The beautiful painted tiles of Hyderabad, Sind, prove that skill little inferior to that which covered the most lovely archways and other buildings of imperial Dehli, still remains at the command of the architect to-day, in districts famous of old for this class of miscellaneous painting. The enamels, vitrified colours on a metal base from Jeypore, were as lovely as anything Cellone or Caradosso ever did. The Panjab enamel is usually blue and green.

The people of Kashmir execute beautiful patterns on their papier-mache work.

The Shiahs do not entertain the same objection to pictures that Sunni Muhammadans have; and portraits and other representations of the human figure are common among them. The art of caligraphy is carried by the Persians to the highest perfection, and they are allowed to be the best penmen in the east. Their beautiful character affords the greatest scope for a fine writer to display his skill. The caligrapher of the Muhammadan races also displays great skill in arabesque ornamentation of his pages, and the Guldastah-i-Soohn published in Madras affords many beautiful illustrations, with ornamentation in every variety of arabesques. In white-washing their walls, over the chunam or lime plaster, the workmen of Seringapatam first give a thin coat of suday, or fine clay, which is mixed with size, and put on with a hair brush. They next give a coat of whiting made of powdered balapum or pot-stone, and then finish with a coat composed of eight parts of abracum or mica, one part of powdered balapum, and one of size. The abracum is prepared from white mica by repeated grindings, the finer particles being removed for use by washing them from the grosser parts. The wall when finished in this manner shines like the scales of a fish; and when the room is lighted, it has a splendid appearance.

Painting of portraits is an art which in India and China has attained to a degree of excellence. Sir Rutherford Alcock's work on the artistic works of Japan has shown the high state of excellence to which the people of that nation have attained. At the International Exhibition of 1871, the paintings on talc from Patna, Benares, and Tanjore, the Dehli paintings in ivory, and other specimens, were prominently noticed. — *Burton's Mecca; Elph.* p. 158.

PAIR-AMMA-VARU, amongst the non-Aryan races of the S. of India, the goddess of small-pox. The words mean lady mother of the eruption.

PAISACHI. Sansk. Demoniac, a demon, a goblin, a disembodied spirit. A form of marriage amongst the Hindus in ancient times; the forcible seizure of a wife. A written character in the S. of India, invented by the Palli race. The Paisachi Prakrit, a vernacular tongue of ancient India, was a dialect differing not much from Magadhi.—*Hind. Theat.* ii. p. 215; *As. Res.* iii. p. 315, vii. p. 199.

PAITA or Poita. Beng. From the Sanskrit Pavitra, the thread or string of cotton worn by the Brahman, Kshatriya, Vaisya, and the artisan castes of Hindus; it marks them as initiated into the tribe or guild, or, as applied to the Brahmans, twice born.

PAITAN, a town on the Godavery, supposed to be near Plithana of the Periplus. It is mentioned as sending onyx stones to Barygaza, the modern Baroch, 230 miles distant. Col. Tod says (Travels, p. 297), Paitan, on the Godavery, is the Tagara of the Periplus, which supplied the sindones for the Roman market, and he supposes Tagara to be from Tak-nagara, the city of the Tak or Takshak. It is variously written, Paithana, Pattana, Puttan, and Pythan; and Tagara and Plithana seem to have been towns of importance near it, and known to the Greeks.—*Elphin.* p. 224; *Tod's Travels*, p. 297. See Salivahana.

PAITHINASI, a Hindu philosopher who resided at Hardwar. He taught that God is visible and eternal. He is mentioned in the Skanda Purana.—*Ward*, iv. p. 44.

PAKA. Hind. Written Pukkha. Ripe, mature, exact, complete, perfect, satisfactory. Used of buildings; means made of stone or brick and mortar, as opposed to mud. Paka plaster, plaster made of lime.

PA-KA-THAN. Burm. A timber tree in Amherst, Tavoy, and Mergui, of maximum girth 2 cubits and maximum length 12 feet. When seasoned it floats in water. It is used by Burmese to make paddles, oars, etc.; is a tough, durable, good wood.—*Captain Dance.*

PAK-CHAN, a boundary river in Tenasserim, which falls into the Bay of Bengal at Victoria Point, after a course of 78 miles. The territory of Ma-li-won, on the right bank, belongs to the British. On the left are the Siamese provinces of Kra and Re-noung, which are considered valuable for their lead and tin mines.—*Imp. Gaz.*

PAKENATTI, a homeless migratory race, found in Mysore and the Telugu country, who about the beginning of the 18th century were driven from their houses by oppression. The head of the village authorities in the Telugu district of Bellary is of this agricultural tribe.

PAKFONG, the white copper of the Chinese, an alloy of 40·4 parts of copper, 31·6 of nickel, 25·4 of zinc, and 2·6 of iron.—*Simmonds' Dict.*

PAKHAL. Hind. A leather bag for carrying water in. In British India, a pakhal is slung on each side of a bullock; the driver is called a pakhali.

PAKHALL, a lake, distant about 140 miles from the Nizam's capital in a north-easterly direction. This reservoir, which is picturesquely situated in the heart of a pretty dense forest, has a magnificent spread of water, taking in a circumference of about 50 miles, its shelving margin being girded by a chain of low wooded hills and undulations. One in particular deserving special notice, situated on the south-east side, of considerable height and clothed with arborous verdure, constitutes a striking foreground to the picture, well worthy the pencil of the artist. The advantages here presented by nature, in steep natural ridges, have at some remote period in the past been made subservient to the formation of a huge embankment, by which means the capacity of the lake was considerably enhanced, and the existence of old weirs and sluices unmistakeably indicate the former flourishing condition of the land in the vicinity. The place is often visited by wild elephants. Thick beds of coal occur in the valley of a nullah not very far from Pakhall in the Warangal district. Trial borings were made in Ballarpur, and beds of more than fifty feet thickness were found. At Wurroa, a coal-pit was commenced. The coal is of poor quality, breaks very rapidly on exposure, and is therefore very wasteful. The coal from a place known as Saster is said to be very durable.

PAKHTO, or Pushtu, the spoken language of the Afghan people.

PAKINA DINA VARU. Karn. A tribe of fortune-tellers.

PAKKIWAR, a predatory tribe in the Panjab, whom the authorities in 1863 tried to reform. They profess Muhammadanism.

PAKLI, a plain in the Hazara district occupied by the Swati, Awan, Syuds, and Tanaoli.

PAK-PATTAN, or Ajudhan, an ancient city in Montgomery district, Panjab, on the high bank of the old Sutlej, 28 miles from the present course of the river. Its foundation is assigned to a Hindu saint or raja of the same name, of whom nothing else is recorded. This part of the doab is still known as Surat-des, a name which recalls the Sura-kousæ of Diodorus, and the Sudrakæ and Oxudrakæ of other Greek writers. For many centuries Ajudhan was the principal ferry of the Sutlej, where the two great western roads from Dehra Ghazi Khan and Dehra Ismail Khan met, the first via Mankera, Shorkot, and Harapa, the second via Multan; and at this point the conquerors Mahmud and Timur, and the traveller Ibn Batuta, crossed the Sutlej. The fort is said to have been captured by Sabaktagin in A.H. 367 or A.D. 977–78, during his plundering expedition in the Panjab; and again by Ibrahim Ghaznavi, in A.H. 472 or A.D. 1079–80. On the invasion of Timur, the mass of the population fled to Bhatner, and the few people that remained were spared out of respect for the famous saint Farid-ud-Din, Shakr-ganj, whose shine is in Ajudhan. From this saint the place derives its modern name of Pak-Pattan, or the 'Ferry of the Pure One,' that is of Farid, whose latter days were spent at Ajudhan. By continued fasting, his body is said to have become so pure, that whatever he put into his mouth to allay the cravings of hunger, even earth and stones, was immediately turned into gems and sugar, whence his name of Shakr-ganj, or 'sugar-store.' This miraculous power is recorded in a well-known Persian couplet:—

'Sang dar dast o gohar gardid,
Zahr dar gam o Shakar gardid.
'A stone in the hand became a gem,
Poison in the mouth became sugar.'

From a memorial couplet we learn that he died in A.H. 664 or A.D. 1265–66, when he was 95 lunar years of age. But as the old name of Ajudhan is the only one noted by Ibn Batuta in A.D. 1334, and by Timur's historian in A.D. 1397, it seems probable that the present name of Pak-Pattan is of comparatively recent date. The saint Farid-ud-Din was instrumental in the conversion of the whole Southern Panjab to the faith of Islam. Pilgrims from all parts of India, and even from Afghanistan and Central Asia, visit his shrine, and during the Maharram as many as 60,000 persons have been estimated as present. On the afternoon and night of the last day, a well adjoining the shrine is pierced by a narrow opening, known as 'the Gate of Paradise,' and whoever can force his way though this aperture during the prescribed hours is assured of a free entrance into heaven. The crush is naturally excessive, and often results in severe injuries to the pilgrims.—*Cunningham's An. Ind.* pp. 214-219; *Yule, Cathay*, ii. p. 406; *Imp. Gaz.*

PAKSHA. Sansk. A fortnight; the half of a lunar month. That from the new moon to the full is called the Sukla-paksha or light fortnight, the other is the Krishna-paksha or dark fortnight of the waning moon.

PAKSHU DHARA MISHRA, author of the Prasanna Raghava.—*Ward*, iv. p. 376.

PAKUNG-BA, in Munipur, the personal deity or ishta-deva of the raja. It is a suake, from which the Munipur family claim descent. When it appears it is coaxed on to a cushion by the priestess in attendance, who then performs certain ceremonies to please it.

PAKWAZ. Hind. An oval-shaped drum used for keeping time to the singing of the dancing girls.

PAKYOTH, the wild gourd of Scripture, Citrullus colocynthis, *Schrd.*, grows in many parts of India, on the sandy lands of the Peninsula, Dekhan, Gujerat, Cutch, Dehli. Dr. Burn states colocynth of two kinds occur in Gujerat, the Cucumus colocynthis and C. pseudo-colocynthis. The colocynth of commerce is the dried fruit, peeled and unpeeled, and is brought from the Levant,

north of Africa, and south of Spain. Colocynth is useful for protecting shawls and feathers against insects.

PAL. Hind. A tent; a division of a Jat clan. Pal is also the term for a community of any of the aboriginal mountain races; a section of any Hindu tribe. The Mewati have twelve pal. The Jat have many pal.

PAL, a local term for long defiles, the residence of the mountaineers; their chiefs are called Indra Pati; in Bhaka, Put. Its import is a defile or valley, fitted for cultivation and defeuce.—*Rajasth.* i. p. 381, ii. p. 350.

PAL, also Pala. Tam., Tel. Milk.

PAL. Hind. As a measure of time, a moment, or minute, of which there are 60 in a ghari.

PALA, a dynasty of, it is said, eighteen kings, who ruled in parts of the ancient Gaur dominions in Western and Northern Bengal, and in Behar from A.D. 745 to 1200.

PALA-BHOGAM. Tam. A form of land tenure.

PALA-KAPYA, an ancient Hindu physician who wrote on medicine. He was supposed to be an incarnation of Dhanwantari.—*Dowson.*

PALALU, of the Northern Circars, agricultural labourers who were regarded as slaves to the ryots, and were hereditarily attached to and transferable with the land. The Agari of Cuttack are said to be domestic slaves.

PALAM. Tam. A measure of weight at Madras equal to 1 ounce 3·75 drachms avoirdupois.

PALAMCOTTA, a town and small military cantonment in the Tinnevelly district, in lat. 8° 42½′ N., long. 77° 46′ 40″ E.; population, 17,885 in 1871. A mile east of the Tamrapurni river. Its fort is dismantled.

PALAMOUD, an alimentary substance used by the Turks and Arabs. It consists of acorns which have been dried, toasted (to destroy the bitterness), and reduced to powder, with sugar and aromatics added.—*Simmonds' Dict.*

PALAMOW, a subdivision of the Lohardagga district in Bengal; area, 4260 square miles; population, 366,519. Coal is worked in the district, which is very mountainous.

PALANG POSH, Pers.; in commerce, Palampore. The former term is composed of two Persian words, literally bed-cover. These are manufactured in the district of Cuddalore, at Ponnary, also at Sydapett in the outskirts of Madras, but especially in the town of Masulipatam, the last always of a superior kind, and in various sizes, 5½ to 6 cubits in breadth, and 7 to 8 long, and are sold from 6 to 15 rupees, according to size. The Cuddalore, Ponnary, and Sydapett fabrics are of ordinary quality, and are sold at from 2 to 7 rupees each.

PALANKEEN or Palanquin, a litter or covered carriage borne on men's shoulders. It has almost wholly ceased to be used in India. Palanquins form one of the articles which eastern rulers present to their subjects, or give them permission to use. Written also Palki.

PALANPUR, a native state in the province of Gujerat, Bombay, between lat. 23° 57′ and 24° 41′ N., and long. 71° 51′ and 72° 45′ E. It is one of eleven states in communication with the Palanpur political agent, viz. Palanpur, Radhanpur, Tharad, Wao, Warai, Terwara, Suigaon, Deodar, Santalpur, Kankrej, and Bhabar. Palanpur, Radhanpur, Warai, and Terwara are Muhammadan, the others are Hindu, five of their ruling families being Rajput. The Palanpur family is of Afghan origin, belonging to the Lohani tribe, and is said to have occupied Behar in the reign of Humayun. In 1597, Ghazi Khan, the chief, obtained from Akbar the title of diwan, for having successfully repulsed an invasion of the Afghan tribes. Its revenue, £40,000, and tribute of £5000 to the Gaekwar of Baroda. He maintains a force of 294 horse and 697 foot.—*Imp. Gaz.*

PALAR, a river of the Carnatic, which rises on the Mysore table-land, lat. 13° 27′ N., long. 78° 2′ E., runs S.E. 55 miles, E. 87 miles, S.E. 48 miles, into the Bay of Bengal. Length, about 230 miles, running past Vellore, Arcot, and Chingleput. It receives the Pony, 40 miles; Sheyaru, 90 miles. The entrance of the Palar, 9 miles S. of Sadras, is contracted by a bar or narrow ridge of sand, inside of which the river becomes of considerable width. The town of Coujeveram is built on the Palar. The Palar anicut, in the N. Arcot district, was constructed about the year 1855. Across the river near Vellore it is 2600 feet long, and is the head of a system which irrigates about 37,672 acres.

PALAS. Sansk. Butea frondosa. When a Hindu dies at a distance, it is customary to burn vicariously an article of clothing along with a bundle of leaves of the Butea frondosa. This vicarious rite is called Palasavidhi. It was from the abundance of the palas tree on the battle-field that the name of Plassey was given to the battle fought by Clive in 1757. Palas gum, or Palas goud, or Dhak ka gond, is the produce of Butea frondosa, in ruby red, transparent grains of irregular tears. Under the name of kini or cheena, it furnished one of the kino gums imported into Europe.—*Wilson.*

PALA UTAN. Malay. In Penang, a wood of light brown colour, from a large tree; used for planks.—*Colonel Frith.*

PALAVA, a tribe of the Kshatriya race who had neglected to reverence Brahmans. Manu, speaking of them, styles them Dasya, whether they speak the language of the M'hlecha or that of the Arya, and the people to whom he there alludes seem to have been Medes occupying the valley of the Indus.

PALAVERAM, in lat. 12° 57′ 30″ N., long. 80° 13′ E. A town and military cantonment, 11 miles S.W. of Madras, situated close to the western side of a small range of hills, and 4 or 5 miles distant from the sea-coast. The Adyar river runs sluggishly about 300 yards to the north.

PALAVESHUM, a Maravar of a servile family, who made himself celebrated for his robberies and outrages, from Madura round to Quilon, during the latter part of the Muhammadan government of Seringapatam. Since his death he has been worshipped as one of the demons of the Shanars of Tinnevelly, and was most feared of all their devils. Thousands of persons are called after his name, to deprecate his enmity. Many children of the Tamil Pariah races are similarly named after other demons.

PALAWAH. Burm. A beautiful red but heavy wood of British Burma. A cubic foot weighs 52 lbs. Length of the trunk to the first branch is 45 feet, and average girth, measured at 6 feet from the ground, is 6 feet. It sells at 12 annas per cubic foot.—*Cal. Cat. Ex.*, 1862.

PALAWAN, the S.W. island of the Philippine group, is a narrow strip of land extending nearly S.W. and N.E. 250 miles, forming the eastern boundary of the China Sea, from 8° 13′ to 11° 17′ N. The N. extremity is a narrow peninsula about 60 miles in length, consisting of a mass of limestone rock rising precipitously from the sea, from 200 to 300 feet in height, which the native inhabitants climb readily in search of the edible birds' nests, their chief occupation. It is along the eastern coast of this island that ships proceed when bound up the China Sea late in the seasons, when the north-east monsoon is expected, and derives from this the name of the Palawan passage. —*Journ. Ind. Arch.*

PALAYAKAR. MALEAL. In Travancore, a convert from the Syrian sect to that of the Romish church. Pullenkur, a Syrian Christian in Malabar.

PALAYAR, predial slaves of Malabar. The Pale of the Tuluva are a class of Pariahs. See Kanagan; Slaves.

PALCHARA. In Rajput mythology, the Palchara corresponds to the Furies of the Romans. Describing a battle, the Rajput poet says, 'The abstraction of Iswara was at an end, joy seized his soul at the prospect of completing his chaplet of skulls (mūnda-mala). The Yoginis danced with joy, their faces sparkled with delight, as they seized their vessels to drink the blood of the slain. The devourers of flesh, the Palcharas, sung songs of triumph at the game of battle between the Chohan and Chundail.'

PALEGARA or Paleiyakaran, the Polygar of the early English writers. They were semi-independent chieftains in the south of the Peninsula.

PALEMBANG in the early part of the 19th century held the first rank amongst the native states of Sumatra, between lat. 2° and 4° 30′. The town is built on both sides of the Moosee river. It has many crocodiles in the river. During the British occupation of Java, the sultan caused all the Dutch in this town to be massacred, and the British Government at Batavia despatched a force against him under the command of Colonel Gillespie. The sultan fled into the interior with his treasure. With his flight the Malays rose, and were slaughtering the Chinese and other foreign settlers, on which Colonel Gillespie went on in a few light boats, and his party, which consisted of ten persons, himself included, landed among them. At midnight, the main body of troops entered the place, and a town defended by forts and batteries mounting 250 pieces of cannon, was taken possession of without the loss of a single life. A new sultan was soon afterwards placed upon the throne. This Residency of Netherland India is 2558 geographical square miles. In 1880, its population (628,490) comprised—Europeans, 280; Natives, 621,900; Chinese, 4245; Arabs, 1941; others, 124.—*Court.*

PALEMONIDÆ, a family or tribe of macrurous decapodous crustacea. They belong to Milne-Edwards' family of salicoques or shrimps, and his tribe Palemoniens. The genera are, Gnathophyllum, Hippolyte, Rhynchocinetes, Pandalus, Lysmata, and Palemon. Hippolyte ventricosus occurs in the Asiatic seas; H. Quoyanus at New Guinea. Rhynchocinetes typus—length, about 2½ inches—is a native of the Indian Ocean.

Palemon, *Fabr.*, the prawn. The species of this useful and delicious genus are numerous. M. Milne-Edwards records 17, besides the Indian Palemon brevimanus and P. Coromandelianus of Fabricius. Some of the species of warm climates attain to a considerable size. P. carcinus, of the Indian seas and the Ganges, attains to nearly a foot in length, and P. Jamaicensis, of the Antilles, is from 10 to 12 inches long. The prawns generally inhabit sandy bottoms near the coasts, but some are found at the mouths of rivers, and far up. They mostly boil red. The better known are—

Palemon natator, *Edws.*, Indian Ocean, on Gulf weed.
P. brevimanus, *Edws.*
P. Coromandelianus, *Fabr.*
P. longirostris, *Edws.*, Ganges mouth.
P. carcinus, *Edws.*, ,,
P. ornatus, *Edws.*, Amboyna, Waigyou.
P. lamarrei, *Edws.*, Bengal coasts.
P. Tranquebaricus, *Fabr.*, Tranquebar.
P. hirtimanus, *Edws.*, Mauritius.

PALENGA ZEYLANICA. *Thw.* Palengagass, SINGH. A tree 40 to 50 feet high, of the Ambagamowa district in Ceylon, at an elevation of about 3000 feet.—*Thw. Zeyl.* p. 287.

PALERI AMMA, a deity of the non-Aryan Tamil races of the Peninsula. See Hindu.

PALESTINE is on the S.W. part of Syria. It gets its name from Philistine, a race who inhabited a tract bordering on the Mediterranean Sea. Palestine was originally inhabited by a number of tribes,—Kenite, Kenizzite, Kadmonite, Hittite, Jerezzite, Jebusite, Amorite, Canaanite, Girgashite, Hivite, Phœnician, and Philistine. The desert coast between Gaza, the frontier town of Palestine, and Pelusium or Shur, the frontier town of Egypt, was called by the Hebrew writers the desert of Shur. It was thinly peopled by a race of Arabs named Amalekites.

The country has been intimately associated with the history of several races, and since the middle of the 19th century, a society in Great Britain has employed Captains Warren and Conder, and Colonel Wilson, R.E., in its exploration. East of the Jordan, Captain Conder found among the numerous stone circles, dolmens, and menhirs, already known to exist in Moab, four undoubted great centres round which the monuments are disposed. These are Mushibiyeh, at El Mareighet, also at Minyeh, south of Heshbon, and in the Ghor, near Kefrein. The first of these Captain Conder identified with Bamoth Baal, the second with Baal Peor, the third with 'the top of Baal Peor which looketh towards Jeshimon,' and the fourth with the 'sanctuary of Baal Peor,' in the Jordan valley, where the Israelites worshipped while in Shittim. Also at Ain Heshbon or old Heshbon are an immense quantity of cromlechs. The monuments, which still stand as they stood in the days of Balak, illustrate the religion of the people whom the Israelites were to dispossess. In Palestine itself, Ptolemais, Diospolis, Antipatris, Ælia have all completely disappeared as names, and the old designations, Akka (Acre), Lydd, Kefer-saba, Jerusalem, etc., have re-established themselves. Sebaste and Neapolis have, however, succeeded in maintaining themselves, and preventing the return of Samaria and Shechem. Round about Jerusalem lies a circle of interesting sites,—the Mount of Olives, with the Garden of Gethsemane; the Kedron, with its bold ravine; Jericho, with Elisha's picturesque fountain; and the abrupt fall of Ayun Musa, under Mount Nebo.

The tall massive building known as the Haram, which overshadows the city, for 3000 years has covered the patriarchal tombs, sacred to Hebrew and Muhammadan alike, never disturbed since the mummy of Jacob was laid by the side of those of Abraham and Isaac. Jabal Fureid is the huge fortress and burial-place of Herod, the most conspicuous features in the whole landscape of Southern Judea, whence are to be seen the hills of the wide wilderness, rolling in long succession towards the Dead Sea, with the red wall of Moab beyond. In Bethlehem, the church erected over the birthplace of Christianity may lay claim to be the oldest church of Christ in the world, prayer and praise having risen from it without interruption from the day when Helena built it. The simple tomb of Rachel has remained undisturbed, reverenced, and undisputed, from age to age for more than 3500 years.

Palestine was conquered by the Fatimite Khalifs of Egypt, A.D. 969, and in consequence of the persecution of the Christians by Hakim, between A.D. 996 and 1021, Peter the Hermit, A.D. 1094, began preaching to the nations of Europe a crusade against the Saracens. Crusades followed on this. The eighth and last, under St. Louis, was concluded A.D. 1274.

Palestine shows a total Jewish population of only 15,293 souls. Of these, more than half live in Jerusalem, about 4000 in Safet, 2000 in Tiberias, and 900 in Hebron. The remainder, about 400, are divided between Akka, Haifa, Jaffa, Sichem, and Shefa-Amar.

PALGHATCHERRY, a town in the Malabar district of the Madras Presidency, in lat. 10° 45′ 49″ N., and long. 76° 41′ 48″ E., and 800 feet above the sea. It is in the only break in the line of the mountains from the Tapti to Cape Comorin. It is 25 miles broad at the town of Palghat, and from 35 to 40 miles long, and has an area of 695¼ square miles. It connects the low country on the E. and W., the highest point in its centre being 400 or 500 feet above the sea, and it is traversed by the Madras railway. The mountain on the north, called Vellya Karu Mala, rises 6700 feet. The chiefs are of the Atchen race, and are said to have been Kshatriya Hindus, but to have become degraded below Sudras. They follow descent from the females. There are other chiefs, termed Nair and Naadvalli. The chief rainfall is in June to October. The S.W. monsoon blows through and does not deposit its moisture, though the atmosphere is humid, and the Salem hills intercept the N.E. monsoon. The Palghat ghats are in length about 200 miles, from the gap of Palghatcherry nearly to Cape Comorin. Elevation, from 4000 to 7000 feet, with a spacious table-land 4740 feet; a peaked summit, 6000 feet; another, 7000; Varragherry mountains, 5000 to 6000 feet; near Cape Comorin, in the extreme S., 2000 feet. The west brow of the ghats is, with little exception, abrupt; on the east side the declivity is gradual.

PALI. Tam. Irambu in Malabar, Palari in Portuguese, is the Ceylon iron-wood. Its tree grows to about 30 feet in height, and 20 inches in diameter. It is very useful for stocks of anchors, piles for jetty-heads, beams in storehouses and places where strength is required; for such purposes it is found useful and durable. It may be obtained in great quantities at a very moderate rate.—*Edye, Ceylon.*

PALI, an ancient language in India, which has long ceased to be spoken, but is still used in the Buddhist scriptures of Ceylon, Burma, and Siam. The Pali tongue in Singhalese is called Magadha and Mungata, and in Burmese, Magada-basa. Pali was the mother-tongue of and used by Buddha. The Rupasiddhi is the oldest Pali grammar now extant, and its author, Buddha-Priya, compiled it from the ancient work of Kachhyayana. A quotation from the latter is given in the Rupasiddhi, apparently in the original words. According to this account, Kachhyayana was one of the principal disciples of Sakya, by whom he was selected for the important office of compiling the first Pali grammar, the rules of which are said to have been propounded by Tathagata himself. This statement seems highly probable; for that teacher must have soon found the difficulty of making himself clearly understood, when each petty district had a provincial dialect of its own, unsettled both in its spelling and its pronunciation. A difficulty of this kind could only be overcome by the publication of some established rules of speech, which should fix the wavering pronunciation and loose orthography of a common language. This was accomplished by the Pali grammar of Kachhyayana, compiled under Sakya's instruction; and the language, thus firmly established, was used throughout India by the Buddhist teachers for the promulgation and extension of the practical doctrines of their faith. In the Buddhist works of Ceylon, this language is expressly called Magadhi, or the speech of Magadha; and as this district was the principal scene of Sakya's labours, as well as the native country of himself and of his principal disciples, the selection of Magadhi for the publication of his doctrines was both natural and obvious. Learned men have, however, entertained diverse opinions as to the Pali. Professor H. H. Wilson has remarked that there are several differences between the language of existing Buddhist inscriptions and the Magadhi of Pali grammars; but these differences are not such as to render them unintelligible to those whom Priyadasi (Asoka) addressed in his pillar edicts in the middle of the 3d century B.C. Professor Wilson admits that the Pali was most likely selected for his edicts by Priyadasi, 'that they might be intelligible to the people,' but he is of opinion that the language of the inscriptions was rather the common tongue of the inhabitants of Upper India than a form of speech peculiar to a class of religionists; and he argues that the use of the Pali language in the inscriptions is not a conclusive proof of their Buddhistical origin. But, as opposed to this view, it is a well-known fact that the Brahmans have never used any language but Sanskrit for their religious writings, and have stigmatized the Magadhi as the speech of men of low tribes. In their dramas, also, the heroes and Brahmans always speak Sanskrit, while the use of Magadhi is confined to the attendants of royalty. Professor Wilson has, however, identified the Magadhi with Prakrit, the use of which, though more honourable, was still confined to the principal female characters; but the extensive employment in the dramatic works of the Brahmans of various dialects, all derived from one common stock, seems to prove that they were the vernacular language of the people. In this vernacular language, whatever it was, whether the high Prakrit of the Saurasenas, or the low Prakrit of the Magadhas, we know certainly that

the Vinaya and Sutra, or the practical doctrines of Sakya, were compiled, and therefore also promulgated. Cosma, in Prinsep's Journal, p. 503, has used the term Prakrit as comprehending all the written and cultivated dialects of Northern India. Prakrit means 'common' or 'natural,' in contradistinction to the 'artificial' or 'refined' Sanskrit. In the opinion, however, of Turnour, the celebrated Ceylon scholar, the Pali is a 'rich and poetical language, which had already attained its present refinement at the time of Gotama Buddha's advent' (B.C. 588). According to Sir William Jones, it is 'little more than the language of the Brahmans, melted down by a delicate articulation to the softness of Italian.' To General Cunningham it seems to bear the same relation to Sanskrit that Italian does to Latin, and a much nearer one than modern English does to Anglo-Saxon. The nasal sounds are melted down, the compounds are softened to double and even simple consonants, and the open vowels are more numerous. It is the opinion of many European scholars that the Pali language is derived almost entirely from the Sanskrit, and in this opinion General Cunningham fully coincides. Messrs. Burnouf and Lassen, who jointly formed a Pali grammar, state, as the result of their labours, that Pali is almost identical with Sanskrit; and Professor Lassen, at a later date, when more conversant with the Pali books, states authoritatively that the whole of the Prakrit language is derived from the Sanskrit. Turnour also declares his conviction that all researches tend to prove the great antiquity of Sanskrit. Professor Wilson and James Prinsep are likewise of the same opinion. This conclusion seems self-evident, for there is a tendency in all spoken languages to suppress dissimilar consonants, and to soften hard ones; as in the Latin Camillus for the Tuscan Cadmilus, and the English farthing for the Anglo-Saxon feorthing; or, as in the Pali assa, a horse, for the Sanskrit aswa, and the Pali majha, middle, for the Sanskrit madhya. There is also a natural inclination to clear away the semi-vowels and weaker consonants, as in the English king for the Anglo-Saxon kyning, or as in the Pali Olakita, the seen (*i.e.* Buddha), for the Sanskrit Avalakita; and in the Pali Ujeniya, a man of Ujain, for the Sanskrit Ujajayaniya. It is always, therefore, easy to determine between any written languages that resemble each other, which of the two is the original, and which the borrowed; because letters or syllables are never added, but, on the contrary, are always suppressed or curtailed in the process of time. The Pali is therefore without doubt derived from the Sanskrit, and must, moreover, have been a spoken language for many centuries. For the publication of his esoteric theories regarding the origin of the world and the creation of mankind, Sakya made use of the Sanskrit language only. But the perfect language of our day perhaps owes much of its refinement to the care and sagacity of that great reformer, for it seems highly probable that Katyayana, the inspired saint and lawgiver who corrected the inaccuracies of Panini's Sanskrit grammar, is the same as the Kachhyayana who compiled the Pali grammar during the lifetime of Sakya. Katyayana's annotations on Panini, called Nartika, restrict his vague rules, enlarge his limited ones, and mark numerous exceptions to others. These amended rules of Sanskrit grammar were formed into memorial verses by Bhartrihari, whose metrical aphorisms, entitled Karika, have almost equal authority with the precepts of Panini, and emendations of Katyayana. According to popular tradition, Bhartrihari was the brother of Vikramaditya, the founder of the Hindu Samvat, which dates from 57 B.C. The age of Katyayana is unknown; but as he flourished between the date of Panini, in about 1100 B.C., and that of Bhartrihari, in 57 B.C., there is every probability in favour of the opinion that he was one of the disciples of Buddha. But this identification of the two greatest grammarians of the Sanskrit and Pali languages rests upon other grounds besides those mentioned above. Colebrooke, Wilson, and Lassen have all identified the commentator on Panini with Vararuchi, the author of the Prakrit grammar called Prakrita Prakassa, or Chandrika. Of Vararuchi, nothing more is known than that his work is the oldest Prakrit grammar extant, and that his body of rules includes all that had been laid down by earlier grammarians regarding the vernacular dialects. The identification is still more strikingly confirmed by the fact that Kachhyayana is not a name but only a patronymic, which signifies the son of Kachho, and was first assumed by the grammarian himself. If, therefore, Vararuchi Katyayana is not the same person as Kachhyayana, he must be posterior to him and of the same family. We shall thus have two Katyayanas of the same family living much about the same time, each of whom compiled a grammar, which is much more improbable than that the two were one and the same person. The probable identity of the two great grammarians seems to offer an additional reason for considering Sakya Muni as one of the chief benefactors of his country. For we must not look upon Sakya Muni simply as the founder of a new religious system, but as a great social reformer who dared to preach the perfect equality of all mankind, and the consequent abolition of caste, in spite of the menaces of the most powerful and arrogant priesthood in the world. We must regard him also as a patriot, who, in spite of tyrannical kings and princes, had the courage to incite his countrymen to resist the forcible abduction of their wives and daughters by great men. To him the Indians were indebted for a code of pure and practical morality, which inculcated charity and chastity, performance of good works, and abstinence from evil, and general kindness to all living things. To him, also, they owe the early refinement and systematic arrangement of their language, in the selection of the learned Katyayana as the compiler of the Sanskrit and Pali grammars. The Pali books examined and abstracted by Mr. Turnour consist of the Pitakattayan, the Atthakatha, and the Mahawansa. The first is quasi the gospel of Buddhists. It is stated in the Mahawansa that the Pitakattayan was brought to Ceylon by Mahinda, the son of Asoka, in the 18th year of his father's reign, that is, in 306 B.C., in the exact Pali form in which it now exists.—*Prinsep's Tibet*, p. 148; *Cunningham's Bhilsa Topes; Weber; Hardy.*

PALI. The Scythic Pali are supposed to have been the shepherd invaders of Egypt.

PALI, a small town in the Jodhpur state in Rajputana. Plague broke out here, and spread over Marwar, between 1830 and 1840.

PALIAR or Puliar, a race of herdsmen on the Animallay hills in Coimbatore.

PALIBOTHRA, the ancient Greek name of Pataliputra city, near the confluence of the Sone river with the Ganges. Few old places in India recall to mind so many associations as the Pataliputra of the Hindus, the Palibothra of the Greeks, and the Po-to-li-tse of the Chinese, all referring to the city which is known in our day under the name of Patna. Rennell says (Memoir, pp. 52-54) Pliny's Palibothra is clearly Patna, and as Strabo placed it 425 miles, or so many parts in 1063 of the distance from the confluence of the Jumna to the mouth of the Ganges, he probably meant the same place. The name of Pataliputra does not occur either in Menu or the Mahabharata, the capital of ancient Magadha having in those ages been Rajagriha. It was in the middle of the 6th century B.C. that Ajata Satru founded the city of Pataliputra. This prince, says Lassen, appears to have long had the intention of conquering Vasali, for it is recorded that his two ministers, Sunitha and Vasyankara, founded, in the village of Patali, a fortress against the Vrijji. This took place a short time before the death of Buddha. Under the ancient name of Pataliputra, the place stands before the eyes of the modern traveller as the capital of the Nanda dynasty, of Chandragupta, and of Asoka, as the scene where were played those outwitting Machiavellian policies between Rakshasa and Chanakya, which form the subject of the drama of Mudra Rakshasa and Chanakya; where Megasthenes had arrived on an embassy from Seleucus, and resided several years, leaving behind a record that possesses no ordinary claims upon our attention; whence Asoka issued his famous edicts about Buddhism, identified by General Cunningham with the modern Besarh, 20 miles north of Hajipur. It is from the writings of Megasthenes that we learn that Palibothra was 8 miles long, and 1½ broad, defended by a deep ditch and a high rampart with 570 towers and 64 gates, a state of grandeur of which not a tithe is possessed by the present city. In the time of the Muhammadan conquest, the capital of Behar is said to have been removed to the town of that name, and its raja to have become so degenerated as to abscond from his capital. As described by Ralph Fitch, Patna, in the end of the 16th century, was a large city, but contained only houses of earth and straw. Of the towers and gateways spoken of by Megasthenes, or of the lofty pillars, columns, and turrets of the Suganga palace, mentioned by the Hindu dramatist, not a trace exists surviving the ravages of time and war. Muhammadans now form a large part of the population of Patna, 40,000, and from the district 100,000 of them assemble at the Imambarah to celebrate the Maharram. At Patna is a monument over 150 Englishmen massacred (1763) in cold blood by Sumru (Reinhardt), under the orders of Mir Cassim. It is a tall, slender column of alternate black and yellow stone, that lifts its head about 30 feet high in the old English burial-ground at Patna.—*Bunsen*, iii. 520; *Tr. of Hind.* i. 113; *As. Res.* v. 273, viii. 333, xiv. 380.

PALINURUS of Fabricius, a genus of crustacea which forms the tribe of Langoustiens of Milne-Edwards, being the fourth of his family of cuirassed macrurians, and characterized by the existence of antennæ of the ordinary form, and the absence of didactylous pincers. It is the type of the family Palinuridæ. The Palinuri, or sea-crawfish, have the body nearly cylindrical. Their carapace is nearly straight from before backwards, very convex transversely, and presents about its anterior third part a deep transverse furrow, which is directed forward on each side, and separates the stomachal from the cardial and bronchial regions, the only ones which can be well distinguished. P. fasciatus, of the Indian Ocean, has the antennular ring armed above with two conical rather large teeth situated near its anterior border; carapace armed with a small number of spines, and slightly granular, or only dotted on its posterior half; lateral tooth of the anterior border of the carapace small; no spines on the median line of the stomachal region; median tooth of the anterior border of the epistome very large; length about a foot. P. vulgaris, the common sea-crawfish or spiny lobster, Langouste of the French, inhabits the seas of Europe. —*Milne-Edwards in Eng. Cyc.* See Crustacea.

PALITANA, a native state within the British Political Agency of Kattyawar, in the Bombay Presidency, lying between lat. 21° 23′ 30″ and 21° 42′ 30″ N., and long. 71° 31′ and 72° 0′ 30″ E.; area, 99 square miles. Satrunjaya hill, which rises above the town of Palitana, is covered with Jain temples, and is the resort of innumerable pilgrims, for whom a fixed sum is paid yearly by the Srawak community to the Palitana chief. It is sacred to Adinath, and each temple contains images in marble of Adinath, or of some of the Tirthankara; and perhaps no fabric of human workmanship in India is more calculated to arouse wonder, admiration, and lasting remembrance, than Palitana in its unique and mysterious perfection. Satrunjaya rises nearly 2000 feet, and is between 2 and 3 miles in ascent, taking the sinuosities of the route into account. At the foot of the ascent there are steps with many little canopies or cells, a foot and a half to three feet square, open only in front, and each having in its floor a marble slab carved with the representation of the soles of two feet (charan). Higher up is a small temple of the Hindu monkey god, Hanuman. Still higher is the shrine of Hengar, a Musalman pir. The top of the hill consists of two ridges, each about 350 yards long. The buildings on both ridges, again, are divided into separate enclosures, called tuk, generally containing one principal temple, with varying numbers of smaller ones. Each of these enclosures is protected by strong gates and walls, and all gates are carefully closed at sundown. The principal temple of the Khartarvasi tuk is that of the Chaumukh or 'four-faced' Jaina, occupying the centre. It stands on a platform 2 feet above the level of the court, and 57 feet wide by about 67 in length. Over this rises the tower or vimana to a height of 96 feet from the level of the pavement.—*Imp. Gaz.* See Architecture; Pagoda; Sculpture.

PALIURUS RAMOSISSIMUS, *Poiret*, of China and Japan, and P. spinachristi, *Muller* (P. aculeatus, *Lambert*), from the Mediterranean to Nepal, are useful for hedge plants.—*Von Mueller.*

PALKAR-PAL, a Toda dairyman; lit. milkman.

PALK BAY and Palk Strait are between Ceylon and the Peninsula of India, and separate the northern part of Ceylon from the mainland.

The strait is formed between Point Calimere and Point Pedro. It is 35 miles wide at its entrance. —*Findlay.*

PALKONDA, a range of mountains in Cuddapah district, Madras Presidency, lying between lat. 13° 43′ 30″ and 14° 27′ N., and between long. 78° 56′ and 79° 28′ 30″ E., and 2500 feet above the sea.

PALLA, a measure of capacity of 30 payali or 120 seers; also a measure of weight of 120 seers, for groceries, betel-nut, oils, etc., the same as the Pala of Madras.

PALLADIUS, a European traveller in Persia, a few years before the Chinese Fa Hian. He was the author of a tract, De Moribus Brachmanorum. It was embodied in the Pseudo-Callisthenes, published by Muller (Script. de Alex. Magno, pp. 103, 104). In it there is a fanciful account of the Bisadæ, the gatherers of pepper. They are described as a dwarfish and imbecile race, with big heads, and long, straight, unclipped hair, who dwell in rocky caves, and from the nature of their country are expert at climbing cliffs, and thus able to gather the pepper from the thickets.—*Yule, Cathay*, i. pp. 144, 145.

PALLAN, Pallar, or Puller are a slave race attached to the Vellala agriculturists of the south of India. The Mallar are the agricultural labourers of the Pallar tribe. Pallan is applied specially to one who works in the fields. Their tribal title is Kudumpan, which means a headman or chief.—*Wils. Glossary.*

PALLAS, an author who wrote on the Natural History of Central Asia. His travels in different parts of the Russian empire and in Central Asia were translated into French, and published in Paris in 1788–93.

PALLEGOIX. The Right Rev. J. P. Pallegoix, Vicar-apostolic of Siam, Bishop of Mallos, died on the 18th of July 1862. He had been long resident in the Malay Peninsula and Siam, and wrote on Siam.

PALLE-SATTERAM. Tam. The lizard science. Lizards are supposed to give warning by chirping of approaching good or evil.—*Hardy.*

PALLI, a servile tribe in the south of India, bondsmen or slaves of Brahman proprietors.—*Wilson.*

PALLI. Beng., Can., Maleal., Tam., Tel. A hamlet, a village, a town, as Tri-sira-palli (Trichinopoly), the city of the giant Trisira. It is the equivalent of the Canarese Halli in Harpanhully, and is written polly, palle, palliya, pally, and pilly. See Palliam.

PALLI, an ancient shepherd race dwelling near the river Cali. They seem to have been a branch of the Kirata. A Palli race or Pala seem to be the Siripala of Ptolemy. In the Puranas, the Palla, Kirata, and Ahira are all classed as shepherds. The Palla are represented as in all parts of India. The Palla south of the Nerbadda, on being overthrown by the Chalukya in the 4th century, turned to the south, and found refuge in the Chola kingdom. The Tondaman Raja of Puducottah takes the title of Pallawa. The Pallava or Palli were in the Dekhan in the 4th and 5th centuries, and in the Carnatic in the 5th or 6th. A Palli shepherd dynasty reigned in Bengal up to A.D. 1100, and are supposed by Sir Henry Elliot to have been Ahir. Mr. Colebrooke concludes that the Pal or Palla reigned from the 9th to the latter part of the 11th century. The shepherd Kurumbar (Kuru, a sheep), in the south of India, were dominant in several places till the 12th century.—*As. Res.* iii. pp. 303-459.

PALLIA. Hind. A monumental pillar amongst the Rajputs.

PALLIAM, Pale, Palevu, Paleya, Paleiyam, Pollam, Pollem, Pallim, Polemu,—Tamil, Telugu, and Carnatic words signifying a tract of country subject to a petty chieftain. In Madras town, a district occupied by particular races, as the Upara-palliam, Wadara-palliam, the wards of the Upara and Wadara races.

PALLIWAL. Next to the Rajputs of Jeysulmir, equalling them in numbers and far surpassing them in wealth, are the Palliwal. They are Brahmans, and denominated Palliwal from having been temporal proprietors of Palli, and all its lands, long before the Rahtor colonized Marwar. Tradition is silent as to the manner in which they became possessed of this domain, but it is connected with the history of the Palli or pastoral tribes, who from the town of Palli to Palit'hana, in Saurashtra, have left traces of their existence. The Palliwal Brahmans, as appears by the annals of Marwar, held the domain of Palli when Seoji, at the end of the 12th century, invaded that land from Kanouj, and by an act of treachery first established his power. Their subsequent migration to the desert of Jeysulmir is attributed to a period of a Muhammadan invasion of Marwar, when, a general war contribution (dind) being imposed on the inhabitants, the Palliwal pleaded caste and refused. This exasperated the raja, for as their habits were almost exclusively mercantile, their stake was greater than that of the rest of the community, and he threw their principal men into prison. In order to avenge this, they had recourse to a grand 'chandi,' or immolation, on which he issued a manifesto of banishment to every Palliwal in his dominions. The greater part took refuge in Jeysulmir, though many settled in Bikanir, Dhat, and the valley of Sind. In the early part of the 19th century almost all the internal trade of the country passed through their hands, and it was chiefly with their capital that its merchants traded in foreign parts. They were the Metayer of the desert, advancing money to the cultivators, taking the security of the crop, and buying up all the wool and ghi (clarified butter), which they exported to foreign parts. They also rear and keep flocks. They were then subject to the visits of the Maldote, Tejmalote, and other plunderers. The Palliwal never marry out of their own tribe, and, directly contrary to the laws of Menu, the bridegroom gives a sum of money to the bride. There is little doubt that the Palliwal Brahmans are the remains of the priests of the Palli race, who, in their pastoral and commercial pursuits, have lost their spiritual power.

PALLONARUA. In Ceylon, Anaradhapura is a deserted city. It seems to have become the capital of Ceylon about B.C. 400. About B.C. 250 it became one of the principal capitals of Buddhism in the east, which it continued to be till about A.D. 750, when the repeated invasions of the Tamil races led to its abandonment for Pallonarua, which continued to be the capital for some centuries. Anaradhapura has within its limits ruins of topes or dhagobas, the Lowa Maha Paya, Abhayagiri, Jetawana, Thuparamaya, Lankaramya, Saila, and Ruanwelli. It was erected B.C. 250, to

hold the right jawbone of Buddha. Subsequently, at the beginning of the 4th century, a tooth was brought from India, and deposited in a small building erected for the purpose on one of the angles of the platform of this building. The Lowa Maha Paya, or Great Brazen Monastery, was erected B.C. 161, by king Duttagaimuni. It is 225 feet square, and with 9 storeys, and 100 cells for priests. In A.D. 285, Mahasena destroyed it, but it was re-erected of 5 storeys by his son. It never regained its previous fame, and fell into decay, and the 1600 pillars which once supported it alone remain; they are unhewn blocks of granite. The quadrupeds sculptured on the Anaradhapura city, also at Hullabid in Mysore, and at Amravati, are the elephant, lion, horse, and bull; the birds are the hansa or sacred goose, or pigeons. Besides these, there is at Anaradhapura a temple called Iswaramunya, partly cut in the rock, partly structural. But to Buddhists the most sacred object there is the Bo Tree, which was brought there by Mahinda and Sangamitta, son and daughter of Asoka, who introduced Buddhism into Ceylon.

The Pallonarua temples were mostly built A.D. 1153-1186, by Prakrama Bahu. Its rock-cut structure, called Gal Vihara, has a seated figure of Buddha 16 feet in height, one standing figure 25 feet, and one recumbent 45 feet long, in the conventional attitude of his attaining Nirvan. In front is the Jetawana Rama temple, 170 by 70 feet, with an erect statue of Buddha 58 feet in height. The Rankot Dhagoba and the Mahal Prasada are also of interest, the last being a representative of the seven-storeyed temples of Assyria. See Architecture.

PALM, the term applied in Southern India to the bars of iron manufactured from Cutties.

PALMA BRAVA, the Nibong of the Tagala of Mindoro, used by the wild tribes of Mindoro to form their bows and point their arrows.

PALMA CHRISTI, Castor-oil palm.

Ricinus communis, LAT.	Jarak, ... MALAY.
Kaliki, MADURESE, SUNDA.	Tangan-Tangan, . . TAG.

Called Christ's palm, because where the true palms are not found, it is carried on Palm Sundays.

PALMANAIR, in lat. 13° 11½′ N., long. 78° 47′ 17″ E., in the Carnatic, a small town on an open plateau west of Chitore. The dak bungalow is 2618 feet above the sea. It is 25 miles N. of the railway station of Goriattum. Occasional instances of fever have given it a bad name. The thermometer at Palmanair in December 1861 ranged from a minimum of 54° to a maximum of 74°.

PALM BOOKS. The books and separate leaves employed for writing on in Asia, with an iron style, are made from the leaves of the talipat tree, Corypha umbraculifera, also from the Tara, Tareet, or Tallier of the Bengalese, C. taliera, *Roxb.*, and from the leaves of the palmyra palm. All the Burman books are made of the leaf of a species of Corypha; but the orders that are issued from the Burmese courts are written on strips of the palmyra palm leaf. Those used in Southern India for school-boys' books, for the accounts of shopkeepers, the orders of collectors, and village accounts, are also made of the leaf of the palmyra. The Ola of the Tamil people is the dried palmyra leaf prepared for writing on with a style.—*Mason.*

PALMER, a term applied to the pilgrims from Palestine, from the staff of the date-palm branch which each brought back.

PALMINE may be prepared from the castor-oil, and possibly from other oils also, by treating them with nitric or nitrous acids. A process is given in Brande's Manual of Chemistry, xi. p. 1257, and is supposed to be the substance which was, about A.D. 1857, patented for the use of railway carriages in British India; and whether as regards its origin, the facility of making it, the abundance of the castor-oil plant in India, its consistence and cheapness, it well deserves attention. When nitrous or nitric acid is made to act upon castor-oil, it is converted into a solid wax-like substance; and a similar, though much more rapid, result takes place when this oil or olive oil are similarly treated with nitrate of mercury. Castor-oil is the only one of the drying oils which is susceptible of this species of solidification. On adding nitrous acid to castor-oil, a yellow liquid is at first formed, and the time required for its solidification varies with the quantity of acid employed; when about a twentieth part of acid is used, it solidifies in seven or eight hours, and this or somewhat less is the best proportion. If too much acid be used, a third part, for instance, or a half, the temperature rises to 130° or 140°; effervescence ensues, and the oil becomes opaque, and instead of indurating remains viscid. Palmine thus obtained is yellow, but when purified by solution in boiling alcohol, it is white, of a waxy fracture, and requires a temperature of about 150° for its fusion. When this is kept for some months, it occasionally acquires a resinous appearance, and presents an almost vitreous fracture. A large and profitable trade might be had in palmine made from the cheap oils of Southern Asia, the difficulty of transporting which while fluid is well known.

PALM OIL.

Olio di palma, . . IT.	

This is a fatty substance, obtained from the fruit of several species of palms; that of the Elæis Guineensis, growing on the western coast of Africa, has the consistence of butter, a yellowish colour, and scarcely any particular taste, and becomes rancid on being kept for any length of time. It is chiefly used in Britain for the manufacture of toilet soap, pomade perfumery; also in medicine and surgery. In 1880, 90,219 cwt. of palm oil were imported into Britain, valued at £1,026,378; and of cocoanut oil, 64,059 cwt., value £317,828. Elæis melanococca, *Gærtn.*, is a native of America; both species might be profitably introduced into India. The Cocos butyracea and C. nucifera also yield palm oils.—*Seeman; M'C. Comm. Dict.*

The palm trees or palm tribe of plants belong to the order Cocoaceæ or Palmæ, the Palmaceæ of Lindley. They grow alike in the eastern and in the western hemispheres. Particular species are confined to their own peculiar localities, but Cocos nucifera, Acrocomia, Sclerocarpa, and Borassus flabelliformis are spread over many lands. The number of known species scattered over the world amount to over 1000. Of these, not a few love

the humid banks of rivulets and streams; others cling to the sea-shores, and some ascend into alpine regions. Some collect into dense forests, others spring up singly or in clusters over the plains. Writers of systematic botany have arranged them differently, one of the most recent arrangements being into seven tribes,—Borassineæ, Coryphineæ, Phœnicineæ, Arecineæ, Cocoineæ, Lepidocaryineæ, and Nipineæ.

i. Borassineæ—
Borassus flabelliformis, *Linn.*, all India.

ii. Coryphineæ—
Corypha elata, *Roxb.*, Bengal.
C. gebanga, *Bl.*, Burma, Java.
C. macropoda, *Kurz*, Andamans.
C. rotundifolia, *Lam.*, Moluccas, Cochin-China.
C. taliera, *Roxb.*, Bengal.
C. umbraculifera, *Linn.*, Ceylon, Malabar, Bengal, Burma.
Chamærops Khassiana, *Griff.*, Khassya.
C. Martiana, *Wall.*, Kamaon, Nepal.
C. Ritchieana, *Griff.*, Trans-Indus.
Licuala acutifida, *Mart.*, Malay Peninsula.
L. longipes, *Griff.*, Mergui.
L. paludosa, *Griff.*, Andamans.
L. peltata, *Roxb.*, Assam.
L. pumila, *Bl.*, Java.
L. rotundifolia, *Bl.*, Java.
Livistona Jenkinsia, *Griff.*, Sikkim, Assam.
L. speciosa, *Kurz*, Chittagong, Pegu, Tenasserim.

iii. Phœnicineæ—
Phœnix acaulis, *L.*, Behar, Burma, Central India.
P. dactylifera, *Linn.*, S. Panjab, Sind.
P. farinifera, *Willde*, Coringa.
P. Ousleyana, Chutia Nagpur, Assam.
P. paludosa, *Roxb.*, Sunderbans, Burma, Andamans.
P. pedunculata, Neilgherries.
P. sylvestris, *Roxb.*, all India.

iv. Arecineæ—
Areca catechu, *Linn.*, all India.
A. costata, *Bl.*, Andamans.
A. Dicksoni, *Roxb.*, Malabar.
A. disticha, *Roxb.*, Khassya.
A. gracilis, *Roxb.*, Sikkim, Assam, Bengal, Burma.
A. hexasticha, *Kurz*, Burma.
A. humilis, *Willd.*, Amboyna.
A. laxa, *Buch.*, Andamans.
A. Nagensis, *Griff.*, Naga hills.
A. triandra, *Roxb.*, Chittagong, Burma, Andamans.
Arenga saccharifera, *Labill*, Burma, Malaya.
A. Westerhoutii, *Griff.*, Malay Peninsula.
A. Wightii, *Griff.*, Coimbatore.
Bentinckia coddapanna, *Berry*, Travancore.
Caryota obtusa, *Griff.*, Mishmi hills.
C. sobolifera, *Wall.*, Arakan, Pegu, Andaman.
C. urens, *Linn.*, W. Ghats.
Wallichia caryotoides, *Roxb.*, Chittagong.
W. densiflora, *Martins*, Kamaon, Himalaya.
W. disticha, *T. And.*, Sikkim.
W. nana, *Griff.*, Assam.
W. Yomæ, *Kurz*, Yoma mountains.

v. Cocoineæ—
Cocos nucifera, *Linn.*, all East Indies.

vi. Lepidocaryineæ—
Calamus acanthospathus, *Griff.*, Khassya.
C. Andamanicus, *Kurz*, Andamans.
C. arborescens, *Griff.*, Pegu.
C. collinus, *Griff.*, Khassya.
C. concinnus.
C. erectus, *Roxb.*, Sylhet, Pegu.
C. extensus, *Roxb.*, Sylhet.
C. fasciculatus, *Roxb.*, Bengal, Burma, Andamans.
C. flagellum, *Griff.*, Sikkim.
C. floribundus, *Griff.*, Assam.
C. gracilis, *Roxb.*, Assam, Chittagong.
C. grandis, *Griff.*, Andamans.
C. Guruba, *Mait.*
C. Helferianus, *Kurz*, Tenasserim, Andamans.
C. humilis, *Roxb.*, Chittagong.
C. hypolencus, *Kurz*, Tenasserim.
C. inermis, *T. And.*, Sikkim, Bhutan.
C. Jenkinsianus, *Griff.*, Sikkim.
C. latifolius, *Roxb.*, Andamans.
C. leptospadix, *Griff.*, Sikkim.
C. longipes, *Griff.*
C. macrocanthus, *T. And.*, Sikkim, Bhutan
C. macrocarpus, *Griff.*, Bhutan.
C. Mastersianus, *Griff.*, Assam.
C. melanacanthus.
C. Mishmiensis, *Griff.*, Mishmi hills.
C. montanus, *T. And.*, Sikkim, Bhutan.
C. nitidus.
C. nutantiflorus, *Griff.*
C. palustris, *Griff.*, Mergui.
C. paradoxus, *Kurz*, Martaban.
C. platyspathus.
C. polygamus, *Roxb.*, Chittagong.
C. quinquenervius, *Roxb.*, Sylhet.
C. rotang, *Roxb.*, E. Indies.
C. Royleanus, *Griff.*, Dehra.
C. schizospathus, *Griff.*, Sikkim.
C. tenuis, *Roxb.*, Assam, Pegu.
C. tigrinus, *Kurz*, Burma, Andamans.
Korthalsia laciniosa, *Mart.*, Tenasserim.
K. scaphigera, *Mart.*, Andamans.
Plectocomia Assamica, *Griff.*, Assam.
P. elongata, *Mart.*, Java.
P. Himalayana, *Griff.*, Sikkim.
P. Khassiana, *Griff.*, Khassya.
P. macrostachya, *Kurz*, Tenasserim.
Zalacca edulis.
Z. Wallichiana, *Mart.*, Burma.

vii. Nipineæ.
Nipa fruticans, *Roxb.*, Malayana.

Others, mostly of the E. and W. Indies, meriting notice are—

Acrocomia sclerocarpa, Macaw palm, W. Indies, Brazil.
Astrocaryon murumura, and A. tucuma.
Calamosagus harinæfolius, laciniosus, and ohriger.
Carludovica palmata of Panama.
Ceratolobus glaucescens, *Bl.*, Java.
Dæmonorops melanochœtes, *Bl.*, Java.
Eugeissonia truncata, *Griffiths*, Malacca, Penang.
Euterpe montana of Venezuela.
Hyphæne Thebaica, Doum-palm of Egypt.
Iriartea ventricosa or Pashiuba barriguda.
Jubæa spectabilis, Chili palm.
Leopoldinia pulchra, Java.
Lodoicea Sechellarum, *Labill*, Seychelles.
Macrocladus sylvicolia, *Gr.*
Phytelephas macrocarpa, vegetable ivory palm.
Pritchardia Pacifica of Polynesia.
Ptychosperma Alexandræ, *Von Mueller*, Australia.
Slackia geonoformis.
Stevensonia of the Seychelles.
Thrinax argentea, Cuban palm.
Tucuma vulgare, Brazil, Rio Nigro, Upper Amazon.
Verschaffeltia of Seychelles.

Many of the palms in tropical countries are conspicuous for their lofty pillar-like stems, surmounted by apparently inaccessible fruit or gigantic foliage. Palms appear to prefer a soil in some measure saline, although many species are inhabitants altogether of inland districts, and even of high mountains. Their geographical limits appear to be within lat. 36° N. in America, lat. 44° N. in Europe, lat. 34° N. in Asia, and lat. 38° S. in the southern hemisphere. Their powers of migration are extremely small; few of them have been able to cross the ocean without the aid of man. This remark, however, is not applicable so far as regards the cocoanut, which with its keeled fruit sails to the most distant shores. Their favourite stations are on the banks of rivers and watercourses, and the sea-shore, some species scattered singly, and others collected together into large forests. In general they adhere to the soil by clusters of strong simple roots, which not uncommonly form a hillock elevated above the surface

of the ground. Their trunks are solid, harder on the outside than the centre, and are sometimes, as in the cane-palms, coated by a layer of silicious matter; they are usually quite simple, growing exclusively by a single terminal bud, called in the oreodoxa and areca its cabbage, and eaten as a delicacy when boiled; but in the hyphæne, or doum-palm, they are regularly forked. In the majority of the order the stem is cylindrical, but in some it is thickest at the base, and in others swollen in the middle; occasionally it is defended by strong hard spines, but is more frequently unarmed, and marked by rings which indicate the places whence the leaves fell off. The leaves, called fronds by Linnæus, are alternate, with a very hard epidermis and a distinct petiole, from the base of which a coarse network, called reticulum, sometimes separates next the trunk; they are usually either pinnated or fan-shaped, but are occasionally nearly split in two; their veins are parallel, the spaces between them plaited, and the whole size sometimes very great, as in the fan-palm, in which specimens have been seen as much as 18 or 20 feet in breadth. The flowers appear in panicled spikes from the inside of hard dry spathes, which are often boat-shaped, and, although small, they are sometimes so extremely numerous that each panicle will weigh many pounds. They are generally hermaphrodite, but often monœcious, dicœcious, or polygamous. The calyx and corolla consist each of three pieces, which are either distinct or more or less united. The stamens vary in number, from three to a large multiple of that number, and bear two-celled linear anthers, which open along their inner face. The ovary consists of three carpels, which are sometimes distinct, sometimes consolidated, and occasionally in part abortive, so that the ovary is only one-celled. The ovaries are almost always solitary, and erect in each cell, but sometimes two are present, which in that case stand side by side; they are orthotropous in some genera, and anatropous in others. The styles are very short, the stigmas simple. The fruit varies extremely in its consistence and appearance. Sometimes it is three-celled, often one-celled. In some species, as the cocoanut, it is a kind of drupe covered by a coarse fibrous rind; in others it is a soft, sweet, eatable pericarp, as in the date; in others its surface is broken up into lozenge-shaped spaces, as in the sagus, whose fruit looks as if covered with scale armour. The seed is single, either solid or hollow, and consists principally of albumen of a fleshy, oily, horny, or cartilaginous texture, within which is lodged a very small cylindrical embryo at some part of the surface distant from the hilum.

'This natural order of plants is one of the largest, the most beautiful, as well as the most useful, of the whole vegetable kingdom. Palms are associated with the most sublime truths of Christianity. In everyday life we speak of our "palmy days," and "carrying off the palm," as happy and excellent times and seasons of rejoicing. In the Old Testament, the palm-tree is first mentioned as the tamar, in Exodus xv. 27, but afterwards frequently. Psalm xcii. 12, 13, and 14, says the righteous shall flourish like a palm-tree; and in Canticles vii. 7, the erect and slender form of woman is compared to the palm: "Lo, thy stature is like a palm-tree, and thy bosom like clusters of dates." In the temple of Solomon were pilasters made in the form of palm-trees. A branch of a palm was a signal of victory, and was carried before conquerors in the triumphs. They were borne before Christ in his way to Jerusalem, as in John xii. 13; and allusion is made to this in Revelation vii. 9.

'They are remarkable for the many useful purposes they are calculated to fulfil. They furnish many of the necessaries, comforts, and luxuries of life. In household economy, parts of them are formed into spoons, and cups, and ladles, and lamps, and hats, and clothes, and combs, hammocks, bowstrings, fishing lines, and fish hooks. The light rafters of the houses are obtained from the straight cylindrical trunks of the Java palm (Leopoldinia pulchra), the date, and the palmyra tree. The sweeper of the crossings of London holds in his hand a broom, the fibrous portion of which was cut by the wild Indians of Brazil from the stems of a palm. The gentleman who prides himself on his Penang Lawyer is but carrying a young plant of the Licuala acutifida. The knob of the lady's parasol is formed from a Coquilla nut turned into that shape. The chip hats, so extensively worn on fine summer days, are made of the leaves of a Cuban palm (Thrinax argentea). Heaps of dates are to be seen in all the shops of Europe, which were gathered by the Bedouin Arabs, or on the borders of the great desert of Sahara; and cocoanuts, grown on the shores of the Indian Ocean, in the myriads of islands which form its archipelago, or on the shores of the Caribbean Sea, are sold in every city of the colder regions of the world, where they are ever beheld with unabated curiosity. The cordage and rigging of the ships, and the thick mattings used on staircases in Britain, spun and woven, are from the husk of the cocoanut, and many articles of furniture are made from the woods of palms. Toys and ornaments are made from the kernels of the vegetable ivory palm. The stearic candles, so well known, are composed of the fatty substance extracted from the oil-palm and the cocoanut. The sago, which is so useful a food in the treatment of the sick, and which is seen in such varied guise on our tables, is the pith of palms that flourish in many tropical regions; the famous betel-nut dentifrice, formed of the charcoal of that nut, coloured with dragon's blood, is the produce of two palms; and the toilet soaps of Europe are made from palm oils. The roof is thatched with the leaves of palms. In one region, the door of the house is made of the split stems of the Pashiuba palm (Iriartea exorhiza). The harpoon for catching the cow-fish is formed of the black-wood of the Pashiuba barriguda (Iriartea ventricosa), and in another region the thickly matted leaves of the cocoanut and palmyra serve as a door for the gardens and parterres.'

The palm oils from the Elæis Guineensis, and from the cocoanut palm of the East Indies, are extensively used in the west and east. The Elæis Guineensis also yields an excellent palm wine. The numerous uses to which the cocoanut palm are applied are familiar even to all who have not seen it. It grows on all the shores of the East and West Indies, and the leaves furnish thatch for dwellings, materials for buckets, baskets, and fences, and make excellent torches. The juice of the flower stem is fermented into palm wine, distilled into arrack, or made into sugar.

The fruit, when green, is filled with a liquid albumen, which is largely drunk as a refreshing liquid; when ripe the albumen solidifies, and is used in cooking, and affords an abundance of oil, which is used in lamps, and in Europe is manufactured into candles. The fibrous rind forms the coir of commerce, made into cordage and cables. The cocoanut, the date, and others are valued for their fruit; the fan-palm and many more for their foliage, whose hardness and durability render it an excellent material for thatching; the sweet juices of the palmyra, the date, the cocoanut, and Arenga palms, when fermented yield wine; the centre of the sago-palm abounds in nutritive starch; the trunk of an Iriartea or Ceroxylon exudes a valuable vegetable wax; an astringent matter resembling dragon's blood is produced by Calamus draco; many of the species contain within their leaves so hard a kind of fibrous matter, that it is employed instead of needles, or so tough that it is manufactured into cordage; and their trunks are in some cases valued for their strength, and used as timber, or, as in the cane-palm, for their elasticity or their flexibility. The fruit of some is edible, of others abounding in oil. The stems of some species are gorged with farinaceous matter, which may be separated as a starch-like powder, or granulated into sago. The broad leaves, from their great size and hard surface, are useful for thatching the cottages of the poor, or for making umbrellas for the rich. The narrow-leaved kinds are plaited into mats and baskets, or smoothed so as to be fit for writing on; while the leaves of several, when in a young and tender state, are eaten both raw and in a cooked state, and are hence called cabbage-palms. Some abound in strong unyielding fibre, while others form wood which is applicable to all the purposes of timber. Hence several are valuable articles of culture in the countries where they are indigenous, or where the soil and climate are suitable for their growth —as for instance the date-palm in Arabia and Africa, the oil-palm in the west of Africa, the cocoanut in India and its islands, together with the betel-nut, palmyra, and talipat palms; while the sago, the eju, and the betel-nut palms flourish in the moist warm climates of the Malay Peninsula, and of the Indian Archipelago. The palms abound chiefly in the tropical parts of the Old World, as well as of South America, but a few species extend to rather high latitudes, as an areca to lat. 38° S. in New Zealand, and a sabal (Chamærops, *Auct.*) to lat. 40° N. in North America; while the dwarf-palm, a native of the North of Africa, is now at home in the south of Europe, where even the date-palm is grown in a few sheltered situations, though it is in the hot and dry soil of Arabia and Africa that it attains the greatest perfection, and furnishes a principal part of the diet of its inhabitants, as well as an article of commerce. Phœnix sylvestris, a variety or species of the same genus, is common in most parts of India. A Chamærops is found in Nepal, and one on the Khassya hills, at elevations of 5000 to 8000 feet; while C. Ritchieana is found in the Khaibar pass, and probably all along the mountainous range from Afghanistan to Sind. In southern latitudes the cocoa and the betel-nut palms are objects of extensive culture, as well as the sago-palms, of which the eju or gomuti of the Malays, the Arenga saccharifera of botanists, is one abounding in sap, which can be used as palm wine or converted into sugar, also yielding at all times strong and durable fibre. The older trees when cut down yield sago, as do Sagus Rumphii and S. lævis, especially abundant in and near Sumatra, the latter being remarkable among palms for throwing up young plants around it in the same manner as the plantain, Musa paradisiaca. It is no doubt to some one of these sago trees that Sir John Maundeville alludes when he says, 'In that land grow trees that bear meal, of which men make bread, white and of good savour; and it seemeth as it were of wheat, but it is not quite of such savour. And there are other trees that bear good and sweet honey, and others that bear poison. And if you like to hear how the meal comes out of the trees,—men hew the trees with a hatchet, all about the foot, till the bark be separated in many parts, and then comes out a thick liquor, which they receive in vessels, and dry it in the sun, and then carry it to a mill to grind, and it becomes fair and white meal; and the honey, and the wine, and the poison are drawn out of other trees in the same manner, and put in vessels to keep.' The leaves of many palms are employed for thatching, for making chattas or umbrellas, punkahs, and hats. The stems of Licuala peltata, the Chatta-pat of Assam, are in universal demand in that valley. Scarcely a single ploughman, cow-keeper, or coolie, but has his jhapi or chatta made of chatta-pat. But the leaves of this palm are coarser than those of the toka-pat of the Assamese, which was named Livistona Jenkinsiana by Griffith. Colonel Jenkins says that this species of palm is an indispensable accompaniment of every native gentleman's house; but in some parts it is rare, and the trees are then of great value. The leaves are in universal use throughout Assam for covering the tops of dhoolies or palkees, and the roofs of khel boats; also for making the umbrella hats (jhapi) of the Assamese. For all these purposes the leaves are admirably adapted, from their lightness, toughness, and durability. To the above list of useful Indian palms might be added the Zalacca macrostachya, used for making baskets and for tying Nipa leaves. The Chinese make cables of the rattan. The Areca vestiaria is so called from clothing being made from its fibres, and Rhapis Cochin-Chinensis is employed for thatching, etc. Lodoicea Sechellarum is the palm yielding the much famed Cocos de Mer, or double cocoanut,—for one of which, in the Mauritius collection, a prize medal was awarded at the Exhibition of 1851; its leaves are formed into baskets and flowers, and the nut, formed into a dish, is largely used as a scallop by the Muhammadan fakirs.

The Chamærops Khassiana, fan-palm, the Pakha of the Khassya, grows on the cliffs near Mamloo, on the Khassya hills. It may be seen on looking over the edge of the plateau, its long curved trunk rising out of the naked rocks, but its site is generally inaccessible; while near it grows the Saxifraga ciliaris of English gardens, a common plant in the N.W. Himalaya, but extremely scarce in Sikkim and the Khassya mountains. This species of Chamærops is very closely allied to, if not identical with, Ch. Martiana of Nepal, which ascends to 8000 feet in the Western Himalaya, where it is annually covered with snow; it is not

found in Sikkim, but an allied species occurs in Afghanistan, called Ch. Ritchieana. There are upwards of twenty kinds of palm in the Khassya district, including Chamærops, three species of Areca, two of Wallichia, Arenga, Caryota, three of Phœnix, Plectocomia, Licuala, and many species of Calamus.

The betel-nut palm, Areca catechu, grows throughout the East Indies, and produces the betel-nut, which the people largely use, along with the betel leaf, as a masticatory, and its nut also yields a kind of catechu, and in the mountains of Malabar the poorer people use the nut of the Areca Dicksonii as a substitute. The Arenga, the gomuti palm of the Eastern Archipelago, yields sago, sugar, palm wine, and black horsehair-like fibres, from which cordage and cables are made. A single tree yields about 150 lbs. of good sago meal, and its sap is largely used as a palm wine, or is boiled down into a thick syrup, and allowed to concrete. Horsehair-like fibres surround the petioles of its leaves. The palm wine from the Caryota urens of the Peninsula of India and the Moluccas is a valuable product. It is fermented and drunk as an intoxicating beverage, or is distilled to obtain a spirituous liquid. The best trees, during the hot season, will yield 100 pints of sap in 24 hours. The pith of the trunk in old caryota trees is made into sago, and baked as bread, or boiled in the form of a thick gruel. The different species of Calamus furnish the canes and rattans of commerce. They are largely used in the East Indies as the linings of bedsteads and chairs, as screens, and to form ladders and cables. Sagus lævis, *Rumph.*, of the Eastern Archipelago, and S. farinifera, *Gærtn.*, of the Malay Peninsula and the Archipelago, both yield the sago of commerce. The people of the Moluccas live to a large extent on the pith of the latter tree. The leaves of the tali tree of Ceylon and the Moluccas, the talipat or great fan-palm of Ceylon, the Corypha umbraculifera, are of great value as a thatching material; and the leaves of the tara-palm of Bengal, the Corypha taliera, and those of the palmyra, are used as book leaves to write on, with iron styles, and they are also used to tie the rafters of their houses. The species of the date-palms, the genus Phœnix, yield several useful products. P. sylvestris, the wild date-palm, grows abundantly throughout British India. Its fruit is of no value, but its juice is largely used as a palm wine, and is boiled into sugar, which is to some extent exported to other countries. This wild date tree is met with in almost every part of British India. It flourishes in the alluvial soils which cover the south-eastern portion of Bengal proper, excepting only such tracts as suffer entire submersion annually from the overflow of their rivers, as is common in portions of the Dacca, Mymensing, and Sunderbun districts. The extent of country best suited for its growth is an area stretching east and west about 200 miles, and north and south about 100 miles, and comprehending by a rough estimate about 9000 square miles within an irregular triangular space. When not stunted in its growth by the extraction of its juice or sap for toddy drinking or for sugar, it is a very handsome tree, rising in Bengal from 30 to 40 feet in height, with a dense crown of leaves spreading in a hemispherical form from its summit. These leaves are from 10 to 15 feet long, and composed of numerous leaflets or pinnules about 18 inches long. The trunk is rough, from the adherence of the bases of the falling leaves; this serves to distinguish it at a glance from the smooth-trunked cocoanut palm, which in its leaves only it resembles. The fruit consists more of seed than of pulp, and altogether is only about one-fourth the size of that of the true date of Arabia. For its palm wine, the stem is notched and sloped, and a spout made of its frond. The toddy of the cocoanut, the palmyra, and the gomuti palms, is obtained from the spathe. In the gomuti, palmyra, and cocoanut, the spathe is cut across, and the juice flows into a pot.

The people of Nejid believe that the more their date-palms, Phœnix dactylifera, are watered, the more syrup will the fruit produce; they therefore inundate the ground as often as possible. At El Jauf, where the date is peculiarly good, the trees are watered regularly every third or fourth day. The stem of Phœnix farinifera contains fecula, which is used as food in times of scarcity, its leaflets are wrought into mats, and the common petioles are split into three or four, and used to make baskets. Its fruit is edible. Walking-sticks are made of the trunks of the P. paludosa, and the trunks are used as rafters and the leaves for thatch.

The Stevensonia and Verschaffeltia of the Seychelles are eminently suited for decorative purposes. The former is spoken of as Roi de la Famille, the latter as its worthy rival, from its grand shape and its rich foliage.

The Pritchardia Pacifica palm of Polynesia is the exclusive property of the aristocracy, and not allowed to be used for common purposes.

The Chinese make overcoats of the leaves and fibres of Chamærops excelsa, *Thunberg*. In the western hemisphere, the Chili palm, Jubæa spectabilis, *Darwin*, is felled to obtain its syrup-like sap, called palm honey, of which a good tree will yield ninety gallons. The costly Panama hats are made of the leaves of the Carludovica palmata. A useful oil is obtained from the hard-shelled nuts of the Acrocomia sclerocarpa of the West Indies and Brazil. The vegetable ivory nuts of the Phytelephas macrocarpa are extensively used. Species of the genus Astrocaryon of the Upper Amazon yield several commercial products; the kernel of A. murumura nearly approaches to vegetable ivory in hardness; the stony seeds of A. tucuma are turned into rings; and the beautiful hammocks of the Upper Amazon are made of tucum thread, prepared from the A. vulgare. The detailed account of the more important of these palms will be found under their respective names in the alphabetical arrangement.—*Burton's Mecca*, ii. p. 175; *Powell's Handbook*, i. p. 512; *Hartwig; Griffith's Palms of British East India; Roxb. PALM-TREE WOODS is a commercial name in Britain given to the stems or trunks of palms from the East and West Indies, and imported to

a small extent for fancy use. The palms furnish black, brown, prickly brown, and speckled woods, principally from the Areca catechu, Borassus flabelliformis, species of Calamus, Cocos nucifera, and species of Corypha, which are largely used in India. In structure, the wood of the palms appears formed of a series of hard, stiff, longitudinal fibres not interlaced or twisted, but crossed at considerable intervals at various angles by similar fibres. The palm woods are sparingly employed in England for cabinet and marquetry work, sometimes for billiard cues, which are considered to stand remarkably well, and they are also turned into snuff-boxes, etc. The smaller kinds are imported under the names of partridge canes (called also Chinese or fishing canes), Penang canes, from the island of that name, together with some other small palms which are used for walking-sticks, the roots serving to form the knobs or handles. The knobs exhibit irregular dots, something like the scales of snakes; these arise from the small roots proceeding from the principal stem; which latter shows dotted fibres at each end of the stick, and streaks along the side of the same. Twisted palm sticks are the central stems or mid-ribs of the date-palm; they are twisted when green, and stretched with heavy weights until they are thoroughly dry. They are imported from the Neapolitan coast, but are considered to be produced in Egypt. The shells of the cocoanut and coquilla-nut, and the kernels of the areca or betel-nut, and those of the corosos or ivory-nut, have likewise their uses in British workshops. The varieties of the several hundred species imported into Great Britain from the East and West Indies are known there by the uames, palm, palmetto, palmyra, uutmeg, leopard, and porcupine woods, etc., from their fancied resemblances; for when they are cut horizontally, they exhibit dots like the spice, and when obliquely, the markings assimilate to the quills of the porcupine. The trunks of the palms are invariably soft and spongy in the centre, but are gradually harder towards the outside. They do not possess the medullary rays of the proper woods, but only the vertical fibres, which are held together by a much softer substance, like pith or cement, so that the horizontal section is always dotted, by which they may be readily distinguished from all true woods. The colours and hardness of the two parts differ very materially. Areca catechu, the betel-nut palm, is remarkably straight; it grows to the height of about 30 feet, and rarely exceeds 4 or 5 in circumference. The general colour of its wood is a light yellow brown, the fibres are large, hard, and only a few shades darker than the cementitious portions. Cocos nucifera, the cocoanut palm, sometimes grows to 90 feet in height and 3 feet in diameter, but is generally less. The upper part of its trunk is soft and stringy, but the lower supplies a useful wood, the fibres of which are of chesnut brown, and several shades darker than the intermediate substance. The wood is employed for joists, troughs for water, and many purposes of general carpentry. The wood of Caryota urens is much darker than either of the preceding, the fibres are nearly black and quite straight, and the cement is of a dark-brown; but in either varieties with these black fibres, the softer part is very light coloured, and so friable that it may be picked out with the fingers. Palmyra wood, Borassus flabelliformis, is largely used in Ceylon and the Peninsula of India for the construction of roofs, the joists of which consist of two slabs, the third or fourth part of the tree, bolted together by their flat sides so as to constitute elliptical rafters. For flat roofs they are covered first with flat tiles, and then with a white concrete called chunam, consisting of shell-lime, yolks of eggs, and jagari (sugar), beaten together with water in which the husks of cocoauuts have been steeped.

The Picly pole, the Cocos Guineensis of Jamaica, etc., a palm growing 40 feet high, and of small diameter. Its wood is said to be very elastic, and fit for bows and rammers.—*Simmonds; Tredgold.* See Palmyra and Porcupine Wood.

PALM WINE, or toddy, is the fermented sap of several palms of the E. Indies,—Arenga saccharifera, Borassus flabelliformis, Caryota urens, Cocos nucifera, Phœnix dactylifera, P. sylvestris, and species of Caryota.

Palmyra wine.

Palm wine is mentioned in Exodus xxix. 40 and Numbers xxviii. 7, and its spirit seems to be the same as the strong drink of Isaiah v. 11 and xxiv. 9. The Hebrew name is Siker, the Sikers of the Greeks, from which seemingly comes the Saccharum of the Romans. According to Jerome, in Hebrew any intoxicating liquor was Sikera, whether obtained from grain, the juice of apples, honey, dates, or any other fruit.

When first drawn, palm wine is refreshing, but in a short time passes on to the vinous or acetous fermentation, and in these stages spirits are distilled, sugars are made, or vinegar obtained. In the languages of the E. Indies, the spirit is called arrack; it is the cha of the Chinese, the sagwire of the Philippines, the tuba of Manilla and Mindoro, and the tuac of Timor and the Moluccas. The palm wines are obtained from the date trees by tapping or notching the trunk, and from the arenga, palmyra, cocoanut, caryota, by cutting the fruit-bearing spathe.

With the wild date tree, Phœnix sylvestris, in Bengal, the process of tapping and extracting the juice commences about the 1st of November and terminates about the 15th of February. Some days previously, the lower leaves of the crown are stripped off all round, and a few extra leaves from the side of the tree intended to be tapped. On the part thus denuded, a triangular incision is made with a knife, about an inch deep, so as to penetrate through the cortex, and divide the sap vessels; each side of the triangle measures about 6 inches, with one point downwards, in which is inserted a piece of grooved bamboo, along which the sap trickles, and from thence drops into an

earthen pot suspended underneath it by a string. The pots are suspended in the evening, and removed very early the following morning, ere the sun has sufficient power to warm the juice, which would cause it immediately to ferment, and destroy its quality of crystallizing into sugar. The cutting being made in the afternoon, next morning the pot is found to contain, from a full-grown tree, 10 seers of juice, the second morning 4 seers, and the third morning 2 seers of juice ; the quantity exuding afterwards is so small, that no pot is suspended for the next four days. Daily, at sunrise, throughout the gur or sugar-making season, the toddy-drawer may be seen climbing the trees, and collecting at a convenient spot beneath them, the earthen pots containing the juice yielded during the past night. Under a rude shed, covered with the leaves of the date tree itself, and erected under the shade of the plantation, is prepared the boiling apparatus to serve for the gur season. It consists of a hole of about 3 feet in diameter, sunk about 2 feet in the ground, over which are supported by mud arches four thin earthen pans of a semi-globular shape, and 18 inches in diameter; the hole itself is the furnace, and has two apertures on opposite sides for feeding in the fuel, and for escape of the smoke. The fire is lit as soon as the juice is collected, and poured into the four pans, which are kept constantly supplied with fresh juice as the water evaporates, until the whole produce of the morning is boiled down to the required density. As the contents of each pan become sufficiently boiled, they are ladled out into other earthen pots or jars of various sizes, from 5 to 20 seers of contents, according to local custom, and in these the boiled extract cools, crystallizes into a hard compound of granulated sugar and molasses, and is brought to market for sale as gur. By subsequent processes the gur is deprived more or less of its molasses and impurities.

The process of obtaining it from the spathes is as follows :—When the spathes, for instance, of the fruit-bearing palmyra trees appear, the toddy-drawer, climbing to the top of the tree, binds the spathes tightly with thongs to prevent their further expansion, and thoroughly bruises the embryo flowers within to facilitate the exit of the juice. For several succeeding mornings, this operation of crushing is repeated, and each day a thin slice is taken off the end of the racemes, to facilitate the exit of the sap and prevent it bursting the spathe. About the morning of the eighth day, the sap begins to exude, when the toddy-drawer again trims this truncated spathe, and inserts its extremity into an earthen pot to collect the juice. These vessels are emptied morning and evening, and the palmyra will continue for four or five months to pour forth its sap at the rate of three or four quarts a day; but once in every three years the operation is omitted, and the fruit is permitted to form, without which the natives assert that the tree would pine and die.

With the Arenga saccharifera, one of the spathes or shoots of fructification is beaten for three successive days with a small stick, with a view of determining the sap to the wounded part. The shoot is then cut off, and the liquor which pours out is received in pots of earthenware, in bamboos, or other vessels. This palm is fit to yield toddy at seven or eight years old, and continues to yield it for two years at the average rate of three quarts a day. When newly dawn, the liquor is clear, and in taste resembles fresh must. In an hour or two it becomes turbid, whitish, and somewhat acrid, and quickly runs into the vinous fermentation, acquiring an intoxicating quality, and much of it is drunk in that state. A still larger quantity is immediately applied to the purpose of yielding sugar. With this view the liquor is boiled to a syrup, and cooled in small vessels, the form of which it takes ; and in this shape it is sold in the markets. The sugar is of a dark colour and greasy consistence, with a peculiar flavour. It is the only sugar used by the native population of Java. The wine of the palm is also used in the preparation of arrack.—*Walton's State*, p. 116.

PALMYRA, also called Tadmor, a ruined city in the desert, to the S.E. of Jerusalem, three days' journey from the Euphrates. We read in 1 Kings ix. 18, and 2 Chronicles viii. 4, that Solomon built 'Tadmor in the wilderness;' and Josephus assures us that the city, which was subsequently known under the name of Palmyra by the Greeks and Romans, was one and the same place. It has again recovered its original appellation, being known to the wandering Arabs under that of Tadmor. The first mention of it in Roman history is under Mark Anthony (see Appian, De Bello Civil. lib. 5), at which time it appears the inhabitants were noted for their riches and their commerce with the eastern nations. Pliny described Palmyra as remarkable on account of its situation, the richness of its soil, and its agreeable streams. It is now encompassed on every side by a vast desert of sand, which completely separates it from the rest of the world. It always maintained its independence between the two great empires of Rome and Parthia, whose constant endeavour it was, during their wars, to bring it over to their respective interests. It is distant 337 miles from Seleucia on the Tigris, 203 to the nearest part of the coast, and 176 from Damascus. The entire ruins of Palmyra, when seen at a certain distance, are infinitely more striking than those of Balbek ; but there is not any one spot so imposing as the interior view of the temple of Balbek. The temple of the sun at Tadmur is upon a grander scale than that of Balbek, but it is choked with Arab houses, which admit only a view of the building in detail. The architecture of Balbek is richer than that of Tadmor. From the time of Solomon till after the captivity of the Roman emperor Valerian by the Persians, but little is known of it. It rose to the highest opulence and splendour under Odenatus, whose dominions extended from the Euphrates to the Mediterranean. But its chief interest is connected with the wife of Odenatus, Zenobia, queen of the east. Her increasing power attracted the notice and jealously of Aurelian, who, having defeated her in two pitched battles, laid siege to Palmyra. Soon after the surrender of the city, the Palmyrenes revolted against the emperor, who in consequence entirely destroyed the city, and put the greater part of the inhabitants to death, though he afterwards restored the temple of the sun, and gave permission to the remnants of the Palmyrenes to rebuild and inhabit their city. The temple of the sun consists of an immense court, of which the ruins are spread over a space of 220 yards. It is surrounded by a stately wall, adorned with pilasters within and without. Two rows of

marble columns, of which about sixty remain entire, formed a colonnade within the court, which is now occupied by the Arab huts. The great colonnade extends more than half a mile in length, and probably was the main street in the city, from which others branched out laterally; it was entered by an archway, and terminated by a large building, of which the portico alone remains. Innumerable columns and ruins of temples are scattered over the plain. Lord Lindsay says, 'An awful stillness—a lifelessness—pervades the ruins; they stand as lonely and silent as when the last of the Palmyrenes departed and left the city of Zenobia to silence and decay.'

Palmyra is a Sanskrit word corrupted, and affords the etymology of Solomon's city of the desert, Tadmor. The p, by the retrenchment of a single diacritical point, becomes t; and the l and d being permutable, Pal becomes Tad or Tar or Tal, the palmyra, which is the mor or chief of trees; hence Tadmor from its date trees. In British India there are more than one 'city of palms' (Talpur); and the tribe last ruling in Hyderabad, on the Indus, was called Talpuri, from the place whence they originated. —*Robinson's Travels; Tod's Rajasthan.*

PALMYRAS POINT, a headland in Cuttack, in the N.W. side of Bay of Bengal, in lat. 20° 44′ 40″ N., and long. 87° 2′ E. Vessels making for the Hoogly from the south endeavour to sight it.

This tree is very abundant, especially in all the sandy tracts near the sea. It is to be seen in almost all parts of India, and occasionally as far as lat. 30° N. It is, next to Caryota urens, the largest palm in the Peninsula, and it seems to thrive equally well in all soils and situations. The palmyra forests of Tinnevelly form a distinctive feature in the scenery of the province; it extends along the Malabar coast, and is almost the only tree seen in the flatter alluvium near the sea at Gujerat. It is common on the islands of the Indian Archipelago. After the cocoanut tree, this is the most useful of the palms. The fruit and the fusiform roots of the young trees are used in the Northern Circars as articles of food by the poorer classes. The leaves are used for thatching and coarse fibre. Toddy is extracted from the sap of the tree, and is extensively used in the manufacture of sugar in Vizianagram and Rajamundry. Very neat baskets of palmyra leaf are manufactured at Tinnevelly. The seeds when young are eaten by the natives, being jelly-like and palatable. The Poonatoo of the Singhalese is the pulp of the fruit dried in the sun, then smoked in their houses, and eaten as cakes, for soup, or in curry; its young root is as edible and nutritious as a carrot; from its leaves are manufactured mats, fans, beautiful basket-work of every description, sandals, hats, umbrellas, sieves, thatch, water buckets, and the most lasting substitute for paper used by the natives, and are largely used for writing upon with an iron style. The sap is a pleasant nutritious drink, and from it is produced an excellent sugar, and superior sugar-candy. The fruit when roasted is a wholesome food, and in hot weather the pulp is a most grateful refreshment. The timber of the trunk supplies the natives with a durable wood for building purposes, the refuse of the leaves is their ordinary firing, and the huge root of the old tree, when covered with a sheepskin, forms an excellent drum. The dried prepared leaves are also employed for thatching houses, for making small baskets, mats, etc., and some also are formed into large fans. The fibres of the leaf-stalk are employed on the Madras side for making twine and small rope. They are about two feet in length, strong, wiry, and not unlike those of the esparto of Spain. The wood, near the circumference of old trees, is very hard, black, heavy, and durable. Its wood is used chiefly for rafters, joists, and reepers; when of good age, the timber is very valuable for this purpose; the timber is split into four for rafters, into eight for reepers,—these are dressed with an adze. Those of the Jaffna palmyras are famous, and were largely imported into the Peninsula in former times. From the structure of the fibres, it splits easily in the direction of its length, but supports a greater cross strain than any other wood; iron nails, however, rust rapidly in it. As a fancy wood it is known in Europe as porcupine wood and as nutmeg wood. Near the base of the leaves is a fine down, which is used for straining liquids through, and also for stopping bleeding from wounds. The tree, during the first part of the season, yields a pretty large quantity of toddy or palm wine. This is either drunk fresh drawn from the tree, or boiled down into a coarse kind of syrup called jagari, or it is fermented for distillation. One-fourth of the population of the northern provinces of Ceylon are supported by the produce of this tree. In Tinnevelly thousands subsist on the products of this palm; a considerable portion of the revenue of the province is derived from the tax upon it, and no small portion of the time of the magistrates is wasted upon the quarrels and disputes of which it is a most fruitful source. There are about five millions of palmyras bearing tax, and the sum thus realized by Government grants is one lakh and a half of rupees, or about one rupee per thirty trees. Proprietorship in palmyras consists of four classes, viz. 1. The ryot who is owner of the trees and the lands upon which they grow; 2. The palmyra-climber who holds a puttah for trees growing on the land of another; 3. The climber who holds a puttah for trees growing on land belonging to Government, lying waste, but capable of being cultivated; and 4. Climbers who hold puttahs for trees on land belonging to Government, but which cannot be cultivated, such as road-sides, etc. From this diverse proprietorship, from the manner in which the tax is assessed, oftentimes being in excess of the land tax, and from the practice of inspecting and assessing the tax once in three years, the proprietors are subjected to considerable inconvenience, and the collector and his assistants to very much labour. Palmyra leaf fibres are obtained by bruising and beating the leaf-stalks, which are then dried in the sun for a couple of days, when they are taken up, the fibres separated by the fingers, and gently scraped with a knife to remove any pulp adhering to the fibres. —*Tennant's Ceylon, M.E.J.R.; Royle's Fib. Plants*, p. 39; *Mason.*

PALNAUD, the N.W. corner of the Guntur collectorate, grows cotton.

PALNI, commonly written Pulney; also called Varahagiri, Vadagiri, and Kannandenan, is an isolated mountain range in the Madura district of the Madras Presidency, betweeu lat. 10° and 10° 15′ N., and long. 77° 20′ and 77° 55′ E. It extends in a north-easterly direction from the Western Ghats, with which they are connected by a ridge of hills about 8 miles in width. The range is divided into two groups, the higher and lower, or the west and east ranges. The mean elevation of the former is about 7000 feet, of the latter from 3000 to 4000 feet. The total population of the hills is about 13,200 souls,—4800 on the higher ranges, and 8400 on the lower. The inhabitants are the Puliyar race.—*Imp. Gaz.*

PALO. Hind. The starchy extract of root and stem of Tinospora cordifolia, *Miers*, the stem of which is macerated, and the solution evaporated to dryness.—*Simmonds' Dict.*

PALODHERI. The Pol-u Sha of Hiwen Thsang has been identified with Palodheri, or the village of Pali, which is situated on a dheri, or 'mound of ruins,' the remains of some early town.—*Cunningham's India*, p. 51.

PALOGPONG IKAN, or Ari-ari-ikan of the Malay, Loo-pa of the Chinese, is isiuglass. Since the Chinese settled in the Straits, they collect fish-maws at Penang, Malacca, and Singapore, also from Bombay, Ceylon, Madras, Bengal, Tenasserim, and most of the Malayan islands, and export to China. —*Jour. As. So. of Bengal*, p. 445.

PALOLO, the name given to Balti by the Dard race. See Balti; Bolor; India.

PALOLO VIRIDIS. *Gray.* A small sea-worm, one of the Annelides, occurs in some parts of Samoa (the Navigator Islands), in the South Pacific. They appear for two days monthly, the day before and the day on which the moon is in her last quarter. They resemble a very fine straw, and are largely eaten.

PALONG. The Pa-long, Po-loa, Pa-on, or Za-baing tribe are partially subject to, and located to the east of, the Mo-Meit (Mung Myit, Moung-m-ri) beyond the Ka-reu-ui, and along the Chinese frontier, as far as the latitude of Bamo (Mang-mo). They are civilised and remarkably industrious, being good carpenters, dyers, and blacksmiths. Their dha or swords are exclusively used in and around Bamo. Between Yunnan and Burma, by Bamo, the route passes across a rauge of hills inhabited by Ka-khyeng and Palong, and then enters a Shan country, the Ko-pyi-doung of the Burmans. The Palong inhabit the valley south-east of Bamo, beyond the first mountain range. They approximate to the Shan, of whom they are probably an offshoot; they wear the same dress, and are Buddhist, but they have affinities with the Ka-khyeng. They seem to resemble the Annamese in some respects. A race of the same name (Panong), but to which the Siamese apply the generic name of Ka or Kha, inhabit the mountains of Laos, bordering on Kambojia. They are a coarse and debased variety of the Annam and the Kambojian type. The Palong tribe have Shan and Ka-khyeng on the north, with Burmans on the south, between lat. 97° and 98° N., and in long. 23¼° N. The Paloug tribe are kindred to the Shan, and inhabit the hills east and north-east of the ruby mines, on the border of Burma and China. They are short athletic men, with fair skins; many of them have large grey eyes, and all have a small flat nose, much distended towards the nostrils. They wear a dark jacket and short breeches in the Shan style.—*Yule*, p. 169.

PALOO, Singh., Mimusops hexandra, *Roxb.*, has a hard, fine, close-grained, heavy Ceylon wood; heart-wood deep red-brown; recent layers reddish-yellow; its compact, even structure, admirably adapt it for turning wood.—*Exh.* 1851.

PALSAMUDRAM, in lat. 13° 57′ N., and long. 77° 41′ E., in Mysore, 4 miles west of the Chitore. The dak bungalow is 2279 feet above the sea.

PALUDINIDÆ, a family of prosobranchiate gasteropodous mollusca, inhabitants of fresh water. The genera included in it are paludina, valvata, ampullaria, amphibola, and bithinia. The genus Paludina, *Lam.*, is found in Europe, Asia, Africa, and America. The number of recent species of Paludinæ given by Woodward is 60, and of fossil species 50.

PALUMBUS ELPHINSTONEI, P. torquatus, P. pulchricollis, P. Torringtonii, of British India and Ceylon, are wood-pigeons.

PALUNG. Beng. Beta Bengalensis, native variety of beet-root cultivated for food.

PALWAH, a fish of Sind, called Pullah or Pullar in Bombay, and Hilsa of Bengal; in the Bombay market it is only eaten by natives, and its name is written Palo.

PALWAR. Hind. A boat on the Hoogly and Ganges, of 15 to 20 tons burden, employed for goods traffic.

PAMBAM, written also Paumben, a small town in the extreme south of the Peninsula of India, giving its name to the passage between the island of Rameswaram aud the mainland, in Madura district, Madras; situated in lat. 9° 17′ 20″ N., aud long. 79° 15′ 31″ E., at the western extremity of the island commauding the chanuel.

PAMBAN MANCHE. Tam. Snake-boat of Cochin. See Boat.

PAMBOO KALOO. Tam. Literally snake-stone. In Ceylon, a substance used by the people to apply to a snake-bite to extract the poison. It was examined by Faraday, who declared it to be a piece of charred bone which has been filled with blood, perhaps several times, and then carefully charred again.

PAMBU PRANDU. Tam. Circætus gallicus, *Gmel.* It is the common serpent-eagle of India. It generally circles in the air, but often flying along the ground like a harrier; its chief food is snakes and lizards.

PAMIDI PATTI. Tel. Gossypium, *sp.* Pamidi means valuable. Pamidi tangedu, Tel., Poinciana pulcherrima, *L.*

PAMIR, the Upa Meru of the Vedic Aryans, which Europeans have changed to Bam-i-Danya, or the roof of the world. Lieutenant Wood, of the Indian navy, early in the 19th century encamped on its summit, and traced the Oxus to its source. The ascent from Yarkand and Kashgar, westward to the table-land of Pamir, is almost imperceptible; aud when that lofty position is gained, where the average elevation is probably as much as 15,000 feet above the sea, a vast open plain is seen, which stretches from the valley of the Jaxartes in one direction, across the head-streams of the Oxus, to the top of the Kashgar or Chitral valley in another. This plateau may be 700 or 800 miles in extent.

Pamir is a very mountainous country: the peak of Kaufmann is 22,580 feet; Mount Gurunda, from which many of the rivers of Central Asia flow, is 20,900 feet; Mount Mustag, 25,800 feet. The summits of all these are covered with eternal snow, the limit whereof on the northern slope is at 14,000 feet high; on the southern, at 19,000 feet. The valleys of the Pamir are barren, only a few of them being covered with fertile meadows. From this plateau, the Oxus, Jaxartes, rivers of Yarkand and Kashgar, and the Gilghit branch of the Indus, derive their head-waters. The Pamir, to the height of some 12,000 feet, has no steppe region. There are valleys along the rivers up to a height of 14,000 feet, but the widest is only 20 versts. This peculiar feature the Pamir has in common with the Tian Shan and Tibet, where similar valleys of narrow width at considerable heights are found. Real lofty plateaux are not to be found on the Pamir. The mountains rise in lofty ridges to 6000 feet and 7000 feet above the valleys. The absolute height of the mountains of the Pamir reaches often to 19,000 feet, and three groups of great altitude reach as high as 25,000 feet. It is studded throughout with lakes, and from it descend four great river systems. The Narym, which is the main stream of the Jaxartes, runs through a long, luxuriant valley, between the culminating ridge and outer range of the Tian Shan, and drains all the northern face of the plateau. The Oxus, rising in the Sari Kul or Yellow Lake of Pamir, at least 300 miles to the south of the Jaxartes, receives from its right bank a multitude of small streams, which run to the south through rugged valleys, on the south-western face of the Pamir uplands. The western face of Pamir, between the Jaxartes and the Oxus, is far more precipitous than the eastern. Ridges run out as far as Samarcand and Karshi, and the streams from the upland which twine amongst these ridges form the Zar-afshan and Karshi part of the water system of the Oxus, though before they reach that river they are entirely consumed in irrigation.

Pamir Kul, in lat. 37° 14′ N., and long. 74° 18′ E., also called Burkut Yasin, a small lake, 13,300 above the sea, close to the crest of the Pamir steppe, and 102 miles east from Panja in Wakhan. From its western end flows the more southern of the two known branches of the Oxus. In summer, the neighbourhood is infested by Kirghiz and Kunjuti robbers.

Peschel rejects the view that these highlands were the primitive homes of the Indo-Europeans. He regards Bactria and Turkestan as likely to find more favour with students of the Indian and Iranian tongues. But he considers that it lay eastward of Nestus, now Kara-su, occupying both slopes of the Caucasus and the gorge of Dariel.

PAN, a race of the Kandh country, procurers for the Meriah sacrifices, numerous in Boad. In the Chutia Nagpur tributary states this class are regarded both by Hindus and aborigines as vile. The Kandhs associate with them on a more equal footing, allowing them to hold lands and to share in the village festivals. They also ply their trade as weavers, and the poorest of them work as farm labourers, cultivating land belonging to Kandhs, and making over to their landlords half the produce as rent.—*Dalton, Ethnol. of Bengal*, p. 299.

PAN. Hind. Betel-leaf, Piper betle, used as a masticatory, which takes the place of opium and tobacco in many Asiatic countries. Slices of the areca nut are wrapped in the fresh leaves of the betel-pepper vine, with a small quantity of quick-lime. This masticatory has a herbaceous and aromatic but astringent taste. Some of all classes, male and female, chew it, and allege that it strengthens the stomach, sweetens the breath, and preserves the teeth. It gives the lips, tongue, and teeth a reddish tinge. The Piper betle is cultivated in spots by itself; it requires much water and care.—*Simmonds' Dict.; Riddell.*

PAN or Pun. Hind. An ancient Indian currency, the fifth part of an anna. A sum of 80 cowry shells; also a land measure of $3\frac{3}{4}$ cubits. It is the source of the Anglo-Indian coin, Fanam, and seems to be derived from the Sanskrit Pana, money in general.—*Wilson.*

PAN and Pat are Sanskrit names for a leaf; and hence Panna, a leaf or sheet or paper, and Patera, a plate of metal or sacrificial cup, because these vessels were first made of leaves. There is a coincidence between the Sanskrit and Tuscan Panna. The Madonna Impannata, by Raphael, in the Pitti palace at Florence, is so called from the subdued light admitted through the window, the panes of which are of paper.—*Tod's Rajasthan*, i. p. 661.

PANA. Uriya. A wild predatory tribe, on the south borders of Orissa.

PANAK. Hind. A painted stick for extending a web during weaving.

PANALA. This, with its sister fort of Pawungarh, stands on a ridge about 12 miles to the N.W. of Kolhapur, forming part of a range of hills that runs nearly due east from the ghats. Its elevation above the plain of Kolhapur is 975 feet, and above the level of the sea at 2772 feet. In the Buddhist period, Panala and the neighbouring hills seem to have been favourite seats for recluses.

PANAMPARANAR, one of the twelve disciples of Agastiya, so called from the town where he lived. A treatise on grammar, Panamparanar Sutiram, and the preface to the Tolkappiyam, are attributed to him.

PANAX, a genus of the ivy tribe of plants, of the natural order Hederaceæ, viz.—

Aculeata, *Ait.*, China.	Fruticosum, *L.*, Java.
Arboreum, N. Zealand.	Longissomum, N. Zealand.
Cochleata, *D.C.*, Java.	Palmatum, *R.*, Chittagong.
Digitatum, *R.*, Sylhet.	Quinquefolium, China?
Fragrans, *R.*, Khassya.	

The species of Panax are herbs, shrubs, and trees, having the leaves and inflorescence variable. The plants of this family are not possessed of very decided medical properties, though the roots of all are said to possess medicinal qualities, and are much esteemed by the Chinese for their beneficial influence on the nerves.

Panax fragrans, *Roxb.*, Gooti-soona, Hind., a shrub, with fragrant flowers of a green colour, a native of Nepal.

Panax fruticosum, *Linn.*, is used in China and Cochin-China as a febrifuge, and as an astringent tonic. It has a shrubby, unarmed stem. It is a native of the Moluccas, the islands of Ternate, Java, and Amboyna, and is commonly grown in Indian gardens, and easily propagated from cuttings.

Panax pseudo-ginseng. Dr. Wallich has

discovered this species in Nepal; it is closely allied to P. quinquefolius.

Panax quinquifolium.

Aureliana Canadensis. | Ginseng, ... CHIN.

This plant is about a foot high, with glabrous, straight, simple stalks, terminating in three leaves, each composed of six uneven leaflets, a little pedicelled, oval, lanceolate, acute, and toothed at the edge. The flowers are borne on a central peduncle, and disposed in an umbel. The berries are kidney-shaped, red, compressed, crowned with the calyx and stones, and containing two semicircular seeds. It is a well-known plant. The roots are about the thickness of the finger, like those of parsley, of a whitish-yellow colour externally, white within, two to three inches long, wrinkled, or with rings, often divided into two branches, rarely into three or four, and these presenting a slight likeness to the human form, whence the Chinese name is derived; the parenchyme is formed of a horny and compact tissue, displaying some resinous points. Above the neck is a knotty twisted tissue formed by the remains of the old stalks. The odour is sweet and weakly aromatic, the taste saccharine, somewhat like that of liquorice, subsequently bitter, and rather aromatic. The root of an umbelliferous plant, the Sium ninsi, is often mixed in the druggists' shops, or mistaken otherwise for the ginseng; the essential difference consists in the ginseng having the neck covered with fibrous threads, the remnants of the cortical part of the stalk. The root abounds in gum and starch, and has a little resin and essential oil. The root, without any obvious cause, has attained the highest celebrity and esteem among Chinese for its alleged medicinal virtues. The Dutch brought it from Japan in 1640, but the Japanese themselves were indebted for it to China. The plant grows in the great forests of Tartary between lat. 39° and 47° N., but has also been found in abundance in Virginia and Canada, and the roots are now cheap in China. The Chinese name the root 'the pure spirit of the earth,' the 'recipe of immortality,' the 'queen of plants,' etc., and regard it as a panacea for all diseases. In A.D. 1709 the emperor of China commissioned 10,000 Tartars to go in quest of as much of this root as they could find; each one was to give two pounds of the best of it to the emperor, and to sell the rest for its own weight in fine silver. The roots enter into the composition of every Chinese medicine. It is reckoned a stimulant and restorative. By Europeans and Americans, however, it is looked upon as a mere succulent, similar in its qualities to liquorice.—*Eng. Cyc.; Royle's Ill. Him. Bot.; O'Sh.* p. 373; *Smith, Mat. Med.; Tr. Med. Soc. Cal.; Pl. As. Rar.* ii. p. 30; *Eng. Cyc.; Riddell; Voigt.*

PANCH, HIND., five; from the Sanskrit Pancam, PANJ., PERSIAN; hence Pani, the hand; Pente, GR., Quinque, LAT., Cinq, FR. Panch is a frequently occurring word in compounds.

Panch, five, is said to be the origin of Punch, who has himself, Judy, the dog, the devil, and the child; also of the drinking punch with its five ingredients,—spirits, water, sugar, the lemon, and spice, or, according to another account, spirits, tea, sugar, lemons, and water.

Pancha Ganga Ghat, the five rivers to which Hindu pilgrimages are made.

Panchayat or Panchait, a native court of arbitration, originally consisting of, as the name implies, five members, but which may consist of any number. The Panchayat of India is identical with the Hebrew and Roman custom of elders sitting at the gate, the γερουσια of the Greeks; in Ceylon, it is the Gam-sabawa.—*Tennant's Ceylon.*

Panchajanya or Panchaganya, the Sanchasura conch or shank shell trumpet of Krishna. It was formed from that of the sea-demon Panchajana.—*As. Res.* iii. 399, viii. 301.

Pancha karatta, the five great gods or lords, also the five faces of Siva.

Panchal, Panchala, or Pancham bandam, the five artisan castes of the Hindus, viz.:—

	Canarese.	Hindustani.
Goldsmith, . . .	Aksala.	Sonar.
Blacksmith, . .	Kambara.	Lohar.
Coppersmith, . .	Kantsagara.	Tambagar.
Stone-cutter, . .	Kassigara.	Sangtrash.
Carpenter, . . .	Bargia.	Barhai.

	Mahratta.	Tamil.	Telugu.
Goldsmith, .	Sonar.	Tattan.	Aosal ura.
Blacksmith,	Lohar.	Karuman.	Kamr uru.
Coppersmith,	Tambatgar.	Kannan.	Kantsar uru.
Stone-cutter,	Gondi.	Kul-tachan.	Kassi uru.
Carpenter, .	Sutar.	Tatchan.	Wad'l oru.

The Panchala wear the Brahmanical thread, and some of those amongst the Mahrattas and Tamils claim to be Brahmans.

Pancha-linga, he who has five linga, a name of Siva, probably from the five places celebrated for his symbol, viz.:—(1) Conjeveram, where there is the Prithivi-linga, or linga made of earth; (2) Jambukeswara, where the Ab-linga is said to exude water perpetually; (3) Tirunamale, where the tejo-linga sparkles with light; (4) Kalahasti, where there is the Vayu-linga, the lamp of which is said to be in constant vibration with the wind; and (5) Chidambara, where there is the Akasa-linga or ethereal linga, an imaginary linga worshipped without any material form of it being kept in the temple.

The Sankhya philosophy reckons five organs of sense and five organs of actions; also five elements produced from the five subtle particles, ether, air, fire, water, and earth.

Pancha-gavya or Pancha-kavya, the five products of the cow,—cow-dung, urine, curds, milk, and ghi, sacred to the Hindu.

Pancharatna, five precious articles, gold, silver, pearls, crystal, and the emerald.

Pancha —? The five sweet juices, curds, milk, ghi, sugar, and honey.

Pancha —? The twigs of five trees, Ficus Indica, F. religiosa, F. glomerata, Mangifera Indica, and Mimusops elengi.

Pancha —? The five astringent juices from macerating in water the barks of Eugenia jambolana, Bombax heptaphyllum, Sida rhomboidea, Zizyphus jujuba, and Sesbania grandiflora.

Panchanga, SANSK., a form of salutation with Hindus. An almanac; a calendar.

Pancham, HIND., the dominant fifth in the musical scale.

Panchama, the fifth lunar day of the bright or dark half of each month.

Pancha-maha-patika, in Hinduism, the five

heinous sins, viz. killing a Brahman, stealing gold, drinking spirits, intercourse with the wife of a spiritual preceptor, and association with a person who has committed these sins.

Pancha-maha-sabda, the martial drum, one of the insignia of royalty of the Chalukya dynasty when ruling at Kalyan.

Panchamaras, Mahomed and his four confidential associates.—*As. Res.* ix. p. 143, x. p. 96.

Panchakki of Nepal, a water-wheel, a water-mill on the bank of a river.

Pancha Shegam, a Hindu ceremony, which consists of pouring milk on the lingam. It is afterwards very carefully preserved, and some drops of it are given in the Panch Shegam office to dying people, that they may merit the delights of their heaven.

Pancham Bandham, five servile tribes in Karnata, of whom are the Pareya, Bulwan, Chakili, and Toty.

Panch Mukhi, five-faced, a name of Mahadeva.

Pancha Vaddium, five musical instruments of Malabar, viz., Jenta, Chengalam, Ilatalom, etc., sounded three times daily, before Hindu princes.

Pancha-Vriksha, the five trees of Swarga, the heaven of Indra. Their names were Hari-Chandana, Kalpa Vriksha, Mandara, Parijataka, and Santana.

Panch-Chulia, five fireplaces, the kitchen of the goddess Nanda, in a mountain in Kamaon; its two east peaks are 22,673 and 21,114 feet above the sea.

Panch Dravid and Panch Gaur are usually taken to indicate the Hindu arrangement of the Dravida and Gaur tongues, also the Dravida and Gaur Brahmans. The pandits named the five Dravida tongues, the Telinga, Kanatika, Mahrati, Gurjara, and Dravida or Tamil proper; but at present Dr. Caldwell displaces the Gurjara or Gujerati and the Mahrati, and considers the Dravida proper or Tamil, the Telinga, and the Karnataka (Kannada or Canarese) to be the three principal languages of the Dravidian family; and he adds thereto the Malealam, the Tulu, and the uncultivated Toda, Kota, Gond, and Ku, making altogether nine Dravidian or Tamilian tongues. The five Gaur Brahmans are Kanya-Kubhya, Gaur, Saraswat, Maithal, and Ut-Kala.

Panch-patta, HIND., a striped silk of Ahmadabad.

Panch-Pira also Panch-tan, a place in Ulwar or Mewat, consecrated to five Muhammadan saints.

Panchrangi of Dharwar has a warp of silk and weft of cotton; worn ordinarily by dancing women, not considered fit for respectable women.

PANCHALA, the country north and west of Dehli between the foot of the Himalaya and the Chambal. It was in the dominion of a race who were ruling in India at the time of the Kuru and Pandava strife. Their sway extended through the whole Southern Doab beyond Benares, as far as the river Karmanvati, which was for a time considered the frontier line of the two tribes. Canyacubya, the modern Canouj, appears in early times to have been called Panchala. It seems to have been a long but narrow territory, extending on the east to Nepal (which it included), and on the west along the Chambal and Banas as far as Ajmir. Little else is known of its early history, except through the Rajput writings and traditions collected by Colonel Tod, and the inscriptions examined by Professor Wilson, with those translated and discussed by Principal Mill. The former relate that it was taken from another Hindu dynasty, A.D. 470, by the Rahtor Rajputs, who retained it until its conquest by the Muhammadans in A.D. 1193, when they withdrew to their present seats in Marwar. The identity of Canouj and Panchala is assumed in Menu 11, 19. Its limits, as assigned in the Mahabharata are made out by connecting notes in the Oriental Magazine, iii. 135, iv. 142. These boundaries, enlarged a little on the south and on the west, are the same as those assigned by Colonel Tod to the same kingdom at the time of the Muhammadan invasion. According to the Mahabharata, the great kingdom of Panchala extended from the Himalaya mountains to the Chambal river. The capital of North Panchala, or Rohilkhand, was Ahi-Chhatra, and that of South Panchala, the Central Gangetic Doab, was Kampilya, now Kampil, on the old Ganges between Budaon and Farkhabad. Just before the great war, or about 1430 B.C., the king of Panchala, named Drupada, was conquered by Drona, the preceptor of the five Pandu. Drona retained North Panchala for himself, but restored the southern half of the kingdom to Drupada. According to this account, the name of Ahi-Chhatra, and consequently also the Buddhist legend of Adi-Raja and the serpent, are many centuries anterior to the rise of Buddhism. It would appear, however, that the Buddhists must have adopted and altered the legend to do honour to their great teacher, for Hiwen Thsang records that outside the town there was a Naga-hrada or 'serpent tank' near which Buddha had preached the law for seven days in favour of the serpent king, and that the spot was marked by a st'hupa of king Asoka. In A.D. 1870, the only existing st'hupa at this place was called Chattr, and General Cunningham infers that the Buddhist legend represented the Naga king after his conversion as forming a canopy over Buddha with his expanded hood. He thinks also that the st'hupa erected on the spot where conversion took place would naturally have been called Ahi-Chhatra, or the 'serpent canopy.' A similar story is told at Buddha Gaya of the Naga king Muchalinda, who with his expanded hood sheltered Buddha from the shower of rain produced by the malignant demon Mara. The great mound of ruins called Atranji-Khera is situated on the right or west bank of the Kali Nadi, four miles to the south of Karsana, and eight miles to the north of Egta, on the Grand Trunk Road. The Panchali-Kudu in Telugu is a native of Panchala.—*Bunsen*, iii. p. 554; *Elphinstone*, i. p. 402; *Cunningham's India*, p. 360; *As. Res.* viii. pp. 336–341.

PANCHAM, a Lingaet layman; also one of the eighty-four Gachchas of the Jains.—*As. Res.* xvii. p. 293.

PANCHAMI. See Naga; Serpent; Snake.

PANCHAMI RISHI, a Hindu festival, held about the beginning of September, and is supposed to be in honour of seven Rishi or sages, represented by the seven stars of Ursa major or the Pleiades.

PANCHANGA, a Hindu almanac. The Hindu almanacs are all so complicated, and so few persons are able to understand them, that in every Indian town astrological professors, called Joshi, Jotisi, or Jotisaru, earn a livelihood by going in

the early morning from house to house to mention the circumstances by which the religions observances of the Hindus are to be guided. The Hindu year is solar or sidereal, but the religious life of the Hindu follows the lunar calendar. A very complicated method has been devised for keeping the two concurrent, and the result is the Hindu 'luni-solar year,' a mode of reckoning time which has no parallel in any age or in any country. The solar year begins with the entrance of the sun into the sign Aries, and is of the same length as that of Europe; but the Hindu allows for the precession of the equinoxes, so that his year is gradually getting a little behind the Europe year. The luni-solar year begins with the new moon which immediately precedes the commencement of the solar year. The lunar month consists of thirty tithi or lunar days, which vary slightly in length according to the varying motion of the moon. These lunar months and days have to be kept concurrent with solar time, and this is effected by intercalation and omission. The lunar months are named from the solar month in which the new moon falls; and when two new moons occur in one solar month, the name of that month is repeated in the luni-solar calendar. It happens, at long intervals, that there is no new moon in one of the solar months, and when this occurs the name of that month is expunged. The same principle applies to the days. When two tithi or lunar days end in one solar day, that day is repeated, and when it happens that no tithi ends in a solar day, that day is expunged. The intercalated months and days are known as adhika, excessive, and the expunged as kshaya, destroyed. Each lunar month is divided into two halves, or fortnights, that of the increasing moon called sudi, and the waning half called badi; and the days are numbered from one to fifteen.

It will be seen from this how indispensable an almanac is to a Hindu. In his public and private accounts, and in his usual daily occupations, a Hindu keeps to civil reckoning of time. In his religious ceremonies he must keep his attention to astronomical aspects, and in his festivities and other occupations, to the astrological aspects of the planets. In business matters a solar year and months are generally used, as in the era of Salivahana and others; but the Samvat, or era of Vikramaditya, which follows the luni-solar reckoning, is also extensively employed in the ordinary affairs of life. The almanac being thus a necessity, great numbers of almanacs are published in all the principal languages, varying of course in accuracy and completeness, but all showing a considerable amount of scientific knowledge. The Hindu almanac is everywhere called Panchanga, because it must exhibit five (pancha) distinct matters:— 1. the tithi or lunar day; 2. the vara or solar day of the week; 3. the nakshatra or lunar asterism for each day; 4. the yoga, the conjunctions and transits of the planets, eclipses, etc.; 5. the karanas or subdivisions of the lunar day. These are essentials, and to them must be added the sankranti or entrance of the sun into the different signs of the zodiac. The corresponding dates of different eras current in the country are generally given,—the Christian era, the Muhammadan era of the Hijira, and the Parsee era of Yezdejird. The table for each fortnight must show also the exact time of the rise, culmination, and setting of the sun, and the position of the moon and the planets, and may give illustrative diagrams. The amount of the accumulated precession of the equinoxes at the beginning of the year is assumed to be 18° 11′ 10″, and the annual variation 50′ 2″. There is also in the Panchanga almanac a table of latitudes and longitudes of important places in India, the approximate declination of the sun for each day of the year, and the ascensional difference. The various eclipses are carefully described, and many have diagrams exhibiting the phases as visible. There are lists of the names of the nakshatras, the tithi, the yogas, and the karanas, the signs of the zodiac, the days of the week, and the six seasons of the year, etc.

The ceremonial calendar of fasts and festivals is an important matter to every Hindu. Religious observances of greater or less importance are constantly occurring. These are entered against their respective dates in the calendar, and in some versions short accounts are given of the most important of them. Of New Year's Day, we are told that in the morning a Hindu rubs his body with scented oil, and then bathes with warm water. Flags are raised on poles by each family to represent the banner of Indra, king of the gods. The leaves of the bitter nim tree are eaten, which secures health to the body. The almanac for the New Year is worshipped, and its predictions for the year are heard from one versed in astronomy and astrology, who is remunerated handsomely. The Brahmans also receive liberal gifts from the people. Gifts or feasts to Brahmans are universal on all festivals, and it is impressed upon the celebrants that without these the observance is ineffectual. On the 3d Vaisakha sudi (24th April) 'earthen water-pots and fans are given to Brahmans for the coming summer season, that the pitri or manes of deceased ancestors may feel comfortable during this season in the heavens.' On the 15th Jyaishtha sudi, 'women fast and go to worship at the foot of the Indian fig-tree to preserve them from widowhood.' On the last day of Asarha badi, all the lamps in the house are washed, cleaned, 'and placed in a row, and offerings of incense and flowers are made to them. Sweetmeats are prepared in honour of the lamps, and are eaten by the whole household.' The 5th Srawan sudi is held sacred to the serpent gods. 'Ceremonies are performed on this day to ensure against the bites of snakes.' On the last day of the same month, 'the 64 Yogini, or female attendants of the goddess Durga, are worshipped, particularly by women, with the hope of obtaining issue.' The 10th Aswin sudi, at the autumnal equinox, is the Dasahra, 'the victorious tenth,' in honour of the victory of Durga over a monstrous demon. This is a great holiday, lasting ten days; but it is only the last of the ten days that is properly called Dasahra. The image of the goddess is worshipped with various observances throughout the ten days, and on the last day it is borne with ceremony and thrown into the water. The 13th of the sudi or light half of the same month is the Dewali or Dipawali, a great festival in honour of Kali, another form of the goddess Durga. This is the great 'feast of illumination, during which houses are cleaned, whitewashed, and illuminated.' Fireworks are displayed, and 'playing with dice is the chief recreation of the well-to-do people.' The Makara-sankranti is a solar festival, held in honour of the sun, on the day

of his entrance into Capricorn. The Holi, also, or spring festival, is held in Phalguna, the last month of the year, in honour of Krishna, but is essentially a spring festival. Many of its observances have reference to that season, and some of them find their counterparts in other regions of the world. This feast lasts fifteen days, and resembles the Roman Saturnalia or the modern Carnival. People throw red powder at each other, and females are saluted with very impure exclamations and jests. On the day of full moon a pile is lighted before every house and in parts of the city, and cakes and cocoanuts are offered. In Bengal, Madras, and other parts, swinging was a great feature in this festival, but it has been prohibited by the British Government.

A third portion of the almauac is the astrological, and by no means the least important in the eyes of the great mass of Hindus. Lucky and unlucky days and seasons, and the influence of the planets and astronomical phenomena, are to the Hindu settled articles of belief which are beyond question. No matter of importauce can be entered upon without consultiug the Brahmans, and the Brahmans consult the Panchanga. There is merit even in referring to the almanac; and those who on New Year's Day hear what are the celestial influences of the year, thrive well in this world, free from sickness, calamity, or poverty, and become possessed of stores of corn and treasure. From the tithi a man derives good and weal; from the days of the week, long life; from the nakshatras, liberation from sin; from the yoga, liberation from disease; from the karanas, success in a desired work. There is a table of auspicious days for the investiture of Brahmans with the sacred thread, and another table of auspicious days for marriages. Hindus must of course be aware that they often fail in obtaining the good things promised upon astrological authority, but noue would venture to brave the dangers of unlucky days and inauspicious conjunctions. They may be disappointed by the past, but they cannot venture to challenge the future. Another table enables a person to calculate his luck for the year, by the sign of the zodiac the moon was in at his birth. Absurd as all these are, they are not set down at haphazard, but are the results of certain rules and calculatious. The influeuce of the planets during a recent year was thus predicted:—'The sun will be king. The minister is Mars. The lord of the first harvest is Jupiter. The lord of the clouds is the moon. The lord of the waters is Saturn. The lord of the last harvest, Mercury. When the sun is king, there is destruction to corn, flowers, fruits, and roots; fear from robbers; no water; disagreements among the rulers of the world, and disease to the inhabitants. When Mars is prime minister, there will be scarcity of rain, destruction to corn, fear from fire aud robbers, pain from diseases, and the rulers of the land will fight against each other.' Happily for the world, and happily also for astrology, there are countervailing influences. When Jupiter is lord of the first harvest, the indication is that there will bc plenty of rain, corn, water, wealth, and fruit, and gladness among the people; and under the influence of the moon, the lord of the clouds, there will be plenty of corn, flowers, and fruits; the learned will be happy, and the rivers and wells will overflow with water. Among the many other portents of the year, there is one which foretells success to robbers, impostors, and wicked people; another forctells victories to kings with small armies over those with large ones. One most desirable portent indicates moderation in all things, and another happiness to all mankind, and plenty of corn and fruit. Some of the portents are very incongruous and amusing in their association of things. One indicates destruction to potentates, asses, and earthen-pot makers; another bodes ill to black beetles, but happiness to the worshippers of Siva.

Such is the mixture of wisdom and folly presented by a Hindu almanac. The science which Hindus display in the preparation of their ephemeris is worthy of admiration, and the care they take in fixing the proper times for their religious festivals is deserving of all respect. Such things, in Great Britain, are not dead even now. Old Moore still flourishes; the Vox Stellarum, as declared by him, is yet listened to. Zadkiel is not yet defunct; and more than one low-class publication puts forth pretended astrological predictions. Even among educated people are to be found some who have faith in astrology. If astrology has been able to maintain a precarious stand against the overpowering attacks of western science, what expectation or hope can there be of its extinction in India? There it has for ages mingled with every man's daily and religious life, and will last as long as, and probably even survive, the religion with which it is associated.

PANCHA-TANTRA, literally five books; a famous collection of tales by Vishnu-Sarman, a Brahman, about the end of the 5th century of the Christian era, for the edification of King Dabishlim's sons. They were translated into Pehlavi, in the 6th century, in the time of Nushirwan; from that into Arabic by Abdallah bin Mokaffah about the middle of the 8th century; then into Persian by Rudaki, about the close of the 9th century, who received 80,000 dirhams for his labour. About the middle of the 12th century (A.D. 1150), in the time of Bahram Shah, a Persian prose translation was made; and a subsequent version was made by Kashifi, and named the Anwar-i-Suhaili. It is the basis of the Iyar-i-Danish in modern Persian, and the latter has appeared in Urdu as the Khird-Afroz. A Greek version was made by Simeon Seth at the command of Alexis Commenes, and they appeared in Hebrew and Aramaic, Italian, Spanish, and German. The first English edition was in the 16th century, then in French in 1644 and 1709. A Latin version was made by order of John of Capua, from the Hebrew, in the 13th century, and from it translations were made into all the languages of modern Europe, until it became universally known as Pilpay's Fables. It has been translated into the Tamil, Canarese, and all the spoken languages of India. Pilpay is evidently derived from Bidpai, but in the original Sanskrit no name similar to this occurs. The Arabic translation is called Kalila-wa-Damna, the names of two jackals which take a conspicuous part in the first story, their names in the original Arabic being Karataka and Damanaka. The later Persian translation is called Anwar-i-Suhaili, or Lights of Canopus, and the Turkish rendering of it is the Humayun Namah. With the exception of the

Bible and the Pilgrim's Progress, there is probably no work that has been translated into so many languages as the Pancha-Tantra. There is great diversity in the manuscript copies of the Pancha-Tantra. In some versions the residence of the king is in Mahilaropya, a city of the south of India, which Professor Wilson identifies with St. Thomé. The Cauarese and Sanskrit versions make it to be Pataliputra on the Ganges. Ward says it is the only original work on ethics in the Sanskrit language.—*Garrett; Ward.*

PANCHGHAR has ten small towns. It is celebrated for its groves of date trees; is occupied by the Gitchki tribe of Brahui, of peaceful and agricultural habits.

PANCH MAHAL, a British district on the eastern frontier of Gujerat, between lat. 22° 30′ and 23° 10′ N., and long. 73° 35′ and 74° 10′ E.; area, 1731 square miles; population in 1872, 240,743 souls,—89,624 being Koli, 68,710 Bhil, and 5966 Naikra. Naikra are the lowest and poorest, and until the middle of the 19th century were turbulent and unsettled. The Bhil and Koli are bad cultivators, thriftless, idle, and fond of strong drink. To check the thieving tendencies of Bhil and Koli, and to prevent any renewal of Naikra risiugs, the Panch Mahals are provided, in addition to the unarmed police, with a regiment called the Gujerat Bhil Corps, 530 strong. Of the 14,921 Musalman, 4461 are Ghauchi, generally oil-pressers, but formerly carriers of merchandise between Malwa and the coast.—*Imp. Gaz.*

PANCHWAI. Beng. A passage boat on the Lower Ganges.

PANDA or Punda, the proprietary or presiding priest of a Hindu temple of Siva, usually, though not invariably, a Brahman. The office is hereditary; and in some places, as at Benares, the panda officiates only on particular occasions, the duties of daily worship being performed by inferior priests or pujari in his employ. The term Panda is also applied to a priest who is stationary at any particular place or shrine. It is also described as properly applicable to a particular tribe, a branch of the Bharadwaja liue (Gotra), one of the chief sections of the Canouj Brahmans, with such names as Bakhtawar Pandy. Up to the Mutiny, many of them entered the Indian army, and the word has been multiplied by the British, since the revolt of 1857–58–59, Pandy being applied to all the rebels, from the circumstance of the first one who was executed at Barrackpur being of the name of Mungul Pandy.

PANDAL. Anglo-Tam. From Payal, Tam. An awning formed of grass, leaves, branches, or cloth; a platform, a canopy, a stage, a booth, a shed.

PANDANACEÆ. *Lindl.* An order of plants comprising 2 genera, 16 species, viz. 12 Pandanus, 4 Freycinetia. The Pandanaceæ or screw-pines abound in the Mauritius, Bourbon, India, the Straits, and Burma. The following species of the Pandanus genus are known in S.E. Asia:—

P. amaryllifolius, *Roxb.*, Amboyna.
P. Andamanensium, *Kurz*, Andamans.
P. candelabrum, *Pal., Beauv.*, N. Guinea.
P. caricus, *Rumph.*, Moluccas.
P. drupaceus, *Pet. Th.*, Mauritius.
P. edulis, *Pet. Th.*, Madagascar.
P. elegans, *Pet. Th.*, Mascarenhas.
P. fascicularis, *Lam.*, Moluccas.
P. fœtidus, *Roxb.*, Bengal.
P. furcatus, *Roxb.*, Malabar, Chittagong, Pegu.
P. graminifolius, *Kurz*, Burma.
P. humilis, *Rumph.*, Moluccas.
P. leram, *Jones*, Nicobar.
P. lævis, *Rumph.*, Burma.
P. marginatus, *Roxb.*, Mauritius.
P. moscatus, *Rumph.*, Amboyna.
P. odoratissimus, *L. fil.*, all S. Asia.
P. utilis, *Bory.*, Madagascar, Mauritius.

The name is derived from the Malay Pandang, and called screw-pine from their leaves, which resemble those of the pine-apple, and are inserted spirally along the stem. Species are found also in Mauritius, Bourbon, and Australia. The leaves are composed of tough, longitudinal fibres, white and glossy, which enable them to be employed for covering huts, making matting, as well as for cordage; and in the Mauritius, for making sacks for coffee, sugar, and grain. The species which is best known in India is P. odoratissimus, on account of the exquisite perfume of its flowers. This plant, as well as some of the other species in the Mauritius, are known by the name Vacoa or Baquois, said to be P. sativus. On many of the Burmese boats, sails are made of the large narrow leaves sewed together of a species that has a trunk like a palm, and the fruit is used by the Karens to hackle their thread. The smaller and finer mats in common use are fabricated from the leaves of this species, which grows in Tenasserim above tide waters.

According to De Candolle, one species of pandanus, when opening in flowers, emits an electric spark, accompanied by a noise.

The fruit of a pandanus is an article of food amoug the natives of the north coast of Australia, where it is prepared by steeping in au embanked puddle. Dr. Leichhardt found the pandanus fruit in extensive use among the natives of the Gulf of Carpentaria, and was inclined to believe that they obtain a fermented liquor by this process of soaking. The practice is more probably adopted for the purpose of removing some deleterious substance, similar in its nature to the heart of the manioc. The fruit of the cycas palm is sliced up and dried in the sun with the same object.—*G. W. Earl, Papuans*, p. 171; *Marius*, p. 121; *Jour. Agric. Soc. of India*, 1843, p. 92; *Royle, Fib. Pl.* p. 35; *Royle, Ill. Him. Bot.* p. 408; *Roxb. Fl. Ind.* iii. p. 741; *Mason.*

PANDANUS FURCATUS. *Roxb.* Tha-bau, also Ta-gyet, also Tau-ta-kyet, Burm. Lowland screw-pine. The large coarse mats in universal use in Tenasserim are made from the leaf of a species of screw-pine that grows abundantly on the lowlands near tide waters. H-sat shwa gyee, Yæ ta kyet, are other Burmese species.—*Mason.*

This grows along the coasts and in moist parts of all the Peninsula of India, and its leaves are

extensively manufactured into mats, baskets, and hats. The fibre of the leaf is white, soft, glossy, ill suited for cordage, but it has been found well adapted for the preparation of a good quality of paper, also for good sacking. Its fibrous aerial roots are much employed as paint brushes. The people of the Mulgrave Archipelago are said to use the juicy pulp and the pleasant kernels of the fruit. The wood is hard and durable; the flowers are used in garlands, and the red and yellow nuts as ornaments. All soils and situations seem to suit it equally well, and it flowers chiefly during the rainy season. It is much employed to make hedges, for which it answers well, but requires too much room. The lower yellow pulpy part of the drupes, and also the tender white base of the leaves, are eaten raw or boiled during scarcity.

The fusiform roots are composed of tough fibres, which basket-makers split and use to tie their work with; they are also so soft and spongy as to serve the natives for corks. In the Mauritius, its leaves are employed for package bags for the transport of coffee, sugar, and grain. As soon as gathered, the spines on their edges and dorsal nerve are stripped off, and the leaf divided into slips of the breadth proper for the use they are required for; this operation is performed with the blade of a common straight knife; they are then laid in the sun for a few hours to dry. When required for working into mats, the slips are passed under the blade of a knife, applied with moderate pressure, to remove all asperities on their surface, which gives them a polish, and makes them plain and more convenient to the hands. With the leaves, the natives of Southern India and the inhabitants of the Friendly Islands make a fine kind of sleeping mat, which they stain yellow and red with cassia leaves and Vatinga cottay. They are also used to make the common kind of umbrellas, called by the Tamils Talay elley kedri. The fine furnitures of Madras are packed in mats of these leaves. The natives of India are fond of the scent of the flower, which they place among their clothes. In the district of Ganjam, the flowers are said to be frequently tenanted by a small and very venomous snake. The male flowers are exceedingly fragrant, and great favourities with the Burmese. The flower is constantly referred to by the Sanskrit poets by the name Ketaki, and is the Keora and Ketgi of the Hindus. The Arabs call it Kazi, and Avicenna described it under the name of Armak. Oil impregnated with the odour of its male flowers, called Keore-ka-atr, costs two rupees the tola; and the distilled waters are highly esteemed both for their odour and their medicinal use as stimulants. This tree is often alluded to in the Hindu drama. In 'Malati and Madhava' the latter says,—

'Night, ever friend to love, now spreads its shade;
Faint in the east the gentle moonlight gleams,
Pale as the palm's sear leaf, and through the air
The slowly rising breezes spread around
The grateful fragrance of the ketaki.'

The Hindus use the flowers in all the ceremonies made in honour of Pulliar, Subramaniar, Mariamma, and Vishnu, but never in those of Siva.—*Eng. Cyc.; Graham's Cat. of Plants*, p. 227; *Chow-Chow*, p. 299; *Cal. Cat. Ex.*, 1862; *Mad. Ex. Jur. Rep.; Singapore Cat. Ex.*, 1862; *Sonnerat's Voyage*, p. 9; *Roxb.; Rohde, MSS.; M. E. of* 1857; *Ains.; Mason.*

PANDANUS UTILIS. *Borr.* The mats in which Mauritius sugar is imported are made of the leaves of P. utilis, *Borr.*

PANDARAM, a Saiva devotee; the officiating priest at the temples of Siva. This word seems to be Panduranga, or pale complexioned, from these individuals smearing themselves with ashes. Pam also means song. In the south of India they are Hindus of the Sudra section, worshippers of Siva, of whom many are professed mendicants, but many are learned men. These are not Vira Saiva, nor do they wear the lingam or adore Basava.—*Brown, Jangams*, p. 7.

PANDARPUR. A town of the Sholapur district, Bombay Presidency, situated in lat. 17° 40′ 40″ N., and long. 75° 22′ 40″ E., on the left bank of the Krishna, and 1378 feet above the sea. Pandarpur contains a celebrated temple, dedicated to the god Vithoba, regarded as an incarnation of Vishnu. In honour of this god, three fairs are annually held.

PANDHRI, a local tax levied on the non-agricultural classes, on shops, in the Madras presidency.

PANDION HALIÆTUS. *L.* The osprey.

P. Indicus, *Hodg.*	P. fluvialis, *Savi.*

Macha rang, . NEPAL.	

The osprey or fish-hawk is spread over all Europe, Asia, and Africa. It is common along all the large rivers of India, and at most of the large lakes and tanks even far inland. It plunges from a great height into the water, and can take up a fish of considerable size, but the Haliætus leucogaster frequently robs it of its prey. A northern poet says,—

'Soon as the sun, great ruler of the year,
Bends to our northern climes his bright career,
And from the caves of ocean calls from sleep
The finny shoals and myriads of the deep;
When freezing tempests back to Greenland ride,
And day and night the equal hours divide;
True to the season, o'er our sea-beat shore,
The sailing osprey high is seen to soar,
With broad, unmoving wing; and circling slow,
Marks each loose straggler in the deep below;
Sweeps down like lightning! plunges, with a roar!
And bears his struggling victim to the shore.
The long housed fisherman beholds with joy
The well-known signals of his rough employ,
And as he bears his net and oars along,
Thus hails the welcome season with a song:—

'The osprey sails above the sound,
The geese are gone, the gulls are flying;
The herring shoals swarm thick around;
The nets are launched, the boats are plying:
Yo ho, my hearts! let's seek the deep,
Raise high the song, and cheerily wish her,
Still as the bending net we sweep,
"God bless the fish-hawk and the fisher!"

'She brings us fish, she brings us spring,
Good times, fair weather, warmth, and plenty;
Fine stores of chad, trout, herring, ling,
Sheepshead, and drum, and old wives dainty.
Yo ho, my hearts! etc.

'She rears her young on yonder tree,
She leaves her faithful mate to mind 'em;
Like us, for fish, she sails to sea,
And plunging, shows us where to find 'em.
Yo ho, my hearts! etc.'

PANDIT, a Brahman learned in the Sanskrit. It is to the Hindus what hakīm is to the Muhammadans, but it is a term applied to all Kashmiri Hindus. They are mostly of the Brahman-

ical caste, wonderfully fair, and have no objection to flesh-eating. Numbers of them are now settled in India.—*Calcutta Review.*

PANDO. Hind. Artificial whiting, or plaster of paris.

PANDRAKARA, a race who rear silkworms.

PANDRETHAN, a temple in Kashmir, built between A.D. 913 and 921. It is supposed to have been a Vaishnava temple.

PANDU, from whom the Pandava princes of Hastinapur were named, was a descendant through Bharata from Puru, the great ancestor of one branch of the Chandravansa or Lunar race. A descendant of Bharata was king Santana, who married a widow named Satyavati, and two sons, Chitrāngada and Vichitra-virya, were born. Chitrāngada fell in battle, and Vichitra-virya succeeded to the throne, but he died without a son, leaving two widows, Amba and Ambalika, daughters of the king of Kasi; and Satyavati, who had had a son, Krishna Dwaipayana or Vyasa, by her former husband, called on him to raise up seed to his half-brother. The elder widow bore a son, blind Dhritarashtra. The younger widow bore Pandu; and a slave girl bore a third son, named Viduru; and because of Dhritarashtra's blindness, Pandu came to the throne. Pandu had two wives, Kunti and Madri, with whom, however, he did not, as the legend says, consort; and he and his wives retired to the Himalaya, where he died. But Kunti had three sons, Yudishthra, Arjuna, and Bhima, begotten respectively by the deities Dharma, Vayu, and Indra; and the two sons of Madri, Nakula and Sahadeva, by the twin Aswini gods. These were the five Pandava.

On Pandu abdicating, his half-brother, the blind Dhritarashtra, re-ascended the throne, and his sons took the title of Kaurava, from their ancestor Kuru. The Pandava lads and the Kaurava lads were brought up together at Dhritarashtra's court, but they were constantly quarrelling, and their enmity reached a height on Dhritarashtra passing by his own children and nominating Yudishthra to be his successor. For the sake of peace, the five Pandava retired to Vāranāvatu, and, being followed there by the active enmity of their cousin Duryōdhana, they escaped to the forest disguised as Brahmans.

Virat, the capital of Matsya, is celebrated in Hindu legends as the abode of the five Pandu during their exile of twelve years from Dilli or Indraprastha. The country was famous for the valour of its people, as Menu directs that the van of an army should be composed of 'men born in Kurukshetra near Indraprastha, in Matsya or Virata, in Panchala or Kanya Kubja, and in Surasena, of the district of Mathura.' The residence of Bhim Pandu is still shown on the top of a long, low rocky hill about one mile to the north of the town. The hill is formed of enormous blocks of coarse gritty quartz, which are much weather-worn and rounded on all the exposed sides; some of these blocks have a simple, straight face passing onwards, the result of a natural split, of which advantage has been taken to form small dwellings, by the addition of rough stone walls plastered with mud. Such is the Bhim-gupha or Bhim's cave, which is formed by rough walls added to the overhanging face of a huge rock about 60 feet in diameter and 15 feet in height. Similar rooms, but of smaller size, are said to have been the dwellings of Bhim's brothers. They sought shelter in various countries near the Indus; and while at the court of king Drupdeva in Kampil-nagara of Panchalika kingdom, Arjuna's skill in archery carried off his daughter Draupadi, who became the bride of the five brothers. After being won by Arjuna at her Swayamvara or tournament, she was taken to the house of their mother Kunti, who desired the brothers to retain her as their wife. Between that time and the interval of her marriage, Draupadi performed the usual household duties; and ultimately, with Kunti and Draupadi in one car, and Yudishthra and his brothers in another, the family proceeded to the town of Kampila, where the marriage ceremony was performed. The five brothers had each a house and garden of his own, and Draupadi dwelt with each of them in turn for two days at a time; and it was agreed upon that another brother, under pain of being exiled for twelve years, should not enter where Draupadi was staying. But Arjuna broke the rule, and became exiled.

On the occasion of Krishna visiting his Pandava relatives at Hastinapur, accompanied by his wives and singing and playing women, Satyabhama, speaking with Draupadi, the polyandric wife of the Pandava, remarked to Draupadi, We, who are so many thousands in number, have all but one and the same husband in Krishna, and we are all happy with him: how comes it then that you have five husbands, and are not ashamed before men? To this Draupadi replied, You are every one jealous of each other, and are always talking of your suspicions one of another. But I never speak one word which all my five husbands may not hear alike, and which would give to either the smallest offence. Descended from the ancient sovereigns of the countries of Hindustan bordering upon the Jumna, thus called Panduan Raj, or the kingdom of the Pandu, in Hindu mythology, the five Pandu are regarded by the present Hindus as five demigods.

The strife between the cousins ultimately led to the destruction of the Kaurava in a great war, described in the Mahabharata.

These legends show customs of ancient India, some of which are still in force. As one of these still recognised, Menu, regarding the choice of a husband, enjoins parents to select a handsome son-in-law; and adds, 'Three years let a damsel wait, though she be marriageable, but after that term let her choose for herself a husband of equal rank.' But in the days of the Pandu, one mode of selecting a husband was the Swayamvara or self-choice, where a girl chose her own husband. In the Mahabharata, the cases are mentioned of Pandu with Pritha, Yudishthra with Devika, Sahadeva with Vijaya, Sivi and Devaki, Nala and Damayanti, Draupadi and Arjuna. Menu describes eight modes of marriage, viz. Brahma, Deva, Arsha, Prajapatya, Asura, Gandharva, Rakshasa, and the eighth and worst, Paisacha; the first six for a Brahman, the four last for a warrior, and the same four, the Rakshasa excepted, for the third and fourth of the Hindu castes.

The practice of a relative raising children for a deceased childless relative is sanctioned by Menu, who says: 'On failure of issue by the husband, the desired offspring may be procreated either by his brother or some other near relative, called

Sapinda, on the wife, who had been duly authorized.' Pandu, also, when lamenting his childlessness, says to Pritha, 'In distress men desire a son from their oldest brother-in-law.'

The Gujar race, many of the Jat clans, and others in the north of India, still take to wife the widow of a deceased brother by the Karao ceremony. It is still a popular Hindu belief that the gods visit women. According to the legend, Kunti was the sister of a prince of Mathura, who was the father of Heri and Baldiva, the Indian Hercules (Hericula). Kunti, in consequenee of the sins of the ancestors of herself and her husband, was doomed to experience the greatest curse that can befall a Hindu female, sterility. However, by a charm, she enticed the gods to her bed. Thus, says Colonel Tod, she had by Dharmaraja (Yama, or the Minos of the Greeks), Yudishthra ; by Pavana (Eolus), Bhima ; by Indra (Jupiter Cœlus), Arjuna ; and Madri had Nakula and Sahadeva by Aswini Kumara (the Hindu Esculapius, or the sons of Surya, the twins of the Hindu zodiac).—*Cunningham's Ancient Geog. ; Garrett ; Mahabharata in Wheeler's Hist. of India*, p. 228; *Westminster Review*, April 1868 ; *Tod's Rajasthan*, i. p. 31 ; *Cole.'s Myth. Hind.* p. 248.

PANDU-KURI or Pandu-kuli, the popular Tamil term applied to ancient cairns, tumuli, or tombs found all over S. India. Hindus know nothing of the race to which these remains belonged, and neither in Sanskrit literature nor in that of the Dravidian languages is there any tradition on the subject. Kuri means a pit or grave, and Pandu denotes anything connected with the Pandava brothers. To call anything a work of the Pandu is equivalent to terming it Cyclopean in Greece, a work of the Picts in Scotland, or a work of Nimrud in Asiatic Turkey, and means only that the structure to which the name is applied was erected in some remote age, by a people of whom nothing is now known. When the Tamil people are asked, By whom were these Pandu-kuri built and used ? they sometimes reply, By the people who lived here long ago ; sometimes that the people were a race of dwarfs only a span or a cubit high, but possessed of the strength of giants.

Near the village of Chavadi Palciyam, in Coimbatore, one of them, opened in September 1807, contained a hoard of the flat silver coins—pieces found in all parts of India, and amongst them a silver denarius of Augustus. The cairns of Coimbatore are called Mandaver Kuli, which Dr. Shortt thinks is a dialectal change from Panda Kurzi, the ordinary Tamil name. In some opened in 1873 by Mr. Wedderburn were found an earthen jar containing human bones.—*Dravid. Grammar*, pp. 326, 327.

PANDUNG - TOUNG - YO - THA, sons of the mountain range, a barbarous race in the interior, east of Ava.

PANDYA. Mahr. The writer or accountant of a village or district; an officer employed in the customs. In the Madras Presidency the term is sometimes applied to the headman of a district.—*Wilson.*

PANDYA, a kingdom in the south of the Peninsula of India, supposed to have been founded five or six centuries before the Christian era. Their first capitals seem to have been Kukhi near Ramnad, the Kolkhi of the Periplus, and Kalyana near Cape Comorin. Up to the rise of the great Chola dynasty in the 10th and 11th centuries, the Pandya dynasty seems to have had a long career of prosperity and power. After that, for a while, they appear to have been subjeet to the Bellala dynasty of Mysore, but they had had several epoehs of great brilliancy and power. Augustus, emperor of Rome, when at Antioch, received an embassy with letters from king Pandyon of ancient Dravira. The embassy gave valuable and curious presents, amongst others a man without arms, and a serpent ten cubits long. In the letter, the king described himself as holding sway over six hundred kings, and he asked the friendship of Augustus. In the embassy was an Indian named Zarmanochegus, from Baragoza or Broach, who accompanied Augustus to Athens, and there, as Calanus had done, committed self-immolation before the emperor. His tomb, known as the Indian's tomb, was to be seen as late as Plutarch's time. Their country, Pandya (Παυδαία of Megasthenes), Pandi Mandala of the Periplus, Pandionis Mediterranea and Modura Regia Pandionis of Ptolemy, was one of three ancient divisions of the Dravida country of Southern India, the other two being Chola and Chera. And an early legend runs that the three kingdoms were founded by three brothers. Pandya kingdom seems to have been founded in the 5th century B.C. by Pandya, a person of the agricultural class.

Strabo mentions an ambassador from king Pandion to Augustus Cæsar, and, from the Periplus and Ptolemy, Pandion seems to have been the hereditary appellation of the descendants of Pandya. Ptolemy notices Pandion, and the author of the Periplus of the Erythræan Sea mentions Comari (Comorin) and other places as under a king Pandion. At the time of the Periplus the principality extended to the Malabar coast, but in general the ghats formed the western limit of the kingdom, which oecupied what are now the revenue distriets of Madura and Tinnevelly. The seat of government, after being twiee changed, was fixed at Madura, where it was in the time of Ptolemy, and where it remained till the early part of the 18th century (A.D. 1736). Their wars and rivalries were with the adjoining kingdom of Chola, with which they seem, in the first eenturies of the Christian era, to have formed a union which lasted some time. They, however, resumed their separate sovereignty, and were a considerable state until the 9th century, when they lost their consequence, and were often tributary, though sometimes quite independent, till it ended under the Naik dynasty, which was conquered by the Nawab of Arcot, A.D. 1736. A wall is said to mark the boundary between the Chola and Pandya kingdoms in Madura, remains of which have been traced near Ramagiri, the Cuddanags of Coorg, etc. Professor Wilson supposes the appearance of Pandya as an organized state and the foundation of Madura to have happened B.C. 500. At the beginning of the Christian era, the Pandya dynasty seems to have held sway over the greater part of the southern portion of the Peninsula on the Coromandel coast, westward to Canara and Malabar, and southward to the sea. Adi Vira reigned about the year 1040. He was a literary prince, and some of his aphorisms are in common circulation in a small collection called Vetty Verkay. Pandya is still the general term used in

Travancore for the Madras revenue districts of Tinnevelly and Madura. Chola with Tanjore, and Chera with Salem, known as Kerala, comprised the tract from Gokarna in N. Canara to Cape Comorin. The fish was the ensign of the Pandyan dynasty, who were thence called Miuavar (Min, TAM., a fish), and their standard Minkodi.

Two embassies were sent by the Pandyan king to Augustus, the first of which he received at Tarragona, the second is mentioned by Strabo. The friendship of the Romans was sought by only one other Hindu prince, O Kerobothros, the king of Chera or Kerala, who also was a Dravidian.

The Pandyan capitals were at Kurkhi (Korkoi), Kalyanapura, Kulasekara-pattanam, and Madura. The site of Kurkhi or Korkai is still a matter of dispute. It has been considered to be the Kolkhi of the Periplus, identified by D'Anville with Kilakarai near Ramisseram, and by others with Korkai or Gorkai near the mouth of the Tamrapurni.

The Chera was an ancient dynasty in the south of the Indian Peninsula, the rise and fall of which, as also the extent of their dominions, are only vaguely known. They seem to have riseu on the fall of the Pandya sovereignty, and to have ruled over Travancore and Coimbatore, and parts of Salem. The Chera princes seem to have been first established at Scandapura on the Malabar coast, and subsequeutly at Talcad or Dalavanpura on the Cauvery and Mudugonda-patnam, perhaps the same as the modern village of Mudugondur on the road from Seringapatam to Kunghal. The site of Scandapura is unknown. Talcad is described by Buchanan as a place of some extent, containing many buildings nearly covered with sand. The Carura regio Cerebothri, one of the earliest sites, has beeu supposed to indicate Carur in Coimbatore.

The ancient kingdom of Kerala on the Malabar coast was for some time subject to the Chera princes.

The several capitals of the Chola were at Conjeveram, Wori-ur, Combaconum, Gangondaram, and Tanjore. The whole history of this for some time the most important power of the Peninsula, is involved in great obscurity. There is no reliable information anterior to the 9th century, yet they must have been exercising sovereignty anterior to the time of Ptolemy, who makes mention of Arcati Soren; and, in the Mahawanso, there are frequent references to transactions with the Chola during the earliest periods of the Singhalese annals. The Tamil traditions also abound with stories of Adonda Chakravarti, who appears to have been a soldier of the prior Kurumbar tribes; but there are no trustworthy records forthcoming of his origin and actions, neither have there been obtained any authentic accounts of the overthrow and extinction of any of the great southern states.—*Mr. W. Elliot; Elphinstone's History of India*, p. 412.

PANEJITA. SANSK. A form of Hindu slavery.

PANEKKAR, a title in Travancore.

PANEL. SIND. The leaves and stalks of the Pogostemon patchouli, *Lepellitier*, used as a perfume.—*Simmonds' Dict.*

PANE LOYE. TEL.? URIYA. A fibrous plant, much employed by the Uriya fishermen in making their fishing baskets, and as lines for their nets; also used for tying fences and making sieves. It is cheap, and when tarred and stretched, makes a good fence, and lasts for three or four years.

PA-NGAN. BURM. A compact white wood of Amherst, used for boats and oars, and for making musical instruments. It seems to be Gmelina arborea.—*Captain Dance.*

PANGLIMA GAJAH. MALAY. The first word meaus a governor or superintendent, and the other elephant. The office of superintendent of elephants at a Malay court was one of considerable dignity.—*Journ. Ind. Arch.*

PANGOLIN, ant-eater; manis.

Badjar-kita, . . BENG.	Tarang-giling, . . MALAY.

Tanggilin, . . . MALAY.	Arialer, ... TEL.

The pangolin of India, belonging to the order Edentata, gets its Indian name from its Malay designatiou. The genus is common to Africa and S.E. Asia, and iu India is not rare, though, from their habit of appearing abroad after sunset, they are not often seen. Manis Javanica of Desmarest inhabits the Malayan Peninsula, Penang, Borneo, and Java. M. pentadactyla, *Linn.*, is found in several parts of India. This species has been knowu ever since the expedition of Alexander the Great, and is mentioned by Ælian uuder the name φατταγῆ.

Manis pentadactyla, *Linn.*, *Blyth.*

Indian scaly ant-eater of all India.

Manis aurita, *Hodg.*, *Blyth.*

Pholidotus dalmanni, *Gr.*	M. leucura, *Hodg.*
M. Javanica, *Bly.*	M. dalmanni, *Saunder.*

The Sikkim scaly ant-eater is met with in Harpeh, Kiangnan, and the southern Chinese provinces. It is dark coloured, more than 2 feet long, and covered on the back, limbs, tail, and every part of the body, except the belly, with moveable imbricated scales. The tail is long, and the tongue very mobile. It lives on flies, ants, etc., by catching them upon its outstretched tongue. Sometimes it lies down as if dead, and as the flies collect upon its body, it closes on them with its scales, and, entering the water, feasts upon the prey which floats upon the surface of the water, drowned by the manœuvre. The scales (Chuen-shan-kiah, CHIN.) are roughly triangular, concavo-convex, and marked at the attached end with fine grooves, like those on shell-valves. They are brown and semi-transpareut, those of the tail being the finest. They were formerly given in all sorts and conditions of disease, not excluding skin diseases. The principal use at the present time is to scratch itching surfaces, for which purpose they are fixed upon a length of bamboo as a kiud of curry-comb. This instrument is largely used amongst the prurient Chinesc.—*Tickell; Elliot; Jerdon's Mammals; Wallace's Archipelago; Smith's Chin. Mat. Med.*

PANGONG LAKE, in Ruthog or Rudok, in

lat. 33° 43′ N., is 85 miles long, and about 3 miles in average breadth. The area is 250 square miles. The water is clear and extremely salt, and 142 feet at greatest depth. The Rudok country lies to the east of Ladakh and Rukchu. The lake stretches about 80 miles from east to west, the whole length of the country, at an elevation of 14,200 feet above the sea. The area of Rudok is 4800 square miles, and its mean height 14,500 feet. It seems to have had originally an outlet at its north-west extremity, discharging itself along the valley of Tankatse into the Shayuk. Tso-mo-ri-ri lake appeared to Moorcroft to be deeper and less clear than the lake of Pangong. It contained no fish, and was not much frequented by wild-fowl; the taste of the water was brackish. Gerard afterwards visited this lake, which he calls Chuinonenil; he places it at an elevation above the sea of 15,000 feet, and observes that, whilst it is fed by several considerable streams, it has no efflux, and is kept at its level entirely by evaporation.—*Moorcroft's Travels*, ii. p. 51; *Cunningham; Thomson.*

PANGONG-TSO. The Changpa is a semi-nomade tribe near the Pangong-tso pass. They dwell in their grazing grounds under huts (galkol) made of yak's hair. The people there call themselves Bhot.

PANGSHURA, a genus of fresh-water tortoises, family Emydidæ. P. tecta, P. flaviventer, and P. Smithii occur in Bengal, and P. tentoria in the Indus. See Chelonia; Reptiles.

PANIANI, a river on the Malabar coast, in lat. 10° 46¾′ N., navigable for small vessels.

PANICACEÆ, the grass tribe of plants, the Graminaceæ of Lindley, an exceedingly numerous order, comprising both land and water plants, but no marine ones. They occur in every soil, alone or along with other plants, and from the frigid zone to the tropics. Many tropical grasses are, like the bamboos, of considerable size, rising 50 or 60 feet high. It was estimated by Voigt that the grasses in the East Indies are 1300 in number. The grasses at the foot of the Himalaya form a jungle sufficiently high to conceal the elephant and the rhinoceros, and, in ascending the Himalaya, species of plants are met with of the same genera as found in proceeding from the equator to the poles, and many of the pasture grasses of Europe form the grassy sward of the Himalaya. The temperature of the cold-weather months of the East Indies is the most favourable for the growth of the cereal grasses, and cattle are fed on the green or dry stalks of the Paspalum stoloniferum; Panicum miliaceum, helopus, miliare, Italicum, setigerum, repens, colonum; Penicillaria spicata; Sorghum vulgare, cernuum, saccharatum; Andropogon Martini; Rotbölla glabra; Hordeum hexastichon; Triticum æstivum.

As a rule, however, the horses are fed on the creeping stems and leaves of the durba grass, Cynodon dactylon. The principal of the Panicaceæ of Eastern and Southern Asia are as under:—

B. Paniceæ, *Nees.*

Paspalum stoloniferum, *L.*, cultivated.
Helopus annulatus, *Nees*, Bengal.
H. filiculmis, *Nees*, Bengal.

The structure of the grasses is among the most simple of the perfect forms of vegetation. A stem clothed with alternate leaves whose stalks are thin, and constituting as many sheaths to guard the young and rapidly growing shoots; a few rudimentary leaves collected at the ends of the branches of inflorescence, and constituting flowers; a very small number of stamens, and seed enclosed in a thin pericarp,—are all that nature provides to enable these plants to preserve their race. The floral leaves, called glumes, paleæ, and scales, offer a prodigious number of different appearances, according to the manner in which they are combined or modified.

The distribution of the cultivated grasses is determined not alone by climate, but depends also on the civilisation, industry, and traffic of the people, and often on historical events. Within the northern polar circle, agriculture is found only in a few places. In Siberia grain reaches at the utmost only to 60°, in the eastern parts scarcely above 55°, and in Kamtschatka there is no agriculture even in the most southern parts (51°). The grains which extend farthest to the north in Europe are barley and oats. In the milder climates these are not used for bread, but they afford to the inhabitants of the northern parts of Norway, Sweden, and a part of Siberia their chief vegetable nourishment. Rye is the prevailing grain in the south of Sweden, Norway, and Denmark, and in all the lands bordering on the Baltic, and the north of Germany. In the latter, another very nutritious grain, buckwheat, is very frequently cultivated. In the zone where rye prevails, wheat is generally to be found, barley being here chiefly cultivated for the brewing of beer, and oats supplying food for the horses. To these there follows a zone in Europe and Western Asia where rye disappears, and wheat almost exclusively furnishes bread. The middle and the south of France, England, part of Scotland, a part of Germany, Hungary, the Crimea, and Caucasus, also the lands of Central Asia, where agriculture is followed, belong to this zone. Here the vine is also found; wine supplants the use of beer, and barley is consequently less raised. Next comes a district where wheat still abounds, but no longer exclusively furnishes bread, rice and maize becoming frequent. To this zone belongs Portugal, Spain, part of France, on the Mediterranean, Italy and Greece; further, the countries of the east, Persia, Northern India, Arabia, Egypt, Nubia, Barbary, and the Canary Islands; in these latter countries, however, the culture of maize or rice towards the south is always more considerable, and in some of them several kinds of sorghum and Poa Abyssinica come to be added. In both these regions of heat, rye only occurs at a considerable elevation; oats, however, more seldom, and at last entirely disappear, barley affording food for horses and mules. Wheat is cultivated to great heights in the Himalaya, it being one of the chief crops up to 9500 feet on the Chenab, and occurring to 1500 feet on the Sutlej, good to 11,500 feet, and grown to 13,000 feet in Ladakh. Zea mays grows up to 7500 and 8000 feet on the Chenab and Ravi; Eleusine coracana is frequent up to 6000 and 7000 feet. Hordeum is cultivated on the Sutlej to 13,500 feet and 15,000 feet, and on the Chenab and in Ladakh and Lahoul at 8000 and 14,500 feet. But even rice is abundantly grown throughout the Siwalik tract and up the valleys at an elevation in places of 6000 or even nearly 7000 feet; Paspalum at 6000 feet; and on the plains of India many of these, wheat, sorghum, barley, are cold-weather crops.

Pastures.—Upon the slopes of the Himalaya there are found abundance of good nourishing pastures, admirably adapted to the requirements of cattle and sheep, and upon which many herds and flocks are reared when the dry season forces them from the plains below. Throughout the flat countries, and spread over vast tracts of indifferent soil, we meet with grasses, or rather herbage, in sufficient abundance, but generally either coarse and poor, or rank and distasteful to animals. In swampy or sterile plains these reedy grasses often fail to tempt even the coarse-feeding buffalo and rhinoceros; and it is a common practice amongst all the Indian villagers at the end of the dry season to set fire to such tracts, on which the long withered herbage readily ignites, and after the first monsoon showers furnishes a rapid and abundant supply of young sweet blades. In some parts of India, especially near the larger towns, it is customary to cut grass for hay as fodder for horses during the excessively dry months.

Besides grain, camels and elephants are fed upon the leaves of various trees. The goats, sheep, and cattle are pastured upon what are called the waste land, or the jungles of the villages; the last are fed also upon chopped straw, and the stalks of the joar (Sorghum vulgare), cut into small pieces; while horses, besides pulses, are fed upon grass brought in by men called grass-cutters, but who rather scrape off the ground the creeping stems and young leaves of the grass called Doob or Durba, or Hariali (the Cynodon dactylon of botanists). This grows throughout the year, is fortunately the most common species throughout India, and succeeds particularly well in the northern parts, where lawns and pastures of moderate extent are made by planting pieces of its creeping stems. It is also much used for forming a covering for the banks of rivers, ramparts, and esplanades. A very nourishing grass, possessing a powerful aromatic odour, is met with on the elevated lands above the ghats of the south, as well as in the North-West Provinces. So strong are its aroma and flavour, that the flesh, milk, and butter of the animals feeding upon it become in time sensibly affected both in taste and smell.

Throughout India, the pasture lands are everywhere left to nature; there is generally a right of common pasturage, and there is nothing to prevent the village cattle from roaming at discretion. The first step, therefore, towards the improvement of grass lands must be the establishing and keeping up a strong and sufficient fence.

The principal of the Indian grasses, and perhaps the most generally diffused, is the Doob grass (Cynodon dactylon), a creeping plant possessing much nourishing property in its long stems no

less than in its leaves. This endures the greatest elevation of temperature, as its roots penetrate far below the surface; and although during the dry monsoon giving no signs of life, it puts forth its tender leaves on the first approach of the rains. The Cynodon dactylon or Hariali grass of India is occasionally grown from seed. Root creeping through the loose sand, with strong fibres at the nodes. Stem rarely exceeding 6 inches in height, creeping to a considerable extent, matted, very smooth. Florets, all on one side of the spike-stalk, awnless, purplish, and ranged in two close alternate rows. All the stems which lie near the ground take root, and by this means, though an annual plant, it increases and spreads very wide. It yields abundance of seed, of which small birds are very fond. It has been found a successful plan to allow the seed to ripen before the hay is cut, as it then propagates itself by the seeds, in addition to the runners. This grass is also found in Great Britain, but in that country its produce and nutritive properties are comparatively insignificant, while in India it constitutes three-fourths of the pasture. Respecting this grass, Sir W. Jones observes (As. Res. iv. 242) 'that it is the sweetest and most nutritious pasture for cattle, and its usefulness, added to its beauty, induced the Hindus, in their earliest ages, to believe that it was the mansion of a benevolent nymph.' Even the Veda celebrates it, as in the following text of the A't'harvana: 'May Durva, which rose from the water of life, which has a hundred roots and a hundred stems, efface a hundred of my sins, and prolong my existence on earth a hundred years.'

On the table-lands of the East Indies, most of the food of man is obtained from the millets; but in the low lands, in the eastern parts of the temperate zone of the old continent, in Further India, China, and Japan, northern kinds of grain become unfrequent, and rice is found to predominate. The cause of this difference between the east and the west of the old continent appears to be in the manners and peculiarities of the people. In North America, wheat and rye grow as in Europe, but more sparingly. Maize is more reared in the western than in the old continent, and rice predominates in the southern provinces of the United States. In the torrid zone, maize predominates in America, rice in Asia; and both these grains in nearly equal quantity in Africa. The cause of this distribution is without doubt historical, for Asia is the native country of rice, and America of maize. There are numerous grasses common in India which cattle delight in, but the greater number of these flourish most in the rainy season. Their rapid growth, and the great height they attain, as well as their withered and dry nature towards the close of the year, soon, however, unfit them for pasture grasses. For pasturing sheep, the table-land from Coimbatore to Kandesh, and the provinces from Gujerat to Hurriana and Saharunpur, seem suited. But the Himalayas, enjoying a temperate climate and a European-like vegetation, have also abundant and excellent pasturage. During the rainy season, when the temperature is moist but equable, the Himalayas have many grasses resembling those in the plains. These are associated with others belonging to European genera, which are able to withstand the winter's cold; so that throughout the year, nearly, there is abundant pasturage in the neighbourhood of the Himalayan villages. Of this the inhabitants avail themselves, by driving their herds of cattle and flocks of goats and of sheep to different ranges and elevations, according to the season of the year. The sward upon these mountains is short and thick, and very closely resembles that which is met with on the mountains of Scotland and Wales. Dr. Royle, in his Illustrations of the Botany of the Himalayan Mountains, has mentioned that these grasses belong to such genera as agrostis, fox-tail grass, cat's-tail, meadow grass, fescue, cock's-food, bent grass, oat grass, and others.

Guinea Grass has been cultivated in India and Ceylon. When well manured and kept clear of weeds, it grows most luxuriantly, and admits of being cut every six weeks or two months. A small patch near Colombo, which, beginning with about three-quarters of an acre, gradually extended to above an acre and a half, for seven or eight years supplied three or four milch cows and from five to seven horses continually with all the grass required for their consumption, and latterly left a surplus, which was dried for bedding and hay. When first planted it frequently attains a height of even nine feet; and a stalk taken promiscuously from a small patch planted about the year 1857 in Combaconum, measured 10 feet 4½ inches in length; but when cut two or three times it grows thicker, but not so high. It is exceedingly excellent feeding for horses and cattle, and is generally preferred by them to the ordinary country grass, though horses which are hard worked seem to prefer the Cynodon dactylon grass roots supplied by the grass-cutters.

Sugar is a product of one of the grasses. It exists in great quantities in the sugar-cane (Saccharum officinarum), and species of saccharum are valued in India for rope-making and thatching. The boatmen of the Indus universally employ the moonja (probably Saccharum moonja) as a towing-rope and for the rigging of their vessels, in all places above Sukkur, two-inch ropes, often fifty fathoms in length, made of moonja fibres, being sufficient for dragging their largest or 1200-maund boats up the Indus, against the full force of the stream. The rope is also light, so advantageous for rigging, and bears without injury alternate exposure to wet and to subsequent drying,—both qualities being essential for a tow-rope. The upper leaves, about a foot or so in length, are preferred, are collected into bundles, and kept for use.

The moonja of Hindustan (Saccharum moonja) is collected after the rainy season and kept for use, as it is employed in tying up their cattle at night and for ropes for their Persian wheels. It is said also to be one of the grasses employed for making tow-ropes by the boatmen about Benares. The shur or sara of Bengal (Saccharum sara), or the pen-reed grass, is employed by the boatmen about Allahabad and Mirzapore, and esteemed as a tow-line for its strength and durability, even when exposed to the action of water. It is said to be beaten into a rude fibre, and then twisted into a rope. The sacred grass of the Hindus, the dab or koosha of the Brahmans (Poa cynosuroides), is also made into rope in N.W. India.

Several indigenous grasses are employed for making mats, baskets, ropes, sacks, nets, and sails.

Species of the bamboo are numerous, and the inhabitants use them for all the purposes to which in Europe wood is applied, and to many of those for which the metals are utilized.

Closely connected with the subject of the pasture grasses is that of providing green food for horses, camels, and elephants, and one to which little attention has been paid, though the supply has much diminished in the neighbourhood of towns and large stations. To this Dr. Wallich called attention in his evidence before the Committee of the House of Commons in 1832, stating that for any number of animals, either for conveyance or for consumption, any quantity of food might be produced in the utmost possible abundance in India, but suggested that a more ready and plentiful supply of food for elephants and camels should be provided, by planting those trees (such as particular Indian fig-trees) which form the staff of life for them, and which are extremely easily cultivated. In the Madras Presidency, considerable exertions were made about the year 1796, in everywhere planting what was called the bastard cedar (Guazuma ulmifolia) as green food for cattle (Royle's Productive Resources of India). The need for care on this point increases with the extending cultivation; rye-grass and clover grow well in upland districts in India, and when sown fresh have been found to answer admirably on the Shevaroy, Pulney, Baba-Booden, and Neilgherry hills. In Gujerat, the cultivators feed their cattle on the sweet stalks of the joari and bajra.

The Prangos hay plant grass of Tibet was found by Mr. Moorcroft to be employed both as winter fodder for sheep and goats, and frequently for neat cattle. Writiug from the neighbourhood of Draz, he described the plant as producing fatness in a space of time singularly short, and likewise as being destructive to the river fluke; he therefore justly concluded that it would be an invaluable acquisition to any country. When once in the possession of the ground, for which the preparation is easy, it requires no subsequent ploughing, weeding, manuring, or other operation, save that of cutting aud of converting the foliage into hay. Though abundant in various directions, the Kashmirians do not esteem it of any value, and Dr. Falconer is of opinion that its importance had been much over-estimated, in consequence of its being the ouly food in many of the bleak and barren tracts of Tibet. In Kashmir, where, far from a deficiency of herbage, there is actually a superabuudance of pasture grasses, it is necessarily much less esteemed. The Prangos will therefore most probably be a valuable acquisition only in countries devoid of good natural pasturage, aud of which the climate is favourable to its growth.—*Dr. Cleghorn's Grasses; Moorcroft, Tr.* p. 179; *Royle, Pro. Res.; Royle, Ind. Fibres; Schouw in Jameson's Edinburgh Philosophical Journal*, April 1825; *Spry's Suggestions.*

PANICHENKERNY LEWAY, in Corle Pattoo in Ceylon; a bed of salt formed on it by an inroad of the ocean.

PANICKEA, elephant hunters at Eraoor, in Ceylon, who snare them with a noosed rope. They are Muhammadans.—*Tennant.*

PANICUM, the millet genus of grasses of the order of Panicaceæ. Species of the genera Eragrostris, Panicum, Pennisetum, Poa, Rotbölla, Saccharum, and Vilfa are the grasses of the Doab. The seeds of Panicum Italicum, miliaceum, miliare, and sanguinale are used as food for man. Cattle are fond of P. commutatum, helopus, jumentosum, and setigerum, as grasses. The genus contains a very large number of species, which abound in the hot parts of the world, and a few extend to higher latitudes and ascend the cool mountains of hot countries. They are valuable as pasture grasses, and for their sceds, which form a large portion of the food of the poorer classes of many nations. Some of the species of Panicum of the Brazils are of gigantic stature, and yet tender and delicate in their herbage. The Coapim dc Angola of Brazil grows 6 or 7 feet high, and other equally gigantic species constitute the field crops on the banks of the Amazon; while P. jumentosum, or Guinca grass, forms the most valuable pasture for cattle in Jamaica.

Panicum brizanthum, *Hochstetter*, from Abyssinia to Nepal, a large-grained perennial millet grass.

Panicum commutatum, *Nees.*

Panicum ciliare, *Roxb.*	Changali gaddi, . TEL.

A wholesome and nourishing grain used by the poorer classes. There are several varieties of it, which yield from 50 to 60 fold; it delights in a light, tolerably dry, rich soil; the same ground yields two crops between the first of the rains in June—July and the end of January, in the Circars, but only one crop in the Northern Provinces.

This millet is grown in India and Europe. Seeds small, roundish, straw-coloured; pericarp brittle, with a round and partially pellucid grain, alimentary. The grain is prized by the natives of India, who make cakes of it and also prepare it as porridge. For the purposes of pastry it is very little inferior to wheat, and when boiled with milk, forms a light and pleasant meal for invalids. It is grown in abundance in the southern part of Europe, particularly in Portugal, where it is termed Mitho Painco. It is rarely grown in the Panjab plains, but is commonly cultivated in the Himalaya, occasionally up to 6500 feet.

Panicum jumentosum, *Pers.*, the Guinea grass,

has been cultivated to a small extent in India and Ceylon. When well manured and kept clear of weeds, it grows luxuriantly, and admits of being cut every six weeks or two months. A small patch near Colombo, which, beginning with about three-quarters of an acre, was gradually extended to about an acre and a half, for seven or eight years supplied three or four milch cows and from five to seven horses continually with all the grass required for their consumption, and latterly left a surplus, which was dried for bedding and hay. When first planted it frequently attains a height of even 9 feet; and a stalk taken promiscuously from a small patch planted in Combaconum measured 10 feet 4½ inches in length; but when cut two or three times it grows thicker, and not so high. It is excellent feeding for horses and cattle, and is generally preferred by them to the ordinary country grass, though horses which are hard worked seem to prefer the dry grass roots of the Cynodon dactylon supplied by the grass-cutters. It should not be given to cattle fresh, but the supply for one day should be cut the day previous, and it should not be cut too close to the ground, but the stalk ought to be left 7 to 9 inches high. It is a good plan to move the ground between the roots every time the grass is cut, and the ground should be heavily manured after every three or four cuttings. It is very hardy, and may be easily propagated. It requires abundant moisture, but will not live in a soil which is at all marshy. It answers best planted in small tufts 1 foot 9 inches to 2 feet apart, which rapidly spread into stools from 6 inches to 1 foot in diameter.

Panicum miliaceum, *Willde.*, common millet.

Cheenwa, . . . Kash.	

This is a well-known millet, cultivated in the south of Europe and in tropical countries. There are two varieties, one brown, the other yellow coloured. In the south of Europe, as well as in India, it forms a portion of the food of the inhabitants. In the latter country it is cultivated in the cold weather with wheat and barley, and it is the only one of the small grains that is so grown at the cold season of the year. It is imported into Britain from Salonica and Kaffa, for feeding cage-birds and poultry; when husked, it is used as food in puddings. In the Sutlej valley, between Rampur and Sungnam, it grows at an elevation of 6000 to 9000 feet. In the middle regions it is one of the chief crops.

Panicum miliare, *Lam.*

Kungoo, . . . Hind.	Nella-shama, . . . Tel.
Kutkee . . of Multan.	Shamaloo, ... ,,

This is cultivated in Europe and S. Asia; seeds oval, slightly compressed, brilliant, about a line in length. In India generally cultivated on an elevated rich soil; the seed is one of the sorts of dry or small grain which forms an article of diet of the Hindus who inhabit the higher lands, and cattle are fond of the straw. Alimentary, but the pericarp is with difficulty separated from the grain; chiefly used in a kind of gruel or bouillie. Does not appear to be common in the Panjab, but Edgeworth mentions it at Multan.

Panicum semiverticillatum, *Rott.*, Lupta, Hind. This grain is inferior to several of those hitherto mentioned, and is eaten by the poor people in the districts in which it is cultivated, such as Coimbatore and other dry grain countries.

Panicum setigerum, *Retz*, Bura galgantee, Hind. Cattle are fond of it.

Panicum spectabile. Indigenous to Adelaide, Australia; grows luxuriantly in dry and stony places, is both sweet and succulent, readily eaten by cattle, and therefore well worthy of introduction into India.—*Ainslie; Cleghorn's Panj. Rep.; Mr. Caldwell, in litteris; O'Sh.; Spry's Suggestions; Stewart's Panjab Plants.*

PANIGRAHANA. Sansk. Hindu marriage; part of the ceremony consisting of the bridegroom taking the bride's hand.

PANINI, a Sanskrit grammarian who founded the present system of Sanskrit. He is the most celebrated of those grammarians whose sutras have come down to us, though he himself mentions many who preceded him. According to Bunsen (iii. p. 565) and Bohtlink, he lived B.C. 350, but Dowson names the 6th or 4th century B.C., and Garrett says no time more definite can be fixed than prior to the era of Sakya (B.C. 543); while Weber thinks that he lived after the date named by Bunsen. Mr. Garrett says that Panini was a native of the village of Salatura, N.W. of Attock, in the country of Gandhara, from which he is sometimes called Salaturiya. He is described as a descendant of Panin and grandson of Devala; his mother's name was Dakshi, and he bears the metronymic of Daksheya. His grammar consists of eight Adhyaya or books, each comprising four Pada or chapters, each chapter containing a number of sutra or aphoristic rules. The sutra amount on the whole to 3996. The rules of Panini were criticised and completed by Katyayana, who seems to have been the teacher and contemporary of Patanjali, who again criticised Katyayana. These three authors are the grammarians of India, and in literary merit their works excel all the grammatical productions of other nations.

The grammar is called Paniniyam. It is the standard authority on Sanskrit grammar, and it is the most original of all the productions of the Hindu mind. It is in the form of sutras. It stands supreme among the grammars of the world, alike for its precision of statement and for its thorough analysis of the roots of the language and of the formative principles of words. By employing an algebraic terminology, it attains a sharp succinctness unrivalled in brevity, but at times enigmatical. It arranges, in logical harmony, the whole phenomena which the Sanskrit language presents, and stands forth as one of the most splendid achievements of human invention and industry.—*Garrett; Dowson; Bunsen*, iii. p. 565; *Imp. Gaz.*

PANIONIUM, says Herodotus, is a sacred place on Mycale, situate towards the north, which, by the universal consent of the Ionians, is consecrated to the Heliconian Neptune. Mycale is a promontory projecting itself towards Samos. On this mountain the Ionians assemble from their different cities to celebrate the Panionia. A bull was usually offered in sacrifice to Neptune, and if he

bellowed during the performance of the rite, it was accounted an auspicious omen, as such a sound, resembling the roaring of the sea, was held to be particularly acceptable to the ocean king.—*Milner's Seven Churches of Asia*, pp. 76, 77.

PANIPAT, an ancient town in lat. 29° 23′ N., long. 77° 1′ 10″ E., in the Kurnool district of the Panjab, 53 miles N.W. from Dehli, with a population in 1868 of 25,276. It has been supposed by some to be one site on which the Kuru and Pandu chiefs contended about 1300 years before the Christian era, and it has repeatedly since then been made the battle-field on which contests have been held for supremacy over India. The emperor Baber, in his fifth and last expedition into India, led an army of 12,000 men from Kābul; he encountered and completely defeated the emperor Ibrahim Khan, Lodi, at Panipat, 20th April 1526; and in May, Dehli yielded to him without resistance, and he soon after reduced to his power all the provinces of the empire. The emperor Akbar, grandson of Baber and son of Humayun, had to defend his claim to India against Hemu, the Hindu general of Sultan Adili. Hemu, on the death of Humayun, advanced with 100,000 men against Akbar, who, at Panipat, met Hemu, completely defeated him, and took him prisoner; and, while bleeding from his wounds in Akbar's tent, Bahram Khan struck off the captive's head, 5th Nov. 1556. The next decisive battle here was fought 6th Jan. 1761, when Ahmad, the Abdalla, king of Kābul, inflicted a crushing blow on the Mahrattas, which indirectly cleared the way for the establishment of British supremacy. The Mahratta power was then at its zenith. Their frontier extended on the north to the Indus and the Himalaya, and on the south nearly to the extremity of the Peninsula; all the territory within those limits that was not their own paid tribute. They had a well-paid and well-disciplined army of cavalry, with 10,000 disciplined infantry, and a good train of artillery. Ragoba, brother of the ruling peshwa, was commanding their forces in the North-West Provinces, and in 1758 he occupied the whole of the Panjab. But in the year 1759, Ahmad Shah returned to Hindustan, and fell on and almost destroyed the detached force of Dataji Sindia, and the force under Mulhar Rao Holkar was overtaken and nearly destroyed by a body of Ahmad's army. These failures led to Ragoba resigning the command to Sedasheo Rao, Bhao, a cousin of Balaji Rao, Peshwa. The Bhao was naturally haughty and overbearing, proud of the new greatness of his family, and puffed up by recent success into an overweening confidence in his own abilities both as a soldier and a statesman. He came to the north of India accompanied by Wiswas Rao, the peshwa's youthful son and heir-apparent, and by all the great Mahratta and Brahman chiefs without exception. Whatever the nation possessed, either of power or magnificence, was brought forth to give weight to Sedasheo Rao, Bhao. Many Rajput detachments were sent to join him as he advanced, and Suraj Mull is said to have reinforced him with a body of 30,000 Jat. The Daurani army had been many months in India, and were occupying Dehli with a small garrison. Sedasheo Rao took this city and its citadel with little difficulty, and he plundered whatever of value the Persians and Afghans had left. Whilst the Mahrattas were advancing and occupying Dehli, Ahmad Shah was forming alliances with Najib-ud-Dowlah and the Rohillas, and with Shuja-ud-Dowlah, viceroy of Oudh. Ahmad Shah remained encamped at Anupshahr, on the frontiers of Oudh, till near the close of the rainy season of 1760, when he set out for Dehli, and, between fording and swimming, crossed the Jumna near Cunjpura (25th October 1760), which made so great an impression on the Mahrattas, that they hastily removed to Panipat, where they threw up works round their camp, encompassed by a broad and deep ditch, and protected by their numerous artillery. The numbers in the two armies are not accurately known. The Bhao's force seems to have consisted of 50,000 cavalry in regular pay, with at least 15,000 predatory Mahratta horse, and 15,000 infantry, of whom 9000 were disciplined sepoys under Ibrahim Khan Gardi, a Muhammadan deserter from the French service. He had 200 guns, with numerous wall pieces, and a great supply of rockets, which was a favourite weapon of the Mahrattas. These troops, with their numerous followers, made the numbers within his lines amount to 300,000 men. Ahmad Shah had about 40,000 Afghans and Persians, 13,000 Indian horse, and a force of Indian infantry estimated at 38,000, partly Rohilla, but the great majority a rabble of foot-soldiers. He had also about 30 pieces of cannon of different calibres, chiefly belonging to his Indian allies, and a number of wall pieces. Ahmad Shah also encamped and threw up lines round his army. Govind Rao Bundela appeared in the rear of the Daurani camp with 10,000 or 12,000 horse, which spread over the country in the Mahratta manner so as to intercept all supplies. But Attai Khan, the grand vizir's nephew, made a march of sixty miles, surprised Govind Rao's camp about daybreak, and completely destroyed his force, Govind Rao himself falling in the action. And now the Mahrattas began to feel the severest want, having entirely eaten up and consumed the town of Panipat, which was within their lines. For two months there were skirmishes, and the Mahrattas thrice made attacks on the Daurani lines. Ahmad Shah had pitched a small red tent in front of his entrenchment, to which he repaired every morning. He was on horseback the whole day, visiting his posts, reconnoitring, and never rode less than fifty or sixty miles a day. At night he placed a picket of 5000 horse as near as he could to the enemy, while other parties went the round of the whole encampment. In the Mahratta camp the distress for supplies became intense. They sent out a foraging party, with innumerable camp followers, to endeavour to bring in some relief; but the helpless crowd was discovered by the Daurani force, and slaughtered in prodigious numbers. On this the chiefs and soldiers surrounded the Bhao's tent in a body, and urged that it was better to run any risk in the field than to perish in misery. The Bhao agreed to their wish for battle; they all partook of the betel-leaf, and swore to fight to the last, and orders were given to make the attack the next morning before daybreak. Early in the morning the Daurani spies brought intelligence that the Mahrattas were getting under arms, and Ahmad was roused. He soon appeared on horseback, and ordered out his own troops, himself advancing till he saw the Mahratta army coming on slowly and regularly,

with their artillery in front. Ahmad Shah drew up his army opposite, and himself took post at his little red tent, which was now in rear of his line. The artillery was not much employed by the Muhammadans, and the practice of the Mahrattas was inefficient. The actual engagement was begun by Ibrahim Khan Gardi, who ordered his battalions to charge with the bayonet. Their attack fell on the Rohillas, who were broken with prodigious slaughter. Their defeat exposed the right of the grand vizir, who commanded the centre of the Daurani line, and who was now charged by the Bhao and Wiswas Rao with the flower of the Mahratta army. In this charge, Attai Khan, the vizir's nephew, was killed by his side, and the Daurani troops were forced to give ground, but he himself dismounted, and, with the few that were near him, determined to die at his post. As the din of battle suddenly ceased, Casi Rao was sent by Shuja-ud-Dowlah to inquire the cause. Casi Rao found the vizir on foot in full armour in an agony of rage, reproaching his troops for quitting him, and endeavouring to reform his ranks. Ride to Shuja-ud-Dowlah, said he to Casi Rao, and tell him if he does not support me immediately I must perish. But Shuja-ud-Dowlah, though he kept his ground, did not venture to take part in the action. Ahmad Shah had observed these transactions, and ordered up a reserve to support the vizir. The advantage remained with the Mahrattas until Ahmad, after rallying the fugitives, and ordering all who refused to return to be cut down, gave orders for an advance of his own line, and at the same time directed a division on his left to wheel up and take the Mahrattas in flank. This manœuvre was decisive; for though the closest combat was raging in the centre where the Bhao and Wiswas Rao were engaged on horseback, and where they fought on both sides with spears, swords, battle-axes, and even daggers, yet 'all at once, as if by enchantment, the whole Mahratta army turned their backs, and fled at full speed, leaving the field of battle covered with heaps of dead.' The victors pursued in every direction for fifteen or twenty miles with the utmost fury, and, as they gave no quarter, the slaughter was immense. A large portion of those who escaped the Daurani arms were cut off by the peasants, and great numbers who fell into the hands of the Daurani were massacred in cold blood. Ahmad Shah, instigated by Najib-ud-Dowlah, ordered a search for Jancoji Sindia, who had been concealed by a Daurani chief, and was made away with to avoid detection. He also compelled Shuja-ud-Dowlah to deliver up Ibrahim Khan Gardi, sent for him into his presence to reproach him, and then gave him over to the grand vizir to be confined, but he died of his wounds within a week. The body of Wiswas Rao was found, and a headless trunk, supposed to be that of the Bhao. The whole number of the slain is said to have amounted to near 200,000. Almost all the great Mahratta chiefs were killed or wounded, except those who had been left with a force at Dehli, and Mulhar Rao Holkar, who was accused of having early left the field. Madhaji Sindia was permanently lamed, and Nana Farnavis narrowly escaped by flight. The battle was fought on the 6th January 1761 (Jamadi-us-Sani, A.H. 1174). Grief and despondency fell on all the Mahratta nation. The wreck of the army retired south of the Nerbadda, evacuating almost all their acquisitions in Hindustan. The Peshwa Balaji Rao retreated slowly to Poona, where he died in a temple that he had erected. From that time the power of the Brahman peshwas never rallied, but was re-transferred to the Mahratta chiefs of the houses of Sindia of Gwalior, Holkar of Indore, the Gaekwar of Baroda, and the Bhonsla rajas of Nagpur.—*Elphinstone's Hist. of India; Cal. Rev.* Jan. 1871; *Malcolm's Cen. India; Wheeler's Hist. of India; Rennell's Memoir; Asiatic Researches.*

PANIR. HIND. Cheese. Panir-gar, a cheese-maker. Panir-maya, rennet.

PANIR or Panirbad. HIND. Withania coagulans, called Akri, a small shrub with light-coloured leathery leaves, which is common west of the Indus and along the Salt Range (to 4500 ft.), and occurs in the Southern Panjab, generally near houses or fields, seldom in the real desert. The Afghans use its berries for curdling milk to make cheese, whence its Persian name Panirbad. The seeds are considered stomachic about Peshawur, and they probably possess anodyne or sedative properties. In home practice they are given to children for colic, are used in veterinary medicine, and are sold in most bazars. Honigberger states that the bitter leaves of this plant are given as a febrifuge by the Lohani.—*Powell; Stewart.*

PANJ. PERS. Five; the five fingers. Panjah, with the Shiah Muhammadans, an alam or standard, the extended hand carried on a pole in the Maharram. Panj-i-Mariam, Cyclamen Europæum. Panj-tan, with Muhammadans, the five holy persons,—Mahomed, Ali, Fatima, Hasan, Husain.

PANJAB, a frontier province in the extreme N.W. of British India, lying between lat. 27° 39′ and 35° 2′ N., and long. 69° 35′ and 78° 35′ E. It is partly British territory, comprising the revenue districts of Dehli, Hissar, Ambala, Jullundhur, Amritsar, Lahore, Rawal Pindi, Multan, the Dehrajat, and Peshawur, and partly Native States, 56 in number, in feudatory alliance, or politically connected with British India. The area of these two divisions is 141,449 square miles, with a gross population in 1881 of 22,712,120.

British Districts,	106,632 sq. m.	Pop. 1881, 18,850,437
Native States, .	35,807 ,,	,, 3,861,683

The Imperial Gazetteer enumerates the Native States for 1868 as under. A part only of the Panjab Census Report of 1881 has been received up to the time (August 1883) of this passing through the press:—

	Sq. M.	Pop.		Sq. M.	Pop.
Kashmir and Jammu, .	79,784	1,534,972	Keuthal and Ratesh, .	116	50,000

			Suket, . .	420	41,126
			Faridkot, .	600	68,000

The Panjab proper, the couutry of the Five Rivers, was conqucred by the British from the successors of Ranjit Singh. By a treaty with that sovereign of the Panjab, Ranjit Singh, dated 26th April 1809, he undertook not to make or allow any encroachment on the states on the left bank of the Sutlej. The largest of these were Patiala, Jheend, Nabha, Kalsia, Maler Kotla, and Faridkot.

In 1838, Ranjit Singh formed one of the triple alliance with the British and Shah Shuja, but he died iu 1839. In 1840, his son and his grandson both died by violence, to be succeeded by Sher Singh, who was assassinated in 1843, after which great anarchy prevailed, which, after two years of desolation, terminated in an invasion of the E.I. Company's territory. On the 11th December 1845, the Sikh army crossed the river Sutlej, and marched on to the British head quarters at Moodkee, where, 18th Dec., an engagement ensued, which lasted from three o'clock in the afternoon until after nightfall, when the Sikhs were driven from the field. Three days afterwards they renewed the attack at Firozshah, fought till the close of the day and all through the night, and were only at length driven back after a frightful sacrifice of life (21st and 22d Dec.). But scarcely had the victors congratulated each other on their success, when a fresh Sikh army advanced, and the British remained masters of the field only after great exertions. The Sikh army had only retired across the river, and they renewed the strife at Aliwal on the 28th January 1846, where they were defeated with an immense loss in killed and wounded; and another sanguinary engagement on the 10th February at Sobraon terminated this eventful war.

Lord Harding acted towards the Panjab ruler with moderation. He might have annexed the entire Panjab, but he contented himself with taking the old Sikh provinces S.E. of the Sutlej, and the hill country lying between the Beas and the Indus; and his successor, Lord Dalhousie, had to do what Lord Harding had left undone, and the Sikhs were defeated, on the Chenab at the close of 1848; at Chillianwalla, January 1849; and at Gujerat, 22d February 1849. The entire dominions were incorporated with those of British Iudia on the 29th March 1849, and on the 1st January 1859 the territory was erected into a separate department under a Lieutenant-Governor.

The Panjab on the north has Kashmir (Cashmere) and the hill states of Swat and Buner; it is bounded on the east by the river Jumna (Jamna), the North-West Provinces, and the Chinese Empire; ou the south by Sind, the river Sutlej (Satlaj), and Rajputana; and on the west by Baluchistan and independent tribes dwelling along the outer face of the north-west Panjab frontier, and inhabiting hills as under:—

Adjoining the frontier of Hazara district, Hasanzai.
Adjoining frontier of Peshawur district, Judun, Bunerwal, Swati, Ranizai, Osman Kheli, Upper Mohmand.
Adjoining frontier of Peshawur and Kohat districts, Afridi.
Adjoining frontier of Kohat district, Buzoti, Sepah, Orakzai, Zymusht Afghan, Turi.
Adjoining frontier of Kohat and Dehra Ismail Khan districts, Waziri.
Adjoining frontier of Dehra Ismail Khan district, Sheorani, Oshterani, Kusrani, Bozdar.
Adjoining frontier of Dehra Ghazi Khan district, Khutran, Kosah, Lughari, Gurchani, Murree, Bugti.

The Muhammadan tribes within the frontier, and British subjects inhabiting partly hills and partly plains, are:—

Hazara district, Turnooli, Gukar, Doond and Sutti, Kaghan, Syuds, and others.
Peshawur district, Yusufzai, Khalil, Mohmand of the plains.
Peshawur and Kohat districts, Khatak.
Kohat district, Bangash.
Dehra Ismail Khan district, Bunnochi, Murwuti, Butani, Chiefs of Tank, Chiefs of Kolachi, Chiefs of Dehra Ismail Khan, Nutkani, Lund.
Dehra Ghazi Khan district, Dreshuk, Mazari.

The Panjab or Five River territory of the Muhammadan administrators comprised only the tract of country enclosed and watered by the confluent streams of the Sutlej, the Beas, the Ravi, the Chenab, and the Jhelum. With the Muhammadans the capital was, as now, Lahore, in the centre of the province; but, under British re-arrangement of the revenue districts, the province now includes Dehli, a more populous city, which was long the ancient metropolis of the Moghul dynasty.

In the extreme west, where the Sulimau Hills form a great barrier, the Trans-Indus tract forms the first natural division of the Panjab province. Its northernmost portiou consists of the Peshawur valley, encircled by mountains, through which the Kābul river flows down to join the Indus at Attock; together with the hilly district of Kohat, a wild outlying mass of salt-bearing ranges, traversed by minor tributaries of the great river. Its southern half comprises the Dehrajat, a long strip of barren country lying between the Suliman mountains and the Indus, aud forming parts of Bannu and Dehra Ismail Khan districts, together with the whole of Dehra Ghazi Khan. The entire length of this narrow belt consists, on the west, of a fertile submontane fringe, merging in the centre into a waterless desert, and sinking eastward into the fruitful lowlands of the Indus. The province also iucludes the isolated Himalayan valleys of Kangra, Kullu, Lahul, and Spiti, and the glens of the Hazara frontier among the outliers of the main Central Asian system of the Hindu Kush.

The Panjab must always have been the line which tribes and races followed in migrating to the south-east. The East Aryans in their migrations towards India came through the Panjab, and the oldest Vedas contain their records while dwelling there. Their emigrations into the Indus country occurred about B.C. 4000, and the opening to the Vendidad describes the succession of the foundation of 14 kingdoms, the last and most southern of which being this land of the Five Rivers, the Panjab.

Alexander the Great of Macedon came by way of Bactria and the Hindu-raj pass, crossed the Indus near Taxila, identified by General Cunningham with the ruius of Shah Dheri in the Rawal Pindi district. He found there great warlike tribes, each with a purely republican constitution, and on one occasion he treated with 300 deputies of a tribe, who seem to have been elected and seut as delegates of the people. The best account of them is at page 300 of Heeren's volume on the Persians (Campbell, p. 8). After receiving the adhesion of Mophis or Taxiles, king of that city, he advanced with little resistance to the banks of the Hydaspes or Jhelum. Effecting the passage

of the river at Jalalpur, in the Jhelum district, he encountered the army of Porus (Purusha) at Mong, in Gujcrat, and defeated the Indian monarch with a loss of 12,000 slain, Porus himself being taken prisoner, but restored by Alexander to his entire kingdom. The conqueror halted for a month in the neighbourhood of the Hydaspes, and founded two cities, Nikaia and Bukephala; after which he overran the whole Panjab as far as the Hesudrus or Sutlej. The refusal of his troops to proceed farther from home compelled him to fall back once more upon the Hydaspes, where he embarked on board a fleet to sail down the Indus. The only opposition he met with was from the Malli, who occupied the modern district of Multan. At the siege of their capital, he received a severe wound, in revenge for which he put every person within the walls to the sword.

The Greek brigades in the Panjab were placed first under Philip, while the civil administration of the country remained in the hands of the native princes, Taxiles and Porus. Afterwards, on the murder of Philip by the mercenary soldiers, Alexander (Anabasis, vi. 2; vii.) directed Eudemos and Taxiles to govern the country until he should send another deputy. It is probable, however, that the Greeks continued to retain the charge; for after Alexander's death, in B.C. 323, Eudemos contrived, by his general Eumenes, to make himself master of the country by the treacherous assassination of king Porus (Diodorus, xix. 5). Some few years later, in B.C. 317, he marched to the assistance of Eumenes, with 3000 infantry and 5000 cavalry, and no less than 120 elephants. With this force he performed good service at the battle of Gabiene. But his continued absence gave the Indians an opportunity not to be neglected; and their liberty was fully asserted by the expulsion of the Greek troops and the slaughter of their chiefs. (Justin, xv. 4—'Præfactos ejus occiderat;' again, 'Molienti deinde bellum adversus præfactos Alexandri.') Chandragupta was present when Porus was murdered, and he became the leader of the national movement, which ended in his own elevation to the sovereignty of the Panjab. Justin attributes his success to the assistance of banditti. (Justin, xv. 4—'Contractis latronibus Indos ad novitatem regni solicitavit.') But in this Col. Cunningham thinks he has been misled by a very natural mistake; for the Aratta, who were the dominant people of the Eastern Panjab, are never mentioned in the Mahabharata without being called robbers. (Lassen, Pentapot Indica—'Aratti profecto latrones,' and 'Bahici latrones.') The Sanskrit name is Arashtra, the 'kingless,' which is preserved in the Adraistæ of Arrian, who places them on the Ravi. They were the republican defenders of Sangala, or Sakala, a fact which points to their Sanskrit name of Arashtra, or 'kingless.' But though their power was then confined to the Eastern Panjab, the people themselves had once spread over the whole country:—'Ubi fluvii illi quini . . . ibi sedes sunt Arattorum' (Lassen, Pentapot Indica, from the Mahabharata). They were known by the several names of Bahika, Jarttika, and Takka; of which the last would appear to have been their true appellation; for their old capital of Taxila or Takka-sila was known to the Greeks of Alexander; and the people themselves still exist in some numbers in the Panjab hills. The ancient extent of their power is proved by the present prevalence of their alphabetical characters, which, under the name of Takri or Takni, are now used by the Hindus of Kashmir and the northern mountains, from Simla and Subathu to Kābul and Bamian. On these grounds, Major Cunningham identifies the banditti of Justin with the Takka, or original inhabitants of the Panjab, and assigns to them the honour of delivering their native land from the thraldom of a foreign yoke. This event occurred most probably about 316 B.C., or shortly after the march of Eudemos to the assistance of Eumenes. It was followed immediately by the conquest of Gangetic India (Justin, xv. p. 4), and in 316 B.C. the rule of Chandragupta was acknowledged over the whole northern Peninsula, from the Indus to the mouths of the Ganges. According to Colonel Tod, the Yavan, or Greek princes, who apparently continued to rule within the Indus after the Christian era, were either the remains of the Bactrian dynasty, or the independent kingdom of Demetrius or Apollodotus, who ruled in the Panjab, having as their capital Sagala, changed by Demetrius to Euthymedia. Beyer says, in his Hist. Reg. Bact., p. 84, that according to Claudius Ptolemy there was a city within the Hydaspes yet nearer the Indus, called Sagala, also Euthymedia; but he scarcely doubts that Demetrius called it Euthymedia from his father, after his death and that of Menander. Demetrius was deprived of his patrimony, A.U.C. 562. Sagala is conjectured by Col. Tod to be the Salbhanpura of the Yadu, when driven from Zabulisthan, and that of the Yuchi or Yuti, who were fixed there from Central Asia in the fifth century, and if so early as the second century, when Ptolemy wrote, may have originated the change to Yutimedia, the 'Central Yuti.' Numerous medals, chiefly found within the probable limits of the Greek kingdom of Sagala, either belong to these princes or the Parthian kings of Minagara on the Indus. The legends are in Greek on one side, and in the Sassanian character on the reverse. The names of Apollodotus and Menander have been deciphered, and the titles of 'Great King,' 'Saviour,' and other epithets adopted by the Arsacidæ, are perfectly legible. The devices, however, resemble the Parthian. These Greeks and Parthians must have gradually merged into the Hindu population.

Towards the commencement of the Christian era, this part of India appears to have been overrun by successive hordes of Scythians, whom some mighty revolutions in Tartary had expelled from their native seats. The Chinese historians say that about a century before this era, the Yuti (Gete or Jit), who occupied a vast country between China and the Tian Shan, or the Celestial Mountains, were, after many sanguinary wars, expelled by the Heung-noo, or Huu, and forced into the countries of the Oxus and Jaxartes, whence they extended themselves to Afghanistan and the borders of India. The Indus was only a temporary barrier, and they appear to have occupied the whole country of the Five Rivers. These conclusions, heretofore formed from meagre historical evidence, have been confirmed by the discovery of coins of Panjab rulers, whose names, Azes and Azilises, have no affinity with Greek or Hindu nomenclature, and denote a barbarian

origin. The great Indian sovereign, Vikramaditya, expelled the Scythian princes from the Panjab, and his era, called the Samvat, B.C. 56, is supposed to commence from a great victory obtained by him over the barbarians in that country, which completed his conquest of all Hindustan. His empire, however, fell to pieces after his death, when new hordes of Scythians overran the Panjab, and established, about B.C. 20, a dynasty of kings bearing the name of Kadphises. Coins of these kings have been recovered, and their barbarous effigies clearly distinguish them from Greeks or Hindus. This dynasty is supposed to have reigned throughout the whole of the first century of our era, when it was subverted by a fresh swarm of Scythians, under the Kanerki kings. Between the dynasties, however, there is evidence, from the testimony of Apollonius Tyaneus, related by Philostratus, that a Græco-Parthian king named Phraotes reigned in the Panjab, which fact is supported by coins of Undopherres and Gondophares, both called in the Aryan legends upon the coins. The power of the Kanerki kings in the Panjab must have continued for some centuries, for in the topes or tumuli which have been opened in that country, Kanerki coins have been found along with those of Kadphises and other predecessors of the race, mixed with coins of the Sassanian monarchs of the third and fourth centuries of our era. That these Scythian invaders continued to pour into and occupy the Panjab, is a fact attested not only by Fa Hian, a Chinese traveller in India, early in the fifth century (who crossed the Five Rivers, and found Buddhism prevalent in that country), but by an inscription found by Colonel Tod in a temple near Kota, in Rajputana, dated A.D. 409, which contains a memorial of a Jit prince of Salpura, at the base of the Siwalik mountains. Colonel Tod considers it to be proved beyond a doubt, 'that these Jit princes of Salpura, in the Panjab, were the leaders of that very colony of the Yuti from the Jaxartes, who in the fifth century, as recorded by De Guignes, crossed the Indus, and possessed themselves of the Panjab.' Various indications appear in the Rajput annals of their conquests and settlements in this country, even as far as the Jhelum. In more modern times, the country has been held by Mahmud's successors, Chengiz Khan, Timur, Baber; Humayun, and his successors, Nadir Shah, Ahmad Shah, Ranjit Singh, and the British.

The population of the Panjab is now of a varied character. As a highway through which invading and immigrant races sought to pass, most of them left portions of their number there, and its people are of Scythic, Aryan, Arab, and Mongoloid origin; and the census of 1872 enumerated the tribes as under:—

The Chamar were included amongst the Hindus and Sikhs, and were 654,406 in number.

At the 1881 census, the total numbers of the religious sects were found to be 22,712,120, as under:—

Muhammadans,	11,662,434	Buddhists,	3,251
Hindus,	9,252,295	Zoroastrians,	465
Sikhs,	1,716,114	Jews,	31
Jains,	42,678	Others,	1,153
Christians,	33,699		

The Muhammadans are nearly all of the Sunni sect. Great portions of Hindu and Jat tribes have adopted the Muhammadan religion. The chief non-Hindu or aboriginal tribes are the Baori, Chamar, Changar, Chuhra, Dumna, Dhanak, Dagi, Labana, Mahtam, Meg, Od, and Sansi.

Baluch contribute to the predatory classes; others of the homeless, criminal classes are:—

Aheri,	13,086	Harni,	1,338
Baori,	22,024	Jhabel,	8,063
Beldar,	3,449	Kehsal,	1,251

Chuhra (scavengers).		Pakhiwar,	4,502
Gogra,	3,110	Sansi (gypsies),	21,309
Gurmang.		Thori,	10,594

Languages.—Nine languages are current in the Panjab,—English, Hindi, Jataki, Kashmiri, Panjabi, Pushtu, Persian, Sindi, and Urdu or Hindustani. Pure Panjabi is confined to the small number of Sikhs who are settled in the different cities and towns. It is recognised as a dialect of Hindi. The Brij Basha (or Bhaka, as it is pronounced on the Ganges) and the Panjabi are the two most cultivated varieties of Hindi, but the Panjabi passes into Multani, which a good philologist has shown to be a corrupted form of Panjabi; whilst Jataki, again, farther to the south, is a dialectal form of Multani. The educated Muhammadans and many of the Hindus use Persian in their correspondence.

Rivers.—The modern names of the five rivers which give the province its name, are the Jhelum, the Chenab, the Ravi, the Beas, and the Sutlej. They ultimately join the Indus, which is known to the people as the Sind and the Attock, and anciently the Aba-Sin. They are mentioned here in their succession eastward from the Sind or Indus, Each mesopotamia district between two rivers is

called a doab, from Do, two, and Ab, water; and of these there are five, viz. the Jalandhar Doab, between the Sutlej and the Beas; the Bari Doab, between Ravi and the Beas or the Sutlej; the Rechna Doab, between the Ravi and the Chenab; the Chuj Doab, between the Chenab and the Jhelum; the Doab-i-Sind Saugur, between the Jhelum and the Indus. The names of three of the doabs are formed by joining the initial letters of the rivers; thus, between the Beas and Ravi is the Bari Doab; between the Ravi and Chenab is the Rechnab; and that between the Chenab and the Jhelum is the Chuj.

Modern names.	Sanskrit names.	Greek names.
Jhelum or Bihut.	Vitasta.	Hydaspes.
Chenab.	Chandra Bhaga, or Sanda Bhaga.	Ascesines.
Ravi or Rhoas.	Airavati.	Hydraotes.
Beas, Beya, Veya.	Vipasa.	Hyphasis.
Sutlej or Ghara.	...	Hesidrus.

The Panjab rivers are constantly shifting their channels. The Beas has altogether lost its independent course, and is now a mere tributary of the Sutlej. The valley of the Chenab, below Kalowal, is nearly 30 miles broad, and that of the Ravi, near Gujera, is 20 miles, the extreme limits of both rivers being marked by well-defined high banks, on which are situated many of the most ancient cities of the Panjab. Multan was originally situated on two islands in the Ravi, but the river has long ago deserted its old channel, the nearest point of which is now more than 30 miles distant. But during high floods the waters of the Ravi still flow down their old bed, and General Cunningham had twice seen the ditches of Multan filled by the natural overflow of the river.

The rivers are liable to sudden rises. This rise will frequently take place in the course of a day or two, sometimes in a few hours. The Markanda, in the Ambala district, at one time of the year is like an ocean; at another it will be a slender stream, hardly to be called a river. The Indus always contains a large body of water, but even this river is liable to become dammed up in the hills whence it rises; the water then accumulates, and, bursting at length its dams, comes down with terrible force. Once or twice these floods have occurred, giving only a few moments' notice by a sound as of distant thunder, and then coming on with a sweep that spread desolation for many miles.

The chief towns are Attock, Dehra-i-Ghazi Khan, Dehra-i-Ismail Khan, Jalandhar, Jhelum, Kapertalla, Lahore, Leia, Multan, Peshawur. The Panjab has also districts on both sides of the river Sutlej, designated Cis-Sutlej districts east of that river, and Trans-Sutlej states west of that river. In the Cis-Sutlej territory are the districts and towns of Firozpur, Sobraon, Kithul, Ludiana, and Ambala. The Trans-Sutlej states are Hoshiarpur, Dharmsala, and Kangra.

Panjab is a largely manufacturing country, the value of the produce from looms and workshops being estimated in 1871–72 at £4,850,000. Their woollen manufactures are from the exquisitely soft fleeces of Rampur and Kerman, from sheep wool, and from goat and camel hair. Silk is obtained from Afghanistan, Yarkand, Bokhara, Bengal, and China, and manufactured at Amritsar, Lahore, Multan, Bahawulpur, and Jalandhar, and the manufactures valued at £150,000 a-year.

There are about half a million of weavers in Sialkot, Hoshiarpur, Amritsar, Ambala, and Jalandhar. Kyes, loongi, daryai, and other silk manufactures are exported chiefly to Dehli, Amritsar, and Peshawur; and kundla and gold lace work are made largely for local consumption and for export to Multan, Rawal Pindi, and Peshawur. Amritsar town being the commercial capital of the Panjab proper, its trade is carried on with Bokhara, Kābul, Kashmir, Calcutta, Bombay, Sind, Rajputana, the N.W. Provinces, and all the principal marts in the Panjab. Manufactures of pashmina and silk goods give employment to large numbers of workmen. The pashmina goods are manufactured from the fine wool of Tibet, imported through Kashmir, and 4000 looms are engaged in this trade, each of which is worked by two men. The workmen are all Kashmir Muhammadans, and the manufacture is said to have been established since A.D. 1840. The most valuable articles are the Kashmir shawls. The silk manufacture has long been established at Lahore, and has spread from that place to Amritsar, where it is now carried on to about an equal extent.

About half the population are engaged in agricultural pursuits. The most industrious are the Rain, Mali, Saini, Lubana, and Jat. The Rain are diligent, persevering men, and on good land will often sustain three or four successive crops of vegetables, which they produce largely in addition to the grain crops.

The Mali are chiefly gardeners.

The Saini occupy sub-mountain tracts, and grow sugar-cane largely. Their village lands are always in a high state of tillage.

The Lubana or Brinjara are to be found on some waste lands, and are careful and thrifty cultivators. They have many settlements along the right bank of the Ravi.

The Jat, about two millions in number, are conspicuous for their industry, and the wives cheerfully work along with their husbands in all field labour. They grow grain largely, and their well-worked and well-fenced fields can always be distinguished from those of the Syud, Pathan, Brinjara, Brahman, Gujar, Rangar, and the Rajput, the last being the worst, for he considers ploughing beneath him, and will never hold the plough if he can get any Chamar or other low caste man to do it for him.

As a rule, the cultivators do not consume the wheat they produce, but keep it for sale, and subsist on the pulses, barley, and inferior grains.

The plain districts of the Panjab greatly resemble one another in their general physical features, the main difference consists in the fact that some are better irrigated than others, and that some include large tracts of sandy unproductive country, like the desert portion of Multan or Muzaffarnagar. The climate of such districts is hot and sultry; the amount of rain that falls is at its minimum, and cultivation is almost entirely dependent on canals and artificial irrigation. In this respect no doubt these districts differ widely from the rich plains of the Jalandhar and Bari Doabs, where not only do the great rivers fertilize the soil, but the periodical rainy season seldom fails to yield an abundant increase to the summer sown crops of the kharif. The climate is in general characterized by dryness and warmth; little rain falls except in those parts extending

along the base of the Himalaya, and where the south-west monsoon is partially felt. The face of the country presents every variety, from the most luxuriant cultivation to the most sandy deserts, and the wildest prairies of grass and brushwood. A traveller passing through those lines of communication which traverse the northern tracts, would imagine the Panjab to be the garden of India; on the other hand, returning by the road which intersects the central tracts, he would suppose it to be a country not worth annexing. From the base of the hills southward, there stretches a strip of country from 50 to 80 miles broad, watered by mountain rivulets, and for fertility and agriculture unsurpassed in Northern India. In their downward course the rivers spread wealth and fruitfulness on either side, and their banks are enriched with alluvial deposits, and fringed with the finest cultivation. These tracts, though unadorned with trees, and unrelieved by any picturesque features, are studded with well-peopled villages, are covered with two waving harvests in the year, and are the homes of a sturdy, industrious, and skilful peasantry. Within this tract are situated the sister capitals of Lahore and Amritsar, and most of the chief cities, such as Dinanuggur, Buttala, Sealkote, Wazirabad, Gujranwala, Ramnuggur, and Gujerat.

The sloping plain of the Panjab varies in elevation, from 600 to 2000 feet above the sea; Lahore being but 900, and Jhelum about 1600. It declines regularly to the south-western extremity. The soil of the doabs is of varied fertility; generally, it is very sandy, but they are rendered highly productive by irrigation from the rivers which traverse these plains. The rich and fertile tracts that border on the great rivers of the Panjab, extending inland to the centres of the doabs as far as the fecundating influences of their waters are felt, yield annually an abundant harvest of grains of all kinds, and pulse, which form the staple articles of food to the great majority of the population.

The plains of the Panjab may be described as vast expanses of alluvial clay and loam, whose elementary constituents must once have been the same as now form the rocks of the huge ranges of mountains to the north. The principal constituents that produce a variety in the nature of soils, and one which is very important in the Panjab island, in fact the main distinction of soils (apart from that of their containing or not containing 'kalr,' the efflorescent salt), is that the soil is sandy, as in many portions of districts it is, or that it is rich loam and clay.

The districts of Lahore, Gujranwala, Amritsar, Gujerat, Jalandhar, Ludiana, Ambala, Dehli, and Peshawur, are watered districts, whether irrigated by canals, wells, rivers, or abundance of rain, and their soils are chiefly alluvial.

In the Multan, Muzaffarnagar, Shahpur, or Gugaira districts, the soil is arid and sandy, they are not well watered, and the rainfall is small.

The country to the east of the Hydaspes (Jhelum) is open and fertile, but is rugged to the west of that river, and sandy towards the junction of the five rivers.

PANJAH. Hind. A model or drawing of a man's hand with the fingers extended. A representation of this is mounted on a staff by Shiah Muhammadans, and carried in procession in the Maharram as a standard, being supposed by them to represent the hand of Ali, and the extended fingers are said to symbolize Mahomed, Ali, Fatima, Hasan, Husain. They get the names of certain of the martyrs, viz. Panjah-i-Haidar, or Panjah-i-Murtuza Ali. An impression on paper of the open hand is occasionally made as a signature. At Amritsar, in March 1846, when Gulab Singh was formally inaugurated as maharaja of Jummoo, he exhibited the engagement with the lama of Lhassa, drawn out on his part in yellow, and on the part of the Chinese in red ink, and each impressed with the open hand of the negotiators dipped in either colour, instead of a regular seal or written signature. The Panjah, or hand, seems in use in Asia as typical of a convent, and it is moreover a common emblem on the standards of the Eastern Afghans. Hyder Ali, father of Tipu Sultan, is said to have used his hand smeared with ink as his attestation to important documents.—*Cunningham's Sikhs.*

PANJAM. Tel. A class of cotton cloths manufactured in the south of India.

PANJAY TANOBA, a class of slaves in Coorg.

PANJERANG. Malay. A titular designation of a native chief.

PANJPAI, a section of the Iliaszai Yusufzai tribe in part of the Buner valley.—*H.A.N.W.F.*

PANJSHAHR, a populous valley which affords a communication with Badakhshan. It contains silver mines, which were worked by Abul Fazl.

PANJ-TAN, five holy persons of the Shiah Muhammadans,—Mahomed, Ali, Fatima, Hasan, and Husain.

PANKA or Ganda, a sect of Hindus, followers of Kabir, who is said to have appeared in the weaver caste, in the same country and at the same time as Rai Das, both being disciples of Ramanand, and their doctrines being similar in many respects. They cultivate the land, but they are not generally esteemed as cultivators.

PANKHA. Hind. A fan; a wooden frame and fringe suspended overhead, which, when swung, causes a movement in the air. Palm leaves made into fans.

PANKHI and Namadah are coarse heavy felts, used as blankets.

PANKONG, a lake, 13,930 feet above the sea, in Ladakh in Chinese territory, forty miles long and two to nearly four miles wide.—*Drew.*

PANKTI - PAVANA. This term, rendered 'taking precedence at festivals,' means the purifier of the row, or range, or assembly, that is, Jagaddhara says, in the place where there is food, or, in other words, they were Agra-bhojana, the first served at feast. He also quotes a text, without mentioning his authority, to show that the term implies a Brahman who has read the Yajur, Sama, and Atharava Vedas, and the word is similarly explained by Menu, iii. p. 184.—*Hind. Th.* ii. p. 11.

PAN-LOUN. Burm. In Tavoy, a close-grained red wood, used for building.—*Dr. Wallich.*

PANNA, a native state in Bundelkhand, under a chief, descendant of Maharaja Ch'hator Sal. Its area, 2555 square miles, with a population in 1875 of 183,000, and revenue five lakhs. It is mostly on the table-lands above the Vindhyan ghats. North-east of the town diamonds are found.

PANNA. The standard of Panna under the Peshwa was called the Ankusi rupee, from Ankus, the instrument used by the mahout to guide the elephant; probably a symbol marked on the coin.

PANNAGAL, snake-charmers in the Deva-loka.

PANNAM KALANGOO. Tam. The first shoot from the planted palmyra nut, the germ of the future tree. The people of Southern India and Ceylon have for many hundred years been in the habit of eating this. It is about the size of a common carrot, though nearly white. It forms a great article of food among the natives for several months in the year; but Europeans dislike it, from its being very bitter. Recent experiments have proved that a farina, superior to arrow-root, can be obtained from it, prepared in the same way; and 100 roots, costing 2½d., yield one and a half to two pounds of the flour. In Madras 100 cost 1½d. Pannam Oli are leaves of the palmyra tree, prepared for writing on. Pannam Pallam, fruit of the Borassus flabelliformis. Pannam Kalloo is toddy or palm wine.—*Simmonds' Comml. Products*, p. 376.

PANNI. Hind. Slips of leather for gilding. Pannigar, a leather gilder.

PANNI, a servile caste of Malabar. The Panniar of Malabar are agricultural slaves.

PANNIAR or Punniar, a town in the Maharaja Sindia's dominions, Central India, in lat. 26° 6′ 12″ N., and long. 78° 2′ 2″ E., 12 miles west of Gwalior. On the 29th December 1843, on a rising of the Gwalior army, the British Indian army, under Sir Hugh Gough, defeated them, and took 24 guns.

PANOON, a large tree of Lucknow, grows spontaneously in the Terai; its timber is used for beams, etc.—*Cal. Cat. Ex.*, 1862.

PANORAMA. Panoramic representations of holy places are common in India, in the form of long rolls fixed against a wall in compartments. Scenes from the Mahabharata and Ramayana, in illuminated and embellished portable scrolls, are very frequent; also, in the Western Provinces of India, to meet with a kind of fresco-painting is common upon the walls of gardens or enclosures of tanks, respresenting mythological or historical subjects.

PAN-PATRA. Hind. A cup, often seen figured in the hand of the goddess Devi, or Bhawani, for the purpose, it is said, of receiving the blood of victims.

PAN-SALA, a cell in a Hindu temple or in a Buddhist pagoda, for the residence of the priests.

PAN SAM are Chinese words of salutation by a visitor, meaning, I respectfully request permission to kneel and knock the head.

PANSARI. Hind. A drug-vendor.

PANSEE, a Muhammadan tribe or sect in Yunnan, who about A.D. 1862 rebelled against the Chinese authorities. In A.D. 1863 their own numbers were not over twenty thousand, but their forces soon rose to two or three hundred thousand, among whom were Chinese, Shans, and a few Ka-khyen. In any place that resisted after taking, the old and the adults were slain wholesale, the young men made Musalmans or slaves, the young women only had death exchanged for the harem. The whole of Yunnan fell into their hands, and the Shan states belonging to it accepted their suzerainty, but they exasperated their Shan subjects into open hostility. Their head or king was called Tuwinsin, and resided at Tali. The Ayebeing Bochup was the General and Commissioner in 1863; he conducted hostilities against an army of Chinese, under Leesitagli or Lioguanhan, in the Nalukan mountains, between Mainla or Kaingai and the Pansee post Mopu, two days from Momiru. The Commissioner of Momiru was Sophusyanjin. The Pansee seem the Panthay tribe, q.v. The Chinese put down the rebellion.

PANSERI, from five, and Ser, a weight or measure of five seers.

PANSH-AGNI. Hind. In Hinduism, five fires,—that is, one towards each cardinal point, close to the devotee, with the sun, on which he constantly looks, over his head; standing with uplifted arm, without aid or support, day and night, feeding on air, immoveable, on his right toe, upon the afflicted earth, etc.

PANSHEN ERDENI, Lama, resides at Tashilumbo, eight days' journey to the west of Lhassa.

PAN SOOPAREE. Hind. From Pan, betel leaf, and Sooparee, areca-nut. In India the handing round of these to visitors is a ceremonial equivalent to the English custom of cake and wine. On taking leave, the ceremonial is various. With the nawabs of the Carnatic, the nawab would put a little atr on the visitor's handkerchief, then sprinkle it with rose-water, then present a rose-bouquet, then a bheri of pan sooparee, and, suspending a garland of jasmine round the neck, shook hands and dismissed the visitor. At the palaces in Hyderabad of the nobles Vikar-ul-Umra, Shams-ul-Umra, and Sir Salar Jung, the host accompanied the guest to the door, and then presented one or more little phials with rose-attar.

PANSWAH or Panshway or Pansi. Hind. A small boat attached to a budgerow, used on the Ganges and Hoogly rivers, with an awning of matting and thatch over the stern. It is a passenger and goods boat, is usually rowed by two or four men, but carries a mast and two sails.

PANT or Punt, amongst the Mahrattas an officer of the state; in the times of the Peshwas, Pant-Pratiuidhi meaning representation of the raja, *i.e.* viceroy.

PANTÆNUS, a Christian missionary who penetrated into India in the 2d century. He found and brought to Alexandria, on his return, a copy of the Hebrew Gospel of Matthew, which had apparently been taken there by the apostle Bartholomew.—*Indian Antiquary*, October 1873.

PANTHAY, a Muhammadan sect in the province of Yunnan, in the south-west of China. It is a colloquial corruption from Puthee, which distinguishes Muhammadans from other religions in Burma. The Burmese call them Quayzse, meaning a foreigner. Mr. J. W. S. Wylie erroneously conjectured it to be the same as Hoai-Hoai, the term applied by the Chinese to all Muhammadans, Hoai (Muhammadan) zse (independent). Hoai-zse means Muhammadans independent of Chinese authority. In 1855 they established their independence in Yunnan, but for a few years only. In 1872 they sent an embassy to England. They are a tall, strongly-built, fair-skinned race, with a type of face differing distinctly from the Chinese. They are keen traders, very industrious and enterprising.—*Fytche in B. As. So. Jour.*, 1867.

PAN THEET YA, also Let touk, Burm.?

Vateria Roxburghiana, *Wight.* In Tavoy, a good, white, rough wood, useful for boat-building. Vateria lanceolata?—*Dr. Wallich.*

PANTHER, leopard or pard of the E. Indies; Felis pardus, *Linn.* See Felidæ.

PANTHI. Hind. The follower of any Hindu religious sect, as Aghora Panthi, Kabir Panthi.

PANTHOLOPS HODGSONII, the sous or Tibetan antelope. It rarely comes so far south as Tooskee Lake; its favourite haunts are among the lofty ranges northwards; it is met with in herds. It has two slit-like openings in the groin, forming pouches of a size capable of containing the clenched fist. They are strange appendages, and, like the infra-orbital openings, their uses are not apparent.—*Adams.*

PANTULU is the title of all Vāpari Brahmans, and is given to Teling schoolmasters. It is derived from Pandit, a learned man.

PANTUN. Malay. Four lines of poetry. See Ber-Beit.

PANUBUR, in the Aru Islands, is a basket measure which may contain half a pikul.

PANWAR-SHADI. Hind. Amongst Hindus in Bengal, a kind of marriage of a female slave to a nominal or vagrant husband, who for a small payment will agree to wed any number of women. Cohabitation rarely follows; and the object of the arrangement is to provide a putative father for any child the woman may bear, by whomsoever begotten, and which then became the property of the owner of the female slave.

PANYALA. Beng. In Behar, the small leaves and shoots of the Flacourtia cataphracta, which resemble rhubarb in flavour, and are used as gentle astringents.—*Simmonds' Dict.*

PAO. Lepcha. This is a large bamboo, the prevailing plant near the base of the Sikkim valleys; it attains a height of 40 to 60 feet, and the culms average in thickness the human thigh; it is unarmed, deep-green or purplish, and used as a large water vessel. Besides this there are nearly a dozen kinds of bamboo known to the Lepcha. Two species of hill bamboo, 'Payong' and 'Praong' of the Lepcha, replace the 'Pao' of the foot of the hills. The former flowers abundantly, the culms, 20 feet high, being wholly a diffuse panicle of inflorescence. The 'Praong' bears a round head of flowers at the apex of the lofty branches.

PAO. Hind. A quarter. Paola, quarter of a rupee. Paona or Pona, a quarter; when placed before another number, as Pon-do, or Pona-tin, it means a quarter less two or three, *i.e.* $1\frac{3}{4}$ or $2\frac{3}{4}$.

PAO-KIA. Chin. Takers of a census. The official word used in the Chinese census is Yen-hu, literally fires-doors. Persons called Pao-kia, or chiefs of ten fires, are appointed to collect the numbers of their tithing.—*Yule, Cathay*, i. 117.

PAOPA-DOUNG, an isolated mountain in Burma, which the Burmese regard with some superstitious dread. They say it is impossible to ascend it, and describe it as the dwelling-place of Nats and Bilus.—*Yule*, p. 27.

PAOREE, the civil station of British Garhwal, is 5238 feet above the level of the sea.

PAPA. Tel. An ancient term for a snake.

PAPA, a rush of the Society Islands with which the finer mats are made.

PAPAHA. Hind. An insect which attacks rice.

PAPAIA-OMU or Areoi of the Society Islands, strolling-players, who act their drama or Aamu. Papa-Nayu (Phani-Pati), the dragon-king.—*Montgomery*, p. 94.

PAPAR. Hind. A kind of biscuit. Papargar, a maker of the papar. This is the Pappadam of the English.

PAPAVERACEÆ. *Juss.* The poppy tribe of plants, annual or perennial herbs, rarely undershrubs, with a milky juice, species of which may be thus shown:—

Papaver somniferum, *L.*, Morea, Egypt, E. Indies.
Var. (*a*) album, flowers and seeds white.
(*b*) nigrum, flowers purple, seeds black.
P. Persicum, *Lindl.*, Persia.
P. amœnum, *Lindl.*, N. India.
P. glabrum, *Royle*, Himalaya.
Argemone Mexicana, *Linn.*, all India.

PAPAVER SOMNIFERUM. *Linn.* Poppy.

Var. (*a*) with white seed.	*Var.* (*b*) with black seed.
Khash kash aswad, Arab.	Banga-pion, . . Malay.
Pasto, ... Beng.	Bunga madat, . ,,
Mukon, ... Gr.	Khash-khash, Kunar, Pers.
Koknar, Post, . Hind.	Chosa, ... Sansk.
	Kasakasa, . . Tam., Tel.

This very important plant, one of the Papaveraceæ, a native of the south of Europe and Asia Minor, was well known to the Greeks, and was cultivated at very early periods on account of its seeds. (Theoph. lib. ix. cap. xiii. ed. Bodæus and Staple, p. 1097.) Some authors have been of opinion that it is the μήκων of Dioscorides, and that the kind with black seeds was called ἀγρία, and that with white seeds ἥμερος; and that it is the juice of this plant which Hippocrates recommends under the name of ὀπὸς μήκωνος, or jnice of the poppy. Pliny (xx. c. 18) uses opium to express the inspissated juice of the poppy. Sprengel, in his Hist. Rei Herb. i. p. 176, quotes Diosc. lib. iv. c. 65, as referring to Papaver somniferum, and to P. Rhoeas; but in his edition of that author (ii. p. 600) he mentions only the latter plant; hence we may infer that he conceives the former to have been unknown, as he nowhere else mentions it. It was early cultivated in Egypt, in India, Persia, and Asia Minor, as well as in some parts of Europe. The garden poppy is probably a native of Persia. The dark red-flowered and black-seeded was called by Gmelin, P. somniferum; and the white-flowered with white seeds, P. officinale. It is cultivated in Turkey, Asia Minor, Egypt, Persia, India, and China, on account of its inspissated juice, the opium of commerce. The cultivation of the poppy is very simple, though the weeding requires care, and the plants must not be crowded too much together. They are carefully watered and manured, the watering being more copious as the period of flowering approaches, and until the capsules are half-grown. The capsules are employed in medicine for the preparation of a sedative decoction and syrup, much used for children. They are devoid of odour, of slightly bitter taste. If collected before the concrete juice is removed, the capsules contain a minute portion of all the active principles of opium; for medicinal purposes those should be rejected which are marked with longitudinal and parallel cuts resulting from the extraction of opium. An infusion of poppy heads in cold water should strike a red colour with permuriate of iron.

Poppy seeds yield by expression 56 per cent. of

a bland and very valuable oil, of a pale golden colour, fluid to within 10 degrees of the freezing point of water, sp. gr. ·939; it dries easily, is inodorous, of agreeable flavour, is partially soluble (8 in 1000) in alcohol, dissolves the oxides of lead. For all pharmaceutical purposes, this oil is equal to that of the olive employed in European pharmacy. About 30,164 tons of poppy seeds, value Rs. 39,04,065, are annually exported from India, chiefly to France and Britain. Opium is an important article of commerce, and is extensively used in medicine and as a luxury.

PAPAW TREE, the Carica papaya, the Bati of the Malays, is not the pawpaw of the Mississippi valley, Porcelia triloba, but is the pawpaw of South America and the West Indies, one of the Papayaceæ. Europeans call it papaya, from the Portuguese papayo, and by the Portuguese it was probably introduced into India. The fruit resembles a melon in appearance, and often tastes no better than a good English turnip. It is eaten raw, also after being cooked. The leaves have saponaceous properties, and are used in tropical America in the absence of soap. Both leaves and fruit act in a hitherto unexplained way upon the animal fibre, and make the toughest meat tender, if either boiled with portions of them, or even wrapped up in the leaves, or if fowls be fed on the seeds. The seeds have a mustard-like pungency, and are an efficient vermifuge.—*Mason; Williams; Seeman.*

PAPCONDAH. Through a pass in the gneiss mountain of Papcondah, the Kistna river enters the plains of the eastern coast. In this district the sandstone re-appears, at an elevation little above that of the sea, but basaltic hills, several hundred feet in height, in which marine fossils have been discovered, exist almost within the delta formed by its sediment.

PAPENBERG, an island of Japan, notorious as the spot where many Portuguese and Japanese Christians were barbarously martyred.—*Hodgson's Nagasaki*, p. 33.

PAPER.

Warak, Kartas, AR., TAM.	Kaghuz, . . . PERS.
Papir, ... DAN.	Papel, . . . PORT., SP.
Papier, . . . FR., GER.	Bumangna, . . . RUS.
Carta, Charta, . IT., LAT.	

Paper of various qualities is made throughout all the countries in the south and east of Asia, and is used for writing on and for many economic purposes in all parts of British India, Further India, China, and Japan. In Western India, paper is made at Ahmadabad, Surat, Dharwar, Kolhapur, and Aurangabad; that made at Aurangabad bears the palm as to fineness and gloss, hence the demand for it in native courts of India, to engross sunnuds, deeds, and other such documents; and the Bahadur khani and Madhagari paper of Dowlatabad are famed. For courtly use grains of gold-leaf are mixed with the pulp, and thus become spread over the surface of the paper, called Afshani Kaghaz. China, up to the year 1840, largely supplied India with paper; and there are now, 1883, in British India, many small establishments making inferior papers, with five or six worked by steam. But after the middle of the 19th century, paper for the writing and printing purposes of Europeans, and also, too, of most of the natives, was all imported into India from France and Great Britain. Muhammadans and the Hindus in India, who use an Indian ink, still largely write on a glazed paper, the manufacture of India. The British Indian Government, during Sir Charles Wood's (Lord Halifax) position as Secretary of State for India, ordered all supplies to be purchased in Great Britain, and that order threw back many trades and caused great financial losses to the Indian Government. The manufacture of paper as a writing material was a comparatively late discovery. A paper was manufactured at a remote period in Egypt from the papyrus or paper-reed, a plant growing freely on the banks of the Nile. A manufacture of paper from the bark of trees and other substances existed also in China from a very early date; but among the nations of antiquity, before the introduction of paper, such substitutes were used as lead, copper, brass, bricks, clay, and stone, on which national edicts and records were written or engraved; or tablets of metal, wood, wax, and ivory, skins of fishes, intestines of serpents, backs of tortoises, bones of animals, and the inner bark and leaves of trees for ordinary purposes. Indeed, there are but few sorts of plants that have not been used for making paper and books, and hence have arisen the terms biblos, codex, liber, folium, tabula, tillura, philura, scheda, patta, etc., which express the several parts of the plants that were written on. The use of these was greatly discontinued after the invention of papyrus and parchment, but they are still used in many parts of the world. The Egyptian papyrus was made by laying thin plates of bark, taken from the middle of the paper-rush, side by side, but close together, on a hard smooth table; other pieces of the same size and thinness were then laid across the first at right angles; the whole was moistened with the water of the Nile, which was supposed to have some agglutinating property (though this probably resided in the plant itself), and pressure was then applied for a certain number of hours. Thus a sheet of paper was formed which required no other finishing than rubbing and polishing with a smooth stone, or with a solid glass hemisphere, and drying in the sun. This very simple process was rather a preparation of a natural paper than a manufacture, properly so called, and is practised to the present day in Nepal, Chinese Tartary, China, Japan, and the Pacific Islands, with the inner barks of the paper mulberry, for making clothing and paper materials.

Tus or Tuz is a birch bark upon which, in addition to leather, we learn that the ancient Persians wrote, and it seems also to have been anciently used in North India. In Hiwen Thsang's time (A.D. 629-645), the early Buddhist scriptures of Kasyapa's council were written on the leaves of the Tala and other palms, which are still largely used in all Southern India, Ceylon, Burma, and Siam, for account keeping, records, and books; and it is traditionally recorded that many of the writings of Mahomed were on the blade-bones of sheep.

The Chinese, however, affirm that at the beginning of the Christian era they discovered the means of manufacturing paper from pulp. Before that invention they used to inscribe written characters on strips of bamboo, or sheets of metal, using a style or pen of iron for the purpose of marking the characters; and before their art of paper-making had arrived at

perfection, they wrote upon white silk or cotton with a bamboo pen, which was found more conveuient than writing either on strips of bamboo or sheets of metal, as the silk or linen could be folded into a small compass.

Anciently, in Chiua, bamboo leaves scorched before a flame were also used to write upon, and bamboos contribute largely to the manufacture of the finished articlc of the present day. In the times of the Ts'in and Han monarchs, coloured threads of silk were used to record events, and the Chinese written character iu constant use still retains the radical for silk. In the reign of thc Han emperor Ho-ti, the bark of certain trees came into use, being boiled to a pulp, along with silk, old fishing nets, and hemp fibres, to make a paper which came into general use. Then, as now, the materials employed varied greatly according to the locality. The use of printiug-blocks in China, in the 6th century after Christ, led to the extensive making of paper, in which the Chinese have ever since contiuued to excel. The delicacy of their best proof-paper, forming the original 'India-proof' of former days, the elegance, cheapness, and general use of their commonest stationery materials, are amongst the most satisfactory proofs of their civilisation. So early as the year 900 A.D., three kiuds of paper were produced in Japan, viz. Ma-shi from hempen rag pulp; Hi-shi from the gam-pi (Wickstrœmia canescens) and other plants; and Ko-ku-shi made from Ko-zo (Broussonetia papyrifera), which is like that now in use in Japan, and it is also made there from the Edgeworthia papyrifera.

The manufacture of the Chinese extended to the making of sheets of paper from old rags, silk, hemp, and cotton, and has been supposed to have been the source whence the Arabs obtained their knowledge of paper-making. The latter people uudoubtedly introduced into Europe, in the earlier half of the 12th century, the art of making paper from cottou, aud established a paper mauufactory in Spain. In 1150, the paper of Xativa, an ancient city of Valencia, had become famous, and was exported to the east and west; and when some Christian labourers obtained the mauagement of the mills of Valencia and Toledo, the different processes of the manufacture were greatly improved. Cotton paper became general at the close of the 12th and beginning of the 13th centuries, but in the 14th century it was almost entirely superseded by paper made of hempen and linen rags. The paper made of cotton was found not to possess sufficient strength or solidity for many purposes; a very strong paper was thcrefore made of the above snbstances, not weakened by bleaching, according to the present mode, which, by removing the natnral gnm, impairs the strength of the vegetable fibre. Somc of these old papers, from having been well sized with gelatine, are said to possess their original qualities even to this day. The manufacture of paper from linen rags became general in England, Frauce, Italy, and Spain in the 14th century. The first German paper-mill was established at Nnremberg in 1390. English mannscripts on linen paper date as early as 1340. It was made in England A.D. 1250, and in the Bartolomæus of Wynkyn de Worde (1496) it is stated that paper of a superior kind was made for that work by John Tate, jun., at his mills in Stevenage, Hertfordshire. In 1770, the manufacture of fiue paper was established at Maidstone, in Kent, by a celebratcd maker, J. Whatman, who had worked as a journeyman in some of the principal paper-mills on thc Coutinent. Not long before this, wove moulds had been invented by Baskervillc, to obviate the usual roughness of laid paper, and these, attracting attention in France, led to thc improvements which characterized the vellum paper of that period. Holland, too, contributed its share to the advancement of this manufacture, by inventing cylinders with steel blades for tearing the rags, and thus facilitating their conversion into pulp, which by the old method of stampers only, was a very slow and defective process. In 1799, the first attempt to produce paper in an endless web was made in France by a workman in the employ of M. Didot. The invention was brought to England by M. Didot in 1801, and made the subject of patents, which in 1804 were assigned to the Messrs. Fourdrinier. The invention was perfected at Tewin Water, in Hertfordshire, at a cost of £60,000. Their patent right was, however, invaded, and they lost a considerable sum of money dne to them from the imperial treasury of Russia, though, to enforce his claim, Henry Fourdrinier, at the age of seventy-five, with his daughter, made a special journey to St. Petersburg. The Fourdriniers then petitioned the British Goverument, the revenue having benefited half a million a-year by their inventions, when their claim was meanly recognised by a parliamentary vote of £7000; on which the paper-makers resolved to purchase by subscription annuities for the surviving patentee and his two daughters; but ere this was done the father died, in his eighty-ninth year, and his two snrviving daughters received small pensions from the Crown.

The subject of water-marks assists in elucidating the history of paper-making, and the mark of the manufacturer has often been found of nse in detecting literary forgeries and frands in the falsification of accounts. One of the oldest water-marks in existence is an open hand, whose middle finger is connected by a straight line or stem with a star. This appears on a sheet of paper of the manufacture of Flanders, which at that time supplied all the paper needed for the correspondence of England. Upon a sheet of paper is written a letter, preserved in one of the museums at Venice, which was addressed to Francesco Capello, by king Henry VII., from 'our manor of Woodstock,' on the 20th of July 1502. Mr. Herring, however, states its introduction at 1530, adding that it gave the name to 'hand' paper. Note-paper once bore a tankard, but it had since the royal arms iu a shield without motto or supporters. Post was marked with a postman's horn in a shield with a crown; Copy had a fleur-de-lys only; demy and several larger sorts, a fleur-de-lys in a crowned shield; royal, a shield with a bend sinister, and a flenr-de-lys for crest. Mr. Herring traced the term cap to the jockey cap, or something like it, in use when the first edition of Shakespeare was printed. The date given to foolscap in the Archæologia xii. is 1661, and the traditional story related of its origin is that, when Charles I. found his revenues short, he granted certain privileges, amounting to monopolies, and among these was the manufacture

of paper, the exclusive right of which was sold to certain parties, who grew rich and enriched the Government at the expense of those who were obliged to use paper. At this time all English paper bore in water-marks the royal arms. The Parliament under Cromwell made jests of this law in every conceivable manner, and, among other indignities to the memory of Charles, it was ordered that the royal arms be removed from the paper, and the fool's cap and bells substituted. These were also removed when the Rump Parliament was prorogued; but paper of the size of the Parliament's journals still bears the name of 'foolscap.'

Mr. Herring relates that the practice of blueing the paper-pulp had its origin in an accidental circumstance. About the year 1790, at a paper-mill belonging to Mr. Buttenshaw, his wife was superintending the washing of some fine linen, when accidentally she dropped her bag of powder-blue into some pulp in a forward state of preparation, with which the blue rapidly incorporated. On Mr. Buttenshaw's inquiring what had imparted the peculiar colour to the pulp, his wife, presuming that no great damage was done, took courage, and confessed the accident, for which she was afterwards rewarded by her husband, who, by introducing to the London market the improved blue cake, obtained for it an advance of four shillings per bundle.

In paper-making by machinery, the pulp is first made to flow from the vat upon a wire frame or sifter, which moves rapidly up and down. Having passed through the sifter, the pulp flows over a ledge in a regular and even stream, and is received upon an endless web of wire-gauze, which moves forward with a shaking motion from side to side, assisting to spread the pulp evenly, and allowing the water to pass through the wire, by which means the pulp solidifies as it advances. Before the pulp quits the plane of the wire, it is pressed by a roller covered with felt, and is then taken up by an endless web of felt, which, gradually moving forward, absorbs a further portion of the moisture. It is again pressed between rollers, and, after being passed over cylinders heated by steam, it is cut by machinery into sheets. Thus in two or three minutes, the pulp, which is introduced upon the web at one extremity of the machine, is delivered at the other in the state of perfect paper. By this process 25 square feet can be made in one minute, or 15,000 square feet in a working day of ten hours.

Paper can be made from multitudinous vegetable substances, but only profitably from a few. It is manufactured in China from various materials, each province or district having its own peculiar manufacture. In that country, Ho-chi is rice-straw paper used for sacrificial burnings. Pi-tsze is the mulberry bark paper, which has been long used in the Hankow Mission Hospital as a substitute for lint and old rag. It comes from Wu-chang-fu and Yun-yang-fu in Hu-peh. Wan-tsai hien, Fung-sin hien, and Lin-chang hien, all in Kiang-si, make a paper, called Piau-sin, used for packing. Lin-yang hien, in Hunan, also supplies this article. Hwa-tsien paper from Fuh-kien and Sin-chang hien (Kiang-si) is a rough paper for packing up drugs in. Hwang-pian paper, made in Kwang-sin-fu (Kiang-si) is the same as the Ho-chi, used in burning for the dead. Ta-tseh, Chung-tseh, made in Kwang-sin-fu, are used for account books. Mau-pien and Lien-chi are fine papers made in Northern Fuh-kien and in Yuen-shan hien (Kiang-si), and used for writing, printing, and mounting pictures or scrolls. Kai-lien-chi is a good yellow thin paper, useful for wrapping up powders in dispensary practice. Lah-tsien is a waxed note-paper. Seven-lined and eight-lined paper, divided by perpendicular red lines, and stamped with curious coloured devices, are sold everywhere in great variety at small cost. In Foh-kien province, paper is made from young soft bamboo; in the province of Che-kiang it is made from paddy straw; in the province of Kiang-nan it is made from the refuse silk, and this paper is very fine and delicate, being highly valued for writing complimentary inscriptions upon. To size the paper and render it fit for ink, they make a glue, somewhat similar to isinglass, from fish bones; these they chop up very small, and soak the mass in water, which is continually renewed; when all oily impurity is extracted, they add a due proportion of alum, which has been dissolved. Over the vessel in which this mixture is, a rod is laid, a cleft-stick is used for holding the sheet of paper during the process of dipping; as soon as the paper has been sufficiently saturated, it is withdrawn by gently rolling it round the stick which has been laid over the vessel; the sheet of paper is afterwards hung to dry either near a furnace, or in the sun. They employ a vast variety of fibrous substances for this manufacture, and apply paper to a variety of uses little thought of in other countries. They make up an infinite variety of kinds, from the coarse, heavy, half-inch thick touch-paper for retaining a slow, enduring fire, to the beautiful so-called India paper suited for the finest proof engravings. In the tea-chests there is a lavish use of many thicknesses of paper. If a hut or boat is leaky overhead, the bed is protected by a large sheet of oiled paper. If a shop-keeper wants to tie up a parcel, he seizes a strip of tough paper, and by rolling it on his thigh at once converts it into a strong pack-thread; and even a torn sail is at times patched with tough paper. In China it is the cheapest of materials in daily use, and the manufacturers are very numerous. They make it of rice-straw, wheat-straw, cotton, hemp, of young bamboos, of different fibres, and of the barks of the paper mulberry, Broussonetia papyrifera, also of the Ailanthus and other trees, and of the refuse of the silk cocoon, showing that the inventors of the art make use chiefly of unwoven fibres, though they also employ refuse cloth and silk, etc.

The paper on which the Honourable Mr. Morrison's book was printed, was manufactured from the common yellow bamboo paper of the Chinese, by sizing it in water saturated with alum, to which glue was added; and the sheets dried and smoothed by rubbing them on a warm wall. The glazing upon Chinese writing paper is made by waxing the sheet, and afterwards rubbing it with a smooth stone; two, three, and four sheets are made into one thick sheet for ledgers or other account books, by the same process, after wetting the inner surfaces with glue water, and drying the sheet in the sun. There is also a thin paper called Nankin paper, which is manufactured from cotton wool, that is tougher and more flexible than

the bamboo paper. Coloured paper is exported in considerable quantities; the exportation of all kinds is principally to India and the Archipelago. In China itself the consumption of Chinese writing paper is great, on account of its not being injured by the climate, foreign paper sized with glue being liable to spoil.

The making of paper in China from the bamboo is carried out somewhat in the following manner:—After being soaked for some time in water, the bamboos are split up and saturated with lime and water, until they become quite soft. They are then beaten up into a pulp in mortars, or, where water-power is at hand, as in the hilly districts, the beating or stamping process is done by means of stampers, which rise and fall as the cogs which are placed on the axis of the water-wheel revolve. When the mass has been reduced to a fine pulpy substance, it is then taken to a furnace and well boiled, until it has become perfectly fine, and of the proper consistency. It is then formed into sheets of paper of various degrees of fineness, according to the purposes for which it is intended. It is not only used for writing upon and for packing with, but a large quantity of a coarse description is made for the sole purpose of mixing with the mortar used by bricklayers.

With the Broussonetia papyrifera, the following is the process adopted by the Chinese:—The small branches are cut by them in lengths of about 3 feet, and boiled in an alkaline ley for the sake of loosening the inner rind or bark, which is then peeled off and dried for use. When a sufficient quantity has been thus laid up, it is again softened in water for three or four days, and the outer parts are scraped off as useless; the rest is boiled in clear ley, which is kept strongly agitated all the time, until the bark has become tender and separates into distinct fibres. It is then placed in a pan or sieve, and washed in a running stream, being at the same time worked with the hands, until it becomes a delicate and soft pulp. For the finer sorts of paper, the pulp receives a second washing in a linen bag; it is then spread out on a smooth table, and beaten with a wooden mallet, until it is extremely fine. Thus prepared, it is put into a tub with a slimy infusion of rice and a root called oreni; then it is stirred until the ingredients are properly blended; it is next removed to a large vessel to admit of moulds being dipped into it. These moulds are made of bulrushes cut into narrow strips and mounted in a frame; as the paper is moulded, the sheets are placed covered with a double mat. The sheets are laid one on the other, with a small piece of reed between, and this, standing out a little way, serves afterwards to lift them up leaf by leaf. Every heap is covered with a board and weights to press out the water; on the following day the sheets are lifted singly by means of the projecting reeds, and are placed on a plank to be dried in the sun. This paper is so delicate that only one side can be written on, but the Chinese sometimes double the sheets, and glue them together so neatly, that they appear to be a single leaf.

In Japan, in December, after the tree has shed its leaves, they cut off the branches about 3 feet in length, and tie them up in bundles. They are then boiled in a ley of ashes in a covered kettle, till the bark is so shrunk that half an inch of the wood may be seen projecting at either end of the branch. When they have become cool, the bark is stripped off and soaked in water three or four hours until it becomes soft, when the fine black skin is scraped off with a knife. The coarse bark is then separated from the fine. That of the new branches makes the finest paper. The bark is then boiled again in fresh ley, continually stirred with a stick, and fresh water from time to time is added. It is then put in a sieve and taken to a brook, and here the bark is incessantly stirred until it become a fine pulp. It is then thrown into water, and separates in the form of meal. This is put into a small vessel with a decoction of rice and a species of Hibiscus, and stirred until it has attained a tolerable consistence. It is then poured into a large vessel, from whence it is taken out and put in the form of sheets on mats or layers of grass straw; these sheets are laid one upon another with straw between, and pressed to force the water out. After this, they are spread upon boards in the sun, dried, cut, and gathered into bundles for sale. This paper will better endure folding, and last longer, than that made in Europe; is used to form the walls of rooms, and the fans in universal use; it is used as wrapping paper, and forms the string to tie it; in square pieces it is used as pocket-handkerchiefs, and pressed together and lacquered is worn as hats. This paper is of every consistency, but always tough. The youngest branches form the whitest paper. It is impossible to tear this paper against the grain. It is of different qualities, and some of it is as soft and flexible as cotton cloth. Indeed, that used for handkerchiefs might be mistaken for cloth, so far as toughness and flexibility are concerned. Paper of Japan is applied also in lieu of glass on the sliding walls of the houses, for pocket-handkerchiefs, for napkins, tablecloths, waistcoats, and other articles of wearing apparel.

Nepal paper is manufactured almost exclusively in Nepal from the bamboo. After being cut, it is beaten in wooden mortars until reduced to a pulpy mass, then thrown into a vat of water, the impurities separated, and when of a proper consistence, it is spread on linen to be dried; the surface is rendered smooth by friction, and with a pebble on boards. Its structure is very tough, and cannot be torn rectilineally, and it is most serviceable for filtration, as the fibres do not separate readily when saturated with moisture, and will resist in a moist condition considerable rough handling.

The Nepal paper plant is the Daphne cannabina, one of the Thymalaceæ. At the Great Exhibition of 1851, many visitors were much interested about a huge sheet of Nepal paper exhibited by Colonel Sykes. Mr. Hodgson (Journ. As. Soc. i. p. 8, 1832) and Dr. Campbell describe the process of making paper from the Daphne cannabina as consisting, first, in boiling slips of the inner bark of the paper plant in a ley of wood-ashes for about half an hour, by which time the slips will be quite soft. These are then beaten in a stone mortar with a wooden mallet till they are reduced to a homogeneous pulp. This is then diffused through water, and taken up in sieves and paper frames, as in the ordinary process for making paper by hand. When dry, the sheet of paper is folded up; sometimes it is smoothed and polished by being rubbed on wood with the convex side of a chank shell. Though called Nepalese, the paper

is not manufactured in Nepal, but in Cis-Himalayan Bhot, in the midst of its immense forests, where there is an abundant supply of the plant, of wood for ashes and for firewood, as well as a constant supply of clean water. This paper is remarkable for its toughness, as well as its smoothness. Some of it, in the form of bricks of half-stuff, was sent to England previous to the year 1829. As the quantity sent was not sufficient for a complete experiment, a small portion of it was made into paper by hand. An engraver, to whom it was given for trial, stated that 'it affords finer impressions than any English-made paper, and nearly as good as the fine Chinese paper which is employed for what are called India paper proper' (Gleanings in Science, i. p. 210). Dr. Campbell describes the paper made by the hand 'as strong and durable as leather crust, and quite smooth enough to write on, and, for office records, incomparably better than any Indian paper. Many of the books in Nepal, written on this paper, are said to be of considerable age, and the art of making paper seems to have been introduced about 500 years ago from China, and not from India.' Colonel Ramsay, Resident at the court of Nepal, describes the daphne as a small evergreen perennial shrub, somewhat like a laurel, which bears poisonous berries. There are several species of it in Nepal, from all of which, he was told, paper is made. In some kinds the flowers are pure white, in others dirty white, tinged with pink or purple. There is an impression in the plains of India that the Nepal paper is prepared with arsenic. This, he says, is quite a mistake, for arsenic is not allowed to be sold here, nor any other virulent poison, under a heavy penalty. The whole tribe of plants bearing the name of daphne are more or less poisonous, but the daphne paper cannot retain the poisonous quality of the plant, as rats and insects often eat it with apparent avidity. This unsightly paper is tough when kept dry, and can be used like cloth for wrapping up dry substances in, and it can be used after having been saturated with water, provided it be carefully dried within a reasonable time after it has been wetted. One sheet in the Museum of the Bengal As. Society measured 50 feet by 25 feet.

The Burmese make a coarse paper from the bark of a large creeper found in the forests. The paper is thick, like pasteboard, and the surface is blackened, and written upon with a steatite pencil.

In British India, the process of paper-making appears to be very much the same throughout. The materials—gunny, old rags, waste-paper, or fibre, as the case may be—are cut up into small pieces, well soaked, and then pounded in a cistern or well, floored with chunam or stone, the pounding instrument being shod with iron, and in some cases worked like a pe-cottah. The pulp is then washed and sprinkled with lime-water, and left to stand for periods varying from three days to a week. This process is renewed two or three times. The pulp is then taken up on frames fitted with strainers, and dried.

These frames are generally made so as to hold each one sheet, and each sheet when sufficiently coherent is hung or fixed against a wall to dry. It is then rubbed over with thin paste made of rice-flour and water, again dried, and afterwards pressed. The process is usually completed by glazing, which is done in some cases by rubbing each sheet with an oiled stone roller.

In Europe, down to the beginning of the 18th century, cotton, flax, and hemp were the usual materials, except rags, used in the manufacture of paper. Cotton and linen rags are now chiefly used for this purpose, because they are more easily and cheaply converted into pulp, and furnish a better article when finished than other fibrous materials. But the comparatively high price of rags, and the enormous demand for cheap paper, have compelled manufacturers to turn their attention to other sources of supply, and efforts are being unceasingly made to manufacture paper from the fibres of different vegetable substances.

It is objected by manufacturers of paper that pulp from unwoven fibres does not draw through the present machinery so well as that made from rags. A modification of machinery would no doubt remedy this. But new materials involve new machinery for reducing them to pulp, and the older paper-makers have not yet established machinery suited for these new materials in addition to that at present in use. Enterprising men are laying themselves out to make pulp or half-stuff for sale to the paper-makers, and it will be by those men that any new materials will be worked. Many thousands of inventors and manufacturers, many years of incessant labour, and millions of pounds sterling have been expended in experiments upon wood, straw, and similar substances; but the problem of obtaining good paper, at a moderate cost, from raw vegetable fibre, is yet only partially solved. Neither straw, nor wood, nor any similar material has superseded linen and cotton rags. The raw fibre of papyrus was used for thirteen centuries; the reign of rags has lasted twelve and a half centuries. The most practical of the substitutes seems to be straw, the first useful paper from which was made in 1800, and used in a book printed by Burton of London, a copy of which was presented by the Marquis of Salisbury to king George III. The work is entitled An Historical Account of Substances used in Paper-making. Cobbett, in 1828, employed, experimentally, some paper made from the husks of Indian corn, but with little success. The substitution of straw in 1800 was regarded of great national importance, and highly deserving support. It was neglected for many years, but straw is now extensively used in paper-making in England, and on the Continent of Europe.

A book written in German by M. Schaffers so long ago as 1772 (Sammtliche Papierversuche von Jacob Christian Schaffers, Prediger zu Regensburg, Regensburg 1772), contains sixty specimens of paper made from the bark of the willow, beech, aspen, hawthorn, lime, and mulberry; from the down of the asclepias, the catkins of black poplar, and the tendrils of the vine; from the stalks of nettle, mugwort, dyer's weed, thistle, bryony, burdock, clematis, willow herb, and lily; from cabbage-stalks, fir-cones, moss, potatoes, wood-shavings, and sawdust; and it has been likewise made from rice, hop-bine, liquorice-root, the stalks of the mallow, and the husks of Indian corn. M. Bardoux, a manufacturer of Poictiers, manufactured paper from oak, walnut, pine, and chesnut. The question of the present day therefore is not, 'of what vegetable subtances can

paper be made?' but 'which of them can compete with rags?'

In a memorandum, drawn up by Dr. J. Forbes Royle, on the materials for paper-making procurable from India, he reviewed the entire unutilised and utilised fibrous plants of India. Several bales of the straw of certain Indian grasses were forwarded to the Society of Arts, but the report of competent judges was that none of them are well adapted for the making of paper, though they did not doubt that paper can be made from all of them. The common rice-straw (Oryza sativa) was the best. They added that all the samples are very inferior in paper-making quality to many substances which can be obtained readily in England, but which are not even considered as worth using.

In Africa, besides the esparto grass and the bark of the Adansonia, there is a fibre-producing plant called diss-grass, which can be obtained in such quantities and at such a price as may render it a useful luxury. The dwarf palm can be obtained in almost any quantity in Algeria, but the cost of collection is rather more than that of esparto, as each leaf is picked separately, and its manufacture into paper is more difficult and expensive, the texture of the fibre varying in different parts of the leaf, one portion of which contains some yellowish wax or resin, extremely difficult of kill, and almost impossible to detect till it is discovered on the hot rollers, and the paper is spoilt. The rivers of South Africa are in many places choked with a plant known as the palmete, a kind of large rush, 8 to 10 feet in height, of which large quantities can be obtained, and which in all probability will be found of use in the fabrication of ropes and paper.

Mr. Liotard and Baron F. von Mueller have given lists of plants from which paper could be made, and the following of the East Indies are obtained from their writings:—

Abelmoschus esculentus, *W. and A.*, esculent okro.
Abutilon Indicum, *G. Don*, country mallow.
Acacia Arabica.
Adansonia digitata, *Linn.*, baobab.
Agave Americana, *Linn.*; A. cantala; A. diacantha; A. variegata; A. vivipera, *Linn.*; and A. yuccæfolia.
Ailanthus, *sp.*
Aloe Indica, *Royle*; A. perfoliata, *Roxb.*; and A. vulgaris, *Lam.*, Barbadoes aloe.
Althea, *sp.*
Ananas sativus, *Schult.*, pine-apple.
Anatherium muricatum, *Beauv.*, cuss-cuss grass.
Apocynum, *sp.*
Aralia papyrifera.
Arang of Berar.
Areca catechu, *Linn.*, betel-nut palm.
Aristada setacea.
Arundo karka.—?
Bambusa arundinacea, *Willde.*; B. gigantea; and B. vulgaris.
Baree, a grass of Sind.
Bauhinia racemosa, *Lam.*; B. tomentosa, *Linn.*; and B. Vahlii, *W. and A.*
Betula bhojputra.
Boehmeria nivea, *Hooker*; rheea; China grass.
Bonapartea juncoidea of Australia.
Borassus flabelliformis, *Linn.*, palmyra.
Broussonetia papyrifera, *Vent.*, paper mulberry tree.
Butea frondosa, *Roxb.*, pulas tree.
Cajanus Indicus, *Sprenger*, pigeon pea.
Calotropis gigantea, *R. Br.*; C. Hamiltonii and C. procera, *R. Br.*
Camelina, *sp.*
Cannabis sativa, *L.*, hemp.
Careya arborea, *Roxb.*
Caryota urens, *Linn.*, bastard sago.
Chamærops Ritchiana.
Chikti of Berar.
Chlorogalum, *sp.*
Cocos nucifera, *Linn.*, cocoanut tree.
Conocarpus latifolius, *Roxb.*
Conocephalus niveus —? C. globulifer, *Bennett*; C. naucleiflorus.
Corchorus capsularis, *Linn.*, jute, ghi-nalita pat; C. olitorius, *Linn.*, jute, Jew's mallow.
Cordia latifolia, *Roxb.*, broad-leaved sepistan; and C. myxa, *Linn.*, sepistan.
Crotalaria Burrhii —? C. juncea, *Linn.*, sunn-hemp; C. Leschenaultii —? and C. tenuifolia, *Roxb.*, Jubbulpur hemp.
Curcuma, *sp.*, leaves.
Cyperus textilis and C. variegata —?
Dæmia extensa, *R. Br.*
Daphne oleoides —? D. papyracea, *Wall.*, Nepal paper shrub; and D. cannabina.
Dendrocalamus strictus, *Nees*, and D. tolda, *Nees.*
Desmodium tiliæfolium, D. triflorum, *Dec.*; and D. argenteum.
Edgeworthia papyrifera.
Elæocarpus tuberculatus.
Eleusine coracana, *Gærtn.*
Erinocarpus Nimmonii.
Eriodendron anfractuosum, *Dee.*
Erythrina Indica, *Lam.*, Indian coral tree.
Eugenia, *sp.*, tha-byay of Burma.
Fatsia, *sp.*
Ficus Bengalensis, *Linn.*; F. elastica, *Roxb.*; F. glomerata, *Roxb.*; F. racemosa, *Linn.*; and F. religiosa, *Linn.*
Fourcroya, *sp.*
Girardinia heterophylla, *Dalz.*, Neilgherry nettle.
Gmelina arborea, *Roxb.*
Gossypium, *sp.*, G. Indicum, etc., cotton.
Grewia oppositifolia, *Buch.*
Hampu, a creeper of Coorg.
Hardwickia, *sp.*
Helianthus, *sp.*
Hibiscus cannabinus, *Linn.*; H. furcatus, *Roxb.*; esculentus; H. mutabilis —? H. rosa Sinensis, *Linn.*; H. sabdariffa, *Linn.*, roselle; and H. Surattensis, *Linn.*
Hydrangea, *sp.*
Hymenodictyon excelsum, *Wall.*
Isora corylifolia, *Schott. and Endl.*
Kasdo, a Sind grass.
Kevan, of Ratnagiri, made into ropes.
Kherdo, a Sind grass.
Lavatera, *sp.*
Lepidosperma, *sp.*
Leptadenia Jacquemontiana —?
Linum usitatissimum, *Linn.*, flax.
Lygeum, *sp.*
Madid of Belgaum.
Malachra capitata, *Linn.*
Maoutra, *sp.*
Marsdenia tenacissima, *R. W.*
Morus Indica, *Linn.*, mulberry.
Musa paradisiaca, Cavendishii, coccinea, glauca, Nepalensis, ornata, superba, and textilis.
Opuntia Dillenii, *Haw.*, hedge prickly pear.
Orthanthera viminea, *Royle.*
Oryza sativa, *Linn.*, rice-straw.
Oxytropis, *sp.*
Pachyrhizus, *sp.*
Pandanus odoratissimus, *Linn. f.*, screw pine.
Parkinsonea aculeata.
Phœnix dactylifera, *Linn.*; P. farinifera, *Roxb.*; and P. sylvestris, *Roxb.*
Phormium, *sp.*
Phrynium dichotonum.
Pimeloa, Neilgherries lace bark.
Poa, *sp.*
Populus ciliata.
Psamma, *sp.*
Ros, Rosdo, a Sind grass.
Saccharum munja, *Roxb.*, munj; S. officinarum, *Linn.*, sugar-cane refuse; S. fuscum; S. procerum, *Roxb.*; S. sara, *Roxb.*, pên-reed; S. spontaneum, *Linn.*, thatch grass.
Salmalia Malabarica, *Schott. and Endl.*, red cotton tree.

Sanal of Madura. Qu. hemp.
Sanseviera Zeylanica, *Willde.*, bowstring hemp.
Sardo of Belgaum.
Sarkhad, a Sind grass.
Sesbania aculeata, *Persoon ;* S. cannabina.
Sida acuta, *Burm. ;* S. populifolia ; S. tiliæfolia.
Spartina, *sp.*
Spartium, *sp.*
Sponia Wightii.
Sterculia guttata, *Roxb. ;* S. ornata —? S. ramosa ; S. urens, *Roxb. ;* and S. villosa, *Roxb.*, hemp.
Stipa, *sp.*
Thespesia populnea, *Lam.*, portia tree.
Tillandsia, *sp.*
Triticum vulgare, *Villars*, wheat.
Tylophora asthmatica, *R. W.*
Typha elephantina, *Roxb.*
Urena lobata, *Linn.*
Urtica heterophylla, Neilgherry nettle.
Whala of Ratnagiri.
Wikstrœmia salicifolia and W. canescens.
Worang of Ratnagiri.
Yucca gloriosa, *Linn.*
Zea mays, *Linn.*, maize.

Of all these S.E. Asia plants, the more promising seem to be the bamboo, the musa, jute, sunn, lint, hemp, malachra, rice-straw, wheat-straw, and calotropis, but nouc of them come up to rags.

The inner bark of Corchorus (jute) yields a paper pulp, but of inferior quality, and is bleached with difficulty; and agave and banana or plantain are not only expensive, but it is difficult to bleach them. Flax straw can be utilized, but yields ouly 12 to 15 per cent. of pulp; hemp produces 25 per cent. ; nettles, 5 per cent. of a very beautiful and easily bleached fibre.

Palm leaves contain 30 to 40 per cent. of fibre, but arc not easily bleached. The Bromeliaceæ contain from 25 to 40 per cent. of fibre; Bonapartea juncoidea of Australia, 25 per cent. of the most beautiful vegetable fibre kuown, which could be used for paper pulp, and for all fabrics in which flax, cotton, silk, or wool are employed; the plant needs no other preparation than cutting, drying, and compressing like hay. Ferns give 20 to 25 per cent. of a fibre not easily bleached; Equisctum, 15 to 20 per cent. of inferior fibre, casily bleached.

Althea, and many of the Malvaceæ, produce 15 to 20 per cent. of paper pulp. Stalks of beans, peas, hops, buckwheat, potatoes, heather, broom, contain 10 to 20 per cent. of fibre.

The straws of cereals—rice, wheat, barley, oats, and rye—cannot be converted into white paper pulp after they have ripened the grain; the joints and knots iu the stalks are then so hardened that they resist all bleaching agents.

Hibiscus esculentus and H. cannabinus are used by the paper-makers of Dowlatabad, and Dr. Riddell suggested the roosa grass. Paper and envelopes for writing, printing, etc., are imported into India, chiefly from the United Kingdom, Austria, and France, of value nearly 50 lakhs of rupees; in 1880–81, 47,65,976 rupees.—*Tomlinson; Bombay Quarterly Review*, p. 265, *of* 1855; *Chinese Mat. Med. ; Sirr's China*, ii. pp. 1–4 ; *Rev. PAPER CURRENCY. The average circulation from the commencement of the Paper Currency operations in India, has been as under :—

1862-63, .	Rs. 4,41,94,285	1870-71, .	Rs. 9,81,32,240
1863-64, .	,, 5,23,25,000	1872-73, .	,, 12,86,40,370
1864-65, .	,, 6,88,20,116	1874-75, .	,, 10,67,04,070
1865-66, .	,, 7,72,57,983	1877-78, .	,, 13,25,02,470
1866-67, .	,, 8,98,93,179	1880-81, .	,, 13,66,29,350
1867-68, .	,, 9,28,50,848	1881-82, .	,, ...
1869-70, .	,, 10,66,94,777	1882-83, .	,, ...

PAPER MULBERRY, Chiu, Ch'u, Kau sang, CHIN., Broussonetia papyrifera, is a native of the isles of the Southeru Ocean, as well as of China and of Japan. It has long been famous for its fibrous bark, which is made into a kind of cloth, as in Otaheite and in the Sandwich Islands, as well as into paper in Japan. The bark is boiled into pulp in a ley of wood-ashes, and then well washed by agitation of it iu water until it becomes like tufts of tow. If too much boiled, the paper will be weak but white ; and if insufficiently washed, it is coarse but strong. It is then heaped on a table, and beaten into a pulp by batons of hard wood. Mucilage obtained from boiled rice, or from a plant called oreni, is added to the pulp, which is stirred with a clean reed until reduced to a homogeneous liquor, and when of a due consistence it is ready for conversion into sheets.

PAPER PLANT of Nepal, the Daphne cannabina, is one of the same family as the lace bark tree, Lagetta lintearia, of the West Indies. D. cannabina is supposed to be idcutical with the D. odora of Thunberg. It is extremely abundant in the Himalaya, and the paper is made by boiling the inner bark in a ley of wood-ashes, and reducing them to pulp by beating. Daphne eriocephala is very common on the Neilgherries, Western Ghats, and on the hilly parts of the Southern Mahratta country and Dekhan. On a trial of the paper by an engraver, he reported it as affording finer impressions thau any English-made paper, and nearly as good as the fine Chinese paper which is employed for what are called India-paper proofs. Dr. Campbell describes the D. cannabina paper as strong and durable as leather.

PAPER, RICE. The rice-paper plant is the Aralia papyrifera, *Hooker*. Chinese rice-paper had long been supposed to be cut from cylinders of a pith which has always a central hollow chamber, divided into compartments by septa or excessively thin plates. The supposition was confirmed by Sir William Hooker receiving from China specimens of the rice-paper plant, which very closely resembles, in botanical characters as well as in outward appearance of size and habit, the Aralia plant of Sikkim. The largest specimens are about five or six feet in height, and from six to eight inches in circumference at the base, but nearly of an equal thickness all up their stem. The stems are crowned at the top with a number of palmate leaves on long footstalks, which give to the plant a very ornamental appearance. The under side of each leaf, its footstalk, and the top part of the stem, is densely covered with down of a rich brown colour. It flowers and seeds during the winter and spring months at Hong-Kong and Calcutta. The proportion of pith in these stems is very great, and from this pure white substance the beautiful rice-paper is prepared. The Chinese call this plant the T'ung-ts'au. The T'ung-ts'au

is largely cultivated in many parts of the island of Formosa. The Canton and Foh-kien provinces are the chief consumers, and the town of Fu-chu alone is supposed to take annually not less than 30,000 dollars' worth. In the Chinese market, 100 sheets (each about three inches square), one of the most beautiful and delicate substances with which we are acquainted, are procurable for 1¼d. or 1½d.

It is a delicate vegetable film, consisting of long hexagonal cells, whose length is parallel to the surface of the film, and which are filled with air when the film is in its usual state; the peculiar softness which so well adapts it for receiving colours, is owing to this structure. The pith is carefully taken out and cut in sheets, by running a knife round it, and smoothing them with an iron. When the tissue breaks, the fracture is connected by a lamina of mica. Paintings on Chinese pith-paper, or rice-paper, are much sought after for their splendid colourings. Its velvety surface contrasts admirably with brilliant colours. An India-ink outline is first transferred by damping and pressing it upon the paper, when the ink strikes off sufficiently to enable the workman to fill up the sketch; one outline will serve for limning several copies, and in large establishments the separate colours are laid on by different workmen. The manufacture of these paintings at Canton employs between two and three thousand hands. Another tissue sometimes used by the Chinese for painting, more remarkable for its singularity than elegance, is the reticulated nerve-work of grape leaves, the fleshy green part of the leaf having been removed by maceration, and the membrane filled with isinglass. The appearance of a painting on this transparent substance is pretty, but the colours do not retain their brilliancy.—*Williams' Middle Kingdom*, ii. p. 145; *Eng. Cyc.*; *M'C. Com. Dic.*

PAPIER-MACHE, a name properly applied to articles composed of paper pulp, boiled in a solution of gum or size to give it tenacity, and then pressed into moulds; though the term is also applied to trays, snuff-boxes, and other things made by glueing several plies of paper together, and then varnishing. It is made in the Panjab.—*Faulkner.*

PAPILIONIDÆ. *Leach.* The butterfly family of the order Lepidoptera, *Linn.*, comprising the genera, Ornithopteras, *Boisd.*; Papilio, *Linn.*; Pontia, *Fabr.*; Pteris, *Schr.*; Callosune, *Doubl.*; Idmais, *Doubl.*; Thestias, *Boisd.*; Hebomoia, *Hubn.*; Eronia, *Hubn.*; Callidryas, *Boisd.*; Terias, *Swain.* The genus Papilio includes all the butterflies. The insects composing it have mostly thin and elongated antennæ terminated by a club. They are all day-fliers. Their larvæ, which are variously shaped, have six pectoral, eight abdominal, and two anal feet. The pupæ are usually angulated, and, with a few exceptions, naked. The perfect insect varies in size from less than an inch across the wings when expanded to nearly a foot in breadth. Equally variable are their colouring and outlines. They are short-lived. Their powers of flight are very great, and the mode of flight varies in the several species. The males are usually more gaily coloured than the females. The Papilionidæ, swallow-tailed butterflies, from their large size and gorgeous colouring, are more frequently collected than other insects. Sikkim boasts a profusion of beautiful insects, amongst which the British swallow-tail butterfly (P. machaon) disports itself in company with magnificent black, gold, and scarlet winged butterflies of the Trojan group, so typical of the Indian tropics. Papilio Ulysses, one of the largest of the tribe, is common at Amboyna. It flies with a rather weak, undulating motion. It is in Northern India, the Malay Islands, and S. America where these fine insects occur in the greatest profusion. In continental Asia, 65 species have been described, and 130 species in the Eastern Archipelago, from the Malay Peninsula to near New Guinea.—*Eng. Cyc.*; *Wallace*; *Hooker's Him. Jour.* See Insects; Natural History.

PAPIONINÆ, a sub-family of mammals, including the true baboons of Africa and the monkey-like baboons of India, viz.—

Inuus silenus, lion monkey.

Simia leonina, *Shaw.*	Silenus veter, *Gray*, *Horsf.*, *Blyth.*
S. silenus, *Linn.*	
Nil-bandar, . . BENG.	Nalla-manthi, . . MAL.
Siah-bandar, . . HIND.	

The lion monkey is a native of the more elevated forests of the Western Ghats of India, from lat. 15½° N. to the extreme south, but is most abundant in Cochin and Travancore. It does not occur in Ceylon, and though called so by Buffon, it is not the wanderoo, which is a species of presbytes. It is of a somewhat sulky and savage disposition, and is with difficulty taught to perform any feats of agility or mimicry.

Inuus rhesus, the Bengal monkey.

Macacus rhesus, *Desm.*	Pithex oinops, *Hodgs.*, *Hor.*
Inuus erythræus, *Schreb.*	Papio rhesus, *Ogilby.*
Morkot, Banur, . BENG.	Bandar, ... HIND.
Piyu, ... BHOT.	Suhu, ... LEPCH.

This is the common monkey of all N. India, extending up to 4000 and 5000 feet in the Himalaya, and south to about lat. 18° or 19° N. to Gumsur and near Nagpur. It frequents all the forests and groves in the open country, and in Northern India may be seen in many towns and villages. It is very easily tamed and made to exhibit various feats of agility.

Inuus pelops, the hill monkey.

Macacus pelops, *Hodgson.*	M. Assamensis, *M'Clell.*

Occurs in Assam and Darjiling.

Inuus nemestrinus of Tenasserim and Malayana.

Inuus leoninus, *Blyth*, of Arakan, perhaps the same as I. arctoides of Is. Geoff.

Macacus radiatus, the Madras monkey.

Cercopithecus radiatus, *Kuhl.*	Simia sinica, *Linn.*, *Elliot*, *Blyth*, *Horsf.*
Munga, ... CAN.	Makadu, . . . MAHR.
Bandar, ... HIND.	Wanur, Keda, . ,,
Vella-manthi, . MALEAL.	Koti, ... TEL.

The Madras monkey is to be seen all over the southern parts of India, extending north to lat. 18° N., where it is replaced by Inuus rhesus; it lives in the dense jungles, also in populous towns, and carries off fruit and grain from the dealers with great coolness and address. It is the monkey most commonly met in menageries, and led about to show feats of agility. It is the most inquisitive and mischievous of its tribe.

Macacus pileatus, *Shaw*, of Ceylon, is the Simia pileatus, *Linn.*

Macacus cynomolgos, *Linn.*, of Burma.

Macacus carbonarius, *F. Cuv.*—*Jerdon's Mammals.*

PAPISRANG. Penang has two woods of this name, viz. one of a purple colour, a strong wood, used for beams; the other of a pale brown colour, 6 to 9 feet in circumference, 40 feet long, not good for beams, chiefly used for furniture.—*Colonel Frith.*

PAPLI CHUCKAY, Tam., yields an orange dye.

PAPPATI, the New Year's Day of the Zoroastrians, by whom it is strictly kept as a festival. It is celebrated in honour of Yezdejird. On this day the Zoroastrians rise early, dress in new clothes, and, after prayers in their households or temples, pass the day in congratulatory visits and entertainments.—*The Parsees*, p. 60.

PAPPRI. Hind. A natron salt obtained from the lake of Lunar, used in the manufacture of bangles. A substance found at one stage of the manufacture of sal-ammoniac.

PAPUAN, a Negroid race occupying New Guinea and its neighbouring islands in the Eastern Archipelago, and extending from New Guinea eastward through the Louisiade and Solomon Archipelagos to the New Hebrides, where it co-exists with some tribes of Malaya-Polynesians, and still farther to the Fiji Islands, which are the extreme limit of the race in an eastern direction.

In a direction north-west from New Guinea, a Papuan race extends through the Moluccas and the Philippines, but in these islands they only appear in small and scattered tribes, occupants of the mountain fastnesses.

The small islands which extend from New Guinea to Timor, with the exception of the Aru Islands, are occupied by Malaya-Polynesians of the most decided character; but at Timor, especially near the north-east end, a race evidently of Papuan origin again appears, but never, so far as Mr. Earl had been able to ascertain after a strict inquiry, in an absolutely pure state. These tribes were much oppressed by the Malaya-Polynesians who occupy the table-land of the interior; and the slaves which were brought down to the settlements on the coast, and were formerly exported to Macao and other places, were chiefly of this Papuan race.

Some tribes on the great island of Flores or Mangarai assume a more decided Papuan character, and there is said to be also a tribe of this race in the neighbourhood of the Timboro mountain on Sumbawa; but beyond this they disappear, and a Negro race is not encountered again until we meet them on the Malay Peninsula under the name of Semang, occupying some mountain tracts in the states of Kidah, Perah, and Kalantan. Farther west, the Andaman Islands in the Bay of Bengal are occupied by a people of most decided Negro character.

The Malayan term for crisped or woolly hair is 'rambut pua-pua.' Hence the term 'pua-pua' or 'papua' (crisped) has come to be applied to this Negro race, and expresses their most striking peculiarity. With the Mincopi of the Andamans, the Semang of the Malay Peninsula, the Alfoer and Negrito of the Philippines, they have been named Oriental Negroes, to distinguish them from the Negro race of Africa.

They were called by Mr. Muller, Mairassie, and by Lieutenant Modera, Alfoeren or Alfoer. Marsden adopted the term 'Negrito,' or 'little Negro,' from the Spaniards of the Philippines, and applied it to the entire race.

The term 'tanna papua,' or 'land of the crisp-haired,' is applied by the brown-coloured races not only to New Guinea, but to all the adjacent islands, which are occupied exclusively by the Papuan race. Their frizzled or woolly hair does not spread over the surface of the head, as is usual with the Negroes of Western Africa, but grows in small tufts, the hairs which form each tuft keeping separate from the rest, and twisting round each other, until, if allowed to grow, they form a spiral ringlet. Many of the tribes, especially those who occupy the interior parts of islands whose coasts are occupied by more civilised races, from whom cutting instruments can be obtained, keep the hair closely cropped. The tufts then assume the forms of little knobs about the size of a large pea, giving the head a very singular appearance, which has, not inaptly, been compared with that of an old worn-out shoe-brush. Others again, more especially the natives of the south of New Guinea and the islands of Torres Strait, troubled with such an obstinate description of hair, yet admiring the ringlets as a head-dress, cut them off, and twist them into skull-caps made of matting, thus forming very compact wigs.

But it is among the natives of the north coast of New Guinea, and some of the adjacent islands of the Pacific, that the hair receives the greatest attention. These open out the ringlets by means of a bamboo comb, shaped like an eel-spear, with numerous prongs spreading out laterally, which operation produces an enormous bushy head of hair, which has procured them the name of 'mop-headed Papuans.' Among the natives of the Fiji Islands (the easternmost limit of the Oriental Negro race), the operation of dressing the hair occupies the greater part of a day. The hair of the beard and whiskers, which generally grows very thick and bushy, is arranged in little tufts similar to those of the head, and the same peculiarity is found to exist in the hair with which the breasts and shoulders of the men are often covered, but the tufts are here farther apart than on the head and chin. This woolly or twisted hair is peculiar to the full-blooded Papuans. A comparatively slight mixture with the brown-complexioned or Malaya-Polynesian race appears to destroy the peculiarity. The hair of people of the mixed race covers the surface of the head. It is therefore very easy to distinguish the pure Papuans.

Within the geographical limits of the Indian Archipelago, the Papuans only appear as inhabitants of the sea-coast, in New Guinea and the islands immediately adjacent. In other parts of this region they have found shelter among the mountain fastnesses, maintaining an unequal struggle with the brown races by whom they are surrounded; and in some of the Spice Islands, the group nearest to New Guinea, their extirpation is matter of history. In Ceram and Gillolo a few scattered remnants of the race still exist; but they hold little or no intercourse with their more civilised neighbours, flying into the thickets which afford them shelter and concealment on the first appearance of a stranger, experience having taught them that death or captivity might be their fate if they fall into the hands of their enemies. The characteristics of the mountain Papuans must therefore be sought in those islands where their

numerical strength permits them to lead a life more fitted for human beings than that of their hunted brethren. It is an error to suppose that these Negro races disappear before civilisation. Their chief destroyers have been the wild and warlike hunting tribes of the brown race; and, excepting the case of the Moluccas, wherever European civilisation has been introduced, the Papuans are more numerous than elsewhere. The large island of Mysol or Mæsual, which lies nearly midway between the north-western extreme of New Guinea and Ceram, is said to have been occupied exclusively by Papuans when this region was first visited by Europeans, and they still form the bulk of the inland population, but the villages of the coast are occupied by a mixed race, in which the Papuan element, however, prevails. The islands of Goram, Ceram Laut, Bo, Poppo, Geby, Patani, Hoek, and the south-eastern extremity of Gillolo, are also occupied by people of the mixed race, who are remarkable for their maritime activity, and for their friendly disposition towards European strangers. The woolly-haired tribes are more numerous in the Philippines than in any other group of the Indian Archipelago, with the exception of New Guinea. M. Mallat (Les Philippines, i. p. 97, Paris 1846) gave the amount of the 'Negrito' population in 1842 as 25,000. The island on which they were first seen was named by Magellan 'Isla dos Negros,' to distinguish it from the adjacent island Zebu, where his ships remained for some months. Negros still contains a large population of Papuans; while Zebu, Samar, and Leyte are altogether free from them, and no record exists of their having ever been found there. But Mindanao and Mindoro contain several tribes of Negritos, and they form the chief population of the less accessible parts in the mountain ranges of Luzon, the largest island of the Philippine group. The accounts of the Negrito race given by the early Spanish navigators perfectly apply to their present condition. They are described as being smaller, more slightly built, and less dark in colour, than the Negroes of Africa, and as having features less marked with the Negro characteristics, but as having woolly hair.

New Guinea, etc.—The whole of the great island of New Guinea, the Ke and Aru Islands, with Mysol, Salwatti, and Wagiou, are inhabited almost exclusively by the typical Papuan, and the same Papuan race extends over the islands east of New Guinea as far as the Fiji Islands. The people on the coast of New Guinea are in some places mixed with the browner races of the Moluccas. In the typical Papuan, the colour of the body somewhat varies: generally it is a deep sooty-brown or black, somewhat approaching, but never quite equalling, the jet-black of some Negro races, but it is occasionally a dusky brown. The hair is harsh, dry, and frizzly, growing in little tufts or curls, which in youth are very short and compact, but afterwards grow out to a considerable length, forming the compact frizzled mop which is the Papuan's pride and glory. The face has a beard of the same frizzly hair; and the arms, legs, and breast are also more or less clothed with hair of a similar kind. In stature, the Papuan is superior to the Malay, and the equal or superior of the average European. The legs are long and thin, and the hands and feet larger than those of the Malay. The face is somewhat elongated; the forehead flattish, the brows very prominent; the nose is large, rather arched and high, the base thick, the nostrils broad, with the aperture hidden, owing to the tip of the nose being elongated; the mouth is large, the lips thick and protuberant. He is impulsive and demonstrative in speech and action; his emotions and passions express themselves in shouts and laughter, in yells and frantic leapings. Women and children take their share in every discussion. The Papuan has much vital energy (?) In the Moluccas, Papuan slaves are often promoted to places of considerable trust. He decorates his canoe, his house, his domestic utensils, with elaborate carving. They are often violent and cruel towards their children. If the tide of European civilisation turn towards New Guinea, the Papuan, like the true Polynesian of the farthest isles of the Pacific, will no doubt become extinct. A warlike and energetic people, who will not submit to national dependence or to domestic servitude, must disappear before the white man. The Papuan race is found in all the islands as far east as the Fiji. Mysol and Wagiou are Papuan, mixed, partly.

The Negroes of New Guinea are in various states of civilisation. Some of the rudest dwell in miserable huts, and seek a bare subsistence by the chase or the spontaneous productions of the forest. There are, however, other Negro tribes living on the coasts who have made some advance in civilisation. These dwell by whole tribes in huge barn-like houses raised on posts, like those of the wild inhabitants of Borneo, but ruder. Their beard is crisp. The forehead is high and narrow; eyes large, dark-brown, or black; nose flat and broad; mouth large, lips thick, and teeth good; few have regular features, and most are apathetic. The ordinary men wear a waist-cloth made of the bark of a tree, called Mar, which is wrapped round the waist and passed between the legs. Women wear a short sarong to the knee, generally of blue cloth. Men and women tattoo their bodies on occasions, by pricking the skin with a fish bone and rubbing in lamp-black. The Papuans of Dori worship, or rather consult, an idol called Karwar, a figure rudely carved in wood and holding a shield. Every house is provided with the idol, which is usually about 18 inches high, is exceedingly disproportioned, the head being unusually large, the nose long and sharp at the point, and the mouth wide and well provided with teeth. The natives have also a number of 'fetishes,' generally carved figures of reptiles, which are suspended from the roofs of the houses; and the posts are also ornamented with similar figures cut into the wood. The Dori people are a seafaring people, and are expert swimmers and divers. Their prahus have outriggers, and are excavated from the trunk of a single tree. Their food consists of millet, obi, maize, a little rice, fish and hogs' flesh, and fruits. Sago is imported in small quantities. Theft is considered a grave offence; they are chaste, and marry one wife. The dresses of the chiefs among the natives of Dori consist of the saluer, or short drawers of the Malays, and the kabaya, or loose coat of calico, with a handkerchief tied round the head. The common men, and the chiefs themselves, when not in the presence of strangers, wear only a chawat, or waist-cloth of the bark of the fig, or

of the paper mulberry tree, beaten out like the bark cloth of the Polynesians. The Papuans inhabit the shore, the Arfak dwell in the mountains and interior. Both these main classes are divided into different tribes, who are generally in a state of hostility with each other. The Papuans of Dori resemble those of Mysol, which is called Long Island in the English charts, and lies about 10 miles to the east of Dori. In general they are short in stature, the most $5\frac{1}{4}$, very few $5\frac{1}{2}$ feet high, but muscular and well made. Their colour is dark-brown, inclining to black in some. Two albino children were seen there (of the same mother), with white skin rather passing to yellow, with some brown spots on the back, and with white crisped hair and blue or green eyes. The Papuans of Dori are generally affected with skin diseases; in some the skin looks as if it were covered with scales (ichthyosis). The hair is black and crisped. It has a reddish tint at the outer ends. They usually wear the hair the full length to which it will grow, which makes their head, from a distance, appear twice its actual size. In general they bestow little care upon it, so that it has a disorderly appearance, and gives them a wild aspect. There are some, however, whose hair, whether through art or naturally, is smooth and even, as if it had been clipped. The men wear a comb in their hair, consisting of a piece of bamboo having three or four long points on the under side, like a fork, running into a point above, and generally carved. This comb, which is stuck in obliquely at the side, has a small strip of coloured cotton fastened at the top, which hangs out like a streamer. The women do not wear this ornament. The beard is strongly crisped, but short; the hairs of the beard are sometimes pulled out. Most Papuans have a high but small forehead, large dark-brown or black eyes, flat broad noses, large mouths, with thick lips and good teeth; many, however, have thin crooked noses and thin lips, which give them a European physiognomy. They pierce the ears, and wear some ornaments in them, or their tobacco, which they roll in pandan leaves, and of which they are great consumers.

The appearance of the Papuans is lazy and stupid; most of them are very ugly, only a very few have regular features and a lively aspect. The women wear a short sarong, generally of blue cotton, which hangs to the knees, or a kind of breeches with very short legs. The body is otherwise entirely uncovered. Some, however, wear the sarong to above the bosom. The children of both sexes go entirely naked until the age of puberty. All wear rings on the arms, composed of fish bones, shells, copper, silver, twisted rattans or rushes. These last, of the breadth of two fingers, and usually red coloured, are put on the arm at an early age, and adhere tightly to the skin as the limb grows. The men mostly wear a similar band of rattan on the wrist of the left hand, but much broader, and which sits loose on the wrist, in order to prevent the skin being stripped off by the hard string in shooting with the bow. They tattoo themselves on different parts of the body after the death of one of their relations,—for instance, on the cheeks and under the eyes after the death of the father; on the breast for the grandfather; on the shoulders and arms for the mother; and on the back for a brother. The women also tattoo, but chiefly after the death of one of their female relations. The figures appear to be chosen at will, mostly like those on two crossed klewang, or two curls running into each other. This tattooing is performed by young girls, by pricking the skin with a fish bone, and rubbing in soot. Large scars are seen on some, as if they had been burned. The number of such scars on one person are sometimes as many as ten, and are probably used as ornaments.

The weapons of the Papuan consist chiefly of bows and arrows, the spear, klewang, and parang, as well as the shield for protection. The bows are formed of bamboo or of a kind of very tough red wood; the string rests in two notches near the ends, and is made of rattan. The bows which they use in war are 6 or 7 feet long, those for ordinary use are mostly 3 or 4 feet. The arrows are formed of reeds, a little shorter than the bows; they have very long tapering points of bamboo, fish bones, pointed bones or wood hardened in the fire; sometimes, but not generally, these points are of iron. Most of the points have sharp barbs, which generally produce incurable wounds, especially in the case of those who have no knowledge of the healing art, and leave the cure to nature. They do not apparently use poisoned arrows. The points are put into the arrows and fastened with thread, being often subsequently blackened. They generally have a great quantity of arrows in readiness for use. The spears, like the arrows, have barbed points, and are generally 8 to 10 feet long, and frequently have, just below the point, a small bunch of cassowary feathers. The klewang and parang, which they make themselves, or purchase from ships, are of the usual form. The shield is of wood, four-sided, 5 to 6 feet high, 2 broad, somewhat bent out at the edge, and furnished with a handle at the back. They are generally carved on the outside, and ornamented with the figure of a Papuan in a sitting posture.

The trade with New Guinea and the Eastern Islands (commonly called the Bugis trade), and the trepang fishery on the north coast of Australia, is carried on chiefly in vessels called Padewahkan. These leave Macassar and the other ports of Celebes for the Eastern Islands during the westerly monsoon, returning with the south-east trade-wind. The rich produce of New Guinea, of Ceram, and the islands to the north and north-east of Timor, is collected in the Aru Islands, and vessels belonging to British and Chinese merchants annually resort to them to obtain the commodities which they require in exchange for the manufactures of Europe and continental India.

The natives of the Utanata river are the finest looking men of all the people of the west coast of New Guinea. The river is the southernmost limit of the adventurous voyages of the traders from Celebes. These men are above the middle size, and many among them may be called large men. They are stout and well made. Their colour is a dark-brown, with sometimes a bluish tinge. They have dark and small eyes, a flabby, drooping nose, the septum of which is usually bored, and an ornament of wood or hog's tusk worn therein. The mouth is large, and provided with very white teeth, which are sometimes filed

to points. The lips are tolerably thick. Their features bear considerable resemblance to those of the Africans. Some of them have marks on the body, especially on the arms, breast, and belly, made by cutting the flesh with sharp stones, and then burning the wound, which causes the flesh, when the cicatrix is formed, to stand out in relief in weals the thickness of the finger.

The Papuans of New Guinea have the sumpit or blow-pipe, but their principal weapons are the bow and arrow, and a light spear or lance.

Aiou or Yowl is a group of low circular islands situated about 70 miles W.N.W. from the Cape of Good Hope on the west coast of New Guinea, and 30 miles from Wagiou in the Gillolo passage; Aiou Baba, the largest, is in about lat. 0° 25′ N., and long. 131° E. Other islands are Abdon and Konibar. The inhabitants are Papuans, who occupy themselves almost exclusively in fishing and in catching turtle, with which the lagoons within the reef abound.

Ansus Island is inhabited by Papuans. Their houses are built on posts, placed entirely in the water. At very low water only is the beach partially uncovered. This beach consists of mud, in which mangroves grow luxuriantly, and completely obstruct a landing. Their gardens consequently are on the surrounding islands. They wear their hair in tufts. Their appearance is good-natured, faces regular, eyes beautifully black, the mouth broad, with beautiful regular teeth, and the forehead high but narrow. Many have thin lips and finely curved noses, which give them a more European physiognomy. The men are generally handsome and well formed, stout without being too thick, strong and muscular; the women very good looking, and some children with very regular, soft faces, and long pendent curly hair.

Modera Island, about 60 miles N.N.E. of the Great Ke, is occupied by Papuans. It is the south-westernmost of a group of high islands which were at one time considered to form part of New Guinea.

Brumer Island is on the south coast of New Guinea. The women are tattoed on the face, arms, and front of the body, but generally not on the back, in vertical stripes, less than an inch apart, and connected by zigzag markings. On the face these are more complicated, and on the forearm and wrist they are frequently so elaborate as to resemble lace-work. The men are more rarely tattoed, and then only with a few lines or stars on the right breast. Sometimes, however, the markings consist of a double series of large stars and dots stretching from the shoulder to the pit of the stomach.

The Aru, Aroe, or Arru group of islands is situated on the northern verge of the great Australian bank. They extend from lat. 5° 52′ to 7° S., and in long. 133° 56′ E., running for upwards of 100 miles N. and S., and between 40 and 50 miles in breadth, and lie between the Timor Laut group and the S.W. coast of New Guinea. The more northerly of the islands are rarely more than 5 or 6 miles in circumference.

The Aru islanders are Papuans, with black or sooty-brown skins, woolly or frizzly hair, or strongly curled; thick-ridged, prominent noses, and rather slender limbs. There are some mixed races among them. The Papuan talks, laughs, and shouts without intermission. Papuan boys sing cheerily as they walk along, or talk aloud to themselves, which is quite a Negro peculiarity. The men, in height, are from 5 feet 4 inches to 5 feet 8 inches. The women delight in combing and forking their frizzly hair, which is tied in a bunch at the back of the head, using a fork with four diverging prongs to separate and arrange the long tangled frizzly mass. The Aru Papuans told Mr. Wallace that some of their tribes kill the old folks when they can no longer work, but he saw many old people. On a man's death, all the chattels which he has collected during his life, including tusks, gongs, and precious China dishes, are broken in pieces and thrown away, and heaps of these fragments are to be seen in the villages.

The produce of the islands is pearls, mother-of-pearl, trepang, tortoise-shell, paradise birds, and timber. They are given to intoxication. The men are jealous, and easily roused to anger by abuse of their women or ancestors. Their food is sago, fish, molluscs, the luxuries being tobacco and betel. They redden their hair by washing it with wood-ashes. They ornament their houses with brass trays called dulam or talam, and with elephants' tusks, all of which are destroyed on the owner's death.

Timor Island, in lat. 8° 21′ to 10° 23′ S., and long. 123° 30′ to 127° 15′ E., is occupied by tribes much nearer the true Papuan than those of the Moluccas. Slender figures of medium height; they are dusky-brown or blackish, with bushy frizzled hair, and the long Papuan nose, with the overhanging apex which is so characteristic of the Papuan, and so absolutely unknown among races of Malayan origin. The houses of the Timorese Papuan mountaineers are raised on posts. Their dead are laid on a stage 6 or 8 feet above the ground, sometimes open, sometimes covered, and retained there till money for a feast can be obtained, when they are burned. They are said to be great thieves, and the tribes constantly at war with each other, but are not very courageous or bloodthirsty. They respect the custom of tabu, which they call pomali. In their excitable disposition, loud voices, and fearless demeanours, the Timorese closely resemble the Papuans of New Guinea and the Aru Islands. The women talk to each other and to the men with loud voices, and with a self-assertion quite different from Malay women.

In the islands west of Timor, as far as Flores and Sandalwood Islands, a very similar race is found, which also extends eastwards to Timor Laut, where the true Papuan race begins to appear.

Negros or Buglas Island extends from lat. 9° 4′ to 9° 50′ N. Scattered tribes of Negritos occupy the mountain range which extends throughout the length of the island.

Flores Island, due south of Celebes, is inhabited by a race speaking six different languages or dialects, known as the Ende, Mangarai, Kio, Roka, and Galeleng. The stature is short and squab like Malays. The complexion is a good deal darker than that of the Malay; the nose flatter, the mouth wider, and the lips thicker, and the hair buckles without frizzling. The coast is occupied by the Malay or brown race, but in the interior is a people with frizzled hair, and a

similar frizzled-hair people live in the mountainous parts of Solor, Pintar, Lombatta, and Ombay.

The people of the neighbouring island of Semao are like those of Timor, with frizzly or wavy hair, and a copper-brown colour.

The people of Bo Island are a mixed race of Papuans and the brown-skiuned race.

The Papuans for the most part exist only in a savage state, deriving a scanty subsistence from the productions of nature, living in conical-shaped huts; or where they appear as occupants of the sea-coast, roaming about in small cauoes in search of food. Some of the more independent tribes, by which is meant those who have exclusive possession of the country they inhabit, have, however, adopted mauy improvements. In several parts of the north aud of the south coasts of New Guinea, the villages consist of one large house, crected on piles, and occupied by all the married people, with a smaller one adjaceut for the bachelors. These houses bear a very close resemblance to those of the Dyaks of Borueo, but are smaller and of more rough construction. Here the Papuans also cultivate fruits, yams, and sweet potatoes, and keep hogs and poultry to kill for food,—in fact, are almost on a level, as far as regards agriculture, with the more uncivilised tribes of the Malaya-Polynesians, from whom, indeed, if we may judge from the names employed to designate their agricultural productions, they have derived the slight but important advance they have made iu civilisation. The weapons of the Papuans are heavy wooden clubs, spears or lauces of nibong or other hard wood, and darts formed of a small kind of bamboo, provided with points of hard wood or of sharpened bone. The lances are projected generally by means of a becket of sennit about a foot aud a half long, oue end of which is provided with a toggle. This is held between the fingers, while the other end is fastened to the lance with what sailors call a 'half-hitch' knot, which flies off when the lance is projected, thus allowing it to go free. The becket gives a greatly increased purchase to the thrower, but is much inferior in this respect to the womeroo or throwing stick of the Australians. The darts are projected by means of a powerful bow, often 6 feet in length, with a bowstring of rattau. Mr. Earl suspects that this instrument was not originally Papuan, but has been adopted from the Polynesians. Stone axes and knives of quartz are now superseded among all those tribes who have either direct or indirect communicatiou with the traders of the Archipelago, by parangs, or chopping-knives of iron. Their agricultural instrumeuts are mere stakes of wood, sharpened at one end, which prove sufficieut to effect the rude interfereuce with nature required by their mode of cultivation.

The art of navigatiou appears uever to have been in a very advanced state among the Papuans, since their navigation has only extended to those countries which could be reached from the continent of Asia without entailing the necessity of going out of sight of land; nor are they yet sufficiently advanced in the scienee of navigation to venture on any other than coasting voyages. Towards the eastern limits of the Papuan race, where they come in close contact, and are often mixed with the Polynesians, navigation is in a more advanced state thau elsewhere, but this is evidently the result of contact with strangers, by whom, indeed, the navigation is personally conducted. The highest state of the art among the Papuans, without foreign assistance, is met with in Torres Strait, and upon the south coast of New Guinea. Here they possess large canoes of such construction, and propelled in so peculiar a manner, that we must consider them purely Papuan. Some very excellent sketches of these canoes, with a full description, are given in Fliuder's Voyage. These canoes or boats are from 30 to 40 feet long, and the planks with which they are constructed are sewed together with the fibres of the cocoanut. Each is provided with an outrigger, and a platform of bamboo occupies the centre of the boat on a level with the gunwale. They are propelled in calm weather by paddles with long haudles, the rowers all standing, as is generally the case amoug the Papuaus. But the most striking peculiarity of these vessels consists in the sail, which is an oblong piece of matting set up in the foreparts of the vessel by means of two poles or masts, to which the upper corners of the sail are fastened. These masts are moveable, and the sail is trimmed by shifting the head of one of the uasts aft. Accordiug to Mr. Earl's experience, these boats sail very iudifferently, except before the wind; but Captain Flinders, who had good opportuuities of judging, maintains a more favourable opiuion. They are often to be met with about the month of March 300 or 400 miles down the north-east coast of Australia, the islanders being in the habit of making an annual voyage in this direction. The stopping-places are usually the islands lying off the coast, where they obtained tortoise-shell and trepang, the chief objects of their voyages. The natives of the south coast of New Guinea have very large canoes of a similar but more unwieldy construction, and propelled by a similar description of sail. These have uever been seen far from the coast, and iu fact are almost unmanageable from the difficulty experienced in steering such unwieldy masses with paddles alone. It is therefore difficult to couceive for what purpose they have been constructed, unless it should be for war, in which case their large size would give them an imposing appearance. The New Guiuea canoes generally are of light construction, and are provided with an outrigger. The larger ones have an attap roof, aud are capable of contaiuing an entire family, with household furuiture aud domestic animals.

With regard to the geueral disposition of the Papuans, a great difference is found between those living iu a state of independence and those who exist iu bondage among the neighbouring nations. The former are iuvariably fouud to be treacherous and revengeful, and even those who have long been accustomed to intercourse with strangers—the tribes of the north-west coast of New Guinea, for example—are never to be depeuded upon, and the greatest precautions are always taken by those who visit them for purposes of trade. The wilder tribes generally avoid intercourse with strangers, if the force which lands is sufficiently great to cause alarm, but if otherwise, they pretend friendship until opportuuity occurs, when they make a sudden and ferocious attack.

But what distinguishes them most from their neighbours, the Malaya-Polynesians, and even from the Australians, is the aversion, even hatred, they bear towards those who attempt to settle in their territory, and which is continued as long as a man of the tribe exists. It is probably this perfectly untameable nature that has led to their utter extermination in all those islands of the Indian Archipelago that did not possess monntain fastnesses, to which they could retire to lead a life similar to that of the Bushmen of Sonth Africa. There have been instances of this in Van Dieman's Land, Melville Island (N.W. coast of Australia), and at Fort Du Bus on the west coast of New Guinea, in all which settlements the country was occupied by a pure or nearly pure Papuan race. In the former, hostility was continued as long as a native remained on the island, and in the two last, until the settlements were abandoned in despair. On the other hand, their neighbours the Australians have invariably submitted after a single trial of strength; and the Malaya-Polynesians, when not under the influence of other foreigners, have always evinced a desire to have strangers, especially Enropeans, settled among them, as shown by the people of the Molnccas when first visited by the Portuguese, and as displayed at the present time in those remote parts of the Indian Archipelago where the race maintains its ancient purity. The untameable ferocity of the Papuans only exists as long as they remain in their native country. On leaving it their character seems totally changed, as far as regards this particular. The Papnan slaves, who exist in great numbers in the eastern parts of the Archipelago, are remarkable for their cheerful disposition and industrious habits. The aversion to strangers felt by these Negroid races was retained by the Negrito of the Andamans for several years, but in 1873, while the Editor was there, a tribe voluntarily came in their canoes to Ross Island. The Andaman Mincopi have since partly settled.

With regard to statnre, a great difference is found to exist between various tribes, even in New Guinea, and which has led to much confnsion in the descriptions given by travellers, who have, perhaps, each only seen a single tribe. On the south-west coast of New Guinea, within a space of 100 miles, are to be found tribes whose stature is almost gigantic, and others whose proportions are so diminutive as almost to entitle them to the appellation of pigmies; while the manners and cnstoms of each so exactly correspond, as to preclude the supposition that these peculiarities can be other than accidental. It is difficult to account for these peculiarities, bnt as the stout and stalwart Papuans are met with only among those coast tribes who have maintained their independence, and at the same time have acquired many of the agricultural and mechanical arts from their neighbours the Malaya-Polynesians, while the pigmies are found only in spots where they have been driven to mountain fastnesses, or have fallen under the influence of other races, we may conclude that their mode of life has much to do with this difference in point of stature and proportions.

The Papuans of Dori hang the skulls of the Arfak under the eaves of their houses, which are built in the water on posts, and led up to by rude wooden bridges. There is a large council chamber at Dori, snpported on larger posts, on each of which is a rude carving of a nakcd man or woman, with other revolting carvings near. The people of Dori resemble those of the Ke and Aru Islands; many of them are very handsome, tall, well made, with well-cut features and aquiline noses. Their colour is a deep brown, often approaching to black, and their frizzly hair is combed up into a mop-like form by means of a long six-pronged fork. The language spoken at Dori is not understood by the Papuans at Hnmboldt Bay. The Dori people are great carvers and painters. Their food is roots and vegetables, with fish and game as a luxury. The Arfak or hillmen of New Gninea are gcnerally black, but some are brown like the Malay. Their hair, though more or less frizzly, is sometimes short and matted, instead of being long, loose, and woolly. The many Papuan tribes in New Guinea are generally in a statc of warfare with each other, and return from their warlike expeditions with heads. The natives have also a number of 'fetishes,' generally carved figures of reptiles, which are suspended from the roofs of the houses, and the posts are also ornamented with similar figures cut into the wood.

A widow remains in the family of her deceased husband.

The Papuans, when placed in circumstances favourable for the development of their powers, are physically superior to the races of Sonth-Eastern Asia. Some of the New Guinea tribes would bear a comparison, in point of stature and proportions, with the races of Europe, were it not for a deficiency abont the lower extremities. Even the more diminutive mountain tribes arc remarkable for energy and agility, — qualities which have led to their being in great demand as slaves among their more civilised neighbours. With regard to mental capacity, also, they are certainly not inferior to the brown races; but their impatience of control while in an independent state, utterly precludes that organization which would enable them to stand their ground against encroachment, and they invariably fall under the influence of the Malayans whenever the two races are bronght into contact.

Intellectually, Mr. Wallace places them abovc the Malays, though the Malays have acquired morc actual civilisation by contact with superior races. The Papuans have a taste for personal embellishment, but it takes such eccentric forms as the attaching of two boar's tnsks joined together to the nose, with the tips tnrned upwards. They eat many kinds of large insects. They are totally ignorant of metals, and the coast dwellers are even unable to procure fire for themselves. When they accidentally let their fires go out, they have to ask a spark of the hill tribesmen, who produce it by friction. Yet they divide the year into lunar months, have names for the constellations, and one of the tribes, the Ilema, counts up to a million.

Certain of the Papuan customs distingnish them from the Malaya-Polynesians, and certainly are of Papuan, or at least of Negro origin. One of these is the custom of raising the skin in cicatrices over various parts of the body, especially on the shoulders, breast, buttocks, and thighs. This must not be confounded with the tatooing or puncturing the skin which is practised by many of the Malaya-Polynesian tribes, and which is never met with among the Papuans, as

the scarifications about to be described are unknown to the others. The skin is cut through with some sharp instrument in longitudinal stripes, and, if on the shoulder or breast, white clay or some other substance is rubbed into the wound, which causes the flesh below to rise; and these scarifications, when allowed to heal, assume the form of raised cicatrices, often as large as the finger. It appears that those on the arms and breast, which are the largest and most prominent, are made in order to qualify them for admission to the privileges of manhood, by showing their capability of bearing pain. Boring the septum of the nose is universally practised among the Papuans. In the first instance they wear a roll of plantain leaf in the orifice, which by its elasticity enlarges it to a sufficient size to admit the thigh-bone of a large bird, or some other ornament, which is then worn extending across the face on all great occasions. British sailors have a very quaint name for this practice, which often comes under their observation among the Papuan islands of the Pacific; they call it 'sprit-sail yarding,' after a cruel method they have of treating sharks and dog-fish, which are frequently let go after having been hooked, a piece of wood being previously thrust through their nostrils, which, projecting on either side, prevents them from getting their heads under water, and they die a lingering and painful death.

Filing or grinding down the front teeth until they become pointed, is practised by some of the tribes of New Guinea and of the adjacent islands of the Pacific. This custom, however, is not confined exclusively to the Papuans, as it is practised also at the Pagi Islands, on the west coast of Sumatra, the natives of which appear to be Malaya-Polynesians. This custom must not be confounded with one which is common among many of the Malayan and Bugis tribes, that of grinding down the front teeth until they become almost level with the gum. Another singular custom, which is only met with among the Papuans, or the tribes closely bordering on them, is that of dyeing the hair (which is naturally black) a reddish or flaxen colour, by using applications of burnt coral and sea-water in some instances, and preparations of wood-ashes in others. This process seems to expel all the dark colour from the hair, leaving it of a flaxen tinge, which appears to bear a close resemblance to the celebrated 'capillus flavus' so much admired among the Roman ladies, and which seems to have been produced by a similar process. The only Malaya-Polynesians whom Mr. Earl had known to practise this custom are some of the natives of Timor Laut, Sermatten, and Baba Islands lying to the westward of New Guinea, and not very remote. He was therefore induced to consider it as a Papuan, or rather, perhaps, as a Negro custom, for it is equally prevalent in many parts of Africa, especially among the Somali and other tribes in their neighbourhood. All travellers who have had opportunities of visiting Aden will have observed this custom among the African Somali employed in coaling the steamers, who sometimes appear with the plaster of coral still attached to their heads.—*Earl's Papuans; Logan in J. Ind. Arch.*, 1850; *A. R. Wallace, East. Arch.* ii. pp. 62, 180, 200; *Do. in Journ. R. Geog. Soc.* xxx. p. 172; *Crawfurd's Dictionary; Crawfurd's Hist. Arch.* i. p. 18; *Bikmore*, pp. 204, 242; *M'Gillivray's Voyage in the Rattlesnake*, i. p. 262; *Lubbock, Origin of Civilisation*, pp. 44, 122, 335; *Horsburgh, Journ. Ind. Arch.; Newbold in Royal As. Soc. Journ.*, 1845; *Quarterly Review; Marsden, Sumatra; Asiatic Researches; Cook's Voyages; Syme's Embassy to Ava; Wilkes' Exploring Expedition; Mallat, Les Philippines; Wallace; Kulf.*

PAPYRUS ANTIQUORUM. *Willd.*

Cyperus Syriacus, *Parl.* | Babeer . . . of Syria.

This papyrus grows in Egypt, Syria, and Sicily. It is translated in the Bible rush and bulrush; is the sedge from the pith of which the ancients made paper.—*Royle; Birdwood; Layard, Nineveh.*

PAPYRUS DEHISCENS. *Nees.*

Cyperus corymbosus, *H.B.* | C. Pangorei, *Roxb.* i. p. 202.
Chumati pati, ... Hind.

A sedge of the Peninsula of India and of Bengal, very common on the banks of the Hoogly, where it helps to bind and protect the banks.—*Voigt.*

PAPYRUS PANGOREI.

Cyperus tegetum, *Roxb.* | C. Pangorei, *Rottl.*
Madoorkati, ... Hind.

A sedge of the Peninsula of India, extremely common about Calcutta, and very extensively employed in Bengal for making the elegant, shining, useful mats for which the capital of India is famous, and which are frequently imported into Europe. When green, the culms are split into three or four pieces, which in drying contract so much as to bring the margins in contact or to overlap each other.—*Eng. Cyc.; Voigt; Royle.*

PAPYRUS TEGETIFORMIS. *Arnot, W.*

Cyperus nudus, *Roxb.* | Kuch-kuchiya, . . Beng.

A sedge of Bengal.—*Voigt.*

PAR. Hind., Pers. A feather. Par-i-taos, a shawl-wool cloth or pashmina of two colours, literally peacock's feather. Par-i-purz, a shawl-wool fabric with a nap.

PAR, a river which rises in the W. Ghats, in lat. 20° 30′ N., and long. 73° 43′ E., and runs W. into the Arabian Sea. Length, 50 miles. It has no tributaries of note; area drained small, and imperfectly defined. Though rugged, the Konkans have many fertile valleys, each of which for the most part affords a passage for a small river or torrent, holding a westerly course, like the Par, from the ghats to the Indian Ocean. The most fertile spots are on the banks of streams. The rivers abound with fish, but are also frequented by crocodiles. The Savitri also is navigable as far as Mhar, 30 miles from its mouth.

PARA. Maleal. A grain measure of Malabar, equal to 10 Yedan galli, and containing 1264 cubic inches, rather more than 4 imperial gallons, or 40 lbs. avoirdupois.

PARA. Baluchi. A section of a tribe.

PARA. Beng. Also Paragam. A hamlet, a village.

PARA. Sansk. Strange, foreign, supreme, infinite; hence—

Parabara, Sansk., the most high; but Parabaravasta, as conceived by the Hindus, is not the true Supreme Being. As an immaterial being, it is the universal spirit; as a material being, it is the universe; the masculine power is identified with Siva, and the feminine power is the so-called Sakti.

Parabrahma or Brahm of the Hindus, the supreme Universal Spirit, the Supreme Being, is a term that first appears in Hindu religious books,

in some of the best Upanishads, or appendages to the Vedas, of later date than the first three, and introducing a different and superior theology. It seems to have been a first effort towards the recognition of a Creator; and many Hindus now recognise the Almighty as an infinite, eternal, incomprehensible, and self-existent Being. He who sees everything, though never seen; he who is not to be compassed by description, and who is beyond the limits of human conception; he from whom the universal world proceeds; who is the lord of the universe, and whose work is the universe; he who is the light of all lights, whose name is too sacred to be pronounced, and whose power is too infinite to be imagined, is Brahm! the one unknown, true being, the creator, the preserver, and destroyer of the universe, from whom all souls come, and to him again return. Under such, and innumerable other definitions, is the Deity acknowledged in the Vedas, or sacred writings of the Hindus. But while there are learned Brahmans who 'thus acknowledge and adore one God, without form or quality, eternal, unchangeable, and occupying all space, they have carefully confined their doctrines to their own schools, and have tacitly assented to, or even taught in public, a religion in which, in supposed compliance with the infirmities and passions of human nature, the Deity has been brought more to a level with man's own prejudices and wants, and the incomprehensible attributes assigned to him, invested with sensible and even human forms.' Upon this foundation the most discordant fictions have been erected, from which priestcraft and superstition have woven a mythology of the most extensive character. In India, the human form in its natural state, or possessing the heads or limbs of various animals, the elements, the planets, rivers, fountains, stones, trees, etc. etc., have all been deified, and become objects of religious adoration. The sun, moon, and all the heavenly host; fire, earth, and all natural phenomena,—all nature, indeed,—the passions and emotions of human beings, their vices and virtues, are transformed into persons, and act appropriate parts in the turbulent history of man. The omnipotent God, whom the Hindu has been taught to consider as too mighty for him to attempt to approach, or even to name, has been lost sight of in the multiplicity of false deities, whose images have been worshipped in his place. To these deities the many splendid temples of the Hindus have been erected, while throughout the whole of India not one has been devoted to Brahm, whom they designate as the sole Divine Author of the universe, the One Eternal Mind, the self-existing, incomprehensible Spirit. But the will of God, that the world should exist and continue, is also personified by them, and his creative and preservative powers are made to appear as Brahma and Vishnu, while Siva is the emblem of the destructive energy,—not, however, of absolute annihilation, but rather of reproduction in another form. In the Hindu religion, therefore, this triad of persons represents the almighty powers of creation, preservation, and destruction. In their metaphysics, Brahma is matter, Vishnu spirit, Siva time; or, in natural philosophy, earth, water, and fire. These three persons have wives, the executors of the divine will and the energies of their respective lords. The preservative and representative powers, being in constant action, are, as have been also their wives and children, fabled to have descended on earth innumerable times in divers places for the instruction and benefit, including the profitable punishment, of mankind. And these endless incarnations have been worked up by the poets with a wonderful fertility of genius and the pomp of language into a variety of sublime descriptions, interspersed with theological and moral texts, that at length they were received as inspired productions, and became the Hindu standard of truth. Brahma, the creative power, is not specially adored in temples dedicated exclusively to him. His creative duties over, his portion of the Divine activity ceased to operate on the hopes and fears of mankind. In their mythology, however, the Hindus narrate fabulous persecutions and warfare which overthrew Brahma, his temples and worship; and the sects of Vaishnava and Saiva now comprise all the individuals of the races in India distinguished by the appellation of Hindus. A philosophic few excepted, they are worshippers of a superstitious and idolatrous polytheism; and the Hindu erects no altars to Brahm, the infinite, incomprehensible, self-existing Spirit, 'which illumines all, delights all, whence all proceed; that by which they live when born, and that to which all must return.' The Narayana of the Hindu of the present day is rather the Spirit of God moving on the water, and can be regarded but as the spirit of Brahm (Ins. of Menu, ch. 1, v. 10), though the two Hindu sects claim for their Vishnu and Siva the title of Narayana, and Brahm himself is sometimes called Narayana. At present there will not be found two Hindu families whose belief is identical, though almost all the educated of the people recognise one God under one name or another. God thus adored is Brahm, the One Eternal Mind, the self-existing, incomprehensible Spirit. From time to time great reformers rise, condemning the prevailing Hindu idolatry, and so anxious are the people to know the truth, that every new teacher immediately gathers around him a number of disciples.—*Tod.*

PARABEIK. Burm. A notebook made of thick, coarse, bark paper, coated with a charcoal paste and folded. They are written on with a steatite pencil.—*Forbes.*

PARACELSUS, an eminent medical practitioner. He died A.D. 1541, at the age of 48, in the hospital of St. Sebastian, at Salzburg, in Germany, after a life of great indulgence and dissipation.

PARACHALI. Hind. A caste of traders in the Panjab; their merchandise is carried by the Kābuli, Tajak, and some of the Khaibar tribes.

PARACLETE. Muhammadan doctors unanimously teach that by the Paraclete, or, as they choose to read it (John xvi. 7), 'the Periclyte or Illustrious,' their prophet was intended and no other.—*Sale's Koran*, c. clxi.

PARADESI or Pardesi. Hind. Wandering devotees from Northern India; also any foreigner from Hindustan.

PARADISE is supposed to be derived from the Arabic Firdūs, one of the regions of the paradise of the Muhammadans. More truly Pari-des, the other land, the future world of the Persians, has also been surmised. See Jannat.

PARADISE BIRDS, Papua birds.

Burong mati, . . . Aru.	Ave de Pardiso, . . Port.
Manuk devata, . . Jav.	Burong Papua, . . Tern.
Burong devata, . Malay.	Soffu, Sioffu, . . . ,,

Of the various birds of paradise, named by the Indians birds of Ternate (Valmont de Bomare, Historie Naturelle, iv. p. 296); by the Ternatians, birds of God (Valentyn's Indian Archipelago, iii. pp. 306-313); by the Dutch, king's birds (Forrest's Voyage to New Guinea, p. 142); and by the Spaniards, birds of the sun (Aldrovandus, Valmont de Bomare, iv. p. 297), the names Manuk devata and Burong devata, or bird of God, have been adopted in modifications by several naturalists (Margrav, Brazil, p. 207; Rai, Syn. Av. pp. 21-27; Briss, p. 2-130; Buffon's Hist. Nat. des Ois. iii. p. 207). Of these, the great Promeropes (Pritchard's Researches, i. p. 83), the most beautiful of winged creatures, were fabled by the fancy of the Arabian poet, as visitants from heaven to earth; and it is a myth among the islanders of the Archipelago, that when old, and feeling the approach of death, the paradise birds fly upward towards the sun, but, having spent their strength in the inferior world, fail to reach again their celestial home, fall and die as they descend,—a graceful fancy not forgotten by the moralist or the poet (Camoens' Lusiad, Book x.). No representation can exaggerate their beauty, or excel the lustre of their plumage. They were supposed footless, and incapable of alighting, until it was discovered that the Indians cut off their feet before preserving them. They fly always against the wind. They are caught in New Guinea, the Aru Islands, Mysol, Salwatti, Wagiou (Crawfurd's Journ. Ind. Arch. v. p. 182), with a species of bird-lime, but are also shot with blunt arrows. In the nutmeg season, also, they come from their breeding grounds in the interior of that vast island, and sail in flocks of thirty or forty over the eastern borders of the Archipelago. They form valuable articles of export. Europe is supplied chiefly from Batavia, China from the Molucca and Aru Isles, while the natives of that remote group, with many of the Malays, adorn their casques at martial pageants with feathers plucked from their glittering wings.

Mr. A. Russel Wallace applies the term birds of paradise to the following:—

Paradisea apoda, the Great Paradise Bird, in the Aru Islands.
P. Papuana, the Lesser Paradise Bird, in New Guinea, Mysol, and Jobie.
P. rubra, the Red Paradise Bird, in Wagiou.
Cicinnurus regius, the King Paradise Bird, in New Guinea, Aru Islands, Mysol, Salwatti.
Diphyllodes speciosa, the Magnificent, in New Guinea, Mysol, and Salwatti.
D. Wilsoni, the Red Magnificent, in Wagiou.
Lophorina atra, the Superb, in New Guinea.
Parotia sexpennis, the Golden Paradise Bird, in New Guinea.
Semioptera Wallacei, the Standard Wing, in Batchian and Gillolo.
Epimachus magnus (Upupa magna, *Gm.*, U. superba, *Lath.*), the Long-tailed Paradise Bird. Body generally black or brownish-black; tail graduated, thrice as long as the body (Lesson says three feet in length, French); feathers of the sides elongated, raised, curled, glittering on their edges with steel-blue, azure, and emerald-green, like precious stones; the head and the belly lustrous, also with steel-blue, etc. In truth, language fails to convey any just idea of the magnificence of this species. It inhabits the coasts of New Guinea.
Scleucides alba, the Twelve-wired Paradise Bird, in New Guinea and Salwatti.
Ptiloris magnifica, the Scale-breasted Paradise Bird, New Guinea.
Pt. Alberti, Prince Albert's Paradise Bird, in North Australia.
Pt. Paradisea, the Rifle Bird, in East Australia.
Pt. Victoriæ, the Victoria Rifle Bird, in N.E. Australia.
Astrapia nigra, the Paradise Pie, in New Guinea.
Sericulus aureus, the Paradise Oriole, in New Guinea and Salwatti.

Mr. D. G. Elliot, in 1873, in a monograph of these beautiful birds, in addition to those enumerated by Mr. Wallace, gave the following:—

Ælurœdus buccoides, crassirostris, melanotis.
Amblyornis inornata.
Chlamydodera cerviniventris, maculata, muchalis, xanthogastra.
Diphyllodes respublica, speciosa.
Drepanornis Albertisi.
Epimachus Ellioti, speciosus.
Mamicodia atra, chalybea, kerændreni.
Paradigalla carunculata.
Paradisea minor, raggiana, sanguinea.
Ptilonorhynchus Rawnsleyi, violaceus.
Sericulus melinus.
Xanthomelus aureus.

Paradisea apoda is perhaps the most elegant of all these birds. It is le grand emeraude of the French. The birds of paradise, says M. Lesson, or at least the emerald, live in troops in the vast forests of the country of the Papuans, a group of islands situated under the equator, and which is composed of the islands of Aru, Wagiou, and the great island called New Guinea. They are birds of passage, changing their quarters according to the monsoons. The females congregate in troops, assemble upon the tops of the highest trees in the forests, and all cry together to call the males. These last are always alone in the midst of some fifteen females, which compose their seraglio, after the manner of the gallinaccous birds. They are as omnivorous as the crow, and, like the turkeys, Argus pheasants, the dancing bird of America, Rupicola coyana, and Sat-bhai or seven brothers of India, are fond of displaying their plumage.

Paradisea regia, called the Burong raja, also Goby-goby, is a very beautiful bird, first described by Linnæus as the great paradise bird, whose call is wawk, wawk, wawk, wok, wok, wok.

In the genus Paradisea of Linnæus, many birds were included since transferred to other genera; but three species are still retained in it, viz. P. apoda, *L.* (P. major, *Shaw*), back of a deep maroon-brown, contrasting with the golden-fulvous neck; P. Papuana, *Bechstein* (P. minor, *Forster*), back of a pale golden-brown, shading into the golden-fulvous of the neck; P. rubra, *Cuvier* (P. sanguinea, *Shaw*), back of the same bright golden-fulvous as the crown and neck, the long axillary plumes gorgeous red, and broad flattened middle tail-feathers, like long shreds of whalebone. In other respects the general characters are the same. All have short velvety feathers of a golden-fulvous hue on the crown and nape, with the throat and forehead deep, dark, satiny green, most developed in P. rubra, least so in P. Papuana. P. apoda and P. rubra have a black chin, and P. apoda has a broader green frontal mark than P. Papuana; while P. rubra has the fore part of the head green to beyond the eyes, the feathers being developed to form two hillock-like tufts on the head, and lengthened also on the sides of the throat, where disposed in concentric series, instead of uniformly as in the others. Moreover, the golden-fulvous of the nape is continued round the front of the

neck in P. rubra only; and P. apoda alone has a peculiar extraordinary denseness of feathering on the breast.

In the beautiful little king-bird of paradise (Cincinnurus regius), the stem-like middle tail-feathers are broadly barbed at the extremity, where they curl round in a singular manner to form a flat disc, of a deep emerald-green hue; and the axillary tufts are comparatively short, and consist of ordinarily-shaped feathers, which are brown with broad emerald-green tips.

In the Samalia magnifica there are huge neck-tufts, in addition to small axillary tufts, and the middle pair of tail-feathers again assume the form of lengthened stems.

In the Parotia sex-setacea, the feathers of the flanks are extraordinarily developed, composing a huge floccose mass; and each side of the head is ornamented with three long stems terminated by a black oval.

In the Lophorina superba, the scapulary feathers are enormously developed, and form a sort of erectile mantle; this splendid creature being also peculiarly adorned upon the breast.

The paradise birds of Aru at their pairing season have sacaleli or dancing parties, in certain trees of the forest, with immense heads, spreading branches, and large but scattered leaves, giving a clear space for the birds to play and exhibit their plumes. The bird is nearly as large as a crow, and is of a rich brown coffee colour. The head and neck is of a pure straw yellow above and rich metallic green beneath, and long plumy tufts of golden-orange feathers spring from the sides beneath each wing, and when the bird is in repose are partly concealed by them. At the time of its excitement, however, the wings are bent over its back, the head is beut dowu and stretched out, and the long plumes are raised up and expanded till they form two magnificent gold fans, striped with deep red at the base. When seen in this attitude it really deserves its name; a dozen or twenty full-plumaged male birds assemble together, raise up their wings, stretch up their necks, and elevate their exquisite plumes, keeping them in a continual vibration. Between whiles, they fly across from branch to branch in great excitement, so that the whole tree is filled with waving plumes in every variety of attitude and motion.—*Hardwicke and Gray, Ill. Ind. Zoology; F. D. Bennett, Wanderings; Wallace, Malay Archip.* ii. 141-220; *Lesson.*

PARADISE FISH, Polyuemus risua, the Tapsi or mango-fish of India, is the Polynemus paradiseus of Linnæus (a name applied to another species by Bloch), on account of its long lateral filaments. Esteemed excellent food in India, and the sound furnishes isinglass.—*Simmonds' Dict.*

PARADISE FLY-CATCHER, Tchitrea paradisi, *Linn.*, shah bulbul or rocket-bird, though not common, its singularly attractive plumage can scarcely escape observation. The adult male has a blue head, white body, with two of the tail-feathers prolonged for upwards of 8 inches beyond the tip; these, in the female, scarcely extend beyond a quarter of an inch. The young birds are chesnut. Several birds are named of paradise.

The Bhim-raj or Indian mocking-bird, a species of Drongo or king crow (Edolius paradiseus); the male of the former having its two middle tail-feathers much elongated, and the other having its outermost tail-feathers prolonged into wire-like stems, barbed and twirled at the extremity. In like manner, the Vidua paradisea is a finch-like bird of Africa; the famous Queselt of the ancient Mexicans is the Trogon or Calurus paradiseus; and the Stanley crane, which has elongated tertiaries sweeping down to the ground, is the Grus paradisea of Temminck.

PARADOXURUS, a genus of mammals of the sub-family Viverrinæ.

Paradoxurus bondar, *Gray*, Terai tree-cat.

P. hirsutus, *Hodgson.*	P. Pennantii, *Gray.*
Baum, Bondar, . . Beng.	Machabba, . . Nepal.
Chinghar, ... Hind.	Malwa, ... ,,

The Terai, Bengal, and Behar.

Paradoxurus derbyanus, *Gray*, Malayana.

Paradoxurus Grayi, *Bennett*, hill tree-cat, is the P. Nepalensis, *Hodgson*, and P. bondar, *Temm.*

Paradoxurus fasciatus, a civet cat of Nepal, S.E. Himalaya, Arakan, N. Burma, over much of the Archipelago.

Paradoxurus leucomystax, *Gray*, Malayana.

Paradoxurus musanga, palm-cat.

P. typus, *F. Cuv.*	P. prehensilus, *Gray.*
P. Pallasii, *Gray.*	Viverra hermaphrodita, *Pallas.*
P. Crossii, *Gray.*	P. strictus, *Hodgs.*
P. dubius, *Gray.*	P. quadriscriptus, *Hodgs.*
P. musangoides, *Gray.*	
Bondar, . . . Beng.	Jhar-ka-kuta, . Hind.
Kara-bek, ... Can.	Ud, ... Mahr.
Menuri, Lakat, . Hind.	Maram-pilli, . Maleal.
Khatas, ... ,,	Manu-pilli, . . . Tel.

Common and abundant throughout the greater part of British India; lurks by day among the fronds of the cocoanut palms, rolled up as a ball. It will live for months in confinement on vegetable food, but preferring flesh. It is said to consume the toddy of the palmyra.

Paradoxurus trivirgatus, *Temm.*, Ceylon, Malay Peninsula and Islands.

Paradoxurus Tytleri, *Blyth*, Andamans.

Paradoxurus Zeylanicus, *Pallas.* This species peculiar to Ceylon. It has a dark variety formerly termed by Dr. Kelaart P. montanus, but now described as P. Zeylanicus, *var.* Fuscus, beetle brown throughout; no streaks on the back perceptible; fur very glossy; tail with a bright golden-yellow subterminal ring. It comes from Newera Elia.—*Tennant's Ceylon; Jerdon's Mam.*

PARADZEKA of Burmese Buddhism, four unpardonable sins,—fornication, theft, murder, and a false profession of the attainment of monachism.

PARAGUAY TEA, Ilex Paraguayensis. The leaves, collected in Paraguay and South Brazil, are dried and used as a tea. See Mate.

PARAH, an Indian measure of capacity, two feet square and six and a half inches deep. The internal measure of a standard parah is a cube of 11·57–100 inches. The weight for various goods according to the Ceylon custom-house practice is,—for coffee, 35 to 50 lbs.; pepper, 27 to 30 lbs.; salt, 52 to 55 lbs.; paddy, 30 to 33 lbs.; husked rice, 42 to 46 lbs. In Bombay, eight parah make a candy, by which seeds, grain, etc., are measured. The parah contains 7 paillies, and weighs 19 lbs. 9 oz. 9·6 drs. The parah measure for salt is 1607·61 cubic inches.—*Sim. Dict.* See Para.

PARAKSHITA, a ruler of India. The time of his birth is uncertain. The kings of Magadha were of six dynasties, viz. that of Barhadratha, of the line of Pandu, the first of which was Jara-

sandha, a contemporary of Yudishthra and Krishna; according to Sir William Jones, B.C. 3101, according to Professor Wilson in the reign of Saha-deva, B.C. 1400, Parakshita was born and the great war ends, and in the reign of Ripunjaya, B.C. 915, a Buddha was born.

PARA KUDI, meaning foreign holder, a cultivator whose tenancies resemble closely the coloni and aratores of the Roman empire.

PARALI, from Pral, HIND., of Panjab. Straw of Oryza sativa or rice-straw, and Triticum æstivum, or wheat-straw. These are extensively employed by the hill tribes for snow-shoes. Price, 2 annas per pair.—*Powell*, i. p. 521.

PARALIA, of the Greeks, or the country of the Aii, is the present South Travancore.

PARAMAHANSA is a word used in the ninth volume of the As. Res. p. 318 (Cal. 4to edit.), where it is applied to Hindu ascetics of the orthodox sect in the last stage of exaltation; they disuse clothing. Now-a-days, individuals entirely naked are perhaps never seen in places of European intercourse; but up to the early part of the 19th century, dozens sometimes of these brawny saints were to be seen lolling and sleeping in the streets, and on shop-boards, as naked as they were born. They were always treated with great respect, especially by women; and at all times Hindu women in passing them saluted the ascetic. Four kinds of the Hindu ascetic mendicants, the Kutichara, Bahudaka, Hansa, and Paramahansa, differ from each other only in the graduated intensity of their self-mortification and profound abstraction, but the Paramahansa is the most exalted. He is occupied exclusively with the investigation of Brahm, or the Supreme Spirit; he is equally indifferent to pleasure or pain, insensible to heat or cold, and incapable of satiety or want. Individuals used to be met with naked in all weathers, never speaking, and never indicating any natural wants, and what was brought to them as alms or food was received by the attendants, whom their supposed sanctity or a community of interests attached to them, and by these attendants they were fed and served on all occasions as if they were as helpless as infants.—*Moor's Pantheon; Wilson.* See Hindu.

PARA MANIK. HIND. As the enforcement of Hindu caste observances cannot be trusted to the members of each caste as individuals, the result has been the growth of this class of inquisitors, who are perpetually prying into the minutest privacies of life to see that nothing is amiss.

PARAMATMA. SANSK. The Supreme Soul of the universe, or rather the Universal Spirit. The Hindus do not dispute the names of God or Allah, because they consider these expressions synonymous with Parameshwara, the Supreme Being,—that is to say, the Paramatma or Supreme Spirit of the Vedantist, the Siva of the Saivite, the Vishnu of the Vaishnavite. This exalted being, they consider, does not interfere immediately in the affairs of men; no question of scripture is necessarily brought forward by the introduction of his name. But when the names of Jesus Christ and Mahomed are employed, Hindus understand these to refer to some man who appeared on this earth, and the belief in whom is necessarily inconsistent with the belief in their own scriptures. Parameshwara, SANSK., from Param, excellent, and Eshwara, God, or, more simply, the glorious.—*Rasamala, Hindu Annals*, ii. p. 441.

PARAMITA, a queen of the Amazons, who is mentioned in the Mahabharata as conqueror of Arjuna, when he was accompanying the horse for the Aswa Medha, or sacrificial horse.

PARAMPA or Paramba. MALEAL. A garden, a cocoanut or areca-nut plantation.

PARANCH or Pranch. HIND. A written placarded notice demanding redress, or threatening destruction of the property.

PARANDA. HIND. A silk material, used as a hair ornament in Lahore; also a bird.

PARANG and Szanskar are districts in the N.W. Himalaya; Piti and Guge are Tibetan districts; all east of Piti is Tibetan.

PARANG. MALAY. A sword, a chopping-knife.

PARANSOTI TAMPIRAN was the head of a Saiva Matam (monastery) at Madura, during the reign of Ativira Pandiyan, about the 12th century. At the request of the king, he wrote a Tamil poem, Tiruvilliyadal Puranam, translated from the Sanskrit Kalasya Mahatmaya, relating the 64 sports of Siva.

PARAPPAR. TAM. An overseer, a term of courtesy for Brahmans amongst the Tamil people. See Ayar.

PARASANG, a Persian long measure of 3 or 4 miles, more or less in different districts.

PARASARA or Parashara, the earliest Hindu writer on astronomy whose name has come down to us, and is supposed to have lived about the 14th century, B.C. 1391, but has been variously estimated down to B.C. 575. He resided at Sri Shaila, and is said to have been a son of Vasishta, also a son of Saktri, and grandson of Vasishta. By an amour with Satyavati, a fisher girl, he was father of Krishna Dwaipayana, styled the Vyasa or arranger of the Vedas. Parasara was a disciple of Kapila, and he is said to have written also on Dharma Sastra; to have received the Vishnu Purana from Pulasteya, and to have taught it to Maitreya.

PARASGAR, HIND., of Kashmir, a shawl-washerman.

PARASHAWARA, now called Peshawur, is first mentioned by Fa Hian in A.D. 400, under the name of Fo-leu-sha. It is next noticed by Sung-Yun in A.D. 502, at which time the king of Gandhara was at war with the king of Kipin or Kophene, that is Kābul and Ghazni, and the surrounding districts. Sung-Yun does not name the city, but he calls it the capital, and his description of its great stupa of king Kia-ni-sse-kia, or Kanishka, is quite sufficient to establish its identity. At the period of Hiwen Thsang's visit in A.D. 630, the royal family had become extinct, and the kingdom of Gandhara was a dependency of Kapisa or Kābul. But the capital, which Hiwen Thsang calls Pu-lu-sha-pu-lo or Parashawara, was still a great city of 40 li, or $6\frac{2}{3}$ miles in extent. It is next mentioned by Masudi and Abu Rihan, in the 10th and 11th centuries, under the name of Parashawar; and again by Baber, in the 16th century, it is always called by the same name throughout his commentaries. Its present name is due to Akbar.

One great object of veneration at Parashawara in the first centuries of the Christian era, was the begging-pot of Buddha, now at Kandahar, and called Kashgul-i-Ali. Another famous object was

the holy pipal tree, at 8 or 9 li, or 1½ mile, to the S.E. of the city. This same tree would appear to have been seen by the Emperor Baber in A.D. 1505, who deseribes it as the stupendous tree of Begram, which he immediately rode out to see. It must then have been not less than 1500 years old; it is not mentioned in A.D. 1594 by Abul Fazl in his account of the Gor-Katri at Peshawur. —*Cunningham, Anc. Hist. of India.*

PARASNATH, a mountain in Bchar of grcat sanctity; it is the eastern, as Mount Abu is the western, metropolis of Jain worship and pilgrimage. 10,000 annually, from distant parts of India, visit the scene of Nirvana or 'beatific annihilation' of ten of the 24 deified saints or Tirthankara, who are the objccts of Jain adoration; and from the last of thcse, Parswa or Parswanatha, the hill, originally called Samet Sikhar, took its better known name of Parasnath. It is in the east of Hazaribagh district, and adjoining Manbhum, Bengal, lat. 23° 57′ 35″ N., long. 86° 10′ 30″ E. The mountain consists of a central narrow ridge, with rocky peaks rising abruptly to a height of 4479 feet from the level country on the S.W., and throwing out long spurs. It is the highest hill of the range of hills separating Lower Bengal from Behar. Like to Abu on the west, the Jain religionists have covered the summit of this hill with numerous small temples, and the sacred Charan or foot-print is also shown. Amongst thc Hindus, the eastern peak is the most noted. On its top, Parasnath obtained nirvan or emancipation from matter. The spot is especially sacred from that circumstance, and forms the holiest place of worship to the sect. The pilgrims climbing to see the last scene of his life and labours, are here shown his foot-prints, marking the spot where he obtained his nirvan.— *Hooker's Him. Journ.* i. p. 18; *Imp. Gaz.; Schlag.; Tr. of Hind.* i. p. 200.

PARASOL or Umbrella, a shade from the sun's rays, has been used in eastern countries as an emblem of rank from the most aneient times. The title Satrap of the Greeks is supposed to have been derived from the Ekach'hatra, also Ch'hatrapati, the vaulted horizontal umbrella, which in ancieut India was always reserved exclusively for royalty. The Aftabgiri of Muhammadans of Persia and India is a round, flat, vertical parasol, carried to shade persons of rank by special permission of the sovereign, and usually emblazoned with a family device.

PARASU-RAMA, a Brahman, supposed to have lived B.C. 1176, who gave his name to an era, nsed still on the Malabar eoast, from Mangalore to Cape Comorin. He was son of Jamadagni, a Brahman, and was apparently a village hero, but his name is associated with many fabulous Hindu legends. He was descended on his father's side from Bhrigu, and on his mother Renuka's side from the royal Kusika, and was born near Agra. Parasu-Rama means Rama with the axe, and he was also called Khandu Parasu, who strikes with the axe, and is said to have 21 times overthrown his Kshatriya opponents, which would seem to indicate a prolonged contest for supremacy between the Brahmanical and Kshatriya races. He was a contemporary and an opponent of Rama Chandra, by whom he was overcomc. His history is detailed in the Mahabharata, Ramayana, and Bhagavat-Gita. He is fabled to have cut off his mother's head for some impropriety of her thoughts, but on his father offering him a boon for this, he asked her to be restored to lifc, also that he might bc invineible in single combat, and enjoy length of days. He is fabled to have taught Arjuna the usc of arms; is also fabled to have flung his axe into the Arabian Sea, and thus to have reclaimed the present Malabar, which he peopled from the north with the ancestors of the present Namburi Brahmans. He is said to have been a worshipper of Siva; and the cause of his war with Rama was his anger with Rama for breaking Siva's bow. Hindus regard him as the sixth avatara of Vishnu, and his opponent Rama Chandra as the seventh. Renuka, the wife of the Rishi Jamadagni, and mothcr of Parasu-Rama, is said to be identieal with the Gramma-deva Ellammen. The Parasu-Rama era is current on the Malabar coast. At the birth of Christ, 1176 years of the Parasu-Rama era had expired, and the 1177th year began on the 17th August A.D. 1, Julian style.—*Gita*, p. 86; *As. Res.* i. p. 426, iii. p. 68.

PARASURAM BHAU was defeated at Panipat by Ahmad Shah. See Panipat.

PARASWANATH, the 23d Jaina Tirthankara, is said to have been born at Benares, where hc married the daughter of King Prasenajita, and died, aged 100, on Samet Sikhar or Mount Parasnath in the west of Bengal, about B.C. 777. Paraswanath is sometimes shown with a snake hood, sometimes as a blaek man (Samta Paraswanatha). —*Ferg. and Burg.* p. 48.

PARATROPIA DIGITATA. *Voigt.*

P. venulosa, *W. & A.* | Araba digitata, *Roxb.*
Pa-loo-let-wa, ... BURM.

A large shrub, native of Circars. Paratropia umbraculifera, *Roxb.*, is a plant of the Moluccas. The Karens make an infusion of the leaves of a species of Paratropia, which they administer for many internal diseases.—*Mason.*

PARAVAR, a dark-skinned, almost black race, in the extreme south of the Indian Peninsula, living in villages along the sea-coast, and earning their bread as fishermcn, with nets, lines, and hooks. They own canoes, whieh they take to sea before daylight, and return about noon. Their ancestors are said to have bccn converted by Xavier, and they still profess the Romish religion, but they are drunken and dissolute. — *Madras Government Proceedings.*

PA-RA-WA, in Amherst, a hard, red, compact wood, with large fibre, and fit for gun carriages or other similar purposes. It is exempt from attacks of insects. It is used for spears and arrows (a species of Garcinia?).

PARBAT, from Parvata. SANSK. A hill near Poona; any mountain.

PARBATI or Parvati, a Hindu goddess, the mountain goddess, wife of Siva. See Kali; Parvati.

PARBATTIAH, a hill peoplc of Nepal, who are arranged iuto four classes, denominated Awal, Doom, Seoom, and Charum, Persian terms denoting 1st, 2d, 3d, and 4th. The Awal are those peasants who possess five ploughs and upwards; the Doom, such as have from one to five; the Seoom arc thosc who, without being proprietors of ploughs, arc considered to be at the head of a few labourers; and the lands of Nepal proper are cultivated, almost without excep-

tion, by Newars; those to the westward, as Noorkale, etc., by the Parbattiah tribe, called Dherwara.

PARBHU, a writer caste in the Bombay Presidency, who claim to be pure Kshatriya, and descendants of Chandrasena raja of Malabar. The British in India call them Purvoe.—*Wilson.* See Prabhu.

PARCHA, head priests of the temple of Jaganath, who superintend the colleetion and disbursement of the revenues of the temple, and also see that the worship is eonducted in an orderly manner.

PARCHA. Hind. A piece of cloth; also wellgearing. Parcharkar, the art of joining in stone.

PARCHERRY. Anglo-Tam. From Paraiyan, a Pariah, and Cheri, a plaee. Parai-cheri, a village or quarter or ward of a city occupied by Pariahs; a derogatory name applied by Hindus to all non-Hindus, in the same meaning as M'hleehas.

PARCHMENT.

Parchemin, . . . Fr.	Cartapecora, . . . It.
Pergament, . . . Ger.	Pergamino, . . . Sp.

Parehment eonsists of the skins of sheep and goats, prepared in such a manner as to render them suitable for being written upon. It is now chiefly employed for charters and other writings where great durability is desirable. The name is from the Latin Pergamena, from Pergamus, the reputed place of its invention. Eumenes II., king of that place (who reigned B.C. 197–159), has the honour of the invention, he being stimulated thereto by the prohibition of the export of papyrus from Egypt; but Herodotus says skins were commonly used for that purpose in his time; and it is even asserted that the word Pergamena was not used until several eenturies after the death of Eumenes. Layard says (Nineveh, ii. p. 151) the Egyptians used it occasionally as early as the 18th dynasty. According to Mabillon, the first writer who used the term is Tatto, a monk of the 4th century; before his time, the word Membrana was employed, as in the Greek Testament, 2 Timothy iv. 13. Following on the tables of stone used by Moses, the Jews used rolls of skin for their sacred writings.

Vegetable parchment, or ametastine, applicable for legal deeds, is made from water-leaf or unsized paper, and it acquires its peculiar properties by being dipped in diluted sulphuric acid, the strength of whieh must be regulated to the greatest nicety. It is one of the most unalterable and unchangeable of manufactured substances. It takes writing ink and dyes very readily, and, from its perfect surface, receives varnish without being sized in the first instance.—*Faulkner; Tomlinson.*

PARCHMENT. The coffee bean has three coverings,—(1) the outer pulp, within which is (2) the parchment, of a faint straw colour, which surrounds the coffee beans, and (3) the silver skin, semi-transparent, which adheres elosely to the seed.

PARDAH. Hind., Pers. A screen. Pardahnashin, a screened person, a woman who is secluded. It is a curtain, a cotton cloth with white and blue stripes, used for curtains, etc. The word Pardah, which means curtain or veil, is often metaphorically used, and implies that seclusion in which many females in India live; but in cases where ladies transact business, the expression must be taken literally, as they are seated behind a curtain, where they hear and are heard, and through the openings of which they see without being seen.—*Malcolm's Central India*, i. p. 279.

PARDANTHUS CHINENSIS. *Ker.*

Ixia Chinensis, *Linn.*	Ferraria crocea, *Salisb.*
Moræa Chinensis, *Thunb.*	
Shie-kan, . . . Chin.	Belam-konda-sulal-mani,
China leopard flower, Eng.	Maleal.
Tiger lily, . . . ,,	

A native of Nepal and the Himalaya, and common in gardens, being a very ornamental flowering shrub. It has a showy yellow and orange flower, whose petals are spotted like a leopard's skin. It is very commonly cultivated by the Burmese. It is used in medicine. The dark, irregular rhizomes of this and other iridaceous plants are sold in China under the name of Shie-kan.—*Mason.*

PARDESI. Hind. A foreigner, a stranger. In Southern India, the northern Hindus are so termed by themselves; and by the southern people, the term is equivalent to foreigner, as from Northern India.

PARDHAN or Pradhan, ministers of a native court; in Bengal, village authority.

PARDHI, a sportsman or fowler, a hunter race in the south of India, called also Harn-pardhi, also Shikari, but who call themselves Bhowra.

PARDHI, in the Maiker district, are cultivators, also wood-cutters; this race are part of the Gond.

PAREIRA BRAVA. *Linn.*

Wild vine, Velvet leaf, Eng.	Grieswurzel, . . . Ger.

A medicinal root, procured from the Cissampelos pareira, a native of the West Indies and South America.

PAREYO. Singh. Literally strangers, also called Widiyetto, or people of the highroad, a race near Badulla in Ceylon, supposed to be the descendants of Portuguese captives with women of rank of the country, degraded for crimes, or made slaves after the re-conquest.—*Ten.* ii. p. 267.

PARGANA. Hind. A district, a tract of country, including a number of villages; a subdivision of a district or province.

PARHARRI, servants of the Hindu idol Jaganath, who dwell within the holy land of the temple, and guard the seven inner doors of the pagoda, attend during the day, and watch over it at night; they present pilgrims to Jaganath.

PARHEYA, a race in Palamow, the mere remnants of a tribe who once formed an important part of the population. They vary largely in physieal appearance. At Ramkunda in Palamow, two might have been classed as Negro, two as Mongolian. The Negro type were dark and prognathous; the latter bright copper-coloured, with flat, broad faces, and slightly oblique eyes.

The Parheya have a tradition that their tribe formerly held sheep and deer sacred, and used the dung of those animals to smear floors with, as they now use eow-dung.—*Dalton, Ethnol. of Bengal*, p. 131.

PARI. Hind., Pers. A fairy. Parizad, born of a fairy, a beautiful woman; the people of the valley of Peshin in Segestan worship fairies. Pari Sosan, maiden-hair.

PARIAH or Pariar.

Holeyar, ... Can.	Paraiyan, . . . Tam.
Dher, ... Hind.	Paraiyar, ... ,,
Mhar, ... Mahr.	Paraiyadi kiravan, ,,
Paravan, . . . Maleal.	Malla vadoo, . . Tel.

Pariah is a Tamil term, applied to an aboriginal people scattered throughout Southern India, often

adhering to a Shamanism. They are permitted to marry into each other's clans. They are regarded by the four castes of Hindus as of very low grade, but they are not out-castes, or men who have been expelled from other castes. They are not the Madiga Wanlu of Telingana, or Chakkili of the Tamil, or Mang of the Mahrattas, nor Chamar of Northern India, who are shoemakers or workers in raw hides, and still eat creatures which die from disease, and other animals that most races regard as unclean, and who in villages perform the lowest menial offices, such as messengers and scavengers, and are paid by portions of the crops and some small privileges, but are not permitted to reside within the village. The Pariah, however, are usually the serfs of the Sudra agriculturists. Those in the large towns, in the employ of the Europeans in Southern India, are quick, intelligent, and active. The race is emigrating with great rapidity to the West Indies, Mauritius, Cape Colony, and the Burmese provinces, etc., where all sectarian or social distinctions are unknown. There are said to be thirteen subdivisions amongst them. The Pariah are not the lowest of the aboriginal races. Even in the Tamil country there are ten castes who are lower in the social scale than the Pariah, and from these are excluded the Pallar, who dispute precedence with the Pariah. The Pariah constitute a well-defined, distinct, ancient race, independent of all others, and has its own subdivisions, its own peculiar usages, its own traditions, and its own jealousy of the encroachments of the castes which are above it and below it. And the Pariar, whom St. Pierre's romance has fabled as a mild, benevolent, subdued being, whenever he has an opportunity, is as severe on other sects as from the custom of the world we would surely expect. Several of the aboriginal races of the S. of the Peninsula have race or tribal titles; that of the Pariah is Samban, which means deity. The term Pariah is supposed by Professor Wilson to have its origin in the Tamil, Parai, a drum, as they are often the village musiciaus. Along the border country of the Nizam's territories, and in Berar, the Hindus style the Mhar and Dher or Pariah, Christians, the word being pronounced Kirsn. The Dher or Dhed of the Dekhan is employed as a watchman and messenger in the village establishments. In the Dekhan the Dher is identified with the Mhar. In some places he performs the duty of scavenger. In the Saugor territory, the Dher are said to eat dead animals, clean the skins, and sell them to the Chamars or tanners.

The Holiya of the Canarese country is a low man, an out-caste, commonly an agricultural labourer; the term is from Hola, a field; and in several districts he is a predial slave, being saleable by the owner of the estate on which he is located, either with or without the land. He is described as a predial slave in Canara and Coorg; in the former he is said to be a subdivision of the Dher, in the latter one of three principal classes of slaves called Holiyar, Yemaru, and Paleru. In both countries the Holiyar are distinguished by various demonstrations prefixed, which are variously written, and the meaning of which is not explained, as—Maury Holiya, Byr Holiya, Murtha Holiya, Bulgi Holiya, Kembutta Holiya, Badaya Holiya, Rookhee Holiya; of these, the only peculiarities noted are, that the Kembutta Holiya is native in Coorg, the rest are natives of Carnata. The Holiya are generally a more faithful class of slaves than others. Amongst the Mare Holiya, the custom of succession through the female line prevails. The Holiyar of the Canarese-speaking districts in the centre of the Peninsula are the village servants, watchmen, and the like, and are a willing, honest race.

PARI CHARAK. Tam. Superintendent of a temple. See Parcha.

PARI JATAMU or Para jatamu. Sansk. A celebrated tree, in Hindu mythology said to have been produced at the churning of the ocean, and to have been grown in Swarga, Indra's paradise. W., p. 529, has Erythrina Indica, or the coral tree; Br., p. 591, the same, and also the Amaranth and Mimusops elengi, also Nyctanthes arbor tristis, adding that it is a genuine name for all flowers with a jasmine scent. In the As. Res., W., p. 244, Sir W. Jones states that it is given to several different genera quite distinct from each other. Mr. Elliot heard it assigned to Cochlospermum. The Hindu fable is that Krishna, at the instigation of his wife Satya Bhama, stole it from Swarga, and took it to Dwaraka, but after his death it returned to Swarga.—*As. Res.* xi. p. 134.

PARIKSITI. A story of Pariksiti is still prevalent in the Hindu family circle. He was a Puranic hero who was doomed by a sage to die of a snake-bite. In order to escape this fate, he retreated to a barren island, believing that the serpent could not ford the water, and he would be quite safe. But the serpent, having assumed the form of a lemon, swam over to the island. The lemon was beautiful to behold, and he could not resist the temptation of smelling it. Having done so, the lemon bit the nose of Pariksiti, and he fell into a swoon and died. The legend guides the Hindus in their daily life. The serpent-god hears, it is said, the prayers of the devotee, whose house he occasionally visits. A superstitious woman, filled with awe and fear, instead of turning the venomous god away, beseeches him to retire, and when the god dilates his hood, and sways it to and fro, she thinks that it thereby promises her safety. She will not allow her children to smell a lemon, however fragrant it may be, and warns them that the serpent-god may transform himself into a lemon and bite their noses.

PARILOKA. Hind., Sansk. The future world, heaven; literally another place.

PARINARIUM EXCELSIUM, one of the Pomaceæ, a large tree brought to Bombay from Goa; the fruit, which ripens in December and January, resembles a coarse plum, and is held in much estimation. Colonel Beddome found P. Indicum at 2000 or 3000 feet on the Wynad slopes, Malabar, Carcoor ghat, and vicinity.—*Riddell.*

PARINDA. Hind., Pers. A light boat of Kashmir; a bird.

PARISHAD, a community or college of Brahmans associated for the study of the Vedas.—*D.*

PAR-i-TAOS, literally peacocks' feathers, a sort of pashmina or shawl-wool cloth of two colours.

PARITIUM MACROPHYLLUM, Bet-mwæ-sha, Burm. A plant of Burma which furnishes a useful fibrous material for ropes, being long, soft, pliant, and strong; colour brown.—*M. E. J. Reports.*

PARITIUM TILIACEUM. *St. Hil.*

Hibiscus similis, *Blume.* | H. tiliaceus, *Linn.*
H. elatus, *D.C.* | H. tortuosus, *Roxb.*
Bola, ... Beng. | Paruti, Tali Pariti, Male.
Lye-nya-sha, . . . Burm. | Belli-patta, . . . Singh.

The banks of tide-water streams of Burma are often damasked with the changeable red and yellow flowers of this large luxuriaut bush. It is common also on the Malabar coast, and supposed not to differ from H. arboreus, the Maho tree and Mohaut of the West Indies. The fibres of its inner bark are employed for cordage by the inhabitauts of the South Sea Islands and by the American Indian; it is said to gain in strength when tarred. The Otaheitans make fine matting from it, and likewisc manufacture it into ropes and cords.—*Mason; Royle.*

PARIVRAJAKA, a religious mendicant; a Brahman in the fourth stage of his religious life. —*Dowson.*

PARIWARA ISLAND natives closely resemble other Papuans to the eastward, but are smaller in stature, and wear the hair frizzled up into a mop projecting backwards.—*Macgillivray's Voyage*, i. pp. 293, 294.

PARJI, the servants of the village community of Hindustan. In Faizabad, they comprise the blacksmith, carpenter, barber, washerman, and shoemaker. See Baloti.

PARKA. Hind. The copper receiver of a still, kept cool in water; in this the spirit accumulates.

PARKARMA. Sansk. In Hinduism, the religious circuit of any shrine or holy place; a circumambulation, otherwise called pradakshana.

PARKES, Sir HARRY, for some years Her Britannic Majesty's minister at the court of China. His term of office included the episode of the treaty of Tien-tsing, the first and second opium wars, the outrage on the lorcha *Arrow*, and the important negotiations which followed the arrival of Lord Elgin, in company with Sir Thomas Wade, Sir Rutherford Alcock, and General Gordon. For eighteen years he has represented Great Britaiu in Japan. Hc underwent cruel sufferings in China through the treachery of General Sankolinsin.

PARKHAR, a district north of the Runn of Cutch, the words par and khar meaning beyond, and salt desert. The Thur and Parkhar districts are occupied almost equally by Muhammadans and Hindus, subdivided into classes. They generally used a mixed lauguage called Dati, composed of Sindi, Marwari, and Gujerati, though Gujerati is in use in some parts of the district. In manners and customs they resemble the Cutchi. They are chiefly occupied in cattle-breeding aud as graziers. The Muhammadans are Syuds, Baluch, Brahui, Jat, and Summa. The Hindus are Brahmans and Soda. There are also 25 commercial tribes, 5 out-caste races, the Mengwar, Bhil, Koli, Bala-Shahi, and Shikari; and 13 miscellaneous tribes, Shaikh, Memon, Kumbraui, Gudda, Bujeer, Mohana, Jokiah, Dookur, Koliah, Amunda, Bhopa, Mahur, Hakra. In the Thur and Parkhar district, only 9 inhabitants to the square mile.

PARKIA, a genus of plants named in honour of Mungo Park. The genus contains only a few unarmed trees of the west coast of Africa, the Peninsula of India, Sylhet, and in the islands to the eastward to Bay of Beugal. Parkia Africana is the Nitta or Doura tree of Soudan. The farinaceous matter surrounding the seeds is eaten, and also made into a pleasant drink when steeped in water. The seeds are roasted as coffee, then bruised, and allowed to ferment in water. When they begin to become rotten, they are well washed and pounded, and the powder is made into cakes resembling chocolate, which form an excellent sauce for all kinds of meat.—*Brown, in Denham, quoted in Eng. Cyc.; Voigt.*

PARKIA BIGLANDULOSA. *W. and A.*
Mimosa pedunculata, *Roxb.*
Chendu phool, . Hind. | Sambrani manu, . Tel.

A large and elegant tree introduced into India from Africa. It is one of the best trees for avenues. It requires care and water regularly. The flower-buds resemble balls of red velvet. The wood is hard and promisiug; it is surrounded by an astringent bark. The sweet and farinaceous pulp within the pods is highly esteemed, and made into sweetmeats. The uatives also make a pleasaut drink by diffusing the farina through water.—*Voigt; Riddell; Cleghorn, in M. E. J. R.*

PARKIA ROXBURGHII. *G. Don.* Mimosa biglobosa, *Roxb.* A tree of Assam and Sylhet; wood uot known.—*Voigt.*

PARKINSONIA ACULEATA. *Linn., D. C.*

Barbadoes flower fence, Eng. | Vilaiti kikar, . . Hind.
Jerusalem thorn, . ,, | Adanti, ... ,,
Genet epineux, . . Fr. | Sima jiluga, . . Tel.

A small graceful tree of the West Indies and South America, domesticated in India. It grows 12 or 15 feet high, and is seen everywhere in the Peninsula, springiug up with less care than any other tree, needing little water, and furnishing abundant cuttings for fuel. It is very generally employed as an ornamental plant, and for the construction of hedges, for which its stroug spines render it well adapted. The flowers are large, yellow, very numerous, and a little variegated with red spots, and are succeeded by loug, narrow, knotted pods. It grows readily from seed; the stem from which the leaves spring is capable of being converted into a white fibre. Some of it was seut to the Exhibition of 1851, as a material for paper-making, and could probably be afforded at a cheap rate, from the cuttings of the shoots of this plant.—*Drs. Voigt; Riddell; Royle's Fib. Pl.* p. 288; *Stewart's Panjab Plants; Eng. Cyc.*

PARLA KIMEDI, an ancieut zamindari (landed estate) in Ganjam district, Madras; the largest in the district, extending over an area of 993 square miles, including 354 square miles of maliya or hill country. Population (1871), 250,978, inhabiting 47,341 houses aud 1043 villages. The estate pays a peshkash (fixed revenue) of £8782, the proprietary income being returned at £46,500. The zamindars claim descent from the royal house of Orissa Gajapati (Gaugavansa), aud take precedence in the district. Eleven hill chiefs called Bissaye, and 23 smaller lairds called Dora, owe feudal allegiance and pay tribute to the raja. —*Imp. Gaz.* vii.

PARLOCA. Hind., Sansk. The future world, literally another place.

PARM. Sansk. A dot, a symbol of the Supreme Being, Parm-Eswar. See Chank.

PARMELIACEÆ. The lichen tribe of plants, the Lichenaceæ of Lindley, are perennial plants, often spreading over the surface of the earth on

rocks or trees, in dry places, in the form of a solid and foliaceous, or hard and crustaceous or leprous substance called a thallus. Many of the same species are found in different parts of the world; the lichens of N. America differing little from those of Europe, and almost all those collected by Dr. Royle in the Himalayas were found by D. Don to be identical with European species.

Variolaria lactea, *Ach.*
Urceolaria scripta, *Ach.*
U. cinerea, *Ach.*
Isidium Westringii, *Ach.*
Lepraria chlorina, *Ach.*
Solorina crocea, *Ach.*

Some lichens are useful to man as food and medicinally; others, after maceration in urine, can be employed as dyes, the chief dye plants being the Lecanora parella, also the purple powder of L. tartarea, or cudbear, from Cuthbert, who introduced it; P. hæmatomma, Rocella tinctoria, and R. fuciformis furnish the orchil or archill dye, called also Orseille des Canaries. The Borrera ashneh is a common dye in India. The nutritive properties depend on the presence of an amylaceous substance analagous to glutone, which Berzelius says exists in the form of pure starch or amylaceous fibre to the amount of 80·8 per cent. in Cetraria Islandica.—*Voigt; Eng. Cyc.* See Dyes.

PARMELIA KAMTSCHADALIS. *Esch.*

Shih-jui, . . . CHIN.?	Charcharita, . HIMALAYA.
Chalchalira, HIMALAYA.	Ausneh, . . ,,

This lichen is found in the Panjab bazars, and is probably gathered in the Himalaya. It is used as a dye, and is also officinal, being given as a stimulant to digestion, and on the Yunnani system in mania, as a diuretic. Honigberger states that it is also administered in disorders of the stomach and womb, and in cases of calculus. It is also said to be used for purifying the blood, and as a bitter tonic and astringent, and used in intermittent fever and hæmorrhage.—*Stewart; Powell.*

PARM-NARM. HIND. A name given by Akbar to the fabric of ibex wool, the Shah-tus.

PAROPAMISUS, a name applied by the ancient Greeks and Romans to the mountainous region between Herat and Balkh on the N.W. and Ghazni and Kandahar on the S.E. In this extent it comprises what are now known to be several distinct ranges, and the old name has ceased to be used. This mountainous region extends 350 miles from east to west, and 200 from north to south. It is so difficult of access, and so little frequented, that no precise accounts of its geography are to be obtained. The eastern half is inhabited by the Hazara, and is cold, rugged, and barren; the level spots are little cultivated, and the hills are naked and abrupt. The western part, which belongs to the Aimak, though it has wider valleys and is better cultivated, is still a wild and poor country. The northern face of these mountains has a sudden descent into the province of Balkh; their acclivity is less on their other extremities, except perhaps on the west or south-west. On the north-west they seem to sink gradually into the plain which borders on the desert. The slope of the whole tract is towards the west. To the north of this, extending eastwardly and to the west, are the elevated plains of Tartary, the Asiatic dominions of Russia, Chinese Tartary, and China, and the regions occupied by several Turkoman nations. Part of the mountains N.W. from India was also called the Paropamisus or Hindu Knsh; and Imaus and Hindu Kush seems to have been identical terms. The true Imaus, however, is the ridge which separates Kashmir from Little Tibet. It appears to incline, in its northern course, towards the continuation of the Hindu Koh, and even to join it. The term Hindu Koh or Hindu Kush is not applied to this ridge in its whole extent, but seems to be confined to that part of it which forms the N.W. boundary of Kābul, and this is the Indian Caucasus of Alexander. There is, however, much confusion, owing to the use of Tibetan, Chinese, and Persian names for that great mountain mass. —*Lassen on the Kings of Bactria; Rennell, Memoir*, p. 190; *Elphinstone's Caubul*, p. 430; *Vigne's Narrative*, p. 193; *Wh. Hist. of I.* p. 419; *Porter's Travels*, i. p. 152.

PARRA, a genus of tropical birds belonging to the family Parridæ, the sub-family Parrinæ, the Jacanas, as under:—

Sub-Fam. Parrinæ.

Metopidius Indicus, *Latham*, the bronze-winged Jacana, all the East Indies.
Hydrophasianus chirurgus, *Scopoli*, the pheasant-tailed Jacana, Ceylon, India.

The genus Parra is restricted to birds from South America; but Adams speaks of a water-pheasant (Parra Sinensis) which was shot on the river near the head of the valley of Kashmir.—*Adams.*

PARRA. TEL. A measure of capacity, fixed at 4000 inches = 5 marakal.

PARRAKEET, birds of the tribe Scansores and genus Palæornis. A sub-family of birds of the parrot family or Psittacidæ, peculiar to the eastern hemisphere, found in the tropical regions of Africa, Asia, and Australia.

PARROT.

Perroquet, ... FR.	Papagayo, ... SP.
Papagei, ... GER.	Killi poolli, . . . TAM.
Tota, ... HIND.	Chiluka, ... TEL.
Pappagallo, ... IT.	

The parrots are arranged by naturalists in the

family Psittacidæ, belonging to the climbing tribe of birds, and divided into six sub-families, as under:—

Psittacinæ, true Parrots.
Loriinæ, Lories.
Palæorninæ, Parrakeets.
Platycercinæ, Australian Parrakeets.
Arainæ, Macaws of America.
Cacatuinæ, Cockatoos of Australia and islands.

Palæorninæ or Parrakeets.

Palæornis Alexandri, *Linn.*, all India.
P. torquatus, *Bodd.*, Tropical Africa, all India, Ceylon.
P. rosa, *Bodd.*, all India, Burma.
P. schisticeps, *Hodg.*, Himalaya, Bengal, Sylhet, Assam.
P. columboides, *Vigors*, Malabar coast, Neilgherries.
P. Javanicus, *Osbeck*, all India to Java.
P. calthropæ, *Layard*, Ceylon.
P. caniceps, *Blyth*, Nicobars, Penang.
P. erythrogenys, *Blyth*, Nicobars, Andamans.
P. longicauda,—? Sumatra, Malayana.
P. modestus, *Fraser*, —?
P. viridimystax, *Blyth*, —?

Loriinæ or Lories.

Lorilucus vernalis, *Sparrm.*, the love-bird or Indian Lorikeet of Malabar, the Sub-Himalaya, Bengal, Sylhet, and Burma.
L. galgulus,—? Malay Peninsula.
L. Asiaticus or Indicus,—? Ceylon.

Other species in China and E. Archipelago—

Psittinus Malaccensis,—? Malay Peninsula.

Cacatuinæ or Cockatoos.

a. White, with large crests, from the Moluccas and Australia.
b. Black, of Australia and islands near, forming the crested genera Microglossum and Calyptorhynchus.

Nestorinæ have dingy plumage and square tail.
Psittacinæ have short and even tail.

PARROTIA JACQUEMONTIANA. *Dec.*

Killar, Kirru, Pare, Chen.	Killar, ... Ravi.
Wych hazel, . . . Eng.	Sha, ... Sutlej.
Psher, Pishor, . Jhelum.	Spilecha, . Tr.-Indus.
Pahu, Po, . . Kangra.	

A shrub of some size, which grows abundantly in many places on most of the rivers up to the Indus, as well as more sparingly beyond it, at from 2800 to 8000 feet. It is generally seen in clusters and thickets, the stems ranging up to 12 or 15 inches girth, and 15 or 20 feet high. The leaf resembles that of the hazel, for which this plant has frequently been taken by Europeans, although the fruit is very different. In some places its leaves are said to be browsed by cattle. The wood is hard and strong, and makes good pegs, native bedsteads, rice-pestles, walking-sticks, etc.; and Vigne states that he had an excellent flute made in England of its wood. The twigs are used for binding loads, making baskets, etc.; but the chief use of the plant is for the twig-bridges, often spanning 300 feet. These are in most places made of Parrotia twigs, either wholly or mostly, Cotoneaster, Olea, and Indigofera heterantha, *q.v.*, being sometimes mixed with these. For the bridges, etc., Parrotia is cut at all seasons, but is not very lasting, requiring frequent piecemeal renewal. Longden mentions a birchen jhula at Koksar, since replaced by a bridge; and willow is stated to be employed in Spiti, Ladakh, etc. Near Muzaffarabad there were several bridges of the same construction (viz. one longitudinal rope to walk on, and two lateral ones to hold by, connected with the former by thinner ropes), but made of twisted hide, and one was mentioned by Hutton in Kanawar made of yak's hair. Parrotia Persica grows in Persia and Kashmir, and furnishes a very hard wood.—*Dr. J. L. Stewart, M.D.*

PARSA. Hind. With Hindus a portion of grain set aside to appease evil spirits, which becomes the perquisite of the gorait or watchman.

PARSEE, a name given to the Zoroastrians, now scattered through different parts of Southern Asia, but principally located in Bombay and Gujerat. They are called Parsee because they came to India from Pars or Fars, the province of Persia known as Persis by the Greeks. They are of that Aryan race who in primeval times dwelt in Aryana-Vaejo, the old Aryan home believed to have been on the banks of the Araxes, near where the city of Atropatene afterwards stood, far north of India, where winter reigned for ten months of the year. The race parted into two great branches: the East Aryan or Brahmanical moved towards India, and the West Aryans, whom the modern Parsees represent, journeyed westwards. The great bulk of the Aryans in Persia adopted Muhammadanism when overthrown by the Arabs, and a small remnant, adhering to their Zertushtrian religion, left their country. The emigrant Parsees retreated to Khorasan, where they remained for a hundred years; afterwards retreated to Hormazd or Ormuz in the Persian Gulf, where they remained for 15 years, and then sailed for Diu, a small island to the N.W. of the peninsula of Gujerat. After a few years they sailed to Sanjan at the S. extremity of Gujerat province. A small remnant race exists in Yezd. In Persia, in 1881, there were only 500 families who were subject to the Jazia or poll-tax, could not wear white robes, could not build a new house, could not appear on horseback, had to pay transit dues on passing from place to place with goods; instances were occurring of girls and women being forcibly converted to Muhammadanism; a convert could claim all the heritable property; in purchasing land, one-fifth of its value had to be paid as fees to the mullas.

Being persecuted and annoyed by the Muhammadans, most of their countrymen have emigrated to India. A handful of persecuted exiles, living in a foreign land, surrounded for 1200 years by idolatry, and persecuted at times by religious fanaticism, the Parsees have still preserved their national type and character and their original worship. Though they have not altogether escaped contamination, and have adopted many superstitious ceremonies and notions of the Hindus, they have always recoiled from degenerating to the worship of idols, and have clung tenaciously to the idea that they were worshippers of only the invisible Hormazd, the great God. The Parsees believe in the existence of angels, created by God, and having the power given them to assist and benefit mankind. But they centre their prayers and their hopes, above all, in Hormazd. Their whole morality is comprised in three words, —Pure thought, word, and deed; their reward and punishment depends upon their fulfilment of this injunction, and their pardon on the will and mercy of God. The worship of fire, and the ordinary receptacle of the sacred fire, is called Adurian, the more expensive places, of which there are six in India, being called Atash-bahram. They now have a heaven; and the place to which the souls of the good go, is Gurasman Bahasht.

They have a hell, called Dozakh, which they describe as a dark place with fiends, and where Ahriman or Shaitan dwells as the arch-fiend. They are strict in their ritual observances, particularly those inculcated for purification. The kusti or sacred thread has frequently to be removed from the person; and their families, like those of the Jews, Mnhammadans, and Hindus, dwell in rooms apart. They have 101 attributes or names of the deity. Before prayer they wash their hands and feet, take off the kusti, pray, and again fasten the kusti. In their prayer, they first recite the Saroshbaz, Sarosh being an angel in heaven. They then pray to Khūrshad, the sun, to an angel named Mahir (Mihir? the sun), and to Hormazd, the beneficent principle. Women also usually pray. While they were still dwelling in Bactria, Zertusht, known to the western world as Zoroaster, reformed the W. Aryan worship. Zoroaster's reform in Bactria occurred about the time of Menes, or about 3500 B.C. The Parsees of India, however, maintain and quote as their authority (Haug's translation) the Gathas, and the good principle is distinctly noticed in the Gathas, songs of Zertusht. He is altogether distinct from another Zoroaster, the Median conqueror of Babylon, who vanquished the realm and city of the Chaldees, and founded the second Babylonian dynasty in the year 2234 B.C. He was a priest of the fire-worshippers at a time when the doctrine of a duality of good and evil was already in vogue, though the name of Ahriman does not occur in the oldest records. What is understood by evil is evil thought (Ako mano), or falsehood; and this is contrasted with good thought, which is identical with the good principle, and is now known as Horimazd or Hormazd. An absolute personification of the good principle is, however, hardly to be found in the songs of Zertusht.

In British India, they object to the term fire-worshippers, but the Zoroastrian religion there has become the distinguishing mark of a caste rather than a living faith, while their versatility, intelligence, and general aptitude for business have made them a wealthy and influential body. They do not proselytize, have only recently relaxed a little towards nine of their own race, but they still resist the admission of hundreds of others who, being descended from Parsee fathers and Hindu or Musalmani mothers, wished also to be invested with the sacred thread. The excluded body conform in all externals to Zoroastrian rules, and call themselves Parsees, but the right to join in public worship has been steadily refused them, till nine persons were invested with the thread by a Dnstoor in presence of a thousand Parsees.

The Parsees have the Zend and Pahlavi names of 21 books which they suppose Zoroaster to have produced, but of which the major part have been lost. Their Zendavesta consists of—(1) the five Gatha or songs and prayers (in metres resembling Vedic), which alone are thought to be the work of Zoroaster himself, and form part of the Yazna or Yajna, written in two dialects, the older of which Dr. Haug called the Gatha; (2) the Vendidad, a code of laws; (3) the Yasht, containing hymns to the sun and other deities. There is another portion called the Vispard. A note in the Dinkard, an ancient Pahlavi work, however, says the Avesta has three parts—(1) the Gatha, in verse, and treating of the invisible world; (2) the Date, in prose, and giving rules of conduct; and (3) Mathre, comprising prayers and precepts, and giving an account of the creation. The Vendidad, the Yazna, and the Vispard survive, and are collectively known as the Vendidad Sade; also the Ogum Decha, the Khurdah-Avesta, and the Yashts, with fragments of the Vistasp, Hadokht, and Damdad books. The Izashne, Vispard, Khurdah-Avesta, and Yashts are books of prayers.

The Ahuna Vairya or Honover is the especial prayer offered by the Parsees to the Supreme God, as a benediction. It is—

'Yathâ ahû vairyô.
Athâ ratus ashât chit hacha.
Vanheus dazdâ mananhô shyao thénanām.
Anheus Masdai Khshathrémcha Ahurâi.
Ayim darigubyô dadhat Vâçtârĕm.'

Professor F. Spiegel translated it, and from his German, A. H. Bleeck rendered it into English—

'As is the will of the Lord, so (is He) the ruler out of purity.
From Vohu-manô (will one receive) gifts for the works (which one does) in the world for Mazda.
And the kingdom (we give) to Ahura when we offer succour to the poor.'

The English translation from A. Franck and J. Oppert's French version is as follows:—

'Like the Verb of the Supreme Will, emanation exists only because it proceeds from truth. The creation of what is good in thought or act in the world belongs to Mazda, and the reign is of Ahura, whom the Verb has constituted the destroyer of the wicked.'

Professor Max Müller says (vi. p. 176): 'A Parsee believes in one God, to whom he addresses his prayers. This God has neither face nor form, colour nor shape, nor fixed place. He is himself alone, and of such glory that we cannot praise or describe him, nor our minds comprehend him. Whoever believes in any other God but this is an infidel.' The Zertushti catechism says: 'If any one commit sin under the belief that he shall be saved by somebody, both the deceiver and the deceived shall be damned to the day of Rasta Khez.' 'Your Saviour is your deeds, and God himself, he is the Pardoner and the Giver.'

Amsshashpand.—In the existing Parsee religion seven Amsshashpand are supposed to exist; they are called the immortal holy ones. These cannot be regarded as the elements.

The *Ardibehest-Jasan* festival is maintained in honour of Ardibehest Amsshashpand, the controlling angel, according to their theology, over their sacred fire. On this day the Parsees crowd their fire-temples to offer up prayers to the Supreme Being.

The *Ava Ardui Sur Jasan* festival is held in honour of Ava, the angel, in their theology, who presides over the sea. On this day, Parsees should approach the sea-shore or any stream of water, and chant prayers from the Zend; but these people now generally mix with their prayer several Hindu rites, such as offering flowers, sugar, cocoa-nuts, etc. In Bombay, a fair is held on the esplanade on this day.

The *Amardad-sal* holiday is held on the day following the Khurdad-sal, of which festival it is merely a continuation. Amardad is from Amere-

tat, immortality, the seventh Amsshashpand of the Parsee.

There is a Parsee sect known by the name of Shapoo, who, like the Zoroastrians, pray while standing looking to the sun and near water. They never talk with anybody barehead, etc. The admission of an individual into the Parsee faith is indicated by the assumption of the Sadaro or shirt.

Parsee festivals are celebrated with but little show. Their day is divided into watches termed gah, of which there are four in winter and five in summer. Each gah has a heavenly watcher and its own special prayers. Pateti Naoroz, or New Year's Day, is held on the 1st of Farvardin, celebrated in honour of Yezdejird, the last king of the Sassanian dynasty. On this day alms are given, and congratulatory visits paid, in which the Hama-i-jor or hand-joining is practised. Rapitwar, on the 3d of Farvardin, is in memory of Ardibehest; Khurdad-sal, in memory of Zoroaster.

Physicians who attend Parsee patients are always charged (if the cases are likely to terminate fatally) to give timely warning to the friends of the sick man. When it is believed that he is drawing near his end, the sacred Hom water is given to drink, and, when life departs, the attendants place the body on stones, in a lower chamber, from which everything else has been removed, and wash it with warm water. The reasons given for the removal to the ground are various, but the one ordinarily accepted amongst them is that a dead body is an unclean thing, necessitating that all who touch it must destroy their clothes, and whatever it touches must be destroyed. With these views the dead in Bombay are carried by a class of Parsees called Nessus Salar, Nessus meaning unclean. These men carry the remains to the dokhma or tower of silence, on the floor of which they lay it. The dokhma is without any roof covering, is open to the sky, so that birds of prey, vultures, kites, and crows have the freest approach. The raised floor has a deep well surrounded by a platform, with channels converging to the well. The dead are carried within on an iron bed, from which they are removed and placed on a partition of the platform, and the fluids resulting from its decomposition flow along the channels into the well; but after a time the remnants of bones are also swept into that excavation. This mode of disposing of the dead is universal among the Parsees whenever they are able to give effect to the arrangements. A small dokhma will cost Rs. 10,000 or Rs. 15,000. When the well is full, the bones are removed and buried outside the dokhma. After the demise, before removal from the house, a dog is brought near to gaze on the departed. This is the Sag-did, or dog-gaze, and its object is variously explained,—anciently, it is said, because the dog's intelligence could show whether life was extinct; but at present the notions are that the dog's presence secures the passage of the soul over the bridge of Chinvat (see Bridge). The fire-priests are paid to pray for the dead, monthly, for a year, and thereafter on the anniversary of the demise.

Addar jasan is the 9th day of the 9th month of the Parsee year. On this day, money is distributed to the priests, and offerings of sandal-wood are made to the sacred flame in their fire-temples, which are then much crowded. The educated amongst them are inclined to imagine their Gurasman or Bahasht, in which Hormazd dwells, a heaven something like that of the Christians, but seven (or four) heavens are recognised amongst them; and their Dozakh, where dwells Ahriman or Shaitan amongst dark fiends, is the equivalent of hell.

In childhood, a Jubhla or silken frock is worn by the Parsee, both boys and girls, and they are invested with the Sadaro, or sacred shirt, and the cord or kusti, at the age of six years and three months. It is in reality deemed to be the seventh year,—the nine months of the child's gestation being included. This investiture is the initiation of the child into the religion of Zoroaster, the silken Jubhla being then discontinued. The Sadaro is made of cotton cloth, or gauze, or net, while the kusti is a thin woollen cord of seventy-two threads, representing the seventy-two Has or chapters of the Izashne, one of their sacred books. The Sadaro and kusti are worn alike by men and women, but the latter likewise dress in the saree, generally of coloured silk, and the short-sleeved silk vest called the Kanchri or Choli. Provided the Sadaro be worn, any other material and of any colour may be added over it. It is to the kusti, the sacred thread, to which Moore, in his Lalla Rookh, alludes, when he makes Hafiz declare himself a fire-worshipper:—

> 'Hold! hold! thy words are death,
> The stranger cried, as wide he flung
> His mantle back, and showed, beneath,
> The Gebr belt that round him hung.'

The kusti is terminated by two small tails at each end, denoting the four seasons; three knots on each tail represent in the aggregate the twelve months of the year. Baron de Bode, however, states that the cord is twisted, of 27 threads, such being the number, according to one Parsee interpretation, of the known kingdoms of the world at the time of Hushang. But it is variously explained. The assumption of the Sadaro or sacred shirt is part of the ceremony of initiation. It corresponds to the under garment worn by a Hebrew child, called Arbang Kanphoth.

In 1861, at the 11th meeting of the Bombay Literary and Philosophical Society, Professor Daddabhai Naoroji gave a short sketch of the present condition of the priesthood, whom he described as a body not only ignorant of the duties and objects of their own profession, but entirely uneducated. They only know how to read and write, as that is necessary to the preparation by rote of a number of recitations and prayers required for their daily avocations. On account of this general ignorance among the priests, there is no pulpit among the Parsees. The religious education of the Parsee child consists only in the preparation by rote of a certain number of prayers in Zend, without understanding a word of it. Of late some effort has been made to supply this want. A dialogue is composed, which gives a general outline of the doctrines and morality of the Zertusht religion, as believed by the present Parsees. The creed taught in it is summed up as follows:—To know God as one; to know the prophet, the exalted Zertusht, as his true prophet; to believe the religion of the Avasta, brought by him from God, as true beyond all manner of doubt; to believe in the goodness

of God; not to disobey any of the commands of the Mazdiashna religion; to shun evil and wickedness; to strive for good deeds; to pray five times in the day; to believe in the reckoning and justice on the fourth morning after death; to hope for heaven and to fear hell; to consider the day of general resurrection and judgment as certain; to remember always that God has done what he willed, and shall do what he wills; to turn the face to some luminous object while worshipping God. God is the creator of all things. Deeds shall determine reward or punishment after death, and none but God alone will and can save.

They have sacred fires in the temples, towards which they turn when addressing their prayers, not to it, but to the God of which it is the symbol. The injunction is to turn their face to anything that is glorious, as the sea, the sun, etc. They would not abuse fire, nor extinguish it unnecessarily, nor use it in a contemptuous manner. Hence the Parsees do not smoke. Gaomaezo or nirang is the urine of the cow, ox, or she-goat; and the second act of a Parsee, after rising from his bed, and before touching anything with his hands, is to rub it over the face and hands, after which he purifies himself by having water poured on his hands and feet. This process is laid down and enjoined as a purification rite in the 9th Fasgard of the Vendidad (page 120, line 21, in Berghaus edition). The reforming Parsees object to its use. Others say that Max Müller has misinterpreted this sentence.

A pious Parsee has to pray about sixteen times a day. They pray in the Zend language, which none of them understand. They pray on getting out of bed, after using the nirang, after bathing, after cleaning the teeth, after finishing the morning ablutions, after the ordinary natural functions, after washing the hands. Every one of the three meals begins and ends with prayer, besides the grace, and before going to bed the day is closed with prayer. Amongst the Parsees there is no pulpit, or pulpit orations in the vernacular of the people. Ordinarily every one goes to the fire-temple whenever he likes, recites his prayers himself, and as long as he likes; gives, if so inclined, something to the priests to pray for him. On several occasions, as in the occurrence of the Ghumbar, the bimestral holidays, there are assemblages in the temple, and prayers are then repeated, in which few or none join. The priests are described as very bigoted, and exercise much injurious influence, especially over the women. Perhaps only a dozen of professional priests lay claim to a knowledge of the Zendavesta, to the extent of reading with meaning the books they have been taught. Parsees have one wife. They do not eat beef, pork, or ham, and do not eat food cooked by a person of another religion. The high priest is called Dustoor; the other priests are styled Mobed, and the priesthood is hereditary. The Yazna, Vispard, and Vendidad are their sacred writings, but they have not been translated into a vernacular, and each Parsee has to pick up his religion as best he may.

Their ablutions for purification are much insisted on, after most of the natural functions, and, like the Hindu, the women dwell apart when unwell, and, similarly, for the forty days after childbirth, as followed by the Mosaic and Muhammadan ritual. The people are of a yellowish-white colour, tall, large-made men, with long arms and large feet. Their women are of a pale white, but mostly with a slightly xanthous hue. A new code of laws for the Indian Parsees was promulgated in the middle of the 19th century. In social life, they now can marry only one wife, though formerly, in case of barrenness, a second could be married. The young bride is taken to her husband's house after she grows up. The women of the Parsee community are believed to be very chaste. They marry in comparative childhood, and this seems to have its usual resulting evils, for the immoralities of the men are frequently before the community in the public papers. The wife and husband call each other by their names. The Parsees do not eat the flesh of the cow or hog, and are permitted the use of spirituous liquors. Their women also use the latter; but they are a sober people, rarely partaking to excess. At their meals, when sitting down, they pronounce the grace, called Jamwani baz, which they suppose to be a thanks-offering.

Priestcraft, acting upon ignorance, has not failed to do its work, and has left a legacy of a few works for which the Parsee has no reason to be thankful. Many ceremonies have been thus introduced, but the reformers contend that all those ceremonies that have no authority in the original Zendavesta ought to be abolished. Of course the old and the priests do not like this at all. Marriage among cousins is recommended. The form of marriage among the Parsees is a very simple ceremony,—little more, indeed, than a civil contract, ratified by family consent and abundant festivity.

The ancient Persians reckoned a new era from the accession of each successive monarch, and as Yezdejird had no successor, the date of his accession to the throne, 16th June A.D. 632, has been brought down to the present time, thus making the year A.D. 1867 their year 1235-36. In their calculations, only 365 days are allowed to the year; leap year is unknown to them, though it is alleged that in every 120 years one month was added to make it correspond with the solar year. The year is divided into twelve months of thirty days each, and five days, or Gatha, as they are called, are added at the end to make up the deficiency. The months are,—

1. Farvardin.	4. Tir.	7. Meher.	10. Deh.
2. Ardibehest.	5. Amardad.	8. Aban.	11. Bahman.
3. Khurdah.	6. Sharivar.	9. Adar.	12. Asfandyar.

Gatha, 5 days.

The Parsees do not now divide their time into weeks, but name the 30 days of their months each after a celestial being—7 Amsshashpand, and 23 Izad—supposed to preside over them. These are as follow:—

Gujerati.	*Pahlavi.*
1. Hormazd, ...	Anhuma.
2. Bahman, ...	Vahuman.
3. Ardibehest, . . .	Antavahisht.
4. Sharivar, ...	Shatnavin.
5. Spandarmad, . . .	Sapandamad.
6. Khurdad, ...	Khundad.
7. Amardad, ...	Amandad.
8. Dep-Adar, . . .	Dini pavan Atun.
9. Adar, ...	Atun.
10. Awan or Aban, . . .	Avan.
11. Khurshid, ...	Khur.
12. Mohar of Mah, . . .	Maha.

	Gujerati.	*Pahlavi.*
13.	Tir,	Tir or Tistar.
14.	Gosh,	Gosh.
15.	Dep-meher,	Dini pavan Matun.
16.	Meher,	Matun.
17.	Serosh,	Sarush.
18.	Rashne,	Rashan.
19.	Farvardin,	Farvardin.
20.	Behram,	Varahram.
21.	Ram,	Ram.
22.	Guvad or Bad,	Wad or Vat.
23.	Dep Din,	Dini pavan Din.
24.	Din,	Din.
25.	Ashashang,	Ard.
26.	Ashtad,	Ashtad.
27.	Asman,	Asman.
28.	Zamiad,	Zamiad.
29.	Maharaspand,	Mansar-spand.
30.	Aniran,	Aniran.

The 1st, 8th, 15th, and 22d days are sacred to Hormazd, and thus afford evidence of an older division into weeks.

The Parsees of India are divided into two sects,—the Shahanshahi or Rasami, and the Kadimi or Churigar, the former of whom constitute the larger portion of the race. This division originated about the beginning of the 18th century, when a Persian priest named Jamasp arrived in India, and found that his co-religionists differed from their brethren of Iran in their calculation of time by a full month, and in other minor points relating to their liturgy. Serious disputes arose in consequence, which ended in the formation of the two sects, the Rasami adhering to their own views, and the Kadimi adopting the opinions imported by Jamasp, and thus agreeing with their Persian brethren. The difference lies in their computation of time, and in some slight variations in the forms of prayer. Those that begin their year a month earlier are styled Kadimi, and the rest Rasami, *i.e.* customary, and Shaharhai, for which some one proposed to substitute Shahanshahi ('of the kings of kings'), and this absurd change has ever since been adopted. The Kadimi Parsee era of Yezdejird, or Dareai Naoroz, or sea-reckoning, is made use of in nautical calculations among Asiatic mariners; and the new year always commences on the 1st of Farvardin, which falls about the 25th of August, one month earlier than the commencement of the Rasami new year. With the Rasami Parsees the new year begins on the 1st day of Farvardin, which in A.D. 1867 fell about the 24th of September, a month later than the commencement of the Kadimi new year.

About A.D. 1705, Jalaludin Malikshah, finding that the commencement of this year in Persia had anticipated the epoch by 112 days, ordered that in future the Persian year should receive an additional day whenever it should be necessary to postpone the commencement of the following year, in order that it might occur on the day of the sun's passing the same point of the ecliptic. U'mar Khyam, one of the astronomers appointed by him to construct a calendar, is said to have discovered that 8 intercalations in 33 years very nearly adjusts the calendar, giving the length of the year 365d. 5h. 49m. 5·65s. Scaliger and others say this was the period actually adopted, though Delambre shows that the Persian intercalation combines the two periods of 29 years with 7 intercalations, and of 33 years with 8 intercalations.

The Persian word Gab'r, applied to the Parsees, means any non-Muhammadan. According to the dictionary Burhan-i-Kattea, Gab'r is used in the sense of Magh, which signifies a fire-worshipper. Gab'r mani-i-Magh bashad, keh atash purust ast. This is sometimes written, and very often pronounced, Gavr, by a change of letters frequent in Persian, as in other languages. Gavr, we learn from the dictionary Jehangiri, means those fire-worshippers who observe the religion of Zertusht (or Zoroaster), and they are also called Magh. But Origen, in the 3d century, defending Christianity against Celsus, an Epicurean, who had alluded to the mysteries of Mithra, uses Kabir as equivalent to Persians. 'Let Celsus know,' says he, 'that our prophets have not borrowed anything from the Persians or Kabirs' (Orig. contr. Cels. lib. vi. p. 291, Cantab 1658). A Jewish writer, quoted by Hyde (Hist. Relig. Vet. Pers. cap. xxix.), declares that the Persians call their priests (in the plural) Chaberin (or Khaberin), whilst the singular Chaber or Khaber (occurring in the Talmud) is explained by Hebrew commentators as signifying Parsai, or Persians. On this subject Hadrian Reland has offered some remarks in Dissert. ix. de Persicis Talmudicis (see his Dissert. Miscell. part ii. p. 297, Traj. ad Rhen. 1706). Dr. Hyde, however, as above cited, thinks that Chaber or Chaver denoted both a priest and a layman. Meninski says, 'Ignicola, magus infidelis, quivis paganus.' The word is familiar to the people of Europe under the aspect of Guebre. It is a term applied by the Persians to the Persian-speaking part of the Teimeni tribe of the Char Aimak.—*Stuart's Jour. Residence in N. Persia*, p. 171; *Elliot's Gloss.; Ouseley's Tr.* i. pp. 150, 217; *Postans' W. India*, i. pp. 110, 120; *Muller, Chips*, p. 180; *Professor Daddabhai Naoroji and Dr. Ihne, in Proc. Bombay Lit. Soc.; The Parsees*, pp. 61, 70; *Wilson's Glossary; Menant on the Parsees; Bombay Almanac; De Bode's Travels.*

PARSHNI, a name of Kunti.

PARSIVAN, literally speakers of Persian. Parsivan (Parsi zaban) is a term applied variously to the settled inhabitants of towns engaged in commerce, and to the agricultural population engaged in tillage. The Parsivans, Col. MacGregor says (ii. p. 64), who are attached to the soil, obtain from the labour of cultivating it only sufficient for their families. For security, they must place themselves under the care of an Afghan. Parsivan and Aimak, who are subject to the Afghan, profess Muhammadanism. The Parsivan live in towns, and the Aimak are nomades, and live in tents. Their number is double that of the Afghans. The Tajak are subdivided into two very distinct classes,—the Parsivan or Parsi-zaban, who speak the Persian language, and inhabit towns and villages, and the wandering Aimak, who live under canvas. The Hazara are Aimak, though they pretend to be of Afghan race; the Afghans deny this, because they speak corrupt Persian, whereas the Afghan always speaks his mother tongue, the Pushtu.—*Ferrier, Journ.* p. 158; *MacGreg.* ii. p. 64.

PARSLEY.

Hu-tsai,	CHIN.	Petersillie,	GER.
Hiang-tsai,	,,	Petrosemolo,	IT.
Persil,	FR.	Perexil,	SP.

Parsley, Apium petroselinum, a seasoning herb, used in soups, garnishing, etc. It grows well in India during the cold months; requires a free, rich soil. Is cultivated from seed sown in beds or

rows, where it is to remain. The plants, when about two or three inches high, should be thinned, and a space of at least a foot left between each. It will, if watered and taken care of, continue all the year round. Occasionally cut down the leaves to within four inches of the root, as it makes the parsley throw out young and fresh leaves. It bears transplanting well. Give the preference to European seed; the common parsley of the country is very insipid. The roots of parsley are much used in French cookery.—*Jaffrey.*

PARSNIP.

Pastinak, . Dan., Dutch.	Cenoura branca, . Port.
Pannais, ... Fr.	Pasternak, . . . Rus.
Pastinake, . . . Ger.	Chirivia, ... Sp.
Pastinaca, . . Lat., It.	Palsternacka, . . Sw.

Parsnip, Hu-lo-p'u, Chin., in India, is a vegetable very difficult to rear, as the seeds do not often come up. The parsnip belongs to the natural order Umbelliferæ, and is closely related to the carrot, celery, and parsley. It is a native of Europe, and is most plentiful on dry banks or on a chalky soil. Pliny tells us that parsnips were cultivated on the banks of the Rhine, and were brought from thence to supply the tables of the Roman emperors. The wild parsnip, if grown for two or three years in rich garden soil, acquires all the characters of the cultivated form; and if the garden plant escape into uncultivated ground, it speedily reverts to its originally wild and degenerate condition. It is consumed in large quantities in Catholic countries, being used with the salt fish eaten during Lent.

PARSONS, ABRAHAM, author of A Voyage from Bombay to Mokha and Suez, London 1808.

PARSWA, the 23d Tirthankara, appeared about two centuries B.C. His symbol is the serpent.—*Tod.*

PARTABGARH, a town in Oudh which gives its name to a district, situated between lat. 25° 34′ and 26° 10′ 30″ N., and long. 81° 22′ and 82° 29′ 45″ E. In Manikpur and Bihar parganas, there are many families of Brahmans, whose ancestors belonged to the lower castes of Hindus, and were invested with the sacred thread by Raja Manik Chand, a brother of Jye-chand, the last Hindu king of Canouj. Of the lower castes, Kurmis (95,258), Ahir (92,622), Chamars (81,419), and Pasi (46,116) predominate, with a good sprinkling of Murao (26,263) and Gareria (25,232). The Kurmi and Murao are the best cultivating castes, and are almost all agriculturists. The majority of the Ahir, Chamar, Pasi, and Gareria are also cultivators. There are more Lohar (14,828) and Lonias (14,359) in Partabgarh than in any other district in Oudh; but comparatively few of the former are engaged in agricultural pursuits. The latter, salt-makers by hereditary profession, are almost exclusively cultivators. The lower classes, who for the most part pursue some distinctive trade, include the Julaha or weaver (9053), the Dhunia or cotton-corder, the Darzi or tailor and tent-maker, the Manihar or lac-bangle maker, and the Kunjra or fruiterer.—*Imp. Gaz.* vii.

PARTHASARADI, more properly Parttasarati, meaning a charioteer; a name applied to Krishna, because he acted as the charioteer of Arjuna at the great battle of the Mahabharata, between the Kaurava and Pandava princes. It is the name of a deity at the temple in Triplicane, Madras, which the Vaishnava people largely reverence.

PARTHENOPE HORRIDA. *Edw.* A crab of Madagascar, Bourbon, and Mauritius, covered with long sharp rugosities. See Crustacea.

PARTHIA, the country of an ancient dominant race of Scythians, known to the Romans by this name. Under the form Parthava, also Parsa, they are mentioned in the time of the Achæmenidæ. For centuries they maintained the independence in the east against the Romans. The rulers were as under:—

B. C.
255 Arsaces I.
253 Tiridates I.

209 (Vologeses) V.
Artabanus V.
235 Artaxerxes, king of Persia, 1st of the Sassanidæ.

Parthia proper was a small province, very near to the S.E. extreme of the Caspian Sea, which territory, after the division of Alexander's empire, fell to the share of the Seleucidæ, kings of Syria and of the east, about 300 years before the Christian era. About 50 years after, 250 B.C., under Arsaces, who is variously described as a native of Soghd, as a Bactrian, and by Moses of Chorene as of Balkh, this last author adding that the dynasty was known as Balkhavenses or Pahlavian, Parthia rebelled, and, together with Hyrcania and other adjoining provinces, became an independent state. Arsaces, however, used Greek only on his coins and in his public letters and correspondence. His coinage is ordinarily with the head of the sovereign on one side, and only one coin has a lingual inscription. As the empire of the Seleucidæ grew weaker, the Parthians extended their country westward; and the fine province of Media (now Irak-i-Ajam) fell to them; and within a century after the foundation of their state, it had swallowed up all the countries from the Indus to the Euphrates, Bactria included, and this province had (256 or 252 B.C.) thrown off the yoke of the Seleucidæ, long before Parthia. The Parthian conquests in Armenia, 70 years before Christ, brought them acquainted with the Romans, whose conquests met theirs, both in that country and in Syria. The Parthians, together with their conquests, had advanced their capital westwards, and had established it on the Tigris at Seleucia, or rather Ctesiphon (near the present Baghdad) before their wars with the Romans commenced. Their first wars with the Roman people continued about 65 years, and were noted by the expeditions of Pompey and Anthony, and the defeat of Crassus, B.C. 53, who fell on the plain of Carrhæ, the Haran of the Bible. On this event, the Parthians extended their conquests farther westward, but were afterwards compelled to retire; and they generally lost ground in Armenia and Mesopotamia during the time of the Roman emperors Trajan and Septimus Severus,

who recovered the line of the Euphrates under Trajan, and that of the Tigris under Septimus Severus, whose capture of the capital Ctesiphon gave a fatal blow to the Parthian power (A.D. 198). Trajan penetrated to their capital, and satisfied his curiosity by embarking on the inland sea. The moderation of Adrian restored the ancient boundary of the Euphrates. In A.D. 245, Persis, or Persia proper, which had for some ages ranked as a province of Parthia, gained the ascendency. After they had reigned for nearly 500 years, the Parthian monarchy was overthrown by a native Persian named Ardeshir or Artaxerxes, surnamed Babekan, from his father Babek (A.D. 226).—*Quarterly Review*, 1873; *Prinsep's Antiquities by Thomas*, ii. p. 176; *Weber; Rennell's Memoir*, p. 200; *Malcolm's Per.* i. p. 88; *Tod's Raj.* ii. p. 5.

PARTRIDGE.

Hajal, ... Arab.	Teetr, ... Hind.
Perdix, ... Fr., Sp.	Pernice, ... It.
Rebhuhn, ... Ger.	Keklik, ... Turk.

Partridges belong to the Tetraonidæ and sub-family Perdicinæ, and the chief species in the East Indies are as under:—

Lerwa nivicola, *Hodgs.*, snow partridge, Himalaya.
Francolinus vulgaris, *Stephens*, black partridge, North India.
F. pictus, *Jerdon*, *Selby*, painted partridge, Central and Southern India.
F. Phayreii, *Blyth*, North Burma.
F. pintadens, —? —?
Caccabis chukor, *Gray*, chukor partridge, Western Himalaya.
C. Græca,—? Western Asia, South Europe, North Africa.
Ammoperdix bonhami, *Gray*, seesee partridge, Panjab.
A. Hayi, *Gould*, Arabia, Palestine, Western Asia.
Ortygornis Ponticerianus, *Gmelin*, grey partridge, South India.
O. gularis, *Temm.*, kyah partridge, Bengal.
Rhizothera longirostris, *Temm.*, Malayana.
Arboricola torqueola, *Vigors*, black-throated hill partridge, Himalaya.
A. rufogularis, *Blyth*, rufous-throated hill partridge.
A. atrogularis, *Blyth*, Tiperah, Chittagong.
A. intermedia, *Blyth*, Arakan.
A. brunneopectus, —? *Tickell*, Tenasserim.
A. sphenura, —? China.
Perdix personata, *Horsf.*, Java.
P. Javanica, *Gmelin*, Java.
P. Hodgsoniæ, *Gould*, —?
P. punctulata, *Gray*.
P. Charltoni, —?
P. chloropus, *Blyth*.
Rollulus coronatus, —? Malacca crowned partridge.
R. niger, —?

There are three kinds of partridges in the plains of India, called by Indian sportsmen, black, painted, and grey; also rock or sand-grey, or bush and wood partridges. The grey, the least handsome, and far inferior to the English bird, the most nearly approaches it in appearance. The black excels all for the splendour of its plumage. The call of the black and painted partridge is very similar. In the Bombay Presidency the black partridge has not been seen south of Cutch. It is abundant north of it, in Sind, but would appear to be replaced by the painted, farther south. The flesh of all the partridges in India is white, and far inferior to that of either the common English or red-legged bird. The hen of the black partridge is quite different in appearance to the male, is not unlike the painted partridge of both sexes, and is sometimes mistaken for it. The black partridge commences to pair about April in the Himalaya, but earlier in the plains; the young remain with their parents a long time, and are not fit for shooting until the middle or end of October. During the period of incubation the males can be heard answering each other; the call-note is harsh, and composed of four distinct sounds following each other in succession, and not unlike the words, 'Whee wha which a which,' which it repeats at short intervals when perched on a stone in bushy places. The Tibet partridge (P. Hodgsoniæ) was first discovered by Mr. Wilson of Mussoori in 1841, and subsequently described by Mr. Hodgson. It was (1854) met with by Lieutenant Smith, 15th Regiment, near the Pangong Lake in Little Tibet. This partridge seems to be common along the western slopes of the Tibetan Himalaya, and affects barren mountain sides.—*Jerdon; Adams.*

PARUPA. Tam. Soft. Parupu kiré, Chenopodium album. Parupu benda, Abelmoscus ficulneus. Parupu velaga, Feronia elephantum.

PARU-PARISSANA. This name first occurs in the tri-lingual tablets of Darius, where the mountain range of Gandara is termed Paru-Parisanna. Paru merely means a mountain in Sanskrit. The country is not known by this name by its inhabitants, who only speak of it by the tribe dwelling in, or the chief who commands it. Ferrier includes in this name, all the mountain country enclosed by the circle formed by Herat, Maemana, Balkh, Bamian, Ghazni, Kalat, Ghilzi, Kandahar, Zimindawar, and Sahlin. It may be looked upon as a vast natural fortress, thrown on to the centre, and on the culminating point of the great Asiatic table-land. From whatever side, it must be approached by rugged and high mountains, and it is also intersected by others in various directions, particularly east and west. It is a country of incessant change, the Jamshidi, the Hazara, the Zeidnat, and the Taemuni being in constant movement.—*Ferrier's Journey*, p. 254.

PARUS, a genus of birds, the tit-mice of the sub-family Parinæ, family Ampelidæ, and order Insessores. See Birds.

PARVATA, also Parbatya, a hillman, a mountaineer of Nepal.—*Wils.*

PARVATI or Parvati Peak, lat. 31° 51′ 5″ N., long. 77° 42′ E., in Kulu-Lahol, near the source of the Parbati, an affluent of the Beas, 20,515 feet, G. T. S. Presents a steep broad wall, as seen from Jako.—*Schl.; Herm.*

PARVATI, generally written Parbatti, a hill of considerable height, south of the city of Poona, on the summit of which is a temple in honour of Parvati, consort of Mahadeva. This temple is much resorted to, and when lighted up on great occasions, it shows well, and from its top is a fine view of the city and environs. On the annual Hindu ceremony of Dutchna, or alms-giving, mendicant Brahmans come from considerable distances. A gift on this day tells tenfold of an ordinary alms. Generous people on the road to and from this meritorious pilgrimage, make presents to some Brahmans. The whole month is indeed very fit for the benefits from hospitality and alms-giving, so that the travelling Brahmans are fed, etc., all the way to Poona and home; and it is said that forty thousand have been known to assemble on this occasion at Parbatti. Its chief temple was erected A.D. 1749, at a cost of Rs.10,00,000. It has images of Siva and other deities, one wholly of silver, and one of gold.—*Major Moor*, pp. 376, 377.

PARVATI, in Hindu mythology, a goddess, fabled to be the daughter of Parvata, a mountain, and the sakti or consort of Siva. She has been amalgamated with many Vedic and Puranic and local goddesses. Her forms are more various and powers more extensive than those of any of the other Hindu deities; and she acts sometimes dependent on, at others wholly independent of, her husband. As a girl she was called Gauri. She is known as 'the mother,' Ambika, who at a later period is identified with the wife of Rudra. Uma, daughter of Himavat, or the Himalaya, is another form. Parvati, the mountain goddess, also the daughter of Himalaya, is a still later and now more common title. As Kali, the black goddess, and Durga, she is the most terrible deity of the Hindu pantheon, to be propitiated by human sacrifices, and invoked when the destruction of an enemy was sought. She is also called Bhawani, in which she corresponds with Lucina. As Kamachi, she is the goddess of love-inspiring eyes; and at Madura she is worshipped under the name of Minachi, fish-eyed. Muir supposes that as early as the time of Pliny she was worshipped at Cape Comorin, called after her, Kanyakunari.

Parvati is known in her martial character as Durga, or active virtue, and as such she destroyed the Asura, or demon Mahesha, a personification of wickedness.

As Durga Mata, one of the characters of the Rajput, she is the 'Mother of the Mount,' and her shrine crowns many a pinnacle in Mewar; and, with the prolific Gauri, she is amongst the amiable forms of the universal mother, whose functions are more varied and extensive than her sisters of Egypt and of Greece. As Durga Mata, she is the Mater Montana of Greece and Rome, according to Diodorus, an epithet of Cybele or Vesta as the guardian goddess of children. She seems to be the same as the divinity of Hieropolis, called Rhea, and Cybele in Phrygia.

She is largely worshipped as Mera, and in Bengal as Durga.

Anna Purna Devi, a goddess of the Hindu mythology, is a beneficent form of Parvati. She is described as of a deep yellow colour, standing or sitting on the lotus, or water-lily. She has two arms, and in one hand holds a spoon, in the other a dish. In her dress she is decorated like the other modern images of Durga. Anna Purna is a household goddess, and is extensively worshipped by the Hindus. Her name implies the goddess who fills with food, and they believe that a sincere worshipper of her will never want rice. She is possibly the Anna of Babylon; and she has been considered as the prototype of the Anna Perenna of the Romans, whom Varro places in the same rank with Pallas and Ceres, and who was deified and held in high esteem by the Roman people, in consequence of having supplied them with food when they retired into Mount Aventine. Besides the great similarity of names, there is a singular coincidence in the times of their worship, the festivals of Anna Purna taking place in the early part of the increase of the moon, in the month Choitru (partly in March), and those of the Roman goddess on the Ides of March. In India, she is known simply as Anna, also as Anna Purna or Anna Devati. In a hymn addressed to her by the rishi Agastya, she is personified as Pitu, or material food. Anna Purna is from the Sanskrit, Anna, food, and Purna, full. Another name is Anna, food, and Prashana, feeding. The Rajput rite of Sati or self-sacrifice is traced to Parvati. Sati, to avenge an insult to Iswara, in her own father's omission to ask her lord to an entertainment, consumed herself in the presence of the assembled gods. With this act of fealty (Sati) the name of Daksha's daughter has been identified; and her regeneration and reunion to her husband, as the mountain nymph Mera, or Parvati, have by some been supposed to furnish the incentive to similar acts. In the history of the Hindu celestial Mera, the Rajputni has a memorable lesson before her, that no domestic differences can afford exemption from this proof of faith. Parvati, as the consort of Siva, has maternal claims upon Kartikeya, the leader of the celestial armies, and Ganesha or Ganapati, the god of wisdom. As Parvati she is described of a white, as Kali of a dark blue or black, and as the majestic and tremendous Durga, of a yellow colour.

Parvati by the Saiva sect is identified with the supreme sakti Mahadevi.

Parvati has no particular temples, but her statue has a sanctuary apart in the temples of Siva.

The argha or yoni in Hindu mythology is Parvati's especial emblem.

On one occasion, when Vishnu beheld Siva dancing about frantically with the deceased form of Sati in his arms, he cut it into fifty-one pieces; which Siva, who still continued in his frenzy, scattered in different parts of the earth. These spots he afterwards ordained to be places of worship to his own and his energy's peculiar emblems.

PARWAN or Parman. On the tops of the hills on the island of Bombay, resided in 1842 about 75 families of cultivators. The costume of the women, and many of the words in their language, are similar to the Hindi. They said that they immigrated from Rajputana.

PARWAN DARA, a river and narrow valley of the Koh Daman of Kābul. From the head of the valley to the village of Iangheran, it is a narrow rocky defile, but afterwards assumes a softer character; and the Saralangi erect their castellated houses on the projecting boulders. Parwan is situated in a nook of the Hindu Kush, and has, from its position near the terminus of several of the chief passes, often been famous in Asiatic history. It is evidently the Karwan of Jaubert's Edrisi (a mistranscription for Farwan). The town of Parwan is of no great size, but a nice enough place, with agreeable environs, thronged bazars, and rich inhabitants. At Parwan the army of Chengiz was checked for the moment in 1221, being defeated by the Sultan Jalal-ud-Din of Khwarizm. In the valley near Parwan, in 1840, a brigade of Bengal troops under General Sale was attacked by remnants of Dost Muhammad's army, and a Bengal cavalry regiment fled, which caused the day to be lost, when two officers were wounded, and three officers killed.—*MacGregor*, pp. 620, 621.

PARWANIYA, in Benares, a numerous body of Hindus. Ten or twelve days after the birth of a son in the family of a Hindu, two members of this caste come to the house, where they sing songs of gratulation and joy, keeping time by the beating of a drum.—*Sherring's Tribes.*

PARWAR. Pers., Hind. A patron. Ghrib-parwar, a nourisher of the poor. See Parrapar.

PARWARI. Mahr. Properly, Parawari. In Maharashtra, the dwellers outside the walls. They are of non-Aryan races, whom Hindus consider to be unclean, and do not permit to reside within the walls. They are also called Ati Sudra, or inferior Sudra; also Autyaja, or last-born. Of the Parwari are the Mhar or Dher, who eat animals that have died of disease, make hide ropes, are the village boundary men, scavengers, police, guides. The Mhang is another of the Parwari. The Parwari of the Bombay army, along with the 2d Battalion of the 42d Highlanders, defended Mangalore for six months against a force of 40,000 men, and then capitulated honourably.

PARYSATIS, the Greek mode of writing the name of Pari-zad (fairy born), the mother of the younger Cyrus.

PASA. Hind. A die; plural, Pasé. Those in use by the Hindus are oblong, and both skill and chance are brought into play. The most celebrated match occurred between Yudishtra, the eldest Pandava, and Dhritarashtra. Also, a square ingot of silver, weighing from 32 to 60 tolas. The word is current at Berhampur.—*Wh. H. of I.*

PASA LINIJA, a Penang wood of a light-brown colour. A large tree, used only for planks; it soon decays.—*Col. Frith.*

PASARI, Pasehi, Pasban, or Tinni (Zizania aquatica), are different kinds of rice of spontaneous growth, found on the borders of lakes and swamps of N. India; the Tinni is a larger and better grain than the other. They sell half as much more for a rupee than ordinary rice.

PASBAN, Gorayat, Paik, Douraha, etc., in Hindustan, are the village watchmen, whose places in the Dekhan are taken by the Mhar; in Gujerat, by the Paggi; in Telingana, by the Tillari.

PASH, Pys, or Pashu. Hind. A cord or rope, seen in the hands of some of the Hindu deities to strangle sinners with. Whoever is caught by it cannot get away.—*Myth. Hind.* 391.

PASH, also written Pakh, Push, and Pukh, in the district of Rudak and the highlands of Kashgar, in the Waziri country, the supposed original seat of the Afghan tribes, and of the origin of the words Pushtu and Pukhtu.

PASHA, also Pacha and Padshah. Pers. A king, a noble.

PASHAI, a race mentioned repeatedly by Leech as one of the most numerous tribes in the Punjshir valley and adjoining passes. These are supposed to be Muhammadans; but as the name is mentioned also by Elphinstone as that of one of the Kafir tribes, part of them in the mountains may have retained their heathenism and independence.

PASHANA. Sansk. A stone, a rock; a term used in deeds of sale or grants of land to convey a right to all precious stones, minerals, or ores in the transferred land.

PASHIA, amber necklaces worn by the women of Tibet.

PASHM. Hind. Wool, shawl-wool; the fine wool which forms the material of the shawls generally in the Panjab. Pashm and pashmina are specially applied to the fine shawl-wool of Turfan and Changthan. It is produced abundantly in the eastern provinces of Bod, as far as Lhassa. The people of U-chang, *i.e.* the provinces about Lhassa and Digharcha, wasted it in Lieutenant Strachey's time. The Rudakh pashm was combed out without shearing.

The woollen substances used in the Panjab are—

a. Pashm, or shawl-wool, properly so called, being a downy substance found next the skin and below the thick hair of the Tibetan goat. It is of three colours,—white, drab, and dark lavender (Tusha). The best kind is produced in the semi-Chinese provinces of Turfan Kichar, and exported via Yarkand to Kashmir. All the finest shawls are made of this wool; but as the Maharaja of Kashmir keeps a strict monopoly of the article, the Panjab shawl-weavers cannot procure it, and have to be content with an inferior kind of pashm produced at Changthan, and exported via Leh to Amritsar, Nurpur, Lodhiana, Jalalpur, and other shawl-weaving towns of the Panjab. The price of white pashm in Kashmir is—for uncleaned, 3s. to 4s. per lb.; ditto cleaned, 6s. to 7s. per lb.; of Tusha ditto, uncleaned, 2s. to 3s. per lb.; cleaned, from 5s. to 7s. per lb.

b. The fleece of the Dumba sheep of Kābul and Peshawur, sometimes called Kābuli pashm, is used in the manufacture of the finer sorts of choga, an outer robe or cloak with sleeves, worn by Afghans and other Muhammadans of the western frontier.

The pashm of the wild sheep and ibex is of a delicate grey colour, and finer and softer than that of the shawl goat.

Where the finest shawls are woven, every care is taken to procure the best pashm, and to clean it. The best kind is cleaned with lime and water; but ordinarily the wool is cleaned by being shaken up with flour. The next operation is that of picking the hair from the pashm. This is a tedious operation, but the value of the cloth subsequently manufactured varies with the amount of care bestowed upon it. The wool thus cleaned and sorted is spun into thread with the common charkha or native spinning machine. This is also an operation requiring great care; and white pashmina thread of the finest quality will sell at 25 rupees the pound weight. The thread is next dyed, and is then ready for the loom.

Pashmina fabrics, embroidered with silk, and plain pashmina cloths, are produced extensively at Amritsar and Lodhiana, and a few at Lahore.

PASHPAPUR, an ancient town on the N.W. frontier of British India, mentioned in a Sanskrit play:

Rak. What news from Pashpapur?
Vir. I have not much to tell, sir:
Where shall I commence?
Rak. With Chandragupta's entry in the city.
Whatever my agents since have done, inform me.
Vir. You will remember, sir, when in close league
United by Chanakaya, Parvateswara
And Chandragupta in alliance, led
Their force against the city,—a wild multitude
Of Sakas, Yavanas, and mountaineers,
The fierce Kambojas, with the tribes who dwell
Beyond the western streams, and Persian hosts,
Poured on us like a deluge.

PASHTUN, according to Vigne, is the name of the language of Afghanistan and of this people. It commences at Herat on the west, and is understood and spoken throughout Afghanistan, the Panjab frontier tribes, and Turkestan. See Pash.

PASI, the village watchman of Oudh, paid usually by a plot of land, or 2½ seers of grain from each bigha. The Pasi are also toddy drawers.

PASPALUM, a genus of the Panicaceæ, of which the species P. distichon, *Burmann*, P. scrobiculatum, *Linn.*, and P. stoloniferum are grown in the E. Indies as fodder and food plants.

PASPALUM STOLONIFERUM. *Linn.*

Kodo, Myna, . . Hind. | Aruga, Warugu, . Tel.

This is an inferior grain, only used by the poorest classes. It is cultivated over almost all parts of India. It delights in a light, dry, loose soil, but will grow in a very barren one, or where the soil is barren and unsuited to the cultivation of better grains. Dr. Roxburgh distinguished from this the species which Linnæus called Paspalum kora, but it appears to be only a variety growing in moist situations. Both species are much relished by cattle, either in a green or dry state. The Kakum Rajputs of Ghazipur never cultivate or eat kodo: 'Nefas violare et frangere morsu;' and the reason assigned is that, while under the influence of Mutouna, they were set upon by some of the neighbouring tribes, and lost the greater part of their once extensive possessions. The variety of it called in Tamil Serruku Warrugu, and in Telugu Tikka Arikehlu, if not dressed in a particular manner, is said to produce vertigo, nausea, and other unpleasant symptoms. Dr. D. White, of Bombay, writes that this variety is called in Gujerati, Menya, which he supposes is taken from the Sanskrit word Mana, signifying causing frenzy. Khesari (Lathyrus sativus) is another grain which is found to have injurious properties.—*Eng. Cyc.; Elliot; Roxb.* i. p. 278; *Ainslie*, p. 220.

PASSAETA. Guj. Lands allotted for the support of district and village officers.

PASSAGE ISLAND, a name of Barn Island in the Straits of Singapore.

PASSALÆ. See Topes.

PASSALUS, a genus of coleoptera, which abounds over India and the Archipelago.

PASSERINA, Kan-sui, Chinese, is a Chinese plant which has an acrid and poisonous juice; its tubercular or nodulose roots are sold with the tubers separated; they are given in anasarca, ascites, tympanitis, hernia, hydrocele, and dysuria, and are applied to ease pain, and to the ears in cases of deafness. Passerina chamædaphne, Yuen-hwa, Chinese. In China the small dried flowers of this plant are infused in a spirit much drunk in central China as a sort of cordial, tonic, and anti-febrile tincture. The leaves, flowers, and root-bark are applied to buboes as counter-irritants. They are said to act on the womb.—*Sm.*

PASSERINÆ, the sparrow sub-family of birds, of the family Fringillidæ, sub-family Passerinæ, as under:—Passer montanus, the tree sparrow of Europe, Asia (commoner to the eastward), Siberia, Tibet, Sikkim, Arakan, Malayan Peninsula, Java, China, Japan. Passer salicarius (vel Hispaniolensis) of Barbary and the southern parts of Europe, Asia Minor, Bokhara, and Afghanistan, visits the Peshawur valley and Kohat in large flocks, being everywhere more highly gregarious than P. domesticus, P. petronia (Petronia stulta), also of S. Europe and N. Africa to Madeira. It is common in Afghanistan. See Sparrow.

PASSES.

Ghat, ... Hind. | To-gé, ... Jap.

The following are the principal passes bounding British India, and traversing many of the provinces and regions within the frontier:—

1. *Dekhan.*

	Feet.		Feet.
Bapdeo,	3499	Pochama,	2446
Katruj,	3019	Nana,	2429
Par,	2698	Jam,	2328
Nagcherri,	2645	Malsej,	2062
Navi,	2617	Tal,	1912
Salpi,	2478	Bhor,	1798

2. *Malwa.*

Pendera,	3498	Poppera,	1560
Silva,	1928	Gumba,	1553
Mandla,	1626	Singrampur,	1437

3. *Karnatic, Neilgherries, and Ceylon.*

Sigur,	7204	Kodur,	2401
Sispara,	6742	Gantvarpilli,	2373
Rangbodde,	6589	Kisnagherri,	2150

4. *In the crest of the Himalaya, from Sikkim to Kishtwar.*

Ibi Gamin,	20,459	Sipu,	17,670
Janti,	18,529	Uta Dhura,	17,620
Parang,	18,500	Birmkanta,	17,615
Donkia,	18,488	Kiungar,	17,331
Mana,	18,406	Niti,	16,814
Kiobrang,	18,313	Vallanchun,	16,756
Nelong,	18,312	Puling,	16,726
Umasi,	18,123	Shinku La,	16,684
Langpia,	17,750	Bara Lacha,	16,186
Mayang,	17,700		

5. *In the crest of the Kara-korum, from long. 76° to 79° 30′ E. Gr.*

Mustagh,	19,019	Kara-korum,	18,345
Chang-chen-mo,	18,800		

6. *In the crest of the Kouen Lun, from long. 78° to 80° E. Gr.*

Elchi,	17,379	Yurungkash,	16,620

The comparison of these with the passes in the Alps and in the Andes will be of interest.

In the Andes.

Alto de Toledo,	15,590	Assuay,	15,526
Lagunillas,	15,590		

In the Alps.

New Weissthor (*a*),	12,136	St. Theodule,	11,001
Old Weissthor (*a*),	11,871		

(*a*) These two passes cannot be used for practical purposes.

In the southern part of the Peninsula of India is the valley and gap or pass of Palghat, leading to the western coast. The Guzzelhutty pass leads up the deep valley separating the Neilgherry Hills from Colligal.

The Mana and the Niti passes are on the Saraswati and the Dooli branches of the Ganges.

Juwahir Darma or Belong and Byans are passes on the Gouri, Dhouli, and Kali rivers, branches of the Gogra. The Rotang pass, in the Himalaya, in lat. 32° 24′ N., and long. 77° 10′ E., is 13,200 feet above the sea. The Rotang pass near Dharmsala leads to the heart of Central Asia. The Beas river rises in a sacred pool called 'Vyas Rikhi' in the Rotang pass, at the head of the Kulu valley. The scenery of the river valley is very beautiful, and is unlike that of the Chenab or Sutlej. The river is fringed with trees, and studded with green islands. There is a good riding path close along the bank, which does not exist upon any other river in the Panjab. Besides deodar in the Upper Beas valley, 'kail,' Pinus excelsa, elm, maple, oak, and walnut are

abundant. On the Parbati, box occurs; also olive and the twisted cypress (C. torulosa) are found in small quantity.

Kanawar is usually divided into Upper and Lower Kanawar, and includes the upper part of the Sutlej basin to the borders of Piti and Guge in Tibet. Its general direction is N.E. and S.W. It has two parallel bounding mountains. On the S.E. it is bounded by the Cis-Sutlej mountains, and to the N.W. by the mountains of Piti. The mountains which descend from the two parallel bounding chains of Kanawar are very lofty. They are crossed in the usual route into Tibet by the Werang pass, 13,200 feet; by the Runang pass, 14,500 feet; the Kuibrang in the north, across the Cis-Sutlej, is 18,300 feet. The Shatul pass across the Cis-Sutlej leading to Simla is 15,560 feet; and the Hangrang into Piti is 14,800 feet. The passes to Upper Piti are more lofty. The bed of the Sutlej, from 8000 to 9000 feet at the upper part of Kanawar, descends to 4000 feet in Lower Kanawar.

The passes from Kanawar through the Outer Himalaya range are fifteen in number:—

(*a*) Shatul, 15,555 feet, leading from Rol to Utharabi. This pass is reckoned worse than most of the others, not on account of its elevation, for it is inferior in altitude to many of the rest farther to the east, but from there being almost 14 miles without even a single bush for fuel. It is open part of June, July, August, September, October, and sometimes November.

(*b*) Sundru, from Tangno to Rasgrami. The people represent it as crossing two ranges, and say it was very seldom attempted, and was never open more than two months in the year; so it is probably little below 16,000 feet.

(*c*) Yusu, 15,877 feet, leading from Janglig to Rasgrami.

(*d*) Burendo, 15,171 feet, is the easiest pass in this quarter, and most frequented; it leads from Janglig to Rasgrami, and is open seven or eight months, and during the rainy season almost all the snow dissolves.

(*e*) Nibrung, 16,035 feet; (*f*) Gunas, 16,026 feet; (*g*) Ghusul, 15,851 feet; from Chuara to Sungla of Tukpa. These three passes cross the top of the range within half a mile of each other.

(*h*) The next is Rupin, 15,480 feet, a very easy pass.

(*i*) Nulgun, 14,891 feet, is the lowest pass seen by Gerard, in the outer Snowy Range.

(*j*) Barga; (*k*) Lumbia; (*l*) Marja; (*m*) Singa. These four passes are contained in the space of little more than a mile; they lead from Sungla, Rakcham, and Chetkul, to Lewar of Garhwal, and, like Gunas, Nibrung, and Ghusul, are crossed in different months. Barga is reckoned lowest, so is probably little above 15,000 feet; it is chiefly travelled by the Sungla people, being on the direct road from that place. The others are most likely between 16,000 and 17,000 feet, and are frequented by the inhabitants of Rakcham and Chetkul.

(*n*) Sungla, from Chetkul to Burasu of Garhwal, is reckoned lower than Kimlia, and may perhaps be 16,000 feet. The road is said to be generally bad, and is travelled for six months.

There are three passes to the westward of Shatul, the Jalsu, Khealig, and Suugri, but they cannot be considered in the Himalaya, being from 2000 to 4000 feet below the circle of congelation. These fifteen passes are almost as good as the Rampur road, and many of them considerably better. Most of the passes to the eastward are said to be better than those mentioned; some of them are—

(*o*) Shear Garh, a difficult pass.

(*p*) Burasu, to Chungsa; much snow, and rather difficult.

(*q*) Jannubi, to Chubrung; high, but very easy.

(*r*) Kedarnath, said to be very difficult.

(*s*) Dumnis, from Badrinath to Chubrung; the pass is high, there is much snow, but the road is good, and is travelled by loaded cattle.

(*t*) Birji pass; (*u*) Niti pass; (*v*) Dharma pass; (*w*) Juar pass. These last four passes are travelled by cattle.

The passes leading from Kanawar to Chinese Tartary on the eastward are six in number, all of which are practicable for loaded sheep:—

1. Chungsakhago, from Chetka to Neilung, on the Janki or Jannubi branch of the Ganges; a lofty pass, probably not under 18,000 feet.
2. Kuno pass, from Kuno to Tunge;
3. Tidung, from Charung to Tunge. These two roads are each about five days' journey without an intermediate village, and, like Chungsakhago, cross a high, flat piece of ground.
4. Kiubrang, from Nisung to Bekhur, five stages without a village. The road leads up the Taglakhar river for three and a half days, and is often difficult.
5. Gangtung, from Dabling to Bekhur. This, properly speaking, is not a distinct road.
6. From Numgea to Shipke there are two roads—1st, Piming, the height of which is only 13,661 feet. Part of this path is very rugged, in clearing the deep-worn glen of the Upsung rivulet.

There are four passes leading to Spiti—

1. From Pandrabis,
2. Tari from Wangpo, } Open five months.
3. From Lipe.
4. Manerung, from Sungnam, open three and a half or four months.

The Kanawari and Tartar races estimate the altitudes of the passes by the difficulty of breathing they experience in ascending them. Those who cross the outer chain attribute the symptoms from which they suffer, to the noxious qualities of a poisonous plant; but the best informed, who are in the habit of traversing heights where there is no vegetation, know well that they are produced by the height alone.

In the Kouen Lun, all passes above 15,000 feet are closed in winter by the heavy snowfall.

Chang-chen-mo gives its name to a route of about 16 marches between Ladakh and Eastern Turkestan, said to be the easiest from India to Upper Asia, much easier than the more westerly Kara-korum route traversed by Schlagentweit and Mr. Johnson. The heights vary from 19,000 to 21,000 feet, but the mountains are generally rounded, and fuel and grass are abundant save at one stage.

Gumah is equidistant between Ilchi and Yarkand, and the Kara-korum route meets this route at Shadula. The existence of glaciers in Western Tibet was first made known by Vigne, who alludes to them in his Travels in Kashmir. Colonel Richard Strachey was the first who proved their existence in 1847 in the Himalaya.

Dras adjoins Kashmir, the intercommunication being by the Zoji pass, a remarkable depression of 11,300 feet, through which flow the moist winds of Kashmir, and Dras is the most humid and fertile province of Tibet.

In December 1845, when the Chinese fought a battle near Tirthapuri in Gnari Khorsum, the garrison of Takla Khar fled across the pass near the head of the Kali river. Even in this unopposed flight one-half of the men were killed by frost, and many of the remainder lost their fingers and toes; the flight was most disastrous.

The snow-line in the Himalayan regions is 14,000 feet south of the range, and 16,000 feet

north of it. Roses grow in the valleys 13,000 feet above the sea; and in the Tibetan table-land coru is sown at an altitude of 16,500 feet, and in one placc nearly 18,000 feet above the sea. There would appear to be three or four passes varying in height from 15,000 feet to 17,000 fcet, which enter Tibet. In considering these great altitudes, we must bear in mind that the Kirong pass is available for a very extensive traffic. There would appear to be no doubt that the Jeylub pass, in Chumbi, is still more practicable. The Jeylub pass is the lowest in thc Chola range, which, again, is one of the lowest sections of the Himalaya. It leads into the Tibetan territory of Chumbi, and from the pass to Lhassa is from 200 to 300 miles.

The Parijong pass, used by Bogle, Manning, and Turner, was in their day opcn certainly until November, when the cold was not at all extreme; and by the Donkia and other passes Sikkim has maintained for centuries some sort of communication with Tibet.

Mr. Georgia Bogle, who was sent in 1775 on an embassy to the Grand Lama of Tibet in 1774, travelled by way of Koch-Bahar, Tassasudon, and Paredrong to Chanmanning, the then residence of the Lama, and nearly in the same parallel of latitude with Lhassa.

Passes through Assam lead along thc valley of the Dihong; — the northern bank of the Lohit through the Mishmi Hills, leads into Tibet; the Phan-gan pass leads to Man-chi in China, a month's journey over mountains 6000 to 18,000 feet high. The Patkoi pass to Bhamo and China affords means of communication between the Siugpho tribes on the north and south of the Patkoi mountains. This was the route followed by the Burmese in their invasion of Assam, which led to the first war between them and the British.

In the south of India the highest pass is the Sigur in the Neilgherries, 7204 feet. The Rangboddc pass in Ceylon, 6589 feet, is little inferior in height. Of the numerous passes occurring in the Western Ghats, the Bapdeo and the Katruj both exceed 3000 feet, the former being 3499 feet, the latter 3019 feet; and the Ramghat is upwards of 2000 feet.—*Trelawney Saunders' Mountains and River-basins.*

PASSEWA. Hind. A semi-fluid extract obtained from the capsules of the poppy after the seeds are extracted; it hardens by exposure, and is used in making up the shell-coveriugs of the opium cakes for export. It contains a portion of morphia.

PASSIFLOREÆ, the passion-flower tribe of plants, comprise about 14 genera and more than 200 species, of which 20 occur in the E. Indies. The name is derived from a faucied resemblance between the parts of their flower and the emblems of the Messiah's crucifixiou. They are all twining plants, often scrambling over trees to a considerable length, and in mauy cases the large gaily or richly coloured flowers make them favourites in gardens, where many are cultivated, particularly P. alata, P. quadrangularis, P. edulis, P. cærulea, P. racemosa, P. Loudoni, P. onychina, P. palmata, aud P. filamentosa. It is, however, chiefly for their fruit that they are valued in the couutries where they grow wild, the pulp which euvelopes the seeds being cool and refreshing, with something of a fragraut bouquet. The granadilla, P. quadraugularis, fruit is as large as a child's head, and is growu in many parts of the E. Indies. The water-lemon of the W. Indies is the produce of P. laurifolia; P. maliformis bears what is called the sweet calabash; and the pleasant pulp of P. edulis furnishes the confectioner with a most delicate material for the flavouring of ices. Many, however, arc of no valuc for their fruit, and somc are actually fetid. There are scveral wild varietics,—Modecca palmata, Courtallum, Cochin; M. dubia, Sumatra; M. trilobata, Chittagong; M. furfuracea, Promc; M. extensa, Khassya. Passiflora Chinensis, *Wall.*, a native of Chiua. P. fœtida, a species with fetid flowers, but very elegant moss-like involucres, may be often seen crceping over the hedges iu Moulmcin. P. laurifolia, the laurel-leaved passion-flower, called in the W. Indies watcr-lemon vine, appears to havc been the first of the tribe introduced into Burma. P. quadrangularis, granadilla, flourishes well in Burma and ou the Tenasserim coast, and is very prolific. The smooth, oblong fruit grows nearly as largc as a cucumber, contains a succulent pulp, which makes a cooling, delicious dish, and, when prepared in tarts, can scarcely be distinguished from green apple. The Rev. Mr. Bennett of Tavoy introduced it among the Karens, by whom it is highly esteemed, and much sought for. It possesses all the attractive qualities of fine fruit, has handsome, fragrant blossoms, and, when trailed over an arbour, gives a rich passing shade. Carica papaya, one of this order, yields the valued papau fruit.—*Riddell's Gardening; Eng. Cyc.; Mason; Jaffrey.*

PASTE, in jewellery, imitative gem.

PASTILLES.

Wan-yen-hiang, . Chin. | Ood-batti, . . . Hind.

The Ood-batti pastilles in use in India, burned at Muhammadan tombs, are made of benzoin. The Wan-yen-hiang of the Chinese are long, limp torches of bamboo, covered with a composition of elm sawdust, some fragrant substance, and a small quantity of sulphur or orpiment. They are burned to drive away mosquitoes or overcome bad smells. They are sold in China for one cash each.—*Smith.*

PASTINACA, a genus of plants of the order Apiaceæ, from Pastinum, Lat., a two-pronged fork. P. sativa, *Linn.*, has two varieties—(*a*) Sylvestris, the wild parsnip of Europe; and (*b*) Edulis, the cultivated parsnip. P. Hookeriana, P. ringens, P. sprengeliana, and P. sativa are grown in the E. Indies.—*Wight's Icon.* No. 1008.

Pastinaca sativa, *L.*

Hu-lo-pu, . . . Chin. | Parsnip, ... Eng.

Var. a. Sylvestris is the wild parsnip of Europe and the Caucasus.

Var. b. Edulis is the cultivated parsuip. It is extensively cultivated in Guernsey and Jersey as fodder for cattle. In the north of Ireland, parsnips are used in the composition of a kind of beer, brewed with hops. Wine and ardeut spirits arc likewise made from the roots.

Pastinaca secacul is the Shakakel misree (Sium sisarum, *Ainslie*), much used by eastern physicians; the root is a very efficacious medicinc. Dr. Royle thought it came from Kashmir to Hindustan, but Honigberger heard that it is imported from Egypt; and hence, probably, it is called Egyptiau (misree).—*Honigberger; Voigt; Eng. Cyc.*

PASTORAL TRIBES are in all Central and

Southern Asia, and there are many semi-nomades on the borders, and within the confines of British India, amongst the two last being all the frontier Afghans, Baluch, Brahui, and Jat; the desert tribes, Champa, Ahar, Ahir, Dhangar; and the Gadariya, Gujar, and Kurubar, Goala, Gop, Sadgop, Kum, Rangar, and Gurung. In Persia, Kurdistan, and Arabia, the chief part of the population are nomades. See Nomade.

PASTU, the language of the Afghans, also written Pashtu, Pushto. See Pash; Pashtun.

PASU-PATI. Sansk. Lord of auimals, a name of Siva.

PASUT of Lahoul, a compound of alum, etc., used in dyeing.

PASWAJ. Hind. A woman's gown of a light texture and gay colour.

PAT. Hind. Part of the sugar-cane mill. A plank.

PAT is the wool of a goat of Kābul and Peshawur, infcrior to the real pashmina or shawl-wool of Tibet, from which a texture called Pattu is made.—*Powell's Handbook*, p. 21.

PAT, a desert plain; a desert country betweeu Asnee and the hills west of the Indus, above Mithunkote. It is wandered over by the ghorkhar, the Equus onager.

PAT. Hind. A leaf of a plant, any leaf; a book.

PAT. The five pat in Northern Hindustan, were Panipat, Sonpat, Indrapat, Tilpat, and Baghpat, of which all but the last were situated on the right or western bank of the Jumna. The term Prastha, according to H. H. Wilson, means anything spread out or extended, and is commonly applied to any level piece of ground, including also table-land on the top of a hill. But its more literal or restricted meaning would appear to be that particular extent of land which would require a prastha of seed, that is, 48 double handsful, or about 48 imperial pints, or two-thirds of a bushel. This was no doubt its original meaning, but in the lapse of time it must gradually have acquired the meaning, which it still has, of any good-sized piece of open plain. Indraprastha would therefore mean the plain of Indra, which was seemingly the name of the first settler. Popular tradition assigns the five pat to the five Pandu brothers. The above five pat or prastha were given by Dhritarashtra to the Pandu, and from Pat comes Pati, a township.—*Cunningham; Travels of a Hindoo.*

PAT. Hind. A deity of the Bhuiya, a mountain god; amongst the Kol, sacred high places. See Kisan.

PAT. Mahr. A second marriage of a woman among the lower classes of the Mahrattas, whether of a girl whose betrothed husband has died, or of a widow, or of a divorced woman.

PATAKAM. Tam., Tel. The sectarian mark ou the foreheads of Hindus.

PATALA, the Hindus recognise seven regions beneath the earth, viz. Atala, Vitala, Nitala, Gabhastimat, Mahatala, Sutala, and Patala. These are inhabited by the Naga, Daitya, Yaksha, Danava, and others. The Daitya and Danava dwell in Rasatala, the sixth region; and in Patala, the seventh, Vasuki reigns over the chief Nagas or snake demi-gods. The lowest of the seven lower worlds, by Zicgenbalg was identified with Naraka, hell.—*Dowson; Hind. Theat.* ii. p. 270; *As. Res.* xi. 91.

PATALA or Pitasila, the capital of Lower Sind, identified with Nirankot or Hyderabad, also called Patalpur. The position of Nirankot is fixed at Hyderabad by the concurrent testimouy of M'Murdo, Masson, Burton, and Eastwick. Sir Henry Elliot alone places it at Jarak, as he thinks that that locality agrees better with the descriptions of the native historians. From a comparison of the narratives of Arrian and Curtius, it appears that the raja of Patala, having made his submission to Alexander at Brahmana, or the city of Brahmans, the couqueror sailed leisurely down the river for three days, when he heard that the Indian prince had suddenly abandoned his country and fled to the desert.—*Cunningham's Ind.* p. 279.

PATALENE, the country about Tatta on the Indus. See Bactria; Greeks of Asia.

PATALIPUTRA, the Palibothra of Greek writers. It was the capital of the Nanda dynasty and of the Maurya dynasty, which was founded by Chandragupta, and which succeeded the Nanda as rulers of Magadha.

When Hiweu Thsang, in the beginning of the 5th century, entered the capital of Magadha, the city, originally called Kusumapura, had been deserted for a long time, and was theu in ruins. It was 70 li or 11⅔ miles iu circuit, cxclusive of the new town of Pataliputra-pura. This name the Greeks slightly altered to Palibothra, on the authority of Megasthenes, whose account is preserved by Arrian. That writer says—The capital city of India is Palibothra, in the confines of the Prasii, near the confluence of the two great rivers Erannoboas and Ganges. Erannoboas is reckoned the third river throughout all India, and is inferior to noue but the Indus and the Ganges, into the last of which it discharges its waters. Megasthenes assures us that the length of this city is 80 stadia, the breadth 15; that it is surrounded with a ditch, which takes up 6 acres of ground, and is 30 cubits deep; that the walls are adorned with 570 towers and 64 gates. Diodorus attributes the foundatiou of the city to Herakles, by whom they mean Bala-Rama, the brother of Krishna, but this early origin is not countenanced by the native authorities. According to the Vayu-Purana, the city of Kusumapura or Pataliputra was founded by raja Udayaswa, the grandson of Ajatasatru, who was the well-knowu contemporary of Buddha; but the 'Mahawanso' makes Udaya the son of Ajatasatru. According to the Buddhist accounts, when Buddha crossed the Ganges on his last journey from Rajagriha to Vaisali, the two ministers of Ajatasatru, king of Magadha, were engaged in building a fort at the village of Patali as a check upon the Wajji, or people of Vriji. Buddha then predicted that it would become a great city. From these concurring authorities General Cuuningham concludes that the building of the city of Pataliputra was actually begun in the reign of Ajatasatru, but was not finished until the reign of his sou or grandson Udaya, about B.C. 450. Prior to Hiwen Thsang's visit, Pataliputra had been deserted for Rajagriha or Behar; and another Chinese missiouary, who wrote iu A.D. 640, states that Pataliputra was a mass of ruins when he had seen it. Dowson says it is the modern Patna.—*Dowson.* See Patna.

PATALPURI is a remarkable place, most probably once above ground, but on which two

united rivers have deposited their silt and formed a soil. A cave leads to a spacious square temple, about seven feet high, the roof of which is supported by thick walls and ranges of pillars. In its middle is a large lingam of Siva, over which water is poured by the pilgrims. Surrounding this presiding deity are other gods and goddesses of the Hindu pantheon. Towards the left is seen a dead forked tree, which with its withered trunk has stood there for several hundred years. General Cunningham's Archæological Report states that, according to Hiwen Thsang, Allahabad was situated at the confluence of the two rivers, but to the west of a large sandy plain. In the midst of the city there was a Brahmanical temple, to which the presentation of a single piece of money procured as much merit as that of one thousand pieces elsewhere. Before the principal room of the temple there was a large tree with wide-spreading branches, which was said to be the dwelling of an anthropophagous demon. The tree was surrounded with human bones, the remains of pilgrims who had sacrificed their lives before the temple,—a custom which had been observed from time immemorial. This tree is now situated underground at one side of a pillared court, which would appear to have been open formerly, and which is supposed to be the remains of the temple described by Hiwen Thsang. Originally both tree and temple must have been on the natural ground-level, but from the constant accumulation of rubbish they have been gradually earthed up, until the whole of the lower portion of the temple has disappeared under ground. The upper portion has long ago been removed, and the only access to the Akshay Bat now available is by a flight of steps which leads down to a square pillared courtyard.—*Tr. of Hind.* i. p. 313.

PATAMAR, a vessel employed in the coasting trade of Bombay to Ceylon. Patamar vessels may be considered the best in India, as they sail remarkably well, and stow a good cargo of merchandise. They are grab-built, that is, with a prow stem, which is the same length as the keel; and the dimensions of the large class are 76 feet 6 inches in length, 21 feet 6 inches in breadth, 11 feet 9 inches in depth, and about 200 tons burden. They are planked with teak, upon jungle-wood frames, and are really very handsome vessels, being put together in the European manner, with nails, bolts, etc.; and their bottoms are sheathed with inch-board, and a layer of chunam mixed with cocoanut oil and a portion of dammer (country rosin). This is a very durable substance, and a great preservative to the plank against worms. Some of the smaller class of these vessels, of about 60 tons burden, are sewed together with coir, as other native boats are. The small class has one, and the large class two masts, with the lateen sail, the foremast raking forward for the purpose of keeping the ponderous yard clear when it is raised or lowered. The yard is slung at one-third of its length; the tack of the sail is brought to the stern-head, through a fixed block, and the sheet hauled aft at the side, as usual. The halyard is a pendent and treble block, from the masthead aft to midships, thus acting as a backstay for the mast's security, together with about two pairs of shrouds. These vessels generally export salt from Bombay to the coast, and take back coir, rice, cocoanuts, copra, oil, timber, sandal-wood, pepper, and various articles, the production of the coast. They are navigated with much skill by men of the Moplah sect and other Muhammadans, and have a crew of ten or twelve men, and a tindal, who are good pilots and navigators off the coast from Bombay to Cape Comorin; generally speaking, honest and trustworthy.

PATANI, a Malaya-Siamese province. The Orang-patani are supposed by Captain Osborn to be identical with the Orang Laut, or men of the sea. They hunt in small groups east and west of the Straits of Malacca. Under fifty different names they are known to the inhabitants of Siam, Java, Sumatra, Borneo, and the Moluccas, and in all cases bear a bad reputation. With the Sarkab or fish-spear and the Parang or chopper as their only implements, they eke out a miserable subsistence from the rivers and forests; rice is a luxury. Tobacco they procure by the barter of fish, and a few marketables collected from the forests and coral reefs. Their personal appearance is unprepossessing, and their deportment lazy and slovenly, united to much filthiness of person.—*Osborn's Quedah*, p. 254.

PATANJALA, Sansk., from the sage Patanjali; which word is made up of Pat, to throw down, and Anjali, joined hands. This conjunction teaches us that people went before him for instruction with joined hands.

PATANJALA. Sansk. A philosophy of the Hindus. In it are five afflictions, viz. Avidya, Asnuta, Abhinivesa, and Dwesha.

PATANJALI. There were two celebrated ancient Hindu authors of this name. One was the founder of the Yoga philosophy, the other the great critic of Panini and Katayayana, styling his book the Great Commentary, Maha-bhashya. It is a commentary on the Vartikka, or critical remarks of Katayayana on Panini. His mother's name was Gonika. He was born at Gonarda (hence his other names, Gonika putra and Gonardhya), in the east of India, but he resided for a time in Kashmir. He wrote between B.C. 140 and 120. There is no grammatical author who can be held superior to him. Mr. Growse (p. 57) mentions that he was a native of Gonda in Oudh, lived about B.C. 150; and adds that Patanjali mentions the local worship of Krishna and Balarama at Mathura, and quotes from poems descriptive of their lives. (This may be the Patanjali noticed by Ward (iv. 9) as the son of Angira and Sati, born in Havrita Varsha, where his parents resided, and he was known also as Pingala-charya and Pingala-naga.) The other Patanjali is the author of the Yoga system of philosophy, which forms one of the great schools of Hindu metaphysical doctrine, and is distinct from the Vedanta, the Nyaya, the Mimansa, and many others of equally marked but indifferent character. It is a theistic philosophy. He was the founder of the doctrine and practice of Hindu asceticism; and his doctrine, if it did not precede Buddhism, must have closely followed.

PATAR. Hind. A dancing girl attached to a Hindu temple; also a Murli, or woman devoted to the gods.

PATAR, also Pathar. Hind. Mountains. Central India is a table-land of unequal surface from 1500 to 2500 feet above the sea, bounded by the Aravalli mountains on the west, and those of the

Vindhya on the south, supported on the east by a lower range in Bundelkhand, and sloping gradually on the north-east into the basin of the Ganges. It is a diversified but fertile tract. The Patar, or plateau of Central India, is distinct from the Vindhya to the south and the Aravalli to the west, and its underlying rock is trap. The whole of the plateau of Central India was once under the princes of Chitore, but the sack of this famed fortress by Ala-ud-Din, and the enormous slaughter of the Gehlotes, had so weakened their authority, that the aboriginal Meenas re-possessed themselves of all their native hills, or leagued with the subordinate vassals of Chitore.—*Tod's Raj.* ii. p. 457.

PATARI, a wandering tribe of people who speak the Telugu language, some of whom have travelled into the Mahratta country, pursuing their avocation of manufacturers of hand-mills, from which they are also named Chakki Karne-walay by Muhammadans, and are seemingly identical with the Takinkar. They have a deity whom they term Satwai, whose emblem is suspended around their necks, and resembles the forms worshipped as Hanumantu. They dwell within the walls, in huts made of a fine grass. They marry at all ages; they do not eat the cow or bullock, and they bury all their dead.

PATEL, amongst the Mahrattas, the headman of a village, from Pati, head of the community. Opinions are various as to the origin and attributes of the Patel, the most important personage in village sway. But there is no doubt that both office and title are of ancient growth. The office of Patel of Mewar was originally elective; he was 'primus inter pares,' the constituted attorney or representative of the commune, and, as the medium between the cultivator and the government, enjoyed benefits from both. Besides his bapota, and the seerana, or one-fortieth of all produce from the ryot, he had a remission of a third or fourth of the rent from such extra lands as he might cultivate in addition to his patrimony. The Patel of the Dekhan, and of the west and centre of Hindustan, is the Mandel of Bengal, and the Makaddam of other districts, especially where there are, or have been, hereditary village landholders.

PATELLA, a large clumsy boat on the Ganges, in use for baggage, cattle, etc.

PATELLIDÆ, the limpet family of molluscs.

PATERA, a small boat-shaped cup, in use in the religious rites of the Hindus. It is called also an Argha, also Argha patera, and also Jhula. The Patera or Jhula of the Jogi ascetic is a hollow gourd; that of the Hindu deity Hari, the god of war, is the human cranium; the Jhula or begging scallop of the Muhammadan fakir is a gourd or a double cocoanut. Fakir ke jhulé mén tūkra kōn dala?—Who threw the piece into the fakir's scallop?—indicates a child of unknown parentage.

PAT'HA. Hind. Fibre of the Chamærops Ritchiana, of which mats, etc., are made.

PATHAN, a name applied in a loose manner to all the tribes bordering on the common frontiers of India, Afghanistan, Persia, and Balkh. The people are now found in all parts of British India, mixed with the rest of the inhabitants. The greatest colony is that founded chiefly by the Yusufzai at no very remote period. They have been known to the British as Afghan, Pathan, and Rohilla. The source of the name is doubtful. Pihtan or Pathan, given as one source of the term, is said to have been a titular designation bestowed by Mahomed on an Afghan of the name of Kais or Kesh, who visited Mahomed at Medina. It is also claimed to be a corruption of the Arabic Fathan (a conqueror), or a derivation from the Sanskrit Paithna, to penetrate (into the hostile ranks). It is an honourable term in Arabia, where Khurasani (a native of Khorasan) leads men to suspect a Persian. The Karani, Ashtarani, Mashwani, and Wardak of the North-West Frontier call themselves Pathans, but they are deemed of different origin from the Afghan. The Karani includes the Orakzai, Mangal, Khatak, Afridi, and Khugiani tribes, and the Waziri are sometimes included among these. The Wardak are in the valleys of the Sokhta and Ghazni rivers. They are quiet and hospitable, and their country is well cultivated. The Afghans call themselves 'Ban i Israel,' or children of Israel, but consider the name of 'Yahudi,' or Jew, as opprobrious. They affirm that Nebuchadnezzar, after the destruction of the temple of Jerusalem, removed them to Bamian (the present Kābul), and that they were called Afghans, after their leader Afghana, who was a son of the uncle of Asof (Solomon's vizir), who was the son of Berkin. This person's pedigree is derived from a collateral branch, his own father being unknown, which is not at all uncommon in the east. They say that they lived as Jews till Kalid (who obtained the title of khalif), in the 1st century of the Muhammadan era, called on them to take part in the war against the infidels. For these services the khalif gave their commander, Kysee, the title of Abd-ur-Rashid, which means the son of the mighty, and appointed him 'Butan' (an Arabic word), or head of his tribe (answering to a clan in Scotland). It is supposed to be from this title that the Afghans were called, in India, Patan. After the campaign under Kalid, the Afghans returned to their native country, and were governed by a royal race, descended from Kyani or Cyrus, till the 11th century, when they were conquered by Mahmud, who established his power in Ghazni, conquered part of India, and founded the Afghan kingdom, which continued till Baber, a descendant of Tamerlane, founded the Mongol empire. Such is their belief.

Afghans have never migrated in large bodies, but have accompanied the Muhammadan rulers of India, all of whom have entered from Afghanistan, and brought bodies of the Pathan with them. Some of these have settled in many places throughout Northern India, and in some parts of the south, some of them in villages, where they own and cultivate the soil. They have been in considerable numbers in the native army of British India, particularly in the corps of irregular cavalry, and in Northern India, in the civil service of Government. A few Pathan settlements are found in the Panjab and about Dehli. They are numerous in the Upper Doab and Rohilkhand, and, all over India, Pathan principalities, jaghirs, and families were met with till the beginning of the 19th century.

They came in without their women, and have intermarried with other Muhammadans, and with Hindus. Tod relates (Rajasthan, ii. pp. 22, 23) that in S. 1572 (A.D. 1516) a desultory band of Pathans made an incursion during the fair of

the Tij, held at the town of Peepar, and carried off 140 of the maidens of Maroo. Between A.D. 1157 and 1526, 20 Pathan kings ruled in Hindustan. The average duration of their rule was 9¼ years. The only Pathan dynasty now in British India is that of the Begum of Bhopal.

Wherever Pathan dynasties ruled in India, their architectural remains are of a magnificent character. At Dehli, Agra, Mandu, and Burhanpur, ruins of palaces, mosques, and mausoleums attest the magnificence of their founders, and their noble, scientifically constructed fortifications attest their skill. Of the early Pathans of the Ghori and Khilji dynasties, from A.D. 1193 to 1321, there may be noticed the Kutub Minar, of majestic beauty, erected A.D. 1200, and the stern grandeur of Taghalaqabad, A.D. 1321. The style is different of the later Pathan of the Taghalaq and Saida dynasties, A.D. 1321 to 1451, from the Afghan of the Lodi dynasty, A.D. 1451 to 1526. The usual form of a Pathan tomb was an octagonal apartment surmounted by a dome, the apartments surrounded by an arched verandah, the arches rising from square columns.

Pathans to the west of the Indus, as well as a few to the east of it, in the north of the Hazara district, and west of that of Rawal Pindi, speak Pushtu. The Pathan are the only people of Central Asia who in comparatively recent times have come to reside to any considerable extent in India. The Pathan tribes had advanced into the north-east corner of Afghanistan within comparatively recent historical times, for the lower valleys of the Kābul country were once occupied by Hindu races, and the peaks of the Safed Koh, between Jalalabad and Kābul, bear such Hindu names as Sita, Ram, etc. The term Afghan is hardly known to the people whom Europeans so designate, for the tribes have not as yet coalesced into a nation.

PAT'HAR. HIND. Any stone, a monument, a tombstone, a pallia. Pat'har ka phul, a lichen. Haiza-ka pattar, Kalanchoe varians. Mit pattar, Machilus odoratissimus. Til pattar, Acer creticum and A. cultratum. Colonel Tod says he was particularly struck with the monument of a Charan bard, to whose memory they had set up a pallia or tombstone, on which was his effigy, his lance at rest, and shield extended, who most likely fell defending his tanda. The tract had been grievously oppressed by the banditti who dwelt amidst the ravines of the Bunas, on the western declivity of the plateau. 'Who durst,' said his guide, 'have passed the Pat'har eighteen months ago? the Meenas would have killed you for the cakes you had about you; now you may carry gold. These green fields would have been shared, perhaps reaped altogether, by them; but now, though there is no superfluity, there is play for the teeth, and we can put our turban under our heads at night without the fear of missing it in the morning.' At one of the cairns in the midst of the wood, his people all paused for a second; it was raised over the brother of the Bhatti thakur, and each, as he passed, added a stone to this monumental heap.—*Tod*, ii. p. 659.

PA-THA-YOU-SHA. BURM. A bast of Arakan, from a species of Musa; strips 7 feet in length; fine in texture, light coloured; formed of several easily diffusible layers, the outer layers rather dense and compact, and the inner cancellar. —*Royle.*

PATHI. BURM. The term by which, in Burma, native-born Muhammadans are known.

PATHI, HIND., of Shahpur, a weight of wool, equals the shearing of one fleece of a sheep.

PATHRAINI. HIND. An iron graver used in Multan for tracing patterns for gold inlaying work, seemingly a corruption of pattern.

PATI. HIND. A township; in the N.W. Himalaya, a subdivision of a district.

PATIALA, a native state in the Panjab. It belongs to the group known as the Cis-Sutlej States, and is situated between lat. 29° 23′ 15″ and 30° 54′ N., and long. 74° 40′ 30″ and 76° 59′ 15″ E. Its area, 5412 square miles; estimated population (1875), 1,586,000; supposed gross revenue, £457,239. The ruling families of Patiala, of Jind (Jheend), and of Nabha, are called 'the Phulkian houses,' because they are descended from Phul, a Chaudhari, or agricultural notable, who in the middle of the 17th century founded a village in the Nabha territory called after his name. The chiefs of Jind and Nabha are descended from Tiloka, the eldest son of Phul; the Maharaja of Patiala is descended from Rama, the second son, and is a Sikh of the Sidhu Jat tribe. The Patiala maharaja aided the British with supplies in the revolt of 1857, when before Dehli. He was elected a member of the Viceroy's Council, and proposed a bill prohibiting the killing of cows. His widow and her daughters were Christians.—*Aitcheson's Treaties; Imp. Gaz.*

PATINA, in Ceylon, grass land, for the most part rock, barely covered with a superstratum of soil, but producing long grass, and here and there a stunted and thorny bush or tree. Like the prairies of America, the patinas are burned off every year. Grass-covered openings or meadows amount to millions of acres in Ceylon, about the middle of the hills, on which, except the Careya arborea and Emblica officinalis, trees do not grow. In the lower ranges they are covered with tall lemon grass, Andropogon schœnanthus. Coffee, by the use of manures, was unsuccessfully tried on them.—*Simmonds' Dict.*

PATING, HIND., of Tibet, dried apricots brought from Balti.

PATISCHOROEEIS of Strabo, the Patiskhari of the cuneiform inscription, are the Bakhtiari of Luristan.

PATKA. HIND. A girdle, a scarf, a labourer's turban, a sash. Zarri-Patka, a gold sash bestowed as an honour or decoration by sovereigns; the national standard of the Mahrattas.

PAT-KOI, a pass leading to Bamo and China. It was the route followed by the Burmans in their invasions of Assam, and is the means of communication between the Singpho tribes on the north and south of the Patkoi mountains.

PATNA. HIND. Patnam, TAM.; Patnama, TEL., SANSK. Any town or capital; a name of Seringapatam, also of Madras, subjoined to many distinctive names of towns, as Seringapatam, Masulipatam, Chinapatam (Madras).

PATNA, a city on the right bank of the Ganges in Bengal, in lat. 25° 37′ 15″ N., and long. 85° 12′ 31″ E., with a population of 158,900 souls. It gives its name to a revenue district, and to a revenue commissionership, the latter of 23,726 square miles, and a population in 1872 of 13,122,743

persons. Patna has been identified with Pataliputra of the ancient Hindus, the Palibothra mentioned by the Greek historian Megasthenes, who came as ambassador from Seleucus Nicator to the court of Sandracottus or Chandragupta at Pataliputra, about the year 300 B.C.; and the river Erranoboas of Greek writers is the Hiranya baha or gold-bearing stream of the Hindus, the Sone river of the present day. It was also anciently known as Kusumapura, also Pushpapura.

Strabo and Pliny agree with Arrian in calling the people of Palibothra by the name of Prasii, which modern writers have unanimously referred to the Sanskrit Prachya or 'eastern.' But it has seemed to General Cunningham that Prasii is only the Greek form of Palasiya or Parasiya, a 'man of Palasa or Parasa,' which is an actual and well-known name of Magadha, of which Palibothra was the capital. It obtained this name from the Palasa, or Butea frondosa, which still grows as luxuriantly in the province as in the time of Hiwen Thsang. The common form of the name is Paras, or, when quickly pronounced, Pras, which he takes to be the true original of the Greek Prasii. This derivation is supported by the spelling of the name given by Curtius, who calls the people Pharrasii, which is an almost exact transcript of the Indian name Parasiya. The Praxiakos of Ælian is only the derivative from Parasar. The city extends for nearly 9 miles along the Ganges, from the suburb of Bankipore on the west, to Jafar Khan's garden on the east. Patna has a Sikh colony. There is a huge incomplete domed granary, built in 1784–1786, which was utilized in the Bengal famine of 1873. In 1851, Maharaja Jung Bahadur rode up its winding staircase. In 1876-77, the imports and exports of Patna town (excluding Government monopoly of opium, and probably omitting a good deal besides) were registered to a value of $7\frac{1}{4}$ millions sterling. The imports alone amounted to more than 4 millions. On 6th Oct. 1763, a number of the British were massacred here by order of Mir Kasim. He wrote to the English authorities, 'If you are resolved to proceed in this business, know for a certainty that I will cut off the heads of Mr. Ellis and the rest of your chiefs, and send them to you.' This threat he carried out with the help of Samru, a Swiss (Walter Reinhardt), on the evening of the 6th October. Mr. Ellis and others, according to a contemporary letter, were decoyed one by one out of the room where they were drinking tea, at seven o'clock, and instantly cut down. About 60 British were thus murdered, their bodies being thrown into a well in the compound of the house in which they were confined. It is said that 200 British were killed at this time throughout Bengal.—*As. Res.* v. p. 280, ix. p. 46, xiv. p. 393.

PATNI. HIND. A Hindu wife, the wife first married.

PATOMKAR, on the Malabar coast, a tenant-farmer.

PATONWA. URIYA. A species of Gardenia? of Ganjam and Gumsur; extreme height 20 feet. Used chiefly for firewood, being tolerably common. The fruit thrown into a pond of water kills the fish in it, and it is used for that purpose by the Keyout or fishermen. This mode of catching fish is designated Macho nohneebaro. The fruit is said to be poisonous, but the seeds are used medicinally for fever.—*Capt. Macdonald.*

PATOO or Asta is a bast from Birbhum. It is like the Patwa bast of Bhagulpur.—*Royle.*

PATRA. HIND. The Kataya or wire-drawers' work-bench.

PATRA. TAM. Any leaf used for writing on, the birch bark or palm frond; also a sheet of paper or metal on which grants are engraved. See Patera.

PATRA. HIND. Tha-beit, BURM. Gautama's alms-bowl; it is said to have been sent by king Asoka to Ceylon, and is shown in the Malagawa vihara at Kandy. Fa Hian saw one at Peshawur. It is the Holy Grail of Buddhism.

PAT-RAJ, a Pujari amongst the Mahrattas.

PATRANG. HIND. A silk dress; Æchmanthera gossypina.

PATRI. HIND. A neck-chain of silk, carrying amulets. A hone; also a little iron wedge or plate.

PATSHAING. BURM. A drum-harmonicum, a musical instrument used in Burma. It consists of a circular tub-like frame about 30 inches high, and 4 feet 6 inches in diameter. This frame is formed of separate wooden staves fancifully carved, and fitting by tenon into a hook.—*Yule.*

PATSHALA, a village school of Bengal. The discipline in the Patshalas is very cruel. The Calcutta Review mentions that a boy is made to bend forward with his face towards the ground; a heavy brick is then placed on his back, and another on his neck; and should he let either of them fall, within the prescribed period, he is punished with the cane. A boy is condemned to stand on one foot; and should he shake or quiver or let down the uplifted leg before the time, he is severely punished. A boy is made to sit on the floor in an exceedingly constrained position, with one leg turned up behind his neck. He is made to sit with his feet resting on two bricks, and his head bent down between both legs, with his hands twisted round each leg so as painfully to catch the ears. A boy is made to hang for a few minutes, with his head downwards, from the branch of a neighbouring tree. A boy's hands and feet are bound with cords; to these members so bound a rope is fastened, and the boy is then hoisted up by means of a pulley attached to the beams or rafters of the school. The fingers of both hands are inserted across each other, with a stick between and two sticks without, drawn close together and tied. A boy is made to measure so many cubits on the ground, by marking it along with the tip of his nose. A boy is constrained to pull his own ears, and if he fail to extend them sufficiently he is visited with a severer chastisement. The boy who first comes to school in the morning receives one stroke of the cane on the palm of the hand, the next receives two strokes; and so each in succession, as he arrives, receives a number of strokes equal to the number of boys that preceded him, the first being the privileged administrator of them all. Four boys are made to seize another, two holding the arms and two the feet; they then alternately swing him and throw him violently to the ground. Two boys, when both have given offence, are made to knock their heads several times against each other. Again, two boys are made to seize another by the ears, and with these organs well outstretched he is made to run along for the amusement of the bystanders; which latter clause reminds us of the old Roman poet's line—'Omne tulit punctum qui miscuit utile dulci.' Nettles dipped in water

are applied to the body, which becomes irritated and swollen; the pain is excruciating, and often lasts a whole day; but however great the itching and the pain, the sufferer is not allowed to rub or touch the skin for relief, under the dread of a flagellation in addition. This seems bad enough; but here is something worse: The boy is tied up in a sack along with some nettles, or a cat or some other noisome creature, and then rolled along the ground.

PATSO or Patsau, of particoloured silk, is worn by the Burma court and the wealthy Burmans of the capital. In Akyab it is worn there by the Mug race. The Patso of Burma, however, is the cloth worn by all classes. A piece costs up to 24 rupees.

PATTA, also Pat or Pattr. HIND. Any leaf. A lease of land, a deed of lease, a title or appointment to office; a belt as an office badge.

PATTADARI, a lease of land. In India, under British rule, are three land tenures, one known as the Zamindari, or permanent settlement, made in 1793 by Lord Cornwallis, of Bengal proper, and since then extended to Behar and Orissa. In this the lands are divided amongst landlords, who pay a quit-rent to Government, which in Bengal has been definitely settled. Something similar has been proposed for Oudh, as the Talukdari. (2) The Ryotwari tenure in Madras, favoured by Sir Thomas Munro, under which the cultivators are the co-owners of the soil, and pay direct to Government. A modification of this has been introduced into Bombay. (3) The Pattadari tenure was carried out by Mr. R. Martins Bird in the N.W. Provinces, and it has since been extended to the Panjab. In this, Government deals direct with village communities, who are jointly responsible for the assessment.

In Bombay and Madras, Government transacts its revenue business chiefly direct with the cultivating ryot, who is regarded as the feuar or proprietor, paying a feu-duty, and so long as that is paid he cannot be dispossessed. Neither in Bombay nor Madras is there any middleman. In Bengal, however, the British took up the Zamindar system, who, under Muhammadan rule, had been partly a rent-collector and partly a landed proprietor, and elected him to be owner, to the exclusion, in many cases, of the rights of the cultivators. Subsequently the Government, to the exclusion of the real owner, elected the tenant or the village community. In Bengal and Oudh, the land-tax is still levied on estates; in Northern India, on villages and proprietary holdings; but in Madras, on individual fields. In Bombay, however, the taxes levied on the blocks of 10 or 12 acres accords to the convenience of the occupiers, and they are tenants for 30 years. In copper-plate grants dug from the ruins of the ancient Ujjain (presented to the Royal Asiatic Society), the prince's patents (Patta) conferring gifts are addressed to the Patta-cila and ryots. Colonel Tod never heard an etymology of the former word, but imagined it to be from Patta, grant or patent, and Cila, which means a nail or sharp instrument,—metaphorically, that which binds or unites these patents; all, however, having Pati, or chief, as the basis. — *Tod's Rajasthan*, i. 500; *Trans. Asiatic Society.*

PATTA-ISTRI is the first lawful wife of a king. Pattapu bharya, TEL., the crowned wife of a Hindu ruler.

PATTAL. HIND. Plates made of leaves by the Dosali caste.

PATTAM. TAM. A gold frontlet ornament worn by Hindu women.

PATTANA, Pattan, Patna, Pat'tain. SANSK. A word of Sanskrit origin. Any town or city. It is found in nearly all the languages of British India, as in Masulipatam, Chinipatan (Madras), or simply Patna, Seringapatam. Pattan, the Pattana or Paithana of the ancient Greeks, is supposed to have been the capital of Salivahana. Pattan, in Gujerat, is the ancient Balhara capital. Somanatha and Anhilwara were known as Pattan. Pattau-Somuath is 29 miles N.W. of Diu, in lat. 20° 53′ N., and long. 70° 35′ E.

PATTANG. HIND. A paper kite. Pattang-bazi, flying kites. Pattang saz, a kite maker.

PATTI, the Swastika of the Buddhists, and the monogram of Vishnu and Siva.

PATTU. HIND. A white woollen cloth; a blanket or wrapper made of Pattu, a breadth of woollen cloth sewn together. Puttu, a thick woollen blanket woven on the Spiti Hills. A coarse, thick fabric made of the refuse wool and long hair from the shawl goat. It is sold in pieces of 10 inches in width and about 21 feet in length at 2 rupees 8 annas or 3 rupees a-piece, according to the quality.

Pattu abshar, striped woollen cloth.

Pattu chet, woollen cloth stamped with a pattern.

Pattu-Dahzang, cloth made at Dahzang, near Ghazni.

Pattu-foduk, a Ladakh woollen fabric.

Pattu Ramnagri, the Pattu fabric made at Ramnagar.

PATTUAH, a name of the Juanga race. See Juanga.

PATTY and Pajel are short and pointed-headed chanks; and the Wallampory are the right-hand chanks. Bertolacci mentions, as a peculiarity observed by the Ceylon fishermen, that all shells found to the northward of a line drawn from a point about midway from Manaar to the opposite coast of India, are of the kind called Patty, and are distinguished by a short flat head; and all those found to the southward of that line are of the kind called Pajel, and are known from having a longer and more pointed head than the former. The Wallampory or right-hand chanks are found of both kinds.

PATWA. HIND. A braider, a maker of fringe and tape.

PATWA or Patahra manufacture and sell ornaments made of zinc and tin and other inferior metals, worn by men and women, but chiefly by the latter. They also make trinkets of silk and silk cloth, edged with gold.

The Patwa knit silken cords; and in Behar, where silk is produced, many families are employed in weaving silk cloth, or silk and cotton mixed, or cotton alone.

PATWA. HIND. String and rope made from the fibre of Bauhinia racemosa.

PATWA. HIND. The red juicy calyx of Hibiscus subdariffa used for making jelly, etc.

PATWARI. HIND. In Hindustan, a village accountant, responsible for keeping the accounts of the village, noticing changes in the list of pro-

prietors, and accounting between the headman or Lamberdar and the proprietors for the share of revenue paid by each. In the Dekhan and Southern India, the village accountant is the Kulkarni and Karnam, and in Gujerat the Tallati.

PAUCHONTEE, or Indian gutta tree, is common in the densely-crowded tracts of Coorg, abounding at the foot of the ghats N.E. of Trevandrum, the eastern part of Wynad, Animallay mountains, and Cochin territories, from 8° 30′ to 10° 30′ N., and at an elevation of 2500 to 3000 feet above the sea. The tree abounds in the Cochin Sircar territory, and on the cardamom table-lands of Travancore, and at the Pool on the summit of the ghats above Chocuraputtee. It appears to be common in all the forest tracts at all within the influence of the S.W. rains. It attains a height of 80 to 100 feet, and a diameter of 2 to 4 feet, and it rises up to a great height without giving off any branches. It is the Pauley tree of Wynad, and the Pauchontee of Cochin. It is the Isonandra acuminata of Lindley, and the Bassia elliptica of Dalzell. It yields a milky juice, which concretes, and is brittle at an ordinary temperature. It softens by the heat of the hand and mouth, and may be moulded between the fingers. It readily melts by the application of heat, and becomes very sticky. This stickiness is gradually destroyed by contact with water. It forms a paste with coal-tar, naphtha, and oil of turpentine. It has excellent insulating powers, and may be used successfully for coating the wires of telegraphs. It is probable that several thousands of these trees fall annually under the axe of the woodcutter, as the Government forests in Wynad give way to the extension of coffee-planting, and the private forests in Malabar to raggi cultivation. In 1855, General Cullen forwarded a drawing and description of it. The wood of the Pauchontee tree is in gravity not less than 55 lbs. the cubic foot; and a bar of one inch square, with 18 inches clear of the supports at each end, broke with a long fibrous fracture, after a weight of 440 lbs. had been imposed, though not till this weight had for some minutes been suspended from the bar. This tenacity is as high if not higher than that of teak. A tree when tapped, two taps at every three feet from the base to sixty feet high, or 40 taps in all, yielded in twelve hours about eight pints or pounds of the sap. The exudation from the trunk has some resemblance to the gutta-percha of commerce. According to General Cullen, in 5 or 6 hours upwards of 1½ lbs. was collected from 4 or 5 incisions in one tree.—*Balfour's Report of the Madras Museum of* 1856.

PAULOWNIA IMPERIALIS. Tung, Peh-tung, Chin. A tree of China and Japan, furnishing an excellent timber, much prized for musical instruments. The large cordate leaves are used as a wash for sores, and to strengthen the hair when turning grey. Bark vermifuge and diuretic.—*Smith.*

PAUMBEN, a small mercantile town on the W. extremity of the island of Ramisseram, in lat. 9° 37′ N., long. 77° 17′ E. It derives its name from the serpentine character (Pamu, Tam., a snake) of the Paumben channel, which separates the island from the mainland. The population are chiefly Labbai Muhammadans. The Paumben channel is between the islands of Ramisseram and Manaar. These two almost connect Ceylon and the continent, and form what is known as Adam's Bridge at the head of the Gulf of Manaar. The British Government since 1828 have been deepening the channel to thirteen feet of water, so as to render the rounding of Ceylon unnecessary.

PAUNDRAKA, an opponent of Krishna at Benares. Krishna is said to have defeated and killed him, and burned Benares.

PAURAVA, descendants of Puru of the Lunar race.—*Dowson.*

PAUSSIDÆ, a family of insects, comprising the genera Cerapterus, *Swed.*; Pleuropterus, *West.* Mr. Westwood mentions sixty-two known species, a great portion of which belong to the East Indies.

PAVANA, the Hindu god of the winds. He is by some represented sitting on a deer, holding in his hand a hook for guiding the elephant.—*Cole.'s Myth. Hind.* p. 111.

PAVANANTI, a Jaina who lived at Sanakapuram. Under the patronage of a king, he commenced the Nannul, the most celebrated Tamil grammar, but died after completing the first two parts.

PAVETTA INDICA. *Linn.*

Ban-akhrot, . . . ,,	

This fine picturesque tree yields a grateful shade. It grows in most of the higher hills, Cis and Trans Indus, at from 4000 to 9000 feet, is found in the Sutlej valley between Rampur and Sungnam, at Kulu at an elevation of 5000 to 8000 feet, on the mountains at elevations of from 8000 to 10,000 feet, in Kamaon, Garhwal, and Sirmore, also near the sources of the Ganges and in Kanawar, and attains girths up to 10 and 15 feet. The wood is light-coloured and easily worked, but is not much valued, being used for ordinary building purposes, packing-cases, water-troughs, tea-boxes, and rough pattern-making. Some of the Tibetan drinking-cups are made from it. The root, called Jauz-mukaddam ban-khor, is used for horses in colic, and is recommended as an external application in rheumatism. The seeds contain much fecula, and are eaten by the hill people in times of scarcity, but require long maceration in water first, as they are very acrid. Grows to a very great size and strength; wood soft and strong, of a white colour, veined, fine grained; polishes well; used for building and cabinet-making purposes.—*Royle's*

The head is surmounted by an aigrette of 24 upright feathers. In the male the tail-coverts consist of feathers with loose barbs and of unequal size, the upper one shortest, each terminated by numerous eyes or circlets of a metallic iridescent brilliancy; these the bird has the power of erecting into a circle or wheel, which presents, when the sun shines on it, an object of dazzling splendour. The female has the aigrette, but has not the splendid ornament with which the male is gifted; her colours generally are sombre. This species is spread over India; it is readily domesticated, and many Hindu temples have considerable flocks of them. The bird, as domesticated in Europe, is identical with the wild bird of India. Colonel Williamson, in his account of peacock-shooting, states that he had seen about the passes in the Jungleterai district surprising quantities of wild pea-fowls. Whole woods were covered with their beautiful plumage, to which the rising sun imparted additional brilliancy. He says there could not be less than twelve or fifteen hundred pea-fowls, of various sizes, within sight of the spot where he stood for near an hour.

Pavo Japonensis, *Aldrov.*, P. Javanicus, *Horsfield.* Prevailing tints, blue and green, varying intensity, and mutually changing into each other, according as the light falls more or less directly upon them. In size and proportions the two species are nearly similar, but the crest of P. Javanicus is twice as long as that of P. cristatus, and the feathers of which it is composed are regularly barbed from the base upwards in the adult bird, and of equal breadth throughout. Head and crest interchangeably blue and green.

The Javan pea-fowl is a splendid bird. It replaces the common pea-fowl in the Malay Peninsula and Java, and is readily distinguished by its different colouring and peculiar crest.

Pavo muticus, *Linn.*, P. Assamicus, *M'Clelland,* is found in all the countries from Assam through Burma to Malacca, and the islands. It has spurs; its crest is composed of about ten or more slender barbed feathers. It has more green and gold and less blue in its plumage than P. cristatus.

The black-shouldered pea-fowl, Pavo nigripennis, is commonly called the Japan peacock, but is not found in Japan. It occurs wild in Cochin-China. —*Eng. Cyc.; Jerdon, Birds of India.* See Peacock.

PAWA or Padraona, an ancient city on the Gandak river, between Kapilavasta and Kasinagara. In the Ceylonese chronicles the town of Pawa is mentioned as the last halting-place of Buddha before reaching Kasinagara, where he died beneath a sal tree.—*Cunningham, Ancient Geog. of India*, p. 434.

PAWAN. Hind. The wind. Pawan-ka-put, lit. Son of the wind. The general of the monkey army that Rama took with him in his expedition against Ceylon.

PAWAN BANS, the name by which the Bhuiya to the south of Singbhum designate themselves.

PAWANG. The Rev. P. Favre, apostolic missionary of Malacca, mentions that the Pawang are priests, teachers, physicians, and sorcerers. Many members of their own nation do not believe that the Pawang have any supernatural powers as sorcerers or as priests. Amongst the Malays their skill is much in honour, and their persons objects both of veneration and of fear. The Malays have a firm faith in the efficacy of the supplications of the Pawang, and an extraordinary dread of their supposed supernatural power. Malays imagine that they are endowed with the power of curing every kind of sickness, and of killing an enemy however distant he may be, by the force of spells; and with the gift of discovering mines and hidden treasures. It is not uncommon to see Malay men and women, at the sight of a Binua Pawang, throw themselves on the ground before him.—*Journ. Ind. Arch.*, Feb. 1849, p. 115.

PAWARUJA, a class of dancers at public festivals. They are found in the districts east of Oudh.—*Sherring's Hindus.*

PAXITIRTHA. Taranatha, in his history of Indian Buddhism, mentions Paxitirtha in Tibetan as a Buddhist temple, or, in the Tibetan corresponding name, Bird convent. It is now called the Tirukkaz Hukkunram, and is 36 miles S. of Madras; and the kites at it are fed at noon. The temple is now devoted to Siva, but the inscriptions show that it was once a Jain temple.

PAXIUBA, a palm of the Rio Negro, is the Iriartea exorrhiza.

PAYAKARI. Karn., Tel. A temporary cultivator.

PAYANELIA MULTIJUGA. *D.C.* A timber tree of the Andamans.

PAYASA, in Brahmanism, sacred food, consisting of rice and milk. It is prepared at Brahmanical sacrifices. Payasa-homa, a Hindu sacrifice with ghi and fire, also with rice and milk, but products of the cow are mixed with them.

PAYUNG in Malay and Javanese, and Songsong in Javanese only, an umbrella. Among the civilised nations of the Malayan Archipelago, this is the universal badge of rank, from the prince to the humblest office-bearer, and stands instead of the crowns, coronets, stars, and ribbons of the

nations of Europe. The quality of the party is expressed by its size, colour, or material.—*Crawfurd's Dict.* p. 330.

PA-ZEND. The book containing the religious code of the present Parsees is called the Vendidad. It has undergone three various processes of composition, of the Avesta, Zend, and Pa-zend. The Avesta is of very ancient date, and is the groundwork of the present Vendidad, though all of it almost is post-Zertushtrian. In the course of time, several explanations and interpretations of the laws were made, which acquired as much force as the original, and were incorporated with it. This is the Zend, and the incorporation of further explanations was styled the Pa-zend. Avesta means direct higher knowledge, divine regulation. Zend means the explanation of this, and Pa-zend the supplement to the Zend, or further explanation of the Zend doctrine. All the three steps exist in the present Zend Avesta, or more properly Avesta Zend.—*Bunsen.*

PE, in the weights of Burma, is the 1-20th part of a kyat or tikal.

PE. Tam. Wild, uncultivated; a devil.

The pea is grown as a vegetable throughout all the southern and eastern parts of Asia, wherever Europeans reside. It is a well-known leguminous plant, of which two species are commonly distinguished in Britain,—the grey field-pea, and the white or yellow pea. Of these two species there are many varieties. The large white, green, and brown are the common pea in the Dekhan; the latter sort are boiled, and eaten often in the shell. Peas may be sown there in the beginning of June, and continued at pleasure until February. In sowing, they should not be too thin, or placed deeper in drills than two inches, and a space of three feet between the rows; the first crop in double rows, with a space of a foot between. When they are ready to climb, earth up both sides well, leaving room for the water to run in the middle. Then place good strong sticks in the centre of the rows, and on the outer side of each lay good old manure, after which little trouble is required. Keeping them free from weeds is of course essential; and to preserve the seed, take care and remove any of the plants that appear of a different kind when in blossom; also draw out all the thin and bad-looking plants, to prevent the pollen impregnating the good, and if this seed be the produce of the rain-crop, if sown again in the cold weather they will be much finer and last longer than the seeds of the former season. For late crops, put down in single rows, and in lines from east to west; this enables the sun to act upon the whole, and tends to prevent mildew from damp on the stalks. In growing crops that you do not intend to stick, it is advisable to put brushwood on one side for them to creep over, and prevent much loss in seed from damp and otherwise. The kinds that grow best at Madras are the Bangalore and Cape seed, sown in drills after the heavy rains are over. The best manure for this vegetable is street sweepings and wood ashes.

The country pea of British India is sown after the rains in drills, and varies in price according to the quality; when green they are tolerable as a vegetable, but are best in soup. Procurable in December and January.

The Japan pea has been introduced into the United States, and returns 200 and 300 per cent.

In chemical composition the P. sativum of India has moisture, 12·65; nitrogenous matter, 23·50; starchy matter, 60·28; fatty or oily matter, 1·61; and mineral constituents, 2·41.

The chick-pea, or Bengal gram of India, is the Cicer arietinum, the pigeon-pea is the Cajanus Indicus, and the pea-nut is the Arachis hypogea. —*Agricultural Report for* 1854 *from Commissioners of Patents to House of Assembly; Faulkner; Riddell; Jaffrey.*

PEACH, Amygdalus Persica.

Khookh, . . .	Arab.	Aroo, Shaft-alu, .	Hind.
T'au, Ping-t'au, .	Chin.	Accusare, ...	It.
Hoh-t'au, Sien-kwo,	,,	Shaft-alu, .	Pers., Turk.
Peche, ...	Fr.	Kardi, Kulloo, Aroo,	,,
Pfirsiche, ...	Ger.	Malo coton, . . .	Sp.

The peach was introduced into Europe from Persia, a country in which the fruit is very fine, and where both the free and cling stone varieties are known, and called Kulloo and Kardi. It has been supposed to be a native of the oases of Egypt, in consequence of its name, Burkook, being probably the original of the old term apricoke and præcocia.

There are two varieties in the Panjab plains, one, a round fruit, which is elongated to a point on one side; this is called Noki (Nok, a point). The other is a flat fruit, like the Chinese peach, and is called Tiki; the latter is much superior both in juiciness and flavour. At Kandahar there are two sorts, one small and strong flavoured, called Babri, and one large and luscious, called Tirwah.

At Kābul it is said to be preserved in fourteen different ways, with and without the stones, or the kernel left, or an almond substituted. It is generally brought in this state into N. India, under the name Khoobani; the Arabic name is Mishmish; in Bokhara, where they are particularly fine, they are called Bakur khani. In the Himalaya the fruit is called Zard-aloo, Chooloo, and Chinaroo; in Kanawar the fruit is dried on the tops of their houses, and, when pounded, mixed with their meal. It is chiefly cultivated on account of the beautiful oil which is expressed from the kernels. These may also be found in the bazars, under the name of Badam-kohi, or hill-almonds. The oil has a slight smell of hydrocyanic acid, and must resemble that from almonds, especially the bitter kind, or that obtained from Prunus brigantiaca. They ripen well and are of a fine flavour in Peshawur; also in the north of India, with the well-flavoured flat peach from China. With care, it succeeds also in the elevated lands of Mysore, Ahmadnaggur, and Dowlatabad. It is found wild in different parts of the Himalaya, as about Mussoori, at elevations of 5000 and 6000 feet. In the district of Bissehur there is a distinct kind, called Bhemi by the natives, Persica saligna, *Royle*, which, though small, is juicy and very sweet.

In the vicinity of Shanghai is a fine and large

variety of peach, which comes into the markets there about the middle of August, and remains in perfection for about ten days. It is grown in the peach orchards a few miles to the south of the city; and it is quite a usual thing to see peaches of this variety 11 inches in circumference and 12 ounces in weight. Trees of the Shangbai variety are now in the garden of the Horticultural Society of London. In China, Yu-t'au is the nectarine; Ping-t'au and Hoh-t'au are names of the flat peach; and the Kin-t'au is a yellow-fruited peach. The peach is supposed to be a modified almond under cultivation; and though many hundred varieties have been produced, the peach and the almond are believed by Professor Koch to be of the same stock.

The nectarine is found in gardens in Northern India, where it is called Shaft-alu and Moondla-aroo (smooth), though it does not perfectly ripen its fruit, nor is it known from whence it was introduced, though probably from Kābul. The apricot is very abundant around almost every village in the Himalaya, rendering it difficult to ascertain whether it be ever found wild, as the trees remain the only vestiges of deserted villages. —*Drs. Wall. Cat.; Royle, Ill. Him. Bot.; Riddell; J. L. Stewart.*

PEACH GUM, T'au kiau, CHIN. In China employed medicinally.

PEA-FOWL.

ταως, . . .	ARAB., GR.	Marak, .	MALAY., JAV.
Pea-fowl, ...	ENG.	To-gei, ...	MALEAL.
Paon, ...	FR.	Manura, .	SANSK., JAV.

Tukeyiun, . . .	HEB.	Tokei, ...	SINGH.
Tukhi-im, . . .	,,	Mail, ...	TAM.
Pavo, ...	LAT.	Tawuss-kushu, . .	TURK.

There are three species of pea-fowl known in India, Pavo cristatus, P. Japonensis, and P. muticus, *Linn.*, the former of British India; the latter is from Assam to the Malay Peninsula, Java, and Sumatra, and has never been domesticated by the natives of the Archipelago. P. cristatus and P. muticus are wild species; and Mr. Sclater has lately named P. nigripennis, but its country is unknown. Peacocks are called in Hebrew, Tukhi-im; and the name still used on the coast of Malabar is To-gei, which in turn has been derived from the Sanskrit Sikhin, meaning crested. In many parts of India they live in a semi-domestic state in and about the villages. The peacock is said to have been introduced to Europe by Alexander the Great. Pea-fowl were so rare in Greece, that a male and female were valued at Athens at a thousand drachmæ, or £32, 5s. 10d. Samos possibly was the next place they were known at, where they were preserved about the temple of Juno, being a bird sacred to that goddess. But their use was afterwards permitted to mortals, for Gellius, in his Noctes Alticæ (c. 16), commends the excellency of the Samian peacocks. They were, however, known in Judea many years before the days of Alexander, and are noticed, with apes, in 1 Kings x. 22, 2 Chronicles ix. 21, the words translated being found in the Sanskrit.

The peacock was a favourite armorial emblem of the Rajput warrior; it is the bird sacred to their Mars (Kumara), as it was to Juno, his mother, in the west. The feather of the peacock is used to decorate the turban of the Rajput, as that of the warrior of the Crusade, adopted from the Hindu through the Saracens. 'Le paon a toujours été l'embleme de la noblesse. Plusieurs chevaliers avaient leurs casques des plumes de cet oiseau, un grand nombre de familles nobles le portaient dans leur blazon ou sur leur cimier, quelques uns n'en portaient que la queue.' A bunch of peacock's feathers is still the implement of conjuring, and is carried by mendicants in India who pretend to skill in magic; it is especially borne about by Jaina vagrants. The peacock enters into the Hindu mythology. Siva, for the amusement of Parvati, his bride, originated a particular dance, to the musical accompaniment of the tabor, struck by his attendant Nandi. His sons were present,—Kartikeya, mounted on his peacock, and Ganesa with the head and trunk of an elephant. Siva is embellished with a collar of the hooded snake twining round his neck and surmounting his head. The peacock is supposed to be particularly delighted by the approach of the rainy season; and the bird of Kartikeya, mistaking the deep sound of the drum for the rolling of thunder indicative of a storm, screams with delight. The peacock is considered the natural enemy of snakes; and the snake of Siva, alarmed at the approach of his mortal foe, deserts his place on the neck of the deity, and makes for the first hiding-place he can find. This happens to be the tip of Ganesa's elephant trunk, his entrance into which disturbs the bees that are supposed to settle on the temples of an elephant. The European fable of the jackdaw borrowing the plumage of the peacock, has its counterpart in Ceylon, where the popular legend runs that the pea-fowl stole the plumage of a bird called by the natives Avitchia. This bird utters a cry resembling the word Matkiang! which in Singhalese means, 'I will complain.' This they believe is addressed by the bird to the rising of the sun, imploring redress for its wrongs. The Avitchia is described as somewhat less than a crow, the colours of its plumage being green mingled with red. The wild pea-fowl of the jungles is a good bird for the table, and when young is no despicable food.

The throne of Shah Jaban was in the form of a peacock with a spread tail, and is famed in history as the Peacock Throne, which Nadir Shah carried off from the sack of Dehli. The colours of the tail were represented in natural colours by sapphires, emeralds, rubies, and other appropriate gems, which formed the chief ornament of a mass of diamonds and precious stones that dazzled every beholder. Tavernier, a jeweller by profession, mentions the common belief that it cost 160,500,000 livres, nearly six millions and a half sterling. But the author of the Nadir Namah only names two millions, and Scott only one million sterling.—*Elphinstone*, p. 530; *Crawfurd's Dict.; Darwin, Origin of Species; Muller's Lectures*, p. 190; *Tod's Rajasthan*, i. p. 137; *Hind. Theat.* ii. pp. 10, 306; *Tennant's Nat. Hist.* p. 244; *Pennant's Hindoostan*, i. 211. See Pavoninæ; Sacti; Vahan.

Pearls are found in several molluscs inhabiting shallow seas and saudbanks in the old and new world, but the most productive mollusc is the Meleagrina margaritifera or Avicula margaritifera, the pearl oyster; and the best known localities are the Persian Gulf, the west coast of Ceylon in the Gulf of Manaar, Panama, the shores of California, Australia, Red Sea, Arabian coasts, the Aru Islands, Zebu, the Sulu Archipelago, Mindauao, coast of New Guinea, Torres Straits, Gulf of Omra, and coasts of Japan.

Friar Jordanus, a quaint old missionary bishop, who was in India in 1330, says that 8000 boats were engaged in this fishery and that of Ceylon, and that the quantity of pearls was astounding and almost incredible. The headquarters of the fishery was then, and indeed from the days of Ptolemy to the 17th century continued to be, at Chayl or Coil, literally, the temple, on the sandy promontory of Ramnad, which sends off a reef of rocks towards Ceylon, known as Adam's Bridge. And Ludovico di Varthema mentions having seen the pearls fished for in the sea near the town of Chayl, in about A.D. 1500; and Barbosa, who travelled about the same time, says that the people of Chayl are jewellers who trade in pearls. This place is, as Dr. Vincent has clearly shown, the Koru of Ptolemy, the Kolkhi of the author of Periplus, the Coli or Chayl of the travellers of the Middle Ages, the Ramana-Koil (temple of Rama) of the natives, the same as the sacred promontory of Ramnad and isle of Rameswaram, the headquarters of the Indian pearl fishery from time immemorial.

In Arabic poetry, pearls are fabled to be drops of vernal rain congealed in oyster shells. Benjamin of Tudela says that in the month of March the drops of rain-water which fall on the surface of the sea are swallowed by the mothers-of-pearl, and carried to the bottom of the sea, where, being fished for and opened in September, they are found to contain pearls. The Hindus poetically describe them as drops of dew falling into the shells when the molluscs rise to the surface of the sea in the month of May, and becoming, by some unexplained action of the sun's rays, transformed into pearls. Pliny and Dioscorides believed that pearls were productious of dew; but that observant old Elizabethan navigator, Sir Richard Hawkins, shrewdly remarked that 'this must be some old philosopher's conceit, for it cannot be made probable how the dew should come into the oyster.'

Modern writers suggest various causes for the intrusion of the nucleus round which the pearl is formed. The free border of mantle lining each valve of the shell dips downwards to meet a similar edge on the opposite side, thus forming a double-fringed veil. The tentacles of this fringe consist of long and short flat filaments, which are exceedingly sensitive, so that even the approach of a foreign substance makes them draw forwards and shut out the intruder. They doubtless prevent the pearls from dropping out of the shell, and preserve the fish from the host of carnivorous creatures which infest its place of abode; and if it be true that particles of sand form the nuclei of pearls, they must run the gauntlet of these ever-watchful sentiuels before they can intrude themselves amongst the interstices of the mantle. The food of pearl-oysters consists of foraminifera, minute algæ, and diatoms; and Dr. Kelaart has suggested that the silicious internal skeletons of these microscopic diatoms may possibly permeate the coats of the mantle, and become nuclei of pearls.

It is suggested that pearls are produced when the transparent envelope of the animal, called the mantle, is wounded or irritated. That small boring worms pierce the shell and penetrate to the body of the animal. The mantle then sends forth a quantity of pearly matter over the wounded spot, and this becomes a little knob or pearl. This is supported by the fact that nearly all the shells in which pearls are found are outwardly contorted, and that a smooth regular shell is a pretty sure sign of the absence of the pearl.

The Chinese are said to thread upon fine silk, small beads of mother-of-pearl, and fasten them within shells of pearl oysters when they rise to the surface of the water at the beginning of summer. The animals are then restored to their bed, where they soon cover the beads with calcareous matter, and thus convert them into pearls. Small figures of Buddha are the stock subjects introduced, and these are highly valued by Buddhists in all countries. Small pearls which have been immersed in acetous acids, and thus reduced to their membranous constituents, have the appearance of being formed of concentric coats of membrane and carbonate of lime, thus resembling in composition the mother-of-pearl with which oyster-shells are lined. Mr. Robert Garner, F.L.S., particularly examined those formed in the mantle of the Conway and Lancashire salt-water mussel; and he attributes the same origin to all pearls, the oxidation of a minute species of diatoma causing their formation, much in the same way that galls are formed in plants.

Sections of pearls show very fine concentric laminæ surrounding a grain of sand or other extraneous matter. The nacreous lustre has been attributed to the diffraction of light from the outcropping edges of the laminæ; but Dr. Carpenter says it may result from the minute plication of a single lamina.

In whatever way produced, pearls of considerable size, on account of their beauty and rarity, have been valued at enormous prices in past ages, and are still among the choicest objects of the jeweller's art. Their delicate and silvery lustre has been as widely celebrated as the brilliance of the diamond. The Meleagrina margaritifera furnishes the finest pearls and finest nacre. When secreted in the globular form, it is the pearl; on the inner walls of the shell, it is the nacre.

A pearl, to be pure, should be of perfect white-

ness, be spherical or of a regular pear shape; those of blue reflection are less valued, and the yellow pearls still less. Tavernier was of opinion that the yellow colour was a stain from the rotting mollusc.

The pearl mollusc multiplies by means of what is technically called spat or spawn, which is thrown out in some years in great quantities,—perhaps similar to the edible oyster of Britain, which threw much spat in 1849, and not again until 1860, and not then up at least to 1866. The spat floats in and on the water, and attaches itself to anything it comes in contact with, attaining, it is said, the size of a shilling in six months. In its seventh year the pearl mussel attains its maturity as a pearl producer; pearls obtained from a seven-year mussel being of double the value of those from one of six years of age. In mussels under four years the pearls are not of any mercantile value, and after seven years the pearls deteriorate. Those from mussels of about four years old have a yellow tinge, and the older kinds a pinky hue; but pearls of a red and even black, as also with other colours, are likewise met with. Of all the substances used for personal decoration, the pearl alone derives nothing from art. The Baghdad dealers prefer the round white pearl. Those of Bombay esteem pearls of a yellow hue and perfect sphericity. According to European taste, a perfect pearl should be round or drop-shaped, of a pure white, slightly transparent, free from specks, spots, or blemish, and possess the peculiar lustre characteristic of the gem. In India and China, the bright yellow colour is preferred. The rose-tinted pearl of Scotland is in large esteem amongst Paris ladies. The pearls of Scotland of the best kind range in price from £5 to £50, but £100 has been paid for a fine specimen. Pearls of the Persian Gulf and Ceylon realize from Rs. 1000 to Rs. 1500 a tola of 180 grains.

A pair of very fine black pearls was recently sold to a rich iron merchant in Paris for 500,000 francs. The pink pearl ranks with the clear white pearl in value. Some specimens have been found with purple, cream, and salmon colours.

Pearls are designated in Europe by their colours, white, yellow, or black; or by their size, as seed-pearl. The best pearls are of a clear, bright whiteness, free from spots or stains, with the surface naturally smooth and glossy. Those of a round form are preferred, but the larger pear-shaped ones are esteemed for ear-rings. Seed-pearls are those of the smallest size.

The dealers in Ceylon recognise twelve classes, in none of which is the actual weight taken into consideration—

1. Called Ani, comprising those pearls to which Pliny first applied the term 'unio,' in which all the highest perfections of lustre and sphericity are centred; 2. Anathari are such as fail a little in one point, either in lustre or sphericity; 3. Sanadayam, and 4. Kayeral, such as fail in both; 5. Massagu, or confusion; 6. Vadivu, beauty; 7. Medangu, bent or 'folded' pearls; 8. Kurwal, double pearls; 9. Kalippu, signifying abundance; 10. Pœsal, and 11. Kural, mis-shapen. These find a ready sale in India, all kinds and shapes being indiscriminately used to adorn the roughly made breastplates of gold worn by women of high caste. 12. Thool, literally 'powder.' These are all easily disposed of in India, where they are sometimes made into lime to chew with betle.

Pearls are found in the Unio marginalis, *Lam.*, and Unio flavidus, *Benson*, of the Bhandardah lake near Berhampore.

In the salt-water inlets along the entire seacoast of Sind, a thin-shelled variety of the oyster occurs; on the sandbanks, called Kenjur, that are left dry at low tides, but chiefly in the creeks near Kurachee, a seed-pearl is found, selling at Rs. 15 the tola. The seed-pearl fishery was let by the Amirs successively for Rs. 650, Rs. 1300, and Rs. 19,000. After 1839, they let them out for Rs. 1100, Rs. 21,000, and Rs. 35,000, but the contractors failed.

The produce of the fisheries in the Gulf of Manaar has varied greatly at long intervals. From 1838 to 1854 there was no fishery at all. A similar interruption had been experienced between 1820 and 1828. The Dutch had no fishery for 27 years, from 1768 to 1796; and they were equally unsuccessful from 1732 to 1746. It has now been satisfactorily proved that the pearl-oyster's occasional disappearance is perfectly natural. The Arabs of the Persian Gulf, according to Colonel Pelly, attribute the decay of the Sind and Ceylon fisheries to the mixture of mud and earthy substance with the sand of the beds.

In the Persian Gulf the pearl banks extend 300 miles in a straight line, and the best beds are level and of white sand, overlying the coral in clear water; and any mixture of mud or earthy substance with the sand is considered to be detrimental to the pearl mollusc. These banks are from 3 to 6 miles off shore, in 6 to 7 fathoms water. 400 boats of all sizes are annually employed, carrying crews of from 13 to 25 persons, half of them divers. The yearly produce was estimated at 40,000 tomans, each toman 18 piastres Rumi. —the masters drawing three shares, divers two shares, and assistants one share. Some of the Arab colonies on the Persian littoral retain a right to fish on the banks, which are appanages of the parent Arabian tribe.

In the Persian Gulf there is both a spring and a summer fishery, and as many as 5000 boats will assemble from Bahrein and the islands, and continue fishing from April to September. The total amount derived in the pearl fisheries of the Persian Gulf has been estimated at £400,000, employing about 30,000 persons. During a recent year, 30 divers engaged in the pearl fishery in the Persian Gulf lost their lives, most of them being victims of sea monsters. The value of the pearls taken in 1879 in the Persian Gulf was set down at about £300,000. There were 7,000,000 fished, and it was believed that but for the frequent interruption by weather, 2,000,000 more might have been lifted.

Off the coast of Ceylon the fishing season is inaugurated by numerous ceremonies, and the fleet, sometimes of 150 boats, then puts to sea. Each boat has a stage at its side, and is manned by ten rowers, ten divers, a steersman, and a shark charmer (Pillal karras). The men go down five at a time, each expediting his descent by means of a stone 20 to 25 lbs. in weight, and, holding their nostrils, gather into a net or basket about 100 shells in the minute or so which they remain under water. Each man makes 40 to 50 descents daily. The pearl-oysters are thrown on the beach

and left to putrefy. It has been ascertained that no diving apparatus could, with any advantage, be substituted. The common time for remaining under water is 50 or 60 seconds, but Sir Henry Ward timed one man at 80 seconds, and another at 84 seconds. When the oysters reach the Government kottus, they are divided into four heaps. The divers then remove their share, and the remaining three-fourths, belonging to Government, divided into heaps of 1000 each, are sold by auction to the highest bidder. Sir Henry Ward says,—I have seen myself 32 pearls taken out of one oyster, three of which were worth £1 a piece, while even the smallest had a marketable value.

The Ceylon receipts have been £1,117,992, viz.:—

1796 to 1809,	£517,481	1855 to 1863,	£168,470
1814 to 1820,	89,909	1874 to 1881,	155,000
1828 to 1837,	227,132		

The revenue derived from this source is of a very uncertain and precarious nature.

1855,	£10,922 1 0	1859,	£48,215 18 10
1857,	20,363 6 6	1880,	20,015 0 0
1858,	24,120 0 2	1881,	59,953 0 0

Pearl banks dot the coast from the sandy island of Rameswaram southwards to the mouth of the Tambraparni river.

In 1881, about 27 millions of oysters were fished, which were sold for an average of Rs. 33 per 1000, about 3000 men being employed at the work.

About the year 1794, the Madras Government undertook the management of the pearl fisheries on the S.E. coast of the Peninsula, and in the 83 years realized about 12 lakhs of rupees, their annual expenditure being about Rs. 6000.

In the Aru Islands on the coast of New Guinea, the great sources of wealth are the pearl and trepang banks, which lie on the eastern side of the group, and are often several miles in width, being intersected by deep channels, some of which will admit vessels of burden.

The pearl fisheries in Western Australia are yearly becoming more valuable to the colony. In 1875 the value of pearls and pearl shells exported was £65,000; in 1876, £74,143. Some £30,000 worth of pearl shells also were fished up from Champion and Nicholl bays last year, and shipped to Europe for manufacture into buttons, knife-handles, etc. Some valuable pearls are also being discovered in the oysters. One was recently sold at Perth for £215; and another, worn in a scarf-ring, worth nearly as much, being as big as a small nut. Three years before, a pearl valued at £1500 was fished up. Sharks' Bay, in the 25th degree of south latitude, is the locality where the best pearls are found; it is here where the Avicula margaritifera has made a home. A good many Malays, imported from the Dutch islands in the Eastern Archipelago, are engaged in pearl-fishing, but the best divers are the natives of Australia.

Eleven firms are engaged in the trade in Torres Straits, of whom ten have their headquarters at Sydney, employing nearly 100 boats in the work. The imports of pearl shell into N. S. Wales from Queensland and Torres Straits ranged from £2500 in 1871 to £62,468 in 1878. The amount of pearl shell exported in 1878 was 449½ tons, valued at from £60,000 to £70,000. The price of the shell ranges between £120 and £280 per ton. The divers principally consist of Kanaka, Maori, and Malay, only some 20 white men being engaged in the operations, with a few Australian blacks; the divers' earnings seldom being less than £200 a year, while in very good years, such as 1878, they have been known to make £340 each. Although there are a good number of sharks in these seas, the loss of life on the part of the pearl fishers is very small, averaging about two per annum; and it is a curious fact that the sharks almost always disappear as soon as the fishing operations commence.

Captain Moresby says that pearl shell fishing near the islands of Torres Straits is carried on by Europeans, who engage divers from the Loyalty, Solomon, and New Hebrides groups. Large open boats are employed, each with eight or ten divers. The pearl shell sells at Sydney at £150 to £180 per ton. The divers go down in 4 and 6 fathoms water. The mollusc cannot be the Meleagrina, for he says it weighs from 3 to 10 lbs.; the divers bring up one under each arm. The pearls, he says, are few, small, and of poor quality, and become the property of the divers. The mollusc is eaten.

Two thousand years ago, the Romans found pearls in Britain; and in modern times the rivers of Scotland have afforded considerable quantities, though not of the best quality. Several rivers of Saxony, Silesia, Bavaria, and Bohemia afford pearls, and they are also found in two or three Russian provinces. The coast of Columbia and the Bay of Panama have furnished considerable quantities, but they are not considered equal to the pearls of the east in shape or colour. Pearls to the amount of £500,000 are annually brought to Canton; coral is also a part of cargoes from the Archipelago to China.

The larger pearls are considered the more valuable. Cleopatra is said to have dissolved in vinegar a pearl of the value of 150,000 aureos or golden crowns, in the presence of Anthony, and to have drunk it off; but it would have required a larger quantity and stronger acid than any one could have taken with impunity to have done so. Cæsar is said to have paid a sum equal to £50,000 sterling for a single pearl. The fellow drop to the pendant destroyed by Cleopatra is said to have been sawn in two by command of the Emperor Augustus, and used to adorn the statue of Venus.

Tavernier mentions one which an Arab had found in the Parages de Catifa, which the king of Persia purchased in 1633 for £54,000. A pearl from Panama, called Peregrina, bought by Philip II. of Spain, weighed 134 carats. It was pear-shaped, of the size of a pigeon's egg; it was valued at 50,000 ducats. Another, sold by Gorackes? de Calais to Philip IV. of Spain, weighed 126 carats. When the crown jewels of France were examined in 1789, the value of the pearls was estimated at £40,000. Amongst them were, one of $27\frac{6}{16}$ carats, valued at £8000; two of $57\frac{1}{16}$ carats, valued at £12,000; two of $99\frac{6}{16}$ carats, estimated at £2580. France has a magnificent pearl, brought from Berlin by Napoleon. Mr. Hope's pearl, said to be the largest known, measures 2 inches long, 4 inches round, and weighs 1800 grains. One taken from India in 1660, and now in the possession of Princess Youssopoff, weighs 126 carats, and is valued at £16,000.

When the Princess Royal married the king of Prussia's son, she had, amongst other articles, a necklace of 32 pearls. They are said not to have been all of the first kind, nevertheless its cost was estimated at £20,000.

The prices of the smaller-sized pearls, like those of the smaller-sized diamonds, are rapidly increasing. A pearl of 3 grains will cost about £1; a pearl of 30 grains, £110. The Imam of Muscat has one worth £32,000. A few years ago, a pearl was sold in London for £2600, which weighed 116 grains; and in 1878 another of 114 grains was sold. These two were purchased by Baroness Alphonse Rothschild.—*Faulkner; Pliny's Nat. Hist.* lib. xxxii. ch. 31; *Tennant's Ceylon*, p. 371; *Walton's Discourse*, p. 70; *Forrest's New Guinea*, p. 43; *Rumph.* tab. 47; *Da Costa, Conchyll*, vii. p. 4; *Chemnitz*, vii. ix. p. 495; *Gmelin; Linn. Syst.* p. 3300; *Bonan*, i. pp. 83, 84; *Argenvill*, p. 23; *Dampier's Voyage to New Britain, in Harris*, i. p. 124; *quoted in St. John's Indian Archipelago*, i. p. 137; *Woodward's Fossil Shells; E. Gray in Annals of Philosophy*, Nov. 1825; *Jameson's Ed. Journ.* 1826, p. 199; *Rebeyro's Ceylon; Moresby*, p. 31; *Intellectual Observer; Woodward.*

PEARL, ARTIFICIAL. These are largely made in China, for domestic use and for export; also largely in France from the scales of the small fish called ablette or bleak (Cyprinus alburnus). These fishy particles can be kept for a long time in solution of ammonia, and this enables the manufacturers of artificial pearls to carry on a considerable traffic with distant places where the fish is plentiful, the supply from the Seine, though abundant, being insufficient for the purposes of the trade of Paris. Slender tubes of glass are prepared, called girasols; the pearl essence is then mixed with a solution of isinglass, and is blown while hot into each bead by means of a fine glass pipe. The solution is spread equally over the whole internal surface, by shaking the pearls in a vessel placed over the table where the workman sits, and to which he gives motion by his foot. When the varnish is equally diffused and dry, the beads are filled with white wax; this gives them the necessary weight and solidity, and renders them less fragile. They are then bored with a needle, and threaded on strings for sale. The holes in the finer sort are lined with thin paper, that the thread may not adhere to the wax. To produce one pound of scales 4000 fishes are required; but this quantity of scales only yields 4 ounces of pearl essence. The fishes are about 4 inches long; they are sold at a cheap rate in the markets after being deprived of their scales. The value of a pound of washed scales in the Chalonnais is from 15 to 25 livres.

PEARL-ASH. Kien-sha, CHIN. The term is applied to calcined potash. It has a spongy texture, and a whitish pearly lustre. Pearl-ash can be prepared from nitre and charcoal.

PEARL-BARLEY. P'i'mi, CHIN. Husked barley. The seeds rounded, and all the outer coat removed.

PEARL, MOTHER OF.

Mère-perle, . . . FR.	Indong mutiara, MALAY.
Sadf, ... HIND.	Gohur parwar, . PERS.
Madre perla, . . IT., SP.	Sipi muthu, . . . TAM.

Mother-of-pearl used to be sold by the Labbai stone merchants, cut into beads and other ornaments, which at first they called Surat Munnie, owing to their being brought from Surat. The beautiful lining of shells known as mother-of-pearl is manufactured into articles of great beauty. Pearl substance is dissimilar from nacre, and all attempts to make pearl from nacre have failed. The layers of the pearl are concentric, but the nacre is in straight lines; also nacre is harder.

PEARL-OYSTER. The Meleagrina margaritifera is not, however, an oyster proper, but a genus of the Aviculidæ or wing-shell family of molluscs. The pearl-oysters are less oblique than the other aviculæ, and their valves are flatter and nearly equal. They are found in about 12 fathoms water at Madagascar, Ceylon, the Persian Gulf, Swan River, Panama. Seed-pearl is a name given to the small-sized pearls, called in China Yang-chu.

PEARL SAGO, granulated sago meal, sago.

PEARLY NAUTILUS, Nautilus pompilius. Like all cephalopods, it swims backwards. It lives at great depths, down to 200 fathoms.

PEAT is composed chiefly of the decayed fibres of mosses, and is used as fuel. Dr. Falconer obtained very modern peat out of the banks of the Hoogly, a few feet below the surface of the soil, in which were seeds of the Euryale ferox. Peat is generally distributed on the Neilgherries over the entire range of the hill tract. The plants producing Neilgherry peat are different from those of Europe. Large peat bogs occur on the Kundahs, and run as far east as Jakatallah or Wellington. Good peat has been found in the Mid Himalayas at the Sach pass, resembling Irish turf in its character, and in the genera of producing plants. Dr. Angus Smith largely recommended the use of the peat in the Panjab.—*Faulkner; Hooker's Jour.* ii. p. 341; *Cleghorn's Forests of S. India; Cleghorn, P. Rep.*

PEBBLES, the silicious minerals of Cambay, are sold in Europe and America. Scotch, Irish, Chamouni, Niagara, and Isle of Wight pebbles are so called, according to the locality whence brought.

PECHA. HIND. A scarf worn by Lahouli women.

PECHAK. HIND. A reel for gold thread.

PE-CHI-LI, a province of China, the principal length of which extends from 38° to 40½° N. It is bounded by Chinese Tartary on the N., by Ho-nan on the S.W., by the Imperial Sea and Shan-tung on the E., and by Shan-si on the W. Pekin, the capital of the empire, is situate in this province, together with 9 other cities of the first class, 40 of the second class, and 180 of the third class. The Gulf of Pe-chi-li has been surveyed. The tide, being retarded by islands, rises only about 10 feet, but the greater part of the land being only about 3 feet above high-water mark, and there being but few mountains, the rivers are navigable for a considerable distance, notwithstanding their comparatively small size, and in the rainy season they frequently overflow the country. The river Pei-ho experiences a tidal rise 100 miles inland from the bay; it flows through a completely level country, the soil of which is composed of light sand and micaceous particles, blended together with portions of clay and vegetable mould, without a single rock, stone, pebble, or gravel of any kind.—*Sirr's China*, i. p. 410.

PECHWAN. HIND. A hookah with a long twisted pipe.

PEDALIUM MUREX. *Linn.*

Khussuke kabir, . ARAB.	Kaka mulu, . . TAM.
Gokaru, . . . HIND.	Ani-neringi, . . ,,
Gheja-sudu-moostra, SANS.	Yenuga-palleru, . TEL.
Eet-neringi, . . SINGH.	

A succulent, pretty large ramous annual, with small yellow flowers, which appear in the rains. It grows generally over all India, but chiefly on the Coromandel coast, in a moist sandy soil; flowers in the rainy and cold seasons. The fresh plant renders water or milk very mucilaginous, without altering the taste, colour, or smell of the liquid. This thickening disappears in a few hours. Butter-milk is often fraudulently thickened by the use of the leaf; the plant is a good mucilaginous demulcent, much used by the natives as a drink in gonorrhœa, and is useful as a diuretic in urinary diseases. It is considered cool and tonic.—*Riddell; Ains.; Roxb.; O'Sh.; Powell.*

PEDANG. Jav. A kris of Java.

PEDARI, in Hinduism, a fierce Gramma-deva.

PEDDA. Tel. Great. Pedda manushulu, great persons. Chinna peddalu, great and small.

PEDILANTHUS TITHYMALOIDES, the Jew bush of the W. Indies, now common everywhere about Calcutta in hedges. A shrub about 6 feet high, abounding in white bitter milk, known and used in America and W. Indies as ipecacuanha; but in numerous trials no proof was obtained of its efficacy.—*O'Sh.* p. 566; *Mason.*

PEDIR coast on the north part of Sumatra, extends from Point Pedro 40 leagues to Diamond Point. Pedir Point, or Batoo-Pedir, is in lat. 5° 31′ N., and long. 95° 52½′ E.—*Horsb.*

PEDRA BRANCA, or White Rock, in lat. 1° 19′ N., and long. 104° 25½′ E., lies in the middle of the entrance of the Straits of Singapore, 7½ miles west from the east peak of Pulo Aor, on which is erected the Horsburgh lighthouse, lighted 15th October 1851. The tides near it are very irregular in time, velocity, and direction.—*Horsb.*

PEDRA BRANCA, or Tysiug-Cham, a rock on the south coast of Chiua, in lat. 22° 18½′ N., and long. 115° 7¾′ E., 49 miles eastward of Lema Island.—*Horsb.*

PEDRONS, a colouel in Sindia's army, who served under Perron. He raised and commanded the 3d Brigade, and was in commaud of Alighur, and was taken prisoner wheu Lord Lake stormed and took it.

PEDRO-TALLA-GALLA, the highest peak in the mountains of Ceylon, 8280 feet above the sea.

PEENASH. Hind. ? A disease which occurs in man in the north-west of India, caused by the larva of au insect taking up its abode iu the cribriform plate of the ethmoid bone. The larva is small, articulated, and terminates in a spiral tail. The mouth and eyes are very distinct.—*Taruk Chandar Lahori; Moquin Tandon.*

PEEPSA, a troublesome dipterous iusect, very small and black, which floats like a speck before the eye. Its bite leaves a small spot of extravasated blood uuder the cuticle, very irritating if not opened.—*J. B. As. Soc.* No. xxxix. p. 426. Sec Insect.

PEGANUM HARMALA. *Linn.* Syrian rue.

Hurmaro, . . . Dukh.	Islam lahori, . . Hind.
Harmal, Isband, . Hind.	Spelane, . Tr.-Indus.
Harhar? . . . ?	Harmala ruta, ?

This plant occurs in many parts of India, on waste, brokeu grouud. The seeds are used in native mediciue, and called Lahori Hurmul. In the Makhzau-ul-Adwiah, the seed is called Moolie. It is the same as the πήγανον of Dioscorides. P. harmala and Lactuca virosa are both said to possess narcotic properties like opium. The seeds were at one time imported into England. It is principally used as a fumigatory agent to avert evil influences. The plant is considered proper only for sweepers, and uot to be touched by Sikhs or Hindus, but the seeds are burned on a fire if any person enter a room who may have any discharge which could render him unclean.—*Hook. and Th. Fl. Ind.* pp. 83, 115; *Powell*, i. pp. 295, 355, 452; *Royle*, p. 155; *O'Sh.* p. 260.

PEGASUS, a genus of fishes of the sectiou Syngnathidæ. One of the species is known as the flying horse; the flying fish and flying gurnard are other flying fish. P. natans, *Linn.*, 3 inches long, a small fish with two largish fins near the head. P. draconis, *Linn.*, 3 inches long, dark coloured, with two very large fins uear the head.

PEGU. Tib. The yak cow; small, like the cow of Bengal, hair long. Sauh, cross betweeu cow and yak. Saah Yak, produce of cow by yak bull. Ba Sauh, produce of female yak by bull. These are great milkers, better than yak or cow; tail, half-cow, half-yak. Females give young with bulls or yaks, best produce with yaks. Elevation of shoulder less than in the yak. Hair long, but less so than the yak.

PEGU or Pai-gu, an administrative division of the province of British Burma. Area, 9159 square miles; population (1881), 2,323,512. Pegu, its chief town, was captured 3d June 1852, and Pegu district was anuexed by proclamation on 20th December 1852. Pegu has four great mountain ranges: the range separating Arakan from Pegu is about 4000 feet high; the range separating the valley of the Irawadi from that of the Sitang, about 2000 feet high; the Martaban and Tenasserim ranges, about 5000 feet; and the fourth or most easteru separates the Sitang aud Salwin rivers, and extends into the large and compact mountain group of Younzalleu to the south-east of Tounghoo. The area of this lofty region is about 100 square miles, and several peaks rise to 7000 and 8000 feet. The inhabitants consist principally of Burmans, Talaing or Mon, Karen, Karen-nee or Red Karen; Khyin, whose women tattoo their faces; the Yeh-baing of the Yoma range and the Shan, who form separate communities. Pegu is described by European travellers in the 16th century as of great size, strength, and magnificence. Cæsar Frederick was here in the latter portiou of the 16th century. When Aloung-bhura overran and conquered Pegu in the middle of the 18th century, he used every effort to annihilate all traces of Talaing uationality. He destroyed every house in the town, and dispersed the inhabitants.

The Pegu or Zamayee valley lies to the east of Phoungye, from which it is separated by another brauch of the Yoma. This valley is enclosed on all sides by hills; it is about 40 or 50 miles in length from S.S.E. to N.N.W., which is the direction in which it lies, and 20 miles in breadth from E. to W. The Zamayee river is large, and navigable for small craft in the rains for a distance of 60 or 80 miles above Pegu, to the extremity of the valley; and although only about knee-deep in the dry season, it rises 40 feet in the rains. The mountains extending along the N.W. side of the valley, separating it from Phoungye, the Hlaine, and Tharawaddy, are of considerable extent and elevation, and form a part of the Yoma range. On the E. side it is separated from

the plains of Tounghoo and Shoay-gyeen by a lower branch of the same chain, and finally it is enclosed on the S. by a low hilly tract, through which the river passes by a series of small defiles to Pegu. The rains pour down at the rate of 150 inches in the course of a monsoon, and the rivers rise 30 to 40 feet. The silting up of the alluvial deposit at the mouth of the Pyne-Choung creek is doubtless due to this cause. If native tradition is correct, 2000 years ago the sea washed within 8 or 10 miles of the old royal city of Pegu.—*Dr. M'Clelland, in Selec. Records, Govt. of India, Foreign Dept.* No. ix. p. 8; *Imp. Gaz.* vii.

PEH. CHIN. White. Peh-chi, Iris florentina. The root is a favourite cosmetic with the ladies of China. Peh-fen, white lead. Peh-kiang, Zingiber officinale. Peh-kih, a Zingiberaceous rhizome obtained in China, in Shan-si, Kwei-Chau, Kiangnan, used in hæmoptysis, phthisis, and other ailments.—*Smith.*

PEH-HO, written Pei-ho, the White River of China. Below Pekin it and the Sha-ho river join, and the united streams bear the name of Pe-ho, and disembogue into the Gulf of Pe-chi-li. —*Yule, Cathay*, ii. p. 259.

PEH-LAH. CHIN. Insect-wax, a product of the province of Sze-chuen, where the tree on which it feeds, the Peh-lah shrub, flourishes; but though the insect thrives there, it is found necessary to keep up the supply of insects by the constant importation of eggs from beyond the western frontier of the province. The insect is about an inch in length, and of pale-grey colour, and one insect exudes an ounce of wax in the season, of the summer months. The insect is not affected by rain, but when the leaves fall it dies. The wax is then collected and melted in a cloth over boiling water. It is pure white. On the largest cakes in Hankow is often observed written, 'It mocks the frost and rivals the snow.' The price was 40 dollars a pikul, or about 15d. a pound. The vegetable tallow of which candles are usually made melts with great facility; in order, therefore, to prevent them from running, they are coated with a thin crust of finest insect wax, which is extremely hard, and slow to melt, so that it retains the vegetable tallow in a liquid state, and is a clean and economical ingredient.—*Oliphant*, p. 405.

PEHLAVI, an ancient language used in the time of Ardeshir, now called Huzvarish. It was the ancient language of the Persians prior to the Muhammadan conquest by the Khalifs, in A.D. 636. See Pahlavi.

PEH-TIEH. CHIN. A textile fibre from the country of the Uigur.

PEH-TUN-TSZE, also Tun. CHIN. This is a quartzose mineral used by the Chinese in making porcelain.

PEI, or Pey, or Pe, also Pisacha. TAM. A demon. Though Pey and Pisacha are to a certain extent interchangeable, yet people who are skilled in diabolical refinements draw a distinction between them. Pey, they say, means the ghost of a human being that has become powerful and malignant. It has a name and a place of residence, and is systematically worshipped. The Pisacha, on the other hand, they say, has no home, or name, or worship. The Bhuta, they add, is a demon of a higher order, an attendant on the Brahmanical demon-gods. It is likewise worthy of notice that Pey has meanings which Pisacha has not. In combination with names of plants, Pey means wild, uncultivated, useless for human food; in combination with names of animals, it means insane. The use of a word in combination often throws light on its original meaning. It is possible that this application to plants and animals may be only a metaphorical transfer of the older meaning of 'devil.' Still, in either case, the direct derivation of Pey from Pisacha, a word which is never used in this way, may be regarded as improbable. Pei-puja, devil worship, still prevails in Tinnevelly. When the Brahmans in A.D. 1800 (?) introduced the worship of Vishnu into Southern India, they abolished the demon worship as far as their power extended.—*Garrett.*

PEIN-GO. BURM. A boat on the Burmese rivers. See Boat.

PEI-TAN. CHIN. The altar of the earth.

PEKEA, a genus of plants inhabiting Guiana, of the genus Caryocar of modern botanists, and which might advantageously be introduced into India. Caryocar nuciferum bears the Suwarrow or Saouari nuts of commerce. The fruit is in form like an egg, covered with a thick rough brown rind, beneath which is a soft greenish buttery substance. The nut has a stinging surface, and contains a very excellent kernel, from which may be extracted an oil like that from sweet almonds.

P. butyrosa is a large tree with a trunk 80 feet high, and 3 feet in diameter. The berries are covered by a rind 2 or 3 lines thick, and consisting internally of a buttery yellow substance, which melts between the fingers, and which is sometimes used in cooking instead of animal butter. Under the rind lies a stone covered all over with slender stings, which easily separate, and become very troublesome to those who open the stones; within is a kidney-shaped kernel covered with a brownish membrane, and very good to eat; it is commonly served at table. It is called Pekea by the blacks in the neighbourhood of Oyapoco in French Guiana, where it is much cultivated.

P. tuberculosa, *Aublet*, the Caryocar tomentosum of modern botanists, is a very large tree inhabiting the woods of Guiana, where it is called Tatayouba by the Garipou Indians. The fruit consists of greenish compressed drupes, which adhere around a common centre, and contain a single seed of large size, covered with a brownish rugged woody shell, and enclosing a kernel of a soft consistence, and of the most delicate buttery quality. It is much superior to English walnuts, almonds, and filberts. Differs in having no stings upon the surface of the stone of its fruits.

PEKING or Pekin, in lat. 39° 54′ N., long. 116° 32′ E., lies north-west from the entrance of the Pei-ho river, about 114 or 120 miles inward. Pekin means court of the north, and Nankin court of the south, both of them large towns.

Pekin is the present capital of China. It bore the name of Yew-chau, from the Hun dynasty B.C. 202 to the Wu-tae A.D. 950, through five kingdoms or princedoms. During the Liau dynasty, A.D. 1000, it was called Nan-king, because the northern capital was beyond the great wall; but the Hun dynasty called it Pe-king, or northern place, and the Ming dynasty called it Hung-wu. In B.C. 1111, Wan-wang of the Chau dynasty gave his

brother the title of Prince of Yen, who built a city called Yen-king, and the ornamental marblework of this old city forms the foundation-stones of the western portion of the walls of the present city of Peking. About A.D. 1200, Chengiz Khan took Yen-king, and after him his son Oktai put an end to the Kin dynasty. In 1267, Kachilai Khan, nephew of Oktai, and grandson of Chengiz Khan, destroyed Yen-king, and a little to the north-east of its site built another city, called Tatu, or King-ching, or Shun-teen-fu, now called Peking. This is the Kambalu, the city of the Kablai Khan of Marco Polo. The Mongol dynasty subsequently ruled from Peking from A.D. 1280 to 1368, but in 1369 was succeeded by Hung-wu of the King dynasty, who removed the court to Nan-king, where it remained till Yung-lo, the third of the Ming, embellished Peking, and in A.D. 1410 made it his capital, since which time it has continued to be the capital, the centre of all the administrations.

Peking resembles an immense village. It is situated in a large plain, but, from the peculiar formation of the land, it is not to be seen from a distance. The wall is of a considerable height, 35. to 40 feet, and surrounded by a canal which communicates with the Pei-ho, so that a portion of the supplies intended for the capital can reach Peking in very light boats. Peking consists of two cities, separated by a wall, — the Manchu city, Zein-tchau, and the Chinese city, Wai-lo-tchau. In the centre of the former, surrounded by a wall, is the Imperial quarter, Nouan-chau, composed exclusively of buildings set apart for the emperor and his suite, whose roofs, covered with yellow tiles, glitter in the sun's rays like burnished gold. All these edifices, kiosks, and temples are surrounded by gardens, ornamented with lakes and artificial rockwork. In the Manchu city, not far from the Imperial quarter, are the different departments of government for the Manchu employees. To the east of the Manchu city is the hall of examination, similar to the one at Canton, but more spacious. The Chinese city consists mostly of shops. The temples of Heaven and Agriculture are at the south of the city. These are large establishments (surrounded by walls), comprising several buildings in themselves.

The most remarkable spot near Peking is the Hai Dian, the residence of the Bagdochan, his majesty the emperor, situated about seven miles west of the city. The emperor only appears in the capital on occasions of great festivals or sacrifices. The grounds around the palace are laid out in vast gardens. Still farther to the west lie a range of mountains whose summits are crowned with temples more or less picturesque.

At Peking, the temple of the Great Dragon, a circular pyramid, and a Buddhist monastery, the pagoda, and a pavilion in the summer palace, and the Tung Cheu pagoda, all merit notice.

The Tartar city, officially Nei-chhing or Inner town, encloses a second, called Hoang-chhing or Imperial (yellow) town, which no doubt represents the outer palace of Odoric's day, and that includes a third, called Fseu-kin-chhing or Red City, which is the actual residence. The Green Mount, to which Kablai caused remarkable trees of every bulk to be transferred, still stands conspicuous within the palace walls. It is called by the Chinese King-shan, Court Mountain, Wan-su-shan, Ten thousand years Mount or Meishan, Coal Hill, the last from the material of which it is traditionally said to be composed, as a reserve store in case of siege. It rises 160 feet above the natural soil, and on it the last Ming emperor met a miserable end. The lake also (called Thai-i-chi) still exists as a swampy hollow, and the Beautiful Bridge is there in decay. In the Peking or court pronunciation, the Sheng differ materially from those in the Canton and Fu-chien dialects. In the court pronunciation, only four Sheng are heard: in the Nankin, five; and in the Canton and Fu-chien, seven or eight. The Sheng are produced solely by the sinking, rising, or non-alternation of the sound. The Peking dialect holds the same place in China that the London English, as spoken by the educated classes, does in Britain. When the missionaries of the Society of Jesus made their way in the 17th century to Peking, and startled the wise men of the Celestial Empire by their superior knowledge, they found in the eastern part of the city, on the rampart or wall surrounding it, an astronomical observatory, furnished with several old instruments. Father Verbiest so gained the confidence of the Emperor, by repeatedly calculating beforehand the exact length of the shadow which a gnomon would throw at noon, that he was authorized to have six new large instruments made. An account of these he published in 1687. To the old instruments, which had to be removed to make room for his own, he seems to have paid little attention. These instruments, as well as those erected by Verbiest, are, however, even still in existence. Verbiest's instruments, sextant, quadrant, azimuth circle, zodiacal armillary sphere, etc., were copies of the astronomical instruments devised and constructed by Tycho Brahe; but besides these were the two large instruments which had been made during the Yuen dynasty, and four large instruments are said to have been constructed A.D. 1279. In this year, Kablai Khan, the great Mongol monarch, finished the conquest of China, and moved his residence to the new city Taydo, now Peking. This monarch favoured the arts and sciences, and he supported and protected the astronomer Ko Show-King. There are found, thus, in the 13th century, the equatorial armillæ of Tycho Brahe, and an equatorial instrument quite like those with which Tycho observed the comet of 1585. These instruments of Ko Show-King were examined in one of the first years of the 17th century by the Jesuit Matteo Ricci; and in Colonel Yule's translation of The Book of Ser Marco Polo, they are described at length. By them it is proved that the Chinese astronomers anticipated some of the ideas of the great Danish astronomer some three centuries before his time. —*Swinhoe, N. China Campaign; Polo*, i. p. 10; *Exped. de Chine, par P. Varin*, 1862; *Davis*, ii. p. 75; *Timkowski*, ii. p. 154; *Panthier, Chine Moderne*, p. 19, quoted in *Yule, Cathay; Meadows' Desultory Notes.*

PELAN, a very hard, fine, close-grained wood of Ceylon.

PELARGONIUM, a genus of plants usually called geraniums. Many species thrive well in India, and are easily raised from seed. The horse-shoe and oak-leaf bear flowers abundantly, but it is generally remarked that plants grown from English seed do not blossom. Many of the

species thrive well when put out in the garden, but are better for being grown in large pots, and if so placed as only to receive the morning and evening sun, will blossom most abundantly. The tubers of Pelargonium triste are eaten at the Cape of Good Hope. Pelargonium odoratissimum, *Aiton*, a perennial trailing herb of S. Asia, yields by distillation a fragrant oil from its leaves.—*Von Mueller; Riddell.*

PELASGI, ancient races whose language and civilisation are supposed to have been the prototypes of Hellenism and Ionianism. Pococke derives this term from Pelasa, the ancient name of the province of Behar. Pelasgus, the ancestor of the Pelasgi, is said by Asius, the Greek poet, to have sprung from the black earth, B.C. 700.

PELICAN, a genus of birds of the family Pelecanidæ. The pelican is said to breed on palmyra trees on the Godavery, in the midst of populous villages, within reach of the haud. Pelicans and a species of stork have for loug built their nests iu a tope uear the village of Pulguralapully, about 39 miles N.E. of Cuddapah. Dr. Jerdon mentions a pelicanry in the Carnatic, where for ages past the pelicaus had built their rude uests on rather low trees in the midst of a village, undisturbed by the presence of the people. The pelican is a favourite food with the Lohanna of Sind. Pelicans feed chiefly on fishes, but do not dive for their food. The Pelicanidæ of the E. Indies are as under:—

Pelecanus crispus of E. Europe.
P. inflatifrons, *Blyth.*
P. Javanicus, *Horsf.*, lesser white pelican.
P. mitratus, *Licht.*, crested pelican.
P. onocrotalus, *Linn.*, European pelican.
P. Philippensis, *Gmel.*, grey pelican.

P. ouocrotalus is a regular visitant to India during the cold weather, sometimes appearing in considerable flocks, and clearing whole tanks and jhils of their fish, to the dismay of the fishermen. They form a dense line across the tank, and regularly hunt it from oue end to the other.

P. mitratus is spread through S.E. Europe, part of Africa and Asia. P. Philippensis is the most abundant in Iudia. P. Philippensis is used by the fishermen in some parts of the E. of Bengal, as a decoy in catching certain kinds of fish (Colisa and Anabas), which are attracted, it is said, by the oily secretion exuding from the birds' skins. They are tied to the boat, sometimes with their eyes sewn up.—*Adams; Blyth in B. As. Soc. Jo.*, Nov. 1856; *Jerdon.*

PELLICULARIA KOLEROGA. *Graham Anderson.* The fungus causing leaf-rot in coffee leaves.

PELLITORY, Anacyclus pyrethrum.

Akurkurra, . . Arab.	Pietro, Parietaria, . It.
Sesin, ... Chin.	Akkaraputta, . Singh.
Zahn-wurtzel, . . Ger.	Akkarakarum, . . Tam.

A plant of N. Africa, of the Levant, Barbary, Persia, and the S. of Europe, cultivated for its root, which is used iu medicine as a masticatory and a stimulant. The root is without smell, and when dry it is some inches long, tough, fibrous, of the thickness of a quill, externally grey, internally white. Pellitory is to be found in most Indian bazars, it being an export from Mocha to Bombay. The Vytians prescribe an infusion along with the lesser galangal and ginger as a cordial and stimulant in the lethargic stage of typhus fever, and in paralytic affections. They also use it as a masticatory for the toothache. — *Ben. Phar.; Faulkner; Ains. Mat. Med.*

PELLY, Colonel Sir LEWIS, author of Journey from Persia to India; Account of the Province of Fars; Letters on Herat, Bokhara, Bandar Abbas; Notes ou Lingah, Kishm, and Bandar Abbas; On the Coast between Bandar Abbas and Cape Jashk; On Bushahr and Shiraz; Ou Bushahr and its Districts.

PELOPÆUS, or dirt dauber, a genus of neuropterous insects, constructs earthen cells side by side, and sticks them on walls and rafters. Pelopæus spinolea is the wasp-mason.

PELTIPHORUM LINNÆI. *Bentham.* Cæsalpinia Braziliensis, *Linn.*, a small tree which yields the orange-coloured Brasilletto wood.—*Mueller.*

PELUSIUM, an ancient port on the Red Sea.

PEMBANOO, a root of Arakan, from which an arrow-root is prepared, and sold at four rupees the maund. The root is obtainable in large quantities.

PEMBERTON, Captain R. B., author of a Mission to Bootan, As. Jl., 1840, xxxi. part 1, 81; also a Report on the Eastern Frontier of British India, Loud. Geo. Trans., 1838, viii.

PEMMICAN, preserved meat, baked dry and reduced to powder.

PEMPHERIS MOLUCCA. *Cuv.* Length, 3½ inch. Inhabits Sea of Penang, Moluccas, Batavia, and Japan. Its air-vessel is large and thick.—*Cantor.*

PEN.

Plumes a écrire, . Fr.	Penne da scrivere, . It.
Schreibfedrren, . . Ger.	Pera stwoli, . . . Rus.
Kalm, Guj., Hind., Pers.	

Pens for writing are formed of the quills of the goose, swan, fowl, or other bird. Metal pens, now extensively used, are manufactured in vast quantities at Birmingham, London, and Sheffield, the materials used being steel, copper, brass, gold, zinc. Pens for writing in the Arabic and Persiau and Deva-nagari characters are made of reeds, and the pens or styles for writing on palm leaves are points of steel.

The reed pens for writing Persian, Urdu, and other characters are called—

Beroo, Burro, . Hind.	Pedda relloo, . . Tel.
Perin nanil, . . . Tam.	

The reed pens used by all Muhammadans iu writing the Arabic or Persian character, are the product of the Saccharum sara, a thin, hollow-jointed reed. Persian reeds are most esteemed, being tougher, and capable of being used much longer than the Indian reed. The Arundo karka, *Linn.*, is also similarly used in Sind. Jeremiah, xvii. 1, says,—'The sin of Judah is written with a pen of iron.' In many parts of British India and in Burma, iron styles are alone used, forming the letters by making incisions into the palm leaf. Books thus written are very durable. This style is broad at the top, and at one side is sharp like a knife, to prepare the palm leaves.—*Ains. Mat. Med.* p. 194.

PENÆA MUCRONATA.

Anzerut, . . . Arab.	Sarcocolla, . . . Lat.

A gum-resin obtaiued from the bark of the Penæa mucronata, brought chiefly from Kābul, is sometimes called Sarcocolla. It is taken as a laxative both in powder or in infusion. It formerly was used in Europe for wounds.—*Cat. Ex.*, 1862.

PENÆUS, a genus of the crustacea, viz.—

Penæus canaliculatus, *Edws.*, Celebes, Mauritius.
P. monoceros, *Edws.*, India.
P. Indicus, *Edws.*, Coromandel.
P. monodon, *Edws.*, Indian coasts.
P. affinis, *Edws.*, Malabar.
P. brevicornis, *Edws.*, Indian coasts.
P. crassicornis, *Edws.*, Indian coasts.
P. styliferus, *Edws.*, Bombay.

PENANCE, called Tapas, practised by Hindu gods, Rishis, Rakshasas, and men, to obtain boons.

PENANG, also called Pulo-Penang and Prince of Wales' Island, an island in lat. 5° 25′ N., long. 100° 19′ E., is about 15 miles in length, and from 7 to 12 miles in breadth. It contained a population of about 150,000 in 1871,—Chinese, 22,720; Malays, 20,110; Indians, 71,100; and Europeans, 513. Until the year 1870, it was a dependency of the Bengal presidency, under the Governor of Singapore. Bell Retiro, or Government Hill, 4½ miles west of the fort, is 2550 feet above the level of the sea; and West Hill, lying a mile farther west, is 2713 feet. Nothing can exceed the beautiful luxuriant vegetation of this island, which was an uninhabited forest, when given by the king of Qedah to Captain Light in 1785, as the marriage portion of the king's daughter, whom Captain Light married; but it was sold to the British by the king in 1800. The traveller looks down from the summit of Penang Hill on Province Wellesley, opposite the Strait. Malacca is 250 miles from Penang, and Singapore half as much farther. Province Wellesley is 24 miles long by 8 in breadth. Until lately, Penang supplied the London market with nutmegs, but cocoanut trees have taken their place. Tapioca, for the American market, has been grown to a great extent in the province, realizing fortunes to the planters. Water is brought by pipes into the town from the base of a hill six miles off, and there is a plentiful supply throughout the year. Penang, like the other settlements in the Straits, is a free port. —*Woods of Penang, by Colonel Frith; Rambles in Java; Wathen's Voyages*, p. 144.

PENANG LAWYER, a walking-stick, a young plant of the Licuala acutifida, *Mass.*, the Plass tikoos of the Malays. It is a small palm, attaining generally only 3 or 5 feet, but in exceptional cases from 15 to 20 feet, in height. The Penang lawyers are prepared by scraping the young trunk with glass, so as to wholly remove the epidermis and nothing more, the inside being the substance of rattan. It is on this account that the smaller thin sticks are so much more sought after than the larger thicker ones, and are so rare. The sticks are ultimately straightened by fire, and then polished. They are imported into England as walking-sticks. About 400 reached Liverpool annually, from 1851 to 1855. Other species of Licuala are longipes, paludosa, and peltata.—*Seem.*

PENATES, amongst the ancient Romans, were gods corresponding to the Pitri of the Hindus. A knowledge of their gods is useful in explaining the Hindu deities. Amongst the Romans the gods were arranged into Dii majorum gentium, and Dii minorum gentium. The Dii majorum gentium were the great celestial deities, and those called Dii selecti. The great celestial deities were twelve in number,—Jupiter, Juno, Minerva, Vesta, Ceres, Neptune, Venus, Vulcanus, Mars, Mercurius, Apollo, and Diana.

The Dii selecti were eight,—Saturnus, Janus, Rhea, Pluto, Bacchus, Sol, Luna, and Genius, the dæmon or tutelary god, who was supposed to take care of every one from his birth, during the whole of life.

Nearly allied to the genii were the Lares and Penates, household gods, who presided over families.

The Lares of the Romans appear to have been the manes of their ancestors; and there were Lares domestici et familiares, campitales et viales, militares et marini. Small waxen images of them were made, and covered with dog-skin, and at festivals brought to the hearth and sacrifices offered to them.

The Penates were of two kinds, Patrii penates familiaresque. Those of the ancestors were worshipped in the innermost part of the house, which was called penetralia, also impluvium or compluvium. The city and temples were under the protection of the Publici penates, and these were worshipped in the Capitol.

The Dii minorum gentium were Dii indegetes or heroes, of whom were Hercules, Castor and Pollux, Æneas and Romulus, as also the Roman emperors.

The gods called Semones were Pan, Faunus, Sylvanus, Vertumnus, Pomona, Flora, Terminus, Pales, Hymen, Laverna, Vacuna, Averruncas, Fascinus, Robigus, Mephitis, Cloacina; also Nymphs in the earth, Orcades in mountains, Dryades in woods, Hamadryades, Napææ, Naiades, Nereides, and Oceanides; and each river had a particular deity. The Semones also included the infernal judges, Minos, Æacus, and Rhadamanthus, Charon, and Cerberus; also the virtues and affections, such as Piety, Faith, Hope, Concord, Fortune; also foreign deities, the winds and the tempests, Eurus, Auster or Notus, Zephyrus, Boreas, Africus, Corus, Æolus, and Auræ.

The Romans worshipped some gods that they might do them good, and others that they might not hurt them, as Averruncas and Robigus. There was both a good Jupiter and a bad; the former was called Dijovis or Diespiter, and the latter Vejovis or Vedius. But Ovid makes Vejovis the same with Jupiter parvus or non magnus.—*Adams' Roman Antiquities.* See Hindu; Pitri.

PENCIL.

Surme-ka-kalm, . HIND. | Kalam, . . . MALAY.

A leaden pencil in the Russian language is Karan-dash, supposed of Turkish origin, Kara meaning black, and Dash a stone.—*De Bode's Tr.*

PENDIENG. JAV. A girdle of small silver plates.

PENDOPPO. JAV. An awning formed of leafy branches.

PENEBARROO. SINGH. A wood of the eastern province of Ceylon. A cubic foot weighs 61 lbs., and it is said to last 50 to 90 years. It is used for rafters, etc. Fences made of the sticks of this tree are the most durable of all.—*Mr. Mendis.*

PENG-LAY-OUN. BURM. In Amherst, a timber used for spear handles; a most valuable wood, compact, homogeneous, very heavy, of a deep brown colour and fine grain, having no tendency to split, and exempt from attacks of insects. In Tavoy is a wood of this name, described as a strong, rough, red wood, like Acacia serissa.—*Cat. Ex.*, 1851; *Mr. Blundell.*

PENGOLIN, Manis aurita of Sikkim, M. Javanica of Malayana, and M. pentadactyla of all India, species of the Edentata, the scaly ant-eaters. The Malay name of Pengolin is indicative of its faculty, when alarmed, of rolling itself up into a compact ball, by bending its head towards its stomach, arching its back into a circle, and securing all by a powerful fold of its mail-covered tail. The Singhalese regard it with aversion, one name given to it being the Negombo (devil).—*Tennant; Jerdon.*

PENGUIN, of the antarctic circle, is the Aptenodytes Fosteri. The jackass penguin is the Speniscus demersa; it is an ugly bird.

PENICILLARIA SPICATA. *Swartz.*

Panicum spicatum, *Roxb.* | Holcus spicatus, *Linn.*

Muttari, . . . MALEAL.	

This is grown over all British India, and up the Sutlej valley between Rampur and Sungnam to an elevation of 5000 feet. Its grain is reckoned more delicate and of a less heating nature than sorghum; like it, it is made into cakes and porridge. The natives of some parts of Africa prepare from this grain a kind of malt, which they use for making beer. Its chemical composition averages—moisture, 11·34; nitrogenous matter, 10·34; starchy matter, 73·03; fatty or oily matter, 3·29, and mineral constituents, 1·99.

PENINSULA. In the South and East of Asia there are several peninsulas, as that of Arabia, the peninsula of Gujerat, the peninsula of India, and that of Malacca. India, south of the Vindhya Range and of the Nerbadda river, is termed the Peninsula by the British, but the Hindus and Muhammadans call it the Dakshana, Dekhan, or South. At its broadest part, in lat. 22° N., it is 1200 miles across, but it tapers away towards the south, and in lat. 7° 40′ N. ends in the promontory of Cape Comorin, the Arabian Sea washing its western and the Bay of Bengal its eastern shores. A range of mountains runs along each side of this peninsula, parallel with the coast, leaving between them and the sea, in their whole length from north to south, a belt of low level land from 20 to 50 miles in breadth. These two mountain ranges are termed the Eastern Ghats, and the Syhadri mountains or Western Ghats, and have an average elevation of 1200 to 3000 feet respectively, but solitary mountains and spurs from the western range attain an elevation of 6000 and 8000 feet above the level of the sea. The Western Ghats, on the side next the sea, are scarped, and at places sink precipitously 2000 feet to the level belt below. The Eastern Ghats do not fall so abruptly; but both ranges are covered with forests, through which a few passes lead from the coast into the interior of the country, which is an upraised table-land from 1200 to 3000 feet above the sea, the general declivity of the land being from west to east. To the north of Coimbatore the peninsular chain rises abruptly to 8000 feet as the Neilgherry Range, and continues northward as the mountains of Coorg. The rainfall, which is great on the western coast, is less on the Neilgherries, being 100 inches at Dodabetta and 64 inches at Ootacamund. Farther north, in the Nagar district of Mysore, there are many rounded or table-topped hills, 4000 to 5000 feet high, often cultivated to that height, and rising in some places to upwards of 6000 feet. The climate of the western part is very humid, and particularly so at the town of Nagar or Bednor, 4000 feet high, on a spur of the western chain, where the rain is said to last for nine months. The Peninsula of India is held by the independent kingdoms of Travancore, Cochin, Mysore, Hyderabad, Kolhapur, with smaller feudatory states; but the larger part is under the British, forming the Madras and Bombay Presidencies, the Central Provinces and Orissa being under Bengal, the British armies being distributed over the whole of the Dekhan, and branching out into some of the adjoining provinces; thus the Bombay Presidency has its troops in Gujerat, Cutch, and Sind on the north-west of the Peninsula, as also at Aden, and the Madras troops hold British Burma.

Gneiss, granite, syenite, and trap form the prominent features of the Dekhan rocks; clayslate, mica, chlorite and hornblende schists, sandstones and limestones, with fossils of a post-oolite age, being the stratified rocks through which they burst. The greenstone is supposed by some observers to decompose into a deep black earth, light when dry, and cracked and rent by the sun in the hot season, but forming a tenacious soil in the rains, rendering marching almost if not wholly impracticable. It is called Regur in the Dekhan, and is the 'cotton soil' of Europeans, by many of whom it is regarded as indicating an unhealthy locality. The granite rocks, on the other hand, decompose into a red sandy soil, which is generally hard, and as it allows a rapid percolation of water and quickly dries, it is less fertile, but is considered more favourable to health.

Gold is found on the Neilgherry Hills in the numerous streams of the Malabar collectorate; in the Dharwar, Bellary, Cuddapah, and Madura collectorates; in Mysore, in the Northern Circars, and is everywhere washed for; diamond, corundum, spinel, ruby, garnet, topaz, tourmaline, and beryl also occur.

The Tamil-speaking inhabitants of the Coromandel coast can make themselves intelligible when they get into the districts on the western coast of the Peninsula, where Malealam is vernacular. They number about 14 millions of souls, and are largely engaged in agriculture. They have several extensive landed proprietors, and from prehistoric times had several independent kingdoms. One of these was the Pandya, another the Chola, regarding which little has come down to the present day. The several capitals of the Chola were at Conjeveram, Woriur, Combaconum, Gangondaram, Tanjore.

The people speaking the Telugu call themselves Teling. They are about 13 millions in number, and occupy the eastern region between lat. 12° and 18° N.

The people who speak Canarese are about nine millions in number, chiefly in the centre of the Peninsula; they are a tall and singularly graceful race, with whom a community something akin to polyandry is very prevalent. In this they somewhat resemble the Kandyans of Ceylon, the Coorg race, and the Nair of Travancore.

The Malealam language is spoken in the south-west of the Peninsula by about 2½ millions, and

the Tulu on the seaboard, somewhat to the north, by about 100,000 or 150,000.

The people speaking the Mahratta language have widely emigrated from the ancient Maharashtra, but the bulk of them are to be found occupying between lat. 17° and 21° N.

The peninsula of Gujerat forms the province of Kattyawar, is well defined by the Gulfs of Cutch and Cambay, with the Runn on the N. and E., and the sea on the south. It contains 19,850 square miles, and Col. Jacob estimated its population at 1,475,685.

The great triangular plateau which forms the Peninsula of India, in the later tertiary period was an island separated by an arm of the sea (now forming the valleys of the Ganges and Indus) from the Himalayan and Burmese countries.—*Wallace*, i. p. 316; *Findlay*. See Malay Peninsula.

PENNAKONDA, in the Bellary district of the Madras Province, in lat. 14° 5′ 15″ N., long. 77° 38′ 10″ E., with a population in 1871 of 5106. It was once an important fortress, to which the Vijayanagar rulers retired after the battle of Talikot, A.D. 1565.—*Imp. Gaz.*

PENNAR, called also Pinakini, and written Pennair. The name of two rivers in South India, which both rise north-west of Nundidrug in Mysore, and flow eastwards through the Carnatic into the Bay of Bengal. Pennar or Pennair is the name adopted by European geographers; but Pinākini, apparently derived from the bow of Siva, is that by which these rivers are known to the Canarese inhabitants of Mysore. The northern river falls into the sea 19 miles south of Nellore, and the southern, or Dakshana Pinākini, disembogues near Fort St. David, a few miles north of Cuddalore. Both are utilized for irrigation.

PENNISETUM CENCHROIDES. *Rich.*

Dhaman, Kurkan, . Hind. | Taura, . . . Tr.-Ind.

Common in many parts of the Panjab plains, and reckoned one of the best of all the wild grasses for forage, both for cows and horses. Near Multan its seeds are swept up from the ground to be used as human food.—*Stewart; Powell.*

PENNISETUM ITALICUM. *R. Br.* Kangni, Hind. German millet or Italian millet, Panicum Italicum. Seeds small, delicate, and wholesome, used as food.—*Powell*, i. p. 383.

PENNISETUM TYPHOIDEUM. *Rich.* Bajra.

Penicillaria spicata, *Willde.* | Panicum spicatum, *Delile.*

This ripens its millet in about three months. Its stems are thick, and reach a height of six feet. The maximum length of a spike is about 18 inches; and Colonel Sykes counted on one plant 15 spikes, and occasionaly 2000 seeds on one spike. It requires a rich and loose soil. It furnishes a valuable green fodder, and a good hay.

P. cereale, *Trin.*, of China, furnishes a millet for cakes.—*Von Mueller.*

PENNYROYAL, Mentha pulegium. A mint used in cookery as seasoning and in distillation, propagated by division of the plant.

PENTACME BURMANICA. *Kurz.* A timber tree of British Burma.

PENTACME SIAMENSIS. *Kurz.* Shorea Siamensis, *Miq.*, *Hook.*, a timber tree of Prome; yields a useful resin.

PENTAPETES PHÆNICEA. Its flowers yield a mucilaginous cooling juice, used in special diseases; considered to be astringent. It is an erect growing plant; flowers axillary, large, expand at noon, of a bright red colour, and drop by daylight next morning.—*Powell*, i. p. 333; *Riddell; Voigt.*

PENTAPTERA ARJUNA. *Roxb.*

Terminalia arjuna, *W. and A.*

Touk-kyau, . . . Burm. | Arjuna, Arjunsadra, Duk.

Is a common forest tree; the bark is used internally by the natives as a tonic, and is also applied externally as a vulnerary. It and P. glabra grow in all the teak forests of Burma. Their dark-brown timber is as strong as teak, and usually attains a girth of from seven to nine feet, with height in still more lofty proportion. This timber has never been fairly tried for ship-building.—*Riddell; M'Cl.; Hind. Th.* ii. p. 100; *Roxb.; Voigt.*

PENTAPTERA TOMENTOSA. *Roxb.*

Terminalia tomentosa, *W. and A.*

Asun, Beng., Duk., Panj.	Kumbuk, . . . Singh.
Maddi, ... Can.	Maratha, ... Tam.
Peea-sal, . . . Dukh.	Karoo maratha, . . ,,
Sain, Asun, . . Panj.	Nalla maddi, . . . Tel.

This tree grows in the Peninsula of India and in the north-west of British India. It has thick leathery leaves; fruit smooth, five winged. It grows to be a large timber tree of much utility, flowering time April and May; the seed ripens in the cool season. The wood is very tough, and used for making shafts to gigs, etc. Is very hard and heavy, and not so stiff as teak. In the Panjab it furnishes an excellent, hard, and compact timber, well suited for building and railway purposes. It is found in Kangra in sub-Himalayan forests, and is not uncommon as far west as the Ravi, but not of a large size. It is well suited for avenues and plantations in the east of Panjab.—*Rohde's MSS.; Powell; Roxb.; Voigt.*

PENTATEUCH, from the Greek Pente, five, and Teuchos, a book, the first five books of the Old Testament. Muhammadans allege that the Pentateuch, the Psalms, and the Gospels in use with Christians have been greatly altered. The five books of Confucius are the Shu-king, a book of history; Lee-king, book of rites;—? or book of odes; Yih-king, or book of changes; and the Chun Ts-eu, or spring and autumn annals.

PENTATROPIS SPIRALIS. *Don.*

P. microphylla, *Roxb.*	Asclepias microphylla, *R.*
Oxystelma caudata, *Ham.*	A. tenuiflora, *Roxb.*
Van-veri, ... Beas.	Pula-pala, ... Tel.
Perpadagum, . Maleal.	Amhar-vel, . Tr.-Ind.
Pushpi, ... Panj.	

Grows throughout British India; flowers used medicinally.—*Stewart; Roxb.*

PEN-TS'AU of China, a celebrated work on the materia medica in use by Chinese physicians. —*Smith.*

PEON. Hind. A footman, a foot soldier; amongst the British in India, an office servant. The chess term of pawn is derived from it.

PE-OO. Hind.? Mahr.? A grain-pit beneath some part of a house, in which rice is lodged. It is apt to germinate if there be heavy rain.—*Marshall.*

PEOR, the Greek phallus, the Roman priapus, the Hindu lingam.

PEORI. Hind. Indian yellow; a pigment used in lumps; a precipitate, collected and dried from the urine of cows which have been fed on mango leaves. 'Wilayiti peori' is chrome yellow (chromate of lead).—*Powell.*

PEPPER.

Filfil (Abiad, white; Aswad, black), . ARAB.	Sahan, . . . PALEMBANG.
Micha, ... BALI.	Perez, Peretz, . . RUS.
Hu-tsiau, ... CHIN.	Maricha, . . . SANSK.
Mirch, ... HIND.	Gammiris, . . . SINGH.
Nero (black), . . . IT.	Mulagu, . . TAM., TEL.
Chabai, . . . MALAY.	Beber, ... TURK.

There are several peppers, black, white, and long pepper, melegueta pepper, cayenne or Chili pepper, Guinea and Jamaica pepper, and cubeb pepper, the last used as a medicine, the others in food as condiments. The black pepper of commerce is obtained from the dried unripe fruit (drupes) of Piper nigrum, a climbing plant common in the East Indies. Three kinds of black pepper are distinguished by wholesale dealers. *Malabar pepper*, the most valuable, is brownish-black, free from stalks, and nearly free from dust. *Penang pepper* is brownish-black, larger, smoother, free from stalks, but very dusty. It is sometimes used in England to manufacture white pepper. *Sumatra pepper*, the cheapest sort, is black mixed with stalks, and contains much dust. Under the name of Sumatra pepper, some dealers include the Penang or brownish-black sort, and the black Sumatra sort. Three kinds of varieties of white pepper have also been distinguished. *Tellicherry* pepper, which is of two kinds; large fine Tellicherry pepper is larger and whiter than any other description of white pepper, and fetches a higher price; small or coriander-like pepper is shrivelled. *Common white pepper* comes from Penang by Singapore; it is round, and not shrivelled; its value depends on its size and whiteness. *English bleached*, or white pepper. When the two preceding sorts are scarce, brown Penang pepper is bleached. The yellowest and largest are chosen for this purpose, for neither an expensive nor small sort would pay.

	Imported into India.		Exported from India.	
Year.	Lbs.	Rs.	Lbs.	Rs.

1879-80,	9,040,141	16,00,224	3,164,701	6,42,853
1882-83,	5,168,286	12,36,707	9,265,411	23,06,721

Almost all from the Straits. A small quantity from Ceylon.

Pliny states that the price of pepper in the market of Rome in his time was, in English money, 9s. 4d. a pound. The pepper alluded to must have been the produce of Malabar, the nearest part of India to Europe that produced the article, and its prime cost could not have exceeded the present one, or about 2d. a pound. After the great discovery of Vasco da Gama, the price of pepper fell to about 1s. 3d. a pound, a fall of 8s. 1d. from that of the time of Pliny, and of 4s. 9d. from that of the Muhammadan Arabs, Turks, and Venetians.

Black Pepper.

Hu-tsiau, ... CHIN.	Lada, Lada-itam, MALAY.
Kala mirch, . . . HIND.	Maricha, ... „

White Pepper.

Safed mirch, . . . HIND.	Lada puteh, . . MALAY.

Black pepper and white pepper are the fruit of the Piper nigrum, the former being the whole berry dried, while the white pepper is the ripe berry deprived of its skin by soaking it in water, rubbing it off, and drying it in the sun. This has less of the peculiar virtues of the spice than black pepper, and is not so generally used. Pepper is a warm carminative stimulant; it is used largely in Europe, but in the south and east of Asia, the capsicum, chilli, or cayenne spice, is preferred. It strengthens the stomach, gives tone to the system, and assists digestion. In the Northern Circars of the Madras Presidency, the Piper trioecum, an excessively pungent pepper, is largely used as a substitute for black pepper; in America, the plants Peltobryon longifolium, Serronia jaborandi, are similarly used, also at the Cape, Cocobryon Capense.

The black pepper vine is indigenous to the forests of Malabar and Travancore, and for centuries has been an article of exportation to European countries from that coast. Although growing in other countries of the east, Malabar pepper is considered to be the best. Its cultivation is very simple, and is effected by cuttings or suckers put down before the commencement of the rains in June. The soil should be rich; but if too much moisture be allowed to accumulate near the roots, the young plants are apt to rot. In three years the vine begins to bear. They are planted chiefly in hilly districts, but thrive well enough in the low country in the moist climate of Malabar. They are usually planted at the base of trees which have rough or prickly bark, such as the jack, the erythrina, cashew-nut, mango tree, and others of similar description. They will climb about 20 or 30 feet, but are purposely kept lower than that. During their growth it is requisite to remove all suckers, and the vine should be pruned, thinned, and kept clear of weeds. After the berries have been gathered, they are dried on mats in the sun, turning from red to black. They must be plucked before quite ripe, and if too early they will spoil. White pepper is the same fruit freed from its outer skin. In this latter state they are smaller, of a greyish-white colour, and have a less aromatic or pungent taste. The pepper vine is very common in the hilly districts of Travancore, especially in Cottayam, Meenachel, and Chengana-cherry districts, where, at an average calculation, about 5000 candies are produced annually.

To prepare white pepper, the berries are allowed to ripen and become of a beautiful bright red colour; the outer or fruity skin becomes tender and soft, and is of a sweetish taste. When plucked, the berries are collected in loosely woven bags, and steeped for a day or two in water, either hot or cold. This serves to loosen and detach the red pulpy seed covering, and when taken out and dried in the sun, a little hand-friction is all that is required to clear the seeds. They are then winnowed, and thus made ready for the market.

Long pepper, the Chavica Roxburghii, or Piper longum, is another cultivated species. It is readily propagated by cuttings. The stems are annual, and the roots live for several years, and, when cultivated, usually yield three or four crops, after which they seem to become exhausted, and require to be renewed by fresh planting. The berries of this kind of pepper are lodged in a pulpy matter, like those of P. nigrum. They are first green, becoming red when ripe. Being hotter when unripe, they are then gathered and dried in the sun, when they change to a dark-grey colour.

Japan pepper, Xanthoxylum (Fagara) piperitum, *D.C.*, is used as a condiment in China and Japan. The fruit capsules are remarkably fragrant when

bruised, from a pungent aromatic principle residing in the tubercles of the rind.

Ethiopian pepper is the fruit of Xylopia aromatica.

The seeds of some species of fennel-flowers (Nigella sativa and arvensis), natives of the south of Europe, were formerly used instead of pepper, aud arc said to be still extensively employed in adulterating it; and a substitute for pepper is the fruit of Tasmania aromatica in Van Diemen's Land. Wild pepper, Filfil burree, the fruits of several species of Vitex.—*Ben. Ph.* p. 30; *Hogg; R. Brown; Eng. Cyc.; Drury's Letters from Malabar; Drury's Useful Plants; Faulkner; M'Culloch's Dict.; Simmonds; Smith.*

PEPPER COAST, the liue of coast in Sumatra from Ayer Bangie to the north point.

PEPPERMINT, Mentha piperita, an aromatic herb, raised from seed. This plant might be grown for distillation on the hills of India, and become a valuable article of commerce; grows freely on the plains.—*Jaffrey.*

PEPPER ROOT.

Filfil-mooeh, . . . Arab.	Pippali-mula, . . Sansk.
Pipili-mool, . . . Hind.	Tipili moolum, . . Tam.
Granthika, . . Sansk.	

The root of the long pepper is a favourite medicine of the Hindus; it possesses the virtues of the berry, but in a weaker degree, and is prescribed by them in cases of palsy, tetanus, and apoplexy. Pepper root is procurable in most Indian bazars.—*Ainslie.*

PEPUL. Hind. Urostigma religiosum or Ficus religiosa. Its Sanskrit uames are Chaladala, quivering branches; Peppala, the preserver; Kungarasan, elephant's food; Ashvatter, not durable. The trunk, when old, has many ridges and hollows, as if many trunks were united; the bark is deemed a good tonic.

PERA. Hind. A kind of sweetmeat, made in round cakes.

PERAK territory, on the Malay coast, has a coast line of 100 miles, the depth inlaud being about 50, and the Dending and Sambilan islands belong to its chief. On the banks of the Perak river are situated the bulk of the inhabitants, consisting of Malays and a few Chinese, who, with some wild and wandering tribes of the Malayan race in the interior, prey upon each other on land aud sea. The pirates of Laroot aud Perak infested the seaboard for fully half a century after the settlement of Penang. Perak is said to produce graphite, galena, antimony, iron, tin, gold, diamonds, and garnets.—*M'Nair*, p. 25.

PERAK. Hind. A head ornament, worn by married women in Spiti, Ladakh.

PERCH, Perca fluviatilis, is the most beautiful of the fresh-water fishes of Europe, and it exteuds into Asia. It is very prolific, and 250,000 eggs have been counted in one of middle size.

PERE PONS, a native of France, who resided in Iudia. Iu A.D. 1740, he sent home a report on Sanskrit literature.

PERGANNAH or Pargana, in the Muhammadan land revenue system, a subdivision of a subah. Pergannah, under the revenue system of the Hindus, was a district of 100 villages. It is still recognised throughout Northern India, but the number of villages greatly varies, aud the officers employed in it are only known by their enjoyment of lands or fees hereditarily, or by being the depositaries of all registers and records connected with the land. The province in Bengal called the Twenty-four Perganuahs was acquired by treaty from the Nawab of Bengal on the 20th Dec. 1757. In the ancient Hindu system of government, the administrative officers are ordered to be lords of 10, 100, and 1000 towns, but the Pergannah alone corresponds to the 100 towns. The townships everywhere remain entire, and arc the indestructible atoms from an aggregate of which the most extensivc Indian empires have been formed.

PERGULARIA ODORATISSIMA. *Smith.*

Asclepias odoratissima, *Roxb.*	Cynanchum odoratissimum, *Lour.*
Ye-lan-hiang, . . Chin.	Sita manoharam, . . Tel.

A creeper with a climbiug woody stem, cracked bark, flowers yellow and very fragrant, well adapted for covering trellis work. It furuishes a perfume. Often cultivated in the gardens in Moulmein. P. pallida is described by Wight.—*Jaffrey; Mason.*

PERICLYTE. The Muhammadan doctors so read the word Paraclete. Periclyte means illustrious, and they quote it from the gospel of St. Barnabas, of which the Moriscoes in Africa have a Spanish translation.—*Sale's Koran*, p. 9; *Chatfield's Hindustan*, p. 271.

PERICOPSIS MOONIANA. *Thw.*

Dalbergia Mooniana, *Thw.* | Nadoong, . . . Singh.

This large and very valuable timber tree is common about Colombo and the southern and central parts of Ceylon at no great elevation. The timber is used for building purposes and for furniture. —*Beddome.*

PERILLA ARGUTA. *Bentham.* An annual herb of Japan. An infusion of this plant is used to give a deep red colour to table vegetables. P. ocimoides, *Linn.*, of Upper India, is similarly used. —*Von Mueller.*

PERIM ISLAND, in the Gulf of Cambay, is little more than a mile in length, and 300 to 500 yards broad. Its lighthouse is in lat. 21° 35′ 15″ N., and long. 72° 20′ E., and lies 3 miles from the nearest point of the Kattyawar coast. In 1836 vast quantities of fossils were found in it. It is the Baiones Island of the Periplus. It is surrounded by an extensive rocky reef on all sides except the south, and rises so sheer from the bottom of the sea, that in some places, a few yards from the shore, there is a depth of 11 and 12 fathoms of water.—*Imp. Gaz.; Findlay.*

PERIM ISLAND, situated in lat. 12° 40′ 30″ N., aud long. 43° 23′ E. (King), in the uarrowest part of the straits of Bab-ul-Mandab, is distant from the Arabian coast nearly 1½ miles, and from the African between 9 and 10 miles; greatest length, 3½ miles; average width about 1¼. It is termed by the author of the Periplus of the Erythræan Sea, the island of Diodorus, and is known amongst the Arabs as Mayoon. Its formation is purely volcanic, and consists of long, low, and gradually sloping ranges of hills. Albuquerque landed upon it in 1513, on his return from the Red Sea, and, having erected a high cross on an eminence, called the island Vera Cruz (Portuguese in Asia, i. p. 193). It was again occupied for a short time by the pirates who frequented the mouth of the Red Sea, plundering the native vessels engaged in the Indian trade; but, having made a fruitless search for water, they removed to Mary's Island, on the east side of Madagascar (Hamilton, i. p. 43). In

March or April 1799, it was taken possession of by the E. I. Company, and a force under Lieutenant-Colonel Murray was sent from Bombay to garrison it, with the view of preventing the French troops, then engaged in the occupation of Egypt, from proceeding to India to effect a junctiou with Tipu Sultan, but it was found untenable as a military position, and the troops were accordingly withdrawn. In consequence of increasing steam navigation in the Red Sea, Perim was re-occupied in the beginning of 1857, and a lighthouse erected 1861. The island is trachytic.

PERINTALU. Tel. A wife, a domestic woman, but generally applied to deified womeu. Many of the small temples in Telingaua villages are dedicated to goddesses so called, the spirits of dead women.—*W. E.*

PERIOPTHALMUS. A species of this, a little mud fish, is found in great quantities on the mud banks of the Ganges delta, in company with the scarlet crab. This little fish skips along the surface of the water by a series of jumps. It leaps on land. The species in Fiji is the P. kolrenteri, *Gunther*. These fishes are able to progress out of the water in humid places, and to hunt after their prey, which consists of terrestrial insects.—*Moseley*, p. 295.

PERIPLOCA APHYLLA. *Duch.* The Bata, Barrarra, Barre of the Paujab. A plant with leafless erect stems, common in many places, Trans-Indus and in the Salt Range, and occurring in the outer hills east to the Chenab, occasionally up to 3500 feet. In parts of the Peshawur valley it is so common as to be used for fuel. It is eaten by goats. The buds are eaten raw, or cooked as a vegetable, and as food they are considered to have a beneficial effect on wounds.—*Dr. J. L. Stewart.*

PERIPLUS, a work by Arrian.

PERIPLUS of the Erythræan Sea, a book by a Greek merchant, which contains the best account of the commerce carried on in the early part of the Christian era, from the Red Sea and the coast of Africa to the E. Indies. He seems to have traded at Berenike, a great seaport in the southern extremity of Egypt, from which he made several voyages to India. It gives an account of six voyages. It describes the whole coast of the Red Sea, and of the S.E. of Arabia, and that of India from the Indus round Cape Comorin to a point high up on the coast of Coromandel, and gives accounts of the commerce carried on withiu those limits, and in some places beyond them. Until nearly his time, the ships from India coutinued to cross the mouth of the Persian Gulf, and creep along the shore of Arabia to the mouth of the Red Sea, but at about the time of this author, the Greeks from Egypt and the Arabs used to quit the coast soon after leaving the Red Sea, and stretch across the Indian Ocean to the Malabar coast.

Letronne supposes that the author of the voyages wrote in the time of the Emperor Septimus Severus and his son, namely, between the years 198 and 210 of the Christian era. C. Muller gives A.D. 80 or 90. Dean Vincent supposes it to have taken place about the tenth year of the reign of Nero (A.D. 64). It was doubtless near, but subsequent to this era. The author had navigated the Red Sea, the Persian Gulf, and the coasts of Malabar and Coromandel, and had resided many years at Baroach, in the court of a Hindu raja. He describes Arabia as having pilots, sailors, and persons following maritime pursuits. He mentions that large vessels were navigating the Bay of Bengal to the Ganges and Chryse. See Aden; Kalian.—*Elph.* p. 107.

PERIYA ALVAR, a native of Villipattur. He was one of the twelve Alvars who flourished in the reign of Vallabadeva Pandiyan, king of Madura. He wrote 400 stanzas of the Nalavira Sirunantam.

PERIYA-TAMBIRAN. Tam. Lit. the great god, the name of an image in the temples of the Grama Devata.

PERMANENT SETTLEMENT is a revenue term in British India, usually applied to au agreement introduced in 1793, during the administration of Lord Cornwallis, by which certain agents for collecting the rents or taxes on the land were granted the right of occupying that position permauently, on making annual payment to the Government of the amount of rents then being paid. The object in view was to create a body of landlords like those of Great Britain. It is an immemorial law that 'the resident ryot, simply as such, is, throughout the continent of Iudia, possessed, as a rule, of hereditary occupancy at the customary rates of the vicinity.' Lord Cornwallis insisted that 'whoever cultivates the land, the landlord can receive no more than the established rent. To permit him to dispossess one cultivator for the sole purpose of giving the land to another, would be vesting him with a power to commit a wanton act of oppression, from which he could derive no benefit.' The enhancement of rent was positively prohibited, unless the ryots could be induced to 'cultivate the more valuable articles of produce, and to clear the extensive tracts of waste which are to be found in almost every zamindari in Bengal.' The zamindar of those days was perfectly cognisant of the conditions attached to his position, among which was the right reserved by the Court of Directors, as successors of the Moghul Government, to make 'from time to time all such regulations as may be necessary to prevent the ryots being improperly disturbed in their possessions, or loaded with unwarrantable exactions.' The court added that their 'interposition, where it is necessary, seems also to be clearly consistent with the practice of the Moghul Government, under which it appeared to be a general maxim that the immediate cultivator of the soil, paying the rent, should not be dispossessed of the land he occupied.' The zamindars, in the year 1880, were supposed to be receiving about 16 millions sterling from their ryots, but paying to the Government only the amount fixed in 1793, and the cultivators have not shared in the increase of wealth of the country. Three times since the middle of the 19th century, the Government has tried to alleviate the cultivators' condition in British India, but hitherto without success. The exact number of occupancy ryots is not known, but there are nearly ten millions who pay less than £10 a year rent for their holdings, and of these upwards of six millions pay less than 10s. Below these two classes, again, come the untold millions of day-labourers, who barely exist from hand to mouth, and whose unparalleled fecundity is becoming a positive danger to the State. See Pattadari; Ryotwari.

PERNIS APIVORA, honey buzzard of Europe, Asia, N. Africa; migratory. In India, common (if identically the same), in addition to P. cristata. In the crestless or sub-crested Indian specimens (adults) there is a marked tendency to the development of three dark stripes on a white throat, and in the Astur trivirgatus and sundry other Indian species. Such may be a hybrid race between P. apivora and P. cristata.

PEROO, Sind., is a term applied, with some prefix, to the fruits of four plants. Salvadora Persica is called Khari peroo, S. Indica is Mitha peroo, Solanum incertum, *Dun*, is Kan peroo, and Phyllanthus multiflorus is Phika peroo.

PERQUISITES from cultivators, called in N. India, Amgaunga, Anjali, Siaodi, Thapa, are given from the threshing-floor to the Brahmans, Purohit, Guru, herd, and village god.

PERRON, a French sailor on board the frigate *Sardaigne*, which came to India in the year 1774. He became acquainted with De Boigne in 1789, and was appointed Captain-Lieutenant in the 2d brigade of Sindia's army. He distinguished himself at the battles of Mirta and Patan, and he obtained an independent command. At the battle of Kardla, he was in command of ten of De Boigne's trained battalions, with cavalry and artillery, with 5000 men under Filoze, and 3000 under Hessing; the total number of the Peshwa's troops, with those of Sindia and Holkar, was 130,000, and 10,000 Pindari. The Nizam's army, under M. Raymond, 20,000 horse, besides artillery. The armies met between Parinda and Khardla, 12th March 1795, and, after a brief success, the Nizami fled, but Raymond retreated in order. Perron ruled the territory from Lahore to Kota, and between Aligarh and Jodhpur. About the 5th September 1803, he surrendered to Lord Lake, and went to reside at Chandernuggur. Perron at one time enjoyed a revenue of nearly half a million, and when he surrendered to Lord Lake he carried away with him whatever property he was able to save. Perron had succeeded the veteran De Boigne in the command of Sindia's army, when de Boigne, after many years' service, returned to Savoy with a fortune of nearly half a million sterling. He was an able commander, and was assisted by several able officers of his own, with the object of disciplining Sindia's troops; lands had been assigned between the Ganges and the Jumna, over which, and at Dehli, Agra, and Futtehghur, Perron ruled with almost regal power; and though ruling ostensibly as Sindia's deputy, it was in the name of the Moghul emperor, or the blind Shah Alam, who was in fact no more than a helpless captive and puppet in his hands.—*Havelock.*

PERRON, ANQUETIL DE, an oriental scholar, with the desire to learn Zand; in November 1754 he joined the French army.

PERRY. Sir Thomas Erskine Perry, Knight. For fifty years he led a very active life as lawyer, politician, law reformer, as seen in his book on Oriental Cases; was Chief Justice of Bombay, and President of the Bombay Asiatic Society, Member of Parliament seven years, Member of the Indian Council twenty years. Author of a Letter to Lord Campbell on Law Reform, Lond. 1850; Translation of Savigny's Law of Possession, Lond. 1848; Character of the Hindoo King Asoka, Bom. As. Trans. iv.; On the Aboriginal Tongues of India, in Bom. As. Trans. 1852; A Bird's-eye View of India.—*Dr. Buist's Catal.*

PERRY, Commodore, of the United States, in 1854 negotiated a treaty with Japan.

PERSEA of the ancients, fruit of Balanites Egyptiaca.

PERSEA GRATISSIMA. *Gærtn.* The alligator pear or avocado pear of the West Indies, receives its name in consequence of the resemblance in form between its fruit and that of the Pyrus. It is about the size of an apple tree; the leaves are oblong, veiny, and the flowers small, and of a greenish-yellow colour. The fruit is the size of a large pear; inside it is yellow, and contains a kernel enclosed in a soft rind. In taste it resembles the peach, but more agreeable, though not so sweet. It is sometimes eaten with pepper and salt, but more frequently with a little sugar and lime-juice. Three varieties are mentioned, the red, the purple, and the green.—*Icones; Eng. Cyc.*

PERSEPOLIS of the Greeks, Elymais of the Hebrews, and Istakhr of the Persians, in the province of Fars, is now a series of ruined remains, known to the people of the country as the Chahl Minar (forty pillars) and Takht-i-Jamshid (Throne of Jamshid). They are supposed to comprise the palaces of Darius, Xerxes, and Artaxerxes, each on a separate terrace. The area of the Chahl Minar is 50,000 square feet. In the vicinity are the sculptures known as the Naksh-i-Rustum, and about 30 miles distant are ruins called Madar-i-Suliman.

Persepolis is about 12 miles from the river Bendamir, at the foot of the rocky spur which confines the northern end of the Marvdasht plain on its eastern side. From the foot of the slope, a platform 500 yards long and 312 broad has been built out into the plain. Of the portal two marble columns and four bulls are standing; other two columns have fallen. Of 72 pillars in the great hall, at the top of the steps, only 12 are now standing. The breadth of the great hall is 127 yards. The hall of Darius is 60 yards, and that of Xerxes 33 yards. An inner hall had 100 columns. The columns stood on inverted lotus flowers, beautifully carved. The reputed tomb of Darius is higher up.

The tombs of Persepolis are on opposite sides of the Marvdasht plain, which here begins to narrow between spurs of the mountains which bound it on the north. Persepolis stands at the foot of the eastern spur. The tombs are carved in the face of the western spur, the cliffs of which rise from 90 to 500 feet, the tombs, five in number, being excavated at heights from 90 to 200 feet. The bodies of the kings have long been taken away, and the broken slabs that covered them lie on or in each empty sarcophagus. In preparing their sepulchres, the first thing that the old Persian monarchs did was to carve a huge cross on the face of the cliff. At the only accessible tomb, near the top of the cross, is a graven effigy of a king, bow in hand, worshipping fire burning on an altar. Along the foot of the rocks are sculptured tablets, spiritedly executed, representing equestrian combats on a gigantic scale; and one huge carving portrays the submission of Valerian kneeling to Shahpur, explained in an inscription in Pehlavi, with an illegible Greek inscription. A marble fire-temple in high preservation is a few yards from the foot of the cliff.

It is not known whether it was originally

called Elamais, Istakhr, or Takht-i-Jamshid. After the establishment of the empire by Cyrus, he and his immediate descendants divided their residence chiefly between Babylon, Susa, and Ecbatana. He was a conquerer long before he was a king; and while Cambyses, his father, reigned in Persia, and occupied his own capital, and Cyaxares, his uncle, yet lived, and maintained his state in Ecbatana, the principal city of the Medes, the present Hamadan, Cyrus resided at times in Babylon, which he had subdued, and then afterwards at Susa, when the death of Abradates gave the whole province to his generous prince and friend. Cyrus did not live more than eight years after he became master of the empire, and therefore could not have had much time to distinguish Persepolis by any long residence there, though he often went thither. We learn from several writers that at different periods both Cyrus and his successors had added to the splendours of the city which the Greeks called Persepolis. Xenophon clearly points out its situation (Strabo, Diod. Siculus). — *Porter's Travels*, i. pp. 576, 577.

PERSIA lies between lat. 25° 40′ to 39° 50′ N., and long. 44° 20′ to 61° 35′ E., with a population variously estimated at 5 to 7 millions. It is about 1400 miles long from the Khoi and Bayazad road to Gwadar, and 900 miles broad from the Makran coast to the Atrak river. It has 18 great divisions,—Astrabad, Azarbijau, Ardelan, Fars, Ghilan, Isfahan, Kirmanshah, Khuzistan, Khorasan, Kirman, Khemseh, Laristan, Luristan, Mazandaran, Mullayer, Nain, Tehran, and Yezd.

Modern Persia consists of three principal parts, viz. Fars proper (Persis proper), Laristan near the Persian Gulf, and Behbehan, or the country of the Khogilu, which represents the circle of Kobad. Behbehan is bounded on the north by the great belt of mountains which separate Irak-i-Ajam from the southern provinces of Persia. The northern and north-eastern shores of the Persian Gulf form its boundary to the south, Ram-Hormuz and the Ka'b country lie to the west, while Shuzistan separates Behbehan on the east from the direct dependencies of Fars. On the east and south-east, Behbehan is surrounded by the Mamaseni tribe; on the north and north-west by the Bakhtiyari; and on the west and south by the Ka'b Arabs. Also the mountainous region to the north and north-east of the plain of Behbehan is occupied by the Khogilu tribes.

The greater part of the most important region of modern Persia corresponds to the ancient Media; the province of Azerbijan, west of the Caspian, answering to Media Atropatene, and that of Irak-Ajami to Great Media. The northern part of Khorasan is the ancient Parthia, and the lowland round the south-east of the Caspian was Hyrcania.

The whole of the centre of Persia is composed of immense salt deserts, with such oases as Yezd and Beerjan scattered about it, at too extended intervals, however, to afford cohesion and mutual support. The desert may be roughly said to extend all the way along the Afghan frontier from a point 100 miles south-west of Herat to the Persian Gulf, and from this broad base it projects to within 100 miles of Teheran. North of this salt desert lies the magnificent province of Khorasan; west of it the fertile provinces of the Caspian, including Azerbijau; and south-west and south, the rich mountain region running conterminous with the Turkish frontier and the waters of the Persian Gulf; the great range on the north, joining the Hindu Kush south of Herat.

The general aspect is desolate and bare in the extreme. On its north and east, Persia is nearly enclosed by deserts. On the north is the great desert of Khiva, or, as it is called, the Kara-Kum. This stretches along the whole north border of Khorasan and Afghan-Turkestan as far as Balkh. It is more of a waste than a desert, and in spring is covered with grass, and is said then to be quite practicable for light troops. Its greatest breadth is from the Aral S.W. to the Atrak river, about 250 miles, and the breadth gradually lessens as it goes eastwards till near Balkh it has a breadth of only a few miles. Its general breadth, however, is from 180 to 150 miles. Its length from the Caspian to the vicinity of Balkh cannot be less than 600 miles.

The great salt desert of Khorasan extends from Kum and Kashan to the east for a distance of 300 miles, and is probably continuous with that of Seistan, and if so, it probably runs to the south of Tabas.

The desert of Kirman stretches to the N.E. of Kirman, and is supposed to be continuous with that of Seistan and Makran. It stretches from Khubbis to the lake of Seistan, 150 miles, thence along to the S. bank of the Helmand, up to the vicinity of the valley of Peshin on the Kandahar and Quetta road; then it turns S.W., keeping away from Nushki Sarawan and Kharan, and then runs S. between Banpur and Panigur to near the sea at Gwadar. To the west of this it keeps north of Jalk and Sib, and the continuation of the mountains of Kirman, till it again intervenes between Khubbis and Seistan. Its length is about 400 miles, and breadth 200 miles, from the Helmand to the parallel of Kohuk. The sand of this desert is of a reddish colour, and so light that when taken into the hand it is scarcely palpable. It is raised by the wind into longitudinal waves, sloping to the leeward side to the height of 10 or 20 feet, and is there perpendicular.

The mirage is common; and the dangerous Bad-i-simum often blows between the months of May and August, injurious to everything with life,—even camels and other hardy animals perish,—and killing men sometimes instantaneously, or after hours or even days of suffering.

Nowhere else than in Persia is the zodiacal light, known as the Subh-i-sadiq, more beautifully seen.

Azerbijan climate is healthy and bracing, the soil is remarkably fertile, and the inhabitants are hardy, active, and industrious. Khorasan contains more fertile territory than the British Isles, and could easily furnish sustenance for twenty million people. Bailie Fraser described the Goorgan part of Khorasan as 'one of the loveliest regions in the world.' Baron de Bode, a Russian traveller in Khorasan in 1836 and 1848, affirmed the district south of the Kopet Dagh to combine the 'excellences of an English landscape and the scenery of the Caucasus.'

The most ancient of the races that ruled in Persia was the *Peshdadian* dynasty. Of the fourteen known names of this dynasty, the first was Kaiumars, who reigned at Balkh. In this line, the

names occur of Jamshid, who reigned at Persepolis; Feridun, who was restored by Kawa, the blacksmith; and Afrasiab, who was king of Turkestan.

The *Kaianian* dynasty followed the Peshdadian, and amongst its rulers were Kai Kobad (Kai signifies the mighty); Kai Kaus, son or grandson; Rustam, his general; Kai-Khūsru, grandson, Cyrus the Great; Lohrasb, son of Orond Shah; Gushtasp, his son, Hystaspes of Grecian history; Isfendiar, his son, Apanda or Astyages of Ardashir; Darab and Dara, the Darius overcome by Alexander.

The authentic history of this region begins about B.C. 710 with Djoces, a Mede, who, as also his son Phraortes, fell in attacks on Assyria. Cyaxares, king of the Medes, son of Phraortes, about B.C. 606, combining with Nabopolassar, king of Babylon, and with the Arabians, Persians, and Armenians, overran Assyria, and took and destroyed Nineveh.

After the death of Alexander, Persia as well as Syria fell to the lot of Seleucus Nicator, who established the dynasty of the Seleucidæ. Antiochus Soter succeeded Seleucus Nicator; and in the reign of his successor, Antiochus Theos, Arsaces, a Scythian, who came from the north of the sea of Azof, induced the Persians to throw off the Greek yoke, founded the Parthian empire, and made Rhages his capital. This was likewise the period of the foundation of the Bactrian kingdom by Theodotus, the governor of it, who, finding himself cut off from Syria by the Persian revolution, declared his independence. Arsaces is called Asteh by eastern writers, and is said to have been a descendant of the ancient Persian kings. When he gained the kingdom, it is said he promised to exact no tribute, and merely to consider himself as the head of a confederacy of princes, united for the double object of maintaining their independence and freeing Persia from a foreign yoke. This is the commencement of that era of Persian history called by eastern writers Muluk-ut-tuwaif, or commonwealth of tribes, called by the Persians the Ashkanians and Ashganians, known to the Greeks as the Arsacidæ, from B.C. 253 to A.D. 223, in which year Ardashir Babegan-bin-Sasan, the Artaxerxes of the Greeks and Romans, founded the Sassanian dynasty, which ruled till A.D. 632. Amongst this dynasty were Shahpur, who defeated the emperor Valerian near Edessa; also Khusru Nushirwan, famed for his benevolence, and who largely extended his dominions, took Antioch and Jerusalem, and all Egypt southwards to Nubia. 90,000 Christians are said to have been slain when Jerusalem was then taken.

Persia was overrun by the Arabs, A.D. 632–636, and was held by the khalifs for 600 years.

It was at Nahavend, in A.D. 632 (Hijira 21), that the celebrated battle of Kadesia was fought, in which, after three days, the troops of the khalif Omar, commanded by the Arab chief Noman, who was there slain, defeated the Persians, in the reign of Yezdejird, one of the Sassanide princes. This monarch, shortly after his defeat, was killed by a miller of Merv, with whom he had taken refuge. The dynasty of the Sassanides had reigned in Persia 415 years. It became extinct with Yezdejird, and Persia then fell under the dominion of the khalifs, who compelled the population to embrace Islamism. The town of Nahavend is built just at the foot of the north-east range of hills, upon some craggy points. In the centre of the town rises the citadel, a most imposing-looking structure, and really of some strength. It crowns the top of the highest of the craggy points upon which the place is built, and is supported by immensely solid mud walls from without, rising at least 100 feet high.

Persia has since been under many dynasties, either ruling in whole as it now is, or in parts of it. The khalifs ruled from A.D. 632 to 1258, when Mustasem was put to death by Hulaku, the grandson of Chengiz Khan; the Samani of Bokhara, Khorasan, and Persia held sway A.D. 874 to 998; the Ghaznavi of Persia and India, A.D. 975 to 1183; the Seljuk in Iran, Kirman, and Anatolia, A.D. 1037 to 1283; the Mosul branch of the Atabegs of Irak, under the Seljuk, from A.D. 1127 to 1197; the Il-Khani of Persia, a Moghul dynasty, A.D. 1259 to 1346; and the Sufi and Zand of Persia, A.D. 1499 to 1797.

Under the Kaianian, Parthian, and Sassanian dynasties, the metropolis of the empire was moved from Persepolis to Pasargadæ, and thence to Susa; and in modern times the Sufi, Zand, and Kajar reigning families have successively chosen as their respective capitals, Isfahan, Shiraz, and Teheran. The last place is within a few days' march of the native districts of the ruling Kajar tribe, near Astrabad—Aga Muhammad Khan, Kajar, in 1788 having founded the present dynasty.

Kurna is one of three Apameas built by Seleucus in honour of his first wife, Apamea, daughter of Artabazus. It is situated at the point of a triangle formed by the confluence of the rivers Euphrates and Tigris, and was formerly a place of consequence. Kurna is situated on a low flat, with apparently a rich soil, and along the river are low banks to prevent the country being flooded. Meshed, the capital of Khorasan, forms the connecting link of Central Asia and Persia, the Caspian and Afghanistan. Meshed lies on the highway from the Caspian to Herat, distant about 215 miles from the latter place. Its garrison consists of nine battalions of infantry, a regiment of cavalry, and a couple of field batteries, in all about 8000 men. A force of about 1000 horsemen employed in patrolling the road between Mashad and Khosan, the frontier town. Tabreez, the administrative centre of Azerbijan, draws to itself the commerce of Turkey, of Persia, and of Russia, and distributes around the manufactures for which it has ever been famed.

The men of Kasvin, Tabreez, Hamadan, Shiraz, and Yezd are as remarkable for their courage as those of Kum, Kashan, and Isfahan are for their cowardice. The nomade tribes are all predatory, and glory in that, but they hold thieving in detestation; they delight to listen to romantic tales. The Iliyat nomade tribes are sincere, hospitable, and brave, but rude, violent, and rapacious. The chiefs of the military tribes form the hereditary nobility.

From time immemorial, the three races, Persian or Pehlavi, Arab, and Turkoman, have been striving for mastery, but the Persian inhabitants of the towns and those of them engaged in cultivation are not warlike, and the contest has been between the Persian nomade and the Turkoman nomade, the two great military classes of the population.

The Persian nomades all belong to the Pehlavi stock, though their dialects are different. They inhabit Kirman, nearly all Fars, a part of Irak, and the whole of Kurdistau, a region stretching through the ranges of highlands from near the entrance of the Persian Gulf in a north-west direction, along the left bank of the Tigris as far as Armenia.

The Turkoman nomades entered Persia with conquering armies, and have come from the bauks of the Volga, from beyond the Oxus, and from the plaius of Syria. Their habits are the same as the Persian nomades, but they speak a different language, and from the invasion of the Arabs till the death of Nadir Shah, the rulers of Persia had either been Arab or Turkoman. No member of the Persian nomade tribes had ever ascended the throne. It is this, probably, that gave rise to the bloody strife between the Zand and the Kajar tribes.

The Zand are the most illustrious of all the Persian tribes, and one of their chiefs, Karim Khan, after the death of Nadir Shah, succeeded in establishing himself in Isfahan and the southern provinces. The Kajar are a Turkish tribe brought by Timur from Syria, and settled between Elburz and the Caspian. After the death of Nadir Shah, a deadly war raged between Karim Khan, Zand, and Muhammad Hasan Khan, Kajar, which ended in Karim Khan's accession. Lutf Ali Khan (1795) was the last of the Zand rulers. —*Kinneir; Watson; Malcolm; Wheeler; Morier; Fraser; Monteith; Shiel, by Lt.-Col. MacGregor*, iv. pp. 358–516.

In addition to the revolutions resulting from contests by the different races within, these territories have been repeatedly overrun by foreign armies, aud since the beginning of the 18th century their armies have been defeated by Afghans, Russians, and British; and Russia has compelled Persia to renounce the right of keeping war-ships on the Caspian Sea, and has established for herself a naval station on the island of Ashurada, at the south-east coruer of the sea commanding the approach to Asterabad.

Under the present organization, the Persian army consists of 77 battalions of infantry, of an average strength of 800 men; 79 regiments of cavalry, consisting of eight troops of 50 sabres; a strong regiment of engineers, and 200 guns. The various grades are—Amir-i-toman, or general of division; Amir-i-pung, or general of brigade; Surtip, or colonel. The regimental ranks are represented by Sarhang, or lieutenant-colonel; Yawar, or major; Sultau, or captain; Naib-i-awwal, or first lieutenant; Naib-i-doyum, or second lieutenant. A sergeant is called Vakeel, a corporal a Dahbashi, and a private Sarbaz. The bone and sinew of the Persian army is derived from the Turk tribes of Azerbijan, from the Kurds of the mountainous districts of Persian Kurdistan, and from the Lur, Bakhtiyar, and Iliyat tribes who inhabit the mouutain chains extending southward and eastward from the great range of Zagros. The standing army of Persia is, with the exception of the Shah's body-guard, made up of regiments nominally raised in the above districts; the chiefs and khans of the various tribes are nominated to commissions in the regiments furnished by these clans. The men are brave, but need leading. In 1861, 20,000 Persian troops and 32 cannon surrendered, almost without fighting, to 5000 Merv Tekke horsemen, armed only with spears and matchlocks. That terrible disaster to Persian arms destroyed the Shah's prestige on the Turkoman border. Its population, composed of townspeople 1½ millions, nomades and villagers 2½ millions, is under 5 millions; and Teheran and Tabreez have each 120,000, Meshed 70,000, Isfahan 60,000, and Shiraz 40,000. The most powerful of the nomades, the Il-Khani of Kaskai, has 25,000 or 30,000 black tents; Kelhor of Kermanshah have 11,000; Zengeneh, 10,000; the Sheqhagi of Azerbijan, 15,000 tents and houses; and besides these are about 100 minor tribes.

The Persians are all of fair complexion. The Arab, the Persian, the Afghan, and Sikh, when speaking of the people of India, call them 'black men;' even in India, the descendants of the Arab, Persian, Moghul, and Afghan conquerors use the same designation,—'Kala Admi,' literally black man, being ever in their mouths; and Hindus themselves, in their various tongues, likewise so distinguish themselves from all the fair foreign races.

Persia is a thoroughly aristocratic country, where high birth and polished manners are much considered. In this point it differs much from Turkey. Owing to his politeness towards strangers, and an apparently hospitable disposition, the first meeting with a Persian usually makes a favourable impression. He is quick-sighted, sociable, witty, and affable, buoyant in spirits, well acquainted with the forms of politeness, and to a certain extent inquisitive in matters of science and art. The offering from an inferior is called Peshkash. A gift or recompense from a prince or superior is called Inam, or Khelat, also Bakhshish, a Persian word much used in this sense by the Turks. Among themselves, with their equals, the Persians of the higher classes who are settled in towns are affable and polite, to their superiors servile and obsequious, and towards their inferiors haughty and domineering.

Marriages are of two kinds, one the Aqdi, with a girl of the bridegroom's own rank, the other the Seegha, with a woman of humbler birth. A practice prevails of marrying under a contract for a period. Many of the women read and write, especially the Kajar women. Persians consider the number thirteen so unlucky, that in general they will not even name it. When they have occasion to allude to this number, instead of mentioning Sezdeh (thirteen), they say Ziyad (much more), or Hech (nothing). The Persians shave the crown and hind part of the head, leaving a tuft on the top, aud hair on either side, which some keep closely clipped above the ears, and others wear in long masses of ringlets.

The usual riding costume of a Persian gentleman consists of a black lambskin cap, pinched into a conical shape. An open shawl surcoat, lined with fur, reaches about half-way down the thigh; the sleeves are cut off a little below the elbow. These surcoats seldom cost less than £25, often much more. Under this a light gown is worn, reaching nearly to the ankle, open on the sides for about a foot from the bottom, and with slits left opeu under the arms and inside the elbows. A shawl is tied round the waist, and supports a long dagger with a handle of ivory or bone, sometimes

ornamented with jewels. In cities, the surcoat is usually laid aside, and in winter a cloak of cloth is substituted. On horseback, a pair of roomy Hessian boots, of black or red leather, are drawn over the voluminous shalnar or Cossack trousers.

The natives of Persia do not recline on cushions in the luxurious manner of the Turks, but sit in an erect posture on a thick felt, called a namad. They have seldom or ever fires in their apartments, even in the coldest season; and in order to be warm, wrap themselves in a fur pelisse, or a barouni, which is a handsome robe of crimson cloth, lined with shawls or velvet. Like other oriental nations, they rise with the sun.

The dress of Persian women consists of a pair of immensely wide trousers, like a couple of petticoats tacked together, made of silk or cotton, and fastening round the middle by a running string; a very short chemise of gauze, reaching only to the waist; a kurtni or jacket reaching to the hips, having open sleeves, which may be buttoned close if required; an arackchin or small skull-cap upon the head, and sometimes a charkud or handkerchief thrown over the head and descending on the shoulders and back. In full dress a Muhammadan lady wears the Peshwaz or Persian robe, in which dancing women usually perform. It has long tight sleeves, a tight body crossed in front, and a very voluminous muslin skirt, the most fashionable amplitude being about forty, or even sixty yards in circumference. This garment is often trimmed in a costly manner with gold or silver lace, and is only worn as a bridal dress or at domestic festivals. The Persian ladies regard the bath as the place of their greatest amusement. They make appointments to meet there; and often pass seven or eight hours together in the carpeted saloon, telling stories, relating anecdotes, sharing their kaliouns, and completing their beautiful forms into all the fancied perfections of the east,—dyeing their hair and eyebrows, and curiously staining their fair bodies with a variety of fantastic devices, not unfrequently with the figures of trees, birds, and beasts, sun, moon, and stars. This sort of pencil-work spreads over the bosom, and continues down as low as the navel, round which some radiated figure is generally painted.

There are two harvests in the year; that of the Saifi or summer, reaped in the end of autumn, consists of rice, cotton, maize, Holcus sorghum, Panicum Italicum, Cicer arietinum, Ervum lens, mashek, Phaseolus radiatus, the castor-oil plant, sesamum, and some garden vegetables. An exhaustive system of agriculture is practised in Persia, which keeps her impoverished.

In several parts of the country are copper, lead, and iron mines, and Fars yields sulphur in abundance; and if these mines were properly worked, the profits would be very great.

Persian weights are :—

Nokhood (Cicer arietinum).

24 nokhood = 1 miscal, about one-sixth of an ounce.

90 miscals = 1 vakka, nearly 1 lb. avoirdupois.

8 vakkas or 720 miscals = one man of Tabreez. In different places varying from 7 to 7½ lbs.

2 Tabreez man = 1 kharwar or ass-load, 725 lbs.

The value of its external commerce has been estimated at four or five millions sterling. The port of Abushahr (Bushire) trades chiefly with India, and of its five great caravan lines, one passes westward from Central Persia towards Baghdad, Mesopotamia, Syria, and Asia Minor; a second runs northward through Erzerum, and into Europe by the way of Constantinople; a third goes also to Europe by Tiflis. The fourth runs eastward to Bokhara and China. And the fifth proceeds to India by two distinct lines, which unite at Herat. One of these routes comes to this town from Irak and the south-western provinces of the kingdom; and the other route leads from the north-west, by Teheran, Nishapur, and Mashed. Eastward of Herat, the united lines pass through Kandahar, Kābul, and Jalalabad, to Attock, from whence it branches out to different parts of India. The manufactures are shawls, carpets, felts, silks, velvets, cotton piece-goods, weapons, paper, leather, and furs. The merchants have each a cypher in which they carry on all their correspondence. Merchants of Yezd are found in Bombay, the Mauritius, Java, and China.

After Persia was overrun by the Muhammadans from Arabia, most of the people seem to have become Muhammadans, and from that time little is known of the funeral customs of the fire-worshippers in the years preceding the arrival of a small remnant of them on the coast of Gujerat. In ancient Persia, the dead were exposed in natural caves or dokhmas, or in the mountain valleys. At the present day, unless a death happen to take place during the night, the funeral follows immediately after it. The body is washed with rose-water; then, being wrapped in a white sheet and cotton shroud, it is carried on a bier to the grave. If the deceased be rich, a funeral feast is kept for several days after the ceremony, and alms are distributed at particular intervals. But when a person of rank dies, it is not unusual for the king to command the body to be conveyed to Meshed-Ali, or one of the other places of Shiah pilgrimage; followed by his charger bearing the arms, clothes, etc., of the deceased, and also by numerous led horses, with the badges, banners, and other expensive insignia of funeral state.

Mr. Stack, a recent traveller, came to the conclusion that a residence in Persia is calculated to beget a positively 'Lucretian hatred' of religion. Of the city and shrine of Kum he speaks with abhorrence, as the stronghold of the most dismal superstitions. The plains and city of Kum are shrouded in a haze of heat and dust, blown up by the hot winds.

The Persian language was the court and official language of the Dehli rulers and of all their allies and subordinate Muhammadan and Hindu kingdoms, and the principal Hindu states still continue its use. For a long time, at Dehli, two languages were used by the emperors, and there were two parties in the court, the one speaking Persian, and the other Turki, the mother-tongue of Baber, who was a Chaghtai Turk. In A.D. 1871–72, in eight districts of the N.W. Provinces, the Urdu or Persian reading pupils of the Tahsili and Halkabundi schools largely exceeded the Hindi or Nagri reading scholars, ranging from two-fifths to three-fourths. All educated Muhammadan men in India write in Persian, but speak Urdu. Women always write in Urdu. The more celebrated of the Persian writers are Fardusi, Ferishta, Hafiz, Jelal-ud-Din, Jami, Khusru, Nizami, and Sadi. Several of the books are not placed in schoolboys' hands; for instance, the Persian Bahar-i-Danish on

woman's guile, the fifth chapter of the Gulistan of Sadi, also the love-story of the Zulikha of Jami, Laili and Majnun, Lazzat-un-Nissa, Tuhfa Shahi, Tuhfa-ul-Ashakin.

The modern tongue of Persia is derived from Zand, as Italian was derived from Latin; but the Persians now speak a language which is neither Semitic, like Arabic, nor Turanian, like Turkish; it is a branch of the Indo-European or Aryan family of speech. Also, a large infusion of Persian words, however, found its way into Arabic, and through Arabic into Turkish, and the result is that at the present moment the Turkish language, as spoken by the higher ranks at Constantinople, is so entirely overgrown with Persian and Arabic words, that an uneducated Turk from the country understands but little of the so-called Osmanli, though its grammar is exactly the same as the grammar which he uses in his Tartaric utterance. Throughout Persia the inhabitants of towns all speak the Persian language. It is spoken in Erivan, and a great part of Azerbijan, Shirvan, and Daghestan, north of Caucasus. The tribes to the west of India, especially those of Khorasan, understand Persian generally; and their dress, arms, and habitations, while they retain their national peculiarities, approach to those of Persia. The Persian language is met with amongst the Hazara Mongols of Ghito in Seistan, Ghorband, Badakhshan, and Baluchistan. Persian is the official language of Afghanistan, but the Pushtu is alike the common tongue of the uneducated people and of the Amir. The Afghans have a few Pushtu works, but they read Persian authors by preference, and through them have formed imperfect ideas of geography, astronomy, medicine, and history; these works, full of fictions and deficiencies, have not assisted in developing their faculties. Throughout British India, the written language of the educated Muhammadan is the Persian. This language was formed after the Muhammadan conquest, and its literature is essentially of the middle ages and of modern times. The literatures of the West Aryans, Persia, and of the East Aryans are thus separated by time as well as by space, for the great literature of India belongs strictly to antiquity. The natives of Persia are enthusiastically devoted to poetry. The meanest artisan of the principal cities of that kingdom can read or repeat some of the finest passages from their most admired writers; and even the rude and unlettered soldier leaves his tent, to listen with rapture to the strain of the minstrel, who sings a mystic song of divine love, or recites the tale of a battle of his forefathers. The very essence of Suffeeism is poetry. Many of the tales and stories current throughout central Europe came to it through the Persian.

During the reign of Shah Abbas the Great, the English first established commercial settlements in Persia. Two enterprising Englishmen, Sir Anthony Sherely and his brother, with a few followers, had made their way to the court of Persia, where they met with a distinguished reception. Sir Anthony returned as envoy from Shah Abbas, to establish an alliance with the Christian monarchs of Europe for the destruction of the Turks, and with a grant, permitting all Christian merchants to trade freely with Persia. Under the patronage of Shah Abbas, the English, the French, and the Dutch had established factories at Gombroon, to which place the Persian monarch afterwards gave the name of Baudar Abbas, or the Port of Abbas, by which it is now known. Shah Abbas, however, had less toleration for the Portuguese, who in 1507, under Albuquerque, had conquered and occupied the island of Hormuz, at the entrance of the Persian Gulf, not far from Gombroon, and he resolved on their expulsion. He was joined in this enterprise by the English, then at war with Portugal, with whom in 1622 he entered into an engagement, granting them half the plunder of the island, and half the future customs of Gombroon and Hormuz. The Portuguese were driven out, but the promises of the king of Persia to the English were not kept. The factory at Gombroon was maintained through many losses and disasters till 1761, when it was withdrawn, in consequence of oppressions of the provincial governor of Lar. The death of Shah Abbas, in 1628, was followed by the rapid fall of the Suffavean dynasty. Four weak princes of that house successively ascended the throne of Persia. During their reign the Turks severed from the Persian empire some of the best of the western provinces, the Arab ruler of Muscat possessed himself of the islands in the Persian Gulf, the Afghans of the Abdali tribe made themselves independent in Herat, and the Ghilzies in Kandahar; and in 1722, within a century after the death of Shah Abbas, Isfahan was besieged by Mahmud of Kandahar, to whom Shah Husain formally resigned his crown. The Afghan dynasty was short-lived. Mahmud died insane in 1725. His cousin and only successor, Ashraf, was slain in 1730, while fleeing in the desert before his conqueror, Nadir Kuli Khan, the warrior Nadir Shah. After the abdication of Shah Husain, his son Tamasp had assumed the name and state of king, and was unceasing in his feeble efforts to recover the crown. Shah Tamasp was permitted to enjoy his nominal sovereignty only two years, when he was dethroned by Nadir Kuli, who with affected reluctance accepted the crown. Little had remained of Persia in the feeble grasp of Shah Tamasp, when in the year 1726, Nadir Shah, after a life of vicissitudes, found himself at the head of a predatory band in Khorasan, at the age of about thirty-five. The genius of this man alone quickly changed the aspect of affairs, and Persia, from being trodden under foot by all, became during his lifetime a formidable power. Within a few years after his murder in 1747, the mighty empire which he had recreated was dismembered. Ahmed Khan, Abdali, proclaimed himself king of the Afghans, took Kandahar and Herat, and laid the foundation of an empire, which he extended by conquests more brilliant than those of Nadir Shah. The province of Khorasan was all that was left to Shah Rukh, the blinded grandson of Nadir Shah. This was guaranteed in his independent possession by Ahmed Khan, but was soon broken up into a number of independent principalities. The southern and western provinces of Lar, Fars, Irak, Azerbijan, and Mazenderan were subdued by Karim Khan of the tribe of Zand, and a prince of the Suffavean house, named Shah Ismail, a son of the sister of Shah Husain, was set up as a king. But he was a mere puppet, and was soon cast into prison, and Karim Khan ruled alone. He was a just ruler. In 1763, he granted to the

British a firman for a factory at Bushire, and for the trade of the Persian rule. Karim Khan died in 1779, after a vigorous rule of 26 years. His death was the signal for fresh revolutions, marked by the most atrocious cruelties, in the course of which the four surviving sons of Karim Khan were savagely mutilated. This state of things ended in 1795, in the elevation to the throne of Persia of Aga Mahmud Khan of the Kajar tribe, the founder of the present dynasty. In 1788, during the brief rule of Jafar Khan, nephew of Karim Khan, and the last representative but one of the Zand family, the British, who during the revolution had been subjected to many oppressive exactions, obtained, through the chief of their factory at Bussora, another firman for unrestricted trade in the Persian dominions. From the success which had attended the invasion of India by Nadir Shah and Ahmed Shah, Abdali, it was believed that the plains of India were exposed to be periodically ravaged by any ambitious ruler in Afghanistan. In 1796, Zaman Shah, grandson of Ahmed Shah, Abdali, advanced to Lahore, with the professed purpose of restoring the house of Timur from the domination of the Mahrattas, and, after some years, in 1801 Captain Malcolm was sent on an embassy to Persia. The re-conquest of Afghanistan was always a favourite dream of the Kajar dynasty, who conceived that their rights of sovereignty over that country were as complete as in the days of the Suffavean kings. In 1828, Futteh Ali Shah was induced by the Russians to advance on Herat, the key of Afghanistan, but two expeditions were unsuccessful. His son Muhammad Shah, who was ever a friend of Russia and an enemy to British interests, revived the project, and with a large force laid siege to Herat, on 23d November 1837. To force the Shah to renounce his ambitious projects, a demonstration was made in the Persian Gulf, by the occupation of the island of Kharak. This induced him to withdraw from Herat, after a siege of ten months, during which all his efforts had been frustrated by the energy and ability of Lieutenant Eldred Pottinger, an officer of the Bombay Artillery. Muhammad Shah died in August 1848, and was succeeded by his eldest son, Nasir-ud-Din. On the death of Yar Muhammad Khan, his successor, feeling himself insecure in power, and being threatened by the Amir of Kābul and by Kohun-Dil Khan from Kandahar, Syud Muhammad Khan made overtures to Persia, and a force was despatched by the Shah nominally to reduce the Turkomans, but in reality to occupy Herat. A force was sent in December 1855, in violation of the agreement made by the Persian Government. Muhammad Yusuf was taken prisoner, and Herat was captured on 26th October 1856. The quarrel could not be adjusted, a British force was sent from Bombay to occupy Kharak, and on the 1st November 1866, war was declared. After a brief successful campaign under Sir James Outram, a treaty of peace, concluded 3d February 1857, was signed at Paris on the 4th March 1857. In this the previous treaty was adhered to for the abolition of slavery in the Persian Gulf. In 1861 an attempt made to arrange for a telegraph line through Persia to Bandar Abbas, failed; but in 1863, the king resolved, in constructing a line from Khanakin on the Turkish frontier, through Teheran, Isfahan, and Shiraz, to meet the British line at Bushire.—*Ouseley's Tr.* i. 451; *Bombay Liter. Trans.* v. 1; *Max Müller at the Royal Institution; Treaties, Engagements, and Sunnuds; Ferrier's Journ.; Kinneir's Geog. Mem.; Ferrier's Afghans; Pottinger's Travels; Col. Stuart's Residence in N. Persia; Augustus H. Mounsey, F.R.G.S., Journey through Caucasus and the Interior of Persia; Sir John Malcolm, Sketches of Persia and History of Persia*, ii. p. 398; *De Gobineau, Histoires des Perses*, Paris 1869; *Quarterly Review*, July 1873.

PERSIAN, a silken fabric of various colours, and exceedingly flimsy in its texture. It is chiefly used in lining.—*Faulkner.*

PERSIAN BERRIES, or Yellow Berries, the fruit of Rhamnus infectorius, used by the modern Greeks to dye morocco leather; employed also in calico printing. The average annual imports into the United Kingdom are about 150 tons. They come from the Levant in hair bales, weighing three and a quarter cwt., or in tierces of four to five cwt., and are used by calico printers for dyeing a yellow colour.

PERSIAN FLEA POWDER, the Poudre mismaque, is sold in Paris, in boxes, for destroying immediatcly, bugs, fleas, ants, lice, black beetles, caterpillars, and all insects. Chamomile rouge, the beautiful red Pyrethrum (P. carneum, formerly Chrysanthemum coccineum), in England a pretty garden ornamental flower, is a dread enemy to fleas.

PERSIAN GULF extends from lat. 24° to 30° 20′ N., and long. 48° to 58° E. It runs in between Arabia and Persia from the Straits of Ormuz, which are 35 miles wide, to the mouth of the Shatt-ul-Arab. In breadth at the narrowest part, between Cape Musseldom and Gombroon, it is 55 miles; and at the widest part, between Bushire and Khodema, three degrees and 20 miles; and is about eight degrees in length from the Straits of Ormuz. It is known in eastern manuscripts as the Sea of Fars, the Sea of Oman, the Sea of Kirman, Sea of Kateef, Sea of Basrah, deriving these and other names from the adjoining provinces, and from remarkable places on its Arabian and Persian shores. This great inland sea makes a rift in the continent of Asia 450 miles deep and from 100 to 180 broad, and comprises an area of about 70,000 square miles. The northern coast belongs exclusively to Persia. The southern coast is partly Turkish and partly independent Arab. Muscat formerly possessed—by right of 100 years of fiefdom—almost a third part of the north coast of the gulf, which Persia resumed about 1878. A considerable portion of the southern coast of the gulf, too, has recently passed under Turkish from independent Arab rule. In the early part of the 19th century, the British assumed the political control of the Arab tribes on both shores of the gulf, but the opening of the Suez Canal has admitted of Turkish war-vessels being present, Great Britain retaining free control over the sea. A few years ago Turkish rule reached scarcely farther from the Shatt-ul-Arab than Kowait, but has now added 400 miles of sea-coast. Turkey has ousted the Wahabees

out of the broad strip of Arabian coast which bears the name of El Hasa or Lahsa, and in doing so has obtained the two seaports of Kateef and Ojeyr, thereby excluding the Wahabees from the sea; and has, on the invitation of the Arab chieftains, carried her flag as far as El Bida, a town on the eastern coast of the bold promontory of El Kutr (Guttur). Where the Turkish authority ends in the neighbourhood of El Bida, what used to be locally known as the Pirate Coast commences, and extends as far as Shinas, on the eastern coast of the bold promontory of Cape Mussendum, which closes the Persian Gulf to the east. From this point, Shinas, the territory of the little independent state of Muscat or Oman begins, from which the Zanzibar dominion is an offshoot. The Pirate Coast acquired its name from the predatory habits of its Arab tribes. An expedition from Bombay in 1809 attacked their stronghold of Ras-ul-Kheima, on the western side of Cape Mussendom, and with the loyal aid of the Sultan of Muscat succeeded in destroying it. A more formidable expedition was organized, under General Keir, in 1819, and the pirates of this coast were effectually brought under control. The Arab chieftains entered into a general engagement to abjure and put down piracy. This treaty is still in force.

It has numerous islands, but only the following are of importance:—Bahrein, 80 or 90 miles in circumference; Kharak, about 4½ miles; Kishm, 54 miles long and 32 broad; and Ormuz, though historically interesting, is a small barren volcanic island, covered with salt. Dr. Jules Oppert claims Bahrein as the common home to which classical and Chaldæan tradition trace the ancient Assyrians and Phœnicians alike, with the Tilvun of the cuneiform inscriptions. Arrian called it Τύλος and Strabo spelt it Τύρος.

Most of the ancient traffic with India seems to have been by way of the Persian Gulf and the Red Sea. The Tyrians established depots on the shores of the Persian Gulf, and the course of trade being through the land of the Cushdi, the races in India came to be included under the ethnological title of Cush (Genesis x. 6), and hence the Persian, Chaldæan, and Arabic version frequently render that term by India, Isaiah xi. 2, xviii. 1; Jeremiah xiii. 23. The Mesopotamian Valley is believed to possess a soil rich enough to supply whole nations with corn, if only the increase of cultivation and the prosperity of the cultivators were made matter of imperial concern. The valley of the Karun river, in the south of Persia, offers a scarcely less promising field for the growth of barley and wheat. The survey of the gulf was undertaken between 1820 and 1830 by the officers of the Indian navy. The winds are chiefly easterly and westerly, taking the direction of the coasts. When the S.E. wind sets in, the whole force of the sea is brought to bear directly against the current of the Euphrates, and hence an enormous deposit is effected of the alluvium brought down by the stream, thus barring up its mouth. This deposit, constantly on the increase, progresses, according to Sir Henry Rawlinson, at the rate of a mile in the lapse of 35 to 40 years. A great city, of which the ruins are to be seen above Mahammerah, was an island in the time of Sennacherib named Billat, and has been shown to have been still an island in the time of Alexander. At the present time it is sixty miles from the mouth of the river, and a succession of cities can be traced upon the desiccated delta below it, along the river, down to the sea. According to that writer, the gulf once extended to Baghdad, 500 miles beyond its present point.—*Ait. Treat. Eng. and Sunn.* iv. p. 199; *Travels in Oman*, i. p. 265; *Col. Chesney, Euphrates and Tigris*, i. p. 568; *Rennell's Memoir*, p. 34; *Taylor.*

PERSIMMON. Tsze, CHIN. The juicy fruits of Diospyros kaki and other species.

PERTABGARH DEOLAH, a small principality grown out of Mewar, the raja being descended from a junior branch of the Udaipur house. From the time of the establishment of the Mahratta power in Malwa, the raja of Pertabgarh paid tribute to Holkar. Under the 4th article of the treaty of Mundisore, the British Government acquired a right to the tribute levied by Holkar in Pertabgarh. Raja Dulput Singh succeeded to the state in 1844. Dulput Singh was grandson of the chief of Pertabgarh, and had succeeded to the state of Dungurpore on the deposition of Jeswunt Singh, by whom he had been adopted. On his succession to Pertabgarh he relinquished Dungurpore to Oody Singh, son of the Thakur of Sablee. He was guaranteed the right of adoption. The area of the state is 1460 square miles, the population 150,000; the revenue, after deducting the tribute paid to the British Government, and about two lakhs of rupees enjoyed by feudatories of the state, is in British money about 262,400 rupees. The chief receives a salute of fifteen guns.—*Rajasthan*, ii. p. 76; *Treaties*, etc.

PERUMAL, literally the great personage, the most common name of Vishnu in the Tamil country. Perumal Tirunal, a festival celebrated in honour of Vishnu and his consort.

PERUN. HIND. (qu. Pairahan, PERS.) An article of dress amongst Hindu women.

PERUVIAN BARK, or Cinchona bark, is obtained from the Cinchona genus of trees,—C. officinalis, C. succirubra, C. Calisaya, C. micrantha, etc.,—natives of the Andes of Peru, from whence plants have been introduced by Mr. Clement Markham into India and into Java. Quinine is obtained from the bark. The Cinchonæ, when cultivated, not only yield their normal proportion of quinine, but in some species at least this is susceptible of a large increase.

PESCADORE, Pehoe, or Ponghu Islands consist of 21 inhabited islands, exending from lat. 23° 12′ to 23° 47′ N., and long. 119° 16′ to 119° 39¼′ E. No part of the group rises higher than 300 feet above the sea, and the summits of the islands between Formosa and the mainland are flat.—*Horsb.; Collingwood.*

PESHAWUR, a province in the extreme N.W. of British India, which takes its name from the town of Peshawur. The district lies between lat. 33° 43′ and 34° 31′ N., and long. 71° 25′ and 72° 47′ E.; has an area of 1928 square miles, and a population in 1868 of 523,152. Its British military cantonment is in lat. 34° 0′ 15″ N., and long. 71° 34′ 45″ E. The town of Peshawur has about 60,000 inhabitants. It is bounded on the north by the ranges which link the Safed Koh to the Hindu Kush, on the west and south by continuations of the same mountains, on the south-east by the Indus, and on the north-east by the

hills of Buner and Swat. Peshawur, down to the time of Akbar, bore its old name of Parashara, under which form it is mentioned by Abul Fazl and Baber, and still earlier by Abu Rihan and the Arab geographers of the tenth century.

Six centuries before Christ, the tribes of Peshawur repulsed an army sent from Persia to collect tribute, which the princes of Hindustan formerly paid, but which had been withheld by Sinkol, then ruler of the country. In the fifth century B.C., they prevented a Rajput sovereign from establishing himself on the Indus. He was named Keda Raja, contemporary with Hystaspes, father of Darius. Subsequently they opposed Alexander in his advance against Porus. One of the rock edicts of Asoka is in the vicinity of Shergarh in Yusufzai. About B.C. 165, Pashpamitra persecuted the Buddhists, and the Greeks reappeared on the Indus, under Menander, king of Bactria. His successor, Eucratides, B.C. 145, annexed to his kingdom the Kābul and Peshawur valleys, with a part of the Panjab and Sind, B.C. 80. Khorasan, Afghanistan, Sind, and the Panjab were united under a ruler of the Saka or Sacæ Scythians. Other Saka tribes and princes followed; but Indian princes of Lahore and Dehli reconquered their Trans-Indus territories of Kābul, Peshawur, etc., which they retained till about the seventh century of the Christian era. In 978 A.D., Jaipal, raja of Lahore, advanced from Peshawur to attack Sabaktagin, governor of Khorasan, under the titular sway of the Samani princes. Jaipal was utterly defeated, and Sabaktagin took possession of Peshawur, which he garrisoned with 10,000 horse.

Peshawur proper is divided into two portions, one lying on the right bank of the Kābul river, and adjoining the Khatak and Afridi hills, which run down to a point at Attock; the other a triangular-shaped tract, of which the two sides are marked out by the Kābul river and one of its tributaries, the Bara, and the base by the Khaibar hills. This is the most highly cultivated spot in the whole valley; in the centre of it stands the city. Its climate is very hot in summer, the thermometer frequently reaching 110° or 112° in the shade. The heat is, however, occasionally mitigated by the breeze from the neighbouring mountains, and as the country, naturally fertile, is well watered by the Indus, the Kābul river, the Bara, and some other streams of less importance, and is, moreover, well cultivated, it is amazingly productive. Scented rice, grown on the banks of the Bara river, is exported, and commands a high price. The district yields iron ore, gold dust, antimony, talc, lignite, and rock-salt. Its present name was given to it by the emperor Akbar, modifying its ancient designation of Parashara. Its position has exposed it to invasions from the west, and it is now enclosed on the north and west by hill tribes of Pathan or Afghan descent, professing Muhammadanism, with democratic institutions, and partly nomade habits, and pressed for land. The Peshawur population also is mostly Muhammadan (481,447), with 27,408 Hindus, 2014 Sikhs; Gujar, 10,384; Brahmans, 2185; Kshatriya, 6398; Bania, 3444; Arora, 11,957; Mughal, 21,428; Kashmiri, 12,238. The principal clan of the Pathans is the Yusufzai (82,170), who retain all the individual freedom, patriarchal institutions, and jealousy of personal aggrandizement, which are the original characteristics of the Afghan mountaineers. As soldiers they are not inferior to any of the independent tribes. They are the most martial of all the British subjects on the frontier, and the history of many generations attests their military exploits. Participators in every war that has convulsed the Peshawur valley, and always the recusant subjects of the Sikhs, they literally turned their swords into ploughshares, and became right good lieges of the British.—*Lt.-Col. MacGregor, High Asia*, ii. 548–590; *Aitcheson's Treaties; Imp. Gaz.; Prinsep by Thomas; Records, Govt. of India.* See Panjab.

PESH-IMAM. The Imam in Muhammadanism is a chief, civil or religious. A Pesh-Imam is the leader of prayers in a mosque. The Imam of Muscat is a sovereign ruler. The Shiah believe in 12 Imams, of which the last, Imam Mahdi, is supposed to be still alive, or not yet come. Imam Shafai is one of the four recognised commentators of the Koran.—*Wils. Gloss.*

PESH-KABZ. PERS. A kind of dagger; blade is straight at the back, sloping to a point in front; handle of the bone of a cetacean.

PESHKAR. HIND., PERS. A superintendent; under the Mahratta and Hyderabad governments, an officer of state.

PESH-KASH. PERS. Tribute. In Persia, presents from inferior officers to superiors, something like the reliefs which in Europe during the middle ages vassals had to pay to their suzerain lords. Literally it signifies first-fruits, or rather that which is first extracted.—*Malcolm's India.*

PESH-KHIDMAT, a servant constantly in attendance about the person of his master, particularly while he dresses and takes his meals; nearly answers to the Khidmutgar of India.—*Fraser's Khorasan*, p. 194.

PESHOLA, a lake in Rajputana. The abode of the Hindu deity Sookhdeo, near the Peshola and Oodisagor lakes, is in a deep recess, well wooded, with a cascade bursting from the rock near its summit, under a ledge of which the symbolic representative is enshrined. Around it are several gop'has or caves of the anchorite devotees; but the most conspicuous object is a projecting ledge, named Dyte-ka-har, or giant's bone, on which those who are in search of ease jump from above. This is called the Vira-j'hamp, or warrior's leap, and is made in fulfilment of vows either for temporal or future good. Although most of the leapers perish, some instances of escape are recorded.—*Rajasthan*, ii. p. 628.

PESHWA. PERS. A titular term. Peshwa, PERS., meaning preceding, was used by Ala-ud-Din (A.D. 1152) as a ministerial title. It was adopted by the Mahratta rulers, Sivaji and Sumbaji, as a designation of their chief minister, and was retained by the Brahmans, who succeeded to the rule of the Mahratta dominions, until they were finally conquered and set aside in 1818. Siwai Madhu Rao was Peshwa in 1790; Vinaek Rao Bakha Sahib in 1802, and Chimnaji Appa Sahib, 1802. Baji Rao Ragonath was Peshwa in December 1802. He was the son of Ragonath Rao. On the 3d June 1818, he formally abdicated and went to reside at Bithur on the Jumna. He had no son, and adopted Nana Rao, known in the 1857 mutinies as the Nana Sahib.

PESHWAZ. Pers. The courteous act of advancing to receive a guest; the equivalent of the Arabic is Istaqbal. The Murajat is to accompany on leaving.

PESHWAZ. Hind. of Dehli. A female dress or skirt.

PETA. Hind. Silk thread or wool for weaving.

PETACA, of Manilla, a cigar case made of fine strips of cane. The finest of these cigar cases cost upwards of 50 dollars.

PETERSBURG or St. Petersburg, the metropolis of the empire of Russia. It is seated on the Neva, near the Gulf of Finland, and built partly on some islands formed by the river, and partly upon the continent. Peter the Great first began this city by the erection of a citadel with six bastions in 1703, and in less than nine years the seat of empire was transferred to it from Moscow. The streets are straight, and generally broad and long. The mansions of the nobility are vast piles of building, and the public edifices are of magnificence. Among the ornaments of Petersburg is an equestrian statue of Peter the Great in bronze of a colossal size, the pedestal of which is a huge rock, brought to the spot at a great expense.

PETH. Hind. A market, a bazar.

PETHA. Hind. Benincasa cerifera; a gourd used for making sweetmeats; also a sweetmeat made of B. cerifera coated with sugar.

PETHAMBARAM, a silk cloth of Benares, Nagpur, Combaconum, and other places. The Benares cloths are highly prized for their superior quality. They measure 12 by 2½ cubits a piece; two pieces make one suit of an upper and under garment. Hindus wear these cloths during their devotional and holiday time. They are sold from Rs. 50 to 350, or even more.

PETHEN. Heb. An adder, Psalm lviii. 4, xci. 13; Deuteronomy xxxii. 24; Job xx. 14, 16. The python snake. See Serpent.

PETHURI, or Pracha amavasya, takes its latter name from Prachi, eastern, and Amavasya, new moon. It is a Hindu festival held on the new moon of the month Sravan, in honour of the 64 yogini or female attendants of the goddess Durga. This is chiefly held by women who have lost infant children, but many Hindu men also engage in the holiday, and purchase sweetmeats and toys. This day falls about the last days of August.

PETITIONS are the usual form adopted by subjects in addressing authorities of eastern countries,—the Arabic, Persian, and Urdu terms being arz, araiz, and arzi or arzian. In an extreme case, the petitioners of Constantinople and High Asia approach the authority bearing fire on their head. The Afghans explain this to imply that the misery of the petitioner is as great as if he were actually plunged in fire.—*Elphinstone's Caubul.*

PETORAGARH, lat. 29° 36′ N., long. 80° 11′ E., in Kamaon, about 8 miles west of the Kali. Its fort is 5549 feet above the sea.—*Webb.*

PETRÆA, the ancient capital of Arabia. Its wonderful remains have been several times deseribed.

PETRIE, WILLIAM, a resident of Madras, who at his own expense erected there the first observatory in the east. He was afterwards a member of the Madras Government.

PETRIFIED WOOD is found in many parts of Southern Asia. Sir W. Johnston gave a notice of that of Ceylon in vol. i. London As. Trans. That at Trevecaree, near Pondicherry, was noticed by Captain Warren in As. Res. xi. p. 1, and Captain Newbold, in Lond. As. Trans., 1846. Captain M'Murdo gave an account of that in Cutch in Bom. Lit. Trans. ii. p. 110. Of that on the Godavery, Dr. Voisey's account is in Bl. As. Trans., and Dr. Malcolmson's in Lond. Geo. Trans., 1839, p. 566. Captain Vicary's account of that in Sind was given in London Geo. Trans., 1845, iii. Dr. Buist gave an account of a petrified forest near Cairo, in Bombay Times, August 1846. Captain Newbold's account of same is in Lond. As. Trans., 1844, and Prof. Orlebar's account of it in Bombay As. Trans., 1846. A notice of that in the peninsula of Sinai, 4500 feet above the sea, is in Dr. Wilson's Lands of the Bible, i. Petrified wood occurs also on the island of Perim, Gulf of Cambay; and Dr. Nicholson's account of it is in Bom. As. Trans. i. The Perim and Pondicherry wood is full of worm-holes, and seems to have been in a state of extreme decay before petrification. Petrified wood abounds in the districts of Irawadi.—*Dr. Buist's Catal.; Yule's Embassy.*

PETROLEUM, Earth-oil.

Petroleum, as its name indicates, is an oil-like exudation from rocks, which was employed in medicine in the earliest times, though little used now. It is very abundantly diffused, and in various other forms. It is nearly allied with bitumen on the one hand, and naphtha on the other, between which it occupies an intermediate place, the principal distinction being a difference of consistency and colour. Bitumen in its several varieties, known as mineral pitch, asphalte, pisasphaltum, etc., is solid or nearly so, and black or dark coloured; naphtha is perfectly liquid, and light in colour. Petroleum, earth-oil, or rock oil, is viseid or oily, and greenish or reddish-brown in colour.

At Kafir Kot, it exudes from brown bituminous sandstone, and is usually found floating on the surface of springs; Ratta Hotar hills; at Jabba, a hamlet of Kussan, west of Chakrata, and about 9 miles east of Kalabagh; at Dhadur, 3 miles west of Kabbakhi, in the Salt Range; at Narsinghpur, in the Salt Range; at Jabba, near Nurpur; in the Algad ravine at Kafir Kot on the Indus, and in smaller quantities at some other places. It is a product of the hills on the west side of the Indus, called Tukle Riesar, near Banu and Tank, procurable in the bazar of Dehra Ismail Khan. It is of a reddish colour. In Barbadoes and Trinidad, petroleum is found floating on springs of water; in Britain, as at Colebrooke Dale, etc.; in many parts of Europe; at Baku, on the shores of the Caspian. Springs of it occur near Hit, on the Euphrates, and were noticed by Dr. Winchester in Bom. Geo. Trans. iii. p. 15.

Petroleum has been found at a place called Makoom, a few miles beyond Jeypore on the Dehing. Petroleum is very plentiful in Upper Burma. At Yeynan-gyoung there are about 150 wells being worked. The daily out-turn is estimated at 15,000 viss. The total yield of these wells is 6,000,000 viss, or 9375 tons per annum.

The total quantity of earth-oil yielded by the wells of Upper Burma is 6,600,000 viss, or 10,312½ tons per annum. There are many abandoned wells, and wells that produce very small quantities of oil. At Pagan there are about 50 wells; they yield daily 1500 viss of oil, which the earth-oil contractors are allowed to purchase. The oil from these wells is obtained in a more liquid state, and more resembles naphtha. It is better suited for lighting purposes than the Yeynan-gyoung oil.

The town of Yeynan-gyoung is the centre of a small district in which there are more than five hundred petroleum wells in full activity. The district consists of a sandy loam, resting upon alternate strata of sandstone and indurated clay; under these is a layer of pale blue argillaceous schist, of considerable thickness, impregnated with petroleum, and resting upon coal. The petroleum flows into the well when it is sunk a few feet into the schist, and when it begins to fail the well is deepened. It is remarkable that no water ever penetrates into these wells.

In Cheduba there are 22 wells; in Ramree, 13 wells, each producing two maunds in the season, the aggregate being 70 maunds annually. The produce might be increased some 10 to 20 maunds by digging more wells. The petroleum is thick and dark coloured. It is used for burning, also to pay boats' bottoms, and as a wood varnish. Two wells were said to yield a clear bright fluid.

It occurs at Akyab, Ley Doung, in the Padoung township of the Prome district; at Thayat Myo, and at Khyouk h'pyoo, in Upper Burma; at Pagan and Yeynan-gyoung; is very abundant at Yeynan-gyoung, or Earth-oil creek; very abundant in Western China, and also in Sumatra, Sulu Islands, and Japan.

In the island of Cheduba, the method of collecting it is simple. The earth is turned up to a depth of two feet, and a bank of soil, raised round a square of about 20 yards, is distributed so as to form it during the rains into a shallow pond of about the above depth. The surface of this pond is in a constant state of ebullition from the escape of gas, with which comes up the petroleum. It collects on the surface in three different forms. A green fluid oil first spreads itself over the spot where the gas is bubbling up. As it extends, its edges exhibit a brown curdled substance resembling half-congealed dripping; and amongst this, as it becomes thicker, is seen gathering in spots a dark-brown substance of the colour and consistency of treacle. This latter is used to preserve wood, to saturate paper for umbrellas, and is sometimes burned; but the fluid of a green colour is that mostly used to supply lamps. The curdled substance is used with the dark in the coarser purposes to which it is applied. This is the least valuable, and sells at five pots for a rupee; the other two at three pots for 2 rupees. A bamboo is used to skim the surface of the ponds, and bring the substance to the bank; it is scooped up with a cocoanut shell, and put into the pot. It floats so lightly on the water that this process is quickly and effectually performed. The break of the day is the time chosen for the operation, as, from the cooler temperature, it is then of harder consistence on the water, and more easily and cleanly skimmed. In the heat of the day it becomes so fluid as to make it difficult to collect without a large proportion of the water. In the months of March and April the pond gradually dries up, and the oil can then be no longer collected from out the soil. The pond is then dug, and the whole soil in it is as much disturbed as possible. On this operation depends the quantity to be yielded during the next season, and the deeper it is dug, the larger will be the produce. A sort of superstitious fear is attached to these ponds, and on no account would a native dip his foot in its water, though he will not hesitate to dig the soil when dry, nor to handle its produce, to which no sort of deleterious property is attributed. The state of ebullition, without apparent heat, may occasion this feeling among them. The ponds are surrounded by a rough hedge of stout sticks, to preserve them from the intrusion of buffalo or deer. Insects were seen in them. No heat is perceptible at the surface, the thermometer where the greatest ebullition was going forward showing but 2° more than the atmosphere, viz. 74°. No doubt this mineral product might, with ease and little expense, be increased to a very large amount; and the oil has yet perhaps to be better known and better appreciated than now, when its value will in all probability be much increased. Britain imports 59½ million gallons.

The production of crude oil in the United States has very largely increased, the daily average yield being estimated at 45,000 barrels. The local consumption of refined oil in the United States was over 3,000,000 barrels per annum. In 1879, China, Japan, Java, etc., took 600,000 barrels, against 185,000 barrels in 1877. The accumulated stock of crude oil in the United States at one period (June to August) reached the enormous total of 5,000,000 barrels. The total shipment from the United States to all parts of the world was 321,829,050 gallons, against 329,178,800 gallons in 1877, and 221,710,049 gallons in 1876.

It serves for lamps, and, mixed with ashes, answers the purposes of fuel. It is a good wood varnish. A composition of petroleum and resin is an excellent material for covering wood-work and for paying the bottoms of ships and boats, as it protects the timber from the attacks of worms and insects. When rectified by distillation, it affords naphtha. Candles are made of paraffin, a substance obtained by Mr. Warren De La Rue's process from Burma petroleum, and also produced by distillation of coal and other minerals of disputed relationship to coal. Paraffin oil, obtained by the distillation of petroleum, of coal, etc., is a lubricating oil of much value for machinery of all kinds, as it does not injuriously affect brass or other metals. At Baku, on the shores of the Caspian Sea, a petroleum locality, the viscid mineral is rolled up into balls, with earth, forming a fuel in a convenient form. At the same place, and at many others, petroleum is used for coating the flat roofs of houses. In the Trans-Indus, Northern Derajat, etc., it is the common application for sores on the backs of camels. Momyai is a black substance, principally clay, which, however, burns feebly, and softens slightly to the flame of a lamp, giving out a peculiar empyreumatic odour. It is the osteocolla of native medicine, and is, when genuine, of very high price, and its use solely medicinal. The specimens purchased often consist of solidified mineral tar,

or still oftener of lignite. Petroleum has been discovered in many places and in great abundance, selling in London in 1883 at 6d. the gallon, and has led to a great diminution in the number of whalers.—*Captain Cox in As. Res.* vi. p. 127; *Dr. Winchester in Bom. Geog. Tr.* iii. p. 115; *Captain Halsted in Beng. As. Trans.*, 1841; *Capt. Hannay; Jury's Reports Ex.; Honigberger*, p. 322; *Royle's Mat. Med.; Smith's Mat. Med.; Powell*, p. 20; *Mason's Tenasserim; Yule's Embassy.*

PETROMYZONTIDÆ, a family of fishes of the sub-class Cyclostomata, as under:—

SUB-CLASS V. Cyclostomata.

Fam. I. Petromyzontidæ.

Mordacia mordax, *Rich.*, Tasmania, Valparaiso.
Gestria Australis, *Gray*, S. Australia.
Chilensis, *Gray*, Chili, Swan River, New Zealand.

Fam. II. Myxinidæ.

Bdellostoma cirrhatum, *Forst.*, S. Africa, Japan, New Zealand.

PETROSELINUM SATIVUM. *Hoffm.*

Apium petroselinum, *Roxb.*

Bilati Pitursilii, . BENG.	Πετροσέλινον, . . . GR.
Common parsley, . ENG.	Pitar saleri, . . . HIND.

Parsley, one of a genus of plants belonging to the natural order Umbelliferæ.—*Hogg*, p. 382.

PETTAH, properly Pettai, among the Tamil people, a suburb, a towu contiguous to a fortress, but distinct from it, and usually separately fortified. The term is also applied to a village near a town in which a fair or market is held. In the latter sense it is doubtless the same as the Gujerati, Hindi, and Mahrati, Peth, Pent, or Penth, a market or bazar, or part of a towu where there are shops, or a trading or manufacturing town. There are few large towns of Southern India without a pettah, but several places of considerable size, as Ranipet, Lal-pet, Mir-sahib petta, have this termination, which betokens their rise to have been a clustering of traders under the protection of a fort.

PE-TUN-TZE, the Chinese name for a white mineral used with kaolin in the manufacture of porcelain. Kaolin is said to be derived from the decomposition of the felspar of granitic rocks. Pe-tun-tze is the same mineral which has not suffered decomposition, and on account of its fusibility it is employed in glaziug the porcelain.—*Eng. Cyc.*

PEU. TIB. A carbonate of soda, found all over Dingcham and Tibet, south of the Yaroo; it appears as a whitish powder on the surface of the soil, never in masses under ground. It is not used to make soap or otherwise in the arts; a small quantity is always put into the water with tea; it is considered to improve the flavour, and it gives a high brown colour to the decoction. It is generally used in medicine.

PEUCEDANUM CACHRYDIFOLIUM. *Led.* A valuable fodder herb of Persia. P. graveolens, *Bentham*, is the Anethum grav., *Linn.*, common dill. P. sativum, *Bentham* (Pastinaca sativa, *Linn.*), is the parsnip. P. sekakul, *Bentham*, a biennial of Egypt and Syria; its root is edible.—*Von Mueller.*

PEU RA, the Tibet goat, small, hairy, of all colours. Has an under coat of fine wool, similar to the shawl-wool, but there is no shawl-wool trade from Eastern Tibet to India at present. Flesh pretty good.

PEWAN. HIND. Two small flat pieces of stoneware or porcelain, used by fine wire-drawers to grind the point of a wire between, so as to be able to insert the point in the plate.

PEWAND. HIND. A graft. Pewandi, any graft tree.

PEWTER.

Risas, ... ARAB.	Stagno, ... IT.
Sih, ... CHIN.	Olowo, ... RUS.
Etain, ... FR.	Estano, Peltre, . . . SP.
Zinn, Zinngeisserzin, GER.	

A compound metal, made of four parts of tin and one of lead; a finer kind consists of tin mixed only with a little antimony and copper. It is used in making plates, dishes, spoons, and such other domestic articles.—*M'Culloch*, p. 900.

PHÆNICOPHAINÆ, a sub-family of birds of the family Cuculidæ. Phænicophaus callirhyncus, of Celebes, is one of the finest known cuckoos. Its bill is of a brilliant yellow-red and black.

PHÆTON, a genus of birds of the family Phætonidæ. P. candidus and P. rubricauda occur in India.

Phæton æthereus, *Blyth*, or red-tailed tropic bird, is by seamen called the 'boatswain,' from the long tail-feather, which they call a marlin-spike. They are seen 700 and 800 miles from land. Phæton candidus, *Brisson*, is the white tropic bird of tropical seas, Bay of Bengal to Mauritius.—*Collingwood.* See Birds.

PHAG or Phagu. HIND., URIYA. The red powder which Hindus throw over each other at the Holi festival.

PHAGWA. HIND. The hot wind of N.W. India. It blows in March.

PHAILWAN. HIND. A wrestler. In ancient writings, applied to a hero of romance, such as an Amadis de Gaul, etc., who performs feats of wonderful or superhuman prowess. But of late it has been used to wrestlers, prize-fighters, and bullies, as well as persons of great strength and courage.—*Fraser's Khorasan*, p. 376.

PHAK. TIB. Pig, two varieties,—the Lho phak, or southern pig, which is most abundant to the south of Lhassa, and is described as similar to the Indian village pig; and the small China pig, now abundant in Lhassa and other towns. No wild hogs anywhere in Tibet. The Chinese butchers in Lhassa blow their pork, and take in the country folks greatly by its fine appearance.

PHAKI or Phakial, a Shan race settled on the Dihing river. See Shan.

PHAL or Phala. HIND. A ploughshare, a blade, an arrow-head. A frame used in the threshing-floor.

PHALACROCORACIDÆ of Bonaparte, the Graculidæ of other naturalists; a family of the fishing birds.

PHALÆNA PATROCLUS. *Linn.*, *Cramer.* A well-known splendid moth, common in collections from Burma, China, Assam, and Sylhet.

PHALAHA. HIND. Lawful food for Hindus on their bart'h or fast days, such as buckwheat and some pulses.

PHALANGISTA MACULATA is as big as a cat, has a long snout; large, round, protuberant eyes; yellow and brown spotted skin; long tail, covered with hair on the upper part, but bare on the lower part and at the end. With its tail it fastens itself in climbing, and rolls it up when running. The female has a yellow skin, with long soft hairs, but without spots, and has a pocket under the belly, formed by a fold in the

hide, into which the hand can be inserted. She carries her young in it, hanging on the nipples, until they have grown strong enough to leave this shelter. P. vulpina is the vulpine phalanger or opossum of Australia, and Belideus breviceps is the short-headed phalanger. Phalangers of Australia climb expertly, living on leaves, buds, and fruit, though in some cases more or less carnivorous, remaining concealed during the day in the hollows of the trees, and at night seek for food among the branches.—*Ind. Arch.* June 1852.

PHALANGUM BISIGNATUM, a long black-legged spider of Ceylon, with a tiny white body; in the high country it congregates in groups of from 50 to 100 in hollow trees. In the low lands they are not gregarious.—*Tennant's Ceylon.*

PHALARIS CANARIENSIS. *Linn.* Canary grass, but growing now in many countries, for its seeds are the best kind of food for small birds; its flour is made into cakes.—*Von Mueller.*

PHA-LAUNG. Burm. Tadpole; in Arakan, a term of abuse of the British.

PHALGUNA or Phalgun, the 11th month of the Hindu year, is one of the Hindu months of spring or Vasant. At Udaipur the merry month of Phalgun was ushered in with the ahairea or spring-hunt. The preceding day, the rana used to distribute to all his chiefs and servants either a dress of green or some portion thereof, in which all appear habited on the morrow, whenever the astrologer has fixed the hour for sallying forth to slay the boar, to Gouri, the Ceres of the Rajputs; the ahairea is therefore called the Muhurut-ka-shikar, or the chase fixed astrologically. As their success on this occasion is ominous of future good, no means were neglected to secure it, either by scouts previously discovering the lair, or the efforts of the hunters to slay the boar when roused. As Phalgun advances, the bacchanalian mirth increases; groups are continually patrolling the streets, throwing a crimson powder at each other, or ejecting a solution of it from syringes, so that the garments and visages of all are one mass of crimson. On the 8th, emphatically called the Phag, the rana joined the queens and their attendants in the palace, when all restraint is removed, and mirth is unlimited. But the most brilliant sight is the playing of the Holi on horseback, on the terrace in front of the palace. Each chief who chooses to join has a plentiful supply of missiles, formed of thin plates of mica or talc, enclosing the crimson powder called abira, which with dexterous horsemanship they dart at each other, pursuing, caprioling, and jesting. This part of it much resembles the Saturnalia of Rome of this day, when similar missiles are scattered at the Carnival. The last day, or Poonim, ends the Holi, when the nakarra drums from the Tripolia summon all the chiefs with their retinues to attend their prince, and accompany him in procession to the Chougan, their Champ de Mars. In the centre of this is a long sala or hall, the ascent to which is by a flight of steps; the roof is supported by square columns without any walls, so that the court is entirely open. The festival of Holi, more classically called Hulica, otherwise Phalgutsava, meaning the festival of Phalguna, as occurring in the month of that name, commences about the full moon, at the approach of the vernal equinox. It is one of the greatest festivals among the Hindus, and almost all sects seem to partake in its festivities; and all ranks, from kings downward, appear animated by the season, which is peculiarly dedicated to Krishna. Images of this deity are then carried about in palkees, and on elephants, horses, etc., attended by music and singing and various antics. People of condition receive numerous visitors, who are entertained with dancing girls, music, singing, betel, and rose-water. An annual festival to celebrate the birth of this god is held in the month Bhadra. On this day his worshippers fast, but on the conclusion of the worship indulge themselves in music, dancing, singing, and various other festivities. In the month Sravana another festival is held in his honour, which lasts from three to five days, during which the same festivities prevail; to which is added the ceremony of swinging the image of the god in a chair suspended from the ceiling. In the month Kartika, a third festival takes place, to celebrate his revels among the Gopia; and in the month Phalguna is also held the celebrated festival of the Dola, the ceremonies of which last fifteen days, and are accompanied with great splendour and festivity. During these holidays, the Hindus of Northern India spend the night in singing and dancing, and wandering about the streets, besmeared with the dola (a red) powder; in the daytime, carrying a quantity of the same powder about with them, which, with much noise and rejoicing, they throw over the different passengers they may meet in their rambles. Music, dancing, fireworks, singing, and many obscenities take place on this occasion. The Rev. Mr. Ward says:—'At these times, the grey-headed idolator and the mad youth are seen dancing together, the old man lifting up his withered arms in the dance, and giving a kind of horror to the scene, which idolatry itself, united to the vivacity of youth, could scarcely be able to inspire.' Krishna is also worshipped under his infant form as Gopala and Bala-gopala, and again as Gopi-natha, the god of the milkmaids. In the picture of Krishna, observes Sir William Jones, it is impossible not to discover at the first glance the features of Apollo, surnamed Nomios or the pastoral in Greece, and Opifir in Italy, who fed the herds of Admetus, and slew the serpent Python.—*Tod's Rajasthan*, i. p. 567.

PHALLUS. Gr. The priapus of the Romans, and the lingam of the Saiva Hindus. It is mentioned in Ezekiel xvi. 17 and Amos v. 26. Colonel Tod says that no satisfactory etymology has ever been assigned for the Hindu name of the phallic emblem. He supposes that it may be from the same primeval language that formed the Sanskrit. Phalisa, he adds, means the 'fructifier,' from Phala, fruit, and Isa, the god. Thus the type of Osiris can have a definite interpretation, still wanting to the lingam of Siva. Both deities presided over the streams which fertilized the countries in which they received divine honours. Osiris, over the Nile, from the mountains of the Moon in Ethiopia; Siva, over the Indus (also called the Nil) and the Ganges, from Chandragiri, 'the mountains of the moon,' on a peak of whose glaciers he has his throne. The Greeks, who either borrowed it from the Egyptians, or had it from the same source, typified the fructifier by a pine-apple, or, as others say, the fir-cone or date-seed, the form of which resembles the Sitaphala or fruit of Sita, whose rape by Ravana carried

Rama from the Ganges over many countries ere he recovered her. In like manner, Gouri, the Rajput Ceres, is typified under the cocoanut or Sriphala, the chief of fruit, or fruit sacred to Sri or Isa (Isis), whose other elegant emblem of abundance, the camacumpa, is drawn with branches of the palmyra or cocoa-tree, gracefully pendent from the vase (Cumbha). The Sriphala is accordingly presented to all the votaries of Siva and Isa on the conclusion of the spring festival of Phalguna,—the Phagesia of the Greeks, the Phamenoth of the Egyptians, and the Saturnalia of antiquity,—a rejoicing at the renovation of the powers of nature, the empire of heat over cold, of light over darkness.—*Rajasthan*, i. 539; *Tr. of Hind.* i. 265. See Balanus; Lingam.

PHALSA. Hind. Grewia Asiatica. Phalsi, a sherbet prepared from its fruit.

PHANGA or Phunge. Beng. A species of Gryllus, a voracious feeder on young poppy plants.

PHANGAN, a pass which leads to Man-chi in China, occupies a little more than a month on its journey, and leads over mountains 6000 to 8000 feet high. The Patkoi pass, from Bamo and China, was the route followed by the Burmese in their invasions of Assam, and is the means of communication between the Singpho tribes on the north and south of the Patkoi mountains. The passes through Assam are along the Dihing route into Tibet, the northern banks of the Lohit, and through the Mishmi hills into Tibet, called the Mishmi route.

PHANSI. Hind. Hanging. Phansigar, a robber, a strangler, an executioner.

PHAO. Hind. of Lahoul. A kind of spirit which is put into the mixture called lugri, when the fermented materials are placed in the still. Phap, a ferment for beer, etc.—*Powell.*

PHAPHOR. Hind. A kind of morel in the Jhang district. Urginea Indica, one of the Liliaceæ.

PHAPRI. Hind. Thin biscuits. Phapri or Phapra means any thin shell-like substance.

PHARA. Mahr. A measure of capacity for grain or salt. That of salt is equal to $10\frac{1}{4}$ adhali.

PHARAOH, a title of rulers in Egypt in the time of Moses, rendered famous among all nations who follow the Hebrew, the Christian, or Muhammadan faiths. One of the Pharaohs is said to have followed the Israelites, and been drowned in the Red Sea. At Suez, after a north-westerly breeze has been blowing some time, the water recedes; and should it be followed by a south-east wind, it rises very suddenly, sometimes as much as six feet, and renders the ferry, situated about a mile and a half to the northward of the town, impassable. At a sitting of the French Academy, M. Lesseps stated, upon the authority of the reports made by his engineers, that 'at the time the Israelites left Egypt under Moses' leadership, the ebb and flow of the tides of the Red Sea reached up to the foot of the Saragaim, near Lake Timsah.' If this be correct, it follows that the spot where the Israelites crossed the Red Sea was situated not to the south, but to the north of the present extremity of its northern arm. The term Pharaoh is derived from Per-aa, the great house or court, analogous to the Turkish title of Bab-ul-Maqaddas, or Sublime Porte.—*Wellsted's Tr.* ii. p. 42.

PHARBITIS NIL. *Choisy.*

Convolvulus nil, *Linn.*	Ipomæa cœrulea, *Koen.*, *Roxb.*
Ipomæa nil, *Roth.*	
Hub-ul-nil, . . Arab.	Kala-dana, . . . Hind.
Phaproo sag, . . Beas.	Mirchai, ... ,,
Nil-kalmi, . . . Beng.	Bildi, ... Jhelum.
Kirpawa, ... Chen.	Ker, Kirpawa, . ,,
Kien-niu-tsze, . . Chin.	Aishk-pecha, . . . Pers.
Inflaton, ... Gr.	

This plant, one of the Convolvulaceæ, grows in all tropical countries; and throughout India its seeds are used as a purgative, but are irregular in their operation. They are roasted slightly and powdered, and the dose is 30 to 40 grains. A cathartic oil is obtained from the seeds. The variety P. nil; β cœrulescens, *Roxb.* Flowers large; in the morning of a pale blue, gradually growing darker.—*Voigt; Birdwood; Irvine; Honigberger; Dr. Stewart.*

PHARBITIS PURPUREA.

P. hispida, *Choisy.*	C. discolor, *Roxb.*
Convolvulus purpureus, *Linn.*	Ipomæa purpurea, *Linn.*
C. mutabilis, *Sales.*	I. hispida, *Zucc.*
C. glandulifer, *Spr.*	I. Zuccagni, *Rom.*
	I. glandulifera, *Ruiz.*

Var. a. purpurea, C. purpureus, light purple.
,, *b.* violacea, violet flowers.
,, *c.* elata, C. purpureus, *var.* elatior.
,, *d.* varia, C. purpureus, *var.* varius.
,, *e.* leucantha, white flowers.

A plant of America, cultivated in gardens.

PHARFURA, a fine enamelling on the back of jewelled ornaments, done at Jeypore, etc.

PHARID-BUTI. Hind. A mucilaginous plant found at Ajmir; used in sherbets.—*Gen. Med. Top.* p. 149.

PHARISEE, from Pharash, set apart. Hebrew reformers after the seventy years' captivity.

PHARNACEUM MOLLUGO. Ghimasag, Hind. Ladies' bedstraw; wild in gardens during rains; sometimes used as a pot-herb; said to have medicinal properties.—*Gen. Med. Top.*

PHARNAVIS, a public officer under the Mahratta government; the keeper of public registers, through whom all orders or grants were issued. Corruptly, Furnavis.

PHASEE. Uriya. A tree of Ganjam and Gumsur, of extreme height 60 feet, circumference 6 feet, and height from the ground to the intersection of the first branch, 30 feet. A light, hard wood, used for sugar-presses, rice-pounders, and bandy wheels, and occasionally for making boats of. It is tolerably plentiful.—*Captain Macdonald.*

PHASEOLUS, a genus of plants of the natural order Fabaceæ, the bean tribe. The East Indian species are as under:—

P. aconitifolius, *Jacq.*, all India.
P. aureus, *Roxb.*, cultivated.
P. angustifolius, *Roxb.*, China.
P. calcaratus, *Roxb.*, Mysore.
P. caracalla, *L.*, W. Indies, introduced.
P. coccineus, *Kniphof.*
P. dolichoides, *Roxb.*, Chittagong.
P. fuscus, *Wall.*, Prome.
P. glaber, *Roxb.*, Mauritius.
P. lunatus, *L.*, all India.
P. minimus, *Roxb.*, China.
P. mungo, *L.*, cultivated.
P. multiflorus, *L.*, cultivated.
P. nanus, *L.*, cultivated.
P. radiatus, *Linn.*, Peninsula of India.
P. rostratus, *Wall.*, cultivated.
P. Roxburghii, *W. and A.*, all India.
P. semierectus, *L.*, W. Indies, introduced.
P. sublobatus, *Roxb.*, Bengal.

P. trilobus, *Ait.*, all India.
P. torosus, *Roxb.*, Nepal.
P. vulgaris, *L.*, all India.

Phaseolus aconitifolius, *Jacq.*
Dolichos dissectus, *Lam.*

Mat, Mash, Moth,	Hind.	Mohae, ...	Sind.
Adas, ...	Pers.	Tulka-pyr, . . .	Tam.
Vasunta, . . .	Sansk.	Kuncuma-pesalu, .	Tel.

Grown as fodder throughout the Peninsula and in Upper Provinces of India; in 100 parts—

Moisture, . . .	11·22	Fatty or oily matter,	0·64
Nitrogenous matter,	23·80	Mineral constituents,	3·56
Starchy matter, .	60·78		

This dwarf plant has a small, pleasant-tasted pulse, much cultivated in the higher proviuces of India. When split, it forms one of the 'dal,' and, ground into flour, is made into bread by natives, and sometimes used mixed with wheat-flour. Bullocks, sheep, goats, and many of the native cavalry horses are fed on it. Two varieties are cultivated, white and black. Price, 22 seers per rupee. Its roots, as well as those of P. radiatus, are said by Royle to be narcotic.—*Ainslie.*

Phaseolus adenanthus, *G. Meyer.*

P. truxillensis, *Humboldt.* | P. rostratus, *Wallich.*

Cultivated for its seeds. A variety with edible roots occurs.—*Von Mueller.*

Phaseolus augulatus, Luh-tau, Chin., a plant of China.

Phaseolus aureus, the Sona Mung of Bengal, is cultivated in Bengal. Sown about the end of October or beginning of November, and reaped in February or the beginning of March.

Phaseolus coccineus, *Kniphof*; P. multiflorus, *Willdenow.* The scarlet runner; a twining, showy plant, perennial, as useful as the ordinary French bean. The root contains a narcotic poison.—*Von Mueller.*

Phaseolus lunatus, *Linn.*

P. maximus, *Sloane.* | Bun-burbutie, . . Beng.

This is the country French bean, country haricot bean, Lima bean, and Duffin bean of India. Sown in rows the same as other beans, but with a much greater space between; they require very strong sticks for support, and are ready in about six months. No very particular care is necessary. This is a most valuable bean, much prized by the European inhabitants of India, by some of whom it is preferred to the Windsor bean. It was originally brought to India from Mauritius, and is extremely prolific.

Phaseolus mungo, *Linn.*, green gram.

Var. α. chlorospermum. | P. hirtus, *Retz.*

Hali moong, . .	Beng.	Danie masha, . .	Sansk.
Hessaru, . . .	Can.	Ulandu, . . .	Tam.
Hu-tau, ...	Chin.	Wudalu, ...	Tel.
Urad, ...	Hind.	Pacha pesalu, . . .	,,
Mung, ...	Mahr.		

This very pleasant-tasted pulse is much prized, dressed in various ways, boiled, or ground to flour. It is of great value whenever the periodical rains fail and rice cannot be growu, and famine is the consequence; in 100 parts—

Moisture, ...	11·5	Fatty or oily matter,	1·29
Nitrogenous matter,	24·12	Mineral constituents	
Starchy matter, .	29·87	(ash), ...	3·6

It is commonly cultivated in the Panjab plains, and to 3500 feet in the hills, and its pulse is considered nutritious and digestible. It will keep good for about three years if carefully preserved by packing it iu parcels. Of the Indian pulses, it fetches the highest price, and its small seed is in great request for delicate dishes and cakes. It is cultivated up to 6000 feet; the harvest is thirty-fold. Colonel Sykes counted 62 pods on one plant, with from 7 to 16 seeds on each.

Phaseolus max, *Roxb.*, black gram.

Var. β. melanospermus, black seeds.

Mash, ...	Arab.	Benu mash, . .	Pers.
Kalo moog, . .	Beng.	Masha, ...	Sansk.
Krishna moog, .	,,	Bu-mæ, ...	Singh.
Chicuda, ...	Can.	Karpa-ulandu, .	Tam.
Kali urad, . . .	Hind.	Nalla wudalu, . .	Tel.
Kali moong, . .	,,	Nalla pesalu, . . .	,,
Wuddu, . .	Maleal.	Karpa, Minomolu, .	,,

This pulse is grown in the Sutlej valley between Rampur and Sungnam at an elevation of 6000 feet. The seeds are both black and green. It differs but little from the common ulundu, P. mungo, except that it is of a darker colour and somewhat larger. The Moong of the natives and black gram of the English is like P. muugo, but distinguished by its black seeds, and is, like it, found in a cultivated state; it takes about the same time to ripen, and yields nearly the same produce. It is a common pulse in Burma.

Phaseolus radiatus, *Roxb.*, is R. Roxburghii, *W. and A.*, the Mash-kulay of all India. It also has a green and a black seeded variety. It is the most esteemed of all the leguminous plants.

Phaseolus rostratus, *Wall.*, *W. and A.*

Ph. alatus, *Roxb.*, *Rh.*		Ph. amarus, *Roxb.*	
Bun burbuti, . .	Beng.	Karalsana, ...	Tel.
Hullunda, . . .	Hind.	Karu alachanda, . .	,,
Katon paira, .	Maleal.		

This species is grown in the Circars and in Malabar, where the tuberous roots are eaten; other parts of the plant are used in medicine.

Phaseolus trilobus, *Ait.*, *Roxb.*

Glycine triloba, *Linn.* Dolichos trilobatus, *D.C.*		Dolichos stipulaceus, *Lam.*	
Mugani, ...	Beng.	Kulaee, Trianguli,	Hind.
Three-lobed bean,	Eng.	Pilli pesara, . . .	Tel.

This species of Phaseolus, sown like any other beans, grows spontaneously everywhere in the Tenasserim provinces. Roxburgh says he never found it but in its wild state; Voigt says the leaves are alleged to be tonic and sedative, and are used in cataplasms to weak eyes. Cultivated in the Peninsula of India and in Bengal, and its seeds are eaten by the poor. In China, its root is eaten, though slightly noxious if not thoroughly cooked, and a kind of arrow-root is prepared from the root.—*Mason; O'S.; Smith.*

Phaseolus vulgaris, *Linn.*

Lobiya, Bakla, . Hind. | Dambala, . . . Singh.

French bean, kidney bean, haricot bean, native of Kābul and Kashmir, said to be a native of India; but Dr. Royle states that seeds were brought to him from Kashmir, and he was therefore inclined to consider that it was introduced into Europe from the most northern parts, such as Kābul and Kashmir, and that this accounts for their being able to cultivate it at a lower temperature than other species of the genus. The meal is twice as nutritious as that of wheat. P. nanus, *Linn.*, and P. tumidus, *Savi*, sugar, sword, or egg bean, are varieties of P. vulgaris.—*Von Mueller; Eng. Cyc.; Voigt; Ainslie; Roxb.; Royle; Cleghorn; Mason; Jaffrey.*

PHASIANIDÆ, the pheasant family of birds, comprises the pea-fowl, pheasants, jungle-fowl, and spur-fowl, all of them peculiar to Asia, India,

Burma, and Malayana; some authors include also the turkeys. They frequent forests, jungles, and thick coverts, perch and roost on trees:—

Sub-Fam. Pavoninæ, Pea-fowl.

Pavo cristatus, *Linn.*, common peacock.
P. Japonensis, Japan peacock.
P. muticus, *Linn.*, Burmese peacock.
Polyplectron Tibetanum, Assam to Tenasserim.
P. bicalcaratum, *Linn.*, Malacca, Sumatra.
P. Napoleonis, *Hume.*
P. chalcurus, *Temm.*
Argusanus giganteus, *Temm.*, Malay Peninsula, Archipelago.

Sub-Fam. Phasianinæ, Pheasants.

Lophophorus Impeyanus, *Latham*, the monal, Himalaya.
Crossoptilon auritum, *Pallas*, snow pheasant.
C. Tibetanum, *Hodgson*, snow pheasant.
Ceriornis satyra, *Linn.*, Sikkim horned pheasant.
C. melanocephala, *Gray*, Simla horned pheasant.
C. Temminckii, *Gray*, China.
C. Caboti, *Gould*, China.
Ithaginis cruentus, *Hardw.*, green blood pheasant, Bhutan, Sikkim.
Pucrasia macrolophia, *Less.*, Purkas pheasant.
P. castanea, *Gould*, North-west Himalaya.
Phasianus Wallichii, *Hardw.*, Cheer pheasant.
P. Colchicus.
P. torquatus, —? ring-necked pheasant of China.
P. Mongolicus, *Gould.*
P. versicolor, *Vieillot*, Japan.
P. Reevesii, *Gray*, China.
P. Sœmmerringii, *Temm.*, Japan.
P. lineatus, *Lath.*, silver pheasant of Burma.
Thaumalea picta, —? China, Central Asia.
T. Amherstiæ, *Leadbeater*, North China, Manchuria.
Gennæus nycthemerus, *Gould*, silver pheasant of Himalaya.
Gallophasis albocristatus, *Vigors*, white-crested Kalij pheasant.
G. melanotus, *Blyth*, Sikkim, the Kalij pheasant.
G. Horsfieldii, *Gray*, Assam, Tiperah, Chittagong.
G. lineatus, —, Assam, Burma.

Sub-Fam. Gallinæ, Jungle-fowl, Firebacks, Black Pheasant.

Diardigallus prelatus, *Bonap.*, Siam.
Gallus ferrugineus, *Gmelin*, red jungle-fowl.
G. Sonneratii, *Temm.*, grey jungle-fowl.
G. Stanleyi, *Gray*, Ceylon.
G. furcatus, *Temm.*, Java.
G. æneus, *Temm.*, Batavia.
Galloperdix spadiceus, *Gmelin*, red spur-fowl.
G. lunulosus, *Valerie*, painted spur-fowl.
G. Zeylonensis, —? Ceylon.

The genus Phasianus is higher up the Himalaya slopes than the Gallophasis, and the Gallus is still lower. Phasianus colchicus and the Chinese P. torquatus readily intermix and blend, wherever the latter has been introduced in Europe. Phasianus colchicus, the common pheasant, was originally from Asia Minor. P. torquatus came from Shanghai about the middle of the 18th century; P. Mongolicus from Mongolia, P. Sœmmerringii from Japan, P. Reevesii from China, and P. versicolor from Japan. See Pheasant.

PHASMA, a genus of the Phasmidæ, inoffensive leaf-eating insects of very varied forms, some being broad and leaf-like, others long and cylindrical, so as to resemble sticks, whence their common name, walking stick insects. The larger wingless Phasmidæ are 8 to 12 inches long, and as thick as the finger. They are abundant in the Moluccas, hanging on the shrubs that line the forest paths, and they resemble sticks so exactly in colour and other parts, as to render their detection impossible. The wings of those provided with them are often brightly coloured. The genera Phasma and Mantis often escape observation from their resemblance to grass and brown twigs. The Phasmidæ are found in Asia, Africa, S. America, and Australia, and from their varied shapes are called spectres, phantoms, devils, horses, soldiers of Cayenne, walking leaves (Phyllum), animated sticks, etc. About 600 species of Phasmidæ have been described. Their whole colouring, form, rugosity, and the arrangement of the head, legs, and antennæ, are such as to render them absolutely identical in appearance with dead sticks and bits of withered grass and leaves, and they have the extraordinary habit of stretching out their legs unsymmetrically, so as to render the resemblance complete. Ceroxylus laceratus of Borneo is covered over with foliaccous excrescences of a clear olive-green colour, so as exactly to resemble a stick grown over by a creeping moss or gungermannia. The Dyak who brought it said it was grown over with moss although alive, and only a most minute examination convinced that it was not so.

PHEASANT birds belong to the family Phasianidæ. Gold and silver pheasants are inhabitants of China; but the golden pheasant, according to M. Temminck, inhabits not only China and Japan, but the northern parts of Greece, as also Georgia and the Caucasus, and has been met with even in the province of Orenburg. M. Degland tells us that M. Gamba, French consul at Tiflis, met with this gorgeous bird in numerous flocks on the spurs of the Caucasus which extend towards the Caspian Sea, and that now it has gone wild and multiplied in some of the forests of Germany. The golden pheasants inhabit no part of the plains of India, nor does any kind of pheasant inhabit south of the Himalaya in British India.

Dr. Adams, close to the melting snow, came on several flocks of the great snow-pheasant, known to the Kashmiri by the names Gor-ka-gu and Ku-buk-deri. It is also called Lepia and Jermonal in other districts westward. This species seems to frequent the high ranges of Afghanistan, and suitable situations all over the great Himalayan chain. There are three allied species, one of which is possibly only a local variety (Tetraogallus Tibetanus); the other two are decidedly distinct. One of the latter is said to frequent the Ladakh mountains; it has a band on the front of the neck like the chukor. He saw a flock of snow-pheasants together with quoir monal or snow-partridge (Lerva nivicola). This handsome bird is not uncommon in certain localities and at high altitudes on Kashmir, Ladakh, and northwards. The snow-partridge breeds near the limits of vegetation, and lays from six to seven eggs.

The black-headed or Hasting's pheasant (Ceriornis melanocephala, *Gray*) is found on the wooded slopes of the Pir Panjal. It is one of the gayest, and at the same time largest of its family. From the brilliancy of its plumage, it has been designated by Europeans the argus pheasant; but the true argus is a native of Sumatra and the Malayan Peninsula. The most common local name for this species, besides the above, is Jewar. In some parts of the Kashmir ranges, the male is called Sonalu, and the female Selalee. Its close ally, the Sikkim horned pheasant (C. satyra), has not been met with on the North-Western Himalaya. Oft, in the stillness of an alpine solitude, at his

tent door, by the cheerful log-fire, Adams listened to the well-known Wa, wa, aw, of this bird. The loud wailing cry of the jewar sounds mournfully along the valleys, and is more often heard at dusk and break of day than at any other time.

Foremost of all the various species of pheasants stands the Impeyan, or monal (Lophophorus impeyanus). This splendid bird, once so abundant in the Western Himalaya, is now, comparatively speaking, restricted to certain localities in the wooded slopes of the higher ranges. Whole tracts of forests, once dazzling with the gorgeous forms of these birds, are now without a single specimen. It will, however, be long before it is extirpated, for its haunts are high up among the craggy rocks, where few ordinary sportsmen venture. The average weight of an adult male monal is nearly 6 lbs.; that of the female, about 5 lbs.; the young of the year, about 3 lbs. Its favourite haunts are in the deepest solitude of the forest, or among the bamboo and dense jungle which clothe the sides and bottoms of the valleys. It is found along the line of the Himalaya, from 6000 to 8000 or 10,000 feet, but is partial to localities. It is strictly alpine in its haunts, and prefers the cooler regions of the middle ranges to the forests bordering on the plains of Indian. They are bought chiefly to adorn ladies' bonnets. Its favourite food consists of acorns, earth-nuts, bulbs, wild strawberry, currants, etc. They may be met with in scattered flocks, singly, or in pairs. The female monal lays four to six eggs, very similar in colouring to those of the turkey. The young bird has the dark-brown plumage of the female until the autumnal moult. About Mussoori and Simla, Monal is the name; to the eastward it is called Ratteah cowan and Monalee. The male is the Lont and the female the Ham of the Kashmirians, who adorn their mosques with the brilliant feathers of the male.

The plach pheasant, known by the local names Pukras, Coclass (Pucrasia macrolopha), is less plentiful, and does not appear to be so generally distributed as the monal.

The cheer pheasant (Phasianus Wallichii) is one of the most elegant in the Himalaya. It is likewise known by the local names of Buinchil and Herrel. The male measures about 18 inches, exclusive of the tail, which varies from 20 to 26 inches in length. The naked skin around the eye is bright red. The iris is light brown. The tail is composed of eighteen feathers, which graduate in pairs, and are broadly barred with pale yellow or dusky brown and olive blotches. The cheer frequents the lower and middle regions, and is seldom found at very high elevations. It delights in grassy situations, among stunted oak or such like, and is generally met with in flocks of from six to twenty. The moment they are disturbed they separate, and secrete themselves among the grass or in the foliage of trees, whence it is said they have been knocked down with sticks.

The white-crested kalij (Gallophasus albocristatus) is the most common and widely distributed of the Himalayan pheasants. There is a congener, with white markings on the crest and back, found on the eastern ranges, Sikkim, etc. Mr. Blyth considered it a distinct species, and named it G. melanotus. But Adams has seen many old males of the G. albocristatus with very little white on the crown and back. This kalij pheasant (Mŭrghee kookera of the natives) is plentiful along the great valleys, called Doons, bordering on the plains of India, up to elevations of from 6000 to 8000 feet. It prefers, however, the more southern ranges, and is seldom met with in the remote interior. The egg is white, and about the size of the bantam's. A nest may contain from nine to twelve and even more eggs, which are hatched about the end of May. Grubs, insects, seeds, shoots and leaves of trees, constitute the favourite food of the kalij.

The red-legged partridge, better known in the east by the name of chukor (Caccabis chukor, *Gray*), has a wide distribution. It does not differ in any well-marked particular from the Greek partridge of south-east Europe, and shows how easily species can be made. Of Perdix Græca there is a variety in the island of Crete. Lieut. Wood in his journey mentions taking part in a hunting expedition, when the party bagged 500 chukor, by running them down with beaters and dogs. The chukor prefers barren mountains to the rich and luxuriant vegetation of the more southern ranges; bare stony ridges clad with low scrub are its favourite haunts. During incubation the male remains near the nest, and may be heard all day piping his loud call, Cuc-cuc, resembling that of the domestic fowl. The Kashmirians call the bird Kau-kau, from its call.

The lineated kalij of Arakan and Burma is Gallophasus lineatus; the purple kalij is G. Horsfieldii, the white-crested kalij is G. albocristatus, and the black-headed is G. melanotus. The Japanese pheasant (Phasianus versicolor) and Sœmmerring's pheasant (P. Sœmmerringii) are beautiful birds, close allies of the common pheasant (P. colchicus). They inhabit Japan, where they are the only representatives of the genus. Males of the Japanese pheasant were introduced into Europe some years ago, and hybridized freely with females of the ordinary bird, until the ultimate produce could scarcely be distinguished from the pure-bred P. versicolor.

The bar-tailed Reeve's pheasant (P. Reevesii) is remarkable for the excessive elongation of the two central tail-feathers, which in some specimens reach a length of five feet six inches. It is, besides, conspicuous for its beautifully variegated plumage. Its native country is Central China, to the north of the river Yang-tze-kiang. Amherst pheasant (Thaumalea Amherstiæ) of N. China is a strict congener of the gold pheasant (T. picta) of Central China, but is even more showy and magnificent in plumage. It has been obtained by collectors in Yunnan and Western Sze-chuen in considerable numbers.

Temminck tragopan (Ceriornis Temminckii) is found in China, Nepal, Bhutan, and Sikkim, being replaced on the slopes of the N.W. Himalayas by the black-headed tragopan (C. melanocephala, *Gray*). Temminck's tragopan is a representative of this splendid group of pheasants in Central and Western China; and Blyth's tragopan, the most recent addition to the genus, is from Upper Assam.—*Adams.*

PHEEAL. Hind. Supposed to be an old jackal, commonly known as the tiger's provider.

PHEESH. Sind. Chamærops Ritchieana, a dwarf palm growing near the Hubb river. Its leaves are gathered by the Chuta and Brahui tribes, and made into the matting and strings with

which their huts are constructed, also into shoes and sandals. A camel-load of leaves sells in the northern parts for 12 to 16 annas. It has a small acrid berry.

PHIH or Pruh, the name given by the Lepcha to the Bhutani.

PHILADELPHACEÆ. *Lindl.* The syringa tribe of plants, comprising the genus Philadelphus, the Buzru, Mudnu, Zhoang of the Sutlej, appear to be the species P. tomentosus; grows at from 8000 to 9500 feet, and is stated to be used for ropes.—*Stewart.*

PHILIPÆA CALOTROPIDIS. *Stewart.*

Bhum-phor, . . HIND. | Khurjin, Khalatri, PANJ.

This grows like a parasite on the roots of the Calotropis in Shahpur, and is said to be used as fodder for sheep, goats, and oxen, not camels. In Shahpur, Dr. Stewart says the plants grow on the roots of the Salvadora oleoides, and on all the tamarisks, and that he never found them on the Calotropis. The natives call it Gidar ka tamaku, jackal's tobacco. It is a very striking object. The bare, hard soil near a Salvadora bush cracks, and in the course of a night the place is studded with what resembles huge flowering heads of digitalis, each with a stem more than an inch thick, and without any regular leaves.—*Stewart.*

PHILIPPINE ARCHIPELAGO consists of over 500 islands, but only Luzon and Mindanao are of great size. The group lies between Borneo and Formosa, and separates the Northern Pacific Ocean from the China Sea. It covers 14½ degrees of latitude, from lat. 5° to 19° 30′ N., but with the Bashee or Batanes Islands to lat. 21° N.; about 300 leagues from north to south, and 180 leagues from east to west, and in 1876 had 6,173,632 inhabitants. The islands were discovered by Magellan in 1521, and were first claimed by the Spaniards in 1565. They are separated from the Sulu Archipelago on the south by the Strait of Basillan, while on the north the Balintang channel separates them from the Batanes and Bashee Islands. The principal islands are Luzon, and to its south Mindoro, Magindanao, Palawan, Panay, and Samar. The Archipelago received its name after Philip the Second of Spain. It is the Spanish Indies, and is spread through an area of 52,647 English square miles. The Caraballos range of mountains runs through the centre of the whole, and in Luzon the mountains are occupied by unsubdued races. There are large lakes in most of the islands; and Mindanao, 'min of the lake,' gets its name from its numerous waters. There are thermal springs at Laguna, and boiling springs north in the district of Mainit. Luzon, the largest island, has an area of 2000 square miles; Mindanao, 1500 square miles; and the next in size are Palawan, Samar, Panay, Mindoro, Leyte, Negros, and Zebu. The light-house on the north pier of Luzon is in lat. 14° 36′ N., and long. 120° 57′ 20″ E., and its population has been estimated at nearly five millions. It is the best known to Europeans. Long and narrow, 450 miles by from 10 to 140, its coast is fringed with rocks and broken by many gulfs, inlets, and capacious bays. The surface is covered through a large portion of its extent by mountains, two high ranges in the north being divided by the Cagayar river, which flows between two headlands into the sea. The focus of the aboriginal civilisation of the Philippines, as might be expected, has been the main island of the group. Luzon is a corruption of the Malay and Javanese word Lasung, meaning a rice-mortar. The Spaniards are said to have asked the name of the island, and the natives, who certainly had none, thinking they meant a rice-mortar, which was before the speakers at the time, answered accordingly.

They are often shaken by earthquakes, and volcanic explosions are so frequent as to be regarded almost as common occurrences. The provinces are frequently visited with dreadful hurricanes, called in the country Leaguios. In no other part of the world are storms so terrific as there during the change of the monsoon. They are often desolated by locusts.

Negros or Buglas Island extends from lat. 9° 4′ to 9° 50′ N. The central group of the Philippines consists of Panay, Negros, Samar, Leyte, Masbate, Bohol, and Zebu; the two first and Luzon are the chief islands in which Negrito tribes exist to the present day, and even as regards Panay the fact must be considered doubtful. Negros, however, contains a considerable Negrito population; the crest of the mountain range, which extends throughout the length of the island, a distance of 120 miles, being almost exclusively occupied by scattered tribes. There is a rainy season of six months, and a mixed one of equal duration.

The population in 1873 was estimated at over six millions, viz. paying tribute, 5,501,356, and independent pagans, 602,853. The population has rapidly increased. In the early part of the 19th century, from the collective returns recently made out by the district magistrates, the total number of tributes were 386,654, which Walton multiplied by 6½, and produced the sum of 2,515,406, at which he estimated the total population, including old men, women, and children:—Indians of both sexes, 2,395,687; Sangley Mestizos, 119,719; Sangleys, 7000; whites of all classes, 4000. The following is now given as the population in 1791, 1810, and 1873:—

	1791.	1810.	1873.	
Indians,	1,582,761	2,395,687	5,501,356	tributaries.
Mestizos,	66,917	119,719	602,853	independents.
	1,649,678	2,155,406	6,104,209	

In 1740, Manilla had only 6000 or 7000 inhabitants; in 1864 it was stated to have had 80,000; and in 1873 the population of Manilla was 230,407, as under:—

European Spaniards,	4,189	Chinese Mestizos,	46,066
European Foreigners,	250	Spanish Mestizos,	3,849
Chinese, ...	15,157	Pure natives, . .	160,896

The Aheta or Negrito of the Philippines are a Papuan race, the second name, meaning little Negro, being given to them by the Spaniards; but that of Ita or Aheta, so pronounced but written Ajeta, is their usual appellation among the planters and villagers of the plains. The woolly-haired tribes are more numerous in the Philippines than in any other group of the Indian Archipelago; they were estimated by M. Mallat, in 1842, to amount to 25,000. The islands Samar, Leyte, and Zebu have not any of them; but they were found in Negros, Mindanao, Mindoro, and Luzon. In the early accounts of them by Spaniards, they are described as being smaller, more slightly built and less dark in colour, than

the Negroes of Africa, and as having features less marked by the Negro characteristics, but as having woolly instead of lank hair; and their social condition could not then have been much better than now, since they were described as living on roots and the produce of the chase, and as sleeping in the branches of the trees, or among the ashes of the fires at which they had cooked their food. They are all well-formed and sprightly, but very low in stature, as they rarely exceed four feet and a half in height. They are ebony-black, like Negroes of Africa. Their hair is woolly like that of the Papuans. A line commencing to the east of the Philippine Islands, thence along the western coast of Gilolo through the island of Bouru, and curving round the west of Flores, then bending back by Sandalwood Island to take in Pratti, will separate the Malayan and all the Asiatic races from the Papuans and all that inhabit the Pacific, though along the line of junction intermigration and commixture have taken place.

The higher slopes, the Ysarog (Issaro) of the island of Luzon, are occupied by a small race, called erroneously Ygarrot. On the death of a near relative, the head-man of the house is said to kill any individual at random.

The Indian race are superstitious, credulous, fond of gaming, and particularly addicted to cock-fighting. This seems to have been introduced by the Spaniards, and in the year 1779 cock-fights were taxed for the first time. The Indians of the Philippines are among the best-favoured of the Asiatic islanders, but they are not reckoned so brave as the Malays. They are a quiet, inoffensive race, clean and well-shaped, and are all converted to the Romish faith. The sailors of the Philippines are so dexterous, that they are taken almost exclusively in the other islands as steersmen, and as such have a preference in many parts of the east.

Sulu was for many years the market where the Lanun and other pirates disposed of much of their plunder, and in former times itself was decidedly piratical. The Muhammadan religion has made much progress in Mindanao and the Sulu Islands, as has the Malay language, the usual channel through which it has at all times been propagated over the islands of the Indian Archipelago.

In the Philippines are many separate nations or tribes, speaking distinct languages, unintelligible to each other. Of these, the Bisayo, Bicol, Ilocano, Pangasinan, Pampango, and Tagala are the most important. The principal languages of Luzon are the Tagala, the Pampanga, the Pangasinan, and the Iloco, spoken at present by a population of 3,000,000; while the Bisaya has a wide currency among the southern islands of the group, Leyte, Zebu, Negros, and Panay, containing 2,000,000 people. The languages and their dialects in Luzon are the Aetai, Apayo, Bicol, Bisaya, Cebuano, Dadaya, Gadan, Ibilao, Idayan, Ibanag, Ifugao, Ilocano, Igorotte, Itanes, Ilongotte, Malaneg, *Pangasinan*, *Pampanga*, Suflin, *Tagala*, Tinguian, Zambal, spoken by about 4,700,000; those in italics being the most important, being spoken by about 3,000,000. The languages of Mindanao are Bisaya and Manday, spoken by about 100,000.

The languages of the distant islands are the Agutaino, Carolino, Chamorro, Calamiano, Coyuvo, and Ibanag, spoken by about 30,000.

The Bicol is spoken only in the two Camarines, Albay, Luzon, the islands of Masbate, Burias, Ticao, Catanduanes, and the smaller islands adjoining. Spanish has scarcely acquired a footing.

Mr. Crawfurd remarks that whether the principal languages of the Philippines be separate and distinct tongues, or mere dialects of a common language, is a question not easy to determine. Certainly, he says, the phonetic character of the Tagala, the Bisaya, the Pampangan, and Iloco are, sound for sound or letter for letter, the same. It does not appear, from a comparison of the phonetic character and grammatical structure of the Tagala with those of Malay and Javanese, that there is any ground for fancying them to be one and the same language, or languages sprung from a common parent, and only diversified by the effects of time and distance; and an examination of the Bisaya dictionary gives similar results. The great islands of Mindanao, Palawang, and the Sulu group of islets, forming the southern limits of the Philippine Archipelago, contain many nations and tribes, speaking many languages of which little has been published. Mr. Crawfurd, on the information given by Mr. Dalrymple, informs us that even in the little group of the Sulu Islands a great many different languages are spoken; and he gives a short specimen of 88 words of one of those most current.

The alphabet of the Tagala nation of the great island of Luzon or Luzonia consists of thirteen characters. It is the only one existing in the whole of this group, and seems at one time to have been used among the civilised tribes of the neighbouring islands, having spread even to Magindanan and Sulu. The forms of the letters are rather bold, and more complex than that of the Sumatran alphabets.

Spain has in all her conquests kept prominently before her the propagation of Christianity in the form embodied in her church. The Philippines therefore present a spectacle which contrasts strongly with the Dutch dependencies in the east. Spain appears in the Archipelago in her religious earnestness, her ecclesiastical assumption, and her gorgeous establishments. The natives of the Philippines have generally been converted and received into the Catholic Church. It is observed by Malte Brun, in his sketch of the inhabitants of the Philippines, that they are the only people in the Eastern Archipelago who have improved in civilisation from an intercourse with Europe. A commercial monopoly formed no part of the Spanish policy in that quarter of the world. No rich spices, no precious gums, no abundance of rare metals or drugs, were there to allure Spanish cupidity. The Spaniards nevertheless appear to have been guided in their plans of colonization—at least in the Indies—by a theory which nations still more great, and infinitely more free, might have adopted with advantage to themselves and to all humanity. They were not sordid monopolists; they ruled less by terror, and more by moral influence and the persuasions of their priests; and their power, not founded on the edge of the sword, was tolerable to the native race. They encouraged settlements, they allowed freedom to traffic; and though they levied unjust and irksome taxes, their system has been productive, within its narrow sphere, of more good than that of other conquerors in the Eastern Archipelago. That their

commerce in the further east never developed itself to any lustre or grandeur, is true, but it was because their monopoly was less rigid, not because their vigour was less manly, than that of the Dutch. Had Spain been more energetic, and still more liberal, her prosperity in the Eastern Archipelago might have rivalled that which she once enjoyed in the western world. The Tagala, who dwelt in the district round about Manilla, and are derived, according to their traditions, from the Malays, have submitted thoroughly to their rule, and become the servants of strangers. The Zebuans appeared firm in the defence of their independence, but were driven from their position by a body of men landed in good order from the ships.

The Philippine Islands have 21 species of mammals and 288 species of birds. The large and curious Idea leuconöe, with its semi-transparent white wings veined and spotted with black, is copied by the rare Papilio idæoides from the same islands. The sileucao is a logwood of an excellent quality. They have also the braziletto, another dye-wood; the eagle-wood, narra, a species of red ebony striped; the tindal-wood, all red; the sandal-wood; the pangasinang fir, the molave, an incorruptible wood, the guijo, excellent for shipbuilding, as well as the banava, calantes, or Philippine cedar, the sagovan, red and white, mary-wood, for small masts, spars, etc., the manga-chapuy betis, dasag, dungol, calumpan, and many others.

Rice is largely used as food, and, as in other countries where it is grown, there are many varieties. Manilla hemp, from the Musa textilis, has acquired a high character in Europe; 25,000 tons were shipped in 1858 from Manilla alone, of which Great Britain received one-fourth. In 1877 to 1879 the quantities of it and values received by Britain from the Philippines were as under:—

	Cwt.	Value.		Cwt.	Value.
1877,	332,304	£488,069	1879,	337,687	£434,037
1878,	421,160	551,856			

In 1879, the value of the sugar, hemp, and tobacco exported was twelve millions of dollars.

Coal occurs in the island of Zebu.

Gold is found in the mountains and in alluvial deposits, abounds in Luzon and in many of the other islands; but in the mountains the mines are not worked, indeed it may be said they are scarcely known. The wild races collect it in the brooks and streamlets. The natives of the province of Camarines in Luzon partly devote themselves to the working of the mines of Mambulao and Poracale, which have the reputation of being very rich.—*Mr. Rich, Botanist to the United States Exploring Expedition; Lubbock's Orig. of Civ.; Marryat's Indian Archipelago; Wallace*, ii. p. 218; *Quarterly Review*, No. 222; *Walton's State; Earl, Papuans; St. John's Indian Archipelago; Crawfurd's Malay Gram. and Dict.; China, Japan, and Philippines Chronicle and Directory.*

PHILISTINE, or foreigners, gave that name to Palestine, where they opposed the Jews in the conquest of that country.—*Sharpe's Egypt.*

PHILLYREA. Of this genus, Roxburgh describes P. paniculata and robusta, and Wight in Icones gives P. robusta, terminalis, and affinis. P. paniculata is a small tree with oblong ovate leaves; flowers in terminal panicles, pure white, bending down the branches, and giving the tree a graceful appearance. Introduced from China. P. robusta, the Bhooemoora of India, is a large tree.—*Riddell.*

PHILOMELA LUSCINIA. *Selby, Gould, Sw.*

Motacilla luscinia, *Linn.* | Curruca luscinia, *Flem.*
Sylvia luscinia, *Latham.*

Nightingale,	Eng.	Usignulo,	It.
Rossignol,	Fr.	Ruisenor,	Sp.
Nachtigall,	Ger.	Nachtegahl,	Sw.
Rossignuolo,	It.	Eos,	Welsh.

The nightingale is rich brown above, rump and tail with a reddish tinge, throat and middle part of belly dirty or greyish white; lateral parts of the neck, breast, and flanks, grey; bill and legs light brown; sexes alike. The nightingale shuns observation, abiding in the thickest coverts, and in these the nest is sometimes placed on a low fork, but generally on the ground. Withered leaves, particularly those of the oak, very loosely confined with dried bents and rushes, and lined internally with fine root-fibres, form the structure. The eggs, of an olive-brown, are four or five in number. After the young are hatched, generally in June, the melodious song of the male ceases, and is succeeded by a low croak, varied occasionally with a snapping noise; the first is considered to be meant for a warning, and the last as a defiance. The food consists of insects, such as flies and spiders, moths and earwigs.

Philomela orphea, *Jerdon* (the Sylvia of Temminck, and Curruca Jerdonii, *Blyth*), except in Bengal, occurs all over India in the cold weather.

Philomela Turdoides, *Blyth.*
Luscinia major, *Brisson.* | Sylvia philomela, *Bechst.*

Thrush-nightingale, inhabits Europe and Egypt. Its song is loud, but far inferior to that of the true nightingale.

PHIN, stone circles, which the Todas call P'hin. Also a common term for a pot, urn, or any vessel of such-like description.—*Harkness' Neilgherry Hills*, p. 33.

PHIRAOTI. Hind. A small wheel like a chalar on the edge of a pond or nullah, for raising water; it is worked by the foot.

PHIRI of Kashmir, seconds of shawl-wool.

PHIRKI. Pushtu. A section of a tribe.

PHLAP, also Khlap, the Assamese name of the tea plant. The camellia is called Misa Phlap in Muttuck, and Heelkat in other parts of Assam. In Cachar it is called Dullicham or white wood, from the light colour of its bark. Its timber is hard and durable, and used for posts of houses.

PHLOMIS RUSSELLIANA, Jerusalem sage, perennial and shrubby plants, with coarse hairy leaves resembling the common sage; the flowers are purple, red, yellow, etc., growing readily from seed in any common soil.—*Riddell.*

PHLOX, a genus of elegant plants, which, from their lively colours, have a pretty appearance when grown in patches. The colours are red, purple, lilac, white, etc.; grow readily from seed in a light garden soil, either in pots or the flower-beds; should be sown thinly, and when one or two inches high, transplanted where intended to flower; require in pots a somewhat loamy soil, well manured and drained.—*Riddell; Jaffrey.*

PHOBEROS HOOKERIANUS. *Wight.* A large tree of the central province of Ceylon, at an elevation of 4000 to 7000 feet.—*Thw.*

PHOBEROS ROXBURGHII. *Bennett.*
Ludia spinosa, *Roxb.* | Flacourtia stigmarota, *Wall.*

A tree of Sumatra; flowers small, reddish-white, March and April; fruit, September.—*Roxb.*

PHOCA, the seal. Apollonius related that he had seeu at Ægæ, near Issus, a female Phoca which was kept for fishing purposes. — *Yule, Cathay*, i. p. 112.

PHOCÆNA BREVIROSTRIS. *Owen.* One of the cetaceæ; occurs iu the Bay of Bengal.

PHOCÆNA COMMUNIS.

Ph. Rondeletii, *Willughby.* | Delphinus phocæna, *Linn.*

The common porpoise.

PHŒBE LANCEOLATA. *Nees.* A timber tree of Bhajji in the Panjab, and common in the Wyuad, Animallays, and, Tinnevelly mountains at 3000 feet elevation.—*Beddome, Fl. Sylv.*

PHŒBE WIGHTII. *D. C.*

P. lanceolata, *W. J.* | Kumara of Burghers.

This good-sized tree is very common about Ootacamund and the higher ranges of the Neilgherries, and in many other localities along the Western Ghats, at considerable elevations. It is in flower and fruit all the year round; it yields a good dense wood of a light-red colour, which is in use for various purposes with the natives. Mr. Gamble enumerates also Ph. angustifolia, attenuata, glausescens, pallida, paniculata, and villosa.—*Beddome, Fl. Sylv.* p. 292.

PHŒNICIA. One site of this ancient dominion was on a narrow fertile strip of land, lying between the western slope of Lebanon and the Mediterranean Sea, and extended from the river Eleutherus on the north to near Mount Carmel in the south. The ancient city of the name stood in lat. 33° 34′ N., on a promontory. India seems to have obtained an alphabet from the Phœnicians, about the 5th century B.C., about the time that the Greek letters became known on the higher feeders of the Indus.

The Phœnicians are supposed to have emigrated from the Persian Gulf to the shores of Syria, between B.C. 3000 and 2500, and their alphabet was adopted by nearly every civilised nation of the ancient world. They were the great traders of the world. At first the trade between the east and west, by the Red Sea and Persiau Gulf, was in their hands; it survived in full vigour the destruction of Tyre, B.C. 586 and 332, and of Carthage, B.C. 146; but the sea-fight off Actium seems to have put a term to the Phœnician commerce in the Mediterranean, which went into other hands, to the Arabs who had shared it with them from the earliest times, and passed to the Portuguese.

PHŒNICOBALANUS of the ancients was probably the nut of the Doum palm of Egypt.

PHŒNICOPTERINÆ, a sub-family of birds of the family Anatidæ.

PHŒNICOPTERUS ROSEUS. *Pallas.*

P. antiquus, *Temm.* | P. minor, *Jerd.*

Kan-thunti, . . . BENG.	Pu-nari, ... TAM.
Bag-hans, Raj-hans, HIND.	Pu-konga, . . . TEL.

The flamingoes number about six species, of which three are American. This bird is found on the shores of the Mediterranean, is extremely abundant in Tunis and Egypt, and extends its range as far as India. The flamingoes cross the Red Sea from Egypt to Arabia, prior to the breeding season, in immense flights, sometimes exceeding a mile in length. They feed on minute mollusca, which they gather in shallow water. The upper mandible is always lowest during the operation, and the objects of search are passed over it as a duck sifts with its lamellæ. The action of the neck by which the head is thus turued downwards and inwards gives a most peculiar character to a flock of flamingoes as they wade along the shore, and in their flight the black pinious and roseate coverts make a beautiful contrast with their snow-white bodies. See Birds.

PHŒNIX, a genus of palms, the species of which are found in the south of Europe, in the north of Africa, and in all the south of Asia, eastwards to the Archipelago, and their products are brought into the markets of India. The trunk, marked with the scars of fallen leaves, is in some species so short that it hardly appears above ground.—*Seeman.*

PHŒNIX ACAULIS. *Ham.*

Schaap, . . . LEPCH. | Pind Khajur? . . PANJ.

A small stemless palm which grows in Sikkim on the driest soil and in the deep valleys. The Lepchas eat the youug seeds, and use the feathery fronds as screens when huuting. It is found growing east of Siligori in the Terai, and is a sure sign of a hungry soil.—*Stewart's Panjab Plants*, p. 243; *Hooker's Him. Jour.* i. pp. 143, 400.

PHŒNIX DACTYLIFERA. *Linn.* Date palm.

The date tree grows in tropical and Middle Asia, in North Africa, Arabia, and Persia, and in some parts of Northern India. Its northern limit is lat. 35° N. The town of Elche in Spain is surrounded by a planted forest of 80,000 date palms, and the sale of leaves there and at Alicante for decoration yields a large revenue; and in the Gulf of Genoa also is a date forest. It is unisexual, grows to a height of 80 to 120 feet, and produces to the age of 100 to 200 years. It is the great support of the Arabs of Yemen; nineteen-twentieths of the Fezzan population live ou dates for nine months of the year, and for many animals it is their sole food, the oases being bare of herbage. The tree will live in saltish soil, and the water for its irrigation may be slightly brackish. One male tree is considered sufficient for fifty female plants, and the pollen dust is sparingly applied by artificial means. Several bunches of flowers are formed iu a season, each producing ofteu as many as a hundred dates. Iu Egypt as many as four cwt. of dates have been harvested in one season from a single date palm. There are many varieties of dates; those of Gomera contain no seeds. The best dates are produced in oases, where the water is abundant. The Zadie variety produces the heaviest crop, averaging 300 lbs. to the tree; the better varieties are only obtainable from offshoots of the root. These will commence to bear in five years, and will be in full bearing in ten years. It was introduced into the Southern Panjab in the 7th or 9th century; but the true date is nowhere

known in any quantity to the north or east of Tulamba and Jhang, both close to the Chenab, although the trec has been tried in the districts of Lahore and Amritsar, and there are a few in the northern part of Jalandhar, where, however, the chief use of the tree is for the sweet juice. It was introduced into Oudh. There are some at Saharunpur, which give good fruit, especially when the rains are late. The natives assert that it will not grow except where the soil is or has been subject to inundation. There are also hundreds of the trees about various towns in Multan and Muzaffargarh, but it is most abundant near Dehra Ghazi Khan, Trans-Indus, where the country for ten or twelve miles from north to south has such numbers of trees, that eight or ten thousand rupees are said to be annually got by Government from the small tax which is levied on each female trec, as the sexes arc on separate individuals. At Multan there is a bedana (*i.e.* seedless) fruit, in which the stone and its kernel are represented only by a little shrivelled membrane, the rest of the fruit consisting of the pleasant sweet pulp. Edgeworth states that there is only one tree yielding these, which was formerly reckoned badshahi, royal, *i.e.* the produce was reserved for the ruler of the country. But several trees produced these, which are the upper fruit ripening after the lower ordinary dates of the same tree. The fruit of a female tree is much more valuable than its sugar, and the male tree has but little juice. The terminal bunch of young leaves, taken only when a tree is cut down, is eaten by the natives both raw and cooked. There are at least sixty varieties of dates. The date stones are made into beads; the leaves are made into couches, baskets, mats, bags, brushes, fly-traps.—*Stewart's Panjab Plants*, p. 245; *Seeman on Palms; Mason's Tenasserim; Roxb. Fl. Ind.; Royle's Fib. Plants; Ainslie*, p. 30; *Voigt; Von Mueller; Powell*, i. p. 379.

PHŒNIX FARINIFERA. *Roxb.*

Phœnix pusilla, *Gœrtn.*

I'ntha, . . . MALEAL.	Chiruta ita, . . . TEL.
I'thi, ... TAM.	Chittita chettu, . . ,,

This dwarf palm grows in the sandy plains of the south of India, where it flowers in January or February; the fruit ripens in May, and the sweet pulp of its seeds, also the farinaceous substance of its stem, are eaten in times of scarcity. The leaflets are made into mats; and the common petioles are split into three or four, and are used to make baskets of various kinds. The trunk, about one or two feet high, is so enveloped in the leaves as to appear like a bush. It is common in the Peninsula of India, on dry, barren, sandy ground not far from the sea. The exterior or woody part of the trunk consists of white fibres matted together; these envelope a large quantity of farinaceous substance, which the natives use for food in times of scarcity. To procure this meal, the small trunk is split into six or eight pieces, dried, and beaten in wooden mortars, till the farinaceous part is detached from the fibres; and the meal, when separated by sifting, is fit for use by being boiled into a thick gruel or conjee. It is, in fact, an inferior sago. It seems to possess less nourishment than common sago, which is obtained in a similar manner from another palm, and is less palatable when boiled, but it has saved many lives in times of scarcity. — *Seeman on Palms; Jaffrey; Eng. Cyc.*

PHŒNIX HUMILIS. *Royle.* Dwarf date palm.—*Stewart's Panjab Plants*, p. 245.

PHŒNIX PALUDOSA. *Roxb.*

Hintal, . . . BENG.	Giruka tati chettu, . TEL.
Then boung, . . BURM.	Hintalamu, . . . ,,

The small marsh date palm tree, grows plentifully on the Sunderbuns south of Calcutta; on the low islands in the rivers, and on the shores which are inundated with the highest tides, the marsh date palm abounds. It is about 20 feet high, no thicker than a walking-cane; fruit precisely like a bunch of dates, but is not edible. Griffith says it is well worth cultivating on account of its elegant impenetrable tufts, which well adapt it for bank scenery. The trunks of the smaller trees serve for walking-sticks, the long trunks for rafters, and the leaves for thatch.—*Hooker's Him. Journ.* i. p. 1; *Mason; Seeman; Von Mueller.*

PHŒNIX RECLINATA, of the Cape of Good Hope, has a thin, sweet coating of the fruit.

PHŒNIX SYLVESTRIS. *R.* Wild date palm.

Elate sylvestris, *Linn.*

Send ka jhar, . . HIND.	Eetcha maram, . . TAM.
Khaji of . SALT RANGE.	Ita chettu, Ita, . . TEL.
I'tsham pane, . . TAM.	Pedda ita, . . . ,,

The wild date palm grows throughout British India, and is of great value on account of the palm wine it yields, and the sugar made from the palm wine. It occurs wild in many places in and near the Siwalik tract, up to and probably beyond the Indus, in the Salt Range, and out into the plains in the east of the Panjab. It is not seen much above 3000 feet in the outer hills; and Vigne correctly points out that the palms of Baramoule in Kashmir were creations of Moor's imagination. It is found in the Sind Sagar Doab, on the borders of sandy tracts, and in such land that little else grows on.

In Muzaffargarh it does not grow actually in the sandy desert, but flourishes on its borders in the most wretched soil, and where hardly any other vegetable exists, and it is often found in luxuriant groves. They pay a tax to Government, which forms an important item in the sair revenue of some districts. If not too early notched for the wine, it grows straight and very tall, length of trunk being 50 feet, and girth 2 feet, and attains full size in 40 years. Its wood is used for water-conduits, and for temporary bridges; and its leaves are extensively employed for baskets and matting for floors. Its timber is inferior to the palmyra, cocoanut, etc. The fruit when ripe is small, oval-shaped, dark-coloured, and sweetish, about the size of a ripe wild plum, but of no value. The leaves and stalks are made into baskets, boxes, and hats, twisted into rope, used for thatching, and in the manufacture of light mats for building huts. At the age of seven or ten years, when the trunk of the tree is about four feet high, it begins to yield juice, and continues productive for 20 or 25 years. The juice is extracted during the months of November, December, January, and February, during which period each tree is reckoned to yield from 120 to 240 pints of juice, averaging 180 pints. Every 12 pints or pounds is boiled down to one of gur or jagari, and four of gur yield one of good sugar in powder, so that the average produce of

each tree is about 7 or 8 lbs. of sugar annually. It yields Sendi or palm wine, commonly called toddy. The mode of obtaining this is by removing the lower leaves and their sheaths, and cutting a notch into the centre of the tree near the top, from which the liquor issues, and is conducted by a small channel, made by a bit of the palmyra tree leaf, into a pot suspended to receive it. This juice is either drunk fresh from the tree, or boiled down into sugar, or fermented for distillation, when it gives out a large portion of spirit, called arrack. Date sugar is imported in considerable quantities into Britain. Dr. Roxburgh calculated that in 1800 only about 100,000 lbs. were made annually in all Bengal. The inner wood furnishes, by boiling, a kind of catechu, which contains much tannin. It is obtained by boiling the heart-wood for a few hours, when it assumes the appearance and consistency of tar. It hardens by cooling; and when formed into small squares and dried in the sun, is fit for the market. The produce of Bombay is of uniform texture and of a dark-red colour. That of Konkan and other parts of India is of a chocolate colour, and marked inside with red streaks. The analysis of Sir H. Davy gave the following result:

	Bombay.	Konkan.		Bombay.	Konkan.
Tannin, .	54·5	48·5	Insoluble matters, sand, lime, etc., .	5·0	7·0
Extractive,	34·0	36·5			
Mucilage, .	6·5	8·0			

The fibres of the leaf-stalk are used for cables in the Red Sea. The natives of the east chew the fruit in the same manner as the areca nut, with the leaf of the betel, pepper, and quick-lime.—*Eng. Cyc.; Roxb.; Simmonds*, p. 579; *Ainslie*, *Madras Ex. Jur. Report.* See Date.

PHOG. Hind. Polygonum convolvulaceum, Calligonum polygonoides, Ficus caricoides, and F. reticulata. Twigs are woven into a wicker-work to line wells and prevent the earth falling in.

PHOG or Phogli. Hind. A wild grain; dregs or lees of anything after infusion, etc. The Phogli of Muzaffargarh is the fruit of a plant called phoke, found in desert tracts in the Panjab. It somewhat resembles the caper in its habit and colour, being destitute of true leaves, and composed of numerous fine and angular branchlets. It is much more slender than the caper, and does not attain to the same size. The flowers and fruit, which are very small and of a grey colour, fall off on attaining to maturity, and are gathered by the natives, who mix them with ghi, and use them as a relish. The fruit is well known throughout the districts.

PHOGLI. Hind. A term applied to a coil of fine gold wire in spangle-making.

PHOLAHEE. Hind. A small thorny tree. Wood of the young tree white, of the old dark-coloured, especially the heart-wood, tough and durable; used for cart wheels and sugar mills. The branches of the trees are used for fences. Length of tree to first branch, 5 feet, and girth 3 or 4 feet.—*Dr. Campbell.*

PHOLIDOTA, a genus of the orchid family. Ph. articulata, *Lindl.*, grows in the Khassya mountains and in Moulmein; Ph. imbricata, *Lindl.*, throughout India; and Ph. undulata, *Wall.*, in the Khassya Hills.

PHOOT or Phooti. Hind. Cucumis momordica; field cucumber, sown generally in the fields amongst jowari. It is something between the melon and cucumber; keeps for a long time if not too ripe, and would be valuable as a store vegetable for sea.—*Riddell.*

PHOOTANAY or Poothani. Hind. Parched Bengal horse gram.

PHORMIUM TENAX, *Forster*, is the Koradi or Harakeke, or New Zealand flax plant. There are several varieties, which yield flax of varying degrees of fineness. It is a plant likely to thrive on most of the lower hill ranges of British India, and to prove especially suitable for culture on parts of coffee estates in which the coffee has died out. Its fibre or flax, when well prepared, is superior in strength and equal in other respects to European flax, so that it seems very desirable that its culture should be encouraged. The comparative tenacity, according to Dr. Lindley, is—Silk, 34; New Zealand flax, 23; European flax, 16; European hemp, 11.

The Phormium is a flag-like plant, with sword-shaped leaves, and bears its flowers on a stalk like the American aloe. The flower contains a sweet juice. It is much liked by children, and is collected by the natives in their calabashes to the extent of half a pint from a plant. At the root of the leaves a gum-like substance is found, which serves the Maori as a substitute for sealing-wax and glue, and is also eaten. The pith of the dried flower-stalk when ignited burns like tinder, and is used as a slow match to carry fire on a journey. The leaf when green is used for writing on, the characters being engraved with a sharp-edged shell. Split and cut into strips, it serves instead of cords, strings, ropes, straps, etc., and is indispensable to the natives as a means of binding in building huts and canoes. The green strips of the leaves are plaited by the women into neat baskets, which at meals serve as plates and dishes; while the men make lines, nets, and sails of them. They also extract the fibre, dye it of various colours, and thus get material for mats and garments. The plant covers millions of acres in New Zealand, growing spontaneously on any kind of soil, moist or dry, and in any locality, high or low. It, however, attains its greatest luxuriance in moist alluvial soil. The leaf in structure resembles that of the agave. The separation of the fibre may be effected by means of maceration, or mechanical force applied so as not to injure the bast-cells, sometimes combining both these means. The natives, who use only the upper part of the leaf and only on one side of it, clean the fibre by scraping off the parenchyma with a shell. The quantity prepared by them was very small, and the Government of New Zealand, being impressed with the great value of the flax as an article of export, offered some years ago a reward of £4000 for a machine that would clean the fibre rapidly and effectively. In a small factory near Nelson the process employed was to boil the leaves in lye-water, then to dry and twist them into a thick rope, after which they were passed between ribbed wooden rollers, until the fibre was laid bare in a tolerable state of purity. The dried and bleached produce thus prepared was sold for £25 per ton. In 1860, the Rev. Mr. Purchas invented a machine for cleaning the flax, consisting essentially of a large solid cylinder or drum of hard wood, revolving, and so put together that its surface presents the cross section of the wood. Above it are a number of perpendicular

iron plates, grooved on their lower edges, which, being raised, descend in succession by their own weight. The green leaves are passed between the drum and the iron pounders, when the action of the latter, aided by a stream of water, separates and cleans the fibre. A steam-engine of 8 horse power works the machine, which will clean a ton of fresh leaves, yielding 3 cwt. of flax, per day. It has been tried on other fibrous plants, and found equally suited for the agave, Manilla hemp, and pine-apple. In October 1872, the sale of its fibre in London was 11,500 bales, valuc £19 to £31. Its tow for paper sells from £10 to £20 the ton.—*Dr. Hochstetter, quoted by Dr. G. Bidie, M.B.; Dr. Bennett*, i. p. 76; *Von Mueller; Sir Joseph Banks in Cook's First Voyage.*

PHOSPHORESCENCE. The phenomenon of phosphorescence, Dr. Hooker says, is very conspicuous on stacks of firewood, at Darjiling, during the damp, warm, summer months, May to October, at elevations of 5000 to 8000 feet; it may be witnessed every night by penetrating a few yards into the forest,—at least it was so in 1848 and 1849; and during Dr. Hooker's stay there, billets of decayed wood were repeatedly sent to him by residents, with iniquiries as to the cause of their luminosity. A stack of firewood presented a beautiful spectacle for two months (in July and August), and on passing it at night, Mr. Hodgson had to quiet his pony, who was always alarmed by it. The phenomenon invariably accompanies decay, and is common on oak, laurel, Tetranthera, birch, and probably other timbers; it equally appears on cut wood and on stumps, but is most frequent on branches lying close to the ground in the wet forests. It is a vital phenomenon, and due to the mycelium of a fungus. Alcohol, heat, and dryness soon dissipate it. In the animal kingdom, luminosity is especially common amongst the radiata and mollusca; it is also frequent in the entromostracous crustacea, and in various genera of most orders of insects. In all these, even in the sertulariæ, Dr. Hooker observed the light to be increased by irritability, in which respect the luminosity of animal life differs from that of vegetable. Phosphorescent matter is secreted or emitted at will by an infinite number of crustacean and molluscous animals, with which the ocean abounds, but has been observed to obtain also in a species of shark, and in the glow-worm, firefly, and the luminous centipede, Geophilus fulgens, one of the myriapoda. It also exists in some fungoid plants; a species of agaricus in the Australian woods is vividly luminous, and is described by Dr. Hooker as occurring at Darjiling. Dr. F. D. Bennett was inclined to believe that phosphorescence of the sea is caused from a luminous power in living marine animals. Sometimes the sea for miles gives at night a pale light from myriads of noctiluca. The commonest phosphorescence is caused by various small animals, small crustaceans. Some crustacea certainly derive their phosphorescence from containing in their stomachs phosphorescent food, and their excrement is phosphorescent. When large fish or porpoises or penguins dash through water full of luminous crustaceans or noctiluca, their bodies are brilliantly lit up, and their track marked with a trail of light. The Ascidian colony pyrosoma, however, gives the most beautiful phosphorescence. When touched, the light breaks out at first at the spot stimulated, and then spreads over the surface of the colony as the stimulus is transmitted to the surrounding animals.

The pyrosoma is a pelagic aggregation of individuals, forming a hollow cylinder closed at one end, from 5 inches to 5 feet in length. The Pyrosoma Atlanticum, from 3 to 4 inches long, is composed of an aggregation of small tunicaries, and produces a powerful light on being disturbed. Large forms of Aurelia and Cyanea move along, surrounded by a halo of golden grecnish light. The little Dysmorphosa gives a light of a deep aurelian hue. A large jelly-fish (Medusa) was observed near Nantucket, from the mast of a vessel, moving lazily along, its disk encircled by a halo of 20 feet in diameter, while the train of gleaming tentacles stretched away 200 feet or more. Mrs. Agassis measured one whose disk was 7 feet across, with tentacles over 112 feet in length. The shapely Zygodactylæ wander about like ignes fatui; the Idylia gleams with ever-changing hues; pleuro-branchiæ flit about, their fringed tentacles glistening with red, green, yellow, and purple rays. Urticena nodosa is a luminous sea anemone of New England. Noctilucæ zones occur 30 miles in breadth, about 30,000 in a cubic foot; the diatom pyrocistis, the star-fishes, Asterias ophiocnida, species of Ophiuridæ, and others, are luminous, and amongst others may be named the moon-fish, Orthagoriscus mola; the lamp-fish, Scopelus resplendens; species of Chauliodus argyropelecus, and the Squalus fulgens of Florida. The sea-pen, Renilla reniformis, emits a golden-green light. The Pennatula phosphorea sea-pen emits a vivid purple light; also species of the little pterypod Cleadora. Pyrocistis fusiformis is the lantern fish. Cirratulus grandis is a marine worm of Great Britain. Cancer fulgens of the Atlantic sends out flashes of light, especially when irritated.

All the alcyonarians dredged by the *Challenger* in deep water were found to be brilliantly phosphorescent when brought to the surface.

The polyps of the Veretillum cynomorium, a zoophyte of the Mediterranean and Atlantic, is phosphorescent. At night, on the slightest irritation, a whole colony glows with undulating waves of pale green phosphoric light.

Medusæ possess luminous powers. The Salpæ are luminous. The Squalus fulgens, or luminous shark, gives out a shining light like that of the pyrosoma. Dr. Bennett found the surface of the water become brilliantly phosphorescent, when his boat struck on a coral reef at Thur Bay in the island of Rotuma. One of the pyrosoma, a luminous aggregate tunicated mollusc, has been found there floating in great numbers; and little minute points, apparently of a jelly-like substance, are found on the Australian coast, similar to those which on the coasts of England have been called noctiluca.

Kirby and Spence state that a ground beetle (Carabus) has been observed running round and round a luminous centipede as if afraid to attack it.

A nocturnal ape, the Nyctipithecus trivirgatus, is said to emit light from the eyes.—*Moseley*, p. 574; *Bennett*, p. 64; *Hooker's Him. J.* ii. p. 150; P. 71; *Jameson's Journ.* xi. p. 222, 1824.

PHOSPHORUS PILLS, for destroying rats, consist of hog's lard ground up with cocoanut and phosphorous made into paste. This forms

the most certain bait and poison combined to destroy rats; care must be taken in mixing the phosphorus, of which very little suffices.

PHOTINIA, a genus of the Pomeæ or apple tribe of plants; the Yelnyo of the Darjiling Hills.

The bark of P. Bengalensis, *Wall.* (the Mespilus Bengalensis of Roxburgh), of Assam, Chittagong, Khassya, and Nepal, is used in Nepal for dyeing scarlet. Ph. eugenifolia, *Lindley*, grows on the Khassya mountains. Ph. glabra is common in China, and ornamental. It is a noble evergreen, which in the winter becomes covered with bunches of red berries.

Ph. notoniana, *Wall.*, is a very handsome middling-sized tree, very common at the higher elevations on the Neilgherries, Animallays, Pulnies, and on the Ceylon mountains. It flowers in March and April, and its fruit ripens in June and July; the latter in taste and flavour resembles that of the mountain ash. The tree is called Kaddi bikkri by the Badaga, on the Neilgherries; the timber is adapted for cabinet purposes; it is closely allied to, if distinct from, P. integrifolia.

Ph. serratifolia, *M'Clell.* Doukyat, Burm. Found in the neighbourhood of Rangoon and along the banks of the streams in the Rangoon districts, in the direction of the teak forests. Wood red, adapted to cabinet-making. The leaves of this plant are used for a green dye. Mr. Gamble mentions Photinia Griffithii, *Dcne*, of Himalaya, Ph. Lindleyana, *W. and A.*, of Neilgherries, Ph. mollis, *Hooker*, of Himalaya.—*A Res. among the Chin.* p. 51; *Lindley; Beddome, Fl. Sylv.* p. 192; *Dr. M'Clelland; Voigt.*

PHOUNGYE, a Buddhist monk of Burma; the term means great glory. The body of a deceased Phoungye is placed on a car, taken to the cemetery, and lifted on a pyre, which is composed of highly inflammable materials, and which is ignited by discharges of rockets, while dancing and drinking go on in booths hastily constructed for the occasion.

PHRA. Burm. Lord. When a Burman enters a kyoung or monastery, he kneels before the image of Gaudama, bends his head three times in honour of the three precious things,—phra, tara, thenga, *i.e.* the Lord, the law, and the assembly. Phra-kywn, in Burma, are the Buddhist pagoda slaves. In the Buddhist religion, as it prevails in Burma, the servitors at the temples are invariably out-castes, with whom the rest of the community will hold no intercourse. They sweep the vicinity, clear away the remains of offerings, and wash the idol.—*Forbes.*

PHRAGMITES COMMUNIS, the reed. Lu, Tib.; Wei, Chin. This tall, tufted reed grows on the banks and islands of the Yang-tze river, to the height of 12 to 18 feet, and yields a revenue to Government. The young shoots are eaten; and the fistulai or reed stems are used as fuel, to construct houses, mats, and hurdles. The leaves wrap up rice balls. It is a tall plant, with annual stems and a perennial root, and is found exclusively in places overflowed even during summer. In such situations, in Great Britain, all through Europe, Siberia, Japan, North America, and even Australia, it forms thick coverts, and yields an abundance of stout durable grass of great value for the purpose of thatching the roofs of buildings. This is undoubtedly the φραγμίτης of the Greeks. A second species is said to grow in Egypt, and a third in the island of Mauritius.—*Eng. Cyc.*

PHRAT or Frat, also Al-Farah and Al-Farat of the Arabs, is the Euphrates river. Phrat is mentioned in Scripture, and is said to have two derivations from the Hebrew, Phar or Pharatz, to spread, and Pharah, to produce fruit or flowers. Farat, in Arabic, means abundance. The Euphrates rises in the mountains of Armenia by two principal sources. At Korna, it and the Tigris unite and form the Shatt-ul-Arab, which falls into the Persian Gulf about 50 miles from Bassora.—*Vincent; Kinneir's Geog. Memoir*, p. 8.

PHRYNIUM DICHOTOMUM. *Roxb.*
Maranta dichotoma, *Wall.* | Theen, ... Burm.

Very plentiful in the forests of the Pegu and Tounghoo districts. It is said to afford a strong fibre.—*M'Clelland.*

PHTHAH, the creative power of the Egyptians. See Kneph; Osiris.

PHUL. Hind. A flower, a head ornament; also the first distilled spirits (see Ek-atisha), technical in Karnal; also a sort of sal-ammoniac. Mahadeo-ka phul, Daphne cannabina; Paighambari phul, Arnebia echioides; Tulenni phul, Hamiltonia suaveolens; Phul-sola, Æschynomene aspera.

P'hul charhana, or Ziarut, or Tija, a Muhammadan funeral ceremony.

P'hul ki chuddur, a covering of flowers.

P'hul pahanna, a Muhammadan ceremony.

P'hul ka tabaq, the fairy flower tray.

P'hul soongni, any sweet-scented flower enclosed in a piece of cloth for the bride to smell.

Phulel-ka-tel, an odoriferous oil made by placing sweet-scented flowers in three or five successive patches, over gingelly oil-seed, and then expressing the oil.

Phula-Dola. In the astral worship of the Hindus, Vishnu is the object. The Phula-dola, or Floralia, in the vernal equinox, is so called from the image of Vishnu being carried in a dola or ark, covered with garlands of flowers (phula). Again, in the month of Asar, the commencement of the periodical rains, which date from the summer solstice, the image of Vishnu is carried on a car, and brought forth on the first appearance of the moon, the 11th of which being the solstice, is called 'the night of the gods.' Then Vishnu reposes on his serpent couch until the cessation of the flood on the 11th of Bhadoon, when he turns on his side.

Phuli, in Ladakh, a salt used in infusing tea.

PHULJHAR is one of the clusters of states formerly known as the eighteen Garhjat, and is now included amongst the ordinary khalsa zamindaries of the Sumbulpore district. The census returns of 1866 give the population at 32,721. The agricultural classes are chiefly Agharia, Kolta, and Gond, but there is a sprinkling of other castes, such as Brahmans, Mahautis, Telis, Malis, etc. A few Khonds are also settled here and there.

PHURRA, leaves of the Chamærops Ritchieana, which are brought from Baluchistan into Sind, and made into baskets, fans, brushes, sieves, sandals, pouches, platters, and ropes.—*Sim. Dict.*

PHWON or Mwoon, a Shan tribe on the Irawadi, to the north of Bamo, who describe themselves as emigrants from a country to the N.E. called Mo-toung, also Moo-long. Their language is said to be distinct.

PHYIPA, a marmot in the Bhot countries, in whose burrowings gold is found. It is supposed to be the country of the Issedones, alluded to by Herodotus.—*Latham.*

PHYLACTERY. Plutarch, a Roman author, mentions the Bulla, as suspended from the necks of the more noble Roman boys, as a phylactery, or preservative of good order, and as it were a bridle on incontinence. But it is not improbable that some of the Jews in the Saviour's time, as they certainly did afterwards, regarded their phylacteries as amulets or charms, which would keep or preserve them from evil. There is a remarkable passage in a rabbinical Targum, written about 500 years after Christ, which may both serve to illustrate what Christ says, Matthew xxiii. 5, and to show what was the notion of the more modern Jews concerning their phylacteries. It runs thus: 'The congregation of Israel hath said, I am chosen above all people, because I bind the phylacteries on my left hand and on my head, and the scroll is fixed on the right side of my door, the third part of which is opposite to my bed-chamber, that the evil spirits may not have power to hurt me.'—*Rasmala, Hin. Annals*, ii. 409.

PHYLLANTHUS, a genus of plants belonging to the Euphorbiaceæ, several of them being arboraceous. The more important species are noted below, but there are about fifty species in Eastern and Southern Asia, few of them of economic importance. The bark of Phyllanthus Nepalensis, *Mull.*, of Nepal, is used in tanning. Ph. bicolor is a timber tree of Darjiling.

PHYLLANTHUS DISTICHUS. *Mull.*

P. longifolius, *Roxb.*	Cicca disticha, *Linn.*
Loda-nori, . . . BENG.	Arunelli, ... TAM.
Thin-bo zi pyu, . BURM.	Russa usareki, . . TEL.
Harfaruri, Chalmeri, HIND.	

Cultivated for its edible fruit.

PHYLLANTHUS EMBLICA. *Linn.*

Emblica officinalis, *Gærtn., W. Ic.*

Amluj, ... ARAB.	Amalaca, . . . SANSK.
Emblic myrobalan, ENG.	Topunelli, Topanella TAM.
Aola, Anola, Amla, HIND.	Usirika, ... TEL.
Nelli, . . . MALEAL.	

This valuable good-sized timber tree is very abundant in almost every dry jungle and forest throughout the Madras Presidency, particularly about the lower slopes of mountains, which it ascends to rather over 4000 feet elevation; it is also found in Ceylon, Bengal, Burma, and Malacca, China, Java, Borneo, and Japan, and it is often cultivated in native gardens, and about temples. This plant is held sacred to Siva, and its leaves are used in worshipping that deity, as also his consort Durga or Kali. The Bengal Hindus, however, do not hold it in veneration, but those of the North-West Provinces annually worship it on the festival of the Sivaratri. It is worshipped by agriculturists in the west of India, on the 11th of Phalgun. A yellow or red thread is tied round the trunk of the tree. Libations are poured at the roots, and prayers and songs are recited in honour of the plant. Its flower is deemed cooling and gently aperient, and is prescribed in conjunction with other articles in the form of electuary. The fruit is used abundantly, fresh or dried, as a condiment, being pickled; also in dyeing, and to wash the hair with. The fruit is very acid and astringent, and contains gallic acid. The fruit has been supposed beneficial as an adjuvant in treating scurvy. The fruit resembles the gooseberry, having a sharp acid juice, and is eaten raw by the natives, and is sometimes made into preserves. The bark is strongly astringent, and is used for tanning leather.—*Ainslie; Riddell, Gen. Med. Top.; Beddome; Gamble.* See Dyes.

PHYLLANTHUS POLYPHYLLUS. *Willde.* A very common shrub or small tree in the northern parts of Ceylon.—*Thw.*

PHYLLANTHUS RETICULATUS. *Poiret.* A shrub of the Coromandel side of India, the Konkans, and Bengal, with a white and durable wood, employed by the hill people for various economical purposes. It is frequently employed for ornamental hedges. Cattle eat the leaves.—*Roxb.*

PHYLLIUM SICCIFOLIUM, walking leaf insect. The true leaf insects of Eastern Asia belong to this genus. They are of the size of a moderate leaf, which their large wing-covers, and the dilated margins of the head, thorax, and legs, cause them to resemble. The veining of the wings, and their green tint, exactly correspond to that of the leaves of their food-plant, and as they rest motionless during the day, only feeding at night, they the more easily escape detection. Most of the tropical Mantidæ and Locustidæ are of the exact tint of the leaves on which they habitually repose, and many of them, in addition, have the veinings of their wings modified so as exactly to imitate that of a leaf. This is carried to the furthest possible extent in the wonderful genus Phyllium, the 'walking leaf,' in which not only are the wings perfect imitations of leaves in every detail, but the thorax and legs are flat, dilated, and leaf-like, so that, when the living insect is resting among the foliage on which it feeds, the closest observation is often unable to distinguish between the animal and the vegetable. See Phasma.

PHYLLOCLADUS TRICHOMANOIDES, a valuable timber tree of New Zealand. It is the Sanekaha or Tana Raa, or Tawai or Toatoa, or pitch-pine of New Zealand, grows to 60 or 70 feet high, and 14 or 15 feet in circumference. Its timber is white, hard, heavy, and of good quality, but not so durable as that of the Kawri pine. It bark is used as a red or blaek dye.—*G. Bennett*, p. 412.

PHYLLOSOMA, a genus of the crustacea.

Phyllosoma communis, *Edws.*, African and Indian seas.
P. stylifera, *Edws.*, Indian Ocean.
P. affinis, *Edws.*, New Guinea seas.
P. clavicornis, *Edws.*, African and Indian seas.
P. longicornis, *Edws.*, New Guinea.
P. Freycinetii, *Edws.*, New Guinea.
P. laticornis, *Edws.*, Indian seas.
P. Indica, *Edws.*, Indian Ocean.
P. brevicornis, *Edws.*, African and Indian seas.
P. stylicornis, *Edws.*, Indian Ocean.

—*Eng. Cyc.*

PHYLLOSTACHYS BAMBUSOIDES. *Siebold.* A dwarf hardy plant of the Himalaya, China, and Japan. Its yellowish canes make excellent walking-sticks. P. nigra, *Munro;* Bambusa nigra, *Loddiges*, of China and Japan, grows to 25 feet high, and is known to have grown 16 feet in six weeks; stems nearly solid, and becoming black.—*Griffiths; Von Mueller.*

PHYLLOXERA VASTATRIX is an aphis of low form, hardly better than the common coccus or scale insect, seen in almost every English

greenhouse. Out of reach underground, coursing up and down every root and rootlet, it sucks and saps, until the vine above slackens in growth, and slowly dies of starvation.

PHYMATEA PUNCTATA. *D.* One of the Orthoptera. This large, well-known, beautiful locust has a scarlet abdomen, and yellow and bronze above. Its ravages in Ceylon are not continuous in the coffee tree, but are occasionally very annoying. A swarm once settled on a field of one-year-old coffee, and gnawed the bark off the stems, causing them to throw out many shoots, and permanently disfigured five per cent. of the trees. They do not touch the Illuk grass, Saccharum Konigii, *Retz*, but seem only to attack cultivated plants and trees. At Tangalle they destroyed tobacco plantations, and at Matillee in Kandy the native grain crops were injured by these locusts. The larvæ and pupæ are as destructive as the perfect insects, but this seems, fortunately, the only species of locust that does any real injury in Ceylon, and this injury is in importance not to be compared with that done by other species in other countries.

PHYOO. Burm. A tree of maximum girth 1½ cubits, and maximum length 17 feet. Abundant in Tavoy and Mergui, also in less abundance in Amherst province. When seasoned, it floats in water. It has a tolerably good strong wood, but not with much tenacity of fibre.—*Capt. Dance.*

PHYSALIA PELAGICA. *Lamurek.*

P. coravella, —? | Holothuria physalis, *Linn.*

This is one of the Acalephæ, is the Portuguese man-of-war and Guinea ship of the English, and the frigate and galere of the French. It occurs in all the great seas. Its body is an oblong bladder filled with air, with a peak-like projection at one end, beneath which are many tentaculæ, some short and thick, others several feet long, which it wraps round the hands, and inflicts painful stings, giving rise to constitutional irritation, and leaving a numbness. It is moved along the surface of the water by the inflated oblong bladder, which catches the wind, and glows in delicate crimson tints when floating on the waves, while its long tentaculæ, of a deep purple colour, extend beneath to aid in the capture of its prey. When handled, the long thread-like appendages, wrapped over the hands and fingers, inflicts a pungent pain by means of au acrid fluid discharged in them. Physalia utriculus is also the Portuguese man-o'-war.—*Bennett.*

PHYSALIS ALKEKENGI. *Linn.* The winter cherry or strawberry tomato is a native of Europe on exposed hills, and of Persia and Japan. The corolla is a dirty white, the calyx reddish-yellow, enclosing a red berry. Its fruit was well known to the ancients, and is described by Dioscorides. In England the plant is cultivated chiefly on account of its appearance. The berries have a subacid and not unpleasant flavour, but the persistent calyx with which they are invested is very bitter. MM. Dessaignes and Chautard analyzed it, and succeeded in procuring a bitter substance, which they called physaline, forming a light white powder with a very slight shade of yellow, leaving in the mouth after a time a very marked taste of bitterness. Honigberger, p. 324, tells us that its fruit (Halicacabum), the winter cherry, is what the easterns call Kaknuj, which the British apply to P. flexuosa or somnifera, as this is the name of the plant in the lower parts of Hindustan, in Bengal? The winter cherry is used by the Hakims as a diuretic, and in ulceration of the urinary bladder. It is said to be purgative, and is much used in veterinary medicine. The winter cherry is now regarded as useless.—*Eng. Cyc.; Ind. Ann. Med. Sci.* for April 1856, p. 384; *Honig.* p. 324; *Hogg; Voigt.*

PHYSALIS ANGULATA. *Linn.*

Country gooseberry.	The tooth-leaved winter cherry.
Winter cherry.	
Jouz-ul-nuruj, . . Arab.	Agni-munda, . . Sansk.
Poplah, ... Dukh.	Takali pallam, . Tam.
Kaknuj, ... Pers.	Takkali pundu, . . Tel.

This was introduced from Malacca, and has got the name of country gooseberry in India, from its resemblance in taste to that fruit. It is a small bush.—*Ainslie*, p. 233; *Roxb.; Voigt.*

PHYSALIS PUBESCENS. *L.* Downy winter cherry, the Camara of Brazil, is a native of America, cultivated in the East Indies. The whole plant is densely clothed with down. The corolla is yellow, marked with five round brownish-violet spots at the throat. The berries are yellowish when ripe; they are called gooseberries, or Brazil gooseberries, and when preserved with sugar make an excellent jam.—*Eng. Cyc.; Genl. Med. Top.* p. 183; *Mason.*

PHYSALIS SOMNIFERA. *G. Don.*

Var. a. Physalis flexuosa, *Linn.*
P. somniferum, *var.* flexuosa, *Hort. Cal.*
Phyllanthus urinaria, *Linn.*

Ashwagundha, . . Beng.	Amkalang, . . . Tam.
Flexuose winter cherry.	Amukanam, . . ,,
Asgandh, Kaknuj, Hind.	Penneru aswagandhi, Tel.
Pevetti, . . . Maleal.	Pilli vendram, . . ,,

A native of rocky places on the sea-coast of the south of Europe. Grows all over India. It has several shrubby branched stems, round and downy. The leaves are in lateral pairs, short-stalked, ovate, downy, and from 2 to 4 inches long. The flowers are of a greenish-yellow or white. The berry is red and smooth, and about the size of a pea. This plant is the Στρύχνος ὑπνωτικὸς of Theophrastus (Hist. Plant. 9, 12), and the Στρύχνον αλικάκαβον of Dioscorides (4, 72). It is reputed to be narcotic, diuretic, deobstruent, and alexipharmic. The leaves steeped in oil are in India applied to inflammatory tumours, and they are used in a similar way in Egypt. Kunth recognised this plant in Egyptian mummies.

Var. b. Physalis Peruviana, *Linn., Roxb.*

Tophlee, Teperiya, Beng.	Tapuria, Macao, . Hind.
Pung-ben, . . . Burm.	Budda busara, . . Tel.
Cape gooseberry, . Eng.	Budama, Busara kaya, ,,
Peru winter cherry, ,,	Pambudda, ... ,,
Brazil gooseberry, ,,	

This variety is the P. Barbadensis, *Lam.;* P. edulis, *Sims;* P. esculenta, *Willd.;* P. latifolia, *Lam.;* P. pubescens, *Linn., Herb.;* P. tomentosa, *Medic.*, and P. tuberosa, *Zucc.* Grows luxuriantly in India in a good soil. The seed should be sown at the commencement of the rains. The young plants when about six inches high should be set out in rows at least two feet apart from each other, sufficiently wide apart, in fact, to allow the gardener to pass easily between them. They may be grown either on sticks or on trellis, and should be carefully pruned. The young shoots bear the finest fruit, and, if carefully attended to, will bear almost all the year round, the excellence and abundance of the fruit well repaying for extra

care bestowed on the cultivation of the plant. It is a most wholesome and useful fruit; none more so for tarts, or even for dessert, and for making jam or preserve. The bush should every now and then be carefully pruned, cutting out the old wood, as the new shoots provide the finest flavoured fruit.—*Eng. Cyc.; O'Sh.; Irvine*, pp. 123, 183; *Honig.* p. 324; *Riddell; Roxb.* i. p. 562.

PHYSIC-NUT TREE, Jatropha curcas. The leaves, warmed and rubbed with castor-oil, are used as a poultice to hasten suppuration; seed excessively drastic. The milky juice boiled with oxide of iron makes fine black varnish, the juice dyes linen black; the embryo is said to be the source of the purgative element, and that by removing the embryo the nut becomes bland and alimentary; MM. Fee and Humboldt support this opinion. The physic-nut is a powerful cathartic, one seed, or three or four drops of the expressed oil, being a sufficient dose. In the Dekhan, this plant is used as a hedge from its easy growth; it flowers in the rains. Physic-nut oil, called Jangli erandi ka tel, Hind., Kaat-amunak, Tam., and Adavi-amada-poo noonay, Tel., is a beautiful pale yellow oil procured from the seeds of the angular-leaved physic-nut, and it is used by the natives in medicine and as a lamp oil. About 700 tons of this oil were imported into Liverpool in 1850 from Lisbon, for the purpose of dressing cloth, burning, etc. It has been imported into England as a substitute for linseed oil. The colour is somewhat paler than the best linseed oil. It can be obtained in some parts of the country where it is plentiful, for little more than the cost of manufacture. It is now chiefly used in lamps. At the Madras Exhibition of 1855, a light straw-coloured specimen was shown by Lieutenant Hawkes, and several good but rather high-coloured samples from the Tanjore and Travancore Local Committees and the Madras Tariff. The glaucous-leaved physic-nut is the Jatropha glauca. — *Mason; O'Sh.; Simmonds; Riddell.*

PHYSOSTOMI, an order of fishes of the sub-class Teleostei.

PHYTELEPHAS MACROCARPA. Ivory nut. Palma de marfil, . . Sp. | Marfil vegetal, . . Sp.

The seeds of Phytelephas macrocarpa of New Grenada constitute the vegetable ivory used in turnery for chessmen, etc. The trunk seldom rises more than a few feet, trailing frequently 20 feet upon the ground. The seeds are produced, seven to nine together, in hard clustered capsules, each head of six or seven of which weighs about 25 lbs. when ripe.

PHYTOCRENE GIGANTEA. *Wall.* A gigantic climber of the forests of Chittagong and Burma. Its stem on being cut gives out a quantity of fresh water good for drinking. Its wood structure is curious.—*Gamble*, p. 80.

PHYTOLACCACEÆ. *Lindl.* The Virginian Poke tribe of Phytolacca, Rivina, Gisekia, and Bosea. Phytolacca acinosa, *Roxb.*, is from Nepal, where the leaves are eaten after boiling. P. decandra, North America; the root is very nearly equal to ipecacuanha, but its use is sometimes attended with slight narcotic symptoms. It is also used as an external application in itch and tinea capitis. P. dioica, *L.*, a beautiful tree of South America, introduced into Spain, where it is planted to shelter public promenades. P. icosandra is a herbaceous plant. A tincture from the ripe berries has the reputation of being a remedy for chronic rheumatism and syphilitic pain.—*Riddell; O'Sh.*

P'I. Chin. Skin of the animal body.

PIADAH. Hind. A peon, a footman. Papiadah, on foot.

PIAL or Pyal. Tel. The verandah of a house; in Urdu, Pandal.

PIALA. Hind. A cup, a phial. Amongst the Rajputs the cup for opium solution. Colonel Tod relates how a Rajput chief with courtesy invited another to his castle, entertained him, and pledged his health and forgiveness in the 'munwar piala.' They made merry, and in the cup agreed to extinguish the remembrance of the feud. Munwar piala is a favourite expression, and a mode of indicating great friendship: 'to eat of the same platter (thali), and drink of the same cup (piala).' Piala, the touch-hole of a cannon. —*Tod's Rajasthan.*

PIASSABA FIBRE, from the leaf-stalks of Attalea funifera, *Mt.*, and Leopoldinia piassaba, *Wallace*, a valuable palm of the native forests of the maritime provinces of Brazil. The fibres of its leaf-stalks and other parts furnish the best cordage of South America. A coarse black fibre is obtained from the dilated base of the petioles. It is collected by the natives, and partly used for home consumption, partly exported to Europe, tied up in bundles of several feet in length, and sold in London under this name at about £14 the ton. It is manufactured into cordage in its native countries, and as it is light, cables made of it do not sink in the water. A. cohune of Honduras is another important species, very abundant in its native country. The nuts, which grow in clusters of several hundreds, yield a valuable oil. These should be introduced into India.—*Seeman; Dr. Spruce in Linnæan Journal.*

PIASTRE. The value of the Eyn piastre varies from 2s. to 2s. 6d.—*Rich's Kurdistan.*

PICA, a genus of birds. P. caudata, the magpie of Europe, W. Asia, Siberia, N.E. America, China? Japan? is replaced in Afghanistan and W. Tibet by P. Bactriana, in E. Tibet by P. Bottanensis, in China and Japan (?) by P. media, and Barbary by P. Mauritanica. See Pie.

PICE, Anglo-Hind. for Pysa, a copper coin of which four go to the anna, precisely an inch in diameter, weighing 100 grains troy, which is a legal tender for one sixty-fourth of the India rupee, and the double pice weighing 200 grains for one thirty-second of the rupee. This name is applied to a weight, a variable division of the seer, ranging in different localities from 156¼ grains up to 276½ grains.

PICHAURA. Hind. One of the pair of drums called 'tabla.'

PICHILI. Hind.? Beng.? A sort of cap worn by men in Birbhum.

PICHKARI. Hind. A stomach-pump; syringe for injection.

PICHOOLEE. Uriya.? A large creeper very common in Ganjam and Gumsur, with a circumference of 1¼ feet. The bark is used medicinally for wounds and contusions.—*Captain Macdonald.*

PICIDÆ, the woodpecker family of birds, of which there are six sub-families, many genera and species, in the East Indies. See Birds.

PICKLES.

Saumure, Marinade, Fr.	Salamoia, ... It.
Pokel, ... Ger.	Salmuera, ... Sp.
Achar, ... Hind.	

Pickles are largely made and used by the natives of the East Indies, and are largely imported for European consumption. The mango and the tamarind, with capsicum, salt, spices, and sugar, in vinegar, are the more common substances used by the people; but the potato, cabbage, the fruit of the caper, the cayenne, ginger, onion, apple, tomato, turnip, also are pickled in vinegar; the mango and the citron are in oil. 'Chatni' has many varieties, composed of mango, tamarind, with red pepper, common salt, spices, sugar, vinegar, and a number of other ingredients, varied according to the taste of the maker, or according as is wished to produce a hot, sweet acid, or pungent 'chatni.' All these articles are used as relishes by natives, with their dhal, and rice, and chapatties. The native pickles are prepared with native vinegar, being generally sugar-cane juice fermented till it turn acid.—*Hassal; Powell.*

PICRASMA JAVANICA, *Bl.*, of Burma, one of the Simarubeæ, has a soft white wood. P. Nepalensis, *Benn.*, is a small tree of Nepal and the Khassya. P. quassoides, *Benn.*, is a tall shrub of the Outer Himalaya, from the Chenab to Nepal, up to 8000 feet. Its bark is used as a substitute for quassia.—*Gamble*, p. 64.

PICRORRHIZA KURROOA. *Royle.*

Veronica Lindleyana, *Wall. Cat.*

Tita, ... Beng.	Kali kutki, . . . Hind.
Bitter root, . . . Eng.	Kurrooa, Karru, . Panj.
Pathan bed, . . Hind.	Hoon-ling, . . . Tib.

This plant grows in Gosainthan, Rampur, Sungnam, Kamaon, and Kedarkanta, on all the hills of the Himalaya, as also in the Kashmirian mountains. It is a fleshy-rooted perennial. Flowers sessile, deep blue, in dense spikes. The root is intensely bitter, and used as a medicine in India, at Lahore, more in veterinary than in human medicine. Tita or teeta is a general name given in Bengal to the roots of bitter herbs, but is given in East Nepal and in the Yaloong valley to the Picrorrhiza. It is a plant allied to speedwell, and grows at from 5500 to 15,000 feet elevation, and is a powerful bitter. The term Kali kutki is applied also to black hellebore, the Helleborus niger, an acrid purgative and poison. The Picrorrhiza root is exported to the plains, is one of the regular febrifuges, and is given for ascites and applied in plaster. Part of the Karru sold is the root of Gentiana kurroo (*q.v.*), and some of it is possibly produced by other plants.—*Hooker's Jour.* i. p. 272; *Cleghorn's Panj. Rep.* p. 67; *Powell*, i. p. 362; *Stewart; O'Sh.; Honigb.* p. 325.

PICTURE PLANT, Graptophyllum hortense, Justicia picta, variegated leaf, blood-red leaf. One variety has variegated leaves, and the other deep purple.

PICUL, a weight of China = 133⅓ lbs. English.

1⅓ oz. English = 1 Tael.	100 Catty = 1 Picul.
16 Tael = 1 Catty.	

PIDDINGTON, HENRY, long coroner in Calcutta, was a merchant seaman. He published various scientific papers on Economic Geology, and afterwards Researches on the Law of Storms, the latter requiring an amount of patience and industry which can only be correctly estimated and appreciated by those engaged in pursuits of a similar nature. He published 24 Memoirs of Cyclones that had occurred between 1780 and 1851; and issued also The Sailor's Hornbook of Storms, which has gone through six editions. He showed the circular and progressive character of cyclones, and that north of the equator they circled from right to left, or against the hands of a watch. He contributed notices to the Agricultural and Horticultural Society, on the soils best suited for the cultivation of tobacco, coffee, sugar, cotton, and the tea-plant; on the manufacture of indigo; the artificial production of cotton; on the mode of preparing Manilla hemp; on the prevention of contagious diseases amongst cattle, and on the disease called Bosonto, which attacks the cattle of Bengal. He also published, as a part of Prinsep's Useful Tables, a Tabular View of the Generic Characters of Roxburgh's Flora Indica, a work requiring a considerable amount of labour and care in the compilation, and effecting a saving of time to the botanical student; but perhaps the most useful of his labours in this department was his English Index to the Plants of India, published 1832. In 1839 he printed, for private circulation, a treatise on the Scientific Principles of Agriculture considered as a branch of Public Education in India (which was published in 1854).

PIDGIN or Pigeon, an Anglo-Chinese corruption for the word business.—*Colld.*

PIE. Hind. A small copper coin of British India, the third part of a pice, and 12 of which go to one anna.

PIE or Magpie, the genus Dendrocitta, *Gould*, called also tree-crows, are of strictly arboreal habits.

D. rufa, *Scopoli*, the common Indian magpie, all India.
D. pallida, *Blyth*, the pale magpie, N.W. Himalaya, Kashmir, Afghanistan.
D. Sinensis, *Latham*, the Himalayan magpie, all British India.
D. frontalis, *M'Clelland*, the black-browed magpie, all India.
D. leucogastra, *Gould*, the long-tailed magpie.
D. rufigastra, *Gould*, South Asia.
D. occipitalis, *Mull.*, Sumatra.

D. rufa and its ally the red-vented pie (D. Sinensis), affect the same situations; and although D. rufa is not so domestic in habits, and less often met with in the neighbourhood of dwellings, it is plentiful in copses and jungles. Others of this family are Temia varians and T. cucullata of Burma; Glaucopus aterrimus, *Temm.*, of Borneo, with G. leucopterus and G. temnurus from Malacca.—*Adams.* See Pica.

PIENCHE. Tam. A Ceylon tree with wood of a dark colour, and very heavy and close grained. It grows to about 12 inches in diameter, and 14 feet in height. From this tree the native carpenters make the frames of vessels, it being considered durable. It produces a fruit which is of no use. —*Edye, Ceylon.*

PIERARDIA DULCIS is the Rambeh or Ramboi of the Malays. Another species, P. sapida, the Baccaurea sapida, *Mull.*, also yields an edible fruit. It is found in the district of Tiperah, to the eastward of Calcutta, and also in China, where it is cultivated for its agreeable fruit; it is there called Lutqua, and is called Lutco by the Hindus on the eastern frontier of Bengal.—*Eng. Cyc.*

PIERIS, a genus of plants, small trees. P. lanceolata, *Don*, of the Khassya Hills; P. formosa,

Don, and P. ovalifolia, *Don*, of the Himalaya. The young leaves of the last are used to kill insects; they are poisonous to goats, and an infusion is used in cutaneous diseases.—*Gamble.*

PIETRO DELLA VALLE travelled in Persia in 1614–23? and his book is known as Viaggi in Turchia, Persia, et India. He visited Cambay A.D. 1623, and wrote in the last days of the reign of Jahangir (1605–1627).

PIG.

Chu, ... CHIN. | Pindi, ... TEL.
Sur, Bura Janwar, HIND. |

The ordinary name for the wild and domesticated species of swine. There are many domesticated varieties. The hunt of the wild boar, called pig-sticking, is a favourite amusement of the British officers in India. They hunt on horseback, and use spears,—in Northern India with short spears, which are jobbed down on the boar; in the Dekhan with long spears, which are held firm in the armpit. The wild boar of Celebes is peculiar, but the Babirussa or pig-deer there has long and slender legs, and the male curved upper tusks turned back so as to resemble horns. It feeds on fallen fruits. It is found in the Celebes, in the Sulu Islands, and in Borneo. Pigmy hog (Porculia sylvania) of the submontane Himalayan regions. These little creatures, 7 or 8 lbs. in weight, are perfect little wild pigs, and are active, healthy, and strong. See Sus.

PIGAFETTA. Antonio Pigafetta, the companion of Ferdinando de Magaglianes.

PIGEON ISLAND, or Nctrun Island, on the W. side of the Peninsula of India, in lat. 14° 1′ N., and long. 74° 19′ E., is 10 miles from the main. It rises abruptly out of 16 or 17 fathoms of water to a height of 300 feet, and may be seen from a distance of 25 or 30 miles. Another of same name is off the Vizagapatam coast, in lat. 17° 33′ N., long. 83° 14′ E.

PIGEON-PEA, Cajanus Indicus, is the seed of the plant called by Linnæus, Cytisus cajan, and by De Candolle, Cajanus bicolor, C. flavus, and C. Indicus. It is a pulse highly esteemed by all classes of the natives of India, and known as Dhal, Tour-ka-dal.

PIGEONS are classed by naturalists in the order Gemitores, which Jerdon (ii. 441) thus arranges :—

ORDER, GEMITORES, Pigeons.

Fam. Treronidæ. *Sub-Fam.* Trerorinæ, Green Pigeons.
Treron Nepalensis, thick-billed green pigeon, also T. aromatica, T. axillaris, T. curvirostra, and T. psittacea.
Crocopus phœnicopterus, Bengal green pigeon, also C. chlorigaster and viridifrons.
Osmotreron bicincta, orange-breasted green pigeon, also O. Malabarica, Phayrei, and flavo-gularis.
Sphenocercus sphenurus, Kokla green pigeon, also S. apicaudus, Korthalsi, Oxyurus, and Sieboldi.

Sub-Fam. Carpophaginæ, Fruit Pigeons.

Carpophaga sylvatica, the green imperial pigeon; also C. insularis, œnea, chalybura, insignis, basilis, cineracea, lacernulata, paulina, rosacea, and others.

Fam. Columbidæ. *Sub-Fam.* Palumbinæ, Wood Pigeons.
Alsocomus puniceus; also A. Hodgsonii, Palumbus casiotis; also P. pulchricollis, Elphinstonei, and Torringtonii.

Sub-Fam. Columbinæ, Rock Pigeons.
Palumbœna Eversmanni, Columba intermedia, the blue rock pigeon; also C. rupestris and leuconota.

Sub-Fam. Macropyginæ, Cuckoo Doves.
Macropygia tusalia; also M. ruficeps, rufipennis, macrura, phasianella.

Sub-Fam. Turturinæ, Turtle Doves.
Turtur rupicolus; also T. meena, Cambayensis, Suratensis, risoria, humilis.

Fam. Gouridæ. *Sub-Fam.* Phapinæ, Ground Doves.
Chalcophaps Indicus; also C. Javanicus, augusta, chrysochlora, longirostris.

Sub-Fam. Calœninæ.
Calœnus Nicobaricus.

Sub-Fam. Gourinæ.
Goura coronata; also G. Victoriæ.

Some Ceylon pigeons live entirely on trees, never alighting on the ground; others, notwithstanding the abundance of food and warmth, are migratory, allured, as the Singhalese allege, by the ripening of the cinnamon berries, and one species is known in the southern provinces as the cinnamon dove. A very beautiful pigeon, peculiar to the mountain range, discovered in the lofty trees at Newera-ellia, has been named Palumbus Torringtonii.

Columba intermedia, blue pigeon.

C. livia, *Blyth.* | Pagoda pigeon.
Kabutar, ... HIND. | Kovil pora, . . . TAM.
Parivi, ... MAHR. | Gudi-purai, . . . TEL.

The blue pigeon is the most common in India of all the pigeons. They congregate in large numbers, and breed wherever they can find suitable spots, on pagodas, mosques, and tombs. The common blue pigeon of India differs from the C. livia of Europe only in having an ash-coloured instead of a pure white rump. The C. livia of Europe, or rock pigeon, with its sub-species, is the parent form of all domesticated pigeons. Of these there are four groups, with at least 150 varieties, consisting of—

Poulters.

First, the German, Dutch, and English.

Second group includes the Kali-par, Murassa, Bussora, Dragon, and English carrier; the Bagadotten, Scanderoon pigeon, cygne rients, the tronfo, and the bank.

Third group includes the Java and English fantail, the turbit, and African owl; the Persian lotan, common and short-faced tumblers; the Indian frill-back and jacobin.

Fourth group includes the dovecot pigeon, swallow, spot, nun, English frill-back, laugher, and trumpeter.

Columba livia is the rock-dove of Europe, North Asia to Japan, N. Africa; abundantly replaced in India by the barely separable C. intermedia.

Columba aromatica of Latham, the Vinago aromatica, is of a mild and timorous disposition, and is generally seen in flocks or societies, except during the period of reproduction, when they pair, and retire to the recesses of the forest. The nest is simple, and composed of a few twigs loosely put together, and the eggs are two.

Carpophaga Forsteni, a fruit pigeon of N. Celebes.

Carpophaga oceanica, one of the nutmeg pigeons; many of both sexes are furnished with a large round fleshy caruncle on the bill, at the base of the forehead; this is said to be present during the breeding season only.

Carpophaga oceanica, *Selby*, is the Columba oceanica of Lesson, and according to Lesson is the Moulouesse or Mouleux of the natives of Oualan; it approaches the nutmeg pigeon, Columba (Carpophaga) œnea, very nearly, but differs from it in size, being one-third less, and in the distribution of some of its colours. The nut-

meg pigeon lives more particularly in the Eastern Moluccas, and especially at New Guinea and Waigiou, while the oceanic fruit pigeon is abundant in the little isle of Ouolan, in the midst of the great archipelago of the Carolines, and seems to exist in the Pelew Islands; it may possibly spread over the Philippines and at Magindanao.

Geophilus Nicobaricus is the Columba Nicobarica of Latham, the C. gallus of Wagler. It inhabits the Nicobar Islands, Java, Sumatra, and many of the Moluccas.

Turtur humilis, the Asiatic pigeon, is somewhat common in the Panjab.

Lophyrus coronatus is the Columba coronata of Latham; Phasianus cristatus Indicus of Brisson; Columbi Hocco, *Le Vaill.;* Colombe Galline Goura, *Temm.;* great-crowned pigeon, *Edw.;* and is a species surpassing in size all the other Columbidæ. Total length, from 27 to 28 inches. This bird is found in many of the islands of the great Indian group. Not rare in Java and Banda, abundant in New Guinea and in most of the Moluccas. Nest built in trees; eggs two; cooing of the male hoarse, accompanied by a noise somewhat like that of a turkey-cock when strutting. Its food consists of berries, seed, grain, etc. Flavour of the flesh said to be excellent.

Goura coronata, the crowned pigeon, and the Victoria crowned pigeon, G. Victoriæ, are noble birds of New Guinea and its adjacent islauds. G. Victoriæ from Jobi Island, has a red-brown breast, grey wing spot, and a beautiful white-tipped vane surmounts the crest. Like the passenger pigeon, and all the fruit-eating pigeous of the genus Carpophaga, they lay but one egg. Recent writers name them Bipositores.

Australia is rich in pigeons; the most desirable to acclimatize is the wonga-wonga, and the most graceful is the crested dove. The latter breeds very freely in confinement, when suitably accommodated. The wonga-wonga, a shy breeder, is the Leucosarcia picata. The bronze-wing pigeon is Phaps chalcoptera. The crested dove is Ocyphaps lophotes.

Pigeons of Fiji are Chrysœna viridis, *Layard;* C. luteovirens; C. victor, and Carpophaga Pacifica.

Pigeon-breeding is quite an oriental art; and a very good authority on the subject is an Arabic book translated into French in 1805 by De Sacy. A German translation was published by Herr Lœper.

Carrier pigeons have been trained in Europe for many useful purposes, latterly carried by fishermen seawards and liberated, with information as to the captures. They are much used by the Chinese for sending messages from town to town, conveying the market prices and exchange rates. They fly from Su-chan and Shanghai, 80 miles, in three hours. Two of the leading continental nations maintain pigeon-breeding establishments to supply fortresses and armies in the field with carrier pigeons. The Greeks employed pigeons for making known the names of victors in the Olympic games; the Romans likewise used them. From A.D. 1146 to 1256, the date of the Mongol invasion, the Baghdad khalifs used pigeons regularly for the transmission of correspondence. The Turks had carrier pigeons; and their Sultan Suliman maintained a pigeon post between Constantinople and Ofen, the distance, 170 geographical miles, being accomplished in 24 hours. In Egypt, in the 15th century, communications by pigeon were kept up between Cairo and Alexandria, Cairo and Damietta, Damascus and Tripoli. In Arabia and Persia, pigeon posts were found in existence by European travellers as late as the 17th and 18th centuries.

Hindu pandits assert that Siva and his spouse, under the forms and names of Kapot-eswara (pigeon god) and Kapotesi, dwelt at Mecca. The dove was the device of the old Assyrian empire, because, it is supposed, Semiramis was preserved by that bird. The Meccan pigeons—large blue rocks—are held sacred, probably in consequence of the traditions of the Arabs about Noah's dove. Some authors declare that, in Mahomed's time, among the idols of the Meccan pantheon, was a pigeon carved in wood, and above it another, which Ali, mounting upon the prophet's shoulder, pulled down. This might have been a Hindu, a Jewish, or a Christian symbol. The Moslems connect the pigeon on two occasions with their faith: when that bird appeared to whisper in Mahomed's ear, and, secondly, during the flight to Medina. They are called 'Allah's proclaimers,' because their movement when cooing resembles prostration. Almost everywhere the pigeon has entered into the history of religion. At Mecca they are called the doves of the Kaba, and never appear at table. They are said to be remarkable for propriety when sitting upon the holy building. This may be a minor miracle.—*Eng. Cyc.; Jerdon's Birds of India; Cat. Birds, Beng. As. Soc.; Cat. Birds, India House Museum; Burton's Mecca*, iii. p. 218.

PIGMY DEER. The Chevrotin, or pigmy deer, are not much larger than hares.

PIGOT, Lord, for forty years a civil servant of the East India Company at Madras. He amassed a fortune of forty lakhs of rupees, and on visiting England 1774 he obtained an Irish peerage, and returned to Madras as Governor. He strove to preserve the purity of his government, suspended two of its members, and placed the commander-in-chief, Sir Robert Fletcher, in arrest; but the majority of the Council placed Lord Pigot in arrest. The Court of Directors ordered his restoration. Seven members of the Council were dismissed, 1776, and Sir Thomas Rumbold, a Bengal civilian, appointed Governor.—*Marshman.*

PIG'S TUBERS, Chul-ling, Chin. These tuberiform bodies are of irregular size, and are compared by the Chinese to pig's dung; they are produced as an excrescence on the liquidamber tree, and used by the Chinese in fevers, fluxes, and urinary disorders.—*Smith's Mat. Med. China.*

PIGU, the Persian name of Buddhists, and for eastern Turks.—*Vambery*, p. 88.

PIH-KEA-SO. Chin. The hundred family lock; a lock purchased with money begged from friends, and put round a child's neck to lock it to life.

PIH-TE or Pak-tai is the great deity of the north, whom the Chinese believe existed before the world. He is regarded as the most beneficent of deities, and his temples are generally crowded with votaries; all persons embarking in trade seek his blessing. Five genii preside over the five elemental substances, fire, earth, water, metal, and wood, and in the fourth month of each year are honoured with banquets.

PIKOTA. Tam.? A machine on the principle of a lever, for raising water from wells. It is

called Etamu in Telugu, and Yerram or Yettam in Tamil. It has a bucket (Etamu bakkena, TEL., Yetta chal, TAM.) suspended from a bamboo pole, Yetta kol.

PIKU, an apparatus used in Hazara for rice cleaning, etc.

PIKUL, equal to 133⅓ lbs. avoirdupois.

10 Cash	=1 Candarin.	100 Catty	= 1 Pikul.
10 Candarin	=1 Mace.	1 ,,	=16 Tael.
10 Mace	=1 Tael.	1 Tael	=1⅓ oz. English.
16 Tael	=1 Catty.		

PIKUNI, female Buddhist mendicants.

PILAMA. SINGH. Statue of the Buddhist deity.

PILANG, a very hard wood of Java, employed in the eastern districts for the construction of ships' blocks, etc. Pung is equally hard with pilang, and is employed by the natives for pegs in constructing their prahus.

PILAVATA, in the Malealam country, a scarf permitted to be worn over the shoulders by people of high caste alone.

PILCHARDS. In the south of England pilchards are largely taken in nets, and efforts are being made to place them in the market like sardines in tins. Clupea pilchardus, the pilchard, is said to frequent the coast of Japan in the latter part of the month of June and commencement of July. They are taken by the seine nets. When fresh, they are sweet and nutritious, but they are chiefly valued for their oil, to obtain which they are piled up in heaps for 24 hours, are then boiled for some time in sufficient water to prevent their burning, then ladled into strong square presses, and the lever action of a lid presses out the oil. The oil, after cleaning, is used for lamps, and the refuse for manure.—*M'Culloch's Com. Dic.*

PILGRIMAGES are extensively made by Hindus, and regarded as very meritorious. Of all the holy cities of the Hindus, Benares takes the first place; but the shrines at Hardwar in the Himalaya, Dwaraka in Gujerat, Jaganath in Orissa, Panderpur on the Kistna, Tripati in N. Arcot, Srirangam near Trichinopoly, and the island of Ramiseram, are all sacred sites to which Hindus resort. There may also be mentioned Abu, Anupshahr, Aror, Badrachalam, Badrinath, Bhadreswar, Bhagulpur, Bhuvaneswar, Birbhum, Danta, Deogarh, Deoprayag, Ganga-Bal, Gaya, Gauhati, Govardhan, Kedarnath, Kurukshetra, Nasik, Parasnath, Puri, Rameswaram, Saugor Island, Sivaganga, Trichinopoly, Trembak. Of rivers, the Ganges takes the first place; but Hindus reckon five Ganga, viz. the Ganges proper, the Godavery, Kistna, Cauvery, and Tumbudra, and they have twelve holy rivers. The objects of the Hindus in making their pilgrimages are as varied as the human motives, passions, and desires, but chiefly to fulfil a vow or to implore benefits, or in penance. The bulk of the Hindus who make pilgrimages are usually in poverty, and beg from place to place. Many die on the roads, exhausted by the prolonged exertions. To visit their various sacred sites, from the source to the mouth of the Ganges and back again, occupies six years. With Muhammadans of the Sunni sect, Mecca and Medina are the chief pilgrimage cities; and the Shiah sect visit Medina and Karbala, and Ardabel, in lat. 38° 14′ N., and long. 48° 21′ E. The principal places for their minor pilgrimages are the tomb of Ali, called Mash'hid-i-Ali at Naj'f near Cufa, the shrine of Imam Husain at Karbala, and that of Imam Raza at Mash'hid in Khorasan, but the tombs of all the numerous Imam-zadeh and holy characters throughout Asia are visited. The minor pilgrimage to the Muhammadan saints of India is termed a Ziyarat, as distinguished from the Haj or great pilgrimage to Mecca in Arabia, but no Muhammadan except the Maliki is bound to pilgrimage unless he possess a sum sufficient to support himself and his family. The streets of Mecca, however, abound in pathetic Indian beggars, who affect lank bodies, shrinking frames, whining voices, and all the circumstance of misery, because it supports them in idleness. There are about 1500 Indians at Mecca and Jedda, besides 700 or 800 in Yemen. The Muhammadans of Sumatra and of Netherland India largely resort to Mecca.

Amongst the Christians, Jerusalem in Western Asia, and St. Thomé or Mylapore on the Coromandel coast, an outskirt of Madras, are the chief places of resort. An immense concourse of Christians visit every year, on the 29th September, the fountain of St. Michael near Ballynaskellig, on the coast of Kerry. Then the feast of St. Michael coincides with the autumnal equinox, and consequently with the sacrifices and the Baal-tinnes of the Druids, which also took place at this period. It is related that Arthga, son of Cathal, king of Connaught, took the pilgrim's staff, and set out for Hiona dia ailithre, a rock or upright stone, and itriallum, going round. Ailathre, used by the ancient Irish, is still employed to designate the pilgrimages to Iona, Jerusalem, or Rome.

The Buddhist pilgrims of Burma visit the great Shoay-dagon pagoda at Rangoon, and the pagoda at Prome, and all the southern Buddhists reverence the Anaradhapura temple in Ceylon.

With all these races and religionists, Hindus, Hebrews, Buddhists, Muhammadans, and Christians, the circumambulation of the shrine forms part of the pilgrim's duty. This was a Jewish practice, it is often mentioned: 'Walk about Zion, and go round about her, tell the towers thereof.' In India, pilgrim taxes were instituted by Muhammadan rulers on Hindus, but were abolished by an act passed by the British in 1840, and all interference with the religious ceremonials or temples of the natives discontinued.

Pilgrim's-tree, also called Rag-tree, is to be observed throughout Southern Asia, in Egypt, and in Africa. They are trees on which rags are suspended, and Buddhists, Hindus, and Muhammadans alike add to them. In the Peninsula of India, it is usually the common babul tree, Acacia Arabica. Burton says that some believe that Mahomed permitted the practice, and explain the peculiar name of the expedition called Zat-ur-Rukaat (place of shreds of cloth), by supposing it to be a term for a tree to which his followers hung their ex-voto rags. Huc in his travels mentions that the Tartars worship mountain-spirits by raising an 'obo,' dry branches hung with bones and strips of cloth, and planted in enormous heaps of stones. Park, also, in Western Africa, conformed to the example of his companions, in adding a charm or shred of cloth on a tree (at the entrance of the wilderness), which was completely covered with these guardian symbols. The Tarikh-i-Tabari mentions it as a practice of the pagan Arabs, and talks of evil spirits residing in the date tree.—*Burton's Mecca*, i. p. 227.

PILIBHEET, the chief town of the Jehanabad subdivision of the Bareilly district, has a population of 27,900 souls, inhabiting 6116 houses. It derives its name from a sect of Banjara called Peerea, and Bheet, a structure, or anything raised above the ground; the entire name implying the lodgment or tanda of Peerea Banjara. They first established themselves at a place now called 'Old Pilibheet,' and removed to the site of the present town about the year 1740, on the invitation of Hafiz Rahmat Khan, the then ruler of Bareilly, and in fact of all Rohilkhand. The town was subsequently fortified, and the old bastions and curtains of it are still standing, though dilapidated and broken. Pilibheet is the great emporium of Northern Bareilly and the adjacent Terai and hills, and its timber and rice marts are unequalled in all Rohilkhand. The far-famed Pilibheet rice is grown in the northern low Terai lands, and the finest and best quality sells at three seers per rupee, whilst the price of the coarser or inferior description varies from eight to eleven seers per rupee. Numbers of flat-bottomed boats are annually built at Pilibheet, and floated down to Futtehghur, where they ordinarily sell for about 200 or 250 rupees each.

PILLAI or Pilly is a title added to the names of persons in the south of the Peninsula engaged in agriculture. It is a Tamil term, and is usually supposed to mean a child or son of the deity; but some derive it from the god Pillaiyar, son of Siva. It is now a tribal title, which has been largely assumed by native Christians in the south of the Peninsula; it is also usually appropriated by the Idayar, the great pastoral race of the Tamil country, who, however, likewise take as titles, Konar, Kone, or Khone, meaning king. The title of Pillai is also conceded to the Kannahan or accountant's tribe, and the Valluwah priests of the Pariah races also call themselves Pillai, which is likewise allowed to the Hindu Komatti of Telingana. This honorary suffix is very largely taken in Travancore. Strictly speaking, it can be used there only by those who have presented to the sovereign a certain nuzzer, and have received the Tiru Mukha Sthnanam. This titular appellation, though now assumed by many persons who have not been so honoured, but is by courtesy conceded to them, purports to indicate its recipient to be an honorary accountant to the sovereign, though its holder has no duties to perform.

PILLAIYAR, literally the noble child, the most common name of the god Vighneswara in the Tamil country. Pillaiyar chaturtti, or Pillaiyar-nonbu, a fast on the fourth day of the new or full moon in honour of Vighneswara, and more especially in the month Avani (August—September).

The only seats used by Asiatics of rank are carpets or cloths spread on the ground, which is elsewhere uncovered, and pillows. Moghul emperors used a sort of throne, but their courtiers sat on the ground. The Hindu rajas, the Peshwa, and others, sat upon a cloth, supporting themselves by pillows. The Nawab of Hyderabad in the Dekhan, and all his nobles, sit on small carpets with pillows at their back.

PILOT FISH, Naucrates ductor, the Gasterosteus ductor, *Linn.* One of these almost invariably accompanies a single shark. It is a prettily-marked fish, the back and head being of a beautiful purplish hue, the sides streaked with fine black bands, the belly silvery, and the fins black and white mottled. Its length is from four to eight inches. It lives on marine plants (fuci) and fish. It is good and delicate eating. When a shark is caught, it does not quit it till the shark is removed from the water.

PILPAY, the Bed-pai of the ancient Hindu. He was the prime minister of Sailadeva. Pilpay's fables is the English version of the Panchatantra.

PI MA PEW. Burm. White peema, a tree of maximum girth 6 cubits, and maximum length 30 feet. Very abundant all over the Tenasserim and Martaban Provinces. When seasoned it floats in water. It is a tough wood, lighter than, but does not last for so long a time as, red peema, and rots in any position when shut out, as in the hulls of ships, in store, etc.—*Captain Dance.*

PIMELEA. A species of this genus of plants is abundant in the Wynad, and common all over the Neilgherries, where its fibre is made into sewing thread by the natives.

PIMENTA OFFICINALIS. *Lindley.* Clove pepper.

Eugenia pimenta, *D. C., var. a.* longifolia.
Myrtus pimenta, *Linn., var. a.* longifolia.

Piment, Dan., Dut., Ger.	Pimenta du Jamaica, Port.
Poivre de Jamaique, Fr.	Angliiskiipirets, . . Rus.
Nelken-pfeffer, . . Ger.	Pimenta de la Jamaica, Sp.
Pepe garofanato, . . . It.	Krydd peppar, . . Sw.

This allspice tree, or bayberry tree, has been introduced into the East Indies. There are several large trees at Madras, but the climate of the Carnatic does not suit them. It flourishes spontaneously and in great abundance on the north side of the island of Jamaica. Every leaf when bruised emits a fine aromatic odour. The tree has been known to grow to the height of from 30 to 40 feet, exceedingly straight. A single tree has frequently produced 50 lbs. of the raw or 10 lbs. of the dried fruit, which is known in commerce as allspice, pimento, clove pepper, and Jamaica pepper. The fruit has an aromatic odour, and its taste combines that of cinnamon, nutmeg, and cloves; hence its common name of allspice. The leaves yield by distillation a delicate odoriferous oil. The berries are gathered before they are ripe, and spread on a terrace, exposed to the sun for about a week, during which time they lose their green colour, and acquire that reddish-brown tint which renders them marketable. Some planters kiln-dry them. Perhaps a very plenteous crop occurs but once in five years.—*Poole; Simmonds; Cat. Mad. Ag. Hort. Gard.; Madras Exh. Report; Voigt.*

PIMPINELLA, a genus of plants of the natural order Apiaceæ, of which are known P. anisum, P. Candolleana, P. involucrata, and P. Lechenaultii.

Pimpinella anisum, *Linn.*, aniseed, anise.

Jira-manis, . . Malay.	Kuppi chettu, . . Tel.
Adis manis, . . ,,	

This plant grows in Egypt, Scio, and the

Levant, and is cultivated in Europe for its seed, which in various forms is much employed in medicine as a stomachic, especially in the diseases of children, and is also used as a condiment among all eastern nations. 8 lbs. of the seeds give 3½ ounces of the oil. Essential oil of aniseed is white, yellowish, a little lighter than water. It only exists in the pericarp, the interior of the seed yielding a tasteless and inodorous fixed oil. The pure essential oil can only be obtained by distilling the seeds with water. The oil is a good and safe stimulant, and is much used in prescriptions for children suffering from flatulence and colic.

Pimpinella crinita, *Bois.*, Bal ajuain, SUTLEJ, RAVI. A small plant, common in the Salt Range up to about 2000 feet, and in several of the more arid tracts of the Panjab, Cis and Trans Indus.

Pimpinella involucrata, *W. and A.*

Apium involucratum, *Roxb.* | Radhuni, . . . BENG.
Ptychotis Roxb., *D.C.*

Cultivated all over Bengal, at Singapore, Prome, etc. Flower small, white, in February, March, and April. Seeds used by the natives for culinary and medicinal purposes. The leaves, though of an unpleasant smell, are now and then used as a substitute for parsley by Europeans.—*O'Sh. Dr. J. L. Stewart; Voigt; Wight's Icones.*

PINA-CLOTH, an expensive fabric made by the natives of the Philippines from the fibres of the pine-apple leaf, the Ananassa sativa; the texture is very delicate, soft, and transparent, and generally has a very slight tinge of pale yellow. It is made into shawls, scarfs, handkerchiefs, dresses, etc., and is most beautifully embroidered by the needle. See Pine-Apple.

PINANG, also Pulo-Pinang, or Prince of Wales Island, is about 400 miles to the north of Malacca, at the head of the Straits, and separated from the mainland by a channel two miles broad. The highest peak, not far west of the town, is about 2700 feet high. Government Hill adjoining it is about 2500 feet, and the other hills from 1000 to 2000 feet high. The island is 14 miles long by 8 miles broad; it was obtained for a yearly payment of 6000 dollars from the neighbouring Malay sultan of Kedah, through the influence of Captain Light, who is said to have married his daughter, and who was appointed the first governor in 1786. The island then was wild and uncultivated, with only some 20 or 30 inhabitants. Long after that, the opposite coast, some 30 miles long by 15 miles broad, was obtained from the same prince for another annual payment of 4000 dollars.

PINA-THA. BURM. ? In Amherst, Tavoy, and Mergui, a tree of maximum girth 5 cubits, and maximum length 25 feet. Very abundant all over the Tenasserim provinces, particularly in the old deserted towns. When seasoned, it floats in water. It has a light wood with a yellow hue, which darkens on exposure. Useful for the yellow dye which boiling extracts from it, and which is permanent in cloth, and not affected even by boiling water. It is used by Phoongyes. This wood has a fine tone when struck, and is used for musical instruments by the Burmese; it is used by English brush-makers for the backs of hair brushes, being a handsome wood which takes a good polish.—*Captain Dance.*

Tombak, ... DUT.	Wellaety-suna, GUJ., HIND.
Similor, Tambac, . . FR.	Tombacco, ... IT.
Tomback, . . . GER.	Tambac, Tumbaga, . SP.

A yellow, gold-coloured alloy of zinc, copper, and brass, in imitation of gold.—*M'Culloch.*

PIND. HIND. An aphorism. In the Upper Panjab, a village; as Pind Bhattian, Pindi Ghaib, Rawal Pindi. In the Multan division and Dehra-jat, dried dates of Phœnix dactylifera.

PINDA. SANSK. A ball of food offered at the Srad'has of Hindus to the pitri or manes. They are made of boiled rice, sesamum seeds, honey, butter; also, at times, various pulses, cereal grains, water, frankincense, sugar, and milk. Also said to mean food prepared the day after a death, of which, as a rule, only members of the family partake.

It is laid down in the Hindu scriptures that, on the occurrence of a death, the son or other heir of the deceased must offer lump-offerings (pinda), and that if he neglect to do so, the spirit passes into the state of goblin. If, after the fourth lump has been offered, the obsequies proceed no further,—for example, if any cause occur to prevent cremation,—the spirit, it is believed, remains a bhut or goblin. Similarly, if six lumps only be offered, the spirit remains a pret. For twelve days the soul, it is supposed, is seated on the eaves of the house in which it had parted from the human body. At sunset, therefore, the compassionate relatives place upon the roof for its subsistence a vessel of water and another of milk. Other accounts fix the residence of the soul during this melancholy period at the place of the funeral pile, or at cross roads; and some admit that it dwells alternately in the elements of fire, air, and water, and in the house which was its home. One lump-offering should be made daily, until the fourth day from the day of decease, for the construction of a new body for the pret. The body at the end of that time attains to the size of the upper joint of a man's thumb. On the tenth day, a lump should be offered for the purpose of satisfying the hunger and thirst which the pret now begins to feel. The common practice in Gujerat at the present time is to make the lump-offering ten times on the tenth day. Srad'ha must be performed on the tenth, eleventh, twelfth, or thirteenth day succeeding the decease, and afterwards monthly on the day of the month on which the death occurred, and yearly on its anniversary. Srad'ha must be performed beside a reservoir or on the banks of a river. The sacrificer shaves his face, and, holding in his hand a copper cup containing water, with sesamum and sacrificial grass, he repeats the name of his progenitors, both paternal and maternal, sprinkling water as he repeats each name. The heir now forms an image of the deceased with sacrificial grass, washes it, and strews it with flowers. A similar representation of a Viswa Deo is also made to witness the performance of the rite. The sacrificer sprinkles these, muttering a charm which has been taught him by his family priest, and which is supposed to call the Deo and the soul of the deceased into the figures. A saligrami stone is placed beside them to represent Vishnu, and the three are worshipped with the usual ceremonies. Food is then set before the grass figures and the saligrami, and

the heir, sprinkling them once more, repeats the charm which is supposed to dismiss their inhabitants. The grass is thrown before a cow to be eaten. The rites performed, the relations and neighbours of the deceased are entertained, and Brahmans feasted according to the means of the sacrificer.—*Kennedy on the Origin of Languages*, p. 210; *Rasamala, Hindoo Annals*, ii. p. 374.

PINDAPATA VELA is explained to signify the hour of going round to collect the Pinda, which is the name given to the food collected by the Sangata or Buddha mendicant. The word means a lump or ball of any viands, usually of rice or meal. It is at the seventh gharri, which will be one hour after noon.—*Hind. Th.* ii. p. 38.

PINDARA or Pindari, who ravaged India from the middle of the 18th to the earlier part of the 19th century, were of every origin, but the term was taken from the Beder race, who extend from the Kistna southwards into the Mysore country, where they hold lands. A small body of them dwell on the platform of Raman Malay, 37 miles west of Bellary, and there are two small principalities of the Beder race at Zorapore and Ghurgunta, on the north bank of the river Kistna. It is from this race, the Baidara Wanlu of the Teling, that the name Pindara comes.

Pindara are mentioned in Indian history as early as the commencement of the 18th century; several bands followed the Mahratta armies in their early wars in Hindustan. Coleman tells us that they were early arranged into durrah or tribes, commanded by sirdars or chiefs, and people of every country and of every religion were indiscriminately enrolled in this heterogeneous community, a horse and sword being deemed sufficient qualifications for admission. A common interest kept them united. Some of the chiefs acquired wealth and renown in the Mahratta wars; they seized upon lands, which they were afterwards tacitly permitted to retain, and transmitted, with their estates, the services of their adherents to their descendants. The Pindara were a sort of roving cavalry, coeval with the earliest invasions of Hindustan by the Mahrattas. When the Brahman Peshwa rulers ceased to interfere personally in northern politics, and that part of the Mahratta affairs became transferred to Sindia and Holkar, the Pindaras ranged into two parties, the Sindia Shahi and Holkar Shahi. The horde was called a Luhbur, and out of 1000 about 400 might be well mounted. Their favourite weapon was a spear with a light bamboo shaft, and from 12 to 18 feet long. They had no baggage, and could therefore move with a speed which no regular troops could accomplish. They were guilty of every outrage that barbarity could suggest on the villages through which they passed. The Pindara attached themselves as a distinct class to native armies, which they followed without receiving pay or being actuated by patriotism; and so far from wishing to be distinguished for their prowess as fighting men, they never sought even for plunder, their sole occupation, but where it could be obtained without danger.

When first known to the British, they were in two bodies, the Sindia Shahi, of 18,000 horse and 1300 foot, with 15 guns, and the Holkar Shahi, of 3000 horse, 1500 foot, and 18 guns. The Sindia Shahi were under several leaders, of whom Chetoo, Karim Khan, and Dost Muhammad were the principal. They moved through the country at their pleasure, and levied contributions at will upon their sovereign's subjects and dependents, or carried their bands into Rajputana, and plundered both friends and foes. They threatened Mirzapore, plundered Masulipatam, Ganjam, Guntur, and the Northern Circars. Central India was disorganized, the princes of Rajputana were helpless, the Maharaja of Udaipur was bearded in his capital by military adventurers, and robbed of his domains by his own feudatory chiefs and clansmen. His palace on the banks of the lake was besieged, and his servants bringing up water were plundered; and on the suppression of the Pindara, the British Government, in 1818, allowed him Rs. 4000 a month until his country should yield some revenue. Rajputana had then become wholly disorganized. The raja of Jodhpur had abandoned the reins of government to the hands of a dissolute prince, who was soon after assassinated. The raja of Jeypore, infatuated by a Muhammadan dancing girl, preserved only a portion of his hereditary possessions by the sufferance of Amir Khan. The Marquis of Hastings, then Governor-General, took the field against them in 1817, with the combined forces of the Bengal, Madras, and Bombay armies, which, including irregular horse and contingents, amounted to 116,464 men and 295 guns. It was the strongest British army which had been seen in India. One-half operated from the north, the other half from the south. The forces of the native powers which might be brought into the field were estimated at 130,016 horse, 87,316 infantry, and 589 guns, including the Pindara.

During the administration of Lord Hastings, the most powerful of the captains were Amir Khan, Chetoo, and Karim Khan. Amir Khan had an organized army of many regiments and several batteries of cannon. In 1814 he had 30,000 horse and foot, and a strong force of artillery, whom he supported by exactions on the Rajput states. Karim, in 1807? paid a ransom to Sindia of £100,000.

Chetoo during 1817 had been encamped at Ashta, on the Parbati river, some 40 miles distant from Bhopal; a second camp of Pindara was under Karim Khan, north of the town of Ashta, near Bairsa; and a third, under Wasil Muhammad, near Garspur, 35 miles west of Saugor. But between Chetoo and Karim Khan the enmity was such as to preclude the formation of any common plan of action. They were hemmed in by divisions of the army of India under Sir Dysen Marshall, Sir John Malcolm, Sir Thomas Hislop, Colonel Adams, and the Marquis of Hastings, and one part after another was surprised and broken up. Amir Khan disbanded his army on condition of being guaranteed the possession of what is now the principality of Tonk. Karim Khan was granted a jaghir, value Rs. 1,60,000 per annum, near Gorakhpur, on the Nepal frontier. Wasil Muhammad was placed at Ghazipur, on the Ganges, but, disgusted with so tame a life, he poisoned himself; and Chetoo, refusing all offers, about February 1818 fled to the forest, and was destroyed by a tiger in the jungle near Asirgarh. He was the last of the Pindara chiefs in the field.

In the same year (1817), and almost in the

same month (November), as that in which the Pindaras were crushed, the three great Mahratta powers at Poona, Nagpur, and Indore rose separately against the British. The Peshwa himself surrendered, and was permitted to reside at Bithur, near Cawnpur, on a pension of eight lakhs of rupees. The districts in Central India and Malwa were left in a disorganized state: the Mahratta chiefs had parcelled out amongst themselves the possessions of the Rajput chiefs, and the smaller states were all subject to Sindia, Holkar, or the Puar, and sometimes to all three. Many of the smaller chiefs had been driven from their possessions, and had sought refuge in the jungles and mountains, where they robbed or levied tankhah or black-mail from the larger states. These predatory chiefs were twenty-four in number at Sir J. Malcolm's time.

The capture of Atghar on the 8th April 1819, was the closing operation of the war against the Pindara and the Mahrattas, under Appa Sahib, Baji Rao, and Holkar. It had lasted from the 5th November 1817 to the 13th May 1819, during which the British forces had conducted a remarkable number of sieges, and forced marches by night and day. More than thirty hill fortresses had been captured, and a space of nearly 40 geographical degrees, which for half a century had been scenes of continued anarchy, was freed from the most destructive of military insolence, of a vast number of well-armed, reckless, and predatory hordes. No grand battle was fought, and much was effected by political sagacity. Holkar's power and territories were reduced, Appa Sahib became a fugitive, Baji Rao a pensioner, and Sindia's power reduced; while treaties were entered into between the E. I. Company and the rajas of Jodhpur, Jeypore, Jeysulmir, Bikanir, Dungarpur, Partabghur, Banswara, Sirohi, Krishnaghur, Kisauli, Bundi, and Kotah. 134 European officers and 3042 of other ranks had been killed and wounded.

PINDARAKA, a watering-place on the Gujerat coast, about 20 miles from the N.W. corner of the Peninsula of India. It is near Dwaraka, and was resorted to by Krishna. It is still venerated.

PIND DADAN KHAN, a commercial town in the Panjab, with a population of 15,740, consisting of 7329 Hindus, 7984 Muhammadans, 404 Sikhs, and 23 others. It is situated in lat. 32° 34′ 53″ N., and long. 73° 5′ 20″ E., and is one mile from the north bank of the Jhelum river, and five miles from the foot of the Salt Range.—*Imp. Gaz.*

PINDING. SINGH. A gold ornament worn by Malay women of rank as a fastening for the waist-belt.

PINDUR and Kuphinee, two rivers in the Kamaon Himalaya, remarkable for the glaciers which occur in them.

This is the fruit of a plant indigenous to America and the East and West Indies, and reared in hot-houses in Europe. In its wild state it is inferior to the carefully cultivated. It is one of the most abundant fruits in the Tenasserim provinces. Its long and rigid leaves, thorny at the edges and point, abound in fine white fibres, which are in some countries woven into the finest fabrics, netted or twisted into lines for fishing, and into ropes possessed of considerable strength. These are said not to be injured by constant immersion in water, a property which the natives increase by tanning them. The plant is said to have been introduced into India by the Portuguese in the year 1594. Being a native of the moist forests of South America, from the level of the sea to elevations of about 1800 feet, it requires, for its successful culture as a fruit, a warm and moist climate; but, like others of the family, the species are capable of existing in a warm, dry air. The pine-apple is described as growing in great abundance in the Philippine Islands, but as producing only a small, rather dry fruit. But M. Perrotet considered it a distinct species, and named it Bromelia pigna, from the Spanish name Pigna or Pina, signifying a cone. There, this plant is valued on account of the fine hair-like fibres which are separated from out of the leaves. Of these fibres, the celebrated pine-apple cloth of the Philippines, sometimes called 'batiste d'ananas,' and resembling the finest muslin-like fabric, is woven. This is embroidered by the nuns of the convents in Manilla. The leaves, recently gathered, are laid upon a board, and the epidermis is removed with a broad knife. Upon its removal from the upper surface of the leaf, the long and beautiful fibres are seen lying upon the lower and denser epidermis, running in a longitudinal direction; the fasciculi of fibres are then readily detached by the hand, on being raised with the broad knife. Spinners in England did not consider it could be substituted for flax in the manufacture of textile fabrics. A patent was, however, taken out by Mr. Zincke, for the manufacture of thread from this fibre, because, when bleached, it could be spun in the same way as flax. The process of bleaching, by destroying the adhesion between the bundles of fibres, renders it much finer, and hence enables it to be extended between the rolls in the process of spinning. The first step is to remove the fleshy or succulent side of the leaf. A Chinese, astride on a narrow stool, extends on it, in front of him, a pine-apple leaf, one end of which is kept firm, then, with a kind of two-handled plane made of bamboo, he removes the succulent matter. Another man receives the leaves as they are planed, and with his thumb-nail loosens and gathers the fibres about the middle of the leaf, which enables him by one effort to detach the whole of them from the outer skin. The fibres are next steeped in water for some time, after which they are washed, in order to free them from the matter that still adheres and binds them together. They are now laid out to dry and bleach on rude frames of split bamboo. The process of steeping, washing, and exposing to the sun is repeated for some days until the fibres are considered to be properly bleached. Almost all the islands near Singapore are more or less planted with pine-apples. The leaves that are annually suffered to putrefy on the ground would supply fibre for a large manufactory of valuable pina-cloth. The pine-apple planters are not Malays, but Bugis, most of whom have families.—*Jour.*

Ind. Archip. ii. No. viii. 1848, p. 523; *M'Clelland; Mason; Royle's Fib. Pl.* p. 337; *Journ. of Agric. Soc. of India*, viii. p. 182. See Pina-Cloth.

PINELLIA TUBERIFERA. Midsummer root. Sang-pwan-hia, . . CHIN. | Fan-pwan-hia, . . CHIN.

In China, the tubers of two or three aroid plants are gathered in the middle of summer, and used medicinally. Of these, Pinellia tuberifera, Ariscema ternatum, Arum macrorum, and others are soaked and dried frequently, until the poison is exhausted, and then cut into slices or made into a powder. In Hankow, they are met with in the form of white or yellowish-white spherical balls, the interior is beautifully white, dense, and amylaceous when fresh; they are emetic and diaphoretic. When dried or in powder, they are given in fever, rheumatism, apoplexy, and renal diseases.—*Smith's Mat. Med.* p. 149.

PINE MARTEN, Martes abietum, does not apparently affect the Western Himalaya, but its skins are brought to India from Afghanistan.

PINEY TREE, Vateria Indica, *L.*, the Elæocarpus copalliferus, *Retz*, is a lofty tree of Malabar, which produces the piney varnish, the piney resin or white dammer, Indian copal or gum anime, and the piney tallow or Dupada oil, and the timber is an excellent building wood. The tree grows plentifully in the forests of the western coast; it grows from cuttings, and is found planted by the roadside in Malabar. The resin resembles copal, and the finer specimens are as transparent as amber, and nearly colourless. It is procured by cutting a notch in the tree, sloping inwards and downwards. This is soon filled with the juice, which in a short time hardens by exposure to the air. When used as a varnish, the usual practice is to apply the balsam before it has become hard.

Dr. Buchanan, in his Journey through Mysore, Canara, and Malabar (ii. p. 476), says men of the Panchala tribe paint and varnish by the following process:—They take buttermilk and boil it with a small quantity of quicklime until strings form in the decoction and separate from the watery parts, which they decant. The stringy matter is then mixed with the paint, which has been well powdered; with these the woodwork is first painted, it is then allowed to dry for one day, and afterwards receives a coat of pumdam, which is the fresh juice of a tree called Piney marum. The pumdam must be used while it is fresh, and will not keep for more than two or three days after the first coat of paint is given, and that is followed by another of varnish. In the same manner leather may be painted and varnished. The varnish effectually resists the action of water, but when that is not procurable, the resin, melted by a slow heat, and mixed with boiling linseed oil, forms a varnish which answers equally well for most purposes. The following formula for its preparation may prove useful:—Into a new and perfectly clean earthen vessel (a chatty) put one part of the piney dammer in coarse powder, cover closely, and apply a very gentle heat until the whole is melted; then add about two parts of linseed oil, nearly boiling hot, and mix well with a wooden spatula. Should the varnish prove too thick, it can at any time be reduced by the addition of more oil, or, if required, may be made thicker in the first instance. It is essential to the success of the process that the piney be melted in a covered vessel over a very slow fire, and the whole of it reduced to a fluid before the addition of the oil, which must, to ensure an equal mixture, be nearly boiling hot. This varnish is used for carriages and other fine furniture requiring to have their paint well protected, or to which it is desirable to impart a fine gloss. A spirit varnish is prepared by reducing to powder about six parts of piney and one of camphor, and then adding hot alcohol sufficient to dissolve the mixed powder. Alcohol does not dissolve piney without the aid of the camphor, but once dissolved will retain it in solution. The varnish thus prepared is employed for varnishing pictures, etc., but before being used requires to be gently heated to evaporate the camphor, which otherwise will produce, by its after-evaporation, a roughness and inequality on the surface of the picture, and spoil its appearance.

Piney tallow or Dupada oil, Piney yenne, TAM., Dupada nuna, TEL., remains perfectly solid, even in hot climates. It is prepared by cleaning the seeds, then roasting and grinding them into a mass. To five seers of seed add 12 seers of water, and boil until the oil rises to the surface. Remove the oil, stir the contents of the vessel, and allow it to stand until the following day, when more oil will be observed on the surface, which may be collected, and the process repeated. The oil is principally used for lamps, but is very suitable for soaps and candle-making.

On the Malabar coast, the resin, under the name of piney dammer, is made into candles, which diffuse in burning an agreeable fragrance, give a clear, bright light with little smoke, and consume the wick so as not to require snuffing. Some of these candles that were sent to Great Britain were highly prized, and sold for very high prices. Their importation was stopped by the high duties that were levied on them.—*M. E. J. R.; O'Sh.* p. 755; *Wight; Buchanan's Journey.*

PINGADO and Bambwai, timbers of Burma, possess the same property as anan in resisting decay, but are less abundant, denser in grain, abound in knots, and are smaller in size than that timber; they are, however, prized by the Burmese for their useful properties, and are with thengan generally used in the whole tree as posts for monasteries, houses, etc. In the construction of wharfs and embankments on the river face, both anan and pingado would be found valuable for posts, and if proper care be observed in the selection of the timber and in freeing it from all the sap portions of the tree, it would doubtless prove as lasting as brickwork.

PINGALA, a great authority on the Ch'handas or prosody of the Vedas. He is supposed to have written about two centuries B.C.—*Dowson.*

PINGO, SINGH., the cowri or cavadi of the Peninsula, is an elastic stick loaded at both ends, poised on the shoulder, used in Ceylon for carrying burdens.—*Simmonds.*

PINI, in the Society Islands, coarse matting made of rushes.

PINJAN. HIND. A large bow, used in carding and cleaning cotton.

PINJARA. HIND. A cotton-cleaner. He uses in his trade the following apparatus:—Tatti, 2 annas; dastah, 8; kunar, 40; goolel, ¼ anna; tarazoo, 1—total, Rs. 3.3.3. A Pinjara can clean 72 lbs. of cotton in a day, and earn about

eight annas daily. Cotton, after being separated from the seed, is beaten to open out the fibre and fit it for spinning.

The Rahat of Dharwar is the cotton spinning-wheel.

The Tanwul is the rack on which the thread is wound to form into hanks for sale.

The Foot-roller of Dharwar, for cleaning cotton, is worked with two feet on a stone by a woman sitting, or rather balancing herself on a low stool. The seeds are rolled out in front, and the cotton drawn away as fast as it is freed from the seed, and piled up behind under the stool.

The Ratee or roller of Dharwar is sometimes used for separating the seed from the cotton.

PINJRAPOL. HIND. In India, an hospital for sick animals. The account given by Pietro de la Valle, who visited India 1614–1623, shows how very ancient this asylum is. 'The same day of our arrival,' says he, 'after we had dined and rested a while, we caused ourselves to be conducted to see a famous hospital of birds of all sorts. The next morning we saw another hospital of goats, kids, sheep, and wethers, either sick or lame.' The Jains are the great protectors of animal life. They, together with the Buddhists, are pre-eminently tender on this point, not only on the score of humanity, but from their belief in the doctrine of metempsychosis, which teaches them to regard the brutes as of their own kin, the tenements not improbably of the souls of their ancestors. The celebrated king Asoka flourished about 250 years B.C. His capital was Palibothra, at the junction of the Sone and Ganges. The inscriptions on the palaces of Dehli and Allahabad, on the rocks in Afghanistan and Girnar in Cutch, refer to the events of his reign. On one of these tablets, Asoka proclaims that though until then hundreds of thousands of animals had been killed daily for the royal kitchen, from thenceforth the practice should be discontinued, as he had become religious. On another, it is proclaimed that throughout his dominions, trees for the shade and shelter of men and animals, and wholesome and nutritious vegetables for their consumption, shall be cultivated. It is considered probable that the Jains and Buddhists set their faces against animal suffering, as a contrast to the cruelties at the time practised by the Brahmans, and that they to some extent succeeded in shaming them down. It appears from the Ramayana that the Brahmans of those days made offerings not only of flowers and plants, but of slaughtered horses, hogs, and sheep; the sacred cow herself being occasionally offered on the altar. At their feasts both butcher meat and intoxicating liquors were freely indulged in. The Brahman hermit, Bharadwaja, gave a magnificent entertainment at Allahabad to Charat and his army, where venison, the flesh of the wild boar, mutton, peacocks, and partridges, with abundance of strong drink, furnished forth the repast. Menu considers the feast in honour of a dead relation incomplete unless where animal food is present. We have no authoritative information as to when the present protective system crept in; that it is not countenanced by the sacred books of the Hindus or the customs of antiquity, and is a matter comparatively of yesterday, is apparent. We are still more in the dark as to the introduction of hospitals for aged and diseased animals. Of one of these at Surat, Ovington gives an account as he saw it in 1689, Hamilton describes it as he saw it in 1772; Heber speaks of that at Broach in 1824. There is nothing that can be adduced in their support either from the sacred works of the Hindus, the Asoka inscriptions, or the institutes of Menu, more than may be inferred from the proverbs of Solomon that 'the merciful man is merciful to his own beast.' The homage to brute animals, originally confined to the Jains and Buddhists, and not even making its appearance amongst them until a comparatively recent period of their history, slowly extended itself amongst the Brahmans, and in the early part of the 19th century had infected the Parsees. This comparatively enterprising and enlightened race, so far from being exempt from the degrading superstitions of the Hindus, as has been asserted, seem to have picked up some rags from the superstition of every sect and denomination with which they have come in contact, and patched it on to their own comparatively simple creed. The superstition of the Banians, like themselves a great trading community, seems to have been peculiarly attractive to them, and the pinjrapol being their pet institution, speedily secured the sympathies of the Zoroastrians.

The Bombay pinjrapol owed its origin as much to the Parsee respect for dogs as to the superstitions of the Jains. In 1813, the dogs running wild and masterless in the street had become so intolerable a nuisance, that an order was issued for killing them, and the result of this was a succession of street rows and disturbances betwixt the dog-destroyers and dog-reverencers, which led the latter to offer a sum of money for each mangy cur that was released from durance and made over to them. Some 30,000 or 40,000 of these canine quadrupeds were in this way annually packed off, the bulk of them were sent to an island near the mouth of the Tapti to starve or to worry or infect each other. So cruel are the tender mercies of the wicked and superstitious. Great expense was incurred on this account, and as the funds began to diminish from failing zeal, Motichund Amerchund, a great Jain merchant, and partner of Sir Jamsetjee Jejeeboy, exerted himself and obtained an agreement on the 18th October 1834 from Shree Gosainjee Maharaja, and setts of the Hindus, Parsees, and others, by which they bound themselves to raise taxes on opium, cotton, sugar, bills of exchange, and pearls, 'that the lives of a great many animals may be saved, which is an act of great charity.' The Srawaks or Jains agreed to raise a fund amongst themselves for the required ground and building, the rates were collected and sent yearly to the managers appointed, namely, Bomanjee Hormusjee Wadiajee, Sir Jamsetjee Jejeeboy, Motichund Amerchund, Vukutchund Khooshalchund. The agreement, signed by about 450 merchants, contains a clause stating that any excess of the funds may be applied to such charitable objects as may be approved of by the trustees. At one time there were about seven lakhs of rupees (£70,000). Whilst the Bombay pinjrapol was under the vigilant superintendence of Sir Jamsetjee Jejeeboy, the funds poured amply in, and the institution was most carefully conducted. Since 1851 the place has become a sink of animal and moral corruption. When seen by the Editor in 1866, it was filled

with wretched sick animals, and the place was inexpressibly filthy. It fearfully fails to fulfil any one of the ends it professes to aspire after. To the horse, the ox, the goat, the sheep, and the dog, more especially the first and the last, fresh air and exercise are indispensable, not only to health and enjoyment, but to existence. As to the horse, he is a hunter of the hills; to him confinement is a curse, and followed by the worst of ills. This noble beast —who probably has never once within his life been tied up for forty-eight hours on end, whose master, daily even and morn, when there was no work for him to do, saw that he had air and exercise—from the day that he enters the pinjrapol to that when his dead carcase is dragged out of it, is pinned down to one spot. The sheep and goats fare but little better; the dogs are infinitely worse off than the horses. It not unfrequently happens that animals which have been sent there by mistake are recovered by their owners; a single hour in the kennels sends them back covered with vermin, and infected with the most loathsome diseases. Lions, tigers, panthers, and other carnivora are occasionally kept in the pinjrapol; it is forgotten that for every day that one of these is kept alive, one sheep or goat must die to feed it.—*Bombay Standard*, 1858; *Bombay Times.*

PIN-LAY-JALLAT. Burm. A tree of maximum girth 2½ to 3 cubits, and maximum length 15 feet, in the Tenasserim provinces. When seasoned, it floats in water. Its wood is strongly recommended for fuses; it is free from oil and acid, and light, yet strong; it is much used for rockets of enormous dimensions and for woodeu guns, and is used for the burning of the dead Phoungyes, and on other occasions.—*Capt. Dance.*

PINNA, a genus of molluscs. The byssus of a Mediterranean species is long enough to be woven into a fabric. Men's gloves, from its byssus, in 1820 cost 13 carlini the pair; women's gloves, 18 carlini; stockings, 6 ducats; waistcoats, 30 ducats; and coat, 100 ducats.—*Jameson*, p. 191, i. 1820.

PINNACE, a boat of the Ganges, rigged like a brigantine, and used for family pleasure-trips or short journeys, rather than for any lengthy travel; generally from 12 to 20 tons burden, and from 40 to 50 feet in length, with a crew of 12 or 15 men.

PINNOTHERIDÆ, a family of the Brachyurous crustacea called Pinnotherans by Milne-Edwards, known by the common name of pea-crabs; of these the genus Elamena, *M.-Edwards*, is founded on Hymenosoma mathæi, figured by M. Ruppell in his work on the Crustacea of the Red Sea. Milne-Edwards thinks that it seems to establish the passage between the Hymenosomata, the Oxystomes, and the Oxyrhynchi. Elamena mathæi (Ruppell, Krabben, pl. v. f. 1) is found in the island of Mauritius and the Red Sea. —*Eng. Cyc.*

These are imported into India from Europe.

PINTO. Ferdinand Mendez Pinto, a Portuguese leader in the Eastern Seas from 1537 to 1558. He wrote a history of his career, under the title 'Peregrinations,' which were published in 1614, and translated and published in 1653 by H. C. Gent. These afford a fearful picture of the inhuman depravity and bloodthirstiness of the Portuguese adventurers of his time. Faria-y-Sousa, author of 'The Portuguese Asia,' regards Pinto as a truthful writer; but Pinto has been treated as an infamous liar, simply on account of the incredible atrocities which he describes without any reticence or apparent consciousness of their guilt. He was the first European who visited Japan. He landed at Cape Bungo towards the end of 1542, in lat. 33° 32′ N., and long. 132° 2′ E. He was either shipwrecked there or landed intentionally. He returned to Europe 1558, and died 1581.

PINUS, a genus of trees belonging to the natural order Pinaceæ of Lindley, the Coniferæ of Jussieu, the fir tribe of plants. Cone-bearing pines with long leaves, like the common Scotch fir, are found as far south as the equator, in Arakan, the Malay Peninsula, Sumatra, Borneo, Japan, and S. China, also in Arabia, in Australia, and New Zealand. It is a very remarkable fact that no gymnospermous tree inhabits the Peninsula of India, not even the genus Podocarpus, which includes most of the tropical gymnosperms, and is technically coniferous, and has glandular woody fibre, though, like the yew, it bears berries. The absence of oaks and of the above genera (Podocarpus and Pinus) is one of the most characteristic differences between the botany of the east and west shores of the Bay of Bengal. The pine tree genus consists for the most part of timber trees, many of which are of great beauty, and of much value on account of their timber. Many of them are growing along with fir trees (Abies), yew trees, and the larch (Larix), in the Northern Himalaya, in China and Japan, and one or two in Burma, one? in Cochin-China, and one in Arabia. Other eastern coniferæ are species of araucaria, biota, callitris, cedrus, Cunninghamia, cupressus, cryptomeria, dacrydium, dammara, juniperus, larix, podocarpus, taxodium, taxus, and thuja. The pine forests of the hills yield tar, resin, and might yield turpentine, except that, by the native process of preparation, this most valuable product of the crude resin is allowed to evaporate. The pines of New Zealand are the Dammara Australis, Dacrydium cupressinum, Podocarpus totara, P. dacrydioides, P. spicata, P. ferruginea, and Phyllocladus trichomanoides. The San or Sha-muh pine tree of the Chinese is the Cunninghamia Sinensis, a tree of Japan and of the South, Central, and W. Provinces of China, at a distance from the sea-coast. All parts of the tree are used medicinally, as stimulant, tonic, and sedative remedies; it yields a good timber, used for coffins, flooring, furniture, house-frames, and for piles, but these latter must not be alternately exposed to the air and water. Several of the Indian coniferæ have been variously arranged by different botanists, under the genera Abies, Cedrus, and Pinus, but the following are usually recognised as belonging to the last-named genus:—

Pinus alcocquina, *Parlatore*, grows in Japan, at 6000 to 7000 feet.—*Von Mueller.*

Pinus densiflora, *Sieb. and Zucc.*, a tree of Japan, along with P. Massoniana.

Pinus excelsa, *Wall.*, the P. peuce of Macedonia. Its eastern synonyms are—

Shim; Som-shing, . ,,	

It is a large tree of Narambetty, Nepal, Simla, Bhutan, Sirmur, Garhwal, and Kaghan; scarce at Murree. Found in the Sutlej valley between Rampur and Sungnam, at an elevation of 7000 to 11,000 feet; at places rises to 12,000 feet. It grows in W. Nepal, not in E. Nepal, and Sikkim, but is common in Bhutan. It is found with the deodar at Narambetty, Theog. Resembles the Weymouth pine, and is remarkable for its drooping branches. Dr. J. L. Stewart says it has recently been identified with P. peuce, which grows only in a confined locality in Macedonia at from 2400 to 5800 feet. It is common in many parts of the Panjab Himalaya, generally growing in mixed forests, from 5000 to perhaps 11,000 feet; the 13,000 feet given as a maximum by Aitchison is probably a mistake. It also grows sparingly in W. Tibet, at 8000 to 10,000 feet; Trans-Indus. Griffith found it in Kafiristan, and Bellew near the Safed Koh, at 9000 to 10,000 feet. Trees of 8 and 9 feet girth are not unfrequent, but it rarely reaches 100 feet in height, although trees of 150 feet occur at times. It furnishes the best wood for most purposes of all the Himalaya conifers next to deodar, and where the latter is scarce or dear, this is used for all the ordinary purposes of construction. In Kullu, as shingles, it is said to last 7 or 8, and inside 15 years; and at Murree, where it is the best wood procurable for shingles and ordinary purposes, the supply in A.D. 1860 was rapidly getting exhausted. The wood is so resinous as to be used for flambeaux and candles.

Pinus firma, *Antoine*, of N. Japan.

Pinus Fortunei, *Parlatore*, of China.

Pinus Gerardiana, *Wall.*, Neoza pine, edible pine.

A moderate-sized tree, confined to the northern and drier face of the Himalaya, beyond the range of periodical rains far among the hills, and its presence is indicative of a dry climate. It grows in one or two small clusters on a ridge with a northern exposure, near Walassa, but does not generally ripen its fruits. It is first seen on the Miru ridge, and above Chini becomes a principal tree of the forest, produces a very large cone, containing, like the stone-pine of Europe, eatable nuts, of an elongated oblong form, which, when roasted like chesnuts, are agreeable to the taste, though with a little flavour of turpentine. The seeds, of which there are more than a hundred in a cone, are collected and stored for winter use, being a regular article of food in Tibet and Afghanistan. They ripen about October, and are extracted from the opened cones by beating. They are largely consumed by the inhabitants, which has probably caused the wood of the tree to be less used than it would otherwise have been. They are oily and difficult of digestion, are stimulant, and an oil extracted from them is said to be applied externally in diseases of the head. This tree has been repeatedly tried in the rainy districts of the Himalaya, but will not succeed, a dry climate being essential to it. It is common in a part of the Upper Sutlej basin, at one spot on the Ravi, on a short portion of the Upper Chenab and its tributary the Miru, also growing near Astor and Gilghit, not far from the Indus, and is found near the Safed Koh (Bellew), and in Kafiristan, etc., north of the Kābul (Griffith) Its range in the Panjab Himalaya may be put at from 5800 to 8000 feet. Dr. Stewart believes there is some mistake in Cleghorn's 10,500 feet on the Sutlej. It does not, as a rule, exceed 6 or 7 feet in girth, although he had seen it up to 12 feet, and its height does not generally range over 50 or 60 feet. It is a short-trunked tree, and the boughs and often the stem are much curved. The timber is but little used for construction, but Dr. Stewart had seen it used for the sticks on which the passenger by the swing-bridge sits, and on which his life depends. It is very resinous, and is generally reckoned the best of all for torches and fuel, but on account of the value of its fruit is not often taken for these purposes. Major Longden says that the Kanawaris do not use its resin as it gets too hard, but he extracted excellent tar from the wood by destructive distillation. On the Sutlej, a rude basket is formed from a piece of the bark having its corners fastened together by wooden pins.

Pinus Griffithii, *Parlatore*, is the Larix Griffithii of the N.W. Himalaya; grows at 8000 to 12,000 feet.

Pinus Kæmpferi, *Lambert*, Abies Kæmpferi or golden pine, is a native of Japan, found wild on the mountains of Fako. The handsomest of all the larches; grows to 150 feet; wood hard and durable.

Pinus Khasyana, *Royle*. Tin-yoo-ben, Burm. Found on the hills in British Burma, between the Sitang and the Salwin rivers, at an elevation exceeding 3000 feet. It is a stately tree, sometimes as high as 200 feet to the top. The wood is very rich in resin. In a full-grown tree on good soil the average length of the trunk to the first branch is 80 feet, and the average girth measured at 6 feet from the ground is 9 feet.

Pinus leptolepis, *Sieb. and Zucc.*, of Japan, up to 9000 feet.

Pinus longifolia, *Roxb.*

A large tree of Darjiling, the Himalaya, Kangra, Simla, Sikkim, Bhutan, grows at 4000 to 7000 feet. This species is, of all the Indian pines (except its near ally P. Khasyana), that which is capable of enduring the most heat, and at the same time the greatest variation in amount of moisture, as it is found at elevations of not more than 1000 feet above the level of the sea, equally in the hot, humid valleys of Sikkim, where it enjoys a perpetual vapour-bath, and on the dry sandstone hills of the Upper Panjab, on which rain hardly ever falls. It is only, however, at low elevations, where the mean temperature is high, that it is capable of supporting a great amount of humidity. Heart-wood small, soft, and reddish, not durable, and is readily attacked by insects. It is used for shingles, tea boxes, the bottoms of boats; it is often made

into charcoal. The tree yields 10 to 20 lbs. of resin the first year, and about one-third the quantity the second year, after which the tree either dies or is blown down. Tar is extracted from it, and turpentine is distilled from the tar. The bark is used for tanning and for iron-smelting; the charcoal of the leaves, mixed with rice water, is used as ink. The Pinus longifolia exudes naturally or yields to incisions a very fine turpentine, which is called Gunda baroza in the bazars, Birje and cheer ka gond, Pers., Birozeh tur. But Gunda baroza is a name also given to Indian olibanum. The natives of the Outer Himalaya prepare tar in a simple way from fragments of the wood. The dry chips are put into a large earthen pot with a narrow neck, containing about 10 seers, and in the bottom four or five small holes (one-fifth inch) are drilled. The pot thus filled is luted over with stiff wet mud on the top and sides. A hole being dug in the ground, a smaller pot, holding $\frac{3}{4}$ seer, is placed in it, and the larger one on the top; the joint being luted, and the surrounding space filled up with earth, a heap of cow-dung bratties (15 seers) is piled over the whole, and as much more as is required to keep up the fire for eight or nine hours. The residue of each pot gives 5 chitaks of tar and 1 seer of charcoal; four men will easily make $2\frac{1}{4}$ maunds, or 9 large pots full of tar, in the month, and the cost will be Rs. 21, viz. four men at 5 rupees = 20 rupees; purchase of pots, 1 rupee; on $2\frac{1}{3}$ maunds = 3 annas 8 pie per seer. The value of the charcoal, near the railway or a large town, will reduce the cost of tar to 3 annas per seer, or probably less. The product appears to be equal to the tar imported from Europe, which is prepared on a larger scale. Mr. J. D. Smithe, civil engineer, adopted a modification of this plan at the Madhopur workshops. On the large pot, holding 12 seers, and filled with chips, he placed a smaller one inverted, luting the joint and upper surface with stiff mud, five inches thick; these vessels, thus prepared, are put on the top of a third, which we may call the receiver, and, as in the former method, the joint being luted, the whole is covered with fuel, and a fire lighted. Four to eight hours are necessary to extract all the tar. After the fire has been extinguished and the vessels have cooled, the ashes should be raked out, until the under vessel or receiver is visible; the large pot should then be carefully lifted off with a thick cloth in the hands. As the layer of mud is essential for the preservation of the vessels, time and fuel will be saved if by careful management the coating is not broken; each time it is renewed a considerable expenditure of fuel takes place. Care is necessary in lifting the large pot to prevent lute or ashes falling into the receiver which contains the tar. The charcoal should then be taken out of the large vessel and the tar out of the receiver, when they are ready to be charged again, as at first. Common bazar pots may be used, and with good management they may be fired 10 or 12 times; the economical working of the tar factory very much depends upon care and attention. The pots may be worked in a row $1\frac{1}{3}$ foot apart;—by this arrangement there will be a great saving of fuel. The average produce, according to Mr. Smithe, is as follows:—One seer of wood yields 2–6th chitaks of tar and 4–3d chitaks of charcoal, giving 6–9th chitaks as the produce of each seer of wood put into the pot, or 43·1 per cent. To produce a seer of tar, 6 seers 4 chitaks of fresh chips are required for charging a pot, and 2 maunds 6 seers and 9 chitaks of chips for fuel. The estimated cost is about one anna per seer, which, however, seems to be too low. The pots for the tar-making process should be charged with chips about 1 or 2 inches thick and 3 to 5 inches long. The tar produced by the above process, from the chips of deodar (Cedrus deodara), Chil (Pinus longifolia), or Kail (Pinus excelsa), is of a superior description, equal to Swedish tar. It is a mixture of resin and oil of turpentine, more or less blackened by the admixture of empyreumatic products; it thickens after exposure to the atmosphere, and may be used for coating boats; it is valuable as a preservative for all the woodwork of dams, regulating bridges and railway sleepers, also for telegraph posts and wooden fencing.

Pinus Merkusii, *Jungh*, Tin-yoo-ben of the Burmese, grows near the Toung-gyin river, associated with Dipterocarpus; splinters are used for torches.—*Roxb.; O'Sh.; Royle, Ill.* p. 350; *Wall.; Stewart; Cleghorn; Bellew; Hooker*, ii. p. 43; *Gamble; Brandis; Von Mueller; Cal. Cat. Ex.*, 1862; *Thomson's Tr.*

PIPAL. Sansk. Urostigma religiosum, *Miq.* Gaz pipal is the Plautago major, also Abies Smithiana, and Paras pipal is the Thespesia populnea. Urostigma religiosum, the poplar-leaved fig tree, is the celebrated tree of Buddha Gaya, of which a shoot has been cherished at Anaradhapura for twenty centuries. Such trees are maintained in the courtyard of nearly every vihara or temple in Ceylon as objects of veneration.

PIPAL-PAN. Tam., Tel. A small ornament of the shape of a leaf of the Urostigma religiosa, suspended in front of the pubes of young Hindu girls. It is of gold, or silver, or copper, and is their sole available concealment. Young Hindu boys have a little tube of gold, silver, or copper, with a ball at each end, strung on a string.

PIPE-CLAY.

Khurra, ... Dukh. | Namam, ... Tam.

This is of a greyish-white colour, with an earthy fracture, and a smooth, greasy feel; it adheres to the tongue, and is very plastic, tenacious, and infusible. When burnt, it is of a cream colour, and is used for tobacco-pipes and white pottery. It is found in abundance in several parts of India, and is used for the same purposes that it is in Europe. Some castes of Hindus also employ it for making the distinguishing marks on their foreheads, and (moistened with water) it is often applied round the eye in certain cases of ophthalmia, as well as to parts of the body that are bruised.

PIPERACEÆ, the pepper tribe of plants, of which the species of the genus piper are the most important. They are herbs, undershrubs, or shrubs of the tropical regions in both continents, and about fifty species of the genus piper occur in the East Indies, viz. betle, chaba, cuneifolium, lonchites, longum, malamiri, nigrum, peepuloides, plantagineum, reptans, ribesioides, sarmentosum, saxatile, stenophyllum, subpeltatum, sylvaticum, triöecum, and uliæfolium.

PIPER BETLE. *Linn.* Betel, betel vine.

Chavica betel.

A native of the south-east of Asia, growing wild in India, along water-courses, towards the Circar mountains, but is much cultivated. The female spike having attached to it the dried half-ripe berries (resembling the catkin of the birch), is used in medicine. It has nearly the same chemical composition and properties as black pepper, though feebler. It is said to contain piperin. The root (Granthicka, SANSK.), sliced and dried, constitutes the Pipula moola of the native druggists, a substance much used as a stimulant remedy and spice by the Hindus, but it is still weaker than the fruit. Long pepper is a creeper of easy culture, and should be trained on poles, or have strong sticks to grow upon. It is common in all parts of India, is extensively cultivated in the Northern Circars; its use is rather limited, but as, in the commercial returns, it is always included with black pepper, the quantity cannot be ascertained. Long pepper is readily propagated by cuttings. The stems are annual, and the roots live for several years, and, when cultivated, usually yield three or four crops, after which they seem to become exhausted, and require to be renewed by fresh planting. Its berries are lodged in a pulpy matter like those of P. nigrum. They are first green, becoming red when ripe. Being hotter when unripe, they are then gathered and dried in the sun, when they change to a dark-grey colour. The spikes are imported entire. The taste of the berries is pungent, though rather faint.—*O'Sh.; Jaffrey; M. E. J. R.*

PIPER METHYSTICUM, Ava pepper, a native of the Society, Friendly, and Sandwich Islands. It is used in a tincture in chronic rheumatism, and in infusion as an intoxicating beverage, which is also deemed antisyphilitic. To cure venereal, the patient drinks an infusion until he becomes drunk, after which copious perspiration ensues. The national beverage in the Kava of Polynesia is prepared from the root and extreme base of the stem; they are preferred fresh, but are nearly as good when dry. Reducing the roots to minute particles, according to Polynesian usage, by chewing, is a task in Fiji by lads who have sound teeth; in other Polynesian islands it is done by young women. On public occasions, or at carnival meetings, when the chewed root is placed in the bowl and water is poured on, the whole assembly begin to chant appropriate songs, and this is kept up until the dregs of the root have been strained. The beverage has the look of coffee with plenty of milk in it, and an aromatic, slightly pungent taste, which, when once acquired, must, like all acquired tastes, be enticing.—*Dr. Seeman, Viti; O'Sh.*

A climbing plant, native of Malacca, Java, and Sumatra; found wild among the hills of the Rajamundry district, but cultivated all along the Malabar coast, in Sumatra, Borneo, the Malay Peninsula, and all countries to the east of the Gulf of Siam. The best pepper comes from Malabar, the least esteemed from Java and Sumatra. The pepper vine is very common in the hilly districts of Travancore, especially in Cottayam, Meenachel, and Chenganacherry districts, where at an average calculation about 5000 candies are produced annually. Its cultivation is very simple, and is effected by cuttings or suckers put down before the commencement of the rains in June. The soil should be rich, but if too much moisture be allowed to accumulate near the roots, the young plants are apt to rot. In three years the vine begins to bear. They are planted chiefly in hilly districts, but thrive well enough in the low country in the moist climate of Malabar. There they are usually planted at the base of trees which have rough or prickly bark, such as the jack, the erythrina, cashew nut, areca, and mango. They will climb about 20 or 30 feet, but are purposely kept lower than that, at 12 to 15 feet. During their growth it is requisite to remove all suckers, and the vine should be pruned, thinned, and kept clear of weeds. The berries are gathered before they are perfectly ripe, and quickly dried on mats in the sun, by which they turn black. When plucked too young, they speedily fall into a state of powder. Such are separated from the others by sieves and winnowing. In this condition it is termed black pepper. White pepper is the same fruit freed from the outer rind; for this purpose the ripe berries are allowed to macerate in water, and the husk is removed. These are smaller, smooth, of a greyish-white colour, varying to yellow, with a less powerful odour and taste than the black. The root is a tonic and cordial. Both Piper nigrum and Piper longum grow wild in considerable quantities in the hilly tracts of Goodem, and probably along the whole of the extensive range of the Eastern Ghats. The latter finds its way in small quantities down to the bazars on the coast, but the black pepper is entirely neglected, and does not appear to be gathered even for local use. Black pepper and long pepper appear to have been used as febrifuges in the east from the earliest periods. The powder and the root of long pepper have been much employed in

Hindu medicine. The root is said to be bitter and dry; it is a stimulant tonic, is employed for coughs and indigestion, also fever. The black pepper from the forests of Malabar and Travancore for centuries has been an article of exportation to European countries.—*Roxb.; Ainslie; Eng. Cyc.; M. C. C. Ind. Ann. Med. Science; Powell.*

PIPER RIBESIOIDES. *Wall.* Tau kwou, Burm. Piper sylvaticum, *Roxb.*, a native of the mountains on the north-west border of Bengal, where the natives call it pahari pipal, or mountain long pepper, and use it, both green and ripe, in their dishes. In the botanic garden it blossoms, and the berries ripen during the rains.—*Roxb.*

PIPER TRIOECUM. *Roxb.* Mirial tiga, Tel. Circar mountains, in shady places; with rich soil, fruit succulent, small, round, red, excessively pungent; an important article of commerce from Madras.—*Roxb.; O'Sh.* p. 575.

PIPSA, a troublesome dipterous insect which swarms on the banks of the streams in Sikkim; it is very small, floating like a speck before the eye. The bite of the pipsa leaves a small spot of extravasated blood under the cuticle, very irritating if not opened. It resembles a flea, and is found on the banks of the Rungeet river, in Sikkim. See Mura.

PIPTANTHUS NEPALENSIS, a plant on the Tendong, in Sikkim, with golden blossoms.—*Hooker's Journ.* ii. p. 5.

PIPTURUS PROPINQUUS. *Weddell.* A bush of the Eastern Islands, South Sea Islands, and East Australia, with a fibre similar to that of the China grass, Boehmeria nivea. P. velutinus, *Weddell*, is closely allied.—*Von Mueller.*

PIR. Hind. A Muhammadan saint, a religious instructor. Pir zadah, son or descendant of a pir. Amongst the Kurds of Persia, pir is a title, though it means literally an old man or old woman. It is often united with Murshid, a guide to the right path, *i.e.* salvation. Pir-o-Murshad is applied reverentially to the religious teachers of the Muhammadans of India and Persia, but is also used in addressing people of high rank.

Piran-i-Pir, the saint of saints, *i.e.* Dastagir, the Pir-i-Dastagir Sahib, a Muhammadan walee or saint whose tomb is at Baghdad. He is considered the chief of their saints. A Muhammadan festival is held on the 11th of Rabi-us-Sani, in honour of Syud Abdul-Kadar Ghilani, or Pir Piran, a Sufi teacher, native of Ghilan, who taught and died in Baghdad. Sadi studied under him.—*Herk.*

Pir Jalal—? oblations are offered at his shrine.

Pir Mangho, a place of Muhammadan pilgrimage, 10 miles west of Kurachee, famous for its hot springs and crocodile tank, from which it is erroneously supposed to derive its name, the crocodile here being the long-snouted garial, not the short-nosed muggur. About a hundred of these are kept in a marsh close by, called muggur-taldo.—*Dr. Buist's Catalogue.*

PIRACY is described in the earliest Malay romances, and is spoken of in glorifying the brave deeds of their ancestors. Piracy has always been frequent along the coasts of China. Pirates continue to infest the Sulu Sea and the southern ports of the Philippines. They come in the middle of the western monsoon, and return in the beginning of the eastern monsoon. They seem to come mostly from Lanun Bay, on the south coast of Mindanao. Dampier, in 1686, calls them the Hillanunes, living in the heart of the country of Mindanao. They are bold, but rarely attack European ships, generally the trading schooners manned by Malays. Their prahus are open boats, about 50 feet long, 12 wide, and 4 deep. They have a swivel throwing a 1 lb. ball, but their plan of attack is to throw themselves in overpowering numbers on board of their prey. Magindano pirates, every year, with their long prahus, well manned, visit some part of the Archipelago, robbing, destroying, killing, or making captive all they meet with. The Dutch and the British have done very much towards suppressing piracy, but the Spaniards nothing. In the Persian Gulf, and on the western coast of India, until the beginning of the 19th century, piracy had prevailed, and in the 17th and 18th centuries an extensive system of piracy prevailed on the Arakan coasts and in the Delta of the Ganges, in which some Portuguese leaders joined.

Piracy from pre-historic times has been a profession with several maritime tribes of the East Indies, who have preyed on commerce on all the coasts from Africa to the remotest islands of the Archipelago. The present seat of piracy in the Indian Archipelago includes Mindanao, Sulu, and the crowd of other islands extending from Mindanao to the north-east coast of Borneo, and separating the Mindoro from the Sulu Sea. Formosa to the Sulu Archipelago and Mindanao is all included, and embracing the Philippine and Basayan groups. In the early part of the 19th century, pirates made their haunts chiefly about Lingen, the island of Billiton, and the west coast of Borneo.

On the western side of the Peninsula of India, pirate races were harassing the seaport towns at the time of the arrival of the Portuguese. The Sidi chiefs of Janjira and Sachin and the Mahrattas engaged in it on the western coast, and even at the present day some of the races on the littoral of Cutch and Cambay are scarcely restrained from following this as a profession. Up to the close of the 18th century, the islands of Kenery and Colaba, near Bombay, were the resort of these predatory bands.

The British continue to guard against piracy in the Persian Gulf up to the present day, and armed ships of the Indian and British navies, all through the close of the 18th and in all the 19th century, have been employed there in protecting commerce. Ibn Haukal, in his version of the Koran, informs us that before the deliverance of the children of Israel from Egyptian bondage, the subjects of a pirate monarch in these parts seized on every valuable ship which passed. The possession of a few ports within and near the entrance of the Persian Gulf, where it is not more than 30 miles across, enabled them to perceive and sally out on all passing vessels. In recent times, the Muscat Arabs, during the period of their ascendency, from 1694 to 1736, were highly predatory; but it was not until 1787 that the Bombay records made mention of the systematic continuance of piracy.

The race whose power and influence were long felt by the neighbouring tribes, and is still intimately connected with their political condition, occupy a part of the coast within the Persian Gulf, comprehended between the mountain range

and the sea-shore, and extending in that direction from Kasab to the island of Bahrein, a distance of 350 miles. On the map, this portion bears the designation of the Pirate Coast. To the Portuguese during their brief career in India, they proved quite as troublesome as they did in the latter part of the 18th century to the British; with these robbers the Imams of Muscat have been repeatedly at war. In 1809, an expedition was sent against them under Captain Wainwright, in His Majesty's ship *Chiffonne*. Their principal stronghold, Ras-ul-Kheima, was stormed and taken, and 50 of their largest vessels burnt or destroyed. Leit, on the island of Kishm, and several other ports, were reduced; but though this had the effect of checking them for a time, they soon rebuilt these ports, and gradually returned to their old practices. The inhabitants of the Pirate Coast consider themselves to be far superior to either the Bedouin or town Arab. The latter, especially those from Oman, they hold in such contempt, that a Muscatti and an arrant coward are by them held to be nearly synonymous. They are taller, fairer, and in general more muscular than either of the above classes, until they attain the age af 30 or 40 years, when they acquire a similar patriarchal appearance.

After 1809, there were some overt acts of attempted piracy, but these were easily prevented by the Indian navy, and on one serious attempt, in 1833-34, *Ras-ul-Kheima* and *Shaya*, vessels of large size, with some 2000 fighting men on board, were prevented from coming out on a piratical enterprise. They were met by one ship of war (*Elphinstone*), and driven back to their ports with great slaughter, and they surrendered a few days afterwards.

The Pirate Coast of Arabia extends from Ras-ul-Kheima to Abuthabec.

Lingah is the chief town of the piratical Joasmees, on the Persian side. It is close to the sea, in lat. 26° 33′ N., about 24 miles from Kishm.

Ramsee town is in lat. 25° 33′ N., and is near Ras-ul-Kheima, in lat. 25° 48′ N., and lat. 56° 4′ E. It is the centre of the pirate ports, and their chief town, containing a thousand houses. It is situated on a point of land projecting into the sea; within the point is a deep narrow bay. Eleven miles from Ras-ul-Kheima is Hamra, a low sandy islet, and near it, on the mainland, the villages of Aruulgavine, Ejman, and Fasht. To the west of the town of Shargah is a small lagoon in which the dows are anchored. South-west of Shargah is the small town of Boo Haile.

The Beniya tribe inhabit the most northerly district of Oman, called Sir (Seer). The tribe has three branches,—Beniya, Manasir, and Owaimir. Those inland possess a fine breed of camels, and are nomades, migrating yearly; the coast dwellers fish in small boats, and dive for pearls. Their pearl fishery is accounted to produce 10,000 tomans yearly. They seize the small boats that approach their coasts. They can furnish 20,000 excellent musketeers.

The Badoo of the town of Huailah, of Khor-Hassan, and Zobara are agricultural and pearl fishers. Within the space of twelve hours, 5000 Badoo could be marched down to the coast.

Ojeyr is the chief seaport of the Wahabecs. From Ojeyr to Kateef is two days' journey, and the district is occupied by Uttoobee Arabs, but the Badoo occupy from Kateef to Grane.

The islands of Inderabia and Basheeab are occupied by traders, shepherds, and farmers.—*Bikmore*, p. 318; *Wallace*, ii. p. 29; *Persian Gulf Selections; Wellsted's Travels*, i. p. 243.

PIR BABA, a Muhammadan saint, whose shrine is at Buner, 10 miles E. of Elai. About 400 or 500 fakirs, etc., are in attendance.—*MacGregor*, ii. 5.

PIRI. TAM. A Ceylon tree, which grows to about 20 feet in height and 2 feet in diameter. Its wood is very close in its grain, and is used by the natives for the frames of vessels, and in house work. It produces a fruit which is of no use.—*Edye of Ceylon.*

PIR PANJAL, a range of mountains which extends for about 40 miles between the Baramula pass and Pir Panjal, or Nandan Sar pass, and rising to 16,500 feet above the sea. The most picturesque road into Kashmir traverses the Pir Panjal pass, and is known as the Gujavat and Pir Panjal route. The top of the pass is a fine grassy plateau, about half a mile wide, with an elevation of about 11,500 feet, gradually sloping down to the Aliabad sarai.

Pir Panjal pass is called also the Sona Gulli; it is open for foot-travellers from the 20th April, and for horses about 20th May, and is shut for 3¼ months in the year. Hodgson, Herbert, and the Gerards state 11,500 feet as the height up to which forest trees grow in alpine India, east of the Sutlej. The Pir Panjal range of hills is visible from the Shalimar gardens in Kashmir. Muhammadans say the range derives its name from Panj, five, and Pir, saints, five pious brothers having settled on it, and performed several wondrous feats around; but the name seems to be Pansal, which in the Kashmirian language signifies a pass, and Pir, a devotee. Europeans and Persians call the whole mountain Pir Panjal, but the natives restrict the name to the pass. The mass of this range, according to Vigne, is basaltic.

PIR POINTEE, Father Pointee, or St. Pointee, a Musalman saint. His tomb, resembling that at Sicrigully, though less picturesquely situated, stands on a little cliff above the river, with some fine bamboos hanging over it.—*Heber's Journal*, i. p. 199.

PIRZADAH. PERS., HIND. Son of a Pir, from Pir, a saint, and Zadah, the offspring. It means a religious devotee of the Muhammadans, but not an ascetic, and is considered a reverential appellation. In India, the five famed of these Muhammadan holy men are Ghazi Miyan, whose tomb is at Baraitch; Pir Hathili, sister's son of Ghazi Miyan; Pir Jah'l, of Lucknow; Pir Muhammad, of Jounpur; and another. They are known as the Panch-Piri.—*Pottinger's Travels*, p. 139; *Oudh*, p. 125.

PISACHA, a daughter of Daksha, and wife of Kasyapa. Pisacha, in Hindu life, is a marriage obtained by a forcible abduction, the most objectionable of all the Hindu forms of marriage.

PISACHA. SANSK. An evil spirit, a devil, a ghost, one haunting burning or burying places. The most malignant order of malevolent beings, lower than the Rakshasa. The Pisacha is mentioned several times by Menu (i. 37, 43, v. 50, xii. 44). He is classed with Rakshasa and Yaksha, who are described as eating flesh meat and unclean food.

Pisacha is the Sanskrit word for Peygal. Pisachi, female.—*Williams' Story of Nala*, p. 177. See Pei; Peisacha.

PISH, Chamærops Ritchieana? In Baluchistan, Las, and Makran, the Gudhaf or Gudhap or Gudhab of the Arabs grows luxuriantly among the hills. It is seemingly a palm. It has fan-shaped leaves, which are used for the Makrani houses, and for making mats, bags, shoes, ropes, pipes, cups, etc. Its pith is made into tinder; between the top leaves is a palatable stalk; its small acid berries also are edible, and make rosary beads.

PISHING or Pisheen, a valley to the west of Baluchistan, separated from the valley of Kanhee by a range of mountains. It is to the west of Seistan.—*Ritchie*, ii. p. 13. See Kalat.

PISHON of Genesis, supposed to be the river Indus.

PISONIA, a genus of plants of the marvel of Peru tribe, of the order Nyctaginaceæ. Pisonia inermis, Kongi-putri, Dukh., is without thorns. —*Lindl.*

PISONIA MORINDIFOLIA. Lutchi-kottay-ellay, Tam. The leaves of this pretty lettuce tree make tolerable greens cooked with cocoanut, chillies, etc.; leaves of a light-green colour, turning nearly white during the hot months.—*Jaffrey.*

PISONIA VILLOSA. *Poir.*

Pisonia aculeata, *Roxb.*	Tragularia horrida, *Kon.*
Bagh-achura, . . Beng.	Konki; Kanki putra, Tel.
Karu Indu, . . . Tam.	Embudi chettu, . Tel.

A plant of Bengal and the Peninsula of India, seen growing everywhere. Prickly pisonia makes impenetrable hedges. Konki, in Telugu, means a hook, and has refereuce to the thorns, which are aculeate backwards, and very prehensile.—*Roxb.*

PISTACHIO NUTS, or Pistachia nuts.

Pistasie, ... Dan.	Pistacchi, Pistuchi, It.
Pistasjes, . . . Dut.	Pistaciæ, ... Lat.
Pista chenoot, . . ,,	Fistica, Pistacha, . Port.
Pistaches, ... Fr.	Fistashka, . . . Rus.
Pistaschen, Pistazie, Ger.	Alfocigos, Pistacho, Sp.
Pista, ... Hind.	Pistacie, ... Sw.

A small oily seed, the producc of Pistacia vera. They arc oblong and poiuted, about the size of a filbert, enclosing a kernel of a pale greenish colour, covered with a yellowish or reddish skin. They have a pleasant, sweetish, unctuous taste, and are chiefly served up at the dessert. Pistachio nuts are imported into Bombay from the Persian Gulf, also iuto N.W. India, through the Bolan pass. They are eaten with relish by natives.—*Faulkner.*

PISTACIA, a genus of plants bclonging to the natural order Anacardiaceæ. Seeds solitary, each without albumeu. The species are—

P. Atlantica, *Desf.*, —?
P. Cabulica, *Stocks*, Sind.
P. integerrima, *H. f. et T.*, N.W. Himalaya.
P. lentiscus, *L.*, S. Europe, N. Africa.
P. terebinthus, *L.*, *Voigt*, S. Europe, N. Africa.

Pistacia Atlantica, *Desf.*, Tagho, Pushtu, yields the Rumi mastiki or Kundar rumi of the bazars of the Panjab; used in asthma, also mixed in ointments.

Pistacia Cabulica, *Stocks*, Khinjak, Pushtu. A tree of Sind, yields a resin similar to mastic.

Pistacia integerrima, *H. et T.*, Zebra-wood tree.
Rhus integerrima, *Wall.*

Kakrein, . . . Beas.	Kakkeran, Toongoo, Rav.
Kakra, . . . Chenab.	Kakra-Singhi, . . ,,
Kakrei, Tanhari, ,,	Kakaangche, . Sutlej.
Khakkar, . . Jhelum.	Sarawan, Trans-Indus.
Kangar, . . . ,,	Shne, Masna, ,,
Drek, Goorgoo, Kaghan.	

This ornamental tree grows in many places in the Panjab Himalaya at from 1500 to 5500 feet, also in Simla, Garhwal Hills, Hazara, and Afghanistan. Its zebra-coloured wood is in great demand amongst Europeans for chairs and cabinets; it is also made into oil mills. The leaves and young shoots are browsed. The fruit, sumak, is given in indigestion. The kakra-singhi, a large, hollow, horn-like curved gall, with a tawny-brown rough exterior, is cousidered hot, dry, and astringent, and is used by natives in coughs and asthma, fever, piles, and dysentery. It is also said to allay vomiting, thirst, and difficulty of breathing. —*Cleghorn; Stewart; Powell*, i. p. 338.

Pistacia lentiscus, *Linn.*, Mastic tree.

Mastaka, . . . Arab.	Rumi mastiki, . Hind.
Uluk-bagh-danu, ,,	Kundar rumi, ,,
Kinnah, . . . ,,?	Kinnah, Kinnoli, Pers.

A native of the south of Europe, North Africa, and Asia Minor, introduced into the Calcutta Garden in 1806. The bud, bark, leaves, and fruit have all been used in medicine, but have been laid aside in modern times. The leaves are evergreen; fruits very small, pea-shaped, reddish when ripe. The resin is called—

Rumi mastaka, . Arab.	Ulmastiga, ... Sp.
Gum mastic, . . Eng.	Kinnoli, . . . Turk.
Kundar rumi, . Pers.	

Mastic is obtained from the trunk by incisions made in the month of August. It occurs in oval tears of variable size, smooth, diaphanous, brittle, breaking with plane, brilliant, glassy, and pale yellow surface, and owing to its brittleness being usually covered with its own dust. Its odour is agreeable; flavour weakly balsamic; it softens in the mouth, and becomes ductile like white wax. It melts at a moderate heat, and then exhales a sweet odour. Mastic is quite insoluble in water; it yields to alcohol 80 per 100 of soluble matter, leaving a substance resembling caoutchouc, which is slowly dissolved by ether. This resin gives its name to the process of mastication, being largely chewed in the east. It is much used by dentists for filling up carious teeth; it is burned as incense; and in some parts of Greece it is added to bread in small quantities to give it an agreeable flavour. Mastic is extensively employed as a transparent varnish, dissolved in turpentine or alcohol, with other resinous bodies. A species of mastic, called tum, is obtained in Africa from the Pistacia Atlautica. The true resin is sold in all the bazars for about three rupees the seer. It is used by hakims in diarrhœa and diseases of the stomach or liver. It comes from Kābul, but the best is said to come from Turkey and the Levant, hence called Rumi.—*Roxb.; O'Sh.* p. 278; *Powell.*

Pistacia terebinthus, Terebinthus vulgaris.

Katinge rumi, . Arab.	Zungbari, . . . Pers.
Butum, ... ,,	Sukhur, ... ,,

A native of Barbary, Greece, and the south of France. A resinous juice of much value is afforded by this tree. It is seldom seen in clumps or groves. It is said to produce cypress or chian turpentine, and to supply a kind of follicular gall. Its small, brown, dried fruits, called Hab-ul-Khizra, are said to come from Bokhara, and to

be used as an astringent in special diseases, and for palpitation of the heart.—*Powell.*

Pistacia vera, *Linn.*, Pistachio tree. Fistak, Pista, HIND. A large bush or small tree, from 15 to 20 feet high, of Asia Minor, Syria, Persia, N. Turkestan, Mid Asia, Bokhara, Kābul, Koh-i-Kush, and S. of Europe. It yields the pista or pistachio nut, of which about 140 tons are annually imported via Peshawur and the Bolan pass. The gall found on it, pista-ka-phul, gul-i-pista, and bazghanj, or bozaghanj, are imported into Bombay from the Persian Gulf, and used as an astringent medicine, also as a dye for silk. By the Hindu physicians the fruit is considered a warm and moist remedy; the kernel contains much oil, and acts as a demulcent and restorative. It is principally used in special diseases. The bark is employed as a tonic in indigestion. The galls act as astringents, and are used in diarrhœa. According to Mr. Elphinstone, it grows wild in the Hindu Kush. The almond and the pericarp are imported into India from Kābul, with the kind of gall termed gul-i-pista, and a resin called aluk-ul-imbat.—*O'Sh.* p. 276; *Royle's Ill.* p. 178; *Faulkner; Birdwood; Powell*, i. p. 337.

PISTIACEÆ, Lemnads, or Duck-weeds, a natural order of endogenous plants. The species are floating or land plants, with very cellular, lenticular, or lobed fronds or leaves. The common duck-weed, Lemna, may be regarded as the most simple of all phænogamous plants. It inhabits the ditches of the cool parts of the world. Pistia is found in the tropics; Ambrosinia in the basin of the Mediterranean.—*Eng. Cyc.*

PISTIA STRATIOTIS. *Linn., Roxb., Rh.*

Unter ghunga, . DUKH.	Agasa-tamare, . . TAM.
Toka pana, . . HIND.	Antara-tamara, . . TEL.
Taka pana, . . ,,	Akasa-tamara, . . ,,
Kodda pail, . MALEAL.	Niru budiki, . . . ,,

An aquatic stemless plant, growing in all tanks and ditches. It is said to occasion dysentery to those who drink the water. Its juice is given medicinally. The natives of several districts of Southern India were in the habit of using the fresh living plants of the Pistia stratiotes or Agasa-tamare for attracting and stupefying bugs, but large quantities of this plant were collected and tried in several hospitals and public institutions, and found useless.

PISUM ARVENSE. *Wight.*

Keia, ... BENG.	Mattar, . . . HIND.
Wan tau, . . . CHIN.	Mattar rewari, . ,,
Tsing, siau, tau, . ,,	Kala mattar, KAGHAN.
Bisillah, . . . EGYPT.	Karani, . . . KASH.
Field pea, ... ENG.	Kulawan, . . . SIMLA.

Cultivated throughout India, sown after the rains in drills, and varies in price according to the quality; when green, they are tolerable as a vegetable, but are best in soup. Procurable in December and January.—*Riddell.*

PISUM SATIVUM. *Linn.*

var. α. macrocarpum, *Ser.*, sugar pea.
var. β. quadratum, *L.*, Chota-mutur, grey pea.
var. γ. agreste, Patna pea, common field pea.

Hummus, . . . ARAB.	Shanma; Ahandil, LADAK.

Batanah, . . . ,,	Patanlu, ... TEL.
Batani, ... ,,	Gundu sanighelu, . ,,

This is the pea of the garden. Cultivated throughout the plains of India, and grown in the N.W. Himalaya up to 14,000 feet. At the latter height it does not ripen its seed, and is used as fodder. It is found in the Sutlej valley, between Rampur and Sungnam, at an elevation of 8000 to 14,000 feet. Cultivated in Kanawar and Spiti. 100 parts of the pea, from Benares, yielded—Moisture, 12·65; nitrogenous matter, 23·50; starchy matter, 60·28; fatty or oily matter, 1·11; mineral constituents (ash), 2·41.—*Ainslie; Eng. Cyc.; Cleghorn*, p. 66.

PITA. TAM. Aloe or agave fibre.

Cantala, Banskeora, HIND. | Petha kalabuntha, . TAM.

The species of agave commonly called aloe plants are natives of America, which have become so naturalized in many parts as to appear to be indigenous in Africa, parts of India, and in the south of Spain. The agave plants resemble the true aloe in their sword-shaped leaves with parallel veins, which, however, grow to a gigantic size—that is, from eight to ten feet in length—in a cluster from the root, with their margins usually armed with short thorns, and their points with a hard and sharp thorn, which makes them useful hedge plants; the leaves abound in fibres of great length, of considerable strength, also tough and durable. The Mexicans make their paper of the fibres of agave leaves laid in layers. The expressed juice of the leaves evaporated, is stated by Long, in his History of Jamaica, to be also useful as a substitute for soap.—*Royle, Ill. Him. Bot.* p. 375; *Royle, Fib. Pl.* p. 4.

PITAKA, Tein-pitaka, three divisions of the sacred writings of the Buddhists. Pitakattayan, or the three Pitaka, do not seem to have been committed to writing until B.C. 85, or 458 years after Sakya's death, during the reign of Watta Gamini, king of Ceylon.—*Hardy; Fytche*, p. 167.

PITAMAHA, born at Gauri Sankar, and lived at Kuru Kshetra. He taught that the world, time, and space, like God, are eternal; and he enjoined the practice of the three sects, Saiva, Sakta, and Vaishnava.—*Ward*, iv. p. 31.

PITAMBAR (from Pita, SANSK., yellow, and Ambar, cloth), a yellow amber-coloured cloth, or soft silk dhoti, ten yards long, forming both a skirt and a body covering, or worn by men as a dhoti. The silk pitambars of India, or men's silk loin-cloths, are worn by Hindus at entertainments and festivals, as also in religious worship. Saris are nearly universal for Hindu women's wear, and sousse, made into petticoats and trousers, is as universal for Muhammadan women and men also; and it has this advantage over saris, that the colours and patterns differ very little anywhere within the confines of India; whereas saris, dhotis, and loongis must be made to suit particular localities, and the patterns of one locality would inevitably be rejected in another. See Clothing.

PITAMBARA, clothed in yellow garments, the colour of the clothing of Buddhist and Hindu religious ascetics.

PITAPUR, in Gujerat, occupied by the Bagela race.

PITAR, father, is derived from the Sanskrit root Pa, which means to protect, to support, to nourish. The father, as genitor, was called in Sanskrit Ganitar, but as protector and supporter of his offspring he was called Pitar; hence, in the

Veda, these two names are used together, in order to express the full idea of father. Thus the poet says—

'Dyaus me petâ genitâ,
Jovis mei pater genitor,
Ζευς ἐμου πατηρ γενετηρ.'

In similar manner, Matar, mother, is joined with ganitu, genitrix, which shows that the word Matar must soon have lost its etymological meaning, and have become an expression of respect and endearment; for among the early Aryans Matar had the sense of maker, from Ma, to fashion. In the non-Aryan nations of Europe and Asia, the terms are—

Language.	Father.	Mother.

PITCH.

Zift, Kar, Arab., Turk.	Pitch, Guj., Hind.
Sung-shu-kau, Chin.	Pece, It.
Brai, Poix, Fr.	Smola-gust aja, Rus.
Pech, Ger.	Pez, Sp.

Pitch is the residuum of tar, inspissated by heat or boiled down to dryness. In China, black dammer and impure elemi are used as substitutes for pitch. In British India the black dammer is used similarly.—*M'Culloch.*

PITCHER PLANTS are of the natural order Nepenthaceæ, and there are several species in Ceylon, the Khassya, the Malay Peninsula, Sumatra, Java, and Borneo. N. rajah, N. Lowii, N. Edwardsiana, are all Borneon species. Other known species are N. ampullacea, distillatoria, lœvis, phyllamphora, and Rafflesiana. They are quite common near Mount Ophir in Malacca, and the pitchers there contain about half a pint, and are beautifully ciliated with large ciliæ; the broad pitcher—for this, like the Rafflesiana, produces two kinds—is generally crimson; the long pitcher differs from the other in its trumpet shape and green colour, which is spotted with crimson. The leaves are moderately large and broad,—at least those of them which produce the broad pitcher, and which are found near the base of the plant,—are dark green above, and of a fine peach-coloured red beneath. The Nepenthes ampullacea produces green or spotted short and broad pitchers; it is also a climbing plant, and found in thick jungles. The old stems falling from the trees become covered in a short time with leaves and vegetable matter, which form a coating of earth about them; they then throw out shoots, which become in time new plants; but apparently the first attempts to form the leaf are futile, and become only pitchers, which, as the petioles are closely imbricated, form a dense mass, and frequently cover the ground as with a carpet of these curious formations. As it continues growing and endeavouring to become a plant, the laminæ of the leaves gradually appear, small at first, but every new one increasing in size, until finally the blades of the leaves are perfect, and the pitchers, which, as the leaves developed themselves, have become gradually smaller on each new leaf, finally disappear altogether when the plant climbs into the trees. This formation of the pitcher may afford an instructive lesson to the naturalist, as, though not to the same extent, the principle is perceptible in all of this curious tribe, the leaves of seedlings and weak plants always producing the largest pitchers. The best known to Europeans is Nepenthes distillatoria, *Ait.*, of the Khassya mountains; it is the N. phyllamphora and N. Indica, *Lam.* None of the plants of Borneo so much attract curiosity as the various and beautiful pitcher plants, eight different species of which were discovered in the western part of the island. The pitchers, which in some instances would contain upwards of a pint of water, hang from the midrib of the leaf of which they are a formation; they precisely resemble pitchers, being furnished also with a lid. The Nepenthes Rafflesiana produces its pitchers singly; they are large and generally crimson; it grows on rocky islands in the neighbourhood of Singapore, and it is easily distinguished from its near ally, the native of Borneo and Mount Ophir, by its inferior size, shortness of the column which supports the lid, the white and powdered appearance of its stems, and its bushy habit, never exceeding four or five feet in height. The largest Borneon one, Nepenthes Hookeriana, grows in shaded jungles, climbing to the tops of the trees. The pitcher is nine inches in length, having a large lid standing on a column, which is a continuation of the beautiful edge of the pitcher; that part which is broadest and turned towards the midrib of the leaf from which it depends, is furnished with two broad wings.—*Wallace*, i. p. 31; *Low's Sarawak*, p. 68.

PITH, Eng., Sola or Shola of Hindustan, is obtained from the Æschynomene aspera. At the Madras Exhibition of 1855, the Trichinopoly Local Committee exhibited a large collection of figures and architectural models, carved in the pith of the typha. The attitudes of the figures were stiff, but the draperies characteristic. Also pith work made from the rushes called Nultee in Tanjore.

PITHA-STHANA. Sansk. Seat or place of a seat. Of these are 51 places where the limbs of Sati fell, when scattered by her husband Siva, as he bore her dead body about, and tore it to pieces after she had put an end to her existence at Daksha's sacrifice. At the Jwala-Mukhi, Vindhya-Vasini, Kalighat, and others of the Pitha-Sthana, the temples are erected to the different forms of Sati or Devi, and not to the phallic emblem of Siva, which may be there as an ornament or accessary, but not as a principal.—*Garrett.*

PITHECOLOBIUM ANIMALLAYANUM of Beddome. This very beautiful tree, with its large spreading head, is very conspicuous in the moist woods on the higher ranges of the Animallays, 5000 to 8000 feet, and other hills to the south of them. P. bigeminum, *Martius*, is a large tree of the Himalaya and S. India.—*Beddome, Fl. Sylv.* xvi. p. 189.

PITHECOLOBIUM DULCE. *Willd.*

Inga dulcis, *Willd.* | Mimosa dulcis, *Roxb.*
Manilla tamarind, . ENG. | Karka puli, . . . TAM.

This tree is supposed to have been introduced from the Philippine Islands, but it is common throughout the Madras Presidency; it is one of their best coppice fuels, and is largely grown for that purpose, and is also much used as a hedge plant. A cubic foot of unseasoned wood weighs 50 to 53 lbs., and when seasoned 40 lbs., and its specific gravity is ·640; it is hard, coarse-grained, and brittle, of a reddish-brown colour, and when sawn emits an unpleasant odour; it is used for country carts, packing-boxes, and the panelling of doors.—*Beddome, Fl. Sylv.* p. 188.

PITHECOLOBIUM SAMAN is the rain tree. It grows rapidly.

PITHECOLOBIUM SUBCORIACEUM. *Thw.* Meemini mara, SINGH. A large tree 30 to 40 feet high, growing, not uncommon, at an elevation of 4000 to 6000 feet in the central province of Ceylon; wood unknown.—*Thw. Zeyl.* part ii.

PITHECUS, the orang-outang. The following species are known:—

Pithecus Brookei, *Bl.* P. Wurmbii et P. Abelii, *Owen*, though neither the species described by Van Wurmb, nor that by Dr. Abel, the Mias rambi, MALAY, *Brooke*. A native of Borneo.

Pithecus curtus, *Blyth*, the Mias chapin of the Dyaks. A Borneon species.

Pithecus morio, *Owen*, Mias kassar, MALAY, *Brooke*. From Borneo.

Pithecus Owenii, *Bl.*, small orang with short forearms. Adolescent female. Hab. unknown.

Pithecus satyrus, *L.* apud Brooke, S. Muller, and others, Mias pappan, MALAY, *Blyth*. From Borneo.—*Ben. As. Soc. Journ.* No. 4, p. 383.

PITHORAGARH, a military cantonment in Kamaon district, North-Western Provinces; lat. 29° 35′ 35″, and long. 80° 14′ 30″ E.—*Imp. Gaz.*

PITI. HIND. Pulse of the kind called mah ground up into a fine paste with water.

PITI and Hungrung are two valleys in the Himalaya. That of the Piti river is entered from Kanawar by the Hungrung pass, elevated 14,800 feet; the Parang pass, 18,500, leads over the range dividing the Parang from the Piti rivers. The district of Piti, which was formerly almost independent, but paid tribute to, or exchanged presents with, all the Tibetan countries in its neighbourhood, namely, with Garu, Ladakh, and Lahul, as well as with Kanawar, followed, in 1846, the fortunes of Lahul in being transferred to British rule. It is a very thinly populated valley, the villages being small and distant, and the arable tracts of no great extent. The mountains on its southern border, by which it is separated from Kanawar, are so very elevated that they wholly intercept all access of humidity from the districts to the northward of them, and render the climate entirely rainless. The houses are in consequence very generally built of unburnt bricks, made of the fine lacustrine clay so common in the valleys, and their flat roofs are thickly covered with a layer of the same material. The gradual transition, in ascending the Sutlej, from Hinduism to Buddhism, is very remarkable, and not the less so because it is accompanied by an equally marked change in the physical aspect of the inhabitants, the Hindus of the Lower Sutlej appearing to pass by insensible gradations as we advance from village to village, till at last we arrive at a pure Tartar population. The people of Upper Piti have quite the Tartar physiognomy, the small stature and stout build of the inhabitants of Ladakh, to whom also they closely approximate in dress. To what extent mere climatic influences may cause these differences, and how far they depend on an intermixture of races, it is difficult to decide. It is impossible, however, to avoid being struck by the coincidence between these physical and moral changes in the human race, and the gradual alteration in the forms of the vegetable world, which are observable as we advance from a wet to a dry climate.—*Thomson's Travels in W. Himalaya and Tibet*, p. 109; *H. f. et T.* p. 223.

PITRA BAKSH, from Pitra, paternal ancestors, the Patrii of the Romans, is a Hindu festival about the end of September, on the last day of Bhadrapada or first day of Aswin, on which offerings of fire and water are made to the manes of deceased ancestors. See Astronomy.

PITRI, the soul of a deceased ancestor; also the manes of ancestors to whom the obsequial worship Srad'ha is performed. They are the Feralia of the Romans, and in Hinduism also embrace the ten Prajapati or mythical progenitors of the human race; also the sons of the gods, according to a legend in the Harivansa, and in the Vayu-Purana, though all the Puranas give similar accounts of the Pitri.

The offerings to ancestors are balls of rice and flour (pinda); thus of a simple nature, as was the case with the Romans; for Ovid, in his Feralia, remarks ironically, Parva petunt manes,—the manes are easily satisfied.—*Wilson; Dowson.*

PITRI, the Aryan divinity of food.

PITRI-ISWARA. The worship of the ancestorial manes, the Pitri-iswara or father-gods of the Rajputs, continues for fifteen days. The rana of Mewar goes to the cemetery at Ara, and performs at the cenotaph of each of his forefathers the rites enjoined, consisting of ablutions, prayers, and the hanging of garlands of flowers and leaves sacred to the dead, on their monuments. Every chieftain does the same amongst the altars of the 'great ancients' (barra boora); or, if absent from their estates, they accompany their sovereign to Ara. See Dharma-raja.

PITRI-MEDHU, SANSK., from Pitri, forefathers, and Medhu, flesh. The early fathers, the progenitors of the human race, their manes, the dii patrii and dii manes of the Romans.

PITRI-PATI, lord of the manes; Yama, judge of the dead.—*Dowson.*

PITT, WILLIAM, Prime Minister of Great Britain. In 1784 he introduced a Bill in the British Parliament to establish a Board of Control over the Court of Directors of the East India Company. The Board was to consist of six Privy Councillors, who were to act as Commissioners, having control and superintendence of all the affairs of the British possessions in the East

Indies. Of these six, two were to be the Chancellor of the Exchequer and one of the Principal Secretaries of State, either of whom was to preside, and in their absence the senior of the remaining four. With the senior, who was known by the designation of President of the Board of Control, the whole business of the Board soon rested; he was essentially a new Secretary of State. The Bill materially diminished the powers of the Directors of the East India Company.

PITTA and Kaloochia. URIYA. Pitta, a tree of Gaujam and Gumsur, extreme height 36 feet, circumference 3 feet, and height from the ground to the intersection of the first branch, 15 feet. Pitta is used for posts, ploughshares, and firewood as the kaloochia, but is a larger tree and very plentiful.—*Captain Macdonald.*

PITTAL, a cultivating race in Rajputana, who are supposed to be Kurmi under another name.—*Campbell*, p. 93.

PITTAPUR, a large zamindari in Rajamundry.

PITTOSPORACEÆ, *Lindl.*, of 3 genera, 9 species, viz. 7 Pittosporum, 1 Billardiera, 1 Sollya. Wood of Pittosporum bicolor, *Hk.*, and P. undulatum, *Vent.*, from Victoria and New South Wales, is white, adapted for turners' purposes, and recommended as a substitute for the boxwood used by engravers. P. tobira, *Roxb.*, is a pretty shrub of China. Mr. Gamble names P. glabratum, humile, dasycaulon, ferrugineum, tetraspermum, Nilghirense, eriocarpum, and floribundum.

Pittosporum Ceylanicum, *Wight, Ill.*

P. floribundum, *W. et A.*	Senacia Nepalensis, *D.C.*
Celastrus verticillatus, *R.*	Katteya-gass, . . SINGH.

A moderate-sized tree of the Oova district of Ceylon, growing at an elevation of 3000 to 5000 feet.—*Thw. Enum. Pl. Zeyl.* i. p. 68.

Pittosporum tenuifolium, the lemon tree of New Zealand, attains to 12 or 15 feet in height. It yields a fragrant resin.—*G. Bennett.*

PITTS, JOSEPH, of Exeter, visited Mecca A.D. 1678.

PITT STRAIT, called Sagewyn by the Dutch, is bounded on the north by Battanta Island, and on the south by the north coast of Sallawatty and the group of small islands stretching from thence to the adjacent coast of New Guinea. Its length is about 39 or 42 miles, and its greatest breadth is about 7 or 8 miles. Pitt Strait and Dampier Strait are separated from each other by Battauta Island.

PITYRANTHE VERRUCOSA. *Thw.* Kleinhovia verrucosa, *Gardn. MS.* This tree is found in Ceylon, in the Battecaloa, Jaffna, and Trincomalee districts.

PITYRIASIS VERSICOLOR, a parasitic fungus of Melanesia and Polynesia, which causes the vegetable itch, the Tokelu ringworm.

PIYA DASI or Priya Darsi, a title of the Buddhist king Asoka, king of Magadha, who lived in the third century B.C. His era is near that of Antiochus the Great.

PLACSHADWIPA, Asia Minor, called also Sakadwipa.—*As. Res.* iii. 304, vi. 515, viii. pp. 264, 288. 297.

PLACUNA PLACENTA, the window shell genus of shells, is found in great abundance in the Tamblegam lagoon near Trincomalee, and their collection was rented out, 18 millions being gathered annually. The shells are exported to India and China as a substitute for window glass, and small pearls are found in them. On the Coromandel coast of the Peninsula of India, they are found fossil in the tertiary strata of the eastern coast line.

PLAGUE, or Levantine plague, also Bubonic plague, are terms by which the nations of Europe designate a contagious disease of a severe form which from time to time has appeared as epidemic in Egpyt, in S. Arabia, Syria, Turkish Arabia, Southern Persia, extending to Turkey in Europe, Malta, Gibraltar. It is known to the Arabs as Ta'un. It prevailed severely in Baghdad in 1830, and appeared in Egypt in 1842. It broke out at Pali in Rajputana about A.D. 1830-1840, and appeared in China during the fifteen years of civil war, from 1855 to 1870. The Chinese called it Yang-tzee. It prevailed specially in the province of Yunnan and some of the neighbouring districts, and was believed to have been introduced there from Burma, but this unlikely point was never established. On the outbreak of the civil war, it became very prevalent, and was still raging in 1879, though the rebellion had been long put down. The disease first attacked animals which live in or on the ground. The rats, who were the soonest assailed, came out in troops from their holes, and, after staggering about and falling over each other, dropped dead. Buffaloes, oxen, sheep, and deer also very quickly succumbed, but fowls, which spend part of their time above the ground, more often escaped. Those who died of it were supposed to be possessed of a devil, and could not be buried, lest the repose of their ancestors should be disturbed. The bodies were placed on a bier, and exposed to the sun outside the gates, so that the traveller who passed a village where the Yang-tzee was raging was nearly choked by the odours with which he was suddenly brought into contact.—*M. Emile Rocher on the Chinese Malady called Yang-tzee.*

PLAGUSIA POTOUS. *Cuvier.* The Jerree Potoo of Russell, Ikan ledah of the Malays, is a fish of excellent flavour, and, like Plagusia trulla, passes at European tables under the denomination of 'sole.' The species are all distinguished for their tenacity of life. The fishermen at Penang assert that some species of Plagusia shoal at certain seasons.

PLA-KAT, SIAM., literally fighting fish, is the Macropodus pugnax.

PLANCHONIA VALIDA. *Blainv.* A timber tree of the Andamans.

PLANETS in Hindu mythology are minor deities. Brahaspati is not a planet, but 'the lord of prayer.' See Graha; Haft Dhat.

PLANKS.

Planker, ... DAN.	Papan, ... MALAY.
Planken, . . DUT., GER.	Tolstule-olosku, . RUS.
Bordages, Planches, FR.	Plankor, ... SW.
Takhta, ... HIND.	

Thick strong boards, cut from various kinds of wood.—*M'Culloch's Com. Dic.* p. 920.

PLANT is a term designative of all the vegetable kingdom, which botanists classify into orders, genera, and species, supposed about 500,000. The *telegraph plant*, Desmodium gyrans, has small leaflets in pairs on the leaf-stalks, which exhibit a spontaneous jerking motion.

Vinegar plant is a mould, the spawn (Mycelium)

of which forms a tough web. It is often seen floating in vinegar, and it induces fermentation if placed on saccharine fluids.

The *pitcher plants* are species of Nepenthes, growing in Ceylon, Malay Peninsula, Java, Sumatra, and Borneo.

The *hand plant*, Cheirostemon platanoides, so called because the curved stamens of the flower have a singular resemblance to a clawed hand, and the ancient Mexicans venerated it.

Venus fly-trap is the Dionœa muscipula. On the upper surface of its lobes are six minute bristles (three on each side), and the instant any one of these bristles is touched, the lobes close on each other, and entrap the insect which had alighted on the leaf.

The *Cephalotus* of Australia has pitcher-like leaves.

PLANTAGINACEÆ. *Lindl.* The rib-grass tribe of 1 gen. with 15 species of Plantago. Soda is obtained in Egypt from the ashes of P. squarrosa.

Plantago amplexicaulis, *Cav.*, Gaj-pipali, HIND. Said to be an astringent.

Plantago ispaghula, *Roxb.*, Spogel seeds.

Buzr katoona, . . ARAB.	Ispungur, . . . SIND.
Fuslioon, ... GR.	Ispaghal verei, . . TAM.
Ispaghol, Isabghul, HIND.	Isapagala vittulu, . TEL.

Cultivated in India during the cold season for the seeds, which are used as an emollient and light article of diet for convalescents. In making a decoction of ispaghul, take of ispaghul seeds two drachms, distilled water one pint; boil and strain. This preparation is a simple demulcent, was recommended by Mr. Twining in dysenteries, and is much used in India in catarrh, gonorrhœa, and nephritic affections.

Plantago major, *Linn.*, Way-bread.

Ch'e'-ts'ien, . . CHIN.	Fasliyun, ... GER.
Cart-track plant, . ENG.	Bartang, ... HIND.

The Chinese name looks like an adaptation of Psyllium.

Plantago psyllium, *Linn.*, Flea-wort, ENG., Bartang, HIND. The seeds, called flea-seed, contain a great quantity of mucilage, and in Britain are extensively employed by muslin manufacturers for stiffening their goods; they are also used by paper-stainers and bookbinders. They form rich mucilaginous drinks, useful in catarrh and other ailments for which linseed is used.—*Roxb.; Ainslie; O'Sh.; Hogg; Smith; Voigt; Powell.*

PLANTAIN, Banana, Musa Paradisiaca.

Mauz, ... ARAB.	Pisang, ... MALAY.

Plantain is the name applied to various species of the genus Musa, of which, in the East Indies, the best known are M. paradisiaca, which yields the edible plantain or banana, and M. textilis, the Manilla hemp plant. The bananas appear to be natives of the southern portion of the Asiatic continent (R. Brown, Bot. of Congo, p. 51). Transplanted at an unknown epoch into the Indian Archipelago and Africa, they have since spread also into the new world, and in general into all intertropical countries, sometimes before the arrival of Europeans. Humboldt put a very high value on this fruit as an article of food. According to him, it affords, in a given extent of ground, forty-four times more nutritive matter than the potato, and 133 times more than wheat. In the East Indies it is only used as a dessert. In Jamaica, Demerara, Trinidad, and other colonies, however, many thousand acres are planted with the banana. The vegetation is so rapid, that if a line of thread be drawn across and on a level with the top of one of the leaves when it begins to expand, it will be seen in the course of an hour to have grown nearly an inch. The *fruit*, when ripe, is of a pale-yellow, from 2 or 3 inches to a foot in length, and 2 inches thick, and is produced in bunches weighing 40 lbs. and upwards. In the Straits Settlements, the most approved varieties are the royal plantain, which fruits in eight months; one which bears in a year, the milk plantain, the downy plantain, and the golden plantain or banana. A variety termed Guindy was imported from Madras, where it was in great esteem. It had this advantage over the other kinds, that it could be stewed down like an apple. The Malays allege that they can produce new varieties by planting three shoots of different sorts together, and by cutting the shoots down to the ground three successive times, when they have reached the height of 9 or 10 inches. In some districts of Mexico, the fruit is dried in the sun, and in this state forms a considerable article of internal commerce, under the name of plantado pasado. When dried and reduced to the state of meal, it cannot, like wheat-flour, be manufactured into macaroni or vermicelli, or at least the macaroni made from it falls to powder when put into hot water. The fresh plantain, however, when boiled whole, forms a pretty dense firm mass, of greater consistency and toughness than the potato. The mass, beaten in a mortar, constitutes the 'foo-foo' of the Negroes. Plantain meal cannot be got into this state unless by mixing it up with water to form a stiff dough, and then boiling it in shapes or bound in cloths.

In Pegu there are scarcely any good plantains to be had, owing to the Burmese habit of only eating green fruit, and their total indifference to the finer qualities of flavour. The great use of all fruit with the Burmese is to serve as an addition to their curry, for which purpose one kind of plantain is just as good as another. The plantain or banana holds the same place in Tenasserim that the apple does in England and the United States. It is used as a vegetable as well as an article for the dessert, the great proportion being eaten with rice and meat in the place of potatoes. Like the mango, the Musa is indigenous in Tenasserim, but the wild fruit is too full of seeds to be eatable. A species grows wild in Tenasserim jungles, and is rather an ornamental plant, which is all that it has to recommend it. Unlike the common plantain, it never throws up shoots from its roots. The plantain and banana embrace many varieties. Mr. Mason had the Burman names of twenty-five before him. 'The numerous varieties,' writes Voigt, 'we have in vain tried to put in some order. The attempt made for this purpose, in Schultens, appears to us to have only increased the confusion.'

The *Manilla hemp*, from which a fabric of the finest texture is prepared, is made from the leaves of the Musa textilis. Several varieties of the banana are cultivated in the Dekhan.

—the large red, the green, and the yellow. A small sort, which is supposed to be the real banana of the West Indies, is perhaps the most luxuriant. The plants blossom at all seasons, and so soon as the drupe of fruit begins to ripen, which is known by some turning colour, it is cut and hung up to ripen in the house. The plant will not bear again, and if not cut down it will perish of itself, on which the surrounding shoots grow up and blossom as the former. The plants are generally grown in beds or clusters in a good, rich soil, when fine fruit is almost the sure return. In transplanting the shoots of 2 or 3 feet high, about one-half is generally cut off; the green fruit is used in curries; the natives of the Peninsula of India also use in their curries the extremities of the flower shoots, the heart of the stem, and that portion of it from which the roots proceed.

The stem yields a fine white silky fibre of 5 or 6 feet in length, specifically lighter than hemp, flax, and aloe fibre, by ¼th or ⅕th, and possessing considerable strength. The plantain will flourish in almost any soil where the climate is warm and moist. A young shoot being planted attains maturity in eight months, producing a bunch of fruit weighing 30, 50, and even 100 lbs., and throwing out from its roots and around its stem from 7 to 10 fresh shoots. These will each become a distinct plant, producing its own bunch of fruit. There may be from 300 to 400 plants in an acre, each producing on an average seven suckers, thus making in all from 2100 to 3200 plants in an acre. The produce of fruit at the lowest estimation would be from 900 to 1200 lbs. annually; and this fruit has its market value.

The plant is cultivated everywhere in Southern India, where the varieties are the rustaley, superior table plantain; poovaley, or small guindy variety; payvaley, a pale ash-coloured sweet fruit; monden, 3-sided coarse fruit; shevaley, large red fruit; and putchay laden, or long-curved green fruit. All these yield fibres, but of very different quality. This fibre has a particular tendency to rot and to become stiff, brittle, and discoloured by steeping in the green state, and it has been ascertained by trial that the strength is in proportion to the cleanness of the fibre. If it have been well cleaned, and all the sap quickly removed, it bears immersion in water as well as most other fibres, and is about the same strength as Russian hemp. The coarse large-fruited plantains yield the strongest and thickest fibres; the smaller kinds yield fine fibres, suited for weaving, and, if carefully prepared, these have a glossy appearance like silk. This gloss, however, can only be got by cleaning rapidly, and before the sap has time to stain the fibre; it is soon lost if the plant be steeped in water. The rope ought not to be hard spun, as it becomes stiffer when wet, and is liable to snap if it get into a twist or knot. Almost every part of the plantain may be converted into fibre, but it most abounds in the stem and leaves, and can be made available for textile or cordage purposes. The combings or tow separated during the preparation of the fibres is of value as a substitute for horse-hair for stuffing mattresses, etc.; and the peduncle of the core can be pounded into half-stuff for the paper-makers, and form an excellent material for the finest or the toughest kinds of paper. In the West Indies the spiral vessels are employed as tinder. In the process of preparation of plantain fibre, the stem should be cut down six inches above the ground, and then divided longitudinally into four parts, and the juice expelled by passing each slip longitudinally through the common sugar-mill, with grooved hard-wood rollers, or a mill the rollers of which are 3 feet long and one foot in diameter. In the process of crushing, the stalks and the harder and softer parts of the stem should be passed through separatcly, which can be easily effected if the rollers be horizontal. In this way the produce will be four or five pounds of fibre from each tree. The fibres from the midrib of the leaf are the best; and in general if the stem yield four pounds nett of fibre, the stalk will give one pound out of four. After the crushing, the fibres are to be well washed and boiled in soda or other alkaline ley to separate the gluten and colouring matter, keeping the fibres from the several parts quite separate in this process of boiling. They are then bleached, and the highest coloured fibres do not require more than six hours, but the darkest from twelve to eighteen. The finest plantain fibre, when carefully cleaned and dressed, by what may be termed the 'fresh process,' in contradistinction to the system of rotting the fibres free, has been said to be well suited for the imitation of silk in carriage braid and carpet work. The average value put upon such fibres was said to be £70 per ton, when Russian hemp was selling at £50 per ton. In the West Indies, the total expense of producing a ton of fibres was calculated at £9, 13s. 4d. Early in the year 1880, two gentlemen in Bombay commenced operations on a moderate scale at Bassein, giving employment to about 40 day-labourers for a period of above one year; the out-turn of fibre, waste, and paper-stuff, produced at the rate of two tons per diem by the simplest conceivable machinery, and at comparatively trifling cost, readily commanding the following prices, on 9th December 1880, in the Liverpool markets:—Plantain fibre, £20 per ton; plantain waste, £10 per ton; plantain tow, £10 per ton.

From 800 trees, which was the average daily quantity manipulated by Messrs. Price and Lacey, the yield was as follows:—Clean fibre, one ton; waste, half ton; tow, half ton; while the cost of production was Rs. 52:—800 stems at Rs. 2 = Rs. 16; cartage, Rs. 16; 40 coolies, for cutting, splitting, washing, drying, packing, etc., Rs. 10; fuel for engine, Rs. 5; sundries, Rs. 10.

The superintendent of the Calcutta Botanic Garden has found that, during the dry months, simple exposure of the sliced stem to the sun is sufficient to prepare the fibre for the paper-maker, provided the paper-mill be on the spot. What is still wanted is a cheap method of removing the cellular tissue, which contains a large quantity of sap, and is useless for paper-making, so that when shipped on the voyage to England there may be no risk of fermentation.

On the Arakan coast, the layers of the stem of the plantain, termed there Pa-tha-you-sha, are sold in a dried state; some of it is even twisted into a bast rope. It would probably command a good price as a cordage or paper material, or for textile fabrics.

The *leaves* are used in regimental hospitals, for dressing parts that have been blistered.

The *meal* is prepared by stripping off the husk

of the fruit, slicing and thoroughly drying the core in the sun, after which it is powdered and sifted. It has a fragrant odour, and its flavour is said to depend a good deal on the rapidity by which the slices are dried. It should be husked and sliced by nickel or bamboo knives, as those of steel injure the colour of the meal. It is calculated that the fresh plantain will yield 40 per cent. of meal, that an average bunch of 25 lbs. weight will yield 5 lbs., and that an acre of plantain walk of average quality producing 450 bunches during the year, would yield upwards of a ton of meal. In the W. Indies plantain meal is largely employed as the food of infants, children, and convalescents. In composition the plantain fruit approaches most nearly in nutritive quality to the potato, and the meal of the plant to that of rice.

The varieties which are rich in saccharine matter make an admirable preserve, on being skinned and split longitudinally and dried in the sun, by which process they immediately acquire a consistence like Turkey figs, and become capable of being packed and preserved in the same way.

In S. America, the fruit is not only used as an article of diet in its fresh state, but, when dried, forms an article of internal trade, besides having its flour separated, and cooked or made into biscuits. It is also preserved in the Society Islands.

The *skins* of the fruit are used by the tanners in dyeing leather black. — *Surgeon T. Key in Proceedings of the Madras Committee; Madras Ex. Jur. Rep.; Royle's Fib. Pl.; Simmonds' Com. Prod.; Dr. A. Hunter in M. E. Proceedings; Mason's Tenasserim; Dr. M'Clelland in Records of the Government of India; Dr. King in Report of Calcutta Ag.-Hort. Gard.*

PLASMA, a green, semi-transparent calcedony, having a dark tint, which is supposed to be coloured by chlorite. It is found chiefly in India, and is made into beads and other ornaments. Occasionally specimens are found among the ruins of Rome. — *Waterston; Faulkner.*

PLASSEY, on the Bhagirathi river, in the Nadiya district of Bengal, is in lat. 23° 47′ N., long. 88° 17′ 45″ E. It is famous in the history of British India as the scene of a battle which was here fought and won by Clive on the 23d June 1757, with 700 European troops, 1400 sepoys, and 570 sailors, and the victory threw Bengal, Behar, and Orissa into British hands.

Orme states that the nawab, Suraj-ud-Dowla, had 50,000 foot and 18,000 horse, and 50 pieces of cannon, 24 and 32 pounders. There were also 40 Frenchmen, under the command of Sinfray. The action was a cannonade, and Clive computed the enemy's loss at 500 killed, that of the English at 22 killed and 50 wounded.

It was not until the 12th August 1765 that Shah-i-Alam, emperor of Dehli, at a conference with Clive, held at Allahabad, granted to the English E.I. Company the Diwani of Bengal, Behar, and Orissa. Clive agreed to pay to the emperor a tribute of 2 lakhs monthly, from the proceeds of the revenues. But the memorable battle-field has ceased to exist, changes in the bed of the river having swept it almost all away. Of the famous mango grove called the Lakha Bagh, or the tope of a lakh of trees that was 800 yards long and 300 broad, all the trees have died or been swept away by the river, excepting one, under which is buried one of the nawab's generals who fell in the battle. So long ago as 1801, there were no more than 3000 trees remaining. It is now a cultivated plain. The spot where the solitary tree yet survives is called Pir-ki-jaga, and is held sacred by Musalmans. — *Tr. of a Hind.* i. p. 51; *Malcolm*, vi. p. 256; *Orme*, ii. p. 173.

PLATALEA LEUCORODIA, Spoon-bill.

Cherita, . . . Beng.	Weisser loffeler, . Ger.
Lepelaar, ... Dut.	Chamach-huza, . . Hind.
Spoon ihis, . . . Eng.	Becquaroueglia, . It.
Pale, Poche, Truhle, Fr.	Cucchiarone, . . ,,
Spatule, Cueiller, . ,,	Gentu-muku-konga, Tel.
Loffel gans, . . . Ger.	Llydon big, . . Welsh.

One of the Plataleinæ, the spoon-bill sub-family of birds of the family Tantalidæ, common in India, Europe, Africa, Asia. It breeds in India in lofty trees, but also in marshes. Other known species are—

Platalea major, *Temm.*, Japan.
P. minor, *Schlegel*, Japan.
P. ajaya, *Linn.*, America.
P. flavipes, *Gould*, Australia.
P. melanorhynchus, *Gould*, Australia.

PLATANEÆ, the oriental plane tribe of plants, comprising one genus and four species, — one of Europe and Asia Minor, one N. America, and two from Asia Minor and Central Asia. The Platanus orientalis has palmate leaves resembling those of the common sycamore. It grows in the western parts of Asia, and extends as far east as Kashmir. Its wood is fine grained and hard, and when old it acquires dark veins so as to resemble walnut-wood. The tree was valued for its shade by the Greeks and Romans, and it was held sacred in the east. P. occidentalis is found in most parts of N. America, from Mexico as far as Canada. The timber is of a reddish colour, and will not bear exposure to the weather. There is but this one genus in the order, and six species. The family resembles Artocarpeæ. — *Hogg; Eng. Cyc.*

PLATANISTA GANGETICA. *Gray.*

Dolphinus Shawensis.	D. Gangeticus.
Platanista of Pliny.	Sou-sou of India.
Dauphine du Gange, *T. Cuv.*	Susa of Buffon.

Inhabits the Indian seas, the Ganges and its tributaries. It eats prawns, Palæmon carcinus, also the fish Wallago attu and Saccobranchus fossilis. The flesh and blubber are eaten by some low castes.

Platanista Indi, *Blyth*, the porpoise of the Indus, is larger than P. Gangetica, and of a paler colour. — *Jerdon.*

PLATANUS ORIENTALIS. *Linn.*

Doolh, ... Arab.	Chunar, . Hind., Pers.
Chinar, . Hind., Pers.	Buna, Buin, Bonin, Panj.

The oriental plane is indigenous in Asia Minor and in most of the countries of the Levant, and it extends into Kashmir. Ancient Greeks and Romans prized it particularly for the close shadow which its spreading foliage afforded, and they celebrated many of their festivities beneath its branches. A plane tree is mentioned as having existed in Lycium, in the hollow of which the Consul Licinius Musicanus gave a dinner to 19 friends. The wood is much like that of the beech, but it

is less hard, has a finer and closer grain, and is more capable of receiving a good polish; it is, however, very apt to warp and split, is not durable, and is frequently attacked by the worm. Immersing the wood in water for several years, is said to improve its quality. It is used for gun-stocks. According to Belon, the Greeks of Mount Athos were in the habit of making boats of a single piece, out of the trunks of the largest trees. It grows in Kashmir from seed, but requires to be transplanted. Some re-planted by Akbar in A.D. 1588, when seen by Mr. Vigne in 1838 were 20 feet in circumference. Vigne had seen some grand trees in the valley opposite to Therapia on the Bosphorus; and one near Avin, at the foot of the Elburz mountains, measured by him, was 64 feet in circumference. It appears to be tolerably common in Afghanistan, and is frequently seen at villages, etc., in the Panjab Himalaya, extending sparingly east to the Beas, and up to 8300 feet in Ladakh. In the Kashmir valley it is abundant, the trees ranging up to 75 feet high; and Dr. Stewart had noted seven or eight of more than 20 feet, the largest being 28 feet girth in Srinagar, Kashmir. The spread of two trees measured by him had a radius of 37 and 44 feet respectively in one direction. The finest grove in Kashmir is the Nazim Bagh, on the banks of the lake, near the city of Srinagar, which at one time consisted of 1200 noble trees, said to have been planted about the 17th century. To the eastward it does not thrive. In Kābul, where timber is scarce, Irvine states that it is the only material for gun-carriages; and in Kashmir it furnishes part of the wood for making the small painted boxes.—*Dr. Stewart; Book of Trees*, p. 152; *Royle's Ill.* p. 344; *Hugel's Travels in Kashmir*, p. 85; *Cleghorn's Pan. Rep.*

PLATAX ARTHRITICUS. *Cuv. and Val.*

Ikan bonna, *Bell.* | Chætodon arthriticus, *C. and V.*

The total length of this fish is 1 foot 7 inches. It inhabits the seas of Penang, Sumatra, Java, and Singapore. The flavour is excellent, the large air-vessel is thin, and yields little isinglass.—*Cuv. and Val.*

PLATINUM or Platina, Kum-phok, BURM., Pehkin, CHIN., from Plata, silver. An important metal, first made known in Europe by Mr. Wood, assaymaster in Jamaica, who met with its ore in 1741. In 1750 he published a paper upon it in the Philosophical Transactions. The name was given to it on account of its colour; it was originally called Platina del Pinto, because it was found in the auriferous sand of the river Pinto. It has since been found in China, Burma, Brazil, Colombo, St. Domingo, and in the Ural mountains. It occurs along with gold in the Hukong valley, and metal-workers alloy it with copper and silver, with which they form bowls of tobacco-pipes. It is said to be found also in the Shan states. The sands of the Namtowa river, about 36 miles S.E. of Jeypore in Upper Assam, on the other side of the mountains, is the most prolific source of the platina.—*As. Res.* xviii. part ii. p. 279.

PLATO, B.C. 429–348, the Iflatuu of the Arabs, an illustrious philosopher of Greece, son of Ariston and Perictione. He was born at Athens in May 429 B.C. From his twentieth till his twenty-eighth years he studied under Socrates, the Sucrat of the Arabs, a great part of whose discourses he committed to writing. He resided then in Egypt and afterwards in Italy, and then returned to Athens, where for some time he taught at a place called the Academy. On the invitation, however, of the elder Dionysius, he went to his court, but his free speaking displeased the tyrant, who is said to have sold him as a slave. He was bought by Anniceres, a native of Cyrene, who freed him, and he returned to Athens. The books which exist consist of a long series of dialogues, with Socrates as the chief interlocutor. They are dialectical, ethical, and physical. His original name was Aristocles, but he received the name of Plato from the breadth of his forehead and chest. Plato, Epicharmus, and others adopted a philosophy similar to that of the Vedanta, a system of perceptions of primary or secondary qualities. He died on his 82d birthday, B.C. 348. He had Aristotle as a pupil.

PLATTER LEAVES, used by the Hindus, are made of leaves of the Eugenia jambolana, Ficus Bengalensis, F. cordifolia, F. religiosa, Mangifera Indica.—*Birdwood, Arts.*

PLATYCERCUS HYPOPHONIUS, *G. R. Gray*, is called by the Malays 'Kastori raja,' or prince parrot, from its being the most brilliantly plumaged of all that family. Platycercus vulneratus, of Timor, a green species of parrot?

PLATYCERIUM, a genus of staghorn ferns of Australia, of which P. alcicorne and P. grande are the more remarkable. P. (Acrosticum) alcicorne retains much moisture in its dead, sterile fronds, which form large scales, rising one over another. In stormy weather they are sometimes thrown down by the weight of water and vegetable matter thus accumulated about them. Platycerium grande, *J. Sm.*, is the elkhorn fern of Borneo and neighbouring islands. — *J. Backhouse, Visit to Australia.*

PLATYCODON GRANDIFLORUM. *Smith.*

Kih-kang and Kih-hung, CHINESE. A plant of China of the Campanulaceæ or Bellwort tribe, from the provinces of Sze-chuen, Hu-peh, Ho-nan, and Shan-si. It is said to be used to adulterate ginseng.

PLAVA, a name of the men of Bhutan.

PLAYFAIR. Several relatives of this name served as medical and military officers in the 19th century in the East India Company's armies of Madras and Bengal. Dr. Sir Lyon Playfair, C.B., an eminent chemist and philosopher of Great Britain, was at one time in Bengal. Lieutenant-Colonel Playfair wrote on the Fishes of Zanzibar, also a History of Aden.

PLECOTUS AURITUS. *Jerdon.*

Pl. Darjilingensis, *Hodgson.* | Pl. homochrous, *Hodgson.*

The long-eared bat of Europe and Darjiling. Pl. Timorensis, *Geoffroy*, is from Timor.

PLECTOCOMIA, a genus of palms, growing in Malacca, Java, Assam, and the Khassya Hills, with leaves of great length, having a hook at the end by which to support themselves. P. Himalayana, *Griff.*, is the Rhenoul of the Lepchas. It is not a very large plant, but it climbs lofty trees, and extends 40 yards through the forest; 6500 feet is the upper limit of the palms in the Sikkim Himalaya, the Rhenoul alone attaining this height. Griffith also described P. Assamica and P. Khassyana, and Kurz mentions P. macrostachya of Tenasserim. — *Hooker*, i. p. 147; *Seeman; Gamble.*

PLECTRANTHUS PARVIFLORUS. *Willd.*

P. graveolens, *R. Br.*, a plant of N. Holland, with blue or purple flowers.

PLECTRANTHUS RUGOSUS. *Rottler.*

Lumnitzera densiflora, *Sprenger.*
Isodon plectranthoides, *Schræd.*

Pioomar, Chugu, CHENAB. | Pok, Rosbang, . SUTLEJ.
Sola, Solei, . . . ,, | Chichri, Toarb, . . ,,
Flea-killer, . . . ENG. | Sirru kalengu, . . TAM.
Bui, . . . JHELUM. | Khwangere, . TR.-INDUS.
Kot, Siringri, Itsit, RAVI.

A small, rather slender, shrubby plant, has a wholesome, pleasant-tasted, bulbous root, much eaten by the natives, particularly during the period of their great festivals. Its leaf is rough and not unlike that of Borage; it grows in the Himalaya at Mount Chur, Sirmore, Dehra Doon, and at Tinnevelly. It is abundant in the Panjab Himalaya from 3000 to 9000 feet, and occurs in the Salt Range. In places it is used as bedding to keep off fleas. The leaves have an aromatic, sago-like smell, and a somewhat bitterish taste.—*Ainslie; Stewart, Panjab Plants; Voigt.*

PLECTRANTHUS SECUNDUS. *Roxb.*

P. cordifolius, *D. Don.* | P. incanus, *Lam.*
P. mollis, *Spreng.* | P. Nagpurensis, *Rotl.*
P. divaricatus, *Weinm.* | Ocimum molle, *Ait.*

A plant of Mysore and the Western Dekhan, Kandalla, Roza, Ellora; also in Nepal.—*Roxb.*

PLEURONECTES SOLEA, the sole.

Kowlie mutchie, DUKH. | Naak meen, . . . TAM.
Ikan leda, . . MALAY.

—*Ains. Mat. Med.* p. 155.

PLEUROPTERA, a tribe of mammals, generally known as the flying lemurs, flying cats, and flying foxes. See Mammalia.

PLINY, a historian of Rome, whose name was Caius Plinius Secundus, born A.D. 23. He died A.D. 79, suffocated by a pestilential vapour near Mount Vesuvius. He was a voluminous author, but most of his works have been lost. The Historia Naturalis or Historia Mundi still remains; it is in 37 books. Notices occur in it of Khuzistan, Koh, Lokman, Okelis, and the Kol race.

PLOCARIA CANDIDA. *Nees.*

Eucheuma spinosa, —?

Kyouk puen, . . BURM. | Ceylon moss, . . ENG.
Hai-tsai, Hai-tsau, CHIN. | Agar-agar, . . MALAY.

This is abundant on the east coast of the Bay of Bengal. The Chinese name Hai-tsai means sea vegetable, and is applied to all the Algæ used as articles of diet. Agar-agar is also applied by the Malay race to the Gigartina tenax and Sphærococcus growing on the rocky shores of Malaysia. The Plocaria genus of plants belongs to the alliance Algales, the order Ceramiaceæ, and the sub-order Sphærococceæ. One of the species, P. helminthocorton, a native of the Mediterranean, is called Corsican moss, and has a considerable reputation as a vermifuge. Plocaria candida is abundant on the Tenasserim coast, and is valued for invalids. It was first brought to public notice by Dr. O'Shaughnessy as the edible moss of the Easteru Archipelago, and referred by him to the genus Fucus. The fructifications, however, being in small tubercles, the Rev. Mr. Mason considered it as a species of Agardh's genus, Sphærococcus, which now constitutes a member of the genus Plocaria. It is an allied species with the Ceylon moss (Gigartina lichenoides), first described as Fucus amylaceus by Dr. O'Shaughnessy, the Plocaria lichenoides of Mr. Mason; also with a species found on the coast of Devonshire in England, P. compressa; likewise with the Corsican moss of the Mediterranean, P. helminthocorton; also with the agar-agar, P. tenax, a species used in China as a substitute for glue and gum-arabic, but differs from the Irish moss or Chondrus crispus, and is not of the same natural family as the Iceland moss, which, indeed, is a lichen, the Cetraria Islandica. The Tenasserim moss is wholly free from the bitter principle which renders other fuci so objectionable. Mr. Mason seems to consider it identical with the Ceylon moss, for he gives the same account of it as Dr. O'Shaughnessy gives to that from Ceylon. It contains, he says, a considerable proportion of starch, and was hence named by Dr. O'Shaughnessy the starch fucus, F. amylaceus, but its specific name has been since changed to candida, white, probably from a mistaken idea that the substance is naturally white, whereas it becomes so only by bleaching in the sun; its natural tint is a shade between olive and purple, such as the natives designate red. According to Dr. O'Shaughnessy, 100 parts contain—Vegetable jelly, 54·5; true starch, 15·0; wax, a trace, 0·5?; ligneous fibre, 18·0; gum, 4·0; sulphate and muriate of soda, 6·5; sulphate and phosphate of lime, 1·0; iron, a trace, 0·4? From the tendency of pectine or vegetable jelly to form insoluble compounds with saline and earthy bases, it is necessary to steep this fucus for a few hours in cold rain-water as the first step in its preparation. This removes a large portion, if not the entire, of the sulphate of soda, leaving all the gelatine and starch. It should next be dried by the sun's rays, and ground to a fine powder. When ground, boiling for 25 minutes or half an hour dissolves all the starch and gelatine. The solution while hot should be passed through muslin or calico, and thus the ligneous fibre is removed; lastly, the strained fluid should be boiled down till a drop placed on a cold surface gelatinizes sufficiently. With milk and sugar, and flavoured with lemon-juice or sherry, this substance, when so prepared, would afford the invalid a pleasant article of diet. It may be available in several processes of art and various manufactures.—*O'Shaughnessy; Mason's Tenasserim.*

PLOCEINÆ, the weaver birds, the tisserins of the French, a sub-family of the Fringillidæ and tribe Curvirostres. They form curious pensile nests.

Ploceus baya, *Blyth*, the common weaver bird, Ceylon, all India, Assam, Burma.
P. manyar, *Horsfield*, Burma, Archipelago.
P. Bengalensis, *Linn.*, black-throated weaver bird, British India, Assam, Tiperah, Burma.
P. Philippinus, —? Java, Burma.

They build nests like a crucible, with the opening downwards, and usually attach them to the tender branches of a tree hanging over a well or tank. P. baya is found throughout India; its nest is made of grasses and strips of the plantain or date palm leaf stripped while green. It is easily tamed and taught some tricks, such as to load and fire a toy cannon, to pick up a ring, etc. P. Bengalensis occurs also in Hindustan and Burma. P. manyar is of all British India.

PLOTOSUS ANGUILLARIA and Pl. albilabris occur in the seas of the Malay Peninsula. At

Penang, the latter species is less numerous; both are eaten by the poorer classes of natives. The wounds of both are equally dreaded. Plotosus canius, *Buch. Ham., Cal. Cat.*, is the Notopterus l'allasii, *Cuv. et Val., Cal. Cat.*

PLOTUS MELANOGASTER. *Gmelin.*

Goyar, ... Beng.	Banwa, . . . Hind.
Indian snake bird, . Eng.	Sili, ... Sind.
Chakuri, . . . Gond.	Kallaki pitta, . . Tel.

This beautiful diver is found throughout all India, Ceylon, Burma, and Malayana. In some parts it is exceedingly numerous, but they hunt singly. They swim and dive with rapidity, float low in the water, the head and neck alone visible. The lengthened scapular feathers are looked on as a badge of royalty by the Khasias, and they are esteemed by all. They were the badge of one regiment of the Bengal irregular cavalry. It has a hair sieve at the far end of its stomach, which prevents the passage of bones into the small intestine.—*Jerdon*, ii. p. 866.

PLOVER.

Pluvier, ... Fr.	Piviere, ... It.

Is a name applied in ordinary conversation to species of birds of the families Cursoridæ and Charadridæ.

Cursorinæ.

Cursorius Coromandelicus, *Gm.*, Indian courier plover.
Rhinoptilus bitorquatus, *Jerd.*, double-banded plover.
Glareola orientalis, *Leach*, large swallow plover.
G. lactea, *Temm.*, small swallow plover.

Charadrinæ.

Squatarola Helvetica, *Gm.*, grey plover.
Charadrius longipes, *Temm.*, golden plover.
Ægialitis Geoffroyi, *Wagler*, large sand plover.
Æ. pyrrhothorax, *Temm.*, small sand plover.
Æ. cantianus, *Latham*, Kentish ring plover.
Æ. Philippensis, *Scopoli*, Indian ringed plover.
Æ. minutus, *Pallas*, lesser ringed plover.

The courier plover runs about rapidly, nodding its head occasionally when it stops, running for a distance at speed, suddenly stopping, erecting the body, and then starting off again. The large and small swallow plovers hawk over the fields of grain or rumnahs of grass, catching insects in the air.—*Jerdon.*

PLUKENET. Leonard Plukenet's works were published in London between 1696 and 1705, in 4 volumes quarto, containing 454 plates, with 2740 figures of plants, many of them Indian. These figures are small, and often much reduced from the natural size, especially when the plants were large, but are generally very characteristic; they are much less costly and more easily procured than those of Van Rheede.

PLUM.

Nai; Kia-king-ts'ze, Chin.	Prugna, ... It.
Blomme Svedske, Dan.	Ameixa, ... Port.
Pruim, ... Dut.	Sliva, ... Rus.
Prune, ... Fr.	Aruela, ... Sp.

The fruit of the tree Prunus domestica, indigenous to the greater part of the northern hemisphere; 274 varieties of this fruit are enumerated. Dried plums form an article of commerce under the names of prunes and prunellas.—*Smith's Mat. Med.; Faulkner.*

PLUMBAGO, black lead, graphite.

Blyant, ... Dan.	Tshernyi Karandash, Rus.
Potloot, ... Dut.	Lapiz plomo, . . Sp.
Plombagine; Potelot, Fr.	Carburetto de hierro, ,,
Reisblei pottloth, . Ger.	Engelsk blyerts, . Sw.
Piombaggine,. . . It.	

Plumbago, a carburet of iron, is used for making leads for pencils and for crucibles. Barrowdale, in Cumberland, was long the only known mine that produced lead of that fine quality requisite for the manufacture of drawing-pencils. The Cumberland mines had been wrought since Queen Elizabeth's time; pure Cumberland lead costing as much as from 30 to 40 shillings a pound, being found in detached pieces, so that the supply was occasionally irregular, and the search for it laborious and often fruitless. Inferior descriptions come from Spain. Veins occur in the hills near Nambrapane in Ceylon. These are largely worked. The best kind of plumbago for crucibles is Ceylon, as it resists the action of fire better than any other substance, except asbestos, and the export has risen from less than 24,000 cwt., valued at £1000, in 1850, to 136,000 cwt., valued at nearly £44,000. Lieut. Evans, 51st Regiment M.N.I., exhibited plumbago of indifferent quality from beds of shale that accompany iron-ore at Malacca. Indifferent plumbago was also exhibited along with iron-ore and slaty shales from Cuddapah. It was found by Captain Boswell, of the 52d Regiment, in the hills of Paparassam, where it occurs in considerable quantities. Darjiling and Burma are also mentioned as localities from which it has been brought; it is found to the east of Nat-taik in large quantities on a low range of hills near the village of Nyokestoke. It is not utilized. Finely powdered graphite can, by an extreme degree of pressure, be rendered nearly as compact as the best mineral graphite. The great manufacturers of pencils in England reported the Kamaon and Travancore specimens as quite useless for the manufacture of black lead pencils, observing that they could not use the specimens in the state in which they had been sent without damaging their machinery, at the same time they could not conceive why purer specimens should not be found in the same locality. General Cullen, Resident of Travancore, reported that two varieties were found, one in thin laminæ, another granular. The granular or fibrous variety he had discovered in two localities, and both of them in laterite, a few feet only below the surface. One locality is about 5 or 6 miles N.E. of Trevandrum, and the other about 12 or 14 miles N.E.; he brought in from this latter locality, on his visit to it, about 3 cwt. Some small deposits are also found immediately on the W. of the town of Trevandrum. Graphite in thin scales or laminæ is common nearly throughout the laterite tracts of Travancore and Cochin, but more or less abundant in particular places. It is found in some places in laminæ of considerable size, particularly in a laterite hill about 25 miles N.E. of Trevandrum at a place called Caviattencudul, near the foot of the Ghat mountains. It is also found in laminæ of good size in the disintegrated gneiss of the ghats on the Tinnevelly side, also common in the kunkur or travertine deposits near Culdacoorchy and Amba-samudrum. The Vizagapatam graphite is probably also found in laterite, of which there was a large deposit at Bimlipatam. Plumbago mixed with boiled oil, and applied to canvas and other cloths, renders it non-combustible. A powdery plumbago has been obtained from Jammu territory. It was discovered by Dr. W. J. Thornton, Civil Assistant-Surgeon, Gurgaon, in October 1861. It is found in masses of variable sizes, and in general

quite detached, though in some cases the rock all round is full of plumbago mixed with finely divided micaceous particles.—*Cat. Ex.*, 1862; *On the Graphite of Kamaon by Dr. Royle; Letter from the Resident of Travancore*, 9th February 1857, *Bombay Gazette; M. L. S. Journal; Rohde's MSS.; M. C. C.; M. E. J. R.; Simmonds.*

PLUMBAGO EUROPÆA.

Chitra vani, . . SANSK. | Chitra, Shitraj, . SANSK.

An erect, branching, smooth, herbaceous shrub. The whole plant, especially the root, is very acrid. The properties of this species and of the P. scandens and P. Zeylanica are nearly identical. A paste made with rice congee and the bruised bark is applied by the natives of India to buboes in the incipient states; it acts as a vesicatory.

PLUMBAGO ROSEA. *Linn.* The root, in various forms, is much employed as a poison in India; as an irritant to occasion abortion, it is introduced into the vagina, and applied directly to the neck of the uterus. The bark of the plumbago root of various species, especially the P. rosea, rubbed into a paste with water and a little flour or congee, occasions pain in about five minutes, which increases in severity till, in a quarter of an hour, it is equal to that of a cantharides blister or mustard sinapism. If the paste be removed, in half an hour the pain becomes allayed, and in a period of 11 to 18 hours a large uniform blister, full of serum, is occasioned. The blistered surface heals readily without unpleasant ulceration. — *O'Sh.; Ainsl.; Powell; Roxb.; Voigt.*

PLUMBAGO ZEYLANICA. *Linn.*

Shituruj, . . .	ARAB.	Tumba kodivali,	MALEAL.
Chutra, . . .	BENG.	Kodiveli-chitra mulum, ...	TAM.
Ken-kyok-phyoo,	BURM.	Agni mata, . . .	TEL.

Chitur mul, . .	DUKH.	Tella chitra mulum,	,,
White-lead wort, .	ENG.		
Chitra-chita, . .	HIND.		

The white plumbago is common; so are the other varieties, red and blue, and blossom throughout the year, but the blue is the handsomest; is propagated by layers. The red, the white, and the blue flowered plumbago are common in Tenasserim gardens, and the first two are cultivated by the Burmese for the vesicatory power of their roots.—*Roxb.; Riddell; Mason; Ainslie.*

PLUMIERA ACUMINATA. *Ait., Roxb.*

Gobur-chumpa, .	DUKH.	Vada ganneru, . .	TEL.
Pagoda tree, . . .	ENG.		

A small elegant tree, common. A pure white caoutchouc is obtained from this tree. It is abundant and luxuriant in the Pinjore valley, is called by the Burmese, China champac; its straggling and often leafless branches shoot out from their extremities delicate orange-coloured blossoms, tinged with red, and of sweetest fragrance.—*Riddell; Royle; O'Sh.; Mason.*

PLUMIERA ALBA. Gulachin, DUKH. The white chumpa. This and P. rubra, *Jack*, have been introduced from the West Indies.

PLUTSCHAU, HENRY, a Danish Protestant missionary, who came to India in A.D. 1705, along with Bartholomew Ziegenbald.

POA, a genus of grasses of the natural order Panicaceæ. The following are species grown in the south and east of Asia:—

P. Chinensis, *Retz*, P. India, China, bura-pini nuti.
P. cylindrica, *Roxb.*, Canton.
P. cynosuroides, *Retz*, Egypt, India.
P. diarrhena, *R. and S.*, Bengal.
P. elegantula, *Kth.*, Bengal.
P. Gangetica, *Roxb.*, Bengal.
P. multiflora, *Roxb.*, Bengal.
P. nemoralis, *Linn.*, Europe.
P. nutans, *Kon.*, Bengal, Coromandel.
P. punctata, *Linn.*, Bengal.
P. paniculata, *Roxb.*, Bengal.
P. plumosa, *Retz*, Bengal.
P. Roxburghiana, *Schultz*, Bengal.
P. tenella, *Linn.*, P. India.
P. unioloides, *Retz*, P. India, Bengal, Moluccas.
P. viscosa, *Retz*, P. India, Bengal.

Species of this genus have followed the migrations of man. They mostly contain a sufficient quantity of nutritive matter to render them fodder for various animals. P. annua is perhaps the commonest of British plants, springing up on every neglected spot around the habitations of man. P. pratensis is known by the name of the smooth-stalked meadow-grass, and is found in most pasture lands. P. nemoralis, the wood meadow-grass, is also a common grass in shady places.—*Voigt.*

POA CYNOSUROIDES. *Retz.*

Eragrostis cynosuroides, *R. and S.*
Uniola bipinnata, *Linn.*
Briza bipinnata, *Linn.*

Kusha, Kusa,	HIND, SANSK.	Kusa dharbagaddi,	TEL.
Pavitra, . . .	,,	Aswalayana, . . .	,,

A plant of Egypt and India, the kusha sacred grass of the Hindus, being sacred to Siva, as are also the pipal, banyan, the neem (Melia azaderachta), while the Ocimum sanctum or tulsi is sacred to Vishnu and Krishna. Some Hindu legends make Garuda the offspring of Kasyapa and Diti. This dame laid an egg, which it was predicted would produce her a deliverer from some great affliction. After a lapse of five hundred years, Garuda sprang from the egg, flew to the abode of Indra, extinguished the fire that surrounded it, conquered its guards, the devata, and bore off the amrita (ambrosia), which enabled him to liberate his captive mother. A few drops of this immortal beverage falling on the kusa, it became eternally consecrated; and the serpents, greedily licking it up, so lacerated their tongues with the sharp grass, that they have ever since remained forked; but the boon of eternity was ensured to them by their thus partaking of the imperishable fluid. This cause of snakes having forked tongues is still, in the popular tales of India, attributed to the above greediness. At the Ganges bathing-places for pilgrims, the Brahman guides usually present the pilgrim with blades of this grass.

POAY NGHAT, BURM., is used in Burma for caulking boats.

POCHAN, of Dehra Ghazi Khan, a woman's scarf.

POCHARD, the English name of the Branta rufina, *Pallas*, the red-crested pochard; Aythya ferina, *Linn.*, the red-headed pochard, of the subfamily Fuligulinæ.

PODADENIA SAPIDA. *Thw.*

Rottlera Thwaitesii, *Bail.* | Stylanthus Thwait., *Bail.*

A large tree of Ambagamowa in Ceylon, and at Marai-Calai, near Ratnapura, at an elevation of 1000 to 2000 feet. The fleshy aril has an agreeable flavour.—*Thw. Zeyl.*

PODICIPIDÆ, the grebe family of birds; Podiceps cristatus, the great-crested grebe of Europe, Asia, all Africa, America, Himalaya,

Bengal, Sunderbuns. Perhaps commoner in India than is generally supposed, from its secluded habits, and the great difficulty of porcuring specimens.

Podiceps Philippensis or P. minor, the little grebe of Europe, Asia and its islands, North Africa; very common in India.

PODOCARPUS, a genus of the yew tribe, large timber trees of the East and West Indies, the Archipelago, South Africa, and South America.

P. polystachys, *R. Br.*, Nepal, Khassya, Malacca, Singapore, China, Japan.
P. elongatus, *l'Herit*, —?
P. Chinensis, *Swt.*, China.
P. cupressina, *R. Br.*, Penang, Java.
P. macrophylla, *Wall.*; P. maki, *S. and Z.*, Chinensis, *Wall.*, Japan, Amboyna, Nepal, Penang.
P. Koraiana, *Sieb.*, Japan.
P. nageia, *R. Br.*, Japan.
P. Japonica, *Sieb.*, Japan.
P. cuspidata, *Endl.*, Japan.
P. grandifolia, *Endl.*, Japan.
P. spicata, *Brown*, N. Zealand.
P. totara, *Don*, N. Zealand.
P. bracteata, *Bl.*, N. Zealand, Borneo.
P. latifolia, *Wall.*, N. Zealand.
P. neriifolia, *Don*, N. Zealand, Burma.

P. amara, *Blume*, grows on the volcanic mountains of Java, to the height of 200 feet.

P. bracteata, *Blainville*, attains to 80 feet, of Java, up to 3000 feet; also in Borneo, Burma, and Andamans.

P. cupressina, *R. Brown*, is of Java and the Philippines, grows 180 feet high, and furnishes a highly valuable timber.

P. dacryoides, *A. Richard*, of the swampy ground of New Zealand, is the Kahi Katea of the Maoris and the white pine of the colonists. It is a tall, gregarious tree, grows to 150 feet, with a diameter of 4 feet.

P. ferruginea, *Don*, is the Miro, a large timber tree of New Zealand; attains the height of 30 to 40 feet, and 6 to 8 in circumference. Its timber is red and hard, and it yields a dark-red coloured gum-resin.—*G. Bennett*, p. 415.

P. latifolia, *Wall. Pl. As.*, the Neerambali or Nerve tree of the Tamils, is a tall, erect tree of Tounghoo, Khassya, the South Tinnevelly mountains, and Courtallum. It was the first conifer detected in Southern India. It is exceedingly ornamental when only a few feet in height, and well worth cultivating; it flowers in August and September, and ripens its fruit in January and February; the tree is abundant on the hills above Calcad in the dense moist forests, at 3000 to 5000 feet elevation. The timber appears to be very good.—*Beddome, Fl. Sylv.*

P. neriifolia, *Don*, Theetmin, BURM., meaning the prince of trees. These are large trees with stems not very regularly shaped, and found on the higher hills between Sitang and Salwin rivers, and on the range which skirts the coast of the Tenasserim provinces in British Burma. The wood is close-grained, and a cubic foot weighs 50 lbs. The average length of the trunk to the first branch is 20 feet, and average girth measured at 6 feet from the ground is 6 feet.—*Brandis' Cal. Cat. Ex.*, 1862; *Royle's Ill. Him. Bot.* p. 349; *Gamble.*

P. totara is the totara or mahogany pine, the most valuable timber tree of New Zealand. It grows to 80 or 90 feet, with 15 or 20 feet in circumference. Its timber is of a red colour, darkened by age and exposure, excellent in plank or spar for durability and lightness.—*G. Bennett*, p. 415.

PODOPHYLLUM EMODI. *Wall.* Occurs in Nepal and Kamaon, and on the Chur mountain in the Himalayas, at an elevation of 10,000 feet. P. hexandrum was found by Dr. Royle on the Kedarkanta mountain, at an elevation of 12,000 feet. P. peltatum is the May apple of the United States, where the root is considered to be a valuable and powerful cathartic.—*O'Sh.* p. 170.

PODOSTEMON. Dr. Wight, in Icones, gives of this genus of plants, P. dichotomus, elongatus, griseus, olivaceus, rigidus, subulatus, Wallichii, Wightii. P. Wallichii, *R. Br.*, and P. Griffithii, *Wall.*, have been found on the Khassya mountains. One species which grew near the Jaintia Hills on the stones at the bottom of the Oongkot, is a remarkable water-plant resembling a liverwort in its mode of growth. Several species occur at different elevations in the Khassya, and appear only in autumn, when they often carpet the bottom of the streams with green. In spring and summer no traces of them are seen, and it is difficult to conceive what becomes of the seeds in the interval, and how these, which are well known, and have no apparent provision for the purpose, attach themselves to the smooth rocks at the bottom of the torrents. All the kinds flower and ripen their seeds under water, the stamens and pistil being protected by the closed flower from the wet. This genus does not inhabit the Sikkim rivers, probably owing to the great changes of temperature to which these are subject.—*Hooker's Journ.* ii. p. 314; *W. Ic.*

PŒCILONEURON INDICUM. *Bedd.* Kirbally, CAN., a good-sized tree, common in the ghat forests of South Canara and Malabar up to an elevation of 4000 feet; wood very hard, and used for rice-pounders in South Canara; it flowers in March and April. P. flata limbata produces a kind of wax.—*Beddome, Fl. Sylv.*

POEPHAGUS GRUNNIENS, the yak.

POETRY. The poetry of the Hindus is rich, high, and varied, abounding in luxuriant descriptions, and occasionally displaying both grandeur and tenderness; but it is often rendered dull by repetition and bombast, and deformed by an indelicacy unknown to Europeans. Paradise Regained says—

> 'They loudest sing
> The vices of their deities, and their own
> In fable, hymn, and song, so personating
> Their gods ridiculous, themselves past shame.'

In Hindu poetry, despairing lovers very commonly address objects of nature, clouds, elephants, and birds on the subject of their lost or absent mistresses, as in the Megha duta, the 4th Act of the Vikramorvasi, and the 9th Act of the Malati Madhava. One important cause of distinction between modern European poetry and ancient eastern poetry is, that the latter was not intended for quiet perusal in the cabinet, but for public recitation, as minstrelsy. Hence great attention is paid to classes of letters, and to the flowing of sounds one into the other, without any interval or hiatus between. The most common Sanskrit metre is the stanza of four verses, containing eight syllables. The popular poetry of the Tamil people is of two kinds, viz. that which is intelligible to the ordinary labourer, such as the writings of Siva-vikkyar, and three-fourths of the writings

of Auvaiyar, the Tamil poetess; and the other kind is the classic poetry, such as that of Kamban.

Nearly the whole of Tamil literature, including works on medicine, arithmetic, grammar, and even dictionaries, is in poetry. With the exception of the commentaries on poetical works, prose composition may almost be said to owe its origin to European influence. Only a very imperfect idea of Tamil poetry can be given. In some respects natives alone can fully appreciate its excellence; while, on the other hand, they are blind to some of its defects.

Beschi, in an appendix to his high Tamil grammar, remarks that the Tamil poets use the genuine language of poetry. They rarely mention any object to which they do not couple some ornamental epithet. When they speak of a tree, they describe it either as green, or loaded with flowers, or shady, or majestically large, or as having all these qualities. They never mention a mountain without representing it as rising among woods, or watered by fountains, or decked with flowers. Sometimes they employ this embellishment to excess. They are full of metaphor and allegory. They are at times extravagantly hyperbolical. In the Tamil Naishadam, it is said of Damayanti, the consort of the hero, that when Brahma had created her, her beautiful form had only one rival in the universe, and that was the fair moon. But Brahma, determined that every beauty should centre in Damayanti, took a handful of beauty from off the face of the moon, and threw it into that of Damayanti. The deformity thus made is still apparent in the moon. The Tamil poets delight in similes, as all eastern poets do. They indulge in fiction, and pay little regard to nature. Their Parnassus is Pudiyamalai, near Cape Comorin. They have neither Apollo nor Mercury. Their Minerva is Saraswati. They invocate Ganapati. Pathos and sweetness rather than vigour are the characteristics of Indian poetry. They are not 'thoughts that breathe and words that burn,' so much as thoughts that please and words that charm. Milk and honey flow, but such milk and honey as to prove an unwholesome diet to some minds.

Dr. Caldwell observes that, 'whilst an elevated thought, a natural expressive description, a pithy, sententious maxim, or a striking comparison, may sometimes be met with, unfortunately elegance of style, or an affected, obscure brevity, has always been preferred to strength and truthfulness, and poetic fire has been quenched in an ocean of conceits. Nothing can exceed the refined elegance and "inked sweetness" of many Telugu and Tamil poems; but a lack of heart and purpose, and a substitution of sound for sense, more or less characterize them all; and hence, whilst an anthology composed of well-selected extracts would please and surprise the English reader, every attempt to translate any Tamil or Telugu poem in extenso into English, has proved to be a failure. To these causes of inferiority must be added a slavery to custom and precedent at least equal to what we meet with in the later Sanskrit. Literature could never flourish where the following distich (contained in the Nannul, or classical Tamil grammar) was accepted as a settled principle:—"On whatsoever subjects, in whatsoever expressions, with whatsoever arrangement, classical writers have written, so to write is denoted propriety of style."'

Tukarama, the great Mahratta poet, was originally a corn chandler in a village near Poona, but he became a devotee of the popular deity Vitoba. He died in 1649. His poems are moral and religious. They abound with fine images and noble thoughts, and their author stands high among the poets of India.

The following poetesses have lived at different times and contributed to the Urdu poetical literature:—

Atab Begam, Behar.
Roshini Jan of Lucknow.
Bhangan of Paniput.
Begam Jan, daughter of Nawab Khair-ud-Din Khan.
Begam, daughter of Mirza Baber, belonging to the zanana of Bahadur Shah of Dehli.
Beni Jan of Benares.
Begam, daughter of Nawab Intizam-ud-Dowla, and wife of Asaf-ud-Dowla of Oudh.
Begam, daughter of Arnad-ul-Mulk Ghazi-ud-Din Khan.
Mutilabale of Barelli.
Beranija of Dehli.
Nur Jahan, Mirasin, of Furkhabad.

The better known of the poets who have written in Hindi and its dialects adopted the following takhallus or poet-names:—

Ajaz.	Insha.	Mahakam.	Razakh.
Asaf.	Josash.	Maruf.	Sheda.
Balhar.	Jurat.	Mastan.	Souda.
Be Dar.	Kalandar.	Mir.	Soz.
Chand.	Kudrat.	Mir Taki.	Suraj.
Dard.	Latif.	Na.	Wali.
Fadvi.	Lutf.	Nazir.	Yakin.
Ihsan.	Maazzaz.	Niaz.	

The following poets have written in Persian:—

Sadi.
Jalal-ul-Din.
Kamal-ud-Din.
Shah Sharf-ud-Din.
Mir Murad Ali Khan.
Jami.
Hafiz.
Kamal-ud-Din.

Jalal-ud-Din.
Azad.
Umar Khayyam.

—*Mahabharata*; *Calcutta Review*, No. 109, p. 28; *Balfour's Guldastah-i-Soohn*; *Dravidian Comp. Gram.* p. 89; *Madras L.S.J.*, July 1864; *Rev. H. Bower.*

POGOOL, alias Koondul, TAM., large ear-rings.

POGOSTEMON PATCHOULI. *Pellet.*

Pogostemon intermedius, *Benth.*

Pachouli, Patcha pat, BENG. | Kottam, MALEAL., TAM.

A labiate plant used as an ingredient to mix with tobacco for smoking, also for scenting women's hair. It is found in every bazar throughout India. It grows in Sylhet, Penang, and the Malay Peninsula, and seems to grow abundantly in a perfectly wild state at Penang. M. de Hugel found it growing wild near Canton. The odour

of the dried plant is strong and peculiar, and to some persons not agreeable; the dried tops imported into England are a foot or more in length. In Europe it is principally used for perfumery purposes, it being a favourite with the French, who import it largely from Bourbon. They were led to use it because a few years before real Indian shawls bore an extravagant price, and purchasers distinguished them by the odour of patchouli, with which they were perfumed; and on discovering this secret, the French manufacturers got into the way of importing the plant to perfume articles of their own make, and thus palm off home-spun shawls for real Indian. The Arabs use and export it more than any other nation. Their annual pilgrim ships take up an immense quantity of the leaf; they use it principally for stuffing mattresses and pillows, and assert that it is very efficacious in preventing contagion and prolonging life. The characteristic smell of Chinese and Indian ink is owing to an admixture of this plant on its manufacture. Some people put the dry leaves in a muslin bag, and thus use it as is done with lavender, for scenting drawers in which linen is kept; and this is the best way to use it, as its odour, like musk, is most agreeable when very dilute. It requires no sort of preparation, being simply gathered and dried in the sun; too much drying, however, is hurtful, inasmuch as it renders the leaf liable to crumble to dust in packing and stowing on board. By distillation it yields a volatile oil, on which the odour and remarkable properties depend. This oil is in common use in India for imparting the peculiar fragrance to clothes. Among the richer classes of natives in Penang it sold at the rate of a dollar and a quarter to a dollar and a half per pikul. In Bengal, some which was imported from Penang several years previous sold at 11 rupees 8 annas per maund. Later investments have sold at a much lower rate.

POHONTJAT. Jav. A wild tree in Java, which furnishes a beautiful vermilion dye.

POI, in Tahiti, a bowl used as a dish. It is made of kou wood, and has partitions for delicacies, such as dogs, raw fish, shrimps, and herbs.

POILA or Poliya, a slave race.—*Wils.*

POINCIANA, a genus of plants of the order Fabaceæ. The following species grow in south and east of Asia:—

P. aculeata —? W. and E. Indies.
P. elata, *Linn.*, all Peninsular India.
P. Gilliesii, *Hooker*, Chili.
P. pulcherrima, *Linn.*, India, Bengal, Moluccas.
P. regia, *Bojer.*, Madagascar.

POINCIANA ELATA. *Linn.*

Nirangi, ... Can.	Suncaishla, . . . Tel.
Pade Narrayan, . . Tam.	Sunkeswaram, . . ,,
Chitikeswaram, . . ,,	

A very beautiful, middling-sized, very showy tree, abundant in a planted state in avenues, topes, gardens, native cemeteries, etc.; its flowers are large, showy, yellowish, inodorous; the wood is yellow, tolerably close and even grained, easily worked, and gives a smooth surface; warps slightly but never cracks; unseasoned 54 to 58 lbs. per cubic foot, and when seasoned 45 lbs.; sp. gr. ·720. It is well suited for cabinet work. It has been successfully used as a protection for the footings of rivers and channel banks. Where it is not wanted to spread laterally and to cause obstructions, it should be planted in cuttings in December; its grows quickly; its wood might be used for basket boats. Its leaves are extensively used for manuring indigo fields in Cuddapah.—*Drs. Roxb.* ii. p. 355; *Cleghorn; Beddome, Fl. Sylv.* p. 178.

POINCIANA REGIA. *Bojer.* The royal poinciana is a gorgeous shrub, introduced from Madagascar into India, bears showy coloured flowers, bright scarlet variegated with yellow. It flourishes well in the Tenasserim Provinces. This tree does not attain a great size, but it is very pretty, and should be planted in mixed avenues.—*M. E. J. R.; Mason; Madras Hort. Garden Cat.*

POINT CALIMERE, a low sandy projection, on which a white pillar has been erected as a beacon, in lat. 10° 17′ N., long. 79° 52′ 30″ E. It is the S.E. extremity of the low drained land, which may be taken for the delta of the river Cauvery. It is thickly planted with cocoanut palms.—*Findlay.*

POINT DE GALLE. The town and fort are built on the point which is rocky and bluff to seaward, with a rocky islet near, called Pigeon Island, surrounded by smaller ones. The entrance of the bay is about a mile wide, and there, as well as inside, the depth of water varies from 2 to 14 feet. It is 70 miles S.E. of Colombo, and is a fortified seaport town, having the only good harbour on the southern coast of the island. It was formerly in the possession of the Dutch, by whom the fort at the entrance of the harbour was built. The light on the S. bastion is in lat. 6° 1′ 25″ N., and long. 80° 12′ 32″ E. It was the Kalah of the Arabs, is supposed by Sir J. E. Tennant to be the Tarshish of Scripture. It has been the resort of merchants from the most ancient times, and continues to be a great commercial emporium.—*Findlay.*

POINT DIVI, on the E. coast of the Peninsula of India, is at the N.E. branch of the Kistna delta. Its lighthouse is in lat. 15° 58′ 44″ N., and long. 81° 9′ 21″ E.

POINT PALMYRAS, projecting into the Bay of Bengal at Mypurra Island, is in lat. 20° 43′ 15″ N., and long. 81° 1′ 40″ E.

POINT PEDRO is the N.E. point of Ceylon. Its custom-house is in lat. 9° 50′ 30″ N., and long. 80° 15′ 10″ E. It is a corruption of the Portuguese words Punta das Pedras or Rocky Cape. A little town of same name is a mile west of the cape.

Point Pedro Shoal, a dangerous shoal which encompasses the N.E. extremity of the island of Ceylon.—*Findlay.*

POINT ROMANIA, in lat. 1° 21½′ N., forms the S.E. extreme of the Malay Peninsula. The circumjacent coast is level land covered with trees. It is fronted by the six Romania islands.

POISON.

Tuh-yoh, ... Chin.	Gift, ... Ger.
Lau-hway-jin-tih-yoh, ,,	Zahr, . . Hind., Pers.
Kwan-yoh, ... ,,	Veleno, ... It.
Poison, Venin, . . . Fr.	Veneno, ... Sp.

A poison used by suicides in British India is opium mixed with sweet oil. The ordinary plant used to stupefy is the Dhatura. In China, the most common and convenient drug is opium. Mandarins of high rank are said to wear on their persons a small bead, filled with what is called

peacock's blood, which it is said they take when they wish to destroy themselves suddenly. The Bikh poison of the Himalaya is largely used to poison tigers. Dr. Buchanan first acquainted the European world with the existence of four kinds of Bikh, viz. Singya Bikh; Bish or Bikh, the poison; Bikhma, a powerful bitter; and Nirbisi. He referred the first to a species of Smilax. The Bish, *i.e.* the poison, is the root of Aconitum ferox. The substances used for poisoning rivers in order to obtain fish, are Croton tiglium, Anamirta cocculus, Capsicum frutescens, and Kare kai (Tulu), a species of Posoqueria, probably nutans or longispina. The inhabitants of Mysore and Coorg habitually poison the rivers. From two years' discouragement of poisoning, and one year's discouragement of fine cruives, there were marked advantages.

Poison oak, the Yen-fu-tsze of the Chinese, is the Rhus semialata; poison bulb is Crinum Asiaticum; poison nut is Strychnos nux vomica; and poison turnip, Cicuta virosa. The expressed juice of the root of Maranta arundinacea is stated to be a valuable antidote to some vegetable poisons, and also servicable in cases of bites or stings of venomous insects or reptiles.—*Royle's Ill.* p. 46; *Simmonds, Com. Prod.* p. 627.

POITA, SANSK., from Oopa and Veeta, pure. The poita, or jandiam, or zonar, is worn as a sacred initiatory cord by Brahmans, by all the Parsee race, by the Kshatriya, the Rajput, and all the Vaisya race of Hindus. The artisans in Southern India are goldsmiths, Komsala; carpenters, Wodla; blacksmiths, Komala; braziers, Konsagara; stone-cutters, Sungtrash. The investiture of a young Brahman with the poita (a contraction of the Sanskrit yagnopavit)—*i.e.* the sacrificial thread—is analogous to the assumption of the toga virilis of a Roman patrician. The almanac is consulted for an auspicious day. The lad is shaved, washed, and clothed in red. The staff of mendicancy is placed in his hand, and he assumes for a moment the dress and character of a Brahmachari or religious student, at the service of a spiritual guide, as prescribed by Menu. He repeats a sacred text, goes through the form of alms-begging and pretending to renounce the world, and then, at the earnest request of his family, returns to his scholastic or secular pursuits. See Pavitra; Punal.

POIVREA COCCINEA. *W. Ic.*

Combretum coccineum, *Lam.* | C. purpureum, *Vahl.*

The scarlet poivrea is the popular favourite amongst the climbing plants in Madras. It requires a trellis not too high; the sooner it gets a procumbent position, the more luxuriant it will grow and flower; easily propagated by cuttings of the young wood in sand under glass. Native of Madagascar.—*Jaffrey.*

POKAR. Several Tamil treatises on medicines, —Pokar Yokamarkkam, Pokar Elamuru, Pokar Tirumantiram, and Pokar Nikandu,—attributed to Pokar, who is said to have lived at a very remote period, but they are spurious.

POKHRAJ. HIND. P. Zafrani and P. Zard are varietics of the topaz.

POKO NEREI. MALAY. A tree growing amongst mangroves at Singapore, used to prevent diarrhœa.

POKURNA are a singular tribe of Brahmans, of whom it is calculated there were, about A.D. 1820, 1500 to 2000 families in Jeysulmir. They are also numerous in Marwar and Bikanir, and are scattered over the desert and valley of the Indus. They follow agricultural and pastoral pursuits chiefly, having little or no concern in trade. The tradition of their origin is singular: it is said that they were Bildars, and excavated the sacred lake of Poshkur or Pokur, for which act they obtained the favour of the deity and the grade of Brahmans, with the title of Pokurna. Their chief object of emblematic worship, the khodala, a kind of pickaxe used in digging, seems to favour this tradition. See Palliwal.

POL. SANSK. A gate; eastern or sun gate is Sooruj-pol; Bal-pol, the gate of Bal, the sun-god.

POLA, amongst the Mahrattas, a bull set at large, dedicated to Siva or Vishnu, and stamped with the trident or discus. The Pola festival is held on the new moon of Sravana or Bhadra (July—September), in which bullocks are exempt from labour, are decorated and led through the town in procession.

POLA, in Telugu, means land, whence Polamu, a field.

POLAI, of Singapore, a very remarkable light white wood used to make floats for fishing-nets, and might probably be exported, and used with advantage as a substitute for cork, and some similar substances.

POLANISIA, a genus of plants of the order Capparidaceæ. Dr. Wight gives Polanisia Burtporensis, Chelidonii, and icosandra.

Polanisia Chelidonii, *D.C.*

Cleome Chelidonii, *Linn.*

Of the Peninsula of India, with large rose-coloured flowers; seeds pungent, are powdered and used in curries.

Polanisia felina, *D.C.*

Cleome felina, *Linn.* | Aria-vila, . . MALEAL.

This small plant grows at Courtallum, and is used medicinally.—*Voigt*, p. 75.

Polanisia icosandra, *W. and A.*

Cleome icosandra, *Linn.*	Cleome viscosa, *Roxb.*
Cleome dodecandra, *Linn.*	
Hurhurya, BENG., HIND.	Kukka vaminta, . TEL.
Kat-kuddaghu, . MAL.	Nela vaminta, . . ,,
Naia-veli, . . . TAM.	Pedda vaminta, . ,,
Nahi kuddaghu, . ,,	

A plant of both Peninsulas of India, of Bengal, Nepal, Saharunpur. The bruised leaves are used in Cochin-China as a counter-irritant and as a vesicant, in the same way as sinapisms in Europe. The root is used as a vermifuge in the United States of America. The seeds are employed medicinally in India, and sold in the bazars under the name of chori ajuan. They yield an oil when subjected to very powerful pressure, which is of a light olive-green colour.—*Eng. Cyc.; Mason.*

POLAO. HIND. A savoury dish made of rice and fowl or mutton or beef, with cardamoms, cloves.

POLAYAN, in Malabar, a slave race, both domestic or agrestic. The husband resides with the wife, though with a separate master, and the children inherit the rights of the mother.

POLE, CAPTAIN, an English officer who fell at the taking of the Travancore lines in A.D. 1809, and was buried in a sandy waste 25 miles from the scene of battle. A few years after, the Shanars of the neighbourhood commenced the

worship of his spirit. It consists in offering to his manes spirituous liquors and cheroots.

POLE-CAT, a species of martes. The black-faced pole-cat of Tibet has a tail one-third of the entire length; soles clad, fur long. A specimen obtained in the district of U, in the south of Sanpu, was brought along with a specimen of the Tibetan badger (Taxidea leucurus). The length from snout to vent is 14 inches, and the tail is 7 more, so that M. toufæus only of Tibet and M. flavigula of the Himalaya can compare with it in size.—*Hodgson; Beng. As. Soc. Journ.*, 1849.

POLEEY or Pallia. GUJ. A tombstone raised over a peasant who has fallen in defence of his homestead. See Pallia; Pat'har.

POLIANTHES TUBEROSA. *W.*

Rujuni-gundha, . BENG.	Sandhy-araga, . . SANSK.
Gool-shaboo, . . HIND.	Undimandari, . . TEL.
Andi-malleri, . MALEAL.	

The common tuberose. Cultivated in gardens, flower worn by native women in their hair. The natives say its seeds are the white todri of the oriental bazars, which, as also the other todri, Europeans supposed to be from Malacca. The flower has a delightful fragrance, and throws out its odours strongest at evening.—*Roxb.* ii. p. 166; *Honigb.* p. 329; *Mason; Powell.*

POLIMERA, a boundary, and in Hindi Polach means arable land. Polimera amma is the goddess of boundaries.

POLIOÆTUS ICHTHYŒTUS. *Horsf.*

Pandion lineatus, *Jerd.*	I. lucarius, *Hodgs.*
Ichthyœtus bicolor, *Gray.*	Haliætus plumbeus, *Hodgs.*
I. Horsfieldii, *Hodgs.*	
Mach-moral, . . BENG.	Mudhuya, . . . HIND.

The white-tailed sea eagle is rare south of the Nerbadda, but common in Hindustan, Burma, and Malayana. It lives chiefly on fish, but will carry off a teal or wounded duck. P. humilis, *Temm.*, a miniature of the last, is found in Malacca and the islands. It is the I. nanus of Blyth.

POLISHING SLATE, Polier Schiefer, a mineral, occurring massive, with a slaty texture. Its colour is white, yellowish-white, or yellow, brittle, opaque. Specific gravity, 0·59. It is found near Biliu in Bohemia, at Zwickau in Saxony, and Auvergne, and is supposed to be a volcanic product. Its analysis by Bucholz in 100 parts gives—Silica, 83·5; alumina, 4·0; lime, 8·5; oxide of iron, 1·6; water, 9 0. Curatella and Trachytella leaves are employed in Guyana and China for polishing wood, and even metal; and those of Delima sarmentosa are employed in Ceylon for the same purpose.—*Royle, Ill.* p. 58.

POLKEE. TEL. Several unspecified woods, white, black, and red.

POLLAM. TAM. Narrow valleys between the Eastern Ghats.

POLLANARRUA, now a ruined city in Ceylon, was its capital in the middle ages. It was captured and sacked by the Tamil invaders in A.D. 1023, recovered by Wijaio Bahu in 1071, but again plundered in A.D. 1204. These ruins are the most extensive and best preserved in Ceylon. There are many gigantic stone figures of Buddha, and the remains of various temples and other buildings. Compared with those at Tissemaha-rama, these ruins are modern, only dating from A.D. 718, and though looked upon as entirely Buddhist remains, both the Delada Malagawa and the Jagta-maha-rama more nearly resemble the Hindu temples seen in India than other Buddhist temples in Ceylon.—*Frere, Antipodes*, p. 186.

POLLOCK, a general officer of the Bengal army who conducted operations against Kābul in 1842.

POLLY, Palle, Palli, Palleya, Pally, Pilly, as in Trichinopoly, Lingampilly, is a Bengali, Hindi, and Dravidian word, meaning a house, a village, a district, a school, a mosque, a church, and generally a place of concourse. It has probably the same origin as the Greek Poleo, to frequent, and Polis, a city. Pol in Sanskrit is a gate. Trichinopoly is said to be from Tri-sira-palli, the town of the three-headed giant.

POLO. HIND. A Tibetan game of hockey on horseback. It is the national game of the Balti race. It is also played by the Dards, and amongst all the people from Leh on the S.E. to high up the Gilghit valley on the N.W., and even in the Chitral valley beyond. The writer Joannes, in his History of the reign of the Emperor Manuel Comnenus, shows that polo was played at Constantinople in the middle of the 12th century as a common game.—*Drew, The Northern Barrier.*

POLO, the family name of three travellers into Central Asia and China. In the year 1266, Nicolo and Maffeo Polo, the father and uncle of Marco Polo, were at Constantinople, whither they had gone from Venice with their merchants' wares. Having laid in a store of jewels, they resolved to cross 'the Greater Sea' (Black Sea), on a venture of trade, to Soldaia; and, having stayed there a while, they thought it well to extend their journey farther, 'and travelled until they came to the court of a certain Tartar prince, Barca Kaan (Barka, a brother of Batou Kkan), whose residences were at Sara and Bolgara.' While here a great war broke out between 'Barca and Alau (Barka's cousin, Hulaku Khan), the Lord of the Tartars of the Levant,' and in the end 'Barca, the Lord of the Ponent,' was defeated, and so the two brothers Maffeo and Nicolo could not get back to Venice by the way they had come, nor until they had gone 'across the whole longitude of Asia.' Leaving Bolgara they went on to 'Ucaca,' and thence departing, 'and passing the great river Tigris' (Volga), traversed a desert country for 17 days, until they came to 'Bocara' (Bokhara). 'Whilst they were sojourning in that city there came from Alau, Lord of the Levant, envoys on their way to the court of the Great Kaan (Mangu Khan, brother of Hulaku), Lord of all the Tartars in the world.' The two brothers joined the party, and journeyed a whole year until they reached the court of Kablai Khan, who had now succeeded his brother Mangu as Khakhan of the Tartars. Before the death of Mangu Khan, A.D. 1259, it had been intended to remove the seat of the Tartar capital from Karakorum into Cathay or Northern China; but this step, which in the end converted the Tartar Khan into a Chinese emperor, was left to be carried out by Kablai Khan. The two brothers were received with great honour and hospitality by Kablai Khan, and when the time came for them to go back to Europe, he charged them with a letter to the Pope, in which he begged that 100 persons of the Christian faith might be sent to him acquainted with 'the Seven Arts,' able clearly to prove that 'the Law of Christ' was best,—which,

if they did, he declared that he and all under him would become Christians. Kablai Khan also delivered into their hands a golden tablet as a passport, by showing which they were honourably provided with whatever they wanted, whithersoever they went. The two brothers travelled back westward, and after three years came to 'Layas in Hermenia' (L'Ayas or Ayas), a port on the Gulf of Scanderoon, which was then 'one of the chief places for the shipment of Asiatic wares arriving through Tabreez, and was much frequented by vessels of the Italian Republic' (Yule, Marco Polo, note to chap. viii. of Prol). In April 1269 they reached Acre, where, hearing of the death of Clement IV., they returned to Venice, there to await the end of the long papal interregnum by which it was followed. When Gregory X. was at last elected Pope, they at once started on their second journey to the court of Kablai Khan, about November 1271, this time taking young Marco Polo with them. From Acre they proceeded by Ayas and Sivas, and then by Mardin, Mosul, and Baghdad, to Ormuz, at the mouth of the Persian Gulf, hoping to go on to China by sea. This they were not able to do, and so, turning their faces landward, they traversed successively Kirman and Khorasan, Balkh and Badakhshan, and ascended the Upper Oxus to the Pamir plateau, 'a route not known to have been since followed by any European traveller except Benedict Goes (1602–1607), until the spirited expedition of Lieut. John Wood, of the Indian navy, in 1838' (Yule, Marco Polo, Introduction). Crossing the steppe of Pamir, the travellers proceeded by Kashgar, Yarkand, and Khoten, and the vicinity of Lake Lob, through the Gobi desert to Tangut, until at length, some time during the midsummer of 1275, they arrived at the stately pleasure dome of Kablai Khan in 'Xanadu' (Shangtu). They afterwards proceeded with the Khakhan to his capital, 'Cambalu,' now Pekin. They rose rapidly in the great Khan's favour. Marco was entrusted with several missions in different parts of the empire, and in Chiampa or Southern Cochin-China, and the Indian Seas, and Southern India; while to all the hints of the Venetian merchants to be allowed to return home with their gathered wealth, 'the aged emperor growled refusal.' Hulaku, the founder of the Mongol dynasty of Persia ('Lord of the Levant'), was succeeded by his son Abaka, who married a daughter of the Greek emperor Michael Palæologus. His brother Nicolas, who succeeded him, became a Muhammadan, but his son Arghun Khan was hostile to the Muhammadans. He sent embassies (conducted by a Genoese named Buscarelli) to the Pope and the kings of France and England, proposing an alliance against the Saracens and Turks; and in 1290 Edward I. sent Geoffrey de Langley on a return mission to him. Arghun Khan, having lost his favourite wife in 1286, sent to Kablai Khan to select another for him; and about the very time that Geoffrey de Langley's mission was setting out for England, the Polos were commissioned by Kablai Khan to escort the new bride he had chosen for his great nephew from 'far Cathay,' by sea, to the Persian court.

The bridal party sailed from the port of 'Zayton' (Chinchau) in the spring of 1292. They touched at Ceylon, at a port on the Coromandel coast, at Kayal, a port of Tinnevelly, the Koil of the present pearl fisheries, and at other ports on the Malabar and Konkan coasts of Western India, at one of which they passed the monsoon of 1293. Marco Polo notices the fine cottons of Coromandel, the abundance of pepper and ginger of Malabar, the incense of Tannah, and the pepper, ginger, indigo, and cotton of Gujerat. Sailing on the close of the monsoon from India, the party reached Ormuz about November 1293, and the Persian camp two months later. Here the fair princess wept as she took leave of the three Polos, who went on to Tabreez, and, after a long halt there, proceeded towards Venice, where they arrived some time in 1295, having been absent from home nearly 24 years. The publication of The Book of Ser Marco Polo became one of the influences which inspired Columbus. It was thought that no great breadth of ocean rolled between Western Europe and Eastern Asia, and, full of this idea, Columbus launched boldly on the Atlantic, convinced that the first shores reached by him would be those of 'Chipangu' (Japan), Cathay, 'Chamba' (Cochin-China), and India. From the time of the Saracen conquest of Egypt, Syria, and Persia. Christians had been forbidden to pass through those countries to the east, and the direct overland trade of Europe with India had entirely ceased. Marco Polo, therefore, was the first after Cosmas Indicopleustes (circa A.D. 535–550) to give a written account of India, and yet we owe its existence to the accident of his having late in life been taken in a sea fight by the Genoese, and thrown into prison, where he was persuaded by a fellow-prisoner to dictate his narrative to relieve the tedium of their captivity.

In Marco Polo's old age, and the years following his death, a remarkable land trade, but temporary, sprang up between China and the trading cities of Italy, of which curious details are given in the book of Pegoletti. The chief imports from the east were the rich satins and damasks of China. European linens were carried for sale on the way; but to China itself, in general, only silver, to purchase goods there. Factories of Genoese merchants were established at Foh-kien. This trade was apparently carried on entirely by Italian merchants travelling to make their own purchases. —*Sir George Birdwood; India Office Records.*

POLYALTHIA CERASOIDES. *Dun, W.A.*

Uvaria cerasoides, *Roxb. Fl. Ind.* ii. p. 666.

Hoom, ... MAHR. | Chilka dudugu, . TEL.

A straight-growing, handsome tree of moderate size, timber whitish and close grained; much used in the Central Provinces and in the Bombay Presidency in carpentry, and for boat masts and small spars. It is common in dry forests near the foot of all the mountains on the western side of the Madras Presidency, in the Salem forests, the Nullamallays, Mysore, Orissa, and the Godavery forests; it flowers in the hot months, and the flowers are fragrant and of a greenish colour.—*Roxb.; Beddome, Fl. Sylv.* part i. p. 1.

POLYALTHIA COFFEOIDES. *Thw.*

Guatteria coffeoides, *Hook. et Thom. Fl. Ind.* p. 141.

A highly-ornamental tree in Ceylon and in all the moist forests on the western side of the Madras Presidency, from 1000 to about 3500 feet elevation. The Kurumbars make ropes from the bark, which, when fresh, has a strong smell of

ammonia. The tree is in flower at all seasons.—*Beddome, Fl. Sylv.* p. 72.

POLYALTHIA FRAGRANS. *Dalz.* A large tree, common in the moist forests of the Animallays, 2000 to 3000 feet, in Malabár, on the South Canara Ghats, and Bombay Presidency.—*Beddome, Fl. Sylv.* p. 74.

POLYALTHIA LONGIFOLIA. *Wall.*

Uvaria longifolia, *Roxb.* | Unona longifolia, *Duval.*
Deodaree, . . . Hind. | Assothee, Ashok, . Tam.

This is a very handsome tree, of erect growth, and yielding a good shade. It is extensively planted as an avenue tree at Madras. Timber whitish-yellow, light, and very flexible, tolerably close and even grained; sp. gr. ·592. Weight, 37 lbs. per cubic foot seasoned, and used for drum cylinders.—*Beddome, Fl. Sylv.* p. 38.

POLYANDRY. As a rule, throughout the south and east of Asia, woman is monandric, living with one husband, but there have been polyandrists in the same region from the most ancient times till the present day. It has been supposed by some writers that polyandry was peculiar to no division or race of mankind, but was a phase at one stage of the development of every race. It prevailed amongst the Jews and Arabs, among the Spartans within historic times, and among the Celts of Britain in Cæsar's time. As a rule, in India, the population are monandrists and monogamists. But both polygamy and polyandry are met with. From the most ancient times, we read of the existence of forms of polyandry amongst various nations, wide apart the one from the other. It still prevails in modified ways in Tibet, in the Himalaya, amongst some Dravidian races in Southern India, and in Ceylon amongst the indigenes, probably also a Dravidian race. It is said to be followed in parts of Africa, and also in North America. Humboldt found it common in the island of Lancerota, one of the Canaries. Polybius (book iv. chapter iii.) tells us that the Arcadians, in order to smooth and soften their rough and stubborn dispositions, ruled the study of music and dancing, and appointed frequent festivals and sacrifices, which both sexes were obliged to celebrate together, the men with women, and the boys with virgins. Aristotle, followed by Polybius (book xii. ex. ii.), mentions that among the Locrians of Italy all nobility of ancestry was derived from women and not from men. One hundred noble families of the Locrians seem to have migrated into Italy from Asia Minor, along with some of their women, and only the descendants of these women were reputed noble and regarded as descendants of the hundred families. It was from these hundred families that the hundred virgins were taken by lot, as the oracle had commanded, and were sent to Troy. They had amongst them an institution which they had adopted from the people of Italy, amongst whom they were mixed. At the time that they drove the Sicilians out of this part of Italy, the latter had a custom of appointing a young man to lead the procession in their sacrifices, and he was always chosen from the noblest and the most illustrious of their families. But instead of a young man, the Locrians appointed a virgin for the office, because nobility among them was derived from women. The one brother after another succeeding to a widow, among the Jews, alluded to in the question of the Sadducees, may have the relation to the Asiatic polyandry that a normal state has to an abnormal. Indeed, we read in ancient scripture of the son succeeding to or taking his father's wives, a practice which reached a height in Solomon's time. And Marco Polo tells us that amongst the Mongols, in the time of Kablai Khan, brothers took deceased brothers' wives, and sons the wives of their fathers, their uterine mother excepted. In the west, Cæsar (lib. v. ch. xiv.) says of the Britons of his time, 'Uxores habent deni duodenique inter se communes, et maxime fratres cum fratribus, et parentes cum liberis. Sed si sunt ex his nati, eorum habentur liberi a quibus primum virgines quæque ductæ sunt.' 'Ten and even twelve have wives common to them, and particularly brothers among brothers and parents among their children; but if there be any issue by these wives, they are reputed to be the children of those by whom respectively each was first espoused when a virgin.' And it may be that the 'bundling' is but a partial continuation of another social custom of the ancient Britons, who often contracted conditional marriages, a practice largely followed by the Swiss at the present day. But Dr. Vaughan, in his Revolutions in English History (pp. 97 and 98), questions if Cæsar's knowledge of the Britons was such as to warrant his making that statement. He grounds this scepticism on his belief in the natural instincts of barbarians which operate as powerful safeguards of the chastity of women, and on the fact that among the Britons, according to Pomponius Mela, iii. 2, women were held in high estimation, shared in the honours of priesthood, had the gifts of inspiration, prophecy, and of working miracles, and, like Boadicea and Cartismandua, ruled in failure of male descent. He notices the silence of Diodorus and Strabo as to the custom of polyandry, though both were familiar with what Cæsar had written; and he mentions also his disbelief of the statement of Xiphiline, who attributes the usage imputed to the Britons by Cæsar to the Caledonians in the time of Severus. Dr. Vaughan also disregards the authority of Dion Cassius, who wrote two centuries later, in which a British woman is made to say in defence of her countrywomen, that they only did openly with their equals what the Roman women did secretly with their inferiors. The high feelings of the Britons on the purity of their women, he considers established by the fact that it was the wrong done to the chastity of the daughters of Boadicea that filled the cup of indignation among the Britons to overflowing; and the statement of Tacitus, that it was the scandalous proceeding of Cartismandua, in marrying beneath her rank, that helped to produce such disaffection among her subjects as to compel her to fly to the Romans for protection. But when discrediting Cæsar as to the Britons, and Xiphiline as to the Caledonians in the time of Severus, from the disaffection produced by the marriage of Cartismandua beneath her rank, Dr. Vaughan was evidently not aware that the same would result were a Nair woman of the present day to consort with an inferior.

The lending of wives in ancient times in India is repeatedly noticed in the older writings of the Hindus. King Saudasa or Kalmashapada allowed his wife Madayanti to associate with the sage Vashishtha. According to some, this was a

meritorious act on the king's part, and a favour to Vashishtha; according to others, it was to obtain progeny. Similarly, Colonel Yule (Cathay, i. p. lxxxix.) makes mention of the Hazlakh, who are great gamblers, and stake wife, mother, or daughter on their play. When a caravan of travellers comes into their country, the wife or sister or daughter of some chief comes and washes them. And if any of these ladies takes a fancy for one of the strangers, she carries him home and entertains him with all kindness, and makes her husband or son or brother provide for him in every way; nor as long as the guest is keeping company with her does the husband come near them unless for necessary business. This custom is related by Marco Polo of the people of Kamul. He says of it, 'Il le tiennent a grand honneur et n'en ont nulle honte. Car tuit cil de ceste province sont si honni de lever moliers comme vous avez ouy' (Panthier, p. 157); and it is a notorious allegation against the Hazaras of the Hindu Kush, that they carry on the same practice (Wood, p. 201, and Burnes).

The custom here seems of a kind similar to those noticed by Sir R. K. Porter amongst the Kisty tribe in Circassia, and amongst the Torneo in Lapland. Before the khalifs had extended their principles, with their power, over every part of N. Persia, in Atropatia (now restored to its more ancient name of Azerbijan) women estimated their dignity according to the number of husbands they could boast.

The prevalence of polyandry in the Vedic times is shown in Kashivat saying, 'Aswins, your admirable (horses) bore the car which you had harnessed (first) to the goal, for the sake of honour, and the damsel, who was the prize, came through affection to you and acknowledged your (husbandship) saying, You are my lords.' But polygamy was likewise known, for Kashivat, an illustrious rishi, married ten sisters at once; and this practice continues to the present day amongst Kulin Brahmans; and the last raja of Tanjore, who died in 1855, a Mahratta Kshatriya and descendant of Sivaji's brother, married eighteen young Mahratta women at once.

The fortunes of the five Pandava princes, and the history of their adventures in an archery contest at the court of Drona, is detailed in the epic poem of the Mahabharata. The third of the brothers, Arjuna, was declared victor, and received as his prize the king's daughter, Draupadi, who was equally the wife of his brothers, and possessed five husbands instead of one. When the Pandava were remonstrated with by king Drupada for making his daughter Draupadi their joint wife, Yudishthra, the eldest, according to the Mahabharata, replied to him that Jatila, of the family of Gautama, an excellent woman, had lived with seven saints; and that Varkshi, the daughter of a Muni, resided with ten brothers, all of them called Pracheta, or men whose souls had been purified by penance. These two arguments leave no doubt but that polyandry was then an institution in parts of India. Arjuna and his wife and her other four husbands lived for some years at the fort of Bairath, and the remains of a Gurkha structure on the same site are still visible on a hill near the north-west corner of the Doon. In British India, polyandry continues almost universal in the hill districts attached to the Doon, called the Jounsar and Bawar pargana. In the Jounsar district, when the eldest brother marries, the woman is equally the wife of his younger brothers, though the offspring are called the children of the eldest brother. When much difference exists in the ages of the brothers of a family, the elder marry a wife, and when the younger grow up they marry another, but the two wives are considered equally the wives of all the brothers. M'Clelland (p. 180) gives a long list of polyandric races, namely, those of Tibet, Kashmir, of the Himalayan regions, the Toda, Coorg, Nair, and other races in India and Ceylon; in New Zealand (Lafitan, i. p. 555) and one or two other Pacific islands, in the Aleutian Archipelago, among the Koryak, the Saporogian Cossack, on the Orinoco, in parts of Africa, and in Lancerota. To these he adds the ancient Britons, some of the Median cantons, the Picts, and the Getes; while traces of the custom occurred among the ancient Germans. To these Sir John Lubbock adds that of some families among the Iroquois.

It has certainly existed from time immemorial in the valley of Kashmir (Vigne, i. p. 37), in Tibet, and in the Siwalik mountains. It is found in Sylhet and Cachar (Jo. As. Soc. Ben. ix. p. 834); among the Coorgs, and on the Neilgherry Hills among the Todas. And it regulates the laws of inheritance amongst races in the southern extreme of the Peninsula of India. In Tibet polyandry continues prevalent. The eldest brother proposes to a girl's parents, and if agreed to, she is brought to her future home, where a three-days' carousal completes the ceremony. In the upper valleys of the Sutlej, in Spiti and Kanawar, are mixed races exhibiting much Tibetan blood, and religion apparently more Buddhist than Hindu. The Tibetan colony at Mahasu, just above Simla, are powerful, ruddy-looking people, entirely unlike Indians. Their women are industrious, but very unattractive. The Tibetan forms an interesting study for the curious in national manners and character. The eldest son has the privilege of choice, but the woman he marries is in common with his brothers. In such a state of society, female chastity is not much valued till the question becomes intermingled with the rights of property. Before marriage, therefore, a woman may associate with men with but little remark; but after she has entered into the fraternal copartnery, they are taken cognisance of by the law.

Turner mentions that the Tibet women in his day, with their three or four husbands, were just as jealous as a Muhammadan polygamist is of his several wives. He saw one woman who had five husbands, all brothers, though the chief, indeed real, husband is the elder brother. Major Cunningham remarks that amongst the Bhoti of Ladakh polyandry is strictly confined to brothers. Each family of brothers has only one wife in common. The most usual number of husbands is two, but three and even four husbands are not uncommon. This system, however, prevails only among the poorer classes, for the rich, as in all eastern countries, generally have two or three wives, according to their circumstances. Polyandry, he adds, is the principal check to the increase of population, and, however revolting it may be to our feelings, it was a politic measure for a poor country, which does not produce

sufficient food for its inhabitants. Every spot of ground within the hills which can be cultivated, has been under the plough for ages; the number of mouths must remain adapted to the number of acres, and the proportion is preserved by limiting each proprietary family to one giver of children. The introduction of Muhammadanism in the west, by enlarging the views of the people and promoting emigration, has tended to modify this rule; and even among the Lamaic Tibetans, any casual influx of wealth, as from trade or other sources, immediately leads to the formation of separate establishments by the several members of a house. Mr. Dunlop, in his Hunting in the Himalaya (p. 181), observes that wherever the practice of polyandry exists, there is a striking discrepance in the proportions of the sexes among young children as well as adults. In a village with upwards of 400 boys, there were only 120 girls. He does not suppose that female infanticide prevails or is the cause of the preponderance, as a wife is generally purchased for a large sum from her parents. But in the Garhwal Hills, where polygamy is prevalent, there is a surplus of female children. The polyandry of Ladakh is noticed by Moorcroft (Trav. ii. pp. 321, 322), and also in the Journal of the Asiatic Society of Bengal for 1844, p. 202, etc.

In Sirmore, three or four or more brothers marry one woman; they are unable to raise the requisite sum individually, and thus club their shares, and buy one common spouse. Women are here articles of property. The custom has a deplorably injurious effect upon the morals of the females in this country, particularly in point of chastity. From the degree of community of intercourse prevailing by custom, the men do not feel shocked at an unlimited extension of it; and the women do not feel shame in a practice from which they are not discouraged by early education. Of a family of four or five brothers, only one or two are in general at home at the same time; some are out on service as soldiers, or with the minor chiefs; others are travelling; the elder usually remains at home. If any quarrel were to arise, a common cause would be made against the offender, and ejectment from house and board ensue. The first-born child is the property of the elder brother, and the next in succession are supplied in turn. The mean number of inhabitants to a house in various parts of Kanawar is six. Polyandry, or a plurality of husbands, prevails also in Chinese Tartary and in the hilly tracts towards the plains. Besides this drawback on the increase of the population, there is another peculiar to Chinese Tartary and the adjoining countries,—that is, celibacy, which is professed by numbers of the inhabitants; and in some villages the monks or lamas and nuns form almost half the population.

Masson, writing of the Sikhs, says it was no unusual arrangement for the many brothers of a family to have a wife in common; and he had known the soldiers of M. Allard request permission to visit their homes, alleging that their brothers had gone on a journey, and their wives were alone. The plea was considered a good one. But such customs must not be imputable to them as Sikhs; they are rather the remains of an ancient and rude state of society prevailing among the Jat race.

Polyandry prevails in Kamaon between the Tons and Jumna about Kalsi, by Rajputs, Brahmans, and Sudras, the brothers of a family all marrying one wife, the children all attributed to the eldest brother. The Padam or Bor Abor in North-Eastern India are polyandrous, and it is not uncommon for an Abor woman to have two husbands, brothers, living under one roof. Among the Miri, a clan of the Abor, two brothers will unite to buy a wife.—*Eth. of Beng.* p. 33.

Polyandry may somewhat explain the comparative indifference with which some races regard the purity of their unmarried women. And this view is supported by the still existing Hindu belief as to the visits of the gods to certain women. This is an ancient notion of the Aryan Hindus, as of the Greeks and Romans, and it is alluded to in the mythological history of the origin of the Pandava heroes, now demi-gods. Descended from the ancient sovereigns of the countries of Hindustan bordering upon the Jumna, called Pandavan raj, or the kingdom of the Pandus, Pandu, son of Vyasa and Pandea, was the reputed father of these five heroes. Their mother's name was Kunti, the sister of a prince of Mathura, who was the father of Heri and Baldeva, the Indian Hercules. Kunti, in consequence of the sins of the ancestors of herself and her husband, was doomed to experience the greatest curse that can befall a Hindu woman, sterility. However, by a charm, she contrived to remove the anathema by enticing the gods to her bed. Thus, says Colonel Tod, she had by Dharmaraja (Yama or the Minos of the Greeks), Yudishthra; by Pavana, Bhima; by Indra, Arjuna; and Nycula and Sydiva by the Aswini Kumara (the Hindu Esculapius, or the sons of Surya), the twins of the Hindu Zodiac (Cole. Myth. Hind. p. 248). Over all Kamaon, amongst the richer people, the custom of many brothers having one wife in common has long ceased to be practised, though the widow of an elder brother is commonly remarried to the next brother. This is also a custom with some Jat and Gujar tribes. The Chamar or leather workers of Kanawar, however, like the Bhot, still practise polyandry.

Amongst the Toda and Kurumbar of the Neilgherry mountains, the brothers of a family have usually only one wife between them. She is, moreover, allowed to consort with strangers, without the slightest objection or jealousy on the part of her proper lords.

Polyandry prevails in Travancore, and in the two provinces of the Madras Presidency, called Malabar and Canara, about 300 miles long and 50 broad. Mr. Strange describes it (Hindu Law, p. 67) when he says, the inheritance runs in the female, and not in the male line. A man's sons are not in the list of his heirs. His property goes to his sisters, sisters' sons, sisters' daughters, sisters' daughters' sons and daughters, mother, mother's sisters and their children, and to his maternal grandmother, her sisters and their children. Failing these and their stock in the same way of descent, it goes, as in other parts of the Madras Presidency, to the man's disciple and fellow-student, and then escheats. This rule of descent is termed Marumakatayam, or Nepotism in the female line. The origin of this, he adds, is stated to have been in the time of Parasuramen, the first king of Malabar, who introduced Brahmans

into the district, and gave them possessions therein, and to prevent these properties from being split up, decreed that they should vest in the elder brothers, whom alone he permitted to contract marriage. The sons of these were to be accounted as sons for the whole family. The junior brothers being without wives, are allowed to consort with females of lower classes. The offspring of these unions not being legitimate, could not rank as Brahmans, or inherit from their fathers. Their inheritance was hence made to follow from their mothers. The lower castes fell into the same system of promiscuous intercourse amongst themselves. With them, the females before attaining maturity go through a form of marriage, the bridegroom not necessarily taking the position of husband. After maturity, they may consort with whom they please, and with as many as they please, provided that the connection be with members of their own or some higher caste. The offspring succeed to the estate in the mother's family, it being obvious that parentage cannot be traced out in the line of the male. The castes that follow this rule of Marumakatayam are all, excepting Brahmans and Aka Podwals, a class of pagoda servants, the artisans, viz. carpenters, brass-smiths, blacksmiths, and goldsmiths, and some of the lowest denominations, such as the Cheromars, or slave tribe; with the Malayers and the Paniars, the rule of descent is to sons. The Teeyer or toddy-drawers, and the Mookwa or fishermen of North Malabar, follow Marumakatayam, while those to the south observe Ma-katayam, or descent to sons. In North Malabar, most of the Mopla (Mopilla, mother's son), although Muhammadans, follow also the rule of Marumakatayam, in this respect having conformed to Hindu usage in the times of the ascendency of the Hindus. The adherents to Marumakatayam form united family communities, termed Tarwada. The remotest member is acknowledged as one of the family, if living under subordination to the head of the family and taking part in their religious observances. The senior male of whatsoever branch is the head of the family, and is termed Karnaven. The other members are termed Anandraver. There is nothing analogous to the state of widowhood as existing elsewhere; females, whether in alliance with males or not, reside in their own families. In theory, the property is held to vest in the females only, the males having right of management and claim to support. Practically, the males are co-sharers with the females. In default of males, females succeed to the management of the family property. In some families the management devolves on them preferably to the males, and in such case the senior female takes it. All members of the family, even the remotest, are entitled to maintenance. On failure of sister's progeny, male and female, the head of the family may make adoption. The descent being in the female line, the adoption must be a female. In view of the probable minority of her offspring at the period when the management may fall in, a male, her brother, may be taken, in adoption, at the same time with herself, in order to afford provision for the administration of the affairs of the family, and for conduct of the religious rites to be observed therein.

Part of the peoples here alluded to as practising polyandry on the Malabar coast, are called Nairs. Dr. Buchanan, writing regarding their social customs and the results from this practice of polyandry in his time, states that they marry before they are ten years of age, but the husband never afterwards cohabits with his wife. Such a circumstance, indeed, would be considered as very indecent. He allows her oil, clothing, ornaments, and food; but she lives in her mother's house, and after her parents' death, with her brothers, and cohabits with any person that she chooses of an equal or higher rank than her own. If detected associating with any man of low caste, she becomes an out-caste. It is no kind of reflection on a woman's character to say that she has formed the closest intimacy with many persons; on the contrary, the Nair women are proud of reckoning among their favoured lovers many Brahmans, rajas, and other persons of high birth. In consequence of this, no Nair knows his father; every man looks upon his sister's children as his heirs, and it is not easy to see the inducement to the Nair to marry, as he has the burden without any of the enjoyments of wedded life. But this legal or authorized practice must have its check in the social or natural state of man, which, as of most creatures, is one of true monogamy; and proof of this, and yet also of the lateral descent law, is furnished by the account given of the death of a raja of Travancore, who in 1860 died of a decline at the age of 46, after a reign of thirteen years. He had been much affected by the death of a lady of his family, and made a pilgrimage to several shrines, practising great austerities and fastings. His medical attendants (native and European) warned him of the risk in his feeble health, but he persevered, and sank of exhaustion and weakness. He took an affectionate leave of his family, and showed his solicitude for his people by requesting that the custom of shutting the shops for fifteen days when a raja dies, might be dispensed with on this occasion, on account of the dearth and distress from which the people were then suffering. On account of the imbecility of the first nephew,—sister's son,—the second nephew had long been acknowledged as the first prince by the family and the British Government, and then ascended the throne.

The royal family of Travancore seem, however, in 1883 to be recognising their own children; for three daughters of the maharaja Rama Varma were married on the 18th May with great pomp, all the great officers of the State joining in the marriage procession. Behind them came Nair ladies decked with jewels, and wearing jessamine wreaths. Each of these carried in her left hand a silver salver containing rice, a piece of folded silk, a red little box with red powder, and two green balls. Behind these, Tanjore nautch girls. After them came young Nair women dressed in kimkhab, with jewels from head to foot, some in Tanjore fashion, and others in the fashion of the Malayali. After them Nair ladies of Trevandrum, gorgeously dressed, with various kinds of jewels, and with roses and jessamines in their hair. After these were three elephants in a row, richly caparisoned, and with golden head-ornaments, and with howdahs, in each of which was seated the bridegroom, dressed alike in kimkhabs, with brilliant ear-rings, gold chains with diamond pendants, and with gold bangles set with precious stones given

by the maharaja to his sons-in-law. The bridegrooms had all of them a sword in their right hand and umbrella-bearers behind. Numerous other elephants then followed.

As this custom is of interest ethnologically, the following description of it is given. Kookel Keloo, Nair, district munsiff in Malabar (Madras Lit. Soc. Jour. No. 48, p. 52, 1859), says the Eeyoover or Teeyer (toddy-drawers) are a section of the servile class of people who, during the time of the Brahmans and Perumals, came to Malabar from Ceylon to earn their livelihood. It cannot, however, be accounted for, how they in many parts, though not throughout the whole of Malabar, came to adopt the beastly custom of the Kummaler of the country, of a single girl being married to three and four brothers; and likewise, in some parts of the country, where this sad custom is not so generally prevalent among them, the practice of taking their deceased brothers' widows for wives as the Musalman Mopilla do. It is only in the taluks of Nidunganad, Kuttanad, Chowghat, and some parts of Vettutnad, and a few adjoining spots in South Malabar alone, that a woman among the Nair is kept at the same time by two or three different men, who are, though, never brothers. It is, though, very possible that the Teeyer may have taken the idea from this latter error, and themselves fallen into the other and more shameful one; or perhaps they observe the custom, as they in general are, as a document in its beginning shows, sprung from the Kummaler or the Kummalers from them, through their then frequent intermarriages. The document calls them also Eeyoovahaiyer, a word equally low and contemptuous in Malabar, and of the same meaning as the word Kummaler. Moreover, amongst the Nair of the whole of North Malabar (that is to say, from part of Cooroombranad as far as Mangalore), though sometimes unchaste practices occur in their families, yet I can, he says, most confidently assert that the above abominable custom of one woman being kept by two or three men at the same time, never in ancient or modern times was once known. A Nair there will, though, occasionally marry two or three women in succession, if the first or second prove barren, or all the children born die, or from any other like cause or domestic difference. Many of the Teeyers also of that part of the country do in some measure follow the custom of the Nairs; but the Teyettees (Teeyer women) of the remaining Teeyers there are notorious harlots, and become the concubines of strangers of any caste or religion, and this without the least prejudice to their own caste, or any loss of esteem in society; on the other hand, any such act proved against any females of the other castes, subjects the person to excommunication from caste, banishment from society, and all religious advantages. The Teeyer females of South Malabar do not, though, so readily as those of the north, yield themselves to this disgraceful practice. Owing to the very great number of castes, and the peculiar and different manners and customs of various parts of the country, the superficial inquiries of most foreigners have led them into error, and in their works they generally ascribe the same pernicious practices to all castes and parts of the country indiscriminately. However, the Nairs, Teeyers, and indeed all the other numerous castes of Malabar (including the Cochin and Travancore countries, these being indeed the most striking in this respect), are in some way or other in a greater or less degree of error; and reformation therefore is indeed much needed among them all. It is, though, very lamentable to find them dormant in their original state of depression, and not seeking for reformation rather than growing blindly proud of their vain and different castes and privilegcs, and ready to run any risk, even that of hazarding their lives, only to preserve their castes.

The Ashary, in Malabar, the carpenter caste, the brassfounder, gold and iron smiths, continue the practice of polyandry, but in civil inheritance follow from father to son. The elder brother marries, and the wife is common to all the brothers. If a junior wish to marry, he must live apart and set up business apart; but if any of his younger brothers reside with him, his wife is common to them. Anandraver is the term applied to the junior members of a Tarwada community living under the law of inheritance called Marumakatayam. (See Karnaven; Tarwada.) In the Madras Journal of Literature and Science for July 1864, a native of the country furnishes a translation of a work entitled the Bhutala Pandyana, Aliya Santanada Kattukattale, in which is given the following mythical explanation of the causes which led Bhutala Pandya to frame the Aliya Santana rules. It relates that Deva Pandya, a wealthy merchant of the Pandya country, was sending new ships, richly laden, to a dark island covered with snow, but before launching them, Kundodara, a Bhuta raja, or king of the demons, an attendant on Siva, observing that the ships were new, demanded a human sacrifice. Deva consulted with his wife as to sacrificing one of his own seven sons, but the wife fled with them to her native town. On which Deva lay in deep distress, until his sister Satya-vati, hearing of the case, came and offered her own boy, saying to Deva, 'You should not care for this trifling matter. Do you give the boy Jaya Pandya, a son of mine, as a human sacrifice.' But Kundo-dara refused the boy, being aware that Jaya was the son of Vira Pandya, king of that dominion, who had been defeated by Chand Rangada raja, and that Jaya was a Mahapurusha, destined to be a great man; he desired Jaya to assume his, the demon king's name, as Bhutala Pandya, and promised to restore him to the dominions of which Chand Rangada had deprived him. On this, the demon king entered Ujjain, subdued the eight demi-gods, Bhairava, etc., gave Bhutala a throne that Davendra had given to Vikramarka, and entered the town of Jayantika, accompanied by Bhutala. On the demise of the king Siddha Vira Prassiddha Raya, Jaya was elected king. Jaya ruled for six years, during which the Makkala Santana, *i.e.* the law of inheritance by direct descent of sons, was, for the following reasons, set aside, and that of Aliya Santana, *i.e.* inheritance on the line of nephews, substituted. The ships of Deva had during a mercantile voyage grounded on the miry bank of an island covered with snow and darkness, and the crew were in great distress, when the demon king appeared and bid them load the ships with the Siddha sile stone (a green stone, husuru sile galu) and Siddha-rasam, and pray to him. This being done, a fair wind brought the ships to the river mouth of Hangara katte at Kalianpur

harbour. King Jaya, on ascertaining that the ships belonged to his uncle Deva, sent for him to receive them, but the demon king again demanded one of Deva's sons as a sacrifice. Deva consulted as to this with his wife, who refused the goods on that condition, and the cargo of stone and liquid was then delivered to king Jaya, who placed both the stone and the liquid in front of the idol Someswara, changing its name to Sidheswara, and erected a temple and image to Kundo-dara, the demon king, to which he gave the name of Maheswara. On the demon king's recommendation, he framed a code of laws, containing 30 rules, introducing the Aliya Santana rule (the descensus a matre). At this time king Jaya is styled 'master of the throne of king of kings, master of the masters of the four countries called Tulu, Malayala, Haiga, and Karnatica, the first person in the era of Sativahana.' In the sixth year of his reign, the demon king ordered him to bury the green stone (emerald), and shut up the Siddha-rasa well, and the image of Naga set thereon. The castes enumerated in these rules are the

Tulu varu.	Kambararu (potters).	Agasa (washermen).
Mala varu.	Devadiga.	Halepaika.
Jainaru.	Saliya (weavers).	Mundala.
Nayamma	Mulekudeya.	Karinnara.
varu.	Panchala.	Holeya.
Masadika.	Kshauraka (barbers).	Andekoraga.
Haricetti.		
Pari-yaru.		

King Jaya prohibited the Brahmans officiating in death and birth ceremonials; prohibited the Maha-layam or inauspicious ceremony for the deceased; prohibited the giving of the Panchagavyam; prohibited the Punya-Homa sacrifice with dubh grass on births and deaths, and permitted only the Nirmalya or remains of idol offerings for the dead, and authorized the continuance of the Puja and Abhi-shekam to the deity for those who brought forth children or died. In the twelfth year of his reign, he invited Jains from the Balaghat, and they built Mangalore and other towns. King Jaya made the Aliya Santana rules applicable to the Kshatriya, the Vaisya, and the Sudras, but permitted Brahmans to continue the rule of direct descent.

The explanation of the above fable seems to be that in the time of king Jaya, all great works, such as shipbuilding, as is still the case in Polynesia, were inaugurated by human sacrifices in propitiation of demons; that a woman of rank twice refused to part with any of her sons for such a purpose, and her husband's sister offered her son Jaya in their stead, but was refused; from which king Jaya declared that descent of property should follow from the sister's side.

Mr. Strange mentions (in literis) that polyandryism in Malabar has prevailed only among those classes whose rule of inheritance is by Nepotism, termed Marumakatayam. It has prevailed in like manner in Travançore, where the same rule of descent is followed. There is, however, a strong tendency in Malabar to throw up the said rule of deseent, and to convey property from father to son, and this feeling is owing to the gradual abandonment of polyandryism. The connubial connection which is in question is termed ordinarily, in Malabar, Guna-dosham (Guna, good, Dosham, evil; for better for worse). In Travancore it is styled Mundu-vanga (Mundu, cloth, Vanga, receiving). The girl taken is of ripe age, and her consent must be obtained. Personal acquaintance thus precedes the formation of the union. The ceremonial consists in the man presenting her with a Mundu, or white muslin cloth. In North Malabar, a small sum of money is tied up in a corner of the cloth. Small presents of money are given to Brahmans. There is an assemblage of friends at the girl's house, and a supper is given either before or after the ceremonial. The hour is about 8 P.M. The girl sometimes is taken to the man's house, but sometimes remains in her own, and is visited by him there. Each party is unrestricted as to the number of such connections that may be formed, but these ordinarily do not exceed two or three. The descent being in the female line, the parentage as to the father was immaterial. Jealousies and quarrels, terminating sometimes in murder, are, however, rife, as might be expected. The connection depends simply upon the will of the parties, and may be broken off by either at pleasure. But the unions in Malabar are now commonly of single couples, the woman living in the man's house strictly as his wife. The classes among whom polyandryism has prevailed in Malabar are the Nair, the Teeyer of North Malabar (those of South Malabar adhering to the descent to sons), and a branch of the slave tribes called Kallady. The term 'Nair' is derived from Naiker, the honorary plural of Naik, which comes from the Sanskrit term 'Nayakah,' meaning a chief man. The four classes of workmen in Malabar, namely, the Ashary (carpenter), Mushaly (brassfounder), Tattan (goldsmith), and Perun-kollan (ironsmith), still follow a peculiar form of polyandryism. This is kept up only in the family. The elder brother marries, and his wife is common to all the other brothers. If a junior wish to marry, he must live apart and set up business apart; but if any of those junior to him should reside with him, his wife is common to them. These classes have descent from father to son.

Kookeloo (Kookel Keloo), a Nair, writing on this subject, mentions that in the Malealam country, the Ainkudi Kummaler are the five artisan castes,—the Ashary or carpenter, the Mushaly or brazier, the Tattan or goldsmith, the Perun-kollan or blacksmith, and the Tol-kollan or tanner. These five castes follow the custom of marrying one girl among three or four brothers; and this Kummaler custom of three or four brothers marrying one girl, is followed in some parts of Malabar by the Eeyoover, Juver or Teeyer, toddy-drawers, and partially, also, is the custom of the Muhammadan Mopilla, in taking the wife of a deceased brother. The Kummaler and Teeyer are sprung from the same race, and in earlier times intermarried, and this may explain the similarity amongst them of this social practice. It is only in the taluks of Nidunganad, Kuttanad, Chowghat, in some parts of Vettutnad, and a few adjoining spots in South Malabar, that a woman amongst the Nair is kept at the same time by two or three men, who are not brothers. Although the customs of Nair, the Teeyer, and other castes of Malabar, Cochin, and Travancore, particularly by the two latter countries, are thus more or less identical, the practice of polyandry does not seem to have ever prevailed generally amongst the Nair and many of the Teeyer of North Malabar, from Kurumbranad to Mangalore.

As the result of the Aliya Santana rules, it is stated that, in the present day, the husband during his life gives his personal property to his wife and children, mortgages his permanent property, and on his demise transfers it with the debts to the sisters and their children, so that the territorial possessions have all fallen to Brahmans, Muhammadans, and Christians.

In Canara, a similar system of inheritance obtains to that in Malabar, which is termed Aliya Santana, or nephew inheritance. As in Malabar, the Brahmans do not follow this rule. In its details, the Canara law of Aliya Santana corresponds with that of the Malabar Marumakatayam, saving that the principle that the inheritance vests in the females in preference to the males is in practice better carried out in Canara, where the management of property vests ordinarily in the females, while in Malabar the males commonly administer thereto.

The Aliya Santana of the Tuluva country is similar to the old Italian law of descent, a matrice, a sister's children being considered more surely of a man's own blood than those by his married wife (Coorg Memoirs, p. 30). In the Tuluva country, a Brahman widow can devote herself to the temple, and reside outside or inside its walls. If within, she is a servant of the idol, and receives men of her own caste only. The offspring of such, if boys, are called Moylar; and if girls, are said to be given in marriage to the boys. But if the woman elect to reside outside, she must pay a monthly sum to the pagoda, and may cohabit with any one of pure descent.

The Coorgs continue to have a kind of marriage communism within the family, the wives of the brothers of one house being common property. Children, therefore, are rather children of the family or of the mother, than of the ostensible father. The Coorgs quote, as their authority for this custom, the story of Draupadi. But the state of family life in many Coorg houses, resulting from this custom, is very sad, giving rise to jealousy, mistrust, heart-burnings, quarrels, and often deadly hatred. At present, two or three generations continue to live together in the ancestral home, a large human bee-hive,—the grandfather and grandmother, their sons and daughters-in-law, the children of these families; some houses containing sixty, seventy, eighty souls and upwards; but families are constantly being torn up and separated from the discord that occurs.

Dr. Baikie alludes to a somewhat similar community amongst the Canarese-speaking races to the north. The habits of the Coorgs may vary amongst themselves. Reliable information from another source is to the effect that the first to take to himself a wife is the elder brother. But if she remain unfruitful to him, she passes to the next brother, and only when she fails to have offspring to any brother does she become an outcaste from the family.

Until abolished by the governor, Sir Henry Ward, about A.D. 1860, polyandry prevailed throughout the interior of Ceylon, chiefly amongst the wealthier classes, of whom one woman had frequently three or four husbands, and sometimes as many as seven. The custom was at one time universal throughout the island. Valentyn, ch. vi. p. 95, is quoted for the fact that the king of Kotta, Wijaio Bahu VII., who was reigning when the Portuguese built their first fort at Colombo, had one wife in common with his brother; and Raja Singha I. was born in polyandry; but the influence of the Portuguese and Dutch sufficed to discountenance and extinguish it in the maritime province. As a general rule, the husbands are members of the same family, and most generally brothers. According to the tradition of the Singhalese, the practice originated in the feudal times, when it is alleged their rice lands would have gone to destruction during the long absences enforced on the people by the duty of personal attendance on the king and the higher chiefs, had not some interested party been left to conduct their tillage. Hence the community of property led at length to the community of wives. Sir J. E. Tennant, in A.D. 1848, was informed to the above effect by an aged chief of the Four Korles, Arunpulle Ratemahatmeya, who had lived under three native kings prior to the conquest of Kandy by the British. In more recent times, the custom has been extenuated on the plea that it prevents the subdivision of estates, the children of these promiscuous marriages being the recognised heirs of all the husbands, however numerous, of their mother. But it existed in Ceylon before the conquest of Wijaio. In Ceylon no disgrace attaches to such unions, and the offspring are regarded as equally legitimate with those born in wedlock. Within a recent period, about A.D. 1860, a law has been introduced to put a stop to this custom. Sir J. E. Tennant tells us that, in Ceylon, in the province adjoining Bintenne, where the owner's sister's sons inherit in preference to the sons of the owner's wives, the custom is explained by a Singhalese legend to have originated from one of their kings being directed by an oracle to sacrifice a male child of the blood-royal, in order to thwart the malice of a demon who nightly destroyed the bund of a tank in process of construction. But his queen refused to surrender one of her children, on which his sister voluntarily devoted her own boy to death. The king, in honour of her patriotism, declared that nephews were ever after to be entitled to succession in preference to sons. Also, in the western extremity of the province of Ceylon, adjoining that of Bintenne, something like the custom of the races of Western India prevails, and nephews by the sister's side succeed to the inheritance, to the exclusion of the possessor's sons. Singhalese kings frequently married their sisters.

Throughout the interior of Ceylon, among the Kandyans, and them only, polyandry is prevalent, and the wife has the possession of all the brothers, of whom so many as eight have been known. The children call the eldest brother father. A man can bring in another, not a relation, to have joint marital rights with himself; indeed, the first husband can so introduce as many as the wife will consent to receive as husbands. In Kandy, in the Beena marriage, the husband goes to reside in the wife's house, and the woman shares the family inheritance with her brothers. The husband in this marriage can be dismissed summarily by the family of the wife. In the Deega, a more respectable marriage, the wife leaves her own house for that of her husband,—forfeits all her claim on the property of her parents, but acquiring some claim on that of her husband, and the wife cannot obtain divorce

unless with the full consent of the husband. Divorces are constantly sought for by women on trivial pretences. A child born within nine months of the divorce must be maintained by the husband.

North of Ceylon, in British India, the polyandry customs of the Reddi race have already been alluded to. Among the Karakat Vellalar of Madura, adultery with a husband's brother or kinsman is condoned; farther north, among the Nuniya and Ahir, the Levirate law prevails; and with the Gujar and the Jat polyandry customs are permissive. Still farther northwards, in Sirmore, one of the sub-Himalayan Hill States, polyandry is almost universal; in Lahoul, a subdivision of the Kangra district of the Panjab, polyandry is the custom of the people, who are Bhutiyas or Tibetans; and the Kanet, who make up the mass of the population, are of mixed Indian and Mongol origin, the latter element predominating. They are Buddhists, numerous monasteries stud the hills, and they bear a good character. In Spiti, a district of the Kangra division, polyandry no longer prevails; but the same object is attained by their primogeniture custom, by which only the eldest son marries, while the younger sons become monks. Crime is rare, but chastity and sobriety are almost unknown. And in the very south of India, among the Namburi Brahmans of Travancore, the eldest son alone marries and inherits, and they allow their girls to remain unmarried to any age, and even to die unmarried.—*Yule, Cathay*, i. p. 189; *Panthier*, p. 157; *Wood*, p. 201; *Burnes' Tr.; Porter's Travels*, i. pp. 143, 144, 340; *Vigne's Kashmir*, i. p. 37, v. p. 13; *Beng. POLYGALACEÆ. *Lindl.* The milk-wort tribe of plants, comprising the genera Polygala, Salomonia, Xanthophyllum, and Securidaca.

POLYGALA SENEGA, snake root. Several species of Polygala were formerly medicinally employed in Nepal and the Himalaya. P. crotalarioides is used as a snake antidote. P. speciosa is grown in gardens as an ornamental plant. All the species have handsome, showy flowers, chiefly pink, scarlet, red, or white. The root of P. tenuifolia. Yuen-chi, CHINESE, is brought from Shen-si and Ho-nan in cortorted quilled pieces. It is used in cynanche, cough, carbuncle, and its leaves in spermatorrhœa.—*Smith's Chin. Mat. Med.* p. 175; *Riddell; O'Sh.*

POLYGAMY. Although polygamy is sanctioned by the laws of the Muhammadan religionists, by the customs of the Chinese, the Cochin-Chinese, the Siamese, and, in particular circumstances, amongst the Hindus, the people generally are in practice monogamic. Throughout the Hebrew Scriptures (Genesis xii. 15, xxi.; Esther ii. 3) there are notices of a plurality of wives from the most ancient times, but the Jews were a truly monogamic race, and it was only with Saul and David, followed by Solomon, that numerous wives became usual. Amongst the Muhammadans, the practice from Mahomed's time till now has been to restrict to four wives, and to the haram or war captives, or purchased or household slaves; and in British India the followers of this faith do not deviate from their religious rules, though in general they are monogamic. Opinions greatly differ as to the advantages and disadvantages of polygamy. Though the Christian peoples of Europe are monogamic by law, in practice polygamy, with many resulting crimes and evils, is not unknown. With the Muhammadans and ruling Hindu races who permit and practise polygamy, it is a fertile source of intrigue and disquiet in homes. Colonel Tod, writing of the ruling Rajputs, says polygamy is the fertile source of evil, moral as well as physical, in the east. The desire of each wife that her offspring should wear a crown, is natural; but they do not always wait the course of nature for the attainment of their wishes, and the love of power too often furnishes instruments for any deed, however base. The number of queens is determined only by state necessity and the fancy of the prince. To have them equal in number to the days of the week is not universal; while the number of handmaids in unlimited. It will be conceded that the prince who can govern such a household, and maintain equal rights, when claims to pre-eminence must be perpetually asserted, possesses no little tact. The government of the kingdom is but an amusement compared with such a task, for it is within the Rawula that intrigue is enthroned. Captain Burton, who saw the great polygamic system in the Salt Lake City, observes that the nations of Europe have monogamic laws, have forbidden a plurality of wives, and the consequences are that adulteries and unlawful connections prevail to a most fearful extent; and among some of these nations, sinks of wickedness, wretchedness, and misery are licensed by law. Though polygamy is met with among nearly all the nations of Southern and Eastern Asia, neither amongst the Muhammadans or Hindus is it deemed a respectable practice. A Muhammadan by law can marry four wives, and all his captives in war can form his haram; but no Muhammadan, however rich, no ruling sovereign even, can obtain a second wife from a family of equal social position to his own; and amongst Indian Muhammadans only one wife is married with all the rejoicings and ceremonial display which in most countries are observed when a virgin bride becomes a wife and mistress of a home. In the profligacy of towns, or in the enforced idleness to which so many Muhammadans in India are now constrained, there are in some houses to be found the legitimate number of wives, along with Hindu converts to Muhammadanism, who are styled the Harm; and occasionally, amongst the poorer men who have been great travellers, and have married in distant places, more than one wife is in a house. But monogamy is the general rule, and marriage is made with the wife for whom the greater rejoicings are made. In Muhammadan law, all children born in marriage have equal rights. In

India, therefore, where women are married either simply by the Nikkah ceremonial or by the additional display in the Shadi or rejoicings, the Muhammadan law does not recognise any distinction in the rights of the children from Nikkah or Shadi wives. But in the social customs of the Muhammadans of Southern India, a great distinction is made between the offspring in the two marriages. A Nikkah wife never receives the same amount of respect from her household and from relatives, and never receives from her husband an equal monthly allowance to that of a Shadi wife. The Nikkah and Shadi children in their father's households receive equal courtesy from relatives, because they are then alike looked upon as the children of the master of the house. But a father never grants to Nikkah children allowances equal to those which he apportions to those of the Shadi descent. When parents are seeking for suitable marriages for their children, Nikkah offspring are regarded as greatly inferior in social rank to Shadi offspring, and the taint of the Nikkah marriage is remembered by all from generation to generation; and one of the great social injuries from polygamy is that it renders brotherly affection impossible. Among the Mehman sect of Muhammadans, their Pir, or holy men, are of the family called Rashid Shahi (descended from one Muhammad Rashid Shah), or the Rohri-wara Sayyids, remarkable for nothing but excessive polygamy. Rashid, the founder of the house, took unto himself thirty-two wives (instead of four), and justified the practice by the usual sophistical argumeuts of the Safi order to which he belonged. The Sindi divines pronounced his tenets to be heretical and his conduct damnable. The Mehman sect, however, did not object to it, and still reverence his descendants.

Among Hindus in general it is rare to hear of two wives in one house, but the concubinage of cities is facilitated by the temples possessing Devadasa women devoted to the gods. In Hindu law, a man ought not to take an additional wife save under certain justifying circumstances. These are —his wife's exhibiting want of chastity; habitual disobedience or disrespect towards him; bad temper; bad health; barrenness; or should she for a period of ten years produce only daughters. The consent of the Hindu wife, without any disqualifying causes on her side, also of itself warrants re-marriage. The absence of these justifying causes will not, however, invalidate a second marriage. A wife who has been superseded by a second marriage, whether justifiably or not, should continue to reside with her husband. If he oblige her to leave him, she should reside with his relatives or her own. In either case the husband is bound to maintain her.

It will thus be seen that, by the law, a Hindu may marry as many wives, and by custom keep as many concubines, as he may choose. Sivaji, the last maharaja of Tanjore, married eighteen wives on one day, but this was caused by a mere accident. The raja had sent to his native place for some young women, intending to marry one and give the others in marriage to his nobles; but on their arrival, and becoming aware of his intention, they declared that as they came to marry him, they would do so or not marry at all, but all would at once destroy themselves. In mythological history, it is stated that the ancient king Dasaratha, the father of Rama, had 60,000 wives.

Notices of polygamy are more frequently met with in the stories of the Hindu gods than seen among the modern Hindus. The majority of the heroes in the writings of Kalidasa are described as polygamists. At present, generally speaking, a Hindu marries only one wife, and after her death another, if he can afford it. In Madras, a city of 400,000 people, there were (in 1860) only three instances in the higher classes of Hindus living with three wives, and these they had married successively on account of the want of children. Concubinage among the higher ranks of Hindu society in Madras is not uncommon, and is generally selections from among the dancing girls of pagodas. In the interior, the petty rajas and zamindars marry two wives, and sometimes keep concubines at the same time. Also the marriage laws of the Hindus who follow the rules of Marumakatayam and Aliya Santana, and the customs of some of the Coorg, Reddi, Canarese, Gujar, and Jat races, lead to polygamy and concubinage; but the Teling, Mahratta, Kurmi, Kunbi, Bengali, and Rajput are monogamic. In Bengal, however, a Brahman race, the Kulin, are regarded by other Brahmans as of the highest social rank, and they eagerly give their daughters to the Kulins, amongst whom are men with many wives. About 1860, the pandit Iswara Chandra Vidyasagar published a pamphlet in Bengali denouncing polygamy, and gave the names of twelve Kulin Brahmans with forty to eighty wives.

Polygamy is practised both on the mainland and in Torres Straits, and Mr. M'Gillivray had heard of a man with four wives. According to the will of the father, and without regard to disparity of age, the future husband may be, and often is, an old man with several wives. When the man thinks proper, he takes his wife to live with him without any further ceremony; but before this she has probably associated with the young men,—such, if conducted with a moderate degree of secrecy, not being considered as an offence, although if continued after marriage it would be visited by the husband (if powerful enough) upon both the offending parties with the severest punishment.

The Abbe Em. Domenech tells us that polygamy prevails amongst the Indians of North America.

In the large towns of China and Japan, concubinage seems to prevail to a greater extent than it is met with in the western countries of Southern Asia. In Japan, the practice, so soon as a woman is married, of staining her teeth black, and thus destroying one of woman's greatest ornaments, can only have the effect of making the wife less attractive to the husband, and forcing his affections elsewhere. And in the concubinage of China there is not found among the young women whom they select, any of the deformed feet which the richer classes of the people create for the girls who are to be the wives of their households.

Mr. T. T. Meadows writes strongly on the injurious effects on Chinese women which the right to have many wives occasions. In China the extent to which wives are, by law and custom, in the power of their husbands, would produce deplorable effects, but for the almost unlimited power which law and opinion give mothers over their sons of every rank and age. So also the

institution of polygamy is largely counterbalanced by the desire of all the men to marry early, in order to secure a progeny of sons as soon as possible. The condition of the Chinese woman is most pitiable: suffering, privation, contempt, all kinds of misery and degradation, seize on her in the cradle, and accompany her pitilessly to the tomb. Her very birth is commonly regarded as a humiliation and a disgrace to the family, an evident sign of the malediction of heaven. If she be not immediately suffocated, she is regarded and treated as a creature radically despicable, and scarcely belonging to the human race. Pan-houi-pan, celebrated among Chinese writers, though a woman, endeavours in her works to humiliate her own sex, by reminding them continually of the inferior rank they occupy in the creation. 'When a son is born,' she says, 'he sleeps upon a bed; he is clothed with robes, and plays with pearls; every one obeys his princely cries. But when a girl is born, she sleeps upon the ground, is merely wrapped up in a cloth, plays with a tile, and is incapable of acting virtuously or viciously. She has nothing to think of but preparing food, making wine, and not vexing her parents.' In ancient times, in China, instead of rejoicing when a child was born, if it happened to be a girl they left it for three whole days on a heap of rags on the ground, and the family did not manifest the slightest interest in so insignificant an event. This public and private servitude of women—a servitude that opinion, legislation, and manners have sealed with their triple seal—has become in some measure the corner-stone of Chinese society. The young girl lives shut up in the house where she was born, occupied exclusively with the cares of housekeeping, treated by everybody, and especially by her brothers, as a menial, from whom they have a right to demand the lowest and most painful services. The amusements and pleasures of her age are quite unknown to her; her whole education consists in knowing how to use her needle; she neither learns to read nor to write; there exists for her neither school nor house of education; she is condemned to vegetate in the most complete and absolute ignorance, and no one ever thinks of or troubles himself about her till the time arrives when she is to be married. Nay, the idea of her nullity is carried so far, that even in this, the most important and decisive event in the life of a woman, she passes for nothing; the consulting her in any way, or informing her of so much as of the name of her husband, would be considered as most superfluous and absurd. In China a woman counts for nothing. The law ignores her existence, or notices her merely to load her with fetters, to complete her servitude, and confirm her legal incapacity. Her husband, or rather her lord and master, can strike her with impunity, starve her, sell her, or, what is worse, let her out for a longer or shorter period, as is a common practice in the province of Che-kiang. Polygamy aggravates the sufferings of the Chinese wife. When she is no longer young, when she has no children or none of the male sex, her husband takes a second wife, of whom she becomes in some measure the servant. The household is then the seat of continual war, full of jealousies, animosities, quarrels, and not unfrequently of battles. When they are alone they have at least the liberty of weeping in secret over the cureless sorrows of their destiny. The little Chinese girl born in a Christian family is not murdered, as is often the case among the pagans. Religion is there to watch over her at her birth, to take her lovingly in its arms and say, Here is a child created in the image of God, and predestined, like you, to immortality. The Chinese bride is seldom seen by the husband until she leaves the sedan chair in which she is conveyed, with her belongings, to his house. Mandarin ducks are introduced at marriages as patterns of connubial felicity. In the little feet of the Chinese women the four small toes appear grown into the foot, the great toe left in its natural position. The fore part of the foot is so tightly bound with strong, broad ligatures, that all the growth is forced into height instead of length and breadth, and forms a thick lump at the ankle; the under part measures scarcely 4 inches long and 1½ inches wide. The foot is constantly bound up in white linen or silk, and strong, broad ribbons, and stuck in a very high-heeled shoe. The crippled fair ones trip about with tolerable quickness; to be sure, they waddle like geese, but they manage to get up and down stairs without the help of a stick. Infanticide, of which the husbands are the only perpetrators, is not uncommon; but female children only are murdered, and those immediately after their birth. This horrible crime meets with no punishment from the laws of the country; a father being the sovereign lord of his children, he may extinguish life whenever he perceives, or pretends, that a prolongation of it would only aggravate the sufferings of his offspring.

The one-wife system is confined principally to a few small nations inhabiting Europe, and to those who are of European descent inhabiting America. It is estimated by the most able historians of our day, that about four-fifths of the population of the globe believe and practise, according to their respective laws, the doctrine of a plurality of wives.

Amongst most of the pagan tribes on the north and east of British India, and with several of the hill tribes within the British boundaries, field labour is looked upon by the men as derogatory. It is left to the women; the number of wives, therefore, as of slaves, indicates the extent of their worldly means, and polygamy results. With the Jat and Gujar, the Bhil, Mina, and Mhair, the practice of a brother taking to wife the widow of a deceased brother also occasions the presence in a household of more than one wife. With Hindus, polygamy results from their religion. According to the usual Hindu belief, the future beatitude of a man solely depends upon the funeral obsequies performed and oblations offered to the manes by his putra or son. The primary object of marriage among the Hindus is to obtain a male issue; and it is chiefly in case of failure of a putra or son that the Hindu law sanctions polygamy.

The Muslim husband provides separate apartments and a distinct establishment for each of his wives, unless, as sometimes happens, the one be an old woman and the other a child.

International marriages were very frequent among the different tribes that compose the great family of the Selishes in N. America. After the union, the man generally joined the band to which his wife's family belonged. The custom

arose from the women being the purveyors of the family; they were better able to maintain their household in a locality known to them, and where they could find the nutritive roots on which the tribes chiefly lived. The Indian women's cabins, containing provisions, were completely under their control, and husbands could never touch anything in these without the permission of the mistress of the house. Among the Natchez, the incontinence of the young girls was for them a title of honour, for they made marriage portions for themselves by means of the most unrestrained intercourse, the importance of their matches depending on their greater or less licentiousness. But when once married, they led a most exemplary life, and became models of conjugal fidelity. The reason of this change being that having solemnly given themselves up to their husbands, they had no right to dispose of themselves to any one else. The marriage at length was a purchase, however, the young man saying, 'Here are thy presents with which I buy thee of thy parents.' Polygamy was restricted among the Indian nations of N. America by their poverty, the system of purchase precluding many being bought, but among the rich several wives were married. The Navajos had a regular haram, the last married wife being the mistress of the house; but an Indian generally chose sisters, to have peace.

Colonel Marcy of the United States army mentions that though the custom is now very much abandoned, it was formerly regarded by the Comanche Indians of N. America as an essential part of genuine hospitality, that their guests should have wives assigned to them during their stay in camp. Polygamy was prevalent amongst them, every man having as many wives as he could support. On one occasion, in 1849, when escorting emigrants across to New Mexico, two young girls were brought and offered to him before all the party, but, to the great surprise of the chief Is-sa-kip, they were declined. Among the Moqui Indians of N. America, the young woman selected the young man who suited her fancy, and then her father proposed the match to the youth's father; this proposal was never refused. Polygamy was unknown amongst them.

Throughout the South and East of Asia, women, even as first wives, do not take a favourable position in their households until they become mothers, and the presence of sons of their own, or adopted, is longed for by the childless wife, who often urges her husband to take another spouse.

Polygamy, in China, is encouraged by the law which compels gentlemen and tradesmen to give their slaves in marriage, and by the custom which compels a husband to live apart from his wife during her pregnancy, and while nursing. Wealthy Chinese are generally very careful to follow this custom. It prevails throughout Central Asia, amongst the Muhammadans of Bokhara, Samarcand, and other khanates, and in British India many Muhammadans re-marry when their first wife becomes beyond the child-bearing age. Of all the women in Southern and Eastern Asia, the wives of the races who have adopted Islam hold the highest social position. A Muhammadan woman can legally hold property, is the owner of her own dower, and each wife has a separate establishment and a separate allowance for herself, and separate visit days. This, indeed, is also a Hindu custom, and is carefully engaged for in the Hindu marriage agreements.—*Sinnett's Lady's Voyage*, p. 50; *Bowring's Siam*, i. p. 105; *Macgillivray's Voyage*, i. p. 8; *P. As. Soc. Jour.*, 1877; *Imp. Gaz.*

POLYGAR, properly Palegara, is derived from the Tamil Paliam, a fort, and Karan, a defender, plural Karar. In Southern India, in the time of Orme, it was a term applied to the semi-independent chiefs in mountainous and woodland districts of the Tamil region. Of these were Aryalore, Bangar Yatcham, Bomraj, Coilor-pettah, Elerempenah, Ettapuram, Madura, where their districts lie along the foot of the mountains to the west. Others, in Tinnevelly, in that neighbourhood were styled the Tondiman raja, the greater and lesser Maravar; Nattam Nelli Cotah, and Nellitangaville, the last styled Pullitaver. North of Madras were the Polygars of Bangar Yatcham, Damerha, and Bomraj, against whom, in 1756, Muhammad Ali and Colonel Kilpatrick marched. A Polygar possessed the fort of Savanore, one settled at Oodiagherry, and another near Verdachelum, when, in July 1751, Mr. Pigot and Clive drove off another at Warrior-polliam. The most northern Polygar chief was the Dessaee of Sawuntwari. Those of Jooneer and Punala were reduced by Sivaji.—*Orme.*

POLYGONACEÆ. *Lindl.* The buckwheat tribe of plants, comprising the genera Konigia, Rumex, Oxyria, Rheum, Coccoloba, Ceratogon, Ampelygonum, Polygonum, and Fagopyrum. Polygonum linifolium, as also P. aviculare and affinis, grow about Lahore, where they are well known, but little used. P. macrophyllum and P. molle grow among the Kashmir mountains, where the roots are officinal. P. Chinense and P. barbatum yield a blue dye like indigo, in China and Japan. Wight gives P. ambiguum, aviculare, barbatum, Chinense, Donii, glabrum, horridum, Indicum, molle, Nepalense, pedunculare, strictum, Wallichii; a variety of P. orientale is the Pani marich of Bengal. P. tomentosum is eaten by cattle.

Polygonum, *sp.*
Bijband, Kuwar, Hind. | Kamin, Hunraz, Hind.

Used in N.W. India for spitting of blood and rheumatism. A substitute for rhubarb in double doses.

Polygonum amphibium, *Smith*, smart-wood.
T'ien-liau, Liu, . Chin. | Guree, ... Kash.

The acrid seeds of this Chinese plant are emetic and stimulant, and are applied to scald head and wounds. The root has been recommended as a substitute for sarsaparilla, which its root-like stems resemble. It vegetates in Kashmir, and is considered as a veterinary medicine; whence its name, guree (horse).

Polygonum aviculare, *Linn.*, knot-grass.
Wei-jui, ... Chin. | Machuti, Nisomali, Hind.

A plant of China; its dried root is used as a pectoral. Considered medicinal in Behar and Kashmir. Its numerous seeds supply abundant food for small birds; they are said to be emetic

and cathartic. Thunberg says that in Japan a blue dye is prepared from this plant.

Polygonum barbatum, *Linn.*

Miau-liau, . . . CHIN. | Atalari, Aatalari, . TAM.
Velutta modela muku, MALEAL. | Konda mallier, . . TEL.

This plant grows in moist places in Bengal and Peninsular India, and is given in infusion by the native doctors in India in cases of colic. Cattle eat it greedily. The seeds are used in China also in colic and choleraic affections; its leaves and stalks as a wash for callous ulcers.

Polygonum bistortum, —?

Maslun, . . . HIND. | Anjabar, . . PANJAB.

A plant of the north-west of India. Root very astringent; useful in sore-throat and relaxed gums and ulcers.

Polygonum cymosum, *Wall.*, a wild buckwheat, called pullopbi, abundant at Choongtam in Sikkim, forms an excellent spinach; it is a common Himalayan plant, and is also found in the Khassya mountains.

Polygonum fagopyrum, *Willde.*, *Smith.*

Fagopyrum esculentum. | Ugla kaspat, . . HIND.

Seeds nutritive, contain much oil, said to be very fattening. P. tataricum is hardier, and ripens more rapidly than P. fagopyrum.

Polygonum hydropiper, *Riddell*, P'en-chuh, CHIN., a Chinese plant. Juice used as a wash in itching skin affections; as a diuretic, carminative, and anthelmintic. The plant is used as a flux in operating on metals.

Polygonum polystachynm, *Wall.*

Amldandi, Chuchi, HIND. | Tror, ... RAVI.

This and P. polymorphum are tall plants with fine flowers; one at least of them exhaling a strong honey smell at times. Both appear to be common locally in the Panjab Himalaya, from 6000 to 12,000 feet. The young leaves are nsed by the natives as a pot-herb, and a very good imitation of rhubarb is got by stewing the stalks, which also, after peeling, are eaten raw by the natives in some places.

Polygonum tortuosum, *Don*, Niala and Nialo, PANJAB. This grows to 15,000 feet in the Himalaya, is said to yield a yellow dye in Lahonl. In Ladakh it is browsed by goats and yaks.—*Eng. Cyc.; Honigb.; Hooker's Him. Jour.* ii. p. 31; *O'Sh.; Powell; Riddell; Roxb.; Smith, M. M.; J. L. Stewart; Wight's Ic.; Williams' Mid. Kingd.*

POLYNEMUS, a genus of fishes. placed by Cuvier in his third division of the Percidæ, the general form of the body somewhat resembling that of the perch. They are called paradise fish. The Polynemi yield isinglass, and many of them are valuable for food, and known in India as the sele, king-fish, roe-ball, tapasi matchi. See Isinglass.

POLYNESIA. By modern geographers, Polynesia, in its widest extension, has been nnderstood to include the numerous islands which lie in the Pacific to the east of the Philippines, Moluccas, and Anstralia, and stretch away to within a few degrees of the west coast of America. So defined, this oceanic region has been ethnographically distributed into Melanesia, Micronesia, and Polynesia proper; but authors differ greatly in their classifications of its races, and the views of Mr. A. R. Wallace and of Mr. Keane will be found under India. Melanesia, or the area of the black or Papuan, *i.e.* frizzly-haired, population, includes Papua or New Guinea, and all that continuous insular reach south of the equator, from New Ireland to New Caledonia. Micronesia comprises the Pelew Islands, the Carolines, the Marianne or Ladrone, and the Tarawa or Kingsmill groups. Polynesia proper, extending eastward from Tarawa to Waiho or Easter Isle inclusive, and from Hawaii north to New Zealand south of the equator, comprehends the whole of the intermediate island-world, with the exception perhaps of the Fiji group. Micronesia, or the Pelew-Tarawa region, is covered by the brown race; and Melanesia is the area of the black race; and there is the intermediate and ambiguous Fiji Islands. Among the inhabitants of Polynesia proper of the ethnographical writers, a similarity of race, language, religion, customs, and government sufficiently attest identity of origin. Some ethnologists, indeed, regard it as established, that the Polynesians proper are sprung from the Malay family. This bold and enterprising people, issuing from Sumatra, their primitive settlement, founded Singhapura, A.D. 1160, and, abont a century afterwards, Malacca. The first arrival of Hindus in the Indian Archipelago, if we may trust Javanese annals, occurred about A.D. 1278. The Malay exodus from the same insular region to Polynesia is conjectured to have taken place after the Hindu influence began to prevail there, and before the arrival of the Muhammadan traders and settlers from Arabia. The presence of the black or Papuan element in the various islands of Polynesia is explicable on the hypothesis that the Indian Archipelago and Malay Peninsula were primitively inhabited by a dark race, exterminated or absorbed by a brown race of Indians, connected perhaps with the woolly-haired tribes still known to exist in the mountain range which traverses the eastern side of the Indo-Chinese Peninsula. In support of this, or a not dissimilar hypothesis, Professor Latham refers us to a proximately black variety among the existing populations of Protonesia, the Malayan Peninsula, and Indian Archipelago, from whose inferior social position and restriction to the interior and more impracticable parts of the island, he concludes that the Protonesian blacks are the descendants of the older occupants. The population of all the islands of the Pacific continental group is presumed to date from Oceanian migration, which has been laid down in the following order,—Malayan, Protonesian, Papuan, Polynesian. When Cook explored the Society Islands, they possessed 1700 war canoes, manned by 68,000 men; but now the total population of the group is said to be only 9000! Yet Mr. Wallace is of opinion that 'Polynesians may be civilised without being exterminated, if they be protected from the rude competition, the vices, and the diseases which free intercourse with the ordinary class of Europeans invariably brings upon them.' Tahiti has not enjoyed that protection, and the result is that the population is fast dwindling. Misguided missionary zeal is charged by Mr. Wallace with having contributed to this result, by forbidding the idyllic festivities of former ages. The consequence is that the fermented juice of the orange has taken the place of the indigenous dances of the past. As Tahiti is French, so the Sandwich Islands are Americanized. According to Mr. Wallace, the effects of the new civilisation have

been dubious in both. He charges part of the result on the missionaries of the Congregational denomination of the United States, for having represented Christianity as 'a severe legal Jewish religion, deprived of its dignity, beauty, tenderness, and amiability.'—*A. R. Wallace*, ii. p. 227; *Crawfurd's Dict.*; *Westminster Review*, April 1862; *Peschel*; *Earl*; *Captain Elphinstone*; *Erskine's Western Pacific.*

POLYPE or Polyp, a class of the animal kingdom. The name is from the Greek πολυπους, meaning many-footed, and usually comprises the animals of all zoophytes. Some species, like the hydra, float about in the water separately, or are, like the anemone, on rocks; but others secrete a habitation or basis, to which the term polypidom has been applied. These live in masses, formed by an aggregation of individuals. The polypary is the stem or central axis, and it is covered with a skin or membrane, partly gelatinous, partly calcareous. It is the coral of commerce. The more prominent genera are actinia, astrea, caryophyllea, corallium, hydra, isis, madrepora, meandrina, oculum, pocillopora, porita, sertularia, tubipora, and others. The polypes that make corals are chiefly Anthipathes glaberrima, Madrepora corymbosa, M. pocillifera, Gorgonia tuberculata, two species of Astrea, Leiopathes glaberrima, and L. Lamarckii. The Corallium nobilis, dredged in the Mediterranean, yields the red coral which, after pearls, is for ornamental jewellery the most precious product of the sea. Sicilian coral has fetched £10, 10s. the ounce. Tubipora musica has bright red calcareous tubes. It is used for ornament. The brain coral is called Meandrina. The walls formed by polypi are always perpendicular. The madrepora abound near the islands of the Indian and Pacific Oceans, and cover the banks and reefs near the shores, particularly M. muricata, *Linn.* When still alive in the sea, the rough surface is seen dotted with red spots, which are the polype or coral insects, and a minute examination detects thousands of them, each inhabiting permanently a little cell of its own. Many of the polype or coral insects have a little parasol-shaped cover for the head; the arms are furnished with eight claws, are long compared with the body, and are generally seen extended as if reaching for food. Some of the kinds of coral resemble gigantic plants with flowers and leaves. Some grow like a tree with leafless branches, and others spread out fan-like into broad flat surfaces. Those which build the coral reefs are not tidal animals, and require to be constantly submerged or washed by the breakers. Exposure to the sun's rays for a very short time invariably causes their destruction.—*Darwin.*

POLYPODIUM, a genus of ferns of the order Polypodiaceæ. The prominent species are:—

P. excavatum, *Roxb.*, Moluccas.
P. giganteum, Tenasserim.
P. glabrum, *Roxb.*, Bengal.
P. Horsfieldii, *R. Br.*, Penang.
P. lucidum, *Roxb.*, Nepal.
P. mucronatum, *Roxb.*, Sylhet.
P. pertusum, *Roxb.*, Sunderbuns, Tenasserim.
P. phyllitidis, *Linn.*, Chittagong.
P. proliferum, *Roxb.*, Nepal, Bengal.
P. quercifolium, *L.*, Bengal, Moluccas.
P. semisagittatum, *Roxb.*, Sunderbuns.
P. sophoroides, *Roxb.*, Moluccas.
P. tenerum, *Roxb.*, Sylhet.
P. tridactylum, *Wall.*, Khassya.
P. Wallichii, *R. Br.*, —?

A large terrestrial reed fern, with hollow stems like a reed, is often used by the natives of Tenasserim instead of quills for pens. In Calcutta, the Hindus boil the young tops of a polypodium with their shrimp curries. Hindu and Muhammadan medical men use several of the ferns in their practice.—*Hooker*, i. p. 50; *Mason.*

POLYPORUS, a genus of fungi causing dry rot. Some grow to a very large size, P. fomentarius, on poplars near Iskardo, exceeding in dimensions anything which this species exhibits in Europe.

P. authelminticus.

Thau-mo, Wa-mo, . BURM. | Chu-tan, . . . CHIN.

Grows in Chiua on bamboo. It is about the size of a pullet's egg; it is used as an anthelmintic.

P. igniarius, Chi, Ling-chi-ts'au, CHIN. Many sorts of fungi having some degree of luminosity in the dark, occur in China.—*Smith*, p. 175.

POLYRACHIS, a curious genus of ants in the eastern forests, armed with hooks, spines, points, and bristles. See Ants.

POLYSPORA AXILLARIS is very highly prized by the Chinese. It grows in the same situations with the Enkianthus reticulatus, flowers in February and March, about the time of their new year, and they bring the branches down from the hills in great quantities for the decoration of their houses.—*Fortune.*

POMACENTRUS, one of the gaudiest fish among the coral reefs; others are the Chetodon, the Balistinæ, and Glyphosodon. A Pomacentrus is of the richest azure blue; the Glyphosodon and Theropon are striped and banded.—*Colld.*

POMALI, in Timor Island, a form of the taboo.

POMEGRANATE, Punica granatum.

Rana ruman, . . ARAB.	Rumaas, ... PORT.
Ngan-shih-liu, . . CHIN.	Delunghidie, . . SINGH.
Rimnon, ... HEB.	Granadas, ... SP.
Anaar, Darim, . . HIND.	Madalum, . . . TAM.
Gangsalan, . . . JAV.	Dadima, ... TEL.
Dalima, . . . MALAY.	Nar, ... TURK.
Anaar, ... PERS.	

This shrub is common in the warmer parts of the temperate zone. Pomegranates when ripe are about the size of an orange, are covered with a hard, light-brown rind, and contain a reddish, seedy, juicy pulp. Dried pomegranates are said to be used for dyeing yellow; the rind is also a tauning substance. The pomegranate is grown throughout Southern Asia. In Kandahar, the fruit grows of large size, beautiful red colour, and of great lusciousness. There are six or seven sorts; those of Jalalabad are famous, the husk of the fruit is very acrid, and is used in dyeing, and in medicine an astringent; the root-bark has similar properties. Pomegranate peel, Shih-lui-pi, CHIN., is used in China as an astringent. Pomegranate seeds, Anardana, HIND., used in India medicinally. The root is an excellent vermifuge. The bark has been used in dyeing, and it is this which gives the colour to yellow morocco leather.

POMFRET, Stromateus argenteus.

Hulva mahi, . . DUKH. | Vowal meen, . . TAM.

The pomfret fish is much valued by Europeans in India. S. argenteus, *Bloch*, the Madras white pomfret, is in abundance, and in excellence it vies with S. Sinensis. S. niger, the black pomfret, is taken abundantly along the coasts of India, and is largely dried for export to the interior. S.

Sinensis is par excellence the white pomfret of the Straits Settlements and Madras, and 'pample blanche' of Pondicherry. It is justly renowned for its flavour, but it requires to be used when freshly taken. In the Straits and on the Coromandel coast it is abundant at all seasons. At the Sandheads in the Bay of Bengal (lat. 21° N.) it occurs, but less numerously. Dr. Russell considered it very inferior to the black or S. niger, *Bloch.* It is very abundant on the Tavoy coast, and in a smooth sea may be seen deep in the water in great numbers, but they are very shy of the hook.—*Russell*, p. 34; *Mason; Ains. Mat. Med.*

POMFRET, BULL'S EYE, Holocentrus ruber, is eaten in Ceylon.

POMPONIUS MELA, who wrote De Situ Orbis, states that in the farthest east of Asia are the Indians, Seres, and Scythians. The Indians and Scythians occupy the two extremities, the Seres are in the middle.—*Yule, Cathay*, ii. p. 153.

PON. Tam. Gold, also a sum of money; and it is used in the sense of a pagoda. It may be the source of the term Hun.

PONAM. Maleal. High land overrun with underwood.

PONANY, a river in Coimbatore, lat. 10° 19′ N.W., long. 77° 6′ W., flows into the Indian Ocean; length, 128 miles. Navigable for canoes as far as Palghat, 63 miles from the sea.

PONDICHERRY, on the Coromandel coast, the chief town of the French possessions in India, and residence of the Governor-General, is in lat. 11° 55′ 57″ N., long. 79° 52′ 33″ E.; population, 156,094. Pondicherry was founded by Martin in 1674, and afterwards became the seat of the French Government in India. It was taken by the Dutch in 1693, but it was restored at the peace of Ryswick. In 1748 the British besieged, and on 14th January 1760 Colonel Coote took it, to be restored in 1763. The British took it again, and restored it in 1783; again captured it in 1778, to be restored 1785; recaptured 1793, and restored 1816. It is surrounded by the Cuddalore taluk of South Arcot district, Madras. Pondicherry consists of three districts; that of Pondicherry is composed of the town and eleven villages, that of Villanur having forty-five villages, and that of Bahur thirty-six. The most important streams that run through the territory of Pondicherry are Ginji, which is fed by the Arincoupom and the Chonnambar rivers, and the other is the Ponnear.

PONDIGUL SLATE, a black monumental marble, procurable in any quantity at Pondigul.

PONERIDÆ. *Smith.* A family of ants of the order Hymenoptera, comprising the genera—

odontomachus, *Latr.*	pseudomyrma, *Gurc.*
typhlopode, *Westw.*	atta, *St. Farg.*
myrmica, *Latr.*	pheidole, *Westw.*
ponera, *Latr.*	meranoplus, *Smith.*
crematogaster, *Land.*	cataulacus, *Smith.*

In the genus Ponera the neuters and females are armed with a sting. Dr. Jerdon mentions P. affinis, processionalis, pumila, rufipes, sculpta, stenochellos.

P. processionalis lives in the ground in very numerous societies; frequent in jungly districts. Occasionally a vast column of them, three or four deep, may be seen crossing a road, and the column can be traced for 40 and 50 yards. It stings very severely.

P. sculpta is the commonest ant in Malabar, from the level of the sea up to the top of the Neilgherries. It lives in the ground in small societies, often making its nest in a flower-pot, occasionally under a large stone. It does not work in concert, being generally seen solitary. It lives on animal substances, but apparently will also take vegetable matter, and fight for a ripe seed of the Lantana.

PONG, a once powerful dynasty of the Tai race, finally overthrown by Alompra in the middle of the 18th century. See Tai.

PONGAMIA, a genus of plants, mostly trees, of the order Leguminosæ, section Dalbergiæ. The following East Indian species are known:—

P. glabra, *Vent.*, British India, Burma.
P. marginata, *Grah.*, Khassya.
P. uliginosa, *D.C.*, Pen. India, Pen. Malacca, Bengal.
P. sericea, *Vent.*, Java.
P. heterocarpa, *Wall.*, Burma.
P. atropurpurea, *Wall.*, Burma.
P. ovalifolia, *W. and A.*, Peninsula of India.
P. elliptica, *Wight's Ic.*

PONGAMIA ATROPURPUREA. *Wall.* This is a very large tree, very common about Moulmein, abundant in the Tenasserim provinces, and though vastly inferior to a multitude of others, Wallich thought it of sufficient beauty to give it a place among his splendid engravings of rare Indian plants. Flower a beautiful purple. — *Mason; Malcolm's Tr.*

PONGAMIA GLABRA. *Vent.*

Galedupa Indica, *Roxb.*

Tha-wen, . . . Burm.	Sook-chain, . . . Panj.
Kanuga, Kongay, . Can.	Mogul karanda, . Singh.
Karanj, ... Hind.	Pongam, ... Tam.
Papree, Paphri, Kamaon.	Kanuga, ... Tel.
Rara, ... Kangra.	

This graceful tree grows all over India, attaining a height of 40 to 50 feet, and has beautifully varnished green leaves all the year round. It is excellent for avenues. The boughs and leaves are extensively used as a strong manure, for sugar-cane especially. The wood is light, tough, and fibrous, coarse and even grained, of light yellowish-brown colour, not easily worked, nor giving a smooth surface; it is improved in strength and colour by being seasoned in water; a cubic foot unseasoned weighs 48 to 55 lbs., and 40 lbs. when seasoned; sp. gr. ·640. It is used for a variety of purposes, and the solid wheels of the Waddars' carts are often made of it. The bitter oil from the seeds is much used on the Bombay side in the manufacture of native felt, and has great curative powers in itch and mange. It solidifies at 55°, is of a pale brownish colour, has a slight smell, which becomes more evident in the darker coloured samples. It is used for burning in native lamps, and in large quantities for boiling with dammer to soften it for the seams and bottoms of ships. A maund of seeds costs 1½ rupees, and the extraction of the oil by heat costs 8 annas. The oil produced amounts to 6¾ seers per maund.—*Wight; Voigt; Gibson; Cleghorn; Beddome*, p. 23; *M. E. J. R.; Mr. Thomson; Powell; Gamble.*

PONGOL, the first day of the Tamil year, a Tamil festival, about the 11th January, when the sun enters Capricorn, and is the greatest of the unsectarian festivals of the Hindus. The Pongol is nothing else but the pagan feast for the birth of Mithras. The last presents the allegory of the regeneration of the sun, and that of Pongol is for the return of this planet. The renewal of the

solar year has been always celebrated with great solemnity among all nations. It is the Sankranti or Maha Sankranti of other Hindus. The festivity lasts three days, during which the Hindus employ themselves somewhat in the same manner as the Europeans do on the first day of the year. To the Hindus the feast of the Pongol is a season of rejoicing, for two special reasons. The first is, that the month of Magha, *i.e.* December—January, every day in which is unlucky, is now over; and the other, that it is succeeded by a month, each day of which is lucky. For the purpose of averting the evil effect of the baleful month of Magha, about four o'clock in the morning the Sanyasi ascetics go from door to door of every house, beating on a plate of iron or copper, which produces a piercing sound. All who sleep, being thus roused, are counselled to take wise precautions, and to guard against the evil presages of the month, by expiatory offerings and sacrifices to Siva, who presides over it. With this view, early morning, the women scour a space of about 2 feet square before the door of the house, upon which they draw several white lines with flowers, and upon these they place several little balls of cow-dung, sticking in each a citron blossom. These little balls are probably designed to represent Vighneswara, the remover of obstacles, whom they desire to propitiate with the flowers. Each day these little lumps of cow-dung, with their flowers, are picked up and preserved in a private place, till the last day of the month Magha; and when that comes, the women, who are alone charged with this ceremony, put the whole in a basket, and march from the house, with musical instruments before them, clapping their hands, till they reach some waste place, where they dispose of the relics. Then, with the first day of the new month begins the festival, the first day of which is called the Bhogi Pongol, *i.e.* Indra's Pongol, and it is kept by inviting the near relations to an entertainment, which passes off with hilarity and mirth. The second day is called Surya Pongol, *i.e.* Pongol of the sun, because it is set apart in honour of the sun. Married women, after purifying themselves by bathing, which they perform by plunging into the water without taking off their clothes, and coming out all wet, set about boiling rice with milk in the open air, and when it begins to simmer, they make a loud cry, all at once repeating the words Pongol! Pongol! it boils! it boils! The vessel is then lifted off the fire, and set before the idol Vighneswara, which is placed close by, and, after having been offered to the image, part of the rice is given to the cow, and the remainder distributed among the people. This is the great day of visits among the Hindus. The salutation begins with the question, 'Has the milk boiled?' to which the answer is, 'It has boiled;' and from this the festival takes its name Pongol, *i.e.* boiling. The third day is called the Madu Pongol of cows. On it they mix, in a great vessel filled with water, some saffron, cotton seeds, and leaves of the margosa tree; and then, going several times round all the cows and oxen belonging to the house, they sprinkle them with the water, as they turn to the four cardinal points; and make the Hasht-anga, or prostration of the eight members, before them four times. This ceremony is performed by the men only. Next, the cows are all dressed out, their horns being painted with various colours, and garlands of flowers and foliage put round their necks and over their backs. They likewise add strings of cocoanuts and other fruits, which are soon shaken off by the brisk motion of the animals which these trappings occasion, and are picked up by children and others, who follow the cattle on purpose, and eagerly eat what they gather, as something sacred. The cattle then, being driven in herds through the villages, and made to scamper about from side to side by the jarring noise of many sounding instruments, are during the remainder of the day allowed to feed at large without a keeper, and whatever trespass they commit is suffered to pass without notice or restraint. At the conclusion of the festival, they take the idols from the temples, and carry them in pomp to the place where the cattle have been collected. The Deva-dasa singing girls of the temple are also present. On the eve of the celebration of the festival, houses are cleaned, broken roofs are repaired, the rude external decorations of the walls are painted afresh, and the sacred signs of the Vaishnava are carefully picked out above the threshold. The potter plies his wheel incessantly, for every Hindu house must be furnished with new utensils. The rice-man is busy with cadjan and style, buying up new grain from needy cultivators, for in every house new rice only may be used. Parents who during the past year have given a daughter in marriage, and seen her settled in her new house, send her large quantities of grain, fruits, and household stuffs, that the Pongol may be kept without touching the small capital of the young couple.—*Garrett.* See Pola.

PONNI-AMMAN, a local goddess, worshipped at Madras for protection against cholera. In Tamil the name means golden mother.

PONTEDERACEÆ, a natural order of plants, natives exclusively of North and South America, the East Indies, and tropical Africa. Some of the species of Pontedera are employed by Indian practitioners in liver complaints and diseases of the stomach. Rubbed down in butter and drank, they are said to remove redness of the eyes; powdered and mixed with sugar, to relieve asthma; and when chewed, to remove toothache; brayed with milk, some are administered in fever and some eaten as pot herbs. Roxburgh describes P. dilatata, hastata, plantaginea, sagittata, and vaginalis.—*Roxb.*

POOAH or Poee is the Kienki fibre of the Lepchi, and the Yenki of the Limboo. It is the Urtica frutescens, *Thunberg;* grows in Nepal to the height of 6 or 8 feet. Its fibre, when properly dressed, is quite equal to the best flax of Europe, being used for fishing-nets, game-bags, twine, and ropes; is considered well adapted for making cloth and canvas, has great strength, and endures wet well. It is cultivated, but grows wild and abundantly in the valleys throughout the mountains of Eastern Nepal and Sikkim, at the foot of the hills striking the Terai, to the elevation of 1000 to 1200 feet, and within the mountains up to 3000 feet. It does not grow in the forest, but is chiefly found in open clear places, and in some situations overruns the abandoned fields of the hill people, within the elevations which suit it. It sheds its leaves in the winter, throws them out in April and May, and flowers and seeds in August and

September, the exact period altering of necessity with the elevation. D. Don described from Nepal, Boehmeria frondosa, macrophylla, platyphylla, and ternifolia; also B. salicifolia, from the Himalaya and Moluccas. B. interrupta, *Willde.*, is the lal bichuti of Bengal, and B. Hamiltoniana, Malabarica, nivea, rugulosa, and Travancorica occur.—*Voigt; Royle*, p. 368. See Boehmeria; Fibrous Plants.

POOD or Poot, a Russian weight = 35¾ lbs.

POOEY or Pway. Burm. A theatrical performance. It has a full orchestra, the patshaing or drum harmonicon, a circular tub-like frame about 30 inches high and 4½ feet in diameter, and with 18 or 20 drums fastened around it. The Burmese amusements are boat and horse races, the pooey drama, music, cock-fighting, gambling, boxing, football.

POON, Puhn, or Peon, a commercial term, derived from the Malay language, but applied by natives of India and Europeans to the timber of several distinct trees used for masts and spars. Dr. Roxburgh says, Calophyllum angustifolium, a native of Penang and of countries eastward of the Bay of Bengal, yields the straight spars commonly called Poon, which in those countries are used for the masts of ships, and Drs. Gibson and Cleghorn were also of this opinion. It occurs in Penang, Coorg, Mysore, Canara, and along the ghats northwards to Sawuntwari, but rarely of any great size beyond the line of the Nilcoond ghat. It is a magnificent tree when growing in the ravines of the southern ghats of Canara. In habit and appearance, Dr. Gibson says, it is totally distinct from C. inophyllum. At the Madras Exhibition of 1855, Dr. Cleghorn in the Jury Reports, noticing Sterculia fœtida as a large tree in Mysore and the western coast of the Peninsula, adds that it is one of the trees believed to furnish the smaller poon spars, and Major Drury, in Useful Plants, repeats this. Calophyllum inophyllum grows in the western parts of Ceylon, where it is employed for the masts and cross sticks of Yettra dhonies and fishing-boats and poles of bullock carts. A cubic foot of it, there, weighs 40 lbs. In the alpine forests it attains a great size, and furnishes the poon spars so valuable for shipping. The weight of a cubic foot of the following poon trees is stated as under:—

Calophyllum inophyllum, 26–45 lbs.	C. tomentosum, 32–38 lbs.
C. polyanthum, 38–44 ,,	C. Wightianum, . 45 ,,
C. spectabile, . 38–39 ,,	Dillenia pentagyna, 45–70, ,,
	Sterculia fœtida, . 28 ,,

The impossibility at present of tracing the particular trees noticed by Edye under his description of the poon of commerce, reduces the value of his observations.

POONA, a town and military cantonment in the Dekhan, which gives its name to a revenue district, lying between lat. 17° 54′ and 19° 23′ N., and between long. 73° 24′ and 75° 13′ E., with an area of 5348 square miles; population in 1881 was 900,621. It is above the ghats, and about 119 miles south-east from Bombay. The provinces of Aurangabad and Bijapur are arranged into two divisions, termed the Poona and the Southern districts, the latter with its headquarters at Belgaum. From July to November, Poona city is the seat of the Government of Bombay. It is in lat. 18° 30′ 23″ N., long. 73° 55′ 33″ E., and is about 1840 feet above the sea. The annual fall of rain is 25 inches, the mean temperature is from 55° to 96°, and the rock is greenstone and greenstone amygdaloid. One of the finest views of the city and the surrounding country is to be obtained from the fort of Parbattiah, once a Mahratta stronghold, now famed for its Hindu temple. The approach leads through a shady avenue of tamarind, mango, and cocoanut trees, to a small lake with an island, clothed with fruit trees to the very margin of the calm and glassy water, in which are reflected the broad leaves of the plantain and palm, festooned with a woodbine-like creeper. This place, until the year 1817, was the city in which the Peshwa rulers of the Mahrattas resided. A battle was fought there between the British and the Peshwa on the 16th November 1817, and the city was taken on the 19th November. The population of the city in 1872 was 90,437. The cultivators are chiefly Kunbi and Mali; the Brahmans are numerous, the Muhammadans in the district about 40,000, Parsees 1263, and Jews 281. The predatory tribes are the Ramusi, Bhil, and Koli, and the menials are the Dher, Mhair, and Mhang.

POONAC. Tam. A name for the cake left after expressing the oil from the cocoanut pulp. It is used as manure and for feeding stock.

POONAMALLEE, a military station 13 miles due west of Madras. An old fort stands about 400 yards east of the barracks, and the pettah is on the S.E.

POOREE, a town and district of the province of Orissa. The town is in lat. 19° 48′ 17″ N., long. 85° 51′ 39″ E. It is 250 miles S.W. from Calcutta, and 595 miles N. of Madras. Pooree town is celebrated for its famed temple of Jaganath. It stands on a low, sandy, hilly ridge. It has a population of 22,695. The great pagoda at the S. of the town is 180 feet high.

POPE, Pape, Papst, Papa, Fr., Ger., It., Sw., is the title of the religious sovereign of the Romish sect of Christians. The whole number of Popes from St. Peter to Pius ix. is 257. Of these, 82 are venerated as saints, 33 having been martyred; 104 have been Romans, and 103 natives of other parts of Italy; 15 Frenchmen, 9 Greeks, 7 Germans, 5 Asiatics, 3 Africans, 3 Spaniards, 2 Dalmatians, 1 Hebrew, 1 Thracian, 1 Dutchman, 1 Portuguese, 1 Candiot, and 1 Englishman. The name most commonly borne has been John; the 23d was a Neapolitan, raised to the chair in 1410. Nine pontiffs have reigned less than 1 month, thirty less than 1 year, and eleven more than 20 years. Only five have occupied the pontifical chair over 23 years. These are, St. Peter, who was Supreme Pastor 25 years 2 months 7 days; Silvester i., 23 years 10 months 27 days; Hadrian i., 23 years 10 months 17 days; Pius vi., 24 years 8 months 14 days; Pius ix., who celebrated his 25th year in the pontifical chair, June 16th, 1871. Alexander vi., Pope of Rome, on the 4th May 1493, arranged the world into two hemispheres, and decreed that all lands discovered in the eastern half should belong to the Portuguese, all in the western half to the Spaniards. In a treaty between Spain and Portugal, dated 7th June 1494, the demarcation line was drawn 370 leagues west of the Cape de Verde Islands.

POPHAM, Sir HOME. A naval officer of the British service, employed in 1802 as ambassador to the States of Arabia.

POPLAR.

Poppeltræ, . . .	Dan.	Populus, ...	Lat.
Popelier, ...	Dut.	Choupo, Alemo, .	Port.

Trees of the Populus genus of plants grow in Europe and in the colder parts of S. Asia. The aspen, P. tremula, is found in the valley of the Yang-tze and other parts of China. The Euphrates poplar, P. Euphratica, grows in the Panjab, as also does P. alba, the white poplar; the balsam poplar, or P. balsamifera; the Himalayan poplar, P. ciliata; the Italian poplar, P. nigra. See Populus.

POPPY, Papaver somniferum.

The poppy is cultivated in Europe, Egypt, Central Africa, Asia Minor, Persia, in British India, and in China, for its products, viz. the opium or concrete juice, its capsules or poppy heads, the seed, and poppy seed oil; but of these opium is by far the most important, bringiug to British India an annual revenue of six or seven millions sterling. The plant on its growth is liable to be attacked by several insects.

Opium is obtained from the poppy in Asia Minor, Egypt, Persia, S.E. of Asia, and in China. It is used as a narcotic and soporific, and morphia and other drugs are prepared from it. In medicine the capsules are employed in fomentations for inflamed surfaces, and a syrup is prepared from them to allay cough, etc. In Upper India an intoxicating liquor is prepared by heating the capsules of the poppy with jagari and water.

The seeds yield by expression about 50 per cent. of a bland and very valuable oil, of a pale golden colour, fluid to within 10° of the freezing point of water. It dries easily, is inodorous, of agreeable flavour, and partially soluble in alcohol. By exposure to the rays of the sun in shallow vessels, the oil is rendered perfectly colourless. It is expressed in India by the common stone mill. Poppy seed is eaten by the natives made into sweetmeats, provided the opium has been extracted from the seed-vessel, otherwise it is bitter and narcotic, and under these circumstances the oil extracted is also bitter. The oil is used for cooking and burning. Poppy seed is being largely exported from India, chiefly to France and Great Britain.

POPULATION OF THE EARTH. The estimates must be little better than guesses for Africa. For this continent Dr. Rohlfs maintains that an estimate of 100 millions is quite enough, while Behm and Wagner retain the old figure of 200 millions with considerable hesitation. For China, the most varied estimates have been given, from 200 to 500 millions; and Behm and Wagner have come to the conclusion that hitherto there have been over-estimations of the population of this vast empire; so that, instead of a population of 434¼ millions (including Corea), they reduce it to 379½ millions.

According to the latest data, the following are the areas and populations of the various continents, with the number of inhabitants per square kilometre:—

	Sq. Kilo.	Population.	No. per sq. Kilo.
Europe, ...	9,730,576	327,743,400	34
Asia, ...	44,580,850	795,591,000	18
Africa, ...	29,823,253	205,823,200	7
America, ...	38,473,138	100,415,400	2·6
Australia & Polynesia,	8,952,855	4,232,000	0·5
Polar Regions, . .	4,478,200	82,500	—
Total, . . .	136,033,872	1,433,887,500	10·5

Europe, its area and populations.—Germany, 1880, 540,496 sq. kil., 45,234,061 inhabitants; Austria, 1880, 299,984 sq. kil., 22,144,244 inhabitants; Hungary, 1880, 322,628 sq. kil., 13,695,184 inhabitants; Holland, 1880, 32,999 sq. kil., 4,060,580 inhabitants (estimate); Luxemburg, 1880, 2587 sq. kil., 209,570 inhabitants; Belgium, 1879 (estimate), 5,536,654 inhabitants; Great Britain and Ireland, 1881, 314,951 sq. kil., 35,246,562 inhabitants; Switzerland, 1880, 413,390 sq. kil., 2,846,102 inhabitants; France, 1881, 528,571 sq. kil., 37,321,186 inhabitants; Spain, 1877, 508,093 sq. kil., 16,625,860 inhabitants; Portugal, 1878 (including Azores and Madeira), 92,828 sq. kil., 4,550,699 inhabitants; Italy, 1881, 288,539 sq. kil., 28,452,639 inhabitants; Greece, 1882 (estimate), 64,688 sq. kil., 1,979,423 inhabitants; Roumania, 1881, 129,947 sq. kil. (estimate), 5,376,000 inhabitants (official); Servia, 1881 (estimate), 48,582 sq. kil., 1880 (estimate), 1,700,211 inhabitants; Montenegro, 1882 (estimate), 9030 sq. kil., 236,000 inhabitants (official estimate). Turkey—I. Immediate Possessions, 1882 (estimate), 165,438 sq. kil., 4,490,000 inhabitants; East Roumelia, 1880, 35,901 sq. kil., 815,513 inhabitants; Bulgaria, 1881, 63,865 sq. kil., 1,998,983 inhabitants; Bosnia, Herzegoviua, and Novi Bazar, 1879, 61,065 sq. kil., 1,326,453 inhabitants. Including the tributary island of Samos, the area of the Turkish possessions in Asia is 1,899,069 sq. kil. and the population 16,357,000. Thus the total area of Turkey in Europe and Asia is 2,225,445 sq. kil. and population 24,987,000. Denmark, 1880, 38,440 sq. kil., 1,969,039 inhabitants (Faroes, 1333 and 11,220, Iceland, 104,785 and 72,438, Greenland, 88,100 and 10,000, Danish Antilles, 358 and 33,763),—total Danish kingdom, 233,000 sq. kil., 2,096,400 inhabitants; Sweden, 1880, 450,574 sq. kil., 4,565,668 inhabitants; Norway, 1880, 325,422 sq. kil., 1,913,500 inhabitants; Russia, 1879, 5,427,124 sq. kil., 83,626,590 inhabitants, whereof Europeau Russia has 4,888,713 sq. kil. and 74,493,809 inhabitants, Poland 127,310 and 7,104,760, Finland 373,603 and 2,028,021, Sea of Azof 37,496 sq. kil. Russia iu Asia has had changes of boundary between Russia and China in Kuldja and in the Black Irtysh; the formal annexation of the Tekke-Turkoman region; the adjustment of the boundary between Russia and Persia iu the Trans-Caspian region. The general result for Russia in Asia is as follows:—The Caucasus, 472,666 sq. kil., 5,546,554 inhabitants; Trans-Caspian territory, 327,068 sq. kil., 203,000 inhabitants; Siberia, 12,495,109 sq. kil., 3,911,200 inhabitants; Central Asia, 3,017,760 sq. kil., 5,036,000 inhabitants. Asiatic Russia has thus an area of 16,312,604 square kilometres and a population of 14,696,750; adding to this the figures for Russia in Europe, we have the total area of the Russian Empire as 21,739,728 square

kilometres, and the population 98,323,000. For the independent Turkoman region, Behm and Wagner give an area of 206,500 sq. kil. and a population of 450,000; for Khiva, 57,800 sq. kil. and 700,000 inhabitants (the estimate of 1873); and Bokhara (including Shignan, Roshan, Karategin, etc.), 239,000 sq. kil. and 2,130,000 inhabitants.

Arabia, 3,156,600 sq. kil. (including Sinai and the Syrian Desert) and 5,000,000 inhabitants; of this, an area of 2,507,390, with a population of 3,700,000, is independent of Turkey.

Persia.—Area is given as 1,647,070 sq. kil.; the population on an estimate by General Schindler in 1881, is given as 7,653,000.

Afghanistan.—Area, 721,664 sq. kil., and a population of 4,000,000 (including Wakhan, Badakhshan, Kundnz, Chalum, Balkh, Maemana, and Herat).

Kafiristan has an area of 51,687 sq. kil., and Behm and Wagner accept Major Raverty's estimate of 100,000 families, or 500,000 inhabitants.

The figures, then, are — for China proper, 4,024,690 sq. kil. and 350 million inhabitants; and for the tributaries of Manchuria, Mongolia, Tibet, Zangaria, and East Turkestan, 7,531,074 sq. kil. and 21,180,000 inhabitants,—in all, for the Chinese Empire, 11,555,764 sq. kil. and 371,200,000 inhabitants. With regard to Corea, the area is stated as 236,784 sq. kil. As to its population, the most varied estimates have been given,—from 7½ millions to 15 millions; Messrs. Behm and Wagner estimate 8½ millions.

The area of Japan, 1881, and its dependencies (the Kuriles, Loo-Choo, and Benin Islands) 382,447 sq. kil., and the population 36,357,212.

The total area ruled by Britain in India, including Tributary States and Further India, is 1,457,244 square miles (3,774,193 sq. kil.), and the population 252,541,210.

Nepal, Bhutan, etc., States.—The area of 234,000 sq. kil. is given, and a population of 3,300,000; French possessions, 508 sq. kil., population (1879) 276,649; Portuguese possessions, 3355 sq. kil., population (1877) 444,987; Ceylon, 24,702 sq. miles (63,976 sq. kil.), and the population (1878) 2,606,930.

In Further India — British Burma, 229,351 sq. kil., 3,707,646 inhabitants; Manipur, 19,675 and 126,000; people east and south of Assam, 65,500 and 200,000; Burma, 457,000 and 4,000,000; Siam, 726,850 and 5,750,000; Annam, 140,500 and 21,000,000; French Cochin-China, 59,456 and 1,597,013; Cambodia, 83,861 and 890,000; Independent Malacca, 81,500 and 300,000; Straits Settlements, 3742 and 390,000.

Islands.—Andamans, 6497 sq. kil. and 14,500 inhabitants; Nicobars, 1772 sq. kil. and 5500 inhabitants; Sunda Islands and Molnccas, 1,693,757 sq. kil. and 28,867,000 inhabitants; Philippines, 296,182 sq. kil. and 6,300,000 inhabitants. Dutch possessions (including New Guinea and the Papuan Islands), 1,462,400 sq. kil., 27,962,000 inhabitants. For the British territory of North Borneo an area of 57,000 sq. kil. is given, and a population of 150,000.

For Australasia the census figures of 1881 are as follows for population:—New South Wales, 751,468; Victoria, 62,346; Queensland, 213,525; South Australia, 279,865; West Australia, 31,000. Total — Australia, 2,138,200, or, with 55,000 natives, 2,193,200; Tasmania, 115,705; New Zealand, 489,933.

To New Guinea an area of 785,362 sq. kil. is assigned (or, with the neighbouring islands, 807,956), and a population of 500,000. Of Oceanic Islands, the Society Islands (Tahiti, Moorea, etc.), the Tuamotu and Gambier groups, and other Pacific islands, have been annexed by France, and Rotumah has been taken over by Britain. For Fiji, the population at the end of 1880 is given— 121,884. Melanesia, 145,855 sq. kil., 617,400 inhabitants; Polynesia, 9791 and 121,500; Sandwich Islands, 17,008 and 57,985; Micronesia, 3530 and 91,600. Total—Oceania, 176,184 sq. kil. and 888,500 inhabitants.

Morocco is given 812,332 sq. kil. and 6,140,000 inhabitants. Recent changes in the administrative divisions are noticed, and the total area given is 667,065 sq. kil., with 2,867,626 inhabitants (1877). For 1880, the area of the Civil Territory stands at 73,835 sq. kil., and its population 1,882,124. Tunis, under French protection, has an area of 116,348 sq. kil. and population 2,100,000. Tripoli, Fezzan, and Barka have an area of 1,033,349 sq. kil., and a population of 1,010,000. The Sahara, outside the Mediterranean and Soudan States, is credited with an area of 6,180,426 sq. kil., and a population of 2½ millions.

Egypt proper has now an area of 935,275 sq. kil., and a population of 5,583,774; adding to this the Libyan Oases and the Egyptian Soudan, the whole of the territory under the Khedive covers an area of 2,986,900 sq. kil., with a population of 16,400,000. For the States of Central Soudan (Wadai, Bagherini, Bornu, Kanem, Socota, etc.), there is the total area 1,714,984 sq. kil., with a population of 31,800,000. For the French possessions in Senegambia, the population is given as 192,924 for 1879; but this does not include the extensive territory in the Upper Niger brought under French protection in 1881. For Sierra Leone the population of the census of 1881 is given — 60,546; Lagos (1881), 75,270; Gold Coast (1872), 408,070. Liberia is given an area of 37,200 sq. kil., and a population of 1,050,000, of whom, however, only 18,000 can certainly be regarded as civilised. For Abyssinia 333,280 sq. kil. and 3,000,000 inhabitants are given; while Galla and Somali Lands have an area of 1,897,000 sq. kil., and a population of 15½ millions. All the countries in the region of the Great Lakes are classed together as the Equatorial Regions; those north of the equator having an area of 2,254,980 sq. kil. and a population of 27,000,000, and those south of the equator 1,717,900 sq. kil. and 20,000,000 inhabitants.

In S. Africa, the Portuguese possessions on the west coast are given as 809,400 sq. kil. and the population 9,000,000, and on the east coast 991,150 sq. kil. and only 1,000,000 inhabitants. The independent States in South Africa are Muata Janvo's kingdom, Kasongo's, Marute Mabunda, Matabele Land, Swasi Land, Orampo Land, etc., the total area being stated as 6,255,082 and the population 16,296,350.

The figures for British South Africa are:—Cape Colony, 199,950 square miles, 780,757 inhabitants (1880); Basutoland, 9720 and 128,176 (1875); West Griqualand, 17,491 and 45,277 (1875); Transkei, 15,573 and 409,944; Natal, 18,750 and 364,338 (1880);—total, 261,484 square miles, 1,728,492 inhabitants.

Transvaal is estimated at 285,363 sq. kil. and

the population (1881) 816,960, of whom 40,000 are white. The calculated area of the Orange Free State is 107,439 sq. kil.; the population of 1880 was 133,518, of whom 61,022 were white.

The African islands area in the Atlantic is 15,801 sq. kil. and the population 572,600; in the Indian Ocean, 610,141 sq. kil. and 4,330,000 inhabitants.

America.—Its areas and populations of 1881 are—Ontario, 107,780 sq. miles and 1,923,228 inhabitants; Quebec, 193,355 and 1,359,027; New Brunswick, 27,322 and 321,233; Nova Scotia and Cape Breton, 21,731 and 440,572; Manitoba, 150,000 and 65,954; Prince Edward Island, 2173 and 108,891; British Columbia, 355,999 and 49,459; Territories, 2,346,983 and 56,446;—total, 3,205,343 sq. miles and 4,324,810 inhabitants. Newfoundland has an area of 42,734 sq. miles, and population in 1881, 181,753. The French possessions in North America (St. Pierre, Ile-aux-Chiens, and Miguelon) have an area of 235 sq. kil. and a population (1879) of 5224. The total area is stated at 3,602,990 sq. miles, and the total population 50,442,066.

For Mexico the area is 1,945,471 sq. kil.; the population is stated to be 9,577,279.

For the Central American States the figures are —Guatemala, 121,140 sq. kil., 1,252,497 inhabitants (1881); Honduras, 120,480 and 350,000; British Honduras, 19,585 and 24,710; Salvador, 18,720 and 554,785 (1878); Nicaragua, 133,800 and 300,000 (1877); Costa Rica, 51,760 and 185,000 (1874); Panama State, 81,823 and 224,600 (1870);—total, 547,308 sq. kil. and 2,891,600 inhabitants.

The total area of the West India Islands is 244,478 sq. kil., and the population (mostly that of 1879–81) 4,617,450. The British possessions have an area of 34,500 sq. kil. and a population of 1,206,522. Guiana is divided as follows:—French, 121,413 sq. kil. and 36,000 inhabitants (1879); Dutch, 119,321 and 63,525 (1879); British, 221,243 and 248,110 (1879). Against other South American States are the following figures:—Venezuela, 1,137,615 sq. kil., 2,675,245 inhabitants (1881); Colombia, 830,670 and 3,000,000; Ecuador, 643,295 and 946,033, besides 200,000 wild Indians; Peru, 1,119,941 and (1876) 3,050,000; Bolivia (without considering probable results of recent war), 1,297,255 and 2,325,000; Chili (including results of recent division of Patagonia and Tierra del Fuego between Chili and the Argentine Republic), 537,187 and 2,420,500; Argentine Republic, 2,835,969 and 2,540,000 (1880); Uruguay (1880), 186,920 and 438,245; Paraguay, 238,290 and 293,844; Brazil, 8,337,218 and 11,108,291.—*Times.*

POPULUS ALBA. *Linn.* White poplar.

Rikkan, CHEN., KANGRA.	Chita bagnu, . JHELUM.
Prasti, Sannan, ,,	Fras, Jangli frast, KANGRA.
Chanuni, . . . ,,	Mal, . SUTLEJ, KANAWAR.
Safeda, Baid, . HIND.	Spelda, Sperda, TR.-INDUS.

The white poplar is found in the Sutlej valley between Rampur and Sungnam. It grows to a considerable size in parts of the basins of the Jhelum and Chenab, and is occasional on the Sutlej, ranging from 4000 to 8500 feet, reaching 9000 in Tibet. Trees of 6 and even 8 feet in girth and 50 or occasionally 70 in height are seen, but they are mostly considerably smaller than these sizes. The tree is also common, planted, in parts at least of Afghanistan (Thomson); is not uncommon, planted, at Peshawur, and grows at Lahore. The tree grows to a large size in Pangi, and is used for roofing in Ladakh and Lahul. It is propagated by cuttings. The timber is white and soft, but not strong or durable, and is not valued. In Afghanistan it (with perhaps that of P. fastigiata) is used for manufacturing the round boxes in which grapes are exported to India.

POPULUS BALSAMIFERA. *Linn.*

Yarpa, ... CHENAB.	Berfa, Makal, . LADAKH.
Balsam poplar, . . ENG.	Maal, Changma, . PANGI.

On the Chenab river, both Populus balsamifera, 'yarpa,' and P. nigra are planted near villages, but in much smaller numbers than the willow. Dr. Stewart says P. balsamifera is common, planted in Lahul at 9000 to 10,000 feet, and in Ladakh up to 14,000 feet, in Spiti to 12,500 feet. Aitchison mentions that in Lahul it is never cut, as it is supposed to be the abode of the dewa (deity), and festivals are held under some of the finer specimens, which reach 50 feet in height. In Ladakh they reach 60 or 70 feet, and Dr. Stewart had there noted a plank of the wood 2½ feet broad, and seen one tree of 9 feet girth.

POPULUS CILIATA. *Wall.*

Chalonwa, BEAS, SUTLEJ.	Bagnu, Phalja, . JHELUM.
Rikkan, Ban-frastu, CHEN.	Sulali, Dudfras, KANGRA.
Flassu, Chanun, Pabe, ,,	Palach, Falah, . PANJAB.
Pahari pipal, . HIND.	Phalja, ... ,,
Safeda, ... ,,	Chalon, Tallon, Falsh, RAVI.
Shawa, . . JHELUM.	Kramali, . . . SUTLEJ.

This grows in the Sutlej valley between Rampur and Sungnam at an elevation of 6000 feet. It is common wild in the Panjab Himalaya up to the Indus at from 4000 to 10,000 feet; occasionally reaching 10 feet in girth, and, from its leaves resembling those of the pipal, Ficus religiosa, is frequently called by that name by men from the plains. The wood is soft and not valued, but is used for water-troughs, and in Hazara occasionally for gun-stocks. In some places the leaves are given as fodder. There is a plentiful floss round the seeds, the coma of which has at times been recommended for paper-making, etc.

POPULUS EUPHRATICA. *Oliv.*

Hodung, Hotung, LADAKH.	Bahan, PUSH., SUT., T.-IND.
Bhan, Labhan, . PUSHTU.	Safeda, Sperawan, ,,

The tree of the banks of Euphrates, has been found by Griffith, Stocks, and others on the banks of the Chenab and Indus, in Sind and Multan, also at intervals along the valley of the Indus, within the mountains, but it appears to be far from common there, and to confine itself to hot, sandy places. In several parts of Nubra it is common enough, but only, so far as Dr. Thomson observed, on the south side of the Shayuk. It is thus remarkable for its extended distribution. This is also remarkable for the very changeable shape of its leaves, which vary from broadly deltoid and coarsely toothed to narrow linear and quite entire. The leaves of the full-grown tree are generally broad and much toothed, while young plants have very narrow leaves; the shoots of pollard plants, which are common, the tree being much used for fuel, are also narrow. The wood being white (and so not flesh-coloured) is preferred for constructive purposes by Hindus, and for the same reason the twigs are used by this them as tooth-sticks. They are exported for that

purpose. In Siud and Hyderabad lacquered work-boxes are made of it, and it is used in turnery. The wood is rarely used for boats in Sind, but is said to be largely so employed on the Euphrates. It is also employed for fuel in the south (in part even for steamers, although from its lightness it is not very suitable); and in parts of Tibet, where it grows up to 10,500 feet, it furnishes much firewood. In Sind the bark is given as a vermifuge, and the liber is employed as a gun-match. It is common in clumps on the Sutlej bank, but does not grow large, and is generally crooked. It flowers in February, and throws up root-shoots with great rapidity. The wood is objected to for steam fuel, owing to the great emission of sparks, which endanger the awnings.

POPULUS NIGRA. *Linn.*

Var. P. pyramidalis.

Frast, Prast, Farsh, CHEN.	Changma, . . LADAKH.
Mokhal, Paskhu, . ,,	Yarpa, Yulatt, . ,,
Italian poplar, . . ENG.	Kabool, Kaool, . ,,
Safeda, . . . HIND.	Kramali Biuns, . SUTLEJ.

This tree is commonly planted in Kashmir, on the Chenab, at from 3000 to 11,500 feet, and on the Sutlej and in Ladakh to 13,300 feet. It is common in Afghanistan, grows luxuriantly in Kashmir, where trees with 6 to 12 feet of girth, and from 90 to 100 feet high, are to be seen; a spirit is distilled from the bark.

POPULUS SPINOSA. *Smith.* Yan-yang-hoh, CHIN. A plant of China, leaves medicinal.

POPULUS TREMULA. *Smith.* Fu'i, CHIN.; Aspen, ENG. Grows in the valley of the Yang-tze. A tree like P. tremula, the aspen, has been received from Lahul.—*Stewart's Panjab Plants; Powell's Panjab; Cleghorn's Panjab Report; Thomson's Trav. W. Himalaya*, pp. 189, 207; *Gamble; Smith's Mat. Med.*

PORACCHI, in his Isolario, published at Padua in 1570, gives an account of the inhabitants of Batech, which Sir J. E. Tennaut surmises to be Batticaloa. He describes them as being constantly at war with their neighbours, eating the flesh of their prisoners, and selling their scalps at high prices.—*Tennant's Ceylon.*

PORAMBOK. TAM. Uncultivable land; in the Madras Presidency are 23,964,160 acres. Ayacut, arable land; of this in Madras Presidency 14,183,329 acres are not occupied or not cultivated, and 27,516,511 are under crops.

PORBANDAR, the chief town of a Native State of same name in the Political Agency of Kattyawar, Bombay. Area, 535 square miles, with 103 villages; population (1872), 72,077. Porbandar is built on a creek of the sea, on the S.W. coast of Gujerat. The inhabitants carry on a brisk trade with Bombay, Sind, and Malabar.—*Imp. Gaz.; Pottinger's Tr.* p. 8.

PORCELAIN.

Tse-ki, ... CHIN.	Cheni-kam, GUJ., HIND.
Porcelaine, . . . FR.	Porcellana, . . . IT.
Porzelan, ... GER.	Porcelana, . . . SP.

Very fine earthenware, white, semi-transparent, and sometimes beautifully coloured and gilt. Chinese porcelain of an exceedingly fine texture has long been renowned; but British porcelain, although unable to boast of such fine specimens of costly workmanship, has risen to be a matter of great importance. Dresden has long been famous for the beauty of its porcelain productions; but the finest and most magnificent work of European ware has been produced at Sevres in France. The name was given by the Portuguese to the semi-transparent cups they saw on their arrival in China, from their resemblance to the lustrous nacre of sea-shells or porcellana, for they supposed it to be a composition of egg-shells, fish-glue, and scales. In China, kao-lin, quartz, and soapstone are ingredients used in the manufacture.

Kao-lin or Kau-ling, *i.e.* high ridge, the name of a hill near Jau-chau-fu, is obtained from the disintegrated granite in that region, and is nearly pure felspar; by slow decomposition the alkali and part of the silex is removed and water imbibed. An analysis of the clay used in Europe shows the constituents to be—Silica, 43; alumine, 36; water, 19; and a trace of magnesia and carbonate of lime.

The Pe-tun-tse or Peh-tun-tsz of China is nearly pure quartz, and the best of the Chinese is brought from Hwui-chau in Ngan-hwui, but is procurable elsewhere; it is reduced to an impalpable powder by toilsome processes, and formed into cakes to sell to the manufacturers.

Steatite or soapstone, called Hawh-shih, is also employed, and some forms of carbonate and sulphate of lime, which are mixed in to produce an inferior article, though still among the best now manufactured; the soapstone ware is more brittle than the other, but fine, white, and very light. The proportions of the ingredients vary according to the desired fineness of the ware.

Coloured Ware of China.—After the paste or biscuit is formed into the required shape, the dishes are painted by workmen, each of whom takes a single colour and a single part of the picture. The whole surface of the dish is sometimes covered with gay figures, but the most common decoratious consist of heroes, statesmen, etc., in different attitudes and costumes, and sentences beautifully written referring to them and their times. Most of the inscriptions and figures seen upon mantelpiece ornaments, teacups, and jars are of this nature, explaining some event in the life, or a panegyric upon the personage there represented; this affords an opportunity for persons to show their scholarship in explaining the quotation. The colours used on the fine porcelain have long been admired; and Des Guignes, who made many endeavours to procure samples of them and ascertain the mode of mixing them, has given the composition of some of the principal colours; but at present there is probably little to learn from them in this branch. After the workmen have finished the painting, the pieces are covered with a liquid mixture of alkali, obtained from burning ferns with the quartzose Pe-tun-tse, after which they are baked. The best articles are surrounded with a case lined with sand, in order to protect them from the flame; and as the furnaces are only about six or eight feet square, the closest attention can be paid to the condition of the ware, and the exact time ascertained for reducing the heat and opening the kiln. Some of the pieces brought from the interior are perfectly white, and the patterns are afterwards painted and fixed on them accordiug to the faucy of the customer. The finest specimens are from the kilns of King-teh-chin in Kiang-si.

Black China-ware, the Ow-mi-ew, ornamented with gold, is very much prized in China. To make this ware they mix three ounces of azure and

seven of the oil of stones; this is laid on the ware, and when perfectly dry it is baked, after which the gold is laid on, and the vessel is re-baked.

Cracked porcelain.—The To-wi-kie China-ware is highly prized under the cognomen of cracked porcelain. It is prepared simply by varnishing the vessels with a whitish ash-coloured varnish, made from calcined transparent white pebbles. This has the property of marbling and veining the ware, and giving it an appearance as if it had been fractured into many pieces, which had been carefully reunited.

Chinese red colour, used in the porcelain painting, is made from Taow-fau, or copperas. Their mode of perparation is by putting a pound of copperas into a crucible, over which another crucible is luted, having a small hole in it, which is lightly covered over; around these they pile charcoal, and enclose the whole within bricks, when they fire the charcoal, and as soon as the fumes issuing from the aperture in the crucible become of a light colour, a small quantity of the copperas is taken therefrom, laid upon fir-wood, and moistened with water; if the colour then prove to be a bright red, they remove the fire, if not, they allow the copperas to remain subjected to the heat until it assumes that colour, and then remove the fire. When the crucibles are cool, a cake is found in the lower one, but the finest colour is encrusted on its sides and on the bottom of the upper crucible, which is kept separate from the cake; the pound of copperas produces about four ounces of colour.

Chinese white colour, also used in painting porcelain, is made from calcined transparent flint, to an ounce of the powder of which they add an equal quantity of white lead.

Chinese green, a beautiful colour, is prepared with one part of powdered calcined flint, two parts of white lead, and six parts of the scales of well-hammered copper.

Chinese violet is produced by adding an additional quantity of the prepared white to the green.

Chinese yellow is made by combining equal portions of prepared white and red.

All these various colours are used by the China-ware painters, having been previously dissolved in gum-water, to which they occasionally add saltpetre, copperas, or white lead. The colours are laid on after the first baking and varnishing of the China-ware, but the beauty and depth of the colouring is imperceptible until after the second baking.—*Williams' Middle Kingdom*, ii. p. 116. See Ceramic Manufactures; Earthenware; Pottery.

PORCUPINE.

Saru, ... BENG.	Porco spinaso, . . IT.
Porc-épic, ... FR.	Salendra, . . . MAHR.
Stachelschwein, . GER.	Puerco espin, . . SP.
Saori, ... GUJ.	Yeddu pindi, . . TEL.
Sarsel, ... HIND.	

Porcupine, in Europe, Asia, and Africa, is a name of several species of the genera Hystrix and Atherura, and, in America, of genera of the group Cercolabinæ or Philodendreæ more or less arboreal. In British India, the species are known as the Indian porcupine, the Bengal porcupine, the crestless porcupine, and the Malay porcupine; the crested porcupine belongs to Europe, and the African porcupine is the H. Africæ-Australis, *Peters*. Of Ceylon porcupines, Dr. Kelaart is quite certain of Hystrix leucura, *Sykes* (H. Kirautirostris). Mr. Blyth compared it with Waterhouse's description, and it quite corresponds; so that H. Zeylonensis makes a second species of the genus in Ceylon. He terms it H. etava. In Ceylon the porcupine is destructive to the young cocoanut palms, to which it is a pernicious and persevering, but withal so crafty, a visitor, that it is with difficulty any trap can be so disguised, or any bait made so alluring, as to lead to its capture. The usual expedient in Ceylon is to place some of its favourite food at the extremity of a trench, so narrow as to prevent the porcupine turning, whilst the direction of his quills effectually bars his retreat backwards. On a newly-planted cocoanut tope at Hang-welle, within a few miles of Colombo, Sir J. E. Tennant had heard of as many as twenty-seven being thus captured in a single night; but such success is rare. The more ordinary expedient is to smoke them out by burning straw at the apertures of their burrows. At Ootacamund, spring-guns have been used with great success, placing them so as to sweep the runs of the porcupines. A planter on the Neilgherries recommends that a single-barrel pistol be procured and an iron rat-trap; the pistol must be placed so that on being discharged the shot will sweep the gap or entrance. In this position it must be firmly fastened. The trap is then to be set, the compressed spring let in between the trigger and trigger guard of the piece, and tied to a peg; then a string blackened with ink attached to the plate of the trap is stretched loosely along the gun and across the gap, and fastened,—so that nothing can pass in without touching it. As the cord is loose, the animal in entering gets well opposite the gun before it tightens and springs the trap, the piece having been placed on full-cock is of course fired by the rising of the trap-spring. A pistol is much better than a gun, because the latter has to be set horizontally, in which case it is very liable to miss or only wound the animal it is set for; a pistol can be placed vertically, in which case it cannot but hit anything passing through the gap under it. The flesh is esteemed a delicacy in Ceylon, and in consistency, colour, and flavour it very much resembles young pork.

Atherura fasciculata, the Malay porcupine, is found on the Tiperah Hills, and thence southwards to the Malay Peninsula. It has a much larger tail than the true porcupines, ending in a tuft of long bristles. The spines of the back are less elongated.

Hystrix Bengalensis, Blyth, Bengal porcupine, is the H. Malabarica, *Sclater*, and is found in Travancore, Cochin, S. Malabar, Bengal, Assam, and Arakan. Length, head and body 28 inches, tail 8 inches. In Malabar its flesh is more esteemed than that of the common variety.

Hystrix leucura, Sykes, Indian porcupine.

H. hirsuti-rostris, *Brandt*.	H. cristata Indica, *Gray, Hard.*
H. Zeylanensis, *Blyth*.	
Sajru, ... BENG.	Sarsel, ... HIND.
Yed, ... CAN.	Salendra, . . . MAHR.
Hoigu, ... GOND.	Dumsi, . . . NEPAL.
Say, Sahi, Sayal, HIND.	Yeddu pandi, . . TEL.

Found over all India from the Himalaya to Cape Cormorin, except in Bengal. It is 32 inches long, and its tail is seven inches. They charge

backwards on their foes, and dogs often get seriously injured. The flesh is good eating.

Hystrix longicauda, *Mars.*, Crestless porcupine.

H. Hodgsonii, *Gray.*
Sathung, . . . LEPCHA. | Achotia dumsi, . NEPAL.
O'e, ... LIMBU.

This inhabits Nepal and Sikkim and southwards into Burma, Malayana, and the Archipelago. They are mischievous, rooting up the tubcrous roots sown in the gardens; they breed in confinement; their flesh is good. They measure 22 to 24 inches from snout to vent, and stand about 8 inches high.—*Tennant's Ceylon*, p. 45; *Jerdon's Mammals; Beng. As. Soc. Journ.*, August 1847.

PORCUPINE ANT-EATER of Australia, the Echidna hystrix, called also the native porcupine or hedgehog. It is nocturnal, generally sleeping during the day, and burrowing actively at night.

PORPHYRY, a crystalline rock containing crystals of minerals. Porphyry quarries were known to the ancients as existing in Egypt. At the mountain called Jabl Dekhan, the Mons-Porphyritis, their colours are green, purple, and red. Porphyries of various kinds occur in many parts of British India, but are not utilized. Felspar of a granular texture, without crystals imbedded, is claystone; with imbedded crystals of felspar, it is porphyry. Hornblende mixed with uncrystallized felspar makes some greenstones; with imbedded crystals of felspar this becomes greenstone-porphyry. Hence by this mode of designation we have pitchstone-porphyry, greenstone-porphyry, basaltic-porphyry, felspar-porphyry. Among volcanic rocks, porphyritic trachytes are common. Greenstone porphyry occurs near Secunderabad; porphyritic granite from the upheaved range of isolated rocks at Burmonee, 8 miles N. of Sasseram, and 10 miles from the nearest hills of the Rohtas range.

PORPOISES. This class of mammals of the family Delphinidæ belongs to the Cetacea order.

ORDER, CETACEA, The whale tribe.
Cetæ, *Auctorum.* | Mutalata, *Owen.*
Fam. Delphinidæ, Porpoises.

Delphinus perniger, *Ell.*, *Blyth*, Bay of Bengal.
D. plumbeus, *Dussumier*, Malabar coast.
D. eurynome, *Gray*, Bengal Bay.
D. godama, Bengal Bay.
D. sandama, *Owen*, Bengal Bay.
D. lentiginosus, *Owen*, Bengal Bay.
D. maculiventer, *Owen*, Bengal Bay.
D. fusiformis, *Owen*, Bengal Bay.
D. pomeegra, *Owen*, Bengal Bay.
Steno frontatus, *Cuvier*, Bengal Bay.
S. attenuatus, *Gray*, Bengal Bay.

Ru-i, Roz, HIND., MAHR.

The Nil-Gai belongs to the sub-family Antilopinæ and family Bovidæ. It is found throughout India from near the foot of the Himalaya to the extreme south of Mysore, but is most abundant in Central India and in the country between the Jumna and the Ganges. It does not occur in Ceylon or Assam, or in the countries east of Bengal. The male is 6½ to 7 feet long; at the shoulder, 4¼ to 4½ feet high; horns, 8 to 10 inches; and tail, 18 to 21 inches long. The male is of an iron-grey colour, lower parts white, head and limbs tinged with sepia brown. It frequents forests and low jungles, and associates in small herds of 7 to 20. It can be tamed, but is apt to be vicious at times. It was probably the Hippelaphus of Aristotle. It is comparatively rare, and is becoming more so every day. The country people are apt to confound it with the Sambur; but the localities frequented by the two animals are totally different. The Sambur is impatient of heat, and requires shade and deep cover; the Nil-Gai is indifferent to the sun at noon, and in the open plains it requires a good horse and a long run to come up with it. The Nil-Gai drops on its knees to feed, and attacks and defends itself by butting with the head. The Sambur, on the other hand, never kneels, and when irritated rises on its hind legs, and strikes with the forefeet. In Gujerat the Nil-Gai is found in the open, grassy plains; the herd marches in a line, the bull leading with 8 or 10 cows following. —*Jerdon's Mammals*, p. 273.

PORT BLAIR, the chief settlement in Ross Island, one of the Andamans.

PORT CANNING, a harbour 28 miles from Calcutta, at the Mutlah creek. About a million sterling was expended up to 1868, and a railway was formed, but it was not successful. The object was to avoid the perilous navigation of the Hoogly.

PORTER, SIR ROBERT KER, author of Travels in Georgia, Persia, Armenia, Ancient Babylonia, etc., in 1817–20, London 1821.

PORTO NOVO, a seaport town on the Coromandel coast in the South Arcot district, on the north side of the Vellaur river, in lat. 11° 29′ 25″ N., and long. 79° 48′ 13″ E. It is famed in the history of South India for the complete victory Colonel Coote won near it at Metapolliam, on the 1st July 1781. Coote, repulsed by Hyder Ali in an attempt on Chellumbrum, was falling back on Cuddalore via Porto Novo, when his force of 7878 men was intercepted by Hyder's army, 60,000 strong. Porto Novo has never recovered the devastating effects of Hyder Ali's

invasion of the Carnatic in 1780. The Danes and the Dutch had each a factory here. In the early part of the nineteenth century large iron-works were established here, but did not prove remunerative.

PORTS. The following are the more important of those on the southern shores of British India: —Aden, Akyab, Alepi, Balasor, Bassein, Beypur, Bimlipatam, Bombay, Calcutta, Calicut, Cambay, Cannanore, Chittagong, Cocanada, Cochin, Coompta, Coringa, Dholera, Diamond Harbour, Gogo, Honawar, Kalingapatam, Kalyan, Karachi, Karwar, Madras, Mangalore, Masulipatam, Moulmein, Negapatam, Panwell, Ponani, Porbandar, Port Blair, Port Canning, Porto Novo, Quilon, Rangoon, Ratnagiri, Sadashighar, Sonmiani, Surat, Trombay, Tuticorin, Vingorlu, Viziadrug.

PORT SAID owes its origin in Egypt to the Suez Canal. It lies at the western extremity of an island, which belongs to the narrow strip of land separating Lake Menzaleh from the Mediterranean. The port occupies an area of 570 acres, and has been excavated to a depth of 26 feet by dredging. It is protected by two massive piers, the eastern running for a mile out into the sea, and the western for 1½ miles. The harbour is exposed to the risk of being choked up with the Nile mud, which is swept along the coast by a current flowing from the west. Both piers are constructed of blocks of artificial stone, each block weighing 20 tons. Population, about 9000, the French element preponderating. The inner harbour consists of three sheltered basins. The lighthouse, 164 feet in height, is one of the largest in the world.

PORTUGAL, a kingdom in Europe, with possessions in South-East Asia. It occupies the south-western portion of the Spanish Peninsula, and is situated between lat. 36° 55′ and 42° 6′, and between the 7th and 10th degrees of W. long. Greatest breadth, about 150 English miles, and greatest length about 355. The population in 1878 was 4,550,699, besides 2 millions in the colonies, and with a public revenue of about 4 millions; its army 32,000, and a navy of 45 ships. Since the end of the 15th century, it has held possessions along the E. and W. coasts of Africa and in the south of Asia from the Cape of Good Hope to Japan, and from A.D. 1500 to 1610 they controlled the whole commerce of all these eastern seas. Putting out of sight their great possessions in South America, they would appear at different times to have held the following places in the Indian Ocean:—

On the *east coast of Africa*, Melinda, Quiloa, Querimba, Sofala, Mozambique, and Mombas (expelled A.D. 1615).

In *Arabia*, Aden and Muscat (expelled by the Arabs A.D. 1648).

In *Persia*, Bussora and Ormuz.

In *India*, Diul or Dewal and Tatta on the Indus, Bandel, Diu, Daman, Assarem, Danu, St. Genes, Agaciam, Chaoul, Dabul, Bassein, Salsette, Mahim, Bombay, Tanna, Caranja, Goa, Onoro (Honore), Barcelore, Mangalore, Calicut, Cranganore, Cochin, Quilon; on the east coast of India, Negapatam, Maliapur, St. Thomé, Masulipatam, and several other places on the Coromandel coast and Bengal.

In *Ceylon*, Manaar, Point de Galle, Colombo, Jafnapatam, and other places.

In *Further India*, Malacca, with factories at Pegu, Martaban, Junkseylon, and other places.

In the *Chinese Seas* and *Pacific*, Macao and the island of Formosa.

At the present day the Portuguese retain the coast of Eastern Africa between Delagoa Bay and Cape Dalgado. In India, Goa, Daman, and Diu, with a population under half a million souls, and in the far east, Macao in the China Sea, is their sole remaining possession. They settled there in 1557, and until 1848 paid for it a rent of 500 taels. The Portuguese mode of government and that of the Spaniards has been throughout based on the policy of establishing their religion and social views along with their political power. In Goa, conversions are now infrequent, the large body of European and Native clergy being more employed in parochial than in missionary work. But in India they surrounded themselves with partisans and converts, and made themselves a nation, and in the south of India they had at one time attained to great success. Their converts took the surnames of their leading rulers, and the names of many of the sixteen Portuguese captains-general have been handed down amongst the Roman Catholics of the Peninsula, where the names of de Souza, Pereira, Menezes, Albuquerque, Almeyda, de Mello, Mascarenhas, de Castro, are everywhere met with. To the Portuguese is due the honour of discovering practically the sea route to India by the Cape of Good Hope. Prince Henry the navigator (1394–1460), son of King John the Great of Portugal, had devoted his life to maritime and astronomical studies, and continued till his death to believe in the possibility of sailing eastwards.

Pedro de Covilham and Alfonso de Payva were ordered by King John II. of Portugal to travel overland to India, in order to obtain information regarding the commerce of the eastern seas. They set out from Portugal in 1487, and proceeded by Naples, Rhodes, Alexandria, and Cairo to Tor, on the Red Sea. There they heard of the great trade with Aden and Calicut. From Aden, Payva went into Abyssinia; but Covilham sailed in an Arab vessel to Cannanore, and thence to Calicut and Goa. He was the first Portuguese who reached India. He returned by Sofala to Egypt, where he met the Rabbi Abraham of Beja and Joseph of Lemago, two messengers who had been sent by King John II. to inquire after his progress, and from them he learned the death of Payva. He sent a message to the king by them, to the effect that a ship coasting Guinea southwards would certainly round to the Eastern Ocean. Covilham then returned to Aden, and on to Ormuz and Abyssinia, where he was detained a prisoner until A.D. 1526. His information was acted on.

In 1444, the Portuguese had obtained from the Pope an ordinance bestowing on them the sovereignty over all the lands which had till then been discovered by them, and all that should be discovered as far as the Indies. And immediately after the discovery of America by Columbus, the Pope, by an edict of 4th May 1493, while confirming the king of Spain in the sovereignty of America, and strictly prohibiting all others from touching at any port 100 (afterwards 250) leagues westward of the Azores, declared that the Portuguese were to possess all eastwards of that line. Accordingly, on the 8th of July 1497,

an expedition, commanded by Vasco da Gama, sailed from the Tagus for India. The expedition was not in favour with the people, but King Emanuel, who in 1495 had succeeded John II., was determined to prosecute the project of Prince Henry. Prince Henry had been the Grand Master of the Order of Christ, and his hopes had been as much for the conversion of the heathen as for the extension of the commerce and dominion of his nation. It was in this spirit that the future acts of the Portuguese were, and continue to be, regulated; while the British, who at the present day hold sway over many places once dominated by the Portuguese, have followed the system of non-interference in religious and social matters. For when Cabral, in March 1500, left the Tagus in command of the second expedition, the sum of his instructions was to begin with preaching, and if that failed to proceed to the sharp determination of the sword. In the 16th century, they carried on a piratical crusade against every Muhammadan ship they could find, but their final ruin was brought about by Philip II. of Spain forbidding the Portuguese to continue commercial intercourse with the Dutch. Vasco da Gama rounded the Cape of Good Hope, and saw the east coast of Africa, on the 22d November 1497, and reached Calicut on the 20th May 1498.

A second expedition, consisting of thirteen ships and twelve hundred soldiers, under the command of Cabral, was despatched in 1500. On his outward voyage, Cabral was driven by stress of weather to the coast of Brazil. Ultimately he reached Calicut.

In 1502, Vasco da Gama sailed a second time to the east, with a fleet numbering twenty vessels. He formed an alliance with the rajas of Cochin and Cananore against the Zamorin of Calicut, and bombarded the latter in his palace.

In A.D. 1504, nine ships sailed from Lisbon in three equal squadrons, under the respective commands of Alfonso de Albuquerque, of Francisco Albuquerque, and of Antonio Saldanho; the last was to cruise in the mouth of the Red Sea, the others were to proceed directly to India. Francisco Albuquerque arrived first, and made a considerable addition to his squadron in consequence of having fallen in with some of the ships belonging to Vincent Sodre. For some reason not explained, the two Albuquerques set sail for Europe, leaving only Duarte Pacheco, with 110 men, for the defence of Cochin. Pacheco was superseded in command by the arrival of Lopez Soarez, with a fleet of 13 ships of larger dimensions than had ever before been built in Portugal, and Soarez, after destroying Calicut and Cranganore and the Zamorin's fleet of 17 large vessels, provided with cannon, and carrying 4000 men, leaving four ships at the fort of Cochin, set sail for Europe with the remainder.

The next Indian armament sent from Portugal consisted of 22 ships, carrying in addition to the crew 1500 fighting men, under the command of Don Francisco Almeyda, who bore for the first time the proud title of the Viceroy of India. His arrival in India took place in 1507.

His son fell in a battle fought A.D. 1507 against the combined fleets of Cambaya (Gujerat), the Egyptian fleet (of 12 ships), and those of the Zamorin, off or at Choul, 23 miles south of Bombay,—the Portuguese loss being, according to their own account, 81 men, while according to Ferishta no fewer than 3000 or 4000 Portuguese infidels were sent to the infernal regions.

Successive armaments on a great scale quitted Lisbon for the east. One of these, under Tristan da Cunha, consisted of 13 vessels and 1300 fighting men, cir. A.D. 1508. Another of 12 vessels, under Alfonso Albuquerque, after performing several exploits on the African coast, and effectually crippling the trade between India and the Red Sea, continued along the coast of Arabia, and, after capturing Muscat and several other places of minor importance, entered the Persian Gulf. He proceeded to attack Ormuz, but after a partial success was obliged to depart and proceed to Socotra. Returning thence, he was about to resume the siege of Ormuz, when he received intelligence that he had been appointed viceroy, and thereon proceeded to India. But, on arriving there, Almeyda refused to resign to him the insignia of office, and Albuquerque had to proceed under his command in the fleet that after destroying Dabul defeated the Turkish and Gujerat fleets. Returning thereafter to Cochin, he persisted in retaining the viceroyship, and sent Albuquerque as a prisoner to the fort of Cannanore, but eventually, A.D. 1510, resigned. Albuquerque, now (3d January 1510) fully installed, proceeded to attack Calicut, the greater part of which was laid in ruins. Proceeding to Goa, the city was at first voluntarily surrendered, but on an army sent by Eusuf Adil Shah appearing before it some four months subsequently, Albuquerque had to evacuate the place. He returned in the course of the year, and took Goa by storm, and shortly after declared his intention to make it the capital of Portuguese India.

On the 2d May 1511, he set sail from Cochin for Malacca, of which he took triumphant possession.

On the 18th February 1513, he appeared with a fleet of 20 sail before Aden. Failing to capture it, he proceeded into the Red Sea, and after remaining for some time at the island of Kameran, again passed through the Straits of Bab-ul-Mandab, and returned to India.

In March 1514, he made a third attempt on Ormuz, and succeeded in completely establishing the Portuguese supremacy there. In the two following years the Portuguese power was more firmly seated than before or since.

But on receiving intelligence that he was no longer viceroy, summarily dismissed to make way for his mortal enemy, Lopez Soarez, grief killed him on the 16th December 1515. He was buried at Goa, but in 1566 his remains were transported to Lisbon.

Soarez reduced Aden, took and burned Zeila, but failed in attack on Jeddah. In 1517 he made the king of Colombo tributary, and burned Berberah on the Somali coast.

In 1524, Vasco da Gama came out to the east for the third time, and he too died at Cochin in 1527.

In 1529, the towns of Bassein and Tanna were subjected. During 1530 to 1532, Surat, Gogo, Pati, Mangarole, and most of the other towns on the coast of Gujerat, were destroyed by the Portuguese. In 1532, Aden again became tributary. In 1534, Bassein was ceded to them. In 1538, St. Francis Xavier was sent to Goa to convert

the nations, and from there to Japan his success was unparalleled. From that time the Portuguese power in India rapidly decayed.

In Further India and China their progress was similarly brilliant, but temporary. At Malacca, 200 soldiers of Portugal utterly routed 15,000 natives, with artillery. In 1578, Malacca was again besieged by the king of Acheen, but the small Portuguese garrison destroyed 10,000 of his men, and all his cannon and junks. Twice again, in 1615, and for the last time in 1628, it was besieged, and on each occasion the Achinese were repulsed.

In China they made no progress, although they visited it twice during the reign of Ching-tih (1506–1522). In 1514, Raphael Perestralo, and a few years later, 1517, Don Fernand Perez d'Andrade, landed at Canton. Both these officers were well received by the mandarins at Canton, and d'Andrade was allowed to go to Pekin, where he remained as ambassador of Portugal, until a buccaneering fleet, commanded by his countrymen, committed such depradations on the coast that he was held to have been vicariously guilty of piracy, and, after having suffered imprisonment at the hands of Ching-tih, he was executed by order of the succeeding emperor, Kia-tsing.

The Dutch nation first came to the Eastern Archipelago as the servants of the Portuguese.

Ceylon was occupied by the Portuguese in 1596. Portuguese finally quitted Ceylon on the 24th June 1658, and were carried prisoners by the Dutch to Batavia. Portuguese and Mahrattas were at war in the early part of the 18th century. The war originated in the contest between members of the family of the Angria of Colaba, A.D. 1737. It ended in the loss of the Portuguese possessions of Salsette, Bassein, and the neighbouring parts of the Konkan, A.D. 1739. The Mahrattas admitted that they lost 5000 killed and wounded at the siege of Bassein.

The successes of the Portuguese along a coast line of 12,000 miles, from the Cape of Good Hope to the islands of the Archipelago, were to a large extent owing to the towns which they took having never before been attacked from the sea. But the names of the handful of brave and great men who for a short time were supreme on the seaboard, will be found under their respective letters.

PORTUGUESE MAN-OF-WAR. Sea nettle, ENG.; Galere, FR. The Portuguese man-of-war, one of the Acalephæ, is the Holothuria physalis, *Linn.*, the Physalia pelagica, *Lam.*, also Ph. careivella, and Ph. utriculus. It has an inflated vesicle or bladder, glowing in delicate crimson tints, which rises over and floats upon the waves, whilst the long tentaculæ, of a deep purple colour, extend beneath as snares for capturing its prey. The bladder is generally supposed to collapse in tempestuous weather, but Dr. Bennett says it always remains inflated. The tentaculæ sting.—*Bennett*, p. 5.

This is a common weed in India, and eaten by the Hindus, but cultivated by the market gardeners; used as a spinach, and in curries; almost tasteless; acts as a refrigerant and alterative in scurvy and liver disease. Seeds said to be vermifuge; in Cochin-China the seed is considered emollient and diuretic; considered by natives cool and dry, also aperient. Useful in disorders of mucous membrane, difficulty of breathing, and fevers.—*Ainslie; Roxb.; O'Sh.; Jaffrey; Powell.*

A small troublesome weed with fleshy leaves, used as greens; common everywhere. Fresh leaves, bruised, are prescribed as an external application in erysipelas, and an infusion given in dysuria.—*Roxb.; O'Sh.; Jaffrey; Stewart.*

PORTULACARIA AFRA is the Spekboom of the Cape of Good Hope, said to be the favourite food of the elephant. It is one of the numerous forms which confer a peculiar physiognomy on the vegetation of the colony.

PORUS was of the race of the Puru or Paurava kings, to which in the time of Alexander two princely races belonged. They were the first purely Indian race known to Europe. Colonel Tod derives the name from Puar, once the most powerful and conspicuous tribe in India; classically written Pramara, the dynasty which ruled at Ujjain for ages. The Porus who ruled in the direction of Hastinapura offered a determined resistance to Alexander, with 4000 horse and 30,000 foot of the Kshatriya tribe. He was sovereign of the country near the Jhelum, and opposed Alexander's attempt to cross that river. Alexander drew up his troops at a bend of the river, 14 miles west of the modern Chillianwalla, and crossed during a stormy night. The chariots of Porus stuck in the muddy bank of the river, his elephants refused to face the Greeks, and, turning round, trampled down his soldiers. The son of Porus fell early in the battle, and Porus was wounded and fled, but afterwards yielded to Alexander, and aided him. Alexander built Bukephala, near the modern Jalalpur, on the west bank of the Jhelum; and Nikæa, the present Mong, was on the east bank, on the site of his victory over Porus. Bukephala was named after Alexander's charger, which was killed in the battle.

The dominions of Porus were all situated between the Hydaspes (Jhelum) and Ascesines (Chenab), and his immediate neighbours were independent of him, and mostly at war with him. On the north, his territory extended to the woods under the mountains, but it did not include the whole country between the Hydaspes and Ascesines, for besides other tribes there were the Glaucanicæ or Glaussæ, who had 37 large cities, whom Alexander put under Porus. On the east, between the Ascesines and Hydraotes, he had another Porus who was his bitter enemy. To the S.E. of him were the Cathæi and other independent nations, against whom he assisted Alexander. To the south were the Malli, against whom Porus and Abissares had once led their combined forces, with those of many others, and had been defeated. His western boundary was the Hydaspes. Beyond that river, in the centre, was his mortal enemy Taxiles, on the north of whose dominions was Abissares, an independent prince, whom Arrian calls king of the mountain Indians; and on the south, Sopithes, another independent sovereign, in whose territories the Salt Range lay. In the time of Augustus Cæsar, a letter in Greek praying for assistance was received at Rome from a king of this name on the Indus. See Chandragupta; Hindu; Kama.

POSA of Assam, black-mail.

POSHKHUR, a holy lake in Malwa. See Palliwal.

POSHM-WANLOO, a wandering Teling tribe of mendicants on the banks of the Bhimah, who move about with a small temple with an idol called Poch-amma, the small-pox goddess.

POST. Hind. Poppy capsules; also a narcotic liquor prepared by boiling the capsules in water with jagari; also the rind of any fruit, the bark of any tree, and the skin of any animal.

POSTANS, Captain T., Bombay army, was Political Agent in Upper Sind from 1839 to 1842. He was author of an Account of Sind, translated from Persian historians in Bl. As. Trans. vii. p. 297; Account of Jain Temple at Badrasir, and Ruins of Bodra Nagri in Cutch, ibid. p. 431; Account of Girnar, ibid. p. 865; on the Rivers Nile and Indus, Lond. As. Trans. vii. p. 273; Personal Observations in Sind; Route through Cutch, etc., Lond. Geo. Trans., 1844; Memoir on Shikarpur, Bl. As. Trans., 1841; Trade in Cutch, Bhooj, with Africa, Bom. Geo. Trans. i. p. 169; Report on the Munchar Lake, and Aral and Narra Rivers, ibid. iii. p. 122; on the Kamphatir of Dawodhar in Cutch, Lond. As. Trans. v. p. 263; Account of the Temple of Somnauth. Mrs. Postans wrote on Cutch and Western India, London 1839.—*Dr. Buist.*

POSTIN, a body coat, a fur cloak or coat, a sheepskin coat or vest, much worn in Afghanistan. The sheepskin is prepared with the wool on. After being curried, and the wool cleaned with soap and combed, the skin is stretched on boards by means of nails at the corners, with the inner surface uppermost. This is daily, four or five times, smeared over with a thin moist paste, composed of equal parts of fine wheaten and rice flour, with which is mixed a little finely powdered salt. It is then cleared of the paste, again washed and scraped, and laid out in the open air to dry, and again put on the stretcher, and has rubbed on it a tanning mixture of pomegranate rind, alum, and red ochre, or alum alone. It is then allowed to dry for a few days; the tanning mixture is then scraped off, and the skin firmly rubbed with a wooden roller, and it is rendered soft and pliant by crumpling it between the hands, shaking and beating it with thin twigs. It is one of the most important of the industrial occupations of the people of Kandahar, Ghazni, and Kābul, and of late years has been largely increased for export to the Panjab, where the native army of British India had adopted it as a winter dress; also to Peshawur.

Coats are made by the tailor cutting the skin in strips of 24 inches long, and 4 or 5 inches wide, and stitching these together. Three kinds of coats are made,—the postincha, short and without arms, and the postaki, which reaches to the knees, and has long sleeves, for which five or six skins are needed; also the postin, which are very large, loose, cumbrous cloaks, reaching from head to feet, with long, wide sleeves reaching beyond the fingers. They cost from 1 to 50 rupees, and the woolly side is worn next the body, which harbours vermin. Khosai poshto are cloaks made in Kandahar of white felt, worn by the Afghan peasants.—*MacGregor*, p. 48; *Burton's Scinde*, ii. p. 40.

POTADAR. Mahr. A money-changer.

POTAIL. In the village system of the Mahratta countries, the potail is the chief magistrate of the village. There are often two to four potails in a village, not always of the same caste; for instance, the village of Khanpur, zillah of Nandair, has four potails, two Mahratta, a Canarese-speaking Lingaet, and a Kulkarga. There are a few Brahman and Muhammadan and Pariah potails, but a Christian potail is unknown. In the Canarese-speaking country, the village head is called Goura or Gouda.

POTALA, a great Buddhist monastery at Lhassa. See Tibet.

POTAMOGETON CRISPUS. *Linn.* Sawal and Chusbal, Ladakh. Not uncommon in the Panjab, and apparently abundant at 9000 to 11,000 feet in Ladakh. It is probably one of those plants used in refining sugar here as elsewhere. In Ladakh it is used as fodder.—*Stewart's Pan. Pl.* p. 241.

POTAMOGETON TUBEROSUS. *Roxb.* Found immersed in extensive masses in ponds, lakes, and receptacles of fresh water in Bengal during the dry season, chiefly when in flower in February; it rises so near to the surface as to allow the little spikes of flowers to emerge completely. It is much employed in the N.W. Provinces in the process of clarifying sugar.—*Roxb.* i. p. 452.

POTASH, Potashes, Pearl-Ash.

Shih-kien, . . . Chin.	Carbonate of potash, Eng.
Hwui-kien, ... ,,	Khar, Jowkshar, . Hind.
Potaske, ... Dan.	Manu-uppu, . Tam., Tel.
Jhar ka Namak, . Dukh.	

Potash is a commercial term commonly applied to an impure carbonate of potash, obtained by the incineration of wood, lixiviating the ashes in barrels, first with cold and then with hot water, filtering the ley, and evaporating it to dryness in an iron pot. Potash is of great importance in the arts, being used in the soap and gas manufactures, the rectification of spirit, bleaching, in medicine, and for other purposes. It is procurable in most Indian bazars. No manufacture of potash upon an extensive scale has ever been

attempted in India. The common source of it is the ashes of land plants, and the English market is supplied from Russia and America. A source of pearl-ash, and one very interesting to us, seeing the enormous quantities of saltpetre all over the country, is nitrate of potash and charcoal. The Hindus of the Malabar coast, as well as the Singhalese, who do not use Over Mannoo, or impure carbonate of soda, in bleaching and washing linen, employ for these purposes the ashes of burnt vegetables (chiefly cocoanut leaves), which can only in this way be of service from the potash they contain. Dioscorides describes it as ashes of vine-twigs Cineris lixivium (Pliny xxxviii. c. 51). The Arabs are usually supposed to have been the first to make known this alkali (al-kali). In countries where forests are abundant, as N. America, Russia, Sweden, Poland, wood is piled in heaps and burnt on the surface of the ground, in a place sheltered from the wind. The ashes which are left consist of a soluble and insoluble portion. The soluble part is made up of the carbonate, together with the sulphate, phosphate, and silicate of potash, and the chlorides of potassium and of sodium; and the insoluble portion of carbonate and sub-phosphate of lime, alumina, silica, the oxides of iron and manganese, and a little carbonaceous matter that had escaped incineration. In China, it is prepared by burning composite, polygonaceous, and other inland plants. The ash is made into a thick mass by the addition of some kind of meal, and is sold as an alkali for raising bread, cleaning clothes, etc.

The Bitartrate of Potash, or Cream of Tartar, must have been known ever since wine has been made from the grape, in the juice of which it exists. During the fermentation of wine, sugar disappears, and alcohol is formed, and the salt not being soluble in this, is deposited on the bottom and sides of casks, as a crystalline crust, which, according to the colour of the wine, forms either red or white tartar or argol. It is the Fæx vini of Diosc. v. c. 13. Its nature was determined by Scheele in 1769. It is largely purified both at Montpelier and at Venice. In commerce it is in white crystalline crusts formed of clusters of small crystals aggregated together, which are hard and gritty under the teeth, dissolve but slowly in the mouth, and have an acid and rather pleasant taste.—*Royle; Hindu Med.* p. 97.

POTASH, NITRATE OF. See Saltpetre.

POTATO.

The potato plant, since the early part of the 17th century, has been introduced into Europe, Africa, Asia, and Australia. Sir John Malcolm claims to have introduced it into Persia about the early part of the 19th century. It has been grown by the Burmese since 1862. Potatoes were sent to Kābul by Captain Claude Martin Wade from Ludhiana, and planted by the Amir. Baron Hugel introduced them into Kashmir, and sent them thence into Little Tibet. In British India, the planting has been extending since the early part of the 19th century, but the root is still (1882) only used by Europeans. The Dutch and the Roman Catholic priests introduced it into China, where, also, Europeans are the chief consumers. It is now largely grown in Mysore, and in various parts of the Dekhan, by planting the tubers.

The potato plant belongs to the natural order Solanaceæ, and is closely related to the tobacco plant, belladonna, henbane, nightshade, and other poisonous narcotics. In it, however, the poisonous qualities are confined to the parts above ground, including any of the tubers exposed to the light in growing. It is a native of South America, and is still found wild in the mountainous regions of Chili, Peru, and Buenos Ayres, and has also been found in Mexico and in the Southern States of N. America, but was probably introduced there by the first Spanish settlers. Samples brought from the Carolinas were first grown by Sir Walter Raleigh in the south of Ireland in 1586. In that country, where both soil and climate are favourable to its growth, it rapidly came into favour; but in England, Scotland, and France, a prejudice long existed against it, owing to the poisonous nature of the other plants of the same order, and for a century and a half it was only cultivated in flower gardens. Even in 1725, the few potato plants in the gardens about Edinburgh were left in the same spot from year to year. In 1728, however, Thomas Prentice, a Scotch day-labourer in Stirlingshire, began to cultivate the plant for food, and sold to his neighbours what he did not require for his own use. They bought willingly, and he soon made a small fortune, and lived for sixty-four years a happy witness to the effects of the blessing which he had been instrumental in conferring upon the country. In England, the potato was taken into favour much earlier, and its field culture rapidly extended as its excellent qualities became known. In France it was not until a time of scarcity during the revolution that its culture became general.

In British India, potatoes should be planted in rows about 1 foot apart, and 5 or 6 inches deep; the space between each row not less than a foot. The ground should be light and loamy, and as little infested with white ants as possible. They can be planted at the commencement of the rains in a spot where the water cannot lodge, which may be done by keeping the end of the channel between the ridges open. At this season, plant on the top of the ridges, and do not water them unless necessary, as too much water makes them run to stalk. If the ground have not been well ploughed previous to the rains setting in, and all the weeds destroyed, the chance is the crop will fail; but should the ground be ready, cut the potatoes intended for the seed into pieces, taking care that each slice has at least two eyes in it; as you cut the slices, whilst fresh, dip the cut side of each into wood-ashes, and let them dry well, which takes place in a few hours; this prevents the white ant's attacks. Plant each slice from 9 to 12 inches apart, and place by the side of each a small clove of garlic, which in some measure tends to prevent the attack of a large grub very destructive to the plant. Dr. Riddell thinks this insect's eggs must be in the manure when added to the soil, and he had little doubt but that if the manure was previously worked up with the soil two or three times during the hot season,

and exposed to the heat of the sun, the eggs would be destroyed; or the same purpose might be effected with a little fresh lime. He is sure the caterpillar does not travel to the plant. The finest crops in the Dekhan are sown from the beginning of October to the latter end of December, and this last crop will be found the most productive. Fine crops of potatoes have been grown where hemp has been first sown, and when about 2 feet high ploughed up into the ground. If, when the potatoes are about flowering, any of the stalks wither, carefully open the earth and look for and destroy the grub, which you may be certain is feeding upon it. When these grubs are very numerous, it is necessary to search all the drooping plants daily. A bag with a small quantity of asafœtida can be placed in the watercourse as a remedy when the plants are being irrigated. Another insect deposits its egg on the stalk of the plant. In the rains a small caterpillar eats its way into the stalk above the ground, on which the plant immediately droops; the remedy is to remove the whole. At all seasons keep the stalks well earthed up, and let the potatoes have a moderate supply of water, the season being the guide. One year, Dr. Riddell raised a very fine crop of potatoes during the rains, by sowing them on ridges, and only watered them at first in consequence of want of rain; they were sown in the beginning of July, and a few taken up in the latter end of September. Some of the potatoes weighed from five to seven ounces, and were equal to any seen grown on the hills. In the latter end of August, he tore off shoots from the lower end of the stalks when they were abundant, and planted them in rows, the same distance as for seed; and in November four or five large potatoes were found produced by each stalk, the size of a duck's egg. This plan he strongly recommends when not able to get fresh seed after the rains.

Potato-Starch, or potato-arrowroot, also called potato-flour, forms a white and somewhat glistening powder, which crackles like genuine Maranta arrowroot when pressed between the fingers. It is sometimes called British or English arrowroot, and is prepared by rasping and grinding the well-cleaned tubers of Solanum tuberosum into a pulp.

Sweet Potato (Batatas edulis) is cultivated largely in tropical countries for its root, which contains much farinaceous and saccharine matter. The tubers are usually about the size of potatoes, but several have been seen from Grand Canary weighing 6 to 7½ lbs. each; and one in Madeira is said to have weighed 32 lbs. after having been left in the ground two or three years. Although not known to have been collected in the wild state, it is believed by M. A. de Candolle to be of American origin.

Telinga Potato, Amorphophallus campanulatus, Karna Kalangu of the Tamils, esteemed a very wholesome food. The dark-coloured flowers have a very curious appearance. — *Rid.; Canadian Naturalist; Vigne's Personal Narrative*, pp. 173, 174; *Lowe's Madeira Flora.*

POT BARLEY, or Scotch barley, the grain of barley deprived of the husk by a mill.

POTE. Hind. Glass beads laden with red dye. Pote-ka-Lueh'ch'ha, Hind. A neeklace of strings of black glass beads.

POTEE. Tam. Round red cakes of cotton. An inferior kind is impregnated with the red colouring matter of the prickly pear, and a better kind is made by impregnating the cotton with the kaysur flower, the weeping Nycthanthes arbortristris, but the best is from the safflower, Carthamus tinctorius. The Potee forms a ready and durable substitute for red ink.

POTENTILLA, a genus of plants of the order Rosaceæ. P. atrosanguinea, of Europe, is a herbaceous plant, handsome when in flower, and easily raised from seed, or by dividing the roots. P. denticulosa, *Royle*, is common in the plains of Northern India in the cold season, at elevations of 4000 to 5000 feet in the Himalayas; two other species are found in the Neilgherries. P. discolor, *Jacq.*, appears to be frequent in Kanawar, Spiti, and Ladakh, from 11,500 to 15,000 feet. The under surface of the leaves is covered with a fine dust, which, when the plant is shaken, causes violent sneezing.

Potentilla Inglisii, *Royle; var.* P. fruticosa, *L.* Spang, Jha, Merino, Chen. | Pinjung, Penma, Ladakh.

This is not uncommon in the higher parts of the Chenab basin, where its fragrant leaves, etc., are used as a substitute for tea. It also grows in Spiti and Ladakh, occurring in the latter up to over 10,000 feet. It is browsed by sheep.

Potentilla Nepalensis, *Hook.*, Rattanjot, Sutlej. This is not uncommon in the Panjab Himalaya at 6000 or 7000 feet. Its reddish root is exported to the plains as one of the roots called rattanjot, but the roots of Vinca rosea, *L.*, and Onosma echioides, *L.*, receive the same name. They are employed in dyeing wool, and are officinal, being considered depurative, and they are used externally in the Yunnani system, the ashes being applied with oil to burns.

Potentilla Salesovii, *Steph.*, Shoar of the Panjab, grows in Lahul, Spiti, and Ladakh at 11,000 to 12,000 feet. It is browsed by sheep.

Potentilla tormentilla, Πεντα φυλλον μελαν, *Diosc., Theoph.* A native of Europe, and officinal; the root is very rich in tannic acid.—*Drs. Stewart; Royle; Riddell; O'Sh.*

POTHI. Mahr. A book; a Hindi or Sanskrit book.

POTHOS, a genus of Araceæ, or arum tribe of plants.

POT-METAL, an alloy of copper and lead. It is improved by the addition of tin, and the three metals will mix in almost any proportions. Zinc may be added to pot-metal in very small quantity; but when the zinc becomes a considerable amount, the copper takes up the zinc, forming a kind of brass, and leaves the lead at liberty, which in a great measure separates in cooling. Zinc and lead are indisposed to mix alone, though a little arsenic assists their union by 'killing' the lead as in shot-metal; antimony also facilitates the combination of pot-metal,—7 lead, 1 antimony, and 16 copper mix perfectly at the first fusion, and the mixture is harder than 4 lead and 16 copper, and apparently a better metal. — *Holtzapfel's Mechanical Manipulation; Rohde's MSS.*

POTSTONE, Balpam, Hind., is found in various parts of India, on the western coast, at Turreva Carey, and Chitore, in the Madras Presidency, and in the ghat country betwixt the Phoonda and Ram Ghats. It was known to the Romans, and is described by Pliny as used in the

manufacture of vessels for cooking purposes,—hence its name. The mineral possesses a glistening pearly lustre and greyish tint; it contains 49 per cent. of silica, 30 of magnesia, and 6 of alumina. The stone is prepared for use by reducing it to something like the form, size, and shape desired, by a cleaver, a paned hammer, or strong knife. When a cavity is meant to be circular, it is bored out by being held against the working spindle of a single-centred native lathe. This enables them to be held on by the chuck, when they are chucked and finished in the lathe in the ordinary way. Potstone speedily hardens and darkens by exposure to the air; it absorbs grease, oil, or fatty matter freely; it is stronger than ordinary earthenware, stands heat better, and is pretty extensively used for culinary purposes. That sold in the Bombay bazar is mostly brought from Goa.—*Cat. Ex.*, 1862.

POTT or Poti, a name of Buddha.

POTTA DELL. Singh. A soft, coarse, open-grained, light Ceylon wood.

POTTERY.

Poterie, ... Fr. | Alfar, ... Sp.
Topferarbert, . . Ger. |

The art of making vessels of baked earth is also known as ceramic work, from the Greek κεραμος, clay. It has been known to all races from the earliest times, and some of them 4000 years ago attained to great perfection. The art is alluded to in the book of Job. The potters of Samos were celebrated in the time of Homer. Great quantities of pottery have been found in Egyptian tombs, which to all appearance had lain unopened since the time of the Pharaohs; and in the south of Persia, urns containing remains of some very ancient race. In all the cairns of the Peninsula of India, articles of pottery are found, although of the races who used this form of burial there is no record. The fragments of pottery everywhere found among the ancient cities of India, as in those of other parts of the world, afford the best record of the early races of man on the earth.

While metal is liable to corrosion, and wood to decay, pottery remains almost unalterable, and has thus been the means of discovering to later ages many points respecting the history, religion, customs, and manners of the ancients, which must otherwise have remained unknown. There is a general agreement in the nature and uses of ancient pottery, but at the same time a distinctive character belonging to each country and nation. The rude and simple urns of the early inhabitants of Britain; the more carefully fashioned pottery of the Romans; the simple unglazed earthenware of ancient Greece; the more elaborate forms called Etruscan, of which the finest specimens are, however, attributed to the Greek potters of the Isle of Samos, so celebrated for the delicacy and perfection of their workmanship; the red and black potteries of India; the black and white potteries of North America, the latter interspersed with fragments of bivalve shells; the irregularly formed and fanciful pottery of South America,—all these possess a distinct individuality. The word porcelain existed in the French language in the fourteenth century, and consequently anterior to the introduction of Chinese porcelain into Europe. The potter's art is represented in all its stages on the tombs of Thebes. The mixing of the clay was effected by kneading with the feet, after which a mass of convenient size was formed with the hand, and placed on a wheel of very simple construction, and turned with the hand. During its revolution the forms of the vessel were made out with the fingers; the handles were afterwards affixed; the objects were placed on planks to dry, then carefully arranged in trays, and carried to the oven. Ornamental designs were traced with a wooden or metal instrument previous to the baking.

The earliest use of pottery was doubtless that of ordinary drinking vessels, but there was also a religious employment assigned to earthen vessels, which has been the means of preserving them for the inspection of after generations. In vases of baked earth the ashes of the dead were frequently deposited, and even where the practice of burning the dead was not followed, still various earthen vessels have been found placed at the head and feet of the skeleton, and sometimes hanging on pegs along the sides of the tomb.

In China it was not till the 3d or 4th centuries of the Christian era that fine materials were employed, and that some degree of perfection was attained. When the Chinese had acquired a certain amount of skill and perfection, they appear to have rested entirely satisfied with the results, and to have continued producing it without variation for ages. So exclusively were the Chinese the manufacturers of porcelain, that it acquired the name of their land, and became universally known (on its introduction to Europe in 1518) as china.

The Japanese have acted differently from the Chinese, and have produced porcelain-ware of the finest fabric, and in the highest artistic forms. The origin of the art in Japan is referred to the pre-historic era of Oanamuchi-no-mikoto, and the inventor, Oosei-tsumi. But in B.C. 29, when an empress of Japan died, and, according to immemorial custom, a selection from among the slaves of her household was doomed to death, so that she might not descend unattended into the grave, there arose in the province of Idsoumi the worker in stone and pottery whose name was Nomino-Soukoune. He made images of clay, and, taking them to the widowed emperor, persuaded him to bury them with the body of the august lady, and to spare the lives of her favourite servants. Thereafter the cruel custom was discontinued, and Nomino-Soukoune was allowed, as a title of honour, the designation Haji—the artist in clay. It seems probable that for 1500 years or more pottery only, and not porcelain, was made in Japan; but in the time of Henry VIII. of England, about 50 years before porcelain was first made in Europe, an artist who had travelled in China settled at Hizen, and instituted there a manufactory of the finer ware. But the earthenware of Japan is of such a quality that it has sometimes, apparently, been described as porcelain. Raku-ware, which figures in Japan at ceremonial tea-parties, closely resembles china, but is nothing more than lead-glazed earthenware, introduced by Ameya, a Corean, about the year 1500. It is said that Ameya's descendants, in the eleventh generation, still pursue the trade of their ancestor at Kioto, — such is the permanence of Japanese institutions.

From time immemorial, the potter has formed an essential member of the Hindu village com-

munity. Pottery is made in almost every village, from the small vessels required in cooking to the large jars used for storing grain. In tasteful forms, the pottery of India is not surpassed by that of any other country, although its potters have much to contend with in the opinions of the Hindus as to ceremonial impurity, which prevent them using articles defiled by the touch of other castes. Hindus never use a polluted vessel, so no great expense will be incurred by them; thus encouragement is wanting to improve the nature of their pottery. In the exhibition of Indian pottery in 1851, numbers of the best judges greatly admired its elegant, even classical, gracefulness of form.

The glazed pottery of Burma, of which two very large jars were sent in 1851, has long been known for its glaze not being affected by acid. But the Buddhists of Pegu and Burma have no such notions of social uncleanness as the Hindus have adopted, and their great Martaban jars are used by themselves, and are largely exported. Muhammadans also are free from such views, and variously-coloured encaustic tiles have been used for the domes of some of the tombs near Dehli and Agra, as well as in Southern India in the tombs of Golconda. The tiles are in general character precisely similar to, although not so carefully made as, the oriental tiles known as Persian, which adorn the old mosques of Egypt, Syria, Turkey, and Persia; but the mode of decoration upon many of them is remarkable, the figures being executed in pâte-sur-pâte. Some have inscriptions impressed or incised on the surface, while on others it is reserved on the dark-blue ground. The colours used upon them are a rich copper-green, a golden-brown, dark and turquoise blue, etc. Some of this pottery is precisely similar in composition to that produced in Egypt 4000 years ago. The antiquary, the artist, and the manufacturer may do well to study these wares. As in their silk and woollen fabrics, their metal work, and other manufactures, an inherent feeling for, and power of, producing harmony in the distribution of colour and in surface decoration, exists among the orientals, which Europe should study and imitate, if it cannot copy.

Sind pottery is of two kinds,—encaustic tiles and vessels for domestic use. In both cases the colours are the same,—turquoise-blue, copper-green, dark-purple or golden-brown, under an exquisitely transparent glaze. The usual ornament is a conventional flower pattern, pricked in from paper, and dusted along the pricking. The tiles, which are evidently of the same origin as those of Persia and Turkey, are chiefly to be found in the ruined mosques and tombs of the old Muhammadan dynasties; but the industry still survives at the little towns of Saidpur and Bubri, and Sind ware is made at Hyderabad, Kurachee, Tatta, and Hala. Glazed pottery is made in Sind and parts of Upper India; the turquoise-blue, as painted on a paste beneath a glaze, might have been unearthed in Egypt or Phœnicia. Of the specimens which have been exhibited at times, a small bottle painted in blue on white, is the same as the ancient wares of Thebes; a beautiful rich brown jar, painted with flowers in panels, by means of a white earth or 'slip' applied on the surface of the red clay in the consistence of thick cream (the pâte-sur-pâte of Sèvres), the whole glazed over with yellowish-brown, shows the figures, of pale colour, in slight relief on the darker ground; a low vase with similar ornament on plum colour, and a cylindrical jar of brilliant green was a fine example. This mode of decoration occurs on the heavy bronze-coloured and dark-blue porcelain ascribed to Persia, and is also used in China. A few years since it was a novel application at Sèvres, and Messrs. Minton have made a successful use of this method in the decoration of porcelain.

The Hindus are equally successful with the white and black ware, and with basket ware. Some of it is ornamented with red and blue colours; and with grey and copper-coloured mica of various degrees of fineness, rubbed on the clay, the potter gives a metallic effect on the surface of the piece.

The *clays* which are generally employed in the more populous part of British India, contain so much oxide of iron and carbonate of lime, that the vessels melt into a slag at a temperature little above that of redness. Deposits of a black stiff clay, containing much vegetable matter, occur in some districts; vessels made with it sustain a higher temperature. Clays capable of bearing great degrees of heat have, however, been discovered in different parts of India. As one great object is to have porous vessels for cooling water, the ordinary clays answer sufficiently well for this purpose; and some of the ware, as that of the tortoise-shaped, exposes a larger surface to the air. The essential ingredients in every kind of clay, and consequently in every article in pottery and porcelain, are silica and alumina. No clay or artificially prepared pottery or porcelain paste is ever free from admixture with other ingredients, such as iron, lime, potash, and other minerals. But by purging the paste of the accidental ingredients, the iron, lime, etc., we exalt those properties which render it fit for the preparation of fictile articles. An intimate mixture of silica and alumina with water acquires, by exposure to a high temperature, the required degrees of hardness and density; but for many purposes it is necessary to impart a certain degree of fusibility, to which end other substances are used in various proportions, capable of forming vitrifiable double silicates with alumina and silica. These substances, diffused through the paste formed by the simple silicate of alumina, in some cases with silica in excess, in others with excess of alumina, greatly contribute to the cohesion and hardness of the mass. The various mixtures employed in the different branches of the manufacture were thus classified by M. Dumas:—

Silica, alumina,	Ideal type.
Silica, alumina, lime,	Earthenwares, crucibles, bricks, tiles, encaustic tiles, and common pottery.
Silica, alumina, oxide of iron,	
Silica, alumina, lime, oxide of iron,	
Silica, alumina, potash,	Hard porcelain.
Silica, alumina, soda,	Soft porcelain.
Silica, alumina, magnesia,	Piedmont porcelain.
Silica, alumina, baryta,	Stoneware.

It was at one time supposed that the kao-lin porcelain clay of China was peculiar to that country, but clays of the highest value for all forms of ceramic work are to be found in India, and the white goblets of Arcot and the light-coloured pottery of Madras show that clays perfectly free from iron can be obtained.

By far the best clay Sir William O'Shaughnessy met with was procured by Captain Halsted at

Singapore. It occurs there close to the beach, and can be brought to Calcutta for six annas the maund. The clay is found in thick strata. The detached masses are of a pink tint; broken into, they contain nodules of perfectly white earth. They absorb water eagerly, and yield an exceedingly soft, ductile, and tenacious paste. Uparomi or upper wash may be described as a strong brown tenacious or clayey loam. The best is found at a village called Monad, ten cos west of Chinsurah, and at Panchdowkie, eight cos S.W. of Kulna. The raw earth is sold at four annas the maund, but the prepared uparomi is worth three rupees per maund. Three months are required for its proper preparation, and ten seers of uparomi are procured from each maund of the raw earth. There are also two other sorts of varnishing earth prepared from this uparomi, which are called gad or sium, obtained at the bottom of the washing vessel, and majaree or middle sort. All these prepared specimens—belutti, uparomi, gad, and majaree—are obtained by washing, great care being taken to select the water of a very pure tank, no doubt to avoid saline mixtures, which would act as fluxes. The belutti when prepared is a mixture of the yellow ochre and alumina in slightly variable proportions.

The ancient *potter's wheel* is the instrument with which the Hindu works, and while it revolves, with the aid of his naked hands he fashions vessels of elegant forms, many of which have been admired as being of classical shapes, and some would appear almost as if they were of Etruscan origin; but there is no reason to believe that the Hindus have ever had anything but their own unerring taste to guide them. This beauty of form is equally conspicuous in the pottery of Sewan near Patna, as in that of Azamgarh or of Ahmadabad, of Mirzapore, or of Moradabad. Some of it is remarkable also for its extreme thinness and lightness, showing the great skill of the artist, and making it difficult to understand how it kept its shape when in a plastic state, as it is not known that the turning-lathe is used to give a finish to any of the articles. The painted pottery of Kotah and the gilt pottery of Amroha have also been admired. The handles and the various ornaments of the Ahmadabad pottery are no doubt attached, as in Europe, by means of a slip. It is a horizontal flywheel, the frame of wood, the rim heavily laden with clay, 2 or 3 feet in diameter, weight 60 to 80 lbs., and is put in motion by the potter's hand, assisted by a stick. Once set spinning, it revolves for from five to seven minutes with a perfectly steady and nearly true motion. The mass of clay to be moulded is placed on the centre of the wheel, and the potter squats before it on the ground. This machine has doubtless several defects, but it answers its purpose perfectly. The native furnace is simply an excavation in the ground of variable depth, in which the ware is placed layer by layer, with dry reeds, straw, etc., and all are burnt together.—*Juries' Reports of Exhibitions in India and Europe since* 1851; *Royle, Arts of India; O'Shaughnessy, Bengal Dispens.; Imp. Gaz.* See Ceramic Manufactures; Earthenware; Porcelain.

POTTINGER, ELDRED, a lieutenant in the Bombay Artillery. He was sent to report on Central India by his uncle, Sir Henry, then Colonel, Pottinger. He travelled by Shikarpur and Dehra Ismail Khan to Peshawur and Kābul, disguised as a horse-keeper, thence to Herat as an Indian Syud, through the rude country of the Aimak and Hazara. The Persian army, after taking Ghorian, appeared before Herat on the 22d November 1837? and the following day the siege fairly commenced, and lasted till the 9th September 1838? He was the great stay in preventing its capture. When war with Afghanistan was declared on the 1st October 1838, Lieutenant Pottinger was appointed Political Assistant to Mr. Macnaughten. He died at Hong-Kong.

POTTINGER, Sir HENRY, Bart., a Bombay military officer, who was on the embassy of Sir J. Malcolm to Persia, afterwards Political Agent in Cutch and Sind, Plenipotentiary in China, Governor of Hong-Kong, Cape of Good Hope, and Madras; author of Travels in Beluchistan, 1816.

POTUR, a well at Jafna in Ceylon, about 30 feet in diameter, and sunk to a depth of 144 feet. Its surface is of fresh water; but deeper, it is brackish and salt; and on plunging a bottle to the extreme depth, the water it brings up is highly fetid, and gives off bubbles of sulphuretted hydrogen gas. Its level rises and falls a few inches once in every twelve hours, but it overflows its banks, and is never reduced below a certain level, however much water is abstracted. The natives believe that the well communicates with the sea at Kieremalie near Kangesentorre, a distance of 7 miles, from which they affirm that a subterranean stream flows inwards.

POULTRY.

To keep poultry is an abomination to all but the lowest of Hindus. This abstinence is deeply to be regretted, as fowls would keep down the number of snakes.

POUZOLZIA VIMINEA. *Wedd.* A fast-growing shrub of Kamaon, Nepal, and Assam. Its bark is made into ropes, and the leaves are eaten by the Lepcha.—*Gamble.*

POVINDAH are a trading tribe on the N.W. frontier of British India, conducting all the mercantile transactions between British India and Central Asia. They are pastoral in their habits, but portions of their clans carry goods to Dehli, Cawnpur, Benares, and other parts of India, and to Ghazni, Kalat-i-Ghilzai, Kābul, Kandahar, and Herat. Their chief clans are the Lohani, Nasar, Niazi, Daotani, Mian Khel, and Karoti, and these have subdivisions.

They bring to India dried fruits, drugs, spices, silks, woollens, pashminas, felts, horses, cattle, and camels, and carry away British and Indian manufactures of every kind. Camels, of which they have great numbers, are their ordinary carriage. Their imports and exports at the Indus ferries of the Dehra-i-Ismail Khan district in 1867-68 was stated by them to be 25 lakhs of rupees; in 1868-69 they named 29½ lakhs; and in 1869-70, 33 lakhs; but 50 lakhs, or half a million sterling, is the amount at which the British authorities estimated the value of the trade conducted by the

Povindah. They are wealthy, have fine horses, and can muster about 14,000 fighting men. They are in reality soldier merchants. Between Kābul and Kattywaz their Kafila or caravan can travel separately; but from Kattywaz to the British frontier they have to travel in one great mass for mutual protection. They move in bodies of 5000 to 10,000 strong, heavily armed, under an elected chief with the title of khan, marching like an army, with advanced guard and rear guard and flanking parties, in some parts with daily skirmishes, occasionally pitched battles, and when halting at night sentries are posted and pickets thrown out. In a region so full of wars, the perseverance with which they continue their sueeessful enterprise merits all praise. Major Edwardes said he had hardly ever seen a Povindah who had not one or more wounds on his body; and the loss of an eye, broken noses, scarred skulls, lame legs, and mutilated arms are almost as common as freckles in England.

Their great enemies are the Waziri tribe. The Karoti section of the Povindah, to the west and north-west of the Waziri, have 1500 tents. Their elimate in winter is very severe. In spring they live on milk, ghi or clarified butter, cheese, and kurut or dried buttermilk. They are very fair for Asiatics. The Nasar section are the strongest of the Povindah clans. Their numbers are not aeeurately known, and the estimates made have ranged at from 1850 to 12,000 families. They are migratory, dwelling in summer among the Tohki and Ohtak clans of the Ghilzai tribe, and moving in winter to the Dehrajat. They depend chiefly for food, clothing, and tents on their flocks and herds, and trade less than other sections. Their sheep and camels are numerous. They are small of stature, ugly, and black, are rude and squalid in their general appearance, and barbarous in their manners. The Lohani section have three branches,—the Pani, Daulat Khel, and Mian Khel. The first two and part of the Mian Khel have settled to agriculture. The remainder of the Mian Khel are traders. In summer the men visit Bokhara, Samarcand, and Kābul, a guard being left to protect the women in their felt tents. In the winter they move through the Gomal pass to the Dehrajat, when some of them proceed to Lahore and Benares, returning in April in order to revisit Karabagh and Panah.

The Povindah are not the sole travelling merchants of Central Asia. The Parancha are a tribe of merchants, who are said to have eome from Baghdad, and settled in various parts of the frontier districts of Kohat and Peshawur. They claim to be descended from Nushirwan. They trade from Bombay and Calcutta to Bokhara, taking tea, indigo, chocolate, and cloths, starting about September. From Bokhara they start afresh for Yarkand, Tashkand, and Orenburg, and go also to the fair at Nijni Novgorod, which they call Makraia, and they bring back unwrought silk, Tilla (6s. 8d.) and Ratiska, or Russian coins.

The Ushtarana Afghans inhabit the outer hills opposite the extreme south of the Dehra Ismail Khan district. They have become largely agricultural; but they still trade, and bring, through the Kui Bahara pass, into British territory, camels, goats, sheep, donkeys, bullocks, wool, honey, and ghi, taking back grain, piece-goods, shoes, blankets, indigo, sugar, sugar-candy, and raw sugar. On the Sikhs rebelling in 1848, 200 infantry of the Ushtarana, under Fattah Khan, aecompanied Captain Edwardes to Multan.

The Gandapur tribe inhabit the Daman-i-Koh, in the Dehra Ismail Khan district. They too have largely settled down to agricultural pursuits, but are also traders. Fifty or sixty go every year to Afghanistan, and four times that number to India; but this has had little effect in softening their manners, which are rude.

The Baber of the Dehra Ismail distriet has many sections. They are brave, but much scattered, and in the Dehra district could collect only 600 or 700 fighting men. They were considered by Captain Edwardes the most superior race of all the Trans-Indus distriets. They are the fairest of all the tribes. They had a blood-feud with the powerful Mian Khel, whom they almost rival in commerce.

In Arabia, Persia, Asiatic Turkey, Afghanistan, and Baluchistan, the nomade pastoral raees are continually on the move in and to their winter and summer quarters. But from the most ancient times merchants have been traversing those regions. Ezekiel, who lived B.C. 574, in the 27th chapter tells us that the Ashurites made benches of the ivory brought from the Chittim islands; that the men of Tarshish traded with Tyre in silver, iron, tin, and lead; Javan, Tubal, and Meshech brought slaves and brass vessels; horses and mules were brought by the house of Togarmah; the men of Dedan trafficked in ivory, ebony, and precious clothes for chariots; and spices, precious stones, and gold were the merchandise sold in Tyre by the men of Sheba and Raamah. At the present day, Hindu traders and merchants are seen in every village of Central Asia, to the north-west as far as the shores of the Caspiau Sea; but such are permanently resident in their respective localities, the products of the several countries being brought to them by the travelliug mercantile tribes.

The British Government has granted the Povindah a total remission of the heavy duties whieh were imposed by the Sikh Government on all merchandise brought from the north-west, Kābul, Khorasan, Persia, etc.

The total number of those who encamp on British territory has been estimated at 25,000 souls, half of whom belong to the Nasar section. The passes from which they generally emerge are the Gomal, Manjhi, Shekh Haidar, and Zarkani. Considering the wild and independent life the Povindahs lead, they are marvellously orderly and well-behaved when dispersed in British territory, travelling from one end of India to another. When thus scattered, and unable to continue the precautions adopted while in the passes, they have suffered losses on the Tank and Kolachee borders, in spite of the numerous posts, and of the civil and police arrangements. — *N. W. Frontier*, pp. 545, 546.

POWAR, of Nimbalkur, in the Mahratta country, claim to be deseended from the sacred fire of Mount Abu.

POYAKHARRI, in the Tamil country, heritors of lands which their ancestors in remote times reclaimed, who pay to Government either a warum or grain, or teeriva commutation rent.

POYKAI ALVAR, a native of Kanjipuram, contributed a hundred stanzas to the Nalayira Perapantam.

POYYAMOLI PULAVAR, a Tamil poet, who is said to have lived in the reign of Vanangamudi Pandiyan. He wrote an erotic poem, Tangsaivanamkovai, in illustration of the rules of Narkavirasa Nampis Akapporul.

PRABASHA, a hill near ancient Kausambi, on the Jumna, about thirty miles above Allahabad, in the doab of the Ganges and Jumna.—*Cunningham; Tr. Hind.* i. p. 350.

PRABHAL, in lat. 18° 58′ N., long. 73° 14′ E., in the Konkan, five miles N. of Chock. The fort is 2320 feet above the sea.

PRABHASA, a place of pilgrimage on the coast of Gujerat, near Dwaraka, and also near Somanatha.—*Dowson.*

PRABHAVAL, Sansk., from Prabha, splendour, brightness. The glory figured around the heads of Hindu gods.

PRABHU. Sansk. A lord or master, from which comes the Burmese word Prah or Phra. A term applied to the masters of Hindu sects. Prabhu is the word from which the clerking caste of Bombay have been called Purvoe. Maha-pra'hu, great lord.

PRACHETASA, ten sons of Prachinabarhi, and great-grandsons of Pritu. In Hindu mythology, Vishnu granted them the boon of becoming the progenitors of mankind. They took to wife Marisha, daughter of Kandu, and Daksha was their son.

PRACHYA, the people east of the Ganges, the Prasii of the Greeks.—*Dowson.*

PRADAKSHANA, Sansk., is the Decursio of the Romans, the Deasil of the Scotch, the T'iompodh Desiol of the Irish, from Tompadh, turning, and Deisol, to the right. It is a turning to the right in conformity with the sun's shadow.

The Swastika symbolizes this idea of circumambulation. It is the cross + with the crampons ⊣ at the end of its arms. It is a sign of good luck. Turning in the contrary way is called withershins by the Scotch, the German widershins. The Hindus also apply the term to the circumambulation of their temples to be seen daily everywhere, the worshipper keeping the right hand towards the temple. Their six years' pilgrimage from the source to the mouth of the Ganges and back again, is also a Pradakshana; and the term is also applied to going round the aisle or circumambulatory passage surrounding the inner wall of their temples.

In the mode of trampling out grain from the ear, called Daen and Dawan, Hindi, in which bullocks are tied together, and made to circulate from right to left, the words are supposed to be derived from Dahina, the left side.—*H. Elliot.*

PRADHAN. Sansk. Chief, principal, an eminent person under the Mahratta government; the common title of the eight chief civil and military officers. Written and pronounced Purdhan.

PRAD'HAN or Andh, a Gond tribe.

PRAD'HANA, in Buddhism, is nature or concrete matter. The Pradhanika were worshippers of universal nature as the sole First Cause of all things, an atheistical creed, preceding the teaching of Sakya Muni.

PRADHOSHAURATA, a fast observed by the Saiva sect of Hindus.

PRADYUMNA, the incarnate Indian cupid, a son of Krishna and Rukmini, called Kama in N. India and Man-matha in S. India. The Hindu mythology has many fables about him, and one of these is that when six days old he was stolen by the demon Sambara, and thrown into the ocean; there he was swallowed by a fish, which was afterwards caught and carried to Sambara's house, and on being opened by Maya-devi or Maya-vati, she discovered the beautiful child. The Pradyumna-Vijaya, a drama by Sankara Dikshita, relates the victory of Pradyumna over Vajra Nabha. See Sri Sampradaya.

PRÆSTI, an ancient people governed by Portikanus, or Oxykanus; their capital Mahorta, probably the Oskana of Ptolemy. The name of Præsti given by Curtius might, according to Wilson, be applied to a people occupying the thals or oases of the desert. He refers to Prastha or Prasthala, as derived from Sthala, the Sanskrit form of the vernacular Thal, which is the term generally used to designate any oasis in Western India.—*Cunningham's India*, p. 259.

PRAGA, the modern Allahabad, built by the race of Puru; hence its name Puru-raga, the city of the Prasii.

PRAGATHA etymologically signifies a kind of song (from the root Ga, sing).

PRAGWAL, a Brahman who conducts the ceremonies of the pilgrimage at Allahabad.

PRAHLADA, a devotee of Vishnu, saved from the hands of Hiranya by Vishnu in his incarnation as Narasimha. Dowson says Prahlada or Prahrada, a son of Hiranyakasipa, and father of Bali, who adopted the worship of Vishnu.—*Dowson.*

PRAHU. Malay. A ship or lugger; also written Prow. The boats of the Straits of Malacca, China, Archipelago, are the prahu, sampan, lorcha, pukat, and tong-kong or ting-king. In the Eastern Archipelago, the generic name for a boat or vessel, large or small, is prahu, a word almost naturalized in the European languages. It belongs equally to the Malay and Javanese languages, and from these has been very widely spread to others, extending as a synonym to the principal Philippine tongues. The usual name for a canoe or skiff, both in Malay and Javanese, is sampan. The large vessels which the natives of the Archipelago used in war or trade were called by them jung, which is the word corrupted junk that Europeans applied to the large vessels of the Chinese, of which the proper name is wang-kang. For a square-rigged vessel or ship, the natives have borrowed the word kapal from the Teling people. Names vary with forms of vessels and the uses to which they are put, and these again differ with nations or tribes so as to be innumerable. The most common pirate vessels made use of among the floating communities from the Straits to the south-eastern groups, are the penjajap and kakap, with paduakan, and Malay boats of various size and construction.

The penjajap is a prahu of light build, straight, and very long, of various dimensions, and carrying usually two masts, with square kajan sails. This boat is entirely open, except that aft is a kind of awning, under which the head-man sits, and where the magazine of arms and ammunition is stowed away. In front it carries two guns of greater or less calibre, of which the muzzles peer through a wooden bulwark, always parallel to the line of the keel. Penjajap of large size generally carry, in addition to these, some swivel pieces, mounted along the timber parapet; while boats

of inferior tonnage are armed only with two lelah, elevated on a beam or upright. From twenty to thirty rowers, sitting on benches well covered with mats, communicate to the vessel with their short oars a steady and rapid motion, the more swift in proportion as the prahu is small. Large ones, therefore, are often left hidden in some creek or little maze of islets, while the light skiffs, flying through the water, proceed on their marauding errand.

The kakap prahu is a small light boat, provided with a rudder oar, but with no other oars or sculls. It carries only one mast, with a single quadrangular sail. Like the penjajap, it is built of very buoyant timber, the planks being held together by wooden pins, and lashed with rattans. The pirate never goes to sea with a kakap alone, and the voyager may be sure, whenever he descries a kakap, that a penjajap is not far behind, moving along perhaps in the shadow of the high coast, or lurking behind some island, or lying within the seclusion of some woody creek. Eight or ten of the best fighters are usually chosen to man these light skiffs, which remind us of those flying prahus of the Ladrones described by a French voyager in a note to Sonnerat. In calm weather, the pirates row in these buoyant galleys along the shore, or mount the small rivers, confiding in their agility, and knowing well that if surprised they may fly into the woods, bear their little skiff with them, and launch it again at some spot unknown to their pursuers.

The paduakan are native vessels having a single mast in the form of a tripod, and carrying a large lateen sail of mat. They are from twenty to fifty tons burden, and of great beam, with lofty sides, and little hold in the water. They are steered by two long rudders, which are lifted up when the vessel is moored or passing through a shallow.

The ordinary prahus made use of by the Malay pirates at the present day are from eight to ten tons burden, very well manned, and exceedingly fast. Usually they are armed in the bows, centre, and stern with swivel pieces.

A second-class Illanun pirate prahu of Mindanao carries a crew of about 60 men. It has a stage or platform suspended to the mast, with grappling hooks attached to the end, which is used as a bridge for boarding a prize.

The first-class Illanun pirate prahu of Mindanao carries a crew of 100 men or thereabouts. In this description of vessel, the tripod mast, the two after feet of which work on hinges, is used as a bridge in boarding. In May 1843, the English whaler *Sarah Elizabeth*, Captain Bellinghurst, while at Amfuang, with 2 officers and 14 men on shore cutting spars, was attacked by 5 large and several smaller Illanun prahus, the crews of which, after killing, taking, or dispersing the party employed on shore, boarded the ship, the captain and the remainder of the crew, who were taken by surprise, escaping to sea in the whale-boats. The pirates, after plundering the ship, burnt her to the water's edge, in which state she was found by three other whalers that had been met with by Captain Bellinghurst in the offing, and had accompanied him for the purpose of rescuing his ship from the pirates. A full account of this transaction will be found in the Moniteur des Indes for 1847–48, pp. 34, 35, by Jankpeer Comets de Groot, who was during several years Resident of the neighbouring settlement of Rhio, and afterwards secretary-general to the Colonial Department of Holland.—*Kolff's Report*, 1831; *Earl's Voyage of the Dourga*, note 89; *St. John's Archipelago*, ii. p. 182; *Sonnerat, Voyage*, p. 139.

PRAIRIE GRASS of Australia is the Bromus unioloides, *Humboldt.*

PRAJA or Pauja. SANSK. Lit. progeny, offspring, subjects, people. The praja of Koch-Bahar are cultivators almost in a state of serfdom. In Cuttack, the barber, washerman, fisherman, weaver, leather-worker, and tari-gatherer are classed as praja, and often sold themselves and families into temporary slavery. Prajapat, a king. Prajapati, progenitors of mankind; in the Veda the term was applied to Indra, Savitri, Soma, Hiranya-garbha, and other deities. In Menu to Brahma; it is also given to Menu-Swayambhuva, and also to the ten rishi or mind-born sons of Brahma, fathers of the human race,—Marichi, Atri, Angirasa, Pulastya, Pulaha, Kritu, Bhrigu, Nareda, Vasishta, Prachetas, or Daksha. Prajapatya, SANSK., the work of a prajapati.—*Wilson; Dowson.*

PRAJAPATI, a Hindu sage who dwelt at Hingula. He is mentioned in several Puranas. He taught that God is invisible, though possessed of form, and that final beatitude consisted in absorption into the Great Spirit.—*Ward*, iv. p. 45.

PRAJNA, in Buddhism, means wisdom, understanding, or foreknowledge. The author of the Ashta Sahariska thus addresses Prajna: 'Thou mighty object of my worship!' Thou Prajna art the sum of all good qualities, and Buddha is the guru of the world.' The author of the Puja Kand thus addresses Prajna: I make salutation to Prajna Devi, who is the Prajna Paramita (Transcendental Wisdom), the Prajna Rupa (multiform), the Nir Rupa (formless), and the universal mother.

Prajna Devi is deified Nature or Diva Natura, and the same as Dharma. In the physiological mythology of the Buddhists, the universal mother in the Kameshwari temple at Gowhatty in Assam is represented by the Yoni, which is there a triangular stone, tri-kon-akar-jantra. 'Adi Prajna or Dharma is the Prajna Devi, the Prajna Paramita, the Prajna Rupa, the Nir Rupa, and the universal mother. The wise make no distinction between thee and Budh. When all was Sangata, Prajna Devi was revealed out of Akas (space) with the letter U. That Yoni from which the world was made manifest is the tri-kon-akar-jantra.' In the midst of the jantra or tri-kon is a binda (point or eypher); from that binda Adi Prajna revealed herself by her own will. From the sides of the triangle, Adi Prajna produced Budh and Dharma and Sangha. Adi Sangha, Amitabha, by virtue of his Samta Jayan, created the Budhi Satwa named Padma Pani, and committed to his hands the lotus, the type of creative power. From Padma Pani's shoulders sprang Brahma's forehead, Mahadeo his two eyes, the sun and moon, from his mouth the air, from his teeth Saraswati, from his belly Varuna, his knees Lakshmi, his feet the earth. From the union of the essences of Apaya (Adi Budha) and of Prajna (Adi Dharma) proceeded the world, which is Sangha, represented by the letter M.

PRAKRIT or Prakrita is a term given to

dialects of the Sanskrit; it is the common, the enchorial, and not the perfect language. In this sense the common dialect of any spoken language is a Prakrit. Prakrita means derived from a model. The ancient Prakrit dialects were those forms of the speech of the Aryans which were commonly used by the masses. The earliest show five groups,—the Maharashtri, spoken round Ujjayani or Avanti in Malwa, perhaps including S. Rajputana and the present northern Mahratta country. Next the Sauraseni, spoken in Sarasena, in modern times the country round Mathura; thirdly, the Magadhi, the vernacular of Behar; fourthly, the Paisachi, whose exact locality is not defined; and fifthly, the Apabhransa or corrupt dialect, perhaps in Sind and Western Rajputana. In the Hindu dramas, kings and Brahmans speak Sanskrit, but those of inferior position speak in different Prakrits. The Prakrits have received careful study. Prakrita-prakasa, a grammar by Vararuchi, was translated by Professor Cowell.—*Dowson.*

PRAKRITI. Sansk. Nature, crude matter, primary creation, matter as opposed to spirit; also the goddess of nature. The sakti or female energy of any Hindu deity. Pradhana is crude matter.

PRAMANIK, in Bengal, one of the village authorities; a headman amongst the Hindu castes, from the Sanskrit Pramanika.

PRAMARA, properly Paramara, one of the four Agnicula Rajput tribes. Of their thirty-five sacæ are—

Mori, of which was Chandragupta and the princes of Chitore prior to the Gehlot.

Soda, Sogdi of Alexander, the princes of Dhat in the Indian desert.

Sankla, chiefs of Poogul, and in Marwar.

Khyr, capital Khyralu.

Oomra and Soomra, anciently in the desert, now Muhammadans.

Vehil or Bihil, princes of Chandravati.

Maipawut, present chief of Bijolli in Mewar.

Bulhar, northern desert.

Kaba, celebrated in Saurashtra in ancient times; a few yet in Sirohi.

Omuta, the princes of Omutwarra, in Malwa, then established for twelve generations. Omutwarra is the largest tract left to the Pramara. Since the war in 1817, being under British interference, they cannot be called independent.

Rehar, Dhoonda, Soruteah, and Hurair, Grasia petty chiefs in Malwa.

The Pramara, though not, as the name implies, the chief warrior, was the most potent of the Agnicula, and acted an important part in the history of India in the middle ages. They sent forth thirty-five sacæ or branches, several of whom enjoyed extensive sovereignties. The world is the Pramar's, is an ancient saying, denoting their extensive sway; and the No-kot maroost' halli signified the nine divisions into which the country from the Sutlej to the ocean was partitioned amongst them. Maheshwar, Dhar, Mandu, Ujjain, Chandrabhaga, Chitore, Abu, Chandravati, M'how, Maidana, Parmavati, Omrakot, Bekher, Lodurva, and Puttan are the most conspicuous of the capitals they conquered or founded. Not one remnant of independence exists to mark the ancient greatness of the Pramara; ruins are the sole records of their power. Of all their possessions, the prince of Dhat, in the Indian desert, is the last scion of royalty; and the descendant of the prince who protected Humayun, in whose capital, Omrakot, Akbar was born, is in very humble position. Among the thirty-five sacæ the Vehil was eminent, the princes of which line appear to have been lords of Chandravati, at the foot of the Aravalli; but of the dynasties issuing from the Agnicula, many of the princes professed the Buddhist or Jain faith to periods so late as the Muhammadan invasion. Maheshwar was the ancient seat of the Hya dynasty. The Mori race, whose leader Chandragupta, as is supposed, opposed Alexander, was a Takshak, and the ancient inscriptions of the Pramara declare them to be of the race of Tusta and Takshak.—*Colonel Tod's Rajasthan*, i. pp. 92, 93.

PRAMATI. Sansk. From Pra, prep., and Mati, understanding. Pramathesa, lord of the five senses, title of Mrira, traced to Prometheus. *As. Res.* iii. 327, vi. 506, 510.

PRAM LOCHA, a celestial nymph, sent by Indra to beguile the sage Kandu from his devotions.—*Dowson.*

PRAN, in Hindu belief, a spiritual element, of which there are twelve. The Hindu believes that on the clearness and firmness of his spirit at the last moment, when all is growing dim before him, hangs his chance for the world beyond. His life ebbs away; the eleven pran, or spiritual elements, gliding from him, ascend the precipitous banks of the dark Bhaosagar river. The twelfth pran—the spirit of life—still flutters within him. The eleven forerunners, as they stand on the awful brink, survey beneath a vast chaos of animal shapes and forms. If the twelfth which they have left behind can remain placid and calm, the eleven may have a brief moment's respite to choose from among the ghastly throng the form into which they shall migrate. The choice made, the angel of death from behind precipitates them into the abyss, where, joined by their twelfth mate, they enter the chosen tabernacle. And thus, with a last struggle, the spirit passes away.—*Pioneer.*

PRANA. Sansk. Breath of life. In the Atharva Veda it is personified, and a hymn is addressed to it.

Pranam, a Hindu form of salutation, consisting of a slight inclination of the head and the application of the joined hands to the forehead.

Pranayama, from Prana, life, and Ayama, a coming. The Hindu devotional exercises of pranayama, or breathing through either nostril alternately, and then closing both during the repetition mentally of certain formulæ. It is performed by three modes of suppressing the breathing, called rechakas, puraka, and kumbhaka.—*Dowson; Hind. Theatre*, p. 195.

PRANALIKA is a gutter or spout for draining off the water poured on a lingam.

PRANDHA-BRAHMANA, one of the eight Brahmans of the Sama Veda. It contains 25 sections.

PRANGOS PABULARIA. *Lindley.*

Fitrasuliun, Fitura, Push.	Prangos, . . . Pushtu.
Petrasoleum, . . . ,,	Komal, . . . ,,

This plant grows south from Iskardo, in Western Ladakh at 10,000 feet, in parts of Kashmir at 5000 to 6000 feet. It is found above Vernag, where Moorcroft also says he saw it, and in Afghanistan,

in the high land round Ghazni, about 7000 or 8000 feet (Bellew), and near Maidan, close to Kābul, at 6000 feet, and towards Hajiguk, perhaps 12,000 feet (Moorcroft, who calls it Romai). Bellew brought at least one other species of Prangos from Afghanistan. This plant constitutes excellent fodder for cattle, fattens quickly, and destroys the 'liver fluke,' Fasciola hepatica, of sheep. Royle considers it one of the plants which yielded the Silphium of Alexander's historians. Moorcroft, in Tibet, found it employed as winter fodder for sheep and goats, and frequently for neat cattle; and, writing from the neighbourhood of Draz, he praises the Prangos hay plant. Attempts to introduce it into Great Britain were unsuccessful; and it is probable it will only succeed and be valuable in a climate similar to that where it is found indigenous. It is highly valued in the cold and arid region of Tibet, where it is indigenous. It is found in Tibet, and also most abundantly on Ahatong, a low trap hill in the valley of Kashmir; but there it was not so vigorous as in its Tibetan habitat. Dr. Falconer is of opinion that its importance has been much over-estimated. The Prangos will be valuable only in countries devoid of good natural pasturage, and of which the climate is favourable to its growth. In Kashmir, it is used in decoction to cure the rot in sheep. The leaves are used as fodder for sheep; they are rather heating. The native name, fitrasuliun, is probably a corruption of the Greek name of parsley. Lieut. A. Burnes, crossing in the direction of Alexander's route, found this plant, the Prangos, greedily cropped by sheep. The fitrasuliun seed from this or another species of Prangos is used as an aphrodisiac.—*O'Sh.* p. 369; *Moorcroft*, v. p. 179; *Jam. Ed. Journ.* xiii. 873; *As. Res.*; *Royle's Pro. Res.*; *Powell*, i. p. 352; *Stew.*

PRANHITA, the name of the united streams of the Wardha and Wainganga up to their junction with the Godavery. On the Pranhita and Godavery river, the Mahratta and Teling races meet.

PRAN-NATH, a Hindu reformer who lived in the 17th century in Bundelkhand, and founded the sect that bears his name. He was of the Kshatriya caste, lived to the beginning of the 18th century, and was patronized by Ch'hattrasal, raja of Panna in Bundelkhand. His followers are sometimes called Dhami, from Dham, a name of the Supreme Spirit, or Paramatma. They have no idols. His treatises, 14 in number, are in Hindi verse. The doctrines are monotheistic, and are taken from the Koran. He composed Mahitariyal, with a view to combine the Muhammadan and Hindu religions. They eat together and admit the gods of each other's religions, but do not make any other departure from the customs of their ancestors.

PRAN-PRALAP. There arose in Nadiya, in Bengal, in the beginning of the 16th century, a Hindu reformer who was destined to wield immense influence on the masses. Chaitanya flourished during the time of Kasinatha, and when Sayyid Husain Sharif of Mecca reigned in Gaur under the title of Sultan Ala-ud-Din Husin Shah, Sharif of Mecca. It was when Luther was thundering against the indulgence and other abuses of the Christian church, that Chaitanya preached a new doctrine. That doctrine was the efficacy of Bhakti or faith as contra-distinguished from works. It was an innovation on the Vedic system, which inculcates specific religious duties and the performance of ceremonies and acts. He taught that all men are capable of participating in the sentiments of faith and devotion, and that the members of all jati or castes became pure by such sentiments. He maintained the pre-eminence of faith over caste. The mercy of God was according to him boundless, and not circumscribed by the restrictions of tribe and family. He declared that Krishna was Parmatma or the Supreme Spirit, prior to all worlds, and both the cause and substance of creation. In his capacity of creator, preserver, and destroyer, he is Brahma, Vishnu, and Siva. Chaitanya became the founder of the largest religious sect in India, mustering nine to ten million souls, and fortified by an elaborate organization. Its disciples are to be found in almost every village in Bengal. They include some of the wealthiest and most influential families, as well as a host of poor and obscure men. Having obtained the sympathy and support of a large class, Chaitanya openly declared it was his mission to go forth and preach the love of Krishna as the one thing needful for salvation. But the Krishna of Chaitanya was not the son of Debaki, the intended victim of his uncle the tyrant Kansa, the sojourner in Brindaban, the companion of cowherds, the lover of Radha, the favourite of milkmaids and flower women, the terror of husbands, and afterwards the conqueror of Kansa and king of Dwarka; but the Creator of the universe, and the God of truth, justice, mercy, and love. His Krishna was the great and original Spirit, the author of creation, and the giver of all good. The age of Kasinatha and his successors was eminently favourable to the reception of the religious tenets Chaitanya offered to it. The country had undergone great political and social changes. The character of the Hindus had been moulded during some time by Muhammadan conquests, Muhammadan intercourse, Muhammadan laws, and Muhammadan literature. Their minds were at this time fermenting with religious longings, to which the doctrine of Bhakti inculcated by Chaitanya answered in many ways. A more practical religion than Vedantism, and a purer religion than Bhavanism, was eagerly looked for. It is therefore not to be wondered at that the religion of Chaitanya soon took root in Nadiya, which reverberated with the name of Krishna. Young men and old men of that city gathered round him; among them was Adaitauand, who was to him what the Baptist had been to the greatest religious reformer. He addressed them all in a tone of authority and affection, telling them that Krishna was the Saviour, and that they must love him with all their hearts and with all their souls. His preaching was generally heralded by convulsions and fainting fits. This phenomenon was called by his disciples Pran-Pralap, and continued for hours. During its continuance he forgot all mundane affairs, and exclaimed ever and anon Krishna, Krishna. This ecstatic state of Pran-Pralap was attended with mystic sighs and songs of Haribol. It was contagious among his disciples, and became a conspicuous trait of the new sect. Chaitanya was a mystic. Eating but little, and caring nothing for the animal man, he was able to maintain a state of continued excitement. This cerebral and muscular debility contributed in no inconsiderable degree to bring about those

alternations of deep sorrow and intense joy which told so much upon his audience, and by means of which he swayed tens of thousands. Chaitanya thought or rather felt that the first and greatest of all works was faith in Krishna. From this all other works must spring. He announced this as a mighty message of joy, a message that thrilled through the hearts of his hearers. He preached that the Chandala, whose impurity is consumed by the chastening fire of holy faith, is to be reverenced by the wise, and not the unfailing expounder of the Veda. Again, 'the teacher of the four Vedas is not my disciple. The faithful Chandala enjoys my friendship; to him let it be given, and from him be received; let him be reverenced even as I am revereneed.' Religious rites and ceremonies were in his opinion not essentially important, but the appreciation of them by the generality of mankind, and their adaptability to the spread of religious tenets, were fully realized by him. With a view to perpetuate distinctiveness of his sect and society, and establish an indissoluble bond of union, he insisted on his followers submitting to the initiatory rite of the Mantra. It consisted in the guru or spiritual guide whispering in the ears of the Sishya (disciple) the mystic words 'Kling Krishna.' Another observance enforeed by Chaitanya among his followers was the eating of the prasada by them together. A common meal has always been understood to cement and ratify relations of friendship. The brotherhood of the Vaishnava sect was symbolized in the prasad. It was a communion where all the followers, without distinction of caste, were admitted on equal terms. There was the learned Naiyaik as well as the illiterate Chasa, the Muhammadan Rais as well as the Muhammadan Mahout, the Kulin Brahman and the Kulin Kayastha, as well as the aboriginal Bagdi and the excommunicated Chandal, all participating in consecrated rice and dal and malpua. It was a manifestation of an intimate fellowship between those who shared in this common meal. It is now manifest that one of the distinguishing features of Chaitanya's theocracy was the universal character of the sect he founded. That sect was recruited from all classes of the Hindu as well as the Muhammadan community. No one who desired to enter was refused. To all who knocked at the door, admittance was granted. Chaitanya kept an open house, and his guests represented all classes, not only of society but of humanity. Chaitanya was most child-like in disposition and character. He was essentially guileless and simple-minded, but a most large-hearted man; and it was in his preaching that he poured out the wealth of that heart. He became a king of men on the Bedi or pulpit, which constituted his throne. His sermons were to the Hindus of Bengal what those of Savonarola were to the Florentines. Like the Italian reformer, he was fervid and forcible. Chaitanya was fond of travelling, and became an itinerant preacher. In the course of his peregrinations he came to Ramkali, situated in the suburbs of Gaur, the then capital of Bengal. He delivered there a magnificent sermon. Striking the harp and hymning the praise of Krishna, he touched a chord which resounded and vibrated through Bengal. His utterances were aglow with intense fervour. Thousands of people came to hear him, and the sensation he made was so great as to attract the attention of the king Sayyid Husain, who deputed an officer to inquire into the matter. The officer reported that the noise had been made by a Sanyasi, and that it was not worth while taking further notice of the matter. But he continued to preach, and all classes of men from all parts of the great city crowded to Ramkali. Among those who had come to hear him preach were two Muhammadan brothers, Dabir and Khash, holding high employ in the court of Gaur. They were, in fact, ministers of Sayyid Husain, and enjoyed his entire confidence. They were enraptured with the eloquence of Chaitanya, and became converts to the doctrine of Bhakti; they longed to see him in private, to learn at his feet the tenets of the new faith. Accordingly they went to his cottage at midnight, and thus addressed him: 'Purifier of the fallen, low in descent and occupation, we are afraid of speaking our minds to thee. Saviour of Jagai and Madhai, have mercy on us. Of M'hlecha descent, these sinners are incomparably more odious than those lordly Brahmans of Nadiya. Our race has sinned greatly against cows and Brahmans. We are dwarfs standing on tiptoe to catch the moon. Stoop in mercy towards us.' Chaitanya cordially received them, and assured them of their salvation. 'Krishna will save you; henceforth you shall be known to the world under the names of Rupa and Sonatun.' The reception of two Muhammadan nobles evinced a moral courage of no common order, which, while it showed Chaitanya's deep conviction of the purity and popularity of his faith, afforded conclusive evidence of his extraordinary boldness in disregarding the injunctions of caste and race, and his intention to build religion on the fatherhood of God and the brotherhood of man. It must be remembered that the convert brothers were members of a court which was intolerant of Hinduism, and served a king who, claiming as he did direct descent from the prophet, was particularly aggressive against its doctrines. This act, therefore, was calculated to enlist against the reformer not only the active antagonism of the king and the court of Bengal, but the hostility of the Hindus, who had been accustomed to regard the Muhammadans as M'hlechas, association with whom, in a Hindu religious point of view, is contamination. He, however, fully expected his disciples to cast aside all antiquated prejudices, and above all, and beyond all, to have faith, which he rightfully applied as the true test of training in Vaishnavism. He was emphatically what the Germans call an epoch-making man, representing some of the best elements of Hindu thought and Hindu character, and illustrating in himself the strength and weakness of Hindu theology. His object was grandly catholic. It was to rebuild Hindu society from its foundation, to exterminate priestcraft, to eradicate the evils of caste, to introduce religious toleration, to assert the right of equality of man, and to establish the relations of his fellow-beings on the principle of a universal brotherhood. A fanatic and a mystic, Chaitanya never deviated from his appointed course; and the immense influence he had acquired over the hearts of his followers, he applied to the furtherance of no personal objects, but of that religion to which he had consecrated his life and his energies.—*Calcutta Review*, No. 109, p. 100.

PRANT, an ancient Hindu term, signifying a considerable subdivision of a country.—*Jervis's Geographical Memoir*, p. 81.

PRAPUL, the footmark of Arhan, in the island of Sinbal so called.

PRASADA. Sansk. Prasadham. Prasada, in the Vaishnava sect of Hindu religion, is an article of food, consecrated by previous presentation to an idol, after which it is distributed amongst the worshippers on the spot, or sent to persons of consequence at their own homes. It was the prasada or meat offered to idols from which, in Acts xv. 29, the followers of Jesus Christ were told to abstain. Yet 1 Corinthians x. 25 says, 'Whatsoever is sold in the shambles, that eat, asking no question for conscience sake.' In Orissa, the people buy the boiled rice which has been offered to Jaganath, and all the different castes eat of it together, as an act of merit; the same conduct in Bengal would make them out-castes. The Buddhists of Burma also throw away the offerings; and at the great Shooay-Dagon at Rangoon and the Prome temple, Shooay-San-Dau, vast heaps of boiled rice are thrown over on the rocks. But most Hindus eagerly seek whatever has been offered to an idol; hence it is common to see flowers which have been thus offered, placed in the hair of a Hindu. Water that has been thus made sacred is preserved in Hindu houses, and with it they rub their bodies, and occasionally sip a drop. The celebrated Goguet has remarked that the custom of offering food to the object of divine homage had its origin in a principle of gratitude, the repast being deemed hallowed by presenting the first portion to him who gave it, since the devotee was unable to conceive aught more acceptable than that whereby life is sustained. From the earliest period such offerings have been tendered; and in the burnt-offering (hom) of Abel of the firstling of the flock, and the first portion of the repast presented by the Rajput to Ana Deva, the nourisher, the motive is the same. The Mukhia servants of the temple of Kaniya carry the sacred food to wheresoever the votaries dwell, which produces an ample return. At the same time are transmitted, as from the god, dresses of honour corresponding in material and value with the rank of the receiver, a diadem or fillet of satin and gold, embroidered; a dagla or quilted coat of gold or silver brocade for the cold weather; a scarf of blue and gold; or, if to one who prizes the gift less for its intrinsic worth than as a mark of special favour, a fragment of the garland worn on some festival by the god; or a simple necklace, by which he is inaugurated amongst the elect. Kaniya ki kanti band' hna, 'to bind on the neck the chaplet of Kaniya,' is the initiatory step. At the present day, Christians of no sect make any food-offerings to images. The Hebrew races, however, as also the Muhammadans, only partake of the flesh of such animals as have been made lawful food by being prayed over before being killed. This is called amongst Muhammans Halal karna, to make lawful, and a Muhammadan recites the words Bismillahi, Allaho-Akbar. Otherwise, it is harām, unlawful. In the name of the Lord, to God, the great. In the butcher shops of the towns of Europe where the Hebrew races reside, a mark is put on the animals which have been made lawful for food. When the animal is slaughtered and skinned, an examiner appointed by the synagogue carefully inspects the inside; and meat that has been killed according to the Jewish law, and is lawful to eat, is distinguished by a leaden seal, stamped in Hebrew characters with the name of the examiner, and the word Koshar, meaning lawful. That killed in any other fashion is called 'tryfer.' The Hebrew Scriptures three times command, 'Thou shalt not seethe a kid in his mother's milk' (Exodus xxiii. 19, and xxxiv. 26; and Deuteronomy xiv. 21). The utmost care has been used in carrying out both the letter and the spirit of this injunction, and particular vessels used for dressing flesh and others for milk, and a complete separation required for dishes, plates, knives, forks, and so forth. No vessels of wood or earth may be purchased at second-hand, and those of metal or stone have to be well scoured with hot ashes or scalded in boiling water before it was considered proper to employ them in the preparation of food. The Hindu races are even more stringent than the Hebrew, and many of the Vaishnava sect do not allow a stranger to see the cooking. Numerous others do not permit any one to see them eating.—*Tod's Rajasthan*, i. p. 529.

PRASANNA RAGHAVA, a drama by Jaya Deva in seven acts.—*Dowson.*

PRASE, a quartzose mineral; it is found amongst the pebbles on the shore at Trincomalee in Ceylon, and in the Dekhan trap.

PRASENJIT, son of Susandhi, was 24th of the line of Ikshwaku. In the 6th century B.C., Rajas Prasenajita and Ajata Satra visited Buddha.

PRASHADA. Sansk. A heresy. Some of the popular works of the Hindus allude to 96 prashada or heresies, viz. amongst the

Brahmans, ...	24	Saura, ...	18
Sanyasi, ...	12	Jangama, ...	18
Viragi, ...	12	Jogi, ...	12

PRASII of the Greeks, the Prachi of Hindu writers, the name of the tract in which Magadha is situated. Arrian and Strabo say that the Prasii were the most distinguished of all the Indian nations. Their empire at one time seems to have included most of the tract through which the Ganges flows after it enters the plains of Hindustan.—*Rennell's Memoir*, p. 50. See Prachya.

PRAST'HA. See Pat.

PRATARDANA, called also Vatsa, Satrajit, Ritha-dwaja, and Kuvalayaswa, was son of Divo Dasa, king of Benares. Divo Dasa was driven from Benares in a revolution brought about by the Buddhist and Saiva sects. Divo Dasa dispossessed the Bhadrasena family from a district on the Gumti, but it was recovered by Durdama, and again lost to Pratardan, who avenged the slaughter of his father and family. See Divo Dasa.

PRATCHAN. Malay. In Borneo, a red condiment made of prawns. It is in the form of a paste, and is sold at 3 dollars per pikul. Dry pratchan sells at 10 or 12 cents per qintang.—*Burbidge*, p. 177.

PRATISAKHYA, four treatises on the phonetic laws of the language of the Vedas.—*Dowson.*

PRAVARA, Sansk., in the Hindu worship, means the invocation of those ancestors whose names are to be coupled with that of Agni when the latter is invited to be present at the consecration of the sacrificial fire.

PRAWN. Palæmon, *sp.*

Jeengha, . . . Hind.	Langostin, . . . Sp.
Gambero marino, . It.	Eeral, ... Tam.
Oodang, . . . Malay.	Roiello, ... Tel.

Palæmon serratus and other species are abundant along the coasts of the S. and E. of Asia. In China, prawns, shrimps, crabs, crawfish, and other kinds of crustacea, are abundant and palatable. One species of Chinese crawfish, as large as but not taking the place of the lobster, is called lang hai, or dragon crab. It and cuttlefish of three or four kinds, and the large king crab (Polyphemus), are all eaten by the Chinese.—*Ains. Mat. Med.* p. 155.

PRAY. The Manu Manau tribe are called Pray by the Red Karen; they dwell between the Sgau and Red Karen.

PRAYAGA, the modern Allahabad, also called Pratishthana and Triveni. It is described in ancient Hindu writings as at the confluence of the Yamuna and Ganges, on the bank of the latter; it would seem, therefore, so late as the composition of the drama of the Hero and the Nymph, that that ancient city still stood opposite to its present site. The ruins, according to Hamilton, were still to be seen at Jhusi, on the left bank of the Ganges. Prayaga was a holy place, having been the seat of Bharadhwaja's hermitage; but Allahabad never was a city until Akbar made it one. Akbar called his fort Ilahabad, and it was afterwards called by Shah Jahan, Allahabad. The name of Prayaga is recorded by Hiwen Thsang in the 7th century, and is in all probability as old as the reign of Asoka, who set up the stone pillar about B.C. 235, while the fort was not built until the end of the 16th century. Hiwen Thsang makes the district of Prayaga about 5000 li, or 833 miles, in circuit; but as it was closely surrounded on all sides by other districts, General Cunningham reduced it to 500 li, or 83 miles, and limits the district to the small tract in the fork of the doab, immediately above the junction of the Ganges and Jumna. There still is the famous tree called Akshay Bat, or undecaying banyan tree. This tree is now underground, at one side of a pillared court, which would appear to have been open formerly, and which is supposed to be the remains of the temple described by Hiwen Thsang. The temple is situated inside the fort of Allahabad, and due north from the stone pillar of Asoka and Samudra Gupta. According to the common tradition of the people, the name of Prayaga was derived from a Brahman who lived during the reign of Akbar. The story is, that when the emperor was building the fort, the walls on the river-face repeatedly fell down, in spite of all the precaution taken by the architect. The old city of Prayaga has totally disappeared, and we can scarcely expect to find any traces of the various Buddhist monuments which were seen and described by the Chinese Pilgrims in the 7th century. —*Cunningham's Ancient Geo. of Ind.* p. 388; *Tr. Hind.* i. pp. 207, 317; *Hindu Theatre*, i. p. 207; *The Hero and the Nymph; Hamilton's Genealogies of the Hindus.* See Lat.

PRAYER, Salut, Dua, Arab., Namaz, Pers., is part of the ritual of worship of the Hindus called puja. The Muhammadan praycrs are dua, namaz, and salut. The Muhammadan prayer is called 'salla,' and its performance is required five times in each day. The first time of prayer commences a few minutes after sunset, the second at nightfall, the third at daybreak, the fourth a little after noon. Mahomed would not have his followers commence their prayers at sunrise, nor exactly at noon or sunset, because, he said, infidels worshipped the sun at such times.

PRECIOUS STONES.

Pierre precieuse, . Fr.	Gemma, ... It.
Edelstein, . . . Ger.	Piedra preciosa, . . Sp.

Precious stones are often termed gems by jewellers, who thus designate all minerals remarkable for their hardness, lustre, and beauty; but transparency, brilliancy, lustre, and freedom from defects, to be of great value, should also have associated with them the exact quantity of colouring to furnish the favoured tint. Besides the distinction of gems for the most beautiful of the minerals in jewellers' and lapidaries' work, under the term 'inferior gems' they utilize for ornamental purposes many quartzose minerals, while pearls and nacre from molluscs are amongst the most esteemed of the gems, and coral from the animal, with jet and amber from the vegetable kingdoms, are much appreciated by many races.

If the precious stones in use as gems be noticed chemically, the diamond is a crystallized form of carbon; the balas ruby and spinel ruby are compounds of alumina and magnesia; the chrysoberyl and its variety Alexandrite are combinations of alumina and glucina; the sapphire and ruby, the sesqui-oxide of aluminium; the hyacinth and jargoon (zircon), a compound of silica and zirconia; the beryl, emerald, and euclase, compound silicates of aluminium and glucinum; tourmaline and rubellite, boro-silicate of several bases; lapis-lazuli, a combination of silicate and sulphate of aluminium; and turquoise, a hydrated phosphate of aluminium; amethyst, sard, plasma, prase, chalcedony, and noble opal are varieties of silica or quartz; chrysolite and peridot, a silicate of magnesia and iron; and garnets have a varicd composition, containing two or more of calcium, magnesium, iron, manganese, aluminium, chromium.

From the most ancient times all races have attributed fanciful virtues to them. The diamond was considered by the Romans a remedy against incubus and succabos; the ruby against poison; jacinth procured sleep; sapphire procured favour with princes; it was on tables of sapphire that the ten commandments were engraved, and it was also supposed to preserve the sight; the chrysolite assuaged wrath. Each of the twelve apostles was symbolized with a precious stone,—Peter by jasper, John by emerald, and so on. A sardius was placed in the beast-plate of the Hebrew high priest; any precious stone of a red hue was supposed by the Jews to be a preservative against plague, and by the Arabs to be useful in stopping hæmorrhage.

The value of these minerals varies. From their small bulk and consequent portability, gems have always risen in price during wars. In the French revolution from 1789 to 1796, diamonds are stated by Mr. Emanuel to have doubled their usual price. The prices of the larger are also regulated by the demand and by the fancies of purchasers. The prices of gems seem always to have been higher in Asia than in Europe. Since the middle of the 19th century, fresh sources of precious stones have been discovered in Australia and at the Cape of Good Hope, and much alteration has occurred in

the prices. The most valued gems have been selling in India at 25 per cent. higher than in London. Yet India continues largely to export some kinds, and in the five years 1856-57 to 1860-61, the quantities exported ranged in value from £138,224 to £153,748 annually, nearly all being sent from Bombay, chiefly to Aden, Suez, which took about four-fifths, the rest to the United Kingdom, China, and France. Since then the exports amounted to Rs. 1,87,362 in 1882-83, and the imports rose to Rs. 36,82,177 in 1880-81.

Arabia is said to have the topaz, the onyx, and the yemani or akik. The agate is found near Mocha, emeralds in the Hejaz, beryls and carnelian near San'aa and Aden, malachite in the cavern of Beni Salem; also jasper, amethyst, and turquoise in the environs of the village of Safwa, about three days' journey from Medina. The diamond, the sardonyx, and the topaz were obtained through Arabia in ancient times.

Tavernier, writing of his time, p. 144, tells us 'there are but two places in all the east where coloured stones are found, within the kingdom of Pegu and the island of Ceylon. The first is a mountain twelve days' journey or thereabouts from Siren towards the north-east, the name whereof is Capelan. In this mine are found great quantities of rubies and espinels or mothers of rubies, yellow topazes, blue and white sapphires, jacinths, amethysts, and other stones of different colours. Among these stones, which are hard, they find other stones of various colours that are very soft, which they call Bacan in the language of the country, but are of little or no esteem.'

In *Southern India*, the localities which supply the beryl are also supposed to have yielded the emerald, though Tavernier was not able to ascertain that any part of India, in his day, was yielding emeralds. 'As for emeralds,' he says (p. 144), 'it is a vulgar error to say they came originally from the east. And therefore when jewellers and goldsmiths do prefer a deep-coloured emerald inclining to black, tell ye it is an oriental emerald, they speak that which is not true. I confess I could never discover in what part of our continent those stones are found. But sure I am, that the eastern part of the world never produced any of those stones neither in the continent nor in the islands. True it is, that since the discovery of America some of those stones have been often brought rough from Peru to the Philippine Islands, whence they have been transported into Europe; but this is not enough to make them oriental. Besides that, at this time they send them into Spain through the North Sea.'

In the southern part of *Ceylon* is an extensive group of mountains rising to the height of 7000 or 8000 feet, which successive falls diminish till they rest on the alluvial plains of the low country. The S.W. face of this group forms a bold range, crowned at its western extremity by Adam's Peak, called by the people Sri-pada or Holy Foot, and at the eastern end of the range in Kirizalpota, which rises in abrupt precipices to 8000 feet above the plains. Ratnapura, or city of gems, is in part of this range. It is about 60 miles from Colombo, and about 200 feet above the level of the sea. It is the centre of the gem-producing district, which extends about fifty miles along the base of this mountain range, and in this district, comprising Saffragam and the Three Korles, the search for gems is a regular occupation of the people in the beds of streams and in the alluvial plains lying in the valleys upon their banks. The gems found in that locality are the sapphire, the ruby, and the topaz; the cat's eye, amethyst, and beryl; and the spinel ruby is also found, but is more rare. They are found in a layer of gravel fifteen to twenty feet deep, to which they sink a pit, and if they meet with a thin hard crust of ferruginous stones or masses of milk quartz, such are always favourable signs. The ruby, amethyst, topaz, sapphire, and cinnamon-stone are found there in great abundance; also spinel, chrysoberyl, and corundum. Red, purple, blue, yellow corundums and star-stones are met with at Mathura and Saffragam, and rubies and sapphires at Badulla and Saffragam. Corrundum is very plentiful at Battagamana, on the banks of the river Agiri Kandura. The great bulk of the Ceylon gems, however, come from Ratnapura, the city of gems, the river near which is regularly worked. Ceylon affords also all the varieties of quartzose minerals, as rock-crystal, amethyst, rose-quartz, cat's eye, and prase. Rock-crystal occurs in abundance, both massive and crystallized, of various colours, good quality, and in large masses. Amethyst also is pretty abundant; very beautiful specimens of this mineral are found in the alluvion derived from the decomposition of gneiss and granitic rock at Saffragam and the Seven Korles. A large crystal of it was found near Buanwelle, containing apparently two distinct drops of water. The finest cat's eyes in the world, indeed the only kind that bring a high price, have been found in the granitic alluvion of Saffragam and Matura. Prase occurs only amongst the pebbles on the shore of Trincomalee. Belonging to the schorl family are tourmaline and schorl.

Corundum. The pure oxide of aluminium is seen in colourless crystals of corundum. With minute traces of colouring materials, these crystals assume rich hues, and when transparent become gems conspicuous for their extensive colour-suite, that rank next in value, as in lustre and hardness, to the diamond. These are the colourless luxsapphire, the azure sapphire. the ruby, the oriental topaz, oriental amethyst, oriental emerald, etc.

Star-Stones are in the form of a six-rayed star, and there are star-rubies, star-sapphires, and star-topaz. *Emery* is one of the forms of the opaque, granular, massive states of this mineral.

Oriental Ruby is the most valuable of all gems, when of large size, good colour, and free from flaws. They are found in Siam, the Capelan mountains ten days' journey from Syriam, a city in Burma, also in Ceylon, India, Borneo, Sumatra, on the Elbe, on the Espailly in Auvergne, and Iser in Bohemia. The ruby in colour varies from the lightest rose tint to the deepest carmine, but the most valuable tint is that of 'pigeon's blood,' a pure deep rich red.

Spinel Ruby and *Balas Ruby* belong to the spinel class of minerals, as also are several of the stones sold as Ceylon rubies. Tourmaline, when of a red colour, is called Brazilian ruby, and this term is also applied to the artificially coloured topaz. The ruby brings a higher price

Carat.	£
1	14– 20
1½	25– 35
2	70– 80
3	200–250
4	400–450

than the diamond, ranging as per margiu. *Star Rubies* are asteriated corundums. *Tourmaline* is sometimes mistaken for the ruby, and the pink topaz for the balas ruby.

Spinel ruby and balas rubies are found in Ceylon, Burma, Mysore, Baluchistan. The spinel ruby is of a deep hue. They are comparatively of little value, but are often sold for the true ruby, and the true ruby is occasionally parted with as a spinel ruby. With jewellers, however, every bright red mineral takes the name of ruby. The name is even given to garnets. Hindus and Muhammadans in India greatly object to the dark-coloured stones, deeming them unlucky.

Sapphire with the ancients was a generic term for all blue gems. It occurs in British India, in the south of the Peniusula and Ceylon, also in Ladakh and in Siam. Sapphires vary from the deepest blue to black, and are often of varied hues. If held iu water with forceps, the coloured and uncoloured stones will be seen. A very good blue sapphire of oue carat weight would bring £20.

In Tavernier's time, in India all rubies were sold by weights called rati,—that is, three grains and a half or seven-eighths of a carat; the payments were made iu old pagodas; and rubies of the following weights had been sold as under :—

Of 1 rati, . .	Pags. 20	Of 4⅝ rati, . .	Pags. 450
Of 2¼ rati, . .	,, 85	Of 5 rati, . .	,, 525
Of 3¼ rati, . .	,, 185	Of 6½ rati, . .	,, 920

If a ruby exceeded six rati, aud was a perfect stone, there was no value to be set upon it.

Tavernier says (p. 143), 'The other place where rubies are found is a river in the island of Ceylon, which descends from certain high mountains in the middle of the island, which swells very high when the rains fall; but when the waters are low, the people make it their business to search among the sands for rubies, sapphires, and topazes. All the stoues that are found in this river are generally fairer aud clearer than those of Pegu. I forgot to tell you that there are some rubies, but more balas rubies, and an abundance of bastard rubies, sapphires, and topazes found in the mountains that run along from Pegu to the kingdom of Camboya.'

Oriental Emerald, the green variety of corundum, is the rarest of all gems. The finest occur in a limestone rock at Muzo in New Granada, near Santa Fé de Bogota, lat. 5° 28'; at Odontchelong in Siberia, and, as is said, near Ava. It is associated with spinel. When of a deep rich grass-green colour, clear, and free from flaws, it sells at from £20 to £40 the carat; those of lighter shade, from 5s. to £15 the carat. The emerald pillars in the temple of Hercules at Tyre, the emerald sent from Babylon as a present to a king of Egypt, four cubits in length and three in breadth, and the emerald obelisk described by Herodotus, were all doubtless green jasper. The Aral and Altai mountains have furnished fine emeralds.

The *Prismatic Corundums* fouud among the Tora Hills near Rajmahal, on the Buuas, in irregular rolled pieces, small, and of a light green colour, are sold as emeralds by the natives, under the name of panna or pana.

Beryl includes the emerald of jewellers, and also their aqua marine. It is an alumino-glucinium silicate, the aluminium being in the emerald apparently displaced to a minute amount by chromium.

Aqua marine includes clear beryls of a sea-green or pale-bluish or bluish-green tint. Hindus and Muhammadans largely use them pierced as peudants and in armlets. They are the seing or seigu of the Burmese and the zamarrud of the Persians. At the Madras Exhibition of 1855, a good specimen of aqua marine was contributed from Mysore; other samples of long reed crystals were forwarded by the Nellore Local Committee.

Topaz was so called from the island of Topaziou in the Red Sea. There is a gold-coloured and greenish-yellow topaz. Oriental topaz is of little value in commerce. The gem is of a yellow tint, seldom deep, of a light straw colour. Oriental topaz, ruby, and sapphire consist of 90 per cent. of pure alumina, 7 per cent. of silica coloured with oxide of iron.

Zircon consists of zirconic aud silicic dioxides. Its pellucid varieties are gems. The dull green is the jargoon; the red-tinted varieties are the hyacinth or jacinth. The yellow and blue tints are rare, but the more pellucid and colourless zircon, from its exceptionally high refractive power, approaches even the diamond in brilliancy. Zircon is found in the Ceylon districts of Matura and Saffragam. Matura diamond is the name applied to its finest varieties by the dealers in gems. Besides the two well-established species, common zircon and hyacinth, there is a third, massive, opaque, and uncrystallized, and of a dark-brown colour. Specimens of it from Saffragam weigh two or three ounces. The yellow varieties are sold by the natives as a peculiar kind of topaz, the green as tourmalines, the hyacinth red as inferior rubies, and the very light grey as imperfect diamonds. All the varieties are found in the beds of rivers or in alluvial ground, which, both in Saffragam and Matura, is of the same kiud. Zircon occurs in alluvium in the Ellore district of the Madras Presidency.

Chrysoberyl consists of glucina and alumina (aluminate of glucinum). As a gem it is known as the oriental chrysolite, also as cymophane. It is a beautiful greenish-yellow stone, almost equal in lustre and hardness to the sapphire. Chrysoberyl is sometimes with a yellow or brownish tinge, and occasionally presenting internally an opalescent bluish-white light. When green, transparent, and free from flaws, it is much prized. The less transparent specimens, when cut *en cabochon*, furnish one of the kinds of precious stones to which jewellers give the name of cat's eye. The dark-green variety from the Aral is called Alexandrite.

Diamonds are found in India, Sumatra, Borneo? Australia, the Cape Colouy, the Aral mountains, Brazil, and South America. It occurs in India, in the Dekhan, uear the river Pennar in the Cuddapah district, and near Banaganapilly, in the lower part of the Kistna, formerly near Ellore, and bed of the Godavery. The diamond sold iu 1856? to the emperor Louis Napoleon for £5000, was said to have been obtained in the Pennar or at Banaganapilly. They are also found at Panna in Bundelkhand, and at Sumbulpore on the Mahanadi. Thara and Tora are two diamond-washing tribes who possessed sixteen jaghir villages at Sumbulpore. They are supposed to be of African origin. Another aboriginal tribe called the Jhira are said to have held their villages reut-free on condition of washing the sands of the river for diamonds, which were made over to the raja, while the gold ob-

tained at the same time remained the perquisite of the finders.

Diamonds are found in quartz conglomerates containing oxide of iron, also in alluvium, in loose and embedded crystals, almost always of small size, and most frequent in company with grains of gold and platinum. Diamonds are found crystalline and amorphous, and of all colours, white, yellow, orange, red, pink, brown, green, blue, black, and opalescent. The rocks in which the diamond occurs in Brazil are either a ferruginous quartzose conglomerate, or a laminated granular quartz called itacolumite. The latter rock occurs in the Arals, and diamonds have been found in it; and it is also abundant in Georgia and North Carolina. In India, the rock is a quartzose conglomerate. Mr. Ball tells us that there are diamond mines in various parts of Bundelkhand, but the principal are near Panna, its capital. Other diamond areas are at Badrachellum on the Godavery, near the Kistna river, and near Banaganapilly and Cuddapah. A diamond tract occupies a considerable area between the Mahanadi and Godavery rivers, viz. at Sumbulpore, with the bed of the Mahanadi for many miles above it, and Weiragarh 80 miles to the S.E. of Nagpur. About A.D. 1870, some small diamonds were stated to have been found in a hill stream near Simla.

At *Panna*, diamonds are only known certainly to occur in situ in a conglomerate which is referred geologically to the Rewa group, but there are also numerous workings in alluvial or superficial deposits.

In the *Cuddapah* district, the principal workings have been at Cunnapurti and Ovalumpilly, near Chennur, on opposite banks of the Pennar river, and Landur and Pinchetgapu, west of Chennur.

In the *Kurnool* district, the mines are at Banaganapilly, Munimadagu, Ramulkotta, Timapuram, Yembye, Byaupully, Guramkonda, Gudipad, Bannur, Devanur, Shaitan Kottah, Dewmarruh, Tandrapad, and Baswapur.

In the *Kistna* and *Godavery* districts, diamonds are obtained at Golapilly, Malavilly, Purtial, Ganicoulur or kullur, etc., the pits at Golapilly and Malavilly being sunk in conglomerates and pebble beds of tertiary age.

In the bed of the *Mahanadi*, at Sumbulpore, and about the mouths of the Hebe Khelu and Mand streams, large diamonds have occasionally been found. The place of working is called Heera Khond.

At *Weiragarh*, in lat. 20° 36′ N., and long. 79° 31′ 30″ E., 80 miles S.E. of Nagpur, the diamonds are found in a lateritic grit; and at the sources of the Hebe river, in Gangpur, in the Icha river, a tributary of the Hebe, and also in the Sunk river.

In *Bundelkhand*, the diamond bed proper near Panna is a conglomerate. The rock diggings do not cover a space of more than 20 acres, and the miners excavate great pits, 25 feet broad and often 30 feet deep. At *Kumeea* (or Kahmura), locally called Kakru, to the east of Panna, the diamonds are found in a conglomerate sandstone made up of small pebbles. There are diamond mines also at Udesna, Sakeriva, Mujgaon, Boghin.

An inventory of the precious stones of the crown of France was made in 1832, showing the number to be 64,812, of value £845,000. The value of those of the Brazil sovereign is said to be £5,000,000.

The British crown jewels comprise 1 large ruby, 4 rubies, 1 large sapphire, 16 sapphires, 11 emeralds, 1363 brilliants, 1272 rose diamonds, 147 table diamonds, 4 drop-shaped pearls, 273 pearls.

Artificial Gems are largely made, and many of the precious stones are well imitated. Doublets are partly true gems above, and partly false, being a portion of a true joined artistically to glass or other gem below. Lapidaries and jewellers even are sometimes deceived by false gems, and of others entertain grave doubts. Birmingham sends many blue cut-glass false gems to Colombo for sale. The glass of bottle bottoms is even sold in Ceylon and other places as emeralds. Emeralds are rarely without defects, called flaws, 'Rag,' HIND., and manufacturers, aware of this, make false emeralds with flaws. Of all precious stones, the emerald is most liable to defects, and their absence should excite suspicion, as they can be very easily imitated. *Strass* is a technical term for the base of the artificial gems.

Precious stones are not exclusively articles of luxury; diamonds are largely used in the glazing and other trades, and rubies and sapphires in the manufacture of watches. They are lavishly used by Indian jewellers, who care less for their purity and commercial value than for the general effect produced by a blaze of splendour. And Sir George Birdwood remarks, nothing can exceed the skill, artistic feeling, and effectiveness with which gems are used in India, whether in jewellery proper, in the jewelled decoration of arms, and by Hindus in the ornamentation of the images in their temples. The quantity of diamonds, emeralds, and rubies in the Srirangam shrine surpasses all imagination, though perhaps few of them are without flaws. It is a marvellous sight.

Adularia or moon-stone is very abundant in some parts of the interior of Ceylon, particularly in the neighbourhood of Kandy, where it is occasionally the predominating ingredient of the rock. It is a variety of felspar, a form of orthoclase, and of little value.

Agate, the ἀχάτης of the Greeks and Akeck of the Arabs, is found in great variety and abundance in many parts of India. Some of the agates and other silicious minerals in the amygdaloid rocks on the banks of the Seena river, between Sholapur and Ahmadnaggur, are of great size and in profusion, but the most beautiful are brought from Rajpipla and Cambay.

Amber is largely obtained in many parts of Europe, and in Independent Burma, from mines at Hukong or Phyendwen, near the sources of the Kyendwen.

Amethyst.

Jaballakum, . . ARAB.	Martas, ... MALAY.
Amethyste, . . . FR.	Sang-i-Sulimani, . PERS.
ἀμέθυστος, ... GR.	Ametisto, . . PORT., SP.
Amatista, ... IT.	Sugandi kallu, . TAM.
Amethystus, . . . LAT.	

The amethyst is mentioned in Exodus xxviii. 19, and xxxix. 12, but under this term two different minerals are known, viz. the common amethyst, a quartzose mineral found in amygdaloid trap rocks in all countries, but in some quantity amongst the volcanic rocks of the

Dekhan. Some beautiful specimens of common amethyst crystals occur in dykes of quartz near Bowenpilly, at Secunderabad. It is rock crystal coloured with iron and manganese. Its colour is of every shade of purple violet; some of these are valued, for it is almost the only stone that can be worn with mournings. When the colour of a specimen has to be equalized, it is placed in a mixture of sand and iron filings, and exposed to a moderate heat. The oriental amethyst of jewellers is also of a purple colour, but is an extremely rare variety of corundum. Its colour can be destroyed by heat, and its purity then resembles that of the diamond.

Beryl. Some beryls are quite colourless, but green, blue, or yellow are prevailing tints. The finest beryls were described by Pliny as those which are of a clear sea-green colour—qui viridatem puri maris; hence crystals of clear tints of sea-green or sky-blue are called aqua marinas or aqua marines. Beryl occurs in considerable abundance at Kangium, in the Tanjore collectorate of S. India, in the Siberian Altai range, also in Khotan, Ilchi, and other Chinese provinces. In the United States very large beryls have been obtained, but seldom transparent crystals. Numbers of the Hindus and Muhammadans of Southern India wear them pierced as armlets and pendants, and call them by names given also to the emerald,—as zamarrud, zabrjad, and panna. The colours most esteemed in Northern India are the zababi, next the saidi (from the town of Saidi in Egypt); raihani, new emeralds; fastiki, old emeralds, which they imagine have completed a growth of 20 years; salki, zangari (colour of verdigris), kirasi, and sabuni. Dr. Irvine says (Gen. Med. Top.) prismatic corundum or chrysoberyl is found among the Tora Hills near Rajmahal, on the Bunas, in irregularly rolled pieces, small, and generally of a light green colour. These stones are considered by the natives as emeralds, and pass under the name of panna; but the natives are aware that they are still softer than the real emerald of India.

Cat's Eye.

Bel occhio, . . . IT.	Zmilampis, . . . LAT.
Beli oculus, . . . LAT.	Mata-kuching, . MALAY.
Zmilaces, ... ,,	Chashm-i-maidah, PERS.

Cat's eye is chiefly found in Ceylon, but specimens are also obtained from Quilon and Cochin, and in the neighbourhood of Madras; the site of the last, however, has not been traced. It is brought from Burma. It is a transparent quartz full of minute fibres of asbestos, and is cut in a highly convex form. It is of a yellow hue, slightly tinged with green. The cat's eye is often set in rings, and is much valued in India; those seen in the Moulmein market are not much valued. A small one may be purchased for two rupees, and one of ordinary size for five; while ten rupees is the highest price given for the best. Mr. Edward Streeter (p. 167) distinguishes the true or chrysoberyl cat's eye from the quartz cat's eye. The former is a rare variety of the chrysoberyl.

Chrysolite and *peridot* are silicates of magnesia with iron, and chrysolite is also a yellowish-green corundum. The name is also given to a coloured variety of rock-crystal. Oriental peridot is of a very pleasing, yellowish-green colour, and is a very beautiful gem. It was at one time considered of more value than the diamond. Mr. Streeter says the chrysolite of the ancients is now termed oriental topaz. It is a corundum formed of alumina, coloured golden-yellow by oxide of iron.

Coral is being utilized by the people of India in rapidly increasing quantities. In 1877–78, 65,527 lbs., value Rs. 6,90,875, were imported from the Mediterranean, while in 1883 the quantity was 152,372 lbs., value Rs. 19,59,367. A small part is re-exported. Coral of a pale delicate pink colour is now the most valued in England, a large drop or bead selling at £30 to £40, and smaller pieces at £120 to £150 the ounce. Red is esteemed in India.

Corundum occurs in great abundance in Mysore, in the Coimbatore district of the Madras Presidency; and its crystalline, translucent coloured varieties are the gems known to jewellers as the ruby, emerald, topaz, and sapphire. The emerald is one of the rarest of these varieties. The oriental ruby or red variety of corundum is very rare; when pure in water and colour it is very valuable. The blue variety of corundum is the oriental sapphire, is in greater abundance, but of inferior value, and its colours greatly vary, from the deepest velvet-blue to the palest and almost imperceptible tint, even losing all that and becoming colourless, and in that form is a very beautiful gem, remarkable for its whiteness and the absence of prismatic colours.

The yellow variety of corundum is called the oriental topaz, which is of every shade of yellow, and when pure it is highly valued. But many stones have a milky opalescence, which makes them valueless. The ordinary topaz of commerce, composed of silica and alumina, with hydro-fluoric acid (hydric-fluoride), commonly of a pale orange, toning down to a straw colour, is of comparatively little value.

When the red and blue are mixed in the corundum, the stone is called oriental amethyst; half a stone will be red and half blue, or emerald, ruby, topaz, and sapphire in the same stone. The Ceylon ruby has occasionally a blue tint, which can be expelled by heat.

The opalescence occurs in rubies, sapphires, and topaz. When such stones are cut *en cabochon* at a certain angle to the axis, they form the star-stone, showing in a strong light a star of six rays, very pretty as a fancy stone, but of no value as a gem.

Diamonds are occasionally colourless. The most valuable diamonds are those known to merchants as blue-white. There are only in Europe three or four diamonds which can be termed blue. The finest of these is the 'Hope' diamond, valued at £30,000. It is of a beautiful sapphire blue.

A recent newspaper article mentions that a diamond, weighing 602 carats, of a dark slate colour, has been found in the Jagersfontein mine, South Africa. Owing to its peculiar colour, experts could fix no precise value, but it is said to be worth at least £2000. It is about the size of a duck's egg. Diamonds occur of a red colour; one in London, weighing about three grains, is valued at £800; and a diamond of a pure emerald green, the property of a W. Indian merchant, is mentioned by Mr. E. W. Streeter as of value £1000. At Banaganapilly black diamonds occur.

Among famed diamonds may be mentioned the Orloff gem possessed by the emperor of Russia, which is said to have been brought from Srirangam; it weighs 194¾ carats. The Regent or Pitt weighs 136⅜; it is said to have been obtained at Parteal; but Mr. Pitt is also stated to have bought it for £12,500 from Jam Chund, a diamond merchant. The Sanci weighs 53½ carats. The Matan diamond, belonging to a raja of Borneo, is of 367 carats, and valued at £269,379. The nizam of Hyderabad has one of 340 carats. The Rhodes diamond, of 150 carats, was found 12th February 1880 by Mr. Porter Rhodes in the Kimberley mine in South Africa. The last three are still (1883) uncut. The Pigot diamond weighs 82½. It was brought from India by Lord Pigot. In 1801 it was sold in a lottery for 750,000 francs. The Braganza was discovered in 1741 in Brazil. It weighed 1680 carats. If cut, it is supposed it would weigh 500 carats. It is believed to be a white topaz. The Star of the South, found in Brazil, weighs 254. It was found in July 1853 in one of the mines of the Bogagen district, in the Minas-Geraes province. About one-half of its weight was lost in cutting. Another Brazilian diamond, 138½ carats, was found in 1775 by a negro, a few miles N. of the Rio Plata. One was found in 1878 at Du Toit's pan in S. Africa. It weighs 244 carats. The diamond known as the Star of South Africa was found there about 1868; it weighed 83 carats, and fetched £11,200.

Much artistic skill is requisite in diamond cutting, in order to retain the gem of as great bulk as possible.

A diamond known as the Moghul was cut for Shah Jahan by Hortensio Borgio, a Venetian. It weighed 793⅝ carats, and he reduced it to 186 carats, which angered the emperor so that he fined him Rs. 10,000, in fact all his possessions.

The Koh-i-Nur weighed on arriving in London 186$\frac{1}{16}$ carats, and was valued at £140,000. It was cut by Herr Voorsanger, under Messrs. Coster of Amsterdam, in the atelier of the crown jewels in London, and it was reduced to 106$\frac{1}{16}$, and is valued at £100,000. It is the personal property of the Queen-Empress Victoria. Mr. Streeter is of opinion that it is the Moghul diamond.

The Regent diamond, before cutting, weighed 410 carats, and 136¾ after it was cut.

It is supposed that the Rhodes diamond would, when cut, weigh 100 carats. In July 1853, a diamond was

found in Brazil which weighed 254 carats, but was reduced in cutting to 125.

Mr. Bryce Wright, of 204 Regent Street, is in possession of a diamond of some note, set in a ring which was kept for many years in the treasury of the Moghul emperors of Hindustan. It is one of the very few known diamonds that are cut or engraved, and it is supposed that the work upon it, owing to the extreme hardness of the stone, must have cost years of incessant labour. The engraving is believed to be by a Persian artist; it is a monogram composed of two Arabic words interlocked together, making up the invocation, 'O Ali.' The date of the work is supposed to be A.D. 1200.

All the diamond localities yield stones which mineralogically are true diamonds, but do not possess the high qualities to entitle them to be regarded as precious stones. And this remark is equally applicable to all the varieties of the corundum, felspathic, and other minerals which furnish the gems of the jewellers.

Emeralds are mentioned in Exodus xxviii. 18, also in Tobit, Judith, Ecclesiastes, and Ezekiel. The emerald mines in Jabl Zabarah in Egypt—the Smaragdus mons of the ancients—were worked B.C. 1650, in the time of Sesostris II. These mines (Bunsen's Egypt, ii. 303) were on the Kosseir Road, from Koptos to Aennum (Philoteras).

The *Felspar* group of minerals includes several of value in the arts, such as labradorite, with its beautiful play of colours, moon-stone or orthoclase, valencianite, Amazonite or Amazon stone, and lazulite, called blue felspar and blue spar.

Fossil wood is in large quantity in Burma, in Sind, and at Verdachellum and Ootatoor, west of Pondicherry. It is used for ornaments.

Garnet, from which carbuncles are formed, is in great abundance in the south of India, chiefly in gneiss rock in the Guntur and Coimbatore districts, also at the Munzerabad Ghat, and in the Aravalli range. Amongst its varieties are the violet-tinted almandine; the yellow and hyacinthine garnets known as cinnamon-stone and essonite, which contain calcium and aluminium; the garnet and pyrope, or Bohemian garnet varieties, when cut *en cabochon*, are the carbuncle of jewellery; but the carbuncle (ἄνθραξ) of the ancients included all gems of a red colour, such as hyacinths, rubies, garnets. Other varieties of garnet are allochroite, topazolite, melanite, colophanite, and grossular garnet.

Iolite and cyanite or kyanite imitate the sapphire, but the greater hardness of the sapphire affords an easy test of its genuineness. Kyanite is a silicate of alumina, and occurs in long, thin, blade-like crystals of a clear blue or bluish-white colour.

Jade, which the Chinese so highly value, is brought from Central Asia, one locality being at Gulbagashen in the valley of Karakash. The Yu or Jade mines of Independent Burma are in the Mogoung district, about 25 miles S.W. of Maing-Khum. Momien in Yunnan was formerly a chief seat of the manufacture of jade, and still sends out a considerable quantity of small articles. Jade was imported from Burma in 1880–81 to the value of Rs. 2,45,650, and mostly all re-exported to Singapore and China. It is also called nephrite.

Jet is imported into India from Europe, and is only worn by Europeans. Large quantities of lignite are found in the tertiary strata along the sea-coast of India, but none of it takes a good polish.

Lapis-lazuli, or azure-stone, from Central Asia, is not in much request in India. It was the sapphire of Pliny. It is found in High Asia and in China provinces. In ancient times it was used for cameos and intaglios. The Chinese make it into cups, vases, buttons, caskets.

Malachite, an imported mineral, is rarely worn, and only by Europeans. It occurs in the copper mines in Australia, also largely in Russian provinces.

Mother of Pearl is the nacre from the interior of the shells of molluscs, chiefly from that of the Meleagrina margaritifera.

Onyx, a quartzose mineral, is so named because of its substance being in layers of two colours, as on the nail of the human hand. One of the layers is white, the other of a greyish tint. In its natural state it is a sober mineral, but it is stained black by being boiled in honey, oil, or sugared water, and then in sulphuric acid. For red, protosulphate of iron is added; and for blue, yellow prussiate of potash is added to the protosulphate of iron.

Precious Opal has as varieties the Mexican fire opal, the noble opal of Hungary. Precious opal is the most beautiful of all gems. Its price depends on the play of colours displayed. The hydrophane or Mexican opal loses its beauty when exposed to water.

Common Opal, of a dull white without any play of colours, occurs massive in the volcanic tract of the Dekhan. It is used as a charm round horses' necks, and by native dentists for false teeth.

Oriental is a term employed by jewellers to designate precious stones of the highest value. It is now excluded from books of mineralogy, the minerals to which it was formerly applied being now-a-days noticed under their chemical composition.

Pearls occur of all colours. Those of Asia, from the sea pearl oyster, Mcleagrina margaritifera, are found on the west coast of Ceylon, in the gulf of Manaar, in the Persian Gulf, in the Sulu Islands, near New Guinea, and in the Red Sea. Off the coast of Ceylon, the fishing season is inaugurated by numerous ceremonies, and the fleet, sometimes of 150 boats, then put to sea. Each boat has a stage at its side, and is manned by ten rowers, ten divers, a steersman, and a shark charmer (pillal karras). The men go down five at a time, each expediting his descent by means of a stone 20 to 25 pounds in weight, and holding their nostrils; they gather about 100 shells in the minute which they remain under water. Each man makes 40 to 50 descents daily. The pearl oysters are thrown on the beach and left to putrefy. In the Persian Gulf, so many as 30,000 persons are said to be employed in the pearl fishery (Job xxviii. 18). According to European taste, a perfect pearl should be round or drop-shaped; of a pure white, slightly transparent; free from specks, spots, or blemish, and possessing the peculiar lustre characteristic of the gem. In India and China, the bright yellow colour is preferred. Cleopatra is fabled to have dissolved in vinegar a pearl of the value of 150,000 aureas or golden crowns, in the presence of Anthony, and to have drunk it off; but it would have required a larger quantity and stronger acid than any one could have taken with impunity, to have done so. Cæsar is said to have paid a sum equal to £50,000 sterling for a single pearl. The fellow-drop to the pendant destroyed by Cleopatra is said to have been sawn in two by command of the emperor Augustus, and used to adorn the statue of Venus. The mother of the last nawab of the Carnatic gave him a necklace of pearls, each of which cost about Rs. 1000.

Quartzose minerals are largely used for personal ornament, for articles of luxury, and in the decorative arts. They have been skilfully adapted in the ornamentation of the beautiful Taj Mahal at Agra. Those better known to jewellers and lapidaries are sometimes designated inferior gems, such as the agate, amethyst, bloodstone or heliotrope, chrysoprase of an apple-green colour, carnelian, jasper and Egyptian jasper, onyx, common opal, plasma, rock-crystal, sard, and sardonyx. The last is rarely seen in India. Jasper, onyx, common opal, bloodstone or heliotrope are found in abundance in many parts of the Dekhan, in the valley of the Godavery, and amongst the Cambay stones. Mocha-stones and moss-stones of great beauty occur among the minerals from Cambay. Cambay enjoys celebrity for its agates, mocha-stones, carnelians, and all the chalcedonic and onyx family. All of them are brought from Rajpipla, but worked up at Cambay into every variety of ornament,—cups, boxes, necklaces, handles of daggers, of knives and forks, seals, etc. They are from the amygdaloid trap rocks drained by the Nerbadda and Tapti. The principal varieties sold in Bombay are crystal, milk quartz, prase, a green variety of moss-stone, mocha-stone, fortification agate, calcedony, carnelian, chrysoprase, heliotrope, onyx, obsidian, and very rarely amethyst. These stones abound in all trap countries, the Brazils exporting them as largely as India into Europe, where the terms Brazilian and Indian agates are used indifferently by the trade.

Rock-crystal is abundant in the south of the Peninsula of India at Vellum. It can be dyed. If made red-hot, and plunged repeatedly into the tincture of cochineal, it becomes a ruby; if into a tincture of red sandal, it takes a deep red tint; into tincture of saffron, a yellow

like the topaz; into a tincture of turnesol, a yellow like the topaz; into juice of nerprum, it takes a deep violet like the amethyst; and into a mixture of tincture of turnesol and saffron, it becomes an imitation of the emerald. Steeping the crystal in oil of turpentine saturated with verdigris or spirits of wine, holding dragons' blood or other coloured resins in solution, depths of tints are produced proportioned to the time of steeping. Crystal can be coloured if heated in a crucible with orpiment and arsenic. Crystal coloured red, as false rubies, are known in France as rubaces.

Quartzose minerals were not commonly known in ancient times, and hence were extravagantly esteemed. The fragments of a murrhine cup, the little Cambay stone cup still made in Cambay, were exhibited in the theatre of Nero, 'as if,' adds Pliny, 'they had been the ashes of no less than Alexander the Great himself!' Seventy thousand sesterces was the price of one of these little Cambay cups in Rome in the days of Pompey. The price in Bombay ranges from Rs. 18 to Rs. 35 and Rs. 75. Nero paid 1,000,000 sesterces for a cup, 'a fact,' slily remarks Pliny, 'well worthy of remembrance that the father of his country should have drunk from a vessel of such a costly price.' Amongst the people of India the inferior gems are held in but little esteem; they value a gem for its intrinsic price, not for the workman's skill expended in shaping it, in which the chief value of all the inferior gems consists.

Ruby with lapidaries and jewellers is a term applied to the beautiful red crystals of any minerals which can be used as gems; but the oriental ruby is the red variety of corundum. The finest stones are found in the sand of rivers in Ceylon, in the sand of certain streams, and in the Capelan mountains near Syriam, a former capital of Pegu (Jour. As. Soc. Beng. ii. p. 75), about 60 to 70 miles from the capital in a N.E. direction, and over an area of about a hundred square miles, and sapphires are found along with them. The ruby is considered by eastern jewellers to approach perfection the more closely it resembles the colour of pigeon's blood. The ruby is generally set in rings and brooches, surrounded with brilliants. When placed in the fire a true ruby becomes invisible, but when immersed in water it appears to glow with heat. It is stated in Prinsep's Oriental Accounts of the Precious Minerals, that not to be deceived in rubies is a work of difficulty, because there are spurious ones of polished crystal which much resemble the true gem; these are called Ayn-ul-rajan. Jewellers in the east apply the term lal to all rubies of a fine red colour, but their lal rumani (scarlet or pomegranate ruby) is probably the true spinel. The bright red spinel ruby, lal rumani, is called by modern jewellers as yaqut naram, or simply, in Hindustani, narmah, also labri. The ruby is imitated by spinel, from which it is easily distinguished by superior hardness. The natives, like European mineralogists, distinguish four principal species of yaqut,—red (oriental ruby), blue (oriental sapphire), yellow, white, or colourless (oriental topaz), and green (oriental emerald). Natives distinguish the oriental ruby from the spinel, or balas ruby. A pure oriental ruby of ten carats is worth from £3800 to £4800, while the spinel ruby and balas ruby would be dear at one-twentieth of the sum. When the red has a decided shade of orange, it usually goes by the name of vermeil or vermeille, when of a yellowish-red it is called rubicelle.

Oriental sapphires are blue transparent varieties of corundum. When perfect, of a clear, bright, prussian-blue colour, and possessed of a high degree of transparency, this stone is valued next to the oriental ruby. It is, however, seldom found in this state, being more frequently pale-blue, passing by degrees into entirely colourless. Pale varieties when exposed to a strong heat entirely lose their colour without undergoing any other alteration, and have often been sold for diamonds.

Sapphire is found in the same earth with the rubies of Burma, but are much more rare, and generally of a larger size. Sapphire occurs crystallized in variously terminated six-sided prisms, and in rolled masses, and is found in the beds of rivers or associated with crystalline rocks. It possesses double refraction, and becomes electric by friction. Is not acted on by acids, and remains unaltered by the fire, red and yellow varieties, if anything, being improved in colour by heating. Sapphire is brought from Ceylon, Siam, Ladakh, and Pegu, but it is also found in Bohemia, in France, in the brook Rioupezzouliou, near Expailly, in Velay, and in New South Wales. In 1881–82, sapphires from Siam were imported into British India valued at Rs. 45,390, and via Simla from Ladakh, on the road to Zanskar, of value Rs. 25,956. Sapphire is imitated with iolite, kyanite, etc.; hardness affords the best test of the genuineness of the stone. The word sapphire is derived from sapheiros, the name of a blue stone amongst the ancients. Most probably the sapheiros of the ancients, however, was not our sapphire, but lapis-lazuli.

Schorl occurs in the granite and syenite districts of the Peninsula of India.

Spinel, besides spinels properly so called, includes Franklinite and chromite (chromic iron). Spinel ruby and balas ruby are beautiful gems. Pleonaste is an opaque variety of spinel. Spinel is found in Saffragam and Matura, in Ceylon, in Mysore and Burma. *Spinel ruby* or balas ruby varies in value according to its cut and colour. Balas ruby is pale-red or rose-red; it varies much in price.

Star-stones are varieties of the corundum class of precious stones,—star-rubies, star-sapphires, and the star-topaz. They have stars of six rays, but are not esteemed by the Singhalese or natives of India.

Topaz occurs in the corundum localities. Oriental topaz is a variety of corundum of a yellow colour, more or less mixed with red. The most esteemed colour is a bright jonquil-yellow, and next a pure lemon-yellow. It is a very beautiful stone, though inferior in value to emerald, ruby, or sapphire. The kind most valued by the jewellers of Europe are brought from the Urulga river. White topaz is a fluo-silicate mixed with silicate of aluminium.

Tourmaline occurs abundantly in Siberia, in Burma, in Dindigul, and in Ceylon, in colours black, brown, blue, green, red, white, and colourless, and exhibiting a dichroism. The tourmalines have many valuable and beautiful forms, made use of in the arts. Rubellite, a variety of tourmaline, is found in Burma and Siberia.

Turquoise, from Central Asia, is a favourite with the Muhammadans of India. Turquoise is the Firozah, Hind., hence Firoza-rang, turquoise blue. It is found at Khojend, in Mawar-al-nahr or Trans-Oxiana, at Shebavek, in Kirman, and in a mountain of Azerbijan, where the mine was discovered about fifty years before Ahmad bin Abd ul Aziz composed his Treatise on Jewels. He describes the mine at Nishapur as most celebrated from early ages for that particular kind of turquoise entitled Abu Ishaki, which, says he, averts evil from those who wear it, conciliates the favour of princes, augments wealth, preserves the sight, ensures victory over an adversary, and banishes all unpleasant dreams. He says the ancient sages, when first they beheld a new moon, immediately after fixed their eyes on the Firozah (Ouseley, Tr. i. p. 211). Turquoise is apt to change colour if brought into contact with acids, musk, camphor, or other scents. Small clear Persian stones at Nishapur in Khorasan sell at 6d. to 20s. each, whilst a fine ring stone will realize from £10 to £40. A perfect stone of the size of a shilling, and of good depth, was sold for £400. It varies from white to a fine azure blue, but it is only the fine blue stones that are of value.

Zircon occurs in alluvium in the Ellore district. Hyacinth of the lapidary and jargoon are varieties of zircon. Its pellucid varieties are gems.

King, Precious Stones; Emmanuel on Gems; Mason's Burmah; Tennant's Ceylon; Dr. Buist in Bombay Times; Tavernier's Travels; Niebuhr, Beschreibung von des Arabien; Davy's Ceylon*, p. 20; *Pliny*, xxxvii., xv., xxiii.; *Forbes' Eleven Years in Ceylon*, ii. p. 97; *Wellsted*, i. pp. 112, 113; *Mr. Streeter; Mr. V. Ball on Diamonds*, etc.

PREDESTINATION, the Takdir, Kaza, Al-Makaddar, Kismat, and Nasib of the Muhammadans, is an essential doctrine of their creed. Its influence over their everyday life is evidenced by such sayings as, There are two days in which a man should not have a fear of death, the one on

which he is not to die, and that on which he is to die. Their resignation to events is supreme. Hindus of the Telingana country attribute every good and every evil act to predestination, and this doctrine is strongly insisted on in the introduction to the ancient Hitopadesa. Most of the eastern Christians, also, entertain a similar belief. Many Muhammadans hold that fate is in some respects absolute and unchangeable, in other respects admitting of alteration. In the former case, it is called al Kaza al Mahkum, meaning the absolute and unchangeable fate, and in the latter, al Kaza al Mubram; and they are guided in their daily life by these views. Nevertheless the doctrines of the Koran and the Hadis or traditions appear to be that the decrees of God, or fate and destiny, are altogether absolute and unchangeable, written in the beginning of the creation on the Preserved Tablet, Allawuh al Mahfuz, in heaven. Again, it is held that God has not predestined the will, though He sometimes inclines it to good, and the devil sometimes inclines it to evil; and the Muhammadan believes that he is to be admitted into heaven only by the mercy of God on account of his faith, and is to be rewarded in proportion to his good works.

PREDIAL SLAVES of British India have also been called a Helot race. The chief of them are the Chooroo of the Panjab, the Chamar of Hindustan, the Mhar of the Mahratta country, Pariahs in the south. These no doubt represent conquered races. The Chamar of Hindustan is round-faced, small-featured, and dark, but without any decided aboriginal feature.

PREJEVALSKY, Lieutenant-Colonel N., author of Mongolia, the Tangut Country; Three Years' Travel in E. High Asia, Lond. 1876; also, From Kulja across the Tian Shan to Lob Nor, London 1879.

PREM DEVI. It was a saying of Bhishma, that where a son does not exist, the daughter should occupy the throne. Prem Devi was on the throne of Dehli before the Muhammadan invasion. In Nepal three females reigned at different times. Rajendra Lakshmi is described as a 'woman of extraordinary character and talents.' In Ceylon, several ranis reigned from time to time. In Rajputana females have governed as regents. Colonel Tod, speaking of the Bundi queen, says her sentiments showed invariably a correct and extensive knowledge, which was equally apparent in her letters, of which he had many. At present (1883) the Begum of Bhopal is reigning.—*Calcutta Review*, pp. 43, 109.

PREMNA, a genus of plants of the natural order Verbenaceæ, and tribe Viticeæ. The following are the principal species of the East Indies :—

P. esculenta, *Roxb.*, Chittagong.
P. barbata, *Wall.*, Bengal, Nepal, Kamaon.
P. latifolia, *Roxb.*, Coromandel.
P. longifolia, *Roxb.*, Bengal, Khassya, Assam.
P. herbacea, *Roxb.*, Bengal, Peninsula.
P. procumbens, *Moon*, Ceylon.
P. spinosa, *Roxb.*, Bengal.
P. interrupta, *Wall.*, Sikkim.
P. scandens, *Roxb.*, Kandalla, Sylhet.
P. grandifolia, *Wall.*
P. cordifolia, *Roxb.*, Kandalla, Penang.
P. lævis, *Wall.*, Doab.
P. coriacea, *Linn.*
P. mucronata, *Roxb.*, Morung, Khassya.
P. tomentosa, *Willde.*, Circars.
P. flavescens, *Buch.*, Goalpara.
P. glaberrima, *W. Ic.*
P. integrifolia, *W. Ic.*
P. serratifolia, *W. Ic.*
P. thyrsoidea, *W. Ic.*
P. Wightiana, *W. Ic.*

PREMNA HERBACEA. *Roxb.*

Bhooi jam, . . . Beng.	Sheeroodek, . . . Tam.
Bhoomi jambooka, Sansk.	Gunta baringa? . Tel.
Siribekku, . . . Singh.	

A plant of Ceylon and the Peninsula of India. The leaves of P. esculenta are eaten as food; also used medicinally.

PREMNA INTEGRIFOLIA. *Linn.*
Premna hircina, *Buch.*

Chamaree, . . . Mahr.	Ghebu nelli, . . . Tel.
Appel, . . . Maleal.	Pinna nelli, ... ,,
Munnay maram, . Tam.	

A shrub or small tree, common in India; the timber is only useful for the most common purposes. The leaves have a very unpleasant odour when pressed in the hand, but used by the natives in soups and curries, and a decoction of the leaves is used in colic and flatulence. The root has a somewhat warm and bitterish taste, an agreeable smell, and is prescribed in decoction as a gentle cordial and stomachic in fevers.—*Wight; Jaffrey.*

PREMNA LATIFOLIA. *Roxb.* Nelli chettu, Peddi-nelli, Tel. A small tree of the Coromandel coast; wood white, firm, and used for various economical purposes. Flowers during the hot season; the leaves have a pretty strong though not disagreeable smell, and are much used in curries by the natives.—*Voigt.*

PREMNA MUCRONATA. *Roxb.*

Bankar, . Beas., Ravi.	Gian, ... Ravi.
Ganhila, . . Chenab.	

A tree which occurs in the Siwalik tract to 3000 feet up to the Ravi.—*Stewart.*

PREMNA PYRAMIDATA. *Wall.* Kyoon-nalin, Burm. A small tree of British Burma; wood strong, used for weavers' shuttles. A cubic foot weighs 52 lbs. In a full-grown tree on good soil, the average length of the trunk to the first branch is 30 feet, and average girth measured at 6 feet from the ground is 5 feet.—*Brandis' Cal. Cat. Ex.*, 1862.

PREMNA SERRATIFOLIA. *D. C.*

P. barbata, *Willde.*	Munnæ-keeray, . Tam.

Leaves used similar to those of P. integrifolia. The natives are very fond of them.—*Jaffrey.*

PREMNA TOMENTOSA. *Roxb.*

Kolcuttay teak ma-	Boosairu, . . . Singh.
ram, . . Anglo-Tam.	Nagara chettu, . . Tel.
Chambara, . . . Mahr.	Navuroo, Nagool, . ,,

A small tree of Ceylon, Coimbatore, the Bombay ghats, the Godavery, and the Northern Circars. It has a pretty-looking wood, hard and close-grained, of a brownish-yellow colour, well fitted for ornamental purposes; more a fancy wood than a timber, and is rather scarce; the natives use the sap in some of their ceremonies.—*Roxb.; Wight; Rohde.*

PREM SAGUR, a Hindi paraphrase of the Bhagavat Purana.

PRESBYTIS. *Illiger.* A genus of monkeys, the Semnopithecus of Cuvier, the Langur and Hanuman monkeys of the Hindus.

P. entellus, Bengal Langur.
P. schistaceus, Himalayan Langur.
P. priamus, Madras Langur.
P. Johnii, Malabar Langur.
P. jubatus, Neilgherry Langur.

P. pileatus, *Blyth*, Sylhet, Cachar, Chittagong.
P. barbei, *Blyth*, Tiperah Hills.
P. obscurus, *Reid*, Mergui.
P. Phayrei, *Blyth*, Arakan.
P. albocinereus, Malay Peninsula.
P. cephalopterus, *Blyth*, Ceylon.
P. ursinus, *Blyth*, Ceylon.
P. maurus, —, Java.
P. melalophos, —, Sumatra.

Presbytis cephalopterus, *Zimmerman*, *Blyth*, occurs in Ceylon. It is a most gentle creature; has the body black, slightly grizzled; croup, tail, and exterior of thighs albescent, palest on the croup and end of tail; head rufescent-brown, a little tinged with blackish on the sides, and the whiskers and short hair on the chin and lips of a dull white, conspicuously contrasting. Dr. Kelaart designated it as a new species, Pr. cephalopterus, *var. b.* monticolus, and the native name he spells Kallu wanderu.

Presbytis entellus, *Jerdon.*

P. anchises, *Elliot.*

Musya, ... CAN.	Hanuman Langur, HIND.
Bengal Langur, . ENG.	Makur, Wanur, . MAHR.

The Bengal langur occurs in Bengal and Central India, prefers forests and highly wooded districts, groves near villages, and occasionally enters towns and plunders the shops of the grain dealers with impunity, as the Hindus of N. India deem it sacrilege to kill one, and in some temples in the west of India it is regularly fed by the priests.—*Jerdon.*

Presbytis Johnii, *Jerdon.*

Semnopithecus Johnii, *var. Martin.*	S. cucullatus, *Is. Geof.*
S. Dussumierii, *Schinz.*	S. hypoleucus, *Blyth.*

The Malabar langur is found in the forests of S. Canara, Malabar, Cochin, and Travancore, but frequents gardens and cultivated woodland. Like others of the genus, it generally, by a noisy and alarmed chatter, gives notice of the presence of tigers, leopards, and other beasts of prey.

Presbytis jubatus (Semnopithecus Johnii, *Blyth*), the Neilgherry langur, is of a dark glossy-black throughout. It inhabits the Neilgherries, Animallay, Pulney, and Wynad, above 2500 feet. It is shy and wary. The fine glossy fur is much prized.

Presbytis priamus, *Elliot*, *Blyth*, Konde wanderu, SINGH., the Madras langur, is not confined to the low country in the north of Ceylon. They are seen skirting the Kandyan Hills, and occasionally on the hills. Trincomalee is full of them.

Presbytis schistaceus, *Hodgson*, *Horsf.*, *Blyth.*

Kubup, ... BHOT.	Kamba Suhu, . LEPCHA.
Langur, ... HIND.	

The Himalayan langur is found along the whole range of the Himalayas from Nepal to far west of Simla, Naini Tal, Musoorie, the Terai and lower hills of Nepal, and in Kamaon, up to 12,000 feet. They are bold and predatory.

Presbytis thersites, *Blyth*, Elle wanderu, SINGH. It is found in Ceylon, in Bintenne, and in the Wanny district. It was considered identical with Pr. priamus of the Eastern and Western Ghats of the Peninsula, the Ceylon hanuman, but is distinct from that and the several other allied species which have been confounded under Pr. entellus. At Mr. Elliot's suggestion, it has been designated Pr. thersites, *Elliot.* Adult male inferior in size to that of Pr. entellus (verus) of Bengal, Orissa, and Central India, of a uniform dusky-grey colour (devoid of fulvous tinge) on the upper parts; face surrounded with white, narrow over the brows, the whiskers and beard more developed than in the other entelloid Indian species, and very conspicuously white. The strongly contrasting white beard is indeed the most striking feature of this Ceylon species, as compared with its near congeners.

Presbytis ursinus, *Blyth*, usually seen in large numbers jumping on the trees, and when disturbed they make a peculiar short howling noise. One was known to have attacked a coolie on a coffee estate carrying a rice bag. Some of the races of Malabar eat the flesh of this monkey, and consider it very delicious food, and some Europeans who have tasted it are of the same opinion.—*Elliot; Tennent's Ceylon*, p. 62; *Mr. Blyth's Reports.*

PRESENTS, in oriental customs, are invariably offered by inferiors or subordinates on approaching superiors, and they are usually of money; the superior either simply acknowledges them, or bestows in return articles of dress, or confers the right to certain titles or dignities. The custom was adhered to by Jacob, Genesis xxxii. 13–20 and xxxiii. 10, when about to meet Esau; and by Jacob, in sending his sons to Egypt, xliii. 11, to propitiate Joseph. There are three articles which, in Japan, always form part of an imperial present. These are rice, dried fish, and dogs. Some also say that charcoal is always included. Why these should have been selected, or what they particularly symbolize, is not known.—*American Exp. to Jap.* p. 429.

PRESERVED PROVISIONS. The chief articles employed for the preservation of organized substances are salt, sugar, oil, charcoal, acetic acid, or pyroligneous acid, and alcohol and salt is used in the curing of fish of different kinds, bacon, hams, etc., in the pickling of pork, and in the corning of beef. Salt possesses great affinity for water, which it abstracts largely from the substance to which it is applied, and to which affinity its power as a preservative agent is mainly due. Sugar is principally employed for preserving fruits, either entire or in the state of jam or marmalade. In the condition of syrup, it operates partly by the barrier which it interposes to the free access of the atmosphere to the surface of the fruit, and partly in consequence of its being a non-nitrogenous substance.

Sardines and anchovies are nearly the only articles put up in oil. It appears to operate in the same manner as sugar. The powerful effect of charcoal retarding putrescence in meat, and even in restoring tainted meat to a state of sweetness, is well known. Its action is due to its property of absorbing gases and effecting their oxidation as rapidly as they are developed from the decomposing meat, and which is made to preserve at least the appearance of freshness. The use of dilute acetic acid or vinegar is confined to the preservation of vegetable substances, and is employed principally by pickle-makers.

Pemmican is the muscular fibre of beef or mutton baked on hot iron plates and reduced to a coarse powder, but in India it is fibrous meat cut into long stripes, and dried in the sun. Vegetables and fruits are now largely preserved freed from their fluid constituents. When vegetables thus prepared are immersed in water for some

time, they swell up, become soft and tender, and resume to a very great extent the appearance, colour, and flavour proper to them in the fresh state. In another mode, the article to be preserved is placed sometimes in the raw state, but generally cooked in a tin canister, the lid of which is soldered down, but is perforated with a small aperture or pin-hole. It is then subjected to the action of either steam, boiling water, or a muriate of lime bath, until the contents of the canister, if not previously dressed, have become about two-thirds cooked. The aperture in the cover is then closed, and the canister and its contents are once more submitted for a shorter period—that is until the article is completely dressed—to the operation of heat. As soon as it has become cold, the canister is covered over with a coating of paint; its preparation is then complete.—*Hassell.*

PRESERVES, etc.

Conserve, ... Fr.	Conserva, . . . It., Sp.
Eingemachte, . . Ger. ?	Rèchèl, ... Turk.

The Chinese candy many things which are not considered fit for such purposes elsewhere, as millet seeds, bamboo shoots, slices of the lily root, etc.; these are hawked about the strects. Ginger root, preserved in sugar, is the most common sweetmeat exported; it is made of the tender roots of the ginger plant (Zingiber officinalis), and when good has a bright appearance, a dark-red colour, and is somewhat translucent. If the roots are old, the conserve will be stringy, tough, and tasteless. Much of this kind of sweetmeat is carried to India for consumption there, and for re-exportation to England and the Continent. The export to the United States is considerable, also to Sydney, South America, etc. Other kinds of conserves, as whampee, guava, and pear, jelly, citron, kumquat, oranges, etc., are also sent abroad. In India, the mango, apple, pear, melon, quince, lemon, amla (Emblica officinalis), halela (Beleric myrobalan), carrot, ber, ginger, are all made into preserves. Thcre are preserves also of lemon, Bokhara plum, limes, tomato, rhubarb, cherry (gila, sara, siya), peach, and water-melon. — *Honourable Mr. Morrison's Compendious Description.*

PRESIDENCY is the term by which, in India, the British designate the respective governments of Bengal, Madras, and Bombay. It has its origin in the circumstance of the administration there being conducted by a council, the governor for the time being holding the office of president.

The Presidency of Bengal (or technically Fort William in Bengal) has become so largely extended, as to require that the local government of parts of the original presidency should be delegated by the Governor-Gencral of the extended presidency to Lieutenant-Governors. The Bengal Civil Servants are disseminated throughout Northern and Eastern India,—in (1) the Lieutenant-Government of Bengal Proper, in (2) the North-Western Provinces (of Bengal) and Oudh, (3) the Panjab, (4) Rajputana and Ajmir, (5) Central India, (6) the Central Provinces, (7) Hyderabad and Berar, (8) Mysore and Coorg, (9) Assam, (10) Munipur, (11) British Burma, (12) the Andaman and Nicobar Islands. All these distinct governments, under Lieutenant-Governors, Commissioners, Superintendents, or Native Princes, with Political Agents as their advisers, are supplied with British officials from the Bengal Civil Service, and are subject to the superior control of the Governor-General in Council. The Presidencies of Madras and Bombay cover the remainder of India, and have their own distinct Civil Services.

Although there are 14 separate governments in India, including Madras and Bombay, the 12 divisions of Bengal Presidency have no correspondence with the Secretary of State except through the Governor-General. Bombay and Madras, as separate presidencies, rctain that distinction.

Thc thrce presidencies of Bengal, Madras, and Bombay have each an executive and a legislative council, over which the senior member, as Governor, presides; and letters from the Court of Directors of the E. I. Company were addressed to 'our President in Council,' from which the three divisions came to be called the Bengal, Madras, and Bombay Presidencies. These councils are in direct communication with the Secretary of State for India, who is one of the principal ministers of Great Britain.

PRESTER JOHN. Aung Khan of the Keraite Mongols, celebrated in Europe under the name of Prester John, or Presbyter John, was a contemporary of Chengiz Khan, whom, at the instigation of jealous enemies, he attempted, but failed, to destroy. He was of the Christian religion, contemporary with the emperor Alexius Comnenus of Constantinople, to whom he addressed a letter descriptive of his power. So many fables have been related of him, that his very existence has been doubted. But many particulars of this letter are confirmed by Marco Polo, Sir John Mandeville, and others. In that letter he described himself as a Christian, ruling over the three Indies, from the furthermost, where Thomas is bound, to Babylon. These were divided into 72 provinces, some of them Christian, and each with a king. He mentions that he had vowed to visit the sepulchre of our Lord with a great army, and that his army was preceded by 13 crosses of gold and precious stones. Dr. Oppaert, in an essay read before the Ethnological Society, describes Prester John as a title of four Tartar sovereigns or Kaitach, belonging to the Kitai Tartar, and one of the name Yeliutashi, who defeated the Sultan Sanjar, was the founder of the realm of Kara Kitai. After his conquest of Eastern and Western Turkestan, he became known by the title of Gur Khan, and had his capital at Bala Sagun. The last of thc princes who took this title of Prester John was named Kushluh, who reigned 1213 to 1218, and was defeated and slain by Chengiz Khan.—*Layard's Nineveh*, i. p. 251; *Elliot*, p. 498; *Dr. Oppaert; Schuyler*, p. 122.

PRETA, a spirit; Preta Srad'ha, the first year's obsequial ceremonies to a deceased Hindu. There are fifteen Preta Srad'ha. The Hindu Shastras or sacred books teach that after death the soul becomes preta, viz. takes a body about the size of a person's thumb, and remains in the custody of Yama, the judge of the dead. At the time of receiving punishment, the body becomes enlarged, and is made capable of enduring sorrow. The Srad'ha, performed by a son, delivers the deceased, at the end of a year, from this state, and translates him to the heaven of the Pitri, where he enjoys the reward of his meritorious actions, and afterwards, in another

body, enters into that state which the nature of his former actions assign to him. If the Srad'ha be not performed, the deceased remains in the preta state, and cannot enter another body. This view of a future state is almost similar to that in the 325th and six following lines of Virgil, in the 6th book of his Æneid, as well as of the 28th ode of the 1st book of Horace.—*Ward*, ii. p. 139.

PRETYA-BHAVA. Sansk. This is often rendered the condition of the soul after death, but means really the state on earth. The present life, according to Indian notions, is Bhava, birth and growth; Pretya, after a previous death. In Hindu books, a life after death is not unfrequently alluded to, but it is more for the goods of this world, for strength, for long life, a large family, food, and cattle, that the favour of the gods is implored.

PRIAPUS. Lat. The Phallus of the Greeks, and Liugam of the Hindus. In the south of France it was worshipped under the title of St. Foutin; of St. Regnaud, in Burgundy; and as St. Cosmo, in the south of Italy.—*Tod.* See Lingam.

PRICE, Major DAVID, an officer of the E. I. Co. in the Bombay army. He was long in political employ. He wrote in four volumes, Memoirs of the Principal Events of Muhammadan History from the Death of the Arabian Legislator to the Establishment of the Moghul Empire in Hindustan, London 1811–21; also History of Arabia antecedent to the Birth of Mahomed, London 1824.

PRICKLY PEAR, Opuntia Dillenii, *Haworth*, Cactus Indicus, *Roxburgh*, C. Dillenii, *Ker*, also called the hedge prickly pear, is a native of America, but is now growing over all India, and is called Nag-phana, or snake-hooded. It has large yellow flowers, and fruits throughout the year, but the fruit is not used in India. From the severe pain its prickles occasion, its vitality, and the rapidity of its growth, it is a very troublesome plant to eradicate. After cutting it, put it into water, and sink it to the bottom with stones. In 24 hours the water will begin to get thick and muddy. In two days it smells sour, on the third a scum rises, and the whole substance of the prickly pear is decomposed. It then makes good manure, and will not grow or vegetate. Another method of destroying it is to cut a number of the shrubby plants that usually accompany it, spread these over the ground to the height of a foot or two, lay the prickly pear on the top, and leave the pile to dry for some days, then set fire to the heap. If too much of the prickly pear be piled up, it will require a second firing. Potass may be prepared from the ashes. If prickly pear be cut and left on the ground, it very soon begins to grow again.

PRIEST and Priestly Caste are terms loosely applied to the Brahmans of India; the name is occasionally given to Buddhists. Every Brahman who professes a knowledge of the formula of his religion may become a priest, and such are distinguished by the appellations, Purushita, Acharya, Sndushya, Brahma, and Hota. The first appears to be the principal ceremonial, the last the sacrificial, priest. According to Mr. Ward, the first-mentioned is the most advantageous order, as the rich, who are unwilling to fast, bathe in cold water, and perform further ablutions and sacrifices, bestow fees upon the Purushita to perform these ceremonies for them. The five artisan castes, and all the non-Aryan races, have priests of their own, and not Brahmans. Hindu priests have no official garments.—*Cole. Myth. Hind.* p. 392.

PRIMATES, a group of the mammalia, comprising the quadrumana and cheiroptera. See Mammalia.

PRINSEP, JAMES, one of a family, several of whom obtained employment or sought a career in India. James was for some time secretary to the Asiatic Society of Bengal, and did more to extend the knowledge of eastern numismatics than any other individual up to his time (1873). The results of his researches have been given to the world in two volumes, entitled Indian Antiquities (Murray, 1858), edited by Mr. Edward Thomas; Useful Tables on Indian Metrology and Chronology. The marvellous ingenuity which he displayed in deciphering the inscriptions of Asoka and other hitherto unread documents, revolutionized the whole character of Indian archæology.

Charles R. Prinsep, a barrister in India, and formerly of the Middle Temple, is the translator of Say's Political Economy. Henry Toby Prinsep is the author of several pamphlets on Indian questions, also of various statistics published in the Asiatic Society's Journal, and of a Narrative of Political and Military Transactions of British India under the Administration of the Marquis of Hastings, 1813 to 1823, London 1820, 1825; Origin of the Sikh Power in the Panjab, and Political Life of Maharaja Ranjit Singh, Calcutta 1834.

PRINSEPIA UTILIS. *Royle.*

Behkul, ... Beas.	Rari, Jinti, . Chenab.
Gurinda, Cham., Jhelum.	Bhekling, . . Kanawar.
Arund, ... ,,	Bekkli, Karangura, Ravi.
Tatua, Phoolwara, Chenab.	Bekkar, Bekrul, Sutlej.

A common North-west Himalayan plant, and found at 8000 feet in Sikkim, also in Kaghan and the Sutlej valley between Rampur and Sungnam at an elevation of 4000 to 8000 feet. Used for hedges; its seeds yield an edible oil; wood used for walking-sticks.—*Stewart.*

PRINTED CLOTHS. The art of calico-printing is one which was common to the ancient Egyptians and Indians, and is still largely practised by the latter, and with a skill which produces much to be admired, even in the midst of the productions of the world, and after many attempts have been made to improve an art certainly imported from the east. Pliny was acquainted with the art by which cloths, though immersed in a heated dyeing liquor of one uniform colour, came out tinged with different colours, and afterwards could not be discharged by washing. The people of India were found practising the art when first visited by Europeans, and Calicut on the Malabar coast has given its name to calico.

The large cotton chintz counterpanes, called pallampoors (palangposh), which from an early period have been made in the East Indies, are prepared by placing on the cloth a pattern of wax, and dyeing the parts not so protected.

The colours used in calico-printing are derived from all the three kingdoms of nature, but it seldom happens that solutions, infusions, or decoctions of these colours admit of being applied at once to the cloth without some previous preparation, either of the cloth itself, or of the colouring

material. It is often necessary to apply some substance to the cloth which shall act as a bond of union between it and the colouring matter. The substance is usually a metallic salt, which has an affinity for the tissue of the cloth as well as for the colouring matter when in a state of solution, and forms with the latter an insoluble compound. Such a substance is called a mordant (from the Latin Morderc, to bite), a term given by the French dyers, under the idea that it exerted a corrosive action on the fibre, expanding the pores, and allowing the colour to be absorbed. The usual mordants are common alum and several salts of alumina, peroxide of tin, protoxide of tin, and oxide of chrome. These have an affinity for colouring matters, but many of their salts have also a considerable attraction for the tissue of the cloth, which withdraws them to a certain extent from their solutions. Mordants are useful for all those vegetable and animal colouring matters which are soluble in water, but have not a strong affinity for tissues. The action of the mordant is to withdraw them from solution, and to form with them, upon the cloth itself, certain compounds which are insoluble in water. In European cloth-printing, although the methods employed are numerous, and the combinations of colours and shades of colour almost infinite, yet each colour in a pattern must, in the present state of the art, be applied by one of six different styles of work. These are termed—1. the madder style; 2. printing by steam; 3. the paddling style; 4. the resist style; 5. the discharge style; and 6. the China-blue style. By the proper combination of two or more of these styles, any pattern, however complicated, is produced. The processes actually required for finishing a piece of cloth are numerous, as, for example, in producing a red stripe upon a white ground, the bleached cloth is submitted to nineteen operations, as follows:—1. Printing on mordant of red liquor (a preparation of alumina) thickened with flour, and dyeing; 2. ageing for three days; 3. dunging; 4. wincing in cold water; 5. washing at the dash-wheel; 6. wincing in dung-substitute and size; 7. wincing in cold water; 8. dyeing in madder; 9. wincing in cold water; 10. washing at the dash-wheel; 11. wincing in soap-water containing a salt of tin; 12. washing at the dash-wheel; 13. wincing in soap-water; 14. wincing in a solution of bleaching-powder; 15. washing at the dash-wheel; 16. drying by the water extractor; 17. folding; 18. starching; 19. drying by steam.

Indian dyers apply the mordants both by pencils and by engraved blocks. Blocks are used throughout India, but silk handkerchiefs had the parts where the round spots were to be, tied up with thread, so as not to be affected by the dye-liquors, and it was from this process of tying (bandhna) that they received the name of bandana. The cloth-printers at Dacca stamp the figures on cloth which is to be embroidered. The stamps are formed of small blocks of kantul (Artocarpus) wood, with the figures carved in relief. The colouring matter is a red earth imported from Bombay, probably the so-called Indian earth from the Persian Gulf. Though the art is now practised to much perfection in Europe, the Indian patterns still retain their own particular beauties, and command a crowd of admirers. This is no doubt due in a great measure to the knowledge which they have of the effects of colours, and the proportion which they preserve between the ground and the pattern, by which a good effect is procured both at a distance and on a near inspection. Printed cloths are worn occasionally, as in Berar and Bundelkhand, for sarees; and the ends and borders have peculiar local patterns. There is also a class of prints on coarse cloth, used for the skirts or petticoats of women of some of the lower classes in Upper India; but the greatest demand for printed cloths is for palempores, or single quilts. In the costlier garments woven in India, the borders and ends are entirely of gold thread and silk, the former predominating. Printing in gold and in silver is a branch of the art which has been carried to great perfection in India, as well upon thick calico as upon fine muslin. The size which is used is not mentioned, but in the Burmese territory the juice of a plant is used, which no doubt contains caoutchouc in a state of solution.

There is a branch of cotton-printing carried on at Sholapur. The patterns of various kinds are printed upon coarse cloth, and are used for floor-coverings, bed-coverlets, etc. etc., the latter by the poorer classes. The colours are very permanent, and will bear any amount of washing, but are confined to madder reds, and browns, black, dull greens, and yellows. See Dyes.

The object of calico-printing is to apply one or more colours to particular parts of cloth, so as to represent a distinct pattern, and the beauty of a print depends on the elegance of the pattern and the brilliancy and contrast of the colours. The processes employed are applicable to linen, silk, worsted, and mixed fabrics, although they are usually referred to cotton cloth or calico. There are various methods of calico-printing, the simplest of which is block-printing by hand, in which the pattern or a portion thereof is engraved in relief upon the face of a block of sycamore, holly, or pear-tree wood, backed with deal, and furnished with a strong handle of boxwood. A machine, called the perrotine, in honour of its inventor, M. Perrot of Rouen, is in use in France and Belguim as a substitute for hand-block printing. Copperplate printing similar to that used in the production of engravings, has also been applied to calico-printing. The invention of cylinder or roller printing is the greatest achievement that has been made in the art, producing results which are truly extraordinary: a length of calico equal to one mile can by this method be printed off with four different colours in one hour, and more accurately and with better effect than block-printing by hand. By another method of calico-printing, namely, press-printing, several colours can be printed at once. The cloth to be printed is wound upon a roller at one end of the machine, and the design, which is formed in a block of mixed metal about 2½ feet square, is supported with its face downwards in an iron frame, and can be raised or lowered at pleasure. The face of the block is divided into as many stripes, ranging crossways with the table, as there are colours to be printed.—*Royle's Arts of India.*

PRINTING.

Taba, Chapa, Ar., Hind.	Imprenta, ... Sp.
Impression, . . . Fr.	Atche, ... Tam.
Drucken, . . . Ger. ?	Basma, ... Turk.
Impressione, . . . It.	

Sir John Davis is of opinion that the art of printing, the composition of gunpowder, and the magnetic compass, which are justly considered as three of the most important inventions or discoveries, had their first origin in China. Their printing is by a system of stereotype, the types being made from the pear-tree wood, called by them ly-mo. In the beginning of the 10th century their printing was inveuted, and in A.D. 932 that mode of multiplying copies of books received the imperial sanction, a printed imperial edition of all the sacred works having been then published. The art was not iuvented in Europe till 500 years after this. Marco Polo speaks much of the stamped paper money of the Chinese; and he must have seen their printed books. Printing with moveable types (made of terra-cotta) was invented in China by a smith named Pishing, before the middle of the 11th century, but the invention does uot seem to have been followed up. Their wood-printing was kuown at least as early as A.D. 581; and about 904 engraving on stone for the press was introduced. Paper in China is made from bamboo, from the bark of mulberry, of a hibiscus (Rosa Sinensis), aud of the tree called chu (Broussonetia papyrifera). All bark-paper is strong and tough; it has rays crossing it, so that when torn you would thiuk it was made of silk fibres. This is why it is called Mien-chi, or silk paper.

Printing was known in Europe in A.D. 1428. The art of printing was introduced into India by the Goa Jesuits about the middle of the 16th century, but at first they printed only in the Roman character. Father Estevao (*i.e.* Stephens, an Englishmau), about 1600, speaks of the Roman character as exclusively used for writing Konkani, and the system of transcription which he uses in his Konkani grammar (Arte de lingoa Cannarin) and Purana is really worthy of admiration. It is based on the Portuguese pronunciation of the alphabet, but is accurate and complete, and has been used by the numerous Konkani Roman Catholics of the west coast of India up to the present time. In the 17th ceutury the Jesuits appear to have had two presses at Goa,—in their college of St. Paul at Goa, and in their house at Rachol. Few specimens of their work have been preserved, but there is ample evidence that they printed a considerable number of books, and some of large size. About the end of the 17th century, it became the practice at Goa to advance natives to high office iu the church, and from that time ruin and degradation began, and the labours of the early Jesuits disappeared. Literature was entirely neglected, and the productions of the early presses were probably used as waste-paper by the monks, or left to certain destruction by remaining unused and uncared for on their book-shelves. There is, however, in the Cochin territory a place quite as famous as Goa in the history of printing in India, often mentioned by travellers in the 17th and 18th centuries, Ambalacatta (*i.e.* Ambalakkadu, or Churchwood). The place still remains as a small village with a scanty population of schismatic Nestorians; it is inland from Cranganore, and a few miles to the north of Angamali. The Jesuits appear to have built here a seminary and church dedicated to St. Thomas soon after 1550, and in consequence of the result of the Synod of Udayompura, presided over by Alexius Manezes, Archbishop of Goa, in 1599 it became a place of great importance to the mission. Sanskrit, Tamil, Malayan, and Syriac were studied by the Portuguese Jesuits residing there with great success, and several important works were printed, of which, however, we have only the names left us, as recorded by F. de Souza and others, and still later by Fr. Pauliuus. The last tells us that—'Anno 1679, in oppido Ambalacatta in lignum incisi alli characteræ Tamulici per Ignatium Aichamoni indigenam Malabarensem, iisque in lucem prodiit opus inscriptum: Vocabulario Tamulio com a significaco Portugueza composto pello P. Antem de Proenca da Comp. de Jesu, Miss de Madure.' The first Malabar (Tamil? Malayalam?) types had been cut by a lay brother of the Jesuits, Joannes Gonsalves, at Cochin, in 1577. Ambalacatta was destroyed by order of Tipu, when his army invaded Cochin and Travancore. He spared neither Christians nor Hindus, and to him attaches the infamy of destroying most of the ancient Sanskrit MSS. which time had spared in South India. Brahmans have yet stories current, how in those times their ancestors had to flee to the forests with a few of their most precious books and possessions, leaving the remainder to the flames.—*Trubner's Oriental Record.*

Tamil types seeu, however, to have been cut at Amsterdam in 1678, to express the names of some plants in the large work, Horti Iudici Malabarici. Ziegenbalg mentions, however, that they were so bad that even the Tamilar themselves could not make them out. It would appear that the next attempt was made at Halle, about 1710, to supply the Tranquebar Mission. Fenger says, 'The people there, though unacquainted with the Tamil language, succeeded in making some Tamil letters, which they hastily tried and sent to Trauquebar, where the first part of the New Testameut, as well as other things, was printed with them. This sample, the very first thing ever printed in Tamil characters, was the Apostles' Creed, and the friends at Halle when they despatched it with the printing-press, requested soon to be requited by a copy of the New Testament in Tamil.' The printing of the New Testament was completed in Tranquebar in 1715. The type first cut at Halle is about equal to the size called English. Smaller founts were cut afterwards. A specimeu is given of a part of Arndt's True Christianity, printed at Halle in 1751. Founts of type were subsequently cut in India. Printing was carried on both on the Continent and in Ceylon. In 1761 the Madras Government allowed the Vepery missionaries the use of a press taken at Pondicherry. Tamil typography owes its present excellence mainly to Mr. P. R. Hunt, of the American Mission Press. With much labour, he superintended the cutting of the punches of several founts; the smallest size (brevier) he had prepared in America. He produced the smallest vernacular edition of the Scriptures ever yet issued in India. The American press has also raised the standard of printing throughout the Tamil country. The Rev. W. Taylor states that up to 1835 the only Tamil works printed by natives were the Kural and some poetry by Auvaiyar. In that year (15th September) Sir Charles Metcalfe removed the restrictions on printing, and soon afterwards native presses began to be established. In 1863, there were ten native

presses in Madras, printing in Tamil, on a very small scale. According to Hindu custom, related families dwell together, and a wooden printing press was owned in common; some members acting as printers, others attending to sales. This indeed was the early practice in Europe. Hallam says, 'The first printers were always booksellers, and sold their own impressions. These occupations were not divided till the early part of the 16th century.' In 1872, three or four native printers had iron presses, and even claimed to hot-press their sheets. Some books printed by them were of very fair workmanship.

The very first work printed in Bengali was issued from a press at Hoogly in 1778. It was a Bengali grammar by Nathaniel Brassey Halhed, B.C.S.; and the types for it were actually prepared by the hands of Lieut. C. Wilkins, of the Bengal army, afterwards Sir Charles Wilkins, the celebrated Sanskrit scholar. The first native who learned type-cutting was a blacksmith of the name of Panchanau, who was specially instructed in that art by Lieut. Wilkins himself. This man prepared the first fount of Bengali types for the Baptist missionaries, at Serampur, at the rate of 1 rupee 4 annas per letter. In 1875, the second book in Bengali was published by the E. I. Co.'s press. When Mr. Foster's Bengali translation of Lord Cornwallis' Regulation of 1793 was printed at the same press, a new set of types had been made, vastly superior to its predecessor. In 1803, the Serampur missionaries prepared type in Deva Nagri, and on the 28th May 1818, issued the first Bengali newspaper, called Samachar Darpan. The Samachar Darpan was preceded by a Bengali monthly magazine, designated the Dig-darshan. Shortly afterwards the Timir Nashak was published in Calcutta by a Bengali, but it died in a short time. The Samachar Darpan, or The Mirror of News, was a hebdomadal, and was printed and published at Serampur. Its first editor was the late well-known John Clark Marshman,—Father John, as he was irreverently dubbed by the English press of that time; and the newspaper, after a protracted existence of nearly a quarter of a century, ceased to appear in 1841. The Governor-General, the Marquis of Hastings, according to the Rev. J. Long, on the first issue of the paper, wrote with his own hand to the editor expressing his entire approval of it. And in public his lordship is said to have avowed that it was 'salutary for the supreme authority to look to the control of public scrutiny.'

An Agra newspaper of 1870 says there were then twenty-four mission presses in India, Ceylon, and Burma. These had published in the course of the last ten years no fewer than 3410 separate works, mostly of a Christian and educational character, in 31 languages and dialects. In the year 1870, there were six printing offices in Yezo alone (now called Tokio, *i.e.* Eastern Capital). They turn out elementary school-books to meet the large demands of this progressive people, to be used as the means for acquiring a knowledge of English and other European languages. None but their own people are employed. They publish newspapers in their own characters, but the type is cast on a regular body, to English standard, and in a Japanese type-foundry at Nangasaki. The native characters consist of Chinese, and the Japanese 'Hirakana' and 'Katakana.' The Chinese characters are arranged in cases with very narrow divisions the width of the body of the type; these are placed in the divisions on their feet, with the face upwards.—*Preface to Grammatica Damulica; History of the Tranquebar Mission; Royle's Arts, etc., of India; Pennant's Hindoostan*, i. p. 132; *M'Culloch's Dictionary; Julien in Jour. Asiat.* p. 509; *Chin. Moderne*, p. 626; *Yule, Cathay*, i. p. 219.

PRION DESOLATUS, a petrel of the Kerguelen Land. It is a small bird, and known to seamen as the whale bird, from accompanying the whales. P. pachyptila is also the whale bird of sailors.

PRIONODON GRACILIS, *Horsfield*, a feline form (Felis gracilis, Delundung of the Javanese), placed in a separate section under the name of Prionodontidæ, between Felis and Viverra. (Zoological Researches in Java.) In Blambangan it inhabits the extensive forests which cover that district.

PRIONODON PARDICOLOR. *Hodgson.*

Zik-chum, ... Bhot. | Suhya, . . . Lepcha.

Is the tiger civet, a very beautiful animal of the S.E. Himalaya, Nepal, and Sikkim. Jerdon had one which he domesticated, and it became playful.—*Jerdon.*

PRISHADHRA, a son of Manu Vaivaswata, who killed the cow of his religious teacher, and by that menial act became a Sudra.—*Dowson.*

PRISTIDÆ, the saw-fish family of fishes of the genus Pristis. There are—

Pristis Perrotteti, *M. and H.*, E. and W. Indies, Archipelago, Red Sea.
P. pectinatus, *Lath.*, Tropical Seas.
P. zysron, *Blkr.*, East Indies, Archipelago.
P. cuspidatus, *Lath.*, East Indies.

PRISTIOPHORIDÆ, a family of fishes of the Pristiophorus genus, there are—

Pristiophorus cirratus, *Lath.*, Australia.
P. nudipinnis, *Gthr.*
P. Owenii, *Gthr.*, —?
P. Japonicus, *Gthr.*, Japan.

PRISTIPOMA GUORACA. *C. and V.*

Perca grunniens, *Foster.* | Anthias grunniens, *Bloch., Schneider.*
Guoraka, *Russell.*

This fish is one foot long. It inhabits the Isle of Tanna, Batavia, Coromandel, and Mahé (fresh water). Its air-vessel is very thin, from which its isinglass is of little value.

PRISTIS ANTIQUORUM, a huge saw-fish of the eastern coast of Ceylon. Two other species are found in the Ceylon waters, P. cuspidatus and P. pectinatus. Squalus pristis is the saw-snouted shark.—*Tennent's Ceylon*, p. 325.

PRITCHARDIA PACIFICA. This palm, throughout the Polynesian islands, is held to be exclusively the property of the aristocracy, and not allowed to be devoted to common purposes by the lower classes, like the species which it so much resembles.—*Seeman.*

PRITHI or Kunti, daughter of Sura, a Yadava prince, who gave her to his childless cousin Kuntibhoja, who brought her up. In Hindu mythology, a sage named Durvasa, who was living in her father's house, gave her a charm, by which she was to have a child by any god she liked to invoke. She summoned the suu, and her child was born armed with cuirass and lance. Afraid of the anger of her relatives, she exposed her child in the Jumna, where it was found by Adi Ratha,

charioteer of Dhrita Rashtra, and nurtured by his wife Radha, and called therefore Radheya.

PRITHI RAJ, son of Rana Raemul, the troubadour of Mewar. After several gallant adventures, he was poisoned by Pabhu Rao, chief of Sirohi, and Tara Bai immolated herself on the pyre, and their monument is to be seen near the temple of Mama Devi, overlooking the road leading to Marwar.—*Tod's Rajasthan*, i. p. 673.

PRITHI RAJA, also written Prithivi Raja and Pritwi Raja, a Rajput prince of the Chauhan tribe, under whom the Tomara and Chauhan tribes were united. Shortly before the time of Shahab-ud-Din, the four greatest kingdoms in India were—Dehli, then held by the Tomara Rajputs; Ajmir, by the Chauhan; Kanouj, by the Rahtor; and Gujerat, by Baghela, who had supplanted the Chalukya dynasty. But the Tomara chief dying without male issue, his grandson Prithivi, raja of Ajmir, united the Tomara and Chauhan under one head. As the raja of Kanouj was also a grandson of the Tomara chief by another daughter, he was mortally offended at the preference shown to his cousin; and the wars and jealousies to which this rivalship gave rise, contributed greatly to Shahab-ud-Din's success in his designs on India. Prithi Raja was born in the year 1154, and was sixteen years of age when he succeeded his maternal grandfather on the throne of the Anango. The first princess married by Prithivi was the daughter of the Dahima of Biana, a city the castle of which was built on the topmost peak of Druinadaher. He enlarged the circle of his alliances, till there gathered round his throne 108 chiefs of high rank, and in the height of his power he celebrated the Aswa Medha as a claim of empire. By one account, it was on the occasion of this ceremony that Prithivi, in 1175, carried off the princess Sanjogata in open day from the capital of Jye-chand a feat, the heroism of which forms the subject of the Kanouj Kandh of the Prithivi Raja Chauhan Rasa of the poet Chand. The princess of Kanouj was not only remarkable for her personal charms, but formed the most perfect model of Rajput female character in her day. Her father, claiming empire, was being served by princes of his race, but as Prithivi Raja did not appear, the Kanouj king erected a mocking, ill-shapen image of him. The princess Sanjogata, however, threw her bridal garland over the image, and Prithivi Raja, hearing of it, successfully carried her off, but with the loss of his best chiefs.

Shahab-ud-Din's first attack on Prithivi was A.D. 1191, A.H. 587. The armies met at Tirouri, between Tanesar and Karnal, where most of the contests for India have been decided. While he was engaged in the centre of his army, the Hindus outflanked him; both wings of his army gave way. The rout was complete, and his army was pursued for forty miles, and Shahab settled at Ghazni, where, as he said, he never slumbered in ease or waked but in sorrow and anxiety. After two years (A.D. 1193, A.H. 589) he returned to India with an army of Turk, Tajak, and Afghan. Prithivi again met him on the banks of the Caggar with a vast army, swelled by numerous allies, who were attracted by his former success. They allowed themselves to be surprised one morning at daybreak, but recovered their position and advanced against the Muhammadans in four lines. Shahab-ud-Din retired, keeping his men in hand, till an opportunity occurring, he charged the Hindu army at the head of 12,000 chosen horse in steel armour, and Prithi's prodigious army, once shaken, like a great building, tottered to its fall, and was lost in its own ruins. The Viceroy of Dehli and many other chiefs were slain on the field, and Prithivi Raja, being taken in the pursuit, was put to death in cold blood. Then followed scenes of devastation, plunder, and massacre that have too often been enacted in Dehli. The bard Chand remained to sing the requiem of his nation's fall. He was the last heroic Hindu poet of India, and was the author of the Prithivi Raja Chauhan Rasa, containing an account of Prithivi Raja. It has many books, of which the Kanouj Kandh contains the history of Sanjogata Jye-chand.

The chief of the Chauhan Rajputs in the Ulwar district of Raht claims to be the living representative of Prithi.—*Elph.* pp. 313, 314; *Brigg's Ferishta*, i. pp. 173-177; *Tr. of Hind.* ii. p. 164; *As. Res.* ix. pp. 77, 109, 118, 168, 170.

PRIT'HIVI or Urvi, the goddess of the earth, is by some termed a form of Lakshmi, by others of Parvati. Her husband is Prit'hu, produced by churning the right arm of a deceased tyrant who had died without issue, that he might have a posthumous son, who is represented as a form of Vishnu. As a form of Lakshmi, Prit'hivi is the Indian Ceres. Daily sacrifices are offered to her. The Hindus divide the universe into ten parts, to each of which a deity is assigned. Prit'hivi is the goddess of the earth. Viswakarma, the artificer of the universe, that is, the lord of creation, assuming that character, moulded the earth, and it became Prit'hivi-conspicuous; and that name, Prit'hivi, is therefore assigned to the earth. In Hindu mythology, Urvi means broad and wide; the earth-goddess is typified as a cow, which yields to every class of beings the milk they desired as the object of their wishes. In the Vedas the earth is personified as the mother of all beings, and is invoked together with the sky. In the form of a cow, Prit'hivi was milked by Swayambhuva, grand ancestor of Prit'hu, who so employed him. Prit'hivi, as a personification of the earth, also represents patience; the Hindus refer to the earth, or Prit'hivi, proverbially, as an example of patience or forbearance, permitting her bowels to be ripped open, her surface lacerated, and suffering every indignity without resentment or murmuring. She is quoted also as an example of correctness, as returning good for evil. Prit'hivi Pati, *i.e.* lord of the earth, is a title conferred on terrestrial or real, as well as mythological sovereigns. In the latter sense he is deemed the architect of the universe, and chief engineer of the gods. He revealed the fourth Upaveda in various treatises on sixty-four mechanical arts, for the improvement of such as exercise them; and he is the inspector of all manual labours and mechanical arts. The goddess Prit'hivi is also called Bhu-Devi, also Bhuma Devi, names of the earth. Bhu-Devi, in Hindu mythology, is the terrestrial name of Parvati, as goddess of the earth. As the names of Diana were varied to suit her various forms, she being Luna in heaven, Proserpine or Hecate in hell, so her archetype, the Hindu Parvati, is the heavenly Bhavani, on earth Bhu-Devi, and Patala-Devi as consort of the regent of the infernal regions. Bhu-Deva, as spouse of the earthly goddess, is a name of Siva.

—*As. Res.* vi. p. 502; *Hindu Infanticide*, p. 28; *Coleman*, p. 102; *Moor*, p. 113.

PRIT'HU, the first king who formed towns, taught the arts, taught cultivation, and is fabled by the Hindus to be married to Prit'hivi, a name for the earth. Prit'hu is said to have been grandson of Swayambhuva, the Hindu Noah. He had seven sons, one of whom, Agnidru, got Jambu Dwipa or India. Bharata, great-grandson of Agnidru, got from the Himalaya to the sea, and called it Bharata Varsha. Another account calls Prithi or Prithi Vainya, son of Vena, son of Anga. According to the Vishnu Purana, he was the first king, had universal dominion, and from him the earth was called Prit'hivi. He is fabled to have been produced from the right arm of the body of his dead father. He milked the earth, from which all sorts of corn and vegetables were produced, the earth probably being typified as a cow yielding to all mankind the objects they desired.—*Wilson; Dowson.*

PROBALONGGO or Probbolinggo is a district in East Java, the richest sugar-producing district in the island, and its inhabitants are principally Madurese. The south-western side of the plain of Probbolinggo is bounded by the Tengger mountains.

PROCAPRA GUTTUROSA. —?

Antilope gutturosa, *Pallas.* | Whang yang.
Dzeren. | Yellow goat of the Chinese.
Hoang yang.

Is nearly 4½ feet in length, and 2½ feet high at the shoulder: the body also is large and corpulent, and the legs shorter than is common to the antelopes in general; the horns are black, lyrated, and marked to within a short distance of their points, with prominent transverse rings; the sub-orbital sinuses are small. On the prepuce of the male is a bag about the size of a hen's egg, which contains a waxy substance similar to that produced in the analogous organ of the musk animal, but without any kind of odour. They inhabit the dry arid deserts of Central Asia, Tibet, China, and Southern Siberia, particularly the great desert of Gobi, and prefer the most sandy and stony plains, feeding upon such scanty herbage as these localities supply, and avoiding water, to which they appear to entertain a marked aversion. They are remarkably swift, take prodigious leaps, and when frightened will occasionally pass over 20 or 25 feet at a single bound. In spring and summer they form small families, which live apart from one another, but in the beginning of winter they unite in large flocks, always under the guidance of an experienced old buck. They never run, even when pursued, in a confused crowd, but form single files, and follow closely in the footsteps of their leader. They rarely emit any voice. When taken they are easily tamed, and appear to have rather a predilection for the domestic state, often mixing with flocks of sheep, and approaching human habitations during the severity of the winter season. Their flesh is tender and well tasted, and they are a favourite object of chase with the Moghuls and Tartars.

Procapra picticauda, the Goa or Ra-goa, the Tibet ravine-deer of Europeans, is met with on craggy mountain sides, and, like the goral and chamois, delights to sport among cliffs and precipices. It is described by Mr. Hodgson as an inhabitant of Tibet. It has brown hair with rufous tips; the inside of the ears and limbs white, and tail black. It is perhaps P. gutturosa in its summer coat.—*Eng. Cyc.* p. 236; *Adams.*

PROCELLARIDÆ. The petrel family of birds, of the order Natatores and tribe Vagatores, *Blyth*, comprising the albatrosses (Diomedinæ), the petrels (Procellarinæ), and the diving petrels (Halodrominæ), including the genera Diomedea, Procellaria, Prion, Pelicanoides, Puffinus, and Thalassidroma.

Procellaria Capensis is the Pintado petrel, Cape pigeon, painted petrel.

Procellaria hœsitata, capped petrel of Indian and Southern Oceans. A rare straggler in Britain, has been obtained in Lower Bengal.

Procellaria pelagica, the stormy petrel, seems to belong to every sea.—*Cal. Mus. Cat.; Adams.*

PROCERIDÆ. Among the insects of this family, collected by Dr. Wallich, there were four or five species of true Carabus. Calosoma are found wherever the oak grows. C. Indicum inhabits Nepal. If caterpillars are necessary to keep in check the luxuriance of tropical vegetation, the Calosomata are equally necessary to keep within bounds these insects, which sometimes destroy, in northern climes, nearly the foliage of the year.—*Hope's M. L. J.*, July 1840, p. 117.

PROME, a town which gives its name to a district in the Pegu division of British Burma. It is situated on the left bank of the Irawadi, in lat. 18° 43′ N., long. 95° 15′ E., and is 113 miles N.W. from the town of Pegu. The area of the district is 2887 square miles, and population in 1872 about 274,872. It was taken by the British Indian army on the 1st October 1825, and again on the 9th September 1852. There is here a famed Buddhist pagoda, commonly called 'Shoay San Dau,' or the royal golden-hair pagoda.

PROMETHEUS, the fire-stealer in an old Greek legend, takes his name from the Sanskrit Pramantha, identical with the Greek Manthano, and in their common root, 'Manth,' lay the idea of seizing, robbing, etc. The cave to which the Macedonians attached the story of Prometheus was somewhere in the Paropamisan mountains.

PROON-BA-JAH. Burm. A tree of Akyab, and plentiful in Arakan. Used for making wooden bells, etc.—*Cal. Cat. Ex.*, 1862.

PROPHET, a term in use amongst the people of Europe to designate Mahomed, whom his followers call the Ras-ul-Allah, or messenger of the Lord, also Paighambar. Europeans sometimes call him the Arabian prophet; his followers never do so.

PROSERPINE. Kali is the Hindu Proserpine, or Calligenia, the Grecian handmaid of Hecate. The latter name seems of Hindu origin, 'born of time' (Cali-janama?), and Proserpine is from Prasarpani.—*As. Res.* v. p. 298.

PROSOPIS, a genus of plants belonging to the order Fabaceæ. Prosopis algaroba, like Ava, to produce chica, is chewed and put in a bowl, mixed with water, allowed to ferment, and drunk.

PROSOPIS DULCIS. *Kth.*

Acacia lævigata, *Roxb.* | Mimosa lævigata, *Roxb.*

A tree of N. Spain introduced into India from the Mauritius. The pulp of the pods is very sweet, and is eaten.—*Voigt.*

PROSOPIS SPICIGERA. *Linn.*

P. aculeata, *As. Res.*
P. spicata, *Burm.*
Adenanthera aculeata, *Roxb.*

This tree grows all over India and Sind. It is often stunted and gnarled, in the Panjab preserves it is abundant, and largely used for fuel in steamships and railways. Dr. Brandis relates that a root which was dug out penetrated 64 feet vertically. It attains even a large size in Sind, Coimbatore, and Mysore. Its timber weighs about 100 lbs. unseasoned, and 58 lbs. seasoned, and has a specific gravity of 1·152. It is dark red in colour, straight and close-grained, hard and durable, and superior to teak in strength, and is much used for building purposes and cart wheels, and occasionally for furniture, and makes excellent fuel. It is of very slow growth; it flowers in the hot weather; the mealy sweet substance in the pod is eaten by the natives, and a gum exudes from the tree. Dr. Wight found it sustain a weight of 592 lbs. Its pod is about an inch in circumference, and from 6 to 12 inches long, and when ripe it contains a quantity of a mealy substance which has a sweetish taste. The tree is reverenced in the Dassera rites. It is sometimes used for boat-building. — *Drs. Ainslie, Wight, Gibson, Stewart; Colonel Beddome.*

PROSTITUTES. The great bulk of the prostitutes of India are of Hindu origin. In 1853, Calcutta, with a population of 416,000, had 12,419 common women, of whom 10,000 were Hindus, several being daughters of Kulin Brahmans. In September 1867 there was reported to be upwards of 30,000 women in the town of Calcutta depending on prostitution, but this seems an unlikely number. The majority were said to be Hindus. —*Cal. Rev.*, August 1868. See Dancing Girls; Deva-Dasa.

PROTESTANT, a term applied to Christian sects founded by Luther and Calvin, who protested against doctrines enunciated by the popes of Rome. They number 531,345 in India. Protestant missions in the Tamil country were commenced in 1706, but for about a century the only labourers were Danes and Germans. Christian Protestant missions in Bengal may be regarded as dating from 1799, when the Serampur mission was founded. In 1862, there were 65 European missionaries labouring among the Bengal people, and 16,277 native Protestant Christians. In the Tamil country, there were 132 European missionaries, and 94,540 native Protestant Christians. The Bengali-speaking population of India may be roughly estimated at 26 millions, the Tamil at 12 millions.

PROTIUM CAUDATUM. *W. and A.*

Maray manga, . . TAM.	Malay kluvy, . . TAM.
Kilevay, ... ,,	Vela patri, . . . TEL.

This middling-sized green-barked tree is common in most of the dry sub-alpine jungles on both sides of the Madras Presidency, and is found in Ceylon. It is very common as an avenue tree, but is bare of leaves for some months towards the end of the cold season and beginning of the hot, the young leaves appearing with the flowers in March, the leaves and bark having a strong grateful fragrance. The tree grows most readily from large cuttings, which is the reason it is so often employed for avenue purposes; the wood is said to be worthless.—*Wight; Beddome, Fl. Sylv.* p. 125.

PROVINCE WELLESLEY, on the mainland of the Malayan Peninsula, opposite Penang, from which it is separated about 3 miles, runs north and south 25 miles, varying in breadth from 4 to 11 miles, contains an area of 15,000 acres.

PRUNELLA, Alu Bokhara, PERS., Ustukhudus, PUSHTU, have a reddish-yellow colour, and a sweet, grateful taste, with a slight and pleasant acidity. They are a variety of prunes, and are brought to Bombay from the Persian Gulf.—*Faulkner; Powell's Handbook*, i. p. 365.

PRUNES. Alu Bokhara, PERS. A species of dried plum; there are many varieties. They are generally of an oblong shape and sweet taste, and are prepared in France, Germany, Portugal, and other parts of Europe. Those procurable in Bombay are brought from the Persian Gulf.—*Eng. Cyc.*

PRUNUS, a genus of plants of the order Amygdaleæ, all of the species being natives of the temperate parts of the northern hemisphere. The Amygdaleæ comprise six genera, the East Indian species of which may be thus shown:—

Prunus acuminata, *Wallich.*
P. aloocha, *Royle*, plum of Irki.
P. amygdalus, *Buillon.*
P. Armeniaca, *Linn.*, the apricot, Panjab.
P. Bokhariensis, *Royle*, Bokhara plum.
P. cerasus, *Linn.*, the cherry.
P. cocomilla, *Ten.*, Calabria.
P. communis, *Huds.*
P. domestica, *Linn.*, common plum.
P. insititia, *Linn.*, the bullace.
P. Jacquemontii, *Hook.*
P. Japonica, *Thunb.*, China, Japan; *var. a.*, simple; *var. b.*, plena.
P. Jenkinsii, *Hook.*
P. macrophylla, *S. and Z.*, Japan.
P. mahaleb, *Linn.*
P. Martabanica, *Wall.*
P. mume, *S. and Z.*, Japan.
P. padus, *Linn.*, Japan, Hazara.
P. paniculata, *Thunb.*, Japan.
P. Persica, *Linn.*, Japan, Panjab.
P. prostrata, *Lab.*
P. puddum, *Roxb.*
P. punctata, *Hooker.*
P. rufa, *Wall.*
P. spinulosa, *S. and Z.*, Japan.
P. tomentosa, *Thunb.*, Japan.
Cerasus Caroliniana, *Michx.*, Florida.
C. cornuta, *Wall.*, Sirmore.
C. lauro-cerasus; *Lois*, Levant.
C. Nepalensis, *Scr.*, Nepal, Kamaon.
C. pseudo-cerasus, *Lindl.*, China, Japan.
Armeniaca dasycarpa, *Pers.*, —?
A. vulgaris, *Lam.*, apricot.
Amygdalus cordifolia, *Roxb.*, China.
A. Persica, *Linn.*, peach tree.

Prunus Armeniaca, P. cerasus, P. Bokhariensis, P. triflora, *Roxb.*, grow abundantly in North-Western India.—*Voigt; Powell; Royle's Ill. Him. Bot.* p. 205.

PRUNUS ACUMINATA. *Wall.* A tree of the E. Himalaya, Khassya Hills, and Darjiling, up to 6000 feet, with a thin dark bark and reddish-brown wood.

PRUNUS ARMENIACA. *L.* Apricot.
Armeniaca vulgaris, *Lam.*

The apricot tree grows well on the first range of the Himalaya, bearing abundance of fruit in the months of May and June. It is propagated in the same way as the peach. In India the tree has been naturalized, and grows to a large size in gardens of the Dekhan and Mysore. It blossoms at the same season as the peach, from January to March. Dr. Stewart had seen the apricot wild in many places from 4000 to 6000 feet in the Panjab Himalaya. It is commonly cultivated all over, up to perhaps 15,000 feet, in some places in the dry climates of the Upper Sutlej and the Upper Chenab, and even to 11,500 or 12,000 feet in parts of Tibet. A great deal of the fruit, especially at the higher elevations, is very inferior, and in Tibet it is generally small. But very fair fruit is grown in many parts, and, in some of the Kanawar villages especially, the trees constitute a chief form of the wealth of the inhabitants, and yellow heaps of it may be seen drying in thousands on the roof of almost every house. A considerable quantity (100 maunds) of dried apricots are annually imported viâ Peshawur into the Panjab from Afghanistan, where the tree is largely grown. A gum similar to gum-arabic exudes from wounds in the bark of the tree. The wood is used occasionally for making the Tibetan drinking cups.—*J. D. Cunningham; Drs. Roxb., Riddell, Stewart, Royle, Birdwood, Moorcroft; Darwin, Variation of Animals.*

PRUNUS BOKHARIENSIS. *Royle.*

Bokhara plum, . Eng.	Kokamalis, Græco-Pers.
κοκκυμελεα, ... Gr.	Alu Bokhara, Hind., Pers.

Cultivated at Ghazni.

PRUNUS CERASUS, Cherry tree.

Jerasaya, Kerasya, Arab.	Sakura, . . . Japan.
Padam, ... Hind.	Alu Balu, . . . Pers.

The cherry tree abounds wild in the hills north of Dehra Doon, producing a small common black fruit fit only for preserves, etc.—*Roxb.; Riddell.*

PRUNUS DOMESTICA. *Linn.* Plum.

Barkook, Bargoog, Arab.	Aluchah (small), . Hind.
Vars. Ejass, Idrek, Shahlooj	Shah Alu (yellow), ,,
Aru, Alu, . . . Hind.	Olchi, Er, Or, . Kangra.

Appears to be common, wild and cultivated, in Kashmir, and is cultivated in Afghanistan, etc. Moorcroft mentions some from Yarkand as infinitely preferable to the best French plums. It is also cultivated in the Panjab plains, yielding a waxy yellowish fruit, also said to be found wild in the Caucasus. In Kashmir the wood is used for making the skeletons of the papier-mache boxes. The wood is not generally sound, but handsome, resembling pear or cherry. It is used in turning. Not available in quantity.—*Darwin; J. L. Stewart; Powell.*

PRUNUS INSITITIA, the bullace, is found wild in the Caucasus and N.W. India.—*Darwin.*

PRUNUS PADUS. *Linn.* Bird cherry.
Cerasus cornuta, *Roxb.*

Pacha; Paja, . . Hind.	Paras; Bart, . Kaghan.
Kalakat, ... ,,	Krun, ... ,,

A plant of Kaghan, also of Simla, at elevations of 7000 to 10,000 feet; and Dr. Stewart had seen the people in the Murree Hills eating the black berries of this tree. He describes it as a fine tree, with handsome bunches of white flowers in April, growing in many parts of the Panjab Himalaya from 4000 to 10,500 feet, up to the Indus. The wood is not much valued, but is used for ploughs, railings, etc., and for spoons. The fruit is eaten by the natives, but has a mawkish astringent taste, not peculiarly attractive to Europeans. The kernel yields a poisonous volatile oil, similar to oil of almonds.—*Stewart; Powell.*

PRUNUS PUDDUM. *Roxb.*

P. sylvatica, *Roxb.*	Cerasus puddum, *Wall.*
Pajja paddam, . . Beas.	Amalgueh, . . Jhelum.
Chamiari, . . Jhelum.	

A small tree of the Dehra Doon, Sirmore, and the eastern and Panjab Himalaya, at from 3000 to 5000 feet, up to near the Indus. The fruit is eaten by the natives, though it is always somewhat bitter. The wood is coarse-grained, light, soft, apt to split and to be attacked by insects, but is used in building, and occasionally for implements.—*Dr. J. L. Stewart.*

PRUSSIAN BLUE.

Yang-tien, . . . Chin.	Berlinerblau, . . Ger.
Sesqui ferro-cyanide of iron, . . . Eng.	Azurro Prussiano, Hind.
	Ferri-ferro-cyanas, Lat.
Percyanide of iron, . ,,	,, sesqui-ferro-cyanidum, . . ,,
Ferro prussiate, . . ,,	Lasar Bexlinskaja, Rus.
Bleu de Prusse, . . Fr.	Azul de Prussia, . . Sp.
Cyaneisen, . . . Ger.	

A pigment or dye, composed of cyanogen and iron, and procured by a chemical process from carbonate of potass, bullock's blood, green vitriol, and alum. It is prepared of different degrees of purity, and additions are made to it according to the purposes for which it is required. When pure, it is of a rich and intense blue, with a copper tint on the surface, inodorous, tasteless, insoluble in water, in alcohol, and diluted acids, but is acted upon and dissolved by strong acids. Prussian blue is now extensively made in China, the art of manufacturing it having been carried from the west to the east by a Chinese sailor.—*Waterston; M'Culloch.*

PRUSSIC ACID, or hydrocyanic acid, is obtained by the action of muriatic acid on bicyanuret of mercury. It is limpid, very volatile, and of a strong pungent odour, resembling that of bitter almonds. Its taste is acrid, and it is virulently poisonous. In medicine it is used as a sedative.—*Waterston; Faulkner.*

PSAMMA ARENARIA. *Roem. and Sch.*

P. littoralis, *Beauv.*	Calamagrostis arenaria.

This is the bent grass.

PSEUDOCARCINUS, a genus of crustacea. The following are species of the E. Indies:—

Pseudocarcinus Rumphii, *Edw.*, Indian seas.
P. Belangerii, *Edw.*, Indian seas.
P. gigas, *Edw.*, New Holland.

PSEUDOCOCCUS ADONIDUM, white bug or mealy bug of Ceylon. See Insects.

PSEUDOIS NAHOOR, the Nahoor, Nervate, or Sna, is a native of Nepal.

PSIDIUM CATTLEYANUM. *Sabine.* Chinese guava, purple guava.

PSIDIUM POMIFERUM. *L.* Red guava.

Lal-payara, . . . Beng.	Jambu, . . . Malay.
Ma-la-ka, . . . Burm.	Ratu-pera, . . . Singh.
Jam, ... Dukh.	Koia maram, . . Tam.
Lal-safri jam, . . Hind.	Jama chettu, . . Tel.

The guava tree of the W. Indies, Mexico, and America is cultivated throughout the E. Indies. It grows to a height of 20 or 30 feet, with leaves of pale green, and beautiful large white blossoms. The fruit is about the size of a pear, and a little yellowish when ripe, full of hard seeds the size of buckshot. The fruit is globose, yellow, and somewhat astringent, with an agreeable odour; the root and young shoots are astringent, and are esteemed strengthening to the stomach. The wood is but little used, though esteemed for engraving.—*Eng. Cyc.; Malcom's Tr.* i. p. 108.

PSIDIUM PYRIFERUM. *L.* White guava.

Guava pyriformis, *Gærtn.*

Payara,	Beng.	Amrood,	Hind.

Fan-nien,	Chin.	Suda-pera,	Singh.
Fan-shih-liu,	,,	Koia maram,	Tam.
Jam,	Dukh.	Jama chettu,	Tel.

The pear-shaped or white-fruited guava tree, in all Southern Asia is seen everywhere in gardens, and probably found its way to India from S. America through the Portuguese. Its fruit is esteemed as a dessert fruit, but the scent when too ripe is unpleasantly powerful; it makes a most excellent jelly, and also is prepared in a similar manner to damson cheese. The fruit is sometimes as large as a common baking pear, and may weigh half a pound. They have been brought to great perfection in some gardens, and the fruit of a large size divested almost of seed. This sort generally has a very rough knotty coat, and is more spongy and less firm than the other varieties. A plant continually grown from layers in time ceases to produce seed; perhaps this variety has been so procured. The tree is easily increased by seed, and only requires a good soil to thrive in. The trees should be pruned once a year, otherwise the branches become very straggling. Good gun-stocks are made from the old wood, which is small but very hard, and is used for wood engraving, and commonly for pegs, mallets, handles of tools, etc.—*Drs. Mason, Ainslie, Riddell, Cleghorn; Rohde's MSS.; M. E. J. R.*

PSITTACIDÆ, the parrot family of birds, of the order Scansores. See Birds; Parrots.

PSOPHOCARPUS TETRAGONOLOBUS. *D.C.*

Dolichos tetragonolobus, *Linn.*

Char-kona shin,	Beng.	Winged pea,	Eng.
Chandaree,	Bombay.	Goa beans,	,,
Charpattee,	,,	Cheveaux de frise,	Fr.
Pai myeet,	Burm.	Pois carré,	,,
Pai hsoung wa,	,,	Dara-dambala,	Singh.

A twining annual, the pods or tuberous roots of which are generally eaten in Iudia; commonly cultivated, and young pods used as French beans; easily known by its four-fringed membranous edges; much used by Europeans. The plant is indigenous in the Mauritius. In Tenasserim there is a variety of the Goa bean which produces esculent roots that are eaten like potatoes, and are a very tolerable vegetable.—*Eng. Cyc.; Jaffrey; Mason.*

PSORALEA CORYLIFOLIA. *Linnæus.*

Trifolium uniflorum, *Forsk.*

Hakuch,	Beng.	Karpugum,	Tam.
Po-ku-chi,	Chin.	Bapunga, Bavanji,	Tel.
Baw-chan,	Dukh.	Kalu gachcha,	,,
Karkol,	Maleal.	Kala ginja,	Tib.
Bab-chi,	Pushtu.	Korjastham,	,,

This herbaceous plant grows in Persia, Bengal, and the Peninsula of India. Yields the banchee seeds, used medicinally for leucoderma and scaly skin eruptions.

PSYCHOTRIA, a genus of plants of the order Cinchonaceæ, of which nine species are known to grow in the East Indies. A handsome shrub of this genus, Sgau, Burm., grows in Tenasserim, whose small white flowers throw out a delightful fragrance.—*Mason; Voigt*, p. 393.

PTERIDOPHYLLUM DECIPIENS. *Thw.*

Rhus decipiens, *W. and A.* | Pehimbia-gass, . Singh.

Grows in the central province of Ceylon up to an elevation of 3000 feet. It flowers in January and fruits in March. It is a very ornamental tree, and in Ceylon the wood is used for building purposes.—*Thw. Zeyl.* p. 59.

PTERIS, a genus of ferns of the order Polypodiaceæ. The following are East Indian species:—

Pt. amplectens, *Wall.*, Bengal, Burma.
Pt. angustifolia, *Swz.*, Paras, Sunderbuns.
Pt. dimidiata, *Wall.*, Sylhet.
Pt. esculenta, *Forst.*, Australia.
Pt. graminifolia, *Roxb.*, Paras, Sylhet.
Pt. vittata, *Linn.*, Sunderbuns.

The rhizome of Pteris esculenta is used as food in Australia, like that of Marattia alata in the Sandwich Islands. Pt. amplexicaulis is common at Tavoy, with pinnate fronds, whose leaflets have two lobes at the base which clasp their stipe. Pt. graminifolia, grass fern. The trunks of forest trees in Tenasserim are often clothed with the green drapery of the grass fern, which grows upon them precisely like bunches of long grass.—*Voigt; Mason.*

PTEROCARPUS, a genus of plants of the order Fabaceæ, generally tall trees, furnishing useful timber and other products. The following species are said to occur in the E. and W. Indies:—

Pt. draco, *Linn.*, Guadaloupe.
Pt. erinaceus, *Poir.*, W. Africa.
Pt. Indicus, *Willd.*, Moluccas, China.
Pt. macrocarpus, *Kurz*, Burma.
Pt. marsupium, *Roxb.*, Konkan, Assam.
Pt. Santalinus, *Linn.*, Coromandel.
Pt. Wallichii, *W. and A.*

One species of Pterocarpus is known in the Tamil countries as the Ausena maram; another, the Jumbagum maram, common about Nelambore and in Wynad, is a large tree, with wood used for building and fence gardens, said to be durable; a third, the Karu vagu, is a very common tree on the Western Ghats,—wood strong, durable, and much used for building; a fourth, the Wulla honnay of the Canarese, grows in the Mysore forests, and is used for furniture and house-building. A Burmese species, Padouk of Tavoy, is a large tree used for furniture, etc.; another, called Beejah in Hindustan, is a tree of Jubbulpur, grows to a large size, is found in all parts, but not very abundant, has an excellent wood, and easily worked.—*M'Ivor; Captain Puckle; Gibson's Bombay Forest Report of* 1857-60, p. 12; *Wallich; Cal. Cat. Ex.*, 1862.

PTEROCARPUS ACERIFOLIUM. *M'Cl.* Najee, Burm. This grows along with teak in all the Pegu forests; its timber is extremely valuable, and is as strong as either teak or oak. Its durability for purposes of ship-building has never been tested, because it has never been desiccated or killed like the teak. It attains a girth of 10 or 12 feet, and rises to a lofty height. It has a dark-brown wood.—*M'Clelland.*

PTEROCARPUS DRACO. *Linn.*

Pt. officinalis, *Jacq.*	Pt. hemiptera, *Gært.*
Dum-ul-akwain, AR., HIN.	Hira da-khun, . . PERS.
Jyda-roomee, . . ,,	Barg-i-bart, . . . ,,
Dragon's blood? . ENG.	Kandamoorgarittum, TAM.
Khun siawashan, PERS.	Katja murgam nitru, TEL.

This tree was introduced into India from the West Indies in 1812, but seems to have died out. It is a native of American islands, and especially Guadaloupe. The bark, wood, and leaves are remarkably astringent. The dragon's blood in mass, of commerce, according to Jacquin, is the produce of this tree, but another sort, and most likely that sold in Indian bazars, is produced by the Calamus draco of the Straits, in the form of a red hard resin, in large, somewhat cylindrical lumps; it contains benzoic acid and tannic.—*Voigt; O'Sh.* p. 997; *Powell.*

PTEROCARPUS ERINACEUS, *Poiret*, is a tree of W. Africa, which grows to 40 or 50 feet in height. When the branches are wounded, a clear bright gum exudes from them, which is one source of the gum-kino of commerce, and is mentioned as such by Park. It is a very powerful remedy in obstinate chronic diarrhœa and dysenteries, and in all diseases arising from laxity of tissue. Externally it is applied as a styptic to check hæmorrhages from wounds and ulcers, and to diminish discharges. The gums obtained from the Pterocarpus erinaceus of Gambia and Senegal, and from the Pterocarpus marsupium of India, are the true gum-kinos of commerce; the gum from the Butea frondrosa is the Butea gum-kino of commerce; Botany Bay kino is obtained from Eucalyptus resinifera; a kino-like gum is obtained from Syzygium jambolanum.—*Eng. Cyc.; Royle.*

PTEROCARPUS FLAVUS. *Smith.*

P'-i-muh, ... CHIN.	Yellow sandal tree, ENG.
Hwang-peh, . . . ,,	

A large leguminous tree of China, used for dyeing yellow. Its very bitter bark is used as a tonic diuretic and anti-rheumatic.—*Smith.*

Padouk, ... BURM.	Hwang-peh, . . CHIN.
Cha-lan-ga-da, . . ,,	Andaman red wood, ENG.

This very handsome lofty tree of Burma and the Andamans is said to be indigenous to S. India, but Colonel Beddome had never met with it wild, though grown in gardens there, and is well deserving of extended cultivation; it is common in Burma and in the Andamans; it is also found in Malacca, Penang, Sumatra, Java, Philippine Islands, and South China. It yields a valuable flame red-coloured beautiful timber, which is much used in the gun-carriage manufactories of Madras and Bengal. The wood is prized above all others in Burma for cart wheels; the trees are felled green, and split up into short planks 3½ feet long by 2 feet wide, and 9 inches thick; three of these pieces make one wheel, and a pair are sold in the forests from 12 to 25 rupees. The wood is used for furniture, and by the Burmese for musical instruments; it weighs about 60 lbs. the cubic foot.—*Beddome, Fl. Sylv.* p. 23.

PTEROCARPUS MARSUPIUM. *Roxb.*

Bija-sal, ... BENG.	Vijaya, ... NEPAL.
Hone whonay, . COORG.	Bengha, . . . S. CAN.
Rakta whonay, . ,,	Zammalu, . . . SINGH.
Pia sal, Pit sal, . . ,,	Vengay, ... TAM.
Bibla, . . HIND., MAHR.	Yegi, ... TEL.

This is a large and a very beautiful tree, especially when in flower in the beginning of the rains; its seed ripens about the close of the year. It is widely diffused, and yields one of the most abundant and useful timbers of S. India, and also the valuable gum-kino of Malabar. Its size and manner of growth differ very much under different circumstances; it is often very poor and scraggy, but attains a fine size in the western forests of the Peninsula, and in favourable ravines and subalpine jungles elsewhere; it is seldom found of any size above 4000 feet elevation. It is common all round the foot of the Neilgherry Ghats, and along the roads through the Wynad. It is there notched in a V-shaped form for the extraction of kino, which meets with a ready market on the coast, and is exported in wooden boxes to Bombay. It grows luxuriantly on the Eastern Ghats, on the hills between Vellore and Salem, and on the Malabar and Canara Ghats, where large quantities are collected of the resinous kino. The tree abounds near Tellicherry, and along the whole Malabar coast. It is not generally common in the Bombay forests, but is most seen in the northern inland ones, and also in those of the extreme south, as in the Bedee taluk. Buchanan Hamilton mentions it under the name of Vijaya as occurring in Nepal and also to the eastward of Bengal. It has been observed in the Konkans (Graham), Rajpeepla jungles (Dr. Lush), and Assam (Voigt). The timber is dark-coloured and strong, and much prized for building purposes, and in some parts of Madras Presidency fetches as high a price as teak. On the Godavery, the native dhol is often made of it. It yields from incisions a large quantity of blood-red juice, which, on being simply exposed to the sun, hardens and then quickly cracks into little angular masses and crumbling fragments, which constitute, without further preparation, the kino of the shops. The product can be obtained with facility by simply incising the bark, and requires no outlay save that of collecting. The timber is very little inferior to teak; it seems less liable to split after long exposure, and is equally strong, but the wood is heavier. Vessels built in the Ganjam districts are planked with it; and the door panels and venetians of the neglected houses at Ganjam are formed of this wood, and have stood better than teak similarly situated. It is more expensive than teak to work, and when sawn green the outer planks bend considerably. This is one among the unlucky woods of the Hindus, though the prejudices against it have in part given way to profit. For general utility, it is superior to any other mahajante wood, a commercial term among the people of the Northern Circars, including all wood used for building except teak.—*Roxburgh*, iii. p. 234; *Coromandel Plants*, ii. t. 116; *Drs. Wight, Gibson, Royle, Ainslie, O'Shaughnessy, Cleghorn, Voigt; Captains Sankey, Puckle, Beddome; Messrs, Latham, M'Ivor, Rohde's MSS.; Madras Conservator's Report of* 1858; *M. E. J. R.; Eng. Cyc.*

Colonel Beddome says this red sanders tree of commerce much resembles Pterocarpus marsupium in flower and fruit, but differs by always having 3 instead of 5 to 7 leaflets. It was thus described correctly by Dr. Roxburgh, but subsequent authorities have described it erroneously as having 5 to 7 leaflets. It is abundant on the low hills about the Cuddapah and North Arcot forests and the southern part of the Kurnool district, and Colonel Beddome has seen a few trees in the Godavery forests, but he never met with it elsewhere in the Madras Presidency, and it is not, he believes, found anywhere else in India. The wood is of a fine grain and bright garnet colour, which deepens on exposure to the air. It is beautifully streaked, very hard and heavy, and takes a fine polish; it is much used and highly prized by the natives for building purposes, and for turnery in Madras and the districts in which it grows; it is also largely exported from Madras as a dye-wood, and used as ballast; it is not often found over 3½ or 4 feet in girth and about 20 to 28 feet in height; the largest trees reach 4½ feet in girth, but are then much heart-shaken or hollow. The logs are often notched at both ends, or cut with a hole as for a rope, and are much worn externally from being dragged along the ground; other wood, as also indeed ivory tusks, are sometimes perforated for the like purpose. A bandy-load of selected logs will sell for as much as Rs. 200, *i.e.* twenty logs at 10 rupees each; the roots and stumps are used for dyeing purposes, and sell at 6 to 9 rupees the 1000 lbs. The cattle during the dry season are much fed upon the leaves of this tree, and young saplings are often bodily cut down by thousands by the cowherds. In the four years 1852-53 to 1855-56, there was exported from Madras 179,815 cwt., value Rs. 2,20,983, the destination chiefly being the United Kingdom, Indian French ports, Pegu, and Bengal. It is principally shipped to England from Calcutta in billets from 2 to 10 inches diameter, generally without sap, and sometimes in roots and split pieces. This will explain much of the shipments from Madras to Calcutta. Its timber is chiefly used by dyers and colour manufacturers, also to colour medicine preparations. Its colouring matter is called santalin, and forms a beautiful colour, but precipitates with many metallic solutions. It is employed to dye lasting reddish-brown colours on wool; it yields its colouring matter to ether and alcohol, but not to water. With different mordants it yields various shades of red, but these are said not to be permanent. Indian practitioners sometimes recommend it in powder in conjunction with certain herbs, and mixed with gingelly oil, as an external application and purifier of the skin after bathing. Its red colouring matter also acts as a diaphoretic, like gentiau. It is applied to the forehead in headache, and also as a cosmetic.—*Ains.; Eng. Cyc.; Tredgold; Mr. Rohde's MSS.; Colonel Beddome; Drs. Wight, Cleghorn in M.E.J.R. of* 1855, *and Conservator's Report*, pp. 37, 38; *Mr. Simmonds; Balfour's Commercial Products of Madras Presidency; Drury's Useful Plants; Voigt; Gen. Med. Top.; Powell.*

PTEROCLES, a genus of birds of the family Pteroclidæ, the sand grouse or rock grouse of Europeans in India.

Pt. arenarius, *Pallas*, large sand grouse, Panjah, N. W. Provinces, and Sind.
Pt. fasciatus, *Scopoli.*, painted sand grouse, over most of India except Bengal and Malahar.
Pt. alchata, *Linn.*, large pin-tailed sand grouse, S. Europe, N. Africa, Central Asia, Panjab, Sind.
Pt. exustus, *Temm.*, common sand grouse, Central and S. India.
Pt. Senegallus, *Linn.*, S. Africa, Arabia, Sind.
Pt. coronatus, Africa, W. Asia.

The large black breast (Pterocles arenarius) is at once distinguished by its size and even tail from the pin-tailed grouse (P. exustus), which is by far the most common; both are met with in flocks in fields and waste places. Their flight is strong; and although their flesh is tough and unsavoury, they are much sought after by European sportsmen. The large pin-tail (Pt. alchata) is said to be plentiful in Afghanistan and westward.—*Adams; Jerdon.* See Birds.

PTEROMYS. *Cuv.* A genus of the family Sciuridæ, and commonly known as the flying squirrels, because of the skin of their flanks being extended between the fore and hind feet, forming, when expanded, a wide parachute. The species occur in the south-east of Asia and in the islands of the Archipelago. Pt. cineraceus, *Blyth*, is of Burma; Pt. elegans, *S. Muller*, is of Java.

Pteromys inornatus, *Is. Geoffry* (Pt. albiventer *Gray*), is the white-bellied flying squirrel, the rusi-gugar of Kashmir. Above it is grizzled reddish-brown; length of head and body, 14 inches; found throughout the N.W. Himalaya from Kashmir to Kamaon, Simla, Landour, from 6000 to 10,000 feet.

Pteromys magnificus, *Hodgson.*

P. chrysothryx, *Hodg.*	Sciuropterus nobilis, *Gray.*
Red-bellied flying squirrel.	Biyom, . . . LEPCHA.

Above dark chesnut or ochreous chesnut mixed with black, with lower part of a lighter hue, and the tail tipped with black. Its fur is very soft; a female measured 16½ inches from head to insertion of tail; the latter was 20 inches in length. This flying squirrel is nocturnal in habits, secreting itself in hollows of decayed trees, and feeds on the tender shoots of the pine.

Pteromys nitidus, *Geoffry*, Peninsula of Malacca.

Pteromys petaurista, *Pallas*, *Blyth.*

Pt. Philippensis, *Elliot.*	Pt. oral, *Tickell.*
Brown flying squirrel, ENG.	Pakya, ... MAHR.
Oral, ... KOL.	Para-chalen, . MALEAL.

Upper parts dusky maroon, black grizzled with white; body 20 inches long. Inhabits Ceylon, north to Central India. It lives on roots. It is the brown flying squirrel of Ceylon and the Peninsula of India. The length of the male is 20 inches and the tail 21 = 41 inches; that of the female 19 and the tail 20 = 39 inches. The male is distinguished by an irregular patch of rufous on the sides of the neck, which in the female is a sort of pale fawn. It is very gentle, timid, and may be tamed; but from its delicacy is difficult to preserve. Lives in the holes of trees in the thickest part of the forest.

Dr. Horsfield, in his Zoological Researches in Java, describes two flying squirrels (Pteromys genibarbis and Pt. lepidus), both nocturnal in their habits, nearly approaching to Sciurus sagitta. He

describes the first as living on fruits; the second as found in the closest Javanese forests, where the height of the trees and the luxuriance of the foliage effectually conceal it. He enumerates 16 species of Sciuri, 4 of which were first described by himself. These do not include the flying squirrels. —*F. Cuvier; Gray; Tennent's Ceylon*, p. 42; *Adams; Jerdon's Mammals of India.*

PTEROPODA, a class of the mollusca.

PTEROPODIDÆ, a family of frugivorous bats of the sub-order Cheiroptera. Drs. Peters and Gray enumerate 50 of the flying Pteropus, viz. 1 Indian continent and Burma, 25 Archipelago, 4 China, Japan, and Loo-Choo Islands, 9 Polynesia, 5 Australia, and 6 Africa. Dr. Dobson greatly reduces the number. To drink, which it does by lapping, the Pteropus suspends itself, head downwards, from a branch above the water. Insects, caterpillars, birds' eggs, and young birds are devoured by them; and the Singhalese say that the flying fox will even attack a tree-snake. It is killed by the natives for the sake of its flesh, which Sir J. E. Tennent was told resembles that of the hare. It is strongly attracted to the cocoanut trees during the period when toddy is drawn for distillation, and exhibits, it is said, at such times, symptoms resembling intoxication. Neither the flying fox, nor any other bat in Ceylon, is ever known to hybernate. In Western India the Portuguese cat the flying fox, and pronounce it delicate and far from disagreeable in flavour. The Pteropus Edwardsii take up their abode on a banyan or other tree. Each bat is suspended by the hind feet. The Mahrattas call this bat the warbaggol. The species is very plentiful, and numbers are usually to be seen in the still evening at high elevations, flying with an easy floating motion, now and then varied by the regular flap of their large wings as they steer their course towards the fruit-groves. Dr. Adams measured one from tip to tip about 5 feet. Figs, mangoes, etc., constitute their favourite food. Pteropus Edwardsii and Pt. conspicillatus are found in Australia and Tasmania.

Pteropus Dussumierii, *Is. Geof.*, is of the continent of India?

Pteropus edulis is of Java and Malacca.

Pteropus Edwardsii, *Jerdon.*

Pt. medius, *Temm.*	Pt. Assamensis, *M'Clell., Ell., Blyth.*
Pt. leucocephalus, *Hodg.*

Toggul bawali, . CAN.	Kalong, ... MALAY.
Rousette, . . . ENG.	Sikat yelli, . . . TEL.
Gadal, Barbagal, . HIND.	Siku rayi, . . . ,,

Found in Ceylon, India, and Burma. It is eaten in Ceylon. It is the flying fox or large fox bat. Its flesh is esteemed good eating. Its tongue is covered with large papillæ, pointing backwards, and each one terminating in a brush or collection of bristly points. Length of the male, 12 to 13 inches, weight 29 oz.; of a female, 20 oz. Expanse of wings upwards of 4 feet. When disturbed during the day, they fly slowly round and round, with a low screaming noise, and soon settle again; hovering for a moment over a bough, they catch suddenly with the claw on the angle of the wing, and, allowing the body to drop, they swing with a single hold. In shade and colour, they are of a yellowish-brown above, and yellowish-white below.

Pteropus Kernandrenii, a fruit-bat of Tongataboo, Fiji, Samoa, and Caroline Islands. The Indian fruit-bat is Pteropus medius; the Australian fruit-bat is P. poliocephalus; the collared fruit-bat is Cynonycteris collaris.

Pteropus Leschenaultii, *Jerdon*, Pt. seminudus, *Kelaart*, is the fulvous fox-bat of Madras, Carnatic, and Trichinopoly.

Pteropus Nicobaricus, *Fitzinger*, *Zeleb.*, Pt. melanotus, *Blyth*, is of the Andaman and Nicobar Islands and Java?

Cynopterus marginatus, *Dobson.*

Pt. marginatus, *Geoff.*	Cyn. affinis, *Gray.*
Pt. pyrovorus, *Hodgson.*	Eleutherura marginata, *G.*

India, Darjiling, through Burma to E. Archipelago.—*Tennent's Ceylon*, p. 18; *Adams' Naturalist in India; Jerdon's Mammals of India.*

PTEROSPERMUM, a small genus of plants of the order Sterculiaceæ (from the Greek word πτερον, signifying a wing, and σπερμα, a seed), found in the southern parts of India and the Archipelago. All the species form handsome trees, and abound in mucilage.

Pt. acerifolium, *Willde.*, Peninsula of India, Assam.
Pt. aceroides, *Wall.*, Martaban.
Pt. cinnamomum, *Kurz*, Burma.
Pt. diversifolium, *Bl.*, S. Indian.
Pt. glabrescens, *W. and A.*, S. India.
Pt. Heyneanum, *Wall.*, Ginji, Courtallum.
Pt. Javanicum, *Jungh*, Burma.
Pt. lancæfolium, *Buch.*, Assam.
Pt. obtusifolium, *Wight*, Courtallum.
Pt. rubiginosum, *Heyne*, Courtallum.
Pt. reticulatum, *W. and A.*, Peninsula of India.
Pt. semi-sagittatum, *Ham.*, Burma.
Pt. suberifolium, *Law*, Peninsula of India, Ceylon.

PTEROSPERMUM ACERIFOLIUM. *Willde.*

Kanak champa, . BENG.	Toung-phet woon, BURM.
Nagee, ... BURM.	

A large and useful timber tree of the Peninsula of India and Assam, and growing along with teak in the Pegu forests, though scarce. It affords good shade. The timber is extremely valuable, and is as strong as teak or oak, but its durability has never been fairly tested, as it has never been desiccated like teak. It attains a girth of 10 or 12 feet, and rises to a lofty height. It has a dark-brown wood. — *M'Clelland; Eng. Cyc.*; *Voigt; Gamble.*

PTEROSPERMUM ACEROIDES. *Wall.*

Tha-ma-jam-wai-zoke, . . . BURM.

A timber tree of Martaban, and growing in the Pegu forests similarly to Pt. acerifolium, but plentifully; timber of the same qualities as Pt. acerifolium.—*Voigt; Wallich; M'Clelland.*

PTEROSPERMUM INDICUM. —?

Kyaboka wood tree, ENG. | Lingoa wood tree, . ENG.
Amboyna wood tree, ,, | Serioulout, . . MALAY.

The kyaboka of commerce is said by Prof. Reinwardt, of Leyden, to be the burr of the Pterospermum Indicum, but by others that of Pterocarpus draco, and to be brought from the Moluccas, the islands of Borneo, Amboyna, etc. The wood is of the same colour as the burr, or rather lighter, and in grain resembles plain mahogany. Colonel Lloyd is quoted as saying that the root of the eocoanut tree is so similar, when dry and seasoned, to the bird's-eye part of the wood, termed kyaboka, that he could perceive no difference; the cocoa has a tortuous and silky fracture, almost like indurated asbestos. The general belief is that a tree called Pt. Indicum throws out burrs or excrescences, and that which receives the name of Amboyna wood or lingoa wood, seems to be the timber of the bole of the tree, sometimes along with that of the burr. The lingoa or Amboyna wood is abundant at Ceram, New Guinea, and throughout the Molucca seas. It is very durable, and takes a high polish. At the Exhibition of 1851, there was a circular slab of this wood, from Ceram, 6 feet 7 inches in diameter. But such large circular slabs are only obtained by taking advantage of the spurs which project from the base of the trunk. They are occasionally met with so large as 9 feet, but the usual size is from 4 to 6 feet. Amboyna or lingoa wood was imported in considerable quantities into Great Britain during the period in which the Moluccas were British possessions; but Poole in his Statistics of Commerce says it is now rarely seen in Britain.

The kyaboka wood of commerce is brought from Ceram, N. Guinea, the Aru and other islands of the Moluccas, to Singapore, being much esteemed as a fancy or ornamental wood for cabinet-work. Of late years its estimation seems to have decreased in Europe, but it is still much valued by the Chinese, and is sold by weight. It is sawn off in slabs from 2 to 4 feet long and 2 to 8 inches thick. It resembles the burr of the yew. It is used for making small boxes, writing-desks, and other fancy ornamental work. It is tolerably hard, and full of small curls and knots; the colour is from orange to chesnut-brown, and sometimes red-brown.—*Holtzapfel, J. R. M. E. of* 1855; *Cat. Ex.*, 1851; *Sing. Cat. Ex.*, 1861; *Poole's Statistics.*

PTEROSPERMUM LANCÆFOLIA, *Roxb.*, of Assam, has a dense strong wood.

PTEROSPERMUM RUBIGINOSUM. *Heyne, W. A. Prod.* p. 68. The Kara toveray, TAM., of Tinnevelly, is a large and very fine tree; is very common in the Tinnevelly districts, the Wynad, Animallays, and generally throughout the western forests up to about 3000 feet; the timber is excellent, the wood is much in use for building and other purposes.—*Beddome, Fl. Sylv.* p. 106.

PTEROSPERMUM SEMI-SAGITTATUM, *Buch.*, of Assam, flowers in March, April, and May, with large, white, fragrant flowers.—*Voigt.*

PTEROSPERMUM SUBERIFOLIUM. *Willd.*

Velago xylocarpa, *Gærtn.* | Pt. Heyneanum, *Wall.*
Welang-gas, . . SINGH. | Lolugu chettu, . . TEL.
Teddee maram, . TAM. | Lolugu karra, . . ,,
Nolika chettu, . TEL.

A native of all the mountainous tracts of India, the Godavery forests, and the Ginji Hills. Wood pinkish and hard, but is generally hollow in the centre. In Ceylon, it is common up to an elevation of 2000 feet, especially in the drier parts of the island. The wood is useful for many purposes where toughness is required, such as poles of bullock carts, betel trays, and gun-stocks. A cubic foot weighs 36 lbs. Flowering time the beginning of the hot season, March, April, and May. Trunk erect, growing to be a timber tree of middling size.—*Thw.; Mr. Rohde's MSS.; Mr. Mendis; Tennent; Voigt; Capt. Beddome.*

PTERYGOTA ROXBURGHII. *Sch. and Endl.* Sterculia alata, *Roxb.* A tree of Sylhet and Chittagong, with large, iron-coloured flowers, streaked with crimson and yellow. At Sylhet, its seeds are eaten by the natives as a cheap substitute for opium.—*Roxb.; Voigt.*

PTILONOPUS CINCTUS, a white-headed pigeon of Timor. Pt. superbus and Pt. iogaster, green and purple doves. The Neilgherry wood-pigeon is Pt. Elphinstonei, *Sykes*, also named the Palumbus Elphinstonei, *Sykes.*

PTILONORHYNCHUS HOLOSERICEUS, the satin bower bird, is conspicuous for the satin texture of its glossy black plumage. The satin bower bird, and other species allied to it, long before the construction of their nest, and quite independently of it, weave with twigs, firmly planted in a platform of various materials, an arbour-like gallery of uncertain length, in which they amuse themselves. They pursue each other through it; they make attitudes to each other, the males setting their feathers in the most grotesque manner. The ornamentation of the platform on which the bower stands is an object of constant solicitude to the birds. Scarcely a day passes without some fresh arrangement of the shells, feathers, bones, and other decorative materials, which they bring from long distances in the bush for this purpose, and of which they immediately appropriate every fragment placed within their reach when in confinement.—*Gould, Ornithology of Australia.*

PTOLEMAIS of the Greeks, the modern Akka or Acre.

PTOLEMY, CLAUDIUS, or Claudius Ptolemæus, generally known as Ptolemy the Geographer, lived about A.D. 138. He was a mathematician of Pelusium, and is celebrated for his system of the world, in which he placed the earth as the centre. His geography is a valuable work, and was printed at Amsterdam in 1618, folio; his treatise on Astrology in 1535, and his Harmonica at Oxford in 1683. Although his Map of India is exceedingly faulty,—a work which has travelled down to us from the second century of the Christian era,—it must have possessed something worthy to recommend it, and to keep it alive. Taxila, almost due north of Barygaza, is placed by Ptolemy 11° to the east of it; and the mouth of the Ganges, which was fixed by land measurement from Taxila and Palibothra, is placed 38° to the east of the mouth of the Indus, the true difference being only 20°. As a general rule, the Greeks would seem to have designated the various peoples whom they encountered by the names of their principal towns. Thus we have Kabura and the Kabolitæ, Drepsa and the Drepsiani, Taxila and the Taxili, Kaspeira and the Kaspeiræi. The names of other peoples and towns are recorded by Ptolemy, but few of them can now be identified. The Parsee, with their towns Parsia and Parsiana, General

Cunningham takes to be the Pashai, or people of the Panjhir or Panshir valley. The true name is probably Panchir, as the Arabs always write j for the Indian ch. According to Ptolemy, the three great passes in the western chain of mountains, the Pyle Sarmatæ, the Pyle Albanie, and the Via Caspia, were each closed by large beams of wood pointed with iron. In the midst of the narrow valley flowed a river. The southern extremity was protected by a castle built on a high rock. This defence was to prevent incursions from the people of the north. It is thought likely that the Pyle Sarmatæ is the same with the Porta Ibericæ, or Porta Caucasia, mentioned by Strabo, and the present pass or valley of the Terek. The two latter, the Pyle Albanie and the Via Caspia, merely bestow two names on one place, which is the pass now called Derbent. But there was another, the Porta Cumana, that lay farther westward. Pliny notices it particularly, describing its fortress by the name of Cumania. These defiles, as keys of the east, have always been vigilantly guarded by the possessors. But Leon the First rather chose to incur an inroad from the barbarians than be at the smaller expense of keeping the gate that fixed their boundary. Justinian knew better, and concluded a treaty with Kobad, king of Persia (A.D. 532), agreeing that this pass should be protected by both sovereigns in common, or, if totally confined to Kobad's troops, the Roman should pay the Persian monarch in gold in reward of the double service. Ptolemy makes mention of the Arcati soren, or Arcot, and his tables show an acquaintance with the whole series of ports on both sides of the Bay of Bengal, though less of those on the east side, and on to China. In the last map of his volume, that which contains the Aurea Chersonesus and the Iabades Insulæ (supposed to have meant respectively the Malayan Peninsula or Sumatra and the Java Islands), he places a country far to the eastward of the Aurea Chersonesia, under the equinoctial line, which he states to be occupied by Æthiopes Icthyophagi or Negro fish-eaters; the first term being that employed by the Romans to distinguish the black and woolly-haired Africans from the Mauritani and other brown races of the east; and the second, that usually applied to all nations who derived a portion of their subsistence from the sea. The system of naming nations from the food which formed their chief means of support, seems to have been very prevalent among the ancients; witness Hippophagi, the horse-eating Tartars, Lotophagi, lotus-eaters, etc.; and these names are sometimes found to contain the only existing description of the habits of the people on whom they were conferred, as in the present instance. Dr. Leichhardt, in his overland journey from Sydney to Port Essington, found some tribes of genuine Lotophagi on the lagoons of the table-land. The position of this country with regard to the Aurea Chersonesus agrees well with that of New Guinea, the great seat of the Papuan race. The existence of a Negro people at so remote a spot, which he must have learned from the information of Indian navigators, seems, indeed, to have led Ptolemy into the great error of his system; for, believing that the country of the Æthiopes Icthyophagi formed part of the continent of Asia, he has made that continent, in his general map of the world, come round by the south and join the African continent about Point Prassum, in latitude 15° S. (the then southern known limit of the east coast of Africa), thus making the Indian Ocean and the seas of the Eastern Archipelago form one vast inland sea.—*Rennell's Memoir*, pp. 35, 241; *Cunningham's Ancient Geog. of India*, pp. 9, 31, 32.

PTOLEMY LAGUS, or Soter, was the son of Philip of Macedon by his concubine Arsenoe. He was a favourite of Alexander the Great, on whose death he obtained Egypt, Lybia, and part of Arabia, to which, on the death of Perdiccas, he added Cœlo-Syria, Phœnicia, Judea, and the isle of Cyprus. He made Alexandria his capital, and built there a lighthouse, called the Pharos, as a guide to pilots for that harbour. Merchandise from Europe was carried thence up the Nile to the city of Coptus (probably near Keneh), and conveyed across the desert from thence to the seaport of Myos Hormos (probably near Cosseir) on the Red Sea. He dug a canal from a branch of the Nile to Damietta, a port on the Mediterranean. The canal was 100 feet broad, 30 feet deep, and 10 or 12 leagues in length, extending in fact to the 'bitter wells.' He meant to have continued it to the Red Sea, but desisted from fear that the Red Sea was 3 cubits higher than the land of Egypt! That this canal, though deeper than that of M. de Lesseps, did not succeed, is evident from the fact that in B.C. 277 Ptolemy Philadelphus again changed the direction of Indian traffic. Ptolemy Lagus died B.C. 285.

PTOLEMY PHILADELPHUS (B.C. 287–246), son and successor of Ptolemy Lagus, was so surnamed ironically, because he killed his two brothers. He was a great encourager of commerce, and a liberal patron of learned men. He sent Dionysius to visit India. He constructed considerable fleets both on the Red Sea and the Mediterranean Sea. On account of the dangers attending the port of Myos Hormos, he sent an army to construct the haven of Berenice, in which the ships engaged in Indian commerce took shelter in great security. Trade increased enormously by the new route, and Alexandria became rich and famous. On the recommendation of his chief librarian (Demetrius Philaretes), he is said to have sent a Jew of the name of Aristeas to Jerusalem, to ask the high priest for a MS. of the Bible, and for seventy interpreters. Others maintain that the Hellenistic Jews who lived at Alexandria, and who had almost forgotten their native language, had this translation made for their own benefit. Certain it is, that about the beginning of the 3d century B.C. (285), we find the Hebrew Bible translated into Greek, in that version called the Septuagint.

Ptolemy Philadelphus constructed a canal from Arsenoe (near the present Suez) to the Pelusiac branch of the Nile. The city of Berenice was on the western side of the Red Sea, 450 miles below Suez, from whence the merchandise was transported across the desert of Thebais to Coptus on the Nile. Ptolemy Philadelphus died B.C. 246, aged 64.—*Muller's Lectures*, p. 86; *As. Res.* i. p. 369.

PTOLEMY EUERGETES, son and successor of Ptolemy Philadelphus, declared war against Antiochus Theos, to avenge the death of his sister Berenice, the wife of Antiochus. He made himself master of Syria and Celicia, and was extend-

ing his conquests when the news of a revolt recalled him to Eygpt. He soon quelled the insurgents, and by the prudence of his reign acquired the title of Euergetes or benefactor. He died B.C. 221, and was succeeded by

PTOLEMY PHILOPATRES, ironically so called because he had poisoned his father, his mother, and several of his relatives. He favoured the Jewish nation. He died B.C. 204. It was the opinion of Major Rennell that under the Ptolemies the Egyptians extended their navigation to the extreme points of the Indian continent, and even sailed up the Ganges to Palibothra.

PTYADACTYLUS GECKO, the Chik-chak, a lizard of Labuan. It is very domestic, like the chaplak of India. It is said to be luminous on occasions.

PTYCHOSPERMA ARFAKIANA, *Beccari*, of New Guinea, at 5000 feet elevation attains a height of 30 feet. Pt. disticha, *Miquel*, the Areca disticha, *Griffiths*, a plant of Assam, up to 4000 feet. Pt. Musschenbroekiana, *Beccari*, a palm of Ternate, up to 3000 feet. It grows to 90 feet.—*Von Mueller.*

PTYCHOTIS, a small genus of umbelliferous plants, of which the seeds of some of the species have formed articles of condiment and of medicine from very early times. The genus extends from the south of Europe, through the oriental region, to all parts of India.

This is one of the most useful of the Umbelliferæ, and an excellent remedy in flatulent colic. Cultivated in India everywhere, and much used there. Flowers small, white; small fruit. Seeds yield a volatile oil, from which is obtained ajowan camphor or thymol, a valuable antiseptic. Seeds of an aromatic smell; warm, pungent taste; much used by the natives as a substitute for aniseed, both as an aromatic and in colic; also as a deobstruent in ischuria and dysmenorrhœa, and as a stimulant in catarrh and hemicrania. Employed as an infusion.—*Voigt; Roxb.; O'Sh.*

Ptychotis coptica.

Bal-ajwan, . . . HIND. | Coptic ammi.

A plant of Candia and Egypt, used as a stimulant aromatic.—*O'Sh.* p. 357.

Ptychotis involucrata, —?

Chanu, Radhuni, . BENG. | Anisun, Anisbu, . HIND.

Used as a substitute for parsley.

Ptychotis montana, *Graham*, Bhaphallee.

Ptychotis sylvestris, *Royle.* Arab-ajwan, HIND. Grows in the khadir lands of the Saharunpur district, and used as a stomachic aromatic remedy in flatulence.—*O'Sh.* p. 358.

PU-AN-KU. According to Chinese mythology, the primeval man who came out of the mundane egg; he lived 18,000 years. See Pun-ku-wong.

PUAR or Pouar, a highly respectable Mahratta family at Multan, 30 miles N.E. of Poona. In the early periods of Mahratta history, the Puar family appears to have been one of the most distinguished. They were of a Rajput tribe, numbers of which had been settled in Malwa at a remote era, from whence this branch had migrated to the Dekhan.—*Malcolm's Central India*, i. p. 97.

PUBB MOUNTAINS, in length are about 90 miles, from C. Monze to lat. 26°. They are supposed to equal those of W. Sind, viz. 2000 feet; the highest part is about lat. 25° 30′ N. In lat. 25° 3′ N., and long. 66° 50′ E., they are crossed by the Guucloba pass, described as stony, and of easy ascent and descent. The Pubb river falls into the sea at Cape Monze. Hot springs occur in the neighbourhood. A district on the river, called Chuha, is occupied by a people of that name, who are said to be of Sumrah or Brahui origin.

PUBERTY amongst Muhammadan girls is called Baligh-hona; P'haili sir myli hona; also Burron men milua; and amongst the poor and uneducated its occurrence in a girl is celebrated with music. With Hindus and the non-Aryan races, the girl is put outside the house till the time of purification occurs.—*Herkl.*

PUBLIC WORKS, a department of the Executive Government of British India which attends to construction, irrigation, repairs.

PUBNA, a town in Bengal, about a mile from the left bank of the Pudda, in lat. 24° N., and long. 89° 12′ E. It gives its name to the flat, fertile district of Pubna, which lies to the N. of Jessore, between lat. 23° 34′ and 24° 36′ N., and long. 88° 55′ and 88° 48′ E. Area, 2606 square miles, and population, 700,000. The town is 130 miles from Calcutta.

PUDUKOTTAH, an independent state in the centre of the Peninsula of India, with an area of 1046 square miles, a population of 316,695, or 302·7 to the square mile, and a revenue of Rs. 5,00,000; but the public means is greatly lessened by having three lakhs in inams and jaghir. The ruler is styled the Raja Tondaman Bahadur, and he and his people are of the Kollari race. It is surrounded by the Tanjore and Trichinopoly districts. The Pudukottah chief did good service to the British during the wars around Trichinopoly in 1753, and remained unshaken in fidelity when all the other Polygar chiefs were in arms. He is the only chief in the south of India who pays no tribute. Pudukottah, the chief town, is in lat. 10° 23′ N., and long. 78° 51′ E., and has a population of 13,078 souls, on a low site surrounded by thick jungle. The raja holds also Kilanelli fort in S. Taujore.

PUDUVELIGOPURAM, about 1½ miles N. of Negapatam, a tall, weather-beaten tower, known as the Chiua Pagoda, Black Pagoda, Old Pagoda, Jaina Pagoda. It was removed about 1870. Supposed by Burnell to be a Vimana.

PUDWUL. HIND. Trichosanthes anguina. Tr. dioica is a small snake-gourd the size of an egg; the seed is sown in the cold season, and yields fruit from March to September.—*Riddell.*

PUERARIA TUBEROSA. *D. C.* A tall, woody, twining plant of the south of Asia, up to 4000 feet. Its large tubers are edible, and might improve by cultivation.—*Von Mueller.*

PUGHA, in the territories of the maharaja of Jamu and Kashmir, is a small valley with a lake, in which borax is deposited. The portion from whence the sohaga or tincal is collected has a fine stream running through it into the river Indus; the portion producing the borate of soda is, if not watered by, still under the influence of, thermal springs, varying from 130° to 167°; the tempera-

ture of the streams into which these empty being in July 56°. The entire produce of the valley might be roughly calculated at 20,000 kucha maunds of 38 lbs. The greater portion finds its way to Rampur in Bishahr; some to Kulu, via Mandi, to the lower hills; and a small quantity, via Chamba, to Nurpur. Nearly all that going via Rampur is taken into the lower hills in the neighbourhood of Sabathu, Bhaji, etc., where wood is procurable, and where, during winter, it is refined by the carriers who go there to graze their flocks. It thus becomes borax, in which state it nearly all finds its way to Jugadri in the plains. The whole of the lake plain of Pugha is covered, to the depth of several feet at least, with white salts, principally borax, which is obtained in a tolerably pure state by digging; the superficial layer, which contains a little mixture of other saline matters, being rejected. There is at present little export of borax from Pugha, the demand for the salt in Upper India being very limited, and the export to Europe almost at an end. It has long been known that borax is produced naturally in different parts of Tibet, and the salt imported thence into India was at one time the principal source of supply of the European market. There is another locality near Rodok, in Chinese territory, yielding it, from which the route to the plains is via the Niti pass; this borax is said to be of a very superior quality, nearly pure, and requiring little or no refining.—*Turner's Tibet*, p. 406; *Blane in Ph. Tr.*, 1787, p. 297; *Powell, Handbook.*

PUGHMAN or Pamghan, a mountain range, subordinate to Hindu Kush, running along its S. base, generally from N.E. to S.W. Estimated elevation, 13,000 feet. Oona pass, lat. 34° 23′ N., and long 68° 15′; 11,320 feet. Erak summit, lat. 34°40′ N., and long. 68°48′ E.; 12,480 feet. Always covered with snow. Its south-eastern brow overhangs the delightful region of Koh-i-damau and also Kābul; its northern face forms the southern boundary of the Ghorband valley.

PUGIONIUM CORNUTUM. *Gærtner.* A herb grown as a vegetable by the Mongols, from the Caspian Sea to China.—*Hance; Von Mueller.*

PUIMANGU of Kashmir, a dealer in shawl-wool yarn.

PŪJA. Sansk. Worship of the Almighty or of idols; any Hindu worship. Durga puja is the worship of the goddess Durga; but it assumes various forms, and is attended by a variety of ceremonies, according to the circumstances under which the worship is performed. A Pujali or Pujari is any worshipping priest; the officiating Brahman or priest of a temple; an inferior priest. Puj, a devotee.

PUJAWALIYA, a book of legends in Singhalese, relating principally to Gautama Buddha.—*Hardy*, p. 440.
