SIAM, a state of Further India, extending from the Gulf of Siam to lat. 23° N. It is bounded on the W. by Burma and the Bay of Bengal, on the E. by the Lai mountains. Siam proper is in the valley of the Menam. The boundaries on the Bay of Bengal reach from British Burma in a southerly line to the boundary between Perak and Kedah in the Malay Peninsula, in the latitude of 5° N. Junk-Salung Island contains tin; it belongs to Siam. The boundary line runs nearly east from Perak across the Peninsula, between Tringanu and Pahang to the China Sea, thence north to the head of the Gulf of Siam. The kingdom also comprises the greater part of the ancient domain of Lao, and, since 1862, Battambang, which it conquered.

The Siamese mountains run north to south along the Tenasserim Provinces, and attain elevations from 3000 to 5000 feet. The mountains in Ye province run in three parallel ridges, from 3000 to 4500 feet high, gradually diminishing towards the coast to about 500 feet. The Buffalo mountains, about 700 miles from Moulmein, 1543 feet. The dominions of Siam touch the frontier line of the Tenasserim Provinces. As the crow flies, the British boundary of Tenasserim and the Siamese capital are not more than 100 miles apart.

Borgman estimates the whole area of Siam and its dependencies at 290,000 square miles, Crawfurd at 190,000 square miles. Siam itself pays tribute to China; the king of Siam seeks from the emperor at Pekin a special recognition of his right to reign. Siam proper may be deemed a vast plain, from which the mountains rise higher and higher as we reach the Laos dependencies.

The kingdom of Siam is composed of 41 provinces, each governed by a phaja or functionary of the highest rank, and a considerable number of their districts are under officials of lower ranks.

Pallegoix estimated the population of Siam at 6,000,000—

Siamese Proper (the T'hai), .	1,900,000	Malays, . . .	1,000,000
Chinese, . .	1,500,000	Cambodians, . .	500,000
Laos, ...	1,000,000	Peguans, . . .	50,000
		Karen, Hong, etc.,	50,000

Siam, with its dependencies, is thus occupied by the dominant T'hai, a vast Chinese population, the Laos people, the Cambodians in such parts of Cambodia as recognise the Siamese authority, the Peguans in a part of the Mon or Pegu territory, numerous Malayan tribes, with a variety of mountain races subject to the government of Bankok. The Siamese are located principally on the two banks of the Menam, and on those of the tributary streams which flow into that great river from the latitude of 13° to about 20° N. They also occupy the gulf from the head of the peninsula down to lat. 7° N., where the Malayan races are settled. To the east of the British possession on the Tenasserim coast, in lat. 11° up to 16° 30′ N., about two-thirds of the peninsula is peopled by Siamese races. Indeed, the valley of the Menam, throughout its whole course, is exclusively T'hai, and the T'hai attain their highest civilisation on the alluvial delta of their river. The Siamese proper, the Khamti, the Laos, and the Shan, form the T'hai or Siamese ethnic group. The bulk of the Laos people who are subjects of Siam are spread over the great valley through which the Mei-kong or principal river of Cambodia flows, between lat. 13° and 21° N. Laos is said to contain more square miles than Siam itself; all its princes are tributary to Siam. The Shan states of Zimmay, Rahaing, and Labong are feudatories of the present sovereign of Siam. On the demise of any of the chiefs of these states, the king of Siam appoints the successor, but it is customary to allow the eldest son of the former chief to succeed. Karen inhabit the mountain ranges on the Burmese frontier up to lat. 21°; the Lawa, a more numerous people, the same regions farther south; the Ka, the mountainous district between the Menam and the Mei-kong. The Hong dwell on the hilly region in the N.E. angle of the Gulf

of Siam, from the latitude of about 11° 30′ to 13° N.

The Siamese are physically superior to the natives of the Indian Archipelago, if we except those of Bali; indeed, the Balinese and Siamese bear a striking resemblance to each other. The hue of their skin is a shade darker than that of the Chinese, but they have fairer complexions than the Malays and Javanese. The dress of both males and females consists of a cloth wrapped round the waist, one end being brought between the legs and fastened behind, which gives this portion of their attire the appearance of a pair of trousers. The women, in addition, wear a cloth wrapped round the body, under the arms. Both men and women shave their heads, with the exception of a small round patch which is left between the crown and the forehead. This being brushed up, is made to stand on end. The number of the talapoins or priests is enormously disproportioned to the rest of the inhabitants. In Bankok alone their numbers exceed 30,000.

There have been four dynasties of kings. The first dynasty had a succession of 21 kings, whose united reigns extended over a period of 252 years, from A.D. 1351 to 1603. The next dynasty had 3 sovereigns, who reigned 28 years. The third dynasty began by the Siamese nobles putting aside a minor 9 years old, and setting up the prime minister as king, who began to reign in A.D. 1633, and occupied the throne for 26 years. This dynasty had 9 kings, who were in power 136 years, when the Burmese sacked the capital in A.D. 1767, and carried away many captives. The chief of the Siamese army rallied the Siamese under him at Tonta Buri, which is now the site of a palace. The ancestor of the present dynasty was a Siamese general of great celebrity, who took the throne A.D. 1782, and reigned for 27 years.

The kings of Siam, from the time the old city Ayuthia was built, Chola era 712 = A.D. 1351, furnished by P'ra Alak, the chief of the king's scribes, and doubtless with the approbation of his majesty; designed by him, it is supposed, to correct the list of the kings published in the calendar for 1860. That within the brackets does not belong to P'ra Alak—

First Dynasty.

Names.	Chola Era.	A.D.	Length of reign. Ys.	Ms.
1. Somdet P'ra Rama T'ibawdee,—1st,	712	1351	20	0
2. Somdet P'ra Rame-sooan,—son of the 1st, Who abdicated for	732	1671	1	0
3. Somdet P'ra Bawroma-Rach'a-T'irat,	732	1371	13	0
4. Chow oo-t'awng lan,—son of the 3d,	744	1383	7 days.	
5. Somdet P'ra Rame-sooan,—assassinated the 4th, Being the same person of the 2d reign.	744	1382	6	0
6. Somdet P'raya P'ra Ram,—son of the 5th,	759	1398	15	0
7. Somdet P'ra Nak'awn In,	763	1402	18	0
8. Somdet P'ra Bawroma-Rach'a-T'irat,—son of the 7th,	780	1419	17	0
9. Somdet P'ra Bawroma Trei Lokanat,—son of the 8th,	796	1435	16	0
10. Somdet P'ra Int'a-Rach'a,—son of the 9th,	811	1450	22	0
11. Somdet P'ra Rama-T'ibawdee,—the 2d,	832	1489	40	0
12. Somdet P'ra Bawroma-Rach'a Naw P'oot Tang,—son of the 11th,	871	1510	5	0
13. P'ra Ratsat'a T'irat,—son of the 12th, 5 years old,	875	1514	0	5
14. Somdet P'ra Ch'ei Rach'a T'irat,—son of the 12th, killed hy the 13th,	875	1514	15	0
15. P'ra Yawt Fa,—son of the 14th, aged 11 years,	889	1528	2	6
The 15th was slain by K'oon Warawongsa-T'irat, who took the throne, and reigned 5 months. Being a usurper, his name is not allowed to have a place among the names of Siamese kings. He was assassinated hy K'oon P'irenat'ep, who placed on the throne P'ra Teean Rach'a, who bore the name.				
16. Somdet P'ra Maha Chakra-P'atdi-Rach'a-T'irat,	891	1530	27	0
17. P'ra Mahin Ta-Rach'a-T'irat,—son of the 16th, The capital of the kingdom was taken in 918 by the king of Hongsa-wadee or Pegu.	917	1556	1	0
18. Somdet P'ra Maha Tama, Rach'a-T'irat,	918	1557	23	0
19. Somdet P'ra Naret,—son of the 18th,	940	1579	16	0
20. Somdet P'ra eka-Totsarot,—a younger brother of the 19th,	945	1584	9	0
21. Chow Fa Sri-Sawara-P'ak,—son of the 20th,	962	1603	1	2
Here closes the dynasty of Somdet P'ra Rama T'ibawdee, heing 20 different kings, one of whom reigned twice.				
Second Dynasty.				
22. P'ra Chow Song-T'am,—slew the 21st and reigned, [He acquired a great name by his pretended discovery of Buddha's footprint at P'rahat.]	964	1603	26	0
23. P'ra Ch'et'a - Otsarot, — an elder brother of the 22d, The prime minister, Chow P'aya Kralahom Sri Sooriwong, assassinated the 23d, and placed on the throne	989	1628	1	7
24. P'ra At'itaya Wong, — a hrother of the 23d, 9 years old,	992	1631	0	5
Here closes the dynasty of P'ra Chow Song-T'am,—3 reigns.				
Third Dynasty.				
The former king was driven from the throne hy the Siamese nohles and lords, whose place they filled hy the prime minister ahove mentioned, viz.—				
25. P'ra Chow Prasat T'awng,	992	1631	26	0
26. Chow Fa Ch'ei,—son of the 25th,	1017	1656	0	9
27. P'ra Soot'ama Rach'a,—killed the 26th and reigned,	1018	1657	0	2⅔
28. Somdet P'ra Narai,—son of 25th, killed the 27th,	1018	1657	26	0
29. P'ra Pe't Rach'a, He is called a usurper, and is not allowed an honourahle place among the kings.	1044	1683	16	0
30. P'ra P'oot'a Chow Sua,—son of the 27th,	1059	1698	10	0
31. P'ra Chow Yoo-hooa t'ei,—son of the 30th,	1069	1708	27	0

Names.	Chola Era.	A.D.	Length of reign. Ys.	Ms.
32. P'ra Chow Yoo-hooa Bawromakot, brother of the 31st, ...	1094	1733	26	0
33. Chow Fa Dawkmadua,—son of the 32d, ... And then abdicated the throne for his elder brother.	1120	1759	10 days.	
34. P'ra Chow T'inang Sooriya-Marin-t'ara, . . .	1120	1759	9 days.	

The close of the dynasty of Prasat T'awng, being 9 kings in all, the usurper being excluded. The whole term in which the above-named 34 kings reigned is 417 years, averaging 12·3 years each.

[The Burmese sacked the capital in the year 1767, and carried away many captives. The chief of the Siamese army rallied the Siamese under him at Tonta Buri, which is now the site of H.R.H. Kromalooang Wongsa-t'iat-sait's palace. He built a walled city in this place, and reigned as king P'aya Tak.]

35. P'aya Tak, ...	1129	1767	15	0

The Fourth and present Dynasty.

A Siamese general of great celebrity under P'aya Tak, took the throne, named

36. Somdet P'ra Bawroma-Rach'a P'ra P'oott'i Ywat Fa, .	1144	1782	27	0
37. P'ra P'oott'i Lot-La,—son of the 36th, ...	1171	1809	15	0
38. P'rabat Somdet P'ra Sang-Klow,—son of the 37th, .	1186	1824	27	0
39. P'rabat Somdet P'ra Paramendar Maha Mongkut,—son of the 37th, succeeded to the throne, . . .	1213	1851	12	0
40. P'rabat Somdet P'ra Paramendar Maha Chula-long-korn Klow, son of the 39th,	1230	1868	Still reigning.	

The Siamese head may be considered as a remarkable modification of the Burma-Chinese head, with a peculiar tendency to elongation aud verticality. They have large straight faces, flat occiputs, lowness of the hairy scalp, comparatively small and firm mouth, hard staring eye, and a grave expression.

The Siamese are gentle, cheerful, timid, careless, and almost passionless. They are disposed to idleness, inconstancy, and exaction; they are liberal almsgivers, severe in enforcing decorum in the relations between the sexes. They are fond of sports, and lose half their time in amusements. They are sharp and even witty in conversation, and resemble the Chinese in their aptitude for imitation. There is a passion for jewellery and ornaments of the precious metals, stones, etc. It is said there is scarcely a family so poor as to be without some valuable possessions of this sort. Rings of silver and gold adorn the arms and the legs of children; rich necklaces, ear-rings, and belts are sometimes seen in such profusion as quite to embarrass the wearer. Female children, up to the age of 12 or 13, wear a gold or silver string with a heart in the centre, performing the part often assigned to the fig-leaf in exhibitions of statues. To the necks of children, a tablet, called a bai soma, is generally suspended, bearing an inscription, as a charm against mischief; and men have a metallic ball attached to a belt, to which they attribute the virtue of rendering them invulnerable. A uecklace, consisting of seven lumps of gold or silver, is worn by girls as a protecting influence; the panung is one of the garments worn by the Siamese, called by the Portuguese panks.

Between the Buddhists of Siam and Ceylon there has been much intercourse; and during the efforts made by the Buddhist monks of Ceylon in the defence of their religion and in their attacks ou Christianity and on Jehovah, the king of Siam and one of the native chiefs of Kandy contributed largely towards the publication of the numerous tracts, pamphlets, and serials that were sent forth from the Buddhist printing presses of Ceylon.

Pali is the sacred literature of the Siamese, and is called Pali, Bali, and Pasa Makata (Bhasha Magadha), the language of Magadha. The alphabets of the T'hai or Siamese, of the Burmese, and of the Mon of Pegu, are of Iudian origin. No dialect of the T'hai is intelligible to a Burmese. The alphabets also differ, but, on the whole, the essentials of their civilisation is the same, the chief difference being in the language. The Laos alphabet slightly differs from that of the Siamese proper, but, practically speaking, the language is spoken with remarkable uniformity over the whole T'hai area and Siamese proper; the Laos, the Shan dialects, and Khamti are one.

The Siamese tongue appears by far the most widely spoken language of Ultra-India. It was at one time the lingua franca of Kedah, almost as much as the Malay, and even that wandering Negro tribe the Semang spoke it in some places. It was also current in Assam and Yunnan at the opposite extremities of Ultra-India.

Though wives or coucubines are kept in any number, according to the wealth or will of the husband, the wife who has been the object of the marriage ceremony called the Khan mak, takes precedence of all the rest, and is really the sole legitimate spouse; and she and her descendants are the only legal heirs to the husband's possessions. Marriages are permitted beyond the first degree of affinity. A widow may marry her deceased husband's brother, and a widower his deceased wife's sister. Sovereigns may marry a sister or a daughter to preserve the royal race. After child-birth, the mother is placed near a large fire, where she remains for weeks exposed to the burning heat, and death is often caused by this exposure. The king himself attempted to interfere; but his young and beautiful wife, though in a state of extreme peril and suffering, was subjected to this torture, and died while 'before the fire,' a phrase employed by the Siamese to answer the inquiry made as to the absence of the mother. In Siam, with laymen of rank, as with the priesthood, the dead are embowelled, and the body preserved embalmed for a long period before being consumed on the funeral pile. In their disposal of the dead body of a Khroopacha Acharya, or spiritual guide of superior sanctity, the rewards awaiting those who perform the funeral rites are innumerable. The bodies of the poorer classes are exposed to the elements and beasts of prey. Coal of excellent quality has been discovered. Gold was discovered in Kabin, copper and iron at Lapaburi, and lead and tiu at Kanburi. In the Precious-Stone Mountain, the topaz, the ruby, the sapphire, the garnet, and others are found.

The principal articles of export from Bankok are rice, sapan-wood, sugar, pepper, hides, horns, cardamoms, til seed, tin, stick-lac, silk, paddy,

teak timber, ebony, rosewood, mangrove bark, gum benjamin, gamboge; and all the spices of the Southern Peninsula and the islands grow.—*Latham's Ethn.; Siam and Cambodia, by D. C. King; Jour. Royal Geo. Soc.; Bowring's Siam*, i. p. 27; *Earl's Archipelago*, p. 168; *Jour. Ind. Archip.*, 1847; *Crawfurd's Embassy; Aitcheson's Treaties*, p. 315; *Rangoon Times*, 1863.

SIAMULIUM, *sp.*, the Peepsa, a troublesome dipterous insect, swarms on the banks of the streams uniting with the little Ranjit river in Sikkim. It is very small and black, floating like a speck before the eye; its bite leaves a spot of extravasated blood under the cuticle, very irritating if not opened.—*Hooker's Jour.* i. p. 157.

SIAO, on the N.E. of Celebes, is an island larger than Tagolanda, and is rendered very conspicuous by a high conical volcanic peak, in lat. 2° 43′ N., and long. 125° 35¼′ E.

SIBEL. Arab. Water offered at any time gratis to any person, dispensed in the name of God. It means also, a way, a path. Fi Sabil Allah, in the way of God.

SIBERIA, a great region in the north of Asia. Its conquest by Russia, which the Cossack Irmak began in the 16th century, was completed before the year 1650 by the annexation of the country lying to the north of the Amur, and by the subjection of the more important Tungusian tribes, and Russia became directly interested in the condition of the northern dependencies of China, and of the great high-road through Kiachta and Kalgan to the capital. The population of Siberia, including the nomadic tribes and the colonists (if they can be called so under the compulsory regime), is 3,911,200, divided among the provinces as follows:—Tobolsk, 463,000; Tomsk, 324,000; Irkutsk, 165,000; Yenisei, 164,000; Transbaikal territory, 141,000; Amur, 3000; Maritime Provinces, 13,000; Yakutsk, 112,000. The Siberian territory has an area of 10,709,000 square versts.

Tungus is a general name applied to a population common to a vast area in Siberia and China. Their physiognomy connects them with the tribes of Northern Asia in general, and their language forms a transition between the monosyllabic and agglutinate forms of speech. The Tungus, under the name Manchu, constitute the dominant population of China itself. The tribes under Chinese rule, in Manchuria, on the watershed of the Amur or Sagalin, are termed Manchu. The Manchu proper have a literature with an alphabet modified from the Mongol. They are agricultural and industrial. The Daurian is a Tungus race dwelling on the Upper Amur, all well made, especially the women.

SIBSAGOR, in Assam, situated 11 miles from the south bank of the Brahmaputra, in lat. 26° 59′ 10″ N., and long. 94° 38′ 10″ E.; pop. (1872), 5278. It is the civil station of a district of the same name in the extreme S.E. of the valley, between lat. 25° 19′ and 27° 16′ N., and long. 93° 21′ and 95° 25′ E. The great bulk of the population are pure Assamese, more or less converted to Hinduism. The once dominant Ahom, numbering 94,304 souls, still supply one-third of the total inhabitants. They are now cultivators, but retain many of their ancient habits and institutions. Some of them eat beef and pork, and also bury instead of burning their dead. The Chutia (31,342), of the same original stock as the Ahom, and their predecessors in the government of the upper valley of the Brahmaputra. The Koch (23,965) are members of a tribe whose present chief locality is in the Bengal State of Koch-Bahar, but who ruled at one time over the greater part of Assam, before the arrival of the Ahom. The Dom (16,277) lay claim in Assam to high-caste purity, but reject the ministrations of Brahmans. Aborigines proper include the Cachari (15,320), who are largely employed on tea-gardens; 6862 Miri from North Lakhimpur; and a number of minor tribes, of whom many, such as the Kol, Uraon, and Santal, are imported labourers from Chutia Nagpur. The Hindus are subdivided into the four following sects:—Tantrik, Bhagvatiya, Mahapurushiya, and Thakuria. According to the 1872 census report, the Vaishnava number 94; the Mataks, who are converts to Vishnuvism from among the aborigines of Lakhimpur, 84; the Gosain, or religious teachers of the various sects, 407; the Nanakshahis, or followers of the founder of the Sikh religion, 140.

SIBUNDEE, armed men, in temporary employ as soldiers. It is from Sipah-Hindi, the Indian sepoy. The Moghulai were always kept enrolled.

SICHEL or Shesha Hills are locally known as the Nirmul Range, which extends from the confluence of the Wardha and Godavery, lat. 18° 48′ N., and long. 80° E., till lost in the gradual rise of the country near Lonar, in lat. 20° N., and long. 76° 30′ E. The Godavery river, after entering the granitic table-land of the Dekhan, flows at the southern foot of the Sichel mountains into a sandstone and argillaceous limestone country. This district is similar to that of Bundelkhand and Malwa; it also contains diamonds.

SIDA, a genus of plants of the natural order Malvaceæ. 34 species are known to occur in the E. Indies, amongst them—

S. acuta, *Burm.*, Kureta, Bengal, both Peninsulas.
S. alba, *Linn.*, Nag-bula, Nag-barjala, Bengal, Coromandel.
S. cordifolia, *Linn.*, Barjala, Bengal, both Peninsulas.
S. cuneifolia, *Linn.*
S. humilis, *Willd.*, Bengal, both Peninsulas.
S. microphylla, *Cuv.*, Bengal.
S. retusa, *Linn.*, Bengal, both Peninsulas.
S. rhombifolia, *Roxb.*, Lal-barjala, Bengal.
S. rhomboidea, *Roxb.*, Shwet-barjala, Bengal, both Peninsulas.
S. periplocifolia, — ? Malayana.
S. tiliæfolia, — ? China, India.

The species vary much in habit and in the structure of their fruit and seeds, but they resemble each other in abounding in mucilage, and in some of them having tough ligneous fibres, which are employed for cordage. Several are employed as demulcents in India, in the same way that the mallow and the marsh-mallow are in Europe. S. rhomboidea and S. rhombifolia abound in very delicate flax-like fibres, which may be used for many of the same purposes as hemp and flax; but when the plants are grown for the sake of their fibres, they ought to be sown thick; under which circumstances, like other plants similarly sown, they grow tall and slender without branches. S. periplocifolia, a native of the Malay Islands, which succeeds well in India,

may be cultivated for the same object, especially as when cut near the earth it quickly shoots into long simple twigs, which abound in flax-like fibres. S. tiliæfolia, T'sing-ma from Pekin, is cultivated for this purpose in China as a substitute for hemp and flax. S. lanceolata is the Vishabuddi of Telingana. The Sida hemp, or flax of Burma, is the product of S. acuta and S. stipulata (Burmese, Pyen-dan-gna-len). They are mere weeds, but the most troublesome in Tavoy.—*Roxburgh; Mason; Eng. Cyc.; W. Ic.; Voigt; Hogg.*

SIDA ACUTA. *Burm.*

S. lanceolata, *Retz.*	S. scoparia, *Lour.*, *Rheede.*

Pata ? . . . . SANSK.	Sahadevi chettu, . ,,
Arua manopondu, . TAG.	

Flowers small, yellow; a native of the Peninsula of India; grows to the height of about three feet; and no doubt, like the S. rhomboidea, a good fibre might be procured from it. The root resembles common liquorice, but is very bitter. The infusion of the root combined with ginger is given in intermittents, and in chronic diarrhœa. The leaves bruised with oil are applied externally as a poultice to accelerate suppuration. It promotes perspiration, increases appetite, and is in many respects a useful substitute for more costly bitters. An electuary is prepared in Bengal from the expressed juice of the Sida, and used in the treatment of worms in the intestinal canal; but experienced native practitioners say that no reliance can be placed on its efficacy. An infusion of the root is a very useful bitter tonic and astringent.—*Roxburgh; Voigt; Ainslie; Riddell; O'Sh.*

SIDA CARPINIFOLIA. *Linn.* Its root is intensely bitter, and is given in infusion in intermittent fever.—*J. A. Murray.*

SIDA CORDIFOLIA. *Linn.*, *W. A.*, *Roxb.*

S. rotundifolia, *Cav.*	S. herbacea, *Cav.*

Seeds.

Bijband, . . . HIND.	Kowar, Simak, . HIND.
Chuka, Hamaz, . ,,	

A plant of both Peninsulas of India, of Bengal, and the Panjab. It has middle-sized yellow flowers. Its mucilage, mixed with rice, is given in dysentery and fevers, and its seeds in colic, tenesmus, and gonorrhœa, also taken as an aphrodisiac.—*Roxb.; Voigt; Stewart.*

SIDA PERIPLOCIFOLIA, a native of the Malay Islands, flowering and ripening its seed a great part of the year. Its bark abounds in serviceable flaxen fibres, and as it shoots quickly into long, simple twigs, particularly if cut near the earth, it answers well for procuring fibre of good length for most purposes.—*Roxb.; Voigt; Royle.*

SIDA RETUSA. *Linn.*

Kurun tudi, . MALEAL.	Karun tuti, . . . TAM.

A plant with small yellow flowers, growing in Bengal, Malabar, and Travancore, used in medicine.—*Roxb.; Voigt.*

SIDA RHOMBOIDEA. *Roxb.*, *W. A.*

Sida rhombifolia, *Wall.*

Shwet-bariala, . BENG.	Safed-bariala, . . HIND.
Shwet-barjala, . ,,	Atibala chettu, . . TEL.

A plant with small yellow flowers, growing in the rainy season in Bengal and the Peninsula of India, where the plants are indigenous. The bark yields abundance of very delicate flaxy fibres, which might be advantageously employed for many purposes. When the seed is sown thick on a good soil, the plants grow full and slender, without branches, and are every way fit for such purposes. Major Hanney sent from Assam to the Agri-Horticultural Society, in December 1851, some of the fibre, and Captain Thompson thought from its length, its similarity to silk, and its great strength, that it would fetch a high price in England. A line half an inch in circumference, after exposure to wet and sun for ten days, sustained 400 lbs.—*Roxb.; Royle; Voigt.*

SIDA TILIÆFOLIA, Ts'ing-ma, CHIN., is cultivated for its fibres in China, near Pekin. It is said to be the common fibrous plant of Northern China. Its fibres and those of Dolichos bulbosus furnish coarser sorts of the China grass cloth. The fibre is strong and pliable, very silky in its nature, and the plant of very rapid and luxuriant growth, three crops being obtained in one year. It may, it is said, be brought into England at an estimated price of £8 per ton, which is about one-fifth of the price of hemp of the best quality. Some of Dr. Roxburgh's original specimens, marked July 1804, were from four to five fect in length, and display a fine soft and silky fibre, as well adapted for spinning as the jute, and apparently superior.—*Drs. Roxb., Royle.*

SIDDHA, genii worshipped by the Tantrikas. The Siddha and Vidyadhara are a class of ascetics, also a class of celestial beings of an intermediate order between men and gods, tenanting the middle regions above the earth, and are usually described as attending upon Indra, although they have chiefs and kings of their own. The Vidyadhara have much intercourse with men, intermarrying with mortals, and often having earthly princes and heroes for their kings. The Siddha are a more retired race, and are rarely the subject of fabulous or mythological legend. Charana and Sura are terms used in place of Vidyadhara, implying inferior demigods.—*Hind. Theat.* ii. p. 308; *As. Res.* xvi. p. 21.

SIDDHA, in Tamil Sittar, a Tamil sect, now extinct, which retained Siva as the name of God, but rejected everything in the Saiva system which was inconsistent with pure theism. They cultivated alchemy as sedulously as the Arabians, from whom unquestionably they derived their knowledge of it. One of their number asserted that he visited Arabia, and another refers to the Franks. Several of them refer to the Turakhas, the name by which the Indian Muhammadans are known in the south. All their compositions are modern and colloquial, with grammatical forms unknown to the ancients. Most of this school took the names of rishis and renowned teachers. One of them called himself Agastya, another Sankaracharya, a third Gautama, and this audacity was perfectly successful. Native Christians fancy them to have been endowed with a

prophetic spirit, and to have meant Christ by the Sat-Guru (True Teacher), to whom they constantly refer.

SIDDHANTA. Sansk. Conclusion, from Siddha, proved, and Anta, end. The Siddhantas are Jaina works held in the same veneration by them as the Vedas are by the Brahmanical Hindus. Siddhantachari, from Siddhanta, ascertained or proved, and Acharin, practice. Siddhanta Siromani, a treatise on astronomy by Bhaskaracharya. —*As. Res.* xvii. p. 243.

SIDDHI. Hind., Sansk. The large leaves and capsules of the hemp plant, without the stalk.

SIDEROXYLON, a genus of plants of the order Sapotaceæ, natives of America, Africa, East Indies, and Australia.

S. Cantoniense, — ? Shan-kan-shii, China.
S. cinereum, *Lam.*, Mauritius.
S. tomentosum, *Roxb.*, Eastern Ghats.
S. inerme, *Lam.*, — ?
S. regium, *Wall.*, Pegu.
S. Wallichianum, *G. Don*, Penang.
S. elengioides, *Benth.*, W. Ghats.

The species of Sideroxylon are evergreen trees, with axillary and lateral fascicles of flowers. They are remarkable for the hardness and weight of their wood, which sinks in water, and the genus has hence derived the name of iron-wood.

Sideroxylon tomentosum, the Hoodigalla of the Canarese, is an evergreen tree of Western Mysore and of the Prome district of Burma.

Sideroxylon elengioides, *Benth. and Hooker.*
Achras elengioides, *D. C.*, *Bedd.*

Holay, . . . Badaga. | Pala, ... Tam.

A common tree of the Western Ghats; wood dull red, straight grained, dense, and used for house beams and carpenters' planes; fruit pickled and curried.—*Roxb.* i. p. 602; *Bedd.*; *Gamble.*

SIDH, a Sikh ascetic who has the power to suspend animation.

SIDI, the term by which the Abyssinian and Negro races of Africa are known in India. They were often employed in the households of native sovereigns. Some of them, known as the Sidi of Janjera or Zanjera, were long a powerful and independent maritime people, occupying the coast a few miles south of Bombay. They were employed under the Bijapur State and the Moghul emperors as naval officers. The name is from Syud, Arab., a lord.

SIDI MOULA, a native of Persia, a darvesh who visited the court of Jalal-ud-Din at the close of the 13th century, and was murdered by a body of Kalandars.

SIDON, a great seaport city of the ancient Phœnicians, the foundress of Carthage, but now the modern Saida, little more than a port for fishing-smacks.

SID RAI JYE SINGH. In the Komarpal Charitra, or history of the kings of Anhulwarra Puttun, the reign of Sid Raj is stated to have been from S. 1150 to S. 1201, or A.D. 1094 to 1145. His court was visited by the Nubian geographer Edrisi, who states that Jye Singh was then a Buddhist.—*Tod's Rajasthan*, ii. p. 242.

SIEBOLD. Ph. Fr. von Siebold, C. J. Temminck, H. Schlegel, and W. de Haan, oriental scholars who have written on the East Indies. Siebold's works were Nippon Archiv zur Beschreibung von Japan, Leyden 1832; Voyage au Japon, en 1823 à 1830, Paris 1838.

SIEGESBECKIA ORIENTALIS. *Tatarinov.* He-kien and Kau-kau, Chin., a plant of the China provinces of Sze-chuen and Ho-nan. It is esteemed for its emetic properties, and is given in ague and rheumatism.

SI-FAN. Chinese. Literally Western Aliens. Si-western, fan barbarians, a term applied by the Chinese to the people of Sokyul, Andks, Thochu, Gyarung, and Manyak, between Tibet and China. Each of these has a separate ruler, styled Gya-bo, equivalent to the Chinese Wang. The Tibetans frequently designate them Gyarung-bo, from the special importance of the Gyarung, which reckons 18 chiefs or banners, a power sufficient in former times to have resisted or attacked the imperial dynasty. The Sifan country extends with a varying breadth from the Blue Sea to Yunnan.

SIFERAH or Sipperah, the Siferah of the Arabs. Its ruins are within the Medina wall, near the southern extremity.

SIGHELMUS. William of Malmesbury states that in 883, Sighelmus of Sherborne, sent by king Alfred to Rome with presents to the Pope, proceeded thence to the East Indies to the tomb of St. Thomas at Mailapur, a suburb of Madras, and brought back jewels and spices.

SIGNATURE. The millions of the various races of the east and south of Asia who are unable to write, attest written documents with symbols of their trades, etc., that of the Ho is an arrow mark. Many of the military races make the mark of a dagger; mercantile races, a balance; the Mhang attach the figure of a knife.—*W.*

SIH. Pers. Three; hence—

Sih-barga, a species of trifolium.

Sih-pahi, a soldier, from the tripod rest for his matchlock.

Sih-pai, a tripod table, a teapoy.

Sih-tara, a guitar.

Sih-yari, a term applied to the Shiah Muhammadans.

SIHARA. Sansk. A Hindu marriage wreath. —*Growse.*

SIJ. Beng., Hind. The generic name for species of Euphorbia. Lanka sij, E. tiraculli; Manasa sij, E. ligularia; sij, E. nivulia; Tekata sij, E. antiquorum, the milk hedge plant. The root of E. ligularia is mixed with black pepper, and used in snake-bites. The juice of E. nivulia leaves is purgative and deobstruent, and mixed with margosa oil is applied externally in rheumatism; as also is the juice of E. antiquorum. The fresh juice of E. tiraculli is acrid and applied as a blister. E. ligularia is sacred to Manasa.

SIKAKUL, a root like a carrot, brought from Kashmir; used in Ajmir as an aphrodisiac.—*Gen. Med. Top.* p. 150.

SIKANDAR-NAMA, Book of Alexander the Great, written A.D. 1200, by Abu Muhammad-bin-Yusuf-bin-Muayyid-i-Nizam-ud-Din, is a poem of 6886 verses. It abounds with obscure allusions to facts, traditions, and sentiments of a bygone time, with peculiarities of construction, curious idioms, and unusual uses of words.

The traditions of Alexander the Great, as told by the Persians, differ widely from those preserved by the Greeks. One of its commentators, Syed Seif-ud-Din, says that Hind means dark or black, the colour appropriated to the planet

Saturn, under whose influences Hind or Hindustan is reckoned.

SIKANDRA, a town in the Agra district, N.W. Provinces, in lat. 27° 12′ 59″ N., and long. 77° 59′ 34″ E., 5 miles N.E. of Agra city, on the Muttra road. It contains the tomb of Akbar, commenced by that monarch, and finished by his son Jahangir in 1613. The total height of the building now is a little more than 100 feet to the top of the angle pavilions. An asylum was established at Sikandra in 1837-38 for orphans whose parents had perished in the terrible famine of that year.—*Imp. Gaz.* viii.

SIKERWAL, a Rajput tribe on the right bank of the Chambal.

SIKH, a religious sect in the Panjab, followers of Nanak. They are principally of the Jat race, and under Ranjit Singh obtained sovereignty over the Panjab. Their numbers are estimated at 1,853,426. The first converts were amongst the Jat peasants of Lahore and the southern banks of the Sutlej river, and the Jat of the Manjha and Malwa districts are mostly of this persuasion. The Sikhs in the time of the guru Govind assumed the title of Singh as their distinctive appellation, meaning, metaphorically, a champion warrior. The Sikhs should abstain from the use of tobacco and all intoxicating drugs, but they all drink heavily, the military life which the most of them adopted not being conducive to moral purity. The Akali were the zealots of the Sikh religion, soldiers of God. They wore blue dresses and bracelets of steel, and claimed for themselves a direct institution by Govind Singh. They combined warlike activity with the relinquishment of the world, became the armed guardians of Amritsar, but in a frenzy of zeal would win their daily bread at the point of the sword. It cost Ranjit Singh both time and trouble to suppress them. So strong is the feeling that a Sikh should work, or have an occupation, that one who abandons the world, and is not of a warlike turn, will still employ himself in some way for the benefit of the community. Thus, Major Cunningham once found an Akali repairing, or rather making, a road among precipitous ravines, from the plain of the Sutlej to the petty town of Keeritpur. He avoided intercourse with the world generally. He was highly esteemed by the people, who left food and clothing at particular places for him. The Sikh take their name from the Hindi word Sikhna, to learn, Sikh meaning a disciple. During the 16th and 17th centuries, Nanak and Govind, of the Khatri race, with their succeeding gurus, obtained a few converts to their religious views among the Jat peasants of Lahore and the southern banks of the Sutlej.

Towards the close of the 18th century, they grew to be a great dominant nation, with an influence which extended from the Kara-korum mountains to the plains of Sind, and from Peshawur to Dehli. Their dominions were included between lat. 28° and 36° N., and long. 71° and 77° E. This tract consists of broad plains, slightly above the sea-level, or mountain ranges 2 or 3 miles high. In the former Sikh territory, all were not of the Sikh religion. The people and dependent rulers of Ladakh profess Lamaic Buddhism, but the Tibetans of Iskardo, the Dardu of Gilgit and Kukka and Bimba of the rugged mountains, are Muhammadans of the Shiah sect. The people of Kashmir, Kishtwar, Bhimbur, Pukli, and of the hills south and west to the Salt Range and the Indus, are mostly Sunni Muhammadans, as are likewise the tribes of Peshawur, and of the valley of the Indus southwards, also the inhabitants of Multan, and of the plains northward as far as Pind-dadun-khan, Chuneeot, and Depalpur. The people of the Himalaya eastward of Kishtwar and Bhimbur are Hindus of the Brahmanical faith, with some Buddhist colonies to the north, and some Muhammadan families to the south-west. The Jat of the Manjha and of the Malwa districts, in the Panjab territory, are mostly Sikh; but perhaps not one-third of the whole population between the Jhelum and Jumna has, as yet, embraced the tenets of Nanak and Govind, the other two-thirds being still equally divided between Muhammadanism and Brahmanism. Most of the modern Sikh in no way separate from their tribes, and are known as Jat or Khatri or Brahman Sikh, one member of a family being frequently a Singh, while others are not. The written character in use with them is called Gurumukhi. It is the Devanagari in form, but with different powers to the letters. The Sikh religion forbids them to smoke tobacco. They have, however, no objection to other narcotics; opium and bhang and snuff-taking are not so common. Smoking was first prohibited by the tenth guru, Govind Singh, whose chief objection to it appears to have been that the habit was promotive of idleness, as people would sit smoking and do nothing. The Sikh owes his excellence as a soldier to his own hardihood of character, to that spirit of adaptation which distinguishes every new people, and to that feeling of a common interest and destiny implanted in him by his great teachers. The early force of the Sikhs was composed of horsemen, but they seem intuitively to have adopted the new and formidable matchlock of recent times, instead of their ancestral bow and the spear common to every nation. Mr. Foster noticed this peculiarity in 1783, and the advantage it gave in desultory warfare. In 1805, Sir John Malcolm did not think the Sikh was better mounted than the Mahratta; but in 1810, Sir David Ochterlony considered that, in the confidence of untried strength, his great native courage would show him more formidable than a follower of Sindia or Holkar, and readily lead him to face a battery of well-served guns. The peculiar arms of the contending nations of the 18th century passed into a saying, and the phrase, the Mahratta spear, the Afghan sword, the Sikh matchlock, and the English cannon, became a proverb.

The sect increased rapidly. Nanak, a Hindu of the Kshatriya caste, was born in A.D. 1469 at Hulwandi or Talwandi, near Lahore. He was the son of a grain merchant. From his infancy he was given to religious meditation. In riper manhood he wandered into various countries, and returned to his home with his mind matured with reflection and travel, to preach the unity of God and charity to men. The new creed spread rapidly, but soon provoked the persecution of the Muhammadans. The cruelty with which the Sikhs were treated turned them, under Govind, their tenth and last guru or teacher, from a band of religious devotees into a chosen religious and military commonwealth or khalsa, animated with undying hatred to Muhammadans. Govind waged an unequal war with the emperor of Dehli. Frequently defeated

and broken up, persecuted with inhuman cruelty, the Sikh religionists were driven to hide themselves in the valleys and caves of the hills from the fury of their enemies. Openly to profess their religion became a capital crime. The sect would soon have been exterminated, had not the distractions of the empire which followed the death of Aurangzeb given them a breathing time from persecution. Gradually the Sikhs emerged from their hiding-places, and, gathering in small parties, established themselves in petty isolated forts. Issuing from these, always well mounted, they scoured the country, burning and plundering, and giving infinite annoyance to the weak Muhammadan governors of Lahore and Sirhind.

After the return of Ahmad Shah, Abdali, to Kābul, from his fifth invasion of India, in which he had broken the Mahratta power in the decisive battle of Panipat, the Sikhs found themselves strong enough to possess themselves of the country round Lahore. But this drew down the vengeance of Ahmad Shah, who in 1762 returned to India, disastrously defeated them, and destroyed and polluted their sacred temple at Amritsar. From this defeat the Sikhs soon recovered. In the following year they defeated the Afghan governor of Sirhind, and spread themselves over the plains south and east of the Sutlej, as far as the Jumna. The eighth invasion of Ahmad Shah, which took place in 1767, ended in leaving the Sikhs masters of the country between the Jumna and Rawal Pindi. Within three years their authority was extended over the Jumna and the Rajputs of the lower hills. The spread of the dominion of the Sikhs south of the Sutlej received a severe check from the Mahrattas, who, recovering from their disastrous overthrow at Panipat, again overran Northern India. In 1788, Sindia was in possession of Dehli, and by 1802 the Mahrattas had established their supremacy as far as the Sutlej, and exacted from the Sikh States to the south of that river a tribute of three lakhs of rupees. But the Mahratta power in the north was broken by Lord Lake in 1803; the chiefs of Khythul and Jheend tendered their allegiance to Lord Lake, and rendered occasional service, and all the chiefs of Sirhind became virtually dependents of the British Government. It was the policy of the day, however, to maintain a strict neutrality in regard to the affairs of the chiefs north of the Jumna; and beyond establishing the Sikh chiefs in the territories which they then held, and rewarding those who had done good service, the British Government did not interfere in their affairs till 1809, when the Sikh chiefs threw themselves on its protection from the encroachments of Ranjit Singh. One of the sirdars who earliest raised himself to power and influence, was Maha Singh, of the Sukurchakea Misl, one of the weakest and latest formed of the twelve clans. To him, on 2d November 1780, was born a son, Ranjit Singh, by his wife, a daughter of the raja of Jheend. Ranjit Singh early distinguished himself there.

During the invasion of Shah Zaman in 1798, Ranjit Singh rendered service to the Afghan monarch by recovering for him several pieces of artillery which had been lost in the Jhelum, and he had the address to procure for himself the appointment of Governor of Lahore, where he established himself; and in concert with Futteh Singh, Aloowallia, he soon extended his supremacy over the neighbouring sirdars, and meditated the extension of his authority beyond the Sutlej. In 1803 he made proposals to Lord Lake for the transfer to the British Government of the territory belonging to the Sikhs south of the river Sutlej, on the condition of mutual defence against the respective enemies of himself and the British nation. The offer was declined. In 1805, Ranjit Singh was recalled from a campaign against the Muhammadans between the Chenab and the Indus, by the sudden appearance of Holkar in the Panjab, closely pursued by Lord Lake. With the death of Ranjit Singh, A.D. 1839, the career of the Sikhs, as a nation, may be said to have closed. Internal anarchy led to aggressions on British territory, from which war twice resulted, and finally the whole of the Sikh dominions in the Panjab were annexed to British India.

The military ascendency of the Khalsa was, for a time at least, put down by Lord Hardinge. Moodkee was fought on 18th December 1845; Ferozeshah, on the 21st and 22d; Aliwal, on 28th January 1846; and Sobraon, on 10th February. The first Sikh soldier is believed to have crossed the Sutlej about the 10th of December 1845; and the last was driven back over the river, choked with the dead and the dying, about 12 P.M. on the date last named. The campaign may be said to have occupied about two months; and it was just before or after the battle of Sobraon that Lord Hardinge gave the reply to the Lahore Vakeel who came to propose terms of peace, that 'he would answer him under the walls of Lahore.'

In 1881 the number of this religion was 1,853,426. The Grant'h is the name of the sacred book of the Sikh religionists. The Grant'h is written in the Gurumukhi character, a modified species of the Nagari. It is placed in the holy temple of Amritsar. The initiatory rite for admitting a person into the Sikh religion is termed the Pahul. The novice must have attained the age of discrimination; he stands with his hands joined in the form of supplication, and repeats after the priest the articles of his faith. Some sugar and water are stirred in a basin with a double-edged dagger, and the water is sprinkled on his face and person. He drinks the remainder, and exclaims Wah, Guru! At least five persons have to be present, one of them a priest. Women were sometimes thus initiated. The Sikh sect is rapidly diminishing. The forms of prayer and praise are simple. Portions of the Adi Grant'h are read or sung; the priest says, 'Meditate upon the Book,' and the people reply, 'Wah, Guru! Wah, Guru ka Fatah!' Guru Govind not only introduced the worship of Durga and the sword, but, it is said, offered sacrifices at her festivals. In the Dasama Padshah-ki-Grant'h, Durga is represented as the tutelary goddess of war.

The Sikh or Nanak Shahi, in their religious doctrines, have several sects, amongst whom may be mentioned—

1st. Oodasee, founded by Sree-Chund, a son of Nanak. The Oodasee were rejected by Ummer Das as not being genuine Sikhs.

2d. Behdee, founded by Lukshee Das, another son of Nanak.

3d. Teehun, founded by Guru Unggud.

4th. Bhulleh, founded by Guru Ummer Das.

5th. Sodhee, founded by Guru Ram Das.

The Behdee, Teehun, Bhulleh, and Sodhee are

rather Sikhs of the subdivisions of Kshatris, so called (*i.e.* of the tribes of certain gurus), than distinct sects.

6th. Ram Rayee, seceders who adhered to Ram Raee, when Tegh Bahadur became guru. They have a considerable establishment in the Lower Himalayas, near Hardwar.

7th. Bunda-Punt'hee, *i.e.* of the sect of Bunda, who succeeded Govind as a temporal leader.

8th. Mussundee. Mussund is simply the name of a subdivision of Kshatri; but it is also specially applied to the followers of those who resisted Govind, some say as adherents of Ram Raee, and others as instigators of the guru's son to opposition. The more common story, however, is that the Mussund were the hereditary stewards of the household of the several gurus, and that they become proud and dissipated, but nevertheless arrogated sanctity to themselves, and personally ill-used many Sikhs for not deferring to them, whereupon Govind, regarding them as irreclaimable, expelled them all except two or three.

9th. Rungret'ha, converts of the sweeper, and some other inferior castes, are so called.

10th. Ramdasee, *i.e.* Rao or Raec Dasee, Sikhs of the class of Chamars or leather-dressers, and who trace to the Rao Das or Raee Das, whose writings are inserted in the Grant'h.

11th. Mazahbee, converts from Muhammadanism are so called.

12th. Akali, worshippers of Akal (god), the most eminent of the orders of purists or ascetics.

13th. Nihung, the naked, or pure.

14th. Nirmulleh, the sinless. One who has acquired this title usually administers the Pahul to others; also written Nirmala.

15th. Gheianee, the wise or perfect. A term sometimes applied to Sikhs, who are at once learned and pious.

16th. Soothra Shahee, the true or pure; said to have been founded by one Sootcha, a Brahman.

17th. Sutcheedaree, likewise the true or pure; the founder not ascertained. Suthreh Shahi priests lead a vagabond life, begging and singing songs of a moral or mystic tendency, but are not unfrequently gamblers, drunkards, and thieves. They look up to Tegh Bahadur, father of Guru Govind, as their founder.

18th. Bhaee, literally brother. The ordinary title of all Sikhs who have acquired a name for holiness; and it is scarcely the distinctive title of a sect, or even of an order.

The *Udasi*, as their name denotes, profess indifference to worldly vicissitudes. They are purely religious characters, devoting themselves to prayer and meditation, and are usually collected in convents or colleges called Sangat. They are ascetics, though they do not solicit alms, are generally well dressed, and celibacy does not seem imperative. Many of them are well read in Sanskrit, and are able expounders of the Vedanta philosophy, on which the tenets of Nanak are founded; and in the Gangetic provinces their office consists chiefly in reading and expounding the writings of Nanak and Govind Singh, as collected in the Adi Grant'h and Das Padshah-ki-Grant'h.

Ganj Bakshi, a small sect of no note.

Ram Raya, a small political sect, claiming for their founder Ram Raya, who flourished in A.D. 1660.

Govind Sinhi are the most important of the Sikh community, and comprehend the political association of the Sikh nation generally.

The *Nirmala*, who observe celibacy, and go nearly naked, in other respects resemble Udasi Sikhs.

Naga go without clothes, but otherwise resemble the Nirmala, and, unlike the Saiva and Vaishnava Nagas, do not wear arms.—*Cunningham's Hist. of the Sikhs.*

SIKHA, Sansk., is the tuft of hair which Hindus leave when shaving their heads, called in Tamil the Kudumi. A considerable number of European missionaries regard the wearing of this tuft as a badge of Hinduism, and require the natives employed in the missions to cut off their kudumi as a sine qua non to their retention of mission employment. The idol-worshipping Hindus believe that the top of the head, including the anterior and posterior fontanels, is the most sacred part of the body. They say that the fontanel is the residence of the deity, and call it the 'top eye.' They think also that it is the fountain of the generating fluid of man which supplies the lower members of the body when required; they consider that such holy and useful parts of the body must not without good reason be left uncovered, and hence they say is the necessity of protecting those spots by a tuft. A sect of Sanyasi, however, walk about with bald heads pretending that they have entirely renounced the world, passed the lower steps of ritualism in the ladder to ascend to heaven, and are living in close communion with God, constantly looking at him with their top eye. This sect do away with their sacred thread also, evidently showing that they regard the kudumi in the same light as the other ceremonies belonging to the lower step of the heavenly ladder. When a Hindu wife is in the family-way, the husband allows his hair to grow without being shaved. After the confinement, if the child be a boy, he, on the 16th day, rises up early in the morning, performs ablutions, comes home with a wet head, enters the room where the child is laid, takes a few drops of water from his wet kudumi, pours them into the child's mouth, and then for the first time sees and handles the child. After this ceremony he shaves his hair as usual. When the Hindu parents think it necessary to shave the head of the child, they consult an astrologer, who fixes an auspicious day, when the barber is invited to do his duty. A small image of Pillayar, the son of Siva, is made, before which, on a plantain leaf, a thali or platter filled with paddy, a broken cocoanut, and some plantain fruit are laid, and incense offered to the image. The barber puts his razor before the image and worships it, and then begins the sacred rite of shaving, by putting his razor around the top eye, and leaving a circular portion of hair over the sacred spot unshaven. The Brahman father holds the hair of the child at the crown of the head, and puts the razor around it, while his guru repeats certain mantra, and then shaves the rest of the hair himself, or asks somebody else to do it. It is the custom with certain castes to wet the head with the juice of the cocoanut kernel, beginning with the circular portion of hair to be left as kudumi. A portion of the juice thus used is then poured at the foot of a palmyra tree as an offering to Parvati, the sakti or consort of Siva. The Hindu believes that the

way of extracting toddy from the palmyra was taught by Parvati, and to this day it is the custom of the palmyra-climbers to make special offerings to her when they begin their career. The hair shaven from the head of a little child, especially from the head of the first-born, must not be thoughtlessly thrown away, inasmuch as it is derived from the father of the child, who allowed his hair to grow unshaven, with a special vow for the safety of the child, from the time of its conception till its birth. Some old men say that it was formerly the custom to burn the hair with certain ceremonies, as the Nazarites of the Hebrews did theirs. The shaven hair is now in general carefully enclosed in a silver case, and tied around the waist of the child as an amulet to ward off sickness. Some people tie it in a cloth and carefully preserve it in pots. The circular portion left on the head must be carefully kept and oiled, while the rest of the hair shaven must thus be respectfully treated, otherwise the prosperity and welfare of the child is endangered. If the parents lose their children successively one after another, they keep the kudumi at the back of the child's head on the posterior fontanel, and if the child survive the period in which the one previous to it died, the parents go about asking alms, make a feast to the pandarams, take off the 'tail,' as it is called, and then remove the kudumi to the front of the head.

When a boy has become old enough to go to school, or has so far advanced in study as to begin to write on the cadjan or palm leaf, a feast is made by the parents, and in one corner of the house, previously daubed with cow-dung, a small image of Pillayar is made, before which is placed an offering of plain fruit and cocoanuts. The schoolmaster writes in a cadjan or palm-leaf book, respectfully places it before the image, and worships it. The boy is then called before the image, and while he is standing there with great veneration and awe, the schoolmaster touches him by his kudumi, divides it into three parts, and, after having plaited them together, puts over the kudumi at the crown of the head some raw rice and some sacred amgu grass, and worships it. Some add to these things, a little raw paddy, sacred ashes, and flowers, and tie them in the plaited kudumi. The schoolmaster then respectfully takes the cadjan book, and delivers it into the hands of the scholar, while the scholar respectfully puts the cocoanut and the other offerings into the hands of the schoolmaster, and while doing so the scholar is taught to repeat some congratulatory words, thus: 'Book and learning to me. Cocoanut and money to the teacher.' It was formerly the custom with several lads to wear their hair long, tied up in a knot at the back of the head, nearly after the manner in which women usually wear their hair. This, however, was not usual before they came of age, unless under peculiar vows. The devotees of Parvati believe that their goddess is extremely pleased with this fashion, and in honour of her still wear their hair in this manner. The Maravar caste in South Travancore wear the kudumi until they are about 12 years of age, and then allow their hair to grow long, and tie it up in a knot at the back of the head. Until very recently, each caste differed from another in the way of wearing the kudumi. A Shanar never dared to imitate a Brahman, nor a Pariah a Sudra. Although the sacred spot of the head which ought to be adorned with the kudumi does not differ, yet the manner, quantity, and position of the kudumi differ in each caste. The chief use of the kudumi, however, is in the performance of a funeral ceremony urgently necessary for the salvation of a married man. A Tamil poet, in describing the lamentations of a king who performed penance for obtaining the gift of a son, says that a father can enter Siva's paradise in no other way than by his son performing the funeral ceremony. The Hindus believe that a man, so soon as he is married, commits a serious sin that renders him liable to hell. When he dies he has no alternative but to suffer its torments, unless prevented by the ceremony which his son performs. In order to quench the fire of hell, the son must uncover the sacred portion of his head by shaving off the kudumi, must put upon it a new pot full of water, that it may therefrom absorb the virtue of quenching the hell fire, must walk with it three times around the deceased parent, each time cutting a new hole in the pot that the water may spout out as he walks along, and on the third time must break the pot at the head of the bed of the deceased parent, and pour a few drops of this sacred water into the mouth of the corpse in the same manner as the parent poured a drop of water into the mouth of the son while an infant. He also puts a small coin into the mouth, that the deceased may reward with it the porter of the next world. The Romans also did so, that the deceased might pay Charon, the ferryman, for a passage across the Styx. The cutting off of the kudumi on this funeral occasion is not regarded as a token of sorrow, but is considered as an essential requisite for performing the funeral ceremony which is absolutely necessary for the eternal welfare of the deceased parent. No one but the heir of the deceased cuts off the kudumi, and that at no other time but on the occasion of the parent's death. A father may lose a dozen children, but he never thinks of shaving off his kudumi as a sign of sorrow. On the 16th day it is generally the custom to perform another ceremony in order to send up the spirit of the deceased to heaven, for, until the ceremony is performed, the spirit of the deceased is supposed to hover about the grave. After this the son allows his hair to grow for one year as a token of sorrow; at the expiration of which he makes a feast to Brahmans and others, shaves his hair, and wears the kudumi. No one of the Hindu races styled the twice-born cut off the kudumi on the occasion of performing the ceremony for the deceased parent, because being regenerated by the sacred thread imparts full power to his prayers and other ceremonial that are absolutely necessary for the salvation of the deceased parent. The Chinese, who wear their hair very much like the kudumi, believe that unless certain ceremonies are performed with a knot in the kudumi, the deceased cannot go to heaven. From what certain Tamil poets have sung, it is evident that they have regarded the kudumi in the same light as the sacred thread of the Brahmans. One says, 'What is caste but the sacred thread and the kudumi?' Another says, 'The sacred thread, kudumi, and other ceremonies of the brilliant sacred writings, were they born with you?' In a letter sent by a learned caste Hindu, he says, 'Wearing the kudumi is as import-

ant to us as the sacred thread is to a Brahman.' Not to wear the kudumi renders a man guilty, and liable to hell, Naraga-prerbathee. The goldsmiths say that their god, Visvakarma, sprang from the third eye of Siva with sacred thread and kudumi, and that his devotees wear kudumi in order to resemble him, just as the Saiva devotees wear the Chadei in order to resemble Siva.

SIKHARA or Sikra, also Vimana, the spire of a Hindu temple. They are curvilinear; a pyramidal spire-like roof is common to all Hindu and Jaina temples of the 10th to the 12th century.

SIKKA. Hind. A die for coining, a stamp, a mark, a stamped coin; the designation of the silver currency of the emperors of Dehli and the East India Company; a name of a rupee now uncurrent. The British Indian Sikka rupee remained at 192 grains, but this coinage was discontinued in consequence of Act xvii. of 1835, and since that date the Company's, afterwards the Queen's, rupee of 180 grains has been the only rupee coined at any of the Indian Government mints. The main purport of Act vii. of 1833 was to fix the weight of the Farrakhabad rupee at 180 grains. When the Government of India decided on 180 grains as the tola, they in the same Act declared that this tola should be the unit of a general system of weights in all Government transactions.

SIKKIM, a native state in the Eastern Himalaya mountains, bounded on the N. and N.E. by Tibet, on the S.E. by Bhutan, on the S. by Darjiling, and on the W. by Nepal. It lies between lat. 27° 9′ and 27° 58′ N., and long. 88° 4′ and 89° E.; area about 1550 square miles. On the breaking out of the Nepal war in 1814, Major Latter occupied the Morang, and formed an alliance with the raja of Sikkim, who was rewarded with territory which had been ceded to the British by Nepal. In February 1835, the raja made a formal cession of Darjiling to the British, and received in lieu an annual pension of £300. In 1849, the raja foolishly seized Dr. Campbell, the superintendent of Darjiling, and Dr. Hooker, whilst travelling in Sikkim, and detained them for six weeks. The pension was stopped, and a piece of territory, including the lower course of the Tista and the Sikkim terai, was annexed as a punishment. The capital is Tumlung, where the raja resides during the winter and spring, usually going to his estates at Chumbi in Tibet in summer to avoid the heavy rains of Sikkim. The Tibetan name for Sikkim is Dingjing, or Demojong, or Dee-jon, and for the people Deunjong mars; the Nepalese call it See-i; the Gurkha name for the people is Lepcha, but Mr. Markham says they call themselves Rong.

Sikkim occupies an intermediate position between Nepal and Bhutan, and unites the floras of Nepal, Bhutan, East Tibet, and the Khassya mountains, being hence, in a geographico-botanical point of view, one of the most important provinces in India, if not in all Asia. In the Himalaya, the truly temperate vegetation supersedes the sub-tropical above 4000 to 6000 feet, and the elevation at which this change takes place corresponds roughly with that at which the winter is marked by an annual fall of snow. This phenomenon varies extremely with the latitude, humidity, and many local circumstances. In Ceylon and the Madras Peninsula, whose mountains attain to 9000 feet, and where considerable tracts are elevated above 6000 to 8000 feet, snow has never been known to fall. On the Khassya mountains, which attain to 7000 feet, and where a great extent of surface is above 5000, snow seems to be unknown. In Sikkim snow annually falls at about 6000 feet elevation, in Nepal at 5000, in Kamaon and Garhwal at 4000, and in the extreme West Himalaya lower still. The little fort of Dumsong, 5000 feet above the sea, is situated on a bluff jutting down into the valley of the Tista between Sikkim and Bhutan. The view from this place is magnificent; the snows of the Chola Nitai and Yak-la passes are all quite close. On three sides are the different snowy ranges of Bhutan, Sikkim, and Nepal. Within a space of 16 miles are seen the four countries of Tibet, Sikkim, Bhutan, and British Sikkim; Darjiling is plainly visible, and below is the beautiful and fertile valley of Rhinok in Sikkim; for many miles can be seen the road from the Tibet passes to the Ranjit river on the Darjiling frontier, the route followed by the Tibetian traders who annually visit Darjiling. Between Darjiling and Tumlung, the mountains are generally lower than those of Darjiling itself. North of Tumlung, the passes into Tibet are of great height, and there may be noticed the passes Yak-la and Gnatinla (14,000 feet), Chola (15,000), and Jelep-la (13,000) which cross the lofty spur of the Himalayas, separating the Chumbi and Tista valleys. Then comes the Tankra-la pass, 16,083 feet high, the most snowy pass in Sikkim. Sikkim is drained by the river Tista and its affluents. The Am-machu rises near Parijong, at the foot of the Chomalhari peak (23,929 feet), and flows through the Chumbi valley, which is a strip of Tibetan territory separating Sikkim from Bhutan. In this lower part of its course, the Am-machu passes into the British district of Jalpaiguri, under the name of the Torsha.

Near Mintugong are some copper mines worked by Nepalese. At the base of the Sikkim Himalaya, under the hill station of Darjiling, the great mass of the lofty hills is composed of schistose rocks of various characters considerably disturbed and contorted. Near the base of the hills, and faulted against these rocks at high angles, there is a small extent of sandstone and black shales, which contain vertebrata, pecopteris, etc., similar to those occurring in the great coal-fields of Bengal. This upper group contains many large stems, in all observed cases prostrate, and in most cases giving evidence of great wear and long exposure previously to being embedded; and in some of the finer and more earthy deposits an abundance of leaves occur, of the same general character as those of Burma and Tenasserim.

From the level of the sea to an elevation of 12,000 feet, Sikkim is covered with dense forest of tall umbrageous trees. At 10,000 feet, on the summit of Tanglo, yew appears. Being opposite to the Gangetic valley, the rainy winds sweep almost without interruption up to the base of Kanchinjinga (28,178 feet), the most enormous mass of snow in the world. The snow-level is here 16,000 feet. Oak trees, maple and other mountain trees, throw out great knots in the places to which the Balanophora attach themselves. These knots are hollowed out into

wooden cups by the Lepcha of Tibet, and some, supposed to be antidotes to poison, are of a peculiar pale-coloured wood, and cost a great sum, but common cups cost only 4d. to 6d. They are all imported into Tibet from the Himalaya. The bamboo grows to enormous size, often attaining a diameter of 7 to 9 inches. For the Himalayan cane-bridges, cane is found of the diameter of 1½ to 2 inches, and more than 80 yards long. Yoksun, in Sikkim, occupies a very warm, sheltered flat, and about it many tropical genera occur, such as tall bamboos, and various Araliaceæ, amongst which is A. papyrifera. In Sikkim and Bhutan there are twelve Coniferæ. Sikkim is perhaps the most productive in fleshy fungi of any in the world, and Eastern Nepal and Khassya yield also an abundant harvest. The dimensions of many are truly gigantic, and many species afford abundant food to the natives. Amongst those of East Nepal is a Lentinus, which has the curious property of staining everything which touches it of a deep rhubarb yellow. The Polypori are often identical with those of Java, Ceylon, and the Philippine Isles, and the curious Trichocoma paradoxum of Java and Ceylon occurs abundantly on the decayed trunks of laurels. The curious genus Mitremyces also is scattered here and there, under the form which occurs in Java. Hymenomycetes are abundant; the young shoots and roots of Dimorphanthus edulis are used as food in China and Japan. The genus Boletus through the whole district assumes magnificent forms.

The country of Sikkim and Darjiling is the land of the Lepcha, a Bhot race who are hemmed in between the Newar and other Nepal tribes and the L'hopa of Bhutan on the east, the Lepcha area being barely 60 miles in breadth. His physiognomy is markedly Mongolian, stature short, from 4 feet 5 inches to 5 feet; face broad and flat, nose depressed, eye oblique, chin beardless, skin sallow and olive, with a little moustache on the lips; broad chest and strong-armed, but small-boned, with small wrists, hands, and feet. The Lepcha is honest, timid, and peaceful, with mild and frank features; but they are a dirty, good-natured people, resembling in character the Mongol beyond the Chinese wall. The women dress in silk skirt and petticoat, with a sleeveless woollen cloak. The Lepcha man carries a long, heavy, and straight knife, serving for all purposes to which a knife can be applied. They drink the Murwa, the fermented jniee of the Eleusine coracana, which gives a drink, acidulous, refreshing, and slightly intoxicating, and not unlike hock or sauterne in its flavour. Their songs and the music of their bamboo flute is monotonous. They marry before maturity, the brides being purchased by money or service. In the Darjiling district, in addition to the Europeans, Hindus, and Muhammadans from the plains, the population consists of Nepalese; of the Bhoteah from Bhutan, Tibet, and Sikkim; of the Lepcha and Mechi, who are considered the prior occupants of Sikkim. The Rajbansi of Sikkim are the Koch or Kooch race, of the same descent as the raja of Koch-Bahar. In the plains of Sikkim, the Rajbansi and Bengali are in equal numbers. The Mechi inhabit that portion of the terai which lies under the hills. They are a migratory race, who have no caste distinctions, and live by cultivating the virgin soil. A gradual increase of population has taken place under British rule, from a few scattered tribes in 1853. They consist of Brahmans and Rajputs, few in number, with a Sanskritic tongue, and an Indo-European physiognomy, confined to Nepal; the Rhu, Magar, and Gurong, a mixture of Hindus and Mongolians, with features of a type belonging to the latter, comparatively free from caste prejudices, and speaking the Parbatta dialect. They are short and squat highlanders, and make good soldiers. The Bhoteah, Lepcha, and Murmi are Buddhist, and speak the Tibetan language. They are strong and active, and incline strongly to the Mongolian race. The Limbo, Sunwar, and Chepang possess a small Mongolian type, strongest in the Limbo, and their language is referable to either the Tibetan or Indian standard. The Mechi, Dhimal, and Garo are lowland tribes with a Mongolian physiognomy, but are neither Hindus, Buddhists, nor Muhammadans. The Tharoo and Dhunwar are Buddhists or Muhammadans with fair and barely Mongolian features. The Bahir, Kebent, Amatti, Maralia, Dhanook, and Dom are not Mongolian, but dark races speaking Hindi or Bengali. The Koch or Rajbansi are a race of dark Hindus inhabiting the terai of Nepal and Sikkim, but who have spread into British territory. The term Sikkim Bhoteah is applied to the more recent immigrants from Tibet, who have settled in Sikkim, and are an industrious, well-conducted people. The Bhoteah, again, of Bhutan, to the eastward, bear the worst reputation of any of the numerous people who flock to Darjiling. These should not be confounded with any other Bhotean tribes of Tibet, Sikkim, or Nepal.

The mountain slopes are so steep, that the little shelves are the only sites for habitations between the very rare flats on the river banks and the mountain ridges, above 6000 feet, beyond which elevation cultivation is rarely if ever carried by the natives of Sikkim. Firing the forest is so easy in the drier months of the year, that a good deal of cultivation is met with on the spurs, at and below 5000 feet, the level most affected by the Lepcha, Limbo, and Sikkim Bhoteah.—*Latham's Ethnology; Gleanings of Science; Dr. A. Campbell in Royal Geog. Soc. Jour.; Hooker's Him. Jour.* i. p. 358; *Hogg's Veg. Kingd.; Dr. A. Campbell in B. As. Soc. Jour.* No. xxix. p. 508; *Imp. Gaz.*

SIL. Hind. A slab, a stone on which spices, etc., are ground, resembling an oilman's grinding stone and muller, but the surfaces are rough. Sila-sasanams, or inscriptions on stones, are numerous in the Canarese country.

SILADITYA. Two rulers with this title ruled at Kanouj (Kanya-Kubja), a city on the banks of the Ganges. The first Siladitya, a Buddhist, succeeded Vikramaditya. The second ruled from the Himalaya to the Nerbadda. He, too, was a Buddhist, and was on the throne when Hiwen Thsang, the Chinese missionary, was there. In A.D. 634 he held a general council, at which twenty-one tributary sovereigns attended, together with the most learned Buddhist monks and Brahmans of their kingdoms. They discussed the subject of the Sankhya and Vaiseshika philosophies; the rites of the Buddhist northern and southern schools were discussed, and an image of Buddha, one of the sun-god, and an idol of Siva, were erected. Every five years he distributed his treasures.—*Imp. Gaz.; Fergusson*, pp. 23, 257.

SILAH. Hind., Pers. Arms, weapons, mail. Silahdar (lit. armour-wearer), a mounted soldier providing his own horse and armour.

SILAH-SILAH, section of the Feili Lur tribe of Luristan, number about 10,000 families. They reside in summer about Alishtar and Khawah, and in winter at Jaidar, Saimara, and Pusht-i-Koh. It is not safe to travel amongst them, even under the protection of their chiefs.

SILCHAR, chief town of the district of Cachar, Assam, situated in lat. 24° 49′ 40″ N., and long. 92° 50′ 48″ E., on the south bank of the Barak river.—*Imp. Gaz.*

SILENACEÆ, the Dianthus tribe of plants, comprising 12 genera; 32 species have been found in Southern and Eastern Asia, all with unimportant properties.

Dianthus arbuscula, *Lindl.*, China.
D. Chinensis, *Linn.*, China.
Cucubalus bacciferus, *Linn.*, Europe, Himalaya.
Silene inflata, *Sm.*, Europe, Himalaya, Kamaon, Nepal.
S. viscosa, *Pers.*, Europe, Levant, Kanawar.

A species of Silene grows in China, called there Wang-puh-liu-hing. Its dark-reddish, roundish seeds, resembling turnip seeds, are believed to be vulnerary, styptic, diuretic, galactagogue, discutient, and solvent, and are taken by soldiers after injuries as a remedy.

Baron von Mueller has mentioned that in 1870, the value of the produce of cocoons of the silk-worm amounted in Europe to £16,588,000; in Asia, £28,112,000; in Africa, £44,000; in the South Sea Islands, £24,000; and in America, £20,000: total, £44,788,000. This amount is the representative of many forms of industry, giving employment to numbers of men, women, and children. In the Rajashaline district of Bengal, in 1875, the yield of raw silk was estimated at £400,000, the plantations extending over about 150 square miles, employing 12,000 people. In that district alone 250,000 people derived their support from the trade and other branches of the silk industries.

The arts of rearing silk-worms, of winding off the threads spun by them, and of manufacturing those threads into clothing, seem to have been first practised in China. Many of the names applied to this substance by the several nations of the earth being from one root, proves that they, at least, obtained the substance and its name from one region; and the name Seres, by which China was known to the western nations, was either applied to it from silk being a product of that country, or the country gave its name to the substance known as silk. The Chinese terms see and szu, silk, are found in the Corean language or dialect in the form of sir; in Mongol, sirkek; in Manchu, sirghe. Klaproth supposes this word to have given rise to the Greek ser, the silk-worm, and seres, the people furnishing silk, and hence sericum, serikon, silk. The eggs were brought to Europe by monks. The country from which they brought their precious charge is called by Theophanes simply that of the Seres, but by Procopius Serinda. But it is possible that the term was meant to express a compound like Indo-China, some region intermediate between Serica and India, and if so not improbably Khoten. 'It would be curious,' says Klaproth, 'to know at what period the word silk was introduced into the English language. It appears to be the same as Russian chelk, which is believed to be derived from the Mongol for silk; this is so much the more likely as Russia was for a long period under the Mongol yoke.' Silk, then, seems to have given its name to the people who first fabricated it, and sent it to the west; and the Seres of the Greeks and Romans were seemingly the Chinese, whose empire was formerly separated by the Oxus from that of Persia.

In China, the silk industry is said to have been in its most flourishing state for a period of 4000 years previous to the introduction of cotton from India, at the beginning of the Yuan dynasty, A.D. 1260. The Shi-king contains this distich, 'The legitimate wife of Hwang-ti, named Si-ling Shi, began to rear silk-worms.' M. P. Mailla, in his l'Histoire generale de la Chine, also mentions that, B.C. 2602, Si-ling-chi, wife of the emperor of China, Hwang-ti, was enjoined by him to utilize the thread of the silk-worm, in which she succeeded. This lady did not disdain to share in the labours attending the care of the insect, as well as in those of the loom, the invention of which seems to be attributed to her, and raised her to the position of a tutelary genius, with special altars of her own. But whatever the precise date of the discovery, there can be no question of the very high antiquity of the knowledge in China of the worm and its product. A series of imperial edicts, and a voluminous literature of practical treatises, testify to the importance of the industry, and the care that was taken to foster an art which was considered, according to M. de Rosny, best fitted to promote the morality of the people and extinguish pauperism in the empire. The original cradle of sericulture in China included the country of Yen, lying south-west of the present province of Shan-tung; the country of Ts'ing, answering to the north-west region of the same province; the country of Siu, covering the south of Shan-tung and the northern portion of Kiang-si; and lastly the country of King, which now constitutes the province of Hukong. The industry now extends to the whole of China, even into Manchuria. According to Captain Bowers, of Colonel Sladen's expedition, large quantities used to be raised in Yunnan and Sze-chuen, but the industry suffered from the Panthay revolt. In China, besides exporting millions of pounds annually by sea, the yield is sufficient to clothe in silk all but the lowest classes of a population estimated to number 400,000,000. Shanghai and Canton are the only ports from which any considerable quantity of silk is exported to foreign countries. From Ningpo only 21 kilos. in 1879. But in 1878, in the Ningpo districts, the produce was 2,935,328 kilos., and in 1879 it was 3,334,751 kilos. The best silk is found in the provinces of Sze-chuen, Hu-peh, Che-kiang, and Kiang-nan; but every province south of 45° N. produces it of different degrees of fineness. Probably the kind called tsa-tle, brought

from Hu-peh, is the finest silk found in the world.

Between the 17 years 1858-59 and 1874-75, the exports from all China ranged between 31,618 and 83,644 bales.

Fabrics.—In *China* the manufactures consist of pongee, handkerchiefs, crape shawls, scarfs, sarsenet, senshaw, levantines, satins, ribbons, sewing thread, and organzine or thrown silk. The raw silk sorts usually known in the Canton market are tsa-tle, taysaam, and Canton raw silk. The Chinese silk loom is worked by two hands, one of whom sits on the top of the frame, where he pulls the treadles, and assists in changing the various parts of the machine. The workmen imitate almost any pattern, excelling particularly in crapes and flowered satins and damasks for official dresses. The common people wear pongee and senshaw, which they frequently dye in gambier to a dust or black colour; these fabrics constitute durable summer garments, and the pongee becomes softer by repeated washing. Many of the delicate silk tissues known in Europe are not manufactured by the Chinese, most of their fabrics being heavy. The lo or law is a beautiful article, used for summer robes, mosquito curtains, festoons, and other purposes, but is seldom sent abroad. The English words satin, senshaw, and silk are probably derived from the Chinese terms sz'tiin, sensha, and sze, intermediately through other languages.

Japan has been largely a silk-producing country, but since the middle of the 19th century, their losses have been great from the parasite uji (maggot), as the Japanese call it, which has preyed upon the silk-worm, and in some years killed from 30 to 84 per cent. of the worms. The fly seems to pierce the silk-worm and deposit its egg underneath the skin, where it is hatched into the uji or larva, which, feeding upon the body of the silk-worm during its changes, gradually increases until it is nearly as large as the chrysalis itself, and in the end forces its way out of the cocoon, which thereupon becomes useless. The uji then shrinks considerably in the course of four or five days into a small chrysalis of its own, which on dissection discloses the embryo of a fly. The birth of the fly is supposed to occur about the time of the hatching of the first crop of silk-worms in the following spring, when it deposits its eggs, and the existence of the next annual generation begins. This supposition is grounded chiefly on the fact that in the second crop of the worms the summer hatching is comparatively free from the uji. The Japanese authorities have evinced the utmost desire to foster silk culture and the foreign trade. They have established filatures, and in 1878 the production of silk was 2,650,000 kilos. Between 1860-61 and 1868-69 the exports of silk-worms' eggs from Japan to France and Italy ranged up to 20,712 pikuls, value 9,493,400 dollars, or £2,412,905. The value of the dollar ranged from 4s. 5¾d. to 5s. 2d.

Corea.—According to a Chinese author, the art of silk-reeling was introduced into Corea in the 12th century before Christ, and spread rapidly throughout the whole region; the narrative of an embassy from China to the Corea in the years 1119-1120 B.C., describes the nobles and the chief officers of the court, with their wives, as dressed in the same kinds of silk fabrics as are still to be found in this extreme eastern peninsula. Corea produces mulberry silk, chiefly white, from bivoltine cocoons.

Annam, Siam.—Later, the industry spread southward, and it reached the Annamite kingdoms. M. de Rosny dates its introduction there from the third century B.C. In Tonquin and Cochin-China the manufacture of silk took considerable hold, and in the 17th century A.D. there appears to have been a large export of silk from these countries. At the present day the silk is most used for home consumption; and it is said to be markedly inferior to that of China. The Siamese appear to have learned the art in the beginning of the 7th century B.C., but the manufacture made no great progress till the 18th century A.D., when the opening of more frequent communication with China gave a certain stimulus to the traffic in silk. Early in the 19th century, according to Crawfurd, the industry had again fallen into disfavour.

In *Burma*, the manufacture of silk is a lucrative avocation, and many parts of the country are well adapted for it. But the production of raw silk necessitates the destruction of the insects, an act which is looked upon by pious Buddhists with horror. Many years ago, in the wars between Burma and Assam, large numbers of Cathays and Manipurians of both sexes were taken captive to the Burmese capital, where the royal household dress invariably in silk garments. The putsoe worn by men and the ta-ming worn by women are silk, and the Manipurians and Cathay captives were put to weaving. Cathay and Manipurian families have since moved down the river, under British protection, and silk twist from the Straits and China has found its way into their hands. All their weaving is done with the hand-loom. They have only a simple loom and a spinning-wheel. The silk is imported in hanks. It has then to undergo a process of winding and cleaning and spinning and doubling, of throwing and reeling. If the colour of the silk is to be changed, it must then be dyed, washed, dried, and wound on bobbins, a delicate series of manipulations through which it must pass before it can be woven. The patterns are a mere matter of personal taste, and they can be woven after any fashion or design. The price of silk varies, but the weaver generally doubles it as the value of his work. An ornamented piece of Burmese silk is sold at from two to three rupees per cubit. Ten cubits make an ordinary putsoe, and six a ta-ming. The silk fabrics of Burma look coarse, compared with European manufactured articles, but they are very strong and durable. These Cathay weavers understand ornamental work, and when they can

obtain silver and gold thread, such as tassels and fringes as made up in England, they are able to work them up, to blend them up with silk, so as to make a very handsome pattern of an ornamented putsoe or ta-ming. The humbler classes among the Burmese are passionately fond of gay and flashy colours, while those about the palace prefer garments which are rich and chaste, to mere gaudy splendour.

British India seems to have developed within its own bounds the arts of obtaining the raw silk and of manufacturing it into cloth. None of the many languages of this region, nor in the tongues of Persia and Arabia, have names for silk in any way like to that by which it is known in China. The Indian product appears, however, to have been obtained from wild moths; and the continuous efforts which have been made to extend the cultivation of the domesticated mulberry-feeding silkworms of the genus bombyx, have not met with permanent or prolonged success. In the early years of the East India Company silk was an article of trade. But Indian silk was not held in such great esteem as the silks of China, Japan, Siam, and Persia. The earliest of the Madras records, dated 9th November 1670, notifies the despatch of four factors on £25, and seven writers on £7 per annum, of whom one factor and one writer, well skilled in silk, were destined for Cassimbazar. The planting of mulberry trees was urged on the zamindars of Bengal, and in 1769 a staff of reelers was sent to India from Italy, to introduce into the Bengal filatures the system pursued at Novi. The first consignment of the silk prepared in the Italian method reached England in 1772. In Madras, an attempt in 1793 to foster it failed, and was abandoned in 1798. During the efforts made by the E. I. Company, the improvements in the reeling and drying were great, but none in the cultivation of the mulberry trees; and in British India, wherever the mulberry has been depended on, the worms have often been starved, and disease has broken out. Even in Mysore, where the climate is not unsuitable, and great, though fitful, efforts have been made in the Bangalore, Kolar, Mysore, and Tumkur districts, there has been little permanent success, and throughout the country the woven silks have been chiefly from the wild insects, or from the raw product imported from China and Siam. The Mysore Administration Report for 1870-71 states that 31 per cent. of the cultivated land was under mulberry, and the value of the silk produced in the province was estimated at 5½ lakhs of rupees. The Nundidrug division was said to have exported 4610 maunds (Madras maunds probably).

The East India Company's imports into London of raw silk from Bengal were continuous. From 1793 to 1835, the quantities from Bengal by the Company and private dealers fluctuated greatly from year to year, between 88,219 lbs. in 1797 to 1,387,754 lbs. in 1829. In the eleven years 1850-51 to 1860-61, the value of the silk goods exported from India ranged from £122,787 in 1850-51 to £355,223 in 1860-61. In the last few years, British India has been receiving silk goods from foreign countries to a greater extent than the value of its exports, as will be here shown.

In almost every district of British India, there is silk produced either from the domesticated or wild insect.

Exports from all India as under—

	Quantity.		Rs.	
	1879-80.	1882-83.	1879-80.	1882-83.
Silk, raw, lbs., . . .	563,210	501,576	45,85,055	44,10,415
Chussum and waste silk or cocoons, lbs., . .	838,296	857,857	5,76,515	10,31,017
Manufactures of piece goods, yards, . . .	2,203,971	2,589,217	21,78,937	25,19,997
Mixed, yards, . . .	130,133	202,847	1,04,738	2,43,890

Silk thread piece-goods imported into India—

	Yards.	Rs.		Yards.	Rs.
1874-75,	6,970,667	68,46,991	1881-82,	10,737,731	1,10,60,480
1878-79,	7,350,804	82,28,406	1882-83,	8,518,119	89,02,260

Seven-eighths of it from the United Kingdom and China, and in nearly equal quantities.

Silk goods of silk mixed with other materials imported into India—

	Yards.	Rs.		Yards.	Rs.
1874-75,	168,186	1,16,672	1881-82,	1,461,428	10,32,125
1878-79,	1,536,965	9,87,459	1882-83,	1,153,142	8,38,480

Five-sixths of the value from the United Kingdom. The importation is chiefly into Bengal and Burma.

Silk, raw, imported into India—

	Lbs.	Rs.		Lbs.	Rs.
1874-75,	2,469,255	87,29,269	1881-82,	1,760,595	74,92,107
1878-79,	1,813,993	56,72,364	1882-83,	2,386,150	1,07,41,556

Three-fourths of it from China.

Hyderabad in the Dekhan.—The chief seat of the tasar manufacture is the town Mahdapore, on the right bank of the Godavery, in the Ramghur Circar. The tasar cloths produced at Mahdapore are, in durability and fineness, very inferior to the cloths of the same kind manufactured in Bengal. The tasseh worm-breeders are a class quite distinct from the weavers, and are either Telingas of low caste or Gonds; the former reside principally at Chilpore, Mahdapore, and Chinnore. The cloth is prepared principally for the Hyderabad market. The tasseh breeder never thinks of keeping up the breed of the insect throughout the year. When the leaf is off the tree about the middle of March, he deems his occupation gone, and he leaves the object of his former excessive care to shift for itself; but with the rains returns his toil. If he can gather a dozen of promising cocoons, which his experience tells him are of females, he is quite satisfied. Carefully does he watch the bursting of the cocoon, and much care does he take of its winged inmate, having previously prepared for it a house of teak leaves dried. The male is not tardy in approaching. Impregnation takes place, the male dies, and in four days after laying her eggs, the female also. The eggs are in number about sixty; of these one-half prove abortive, while the others are hatched in ten days. The small insect is fed on the tender leaves of the Careya sphærica, and in six weeks spins its cocoon. The first brood are spared and allowed to burst their cocoons to supply a sufficient quantity of ova for the tasseh harvest. The same process as described is again gone through, with this exception, that the young worms are at this time fed on the leaves of the Pentaptera tomentosa, as those of the Careya sphærica are by this period of the season supposed to have acquired some influence noxious to the insect. During the progress of the worm from the egg to the formation of the cocoon, every energy of the tasseh breeder is called into action for the preservation of his charge. Ants destroy them, kites and crows prey on them, snakes devour them, and squirrels are said to make a repast of them. The tasseh

breeder ascends the Pentaptera tomentosa tree; he carefully clears every branch of the different species of ants by which they may be infested, preventing the access of others by surrounding the trunk of the tree at its foot with ashes. The other enemies are kept off by shouting, throwing stones, firing guns, etc.; and it rouses the apathetic peasant of Telingana to eloquence when he recounts what privations he undergoes, what pleasure he derives, and what incessant labour he incurs, while watching the rearing of the worm and the perfecting of its work. The tasseh moth of the Dekhan is a species of Saturnia. From four to five hundred of the cocoons are sold to the banya and weavers for one rupee; the moth is killed by means of heat. There are three tasseh harvests, one at the end of the rains, the other two in the cold season. The winding of the silk is accomplished by boiling the cocoons, separating the floss, of which no use is made, and twisting eight or ten filatures from as many cocoons on the middle of the thigh with the left hand of the workman, and to be wound on the instrument. This instrument, the middle bar of the wood, is held lightly in the hand of the workman, and made to move in a semicircle. An ounce and a quarter of silk is the average daily winding of a single workman; his wages are at the common rate of one pice for winding the silk of fifty cocoons, about three pice a day, as he cannot wind more silk than from a hundred and fifty cocoons. The pice, however, are large, and go there by eight to the rupee. The only dyes used for the tasseh silk are the flowers of the Butea frondosa and turmeric; by the former the usual familiar colour is produced; by the latter golden yellow is brought out after the threads are for some time immersed in a solution of ashes. The warp threads are stiffened with rice congee.

Panjab.—Raw silk is imported into the Panjab from Khokand, Bokhara, Balkh, Khulm, Akhcha, Shibarghan, Andkui, and Kashmir; from Saidabad, Murshidabad, Rampur-baulia, in Bengal, and from China via Bombay. The raw silk is sent from Amritsar to all parts of the Panjab for manufacture; raw silk is a staple import by way of Kābul. The principal places of silk manufacture are the cities of Peshawur, Bunnoo, Lahore, Amritsar, Multan, Kohat, Leia, and the capital of the neighbouring state of Bahawulpur. The silks of the latter place are considered the best, and the next those of Multan. The silks generally manufactured in the Panjab are—(1) gulbadan, very stout and mostly broad and of high price; (2) daryai, of a lighter texture, and to be had both plain and shot. Multan produces two other kinds, viz. khes and eklal, both very broad, and much higher priced than anything made in Lahore; loongees of cotton with silk ends or borders, or silk and cotton mixed; rich loongees all silk, and piece-goods of pure silk or mixed cotton and silk. In Kashmir, paper called reshmi kaghaz, or haridi kaghaz, is made from the refuse and from pierced cocoons unfit for reeling.

In the *Central Provinces* silk is manufactured from the imported raw silk of the domesticated worm, but more largely from the indigenous tasar worm, at Raipore, Bilaspur, Sumbulpore, the Upper Godavery, Chanda, Bhandara, Nagpur, Balaghat, Seonee, Chundwara, Baitool, and Narsingapur. The collection and rearing of the worm is pursued as an accessory to other employments. The tasar silk seems to be chiefly employed for fringes, or for weaving with cotton into mixed fabrics, the woof being cotton and the warp silk. In some districts muktas (garments worn by Brahmans after bathing), cholis (women's bodices), and do-pattas and dorwas seem to be made of pure tasar silk.

Central Asia.—The countries bordering on the river Oxus, and the canals and watercourses from Samarcand and Shahr-i-sabz, are full of mulberry trees. About ten days or a fortnight after the mulberry trees put forth their leaves, the eggs of the silk-worms are removed from the place where they had been preserved during the winter, and, being wrapped in a cloth, are carried against the naked breast, or still oftener under the armpit. Three to five days are quite sufficient for the little insects to be hatched. They are then placed in a vessel, and fed with the mulberry leaves. After ten days, the worms, according to the expression of the Bokharians, fall into their sleep or trance; they take no nourishment three days running, repeating the same process every ten days, until the time they begin to spin the cocoon. When these are finished, the worm inside is destroyed by exposing the cocoon to the heat of the sun. That done, the Bokharians proceed to reel off the silk threads. The quality of Bokhara silk is much inferior to that of China, and even to the French and Lombard silks, both in colour and softness. The silk annually produced in the Bokhara territory is estimated to be worth 15 lakhs. The greatest quantity is exported to India. There are several descriptions of silk,—Lab-i-abi is produced on the banks of rivers and canals; Vardanzai, produced in the district of that name to the north-west of Bokhara; Chilla jaidar, produced in the environs of Bokhara, is the best, the best specimens being brought from Koubadian and Hazrat Imam, on the north and south banks of the river Oxus.

Persia.—By the 7th century A.D., the breeding of the worm and the manufacture of silk fabrics was firmly established in Persia. The mulberry grows almost throughout Persia; but the true silk region lies on the south shore of the Caspian, between the mouths of the Araxes and Gurgan, or, in other words, the Russian provinces of Shirwan and Persian Ghilan and Mazandaran. The raw silk of Ghilan is the most important Persian article of export. A paper in the Technologist for 1865 states that the worms are very carelessly treated, and the silk very variable in quality. Its quality is low, it being ill-reeled and irregular. The industry is also carried on in the Persian provinces of Kachan, Meshed, and Yezd. Yezd produces a beautiful silk fabric called Husn Kuli Khan. The colour is very rich, yet very quiet, and is well suited for the dresses of European ladies.

Silk in Europe.—The silk-worms' eggs were conveyed from China to Constantinople by two Persian monks, who had gone to the east as missionaries, and had observed in China the various processes connected with the rearing of the silk-worm, the nature of the trees on which they fed, and the preparation of the silk. This occurred about the year 552, in the reign of the emperor Justinian, who gave every encouragement to the introduction of the valuable insect. The eggs

were conveyed from China within a hollow cane. At the proper season they were hatched, and the caterpillars were fed with the leaves of the wild mulberry tree. The monks continued to superintend, at Constantinople, the rearing of the insects and the whole process of manufacturing the silk. The culture spread from there to Athens, Thebes, and Corinth, in the 10th century. Roger II., king of Sicily, A.D. 1130, took an active interest in establishing it at Palermo, followed by Henry IV. of France and James I. in England, and it has extended to most of the states of the south of Europe, to N. and S. America, Northern and Southern Africa, Madagascar, and Australia. France, Switzerland, Portugal, Spain, Cyprus, Crete have largely engaged in this industry; and in its great seat, the Lombardo Venetian States, there are about 3000 reeling establishments. Even in Great Britain in 1875 there were 696 silk factories, employing 48,124 persons, but its climate is little suitable for the insect and its food, and its establishments get their supplies of raw silk from France, Italy, Turkey, India, and China. London is a great mart, and raw silk is sold there at 14s. to 16s. the lb., and eggs of the silk-worm at 16s. to £2 the ounce. In 1870, Japan sold two millions of ounces of ova for Europe.

Great Britain.—Silk imported into the United Kingdom—

	Lbs.	Value.		Lbs.	Value.
1878,	4,174,898	£3,683,261	1882,	3,375,343	£2,792,804
1880,	3,680,286	3,136,816	1883,	3,184,182	2,579,783

Besides that, there was imported in 1882, 44,380 cwt. of knubs and waste, value £587,888, and of thrown, dyed and undyed, 294,207 lbs., value £351,253. The value of all silk and silk manufactures imported into the United Kingdom in 1882 was £14,906,284, comprising silk knubs, husks and waste, also raw silk and thrown, and broad-stuffs, silk and satin ribbons.

Value of exports from the United Kingdom, British and Irish produce—

Year.	Silk, Thrown, Twist, and Yarn.	Silk Manufactures.	Year.	Silk, Thrown, Twist, and Yarn.	Silk Manufactures.
1875,	£880,923	£1,734,519	1879,	£694,735	£1,697,209
1876,	1,080,678	1,794,565	1880,	683,591	2,030,659
1877,	570,999	1,705,153	1881,	1,008,272	2,564,730
1878,	565,266	1,922,953	1882,	825,572	2,692,275

The manufacture of silk in Britain dates from the year 1585, when the sack of Antwerp by the Spaniards drove many Flemish artisans to England. On the revocation of the edict of Nantes, a century later, a large body of French weavers settled themselves in Spitalfields, and the manufacture has always been fostered by the British Government.

In China, Japan, and British India, the industry has been injured by disease appearing amongst the worms. In Italy, until the outbreak of the 19th century epizoic, the insect seems to have found a most congenial habitat, and sericulture had spread more or less all over the Peninsula. Mr. Winkworth, in the Technologist, estimated the yield of Italy at upwards of 100 million pounds of cocoons. The British Trade Journal puts the value of Italian cocoons at 11¼ millions sterling. But by the year 1870 the epizoic disease had made great havoc in Italy, which was then largely dependent on imported seed.

In *France*, the culture of silk seems to have taken a firm hold at the commencement of the 16th century, when Francis I. introduced silk-worms from Milan to Lyons, and the rearing of the worm was simultaneously commenced in the valley of the Rhone. This tract still continues the headquarters of the industry in France, the Cevennes silk bearing the highest reputation. In 1789 France produced 1,000,000 lbs. of raw silk, but in 1853 the out-turn of cocoons reached to 26 million kilos. (corresponding to about 5 million English pounds of raw silk). In 1857, however, the fatal epizoic broke out, and the yield of cocoons fell to 13 million kilos. in 1867.

In *Portugal*, the silk-worm of the province of Traz-os-Montes alone in Europe escaped the 19th century epizoic. The industry is more generally in the hands of small producers than in other parts of Europe.

The *United States* of America have taken to silk culture, but Mr. William C. Wyckoff says (Silk Goods of America, 1879) the business has not been largely profitable. The trees for the insects' food belong in almost equal proportions to three species, viz. Morus multicaulis, M. alba, and M. moretti, the last being like M. alba, but with a purple berry. The worms introduced are also of three species,—annual, bivoltine, and trivoltine. But the first is the species by far most common, and is said to pay better than the others. In 1878, the United States imported 1,590,663 lbs. of raw silk, and in California the eggs were being sold at from 16s. to £2 per ounce. The cocoons are steamed, dried, and pressed, and sell in Europe at 3s. to 6s. per lb.

New South Wales, South Australia, Victoria, and Queensland have all produced silk. The ailantus worm has been bred at Sydney, and both that breed and the Bombyx mori seem to have been tried in Van Diemen's Land so long ago as 1862.

In *New Zealand*, experiments have been made with the ailanthus worm (Attacus cynthia) and with Japanese (seemingly) trivoltines.

SILK-WORM.

Reshm ki keeri, . . DUK. | Puttoo purughu, . . TEL.
Puttoo puchie, . . TAM. | Nar puttoo, ... „

According to Pusanias, the Greeks called the silk-worm Ser. The Tibetans call it Darkyi-srin, from Srin or Srin-bu, a beetle.

Procopius (De Bello Gallico) says about A.D. 500-565 certain monks arrived from the (country of the) Indians, and learning that the emperor Justinian had it much at heart that the Romans should no longer buy silk from the Persians, they came to the king and promised that they would so manage about silk that the Romans should not have to purchase the article either from the Persians or from any other nation; for they had lived, they said, a long time in a country where there were many nations of the Indians, and which goes by the name of Serinda.

Theophanes of Byzantium, writing at the end of the 6th century, says: 'Now, in the reign of Justinian, a certain Persian exhibited in Byzantium the mode in which (silk) worms are hatched, a thing which the Romans had never known before. This Persian, on coming away from the country of the Seres, had taken away with him the eggs of these worms (concealed) in a walking-stick, and succeeded in bringing them safely to Byzantium.'

Diseases of the Silk-worm.—That most frequently met with is known by the name of pattes noires

or poivre in France. M. de Quatrefages proposed to call it the maladie de la tache, from the spots which appear on the worm when attacked with it. These spots can only be perceived by the aid of a magnifying glass, and this circumstance explains why the malady escaped the observation of silk-growers in the majority of cases until five or six days after the worm had cast its fourth skin. The spots exist in all the tissues and organs of the worm, and in its subsequent stages of a chrysalis and moth. In the latter the spots destroy the antennæ, the legs, or a portion of the wings. In the beginning the spot appears under the form of a yellowish matter pervading the whole system; this matter gradually becomes darker, and is then concentrated into a number of tubercles, which are the spots in question. That such a diseased state should exercise an influence on the quality of the eggs, is not surprising. An infected silk-worm may spin its cocoon when the disease is not too far gone, but the insect generally dies, and the body, instead of putrefying, becomes dry and brittle. M. de Quatrefages tried several methods of cure,—first, the hygienic process, which consists in rearing the worms in open sheds instead of close rooms. The leaves of the wild mulberry, not stripped from the branches, he found very efficacious. He strongly recommended silk-growers to rear small lots of worms apart from the others, solely for the purpose of propagating the species. From his experiments, it appears that the silk-worm does not refuse to eat the leaves of the mulberry sprinkled with Peruvian bark, gentian, valerian, mustard, etc., and the two latter powders especially would seem to produce good effects. But scraped sugar appeared to be preferable to all other remedies. The worms eat the leaves sprinkled with sugar with extraordinary relish, and experiments with this substance were accordingly repeated on a larger scale in the establishment of M. Augliviel, in the department of the Gard, where one of the silk sheds, fitted up for twenty-seven trays, was reduced by disease to four. The worms of these were transferred to another shed, and divided into four lots; the first was fed in the common way, the second with moistened leaves, the third with sugared leaves, and the fourth was subjected to a rigorous abstention of food for seventy-five hours, and then fed chiefly with sugared leaves. At the end of twenty-four hours several worms of the latter lot began to spin, and made several small and imperfect cocoons on the tray. The other worms began to shrivel up and diminish in size, but on receiving the sugared leaves they speedily rallied, and many of them spun their cocoons. The worms fed with moistened leaves fared very badly, and very few of them spun cocoons. Those fed in the common way presented nothing remarkable, and yielded a certain quantity of cocoons; but those fed with sugared leaves throve well, and spun their cocoons sooner then the others. The quantities of silk yielded by these four lots were respectively:—1st lot, 210 grammes; 2d lot, nought; 3d lot, 392 grammes, and of a superior quality; 4th lot, 152 grammes. One great fact was put beyond a doubt, viz. that medicine may be administered to silk-worms in the same way as it is administered to cattle and poultry.

Mr. Thomas Wardle, F.C.S., tells us in the Society of Arts Journal, 9th May 1879, that the silk-producing insects belong to the order Lepidoptera, and are members of two families, Bombycidæ and Saturniidæ. All the Saturniidæ are silk spinners, but not all the Bombycidæ. The British Museum Catalogue contains the names of 294 species of Saturniidæ. The Bombycidæ are less numerous. Tho position of these two families in the great system of classification of the animal kingdom may be thus shown:—

Articulata.—Subdivision II. Anthropoda (or true Articulata).

Class VIII. Insecta.—Sub-Class III. Metabola.

Order X. Lepidoptera.—Sub-Order I. Heterocera (Moths—8 groups or tribes).

Group, Bombycina.

Family 10, Bombycidæ. Genera, Bombyx, Theophila, Ocinara, and Trilocha.

Family 8. Saturniidæ. Genera, Attacus, Antheræa, Actias, Salassa, Rinaca, Rhodia, Caligula, Neoris, Saturnia, Loepa, Cricula.

Mr. Moore has given the following list of all the known species of silk producers in India:—

Mulberry-feeding Silk-worms—Domesticated.

Bombyx mori, *Linnæus*. The common silk-worm, domesticated in China, Bokhara, Afghanistan, Kashmir, Persia, S. Russia, Turkey, Egypt, and Algeria, Italy, France, and Spain, in all which countries it produces but one crop annually, spinning the largest cocoon and the best silk, of a golden-yellow or white.

Bombyx textor, *Hutton*. The Boro pullu of Bengal, domesticated in S. China and Bengal; an annual only, producing a white (sometimes yellow) cocoon, of a different texture and more flossy than B. mori.

Bombyx Sinensis, *Hutton*. The Sina, Cheena, or small Chinese monthly worm of Bengal, partially domesticated in Bengal, where it was introduced from China; produces several broods in the year; cocoon white and yellow.

Bombyx cræsi, *Hutton*. The Nistry or Madrassee of Bengal, introduced from China; domesticated in Bengal; yielding seven or eight broods of golden-yellow cocoons in the year, of larger size than B. Sinensis.

Bombyx fortunatus, *Hutton*. The Dasee of Bengal, yields several broods annually, spinning the smallest cocoon, of a golden-yellow colour.

Bombyx Arakanensis, *Hutton*. The Burmese silk-worm, domesticated in Arakan, said to have been introduced from China through Burma; yields several broods annually; cocoons larger than the Bengal monthly species.

Mulberry-feeding Silk-worms—Wild.

Theophila Huttoni, *Westwood*. The wild silk-worm of the N.W. Himalayas. A wild species, the worms being found abundantly feeding on the indigenous mulberry in the mountain forests of the N.W. Himalayas.

Theophila Sherwilli, *Moore*. The wild silk-worm of the S.E. Himalayas.

Theophila Bengalensis, *Hutton*. The wild silk-worm of Lower Bengal. Discovered in the neighbourhood of Calcutta feeding on Artocarpus lacoocha. Found also at Ranchee in Chutia Nagpur.

Theophila religiosa, *Helfer*. The Joree of Assam and Deo-mooga of Cachar. Feeds on the bur tree (Ficus Indica) and the pipal (F. religiosa).

Theophila mandarina, *Moore*. The wild silk-worm of Che-kiang, N. China. Worms stated to feed on wild mulberry trees, spinning a white cocoon.

Ocinara lactea, *Hutton*, Mussoori, N.W. Himalaya. Feeds on Ficus venosa, spinning a small yellow cocoon, yielding several broods during the summer.

Ocinara Moorei, *Hutton*, Mussoori, N.W. Himalaya. Also feeds on Ficus venosa, as well as on the wild fig, spinning a small white cocoon. It is a multivoltine.

Ocinara diaphana, *Moore*, Khassya Hills.

Trilocha varians, *Walker*, N. and S. India.

Atlas and Eria Group.

Attacus atlas, *Linnæus*, China, Burma, India, Ceylon, Java. This appears to be almost omnivorous,

feeding in different districts upon the shrubs and trees peculiar to them. At Mussoori it is found upon Bradleia ovata, Falconeria insignis, and several other trees. At Almora the yellow flowering barberry is said to be its favourite food. In Cachar it feeds on various other trees. Cocoon well stored with a fine silk.

Attacus Sylhetica, *Helfer*, Sylhet.

Attacus Edwardsia, *White*, Sikkim, Cherra, and Khassya Hills.

Attacus cynthia, *Drury*, China. Domesticated in the provinces of Shan-tung and Ho-nan. Feeds on the varnish tree Ailanthus glandulosus.

Attacus Ricini, *Jones*. The Eria of Assam, and Arindi of Dinajpur. Domesticated in the northern parts of Bengal (Bogra, Rungpur, and Dinajpur), in Assam and Cachar, feeding on the castor-oil plant (Ricinus communis), yielding seven or more crops annually. Cocoons somewhat loose and flossy, orange red, sometimes white. The so-called 'Ailanthus silk-worm' of Europe—the result of a fertile hybrid between the Chinese and the Bengal species—was produced some years ago in France, by Monsieur Guerin Meneville, and subsequently reared, from whence it was introduced into various parts of the world.

Attacus Canningi, *Hutton*, N.W. Himalayas. Common in a wild state, feeding on the leaves of Coriaria Nepalensis and Xanthophyllum hostile. Cocoons hard and compactly woven, rusty orange or grey. An annual.

Attacus lunula, *Walker*, Sylhet.

Attacus obscurus, *Butler*, Cachar. Not very common. Stated to feed on a plant called lood.

Attacus Guerini, *Moore*, Eastern Bengal.

Actias Group.

Actias Selene, *M'Leay*, Mussoori, Sikkim Hills, Khassya Hills, Madras. The worms feed upon Andromeda ovalifolia, Coriaria Nepalensis, wild cherry, and walnut at Mussoori, and on Odina wodier in Madras.

Actias Sinensis, *Walker*, N. China.

Actias Leto, *Doubleday*, Sikkim and Khassya Hills.

Actias Mænas, *Doubleday*, Sikkim and Khassya Hills.

Actias ignescens, *Moore*, Andaman Isles.

Tasar and Moonga Group.

Antheræa mylitta, *Drury*, Antheræa paphia of authors, the tusser, tasar, or tasseh silk-worm. These well-known and valuable insects (of various undetermiued species) are widely distributed over India, from east to west and north to south, on the coast, and in the Central Provinces. They feed in a wild state upon the ber (Zizyphus jujuba), the asun (Terminalia alata), the seemul (Bombyx heptaphyllum), etc.

Antheræa mezankuria, *Moore*, the Mezankuria silk-worm of the Assamese. The worms which produce the mezankuria silk are stated to feed on the addakoory (? Tetranthera, *sp.*), which is abundant in Upper and Lower Assam. The silk is nearly white, its value being fifty per cent. above that of the moonga.

Antheræa nebulosa, *Hutton*. This is the tasar of the Santal jungles of Colong. It is also found in Singbhum, Chutia Nagpur.

Antheræa Perrotteti, *Guer. Men.* Described as being found in the districts of Pondicherry, feeding upon a species of Zizyphus, the jambool (Syzygium jambolanum), etc. Stated to produce four broods in a year.

Antheræa Andamana, *Moore*. An allied species to the tasar. Inhabits the S. Andamans.

Antheræa Frithi, *Moore*, Sikkim Himalayas. A common species, inhabiting the hot sub-tropical valleys below 2000 feet. Known only as a wild species. The cocoon is stated to be similar to that of the tasar in form, but of finer silk.

Antheræa Helferi, *Moore*, Sikkim Himalayas. This is a common species found in the hot valleys of Sikkim.

Antheræa Assama, *Helfer*. The Moonga or Mooga of the Assamese. The moonga silk-worm feeds upon the trees known in Assam as the champa (Michelia, *sp.*), the soom, kontoolva, digluttee (Tetranthera diglottica), the pattee shoonda (Laurus obtusifolia), and the sonhalloo (Tet. macrophylla). It is extensively cultivated by the natives, and can be reared in houses, but is fed and thrives best in the open air and upon the trees. The silk forms an article of export from Assam, and leaves the country generally in the shape of thread.

Antheræa Roylei, *Moore*. The oak-feeding silk-worm of the N.W. Himalayas. A common species, feeding on the hill oak (Quercus incana) of the N.W. Himalayas (Simla, Mussoori, Almora). The cocoon is large and very tough, the silk being pronounced as promising and worth cultivating. They can be reared easily in the house.

Miscellaneous Group.

Salassa Lola, *Westwood*, Sikkim Himalayas.

Rinaca Zuleika, *Hope*, Sikkim.

Rhodia Newara, *Moore*, Nepal Kathmandu. Worms feed upon a species of weeping willow. Spins a brilliant green cocoon, pendent from the twigs.

Caligula Tibeta, *Westwood*, Mussoori, N.W. Himalayas, 7000 feet. Common, the worms feeding on Andromeda ovalifolia, wild pear, and the cultivated quince, forming a light, open, net-like cocoon.

Caligula Simla, *Westwood*, Simla, N.W. Himalayas, 5000 feet. Feeds on the walnut, Salix Babylonica, wild pear, etc.; forms an open, net-like cocoon.

Caligula Cachara, *Moore*, Cachar.

Neoris Huttoni, *Moore*, Mussoori, N.W. Himalaya, 6500 feet. The worms appear in April, feeding upon a species of wild pear tree. Spins a thin silken cocoon.

Neoris shadulla, *Moore*, Yarkand.

Neoris Stoliczkana, *Felder*, Ladakh.

Saturnia Cidosa, *Moore*, hot valleys of the Sikkim Himalayas.

Saturnia Grotei, *Moore*, Sikkim Himalayas.

Saturnia Lindia, *Moore*, Sikkim Himalayas.

Saturnia Anna, *Moore*, Sikkim Himalayas.

Loepa katinka, *Westwood*, Sikkim, 5000 to 7000 feet, Assam.

Loepa Sikkima, *Moore*, hot valleys of Sikkim.

Loepa sivalica, *Hutton*, Mussoori, 5000 feet. Spins a long cocoon, pointed at each end, and of a dark greenish-grey colour.

Loepa miranda, *Moore*, Sikkim Himalayas.

Cricula trifenestrata, *Helfer*, the Haumpottonee of the Assamese. Noted as being very commom in Assam, the worms feeding on the soom tree, forming an open, net-like cocoon of a beautiful yellow colour and of a rich lustre, the silk being spun in the same manner as the Eria cocoon. Occurs also in Moulmein, where the worms are stated to feed upon the cashew-nut tree (Anacardium orientale).

Cricula drepanoides, *Moore*, Sikkim.

Antheræa Pernyi, *Guer. Men.*, the oak-feeding silk-worm of Manchuria, N. China. This is described as having been long known to the Manchur Tartars, very large quantities of the silk being used among the Chinese. The worms feed on various species of oak (Quercus mongolica), etc., the cocoon differing from the tasar in form and texture. The silk is represented as strong, but with little lustre. Two crops of silk are produced in the year,—a spring and autumn crop. A. Pernyi is successfully reared in France, the eggs hatching at almost freezing point. The silk is much cultivated and used in Japan. Its fibre is oval, and 950th of an inch thick.

Antheræa Confuci, *Moore*, a species allied to A. Pernyi, inhabiting the hills in the neighbourhood of Shanghai, N. China.

Antheræa Yama-mai, *Guerin Meneville*, the Yama-mai silk-worm of Japan. This worm feeds on the oak, and produces excellent silk of considerable commercial value in Japan, forming a cocoon of a pale yellowish-green colour. It has been acclimatized in Europe, and crossed with Bombyx attacus.

Saturnia pyretorum from South China. The worm feeds upon the Liquidamber formosana in Canton, Amoy, where the silk is stated to be woven into a coarse fabric.

Theophila mandarina, *Moore*, N. China.

The silk-worm has four metamorphoses,—egg, caterpillar, chrysalis or nymph, and moth or aurelias. The threads as spun by the silk-worm, and wound up into cocoons, are all twins, in consequence of the twin orifice in the lip of the insect, through which they are projected. These two threads are laid parallel to each other, and are glued more or less evenly together by a kind of glossy varnish, which always envelopes them, constituting nearly 25 per cent. of their weight.

In *China*, while the worms are growing, care is taken to keep them undisturbed, and they are often changed from one hurdle to another that they may have roomy and cleanly places; the utmost attention is paid to the condition and feeding of the worms, and noting the time for preparing them for spinning cocoons. Three days are required for them to spin, and in six it is time to stifle the larva, and reel the silk from the cocoons; but this being usually done by other workmen, those who rear the worms enclose the cocoons in a jar buried in the ground and lined with mats and leaves, interlaying them with salt, which kills the pupæ, and keeps the silk supple, strong, and lustrous. Preserved in this manner, they can be transported to any distance, or the reeling of the silk can be delayed till convenient. Another mode of destroying the cocoons is to spread them on trays and expose them by twos to the steam of boiling water, putting the upper in the place of the lower one, according to the degree of heat they are in, taking care that the chrysalides are killed, and the silk not injured. After exposure to steam, the silk can be reeled off immediately, but if placed in the jars, they must be put into warm water to dissolve the glue before it can be unwound.

Rearing Worms.—Mr. Barrow tells us that 'in Che-kiang the houses in which the worms are reared are placed generally in the centre of each plantation, in order that they may be removed as far as possible from every kind of noise, experience having taught them that a sudden shout, or the bark of a dog, is destructive of the young worms. A whole brood has sometimes perished by a thunder-storm.' The chambers are so contrived as to admit of the use of artificial heat when necessary. Great care is taken of the sheets of paper on which the multitudes of eggs have been laid by the silk-worm moths; and the hatching of these eggs is either retarded or advanced by the application of cold or heat, according to circumstances, so as to time the simultaneous exit of the young worms exactly to the period when the tender spring leaves of the mulberry are most fit for their nourishment. They proportion the food very exactly to the young worms, by weighing the leaves, which in the first instance are cut, but afterwards, as the insects become larger, are given to them whole. The greatest precautions are observed in regulating the temperature of the apartments, and in keeping them clean, quiet, and free from smells. The worms are fed upon a species of small hurdles of basket-work strewed with leaves, which are constantly shifted for the sake of cleanliness, the insects readily moving off to a fresh hurdle with new leaves, as the scent attracts them. In proportion to their growth, room is afforded to them by increasing the number of these hurdles, the worms of one being shifted to three, then to six, and so on until they reach their greatest size. When the worms have cast their several skins, reached their greatest size, and assumed a transparent yellowish colour, they are removed into places divided into compartments, preparatory to their spinning. In the course of a week after the commencement of spinning, the silken cocoons are complete, and it now becomes necessary to take them in hand before the pupæ turn into moths, which would immediately bore their way out, and spoil the cocoons. When a certain number, therefore, have been laid aside for the sake of future eggs, the pupæ in the bulk of the cocoons are killed by being placed in jars under layers of salt and leaves, with a complete exclusion of air. They are subsequently placed in moderately warm water, which dissolves the glutinous substance that binds the silk together, and the filament is wound off upon reels. This is put up in bundles of a certain size and weight, and either becomes an article of merchandise under the name of raw silk, or is subjected to the loom, and manufactured into various stuffs, for home or for foreign consumption.

When from the large number of worms it is necessary to feed them on floors of rooms and halls, Fortune says a layer of dry straw is laid down to keep them off the damp ground, but whether the worms be fed on sieves or on the floor, they are invariably cleaned every morning. All the remains of the leaf-stalks of the mulberry, the excrement of the animals, and other impurities, are removed before the fresh leaves are given. The Chinese are particular as regards the amount of light which they admit during the period the animals are feeding; no bright light is allowed to penetrate. When the worms cease to feed and commence to spin, the first indication of this change is made apparent by the skin of the little animals becoming almost transparent. When this change takes place, they are picked, one by one, out of the sieves, and placed upon bundles of straw to form their cocoons. These bundles of straw, which are each about two feet in length, are bound firmly in the middle, the two ends are cut straight, and then spread out like a broom, and into these ends the worms are laid, when they immediately fix themselves and begin to spin. During this process the underside of the framework on which the bundles of straw are placed is surrounded with cotton cloth, to prevent the cold draught from getting to the worms. In some instances small charcoal fires are lighted and placed under the frame inside the cloth, in order to afford further warmth. In a few days after the worms are put upon the straw, they disappear in the cocoons and have ceased to spin. In the reeling process, there is, first, the pan of hot water into which the cocoons are thrown; second, the little loops or eyes through which the threads pass; third, a lateral or horizontal movement, in order to throw the silk in a zigzag manner over the wheel; and lastly, the wheel itself, which is square. Two men, or a man and a woman, are generally employed at each wheel. The business of one is to attend to the fire and to add fresh cocoons as the others are wound off. The most expert workman drives the machine with his foot, and attends to the threads as they pass through the loops over on to the wheel. Eight, ten, and sometimes twelve cocoons are taken up to form one thread, and as one becomes exhausted, another is taken up to supply its place. Three, and sometime four, of such threads are

passing over on to the wheel at the same time. The lateral or zigzag movement of the machine throws the threads in that way on the wheel. The water in the pan into which the cocoons are first thrown, is never allowed to boil, but it is generally very near the boiling point. A slow fire of charcoal is also placed under the wheel, as the silk is winding; this fire is intended to dry off the superfluous moisture which the cocoons have imbibed in the water in which they were immersed. A clean, active, and clever workman is entrusted with the care of the reeling process.

Food.—The principal object in the cultivation of the mulberry trees for feeding silk-worms, is to produce the greatest quantity of young and healthy leaves without fruit. For this reason the trees are not allowed to exceed a certain age and height. They are planted at a convenient distance from each other, on the plan of a quincunx, and are said to be in perfection in about three years. The time for pruning the young trees, so as to produce fine leafy shoots, is at the commencement of the year. About four eyes are left on every shoot, and care is taken that the branches are properly thinned, with a view to giving plenty of light and air to the leaves. In gathering these, they make use of steps, or a ladder with a prop, as the young trees cannot support a ladder, and would, besides, be injured in their branches by the use of one. The trees, with their foliage, are carefully watched, and the mischief of insects prevented by the use of various applications, among which are some essential oils. Fresh plants are procured by cuttings or layers, or sometimes from seed.

Mr. Fortune says that in the vicinity of Nan-tsin, the centre of the great silk country of China, it is on the banks of canals, banks of rice-fields, small lakes, and ponds, where the mulberry is generally cultivated. The trees are planted in rows, from five to six feet apart, and are allowed to grow from six to ten feet high only, for the convenience of gathering the leaves. In training them they are kept open in the centre. Leaves are not taken at all from plants in their young state, as this would be injurious to their future productiveness. In other instances a few leaves only are taken from the bushes, while the remainder are allowed to remain upon the shoots until the summer growth is completed. In the latter case the leaves are invariably left at the ends of the shoots. When the bushes have attained their full size, the young shoots with the leaves are clipped close off by the stumps, and shoots and leaves carried home together to the farm-yard, to be plucked and prepared for the worms. In the case of young trees, the leaves are generally gathered in by the hand, while the shoots are left to grow on until the autumn. At this period all the plantations are gone over carefully, the older bushes are pruned close in to the stumps, while the shoots of the younger ones are only shortened back a little, or allowed to attain to the desired height. The ground is then manured and well dug over. It remains in this state until the following spring, unless a winter crop of some kind of vegetable is taken off it. This is frequently the case. Even in the spring and summer months it is not unusual to see crops of beans, cabbages, etc., growing under the mulberry trees.

The best raw silk, called taysaam, comes from the province of Hu-kwang; the tsailee also comes from that province and Che-kiang; both kinds are called Nankin raw silk.

In China, the worms fed on the mulberry trees are called T'ien-lai-ts'an, heaven-sent silk-worms. The best silk of China is obtained from cocoons of worms fed on the Tsin-tso-tsze.

The raw silk of Sheng-king in Manchuria is from the Bombyx Pernyi and B. fantoni worms, fed on the leaves of Quercus Mongolica, Q. rohur, Q. dentata, Q. castaneæfolia.

In Chin-kiang are worms which feed on the Quercus serrata and Q. Sinensis.

Bombyx cynthia feeds on the Ailanthus glandulosa.

Dr. Williamson (Journeys through North China) states that in Shan-tung there is a wild silk from a worm fed on the black pepper tree.

In Chefoo are worms fed on the Xanthoxylon alantum, called by the natives Hua-tsiao, peppery flower, which may be that noticed by Dr. Williamson.

In Hankow, worms are fed on the leaves of the mulberry trees, the ailanthus, and the oak.

In Fu-chu, a worm that feeds on the camphor tree, falls from the tree and is gathered. They are broken in two, dipped in vinegar, and have their intestines drawn out, dried in the air, and used for fishing-lines.

Saturnia atlas, the giant atlas moth, has wings measuring 7 or 8 inches across. This species, and also S. cecropia and S. luna, have their wings produced into a tail. The cocoons of S. cynthia and S. mylitta are used in India for the production of silk. Latreille states that these are the wild species of silk-worm of China.

China Husbandry and Silk Manufacture form the subjects of one of sixteen discourses to the Chinese people. It is there observed that 'from ancient times the Son of Heaven himself directed the plough; the empress planted the mulberry tree. Thus have these exalted personages set an example to all under heaven, with a view to leading the millions of their subjects to attend to their essential interests.' In the imperial Illustrations of Husbandry and Weaving, there are numerous woodcuts, accompanied by letterpress explanatory of the different processes of farming and the silk manufacture. The former head is confined to the production of rice, the staple article of food, and proceeds from the first ploughing of the land to the packing of the grain; the latter details all the operations connected with planting the mulberry and gathering the leaves, up to the final weaving of the silk. From notices of silk-worms in Chinese works collected and published by M. Julien, by orders of the French Government, it appears that credible accounts of the culture of the tree and manufacture of silk are found as far back as B.C. 780; and in referring its invention to the empress Siling or Yuenfi, wife of the emperor Hwang, to B.C. 2602, the Chinese have shown their belief of its still higher antiquity.

Notwithstanding the apparent simplicity of the looms of the Chinese weavers, they will imitate exactly the newest and most elegant patterns from England or France. The Chinese particularly excel in the production of damasks and flowered satins. Their silk crape has never yet been perfectly imitated; and they make a species of washing silk, called Canton pongee, which becomes more soft as it is longer used.

Silk organzine is 'formed of two, three, or more singles (*i.e.* reeled threads after being twisted), according to the substances required, twisted together in a contrary direction to that of which it is composed are twisted.' Organzine is also called thrown silk; it is used in weaving piece goods.

A great part of the silks and crapes used in Hoo-chow-fu are manufactured in the adjoining towns of Soo-chow and Kang-chow. Flowered crape, however, a very beautiful production, is made in Hoo-chow. The process of manufacture is thus described by the Rev. Mr. Edkins in the North China Herald: 'Two men were engaged at a loom in a cottage on the side of a stream. One sat at the end of the loom moving five pedals, and directing the shuttle and all that needed to be done with the threads that lay horizontal on the frame. The other was perched overhead to superintend the pattern. This he did by means of vertical threads tied up in bundles, a large number of which, distributed transversely through the threads of the horizontal frame beneath him, were at his disposal. These he raised according to the requirement of the pattern, and thus caused that elevation in the threads on the frame below that constituted the flowered part of the piece.'

In *Japan*, according to a report by Mr. Adams, Secretary of Legation, 'the silk districts are confined to the principal island, and may be divided into three groups,—the northern designated under the general name of Oshiu; the south-western, including those of Echizen, Sodai, Mashita, etc.; and the central, which produces the Mayebashi, Shinshiu, and other varieties of hank silks, as well as the silks of the Koshiu and Hachoji.' The northern isles are somewhat too cold, and the southern too hot, to be a favourable field for the enterprise. The mulberry trees are planted along the borders of the fields, sometimes in rows, at intervals, across them, so as not to interfere with the cultivation of other plants; but at Uyeda in Shinshiu, in groves. The most common kinds of the mulberry trees are the Yotsume, the Nedzumigaishi, the Oha, and Kibuha, all of them known in Europe. They are well manured.

Rearing of Worms.—The mountainous districts at a distance from the sea appear to be most favourable for the production of the eggs, and the Japanese rearers obtain their seed from Shinshiu. In Japan, the houses for rearing silk-worms are two-storeyed, the corner posts are of wood, the intervals between the posts of trellised bamboo covered with an inner and outer coating of dried mud. The temperature within is kept at 70° Fahr. The hatching season varies from the 20th April to the 5th May. Branches of the mulberry trees are cut and dried, and in bundles brought to the rearing-house. To facilitate cleaning the trays, nets stretched on very light frames are laid over the worms, and fresh leaves are spread upon the nets; the worms, attracted by the fresh leaves, climb up to the nets, and they are then transferred to another set of trays. On the worms ceasing to eat and their skin assuming a transparent colour, they are removed to spin their cocoons to separate trays, called Mabushi.

The worms and the chrysalides are subject to several diseases. One of these, chiefly in the low damp localities, is the attacks of the uji, also called koro and bo, in Chinese chii or tseu. It is supposed to be inserted into the caterpillar, but does not affect its health until after it has turned into a chrysalis. During the period which follows the formation of the cocoons, this maggot kills the chrysalis, on the substance of which it has been feeding; and, having attained its full development, it pierces the cocoon, and renders it useless for anything but floss silk. After the uji has left the cocoon, its colour changes from pale-yellow to reddish-brown, gradually becoming darker and darker, and after three or four days it is nearly black. It is annulated, without feet, and sometimes nearly as large as the chrysalis itself. The uji chrysalis becomes a fly.

Mr. F. O. Adams, H.M. consul in Japan, writing in 1869, and repeating in 1871, says that in the most favoured district in Shinshiu the proportion of uji was from 30 to 40 per cent. Near Koshiu it was 56 per cent., besides 10 per cent. of dead chrysalides. In Musashi, Joshiu, and Koshiu, the general proportion was from 60 to 70 per cent., and in one district of Koshiu it even reached 84 per cent. In 1868 the average is said to have been only 10 to 25 per cent.

When the cocoons are retained for eggs, they are placed in a single layer on the feeding trays, and are covered with sheets of paper pierced with holes at regular intervals of two or three inches. After a fortnight, the moths begin to emerge from the cocoon, and, instinctively seeking air and light, they soon pass through the openings in the paper, and couple on its surface, and in the evening the females are placed on cards, where they lay their eggs, till the following morning. From 50 to 100 female moths are put on a card, which in places is set in a varnished frame, to compel the moth to lay its eggs on the cards, as they dislike varnish. When the cards are filled, they are hung up in dry, shady places, till the eggs, which are yellow at first, assume the yellow or green hue peculiar to the Japanese produce.

When the cocoon is kept for reeling, the chrysalis is killed by exposing the cocoons for several days to the sun, or in the absence of sunshine, to the heat of a charcoal fire. The reeling is performed by young women, who throw the cocoons into a hot-water basin, and detach from the cluster of threads, four, five, or more, according to the intended thickness of the silk, making them glide over the smooth surface of a thin round rod placed across the basin. It is re-reeled into a larger skein before it is made up into hanks or bundles and offered for sale.

In 1869, 319,829 lbs. avoirdupois of eggs were exported from Japan to France and Italy. The eggs of Bombyx mori and other species of Bombyx, are imported into Europe from Japan at about 25s. the ounce, to supply the deficiency caused by the pebrine disease.

In *Bengal*, the system of growing the mulberry as a standard tree has been tried, but with as little success as attended the experiment of the St. Helena variety on the Bombay side of India. The common bush mulberry is very much preferred by the people at Surdah, commercially, Radnagore, and all other parts of Bengal, where silk cultivation prevails. The Morus alba is infinitely to be preferred as food for the worms of the Bombyx mori, and this has been introduced from China into Europe as well as into India. Morus Indica, the species most common in Bengal, is thought by Dr. Wallich to be only one of its varieties. Morus atro-

purpurea is a species introduced into India from China, where it is employed as food for the silk-worm, though Dr. Roxburgh states that it had not been found to answer for that purpose in Bengal. Two varieties (one, the Doppa foglia) of the Italian white mulberry, received from St. Helena, were established in the East India Company's botanic garden at Dapuri, in the Bombay Presidency. The then superintendent, Dr. Lush, forwarded to Calcutta young plants, which, in September 1833, were reported by Dr. Wallich to be in a flourishing condition. Two other species are common in the plains of N.W. India, and others have been introduced there from Kābul and Kashmir; one distinct species occurs, moreover, in the Himalaya. Colonel Sykes also drew attention to the great importance of introducing into India the mulberry called Morus multicaulis, a distinct species or variety introduced by M. Perrottet into France in 1821, from the Philippine Islands, where it had been brought from China. It is now thought by many, both in Italy and France, to be the most valuable sort for cultivation, and has become a favourite variety in America. Besides growing easily, and affording abundance of leaves of the most nourishing kind, it is said to be able to withstand a considerable degree of cold.

The Morus nigra is not the best species for the nourishment of the silk-worm, although the caterpillar feeds readily on the leaves. The white-fruited mulberry, Morus alba, a native of China, is the best, and is greatly preferred by the insect. M. alba is now cultivated in many parts of Europe, frequently as a pollard by road-sides. It comes into leaf a fortnight earlier than the black mulberry, which is an advantage in the culture of silk-worms. The white mulberry does not thrive in Britain, the winters being too severe. The Philippine mulberry is a favourite in the south of France, on account of the size and quantity of the leaves, and the ease with which it can be propagated.

In the south of Europe, mulberry leaves are sold by weight in the market, and the buyer chooses them either young or mature, according to the age of the insects which are to feed on them. Young worms are fed on tender leaves, while full-grown caterpillars require the stronger nutriment of the mature leaf. Attempts have been made to store food for the silk-worm by drying the leaves in the sun, then reducing them to powder, and placing the latter in jars. This powder, moistened with water, is eaten with avidity by the silk-worm, and may prove a valuable resource in late seasons, or under circumstances which affect the principal crop. It is even thought that three or four crops of cocoons per year may be obtained in northern climates, by keeping successive hatchings of eggs in warm rooms, and supplying the worms with this food during winter.

In the *Bengal Presidency*, the districts of Bardwan and Rajshahi in Lower Bengal are the great silk region. In the latter alone, an area of 80,000 acres are under mulberry cultivation, but in Bogra, Maldah, Murshidabad, Birbhum, and Midnapur, the plant is also largely grown. Three growths of silk-worms of the Bombyx mori are usually obtained in the year, in November, March, and August.

The *wild silks* known as tasar or tusser are the produce of several undomesticated worms, which feed on various trees. That of Chutia Nagpur is the Antheræa paphia, and it feeds on Vatica robusta and Zizyphus jujuba; but when semi-domesticated, the leaves for its food are those of the Terminalia alata. This species is trivoltine, August, November, and May. Many attempts have been made to introduce the tasar silk in European commerce, but have failed. The chief tasar worms of Assam are the domesticated eria or Attacus Ricini which feeds on the castor-oil plant, and the semi-domesticated mooga or Antheræa Assama, which feeds on the soom tree.

Silk Fabrics.—Of the districts and towns in British India famed for these, may be named in the Madras Presidency — Chedambaram, Diudigul, Madura, Tanjore. In the Mysore State—Bangalore, Mysore, and Tumkur. In the Bombay Presidency—Ahmadabad, Burhanpur, Dharwar, Surat. In Bengal—Benares, Birbhum, Gaya, Patna. In Burma—Pegu, Rangoon, Shooay-dagon, Tounghoo. In the Central Provinces — Bilaspur and Chanda. In Assam and the N.E.—Darrang, Manipur, Rungpur, Sibsagor; and principal places of silk manufacture are Peshawur, Lahore, Amritsar, Multan, and the capital of the neighbouring state of Bahawulpur. The silks of the latter place are considered the best, and the next those of Multan.

Many of the sarees or women's cloths made at Benares, Pytun, and Burhanpur, in Gujerat, at Narrainpet and Dhanwarum, in the territory of His Highness the Nizam, at Yeokla in Kandesh, and in other localities, have gold thread in broad and narrow stripes alternating with silk or muslin. Gold flowers, checks, or zigzag patterns are used, the colours of the grounds being green, black, violet, crimson, purple, and grey; and in silk, black shot with crimson or yellow embroidery, crimson with green, blue, or white, yellow with deep crimson and blue, all producing rich, harmonious, and even gorgeous effects, but without the least appearance of or approach to glaring colour, or offence to the most critical taste. They are colours and effects which suit the dark or fair complexions of the people of the country; for an Indian lady who can afford to be choice in the selection of her wardrobe, is as particular as to what will suit her especial colour—dark or comparatively fair—as a lady of Britain or France. At the London Exhibition of 1862, silk pieces, figured and gold embroidered, were sent from Bahawulpur by H.H. the Nawab.

Assam.—As each householder reels, spins, and weaves his own cloth, the holiday attire of the Assamese is usually of silk. In Durung, a t'han of good silk measuring 10 yards can be purchased for from 5 to 10 rupees, according to the fineness. The cloth is occasionally coloured, but the Assamese silks are usually of the natural colour as wound from the cocoon.

Afghanistan.—Silks are considerably manufactured at Kandahar. In Kashmir, since 1871, silk is increasing. The silk of Herat, Jalalabad, Kābul, and Kandahar is chiefly consumed in their domestic manufactures.

The larvæ of many European moths produce a strong silk; the native silk-worms of America yield a material which has been manufactured into handkerchiefs, stockings, etc., by the inhabitants of Chilpancingo, Tixtala, and other places of South America. The ancient Mexicans used the internal layers of white cocoons, which

strongly resemble Chinese paper, as a material for writiug on.

Wild silks.—The only coeoons at present utilized in India, besides those of the several speeies of mulberry-feeding worms of the genus Bombyx, are those wild oues of five speeies of Attaeus, viz. A. atlas, eynthia, Edwardsia, and Rieini, and perhaps A. selene, with eight speeies of Antheræa, viz. An. Assama, Frithii, Helferi, mezankooria, nebulosa, paphia, and Perotteti, aud Crieula trifenestrata.

The *wild silk insects* of British India are found on the following trees:—Artemisia, *sp.*, Bauhiuia parviflora, Boswellia thurifera, Careya sphærica, Carissa carandas, Cassia laneeolata, Celastrus montana, Chloroxylon Swietenia, Conoearpus latifolia, Dillenia speeiosa, Ficus Benjamina, F. t'siela, F. religiosa, Lagerstræmia Indiea, L. parviflora, Morus, *sp.*, Nauelea cadamba, Osbeekia, *sp.*, Rieinus communis, Salmalia Malabariea, Syzigium jambolanum, Tectoua grandis, Termiualia glabra, Ter. eatappa, Ter. tomentosa, Ter. arjuna, Tetranthera laneeæfolia, Tet. mouopetala, Vatiea robusta, Zizyphus jujuba, Z. xylopyrus. In Ceylou, Antheræa mylitta, *Drury*, feeds on the eountry almond (Terminalia catappa) and the Rieinus eommunis or castor-oil plant.

The *wild moth* most commonly met with in Southern India appears to be S. paphia. The caterpillar feeds on the leaves of the eountry almond tree (Terminalia eatappa), whenee it is often ealled the almond moth. It is also found on the leaves of the ber tree, Zizyphus jujuba, the easuarina, ete. The eoeoons are ingeniously attached to the twiggy braeches of the ber (Zizyphus jujuba) by a long stalk, terminating in a ring, eneireling the braneh. In the thieker foliage of the easuarina, the silk is woven among the leaves without the above provision. It has not been obtained in any quantity from this souree iu the Madras Presideney.

Tasseh silk cloth is mueh used for ladies' aud children's dresses, aud in most parts in India for native use, being worn by Hindus for eertain ritual eeremonies, and while bathing.

Ahmadabad has long held a prominent plaee as a silk-manufaeturing eity. Its kimkhabs and broeades, though not quite so rieh as those of Benares, are mueh sought after in consequence of their durability and non-fading qualities of their gold tissues. Its mushroos are supposed to be the best in India, and its ordinary silk cloths are also in good demand.

Dr. Forbes Watson's Textile Fabries of India ineludes silk pieee-goods, and loongees and sarees of eotton aud silk used conjointly, from Surat; embroidery of gold and silver on silk from Satara; silk pieee-goods from Ahmadnaggur; silk pieee-goods and silk and eotton sarees from Belgaum; silk and cotton loougees from Bombay; and silk aud cotton sarees from Dharwar. Berhampore, near Kandesh, also manufaetures silk, and there are small colonies of weavers at Jinjerra, Yeola, Tanna, aud Revdanda (in Colaba). The establishment of the manufaeture at the two last places seems to be due to the Portuguese.

In *Europe*, the silk-worm is the eaterpillar of the Bombyx mori. The eggs are smaller than grains of mustard seed, very numerous, slightly flattened, yellowish at first, but changing iu a few days to a blue or slate eolour. In temperate climates they ean be preserved through the winter without hateling until the time when the mulberry tree puts forth its leaves in the followiug spring. The silk-worm, when first hateled, is about a quarter of an ineh long, and of a dark colour. If supplied with appropriate food, it remains contentedly in one spot; this is the easc throughout its ehanges, so that there is no trouble in retaining it within bounds, as there would be with some other eaterpillars. After eight days' feeding and rapid inerease of size, it prepares to change its skin, the first skin having become too small for its body. It remains three days without food, during whieh time a secretion forms on the surfaee of the new skin, whieh helps the caterpillar to east off the old one; but the operation is further faeilitated by silken lines whieh the inseet easts off and fixes to the adjacent objects; these hold the old skin tightly, while the caterpillar ereeps out of it. The whole covering of the body is thus east off, ineluding that of the feet, and of the teeth and jaws; but it is done with difficulty, and sometimes the skin breaks, and a portion of it remains attached to the hinder part of the body, eompressing it, and usually causing death. The newly moulted worm is pale in colour, and wrinkled; but it immediately reeovers its appetite, and grows so rapidly that the new skiu is soon filled out, and iu five days another moult beeomes necessary. Four of these moults aud renewals of the skin bring the eaterpillar to its full size, when its appetite beeomes voracious, aud the sueculent parts of the mulberry leaves disappear with extraordinary rapidity. The insect is now nearly 3 iuehes long; its strueture eonsists of 12 membranous rings, whieh eontraet and elongate as the body moves. There are 8 pairs of legs, the first 3 pairs being eovered with a shelly or sealy substanee, whieh also invests the head. The mandibles are strong, and indeuted like a saw. Beneath the jaw are two small orifiees through whieh the inseet draws its silken lines. The silk is a fine yellow transparent gum, secreted in slender vessels, which are deseribed as being wound, as it were, on two spindles in the stomaeh; these vessels, if unfolded, would be about 10 inehes long. The insect breathes through 9 pairs of spiracles distributed along the sides of the body. The eaterpillar has 7 small eyes near the mouth; the two spots higher up are not eyes, but portions of the skull. Arrived at maturity, the caterpillar is of a rieh golden hue; it leaves off eating, and seleets a eorner in whieh to spin its coeoon. It first forms a loose strueture of floss silk, and then within it the closer texture of its nest, of an oval shape. Here the eaterpillar remains working until it is gradually lost sight of within its own beautiful wiuding-sheet. Taking no food and emitting this large quantity of silk, its body diminishes one-half, and on the completion of its coeoon it ehanges its skin onee more, but then beeomes an apparently iuanimate ehrysalis or aurelia, with a smooth brown skin, aud pointed at one end. It remains in this eorpse-like state for a fortnight or three weeks, when it eomes forth a perfeet winged inseet,—the silk moth. In eseaping from the eoeoon, it pushes aside the fibres, first moistening the interior of the coeoon with tasteless liquid from its mouth to dissolve the gum whieh holds the fibres together. The mouth has no teeth, therefore it cannot gnaw its way out as

generally supposed. In the perfect form, the insect takes no food, and only lives two or three days. The female dies soon after laying her eggs, and the male does not long survive her.

The domestic treatment of the silk-worm has been brought to great perfection in Italy. Formerly the eggs were hatched at uncertain periods, depending on the natural warmth of the season, or they were put in manure-beds, or were worn in little bags about the person next the skin. They are now hatched in an apartment heated to the proper degree by a stove; but they are first washed in water, and afterwards in wine, to separate light eggs, as well as dirt, and the gummy envelope which surrounds the heavy ones. The temperature of the hatching-room is at first 64°, but is gradually raised 1 or 2 degrees daily, until it reaches 82°, which it is not to exceed. Pieces of coarse muslin, or of white paper pierced with holes, are placed over the eggs when they are about to be hatched. Through these the worms creep to the upper surface, and are removed as soon as possible to a cooler place. Young leaves and sprigs of mulberry are laid upon the muslin or paper, when the worms eagerly settle on the leaves, and can thus be transferred to trays, and removed to the nursery. This is a dry room of regulated warmth, with windows on both sides, so that free ventilation may be attainable. Chloride of lime should be in use to purify the air, and a thermometer and hygrometer to regulate the heat and moisture; the latter is apt to abound where silk-worms are kept, and is very prejudicial to them. Moist exhalations arise from the leaves and from their bodies. Fermentation, also, soon takes place if litter and dung be not speedily removed from their trays; these are fertile sources of disease among the worms, and may carry off thousands in a day. 80 lbs. French (=88 lbs. English) of cocoons are the average produce from one ounce of eggs.

Diseases.—One of those to which silk-worms are liable consists of the formation of a minute cryptogamous plant of mildew within the body of the living insect. Damp and fermenting food and litter produce, in the first place, among the fatty matter of the body of the caterpillar, an infinite number of sporules supported by minute stems. These increase to such a degree that the vegetation soon pierces the skin, gives a general mealy appearance to the body of the caterpillar, ripens its seed, which is borne by the winds to every part of the nursery, carrying contagion with it, and at length causes the death of the worms. The dead bodies of worms or moths (for the insect is infected in all stages) are sources of contagion, unless immediately destroyed. This disease is called muscardine in France, calcinetto in Italy. The French name arises from the resemblance of the diseased caterpillar to a mealy kind of sugar-plum made in Provence, and sold by the name of muscardine; the Italian name also refers to the chalky or mealy surface of the skin. Various fumigations and washes have been tried, in order to purify infected nurseries, and to preserve others from the ravages of this malady; a solution of blue vitriol, the sulphate of copper applied to the wood-work, frames, etc., of the nursery, is of great use in destroying the seeds of the fungus, but nothing is so good a preservative as rigid attention to cleanliness and good ventilation. The improved means, first employed in Italy, for preserving the health of these valuable insects, are due to Count Dandolo, who gave particular and scientific attention to the subject, and superseded many an absurd custom in the rearing of silk-worms. According to his method, wicker shelves are arranged in a room at convenient distances, and are lined with paper on which the worms are placed. Such worms only are placed together as have been hatched at the same time, the space allowed them being, for each ounce of egg, 8 square feet during the first age, 15 feet for the second age, 35 feet for the third age, 82½ feet for the fourth, and about 200 feet for the fifth age. The mulberry leaves are chopped, in order to present a large number of fresh-cut edges to the young insect. Four meals a-day, as a regular rule, and luncheons between when the worms are particularly voracious, is the liberal allowance for their subsistence. The temperature at which silk-worms are healthiest appears to be from 68° to 75°, though they are able to bear a much higher temperature. Alternations of heat and cold are exceedingly injurious to them.

The muscardine disease is produced by Botrytis Bassiana; the still more terrible pebrine disease is caused by a minute vibrio-like organism.

In *Madagascar*, there is said to be an indigenous silk-worm of great size, fed in the open fields on the pigeon-pea (Ambira vatry), and yielding very large cocoons. Little attention, however, is paid to it by the natives. This is probably the silk of which Mr. Consul Pakenham writes, 11th August 1869, 'There is another silk in Madagascar much esteemed on account of its strength, which is said to be collected in a state of floss in the interior, and afterwards treated much the same as cotton.' Mr. Pakenham states that M. de Lastelle imported Bombyx eggs from China, introduced the mulberry, and set up a regular establishment at Tamatave, which produced several thousand pounds of fine silk.—*Von Mueller; Four Reports on Japan Silk, by F. O. Adams*, 1870-1871; *Mr. Consul J. Troup's Tour in Japan*, 1870; *China Imperial Customs Silk Report*, 1881; *Ure's Dictionary; Trade Accounts, Statistical Abstract, and Accounts of Trade of Great Britain and British India; Wild Silks of India, by Thomas Wardle*, 1880; *Collection of Papers regarding Tasar Silk*, 1879; *Wm. C. Wyckoff, The Silk Goods of America*, 1879; *Williams' Middle Kingdom; Sir J. Sheil, in Markham's Embassy; Royle's Arts and Manufactures and Productive Resources of India*, p. 497; *Morrison's Compendious Description; Geoghegan, Silk in India, Calcutta*, 1872; *Capt. Hist. of the Bible; Chinese Repository; Juries' Reports and Catalogues of Exhibitions; Davies' Chinese; Fortune's Residence; Tennent's Ceylon; Dr. Walker in Madras J. Lit. and Science; Yule's Cathay; Huc's Chinese Empire; Powell's Handbook.*

SILK-WORM GUT. The substance which is secreted through the mouth of the silk-worm, while in the body of the animal appears as a viscous liquid, which becomes solid when in contact with the air. If a silk-worm be taken when about to spin its cocoon, and immersed for twelve hours in vinegar, on opening the reservoir which contains the liquid silk, this may be drawn out in the form of threads as thick as a common-sized knit-

ting needle, and of great tenacity. They are used for fishing-lines.—*Dr. T. L. Phipson*, p. 12.

SILK COTTONS are products of several plants, Bombyx, Salmalia, Eriodendron, Oehroma lagopus, the feathery, silk-like material in Calotropis pods and the Cryptostegia. The red cotton tree is the Salmalia Malabarica, and white cottou tree, Eriodendron anfraetuosum. Bombyx ceiba and Salmalia Malabarica capsules, on bursting, display a floeculent substance, often mistaken by travellers for cotton. Mr. Williams, of Jubbulpur, succeeded in spinning and weaving some of it so as to form a very good coverlet. It might be used for stuffing pillows, muffs, or coverlets, for wadding, or for conversion into half-stuff for paper-makers, perhaps for making gun-cotton. In the Trans. of the Agri-Hortic. Soc. iii. p. 274, there is a report from the Society of Arts on two pieces of cloth made from the Salmalia; but it is observed that, from the shortness of the staple of the down, and its elasticity, it could not be spun by cotton-spinning machinery. The silky down of the Cryptostegia is strong, and might be applied to some textile manufactures.

In other countries, plants yielding this product are—Eriodendron Caribbæum, *Don;* Er. samauna; Pachira barrigon, *Seem.;* Chorisa speciosa, *Bengus.;* Eriocephalus, *sp.*, of Africa.

The silk cotton of the Eriodendron anfraetuosum is used in England for stuffing the pads of trusses. Cloth has been manufactured from an admixture of cotton and the floss of the mudar (Calotropis gigantea) and the ak (C. Hamiltonii), which produce this floss in great abundance. Messrs. Thresher and Glenny reported their ability to turn it to account, if obtainable in clean, good condition at £35 per ton. The charges of the down are merely those of the labour employed and the packing. It may be collected at about 1 rupee 8 annas (3s.) per maund (82 lbs.). The plant is to be found in the greatest abundance everywhere, growing most luxuriantly in dry, sandy tracts where nothing else will flourish. The down ought to be collected in May and June, and spread at least over two months.—*Mason; Royle; Madras Ex. Jur. Rep.*

SILLAGO, a genus of fishes, of the family Trichinidæ, and group Trichinina. The following species are known to occur in the S. and E. of Asia:—

Sillago sihama, *Forsk*, Red Sea, Indian Seas.
S. Japonica, *Schleg.*, Moluccas, Japan.
S. maculata, *Q. and G.*, Australia, Archipelago.
S. punctata, *C. and V.*, Australian Seas.
S. ciliata, *C. and V.*, Australian Seas.
S. macrolepis, *Bleek*, Batavia, Bali.
S. chondropus, *Bleek*, Moluccas.
S. domina, *C. and V.*, Bay of Bengal, Archipelago; syn. of Uroscopus cognatus.
S. Malabarica, *Bloch, Schneid.;* syn. of Sciæna Malabarica, *Bl., Schin. Pl., Russell*, cxiii., *Soring.*
S. Malabarica, *Cuv., R. A.* ii.
S. actua, *C. and V.* iii. p. 400.
S. actua, *Bleek, Verh., Batav.*, Gen. xxii. 25, 61–64. Ikan Ubi of the Malays of Penang.

SILONG or Selones, the chain of islands of the Malay Archipelago, is frequented by the Silong, a mild, peaceful, and honest race, and little given to crime. They believe that nats or spirits dwell in the sea, land, air, trees, and stones; but they do not invoke or sacrifice to them, nor are they symbolized. Their number does not exceed 1000. They are fishermen, living in their boats or beneath trees on the beaches till the monsoon becomes severe, when they construct slight huts. They subsist entirely on turtle, fish, and shell-fish. They are timid, reserved, and difficult of approach. All these characteristics they possess in common with most of the Orang Laut seamen who frequent the creeks, islands, and solitary shores of both sides of the Malay Peninsula and the Johore Archipelago, and they are probably a portion of the same race. In a small Silong vocabulary Mr. O'Riley notices its strong Siamese affinities. But it has relations to other Ultra-Indian and even to Chinese languages, which show that it is not a mere offset of the Siamese, but probably a sister language.—*The Silong Tribe, by J. R. Logan, in J. Ind. Archip.*, 1850; *Dr. Helfer, J. Beng. As. Soc.*, 1839, p. 986. See India.

SILPHIDÆ, a family of insects. One species, Apatetica Leboides, *Westwood*, occurs in the Himalaya; length four lines, with black and shining elytra, brassy-green.

SILPHIUM is the Silphion of the Greeks. Two kinds of this substance were described; one, from Cyrene, was probably yielded by Thapsia silphium, a native of North Africa; and the other was most likely asafœtida, which has been employed medicinally by Asiatics from very early times.

SILUAR or Sluar. MALAY. Trousers or drawers of different lengths, and receiving separate names.

SILURUS, a genus of fishes of the family Siluridæ. The following species occur in the south-east of Asia:—S. asotus, *Linn.*, China, Japan; S. Afghana, *Gthr.*, Afghanistan; S. Cochin-Chinensis, *C. and V.*, Cochin-China; S. Malabarieus, *C. and V.*, Malabar. Parts of the sounds of Silurus glanis and barbel are boiled, but as the glue does not entirely dissolve, the liquid is strained to separate filaments from the gelatine. Besides these, the cartilaginous and tendinous part of several fishes are boiled down to form fish-glue. 31 genera of the Siluridæ are known to occur in the seas and fresh waters around India, Ceylon, and Burma, 26 of them being fresh water. The marine species of the Siluroid genus Arius and its allies have large eggs, which are frequently found in the mouths of the males, and are believed to be hatched there.—*Day.*

Silver is one of the most anciently known of the metals. It is first mentioned in Genesis xx. 16, and afterwards frequently. In Abraham's time it was common, and according to Genesis xxiii. 15, traffic was carried on with it. Joshua vi. 18, 19, says, 'And ye, in any wise keep yourselves from the accursed thing. But all the silver, and gold, and vessels of brass and iron, are con-

secrated unto the Lord.' It is on this principle that the Brahmanical Hindus act. A Brahman will receive from any caste, however degraded, gold, silver, etc., but to receive from Sndras food or garments, etc., would be considered as a great degradation.

Silver is found native and also combined with sulphur in considerable qnantities, also as a chloride, and alloyed with other metals, especially lead, gold, antimony, arsenic, copper. It is separated from its ores by the process of amalgamation, and is largely coined into the money of various denominations of many conntries; it is largely used for ornament and for domestic purposes, and, being little liable to alteration or to be affected by re-agents, it is much employed for surgical instruments and for vessels for chemical purposes.

Silver is obtained in many countries. An orc of galena or sulphuret of lead at Jungumrazpillay, in the Knrnool district, is rich in silver. One specimen of the Kurnool ore contained upwards of 1 per cent. of silver, or 374 ounces in the ton, the quantity of lead and silver together being only 45 per cent., which was occasioned by there being a considerable qnantity of gangne disseminated throngh the portion examined. Another specimen from Kurnool was fonnd to contain 175 oz., or 3 dwt. in the ton. This, however, accords with the minnte researches of Dnrochet, who found that when sulphide of silver is associated with the snlphides of other metals, it is always uneqnally distributed. It is found to be advantageous to separate the precions metal where it exists to the extent of only 6 ounces in the ton.

Mr. W. Mainwaring found it in the Madura district in a native sulphnret of zinc (blende). Captain Arthur discovered this metal in Mysore, both in its native state (in thin plates adhering to some specimens of gold crystallized in minute cubes) and as a muriate in an ore containing sulphur and oxide of iron.

Grey silver-ore occnrs in the beds of the rivulets of the Kupputgode range, and Heyne (Tracts, p. 315) states that it occnrs in the galena of the Nellore and Calastri districts. Silver occnrs in the galena of Kulu. The 'silver country of the Waziri,' in Knln, covers 677 miles, and abonnds in silver ores, some prodncing 1 in 16 parts of silver. Mr. Ball mentions its occurrence in over twenty British districts.

Silver is said to be in considerable quantity near Lhassa, bnt it is not worked.

Silver is fonnd in many localities in the Shan States to the east of the Irawadi river, but the most prolific mines are those situated at Bawyine, Kyonktch, and Tonng-byne, near Thee-baw, to the N.E. of Mandalay. It is mixed with lead, and is, in fact, a rich argentiferons galena. One mine, the Kampanee, will yield as much as 40 tikals of silver and 25 viss of lead from one basket of the ore; while the poorest mine gives 4 tikals of silver and 30 viss of lead. Other mines exist, such as the Baudween, Baudweengyee, and Sagaing. The supply of silver obtained hitherto has been snfficient for the requirements of Burma in conjunction with the imports from Ynnnan.

Silver mines were seen by Major Slade's party near the Tapeng river, not far from Ponsee. Baudween is north-east from Amarapura and close to the boundary of China, in the N.E. corner of the province of Moong-meet. From this mine alone, it is stated that about 40 viss of pure silver are produced per day (a rich argentiferons galena, it is supposed, yielding 1½ per cent. of silver). From the difficulty of carriage, the lead cannot be bronght away with profit, but the silver fnlly and amply repays the entire cost of working the mines, which are worked by about 10,000 Chinese, as the Burmese dislike the employment. If the statements be even near the trnth, that at Baudween must be one of the richest silver mines in the world; and though there are said to be many other mines in the Shan conntry, that of Baudween is by much the most productive.

At the Madras Exhibition of 1857, a rich ore of argentiferous galena was exhibited from Martaban by Dr. Brandis, granular or in minnte crystals, with silver passing throngh it in thready veins. This ore, assayed by Dr. Scott, was found to contain about 80 per cent. of silver lead. The qnantity of silver was found to vary in the portion examined from 70 to 300 ounces in the ton of ore. By Pattinson's mode for separating the silver, the process proves remnnerative where only 7 onnces of silver can be obtained from a ton of metal. The Rev. Francis Mason, M.A., says the limestone of the provinces probably contains a larger quantity of lead. In the valley of the Salwin there is a rich vein of argentiferons galena, which is reported to appear on the snrface. Dr. Morton sent a specimen to England for analysis, and Professor Mitchell said it contained lead, snlphur, silver, gold (traces), lime, magnesia, iron, silica, and carbonic acid. It is a sulphnret of lead or galena.

Mr. O'Riley had a specimen of an ore of silver, antimony, copper, and sulphur brought him, which produced 35 per cent. of silver; and the Tavoy gold, it wonld appear, contains nearly 10 per cent. of the same metal.

Much silver was brought formerly from Tonqnin in Annam in exchange for zinc, and from Cambodia.

Crawfurd says that no veins of this metal have been discovered in any of the islands of the Malay or Philippine Archipelagos, many of which contain abnndant stores of iron, gold, tin, and antimony. A small qnantity of it, however, appears to be contained in all the gold of these countries, and it is said that on the island of Banca there are silver mines, bnt the snltan had a great objection to their being worked.

Silver mines are quite as nnmerons in Japan as those of gold. In one year the Portuguese, while they had the trade, exported in silver £587,500 sterling.

Silver is brought from Yunnan, near the borders of Cochin-China, and the mines in that direction must be both extensive and easily worked to afford such large quantities as have been exported. In China, silver is obtained from Ching-shui, Lien-chan, Shau-chau-fu, Chau-chan-fu, Shau-king-fu, and Kau-chau-fn (Kwang-tung); also from the island of Hainan, from Kwei-lin-fn, Liu-chau-fu, King-ynen-fu, and Sin-chan-fu in Kwang-si; from Wn-ting-chan in Yunnan; from Chang-teh-fu and Ho-nan-fu in Ho-nan; from Si-gnan-fu in Shen-si; and from Knng-chang-fu in Kan-su. According to the Wan-chau topography, the working of silver was discontinued in the reign of Wan-lih (1615) in consequence of imperial prohibition.

There have been in all countries in historic times great changes in the value of silver compared with that of gold. In British India, in the earlier part of the 19th century, a tola (180 grains) of gold could be purchased for 15 or 16 tolas of silver, but in the period between 1870 and 1883, a tola of gold was costing even 23 tolas of silver. Silver has long been selected as a medium of exchange or standard of value; but at certain periods of history its purchasing power has undergone very great alterations. Between the reign of Edward III. and the accession of Elizabeth, silver rose steadily in value, at the end of that period its purchasing power being double what it was at the beginning. In other words, one ounce of silver at the accession of Elizabeth would buy almost as much as two ounces in the time of Edward III. The causes of this extraordinary rise seem to have been the gradual exhaustion of the old mines and the growth of wealth and trade in Europe. The discovery of the mines of Mexico and Peru caused a great and rapid fall, so that at the accession of Charles I. the purchasing power of silver was only about one-third of what it had been at the accession of Elizabeth. During the following two centuries and a half there was little alteration. The working of the Spanish American mines thus so reduced the value of silver that it took three ounces to buy what one ounce previously would have bought. Silver thus became thrice as cheap as in the middle of the Tudor period, and fifty per cent. cheaper than at the time of Crecy. The mines of Mexico and Peru yielded gold as well as silver, but the latter far more abundantly. Gold therefore also fell in value, but not so much as silver. In the middle ages one ounce of gold exchanged for ten of silver; in 1792, when the United States adopted the dollar coinage, they fixed the proportion at one to fifteen. In other words, the silver dollar was to weigh as much as fifteen gold dollars. By this Act silver was overvalued, and accordingly, in 1803, when France adopted the franc system, the Minister Gaudin fixed the proportion at one to fifteen and a half. Gaudin undervalued as Hamilton overvalued silver, and the consequences were very curious. Fifteen dollars' weight of silver in the open market and as bullion would not buy one dollar's weight of gold, but when coined it would. Consequently it was profitable to every person who had silver to get it coined. Furthermore, it was profitable to every person who had to pay money to pay it in silver, for the silver passed for more than it was intrinsically worth. Silver, therefore, was alone sent to the mint, and silver only passed from hand to hand. What became of the gold? It was legal tender just as silver was, for the United States adopted the bi-metallic system. Either gold or silver, therefore, would discharge debts to any amount. But to pay gold would be to incur loss. Consequently it disappeared from the American circulation, and was exported to France. France also adopted bi-metallism, but as she undervalued silver it would have been a loss to send it to the mint. Accordingly, silver was exported from France to the United States in return for the gold sent by the latter. The United States finding their gold gone, decided upon getting it back; and in 1834 they re-valued the metals, fixing the proportion then at one to sixteen. They thus passed from one error to another. As they had previously over-estimated silver, they now underestimated it, and the result was precisely the reverse of what had before occurred. The whole of the silver was exported, and gold took its place. So complete was the substitution, indeed, that since 1854 not a single silver dollar had been coined by the American mints, although the law making silver a legal tender equally with gold remained upon the Statute Book until 1873. Here we have a double illustration, as complete as if it had been intended for verification, of the influence of mere coinage laws on the movement of the precious metals. In the course of half a century we find gold expelled from the United States and silver from France, and then silver swept away from the former and gold from the latter. Notwithstanding previous experience, Germany has recently demonetized a silver coinage, substituting for it a gold one.

The discovery of gold in California and Australia had a considerable effect upon the monetary systems of the world, but to a far less extent than the discoveries of the 16th century. M. Juglar compiled a series of tables which show what that effect was. From 1850 to 1864 the excess of gold imported into France over that exported amounted to the enormous sum of £136,000,000 sterling. On the other hand, the exports of silver exceeded the imports by as much as £63,000,000. While, therefore, the amount of the precious metals in France was increased by £73,000,000, not only was the total augmentation in gold, but also a not much smaller value of silver was displaced by that metal. The first effects of the gold discoveries was thus to undo what had taken place between 1834 and 1854, and to replace gold in the French circulation. But the exported silver was sent, not to the United States, but to the east. The Public Works policy initiated by Lord Dalhousie, the Mutiny, and the demand for Indian cotton caused by the American Civil War, the opening up of China, and subsequently of Japan, all created an extraordinary demand for silver, which the abundance of gold enabled Europe to spare. In the period 1864–74 a change took place. The excess of the imports of gold over the exports in this period was less than £68,000,000, or about half the former excess. But in the case of silver, instead of an excess of exports, we now find an excess of imports amounting to £49,000,000. Thus in the latter period there was an excess of imports of both metals, but the imports of gold had greatly fallen off, whereas those of silver had taken the place of a much larger deficit. And this occurred in spite of the large sums of silver exported to Germany to pay the indemnity! Another fact to be borne in mind is that the change set in before the war, consequently before the demonetization of silver in Germany, before the depreciation of silver showed itself, and before the increased production of the American silver mines. In the spring of 1865 the American Civil War came to a close. The Southern ports were then opened, American cotton began to arrive in Liverpool, and the demand for the Indian article fell off.

In London, between the years 1833 and 1872, the price of a staudard ounce of bar silver ranged between $59\frac{3}{16}$d. and $62\frac{1}{16}$d. In 1873, the price of silver began to decline, and since then it has been selling as under:—

1873,	59$\frac{4}{16}$d.	1877,	54$\frac{13}{16}$d.	1881,	51$\frac{11}{16}$d.
1874,	58$\frac{5}{16}$d.	1878,	52$\frac{9}{16}$d.	1882,	51$\frac{10}{16}$d.
1875,	56$\frac{14}{16}$d.	1879,	51$\frac{4}{16}$d.	1883,	50$\frac{7}{16}$d.
1876,	52$\frac{15}{16}$d.	1880,	52$\frac{7}{16}$d.		

In 1871 peace was declared between France and Germany; in 1873 the German Government announced the demonetizing of silver; in 1874 there was an enormous increase of bullion, £22,000,000, mostly gold. In 1876 there were remarkable fluctuations in rates of Indian exchanges and bar silver, and the latter touched the lowest price on record.

Value of gold and silver imported from, and exported to, foreign countries at ports in British India:—

	Gold—Imports.	Silver—Imports.
1847-48,	£1,048,778	£922,185
1857-58,	2,830,084	12,985,332
1867-68,	4,775,924	6,999,450
1877-78,	Rs. 1,57,89,273	Rs. 15,77,65,323

—*Mason; Ball; M. Exh.; Oldham; Yule's Embassy.*

SILVER COINAGE. Silver is the legally constituted medium of exchauge in all money transactions throughout the British Indian possessions. The extent to which the Hindu, Muhammadan, and British rulers of India have issued coins, may be shown by mentioning that in 1868 Surgeon-Major Shekiton in a pamphlet gave the assays of 102 gold mohurs, 62 hun or pagodas, and 1 half pagoda, 24 gold fanams of from 2·6 to 5·9 grains, and 21 foreign cold coins; but of silver coins he gave 456 rupees, 23 half rupees, 6 fanams, and a damri.

The English East India Company kept up mints at several of the large towns, but since the 31st August 1869, when that at Madras was closed, minting has been continued only at Calcutta and Bombay, and that chiefly for silver; for in the ten years 1873 to 1882, the total of gold coined was £156,253; for silver, £60,153,158; and of copper, £679,171.

	Silver.	Copper.		Silver.	Copper.

Indian System of Coinage and Currency.—The *silver rupee* was introduced, according to Abul Fazl, by Sher Shah, who took the throne of Dehli from Humayun in the year 1542. Previous to his time, the Arabic dirham (silver drachma), the gold dinar (denarius auri), and the copper fulus (follis), formed the currency of the Moghul dominions. Sher Shah's rupee had on one side the Muhammadan creed, on the other the emperor's name and the date in Persian, both encircled in an annular Hindi inscription. Since the same coin was revised and made more pure in Akbar's reign, we may assume the original weight of the rupee from Abul Fazl's statement to have been 11$\frac{1}{4}$ masha. Akbar's square rupee, called from its inscription the jalali, was of the same weight and value. This coin was called char-yari, from the names of the immediate successors of Mahomed, Abubakr, Omar, Osman, and Ali, being inscribed on the margin. This rupee is supposed by the vulgar to have talismanic power.

Masha.—Concerning the weight of the masha of the Muhammadans, some difficulty prevails, as this unit now varies in different parts of India. Mr. Colebrooke makes it 17$\frac{3}{5}$ grains nearly; but the average of several gold and silver jalali of Akbar's reign, found in good preservation, gives 15·5 grains, which also agrees better with the actual masha of many parts of Hindustan. By this calculation the rupee originally weighed 174·4 grains troy, and was of pure silver, or such as was esteemed to be pure. The same standard was adopted by the emperor Akbar, and accordingly we find coins of Akbar's reign dug up in various places weighing from 170 to 175 grains. Cabinet specimens of Jahangir, Shah Jahan, and Aurangzeb have also an average weight of 175 grains pure; and the same prevails with little variation up to the time of Muhammad Shah, in the coins of opposite extremities of the empire, or struck in the subahs of Surat, Ahmadabad, Dehli, and Bengal, as in the Akbari, Jahangiri, Shah Jahani, Dehli Sonat, Dehli Sonat Alimgir, Old Surat rupee; Murshidabad, Persian rupee of 1745; Old Dacca Muhammad Shahi, Ahmad Shahi, and Shah Alam of 1772. The Moghul emperors thus maintained a great uniformity in the currency of their vast empire, and they were very tenacious of their privilege of coining. On the breaking-up of the empire in the reigns succeeding Muhammad Shah, numerous mints were established by ministers and by the viceroys of the principal subahs who were assuming independence, and the coin was gradually debased as the confusion and exigencies of the time increased. The Mahratta and other Hindu states also established mints of their own, retaining, for form sake, however, the emperor's name and superscription, as a titular avowal of Dehli supremacy. As the British dominion spread, these differences gave rise to the difference in the currencies of the British provinces, and by a happy chance brought those of Madras, Bombay, Farrakhabad to a close approximation. Regulation xxxv. of 1793 was the first of those of the E.I. Company which treats of mint matters. At that time the differences in the values of the currencies were very great, but the dates of the coinage on each coin facilitated the work of the sirafs or money-changers in applying the batta to which the known debasement of each coin entitled it. In 1793, the E.I. Company resolved to remedy the inconveniences which had thus arisen, by declaring that all rupees coined for the future should bear the impression of the 19th year of Shah Alam, and thus by its adoption at that early period, it happened that the Sicca rupee was the only one of the Company's coins which retained the full value of the original Dehli rupee. About the same time, the Surat rupee of the Moghul emperor, weighing 178·314 grains, was adopted as the currency of the Bombay Presidency. It contained 172·4 pure, and was thus nearly equal to the Dehli rupee. From depreciations made in the Surat coin by the nawab, the coinage at Bombay ceased for twenty years; but in 1800 the Surat rupee was

ordered to be struck at Bombay, and from that date it became fixed at 179 grains weight, 164·74 pure, and the mohur was equalized in weight thereto. In 1829, under orders from the Court of Directors, the currency of the Bombay Presidency was equalized with that of Madras by the adoption of the 180 grain rupee and mohur. The Arcot rupee in 1788 still retained 170 grains of pure silver, and subsequently, when coined at the mint of Fort St. George, it had a weight of 176·4 grains, or 166·477 grains pure, until the new system was introduced in 1818, and the Madras 180 grain rupee was established.

The former inscriptions upon the E.I. Company's gold and silver coins were in Persian as follow:—

Obverse of the Sicca rupee struck at the Calcutta mint.—'Hami-i-din-i-Mahomed, Sayah-i-Fazl Oollah sikkah zad bar haft Kishwur Shah Alam badshah.'—'Defender of the Muhammadan faith, reflection of divine excellence, the king Shah Alam has struck this coin to be current throughout the seven climes.'

Reverse—'Struck at Murshidabad in the year 19 of his fortunate reign.'

On the rupee of the Western Provinces, coined at the mints formerly of Farrakhabad and Benares, and at the Sagar mint, the obverse had the same inscription, but on the reverse the date and place of coinage was different,—'Struck at Farrakhabad in the year 45 of his prosperous reign.'

The Madras rupee had a dotted rim on the face, and an indented cord milling; that coined in Calcutta had an upright milled ridge; it has the symbol of a rose on the obverse. The inscriptions are as follow:—

'The auspicious coin of the warrior king Aziz-ud-Din Mahomed, Alamgir (the father of Shah Alam).' 'Struck at Arcot in the 20th year of his auspicious reign.'

The Bombay coin had a plain edge and the following legend:—

'The auspicious coin of the warrior king Shah Alam, 1215.'

'Struck at Surat in the 46th year of his propitious reign.'

As before explained, the Bombay, the Madras, and the Farrakhabad or Sonat rupee, had fortuitously happened to be of nearly the same intrinsic value—

Arcot rupee, pure contents,	. .	165 grains.
Bombay rupee,	,, . . .	164·7 ,,
Farrakhabad rupee,	,, . . .	165·2 ,,

The alteration of the standard of purity in 1818 did not affect the proportion of pure metal, and when the Sagar mint was established in 1825, it was ordered to coin the new Farrakhabad rupee of 180 grains weight, the same as the standard of Madras, or containing 165 grains pure.

The inscriptions on the last of the Company's, afterwards adopted as Her Majesty Queen Victoria's, silver rupee are as follow:—

Obverse—'Victoria Queen.' Reverse—'East India Company, 1840. One Rupee; Ek-Roopiah.' It is milled upright on the edge. The rupee of Queen Victoria, after annexing India to the crown, has obverse—'Victoria Queen,' with crowned bust. Reverse—'One Rupee. India, 1862.'

The *anna* is the sixteenth part of a rupee; there is no anna piece in British India, but the last coin of the E.I. Company and the first of Queen Victoria have a quarter anna and a half anna and a one-twelfth anna or one pai coin. That of the E.I. Company had—obverse—A shield supported by a lion and a unicorn rampant, surrounded with a lion rampant, and the words 'Auspicio regis et Senatus Angliæ.' Reverse of half anna of the East India Company—'Half anna, Do Pai.' Reverse of quarter anna—East India Company. 'One quarter anna, Ek-Pai.' The Pai or one-twelfth anna has,—obverse—'Victoria Queen.' Reverse—'One-twelfth anna. India, 1862.'

On the 31st August 1835, five rupees, viz. the Sicca, the Farrakhabad, the Surat, the Bombay, and the Arcot or Madras, were the only legal tender in British India, within their specified local limits. On the following day, 1st September 1835, Act xvii. of 1835 took effect; it directed the coinage of a Company's rupee weighing 180 grains, of a standard $\frac{11}{12}$ths or 165 grains of pure silver, and $\frac{1}{12}$th or 15 grains of alloy, and declared it equivalent to the Bombay, Madras, Farrakhabad, and Surat rupees, and to $\frac{15}{16}$ths of the Calcutta Sicca rupee.

In 1836, an Act discontinued the Sicca rupee as legal tender in discharge of any debt, but permitted its receipt by collectors of land revenue, or by weight, and subject to a charge of 1 per cent. for re-coinage.

In 1862, after the E.I. Company was deprived of their power to rule India, and its government was assumed by the Queen of the United Kingdom of Great Britain and Ireland, Act xiii. of 1862 continued the weight and fineness of the coin of 1835, but changed its designation from 'Company's' to 'Government.'

At present the following British Indian coins are current:—

a. Legal tender in satisfaction of all engagements, viz.:—Silver coins—A Government rupee (weight, 180 grains; touch, 916·6). A half rupee (weight, 90 grains; touch, 916·6).

b. Legal tender for fractions of a rupee only, viz.:—A quarter of a rupee or four-anna piece (weight, 45 grains; touch, 916·6). An eighth of a rupee or two-anna piece (weight, 22½ grains; touch, 916·6).

Copper Coins.		Weight.
A double pice or ½ anna,	. . .	200 grains troy.
A pice or ¼ anna,	. . . . .	100 ,, ,,
A half pice or ⅛ anna,	. . . .	50 ,, ,,
A pie, 1⅓ of a pice, or $\frac{1}{12}$ anna,	.	33⅓ ,, ,,

Gold.—The old standard for gold coinage in Bengal was 99¼ parts of pure gold to ¾ of a part of alloy. This was altered by Regulation xiv. of 1818 to $\frac{11}{12}$ths of pure gold to $\frac{1}{12}$th of alloy; but the law having become inoperative, the old standard was reverted to for a time, until Act xvii. of 1835 re-established the standard of $\frac{11}{12}$ths fine (*i.e.* = 916·6 touch), but declared that no gold coin should thenceforth be legal tender in India.

Under the Act xvii. of 1835, the following were the coins:—A double gold mohur, 30 rupees piece; a gold mohur (weight, 180 grains), 15 rupees piece; two-thirds of a gold mohur, 10 rupees piece; one-third of a gold mohur, 5 rupees piece.

By a financial notification of October 1868, sovereigns and half-sovereigns coined at any royal mint in England or Australia, of current weight, may be received in all the treasuries of British India and its dependencies, in payment of sums due to Government, as the equivalent of 10 rupees 4 annas and 5 rupees 2 annas respectively; and whenever available at any Government treasury, they may be paid at the same rates to any person

willing to receive them in payment of claims against the Government.

An Indian Coinage Act (xxiii. of 1870) became law on 6th September 1870. It provides that the under-mentioned (as a matter of fact, gold coinage is confined as yet to the Calcutta mint) gold coins only shall be coined at the mints, viz. at Calcutta and Bombay, and at such other places, if any, as the Governor-General in Council may by notification direct, viz. :—A gold mohur or 15 rupees piece, a 5 rupees piece, a 10 rupees piece, a 32 rupees piece or double gold. The respective weights and fineness as before, *i.e.* relatively to 180 grains for the mohur; touch, 916·666.

Silver.—1 rupee, ½ rupee, ¼ rupee, ⅛ rupee. Weight of rupee, 180 grains.

Copper.—1 double pice, 1 pice, ½ pice or one-eighth of an anna, a pie or one-twelfth of an anna. The weight of the double pice to be 200 grains. The other copper coins to be of proportionate weight.

Remedy on copper coins not to exceed one-fortieth in weight.

Device.—The coins struck under this Act bear on the obverse the likeness of H.M. Queen Victoria, and the inscription 'Victoria Queen.' On the reverse, the designation of the coin in English, filled by the word 'India;' with such date and embellishments on each coin as the Governor-General in Council may from time to time determine.

Legal Tender.—No gold coin shall be a legal tender in payment or on account. The said rupee and half rupee shall be a legal tender, provided that the coin has not lost more than 2 per cent. in weight, and has not been defaced or diminished otherwise than by use. The ¼ and ⅛ rupee shall be legal tender only for the fractions of a rupee. None of the copper coins shall be legal tender except for the fraction of a rupee.

Coinage of Bullion.—Subject to the mint rules for the time being in force, the mint-master shall receive all gold and silver bullion and coin brought to the mint, provided it be fit for coinage, and that the quantity so brought at one time by one person is not less, in the case of gold, than fifty tolas, and in the case of silver, than one thousand tolas.

All silver bullion or coin brought for coinage shall be subject to a duty of 2 per cent. on the produce of such bullion; and this duty shall be deducted from the return to be made to the proprietor.

The charge levied for premelting or for cutting such bullion, shall be, in the case of gold, ¼th per mille, and in the case of silver, 1 per mille.

The mint-master, on the delivery of gold or silver bullion or coin into the mint for coinage, shall grant to the proprietor a receipt, which shall entitle him to a certificate from the assay-master for the net produce of such bullion or coin, payable at the general treasury. Assay certificates in case of silver are payable on demand; in case of gold, are payable in gold twenty days after date of mint-master's receipt. When bullion is brought to the mints in the shape of foreign or of uncurrent coin, it is always melted prior to assay.

The following table exhibits the scheme of the British Indian monetary system :—

Rupee.	Anna.	Paisa.	Pai.
1	16	64	192
...	1	4	12
...	...	1	3

Small cowrie or kauri shells are also made use of for fractional payments, and are reckoned as follows :—

4 kauri make 1 ganda.
20 ganda make 1 pan.
5 pan make 1 anna.

but their value is subject to considerable fluctuation.

The maharajas Sindia of Gwalior and Holkar of Indore use the Ujjain rupee. In the Hyderabad State, ruled by the Asof Jahi dynasty, the Shamshiri and Hali Sikka silver rupees are current, and many rude copper coins. In the Travancore State, fanams and chakrams.

The following notes on the names of the coins and the schemes of the coinage of Eastern and Southern Asia may be interesting :—

Annam people have one silver coin weighing 569 grains, and another of 5895 grains, possibly the largest silver coin.

Ashrafi, Murshidabad gold mohur, has a weight of 190·895 grains troy.

Adhela, from Adha, Hind., half, signifies the half of a paisa.

Burma has a coinage of 1, ½, and ¼ rupees; device, a peacock; weight of Ava rupee of 1866 = 180 grains; touch, 898.

The expressions employed by the Burmese goldsmiths in declaring the quality of bullion, require a knowledge of the Burmese numerals, and a few other words.

Numerals.		Metals.	Assay Terms.
1. Ta.	6. Khyouk.	Shew, gold.	Det, better, or above.
2. Nheet.	7. Khwon.	Shwenee, red or pure gold.	Mee, differing or—
3. Thoun.	8. Sheet.	Nguee, silver.	Meedet, better, in assay.
4. Le.	9. Ko.	Ge or khle, lead or alloy.	Meeshyouk, worse, do.
5. Nga.	10. Tshay.	Nee, copper.	Ma, adulterated.
		Byoo, tin.	

The usual weight of the small lumps of silver current in the place of coin, is from twenty to thirty tikals (thirty or forty tolas); they bear a variety of names from their quality and appearance, the figures given by the action of the fire upon a thick brown coating of glaze (of the oxides of lead and antimony) answering in some degree the purpose of a die impression.

Ban signifies pure or touch, and is the purest obtainable of the Burmese process of refinage. The word ban is synonymous with the bani of the Ayin-i-Akbari. Banwari is the Indian name of the touch-needles used in roughly valuing the precious metals.

Kharoobat, shelly or spiral circled, is applied to a silver cake, with marks upon its surface, produced by the crystallization of the lead scoria in the process of refinement. It is supposed to denote a particular fineness, which by Burmese law ought to be ten-ninths yowet-nee in value, *i.e.* nine tikals of kharoobat pass for ten of yowet-nee silver, or it should contain nineteen and a quarter ban and three-quarter copper.

Yowet-nee, red-leafed flowers, or star silver, is so named from the starry appearance of the melted litharge on its surface. Yowet is a corruption of Rowek, leaf, and the word is sometimes written by Europeans, rowanee, rouni, rougahnee, etc. Yowet-nee is the Government standard of Ava, and contains by law eighty-five ban and fifteen alloy per cent. Taking it at nine-tenths of purity of kharoobat, which last is 94·6 touch, its quality

will be 85·2 fine; which closely accord with the legal value. The average of 60,000 tolas of yowetnce in an Ava remittance, turned out two dwt. worse (90·8); but there was a loss of more than 1 per cent. in melting, from the exterior scoria.

Dain, the most common form of Ava bullion met with in circulation, is so called from an assessment levied, during the king's reign, upon villages and horses; dain signifying a stage or distance of two miles. These cakes weigh from twenty to thirty tikals each. Their prescribed legal quality is 10 per cent. better than yowet-nee, which puts this species of silver on a par with kharoobat. In practice, however, the quality varies from 1 to 10 per cent. better (five better to thirteen and a half worse) than Calcutta standard. The average of fifty-two lakhs of dain turned out three pennyweights better.

The following will serve as examples of the mode of valuing bullion:—

Dain ko-moo-det is dain 9 per cent. better. Nga-moo-det, 5 per cent. better. Yowet-nee, standard (85 touch).

Kyat-ge or *ta-tshay-ge*, one tikal or tenth of alloy (meaning one-tenth weight of alloy added to standard).

Kyouk-tshay nga-kyat ge, six tens, five tikals alloy (meaning 60 per cent. of alloy added). Gyan, half yowet-nee (and half alloy).

Gold.—The purity of gold is expressed by moss or tenths only; ten moss, tshay moo (100 touch), being esteemed pure gold.

King's gold, or standard, is called ka-moo-ta pe-le-yowe (nine moss, one pe, four seeds), or nine and three-quarter moss fine.

Merchant's gold is ko-moo-ta-be, nine and a half moss fine. Gold mohurs are called eight and a half moss fine by the Ava assayers.

Bactria.—In the reign of Antiochus II., the third of the Seleucidæ, Theodotus, the governor of Bactria, revolted and established an independent monarchy; his capital was the modern Balkh, and his extensive kingdom included parts of Kābul, Khorasan, and Bokhara. By aid of their coins, the names of nine of their princes have been brought down to us. Their coins have been discovered at Surapura and Mathura, between Agra and Etawa, and others in the Panjab. Indeed, both Greeian and Persian coins are met with frequently in India. General Ventura and Sir Alexander Burnes collected many Greek coins in ancient Bactria and the Panjab. Major Tod discovered one of Apollodotus and one of Menander at Mathura.

Kashmir has the Pookta rupee.

Cash or *Kas*, was a small coin current in Southern India till early in the 19th century; twenty cash being equal in value to four fulus. Kas may be a corruption of the Sanskrit word karsha, which is mentioned in Colebrooke's Essay on Indian Weights, as the same with the word pan. A karsha, or eighty raktika (rati) of copper is called a pana or karsha-pana. It is now the eightieth part of a pan, but the simple word is all that can be identified as having survived the changes of systems. According to the old Madras system, accounts were kept in star pagodas, fanams, and kas,—8 kas = 1 fanam, 336 kas = 42 (silver) fanams = 1 pagoda.

Pagoda. The E. I. Co. reckoned twelve fanams to the rupee, and three and a half rupees to the pagoda. But the bazar exchange fluctuated between thirty-five and forty-five silver fanams per pagoda. Fanams were also coined in a base gold. Copper one, five, ten, and twenty kas pieces were coined in England, by contract, for Madras, so early as 1797. The twenty kas was also called dodo and fulus.

The star pagoda weighed 52·56 grains; touch, 812 per 1000. It was commonly valued at 3½ Madras rupees. Many varieties of the pagoda used to circulate on the Coromandel coast; but since 1833 they have been only obtainable when sought for.

In 1811, a coinage from Spanish dollars took place, consisting of double rupees, rupees, halves, and quarters; and pieces one, two, three, and five fanams; the rupee weighed 186·7 grains. A silver coinage of half and quarter pagodas, of dollar fineness, also then took place; the half pagoda weighed 326·73 grains troy, and was equal to 1¾ Arcot rupees. By a proclamation of 7th January 1818, the silver rupee of 180 grains was constituted the standard coin, and all accounts and public engagements were ordered to be converted at the exchange of 350 rupees per hundred pagodas. The proportion between the old and new currency then became 3½ rupees per pagoda, and in copper 75 kas old currency = 14 paisa new currency.

Chinese Currency.—Sycee silver, in Chinese Wan yin, is the only approach to a silver currency among the Chinese. In it the Government taxes and duties, and the salaries of officers, are paid; and it is also current among merchants in general. The term Sycee is derived from two Chinese words, Se-sze, fine floss silk, which expression is synonymous with the signification of the term Wan. This silver is formed into ingots (by the Chinese called shoes, and by the natives of India, khuri, or hoofs), which are stamped with the mark of the office that issues them, and the date of their issue. The ingots are of various weights, but most commonly of ten taels each. Sycee silver is divided into several classes, according to its fineness and freedom from alloy. The kinds most current at Canton are the five following:—

(*a*) *Kwan-heang*, the hoppo's duties, or the silver which is forwarded to the imperial treasury at Pekin. This is 97 to 99 touch. On all the imperial duties, a certain percentage is levied for the purpose of turning them into Sycee of this high standard, and of conveying them to Pekin without any loss in the full amount.

(*b*) *Fan-koo* or *Fan-foo*, the treasurer's receipts, or that in which the land-tax is paid. This is also of a high standard, but inferior to that of the hoppo's duties, and being intended for use in the province, not for conveyance to Pekin, no percentage is levied on the taxes for it.

(*c*) *Yuen-paou* or *Une-po*, literally chief in value. This kind is usually imported from Soochow, in large pieces of fifty taels each. It does not appear to belong to any particular Government tax.

(*d*) *Yen* or *Eem-heang*, salt duties. This class is superior only to

(*e*) *Mut-tae* or *Wuh-tae*, signifying uncleansed or unpurified, designated the worst of all. It is seldom used, except for the purpose of plating, or rather washing, baser metals.

The tael of Sycee in the East India Company's accounts was reckoned at 6s. 8d. sterling. When

assayed in London, this metal was frequently found to contain a small admixture of gold.

Copper Coins of India.—Throughout Central India, until long past the middle of the 19th century, in the Nizam's territories, much perplexity existed in the varieties of paisa, and in the great range of their value, as also, indeed, in the coins of the more precious metals; so that every town and village almost had its separate currency and its established nirkh or rate of exchange with the rupee, to the great inconvenience of the traveller and of the poorer classes. In weight they varied from 280 grains (the Jeyporei, etc.) to 34 grains (the Maiwari); the former passing at about 35, the latter at 378, paisa for a rupee; but the paisa also differs in each district. From the small advantage of melting up copper money, it happens that part of the circulation in this metal is of very great antiquity; and not only many ancient Hindu coins are met with, but Bactrian and Roman copper coins are also at times procurable at fairs, and in the neighbourhood of old towns in Upper India.

The paisa was in some cases adopted as the unit for determining the larger weights of the bazars, as the Gorakhpur paisa, of which 530 were held equal to a passeri (five seers) at Ghazipur; and generally through the Benares province, 2881 'chalāns' of Futtehghur in like manner were assumed as the weight of a măn in that district. The Dehli paisa, coined till 1818, was twelve masha or one tola in weight.

Most of the paisa of Native States contained more copper in proportion to their value than the E.I. Company's coin, which was, however, originally one tola in weight, and was gradually reduced to 100 grains. The Sagar mint was for several years employed in converting the native copper money into Benares or trisuli paisa of 100 grains weight, and 64 to the rupee. At Bombay, the old paisa were bought up by Government, for the purpose of removing them entirely from circulation, and substituting the new coin. The Bengal Government also adopted a measure to withdraw the trisuli paisa from circulation, in consequence of their becoming much depreciated in public estimation from a large admixture of spurious coin and other causes; the Calcutta mint being ordered to grant 64 new paisa for 72 trisuli, for an amount not under twenty rupees in value brought for exchange.

The *Cowrie shell*, Cypræa moneta, has greatly fallen in value, in consequence of the facilities of commerce. In 1740, a rupee exchanged for 2400 cowries; in 1756, for 2500; but latterly in Calcutta, so many as 6500 cowries could be obtained for a rupee. In Madras, from 1850, cowries had ceased to be used as money; but in Hyderabad of the Dekhan, in 1856, 2688 cowries were to be had for a rupee. Cowrie, in Persian, is simply khar-mohra, literally donkey or mule-shell, because mules are ornamented in that country with trappings of shells, as a gosain's bullock and riding horses are in India. In Arabic, it is known by Wuda, which Ibn Batuta says were carried in large quantities from the Maldive Islands to Bengal, where it was used as a coin, and therefore no doubt can be entertained that the Cypræa moneta was meant. It is employed throughout all Southern Asia as an amulet in sickness and to avert the evil eye, provided the neck-shell be split or broken. Among European nations, these shells, on account of the fancied resemblance of their shape to that of the back of a little pig, are known by the names of porcelli, porcellian, porcellanen, and porcelaine, whence we have porcelain, the glaze or varnish on the China-ware being similar to that of the cowrie. The English phrases, 'not a cowrie, and not a cash,' would seem to be derived from these two minute Indian monies.

Dam.—A copper coin of India, now obsolete. In Akbar's time, 40 dam of copper were equivalent in account to one rupee, and the dam of copper is itself defined at 5 tank, or 1 tola 8 masha and 7 rati in weight, which, at 186 grains per tola, is equal to 323·5625 grains. There seem to have been 9·29 chital in each dam, and in the Sher Shahi rupee 371·8 chital, instead of the old 320 divisional coins of that name and value, which went to the lighter silver piece of former days. In the Ayin-i-Akbari, and in most revenue accounts, the dam is considered the fortieth part of a rupee; but to the common people it is known as the fiftieth of a tuka; 25 therefore go to a paisa, and 12½ to an adhela.

Denar, a Persian gold coin, from the Latin denarius.

Dirham, an Arabo-Persian silver coin, from the Latin drachma.

Dilli-all or *Dili-wal*, in A.H. 614, A.D. 1217, was the ordinary coin of the country about Dehli. The original currency, it is supposed, corresponded with the bullion money of Prithi raja and others, which was imitatively adopted by the Muhammadans in the early days of their occupation of Hindustan.

Dumree or *Damree* is commonly known as a nominal coin, equal to 3⅛ or 3¼ dam, or between 2 and 3 gandas; so that a damree varies from 8 to 12 cowries, according to the goodwill and pleasure of the money-changers.

Fulus or *fals*, an ancient Arabic copper coin, named from the Roman follis, the modern fulus of the Persian Gulf.

Ganda, HIND., is four pice.

Japan has the silver ichibu, 132·5 grains; nishoo, 25·3 grains. The gold koban or kobang of Japan, A.D. 1783 and 1796, 240 grains, was coined by the Dutch E.I. Company.

Japan, in 1877, imported 2,072,673 dollars, but exported 10,079,200.

The Osaco mint coined 690,602 gold yen, 3,895,136½ silver sen, and 1,115,817¼ copper sen and rin; total, 5,701,555¾.

The silver yen is identical in size with the Mexican dollar. The ichibu silver coin is no longer current. Since 1875, the new Japanese trade silver dollar is four grains heavier than the silver yen, and is identical with the American dollar.

Masha, a weight in India varying from 14·687 to 18·5 grains troy, the average being 15½ grains. The rupee of Akbar, which was based upon that of Sher Shah, weighed eleven and a half masha.

Mohur, from Muhr, HIND., a seal, is a gold coin of value 15 or 16 rupees, now uncurrent in India.

Nepal coins.—Nepal was conquered by the Gurkhas in the Newar year 888, corresponding with A.D. 1768. Prior to this epoch, the valley of Khatmandu was divided into three sovereignties, Patan, Bhatgaon, and Khatmandu, each governed

by a raja. Hence, on the Newar coins, three series of rajas' names are found, those of Bhatgaon being generally distinguished by a shell, those of Patan by a trisul, and those of Khatmandu by a sword.

The old coins of the Mal or Newar rajas are much valued for their purity, and are worn by the women, strung to necklaces or armlets, as tokens in memory of their ancestors. The gold mohur of Nepal is 83 to 85 grains. The damree is current in Nepal.

The Nepalese procure all their silver from China, in the form of stamped lumps, as they are current in Lhassa; for the Tibetans generally follow the Chinese custom in their money transactions, of paying and receiving by weight, and the merchants carry scales with them for the purpose. Since the Gurkha conquest the Vikrama era has superseded that of Newar for ordinary purposes, and the Saka, commonly used in Hindustan, has been introduced upon the Nepalese coins.

Netherland India has the silver gulden of 166 grains, also its half and quarter.

Pagoda, a Portuguese appellation of a gold coin, the hoon, derived from the pyramidal temple depicted on one side of the coin. The proper Hindu name is Varaha, wild boar, and doubtless originated in a device of the boar incarnation or avatar of Vishnu upon the ancient coinage of the Carnatic, for the same figure appears as the signet of the rajas of that country in some old copper grants of lands in the Mackenzie collection. The Hindu name probably varied according to the image of the coin; thus we find the Rama Tanka having the device of Rama and his attendants; and the Matsya Hun of Vijayanagar with four fishes on the obverse. Other pagodas have Vishnu, Jaganath, Vencateswar, etc., on them; those with three Swami or figures are of the best gold, and are valued 10 per cent. higher than the common pagoda. Hun is the common term used by the Muhammadan writers, and, indeed, generally by the natives, for the pagoda. It signifies gold in the old Carnatic language.

The hun was subdivided into fanams and kas. Fanam, or more properly panam, is identical with the word pan, known in Bengal as one of the divisions of the Hindu metrical system, now applied chiefly to a certain measure of cowries and copper money. The old fanam was of gold only, and was the one-sixteenth of a hun. In the Lilavati we find,—16 para = 1 dharan, 16 dharan = 1 nishk, where the dharan (or dharam) seems to accord with the hun, which is identical in weight with the Greek drachma. The Ikkeri pagoda contains sixteen fanams; that of Varari and Anandrui, fourteen; and the Kalyan pagoda, twenty-eight. The division adopted by the British was forty-two.

Panna.—The standard of panna under the Peshwa was called the Ankusi rupee, from ankus, the instrument used by the mahout to guide the elephant; probably a symbol marked on the coin.

The *Parthian* or *Arsacian* monarchy was erected by Arsaces, who filled the office of satrap in Bactria, in the year B.C. 256. Vaillant wrote a history of this powerful dynasty, and endeavoured to classify the coins of the twenty-nine Arsacidæ kings. It was subsequently absorbed in the Persian empire in the reign of Alexander Severus, A.D. 226. Their coins have often been found in Southern Asia, the greater number having the Greek word Arsacoy, with different epithets.

Persian ancient coins.—According to Marsden, it was not until the khalifat of Abdul Malik, in the year of the Hijira 76 (A.D. 695), that a distinct coinage was instituted with a view of superseding the currency of Greek or Byzantine and Persian gold and silver.

Persian modern coins.—The Futteh Ali Shah rupee of Shiraz and Hamadan weighs 105 grains; the Karan of Muhammad Shah, 82 grains, minted at several places of 79 to 82 grains; the Huzur dinar, 106 grains; the Larin of Persia, 74·5 grains. Of gold coins, Persia has one of A.H. 1127, weight 166·48 grains, and the Toman, A.H. 1240 and 1248, weighing 68·9 to 73 grains.

Piastre.—The gold piastre of Turkey, A.H. 1115-1171, weight, 53·35 grains.

Pool, PEHLAVI, or Phool, PARSEE. Obolus et res quævis obolo similis ut squama piscis simil (fulus), Borhani Katiu, inde. Be Poolee; Abdul Malik, n. c. Pecuniæ defectus. Abul Fazl says that the pool of olden days was equal to four tolas; Ferishta, again, gives 1 or $1\frac{3}{4}$ tolas.

Rati.—Colonel Anderson considers the rati may be assumed as high as 1·93 grains, and the masha at 15·44 grains.

Sanat, ARAB., year, generally used in coinage of Muhammadan rulers, as the year of their reign, also as the Hijira year.

Sikka, HIND., a coining die, applied to a coin formerly current in India.

Tibet.—M. Csoma de Koros states that the English rupee circulates freely through Western Tibet. The common Chinese brass money, with a square hole in the centre, is likewise current in Lhassa, as generally through the whole of the Chinese empire. The Lhassa (silver) of Tibet is 58 grains.

Tola, HIND., a weight in India, equal to 180 grains troy, the weight of the present rupee.

The gold zecchino or sequin, A.D. 1797, of Ludovico Manin, the last doge of Venice, was current in many parts of India under the names sultani, putli, and putli dukkun; it weighs 53·5 grains.

SILVER FISH. The bodies of the genus Chanda are more or less diaphanous. The name Chanda is from the Hindi word Chandi, silver. They are much prized by the Chinese.

SILVER SKIN of the coffee bean enwraps the bean. See Parchment.

SIMANTONYANA, a Hindu household ceremony of parting the hair of an enceinte woman, on the fourth, sixth, and eighth months.

SIMBUL, an umbellifer, resembling the 'jira' or cummin seed; it has an edible bulbous root, said to be much relished by bears.—*Cleghorn's Panjab Report*, p. 100.

SIMEON SETH, at the command of Alexis Comnenis, made a Greek translation of the fables of Badpai.

SIMIADÆ, or monkeys, a family of the mammalia of the order Primates, viz.:

Order. Primates.
Fam. Simiadæ, Monkeys.

Quadrumana.	Catarrhinæ, *Geoffrey.*
Heopitheci, *van Hœven.*	

Sub-Fam. Siminæ, Apes.

Troglodytes niger, chimpanzee, Africa.
Tr. gorilla, gorilla, Africa.
Simia satyrus, orang-utang of Borneo.
S. morio, orang-utang of Sumatra.
Simanga syndactyla, *Raffles*, Sumatra.

Sub-Fam. Hybolatinæ, Gibbons of Indo-Chinese countries and Malayaua.

Hylobates hoolook, hoolook of Assam, Cachar, Kbassya, and Sylhet.
H. lar, gibbon of Tenasserim.
H. agilis, gibbon of Malay Peninsula; others from the Malay Islands.

Sub-Fam. Colobinæ, Entellus Monkeys.

Gen. Presbytis, *Illiger.* Semnopithecus, *F. Cuvier.*
Hunuman, Langur, HIND.

Presbytis entellus, Bengal langur.

Simia, *Dufresn.*	P. anchises, *Ell.*
Musya, ... CAN.	Hanuman, . . . HIND.
Langur, ... HIND.	Wanur, Makur, . MAHR.

Common in Bengal and Central India.

Pr. schistaceus, *Hodgs.*, *Horsf.*

Kubup, ... BHOT.	Langur, . . . HIND.
Himalayan langur, ENG.	Kamba Suhu, . LEPCH.

Occurs throughout tbe Himalaya.

Pr. priamus, *Ell.*, *Bly.*, *Horsf.*

Madras langur, . ENG.	Gandangi, . . . TEL.

Inhabits the eastern side of the Peninsula and the north of Ceylon.

Pr. Johnii, *Jerdon.*

Simia Jobnii, *Fisher.*	S. Johnii, *var.*, *Martin.*
Semnopithecus Dussumierii, *Schinz.*	S. cucullatus, *Is. Geoff.*
	S. hypoleucos, *Blyth*, *Horsf.*

The Malabar langur of Travancore, Cochin, Malabar, and South Canara.

Pr. jubatus, *Jerdon.* Semnopithecus Johnii, *Blyth*, *Martin.* The Neilgherry langur of Neilgherries, Animallay, Pulney, and Wynad, not below 2500 and 3000 feet.

Pr. pileatus, *Blyth*, Sylhet, Cachar, Chittagong.
Pr. barbei, *Blyth*, interior of Tiperah Hills.
Pr. obscurus, *Reid*, Mergui.
Pr. phayrei, *Blyth*, Arakan.
Pr. albo-cinereus, Malayan Peninsula.
Pr. cephalopterus, *Blyth*, Ceylon.
Pr. ursinus, *Blyth*, Ceylon.

Sub-Fam. Papioninæ, Baboons.

Tbe true baboons of Africa and monkey-like baboons of India.

Inuus silenus, *Jerdon*, lion-monkey.

Simia leonina, *Linn.*	Silenus veter, *Gray*, *Blyth.*
Nil-bandar, . . BENG.	Nella-manthi, . MALEAL.
Siah bandar, . . HIND.	

Western Ghats, Cochin, Travancore.

I. rhesus, *Jerdon*, Bengal monkey.

I. erythræus, *Schreb.*	Pithex oinops, *Hody.*, *Hors.*, *Blyth.*
Morkot, ... BENG.	Marcut banur, . LEPCH.
Piyu, ... BHOT.	Banur, ... ,,
Bandar, ... HIND.	Suhu, ... ,,

Inhabits nearly all India.

I. pelops, *Jerdon.*
Macacus Assamensis, *M'Cl.* Inuus Sikkimensis, *Jer.?*
Macacus Sikkimensis, *Hodg.!*
The hill monkey, high up in the Mussoori Hills.
Inuus nemestrinus, *Jerdon*, Tenasserim, Malayana.
I. leoninus, *Blyth*, Arakan.
I. arctoides, *Is. Geoffrey*, Arakan.
Gen. Macacus radiatus, *Jerdon.*
Simia sinica, *Linn.*, *Ell.*, *Blyth.*, *Horsf.*

Munga, ... CAN.	Wanur, MAHR. of Sykes.
Madras monkey, . ENG.	Kerda, MAHR. of Ghats.
Bandar, ... HIND.	Vella Muntbi, . . TAM.
Makadu, . . . MAHR.	Koti, ... TEL.

All over Southern India.

Macacus pileatus, *Shaw*, of Ceylon.
M. carbonarius, *F. Cuvier*, of Burma.
M. cynomolgos, *Linn.*, of Burma.

Mr. A. Russell Wallace tells us that, with the exception of the orang-utang, the siamang, the Tarsius spectrum, and the Galeopithecus, all the Malayan genera of quadrumana are represented in India by closely-allied species. The Indo-Malay islands have 170 species of mammalia. Of these 24 are quadrumana. The orang-utang species occur in Sumatra and Borneo; the siamang, next to them in size, in Malacca and Sumatra; the long-nosed monkey in Borneo, and gibbons, long-armed apes and monkeys. In Timor, there are 15 bats and 7 land mammals; amongst them the Macacus cynomolgos, the common monkey of all the Indo-Malay islands. Hylobates, the wa-wa or long-armed ape, is the most beautiful of all the monkey tribe. The fur of this gentle little animal is grey, its face, hands, and feet are jet-black; in features it more resembles those of the human race than the orang-utang.—*Jerdon; Blyth, Cat.; Horsfield; Wallace.*

SIMLA, a sanatorium in the Simla district of British India, situated on a transverse spur of the Central Himalayan system, in lat. 31° 6′ N., and long. 77° 11′ E. Mean elevation above sea-level, 7084 feet. The Simla district is under the Lieutenant-Governor of the Panjab, and consists of several detached plots of territory among the hills of the Lower Himalayan system. Area, 18 square miles; population in 1868, 33,995. The mountains of Simla district and the surrounding Native States compose the southern outliers of the great central chain of the Eastern Himalayas. The climate of Simla Hills is admirably adapted to the European constitution, and the district has therefore been selected as the site of numerous sanatoria and cantonments. The plains at the foot of the Simla Hills attain 1000 feet elevation, and the outer ranges are lower than those of Garhwal and Kamaon. Rupar, close to the Sutlej amongst the outer hills, is under 1000 feet, but Subathu, a little farther in, is 4200; and Kussowlee, 6500 feet. The name is the Hindi Shyea Malay. Simla was taken from the Jun raja in 1815, and given to the Patiala raja, but again obtained from him as a sanatorium; the houses are scattered over an extent of about 7 miles, on a series of heights varying from 6500 to 8000 feet, which is the highest elevation. The portion of the Himalaya visible from Simla is a depressed continuation of the chain, extending from the emergence of the Sutlej through the snow, to an abrupt limit bordering close upon the plain of the Panjab near the debouche of the Ravi; few, if any, of the detached peaks rise beyond 20,000 feet.

The range bears wild thyme, wild strawberries, various oaks, pines, the deodar, and all the forms of Europe. Pinus excelsa is a very common tree at Simla, particularly on the southern face of Mount Jako, which is the highest part of the ridge. Abies Smithiana is rare, while the deodar is common on the southern and western slopes of Jako, above 7000 feet; and again in shady groves at the bottom of the valleys on both sides of the ridge, as low as 5000 feet. Pinus longifolia is common at the western or lower extremity of the Simla station, and prevails, to the exclusion of any other tree, on the dry, sunny spurs which run towards the south, at elevations from 5000 to 7000 feet. The trees furnishing the supply of firewood at Simla are chiefly Quercus incana, Rhododendron arboreum, Andromeda ovalifolia, Pinus excelsa,

and Cedrus deodara. The fruit of the trimal, or Ficus macrophylla, is sold in the bazar at Simla.

Koli is the name given to the lower class of cultivators in the Simla Hills. The Kanait are an agricultural race in the Simla Hills and east of the Sutlej, holding most of the land in the Simla Hills. They are inferior in position to Rajputs, but they are often educated, and are generally ministers to the Rajput chiefs. Their women are nice-looking, and all the tribe who are not (in the upper hills) in contact with Tartars are quite Aryan, though not very large. In certain places there is a partial and local practice of polyandry among them, but it is not the general custom of the tribe. The hillmen of Simla are offspring of the dark Kayasth races and Rajputs who have for eight centuries been flying to the mountains to escape Muhammadan invasions. They are filthy in their persons; they have clear, almost Anglo-Saxon, complexion; many have goitres, and they hate Muhammadans. Their chiefs, as the ranas Dati and Kat, are of Rajput origin, and they have a municipal system, with shamilik or commons, and a lombardar or mukhia, *i.e.* chief. Polyandry prevails among the hillmen beyond Kotghur, but it is on the decline, polygamy often taking its place. In the winter the men almost hybernate, spending months in eating and sleeping.

Simla district produces iron-ore, plumbago, pipe-clay, red ochre, limestone, sandstone, and fossils. — *Imp. Gaz.* viii.; *Cal. Review*, 1867; *Thomson's Trs.* p. 22; *Mrs. Hervey, Adventures in Tartary; Hooker and Thomson, Flora Indica*, p. 202; *Ann. Ind. Adm.*

SIMON JANUENSIS, physician to Pope Nicholas v. (A.D. 1288-92), mentions meconium as the dried juice of the pounded capsules and leaves of the poppy.

SIMOOM. Arab., a hurtful hot wind. One prevails in the hot season on the Dasht or plain of Battekotee between Hazar-nao and Jalalabad, where the mountains on both sides are covered with perpetual snow. It is said to be generally fatal to all men, horses, and cattle who encounter it, and as severe in its effects in the night as in the day. The simoom, samiel, or samm of Arabia, the khamsin of Egypt, and the harmattan of the coast of Guinea, is described as being hot and pestiferous, sweeping over the country with such speed, that travellers might be stifled in a moment, unless they throw themselves close to the burning sand and cover their faces with their cloths. Mr. Werry, Consul-General for Syria in 1838, had a meeting of the chief Aghel and of the Anazeh Shaikhs, who stated that the simoom is hot and suffocating, and has frequently caused the death of persons who have been unable to shelter themselves from its deleterious influence. Ferrier says this hot blast, called Sirocco in the south of Europe, is the Sharkia or East Wind of Scripture. In Egypt, Damascus, Arabia, and Baghdad, it blows by sudden squalls, the approach of which is indicated by a certain perturbed state of the atmosphere. The real samm or simoom, if it actually occur, seems a current of air, probably electric, of rare occurrence, and causing instant death, and peculiar to the deserts. It has no injurious effect on vegetation, perhaps because it does not come in contact with it, as it rarely approaches within one or two feet of the ground. The camel, being aware of its approach, instinctively kneels down, and lays its head close to the ground, thus escaping its effects. Where the hot winds or simoom blow, they often become, above Sehwan, dangerous in their effects. The natives, aware of their power, avoid travelling at the season of their occurrence. There is probably great exaggeration. — *Col. Chesney, Euphrates*, i. p. 578; *Ferrier's Journ.; Postan.*

SIMURG, Pers., a fabulous bird of the Persians.

SIN. Chin. The gods. Among existing religions of Japan, the Sin-tu (Siu, the gods, and Tu, faith) and the Buddhist are the most extended. The Sin-tu embraces a cosmogony hero-worship, the Ten-sio-dai-siu, the Sin goddess, being the principal object of worship. The religion has a trace of Buddhism. See Japan.

SIN. Five great sins in the Hindu code are,—stealing gold, drinking spirituous liquors, murder of a Brahman, adultery with the wife of a spiritual teacher, and association with a person guilty of any of these crimes. To kill a Brahman is one of their greatest sins; to kill a cow is also very heinous, as also to kill a woman or an infant. Most of the sins of the Brahmanical Hindus are, however, breaches of ceremonial observances.— *Hindoo Theatre*, p. 30.

SIN or Aba-Sin, a name of the river Indus. Sin is a Scythic word for river, so applied by the Hindus. Aba-Sin is the river Indus, and h and s being interchangeable along the line of the Indus, the Hafta Hindu are the seven rivers, Sāt-sind of the Panjab. In classical Persian literature, siah (black) is synonymous with hind, and Hindu is identical with siah-fam, dark-complexioned. Thus hind-hanna is the equivalent of siahi-hanna, the darkening colour of hanna. Sadi of Shiraz sang that he would give Samarcand and Bokhara for the black (Hindu) mole on a Turkish girl's cheek.

SINAI, a mountain in Arabia, celebrated amongst the followers of the Hebrew, Christian, and Muhammadan religions as that near which the Israelites encamped in their route from Egypt to Palestine. It was from Sinai that Moses proclaimed the Ten Commandments. The Arabs indicate Jabl Tur as the site. The peninsula of Sinai is a triangular tongue of land between the gulfs of Suez and Akaba, comprehended between lat. 27° 40′ and 30° N., and long. 30½° and 35° E, and terminating to the south in the apex of Ras Mahomed, where the two gulfs unite in the common channel of the Red Sea. The average length of the peninsula from N. to S. is about 108 miles.

SINA PATI. Sansk. A commander-in-chief; from Sina, an army, Pati, lord or master.

SINAPIS, Mustard.

Khardal, . . Arab., Heb.	Tuverica, . . . Sansk.
Moung ngyin, . . Burm.	Surai-bij, . . . Sind.
Napu, ... Gr.	Gan-aba, Rata-aba, Singh.
Sarson, Rae, . . Hind.	Kadaghoo, . . . Tam.
Sarshuf, ... Pers.	Avaloo, ... Tel.
Rajika, Sarshapa, Sansk.	

The Sinapis genus of plants belongs to the natural order Cruciferæ. There are 40 or 50 species. S. alba and S. nigra, the white and black mustard, are best known in Europe. Five or six species are cultivated in all parts of India for the sake of the valuable oil their seeds yield. Those most frequently seen are S. glauca, toria, racemosa, ramosa, dichotoma, and juncea.

Sinapis alba, white mustard.

Hu-kai, Peh-lui, . Chin.	Safed rai, . . . Hind.
Hu-lui, ... ,,	

White mustard is a native of most countries in the south of Europe. It is cultivated, and when young is eaten as a salad. The seeds yield by expression 36 per cent. of a bright yellow, pleasant tasted edible oil, having a strong smell and slight taste of mustard. The seeds of S. nigra yield only 28 per cent. of an oil, but in all respects similar to the above. The oil of this species is used in India in cookery, and is considered superior to all other oils for anointing the body, which it is supposed to invigorate. In medicine it is sometimes given internally, but is more frequently applied as a rubefacient. The best flour of mustard is prepared by crushing the seeds of both black and white mustard between rollers, and then pounding them in mortars, when they are twice sifted to yield pure flour of mustard. Two bushels of black and three of white seed yield, when ground, 145 lbs. of flour; which, to diminish the pungency and improve the colour, is mixed with 56 lbs. of wheat flour and 2 lbs. of turmeric; and the acrimony is restored without the pungency, by the addition of a pound of (capsicum) chilli pods, and half a pound of ginger.

Sinapis dichotoma, *Roxb.*

Tha-ba-mee, . . BURM. | Suhota, Sighta, . HIND.
Toreea, Kali surson, HIND. |

Cultivated in British India. Much prized for its oil.

Sinapis eruca, Taramira, HIND., a kind of mustard, with a red seed somewhat elongate. The oil it produces is used as food and for burning, and as a medicine for cattle and horses. It is called 'assu' in Panjabi.

Sinapis glauca, *Cleghorn*, is found in the Sutlej valley between Rampur and Sungnam at elevations up to 11,000 feet, and is much cultivated. Several species of Sinapis are grown in the N.W. Himalaya as salads and condiments.

Sinapis juncea.

Khardel, Kubbr, . ARAB. | Tsze-kai, ... CHIN.

Sinapis juncea and S. ramosa are not sown together, but each is cultivated as a mixed crop, with either grain, barley, wheat, or peas.—*Cleghorn's Panjab Reports*, p. 68.

SIND, the name of the Indus river, and of two rivers in Central India. One of these rises at Latouti, on the table-land near Seronj, and, falling into the Chambal river at its junction with the Jumna, forms that sacred spot Triveni, where a shrine has been erected to Siva. The Chot'ha or Little Sind rises on the table-land forming the buttress of Malwa, skirting the Nerbadda, and joins the Par. The term is from Sin, an Indo-Scythic or Tatar term, the river Indus being the Aba-Sin or Father Stream.—*Tod in Tr. R.As. Soc.* iii. p. 145.

SIND, a province of British India, consists of the lower valley and delta of the Indus, lying between lat. 23° and 28° 40′ N., and long. 66° 50′ and 71° E. Its area, including the Native State of Khairpur, is 54,123 square miles, and its population in 1881 was 2,537,976. It is bounded on the west by Baluchistan; on its north is Baluchistan, the Panjab, and Bakhawulpur; on the east it has the Rajputana States of Jeysulmir and Jodhpur, and on the south the Arabian Sea and Runn of Cutch. Its sea-coast is that of the delta of the Indus, and extends about 125 miles between Cape Monze on the W. and the Koree mouth, which is the S.E. entrance and the boundary of Sind. The delta shore is low, flat, and swampy throughout; but west of Kurachee is a high range of mountains terminating in Ras Muari called Ras Mouari and Cape Monze. The contrasts presented by this province are striking. In the central tracts liable to inundation are picturesque-looking villages, with, in the cold season, waving fields, beautiful small lakes, and the land throughout its length and breadth partitioned by numerous canals and irrigation channels; but outside of the fertilized tracts are bare mountains and sandy deserts. Eastward, Sind is bounded by some of the most desert portions of Bahawulpur, Jeysulmir, and Balmir, a dependency of Jodhpur; and the eastern portions of Sind itself, for from ten to sixty miles within the frontier, are desert wastes. Northwards and westwards are rugged ranges of inhospitable stone-heaps, varying in height from 2000 to 5000 feet, where inhabitants, animal life, vegetation, and water are altogether wanting, and divide the province from the territories of the many Baluch clans that compose the State of Kalat. The more habitable part of Sind is a long narrow tract of country yearly fertilized by the inundation of the Indus, with shifting sand-heaps on the east, and bare stony mountains on the west. In the delta of the Indus expansive lakes abound. From the easternmost mouth of the Indus to the Kurachee harbour, nearly the whole coast is a network of channels and marine lagoons, and of sand-banks and mud-banks, more or less covered by each advancing tide. During December and the two succeeding months, the cold at night is often severe, being frequently 32° Fahrenheit at daybreak, while at noon it often mounts to 75° or 86° in the shade.

To the Western Arabs, all eastwards of the Persian Gulf was known as Hind; but they distinguished the two regions on and beyond the Indus river by the term Hind-wa-Sind. The name of Sind is of great antiquity, and is mentioned both by Pliny and Arrian; the one writes it Sindus and the other Sind. Ancient oriental geographers divide the country into two districts, Lar and Siro, a town called Halah, lying a little north of Hyderabad, forming the point where the Lar and Siro frontiers unite.

In the 7th century it was described as comprising four principalities, viz. Upper, Middle, and Lower Sind, and Cutch, their native names being Siro, head or upper, Vichalo or midland, and Lar or lower.

The district of Lar or Lower Sind, the ancient Pitasila, is the delta of the Indus from Hyderabad to the sea..

In the time of Alexander, the only places mentioned are Sindomana, supposed to be the modern Sehwan, and a city of Brahmans, named by Diodorus, Harmatelia, which seems to have been the Brahmana city destroyed by an earthquake, A.D. 757. At the present day the principal places in Middle Sind are Sehwan, Hala, Hydcrabad, and Omarkot. Hyderabad is supposed to be the ancient Patala and the Nerunkot of the Middle Ages.

Ptolemy has preserved the names of several places, as Barbara, Sousikana, Bonis, and Kolaka, of which the first is probably the same as the Barbarike emporium of the Periplus, and perhaps also the same as the Barce of Justin. In

the time of the author of the Periplus, the capital of Lower Sind was Minnagara, which the foreign merchants reached by ascending the river from Barbarike. In the middle of the 7th century, Hiwen Thsang mentions only Pitasila or Patala.

In the Middle Ages Debal was the chief seaport of Sind, hence called Debal Sindi. It was the emporium of the Indus, and seems to have been situated on the western bank of the Baghan river, below the junction of the southern branch of the Ghara or Sagara branch, five miles to the north of Lari Bandar. Lari Bandar has been deserted, and the present part of the western half of the delta is Dharaja, a few miles east of Lari Bandar. Dewal or Debal means a temple, and several Sind towns had it as a prefix, as Debal Thatta, Debal Kangra. Debal Sindi seems to have been the port at which Zabeida of the Arabian Nights landed from Basra, and found all the people turned into stone.

Debal or Dewal is from Deo, God, Alaya, house = the house of God, a sacred city. Hima-alaya is the snow abode.

Sind was found by Alexander (B.C. 327) well peopled, in a high state of cultivation, under several chiefs. From the time of Alexander till the khalifat of Walid (A.D. 705-715), Sind seems to have been chiefly under Rajputs professing Hinduism. No Buddhist remains have hitherto been observed.

In the early centuries of the Christian era, the Rai dynasty ruled from Kashmir and Kanouj to Makran and the port of Debal on the shores of the Sea of Oman, and from Surat to Kandahar and the Suliman range. The commencement of this dynasty has not been ascertained, but in the time of Rai Diwaij the capital was Alor. He was a powerful chief, who contracted alliances with the rulers of India. He was succeeded by his son, Rai Siharas I. Rai Sihasi was the celebrated son of Rai Siharas, and the next was Siharas II., who reigned 42 years, and was killed in battle. He was a contemporary of Nushirwan. After Siharas II., a Brahman dynasty succeeded. The reign of the Rai dynasty seems to have extended to 137 years.

Several places on the Indus are named after the Chach dynasty, viz. Chachpur, Chachar, Chachgaon, Chachi. Chach was the Brahman who usurped the kingdom of the Rai dynasty of Sind. He was a contemporary of Shahram or Shahrear, and he is supposed to have invented the game of chess. He seems to have reigned about A.H. 2, A.D. 623-24, and to have been succeeded by his brother. In A.H. 93-94, A.D. 711-712, Muhammad Kasim, nephew of the ruling khalif, Walid I., led an army of 15,000 men against the ruler of Sind, raja Daher, who fell in battle before Alor, A.H. 10 Ramzan 93, A.D. 711. Kasim pursued his conquests northwards to Multan. In A.H. 99, A.D. 717, on the invitation of the ruling khalif, Umar-bin-Abdul Aziz, many of the Sind princes adopted Muhammadanism.

After the Ummia khalifs, the Abbassi held Sind until A.D. 1025, when Al Qadar B'Illah, the khalifs' viceroy, surrendered it to Mahmud of Ghazni. In the confusion that resulted on Mahmud's death, a Rajput tribe in Sind, called Sumrah or Sumera, established themselves, A.D. 1054, and held sway until overthrown by the Sammah, another Rajput tribe, A.D. 1315. A brief period of changes was followed by the Sammah tribe re-establishing themselves; and in A.D. 1360 Muhammad Taghalaq took Jam Beni, the reigning prince, to Dehli, from whence he was honourably dismissed, and in 1380 adopted Muhammadanism. The Sammah family continued to reign until A.D. 1519-20, when the last prince was dethroned by Shah Beg Arghun, prince of Kandahar. Arghun Khan Tarkhan was grandson of Hulaku Khan, grandson of Chengiz Khan. One of his descendants, Shah Beg Arghun, occupied Siwi, and his troops in December 1514 took the villages of Kakan and Baghban, and returned to Siwi. In December 1520 he defeated the Sammah army, led by Darya Khan, and gave Thatta up to plunder. He resolved to retain Siwisthan north of the Lukhi Hills, of which he took possession after defeating the Sa'ta and Sumera tribes. He subsequently occupied Bakkar, and moved down the river with the object of invading Gujerat, but died at Chainduka in June 1522. He was succeeded by Mirza Shah Husain Arghun, who defeated a great army near Thatta, composed of the Sind and Sammah races, led on by Jam Firoz. In A.D. 1543, Sind was invaded by the emperor Humayun. Shah Husain died A.D. 1552, at a village 20 cos from Thatta, after a reign of 32 years. Elphinstone says he was drowned in the Indus, and that the Arghun family then became extinct. He was succeeded by Muza Isa Tar Khan (great-grandson of Arghun Khan, grandson of Hulaku Khan, grandson of Chengiz Khan), who, after a comparatively peaceful reign, died A.D. 1566, after a reign of 14 years. His son and successor was Muhammad Baki. There are members of the Tar Khan family still in Sind, and 219,591 in the Panjab.

The last two Asiatic dynasties were the Kullora and Talpur tribes. In the early part of the 18th century, the Kullora, a Sind tribe, took possession of Sind, and were recognised by Nadir Shah or his deputies. The Kullora traced their descent from the Abbasside khalifs, and the Talpuri from Mahomed, but both seem to be Baluch. The Talpuri (Tal or Tar, Borassus flabelliformis or palmyra, and Pura, a town) amount to one-fourth of the population of Hyderabad, which they call Lohri or Little Sind. Previous to the invasion of Nadir Shah, the Kullora, a religious sect, had risen to power in Sind, and the chief of the tribe, Nur Muhammad, had been recognised as governor of the province. During the rule of his brother, Gholam Shah, the connection of the British Government with Sind commenced by the establishment of factories at Thatta and Shah-bunder in 1758. In that year Gholam Shah granted an order for the establishment of the factories and for certain immunities to trade. This order was renewed in 1761; but during the rule of Sirfaraz Khan, the eldest son of Gholam Shah, the trade was so much interfered with, that in 1775 the British withdrew their factories. The violence and tyranny of Sirfaraz Khan and his successors, who from jealousy put to death three of the chiefs of the Talpur tribe, led to the overthrow of the Kullora dynasty. The Talpur chiefs had long held the first place in the service of the rulers of Sind. To avenge the death of their chiefs, the Talpur tribe rose, and, headed by Mir Futteh Ali Khan Talpur,

in A.D. 1786 expelled the Kullora ruler Abdul-Nabbi. The measures which Futteh Ali Khan took to establish his authority alarmed his relatives, Mir Sohrab and Mir Thara, who fled, seized on Khairpur and Shah-bunder, and renounced the authority of their kinsman. Mir Futteh Ali Khan was never again able to extend his authority over the whole province, which henceforth remained divided into three separate principalities, viz. Hyderabad or Lower Sind, under Futteh Ali Khan; Khairpur or Upper Sind, under Mir Sohrab; and Mirpur, under Mir Thara. In Hyderabad, Futteh Ali divided his power with his three brothers, Gholam Ali, Kurm Ali, and Murad Ali, and from their real or apparent unanimity, the brothers received the appellation of the Char Yar, or four friends. In 1799, the commercial intercourse between the British Government and Sind was revived, and Futteh Ali Khan issued an order granting certain privileges in favour of British trade.

Sind fell to the Indian Government, from the Muhammadan Talpur dynasty, after the battles of Hyderabad on the 15th, of Meanee on the 17th February 1843, and of Dubba on the 24th March 1843, all fought by Sir Charles Napier, and this gave to the British the course of the Indus up to Multan. In August 1842, Sir C. Napier had been appointed to the military command in Sind and Baluchistan, and invested with authority over all civil and political officers in these territories. On the 14th February 1843, the Amirs, except Nasir Khan of Khairpur, signed a treaty, leaving Mir Roostum's rights to future investigation. Next day the residence of Major Outram was attacked by 8000 of their troops. After a most gallant defence, the escort made their way to the main army. The battles of Meanee and Dubba subjected the whole of Sind to the British Government, with the exception of the possessions of Ali Murad, who was established as chief of Khairpur, in the territories which belonged to Mir Roostum, both by inheritance and in right of the turband, as well as in the lands of which he himself stood rightfully possessed at the time of the conquest. But a fraud was clearly established by a commission, which met in 1850, and Ali Murad was degraded from the rank of rais of Khairpur, and deprived of all his territories, except those which he inherited under his father's will. The revenue of his possessions in A.D. 1860 was estimated at Rs. 3,50,000, with power to try for capital offences any persons except British subjects. After the conquest, the deposed Amirs were removed from Sind, and pensions were granted them by the British Government.

For British administrative purposes Sind is arranged into the five districts of Kurachee, Hyderabad, Thar and Parkar, Shikarpur, and Upper Sind frontier. The valley is fertilized by the great river, which, like the Ganges, the Irawadi, and the Nile, has an annual rise in the summer months, overflowing its banks and fertilizing the soil to a distance on both sides. Strabo (Geogr. lib. xv.) and Arrian (Hist. Ind. c. 2) compare the delta of the river Indus to that formed by the Nile, and almost every part of the delta has at some time or other formed a channel for the river or one of its many branches. Parts of the territory are almost rainless; the average fall of Sind and Cutch is given by Mr. Blanford at 9·2 inches. Sometimes, indeed, for two or three succeeding years, no rain falls in the province. The N.W. monsoon deluges the Baluchistan hills, but Kurachee, in long. 67° 2′ E., is its eastern limit, and the S.W. monsoon ends abruptly at Lakpat Bandar, on the boundary of Cutch. In Upper Sind, the country is diversified. The Lakhi range forms an abrupt escarpment facing the river, 600 feet high. The towns of Sukkur and Rohri overhang the stream, and lying in the river between them is the island fortress of Bukkur with its lofty castellated walls, crowning the range of limestone hills through which the Indus streams. A little to the south of Bukkur is the island of Sad'h Bela, with its sacred shrine. In the Sehwan district is the Manchar lake, formed by an expansion of the Western Nara. During the inundation it measures 20 miles in length, and covers an area of about 180 square miles; while the Eastern Nara, at the same season, forms dandhs or flood lakes. The extreme S.E. border of Siud is formed by the Runn, a salt-water waste with an area of 7000 square miles. In the Thar and Parkar district, in the eastern portions of Khairpur, and in Rohri subdivision, is the desert, which consists of sand-hills which succeed one another like great waves. The soil of Sind consists of a plastic clay, strongly impregnated with salt. The alluvial strip which borders either bank of the Indus for a distance of 12 miles, is for productiveness the best in Sind, and in places on it are extensive forests of acacia. The exhalations arising from the pools left after the annual inundations give rise to fever.

Religion.—Two-thirds of the population follow Muhammadanism, 17·84 per cent. Hinduism, but all retain their clan designations. These are multitudinous, and many of the tribal names indicate the country from which the first immigrants came, —Syuds from Arabia, Baluch from the mountain region on the west, descendants of slaves from Zanzibar or Abyssinia, with Mehman and Khaja of Hindu origin, with Awan, Chuwan, Guda, Nakhuda, and Solang. Burton (pp. 368-69) gives 79 names of Baluch tribes. Other Muhammadans, generally known as Sindi, of whom there are about 300 clans of tribes, are descendants of converts from Hinduism.

Language.—Persian was the language of literature, ceremony, office, and epistolary correspondence. But Sindi, the language of the people, is spoken from the N. boundary of Kattyawar as far north as Bahawulpur, and extends from the hills on the west to the desert which separates Sind from the eastern portion of the Indian Peninsula. There are several dialects of it. It abounds in Arabic words. These in the Urdu constitute the language of the learned men, but in Sindi they are the words in common use for names. Its literature consists of translations of Arabic religious and moral works, and popular traditions in poetry, and the Arabic Nashki character is used by the Muhammadans, but the Hindus have a separate written character.

The Sindi is superior to most of the dialects of Western India in various minor points of refinement and cultivation, as, for instance, in the authorized change of terminations in poetical words, the reduplication of final or penultimate letters to assist the rhyme, and many similar signs of elaboration.

Agriculture.—The crops consist of rice, sorghum, Penicillaria spicata (spiked millet), Indian corn, and in Upper Sind wheat and barley. The method of clearing water-courses adopted by labourers is peculiar to Sind. They are attended in their work by musicians, and the excitement is kept up by beating drums and blowing horns. Without these they make no progress, but with them the canal-diggers of Sind will do more manual labour than any natives of India. They work uninterruptedly for twelve hours, and use a large hoe (phaorah) with a short handle. The period for clearing the water-courses is the first appearance of a rise in the river (March or April). The seasons for crops in Sind are two, Rabi or spring, and Kharif or autumn, the produce varying in portions of the country. These divisions of the year do not apply to climate, for they hardly exist. Saltpetre abounds in the soil of Sind, particularly the lower country, and is collected in great quantities. In many districts the surface of the land is covered with a saline efflorescence.

The timber trees of Sind are species of Acacia, Albizzia lebee, Avicennia tomentosa, Azaderachta Indica, species of Capparis, Ceriops, Cordia, Dalbergia, Populus Euphratica, Prosopis spicigera, and species of Tamarix and Zizyphus.

The forests, under the rule of the Amirs, were mere hunting preserves, and were admirably adapted, from the thickness of their underwood, for the cover of wild animals of every sort. No attention whatever was paid to their timber.

In Sind, the grass called Sar, which perhaps is Arundo karka, has its culms, sur jo kanee, made into chairs, and its flower-stalks, beaten to form the fibres called moonyah, are made into string or twine (moonyah jo naree), and into ropes (moonyah jo russa).

Nine-tenths of the Sind vegetation consist of plants which are indigenous in Africa, the desert regions assimilating with that country. At least one-half are common Nubian or Egyptian plants, and a considerable number is common to tropical Africa, and South Arabian and Persian plants also occur largely.

The pasture grasses most relished by horses, cattle, and sheep, are Cynodon dactylon, the sweetest and most nutritious of grasses, and abundant everywhere; also Poa cynosuroides, Andropogon involutus, *Stend.;* Anthistiria ciliata, Alopecurus pratensis, *W.;* Dactylis glomerata, and Digitaria sanguinalis, *P.S.;* with the straw of all the grain grasses and millets.

Amongst other wild animals may be mentioned the Gor-khar or wild ass of the deserts, the Equus onager of naturalists.

The river fisheries afford a considerable export trade in dried pullah. Among domestic animals, the camel, of the one-humped variety, ranks first as a beast of burden, immense numbers being bred in the salt marshes of the Indus.

The wool of Sind forms a staple of almost equal importance, though the larger portion of the quantity exported comes, not from the province itself, but from Ferozpur district in the Panjab, and from Afghanistan and Baluchistan.

The spirituous liquors are the gura from molasses, and kuttala from dates; wine called anguri is from the Sind grape; and liqueurs sonfi, mushki, turanji, nusri, gulabi, and kaisari. It abounds in mineral waters, but the situation of the province and its climate alike preclude the hope of their ever being extensively useful to Europeans, though they might be more employed for sepoys and the people of the country.—*Burton's Scinde; Cunningham's India; Elliot's India; Elphinstone's India; Gibson's Forest Reports; Ouseley's Travels; Pennant's Hindustan David Ross, C.I.E, The Land of the Five Rivers and Sind; J. A. Murray, The Plants and Drugs of Sind.*

SINDBAD, well known to Europe as having the history of his voyages incorporated in the Thousand and One Nights, but they form in Arabic a distinct and separate work, which Baron Walkenaer (in Nouvelles Annales des Voyages, tom. liii. p. 6) regards of equal value with those of Soliman and Abu Said. The voyages belong to the 9th century, when the commerce of the Arabs under the khalifs of Baghdad was at its highest activity. In his first voyage Sindbad reaches the country of the maharaja. This title was given so far back as the 2d century to a Hindu king, whose monarchy is said to have comprised the greater part of Southern India, the Malay Peninsula, Sumatra, and Java in the Indian Archipelago, and whose title continued to be borne afterwards by one of the sovereigns of the disintegrated empire, who reigned over the kingdom of Bijanagar or Vijayanagar. In Sindbad's second voyage mention is made of the kingdom of Riha (the Malay Peninsula according to some), and the manner of the preparation of camphor, produced in the mountain forests there, is accurately described. In the third voyage the island of Silaheth is mentioned. In the fourth he was carried to a country (Malabar) where he found men gathering pepper, and from it he went to the island of Nacous (the Nicobars?) and on to Kela (Quedah or Keydah?). In the fifth voyage he is shipwrecked on the islaud (*i.e.* country) of the Old Man of the Sea, probably somewhere on the Konkau coast. Thence he crossed the sea to the Maldives, and back again to the pepper country of Malabar, passing on to the peninsula of Comorin, where he found the aloes-wood, called santy, and afterwards to the pearl fisheries of the Gulf of Manaar, whence he travelled back to Baghdad. In the sixth voyage he visited an island (*i.e.* country) where were superb trees, of the kinds named santy and comary, and the island of Serendib (Ceylon), which was also the limit of his seventh and last voyage.

SINDHU. India was first known to the Chinese in the time of the emperor Wu-ti of the Han dynasty, in the 2d century before Christ. It was then called Yuan-tu or Yin-tu, that is Hindu and Shintu or Sindhu. At a later date it was named Thian-tu, and this is the form which the historian Mat-wan-lin has adopted. The name Sindhu was taken from the Romans, the Romans from the Greeks, the Greeks from the Persians. In Persian the initial s is changed into h, which initial h was as usual dropped in Greek. It is only in Persian that the country of the Sindhu (Sindhu is the Sanskrit name for river), or of the seven Sindhu, could have been called Hindia or India instead of Sindia. Unless the followers of Zoroaster had pronounced every s like h, we should never have heard of the West Indies. The name of India, *i.e.* Hoddu, does not occur in the Bible

before the book of Esther, where it is noticed as the limit of the territories of Ahasuerus in the east, as Ethiopia was in the west (i. 1, viii. 9). The names are similarly connected by Herodotus (vii. p. 9). The Hebrew form Hoddu is an abbreviation of Honadu, which is identical with the indigenous names of the river India, Hindu or Sindhu, and again with the ancient name of the country as it appears in the Vendidad, Hapta Heudu. The native form Sindus is noticed by Pliny (vi. p. 23). But though the name of India occurs so seldom in the Old Testament, an active trade was carried on between India and Western Asia. The Tyrians established their depots on the shores of the Persian Gulf, and procured 'horns of ivory,' 'broidered work and rich apparel' (Ezekiel xxvii. 15, 24), by a route which crossed the Arabian desert by land, and then followed the coasts of the Indian Ocean by sea. The trade opened by Solomon with Ophir through the Red Sea chiefly consisted of Indian articles. Algummim (sandalwood), kophim (apes), thuccum (peacocks), are words of Indian origin (Humboldt, Kosmos, ii. p. 133), to which we may add the Hebrew names of the topaz, pitdah, derived from the Sanskrit pita.—*Muller's Lectures*, p. 215.

SINDHU, a Jat clan in the Panjab. They are steady, good farmers, a sturdy, stalwart people.

SINDIA, the family name and regal title which designate the sovereign whose capital is Gwalior, and who has the title of maharaja. The territories over which the Maharaja Sindia rules form part of what the British term Central India. The Sindia family are Mahrattas, and came from near Satara. Ranaji, the first member of the Sindia family of note (1724), commenced his career as the carrier of the slippers of Balaji Rao, Peshwa. His care in the performance of this menial duty attracted his master's attention, who appointed him to a command in the pagah or bodyguard horse. From this his rise to the first rank of Mahratta chiefs was rapid. He placed himself at the head of several bodies of horse, with which he carried on raids, even into the territory of the emperor of Dehli, and some of the lands he then overran still form part of the appendages of the Gwalior rule. Ranaji's achievements might have perished with him after his death in 1759, had he not been succeeded by a man of still more striking capacity than his own. His youngest son, Mahdaji, although he did not at once succeed to the family jaghir in Malwa, has always been considered his political heir, because it was he who continued the work of establishing the fortunes of the house of Sindia.

Mahdaji Sindia's career had little more than begun when he found a great opportunity for showing the nobility of his character on the fatal plains of Panipat. On that day Mahdaji proved himself the bravest of the brave. The contingents of Holkar and Sindia formed the right wing of the Indian army, but Mulhar Rao left his youthful comrade to bear the brunt of the engagement alone, and the Mahratta forces were utterly defeated. Among the principal consequences of this signal defeat were the accession of Mahdaji to the full title of Sindia, in consequence of the death of all his relatives, and the commencement of a bitter rivalry between him and his neighbour Holkar. The disaster of Panipat, which threatened the family with extinction, was really the main cause of the after-fame of the house of Sindia, by bringing Mahdaji to the front as its responsible leader. Mahdaji escaped from the battle more by accident than by the fleetness of his steed. Pursued by an Afghan horseman, his tired charger was unable to carry him to a place of safety, and, stumbling over a ditch, the Mahratta chief lay at the mercy of his assailant. The Afghan struck him on the knee with his battle-axe, but was content to retire with the spoil of his personal ornaments and of his horse. Mahdaji escaped with the assistance of a water-carrier, also fleeing from the battle, but he carried the limp to his grave.

The overthrow at Panipat was so complete, that the Mahrattas, who before it had seemed to grasp the empire of Hindustan, were after it obliged for a time to content themselves with a very subsidiary part in its affairs, but Mahdaji endeavoured to regain supremacy. By the aid of Mahdaji's army, the emperor Shah Alam was reinstated on the throne of Dehli, and Rohilkhand was overrun by the Mahratta horsemen.

Mahdaji had, after his return from the north, devoted himself to the task of establishing his authority throughout the possessions he had inherited. But when he had secured his estates, his next thought became how he might turn them into a kingdom. In order to attain his object he formulated a policy of his own, by means of which he hoped to render himself as independent of his own suzerain, the peshwa, as of the Moghul emperor. He reorganized his army, and was the first of his race to train an infantry force, and to employ European officers,—De Boigne, 1784; Colonel Fremont, 1792-93; Major Gardner, 1794; Colonel Perron, 1794; Colonel Drugeon, 1797; Colonel Duprat, 1798; Colonel Sutherland, 1795; Colonel Pohlmann, 1799.

For thirty years he thus made himself the greatest potentate in Central India, and it was during this period that the house of Sindia was first arrayed in arms against the British. The early encounters of this campaign were in his favour. The convention of Wargaum closed a campaign of incapacity, and Mahdaji issued from his first contest with the British with increased reputation. The next campaign, under the conduct of Colonel Goddard, left Mahdaji's position intact, although the capture of Gwalior fort was a rude shock to the self-esteem of native warriors. With the signing of the treaty of Salbye, Mahdaji was again left to prosecute his schemes for establishing his supremacy among the Mahrattas. In 1788 he again entered Dehli to replace the aged Shah Alam on the throne, and five years later he marched on Poona to assert his preeminence in the councils of the peshwa. He succeeded in his object, and his prospects were rendered still more brilliant by the intelligence of a decisive victory gained by his troops over his rival Holkar, when his career was suddenly terminated by death in 1794 near Poona. His formidable army, organized under French officers, had made him in reality the ruler of Hindustan, though nominally the servant of the peshwa. He had played a most important part in the struggle which took place for the peshwa's office, after the death of Madho Rao, Bullal. He was the chief support of the party of Nana Farnavis. When peace was concluded with the Mahrattas by the treaty of Salbye in 1781, Sindia was the

mutual guarantee of both powers for its observance. Under the 3d article of this treaty, the right of the British Government to the pargana and town of Baroach was recognised. By this treaty the independent power of Mahdaji Sindia, in his relation to the British Government, was first recognised, but in all other respects he continued ostentatiously to proffer subjection to the peshwa.

Mahdaji Sindia died in 1794, and was succeeded by his grand-nephew Dowlat Rao Sindia. During the distractions which followed on the death of the peshwa Madho Rao Narain, Sindia was able to place Baji Rao in power. When by the treaty of Bassein the British Government had recovered its influence at Poona, and established a subsidiary force there, Dowlat Rao Sindia entered into a league with the raja of Berar to defeat the objects of the treaty, and he opposed General Wellesley's plan. But in the campaign which followed, the power of Sindia was completely broken, both in Upper and Central India, and he was compelled to sue for peace, and to sign the treaty of Surjee Anjengaum in 1803, by which he was stripped of his territories in Hindustan and south of the Ajunta Hills, with the exception of some hereditary villages, and resigned his claims on his former feudatory rajas with whom the British Government had made treaties. A subsequent treaty was concluded on the 23d November 1805. Sindia, however, countenanced the Pindaras in 1817. The subsequent open defection of the peshwa and the raja of Berar shook the stedfastness of Sindia to his engagements. The strong fortress of Asirgarh was not surrendered as stipulated by the treaty, and it therefore became necessary to reduce it by force. In the captured fort a letter was found in which Sindia directed the governor to obey all orders of the peshwa, who, by attacking the Residency at Poona, had declared war with the British Government. In consequence of this want of good faith, Sindia was required permanently to cede the fort of Asirgarh. Dowlat Rao Sindia died in March 1827. He left no son, and a youth of eleven years, named Moogut Rao, declared to be the nearest relation of Dowlat Rao, was adopted, was married to the granddaughter of Dowlat Rao by Baiza Bai, and was placed in power, with the title of Ali Jah Jankoji Rao Siudia, under the regency of Baiza Bai. Baiza Bai acknowledged this succession most reluctantly, and maintained that it was her late husband's intention that she should hold the regency during her life. The rule of maharaja Jankoji Sindia was very weak. Although the Baiza Bai had no strong party within Gwalior territories, she did not cease to intrigue and to use freely for this purpose a sum of Rs. 37,00,000, which she had been awarded as her private property. Jankoji Sindia died on 7th February 1843. He had no children. Tara Rani, however, the maharaja's widow, a young girl of twelve years of age, with the concurrence of the chiefs of the state and the army, adopted Bngeerut Rao, son of Hunwunt Rao, usually called Babaji Sindia, the nearest, though a very distant, relative of the maharaja, and the adoption was recognised by the British Government. The boy was then about eight years of age. He assumed the title of Ali Jah Jyoji Rao Sindia. The Mama Sahib, who appeared to possess the greatest influence, and was attached to British interests, was chosen by the chiefs as regent. But troubles again arose through the instigations of Dada Khasji Wala, who was at length delivered up. An interview was agreed upon between the governor-general and the maharaja, which was to take place at Hingoona on 26th December 1843, but the maharani and her son were held in restraint by the mutinous troops, and on the 29th December, when the British army was taking up its advanced ground, it was fired on by the Gwalior troops. The battles of Maharajpur and Punniar were fought the same day, and ended in the total defeat of the Gwalior army, and the conclusion of a treaty, by which it was agreed that territory yielding 18 lakhs a year should be ceded to the British Government for the maintenance of a contingent force, and other lands for the payment of the debts of the state to the British Government, and expenses of the war; that the army should be reduced to 6000 cavalry, 3000 infantry, and 200 gunners, with 32 guns; that the government during the minority should be conducted according to the advice of the British Resident; and that the just territorial rights of the Gwalior State should be maintained by the British Government. From that time till the rebellion and revolt of 1857 there was little change in the relations of the British Government with the Gwalior State. By the mutiny of the Contingent in June 1857, the Political Agent was forced to quit Gwalior. In June 1858 the maharaja was deserted by his troops on the approach of the rebels under Tantia Topee. He and his minister were compelled to flee to Agra. On 19th June, Gwalior was retaken by Sir Hugh Rose's force, and the maharaja was re-established in his palace. From that date the confidence of the maharaja was entirely withdrawn from his minister, to whom he conceived an intense dislike. Dinkur Rao was at last removed from office in December 1859, and Balaji Chimnaji was appointed in his stead, with the concurrence of the British Government. Since that time the maharaja has himself superintended the whole of his affairs. For his services during the mutinies, Sindia received a sunnud conferring on him the right of adoption. He was also informed that lands yielding three lakhs of rupees a year would be added to his territories; that permission would be given to him to raise his infantry from 3000 to 5000 men, and his artillery from 32 to 36 guns; that the arrears due to the British Government on account of the deficiency in revenues of the districts assigned under the treaty of 1844 would be remitted, and that no payments would in future be claimed should these revenues fall short of 18 lakhs; and the annual payment of 10,000 rupees out of the revenues of Burwa Saugor in the Jhansi district would be hereditary. These modifications of the treaty of 1844 were embodied in a new treaty concluded on 12th December 1860. The raja of Amjhera, tributary to Sindia, paid annually to the Gwalior State a tribute of 35,000 rupees, under an engagement mediated by the British Government. This tribute was part of the sums assigned in 1844 for the payment of the Contingent, and is now payable by Sindia to the British Government under the treaty of 1860. Besides this, the maharaja contributes 20,000 Halee

rupees towards the payment of the Malwa Bhil corps. Formerly Sindia contributed only 8000 rupees to this corps, and the raja of Amjhera contributed 4000 rupees. But when Amjhera was confiscated and made over to Sindia in consequence of the rebellion of the raja in 1857, it was made subject to a payment of 20,000 rupees, no further contribution being required on account of Gwalior. Including the cessions to Sindia under the treaty of 1860, the territories of the Gwalior State are estimated to contain a population of about 2,500,000 souls, and to yield a revenue of 93,09,102 rupees, of which 78,38,900 rupees are derived from the land-tax, 14,70,202 rupees from customs, and the rest from the tributes of feudatories. After the capture of Gwalior by the force under Sir Hugh Rose in 1858, the fort of Gwalior continued to be held by British troops. During the negotiations, however, which ended in the treaty of 12th December 1860, Lord Canning promised that the fort should be restored to Sindia, when this could with safety be done. It was, however, finally decided in 1864 that the cantonment of Morar should be maintained, and it therefore became necessary that the Gwalior fort should continue to be garrisoned by British troops.—*Treaties, Engagements, and Sunnuds; Annals of Indian Administration; Friend of India*, October 1868.

SIND-SAGUR, a doab of the Panjab. Its population are chiefly Muhammadans. They are a fine hardy race, with long flowing beards and large turbands. The bards of the Kheechee relate that all Sind-Sagur formerly belonged to them.—*Rajasthan*, ii. p. 233.

SING. No nation is more closely united by the ties of clanship, which they designate by the word sing, than the Chinese. All the many millions are divided into rather more than 400 sing; those who belong to the same sing consider each other as relations, descended from the same ancestor, and bound in duty to lend mutual help. This excellent custom degenerates frequently into that exclusive partiality which is so repugnant to the spirit of true philanthropy. One sing is opposed to the other, one clan oppresses the other; they proceed even so far as to engage in open hostilities. The ties of nearer relationship are still closer. A Chinese is taught by his sages to love his relations.—*Gutzlaff's Chinese History*, i. p. 207.

SINGALLY and Sozille are the maws or sounds of two fishes, and largely exported from Calcutta.

SINGAPORE ISLAND, at the southern extremity of the Malay Peninsula, in lat. 1° 17′ N., and long. 103° 50′ E., is separated from the continent by a narrow strait, in some places less than a mile in width. Singapore was first settled in A.D. 1160 by Sri Sura Bawana, and from an inscription, now destroyed, on a sandstone rock on a narrow point to the left of the entrance of the Singapore river, it would appear that raja Suran of Amdan Nagara, after conquering the state of Johore with his Kling troops, proceeded to Tamask about A.D. 1201, returned to Kling, and left this stone monument.

The island consists of a number of low hills and ridges, with narrow and rather swampy flats intervening. In several places the sea-face is elevated, but the greater portion of the circumference is fringed by a pretty deep belt of mangrove forest. Bukit Timah is a granitic hill about 530 feet high, but the rest of the island is composed of sedimentary rocks, amongst which sandstone occupies a prominent place. Government Hill is about 160 feet high. The Bukit Timah is in the centre of the island.

During the administration of Sir Stamford Raffles, on the 6th February 1819, for a sum of 60,000 dollars, and a yearly stipend of 24,000 dollars for life, the sultan of Johore made over the island of Singapore to the British, and it was finally ceded by treaty on 2d August 1824 to the British by the sultan.

The island is 25 miles in length, and about a third of that distance in breadth, has an area of 206 square miles (1,423,000 acres), and a population (at the census 3d April 1882) of 139,208.

The total imports and exports (in dollars) during the last decade were as follows:—

	Imports.	Exports.		Imports.	Exports.
1870,	39,058,564	31,731,022	1876,	45,466,070	40,614,783
1871,	36,766,530	32,003,807	1877,	49,327,317	41,428,407
1872,	43,415,383	30,020,121	1878,	47,259,337	39,421,921
1873,	47,880,090	41,752,145	1879,	56,278,292	49,250,238
1874,	46,887,070	41,508,798	1880,	60,675,733	54,578,981
1875,	43,766,201	41,619,519	1881,	70,699,682	58,001,188

In Singapore free port, the only charges are the Straits light dues, which are 1 anna or $2\frac{1}{8}$ cents per registered ton on merchant vessels. All national ships are free of this also. In Singapore, measures of capacity are rarely used, and these only with certain articles, such as tobacco, etc.

16 tael make 1 catty = 1 lb. 5 oz. 5½ grs., or $1\frac{3}{4}$ lb. avoirdupois.
100 catties make 1 (Chinese) pikul = 133⅓ lbs. avoirdupois.
40 (Chinese) pikuls make 1 royan.
2 (Malay) pikuls make 1 char.

The Malay catty weighs 24 Spanish dollars. The Chinese catty weighs $22\frac{1}{2}$ Spanish dollars. Rice is sold by the royan of 40 pikuls. The native merchants buy imported produce from the islands by the Malay pikul, but sell it by the Chinese pikul. Singapore timber is conveyed in huge rafts, 500 or 600 feet long and 60 or 70 feet broad, with atap-leaved houses on the top; each raft containing about 2000 logs, bound together by rattan rope.

SINGASUN is the ancient term for the Hindu throne, signifying 'the lion-seat.' Charun bards, who are all maharajas, 'great princes,' by courtesy, have their seats of the hide of the lion, tiger, panther, or black antelope.—*Rajasthan*, i. p. 293.

SINGAURGARH, hill fort in the Central Provinces, situated in lat. 23° 32′ 30″ N., and long. 79° 47′ E., 26 miles N.W. of Jubbulpur city. It is on a high hill, commanding the narrow Sangrampur valley. It was founded by raja Bel, a Chandela Rajput; it was enlarged by raja Dolpat Sa of Garha-Mandla, who made it the seat of government about 1540. It was the scene of the defeat of Rani Durgavati by Asaf Khan, an officer of Akbar; and the fort stood a siege of nine months in the days of Aurangzeb.—*Imp. Gaz.*

SINGBHUM, a British district in Bengal, lying between lat. 21° 59′ and 22° 53′ N., and between long. 85° 2′ and 86° 56′ E.; area, 3897 square miles; population, 322,396. The district forms the S.E. portion of the Chutia Nagpur

division. It is made up of the Government estate of Kolhan or Ho-desam, the fiscal division of Dhalbhum, and the political estates of Parahat, Saraikala, and Kharsawan.

The central portion of Singbhum consists of a long, undulating tract of country, running east and west, and enclosed by great hill ranges. The Ho or Larka Kol would not allow any strangers to settle in or even pass through the Kolhan, and pilgrims to Jaganath had to make a circuit of several days' journey to avoid it. Among aboriginal tribes, the most numerous are the Kol, 150,925 in 1872; Santal, 51,132; Bhumij, 37,253; and the Bhuiya, 12,078. The bulk of the Kol enumerated above are Ho, otherwise called Larka or 'fighting' Kol. Physically, the Singbhum Ho are the finest of all the Kolarian tribes. The men average 5 feet 5 or 6 inches in height, the women 5 feet 2 inches; and both men and women are noticeable for their fine erect carriage, and long, free stride. Even wealthy men move about all but naked as proudly as if they were clad in purple and fine linen. The Ho are fair marksmen with the bow and arrow, and great sportsmen. They are a purely agricultural people, and their festivals are all connected with that pursuit. Brahmans in Singbhum in 1872, 4098; Khandait, 2255; Rajputs, 1718; pastoral Goala, 34,987; Tanti, or weavers, 20,758; and Kurmi, cultivators, 19,667.

In Singbhum, occasionally, in the markets, a young man will pounce on a girl and carry her off by force, his friends covering the retreat. In 1857 the raja of Purahat joined in the rebellion, many of the Larka Kol following him. A Christian mission went to Chutia Nagpur in 1845, and has made much progress amongst the Dhangar race.—*Dalton*, pp. 163, 181; *Imp. Gaz.*

SINGH, from Sin'h or Sinha, a lion; a title borne by several military castes of Northern India, by Rajputs, by Brahmans, and likewise by Sikhs of Jat race when following the military profession. When a Manjhi Singh dies, leaving no male offspring, his brothers or his nephews of the full blood assume the right of succession, to which the widows become competitors. According to the Shastras (if they may be considered applicable to public property and chiefships), the prior title of the widows is held; but the Sikhs, with a view to avoid an open and direct violation of a known law, have a custom, termed Kurawa or Chadardalna, which obtains in every family with the exception of those of the Bhai: the eldest surviving brother of the deceased places a white robe over, and the nat'h or ring in the nose of the widow, which ceremony constitutes her his wife.—*Steinbach's Panjab*, p. 79; *Wilson.*

SINGHALESE, the general term in use to designate the inhabitants of Ceylon, and also the Ceylon language. The population comprises Europeans and persons of mixed descent, with the Burgher of pure Dutch descent, also Tamil or Dravida, Rhodia, Chalia, Veddah, Kandyan, and Gattaru. See Ceylon; India.

SINGHANA, town in Jeypore State, Rajputana, situated in lat. 28° 5′ N., and long. 75° 44′ E., 95 miles S.W. of Dehli and 80 miles north of Jeypore city. A rocky hill, 2 miles S.E. of the town, contains abundance of copper ore of a poor quality, yielding from 2 to 7 per cent. of metal.—*Imp. Gaz.*

SINGPHO, an uncivilised tribe occupying the hills bordering the extreme eastern frontier of Assam. They entered the Assam valley from Burma about A.D. 1773, and are now settled in the tract in lat. 26° and 27° N., and long. 96° E. Colonel Dalton says they are known to the Burmese as Ka-Ku and Ka-Khyen, but that on entering Assam they called themselves Singpho, which in their language means man. They occupy both the north and the south of the Patkoi mountain, and are near the Hukong valley or Pavendwen, 1000 feet above the sea. Another body, the Mirip Singpho, dwell farther east, in long. 97° E., between the Shooay-doung-gyee and the Irawadi, and near them, near the Hukong valley, are the amber mines, 1000 feet above the sea-level, in lat. 26° 20′ N., and long. 96° E. Their first settlements in Assam were on the Tengaprani, E. of Sadiya, and on the Bori Dihaug river in Namrup, under their chiefs called Gam, La, and Thu or Du. They are a fine athletic Mongoloid, olive-yellow coloured race, above the usual standard, capable of enduring great fatigue, but addicted to opium and spirits; hair abundant; fond of amber ear ornaments and of the deomani (god-bead), a bright-coloured bead. The men tattoo their lower limbs, and the married women from the ankles to the knees. They are polygamists. They bury their dead until decomposed, and afterwards the bones are placed in a coffin and decked out. On the demise of a parent, the eldest son takes the landed property and the youngest son the personal property, the intermediate sons remaining with their eldest brother.

The principal tribes on the frontier of Upper Assam are the Muttuk, the Khamti, and the Singpho. The Bur Senaputti, or chief of the Muttuk branch of the Singpho, entered into an engagement in May 1826, whereby he acknowledged the supremacy of the British, and bound himself to supply 300 soldiers in time of war. The management of the country was left in his own hands, except as regards capital offences. In January 1835 the obligation to supply troops was commuted to a money payment of Rs. 1800 a year. In 1826, similar agreements were made with the Khamti chief of Sadiya, but in 1839 they attacked the town of Sadiya, and many persons, as also Colonel White, the political agent, were slain. Agreements were also made in May 1836 with the Singpho. These tribes were implicated in the Khamti rising in 1839, but they were allowed to surrender under conditions. Many of the Singpho clans have become extinct, and the main body have left Assam for Hukong in Upper Burma.

SINHACHALAM, a temple in the Vizagapatam district of the Madras Presidency, in lat. 17° 46′ N., and long. 83° 11′ 8″ E. It is on a hill (800 feet above sea-level), 6 miles N.W. of Vizagapatam town. The shrine is in a wooded glen, containing springs and beautiful cascades. It is dedicated to the lion incarnation of Vishnu, and held in great veneration. It is believed to have been built by the Gajapati kings of Orissa about the 13th century A.D.—*Imp. Gaz.*

SINHALA, a Buddhist king, of whose coronation a representation occurs in the caves of Ajunta.

SINHASANA, or Lion Seat, the throne on which a sitting Buddha is figured. When the

Mahayana sect became popular, other beings were associated with the Indras, Bodhisatwas, Padmapani, Manjasri. In Hindu temples the sinhasan or throne is very handsome; the usual supporters are the sinha, or lions rampant, trampling on elephants couchant, and ridden by amazons armed with shields and swords. It was applied particularly to the throne of the Chalukya dynasty whilst ruling at Kalian, and literally means the lion's seat.

SINHASANA DWATRINSATIKA, or the Thirty-two Stories of the Speaking Statues; stories which were related by the female statues forming the pedestal of a throne belonging to the renowned Vikramaditya, king of Ujjain. They refer to Bhoj, a king of Ujjain, who obtained possession of a valuable throne, but when he attempted to sit on it the statues met him with uncontrollable laughter, and on his asking why they laughed, one of them related the story of king Vikram, how the throne was given to Vikram by raja Bahu Bul, and the other statues followed by other stories.

SIN-HOA, the country named Aurea Chersonesus of the great geographer Ptolemy, has been shown by D'Anville to be the Malay Peninsula, and his Sin-hoa the western part of Cochin-China.—*Ind. in the 15th Cent.*

SINTOH. CHIN. A gigantic creeping plant which grows spontaneously, extensively used both by natives and Europeans in making a lye or wash for the hair, which it is said to clean and strengthen in a remarkable degree.

SIN-TU or Sin-to or Shin-to, the state religion in Japan, but its followers are much less numerous than the Buddhists; the term is derived from Sin, the gods, and Tu, faith. The priests of the Buddhist religion use the Chinese language in their worship, except in their poetry, which is in the Japanese tongue. The Sin-tu religion, like the old pagan religion of Europe, consists of an apotheosis of all great heroes or saints, amongst whom the Japanese include Buddha, which explains the great consideration shown by the various sects there. Sin-tu temples have as gods the emperors, empress, the gods of the sea (kami), and a round mirror is a sacred emblem.—*Sir J. E. Reed.*

SIPAHI. HIND., PERS., TURK. A sepoy or foot soldier, from Persian Sipah, an army; and hence the words Sipah-salar, commander-in-chief; Sipah-dar, etc. Under the emperor Akbar, the Sipah-salar was a viceroy of a subah or province, from which, in Akbar's time, he was given the designation of Subahdar. The Dewan was a revenue officer under the Subahdar.

SI-PAIT, MALAY, meaning 'bitter wood,' is the root of a tree of Sarawak. In substance, appearance, and lightness it precisely resembles the plye; but while plye is tasteless, si-pait is very bitter to the taste. Pait, in Malay, means bitter.—*Low's Sarawak.*

SIPAL, a name of the Bhotia race occupying Sibu in Darma, in the N.W. Himalaya.

SIPATTA or Sib-patt. HIND. A woman's veil or wrapper, formed of three pieces sewn together.

SIPHONESTEGIA CHINENSIS. *Tatarinov.* A plant of Ho-nan and other parts of China. It has square stems, topped with the dehiscent fruit, containing millet-like seeds, useful in fluxes.—*Smith.*

SIPHONIA ELASTICA, common in the forests of Guiana and Brazil, and has been introduced into the E. and W. Indies. Condamine frequently mentions it in his Voyage down the Amazon. Caoutchouc is the milky juice of the plant, which exudes on incisions being made, and solidifies on exposure to the air.—*Eng. Cyc.*

SIR, also Sar. HIND. The head. Hence Sardar, a chief; Sir-pesh, a forehead jewel; Sir-kar, a government, a superintendent; Sar-posh, a cover. Sar-band, or head-binder, becomes with the Turks turband. Sir, in Pushtu, a peak.

SIRA, a municipal town in the Tumkur district of Mysore, in lat. 13° 44′ 43″ N., and long. 76° 57′ 16″ E. A large proportion of the inhabitants are Kurubar, who manufacture cumblis or coarse blankets.

SIRAF. ARAB., HIND., PERS. A banker, a money dealer, a cashier. It is from the Arabic.

SIRAJGANJ, a town in the Pabna district, Bengal, and the most important river mart in the province. It is situated near the Jamuna or main stream of the Brahmaputra, in lat. 24° 26′ 58″ N., and long. 89° 47′ 5″ E. It formerly stood upon the bank of the Jamuna; but in 1848 an excessive flood of the river washed the entire town away. The traders thereupon retreated some 5 miles backward to the new bank. Scarcely a warehouse stands on the river's brink, nor a tree to afford shelter. Large boats and flats lie anchored in mid-stream; fleets of smaller craft take shelter in the natural bends of the river; while the merchants and brokers move to and fro in light dinghis, to conduct their transactions on the spot. The principal native merchants are Marwari, locally known as Kaya, who are immigrants from Rajputana. They are described as honest, frugal, and diligent, but quite uneducated.—*Imp. Gaz.*

SIRAT. ARAB. In Muhammadan belief, a bridge over which all must pass on the day of judgment. It is said to extend over the midst of hell, and to be sharper than the edge of a sword. In moving along on it the feet of the infidel will slip, and he will fall into hell fire, but the feet of the Muslim will be firm, and carry him safe into paradise. See Bridge.

SIRENIA. Zeiren, GR. Herbivorous cetacea, a sub-order of the Cetaceæ, as under:—

ORDER. Cetaceæ, Whale tribe. 2 fam., 8 gen., 21 sp., viz.—
Fam. Delphinidæ, 5 gen., 14 sp., porpoises; Delphinus, 8 sp.; Steno, 2 sp.; Ncomeris, 1 sp.; Platanista, 2 sp.; Globiocephalus, 1 sp.
Fam. Balænidæ, whales, 4 gen., 7 sp.; Balænoptera, 1 sp.; Balæna, 4 sp.; Physeter, 1 sp.; Phocæna, 1 sp.
SUB-ORDER. Sirenia, herbivorous cetacea. Gen. Halicore, 3 sp.

SIRGUJA, a mountainous tract rising 600 to 700 feet above the level of Chutia Nagpur. Chutia Nagpur is the country on the eastern part of the extensive plateau of Central India, on which the Koel, the Subunreka, the Damuda, and other rivers have their sources. It extends into Sirguja, and forms what is called the Upar-ghat or highland of Jashpur, and it is connected by a continuous chain of hills with the Vindhyan and Kymor ranges, from which flow affluents of the Ganges, and with the highlands of Amarkantak, on which are the sources of the Nerbadda. The plateau averages 2000 to 3000 feet above the level of the sea, with an area of about 7000 square miles. It is on all sides difficult of access. It is

a well-wooded, undulating country, diversified by ranges of hills, and has a genial climate. The population in 1866 was estimated at about a million, and is formed of a number of non-Aryan tribes who had fallen back to that refuge from the plains, more than half of them being the race known to Europeans as Kol. There are 21 mahals which form the S.W. frontier, and which may be thus classified :—

The Sumbulpur Group.

Sumbulpur proper.	Sukti.	Bamra.
Burgarh.	Gangpoore.	Rehra Cole.
Raigarh.	Sarunghur.	Sonepore.
	Bunnie.	

The Patna Group.

Patna proper.	Bora Samur.	Bindra Nowagarh.
Phuljhur.	Khuriar.	

The Sirguja Group.

Sirguja proper.	Udaipur.	Chang Bahar.
Jashpur.	Korea.	

Singbhum.

The territories comprised in the Sumbulpur and Patna groups were ceded to the British Indian Government by the treaty of 1803 with Ragoji Bhonsla. They were all, except Raigarh, restored in 1806, but finally reverted to the British in 1826. The Sumbulpur and Patna groups are in the circle of the Cuttack Tributary Mahals. Singbhum was never Mahratta, and in 1857 its chief, the raja of Purahat, joined in the rebellion, many of the Larka Kol following him. The territories forming the Sirguja group were ceded in 1817, and in 1818 the British Government sent a superintendent to Sirguja to restore order in the country, which had become distracted by domestic feuds. In 1820 and 1825, engagements were made with the chief of Sirguja. In 1819 engagements were also taken from the chiefs of Jashpur and Korea, of which latter state Chang Bahar was then a feudal dependency ; but in 1848 separate settlements were made with Korea and Chang Bahar. The Sirguja mountains are in length 90 miles, breadth 85 miles, and lie between lat. 22° 34′ and 24° 54′ N., and long. 82° 40′ and 84° 6′ E. Sirguja is rugged and mountainous, from 500 to 600 feet above the adjoining tableland of Chutia Nagpur. Drained by the rivers Kunher and Rhern, with its feeder. — *Major Dalton, Annals of Indian Administration ; Aitcheson's Treaties, etc.* See Kol ; Saont ; Singbhum.

SIRHAN RIVER, in Hazara district, Panjab, a tributary of the Indus. Rises at the head of the Bhogarmang glen, in lat. 34° 46′ N., long. 73° 19′ E. Abounds in fish, especially the mahsir. The Pakhli Swathis call the Sirhan their female slave, as it irrigates their fields, grinds their corn, husks their rice, and cleans their cotton. Numerous mills line the bank.—*Imp. Gaz.*

SIRHIND, the capital of a province of that name, is now a town in the state of Patiala. Its gardens are described by Abul Fazl as laid out by Hafiz Rahmat, a grandee of Humayun's court. Thanesar in Sirhind, on the route from Kurnool to Ludhiana, was the object of one of Mahmud of Ghazni's iconoclastic expeditions. It is still surrounded by a ruined wall evidently once of considerable height, connected with which is a dilapidated fort with numerous towers. Sirhind province consists of the north-east portion of the plain which intervenes between the rivers Jumna and Sutlej. It includes the British districts of Ambala, Ludhiana, and Ferozpur, together with the Native States of Patiala, Jheend, and Nabha. This tract comprises the whole watershed of the now deserted stream which once formed the great river Saraswati. In 1882, during the administration of the Marquis of Ripon, a canal was completed designed to irrigate 2500 square miles, 750,000 acres of thirsty soil. It passes through the territory of several native chiefs, as well as through what is directly under British administration. They all gave active co-operation, ranging themselves alongside of the Imperial Government in the efforts it makes for the amelioration of the poverty that presses with terrible severity upon large classes of the Indian populations. The total length of the canal was 502 statute miles; and when the works were completed, 2500 miles of channel were to be maintained. The canal was designed to irrigate, through branches, 522,000 acres in British and 261,000 acres in Native States. The total cost was estimated at 407 lakhs, of which 278 lakhs were being defrayed by the British Government, and 129 lakhs by the Native States.—*Cal. Rev.*, Jan. 1871.

SIRI, Sri, or Siris was one of the principal deities of Arabian and Ethiopian theologies. Deodorus says the Greeks prefixed an O, and made it Osiris.

SIRI, the ancient name of Dehli, prior to its capture in A.H. 587, A.D. 1191.—*Prin. Ind. Ant.* p. 326.

SIRI. Malay. Betel leaf, leaf of the piper betel. Amongst the Malay chiefs, the siri boxes are in forms indicative of the ranks of their respective owners. At the Great Exhibition of 1861 were exhibited those of the sultan of Linga, of the raja Muda or heir-apparent, of the Bindahara or treasurer, and of the Tamanggung, the minister of war and police.

SIRIKUL, a lake 15,000 feet above the sea, on the Pamir plateau, discovered in 1838 by Lieutenant Wood to be the source of the chief branches of the Oxus. It is about 14 miles long by 1 in breadth. The surrounding mountains are covered by perpetual snow.—*Tr. C. As.*

SIRIPUL, a town in Afghan Turkestan, 100 miles S.W. of Balkh, with about 18,000 souls, in houses and tents, mostly Uzbak. The chief is an Uzbak.—*MacGregor*, p. 645.

SIR-KAP, part of Taxila. Hatial is a strong fortified position on the west end of a spur of the Margala range, and immediately to the north-east of the Bir mound, from which it is separated by the Tabra Nala. The fortified city of Sir-kap is situated on a large level mound immediately at the north foot of Hatial, of which it really forms a part, as its walls are joined to those of the Kot or citadel.—*Cunningham's India*, p. 115.

SIRKELE, the minister of the Puducottah State, ruled over by the Tondaman raja.

SIRKI and Kanna, stems of Saccharum munja and of Saccharum sara ; also thatch made of the tapering top of the flower-stalk of munj grass.

SIR KOTAHA. Hind. Level land; sir cultivation, on the plains, means the land that a man retains for his own individual cultivation.

SIRMUR, one of the Sub-Himalayan hill states, under the government of the Panjab, frequently called Nahan, from the name of the chief town. In 1803, the country was brought into subjection by the Gurkhas, who in turn were expelled in

1815 by the British under Sir David Ochterlony. The height of the trigonometrical station on the Chur mountain on the northern frontier is 11,982 feet, and that of the confluence of the Giri and Jumna on the southern frontier about 1500 feet above sea-level. The Raja Ban forest yields much sal timber. A sportsman finds difficulty in making his way through them in search of wild elephants, tigers, leopards, bears, and hyænas, with which they abound. Wild pea-fowl abound, and are sacred. The Kanet, a Rajput tribe, are 60 per cent. of the population; they purchase their wives, and widows re-marry. In recognition of the services rendered by raja Shamshir Purgass during the mutiny, he received a khillat of Rs. 5000 and a salute of seven guns. Population, 75,595; revenue, 1 lakh. The raja is bound to render feudal service. Some women are to be seen delicate in form and feature, but to the northward the female countenance is generally good-humoured, but the form coarse.—*Fraser's Himalayan Mountains*, p. 205.

SIRNA, sanctuary. In all ages and countries the rights of sanctuary have been admitted, and however they may be abused, their institution sprang from humane motives. To check the impulse of revenge and to shelter the weak from oppression are noble objects, and the surest test of a nation's independence is the extent to which they are carried. From the remotest times sirna has been the most valued privilege of the Rajputs, the lowest of whom deems his house a refuge against the most powerful. When Moses, after the Exodus, made a division of the lands of Canaan amongst the Israelites, and appointed six cities to be the refuge of him who had slain unwittingly, from the avenger of blood, the intention was not to afford facilities for eluding justice, but to check the hasty impulse of revenge; for the slayer was only to be protected until he stood before the congregation for judgment, or until the death of the high priest, which event appears to have been considered as the termination of revenge. In India the infraction of political sanctuary (sirna torna) often gave rise to the most inveterate feuds, and its abuse by the priests was highly prejudicial to society. Moses limited priestly interference, by appointing but six cities of refuge to the whole Levite tribe; but the rana of Mewar assigned more to one shrine than the entire possession of that branch of the Israelites, who had but 42 cities, while the god Kaniya had 46. The motive of sanctuary in Rajasthan may have been originally the same as that of Moses, but the privilege was abused, and the most notorious criminals deemed the temple their best safeguard. Yet some princes were hardy enough to violate, though indirectly, the sacred sirna. Zalim Singh of Kotah, a zealot in all the observances of religion, though he would not demand the culprit, or sacrilegiously drag him from the altar, forced him thence by prohibiting the admission of food, and threatening to build up the door of the temple; and the Greeks evaded the laws, and compelled the criminal's surrender by kindling fires around the sanctuary. There was an ancient law of Athens by which he who committed 'chance-medley' should fly the country for a year, during which his relatives made satisfaction to the relatives of the deceased. The Greeks had asyla for every description of criminals, which could not be violated without infamy; but Gibbon gives a memorable instance of disregard to the sanctuary of St. Julian in Auvergne, by the soldiers of the Frank king Theodoric, who divided the spoils of the altar, and made the priests captives, an impiety unsanctioned by the son of Clovis, and punished by the death of the offenders, the restoration of the plunder, and the extension of the right of sanctuary five miles around the sepulchre of the holy martyr. Within the sacred bounds of Mount Abu was the sanctuary (sirna) of Kaniya, where the criminal was free from pursuit.—*Tod's Rajasthan*, i. pp. 523, 526, ii. pp. 378, 551. See Bast; Sanctuary.

SIROCCO. The sirocco wind in the Mediterranean has little effect on the healthy, but the weak and diseased are materially injured by its depressing influence. The term has an Arabic origin, from Sharq, the east wind.

SIROHI, a Native State in Rajputana, lying between lat. 24° 22′ and 25° 16′ N., and long. 72° 22′ and 73° 18′ E. Area, 3000 square miles; population, 153,000. The Banas, rising in the Aravalli Hills, flows through the State into Gujerat, and after passing the cantonment of Deesa, is finally lost in the Runn of Cutch. The people comprise the Banya and Mahajan clans of the Oswal and Porewal, following the Jain faith. The Rajputs are the dominant race, their septs or clans are Deora, Chauhan, Sesodia, and Rahtor. But Kalbi, Rebari, and Dher are numerous; and also aboriginal Bhil, Grassia, and Mina. Grassia are principally in the bhakar or hilly tract in the S.E. corner of the Sirohi. They claim to be the descendants of Rajputs married to Bhil women. There are some Koli, who are believed to have immigrated from Gujerat. Rao Sheo Singh, with whom the British Government concluded a treaty in 1812, was called to power, in 1818, by the unanimous voice of the chiefs, who had deposed and imprisoned his elder brother Oudeybhan-ji for tyranny and oppression. Maharaja Man Singh of Jodhpur, who laid claim to supremacy over Sirohi, sent a force in 1819 to liberate Oudeybhan-ji, but he failed; and Oudeybhan-ji continued in confinement till his death, without children, in 1847. During the disturbances incident on the Jodhpur invasion, Rao Sheo Singh craved the protection of the British Government. The rao made over to the British Government, in 1845, some lands on Mount Abu for the establishment of a sanatorium, but fettered by the condition that no kine should be killed. On several occasions he was requested to cancel this condition, but he always refused. The rao did good service in the mutinies, in consideration of which he received a remission of half his tribute, which had been fixed at Rs. 15,000, to Rs. 7500; he also received the right of adoption and a salute of 15 guns. In 1868 it was discovered that both in Sirohi and in Marwar the practice of Samadh, or burying alive, prevailed to a considerable extent, but confined almost entirely to persons in the last stage of leprosy, by whom it was practised to put an end to their sufferings. His Highness issued a proclamation declaring that Samadh was forbidden, and that any one assisting at any case in future would be liable to imprisonment extending to ten years, and that the jaghirdar on whose estate it took place would be liable to the same punishment, and the forfeiture of his estate; and any raj official,

through whose culpable neglect a case might occur, would also incur the same liability.—*Treaties*, iv. p. 157.

SIRONCHA, lat. 18° 51′ N., and long. 80° 1′ E., in the Central Provinces, is the headquarters station of the Upper Godavery district, pleasantly situated on the left bank of the Pranhita, two miles above its confluence with the Godavery, and 120 miles S.S.E. of Chanda, the nearest station of the Central Provinces. It is 520 feet above the sea-level according to the topographical survey maps. 40 miles above Sironcha occurs what is known as the third barrier.

SIROPA, the Rajput term for a khillat or robe of honour; properly Sir-a-pa (from head, Sir, to foot, Pa), and means a complete dress; in short, cap-à-pie.—*Rajasthan*, i. p. 265.

SIRPHERRA, a tribe who reside in summer in Gurghina and winter in Cutch Gandava.

SIRR. Salt lakes of the Indian desert are termed sirr, though none are of the same consequence as those of Marwar. The largest is at the town of Sirr, so named after the lake, which is about six miles in circumference. There is another at Chaupur about two miles in length. Although each of them frequently contains a depth of four feet of water, this entirely evaporates in the hot winds, leaving a thick sheet of saline incrustation. The salt of both is deemed of inferior quality to that of the more southerly lakes.—*Tod.*

SIRSA, a British district in the Panjab, lying between lat. 29° 13′ and 30° 40′ N., and long. 73° 57′ and 75° 23′ E.; when conquered by the British in 1803, it was found almost entirely uninhabited. The Bhatti were lords of the soil, but they tilled little, and only used it as a site for their scattered forts, from which bands of marauders made occasional raids into the surrounding regions. Sirsa is entirely dependent for its harvests upon the scanty rainfall; it is peculiarly liable to famine. The Bhatti are graziers, and are still predatory. Other races are Jat, Banya, Arora, and the Muhammadan Waller and Kharal.—*Ann. Ind. Ad.* xii.

SISTER is a term applied to cousins, and in such degrees inter-marriages occur. Indeed, a Muhammadan claims for his bride, by right, the daughter of his mother's brother. The polygamic Israelites seem, from Genesis xx. 12, 13, and Esther ii. 3, also Genesis xi. 29, and xxiv. 4, to have held these views; but eastern nations in general shrink from calling their wives sisters, as Abraham called Sarah, Genesis xx. 12, 13, and he was suitably rebuked for his impropriety.—*Hind. Theat.* ii. p. 314.

SISUNAGA, a Maghadha dynasty, which ruled in India from B.C. 691 to 395. These are dates given by Mr. Fergusson, who says Sakhya was born B.C. 623, in the reign of Bimbasara, the fifth king of the dynasty, and died B.C. 543, at the age of 80 years, in the eighth year of Ajata Satra, the eighth king. They are said to have succeeded the parricide Battya kings, B.C. 446, by the murder by Sisunagaga of the last Bhatti. This was brought about by a learned Brahman named Chanacya, through whose intrigues Chandragupta was raised to power.

Sisunagaga, ...	reigned	18	years,	B.C. 446
Kalasoka, ...	,,	28	,, ,,	428
Bhadyasena and his 9 brothers,	,,	22	,, ,,	379

The last brother, Pingamakha, was dethroned by Nanda.—*Fergusson*, p. 14. See Bhattya.

SISYMBRIUM ATROVIRENO. Ting-lih, CHIN. A plant of several parts of China, given in dropsy, fevers, amenorrhœa. Sisymbrium iris, Khub, Kalan, Khakshi, HIND. Small, oval, bright-yellow seeds. Used for coughs. Formerly used as a pot-herb in England.—*Powell.*

SITA, daughter of Janaka, king of Kosala, and wife of Rama. Rama was the son of Desaratha, of the Solar race, king of Ayodhya, now termed Oudh, a potent sovereign of Hindustan, who, having been banished by his father in consequence of the machinations of his queens, retired to the banks of the Godavery, accompanied by his brother Lakshmana and his wife Sita, and lived in the neighbouring forests the austere and secluded life of an ascetic; but Sita having been forcibly taken from him by Ravana, the king of Lanka (Ceylon), Rama, with the aid of Sugriva, the sovereign of Carnata, invaded the kingdom of Ravana, and, having conquered him, placed his brother on the throne of Lanka in his stead. The war seems to have been protracted, and its events are related in the Ramayana, one of the finest epic poems (in spite of many extravagances) extant, which beautifully describes the incidents of Rama's life, and the exploits of the contending foes. Sita was highly loved by her husband, who says she gave him excellent counsel, bore his impatience without a murmur, was as a mother to him in the time of need, and a dear friend in time of joy. The Uttara-Kanda says Rama took back his wife on her own oath and the testimony of the gods as to her purity. But the Raghuvansa and the Uttara-Rama-Charita make her go through the fire ordeal. This is different from Menelaus, who took back his wife Helen after she had lived years with Paris.—*Ward*, iii. p. 183.

SITABALDI, lat. 21° 10′ N., and long. 79° 6′ E., in Berar, a large station adjoining Nagpur. Mean height of the plain, 1169 feet. The hill of Sitabaldi, standing close over the Residency, consists of two eminences joined by a narrow neck of ground, about 300 yards in length, of considerably lesser elevation than either of the two hills. The whole surface is rock. It is near to the town of Nagpur, and a battle was fought near Sitabaldi, 26th and 27th November 1817, and won by the British.—*Schl. Ad. S.*

SITAKUND, highest peak in the Sitakund range, Chittagong district, Bengal, a sacred hill, 1155 feet above sea-level; lat. 22° 37′ 40″ N., long. 91° 41′ 40″ E. It has a hot spring, said to be bituminous, and is a great place of pilgrimage for Hindus from all parts of India. The principal gathering is the Siva Chaturdasi festival, on the 14th day of the moon, sacred to Siva (usually in February); it lasts about ten days, and is attended by from 10,000 to 20,000 devotees. The pilgrims live at lodging-houses kept for the purpose by Brahmans, called adhikaris, each of whom is said to realize from £300 to £400 during this feast. A meeting of Buddhists (chiefly hillmen) takes place on the last day of the Bengali year, at a spot on Chandranath Hill, where the body of Gautama, the last Buddha, is locally reported to have been burned after death. Bones of deceased relatives are brought here, and deposited in a pit sacred to Gautama.—*Imp. Gaz.*

SITAKUND, an oblong tank, about 100 feet long by 50 feet wide, excavated in the Mandar

Hill, Bhagulpur district, Bengal, nearly 500 feet above the surrounding plain. The pilgrims who visit it are persuaded that Sita used to bathe in it during her stay on the hill with her husband when banished from Oudh.

Sitakund, a hot spring, is two or three miles from the town of Monghir, and one of the sights of that pleasant and picturesque station.

SITAL SINGH, moonshi to the raja of Benares, author of a history of the various Hindu sects.

SITANA. Below Derbund lies the district of Sitana, about 15 miles north of Torbaila, near the base of Mahaban, and on the bank of the Indus. The Syuds of this place are the remnant of the followers of Syud Ahmad, who, gathering a handful of Gazee (warlike devotees) from various parts of India, raised a formidable rebellion in Peshawur. After winning and losing Peshawur and Yusufzai, the Syud was eventually slain at the mouth of the Kaghan glen by Sher Singh, the son of Maharaja Ranjit Singh. Most of his adherents, chiefly foreigners to the Panjab, dispersed, and the remainder settled at Sitana, on the slopes of the Mahaban. They were proceeded against by the British in 1858, by a force under Sir S. Cotton.—*Papers, East India, Kābul, and Afghanistan*, 1859, p. 20.

SITANG, a river of Burma, rises in lat. 21° 40′ N., and long. 96° 50′ E., runs into the Gulf of Martaban; length, 420 miles; Yunnan, 115 miles; Saar, 120 miles. It is a navigable river for about 190 miles, and forms the boundary between the Tenasserim Provinces and Pegu. Its valley is the valley of Pegu. The whole extent of the valley is about 350 miles, of which one-half lies within the British provinces of Pegu and Martaban. The Sitang river separates Pegu from Martaban. It opens into a broad estuary, 55 miles wide at its entrance. It consists of hard sand spots, separated by narrow but deep channels, through which the tide rushes with furious rapidity in the form of a bore, which advances like a wall, broken into foam at the top, filling the river from bank to bank. In the dry season, the tide is felt as high as Mūn.—*Findlay.*

SITANUK, one valve of a mussel shell, with the dried fish attached. The Punsari of Ajmir call it 'the small head of a sea animal;' used in Ajmir as an aphrodisiac, and also said to cure the cynanche of children; comes from Bombay via Pali. One seer costs two rupees.—*Gen. Med. Top.* p. 132.

SITAR or Sitara, a musical instrument similar to the cither, supposed to have obtained its name from the Sih-tara, the three-stringed, and believed to be the source of the word guitar. Ek Tara, when with one steel wire; sometimes it has nine or eleven steel wires; but generally three, whence its name. See Kemanchi.

SITONA, a species of this genus of insects is one of the most destructive in Indian granaries, attacking poppy seed, maize, millets, wheat, barley, and rice. It is about one-eighth of an inch long, and of a pale-chesnut colour.

SIVA, a Hindu deity, the object of worship of the Saiva sect, which is the most numerous of all the Hindu sectaries. Nearly all the Rajput races, most of the Hindus in the valley of the Ganges, and three-fourths of all the Hindus of the south of India, worship Siva in some of his emblematic forms, the most received of which is that of the lingam. Magnificent temples have been erected to him all over British India, to each of which from thousands to hundreds of thousands of pilgrims annually resort. Those in the Madras Presidency, at Conjeveram, Jambukeswara, Tirunamale, Chedambara, and Kalahasti, are the most celebrated. Siva and his worship are confined to British India, where the name is variously pronounced and written Siva, Shiva, Sivin, Seo, Sheo, Shev, Seb, S'hiu, Shib, Shivu, and Chivin, and there is mention of this god in the book of Amos (v. 25-27), 'Have ye offered unto me sacrifices and offerings in the wilderness forty years, O house of Israel? But ye have borne the tabernacle of your Moloch and Chiun your images, the star of your god, which ye made yourselves. Therefore will I cause you to go into captivity beyond Damascus.' And it is evident from this that even then, B.C. 955, the emblem under which Siva is still worshipped, and the marks which his followers put on their foreheads, were both well known. About 500 years B.C. the pantheism of the Vedas became transformed into the respective symbolic embodiments of Siva and Vishnu, and, in later times, Siva has since been accepted as the same with the Vedic deity Rudra. Siva is a god unknown to the Vedas; the name is a word of not infrequent occurrence in the hymns, indeed, but means simply propitious; not even in the Atharvan is it the epithet of a particular divinity, or distinguished by its usage from any other adjective. As applied to him whose title it has since become, it seems one of those euphemisms so frequent in the Hindu religions, applied as a soothing and flattering address to the most awe-inspiring god in the whole pantheon.

Siva is mentioned by Bardasanes, a Greek author, as worshipped in a cave not far from Peshawur in the early part of the third century. The worship of Siva seems to have been introduced into India about the beginning of the Christian era, and apparently came from the west, and embodied the sun-worship and the physiologial philosophy of Baal. Colonel Tod tells us that there are numerous temples in Rajasthan of Baalim; and that Balpur (Mahadeo) has several in Saurashtra, all representing the sun.

One of the great teachers of the Saiva sect was Sankaracharya, A.D. 850. He was born in Malabar. He extended his teachings to Kashmir and Kedarnath, where he died at the early age of 32. He wrote in Sanskrit many religious works, and has exercised a great influence on the religion of the people of India. He had ten disciples, and the appellation Das-namah, applied to the ten Saiva sects, has reference to their names. Of these, six and a half sects have fallen away from Sankara's doctrines. They are called Atith, from 'a tita,' passed away from worldly cares. They are still religious mendicants, are frequently collected in maths or monasteries, but they are not ascetics, as they use clothes, ornaments, and money, carry on trade, accumulate property, and mix in the business of the world.

The Dandi of Sankara, three and a half in number, are compelled to retain his doctrines in a pure form. The doctrines of the Dandi and of the Atith are those of the Vedanta system. What the Sri-Vaishnava are to the Vaishnava

sects, that the Dandi are to the Saiva sects; and what Ramanand was to the Sri-Vaishnava, that Gorakhnath was to the Dandi.

The attributes of Siva are many. He is named Isa or Iswara, Rudra, Hara, Sambhu, Mahadeva, Mahesha. Siva is Time, the Sun; he is Fire, the destroyer, the regenerator. His consort Parvati, a mountain nymph, is the symbol of created nature, and in that character named Prakriti. As the deity presiding over generation, his type is the linga, which is the phallic emblem of Egypt, Greece, and Rome. As the god of justice, which character he shares with Yama and other deities, he rides a bull as his vahan, the symbol of divine justice. He holds, as his commonest attribute, a trident, called trisula, in this and in some other points resembling Neptune. His colour, as well as that of the bull, is white, and his hair of a reddish colour. He is sometimes represented as with two, four, eight, or ten hands, and with five faces. He has a third eye on his forehead, pointing up and down, a distinction peculiar to him. As Mahadeva, he is abundantly decked with serpents, emblems of immortality, and common ornaments to many deities. He is often represented with his trisula or trident in one hand; as also with the pasa, string or rope, also often depicted in the hands of his consort Kali, for binding and strangling incorrigible offenders. Serpents, emblems of eternity, form his ear-rings, called Nag-mundala; his pendent collar of human heads, his Mund-Mala, marks his character of destruction or time; and his frontal crescent points at its most obvious measurement by the phases of the moon. Occasionally, in his hands is represented the warlike mace (Gadha or Parasha), and Mrigu or Sasin, a name for the antelope, given also as an attribute of the god Chandra, the Moon. Frequently Siva's loins are seen wrapped in a tiger's skin, and the river goddess Ganga smiles serenely from his Mugut, or headpiece. His sectaries give various explanations and comments on these symbols.

Siva is principally worshipped under the form of the linga. Some of these lingams, usually of basalt or dark-coloured greenstone, are of an enormous size; but they are also made, morning and evening, of clay of the Ganges, and after worship are thrown into the river. The linga is never carried in procession. The temples dedicated to it are square Gothic buildings, the roofs of which are round and tapering to a point. In many parts of Hindustan they are more numerous than those dedicated to the worship of any other of the Hindu idols, as are the numbers of the worshippers of this symbol beyond comparison more extensive than the worshippers of the other deities or their emblems. The Binlang stone is also sacred to Siva. In the temples erected in honour of Siva, the officiating Brahman, after bathing in the morning, enters the temple and bows to Siva. He anoints the image with clarified butter, after which he bathes the image with water which has not been defiled by the touch of a Sudra, nor of a Brahman who has not performed his ablutions, by pouring water on it, and afterwards wiping it with a napkin. He next grinds some white powder in water, and, dipping the ends of his three forefingers in it, draws them across the linga, marking it as the worshippers of Siva mark their foreheads. He next sits down before the image, and, shutting his eyes, meditates on the work he is commencing; then places rice and durva grass on the linga; next a flower on his own head, and then on the top of the linga; then another flower on the linga; then others, one by one, repeating prayers. He then places white powder, flowers, vilva leaves, incense, meat offerings, and a lamp before the image; also some rice and a plantain. He next repeats the name Siv, with some forms of praise, and finally prostrates himself before the image.

On the 14th of the increase of the moon in Phalguna, in the night, a vigil in honour of Siva is kept at his temple, the image is bathed four times, and four separate services are performed during the night.

The temples of Siva in most parts of India are small, and with one chamber, in the centre of which stands a linga, usually of white or black stone; but occasionally 12 such temples, or even up to 108, are arranged immediately adjoining, in a group. Yet these temples are little resorted to by votaries; they are regarded with comparatively little veneration by the Hindus, and flowers and fruit are thrown with little solemnity before the image. The only exception to this is the temple of Vis-Eswara at Benares, which is thronged with a never-ceasing crowd of admirers. Along the banks of the Ganges the worship of Siva is not the prevailing nor the popular condition of the Hindu faith, and it is only in the south of India that the people possess popular legends regarding him.

The worship of Siva is a religion of stern realities, and his consort, in the forms of Durga and Kali, are the dread agents for the punishment of mankind. The opposing worshippers of Vishnu and Siva long desolated India with wars and persecutions. Krishna appears to have been opposed both to the Saiva and Indra sects. If any credit could be given to the Hindu legends, Ravana, who reigned over Ceylon and the southern part of the Peninsula at the time of Rama's invasion, was the head of a civilised and powerful state, a Hindu follower of Siva. The Hindus who worship both Siva and Vishnu are of the sect of Bhagavat Sampradai, or devotees of a two-fold deity, these being ordinarily the lingam and yoni as emblems of Siva and his sakti (Devi), and of Krishna, of the Yadu form, with Lakshmi. Vaishnava Brahmans will never worship Siva nor any emblem of that deity, nor even enter his temple, nor fast on the days of Siva's fast days. Saiva sectarians, generally, worship all deities; they are, in truth, polytheists. But the Vira-Saiva Lingaets, and Smartta Brahmans, and those who recognise the Rig Veda, do not worship at the Vaishnava temples. The period of sectarian intolerance is now past or in abeyance; and, as far as observation goes, the worshippers of Vishnu, Siva, and Buddhists view each other without malignity; which feeling appears never to have influenced the laity of either sects, who are uniformly respectful to the ministers of other religions, whatever be their tenets.

Siva, from the legendary destruction of the three cities of a demon, is named Tripura or Tripura-sura, the supposed origin of the modern Tiperah. Siva is represented with three eyes; hence his

title of Trinitira and Tri-lochun, and in this form he is the Tri-ophthalmic Jupiter of the Greeks. From the fire of the central eye of Siva is to proceed Pralaya, or the final destruction of the universe; this eye is placed vertically, resembling the flame of a taper, is a distinguishing mark on the foreheads of his votaries, the eye in the forehead being one peculiar characteristic of Siva and of his consort, when armed with his terrors. This third eye is said to have burst from his forehead on an occasion when his wife playfully placed her hands over his eyes whilst he was engaged in austerities in the Himalayas. With it he reduced Kama to ashes for daring to inspire amorous thoughts of Parvati whilst engaged in penance, and by its glance the gods and all created beings were destroyed at one of the periodical destructions of the universe.

The second of Vishnu's ten grand avatars or incarnations was in the form of a tortoise, and hence called the Kurma avatara, the principal incident in which was churning the ocean with the mountain Mandara, the huge serpent Sesha serving as a rope to whirl the mountain round withal, and Vishnu, in the shape of a tortoise, sustained the vast load. The result was fourteen precious articles, called gems or Chaoda ratni (more classically Chatur desa ratna), and one of the fourteen was poison; but

> 'To soften human ills dread Siva drank
> The poisonous flood that stain'd his azure neck.'

This legend, which is very popular, gives the action to Mahadeva, whence the epithet Nila-kanta, or blue-throated, is a name of Siva. With the Saiva sect it is now not an uncommon name, usually pronounced, as is that of the deity, Nilkant.

Besides the daily worship of the linga in the temples, there are several other periods in which images of Siva are worshipped under different forms; and these are to be seen in numbers, conveyed through the streets of Calcutta, after the festivals in honour of Siva, to be cast into the river. In the month Phalguna he is worshipped for one day as a mendicant. On the following day the images of him, with a bloated countenance, matted locks, and inflamed eyes, are carried in procession, attended by a large concourse of people, dancing, singing, and playing on various instruments, and thrown into the river. In the month of Mughut there is another festival in honour of him, called Hari Gauri, in which he is represented riding on a bull, with Parvati on his knee. But the most celebrated occasion of his worship is in the month Choitru, at the time that the ceremony of the Charkha, or swinging by hooks fastened in the flesh of the back, is performed. This festival derives its name (Charkha or Chakra, a wheel or discus) from the circle performed in the swinging part of it, that terminates the ceremonies, which should properly last a lunar month; but the term is now much shortened, and the observances of it are limited to the followers of Siva. The higher classes do not engage in it, although they contribute towards the expense of, and countenance it. The initiatory ceremonies of purification, abstinence, and exercises of devotion take place several days before the commencement of the rites, during which time the sanyasis, or worshippers, form themselves into parties, and wander about the streets with horns, drums, etc., making a most intolerable and horrid din. The first exhibition is that of suspension, which is performed by two posts being erected, on the top of which is placed a strong bar, from which the sanyasi or worshipper is suspended by his feet over a fire, kindled beneath him, into which rosin is occasionally cast. His head is then completely enveloped in the smoke, though sufficiently high to be beyond the reach of the flame. On the following day the sanyasis dance and roll themselves upon the beds formed of various descriptions of prickly plants. Their next ceremony is called the Jamp Sanya, or jumping on a couch of pointed steel, which has been thus described. A bamboo scaffolding of three or four stages is erected, on which the sanyasis stand, tier above tier, the principal and most expert occupying the upper row, which is sometimes between 20 and 30 feet high. A kind of bedding, supported by ropes, is stretched beneath the scaffolding by a number of men. Upon the mattress are attached several bars of wood, to which are fixed very loosely, and in a position sloping forward, semicircular knives, upon which the sanyasis throw themselves in succession. In general, the effect of the fall is to turn the knives flat upon the bedding, in which case they do no harm; but occasionally severe wounds, and even death, are the consequences of this rite. Before they take their leap, the performers cast fruits, such as cocoanuts, betel, plantains, etc., among the crowd, on which there is a great scramble for them, as they are supposed to possess much virtue. Women desirous of progeny are very anxious to get these donations, and those of the first families send persons to obtain and bring them for their private eating. The ensuing day is spent in revelling and dancing among burning ashes, and afterwards casting them at each other. On the following day they again infest the streets, attended by music. Cruel rites are now forbidden.

Every Hindu has a sect mark on his forehead, of white earth, red ochre, sandal-wood, or ashes. The worshippers of Vishnu place the mark perpendicularly, and two perpendicular lines and a dot between denotes a worshipper of Vishnu as Rama or Krishna. The worshippers of Siva mark horizontally. Any conical or triangular mark is a symbol of the linga.

One distinguishing mark of the faith of Siva is a crescent on the forehead. With his ascetic devotees the hair is braided, and forms a tiara round the head, and with its folds a chaplet of the lotus seed is often entwined. They smear the body with ashes, and use garments dyed of an orange hue. They bury their dead in a sitting posture, and erect tumuli over them, which are generally conical in form. Col. Tod says it is not uncommon for priestesses to officiate at the shrines of Siva. In the south of India, the officiating priests of the Saiva shrines are commonly of the Vira-Saiva, or Jangam, or Lingaet sect, and are designated Aradhya, also Pandaram.

Siva is represented with his person powdered with the greyish-white ashes of burnt cow-dung, termed Vibhuti, which is consequently used in a similar way by all the Saiva and by many of the Vaishnava ascetics. Part of Siva's scanty raiment is the skin of an elephant, or more properly of an Asura or Titan killed by him under

that form, and thence named Gajasura. His weapon, the trisula or trident, is considered to be in continual motion over the face of the universe to guard and preserve its creatures. To oppose its course would be to incur immediate death. Its motion would appear to be regular, but varying according to the days in the week. Thus it is imagined that it is unlucky to proceed towards the westward on Sundays and Fridays, to the northward on Tuesdays and Wednesdays, to the eastward on Saturdays and Mondays, and to the southward on Thursdays. The trisula or trident symbol of Siva was once used on a copper paisa, weighing 98¼ grains, for circulation in the province of Benares only. Siva, as Mahadeo, is often represented sitting on a tiger's skin, with a Nag snake around his head. In the different terrific forms of Siva and Durga, a necklace of skulls forms an invariable decoration, as does the crescent or half-moon on the forehead; and the moon is considered to be the peculiar reservoir of amrita, or theb everage of immortality. Aghora-Ghanta, invoking Chamunda, says of Durga, a sakti of Siva—

> 'The elephant hide that robes thee, to thy steps
> Swings to and fro; the whirling talons rend
> The crescent on thy brow; from the torn orb
> The trickling nectar falls, and every skull
> That gems thy necklace laughs with horrid life.'

—*Cole. Myth.; Tod's Rajasthan*, i. p. 517; *Hind. Theat.; Hero and the Nymph*, ii. pp. 59, 195; *Prinsep's Indian Antiquities; Moor's Oriental Fragments; Moor's Hindu Pantheon; Ferg. and Burg. Cave Temples*, p. 20; *Oudh*, p. 121.

SIVA-BHAKTA, a worshipper of Siva, a Lingaet or Jangam.

SIVA-CHIPAGA-WANLOO, of Bellary, are worshippers of Siva. The Siva-chipegeree, or Nagaleka-balji wanloo, worship Siva in the form of a snake.

SIVAGANGA, a hill in the Bangalore district of Mysore, in lat. 13° 10′ N., and long. 77° 17′ E., 4559 feet above sea-level. Its face is crowded with sacred buildings. The number of steps leading to the summit is reckoned equal to the number of yojanas thence to Benares, and consequently the ascent is held to be a vicarious pilgrimage to that city. Pop. (1871), 721.

SIVAGANGA, a zamindari in the Madura district of the Madras Presidency; area about 1460 square miles; population, 432,023.

SIVAJI, founder of the Mahratta empire, was the second son of Shah-ji. He was born about the year 1627, and was brought up under the care of Dadaji Condu, a Brahman whom Shah-ji had placed in charge of his Poona jaghir. Sivaji's associates were his father's soldiers and predatory highlanders, and by the age of sixteen he got beyond Dadaji's control. He is suspected of sharing in gang robberies in the Konkan; and he formed a band from amongst the Bhil, the Koli, the Ramusi, and the Mahrattas of the Mawals to the west of Poona, with whom he surprised the garrison of Torna (A.D. 1646), a strong hill fort, 26 miles W. of Poona. On the death of Dadaji, he took possession of his father's jaghir, seized several hill forts, amongst them that of Purandhar (A.D. 1647), and occupied the tract between Chacun and the Neera. Hitherto his acquisitions had been got without bloodshed, but in 1648 he plundered a convoy of royal treasure in the Konkan, and before the court recovered from its surprise at this outrage, it heard that five of the principal hill forts in the ghats had fallen into his hands, and that a Brahman, one of his officers, had obtained possession of Kalian and of all the forts of the Northern Konkan. The Bijapur Government was under the impression that Sivaji was acting by the advice of his father Shah-ji. They therefore seized Shah-ji, threw him into a dungeon, and threatened to build up the entrance unless Sivaji should submit; but on this Sivaji offered his services to Shah Jahan, who appointed him to the rank of commander of 5000, and Shah-ji obtained his release from the dungeon, though for four years, 1649-1653, he remained a prisoner at large within the fortress of Bijapur. No sooner was his father free than Sivaji renewed his plans of aggrandizement. He procured the assassination and seized on the territories of the raja who held the whole of the hilly country south of Poona from the ghats inclusive to the Upper Kistna; and when prince Aurangzeb reached the Dekhan in 1655, Sivaji got himself recognised as a servant of the Moghul Government, and obtained a confirmation of his possessions. But when Aurangzeb declared war against the king of Golconda, Sivaji invaded the Moghul territories, surprised Juner, and made an unsuccessful attempt on Ahmadnaggur. He was again forgiven (A.D. 1658) on promising to aid the prince with a body of horse, a promise which he never fulfilled. He renewed the attacks on Bijapur, and Afzal Khan, the commander of the troops, being sent against him, Sivaji tendered his submission, and at Partabgurh obained a personal interview. At the meeting Sivaji clutched him with the weapon called tiger's claws, and despatched him with a dagger, and at a signal from the fort his troops rushed out and slaughtered and dispersed Afzal Khan's army. He then overran all the country near the ghats, and took possession of all the hill forts. On another army being sent against him, he allowed himself to be shut up in the almost inaccessible fort of Panala, May A.D. 1660, from which he at length escaped on a dark night. The king of Bijapur now took the field in person, A.D. 1661, and before the end of a year Sivaji found himself stripped of almost all his conquests; but on the Bijapur king being withdrawn to Carnata for the revolt of Sidi Johar, Sivaji recovered and increased his territories. A peace favourable to Sivaji was mediated by his father Shah-ji, which left Sivaji (A.D. 1662) in possession of a territory including upwards of 250 miles of the Konkan seaboard between Kalian and Goa, while above the ghats its length was more than 150 miles from the north of Poona to the south of Mirich on the Kishna. Its extreme breadth from E. to W. was 100 miles, on which he maintained an army of 7000 horse and 50,000 foot. At the end of 1662, he broke with the Moghuls, ravaged their country near Aurangabad, took their forts near Juner, and occupied the hill fort of Singhar near Poona. Shaistah Khan was sent against him, and occupied Poona, taking up his quarters in the house in which Sivaji had been brought up. Sivaji left Singhar one evening after dark, posted sentries on the road to support him, and went on with 25 Mawali Mahrattas into Poona, where he joined a marriage procession, gained admission

into the house by a back door, and surprised Shaistah Khan in his sleeping room, who received a blow from a sword which cut off two of his fingers, as he was letting himself down from the window to a court below. Shaistah Khan's son and most of his attendants were cut down. Sivaji returned in safety, and reascended Singhar amidst a blaze of torches. This exploit, so congenial to the disposition of his countrymen, is the one of all his actions of which the Mahrattas still speak with the greatest exultation. On this, Aurangzeb superseded Shaistah Khan by sending his son Muazzam and Jeswant Singh. But Sivaji with 4000 horse came suddenly on the rich and defenceless city of Surat, which he plundered at leisure for six days, and carried off his booty in safety to his capital of Reri or Raighur in the Konkan. He was beaten off from the Dutch and English factories.

Sivaji was again at war with Bijapur, and carried on his operations chiefly in the Konkan. He embarked with a force of 4000 men in 87 ships, sacked Barcelor, and plundered all the intervening tract; his troops ravaged the Bijapur territory, and he led in person an attack on the Moghul districts. Aurangzeb now superseded Jeswant Singh and prince Muazzam by Raja Jye Singh and Dilir Khan, who were sent with a large army to the Dekhan, A.D. 1665. Jye Singh laid siege to Singhar, Dilir Khan to Purandhar, and Sivaji yielded to Jye Singh, delivering up 20 out of the 32 forts in his possession, together with the territories attached to them, and he co-operated with Jye Singh against Bijapur. Aurangzeb, pleased with Sivaji's services, invited him to court, but his reception was studiously humiliating, and, overcome with feelings of shame and indignation, he stepped back behind the line of courtiers and fainted. On recovering, he reproached Ram Singh and withdrew. Aurangzeb ordered him to be watched, but after a short time Sivaji and his son Sambaji passed the guards concealed in baskets, and, mounting a horse with his son behind him, he escaped to Muttra, where he put on the dress of a religious mendicant, shaved off his hair and whiskers and rubbed his face over with ashes, and, leaving his son there under the care of a Brahman, he pursued his journey by the least frequented roads to the Dekhan, reaching Raighur in December 1666, nine months after his escape from Dehli. The English factors at Karwar in the Konkan wrote on the 29th September 1666, 'If it be true that Sivaji has escaped, Aurangzeb will quickly hear of him to his sorrow.' In the following year, 1667, Jye Singh failed in an attempt on Bijapur, and he in his turn was superseded by prince Muazzam and Jeswant Singh. Sivaji joined these commanders, his title of raja was acknowledged, his territory partly restored, and a new jaghir was granted to him in Berar. The years 1668 and 1669 were passed in tranquillity, which gave Sivaji time to arrange his government. His army, both horse and foot, was formed in divisions, with a regular chain of officers, from heads of ten, fifty, up to heads of 5000, above which were the generals of the divisions, all regularly mustered and paid by the state, and the utmost economy enforced. His civil officers were all Brahmans, and those of the highest rank were often employed in military commands also. Aurangzeb tried to get Sivaji into his power, but Sivaji turned all the emperor's plans against himself. Aurangzeb then ordered an open attempt to seize Sivaji. The peace thus broken, Sivaji's great friend and confidant, Tanaji Malusri, surprised Singhar near Poona with 1000 Mawali, who escaladed its walls at night, though with the loss of their leader and many of their number. Sivaji conferred a silver bracelet on each of the survivors; he captured other forts, again plundered Surat, ravaged Kandesh, and for the first time levied the Chouth or fourth share of the revenues, a tax which afterwards formed a prominent feature in Mahratta policy. His progress was almost uninterruped because of the inactivity of Muazzam and Muhabbat Khan (A.D. 1671), who considered the forces under them insufficient for the country they had to hold. Muazzam remained inactive at Aurangabad, and Muhabbat Khan, in an injudicious attempt to cover a siege in which he was engaged, exposed a body of 20,000 men to a total defeat by the Mahrattas (A.D. 1672). This was the first field action won by Sivaji's troops, and the first instance of success in a fair conflict with the Moghuls, and Aurangzeb recalled both prince Muazzam and Muhabbat Khan. In the course of the years A.D. 1673 and 1674, after a succession of battles and sieges, Sivaji made himself master of the whole of the Southern Konkan, except the parts held by the English, Abyssinians, and Portuguese, and of a tract above the ghats, extending farther to the east than the upper course of the Kistna. He now, 6th June 1674, had himself a second time crowned at Raighur, with all the ceremonies of a Moghul coronation, including his being weighed in gold, and distributing rich presents to all around him. Mr. Oxenden was the English envoy from Bombay to Sivaji, and was present at the coronation. At the same time, he changed the titles of his principal officers from Persian to Sanskrit; and while he thenceforth assumed all the pomp of a Mahratta prince, he redoubled his attention to the duties of his religion, and affected greater scrupulosity than ever in food and other things connected with caste. Soon after this ceremony the Moghuls made an excursion into his territories. Sivaji retaliated (A.D. 1675) by sending bands into the imperial provinces, plundering the country to the heart of Kandesh and Berar, and even penetrated into Gujerat as far as Baroach, where for the first time his troops crossed the Nerbadda. In 1676, he resolved to recover his father's jaghir in the Peninsula. He formed an alliance with the king of Golconda, and marched to that fortress with 30,000 horse and 40,000 foot, and it was agreed that he should share with that king all conquests beyond his father's jaghir, while the Golconda forces should keep those of Bijapur in check. He crossed the Kistna at Kurnool, March 1677, proceeded through Cuddapah, and, passing close to Madras, presented himself at Jinjee, of which he obtained possession, and his army besieged and took Vellore, Arnee, and all his father's jaghir in Mysore. Hearing of the invasion of Golconda by the Moghuls, he left his half-brother Santaji in charge of his new conquests; but the king of Golconda had come to a settlement with the Moghuls, and Sivaji, after conquering Adoni and Bellary, returned to Raighur about the middle of A.D. 1678, from which he had been absent eighteen months. His brother Vencaji came to a compromise, by which he was to retain

the jaghir, but pay half the revenue to Sivaji, who was to keep to himself the places he had conquered from Bijapur.

In A.D. 1679, Aurangzeb ordered Dilir Khan and prince Muazzam to make demands on the Bijapur Government. Its king was a minor, and the regent sought the aid of Sivaji, who invaded and laid waste the Moghul territory with more than ordinary severity. He was thus engaged when he received intelligence that his son Sambaji had deserted to the Moghuls. Aurangzeb ordered Dilir Khan to send Sambaji to the royal camp, but Dilir allowed him to return to his father, and Dilir, pressed by Sivaji and by Bijapur, raised the siege and retired. The price of Sivaji's alliance was the cession of the territory between the Tumbudra and the Kistna, and shortly after, on the 5th April 1680, Sivaji died at the age of 53 years.

His treacherous assassination of Afzal Khan was a detestable crime. The family was of the Mahratta Kunbi race, but claimed descent from the rajas of Mysore. His son Sambaji succeeded to power, but, after a life of continued war, he fell into the hands of Aurangzeb, who put him to death in 1689. Ram Raja, son of Sivaji, was for a short time on the throne of his father, but was dethroned and imprisoned by his half-brother Sambaji. He died A.D. 1700, leaving two sons. In 1688, Sambaji, son of Sivaji, was taken prisoner, and in August 1689 put to death. Saho or Shaoji, son of Sambaji, succeeded in 1708. In 1719 Saho obtained the Chouth or one-fourth of the total revenues of the six subahs into which Aurangzeb had nominally subdivided the Dekhan. He fixed his capital at Satara, and on the death of Aurangzeb in 1707, he took advantage of the broils in the Dehli empire to enlarge his boundaries and power. His treasurer was Balaji Wishwanath, father of Baji Rao, the first of the Peshwas of Poona. Holkar, of the shepherd caste, and Sindia, in A.D. 1720 were cavalry officers in his army. He died in 1749, on which Holkar established himself at Indore, and Sindia first at Ujjain, and finally his descendant in 1810 at Gwalior, in the province of Agra.—*Elphin.* pp. 532-572; *Grant Duff, Hist. of the Mahrattas.*

SIVALAYA, a temple of Siva, from Siva, and Alaya, an abode. The Sivalaya in old Bardwan consists of 108 temples in two large amphitheatrical circles, one within the other.—*Tr. of Hind.* i. p. 157.

SIVA NARAYAN, a Rajput, a native of the village of Chondavan near Ghazipur, flourished during the reign of Muhammad Shah, A.D. 1735. He was a voluminous writer, and founded a sect of unitarian Hindus who profess the worship of one God, of whom no attributes are predicated. They offer no worship nor pay regard to any of the objects of Hindu or Muhammadan veneration; they admit proselytes from Hindus, Muhammadans, and Christians. Truth, temperance, and mercy are their cardinal virtues, and polygamy prohibited. The sect comprise Rajputs mostly. They seem to be the same with the Siva Narayana, a unitarian sect of the people of India, who do not worship or regard any object of Hindu or Muhammadan veneration. They admit alike Hindus, Muhammadans, and Christians as proselytes. Their cardinal virtues are truth, temperance, and mercy. Polygamy is prohibited. The founder was Siva Narayan, a Rajput, who flourished about A.D. 1735, in the reign of Muhammad Shah.—*H. H. Wilson*, i. p. 358.

SIVA PUJA is performed by all young Hindu girls in Bengal on the 30th day of the month Choytro, because Siva is regarded as a model husband, and his sakti Durga worshipped him. Krishna in character is supposed to be questionable.

SIVA-RATRI, or Maha Siva-Ratri, a popular festival in honour of Siva, on the 14th of the moon's wane in Magha (January—February). A rigorous fast is observed during the day and night, and Siva is worshipped in the form of the lingam, the priapus of the Romans, and phallus of the Greeks. On the 29th of each month the lingam is worshipped by all Saivites, but in the worship on the Maha Siva-Ratri the many different names of Siva are repeated over the lingam, and a leaf of the Ægle marmelos dropped on it at each name.

SIVASAMUDRAM, lit. Sea of Siva, an island formed by the branching of the Kaveri (Cauvery) river into two streams, each of which makes a descent of about 200 feet in a series of picturesque rapids and waterfalls. The island is properly called Heggura, but the name of Sivasamudram is derived from an ancient city, lat. 12° 16′ N., long. 77° 14′ E.

SIVATHERIUM, from Siva, an Indian deity, is a genus of extinct animals of the family Elephantidæ. The remains of species of this remarkable genus were found by Dr. Falconer and Colonel Cautley in the valley of Mackanda, in the Siwalik Hills of the Himalaya. Two species of this genus, S. giganteum and S. Perimense, have been described. A cranium, lower jaw, and teeth, and bones of the extremities, of S. gigantcum are now in the British Museum. The skull of this animal is nearly as long as that of the elephant; the neck is shorter and stronger than in the giraffe. The posterior portion of the skull is greatly developed, and formed of cellular cavities, as in the elephant. The face is short, and the nasal bones are remarkable for the manner in which they are prolonged into a pointed arch above the external nostrils, indicating a trunk or proboscis. The very inclined direction of the front of the face in relation to the triturating surface of the teeth, imparts a physiognomy altogether peculiar. Two horns arise from the brow between the orbits, and diverge from each other, and it is probable that the posterior protuberances of the forehead also supported a pair of short massive horns. When living, the Sivatherium must have resembled an immense gnu or antelope, with a short thick head surmounted with two pairs of horns. The front pair of these horns were small, whilst those behind were probably palmated. The eyes were small, and it had a nasal proboscis, an organ unknown amongst the Ruminantia.—*Mantell, Petrifactions and their Teachings; Jour. As. Soc.; Eng. Cyc.; Falconer's Palæozoic Remains.*

SIVA-VAKYA, the name of a well-known work treating of Siva as the supreme being.

SIVI, son of the king of Usinara near Gandhara. He was famed for his charity and devotion to Siva.—*Dowson.*

SIVIRA or Seoree, a race in Ghazipur, Gorakhpur, Behar, Benares, and Mirzapore, whom Buchanan thinks identical with the Kol and the Cheru.—*Elliot.*

SIWAI. Hind. A quarter more, a title of a Hindu ruler; also, an additional cess of 25 per cent.; properly Sawai.

SIWALIK HILLS, a mountain range which runs parallel with the Himalayan system, from Hardwar on the Ganges to the banks of the Beas (Bias). It belongs to the tertiary deposits of the Outer Himalayas; and it is chiefly composed of low sandstone and conglomerate hills, the solidified and upheaved detritus of the great range on its north. Its northern slope leads gently down into the Dehra Doon, a vale between the Himalaya and their outlying Siwalik subordinates. A thick forest of sal and sain clothes the lower sides, while on the higher crests pine woods indicate a cooler climate. Wild elephants abound; and the fauna in this section also includes tigers, sloth-bears, leopards, hyænas, spotted deer, pigs, and monkeys. The total length of the range from the Ganges to the Beas is about 200 miles, and its average breadth about 10 miles. All the great rivers which run at right angles to the Siwaliks —the Ganges, Jumna, Sutlej, and Beas—have worn themselves valleys through this chain. The Siwalik Hills are about 8 to 10 miles across, and are a mass of boulder and sandstone hills, generally quite dry, but broken up into ravines, through which sudden floods or 'raos' rush in the rains. The Siwalik Hills, which bound the Doon to the south, are in height from 400 to 600 feet.

It is in these hills that extensive fossil remains were discovered by Dr. Falconer and Captain Cautley. Of the quadrumana or monkey tribe may be mentioned species of the Palæopithecus, Semnopithecus, and Macacus. One of the carnivora, the great sabre-toothed tiger, Machairodus latidens, now quite extinct, is remarkable for the enormous development of its canine teeth, and also for its wide distribution. It has been found in Kent's Cavern, Torquay, in the Norfolk forest beds, in the miocene tertiary deposits of Eppelsheim in Germany, the Auvergne in France, the Val d'Arno in Italy, the pampas deposits and bone caves of South America, and the upper miocene fresh-water limestones of the Siwalik Hills.

These hills also contain remains of extinct species of the Proboscidea or elephants, various species of Mastodon have lived there, and also in Burma, and also in Armenia, many parts of Europe, and N. and S. America. Dr. Falconer described 13 species of fossil elephants, 9 of which are from India. Amongst these are Elephas ganesa, with tusks 10½ feet long, and it was probably the largest of all the extinct elephants.

One of the ungulata or hoofed animals of the Siwalik, the three-toed miocene ancestor of the horse (the Hipparion or Hippotherium), occurs fossil, and has also been found at Pikermi in Greece, and in France and Germany. Remains of the hippopotamus have also been found in the newer miocene deposits of the Siwalik.

India has also furnished fossil remains of two pigs, the Sus hysudricus and Sus giganteus.

The newer tertiary deposits of the Siwalik also furnished remains of the Sivatherium, a gigantic four-horned ruminant, bearing some resemblance to the living antelope of India. Fossil remains of the camel have also been found there; and, of three extinct species of the ruminant Chalicotherium, one is from India, and one from China, while in the later tertiaries of the Siwalik have been found the heads and horn cores of fossil oxen and antelopes.

In the newer miocene deposits of the Siwalik also have been found the bones of a fossil ostrich, Struthio Asiaticus, and the remains of a huge crane, Argala Falconeri.

The tertiary rocks of India have also furnished remains of alligators, crocodiles, and gavials. Some of the existing tortoises are large, but the extinct Colossochelys atlas, discovered by Dr. Falconer in the Siwaliks, exceeds in size all known chelonian remains. From the pieces found, the shell of one has been restored in the British Museum, and it measures 20 feet in longitudinal, and 15 feet in lateral girth.

Mr. W. T. Blanford is of opinion that the fauna of the Siwalik Hills belongs to the pliocene formation. In Sind, strata containing miocene marine fossils pass up into beds with a mammalian fauna, including some of the older Siwalik forms, such as Mastodon, Chalicotherium, Dorcatherium, etc., together with Diuotherium, Hyopotamus, Hyotherium, Anthracotherium, etc., which have never been found in the true Siwaliks. These Sind beds are apparently equivalent to the Lower Siwaliks, which are unfossiliferous in the typical area. In the Middle and Upper Siwaliks, instead of the old forms just named, elephas, loxodon, cervine, and bovine ruminants in abundance, and other recent types, are found. As the Sind beds cannot be older than upper miocene, the typical Siwaliks must be pliocene. The mammal Bos (Bubalus) palæindicus, found in the Upper Siwaliks, occurs also in the Nerbadda alluvium, associated with palæolithic implements.—*Nature*, 5th September 1878; *British Museum Catalogue; Falconer's Palæozoic Remains; Beng. and Roy. As. Soc. Journ.; Imp. Gaz.*

SIYALBET, in Kattyawar, contains the remains of the ancient city of Srilingapura.

SIZE. Siras, Guj.; Sirisht, Hind. A gelatinous substance, obtained from parchment shavings, fish-skin, and several animal membranes. It is less adhesive than glue, and is used by bookbinders, paperhangers, and painters.

SKAMBHA. Sansk. The Supreme Being. The word means the fulcrum. In this sense it is equivalent of the Arabic Kiblah.

SKANDA, a name of Subhramanya, the Hindu god of war, a six-faced deity. Parvati, the wife of Siva, having produced a son, Ganesa, without a father, by her intense wishes, Siva, with emulative skill, developed Skanda out of his own inner consciousness, — or outer substance, — it cannot certainly be stated which. Heaven and earth were then cursed by the tyranny of the giant Sura. Brahma, Vishnu, and the other deities besought Siva to release them from his thraldom. Siva shrank from the task, but promised that his son Skanda should become incarnate for their relief. Immediately on conception he was born of six Kartikeiya, heavenly virgins, who happened at that juncture to have descended to bathe in a sacred tank. While they were basking in the warm rays of the sun, each one of them gave birth to a son, and they at once departed to their celestial abode. Siva, hearing the cries of the little outcasts, instructed Parvati to nurse and rear them. As she hugged them to her breast, the six trunks became incorporated in one, while the six pairs of hands and feet, and the six heads

remained distinct and separate;—hence his other name, Arumugam (six faces). In five years he had completed his course of studies. The following seven years he spent as an ascetic on the banks of the tank which was the scene of his birth. At the age of twelve he collected a thousand hosts of Bhuta or goblins, and sallied forth to conflict with the giant Sura, who had for his defence a hundred thousand hosts of similar goblins, the giant, his two brothers, and his four sons fighting in the forefront of their ghostly battalions. Skanda with one blow of his weapon severed the giant in twain. The separate parts instantly assumed the shapes of a cock and a peacock, and with beak and spur renewed the conflict, only to be re-subdued by Skanda, who mounted the peacock, and has since continued to use it as his chariot, while the cock has remained his warlike emblem and standard. Indra, the god of heaven, rewarded his courage by giving to Skanda his lovely daughter Devani in marriage, while the liberated and joyful inhabitants bowed to him in adorations and worship.

SKANDA PURANA is one of the sacred books of the Hindus. One portion, named Kasi Khanda, of 15,000 stanzas, written prior to the 11th century, describes the Saiva temples in and near Benares. Another fragment, the Utkala Khanda, describes Orissa. The book purports to have been written by Skanda. It is read through once a year in the temples of Siva. Skanda Shasthi, a fast and festival observed in honour of Skanda.—*Dowson.* See Purana.

SKARDO, lat. 35° 20′ 2″ N., long. 75° 44′ E., in Balti, the capital of a province, on the left bank of the Indus. Level of the Indus at the rock Mendok Kar, 7255 feet. In Gilgit, Hunza Nagyr, and all the valleys to the westward, the name Skardo is almost unknown, and the place is called Palor, Balors, Palolo, Balti. It was conquered in 1840, for the Raja Ghulab Singh, by his general Zorawar Singh, with his Dogra troops. The people grow corn, irrigating the land, and using manure. They are fond of out-of-door or manly games. Skardo, or Little Tibet, is a Bhot tract, but the people are Muhammadans. They are strong and hardy; they grow corn and cut water-courses like the people of Rongdo. Skardo is called by the Lamas of Ladakh, Skar-ma-m-do, meaning the enclosed place or the starry place. Iskardo is the Arab-Muhammadan pronunciation, who fail in all attempts to pronounce the double consonant beginning with s, requiring to prefix an i.—*Latham's Ethnology; Adolphe Schlagentweit.*

SKENJEHIL. Pers. A beverage in use with the native hakims; a syrup of vinegar diluted with water.

SKEWERS, a term by which sailors designate a practice in the Archipelago of transfixing the organ. Dalton says they use copper, the bones of birds and monkeys, and hardwoods. The ceremony, he heard, took place after the birth of the first child; but from subsequent inquiries he found that it is immediately after they have tunanged or betrothed with a girl; that unless the lover submitted to it, the girl would have nothing to say to him; that they measured the length of the skewers to be used by the length from the first to the second joint of the woman's third finger; that a great chief often used three, some two, others one; and that it never seemed to injure them in the slightest degree. The Naga are stated by Fytche (i. p. 350) to wear a ring four to eight lines broad.—*Journ. Ind. Arch.* v.

SKIMMIA LAUREOLA. *Hooker.*

Ner . . . of Jhelum.	Shalangli . . . of Ravi.
Burroo . . . of Ravi.	

A shrub of the N.W. Himalaya. It has been introduced into English gardens, and is greatly admired for its aromatic, evergreen foliage, and clusters of scarlet berries. This plant never bears scarlet berries in Sikkim, apparently owing to the want of sun. The fruit ripens, but is of a greenish-red or purplish colour.—*Hooker; Stewart; Gamble.*

SKINNER, Colonel JAMES, a brave soldier who distinguished himself in the wars of Lord Lake and Marquis Hastings. He was the son of a Scotch officer by a Rajput mother, and served in the Mahratta armies under General de Boigne, and afterwards under General du Perron, from 1796 to 1803, when he took service under Lord Lake, and rose to rank and distinction. He died in 1841. He raised and commanded a body of horse, which rendered important services in the campaigns of the British against the Mahratta and Pindari. He wrote in Persian, Tashrih ul Akwam, an account of the origin and occupations of the various castes and tribes of Hindustan, with native drawings representing their appearance and costumes. Besides, he was the author of a book called Tazkirat ul Umra, Memoirs of the Princes. He devoted 20,000 rupees to build a church at Dehli.

Kulit-balulang, Malay.	Deri, ... Turk.

This term is applied in commercial language to the skins of calves, deer, goats, lambs, etc., which, when prepared, are used in the lighter works of bookbinding, the manufacture of gloves, parchment, etc.; while the term hides is applied to the skins of the ox, horse, etc., which, when tanned, are used in the manufacture of shoes, harness, etc. The exports of India have greatly increased in value, from Rs. 30,30,890 in 1851–52 to Rs. 1,95,40,032 in 1882–83. In India, the hides of the bison, sambur, bullock, horse, cow, sheep, goat, kid, dog, and iguana are all tanned. Iguana skins are tanned and dyed black, or are left of their natural colour. They are thin, even, soft, tough, and granular, green-like in external appearance. From the absence of gloss, the appearance of this leather is not in its favour, but it bids fair to be a durable article for light slippers, and a good covering for the commoner kinds of instrument boxes, such as are still done over with shagreen. Sheep and kid skins are tanned white for the better kind of gloves, and for the purpose of the apothecary. Python skin, when tanned, makes excellent boots, much prized in England for their strength, pliability, and great beauty, as they are handsomely marked. They are pliable and easy to fit, perhaps owing to the accommodating nature of the snake's skin when in a live state. Boots of Norwegian manufacture are made from the skin of a salmon. In certain of the Southern States of America, the

skins of young alligators are tanned, converted into leather, and the leather manufactured into boots. They are for sale in many shops in London. The religious Hindu student sits on the skin of an antelope or tiger, and in the south of India the same is used for weddings. Skins were exhibited at the Lahore Exhibition from the hills around Kangra and Simla. The sable from Russia, and the Karakuli lambskins of Bokhara, had been imported. Karakuli are so called from Karakul, a province 20 cos south of Bokhara. They are lambskins with the hair on; as much as 10 lakhs' worth are exported to Persia, Tartary, Kābul, and India; other districts of Bokhara produce them, but all are called Karakuli. The soft black lambskins of Karakul are immensely prized for making postins and for coats. They are prepared by taking the skins of the young lambs immediately on their being born. This of course is an expensive method, and the skins are proportionately high-priced. See Hides.

SKOPTZI. The ceremonies of the Russian sect of 'the mutilated' (Skoptzi) were described in a manuscript by Monsignor Plato, metropolitan of Moscow, at the request of the emperor Alexander I. They fully explain the nature of the 'two communions' of the Skoptzi. The first communion is called that of the Flesh of the Lamb, and is administered at all the general meetings of the Skoptzi; the second, which is only administered to the elect on extraordinary occasions, is called that of the Blood of the Lamb. The women of the sect are bound to live a life of chastity, but it nevertheless often happens that they have children, and this is usually ascribed by the Skoptzi, not to the women having broken their vows, but to divine interposition. The child, if a male, is sacrificed on the seventh day after its birth. A bandage is tied over its eyes, its body is stretched over a dish, and a silver spear is thrust into its left side, so as to pierce the heart. The elect of the Skoptzi then advance in turn and suck the child's blood. This is what is called 'the communion of the Blood of the Lamb.' As soon as the ceremony is over, the body is put in another dish full of sugar, where it is left until it dries up; it is then crushed into powder, and administered in small cakes to the ordinary members of the sect as 'the communion of the Flesh of the Lamb.'

SKURU. Tib. A praying cylinder of wood, four or five inches long, revolving on an iron spindle, on which are wound written prayers and interjections. The lower end of the spindle forms the handle by which the cylinder is twirled. It is of the same character as the praying drums of China.—*Cunningham.*

SKYIN. Tib. Capra Siberica, wild goat or ibex of Ladakh, with horns 4 feet 3 inches in length. It frequents the most inaccessible rocks, but about one or two hundred are killed in Balti every winter, when they are forced to descend into the valleys. In Ladakh they are snared at night, or shot in the grey dawn of the morning when they venture to the streams to drink. Their hair is black, long, coarse, and useless; but the soft under-fleece, called Tus, or in Kashmir Asl-Tus, is an exceedingly fine, soft wool of a light-brown colour, used in Kashmir as a lining for shawls, woollen stockings, and gloves. It is also woven into a very fine cloth, called Tusi, of a soft and delicate texture, much prized for its warmth. The term ibex is given in India to several animals of the genus Capra or goats, but Capra Sibirica, the Ibex Himalayana, *Blyth*, is the Himalayan ibex, the Skeen or Sikeen of the Himalaya, the Kyl of Kashmir. These are the names of the male, that of the female in Tibet is L'danm. It inhabits Ladakh and Kashmir. A wild species of ibex, called Paseng by the Persians, occurs in Middle and North Asia, but it belongs to the genus Ægagrus. See Bovidæ.

SLAID, a Bedouin tribe in Irak. They are cultivators, and have a breed of large white asses, much used in Syria.

SLATE.

Skiferstein,	Dan.	Ardosra,	Port.
Lei,	Dut.	Aspid,	Rus.
Ardoise,	Fr.	Pizarra,	Sp.
Schiefer,	Ger.	Skifersten,	Sw.

Lavangna, Lastra,	It.	Rati palaka,	Tel.

A laminated rock, of which there are many kinds. One of commercial importance is a clay-slate employed for roofing, and as writing slates. True roofing slate is capable of almost infinite division into thin plates or slabs. A blue slate is quarried in the Karakambady district in North Arcot. When first taken from the quarries it is very soft, and can easily be cut into slates, etc. Slate is also found near the Khassya Hills. Slates for roofing are found in Madhopur in the Panjab. Slates are occasionally brought down from the Himalaya. A slate of the Dalhousie quarries is deemed medicinal by natives, and called Sang-i-Musa, 'Moses' stone.' Slates occur in the hilly tracts of the Sonah, Pali, and Ferozpur parganas of the Gurgaon district. Writing slates, and the slate-pencil for writing on them, are imported into the East Indies from Europe. The materials used in the Indies in lieu of writing slates are slabs of wood, and thick slabs of paper, for which pencils of soapstone are used. In Cuttack, Kharee is used for the manufacture of pencils and balls, for writing on the ground or floor, in all rural schools, and by native accountants.—*Cat. Ex.*, 1862.

SLAVE.

Abd, Abdat,	Arab.	Servus,	Lat.
Slaaf,	Dut.	Escravo,	Port.

Slavery in one form or other exists throughout the East Indies. Among all nations, slavery, with its accompanying horrors, was the lot of a weaker neighbour; but even in the case of an enemy conquered in battle, it was by the Egyptians sometimes allowed to stand in place of the more triumphant cruelty of slaughter. The Israelites had learned the evils of slavery from having groaned under it themselves, and they forbade it in every possible case. Exodus xxi. 16, 'He that stealeth a man,' says the law, 'or selleth a man, or hath one found on his hands, shall be put to death.' Nevertheless, slavery was a recognised condition amongst the Hebrew races, as may be observed from reading Matthew xviii. 25, where the Lord Jesus illustrated his sermon by the remark that, 'as he had not to pay, his lord commanded him to be sold, and his wife and children,

and all that he had, and payment to be made.' Hindu law recognises 15 kinds of slaves—1. Grihajata, the child of a female slave; 2. Krita or purchased; 3. Labdha or gifted; 4. Dayadupagata or inherited; 5. Anakalabhrita, taken in time of famine; 6. Ahita, pledged; 7. Rinadasa, voluntarily a slave in payment of a debt; 8. Yuddprapta, taken in a war; 9. Panejita, won in a wager; 10. Tavavaham, voluntarily; 11. Pravarajyavasita, an apostate; 12. Krito, voluntarily for a time; 13. Bhakta-dasa, a slave for his food; 14. Varavahrita or Badava-hrita, one who by marrying a female slave becomes a slave; 15. Atmani krayi, one who sells himself as a slave.

Muhammadan law recognises only two kinds, viz. infidels made captive in war, and their descendants. In practice, however, a title to slaves may be acquired by purchase, donation, or inheritance. Also, according to the principle recognised by these religionists, Kul-Islam hurre! All Islam is free! no Muhammadan can legally be allowed to be kept as a slave; but all over Asia there are many slaves of this religion in the possession of their co-religionists, either purchased or taken in predatory excursions or in war. Mahomed, even when he sanctions the enslavement of captives taken in war, enjoins their surrender on payment of a fair ransom. 'Show kindness to your slaves,' he says in one place; in another, he lays down that 'alms should buy the freedom of slaves;' and once, in speaking of the marriage of slaves, he even says, 'You all come one from another and from Adam, the common father.' The 24th chapter of the Koran runs, 'If any one of your slaves asks from you his freedom, give it him if you judge him worthy of it; give them a little of the goods which God has granted you.'

In what is now British India, during the revolutions and disturbances preceding the accession of Akbar, the enslaving of the conquered soldiery and townsfolk had been carried to a great height. Not only was it practised towards the wives and children of garrisons who stood a storm, but the peaceable inhabitants were also carried off and sold, till Akbar by an edict (1561) prohibited making slaves of persons taken in war.

Sabaktagin, father of Mahmud of Ghazni, was a slave; so was Kutub-ud-Din, the conqueror and first king of Dehli, A.D. 1206, the Slave dynasty lasting till A.D. 1288.

A writer of the 17th century, when noticing the races of Cochin, says the slave castes, the members of which belong to individual masters, are the *Cannekaa*, who gather the cocoanuts; the *Bettoa*, who make saltpans and collect the salt. These two are the most honourable of the slave castes. The *Pulleah*, who are again subdivided into several classes,—the Collamary or smiths, the Weltoe Caren, the Beltoe Pulleah, and the Canna Pulleah, whose occupation is agriculture, sowing, planting, and cutting the Nely, for which they receive both from their proprietors and from strangers one sheaf out of every ten they cut. There was then a dispute between the Cannekaa and the Pulleah as to which is the higher caste; the former maintaining that their caste ranks first, whilst the Pulleah averred that they enjoy more privileges, as, for instance, that they may employ barbers, and may wear a fillet on their heads, and a long garment reaching to the knees, which the Cannekaa may not do.

Tod tells us, in the Rajasthan, that the illegitimate sons of the rana of Mewar are called das, literally slave. They have no rank, though they are liberally provided for. Bussee signifies acquired slavery, in contradistinction to gola, a hereditary slave. The gola can only marry a golee; the lowest Rajput would refuse his daughter to a son of the rana of this kind. The bussee can redeem his liberty. The gola has no wish to do so, because he could not improve his condition nor overcome his natural defects. To the bussee nothing dishonourable attaches. The class retain their employments and caste, and are confined to no occupation, but it must be exercised with the chief's sanction. Individuals reclaimed from captivity have in gratitude given up their liberty. Communities, when this or greater evils threatened, have done the same for protection of their lives, religion, and honour. Instances exist of the population of towns being in this situation. The greater part of the inhabitants of the estate of Bijolli were the bussee of its chief, who is of the Pramara tribe. They are his subjects. The only badge denoting the bussee is a small tuft of hair of the crown of the head. The term interpreted has nothing harsh in it, meaning occupant, dweller, or settler. The numerous towns in India called Bussee have their origin in it. Famine in the regions of Rajasthan is the great cause of loss of liberty; thousands were sold in one great famine. The predatory system of the Pindari and mountain tribes aided to keep it up. The Muhammadan slave girl is called Bandi, Londi, but when associating with their master is one of the haram. The das or slave may hold a fief in Rajasthan, but he never can rise above the condition in which this defect of birth has placed him.

Nafr.—In the west of Bengal the Nafr and his offspring were slaves for ever, and were transferable and saleable. In Purneya the Nafr was sometimes a domestic slave, sometimes an agricultural slave.

Slavery in British India is illegal. About the year 1811 a British officer in authority at Dehli abolished all forms of slavery. His name and the exact date have not been handed down. But by Act v. of 7th April 1843 slavery ceased to exist, by law, in any part of British India, though in many parts the people themselves have not yet freed themselves from their bonds, though public works and railways have greatly aided them. Act v. of 1843 appeared in consequence of information obtained by the Commissioners appointed to frame a code of Criminal Law. They reported that the proportion of slaves to freemen varied in number in different parts of British India as one-sixth, one-third, or two-fifths. On many estates most of the cultivators were slaves. 200 or 250 landholders had as many as 2000 slaves each. In Calcutta, most Muhammadan, Portuguese, Armenian, Parsee, and Jew inhabitants possessed slaves.

In the N.W. Provinces slavery was chiefly confined to the towns, and was generally of a domestic character.

In the hill districts of Kamaon, Garhwal, and in the whole border of the Himalaya from Kashmir to Assam inclusive, also in Arakan and the Tenasserim provinces, in all the territory border-

ing the Malay Peninsula, Penang, Malacca, and Singapore, slavery was everywhere common, and in some provinces included almost the whole of the labouring population. Throughout the Tamil country, as also in Malabar and Canara, by far the greater part of the labouring classes of the people had from time immemorial been in a state of acknowledged bondage. In only three districts of the Madras Presidency was this system of bondage unknown. In Malabar and Canara the labourer was the personal slave of the proprietor, and was sold and mortgaged by him independently of his lands. In the Tamil country the labourer was the slave rather of the soil than of its owner, and was seldom sold or mortgaged except along with the land to which he was attached. In every district of Telingana some sort of serfage or bondage and domestic slavery were then still existing.

In the southern parts of the Bombay Presidency, bordering on the Southern Mahratta country, adjoining Malabar and Canara, and in a few of the less civilised districts of Gujerat, there were agricultural slaves; but in the other districts of that part of India only domestic slavery prevailed, and that was confined to the towns and to the houses of people of importance. Comparing the above information, district by district, with the very imperfect estimates of the population, Sir H. B. E. Frere has estimated the total slave population of British India in 1841 at between eight and nine millions of souls. The slaves freed in the British colonies on the 1st of August 1834 were estimated at between 800,000 and 1,000,000, and the slaves in North and South America in 1860 were estimated at 4,000,000; so that the number in British India far exceeded that of the same classes in all the slave-holding colonies and dominions of Great Britain and America put together; and in that number those of Sind, the Panjab, Oudh, Nagpur, and Burma are not included, as these provinces have only since then been added to the empire.

The domestic slave of British India seems to have been treated at least as well as the hired servants. Self sale—of men selling themselves into slavery to secure a provision for old age, to obtain a wife, or to pay a debt—was an ordinary origin of the servile state, and this was not compatible with any prevalence of harsh treatment, and the prevalence of caste privileges aided to protect the slaves. With the Muhammadans the female slaves were liable to become concubines of their masters; but in most Hindu castes a stigma attached to such connection, and often prevented its open avowal. But every kind of service, both domestic and outdoor, was required of slaves.

The Commission further stated that slaves were both heritable and transferable property; they could be mortgaged and let to hire, and they could obtain emancipation only by their owner's consent, except in some special cases.

In Ramghur, in S. Behar, when petty disputes occurred, the slaves were habitually employed to commit crimes, such as theft and murder; and in Assam they were habitually employed in plundering and gang robbery.

Throughout Malabar the whole labouring agricultural population was servile, and the slaves were under fixed rules; could not approach a freeman or his house within a certain number of paces, to avoid defiling the master or free fellow-labourers. The distance was 72 paces aloof from a Brahman, and 24 paces from a freeman. To carry out this rule, the slaves were required to give notice of their approach by uttering a peculiar cry at every four or five paces. If the cry were answered by a passenger of superior caste, the slave was required to quit the road and retire to a distance. The lower class of slaves were generally interdicted the highway, lest they should pollute the houses of the free labourers in passing them.

The punishments inflicted on slaves were not ordinarily severe. The prices paid varied from a single meal in famine times for a child, up to £20 given in Bengal for a handsome domestic slave girl; and African female slaves and eunuchs brought even higher prices. The sale of free female children by their parents, and of slave girls by their owners, for purposes of prostitution, was very prevalent, and kidnapping, with the same object, was frequent. In every province, from the Himalaya to Cape Comorin, stolen children formed part of the establishments of the Hindu temples. Such shrines were among the most sacred in India; such, for instance, as those of Jaganath at Puri, and of Ragonath in Cuttack, in both of which the salaried officials were the Deva-dasa, who, to the number of fifty or sixty families in Jaganath's shrine, were at the service of Hindu devotees, and formed a regular self-governing corporation, all with strict rules of admission and government.

In many districts in Bengal a very large proportion of the labouring agricultural population seems to have been in one or other form of conditional bondage. Slavery was kept up by the sale or gift by parents of children in time of famine, sale by mothers or maternal relations, sale of wives by husbands, sale of widows by heirs or relatives of deceased husbands, penal slaves, conquest of aboriginal tribes, self sale of adults in times of famines, marrying with a slave, kidnapping of female children; and the Megpunna Thugs would murder parents wholesale, in order to obtain their children, who were sold for a few rupees each; and importation through Arabia of African slaves of all ages and both sexes, styled Habshi or Abyssinians; also the children of slaves were slaves.

After the great inundation of Saugor Island in 1833, children were commonly hawked about the streets of the town of Calcutta for sale.

The Sylhet and the Cachar tribes were long engaged in selling slaves; and the Law Commissioners reported that a slave could be bought for twenty packets of salt, value about six shillings.

Such was the legal condition up to 1843. There are many slaves in the Feudatory States, and the non-Hindu races in many of the villages of British India, the Pariah and tanner races, are little if any above the condition of predial slaves.

The Adavi slave of Canara is a serf, an unpaid labourer.

The Tamil and Malealam Adima or Udima means any slave; a predial slave attached hereditarily to the land, and only transferable with it. In Malabar, amongst the Nair, it means a feudal dependent.

Adiyan, pl. Adiyar, is a slave, serf, or vassal in Malabar; a low-caste man under the protection of a raja or a religious establishment.

The Wakkalu Jamadalu, in Coorg, is a predial slave attached to the revenue lands. They are the personal property of the proprietors, and may be sold or mortgaged at pleasure.

The Bhumi Jamadalu slaves are attached to the land, and transferable with it.

In Malabar the Kanakan or Kanaka charma are predial slaves, supposed to be a subdivision of the Palayar.

Charumar are predial slaves, whose name Wilson derives from Chera, MALEALAM, the soil. They follow the rule of Maruma-katayam. They are very diminutive, with a very black complexion, and not unfrequently woolly hair.

The Mukkavan is a fisherman caste of Malabar, also called Makwa, and their women Makoti.

The toddy-drawer of Malabar is called Katti Karan.

The Panni Malayan are a servile caste of Malabar.

The Pulichi is a forest tribe in Malabar, who are deemed so unclean that they are not allowed to approach other castes.

The Uradi or Urali of Malabar are a servile race.

The Tiyar race in Malabar are toddy-drawers and agriculturists.

The Palayan, Pulian, or Pullar of Malabar is a servile caste, often slaves.

Balute, in the Mahratta countries, means the village officers, several of whom are predial slaves, as the Mhar, Holeyar or Dher, and Mhang.

Badava-hrita is a female slave; also a man who becomes a slave that he may marry a female slave in the family.

Banda, a Muhammadan slave; Bandi, a slave girl.

Ana-kala-bhrita is a person who has voluntarily become so at a season of famine.

In the Tamil countries about Chinglepnt the Alaudadey are a class of slaves.

In many of the countries bordering on British India, the martial and predatory tribes regard tillage as beneath their dignity, and leave the cultivation of the soil to helots. In 1883, in the Chittagong Hill tracts, slavery or vassalage in its broadest sense prevailed throughout the hill tribes. The rowaja or dewan, who is head of the village, owns his clan. They cannot disown his authority, their names are entered in his books; they pay him poll-tax wherever they go, must work for him, and make him the first offerings of their produce. They have been bondsmen for generations, and the links are never severed until death takes them away, or they abandon their homesteads and leave the country. Rowajas or dewans in their turn own allegiance to their chief, to whom they pay the largest share of the poll-tax. The condition of these tribes was very lamentable before Government took possession of the hills. The people were sold at the mere will of the chiefs or headmen; and although this has been abolished, serfdom still prevails in the form described. Sir Lepel Griffin, writing in 1883, says he remembers the time when the Chamba peasants were little better than slaves, and widows were publicly sold in the market-place as ordinary source of revenue to the state.

With Muhammadans, whose creed sanctions polygamy, and with them the Chinese, whose domestic customs necessitate prolonged isolation, slavery and concubinage are difficult to be avoided.

There are many kinds of slaves in Assam distinguished by distinct appellations. The *Moorukea* is a kind of *Chapunea*, neither servant, slave, nor equal, but partaking of all. The master provides the Moorukea with a pair of bullocks and a plough, and he tills his master's land for two days. On the third day the Moorukea may plough his own ground with his master's bullocks and plough.

Arakan.—The plundering expeditions of the tribes of the interior of Arakan are chiefly to obtain slaves. The village attacked is surrounded at night, and generally set on fire, or a volley of muskets is fired into it, and the inhabitants are seized as they attempt to escape from the burning houses. The males are put to death, and the women and children carried away into slavery. In the distribution of the slaves and plunder, the leader receives a double share. For the release of a captive thus taken, a ransom of Rs. 200 is generally demanded.

The Malays have two kinds of slaves, the ordinary menial creature, originally non-Muhammadan, and the debtor slave. When a debtor fails to pay his debt, the creditor is entitled by Malay law to remove him and his family to the creditor's house or grounds, where they all become part of his household. They work for him without pay, and without credit given for the labour in reduction of the debt. The usual result is that the debt, with the enormous interest commonly charged, is never paid off, and the bondage becomes lifelong. On the death of the debtor the family remains liable for half the debt, and so continues in slavery. Such is the strict law. In practice, it give rise to gross abuses. The creditor sometimes gives the debtor's daughters in marriage, pocketing the sum which the Malay bridegroom pays for the virtue and charms of his bride. Sir James Brooke mentions with strong indignation the case of a man to whom 16 reals were due, selling his debtor's daughter to 'a person of influence' for 30 reals. That English raja put down debtor slavery in Sarawak before he had been long there. The late raja of Kedah, a principality adjoining one of our settlements, certainly did the same thing a few years ago; and Mr. Davidson got it abolished in Salangore during his brief residency there about the year 1876. There is no good reason why slavery in any form should be tolerated in British Malay possessions.

A correspondent, dating 2d February 1882, from the Straits, writes of debt slavery in Perak being then in existence. He says, 'Numbers of grey-haired men and women could be found still in debt slavery in Perak.'

In the Netherland Possessions in India, slavery was abolished about the middle of the 19th century. Slavery still exists in China, and the sale of female children, usually from poverty, is of frequent occurrence.

All along the littoral, from the Red Sea through Sind to the Peninsula of India, are descendants of slaves from Africa and Arabia. They are known as Habshi, and in the plural

Habush, and at Muhammadan courts they were the household troops.

The slaves of the Brahui are of two classes, Negroes brought from Muscat, and the descendants of captives made in the wars with the people of the western provinces of the country, as Kej, Turbat, etc.; some have, at various times, been brought from Kashmir and the eastern provinces of Persia. These in colour and features in no respect vary from their masters, and some of the females are remarkably handsome. They are better treated than their Negro associates in bondage, and less onerous duties are assigned to them. Few of the Negroes, and those only who are really useful, are even decently clad; and it is common for them so to multiply, that their masters, from inability to clothe and feed them, dismiss them to provide for themselves in other lands.

The Afghans have supplied themselves with captives from the Siah Posh Kafir tribes of the mountain race in Kafiristan. But Arabia, Egypt, Southern Persia, Baluchistan, Sind, and Peninsular India have been chiefly supplied from East Africa, from the Soudan southwards to Madagascar, most of the eunuchs in S. Asia being from that region. The slave traffic of this region seems to have gone on from pre-historic times, and it was chiefly from the western coast of Africa that European and American nations obtained the slaves whom they employed in agriculture and as domestic servants.

The Turkomau races in High Asia, as also the Hazara races, continuously at present (1883) make raids on the Persians and on their own tribes, and seize on men, women, and children for sale. The border Persians are more than others harassed in this way, and they are admitted into the slave markets of Central Asia, because bigoted Sunni Mullah have declared the Shiah sect not to belong to Islam. Shams-ud-Din Herati, a celebrated lawyer, is said to have been the chief promoter of this legal decision (fatwa). Slave-dealing, from immemorial times, has been practised in the northern provinces of Persia. It is conducted by the Turkomans as a regularly organized traffic, which diminishes as the distance from the Turkoman frontier is increased. They were carried on chiefly by the Tekke and Yomut tribes, the victims of the Tekke being the settled inhabitants of the frontier regions of Khorasan, Herat, Seistan, up to West Afghanistan, while the Yomut infest chiefly the southern shores of the Caspian. The Ali-Ali and the Kara occasionally capture caravans on their way to Bokhara. As the Chandor tribe live between the Lower Amu (Oxus) and the Caspian, they can only occasionally capture a few Kirghiz or Khivans. They treat the captives with such great cruelty as even to shock their neighbours. The great proportion of the slaves taken by the Turkoman and Uzbak are Shiah Persians, but they capture also Sunni of Khaf and Herat, also a few Jamshidi, and some Hazara and Western Afghans. The captives are handed over to the slave merchants in exchange for needed supplies. The slave-traders of Central Asia are seldom Uzbaks, but usually Tajaks or Sarts, with a few Persians; and their principal marts are at Karakol, Karshi, Charjui, and Bokhara. There are, however, other dealers who are employed by friends to ransom the slaves. By the custom of Muhammadan countries, a servant marrying a slave becomes also a slave.

Owing to the Russian advances and the interference of Britain in the affairs of Afghanistan, the slave area in Central Asia has been gradually diminished, until it is only composed of the country lying between Herat and Merv, and between Herat along the slopes of the Hindu Kush to Badakhshan. In Sher Ali's time the khanates of Afghan-Turkestan used to supply the Amir with a periodical consignment of women and boy-slaves as tribute. Mr. Schuyler also, during his journey through Bokhara in 1873, discovered evidence of secret dealings in women and boys in defiance of Russia's prohibition to the contrary.

A writer attached to the staff of the Turkestanski Vedemosti compiled a chronicle of the number of Russian slaves who had been at various epochs detained in Central Asia. The aggregate total amounted to some thousands.

Many generations have passed away since the Tartars sacked Moscow and Kieff, and carried off men and women into bondage in Asia; but old men are still living in South Russia whose fathers were bought and sold in the Tartar slave markets of the Crimea; and both in the Caucasus and at Orenburg may be seen middle-aged men whose youth was spent in bondage in Khiva and Bokhara. The gunner Kidaeff, captured from the garrison at Fort Petro Alexandrovsk on the Oxus shortly after the Khivan campaign, and taken as a slave to Merv, was perhaps the last of the long list of Russian unfortunates whose tears have moistened the sands of Central Asia.

When Major Abbott visited the khanate of Khiva in 1841, upwards of 700,000 persons out of a population of 2,468,500, or 1 in every 3, were slaves. In the city of Khiva alone were 12,000 Herati and 30,000 Persians, the rest of the bondsmen being scattered about the country as tillers of the soil. Writing of the same period, Wolff, the missionary, calculated that out of the $2\frac{1}{2}$ millions composing the population of Bokhara, 200,000 were in a state of bondage. Burnes, another traveller, observed of a Bokharan village near the Oxus in 1832, that 'though not boasting of more than 20 houses, there were yet 7 or 8 Persian slaves.' To capture these slaves was a regular pursuit on the part of the nomade tribes living adjacent to Khiva and Bokhara. The Khivans annihilated the expedition that Peter the Great despatched against them under Prince Bekovitch-Teherkassky; and, more recently, the Tekke-Turkomans of Merv captured 20,000 Persian soldiers in 1861 just outside their stronghold, and glutted the market to such a degree that the price of an able-bodied man fell to a pound.

The alaman or Turkoman raiding expeditions may be said to have received a death-blow when the Russians breached the walls of Goek Tepe. Already, years before, the slave market had been closed at Khiva and Bokhara by the Russian invaders; and the task they have achieved, of suppressing slavery outside Afghanistan and Merv, might rival the costly exertions of Britain on the African coast and in the Pacific.

Slave Trade.—Until the early part of the 19th century, Great Britain permitted her colonies to retain slaves, but from the efforts of Wilberforce,

Clarkson, and others, Britain then abolished slavery in her colonies, as had already been done in the British Islands. Until after the middle of the 19th century, the United States of America held in slavery about five millions of the African races and their descendants of mixed blood, but the slave law was then changed after a civil war in which great numbers of men were slain. During the 19th century, Britain made vast and costly efforts to suppress the slave trade from the west coast of Africa, but till 1884 it continues on the east side of Africa, principally carried on through Arabs and Hindu natives of India.

The Hindu races have been settled as traders on the east coast of Africa from the most ancient known times. When the Portuguese first doubled the Cape, they found Banya traders established at every great port, and it was from them that Vasco da Gama and his successors learned the secret of the easy approach to India by the aid of the monsoons. They have held in their hands the trade of the east coast of Africa, and are still to be found as far south as Delagoa Bay. All the trade between that coast and Europe, America, or Asia passes through the hands of some branch of the Banya community, purchasing goods wholesale from the European or American importer, and selling them in retail for the interior. They are of the Bhattia and Banya tribes of Hindus, and the traffic is shared by the Khojah and Borah Muhammadans; and in 1872, a merchant, Mathur Das Khetsi, writing in the Rast Guftar, stated that from 10,000 to 20,000 slaves passed yearly through Kelwi on their way to Suahili and Arabia. The E. African slave trade by that year had depopulated much of the sea-coast line. To the south of Pangani is the territory of the heathen Wasegua tribe, and the great centre of the traffic. The Arabs of Zanzibar come here, and for muskets, powder, and shot purchase the slaves from the Wasegua chiefs.

The Red Sea slave trade appears to be of an exceptionally revolting nature; nine-tenths of the unfortunate victims are obtained from the southern frontiers of Abyssinia, where an incessant series of border quarrels afford a plentiful harvest to the kidnapper. As a rule, only children are thought worth capturing in these forays, and as the free and independent spirit of the Galla race renders them unfit for domestic or menial service, the males are immediately emasculated and disposed of to the slave merchants. The slaves captured in the Western Galla countries are usually brought to Massowa by way of Matemma, where there is annually held a large 'rakik' or market, whilst Zaila is the principal emporium for those brought from the Eastern Gallas through Shoa, the Christian inhabitants of which country take an active part in the trade. At Massowa a large traffic in slaves goes on, and from Zaila and Tajura; these last situated opposite to the Galla and Shoa territory, on the south-west corner of the Gulf of Aden. In 1873 the governor of Massowa was Munzinger Bey, a Christian, who was not supposed to profit by or even countenance the revolting traffic. At Massowa, as at other places where this illicit traffic flourishes, legitimate trade is almost at a standstill.

The male black slave is in Arabia (and other eastern countries) treated with more consideration than the free servant. If discontented with his situation, he can legally compel his master to sell him. It has been frequently observed that the black slaves are generally greater fanatics than their Muslim masters, and that they are, as a rule, totally ignorant of the doctrines in the defence of which they are so zealous. Through the depopulation of the line of the coast the slave trade has extended farther and farther inland, till in 1870 slaves were being brought from the west of Lake Nyassa, on which the Arabs had dhows to carry their captives across, traversing a distance of 500 miles, a three months' journey, during which the sick are left behind to die, and any hesitation is met with instant death. The Manyema, a cannibal nation, are constantly attacked by the Arab slave-traders. The Manyema are honest, industrious cultivators. Their women do not partake of the cannibal feasts; many of them, far down Lualba, are very pretty, bathe three or four times a day, and are expert divers for oysters. The men are fine tall fellows, not like Negroes; they use long spears, and are only conquered by the Arab firearms.—*Butler's Travels, Assam*, pp. 228, 229; *Dalton's Ethnol. of Bengal*, p. 114; *Times of India; The Madras Mail*, 14th May 1873; *Tod's Rajasthan; Slavery, by Sir H. B. E. Frere, G.C.B., in Fortnightly Review*, March 1883; *Wilson's Glossary; Masson's Narrative; Dr. Livingstone; Mr. H. A. Fraser; Dr. Kraff; Col. Rigby; Mr. Allington; Rev. Horace Waller; Hon. C. Vivian, in the House of Commons Report*, 1872; *Sharpe; Vigne's Per. Nar.* p. 145; *Court's Palembang*, 124.

SLAVONIAN and Slavonic are terms applied to races and their languages now found in the east of Europe and all Turkestan eastwards to the China Sea. The Slavonian and Sarmatian dialects comprehend the languages of eastern Europe, Russian, Polish, Bohemian, and the dialects in the greater part of Europe subject to the Turkish empire. Of the Slavonic languages, properly so called, the eastern branch comprehends the Russian with various local dialects, the Bulgarian, and the Illyrian. It is one of the Aryan tongues.—*Muller's Lectures*, pp. 187, 188.

SLEEMAN, General Sir WILLIAM, an officer of the E. India Company's Bengal army, who discovered the practices of the Thugs, and was appointed by Lord William Bentinck to undertake their suppression. He was long Resident at Lucknow, having previously been Political Agent at Gwalior. He wrote Rambles and Recollections of an Indian Official.—*Dr. Buist.*

SLEEPING HOUSES for the unmarried young men and girls, the lads apart and the lasses apart, are in use among the Bor and Bor Abor and others of the races in Assam, Sirguja, and in the Eastern Archipelago. In Fiji there are two kinds: those in which the men sleep (Buri ni sa), and those dedicated to the gods (Bure kalow). The sleeping bure may aptly be compared to the European clubs. In buildings or bure like these, all the male population, married, sleeps. The boys, until they have come of age, erect a bure of their own, often built on raised stages over the water, and approachable only by a long narrow trunk of a tree. The women and girls sleep at home, and it is quite against Fijian etiquette for a husband to take his night's repose anywhere except at one of the public bure of his town or village, though he will go to his family soon after dawn.—*Galton's Vacation Tourists*, pp. 253, 254.

SLEINANACHD. GAELIC. The Muhammadans in India often cast lots, and in Sind is a practice similar to that of the mountaineers of Scotland, called Sleinanachd, or 'reading the speal-bone' or the blade-bone of a shoulder of mutton. The poet Drayton alludes to the practice of this 'divination strange' amongst the 'Dutch-made English' settled about Pembrokeshire, in his Polyalbion, Song 5. Camden notices the same superstition in Ireland.—*Burton's Scinde*, p. 404; *Tod's Rajasthan*, i. p. 71.

SLIPPERS.

Pantoufle, . . . FR.	Pai-posh, ... PERS.
Pantoffel, . . . GER.	Chinela, ... SP.
Juti, Jora, . . . HIND.	Papoos, Sapata, . TAM.
Pianella, ... IT.	

In Turkey, Egypt, amongst the Persians, and throughout British India, Muhammadans and Hindus take off their boots or slippers when they enter into a mosque or temple, or visit the shrine of their holy men, the Muhammadans giving as a reason that Moses was commanded by God to leave his slippers on approaching the burning bush, because he was treading on holy ground. In Persia, a native never enters a room in boots or slippers; and when a foreigner attempts any transgression of this usage, it is looked upon as the height of ill-breeding, if not quite a premeditated insult. In some cases, where it has been intimated, reasons of policy have compelled an apparent toleration of the objection, by providing the expedient of receiving such visitors in the open air, but the necessity is always remembered with repugnance to the exactors. The custom of leaving the outward covering of the feet at the door is of very ancient practice all over the east, and especially so when the place to be trod on is connected with any religious ideas. We find it recorded so far back as in the Book of Exodus (iii. 4, 5), at the account of Moses turning aside to observe the burning bush, where it is written, 'The Lord called to him, and said, Put off thy shoes from off thy feet; for the place whereon thou standest is holy ground.' And again, we read in the Book of Joshua, that when that great captain of Israel was encamped in the plain of Gilgal, the same Divine Being appeared to him, and said to him also, 'Loose thy shoe from off thy foot; for the place whereon thou standest is holy. And Joshua did so.' In British India, about A.D. 1850, the richer Hindus and Muhammadans who visited amongst Europeans, began to wear patent leather shoes or boots to obviate the necessity of taking off their slippers; but at native courts and at their places of worship the visitor enters either on his bare feet or on his stockings. It is a part of the customs of eastern races, from which they never deviate amongst themselves.

SLOKA, a Sanskrit word. A couplet from a Shastra; a stanza or verse of four lines. The Malays probably derived the term for their poetry styled 'Shair' from the Arabs, and that of 'Sloka' from the Hindus. The origin of the Malay word Pantun is not so easily decided from its name; one word used is Bar-beit, which is from the Arabic Bait, a couplet; but perhaps Pantun itself is a Malayan word.—*J. I. Arch.* v. No. 11.

SMALL-POX—Jadari, ARAB., Mata, Sitla, HIND., Amur, TAM., TEL.—is regarded by the Hindus as a manifestation of the Hindu goddess called Maria-tal, Mari-amma, Devi, Mata, or Sitla, who is supposed by them to be a form of Kali, the wife of Siva. In the south of the Peninsula, the person affected is removed to a separate room. A pot filled with water is placed in the room with the patient, covered over with a saffron-stained cloth and leaves of the nim tree, representing the goddess. These leaves are also sprinkled about the bed of the person infected, who uses the tender twigs of the same tree to relieve himself from the irritation occasioned by the pustules, which, when they become sore, are smeared over with a paste made from the leaves. No strangers or unclean persons are allowed to enter the room where the patient is, both being considered at the time sacred. No puja is allowed to be performed with the ringing of bells, so that the patient may not be disturbed. Oil is not allowed to be used by members of the family when ablutions are performed, it being considered a non-conductor of prurient matter; and any one who has been shaved is also prohibited entering the room. No diet is observed,—curds, butter-milk, curry, and rice, and any other articles of food which the patient may desire, are given. When the patient recovers, widows are invited, and fed and clothed; little images called sellay, in the form of horses, are made of clay or stone, and placed near the Iyenar or tutelary god's temple. The Sudras offer rams, fowls, and ragi, and ambali or kulu is distributed among the poor. When small-pox makes its appearance in a village, men and women give out that the goddess Maria-tal has come upon them. They then dress themselves out fantastically, generally in saffron-stained cloths, and carry on their heads a pot of water, with two or three smaller pots over it, one upon the other. These pots are ornamented with saffron and ochre, and garlands are suspended from them, amongst which several limes are fixed. The bearers of these pots carry in their hands a small drum (Ooduku), which they beat with their hands. Some also dance, and with wonderful skill retain the burden on their heads. As they pass through the streets they stand before each house, the residents of which come out and pour water on the feet of the bacchantes, and present them with money. In the Malayalam and some other districts, so soon as a person is attacked with the disease, he is taken out of the village to a distance of a mile or more, and left in a thatched building, to which food is sent by a miserable old man or woman; and so afraid are they of the ravages of the complaint, that no one else will approach the place. In Ceylon, amongst the avenging scourges sent direct from the gods, the Singhalese regard both the ravages of the leopard and the visitation of the small-pox. The latter they call 'maha ledda,' the great sickness; they look upon it as a special manifestation of devidosay, 'the displeasure of the gods.' In Ceylon, such is the awe inspired by this belief in connection with the small-pox, that a person afflicted with it is always approached as one in immediate communication with the deity; his attendants address him as 'my lord' and 'your lordship,' and exhaust on him the whole series of honorific epithets in which their language abounds for approaching personages of the most exalted rank. At evening and morning, a lamp is lighted before him, and invoked with prayers to protect his family from the dire

calamity which has befallen himself. And after his recovery, his former associates refrain from communication with him until a ceremony shall have been performed by the capwa, called awasara-pandema, or 'the offering of lights for permission,' the object of which is to entreat permission of the deity to regard him as freed from the divine displeasure, with liberty to his friends to renew their intercourse as before.

Sir J. E. Tennent says leopards are strongly attracted by the peculiar odour which accompanies small-pox. About the middle of the 19th century, the capwa, or demon priest of a 'dewale,' at Oggalbadda, a village near Caltura, when suffering under small-pox, was devoured by a cheeta, and his fate was regarded by those of an opposite faith as a special judgment from heaven.

Masson says (Narrative, pp. 307–319) that persons milking a camel ill with small-pox contract what is called the poto-shutar or camel small-pox, and become also inaccessible to variolous contagion equally with those who receive the analogous disease from the cow. He was assured that no fatal results were ever known to follow from either the vaccine or the cameline disease.—*Tennent's Ceylon*, p. 28; *Masson*, p. 307.

SMALTE.

Smalt, ... Fr.	Smaltino, ... It.
Schmalz, ... Ger.	Lasor, ... Rus.
Smalto azzurro, . . It.	Esmalte, Azul-azur, . Sp.

An oxide of cobalt, melted with silicious earth and potash. It is a sort of glass, of a beautiful deep blue colour; and, being ground very fine, is known by the name of azure or blue powder. It is in great demand for the painting of earthenware, in the colouring of paper, and for other purposes in the arts. Smalt is manufactured in Germany and Norway. The Chinese use it for painting on porcelain and glazed copper vessels. —*Morrison; M'Culloch.*

SMARTA BHATTACHARYA, author of the law book Vyavahara Tatwa.

SMARTTA, a sect of the Brahman race of India, followers of Sankaracharya. They adhere to Sankaracharya's doctrine of unity, according to the Vedanta philosophy, but they specially honour Siva. They hold a high place in Hindu society. Their chief establishment is at Srivagiri. The sect regard Brahma and Vishnu as manifestations of Siva, and Siva or Para-Brahma, the supreme, or rather the universal, spirit; they mark their forehead with three (sometimes only one) horizontal lines of pulverized sandal-wood, with a reddish or blackish round spot in the centre.

SMASAN or Smashanam. Sansk.

Rudra bhumi, San., Tel.	Shudukadu, . . . Tam.

The place of incremation of the Hindu dead, the place where bodies are burned; temples of Durga in some of her terrific forms are usually erected in or near it, and monuments of stone or brick are not unfrequently reared where the funeral pile has stood.—*Hind. Theat.* ii. p. 55.

SMILACINA is a pot-herb growing in Tibet, north of Kanchinjinga. It is a beautiful plant, from two to five feet high, and has plaited leaves and crowded panicles of white bell-shaped flowers, like those of its ally the lily of the valley, which it also resembles in its mucilaginous properties. It is called Choklibi, and its young flower-heads, sheathed in tender green leaves, form an excellent vegetable.—*Hooker's Himal. Journ.*

SMILAX, a genus of plants which gives its name to the natural order Smilaceæ. They extend south to Australia, and north to Japan, North America, and the S. of Europe. S. China has a tuberous root abounding in fecula; the Chinese esteem it invigorating, and ascribe to it other virtues. Two Indian species, which, like the Chinese species, have tuberous roots, are called in Sylhet, Hurina-Shook-China and Gootca-Shook-China. These are S. glabra and S. lanceæfolia, and their roots cannot be distinguished from Chob-Chini, the China root. A similar species is common in the southern parts of North America, and has been called S. pseudo-China. Among Indian species are—

S. elegans, Dehra Doon.
S. glabra, *Roxb.*, Garo Hills, Sylhet.
S. randifolia, *Linn.*, Konkans, Dekhan, Bengal.
S. grandis, *Wall.*, —?
S. lanceæfolia, *Roxb.*, Sylhet.
S. maculata, *Roxb.*, Nepal, Kumaon, Mussoori.
S. ovalifolia, *Roxb.*, Konkans, Bengal.
S. prolifera, *Roxb.*, Rajmahal, Bengal.
S. pseudo-China, *Linn.*, Virginia, Jamaica, Garo Hills.
S. retusa, *Roxb.*, Bengal.
S. Roxburghiana, *Wall.*, Garo and Khassya mountains.
S. villandia, Morung Hills.
S. Zeylanica, *Wight*, Ceylon.

S. Roxburghiana or 'Koomare-Shook-China,' and S. oxyphylla or 'Chotee or small Koomaree;' S. rigida and S. ferox are Nepalese species. There are two or more species of Smilax in the Tenasserim jungles, one of which is used as medicine, to supply the place of a species of sarsaparilla, whose dried roots are sold in the bazars.—*O'Sh.; Eng. Cyc.; Dr. Mason.*

SMILAX CHINENSIS. *Linn.* China root.

Smilax China, *Linn.*	Rasna, Sugandamula, San.
Shook-China, . . Beng.	China-alla, . . Singh.
Tsein-apho-ta-roup, Burm.	Poringay, ... Tam.
Tu-fu-ling, . . . Chin.	Gali chakka, . . . Tel.
Chob-Chini, . . Hind.	Pirangi chakka, . . ,,

Dr. Smith applies the above Burmese and Chinese names to the tuberous root of Pachyma cocos. S. Chinensis grows wild in China, from which it is exported to Burma and to India; and the root is one of the China roots of the bazars. It is largely imported into Calcutta from the eastward, and much employed by native practitioners. The China root which comes to Ajmir via Bombay, is taken as an aphrodisiac in milk; one tola is a dose; used also in mesalihs. Natives suppose that this is the root of the Hazari marigold, Tagetes erecta, after being in the ground three years.—*O'Sh.; Gen. Med. Top.; Smith.*

SMILAX GLABRA. *Roxb.* Gootea-Shook-China, Beng. A climber with a large tuberous rhizome, a native of Sylhet, the Garo Hills, and the adjacent country. The stem and branches are thornless; leaves lanceolate, pointed, pale-green beneath. The root is identical in appearance with the China root of commerce, and the natives use it in decoction for the cure of sores and syphilitic eruptions.—*O'Sh.*

SMILAX LANCEÆFOLIA, *Roxb.*, not S. lanceolata, *Wall. and Lourcir.*, is Hurria-Shook-China of Bengal. The leaves are lance-shaped and three-nerved, umbels stalked. Its large tuberous roots are much used by the natives of India in medicine.—*O'Sh.*

SMILAX OVALIFOLIA. *Roxb.*

A plant of Bengal and the Konkans, used for tying bundles.—*Mason; Spry's Suggestions*, p. 68.

SMITH. George Smith, an oriental scholar, who died in the autumn of 1876. Nothing could surpass the effect his paper, which was read on 3d December 1872, on The Assyrian Account of the Deluge, had on English Assyriological inquiry. The scientific journals took it up as a triumph of philological research, and the Daily Telegraph offered to send him out to search for more material. Accordingly he left England in January 1873, and on 3d March he gained his first view of Nineveh. Full accounts of this and the succeeding expedition in 1874 and 1875 have been published. The importance of his inspection of the sites of the palaces of Sennacherib and Assur-Banipal, and the survey of the ruins of Nineveh, cannot be overvalued. He was the first excavator who was able to read the records which he uncovered. He discovered a small fragment of a tablet containing the legend of the creation of the cattle and insects. This led him to search among the tablets in the British Museum, and in March 1875 he announced to the world the discovery of the Chaldæan legends of the Creation. The remainder of the year was occupied in the copying and translation of these texts, and the result was given in his last and famous work, The Chaldæan Account of Genesis. This was the first English work on Assyriology that had been translated into any foreign language.

Lieut.-Gen. Sir Harry George Wakelyn Smith, Bart., G.C.B., born 1788, died 1860. He entered the British army in 1805, and served against Monte Video, Buenos Ayres, and Copenhagen. He was present in the battles of the Peninsular war and at Waterloo, and in 1835 against the Kafir tribes. In 1839-40 he was appointed Adjutant-General to the Forces in India, and was present at the battles of Gwalior and Maharajpore, for which he was nominated a K.C.B. In the Panjab campaign of 1845-46, he was in command of a division at Moodkee, and of the reserve at the battle of Ferozpur, where he supported Sir John Littler in his charge upon the guns of the enemy. A few days later, the Sikh forces crossed the river Sutlej, near Ludhiana, and took up their position at Aliwal, on which Lord Gough despatched Sir Harry Smith, with 7000 men and 24 guns, to relieve Ludhiana. On the 28th of January 1846, Sir Harry Smith led the main charge in the battle of Aliwal, carrying that village at the point of the bayonet, and capturing all the enemy's guns, to the number of 67, a success which enabled him to come to the assistance of the commander-in-chief, and to join in the final and crowning victory of Sobraon (February 10), which crushed the last hopes of the Sikh leaders and their troops, and secured the possession of the Panjab to the British forces. He received the thanks of the House of Lords, was presented with the freedom of the city of London, and the thanks of the Honourable East India Company; was created baronet, and advanced to the dignity of a G.C.B. In September 1847 he was nominated to the governorship of the Cape of Good Hope. He conducted the operations of the Kafir war of 1851-52, until succeeded by Sir George Cathcart.

Sir Lionel Smith in 1821 commanded an expedition against the pirate tribes in the Persian Gulf.

Colonel Richard Baird Smith, an officer first of the Madras and subsequently of the Bengal Engineers. He was born in the year 1818, at Lasswade near Edinburgh, on the banks of the Esk; in 1838 went to India in the Madras Engineers, from which in 1839 he was transferred to the Bengal corps. From 1840 he was employed in the canal department under Sir Proby Cautley, served with Sir Harry Smith at Buddiwal and Aliwal (1845 ?), and in 1848-49 under Sir Colin Campbell (Lord Clyde) at Ramnuggur, and afterwards at Sadullapur and Gujerat. In 1851 he went to Piedmont and Lombardy to study their system of irrigation. He was chief engineer at the siege of Dehli; died in the Madras roads in 1859. He established a Museum of Economic Geology for N.W. Provinces, Bl. As. Trans., 1831, x. p. 779. Author of Memoir on Indian Earthquakes, ibid., 1841 and 1843; and Edin. New Phil. Jl., 1842, xxxiv. p. 107. Wrote an Account of the Delta of the Ganges, Cal. Jl. Nat. Hist. iii.; and on the Irrigation of the N.W. Provinces, pamphlet, 8vo, 1849.

SMITHIA SENSITIVA. *Ait., Roxb.*

Kul kushanda, . Beng. | Muyyaku ponna, . Tel.

An annual with small yellow flowers, makes good hay.—*R. Brown.*

SMRITI, Sansk., is the body of the recorded or remembered Hindu law, the ceremonial and legal institutes of the Hindu traditions. Dowson describes it as inspiration as distinguished from Sruti or direct revelation. He says the term includes several religious works of the Hindus, the Vedangas, Sutras, Ramayana, Mahabharata, the Puranas, Dharma-Sastras, especially the works of Menu, Yajna-walkiya, and other inspired lawgivers, and the Niti Sastras or ethics; but its ordinary application is to the Dharma-Sastras; as Menu says (ii. 10), by Sruti is meant the Veda, and by Smriti the Institutes of Law.—*Dowson.*

SMUT or Dust Brand, Uredo segetum, Siahi, Hindi, is a disease produced in wheat by a fungus, and is said to infect chaff, straw, seeds, and leaves.—*Hassal.*

SNAKE BIRD, Plotus melanogaster.

SNAKE-BITE. In British India, in the six years 1875-1880, 1,073,546 snakes were destroyed, over 103,000 persons died from snake-bite, and Rs. 6818 were given in rewards for killing above a million of snakes. For our knowledge of the nature and effects of snake-poisons we are indebted to Surgeon-General Shortt; to Sir Joseph Fayrer's work on the Thanatophidia; to a Report on Indian and Australian snake-poisoning by Drs. Ewart, Richards, and Mackenzie; to the investigations of Drs. Halford and Weir Mitchell in Australia and America; and to a volume by Dr. Wall of the Indian army.

Dr. Halford, of Melbourne, advanced the theory that in snake-poisoning germinal matter was thrown into the body, together with the virus,

which rapidly developed and multiplied, the process going on at the expense of the oxygen; and he described some cells in the blood which he believed were evidence of his proposition. These cells, however, were afterwards proved to be the ordinary white blood corpuscles. Sir Joseph Fayrer finding that the blood after death from the bite of the viper (daboia) remained fluid, while after the bite of the cobra it quickly coagulated, supposed that death is due to some important changes in the blood. Dr. Wall is unable to accept either of these theories, and, while admitting a serious change in the condition of the blood in viperine, but not in cobra, poisoning, he attributes the cause of death to disturbance of the nervous system,—in the case of cobra poisoning to paralysis of the respiratory function, and in viperine poisoning to convulsions due to the direct action of the poison on the nervous system, and not to carbonic acid poisoning from failure of the respiration.

Surgeon-General John Shortt, a medical officer of the Madras army, recommends liquor potassæ internally for the cure of persons wounded by poisonous snakes. Surgeon-General Sir Joseph Fayrer of the Bengal army recommends liquor ammoniæ. All stimulants are useful,—spirits, and the essential oils of cinnamon, peppermint, etc. Dr. Wall is urgent for the entire removal by the knife of all the poisoned structure before the venom can be absorbed into the system. This, however, requires the skilled eye and hand of the surgeon, and time is not given, because the whole blood of the body passes through the heart in three minutes. The virus of snakes does not owe its peculiar properties to germs, but it is a perfectly structureless plasma, whose physiological action is little influenced by such materials as carbolic acid, and it retains its poisonous properties after being heated for an hour to a temperature of 224·6° Fahr., a temperature which it is hardly probable organic germs could survive. On the other hand, the disinfectants, which act by destroying organic compounds, such as chlorine, sulphurous acid, and chloride of zinc, have a marked effect in weakening the activity of the virus; while the permanganate of potash—better known by the name of Condy's fluid—completely suspends it by parting with its oxygen and decomposing its albuminous constituents.

Dr. Wall found no benefit accrue from the injection of ammonia or the permanganate of potash into the blood, nor does he speak encouragingly of giving large quantities of alcohol to the extent of producing intoxication.

As about 90 per cent. of snake-bites occur on the arms and legs, great importance is attached to the immediate application of a ligature to the limb above the seat of the wound. Dr. Wall thinks that the common mode of tying a piece of string or calico round the limb often fails to stop the circulation, and recommends as a substitute a piece of india-rubber bandage, similar to Esmarch's, employed by surgeons for bloodless operations.

The mungoose is the natural enemy of the snake, and although it seems to be as tameable as the cat, its depredations on the poultry yard will always prevent it taking the place of the cat in the Indian household. Mothers also dread lest their sleeping children be attacked.

Aristotle tells us that serpents may be driven away from a house by the smell of rue. Pliny says that the root of the holm-oak is an enemy to scorpions, and that of the ash to serpents, which, moreover, will not retire under fern. Serpents may be driven away by the burning of hair or stag's horn, or the sawdust of the cedar, or a few drops of galbanum, green ivy, or juniper; and persons rubbed with juniper seeds are said to be secure from hurt by serpents. See Serpents.

SNAKE GOURD, Trichosanthes anguina, a curiously contorted gourd, peculiar to India, and in very general demand for vegetable curries. The plant is of easy culture on trellises around the doors of the native cabins, and the fruit often grows two feet long, beautifully striped, small, and tapering, so, that streaming down from the trellis, they immediately remind one of striped snakes suspended from the foliage of trees. The viper gourd is Tr. colubrina.—*Mason.*

SNAKE-HEADED FISHES, Ophiocephalidæ, breathe atmospheric air direct; so, when pollutions or poisonous substances find access to rivers, or mud is carried down in such quantities as to choke the gills of most fishes, the Ophiocephalidæ are almost unaffected.

SNAKE RACE, Naga or Takshak race, was one of the most extensive and earliest in High Asia, and celebrated in all its extent; but the traditions regarding them, and the notices in the Hindu writings, are so mixed with fable, that little can be understood as to their real position. The Ramayana relates that the sacrificial horse was stolen by a serpent (Takshak) assuming the form of Ananta. The Snake race of India were the foes of the Pandu. The Mahabharata records constant war from ancient times amongst the children of Surya (the sun), and the Tak or Takshak (Serpent) races, and mentions that the horse of the sun, liberated preparatory to sacrifice, by the father of Rama, was seized by the Takshak. The successor of Janmejaya carried war into the seats of this Tak or Serpent race, and is said to have sacrificed 20,000 of them in revenge; and he subsequently compelled them to sign tributary engagements (penameh). The Paratacæ (Mountain Tak) of Alexander were doubtless of this race, as was his ally Taxiles, which appellation was titular, as he was called Omphis till his father's death. Baber gives the position of the capital of this celebrated race, which he passed on his route of conquest. And there is an intermediate notice of it between Alexander and Baber, in the early history of the Yadu Bhatti, who came in conflict with the Tak on their expulsion from Zabulisthan and settlement in the Panjab.

SNAKE-STONE, Pambu kallu, Tam., is a term employed in tropical countries to various substances applied to snake-bites. Charred bone, bezoar, magnesian limestones, and chalk are used. The virtues of these depend on their absorbent qualities; and earth has been recommended. Dr. Davy's belief was that in Ceylon a piece of charred bone is filled with blood perhaps several times, and then carefully charred again, and he says the manufacture of them is a lucrative trade, carried on by the monks of Manilla, who supply the merchants of India. Thunberg was shown the snake-stone used by the Boers at the Cape in 1772, which was imported

for them from the Indies, especially from Malabar, at so high a price that few of the farmers could afford to possess themselves of it. He describes it as convex on one side, black, and so porous that when thrown into water it caused bubbles to rise; and hence, by its absorbent qualities, it served, if speedily applied, to extract the poison from the wound. Mr. Hardy furnished Sir J. E. Tennent with an account of the piedra ponsona, the snake-stone of Mexico: Take a piece of hartshorn of any convenient size and shape, cover it well round with grass or hay, enclose both in a thin piece of sheet copper well wrapped round them, and place the parcel in a charcoal fire till the bone is sufficiently charred. When cold, remove the calcined horn from its envelope, when it will be ready for immediate use. In this state it will resemble a solid black fibrous substance, of the same shape and size as before it was subjected to this treatment. The wound being slightly punctured, apply the bone to the opening, to which it will adhere firmly for the space of two minutes; and when it falls, it should be received into a basin of water. It should then be dried in a cloth, and again applied to the wound. But it will not adhere longer than about one minute. In like manner it may be applied a third time; but now it will fall almost immediately, and nothing will cause it to adhere any more. These are quite insufficient to obviate the effects of a bite by the more poisonous snakes.

SNANA, Sansk., from Sna, to purify; bathing, ablution, a ceremonial of the Hindus; the ceremony of bathing or washing an idol. In the full moon of the month Jyeshtha, images of Krishna, as Jaganath, are carried out and bathed. It is called the Snana-yatra, or in Orissa Ratha-yatra.

SNEEZE, Atas of the Arabs, Cheenk of Hindustan. Most nations salute an individual after his sneezing. A Muhammadan after a sneeze ejaculates, Al Hamd Illah, God be praised; on which any one present adds, Ya! Rahmat Allah, God have mercy on you. On a child in Great Britain sneezing, the mother or nurse ejaculates, Bless you, bless you, my darling.

SNIPE are birds belonging to the family Scolopacidæ, sub-families Scolopaeinæ, Limosinæ, Numeninæ, Tringinæ, Phalaropinæ, and Totaninæ. The species of the Scolopaeinæ which receive the name of snipes, may be thus shown:—

Fam. Scolopacidæ.

Sub-Fam. Scolopacinæ, Snipes.

Scolopax rusticola, *Linn.*, the woodcock, all India.
S. saturata, *Horsfield*, Java.
S. minor, *Gmelin*, America.
Gallinago nemoricola, *Hodg.*, wood snipe, solitary snipe, all India.
G. solitaria, *Hodg.*, Himalayan solitary snipe.
G. stenura, *Temm.*, pin-tailed snipe, all India.
G. scolopacinus, *Bonap.*, common snipe, all northern latitudes.
G. gallinula, *Linn.*, jack snipe, all northern latitudes.
Rhynchæa Bengalensis, *Linn.*, painted snipe.

Gallinago scolopaeinus (Scolopax gallinago) is the common snipe of Europe, Asia, North Africa, and is very common in India.

Gallinago gallinula (Scolopax gallinula), the jack snipe of Europe, Asia, Barbary, is common in India.

Both these are migratory, coming over the Himalaya in October, but the Gallinago stenura snipe precedes them, though few sportsmen discriminate it from the common British snipe, which makes its appearance somewhat later. G. stenura is nevertheless a different bird, at once distinguished by having a set of curious pin-feathers on each side of its tail; whereas the British snipe, which is equally abundant in India, has a broad fan-shaped tail, as unlike that of the other as can well be. The pin-tailed is the common snipe of the Malay countries, and is unknown in Europe, excepting as an exceedingly rare straggler from its proper habitat, the east. The double snipe is the Gallinago major of Europe, distinct from the two species of large or solitary snipes of the Himalaya, G. solitaria and G. nemoricola. The solitary snipe is the Gallinago solitaria. It is found throughout India, northwards to the Himalaya, where, in the lonely glen, by the side of the mountain torrent, where the pine grows tall and dense, and the sun's rays seldom penetrate, may be found the great snipe Gallinago solitaria, from the lower to the upper ranges of the forest region.

There are two distinct species in the Himalaya commonly confounded under the name 'solitary snipe,' and both are very different from the Gallinago major of Europe and Northern Asia, which has not been observed in British India. Of the other Indian kinds, one (Gallinago solitaria of Hodgson) is peculiar to the Himalaya, and to this species the designation 'solitary snipe' should be restricted. It is readily known by its white belly and yellowish legs,—wings longer, straighter, and more acuminated than in the other, and the upper plumage more minutely speckled, with the pale linear markings on the back narrower, and the tail also longer. Average measurement, 12½ inches by 20 in expanse of wings; closed wing 6½ inches, and tail 3 inches. Weight, 5 to 6 oz., or even more.

The other (G. nemoricola of Hodgson) should be distinguished as the wood snipe, and is more of a woodcock in appearance and habit, though keeping to the outskirts of the jungle. Though principally a Himalayan species, it is not rare in the Neilgherries, and it has been met with in various parts of the country, and in the Calcutta provision bazar. This species has blue legs, and the under parts are uniformly barred throughout; the general colouring dark, and the markings bold; the wings more bowed and rounder than in the other, and the tail shorter. 'It is only found,' remarks Mr. Hodgson, 'in the haunts of the woodcock, with this difference in its manners, that it is averse to the interior of woods.' Length, 12½ inches by 18 in expanse of wings; closed wing 5½ inches, and tail 2¼ inches. Weight, 5¼ to 6½ oz. and upwards.

The grass snipe is also known as the pin-tailed snipe (G. stenura); it is distinguished by a duller plumage than the common British snipe, and especially by the curious series of pin-feathers on either side of its tail; whereas the other has a fan-shaped tail, altogether different in form. The pin-tailed is the common snipe of the Malay countries, but not of Australia, as has been stated; the Australian (G. Australis) being a much larger bird, with intermediate form of tail, as in the solitary and wood snipes of British India. In Bengal it is the more abundant species, early and

late in the season, as the common or British snipe is during the height of the cold weather; but so early as the 30th August one was found in a bundle of pin-tailed snipes brought from the Calcutta bazar, and subsequently the pin-tailed only in considerable abundance. Nothing is more easy than to distinguish the two species by the shape of the tail, and a praetised eye will generally tell them at the first glance; yet very few sportsmen in India are aware of the difference.

The little jack snipe (G. gallinula) is much later in its arrival, though numerous species of small waders arrive from their breeding-haunts before the end of August. He, again, has a tail quite different from that of any of the others. In brilliancy of plumage he excels all the rest.

There is a small and distinct species of woodcock in the Malay Archipelago (the Scolopax saturata of Horsfield). The woodcock, identical with the British, has been obtained in the Tenasserim Provinces; it abounds in the Himalaya, is less common in the Neilgherries, and is considered a rare bird in the mountains of Ceylon. On the Bombay side it is said to be far from common in the Mahabaleshwar.

The painted species, the Rhynchæa Bengalensis, belongs to a different genus from the true snipes, far more diverse than the closely akin one of the woodcocks. Sportsmen acknowledge this when they refuse to allow it to count in the game-bag. It is not a migratory bird, and both eggs and young have been obtained in the vicinity of Calcutta. Indeed, Mr. Blyth has taken the egg from the oviduct of a bird brought to the bazar. Its flight is not in the least like that of a real snipe, and has been aptly compared to that of a huge moth fluttering over the ground. One remarkable peculiarity of the painted snipe consists in the dissimilarity of the sexes, the female being the larger and more finely-coloured bird of the two; while the young in their first plumage resemble the mature male. The same has been observed of the Australian painted snipe (R. australis), which externally differs little from the Indian except in having shorter toes. Nevertheless, the female only of the Australian painted snipe has an extraordinary prolongation of the trachea or windpipe, as described by Gould, which is not the case with that sex of the Indian species. So curious a difference of structure existing in two species which externally are so much alike as the painted snipes of India and Australia, is a most remarkable fact.

The woodcock is found on the Neilgherries, and occasionally on the plains of the Peninsula. One was shot at Kaladgi in 1842. It is everywhere very scarce on the plains of India, but has now and then been met with even near Calcutta. The so-called woodcocks seen at the dinner-table are generally greenshanks (Totanus glottis), and occasionally the black-tailed godwit (Limosa ægocephala),—birds of very different Scolopaceous genera.

The Macrorhamphus genus combines the form and exact bill of the snipes, with the plumage and seasonal changes of colouring of the godwits, knot, etc., becoming rufous in the breeding season. Mr. Blyth once obtained this bird in the Calcutta provision bazar. A second example was obtained in the Madras Presidency; and it is a bird that should be looked for on the sea-coast. Shore snipe should indeed be its popular name.

SNOW.

Talj, Tuluj, . .	Arab.	Neve, . . .	It., Port.
Mo-bwing, . . .	Burm.	Snyegh, ...	Rus.
Snee, Sneeuw,	Dan., Dut.	Nieve, ...	Sp.
Neige, ...	Fr.	Sno, ...	Sw.
Schnee, ...	Ger.	Khar?	Turk.

Snow is not known to fall in any part of British India south of the Himalaya. The snow-line of Kamaon was stated by Humboldt at 11,700 feet, but higher than this are flourishing agricultural villages and luxuriant vegetation. In every part of the Himalaya, and of Western Tibet, wherever the mountains attain a sufficient elevation to be covered with perpetual snow, glaciers are to be found. In the lofty chain of the Cis and Trans Sutlej Himalaya, and of the Kouen Lun, whose peaks rise to a very great height, and collect in winter enormous depths of snow, they are of great length. In the central parts of Tibet, which are often lower, and, even in their loftiest parts, are less snowy, than the bounding chains, the glaciers are of inferior dimensions, where the snow-bed is at once cut off abruptly in an ice cliff, which can hardly be said to be in motion, or rather whose motion must be almost entirely from above downwards. Moraines which, on the larger glaciers and among mountains of easily decaying rocks are of astonishing dimensions, form the margins of each glacier, and also occur longitudinally. The annual rising of the rivers Indus and Ganges depends to a great extent on the melting of snows on the mountains. The permanent flooding of the Euphrates is also caused by the melting of the snow in the mountains along the upper part of its course. This takes place about the beginning of March, and it increases gradually up to the time of barley harvest, or about the last days in May, when it is usually of its greatest height. In the report of the Proceedings of the Magnetic Survey, it is mentioned that the phenomenon of the illumination of snowclad mountains after sunset (analogous to the glowing of the Alpine snows) was seen several times in those nights when there was no moon. It was seen particularly well near Chibra, to the north of Kara-korum. Judging of it, as seen there, it was thought to be quite independent of a spontaneous development of light from snow, and evidently caused by an illumination of the snow-fields from the west-north-western parts of the sky. This illumination is only visible after a certain time after the sun has set, namely, when the projection of the earth's shade has reached an angular height exceeding that of the mountains, and when the atmospheric light has decreased so much that the atmosphere behind the mountains reflects less light than the snow-clad slopes of the mountains exposed to the west-north-west. The Lachen valley, says Dr. Hooker, remains almost level for several miles, the road running along the east bank of the Lachen. Shoots of stones descend from the ravines, all of a white, fine-grained granite, stained red with a minute conferva, which has been taken by Himalayan travellers for red snow, a phenomenon Dr. Hooker never saw in Sikkim. Red snow was never found in the antarctic regions during Sir James Ross' South Polar voyage; nor does Dr. Hooker know any authentic record of its having been seen in the Himalaya. — *Hooker's Himalayan Journal*, ii. p. 118; *Magnetic Survey of India*, p. 8.

SNUFF.

Barnuti, Saut, . . Arab.	Tobacco da naso, . . It.
Tabac en poudre, . Fr.	Nosowoi tabak, . Rus.
Schnupftaback, . . Ger.	Tabaco de polvo, . Sp.
Nas, ... Hind.	Enfiyze, ... Turk.

Snuff is tobacco in a powdered state, and in general use as an errhine. Other articles are sometimes added to vary its pungency, scent, etc. The snuff of Masulipatam was to be found throughout the Peninsula of India, where many Hindus and Muhammadans use it. Snuff is very little taken by the inhabitants of the Panjab plains, but the Baluchi and hill tribes of the Dehrajat use it more frequently. It is preserved in small egg-shaped boxes, with a little ivory stopper; some of them are very prettily carved out of the fruits of Feronia elephantum. Benares snuff is famous throughout India, and its manufacturers have made fortunes.—*Powell; Faulkner; M'C.*

SNUSSI, a society of darvesh of recent origin, but who have already obtained an influence in the region of Northern Africa corresponding to that exercised in Central Asia by the late Akhond of Swat. They are usually regarded as exceedingly fanatical.

SOAP.

Sabun, Ar., Guj., Hind.	Sapo, ... Lat.
Fan-kien, . . . Chin.	Sabun, Sujah, . Maleal.
Saebe, ... Dan.	Sabao, ... Port.
Zeep, ... Dut.	Mulo, ... Rus.
Savon, ... Fr.	Saip, ... Scotch.
Seife, ... Ger.	Jabon, ... Sp.
Sapone, ... It.	Tval, Sapa, ... Sw.

The manufacture of soap has long been practised in India, but the identity of its names in very many regions shows that its manufacture was learned almost from one source. Soaps are slightly alkaline, feel soft and slippery, and are detergent. The watery solution is readily decomposed by acids, also by earthy and many metallic salts; hence, when water holds any of them in solution, instead of dissolving, the soap becomes decomposed. Such waters are called hard, while those which are comparatively pure are called soft waters. Castile soap is composed of 9 to 10·5 of soda, 75·2 to 76·5 of oleic and margaric acids, and 14·3 to 14·5 of water. Common soap is made of tallow and soda, and yellow soap of tallow, resin, and soda. Chinese use the native soda (Fan-kien), or the pods of the Acacia concinna (Fei-tsau-toh). Soap seems to have been introduced by the Muhammadans into India, though the Hindus have long used alkaline leys, obtained from the ashes of plants, for many of the purposes of soap; and they have a substitute for soap in several berries. Soap is made at Dacca, of fine shell lime, 10 maunds; saji mittee, impure carbonate of soda, 16 maunds; common salt, 15 maunds; sesamum oil, 12 maunds; goats' suet, 15 seers. It is made of good quality at Saharunpur. The soap of Tranquebar was formerly an export to Mauritius, Penang, Sumatra, and the islands of the Indian Archipelago. In Oudh, a soap is made from cow's fat and the reh which effloresces on barren land. It sells at 8 seers the rupee. Soft soap, used in the arts, is made with caustic potash and fish-oil and tallow; is semi-transparent, of the consistence of honey, brownish-coloured, and nauseous.

SOAP-STONE, Pot-stone, Steatite, Talc.

Hwah-shih, . . . Chin.	Sunkjiri, Sunkjeeru, Hind.
Hwah-shwiu, . . ,,	Bulpam, . . Tam., Tel.

This mineral has a soft and greasy feel; is of a yellowish-white or greenish-grey colour, sometimes spotted or veined, with little lustre or transparency. It is composed of silica, alumina, oxide of iron, and water in various proportions. It occurs in many parts of India and Burma, and is constantly for sale in the bazars, being used to write with on black boards, as Europeans use chalk.—*M. E. J. R.*

SOAP-WORTS. The soap tree of China, Sapindus Chinensis, is a large tree bearing round berries, resembling the fruit of the melia. The tree is called by the Chinese Wa-hwan-tsze and Fei-chu-tsze. The berries are sometimes used in making rosaries, and when roasted are eaten by the Chinese, notwithstanding their apparent acridity. In the form of tincture of the berries, they were used in skin diseases. The followers of the Taou faith employ sticks of this tree to exorcise demons. Soap-worts, soap-fruits, and soap-nuts in tropical climates furnish substitutes for soaps of a more or less useful character, and the dried berries are to be found in almost every bazar, being used throughout India for washing silk, or hair, or woollens and cloths of various kinds. The soap-berries of the W. Indies and the continent of America are from the Sapindus saponaria, and in Java, S. rarak. In India, several species, as S. laurifolius, S. acuminatus, S. emarginatus, and S. detergens, yield berries, used similarly. The fleshy part of these sapindus berries is viscid, and when dry and rubbed with water, they form a lather like soap; and the bark and roots have similar properties, though it is said that articles washed by the root and bark rapidly corrode. Hindu physicians deem the endocarp a useful expectorant, and it is said the seeds, pounded with water, and a small quantity put into the patient's mouth, often put an end to the epileptic paroxysm. The tincture or extract of the soapy matter of the capsules of S. saponaria has been used in chlorosis. Its berries, which are about the size of cherries, enclose black shining nuts, which take a fine polish, and were formerly much used in England for making buttons, after having been tipped with gold, silver, or other metal. They are also made into beads, necklaces, etc. The kernel contains an edible oil, which is sometimes used for burning. In India the nuts of the rheeta, S. emarginatus, are eaten by young people; and in the West Indies the fruits of S. Senegalensis and S. esculentus are deemed as palatable as the hazel-nut and almond. S. rubiginosus has a close-grained, hard wood, and forms an excellent timber. Saponaria vaccaria is well known in India, and is identical in its properties with S. officinalis, a decoction of the root frothing like a solution of soap. Kritz, kris, or kreess, the root of some parasitical plant, but of unknown origin, is used in Kashmir to wash the shawls, soap being used only for the white shawls. It is used also medicinally, and for dyeing the colour called na-furmanee.

Soap acacia is the Acacia rugata, *Buch.* The dried pods of this plant are sold in the bazars of all the East Indies, and used as a substitute for soap in cleansing the hair.—*Mason.*

Soap-berry, seeds of Sapindus saponaria. The fleshy covering (pericarp) of the seeds of this tree, and, in a less degree, the root, make a lather in water, and serve all the purposes of soap, being very generally employed by the poor in washing their coarse linens. The seeds are round, smooth,

and black, and were at one time imported into England for rosaries, and tipped with gold, etc., as buttons. The seed-vessels are employed also in America and the West Indies in washing linen, of which they are said to cleanse more than would sixty times their weight of soap.

Soap-nut, Soap-berry.

Buro ritah, . . . Beng.	Puvandie cottay, . Tam.
Rita, Aritah, . . Hind.	Manay pungung-kai, ,,
Rarak, . . . Malay.	Kumutti ghinzalu, Tel.
Bindak-i-Hindi, . Pers.	Kunk-kaia, . . . ,,
Arishta, Phenila, . Sansk.	

The Sapindus emarginatus, *Vahl.*, yields this product. The capsules contain black seeds, which have a singular sweetish-bitter taste, and a smell not unlike that of an over-ripe mango. They form, when bruised and agitated in water, a kind of sud, like that of common soap, which is extensively used by the natives of India for washing the hair of their head, and by washermen for cleaning silks. Soap-nut and sikaya are extensively used as detergents. They have all the cleansing properties of soap, and form a thick lather with water. They owe this property to the presence of a peculiar principle, which has been termed Saponinæ or Esculic acid, and which can be separated from the seeds by alcohol. The black nut is capable of receiving a high polish, and is much employed for making beads. As a substitute for soap, these two substances might become of value. They are exceedingly abundant and cheap. The pounded seeds are said to be a valuable remedy for epileptic paroxysms and other diseases. Soap-nuts are procurable in most bazars.

Soap-nut oil.

Rithay-ka-tel, . . Hind.	Poongum kai yennai, Tam.
Poovanday kotte-yennai, T.	Kooncoodi nunay, . Tel.

The pale-yellow semi-solid oil is used medicinally by the natives, and is extracted from the kernel of the soap-nut. Its cost prevents its general use. The soap-nut tree grows all over the East Indies.

Soap bark of Chili, from the Quillaja saponaria, used for dressing silk and wool. Chemical science has not yet discovered any equally efficient substitute for this bark, and it has accordingly come into large demand both in France and England.—*W. Ic.; Useful Plants; M. E. J. R.; Simmonds; Smith.*

SOAREZ. Loupo Soarez de Albergaria, a leader of the Portuguese in India in the early part of the 16th century. He succeeded Albuquerque, and in 1516 reduced Aden, took and burned Zeila, but failed in an attack on Jeddah. In 1517 he burned Berbera on the Somali coast, made the king of Colombo tributary, and obtained permission of the ruling sovereign, Dharma Pia Krama Bahoo IX. (A.D. 1505–1527), to erect a fortified factory at the entrance of Colombo.

SOBHAVATI-NAGARA, the birthplace of the Buddha Kanaka-muni, identified with Subhayparsa.

SOBRAON, a small village in Lahore district, Panjab, on the W. bank of the Sutlej (Satlaj), in lat. 31° 7′ N., and long. 74° 54′ E. Opposite this village, on the east bank of the river, in the Ferozpur district, lies the battlefield where Sir Hugh (afterwards Lord) Gough gained his decisive victory of 10th February 1846, which brought to a close the first Sikh war, and led to the occupation of Lahore by a British force. The Sikhs had taken up a strong position on the east side of the Sutlej, protecting the Hariki ford, while their rear rested upon the village of Sobraon. The battle took place on the Ferozpur side, where the Sikhs gallantly held their earthworks until almost their last man had fallen. Comparatively few made their way back across the river. — *Imp. Gaz.*

SOCOTRA lies between lat. 12° 19′ and 12° 42′ N., and long. 53° 20′ and 55° 2′ E., with an area of 1520 square miles. It was known to the ancients as Dioscorida, a name supposed to have been derived from the Sanskrit Dwipa Sakhadhara, *i.e.* island, the abode of bliss. The S.E. coast of Arabia is held by the Mahra tribe, in a narrow strip of land from Misenat to Ras Nus, lying between the sea and the mountains of Subhan, their sovereign being the sultan of Keshin, and the Mahra hold also Socotra. It was long occupied by Christians. It was temporarily occupied by the E. I. Company from 1834 to 1839. It has only three towns of any magnitude. The Bedouins, nomade shepherds, are the original inhabitants. They are tall men and well made, with open countenances, and peaceful. They dwell in caverns in the limestone rocks. Aloes and dragon's blood from Pterocarpus draco are the chief exports.

SOCRATES, B.C. 468-399, the Sokrat of the Arabs, a philosopher of Greece, born at Athens B.C. 468. His father was a sculptor and his mother a midwife. He served bravely as a soldier, but it is as a philosopher that he is famous. He does not seem to have written any book, but Plato digested his discourses, in the form of conversations. He was accused of treason, and was condemned to death by drinking hemlock juice.

SODA BIBORAS, Borax, Tincal.

Boorak, ... Arab.	Sohaga, ... Hind.
Let-khya, . . . Burm.	Catteri, Pijar, . Maleal.
P'ung-sha, . . . Chin.	Tankar, ... Pers.
Yueh-shih, . . . ,,	Tincana, . . . Sansk.
P'wan-shah, . . . ,,	Velligaram, . . . Tam.

Borax is supposed to have been known to the Greeks and Romans, and to have been the chrysocolla of Pliny. The Hindus have long been acquainted with it; it is their sohaga, Sanskrit tincana, and one of the kinds of boorak of the Arabs. It is produced by spontaneous evaporation on the shores of some lakes in Tibet, and is brought across the Himalayan passes into India, and imported into other countries by the names of tincal and crude borax. It is also obtained by saturating the boracic acid of the lagoons of Tuscany with carbonate of soda. Crude borax is in pale-greenish pieces, covered with an earthy coating, and feels greasy to the touch. The natives of Tibet are said to cover it with some fatty matter, to prevent its destruction by efflorescence. It is purified by calcining, which destroys the fatty matter, or by washing with an alkaline ley, which converts it into a kind of soap, then dissolving and re-crystallizing. Sp. gr. 1·35. It is colourless, transparent, somewhat shining. It has an alkaline reaction on turmeric. The crystals, efflorescent slightly in the air, are soluble in 12 parts of cold and 2 of boiling water. When heated, they lose water, swell up into a porous substance called Borax usta v. calcinata, and at a red heat run into a transparent glass called glass of borax, much used as a flux. Another variety, more useful in the arts, crystallizes in octohedra, which are permanent in the air.—*Royle's Mat. Med.; Smith's Mat. Med.*

SODA, Carbonate of Soda.

Kan, Kien, . . . Chin.	Choutoo munnoo, . Tam.
Kohlensaures natron, Ger.	Karum, ... ,,
Neter, ... Heb.	Punhir-karum, . . ,,
Soud, Soudoo, . . Hind.	Ovar-munnoo-karum, ,,
Chowr ki matti, . ,,	Poong karum, . . ,,
Khar, Sajji noon, . ,,	Savitimunnooooppoo, Tel.

The soda of commerce was formerly obtained from kelp or barilla, made by burning sea-weeds and species of salsola. It was known to the early Hindus, and is by them now called Sajji noon (*i.e.* Sajji salt or soda salt). Plants mostly of the natural family of Chenopodeæ, and chiefly of the genera Salsola, Salicornia, Suæda, and Chenopodium, are burned to obtain the ash. This is barilla, and contains 25 to 40 per cent. of carbonate of soda. Various saline plants of the Salsola tribe abound in the thals or deserts during the rainy season. The Indian article, though a natural product, could not compete with the manufactured in the market.

The mineral carbonate of soda, dhobi's earth, occurs abundantly in many parts of India, in a whitish soil over granitic rocks or over alluvium. The earth is collected and used by washermen instead of soap for washing cloth. There is from 5 up to 30 per cent. of dry carbonate of soda obtainable; but in the earth this is mixed with muriate of soda and other salts.

Kelp used to be prepared on the coasts of Europe by burning a great variety of algæ or sea-weeds. Kelp is in hard cellular masses, of a bluish-grey colour, and of a disagreeable alkaline taste, containing from 3 to 8·5 per cent. of carbonate of soda and other salts, as in the case of barilla, but also some potash and iodine.

SODA, Muriate of, Common Salt.

Malh, ... Arab.	Chlor natrium, . . Ger.
Theing-dau-hsa, . Burm.	Namak, Nun, Lun, Hind.
Shih-yen, . . . Chin.	Sodæ chloridum, . . Lat.
Chloride of sodium, Eng.	Garam, ... Malay.
Chlorure de sodium, Fr.	Uppu, . . . Tam., Tel.

The common salt is obtained as rock-salt from the mines of the Salt Range, from the saline lakes and wells of many parts of Asia, in China and British India, from the sea water by evaporation, and from the saline soils by solution. Mineral salt or earth salt of very fair quality is made in Bangalore, Bellary, Hyderabad, Guntur, and Nellore districts, where it is almost invariably accompanied with gypsum, magnesian limestone, sandstone, sulphur, red and brown iron ores, and alum slate. Muriate and carbonate of soda is obtained from the Loonar lake in the Hyderabad territories.

SODA, Nitrate of.

Cubic nitre, . . . Eng.	Wurfelsalpetre, . Ger.
Nitrate de soude, . Fr.	

It consists of nitric acid and soda, and is similar in its properties to saltpetre, differing chiefly in being more pungent in taste, more soluble in cold water, more inclined to attract moisture from the atmosphere, and in crystallizing in a rhomboid form. It is highly esteemed as a manure for pastures, and for all other sorts of agricultural produce, except that grown in heavy wet soils. It is also applied to many of the purposes for which saltpetre is used. It answers well for some descriptions of fireworks, though, being more deliquescent than saltpetre, it is not adapted for the manufacture of gunpowder. This salt is found in immense quantities in deposits in South America, particularly in the districts of Atacama and Tarapaca in Peru. It was exported up to 323,600 tons in 1875. Indifferent samples of this salt were exhibited at the Madras Exhibition of 1857, from Bellary and Hyderabad, where it seems to form a natural efflorescence.—*Waterstone in Faulkner; M. E. J. R.*

SODA, Sesquicarbonate of.

S. bicarbonas.	Bicarbonate of soda.
Sodæ carbonas.	Carb. of soda of the shops.

The trona found near Tripoli in Africa, the natron of the country to the west of the delta of the Nile, and that of the Loonar lake described by the late Dr. Malcolmson, are all sesquicarbonates of soda. The bicarbonate of soda is the same salt as the sesquicarbonate of soda. That which is met with in commerce is usually a pure salt, but occasionally mixed with a small portion of the carbonate. It exists in some mineral springs highly acidulated with carbonic acid, as in those of Vichy. As usually sold, it is colourless, in powder, or in minute scale-like crystals, having a saline, slightly alkaline taste and reaction.—*Royle.*

SODA, Sulphate of, Glauber's Salt.

Malh, ... Arab.	Khara namak, . . Hind.
Sulphate de soude, Fr.	Khari nun, . . . ,,
Schwefelsaures natron, Ger.	Sal catharticus, . Lat.
	Sodæ sulphas, . . ,,

The Chinese names are, for mineral glauber, P'oh-siau and Pi-siau; and for artificial glauber, Hiuen-ming-fen and Peh-lung-fen. It exists in sea water, in the ashes of many plants; is found effloresced on the soil in India, in the water of some lakes and mineral springs, in glauberite, and in some animal secretions. In Bengal, an impure sulphate of soda is extracted from earth in which the salt exists, in the proportion of from ten to fifty per cent. It is prepared in large quantities by simply washing the earth. It is usually sold in crystalline dirty brown masses. These are purified by a simple process. In the Chinese provinces of Cheng-ti-fu in Sze-chuen, and Ts'ing-chau-fu in Shan-tung, this occurs native as an efflorescence on the soil, from which it is brushed up, dissolved in water, and coarsely crystallized. In this form it is a natural salt like the reh of the doab of Northern India, and is used to make the pure sulphate of soda. In China it is confounded with nitre obtained from a similar source.—*Smith's Mat. Med.*

SODHA, a Rajput clan, scattered over the Indian desert. The Sumaicha is a Muhammadan proselyte from the Sodha. Sir H. Elliot says that amongst this tribe the Wairsi was the chief clan, and a cognate clan was called Waisa. The Sodha or Soda tribe is an offshoot of the Pramara, and for many centuries has been an occupant of the desert tracts of Western India, into which they have been driven forward from the banks of the Indus by more powerful arrivals. The Sodha at one time held possession of Amerkot, from which they were expelled by the Talpur dynasty of Sind. The representative of the Sodha family retains the title of rana. He resides at Chor, a few miles N.E. of Amerkot, but shorn of all power, and hard pressed for the means of subsistence. The Sodha Grassia are Rajputs of the Sodha tribe, whose women are famed for their beauty, and are much sought for by surrounding Muhammadans and Rajputs. They sell their female children to the Muhammadans. A Sodha father

reckons his wealth by his number of daughters. Sodha Rajputs occupy Parkar, engage in cultivation. The Sodha who has retained the name of Hindu has so far discarded Brahman teachings, that he will drink from the same vessel and smoke out of the same hookah with a Musalman, laying aside only the tube that touches the mouth. With his poverty, the Sodha lost his reputation for courage, retaining only the merit of being a dexterous thief, and joining the hordes of Seorai and Kossa who prowled from Daodputra to Gujerat. In A.D. 1820, the arms of the Sodha were the sword and the shield, with a long knife in the girdle, which served either as a stiletto or a carver for his meat; few had matchlocks, but the primitive sling was a general weapon of offence, and they were very expert in its use. Their dress partakes of the Bhatti and Muhammadan costume, but the turband is peculiar to themselves. The Sodha is to be found scattered over the desert; but there are offsets of his tribe, now more numerous than the present stock, of which the Sumaicha is the most conspicuous, whether of those who are still Hindu, or who have become converts to Islam.

On leaving the confluence of the Panjab rivers, Alexander sailed down the Indus to the realm of the Sogdi, Σογδοι, where, according to Arrian, 'he built another city.' Diodorus, describing the same people, says: 'Continuing his descent of the river, he received the submission of the Sodæ and Massanæ, nations on opposite banks of the stream, and founded another Alexandria, in which he placed 10,000 inhabitants.' From these accounts, General Cunningham considers that the Sogdi of Arrian and the Sodræ of Diodorus are the same people, although the former have been identified with the Sodha Rajputs by Tod and M'Murdo, the latter with the now servile Sudras by Mr. Vaux. The Sodha occupy the south-eastern district of Sind, about Amerkot, but, according to M'Murdo, they once held large possessions on the banks of the Indus, to the northward of Alore. Abul Fazl states that the country from Bhakar to Amerkot was peopled by the Sodha and Jhareja in the time of Akbar; and General Cunningham believes that the Massanæ of Diodorus are the Musarnei of Ptolemy, whose name still exists in the district of Muzarka, to the west of the Indus below Mithankot. He identifies the Sogite or Sodræ with the people of Seorai, which was captured by Husain Shah Arghun on his way from Bhakar to Multan. In his time, A.D. 1525, it is described as 'the strongest fort in that country.' In this very position, that is about 8 miles to the north-east of Sabzalkot, the old maps insert a village named Sirwahi, which may possibly represent the Seorai of Sindian history. It is 96 miles in a direct line below Uchh, and 85 miles above Alore, or very nearly midway between them.—*Tod's Rajasthan*, ii. p. 12; *Cunningham's India*, p. 253; *Elliot's India*, pp. 531, 532.

SODHI, a descendant of the Sikh Guru Govind. They were addicted to infanticide.

SODHYA. Sansk. Called Sobhacritu in the Karnatic, wrongly written Sodhyum. A constant number to be subtracted in certain computations, to fit the rule to a particular epoch, being the negative of Cshepa.

SO-E. Chin. A garment of leaves, which, as well as hats, is fabricated by the agricultural labourers of Northern China, from the leaves of Chamærops excelsa, a palm indigenous in the northern and central parts of that country; but in the southern districts of China the So-e is made from the leaves of the bamboo and of other broad-leafed grasses.

SOENAIR. Colonel Tod relates that a Rajput ruler in the fulness of his pride had divine honours paid him in the rite Soenair. This distinction, which involves the most august ceremony, and is held as a virtual assumption of universal supremacy, had in all ages been attended with disaster. In the rite of Soenair, every office, down to the scullion of the Rusorah or banquet-hall, must be performed by royal personages.—*Tod's Rajasthan*, ii. p. 8.

SOFALA, a district on the African coast to which the ships of the Hebrews voyaged.

SOFARIDES, a dynasty who ruled in Khorasan and Seistan for thirty years, from A.D. 872 to 903. They displaced the Tahirides. Their founder, Yakub son of Leis, was a brazier (Soffar means a worker in copper) of Seistan, who first raised a revolt in his native province, and afterwards overran all Persia to the Oxus, and died while on his advance against the khalif in Baghdad. His brother Umar was defeated and made prisoner by the Samani, which put an end to the greatness of the family, though a younger member maintained himself in Seistan for a few years after the loss of their possessions (A.D. 903, A.H. 290).—*Elph.* p. 271.

SOFIAN, a little place which is within the lines of a dreadful battle fought A.D. 1585, between the Turks and Persians, and which gave a signal overthrow to the former power by the arms of Hamzeh Mirza, who commanded the Persians. The distance from Sofian to Tabreez is 24 miles.—*Porter's Travels*, i. pp. 219, 220.

SOGDIA or Sogdiana, an ancient dominion. It comprised the mountainous part of Transoxiana (which may be described as the extreme western spurs of the Tian-Shan), with no definite frontier on the east, but bordering westward on Miyankal, southwards on Kesh, and northwards on Osrushna. The capital was Samarcand, undoubtedly the Maracanda of the Greeks, which they specify as the capital of Sogdia. Samarcand, throughout the history of Transoxiana, has been the rival of Bokhara. According to Bunsen (iii. p. 584), the separation of the Aryans was prior to their leaving Sogd. The Aryan emigration from Sogd to Bactria, after the separation, took place, he says, B.C. 5000, consequently before the time of Menes. Their immigration into the Indus country was, he says, about B.C. 4000; and Zoroaster's reform in Bactria about the time of Menes, or half a century later. Sogd is said to be the birthplace of Arsaces I. of the Arsacidæ. Sogdiana in Samarcand formed the first settlement of the Aryans. Sughda, afterwards spelled Sugdia, and commonly Sugdiana, is pre-eminently the country, as being the home of the fire-worshippers. It is described in the Vendidad as in the 38th degree of latitude, where Mara Kanda (Samarcand) is situated, a paradisiacal land, fertilized by the river Sogd, so that Sogd and Paradise are used synonymously by the later writers. The Vendidad (ii. verse 5) says it was created as the second best of the regions and countries.—*Vambery; Bunsen*, iii. 584, 586.

SOH and Wang. Chin. The first and

fifteenth days of the month, kept as holidays by the Chinese.

SOHAG. HIND. Ornaments worn by married women while their husbands are alive. Sohagin, a married woman whose husband is alive.

SOHAGA. HIND. A clod-crusher, also called dah. A flat piece of heavy wood dragged over fields after ploughing and sowing, to smooth down the clods.

SOHAGIN or Sogheea, a sect of Muhammadan fakirs who assume women's clothes, and dress as women.

SOHAR, a town of Oman, on the E. coast of Arabia, with about 20,000 inhabitants.—*Findlay.*

SOHAWAL. This state was entered in the sunnud granted to raja Kishore Sing as a feudatory of Punnah. Separate sunnuds were granted to the chiefs of Koti and Oocheyra on the British occupation of Bundelkhaud. The area of Sohawal is about 300 square miles, and the population about 50,000; the revenue is Rs. 30,000.—*Aitchison's Treaties*, p. 247.

SOHNA, a small town of 7507 inhabitants, with a sulphur spring, in the Gurgaon district of the Panjab, in lat. 28° 14′ N., and long. 77° 7′ E., at the foot of the Mewat Hills. The water has a temperature varying from 115° to 125° F., and it is considered a specific for the Dehli boils. A large bath has been constructed for the use of Europeans.—*Imp. Gaz.* viii.

SOIL. The gross revenue of British India in 1881 was £72,559,978, and the land revenue in that year was £21,112,995; so that alike for the agricultural rent-payers and for the Government receivers it is important to have the fullest acquaintance with the soils, seeing that, since 1872, the land revenue, being then £20,520,377, has but little risen, though agricultural farms and new products had been introduced, and more land brought under cultivation. The soils of British India are not multitudinous, though from the variety of languages the names are manifold.

Peninsula.—Throughout its entire extent, there are four markedly distinct kinds of soil in which cultivation is conducted. These may be briefly named as the red soil over the granitic, gneissic, and syenite tracts; the black soil or regur, also called cotton soil, over the rocks of volcanic origin; the alluvial soil; and the sandy soils along the coasts and in beds of rivers. There are patches of regur or black soil in various parts of the Ceded Districts and in Tinnevelly, and it is to be seen over all the great volcanic outburst in the Dekhan. The red soil tract lies over the granitic regions in eastern and southern parts of the Peninsula. The regur or black soil is very retentive of moisture, and very fertile, and all the country where it is found is well under cultivation. The field crops grown on it are cereals, pulses, and cottons. Dr. Heyne remarked (Tracts, p. 349) that red soil prevails where syenite forms the apparent ground rocks; and Mr. H. F. Blanford says the colour and appearance of the soil is an excellent indication of the presence of certain rocks throughout the districts.

The *plateau* of the Peninsula, from Central India southwards to the Godavery and Kistna rivers, is a great outburst of volcanic rocks, and the soil which is formed from their detritus is exceedingly fertile, when well combined, as it commonly is, with the salts and double salts formed by the union of the organic acids with the inorganic bases of alkalis, earths, and oxides, which have become soluble, and been brought to the surface from below by capillary attraction. And the basaltic plateaux are often surmounted with a deposit of laterite, the detritus of which tends to promote fertility in the soil. There never is any other deposit than this iron clay or laterite above the basaltic plateaux. The centre of the great table-land of the Dekhan for about 80 miles around Beder is covered with great hills of laterite, which occurs also north of Amraoti, in Berar, also near Madras, along the Malabar coast, and at Rangoon. Near Musery, on the banks of the Cauvery, black soil, with its accompanying calcareous strata of marl and tuff, rests in common on granite.

Ceylon.—The rocks of the interior of Ceylon are granite, gneiss, and greenstone. These form the body of the island, and the soil consists of the disintegrated or decomposed materials, in which felspar and quartz greatly preponderate, enriched in some parts by vegetable accretions.

Laterite, called Kabuk in Ceylon, occurs in several parts of the island, and the great quantity of felspar occurring in parts of the island gives to the soil of those tracts a hard clayey structure, with a smooth and firm surface.

Owittes, Dutch or Singhalese? are high lands only cultivable every three to seven years.

Wattoerawes, low, muddy ground covered with reeds, only cultivated in dry seasons.

Moelaries? high, steep ground, only cultivable after rains.

Dedennies, sandy plains planted with fine grain.

Madras.—In the *Tamil* country, the waste or uncultivated lands are classed as Sekal karambu, or capable of cultivation, and Anudi karambu, lying waste from time immemorial, and which cannot be profitably cultivated.

The greater part of the Madras districts is covered with soils formed by the decomposition of metamorphic rocks, gneiss, etc., and such are of inferior quality. Stretching across the country in a N.E. direction from Trichinopoly, there is a wide belt of rocks belonging to the greensand formation, over which a very productive soil rests.

The black cotton soil occurs sometimes in patches, in others extending over plains of hundreds of square miles.

The red soil of the Madras districts in some places covers extensive plains with a hard-crusted surface, in others it is open, friable, easily worked, and generally fertile. These parts are cropped with cotton and cereals; the grey soils with varagoo, Panicum Italicum, and the inferior soils with Penicillaria spicata and Sorghum vulgare.

The soil of that part of the Carnatic which lies nearest to the sea, is loam and saud, sparingly mixed with marine remains, and it has been formed from the debris of the granitic and syenite mountains inland. The rocks of these mountains contain a very small proportion of felspar, which seems to account for the want of the proper admixture of clay, and for the superabundance of iron. It is either a loam mixed with sand and gravel, and strongly impregnated with iron, or, in low and wet places, a stiff red loam mixed with vegetable earth and fine sand, or, on eminences, gravel and sand; and it is often so much impreg-

nated with common salt that it presents a saline efflorescence in dry weather.

Near Madras, it is a heavy sterile salt loam mixed with silicious sand; and along the sea-coast, and for some miles inland, sea-shells are found in a thick black tenacious clay from 10 to 50 feet below the surface.

Between St. Thomas Mount and Vellore, particularly on the higher tracts, the soil is equally poor, though that of the valleys is more fertile, doubtless from the more valuable parts being washed into them.

In the valleys along the Eastern Ghats and between the ranges of hills, the soil is chiefly loamy, mixed with sand, and with a considerable proportion of vegetable mould, which imparts to it its dark shade of brown. The vegetable admixture and loaminess are owing to the great quantity of water with which it is inundated for a great part of the year for the rice cultivation.

Coimbatore has black soil, red soil, calcareous soil, and grey-coloured soil, the last being from schistose rocks, gneiss, mica, and hornblende, and is naturally poor. Cumboo, the Penicillaria spicata, is grown on red and grey soils; sorghum on black or red soils. Calcareous soil yields well under moderate but regular rainfall. Black cotton soil has great power of absorbing and retaining moisture. Mr. Robertson found it capable of holding more than one-third of its entire weight of water, and that it has in a very remarkable degree the power of absorbing moisture from the air. In one night, black soil absorbed $1\frac{3}{4}$ per cent., and sandy soil only three-fourths per cent. One portion placed in an atmosphere saturated with moisture, took up 7·99 per cent. of water in a single night. Its value as a top-dressing merits trial.

The *Neilgherry* group of mountains is uniformly covered with a thick stratum of clayey, grey-coloured, friable vegetable earth, overlying a thicker stratum of red earth.

In the low valleys and flats at the foot of these hills, and also in the declivities of the hills, the soil is of a black or deep-brown colour, of tenacious consistence when moist, crumbling into powder and often splitting into masses when dry. It resembles the black soil forming the swampy ground in peat bogs, and also resembles the black soil of the plains of India, from which, however, it differs in containing a large quantity of carbonaceous matter and much oxide of iron. Dr. Benza exposed it for an hour to an intense heat, from which it lost 25 per cent. of its weight, and changed into an ochry-red powder, but it did not vitrify as the Dekhan black soil does.

Malabar lands are classed as yielding 20 fold, 15 fold, and 10 fold.

Mysore, for a great part of the level surface of the table-land, has a red ferruginous arenaceous earth lying over syenite. White kaolin is frequently found between the two. It has a soft greasy feel, and is sometimes mixed with a fine sand. Kaolin of a fine white colour is found in many parts of Mysore.

The Canarese-speaking natives of Mysore distinguish eight different soils, viz.:—

Yara, black cotton soil, quite free from stones.
Kara, the same but stony.
Kengala, Kempu, red soil mixed with loam and vegetable mould.
Morallu or Molalu, sandy soil.
Kallu, Murbu, stony and gravelly soil.
Bila, Carlu, white stiff loam.
Maska, Masbu, Cabbou, garden soil.
Soudu, Choudu, salt ground.

The tops of the rising hummocks are usually very barren, producing nothing but a small jungle, chiefly composed of Dodonæa viscosa, Convolvulus cuneatus, Erythroxylon arcolatum and a thorny species of Barleria. The soil of the valleys is a good and loamy mixture, in which rice and sugar-cane are grown, the latter demanding the best soil, while the rice requires an abundance of water. All other grains in Mysore are grown under the natural rains.

Salem.—Muriate of lime is found in the well water and the soil of the Bara Mahal or Salem district, also in Mysore and other parts of the Peninsula. The soil containing it rapidly absorbs moisture, is very fertile, and gardeners apply it to the roots of the egg plant. In Mysore it is found largely in the water from which salt is made.

The soda soils of the Bara Mahal or Salem district are in patches, seldom more than half a mile square, and generally resting on a bed of kankar. The soil is sandy, and incapable of supporting vegetation, only a scanty scrubby grass growing on them. The natives call the soil of these patches Chour mannu, and extract the soda to be used as a flux of quartz in bangle-making; and washermen dissolve it, add quicklime to it to make it caustic, and use it in washing clothes. The bangle-makers extract the impure soda by mixing the earth with water in a pot, and allowing it to settle. The solution is then drawn off, and evaporated by sprinkling it on cow-dung spread on the surface of granite rock. When the cake has become about half an inch in thickness, it is taken off and broken into pieces, stored in houses under the name of Chour billah, and is sold at the rate of $17\frac{1}{2}$ rupees the ton. It contains 23 per cent. of insoluble matter. Soda soils of Bengal contain 15 per cent. of sulphate of soda.

The soil in the wide plains of the Ghooty district is largely the black cotton soil.

The *Dekhan* soils, besides regur, are classed as Lal-Barad, red gravelly soil; Pila-Barad, yellow soil; and Mal-Barad, hilly and stony soil; Mattiari-Barad, clayey soil. In Dowlatabad, that prevailing on the higher tracts is generally of a heavy rich aluminous character, but the soil on the plains is principally a light and fertile loam, in either case of no great depth, and resting upon a rocky substratum. These two soils are derived from the wearing away of the surface rocks, the basalt going to form the stiff dark soils, whilst the amygdaloid greenstone disintegrates into a friable earth. The two mixing, form rich loamy lands. Such is the fertility of basaltic soils in general, that some are said to bear wheat cropping for thirty years in succession without a fallow.

The *Mahabaleshwar* Hills have a cellular ferruginous claystone as a surface rock, which disintegrates into a red clay. The soil consists of this red clay intermixed with the débris of trap-rock, and in many places with a considerable portion of decayed vegetable matter, forming a very productive brown mould.

Gujerat is one extensive plain, with many different soils. The prevailing varieties are the black cotton soil, and the light gorat, a grain-

producing soil. On the eastern side of the gulf, the black soil is chiefly confined to the collectorate of Broach and the few parganas of Surat which lie north of the Tapti. The light soil prevails throughout the state of Baroda, the collectorate of Kaira, and some of the northern parganas of Ahmadabad, becoming more and more mixed with sand as we proceed northward from the Mhye. The western and southern parganas of Ahmadabad, lying to the westward of the gulf, abound in black soil, as do many of the numerous valleys of Kattyawar.

Gujerat, in the open districts, where the black soil abounds and cotton is most raised, has no boundary trees or hedges between the villages; the dividing line always consists of a strip of uncultivated land varying in width from 5 to 150 feet.

Bengal.—The general soil of Bengal is clay, with a considerable proportion of silicious sand, fertilized by various saline minerals, and by animal and vegetable products in a state of decay.

In all the Gangetic lowland, the upper layer of a well-raised tract always consists of alluvial mould, but the subsoil is sandy. The rivers which have had the longest course from the hills, deposit mud; the others leave behind them beds of sand; but the Ganges forms alternate layers of each. Hence a flood from the Gogra or the Sarju is injurious to the fields, while an inundation of the Ganges benefits the crops. Lands that are annually inundated or are thrown up by the action of rivers, are of various degrees of fertility, according as mould or sand predominates; where the sand preponderates, the mixed autumn crops, such as wheat and barley, or peas and grain, are largely sown. Where clays abound, as in the mattiara soil, and the fields are low-lying, the different pulses grow well. The tamarisk and thatch grass which grow on the alluvial lands near Faizabad or Allahabad, often yield as good a return as grain crops. An average acre of such manjha lands produces 150 bundles of sticks, of which the cutters and the proprietor share equally.

Where the lands in Bengal are good, and water abundant, three, or, as in Dinajpur, four crops are obtained.

Cachar has a rich alluvial soil, formed from the washing of the mountains which bound it on three sides, drained by the Barak or Soorma river, which deposits large quantities of silt. Teelah, in Assam, and Cachar, are low ranges of hillocks covered with dense tree forest, intermatted with reeds, grasses, canes, and creepers.

In *East Oudh* and in the *Benares* districts, the loams are called doras or domat and kapsa doras. In Gorakhpur the doras is called bangar. The best is the doras. The kapsa doras contains more adhesive clay, and gives less produce. Both these soils take much manure, irrigation, and labour, but produce two crops, and of every variety.

Mattiyar is the prevailing name of the soil of Oudh, Jounpur, Azimgarh, Gorakhpur, and Basti. It embraces all good argillaceous earth, from the brown to the black humic or relmic deposit found in the beds of tanks, but the black soil of Bundelkhand is also known by this name. It is of a darker colour than doras, is more capable of absorbing and retaining moisture; is slippery when wet, very hard when dry, and is seldom manured. It is the finest natural soil, and its yield is equal to the doras and kapsa doras together. Mattiyar is arranged into kapsa mattiyar, this being again classed as kapsa uparwar and kapsa kalar. It also includes karail (black) and bijar. Mattiyar karail is found in the beds of tanks and jhils. Mattiyar kapsa khalar is similar to mattiyar, but has orange-coloured spots, and hence called kahis and sandurya. Its yield is less. Mattiyar uparwar kapsa lies at a higher level, and yields less.

Bijar is as hard as mattiyar, but intermixed with very fine gravel. It resembles the usar soil; but usar produces reh or sajji in the dry season, which bijar does not yield. Only different kinds of rice are sown in it, and even these only when the mattiyar is unusually abundant. So well does the mattiyar retain moisture in Gorakhpur, that indigo sowings go on in March and April, the seed, being commonly rolled in, keep in the moisture. Mattiyar when irrigated is held to be the most productive of all soils; when unirrigated perhaps the worst.

Khalar soils of Oudh are low lands which retain moisture.

The *Saharunpur* district lands are called adhkach'ha, pahara, and tarai. The first is between the two last. The Tarai soil is low moist land lying along the river banks.

Rotation.—It is a popular error to think that a double crop in the year is only obtained from the best manured lands, called goind or gowhani. The fact is, wherever the water supply is large in outlying lands, two crops are taken, but, in the N.W. Provinces, the agriculturist is usually content with one good heavy rabi or spring crop from the inlying lands. The very best of these last are reserved for wheat, sugar-cane, or poppy. Wheat may be grown two or three years running in such land, but natives are quite alive to the value of rotation of crops, and a very usual change is wheat one year, to be followed by (1) Cytisus cajan as a spring crop, but mixed with it is also sown urd (Dolichos pilosus), kodo (Paspalum frumentaceum), or Sorghum vulgare, as an autumn crop. These last grow quickly, and are cut before the Cytisus cajan has made much progress; that is then weeded, and the plough run through it, and left to mature in the spring. This rotation rests the land much, as the leaf droppings largely supplement the usual manure.

Another rotation for wheat is (2) to try for a crop of makra in the rains (always a precarious crop), and when that is cut, to put in barley or peas for the spring.

In the two crop lands proper, *i.e.* the outlying and low-lying lands near a swamp or other abundant water supply, rice (dhan) is grown every rains, and so soon as that is cut, barley and peas are sown, as a mixed or separate crop at pleasure, if they can be irrigated; or if they cannot be so, but yet there still be sufficient moisture in the soil to warrant the seed being sown, grain or peas are put in, and occasionally a sprinkling of barley is thrown in with them.

In *Sind* the soil near the banks of the river is in many places of a loose sandy description, but where this does not form the principal characteristic, it consists of a fine loamy rich clay, exceedingly fertile. Large tracts of land are,

however, impregnated with nitre, and are of course valueless for agricultural purposes. The hills in the back-ground are of sandstone and limestone, in which fossils occur.

In the *Panjab*, the classification of land is in two ways, viz. according to means of irrigation, and according to the nature of the soil. Even where terms descriptive of soil are employed, every class of land may also be described as chahi, if it be watered by wells; abi, if by ponds; or chalar, to be described hereafter; sailabi, if by flood and inundation of rivers; pani mar, if damaged by drainage floods; and barani, if dependent on rain.

The plain districts of the Panjab are subdivisions of doabs, *i.e.* tracts of country between two rivers. The names of the doabs are in all instances (excepting the first or Jalandhar Doab) the result of a rude attempt to join the names of the rivers on each side into one word. Thus, passing the Jalandhar Doab, between the Sutlej and the Beas, we come to the Bari Doab (Beas and Ravi). Then between the Ravi and Chenab, the Richnab Doab; between the Jhelum and Chenab is the Jach Doab. The last doab up to the Indus, takes its name from that river, and it is called Sind Sagar, the ocean of the Sind (Indus river). The Panjabi give the generic name Daman-i-koh or Kandi to the low hills that form the bases of the higher ranges, and in which such hill states as Kotahah and others are situate.

In the *hill districts*, including both hills and intramontane valleys, the best land is called bari; the second quality of land is called ekfasli; the third quality is distinguished by the name shand. This is allowed to lie fallow for two harvests, and is then cultivated only for the rabi. The fourth kind is math; it is a good quality of land, and is retentive of moisture, and will, if manured, yield two harvests in the year; the fifth kind is regi, that is, mixed with sand, or adjacent to the bed of a nullah or hill stream, shelah, which has washed down quantities of sand.

In the Panjab, deposits of moist alluvium extending along the bed of rivers, on which grow tamarisk (pilchi), sarkanda, and the munj (large grasses of the species Saccharum), are called bela. Land periodically inundated by the rise of the river is called bhet. It often has an efflorescenee of reh or kalar (sulphate of soda), which renders it less productive.

Dushahi or dosahi is the same as rohi, except that it has some sand in it. Misi, again, has more sand, so that the soil is half and half sand and clay.

Shor is a kind of barren land, which swells after rain, and yields reh, an efflorescence which consists principally of sulphate of soda, and is fatal to the productiveness of any soil.

In the *Gujranwalla* district, the great subdivision of land is into high and low land, called utar, netar, the high lands being out of the reach of rivers, etc., the netar lands being on the banks, or otherwise subject to their influence. The netar lands are subdivided into bhet and dhaya, that is sailaba land subject to periodical inundation from the river, and land not so subject, respectively.

Rohi is the finest natural soil, a stiff loam which breaks up into large clods.

Doshahi is the dumat of Hindustan, a clayey soil, generally of good quality, manured by cattle being folded on it. When manured, it grows cotton, fine wheat, barley, jowar, makai, melons, etc.

Mera, a mixture of clay and sand, the rusli of Hindustan, has many varieties, some very good, and equal to the best doshahi.

Tibbah, nearly all sand, the bhur of the provinces, worth very little, and only grows the inferior crops of moth, mash, etc.

Cis-Sutlej States have divisions of the soil, to a certain extent corresponding to the netar and utar, viz. the low lands, called khadar; lands which have at one time been the beds of the rivers, or have been flooded; and bangar, high land requiring irrigation by wells. These great divisions are subdivided, as nyain, loamy land cultivated with manure and artificial irrigation; rusli, good loam; dakar, a low-lying stiff clay, productive of rice and gram; and bhur, an inferior land with a large proportion of sand. Land that is inundated and generally unproductive for want of drainage, is called choil. In some of the sandy districts the names vary considerably. In the Gugaira district, for instanee, where the soil is very bare, there is but little scope for all the varieties of inundated, irrigated, and other lands; if land is cultivable at all it is fortunate, and there is but little variety to distinguish. The most generally recognised names of the descriptions of culturable soil are gusrah, sikand, and retli. In the Settlement Records, the name dakar, which is locally unknown, was introduced by the Hindustani amins employed on the measurements. The equivalent term is gusrah. Retli, as its name implies, is land with an excess of sand, and sikand is a stiff clay soil, suited for rice; it is called in some parts pakki chikni.

The following names are known as names of soils and in husbandry in the various linguistic areas:—

Abi, in the Panjab, is an irrigation rate on land watered from tank or stream. In the N.W. Provinces it is applied to land watered from ponds, tanks, lakes, or water-courses, in distinction to that watered from wells, as the supply from the former is liable to fail in the hot season. Abi land is assessed at a lower rate, in some cases at less than a half of that watered from wells.

Agadi, of Coorg, a field in which seed is sown; a nursery.

Aghani, in Bengal, the great dhan or rice crop of the year, sown in Asarh (June—July), and cut in the latter half of Aghan (December).

Agor batai, in Bengal, a division of the crop between the landlord and the cultivator of it, after it has been cut, stored, and threshed.

Ahar, of Bengal, is an embankment raised to catch surface drainage for purposes of irrigation.

Ail, of Bengal, a bank or ridge of earth forming a division between fields.

Aima, of Bengal, a land grant by the Moghul government, either rent-free or subject to a small quit rent, to learned or religious persons of the Muhammadan faith. Aima baz-yaft are such grants subsequently assessed.

Aitho, of Sind, exhausted land lying fallow.

Ajjar, of Bengal, land not subject to diluvion.

Akasia, of Bombay, land dependent on the natural rains, or casually watered from tanks or rivers.

Aman, of Bengal, a rice crop sown on low wet ground about July or August, and reaped in December.

Aman are low lands yielding one crop a year.

Awal, duam, siam, charam, panjam, shasham, haftam, are Persian words signifying, as applied to land, soils of the first to the seventh rate qualities. In Gujerat, previous to the survey, this was a mode of classifying land; its distance from the village and facility for irrigation were taken into account in the classification.

Bad'h, in Bengal, high-lying rice fields, which yield scantily.

Bagh, of Northern India, a garden, an orchard. Baghayat, garden or spade culture, for such articles as betel, chillies, garlic, ginger, hemp, plantain, saffron, onions, sugar-cane, pepper, tobacco, and other vegetables; it is assessed at a higher rate than arable lands.

Baghelkhand, the prevailing classes of soil are mair, sengawan, domat, and bhata. Mair is a black soil which retains water and moisture well, and needs no irrigation.

Bailu, of Bombay, the first sort of rice land, producing in general two crops of rice and one of dry grain or vegetables, or sometimes three crops of rice in the year.

Bajal, of Bengal, a rice crop sown in May or June, and reaped in October.

Balla or Bullah, of Coimbatore, a dry land measure = 166,464 square feet, or 3·83 acres.

Balsundar or Balthaar, of Bengal, sandy soil.

Ban, of Surat and Broach, land covered by salt water at spring tides, a salt-water marsh.

Band or Bandh, in Urdu, a dam, an earthen embankment. Bandara is a masonry dam.

Bangar, in Bengal, a variety of soils, high grounds, uplands, stiff clay irretentive of moisture. In Gorakhpur, bangar is a silicious soil, and bhat a calcareous soil.

Banjar, waste land, fallow land. Adi banjar, immemorial waste land. Banjar jadīd, recently waste. Banjar kadim, culturable land long left uncultivated.

Bankar, a red soil of Bundelkhand, a mixture of sand and clay, and yields 191 lbs. of cotton per acre, two-sevenths being the proportion of cleaned cotton.

Bar; high and somewhat sandy tracts in the centres of doabs, and equidistant from river influence on both sides, are almost universally called bar.

Barad or Burrud, of the Dekhan, stony and sandy inferior land. Lal-barad is red gravelly soil; pila-barad, yellow soil; mal-barad, stony soil.

Barani, of Sind, unirrigated lands cultivated by the natural rains. In Mysore, lands sown at the beginning of the rainy season, 27th April to 2d May, when various grains are sown.

Barar, of Bengal, alluvium.

Barattu, of Bombay, uneulturable land.

Bard or Bardi, of Berar and Central Provinces, stony soil near hills, a light sandy soil.

Barike, of Coorg, low swampy land adjacent to or below the rice fields.

Basmati, of N. India, the best kind of rice, meaning odorous. There are about 200 varieties of rice.

Bat, of Bengal, fallow land.

Belo, of Sind, forest.

Bena, of Bombay, grass land on the borders of cultivated land.

Besur or Beysur, of Bombay, a good, productive soil, with the gorat and kali qualities, but is inferior to pure gorat.

Bett, Betta, Boru, Belt, or Bhat, of Bombay, high-lying land imperfectly irrigated, yielding but one crop a year, and of inferior grain.

Bhadai or Bhadui, of Bengal, rainy weather rice crop, sown about Bysakh, and cut in Bhadai (August—September), autumn crops.

Bhaiyachara, of Oudh and N.W. Provinces, a coparcenary estate held in severalty.

Bhal, of the Indus delta, a kind of rice cultivation.

Bhar is sand of a white or greyish-white colour.

Bhata soil, to the north of the Ganges, which retains its humidity for a long time, and contains a large quantity of nitre; it is not found west of the little Gandak river.

Bhatha, of Bombay, literally flood deposit, alluvial deposit, left in the bed of a river either by the water receding or the river changing its course. Being always moist, it is very productive, and all the more valuable agricultural products can be produced. It is of the Goradu class of soils.

Bhit or Bhiti, of Bengal, raised ground near a tank, for planting the piper betel on.

Bhumi, of N. India, land, earth, culturable land. Bilu-bhumi, of Bombay, is waste land, and in Dharwar is arranged in six classes, viz.:—

Gairau, free grazing ground.
Gaothan, the village site.
Khrab, uncultivated waste land.
Kuran, grazing land.
Hulabamu, grass land which is farmed.
Turmandi, a vacant space in the village where cattle stand.

Bhur, Bhud, Bhuda, unproductive soil, seven-tenths sand, rest clay, sandy soil, not retentive of moisture. Bhud-khaki and Bhud-parani are varieties of it.

Bhur, answering to maira, is a light sandy soil; the better kinds of it produce bajra, moth, mash, and jawar.

Biali, of Orissa, a rice crop sown about May or June, and reaped in October.

Bid, of Bombay, grass land.

Bijar soil of N. India is a stiff clay soil lying low, chiefly sown with rice only; sometimes grain is also grown; sometimes, as in Rai Baraili, this land fetches high rents. It is the land classed as mattiyar, and is generally inferior to domat.

Bijibur, of Berar, failure of crop sown, owing to seed not germinating.

Bindi, of Sind, sailab lands in the river.

Burki, of Bombay, a masonry structure for drawing water from rivers.

Chah, PERS., a well. Chahi, land irrigated from wells.

Chahal, HIND., is a strong soil ranking between rousli and dakura.

Chanch, of Bombay, the Jeela or Jeelun and the Pe-cottah of the Madras Presidency, a contrivance for raising water, upright stand supporting a transverse beam, with a waterpot at one end of the lever, balanced at the other by a stone or clay.

Charsa, of Panjab, a leathern bag for raising water for irrigation.

Chasa, of Bengal, a cultivator, a husbandman, a ploughman.

Chatar, of Bengal, a blight.

Chatali, of Bengal, a pulse crop, reaped in March or April.

Chatan, of Bengal, uncultivated land on the bank of a river.

Chau-masa, of Oudh, lands tilled during the four rainy months of the S.W. monsoon, June to September, set aside for the best crops.

Chaytra, the Bengal month, parts of March and April. Chet, of Sind, is the spring crop.

Ch'hut, of Sind, lands sown broadcast.

Choil. Low lands that receive the drainage of neighbouring uplands, and cannot carry it off, so that it lies, are called choil. They are unproductive for want of drainage. High tracts from which the water drains off quickly, are called magra and thalli.

Chuni, of Sind, a ploughshare.

Dania, of the Central Provinces, is the Kumari of S. India, and Jhum of Burma and Chittagong Hill Tracts, land cultivated by burning down the forest woods or brushwood, and sowing seed on the ashes.

Dakra, Dakara, or Dhakar, HIND., of the Upper Doab, is a stiff dark clay lying in natural dips and hollows, where water collects and lies during its rains; it dries into hard cakes.

Daman, of Sind, shallow soil.

Dang, of Bombay, forest or jungle land.

Dangar, of Bombay, rice crop raised as one of the kharif or monsoon crops. It is sown in kyari or black soil, at first in Darnvadi or small beds of the richest soil, and in July or August transplanted into beds which had previously undergone three or four ploughings while in a flooded state. The crop ripens in October. There are six varieties,—alaichi, karnod, pankhali, sathi or vari, and sutarsal; the first and last are the most common.

Darya, a river. Darya barāmadi, of Sind, land thrown up by a river. Darya burdi, land eroded suddenly in large masses. Darya khurdi is land gradually eroded by running water.

Dhan, URDU, a growing rice crop, also unhusked rice; in Malay padi, English paddy. In Bombay, the dhan crop is the main grain crop, consisting of bajra (Penicillaria spicata), banti, bavta, jowari (Sorghum vulgare), and kodra (Paspalum scrobic.).

The dhan crop is in contradistinction to the kathal or pulse crop. Dhan khet and dhan marri mean a rice field.

Dehar and Kalyar or Khalar, in Oudh, are low lands flooded during the rains. Dehir are lands flooded in autumn.

Dhasa, of Midnapur, high land close to a village, yielding two crops.

Dhekudi, of Bombay, a contrivance for drawing water from the beds of rivers. Dhekudiat is land so irrigated.

Dhenkli, of Bengal, a lever used for raising water for irrigation. See Chanch.

Dhulna, of Orissa, a rice crop grown on low marshy ground during the cold weather, and reaped about March or April.

Diarah or Diyara, of Bengal, Benares, Ghazipur, alluvial soil, an islet in a river bed.

Do-fasla or Do-fusli, of N. India, land producing two crops in a year.

Dol, URDU, a leathern bucket used for drawing water from a well.

Done, of Bengal, low rice land.

Doomuteea, in N. India, is of a light-brown colour, soon powders into fine dust, and requires much more outlay in manure and labour than the mattiyar soil.

Doras or Dores, of Bengal, land half sandy and half clay.

Doshahi is the dumat of Hindustan, a clayey soil, generally of good quality, manured by cattle being folded on it. When manured, it grows cotton, fine wheat, barley, jowar, makai, melons, etc.

Dumat, of N.W. Provinces, a soft loam, land of first quality, consisting of clay and sand.

Dunbi kali, cracked black soil; it absorbs moisture largely.

Eri bhumi, of Dharwar, is black soil, of which five kinds are recognised, viz. :—

Uttama eri, first class black soil, without stone or impurities.

Kurli eri, hard or gravelly black soil.

Hulaka eri, a kind of black soil in valleys.

Sona burali, black soil mixed with lime.

Gocha eri, a very black kind.

Eri, TAM., the bund of a tank, the bank built for retaining water in a reservoir.

Eru kanike, of Coorg, a plough tax levied as an educational cess at 3 or 4 annas a plough.

Eru, URDU, manure.

Fasl, in the N.W. Provinces, a crop, a harvest. Fasli, the harvest or revenue year. There are two principal harvests in the year, the rabi and the kharif. The rabi or spring harvest consists of grains and pulses, wheat, barley, peas, grain (Dolichos, *sp.*), oil-seeds, arhar (Cajanus Indicus), and other crops, which are sown in October and November, and are reaped in February, March, and April. The kharif or autumn crops are sown before or at the beginning of the rains in June and July, and reaped at their close in October, November, and December; generally, in Bengal, all crops reaped at the closing months of the year. The outlying fields, which are lightly cultivated, yielding one crop annually, are called palo, also ek-fardi, also ek-fasli. Do-fasli, also Jutiyan, are lands which bear two harvests a year.

Gadde, of Coorg, an irrigated field. In Bombay, wet or paddy lands fit for rice cultivation, or on which rice is grown.

Gairan, of Bombay, open pasture ground unsuited for cultivation.

Gharbai, of Oudh, irrigation done by hand.

Goera or Nyain is a term applied only to lands in the vicinity of wells and villages, which are abundantly irrigated and manured. Actual desert soil is called thul.

Gohani, Gorat, Bhumi, and Goind, land round a village.

Goind, manured land around a village.

Gojai, of Bengal and Oudh, a crop of wheat and barley grown together.

Gomala, of Mysore, land set apart for grazing pasture land.

Goradu, of Bombay, land of light colour, varying from almost mere sand to soil of the richest quality. Its fertility depends on proper culture and abundant manuring. It somewhat resembles the gorad land of the Jambusar district of Broach Zilla. Goradu kanetar is goradu irrigated either from wells, rivers, or tanks; Goradu kuvetar is dry goradu; Goradu padar is the poorest description. The kharif crops are mostly grown on it,—arad, bajra, banti, baota, bhinda, begen or rigna, chana or gram, chola, chillies, cotton, dhangar or dry rice in small quantities, erandi, garden products, govar, jowar, kang, math, mung, pan, sugar-cane, tobacco, tur, tal, and val.

Gorat, of Bombay, seems to be the same as goradu. It is a sandy soil of a light-brown colour, and varying from a reddish-yellow to brown, quite free from stones. It absorbs the rain rapidly, and never presents a broken surface in the dry season nor a muddy one in the wet. Fine water is found in almost every part of it at 30 or 35 feet from the surface. This soil is often watered and used as baghait or garden land. It is one of the richest descriptions of soil, and produces in rapid succession the most luxuriant crops; it abounds with fine trees, growing to the largest size, and having the most flourishing appearance. It requires to be well manured. From its great fertility the weeding is more troublesome and expensive than in other lands, the cost of cultivating it being altogether double that of the inferior black soil. The crops mostly produced are the kharif crops, and very little cotton or rawi jawar is grown on it. Dhan or grain and kathor or pulse are sown in it at the same time. The other principal articles are bajra, baota, kodra, javar (a little), kapas (a little), dhangar, dry rice in small quantities, math, tuwar, tal, erandi, val, mung, arad, chola, govar, banti, chana (gram), kang, bhinda, pau (indigo), tobacco, sugar-cane, begen or rigna, chillies, plantains.

Gorcharan, of Bombay, common pasture.

Gothan, of Bombay, ground set apart for cattle pasturage.

Gowria, of Oudh, a variety of paddy sown in June and October.

Har, of Oudh, a block or tract of land in a village, of the same quality.

Hari, of Bombay, the third crop, succeeding the kharif or monsoon crop, and the rabi or second crop. It consists generally of kang (Panicum Italicum) and chana (Cicer arietinum), and the poorer kinds of grain, brought forward during the hot season by irrigation.

Harte kunta, of Coorg, a clod-crusher.

Hemanta, of Bengal, the cold months; a rice crop ripening in December.

Jaihan, of Oudh, nursery rice.

Jaisan, of Bengal, a kind of rice.

Jal, of Bengal, water. Jali-dhan, a rice crop sown in marshy land about April, and reaped about July.

Jawaru, of Central Doab, as much land as can be ploughed by a pair (jora) of bullocks at Dehli in half a day.

Jeelun, of Bombay, the Pe-cottah of the Tamil country.

Jethi-dhan, in Oudh, a rice sown in April along the banks of rivers, or where water is still lying, and cut in Jeth. Jethi sawan (Panicum frumentaceum).

Jot, in Bengal and N.W. Provinces, the land held by a cultivator. Jotidar, the actual cultivator.

Kabar, a black soil of the N.W. Provinces of inferior quality to mar.

Kach'hi, of Oudh, garden lands.

Kacho, of Sind, alluvial land thrown up by the river Indus.

Kali, of the Mahratta, is arable land in general, but named from its black colour. It is a black soil or mould, and land of a superior quality; the underlying ground in the Dang receiving and retaining moisture during the cold season, and especially fit for wheat and other spring crops.

Kali bhui, of Bombay, regur or black cotton soil; it is the soil of the great volcanic district of the Dekhan north to Malwa, Ahmadabad, Broach Collectorate, Kaira, Kattyawar, and Surat. It is very retentive of moisture. The crops sown on it are jowar (Sorghum vulgare), kapas or cotton, gahun or wheat, dan-

gar or dry rice, chana, the Cicer arietinum, Bengal gram, castor-oil plant, rape seed (Rata tallar tall), mung (Phaseolus mungo), and tour.

Kali chunkari, black cotton soil overlying lime, which renders it very unproductive.

Kalr, of N.W. Provinces, barren land unculturable from reh efflorescence, salt, or other reason.

Kalr is a salt efflorescence which is observed in many places. Sometimes it extends over large tracts of land, rendering them almost entirely unproductive; they are called kalri zamin.

Kalrati, saline land.

Kanwai, HIND., clayey soil, in Puranya, in muddy hollows, which in the dry season is formed into detached nodules by the action of underground springs.

Kapale, of Mysore, apparatus for raising water for irrigating fields from a well or tank, worked by oxen on an inclined plane.

Kar or Karu, in the south of the Peninsula, the chief rice crop, watered in October, November, and December by the rains of the N.W. monsoon. In the northern districts it is the crop sown in April, and reaped in June or July.

Karas, of Berar, land at foot and top of hills.

Kashtgar, of Sind; Kashtkar, of Bengal, a cultivator.

Kashthar mirasi, a hereditary tenant.

Kashthar pahi, a non-resident tenant.

Kashtkar dehi, of Bengal, a resident cultivator.

Katta. In the Northern Circars, katta regur is a stiff loam, and katta sauda a black soil, from Katta, a clod of earth.

Kewaldas, MAHR., is a black soil.

Khadar or Khadir, HIND., low or alluvial lands easy of irrigation, and especially fit for rice cultivation; also rice beds or patches of ground surrounded by low banks, so as to confine the water and moisten the ground for rice cultivation. In some places, moist, alluvial ground, on which barley and wheat are grown.

Khajan, a salt marsh or meadow land; land near the sea-shore or inlets, and liable to be flooded.

Khaki is a soil or land that cannot be irrigated, and depends wholly on rain.

Khalati, MAHR., low rice grounds about a village. Low country on the upper part of the Malabar coast, descending from the Sahyadri mountains to the sea.

Khar, Kshar, or Karu, alkali, alkaline earth, soda, impure carbonate of potash or soda.

Kharif, the autumnal harvest, the crops of which were sown before or at the beginning of the rains, in June or July, and reaped at their close, in October, November, and December.

Kharpi, of Bombay, a trowel, a spade, a small hoe.

Kharril, resembling the mar of Bundelkhand, is a black earth common in the lowlands and in the plateau south of the Ganges. It produces a good spring crop without irrigation, but its character is much improved if sand is spread over the surface; otherwise it is liable to dry up into deeply-fissured masses of hardened clay.

Khed-waluyak, of Bombay, arable, fit for cultivation.

Khejar zamīn, of Sind, bad land.

Khet, HIND., a field. Kheti or Kheti wari or Khet karn, agriculture, cultivation.

Kiari, of Bombay, a bed in a garden or field.

Kollai, TAM., dry soil, high ground not capable of artificial irrigation. Kollai payir, grain growing on high ground.

Kolpe, of Bombay, a hoe drawn by bullocks.

Korkul, of Bombay, land spoiled for cultivation by running water.

Kos, of Bombay, a leather bag for drawing water from a well; these are of two kinds, the Ramia kos and Sundia kos.

Kshetra, a field cultivation, crop.

Kyadee or Kyado, the bed prepared for rice growing, with or without artificial irrigation.

Kyne, of Burma, vegetable cultivation.

Ky-ne-myay, garden land near water, not cultivated during the rainy season.

Laterite soil is not very productive, and if not continuously cultivated the laterite rock becomes hard and bare, and checks all vegetation.

Lavani, of Bombay, agriculture, cultivation. Lavanidar, cultivator.

Lay, of Burma, a paddy field.

Lewa, of Bengal, rice field prepared for broadcast sowing.

Made bhumi, of Bombay, land in the bed of a tank or river.

Maduri, SANSK., land beyond the influence of the sea, free from any saline impregnation; in opposition to namaki or saline lands, or such as, having been washed by the tide, salt can be made from.

Magani, KARN., TEL., wet cultivation by artificial irrigation.

Majal, of Mysore, a second class of rice land, yielding one crop of rice and one of vegetables or dry grains.

Makha, of Mysore, rains falling between 14th and 27th August; tobacco and wheat are sown at this time.

Makki, culturable land covered with thick jungle; the worst kind of rice land.

Malai, MAHR., alluvial deposits.

Mal-zamīn, MAHR., open country, barren or uncultivated plain; lands of inferior quality or on the sides of hills or on ridges, which, although they can be ploughed, cannot be irrigated, and produce only autumnal crops.

Manal, TAM., sand. Manalachari, soil mixed with sand. Manal taram, sandy soil.

Manavari, of the Tamils of Madras, rice crop depending solely on rain, not being irrigated.

Mani, of Coorg, unculturable fields on a high level, on which water will not remain.

Manjh, HIND., or manjha land is that lying between the land in the immediate proximity of a village and that on the boundaries of its lands. It is considered the second sort of land in point of fertility. In Oudh, marsh land bordering on lakes or rivers.

Mannu, TAM., soil. Four kinds of rice-field soils are reckoned in Coorg, viz.—

Adimannu, low-lying soil, which is considered the best, because it receives the nourishment from all above it.

Karimannu, black soil unfit for rice culture.

Talemannu, top soil (*i.e.* best soil).

Nadumannu, middle (moderately good) soil.

Other nine kinds of soil are recognised in Coorg—

Arasinamannu, yellow earth.

Eremannu, clayey soil.

Usubumannu, sandy soil.

Kalur mannu, unproductive soil.

Kallu mannu, stony soil.

Kempu mannu, red earth.

Choulu mannu, unproductive saline soil.

Jedimannu, clay, potters' earth.

Bilimannu, white earth, white clay.

Mar or Maar, HIND., in the N.W. Provinces, a stiff clay or loamy soil, with some sand and vegetable mould; a variety of it is called kabar. In Bundelkhand it means a rich, black loam. See Purwa.

Marul, MAHR., soil of a light-black colour on the banks of rivers.

Marwa, GUJ., one of the two principal sorts of soil in Gujerat; a sandy soil of a light-brown colour, rapidly absorbing rain, and having water at no great depth. It requires manure, but, treated properly, yields the best crops both as to quality and quantity; valuable for wheat and cotton.

Mattiara, HIND., a rich, clayey soil, mixed with a small proportion of sand, one-tenth of silex, and the rest alluvial mould. Matyar is the equivalent Hindustani term of rohi, misar of misi, and dumat of doshahi.

Mera, a mixture of clay and sand, the rusli of Hindustan; has many varieties; some very good, and equal to the best doshahi.

Metta, TEL., bigh and dry land not capable of irrigation, but depending on the rain; unfit for rice.

Misan, HIND., a soil mixed of clay and sand, sometimes considered as the best kind of soil.

Mowat or Mawat, MAHR., soil of a mixed kind, of a light-black colour.

Mula, of Mysore, rains falling between 12th and 25th December. Cumin, coriander, tobacco, and other seeds are sown at this time.

Mungari, of Bombay, the early crop which is sown about the beginning of the rains, and reaped early in the cold weather; in Mysore, the rains of the S.W. monsoon.

My-ai, BURM., land. My-ai-loot, of Burma, waste land.

Myal, MALEAL., lands on which rice plants are sown thickly for the purpose of transplanting; land watered by rain.

Nachchu, TEL., waste land overrun with knot-grass.

Nijuri, in the Hyderabad assigned districts, land lying fallow from exhaustion of soil.

Nunjah, Nanjai, in Madras, irrigated land in distinction to Punjah dry land.

Obar land is of two kinds, todah and khil. Todah are those little hanging fields like steps rising one above another, and are built up at their lower edge with stones, and which are liable to destruction by being washed down when the rain is violent. If the land be good, it is called 'awal kism' or first class; if stony and bad, 'duyam kism' or second class. Khil land is that which is broken up with the hoe on the steep slopes of a hill; it is too steep to be ploughed. These kinds of soil are observable through many hill districts. In the hill districts bordering on the Ambala divisions, and Kotahah in the Ambala district, the land is divided into kulahu, land watered by kul (water-courses supplied from an artificial pond formed by damming up the hill streams), and obar, which is the same as barani, land dependent on rain for its irrigation.

Oosur soil appears to be formed by a superabundance of one or other of the salts or their bases, which are brought to the surface from the beds below, and not carried off or taken back into these beds. It is known that salts of ammonia are injurious to plants, unless combined with organic acids, supplied to the soil by decayed vegetable or animal matter. This matter is necessary to combine with, and fix, the ammonia in the soil, and give it out to the plants as they require it. It is possible that nitrates may superabound in the soil from the oxidizement of the nitrogen of a superfluity of ammonia. The natives say that all land may become oosur from neglect; and, when oosur, can never be made to bear crops, after it has been left long fallow, till it has been flooded with rain-water for two or three seasons, by means of artificial embankments, and then well watered, manured, and ploughed. When well tilled in this way, all but the very worst kinds of oosur are said to bear tolerable crops. In the midst of a plain of barren oosur land, which has hardly a tree, shrub, or blade of grass, are seen small oases, or patches of low land, in which accumulated rain-water lies for several months every year, covered with stout grasses of different kinds, a sure indication of ability to bear good crops under good tillage. From very bad oosur lands, common salt or saltpetre, or both, are obtained by digging out and washing the earth, and then removing the water by evaporation. The clods in the mattiyar soil not only retain moisture, and give it out slowly as required by the crops, but they give shelter and coolness to the young and tender shoots of grain and pulse. Trees, shrubs, and plants of all kinds everywhere derive carbonic acid gas and ammonia from the atmosphere, and decompose them for their own use in the same manner.

Pada, Padusara, Padakara, Uttarapada, Padit, and Padya are Mahrati terms for fallow or uncultivated lands.

Paiwast, in N.W. Provinces and Bengal, alluvial accretions.

Pallamu, TEL., low-lying ground.

Parampa or Paramba, MALEAL., garden land, a private estate.

Parampoku, in Mysore, uncultivable land.

Parti, in N.W. Provinces, fallow land.

Pasama or Pasama kur, of the Malealam country, from Pasa, paste or glue, is the best quality of soil; it is adbesive and tenacious.

Patla, TEL., is rice land yielding an intermediate crop between the first and second crops, being under water during the wet season.

Pilota is a poor, friable, yellow or dark-red coloured soil, which does not retain moisture.

Podu, TEL., land cleared recently from thicket and prepared for cultivation.

Punchanilam, TAM., also Punchppattam, MALEAL., wet land, or land capable of irrigation and of bearing rice crops.

Punja, properly Punshey, TAM., land not admitting of complete irrigation, and unfit for rice crops, but bearing dry crops. It is the converse of nanjai.

Pur, of Oudh, a large leather bucket for drawing water from wells, by bullocks or by hand.

Purua, of Bombay, a spud.

Purvabhadia, in Mysore, a rain commencing between the 2d and 14th March. Purvashadha, a rain between 26th December and 7th January. Cumin, coriander, tobacco, and other seeds are then sown. Pushia, a rain between 17th and 30th July, when grain is sown.

Purwa is a reddish soil in Bundelkhand, a mixture of sand and clay, yielding 191 lbs. of cotton per acre, two-sevenths being the proportion of cleaned cotton. Mar or Maura, black marl of Bundelkhand, of the first quality, is the most productive soil in the country for cotton, and yields on an average 286 lbs. of cotton per acre, one-third being the produce of clean cotton to the raw produce. See Mar.

Rabi. See Kharif.

Rakar is the poorest of all the soils, and is only productive when the rains are abundant. It has a large mixture of kankar in it.

Rakh or Rakhai, URDU, a grazing and timber preserve.

Ramp or Rampadi, of Bombay, a weeding plough or hoe. The Ramph or Kalpi, Hathia, Rampdi, and Danda are of different sizes.

Ranwa, waste or woody ground in the vicinity of a town or village.

Rasi, MALEAL., is a mixed soil, consisting of sand and clay. Rasi kur, poor light soil. Rasi pasama kur, middling sort soil.

Rausli is a light loam, producing all crops except rice. It is soft and easily worked, consisting of clay and sand; it is mostly like, though superior to, the doshahi in the Panjab series.

Reg, PERS., also Ret, HIND., sand.

Regur, also Kali bhumi, HIND., Regati, CAN., and Regada, Regatti, TEL., the cotton soil and black cotton soil of Europeans, is a black soil, the wonder of all who have seen it. David Boswell Reid says (Edin. Phil. Journ., 1829) it consists of silica in a minute state of division, with portions of lime, alumina, and oxide of iron. The proportion of vegetable and animal débris appears to be very small; minute portions of the roots of vegetables are seen with the naked eye. It fuses readily before the blow-pipe into a dry, black slag. Dr. Voysey fused it into a thick glass. In composition it nearly resembles that of basalt. It is spread over the great volcanic outburst of the Dekhan, varying in depth from 2 to 30 feet. It is the larger part of the soil of Western Gujerat, occurs largely in Malwa, through Berar, over all the Western Dekhan, in the valleys of the Hyderabad territories. It is observed in the Southern Mahratta country, and in large tracts of the Ceded Districts. It is less common in Mysore, but farther south is again seen in continuous sheets from 6 to 20 feet thick below the Salem break, covering the lower plain of Coimbatore, Madura, Salem, Trichinopoly, Tanjore, Ramnad, and Tinnevelly, to the vicinity of Cape Comorin. The purest regur is of a deep bluish-black colour, or greenish or dark-greyish black, shining; when placed in water, it crumbles slowly, with emission of air bubbles, and forms a tenacious paste. When moistened, it gives out an argillaceous odour. Before the blow-pipe it melts into a greenish glass or dark slag. Mr. Reid fused some of it in a large covered crucible placed in a furnace into a solid mass, on the surface of which a crust of oxide of iron formed. Dr. M'Leod found it composed of

Silex,	48·2	Oxide of iron,	1·0
Alumina,	20·3	Water and extractive,	4·3
Carbonate of lime,	16·0		
Carbonate of magnesia,	10·2		100·0

The muriate and carbonate of soda are frequently accidental ingredients in the composition of the regur. They render it sterile when in large quantities. Captain Allardyce informed Captain Newbold that the regur of Trichinopoly does not

fuse, and contains imbedded crystals of pure mineral carbon, which are converted before the blow-pipe into a white ash. The best kinds of this soil are rarely suffered to lie fallow, except by accident, and never receive manure, which is even supposed to lessen its fertility. It has yielded annually, crop after crop, for upwards of 2000 years (usually in triennial rotation), of cotton, sorghum, and wheat, or bajri (Penicillaria), without receiving any aid from the hand of man, except an annual scratching with a small plough, and a decennial, or still more seldom, clearing of nuth grass by means of the large plough. It is irrigated solely by the dews and rains of heaven. It is remarkably retentive of moisture. Dr. Turnbull Christie thoroughly dried a portion of it by a heat nearly sufficient to char paper. He then exposed to the atmosphere of a moderately damp apartment 2515·6 grains of it, and found after a few days it had gained 147·1 grains. He now exposed it to an atmosphere saturated with moisture, and found that the weight increased daily till the end of a few weeks, when it was found to weigh 2828·4 grains. The soil had therefore gained 212·8 grains, or about 8 per cent. In wet weather the surface is converted into a deep tenacious clay. During the dry season, when the crops are off the ground, the surface of regur exhibits a black, drear aspect. Contracting under the powerful heat of the sun, it is divided, like the surface of dried starch, by countless and deep fissures, into figures usually affecting the pentagon, hexagon, and rhomboid. While the upper part for a few inches in depth is dried to an impalpable powder, raised in clouds by the wind and darkening the air, the under portions, at the depth of 8 or 10 feet, retain their character of a hard black clay, approaching a rock, usually moist and cold, when the surface dust has a temperature of 130°. The purest beds of regur contain few rolled pebbles of any kind. Professor Orlebar informed Captain Newbold that in Gujerat it is distinctly stratified, and in the Beder district it is distinctly in layers, sometimes separated by thin layers of sand or gravel. Regur is undoubtedly the best soil of the Peninsula, and its absorbent quality bears out the result of Sir Humphrey Davy's experiments, which showed that the absorbent power of soils with respect to atmospheric moisture, is greatest in the most fertile soils. He dried 1000 parts of a celebrated soil from Ormiston in East Lothian by a heat amounting to 212° Fahr., and found that by one hour's exposure to air saturated with moisture at a temperature of 62°, it gained 18 grains.

Regur, in the Bellary district, produces two kinds of crops, called mungari and kingari. It covers one million of acres, from 1 to 12 feet deep. It has, mixed with it, decomposed felspar, gritty particles of quartz, and is often covered with angular quartzose pebbles; ferruginous quartz and jasper; water is rarely found in these black lands, except at great depths. In the Cuddapah district, the decomposition of the limestones, calcareous veins, clayslate, and sandstones imparts a lighter colour and a looser texture to the regur. Underneath it generally is a kankar deposit resembling white gravel.

The garden soil of Bellary generally consists of regur and mussub soil, mixed with manure of decayed animal and vegetable matter.

In breaking up black soil, the farmers use a heavy plough drawn by five to eight pairs of the strongest cattle, generally buffaloes, and plough it 15 inches deep. The labour and expense is enormous. The ploughshare is a heavy three-cornered block of hard wood; the bar is 12 feet long, and besides the ploughman, two or more drivers manage the bullocks.

Mussub or mixed soil in the Ceded Districts is double that of the regur. Red soil in Bellary district, 2¼ millions of acres.

In the neighbourhood of granitic elevations or protruding beds of gneiss and large pegmatitic veins of quartz and felspar, the débris of these rocks decomposes into a light red soil, termed mussub by the natives, which is only capable of producing the mungari crop. This soil is sometimes extensively deposited in low situations by the force of streams or torrents of rain, when it becomes a terrein de transports or alluvial soil.

Reh, saline inflorescence, salts of soda abounding in some soils, and rendering them unproductive. In the N.W. Provinces, the deterioration of land by reh first attracted serious attention in the villages along the Western Jumna Canal and its branches, about Dehli, Panipat, Rohtak, and Karnal. In 1857, Mr. Sherer, Joint Magistrate of Aligarh, went on deputation to examine the tracts of country deteriorated, and the picture presented by him of the suffering in some of the villages was truly deplorable. Out of 580 canal villages, 59, or nearly 10 per cent., had been injured in degrees ranging severely to partially, 6 per cent. being severely injured. The maximum appeared to be reached in Panipat, where 46 villages, or 19 per cent., were injured out of 242. The salt efflorescses in several parts of the Panjab where there are no canals at all; in these places it appears in land irrigated from wells, where the water is very far from the surface. The salt itself consists of sulphate of soda, with a variable proportion of chloride of sodium (common salt). In some of the instances given by Dr. O'Shaughnessy, the percentage was high; at Jagu, in Panipat, it was 20 per cent., and this consisted of abundance of carbonate of soda with sulphate and chloride of sodium and lime. As far as experience goes, lands near canals, like the old Hosli, in the Lahore district, constructed at, but not below, the ordinary level of the watershed, are usually found to be free from reh efflorescence. Drainage is to a certain extent a palliative and a cure, but, generally speaking, the farmers assert that fully impregnated reh land is incurable and valueless. In gardens and small plots, it has been found useful to dig out the soil to the depth of two feet or so, entirely, and put in fresh. Dr. Brown, chemical examiner for the Panjab, has demonstrated that nitrate of lime would succeed.

Rohi is the finest natural soil, a stiff loam, which breaks up into large clods.

Sada or Sara, HIND., the surface of land long under water, and covered with smooth, decaying vegetation.

Sailabi, of N.W. Provinces, land watered by floods or inundations, and thoroughly soaked.

Sankhu, of Bombay, fallow land.

Seota is a rich loam or mould of varying fertility.

Seri, MAHR., arable land originally, for some cause, excluded from the village assessment; in Telingana, land cultivated by ryots for the state; also waste land or in dispute; also ploughed land.

Shola, of Neilgherry Hills, a grove, a copse.

Shor, of N.W. Provinces, barren land, saline, salt, brackish.

Singa, in Bengal, second-class rice lands, inferior to garha, and superior to bad'h.

Siwai, HIND., a mixture of clay and sand, suited for any soil except rice.

Suggi, of Coorg, harvest time, spring harvest.

Tadal, PANJ., TAM., high land, incapable of irrigation.

Tal, pl. Tallaon, HIND., low ground. Tal-chua, light land above clay, which soon becomes soft and spongy in wet weather.

Talayari, MALEAL., a chief, a headman.

Tarai, in N.W. Provinces, low, moist lands; moist, marshy ground along the banks of rivers or at the foot of the Himalayas, but especially the tract running along the foot of the first range of the Himalayas for several hundred miles, and two to fifteen miles broad.

Taram, of Southern India, different kinds of arable land.

Taw myay, of Burma, jungle land.

Thal, of the Panjab, grazing ground.

Tibbah, nearly all sand, the bhur of the provinces, worth very little, and only grows the inferior crops of moth, mash, etc.

Toung, of Burma, a hill. Toung gya, literally hill garden, kumari cultivation.

Udave, in the Nuggur and Hasan division of Mysore, a jungly tract, fit for coffee planting; jungle allotted to a village for pasture, etc.

Ugala, SANSK., land always saturated with moisture.
Uratiya, BENG., land unfit for cultivation.
Urava matti, HIND., free loose mould.
Utera, of Bengal, a supplementary crop grown amongst the principal crops; it is sown in rice after its transplanting.
Valara, GUJ., land on which the weeds have been burned previous to sowing.
Vasel or Vaselo, of Bombay, fallow; warkas, of Bombay, dry cultivation; the poorer grains, all except rice and pulse.
Vilai, TAM., high ground not supplied with water. Vilai-nilam, fertile arable ground.
Walras, GUJ., a spot of land in a jungle prepared for tillage by burning the bushes and brushwood, and leaving the ashes as manure.
Warkas, MAHR., is a common term for all the grains except rice and the varieties of pulse, and Warkas-zamin is soil suited for their cultivation. Warkas-zamin, also land suited for the dry cultivation.
Yerra-chakku, TEL., a red sort of soil, containing a small quantity of lime.
Zamin, Jamin, land, earth. Gamati jamin, in Bombay, is waste land in a Bhagdari village that has been taken up and cultivated after the settlement was made.

—*Newbold; Bradley, Report on Circar Dowlatabad; Dr. Turnbull Christie in Madras Journal, Lit. and Science*, October 1836; *Cal. Review; Dr. D. B. Reid; Heyne's Tracts; Carnegy; Ward, quoting Colebrooke*, iii. pp. 105, 115.

SOJA HISPIDA. *Mœnch., W. and A., Grah.*

S. Japonica, *Savi.*		Dolichos soja, *L., Roxb.*	
Gari kulay, . .	BENG.	Soy bean, ...	ENG.
Hwang-ta-tau, .	CHIN.	Sahuca bean, . .	,,
Mau-tau, . . .	,,	Bhut, ...	PANJ.

This plant is one of the natural order Leguminosæ. It grows in the N.W. Himalaya, in Nepal, at Taong Dong, in China, Japan, and the Moluccas. It is found in the Sutlej valley between Rampur and Sungnam at an elevation of 6000 feet, and abundant in the Peninsula of India, though probably introduced there. The seeds resemble those of the haricot, French, or kidney beau, and are used by the Chinese to form a favourite dish, called 'teu-hu' or 'tan-hu,' which looks like curd, and which, though insipid in itself, yet with proper seasoning is agreeable and wholesome. The Japanese call the seeds 'miso,' and put them into soup, of which they sometimes partake three times a day. They likewise prepare with them the sauce termed 'sooja,' which has been corrupted into 'soy.' Soy is only sparingly used as a sauce in Great Britain. It has the character of being a useful stomachic, but not more so than any of the other condiments when used with moderation. It is the well-known Chinese bean, which constitutes such a large article of trade between the northern and southern parts of China. Of all vegetable substances, it is richer in nitrogenous or flesh-forming matter than any yet discovered. There are two varieties, a white and a black, of which the composition in 100 parts is as follows:—

White Variety.		Black Variety.	
Moisture, . . .	8·04	Moisture, . . .	10·40
Nitrogenous matter,	39·18	Nitrogenous matter,	41·54
Starchy, ...	30·31	Starchy, ...	30·82
Fatty or oily matter,	18·30	Fatty or oily matter,	12·31
Mineral constituents,	4·16	Mineral constituents,	4·93

In China the ripe ovoid yellow beans are made into bean curd, which is largely consumed by the Chinese when vegetables are scarce; it is the cheese of that race; they are also pressed to extract beau oil or pea oil.—*Eng. Cyc.; Powell, Indian Museum; Smith.*

SOJNA or Dawut. HIND. The science of exorcism.

SOKA. HIND. A blight from want of water, when the sugar-cane dies.

SOKUA, among the Ho of Kolhan, a witch-finder.

SOK-PA, a colony of pure Mongols, who have located themselves on the frontier of China and Tibet. The words in Tibetan mean people of the pasture. On the same frontier, likewise, are the Gyami, Gyarung, Takpa, Manyak, Thochu, Sok-pa, and Horpa.

SOLA. BENG., HIND.

Æschynomene aspera, *L.*	Hedysarum lagenarium, *R.*
Æ. lagenaria, *Lour.*	Sola, Phul sola, . HIND.

A plant of Bengal, Sylhet, Assam, Saharunpur, Southern India, common in moist places in the rainy season. The lower part of the stem is rough and scabrous, as well as the legumes. The plants are remarkable for their light and spongy texture, and seem indeed to be composed almost entirely of pith. The thicker stemmed plants are collected in the dry months of April and May, and the light pith substance applied to making some kinds of toys, the floats of fishermen's nets, and cut into thin slices and pasted together, for making hats, which, being light and having broad brims, are well suited for protecting the head from the influence of the powerful Indian sun, especially if a handkerchief be put loosely into the crown of the hat. This substance has also been employed for lining drawers of natural history, and in its texture very much resembles the substance called rice-paper, which is the pith or stem of a malvaceous plant cut into thin slices. The larger plants are particularly light, white, and spongy.—*Roxb.; Voigt.; M. E. J. R.*

SOLANACEÆ. *Lindl.* The nightshade tribe of plants. The following are grown in Southern and Eastern Asia:—

Lycium Chinense, *Milt.*, Cochin-China, Canton.
Capsicum annuum, *L., Roxb.*, South America.
C. baccatum, *L.*, Tropical America, Guinea, India.
C. chamæcerasus, *Nees*, Moluccas.
C. fastigiatum, *Blain*, South America.
C. frutescens, *L.*, East Indies.
C. grossum, *Willde.*, Nepal.
C. Sinense, *Jacq.*, China.
Solanum Æthiopicum, *L.*, Ethiopia, China, Japan.
S. macrodon, *Wall.*, Khassya mountains.
S. crassipetalum, *Wall.*, Nepal.
S. denticulatum, *Blain.*, Sylhet.
S. giganteum, *Jacq.*, Neilgherries.
S. auriculatum, *Ait.*, Madagascar, Bourbon, Mauritius.
S. decemdentatum, *Roxb.*, Singapore, China.
S. ferox, *L.*, South Konkan, Coromandel, Bengal, Penang, Singapore.
S. incertum, *Dun.*, Bengal, Sylhet.
S. Indicum, *L.*, all British India.

N. fruticosa, *L.*, —?
N. glutinosa, *L.*, Peru, South America.
N. paniculata, *L.*, Peru.
N. plumbaginifolia, *Viv.*, Rio Grande.
N. quadrivalvis, *Pursh.*, North America.
N. rustica, *L.*, Europe, Asia, Africa, America.
N. tabacum, *L.*, all the world.
Petunia nyctaginiflora, *Juss.*, South America.
Hysociamus albus, *L.*, Europe, Tauria.
H. Canariensis, *Ker.*, Canaries.
H. muticus, *L.*, Arabia, Egypt.
H. niger, *Linn.*, Europe, Caucasus, North India.
Atropa belladonna, *Linn.*, N. Europe, Kanawar.
Mandragora officinarum.

Some of this family are deleterious, some have narcotic qualities. The tubers of such as produce them are amylaceous and nutritive. The leaves are generally narcotic, but lose that quality by boiling. The fruits which are red or yellow are acid and eatable, as the alkakengi, tomato, and capsicum; those which are black or purple are deleterious, as the mandrake, belladonna, thorn-apple, henbane, cestrum, etc. Atropa belladonna, *L.*, the suchi of the Sutlej, is found wild in Kanawar at 8500 feet. It is stated to be burned in order to kill fleas.

A Chinese plant called Tso-na-ts'au, one of the Solanaceæ, with an appended account of a similar drug called Yah-puh-lu, from the country of the Hun or Uigur, is described in the Pen-Ts'au as a plant producing profound anæsthesia, during which operations may be performed with perfect freedom from pain. The effects are said to last for three days, and to resemble those from the Atropa mandragora.—*Stewart; Voigt; Smith.*

SOLANKI or Chalukya. The history of this branch of the four Agnicula Rajputs cannot be traced to such periods of antiquity as the Pramara or Chauhan. The tradition of the bard makes the Solanki important as princes of Suru on the Ganges, before the Rahtor obtained Kanouj. Their capital was to India what Venice was to Europe, the entrepot of the products of both the eastern and western hemispheres. It fully recovered the shock given by Mahmud and the desultory wars of his successors; and Sid Rae Jye Singh, the seventh from the founder, was at the head of the richest, if not the most warlike, kingdom of India. The lieutenants of Shahab-ud-Din disturbed the close of Komarpal's reign; and his successor, Ballo Mulldeo, closed this dynasty in S. 1284 (A.D. 1228), when a new dynasty, called the Baghela (descendants of Sid Rae) under Beesildeo, succeeded. Though the stem of the Solanki was thus uprooted, many of its branches (Sachæ) had fixed themselves in other soils. The most conspicuous of these is the Baghela family, which gave its name to an entire division of Hindustan; and Baghelcund has now been ruled for many centuries by the descendants of Sid Rae. Besides Bandugurh, there are minor chieftainships still in Gujerat of the Baghela tribe. Of these, Pitapur and Theraud are the most conspicuous. One of the chieftains of the second class in Mewar is a Solanki, and traces his line immediately from Sid Rae; this is the chief of Rupnagurh, whose stronghold commands one of the passes leading to Marwar, and whose family annals would furnish a fine picture of the state of border feuds. The Solanki is divided into sixteen branches. The name of the Baghela subdivision is from Bhag Rao, the son of Sid Rae, though the bards have another tradition for its origin. Tod (Rajasthan, pp. 80 and 97) styles the Anhalwara family Solanki and Chalukya.

SOLANUM, a genus of the natural order Solanaceæ. Upwards of 400 species of plants belonging to this genus have been enumerated, including many with apparently very opposite properties. The tomato, the egg-plant, and the potato, with the various species of poisonous nightshades, are found united so closely by botanical characters, that it is impossible generally to separate them. The properties of these plants, however, do not differ in kind but in degree; and the berries and leaves, and even the tubers when uncooked, of the potato, possess in a mild degree the narcotic properties of the poisonous nightshades. Many of them have also very handsome flowers. S. Jacquini is considered by the native practitioners of India as an expectorant. S. Æthiopicum, *Willde.*, is a native of Ethiopia, China, and Japan. Two varieties are recorded,—one, the S. violaceum, is a native of China, and the fruit is frequently eaten in that country as a dessert. It has a large spheroid oval berry of a red colour. The other variety is the S. æsculentum, having a prickly stem, and small yellow berries of the size of peas. —*Eng. Cyc.; Roxb.; Mason; Voigt.*

SOLANUM DULCAMARA.

Shuh-yang-ts'iuen, CHIN.	Ruba-barik, . . HIND.
Ku-kia, ... ,,	

This is a native of Europe, Asia, and North America, in hedges and amongst bushes. It is plentiful in Great Britain, and it or a variety of it is found on the Chur mountain, and in the Panjab Himalaya, at 7000 to 7500 feet. Its leaves, etc. (or those of S. nigrum), are officinal under the above name. It has purple flowers, and scarlet, oval, bitter, and juicy berries. These are acrid narcotics, and poisonous in moderately large quantities.—*Eng. Cyc.; Royle; O'Sh.; Stewart.*

Several varieties of this are everywhere cultivated in the E. Indies, Persia, and Arabia. The fruits large, ovoid, firm, innocent, and insipid. It is one of the most useful of Indian vegetables, and is used in culinary purposes in various ways. The large Cape varieties are the best; require good soil and abundance of water. Flowers purple, and bears large, smooth, shining berries, which are the shape and size of a small hen's egg. S. ovigerum has the stem, calyx, and leaves without thorns; and in S. esculentum, these parts are more or less covered with thorns. Several subvarieties of both these vary in the shape and colour of the fruit. The berries are white, yellow, red, purple, and black. The fruit of this plant, the oval-shaped white, the globular-shaped white, and the purple or violet coloured of both forms, are used in stews and soups. The natives of the Panjab regard this vegetable as hot and dry; it is said to prevent sleep and produce unpleasant dreams, owing to vitiated bile. Leaves are said to be narcotic.—*Roxb.*; *Eng. Solanum nigrum grows in waste places. Throughout Europe it is a weed in cultivated ground, and is found in Africa and Asia. It has white flowers, producing small berries of a black colour, and is employed as a narcotic by the hakims of India. The fruits are very dangerous, and act in the same manner as those of the belladonna and mandrake. It is considered by natives cool and moist, and is used in fever, diarrhœa, and ulcers, also in disorders of the eyesight, and in hydrophobia, both externally and internally. It contains a small amount of solanine in the juice of the stem and berries, but it may be eaten as food, as in France.—*O'Sh.*; *Ainslie*; *Eng. Cyc.*; *Powell*; *Voigt.*

Gaju chettu, . . TEL.	kamanchi, . . . TEL.
Kamanchi chettu, . ,,	

The gorkhi is the red-seeded variety; both have small white flowers. They grow throughout the E. Indies and E. Archipelago.—*Roxb.*; *Voigt.*

SOLANUM SANCTUM. *Linn.* Lot's lemon.

Leimun lut, . . . ARAB.	Bari mauhari, . . HIND.
Palestine egg-plant, ENG.	Mahori, Tingi, . . ,,
Maraghune, . . . HIND.	

Grows in Palestine, west of the Indus, and in the Salt Range. Supposed by Dr. Wilson to be the vine of Deuteronomy xxxii. 32. Stem shrubby, tomentose; leaves ovate-repand, oblique at the base, clothed with hoary tomentum on both surfaces. Berries nearly globose. In some places the fruit is eaten fresh and in pickle.—*Panjab Plants*, p. 160.

SOLANUM SODOMEUM. *Linn.* Sodom egg-plant, apple of Sodom, is a native of the north of Africa, the S. of Europe, N. Holland, and Brazil. Fruit white, and about the size of a walnut. It is very subject to the attacks of an insect, which deposits its eggs within the germen, and, as the fruit enlarges, the larvæ of the insect destroy and pulverize the whole of the interior, whilst the rind is left unchanged and entire. When the fruit is gathered under these circumstances, it is crushed to pieces by the hand; or if conveyed to the lips, the mouth becomes filled with an ash-like powder, exceedingly bitter to the taste. To these berries remarkable properties have been assigned by Josephus, Tacitus, and others. Mandeville, an old English writer, says, speaking of the Dead Sea, 'And there besyden grown trees that baren fulle faire apples and faire of colour to beholden, butte whosoe breaketh them or cuttethe them in two, he shall find within them coles and cyndres.' Milton alludes to this fruit in the lines:

'Greedily they pluck'd
The fruitage fair to sight, like that which grew
Near that bituminous lake where Sodom flamed.
This more delusive, not to touch but taste
Deceived; they, fondly thinking to allay
Their appetite with gust, instead of fruit
Chewed bitter ashes.'

It seems to be quoted in Deuteronomy xxxii. 32, 33, and in Isaiah, who says of the future Israelites, their vine is from the vine of Sodom, and from the fields of Gomorrah.—*Harris' N. H. of Bible*, p. 187; *Voigt; Hogg.*

SOLANUM TORVUM. *Swz.*

Goto-begoon, . . Beng.	Wusta-kaia, . . . Tel.
Sunday-kai, . . . Tam.	

A weed used as a vegetable by the natives. It has several synonyms.—*Voigt.*

SOLANUM TRILOBATUM. *L., Roxb., W. Ic.*

S. acetosæfolium, *Lam.*

Achudah? Alarkah, Sansk.	Uchinta kura, . . Tel.
Tuda valle, . . . Tam.	Tella uste, Uchchinta, ,,
Mulla muste-uste, . Tel.	

Root-leaves and tendril shoots used medicinally. The fruit, Toovullay kai, Tam., Moondlamoostekaia, Tel., is round and small, being not much larger than a marrow fat pea. It has a somewhat bitter taste, not unlike that of its congener the choonday kai, and is commonly eaten fried, having been previously sprinkled with a little salt and water.—*Roxburgh; Ainslie; Useful Plants; Voigt.*

SOLANUM TUBEROSUM. *Linn.* Potato.

Alu, . . . Dukh., Hind.	Rata-inula, . . Singh.
Ubi, Kantang, . Malay.	Alu gaddalu, . . Tel.

The potato is found native in the greatest abundance on the western coast of South America. Like most plants which are much cultivated, an abundance of varieties have been produced from the original plant; and in the leaves, colour of the flowers, shape, size, and colour of the tubers, it has a great tendency to depart from its normal character. The potato is a useful esculent, contains a large amount of starch, and when dried it is used as a substitute for salep. It is cultivated throughout British India as a cold-weather crop, in Burma, and in the Himalaya up to 9000 feet, where it is cooked and eaten with buckwheat. Two other species, namely, S. Valenzuela and S. montanum, produce edible tubers, but they are little used. The most formidable potato disease of the 19th century, from the Peronospora infestans, seems to have originated from guano. From potatoes is made British gum, an altered condition of potato starch, used for postage-stamps; starch, or English arrow-root, etc.—*Roxburgh* ii. p. 216; *English Cyclop.; Mason; Powell; Panjab Plants; Voigt.*

SOLANUM VERBASCIFOLIUM. *Linn.*

S. pubescens, *Roxb.*

Ola, . . . Beas, Ravi.	Mullum chande, . . Tam.
Urus, ... Beng.	Rusa gadda manu, . Tel.
Tiari, . . . Chenab.	Karawune, . Tr.-Indus.
Kala mewa, . . Hind.	

This is a native of Asia, America, and the tropical parts of Australia. Grows in the Siwalik tract up to 4000 feet, and west of the Indus. It is frequently cultivated. Every part is covered with a powdery white tomentum. The flowers are white, and the berries are of the size of small cherries, and used in curries.—*Roxb.; Useful Plants; Panjab Plants; Hogg; Voigt.*

SOLANUM VIRIDE. *Br.*

S. anthropophagorum, *Seeman.*

One of the plants of the Fiji Islands and New Zealand, the tubers of which were used when eating human beings.

SOLANUM XANTHOCARPUM. *Willde.*

Var. S. Jacquini, *Willde.*

Kandari, ... Beas.	Kharian maragheone,
Mamoli, Pilak, . . ,,	Hind.
Unt-katara, . . . Hind.	Chhoti mauhari, . Ravi.
Chat-khatai, . . ,,	Mahori, ... ,,
Warumba, . . . ,,	Harnauli, . . Sutlej.

Grows common throughout the Panjab plains, and occasionally to 5000 feet in the outer hills. The seeds are eaten, they are applied for bruises and earache, and the fruit, Katela, Bat-kateya, Hind., is bruised and applied for pain. Considered an expectorant useful in coughs, asthma, and consumption.—*Roxb.; Powell; Panjab Plants.*

SOLAR RACE. In the northern part of British India, there were, in times long prior to the Christian era, two dynasties who strove for mastery, viz. the Solar dynasty, descended from Rama, which entered India B.C. 2300; and the Lunar dynasty, descended from Yadu, which entered India about B.C. 1300. The Solar dynasties at present remaining in India are three, viz.:—

Grahilote or Gehlote or Geholote, with 24 saca or branches, of which the Sisodia is the most distinguished. The rana of Udaipur or Mewar is a Grahilote, descended from Loh, Rama's eldest son.

Rahtor, said to be descended from Rama by Kusa, his second son. It has 24 branches, and the maharaja of Jodhpur or Marwar belongs to this tribe.

Kachwaha also sprang from Kusa. The raja of Jeypore is of this tribe. It has 12 kotri or bouses.

The Lunar dynasty is sprung from the moon, through Yadu or Jadu, and is called Yadu or Jadu. It has eight branches, of which the Jhareja and Bhatti in Cutch and Jeysulmir are the most powerful.

The Agnicula, a third race, have four tribes and eighty-seven branches, viz.:—

Pramara with 35 branches.	Chalukya with 16 branches.
Parihara ,, 12 ,,	Chauhan ,, 24 ,,

The following list names the thirty-six royal races of Rajasthan:—

Ikshwaku, Cacoostha, or Soorya.
Unwye, Indu, Som, or Chandra.
Grahilote sacæ, . 24
Yadu, ... 4
5. Tuar, ... 17
Rahtore, . . . 13
Cushwaha or Cutchwaha.
Pramara, . . . 35
Chahuman or Chauhan, ... 26
10. Chalook or Solanki, 16
Purihara, . . . 12
Chawura, single.
Tak, Tauk, or Takshak.
Jet or Gete.
15. Hun or Hoon.
Catti.
Balla.
Jhala.
Jaitwa or Camari.
20. Gohil.
Sarweya.
Silar.
Dabi.
Gor.
25. Doda or Dor.
Gerhwal.
Birgoojur, . . . 3
Sengar, single.
Sikerwal, ,,
30. Byce, ,,
Dahia.
Johya.
Mohil.
Nicoompa.
Rajpali.
36. Dahima, single.
Extra,
Hool,
Dahirya.

In the thirty-six royal tribes, there are some, the origin of which is not known, such as—

Chaura or Chawara.	Sarwaya or Sarispa.	Sengar.
Tak or Takshak.	Jetwa.	Sikharwal.
Jit or Jat of Panjab.	Kamari.	Bais.
Jumna & Ganges.	Dabi.	Dahia.
Hun.	Gor.	Johya.
Katti.	Doda.	Mohil.
Batta.	Garhwal.	Nikumba.
Jhalamakwahana	Chandela.	Rajpati.
Gohil.	Bundela.	Dahirya.
	Bir-gujar.	Dahima.

Rama had two sons, Loh and Cush; from the former the family of the rana of Mewar claim descent. He is stated to have built Lahore, the ancient Loh-kote; and the branch from which the princes of Mewar are descended, resided there until Keneksen emigrated to Dwarica. The difficulty of tracing these races through a long period of years is greatly increased by the custom of changing the appellation of the tribe, from conquest, locality, or personal celebrity. Sen, an army, seems to have been the martial termination for many generations; this was followed by Dit, or Aditya, a term for the sun. The first change in the name of the tribe was on their expulsion from Saurashtra, when, for the generic term of Suryavansi, was substituted the particular appellation of Gehlote. This title was maintained till another event dispersed the family; and when they settled in Ahar, Aharya became the appellative of the branch. This continued till loss of territory and new acquisitions once more transferred the dynasty to Sisodia, a temporary capital in the western mountains. The title of Ranawut, borne by all descendants of the blood-royal since the eventful change which removed the seat of government from Chitore to Udaipur, might in time have superseded that of Sisodia, if continued warfare had not checked the increase of population; but the Gehlote branch of the Suryavansa still retain the name of Sisodia.

Most of the cula or races are divided into numerous branches or saca, and these saca are subdivided into immediate clans or gotra. A few of the cula never ramied; these are termed eka or single, and nearly one-third are eka. Ikshwaku was the first king in the Solar line, and, according to Hindu mythology, reigned at the commencement of the Tretu-yug. He was the son of the 7th Menu or patriarch, the offspring of the sun. His posterity was called, in consequence, the dynasty of the Solar princes, in the same manner as Budha was reputed the head of the Lunar line. Modern commentators bring the time of his accession down to the year B.C. 1320. A passage in the Agni Purana indicates that the line of Surya, of which Ikshwaku was the head, was the first colony which entered India from Central Asia. But the patriarch Budha was his contemporary, he being stated to have come from a distant region, and to have married Ella, the sister (or daughter) of Ikshwaku. Amongst the Aryan Hindus, the Kshatriya was a warrior branch taking social rank after the Hindu Brahmans. Menu, writing of their duties, says, to defend the people, to give alms, to sacrifice, to read the Vedas, to shun the allurements of sexual gratification, are in a few words the duties of a Kshatriya. How this soldier branch broke up is extremely obscure, but it is generally supposed that none of the races now in India can trace their lineage to that tribe of Aryans, though most of the Rajput families doubtless belong to them. Their quarrels amongst themselves seem to have led to their own destruction. These martial Kshatriya do not appear to have adopted Brahmanism readily, and the Brahmans to overcome them, consecrated by fire, on Mount Abu, a warrior body who still remain, and are known as the four Agnicula Rajput tribes.

Vyasa gives but fifty-seven princes of the Solar line, from Vaivaswata Menu to Rama; and no list which had come under Colonel Tod's observation exhibits for the same period more than fifty-eight of the Lunar race.

Ikshwaku was the first who moved to the eastward and founded Ayodhya.

Budha (Mercury) founded the Lunar line, but we are not told who established their first capital, Poorag, though we are authorized to infer that it was founded by Pooru, the sixth in descent from Budha.

A succession of fifty-seven princes occupied Ayodhya from Ikshwaku to Rama.

From Yayat's sons the Lunar races descend in unequal lengths.

The lines from Yadu, concluding with Krishna and his cousin Kansa, exhibit fifty-seven and fifty-nine descents from Yayat, while Yudishtra, Sul, Jarasandha, and Vahoorita, all contemporaries of Krishna and Kansa, are fifty-one, forty-six, and forty-seven generations respectively, from the common ancestor Yayat. The author, after the invocation to the mother protectress, Om! sacombbari mata! says, 'I write the name of the thirty-six royal tribes.' The bard Chund says, 'Of the thirty-six races, the four Agnicula are the greatest: the rest are born of woman, but these from fire.'

Rama of the Ramayana is described as the son of Ikshwaku and grandson of Menu. His original abode is described as the mountains of the west. He was the first of the dynasties of Oudh. And the Solar dynasty held sway in Ayodhya, the modern Oudh, till the result of the great war, the Mahabharata, when they were forced to give way by their cousins of the Lunar line.

The Rajput race was at an early period divided into the two great Solar and Lunar dynasties, the former having its seat of empire in Oudh, and the latter in Dehli. Struggles for the pre-eminence were carried on with sanguinary obstinacy between these tribes. To fight, was the duty of the Kshatriya, as Krishna told the hero Arjuna, smitten with sorrow at the idea of slaughtering his own kinsmen in battle. 'O Krishna,' said the hero, 'I seek not victory nor a kingdom. I will not fight! What shall we do with a kingdom, or with life itself, when we have slain all these?' Krishna had no such qualms. 'You belong,' he replied, 'to the military class, and your duty is to fight.' And Arjuna fought.

The dynasties which succeeded the great beacons of the Solar and Lunar races, are three in number, —1st. the Suryavansa, descendants of Rama; 2d. the Induvansa, descendants of Pandu through Yudishtra; 3d. the Induvansa, descendants of Jarasandha, monarch of Rajgraha. The Bhagavat and Agni Puranas are the authorities for the lines from Rama and Jarasandha; while that of Pandu is from the Raj-Tariugini and Rajaoli. The existing Rajput tribes of the Solar race claim descent from Lava and Cush, the two elder sons of Rama; and Colonel Tod does not believe that any existing tribes trace their ancestry to his other children, or to his brothers. From the eldest son Lava, the rana rulers of Mewar claim descent; so do the Bir-gujar tribe, formerly powerful within the confines of the present Amber, whose representative now dwells at Anupshahr on the Ganges. From Cush descended the Cushwaha princes of Nirwar and Amber, and their numerous clans. Amber, though the

first in power, is but a scion of Nirwar, transplanted about the 9th century, whose chief, the representative of the celebrated prince Nala, enjoys but a small district of all his ancient possessions. The house of Marwar also claims descent from this stem, which appears to originate in an error of the genealogists confounding the race of Cush with the Causika of Kanouj and Causambi. Nor do the Solar genealogists admit this assumed pedigree. The Amber prince in his genealogies traces the descent of the Mewar family from Rama to Sumitra through Lava, the eldest brother, and not through Cush, as in some copies of the Puranas, and in that whence Sir William Jones had his lists. Whatever dignity attaches to the pedigree claimed by the Amber prince, every prince and every Hindu of learning admits the claims of the princes of Mewar as heir to the chair of Rama; and a degree of reverence has consequently attached, not only to his person, but to the seat of his power. When Madhaji Sindia was called by the rana to reduce a traitorous noble in Chitore, such was the reverence which actuated that (in other respects) little scrupulous chieftain, that he could not be prevailed on to point his cannon on the walls within which consent established the throne of Rama. The rana himself, then a youth, had to begin the attack, and fired a cannon against his own ancient abode. In the very early periods, the princes of the Solar line, like the Egyptians and Romans, combined the offices of the priesthood with kingly power, and this whether Brahmanical or Buddhist. Many of the royal line, before and subsequent to Rama, passed great part of their lives as ascetics; and in ancient sculpture and drawings, the head is as often adorned with the braided lock of the ascetic, as with the diadem of royalty. Ferishta, also, translating from ancient authorities, says to the same effect, that 'in the reign of Mahraj, king of Kanouj, a Brahman came from Persia, who introduced magic, idolatry, and the worship of the stars;' so that there is no want of authority for the introduction of new tenets of faith. Even now the rana of Mewar mingles spiritual duties with those of royalty, and when he attends the temple of the tutelary deity of his race, he performs himself all the offices of the high-priest for the day. In this point a strong resemblance exists to many of the races of antiquity. There seems to be no doubt that amongst the Aryans, whilst they were approaching India, and whilst the worship of nature under the Vedic system of religion prevailed, the householder was his own priest, and performed all the religious duties in sacrifices and worship. The head of the house was, in fact, his own household priest, and to the present day every head of a Hindu house performs all the religious sacrifices of his household. — *Wilson's Glossary; Tod's Rajasthan*, i. p. 215.

SOLE. The Plagusia of Tenasserim is a small fish of the sole family, that grows to nine inches or a foot long. It has no pectoral fins, and the dorsal, caudal, and ventral fins are united. The natives think that two of them always swim together, with their flat, uncoloured sides united. —*Mason.*

SOLEGNATHUS BLOCKII. *Bleeker.* The sea-needle of Block, a long, spindle-shaped fish, with round, needle-shaped body.

SOLENOCARPUS INDICA. W. A. This tree, when in blossom, is a perfect mass of white flowers. It grows on the Animallays (2600 feet elevation), also on the Tinnevelly ghats. When in leaf only, it much resembles the Spondias mangifera.—*Beddome, Fl. Sylv.*

SOLENOSTEMMA ARGEL, Arghel of Egypt, a native of Syria. The leaves are purgative, and are employed in Egypt to adulterate senna.—*Hogg*, p. 5; *Simmonds.*

SOLFATARA, the Hwang-kung of the Chinese. There are three of these in the north end of Formosa. There are also solfataras in the Japanese island of Kiu-siu, and at the south end of Satsuma is the burning sulphur island of Ivoo-sima. See Sulphur.

SOLOMON, properly Sulaiman or Suliman, the son of David, was king over the Judah and Benjamin tribes of the Hebrews or Israelites. He is famed in history for building the temple of Jerusalem, for his great wisdom and great wealth. He began to build the temple B.C. 1014. He founded Hamath, in the country of Galilee, and fortified Tadmor or Palmyra in the wilderness, and many other cities of store (1 Kings ix. 18; 2 Chronicles viii. 4), or emporia, for the commerce of India, and Tyre, Sidon, and all the surrounding nations. His father had introduced the custom of a vast polygamy, which Solomon continued. His commercial transactions extended down the Red Sea and the Euphrates valley, to India and the Aurea Chersonesus.

A port of departure and arrival was Ezion-geber (1 Kings ix. 26) on the banks of the Euphrates, the Hasn Jabir of the Arabs, also called Kalat Jabir or Castle Jabir, of which the vast ruins still exist not far from the ancient Roman town of Beles. Catafago says the translation ought to be, 'And king Solomon made a navy of ships in Ezion-geber, besides that of Eloth.' The modern Arab name of Tadmor or Palmyra is Sulaymaniyah. Solomon is fabled to have been king not only of men, but of the angels, genii, elements, beasts, and birds, and they have many traditions as to the queen of Sheba. Solomon's pools are three large reservoirs built on the slope of a hill about 7 miles S. from Jerusalem. Solomon's temple in Jerusalem was dedicated to Baal, and all the idolaters of that day seem to have held to the grosser tenets of modern Hinduism—

> 'Peor his other name, when he enticed
> Israel in Sittim, on their march from Nile.'

Solomon's temple, of Kashmir, stands on the summit of a hill to the east of Srinuggur city. Its height is 6263 feet above the level of the sea.—*Arrian, Periplus*, p. 152; *Pennant's Hindustan*, i. p. 4; *Tod's Rajasthan*, i. p. 76; *Paradise Lost*, Book I.

SOLOMON ISLANDS, discovered by Dampier, 1699, form an extensive chain which stretches to the N.W. from the E. point of San Christoval Island, in lat. 10½° S. and long. 162° 27′ E., to the N. point of Banka Island, in lat. 5° S. and long. 154° 38′ E. They are part of the extensive chain which, commencing to the N. of New Hebrides, extends in a N.W. direction towards New Ireland, and thence along the N. side of New Guinea. San Christoval or Arsacides is the most south-easterly. The people are cannibals. They murdered Lieutenant Bower and his crew, and massacred the native assistants of Mr. Brown,

the missionary, but Mr. Walter Powell lived amongst them.

SOLOR is an island lying to the east of Flores, and to the north of Timor, under which presidency of Netherland India it is placed. The inhabitants of the coast are Muhammadans in name, but they are hard arrack drinkers. They are hardy mariners and fishers. The village which most applies itself to the whale fishery is Lamakera, on the north-east part of the island of Solor, and lying within the Strait. They are remarkable for their skill in managing their prahu and canoes, and are the most expert fishermen in these seas, frequently capturing the black-fish, which no other fishermen in these seas will venture to attack. The blubber or fat obtained from them is used as food, and also as an article of barter with the inland inhabitants; and the oil and spermaceti is sometimes disposed off to the Bughi and Macassar traders, who prefer it to cocoanut oil for burning in their prahus.—*Journ. Ind. Arch.*, December 1850.

SOLPUGA ARANEOIDES and S. intrepida are two species of Phalange of the Kirghiz steppe, of a yellowish or reddish-brown colour, with long hair. The bite is said to cause death. When walking, it seems as large as two fists. They live in the sand.

SOLTYKOFF, Prince, a Russian noble who travelled in India in 1841, and wrote Voyage dans l'Indie.

SOMA was an ancient Aryan rite, a sacrifice to Indra (Zeus) of an intoxicating potion, consisting of fermented juice of plants mixed with milk. Soma juice and its effects are repeatedly mentioned in the Vedas (i. pp. 21, 139, ii. pp. 169, 233, 260, iii. p. 470). The Soma sacrifice now-a-days is not made with any spirituous fluid, but in Vedic times it seems to have been a distilled alcoholic fluid, and was offered to their deities,—

> 'The gods themselves with pleasure feel
> King Soma's influence o'er them steal;
> And Indra once, as bards have told,
> Thus sang in merry mood of old:—
> This Soma is a god; he cures
> The sharpest ills that man endures:
> He heals the sick, the sad he cheers,
> He nerves the weak, dispels their fears,
> The faint with martial ardour fires,
> With lofty thoughts the bard inspires,
> The soul from earth to heaven he lifts,
> So great and wondrous are his gifts:
> Men feel the god within their veins,
> And cry in loud exulting strains,—
> "We've quaffed the Soma bright,
> And are immortal grown;
> We've entered into light,
> And all the gods have known.
> What mortal now can harm,
> Or foeman vex us more?
> Through thee beyond alarm,
> Immortal god, we soar."'

The Rig Veda, ix. says, 'The purifying Soma, like the sea rolling its waves, has poured forth songs, and hymns, and thoughts.' Thus personified, the Soma god bears a certain analogy to the Greek Dionysus or Bacchus. The two verses above are a nearly literal translation of Rig Veda, viii. 48, 3. The Soma plant of the Vedas is the Sarcostemma viminale, a leafless asclepiad, with white flowers in terminal umbels, which appear during the rains in the Dekhan. It was gathered by moonlight, hence its name, from Soma, Sansk., the moon, and carried to their homes on carts drawn by rams, and a fermented liquor was prepared by mixing its juice, strained through a sieve of goat's hair, with barley and clarified butter or ghi. This beer or wine was used at all their religious festivals, and was used by the rishis at their meals.

Indra, according to Bunsen (iii. p. 587, 8, iv. p. 459), is the prototype of Zeus, and was a personification of ether. The Soma juice is the oblation or libation of the Vedic worship, and the Homa of the Parsee; and Prof. H. H. Wilson (Introduction to the Rig Veda, p. 36) says, 'Almost the whole of the Soma Veda is devoted to its eulogy, and this is no doubt little more than a repetition of the Soma Mandala of the Rig Veda.' The veneration of the Soma plant does not appear to have proceeded from any worship of the moon or planets, which are not, like the sun, objects of special adoration in the Veda. The Soma is mentioned in Menu, iii. pp. 85, 158, 180, 197, 257, v. p. 96, vii. p. 7, ix. p. 129, x. p. 88, xi. pp. 7, 12. All the ancestors of the Brahmans are styled Soma-pa, 'moon-plant drinkers;' and the Soma sacrificial priests, the Soma Yaji and Soma Devi.

Haug says the Homa was a nasty drink. Windischmann suggests that the Soma plant may be identical with the gogard tree, which enlightened the eyes, and Ampelus, the vine of Bacchus, is also mentioned.—*Bunsen's Egypt; Rig Veda; Williams' Nala*, p. 247.

SOMA, in Hindu mythology, is the son of the Rishi Atri by his wife Anasuya, but also said to be son of Dharma and Prabhakara. He married 27 daughters of Daksha (which are the 27 lunar asterisms). He carried off Tara, wife of Brihaspati (Jupiter), who bore a son, and named him Budha, the parent of the Lunar race. Soma, also Chandra, the moon, is chiefly celebrated in the Vedas in connection with the Soma plant, but in the Mahabharata is the mythical progenitor of the great Lunar race of Bharata. These heavenly bodies entered into the elemental worship of the Vedic times.—*Dowson.*

SOMA DEVA BHATTA, of Kashmir, collected the popular stories current in his time, and published them towards the beginning of the 12th century, under the title of Katha-sarit-sagara, the Ocean of the Rivers of Stories.

SOMAJH. From the religious scepticism which is the most remarkable result of western education in British India, has sprung several sects among the more thoughtful and earnest of the Hindus. The Brahmo society resembles in its organization of preachers, members, and hearers, the various sects of Christians. They eschew idolatry in every form, build chapels on the model of a Christian church, and, except that the Bible is seldom referred to, and Christ is only treated as a great and good man, would seem to be an Indian form of theism. They have fixed, paid ministers, lay itinerating agents, who receive no salary for their labour of love, and have adopted the missionary agency of the European churches, and send out trained missionaries for the propagation of theism. The census of 1881 showed their numbers in British India to be 1147, energetic, well-informed, and respected of their countrymen, amongst them men of social position and wealth.

SOMAL or Beer-us-Somal, the country of the Somali, to the south of Cape Guardafui, between the equator and lat. 11° N.; on the west is separated from the Galla nations by the Jub, a large and fertilizing stream which rises in the mountains of Southern Abyssinia, and debouches in the Indian Ocean. Capt. Speke states that the Somali are the descendants of a band of Muhammadans who were driven from Mecca in A.D. 1413, and crossed over to their present site, from which the Galla and Abyssinians were subsequently dispossessed. The Somali in their own land are pastoral nomades, but have settled villages on the coast line, with a patriarchal government. When the mother perishes in child-birth, the parents claim a certain sum from the man that killed their daughter. Twins, here called Wapaeha, and by the Arabs of Zanzibar Shukul, are usually sold or exposed in the jungle, as amongst the Ibos of West Africa. A mother, when carrying her offspring, bears in her hand a kirangozi, a guide or guardian, in the form of two sticks a few inches in length, bound with bands of parti-coloured beads. This article, made by the Mganga or medicine-man, is placed at night under the child's head, and is carried about till it has passed the first stage of life. They trade at Berbera and other places on their coast, or sail to Aden during the N.E. monsoon, bringing gum, myrrh, ostrich feathers, ivory, etc. They are a good-tempered, though indolent race, but easily excited to anger. In Aden they are inveterate thieves and gamblers. They are handsome, aetive, and long-limbed, with woolly hair, capable of undergoing great privation and fatigue. In 1827, a British vessel trading at Berbera was plundered by the Habr Owul tribe of Somali. Berbera is a port to the east of Zaila and Tajowra, and nearly opposite to Aden. In consequence of unhealthy winds, it is deserted for six months every year. During the rest of the year it is visited by caravans of different tribes from the interior of Africa. A vessel of war was sent to punish the tribe for the outrage which they had committed. On 6th February 1827, a treaty of peace and commerce was signed by the elders of the tribe. An expedition was sent in 1854 to explore the country between Berbera and Zanzibar, but on the 18th April 1855 the party were suddenly attacked by Somali of the El Moosa tribe; two British officers were wounded, one was killed, and the entire property of the expedition was carried off. The murderers were not delivered up, but a treaty was entered into. In 1855, the elders of the Habr Gerhagi and the Habr Taljala tribes of Somali entered into an engagement with the Political Resident at Aden to prohibit the slave trade. — *Aitcheson's Treaties,* vii. p. 319.

SOMENDILLA. Tam., Maleal. The Berrya ammonilla tree, yielding the most useful wood in Ceylon for naval purposes. It is commonly called Halmilile and Hameniel by the Dutch and Portuguese. It grows straight, from 20 to 40 feet high, and from 12 to 30 inches in diameter. Superior to any wood for capstan bars, cross and trusseltrees, cask-staves, battens for yards, fishes for masts, boat-building, etc. At Madras it is highly valued for coach-work, from the toughness and fineness of its grain. It is the Trincomalee wood of commerce.—*Edye, Ceylon.*

SOMESWARA or Somnath, lord of the moon, a title of Siva; also applied to Surya, the sun-god. —*Tod's Tr.* p. 508.

SOMNATH or Somanath is an ancient town situated in lat. 27° 7′ N., and long. 71° 34′ E., at the eastern extremity of a bay on the south coast of the peninsula of Kattyawar, in the Bombay Presidency. The western headland of the same bay is occupied by the port of Virawal, which gives to the locality its more common name of Virawal Pattan, also known as Deo Pattan, Pattan Somanath, Somnath Pattan, Prabhas Pattan. On the west, the plain is covered with Muhammadan tombs; on the east are numerous Hindu shrines and monuments.

The country near Somnath is full of memorials of Krishna, and at a spot to the east of the city, near the union of three beautiful streams, the body of the hero is said to have been burned. Before its capture by Mahmud of Ghazni, A.D. 1024-1026, little is known of the history of Somnath.

The country of Soreth, a province of the peninsula of Gujerat, now more generally known under the name of Kattyawar, is celebrated in the Puranas for containing five inestimable blessings. First, the river Gumti; second, beautiful women; third, good horses; fourth, Somnath; and fifth, Dwarka. Among the many places in Soreth that are held sacred by the Hindus, Somnath Pattan has always been one of the most remarkable. It stands one or two miles from the sea, at the junction of three rivers, the Hurna, Kupula, and Sersutty, at a distance of three miles to the east of the port of Belawul. Somanatha or Someswara is a name of the type of Siva, and the worship of Siva under this type prevailed throughout India at least as early as the 5th or 6th century. The Somanath idol, in fact, was one of the twelve great lingams then set up in various parts of India, several of which were destroyed by the early Muhammadan conquerors; and it has been mentioned that Somnath temple was the counterpart of Baalbek; and the idol is related to have been brought to India from the Kaba, on the advent of Mahomed. Brahmanical records, however, refer it to the time of Krishna. Somanath is the title of Swayam-nath, or self-existing, and the religion was, of old, common to Arabia and India; and there is reason for believing, what the early Muhammadan authorities assert, viz. that the Lat, worshipped by the idolaters of Meeca, was a similar deity to the Swayam-nath of the Hindus. The idol itself, Somnath, is stated to be one of the twelve symbols of Siva, which are said by Hindus to have descended from heaven to the earth. The temple of the idol was supported by 56 pillars in rows, the idol was of polished stone, about five cubits high, of proportionate thickness, and two cubits were below ground. General Cunningham says the Pattan Somnath temple of Siva enshrined a figure of the god, bearing a crescent on his head, as Somnath, or the lord of the moon. This appellation was therefore the proper name of the temple, and not of the city, which he concludes must have been Elapura or Erawal, the modern Virawal.

The image was, according to Muhammadan authors, destroyed by Mahmud; but in late years, Ahalia Bhai, the widow of a prince of the Mahratta family of Holkar, erected a new temple on the exact site of that which was demolished. A symbol of Siva Mahadeo has been placed in this temple,

which is deemed peculiarly propitious to those who desire offspring. Not far from this, the Hindu pilgrim is shown a solitary pipal tree, on the bank of the Saraswati river, which he is assured stands on the exact spot where the Sri Krishen received the mortal wound from an arrow, that terminated his incarnation.

About a century after their expulsion from Balabhi, about A.D. 758, Bappa or Vappaka founded a new kingdom at Chitore, and his son Guhila or Guhaditya gave to his tribe the new name of Guhilawat or Gahilot, by which they are still known. About the same time a chief of the Chaura tribe, named Ban raja, or the jungle lord, founded a city on the bank of the Saraswati, about 70 miles to the south-west of Mount Abu, called Anhalwara Pattan, which soon became the most famous place in Western India. Somewhat earlier, or about A.D. 720, Krishna, the Pahlava prince of the Peninsula, built the fort of Elapura, the beauty of which, according to the inscription, astonished the immortals. In it he established an image of Siva adorned with the crescent. Following this clue, General Cunningham inclines to identify Elapura with the famous city of Somnath, which, as the capital of the Peninsula, was usually called Pattan Somnath. General Cunningham takes it to be the same as Elapura or Elawar, which, by a transposition that is very common in India, would become Erawal. Thus Nar-sinh has become Ran-si, and Ranod is used indifferently with Narod, and the ancient Varul is the modern Elur or Ellora.

There is nothing in the Vedas, Puranas, and other Brahmanical books to illustrate the origin and history of the Somnath temple. The earliest notice is contained in the brief account of the successful campaign of Mahmud of Ghazni. According to Ferishta, the fortified city of Somnath was situated on a narrow peninsula, washed on three sides by the sea. It was the residence of the raja, and Naharwala (a transposition of Anhalwara) was then only a frontier city of Gujerat. This agrees with the native histories, which place the close of the Saura or Chaura dynasty of Anhalwara in S. 998, or A.D. 941, when the sovereignty passed into the hands of the Chalukya prince, Mula raja, who became the paramount ruler of Somnath and Anhalwara. When the Somnath temple was plundered by Mahmud of Ghazni in A.D. 1024, Byram Deo (Brahma Deva) of Gujerat was deposed. Mahmud left Ghazni, on his expedition against Somnath, in September A.D. 1024; his numerous army was accompanied by crowds of volunteers, the flower of the south of Turkestan. Ajmir and Anhalwara fell before him. Advancing against Somnath, for two days his most devoted followers were beaten headlong back by the valour of the Rajputs fighting for hearth and altar. On the third day, Mahmud led a furious charge in person, 5000 Hindus lay dead, and the day was won. When he entered the shrine of Someswara, he beheld a superb edifice of hewn stone, its lofty roof supported by pillars curiously carved and set with precious stones. In the adytum, to which no external light penetrated, and which was illuminated only by a lamp suspended from the centre by a golden chain, appeared the symbol of Someswara, a stone cylinder which rose 9 feet in height above the floor of the temple, and penetrated 6 feet below it. Two fragments of this object of idolatrous worship were, at the king's order, taken off, that one might be thrown at the threshold of the public mosque, and the other at the court gate of his own palace of Ghazni. Other fragments were reserved to grace the holy cities of Mecca and Medina. The tradition says that while Mahmud was thus employed, a crowd of Brahmans offered an enormous ransom if the king would desist from further mutilation. Mahmud hesitated, but, after a moment's pause, he exclaimed that he would be known by posterity not as the idol-seller, but as the destroyer. The work of destruction then continued, and was rewarded by the discovery in the vaults below the adytum of untold treasures. Thus fell Somnath. But this traditional story is quite unworthy of credence; the linga is never hollow. Its gates were taken to the mosque of Ghazni, from which they were removed when the British troops returned from the occupation of that country in 1842.

After the time of Mahmud, Somnath would appear to have been abandoned by its rulers in favour of Anhalwara, which is mentioned as the capital of Gujerat in the time of Muhammad Ghori and his successor Aibeq. It was still the capital of the kingdom in A.H. 697, or A.D. 1297, when the country was invaded by the army of Ala-ud-Din, Muhammad Khilji, which occupied Anhalwara, and annexed the province to the empire of Dehli.—*Postan's Western India; Bird's Hist. of Gujerat; Cunningham's Geog. of India; Prinsep; History of Persia; Wilson; Town. Outram and Havelock; Imp. Gaz.*

SOMNATHPUR, a village in Mysore State, celebrated for its temple of Prasanna Chenna Kesava. An inscription at the entrance shows that it was completed in 1270 by a prince of the Ballala dynasty. The whole is most elaborately ornamented, and the structure is completed by three simānas or pyramidal towers surmounting the triple shrine. Round the exterior base are portrayed the leading incidents in the Ramayana, Mahabharata, and Bhagavata, carved in relief in potstone, the termination of each chapter and section being indicated respectively by a closed and half-closed door. The number of separate sculptured images is 74. The workmanship is attributed to Jackanachari, the famous sculptor and architect of the Ballala kings, under whom Hindu art in Mysore reached its culminating point. There is also at Somnathpur a large temple to Siva in ruins.—*Imp. Gaz.*

SON. To have a son, a male child, is the great desire of the married Hindu; and if a son be not born, he may adopt one. The Sanskrit word meaning a son is said to mean deliverer from hell, since the son delivers his father from hell (Menu, ix. p. 138). This accounts for the extreme desire entertained by the Hindus for male offspring. Thus Bhima, like Dasaratha in the Ramayana, and many others, performed the holiest acts for the sake of obtaining a son. The son alone by the offering of the funeral libation (Srad'ha) is supposed to procure rest for the departed spirit of the father. The Hindu law recognised 12 kinds of sons. A son may be born of a wife or adopted. The Dattaka putra, or adopted son, properly renounces all claim to direct inheritance from his natural father and paternal relations, except through any affinity he may have acquired through his adopted father.—*Williams' Nala*, p. 178.

SON or Sugun, in Sind, is a kind of divination by means of the position of birds and beasts, their cry, the direction of their flight, and other such particulars.

SONAI. Hind. Water in which the jute plants have been steeped.

SONAR, Hind., from Sona, gold, a worker in gold and silver. One of the five artisan castes of the Hindus, the other four being the blacksmith, coppersmith, stone-mason, and carpenter. The Sonar, or goldsmith, is a caste or hereditary avocation. He is not a jeweller, but an artisan, and works entirely by weight, charging from one anna to one rupee per rupee of the out-turned manufactured article, the rate varying according to his skill or the art required, the standard of intrinsic value being that of payment. The Sonar usually has the gold or silver with which he is to work delivered to him, and he must return in the ornament the same quality and quantity he received. He cannot work with much alloy, which is the best security against fraud, and his best work is with the purest gold and silver, and in these the metal is treated with quicksilver again and again, until it has become soft and perfectly ductile. The Kanari 'Panchala' and the Kokanasth 'Sonar' claim to be Brahmans. They wear the sacred cord, and have the Vedas read to them by their own priests. The Sonar of the south of India all claim to be of higher birth than the Brahmans. In Benares they claim to derive their origin from the Kshatriyas.

SONARGAON, in the Dacca district, the ancient Muhammadan capital of Eastern Bengal, but now an insignificant village called Painam, situated about two miles from the Brahmaputra, in lat. 23° 39′ 45° N., and long. 90° 38′ 20″ E. It was here that Azim Shah, the son of Sikandar, proclaimed his independence, and invited the poet Hafiz to his court. The town gave its name to one of the three great sarkars or provinces.—*Imp. Gaz.*

SONARI, a little village situated on a low spur of a sandstone hill between the Betwa and Besali rivers, 6 miles to the S.W. of Sanchi, 21 miles N.E. of Bhopal. It contains numerous Buddhist topes. See Bhilsa.

SONCHUS CILIATUS. *Lam.* Sow thistle.

Sonchus oleraceus, *Roxb.*, *Wight Icones.*

Dodak, ...	Hind.	Etrinta, ...	Tel.
Ka't mulingi kiri, .	Tam.	Adavi mullangi, . .	,,

A native of Europe, up to 8500 feet, of the Panjab, also of Peninsular India. It yields a milky juice on incision. Cattle are fond of it. Used in the Neilgherries as a pot-herb by the natives. Also the Kashmir people are said to use it as a vegetable; and it is probably the dwarf sow thistle, the shoots of which the Ladakhi use in a similar way, according to Moorcroft, though this may be the Tragopogon.

Sonchus Orixensis.

Bhangra, ...	Hind.	Dughdika, . . .	Hind.
Kala bhangra, . .	,,	Sahadevi, . . .	,,

Bari (H.) Jangli-tamaku. Similar to Lactuca in its properties.—*Powell; Jaffrey; Stewart, M.D.*

SONDIA. The principal among the illegitimate Rajputs in Central India, of mixed caste, are the Sondia, who have spread from Sondwarra in Malwa (a country to which they give the name) to many adjoining districts. This tribe is divided into many families, which take their name from Rajput ancestors; but all intermarry. Second marriages among their women are very common, and from the strict usages of the Rajputs upon this point, there is none on which they deem the Sondia to have so degraded the race from which they are descended. The Sondia have been either cultivators or plunderers, according to the strength or weakness of the government over them; but they have always had a predatory tendency, and have cherished its habits even when obliged to subsist by agriculture. Their dress is nearly the same as that of the other inhabitants, though they imitate in some degree the Rajputs in the shape of their turbands. They are, in general, robust and active, but rude and ignorant to a degree. No race can be more despised and dreaded than the Sondia are by the other inhabitants of the country. A considerable number occupy the districts of Dig Puch-pabar and Gungrar or Chowmela. They are Hindus, but abstaining from the flesh of kine is their only feature. They drink, use opium, and are of vicious habits; their women are bold and immoral; widows remarry. During the rebellion of 1857–58, they gave considerable trouble. Another tribe, the Bhilalah, who have sprung from Rajputs of the Bhil tribe, derive their name from associating with the Bhils, among whom, from the superior rank of their sires, they obtain respect and consequence. The chiefs of the Bhils in the Vindhya mountains are almost all Bhilalah. This class combine with the pride and pretensions of the Rajputs the cunning and roguery of the Bhils; and appear to be, almost without exception, a debauched and ignorant race, often courageous from constant exposure to danger, but invariably marked by an equal want of honour and of shame. The Bhilalah and Sondia chiefs were the only robbers in Malwa, whom under no circumstances travellers could trust. There are oaths of a sacred but obscure kind among those that are Rajputs, or who boast their blood, which are almost a disgrace to take, but which, it is asserted, the basest was never known to break, before Mundroop Singh, a Bhilalah, and some of his associates, plunderers on the Nerbadda, showed the example.—*Malcolm's Central India*, ii. pp. 15, 153.

SONDRI BREERI or Sondi Breri, an ebbing and flowing spring near the Berengi river in Kashmir. It appears about the vernal equinox. It seems to be an underground continuation of the Berengi river.

SONE. The fishermen settled along the coast from Gheriah to the north, near Surat, and at Colaba, in Bombay, are Koli of the Sone tribe; a few of them are mariners, but the vessels must be manned by natives, the Sone fearing to lose caste, which would take place did they sail with Europeans. The chief Patel of this tribe resides at Angria; he is looked on as a legislator, being endowed with power to adjust the affairs of the Sone Koli, settle their disputes, etc. The women of the Sone Koli wear choli or jackets, and have a number of glass bangles on their left hand; they are frequently seen in Bombay assisting their husbands in fishing and carrying fish to market. When they marry, the ornaments which were intended to adorn their right wrists are consecrated, and thrown into the sea as an offering to the deity who presides over that element, and an invocation to defend her husband from the dangers of the ocean. Not a caste meeting of the Sone

Koli can take place without large potations of mahwa flower arrack being imbibed; and they frequently give any quantity of fish for half a tumbler of raw brandy. The chief tribes of Koli are the Raj, Solesy, Tonkry, the Dhour, Dungry, the Bhil, Mullar, the Ahir, Murvy, and the Sone Koli, with a few others. In Bombay, Tannah, Bhewndi, Kallian, Bassein, Daman, etc., are a number of Christian Koli, said to have been of the Sone section, and to have been forcibly converted by the Portuguese, but, terrified by the cholera in 1820-21, a portion reverted to paganism.

SONE, a tributary to the Ganges. It rises on the Amarkantak table-land, in lat. 22° 41′ N., and long. 82° 7′ E., 3500 feet above the sea. Length, 465 miles; receives the Koel, 140; Kunher, 130; Johila, 100 miles. Including the Phalgu and other rivers falling into the Ganges above Rajmahal, 42,000 square miles drained. The navigation of the river is not considered available. It is the chief tributary of the Ganges on its right bank. The Amarkantak table-land also supplies the sources of the Nerbadda and the Mahanadi, and is included in a tract of wild country transferred to the state of Rewah. In the rainy season native boats of large tonnage occasionally proceed for a short distance up stream; but navigation is even then rendered dangerous by the extraordinary violence of the stream, and during the rest of the year becomes impossible, owing to the small depth of water. There is one characteristic common to the Baghel of Rewah, the Bundela of Bundelkhand, and the Rajput of Gwalior and Malwa, a dislike to labour or service away from their homes; they generally leave tilling of the soil to the servile classes, and are regarded as the heads of the local society. Many of the Rajputs in the states of Central India give themselves up to sloth and the immoderate use of opium. In Malwa, Bhopal, Ujjain, Mundipur, Rutlam, Dhar, Jowra, Augur, Nemuch, Shoojawulpur, and Bhilsa are the principal marts. It is the Hyraniabhya of the ancient Magadha and Prachii, and the Erranaboas of Strabo, Arrian, and Pliny. Palibothra was situated, as stated by Megasthenes, at the junction of the Ganges and Erranaboas, and it is believed to be the modern Patna, the same as the Pataliputra of the Chinese pilgrim Hiwen Thsang.—*Tr. of Hind.* i. p. 225.

SONG.

Sir, ... HEB. | Sur, Gata, . . . SANSK.
Geet, ... HIND. |

Out of the 64 sciences of the Hindus, five, Nos. 22 to 26, belong to music, viz. the modulation of sounds, art of playing on stringed instruments, of playing on wind instruments, of beating the tambourine, and of beating the cymbals. The musical notation extensively used by Curwen resembles the Hindu system. Sir William Jones' Essay on the Musical Notes of the Hindus was published in the third volume of the Asiatic Researches, p. 55, and J. D. Patterson on the Gramal, or Musical Scales of the Hindus, ibid. ix. p. 445; and the chief points established in these essays are thus given in the fourth volume of Lassen's Indische Alterthumskunde, §§ 832, 833. The native musical literature is tolerably copious, and the Indians are acquainted with four systems, whose founders, as usual with them, are mythical personages. The first system is ascribed to Devarshi Narada, who in the epic poetry appears as well skilled in stories, and goes about between the gods and men, to recite tales to them. From him Iswara or Siva received this system. The author of the second system is Bharata, the mythic inventor of the dramatic art; the author of the third is the divine ape Hanuman; and that of the fourth Kapila, the founder of the Sankhya philosophy. These assertions, of course, only mean that the Hindus attached a high value to the practice of music, and this view is confirmed by the circumstance that in the epic mythology the Gandharvas appear as musicians in Indra's heaven. For the antiquity of song amongst the Hindus, it is important to observe that the Udgatar, *i.e.* the priest who sings the saman, belongs to the Vedic period. As to later times, we may refer to the fact that, in the Mrich' chakatika, Rebhila is praised as a renowned singer. The Hindus are acquainted with the European scale of seven tones, and denote them by letters (sa, ri, ga, ma, pa, dha, ni). They admit, moreover, six raga or modes, and the musical treatises contain minute directions as to the employment of them in the six seasons into which the year is divided. The Hindus have also mythologized these ideas, and regard the six raga as god-like beings, whose consorts are called Ragini, and are eight in number. These couples produce 48 sons, called Ragaputra, by whom the various mixtures of the chief modes are denoted. This view furnishes a very striking example of the boundlessness of Hindu imagination, as it is impossible really to distinguish so many modes from one another. In some MSS. are found portraits of these two and 60 male and female genii. The people of India generally take no advantage of the wonderful power, range, flexibility, and sweetness of the musical sounds producible by the human larynx, especially in the female sex. Singing amongst the Muhammadans of India is never indulged in by any but professional men and public women; no woman of the Muhammadans sings even to her infant child. Individuals of some Hindu sects, particularly the Jain, are occasionally heard singing, but it is confined to the Hindu women of the temples of their deities, and to the singing bands of the Muhammadan women and Burmese. With the uncultivated aboriginal races, the efforts at singing is a mere howling.

SONG BIRDS. The European visitor to the E. Indies is much struck with the prevailing silence of the jungle, and the paucity of small birds even in the cold season, so different from the woods and gardens and hedgerows of Britain, teeming with small feathered inhabitants, among which are so many pleasing songsters of all degrees and merit. The chief families amongst whom the faculty of song is found are Merulidæ, Saxicolinæ, Sylviadæ, larks, some finches, a few shrikes and fly-catchers, and some starlings.

SONG-FAI, a money of account of Siam, the half of a fuang, and worth about 1½d.—*Simmonds.*

SONMEANEE, in lat. 24° 27′ N., and long. 66° 39′ E., a small fishing village, as its name Meanee implies. It is in Baluchistan, on a low shore at the mouth of the Poorali river. It is supposed to be the site of the place named by Nearchus the Port of Alexander. In the early part of the 19th century it contained about 250 huts. It is completely defenceless, and, on the side towards Bela, is overlooked by hillocks of sand. The bar at the

mouth of the river has only two fathoms on it at low water, but boats lie close to the village in six and seven. In the early part of the 19th century the inhabitants generally subsisted by fishing, and, with the exception of a few Hindus, were wretchedly poor.—*Pottinger's Travels*, p. 11; *Findlay.*

SONNERAT, a French naturalist and good draughtsman, who settled at Pondicherry, and made immense botanical collections, which seem to have been transmitted to France. These have not been described in any regular form, but such specimens as were presented to Lamarck were introduced into his Encyclopedie Methodique, a work from which much information is obtainable, although its alphabetical arrangement renders it very difficult of consultation, particularly in those genera which have been much subdivided of late years. Sonnerat wrote Voyage à la Nouvelle Guinee, and Voyages aux Indes Orientales et à la Chine, and he made known many new plants.

SONNERATIA ACIDA. *Willde., Linn.*

Rhizophora caseolaris, *Lin.*	Mangium caseolare, *Rump.*
Orchaka, . . . BENG.	Blatti, MALEAL. of Rheede.
Polai, Plye . of BORNEO.	Tewar, ... SIND.
Ta bu, Ta mu, . . BURM.	Gedde killala-gass, SINGH.
La-moo, ... ,,	Paga-pate of SONNERAT.

This tree grows 40 feet high. It grows near the tidal creeks and littoral forests of the region from the Indus to New Guinea, and has an acid eatable fruit. In British Burma it abounds in the mangrove swamps and on the banks of almost every stream on the coast as far as tide-waters reach. The natives use it for various economical purposes. It is said to be a better substitute for coal in steamers than any other kind of wood. In Ceylon it grows to a large handsome tree along the marshy banks of the large rivers. Spindle-shaped excrescences, called Kirilimow in Singhalese, rise from the surface of its roots, four or five feet above the surface of the ground. They are of a firm and close texture, nearly devoid of fibrous structure, and take a moderate polish, some of the transverse cuttings being two feet long and two to three inches wide. The finest pin passes in with ease, and the thin slices are invaluable for linings of insect boxes. The roots of S. acida, S. alba, and S. Griffithii spread far and wide through the soft mud of the marshy banks on which they grow, and at various distances send up, like the avicennia, extraordinarily long spindle-shaped excrescences.—*Roxb.; Hooker; W. and A.; Voigt; Mason; Thw.*

SONNERATIA ALBA. *Sm.* A tree of the Andamans. S. Griffithii, *Kurz*, the Tapyu of the Burmese, grows in Burma.

SONNERATIA APETALA. *Buch.*

Khoura, Keora, . BENG.	Thaum-nia, . . . BURM.
Kam-ba-la, . . . BURM.	Myouk-guo, . . . ,,
Kan-pa-la, . . . ,,	

A pretty large and elegant tree, which grows in the western side of India, in the delta of the Ganges, and under the parallel of Rangoon. It flowers in the hot season. It yields a strong, hard wood of coarse grain. It is the timber of a red colour of which boxes for packing beer and wine are made in Calcutta; is strong, and adapted for house-building. It grows in the low wet lands near the mouths of some of the Tenasserim rivers, bears a strong resemblance to the weeping willow, and is one of the most graceful trees in the country. The casuarina has been removed from the coast to compounds in India, and the sonneratia is quite as deserving.—*Roxb.; Voigt; M'Cl.; W. and A.; Mason.*

SON OF HEAVEN, a title of the emperor of China.

SONO KLING, of the Malaya, a tree of Java; the colour of its wood is a deep brown, inclining to black; used for furniture. Sono kombang of Java, used for furniture, which has some resemblance to the lingoa wood of the Moluccas.

SONPAT, a town in lat. 28° 59′ 30″ N., and long. 77° 3′ 30″ E., 25 miles N.W. of Dehli city. Population (1868), 12,176. It is of great antiquity, and is said to have been founded by the earliest Aryan settlers. Popular tradition identifies it with one of the five 'pat' demanded by Yudishtra, in the Mahabharata, from Duryodhana as the price of peace, and it has derived its name from Raja Soni, the son of Bhopat, who reigned B.C. 920. A little image was here turned up in December 1864 when sinking a well. It is of clay, baked and polished like chunar pottery. The figure is sitting cross-legged with a club in each hand. Below the left knee is a very short inscription in a very old Nagari character. General Cunningham has read this inscription, and supposes the idol to be an aditya or image of the sun. The age of it he thinks to be at least 1200 years. This agrees with the period of the seventh century, when the Hindu Puranic theology had assumed a hundred heads and forms to contend with Buddhism. There were then followers of Brahma, Indra, Ganesha, Surya, Chandra, and a host of gods, all of whom succumbed to the powerful Saivites and Vaishnavites. The only trace of the worship of Surya found in the 19th century, in Northern India, is in Benares, where, in the corner of the quadrangle of the temple of Anna Purna, is a small shrine dedicated to the sun. The idol representing that luminary, however, is seated in a chariot drawn by seven horses, with a glory round his head, a representation of the old Sol of Homer.—*Tr. of Hind.* ii. p. 384.

SONPUR was formerly a chiefship subordinate to Patna, but was constituted a separate state by Raja Madhukar Sa of Sumbulpur about the year A.D. 1560. Since then it has been counted among the cluster of 18 Garhjat states. It is now attached to the Sumbulpur district, and is situated between lat. 20° 41′ and 21° 10′ N., and long. 83° 20′ and 84° 18′ E. It is bounded on the north by Sumbulpur proper and a portion of Rairakhol, on the south and south-east by Bod, on the east by Rairakhol, and on the west by Patna. The non-agricultural castes are Brahman, Mahanti, Rajput; and the agricultural castes are Tassa, Kolta, Agharia, and Gond.

SONTA or Asa. HIND. A club carried by Muhammadan devotees. Sonta-bardar, a mace-bearer.

SONTHAL, Mundah, Bhumij, and Ho speak languages nearly identical. They occupy most of the British districts of Chutia Nagpur, Singbhum, Manbhum, and the hilly part of Bhagulpur, now known as the Sonthal Parganas; also parts of West Bardwan, Midnapur, and Cuttack,—an extensive country west of Calcutta. The Sonthal are a simple, industrious people, honest and truthful, and free from caste prejudices. Their country is healthy, their numbers are increasing, and they are much prized as labourers by the Bengal indigo

planters, in the Assam tea plantations, and on the railways and other works of Western Bengal. The tribes live apart in detached houses or isolated hamlets. The Sonthal are a branch of the Mundah Kol. They seem to have separated from the Mundah, and fell back on Chutia Nagpur from the Damuda river, which the Sonthal call their sea, and they preserve the ashes of their dead until an opportunity occurs of throwing them into that stream or burying them on its banks. The Sonthal are now most numerous in the Sonthal Parganas, but there are many in Mohurbhunj, and there are several colonies of them in the Singbhum district. In 1881, the total in British India was 210,661. They are an erratic race, but Lieutenant-Colonel Dalton thinks that they left their chief settlements on the Damuda river from having been pressed by the Kurmi. The Sonthal, Bhumij, and Mundah tribes have long been known to be intimately connected, and they have affinities with the wild clan of the Korewah of Sirguja and Jushpur, with the Kheriah tribe of Chutia Nagpur, and the Juanga of the Cuttack Tributary Mahals. Since the beginning of the 19th century they have intruded themselves into some of the Rajmahal districts, which therefore now contain two populations, allied to each other, but speaking languages said to be mutually unintelligible. The close relationship of the Kur and Sonthal, and their separation from the Dravidian, may be illustrated by a few examples :—

English.	Kuri.	Sonthal or Kol.	Gond dialects.	Tamil.

The Sonthal and Bhumij races have suffered in esteem in consequence of the human sacrifices offered at the shrine of Kali as Runkini, but these races personally do not much care for this goddess, at whose shrine the establishment and ritual are essentially Brahmanical. The Sonthal and Rajmahali are markedly different in habits, appearance, manners, and national characteristics, and on the Chutia Nagpur plateau these differences are very marked. The Sonthal are a very ugly race, with flat, broad-nosed features. They are a more simple, mild, industrious race than the Rajmahali, Gond, or Khond. Though the Sonthal are geographically near the plains, they seem to be more shy and more socially isolated than the Mundah, Bhumij, and Ho. They have kept much to themselves, preferring locations surrounded by jungle and segregated from the world, and cultivating the lower lands of their country, but they have latterly taken to labour for hire.

SOOBI, a religious sect in Turkish Arabia. At a village not far from the junction of the Tigris and Euphrates, forming the Shat-ul-Arab, in 1872, lived the Sabæan chief priest. He had ancient books which he asserted to be inspired, and a ritual which he refused to divulge. His followers, numbering 500 or 600, are scattered about over the province, and call themselves Soobi, but are popularly styled 'Christians of St. John,' or 'Baptists.'

SOOMURUN or Gujta. HIND. Bracelets made of coloured thread, worn at the Maharram, and of flowers worn on other occasions.

SOONDA, a district in the south of the Bombay Presidency, bordering on North Canara. It contained large forests, but by A.D. 1850 the timber had greatly decreased in amount. In the transfer of Canara to Bombay, this district was re-transferred along with it.—*Gibson's Bombay Forest Reps.*, 1849.

SOPHAGESENUS, the name given to Asoka by the Greeks. Evidence exists that Antiochus the Great was slain by an Indo-Scythian prince, called by the Greek writers Sophagesenus. See Kābul.

SOPHIST of India, a term applied to the Brahmans by Arrian (lib. vi. chap. xvi.) and Strabo. The religious ascetics are spoken of as Brachmanes, Germanes or Sarmanes (Sramana), and Sophists. Onesicritus was sent by Alexander to converse with a body of ascetics, in consequence of their refusing to come to him (Strabo, lib xv.). He found fifteen persons two miles from the city, naked, and exposed to a burning sun; some sitting, some standing, and some lying, but all remained immoveable from morning till evening in the attitudes they had adopted. He found Calanus lying on stones, and to him he first addressed himself. Calanus received him with an affectation of independence, and told him, if he wished to converse, to throw off his clothes and sit down naked on the stones. But Mandanis, the oldest of the party, reproved Calanus, and offered to instruct in the Indian philosophy as far as the means of intercommunication admitted. Alexander failed to prevail on Mandanis to accompany him; Calanus, however, did so, but, falling sick in Persia, and refusing to observe the regimen prescribed to him, he determined to burn himself alive. Alexander in vain opposed this intention, and he was carried to the pile, with a garland on his head, singing hymns. When he had ascended the heap, he ordered it to be set on fire, and met his fate with a serenity which made a great impression on the Greeks. A similar instance of self-immolation is related by Strabo (lib. xv.) of Zarmanochegus, an Indian of Bargoza, who had accompanied an embassy from his own country to Augustus, and burned himself alive at Athens.—*Elphin.* p. 238.

SOPHORA, a genus of plants belonging to the natural order Leguminosæ, said to be so named from an Arabic name (Sophera) of one of the species. Some species are ornamental shrubs and trees, found in Central and Tropical Asia, also in the warm parts of North America and the equinoctial and sub-tropical parts of South America. The species best known in England are S. Japonica and S. Chinensis. It has been proposed to engraft the Nepal S. velutina on the Japonica. Being handsome trees, with both leaves and trees differing much from European trees, they are well adapted for standing singly in lawns. They are raised from layers, but also from seeds, and require a little protection when young. Wight gives Sophora glauca, heptaphylla, and robusta. S. glauca, *Lesch.*, the smooth-leaved Sophora, is a Neilgherry plant, with middle-sized white flowers, tinged with rose colour. S. tetraptera, one of the few leguminous trees of New Zealand, is

variable in habit. S. mollis, the Arghawan of the Afghans, is a handsome, yellow-flowered shrub of the Panjab and N.W. Himalaya.—*R. Brown; Hogg; W. Ic.; Voigt; Gamble.*

SOPHORA JAPONICA. *Linn.* Hwi-shu, CHIN. This is an ornamental tree common in Japan and Central and Northern China, and about Pekin. Its leaves could be substituted for senna. The pods are used in China in preparing a yellow dye; the greenish-yellow, unopened flower-buds are used in dyeing cloth of a yellow colour, or in rendering blue cloth green. The wood was formerly used in China for making fire-frictors. An extract is made from the leaves to adulterate prepared opium.—*Smith; Von Mueller.*

SOPHORA TOMENTOSA. *Linn.*

S. occidentalis, *Linn.* | Downy-leaved Sophora.

A shrub (Hwang-ki, CHIN.), native of Southern Asia, with pretty yellow flowers. In China all parts of this plant are used in medicine as a tonic, pectoral, and diuretic.—*Smith.*

SOPHYTES, or Sophites, or Sopeithes, an ancient king of the Western Panjab, including the Salt Range of mountains.

SORAB, a village in the Shimoga district of Mysore, in lat. 14° 22′ 45″ N., and long. 75° 7′ 55″ E., on the right bank of the Dandavati river, 46 miles north-west of Shimoga town, where boxes, easkets, and cabinets are made by the Gudigar, and which they cover with minute and complicated reliefs. The native designs consist of vegetation and scroll-work, interspersed with figures from the Hindu Panthcon; but any European pattern can be copied to order. The workmanship is considered finer than that of Bombay or Canton, and commands a high price.—*Imp. Gaz.*

SORANI, a ferocious tribe, who call themselves Yezedi, after a khalif of Damascus of that name. They inhabit the mountains of Sindjar, a country to the north-west of Bilbos. They are the greatest robbers of all the Kurdish tribes.—*Porter's Tr.* ii.

SORECIDÆ, the family of shrews, comprising the genera Sorex, Soriculus, Crossopus, and Corsira.

Sorex cærulescens, *Shaw, Blyth.*

Sorex Indicus. | S. Sonnerati, *Geoff.*
S. giganteus. | S. myosurus, *Gray.*
Sondeli, ... CAN. | Musk-shrew, . . . ENG.
Musk-rat, ... ENG. | Chachundi, . . HIND.

All India.

Sorex murinus, *Linn., Blyth.*

S. Swinhæi, *Blyth.* | S. myosurus, *Pallas.*
S. viridescens, *Blyth.* | Mouse-coloured shrew.

Sorex nemorivagus, *Hodgson.*

S. murinus, *Horsf.* | Nepal wood shrew, . ENG.

Nepal, Sikkim.

Sorex Griffithii, *Horsf.*, Khassya Hills.

Sorex scrpentarius, *Is. Geoff.*

S. kandianus, *Kelaart.* | Rufescent shrew.

Ceylon, S. India, Burma, Tenasserim.

Sorex heterodon, *Blyth*, Khassya Hills.

Sorex saturator, *Hodg.*, Darjiling.

Sorex Tytleri, *Blyth*, the Dehra shrew.

Sorex soccatus, *Blyth, Hodgson*, hairy-footed shrew, Nepal, Sikkim, Mussoori.

Sorex niger, *Ell., Horsf.*, Neilgherry wood shrew, Neilgherry Hills.

Sorex leucops, *Hodgs.*, long-tailed shrew, Nepal.

Sorex Hodgsonii, *Blyth*, Nepal pigmy shrew, Nepal.

Sorex Perroteti, *Duvernoy*, Neilgherry pigmy shrew, Mysore, Neilgherries, Dekhan.

Sorex micronyx, *Blyth*, small-clawed pigmy shrew of Western Himalaya.

Sorex melanodon, *Blyth*, black-toothed pigmy shrew of Calcutta.

Sorex Sikkimensis, *Hodg.*; S. homourus, *Hodg.*; S. oligurus, *Hodg.*; S. macrurus, *Hodg.*; S. holosericeus, *Hodg.*; and S. tenuicaudus, *Hodg.*, all of Darjiling.

Sorex ferrugineus, *Kel.*; S. montanus, *Kel.*; S. Kelaarti, *Kel.*; S. purpurascens, *Temp.*; S. Horsfieldii, *Tomes*, all of Ceylon.

Sorex fuliginosus, *Blyth*, and S. nudipes, *Blyth*, Tenasserim.

Sorex atratus, *Blyth*, Khassya.

Sorex albinus, *Blyth*, China.

Sorex pulchellus, *Licht.*, Central Asia.

Soriculus nigrescens, *Jerd.*

Corsira, *Gray, Blyth.* | S. soccatus, *Hodg.*
S. aterrimus, *Blyth.* | S. Sikkimensis, *Horsf.*
Ting-Zhing, . . . BHOT. | Tang-Zhing, . . LEPCH.

Mouse-tailed shrew of Sikkim, Nepal.

Crossopus Himalaicus, *Gray.*

Choopitsi, ... BHOT. | Oong-lagniyu, . . LEPCH.

The Himalayan water-shrew of Sikkim.

Corsira alpina, *Jerdon.*

Sorex caudatus, *Hodg., Bl.* | Alpine shrew, . . . ENG.

Europe, Sikkim.

Corsira Newera-elia, *Kel.*, of Ceylon.

Feroculus macropus, *Kel.*
Sorex macropus, *Blyth.*

Ceylon.

Snakes are said to avoid the neighbourhood of the shrew. In Jeypore the body of a small musk-rat is regarded as a powerful talisman. It is dried, is enclosed in a case of brass, silver, or gold, according to the means of the individual, and is slung around the neck, or tied to the arm, to render the individual proof against all evil, not excepting sword and other cut, musket shot, etc.—*Lubbock, Origin of Civil.* p. 167; *Jerdon; Blyth; Hodgson.*

SORGHUM BICOLOR. *Willde.*

Holcus bicolor, *Linn.* | Andropogon bicolor, *Roxb.*

Cultivated in India (Kalo-deb-dhan, BENG.); grain much used as food.—*Voigt.*

SORGHUM CERNUUM. *Willde.*

S. halepense, *Pers.* | Andropogon cernuus, *Roxb.*
Holcus cernuus, *Willde.* | A. laxus, *Roxb.*
Koonkie, . . . E. BENG. | Soondia . . of BROACH.

Cultivated by the natives of Munipore and other mountainous districts immediately east of Bengal. It is one of the Guinea corns, and reaches a height of 15 feet, with leaves 3 feet long. The grain is white, and forms an article of food of the races N. of Bengal.—*Von Mueller.*

SORGHUM SACCHARATUM. *Pers.*

Andropogon saccharatus, *Roxb.!* | Holcus saccharatus, *Linn.*
A. caffrorum, *Kunth.?* | Broom corn? of America?
Deo-dhau, . . . BENG. | Sorgho-sucre, . . . FR.
Luh-suh, Tih-che, CHIN. | Joar-valaiti, . . HIND.
Shaloo, ... DUKH. | Salu, ... MAHR.
Sorgho, Sorgo, . . ENG. | Devata dhanyamu, TEL.
Chinese northern sugar-cane, ... ,, | Jonna, ... ,,

This is a plant of Northern China. About the year 1855 it was introduced into the south of France and England, and since then into the United States. It was introduced into the Madras Presidency by the Editor in the year 1859. Dr.

Birdwood, however, says it is simply the Shaloo of the Dekhan and the Deo-dhan of Bengal. But Roxburgh (i. p. 271) doubts if his A. saccharatus or Deo-dhan is the H. saccharatia of Linnæus, and describes it as having oval seed, and Voigt calls it Sada deo-dhan, white; whilst the plant which the Editor introduced in 1859 has a black grain different from that of the Imphee and the Sorgho, which the Editor also introduced from the Cape of Good Hope, all of which were yellowish-white. In China, the black seeds are sown in April, but the plant is largely propagated by cuttings. It grows to the height of 12 to 18 feet, with an ample inflorescence, consisting of eight or ten separate stems, which group together to form the tuft of the plant. The large leaves, which make excellent green food or dry fodder for cattle, spring from the nodes of the gradually tapering stems. The seeds, at first green, become brown, and finally of a purplish-black colour, being produced only on the head of the plant. They are very nutrient, and the colouring matter has been used in China to tint wine of a deep colour. Since the efforts made in Madras, the Sorghum saccharatum has been grown for making syrup in almost every part of the United States. The usual machinery, consisting of three rollers, either vertical or horizontal, and driven by steam or horse power. It is believed that cane in a high latitude will degenerate if grown continuously from its own seed. The Minnesota early amber variety is said to combine the characteristics of the Chinese Sorgho and the Imphee or white Liberian, and its kindred African varieties. Its early ripening and the bright amber colour of its syrup give its name. It is very rich in saccharine matter, the flavour very similar to that of pure honey. The syrup granulates readily, and yields sugar equal to the best ribbon-cane of Louisiana. Chinese Sorgho is also known as Chinese cane, also sumac cane, as its seed heads resemble a head of sumac. The stalk of the white Liberian or white Imphee curves at the top, leaving the head pendent, hence its name Goose Neck. The seed heads are shorter, more compact, and of lighter colour than the early amber. The Honduras cane grows about one-half taller than the early amber, Chinese, or Liberian varieties. Its seed top is of reddish-brown and spreading, hence the synonym 'sprangle top.' It is also called Maslodon and honey-cane.—*Letter of the Commissioner of Agriculture, Washington*, 8th April 1880.

SORGHUM VULGARE. *Pers.* Great millet.

Juari, ... HIND.	Jugeri, ... TURK.

Sorghum vulgare grows on light sandy soils, and requires little moisture. It is grown in Egypt, and in all the countries of the south and east of Asia, its grain being used as food for man, in the form of cakes and porridge, also for horned cattle, and its stalks, the karbi of India, as fodder for horned cattle and horses. It is grown in all the table-lands of India, is found in the Sutlej valley between Rampur and Sungnam at an elevation of 6000 feet, but in the N.W. Himalaya only in the valleys. It is also grown by the Karen and Burmese. It grows on a reedy stem to the height of 8 or 10 feet, and bears irregularly-shaped clusters of innumerable round grains about twice as big as mustard seed. It is common all over the Levant, under the name of durra (or dourrah); also in Greece, where it is called kalamboki; there is likewise a coarse sort in Italy, called Melica rossa, or Sorgo rosso.

In China, the seeds of the red variety are made into wine in Hu-peh, and the exhausted grains are a favourite food for pigs. When grown for cattle in Madras, 10,000 lbs. weight of green fodder may be taken off an acre of ground every three months. If the plot be irrigated, one-fourth more may be obtained, and the crop be cut every two months. That is, an acre of irrigated ground will produce about 70,000 lbs. weight of green and nourishing fodder in one year.

Major-General Sir J. B. Hearsey, K.C.B., sent from Barrackpur, on the 5th March 1858, the seed gathered from one plant, which came up accidentally during the early rainy season of 1857, and grew to nearly 11 feet in height. He had it supported by a strong bamboo. It spread out four shoots from the stem close to the ground, and these stems also threw down roots. The head from the principal shoot was very large; the side shoots also headed, but these were small. The number of seeds received from this one plant was 12,700. In the Chittuldroog and Nuggur divisions of Mysore, it is sown during the thunder showers between the end of April and May, and the crop is reaped in September and October. The great defect in this grain is that it will not keep, being soon destroyed by insects; and the ryots have difficulty in preserving sufficient quantity of it for seed in the following year. The seed grain is mixed with ashes, and packed with paddy straw; in spite of which, however, insects obtain admittance; but the stems or straw of this grain, when well preserved from rain, will keep for about ten years, and are used as fodder. This is the millet designated in Ezekiel iv. 9.

SORON, an ancient town in the Etah district, N.W. Provinces of India, originally known as Ukala-kshetra, but after the destruction of the demon Hiranyakasyapa by Vishnu in his boar avatar, the name was changed to Sukara-kshetra. The architectural features of the pillars of its temple resemble those of the Kutub at Dehli. Numerous inscriptions in the temple bear date from A.D. 1169 downward.—*Imp. Gaz.*

SORREL, Oxalis corniculata, *Linn.*, and also the Rumex acetosa, both used as spinach and salad. R. scutatus is a very delicate vegetable, of easy culture in light soil. It is grown by sowing the seed broadcast, and thinning the plants to the distance of 8 or 10 inches from one another. It may be sown at the commencement of the rains.—*Jaffrey; Riddell.*

SORWARNA. HIND. An offering of money

to a beloved friend or relative, to be distributed in alms.

SOSAN or Sosun. HIND. Iris Nepalensis, any of the lilies, species of Amaryllis. Sosanbar, ARAB., Thymus chamædrys. Sosni-rang, lilac colour of iris.

SOTER MEGAS, B.C. 70, a nameless great Bactrian king, who had coins with an Aryan legend, which James Prinsep and Professor Lassen ascribed to Azes. On all is a peculiar monogram with three prongs. The same monogram was continued to coins of Kadphises and of the Kanerki, but it is not found in those of the Hercules type derived from Hermæus. Mr. H. T. Prinsep considers him to have been contemporary, but not identified, with Vikramaditya, and that he assumed the title of Soter Megas, which was continued down by the Kadphises kings. He considers that the nameless kings, with those on whose coins are the words Kodes or Hyrkodes, although mere local chiefs, such as now rule at Kulm, Kunduz, and Balkh, preceded the conquest of the Panjab by Vikramaditya, B.C. 56.

SOUARI NUTS, the fruit of Caryocar nuciferum, *L.*, C. tomentosum, *Willd.*, etc. The kernel is said to be the most delicious of the nut kind. It contains an excellent sweet oil, used in South America. The timber of C. tomentosum is valuable for ship-building. These might be introduced into India.

SOUBAIHA, an Arab tribe in the Lahej district of Yemen, who have been termed the gypsies of Arabia.

SOUJIE. HIND. The hard inner part of the grains of wheat, obtained by sifting the coarsely-ground wheat. In making bread of wheat, one process is first thoroughly to clean the wheat, and for this one woman will clean 430 lbs. in a day, and in the evening the cleaned wheat is placed on a table and thoroughly wetted, and the water left to drain from it during the night. The next morning the still moist grain is ground in hand-mills by women, a woman grinding 40 lbs. in a day. It is then sifted, and as much fine flour and soujie as can be obtained are laid aside. The remainder, then termed Naka, is subjected to a more powerful mill, and an inferior kind of soujie and a second sort of flour obtained from it. The residue is then ground in a large mill, and yields a coarse flour and bran.

Bran is what remains of wheat after the flour and soujie are extracted.

Soujie is the heart of the wheat, and is obtained by coarsely sifting the coarsely-ground wheat with sieves and soopas, by which all the small particles of the bran are separated from it. One woman can clean 50 lbs. a day.

Flour.—The first sort of flour is produced by finer sifting from the first grinding of the wheat. Second sort flour is sifted from the first grinding of the wheat. Second sort flour is sifted from the first grinding after the fine is extracted, and also from the second grinding.

Bread.—The materials for bread are 60 lbs. of first sort soujie, 20 lbs. of second sort or naka soujie, and 20 lbs. of first sort flour; 100 lbs. of these ingredients produce about 128 lbs. of bread.

Biscuit is made from second sort soujie and flour mixed in the proportion of 75 lbs. of naka soujie and 85 lbs. of second sort flour. This produces only about 85 lbs. of biscuit, which, after being well baked, is dried for two days in a kiln.

Barm or *Yeast* sufficient for 800 loaves 1 lb. each, is made of brown sugar 2 lbs., potatoes 1½ lbs., hops ½ oz., with half a gallon of water. Boil and mash the potatoes, boil the hops until none appear on the surface of the water, strain and dissolve the sugar in the liquid. The potatoes are then added, and the whole is strained into a jar or small tub. This quantity produces about 3½ pints, and is generally ready for use in 12 hours. The addition of a small portion of the old barm hastens fermentation. Bombay wheat is whiter and heavier compared with that from Kattyawar, and produces a greater quantity of soujie and flour. That of Kattyawar is smaller and darker, and produces good flour, though smaller in quantity, with less soujie.

SOUL. According to the Greeks, the psyche was the life, the perceptive principle. The pneuma was the spiritual nature. The leyp-bya of the Burmese is the psyche of the Greeks. In Burmese everyday philosophy, the life of man resides in the leyp-bya or butterfly spirit, and dies when it disappears. Man, at the point of death, opens the mouth, and the butterfly escapes from the body, but only to die at the same time. The leyp-bya is the cause of dreams. It is not necessary for the butterfly to remain constantly in the body; when the man is asleep, it leaves the body, and roams about far and wide, but only to known places, lest it lose its way, and, unable to return, both would die. Or it may be gulped up by a beloo, evil spirit, or kept in durance by a ta-seht, or by a sohn, wizard.

Burmese unwillingly wake a sleeping man, as his leyp-bya may be at a distance. An assistant-commissioner rides up to a small townlet, and calls for the headman, but he is asleep. 'Well, then, wake him;' but old Mah flatly refuses; on which the Englishman gallops off, raving at the dreadful impertinence of the people, and Mah Gyee tells all her neighbours how the young Englishman actually wished to imperil her husband's life.

The Greenlander believes that after death the soul travels to Torngarsuk, where reigns perpetual summer and sunshine, and no night; where there is good water, endless seals, birds, and reindeer.

The soul of the Arabs was the tayf or al tayf al khafi, a mysterious or invisible spirit, the ether.

From the passage in the Koran, xlix. 43, the Sufi hold that the soul can leave its body and visit different scenes while the body lies entranced. This, they say, happens to a certain extent every time a man sleeps. Jalal-ud-Din says—

> 'When deepest slumber doth the sense enfold,
> Into the regions of the Infinite
> Men's spirits wander free and uncontrolled.'

Soul or spirit, according to the Hindu philosophers, is eternal, separate from, but may be bound up with, the body.

Soul and animal life are believed by the Jains to be the same, and to be one in gods, men, and brutes.

The Stiens of Cambodia believe that animals also have souls which wander about after their death; thus, when they have killed one, fearing lest its soul should come and torment them, they ask pardon for the evil they have done to it, and offer sacrifices proportioned to the strength and size of the animal. See Spirit-Worship.

SOURA, Sowrah, or Saur is a term, identical with Sairea, given to populations occupying the fastnesses of the Eastern Ghats, along with the Khand and Kol. The Sowrah are wholly within Telingana, and extend from the Godavery to the southern frontier of the Khand, a large district and dependency of Bastar, in Central India, is surrounded by the Teling in the south, Khand and Mari Gond on the east, and Hindus to the north; situated between lat. 18° 30′ and 19° 30′ N., and long. 83° 30′ and 84° 30′ E. In the ancient Namalingāna Shāsanam of Amara, descriptive of the races inhabiting the Indian Peninsula, the Sowrah (Shabarah) are described as people who dress in leaves, and they are placed in a sub-family with the Kiratah, who dress in peacocks' feathers, etc., and the Pulindah, who only know one language. The Sowrah sub-family is described as a variety of the Chandala. They have become divided into two clans,—(1st) the Kapu Sowrah, who are dispersed over those hills of Purlah Kimedy and Palkonda which are in the more open country, and who, from frequent intercourse with the Telinga and Uriya people, have picked up their language and some of their civilisation. Many Kapu Sowrah now live in villages in the plains, and at the foot of the hills, and lead an industrious life. (2dly) The Konda Sowrah or hill Sowrah inhabit the dense forest of the hills to the north of Purlah Kimedy. A large portion of the Konda are nominally under the control of the Bissoyi or hill chiefs of Goomah and Gibau, Soringhee, Ryagudda, Wogayagudda, Jeringhee, and Coipuram. But the greater number go by the name of the Onanyah Sowrah, and are independent. They are bounded on the north by the country of the Khand, another hill tribe, on the east by the zamindaris of Pedda Kimedy and Chinna Kimedy, on the south by Purlah Kimedy, and on the west by Gunipuram, a taluk of the Jeypore country. As viewed from the summit of Mahendragiri, a lofty mountain on its confines, this country appears as a continuous mass of hills which rise behind one another, range after range. Cultivation of dry grains is carried on, on the slopes of the hills, often at an angle of 45 degrees with the plain, while here and there crops of paddy are raised on the small level patches between the hills, advantage being taken of the numerous springs and hill streams. Besides the forts or places of residence of the Bissoyi, there are a few villages of tolerable dimensions among the hills, but the Sowrah generally live in huts perched singly or in small groups of four or five on the hill-sides.

They sing a song which they call Kellangiya. They eat snakes, white ants, mice, monkeys, birds, fruit, vegetables, and grain, but, like the Khand, they object to the use of milk in any form. The women's dress consists of a coarse cloth kilt fastened round their waists, and reaching to their knees, and nude above the waist. The men merely wear a langooty, passing between their legs. Their ornaments consist of nose-rings and ear-rings, bangles, etc., made of brass or bell metal, and as many strings of coloured glass beads worn round their necks as they can accumulate. On festivals, the men decorate their hair with peacock and other feathers. The Sowrah, up to the year 1855, were in the habit of making incursions into the plains of Kimedy and Gunipuram, in small parties of five or ten, and waylaying travellers to rob them of their cloths; and as they were utterly reckless of life, several murders occurred annually. Every individual Sowrah fixes a stone in the ground a span upwards, and calls it by the name of mountain god. He lays a little of each crop before the stone, then sacrifices a fowl, gets some toddy, and, after dedicating to the god, he mixes them all together, and eats them with his friends and relatives. When a child is born, they assign to it the name of the day on which it was born, or that of the presiding demon, the latter being determined by a priest, called by them Vejju. A stimulant prepared of roots and bark is administered to the mother immediately after the birth, and on the fourth day she resumes her ordinary occupations. A young man having selected a bride, messages are sent to her parents, and finally the young man himself goes, bearing a pot of toddy or other present. Three posts are fixed in the ground, between which the bride and bridegroom with their respective friends assemble, and a drunken feast is commenced. The bride and bridegroom sit together while turmeric water is poured on their heads. Presents of cloth, beads, rings, etc., are exchanged. Fowls, and, if procurable, sheep are sacrificed, and the flesh is cooked, made up into balls with some sort of grain, and distributed among the party. They all join in a dance, hopping from one leg to the other, at each movement snapping their fingers and uttering an ejaculation, while at intervals the whole of the dancers bump together and again separate. If the parents of the bride refuse to consent to the marriage, the friends of the bridegroom watch their opportunity and carry her off. The relatives of the girl pursue and attack the opposite party, but even though successful in retaking her, they are prohibited by their customs from giving her in marriage to any one else.

The Sowrah burn their dead, and the following day bury the ashes on the same spot, over which they erect a rude pandal. On the fifth day the priest makes an offering of toddy, sacrificing at the same time fowls or animals, according to their means, to the spirit of the deceased, placing round a pot of toddy a number of leaves to represent the ancestors of the deceased; upon each leaf the priest sprinkles a little toddy, while pronouncing the name of the person represented, after which the toddy is divided among the party. At the end of the first and fourth years, there is feasting on food articles, which are first dedicated to the spirit of the deceased. The Sowrah race is far more wild and savage than the Khand, but they had no share in the Meriah sacrifices performed by the latter. Their bamboo bow is about a yard in length, the string being made of a thin slip of the outer coating of the bamboo, firmly bound on at each end with sinews. The arrows are of light reeds, feathered, with a head of flat beaten iron, having two or three pairs of barbs. They generally aim at the stomach or thigh of their victims, and the wounds are consequently dangerous and very often fatal. Some of them carry rude iron knives and a hatchet called tungi. The Muli Sowrah work in iron, making arrow-heads, knives, etc.; others, called Medari Sowrah, make bamboo mats; and the Arasi Sowrah weave their coarse cloths. They do not know how to tell a lie. They are not sufficiently civilised to be

able to invent. An insurrection occurred in 1858.

SOURABAYA or Soerabaja, in lat. 7° 13′ S., long. 112° 46¾′ E., is a town of Java, situated on the mainland on the shores of a narrow strait, which divides it from the large island of Madura. It is the only perfectly secure harbour on the north coast of Java. It gives its name to a district with a population of 1,722,626, the bulk of whom are Javanese, with 13,185 Chinese, and 1955 Arabs. The town is 1½ miles from the sea, is divided by a river 30 yards wide, which is navigable by boats 100 miles from the sea, and is sufficiently deep at the entrance to admit vessels of 250 tons. Grissik, a seaport town about 5 miles distant, may almost be termed an Arab colony. There are fish-ponds, extensive tanks of salt water, in which sea-fish are fattened for the table. These are highly prized by the Chinese, who spare no expense to procure them.—*Mr. Earl*, pp. 47 to 78.

SOUSSI. Hind. A striped cotton cloth. A kind of soussi is produced in France, blue striped, closer in texture than the Indian, perhaps, but belonging to the same class or category, and another called grivas, in particular, near Vichy, both excellent and fast-coloured fabrics, and both used for trousers and blouses. The Indian soussi are always striped or checked, woven in narrow patterns with coloured yarns, blue and white, black and blue, red and blue, yellow, white, and blue, green and chocolate; and they are worn, fine and coarse, literally by millions of the Hindu people of the middle and lower classes. Soussi is manufactured in Tanjore, Trichinopoly, St. Thomé, or Mylapore. Those of Tanjore and Trichinopoly are made of silk, and mixed with cotton of various colours and sorts, but Mylapore weavers work only in cotton. They are 7 yards by 1; the silk pieces are sold at from 8 to 20 rupees, those of cotton at 2 to 7 rupees each. These are used for undergowns or lungas by the Muhammadan women, and as trousers by men. The colours and patterns differ very little anywhere within the confines of India, whereas sarees, dhotis, and loongis, to suit, differ in particular localities.

SOUTH CANARA. This is a coast district between the sea and the high plateau of the Dekhan, in which most of its rivers consequently take their rise. South Canara has a seaboard of 120 miles, besides about 404 miles of estuaries. In Canara, fish are almost the sole meat food of the people. Hindu mythology says that the whole of South Canara was formerly under the ocean, the boundary of which was the edge of the Mysore plateau, and that the sea was dried up by a flaming arrow of the god Parasu Rama. More modern science robs the fable of its poetry, but leaves it its groundwork of truth, by ascribing the existence of Canara to volcanic action. There are also extensive littoral upheavings. Canara and its boundary hills are the first land that meets and receives the full force of the south-west monsoon, and the annual rainfall on the coast is 130 inches.

SOUTHERN INDIA is a term applied sometimes to all the Peninsula of India south of the Nerbadda river, sometimes to that portion of it lying south of the Kistna river. In the latter restricted sense, it is occupied by the Canarese, part of the Telugu, Tamil, Malealam, and Tulu-speaking races, and comprises part of the Circars, the kingdoms of Mysore, Cochin, and Travancore, and the British provinces of Nellore, Guntur, the Ceded Districts, Chingleput, N. and S. Arcot, Salem, Tanjore, Tinnevelly, and Coimbatore, all largely cultivated.

The architecture and ornamentation of the temples of Southern India have been made known by the representations and descriptions of Bijapur, Dharwar, Ahmadabad, and other cities, by Mr. Fergusson and Col. Taylor, and they are by far the most interesting and complete memorials of the sacerdotal and regal grandeur of Southern India which are in existence, and give a striking impression of the former splendour of those empires. The Dharwar sculptures are the records of Chalukya, Hoi Sala, Bellal, and other local dynasties; some of the figures are clothed with defensive armour, and there is no trace of a sewn garment. All the men's figures have short waist-cloths or dhotis, like kilts, with an end in some cases cast over the shoulder. The women are in the same costume, but both in the earlier memorial stones and on some of the profuse sculpture on the temple at Hallabid, in Mysore (Dhara Samudra, tenth to twelfth century A.D.), they wear bodices, tied in front, as Hindu women wear them at present. Many temples in the south and west of India, as also in Gujerat and Orissa, etc., are known to belong to periods as early as A.D. 500. Groups of figures on them are numerous beyond description; the men wear head-dresses in the form of conical crowns, richly covered with ornaments, their bodies are naked, and their breasts and arms show necklaces and armlets of very ornate patterns. From the loins to the knee, or middle of the thigh, they have in most instances kilts, as it were, also composed of ornaments; and many are altogether naked, both male and female, with a girdle of ornamental pattern round the loins. These figures abound among the sculptures of Ellora, and upon the Hindu temples of Dharwar and Mysore of the eighth to the thirteenth century; also upon the Chola temples at Conjeveram and elsewhere, probably of the same era. In the Jain sculpture the male and female figures are invariably naked, but ornamented in general with necklaces, bracelets, armlets, and zones of exceedingly intricate and beautiful patterns, in imitation, probably, of the chased gold work of the period.

SOUTHERN MAHRATTA COUNTRY constitutes the British zillah of Dharwar, and ought likewise, geographically speaking, to include the small province of Sunda. The general boundaries are the rivers Kistna and Bhima on the north and north-east, the Tumbudra river on the south, the Hyderabad territory on the east, and the Syhadri range of mountains or Western Ghats on the west. This tract affords a great variety of elevation and of geological structure. The western portion abounds with lofty forest trees, festooned by enormous perennial creepers. The bamboo forms a thick and luxuriant underwood in some places, while others are entirely open; and the banks of many clear and rapid streams flowing through it abound with the black pepper plant, the wild cinnamon, and other odoriferous shrubs. Portions of this forest are often left entirely untouched by the axe or knife. These are called

kans, and are favourite resorts of wild animals. To the east of the regular forest lies a tract called the Mulnad or rain country. The bushes consist chiefly of the karunda, the pallas, etc. It abounds in tanks and artificial reservoirs for purposes of irrigation. East of the Mulnad is a great extent of alluvial plain, producing fine crops of wheat, cotton, maize, millet, Sorghum vulgare, Panicum Italicum, Cicer arietinum, etc. And on the Hyderabad frontier is a succession of low, dry hills, with tabular summits, often rising in abrupt scarped precipices, and intersecting and traversing the plains in various directions. The first or mountainous division consists chiefly of micaceous clay and other schists, which to the northward are succeeded by basaltic or trap formation. The Mulnad is composed of undulating clayslate hills, which become covered with basalt to the north. This trap formation extends in a slanting direction from S.W. to N.E., nearly coinciding with a line drawn from Sadasheghur on the coast to Bijapur and Sholapur, and is almost coincident with that marking the separation of the two great tribes of the population using totally distinct languages, the Mahratta and Canarese. The hills to the N.E. and E. are all of sandstone, sometimes resting on schists, sometimes immediately on granite, which latter is the rock nearest the surface in the central and eastern plains. A well-defined range of hills to the S.W., called the Kupputgode, is basaltic. The extensive plains lying between these different lines of hills and eminences are composed of the rich black mould called regur or cotton ground, resulting from decomposed basaltic rocks. To the N.E. a considerable tract of limestone is found, resting on the sandstone, about Bagalcote, Badami, Hungund, Mudibihal, etc.

SOUTHERN-WOOD, Artemisia abrotanum.

Downah, ... Hind.	Dawanum, . . . Tel.
Marikolundu, . . Tam.	

The Tamil people sometimes mix the fine powder of it with gingelly oil, and anoint themselves with it after bathing; and it is one of the many sweet-smelling shrubs that are strewed before the Hindu gods at religious ceremonies. The Muhammadans prize it for its fragrance as a flower.—*Ains. Mat. Med.* p. 44.

SOUTH MAHRATTA JAGIRS comprise a group of native states; population, 610,000. They are Sangli, Jamkhandi, Miraj (senior and junior branch), Kurandwar (senior and junior branch), Mudhol, and Ramdrug. The first four belong to Brahman chiefs of the Patwardhan family.

SOUTHWELLIA BALANGIIAS, China chesnut; seeds when roasted highly palatable.

SOWA, also Shuta-pooshpa. Hind. Anethum sowa, *Roxb.*, Indian dill. The seeds are in every bazar. They form an ingredient in curries, are employed as a carminative, and are bruised and applied externally in rheumatic and other swellings of the joints.

SOW-YEW. Burm. The egg tree of the Karen-nee, chisel-handle tree of the English in Burma, is stated by Dr. Mason to be a species of Dalbergia. Its maximum girth 2¼ cubits, and maximum length 10 feet. Found scattered all over the Amherst, Tavoy, and Mergui forests, inland, in undulating ground only, not near water. When seasoned, it floats on water. It is used by Burmese in preference to any other for handles of chisels and tools, also for helves of axes and hatchets. It is a very hard, fine-grained wood, unequalled for such tools as chisels which are struck with a hammer or mallet. This wood is of a yellowish-white in colour, with patches of black interspersed. It is always procurable in the markets.—*Captain Dance.*

SOY. Tsiang-yu, Chin.; Soya, Jap. A well-known sauce made from the Soja hispida, which grows in China and Japan. In Java it is procured from the Phaseolus radiatus, the green gram, haree moong, or putchay payroo of India. The beans are boiled soft with equal quantities of wheat or barley, and left for three months to ferment; salt and water are then added, when the liquor is pressed and strained. Its price is about 6s. per gallon in the London market. Genuine soy is well flavoured, thick, brown, and clear, and when shaken in a glass, it should have a coat on the surface of a bright yellowish-brown colour. The best is exported from Japan. The flavour and ingredients of soy vary considerably, even among the people who make it, and much of that exported is supposed to be more or less adulterated. Chinese use the Soja hispida pulse when ripe for the manufacture of an oil, and give the remnant of the grain, together with stalks and leaves of the plant, as a food for cattle. Its cultivation has become general in Syria, Dalmatia, and Hungary. In the two former countries, the grain, after being allowed to ripen, is threshed out and roasted, and then employed for making coffee. In China, the grains are soaked till they swell and become soft, and then cooked like the small sort of beans. In other places, the seeds are set in a very damp, watery soil, and kept in darkness till they sprout up into a long white stalk, 4 or 5 inches high, which is then cut and served up after the manner of a salad. A sort of cheese, consumed in quantities by the poorer people both in China and Japan, is made from Soja hispida.

SOYMIDA FEBRIFUGA. *Ad. de Juss.*

Swietenia febrifuga, *Roxb.*	S. rubra, *Rottler.*
Swamy, ... Can.	Patranga, . . . Sansk.
Bastard cedar, . . Eng.	Shem, ... Tam.
Rohuna, Rohitaka, Hind.	Sumi, Somi, Somida, Tel.
Rohuni, Rheyn, . Mahr.	

This large forest tree is a native of all the central and southern parts of India. The wood is red-coloured, light, and easily worked, is reckoned durable and strong, and good for indoor or cabinet purposes, but not adapted to those requiring exposure to sun and weather. Captain Beddome says it never rots underground. The bark is useful in intermittent fevers, where astringent tonics are applicable, but of very questionable efficacy as a true antiperiodic for mild ague, in which, doubtless, like all other astringent tonics, it will often succeed; it should be given in the form of extract. Mr. Broughton says that the substance to which the bark owes its bitter taste has the properties of a resin. It is of a yellowish-white colour when pure, is sparingly soluble in water, but is insoluble if the water contain acids; it is soluble in alcohol, ether, and benzol, but these liquids do not completely separate it from foreign substances.

SOZNI, a bed-cover quilted or embroidered in a pattern; the word literally means lily pattern, from Susan, a lily.

SPAIN, Espana, the ancient Hispania, a country in Europe, part of which was long held by Arabs. In the East Indies Spain holds the Philippine Islands. In 1519 the Spaniards laid claim to the Banda (United), or five (really ten) Nutmeg Islands, and the Moluccas, or five Clove Islands, as falling within the line of their sovereignty laid down by the Pope in 1493. From 1505 the Court of Spain had earnestly engaged in the project of finding a way to the Spice Islands from the west, and in 1508 Pinzon and De Solis sailed in search of them, and explored the coasts of South America to the 40th degree of south latitude. It was not, however, until 1515 that the Pacific was discovered, when Nunez de Balboa, who in 1510 had been placed in command of the Spanish colony of Santa Maria on the Gulf of Darien, having gone on an expedition into the Sierra de Quarequa, suddenly from one of its peaks beheld a boundless sea outstretched below him. From the narrow isthmus on which he stood, it extended east, and west, and south, until it was lost in space. This was the true discovery of America, that it was not, as Columbus believed to his dying day, the easternmost coast of Asia, or the West Indies, but a separate continent; and as this new world, with the vast waste of ocean beyond it, swam into his eyes, and all its moral significance flashed upon his mind, kneeling down upon the scarped summit from which he gazed, Balboa raised his hands to heaven in silent wonder and gratitude at the immensity of the revelation which had been made to him. Then, descending with all his men to the shore of the great South Sea, and wading up to his waist in its waters with his drawn sword, he claimed possession of the infinite expanse in the proud names of Aragon and Castile. In October 1515, De Solis was again sent out to discover the Spice Islands from the west, and in January 1516 entered the Rio de la Plata, originally named Rio de Solis; its present name not having been given to the river until 1525, when Diego Garcia found some plates of silver, probably from the mines of Potosi, in the hands of the wild Indians on its banks. De Solis, having anchored in the mouth of the river, went on shore to explore the country inland, when he and eight of his men were set upon and massacred by the natives, and roasted and devoured by them in sight of his ships; whereupon the disheartened expedition returned to Spain. In 1517, Ferdinand Magellan, who, according to De Barros, had been present at the capture of Malacca, proceeded to Valladolid, and gave it as his opinion that the Spice Islands fell within the Spanish boundary, and undertook to take a fleet thither by the south of the American continent. Accordingly, in 1519, Charles V. gave him five ships for the purpose. Every one of them was accompanied by a Portuguese pilot; and the *Santiago* was commanded by Joao Serrao, an old Portuguese, on whose knowledge of the east, and especially of the Moluccas, of which they were in search, Magellan placed great reliance. On the 21st of October 1520, St. Ursula's day, he reached the cape, which he called Cabo de las Virgines, at the entrance of the strait now called after Magellan, but which he named San Vittoria, in affectionate honour of his own flagship. From many fires having been seen on the land south of the strait, he named it Tierra del Fuego. On the 27th of November he emerged from the strait into the open Pacific Ocean, and the cape which terminated the strait on his left (on Terra del Fuego) he named Cabo Deseedo (the Desired), now called Cape Pillar. On the 6th of March 1521 he discovered the beautiful islands to which, from the thievish propensities of their inhabitants, he gave the name of the Ladrones (Thieves); and on the 16th, the islands he called the Archipelago de San Lazaro, a name afterwards changed by Villalobos, in honour of Philip II. of Spain, to that of the Philippines. On one of these islands Magellan was slain in a skirmish with the natives, brought on by his proselytizing zeal, whereon Joao Serrao and Duarte (Odoardo) Barbosa were elected joint commanders of the expedition. (On Serrao's death, Caraballo was elected commander-in-chief.) On the 8th July 1521 they anchored before the city of Borneo; and on Wednesday, 6th November 1521, they at last descried the long-sought-for Molucca Islands, the object for the discovery of which, by a western route, their daring adventure was undertaken. On the 8th they anchored at Tidore. In the following December, of the two remaining ships of the expedition, it was resolved to send the *Trinidad* back to Spain by Panama and the Strait of Magellan, and to take the *Vittoria* home, under Sebastian del Cano, by the Cape of Good Hope. In order to escape the observation of the Portuguese, her course was steered so far south as the 42d parallel of latitude, but, with all their caution, they approached within five leagues of the Cape on the 6th of May 1522. On the 9th of July, when they reached the Cape de Verd Islands, they were obliged to put in at Santiago, where, to prevent the suspicions of the Portuguese being roused, they said that they had come across from America. It was here they discovered that in sailing round the world they had lost a day, for while by the *Vittoria's* log it was Wednesday the 9th of July, at Santiago it was Thursday the 10th. On the 6th of September the *Vittoria* arrived at San Lucar, the only survivor of the noble fleet which had sailed from the same port on the 20th of September 1519. The circumnavigation of the world, which had originated in the dispute between Spain and Portugal about the possession of the Moluccas, was completed, and the sphericity of the earth demonstrated, against the authority of Cosmas Indicopleustes, which had ruled geographers for nearly a thousand years. Charles V. received Del Cano with the highest distinction, and conferred on him a life pension and a coat of arms, which bore branches of clove, cinnamon, and nutmeg, with a globe for the crest, and the motto, 'Primus circumdedisti me.' In regard to the dispute as to the respective rights of Portugal and Spain to the Spice Islands, the king of Spain was confirmed in the possession of the Philippine Islands, but the Moluccas were finally surrendered to the king of Portugal, under the agreement that the king of Portugal lent the king of Spain 350,000 ducats in respect of any claims which the latter might have on the Moluccas, in the possession of which the king of Portugal was not to be disturbed until the money was repaid, which was never done. By a decree of the Cortes, dated 19th October 1868, the monetary system is as follows:—100 centimes = 1 peseta = 9½d. Gold coins—100, 50, 25, 20, 10, and 5 pesetas. Silver coins—1, 2, 5 pesetas, and 20 and 25 centimes. Bronze coins—1, 2, 5,

and 10 centimes. 100 pesetas = £3, 19s. 2d.; 10 pesetas = 7s. 11d.; and the other coins in proportion. A 25 peseta gold piece is nearly equal to a sovereign.—*W. A. Browne, The Merchant's Handbook; Sir George Birdwood's Researches; Marsden's History of Sumatra*, p. 9.

SPANIEL. King Charles' breed of spaniels is supposed to have been brought from Japan by Captain Saris in 1613. Dogs always form a part of a Japanese royal gift.

SPARROWS. There are several species of this bird, of the genera Passer, Petronia, Pyrgita, of the family Fringillidæ. They are not used as food by any of the races of their native countries, though there is not much difference of flavour in a 'sparrow pie' between Petronia stulta and Gymnoris flavicollis. Homely Passer domesticus is every bit as good as an ortolan. Very much depends on the cooking. Sparrows in China are let loose as an act of merit.

SPARTO GRASS, Lygæum spartum, *Loefft.*, has been introduced into India. The grass sells in London at £5 the ton. In 1868 England imported 95,000 tons from Spain. It is the alfa of Algiers.

SPARUS, a genus of fishes in the Keeling Islands which graze in shoals, with their strong bony jaws, on the tops of the coral branches.—*Darwin, Res.* p. 553.

SPATHIUM CHINENSE. *Lour.*

Aponogeton monostachys, *Linn.*, *Rh.*

Gotti gaddi, Kottika, TEL. | Namma dumpa, . . TEL.

The roots are much prized as food by the Yanadi. In Tenasserim one or two species of Spathium grow in the water, one of which, found on the banks of the Irawadi, has roots nearly as good as potatoes.—*Mason; Voigt.*

SPATHODEA ADENOPHYLLA. *Thw.* Heterophragma aden, *Seem.* Palol, SINGH. A small tree occasionally found in Ceylon gardens. It was introduced into the agri-horticultural gardens at Madras.—*Thw.; Gamble.*

SPATHODEA ARCUATA. *Wight Icon.*

Dolichandrone arcuata, *Hooker.*

Mer-singi, . . . MAHR. | Ran-palai maram, . TEL.

A small or middle-sized tree common in the Walliar forests of Coimbatore, and in the forests on the Bombay coast. It furnishes a strong wood, used by the turner.—*Wight; Gibson; Gamble.*

SPATHODEA FALCATA. *Wall., List.*

Bignonia spathacea, *Roxb.* | Dolichandrone falc., *Seem.*

A small or middling-sized tree, Wodi, TEL., common in most of the forests in the Madras Presidency, in Mysore, in Chanda and Bombay, but not found in Ceylon or Burma. The timber is light-coloured, strong, and serviceable, and much used by the natives for agricultural purposes, building, etc.—*Beddome, Fl. Sylv.; Gamble.*

SPATHODEA RHEEDII. *Spreng.*

Dolichandrone Rheedii, *Seem.*

Mer-singi, . . BOMBAY. | Kanpillay maram, TAM.?
Tha-khoot-ma, . . BURM. | Vodi, Udi, Wodi, . TEL.
Nir pongilam, . MALEAL. | Ganora karra, . . ,,
Deya danga-gass, SINGH.

This small thin tree is a native of the west of Ceylon, the Peninsula of India, the forests of the Northern Circars, of the Godavery, and British Burma. The trunk is very irregular. In a full-grown tree the average length of the trunk to the first branch is 30 feet, girth 7 feet. A cubic foot weighs 23 to 35 lbs. It is strong, of a whitish colour, and in Burma, where it sells at 8 annas the cubic foot, it is used for yokes and cart-poles.—*Beddome; Dr. Birdwood; Gamble.*

SPATHODEA ROXBURGHII. *Spreng.*

Bignonia quadrilocularis, *Roxb.* | Heterophragma Roxburghii, *D.C.*

A large tree, with a straight trunk, and of considerable height. It is a native of the Northern Circars, flowers in the hot season, with spreading branches and large rose-coloured and delightfully fragrant flowers, and is remarkable for its leaves. Roxburgh says its wood is used for many purposes by the natives, but other accounts describe it as worthless. Buffaloes are very fond of the leaves.—*Roxb.; Voigt; Beddome; Gamble.*

SPATHODEA STIPULATA. *Wall.*

Bignonia stipulata, *Roxb.* | Dolichandrone stipulata.
Bet-than, Paet-than, BURM. | Palol, ... SINGH.

A large tree of British Burma; wood used for bows and spear handles, also for paddles and oars. Weight, 48 lbs. Length of the trunk, 20 feet; girth measured 4 feet.—*Roxb.; Dr. Brandis; Gamble.*

SPATHOLOBUS ROXBURGHII. *Bentham.* A gigantic creeper of the Sub-Himalayan region and of Burma. Its fruit and its red kino-like gum are used. It is one of the Leguminosæ.

SPAWN OF FISH. In Canara, men search in the rivers for hillocks wherein spawn has been left, gather the ova, and make it into cakes, which are considered a delicacy. The eggs of the kari and kalmuri are highly prized.

SPEKE, JOHN HANNING, discovered the source of the Nile. He was a captain in the Bengal army. Born 4th May 1827, at Orleigh Court, near Bideford, in the west of England; died near Bath, on the 16th September 1864, at the age of 37, from a shot from a fowling-piece. As a subaltern officer in the Indian army, he had made the campaign of the Panjab under Lord Gough, and in the four successive battles of Ramnuggur, Saddelapur, Chillianwalla, and Gujerat, acting throughout this terrible time with Sir Colin Campbell's division. He used to make hunting and exploring expeditions over the Himalayas, and in the untrodden parts of Tibet. A botanist, a geologist, and especially a lover of natural history, he toiled to collect specimens of every animal, every plant, and every mineral to be found in those wilds; shooting, collecting, and mapping the country as he went, he taught himself the knowledge required to enable a traveller to appreciate and utilize all he sees. In one journey to Africa he served under Captain Burton. The latter fell sick, and Speke went on and struck upon the great lake which is the fountain of the Nile, reaching it from the north, and proving what was at first but a sagacious conjecture, by tracking the river upwards to this same lake from the south. Speke began his march into Africa in the end of 1854. He named the inland sea the Victoria Nyanza. A column has been erected to his memory in Kensington Park, London.

SPERMACETI.

King-yu, ... CHIN. | Wallrath, . . . GER.
Blanc de Baleine, . FR. | Spermazet, . . . RUS.
Sperme de Baleine, ,, | Esperma de Ballena, SP.

The produce of a species of whale, Physeter

macrocephalus, found chiefly in the Pacific and Indian Seas. Spermaceti is found combined with oil in several cetacea, but it is most abundant in the sperm whale, and this is the commercial article. The head of the sperm whale has in front of the skull a solid mass of soft, yellow, and oily fat, based on the upper jaw, and forming the front and lower part of the snout. In a whale of large size this part weighs between two to three tons. The cavity called the case lies beneath and to the right of the spouting canal, and corresponds to nearly the entire length of that tube. It has a white fibrous lining, and is filled with a very delicate web of cellular tissue, containing in large cells a limpid and oily fluid, which is liberated by the slightest force, and has yielded up to 14 barrels, or 500 gallons. It is chiefly spermaceti. When newly obtained from the case of the whale, it is fluid, transparent, nearly colourless, without odour, and has a bland and creamy taste, not unlike that of very fresh butter. At the ordinary temperature of the tropics at sea (77° to 80°), it does not concrete, but in low temperatures, or when cast into cold water, it assumes a dull white hue and the consistence of lard.—*F. D. Bennett, Whal. Voyage*, ii. pp. 160, 223–26.

SPERMACOCE HISPIDA. *Linn., W. and A.*

Spermacoce hirta, *Rottl.*	Spermacoce scabra, *Willde.*
Shaggy button weed, ENG.	Nutti churi, . . . TAM.
Thartavel, . . MALEAL.	Madana, ... TEL.

This plant grows in Southern India, and is employed in decoction as a substitute for sarsaparilla. Roxburgh mentions 12 species.

SPHÆRANTHUS HIRTUS. *Burm.*

S. Indicus, *Roxb.*

Dookkon, . . . ARAB.	Zakhm-i-Hyat, . . HIND.

Gurak moondi, . . ,,	

This is common in Bengal and the Peninsula of India, near water-banks, at Ajmir, and in the Eastern and Central Panjab. Has a round pink blossom, considered heating, cleanses the blood; aphrodisiac; also opens the bowels; the flower and seed capsules are used. The roots, small oblong seeds, and receptacles are reckoned by the Vyteans amongst their anthelmintics, and are prescribed in powder. In the Panjab the officinal flowers are highly esteemed as alterative, depurative, cooling, and tonic.—*Gen. Med. Top.; Ains.; Powell; Stewart; W. Ic.*

SPHÆROCOCCUS, a genus of plants belonging to the natural order Algæ. A great number of species have been described, including amongst them some of the most useful of the sea-weed tribe. These species have been distributed by later botanists into the genera Rhodomenia, Gigartina, Chondrus, Gelidium, and Phyllophora; and the genus Sphærococcus has as species the S. coronopifolius, S. cartilaginaccus, and S. lichenoides. The genus Chondrus affords the Carrageen moss, which is so much used as an article of diet. Some assert it is a species of Gelidium with which the swallows build their nests in the Eastern Archipelago, and which are so highly valued as articles of food by the Chinese. The gelatinous substance of which the nests are composed, however, seems really to be a natural secretion from the swallow itself.—*Eng. Cyc.* See Sea-weed; Thallogen.

Sphærococcus cartilaginaceus, *var.* setaceus. Shih-hwa-tsai, CHIN. It is met with in the Chinese market, and resembles the Carrageen or Irish moss.

Sphærococcus lichenoides, *Agardh*, Ceylon moss, occurs in the coast of the S. Andaman, Termooklee Island, and is met with in China, being frequently cast up by the sea. It may be very well substituted for the Gracillaria lichenoides, *Greville*.

Spezj, Spezierie, . . IT.	Bahar, ... TURK.

Spice is the term applied to all pleasant or pungent aromatic vegetable substances, used for flavouring food and condiments, and largely employed by the people of India. They are obtained from the barks, the dried seeds, the fruit, flower-buds, and root-stocks of different plants. The chiefly aromatic barks are the cinnamon and Cassia lignea; the seeds and fruits include pepper, cardamoms, coriander, cummin seed, star anise, chillies, mustard, nutmegs, mace, pimento, etc. The flower-buds of some furnish cloves and cassia buds, and the roots supply ginger and turmeric.

SPIDERS comprise the genera Clubiona, Theridion, Pholcus, and Epeira. But in common language the Mygale are called crab spiders and mason spiders, also trap-door spiders. Scorpion spiders are of the genus Galeodes; Tarantula spiders belonging to the genus Lycosa of Latreille. L. tarantula, *Latr.*, inhabits Southern Italy, and L. melanogastra Southern France. A spider, remarkable for the bright yellow colour of its web, a species of Epeira, was found by Captain Sherwill 1000 feet high on the summit of Maruk, south of Monghir. Some of the webs, including the guy-ropes, were from 10 to 12 feet in diameter, the reticulated portions being about 5 feet, in the centre of which the spider, of a formidable size and very active, sits waiting for prey. In one web was found entangled a bird about the size of a field lark, and eight young spiders feeding on the body. It was near the centre of the web, and its wings had been completely pinioned by the entwined web. The old spider sat about a foot above the bird. It was six inches across the legs, and had a formidable pair of mandibles. Walckenaer described a spider of large size under the name of Olios Taprobanius, which is very common in Ceylon, and conspicuous from the fiery hue of the under-surface, the remainder being covered with grey hair so short and fine that the body seems almost denuded. It spins a moderate-sized web, hung vertically between two sets of strong lines stretched one above the other athwart the pathways. Some of the threads thus carried horizontally from tree to tree at a considerable height from the ground, are so strong as to cause a painful check across the face when moving quickly against them, and more than once in riding Sir J. E. Tennent had his hat lifted off his head by one of these cords. The webs of spiders are strong enough to entangle and hold the small birds on which they are said occasionally to feed. Small house lizards will also be seized and devoured by these spiders. —*Blyth, Soc. Jour.*, 1850; *Gosse; Tennent's*

SPIKENARD.

Sunbul, ... Arab.	Nardum, ... Lat.
Bal-chur, Beng., Hind.	Nardin, Narawastu, Mal.
Kan-sung-hyan, . Chin.	Shad-a-maugie, . Tam.
Narden, Nardos, . . Gr.	Jettamassie, . . Tel.
Jettamansi, Chebur, Guj.	

The Nardostachys jattamansi of the Himalayas and mountains of High Asia is now generally recognised to be the spikenard of the ancients. Its root is of a blackish colour, and resembles the bushy tail of the ermine. Its odour is strong and fragrant, and is much esteemed by all eastern nations. Spikenard has enjoyed celebrity from the earliest period of the world's history. It was esteemed by the Greeks and Romans, and is mentioned in the Bible, the Nard of Scripture being supposed to be the same substance as the Nardos of the ancients. It contains about 9 per cent. of balsamic resin, and a small proportion of essential oil. It is valued in hysteria, and is a perfect substitute for valerian. See Sunbul.

SPILANTHES ACMELLA, *Linn.*, Hin-ka-la, Burm., is planted by the natives of Tenasserim for its medicinal properties.—*Mason; Voigt.*

SPILANTHES OLERACEA, *Jacq.*, Akarkarha and Pokarmul, Hind., is a powerful stimulant and sialagogue, useful in headache, paralysis of the tongue, affections of the gums and throat, and for toothache, also in fever, cough, and special diseases.—*Powell; Voigt.*

SPILSBURY, Dr., a Bengal medical officer who wrote an account of fossil bones on the Nerbadda in Bl. As. Trans.; also Geological Notes on the Valley of the Nerbadda, ibid., 1833, 1834, 1839.—*Dr. Buist.*

SPINACIA, a genus of plants belonging to the natural order Chenopodiaceæ.

Spinacia oleracea, *Wight.*, spinach.

Ispanaj, . Arab., Pers.	Isfanaj, Isfanak, . Hind.
Sag-paluk, Paluk, Hind.	Vusayley-keeray, Tam.

Much used as a vegetable in India, and the people consider it to be cooling. It grows in rich soil, requires plenty of water, should be sown thinly in drills or broadcast every month or six weeks; may be had during the hot months in sheltered situations, with attention to water.—*Powell; Jaffrey.*

Spinacia tetrandra, *Roxb.*, spinach.

Choolai, . . . Hind.	Dumpa bachchali, . Tel.
Isfanaj, ... Pers.	Mattu bachchali, . ,,

The Hindustani name is indifferently given to Spinacia tetrandra, used in curries, and Amarantus polygamus. The former is a common sort of native greens, and, when boiled, resembles spinach; it is procurable nearly all the year round. The latter is much cultivated, is sown broadcast in beds from June to March. The leaves are sold in the bazar at one pie the seer.

New Zealand spinach is a hardy annual, with fleshy leaves and numerous branches, and as a spinach it is as valuable as the orache. If watered, grows freely, and produces leaves in the hottest weather.—*Riddell; Jaffrey.*

SPINIFEX SQUARROSA. *Spreng., Rh.*

Sea pink, Water pink, Eng.	Ravana suruni misalu, Tel.

This curious dicœcious grass grows abundantly on the Coromandel coast. When the seed is ripe, the spherical head of the plant is detached and blown before the wind. See Isaiah xvii. 13, and Psalm lxxxiii. 13. Its great seed-balls are known to the Singhalese as Maha-Rawana-ræwula, the great beard of Rawana or Rama. See Sand-binding Plants.

SPIRÆA, a genus of plants of the natural order Rosaceæ. S. hypoleuca, S. cullosa, and S. canescens, *Don*, occur in the N.W. Himalaya. S. Kamtschatka is used in Kamtschatka to make an alcoholic spirit.

SPIRÆA SORBIFOLIA. *Linn.*
S. Lindleyana, *D.C.*

Kapru, Ranthul, Chenab.	Dodal, ... Rami.
Kikri, . . . Jhelum.	Kangtar, Boogli, Sutlej.
Karkni, . . . Kaghan.	Krust, Kanoori, ,,
Dor, Bat-pis, . Kangra.	Sar-lakh-tei, Tr.-Indus.
Sarbashtai, . . Pushtu.	

A shrub with fine white flowers, the handsomest and one of the commonest of the Himalaya, from 4000 to 10,500 feet, up to and beyond the Indus. It resembles the English meadow-sweet, especially S. Kamtschatka.—*Stewart.*

SPIRIT-WORSHIP prevails throughout all the south-east of Asia, amongst the Hindus, the Buddhists, the Chinese Taoists, and followers of Confucius, in Japan with the disciples of the Siutu faith, and in all these regions among all the uncultivated aboriginal races. It is the one general cult of all these regions. When Thales taught that the whole universe is pervaded by spirits, he was proclaiming both the primitive and the existing faith of all India and China. In India worship is performed to the Bhuta, Vetala, Pisacha, Preta, Yaksha, Vidyadhara or sylphs, and in Burma to the Nat and to Rakshasa or demons.

Ancestor-worship is a recognition of the existence of spirits freed from the body. This faith was exhibited from early times by the Egyptians; it was as a faith deeply seated, also, in Greece and Rome; it has always been and still is the popular religion of the Chinese, and it forms the belief of all the aboriginal races, and of most of the Brahmanical Hindu religionists of India. The Egyptian belief in the transmigration of the human soul into other bodies, and into the bodies of animals, was connected with it. Animal-worship dates from the earliest times in Egypt, and soon after the time of Menes (B.C. 3400) it became the established religion throughout the empire. This form of faith had evidently its origin in their belief in the identity of the principle of life in all living beings, and in the identity of the soul with life; grounded on a consciousness of moral responsibility and a belief in the personal indestructibility of the human soul. They believed that at the point of death, the deeds of this life are examined, judged, and rewarded or punished; in the latter case condemned to be degraded from human to animal life, and one regulated by brutal instincts.

In China, the spirits of deceased ancestors are periodically worshipped, and on weighty occasions are consulted. In their marriage processions, the titles of the ancestors are carried along with other displayed articles, and they are invoked to bless a newly-wedded couple. Their tombs are kept in repair. Spirits are summoned to attend to their worshippers. According to the Brahmanical Hindus, two things are indispensably necessary to the sacrificer in performing a religious ceremony,—several lighted lamps, and a bell, and the bell is sounded when the deity or spirit is supposed to be summoned.

The Kyoung-tha of Chittagong are Buddhists. Their village temples contain a small stand of bells, and an image of Buddha, which the villagers generally worship morning and evening, first ringing the bells to let him know that they are there. The Sintu temples of the sun goddess in Japan also contain a bell, intended to arouse the goddess, and to awaken her attention to the prayers of her worshippers.

Among the Tiperah of Chittagong, if a man die away from home, his relatives stretch a thread over all the intermediate streams, so that the spirit of the dead man may return to his own village; it being supposed that without assistance spirits are unable to cross running water, as Burns in his Tam-o-Shanter says, 'a running stream they daurna cross;' the streams are therefore bridged. A somewhat similar idea existed in Europe, and it occurs also in the Fiji Islands, and among the Kol of Nagpur. All diseases in men and in cattle are attributed to one or two causes,—the wrath of some evil spirit who has to be appeased, or the spell of some witch or sorcerer. The Circassians and some of the Chinese have also the same belief. Hence it is that insane people are in many countries regarded with so much reverence, since they are looked on as the special abode of some deity.

Hindus, in the Srad'ha ceremonial, make offerings to the spirits of their ancestors. After death, the spirit of the Hindu is conveyed by the messenger of Yama, through the air, to the place of judgment. After receiving sentence, it wanders about the earth for twelve months, as an aerial being or ghost, and then takes a body suited to its future condition, whether it ascend to the gods, or suffer in a new body, or be hurled into some hell. This is the doctrine of several Puranas; others maintain that immediately after death and judgment, the person suffers the pains of hell, and removes his sin by suffering, and then returns to the earth in some bodily form.

In the Srad'ha or funeral ceremonies of the Hindu of Gujerat, the son repeats before an image many incantations, to the following purport: Before thee, O Brahma, I perform my father's Srad'ha. He next offers to his deceased parent, on a plantain-trunk dish, seven blades of kusha, and seven of durva grass, flowers, dry rice, cloth, red paint, and a brass lamp. He next cleanses the place before him with his hands, and, scattering upon it a few blades of kusha grass, presents other offerings to his deceased father, repeating many incantations, which contain the names of the offerings, and an invitation to the deceased father to partake of them. From what remains of these offerings, the son makes two balls, the smallest of which is offered in the name of those of the family who have not received the benefits of the Srad'ha, and the other he presents to his deceased father, and then lays it on some kusha grass as before, and worships it, presenting flowers, water, etc. He now places both hands open against a lamp which is burning, as though he were warming himself; after which he prostrates himself to the sun, and presents a fee of from one rupee to five to the officiating Brahman, salutes all the Brahmans present, and makes prostrations to the saligram, which he afterwards sends into the house. All the offerings are sent to the houses of Brahmans. The family now return home, where an entertainment is provided, both for Brahmans and others, consisting principally of sweetmeats, milk, curds, sugar, cakes, etc. The Brahmans eat in an enclosed spot, the uninvited Brahmans near the house, and the poor in the street or road. At the close of the entertainment, if the person making the Srad'ha be rich, he gives presents to all those who are not guests, whether Brahmans or the poor, and thus dismisses them. The next morning he dismisses the learned Brahmans with presents; to the most learned he gives five rupees perhaps, and to those less learned one. The Brahmans who were invited are also dismissed with presents. About one o'clock a feast is provided for the relations, who are dismissed the next morning with presents of money, cloth, etc., and on this day another dinner is provided for nearer relations. At the close of the Srad'ha a number of mendicant musicians play on certain instruments of music, and sing verses celebrating the revels of Krishna; they are often dismissed with large presents. The next day the family return to their accustomed diet; but the sons, for twelve months after the decease of the father, must refuse every gratification, and cook with their own hands, or eat what has been prepared by a wife or some near relation dwelling in the house. Gunga Govindu Singhu, a person of the writer caste, head-servant to Mr. Warren Hastings, expended, it is said, 12,00,000 rupees at his mother's Srad'ha; and Raja Nuvu Krishna of Calcutta, nearly as much in the Srad'ha for his mother. This expense was principally incurred in presents to the Brahmans, such as bedsteads, at two or three hundred rupees each; water pitchers of silver and gold, some worth a thousand, and others two thousand rupees; dishes of silver and gold, valued at one to five hundred rupees. At the time of bathing, the person who will perform the Srad'ha purifies himself by putting water, seeds, fruits, etc., in parts of the trunks of four plantain trees, repeating incantations. He sends some of this water home to purify the family.

The monthly Srad'ha for the first year after the death of the parent, is upon a very small scale, and the expense is from ten rupees to twelve annas. Besides these, there are other Srad'has for deceased ancestors, as in every month at the total wane of the moon; on the last fifteen, or ten, or five days of the moon in the month Bhadra; once during the first fifteen days of the moon in Ugruhayunu; and again in the same month, in Poushu and Maghu, on the eighth of the wane of the moon; in Voishakhu and Shravunu, on any of the first fifteen days of the moon. At some of these times all Hindus perform this ceremony; at other times only a few persons. The expense is trifling, as scarcely any persons are entertained at them. In this Srad'ha the flesh of cows was formerly offered in sacrifice. In the Kali-yogu this is forbidden, and that of deer or goats is substituted; herbs, bread, and barley are used, as also fresh rain water.

Mr. Forbes in the Rasmala (p. 378) says, The Bhut and Pret are said to reside, at the place where funeral piles are erected, in trees which are not used for sacrificial purposes, such as the tamarind and the acacia, in desert places, at the spot where a death has occurred, or at cross-

roads, for which reason people set at these places food for the use of the Bhut. He is most at a loss for water to drink. The pipe of his throat is, it is said, the size of the eye of a needle, and he is continually thirsty enough to drink twelve gallons of water. The watchmen of Wuroon Dev, however, are stationed wherever there is water, to prevent the Bhut from drinking, and their thirst is therefore as continual as it is intense. The Bhut feed upon all kinds of refuse. The goblin of the best class, he, that is to say, whose funeral ceremonies have been duly performed, but who has been debarred from liberation by his own intense affection for earthly objects, is called a Poorwuj Dev, and resides in his own house or in a sacred fig tree. The Poorwuj Dev, like the Etruscan Lar, or the Grecian hero, is regarded as hovering about his former abode, averting dangers from the inhabitants, and bestowing blessings upon them. He frequently appears in the character of a serpent, and is then treated with great respect by the inmates of the house near which he resides. It is a common belief in Gujerat that serpents are always to be found wherever a hoard is buried, and that these are the Bhuts of the deceased owners who have remained upon earth from affection to their wealth. The Arabian Jin also frequents cross-roads, and the fairies of the Scottish Lowlands carry bows made of the ribs of a man buried where three lairds' lands meet, as in 'A Midsummer Night's Dream' (Act. iii. Sc. 2) :—

'Damned spirits all,
That in cross-ways and floods have burial.'

Desert places, in Gujerat, correspond exactly with the dry places (ανυδρων τοπων) assigned to the evil spirits in Matthew xii. 43, Luke xi. 24. And all eastern races believe them to be the resort of evil spirits. In Gujerat the Bhut and Pret can take possession of a corpse, and speak through its mouth; they exhibit themselves in the form which they possessed when living; they enter into a living man, and cause him to speak as they please; sometimes they afflict him with fever, or various other diseases; sometimes they assume the forms of animals, and frighten people by suddenly vanishing in a flash of fire; sometimes, remaining invisible, they speak in whispers. A Bhut has been known to come to fisticuffs with a man, and to carry a man off and set him down in a distant place. It is even said that women are sometimes found with child by Bhuts.

The Jain Shastras teach a different doctrine in regard to spirits from that which is taught by the Hindu Puranas. They assert that there are eight kinds of Vyuntur Dev, and eight of Wan-Vyuntur Dev, who reside below the earth. Each of these has two Indra, or sovereigns, ruling respectively the northern and southern regions, and who are in colour black, white, or blue. The Vyuntur and Wan-Vyuntur Dev appear upon earth, where they possess the bodies of men, exhibit themselves in various shapes, and perform many strange feats, whence their common name of Kutohulee (or surprising) Dev. Below them reside the Bhuwunputi Dev, who also sometimes appear on earth. Below them again are the Narkina or infernal spirits. Above this earth, in the atmosphere, five kinds of Dev of splendour reside,—the sun, moon, stars, and others. Above them, in twelve Dev-Loka, the Dev who ride in chariots dwell; these, sometimes drawn by their own desire, or compelled by charms, appear in the world, but they do harm to no one. Above them are nine classes of Grivek, and five of Unootur Vimani. They are of great power, and never visit the earth. Men who have lived a life of austerity and righteousness are born again in these classes of upper or lower Dev, but the sinner is not born in them. In olden times, a man who had performed the rite of Uthum by fasting for three days, acquired the power of calling the Dev to him, but now, it is said, these Dev never visit the earth at any one's call.

In Gujerat, when people wish to prevent the removal of a jungle tree, they paint a trident upon it with vermilion, or, if that be inconvenient, they collect a number of stones and throw them down at the root of the tree. Whoever, after this, passes by, is sure to add a stone or two to the heap, believing the place to be the residence of a Bhut. If the place be one where stones are not easily procurable, a bit of old rag is thrown so as to adhere to the tree, and every one who passes by follows the example once set. They call the spot the 'Rag-uncle's.' In places where trees are scarce, these uncles are very common, and people are much annoyed with the dread of touching them. The name uncle is given to the Bhut by women as a term of respect. Men are less superstitious. Similarly, whenever in any place there is a hillock or mound upon which a few stones have been piled one above the other, every passer-by considers himself bound to add a stone to the heap, considering that the spot is the residence of some Dev, and that if any one raise a little temple there, his house will flourish. Such monuments are also set up in places where a person has been slain or wounded. Cairns of this kind are frequently connected with the dead,—

'Many a cairn's grey pyramid,
Where urns of mighty chiefs lie hid.'

The Bhut-bali of the Hindus is an offering to evil spirits, ghosts. On the 14th of the dark half of the month Aswin, the Bhuta Chaturdasi offerings are made to evil spirits, and the Bhuta devata is a spirit worshipped as a deity.

As an instance of the Hindu belief in the powers of demons, Col. Tod tells us that Udi Singh died thirteen years after his inauguration on the cushion of Joda, and thirty-three years after the death of Maldeo. About A.D. 1645, when he was returning home from court, he beheld a girl whom he determined to have. But she was the daughter of a Brahman, an Aya-Punti, or votary of Aya-Mata, whose shrine is at Bai-Bhilara. These sectarians of Maru, he says, are very different from the abstinent Brahmans of Bengal, eat flesh, drink wine, and share in all the common enjoyments of life with the martial spirits around them. And as there was no other course by which the father could save her from pollution but by her death, on that he resolved. He dug a sacrificial pit, and, having slain his daughter, cut her into fragments, and mingling therewith pieces of flesh from his own person, made the homa or burnt sacrifice to Aya-Mata, and as the smoke and flames ascended, he pronounced an imprecation on the raja: 'Let peace be a stranger to him! and in three pahar,

three days and three years, let me have revenge!' Then exclaiming, 'My future dwelling is the Dabi Baori!' sprang into the flaming pit. The horrid tale was related to the raja, whose imagination was haunted by the shade of the Brahmau, and he expired at the assigned period, a prey to unceasing remorse.

Up to the close of the 15th century, it was customary in England to place food for demons. In the dialogue of Dives and Pauper, printed by Richard Pynson in 1493, among the superstitions then in use at the beginning of the year, the following is mentioned:—'Alle that take hede to dysmal dayes, or use nyce observances in the newe moone, or in the new yeere, as setting of mete or drynke by night on the benche to fede alholde or gobelyn.' So in British Indla to the present day, with Hindus, Chitapinda or funeral cakes are offered at the pile, at the time of burning the body. On the fourth day after decease, Chaturtha-pinda, funeral cakes, are again offered. On the 13th day after decease, the pret, or newly-embodied spirit, is compelled by the emissaries of Hades to set forth on his journey towards Yampur. Its attendants aggravate the miseries of the wicked soul by their threats and upbraidings. They cry to the pret, 'Come quick, evil one! We will carry you to Yama's door; we will cast you into Kumbheepak, or some other hell!'

In the south of India, spirits of the air are numerous: celestial vestals, which frequent cool shades and limpid streams, help the sick, succour women in travail, guide the benighted traveller who has lost his way, shower blessings and flowers on happily married couples. The village Kannimar, or virgins, as they are styled in ordinary country parlance, are patrons of the village lassie afflicted with the tender passion, and watch with a motherly interest the progress of stedfast honourable loves. There is nothiug which they hate so intensely as the violatiou of matrimonial vows, or the infringement of maidenly honour. Rude statues of potter's work representing these champions of virtue, may be seen iuvariably under some pleasant shade, by the side of a rippling rivulet or the placid surface of the village tank. When the sun is at its greatest height, and man and beast seek some friendly shelter, these fair celestials, screened from profane mortal sight, quietly perform their ablutions in the tank or brook close by, divesting themselves of their flowing ethereal robes. Their appearance to mortals in bodily form always portends something extremely good or evil; but as they are naturally inclined to acts of kindness and mercy, such interviews prove, in the majority of cases, harbingers of prosperity and conjugal felicity. Instances are not wanting of these sylvan beauties, through forgetfulness to bind the wood with their magic spell, allowing themselves to be surprised by the strolling cowherd ere they have risen from their midday bath. Every year, as the husbandman sows his graiu after the precursory showers of the rainy season, he vows to set apart so much, a kalam (12 marcals), as a thank-offering, if the out-turn should prove as abundant as he prayed for. True to a farthing, the sale-procceds of the virgins' share is religiously laid by, to be made use of a month or two after the harvest, when the ryot, now at leisure, thinks of redeeming his vow at the shriue of the celestial fair one. At the appointed time, generally at night, the whole village wends in solemn procession to the sacred grove, with banners flying aud drums beating, and with all the paraphernalia of easteru worship. Rice is boiled, sheep are slaiu, amateur theatricals improvised, and the light hearts of the multitude rendered still lighter by potions of arrack.

Closely allied to the virgins are sundry village deities, mostly shrineless, the most important of whom are Mariammen, Bhagavati, Chakkammal, Muttaramman, and Dhwarapati.

The principal demons employed by wizards and necromancers are Karuppan, Maden, Patchee, and Irulappen. These assume any shape or colour, according to their masters' orders; and, most frequently, are carried from one place to another, attached to a magical ring, a tuft of hair, or to a baby's scull secreted in the wizard's bag. Sometimes they scour the country at night in quest of their victim, who is generally a rival magician, or one who has by word or deed incurred their master's displeasure. The demon is now a tiger, tearing the entrails of the hated victim; now an inceudiary, setting houses on fire; and very rarely does it appear in monstrous humau shape to kill or frighten or perform any other mischief. But if the pursued man possess a mightier demon, and the assailants be defeated, the latter vent their baffled rage and fury on their master himself. A few demons are so voracious that they snatch up with avidity balls of rice and curry thrown into the air; some so lascivious as to have human mistresses and concubines, and even to outrage the modesty of their occasional fair worshippers. At Bodinaikenur, in the Madura district, a Chetty bought of a magician a Malabar demon, for Rs. 90, it is said; but ere a day had passed since the transfer, the undutiful spirit fell in love with his master's wife, and succeeded in its nefarious purpose.

The European will-o'-the-wisp is the Tamil Kollevai Pai. Modern science calls them phosphorated hydrogen gas rising from dead auimal matter in differeut stages of putrefactiou, but the Hindu persists in calling them devils of a most malignant type. The explosive nature of the gas, before it has time to ascend higher than one's knees, gives it the appearance of jumpiug. In the middle of rice-fields, by the side of staguant pools, and especially in burial-grounds, do these spirits sing and dance and engage in their midnight orgies, to the no small terror and consternatiou of the simple village folks.

There are many more classes of demons, more or less violent, such as Khattarie, Bhudam, Pesasam, Mohinee or sirens, Jadamuni, and Etchilpai. Of the last two, the former occupies perhaps the highest, and the latter the lowest stratum of spirit life in the unseen world. The Jadamuni, as their name indicates, are the spirits of humau sages, who, by dint of extraordinary penance, were enrolled as an inferior set of gods. At midnight, wheu uot a sound of man, beast, or bird disturbs the calm, still air, these assume their humau shape. With their crests touching the skies, and their feet a few feet above the ground, they present a sufficiently hideous aspect, rendered still more horrible by long tresses of hair floating like serpents, tongues dripping with gore, and

eyes like glaring orbs, darting forth the intensest hatred and revenge towards the poor, hapless wayfarer who may happen to cross their customary beat. The Etchilpai are hungry as wolves, and yet without the power of obtaining food; they pick up the stray grains of boiled rice in Hindu kitchens, or snatch off morsels of food from people's heads, if they happen to carry it at night.

In the south of the Madras Presidency, localized demons have exercised a mysterious power for centuries. A man dies under the slightest exceptional circumstances,—and lo! his spirit goes abroad! It lurks in yonder hut, it crouches under yonder banyan tree. It must be propitiated with plantains or fruit, rice, or sweet toddy. There is an English ghost in Tinnevelly. It is the ghost of a Captain Pole, who died in the storming of the Travancore lines early in the nineteenth century. Mortally wounded, and retreating to the northward, he was left behind by his servants, and he breathed his last near a village in which, latterly, a mission of the C.M.S. has been established, and which is called Gospel Town, Suviseshapuram. After his death, he was deified by the simple instincts of the neighbouring Shanars. He has a rude hut to his honour; and the offerings which appease him are brandy and cheroots. He may be invoked. His opinion may be elicited.

Sir Bartle Frere accidentally found an order in existence at Government House, Dapurie, handed down by non-commissioned officers, for the native sentry on guard to present arms if a cat or dog, jackal or goat, entered or left the house or crossed near his beat during certain hours of the night, because it was the ghost of a former governor who was still remembered as one of the best and kindest of men. The raja of Wanparty, one of the Reddi race who have founded small principalities along the banks of the Kistna river, died in 1868 at Hyderabad. He had led a turbulent life, and retained to the last much of the spirit of his youth. At the close of that year, an outbreak of cholera occurred in that neighbourhood, which the people attributed to the spirit of Wanparty, and they made a clay image of him, riding on an elephant, and placed near him the figure of a Binjarni, and worshipped all with the great Mahabala sacrifice.

The superstitious fears of the Hindus extend to innumerable objects: they dread the wrath of the following invisible beings,—the messengers of Yama, bhuts, prets, pisacha, dakinee, yoginee, hakinee, yukhshu, rakshasa, shunkinee, gooma, brumhu-doitya, aluya, etc. They also fear the cries of the following animals, at particular times, and in certain situations, viz. jackals, owls, crows, cats, asses, vultures, dogs, lizards, etc. They also dread different sights in the air, and many kinds of dreams.

King James I. in the preface to his Demonology, says, 'They (magicians) can suddenly cause to be brought unto them all kinds of dainty dishes by their familiar spirit, since as a thief he delights to steal, and as a spirit he can subtilely and suddenly enough transport the same.' To obtain such a spirit for a familiar, the two following receipts were presented by a Hindu of the Peninsula as having been tried and found efficacious:—

In the dense darkness, at the time of new moon, let the person who would obtain a devil, walk naked into a lake, and, standing in the water up to his middle, repeat the mantra (a charm previously taught him by some proficient) the appointed number of times, taking care of his reckoning by casting into the water a pebble, a jasmine flower, or a pepper-corn, from a collection which he has previously counted and brought with him. At every repetition of the mantra, let him give himself a stroke with a rattan. The charm is to be repeated boldly, and without mistake, or the devil will certainly kill the charmer.

Or, go to the temple sacred to the demon whose services are required. Having closed all avenues by which so subtle a subject may escape, stand on the threshold of the temple, and boldly conquer the demon by a powerful mantra. Then you must raise the pedestal on which the image of the demon is placed, and take from under it the money placed there when the image was inaugurated. Instead of this money place there a copper plate, on which you have engraved a kolam (magical inscription). From that day the demon becomes your slave, and will perform for you any service, or bring you whatever you may require. Some say the spirit must, when caught, be confined in a little golden box, called a Simil. Examination of a manuscript book of spells, kolam, and cabalistic figures, collected by a Tamil man of low caste, shows that very many of the incantations commence with the sacred syllable Om! or the mantra 'Nama Sivayah,' salutation to Siva. The invocation is never addressed to either Brahma or Vishnu. The following is a specimen of a charm given by Mr. Murdoch:—

> 'Om! Adoration to the supreme power,
> Kali ratri, black night!
> To whom the bloody flesh of man is dear;
> Whose very form is fate and death;
> Seize, seize on the life of such a one.
> Drink blood! drink blood!
> Devour flesh! devour flesh!
> Make lifeless! make lifeless.
> Hum! Phut!'

The highest Brahman authorities have taught that the case of the devils themselves is not altogether hopeless. There is a well-known aphorism in the Sankhya, which is illustrated by the story of a devil (Pisacha), who was enlightened and obtained felicity by overhearing the religious discourse between Krishna and Arjuna. Burns, it will be remembered, expresses a like hope for the 'puir deil'—

> 'But fare ye well, Auld Nickie ben!
> O wad ye tak' a thought and men'!
> Ye aiblins might—I dinna ken—
> Still ha'e a stake;
> I'm wae to think upon your den,
> Ev'n for your sake.'

With the Burmese, the six lower heavens are occupied by Nat or Dewa, where good kings and virtuous people reside, and the Tha gyah min, or king of the Nat, visits the earth for three days at the beginning of the Burman year, 9th to 12th April. Perfectly distinct from these are the Nats of the house, the water, the air, and the forest. The Nats are everywhere worshipped, but this is denounced by devout Buddhists. With the Karen all nature is filled with Nats; and the Ka-Chin provide the Nat with pipes of spirit, sacrificed animals, hatchets, spears, bows and arrows, which

the Nats may use at their pleasure. In all Burma, especially among the Talaing or Mon (Mohn), and in the neighbourhood of the Geniolatric tribes, at the extremity of every village, the Yua-sohn, there is a Nat-sin, a shrine of every dimension, for the Nats of the neighbourhood, at which lamps, water-pots, and food are offered, with figures of Shway Pyiu-gyi, Shway Pyin-nge, the Nyi-daw, etc.

The Koh soung Nats, twelve in number, six good and six bad, six male and six female, provide a genius for each person. Min mahgyi is the guardian Nat of the house, and usually takes up his abode on the top of a house post, a pot of water being kept in the verandah for his use. Each village also has a guardian Nat. None of the lower class of Talaing would think of eating a morsel without first holding up his platter in the air and praying to the village Nat.

The spirit Moung Iwn Gyi is greatly feared. He lives in water, and causes death. They believe that persons who are executed, or have met with a violent death, become Nats, and haunt the places where they were killed. Every district has a Nat thoo-nge or spirit woman, called Nat-mehmma, who is consulted, and who dances at the Nat feasts.

With the Burmese, on the foundation of a new capital, there are always a certain number of people buried alive. They are supposed to become Nat-thehn, that their spirits haunt the place where they were put to death, and attack all persons approaching with malevolent intentions. In 1860, when the foundations of Mandalay city wall were laid, fifty-two persons were entombed, three under each of the twelve city gates, one under each of the palace gates and at the corners of the timber stockade, and four under the throne itself. By 1880 the virtue had largely evaporated, and it was resolved to replace them by six hundred victims; but the outcry in Europe restrained the king, and only a small number were sacrificed.

The Muhammadans of the S.E. of Asia believe in spirits, and in the science of dawat or exorcism, to which they have recourse to command the presence of genii or demons who, when it is required of them, cause anything to take place. The genii spirits are believed to reside in the lowest firmament, and possess the power of rendering themselves visible to human beings in any form they please. The evil spirits are called shaitan. The spirits of all Muhammadans are supposed to rest in the graves till the resurrection; being laid in the grave, the two angels on Nakir and Mankir interrogate the departed as to his life. Dogs, women, and horses are not allowed inside their burial-grounds. Annually, oblations, called Ooroos, are offered in the name of Mahomed, or in the names of the Pir or spiritual guides, or in the names of the Wali or saint. Khajah Khizr, a Muhammadan saint, often appears to travellers in different guises, but generally as an old man. The people of Sind believe in the Rijal-ul-ghaib; in Jin or genii; in Bhut, ghosts or disembodied spirits; in Ghul, or demons of the wilderness; in Pari, fairies; and in Dev, Rakas, and Pap, powerful fiends, correspounding with the Arab 'Marid.' The Dakini is the same as the witch of Europe, usually an old woman, decrepit, poor, of humble family, and angry disposition. She has the power of turning men into beasts, killing cattle, flying to any distance on a tree by reciting a mand (magical formula), and mounting a hyæna. The Bandh and Mann are frightful beings, half-female, half-hellish. They live in the hills and jungles, where they frequently appear to travellers, are covered with hair like bears, have large pendent lips, and live on fruits and herbs. The Shir is a creature of Satanic nature. He, generally speaking, appears like a low-caste man, very dark, tall, and frightful; sometimes as a headless body. He lives in the makām or burial-ground, where he lights fires, and amuses himself by throwing the brands about, frightening folk by vociferating their proper names, or pursuing them in the form of some beast. Hence their fear of approaching a burial-ground by night. The shaitan of Sind is only seen by learned and religious men; to them he appears as a young man of white complexion and handsome form, which he can change at discretion. In Sind, popular superstition has created the Marhun Machhi (mermen and mermaids). The science of Osteomancy is the Ilm-el-Aktaf (knowledge of the shoulder-blades) of the pagan Arabs and some Bedouin tribes of the present day, the Ilm-i-Shaneh of the Persians and Afghans, and is known to the shepherd Sindi and Baluchi by the name of Phannia-jo-fannu. The instrument of divination is the scapula of a sheep divested of its muscles and integuments, the speal-bane of the Scotch. The Ilm-i-Kāf, or palmistry, is common among Muslims and Hindus, but better known in Cutch than in Sind. The Sona-jo-Ilm, or knowledge of omens, taken from the flight of birds, the appearance of beasts, and other similar phenomena, closely resembles the art of the Indian Thugs. The Baluchi are considered great adepts in this branch of the occult sciences, and the Sindi have a short treatise upon the subject called Sungun-namo.—*Rajasthan*, ii. p. 662; *Burton's Scinde; Ward's Hindoos*, ii. p. 140; *Forbes' Rasamala*, ii. 378; *Lubbock's Civilisation; The Burman.*

SPITI is a subdivision of the Kangra district of the Panjab; area, 2100 square miles, consisting of an outlying Tibetan valley among the external ranges of the Himalaya, between lat. 31° 42′ and 32° 58′ N., and long. 77° 21′ and 78° 32′ E.; its apex lies at the point of convergence of the Kanzam ridge and the outer Himalayas, while the transverse ridge of Manirang, dividing the Kangra district from Bashahr State, forms its base. The higher peaks of the main chain rise 20,000 to 23,000 feet above sea-level; and even the villages stand at from 12,000 to 14,000 feet.

The population of Spiti in 1868 amounted to only 3024 persons, almost exclusively of Tibetan origin. The people belong to a kindred race with those of Lahoul. The language is almost identical, but the customs and religious institutions are not analogous. Spiti is approached from British territories and Kanawar by six different routes, and from Ladakh and Tartary by three routes, through the two chains of mountains. Many of the passes vary from 14,000 to 18,000 feet. The exports are wool, borax, salt, and blankets; and the imports are articles from the plains, and a great deal of iron. The resources of the land are locked up for more than six months in the rigorous winter. The inhabitants are obliged to repair during this inclement season to the lower and more genial latitudes in the valley of the Sutlej. The produce of the land in

Lahoul and Spiti does not suffice for the wants of the population. The people of Lahoul import grain from Kulu, and the valley of the Sutlej supplies the additional demands in Spiti. The barley of Spiti is hexagonal or six-sided, and the grain large and succulent. A liquor, called chang, is distilled in Spiti from barley, and sold at 30 puttahs for the rupee. A puttah is a liquid measure of 2 seers = ¾ of a pucka seer. They consume large quantities. Chang can be made from other grains besides barley; that made from rice is superior. The wealthier classes in Spiti, etc., use a weak spirit, called arrack, which is distilled from rice. When a person dies, the body is buried or burnt, or thrown into the river, or cut into small pieces and burnt; admonitions are made over the body to the departed spirit, such as, Do not trouble yourself, you cannot enter it (meaning the dead body); in summer it quickly becomes corrupt, in winter it freezes, and is too cold for you.—*Powell's Handbook; Gerrard's Kanawar*, p. 112; *Imp. Gaz.*

SPONDIACEÆ, the hog-plum tribe of plants, comprising species of the genera Spondias and Poupartia. They are natives of the East and West Indies, the Society Islands, and the Isle of Bourbon. The fruit of some of the species is eatable.

SPONDIAS ACUMINATA. *Roxb.* Ambut, Dukh. A most elegant middle-sized tree, with shining leaves. It grows on the western side of India, in all the coast and inland forests. The wood in its natural state is not of any value, but could be creosoted with advantage.—*Roxb.; Gibson; Riddell.*

SPONDIAS DULCIS, *G. Foster*, of the South Sea Islands, is a noble tree, growing to 60 feet in height. Its fruit, the 'rewa,' weighs over 1 lb., and is of delicious flavour.

This large tree grows in various parts of India, Ceylon, China, and Burma. The wood is soft, and of little use except for firewood. From wounds made into the bark, in the beginning of the hot season, very large quantities of a transparent juice issue, which soon hardens into a mild insipid gum, like gum-arabic. The fruit got its name from its resemblance to a mango, but it is harsh and little deserving of notice; on the Malabar coast, the root is considered as an emmenagogue; the bark is supposed to be of use in dysenteric affections, and a decoction of the wood serviceable in gonorrhœa. The Karens have a tradition that in those golden days when God dwelt with men, all nations came before him on a certain day, each with an offering from the fruits of their land, and the Karens selected the hog-plum for their oblation, which gave such offence, that God cursed the Karen nation, and placed it lowest among all the nations by whom they are surrounded. The fruit is eaten raw when ripe, and before ripe is pickled, put into curries, made into tarts, etc. The fruit when fully ripe is of a pale-yellow colour, of a pleasant flavour, but a little too acid. The sour leaves are used in chatnis. In China, juice of the fruit enters into several nostrums for the hair, the glory of the Chinese men and women.—*Roxb.*

There are several genera of sponge animals, which naturalists arrange under the class Porifera, as Spongia, Spongilla, Halichondria. There are many species both in fresh and in sea waters, but that used for economic purposes is from Spongia officinalis, *L.*, of the Mediterranean, known as Turkey sponge, and the W. India or Bahama sponge, from Spongia usta.

The substance used as sponge is traversed by many canals, the pores of which open out on the surface. The canals, in life, are lined with a soft gelatinous matter up to the opening of the pores, and the pores are kept open by numerous siliceous or calcareous spicula, needle-like bodies. Whilst the animal is alive, the water, entering into the sponge by the pores, circulates in the canals, and is finally expelled through the larger orifices.

The sponges used in Europe are known in commerce as the fine Syriau, fine Archipelago, fine hard or Grecian, white sponge, gelatine sponge, brown sponge of Barbary, also called Marseilles or Turkey sponge, the Spongia communis of naturalists, which is fished on the coast of Tunis, and used for cleaning rooms, and the sponge of Salonica.

Turkey sponge, the Spongia officinalis of Linnæus, of the natural order Spongiæ, is the peculiar skeleton, whole, and is produced in southern and eastern seas, though imported into Great Britain from Turkey. The imports are in cases, each containing about 500 sponges of various sizes, averaging in value about 35s. per pound. The finer kind, suitable for toilet use, is found in the Levant,—the best on the coast of Northern Syria, near Tripoli, and secondary qualities among the Greek isles. These are either globular or of a cup-like form, with fine pores, and are not easily torn. They are got by divers, who plunge from a boat many fathoms down, with a heavy stone tied to a rope for sinking; the man snatches the sponges, puts them into a net fastened to his waist, and is then hauled up. Some of the Greeks, instead of diving, throw short harpoons attached to a cord, having first spied their prey at the bottom through a tin tube with a glass bottom immersed below the surface waves.

The sponges of the coasts of Asia Minor and Syria are dived for by the people of Calymnos, Chali, Syme, and other islands near Rhodes, from May to October. In May a little fleet of caiques sets sail from Calymnos, manned by the greater part of the able-bodied of the male population, and they return in the autumn, and sell to their richer townsmen who trade in sponges, and these are despatched to Trieste, Syria, or Smyrna. A

diver can descend to 30 fathoms, and remain for three minutes. A caustic fluid at the root of the sponge is apt to cause ulcers. They are cleaned and dried in the fields, and then filled with sand to ensure equality of sales. Numerous species are known, with soft porous bodies, traversed by tortuous canals, but the officinal sponge is imported from the Mediterranean and Red Sea; some of the coarser kinds from the West Indies. Those of the British seas would probably answer equally well for burning. When collected, sponge contains numerous small fragments of corals and minute shells; from these it must be freed before it can be used. Sponge is composed of gelatine and coagulated albumen. When burnt, its ashes give carbon and some silex, carbonate and phosphate of lime, carbonate of soda, chloride and iodide of sodium, bromide of magnesia, with a little oxide of iron.

Coarse, soft, flat sponges, with large pores and great orifices in them, come from the Bahamas and Florida. A small schooner, towing several little boats, with two men in each, passes slowly over the sponge ground. One man sculls, the other squats, hanging over the boat's side, with his head in a bucket, the bottom of which is of glass. Through this he looks down into the deep, still water, and sees the sponges lying 20 or 30 feet below. Then, assisted by the other man, he aims a stroke with a three-pronged hooking-fork at the end of a long pole. The sponge is grappled and lifted into the boat. When the boats have loaded the vessel, the sponges lying on board, covered with a gelatinous mass, from which oozes a slime of disgusting odour, give forth a very disagreeable smell; but the animal soon dies. The sponges are laid out in the sand that this putrefying outer substance may rot off, after which they are roughly cleaned and scraped, pressed, and packed in bales. Much further washing is required, and a chemical process of bleaching. American sponges being so inferior to those of the Mediterranean, it has been sought to utilize them for the stuffing of cushions and mattresses, or for the felting of hats and winter coats, but with poor success.

Sponge is gathered from the rocks of Vizagapatam at about 12 feet below the sea.

Assistant-Surgeon Carter, of the Bombay army, described four species of fresh-water sponges in the tanks of Bombay. They are attached to floating bodies, or on the inclined and under surfaces of the rocks, never at the bottom, and sometimes so high up as to be covered with water only for three or four months.

In the Sea of Japan, a very remarkable sponge (the Hyalonema) is met with. It is a bundle of spicules, like threads of glass, which seem artificially tied together, and on the surface of which is invariably found a polyp of the genus Polythoa.

The remarkable hooked, branched, or star-like spiculæ in many sponges are believed to have the function chiefly of rendering them unpalatable to other creatures.

The sponge-making animal, like some other zoophytes, can be multiplied by cutting it in pieces, leaving each piece to live and grow by itself. It is stated by Dr. Oscar Schmidt, of the University of Gratz, that in three years, at a cost of £8, 8s., 4000 sponges can be raised, worth £16, which would seem to be a profitable industry.—*Phipson; Carter.* See Venus Glass Flower.

A small erect tree of Ceylon, the Coromandel coast, common along the foot of the ghats, occurring in the Kenneri forests, Salsette, in Nepal, Bengal, Sylhet, and Assam. The under bark consists of numerous reticulated fibres, and forms a natural cloth used by the Garo race, and its leaves are used for polishing horn.—*Roxb.; Voigt; Flor. Andh.; Mr. W. Jacob.*

SPONIA POLITORIA. *Planch.* A plant of the Darjiling Terai, Sikkim, Oudh, Salt Range. Wood used for charcoal, leaves to polish wood and horn.

SPONIA WIGHTII. *Planch.*

Kanghi . . of AMBALA.	Mini, ... TAM.
Marni . . . of BEAS.	Gadda nelli, . . TEL.

This tree is common throughout the Presidency of Madras, and is occasionally planted by coffee planters for shade because of its rapid growth; it ascends the mountains to above 5000 feet elevation. The wood is soft and white, but makes about the best charcoal for gunpowder. This tree springs up in all places where heavy, moist forests are cleared away for coffee or other purposes, although there may not be a plant of it within miles. It occurs as a small tree very sparingly in the Siwalik tract up to the Beas, and occurs also in the Salt Range occasionally west of the Jumna; in some parts of India, its exceedingly harsh, rough leaves are employed to polish wood and horn.—*Stewart; Powell; Bed. Fl. Sylv.*

SPOOKDIER, DUTCH, the ghost animal of Menado, is provided with sharp-nailed toes on its four legs for climbing in trees. It is about eight inches high, covered with greyish hair; has large, flabby ears, piercing eyes, and a long, thin tail, on which the hair stands out at right angles.

SPRENGER, ALOYS, M.D., a medical officer of the Bengal army; a philologist; a native of the Tyrol, and born about the year 1813. He arrived in Calcutta in September 1843, and in 1845 was appointed Principal of the Dehli College. He translated Masudi's Meadows of Gold, edited Abd-ur-Razaq's Dictionary of Sufi Terms, and superintended the translation into Urdu and printing of about thirty books of science and history. In 1848–49 he drew up a catalogue of the library of the king of Oudh, about 10,000 MSS. volumes of Arabic, Persian, Pushtu, and Hindustani. He wrote an incomplete life of Mahomed, 1851; a Dictionary of Arabic Technical Terms; Ibn Hajur's Biography of Persons who knew Mahomed; and other works.

SPRINGS. The Aryan Hindu and the non-Aryan tribes who occupy British India, continue to worship springs and fountains, and other natural objects. This has been a custom with many races. The fountain of Egeria, the Fontinalia Romana, the Aquæ ferentinæ, and the sacred wood where the Feriæ Latinæ were celebrated, were under the especial protection of some divinity. Pausanias says that at Phocis in Achaia, there was a fountain called Hama, consecrated to Hermes, near which thirty enormous straight stones had been erected at a very remote period, when, instead of images, the Greeks adored blocks of stone. Such was also the religion of pagan Ireland.

There are ten hot-water ponds within two miles of the old town of Ataran, with a temperature of 130° Fahrenheit. At the forks of the Tenasserim about four miles below Matah, are hot springs highly charged with sulphuretted hydrogen gas.

On the margin of the granite range east of Tavoy are many saline thermal springs, with temperature up to 196°.

A mineral spring is described in the Saugor taluk, Nuggur division of Mysore.

Around Hazaribagh, for about 130 miles in every direction, many places are literally teeming with hot springs.

Other springs, several of them sulphurous, others thermal, occur in the Salt Range; at the base of the Himalaya; in Northern and Western Sind; in Gujerat; in the valley of the Nerbadda, and in the Konkan.

There is a sulphurous spring at Chaunch near the terminus of the Grand Trunk Road; and three miles off a much more abundant and hotter one, called Tantloie, on the banks of the Damuda; also hot springs at Lakarakunda and at Kisshun, Bun, Buklesir, and Sita Kund at Monghir.

The Zungsum mineral springs, beyond Kanawar, are impregnated with salt, alum, and iron.

The Koop or mud volcanoes of Rama Chandra are at Hinglaj, west of Kurachee, and others at Cheduba. There are hot springs at Pir Muggen, others at the Lukkee pass, and the Garm-ab is in the Bolan pass.

SPRUCE, Dr., an eminent botanist, native of Welburn in Yorkshire, who aided Mr. Clements R. Markham, C.B., in introducing cinchona plants into British India, 1860–1865. The British Government in 1877 rewarded him with a pension of £50 a year.—*Markham.*

SPRY, HEN. H., a medical officer of the Bengal army, distinguished for his scientific attainments. Suggestions for extending the Cultivation and Introduction of Useful and Ornamental Plants, with a view to the Improvement of the Agricultural and Commercial Resources of India, Calcutta 1841.

SQUALIDÆ, a family of fishes of the section Chondropterygii, which includes the various species of sharks. The shark's body is elongated, tapering gradually from the head to the tail, or but little dilated in the middle. The male sharks are smaller, and differ externally from the females in possessing two elongated appendages, one of which is attached to the hinder edge of each of the ventral fins, the uses of which are not known. Some species of sharks bring forth their young alive, whilst others are enclosed in oblong semi-transparent horny cases, at each extremity of which are two long tendrils. These cases are frequently found on the sea-shore, and are called sea-purses, mermaids' purses, etc. They are deposited by the parent shark near the shore in the winter months. The convoluted tendrils, hanging to sea-weed or other fixed bodies, prevent the cases being washed away into deep water. Two elongated fissures, one at each end, allow the admission of sea-water; and the young fish ultimately escapes by an opening at the end near which the head is situated. For a short time the young shark continues to be nourished by the vitelline fluid contained in the capsule attached

to its body by the connecting pedicle, till, having acquired the power of taking food by the mouth, the remains of the ovum are taken up within the abdomen, as in birds and some other animals. See Sharks.

Squill is a perennial bulbous-rooted plant found on the shores of Spain, Portugal, north of Africa, the Levant; and one species occurs on the coasts of India. The bulbs are pear-shaped, and vary in size from that of the fist to the compass of a child's head. The root is very nauseous, intensely bitter, acrimonious, and causing inflammation when rubbed on the skin. It is one of the most useful remedies in the Materia Medica.—*M'C.; Faulkner.*

The Indian squill resembles the true squill in medicinal virtues. Farriers are in the habit of using it, in conjunction with other articles, for horses, in cases of strangury and fever. It grows in abundance in waste, sandy soils.—*Ains.*

SQUIRRELS belong to the genus Sciurus. The E. Indian species are—Malabaricus, maximus, Elphinstonei, macrouroides, macrourus, lokriah, barbei, Europæus, laticaudatus, lokriodes, palmarum, tristriatus, Layardi, sublineatus, M'Clellandi, ephippium. Sc. Layardi eats the coffee berries; it is common in Ceylon; the pulp alone is digestible, and the coffee-beans are dropped on logs of wood and on the ground. Sc. Tennentii is peculiar to Ceylon. Its dimensions are large, measuring upwards of two feet from head to tail. It is distinguished from the Sc. macrourus by the predominant black colour of the upper surface of the body, with the exception of a rusty spot at the base of the ears.

Sciurus maximus is the Malabar squirrel. Its upper parts and external surface of the limbs are of a bright chocolate-brown colour. Length about 33 inches, of which the tail measures rather more than one-half. This richly-coloured species is the largest of the true squirrels. It haunts among palm trees, and is stated to be very fond of the milky juice of the cocoanut, as well as of the solid part of the nut. In captivity, it is tame and familiar; but it tries its teeth upon most substances that come within its power, and should be guarded against accordingly.

Sciurus macrouroides, *Hodgs.*, a gigantic squirrel, abounds throughout the Burmese countries and Malayan Peninsula, and northward to the Assam Hills and those of Sikkim and Nepal. It has a pale variety in the Malay Peninsula.

Sciurus macrourus, *Forster*, the common large squirrel of the western districts of Ceylon, also met with in Travancore and other neighbouring districts of continental India, becomes extremely tame, chiefly perhaps remarkable for its singularly loud and harsh voice. Indeed, the voice would seem to be an excellent criterion of specificial distinction among the Sciuridæ. This animal carries its tail in the same peculiar manner, curled round on one side, as is observable in Sc. purpureus and Sc. bicolor, and doubtless all others of the same group.

Sc. Elphinstonei is the red squirrel of the Western Ghat. They soon become very tame. The palm squirrel, also, Sc. palmarum, soon becomes very tame.

One group of the squirrels, of large size and rich colours, is peculiar to S.E. Asia as far as Borneo, some of them wherever there are large and lofty forests.

Flying squirrels are species of the genera Pteromys and Sciuropterus—

Pt. magnificus, *Hodgson*, S.E. Himalaya.
Pt. inornatus, *Is. Geoff.*, N.W. Himalaya.
Pt. cineraceus, *Blyth*, Burma.
Pt. elegans, *S. Muller*, Java.
Pt. nitidus, *Geoff.*, Pen. Malacca.
Pt. petaurista, *Pallas*, Pen. India.
Pt. Philippensis, *Gray*, Philippines.
Sciuropterus alboniger, *Hodgson*, Nepal.
Sc. caniceps, *Gray*, Nepal, Sikkim.
Sc. fimbriatus, *Gray*, Himalaya.
Sc. fuscocapillus, *Jerdon*, Travancore.
Sc. villosus, *Blyth*, Sikkim, Bhutan.
Sc. spadiceus, *Blyth*, Arakan.
Sc. Phayrei, *Blyth*, Pegu.
Sc. genibarbis, *Horsf.*, Malayana.
Sc. Horsfieldii, *Waterhouse*, Malayana.
Sc. sagitta, *L.*, Malayana.

With the flying squirrels, the skin of the flanks is extended between the fore and hind feet, forming, when expanded, a wide parachute. They have long, bony, or cartilaginous appendages to the feet, which serve to support the lateral membrane. Pt. petaurista lives principally on fruits; it and Pt. inornatus have been seen take a flight of sixty yards.—*Blyth; Jerdon; Tennent.* See Sciuridæ.

SRADDHA. SANSK. Faith. In Hindu mythology, daughter of the sage Daksha, wife of the god Dharma, and reputed mother of Kama deva, the god of love.

SRAD'DHA, as commonly understood, are obsequies paid by Hindus to the manes of deceased ancestors, to effect, by means of oblations, the re-embodying of the soul of the deceased after burning his corpse, and to raise his shade from this world (where it would else, according to the belief of the Hindus, continue to roam among demons and evil spirits) up to heaven, and then deify him, as it were, among the manes of departed ancestors. In the ceremony, food and water are offered to the deceased ancestors of the sacrificer, or to the Pitri or manes collectively. The *Preta* or *Dasa-pinda* Srad'dha is an offering of a ball of rice to a deceased person, by the next-of-kin, increased by one daily, for ten days. The *Adya* Srad'dha is the first obsequial ceremony after a person's decease. The obsequies performed monthly, on the day of the new moon, are called *Anwaharya* Srad'dha. The social or legal uncleanness of the Hindu is called Asauch, and occurs from the death of a relative or the like. The day preceding a Srad'dha is held as a fast-day, and called Ativasa. The Ekadasi Srad'dha is a presentation of offerings on the 11th day after demise. The Masika, or Anwaharya, is performed monthly for a year on the day of demise, and the Sapinda or Sapindi Karana on the first anniversary of a person's death. The Abhyu dayaka Srad'dha

is an offering to deceased ancestors, or to the manes collectively, on some prosperous event, as the birth of a son or the like. The proper seasons for the worship of the manes collectively are the dark fortnight or period of the moon's wane, the days called Ashtakas, or the eighth lunations of the dark fortnight of the four months of the cold weather, the summer and winter solstices, and vernal aud autumnal equinoxes. The idea involved is a belief in the prolonged separate existeuce after death of the body of the spirit or ghost that it may hover about its former dwelling, and be gratified by offerings of food. It consists of three distinct rites,—(1) the daily Srad'dha in propitiation of the ghosts of remote ancestors (pitri); (2) the monthly Srad'dha, for immediate paternal ancestors; (3) the funeral Srad'dha, for a near kinsman, within a certain period after death.—*Coleman*, p. 162; *Moor*, p. 75; *Wilson's Glossary*. See Hindu; Shraddha; Spirit-Worship.

SRAMA, the performance of asceticism. Sramana, a Buddhist monk, in Burma called Phoungye, in Siam a Talapoin. Sramana is the appellation of the Buddhist and Jaina ascetics, known to the later Greeks as Sarmanes, Sarmanæ, or Germanes. The ordinary application of the word Brahman means a theologist or divine, and is derived from Brahm, the divinity.—*Strabo*, xv. pp. 7-20.

SRAOSHA, in Parsee belief, an angel who appeared to Zoroaster.

SRAVAKA, a layman of the Jaina persuasion, and Savanga Dhamma laho hodu, or Sravaka Dharma labha bhavatu, as used by Jivasiddhi in one place, are the ordinary salutations a Jati or religious Jain proffers to the laity.

SRAVANA. Sansk. The fourth month of the Hindu solar year, July—August, when the sun is in the sign Carcataca, auswering to the Tamil Audi; also the fifth month of the luni-solar year, owing to that sort of year beginning with Chaitra. The fifth of Sravan is the Nagpanchami, or day set apart for the propitiation of the chief of the reptile race, the Naga or serpent. On this festival, at Udaipur, as well as throughout India, they strew particular plants about the threshold, to prevent the entrance of reptiles. Sravana, also the 22d lunar mansion.

SRAVANA-BELGOLA, a village in the Hasan district of Mysore, 35 miles from Chenraipatam, and 33 miles N. by W. from Seringapatam. Close to the village, on the summit of Chandrabetta, a syenite hill 500 feet high, is Gomateswara, a nude Jaina image 70 feet 3 inches high, which must have been cut from the solid rock; the arms and legs are ornamented with wreaths of flowers, the features are pleasing, the hair curled, unlike that of the natives of India. A pagoda has been built round the image. Even at the present day the Jains are numerously represented in the village of Sravau-belgola, which they are locally reported to have colonized during the reign of Chandragupta in the 3d century B.C. On the hill of Indrabetta in this neighbourhood are many ancient temples and inscriptions cut in the rock, with characters a foot long. The Ballala dynasty lasted from the 10th to the 14th century A.D. Their capital was Dwaravati-pura, the ruins of which are still to be seen scattered around the village of Hallabid. The earlier kings professed the Jain faith, but the finest temples were erected to Siva by the later monarchs of the line. While the Ballalas were at the zenith of their power, the whole of Southern India acknowledged their sway. In 1311, a Muhammadan army under Kafur, the general of Ala-ud-Din, sacked Dwaravati-pura, and returned to Dehli laden with spoils. The Ballala prince escaped to Tondanur in Mysore, and the dynasty continued to exist for sixty years more.

SRAVASTI, in Pali Sawatthi or Sewet, a city in ancient Oudh, now called Sahet-Mahet. It is on the Rapti, aud is famous for Buddha's preaching. Its position, though one of the most celebrated places in the annals of Buddhism, long puzzled the best scholars. The ruined city of Saheet-Mahet is situated between Akaona and Balrampur, at 5 miles from the former and 12 miles from the latter, and at nearly equal distances from Bahraich and Gonda. Sravasti is said to have been built by Raja Sravasta, the son of Yuvanaswa of the Solar race, and the tenth in descent from Surya himself. Its foundation therefore reaches to the fabulous ages of Indian history long anterior to Rama.—*Cunningham's India*, p. 408.

SRI, a name of Lakshmi, the goddess of prosperity, the Ceres of the Latins, but is also very frequently used as an adjective, meaning illustrious. Sri is the Venus Aphroditus of the Indians, born like the Greciau Venus from the sea. Sri is often written Sree, Shri, and Shree. It is prefixed to the names of Hindu deities, Srimata, Sri-swami. All Hindu books are commenced with this word, written at the top of the first page, as an invocation to Ganesh, the god of learning, to favour the undertaking. It is similar to the Greek and Roman invocation of Jupiter, the alif initial at the top of the first page by the Muhammadans, the Laus Deo of the Christians. Sri is now a Hindu honorific appellation, answering to Lord when applied to deity, and Mr. when used for man. Sri Rangapatnam is the Hindu name of Seringapatam. In all letters to Hindus, Sri is prefixed as an honorary appellation; and if the writer wish to be very respectful, he will repeat the word two or three times, as Sri, Sri! Jayaram. According to the Hindus, every city has its own Sri, its own fortune or prosperity, which in former times seems to have been represented by an image with a temple of its own. The practice amongst the ancients of considering a city under the protection of a well-known divinity is more familiar to Europeans, but an analogous superstition with that of the Hindus also prevailed amongst the polytheists of Europe. Thus in the seven chiefs before Thebes, the Theban women seek their shrines of the gods who are the guardians of the city.—*Hind. Theat.* ii. p. 64. See Krishna; Lakshmi.

SRI-CHUND, a son of Nanuk, founder of one of the sects of the Sikh faith. See Sikh.

SRI-DAMA-CHARITRA, a modern drama in five acts, by Sama Raja Dikshita, on the sudden elevation to affluence of Sri Daman, a friend of Krishna.—*Dowson*.

SRI DANDI, author of the Kavya Darsa or Mirror of Poetry, a work on the Ars Poetica.

SRI DHARA SWAMI, author of commentaries on the Bhagavat Gita, Vishnu Purana, etc. —*Dowson*.

SRI-HARIKOTTA, an insulated jungle tract of alluvium and marine deposit, in the Nellore district of the Madras Presidency. It lies between the Pulicat lake and the sea, stretching from Coromandel to Durgarazpatnam; and it contained in 1871, 13,578 inhabitants. Its people, the Yanadi, are a wild race, and speak a dialect of Telugu. When they first came under the notice of the British authorities in 1835, they lived upon roots and jungle produce; but they have been partially reclaimed since then, and now maintain themselves by cutting firewood.—*Imp. Gaz.*

SRI HARSHA lived in the 11th or 12th century A.D. He was a sceptical philosopher, author of the Naga-Nandana, a drama in five acts, which has been translated by Boyd. He also wrote the Uttara Naishadha-Charita or Nai-Shadhya, a poem on the life of Nala, king of Nishadhiya; it is one of the six Maha-Kavya or great poems of the Hindus. Sri Harsha's Neshadha relates the marriage of Nala, king of Neshadha, with Damayanti, daughter of Bhima, king of Vidarbha. It is esteemed the most beautiful composition in the Sanskrit language. Nalodaya wrote a continuation of it. The adventures of the couple constitute an episode in the Mahabharata, and are the subject of a novel in prose and verse by Trivikrama Bhata, entitled Nala-Champu or Damayanti Kat'ha. The Nala and Damayanti was translated into English by Mr. Kindersley of Madras.—*Dowson; Ward*, iv. 386.

SRI-KANTA, a mountain peak in Garhwal State, N.W. Provinces, lying in lat. 30° 57′ N., and long. 78° 51′ E., enclosed by a great bend of the Bhagirathi river; it is a sharp and lofty peak, 20,296 feet above sea-level, visible from Saharanpur, a distance of 105 miles in a straight line.

SRI-KRISHNA is the 9th, and Sri-Rama the 7th, incarnations of Vishnu, as a Kshatriya and a Dwarf Brahman. The anniversaries of these incarnations are observed.

SRI-MAHADEVI, mother of Sankaracharya, expelled her caste for adultery.—*As. Res.* xvii.

SRINAGGUR, in lat. 34° 31′ N., long. 74° 51′ E., the capital of Kashmir, is 5276 feet above the sea, in the valley of the river Jhelum, which divides the city into two equal parts, that are connected by seven bridges. The average breadth of the river is about 887 yards, and its depth during the summer season is about 18 feet. The city is surrounded by low, swampy tracts, which render it unhealthy. The population numbers about 150,000,—20,000 being Hindus, and the remainder Muhammadans. There are many places of historical interest, made famous by Asiatic and European writers. It contains the tomb of the mother of Zain-ul-Abidin, who died in the 15th century; the shrine of Syed Ali Hamadani, and the Jama Masjid, capable of holding 60,000 persons. The Takht-i-Suliman Hill overlooks the city. On the top is a shrine called the Sankaracharya temple, originally Buddhist, built by Jaloka, son of Asoka, about B.C. 220. Hari Parbat, an isolated hill on the northern outskirts of the city, is about 250 feet high, and is crowned by the fort and surrounded by a wall 20 feet high, both built by Akbar about A.D. 1590, at a cost of a million sterling.

The Sher Garhi, within the city, contains the royal palace.

The Dal or lake of Kashmir, on the N.E. side of the city, is about 5 miles long, 2¼ miles broad with an average depth of about 10 feet.

The Shalimar Bagh was laid out by Jahangir; the Nasib Bagh, another picturesque pleasure-ground, is said to have been first planned by Akbar.—*Imp. Gaz.*

SRINAGGUR, the capital of Garhwal, in lat. 30° 14′ N., and long. 78° 37′ E., was built in the 16th century, formerly the residence of the rajas. It is on the south bank of the Alaknanda, about 20 miles above its junction with the Bhagmutty at Deo Prague, where a strip of level ground stretches along for three or four miles, forming the valley known by the same name as the town. The people of Garhwal are Bhot, dwelling in the passes and their neighbourhoods, at heights above 6000 feet. The pass-men state that ridges which, within the memory of man, were covered with forest and pasture lands, are now covered with snow, showing the extension of the snow zone. The Bhot, here as elsewhere, is an agriculturist, and is assisted by slaves, who live under the roofs of their masters.

SRINGAVERA, the modern Sungroor, a village on the north bank of the Ganges, in ancient times inhabited by Nishada wild tribes, of whom Guha was the chief, by whose assistance Rama, Lakshmana, and Sita were ferried over to the south bank of the Ganges, a day's march above its junction with the Jumna.—*Hind. Theat.* i. p. 300.

SRINGIRI (or Sringa-giri) is in the Kadur district of Mysore, on the edge of the Western Ghats, in lat. 13° 25′ 10″ N., and long. 75° 17′ 50″ E., on the left bank of the Tunga river. Population (1871), 1661. In the 8th century, Sankaracharya settled here, bringing, it is said, from Kashmir, the image of Saradamma or Saraswati. The spiritual throne which he founded has been handed down to the present day. The Magani of Sringiri, in the upper valley of the Tunga, forms an endowment of the math or monastery over which the guru presides, and a monthly grant of £100 is allowed in addition by the Mysore State. Several large festivals are held during the year, each attended by from 3000 to 10,000 people, who are fed at the expense of the math.—*Imp. Gaz.*

SRIPADA or Serapada, or holy footprint, the name given in Ceylon to the footstep of Buddha, on the mountain Sumanakuta or Adam's peak, in lat. 6° 51′ N., and long. 80° 35′ E.; top of peak, 7385 feet, or 7420 feet; source of Kalu Ganga, 4345; bungalow, foot of Sripada peak, 5114 feet; lower limit of rhododendrons, on the slopes of Sripada, is 6550 feet. The Sripada is noticed in that part of the Mahawanso written by Mahanaama prior to B.C. 301. Models of it are shown in the Alu Wihara at Cotta and at other temples of Ceylon. The Buddhists are the guardians of the Sripada, but devotees of all religions meet here freely around the object of their common adoration, for Christians, Muhammadans, and Hindus have reverence for the impressions of feet. It is a natural hollow artificially enlarged, said by Buddhists to be the impression of a foot of Buddha. It is, however, called by the Hindus, Sripada or Sripad, meaning the divine footstep, Vishnu having, they say, alighted on that spot in his avatara of Rama. Hindus make pilgrimages to the Sripada in Ceylon and in other places, where similar proofs of an avatar or descent have been discovered.

Christians and Muhammadans ascribe the mark to Adam, and claim that footmark as of their religious relics.—*India in the 15th Century.*

SRI PARVATA means the same as Sri Saila, the mountain of Sri or Lakshmi, a place of sanctity in the Dekhan, near the Kistna river. It still retains its sanctity, but has lost the splendour it formerly seems to have possessed by the extensive remains of sculptures on the mountain, and great labour and cost bestowed on the causeways by which it is approached. It is described by Col. Mackenzie (Asiatic Res. v. and vi.), and was afterwards visited by Dr. Voysey. In this temple was one of the twelve great lingas, the worship of which seems to have flourished particularly up to the period of the first Muhammadan invasion. Prior to the same date, also, it seems to have been a place of great resort for Yogis or Saiva ascetics. —*Hind. Theat.* ii. pp. 18, 277.

SRIPERMATOOR, about 30 miles from Madras, famed for its great Vaishnava temples.

SRIPHAL, the fruit of Ægle marmelos, so called by Hindu poets, because it sprang, they say, from the milk of Sri, the goddess of abundance, who bestowed it on mankind at the request of Iswara. Anona reticulata is called Ramphal, or the fruit of Rama. Anona squamosa is named Sitaphal, after Sita.

SRI RANGAM, an island and small village six miles north of Trichinopoly, formed by the bifurcation of the river Cauvery and by the channel of the Colerun. A dyke or anicut has been raised on its eastern side to prevent the waters of the Cauvery entering into the Colerun. On it is a magnificent pagoda of the Vaishnava sect, composed of seven square enclosures, 350 feet distant from each other. Each enclosure has four gates with high towers, placed one in the centre of each side opposite to the four cardinal points. The outer wall of this temple is not less than four miles in circumference. The idol is named Ranganiyangar, and the accumulated wealth in gold, silver, gems, and precious stones is valued at 12 to 15 lakhs of rupees. The hall of 1000 columns measures 450 feet by 130 feet. The number of columns is 16 in front by 60 in depth, consequently are not more than 10 feet apart. The care of the shrine is under vestrymen, called Dharma-karta, who aided the Editor to form a civil hospital at the place. From 1751 to 1755, the island and its pagodas were the frequent objects of the contests between the French and the British. In those contests, several rocks, the Golden, Pine, French, and Sugar Loaf were the points of the battles.—*Orme; Imp. Gaz.*

SRI SAMPRADAYA, a Vaishnava sect founded about A.D. 1150, by Ramanujacharya. He was born at Perumbur, and studed at Kanchi or Conjeveram, and afterwards resided at Sri Ranga. He then visited various shrines, propagating his reformed views, and reclaiming the shrines for the worshippers of Vishnu, particularly the celebrated temple of Tripati. The sect worships Vishnu and Lakshmi and their several incarnations. They keep the salagrama fossil and tulsi plant in their temples and dwellings, and set up in their houses images of stone and silver, which are daily worshipped. The temples appropriated to Vishnu and his consort are resorted to, and pilgrimages are made to Lakshmi-Balaji, Ramnath, and Ranganath in the south of India, to Badrinath in the Himalaya, Jaganath in Orissa, and Dwaraka on the Malabar coast. This sect in general prepare their food individually and in private, and if a stranger's look fall on the food, the cooking is stopped and the food buried. They must not eat in cotton garments, but, having bathed, must put on woollen and silk. Their chief religious tenet is the assertion that Vishnu is Brahm, that he was before all worlds, and was the cause and creator of all. In opposition to the Vedanta doctrines, they deny that the deity is now of form or quality, but regard him as endowed with all good qualities and with a twofold form, viz. the supreme spirit Paramatma or cause, and the gross one, the effect, the universe or matter. Their doctrine is therefore called the Visishtha'dwaita, or doctrine of unity with attributes. In these assertions they are followed by most of the Vaishnava sects. They assert three predicates of the universe, comprehending the deity; it consists of Chit or spirit, Achit or matter, and Iswara or god, or the enjoyer, the thing enjoyed, and the ruler and controller of both. Besides his primary and secondary form as the creator and creation, the deity has assumed, at different times, particular forms and appearances, for the benefit of his creatures. He is, or has been, visibly present amongst men in five modifications,—in his Archa, objects or worship, as images, etc.; in the Vibahava or avatara, as the fish, the boar, etc.; in certain forms called Vyuha, of which four are enumerated, viz. Vasudeva or Krishna, Balarama, Pradyumna, and Amruddha; fourthly, in the Sukshma form, which, when perfect, comprises six qualities. Blood-offerings at the temples are prohibited by all Vaishnava. Their reward for good acts is laid down as the perpetual residence in Vaikunt'ha or Vishnu's heaven.—*Professor Wilson.* See Mantra.

SRI-VAISHNAVA, a Hindu sect, worshippers of Vishnu, in the form of the four-handed image Lakshmi - Narayana, holding the sankha shell, chakra discus, gada club, and lotus flower. The byragi ascetics of the sect wear pewar or ochre-coloured clothes, have a kanthi or sacred garland around their neck, also a rosary of the tulsi ocimum. They are one of the four Sampradaya or Vaishnava ascetic byragi. These are four in number,—the Ramanandi, Nimanuji, Madhava-charya, and Sri-Vaishnava. Some writers add the Valabhacharya, and others substitute it in place of the fourth. The Sri-Vaishnava are to the Vaishnava sect what the Sri-Saiva are to the Saiva. In the south of the Peninsula are two minor divisions, the Thengalay, whose monastery is at Tinnevelly, and the Vadagalay, whose chief temple is at Agobilam in the Cuddapah district.

SRI YEO, the divine spirit. See Arka.

SROTRIYA or Shrotriya, a Brahman well read in the Vedas, who teaches and expounds them.

SROTRIYAM. TAM. A village or village lands, held at a favourable rate by any subject as a reward for past services. A srotriyam grant gives no right over the lands, and the grantee cannot interfere with the cultivators so long as they pay their rents.

SRUGHNA, now Sugh, a famous ancient city on the old Jumna, near Jagadri.

SRUTA-BODHA, a work on Sanskrit metres, attributed to Kalidasa.—*Dowson.*

SRUTI. Sansk. In Sanskrit, literature revealed by a deity. It applies properly to the Mantra and Brahmana portions of the Veda, but later the Upanishads were included. See Sruta.

SRUVA. Sansk. The lustral spoon, figured as held in the hand of the god Brahma.

SSE-TCHOUEN, or the four valleys, also written Sze-chuen, is the largest province in China, and perhaps also the finest. Its temperature is moderate, both in winter and summer. The Yang-tze-kiang traverses the province from S.W. to N.E. Its fertility is such that it is said the produce of a single harvest could not be consumed in it in ten years. Numbers of textile and tinctorial plants are cultivated. On the hills are fine plantations of tea, of which all the best kinds are kept for the province, and the coarsest are sent to Tibet and Turkestan. Pharmacists from all the empire send their travellers to Sse-tchouen to lay in their stocks of medicinal plants. The wonders of Sse-tchouen are the Yen-tsing and Ho-tsing, wells of salt and wells of fire. M. Imbert, for many years a missionary in this province, but subsequently appointed Vicar-Apostolic in Corea, where he was martyred in 1838, says there are dozens of salt wells in a tract of country of about ten leagues long by four or five broad. The water of these wells yields 20 to 25 per cent. of salt of very acrid quality, so much so as often to inflame the throat to a painful degree. The air that issues from these wells is highly inflammable. If when the tubeful of water is near the top you were to present a torch at the opening, a great flame, twenty or thirty feet in height, would be kindled. This does happen sometimes through the imprudence of workmen, or in some cases from a malicious desire to commit suicide in company. Wells from which fire only, and no salt, is obtained, are called Ho-tsing, fire wells. A little tube of bamboo closes the opening of the well, and conducts the inflammable air to where it is required; it is then kindled with a taper, and burns continually. The flame is of a bluish colour, three or four inches high, and one inch in diameter. Here the fire is not sufficient to boil the salt, but at about forty leagues off there are much larger fire wells. Showmen often fill bladders with it, and carry it about the country; they make a hole in the bladder with a needle, and kindle it with a taper, to amuse lookers-on. This is no doubt what the chemists call carburetted hydrogen. Sse-tchouen province counts nearly 100,000 Christians, zealous and faithful in the fulfilment of their duties.—*Huc's Chinese Empire*, i. pp. 288 to 303.

STAGMARIA VERNICIFLUA. *Jack.*

Arbor vernicis, *Rumph.* | Kaya rangas, . Malay.
Black varnish tree, . Eng. |

A native of the Eastern Islands, but not very abundant in Sumatra, though occasionally found in the neighbourhood of rivers. The wood is of a fine dark colour towards the centre. The bark exudes a resin which is extremely acrid, causing excoriation and blisters when applied to the skin. In this, as well as in becoming black when exposed to the air, it resembles the Melanorrhæa, cashew-nut tree, poison oak, and others of the Terebinthaceæ. According to Rumphius, this tree yields the celebrated Japan lacquer or varnish, and he considers it the same with that of Siam and Tonquin. Loureiro, however, represents the latter to be the produce of another tree. Mr. Jack says the varnish of Siam and Cochin-China is probably the best, but that of Celebes and of Java, which is the produce of this tree, is also employed for the same purposes, and cannot be much inferior, as it bears an equally high price. Chinese and Tonquinese insert into the trunks two pieces of bamboo, sharpened at their points, in such a manner as to penetrate the bark in a somewhat obliquc direction. This fluid resin is sold in Tonquin and Camboja for 33 to 60 dollars the pikul, but in many of the provinces of China for 200 or 300 dollars. The varnish is prepared for use by boiling it with an equal weight of the oil of Tang-yhu. The proportions are varied according to the purposes for which the varnish is required. Sometimes dry pigments are added for the sake of the red or other colours. The Japanese are the most skilful in preparing and ornamenting all kinds of work with this varnish, and their black lacquered works are conveyed to all parts of the world.—*Jack*, *Malayan Miscellany*, No. 3; *Eng. Cyc.*; *Jameson's Edin. Journal*, vi.

STALACTITES. Shih-chung-ju, Chinese. Stalactitic carbonate of lime occurs chiefly in long masses suspended from the roofs of caverns in limestone rocks; stalagmites on the floor. Water containing carbonate of lime, held in solution by carbonic acid, trickling through crevices in the roofs of the caverus, gradually, during its exposure to the air, loses its carbonic acid, and consequently deposits its carbonate of lime; the water passing over the portion first deposited gradually adds to it, and eventually gives the carbonate of lime its great length and stalactitic character. In China, the cup-like masses hanging from the roofs of caves are coaxed into all sorts of shapes by means of pieces of bamboo. They are bright and sparry on fracture, and are usually perforated all through.—*Smith.*

STALAGMITES. Shah-chwang, Chinese. Deposits of lime on the floors of limestone caves in China and the Tenasserim Provinces. Much of the alabaster of which ornaments are made is stalagmite; but all the alabaster images of the Tenasserim coast are made of marble, and not of compact gypsum, which they much resemble. Stalagmites are formed on the floor of the caverns by the water there depositing that portion of its carbonate of lime which is not separated during the formation of the stalactite. Caverns are sometimes nearly filled with these deposits. All the Tenasserim limestone caves have stalactites hanging from their roofs, and stalagmites raised on their floors. The elephant caves near Rangoon are of prodigious size, and the stalactites and stalagmites are wonderful, and when illuminated with blue lights, the effect is magical. Throughout the plain there is scarcely a rock in which one is not to be found. They are tenanted by myriads of bats. Near Rangoon is a small cave which is curiously and fantastically adorned with innumerable figures of Gautama, of every size, from the colossal to the miniature, stuck against the side of the rock, and occupying every available ledge.

STANISLAS, JULIEN, a Sanskrit and Chinese scholar, who translated the Chinese Buddhist pilgrim Hiwen Thsang's book of travels, named Si-in-ki, or Descriptions of the Countries of the West.

STAPHYLEA EMODI. *Royle.* Serpent Stick.

Guldar, ... Beas.	Mar-chob, . . . Pers.
Chual, . . . Chenab.	Thanari, ... Ravi.
Ban-shagali, . ,,	Nag-dan, . . Sutlej.
Ban-bakhura, . ,,	Kaghania, . . ,,
Chitra, Kurkni, Jhelum.	

A small tree of the Himalaya, at an elevation of 6000 to 9000 feet, not uncommon in Murree and Hazara. Bark of branches speckled, whence, on the doctrine of signatures, arises the belief that a branch or stick of it kept by one will drive away snakes.

STAR-ANISE.

Hwai-hiang, . . . Chin.	Anise d'Etoile, . . Fr.
Ta-hwai-hiang, . . ,,	Skimmi, ... Jap.
Pah-koh-hwin-hiang, ,,	Badian-i-khatai, . Pers.
Anas-phool, . . Dukh.	Anasi-pu, ... Tam.

Star-anise is the fruit of the Illicium anisatum of Linnæus, a shrub or small tree which grows in several places in the south-eastern parts of Asia, in China, Japan, the Philippines, and the countries extending from China to Japan from lat. 23½° to 35° N. The name is given from the clustering star-like form assumed by the capsules or pods, five to twelve in number, joined together at one end, and diverging in rays generally fine. These are used all over the east as a condiment. They are prized for their aromatic taste. The barks have a more aromatic flavour than the seeds, but they are not so sweet. In China, their most common use is to season sweet dishes. In Japan they are placed on the tombs of friends, and presented as offerings in the temples. They are chiefly exported direct to India, England, and the north of Europe, at the average value of 8½ dollars per pikul. In India they are much used in seasoning curries and flavouring native dishes, and large quantities are used in Europe in the preparation of liqueurs. It is from this fruit that the oil of anise is prepared, and it imparts the peculiar flavour of anisette de Bourdeaux. — *Burton's Mecca; Morrison; Simm.; Hogg; Faulkner; O'Sh.*

STARCH.

Abgoon, ... Arab.	Amido, ... It.
Kau, ... Burm.	Kanji, Garus, . Malay.
Mien-fen, . . . Chin.	Nishashta, . . . Pers.
Stivelse, ... Dan.	Gomma de trigo, . Port.
Amidon, . . . Fr., Sp.	Krkhmal, . . . Rus.
Amidan, Stärke, . Ger.	Starkelse, . . . Sw.
Ganji, ... Hind.	Godambe mao, . . Tam.

The starch of commerce is procured generally from wheat, rice, and potatoes. The best kind is white, soft, friable, and easily reduced to powder. It is insoluble in cold water and alcohol, but readily affords a gelatinous solution in warm water, which is largely employed for stiffening articles of wearing apparel, and for dressing some descriptions of goods after weaving. It is also much employed by calico printers and others. It can be obtained from a great variety of plants, and many of the most productive of it are natives of the tropical countries in the east. Starch is one of the constituent parts in all mealy farinaceous seeds, fruits, roots, and other parts of plants. The following are the chief fecula or starch-like substances of the east, and may be considered separately also under the heads Arrowroot, Food, and Maranta :—

Arrowroot, West Indian, .	Maranta arundinacea.
Arrowroot, East Indian, .	Maranta ramosissima, Curcuma angustifolia, and other sp. of Curcuma.
Arrowroot, Mergui, . . .	Tacca pinnatifida.
Tapioca, ...	Jatropha manihot.
Cassava meal, ...	Do.
Plantain meal, ...	Musa paradisiaca.
Sago, Singapore, . . .	Arenga saccharifera.
Sago, Malabar, ...	Caryota urens.
Sago meal, ...	Phœnix farinifera.
Salep, ...	Habenaria, etc.
Nelumbium seeds, . . .	Nelumbium speciosum.
Singhara seeds, ...	Trapa bispinosa.
Yams, ...	Dioscorèa (*var. sp.*).
Telinga potato, ...	Amorphophallus campanulatus.
Sweet potato, ...	Batatas edulis.
Ceylon moss, ...	Plocaria candida.
Kotee kalangoo, ...	Aponogeton monostachyon
Farina of	Parkia biglobosa.
Chara kelangoo, ...	Plectranthus tuberosus.
Champoo, ...	Caladium nymphifolium.
Sago, Indian, ...	Cycas revoluta, C. circinalis, species of Sagus.

STARLINGS are birds of the sub-family Sturninæ and family Sturnidæ. The spotted-winged starling, Saraglossa spiloptera, is a native of the woods and jungles of the lower hills. Sturnus unicolor, *Marmora*, the Sardinian starling. The rose-coloured starling, Pastor roseus, *Linn.*, is a famous locust killer, but their flocks commit immense depredations on the white sorghum and the mulberry.

STAUNTON, Sir GEORGE THOMAS, Bart., ob. August 10, 1858, was born at Milford House, near Salisbury, in 1781, and succeeded his father, the first baronet, in 1810. He was chief supercargo for the E. I. Company, President of the Select Committee at Canton, and Commissioner of Embassy to Pekin in 1816. His father, the first baronet, was secretary to Lord Macartney, a Governor of Madras, and received his title after the negotiation of the peace with Tipu Sultan in 1784. He was subsequently Secretary of Legation during Lord Macartney's embassy to China in 1792. With the embassy of Lord Amherst were present Sir George Staunton, who made a translation of the Chinese Penal Code; also Sir John Davis, author of The Chinese, and translator of several works; aud also Dr. Morrison, author of Chinese Dictionary.

STAUNTONIA, a genus of plants belonging to the natural order Lardizabalaceæ, named after Sir George Staunton. This genus is common to China and the Himalayan mountains. The Himalayan species are found in Nepal and in lat. 30° N., at elevations of 5000 and 6000 feet. Stauntonia latifolia, *R. Br.* (Hollbollia latifolia, *Wall.*; Ramkela and Gophla, Hind.), is a twining shrub of Nepal and Kamaon, at elevations of 5000 and 6000 feet. The fruit has a sweetish pulp, and is eaten by the people. Stauntonia angustifolia, *R. Br.*; Hollbollia angustifolia, *Wall.*, is a plant of Nepal.—*Voigt.*

STAUROBATES opposed Semiramis, but was at first overcome by that queen, though he subsequently defeated her. Staurobates is supposed to be the same with Sthavarapati.—*As. Res.* iv. 371, vi. 529, xiii. 256.

STEARINE, the harder portion of animal fats, olein or elain being the softer ones. Stearine yields an acid, called stearic acid, having the form of brilliant, white, scaly crystals, which is largely employed in soap and candle making.—*Waterston.*

STEATITE, Soapstone, Potstone.

Hwah-shi, . . . Chin.	French chalk, . . Eng.
Hwah-shwui, . . ,,	Balpam, ... Hind.
Figure stone, . . Eng.	

Steatite is a silicate of magnesia, a soft magnesian mineral, unctuous to the touch. It occurs in beds generally associated with talcose slate, common in Southern Asia, of all sorts and colours. At Vellore, Kurnool, and Salem, and near Mysore there are very fine and beautifully white soapstones, and near Chittur there is a valuable description, procurable in large blocks, and suitable for many statuary and decorative purposes. There is a quarry of excellent potstone at the Nagery Hills. The stone is of fine grain, easily worked with the chisel, and susceptible of a high polish; when oiled, this stone resembles in a great degree black marble. It is abundant in the rocks of the Irawadi towards Khamti, and the white variety is used all over Burma for writing with on their black paper books. Like potstone and serpentine, which it nearly resembles in composition, it becomes considerably harder by exposure to the air. When first raised it may be easily turned with chisels; the turned articles may be polished first with sand and water, and afterwards with tripoli and water, and, for the highest gloss, with rottenstone and oil, woollen cloths being used in each case. When the steatite has become hard, the methods employed for alabaster may be resorted to. Steatite is used as the material for the idols and other figures, which form the household gods of the Chinese. It is also mixed with black lead in the manufacture of crucibles. It forms a polishing material for serpentine, alabaster, and glass, and removes grease spots from cloth. See Soapstone.

STEEL.

Kang-tieh,	CHIN.	Malela, Kaluli,	MALAY.
Staal,	DAN., DUT.	Aco,	PORT.
Acier,	FR.	Stal,	RUS., SW.
Stahl,	GER.	Acero,	SP.
Foulad,	HIND., PERS.	Egu,	TAM.
Acciajo,	IT.	Wukku,	TEL.
Baja, Waja, Lela,	MALAY.	Chelik,	TURK.

Steel is iron combined with a small quantity of carbon. It is hard, brittle, resists the file, cuts glass, affords sparks when struck on flint, and retains the magnetic virtue for any length of time. It loses its hardness by being heated and cooled very slowly. Steel is used for many small implements and important engineering and other works.

Kouasamoondrum steel is made at several villages in the Circar of Elgundel, at Ibrahimpatnam, and at Konapur in the Karaolla pargana, and at Atmacore and Chintulpet in the Vellurla Taluka. Formerly it was prepared at several other places. Teepoor, the iron, is manufactured at Maytpilly, a village 12 miles south of the Godavery, from a ferruginous sand procured from gneiss by roasting, pounding, and washing.

The steel wire of Chinnapatam, in Mysore, has long been known. The ore from which wootz, an Indian steel, is made, is a magnetic oxide combined with quartz, generally in proportion of 48 parts of quartz to 52 of oxide of iron. It is made in many parts of the south of India, but Salem is the chief seat of the manufacture, and there the ore is prepared by stamping and separating the quartz either by washing or winnowing. The furnace is from three to five feet high from the surface of the ground, and the ground is hollowed out beneath it to the depth of eight inches or a foot. It is somewhat pear-shaped, being about two feet diameter at the ground, and tapering to about one foot diameter at the top; it is built entirely of clay. Two men can finish one in a few hours; it is fit for use the next day. The blast is furnished by a pair of bellows each being a goat skin with a bamboo nozzle; a semicircular opening about a foot and a half high and a foot in diameter at the bottom, is left in the furnace, and before each smeltiug it is stopped up with clay. The furnace is then filled up with charcoal, and kindled, a small quantity of ore, previously moistened, is laid on the top of the fuel, and charcoal is thrown over it to fill up the furnace; in this manner ore and fuel are added and the bellows plied for four hours or thereabouts, when the process is stopped, and the temporary wall in front of the furnace having been broken down, the bloom is removed by a pair of tongs from the bottom of the furnace, and is then beaten with a wooden mallet to separate as much of the vitrified oxide as possible; and, while still red-hot, it is cut half through with a hatchet, and in this state sold to the blacksmiths, who perform all the subsequent operations of forging it into bars, and making it into steel. The process of forging into bars is performed by sinking the blooms in a small charcoal furnace, and repeated heatings and hammerings to free it as much as possible from the vitrified and unreduced oxide of iron; it is thus formed into bars about a foot long, an inch and a half broad, and about half an inch thick. In this state it is full of cracks and exceedingly red short. These bars are cut into small pieces to enable them to pack in a crucible. A quantity amounting to a pound and a half to two pounds is put into a crucible along with a tenth part by weight of dried wood of the Cassia auriculata chopped small; these are covered with one or two green leaves of the Calotropis gigantea, the mudār plant, and the mouth of the crucible filled up with a handful of tempered clay, which is rammed so as to exclude the air perfectly. As soon as the clay is dry, twenty to twenty-four of the crucibles are built up in the form of an arch with their bottoms inwards, in a small furnace urged by two goat-skin bellows, charcoal is heaped up over them, and the blast kept up without intermission for about two hours and a half, when it is stopped, and the process is considered complete. The crucibles are removed from the furnace and allowed to cool; they are then broken, and the steel, which has been left to solidify, is taken out in a cake, having the form of the bottom of the crucible. When the fusion has been perfect, the top of the cake is covered with striæ, radiating from the centre, but without any holes or rough projections on it; when the fusion has been less perfect, the surface of the cake has a honeycombed appearance, caused probably by particles of scoriæ and unreduced oxide in the bar iron, and often contains projecting lumps of iron still in the malleable state. The natives prepare these cakes of steel for being drawn into bars by annealing them for several hours in a charcoal fire actuated by bellows, the current of air from which is made to play upon the cakes whilst turned over before it at a heat just short of that sufficient to melt them; by this means the excess of carbon is detached. The process of smelting iron differs according to circumstances in different parts. In some the ore is collected in the form of sand from the beds of rivers or ironstone is collected either from the surface or from mines.

Steel of Mysore made at Mudgiri is the best,

That made of kanekal ore from the Dhore Gudda Hill in the Chikkanaikenhalli taluk, is produced in a ruder manner, and is of an inferior quality. The kanekal is ponnded to the size of small gravel and well cleaned. But the Mudgiri ore is reduced to an iron-sand by hard wooden mallets, and the earthy particles washed away, and is then filled into the small furnace with 15 times its bulk of charcoal, made of Ficus Indica, F. racemosa, and F. excelsa. The furnace is about 4 feet high, 2½ feet at bottom, and abont 1½ feet at mouth, which is covered with an open earthen pot, pierced with holes at its bottom, like a colander; ten seers of charcoal are placed at the bottom, then one seer of the iron-sand, over which again five more seers of charcoal are placed (the furnace having been previonsly warmed). The materials are then ignited, and the fire kept up from below without intermission for three hours, by two men blowing two common blacksmith's hand-bellows, dnring which time the colander has beeu filled as the material sinks till seven more seers of iron-sand have been added, with their dne proportion of charcoal. The whole eight seers are then considered to be in a proper state to take out, which is done by opening the hole at the bottom, when the semi-molten mass is withdrawn by large pincers to an indentatiou in the neighbouring rock, where it is beaten with the same wooden mallets into as shapely a mass as time will admit of. This is reheated in a forge and beaten into fonr rough bars, and again reheated and beaten into bars 7 to 11 inches long, and in this state they are fit for the crucibles, and called 'gatti mnrudu.' The furnace for converting them into steel is merely a hole in the ground, about two feet deep, liued with red clay, the greatest diameter being about two feet, and the least (which is about nine inches from the surface) about one foot, when it is gradually sloped out in the form of a skew-back to receive fourteen crucibles with their ends downwards, which are ranged round it in the form of a flat arch. Charcoal is put below and above, and when ready for igniting, the charcoal appears about six inches or so above the ground, and is prevented from spreading by a low wall, in the rear of which the bellows are blown. The charcoal is renewed from time to time, so as to keep the crucibles in the midst of a carefully-regulated heat, which is kept np by plying the bellows unremittingly for four hours, when the firing is complete.—*Major Cuth. Davidson, Assistant Resident; M. C. C. for Ex. of* 1851; *Rohde, MSS.; Mad. Lit. Journ.; M. E. J. R.; Heyne.*

STEFANO, HIERONIMO DI SANTO, a Genoese, visited India about 1474–99 as a merchant. At Cairo he laid in a stock of coral beads and other wares, and passed down the Nile to Cane (Keneh), from which he travelled by land through the Egyptian desert for seven days to Cosir (Cosseir) on the Red Sea, where he embarked on board a ship, which in 25 days carried him to Mazna (Massonah) off the conntry of Prester John; and in 25 days more, during which he saw plenty of boats fishing for pearls, to Adem (Aden); aud in 35 days more to Calicut. 'We found that pepper aud ginger grew here, . . . and the nnt of India' (cocoanuts). From Calicut he sailed in another ship, and in 26 days reached Ceylon, 'in which grow cinnamon trees, . . . many precious stones, such as garnets, jacinths, cats'-eyes, and other gems, . . . and trees of the sort which bears the nut of India.' Departing thence after twelve days, he arrived at a port on the coast of Coromandel, where the red sandal-wood grows; and, after a long stay, departing thence in auother ship, after 27 days reached Pegu in Lower India. This country (Pegu) is distant 15 days' journey by land from another, called Ava, in which grow rubies and many other precious stones. From Pegu, where he suffered many and great troubles, he set sail to go to Malacca, and, after being at sea 25 days, one morning found himself in a port of Sumatra, where grows pepper in considerable qnantities, silk, long pepper, benzoin, white sandal-wood, and many other articles. After further and greater troubles suffered here, he took ship to Cambay, where, after six months' detention among the Maldives, and snbsequent shipwreck, he at length arrived, but stripped of all his goods. He notices that Cambay produced lac and indigo. In his destitution he was assisted by a Moorish merchant of Alexandria and Damascus, and after a time proceeded in the ship of a sheriff of Damascus as supercargo to Ormuz, in sailing to which place from Cambay he was 60 days at sea. From Ormnz, in company with some Armenian and Azami (Irak-Ajemi) merchants, he travelled by land to Shiraz, Ispahan, Kazan, Sultaniyeh, and to Tauris; whence he went on with a caravan, which was plundered by the way, to Aleppo, and finally to Tripoli in Syria.—*India in the 15th Century; Dr. Birdwood's Records.*

STEGODON ORIENTALIS. *Swinhoe.* Large broken masses of its fossil bones are obtained in Sze-chuen, Shan-tung, and Shen-si in China, and are called Lnng kuli or dragon's bones. They are powdered and levigated, and used in spermatorrhœa. The fossil teeth of Stegodon Sinensis, *Owen*, also, are called Lung-chi or dragon's teeth. —*Smith.*

STELLARIA MEDIA. *Sm.* Kaaray muntha kiray, Tam. One of the Alsinaceæ or chickweed tribe of plants. S. media grows on the Neilgherries, and S. triandra, *Wall.*, of Nepal, is used by the natives on the Neilgherries as a pot-herb, eaten alone and mixed with others; probably introduced.—*Jaffrey.*

STEMONOPORUS. *Thw.* A geuus of Ceylon trees. The S. acuminatus is a large tree of Ceylon in the Ambagamwa, Badulla, and Mahamahanewera districts, at no great elevation. S. affinis is a large tree, growing in the Hunasgiria district, at an elevation of 4000 feet. S. canaliculatus, a moderate-sized tree, of the Hinidun and Reigam corles, at no great elevation. S. Gardneri, a great forest tree, near Adam's Peak, at an elevation of about 5000 feet. S. lanceolatus is a small tree near Ratnapnra, at no great elevation. S. Moonii, near Maturatte. S. nitidus, at Pasdoon corle, a middle-sized tree, at no great elevation. Thwaites also mentions S. oblongifolius, S. petiolaris, S. reticulatus, S. rigidus, and S. Wightii, a great tree, the Vateria Ceylanica of Wight; and S. apicalis (the Urandra apicalis in Hooker's Kew Jonrnal of Botauy), is a great tree of the damp forests, at an elevation of 1000 to 2000 feet, the Ooroo-kannoo gass of the Singhalese.—*Thw.* p. 43; *Beddome, Fl. Sylv.* p. 99.

STENO MALAYANUS.

Dolphinus plumbeus, *Dussumier, Cuv.*
D. Malayanus, *Lesson apud Cuv.*

Inhabits the Malabar coast and coasts of Penang. It is numerous and rather heavy in its movements, but is rarely captured, except by chance in the stake-nets. It eats small fishes, Clupea and Glyphisidon cœlestinus. Steno frontanus inhabits the Indian Ocean and the Pacific.—*Cuvier.*

STEPHEGYNE PARVIFOLIA. *Hooker f. et Bentham.* This is a large deciduous timber tree, one of the Rubiaceæ, the Nauclea parviflora of Roxburgh. Its wood is light, moderately hard, of a pinkish-brown colour. S. diversifolia, *H.*, is a tree of Burma, and S. tuberlosa, *H.*, a tree of Ceylon.

STERCULIACEÆ, an order of plants of the E. and W. Indies, S. America, Mexico, Madagascar, all Southern Asia, and New Holland. The order comprises 82 genera, and upwards of 100 species. They are trees or shrubs, sometimes climbing or twining plants, and are all remarkable for the abundance of their mucilage and the tenacity of their fibres.

STERCULIA, a genus of plants of the order Sterculiaceæ. One species, the Kun-nun-nu of the Burmese, an enormous tree, grows at Tavoy, as also does another species, called in Tavoy Thika-doo. One species in Africa, and another in India, S. fœtida, yields a tragacanth-like gum. The seeds of Sterculia chicka are eaten by the Brazilians, as in India are those of S. balanghas, S. urens, and S. fœtida, after being roasted. A species called Kodalo in Telugu, not S. fœtida, is a tree of Ganjam and Gumsur; extreme height, 39 feet; circumference, 3 feet; and height from ground to the intersection of the first branch, 8 feet; gives a light wood, used for planks, doors, boxes, and scabbards; it is also used for firewood, being tolerably plentiful. Sterculia ramosa, S. fœtida, S. campanulata, S. piperifolia, are very plentiful throughout the Pegu province; they yield a gum which is known in the bazars of Bengal under the name of Kotheela. Other two species, S. balanghas and S. colorata, are not so plentiful. This gum is

probably analogous to the tragacanth, which Dr. Lindley states is obtained from a species of Sterculia at Sierra Leone.

STERCULIA ACUMINATA, the Kola acuminata, *R. Br.*, is the Kola nut or Gongo nut tree of W. Africa and the Soudan, Senegambia, Angola. In Fezzan they sell at a dollar for four seeds. They support the strength, allay inordinate appetite, assuage thirst, promote digestion, and render those who use them capable of prolonged fatigue. It should be introduced into India. Quantities of the nut are carried to the interior of Africa. Each nut of the Gongo variety sells for 100 cowries, and 2500 cowries at Rabba on the Kevorra value a dollar of 4s. 4d. Bitter Kola fruit is about the size of a peach, rose-coloured, and very pretty. The bitter Kola nut is intensely bitter, not astringent like common Kola, and is used for medicinal purposes.

STERCULIA ALATA. *Roxb.*

Bud'h's Cocoanut. | Pterygota Roxburghii, *Sch. and Endl.*

Shaw-nee, . . . BURM. | Dodelee mara, . . CAN.

Grows to an immense height in Canara and Sunda in deep ravines and sheltered places below the ghats, but is used there only as a support for pepper vines. The wood is said to be too spongy for spars, for which its height and straightness otherwise well fit it. It is a handsome tree in the Tenasserim Provinces, bearing a large fruit, whose winged seeds are sometimes eaten by the natives.

STERCULIA BALANGHAS. *Linn.* Pin-po, CHIN. A tall and straight tree of the hotter parts of Ceylon, common in the forests of the Bombay coast. It may readily be distinguished at certain seasons by its large pink fruit. The wood is of open grain. The seeds are described by Rumphius as being roasted and eaten by the natives of Amboyna, and the capsules burned for the preparation of the kusumbha colouring matter.

STERCULIA COLORATA. *Roxb.*

Bhai?. . . . . DUKH. | Karaka, . DUKH. ? TEL.

A large tree of the Dekhan, which is deciduous in the cold season, and flowers in March and April. The wood is said to be useless. Carpels of a bright red, somewhat resembling the broad pod of a pea opened, with the peas adhering. The tree when covered with them has a strange appearance.

STERCULIA FŒTIDA. *Linn.*

Jangli, Badam, . HIND. | Kudrap-dukku, . TAM.
Pinari maram, . TAM. |

This large tree is very common in the Central Province of Ceylon, and grows in the Peninsula of India generally, but chiefly on the western coast, in Malabar and Mysore. It is common on the hills and plains of British Burma. In Ceylon its wood is used for common house-building purposes. On the western coast and in Mysore, it is applied to a number of useful purposes; and Dr. Gibson tells us that it is used as a substitute for the true poon spars in small country vessels. It makes a good avenue tree. In the cells of this fruit there are contained certain white kernels which have a very pleasant taste, inter carnem ossiculum locatur oblongo-rotundum nucleum continens candidum amarodulcem. The flower has a most offensive smell, and hence the Tamil name. The fruit is used in the treatment of gonorrhœa. The leaves are deemed aperient, and a decoction of the fruit mucilaginous and astringent. The seeds are oleaginous, but are deemed unwholesome. The semi-solid oil obtained by expression from the seeds of this large jungle tree is thick at all seasons of the year, appears to contain a large percentage of stearine, but it is doubtful if it can be obtained in large quantities. It was sent to the Great Exhibition of 1851 from Bombay.

STERCULIA GUTTATA. *Roxb.*

Kawillee of ANIMALLAY. | Pi maram, . . . TAM.
Goldar, ... DUKH. | Ramena pu maram, ,,
Kukar, ... MAHR. |

A large erect forest tree of Ceylon, Malabar, and all over Southern India. Carpels the size of a large apple, three or more growing together, of a reddish colour; seeds size of a chesnut, roasted and eaten by the natives. The bark of the younger parts of the tree abounds with very strong, white, flaxen fibres, of which the inhabitants of Wynad manufacture a kind of coarse cloth, which derives its name from the first process of its manufacture, viz. the chopping the bark into small pieces, from auragoonoo, to cut. It is not usual to make use of the bark until the tenth year. The tree is then felled, the branches lopped off, and the trunk cut into pieces of six feet long, a perpendicular incision made in each piece, the bark opened and taken off whole, chopped, washed, and dried in the sun; by these means, and without any further process, it is fit for the purposes of clothing.

STERCULIA MONOSPERMA. *Ventenat.* The S. nobilis of R. Brown, a middle-sized spreading tree of China. Its seeds and those of S. urceolata of the Moluccas, are roasted and eaten as chesnuts.

STERCULIA PARVIFLORA. *Roxb.* Ram-julparee, HIND. A middle-sized tree, a native of the hills east of Tiperah. It is abundant in the jungles of Ajmir.—*Roxb.; Gen. Med. Top.* p. 202.

STERCULIA PLATANIFOLIA. *Tung.* Wu-tung, CHIN. Ornamental, shady, large-leafed tree of China, frequent in the courtyards of houses and temples. The seeds are oily, and enter into the composition of the cakes eaten at the autumnal festival of the eighth month. The leaves and liber make a hair-wash and a soothing lotion.

STERCULIA URENS. *Roxb.*

Buli? . . . . . BENG. | Velle butalle, . . TAM.
Kur katila, Katira, HIND. | Vellay putalli, . . ,,
Kundol, Kavali, MAHR. | Thabsi, Kavali, . . ,,

This large tree is a native of Ceylon and of most parts of India. Its peculiar bark looks as if painted of a light colour. Wood soft, spongy, and loose-grained, only fit for the most common purposes. Its leaves and tender branches are used in certain cattle diseases. The leaves when soaked in water render it ropy and glutinous. The bark yields the Katila gond gum, resembling tragacanth. The carpel is covered with rigid bristly hairs, which puncture like the Mucuna pruriens. The seeds of the stinging pods are roasted and used by the natives as an article of diet, and also as a dainty. Bark, exceedingly astringent, tinges the spittle reddish. Its gum has been sent to London, but artists did not find it answer. It exudes spontaneously during the hot season, in large, light-brown or white, transparent tough masses. Immersed in water, these swell like a jelly, but do not dissolve unless by protracted boiling. Its uses are very limited. The solution is not adhesive. The want of adhesiveness renders it unsuitable for the arts, while its

difficult solubility renders it inferior to most other gums for medicinal purposes. A similar gum, called Kutira, is afforded by the Cochlosperum gossypium.

STERCULIA VILLOSA. *Roxb.*

Gul-kandar, Kuri, Chen.	Kurdula, . . . Mahr.
Gul-bodla, . . Hazara.	Osha, God-gudala, Sutlej.
Oodhal, Oodial, . Hind.	Magsu, . Sutlej, Ravi.

A large tree of the Dekhan and in the mountainous countries to the eastward of Bengal, common in many places in the outer hills of the N.W. Himalaya to 3600 feet or more up to the Indus, and occurs in the Salt Range. It has a straight trunk, with a smooth bark, leaves palmated, five or seven lobed. The bark can be stripped off from the bottom to the top of the tree with the greatest facility, and fine pliable ropes may be made from the inner layers, whilst the outer yield coarser ropes. The rope is very strong and very lasting, wet doing it little injury. In Southern India elephant ropes, and in Bombay bagging, are made of it. In Dehra Doon good paper has been made from it.

STERCULIA WALLICHII.

Wulena, Ulan, Beas., Rav.	Kuri, ... Chenab.

A shrub of the Panjab, occasional to 3500 feet. —*Drs. Roxb., Ainslie, Brandis, Gibson, Mason, Riddell; Wight and Arnott; Cleghorn; Royle; M'Clelland; Stewart; W. Ic.; Captains Beddome, Drury, Macdonald; Thomson and Mendis; Rohde.*

STEREOSPERMUM CHELONOIDES. *W. Ic.*

Bignonia chelonoides, *Linn.*

Lumu-madala, . . Singh.	

This, though not a large, is a very handsome tree, with very fragrant, beautiful pinkish flowers. It is very common in almost all the forests of the Madras Presidency up to an elevation of about 3000 feet, also in Ceylon, Mysore, Bombay, Bengal, and Burma. The wood is of a beautiful orange-yellow colour, close and even grained, elastic and durable, easily worked, and gives a smooth glossy surface. A cubic foot weighs 57 to 60 pounds unseasoned, and 40 pounds when seasoned; and its specific gravity is ·768. The sapwood is rather coarse-grained, of a brownish-white colour, and not durable. The wood is much used in house-building, and for a variety of purposes by the natives. The roots, leaves, and flowers are used medicinally. The wood of S. fimbriatum, *D.C.*, is of similar structure. —*Wight; Gibson; Brandis; Beddome; Gamble.*

STEREOSPERMUM SUAVEOLENS. *W. Ic.*

Bignonia suaveolens, *Roxb.* A middle-sized tree, with pinnatic leaves and panicled inflorescence, frequent in the Walliar jungles. It abounds in the Sunda forests in Southern India, is very rare in other Bombay forests, but is occasionally found in the Konkan, near temples, where it has evidently been planted for the sake of its beautiful flowers. The wood is dark-coloured, strong, and serviceable; is said by Dr. Wight to be elastic, and fitted for making bows. It grows in the south of Ceylon, in the neighbourhood of Buddhist temples. Its roots are much valued by the Singhalese as a tonic medicine, and they attribute the same properties and give the same name (Palol) to those of Spathodea adenophylla, which is occasionally found in gardens.—*Wight; Cleghorn; Gibson; M. E. J. R.; Thwaites.*

STEREOSPERMUM XYLOCARPUM. *Benth.*

Bignonia xylocarpa, *Roxb.* A deciduous tree of the Dekhan; sap-wood large, grey; heart-wood brown-coloured, very hard.—*Gamble.*

STERNINÆ, a sub-family of web-footed, long-winged birds, known as sea swallows and terns.

Kivi, ... Gond.	Mach-louka (fish snatcher), . . . Hind.
Tehari, ... Hind.	Ramadasu, . . . Tel.
Ganga chil (Ganges kite), ... ,,	Samdrapu-kaka (sea-crow), ... ,,

Terns spend the greater part of their lives on the wing, and always seek their food when flying.

i. *Marsh Terns.*

Sylochelidon caspius, *Latham*, Europe, Asia, Africa.
Syl. strenua, *Gould*, Australia.
Gelochelidon anglicus, the Sterna anglica, gull-billed tern, inhabits the warmer regions of the old world, extending also to America, Java, and is common in India.
Hydrochelidon Indica, *Stephens*, Europe, Asia, Africa.

ii. *River Terns.*

Seena aurantia, *Gray*, Ceylon, Burma, S. China.
Sterna nirundo, *Linn.*, or common tern of Europe, Asia, Africa, S. India, Ceylon.
St. Javanica, *Horsf.*, all India.
St. paradisea, *Brunnich*, or Sterna Dougalli, roseate tern of Europe, Asia, Africa, America, Australia. coasts of India.
St. minuta, *Linn.*, is Sternula minuta, the lesser tern of northern hemisphere; replaced in South America and Australia by nearly affined species; common on the west coast and in parts of South India.

iii. *Sea Terns.*

Thalasseus cristatus, *Stephens*, Red Sea to China Sea.
Th. Bengalensis, *Lesson*, Red Sea to Bay of Bengal.

iv. *Oceanic Terns.*

Onychoprion melanauchen, *Temm.*, Bay of Bengal to Australia.
O. anasthætus, *Scopoli*, Red Sea, Indian Ocean.
O. serrata, *Forster*, Pacific Islands.
Anous stolidus, *Linn.*, the noddy.
An. tenuirostris, *Temm.*, white-headed noddy, Indian Ocean.
Rynchops albicollis, *Swainson*, all India.

—*Jerdon.*

STERNOCERA CHRYSIS. Its elytra are used in India in embroidering muslin.

STEVENSON, Reverend J., D.D., chaplain of St. Andrew's Church, Bombay, who wrote on the Anti-Brahmanical Worship of the Hindus in Lond. As. Trans. vi. p. 239, viii. p. 330; on the Mahrati Language, ibid. vii. p. 84; on the Modern Deities worshipped in the Dekhan, ibid. p. 105; on the Buddha-Vaishnavas of the Dekhan, ibid. p. 64; on the Intermixture of Buddhism with Brahmanism in the Religion of the Hindus of the Dekhan, ibid. p. 1; Analysis of the Ganesa Purna, ibid. xiii. p. 319; Remarks on the Relation between the Jain and Brahmanical Systems of Geography, Bom. As. Trans., 1847, ii. p. 411; on Specimens of Saurashtra Coins found near Junir, ibid. p. 377; on the Brahmanical Manner of Constructing their Images, ibid. p. 396; Translation of Buddha Inscriptions near Nasik, ibid. p. 452; Observations on the Grammatical Structure of the Vernacular Languages of India, ibid., 1849, i. p. 171, 1850, iv. p. 1, vi. p. 196. He gave some comparative lists of words of the Indian languages, tracing analogies in the Mongolian, Celtic, and Hebrew tongues, and said there exists a great resemblance in the grammatical structure of the chief modern languages in the north and in the south of India, proofs of which he produced from the Hindi, Bengali,

Gujerati, Mahrati on the one side, and from Telugu, Carnatica, Tamil, and Singhalese on the other. He thinks that there is more agreement in construction with the Turkish than with the Sanskrit, so that he believed it likely that the original language of India may be the connecting link between what the Germans have called the Indo-Germanic family and the Turkish family of languages.—*Dr. Buist; Max Muller's Rep. Brit. Ass.*, 1847, p. 331.

STEWART, CHARLES, author of History of Bengal to its Conquest by the English, London 1813; also a Descriptive Catalogue of the Oriental Library of the late Tipu Sultan, with Memoirs of Hyder Ali.

STEWART, Lieutenant-General D. M., K.C.B., Bart., served on the frontier in 1854–55, was Deputy Assistant Adjutant-General at the siege of Delhi, and Assistant Adjutant-General of the army at the siege and capture of Lucknow, and throughout the subsequent operations in Rohilkhand. He also commanded the Bengal Brigade in the expedition to Abyssinia in 1867–68, was afterwards (1872–73) Chief Commissioner at the Andaman Islands, commanded the Lahore division, and in command of the Kandahar column of operations in the late Afghan campaign. He was several times mentioned in despatches, was created a Baronet of the United Kingdom, and appointed Commander-in-Chief of India.

ST'HALA. Sansk. Arid or dry land, which in the vernacular dialect becomes t'hul. It is the converse of the Greek oasis, denoting tracts particularly sterile. Each t'hul of the Indian desert has its distinct denomination, as the 't'hul of Kawur,' the 't'hul of Goga,' etc. Maristhali, from the Sanskrit Mri, to die, and St'hala, is a name of the desert of Rajputana. St'hali devata are deities of the soil.

ST'HAMBA or Lat, Sansk., is a monolithic pillar usually erected in front of a Hindu temple, whether Saiva, Vaishnava, Jaina, or Buddhist. They are of all ages, from B.C. 250 down to the most recent times. The Buddhist st'hambas bear the wheel representing Dharma or law or lions; the Saiva bear a trisula; the Vaishnava a figure of Garuda; and the Jaina a Chaumuktra or fourfold Tirthankara. Some of the finest of Buddhist lats were erected by Asoka, and bear his edicts or other inscriptions, but are not apparently in connection with any temple or other structure, or if so, these have long ago perished. —*Ferg. and Burg. Cave Temples of India*, p. 174.

ST'HAMBA PUJA, worship of the temporary posts erected for a marriage.

ST'HANA. Sansk. A place or station. St'han, t'han, st'hana, stan, istan, or estan, added to the name of a thing, expresses the place wherein it abounds or is contained; as Gulistan, a flower-garden or bed of roses; Hindustan, the country of the Hindus; Negaristan, a cabinet or gallery of pictures. St'hana, Sansk., the firm, a name of Siva.—*Ouseley's Travels.*

STHAVIRA, Sansk., or, in Pali, Thero, an elder of the Buddhist religion, a Buddhist priest.

STH'NANAM. Sansk., Tam., Tel. Bathing of the Hindus as a religious rite of purification. St'hnanam abhiangana, amongst Hindus a ceremonial on the wedding day, when the bride and bridegroom are anointed with oil.

STHUNA-KARNA, in Hindu mythology, a Yaksha who is represented in the Mahabharata to have changed sexes for a while with Sikhandivi, daughter of Drupada.—*Dowson.*

ST'HUPA. Sansk. A Buddhist tumulus or tope, a mound, burrow, or funeral pile, a hemispherical shrine, or a tumulus erected over any of the sacred relics of Buddha, or on spots consecrated as the scenes of his acts. The st'hupa in Pali becomes stupo, and in Anglo-Indian phraseology tope. We thus hear constantly of the Bhilsa topes, and the Sarnath and the Sanchi topes. The word is from a Sanskrit root to heap, to erect. The st'hupa or dagoba or topes of India are monumental shrines or receptacles for the relics of Buddha, or for those of the Sthavira or patriarchs of the sect, or to commemorate some historical event or legend. They consist of a cylindrical base supporting a hemispherical dome called the garbha. On the top of this was placed the Tee, a square stone box, usually solid, covered by a series of thin slabs, each projecting over the one below it, and with an umbrella raised over the whole. General Cunningham says the Pali form is Thupo, also Thupa or Thuva, in the early Aryan inscriptions from the Panjab. The term now used is Thup for a tolerably perfect building, and Thupi for a ruined mound. The great st'hupa or Buddhist monument of Manikyala was first made known by the journey of the Honourable Mountstuart Elphinstone, and has since been explored by Generals Ventura and Court. The name is said to have been derived from Raja Man or Manik, who is said to have erected it. The pilgrim Fa Hian states that at two days' journey to the east of Taxila is the spot where Buddha gave his body to feed a starving tiger. But Sung-yun fixes the scene of this exploit at eight days' journey to the south-east of the capital of Gandhara, which is a very exact description of the bearing and distance of Manikyala, either from Peshawur or from Hashtnagar. General Cunningham has identified the great st'hupa of the 'body-offering' with the monument that was opened by General Court, which, according to the inscription found inside, was built in the year 20, during the reign of the great Indo-Scythian prince Kanishka, shortly before the beginning of the Christian era. Manikyala was therefore one of the most famous places in the Panjab at a very early period; but he thinks that it must have been the site of a number of large religious establishments rather than that of a great city. The people are unanimous in their statements that the city was destroyed by fire; and this belief, whether based on tradition or conviction, is corroborated by the quantities of charcoal and ashes which are found amongst all the ruined buildings. It was also amply confirmed by the excavations which he made in the great monastery to the north of General Court's tope. He found the plaster of the walls blackened by fire, and the wrought blocks of kankar limestone turned into quicklime. The pine timbers of the roofs also were easily recognised by their charred fragments and ashes. General Cunningham discovered nothing during his researches that offered any clue to the probable period of the destruction of these buildings; but as this part of the country had fallen into the power of the Kashmirian kings even before the time of Hiwen Thsang, he was inclined to

attribute their destruction rather to Brahmanical malignity than to Muhammadan intolerance. Vaisali is supposed by General Cunningham to lie to the east of the Gandak, where we find the village of Besarh, with an old ruined fort which is still called Raja-Bisal-ka-garh, or the fort of Raja Visala, who was the reputed founder of the ancient Vaisali. The ruined fort of Besarh thus presents such a perfect coincidence of name, position, and dimensions with the ancient city of Vaisali, that there can be no reasonable doubt of their identity. In one of the Buddhist legends quoted by Burnouf, Buddha proceeds with Ananda to the Chapala st'hupa, and, seating himself under a tree, thus addresses his disciple: 'How beautiful, O Ananda, is the city of Vaisali, the land of the Vriji,' etc.—*Ferg. and Burg.* p. 18.

The Tallow.

Kim-yu, Mu-yu, . CHIN. | Peh-yu, Hiueh-yu, CHIN.

It receives its Chinese name from the fondness of the cow for its leaves. It grows nearly all over China and Formosa, and has been introduced into India. Its aspen-like yellow foliage becomes of a brilliant red colour in autumn and winter. The three-seeded berries dehisce when ripe, disclosing the kernels enveloped with the coat of vegetable fat, which renders the tree so valuable. The leaves yield a black dye with sulphate of iron. This fatty tallow substance is of a whitish colour, hard, and tasteless. The ripe nuts are bruised, and the pericarp separated by sifting. They are then steamed in wooden cylinders, with numerous holes in the bottoms, which fit upon kettles or boilers. The tallow is softened by this process, and is separated from the albumen of the seeds by gently beating them with stone mallets, after which the tallow is effectually removed by sifting the mass through hot sieves. The tallow still contains the brown testa of the seeds, which is separated by pouring it into a cylinder made up of straw rings laid one on top of the other, in which it is put into a rude press, and the tallow is squeezed through in a pure state. A pikul of seeds (133⅓ lbs.) yields from 20 to 30 catties of tallow, besides the oil which is obtained from the albumen by grinding, steaming, and pressing it subsequently. The vegetable tallow melts at 104°, and is composed mainly of tripalmitine. To make candles, it is mixed with white insect wax in the proportion of three mace of wax to ten catties of the tallow. The candles are largely used in Buddhist ceremonies. In China the average price is about eight Mexican dollars per pikul. Cases of poisoning in China are generally treated with the tallow or the oil of the albumen, but the latter generally comes up. The tallow is also used in ointments, and the candle refuse as suppositories. The refuse of the husks and seeds is used as manure for the tobacco fields.—*Smith, Mat. Med. Chin.*

STINKING-WOOD, ENG., Chec neb, BURM., is abundant in Tavoy and Mergui. The flowers have an intolerably fetid, sickening smell; hence its name. It is used by the Burmese for boxes, tables, etc., and is a long-fibred, tough wood when new, but rots readily. The stink tree of Ceylon was called by the Dutch Strunt-hout, and by the Singhalese Urenne, on account of its disgusting odour, especially in the thick stem and the larger branches, resembling that of human ordure. Thunberg says the tree was neither the Anagyris fœtida nor the Sterculia fœtida.—*Capt. Dance; Thunberg's Tr.* iv. p. 234.

STIPA, a genus of grasses belonging to the tribe Stipaceæ. Stipa tenacissima, the esparto of the Spaniards, the halfa of Northern Africa, is used in the manufacture of paper, yields a sure crop, independent of the weather, and exempt from the attacks of locusts.

STIZOLOBIUM ALTISSIMUM. Assam bean; Kalee seem, DUKH. This bean is grown like most others, and may be first sowu at the commencement of the rains, and continued during the cold season.—*Riddell.*

STOCKS, an officer of the Bombay Medical Service, an eminent botanist. His extremely valuable collections from Sind and Baluchistan amounted to about 1500 species. He was Conservator of Forests in Sind, and distinguished himself by his researches in the flora of that region. He died at Cottingham on the 30th August 1857, aged 34.—*H. et T.; Bom. As. Trans.* ii. p. 390; *Dr. Buist.*

STOCQUELER, J. H., author of Fifteen Months' Pilgrimage through Untrodden Tracts in Kurdistan and Persia, 1831-32.—*Dr. Buist.*

Stones of every kind, suitable for architecture, sculpture, or ornament, are obtainable in different parts of India, as the red sandstone in the vicinity of Dehli; the slates, limestones, and marbles of the Nerbadda, and of the valleys of the Godavery and Kistua; basalt and basaltic greenstones are used in the Hindu temples; and the marble of Burma is largely sculptured for the figures of Gautama; the Hubba Hills, near Bhooj, yield stone which is employed as a substitute for marble; soapstone is found in many parts of British India, Burma, and China, and is carved into numerous figures; the sandstones of the Kymore range are used as flagstones, and for ornamental purposes; the millstones of Chynepore, Sasseram, Tilowlhoo, and Akbarpur, are famous; the Sone causeway and the Koylwan railway bridge, are built of the dense sandstone of Sasscram; little quantities are found in the higher portions of the range, towards Rohtas; but the best stone, while easily workable, is almost as hard as granite, and may be had of any colour, viz. white, crystalline, blue, grey, and all shades to a dark red.

Stone implements have been largely found in India. Chipped flints, agates, jaspers, and chalcedonies have been found by Lieut. Sweney near Jubbulpur. Others of flint were found by Mr. Blanford near Nagpur and near Lingoosagoor. Flint (chert), agate, and chalcedony knives resembling those of Mexico, arrow-heads, etc., were found by Surgeon Primrose. Stones have been used for recording edicts, laws, and moral codes.

Moses wrote on stone tablets the Ten Commandments. In the Confucian temple at Pekin are ten stones shaped like drums, on each of which are engraved stanzas of poetry. These stone drums are said to have been in existence since the days of Yaou and Shun, who flourished, the former B.C. 2357, and the latter B.C. 2255. The king Asoka, who was a follower of Buddha, had his edicts engraved on rocks, where they are still to be seen.—*Gray*, p. 93. See Sculpture.

STONE-CUTTING. The seal-engraver's wheel consists of a light frame ballasted below to keep it firm, with two uprights about eighteen inches in length and eight inches between. Betwixt the two is a small spindle. This turns at the one end on a screw or pivot, sometimes of cornelian; the shoulder is kept in its place by a neat iron clamp, it is steadied by a piece of rag wrapped round it, and enclosed in the collar. The spindle is terminated by a small spike of iron of about an inch long, ending in a little circular saw or button, from a tenth up to half an inch in diameter. To this, powdered corundum mixed with oil is from time to time applied, while it is spun round with a bow. The engraver holds the seal up betwixt his fingers and thumb, and a sweep or two of the bow causes a mark on the seal. This is deepened and extended as desired, the larger discs being employed for long straight strokes. The work turned out is by no means very fine, but the celerity of execution is surpassing. Diamond dust is very rarely used in India, corundum being the chief material employed in polishing gems, marbles, and metals. For sharpening swords or burnishing metal, it is generally used like a whetstone or burnisher; for polishing gems, it is either made up into a lap with lac or into a paste with oil or grease. For polishing marble or other stone it is used in two forms; the first of these is a cake of about eight inches long, three across, and two deep. This is used by an individual in the hand. For heavier purposes, a cake a foot square or so is employed, placed in a frame. Two men work at this, and the reducing process is very rapidly accomplished by it; it is, in fact, a file with a lac body and corundum teeth. The diamonds seen amongst native gentry are almost all cut in Europe, and the principal gems cut in India are the lapis-lazuli, rubies, emeralds, opals, garnets, and siliceous gems. The chief articles into which these are wrought are paper-weights, knife-handles, miniature-sized cups and saucers, tables for snuff-boxes, brooches, necklaces, bracelets, pins, buttons, and studs. The polish of Cambay stones is not such as pleases the eye of the British lapidary; yet they are so cheap that they might be expected to become a considerable article of commerce. They might be built up into mosaics for work-tables, into chess-boards, and other elegant articles of furniture,—the chief part of the work being performed here, where labour is cheap, the final finish being given at home. The Cambay agates equal the finest Scotch pebbles in beauty; they generally exceed them in size, and may be had for a mere fraction of the price.

Working in stone, polishing the hardest surfaces, engraving the surfaces with imperishable records, and sculpturing stone into various forms, even excavating gigantic temples out of the solid mountains, are branches of sculpture, statuary, and engraving to which Hindus have paid attention from the earliest times; and their structures are conspicuous for the exquisite polish and glass-like appearance of some of the hardest rocks. They use a small steel chisel and an iron mallet. The chisel, in length, is not more than six inches, and it tapers to a round point like a pencil. The iron mallet does not weigh more than a few pounds. It has a head fixed on at right angles to the handle, with only one striking face, which is formed into a tolerably deep hollow, and lined with lead. With such simple instruments they formed, fashioned, and scooped the granite rock which forms the stupendous fortress of Dowlatabad, and excavated the wonderful caverns of Ellora and Ajunta. The traces of the pointed chisel are still visible on the rocks of Dowlatabad, as they are also on some of the works of Egypt. The stone having been brought to a smooth surface, it is next dressed with water in the usual way, and is then polished in the following manner:—A block of granite, of considerable size, is rudely fashioned into a shape like the end of a large pestle. The lower face of this is hollowed out into a cavity, and this is filled with a mass composed of pounded corundum stone, mixed with melted lac. This block is moved by means of two sticks, or pieces of bamboo, placed on each side of its neck, and bound together by cords, twisted and tightened by sticks. The weight of the whole is such as two workmen can easily manage. They seat themselves upon, or close to, the stone they are to polish, and by moving the block backwards and forwards between them, the polish is given by the friction of the mass of lac and corundum. The same materials are employed in polishing agate beads and bracelets, elegantly-shaped cups, or models of cannon. The agate stones are first fixed on a steel spike, and there roughly rounded with an iron hammer, and then polished with a composition of lac and corundum variously applied. The holes are bored with a steel drill, tipped with a small diamond. Cups and saucers, and similar hollow articles, are wrought, according to the required external shape, on the steel spike, and a rough polish given on the rough polishing-stones. The cavity is formed by the diamond-tipped drill to the depth of one-fourth of an inch all over the space, until it exhibits a honeycombed appearance; the prominent places round the holes are then chipped away, and this process is repeated until the depth and form desired are obtained. They are then polished upon prepared moulds of convex forms, and of the same composition as the polishing-plates which are attached to the turning-wheel.

STONE-WORSHIP. Stones have been objects of worship of all nations, and are largely so by the Hindus, generally smeared with red lead.

Amongst the earliest mention of this form of devotion will be found notices in several parts of the Hebrew Scriptures, under the appellations of images and groves, but these are very obscure. The Phœnicians worshipped a deity under the form of an unshaped stone. The Arabs, down to the time of Mahomed, worshipped a black stone, which is now let into the wall of the Kaba. There was a sacred stone in Jura, round which the people used to move deasil, *i.e.* sunwise. In some of the Hebrides the people attributed oracular power to a large black stone.

Baber in his Memoirs, p. 450, describes how, in the battle of Jam, at sunrise, the magicians set to work with their magic stone to create confusion amongst the Persians. In spite of three centuries of Muhammadan teaching, the magic stone still keeps up its reputation among the nomades of Central Asia. The sirdar (chief) of a razzia of Turkomans, or the leader of a Kirghiz baranti, to this day carries it carefully with him, and in case of the deadly bite of a viper or a scorpion, its efficiency is valued as highly as that of a fatiha prayer from the Koran.

Stonehenge is a circle of stones in England, of Buddhist architecture, and is own brother to the circle of upright stones at Amravati on the Kistna, and to many others in the south of India. The Stone of Destiny, on which the kings of Ireland were crowned, was afterwards taken to Scone, and thence carried to Westminster, and placed under the old coronation chair, where it still remains. Seating a king on a stone seems to have prevailed throughout Europe on inauguration. Monarchs of Sweden were seated upon a stone placed in the centre of twelve lesser ones, and the kings of Denmark were crowned in a similar kind of circle. The use of the Inaugural Stone is of Canaanitish origin. Abimelech was made king by the plain of the pillar of Shechem. Jehoash was anointed as he stood by the pillar, as the manner was. The Gael used the standing stone, which was traditionally considered a supernatural sacred witness of any solemn covenant, and especially of that between an elected king and his people. Jack Cade touched London stone, and exclaimed, 'Now is Mortimer lord of London city!' Amongst the Irish, the inauguration of a chief was celebrated at a stone with the impression of two feet, believed to be the size of the feet of the patriarch chieftain who first acquired the territory. Every great tribe had its installation stone and other specialities, such as sacred trees, and rath-hills or entrenched places of meeting, dedicated to the inaugural rite. Herodotus shows that the practice of carving the impression of the feet of mighty heroes on huge stones was older than his time, as he mentions that the Scythians showed the mark of the foot of Hercules upon a rock. Spenser, the poet, writes that some of the stones on which the chief lords or captains of the clan were placed had a foot engraven, which was regarded as the measure of their first captain's foot. On inauguration, the new chief stood thereon, and took oath to preserve all the former customs of the country inviolable. His feet were placed in the impression while the heads of law relating to the clan were read to him.

Stones from the beds of Indian rivers are the usual gramma devata or village deities of the Hindus, and also of the non-Aryan castes, who are not permitted to enter the Hindu temples. The salagrama, a fossil ammonite from the Gandak river, is worshipped by all Vaishnava Hindus.

Stone monoliths are erected as memorials by the Kol and Khassya races. In Kanawar villages in the Himalaya, a stone is set up as a pillar in the fields, its centre and top smeared with whitewash, and the top marked with five finger-marks of red ochre; on this flowers are offered for the prosperity of the field. In S. India, white lime-washed splinters of stone, tipped with red, are placed under the trees in a garden or field. The Asaga of Mysore worship a god called Bhuma Deva, literally earth-god, who is represented by a shapeless stone. The worship of stones is spread over all parts of the district from Berar to the extreme east of Bustar, and that not merely among the Hinduized aborigines, who have begun to honour Kandoba, etc., but among the rudest and most savage tribes. He is generally adored in the form of an unshapely stone covered with vermilion. Two rude slave castes in Tulava, in Southern India, the Bakadara and Betadara, worship a benevolent deity named Buta, represented by a stone kept in every house. Indeed, in every part of Southern India, four or five stones may often be seen in the ryot's field, placed in a row and daubed with red paint, which they consider as guardians of the field, and call the five Pandu. Colonel Forbes Leslie supposes that this red paint is intended to represent blood. The god of each Khond village is represented by three stones. Aerolites are worshipped by Hindus.

Stones are revereneed by the Karen; their selection of them is fanciful. At Benkunat in the Lampong country, there is a long stone, standing on a flat one, supposed by the people to possess extraordinary power of virtue. It is reported to have been once thrown down into the water and to have raised itself again into its original position, agitating the elements at the same time with a prodigious storm. To approach it without respect, they believe to be the source of misfortune to the offender.

The shape of the Polynesian stones, the reverence paid to them, their decoration, and the results expected from their worship, are quite in accordance with a widely-spread superstition. Turner had in his possession several smooth stones from the New Hebrides. He says that some of the Polynesian stone gods were supposed to cause fecundity in pigs. Two large stones, lying at the bottom of a moat, are said to have given birth to Degei, the supreme god of Fiji. In all instances, an addition to objects already existing was expected from the Fiji monoliths. A stone near Baw existed, which, whenever a lady of rank at the Fiji capital was confined, was fabled also to give birth to a little stone.—*Galton's Vacation Tourists*, p. 273; *Vambery, Bokhara*, p. 299; *Lubbock's Origin of Civil.* pp. 207-210, 244.

STONING is regarded by Semitic races as the most infamous of deaths. It is the rajm of the Arabs, and their rajim is an execrating epithet for the devil. One of the ceremonies of the Haj is to cast stones towards Mount Arafat, an act expressive of their utter detestation of the devil.

STORAX.

Mayah, ...	ARAB.	Styrax broom, . .	GER.
Su-hoh-hiang, . .	CHIN.	στυραξ, ...	GR.
Su-hoh-yu, . . .	,,	Storace, ...	IT.
Fung-hiang-chi, .	,,	Styrax, ...	LAT.
Peh-kiau-hiang, .	,,	Azumbar, ...	SP.

A gum-resin, the produce of Styrax officinale, growing in the south of Europe and the Levant. It is usually met with in tears, which is pure; and in lumps or red storax, which is mixed with sawdust and other impurities. Storax has a fragrant odour, and a pleasant, sub-acidulous, slightly pungent, and aromatic taste; it is of a reddish-brown colour, and brittle.

The Chinese names refer to several resinous or balsamic substances, used internally, and externally in plasters.

STORAX, LIQUID, Rose malloes.

Mayah, Sailah, . Arab.	Rasa-mala, . . . Malay.
Sillarus, . . . Hind.?	

Liquid storax is obtained from the Liquidamber altingia. It is more or less opaque, of the consistence of birdlime, greyish colour, warm balsamic taste, and peculiar vanilla-like odour, if pure. Small quantities are imported annually into India from Suez and the Arabian Gulf in skins; it is re-exported to England and China under the designations of Rose malloes (Rasa-mala) and Sillarus, in barrels of about four imperial gallons' capacity each.—*Faulkner.*

STORKS. Naturalists arrange storks under the family Ciconidæ, tribe Cultirostres, and the genera Ciconia, Leptoptilos, and Mycteria.

The storks are more extensively distributed than the cranes, being represented in every part of the world, except in North America, where no member of the group occurs. They are more or less carnivorous in their habits, and are armed with a powerful beak, which attains its largest development in the adjutants and the Balæniceps. The white stork, Ciconia alba, is one of the most familiarly known species of European birds, although in England it has, from the changes effected by improved agriculture, become comparatively rare. It is widely distributed throughout the Old World, being found in North Africa, and in Asia as far as Bengal.

The species of the East Indies are as under:—

Ciconia alba, *Belon*, Europe, Africa, and Asia.
C. leucocephala, *Gmelin*, all India, Burma, and Archipelago.
C. nigra, *Linn.*, Northern India, Panjab, Dekhan.
Leptoptilos argala, *Linn.*, N. and N.E. India, Bengal, and Hyderabad.
L. Javanica, *Horsfield*, S. India, Bengal, Assam, Sylhet, Burma.
Mycteria Australis, *Shaw*, all India, Malayana, Australia.

L. argala is the gigantic stork or adjutant bird of Europeans; L. Javanica, the small adjutant or hair-crested stork; M. Australis is the black-necked stork. Ciconia alba, C. leucocephala, and C. nigra are the white, white-necked, and black storks.—*Jerdon.*

STORM-WAVES occur on some part or other of the coasts of S. India every few years, sweeping over the land and destroying in great numbers the people and their cattle; the western coast of the Peninsula about the northern part of the Bombay Presidency, the eastern part about Masulipatam, Vizagapatam, and Orissa, and the islands of the Gangetic Delta, have been repeatedly overwhelmed.

On the 19th May 1787, the sea rose nearly 15 feet, and inundated Coringa, when 20,000 people and 500,000 cattle perished. Again, in 1789, Coringa was deluged by three enormous waves, following in slow succession, the third of them sweeping everything before it. See Cyclone; Delta.

STRABO, an ancient geographer who lived about the beginning of the Christian era, and in the time of the emperor Tiberius. He travelled between Armenia and Sardinia, and from the Black Sea to Ethiopia, and was the author of some historical works; but his Geography in seventeen volumes is alone extant. It treats on all the then known world; amongst other parts, of the south of Asia, Ceylon, and India, interspersed with many philosophical remarks, and short narratives relating to history and antiquities.

STRACHEY. Several civil and military officers of this name have added to our knowledge of British India.

Edward Strachey, Bengal Civil Service, editor of the Bija Ganita.

Lt.-Col. Henry Strachey, author of Narrative of a Journey to the lakes Cho-Lagan or Rakas Tal, and Cho-Mapan or Manasarowara, and the Valley of Pruang in Tibet in 1846, 8vo, Calcutta 1848; on the Frontier of Kamaon and Garhwal. He mentions that Manasarowara discharges its waters through a gravel bank into Rakas Tal, which again sends off a tributary to the Sutlej.

Sir John and General Richard Strachey wrote jointly on the Finances and Public Works of India for 1869 to 1881.

General Richard Strachey, an officer of the Bengal Engineers, wrote on the Physical Geography of the Provinces of Garhwal and Kamaon, in the Himalaya Mountains, in Lond. Geo. Trans., 1851, xxi. 57; on the Glaciers of the Pindur and Kuphinee Rivers, in the Kamaon Himalayas, Edin. New Phil. Jour., 1847-48, xliv. 108; A Trip to the Niti Pass, 1849, in Bl. As. Trans., 1850; on the Snow Line of the Himalayas, ibid., 1849, xviii. 287; Notes on Investigations near Kamaon, ibid., 240; Geography of Kamaon, ibid., 1851; Horary Barometrical Observations at 11,000 feet above the level of the sea; On the Tertiary Formations of the Himalayas, Rep. Brit. As., 1851. He was appointed by the Indian Government to make a scientific survey of the province of Kamaon, and was occupied on the task about two years, during which time, in addition to the important investigations in physical science which occupied his attention, he thoroughly explored the flora of the province, carefully noting the range of each species. He was joined by Mr. Winterbottom in 1848, and they travelled together in Tibet. Their joint collections, amounting to 2000 species, were distributed in 1852-53 to the Hookerian Herbarium, the British Museum, the Linnæan Society, and some foreign museums.—*B. As. Soc. J.*, 1848; *Dr. Buist; British Museum.*

STRACHIA GEOMETRICA, a bug of a yellowish coffee colour, but marked with grey and orange on the upper side, found at Badulla in Ceylon. It feeds upon the juice of the young coffee berries, 3 per cent. or more of which were said to have suffered from it. It is allied to the green or fetid bug, but though it may occasionally cause destruction, there is no fear of it ever becoming a serious nuisance.

STRAIT OF JUBAL, at the entrance of the Gulf of Suez, 50 miles broad, extends from Ras Muhammad to Tur Harbour.—*Findlay.*

STRAIT OF SUNDA, one of the great portals of the Eastern Archipelago, is 63 miles wide between the south-western extremity of Sumatra and Java Head, but the main strait is narrowed to 51 miles by Princes Island. The most eastern rock is lat. 6° 44′ 13″ S., and long. 1° 36′ 20″ W.—*Findlay.*

STRAITS OF BANCA is rather more than 100 miles long, and in the narrowest part seven miles from shore to shore. The Straits of Banca, between that island and Sumatra, is the most frequented in the Indian Seas.

STRAITS SETTLEMENTS, on the northern boundary of the Straits of Malacca, include under one government, Penang, Province Wellesley, the Ding Dings, Malacca, and Singapore, and were incorporated in one Administration in 1826. These settlements ceased to be connected with India on 1st February 1867, when they became a Crown colony. The inhabitants in 1871 were returned—

Singapore,	97,111	Penang and Province Wellesley,	133,230
Malacca,	77,756		

The census taken in 1881 gives the total population of the Straits Settlements as 423,384, of which 1656 are resident Europeans and Americans, 174,327 Chinese, 238,066 Malays and other Asiatics, 316 Jews and Armenians, and 6904 Eurasians. A rapid increase is taking place in the actual numbers of Chinese, as well as in the proportion they bear to the whole population; and it is remarked that the numbers of Chinese women, though still only 127 in the 1000, has increased in the last ten years. In 1871 the proportion was 107 per 1000.

The inhabitants of Malacca and Province Wellesley consist chiefly of Malays and Chinese, with scarcely civilised tribes of Jakun, Binua, and Semang.

Penang is a beautifully-wooded island, situated at the north-western entrance of the Straits of Malacca, or in about lat. 5° 25′ N., and long. 100° 21′ E., and is about 13½ miles long, with an extreme breadth of 10 miles, containing an area of nearly 70,000 acres.

Penang was obtained in 1786 by treaty from the king of Quedah; and fourteen years later, Province Wellesley was ceded by the same prince. In 1881, its population, with Province Wellesley, numbered 190,597, viz. Malays, 84,724; Chinese, 67,502; Tamils, 25,094; Europeans and Eurasians, 2271; Arabs, 574; Armenians and Jews, each 32.

Malacca has a sea frontage of forty-three miles, with a depth of ten to twenty-eight miles. The town is in lat. 2° 16′ N. Its population, 93,579. Amongst them, Malays, 67,488; Chinese, 19,741; Europeans, 40; Eurasians, 2213.

Malacca, conquered by Albuquerque for the Portuguese about 1515, fell into the hands of the Dutch in the beginning of the 17th century, but was taken by the British in 1795. They kept it until, in 1818, it was redelivered to the Dutch under the provisions of the treaty of Vienna, but it again reverted to the British by the treaty of 1824.

Singapore island is twenty-four miles long by fourteen broad, and contains an area of 206 square miles. The town is in lat. 1° 17′ N., and long. 103° 51′ E. Singapore has never changed European owners. In 1819, Sir Stamford Raffles, then governor of Fort Marlborough, or Bencoolen, in Sumatra, who had been long impressed with the importance of the position, took formal possession of the then nearly uninhabited island. Population, 139,208. Amongst others, Chinese, 86,766; Malays, 22,114; Europeans, with military, and Eurasians, 5862.

Province Wellesley is on the mainland of the peninsula, immediately opposite Penang, the water dividing them being about three miles broad at the narrowest point. It runs from north to south twenty-five miles, varying in breadth from four to eleven miles, and containing an area of 15,000 acres.

STRAMONIUM, Thorn apple.

Masil, Methel, . .	Arab.	Datura, ...	Hind.
Jouz masil, . . .	,,	Datura stramonium,	Lat.

These names are given to several species of Datura; all parts are poisonous. The leaves are used in asthma, for smoking.

STRANGE, Sir THOMAS, Judge of the High Courts of Madras and Bengal, and his son, Thomas Lumsden Strange, Judge of the Sadr Adawlat Court of Madras, authors of books on Hindu Law; that of the son, called a Digest of Hindu Laws, was compiled partly from the smaller work on the same subject by his father, and partly from other eminent authorities, but amplified and elucidated by his own investigations.

STRANGERS' HOME FOR ASIATICS was established in London in 1859. It offers to Indian sailors and other orientals, a comfortable and respectable lodging, with wholesome food, at a cost which shall render the institution self-supporting. Each lodger is to pay not less than 8s. per week, for which the lodger will be supplied with three meals a day, medical attendance, baths, washing, etc. Arrangements have been made to take charge of their money and other property, to make remittances to their families and friends, to give them advice, and afford them information, to protect them from imposition, to procure them employment in vessels.

STRAW.

Tibn, Kash, Alaf, .	Arab.	Paglia, ...	It.
Straa, ...	Dan.	Palha, ...	Port.
Stroo, ...	Dut.	Soloma, ...	Rus.
Paille, ...	Fr.	Paja, ...	Sp.
Stroh, ...	Ger.	Stra, ...	Sw.
Pral, ...	Hind.	Sap, ...	Turk.

Straw is used for thatch, for the forage of horned cattle, for veneering in Japan, and for straw-plait for the bonnets of the women of Europe.

STRAWBERRY is the English name of the plant and fruit of species of Fragaria, of which there are many,—

F. Bonariensis, *Juss.*, Buenos Ayres.
F. Chilensis, *Ehrh.*, South America.
F. collina, — ? Switzerland, Germany, hill strawberry.
F. elatior, *Ehrh.*, America, hautboy.
F. grandiflora, *Ehrh.*, Surinam.
F. Indica, *Andr.*, mountains of India.
F. majaufea, — ? France.
F. monophylla, *Duchesne.*
F. nubicola, *Wall.*, Himalaya.
F. Roxburghii, *W. and A.*, Khassya, Assam.
F. vesca, *Linn.*, cultivated.
F. Virginiana, *Linn.*, North America.

Species occur in India both wild and cultivated; F. Chilensis, *Ehrh.*, the Chili strawberry, was brought from South America. F. collina is also an introduced plant. F. elatior, *Ehrh.*, is the hautboy strawberry from America; and F. grandiflora and F. majaufea are also known, as also F. Roxburghii, *W. and A.*, the F. Indica and Malay of Roxburgh, which has also been classed with Duchesnea and Potentilla, growing in the Neilgherries, Dehra Doon, and Kamaon.

Fragaria vesca, *Linn.*

Paljor, . . .	Chenab.	Tash, ...	Kangra.
Wild strawberry, .	Eng.	Fraga, ...	Lat.
Wood strawberry, .	,,	Bunun, also Musrini,	Ravi.
Kanzar, . . .	Jhelum.	Bana-phal, .	Sutlej.
Ingrach, Yan, .	Kangra.	Tawai, .	Trans-Indus.

This grows wild in most parts of the Panjab

Himalaya, from 4000 to 12,000 feet. The fruit is excellent when gathered dry, but is largely improved by cultivation. It is cultivated by Europeans and market gardeners, and in the Bombay Dekhan a bed of a few square yards brings in from £15 to £20 the season. In Bangalore, it is grown abundantly. The strawberry plant multiplies itself from runners and suckers; the old plant, after it has ceased bearing, throwing them out. In the Dekhan, as soon as the rains have set in, these runners may be removed into a nursery-bed, for their being more easily looked after, and should have the space of 9 or 10 inches allowed between them; they will throw out other runners, the whole of which may be separated and transplanted at the proper season. They thrive best in a light soil with good old stable and vegetable manure at first, and as soon as they show a disposition to flower, may have old goats' or sheep's manure added around each plant, a couple of double handfuls being sufficient. In no part of the Dekhan should the plants be put out for fruiting before the close of the rains, the latter part of September being quite early enough. Suckers planted for experiment at the commencement of August, grew to a good size, and did nothing for ten or twelve weeks but throw out suckers, which were continually removed, but, after all, fruited badly. The finest and most prolific crop was got from suckers put out in the beginning of October. Some strawberries were gathered in November from the plants put out in August, but they were so few as in no way to induce a trial of the experiment again. Varieties can only be procured from seed; and to procure the seed, select the finest ripe fruit, rub it on a sheet of paper, and dry it. When the rains commence, soak the seed in water, reject all that float, the remainder sow in baskets in a light loam, when they will be fit to remove in about six weeks, and should be put in other baskets four or five inches apart, and taken care of until ready to be transplanted into the beds where they are to remain. As these plants throw out suckers very fast, they must be constantly looked after, and removed. They will commence bearing in six months from the time of sowing the seed. As soon as the rains have ceased, put the suckers that have rooted into square beds, each not less than one foot apart, five in a row; this will give twenty-five in each bed,—as many as can be easily looked after and gathered without trampling on the bed, and thereby injuring the plants. When the earth is of a clayey consistence, Dr. Riddell has seen the strawberry cultivated on ridges. Some think this is a good plan, but he prefers the beds. It is sometimes necessary, in consequence of flooding the beds, to put tiles under the fruit to keep it clean, but it also attracts the notice of the birds. If straw or grass be used, then the chances are that white ants destroy the plants. This it is that makes some persons prefer the ridge system of growing, as they say the fruit is cleaner in consequence. Fine fruit may be grown either way; and if on ridges, the same distance must be allowed between the plants as in beds, and even in the latter the plants may be put on raised cones of earth. The common vegetable manure is all that is required at first until near flowering, when a handful or two of goats' or sheep's dung should be put round the plant, opening the earth, and scraping it together. Water during the evening and very early in the morning.—*Drs. Birdwood, Cleghorn, Stewart, Riddell, Hooker, and Hogg.*

STRI-HARIKOTTAH MUTTAH, a small forest tract on the north of Madras.

STRIPERMATUR or Sri Perumbudur, lat. 12° 58′ N., and long. 79° 56′ E., in the Carnatic, 27 miles west of Madras; properly Sripermatur.

STRIVIGUNTUM, an anicut across the Tambrapurney river, in Tinnevelly, about 16 miles from the sea, provides irrigation for 32,000 acres. There are other seven anicuts across the bed of the river.

STROBILANTHES, a genus of plants of the order Acanthaceæ, which grow in the Khassya Hills, Nepal, Nagpur, and Ceylon. In Ceylon, species of Strobilanthes, the Nillu plant, are used as sticks to put in mud walls. Fourteen species of Strobilanthes grow abundantly in the mountain ranges of Ceylon. The golunda rats feed on the seeds, also the jungle-fowl, whose eyes are said to become affected from it.—*Tennent's Ceylon*, p. 30; *Fergusson*.

STROMBOSIA CEYLANICA. *Gardn.*

Sphærocarya leprosa, *Dalz.* | S. Javanica, *Thw.*

A large timber tree of Ceylon and the Canara Ghats. The wood is white and durable. S. Javanica, *Blume*, a closely-allied species.—*Beddome, Fl. Sylv.*

STRUTHIONIDÆ, the Ostrich family.

Naam, Naamah, .	Arab.	Strutho-camelos, .	Ger.
Thar-ud-jemmel, .	,,	Struzzo, Struzzulo, .	It.
Autruche, ...	Fr.	Struthio camelus, .	Lat.
Strausse, . . .	Ger.	Shutr-murgh, . .	Pers.

A family of birds of great size, which may be thus shown,—

Fam. I. Struthionidæ.
- *a.* Struthioninæ.
  - Struthio camelus, Africa.
  - Rhea Americana, Rep. Argentine.
  - R. macrorhyncha, Rep. Argentine.
  - R. Darwini, Patagonia.
- *b.* Casuariinæ.
  - Casuarius galeatus, Ceram.
  - C. bicarunculatus, Aru.
  - C. Kaupi, Salawatty, New Guinea.
  - C. uniappendiculatus, —?
  - C. Bennettii, New Britain.
  - C. Australis, New Holland.

Fam. II. Apterygidæ.
- Apteryx Australis, New Zealand.
- A. Mantelli, New Zealand.
- A. Owenii, New Zealand.
- A. maxima, New Zealand.

The distribution throughout the world of the struthious birds has this peculiarity, that each region which they inhabit has a separate form. The ostrich is found only in Africa, the three known species of rhea only in S. America, the emu only in Australasia, and the cassowaries only in the Moluccas and adjacent islands.

The common cassowary is Casuarius galeatus; Kaup's cassowary is Casuarius Kaupi. Cassowaries are usually wild and difficult to manage, and very rarely breed in captivity. The male takes sole charge of the duties of incubation.

The common cassowary is only found in Ceram, is replaced in the Aru Islands by another species (the Casuarius bicarunculatus), distinguished by having the caruncles on the throat widely separated, and in Northern Australia by a third species. Kaup's cassowary is peculiar to New Guinea, where

a second species of the genus, with only a single throat-wattle (C. uniappendiculatus), also occurs.

The southern apteryx is A. Australis, Mantell's apteryx is A. Mantelli, and Owen's apteryx, A. Owenii. See Ostrich.

STRYCHNOS, a genus of tropical plants. S. colubrina, *Linn.*, in the hot, drier parts of Ceylon; S. minor, *Blume*, at an elevation of 6000 feet, Ceylon; S. nux vomica. S. bicirrhosa, *Lesch.*, is a native of Tanjore; S. lucida, *R. Br.*, is from tropical New Holland; S. Madagascariensis, *Pet. Th.*, is of Madagascar; S. axillaris is of the Khassya Hills, and S. monogynus, *Roxb.*, in Sylhet. Στρυχνος was a name applied by Theophrastus and Dioscorides to a kind of nightshade, but adopted by Linnæus for this genus of the Apocynaceæ. One species is used in ordeals at Gaboon, in Africa, under the name of Cusa or Icaja, and at Cape Lopez it is called M'boundu. It grows in swampy places to the height of 4 to 6 feet. The active principle is contained in the red bark of the root, which is scraped off and steeped in about a quart of water, and when the water has acquired a reddish colour, the poison is ready. S. laurina, *Wall.*, grows at Galle, Kornegalle, and other of the warmer parts of Ceylon. S. cinnamomifolia, *Thw.*, Atta-kirindi-wel, SINGHALESE, a native of Ceylon, growing in the Hantani district, at an elevation of 3000 feet. S. Gaultheriana, of Cochin-China, is employed in cases of leprosy and hydrophobia.—*Eng. Cyc.; Thw. En. Pl.; Thw. Nature.*

STRYCHNOS COLUBRINA. *L.* Snake-wood.

Kuchila luta,	BENG.	Modira kaniram,	MALEAL.
Bois de couleuvre,	FR.	Pao-de-cobra,	PORT.
Lignum colubrinum,	LAT.	Naga musadi,	TEL.

A scandent plant with a stem often 8 to 12 inches in diameter, growing in the hot, drier parts of Ceylon, and in Malabar, Konkan, Coromandel, and Khassya. The wood is of a light-grey colour, hard, and intensely bitter. That of the root is deemed a remedy for the bite of the cobra capella; but several woods have, however, received the appellation of Bois de couleuvre (Lignum colubrinum), viz. the Ophyoxylon serpentinum in Amboyna, the Ophiorhiza mungos in Java, Polygala senega in North America, etc., all for their supposed virtues as antidotes to snake poison. A very large proportionate quantity of strychnine exists in the wood of this root.—*O'Sh.; Eng. Cyc.; Thw. Enum.; Roxb.*

STRYCHNOS LIGUSTRINA.

Caju-alar,	MALAY.	Caju-badaira pail or laut,	MALAY.
Caju-nassi,	,,		

A tree of the Eastern Archipelago, resembling the orange tree; berries globose, yellowish-green, two to eight seeded. This yields the Lignum colubrinum of Timor.—*O'Sh.* p. 443.

STRYCHNOS MINOR. *Blume.*

Var. a. S. parviflora, *Benth.* p. 341.

Grows in the warmer parts of the island of Ceylon, in the Central Province, up to an elevation of 6000 feet.—*Thw.*

STRYCHNOS NUX VOMICA. *Linn.*

Khanek-ul-kalb,	ARAB.	Lignum colubrinum,	LAT.
Falus mahi,	,,	Jhar-katchura,	MAHR.

Snake-wood tree,	ENG.	Gada-kadooroo,	,,
Poison-nut,	,,	Yetti-cotay maram,	TAM.
Kuchila,	HIND.	Musadi, Mushti,	TEL.

A middling-sized tree, with a short, crooked trunk, which grows in the East Indies. The seed is inodorous, but its taste insupportably acrid and bitter. It is very difficult to reduce the seeds to powder; they must be first rasped, the raspings steeped in mucilage, then dried and powdered; or the raspings should be exposed to the steam of water for an hour, then stove-dried, and powdered in a covered mortar. The bark is of an ash-grey colour; is known to the European druggists under the name of the 'false angustura.' Dr. O'Shaughnessy found the bark commonly sold in Calcutta under the name of Rohun, and substituted for the harmless bark of the Soymida febrifuga. It acts as a powerful exciter of the spinal cord, and as a tonic. By Europeans it is principally used in paralysis and neuralgia, also in muscular tremors and incontinence of urine; and natives of India are now using strychnine as an excitatory agent. The pulp of the poisonous fruits are the favourite food of the Buceros Malabaricus hornbill, and other birds. The hard and durable wood is used for many purposes by the natives. It is exceedingly bitter, particularly that of the root, which is used in intermitting fevers, and in cases of venomous snake-bites, when that of Naga musini, S. colubrina, cannot be had. The seeds are employed in distillation of country spirits, to render them more intoxicating. Its timber is strong and close-grained, but never of large size; wood hard, and of a white or ash colour, streaked with white; specific gravity, 0·706. A cubic foot weighs 52 lbs. It is used for ploughshares, cart wheels, in Travancore for making cots, and is adapted for fancy work and cabinet-making. It furnishes one of the snake-woods of commerce. Iron tools are sharpened on blocks of this wood. White ants will not touch it.—*O'Sh.; Royle; Roxb.*

STRYCHNOS POTATORUM. *Linn.*

Induga,	BENG.	Ingivi,	SINGH.
Kha-boung,	BURM.	Tettan kotte maram,	TAM.
Yæ-kyie,	,,	Tettan parel maram,	,,
Chil-binj-ka-jhar,	DUKH.	Indupu chettu, Induga,	TEL.
Clearing nut tree,	ENG.	Katakamu,	,,
Nirmul, Nirmuli,	HIND.	Chilla ginja chettu,	,,
Kataka,	SANSK.	Kotoko,	URIYA.

This tree grows in the drier parts of Ceylon, is found in various parts of India, and grows to a larger size than the S. nux vomica, but scarcer. It has shining fruit, which is black when ripe. It attains a height of from 15 to 60 feet. The English name is derived from the property in the seeds of purifying muddy water, being constantly used for that purpose by the natives, who rub the inside of their brass pots with them. The impurities very soon fall to the bottom. The nature of the action has not been clearly ascertained. It probably depends on astringency in the fruit. The fruit is used medicinally. Pulp, when ripe, eaten by the natives. The entire plant is destitute of the poisonous ingredients of the other species. This seed can often be obtained when alum cannot be procured. The natives never drink clear well water if they can get pond or river water, which is always more or less impure. —*Drs. Roxb., Wight, Gibson, Cleghorn; Captain Macdonald.*

STRYCHNOS SANCTI IGNATII. *Berg.*

Ignatia amara, *Linn.*

St. Ignatius' bean,	ENG.	Papeeta,	HIND.

A branching tree, a native of the Philippine

Islands, with seeds an inch long, the size of a large olive. According to the analysis of Pelletier and Caventon, these beans contain igasurate (strychnate) of strychnia, wax, concrete oil, yellow colouring matter, green starch, bassorine, and vegetable fibre. The strychnine is present in three times the quantity of that in S. nux vomica nuts, but there is no brucine. Its activity is consequently very great, its uses the same as those of nux vomica. In small doses they are said to purge; they are an efficacious vermifuge. When given in over-doses, the symptoms are those of poisoning by strychnia, as vertigo, convulsions, etc., and the remedy used for these effects is lemonade in large quantities, which is said to afford relief speedily.—*Eng. Cyc.; OSh.*

STRYCHNOS TIEUTE. *Lesch.*

Ypo, ... Celebes. | Tietti, Tiette, . . Jav.
Upas tjeute, Tshellik, Jav. | Antiar, ... ,,

Has elliptical, acuminate, 3-nerved, glabrous leaves, and simple tendrils, which are thickened opposite the solitary leaves. This plant is a climbing shrub, a native of Java, and is said to be the true Upas tree of that country. It is undoubtedly the most poisonous species of the genus, and yields the greatest quantity of strychnia. The root is called Upas raja, but another Upas tree of Java is the Antiaris toxicaria, and several other plants are called Upas. The natives of Java prepare from this species one of the poisons that are used for producing death by arrow wounds.—*O'Sh.; Eng. Cyc.*

STURGEON.

Stör, . . Dan., Ger., Sw. | Robalo, ... Port.
Steur, ... Dut. | Osetr, ... Rus.
Esturgeon, ... Fr. | Esturion, ... Sp.
Storione, ... It.

The Sturionidæ family of fishes belong to the section Chondropterygii. Four genera are contained in this family, — Accipenser, Spatularia, Chimæra, and Collorhynchus. The sturgeon, Accipenser sturio, ranges through the seas of the coasts of Europe, and is largely captured by the Russians in the Caspian Sea. Its swim or sound furnishes the best isinglass of commerce. The sturgeon of the Borysthenes are mentioned by Herodotus as large fish without prickly bones, called antacæi, good for pickling; and, according to Professor Rawlinson, caviare also was known to the Greeks. The common sturgeon (Accipenser sturio, *Linn.*) is not unfrequently met with in mouths of English rivers. It is of an elongated form, and has the body protected by numerous indurated plates; the tail is forked, and the upper lobe is the largest, as in the sharks.—*Eng. Cyc.; Yule, Cathay.*

STURNIDÆ, the starling family of birds, which naturalists arrange into the Sturninæ, the starlings or mynas; the Lamprotorninæ, glossy mynas or grakles; the Buphaginæ or ox-peckers; the Quiscalinæ or boat-tails; the Icterinæ or hang-nests; and the Agelainæ or maizes. The Sturninæ, Lamprotorninæ, and Buphaginæ are peculiar to the Old World. In the E. Indies, the more frequently occurring genera and species of the family are as under:—

Fam. Sturnidæ. *Sub-Fam.* Sturninæ.

Sturnus vulgaris, *Linn.*, common starling.

St. Indicus, *Hodgs.* | St. splendus, *Temm.*
Telia maina, . . Hind. | Nakshi-telia, . . Hind.
Tilora, ... ,, | Tilgiri, . . . Kashmir.

The glossy black starling of Europe, Asia, Africa, Azores, is common in the Himalaya, and N. India, Kashmir, Afghanistan, etc., as in Britain.

Sturnus unicolor, *Marm.*, of Sardinia, Barbary, etc., is very distinct, and much less bright in its glosses than the common starling. It is said by Adams to be common in Sind, the Panjab, and Kashmir.

Sturnus cineraceus, *Temm.*, Japan.

Sturnopastor contra, *Linn.*, pied starling.

St. Capensis, *Linn.* | Pastor jall, *Horsf.*
Ablaka-gosalik, . Beng. | Ablak-maina, . . Hind.
Guia-leggra, . . ,, | Venda gorinka, . Tel.

Found throughout a considerable part of India, but absent in the S. and S.W.

Sturnopastor superciliaris, *Blyth.*

Pastor roseus, *Linn.*, the rose-coloured starling, of all India and Burma.

P. jalla, *Horsf.*, Malayana.

P. tricolor, *Horsf.*, Java.

P. temporalis, *Wagler*, China.

Acridotheres tristis, *Linn.*, the common myna.

Gracula gryllivora, *Daudi.* | Mina tristoides, *Hodg.*
Salik, Bhat-salik, Beng. | Salonka, ... Mahr.
Gorwantera, . . . Can. | Goranka, Gorinka, . Tel.
Bemni, Saloo, Chut.-Nag.

All the head, the crest, neck, and breast glossy black. It occurs all over India and Burma. It was introduced from the Mauritius into India to destroy the grasshoppers.

Acridotheres ginginianus, *Latham.*

Turdus ginginianus, *Lath.* | P. Mahrattensis, *Royle.*
Pastor gregicolus, *Hodg.*
Gang-salik, . . . Beng. | Gilgila, ... Hind.
Ram-salik, . . . ,, | Bardi maina, . . Nepal.
Bank myna, . . Eng. | Lali, ... Sind.
Ganga maina, . . Hind.

Occurs from Afghanistan and the Himalaya southwards to the Nerbadda.

Acridotheres fuscus, *Wagler.*

A. griseus, *Blyth.* | Mama cristatelloides, *Hod.*
Pastor Mahrattensis, *Sykes.* | Gracula cristatella, *Sund.*
Jhont-salik, . . . Beng. | Jhonti maina, . . Hind.
Pahari maina, . . Hind.

Occurs in hilly and jungly districts throughout India, Nepal, Assam, and Burma.

Acridotheres cristatellus, — ? China.

Acridotheres Javanicus, *Cabanis*, Java.

Temenuchus pagodarum, *Gmelin.*

Pastor nigriceps, *Hodg.* | Turduspagodarum, *Gmel.*
Maina sylvestris, *Hodg.*
Monghir pawi, . . Beng. | Bahmani maina, . Hind.
Pabiya pawi, . . ,, | Papata pariki, . . Tam.
Brahmany myna, . Eng. | Rawanati, . . . ,,
Popoya maina, . . Hind. | Papata gorruki, . Tel.

Occurs throughout all India. It is the black-headed myua.

Temenuchus Malabaricus, *Gmelin*, is the Pastor caniceps, and T. Blythii, *Hodgson*, the Pawi of Bengal.

Temenuchus Blythii, *Jerdon*, the white-headed myna of the Malabar forests, and other six species of Further India.

Saraglossa spiloptera, *Vigors*, of Western Himalaya.

Eulabes religiosa, *Linn.*, hill myna, of S. India, Coorg, Wynad, and Malabar.

Eulabes intermedia, *A. Hay*, the Nepal hill myna, of N. India.—*Blyth; Jerdon.* See Starlings.

STYLIDIUM BEGONIFOLIUM. *R. Br.*

S. Chinense, *Lour.* | Marlea begonifolia, *Roxb.*

Khassya Hills, extending northwards beyond 30° of N. lat.; middle-sized, white, with large

yellow anthers, from March and April to July and August. Timber employed by the natives in the construction of their houses.—*Voigt.*

STYLOCORYNE WEBERA. *A. Rich.*

Webera corymbosa, *Willd.*	Rondeletia Asiatica, *Linn.*
Canthium corymbosum, *Pers.*	Cupia corymbosa, *D. C.*
	Tarenna Zeylanica, *Gærtn.*
Kommi chettu, . . TEL.	Konda papata, . . TEL.
Bomma papata, . . ,,	

The wood of this small tree is small, but hard, prettily marked, and much esteemed by the natives. The tree is met with on the Godavery. Its leaves and fruit are used in medicine.—*Roxb.; Voigt.*

STYRACEÆ, a sub-order of plants, consistiug of trees or shrubs, and comprising eight or nine genera; Symplocos, Styrax, Paralea, and Decadiathera. The E. Indian species are:—

Symplocos ferruginea, *Roxb.*, Khassya.
S. spicata, *Roxb.*, Khassya.
S. racemosa, *Roxb.*, Bardwan, Nepal, Kamaon.
S. sinica, *Kerr*, China.
S. pulcherrima, *Wall.*, Nepal.
Styrax benzoin, *Dryand.*, Sumatra.
S. serrulatus, *Roxb.*, Chittagong.

This order is chiefly remarkable, in an economical point of view, for furnishing the storax and benzoin of commerce, which contain a peculiar acid called the benzoic acid. Some of the species are used for dyeing yellow.

STYRAX BENZOIN. *Dryander.*

Lithocarpus benzoin, *Blume.*

Bakhur, Kunnuk, . ARAB.	Kominjan, . . MALAY.
Lubani ood, Ood, DEKH.	Husse luban, . . PERS.
Gum-benjamin tree, ENG.	Husse-ul-jawi, . . ,,
Storax, ... ,,	Sambranee, . . . TAM.
Luban, ... HIND.	

This tree is a native of Sumatra, Siam, and Java, and yields the gum-benjamiu of commerce, by making incisions into the tree in its seventh year. The juice hardens on exposure to the air, that which flows first being the purest and most fragrant. It is supposed that Styrax Finlaysonianum also yields it. It occurs in masses composed of white lumps, joined together by a brownish-red substance. It has an agreeable odour and taste. It contains a resin mixed with a considerable quantity of benzoic acid, which may be prepared from this drug. It is a very useful stimulant, expectorant, and diuretic, but is chiefly used as incense. It is principally used in chronic bronchitis and laryngitis, also in jauudice and disease of the bladder.—*Voigt; Birdwood; Powell.*

STYRAX OFFICINALE. *Linn.* A uative of Asia Minor and Syria, common in Greece, and cultivated in the south of Europe. As this plant does not yield a balsamic exudation in all these situations, some storax has been thought to be yielded by Liquidamber orientale. See Storax.

STYRAX SERRULATUS. *Roxb.* Koom jameeva, BENG. A small tree, a native of Chittagong, where it blossoms in March, and the seed ripens in October.—*Roxb.*

SU, also Abar, a great Scythic horde who entered India B.C. 126, and gave their name to the province of Indo-Scythia.—*Elliot.*

SUAR or Surah, a wild, half-savage, forest tribe inhabiting the Eastern Ghats of the Peninsula of India. They are known to their settled neighbours as the Chenchu kulam, Chenchwar, and Chensuar. Wilson names them Chenchu-vadu (Vadu, TEL., a man). They dwell in the tract covering the westernmost range of the Eastern Ghat line, between the Pennar river and the Kistua, and knowu locally as the Nullamallay and the Lankamallay. They inhabit clearings in the forest, live in beehive-shaped huts, like the African, Nicobarian, and many of the ruder Asionesian tribes. These are of wicker-work, with walls about 3 feet high, and a conical straw roof, with a screen for a door. The men, almost nude, have in general only a rag for covering. The women dress like the wandering female basket-makers, whom they resemble in features. The features of the men are small, but the expression is animated, cheek-bones higher and more prominent than those of the Hindus in general, nose flatter, and nostrils more expanded; their eyes black and piercing. In stature they are somewhat shorter thau their neighbours, and they are slightly, but well made, except about the knee and the leg, which is large. The colour of the skin is dark. Newbold characterizes them as between a Teling and a Jakun of the Malay Peninsula. They speak Telugu with a harsh and peculiar pronuuciation. They have large dogs, and a few are employed as hill police in the pass from the Kuman to Badwail. They have no images. They are polygamists; they bury their dead, but sometimes burn, and they carry the deceased's weapous to the grave. They use the spear, hatchet, the matchlock, or a bamboo bow and reed arrow tipped with iron. They look on weaving and other manufacturing arts with contempt. They are patient and docile. Mr. Logan has suggested that the Chenchwar are a continuation of the wild forest Surah of the mountainous tracts farther north in the line of Eastern Ghats. Vocabularies of the Kond, Savara, Gadaba, Yerukala, and Chentsu are giveu in the Beng. As. Soc. Journal of 1856.—*Newbold in Beng. As. Soc. Jour.*, 1865; *Logan in Jour. Ind. Arch.*

SUBAH, a province, a government, sometimes a smaller division, also the officer in charge of a subah. Subah under the Moghul rule was a larger subdivision of their dominions, such as Oudh, Behar, Bengal. Each subah was divided into a certain uumber of circars, and each circar into parganas or mahals (which are used as equivaleut expressions), and the parganas again were aggregated into dustoor or districts; and as the parganas of the dustoor were always contiguous, the dustoor statement in old registers, if copied with any regard to correctness, forms a means of the verification of doubtful names. Subah is an Arabic word, signifying a head of money or a granary. Circar is literally a chief, a supervisor; dustoor, besides signifying a rule, is also a minister, a moonshi. The title of Subahdar, or lord of the subah, is long subsequent to Akbar's time. Sipahsalar was then the ouly designation of the emperor's viceroy in each subah. A subahdar, in the British Indian army, is a native commissioned officer of native infantry or cavalry.—*Elliot; Malcolm's Central India.*

SUBAH. ARAB. The morning. Subh-i-kazib, a false dawn, is a transient appearance of light on the horizon, which often appears about an hour before the subh-i-sadik, or real dawn of day. Subah-ul-kheir, good morning.

SU-BAHU. SANSK. Five-armed, a royal Hiudu title.

SUBAKTAGIN, governor of Khorasan, declared himself independent at Ghazni in A.D. 975;

he afterwards carried his arms across the Indus, forcibly converting the natives to Islamism. These inroads were repeated, and in the last (A.D. 997) he was accompanied by his son, the celebrated Mahmud, who, after his succession to the throne of Ghazni, repeatedly invaded India. Mahmud subjugated the whole of the level district west of the Indus to the very foot of the Brahui mountains. His son Musaud extended these conquests still more westerly into Mekrau. He adhered, however, to his father's plan of not ascending the lofty ranges.—*Hist. of Punjab*, i. 64.

SUBANSIRI, a river in the north-east of the province of Assam, which contributes to form the main stream of the Brahmaputra. It is supposed to rise far up among the mountains of Tibet. It enters the district of Lakhimpur from the Miri Hills, and, flowing south through North Lakhimpur, forms, together with the channel of the Lohit, the large island Majuli Char, and finally empties itself into the main stream of the Brahmaputra in Sibsagor district. In the plains it is navigable by steamers as far up as Patalipani, 16 miles from North Lakhimpur town. Below this place it is nowhere fordable.—*Imp. Gaz.*

SUBARNAREKHA, meaning the streak of gold, is a river in Bengal, which rises 10 miles south-west of Ranchi in Lohardaga district, and flows towards the north-east, leaving the main plateau in a picturesque waterfall called Hundrughagh.

SUBARNAREKHA, in lat. 21° 34′ 30″ N., and long. 87° 22′ E., on the Orissa coast, was the site of the first maritime English settlement in Bengal. The port is unsafe during the south-west monsoon, but within the bar the Subarnarekha possesses a magnificent deep channel.—*Imp. Gaz.*

SUBATHU, a military cantonment and sanatorium in the Simla district of the Panjab, in lat. 30° 58′ N., and long. 77° 2′ E. It occupies the crest of a ridge on a table-land at the extremity of the Simla range, overlooking the Ghambar river, 23 miles from Simla station. It is 4253 feet above the sea. It has been held as a military post since the close of the Gurkha war in 1816, and barracks exist for a whole regiment. Subathu lies 9 miles from Kussowlee on the road to Simla; the hills are bare of wood; the climate differs from that of Kussowlee in being hotter in summer, and colder in winter. It is altogether more dry and sheltered, and has an advantage in being seldom visited by fogs. Subathu is noted for its nummulitic strata.—*Imp. Gaz.* See Sanatoria.

SUBHA, a Bedouin tribe on the right bank of Euphrates below the Weldi. They are constantly at war with the Shammar of Al Jazirah, and on that account are protected by the Anazeh. They have large flocks of sheep and camels, and have good horses. Some families grow grain.

SUBHADRA (Su, beautiful, Bhadra, good), daughter of Vasudeva, sister of Krishna, and wife of Arjuna. Bala Rama, her elder brother, wished to give her to Duryodhana, but, at Krishna's suggestion, her marriage was by seizure of the maiden by Arjuna, near the Raibuta mountain, where she had gone to perform religious ceremonies, and Bala Rama subsequently acquiesced in their union. She was the mother of Abhi Manyu. Her lamentation for her son after he was killed in battle was addressed to his spirit, and she prayed for its being associated with the holy and heroic in the heavenly sphere.—*Dowson; Mahabharata; Cal. Review.*

SUBHAGNA (of good fortune) was an only child, a maiden widow. It is related of her in a Hindu legend, that, having learned from her preceptor the solar incantation, incautiously repeating it, the sun appeared and embraced her, and she thence became pregnant. The affliction of her father was diminished when he discovered the parent. Nevertheless (as others might be less charitable), he sent her with a female attendant to Balabhipura, where she was delivered of twins, male and female. When grown up the boy was sent to school, but, being plagued about his birth, whence he received the nickname of Ghaibi (concealed), in a fit of irritation he one day threatened to kill his mother if she refused to disclose the author of his existence. At this moment the sun revealed himself; he gave the youth a pebble, with which it was sufficient to touch his companions in order to overcome them. Being carried before the Balhara prince, who menaced Ghaibi, the latter slew him with the pebble, and became himself sovereign of Saurashtra, taking the name of Silladitya (from Silla, a stone or pebble, and Aditya, the sun). His sister was married to the raja of Baroach. We are struck by the similarity of production of these Hindu Heliadæ, and that of the Tatar dynasty from which Chengiz Khan was descended. The Nooranyon, or children of light, were from an amour of the sun with Elancua, from which Chengiz Khan was the ninth in descent. Authorities quoted by Petis de la Croix, in his life of this conqueror, and likewise by Marigny, in his history of the Saracens, affirm Chengiz Khan to be a descendant of Yezdejird, the last Sassanian prince. Chengiz was an idolater, and hated the very name of Muhammadan. A courtier telling Aurangzeb of his celestial ancestry, gravely quoting the affair of the mother of the race of Timur with the sun, the monarch replied, 'Mama caba bood.'—*Tod's Rajasthan*, i. p. 234.

SUBHAN. Arab. Praising or glorifying God. Subhan Allah, May God be praised! a frequent solemn ejaculation of devout Muhammadans.

SU-BHANGI or Aghiri are wandering Hindu mendicants. They drink from human skulls water mixed with urine and sugar, and as if for purposes of nature squat before houses, extorting alms by the disgust they create. They likewise do the tricks of producing from their mouths, milk, liquor, etc. They are believed to engage in gang robberies.

SUBHAN RAI, author of Khulasat ut Tawarikh.

SUB-HIMALAYA is a term originated by Mr. B. Hodgson to distinguish all the mountains and their inhabitants below the snowy range. But the term is inappropriate, as it includes precipitous mountains 8000 and 10,000 feet high, and people dwelling in them, higher than the highest mountaineers of Europe. The Sub-Himalayas comprised in Bhutan, Sikkim, and Nepal are chiefly occupied by Tibetan or Bhotia tribes, and by tribes more akin to the Gangetic race. The first fossil remains of the colossal tortoise, Colossochelys atlas, were discovered in 1835 in the tertiary strata of the Siwalik Hills, or Sub-Himalaya skirting the southern foot of the great Hima-

laya chain. They were found associated with the remains of four extinct species of mastodon and elephant, species of rhinoceros, hippopotamus, horse, anoplotherium, camel, giraffe, sivatherium, and a vast number of other mammalia, including four or five species of quadrumana. The Siwalik fauna include also a great number of reptilian forms, such as crocodiles and land and fresh-water tortoises. Some of the crocodiles belong to extinct species, but others appear to be absolutely identical with species now living in the rivers of India, in particular to the Crocodilus longirostris, from the existing forms of which naturalists have been unable to detect any difference in heads dug out of the Siwalik Hills. The same result applies to the existing Emys tectum, now a common species found in all parts of India. A very perfect fossil specimen, presenting the greater part of the evidence of the dermal scutes, is undistinguishable from the living forms, not varying more from these than they do among each other. There are fair grounds for entertaining the belief as probable that the Colossochelys atlas may have lived down to an early period of the human epoch, and since become extinct,—1st, from the fact that other chelonian species and crocodiles, contemporaries of the colossochelys in the Siwalik fauna, have survived; 2d, from the indications of mythology in regard to a gigantic species of tortoise in India. —*Campbell*, p. 46; *Jour. As. Soc. Ben.*, No. 247 *of* 1855. See Siwalik.

SUBRAMANYA, among the Hindus of Southern India, a name of Kartikeya, the god of war. Subramanya is a favourite deity of the Tamil and Teling races.

SUBRAMUNI, below the ghats in the south of the Peninsula, is one of the principal seats of serpent-worship in India.

SUBRAON is in the neighbourhood of Ferozpur in the Panjab. It was the scene of a battle between the British and the Sikhs after the death of Ranjit Singh.

SUBSIDIARY FORCE, a term by which is designated a brigade of the British Indian army, about 5000 strong, lent to the Hyderabad Government, under treaty, and the expenses of which are met by the revenues of the Ceded Districts, now forming the revenue collectorates of Bellary, Cuddapah, and Kurnool. It was the Marquis of Wellesley who established the relations between the Nizam and the British on their present basis, and who initiated that political statns of snbsidiary alliances which has continued with but little alteration down to the present day. By this system a native sovereign receives a British Resident at his court, and receives and maintains a British subsidiary force within his dominions. This system was carried out with the Nizam of the Dekhan in 1798 and 1800. It was also tried on the sultan of Mysore, but Tipu flamed up at the idea of becoming a pensioned prince, and the result was his own overthrow and the establishment of a dependent raja in his room. Then it was tried on the Peshwa of the Mahrattas, and would also have been tried on Sindia and Holkar, had not Wellesley been recalled, and Cornwallis sent out in his room. This system was subsequently extended to the whole of the Native States, and belongs to the general history of India. By this arrangement Nizam Ali was compelled to give up his French force, and to become really dependent on the British power. He died in 1803, very shortly after the change.

SUCCOTH BENOTH, an Assyrian deity, whom the Jews worshipped under the name of Astarte or Ashtaroth, and it is said that this deity was of both sexes. This physiological or androgynic union of the sexes is attributed to a form of Siva, the right side being male and left side female, and his female energy or sakti is fabled to have assumed both appearances as circumstances required. The Babylonian goddess identical with Succoth Benoth was Mylitta, meaning mother, and the term Mat'ha or mother is applied to the wife of Siva. Amongst the Assyrians, the women, once in their lives, had to make a sacrifice of virtue to the goddess Succoth Benoth. Lemprière says that Succoth Benoth was a surname of Venus, in whose temples all the women were obliged to prostitute themselves to strangers. Amongst other names of the wife of Siva is Bali or Vali, under which appellation she assumed the form of a girl of twelve years of age. And in Madura, Balane, and other places, beautiful virgins used to go to the temple once in their lives to offer themselves in honour of the goddess. It was the belief that a god had conversed with them.—*Roberts*, p. 9.

SUD, Sudh, or Sudhan, in Chutia Nagpur, a term which includes all Hindu castes, Brahmans, Rajputs, Goalas, Kurmis, Kahars, etc. The word means pure, and they designate the aborigines Kol, meaning vile or impure, or Chuar, robber. The Kol accepted the distinctive denomination. Uniting in themselves a Dravidian and Kolarian element (the Oraon and Munda), they were in want of a generic term to distingnish them from the Sudhs, but to the latter they also apply the epithet Dikn, a word of uncertain meaning, but not intended to be complimentary. —*Dalton, Ethnol. of Bengal*, p. 309.

SUDANA or Sudatia, illustrious giver, the title of the famous Buddhist prince Wessantara, king of Sibi or Siwi, and son of Raja Sanda. He is believed to have been one of the previous incarnations of Buddha. His history and that of his wife Phusati and two children, are represented in the sculptnres on the north gate of the great Bhilsa tope. He gave away whatever he was asked for, even his kingdom, and was dethroned by the people. His capital Jayatura is supposed to be the modern Shahbaz garhi. On a rock within its bounds is one of the rock inscriptions of Asoka.

SUDDHODANA, father of Gautama Siddharta, the Sakya Buddha. He was chief of a tribe of Sakya, whose country lay among the spurs of the Himalaya, along the banks of the Rohini or modern Kohana. He was one of the last representatives of the pure Aryan or Solar dynasties who held sway in Ayodhya, the modern Oudh, and were deposed by the Lunar dynasties of the mixed Aryan and Turanian races, and reduced to mere chieftains of tribes, who still maintained a precarious independence under the protecting shadows of the Himalaya. The Rohini (Kohana) divided the Sakya rule from that of the Koliyan on its opposite bank, and in times of drought and famine the river was often the subject of fighting between them. But during the rule of Suddhodana there was peace between the clans on either

side of the Rohini, and Suddhodana had married two daughters of the Koliyan chief. Both continued childless, until, in her 45th year, the eldest sister presented her husband with a son, the prince Gautama Siddharta, who when 19 years old was married to his beautiful cousin Yasodhara, daughter of the Koliyan chief, who bore a child to her husband when he was in his 29th year.

SUDI. Hind. The bright or increasing half of a lunar month from new to full moon; a fortnight of the growing moon.

SUDIKKODUTTA NAYSSIYAR, a Tamil poetess, who is said to have been a foundling, who consecrated herself to Vishnu, as worshipped at Tirupati. 173 stanzas, called Tirupavai and Tirumoli, part of the Nalayira Pirapantam, are attributed to her.

SUDRA or Sudar is the caste appellation of the mass of the Hindu inhabitants of India. This word is of very rare occurrence in the Vedas. The Aryans commonly styled their native foes Dasya, but in several passages of the Atharvan, sudra or çudra is directly contrasted with arya. Lassen recognises the name in that of the town Σύδρος on the Lower Indus, and especially in that of the nations of the Sudroi in Northern Arachosia, and he supposes them to have been, with the Abhira and Nishada, a black long-haired race of aborigines, subdued by the Aryans. It cannot be doubted that by the Aryans the term was extended in course of time to all who occupied or were reduced to a dependent condition, whilst the term M'hlecha continued to be the appellation of the unsubdued un-Aryanized tribes. Lassen and Max Muller suppose that the whole of the Sudra or primitive servile classes of Northern India belonged to a race different from their Aryan conquerors; but Dr. Caldwell thinks it probable that a considerable portion of them consisted of the slaves, servants, dependents, or followers of the high caste Aryans, and, like the latter, belonged to the Aryan race. And the fact that the Brahman, Kshatriya, Vaisya, and Sudra are all represented as having sprung from Brahma's body, though from different parts of it, is in favour of the idea that the Sudra differ from the twice-born Aryans in rank only, not in blood. Sudra are farmers, gardeners, mechanics, artisans, and labourers of every description. But in these Sudra avocations will be found persons of the second and third tribes, castes, or classes, but of the first comparatively few. According to Menu, the natural duty of the Sudra is servitude. Many sections and sub-castes of Sudra burn their dead like other Hindus. Others inter them decently clad, and in a horizontal position, while others, as the Lingaets, artisan goldsmith caste, etc., put their dead in a sitting attitude. The Sudra have numerous subdivisions in their castes, and the tendency of the Aryan Brahman races has been to recognise as of the Sudra caste all the aboriginal races who adopt Brahmanism. In the Peninsula of India, the great Vallalar, Idiga, and Reddi races, the Balja, Pakinati, Mootati, Vellanati, all with the titles of Rao, Naidoo, and Sitti, all the Kunbi, Kurmi, all the Hindu barber and mutton butchers, claim to be of Sudra origin. Part of the Sudra have by some authors been believed of a Cushite or Caucasa race, who invaded India anterior to the Aryan immigration. If other employments fail a Sudra, says Menu, he should subsist by writing.—*Oriental Linguistic Studies.*

SUDRA. The Parsees are invested with the sudra or sacred shirt, and the cord or kusti, at the age of six years and three months. This investiture is the initiation of the child into the religion of Zoroaster, the jubhla being then discontinued. The sudra is made of linen or gauze or net, while the kusti is a thin woollen cincture or cord of seventy-two threads, representing the seventy-two Has or chapters of the Izashne, one of the sacred books of the Parsees. The sudra and kusti are worn alike by men and women, but the latter likewise dress in the saree, generally of coloured silk, and the short-sleeved silk vest called the kanchri or choli.—*Parsees*, p. 70.

SUDRAKA, author of the drama Mrichchha Kati, or the Toy Cart.

SUEDA FRUTICOSA. *Moq.* The Lanee and Loonuk, a plant of the Chenopodiaeeæ, growing abundantly in the Panjab and Sind. It is burned along with Salsola Indica, *Roxb.*, and Chenopodium, to obtain Sajji khar, crude carbonate of soda.—*J. A. Murray.*

SUEVI. Su, Tuisto (Mercury), and Ertha (the earth), were the chief divinities of the early German tribes. Tuisto was born of Ertha (Ella) and Manus (Menu). He is often confounded with Odin or Woden, the Budha of the eastern tribes, though they are the Mars and Mercury of these nations. The Suevi or Suiones, the most powerful Getie nation of Scandinavia, was divided into many tribes, one of whom, the Su (Yu-chi or Jit), made human sacrifices in their consecrated groves to Ertha (Ella), whom all worshipped, and whose chariot was drawn by a cow. The Suevi worshipped Isis and Ceres (of Rajasthan), in whose rites the figure of a ship is introduced, 'symbolic,' observes Tacitus, 'of its foreign origin.' At Udaipur, the festival of Isa or Gowri, wife of Iswara, is performed on the lake, and appears to be exactly that of Isis and Osiris in Egypt, as described by Herodotus. The Getic race carried their veneration for the horse, symbolic of their chief deity the sun, into Scandinavia, equally so of all the early German tribes, the Su, Suevi, Catti, and Sucimbri Getes, in the forest of Germany and on the banks of the Elbe and Weser. The milk-white horse was supposed to be the organ of the gods, from whose neighing they calculated future events: notions possessed also by the Aswa, sons of Budha (Woden), on the Yamuna and Ganges, when the rocks of Scandinavia and the shores of the Baltic were yet untrod by man. It was this omen which gave Darius Hystaspes (Hysna, to neigh; Aspa, a horse) a crown. The bard Chund makes it the omen of death to his principal heroes. The steed of the Scandinavian god of battle was kept in the temple of Upsala, and always 'found foaming and sweating after battle.' 'Money,' says Tacitus, 'was only acceptable to the German when bearing the effigies of the horse.'—*Tacitus; Rajasthan*, i. p. 64.

SUEZ, the Es-Suwcys of the Arabs, is at the northern end of the Gulf of Suez. It is supposed to be the Klysma mentioned by Lucian, and later on the Kolzum of the pilgrims, and the sites of these places are indicated by mounds on the backwater which formerly extended for miles inland. Prior to the construction of the Suez Canal, Suez

remained a small Arab village, with perhaps 1000 inhabitants, and although the population has considerably increased, the town presents to this day a decayed appearance, the stimulus given to it by the opening of the canal and docks having been transient.

SUEZ CANAL, connecting the Red Sea and the Mediterranean, was constructed in the middle of the 19th century, having been projected and its works superintended by Count Ferdinand de Lesseps, a native of France. Rameses the Great constructed a canal from the Nile at Bubastes, which reached to the neighbourhood of the lake Timsah. Upon this canal Rameses built his strong towns, Pithon and Rameses, and Israelites were employed in building these cities. This canal was constructed to prevent the passage of the horses of the Hyksos for the purpose of plundering Egyptian territory, and it was certainly completed in the 14th century B.C., and was in use at the time of Herodotus. Necho, a king of Egypt, who reigned about 600 years B.C., is said to have commanded some Phœnicians to sail from the Red Sea to the Mediterranean, round the Cape of Good Hope,—a voyage which they accomplished in two years. If the Phœnicians really did complete the voyage, they anticipated the discovery made by the Portuguese about 2000 years after. Necho entertained the idea of connecting the Mediterranean and Red Seas, and with this view he commenced extending the canal of Rameses, though he succeeded in his design only in extending it as far as the Bitter Lakes.

About 100 years later, Egypt fell under the kings of Persia, and Darius determined upon completing the projects of Sesostris and Necho by digging a canal between the Red Sea and the Nile; but, being assured by the engineers of the period that the Red Sea was higher than the Nile, and that its salt water would overflow and ruin the whole land of Egypt, he abandoned his purpose.

The next king of Egypt who gave his attention to the construction of a Suez Canal was Ptolemy Philadelphus, who reigned about 300 years B.C. He dug a canal from a branch of the Nile to Damietta, a port on the Mediterranean. This canal was 100 feet broad, 30 feet deep, and 10 or 12 leagues in length, extending, in fact, to the Bitter Wells. He meant to have continued it to the Red Sea, but desisted from fear that the Red Sea was three cubits higher than the land of Egypt. That this canal, though deeper than that of M. de Lesseps, did not succeed, is evident from the fact that in B.C. 277 Ptolemy Philadelphus changed the direction of Indian traffic. Alexandria was now made the port on the Mediterranean side, and merchandise from Europe was carried thence up the Nile to the city of Coptus (probably near Keneh), and conveyed across the desert from thence to the seaport of Myos-Hormos (probably near Cosseir) on the Red Sea. On account of the dangers attending this port, Philadelphus sent an army to construct the haven of Berenice, in which the ships engaged in Indian commerce took shelter. Trade increased enormously by the new route, and Alexandria became rich and famous. The father of Cleopatra received a prodigious revenue from customs alone. After the reduction of Egypt and Alexandria by the Romans, the trade increased still further. 120 ships were sent yearly from the Red Sea to India, sailing about the middle of July, and returning within the year. The returns on this Indian trade are said to have amounted to 'an hundred for one,' and through this increase of wealth the matrons and noble ladies of Alexandria were exceedingly profuse in decorating themselves with pearls and precious stones, and enhanced their personal charms by the use of musk and amber, and other rich perfumes.

Soon after this the mighty Roman Empire fell, and history itself is blotted out for a number of years. Not only the trade with India, but India itself, was completely lost to the western world. When, after some centuries, we find the Genoese engaging in commerce and navigation, a new trade route had been opened up between India and Europe.

The design, so long imagined, of connecting the Mediterranean and the Red Sea by a canal, remained unaccomplished, till M. de Lesseps brought his wonderful engineering skill and perseverance to bear upon the work, and the Suez Canal was opened for navigation 17th November 1869.

The Suez Canal starts from Port Said, 40 miles east of the Damietta mouth of the Nile, and runs across the isthmus, and through lakes Menzaleh, El Ballah, and Timsah (on the shores of which latter stands the new town of Ismailia), and through the Bitter Lakes to Suez. Its total length is 92 miles. Its actual width (over the greater part of its length) does not permit of two vessels passing or crossing each other in the canal itself, but there are numerous sidings, by which vessels are enabled to cross one another. Vessels measuring 430 feet in length, and drawing 25 feet 9 inches of water, have safely passed through the canal. The actual cost of the canal, according to a report of the year 1877, was £17,518,729. The total receipts, from all sources, of the Suez Canal Company in the year 1877 amounted to £1,359,026, and the expenditure to £1,169,549. The first year in which the receipts exceeded the expenses was in 1872, when the surplus amounted to £82,849. In 1870, 491 vessels of 436,618 tons passed through; in 1877, 1651 vessels of 2,257,556 tons; in 1882, 3198 vessels of 7,122,125 tons; and total receipts, 63,409,593 francs.

The isthmus has been ascertained to consist of fresh-water formations, passing on the south side into marine deposits of the Red Sea, and on the north into those of the Mediterranean. The whole of the service of the canal is supplied, from one end to the other, by a fresh-water canal, leaving the Nile near Cairo. For 70 miles the ship canal is carried through lakes, its course being marked by buoys, and the bottom having been dredged to the requisite depth; while for 30 miles it takes the form of a land ditch, the waterway being cut partly through sand and partly through clay. The prices of the canal shares have fluctuated. Their nominal value is 500 f. They were quoted in 1861, 438 f. 75 c.; in 1863 they varied from 220 f. to 558 f.; in 1869, the year of the opening of the canal, they rose to 633 f. 50 c.; in 1875 they were at 875 f.; in 1880 they went from 715 f. to 1327 f. 50 c.; in June 1881 they were quoted at 1700 f.; from that period they rose even to 3500 f. In January 1884 they were selling at 2015 f. per share. In 1875 the British

Government bought 176,602 shares from the Khedive for £3,976,852.

SUFFUR, the 2d month of the Muhammadan year.

SUFI, by some authors, is derived from the Greek Sophos. Others point to the Arabic Suf, wool, in allusion to the woollen robes worn by the majority of the darvesh. The Sufi philosophy is called Tasawwuf, and is based on some mystic verses in the Koran and Hadis. Its main principle is that there is no real existence except that of God, and that all the phenomena of the material universe are but emanations from him, and tend ultimately to reabsorption in him. This form of doctrine is spoken of as a tariqat or path (to salvation), the disciple as a traveller (salik), and the manāzil are the various stages of spiritual development. It is a religion of the heart, as opposed to formalism and ritualism. Sufis talk of love to God, of union with God, of death to self, and life eternal in God; of the indwelling in man of the Spirit, of the nullity of works and ceremonies, of grace and spiritual illumination, and of the Logos.

Jalal-ud-Din says, in the Masnavi, 'In whatever place we set our foot, we are always, Lord, within thy resort.' The Sufi creed is a philosophy, a pantheism. The whole visible creation is the outward manifestation of the invisible Being whose spirit is diffused everywhere through it. The first stage of a Sufi disciple is styled Sharyat or Law, in which he practises all the external rites and ceremonies of religion. Tariqat, from Tariq, meaning a path, way, or direction, is the second stage, in which the disciple discards the outward forms of religion, and devotes himself to the mental worship of the deity. The third stage is Haqiqat, from Haq, the All-Righteous. It means the state of truth, and is a condition accompanied by a preternatural knowledge or meditation, obtained by the devotee through a long meditation on God. The fourth stage is the Marifat, from Arif, to know, and is attained by long and painful fasts, dwelling in solitary deserts, seeing only his teacher. Few survive the severities of this stage. But when it is reached, the soul, absorbed into the divine essence, is again with God. But the purified Sufi may partake of the nature of God, which is termed Jamāl, and signifies that mild and gentle beauty which loves to do good and hurts not. Or he may be intoxicated with the wine of the divine love, and absorbed in the contemplation of the Jalāl or consuming glory of the deity; in which state he is full of wrath with the iniquities of the world, and if provoked to imprecations, they take immediate effect. Or he may pass from one stage to another, may at one time assert that God is in his sleep, and then fall back into the condition of ordinary mortals, trusting that God will forgive him his sins and make his latter days righteous. The Sufi spiritualist is often almost with views appropriate to eastern pantheistic ideas, but with many almost atheistic, a sort of esoteric doctrine. There are many sects, tracing their tenets to particular founders, whose views they are supposed to hold. Some of them have attained to the condition of the highest spiritual exaltation; but some of the darvesh or fakirs are degraded beings, and in British India are held in great disesteem. Also many of the educated classes in Persia accept Sufi doctrines, adopting a mystical pantheism and spiritual love in secret, outwardly conforming to Muhammadanism.

Sufi spiritualism, though contrary to materialism, has in reality much in unison. Sufi doctrines are principally held amongst the partisans of Ali, and out of it grew the belief in the infusion of divinity in Ali. Evidences of its antiquity may be found in the annals of almost every ancient and civilised race. The Sufi were called by the Guebres (Gabr), Wahia-daran, Roushan-dil, etc.; by the Hindus, Gnaneshwar and Atma-gnani. Among the Greeks they became Platonists, and have continued up to the present time. The number of Muhammadan sects is considerable. As a broad distinction, they are generally classed as Shiah and as Sunni, but the six bodies of sectarians who oppose the Sunni are classed by them as Rafziah, Kharjiah, Jabriah, Kadriah, Jahmiah, and Marjiah, each of whom are broken up into smaller bodies. Before the end of the 1st century, the ascetic turn and the theosophy inseparable therefrom, a combination styled among the Arabs Sufi, had arisen. This made rapid strides; and in the end of the 3d century was already, itself, the subject of learned works, and the Muhammadan world has carried this system to the utmost extreme. Their Sufi outstrip in every point of view both the Hindu Jogi and the Christian monks. The asceticism of the Sufi is more systematic, their pantheistic teaching deeper and more consistent, and their vices more enormous, than those of any other people. Spinoza and Schelling are left far behind by Ibn Arabi.

Taüs Abu Abd-ur-Rahman died A.H. 102 (A.D. 720). He was the friend of Zain-ul-Abidin, grandson of Ali. He was a pupil of Abu Hurayra, the most devout of Mahomed's friends, and of Ibn Abbas, renowned alike for his profound learning and for his spotless life. Taüs was the founder of a school of disciples whom he trained in mortification, poverty, contempt of the world, and the various spiritual arts and devout practices of the contemplative life. It was he who first adopted the high cap of suf, woollen stuff, from which the term Sufi originated, and the Khirqa or long patched robe, which is their distinctive habit. Among his followers has been Ibn-us-Sammak, an eloquent preacher, who said, 'Fear God as though you had never obeyed him, and hope in him as though you had never sinned against him.'

Fazl Abu Ali Talikani, of Khorasan, lived in the 2d century of the Hijira. He commenced life as a robber, but while on the watch on one occasion, he overheard a verse of the Koran, which awed him so that he was instantly converted, and became widely celebrated for his sanctity and works. On one occasion he said to Harun-ur-Rashid, 'Oh, Khalifah, I have only detached myself from this little world, but you have detached yourself from the world which shall endure for ever.'

Fazl's successor as the head of the order was Bashr (Bishr), the barefooted, who was converted in Baghdad by a dream.

Zu un Nun, a native of Egypt, lived in the 3d century, and his tomb at Cairo still attracts pilgrims. He courageously rebuked wickedness in high places. He scourged himself; was in chains and bondage.

Husn-ul-Hillaj, who was martyred at Baghdad A.H. 303 (A.D. 915), founded a school, which subsequently attained to great influence.

In the 4th century also there lived the famed Abd-ul-Kadar Ghilani, the doctor Mohi-ud-Din-ibn-ul-Arabiya-ul-Maghrabi, and also Umar-ibn-ur-Ridh, author of a celebrated Dewan. He fasted for three or four days, and was subject to ecstasies or Wajd. He taught the freedom of the human will, and was put to death with circumstances of revolting cruelty, on the accusation of teaching Christianity in a covert manner.

Farid-ud-Din Attar, author of the Pind Nama, of the Lives of the Pirs, and the Mantiq-ut-Taer. He had a biographer in Daulat Shah of Samarcand. He was born A.H. 513; but one day he spoke harshly to a darvesh, who rebuked him so as to subdue Farid, who entered the monastery of Rukn-ud-Din Asaf, and attained a high degree of spirituality. He was martyred by the Moghul invaders under Chengiz Khan.

Jalal-ud-Din Rumi, commonly entitled Maulana, also Maulana Rumi. His father was Baha-ud-Din, a lineal descendant of Abubakr, successor of Mahomed. His mother was a princess of the royal house of Khorasan. He was born A.H. 603 (A.D. 1205). When Jalal-ud-Din was five years old, Baha-ud-Din left Balkh, after denouncing the innovations there in the religion. He went to Baghdad, where he rebuked the khalif; then on to Mecca, and finally settled in Qonya, the ancient Iconium, whose monarch he also rebuked; and he died A.H. 628. After his demise, Jalal-ud-Din studied in Aleppo and Damascus, particularly following the philosophy of Al Gazzali, his teacher being Shaikh Syed Burhan-ud-Din, a pupil of his father and an anchorite of great renown, and from him Jalal was instructed in the mysteries of mute reality and ecstasy, and the science spoken of in Koran xviii. 64. He afterwards assumed the rectorship of his father's college in Qonya, where he abode till his death. His son Baha-ud-Din survived him. At his funeral, mourners of all creeds and of various nations attended his remains to the grave. He died at sundown, Sunday, 5th Jamadi-ul-Akhir, A.H. 672 (16th December A.D. 1273), 68 years old. In the religious dances of the darvesh, he introduced instrumental music, the flute, the rebec, the drum, and the tambourine. He says—

'Learn what are the terms of the Musalman's creed,—
Fasting, pilgrimage, prayer, and alms.'

'Thus, when self-abased, man's spirit
From each earthly tie
Rises disenthralled to inherit
Immortality.'

Sad-ud-Din Mahmud, of Shahbistari, near Tabreez, lived in A.H. 717 (A.D. 1317). 15 questions were received from Amir Syed Husaini of Herat on the Sufi doctrines, and Sad-ud-Din was chosen by his sect to answer them. This he did in verse, and his book is called the Gulshan-i-Raz or Mystic Rose Garden. Little is known of the writer. In his answer to the 13th question he says—

'The spiritual world is infinite,
How can finite words attain to it?
How can the mysteries beheld in ecstatic vision
Be interpreted by spoken words?
When mystics treat of these mysteries,
They interpret them by types.'

On this point, however, the outside world will regard it, to say the least, as unfortunate that the Sufi should employ, in telling of their love of God, all the expressions usually adopted when describing the beauties of a mistress, the joys of sexual love, and pleasures of alcoholic stimulants.

The Sufi rest all their system of morality upon the practice of divine love, and the darvesh and fakirs are their expounders.

M. Dozy says the influence of Sufism is rather increasing than diminishing in Turkish provinces, and M. de Kremer considers it the preponderating element in Muhammadan civilisation.

In Constantinople they have 200 monasteries, and there are 32 distinct orders in Turkey. They are styled fakirs, and constitute thoroughly organized bodies, minutely discriminated from each other. Every school, every brotherhood, has its own distinctive teaching and technicalities, its peculiar practices and observances, its great men and founders, its saints and doctors. Within the 19th century, owing to Sufi efforts, Muhammadanism has had a revival in Turkey. A system of primary schools has been established, and the present generation has been taught to regard the ordinances with reverence. Sufi doctrines have been but little avowed in British India. Mullah Shah, a saint and poet, died at Lahore, A.H. 1072 (A.D. 1661–62), and Fatima, daughter of Shah Jahan, erected a tomb over him.—*Burton's Scinde*, p. 406; *Westminster Review*, 1869; *Malcolm's Persia*, ii. pp. 382-445; *Home and Foreign Review*, iv. p. 571; *W. S. Lilly in Cont. Rev.*, August 1883; *Gulshan-i-Raz*. See Zikkir.

SUFI-SUFIYANA, fabric of silk and cotton mixed, lawful for Muhammadans to wear.

SUFOORA, Moses' wife Zipporah.

SUGAR.

Shakkar, AR., GUJ., HIND.	Soola, Sakar, . MALAY.

Saccharum, . . . LAT.	

The commercial sugars of Asia are chiefly the products of the Saccharum officinarum, S. Sinense, Phœnix sylvestris, Borassus flabelliformis, Cocos nucifera, Arenga saccharifera, Nipa fruticans, and Sorghum saccharatum.

Coeval with the use of other vegetable products for domestic purposes in India, appears to have been the employment of the juice of the sugar-cane; though it would not seem that the ancients possessed any knowledge of the process by which this saccharine matter is converted into a crystallized substance. But Marco Polo, who travelled in the east in the year 1250, found abundance of sugar produced in the province of Bengal; and from the almost universal growth of the cane in that province at the first occupation of the country by the British, there is good reason for believing that its culture had rapidly extended at a very early period. From the earliest European intercourse with India, sugar, in a great variety of forms, was met with in daily use. No Hindu lives without it, either as crystallized or in cakes called jagari. Upon the first possession of Calcutta by the E. I. Company, there was a flourishing export trade in sugar to the Indian coasts, some of the Eastern Islands, and a few ports in Arabia and Persia, to the extent of about 1500 tons; whilst the local consumption of the article was enormous. The quality of this sugar was, however, very inferior; and about the year 1776 some unsuccessful

attempts were made to introduce into India the Jamaica mode of growing the cane and manufacturing the sugar.

In China, from unknown times, the people have manufactured sugar both from the sugar-cane and from the sorgo-cane. In the reign of the emperor Tai-Tsung, of the Tang dynasty, the method of boiling the crushed cane was introduced into Sze-chuen and other parts of China from Turkestan or Central Asia. Hence, in China, sugar is called tang, the name of the dynasty being combined with the radical for food.

In Europe, cane-sugar has been largely supplemented by that manufactured from beet-root. One ton of beet-root is said to yield about 100 lbs. of raw or 55 lbs. of refined sugar. The imports into Great Britain were from—

Year.	Sugar-cane—tons.	Beet-root—tons.
1877, ...	144,119	687,552
1878, ...	168,836	565,351

In 1882, there were about 1,925,000 acres under sugar-cane in India, and 168,700 acres under date-palm, besides an area of 17,000 acres under palmyra and cocoanut in the Madras Presidency, from which sugar is made. Of the total area under sugar-cane, the North-Western Provinces alone comprise 921,000 acres; the Panjab, 413,000 acres; Bengal, 185,000 acres; and Oudh, 146,000 acres. Next to these come the Central Provinces with 94,000 acres, and the Bombay Presidency with 89,000 acres; the Madras Presidency shows only 34,000 acres, and the remaining provinces have returned comparatively small areas. Of the total area under date-palm utilized for sugar-making, Bengal had 131,000 acres; and next comes Mysore, then Madras, Burma, and Bombay, with areas respectively of 29,000, 4000, 3708, and 1000 acres.

The imports into and exports from India of sugar and sugar-candy have been as under:—

Imported into India.			Exported from India.		
Year.	Cwt.	Rs.	Year.	Cwt.	Rs.
1875–76	610,524	89,39,283	1875–76	107,288	11,04,274
1878–79	918,202	1,47,75,653	1878–79	51,043	6,96,792
1882–83	672,672	1,08,69,610	1882–83	1,207,423	67,86,420

Of the imports, four-fifths from Mauritius, one-fifth from China and Straits. The great bulk into Bombay, a small part into Burma, smaller into Bengal, Madras, and Sind. The exports, in the form of sugar, sugar-candy, molasses, jagari, gur, etc., were chiefly to Great Britain. Large quantities of sugar are made from the juice of the palmyra palm in the Jaffna Peninsula, Ceylon, chiefly in the neighbourhood of Point Pedro, the agent used to prevent fermentation being coralline, a little of which is put into each chatty. The coarse black sugar which results from evaporation over fire, is poured into minute olah baskets (made of plaited leaves of the palmyra), and exported mainly to Pondicherry, where it is refined and crystallized. The natives of the interior obtain a sugar, the cakes of which very much resemble the maple sugar of North America, from the kittul palm, Caryota urens.

SUGAR-CANDY.

Ping-t'ang, . . . CHIN.	Shakr-kand, . . . HIND.
Chini, ... HIND.	

Is made in China by crystalliziug the raw sugar; the best comes from Foh-kien, called Chin-chew, from which province, especially through the port of Amoy, the exportatiou is likely to increase. Pingfa sugar is the name given to pounded sugar-candy. Pingfa means crystal flowers, and is applied to this sort because it is the Ping-t'ang or caudied sugar made fiue. It was formerly carried to the United States and to India.

SUGAR-CANE.

The sugar-cane, Saccharum officinarum, *L.*, S. violaceum, *Toss.*, and S. Sinense, *Roxb.*, thrives from the equator to the 32d parallel of latitude. It is one of the largest of the grasses, from 8 to 12 feet in height, and acquiring a diameter of one to two inches; the sugar being contained in the loose cellular juicy pith with which the stalk is filled. The sugar-cane of India was introduced into Arabia, Europe, Afriea, W. Indies, and Mauritius. The mention made of it in the Hebrew Scriptures down to the Christian era, is simply that of a sweet cane, or of a fine kind of honey found in an Indian reed. Nearchus, the admiral of Alexander the Great, was the first who made known the existence of the sugar-cane in the westeru world; and from his time it is mentioned by Theophrastus, Varro, Dioscorides, and others. Herodotus alludes to 'honey made by the hands of men.' Lnean speaks of the sweet juice expressed from reeds, which the people of India were fond of drinking, and which Pliny calls saccharine. Still later, Arrian, in his Periplus of the Red Sea, alludes to the honey from reeds called sacchar, as an article of trade between the Indian ports aud the countries of the Red Sea. Sugar-cane was found iu the Crusades growing in the meadows about Tripoli in Syria; and mention is made by a writer of that day of eleven camels loaded with sugar being taken by the Crusaders.

Will and Fresenins, of the Gressen laboratory, give the inorganic elements of Otahcite cane as—silica, 47·75; soluble matters, 32·35; phosphate of peroxide of iron, 4·45; phosphate of lime and magnesia, 3·95; earbonate of lime, 4·10; magnesia, 3·90; carbonaceous matters and loss, 3·50. The 32 per cent. of soluble matters consisted of potash, 10·05; sulphuric acid combined principally with potash, 8·40; ehlorine in eombination with soda as eommon salt, 4; soda, 2·65; gelatinons silica in combination with potash, 2·55; carbonic aeid combined with potash and soda, 1·10; phosphoric acid combined with potash, 0·85; loss, 2·40.

There are many varieties of it, some used only as fruit, others for the manufacture of sugar, an acre of eane yielding six tons of sugar; but in the little advaneed countries, iu the absence of machinery and of scientifie appliances, where the rough sugar press or sugar mill is used, much of the juice of the cane is left iu the refuse. At plaees the mill is dispensed with, the cane being eut into thin slices, and the saccharine contents of its eells extraeted by bringing the slices into eontact with water at an elevated temperature. The water extracts only the soluble substances contaiued in the juice of the plant, while most of the impurities—which in the ordinary process pass into the juice, and must be subsequently removed at great expense—are left in the unbroken cells of the cane, aud do not contaminate the

juice. By this process, it is said, the extraction can be carried so far that 95 per cent. of all the sugar contained in the cane is passed into the clarifier, while the best roller mills at present in use do not extract more than 75 per cent. of the sugar contained in the cane. The diffusion process thus not only improves the quality of the sugar, but produces an increased out-turn of 20 per cent.

In Oudh, three presses are in use,—the Panjabi, the Bairam, and the Tantia. In the Panjabi mill, the canes are crushed whole, and the produce is greater; it is costly, and difficult to keep in order. The Tantia mill is in common use, and consists of a mortar of hard wood, a pestle, a boom to which the cattle are yoked, and another boom connecting the cattle beam and the pestle.

Mr. Bonnefin claims to extract the whole of the saccharine matter from the cane, to prevent fermentation, to thoroughly clear the syrup of all suspended matters ready for filtration, to completely purify the juice by filtration, and to make direct from the cane only pure white, refined sugar. Mr. Bonnefin does away with the cane mill, and substitutes for it what he calls a 'pulpefactor,' which consists of a series of vertical saws, which rapidly cut the bundles of canes into slices. The cut cane falls into a disintegrator placed beneath the saw frame, and in which the cane is quickly reduced to a fine pulp. It is afterwards passed between a pair of rollers, and the whole percentage of the juice extracted. The juice is then mixed, gallon by gallon, as it is produced, with a proper proportion of lime, and passed over a continuous 'preparator,' which consists of a long and broad table having a corrugated or furrowed surface, heat being applied underneath. There are a series of pockets at intervals in the corrugations, and as the juice flows along, the impurities held in suspension are deposited by gravity, and become collected in the pockets, or catchpits, from whence they are cleared out at intervals. The juice travels backwards and forwards for a long distance through the corrugations, finally arriving at the outlet in a favourable condition, both as regards quality and temperature, for filtration. This process is effected in a filter specially devised by Mr. Bonnefin, and which consists of a series of metal rings covered with india-rubber, and placed horizontally in a press. Over each alternate ring—the internal diameter of which is 12 inches—is hung a filter-cloth made of pure unspun cotton of the finest fibre. The rings and cloths, to the required number, which varies according to the rate of filtration desired, are closely pressed and held together by screws, and the syrup is pumped into the press. It passes through the whole series of rings and cloths, the solid impurities being intercepted and retained by that portion of each filter-cloth which covers the opening in the ring, while the syrup passes by capillary attraction through the surrounding portions of the cloths, and is delivered in a perfectly clear and pure condition at the outlet. The pure juice as it leaves the filter-press is conducted either to the ordinary vacuum pan or to the more rapid and effective evaporator and concentrator designed by Mr. Bonnefin. In the evaporator the juice is rapidly deprived of such water as it may contain, while in the concentrator it is as rapidly brought into the condition of sound sugar. All these operations, from the time the cane is placed in the pulpefactor to the moment when it leaves the concentrator in the form of crystallized sugar, it is said, do not occupy more than one hour, as against some 6 to 12 hours with the ordinary process, and its attendant drawbacks.

There are many varieties of sugar-cane in India, some used only as a fruit. For instance, in the N.W. Provinces and Oudh, the thun, paunda, and kala ghanna are edible; and for making sugar are dhaunr, dikchan, matna, padara, and rakhri.

Other varieties mentioned in Benares and E. Oudh are barokha, katara, khusyar, khiwahi, munga, reora, rukra, saranti.

In the Lahore district is a purple cane, called kumad kala; a hard, thin cane, called kumad lahori, another called kata, and others, the plants of which were obtained from Jalandhar and Saharunpur. In Gujranwalla are three kinds of cane, daula, treda, and chinkha. Daula or white is the best, treda is yellowish, chinkha, which is reddish and small, produces good kand and chini.

A large variety in Canton has a bamboo-like appearance, but a smaller variety is cultivated largely for making sugar, and to be eaten as a fruit in Sze-chuen, Ho-nan, Foh-kien, and Canton.

Tahiti has eight varities.

Sugar-cane in W. Oudh is planted in February and March, irrigated from one to three times before the rains, and the cutting begins about the middle of November. The cuttings used for planting may be of all parts of the cane.

Ukh or Ikh generally applies only to the crop, the other names to the cane.—*Cal. Cat. Ex.*, 1862; *Mad. Ex. Jur. Rep.; Les Anglais et l'Inde*, p. 246; *Faulkner*, iii. p. 113; *Powell.*

SUGRIHITA NAMNA ARYA CHANAKYASYA is a phrase of constant occurrence in the Sanskrit dramas, and indicates the importance attached, not to well-sounding, but to lucky or propitious appellations. This superstition was common amongst the ancient nations of Europe, and, according to Cicero, care was taken in the lustration of the people, that those who conducted the victims, and on the formation of the army, that the first soldier on the muster-roll, should have auspicious names. Cum imperator exercitum, censor populum lustraret, bonis nominibus qui hostias ducerent, eligebantur, quod idem in delectu consules observant, ut primus miles fiat bono nomine.—*Hind. Theat.* ii. p. 160.

SUGRIVA, a monkey prince and friend of Rama. He was dethroned by his brother Balin, but the latter was killed, and Sugriva restored as king of Kishkindhya.—*Dowson.* See Vishnu.

SUHAI or Sahai. There are four grand officers of the government of Mewar, viz. the Purdhan, or prime minister; Bukshi, commander of the forces; Surutnama, keeper of the records; Suhai, keeper of the signet, or rather, who makes the monogrammatic signet, Suhai, to all deeds, grants, etc.—*Tod's Rajasthan*, i. p. 479.

SUHAILEA. Hind. A song of joy. See Homage.

SUHAILI, Arab., from Sahilah, a sea-shore, a name given to the African races dwelling along the coast to the south and north of the Straits of Bab-ul-Mandab; also applied to those on the Morocco coasts, known to Europe as Riff, from Portuguese Ripa, a shore.

SUHOYUM. Kash. A burning ground men-

tioned by Abul Fazl in the Ain-i-Akbari. It lies near the village of Nichi-Hama, in the pargana of Muchipora, at the north-west end of the valley of Kashmir, where the plain is about 6100 feet in height. Flames frequently issue from the spot.—*Vigne.*

SUIDÆ, the hog family of mammals, viz. Artiodactyla, *Owen. Tribe.* Chærodia, *Blyth.* The pig and hippopotamus.

Fam. Suidæ, pigs.

Gen. Sus Indicus, *Schinz*, Indian wild boar.

S. cristatus, *Wagm.*	S. scropha, *Linn., Blyth, Ell.*
S. vittatus, *Schl.*

SUIGAM, a Native State in Gujerat, bounded on the north and east by Wao State, on the south by Chadchat State, and on the west by the Salt Desert or Runn. Area, 161 square miles; population (1872), 10,104 persons. The territory was, about A.D. 1450, granted to Pachanji, the youngest son of Rana Sangaji, and, like Wao, is subdivided amongst a numerous independent bhayad or brotherhood. Like their brethren of Wao, the chiefs of Suigam were noted freebooters, and in the early part of the 19th century gave every assistance to the Khosa in their predatory raids.—*Imp. Gaz.*

SUJATA, a girl of a village on the banks of the Nairanjara, who gave food to Sakya as he sat under the bodhi tree, where he became a Buddha.

SUKEIT, an ancient Rajput principality which came under the British Government by the treaty of Lahore. In 1864, full sovereignty was conceded to the raja Oogur Sein, his heirs and those of his brothers according to seniority, unless specially set aside by Government for incapacity or misconduct. The right of adoption has been conferred on the raja by sunnud. It lies between lat. 31° 13′ 45″ and 31° 35′ 25″ N., and between long. 76° 49′ and 77° 26′ E., on the north side of the Sutlej river, which separates it from the Cis-Sutlej Hill States. Area, 420 square miles; estimated population (1875), 44,180. The country of Sukeit was united to that of Mandi until about the year 1200 A.D.—*Aitcheson's Treaties, etc.* p. 375; *Imp. Gaz.*

SUKHAN. HIND. A helm. Sukhani, a helmsman, the sea eunny of British seamen.

SUKHARA, Saiva mendicants, distinguished by carrying a stick three spans long. They dress in a cap and petticoat stained with ochrey earth, smear their bodies with ashes, and wear earrings of the rudraksha seed; also over their left shoulder a narrow piece of cloth dyed with ochre, and twisted in place of the zonar. They use the word A-lakh. See Rukhara; Ukhara.

SUKHAVATI, the abode of the blessed; in Tibetan, Devachan, the happy; in Chinese, Ngyan-lo, pleasure; also Kio-lo, the greatest pleasure; also Tsing-tu, pure or glorious land. Sukhavati is described as a large lake, the surface of which is covered with lotus flowers (Padma), red and white, with perfumes of rare odour. These flowers form the couches for pious men, whose virtues were the cause of their growth while yet sojourners upon earth.

SUKHPANNI, followers of Krishna who pay great attention to personal cleanliness, and wash themselves many times in the day, using various purifying substances. They live apart from society, and have no disciples. The Sukhpanni are of both sexes, and their bodies are burned after death.—*Sherring's Hindu Tribes.*

SUKKUR, a town in Upper Sind on the right bank of the Indus, in lat. 27° 42′ N., and long. 68° 54½′ E. Its tall minarets are seen a long way off, and the banks of the river, for some distance below the town, are densely clad with date and cocoanut groves. Opposite Sukkur is the old town of Rori, built high and overhanging the stream. In the centre of the stream, nearly opposite Rori, is the ancient fortress of Bukkur. Here the river is considerably narrowed, and the stream powerful. The heat of Sukkur is intense, and its climate unhealthy.

SULAIMAN HILLS, a mountain range in Afghanistan and the Panjab, forming the boundary of India on the west. It is thrown off to the south from the Allah Koh ridge between Kābul and Ghazni, and, running southwards without a break, forms the system of mountains of Eastern Afghanistan and Baluchistan. They stretch from lat. 31° 35′ 39″ to 34° 40′ 59″ N., and from long. 69° 58′ 39″ to 70° 0′ 45″ E., thus bordering the whole Dehrajat in Bannu, Dehra Ismail Khan, and Dehra Ghazi Khan districts. The highest peak, the Takht-i-Sulaiman, nearly ne west of Dehra Ismail Khan town, has two summits, respectively 11,295 and 11,070 feet above sea-level. The Kuram forms almost the only river of any importance, taking its rise amongst their dry summits. Length from north to south about 350 miles. They form the watershed between the Indus and the Helmand. The axis of this chain runs close to Ghazni, which is elevated 7726 feet, and to Quetta 5540 feet. The highest part of the chain is near the Koh-i-Baba. It is called the Safed Koh, and is 14,000 feet high. Near Ghazni it is 9000 to 10,000, and near Quetta the same, the peak of Chahal-Tan being 10,500 feet. The east face dips rather steeply to the Indus, but the west declivity, much more gradual, to the table-land of Seistan. From Tank down to Sind, the most important features in the range of hills are the three Tokes. These tokes are the narrow precipitous defiles separating the outer from the inner range. In places their gorges are so confined as to resemble fissures in the rock, not more than ten yards wide, and interrupted by rocks running right athwart the defile; occasionally it widens out, and the bed thus formed is choked up with sand. These glens and ravines, almost impassable to strangers, can be easily footed by mountaineers and their horses. From these defiles, running parallel with the outer range, there are numerous

outlets opening into the plains. The base of the hills is skirted by a Mehra, or open uncultivated plain from 10 to 20 miles broad, having villages on either side; it becomes contracted towards the south, near Dehra Ghazi Khan. In this vicinity it is overgrown with brushwood, but elsewhere it is generally a naked waste, without any sign of life or vegetation. Cultivation is scattered, and depends for irrigation on tanks, and on the mountain torrents rudely trained to descend in steps and terraces.

SULEA or Sele. BENG. The Polyuemus sele, a large fish of the river Ganges and Bay of Bengal. It is migratory in habit, and in the cold weather enters the Bengal rivers in great shoals. Its swimming-bladder, as isinglass, is of value as an article of commerce, and the fish is esteemed as food. It is the Kala-miu, TAM., of John of Tranquebar, and abundant in the Kistna and Godavery. From 8 to 12 oz. of isinglass may be obtained from each fish. Dr. M'Clelland supposed that isinglass is also afforded by a far larger species, namely, P. tetradactylus, Telia or Teriya bhangan, identical with the maga-jellee of the Coromandel coast, and which Buchanan often saw six feet long in the Calcutta bazar, and was informed it sometimes equalled 320 lbs. avoirdupois in weight. It is seldom used by Europeans. M'Clelland says he has frequently seen them loading whole cavalcades of carts on their way to the Calcutta bazar during the cold season.—*Indian Fishes*, pp. 183, 184; *Royle on Isinglass.*

SULIMAN, a merchant of Bussora who made several voyages to India from the Persian Gulf, of which he wrote an account, A.D. 851 (A.H. 237). He visited India when Balhara was ruled by the Balabhi sovereigns. He gives a tolerably coherent account of the seas and places between Oman and China, —the sea of Persia, the sea of Lar (which washes Gujerat and Malabar), the sea of Harkand (from the Dibajat or Maldives, and Serendip or Ceylon, to Al Ramni or Sumatra); the Lankha-balus or Nicobar Islands, and the two (Andaman) islands in the sea of Andaman, and of Kalabar, a dependency of Zabaj (Java); Tayumah (Tiyoman Island), Kadranj (Siam), Sanf (Champa and Camboja), and Sandar Fulat (Pulo Condore). The port in China frequented by the Arabs was Khan-fu (the port of Kiusay or Hang-cheu). He notices the abstaining from wine of the Hindus. He voyaged to India and China in the beginning of the 9th century. His principal establishment was probably at Bussora. His book is styled Salsilat-ut-Tawarikh, and it was continued by Abu Zaid-ul-Hasan of Siraf.—*Ell. Hist.* p. 7; *India in the 15th Century.*

SULIMAN, prince of Nera, is by all the historians of his nation, and also by the more accurate Christian writers, affirmed to be forefather of the Turkish emperors. Suliman was of the noblest Oguzian family among the Scythians, and head of a horde or tribe of Tartars near the Caspian Sea. By these, as well as by the neighbouring people, Suliman was proclaimed by the title of shah. Treading in the steps of the great Chengiz Khan, he came forth from his country with 50,000 followers, the flower of the Scythian youth, and overran not only the neighbouring regions, but all Azerbijan and Syria, as far as Aleppo. When the news of these conquests was brought to the Persian court, the name Turk, common to the Chengiz Khan Scythians, was given also to this army.

SULIMANIA is the capital of a district now bearing its name. It stands in lat. 35° 28′ 28″ N., and long. 45° 17′ 3″ E., and is the metropolis of South Kurdistan. The people of this district are, in general, of low stature, but well-proportioned, robust, and healthy, and of a much fairer tint than the swarthy Arabs, or their Kurdish brethren in the neighbourhood of Kermanshah. A little way out of the direct road to Sulimania is a range of low hills crowned with a regular line of rock rising from their clayey and sulphurous brows. On the side of one of these hills, and which faces the north-west, Strabo described naphtha springs, ten in number. The springs consist of several pits or wells, seven or eight feet in diameter, and ten or twelve deep. The whole number are within the compass of 400 or 500 yards. A flight of steps in each pit, cut for the purpose of approaching the fluid, which rises and falls according to the dryness or moisture of the weather. The natives lave it out.—*Porter's Tr.* ii. p. 440; *Rich's Kurdistan*, i. p. 63; *Mignan's Tr.* p. 329.

SULMA. HIND. A peculiar kind of gold tinsel for embroidery. Gold and silver thread used in making turbands, slippers, and hookahs.

SULPHUR, Brimstone.

Sulphur, from Sal, salt, and πυρ, fire, was employed in medicine by the Greeks, Arabs, and Hindus. Native or virgin sulphur uncombined, is either a volcanic product, or occurs in beds in many parts of the world; found in combination with metals, as in the ores called pyrites, the sulphurets of iron, copper, lead, mercury, etc., whence it is obtained by roasting. Distilling it from earthen pots arranged in two rows on a large furnace, the sulphur fuses and sublimes, and passes through a lateral tube in each pot into another place on the outside of the furnace, which is perforated near the bottom, to allow the melted sulphur to flow into a pail containing water, where it congeals and forms rough or crude sulphur. This being re-distilled, forms refined sulphur. When fused and cast into moulds, it forms stick or roll sulphur.

The great repositories of sulphur are either beds of gypsum and the associated rocks, or the regions of active or extinct volcanoes. In the valley of Noto and Mazzaro in Sicily, at Conil near Cadiz in Spain, Bex in Switzerland, and Craeow in Poland, it occurs in the former situation. Sicily and the neighbouring volcanic islands, Vesuvius and the solfatara in its vicinity, Iceland, Teneriffe, Java, Hawaii, New Zealand, Deception Island, and most active volcanic regions, afford more or less sulphur. The native sulphur of Sicily occurs in beds along the central part of the south coast and to some distance inland. It is found in the United States of America, on the Potomac.

Most of the sulphur brought to Hindustan contains a considerable portion of orpiment,

being much less pure than either that which is dug out of the solfatara near Naples, or that imported from Sicily.

Sulphur and saltpetre are found in the mountains behind Teheran; also in Kishm and in a hilly tract near Khamir, a town on the Persian continent, about 25 miles N.E. from Luft. It is met with in the district of Balkh; also, according to Morier, at Balianlia in Persia. In Baluchistan it is got from the Suni mine, on the ridges separating Saharawan from Cutch Gandava; the great mart for its sale is Bagh in Cutch Gandava; also in mountains south of Kalat, in the province of Mekran.

Sulphur, somewhat mixed with impurities, occurs in the Murree Hills, and the Sulaiman Hills near Dehra Ismail Khan, at Kalabagh. It is found extensively throughout the Salt Range.

The valley of Puga in Ladakh, from whence borax is obtained, yields also sulphur. The Puga sulphur mine is situated a short distance from the Rulangchu, a small stream which is full of hot springs, and runs into the Indus at the foot of a gypsum cliff. Besides the numerous springs charged with sulphuretted hydrogen, and which deposit sulphur on the rock over which they pass, and on the grass and weeds by their sides, sulphur in a mineral form occurs near the surface of the nummulite limestone at Jabba, a little above the petroleum springs, in a white porous gypsum. Sulphur also occurs near Panobar, four miles from Shadipur, on the Indus. The crystals picked out of the rock are called Aunlisar.

In Udaipur it is to be met with, but of a quality inferior to that which is brought from the gulfs of Cutch and Persia. It is found in small quantities in Salem, Masulipatam, Guntur, Cuddapah, and Trichinopoly, along with gypsum in marl and clay beds, and in form of metallic sulphurets.

In the Wodiapolliam jungle, south of Wolandurpet, in the N. Areot district, and which extends E. and W. across the Peninsula, a sulphurous earth is said to be found, covering an extent of low swampy ground, and the sulphur effloresces on the friable brown earth after rains, in yellow crystals.

In Upper Burma it is manufactured from metallic sulphurets to about four tons yearly. It is also made by the Shans at Toungthoo Einlay, to the S.E. of Mandalay. It is found in the blue clay, and is sublimed and condensed. It is abundant in the eight Shan States to the N.E. of Bhamo. It is seen to effloresce in the ravines near the petroleum wells of Burma.

The Malay and Philippine Archipelagos, the most extensive volcanic region in the world, contain a vast supply of sulphur. From the Philippines it is exported to China. The quantity is such at the volcano of Taal, or Bombon, in the province of Botengas in Luzon, that many ships might be loaded with it.

In the volcanic district in the northern end of the island of Formosa are three solfataras. One of these is about five miles east from Tamsui, and a superior one is three or four miles to the northeast. The pits are about 1750 feet above the sea, in a rocky gorge in the mountains, and clouds of steam and sulphureous vapour issue from numerous vents in the rocks. Several hot springs and pools occur, and a miniature geyser throws intermittent jets of boiling water to a height of fifty or sixty feet. A third solfatara is near the village of Kim-pao-li, seven or eight miles N.W. of Kelung. The sulphur is obtained by a rude process of melting; when the frothy slag is skimmed off, the heavier impurities sink to the bottom of the shallow iron pan, and the liquid sulphur is ladled out into wooden buckets, which are broken up when the sulphur has become solid. Similar solfataras exist in Satsuma, in the island of Kiu-siu, in Japan. But the greatest quantity of sulphur of Japan is brought from the Satsuma province. It is dug up in a small neighbouring island, which, from the great plenty it affords of this substance, is called Iwogasema, or the sulphur island. The greater part of the sulphur which is exposed for sale in the Indian provinces is brought from Muscat, from Sumatra, or from the Banda Island called Gunong Api. The Chinese obtain their supplies from the volcanic districts of Turfan, Tangut, and Sze-chuen, and from Satsuma in Japan; formerly it was brought as tribute from Siam and Sumatra.

Sulphur springs exist in many parts of Java and Celebes, and in the Pekalongan district west of Mount Prau. At the base of a high volcanic peak in the island of Damma is another. In China, sulphur springs are met with near Chefoo, and waters containing sulphuretted hydrogen and sulphurous acid gases are not uncommon. —*Bikmore*, p. 126; *Masson's Journeys*, ii. pp. 124-149; *Mason's Tenasserim; Thomson's Tibet*, p. 168; *History of Japan*, i. p. 107; *Walton's State*, p. 37; *Mrs. Hervey's Tartary*, i. p. 163; *Adams, Naturalist in India; Powell; Cat. Ex.*, 1862; *Smith's China*.

SULPHURIC ACID, Oil of Vitriol.

Maulkibrit, . . . ARAB.	Acidum sulphuricum, LAT.
Liu-hwang-yu, . . CHIN.	Arak-i-gowgird, . PERS.
Acide sulfurique, . . FR.	Gandaka rasa, . SINGH.
Schwefel-saure, . GER.	Ghendaga travagum, TAM.
Gandak-ka-tezab, . HIND.	

This acid is produced in small quantities in nature, as near volcanoes, in some acid springs, and it exists in combination in numerous sulphates, especially those of lime (gypsum) and of magnesia, found as minerals, also in the water of springs. It was known to the Arabs, Persians, and Hindus. Sulphuric acid appears, from its name, to have been originally made from the decomposition of sulphate of iron. In the present mode of making sulphuric acid, sulphurous acid from burning sulphur, nitric acid vapour, and steam, are simultaneously admitted into oblong leaden chambers, so partitioned that the vapours can only advance slowly, and thus allow the whole of the sulphuric acid to be deposited. Sulphuric, nitric, mixed nitric or aqua regia, and hydrochloric acids, are all made at Lahore, and sulphuric acid is largely made at other parts of India.—*Royle; Powell*.

SULS, an ornamental style of Arabic writing.

SULTAN. ARAB. King. The Adal Shahi dynasty of Bijapur, the Bahmani dynasty of Beder, Kutab Shahi dynasty of Hyderabad, Tipu son of Hyder Ali of Mysore, Kamran of Herat, the rulers of Johore and Palembang, all took this Arabic title. Tipu engraved it on his seal. Razzia, eldest daughter of Altamsh, whose reign lasted from A.D. 1235 to A.D. 1238, took this title under its feminine form, Sultana. Sultanat is dominion, rule. Sultan-us-Sulatin, king of kings, emperor.

SULTANIAH was built as a royal residence by Oljaitu son of Argun, the eighth of the Mongol

khans of Persia, in 1305. Long after the destruction of the city by Timur, indeed into the 17th century, the tomb of Oljaitu was still magnificent, and especially noted for its colossal gates of damasked steel. The city was reoccupied by some of the Persian kings in the 16th century, till Shah Abbas transferred the seat of government to Isfahan. The ruins were of vast extent in Chardin's time. The present dynasty of Persia has again adopted Sultaniah as a summer residence. Pope John XXII. set up an archbishopric at Sultaniah in 1318, in favour of Francis of Perugia, a Dominican, and the series of archbishops is traced down to 1425.—*Yule, Cathay* i. p. 49 ; *Porter's Tr.* ii. p. 471.

SULTANPUR, in a saline tract in Gurgaon and Rohtak district, Panjab, area 1565 acres. Salt is manufactured from brine in wells, evaporated by solar heat in shallow pans. This tract lies on the banks of the great Najafgarh jhil or lake, and the principal works, both as to quantity and quality of produce, are in a cluster of villages on the borders of the two districts. The number of wells 330, and the pans 3799. 50,000 tons could be turned out annually.—*Imp. Gaz.*

SULTANPUR, a British district in the Rai Bareli division of Oudh, lying between lat. 26° 39′ and 27° 58′ N., and between long. 81° 36′ and 82° 44′ E. Population, 1,000,336 persons. Among low castes, the Ahir are the most numerous, forming nearly 10 per cent. of the population, followed by the Chamar and Pasi. Gujar are more common in Sultanpur than in other districts of Oudh. Among the more skilful agricultural castes, Muraas are numerous, but Kurmi are remarkably few.—*Imp. Gaz.*

SULTAN SAKADA is a deity worshipped by the Kur. Sakal Deva, or Sakra Pen, the chain-god, is worshipped in Seone and elsewhere.

SULTAN SAKHI SARWAR, a Muhammadan noted for his liberal and charitable disposition, and great generosity of character. On his death he was exalted to the position of a saint, and during February to May a fair is held at the shrine, to which annually about 200,000 pilgrims, Sikh, Hindu, and Muhammadan, resort. It is at the mouth of the Sieree pass leading to Kandahar, and is built on the skirt of the mountain. There are about 1650 priests, who issue to poor people parwane or orders in the name of Sakhi Sarwar.

SULTAN SARWAR, a Muhammadan saint whose shrine is at Baluch, four cos from Multan. He was distinguished for piety and purity of manners, and died as a martyr with his brother, fighting against a troop of idolators, and was buried with his wife (who died of grief) and his son in the same tomb. Several miracles are related as having happened at his tomb.—*Araish-i-Mahfil.*

SULU ARCHIPELAGO is a chain of many islands which stretch from the N.E. point of Borneo to the island of Mindanao. Sulu, the chief island, is high, 35 miles long, and from 5 to 10 broad ; it lies in long. 121° E., near the centre of the Archipelago. The amount of land available for agriculture is about 200,000 acres. Soil volcanic in origin, with enormous depth. This group is inhabited by a warlike race, bearing in their personal appearance a strong resemblance to the Malays. In 1775 the Sulu people attacked and drove the British from Balambangan. Sulu had, even then, long been an emporium not only of regular traders from most nations, but the head-quarters of piratical marauders, who there found a ready market for enslaved victims and heterogeneous plunder, and whose descendants, to this day, are proud of the deeds of their ancestors. Spain had a military station there in order to protect the Philippine Islands, and in 1883 assumed the sovereignty of Sula. The Muhammadan religion has made progress in Mindanao and the Sulu Islands, as has the Malay language, the usual channel through which it has at all times been propagated over the islands of the Indian Archipelago. There is a considerable trade between Sulu and Singapore in bêche-de-mer and pearl shells, and a few pearls.—*Keppel's Ind. Arch.* i. pp. 56, 57.

SUMACH. Sir A. Burnes tells of colossal idols and innumerable excavations called sumach, to be seen in all parts of the valley of Bamian for about 8 miles, and still form the residence of the greater part of the population. A detached hill in the middle of the valley is quite honeycombed by them, and is called the city of Gulgula. Caves are in greater number on the north side of the valley where the idols occur, on all sides of which excavations occur.

SUMACH, Shumae.

Tumtum, . . .	Arab.	Sumac, ...	Fr.
Shih-chu-yu, . .	Chin.	Schmack, . . .	Ger.
Sumak, . . .	Dan., Sw.	Sommaco, ...	It.
Smak, ...	Dut.	Sumak, ...	Pers.
Divi-divi, Libi-libi,	Eng.	Sumagre, . . .	Port.

The sumach trees of Europe are the Rhus coriaria and R. eotinus, that of India is the Cæsalpinia coriaria, that of China is the Rhus venenata. The Cæsalpinia coriaria, yielding Divi-divi of commerce, was introduced about A.D. 1830 by Dr. Wallich. It is a hardy plant, of easy cultivation ; it requires a little care, attention, and watering during the first year, or till the plant attains the height of two or three feet ; it does not come into full bearing till about the third year, but in favourable localities it attains a height of 10 to 16 feet, and the produce of one full-grown tree is about 70 lbs. of pod, which have been valued at £8 to £12 per ton as a tanning substance. It is a good hedge plant, and bears pruning. Its pods were used for tanning at Hunsur, but it is questionable if it will ever come into competition with the bark of the Cassia auriculata, a wild shrub abundant on waste ground in the Peninsula. Divi-divi at Hunsur answered admirably for light skins, such as sheep and goat for fancy leathers, but for strong hides it is not so suitable ; it does not, as the tanners call it, fill the hide, and instead of pliant, thickish leather, gives a thin, hard material. Rhus cotinus, *L.*, and R. coriaria, *L.*, shrubs of South Europe and the Levant, are extensively employed in tanning light-coloured leathers, and also as an orange-coloured dye. Sumach from Sicily has been sold at 12s. to 14s. 6d. the cwt. in London.

SUMAH. Sind. A tribe of Jat, though they are generally known by the former title. Such also are the Machi and numerous other subdivisions of the Jat tribes.

SUMAICHA, one of the nyad or proselytes to Islam, from the Soda race, numerous both in the t'hul and the valley, where they have many hamlets. They resemble the Dhoti in their

habits, but many of them associate with the Sehrai. They never shave or touch the hair of their heads. They allow no animal to die of disease, but kill it when they think there are no hopes of recovery. The Sumaicha women never veil their faces.

SUMAJ-BARI. At Kulna is the Raj-bari of the raja of Bardwan, several noble buildings and lofty temples; there is also the Sumaj-bari, or the houses of sepulchre, where a bone of every deceased member of the raja's family is deposited. The raja belongs to the Kshatriya class, and observes the custom of preserving the ashes of the dead. They showed here the bone of the last raja, wrapped up in a rich cloth. It is placed on a velvet musnud with cushions, and silver salvers, tumblers, hookahs, rose-water, and attar-holders in front of the seat, just as the late raja used to sit with all the paraphernalia of state about him.—*Tr. of Hind.* i. p. 23.

SUMALI. Arab. A people on the African coast, and found in Aden and along the west coast of Arabia. Those on the coasts are slaves or their descendants, brought from the interior of Africa by the traders. The dress of the men consists of a white cloth wound round their waist, one end of which, after being carried across the breast, is thrown negligently over the shoulder. In addition to a cloth of this kind of smaller dimensions, the women wear a piece of tanned hide round their waist, to which is added a smaller apron of the same material, suspended by loops over the shoulder, to conceal their breasts. The hair of the men is frizzled into large ringlets, several of which hang on either side of the face. The hair left in the middle is also frizzled and raised by the same means, the whole being anointed with large quantities of mutton fat. Through the upper part they thrust a straight piece of wood, resembling in form and size a skewer, which serves the double purpose of a comb, and also as an instrument for adjusting their curls.—*Wellsted's Tr.* ii. p. 370.

SUMANAP. The industrious, peaceful, and numerous people who speak the Madurese language, with its dialect the Sumanap, occupy the island of Madura, divided from Java by a strait, and form in some districts the bulk of the population on the opposite shores of Java.

SUMANTU, the collector of the hymns of the Atharva Veda, a pupil of Vyasa. Sumantu is mentioned in the Hindu Puranas as a descendant of Vasishta. He is said to be the author of a work on civil law. His doctrines were, that there is in nature an uncreated seed, from which all beings spring.—*Ward*, iv. p. 52.

SUMATRA, a great island at the opening of the Eastern Archipelago. Nicolo de Conti, of Venice, returned from his oriental travels in 1449, and communicated to the secretary of Pope Eugenius v. a consistent account of what he had seen. After giving a description of the cinnamon and other productions of Zeilam, he says he sailed to a great island named Sumatra, called by the ancients Taprobana, where he was detained one year. His account of the pepper plant, of the durian fruit, and of the extraordinary customs of the Batech or Batta people, prove him to have been an intelligent observer. Sumatra was shortly after visited by Odoardus Barbosa, who wrote a journal of his voyage in 1516, in which he speaks of Sumatra with great precision. The productions of the island, he says, were chiefly exported to Catai or China. From Sumatra he proceeded to Banda and the Moluccas, from thence returned by Java and Malacca to the west of India, and arrived at Lisbon in 1508.

Sumatra consists of a rectilinear belt of elevation, stretching from the parallel of Penang to that of Bantam, and shutting in the Malay Peninsula and China Sea from the Indian Ocean. Its extreme length is about 925 geographical miles, and average breadth rather more than 90 miles. The gross estimate of Lieut. Melville van Carnbee is 8035 leagues = 128,560 English square geographical miles. The islands on the west coast give a further surface of 5000 miles. Its S.W. coast has a narrow tract of low land, beyond which the mountains suddenly rise.

Talang, . . .	11,820 ft.	Indrapura, estimated at . .	12,255 ft.
Singalang, . .	9,634 ,,	Luse, territory of Acheen, in 3° 40′ N., . .	11,250 ,,

Lubu Raja, . .	6,234 ,,		

The island is divided into a number of petty states, the chief of which are Acheen, Delly, Langkat, and Siak. British political relations with Acheen date as far back as 1602; the various attempts, however, which were made to establish a factory at Acheen, failed. In 1815 a revolution broke out, and the reigning sovereign, Jowhar Shah, a dissolute prince, was deposed, and Syf-ul-Alam Shah, the son of a wealthy merchant, who was related to the royal family, was raised to the throne. After protracted negotiations, however, the ex-raja was restored, through the mediation of Sir Stamford Raffles, and a treaty was concluded with him. With Delly, Langkat, and Siak, treaties exist, but after the treaty with the Dutch, of 1824, the diplomatic connection of the British with Sumatra ceased. In Sumatra island there are at least 15 nations, and the total population has been variously estimated at from 2,500,000 to 7,000,000.

Netherland India has the following settlements on the coasts of Sumatra:—

Wild Tribes.—There are two races, at the opposite extremes of the civilisation of the island. The one is a half-wild people, the scattered remnants of the aboriginal inhabitants. In the north, they are known under the name of Orang Lubu; the Battas describe them as having inhabited Pertibi before they occupied it (Willer, Tigd. v. N. Ind. 8th y., 2d part, p. 402). They are found up the Mandan above Siak (J. Anderson, Mission to Sumatra, p. 349). In the south, they are mentioned under the name of Orang Kubu by Marsden and other writers who resided on the west coast; and we know, from information received from Malays, that they are found in the

interior on ascending most of the large rivers whose embouchures are on the east coast. Major Sturler, in his account of Palembang, gives a particular description of the Orang Kubu, who in condition and habits entirely agree with the wilder tribes of the Malay Peninsula. The same remark applies to the Orang Gunong of Banka.

The southern extremity of the mountain belt is inhabited by the Orang Abung, long a head-hunting race. These are the mountain nomades; but there are also half-wild people, some living in boats in the salt-water creeks, and others in the sago forests and low jungles of the east coast. In this lowest class of Sumatran tribes should be included those inhabiting some of the western islands, such as the Euganoans. Their physical resemblance to the Malays is everywhere remarked, and (Journ. Ind. Arch. ii. pp. 332, 517) there seems no room to doubt that they are the aborigines of the Malayan region of Sumatra, and the remnants of the stock from which the present Malays have descended. Their numbers may be provisionally assumed at 6000. The Abung and Kubu in the south appear to be about 2000.

Orang Malayu. — The Malay races are the principal inhabitants of the island. They entirely occupy the wildest and middle region of Sumatra, extending from the Rakan nearly to the Palembang on the east coast, and from Ayer Baugis to Kataun on the west coast, a length of about 275 miles, with an average breadth of about 190 miles, and a superficies of 52,250 square miles, or little short of one-half of Sumatra.

The Malay population is distributed as follows:

1. Malays of the mountain region.

a. Menangkabau.
b. Malays of the region of Sapulo Bua Bandar and Gunong Sungei Pagu.
c. The Korinchi.
d. The Rawa.

2. Malays of the hilly territories to the west of the mountain region.

a. The seaboard of Menangkabau (1700 square miles).
b. The seaboard of Sapulo Bua Bandar, having a surface of 1300 square miles.

3. The Malays of the low lands or eastern countries.

4. The Malays of the east coast of the northern region.

The *Batta* of Sumatra are not unlike the Malay and Binua of the Malay Peninsula in feature, but are a finer race of men. The Batta occupy wholly the valley of Mandeling, and have an alphabet and language of their own. The women wear the sarong only, from the waist to the knee.

The Batta language is alphabetic, and invented by themselves. It has several dialects. They believe in evil spirits and omens. They are an inland people, the Malays from Menangkabau having spread and occupied all the coasts. All the Batta beyond the territories of the Dutch are from time immemorial cannibals. On the Dutch acquiring the plain of the Mandeling valley, the Batta dwelling there were compelled to abandon their cannibalism. The writings of Marco Polo show that, so early at least as 1290, they were addicted to this. The raja of Sipirok assured the Dutch Government at Pedang that he had eaten human flesh at least forty times, and that nothing he had ever eaten was equal to it. Professor Bikmore, travelling amongst them in 1865, confirms what Sir Stamford Raffles wrote in 1820, after visiting Tapanuli Bay, viz. that for a person convicted of adultery, midnight robbery, prisoners of war, intermarrying into another tribe, and for treacherously attacking a village, house, or person, the punishment is to be cut up and eaten.

The races blend with each other at their boundaries, many districts and villages in the northern region, for instance, being peopled by Malays and Battas, Malays and Achinese, or Achinese and Battas, and most of the settlements near the coast possess in addition a very mixed population of foreigners from the rest of the Archipelago, China, India, and Arabia, while Europeans are found in small numbers in the Netherlands possessions, chiefly at Palembang, Bankaulu, and Padang, little more than two millions for the entire population. Mr. Francis estimated 4,500,000, but the following table exhibits ascertained results:—

		Area.	Population.	Per sq. mile.
I.	Wild tribes,	...	6,000	...
II.	Orang Malayu,	...	...	...
	Mountains, viz.—

XII.	Orang Maruwi,	600	3,000	5

The inhabitants of Komring and of Komring Ulu have a peculiar language; their writing, in letter and sound, agrees much with that of the Battas. The menarch (dancing) and berswara (singing) also differ in Komring from what they are in the other districts. The young girls dress better, are more pleasing in their movements, and their voice is more harmonious than that of women of the country usually is in singing. Girls are able, in free, agreeable, and melodious tones, to pour forth improvised couplets and verses in honour of persons and events. In former days the concubines of the sultan were chosen from the women in Komring. The Sumatrans speak of tigers with a degree of awe, and hesitate to call them by their common name (rimau or maching), terming them respectfully satwa (the wild animals), or even nenek (ancestors), as really

believing them such, or by way of soothing and coaxing them.

In Sumatra and the groups of islands on its western coast, in addition to the Malay, there are at least nine other languages, five of which, the Ache or Acheen on the north-western end of this island, the Batak or Batta, the Korinchi, east of the Batak, the Rajang or Rejang, and the Lampung, are cultivated or written tongues. There are also several rude languages among the scattered tribes on the mainland. The Batak or Batta nation lie to the east of the Malays. The Lampung nation, which occupies that portion of the south-western side of Sumatra which lies opposite to Java, divided from it only by the Straits of Sunda, has its own peculiar alphabet, which consists of 19 substantive letters, with double or treble consonants, making them up to 44. It has a great deal of that angular, linear, and meagre form which characterizes the other Sumatran alphabets. The Lampung people occupy the eastern end of Java, on the Straits of Sunda, and fronting the western extremity of Java. In the groups of islands on the western coast of Sumatra are several unwritten tongues, amongst which may be named that of the Pogy or Pagi Islands, the language of the Nias, and that of Maros. In Sumatra, beginning from the west, the first evidence of a native written character is among the Batak, and it is singular that a nation of cannibals should possess the knowledge of letters. There was assuredly nothing of the kind in Europe or continental Asia until long after men had ceased to eat each other. The form of the Batak letters is horizontal. The Bhima alphabet formerly in use amongst the Bhima people in the island of Sumbawa, east of Sumatra and Java, has now given way to the alphabets of the Celebes. The Acheen and Malay of Sumatra are written in the Arabic character. The Rejang, at Taba Pananjong in Sumatra, are a distinct race from the Malays of Menangkabau, though they belong to the Malay race. They have a language and alphabet of their own.

A Sumatran scrupulously abstains from pronouncing his own name, merely as a punctilio in manners. It occasions him infinite embarrassment when a stranger, unacquainted with their customs, requires it of him. As soon as he recovers from his confusion, he solicits the interposition of his neighbour. He is never addressed, except in the case of a superior dictating to his dependent, in the second person, but always in the third; using his name or title instead of the pronoun, and when these are unknown, a general title of respect is substituted, and they say, for instance, 'Apa orang kaya punia suka?' 'What is his honour's pleasure?' for 'What is your or your honour's pleasure?' When criminals or ignominious persons are spoken to, use is made of the personal pronoun kau (a contraction of angkau), particularly expressive of contempt. In Sumatra there were formerly three perfectly distinct kinds of marriage,—the 'Jugur,' in which the man purchased the woman; the 'Ambel-anak,' in which the woman purchased the man; and the 'Semando,' in which they joined on terms of equality. In the Ambel-anak marriage, the father of a virgin makes choice of some young man for her husband, generally from an inferior family, which renounces all further right to or interest in him, and he is taken into the house of his father-in-law, who kills a buffalo on the occasion, and receives 20 dollars from his son's relations. After this, the buruk baik'nia (the good and bad of him) is invested in the wife's family. If he murder or rob, they pay the bangun or the fine. If he be murdered, they receive the bangun. They are liable for any debts he may contract in marriage, those prior to it remaining with his parents. He lives in the family, in a state between that of a son and a debtor. He partakes as a son of what the house affords, but has no property in himself. His rice plantation, the produce of his pepper garden, with everything that he can gain or earn, belongs to the family. He is liable to be divorced at their pleasure, and though he has children, must leave all and return naked as he came.

Sumatra is known among the eastern people by the two names of Indalas and Pulo Percha (or Pritcho). No country has been more famous in all ages for gold, and the quantity procured is considerable. There are also mines of copper, iron, and tin; sulphur is gathered in large quantities about the numerous volcanoes. Saltpetre is made from the earth, which is found impregnated with it, chiefly in extensive caves, the haunt of birds, of whose dung the soil is formed; and coal is collected.

Sumatra has about fifteen volcanoes, four of which are of considerable importance,—Dempo, 10,440 feet; Indrapura, 12,140 feet; Talang, 8480 feet; and Merahi, 9700 feet: the others are of less elevations, 6000 or 7000 feet.

Sumatra has the Galeopithecus, the Gymnura Rafflesii, Cervus rusa, Cervus hippelaphus, crocodilus biporcatus Rafflesii.

Mr. George Windsor Earl, in a pamphlet on the Physical Geography of South-Eastern Asia and Australia (1855), pointed out that the islands of Sumatra, Java, and Borneo are connected with the Asiatic continent by a shallow sea; and that a similar shallow sea connects New Guinea and all the adjacent islands with Australia, these last being all characterized by the presence of marsupial animals. Carrying out Mr. Earl's suggestion, Mr. Wallace maintains that some of the islands had long been connected with the Asiatic continent, and others equally long with that of Australia; and that a line of separation can be drawn between these; and he designates the Asiatic portion Indo-Malayan, and the Australian division Austro-Malayan. The seas between Sumatra, Java, and Borneo are so shallow that ships find anchorage in any part of it, as it rarely exceeds 40 fathoms, and the seas eastward to the Philippines and Java rarely exceed 100 fathoms. The elephant and tapir of Sumatra and Borneo, the rhinoceros of Sumatra and the allied species of Java, the wild cattle of Borneo, and the kind long supposed to be peculiar to Java, are now all known to inhabit some part or other of Southern Asia; and of the birds and insects, every family and every genus of the groups found in any of the islands occurs also on the Asiatic continent, and in a great number of cases the species are also identical. The great islands of Java, Sumatra, and Borneo even yet resemble, in their natural productions, the adjacent parts of the continent almost as much as such widely-separated districts could be expected to do, even if they formed part

of the Asiatic continent. The Philippine Islands agree in many respects with Asia and the western islands, but present some anomalies. The eastern portion, on the other hand, from Celebes and Lombok eastwards, exhibits as close a resemblance to Australia and New Guinea as the western islands do to Asia. Australia has no apes, monkeys, cats, tigers, wolves, bears, hyænas; no deer or antelopes, sheep or oxen; no elephant, horse, squirrel, or rabbit. In lieu, it has kangaroo, opossums, wombats, and the duck-billed polypus. It has no woodpeckers or pheasants; but has, in lieu, the mound-making brush turkeys, honeysuckers, cockatoos, the brush-tongued lories, which are found nowhere else in the globe; and all these peculiarities are found in the islands which form the Austro-Malayan division of the Archipelago. The islands eastward from Java and Borneo form a part of a previous Australian or Pacific continent, although some of them may never have actually been joined to it. The Aru Islands, Mysol, Waigyu, and Jobie agree with New Guinea in their species of mammalia and birds, and they are all united to New Guinea by a narrow sea. The 100-fathom line around New Guinea marks the range of the paradise birds. This separation has no relation to their geological character. The Indo-Malayan and Austro-Malayan divisions hold two distinct types of the human race, the Malay and the Papuan, who differ radically in their physical, mental, and moral characters; and, under one or other of these two forms as types, the whole of the peoples of the Eastern Archipelago and Polynesia can be classed, and the line separating these two types comes near but somewhat eastward of that part of the zoological regions. This easterly jutting of the Malay line has been caused by the maritime enterprise and higher civilisation of the Malay races, who have overrun the nearer part of the Austro-Malayan region, have supplanted the original inhabitants, and spread much of their language, their domestic inhabitants, and their customs far over the Pacific. To the Malay type and to the Papuan type respectively, all the people of the various islands can be grouped. The Asiatic races include the Malay, and all have a continental origin; while the Pacific races, including all to the east of the Malay (except, perhaps, some in the Northern Pacific), are derived not from any existing continent, but from lands that now exist or have recently existed in the Pacific Ocean.—*Bikmore; London Geog. Trans.* ix. xv.; *Bombay Med. Trans.; Bombay Geo. Trans.; Buist on Volcanoes of India, in Ed. Phil. Jour.*, 1852; *Jour. Ind. Archip.* iii.; *Newbold's British Settlements; Tijdschrift* v. *Neerl, Ind. in Jour. Ind. Arch.; Cal. Rev.*, 1861, pp. 43, 48; *Marsden's Sumatra*, pp. 4, 94, 162–262; *Wallace*, ii. pp. 19, 41, 53, 60.

SUMATRAS, also Sumatrans, a term given by navigators to tempestuous squalls from the south-west, often experienced in the south-west monsoon in the Straits of Malacca. They are sudden and severe, blowing a moderate gale for 6 or 8 hours, and accompanied with loud thunder, lightning, and rain. They are so called because they rise in the direction of the island of Sumatra. The approach of the squall is betokened by a dense black cloud, which rises from behind the opposite islands of Battam, and soon overspreads the sky, casting a dark shadow over the strait, within which the sea is lashed to foam by the strength of the tornado.—*Earl's Arch.* p. 354; *Horsfield; Newbold's British Settlements*, i. p. 3.

SUMBA or Sandal-wood Island, of about 4000 geographical square miles, is composed of a range of hills that rise immediately from the sea to a height of 2000 feet. It lies to the south of Flores, from the coast of which it is distinctly visible in clear weather. Mount Romba peak is 7000 feet. Vessels visit it in the S.W. monsoon from Sourabaya, and return in the N.E. monsoon with the active little ponies of the island. They are, after the ponies of the Batta of Sumatra, the best of all the horses of the Archipelago. Bikmore thinks its people are Malays, though this is questioned, and they are also said to have a different tongue. It yields sandal-wood and copper. The inhabitants of Savu possess a settlement near the south-west extreme of the island, and the Bugis traders of Ende have two or three small stations on the north coast, which are occasionally visited by small European vessels for the purpose of obtaining horses; but the natives of Sumba all dwell in the uplands, where they cultivate maize, yams, and other produce similar to that grown on Timor, and are said to use the plough, which is unknown in any other island to the eastward of Sumbawa.—*Earl; Bikmore*, p. 112.

SUMBAJI, son of Sivaji, succeeded his father in 1680, and reigned for nine years. He was a tyrannical, voluptuous prince, but courageous. He was captured and carried to the Dehli emperor Aurangzeb, who caused him to be put to death in the most cruel manner. Sumbaji's widow and infant son Saho were subsequently made prisoners, and left in the care of Aurangzeb's daughter.

SUMBAWA, a high volcanic island, the third in a direct line east of Java. It is about three times the extent of Bali or Lombok, and divided by a deep bay into two peninsulas. It has three languages, the Sumbawa, the Bhima, and the Tomboro. The two former are written in the Bugis character, but there exists in this island a curious obsolete alphabet, ascribed to the Bhima nation, which has been displaced by that of the Celebes. In Sumbawa, the Muhammadans take a high place, and they are largely proselytizing the mountaineers. In Grobagan, at the centre of the limestone district, is a mud volcano, 16 feet in diameter. The black mud every few seconds bubbles up and subsides; it rises to a height of 20 to 30 feet, then explodes with a dull noise, scattering a shower of warm black mud in every direction; round about are warm brine springs, from which salt is extracted. Its eruptions are most frequent in the rainy season. It is called Kuwu, 'the place of abode;' and an old legend is that it is the residence of a monster snake, whose writhings cause the eruptions. Mount Tomboro rises to 8940 feet on a peninsula on the N. side of Sumbawa. On the 5th April 1815 commenced a series of frightful explosions, which lasted five days. They were heard so distinctly at Jokyokarta, in Java, a distance of 480 miles, that troops were sent out to repel, as was supposed, some attack that had been made. Similar movement of gunboats was made at Sourabaya; and to the north the reports accompanying the eruption were heard as far as the island of Ternate, near Gillolo, a distance of 720 geographical miles. To the westward, these reports were heard at Moko-

Moko, a port near Bencoolen, which is in direct line 970 geographical miles. The ashes that were thrown out fell to the eastward, against the prevailing wind, as far as the middle of Flores, about 210 geographical miles; and westward on Java, in the mountains of Cheribon, about 270 miles from the volcano. So great a quantity of ashes were thrown out, it is estimated that on the island of Lombok, about 90 miles distant, 44,000 perished in the famine that followed; and Dr. Junghuhn calculates that within a circle described by a radius of 210 miles, the average depth of the ashes was at least two feet. During the eruption, Tomboro lost two-thirds of its previous height. A ship approaching the coast had to sail through a sea of pumice. About 7 P.M. of the 10th April, an eye-witness, the raja of Sangir, mentions that three distinct columns of flame burst forth from near the top of Tomboro, all of them, seemingly, within the verge of the crater, and on gaining some height in the air, the flames mingled in a confused manner. In a short time the whole mountain next Sangir appeared like a body of liquid fire, extending itself in every direction. Towards 8 P.M., at Sangir, stones, some as large as a man's fist, generally of the size of walnuts, fell very thick, and obscured the view of the mountain. Between 9 and 10 P.M., ashes began to fall, and soon after a violent whirlwind ensued, which blew down nearly every house in the village of Sangir, carrying their tops and lighter parts along with it. In the Sangir district next to Tomboro, the whirlwind tore up trees and threw down men, cattle, and houses. In November and December 1836, there were other eruptions. Sumbawa is thinly inhabited since the eruption of Mount Tomboro on 11th April 1815.—*Bikmore*, p. 108; *Court's Palembang*, p. 129.

SUMBOONATH, one of the oldest temples in Nepal. It was erected when Nepal was ruled by a race of Tibetans, and its possession was at one time claimed by the Dalai Lama, or sovereign pontiff of H'Lassa, but he has since been obliged to abandon the claim. The dagoba resembles the temple of Buddha, but is only about half its size; the spire is covered with plates of copper, gilt. It is surrounded by pagodas, as well as numerous more modern shrines of a bastard Hindu class, to which numerous Bhutya and Bhama, a tribe of Newars, resort. Occasionally the Gurkha visit these shrines, the thunderbolt of Indra, which is here exhibited, being the object of attraction to them, as they pride themselves on being orthodox Hindus.—*Oliphant's Journey*, p. 84.

SUMBUL or Sunbul, a term in Arabic and Persian works on Materia Medica, applied to several fragrant roots. The Sumbul root of modern commerce reaches Europe by way of Russia. A Sumbul root introduced into the French market is the root of an umbelliferous plant, which is characterized by a strong odour of musk.

Sumbul-ul-taib, or fragrant Sumbul, is the root-stocks of Nardostachys jatamausi, the Nardos or spikenard of the ancients, and is also applied to Hyacinthus orientalis.

Sumbul rumi is said to be the Narden ukluti, and supposed to be Valeriana celtica.

Sumbul jibali, or mountain nard, is thought to be Valeriana tuberosa.

Sumbul-i-farsi, or Persian Sumbul, is supposed to refer to Adiantum capillus veneris; but it has the description of Hyacinthos applied to it, and Polyanthes tuberosa is substituted for it in India.

Sumbul-i-khatai, or Cathayan Sumbul, is Angelica.

A Sumbul of Central Asia is the root of Eryangium sumbul, known as the musk root.

In Persian works on Materia Medica, all translated from the Arabic, as, for instance, the Mukhzun-al-Adwiah, or Magazine of Medicines, we have four different kinds of Sumbul:—1. Sumbul Hindee; 2. Sumbul Roomee, called also Sumbul Ukletee and Narden Ukletee, evidently the above Celtic Nard, said also to be called Sumbul Italion, that is, the nard which grows in Italy; 3. Sumbul Jibullee or Mountain Nard. Hence it is evident that the kinds described by Dioscorides are alluded to, and in fact the accounts given are merely translations of his descriptions. The fourth kind of Sumbul appears to be a hyacinth or polyanthus. But the first is that with which alone we are at present concerned. The synonyms given to it are —Arabic, Sumbul-al-Taib or Fragrant Nard; Greek, Narden; Latin, Nardum; and Hindi, Balchur and Jatamansi.

SUMBULPUR. 21 Mahals form the S.W. frontier of Bengal, which may be classified in four groups,—Sumbulpur, Patna, Sirguja, and Singbhum,—viz.:

Sumbulpur Group.

Sumbulpur proper.	Sukti.	Bamra.
Burgarh.	Gangpoore.	Rehra Cole.
Raigarh.	Sarunghur.	Sonepore.
	Bunnie.	

Patna Group.

Bora Samur.	Bindra Nowagarh.	Patna proper.
Khuriar.		Phuljhur.

The territories comprised in the Sumbulpur and Patna groups were ceded to the British Government by the treaty of 1803 with Ragoji Bhonsla, but all except Raigarh were restored in 1806, and finally reverted to the British in 1826. The Sumbulpur and Patna groups are in the circle of the Cuttack Tributary Mahals.—*Aitcheson's Treaties.*

SUMERU, in Hindu cosmogony, a mountain ascending 600,000 feet from the surface of the earth, and descending 128,000 feet below it. On this mountain are the heavens of Vishnu, Siva, Indra, Agni, Yama, Nirita, Varuna, Vayu, Kuveru, Isha, and other Hindu deities. At its base are the mountains Mandara, Gandha-madana, Vipula, and Suparshwa, on each of which grows a fabulous tree 8800 miles high.

SUMITRA, B.C. 2100, Jones; B.C. 57, Tod. It is from this prince the Mewar chronicles commence their series of rajas of Saurashtra. It is the last name in the Bhagavat Purana, and he is said by Tod to have been contemporary with a Vikramaditya.

SUMMA claim to be descendants of Sam, son of Noah, to give themselves importance in the eyes of other Muhammadans; there is no doubt that they are Jat converts from Hinduism. Such also are the Machi and numerous other subdivisions of the Jat tribes.

Summa have been long in Sind. They were in power as rulers from A.H. 752 (A.D. 1351) to A.H. 927 (A.D. 1520), when they were overthrown by the Arghuni. Their subdivisions are very

numerous, nearly 200. The chief seem to be the Summa seetions—

Abra.	Jaraja.	Nara.	Sootia.
Abraja.	Jasingorah.	Notia.	Subta.

Hingora.	Nalica.		
Janspuwar.	Nalua.		

The title of the Summa rulers was Jam, a dynastic designation still retained by the Jam of Beyla, the Jam of Cutch, and the Jam of Nowanagar.

SUMPITAN. Malay. A blowpipe used as a projectile amongst the Malay races. That of the Dyak is a piece of wood bored; that of the Bermun tribes consists of two bamboos 7 feet in length, one enclosed within the other. The external one, which is merely for strength and ornament, is about 3–4ths of an inch in diameter, and neatly carved for about a foot at each end and in the middle. To prevent it splitting, the fibrous bark of the triap is bound round about 6 inches of the extremity, and a coating of dammer placed over it. The internal tube, which is the proper sumpitan, is of the same length with the case, but only 3–5ths of an inch in diameter. It is composed of two pieces of bamboo, united by a piece 8 inches long, which embraces the ends tightly at the junction. The bamboo used (the bulu timiang) is very light and fine-grained. The arrows (damak) are small darts, made of the stem of the birtam leaf, 10 inches in length, and 1-16th of an inch in diameter at the base, from which they gradually taper to a very fine sharp point. The base is inserted into a cone of kayu tutu (which is very porous and light) about an inch in length, and 1-3d of an inch in diameter at its base. The point of the dart is dipped for about 5–6ths of an inch in ipoh (upas). This is made by taking akar ipoh, batang ipoh (or kyas), limes, and tuba, which are bruised, boiled, and strained. To this arsenic is added. Other substances, such as pachet, jimardes, mallyc, and gadong, are also sometimes added. The preparation called ipoh has the colour and consistency of chandu. An incision is made round the dart above the ipoh, so as to ensure its breaking off and remaining in the wound. Each dart is kept ready for use in a bamboo case, about 1–4th of an inch in diameter. 50 of these cases are laid side by side and united by strings. They are then rolled up and inserted into a bamboo case, which has a neat lid of jalutong. The same case contains a quantity of barok (a very light, spongy substance, also used as tinder), obtained from the arenga tree called runout. After inserting the dart into the sumpitan, a little barok is introduced. When the Binua blows into the tube, it is pressed against the kayu tutu cone, and prevents any of the air escaping between it and the sides. In shooting, the sumpitan is held firm by both hands being tightly clasped over its end, which is inserted into a handle.

The Malay use small poisoned darts, having on their end a piece of pith or some other light substance, adapted to the size of the bore of the tube. The sumpitan has, at its farthest end, an iron sight by which they regulate their aim. It is also at this end furnished with a large double-bladed spear. Both the sight and the spear are nicely bound on with rattans, which are woven over them. The dart used is poisoned with the ipoh, which is the same as the upas and chetik of Java, described by Dr. Horsfield; the darts, which are very thin and about 10 inches in length, are pointed with the sharp teeth of fish neatly bound on to them. A Meri, who was very expert with the sumpitan, at a distance of from 15 to 20 yards could readily transfix a bird of the size of a starling with one of the little darts. The whole distance to which the arrow can be blown with anything like effect is 60 yards, and at that distance they would probably not pierce the skin. The sumpitan varies in length, being from 7 to 10 feet. It is used also by the Mui people, the Benkatan, and the Tatow, and by all the tribes of the east coast. The Idaan or Meroot are said by Forrest also to possess it. Mr. Low saw speeimens from the river Essequibo, in South America, which resembled those of the Dyak in appearance and size, but without the sight and the spear at the end. It is sometimes seen in India.

SUMRA, a dynasty of Agnicula Rajputs, who, in A.D. 750, suceeeded to the Arabs in the government of Sind. The Sumra during the early part of their sway continued to be Hindus; indeed, many of the tribe still remain so, and roam as shepherds through the t'hals of Jeysulmir and the Upper Dhat country to the east of Sind. The Sumra of the desert are one of the subdivisions of the Pramara Rajputs, and from their frequently combining with the Umar, the two gave name to the large tract of country which is still recognised as Umra Sumra, and within which Alor is situated. Some of the Muhammadans of Sind so early as A.D. 1032 adopted the Karmatian schism, and the Sumra, before they apostatized from their ancestral faith to Muhammadanism, intermediately adopted the tenets of the Karmatian sect. The Sumra race seem to have ruled in part of Sind even before Mahomed's death, at least as early as A.H. 423 (A.D. 1032), and were displaeed in A.H. 752 (A.D. 1351) by the Summa. The name was originally pronounced Samra. The Sumra tribes in the Kurachee district are the Kumirpota, Mitopota, Budipota, and the Norungpota. In the Hyderabad district, the Sumra are cultivators and oil manufaeturers.—*Elliot.*

SUMROO, the name by which Walter Reinhardt was known to the natives of India, supposed to be a dialectal variation from Sombre, which was the pseudonym applied to him by his Freneh comrades. He was a native of Treve, in the Duchy of Luxembourg, half French, half German, and had been a sailor in the French navy; he deserted, and entered the British service as a soldier; next he deserted the British and joined the French; then he entered the service of the Nawab of Bengal, and was the murderer of the

English Resident at Patna and all his followers in 1763. He obtained the command of a large body of men, with lands to support them, and some years afterwards he married a remarkable woman, who was called, from his name of Sombre, the Begum Sumroo. The Begum was of Muhammadan extraction. She became a Romish Christian in 1781, and for many years after Sombre's death maintained a small army and ruled her petty state at Sirdhana with great vigour. She left her property to Mr. Dyce Sombre, son of Colonel Dyce, her minister or managing man, who had married her husband's daughter. The son came to England to urge certain claims upon the Government. He married the daughter of a peer, held for a short time a seat in the House of Commons, was prominent in the law courts, and at last was declared to be insane.

The year of Sumroo's death at Agra has been stated at A.D. 1778. The Begum built a large Romish church. During the Mahratta wars she led her troops into action, riding at their head very gallantly. In 1792 she married Colonel Le Vaisseau. She died A.D. 1836.

SUN. The races of the Sun and Moon furnished two parallel lines of kings, who are supposed to have reigned in the Ayodhya, and in the tract between the Jumna and the Ganges respectively. From one or other of these all the ancient royal families of Hindustan claim to have been descended. The list of the Solar dynasty gives 95 names, and that of the Lunar race 48 names; but the lists and the narrative are so full of absurdities that no part can be taken as a basis on which to found a system of chronology.

SUN-BIRDS or honey-suckers are names of the Nectarinidæ, *Vigors*, Cynnyridæ, *Swainson*, and Promeropidæ, *Gray*, of the old world, their place in South America being taken by the humming-birds, some of the sun-birds almost rivalling their American types. Their sub-families are the Nectarininæ of Africa and Asia; the Drepaninæ of Oceania; the Diccinæ of Asia and Australia; besides Promeropinæ of Africa and Cœrobyne of America. The Nectariuinæ genera are Arachnothera, Æthopyga, Leptocoma, Arachnechthra. The purple honey-sucker of Jerdon, the beautiful blue-winged sun-bird (Arachnechthra Asiatica, *Lath.*), is common, and nothing can exceed the grace and elegance of its congener, the Ceylon sun-bird (Leptocoma Zeylanica). The brilliant green spot on the wing of the male is wanting in the female. In the gardens tiny sun-birds hover all day long, attracted to the plants, over which they hang poised on their glittering wings, and inserting their curved beaks to extract the insects that nestle in the flowers, and sucking the nectar from its flowers like a humming-bird. The male birds only have handsome plumage. They build domed nests suspended from the ends of small branches.—*Adams; Tennent's Ceylon*, p. 249; *Jerdon*. See Birds.

SUN-WORSHIP has prevailed amongst various races since the most ancient times. The Babylonian trinity was Anu, Bel, and Hea. Their goddess Ishtar supplanted Anu at Erech. Bel was lord of the visible world, and had his chief seat at Nipur. Sin, the moon-god of Ur, was eldest son of Bel. Their sun-god was Samas.

In the city of Heliopolis (Balbec) the Assyrians celebrated the worship of the sun with great ceremony. The image had been brought from Heliopolis in Egypt. The Phœnician Hadad, in Syria, Palestine, and Mesopotamia, was the sun-god, representing the generative power of the sun; he was joined with the Phœnician Poseidon (Demarus), the water-god, and Astarte, with her cow-horns, the producing and nourishing earth.

The Egyptian sun deity was known as Mu, Osiris, and Ra.

Ham, the chief god of Thebes, was Amun-Ra, the sun, the king of the gods. Every king of Egypt was styled Ze Ra, or son of the sun, and he was often sculptured as the third person of the triuity in the place of Chonso. With the spread of the Theban power, the worship of Amun-Ra spread. In Nubia and at Elephantine, to the south of Thebes, the chief god was Kueph, the spirit, with a ram's head, who, in imitation of the worship in the capital, became Kneph-Ra. So Sebek, the crocodile, called also Seb, the father of the gods, became in due time Sebek-Ra. Chem, the god of generation, had his name from Chemi. He is in form a mummy, with his right arm raised, and a whip in his hand. He also was sometimes joined to the gods of Thebes, and formed a trinity in unity under the name of Amun-Ra-Chem. At Heliopolis and the neighbourhood, the name of the god of the sun was pronounced Athom, and he gave his name to the city of Thoum. At Mendes in the Delta, and at Hermanthis near Thebes, the sun was called Mando, and became Manda-Ra. Pasht, goddess of chastity, was worshipped chiefly at Bubastes, and has a cat's head. Athor was the goddess of love and beauty; at Mememphis, near Sais, she was worshipped under the form of a cow; at Sais was worshipped Neith, the queen of heaveu, the mother of the gods. She wears sometimes the crown of Lower Egypt. Thoth, the god of letters, has the head of an ibis, and holds a pen in his hand. He was one of the gods of the moon, and lord of Hermopolis.

The myths of Gebal, of Tyre, of Sidon, and of the Canaauites generally, are all mixed up with each other. But they all acknowledged Baal as the sun-god; and Ashtaroth or Astarte was known as Pene-Baal, the face of Baal, also Baltis Baal.

The ancient Phœnicians and Egyptians used to paint the sun of the figure of a man sitting on a lotus or nenofar, which lives in the water without any communication with the clay, resting on itself, equally distinct from matter, swimming in empty space.

Porphyry says the sun was also represented by a man in a ship resting on a crocodile, an amphibious reptile, emblem of air and water.

The suu was the great object of the worship of the Canaanites, chiefly as creator and generator, the source of light and life. Baal, plural Baalim, was a title meaning lord, and the equivalent of Adonai, just as Melech, Moloch, and Malik means king. The Canaanitish gods had this title prefixed, as Baal Berith, the covenant god of Sheehem; Baal Peor, the god of the mountains of Moab; Baal Zebub, the god of flies, etc. etc. (Numbers xxv. 3; 2 Kings i. 2; and Hosea ii. 16). It was also given as a man's name, and David's son was Baal Yada. The sun-god was also known as El, god, and Elyon, the most high god.

Amongst the Accadians of Babylon, the people of

Sipparah, and the Canaanites, children were sacrificed to Baal, to king Anu, and king Adar (Anammeleeh, and Adrammeleeh); but Hosea (ii. 16) declared Baali abolished as the god of the Israelites. Duzu or Tammuz was the youthful sun-god of the Aeeadians of Chaldæa; he was the bridegroom of the goddess Istar. He had the title of Adonai. Adoni-Tammuz was the Greek Adonis, and many legends and other names were applied to him.

In Canaan there were only two prominent goddesses, viz. Ashtoreth of the Northern Canaanites, and Ashera of the Southern Canaanites. Ashera is an Assyrian word, denoting the rich fecundity of nature. Ashtoreth is Istar, goddess of love and war, patroness of the moon and the planet Venus.

The temple of Astarte or Ashtoreth, the Phœnician Aphrodite, was at Paphos, on the Galgai or Galgal Hill. A stone column of cone-like shape was the only symbol inside the shrine, and they believed that it had fallen from heaven, as had the aerolite before which sacrifices were offered in the great temple of the Asiatic Artemis at Ephesus. The Egyptians called them Kefa or Kephene, the palm-land people. Keft was Phœnicia, and Keftur was the Caphtor of the Old Testament, but Canaan was the title they gave to their own country.

The Natchez of N. America worshipped the sun with singular honours, and preserved with the same reverence the sacred fires.

In Northern Asia the Samoyedes are said to have worshipped the sun and moon.

Apollonius, in his visit to Upper India, describes the magnificent temple of the sun at Taxila.

The great Getæ of Central Asia deemed it right to offer the horse to the sun, as the swiftest of created to the swiftest of uncreated beings. Colonel Tod tells us that Bal-nath was the sun-god of ancient India, and the Bul-dan was the gift of the bull to the sun. The white elephant and the white horse in the ancient sun-worship are emblems of the sun. In a legend as to Sakya's birth, a white elephant entered the womb of his mother, Maya Devi.

In the Vedas the sun is called the eye of Varuna; with the Persians the sun was the eye of Ormuzd; it was the Demiurge of the Egyptians, the Baal of the Babylonians, Assyrians, and Phœnicians, the Zeus of the Greeks, and the Wuotin or Odin of the Teutonic races. All Hindus still worship the sun, and the Parsee race turn to the sun as an emblem of light.

In Central India, at the present day, the worship of the sun as the supreme deity is the foundation of the religion of the Ho and Oraon, as well as of the Munda. By the former he is invoked as Dharmi, the Holy One. He is the Creator and the Preserver, and with reference to his purity, white animals are offered to him by his votaries. The sun and moon are both regarded as deities by the Khond, though no ceremonial worship is addressed to them.

The sun is worshipped by the Kharria of Chutia Nagpur, under the name of Bero. Every head of a family should during his lifetime make five sacrifices to it in succession,—fowls, a pig, a white goat, a ram, and a buffalo. The Munda worship the sun as Sing Bonga, to whom they pray and offer sacrifices as to a beneficent creator. The Bura-Deo of the Gonds is also a sun-god. There is a sun temple at Baroda, dedicated to Surya Narajana.

At Sutrapada, in Kattyawar, between the town and beach, is a singularly fashioned temple of the sun, with an image of Rina-Devi; near it is a Surya-Kunda, and another dedicated to a rishi; also a castle on the way to Pattan.

The earliest objects of adoration in Rajputana were the sun and moon, whose names designate the two grand races, Surya or Solar dynasty, and Chandra or Indu or Lunar race. Budha, son of Indu, married Ella, a grandchild of Surya, from which union sprang the Indu race. They deified their ancestor Budha, who continued to be the chief object of adoration until Krishna, hence the worship of Bal-nath and Budha were coeval. That the nomade tribes of Arabia, as well as those of Tartary and India, adored the same objects, we learn from the earliest writers; and Job, the probable contemporary of Hasti, the founder of the first capital of the Yadu on the Ganges, boasts in the midst of his griefs that he had always remained uncorrupted by the Sabeism which surrounded him: 'If I beheld the sun when it shined, or the moon walking in brightness, and my mouth has kissed my hand, this also were an iniquity to be punished by the judge, for I should have denied the God that is above.' That there were many Hindus who, professing a pure monotheism like Job, never kissed the hand either to Surya or his herald Budha, we may easily credit from the sublimity of the notions of the 'One God,' expressed both by the ancients and moderns, by poets and by princes of both races, but more especially by the sons of Budha, who for ages bowed not before graven images, and deemed it impious to raise a temple to them.

At Udaipur the sun has universal precedence; his portal (Surya-pol) is at the chief entrance to the city; his name gives dignity to the chief apartment or hall (Surya-mahal) of the palace; and from the balcony of the sun (Surya-gokra) the descendant of Rama shows himself in the dark monsoon as the sun's representative. A huge painted sun of gypsum in high relief, with gilded rays, adorns the hall of audience, and in front of it is the throne. In addition to these, the sacred standard bears his image, as does that Scythic part of the regalia called the changi, a disc of black felt or ostrich feathers, with a plate of gold to represent the sun in its centre, borne upon a pole. The royal parasol is termed kirnia, in allusion to its shape, like a ray (carna) of the orb. The most revered text of the Vedas of the Hindus, the Gayatri, is imparted to a Brahman youth on his initiation, and is an invocation to the sun. By the Aryan Hindus the sun was also styled Savitar, the progenitor.

The ancient Aryans worshipped the sun as Mitra, or the living, which the modern Parsees still do as Mihr, and name their children after it, a Mihr Bi being in almost every household. The turning towards the sun is noticed in Ezekiel viii. 16. The Parsee looks towards the sun in prayer; the Buddhist and the Hindu, when perambulating their temples, circle from right to left as the sun's circuit. The Ansariah race in Syria are sun-worshippers.—*Bunsen*, iii. pp. 525, 581, iv. pp. 269, 318, 325, 687, v. p. 127; *Sharpe's*

Egypt, i. p. 98; *Chatfield's Hindustan*, p. 191; *Lubbock's Civilisation*, p. 215; *Tod.*

SUNAB-DEO. The bhandara of the Ram Talao or Sunab-Deo in the Satpura had been destroyed by a Muhammadan agent from the Nimbalkar jaghirdar, who took some of the bricks to make a step well in his own village; but guinea-worm attacking the villagers, the people believed it to be a curse, and deserted the village. About 1830, the old Pahlki family induced the people to return, and used the bricks to rebuild the village choultry, but fever and dysentery appeared, and the site was a second time abandoned. And about 1870 the Assistant-Collector again wished to utilize the bricks, but the people stedfastly refused, and explained to him that 'the bricks are the property of Ram, and cannot be touched with impunity.'

SUNAHSEPHAS, a Brahman's son, destined to be a victim to Varuna in the place of Harischandra. He was already bound as the sacrifice, when he remonstrated, and was freed. The story is told in the Aitareya Brahmana, and seems to embody some change of ritual from that of the Vedic times.

SUNDA, in the Eastern Archipelago, forms with Borneo and other islands a group, of which Borneo is the chief. Sunda Strait has two channels which lead into it from the westward, the small channel between the west end of Java and Princes Island, and the great channel to the northward of the island, betwixt it and the south coast of Sumatra, which occupies upwards of a degree of longitude, indented by two large bays, the shores of which are fronted by numerous islands and rocks. The Sunda people are shorter, stouter, hardier, and more active than the inhabitants of the coast and eastern districts. In some respects they resemble the Madurese.—*Raffles' Hist. of Java*, i. p. 59.

SUNDARA-MISRA, A.D. 1599, wrote the Abhi-Rama-Mavi, a drama in seven acts on the history of Rama.—*Dowson.*

SUNDAY. In most countries the first day of the week is named after the sun. Amongst the Hindus called Ravivara, from Ravi, the sun, Vara, a day, also Irida, from Iru, the sun. The Muhammadans in India call it Itewar or Aitewar, from the Sanskrit Aditya, a name of the sun. The complete days of the week are—

Sunday,	Ravivara,	Ravi or the Sun.
Monday,	Somavara,	Soma or the Moon.
Tuesday,	Mangalavara,	Mangala or Mars.
Wednesday,	Budhavara,	Budha or Mercury.
Thursday,	Vrihaspativara,	Vrihaspati (Jupiter).
Friday,	Shukravara,	Shukra (Venus).
Saturday,	Sanivara,	Sani (Saturn).

SUNDDYA or Sandbya, SANSK., in Hinduism, is the recital of prayers accompanied by certain modra or gesticulations, and their performance by Hindus.

SUNDERBANS, said to be derived from Sundari vana, a forest of sundari trees, is a name given to the islands and swamps in the delta of the Ganges, extending for 60 miles from the zamindari and pargana lands in the north to the Bay of Bengal in the south, lat. 21° 30′ 40″ and 22° 37′ 30″ N., and from the Hoogly in the west to the Megna in the east, long. 88° 4′ 30″ to 91° 14′ E., a varying breadth of 30 to 81 miles, and along the coast in length 165 miles, about 7532 square miles.

The northern portion of the delta is highly cultivated and densely populated, supporting 420 souls upon each square mile, or nearly 5,000,000 inhabitants; the southern portion is occupied by extensive swamps and dense forests, and their few inhabitants live in boats, not daring to venture on shore by day on account of the numerous tigers, nor by night on account of the miasma. The name has also been supposed to be derived from the Chandra Bhanda tribe, employed, like the Molangi, on the salt manufacture there; others derive the term from the two Bengali words, sūndar, ban, great or beautiful forest. The breadth of the delta from Chittagong to the mouth of the Hoogly is 260 miles, divided longitudinally by the Megna; all to the west of that river presents a luxuriant vegetation, while to the east is a bare muddy expanse, with no trees or shrubs but what are planted. On the west coast the tides rise 12 or 13 feet; on the east, to 40 or 80. On the west, the water is salt enough for mangroves to grow for 50 miles up the Hoogly; on the east, the sea-coast is too fresh for that plant for 10 miles south of Chittagong. On the west, 50 inches is the Cuttack fall of rain; on the east, 90 to 120 at Noacolly and Chittagong, and 200 at Arakan. The east coast is annually visited by earthquakes, which are rare on the west. And lastly, the majority of the great trees and shrubs carried down from the Cuttack and Orissa forests, and deposited on the west coast of the delta, are not only different in species, but in natural order, from those that the Fenny and Chittagong rivers bring down from the jungle. Mariners when approaching the Sandheads, having no land in sight, not even the height of a span, to guide them, are obliged to trust entirely to their lead to inform them of their position. The sand that is brought down by the rivers hardens under the surface of the sea into a concrete, nearly as hard as rock, to touch upon which is fatal to any craft; but as the waters descending the rivers cut a subaqueous channel through the sand, the lead informs the pilot at once whether he is on a bank or in a channel. Government pilots are always cruising a few miles from the land, and at night continually burn blue lights to inform ships of their position. The segregation of the sand from the mud is as follows: The freshes or heavy rains bring down from up-country vast quantities of sand and earth, calculated at 40,000 million cubic feet, or nearly one-third of a cubic mile, rendering the waters of all the rivers opaque or of a dull yellow colour. This body of water rushing along with great impetuosity reaches the sea; a contest immediately takes place between the rushing water and the advancing tides; the effect is to cause the heavier sand to subside, which is done on either side of the river channels, forming the Sandheads; the finer particles of mud are driven back or up the rivers, and deposited upon the ten thousand islands over which the tide sweeps; but as all the finer particles of sand and mud are not thus thrust back upon the Sunderbans, some portion of the alluvium is carried out to sea for forty, fifty, and even for sixty miles, where, silently and slowly, it finds its way to the bottom of the ocean, forming the soft, impalpable purple mud so well known to pilots and others approaching the shores of India. At sixty miles from the

Sunderbans the ocean is free from any appearance of natant impurities, but nevertheless a certain amount of alluvial matter is subsiding to the bottom of the sea that number of miles from the land, which probably only commence to sink at forty miles from the Sunderbans. On the eastern flank of the delta, by the deposition of soil driven up by the waves, the mainland of Noacolly is gradually extending seawards, and advanced four miles within 23 years. The elevation of the surface of the land is caused by the overwhelming tides and south-west hurricanes in May and October; these extend thirty miles north and south of Chittagong, and carry the waters of the Megna and Fenny back over the land, in a series of tremendous waves, that cover islands of many hundred acres, and roll three miles on to the mainland. On these occasions the average earthy deposit of silt, separated by micaceous sand, is an eighth of an inch for every tide; but in October 1848 these tides covered Sundeep Island, deposited six inches on its level surface, and filled ditches several feet deep. These deposits become baked by a tropical sun, and resist to a considerable degree denudation by rain. Whether any further rise is caused by elevation from below is doubtful; there is no direct evidence of it, though slight earthquakes annually occur; and even when they have not been felt, the water of tanks has been seen to oscillate for three-quarters of an hour without intermission, from no discernible cause. The Sunderbans have no defence whatever to seaward, not even an inch in height; every spring-tide and every cyclone-wave dashes its waters over the land, deluging the country with waves, the impetuosity and volume of which are unknown and unheard of in Europe; waves 30, 40, and even 60 feet in height have been known to rise in the Bay of Bengal, to dash over the highest trees, and to deluge the whole country for miles inland. The Sunderbans in their present state are exposed to the fury of the tropical hurricanes that arise in the Bay of Bengal, and their unhealthiness is great, from the stagnated air and corrupting vegetable deposits; but should this tract ever share in the upheaval that is now going on near Arakan and on the Tenasserim coast, rich would be the soil that would be brought under the plough, and great would be the population that would be found to occupy the seaboard tract. Until that time arrives, much of the Sunderban tract can but remain waste, an inaccessible and an impregnable defence to India towards the sea. The remains of temples, mosques, and other buildings, both Hindu and Muhammadan, prove that the country has not only been once populated, but had made great advancement in civilisation. Maharaja Pratadyta built a magnificent city in the Twenty-four Pargana portion of the Sunderbans. He made tributary all the princes of Bengal, Behar, Orissa, and Assam, overthrew Akbar's army on the shores of the Mutlah, but finally ended his days a captive in the Moghul capital. Storm-waves have devastated the Sunderbans, and the ravages of Mugs and Portuguese buccaneers completed the desolation. Mr. Long has stated that, when in Paris in 1848, M. Jomard, of the Bibliotheque Royale, showed him a Portuguese map of India more than two centuries old, in which the Sunderbans was marked off as cultivated land with five cities therein. This was confirmed by a map in De Barros' Da Asia, a standard Portuguese history of India.

The principal arms of the sea, proceeding from west to east, are the Hoogly, Sattarmukhi, Jamira, Matla, Bangaduni, Guasuba, Raimangal, Malancha, Bara Panga, Marjata or Kaga, Bangara, Horinghata or Baleswar, Rabnabad channel, and the Megna river.

Amongst the calamities that overtake the Sunderbans are great inundations caused by cyclones or hurricanes. About 1584, the tract lying between the Horinghata and the Ganges, known as the Backerganj or Burrisal district, was swept by an inundation, succeeded immediately afterwards by an incursion of Portuguese and Mug pirates. In June 1622 this same tract was again inundated, 10,000 inhabitants perishing, and many houses and property destroyed. In A.D. 1737 happened a great Calcutta storm. In 1736 A.D. the river Megna rose six feet above its usual level at Lukhipur. In A.D. 1833 Saugor Island was submerged 10 feet; the whole of the population, between 3000 and 4000 souls, together with some of the European superintendents, perished; at Kedgeree, a building 18 feet high was completely submerged. The *Duke of York* East Indiaman was thrown high and dry in the rice-fields near Fultah in the Hoogly; in A.D. 1848 the island of Sundeep was submerged; and in 1876 a storm-wave overwhelmed a great portion of the delta, and destroyed about 25,000 souls.—*Calcutta Review*, No. lxiii. p. 24, March 1859; *Hooker's Him. Jour.*—See Cyclone.

SUNDIVA, an island of the Sunderbans, held for about half a century by the Portuguese Sebastian Gonzales and Fra Joan.

SUNDRAS or Sundrus, resin of the Vateria Indica, called by the various names of East Indian copal, Indian anime, and Pincy dammer; in Hindi, according to the Makhzan-ul-adwiya, Chanderus, and Kahruba among the common folk.—*Powell.*

SUNDRI, in musical instruments a fret.

SUNDUR, a small principality, in lat. 15° 5′ N., and long. 76° 34′ E., 24 miles west of Bellary; level of the nalah is 1900 feet. It is in the centre of the Bellary district, and is an independent state of 140 square miles, of which more than a third is hill territory. Its population is 14,000, and revenue Rs. 45,000. The ruler is one of the Ghorpara Mahrattas.—*Cull.*

SUN-FLOWER is the name given to species of the Helianthus genus of plants, of which H. annuus, the annual sun-flower, is cultivated in gardens; H. Indicus, *Linn.*, is probably only a variety of H. annuus; H. multiflorus is the many-flowered sun-flower; H. tuberosus, the Jerusalem artichoke, the tubers of which form a good substitute for potatoes. The stem of H. thurifer yields a resinous matter. The botanical name of this genus is from ἡλιος, the sun, and ἀνθος, a flower. H. annuus, the Tournesol, Fr., Girasole, It., is cultivated in India for its seeds and the oil they yield, a pale amber-coloured oil, free of smell, and sweet to the taste. It is obtained from H. annuus and H. perennis. Sun-flower seeds are used to fatten poultry, pheasants, and partridges; they are said to increase the number of eggs. The leaves are given to cattle.

SUNGA, a dynasty which ruled over India

112 years, after the Maurya sovereigns, from B.C. 188 to 76, the first of whom, Pushpamitra, put his master, the last of the Maurya, to death.

Pushpamitra, .	B.C. 188	Bhagavata, . .	B.C. 112

—*Fergusson*, pp. 19, 716.

SUNGA-BADI, an athcistical sect among the Hindus.

SUNG-DIRAN. Hind. Impnre and weak nitro-muriatic aeid, made by attār or drnggists by mixing equal parts of alum, nitre, and salt with a littlc water in an earthen pot (gurra), and distilling ; an acid fluid eomes over that is applied to cure herpetic eruptions.—*Genl. Med. Top.* p. 152.

SUNG-I. Chin. A substancc resembling tar, used in China in skin diseases.

SUNGROOR, the ancient Sringara, a town on the left bank of the Ganges, and on the frontier of Kosala and the Bhil country. In ancient times the surrounding country was inhabited by Nishadas or wild tribes, and Gnha, the friend of Rama, was their chief.—*Dowson.*

SUNG-YAN HILLS border on Foh-kien, in the district of Ping-yang, Wan-ehan prefecture, and in close proximity to Peh-kwan harbour, lat. 27° 9′ 10″ N., and long. 120° 32′ 6″ E. Alum-making establishments ocenpy about a mile of the side of a lofty hill, adjacent to the qnarries, from which alum-stone crops out. The stones are thrown into a fire of brnshwood, where they burn with a slight lambent flame, and as they crack the fragments are raked out, broken into small pieces, and maeerated in vats. Subsequently the disintegrated mineral is thrown with water into a vessel having an iron bottom and sides of wood, and boiled for a short time. The lixivium is then poured into large reservoirs, where it crystallizes into a solid mass. Blocks of alum weighing about fifty cattics each are hewn out of the reservoir and carried in this state in bamboo frames, onc on cach end of a porter's pole, to the place of shipment, where it is brokcn into fragments. When not designed for immediate exportation, the blocks are stored away for drying. Granitic and porphyritic rocks abound in the vicinity, and some parts of the district produee iron and silver. According to the Wan-chan topography, the working of silver was discontinued in the reign of Wan-lih (1615), in consequence of imperial prohibition. This part of the coast has recently become the seat of extensive poppy cultivation.

SUNG-YUN, a Buddhist Chinese pilgrim, who visited India A.D. 502.

SUNJOGATA, daughter of Jye-chand, a Rahtor Rajput, the last Hindu king of Kanouj. Her father, Jye-chand, eclebrated the last Raj-shahi in India. He did this to soothe his vanity, which had becn mortified by his rival Prithi, a Chauhan Rajput, assuming empire by performing the sacrifice of the Aswa Medha. At the Rajshahi, Sunjogata was led forward to select her husband from the assembled princes ; but she threw the Bar-mala, marriage garland, over the neck of the gold effigy of the absent Prithi-raj. Prithi-raj hearing of this, he, with the élite of his warriors, in A.D. 1175, earried her off from Kanouj in open day. There was a desperate running fight for five days all the way to Dehli, Prithi-raj losing the best of his warriors, but he kept his prize and gained immortal renown. For a few years they lived happily together, but on the invasion of Muhammad Gori she urged him to battle. As he left she exclaimed, 'I shall never more see him in Yoginipnr (Dehli), but in the region of Swarga ;' and her prediction was verified, for he was taken captive and slain (A.D. 1193). She then mounted the funeral pyre, and this is the first authentic record of sati in India.—*Cal. Rev.*

SUNKISA is gcnerally recognised amongst the learned natives of India to be the site of the Sunkasya of the Ramayana. Cnnningham thinks that Sunkisa was destroyed in the wars betwecn Prithi-raj and Jye-chand ; bnt there seems reason to conelnde that the town must have belonged to the latter when it was captured, for it is familiarly known as one of the gates of Kanouj. The ruins of Sunkisa (not called now Samkassa) can enter into no eomparison with those of Kanouj, even if we include the ancient k'hera of Snraee Uqnt'h. It is stated that the worship of the identical Naga mentioned by Fa Hian is still annnally performed there ; bnt the mound where this worship takes place is nothing more than the common heap of bricks, or earth, which we see in every village, erected for worship during the Nag-Panchami.

SUNN. Beng., Hind. Crotalaria juncea, Lat.

Ghore sunn, . .	Beng.	Taag, ...	Mahr.
Mœsta pat, . .	,,	Wucko nar, .	Maleal.
Brown hemp, . .	Eng.	Sana, ...	Sansk.
Hemp, Sunn hemp,	,,	Kenna, ...	Singh.
Konkani hemp, .	,,	Janapa, Shanapa-nar,	Tam.

Bombay hemp, .	,,	Janamoo, ...	Tel.

Snnn fibre is an article of extensive export. The plant is largely grown all over India for the manufactnre of rope, string, and gunny bags. Dr. Wight gave the following as the results of his experiments of the strength of fibres :—

Coir, ...	224 lbs.
Pooley Mungi (Hibiscus cannabinus), . .	290 ,,
Marul (Sanseviera Zeylanica), . . .	316 ,,
Cotton (Gossypium herbaceum), . . .	346 ,,
Cutthalay nar (Agave Americana), . .	362 ,,
Janapa (Crotalaria juncea), Sunn, Hindi, .	407 ,,
Yercum (Calotropis gigantea), . . .	552 ,,

It is equal to Petersburg hemp for many purposes, and when well prepared will bear comparison with flax. In February and March, soon after the flowers drop, and before the secd is ripe, it is plncked up by the roots ; the stems, which are about five feet long, are tied in bundles, and steeped in water, weighted with stones. A few days thereafter, they are beaten, which detaches the integument and coarse cellular tissue, after which they are well washed in repeated waters, and the individual fibres picked ont, free of the vegetable mucous and other impurities. It is then to be well beaten in water, to free it from impurities, wrung, and hung over bamboo frames to dry.

It requires but comparatively little tillage, and not much after-tending. The plants, when site and soil agree, attain to a height of 8 to 9 feet. The hemp is bought in the bazar about 7 lbs. per shilling, and rope made of it at 5 lbs. weight for a shilling. Paper is made from this article.—*Cat. Ex.*, 1862 ; *Mad. Ex. J. R.*

SUNNAH, also Sanat. ARAB. The traditions of Mahomed; a recital containing a sentence or a declaration of Mahomed regarding some religious question, either moral, ceremonial, or theological; the traditional laws of Muhammadanism, based on the sayings and doings of Mahomed. The Sunni sect regard them as of scarcely inferior authority to the text of the Koran, established by usage and the law of custom; they are not recognised by the Shiah sect. The fathers of tradition are styled Shaikh. The traditions began to be gathered about forty years after Mahomed's death. Abu Horeira (A.H. 58), himself a companion of Mahomed, collected from the lips of eye-witnesses, or of those who had heard, no fewer than 3500 traditions regarding Mahomed. The traditions include predictions and prophecies, which Sprenger considers were invented to oppose Christians; also stories of genii, idols, and soothsayers, invented for the heathen Arabs; and, for the Persians, announcements as to Chosroes and the east. The Sunnah commands are optional, whilst the Farz is a divine command, but usually applied to the five indispensable obligations of purification, prayer, almsgiving, fasting, and pilgrimage.

The Sunni sect of Muhammadans regard the Sunnah (Sunnat) or legendary account of the actions and traditions of Mahomed as of equal value to the Koran. The Muhammadan religionists are of two great sects, the Sunni and Shiah, the former being in India, Turkestan, Turkey, and Arabia, while the Shiah are most numerous in Persia. The Sunni hold, amongst other points, the succession to the khalifat to have followed in the line of Mahomed, Abubakr, Umar, Usman, and Ali; the Shiah sect, on the other hand, maintaining Ali to have, and by right, succeeded his cousin and father-in-law Mahomed. There are other points on which their sectarian differences turn, but small numbers of the Shiah religionists, in several parts of Asia as in the west of India, believe in incarnations of Ali, and of these the Ismaili sect may be instanced. The Muhammadans of India, of these two great religious sects, worship apart; but amongst both sects are to be found, mixed together, the people of the various races, Synd, Shaikh, Persian, Indian, Moghul, Pathan, into which the Muhammadans are found arranged, and, as in the families of some Christian countries, the sons will be found as Sunni and the daughters Shiah. The Sunni are occasionally styled Char-yari, or four friends, as recognising Abubakr, Umar, Usman, and Ali to have been the four khalifs. The Shiah are styled the Teen-yari, or three friends. Amongst the Sunni in the south of India the Maharram is a period of extravagant amusement, in which many non-Aryan and Aryan Hindu races join. The Sunni, by far the majority, at this period grossly outrage the grief of the Shiah sect, and scandalize the learned and devout; and many of the mummers or Jalali are of the Pariah, Dher, and Mahratta races.—*Wilson's Gloss.*

SUNN-BHANG is the fibre of Cannabis sativa, common hemp.

SUNRI, a title which includes the Kalwar tribe. The Sunri, though deemed impure from their occupation, frequently style themselves Sudras, especially those who have adopted agriculture as a pursuit.—*Cal. Rev.* No. 110.

SUNTARAR belonged to a Brahman family of Tirunavalur. While a child, he is said to have been adopted by king Narasingha Muniyar. On the day fixed for his marriage, he broke off the engagement, and as an ascetic went about singing hymns in honour of the Saiva temples. With Appar and Sampantar, he was a zealous champion of Saivism. A collection of hymns attributed to him has been printed.

SUNYASI, SANSK., from Sang, prep., and Nyasa, to renounce, a Hindu devotee, some of whom besmear their faces with ashes. The Jews, as an act of mourning, covered themselves with ashes, and the Sunyasi do it as an act of mortification. Persons who seek concealment often assume, for a time, the appearance of Sunyasi.

SUPA, also Supli. HIND. A winnowing sieve. It is worshipped by the Irular races of Southern India.

SUPERSTITIONS. Amongst Hindus the left side is the lucky side in a woman, the right in a man. The purport of the palpitations of the eyes, or throbbing of the eyeballs, is fancied, and seems to have been similarly understood by the Greeks. The powder of white mustard is applied to the top of the head and forehead and other parts of a new-born child as a protection against evil spirits. A mixture of the same with oil and rice is scattered about to every quarter upon the commencement of a sacrifice, to keep off ghosts and fiends. Hindus stain a new cloth with turmeric to keep off demons and disease. Amongst the avenging scourges sent direct from the gods, the Singhalese regard both the ravages of the leopard and the visitation of the small-pox. The latter they call 'maha ledda,' the great sickness; they look upon it as a special manifestation of Devi; and the attraction of the cheetas to the bed of the sufferer they attribute to the same displeasure of the gods. A few years ago, the capwa, or demon priest of a 'dewale,' at Oggalbadda, a village near Caltura, when suffering under small-pox, was devoured by a cheeta, and his fate was regarded by those of an opposite faith as a special judgment from heaven. Such is the awe inspired by this belief in connection with the small-pox, that a person afflicted with it is always approached as one in immediate communication with the deity; his attendants address him as 'my lord' and 'your lordship,' and exhaust on him the whole series of honorific epithets in which their language abounds for approaching personages of the most exalted rank. At evening and morning, a lamp is lighted before him, and invoked with prayers to protect his family from the dire calamity which has befallen himself. And after his recovery, his former associates refrain from communication with him until a ceremony shall have been performed by the capwa, called awasara-pandema, or 'the offering of lights for permission,' the object of which is to entreat permission of the deity to regard him as freed from the divine displeasure, with liberty to his friends to renew their intercourse as before. With the Burmese, if a hen lay an egg upon a cloth, its owner will lose money; to see mush-rooms at the beginning of a journey is a fortunate sign; a snake crossing the path denotes delay; if a dog carry any unclean thing into its master's house, the man will become rich. Auguries are drawn from the flight and numbers of birds, from the barking of dogs, the flight of bees, and

in many other ways.—*Hind. Theat.* ii. pp. 15, 113; *Tennent's Ceylon*, p. 28.

SUPREME COURT, a court of jndicature of the highest in rank in India. Dnring the E. I. Company's rnle, there was a court of first instance and of appeal. Beneath it was the Sadr Adawlat Court. On the abolition of the E. I. Company, the Supreme Courts of Calcutta, Madras, and Bombay were amalgamated with the conrts of Sadr Adawlat nnder three Presidencies, and the nnited body designated the Supreme Court of Judicature.

SUR, a Sind grass, perhaps Arundo kurka; its flower-stalks are beateu into firm fibres called Moonyah, from which string or twine is fabricated.

SUR, a tone in music; a mclody, a tune; a bass or drone to the shuhnaee.

SUR (Soor), a Muhammadan dynasty who ruled at Dehli during the 15 years of Humayun's displacement, A.D. 1540–1557.

SURA. ARAB. A chapter of the Koran. Thc scattered Snra were collected by Zeid, and Europeans call these the Koran. Muhammadans call it the Word of God, Kalam Allah, also Koran-i-Sharif, the holy Koran, also Furhan.

SURA, chieftain of the Yadava, father of Vasudeva and Kunti.

SURA, a tyrannical giant, slain by Subhramanya.

SURABHI, in Hindn legend, a cow obtained as one of the fourteen products from churning the ocean.

> . . . 'And first
> Out of the waters rose the sacred cow,
> God-shaped Surabhi; eternal fountain
> Of milk and offerings of butter.' . . .

Amongst Hindus, at marriage, part of the ceremony consists in the donation of a milch cow. The ceremony is attended by many appropriate ceremonies, finishing with prayers, the acceptor holding during the recital the sacred animal by the tail. The boon-granting cow Snrabhi, and her descendants, are much revered by all classes of Hindus. It is common for Brahmans and others to feed a cow before they take their own breakfast, ejaculating as they present their food, 'Daughter of Surabhi, framed of five elements, suspicious, pure, holy, sprung from the sun, accept this food of me; salutation unto thee!' Or if he conduct the kine to grass, 'May cows, who are mothers of the three worlds and daughters of Surabhi, and who are beneficent, pnre, and holy, accept the food given by me.' In marriage ceremonies, the hospitable rites are conducted by letting loose a cow at the intercession of the guest; a barber, who attends for that pnrpose, exclaims, 'The cow! the cow!' Upon which the guest pronounces this text: 'Release the cow from the fetters of Varuna. May she snbdne my foe, may she destroy the enemies of both him (the host) and me. Dismiss the cow, that she may eat the grass and driuk water.' When the cow has been released, the guest thus addresses her: 'I have earnestly entreated this prudent person, saying, Kill not the innocent, harmless cow, who is mother of Rudras, daughter of Vasus, sister of Adityas, is the source of ambrosia,' etc. 'It is evident,' says Mr. Colebrooke, 'that the guest's intercessions imply a practice, now become obsolete, of slaying a cow for the purpose of hospitality.' In the Hitopadesa, p. 110, the earth is called Surabhi, and the learned trauslator (Wilkins) notes the name to be not usnally so applied, although the earth may well be called the cow of plenty.

SURABHI MANU. TEL. A tree growing in the Nagari Hills; literally, full of milk.

SURACHARYA, SANSK., from Sura, the gods, and Acharya, a teacher.

SURAJ-nd-DOWLA succeeded Alivardi in 1756 as subahdar of Bengal. On the 18th June, instigated by the Dutch and French, he appeared before Calcutta with a large force, on which the women and children of the British residents were sent away in a ship to a place of safety. He had previonsly manifested aversion to the English, owing to the governor of Calcntta having refused to deliver up one of the principal officers of finance under the nawab's late uncle, the governor of Dacca, whom the nawab had resolved to pluuder. After a weak defence, the Calcutta garrison capitulated, aud 146 of them were placed at night in a gnard-room scarcely 18 feet square, and 123 of them died before morning. Of those still alive many were delirious. The guard-room became known as the Black Hole of Calcutta. On 2d Jannary 1757, Calcutta was retaken by a force which had been despatched from Madras under Clive and Admiral Watson, and on the 4th of February Suraj-ud-Dowla's army was surprised and defeated by Clive. Overtnres were then made by the nawab, and on the 9th February 1757 a treaty was concluded, by which he agreed not to molest the Company in the enjoyment of their privileges, to permit all goods belonging to the Company to pass freely by land or watcr without paying any duties or fees, to restore the factories and plundered property, to permit the Company to fortify Calcutta and to establish a mint. War having broken out betwecn France and Great Britain, Clive attacked the settlement of Chandernuggur, but Suraj-ud-Dowla furnished the French with arms and money, and was preparing to make common cause against the British. At this juncture a confederacy was formed among Suraj-ud-Dowla's chief officers to depose him. The British joined this confedcracy, and concluded a treaty with Mir Jafar Ali Khan, and at the battle of Plassey, which was fought on the 23d Jnne 1757, the power of Suraj-ud-Dowla was completely broken, and Jafar Ali was installed by Clive as subahdar of Bengal. Suraj-ud-Dowla fled from the battle-field of Plassey, on a camel, to the city of Murshidabad, which he left in disgnise, aud hired a boat to take him up the river to Patna. But at Rajmahal the boatmen refused to go on farther till next day, and he concealed himself in a garden, where he was recognised in the morning and delivered to his enemies, who put him to death.

SURA-LOCA, the abode of heroes, the Valhalla of the Rajput mythology, literally the sun-place.

SURASENI. With Mathnra as a centre and a radius of eighty miles, describe a circle. All within it is Vrij, which was the seat of whatever was refined in Hinduism, and whose langnage, the Vrij-basha, was the purest dialect of India. Vrij is a name tantamount to the land of the Suraseni, derived from Surscn, the ancestor of Krishna, whose capital Surpuri is about fifty miles sonth of Mathnra on the Yamuna (Jumna). The remains to this day are called Snrpuri. The province of the Suraseni or Saraseni is defined by Menn, and is particularly mentioned by the historians of Alexander.

SURASHTRA, a province in Western India, now Surath or Gujerat, the same as Balabhi.

SURAT, lat. 21° 9½′ N., long. 72° 54¼′ E., in Kandesh, a large town situated on the left bank of the river Tapti, near its mouth, a wide and pleasant stream, cooled by the fresh breezes of the Arabian Sea, 12 miles distant. It was here where the East India Company formed their first mercantile establishment. It has a pinjrapol, or hospital for animals. It was ceded on the 13th May 1800. Boats of 50 tons can come up to it. It is the chief town of a revenue district of the Bombay Presidency, to which it gives its name. The district is a broad alluvial plain, stretching between the Dang Hills and the coast of the Arabian Sea, where it begins to narrow into the Gulf of Cambay. Its population in 1881 was 107,154, mostly Hindus, with Muhammadans and Parsees and aboriginal races. The great famines of 1623, 1717, 1747, 1790, and 1803 affected this district and all Gujerat. In April 1837, 9373 houses of Surat city were burned, and later in the year it was flooded by the river rising. In 1843 and 1849, other destructive inundations took place. The Surat municipality undertook a series of protective works in 1869, and these have somewhat sufficed to secure the city against the loss of life and property; but in July 1883, 250 houses were destroyed.—*Imp. Gaz.*

SURAT-WALI. Hind. Literally good-looking, a term by which the harm women of Muhammadans are designated, to distinguish them from the Shadi wives.

SURBULI. Uriya. A fast dye of a golden tinge is extracted from this plant, which grows on sandy spots along the coast south of Puri.

SURDAS, a disciple of Ramanand, was a native of Ondh, and blind. He lived during the reign of Akbar, and was appointed Amin of Sandila by Todar Mull. When he adopted an ascetic life, he delivered all the taxes he had collected to the shrine of Madan Mohan, a form of Krishna at Bindraban, and sent to the treasury a chest filled with stones, accompaning them with the following rhyme:—

'Terah lakh Sandile upje, sab santan mile gatke,
Surdas Madan Mohan adhi rat hi satke.'

Which may thus be rendered:—

'The saints have shared Sandile's taxes,
Of which the total 13 lakhs is,
A fee for midnight service owing
By me, Surdas, to Madan Mohan.'

On this Todar Mull arrested him, but the emperor forgave him, and before he died he wrote 125,000 stanzas of religious hymns in the groves of Bindraban.—*Oudh*, p. 118.

SURF. Along the east coast of the Peninsula of India, the waves break as they near the shore, and necessitate the use of masulah boats and catamarans. The height of the surf and the distance from the shore at which the waves break, vary with the run of the sea, modified by the wind and current. In a squally day, such as would be dangerous to catamarans or boats, the outer surf breaks at a distance of 450 feet from the shore, and during a gale of wind at 828 feet; but in such a case the swell, the breakers, and the surf merge the one into the other, and render it difficult to decide at what point the surf first breaks.

SURI. Hind. The husks or skins of pulse, mash, etc., which come off when it is split into dal.

SURINJAN. Hind. A root in appearance like the pig-nut, imported via Pali, is bitter and sweet in taste, used as an aphrodisiac.—*Gen. Med. Top.* p. 150.

SURJEE, a Hindu reformer, since the middle of the 19th century, had been urging the population on the frontier of Mewar and Gujerat to reform. He preached the worship of one God, peace, and goodwill. His followers took an oath to abstain from all crimes and offences, from spirituous liquors, and from causing death to any living thing. They bind themselves to live on the produce of the soil, and to bathe before eating. In 1874 he had upwards of 1000 disciples, and three assistant guru or teachers.—*Moral and Mat. Progress*, 1874–75.

SURKHAB or Vakhsh or Kizzel Su, one of the principal streams which form the Ab-i-Panj or Upper Oxus. It rises on the Alai plateau. It enters the state of Karatagin, in which it receives many affluents, and falls into the Ab-i-Panj.

SURKHEL, the chief civil minister of the Pudukottah state.

SURMA. Hind. Antimony; black ore of animony, a ter-sulphide. Indian Muhammadans have a belief that the finest kind of surma comes from Arabia, from the hills of Sinai or Tur, etc. Their tradition is, that when Moses was in the mount, he asked that the glory of the Almighty might be shown him; he was answered that his mortal sight could not bear the glory, but through a chink of the rock a ray of the light was allowed to fall on him, and the rock on which the ray fell became melted into antimony. Galena, lead-ore, is sold as antimony. Muhammadan men apply antimony to their eyelids, but their women use kohl or lamp-black for this purpose. Surma-dan, a small toilet-box for holding antimony powder, used as a cosmetic. Surma-i-Isfahani is glistening iron-ore, used by men for staining the eyelids. Surma-Safed, Iceland spar, found in rocks in Kābul, is extracted and broken into crystalline fragments, more or less opaque. It is employed by the natives as an astringent in ophthalmia, gonorrhœa, and other fluxes, in doses of 70 grains internally, and also externally as a local application.

SURMA RIVER is the main branch of the Barak river in Sylhet district, Assam. On its banks are Sylhet town and Sonamganj, at which marts the limestones, oranges, potatoes of the Khassya Hills are collected for transmission to Bengal. The valley of the Surma is separated from that of Munipur by a range of moderate elevation, which is continued to the southward, and separates Tiperah, Chittagong, and Arakan from the kingdom of Ava. About 70 miles up the Surma, the mountains on the north, which are east of Jaintia, rise 4000 feet high, in forested ranges like those of Sikkim. Swamps extend from the river to their base, and penetrate their valleys, which are extremely malarious; these forests are frequented by timber-cutters, who fell the jarool, Lagerstrœmia reginæ.

SUR-NAI. Hind. A musical instrument like a bagpipe.

SURNAMUKY RIVER rises in the table-land, lat. 13° 26′ N., and long. 79° 11′ E., runs N.E. to Bay of Bengal; length, 99 miles.

SURNUREA, an abbreviation of Surjuparea,

or people living in Surnar, *i.e.* the other side of the Surju or Gogra.

SURPUR, an ancient city, once the capital of the Yadu race. Its site is on the Jumna.

SURU-l-BALDAN, or Pictures of Countries, an ancient Persian compilation from the works of Istakhri and Ibn Haukal.—*Elliot.*

SURVEYS have been in progress in the East Indies ever since the British were there. Marine surveys from the Red Sea to the Straits of Malacca and China, including the banks and islands to the south of India, were carried out by officers of the Bombay marine, later (in 1832? 1829) designated the Indian Navy. Captains Lancaster (1601), Middleton, Keelinge (1607), Sharpey, Saris to Japan, drew up in their voyages charts and sailing directions, which were condensed into rules for the East India Navigations by the famous Captain John Davis of Limehouse, who made five voyages. Richard Hakluyt, Archdeacon of Westminster, was appointed historiographer of the East Indies in 1601. In 1616 Edward Wright was appointed to perfect the E. I. Company's charts, and in the same year, on Hakluyt's death, he was succeeded by the Reverend Samuel Purchas, who in 1625 published Purchas, his Pilgrims, giving an account of the first twenty voyages. Purchas died 1626. The names of some of the later surveyors can alone be given here. Captains John Ritchie, 1770 to 1785; Lacam, 1770; Huddart, 1780–1790; John M'Cluer, and Lieutenants Wedybrough and Court, 1790–1793; Lieut. Blair, 1777 and 1795; Captain Michael Topping, 1788 to 1794; Lieut. Warren, 1805–6.

From 1799 to 1820, Sir Home Popham, Lord Valentia, Captain Keys, Captain Court, Mr. Salt, and others were examining the Red Sea; and subsequently, the coasts of Southern Asia have been surveyed by Captains Maxfield, Knox, Lloyd, James Horsburgh, and Crawford. In the Persian Gulf (1820–1830), Captains Guy and Brucks, Ross, Owen, Haines, Kempthorne, Cogan, Pinching, Ethersay, Whitelock, Lynch, and Houghton. In the Red Sea, Captains Moresby, Elwon, the brothers John and James Young, nephews of Horsburgh, Pinching, Powell, Barker, Christopher Wellsted, Felix Jones, Grieves, Carless. Subsequently Captain Moresby, with some of these officers, and with Lieutenants Robinson, Macdonald, Riddle, surveyed the Maldives, the Chagos Archipelago, and the Saya.

From 1806 to 1834 there was a Marine Surveyor-Generalship at Calcutta, filled by Court, Daniel Ross, and Lloyd; and from 1828 to 1838, during Sir Charles Malcolm's command of the Indian navy, there were several well-equipped surveys. But from 1861 to 1871 Indian coast surveys were stopped altogether, and in the interval many original drawings, which had cost millions, were lost.

In 1820, a survey of the Persian Gulf was commenced under Captain Guy of the *Discovery*, 268 tons, with Captain Brucks as his assistant, in the brig *Psyche*. He was succeeded by Captain Brucks, who had under him Lieutenants Haines, Kempthorne, Cogan, Pinching, Ethersay, Whitelock, and Lynch, all of them men of scientific and literary attainments, with Lieut. Houghton, an accomplished draughtsman. While surveying, they suppressed piracy and the slave trade. The survey was continued until 1830. Captain Brucks retired in 1842, and resided at and became Mayor of Exeter, where he died in 1850.

Surveys, in British India, are being conducted by the archæological, cadastral, field, geological, marine, revenue, trigonometrical, and topographical departments, and geographical research by the aid of learned Asiatics termed pandits. Colonels Lambton, Everest, Waugh, Walker, and Thuillier have been prominent as chiefs of the Trigonometrical Survey.

The greater portion of the North-West Provinces of India has been surveyed by Government officers. The area of each village (or rather parish, to use an English term) is given in imperial acres, but the areas of the fields appertaining to each village are given in local bighas. The introduction of the acre therefore was only partial. In the surveys lately made in the Bombay Presidency, the area of each field is recorded in acres, not only in the English, but in the vernacular accounts, and the term is well known and understood among the people. In the Madras Presidency, the districts of Bellary and Cuddapah were measured field by field (as far as the land was cultivable) in acres in 1803, and Kurnool in the same way in 1842. In Salem, the records of field measurements, made about 1800, are entered both in the native terms and their equivalents in acres, and the acre is by far the best known. Colonel Thuillier pressed forward the revenue and topographical surveys for twenty years. In a period of thirty years, with but very few parties at the commencement, and only increasing very gradually, 160,000 square miles of country, an area considerably larger than the whole of the British islands, was completed and mapped by one branch of the department alone, at a cost of not more than thirty-two shillings and eightpence per mile; whilst the revenue surveys likewise yielded excellent topograpical maps on a similar scale of 364,000 square miles of country, between the years 1846 and 1866, or during Colonel Thuillier's incumbency and superintendence of the operations, at a mean average cost of fifty shillings and eightpence per square mile. The combined results form the large area of 524,000 square miles, or upwards of four times that of Great Britain, executed at a total cost of Rs. 1,25,00,000, yielding a mean average rate of forty-seven shillings and threepence.—*Ann. Ind. Adm.* xii. p. 81; *Home News; E. I. Marine Surveys*, 1871.

SURWAMANYA and Jodimanya are revenue terms introduced into the Mahratta country from the Carnatic, the former meaning grants of land on which Government takes no quit-rent, the latter being grants on which quit-rent are taken.

SURYA, the sun. In Hindu mythology, the deity of the sun is sometimes alleged to be identical with Savitri and Aditya, sometimes is called son of Dyaus, sometimes son of Kasyapa and Aditi, and sometimes fabled to be the husband, sometimes the child, of Ushas, the dawn, and sometimes the father of the Aswini twins. Amongst Hindus the sun is adored under a variety of names, as Surya, Mitra, Bhascar, Viava, Vishnu, Carna or Kana, the last likewise an Egyptian epithet for the sun. In the centre of pictures Surya is represented standing on a lotus pedestal, and holding in each hand a richly-sculptured lotus sceptre. His mughut or cap, ear-rings, dress, and ornaments

are equally rich. Before him stands, also on a pedestal, a handsomely-formed woman, Prabha or brightness, his consort or sakti. At her feet, and in the front of the pedestal, is the legless Arun, holding 'the heaven-spun reins' in one hand, and a whip in the other, guiding the seven (saptaswa) coursers of the sun, which are represented on the socle. On each side of Surya are two attendants carrying chowries, another a sword, and the fourth a cup. At their feet are smaller figures with bows, from which they appear to have just discharged their arrows. In the background are the figures, animals, and foliage usually seen in Hindu sculptures. In other representations, Surya is pictured of a deep golden complexion, with his head encircled by golden rays of glory; sometimes with four, and in others with two arms, holding a lotus in one hand, and sometimes the chakra or wheel in another, standing or sitting on a lotus pedestal, or seated in his splendid car with one wheel, drawn by a seven-headed horse of an emerald colour, or the seven coursers green of the sun. Surya is the personification of that luminary, the orb of light and heat.

'Bright god, thou scann'st with searching ken
The doings of all busy men,
Thou strides't o'er the sky; thy rays
Create and measure out our days;
Thine eye all living things surveys.'

Sir William Jones in a hymn has endeavoured to convey the Hindu views of the sun's position amongst their other gods.

'Lord of the lotus, father! friend! and king!
Surya, thy powers I sing:—
Thy substance, Indra, with his heavenly bands,
Nor sings nor understands;
Nor e'en the Vedas thee to man explain,
Thy mystic orb triform, tho' Brahma tun'd the strain.
"First, o'er blue hills appear,
With many an agate hoof,
And pasterns fring'd, seven coursers green;
Nor boasts yon arched woof,
That girds the show'ry sphere,
Such heaven-spun threads of colour'd light serene
As tinge the reins which Arun guides—
Glowing with immortal grace,
Young Arun, loveliest of Vinatian race;
Though younger he, whom Madhava bestrides,
When high on eagle-plumes he rides.
But oh! what pencil of a living star
Could paint that gorgeous car,
In which, as in an ark supremely bright,
The lord of boundless light,
Ascending calm o'er the empyrean, sails,
And with ten thousand beams his awful beauty veils!"'

The mystic orb triform alludes to the omnipotent and incomprehensible power represented by the triple divinity of the Hindus. The flower of the lotus is said to expand its leaves on the rising of the sun, and to close them when it sets. The Aswini Kumara, the twins of the Hindu zodiac, are called the children of Surya, from Aswini, a form of Parvati in the shape of a mare, into whose nostrils Surya breathed, and thus impregnated her with sunbeams and gave birth to the Aswini.

Surya is, by some Hindu writers, called the regent of the south-west. He presides over Aditwar, or Sunday, from Adit, the first, and War, day. Surya has various names. In the Gaitri he is called Savitri, as the symbol of the splendour of the supreme ruler, or the creator of the universe. Prabha, or brightness, is the consort or sakti of Surya. She is also Chaya, or shade, which form she assumed in consequence of not being able to endure the intensity of the splendour of her lord. The Sauria sect of Hindus derive their name from the radiance of their deity, Sur, bright. Surya is, in his mortal form, the progenitor of the two great Khetri tribes, the Suryavansa and Chandravansa, the descendants of which are termed the children of the Sun and Moon. Surya is believed to have descended frequently from his car in a human shape, and have left a race on earth, who are equally renowned in the Indian stories with the Heliades of Greece.

The Aswini, apparently a personification of light and moisture, as sons of the sun, also as the sun's rays, are noticed as the physicians of the gods. They are described as young and handsome, and riding on horses. Vayu or the air, and the Maruts or winds, are personified and invoked. The Maruts are depicted as roaring amongst the forests, compared to youthful warriors bearing lances on their shoulders, delighting in the soma juice like Indra, and, like him, the bestowers of benefits on their worshippers. Ushas or the dawn, the early morning, the first pale flush of light, is compared to a mother awakening her children, to a lovely maiden awakening a sleeping world, to a young married maiden, 'like a youthful bride before her husband, thou uncoverest thy bosom with a smile.' As a goddess, she is styled the (Rig Veda, i. 123, v. 2) mighty, the giver of light; from on high she beholds all things; ever youthful, ever reviving, she comes forth to the invocation. Indra, according to Bunsen (iii. 587, 8, iv. 459), is the prototype of Zeus, and was a personification of Ether; soma was offered to him in sacrifice.

In the Rig Veda, l. 115, 1, is, Surya atma jagatas tashthusas' cha, The sun is the soul of all that moves and rests. Surya, called also Savitra, Mitra, Aryaman, and other names, was a Vedic god, but continues to be worshipped down to the present day, by Hindus and Zoroastrians. The Solar race of Kshatriyas, who appear in the Ramayana, derive their origin from the sun; but, in the higher spirit, the sun is regarded as divine, as pervading all things, as the soul of the world and supporter of the universe. In a verse of the Rig Veda (iii. 62, v. 10) this idea is supposed to be indicated. It is O'm! Bhurbhuva suvaha, O'm! Tatsa vit'hru varennyam. B'hargo devassya dhimahi dhiyo yona ha pracho dayath. O'm! earth, air, heaven. O'm! let us meditate on the supreme splendour of the divine sun. May he illuminate our minds. And, at the present day, even the most enlightened Brahmans regard this verse as an invocation to the several deities who are implored by the worshipper to aid his intellect in the apprehension and adoration of God. In connection with the sun as a Hindu deity, are the twelve Aditya, sons of Aditi, the universe. In the later Vedic age, these were identified with twelve signs of the zodiac, or the sun in its twelve successive signs.

Early objects of adoration in Rajputana were the sun and moon, whose names designate the two grand races, Surya and Chandra or Indu. Budha son of Indu married Ella, a grandchild of Surya, from which union sprang the Indu race. They deified their ancestor Budha, who continued to be the chief object of adoration until Krishna; hence the worship of Bal-nath and Budha were coeval. That the nomade tribes of Arabia, as well as those of Tartary and India, adored the

same objects, we learn from the earliest writers; and Job, the probable contemporary of Hasti, the founder of the first capital of the Yadu on the Ganges, boasts in the midst of his griefs that he had always remained uncorrupted by the Sabeism which surrounded him: 'If I beheld the sun when it shined, or the moon walking in brightness, and my mouth has kissed my hand, this also were an iniquity to be punished by the judge, for I should have denied the God that is above.' That there were many Hindus who, professing a pure monotheism like Job, never kissed the hand either to Surya or his herald Budha, we may easily credit from the sublimity of the notions of the 'One God,' expressed both by the ancients and moderns, by poets and by princes, of both races, but more especially by the sons of Budha, who for ages bowed not before graven images, and deemed it impious to raise a temple to

'The Spirit in whose honour shrines are weak.'

Hence the Jain, the chief sect of the Buddhists, so called from adoring the spirit (Jin), were untinctured with idolatry until the apotheosis of Krishna, whose mysteries superseded the simpler worship of Budha. Nemnath (the deified Nemi) was the pontiff of Budha, and not only the contemporary of Krishna, but a Yadu, and his near relation; and both had epithets denoting their complexion; for Arishta, the surname of Nemi, has the same import as Sham or Krishna, 'the black,' though the latter is of a less Ethiopic hue than Nemi. It was anterior to this schism amongst the sons of Budha that the creative power was degraded under sensual forms, when the pillar rose to Baal or Surya in Syria and on the Ganges; and the serpent, 'subtlest beast of all the field,' worshipped as the emblem of wisdom (Budha), was conjoined with the symbol of the creative power, as at the shrine of Eklinga, where the brazen serpent is wreathed round the lingam. Budha's descendants, the Indu race, preserved the ophite sign of their lineage when Krishna's followers adopted the eagle as his symbol. These, with the adorers of Surya, form the three idolatrous classes of India. Surya, or the sun, is exclusively worshipped by the Saura sect, who acknowledge no other deity; but this sect is not numerous.

Sun-worship still prevails everywhere throughout Orissa. The sun-temple at Kanarak, nineteen miles N.W. of Jaganath or Juggurnath, looks down upon the sea. Sculptures in high relief, but of an indecent character, cover the exterior walls, and bear witness to an age when Hindu artists worked from nature. The nymphs are beautifully-shaped women in voluptuous attitudes. Each architrave has as usual the Nava-Graha, or nine Brahmanical planets, very finely sculptured in alto-relievo. Five of them are well-proportioned men with mild and pleasing countenances, crowned with high-pointed caps, and seated cross-legged on the lotus, engaged in religious meditation. The form of the planet which presides over Thursday (Vrihaspati or Jupiter) is distinguished from the others by a flowing majestic beard. Friday or Venus is a youthful woman, with a plump, well-rounded figure. Ketu, the descending node, is a Triton, whose body ends in the tail of a fish or dragon; and Rahu, or the ascending node, a monster, all head and shoulders, with a grinning, grotesque countenance, frizzly hair, dressed like a full-blown wig, and one immense canine tooth projecting from the upper jaw. In one hand he holds a hatchet, and in the other a fragment of the moon. At Jeypore, also in Orissa, is a figure on the wall of a temple of the sun-god, with his seven-horse chariot, and a colony of sun-worshippers continues to keep alive the sacred fire in a neighbouring grove. Throughout India, the stricter Vaishnava sectarians refrain from animal food on the first day of the week, which bears the name of Sunday, Rabi-var or Ravi-var. South of Orissa, sun-worshippers are a class of Brahmans. The highlanders on the N.W. of Orissa will not break their fast till they catch a clear view of the sun, and sun-worship still continues amongst wild races of the central plateau of India. The earnestness with which Surya is worshipped is well shown in the Suriyanamaskara Patikam, a Tamil song, which, after an invocation of Ganesa, begins with, 'O thou god, Suriya Narayana, thou art Siva, thou appearest in the vast expanse of the sky with brilliant light; thou art the light of true wisdom; thou art the only deity that filleth the whole universe; thou art the true teacher, that teacheth the five-lettered mantra (namasivaya), the mysterious doctrines; thou assumest bodily shape, thou art the soul of the whole universe, thou hast from the beginning appeared in the shape of this world and the thousand and eight worlds beyond the mundane sphere; and thou ridest every day in a most brilliant single-wheeled chariot.' — *Tod's Rajasthan; Tennent's Christianity in Ceylon*, p. 206; *Cole. Myth. Hind.; Moor*, p. 253; *Hindu Infanticide*, p. 175; *Cal. Rev.*, 1868; *Malcolm's Central India*, ii. p. 193. See Sun-Worship.

SURYA SAVARNI, one of the 14 patriarchs who preside successively over the 14 Manwantaras of the calpa.

SURYA SIDHANTA, a learned work on Hindu astronomy of the 5th or 6th century B.C. Mr. Colebrooke thinks it contemporary with Brahma Gupta, whom he afterwards fixes at the end of the 6th century. It contains a system of trigonometry, which not only goes far beyond anything known to the Greeks, but involves theorems which were not discovered in Europe till the 16th century. It is held in veneration by all Hindu astronomers, although they acknowledge that its elements, without the assistance and use of the tikas, or commentaries, no longer furnish means for representing the true positions of the planets. Hindus allege that this book was revealed 1000 years before the beginning of the Treta-yuga (A. 3,027,101, Ante-Christum). European commentators differ vastly in opinion touching its true epoch. Mr. Bentley, however, seems to have proved, after a very profound research, that let the antiquity of the Surya sidhanta be what it may, it only came into general use in A.D. 538.—*Kala Sankalita.*

SURYA-VANSA, or Solar race, or race of the sun, was a race of Kshatriyas, descended in three lines from Ikshwaku. The Surya-vansa, as collated from the lists of Sir William Jones, Professor Wilson, Colonel Tod, and Hamilton, commenced with Marichi.

Kasyapa, a Muni, married Aditi, who was Daksha's daughter.

Vaivaswata or Surya, the sun.

Sradha Deva or Vaivaswata (the sun), king of Ayodhya.

Ikshwaku in the Treta-yuga, B.C. 3500 Jones, 2200 Tod.

Prinsep says from Ikshwaku sprang the two Solar dynasties of Ayodhya (Ondh) and Maithala (Tirhut). In the Oudh dynasty we find Harischandra, king of India, Bhagirathi, who bronght down the Ganges. In that of Tirhut, Swadhaja, the father of Sita, who married Rama, the last of the line of Oudh in the Dwapar-yuga or brazen age.

The third Solar line of Vesala was also descended from Sradha Deva, Vaivaswata (the suu), king of Ayodhya, and father of Ikshwaku; in this line occurred Trinavindhu, father of Brabira, who married Visvarawa Muni, and Besabiraja or Visala, who founded Vaisali (Allahabad).

Mr. Dowson says the elder branch of the Solar race, which reigned at Ayodhya, was descended from Ikshwaku throngh his eldest son Viknkshi; the younger dynasty, which reigned at Mithila, was descended from Nimi, another son of Ikshwaku. Amongst others of the Ayodhya line were Satyavrata, Dasaratha, Rama, Nala; and of the Mithila line were Krita, Vijaya.

Rama, king of Oudh, was the 34th in descent from Ikshwaku, son of Vaivaswata Muni, the son of the sun. Ikshwaku was therefore grandson of the sun. The existing Rajput tribes of the Solar race claim descent from Lava and Kush, the two elder sons of Rama. They are the present princes of Mewar, Jeypore, Marwar, Bikanir, and their unmerous clans.—*Prinsep; Dowson.*

SURYA-VANSA. Singh. The principal castes in Ceylon are four, viz. the Surya-Vansa, or royal race. This has two divisions, viz. Goe Vansa, cnltivators, the most numerous in the island, and to it belong the nobles, chiefs, priests, and nearly all the Government servants. Nille Makareya, or shepherds, is the second division of the Surya.

SURYA-VELOKANAM, a household ceremony of the Brahmanical Hindus, in which an infant, when four months old, is taken out of doors and shown the sun.

SUS, the hog or swine genus of mammals of the family Suidæ.

Khanzir, . Arab., Pers.	Dukar, ... Mahr.
Baraha, . Beng., Sansk.	Babi utan, . . Malay.
Indian wild boar, . Eng.	Babi alas, Babi, . ,,
Hog, ... ,,	Ghrishvi, . . . Sansk.

Hazir, ... Heb.	Walura, ... Singh.
Jangli Sur, Sur, . Hind.	Koka, Koku, . . . Tel.
Sus scrofa, Porcus, Lat.	

The wild hog occurs in many parts of Europe and in India. The males attain to a large size. It is generally believed that there is no specific difference between the wild hog of Europe and India. The adnlt males dwell apart from the herd. All the wild hogs in the Archipelago are small animals, compared with the wild boar of Europe, or even with that of continental India.

Sus verrucosus, so called from the fleshy excrescence on the sides of the cheeks, has a grotesque and a formidable appearance, but is in reality a timid animal. The number of them in Java is immense.

Sus barbatus. Mr. Blyth has distinguished from the hog common in India, by a specimen sent to him from Ceylon, the skull of which approaches in form to that of a species from Borneo, the Sus barbatns of Muller.

Babirussa of F. Cuvier takes its name from two Malay words, Babi, hog, and Rnsa, a deer. It is the Sus babirussa of Linnæus, and the B. alfurus of Lesson, and occurs in the islands of Buru or Bourou, one of the Moluccas, and in Celebes and Ternate.

Porcula sylvania, *Hodgson*, the pigmy hog of the sal forests of N. India, is the Sano banel and Chota snr of the natives of India. It confines itself to the deep recesses of primeval forest. The adult males abide constantly with the herd, and are its habitual and resolnte defenders.

Of the hog in Asia, there are Sus scrofa, *Linn.*, *var.* S. Indicus, Bengalensis, Audamensis, Malayensis, Zeylanensis, Babirussa, and Papucusis. Sus leucomystax, of Japan and Formosa.

Sus scrofa, *Linn.*

Sus Indicus, *Jerd.*	S. vittatus, *Schlegel.*
S. cristatus, *Wagner.*	
Handi, Mikka, . . Can.	Boorra Janwar, Sur, Dukh.
Jevadi, ... ,,	Dukur, ... Mahr.

The Indian wild hog differs considerably from the German, though not sufficiently so to constitute a species. The head of the former is longer and more pointed, and the plane of the forehead straight, while it is concave in the Enropean. The ears of the former are small and pointed, in the latter larger and not so erect. The Indian is altogether a more active-looking animal; the German has a stronger, heavier appearance. The same differences are perceptible in the domesticated individuals of the two countries. When the wild boar of India, the Sns Indicus, has the run of cultivated lands, it eats daintily. Bnt when stinted for food, it will revel on a dead camel; and in Cutch, when pressed by want, it prowls aronnd the villages in search of refnse.

The wild boar of India is shot and hunted with dogs by natives, but the British sportsmen in India hunt it with the horse and spear; and undoubtedly, of all the wild creatures in India, the jungle boar exacts from its pursuers the greatest care. Sus Indica, the common wild boar, is supposed to be the parent of one of the two groups into which pigs are arranged. The Sus scrofa group or breed is known as the Chinese breed, and extends into Europe, N. Africa, and Hindustan; but in the latter country the boar of the N.W. Provinces is not higher than 36 inches, thongh that of Bengal attains 44 inches.

The Roman or Neapolitan pig, the domesticated breeds of China, Cochin-China, Siam, the Andalusian, Hungarian, the swine of S.E. Europe and Turkey, and the Swiss, are all of the Sus Indica group, which, it is said by a Chinese author, can be traced back for 4900 years. The Japan masked pig is the Sus pliciceps of Gray, and has a deeply-plicated or furrowed skin. According to Dr. Kelaart, there are two species or varieties in Ceylon,—the Newera Elia boar, and the low country S. Zeylonensis.—*Sykes' Cat. Deck. Mam.* p. 11; *Crawfurd, Dict.; Tennent's Ceylon*, p. 59; *Horsfield's Cat.; Forest Ranger; Darwin; Macgillivray's Voyage.*

SUSA, the modern Shush, is some farsangs S.S.W. from the town of Dizful, on the banks of the river Dizfnl. It contains the tomb of the prophet Daniel, and beneath the apartment containing the tomb is a vanlt into which (Daniel vi. 16) Daniel was cast by order of Darins. Its western wall is close to the left bank of the river Shapur or Shoner, probably the Eulæns of profane writers and the Ulai (Daniel viii. 2) of Scripture.

SUSHENA, a physician in the army of Rama.

SUSI. HIND. A striped cotton fabric much used for making paijamas or loose trousers.

Sudi susi, do-kanni susi char, panj, and sat-kanni, varieties of susi, according to the number of stripes.

Sufiyana, a kind of susi.

Chaukannia, a cotton striped fabric, a broad susi. The term kannia seems intended for khane, literally houses, or checkered.

SUSIANA. Khuzistan represents the Susiana of Strabo, as well as the Cissia of Herodotus. Towards the eastern frontiers are the ruins of Rhajoun and Kurdistan in the centre, those of Agines (probably represented by Ahwaz) towards the west. That the geography of the province was well known before the time of Herodotus, may be inferred from a passage in his works, where it is said that Cissia is watered by the river Choaspes, on which is the city of Susa, and the palace of the great king. It is added that its waters alone were thought worthy of being drunk by the monarch. The route from Bussora to the ruins of Ahwaz, in Khuzistan, the ancient Susiana, is easy. —*Mignan's Travels.*

SUSMANI, the gypsies of Persia; Susmaniha in the plural. Many gypsies were established near the castle of Wittgenstein in Sassmanhausen. Possibly it derived from them its name, meaning the abode of the Sussmani?

SUSPENSION BRIDGES in Tibet are of two kinds. Vigne saw one at Dodah, composed of a strong cable stretched across the river, and firmly fixed to the rocks at either end. On this slid a wooden seat-like framework, to which were attached the ropes that pull it backwards and forwards. The other kind consists of a very thick cable of twisted birch? twigs, as a rough foot-rope, and, four feet above it, on either side, are two smaller hand-ropes by which the passenger steadies himself as he walks over.—*Vigne*, p. 199. See Jhula.

SUSRUTA, an eminent physician, supposed by some to have been Hippocrates. According to Hindus, he was son of Visvamitra, a contemporary of Rama, and was a member of a commission of eight persons sent to study medicine under Dhanwantari, raja of Benares, who recommended Susruta to abridge the Ayur Veda, and arrange it in sections. This was done by Susruta, and, next to the book written by Charaka, it is the oldest medical work in the possession of the Hindus. It is in the form of dialogues, and its sections are —Sutra-st'hana, Surgery; Nidana-st'hana, Nosology; Sarira-st'hana, Anatomy; Chikitsa-st'hana, Therapia; Kalpa-st'hana, Toxocology; Uttara-st'hana, Local ailments. His book was translated into Arabic before the end of the 8th century A.D. It has been translated into Latin by Hopler, into German by Vullers, and into English.

SUSTI, a primitive household deity, a goddess of the Hindu households, largely worshipped by the households of Hindustan.

SUSU NAGA, according to the Mahawanso, a son of a chief of Assam. During the reign of his son and successor Kala Sangkha, about a century after Sakya Muni's death, the second convocation of Buddhist priests was held.

SUTAR or carpenter, one of the five Hindu artisans. The others are—Sonar or goldsmith, Lohar or blacksmith, Sungtrash or stone-mason, and the coppersmith. See Viswakarma.

SUTHEEA, in Bengal, an oculist. They are of the Hindu Kayasth race.

SUTHRA, ascetic disciples of the guru Nanak. They beg from house to house, singing the exploits of some famous Hindu chief, and striking together a couple of cylinders they carry in their hands. Their heads are covered with a turband made of black ribands. They reside with their disciples in the monastery of Nagar Sen, a famous Suthra, in the Aurangabad district of Benares. Their bodies at death are either buried or burned.—*Sherring's Hindu Tribes.*

SUTI. HIND. Ek, do, tin, and char suti, cotton fabrics.

SUTLEJ, the most easterly of the five rivers of the Panjab. It rises among the Himalayas in Chinese territory, about lat. 30° 8′ N., and long. 81° 53′ E., on the slopes of the Kailas mountain, which has peaks estimated at 22,000 feet high, and near the source also of the Brahmaputra. It is said to issue from the lake Manasarowar (Manasa-Sarovara), or from another and larger lake called Ravana-hrada or Rakas-tal, which lies close to Manasarowar on the west.

Starting at an elevation of 15,200 feet high, the Sutlej first passes across the alluvial plain of Goge, and it has scoured a passage across the plain in a channel said to be 4000 feet deep, between precipitous banks of alluvial soil. Near Shipki, the Chinese frontier outpost, the Sutlej turns sharp to the south through the Himalayas. It pierces the southern chain of these great mountains through a gorge with heights of 20,000 feet on either side. At Shipki, its elevation is said to be 10,000 feet above the level of the sea. At Rampur it has fallen to about 3000 feet, and at Bilaspur, to a little over 1000 feet. After entering British territory, for the first 200 miles it runs through a wild and almost unpeopled mountain country; receives the Li or river of Spiti near Dablang. Thenceforth the united stream runs in a south-westerly direction through Bashahir and the Simla Hill States, and, on entering the British district of Hoshiarpur, takes a sudden southward bend round the spurs of the Siwalik Hills. Debouching upon the plains near Kupar, it divides Umballa (Ambala) district from Hoshiarpur or the Jullundhur (Jalandhar) Doab from the Sirhind plateau. It next flows almost due west between Jullundhur on the north, and Umballa (Ambala), Ludhiana, and Ferozpur on the south, till it receives the Beas (Bias) at the south-western corner of Kapurthala State (lat. 31° 11′ N., and long. 75° 4′ E.). The united river thenceforward preserves an almost uniform south-westerly direction till its junction with the Indus.

It is considered to be the Hesudrus or Zaradrus of the Greeks and Romans, and the Hyphasis mentioned by Strabo. To its Sanskrit names, Sitloda, Satadru, or Sutrudra, can be retraced Hesudrus of Pliny, the Saranges of Arrian, and the Shetooder and Seteluj of the Ayin Akbari.

From its junction with the Beas to the confluence of the Chenab, it is called Gharra. It is navigable as far as Filur in all seasons for boats of 10 or 12 tons burden. Bilaspur, a town on the banks of the Sutlej, was swept away by a flood. The Upper Sutlej people are amiable and gentle, free of low cunning, having the appearance of a

mixed race between the Tartar and the common hill men. They are fair, well made, and strong, but are filthy and indigent. The women have a toga fastened round the waist. The Bhatti of Bhattiana, west of the Sutlej, is a tribe of handsome people, whose origin is obscure. The Bagri tribe, inhabiting the district of Bagar, between the S.W. borders of Hariana and the Sutlej, are said to have been Rajputs, but also supposed to be Jat. There is a predatory race of this nation settled in Malwa. The Sutlej at the commencement of the rains is an impetuous torrent, foaming along its narrow stony bed, confined within rocky banks, generally bare and precipitous. It preserves the same character from Kotgarh upwards; the valley in Bashahir being very narrow, the river is often not visible from the road, but the noise is always heard as it rushes over the massive boulders. Occasional recesses occur at the bends of the river, where much timber is stranded, and in the course of 120 miles there are several broad tranquil reaches, where banks of white sand and mud may be seen. The average fall has been computed by various observers (Gerard, Thomson, and Madden) at 50 feet per mile from Wangtu to Bilaspur, and 60 feet per mile from Kanam to Wangtu. In the plains, the Sutlej runs through a line of country 6 miles broad, and from 20 to 100 feet lower than the general surrounding level. This tract is called Khadir, as the high adjoining lands are called Bangur. The length of the Sutlej bridge is about a mile and a quarter, being of 58 spans, each of 110 feet.

SŪTRA. Sansk. An aphorism, a precept, a brief rule; literally it means a thread, a line, a band; it is the Latin suere, the German band, a volume; and the works so named contain in the most concise style, doctrines in grammar, metre, law, or philosophy, and form the groundwork of the whole ritual, grammatical, metrical, and philosophical literature of the Hindus.

This body of literature of India forms a connecting link between the Vedic and the later Sanskrit. The Sutra contain a concise elliptical and technical expression of all the knowledge of theology, philosophy, and language which had been attained by the Brahmans up to the Buddhist period. It ranged from B.C. 600 to 200.

The *Kalpa Sutra* relate to ritual, and were not composed earlier than the 12th or 13th century. Having special reference to the Vedas, they are called Srauta; the others, derived from the Smriti (memory), are called Smarta.

The *Grihya Sutra* relate to the ceremonies to be performed by the married householder for his family.

The *Samaya charika Sutra*, or Dharma Sutra, regulate the affairs of everyday life, and are distinguished by Max Muller from the Grihya Sutra, which concern general duty and behaviour, the right conduct of life.

It is chiefly to the Sutra that we have to look for the originals of the later metrical books, such as Manu, Yajna-valkya, and the rest. Aphorisms or Sutras were adopted in the fourth period of the Hindu progress, about B.C. 1000, and in the Sutras the ceremonial prescriptions were reduced to a more compact form and to a more precise and scientific system.

In the Sanskrit language, so complete are they, and so concisely expressed, that the subjects they treat of must have been thoroughly examined and discussed previous to their time, and all their branches and divisions properly developed. These Sutras have been the great standards of instruction in later times, and have formed the bases both of commentaries in which their tenets are expounded, and of other treatises in which Hindu scholars have arranged their doctrines, according to their own judgment, with new illustrations, and perhaps greater breadth of plan. Their brief aphorisms and concise style were intended to assist the memory, although they necessarily leave the meaning obscure.

The Kalpa Sutra digests the teaching of the Veda and of the ancient rishis (sages) regarding the performance of sacrifices and the duties of twice-born men, Brahmans, Kshatriyas, and Vaisyas. The entire Kalpa Sutra of Apastamba is divided into thirty books or sections called Prasnas. The Dharma Sutras, or aphorisms on law, are contained in the twenty-eighth and twenty-ninth books. The Sutras of Apastamba are based upon the Yajur, or second Veda, and not later than the 3d century B.C. The Sutras show the development of Hindu law direct from the Vedic writings, and they form the basis of the laws of Menu, Yajna-valkya, and the many other great writers on law whose codes are held in very high veneration, inferior only to the Veda itself. While the Veda is classed as Sruti, or direct revelation, the Sastras, or law books, are known as the Smriti, or 'Reminiscences' of the ancient sages.

The Sutras or aphorisms of Gautama, based upon the Sama or third Veda, are apparently confined to Dharma Sutras or legal aphorisms in twenty-eight chapters. Apastamba and Gautama are both very great authorities even with modern writers on law, and their texts are frequently quoted and commented on. Rules which were transmitted from generation to generation by oral teaching naturally assumed the briefest possible form. The Sutra literature is very large, and although not included in the Vedic canon, and coming somewhat later in date, it is closely connected with it both by similarity of language and subject-matter. But as it is no part of the Sruti or Revelation, it is sacred only in an inferior degree.

A noticeable point in the Sutras of Apastamba is the full recognition of the Sudra caste, of which no mention is found in the older portions of the Vedas. This caste is found in a hymn universally considered to be one of the latest. The authority for the law and the position of the four castes is explained as follows, in the very first verses of Apastamba:—1. We will declare the acts productive of merit which form part of the customs of daily life, as they have been settled by the agreement (of those who know the law.) 2. The authority for these duties is the agreement of those who know the law, (and the authorities for the latter are) the Vedas alone. 3. (There are) four castes, Brahmans, Kshatriyas, Vaisyas, and Sudras. (4.) Amongst these, each preceding (caste) is superior by birth to the one following. 5. (For all these,) excepting Sudras and those who have committed bad actions, (are ordained) the initiation, the study of the Veda, and the kindling of the sacred fire, and their works are productive of rewards (in this world and the next.) 6. To serve the other (three) castes (is

ordained) for the Sudra. 7. The higher the castes (which he serves) the greater the merit.

The aphorisms of the Nyaya philosophy, of the Mimansa and Yoga, were reprinted in Sanskrit and English by Professor James Ballantyne of the Benares College. — *Mullen's Hindu Philosophy; Hunter's Imp. Gaz.; Dowson; Oriental Linguistic Studies*, p. 71; *Weber*.

SUTTEE, properly Sati, SANSK., a virtuous wife (from Sat, pure), a widow allowing herself to be burned with the corpse of her husband. This practice was abolished in British India on the 4th December 1829; but scarcely a year passes by free from its being carried out in some of the native principalities. About January 1883, for instance, a sati was committed at Utarna, in Jeypore territory, not far from the cantonment of Deoli, by the widow of Sham Singh, the thakur of the village. The principal offenders—the sons and brothers of the deceased thakur—were sentenced each to rigorous imprisonment for terms of seven years, while minor accomplices received sentences of three years each. It never was general throughout India, but it was very frequently practised in the Mahratta States, in Gujerat, in Rajputana, in some of the Panjab districts; and between 1813 and 1828, in Calcutta, the satis ranged from 300 to 600 yearly, and some cases were shockingly cruel.

Ram-Nathu, the second Sanskrit pandit in the college of Fort William, saw thirteen women burn themselves with one Mooktua Rama of Oola, near Shanti-puru. After the pile, which was very large, had been set on fire, a quantity of pitch being previously thrown into it to make it burn the fiercer, another of this man's wives came, and insisted on burning; while she was repeating the formulas, however, her resolution failed, and she wished to escape; but her son perceiving this, pushed her into the fire, which had been kindled on the sloping bank of the river, and the poor woman, to save herself, caught hold of another woman, a wife also of the deceased, and pulled her into the pile, where they both perished.

Scythia.—The rite was practised in early times amongst Thracians, Getæ, and Scythians. Diodorus wrote B.C. 44, and he describes it to have occurred in the army of Eumenes, upwards of 300 years before the Christian era (Diodorus Siculus, lib. xix. chap. ii.). The custom is also mentioned, but much less distinctly, by Strabo, on the authority of Aristobulus and Onesicritus. Aristobulus mentions the practice of self-immolation among the widows of Taxila; it is noticed by Cicero in his Tusculan Disputation (sec. 27), and in A.D. 66, Plutarch in his Morals says, 'And among the Indians, such chaste wives as are true lovers of their husbands, strive and contend with one another for the fire, and all the rest sing forth for the happiness of her who having the victory is burned with her deceased husband.' Ramusio quotes Propertius on Sati. A few lines will show how familiar this still enduring Indian practice was to the Romans 1900 years ago,—

> 'Uxorum fusis stat pia turba comis;
> Et certamen habit lædi, quæ viva sequatur
> Conjugium; pudor est non licuisse mori.
> Ardent victrices, et flammæ pectora præbent,
> Imponuntque suis ora perusta viris.'—P. 80.

North-men.—The Danish north-men of Europe retained the recollection of the sati in the story of Balder, one of the sons of Odin, who was slain by a branch of mistletoe, and Odin himself descended and obtained a promise from the guardians of the dead, that Balder should be restored if all created nature would weep for him. All wept but one old crone whom Loki had possessed, so Balder could not be made to live again, and his faithful Nanna, refusing to survive her beautiful lord, perished on his funeral pile.

The Scythian idea of sati was connected with a future state. When the Scythians buried a king, they strangled one of his concubines, and buried her with him, together with his cup-bearer, cook, groom, waiting-man, messenger, favourite horses (Herod. iv. 71), to serve their master in the next world. Amongst the Thracians with whom polygamy prevailed, the wife decided to be the best beloved was slain by her next-of-kin over the grave of her husband (Herod. v. 5), and buried with him.

Ancient India.—On the occasion of burning the body of Kichaka, whom Bhima had slain to avenge an insult to Draupadi, the deceased's relations wished to burn her with the body, but she was saved by Bhima. The first recorded sati in the Mahabharata, was performed by Madri, the second wife of Pandu; Kunti, the elder wife, contested the point, but the Brahmans who were present gave it in favour of Madri, who accordingly perished on her husband's funeral pile. Just before the town of Dwarka was overpowered by a storm-wave, king Vasudeva died, and four of his wives burned themselves on his funeral pile. Krishna was accidentally slain by a Bhil hunter in the forest. Ayuua then conducted the flying multitude to Kurukshetra, where four of Krishna's widows burned themselves, and the rest of the widows assumed the devotee dress, and retired to the jungle. Sati was quite common, in parts at least of India, at the time of Alexander's invasion. In the Mahabharata we find that one of the wives of Pandu burned herself with his dead body. But after the great war in Kuru-kshetra, none of the numerous royal ladies burned herself. The account of the funeral rite of Dronacharya leaves some doubt as to whether his wife was burned or not. The passage is as follows:—'Behold the scholars of Dronacharya, after chanting the Sama Veda, performing his funeral rites, making his wife foremost and placing her on the right side of the pyre, are bending their steps towards the Dhagirathi.' The practice of the cremation of the widow, though not in existence when Rama lived, nor in much use when Yudishthra reigned, did not die away.

Modern India. — Self-immolation of Hindu widows with the bodies of their deceased husbands, was generally done at the sangam or confluence of rivers. The Sankalpa, or declaration of the sati, is as follows:—Having first bathed, the widow, dressed in new and clean garments, and holding some kusa grass, sips water from the palm of her hand; holding in her hands kusa and tila, she looks towards the east or north, whilst the Brahman utters the mystic word O'm. Bowing to Narayan, she next declares, 'On this month (naming the time) I (naming herself and family), that I may meet Arundhati, the wife of the Rishi Vaisistha, and reside in Swarga; that the years of my stay may be numerous as the hairs on the human body; that I may enjoy with my husband

the felicity of heaven, and sanctify my maternal and paternal progenitors, and the ancestors of my husband's family; that, lauded by the Apsarasas, I may be happy through the regions of fourteen Indra; that expiation may be made for my husband's offences, whether he have killed a Brahman, broken the ties of gratitude, or murdered his friend,—I ascend my husband's funeral pile. I call on you, ye guardians of the eight regions of the world, sun and moon, air, fire, ether, earth, and water, my own soul! Yama, day, night, and twilight, I call you to witness, I follow my husband's corpse to the funeral pile.'

After much discussion, during which Raja Ram Mohun Rai made great efforts in the cause of prevention, sati was at last legally abolished in British India by Lord William Bentinck; and though it is still occasionally performed, all who engage in it are severely punished. It is rare in Kashmir, but still current in Bali.

The chief characteristic of sutteeism is its expiating quality; for by this act of faith, the sati not only makes atonement for the sins of her husband, and secures the remission of her own, but has the joyful assurance of reunion to the object whose beatitude she procures. Menu inculcates no such doctrine: 'Let her emaciate her body, by living voluntarily on pure flowers, roots, and fruit; but let her not, when her lord is deceased, even pronounce the name of another man.' Again, he says (Menu, v. p. 160): 'A virtuous wife ascends to heaven, though she have no child, if after the decease of her lord she devotes herself to pious austerity; but a widow who, from a wish to bear children, slights her deceased husband by marrying again, brings disgrace on herself here below, and shall be excluded from the seat of her lord.'

When the subject of prohibiting satis in British India was under discussion, Brahmans, in support of the rite, gave a quotation of a verse from a chapter of the Rig Veda. This Colebrooke translated as follows: 'Om! let these women, not to be widowed, good wives, adorned with collyrium, holding clarified butter, consign themselves to the fire! Immortal, not childless, not husbandless, well adorned with gems, let them pass into the fire whose original element is water.' Professor Wilson afterwards pointed out, however, that they had falsified the text by altering the words Yonim agre into Yonim agneh. Also the words of the verse in question are addressed not to the widow, but to the other women who, besides the widow, are present at the funeral; and its correct translation is: 'May those women who are not widows, but have good husbands, draw near with oil and butter. Those who are mothers may go up first to the altar, without tears, without sorrow, but decked with fine jewels.' A second marriage in a Hindu woman of several of the races in India who are following Brahmanism, is considered an unlawful act.

Dr. Wilson says, 'We have additional and incontestible proof that the Rig Veda does not authorize the practice of the burning of the widows.' The widow of the deceased had, however, to attend with married women the funeral of her husband. She was placed with his dead body on the funeral pile, and, after the performance of certain ceremonies, she was brought down, and was thus addressed by the priest:—

'Rise up, O woman, to the world of life,
Thou sleepest beside a corpse, come down;
Thou hast been long enough a faithful spouse
To him who made thee mother to his sons.'

The married females attending had then to anoint their eyes with collyrium, when they were thus addressed:—

'The women now draw nigh with oil and butter,
Not widows they, proud of noble husbands;
First to the altar let the mother come
In fair attire, and with no grief or tears.'

There is a passage in the Taitrya Aranakna of the Yajur Veda containing the following address to the widow by the younger brother, disciple, or servant of the deceased:—'Rise up, woman, thou liest by the side of the lifeless; come to the world of the living, away from thy husband, and become the wife of him who holds thy hand, and is willing to marry thee.' This is a clear proof of the widows marrying during the Vedic period. And that the widow was brought down and not allowed to be burned, is also confirmed by her collecting the bones of her late husband after a certain time. But other writers held differently. Angira, one of the sage legislators who was a contemporary of Menu, says, 'The woman who burns herself after the death of her husband gains, like Arundhati, heavenly glory. She purifies the sins of the murderers of the Brahmans, the ungrateful, and the slayers of friends. For Sadhi women there is nothing so meritorious as cremation after the death of their husbands.' The next mention is in the Katyana Sutra, and the age of Katyana is about the 5th century B.C.

Rajputana women of rank seem to have been the most willing to accompany their husbands' remains to the funeral pile. Amongst all others of the Hindu and Sikh religionists, and notedly amongst the Mahratta Brahmans, the satis were often urged for political reasons, and to get rid of the encumbrance of lone widows. When the Rajput Jawan Singh of Edur died in 1833, there was a forcible sati of his widow.

When Man Singh died, in the reign of Jahangir, sixty of his 1500 wives were reported to have burned themselves. Colonel Tod relates (Rajasthan, ii. p. 93) that at the cremation of the body of the ruler of Marwar, Raja Ajit Singh, on the 13th of the dark half of the month Asar, in 1780, the deceased's Chauhani queen, whom Ajit had married in his non-age, and mother of the parricide, the queen from Derawul, the queen from the Tuar race, the Chaora rani, and her of Shekhawati, with fifty-eight curtain wives, all burned themselves.

In the Mahratta country, the monument over the ashes of a sati has usually a hand and arm engraved on it. But at Brahmanwari in Aukole, the monument over the ashes of Bapu Gokla's daughter has two feet engraved on it. She burned herself there on hearing of her husband's death after the battle of Koreygaon. Rao Lakha, at his tomb at Bhoj, is represented on horseback, with seven sati stones on the left, and eight on the right. The tomb was erected about 1770. The Kaur race of Sirguja at one time encouraged satis. A grove between Partabpur and Jilmilli is sacred to a sati, to whom once a year a fowl is sacrificed, and once every third year a black goat.

The emperor Akbar discouraged sati, and on one occasion rode nearly a hundred miles at his utmost speed, to rescue the daughter-in-law of the raja of Jodhpur, whose husband had died. He positively prohibited the burning of widows against their will. Amongst Hindus, also, sati was discouraged by relatives and friends. In addition to their own entreaties and those of the infant children, friends of the family and persons in authority used their influence to dissuade the widow, and in a family of high rank the sovereign himself would go to console the widow.

One common expedient was to keep the widow engaged in conversation while the body was quietly removed and burned. It was reckoned a bad omen for a government to have many satis.

When Sukwar Bai, widow of Raja Shao, was plotting the extinction of the power of the Peshwas, Balaji Rao, who had detected her plot, sent her as a sneering message 'that he hoped she would not think of burning herself with her husband's body,' she forthwith burned herself; at the same time he had promised her brother an estate, provided she, 'for the honour of the family,' became a sati.

Southern India.—Mr. Elphinstone says, 'The practice of sati is by no means universal in India. It never occurs to the south of the river Kistna.' The Abbé Dubois also says (p. 198) that satis were rare in the south of the Peninsula. Nevertheless, Marco Polo stated the practice of Southern India just as Odoric does; whilst in 1580, Gasparo Balbi, an accurate and unimaginative traveller, describes with seeming truth a sati which he witnessed at Negapatam, and speaks of the custom as common. In the middle of the 17th century, P. Vincenzo, the Procurator-General of the Carmelites, says it was especially common in Canara, whilst he was told that on the death of the Naik of Madura 11,000 women had offered themselves to the flames. These 11,000 satis may have been as mythical as the 11,000 virgins of Cologne, but the statement proves the practice there, and in the beginning of the 18th century it continued to be extremely prevalent in that region. P. Martin, in a letter from Marawar (or Ramnad, opposite to Ceylon), dated in 1713, mentions three cases then recent, in which respectively forty-five, seventeen, and twelve women had performed sati on the deaths of the husbands, princes of that state. The widow of the raja of Trichinopoly, being left pregnant, burned herself after delivery.

Towards the close of the 18th century, sati was frequent in the Bengal Presidency, and most so in the Bengal Province. It was comparatively rare in the Madras Presidency and Orissa; Ganjam, Rajamundry, and Vizagapatam were the parts in which it most occurred. The custom was very prevalent under Mahratta rule, but under the British became very rare in Bombay. About the beginning of the 19th century, it used to occur at Poona, in ordinary and quiet periods, about twelve times on an average of as many years. Major Moor was a whole year at Poona, and knew of its occurrence only six times, but it was a tumultuous and revolutionary period, and people were of course put out of their usual and ordinary routine of thought and deed. It was generally carried out at the junction of the Moota and Moolla rivers, about a quarter of a mile from the skirt of the city, at which junction (thence called Sangam) the British Residency was situated.

The forms varied. In Bengal, the living and dead bodies were stretched on a pile, and strong ropes and bamboos were thrown across so as to prevent any attempt to rise. In Orissa, the funeral pyre was below the level of the ground, and the woman threw herself into it. In the Dekhan, the woman sat down on the pyre with her husband's head in her lap, and remained there until suffocated or crushed by the fall of a heavy roof of logs of wood, which was fixed by cords to posts at the corners of the pile. In the year 1817, 706 widows performed sati in Bengal. In 1818, 839 satis were returned as having occurred in the Bengal Provinces.

Ward relates that while at Allahabad an officer saw one morning 16 females drown themselves. Each had a large empty earthen pan slung by a cord over each shoulder. A Brahman supported each as she went over the side of the boat, and held her up till she, by turning the pan aside, had filled it, when he let her go, and she sank, a few bubbles of air rising to the surface of the water.

The widows of the weaver caste buried themselves alive.

It was common at Benares to set up, by the side of the river, stone monuments to the memory of widows who have been burned with the bodies of deceased husbands. Persons coming from bathing bow to these stones, and sprinkle water on them, repeating the words Sati, sati, *i.e.* chaste.

About the year 1860, the Dehli Gazette mentioned that in Central India a woman had been persuaded to consent to the sacrifice, and proceeded, after the usual ceremonies, to the pyre, accompanied by her friends and relatives. When she was on the top of the pile, and the flames began to ascend, her resolution gave way, and, screaming with terror, she leaped to the ground and tried to run away. The attendants tried to cut her down; she was struck with sticks, and wounded in two places with swords, but she ran down to the river's edge, where she concealed herself under some bushes. Here she was discovered, and thrown into the river (the Parwati), where she was drowned. Many of those concerned in this infamous outrage were apprehended, and tried at Goonah, in the neighbourhood of which station the occurrence took place. A nearly similar crime was perpetrated in 1858, in the Farrakhabad district, without a single one of the criminals being convicted or punished.

A writer in the Madras Times, in 1862, remarked that on the occasion of the death of the maharani of Udaipur, a sati took place in which the life of a slave girl was wantonly destroyed. Letters from Central India after that date conveyed the intelligence that another case of a somewhat similar description had since taken place at the cremation of the remains of the thakur of Rewa in Sirohi. The persons implicated were placed in confinement, and were to be punished agreeably to the penalties ordered to be inflicted by the Government for such offences.

Sikhs.—The practice of sati forms no part of the institutions of the Sikhs, and was rare amongst them. The Adi Grant'h says, 'They are not satis who perish in the flames, O Nanuk! Satis are those who live of a broken heart.' But again,

'The loving wife perishes with the body of her husband. But were her thoughts bent upon God, her sorrows would be alleviated.'

An exception occurred in 1805 in the town of Buriah. When the Sikh raja Suchet Singh died, there were 300 women in his palace, all of whom were sacrificed with the deceased's remains. Also on the demise of Ranjit Singh, the four ranis—Koondun, daughter of Raja Sumsar Chund; Hinderi, daughter of Mian Puddum Singh, of Noorpur; Rajkunwur, daughter of Sirdar Jey Singh, of Chynpur; and Baant Ali—determined to burn, in spite of the entreaties and remonstrances of Khuruk Singh and his ministers, who guaranteed their rank and property. The corpse having been washed with Ganges water, and placed on a bier of sandal-wood, decorated with gold flowers, was carried, the day after his death, to the place of cremation, before the gates of the palace Hazaribagh, followed by the four ranis in their richest dresses, loaded with jewels of immense value, walking in a measured step, attended by Brahmans and Sodees (Sikh priests), singing the holy hymns of Nanuk, in the same form, and with the same ceremonies, which were beheld in these very parts (on the banks of the Ravi) by the army of Alexander the Great more than 2000 years before, and which are described by the Greek and Roman writers with a minute fidelity which would suit a modern sati. The funeral pile was made of sandal-wood, and when the procession reached it, an affecting scene took place. Rani Koondun, the principal widow, took the hand of Dhean Singh, and, placing it on the breast of the corpse, made him swear never to betray or desert Khuruk Singh, or his son Nou Nehal Singh, or forget the interests of the Khalsa; and Khuruk Singh, in like manner, swore not to betray or desert Dhean Singh. Besides the fatal curse of a sati, the torments incurred by the slaughter of a thousand cows were impreeated on the head of him who violated his oath. Rani Koondun then mounted the pyre, sat down beside the body of her late husband, which was in a sitting posture, and placed his head in her lap. The other ranis, two of them only sixteen years of age, and of extraordinary beauty, with five, some say seven, Kashmir slave girls (one of them the lovely Lotus, who had attracted the admiration of the mission in 1838), followed the example, seating themselves around the corpse, with every token of satisfaction in their countenance. At the hour fixed by the Brahmans, in the presence of all the troops at the capital and an immense crowd of spectators, including several British officers, the pile was lighted, one account states by Khurnk Singh, another by the rani Koondun, and without a shriek or groan being heard, the living and the dead were reduced to ashes. It is said the Raja Dhean Singh made four several attempts to jump upon the burning mass, but was withheld by the people about him. A witness of this appalling spectacle relates that a small cloud appeared in the sky over the pile, and that he saw (perhaps thought he saw) a few drops fall upon the smouldering embers, as if the very elements wept at the closing scene of this dismal tragedy. The ashes were conveyed in a palanquin of gold, in grand procession, accompanied by Khuruk Singh (in a plain white muslin dress), Dhean Singh, and Kushal Singh, to the Ganges, and committed to that holy river.

Archipelago.—Bali and Lombok in the Archipelago largely profess Brahmanism. Sati still continues to prevail in Bali to an extent that India never knew, and the slaves of a great man are also consumed on his funeral pile. The widows are often despatched by a kris. In Lombok, wives may suffer themselves to be burned or krissed after the death of their husbands. The former is the more rare. The wives of the rajas, however, must suffer themselves to be burned. When a raja dies, some women are always burned, even should they be but slaves. The wives of the priests never kill themselves. An eye-witness thus relates how a gusti, who died at Ampanan, having left three wives, one of them resolved to let herself be krissed, against the will of all on both sides of her family. The woman was still young and beautiful; she had no children. They told me that a woman who under such circumstances suffered herself to be killed had indeed loved her husband. She intended to accompany him on his long journey to the gods, and she hoped to be his favourite in the other world. The day after the death of the gusti, his wife took many baths; she was clothed in the richest manner; she passed the day with relatives and friends, drinking, chewing sirih, and praying. About the middle of the space before the house they had erected two scaffoldings or platforms of bamboo of the length of a man, and three feet above the ground. Under these they had dug a small pit to receive the water and the blood that should flow. In a small house at one side, and opposite these frameworks, were two others entirely similar. This house was immediately behind the bali-bali. At four o'clock in the afternoon men brought out the body of the gusti, wrapped in fine linen, and placed it on the left of the two central platforms. A priest of Mataram removed the cloth from the body, while young persons hastened to cover the private parts of the dead with their hands. They threw much water over the corpse, washed it, combed the hair, and covered the whole body with champaka and Kananga flowers. They then brought a white net. The priest took a silver cup filled with holy water (called chor), on which he strewed flowers. He first sprinked the deceased with this water, and then poured it through the net on the body, which he blessed, praying, singing, and making various mystical and symbolical motions. He afterwards powdered the body with flour of coloured rice and chopped flowers, and placed it on dry mats. Women brought out the wife of the gusti on their crossed arms. She was clothed with a piece of white linen only. Her hair was crowned with flowers of the Chrysanthemum Indicum. She was quiet, and betrayed neither fear nor regret. She placed herself standing before the body of her husband, raised her arms on high, and made a prayer in silence. Women approached her and presented to her small bouquets of kembang spatu and other flowers. She took them one by one and placed them between the fingers of her hands raised above her head. On this the women took them away and dried them. On receiving and giving back each bouquet, the wife of the gusti turned a little to the right, so that when she had received the whole she had turned quite round. She prayed anew in

silence, went to the corpse of her husband, kissed it on the head, the breast, below the navel, the knees, the feet, and returned to her place. They took off her rings. She crossed her arms on her breast. Two women took her by the arms. Her brother (this time a brother by adoption) placed himself before her, and asked her with a soft voice if she was determined to die, and when she gave a sign of assent with her head, he asked her forgiveness for being obliged to kill her. At once he seized his kris, and stabbed her on the left side of the breast, but not very deeply, so that she remained standing. He then threw his kris down and ran off. A man of consideration approached her, and buried his kris to the hilt in the breast of the unfortunate woman, who sank down at once without a cry. The women placed her on a mat, and sought, by rolling and pressure, to cause the blood to flow as quickly as possible. The victim being not yet dead, she was stabbed again with a kris between the shoulders. They then laid her on the second platform near her husband. The same ceremonies that had taken place for him now began for the wife. When all was ended, both bodies were covered with resin and cosmetic stuffs, enveloped in white linen, and placed in the small side house on the platforms. There they remained until the time arrived for their being burned together.

It is always a near relation who gives the first wound with the kris, but never father or son. Sometimes dreadful spectacles occur; such was one at which Mr. K. was present. The woman had received eight kris stabs, and was yet quite sensible. At last she screamed out, impelled by the dreadful pain, 'Cruel wretches, are you not able to give me a stab that will kill me!' A gusti who stood behind her on this pierced her through and through with his kris.

The native spectators, whom, he adds, I had around me, saw in this slaughter which took place before our eyes, nothing shocking. They laughed and talked as if it was nothing. The man who had given the three last stabs wiped his kris, and restored it to its place in as cold-blooded a manner as a butcher would have done after slaughtering an animal.

Only the wives of the more considerable personages of the land allow themselves to be burned. They make a very high platform of bamboo, the woman ascends after many ceremonies, and when the fire is at its greatest heat, she springs into the middle of the flames. Mr. K. thinks that they do not suffer much, because during the leap they are stifled, and at all events the fire, strengthened by fragrant resins, is so fierce that death must speedily ensue.

Anugamana, in Brahmanism, is the performance of sati by a woman alone, whose husband has died in a distant country. A sandal, or any article of his clothes, may then represent him.

Arundhati, the wife of the Rishi Vaisistha, a resident of Swarga, is the spirit whom the devoted sati woman invokes, before mounting the pile.

China.—The Scythic practice is still followed by races of Tartar origin. The emperor Chun-Tche died at midnight (A.D. 1662?), and at dawn of day all the Bonzes and their adherents were chased from the palace. Towards noon the deceased was placed in his coffin, and wept for by an immense multitude who had witnessed the ceremony. As soon as the ceremony of taking the oath of allegiance to young Kiang-hi was concluded, that of the funeral of Chun-Tche was commenced in a style of magnificence surpassing anything of the kind that had hitherto been witnessed. To the solemn and sumptuous pomp of the Chinese rites, were added the barbarous customs of the Tartars. Tragic scenes took place, in which many of the attendants of the late emperor put themselves to death, that they might proceed to the other world, and continue their accustomed services to their master. It is stated in the annals of China, that the empress-mother, perceiving a young prince, who had been the intimate friend and favourite of Chun-Tche, expressed to him, with strong emotion, her grief and astonishment at finding him alive. 'Is it possible,' said she, 'that you are still alive? My son loved you, is doubtless now waiting for you; hasten then to join him, and prove to him that your affection was sincere and generous! Run and bid adieu to your parents, and then have the courage to die! Your friend, my son, is stretching out his arms towards you.' According to the historian, these words, uttered in a tone at once affectionate and severe, caused great distress to the young man. He loved Chun-Tche, but he loved life also, and could not think of death without a terrible shudder. He was surrounded by his afflicted family, who were urging him to escape by flight from so frightful a sacrifice, when the empress-mother sent to him a present of a box ornamented with jewels, and containing a bowstring for him to strangle himself. The unfortunate young man still hesitated, for he was at the happiest time of life, and could not resolve to die of his own accord, as the barbarous prejudices of his nation required; but the two officers who had brought him the fatal present had orders from the empress-mother to help him out of this perplexity, and give a little assistance to his courage, should he be unable to put himself to death, and they helped him accordingly. The coffin of the deceased emperor was transported to the burial-place of the new dynasty, at twenty-four leagues north of Pekin, and never probably was there such a procession as that which accompanied the remains of Chun-Tche to Manchuria. The immense multitude made the whole country resound with the voice of weeping and lamentation, for this prince, of whom in his latter days the people had seemed exceedingly tired, was now clamorously, and perhaps sincerely, regretted. 'For my own part,' wrote Father Schall to his friends in Europe, 'I owe an especial mourning to the memory of the emperor. For the seventeen years of his reign he never ceased to bestow on me many marks of kindness and regard; at my request he did much for the welfare of his empire, and would doubtless have done much more if a premature death had not thus carried off, at the age of twenty-four, this certainly intelligent and highly-gifted young man.'

A correspondent supplied All the Year Round with the following narrative of a tragedy enacted before his own eyes in the neighbourhood of Fu-chu-fu:—'The first notification I had,' says he, 'of what was about to take place, was the parading of a handsome wedding chair about the suburb of the provincial capital in which our foreign settlement is situated. The chair was accompanied by

all the pomps and gaieties of a wedding,—music, gay streamers, and so forth. There was, however, one thing most unusual in this procession. The occupant of the chair was exposed to public gaze, instead of being, as in weddings is invariably the case, closely screened. On making inquiry among our Chinese servants as to what this extraordinary departure from established customs might portend, I was informed that the lady was no bride, but a disconsolate widow, recently bereaved, who, finding herself unprovided for and unprotected, and having, moreover, neither father nor mother, son nor daughter, father-in-law nor mother-in-law, was determined on following her husband to the unknown world, where she might serve and wait upon him as became his dutiful and loving wife. Having accordingly made known her intention to her friends, and having fixed the day for her departure, she was now taking leave of all she knew, and parading the streets as a pattern to her sex. The object of her death being to rejoin her husband, the ceremony was a sort of wedding. She was arrayed and adorned as a bride, and seated in a wedding chair. On the morning of the 16th January, I proceeded, accompanied by two friends, to a spot some four miles distant from Nantae, the seat of the foreign settlement and southern suburb of Fu-chu-fu. We found ourselves in a stream of people, chiefly women and girls, the greater part of whom were small-footed, and were hobbling along, leaning one against another for support, or assisting their tottering footsteps by means of the shoulders of dutiful sons or brothers. We arrived only just in time to see the chair of the victim carried on the ground, and herself ascend the scaffold which had been prepared for her. The chair was the bridal chair in which she had been carried about the streets, and the scaffold consisted of two stages, one raised a few feet from the ground, and the other a few feet higher. The whole was covered with a dark cloth canopy, supported by a framework of bamboos, within which was set a gallows of one very thick cross-piece of bamboo, fastened at either end to a strong upright pole. From this bamboo, under the canopy, and exactly in the middle of the scaffold, hung the fatal rope, covered with a red silk napkin; beneath it was set a chair to enable the devotee to reach the noose. On the lower platform was a table of choice meats and vegetables, at which she was to take her last meal in the land of the living. The table was surrounded by the woman's friends, dressed in holiday costumes, and wearing the red cap of Chinese officials. In former times it was the custom for two district magistrates to be in attendance on all these occasions, but since the higher authorities were hoaxed some years ago by a lady whose courage failed her at the last moment, they have refused to be present at such exhibitions, and now despatch an inferior officer to superintend the arrangements. The chief actress appeared at first to be far less excited than any one in the vast concourse assembled. She was dressed in red bridal robes, richly embroidered with coloured silk, and her head was adorned with a handsome gilt coronet. Her decidedly plain face betrayed not the slightest emotion, and she sat down at the table with as much apparent goodwill as if it had been her bridal rather than her funeral feast. After the lapse of about half an hour, the poor woman, having apparently satisfied her appetite, rose from her seat, and still standing on the lower platform, addressed the surrounding crowd in a set speech, thanking them for their attendance, and explaining why she acted as she did. When she had finished speaking, she took from a bowl on the table several handfuls of uncooked rice, which she scattered among the crowd, and eager was the scramble to get a few grains as her virtuous blessing. This done, she fondled her baby nephew, and bade an affectionate farewell to her brother, who stood by her on the scaffold; then, stepping upon the upper stage of the platform, she bowed gracefully to the surrounding multitude, and addressed to them a few last words. She was helped to mount the high chair placed under the rope, but the rope proving to be still beyond her reach, her brother stepped forward and held her up in his arms, while she with her own hands passed the fatal noose over her head, and adjusted the cruel slip-knot to the back of her neck. The red silk napkin was then placed over her face, and a handkerchief fastened to her right hand. At a signal given by herself, her brother stepped back and left her suspended in mid-air. She then, shaking her joined hands before her breast, 'chin-chinned' the crowd, her own weight causing her to turn round and round, so that persons on all sides received her parting salutations. The spectators had, up to the fatal moment, been laughing and chattering as if assembled at a village fair, but now there was perfect stillness, as every ear was strained and every eye intent. In two or three minutes the action of the hands, at first decided and regular, grew weaker and weaker, and finally ceased altogether; then followed a convulsive shudder of the tiny feet (not above three inches in length), and all was over. The body was allowed to remain suspended for about a quarter of an hour, when it was cut down and placed in a common covered palanquin which was in waiting, the bridal chair having been removed. The rope which had been the instrument of death was now cut into small pieces, and distributed among the friends on the scaffold, all struggling violently to obtain a portion. The chair and the corpse were carried to a small temple about a hundred yards from the spot, followed by a terrific rush of people anxious to obtain another glimpse of the lifeless clay.—*History of the Panjab*, i. p. 170, ii. p. 169; *Huc's Christianity*, ii. p. 401; *Cunningham's Sikhs*, p. 364; *Elphinstone's India*, pp. 189, 190; *M. Polo*, iii. p. 20; *Viaggio di Gasparo Balbi*, p. 83; *P. Vincenzo*, p. 322; *Lettres Edifiantes, ed. Lyon*, 1819, vii. pp. 73-75; *Yule, Cathay*, i. p. 80; *Colebrooke in As. Res. on the Duties of a Faithful Wife; Vigne*, p. 87; *Dr. Vaughan*, p. 192; *Herod.* iv. p. 71, v. p. 5; *Coleman's Myth. Hind.* p. 82; *Sonnerat's Voyages*, p. 43; *Ward's Hindoos*, ii. p. 19, iii. p. 25; *Wilson's Hindu Theatre; Tod's Rajasthan*, i. pp. 633-35.

SUTTOO, Hind., or Champa of the Bhot in Little Tibet, is finely-ground flour or roasted barley, eaten uncooked or made into a porridge.

SUTUK, a Hindu ceremonial after child-birth and after death.

SU-TUNG-PO, a celebrated poet of China. Several wayside springs are dedicated to him, and called Se-yen-tseuen, the spring where the poet washed his inkstone.

SUTWASA, a rite observed amongst Muhammadans when a woman has attained the seventh month of her pregnancy.—*Herk.*

SUVARNA, in Hindu geography, is said to be the same with the river Sone, but also one of the islands called Lanka. Suvarna Bhumi, of the ancient writers, is the modern Thatun on the Sitang river. Suvarna-dwipa was Ireland, also called Surya-dwipa, and Suvarna-tataacas, a tribe living on the borders of Ireland.—*Fergusson; As. Res.*

SWAD. ARAB. A letter of the Arabic, Urdu, and Persian alphabets, which is used by princes as a sign-mark or Baiz; a part of the word Sahih, correct.

SWAHA. SANSK. Offering, presentment of oblations.

SWAHA, in Hindu mythology, is usually understood to be the goddess of fire, the consort or sakti of Agni. She was daughter of Kasyapa, and resembles the younger Vesta of the Romans or goddess of fire, of whom the Romans had no images in their temples to represent her. Similarly Swaha has no image.

SWALLOW, a bird of the family Hirundinidæ, sub-family Hirundininæ. In India are—

Hirundo rustica, *L.*, Europe, India.
H. domicola, *Jerdon*, Neilgherries, Bangalore.
H. filifera, *Stephens*, all India, Kashmir.
H. daurica, *Linn.*, all India, Kashmir.
H. fluvicola, *Jerdon*, Central India.
H. hyperythra, *Layard*, Ceylon.
H. Tytleri, *Hume.*
H. ruficeps, *Hume.*

The daurian or red-rumped swallow, Hirundo daurica, is plentifully distributed over the lower regions in summer, but migrates to the plains of India during the cold months.

The wire-tailed swallow, the Hirundo filifera, is plentiful in the Dekhan during the summer months. It is on wing soon after daybreak, and may be observed skimming over the ground all day long, hunting its winged prey. In the calm and delightful evenings peculiar to Poona, they may be seen in hundreds, perched on stones and tufts of grass upon the plains and the river-banks, and just as night is closing in they rise and seek a roost on the tallest spires and mosques. It is seldom that the males have their delicate tail appendages perfect, and often they are entirely wanting.—*Adams; Jerdon.* See Birds, p. 374.

SWALLOW NESTS. The edible swallow nests are those built by five species, four of which belong to the Archipelago. The common edible swallow nest is that of the Collocalia esculenta, *Gray*, the Hirundo esculenta, *Linn.*; another, which has a white patch at the base of the tail-feathers, C. fuciphaga, *C. Bon.*, is of a uniform brown colour. C. nidifica, *Latham*, is the Indian edible nest swiftlet. Mr. Blyth, however, says C. fuciphaga (Hirundo fuciphaga, *Thunberg*), linchi or lintye of the Javanese, identical upon comparison with Javanese specimens, would appear to be the sole producer of the numerous nests gathered on the rocky coasts of the Bay of Bengal. A white belly is characteristic of C. fuciphaga; and this particular species occurs abundantly on parts of the coast of the Malayan Peninsula, in the Nicobar Islands, and the Mergui Archipelago, and so high as on certain rocky islets off the southern portion of the coast of Arakan, where the nests are annually gathered and exported to China. From all this range of coast, Mr. Blyth says he had seen no other species than C. fuciphaga.

C. fuciphaga is constantly seen inland in the Tenasserim Provinces. The Karen in the valley of the Tenasserim, in the latitude of Tavoy, are well acquainted with the bird, and they say it crosses the mountains to and from the interior every year. The Karen name of the bird is the white swallow, from its white belly.—*Mason.*

SWAMDHEKMA, loyalty or fidelity to him whose salt the Rajputs eat, their immediate lord, even against their king.—*Rajasthan*, ii. p. 25.

SWAMI. TAM., TEL. God, Lord, applied to any of the gods, also to priests, and to the true God. Swamula varu, TEL., literally the lords, a title for a guru or confessor, meaning his holiness. Swami or Sami, like the Latin dominus, the Italian signor, and English lord, is applied in the Tamil and Telugu countries alike to the Supreme Being, the Almighty God, to idols of every kind, and to individuals; it is also the titular designation for the head of any religious order of Hindus, likewise a respectful form of address to Brahmans, to Europeans and Muhammadans of rank, and in this last sense is the equivalent of master or Mr., and thus often used as a form of assent, or to acknowledge an order; many of the Tamil and Telugu Hindus have Swami as part of their names, as Rama Swami, Ranga Swami.

SWAMI-BHOGAM. TAM. The rent due to a landlord or proprietor. In the Tamil country it means the share of the produce or the rent which is paid to the mirasdar or hereditary proprietor by the tenant-cultivator holding the land in farm for a fixed period. In Malabar and Karnata it is the fee or acknowledgment paid by the tenant or mortgagee to the jaumkar or hereditary proprietor, and is often only a pepper-corn rent. It also signifies a religious grant or contribution for an idol.

SWAMI NARAYAN, an earnest religious Hindu reformer in Gujerat, who condemned caste and believed in one god, Brahm, in the form of Krishna, the same as the sun, Surya. He visited Bishop Heber on the 26th March 1826, with a cavalcade of 200 horse well armed, and a large number on foot. He had 50,000 disciples in Gujerat. He preached Krishna as the sole deity, inculcated purity of life and abstinence from violence. In 1871, his followers in Bombay numbered 1242.—*Heber*, iii. pp. 39-42.

SWAN. A large golden figure of the sacred bird is in front of the throne of the king of Burma, and is called in Burmese Hentha, a word of Sanskrit origin. The Hentha is regarded as the king of birds. It is perhaps a mythicized swan. The only swan that visits S.E. Asia is Cygnus musicus, the hooper swan, which is said to appear occasionally in Nepal. It is a bird of the northern regions. C. Bewickii is also a bird of Europe. C. buccinator, or trumpeter swan, and C. Americana are of North America; and C. anatoides and C. Nigricollis are of South America. C. olor is the mute swan, of which C. immutabilis is the wild race. The black swan of Australia is C. atratus. —*Jerdon; Blyth; Yule.*

SWARGA or Swarga locum, according to Hindu mythology, the paradise of Indra—

'Great Surya smiles with lustre gay,
And flings through azure skies his ray;

The golden mountain's glittering brow
Is decked with many a sparkling gem,
Which shines, by Surya's brightness, now,
As if a halo circled them;
And on the mount, beneath his beam,
The king of Swarga's garden smiles,
In which, by many a gurgling stream,
The god his time in pleasure whiles.
Here Vayu through the charming wood
For ever creeps in gentlest mood:
Now o'er the blowing grass he goes,
Now stirs the fragrance of the rose.
Here many a flower of lovely hue,
Famed in the loves of former time,
Blooms glittering with the diamond dew,
And sweetening the heavenly clime.
Young roses, through the passing breeze,
To taste their sweets invite the bees.
Here fountains round the heavenly bowers
Perpetual fall, and glittering showers
Of diamonds, pearls, and stars descend,
And sweet celestial music lend
Unto the ears of mortals, blessed,
For pious deeds, with heavenly rest.
The garden's edge is compassed round
With trees with lasting verdure crowned,
And in the garden's centre stands
A palace built by heavenly hands,
With sapphires decked, the golden walls
Of Satakruta's courtly halls,
Reflecting all their beauteous light,
And glistening round all fair and bright.
The snow-white pavements made have been
Of chrysolites of brightest sheen,
Where sweetest flowers of lovely hue
Are sparkling bright with drops of dew;
The outer wall is smooth all o'er
With rubies glittering more and more,
And through the gardens trees appear
Like morning's light in winter's sky,
E'er the resplendent Surya rears
His glorious face of light on high,
As if in floods of ruby light
The court is bathed and shines so bright.
But lo! a throng afar appears,
Like vanished joys of former years,
So indistinct, that scarce the eye
Its faint progression can descry,
As when at morning's dubious light
A star or two appears in sight;
And now beheld, and now no more
They glimmer in the growing shine;
So like a mass of dim light o'er
The garden move the gods divine;
And midst them those who greater are
Shine like so many stars afar;
Now more and more advance they nigh
With breast erect and statures high,
With steps majestically slow,
With looks cast on the ground below;
Before them Indra, dignified
With royal mien and royal pride,
Proceeds.'

The Apsaras, in Hindu mythology, are nymphs of Swarga, celestial dancers, celebrated for their beauty. Amongst them is Rembha, the popular Venus of the Hindus, and some others are described to be of inconceivable loveliness. They answer to the Pari of the ancient Persians, and the damsels called in the Koran, Hur-ul-ayun, the antelope-eyed Huri. These Hindu nymphs were produced at the churning of the ocean, as related in the Ramayana. Sir William Jones thus describes them in Swarga:

'Now, while each ardent Cinnara persuades
The soft-eyed Apsaras to break the dance,
And leads her loth, yet with love-beaming glance,
To banks of marjoram and champac shades,
Celestial genii tow'rd their king advance,
So call'd by men, in heav'n Gandharvas named.'

According to Kshatriya belief, warriors slain in battle are transported to Indra's heaven by the Apsarasa, nymphs of Swarga. Thus in Menu, vii. 89, it is said, 'These rulers of the earth who, desirous of defending each other, exert their utmost strength in the battle, without ever averting their faces, ascend after death directly to heaven.' And in Book ii. 19 of the Nala, Indra says, 'Why are no warriors slain now-a-days, that I see none arriving in heaven to honour as my guests?' Swarga-rohana, Sansk., death; a Hindu funeral ceremony; ascending to heaven. Swarga Vilasam, or celestial pavilion, the throne-room of the rulers at Madura.—*Coleman; Sir William Jones' Hymn to Indra; Tr. of Hind.* i. p. 302; *Williams' Nala*, p. 140.

SWAROCHISHA, one of the fourteen patriarchs who preside over the fourteen Manwantaras of the calpa.

SWARTZ, an eminent Christian missionary and linguist, for whom a monument has been erected in St. Mary's Church, Madras, inscribed: 'Sacred to the memory of the Reverend Frederick Christian Swartz, whose life was one continued effort to imitate the example of his Blessed Master, employed as a Protestant missionary from the Government of Denmark, and in the same character by the Society in England for the Propagation of Christian Knowledge. He, during a period of fifty years, went about doing good, manifesting in respect to himself the most entire abstraction from temporal views, but embracing every opportunity of promoting both the temporal and eternal welfare of others; in him religion appeared not with a gloomy aspect or forbidding adieu, but with a graceful form and placid dignity.' Among the many fruits of his indefatigable labours was the erection of the church at Tanjore. The savings from a small salary were for many years devoted to the pious work, and the remainder of the expense supplied by individuals at his solicitation. The Christian seminaries at Ramnadpuram and in the Tinnevelly Province were established by him. Beloved and honoured by Europeans, he was, if possible, held in still deeper reverence by the natives of this country, of every degree and in every section, and their unbounded confidence in his integrity and truth upon many occasions was rendered highly beneficial to the public service. The poor and the injured looked up to him as an unfailing friend and advocate. The great and powerful concurred in yielding him the highest homage ever paid in this part of the globe to Europeans. Hyder Ali, in the midst of a bloody and vindictive war with the Carnatic, wrote to his officers to permit the venerable Father Swartz to pass unmolested, to show him respect and kindness, for he is a holy man, and means no wrong to any Government. Tuljajee, raja of Tanjore, when on his death-bed, desired to entrust to his protecting care his adopted son Serfojee, with administration of all affairs of his country. On a spot of ground granted to him by the same prince, two miles east of Tanjore, he built a house for his residence, and made it an orphan asylum; here the last 20 years of his life were spent in the education and religious instruction of children, particularly those of indigent parents, whom he gratuitously maintained and instructed; and here, on the 13th of February 1798, surrounded by his infant flock, and in the presence of several of his disconsolate brethren, entreating them to continue to make religion the first object of their efforts,

and imploring with his last breath for the divine blessing to attend them, he closed his truly Christian career in his 72d year.

SWASTI. Sansk. A compound of Su, well, and Asti, it is; meaning It is well, or, as Wilson expresses it, So be it; and implying complete resignation under all circumstances. The Swasti of Sanskrit is the Suti of Pali, and the mystic cross, or Swastika ✠, is only a monogrammatic symbol formed by the combination of the two syllables sutti = suti. It is the Sutya of Gujerat. The Greeks adopted the Indian symbol of Swastika, as the pottery from the Kamiras and the prototype of Crete show. It is said to be the filfat of the Buddhists, often found on Buddhist images, which Buddhists themselves regard as the emblem of the seal of Buddha's heart. It is conjectured that this symbol must have been brought to China, Japan, and Mongolia by Buddhist priests, and its origin is therefore to be looked for in India. It appears there on the most ancient Buddhist coins, and has been noticed on the walls of all the rock-cut temples of Western India. Even the Ramayana mentions domestic utensils as marked with the same figure. The Swastika appears in ancient Teutonic and Scandinavian mythology under the name of Thor's hammer, as the sceptre of Thor, the god of thunder. It has also been discovered on ancient coins of Indo-Germanic nations. From all this it is concluded that the Swastika was the common symbol and chief magic charm of the Aryan races before they separated. To the present day this hammer of Thor is used among the German peasantry and in Ireland as a magical sign to dispel thunder. Moreover, as in the middle ages bells used to be rung to drive away thunder, the Swastika of the east used to be engraved on church bells, and to the present day many bells in England bear the symbol.

Mr. E. Thomas is of opinion that the mystic cross, being the counterpart of the ancient Swastika, originated in the idea of solar motion, the orb of the chief luminary being considered as the circumference of a wheel, within which the Swastika formed four regular spokes. The hymns of the Veda speak of the sun as 'travelling by an upward and a downward path,' and at evening 'unyoking his horses,' exactly in the same style as Phœbus or Phæton may be supposed to have done at the configuration not only of the Swastika or four-pointed cross, but also of the 'Triquetra' or three-footed revolving device, so commonly found on the coins of Asia Minor, Crete, and Sicily. The Swastika is a symbol of the Tantrica sects.

SWASTIKA, a Tibetan sect, who received their name from their peculiar symbol, the Swastika or mystic cross, which was typical of their belief in Swasti. They are the Tao-sse of the Chinese; and the founder of the doctrine is said to have flourished between B.C. 604 and 523. The Swastika sect were rationalists, who held that contentment or peace of mind were the only objects worthy of attainment in this life, and the principles of the Swastika were received by the bulk of the people with very great favour. They assumed the name of Tirthakara (see Fo-kwe-ki, pp. 22, 23, and Cosma's Tibetan Grammar, pp. 181, 192, the old name of Tirthakar is still preserved among the Mongol as Ter), or pure-doers; but by the Buddhists of Tibet they are said to have been indecent in their dress, and grossly atheistical in their principles. Their Tibetan name, Musteg or Finitimists, is significant of their doctrine of finite existence; but they are more generally known as the Pon or Pon-po. This sect prevailed throughout Tibet until the seventh century, but is now confined to the farthest parts of the most eastern province of Tibet. The name of Pon is evidently only the Sanskrit Punya, pure,—a synonym of Tirthakara. Between the Swastika, who promised nothing after this life, and the Brahmans, who offered an almost endless series of mortal existences, people of strong minds and deep thoughts must have been sadly perplexed. See Tau.

SWAT consists of a long valley, running downwards, generally in a south-westerly direction, but turning half round from east to west as it nears the British frontier, from which it is separated by a lofty range. It is difficult of access to a force moving from British territory. The Lundye or Swat river, the Suatos of the Greek geographers, Sanskrit Suvastu, a river in Peshawur district, Panjab, rises beyond the British border, on the eastern slopes of the mountains which divide Panjakora from Swat territory. It receives the drainage of the entire Swat valley; enters Peshawur district north of Michni, and finally joins the Kābul river at Nisatha. Swat, Boneir, and the country to the east were occupied by that part of the Yusufzai who were the direct descendants of Yusuf; and the most prominent of their sections are the Abu Khel, the Shamozai, the Nikki Khel, the Sibuzai, and the Marazai. The country towards the north, including the Jalash valley, in 1878 was under the chief of Der; the south-western part was under the Khans of Aladund, and the south-eastern or Baizai was nominally under the Khans of Thana, a large town near Sydu.

The lands along the river are low and swampy, and rice is the principal crop. As soldiers, the Swati rank below several of the most martial tribes; the damp climate has enervated them, and in physique they cannot compare with their brethren the Buner hillmen.

The Torwal tribe are highlanders, inhabiting the upper part of the Swat valley. They have about 9000 adult males, and they speak a language which Raverty calls Kohistani. Some understand Pushtu. The Swati and the neighbouring tribes, Bunerwal, Hyazai, Malizai, Yusufzai, Mada Khel, Husnzai, for about 56 years, up to 1879, were under the influence of Abdul Ghafur, the Akhoond, who avoided quarrelling with the British when they became neighbours by their annexation of the Panjab in 1850. He was born 1799 or 1800, and died about 1879.—*MacGregor*, iii. p. 209; *Raverty*. See Yusufzai.

SWATCH. The No-Ground of the Hoogly and Indus rivers are two deep depressions in the sea bottom. That of the Hoogly, between Point Palmyras and Chittagong, is 18 miles from land, in lat. 21° to 21° 22′ N., and is about 9 miles broad, with a depth of 50 to 150 fathoms. That of the Indus is 35 miles W. of the Seer mouth. It is 3 to 5 miles broad, and about 50 fathoms deep. No-Ground also in Persian Gulf.

SWAYAM-BHUVA, the Hindu Noah. His wife was Satarupa.

SWAYAMVARA. Sansk. The public selection of a husband by a princess or lady of rank.

Oue of the favourite incidents in the ancient heroic poems of the Hindus is the rite called Swayamvara, or the choice of a husband by a princess from an assembly of suitors met from all parts to take their chance in the selection. The heroes, at least in some instances, submit themselves in silent rivalry to inspection as she walks along their line to select from the throng the favoured suitor by presenting him with a garland, or a cup of water, or some such token of regard. Arrian represents the lady as acting a merely passive part, but the poems and the very name Swayamvara (from Swayam, herself, and Vara, choosing) show that she had an active share in the transaction. In the Institutes of Menu it is said (ix. 90), 'Three years let a damsel wait, though she be marriageable; but after that time let her choose for herself (vindeta) a bridegroom of equal rank; if, not being given in marriage, she choose her bridegroom (adhigachhed yadi swayam), neither she nor the youth chosen commit any offence.' The scholiast explains it of the so-called Swayamvara, 'adhikaguna-varatable samanajatigunam varam swayam vrinita.' The candidates for the hand of the lady were invited to her father's house, and, after previous festivities for some days, were collected in a hall, round which the damsel passed and selected her future lord, by throwing a garland round his neck; the marriage rite was then celebrated as usual. The custom is the subject of much pleasing poetic description in the Mahabharata, the Naishadha, and other works. A translation of the Swayamvara of Draupadi from the former is published in the Calcutta Quarterly Magazine for September 1825. She was won by Arjuna. Damayanti chose Nala; Tarvati chose Chandra Sekara, and the princess of Kanouj threw the garland over an image of Prithi-raj. In the Hero and the Nymph by Kalidasa (Hind. Th. i. p. 226), Pailava describes a scene in which Urvasi played Lakshmi; Menaka was Varuni. The latter says—

'Lakshmi, the mighty powers that rule the spheres
Are all assembled; at the head appears
The blooming Kesava. Confess, to whom
Inclines your heart?'

Damayanti was the tried and exemplary wife of Nala. She prayed for her union with him, having inquired after and seen him in her apartments. Her becoming Swayamvara again was simply to make Nala, from whom she had been separated, know where she was, that he might come there and be reunited to her. Of the Kshatriya women, some married according to the Brahma mode, and some became Swayamvara. Aja married Indhumati, who was Swayamvara. His son Dasaratha had the daughter of Kosala offered to him, and he married her; but his second wife, Kaikeyi, whom he won, was a Swayamvara. Janaka, king of Mithila, made his daughter Sita Swayamvara. She prayed that she should be the wife of Rama, who bent the huge bow, and was the successful competitor. The character of Sita as a model wife and a holy woman is held high. When she met the venerable wife of Atri, and was highly complimented, she said that, although she was devoted to Rama, and she tried her utmost to follow him, she doubted whether her soul mirrored the purity of his. When she solicited permission to accompany her husband into banishment, she said—

'A wife must share her husband's fate:
My duty is to follow thee
Wherever thou goest. Apart from thee,
I would not dwell in heaven itself.
Thou art my king, my guide,
My only refuge, my divinity.'

After the death of Ravana, when she appeared before Rama, and when he cast reflections on her chastity, she dashed away her tears, brought on by the interview, and, rising from the dust at his feet, addressed Lakshmana as follows:—'Son of Sumitra! in thine eyes I see pity and trust of me. Build me a funeral pyre. Brother, since I am tainted in Rama's sight, 'tis time I should die.' When Draupadi became a Swayamvara, it was proclaimed that whoever would bend an enormous bow, and by it shoot five arrows simultaneously through a revolving ring into a target beyond, would win her. When she was brought to the Sabha, Dhristadumna informed her of the names of those who had been assembled. After the failure of several princes, Karna rose, when Draupadi publicly said, 'I will not marry a carpenter's son.' Arjuna rose, tried, succeeded, and won the bride. When she was taken to Kunti, the latter said to her sons, 'What you have acquired should be your common property.' What emenates from a mother must be done. The propriety of the marriage of one woman to five men was discussed at the Draupada raja's palace, where Kunti was present, and took a part in the discussion. Vyas supported Kunti, and sanctioned the proposed marriage. It appeared that during the Vedic times, the daughter of a rishi was married to Prachata and his nine brothers, and another woman of the Gautama line was the wife of a hundred rishis. But these were exceptions; they are not alluded to in the Rig Veda, and were quoted to legalize the marriage of Draupadi with the five Pandava.

Kunti was brought up by Kunti Bhoja; while at her father's, she took a delight in entertaining guests. She became a Swayamvara, and Pandu received her garland. When Draupadi was married to her sons, she addressed her as follows:—'Daughter! be thou full of esteem and love to thy husbands, as Indrani was to Indra, Swaha to Bibhasara, Rohini to Chandra, Damayanti to Nala, Bhadra to Baiswanara, Arundhati to Vasishtha, and Lakshmi to Narayan. Be thou the mother of hereos. Employ thyself with thy husbands in religious service, and thy prosperity will be unlimited. O daughter, employ thy time in looking after the guests, visitors, the virtuous, children, and the elders. By thee the rajas of the principal cities of Kura Jangala, etc., will be installed.' Kunti's next address to Draupadi was when she was about to proceed with her husbands, beggared by the game at dice, to pass twelve years in exile, and one year in disguise. Draupadi is described as an educated lady, and, according to her own account, she used to receive instruction from a Brahman teacher while on the lap of her father. The Bana Purva records her two conversations,—one with Yudishthra, on forgiveness and the providence of God, in which she shows great powers of observation; and the other with Satyabhama, wife of Krishna, who came to her while she was living in the forest with her husbands. The subject was, on the best way of making the husband attached to the wife. Draupadi said that she conducted herself humbly, serenely, and

devotedly to her husbands; she daily cleaned the house, utensils, cooked and offered meals at the appointed time. While at Indraprastha, she took care of Kunti, saw numerous Brahmans and maid-servants fed and clothed; she also looked after the servants, cowherds, and shepherds. She took care of the treasury, and gave orders on all matters connected therewith. She performed all her duties with every regard to truth, but unmindful of her personal comfort. She added, The faithful wife cannot attain happiness unless she practises self-denial. Do what I have told you, and before strangers remain quiet, but true to your convictions, avoiding excitement and thoughtlessness, and making those your friends who are virtuous and devoted to their husbands. When Jayodrata seized and carried her away, he was pursued by the Pandava; she had then the generosity to advise him to lay down his arms and implore forgiveness. — *Hindu Theatre; Calcutta Review*, No. 109, pp. 39, 40; *Calcutta Quarterly Magazine*, September 1825.

SWEEPERS. In Northern India the Muhammadan sweepers are called bhangi, lal-begi, khakrob, halal-khor, and mehtar, meaning sweeper, lawful-eater, and prince. In the south of India, the village Toti is usually a sweeper.

SWEET POTATO, the Batatas edulis, has a sweet-tasted nutritious root, of which there are two sorts, red and white. The tubers are long, and, when boiled or roasted, very wholesome. They are sown precisely in the same manner as a potato, after the hot season, and are fit to be taken up in six months. The sweet potato of Pondicherry are the edible tubers of Dioscorea purpurea.—*Riddell.*

SWETA KETU, a sage mentioned in the Mahabharata, who denounced the practice of married women consorting with other men.—*Dowson.*

SWETAMBARA, or white-robed, a Jaina sect. Another Jain sect is the Digambara.

SWETATA-PATRA. Sansk. The white canopy, one of the insignia of royalty of the Chalukya race whilst ruling at Kaliau, in the Dekhan.

SWIETENIA CHLOROXYLON. *Roxb.*

Chloroxylon Swietenia, *D. C.*

Satin-wood, . .	Eng.	Mal-burute, . .	Singh.
Dhoura, ...	Hind.	Kodowah porsh, .	Tam.
Burute, Buruch, .	Singh.	Billuga, Billu karra,	Tel.

This cabinet wood is well known for its glossy yellow shades. The tree grows in the Peninsula of India, at Gokak, on sandstone hills, and on the Alleh-Bella Hills, also in Ceylon, and is recognised to be of two kinds there,—the ordinary satin-wood, which is used for oil-presses, waggon wheels, bullock carts, bridges, cog-wheels, buildings, and furnitures; and the flowered satin-lustred samples of the same wood, which is used for picture-frames, furniture, backs of hair-brushes, cabinet-work, and next to calamander is the most valuable of the Ceylon woods. It is hard, weighs 55 or 57 lbs. to the cubic foot, and is supposed to last about 80 years. It occurs in the Northern Circars. Very fine satin-wood grew at Kutapatti in the Tengricotta taluk of Salem, but Dr. Cleghorn supposes that a good deal of the oldest and best was destroyed by the railway contractors. It is used in the Madras Presidency for the naves of gun-carriage wheels, and is the best suited of all the Madras woods for fuses. In beauty and lustre the flowered samples rival the bird's-eye maple of America. In England the best variety of the wood is the West Indian, imported from St. Domingo in square logs and planks from 9 to 20 inches wide; the next in quality is the East Indian, shipped from Singapore and Bombay in round logs from 9 to 30 inches in diameter; and the most inferior is from New Providence, in sticks from 3½ to 10 inches square. The wood is close, not so hard as boxwood, but omewhat like it in colour, or rather more orange; some pieces are very beautifully mottled and curled. It is now principally used for brushes, and somewhat for turning; the finest kinds are cut into veneers, which are then expensive. The Nassau wood is generally used for brushes. The wood has an agreeable scent, and is sometimes called yellow sanders. The price in the Madras Presidency is nearly the same as that of teak and blackwood. —*Roxb.; Tredgold; Dr. Cleghorn's Cons. Rep.* p. 15, *for* 1860; *M.E.J.R.; L.E.J.R.*

SWIFT, a name applied to species of Acauthylis, Cypselus, Collocalia, and Dendrochelidon. Cypsclus affinis builds in societies among ruined palaces and domes. Its nest is made of clay, intermingled with feathers and grass. In haunts and habits it much resembles the European black swift. See Birds, p. 374.

SWINE, the hog family. The Jews and Egyptians were alike in refusing to eat the flesh of swine, except that the Egyptians, who reared those unclean animals to sacrifice to Isis and Osiris, indulged themselves in eating pork once a month, on the day of the full moon. The Jews and the Muhammadans throughout nearly all the world still abstain from this kind of flesh. See Sus.

SWINHOE, ROBERT, ob. 1877, H.M. British Consul, China, author of Catalogue of the Mammals and Birds of S. China, Formosa, and Islands, in Pr. Zo. So., 1870 and 1871.

SWORD.

Sayf, ...	Arab.	Spada, ...	It.

Talwar, Nimcha, .	Hind.	Katti, ...	Tam.
Dha Khanda, . .	,,	Kilij, ...	Turk.

Swords of E. and S. Asia are of various shapes and names.

In the *Panjab*, a metal alloy known as sakela is used for the manufacture of swords, etc., consisting of cast-iron, asbat and kheri iron, and foulad or steel, welded together. Occasionally, in Jammu, a small quantity of silver and sometimes tin is beaten into and welded with the finest sword blades for the sake of texture and polish.

In *Isfahan*, sword-cuttlers formerly enjoyed great celebrity, and numbers of swords are still manufactured there. The best blades are all made of Indian steel, imported into Isfahan in the form of small round cakes, which cost about two tomans each. Old Persian swords fetch very high prices all over the east; for they cannot now-a-days fabricate blades equal to those of former ages. When the blade has been hammered out of the koor or cake of Indian steel, it is put in the furnace, and kept there all night, subjected to the action of a low fire. In the morning it is taken out, smoothed and filed into shape, and then heated red-hot, and immersed for a few moments in a trough filled with castor-oil. It is next

polished, sharpened, and the hilt and scabbard fitted to it; and the last thing done is to bring out the jowhar or damask pattern. For this purpose the blade is perfectly cleansed from oil or grease, and a yellow kind of stone is ground to powder, mixed with hot water in a cup, which must be of china or glass, not metal, and the solution laid on over the blade with a piece of cottou two or three times. This brings out the black jowhar perfectly. The scabbards of Persian swords are all made of thin laminæ of wood joined together and covered with black leather, with a sort of pattern stamped on the outside.

The *Bikanir* people work well in iron, and have shops at the capital and all the large towns for the manufacture of sword-blades, matchlocks, daggers, iron lances, etc. The sword-handles, which often are inlaid with variegated steel or burnished, are in high request, and exported to various parts of India.

In *Cutch*, an inch bar of fine English or Swedish steel is forged into plates 7 inches long, 1 broad, and one-sixth thick. Similar bars of fine spot iron are prepared in the same manner. These are smeared with a paste of borax dissolved in water, and laid in piles of twelve—nine of steel to three of iron, or three to one alternately. Each pile is wrapped round with rag thickly plastered with mud made of a loamy earth; then heated, welded, and drawn out to a bar one inch and one-eighth broad and one-third of an inch thick; this is bent zigzag three or four times, is again welded and drawn out to half an inch thick, and during the heat borax is frequently dropped on the metal while in the fire. Two of these bars are next welded into one, and when about twelve or fourteen inches long it is bent into the form of a loop or staple. In the middle of this a piece of fine-grained file is inserted of the same width and nearly as thick. All is then welded together, and the blade is formed. To temper the blade, an earthen pot twelve inches wide and six deep is notched on the edges (the notches being opposite each other) with a file about a quarter of an inch deep, and is then filled nearly up to the notches with water. Oil is then poured on the surface. The blade being heated equally to a light red, is removed from the fire, and the point, entered into a notch on one edge, is passed to the opposite one, keeping the edge from a quarter to half an inch in the oil. It is drawn backwards and forwards rather slowly, till the hissing ceases and the rest of the blade above the fluid has become black. A jug of water without oil is then poured along the blade from heel to point. In order to take out the warp produced by tempering, the blade, when nearly cold, is passed over the fire three or four times, then, being brought to the anvil, it is set straight by striking it regularly but moderately with a hammer; by this means a Damascus curved blade may be brought nearly straight.

Cutting swords in Asia are made with a hilt so small as to render it impossible for a European hand to use them in the manner of cutting which is common with Europeans. In cutting, an oriental does not straighten his arm at the elbow. The handle is purposely made small and confined, in order that the swordsman may not be forced to straighten his arm, but draw the cut as he delivers it. Mr. Vigne, when at Teheran, had seen a sheep laid in two at one stroke; and Suliman Mirza, one of the numerous sons of the late Futteh Ali Shah, king of Persia, had been known to cut a donkey in half at one sweep of his sword. Thirty-eight of the swords of the Asiatic races were described by Mr. Egerton in 1880 in a Handbook of Indian Arms. The worship of the sword (asi) may divide with that of the horse (aswa) the honour of giving a name to the continent of Asia. It prevailed amongst the Scythic Getæ, and is described exactly by Herodotus. To Dacia and Thrace it was carried by Getic colonies from the Jaxartes, and fostered by these lovers of liberty when their hordes overran Europe. The worship of the sword in the Acropolis of Athens by the Getic Atila, with all the accompaniments of pomp and place, forms an admirable episode in the history of the decline and fall of Rome; and had Gibbon witnessed the worship of the double-edged sword (khanda) by the prince of Mewar and all his chivalry, he might even have embellished his animated account of the adoration of the scimitar, the symbol of Mars. The devotion of the Rajput is still paid to his arms as to his horse. He swears by the steel, and prostrates himself before his defensive buckler, his lance, his sword, or his dagger. The sword is an object of veneration or worship among the Govind Sikhs, as it was amongst the Getes, the Scythian ancestors of the Jats, from whom the Sikhs are descended. Tir-Siugh, the enchanted sword of Angantyr, means Tir, water, and Sing, a lion, *i.e.* in water or spirit like a lion.—*Tod's Rajasthan*, ii. p. 204; *Royle's Arts, etc., of India*, p. 460; *Rohde, MSS.; History of the Panjab*, i. p. 105; *Egerton*.

SYAMA. Hind. Oplismenus frumentaceus, used in Bengal during the rains as fodder grass.

SYAMANTAKA, in Hindu mythology, a gem of great brilliancy, given by Surya, the sun, to Satrajita, a souree of good, of prosperity, and happiness to the virtuous wearer, but deadly to a wicked one.

SYCEE SILVER, silver in the form of ingots, of various weights. The purest quality has 97 to 99 pure silver.—*Simmonds' Dict.*

SYHADRI, a range of mountains continuing down from the S.W. end of the Aravalli to the Western Ghats of India. The name is now, however, applied by geographers to the entire range of the Western Ghats, called by the natives Syhadri in its N. part, and Sukheit in its S. part, Malabar coast. Length, about 800 miles; from about lat. 21° 15′ N., long. 73° 45′ and 74° 40′ E., they terminate almost precipitously, forming the N. side of the gap of Palghatcherry. Average height, 4000 feet. About lat. 21° N., 2000 feet; Mahabaleshwar, lat. 18° N., long. 73° 40′ E., 4700 feet; Purundhar, 4472 feet; Singhur, 4162 feet; Hurrichundurghur, 3894 feet; about lat. 15° N., 1000 feet, towards Coorg; Bonasson Hill, 7000 feet; Tandianmole, 5781 feet; Papagiri, 5682 feet. Seaward face, though abrupt, is not precipitous, but consists of a series of terraces or steps. Chasms or breaks in the range give access to the plateaux, and are denominated ghats or passes, a name which has become generally applied to the range itself. Scenery delightful and grand, displaying stupendous scarps, fearful chasms, numerous waterfalls, dense forests, and perennial verdure.

SYKES, Colonel WILLIAM H., Bombay army, was Statistical Reporter for the Dekhan from 1821 to 1834; from 1840, one of the Directors of the East India Company; a distinguished zoologist, meteorologist, geologist, antiquary, and statist. He has written so much on each of so many subjects, that his papers are classed below.

Meteorology.—Mean Temperature of India at Various Elevations, Rep. Brit. Assn., 1834, iii. p. 567. On the Measurement of Heights by the Thermometer, ibid., 1835, iii. p. 25; Lond. Geo. Trans.; Bom. Geo. Trans., 1839; Jackson's What to Observe, etc. On the Remarkable Difference betwixt the Fall of Rain at Mahabaleswar and that at Bombay and at Poona, ibid., 1839, vi. p. 16. On the Meteorology of the Province of Coorg, in the Western Ghats, ibid., 1842, xi. p. 22. On the Fall of Rain on the Coast of Travancore and Table-land of Uttri Mulli, ibid., 1846. On the Fall of Rain on the Table-land of Uttri Mulli, Travancore, 1846, ibid., 1848, p. 39. On a Remarkable Storm at Bombay, 6th April 1847, ibid. On Indian Hail-storms, ibid., 1850, p. 43. On the Atmospheric Tides in the Dekhan, Phil. Trans., 1840. On the Meteorological Observations in India, Phil. Trans., 1850.

Zoology.—Geographical Range of certain Birds common to various parts of the World, chiefly to India, Rep. Brit. Ass., 1835, iii. p. 69. Fishes of the Dekhan, Trans. Lond. Zool. Soc., 1838. Catalogue of the Mammalia of the Dekhan, Zool. Trans., 1831, republished, Bl. As. Trans., 1832, i. Birds of the Dekhan, Zool. Trans., 1832, republished, Bl. As. Trans., 1834, iii. Quails and Hemipoda of India, Lond. i. 4to.

Statistics.—Wages of Labourers in the Dekhan, Rep. Brit. Ass., 1835, iii. p. 118. Special Report on the Statistics of the Dekhan, its Extent and Physical Circumstances; Geology, Ghats, Escarpments, Climate, Botany, Zoology, Antiquities, Population, Education, Irrigation, Mountains, etc. (See Dekhan), Rep. Brit. Ass., 1837, vi. On the Morality of Calcutta, ibid., 1844, xiii. p. 88. On the Statistics of Hospitals for the Insane in Bengal, ibid., p. 89. Statistics of Civil Justice in India for Four Years, from 1841 to 1844, ibid., 1846, p. 94. Of Charitable Dispensaries in, ibid., p. 96. Statistics of the Agra Government or N.W. Provinces, ibid., 1847. Statistics of Civil Justice in Bengal to which Government is a Party, ibid., 1848, p. 116. Contributions to the Statistics of Sugar produced in India, ibid., 1849, p. 108. Statistics of Civil and Criminal Justice under the Bengal Government for the Years 1844, 1847, 1849, Rep. Brit. Ass., 1836, v. Statistics of the Educational Institutions of India, 1858, 8vo. On the Fruits of the Dekhan—Twenty-one Kinds of Ordinary Wild Fruits, Importance of Communication for the Introduction of Plants of India (Rudiments of Indian Exhibition of 1853, Bombay Economic Museum, Sir A. Johnstone on, in Lond. As. Trans.; Dr. Buist on, Bom. Geo. Trans., 1848). On the Dutch Possessions of the East Indies, Rep. Brit. Ass., 1848, p. 112. Prices of Cerealia and other Edibles in England and India compared, Rep. Brit. Ass., 1847. Mortality in the Jails of the Twenty-four Parganas, Calcutta, Rep. Stat. Survey of India, 1841. Catalogue of Chinese Buddhist Works, Lond. As. Trans. On the Land Tenures of the Dekhan, ibid., 1834, ii. pp. 205-233; 1836, iii. pp. 350-376. On the State of India before the Muhammadan Invasion, founded on the Travels of Fa Hian, ibid., 1836, vi. p. 248. On the Proprietary Right of the Soil vested in the Subject, not the Sovereign, in India, ibid., 1836, vi. p. 246. Same subject as Land Tenures of the Dekhan. Mortality and Chief Diseases of Troops under the Madras Government in 1851 compared with that in 1842, 1846, and 1849, Jl. of Lond. Stat. Soc., 1851. On Expenditure of the Government of India on Public Works, ibid., 1850.

Geology of a Portion of the Dekhan, Lond. Geol. Trans. iv. Second Series, 4to. On a Fossil Fish from the Table-land of the Dekhan, Lond. Geol. Trans., 1851, vii.

In 1832, a Catalogue of Birds, collected by Colonel Sykes in the Bombay Presidency, was published in the Proceedings of the Zoological Society of London. In this were enumerated 226 species, of which above 40 were described for the first time. This catalogue was undoubtedly the most valuable enumeration of the birds of India published, and contains descriptions, with many highly interesting observations on the habits, food, and structure of many of the species. Of those enumerated by Colonel Sykes, there were about 9 or 10 which Dr. Jerdon, when writing in 1839, had not observed, most of which are probably peculiar to the more northern portion of the range of ghats and neighbouring table-land. He wrote also Notes on the Religious, Moral, and Political State of Ancient India, London 1841; Statistics of the Educational Institutions of the East India Company; on the Increase of Wealth and Expenditure in the various Classes of Society in the United Kingdom, London 1837.—*Buist's Cat.; H. et T.*

SYLHET, in lat. 24° 50′ 22″ N., long. 91° 54′ 40″ E., a town in Assam, on the banks of the Surma, with a population of 16,846. It gives its name to a revenue district of 5440 square miles, in which is a population of 1,719,539. The territory of the raja of Jaintia was confiscated in 1835, in consequence of his complicity in the forcible seizure of certain British subjects, who were barbarously sacrificed at the shrine of Kali. In the south of the district, eight low ranges of hills run out into the plain, being spurs of the Tiperah mountains. The highest is about 1500 feet above sea-level. The frontier hill tribes are represented by 5715 Manipuris, 3108 Tiperahs, 2755 Khassyas, 2505 Kulis or Looshais, and 1188 Hajangs. Among the Hindus are the Kaibartta, 134,523, and the Chendal, 117,457; Kayasthas or clerks, 90,042; Sunris, 29,095. The majority of the Hindus belong to the Vaishnava sect. These are perhaps to be regarded as the professed adherents of the Kisari-bhajan sect, identical with the Kartabhajas of Bengal. There are several frequented places of Hindu pilgrimage in the district, including two temples in the territory of Jaintia, where human sacrifices used to be offered up to the beginning of the 19th century.—*Imp. Gaz.*

SYMPHYTUM ASPERRIMUM, the Caucasian prickly comfrey, was introduced into Britain in 1790. It is a useful forage plant.

SYMPLOCOS (from *συμπλοκη*, a knitting together), a genus of plants belonging to the natural order Styraceæ. Wight, in Icones, gives S.

foliosa, Gardneriana, microphylla, monantha, nervosa, obtusa, pendula, pulchra, racemosa. Thunberg gives as plants of Japan, S. Japonica, prunifolia, myrtacea, lancifolia, leptostachys, theophrastæfolia. In Burma there are three undetermined species. One named Kain-tha-phogee, BURM., is a tree of Tavoy, where its timber is used in boat-building. A few of the people of Lamptenng, in Sikkim, find employment in drying the leaves of a shrub, one of the genus Symplocos, for the Tibet market, which are used as a yellow dye. The leaves of S. cratægioides are said to have astringent properties. S. paniculata, the Lodh of Hindustan, grows in the Sutlej valley between Rampur and Sungnam at an elevation of 7000 to 9000 feet, and is used in dyeing. S. pulcha, on the Neilgherries, has hairy leaves and snow-white flowers. S. ramosissima, *Wallich*, of the Himalaya up to 7500 feet. The yellow silkworm feeds on its leaves.—*Hooker's Him. Jour.* ii. p. 41.

SYMPLOCOS GARDNERIANA, *W. Ic.*, is a large and very beautiful tree when in flower, and decidedly the finest of the numerous species of the genus. It grows on the Animallays at 6000 feet elevation, and also in different parts of the Travancore and Tinnevelly mountains and elevations as low as 4500 feet. Dr. Wight found it on the Neilgherries; the leaves turn yellow in drying, and they yield a dye.—*Beddome.*

SYMPLOCOS RACEMOSA. *Roxb.*

Lodh, . . BENG., HIND.	Lodduga, ... TEL.
Hoora, ... MAHR.	Erra lodduga, . . ,,
Sávura, Lodhra, SANSK.	

This small tree, from 10 to 12 feet high, and with a trunk about 20 inches in circumference, is a native of Nepal and Kamaon, of Bardwan and Midnapur in Bengal; grows also in the Kotah jungles, also in the Bombay Presidency, in jungles of the highest ghats. Wood small, white or yellowish, hard and durable, suitable for turnery. It is strong and compact, and might be used for cabinet as well as for other purposes. The bark of the root is sold at four seers the rupee, and is largely used for dyeing red. It is also used in medicine, being considered heating and promotive of the secretions. It is used also in the mesalihs for animals. The bark furnishes one of the red powders, known as 'abir,' scattered by Hindus in the festival of the holi. — *Thomson; Roxb.; Voigt; Gen. Med. Top.*

SYN, a respectful appellation of a fakir, also called shah and sultan.

SYNAGOGUE is the name given to the religious buildings of the Jews. Speaking of Jewish customs, Jesus says they love to pray standing in the synagogues, and in the corners of the streets. Both Hindus and Muhammadans offer their devotions in the most public places, such as at the landing-places of rivers, in the public streets, and on the roofs of boats, without the least effort at privacy.

SYNDESMIS TAVOYANA. *Wallich.*

Ka-tha khyæ, . . BURM. | Tavoy red-wood, . ENG.

A very large tree of British Burma, and in great abundance in the islands on the coast and near Moulmein. The wood makes handsome furniture, and is used for building, boxes, etc. It is occasionally beautifully variegated, and well adapted for furniture and ornamental purposes. When the wood is steeped in ferruginous mud, it turns jet-black and looks like ebony. The large cylindrical knobs, one or two inches in diameter, so often noticed in the ears of Karen women at Tavoy, are made of this wood after the colour has been changed. It is a valuable dye-wood both for black and red, but more especially for orange. The colours imparted to silk with different mordants are as follow:—

Muriate of tin—Three shades of orange, varying with the temperature of the bath and the time of immersion.

Acetate of alumina — Two shades of flame colour.

Acetate of iron—Two shades of drab.

Ditto, with a weak decoction of galls—A fine black, two shades.

Mixed with manjit, a variety of red and pinks are obtained, but not perhaps equal in intensity to those of the manjit alone.

Mr. Mason imagines that the Mergui red-wood is identical with the Tavoy red-wood, Syndesmis Tavoyana.—*Mason.*

SYNGNATHIDÆ, a family of fishes, of the order Lophobranchii. This order may be thus shown:—

ORDER v. Lophobranchii.

Fam. 1. Solenostomidæ.

3 species of Solenostoma.

Fam. 2. Syngnathidæ, Pipe Fishes.

First Group. Syngnathina.

2 Siphonostoma, 3 Ichthyocampus, 1 Urocampus, 1 Leptoichthys, 2 Stigmatophora, 1 Protocampus, 53 Syngnathus, 1 Nannocampus, 23 Doryichthys, 3 Cœlonotus 9 Neroplus.

Second Group. Hippocampina, Sea-Horses.

1 Gastrotokeus, 3 Phyllopteryx, 25 Hippocampus, 3 Solenognathus, 2 Acentronura.

Third Group. Pegasidæ, Winged Horses.

According to some authors, the pipe fishes, the sea-horses, and the winged sea-horses are assigned to distinct families, viz.—

Syngnathidæ, Pipe Fishes.—Body prolonged, slender, linear, or angulated; snout greatly prolonged, cylindrical; mouth terminal, vertical. Ventral fins absent; caudal fin wanting in some.

Hippocampidæ, Sea-Horses.—Head and body compressed; snout narrow, tubular; mouth terminal. Pectorals small; dorsal single; caudal fin wanting.

Pegasidæ, Winged Sea-Horses.—Body broad, depressed; snout suddenly contracted, narrow, somewhat protractile; mouth terminal, beneath. Pectorals generally large; caudal fin small. They all agree in having the endo-skeleton partially ossified; exo-skeleton ganoid; gills tufted (hence the group is named Lophobranchia), in the opercular aperture being small, and the swimming-bladder without an air-duct.

Syngnathus genus has the body elongated, slender, covered with a series of indurated plates arranged in parallel lines. Head long; both jaws produced, united, tubular. No ventral fins.

Hippocampus has its jaws united and tubular, the mouth placed at the end. The body compressed, short, and deep. The whole length of the body and tail divided by longitudinal and transverse ridges, with tubercular points at the angles of intersection; both sexes have pectoral and dorsal fins; the females only have an anal fin; neither has ventral or caudal fins. Hippo-

campus brevirostris, the sea-horse, or short-nosed hippocampus, habits are very singular.

In certain of the species of Syngnathus or pipe fishes, the males are furnished with an elongated pouch under the tail, and in S. acus the roe is transferred from the belly of the female to the pouch of the male. The Hippocampi or sea-horses while swimming maintain an erect position, but grasp with the tail whatever weeds or other objects meet it in the water, and, when fixed, the animal intently watches for and darts on prey with great dexterity. When two are near, they often twine their tails together. Their eyes move independently of each other, as in the chameleon. The species of Pegasus or flying horses inhabit Indian seas; it has a snout, but the mouth is under their snout, and is moveable. There are two distinct fins behind the pectoral, which are often large, hence the name.

SYPHEOTIDES AURITUS. *Latham.*

Otis fulva, *Sykes.*	The lesser florikin.
Khar-titar . of BHILS.	Tan mohr, . . . MAHR.
Kan-noul, ... CAN.	Charaz, Charas, of S. INDIA.
Chulla charz, . . HIND.	Warrogoo koli, . . TAM.
Likh, ... ,,	Niala nemiki, . . . TEL.

The Bhil name means grass partridge, and it gets its Tamil name from being usually found in the Warrogoo (Paspalum frumentaceum) fields. The lesser florikin, also called the common florikin and black florikin, is 19 to 21 inches long. In winter dress the male closely resembles the female, but has always some white on the shoulder of the wing; when in full-feeding plumage, the male in its head, neck, ear-tufts, medial-wing coverts, and all its lower plumage, is deep-black, the chin alone being white, the rest of the plumage fulvous. The different character of the plumage in the two seasons has led some to write on this bird under two names. It is found throughout India, from the extreme south to the foot of the Himalaya, and frequents long grass in preference to any other shelter.—*Jerdon.*

SYPHEOTIDES BENGALENSIS. *Gmel.*

Otis deliciosa, *Gray.*	O. Himalayana, *Vig.*
Bengal florikin, . . ENG.	Charas, ... HIND.
Charras, Charaj, . HIND.	Dabar . . . of NEPAL.

In the breeding season, the whole head, which is very fully crested, the neck, breast, and lower parts, and thigh coverts, are of a deep glossy black; the plumes of the breast elongated, forming a full-breast tuft, and the feathers of the neck in front also lengthened; back a rich olive buff, with zigzag markings, and a black dash in the centre of each feather. It is 24 to 27 inches long. It is found throughout Lower Bengal, north of the Ganges, north-easterly to the foot of the Himalaya, into Dacca, Assam, Tiperah, Sylhet, north-westerly into the valley of the Jumna, Rajputana, the Cis-Sutlej States, and parts of the Panjab. It frequents large tracts of moderately high grass. The sexes live apart but near each other.—*Jerdon.*

SYRIA, with Palestine or Judea, extends about 400 miles from N. to S., and 100 to 280 miles in breadth, between lat. 31° and 37° N., and long. 34° and 41° E., having on the north the pashaliks of Diarbekr and Marash in Asia Minor, on the N.E. and E. the Euphrates, on the S.E. and S. the Arabian Desert, and the Mediterranean on the W. Area about 48,000 square miles; population estimated about 1½ millions. Palestine is usually termed the Holy Land. The principal rivers are Euphrates, Jordan, and Orontes. Syria is a Greek abbreviation of Assyria. Syria, or Aram, lying between the Mediterranean and the Euphrates, is separated into two plains by a double range of hills which divide the country from north to south. The smaller plain is next to the Mediterranean, and is fertile; the larger consists of sand and rocks, and stretches to the Euphrates. Libanus and Anti-Libanus, its principal mountains, are on the west well cultivated by means of terraced cultivation, but are barren and rugged on the east. In the south of Syria there is a great intermingling of nations and races and religions. In the western coast of the Peninsula of India is a small body of Syrian Christians. Its most powerful Bedouin tribe is the Anazeh; they are true nomades; part of them are in Nejd. They possess an ancient grant, in a copper-plate, of privileges bestowed on them. Syro-Arabian languages appear to have been spoken from the very earliest times by the various nations who inhabited that part of Asia lying to the eastward of the Tigris.

SYRINGA, a genus of plants of the order Oleaceæ. Syringa Chinensis, *Willde.*, the Chinese lilac, is a native of China cultivated in Europe. Syringa villosa has villous leaves, and is found in China on mountains about Pekin.

Syringa emodi, *Wall.*

Chunu, ... BEAS.	Rang-chul, . . KANAWAR.
Ban-phunt, . . CHENAB.	Karmar, . . . RAVI.
Ban-dakhur, . . ,,	Ban-chir, . . . ,,
Gnari, ... ,,	Shatri, Dudla, . SUTLEJ.
Shafar, . . . KANAWAR.	Lolti, Rang chul, ,,

Elliptical-oblong leaves, glaucous beneath, attenuated at the base, and acuminated at the apex, with purple flowers. A native of Kamaon, the Panjab Himalaya at 7000 to 11,000 feet up to the Indus, and collected by Bellew at 9000 feet near the Safed Koh. The wood is white and close-grained, and carves well. The leaves are eaten by goats.

Syringa Persica, *L. Var. β.* S. laciniata, *Vahl.*

Persian lilac, . . . ENG.	Hiasmin, . . . KANGRA.

Leaves small, lanceolate; flowers purple. A native of Persia, and cultivated in some of the gardens on the Kashmir lake; seems to be a variety of S. laciniata, a small shrub from four to six feet high. It is one of the most ornamental of low deciduous shrubs, and on that account is very commonly cultivated. When planted in pots and forced, it may be made to flower at Christmas; but by this process the fragrance of the flowers is lost. Of this species also three varieties are found in English nurseries, the white, the cut-leaved, and the sage-leaved Persian lilacs.—*Stewart; Eng. Cyc.; Voigt.*

SYRNIUM INDRANEE, Devil Bird. *Sykes.* Mr. Blyth had some doubts about this bird. There would appear to be three or four distinguishable races, the Ceylon bird approximating most nearly to that of the Malayan Peninsula. The horror of the owl's noctural scream was as prevalent in the west as in the east. Ovid introduces it in his Fasti, L. vi. I. 139; and Tibullus in his Elegies, L. i. E. 5. But Pliny, I. xi. c. 93, doubts as to what bird produced the sound; and the details of Ovid's description do not apply to an owl.—*Tennent, Ceylon.*

SYUD, properly Sayyid, with the Mir, Sharif,

Shaikh, Beg, and Khan, are terms or titles assumed by Muhammadans as their birthright. Syud means lord, and is taken by all descendants of Ali and Fatima, but also by the children of the other wives of Ali. Ali had nine wives, by whom he had 14 sons and 18 daughters; Ali and Fatima's descendants from Hasan and Hūsain being styled Hassani or Syud Hassani, and Hūssaini or Syud Hūssaini, and those from the other wives Alavi or Syud Alavi. The Syud are also styled Mir or prince, their women are Saidani, their race Sādāt, and the offspring of a Syud and other Muhammadan woman Sharif or noble. As a rule, Indian Syuds are quiet, humble-minded men, not distinguished by other qualities from the Shaikhs; they are of Sunni and also of Shiah persuasion, and are met with serving as soldiers or in civil avocations, or following some religious duties. Amongst the women of the Syuds of Madras most can read the Arabic Koran and the Hindustani books of Belief and Devotion, but they cannot write. In all Madras, there were (in 1872) more than 1000 of this tribe of women, some of them also able to read Hindustani story books and could write a little, while a few even knew the Persian Gulistan, Bostan, Anwar-i-Sohaili, Abul Fazl, and other usual books in Persian, and can even write the Persian grammatically, but there are not more than 10 or 15 such women in all Madras. Also about 400 or 500 of them are good needlewomen and embroiderers. The Syud race of Barh in Northern India furnished many persons of note to the courts of Dehli from the reign of Akbar to that of Ferokhsir. They are still numerous in Muzaffarnagar. In Kurachee and the Hyderabad district, the Syuds are landowners and extensive cultivators, and say they came from Arabia and Persia about 700 years ago. Kaghan is a long, narrow glen, stretching upwards till it nearly reaches Chelas; the latter outpost of maharaja Gulab Singh's kingdom is a barren dependency of Hazara. It is inhabited by pastoral and aboriginal races, and was given by former rulers in fiefdom to a family of Syuds, who were confirmed by the British. These Syuds exercised internal jurisdiction, and sent certain members of the family in attendance on the Deputy-Commissioner of Hazara, virtually as hostages for good behaviour. The Syuds were summoned to answer numerous complaints preferred by the people of Kaghan; they came, but afterwards fled, and assumed an attitude of resistance, and intrigued with the Sitana fanatics and with the Hasanzai, then hostile to the British. The small principality of Banaganapilly, in the Ceded Districts, is ruled by Syuds.

Several Syuds have been distinguished theologians, viz. Syud Abd-ul-Kadar, styled Pir-i-Dastagir; Syud Ahmad, styled Kabir, the founder of the Rafai community of fakirs; Syud Jalal-ud-Din, Bokhari. Syud Zain-ul-Abidin, a venerated saint.—*Wilson's Gloss.*

SYUD AHMAD KHAN, author of the Jam-i-Jam. It comprises tables of the princes of the house of Timur, also the Syud and Afghan emperors of India, ending with Muhammad Bahadur Shah, then ruling at Dehli.

SYUD JAMAL, author of the Tar-Khan-Nama or Arghun-Nama, A.D. 1654–55, giving a history of these two families. He quoted largely from Mir Masum's Tarikh-i-Sind.

SYUD MA'SUM ALI SHAH was named by his disciples Ma'bud, 'the adored one,' a title only applied by orthodox Muhammadans to God himself. He was the great Sufi teacher of his time, the 12th century of the Christian era. The first appearance of Ma'sum Ali Ma'bud as a public teacher occurred in Isfahan (A.H. 1196–99), but in consequence of the denunciation of the Ulema, he and his disciples had their ears cropped and were expelled from the city.

SYUD SHAH, ZOOHOOR, distinguished by his wisdom, piety, and austerity of life. He built, of earth, a small monastery at Allahabad, which still remains. He was celebrated for his miracles; by his prayers the most frightful chronic complaints were immediately removed, of which an instance is given in respect to the case of the Governor of Allahabad, Nawab Oomdat-ul-Mulk Amir Khau. Zoohoor boasted of having lived 300 years.

SYUD SULTAN ALI, ul Husaini, ul Musawi, us Safavi, a native of Ardabil in Azarbaijan, who travelled to Lucknow, the capital of Oudh, while Shuja-ud-Dowla was reigning. In A.D. 1798 he undertook a history of India, from the times of Timur to the death of the emperor Muhammad Shah, and he brought it down to A.D. 1805.

SZE. CHIN. A Buddhist monastery.—*Dr. Edkins.*

SZE-CHUEN, a large province on the west of China, with Tibet on its west. It is traversed by the Yang-tze-kiang and its affluents; chief town Ching-tu. The provinces of Yunnan, Kwei-chu, and Houan are on its south. Gold is collected in the sands of the rivers in Yunnan and Sze-chuen, especially from the upper branch of the Yang-tze-kiang, called Kinsha-kiang or Golden-sanded River. The largest amount is said by Sir John Davis to come from Li-kiang-fu near that river, and from Yung-chang-fu on the borders of Burma. It is wrought into personal ornaments and knobs for official caps, and beaten into leaf for gilding, but is not used as a coin, nor is much found in the market as bullion. Silver also is brought from Yunnan, near the borders of Cochin-China, and the mines in that region must be both extensive and easily worked to afford such large quantities as have been exported. Tavernier tells us 'there comes gold from China, which the Chinese exchange for the silver which is brought them. For, price for price, they love silver better than gold, because they have no silver mines. Yet it is the coarsest metal of all the Asiatic gold.'—*Williams' Middle Kingdom*, p. 144; *Tavernier's Travels*, 156.

SZE-MA TSIEN, the father of Chinese history.

SZU or Azes Scythians. Ili is a valley and town in Central Asia, from which Lassen supposes the Szu Tartars were expelled by the Yue-tchi or White Huns, B.C. 150. The Szu Tartars he supposes to be Sacæ, and the Yue-tchi to be the Tochari. After occupying Tahia or Sogdiana for a time, they are stated by the Chinese to have been driven thence, also, by the Yengar, some years afterwards, and to have established themselves in Kipen, in which name Lassen recognises the Kophen valley in the Kohistan. The great Kirghiz horde is adjacent to Ili and Tarbagatai. It is under the dominion of China, and exchanges large quantities of cattle on the frontier for silk goods.

T

T. The alphabets of the Arabic, Persian, Urdu, Sanskrit, Hindi, Mahrati, Gujerati, Bengali, Uriya, Telugu, Karnatica, Tamil, and Malealam, all contain letters with the sound of the English letter t; and the Arabic, Persian, and Urdu each have two letters with the power of the English letters th. This letter of the English alphabet has, in English, but one sound, as in tan, ten, tin, tone, tun, tyne; but in combination with the English letter h, it assumes two compound sounds, a softer one, as in than, thus, then; and a harder sound, as in thicken, thief, thong, thrall, thumb, and thwart. Th, with the sound of the English letter as in thief, and of the Greek letter theta, occurs in Telugu, Uriya, and Karnatica, but this sound is not frequent in other of the eastern tongues, though a t with the aspirated h occurs in most of them, in which h has the sound of an aspirate, pronounced after the t, and should be written t'h, and pronounced hatt'hiar.

There are many examples of the Chaldæan transformation of the sh or s into t, and the following may be adduced:—Hebrew, Shekel, to weigh, becomes Tekel in Chaldee; Heb., Sheber, to break,—Chald., Teber; Heb., Seraphim,—Chald., Teraphim, the Babylonian counterfeit of the divine Cherubim or Seraphim; Arab., Supphon, a serpent,—Chald., Tuphon or Typhon. In Egypt, the s frequently passed into t. Thus we read in Bunsen, 'Tet, who is also called Set,' and many other similar examples. The Turanian tongues also alter the s to t, and thus sir-band or head-band becomes turband, and sarposh, a head-covering, becomes in Egypt tarbosh, as the Arabs have no letter p.

TAALIM KHANA, the gymnasium of India, —one in almost every town. The Siudi are very fond of wrestling, but the Malla or wrestlers of Sind are, generally speaking, African blacks. In Sind wrestling it is not necessary, as in India, to throw the adversary on his back.—*Burt. Scinde.*

TABAKAT-i-AKBARI, by Nizam-ud-Din Hervi, is a history of the Muhammadan kings down to the 37th year of Akbar's reign; it is a historical work of great merit.

TABAKHIR. Hind. A mineral medicinal substance, not to be confounded with tabashir, the silex from the bamboo, from which it is quite distinct.—*Powell*, p. 99.

TABAL, according to Muhammadans, the man who made the first sword, the Tubal-Cain of the Hebrew Scriptures.

TABANIDÆ, a family of insects. Among its species is the zimb of Abyssinia, the very sound of whose dreaded hum sends the herds from their pastures, and makes them run wildly about, till they drop with fatigue, fright, and hunger. In the southern portion of the same continent, and quite as formidable, is the dreaded tsetse, like the zimb, one of the Tabanidæ, though a different species. This insect, which is scarcely larger than the house-fly, reigns over certain districts, attacking the domestic animals. Its bite is certain death to the ox, horse, and dog, yet, strange to say, it produces no serious inconvenience to the human body, nor apparently to the wild game of the country, the buffalo, giraffe, antelope, and zebra, which roam by millions over the same plains.—*Gosse's Natural History*, p. 110.

TABAQ. Hind. A tray. Mewa-ka-tabaq, or fruit-tray. P'hool-ka-tabaq, flower or fairy tray.

TABARI, the Livy of the Arabians, the very parent of their history; but, as far as Ouseley could find by inquiry, given over for lost in Arabic. His name was Abu Jafar Muhammad.—*Ouseley's Travels*, i. 35. See Tarikh-i-Tabari.

TABAR-i-ALAM, a Muhammadan saint in whose name they perform urus.

TABASHIR. Arab.

Banslochun, Bansk, Beng.	Tabaschir, . . . Ger.
Wa-tai-ga-kyouk, Burm.	Dunlochan, . . Hind.
Chuh-hwang, . . Chin.	Tivakshera, . . Sansk.
T'ien-chuh-hwang, ,,	Oonamaku, Unalie, Singh.
Chu-kau, . . . ,,	Munjil uppu, . . Tam.
Tabachir, . Fr., Turk.	Veduru uppu, . . Tel.

A siliceous concretion found in the joints of the female bamboo. It is partly soluble in water, bluish white, concrete, adhesive to the tongue. It is composed of silica, 90·5; potash, 1·1; peroxide of iron, 6·9; alumina, 0·4 per cent. The Persians deem it tonic and aphrodisiac, the Arabs suppose it to be astringent; but from its composition we are warranted in supposing it to be entirely inert. It resists acids, is indestructible by fire, and forms, on being fused with alkalies, a sort of glass. It is much esteemed by the Hindus, Persians, and Arabs as a powerful tonic, and is said by them to have great efficacy in internal bruises. It readily imbibes all the volatile and fat oils, which produce an opacity. If the oils be tinted with acetate of copper, anchusa root, beech-nut, sulphuric acid, or malic acid, the tabashir assumes respectively the colours of the emerald, ruby, chrysoberyl, pink topaz, and Brazilian topaz. Mr. W. Lange has ascertained that the silicium in the sap of plants exists exclusively as a hydrate of silicic acid in very dilute solution. A similar substance has been found in jungle grass. In Ajmir it is used as an aphrodisiac, and in general debility. One massa is the dose, and it is sold at two tolas for one rupee.—*Jameson, Ed. Jour.*, 1820, ii. p. 97; *Smith, M.C.C.; Faulkner; O'Sh.; Mason, Gen. Med. Top.; Thomson's Rec. of Gen. Sc.* viii. p. 132.

TABAT MAKUS, the chapter of the Koran read backwards.

TABAYLA DOLCE, syn. of Euphorbia balsamifera; its sap resembles fresh milk.

TABERNÆMONTANA, a genus of plants belonging to the natural order Apocynaceæ, found in the W. Indies, S. America, Australia, India, and tropical Asia. The flowers of many species are very sweet-scented, and the double-flowered variety of T. coronaria is very ornamental, and is one of the most common species in Indian gardens. The deep-red pulp surrounding the seeds of this species appears capable of yielding a beautiful colour. The cream-like sap of T. utilis, the milk-tree or Hya of Demerara, is said to be very nourishing. Other species are employed medicinally. The sap of T. persicariæfolia is considered a poison in Mauritius.

Tabernæmontana coronaria, *R. Br.*

T. divaricata, *R. Br.*	N. divaricatum, *Linn.*
Nerium coronarium, *Ait.*	
Wax flower plant, Eng.	Ghandi tagarapu, . Tel.
Farkitaggar, . . Hind.	Nandi vardhana chettu, ,,
Nandier vatam, Maleal.	

This ornamental shrub is cultivated in flower gardens; the flowers are fragrant during the night. Dark shining leaves, flowers generally double, colour pure white, resembling wax, having a faint, pleasant smell. The foliage beautifully contrasts with its large blue-white double flowers, which are often called wax flowers. The wax flower of Bengal is a trailing creeper, Hoya carnosa. Farkitaggar is the single variety, and barratagar the double-flowered. It is propagated by cuttings.

Tabernæmontana crispa, *Roxb.*
T. alternifolia, *Linn.* | Kurutupala, . MALEAL.

This shrub grows on the coasts of Peninsular India, and is employed in medicine.

Tabernæmontana dichotoma, *Roxb.*
Cerbera manghas, *Linn.* | Manghas lactescens, *Burm.*
Forbidden fruit, . ENG. | Diwi-kaduru-gass, SINGH.

This is a native of Ceylon, very common in the warmer parts of the island. Kaduru signifies forbidden, and Diwi, tigers. It thrives in a low situation, with a light mixed soil.

Tabernæmontana persicariæfolia, *Roxb.* A straight, middling-sized tree; the tree is sacred, and the scented wood is used in incense.

Tabernæmontana recurva, *Roxb.*, Tau-sa-lap, BURM., is a low shrub, indigenous about Moulmein, remarkable for its recurved peduncles and fragrant flowers.—*Roxb.; Genl. Med. Top.* p. 186; *Mason; W. Ic.; Thw.; Voigt; Gamble; Beddome; Book of Trees; Riddell.*

TABIB. PERS. A physician. Tababat medicine.

TABIK TUAN, the Malay salutation to a European, meaning I salute you, sir.

TABKATIA. HIND. Muhammadan religious mendicants, followers of Shah Madar. They dress in black, wear a chain round their ankles, and carry a small drum. They sometimes lead about monkeys and bears for show.

TABLA. ARAB. A kettle-drum. These are in pairs, and one is called Agaura, a couple of drums, played upon at the same time, one with each hand. Tabal, large drum, used in the field of battle.

TABLE BAY, lat. 33° 54′ S., and long. 18° 25′ E., leading to Cape Town at the Cape of Good Hope, is overlooked by Table Mountain.

TABLUNG, a rude pagan tribe in the hills of Assam, on the eastern frontier of the Mikir and Cachar.

TABOO or Tabu, in the islands of the Pacific, a ceremony to render articles and days sacred and protected. In some places patches of leaves are tied rouud the trees 6 or 7 feet from the ground, to indicate that it is private property. Taboo of the Polynesian Islands is known in the Archipelago as Pomali, and in Madagascar as Kiady, which is there a tuft of grass on the summit of an erect pole. Of the 'tabu days' in the South Sea Islands, Ellis the missionary says:—'Except those whose attendance is required at the temples, no individual is to be seen out of doors.' Again, 'If any one made a noise on a tabu day, he must die.'—*Montgomery*, i. p. 82; *Peschel.*

TABOR, a mountain of Syria, in Palestine, about midway between Nazareth and Tiberias. It is almost insulated, and overtops all the neighbouring summits. The Christians consider Tabor a holy place, in honour of the transfiguration; but the Latins and Greeks are at variance as to the exact spot. In ascending the hill, on the right hand, looking into the plain of Esdraelon, stands a little village, called Deborah by the natives, in which, say the legends, Jael slew Sisera. The view from Mount Tabor is magnificent, and comprises places of the greatest interest; the hills of Gilboa and Samaria, mounts Hermon and Carmel, the plains of Galilee and Esdraelon, the Jordan and the Kishon, the Sea of Galilee and the Mediterranean, are all discernible. On the anniversary of the transfiguration, mass is performed at, and a great procession led to, the altars set up where the three tabernacles were made. They are in a vault underground.—*Skinner's Journey*, i. p. 130.

TAB RIVER is only partly iu Khuzistan, near Beibahem, there of considerable size; it preserves a western course as far as Indian, a town of about 4000 inhabitants; up to which, when ascended by Lieut. Whitelock, of the Indian navy, in 1836, it was found to be navigable for boats of 20 tons. From hence the river inclines more southward, and has a tortuous course through an alluvial soil to the Persian Gulf; an extensive population have their dwellings on its banks. A little way northward of the city of Shuster, at the bifurcation of the river Karum, is the famous reservoir called Shadarwan, with the bridge of Shapur, and several deep and fine kanat.

TABREEZ or Tauris, in lat. 38° 5′ 10″ N., and long. 47° 17′ 46″ E., is 4500 feet above the sea. It stands in a beautiful plain, and in the midst of a forest of orchards covering an expanse of country which has been estimated at 30 miles in circuit. It is the chief town of the Persian province of Azerbijan, has narrow streets, with houses of a single storey. Its present population has been estimated at 30,000. It stands, however, on the outskirts of the Persian empire, and has been terribly exposed to the attacks of wild frontier tribes. In addition to this, earthquakes have repeatedly shattered it. Water is scarce. Turkish is the language spoken. Zobeida, wife of Harun-ur-Rashid, greatly beautified it. In A.D. 858, and again in 1041, it was destroyed by earthquakes. In 1392 Timur took and sacked it, and since then it has repeatedly changed hands between the Turkoman, Turks, Persians, and Russians. In Ptolemy's Geography Tabreez is written Gabris, a mistake of the gamma for the tau. The European geographer D'Anville supposes it to be identical with Ganzaca or Gaza, the capital of Atropatene, a part of Media, so called from Atropates, who, after the death of Alexander, made himself independent. Hulaku, grandson of Chengiz Khan, made it the capital of Persia.—*MacGr.* iv. p. 579; *Porter's Tr.* i. p. 220; *Mignan's Tr.* p. 333; *Ouseley's Tr.* p. 154.

TABUT, also Tazia, in India the representation of a tomb at the Maharram festival; a bier in the shape of a mausoleum, intended to represent the one at Karballa, erected over the remains of Husain. It consists of a bamboo framework, the interstices being filled up with a nicely clipped network of paper, often pasted on mica. But every variety of materials is employed, from the purest silver to ivory, ebony, sandal-wood, cedar, down to bamboo, also wax and bangles. Within it are placed alams or flags to represent those of Hasan and Husain.—*Herklots.*

TACAMAHACA, a resin obtained in America, Bourbon, and the E. Indies. That of Bourbon and India is produced from Calophyllum calaba; portions of this resin are obtained from Elaphrium tomentosum, Canarium commune, Fagara octandra, and likewise it is supposed from Populus balsamifera. It is imported from America in large oblong masses wrapped in flag leaves. It is of a light-brown colour, very brittle, and easily melted. When pure it has an aromatic smell, between that of lavender and musk; and dissolves completely in alcohol, water having no action on it. Calophyllum calaba is a native of Travancore. It is yellow, translucent, adhesive, of acrid taste, and pleasant aromatic smell.—*Thomson's Chemistry; Faulkner; O'Sh.*

TACCACEÆ, a natural order of perennial herbs, with large tuberous roots. Several species grow in the E. Indies and the Archipelago, T. cristata, integrifolia, lævis, montana, Rafflesiana, maculata, and Brownei.

TACCA PINNATIFIDA. *Linn.* Salep Tacca.

Tacca pinnatifolia, *Gærtn.*

Toja . . . of BANDA.	Surana, . . . SANSK.
Touk-ta, . . . BURM.	Kara-chune, . . . TAG.
Tacca liker, . . MALAY.	Kara karnay, . . TAM.
Chanay kalangu, MALEAL.	Kunda, Chunda, . TEL.

In the Moluccas, Otaheite, and other Society Islands, they make of the meal of the root a nourishing gelatinous cake, like that made of salep. It possesses a considerable degree of acrimony, and requires frequent washing in cold water previous to its being dressed. Dr. Harris in 1800 introduced it into Calcutta. In Travancore, where this root grows to a very large size, it is much eaten by the natives, who mix a sufficient portion of some agreeable acid with it to subdue its natural pungency.—*Roxb.* ii. p. 172; *Voigt; Ainslie.*

TACHYPETES AQUILA, the Attagen aquilus, *Linn.*, or frigate bird, also called the sea-hawk, also man-of-war bird, and the boatswain, has short feet, and cannot swim or dive. It is intermediate between the predaceous sea and land birds, and makes other fishing birds abandon their prey. It is of great endurance, takes great flights, rising to great heights in the air. It ranges through all tropical seas, and hovers over the tropical waters. It has been seen 400 leagues from land, and yet is said to return to land every night. Its expanded pinions measure 14 feet from end to end.—*Bennett.*

TACLABO, of the Philippines, a gigantic oyster. Its shell is used as a font in churches.

TAD. HIND. A broad silver ring worn on the upper arm.

TADHAL. HIND., SIND. Preparations of bhang, poppy seeds, and other similar articles, drunk during the hot weather, and believed to be cooling.

TADMOR or Palmyra, a ruined city, known to the Bedouins as Sulaymania. It is three days' journey from the Euphrates. It attained to great splendour from its position, being for centuries a depot for the merchandise brought from the East Indies and up the Persian Gulf, and which was forwarded from Tadmor into Phœnicia and Asia Minor. Solomon took this town under his protection, erected some fortifications for its defence, and gave it a garrison of his soldiers. During the reign of Mark Antony, its inhabitants were noted for their riches and their commerce with the east. Pliny notices it as a fertile oasis in the desert. It is 337 miles distant from Seleucia on the Tigris, 203 from the sea, and 176 from Damascus. The city attained to its greatest grandeur under the rule of Odenatus and Zenobia, but it was besieged and taken by the emperor Aurelian, and Zenobia was led captive to Rome, where she formed part of the display in his triumph.

Zenobia, widow of Odenatus, had been permittted by Gallienus to participate in the title of Augustus, and had extended her sway over the greater part of Asia Minor, Syria, and Egypt. The army of Aurelian encountered the forces of Zenobia on the banks of the Orontes, not far from Antioch, and drove the Palmyrenes from their position. They retreated to Edessa, where they were a second time defeated in a bloody battle, and compelled to fall back on Palmyra, followed by Aurelian, who invested the city. Zenobia was taken prisoner in attempting to escape into Persia, and, after a long defence, Palmyra fell. Aurelian then set out on his return to Italy, and had reached Byzantium when tidings overtook him that the Palmyrenes had revolted, murdered the governor and Roman garrison, and proclaimed a relation of Zenobia Augustus. He immediately turned back to Palmyra, which he entered unopposed, massacred the whole population, and razed the city to the ground, leaving orders, however, to restore the temple of the sun, which had been pillaged by the soldiers. While yet in Mesopotamia, it became known that Egypt had risen in rebellion, and Aurelian hastened to Alexandria, put the usurper Firmus to death, and then returned to Rome. The temple of the sun at Tadmor is on a grander scale than that at Balbec.

TADPATRI, a town in the Bellary district of the Madras Presidency, built about the 15th century. It contains a pagoda dedicated to Rama, and another to Chinturaya, both of them elaborately decorated with sculptures representing the legendary histories of Rama, Krishna, and others.

TAEL, a coin of China, value about forty pence; 100 or 110 go to a dollar. Also a weight = 1⅓ ounce. The tsau-ping ranges from 94 tael 4 mace to 106 tael 4 mace.

TÆNIS BLECHNOIDES, the tapeworm fern of Tenasserim, so called from the resemblance of the line of sori to a tapeworm.—*Mason.*

TAE-PING, native Chinese, as distinguished from the Tartar ruling race.

TAE-TAN. CHIN. The altar of burnt-offering.

TAFL. When Arabs wish to cool the skin after a journey, they wash with a kind of clay called tafl, or with a thin paste of henna, and then anoint the body with oil or butter.—*Burton's Mecca*, i. p. 255.

TAFSIR. ARAB. Ilm-ut-Tafsir, or the exposition of the Koran. Several Tafsir are known all over the modern world. The smaller one is called Jalalani, or the two Jalal, *i.e.* the joint work of Jalal-us-Siyuti and Jalal-ul-Mahalli, and fills two stout volumes octavo. The larger is the exposition of Al Baizawi, which is supposed to contain the whole subject. Some few divines read Al Khazin.—*Burton's Mecca*, i. p. 156.

TAGAL, dry rice cultivation, equivalent to the Malay muah.

TAGALA, a language of Luzon island.

TAGARA is mentioned in the Periplus as a very great city about ten days' journey to the east of Baroach, producing ordinary linen. Its site is now unknown, but it became the capital of a line of kings of the Rajput family of Silar, with whom the ruler of Kalian, near Bombay, in the 11th century, and of Parnala, near Kolhapur, in the 12th, were proud to boast of their connection.—*Elphin.* p. 223.

TAGETES ERECTA. Genda, HIND. The marigold. Its handsome yellow flower is used by the Hindus in making garlands to decorate their idols, and it may be seen on the gates of churches and houses of Europeans at Christmas and New Year's day. Tagetes lucida, the African marigold, is common in all Indian gardens, and readily grown from seed.

TAGETES PATULA. *Linn.*

Genda, ... BENG.	Gul-jafari, HIND., PERS.
French marigold, ENG.	Banti chettu, . . . TEL.

This marigold is grown in most of the gardens of India, and the flower is worn by Hindu women in their hair.—*Gen. Med. Top.*; *Thomson's Records of Gen. Science*, ix. p. 303; *Riddell.*

TAGHALAQ, a dynasty that ruled in India from A.D. 1321 to 1412. Juna Khan, who took the title of Muhammad Taghalaq, ruled from A.D. 1325 (A.H. 725) to A.D. 20th March 1351 (A.H. 752). His father, Ghaias-ud-Din Taghalaq, was killed by the fall of a wooden pavilion which Juna Khan had erected. Juna Khan was the most eloquent and accomplished prince of his age. He was regular in his devotions, and conformed in his private life to all the moral precepts of his religion. In war he was distinguished for his gallantry and personal activity. He established hospitals and almshouses on a liberal scale, and distributed gifts and pensions to his friends and to men of learning with a profusion never before equalled. But his whole life was passed in the pursuit of visionary schemes, and with a total disregard of the sufferings of his subjects.

He bought off an army of Moghuls, under Timurshin Khan, by an immense contribution; he completed the reduction of the Dekhan; he resolved to conquer Persia, but his immense army dissolved for want of pay, and carried pillage and ruin to every quarter. He assembled 100,000 men to conquer China, but when they had crossed through the Himalaya, they were met by a great army of Chinese, and scarcely a man returned. He tried to introduce paper money with copper tokens, but it failed. More than once he moved out his army over a great tract, as if for a hunt, and ordered it to close in to the centre, and all within were slaughtered like wild beasts. His nephew Muhammad, governing in Malwa, rebelled, but was pursued into the Dekhan, taken, and flayed alive. Malik Bahram, his father's friend, rebelled in the Panjab, but was defeated and slain. Bengal and the Coromandel coast revolted, and were never again subdued. His army was attacked by a pestilence at Warangal. The Hindu kingdoms of Karnata and Telingana were re-established, A.D. 1344 (A.H. 744), and the governor of Sambal, he of Beder, also a Moghul chief, and others in the Dekhan and Gujerat, rebelled. He at length died at Tatta, on the Indus, A.D. 20th March 1351 (A.H. 21 Maharram 752). His tomb stands by itself, surrounded by an artificial lake. Thrice during his reign he changed his capital from Dehli to Deogiri, to which he gave the name of Dowlatabad, and compelled the people to remove. Ibn Batuta visited his court A.D. 1341. At the close of the 14th century, during the minority of Mahmud, the last Taghalaq king, Gujerat, Malwa, and Juanpur proclaimed their independence, the last kingdom being the Ganges country from Bengal to the centre of Oudh. After the invasion of Timur (A.D. 1398), other provinces threw off the yoke, and the territory of Dehli was reduced to a few miles near the capital. New Dehli is still known to the people as Taghalaqabad.—*Elphinstone's India*, pp. 350-414; *Tr. of a Hindu*, ii. p. 214.

TAGHALLA. PERS. A difficult game on horseback. When at full gallop, a small stick is thrown in advance on the ground in such a manner that after several rebounds it rises to the off side of the horse, and is recaught.

TAGHAR. PERS., TURK. A large sack, of which horsemen carry a pair, slung over the horse, to contain provender. According to Timkowski, it contains about 4 poods, or 140 pounds of flour.—*Meninski*; *Yule*, *Cathay*, i. p. 153.

TA-GOUNG, the ancient capital of the Burmese empire.

TAGOW, a valley in the Kohistan of Kābul, now held by the Safi, an Afghan tribe. It contains many ancient remains, and numerous coins have been found in them. See Kohistan.

TAHBAND. HIND. A loongee, an article of dress; a cloth worn on the loins; literally lower. It is in the form of a sheet tied round the waist and covering the legs.

TAHFAT-ul-MAJAHIDIN, written by Shaikh Zain-ul-Abidin, gives an account of the proceedings of the Portuguese against the Muhammadans from A.D. 1498 to 1583.

TAHIR, the principal supporter of Mamun, son of Harun-ur-Rashid, in his claims to the khalifat against his brother Amin. The Tahir dynasty is known as the Tahiridi; they ruled in Khorasan from A.H. 205 (A.D. 820-821) to A.H. 248 (A.D. 862-863). Abdallah, A.D. 830, had Kerman, Seistan, Herat, and Kābul under his sway. Tahir remained in Khorasan virtually independent until they were deposed by the Sofarides.

TAHITI, the Otaheite of Captain Cook, is the largest of the six Georgian islands. Of all the islands in the Pacific, it is second only to Oahu of the Sandwich group. Twenty-four varieties of the bread-fruit tree grow in the island. The Tahili is one of the insignia borne by men of rank.

TAH-KHANA. HIND., PERS. An apartment under ground or not exposed to the sun.

TAHLIL. ARAB. Repetition of the Muhammadan creed. See Takbir.

TAHLIL, a shrill noise made by the women of Arabia. It is a combined motion of the tongue, throat, and hand vibrated rapidly over the mouth. When an Arab or a Kurd hears the tahlil, he almost loses his senses through excitement. It is like a very quick repetition of the word el (or lel, lel, lel, lel). Between Kazerun and Bushahr, the women, chiefly of Arab descent, use it to welcome a stranger as an expression of joy; they use it also during the mournful ceremony of a funeral.—*Ouseley's Tr.* i. 310; *Layard*, *Nineveh*, i. 120.

TAHSIL. HIND. A revenue subdivision of a district presided over by a tahsildar, whose primary

duty is to collect revenue, etc., but who, in the Panjab, is vested with civil and magisterial powers; also the office or building in which the business of a tahsildar is transacted. Tahsildar, a sub-collector or officer in charge of a tahsil.

TAI. Tam. The 10th Tamil month (January —February).

TAI, a highly-esteemed fish of Japanese seas.

TAI, a powerful and ancient Bedouin tribe near Mosul. They came from Yemen to the Tigris. They are rich in live stock, and sell their wool at Mosul. Hatim, an Arab shaikh of this tribe, is famed for his generosity. He lived before Mahomed, but his son Adi accepted Mahomed, and became one of the Companions. It is related of Hatim that the Greek emperor sent a person to ask Hatim for a famous horse. Unaware of the object of the visit, Hatim, to do his guest honour, had slaughtered that very horse.

TAI, the Ahom language of the Tai family, the old conquerors of the valley of Assam. It is now spoken only by a few priests.—*Cust.* See Siam.

TAIFAH. Arab., Pers. A nation, a tribe. The primitive tribe of the Afghans was called Taifah, a word which corresponds with that of nation. The first division of this primitive tribe are called 'firqa,' a tribe; and the subdivision of this, 'tireh' or branches. Taifah, a troop of dancing-girls, a company.—*Bunsen; Chesney; Lath.*

TAIFI of Kābul, etc., unripe apricots dried; called in the Panjab khishta.

TAI-TSUNG, emperor of China, is said to have dismissed three thousand women from the imperial establishment. He was only 23 years of age when he subjugated the empire. He was proclaimed emperor in A.D. 627, and was remarkable for his philosophical toleration, and his numerous relations with foreigners. The reception he gave to Olopen was gracious. In A.D. 629, he had subjugated all the Tartar kings, who with common consent conferred on him the title of Celestial Emperor. He died A.D. 649, at the age of 45, after having reigned 22 years.—*Ch. Anc.* p. 286, *in Yule's Cathay*, i. p. 1; *Huc's Christianity.*

TAI-WU, emperor of China (B.C. 1634). In his reign, ambassadors accompanied by interpreters, and belonging to 76 distinct kingdoms, are reported to have arrived from remote regions at the court of China.

TAI YAONG, the great male star of the Chinese.

TAJ, a crown, a circular head-dress in Central Asia.

TAJAK, an Iranian race met with in largest numbers in the khanate of Bokhara, and in Badakhshan, but many have settled in the towns of Khokand, Khiva, Chinese Tartary, and Afghanistan. Tajak is a term of doubtful origin, rather loosely applied to the settled race in the countries ruled over by the Turk, Uzbak, Hazara, Afghan, and Brahui, where the Turki, Pushtu, Brahui, and Baluchi languages are spoken, but whose vernacular language is Persian. The terms Tajak and Parsivan are indeed used indifferently both in Afghanistan and Turkestan to the race whose vernacular language is Persian.

Tajak is applied by the Uzbak and Armenians to the Iranian population in Khiva, Bokhara, Khorasan and Badakhshan. In Persia proper, the Tajak is so termed in contradistinction to the Iliyat, and throughout Persia the term is applied to a cultivator, to distinguish him from an inhabitant of towns. On the Oxus, a Tajak is used as opposed to an Uzbak; in Afghanistan, as opposed to an Afghan or Hazara. The term for this race in Bokhara is Sart; in Afghanistan, Dehgan; in Baluchistan, Dehwar. On the Kābul river, they are called Kābuli. In Seistan, the mass of the population is Tajak, and many of them dwell in reed huts on the great lake, and live by fishing and fowling. The Tajak of Badakhshan possessed that country before the inroads of the Uzbak and Turk. They are purer Iranian than other Tajak. They are a wild race, living in the little mountain glens, in villages surrounded by gardens. The Tajak of Badakhshan are not so handsome as the men of Chitral, their dress is like that of the Uzbak.

The Tajak of Bokhara have occupied the country from unknown times, and were forcibly converted to Muhammadanism before the close of the 1st century of the Hijira. In Bokhara they are a cowardly, avaricious, untruthful, faithless race; tall, fair men, with black eyes and hair. Khanikoff attributes to the Tajaks the greatest purity of race. Rawlinson allows this distinction to the Vakhani, the wild mountaineers of Badakhshan. In Central Asia itself, the Galtcha are regarded as the oldest Iranians of the land.

The term is from Taj, a crown, the fire-worshipper's head-dress; but the Tajak does not so style himself, and regards the term as derogatory. The Tajak is given to agriculture and trade, but fond of literary pursuits and polish, and it is owing to their preponderance in Bokhara that that city has been raised to the position of the headquarters of Central Asiatic civilisation, for there, from pre-Islamic times, they have continued their previous exertions in mental culture, and, notwithstanding the oppression which they have sustained from a foreign power, have civilised their conquerors. Most of the celebrities in the field of religious knowledge and belles-lettres have been Tajak; and at the present day the most conspicuous of the Mullah and Ishan are Tajak, and the chief men of the Bokhara and Khivâ court are Tajak. Vambery considers the Tajak and Sart identical, but he recognises that in their physiognomic peculiarities the Sart differs greatly from the Tajak, being more slender, with a longer face and a higher forehead; but these changes he attributes to frequent intermarriages between Sart men and Persian slaves. In Central Asia, the warrior, the shepherd, the priest and the layman, youth and old age, equally affect poetry and reciting of tales. The literature of the Muhammadans or settled nations, brought from the south, is filled with exotic metaphor and illustration. In Khiva, Bokhara, and Khokand, the Mullah and Ishan have written much on religious subjects, but their mystical allusions are beyond the reach of the people. The Uzbak, the Turkoman, and Kirghiz esteem music as their highest pleasure, and often break out in song, singing soft minor airs. The Uzbak poetry on religious subjects is exotic, derived from Persian or Arabic sources. The Tartar compositions are tales, and relate to heroic deeds, similar to the romances of Europe.—*Vambery's Bokhara*, pp. 8, 338; *Elphinstone's Caubul; Ferrier's Journey.*

TAJ MAHAL, a mausoleum erected at Agra by the emperor Shah Jahan over the remains of his

wife, Arjamand Banu Begum, Mumtaz Mahal, who died A.D. 1629. It is admitted to be the most beautiful piece of Muhammadan architecture in the world. It is on the bank of the river Jumna, and was begun on her demise, but was not completed until 1648. The materials are red sandstone from Futtehpur Sikri, and white marble from Jeypore. The internal decorations consist of inlaid work of precious stones, agate, and jasper, with which every spandrel or other salient point in the architecture is richly fretted, while brown and violet marbles are freely employed in wreaths, scrolls, and lintels, to relieve the monotony of the white walls. Brother Manrique, who was at Agra at the time, says that the plans and estimates for it were supplied by a Venetian named Verroneo.

In the four chambers, answering to the sides of the building, are inserted in the wall plates of white marble, 6 feet high, upon which flowers, in their natural colours, are wrought in a mosaic of precious stones, the stems being worked in with negro-antico. So elaborate is the workmanship, that to form one flower nearly a hundred different gems have sometimes been used; and so exquisite is the finish, that the eye might almost be deceived.

The mausoleum stands on a raised marble platform, at each of whose corners rises a tall and slender minaret of graceful proportions and exquisite beauty. Beyond the platform stretch two wings, one of which is itself a mosque of great architectural merit. The mausoleum is in the centre of the entire structure; it occupies a square of 186 feet, with the angles deeply truncated so as to form an equal octagon. A great dome swells upwards to nearly two-thirds of a sphere, and tapers at its extremity into a pointed spire crowned by a crescent. Beneath it an enclosure of marble trellis-work surrounds the tombs of the empress and of her husband the emperor. Each corner of the mausoleum is covered by a similar but much smaller dome, erected on a pediment pierced with graceful Saracenic arches. Light is admitted into the interior through a double screen of pierced marble, which tempers the glare of an Indian sky, while its whiteness prevents the mellow effect from degenerating into gloom. In colour and design, the interior of the mausoleum may rank first for purely decorative workmanship.—*Imp. Gaz.; Taylor's Visit*, p. 133; *Schonberg's Tr.* i. p. 183; *Bishop Heber.*

TAK. Colonel Tod supposes the Tak to be the same as the Takshak, Nagbansa, or Serpent race, who act a conspicuous part in the legendary annals of ancient India. It is certain that the Tak preceded the Muhammadan kings of Gujerat before that province was absorbed into the empire of Akbar. The Tak of Gujerat are said by Tod to have adopted Muhammadanism when Wajih-ul-Mulk was converted, and became the founder of the Muhammadan dynasty of Gujerat. From this time the name almost disappeared, but there are Tak amongst the Bhangi, who, though of spurious descent, have evidently preserved the name. There are also Tank Rajputs in the Central Doab and Lower Rohilkhand, whose privileges of intermarriage show them to be of high lineage; and there is a tribe of nearly similar name existing near Jamu, not far from their ancient capital Taksha-sila or Taxila. Tonk Thoda and its lands on the Bunas from remote times had been occupied, perhaps founded, by the Tak race, and hence bore the name of Taksilla-nagar, familiarly Takitpur and Thoda. From the ruins of the Thoda temples, remnants of Takshak architecture, the amateur might speedily fill a portfolio. This tract abounds with romantic scenery at Rajmahal on the Bunas, Gokurn, and many others. Herbert calls Chitore the abode of Taxiles, the ally of Alexander. The Tak were all of the race of Pooru, so that Porus is a generic, not a proper name. Taksilla-nagar has been a large city. The emperor Baber has given the position of the city of Taxiles, west of the Indus.—*Elliot's India*, p. 504; *Tod's Rajasthan*, i. pp. 105, 673, ii. p. 449.

TAKANAGA, about half-way between Mombassa and Melindi. The surrounding country is described as magnificent corn land, while the inhabitants are stated to be industrious and harmless.

TAKAN-KAR, in the Dekhan and Berar, a migratory tribe who make and renew stone handmills. See Patari.

TAKAVI. Arab. Advances to farmers in bad seasons.

TAKBIR. Arab. Repetition of the Muhammadan creed, or of the invocation Allah-u-Akbar.

TAKHT. Hind., Pers. A throne. Takht-nishin, the reigning sovereign.

TAKHT-i-BAHI, in the country of the Yusufzai, an early seat of the Aryans, and called Bahai by the natives, is an isolated, barren hill of no great height, about 8 miles west of Fort Hoti-Mardan in Yusufzai. It forms irregularly three sides of a square, with the open side towards the north-west. The inner slopes of this hill are covered with the still standing shells of lofty buildings, constructed of hewn stones; most of them have at least been of two storeys, the openings for the beams of the upper floor and the windows remaining to attest the fact.

TAKHT-i-JAMSHID, the throne of Jamshid, are the ruins of Persepolis. See Naksh-i-Rustoom.

TAKHT-i-RAWAN. Pers. A light frame fixed on two strong poles like those of a sedan chair. The frame is covered generally with cloth, and has a door, sometimes of lattice-work, at each side; it is carried by two mules, one between the poles before, the other behind. The Kajawah is a kind of cradle, swung one on each side of a mule. —*Ouseley's Tr.* i. p. 251; *Rich's Kurdistan*, i. p. 6.

TAKHT-i-SULAIMAN, a bare high ridge of rugged stone on a plain at the edge of the town of Ush in Khokand.

TAKHT-i-SULAIMAN, a mountain in lat. 34° 4′ 8″ N., and long. 74° 53′ E. in Kashmir, overlooking Srinuggur, standing 1000 feet above the plain. It commands a noble view of the valley and its surrounding ridges of snow-topped peaks. On its crest, 6950 feet above the sea, stands the most ancient building in Kashmir, the temple of Jyeshteswara, which, according to tradition, has existed since B.C. 220, and to have been built by Jasoka, son of Asoka. It is now called Sankaracharya.—*Cole. Ill. Anc. Build. Kashmir; Imp. Gaz.*

TAKHT-i-SULAIMAN, a peak of the Sulaiman mountains between the Panjab and Afghanistan, has two summits, respectively 11,317 and 11,076 feet. Two parallel ridges, distant about 4 miles

from each other, are joined by a plateau of about one mile in breadth, which runs from the northern peak of the western range to the southern peak of the eastern range. The southern peak, on which is 'Solomon's throne,' is very steep and almost inaccessible, while the northern, which is higher, is well wooded. The view obtained is magnificent.

TAKHT-i-TAOS, the famous peacock throne of the emperors of Dehli, was so called from its having the figures of two peacocks with their tails spread. They were so naturally executed in sapphires, rubies, emeralds, pearls, and other precious stones of appropriate colours, as to represent life, and strike every beholder with the most dazzling splendour. The throne itself was 6 feet long by 4 feet broad; it stood on six massive feet, which, with the body, were of solid gold, inlaid with rubies, emeralds, and diamonds. It was surmounted by a canopy of gold supported by twelve pillars, all richly emblazoned with costly gems, and a fringe of pearls ornamented the borders of the canopy.—*Tr. of Hind.* ii. p. 297.

TAKI, an ancient kingdom which at one time embraced the whole of the plains of the Northern Panjab from the Indus to the Beas, and from the foot of the mountains to the junction of the five rivers below Multan. Taki, the Tse-kia of Hiwen Thsang, was the capital, and was within a few miles of Sakala, another ancient capital mentioned in the Mahabharata, the Sangala of Arrian. The Sakala people (the Adraistæ or Arashtra) were the Madra, Aratta, Jarttika, and Bahika, according to the Mahabharata, which says the Bahika were the same as the Takka, from which last is the name of their old capital of Taxila or Takkasila, as known to the Greeks. The Takka race still exist in considerable numbers in the Panjab Hills, and their alphabetical characters, under the designation of Takri or Takni, are used by all the Hindus of Kashmir and the northern mountains, from Simla and Subathu to Kābul and Bamian. Arrian places the Sangala or Sakala on the Ravi, and styles them Adraistæ, from the Sanskrit Arashtra, meaning kingless.

The province of Taki contained several of the most celebrated places of ancient India, some renowned in the wars of Alexander, some famous in Buddhist history, and others known only in the widely-spread traditions of the people. The names of the Doabs were invented by Akbar, by combining the names of the including rivers. Thus Chaj is an abbreviation of Chenab and Jhelum, Rechna of Ravi and Chenab, and Bari of Beas and Ravi.

Sind-Sagur Doab, .	1. Jobnathnagar, or Bhira. 2. Bukephala, or Dilawar.
Chaj Doab, . . .	3. Nikæa, or Mong. 4. Gujerat.
Rechna Doab, . .	5. Salala, or Sangala. 6. Taki, or Asarur. 7. Narsingha, or Ransi. 8. Ammakatis, Ambakapi.
Bari Doab, . . .	9. Lohawar, or Lahor. 10. Kusawar, or Kasur. 11.

In the 7th century, the kingdom of Taki was divided into three provinces, namely, Taki in the north and west, Shorkot in the east, and Multan in the south. The province of Taki comprised the plains of the Panjab lying between the Indus and the Beas, to the north of the Multan district, or the whole of the Chaj Doab, together with the upper portion of the Doabs of Sind-Sagur, Rechna, and Bari. The province of Shorkot comprised the middle portions of these Doabs, and the province of Multan, their lower portions.—*H. Elliot; Cunningham's India*, p. 152.

TAK-i-KESRA, or Arch of Chosroes; the modern Tak-i-Kesra marks the site of the ancient Ctesiphon. The Arabic Tak signifies a vault or arch, and that palace of the Persian Khusru (Chosroes and his descendants) near Baghdad is still called Tak-i-Kesra, the principal chamber being arched or vaulted. To its right are fragments of walls and broken masses of brickwork; to the left, and therefore to the south of the arch, are the remains of vast structures, which are encumbered with heaps of earth. The natives assert that the ruins are of the age of Nimrud, of whom in Scripture it is said, 'And the beginning of his kingdom was Babel and Erech and Accad and Calneh in the land of Shinar.' The Babylonian empire was subverted by Cyrus, who took the capital by turning the course of the Euphrates, and marching his troops along the bed of the river into the centre of the city. After the building of Seleucia and Ctesiphon, Babylon became gradually deserted; and we learn from St. Jerome that the space within the walls was converted by the Parthian kings into a royal hunting park. The town of Hillch is said by the people of the country to be built on the site of Babel; and some gigantic ruins still to be seen in its vicinity are believed to be the remains of that ancient metropolis. Since the days of Alexander, we find four capitals at least built out of her remains,—Seleucia by the Greeks, Ctesiphon by the Parthians, Al Modain by the Persians, and Kuta by the khalifs,—with towns, villages, and caravansaries without number. Ctesiphon's ruins are to be seen on the eastern shore of the Tigris, 18 miles south of Baghdad, and immediately opposite to it the ramparts and fosse of the Grecian city of Seleucia, which afterwards, becoming identified with the former under the name of Coche, they assumed, when thus united, the epithet of Al Modain, or the cities. Ctesiphon was most admirably situated on a sort of peninsula formed by a sudden flexure of the Tigris, which must have embraced the greatest part of the town. Its foundation, however, can hardly be ascribed to any particular person, as it would seem to have increased gradually during a succession of many years from a camp to a city. Pacoras, supposed to be Orodes, king of the Parthians, and contemporary with Anthony, is thought to be the first who surrounded it with walls, and made it the capital of the Parthian empire. It was sacked, together with Seleucia, by the generals of Marcus Aurelius, A.D. 165, and afterwards by the emperor Severus. It became the favourite winter residence of the powerful successors of Artaxerxes, from whom it was taken by Said, the general of the khalif Omar, A.D. 637. The sack of Ctesiphon was followed by its gradual decay, and little now remains but that part of the palace of Chosroes called Tak-i-Kesra, the Arch of Chosroes, a melancholy emblem of the glory of its master. It is seen from afar on the plain, and presents a front of 300 feet in length by 160 in depth, having in its centre a vaulted hall, 106 feet in height to the top of the arch, the span of which is 85 feet. The Ali Capi at Isfahan and the gates of the palace of Dehli sink into insig-

nificance beside the Tak-i-Kesra. The city walls, which appear to have been of very great thickness, may also be traced to a considerable distance on both banks of the river. The names of Seleucia and Ctesiphon are very frequently confounded by the early Christians writers; but the cities stood on opposite sides of the river Tigris, and were built at different periods.—*Mignan's Tr.* pp. 58-73; *Layard, Nineveh*, i. p. 242; *Kinneir's Memoir*, pp. 253, 273; *Porter's Tr.; J. B. Fraser's Tr.* p. 3.

TAKIN is the Budorcas taxicolor of Blyth. It is a large, massive animal, denominated Takin by the Mishmi, and Kin by the Khamti. It is one of the group of bovine antelopes. Its nearest affinity is probably to the gnu; but it has various points of stronger connection with musk oxen, and in a natural system its place would probably be assigned between those two types. The Takin tenants the easternmost part of the Himalaya, adjacent to Yunnan, Sze-chuen, and Kham, more especially in the upper or alpine region, but found also in the central region, though never in the lower region, and it probably extends its range from the Himalaya proper to the proximate mountains of China and Tibet. It is described as of high courage and great ferocity, so that it cannot be taken alive, and is killed by the natives with much trouble and some risk. It is said to be very gregarious, though old males are sometimes found solitary. The Takin is much larger than the Caprine antelope (Thar) of the Himalaya.—*Beng. As. Soc. Jour.*, 1850.

TAKIYAH, a place where darveshes have rooms and perform their devotions. Takia-Nishin is a darvesh or fakir, literally one who sits in a fakir's standing-place.—*Burton's Mecca*, i. p. 124.

TAKKA, a Turanian race, the earliest recorded inhabitants of the Rawal Pindi district, about Deri Shahan or Shah Deri village, in lat. 33° 17′ N., and long. 72° 49′ 15″ E. The Takka originally held all the Sind-Sagur Doab, and from their name General Cunningham derives that of Taxila or Takkasila, which Arrian describes as a large and wealthy city, the most populous between the Indus and the Hydaspes (or Jhelum). The city stood a few miles to the north of the Margala pass, where several mounds still mark the sites of its principal buildings. Alexander rested his army at this point for three days, and was royally entertained by the reigning sovereign. The Chinese Buddhist pilgrim Fa Hian visited Taxila, as a place of peculiar sanctity, about the year 400 A.D. Again, in 630 and 643, his countryman and co-religionist, Hiwen Thsang, also made it a halting-place of his pilgrimage, but found the seat of government removed to Kashmir. The ruins of Taxila consist of six separate portions. The mound of Bir, close to the modern rock-seated village of Deri Shahan, abounds in fragments of brick and pottery, and offers a rich mine of coins and gems for the antiquary. Hatial, a fortified spur of the Margala range, probably formed the ancient citadel; it is enclosed by a ruined wall, and crowned by a large bastion or tower. Sir-Kap presents the appearance of a supplementary fortress, united with the citadel by a wall of circumvallation. Kacha-Kot possibly gave shelter to the elephants and cattle during a siege. Babar-Khana contains the remains of a stupa, which General Cunningham identifies with that of Asoka, mentioned by Hiwen Thsang. Besides all these massive works, a wide expanse, covered by monasteries or other religious building, stretches on every side from the central city to a considerable distance.—*Cunningham; Imp. Gaz.; Dowson.*

TAKKEYAH. ARAB. Amongst Shiah Muhammadans, the outward observance of a faith with which the observer differs. This is a practice with Shiah and Khojah Muhammadans for concealing their religious views; the systematic concealment of everything which concerns their faith, history, customs, etc., the disclosure of which might be attended with unpleasant consequences. — *Burton's Scinde*, p. 412; *Mecca*, i. 124.

TAK-PO or Tak-poni, the country of the Tak. It is marked as Towang or Raj Towang in the ordinary maps, and lies in a line between Lhassa and Jorhat in Assam; enclosed within the great bend of the Brahmaputra, and overlies the N.E. part of Butan. Ken-pong is the province of Kong-bo to the E. of Tak-po.

TAKSHA, son of Bharata, and nephew of Rama Chandra, ruler of Gandhara, who resided at and probably founded Takshasila in the Panjab, the Taxila of Ptolemy.—*Dowson.*

TAKSHAK, according to Tod, are the Turshka race, one of the most extensive and earliest of the races of Higher Asia. They were Scythians; and from the time of the great war of the Mahabharata, when we find them already in the north-west, they extended their conquest in India; and as they had a serpent for their national emblem, they were known as the Takshak or Serpent race. Their chief invasion of India, under their leader Sehesnag, occurred about 600 B.C. They extended their conquests to the Magadha empire of Behar, the throne of which was held by the Nag or Serpent dynasty for ten generations, and a branch of them, the Nagbansi chieftains of Ramgarh, Sirguja, have (Tr. R. A. Soc. ii. p. 563) the lunettes of their serpent ancestor engraved on their signets in proof of their lineage, while the capital and district of Nagpur are called after their name. The Vayu and Matsya Purana books call the Sehesnaga, Kshatra-Bandhee, which may designate, says Wilson (Vishnu Pur. p. 467), an inferior order of the Kshatriya. The great invasion above mentioned was, according to Colonel Tod's supposition, nearly contemporaneous with the appearance of the 23d Buddha, Parisnath, whose symbol is that of the race he accompanied, and hence he is called Suhus Phun, 'the thousand-hooded.' It is supposed that the Brahmans made converts of some powerful branches of these new sectaries, and that it is to them the term Agnicula (fire race) is applied, as signifying their spiritual regeneration by the element of fire. If so, the Takshak must be the progenitors of the most distinguished tribes of Rajputs, yet no vestiges are now to be found of the original name Tak, or Takshak, though it is recorded amongst the thirty-six royal races. Elphinstone opposes the doctrine of a Scythian admixture with the Rajputs, but there is much in Indian history which could not well be explained without the admission of an incorporation of some northern family; and even he is disposed to concede the point with regard to the Jat. Takshak is still one of the Grama Devata, or village gods, of the Bhagulpur district. It was a converted Tak Rajput who established the independent dynasty

of Gujerat. One Takshak race entered Hindustan, led by Sehesnag,from Sehesnag-desa, who ascended the Pandu throne. The dynasty lasted 360 years, and terminated with Bykyat. Another Takshak dynasty of ten princes commenced with Chandragupta Mauri, but lasted only about 137 years. Chandragupta, the supposed opponent of Alexander, was a Mauri, and in the sacred genealogies is declared of the race of Takshak. The ancient inscriptions of the Pramara, of which the Mauri is a principal branch, declare it of the race of Tusta and Takshak, as does that now given from the seat of their power, Chitore. The term Nag, Tak, or Takshak are regarded by Colonel Tod as synonymous. Sehesnag-desa he considers to be synonymous with the abode of the ancient Scythic Tachari of Strabo, the Tak-i-uk of the Chinese, the Tajak of the present day of Turkestan.—*Elphinstone's India; Tod, Rajasthan*, i. p. 35; *Jo. As. S.* vi. p. 677.

TAKSILES. According to the Greeks, the chief who joined with Alexander on his approach to the Indus. Colonel Tod (i. p. 105) thinks the name is Tak-Es, the lord of Tak. The Tak were one of the republican races whom Justin styles banditti (Justin, xv. 4)—'Contractis latronibus Indos ad novitatem regni solicitavit.' But the Arattas, who were the dominant people of the Eastern Panjab, are never mentioned in the Mahabharata without being styled robbers (Lassen, Pentapota Indica)—'Aratti profecto latrones,' and 'Bahici latrones.' The Sanskrit name is Arashtra, the 'kingless,' which is preserved in the Adraistæ of Arrian, who places them on the Ravi. They were the republican defenders of Sangala or Sakala, a fact which points to their Sanskrit name of Arashtra, or 'kingless.' But though their power was then confined to the Eastern Panjab, the people themselves had once spread over the whole country—'Ubi fluvii illi quini . . . ibi sedes sunt Arattorum' (Lassen, Pentapot Indica, from the Mahabharata). They were known by the several names of Bahika, Jarttika, and Takka, of which the last would appear to have been their true appellation, for their old capital of Taxila or Takkasila was known to the Greeks of Alexander, and the people themselves still exist in considerable numbers in the Panjab Hills. The ancient extent of their power is proved by the present prevalence of their alphabetical character, which, under the name of Takri or Takni, is now used by all the Hindus of Kashmir and the northern mountains, from Simla and Subathu to Kābul and Bamian. On these grounds, Major Cunningham identifies the banditti of Justin with the Takka or original inhabitants of the Panjab, and assigns to them the honour of delivering their native land from the thraldom of a foreign yoke. This event occurred most probably about B.C. 316, or shortly after the march of Eudemos to the assistanee of Eumenes. See Tak; Takshak.

TAK-ul-BOSTAN is 1½ parasang from the town of Kermanshah. There are here magnificent bas-reliefs, splendid works of art,executed by command of Bahram IV., the Varanes IV. of Roman history, who lived at the commencement of the fifth century, and who, as it is said, was the founder of Kermanshah.—*Ferrier, Journ.* p. 27.

TAL. HIND. Cymbals used by devotees, and frequently an accompaniment to the taifas or bands of dancing girls of India.

TAL. BHOT. A lake.

TALADDU, Tamil poems, describing the infancy of the gods. They are sung to the gods, when, at annual festivals, they are swung in cradles; mothers also repeat them to their children. Several of them are indelicate, others are mere jingles. One of them, known as Chanchadu to all English mothers in Madras for its endearing epithets,—Chanchadu, baby, Chanchadu, maru paravay Chanchadu; Koil para pavay Chanchadu, mara paravay Chanchadu. Swing, baby, swing! swan-dove, swing! house-pigeon, swing! peacock, euckoo, swing! cassia flower, swing! standing-lamp, swing! temple-dove, swing! swan-parrot, swing! The ordinary Taladdu are nursery rhymes.

TALAING or Mon is the name of the natives of Pegu. The Burmese call them Talaing. The Siamese appellation is Ming-mon. Part of this population dwell in the delta of the Irawadi, Mon being the name used by themselves for the native populations of Pegu, Martaban, Moulmein, and Amherst; and the same names Mon or Talaing are given to the vernaeular language of Pegu. The alphabet, like that of the Thay and Burmese, is of Indian origin, being essentially that of the Pali form of speech, and, like all alphabets of this kind, it embodies a Buddhist literature. The Mon language is quite unintelligible to a Burmese or Siamese. Ta-laing Maha-radza-weng, chronicles of the kings of Pegu.—*Latham's Eth.*

TALAK. ARAB. A divorce. Talak-i-byn, the husband's once saying to his wife, 'I have divorced you.' Talak-e-rujaee, the above repeated twice. Talak-e-mootuluqqa, ditto thrice. The last mentioned is irrevocable, and for reunion there must be remarriage. The husband can recall the other two.

TALAKADU, a town in Mysore, on the left bank of the Cauvery, which runs past it. On one bank of the river stand a number of Saiva temples which have been almost wholly overwhelmed by sand. On the other bank, however, is one, the legend concerning which is thus told by Dr. Buchanan:—'A mendicant came one day to Talakadu, intent on making an offering to Mahadeva or Iswara. The temples dedicated to that idol were, however, so numerous that he was much at a loss how to procure an offering for each, so as to avoid giving offence to any idol that might be omitted. With his whole means, which were very slender, the holy man purchased a bag of peas, and offered one at each temple, but all his peas were expended, and one idol still remained to which no offering had been made. Of course it was highly offended at the preference given to the others by a person of his holiness; and to avoid their insolent boasting, it transported itself across the river, where it now stands at Malingy, while its former companions are buried in sand.' Another legend is, that the last rani of Talkad imprecated a curse upon the city 'that it should become sand,' and threw herself into the Cauvery. At the present day, the buildings of the old city are completely buried beneath hills of sand, stretching nearly a mile in length. These saudhills advance at the rate of about 10 feet a year, and are said to cover about thirty temples, of which the topmost pagodas of two still project above the surface. The temple of Kirti Narayana is occasionally opened, with great labour, suffi-

ciently to allow of access for certain ceremonies. —*Imp. Gaz.*

TALA - KAVERY, source of the Cauvery river, in the Brahmagiri range of the Western Ghats in the Coorg province, lat. 12° 23′ 10″ N., long. 75° 34′ 10″ E. A Hindu temple here is annually frequented by many pilgrims. The chief bathing festival is in Tala-masa (October—November), when, according to local legend, the goddess Ganga herself resorts underground to the all-purifying stream. On this occasion every Coorg family sends a representative, and the total attendance is estimated at 15,000. The temple is endowed by Government with £232 a year.—*Imp. Gaz.*

TALAPOIN. This order of Buddhist ascetics or monks is known in China, Japan, Ceylon, Siam, and Tibet under different names, conveying nearly the same meaning, and expressing either the nature or the object of their profession. Talapoin is from the Pali, Talapat meaning the leaf of a palm tree, but applied by the Siamese to designate the large fan made of palm leaves, set in a slender wooden frame, which the Talapoin carry with them when they go abroad. In Burma these monks are called Phoungye, which means Great Exemplar or Great Glory. The Buddhists in Ceylon, Burma, Siam, Tibet, etc., show great respect to the monks, who, in British and Independent Burma in their monasteries, are the chief educators of the Buddhist population. They are known to the Europeans in China and Japan as the Bonze, which is a corruption of Busso, a Japanese word signifying a devout man, and they are the Lama of Tibet. In Burma, the fraternity is composed, 1st, of young men who have put on the Talapoinic dress, without being considered professed members thereof, or having hitherto passed through a certain ordeal somewhat resembling an ordination; they are called Shin. 2d. Of those who, having lived for a while in the community in a probationary state, are admitted professed members with the ceremonies usually observed on such occasions, whereby the title and character of Talapoin are solemnly conferred; they are denominated Pazin. 3d. Of the heads of each house or community, who have the power to control all inmates of the house. 4th. Of a provincial, whose jurisdiction extends over all the communities spread over the towns and villages of one province or district. 5th. Of a superior general, residing in the capital or its suburbs, called Haia Daw or Great Master, having the general management and direction of all the affairs of the order throughout the empire. In the kingdom of Burma, the keystone of the Talapoinic fabric is the Superlatively Great Master residing in the capital or its suburbs. His jurisdiction extends over all the fraternity within the realm of his Burmese Majesty. In Tibet, the order is found existing in greatest numbers under the fostering care of the Great Lama, or high priest, who combines in his own person the regal as well as the sacerdotal dignity and power. In the city of Lhassa, a pontifical court, an elective sacerdotal chief, and a college of superior Lamas, impart to the order dignity, decency, respectability, and stability, which ensure its continued existence, and more or less extend its influence over its members living in distant countries, ruled by a foreign sovereign. Like the Christian monk, the Talapoin bids a farewell to the world, wears a particular dress, leads a life of community, abstracts himself from all that gives strength to his passions, by embracing a state of voluntary poverty and absolute renunciation of all sensual gratifications. He aims at obtaining, by a strict observance of the law's most sublime precepts, an uncommon degreee of sanctity and perfection. All his time is regulated by the rules of his profession, and devoted to repeating certain formulas of prayers, reading the sacred scriptures, begging alms for his support, etc. These features of exterior resemblance common to institutions of creeds so opposite to each other, have induced several writers to pronounce that Catholicism has borrowed from Buddhism many ceremonies, institutions, and disciplinary regulations. Abbé Remusat, in his memoir entitled Chronological Researches into the Lamaic Hierarchy of Tibet, refuted this. Thus there exists in Japan, China, Cochin - China, amongst the Burmese, Siamese, Singhalese, and Tibetans, a religious order with a distinct and well-marked hierarchy, constitution, and regulations, providing for the admission of members, their occupations, duties, obligations, and their mode of life, forming as it were a compact, solid, and perfect body, that has subsisted almost without change during twenty-five centuries, and survived the destruction of kingdoms, the fall of royal dynasties, and all the confusion and agitation produced by political commotions and revolutions. A Buddhist on becoming a member of this holy society, proposes to keep the law of Buddha in a more perfect manner than his other co-religionists. He intends to observe not only its general ordinances obligatory on every individual, but also its prescriptions of a higher excellency, leading to an uncommon sanctity and perfection, which can be the lot of but a comparatively small number of fervent and resolute persons. He aims at weakening within himself all the evil propensities that give origin and strength to the principle of demerits. By the practice and observance of the highest and sublimest precepts and counsels of the law, he establishes, confirms, and consolidates in his own soul the principle of merits which is to work upon him during the various existences he has as yet to go through, and gradually lead him to that perfection which will qualify him for, and entitle him to, the state of Neiban, the object of the ardent desire and earnest pursuit of every true and genuine disciple of Buddha. The life of the last Buddha, Gautama, his doctrines as well as his example, he purposes to copy with scrupulous fidelity, and to follow with unremitting ardour. Such is the great model that he proposes to himself for imitation. Gautama withdrew from the world, renounced its seducing pleasures and dazzling vanities, curbed his passions under the yoke of restraint, and strove to practise the highest virtues, particularly self-denial, in order to arrive at a state of complete indifference for all that is within or without self, which is, as it were, the threshold of Neiban.—*Jo. Ind. Arch.*, 1850; *The Burman and his Notions.*

TALARI. KARN., TEL. The village bailiff, executioner, and watchman; the office was hereditary.

TALAR-i-TIMUR, the reception hall of Timur, in Samarcand, contains the Kok-tash or coronation stone.—*C. As.* See Samarcand.

TALAUMA HODGSONI. *Hook.* A magnolia

growing on Tonglo, in Sikkim, at an elevation of several thousand feet, also in Nepal and Khassya. It is a large evergreen tree, with very dense foliage, and deep shining leaves 12 to 18 inches long; most of its flowers drop unexpanded from the tree, and diffuse a very aromatic fragrance; they are nearly as large as the fist, the outer leaves purple, the inner pure white. Its wood is grey, very soft and even-grained. T. mutabilis is a shrub of Tenasserim, and T. Rabaniana, *Hooker*, is a large tree of the Khassya Hills and Burma, and its wood is sometimes used for furniture and planking.—*Hook. H. J.* i. p. 163.

TALAWA. SINGH. Open park-like meadows in the lowland forests of Ceylon, varying in extent from one to one thousand acres.

TALC.

Kobub-ul-arz, . . ARAB.	Minirum, . . . SINGH.
Yun-mu, ... CHIN.	Appracum, . TAM., TEL.
Abruk, Abraka, . HIND.	Tulk, ... TURK.

This mineral is a hydrous silicate of magnesia; it occurs crystallized and massive. Massive talc reduced to powder is the boot powder of shoemakers. Talcose slate resembles mica slate. Talcose rocks are the gold rocks of the world, and contain the topaz of Brazil, euclase, and other minerals.—*Eng. Cyc.; Tomlin.*

TALCHER, a small Native State in Orissa, with an area of 399 square miles. Coal was discovered here in 1850 by Mr. Turnbull, an officer of the Madras commissariat, and iron and lime also occur near the Brahmany river; gold likewise is washed for. The coal has been reported as not likely to be profitably worked at present. The Hindu population consists of Chasa, Gaur, and Brahmans. The aborigines are Saora, Gond, Taala, and Pana. See Geology.

TALDANDA, a canal in Orissa, 52 miles in length, connecting the town of Cuttack with the main branch of the Mahanadi river. It is intended both for navigation and irrigation.

TALEGALLA LATHAMI, the brush-turkey of the family of the Megapodes (Megapodidæ). These birds construct a mound of earth, leaves, grass, sand, or other materials capable of generating and retaining heat, in which the eggs are buried by the birds, and carefully watched until the young birds are matured, and issue forth from this eccaleobion of nature, stout, strong, and so fully feathered as to be capable of flight on the second or third day of their existence. On the young bird chipping out of the egg, it remains in the mound for at least twelve hours without making any effort to emerge from it, being at that time almost as deeply covered up by the male as the rest of the eggs. On the second day it comes out, with each of its wing-feathers well developed in a sheath, which soon bursts, but apparently without inclination to use them, its powerful feet giving it ample means of locomotion at once. On the third day the nestling is capable of strong flight.

TALENT OF BABYLON corresponded with a Babylonian cubic foot of water at the mean temperature of that country. A talent was divided into 60 minæ, a mina into 60 shekels. Half a silver shekel was a drachma, and this was the ancestor of the British shilling.

TAL-GHAT. HIND. A geographical term in the Peninsula for the low-lying level ground below the ghats of the eastern and western sides.

TAL-GHAT, in lat. 19° 40′ N., long. 73° 33′ E., in the Dekhan, a principal pass on the road from Bombay to Nasik. Top of the ghat is 1912 feet above the sea, and the top of the hill near the ghat is 3241 feet.

TALI, a name in the Eastern Archipelago for the treble fanam formerly coined at Madras, the 24th part of the Spanish dollar.

TALI, in Peninsular India, a piece of gold tied by the bridegroom round his bride's neck at the time of marriage. It remains till she becomes a widow, and is then removed by the husband's relations. The tali are not all of the same form. In some castes it is a small round plate of gold, without stamp or figure on it; in others it is a tiger's tooth; others are hammered by the goldsmith without any precise form. Many castes have them flat and oval, of two small pieces which separate, and with hieroglyphics representing the god Puliyar or the lingam.—*Sonnerat's Voyage*, p. 92. See Mangala Sutra.

TALIB. PERS. An inquirer or wisher, a pupil, a seeker, from Talb. Talib-ul-Ilm, a learner, a pupil.

TALIF-i-SHARIF, a Persian work on medicine, translated by Dr. Playfair.

TA-LI-FU, a lake in China, 7090 feet above the sea.

TALIKAN, a city of Tukharistan between Balkh and Merv, three days' journey from the latter. There is another town of the same name east of Kunduz. The Talikan of Tukharistan is the one most frequently mentioned, and it is generally coupled with Hariab, a city of Guzjan, west of the Oxus, three days' journey from Talikan, three from Shaburkan, and six from Balkh. Yule, however, says there were, in fact, three places so called, that in Badakhshan, that in Khorasan, and a third in Dailam, the hill country adjoining Kazbin.—*Yule, Cathay*, i. p. 253; *Elphinstone's Caubul*, ii. 221, 240.

TALIKOT, a town in the Kaladgi district of the Bombay Presidency, 60 miles N.E. of Kaladgi town, in lat. 16° 28′ 10″ N., long. 76° 21′ 10″ E. A battle was fought here on the 25th January 1565, in which the Hindu empire of Vijayanagar was overthrown by a confederacy of the Muhammadan kings of the Dekhan, the Adal Shahi of Bijapur, the Kutub Shahi of Beder, and the Nizam Shahi of Ahmadnaggur. The Hindu power in Southern India was completely broken by the battle; but within a hundred years a great Hindu revival commenced, which, under the form of the Mahratta Confederacy, was destined to break up the Moghul empire in India.—*Imp. Gaz.*

TALI-NANAS. MALAY. Cordage material obtained from the leaf of the pine-apple plant. Tali Pinding, a waistbelt worn by the natives of the Archipelago. They are manufactured by the Arafura of New Guinea or Seram, who manufacture various textile fabrics from native fibres, as a band or cincture for fastening the sarong of women. Tali Rama, MALAY., China grass. Talitaras, a fibre of Singapore, made into sewing twine.

TALIPOT or Fan Palm, Corypha umbraculifera, belongs to a genus of plants of the order Cocoaceæ, and is met with in Ceylon, Malabar, Java, and the Moluccas. Its large leaves (fronds) are used for thatching, basket-making, and other handy work. The leaves are also used for native books, like the palmyra leaves, and are written on with

an iron style, and for making the huge fans with the petioles attached. It has a stem of 50 to 70 feet high, with large fan-shaped plaited leaves composed of some 40 to 50 segments. The Corypha umbraculifera is known in Tamil as the Coddapanna, and in Hindustani as tali or tadi tree, tali-pat meaning leaf of the tali. The seeds or nuts are made into ornaments, and sometimes, when well polished and coloured red, pass for coral. The trunk furnishes a species of pith which is pounded into flour and baked into cakes, and eaten with much relish by some natives.—*Seeman; Shortt.*

TALISMAN. Talsam, ARAB. Talismans or the doctrine of signatures took their origin from a belief that medicinal substances bore upon their external surfaces signs of the properties or virtues they possessed. It is a term from the Arabic Talsam, and is applied to mystical characters, and also to seals, images, etc., upon which such characters are engraved or inscribed. These characters are astrological, or of some other mystical kind. The purposes for which Talsams are contrived are various,—the preserving from enchantment, or from a particular accident, or from a variety of evils; another protects a treasure over which it is deposited.

TALKH. ARAB. Bitter; also of tobacco, etc., pungent, strong. Badam-i-talkh, Amygdalus amara. Kust talkh or Kut talkh, HIND., Aucklaudia costus.

TALLI-TANDRI. TEL. Parents, father and mother; a respectful appellation for a superior.

The fat of horned cattle and sheep. The tallow-gourd, Benincasa cerifera. Tallow tree, Dryandra cordata. Tallow tree of China is the Stillingia sebifera, the Excœcaria sebifera, Sapium sebiferum, Croton sebiferum of some authors. Its seeds are covered with a waxy substance, used in China for making candles. It has been introduced into the Doons of the N.W. Provinces and Kohistan Panjab. Stillingia sebifera is cultivated extensively in China, chiefly for the sake of the white sebaceous matter (vegetable tallow) enveloping the seeds. The tallow is separated by steaming the seeds in tubs with convex open wicker bottoms, placed over caldrons of boiling water. With trifling exceptions, the candles used by the Chinese in their religious ceremonies are made, by dipping, of the tallow of the Stillingia. The vegetable tallow of Borneo is said to be extracted from the nut of various species of Dipterocarpus, and melted in a gourd shell.

TALMUD, a historical and religious book of the Jews. In its two divisions of Halacha and Haggadah, it sums up the intellectual, social, and religious life of the Jews during a period of nearly a thousand years.

TALPA MICROURA. *Hodgson.*

T. cryptura, *Blyth.*	Short-tailed mole, ENG.
Biyu kantyem, . BHOT.	Pariam, . . . LEPCH.

The mole of Nepal and Darjeeling is $4\frac{3}{4}$ to 5 inches long, with a tail 3-16ths or less. The Talpidæ family belong to the order Insectivora. The species of restricted Talpa amount to five in number, viz. T. Europæa, *L.*, of Europe generally; T. cœca, *Savi*, of Italy and Greece; T. moogura, *Temminck*, of Japan; and T. microura, *Hodgson*, of Nepal, Sikkim, Bhutan, and the mountains of Assam. The fifth is T. leucura, of Cherrapuuji, N. of Sylhet. It differs little from T. microura, except that the tail is considerably more developed, though much less so than in T. Europæa; and the tail is clad and tufted with white hairs, whence the name T. leucura. This animal also would seem hardly to attain the size of T. microura.

Talpa microura fur is a deep slaty blue, with canescent gloss.—*Journ. Ben. As. Soc.*, 1850; *Jerdon, Mammals; Blyth.*

TALPUR, a dynastic title of the last amirs of Sind, descendants from Mir Bahram Khan, chief of the Baluch tribe of Talpur, who succeeded Abdul Nabi of the Kalora dynasty in 1788. Their greatness arose of Futteh Ali Khan. The Talpur were an inferior hill clan of Baluch. Even when they became rulers of Sind, Muhammad Khan, the ruler of Kalat, was ready to go to war with amir Gholam Ali, Talpur, because the latter had the audacity to propose to a female of his family. The Talpur dynasty of Sind were replaced by the British in 1845. Talpur means date-tree town.

TALUK or Talukah. HIND. In India, a revenue district, more correctly written Taluqah. It has as its immediate superintendent a revenue officer styled a talukdar.

Talukdar, in Upper India, a large landholder possessing generally villages of which he is the sole owner, and other villages in which there are subordinate holders, and of which he is only the superior proprietor. In the Lower Provinces, the zamindar is the superior proprietor, and the talukdars are subordinate proprietors.

Talukdari, a form of land settlement adopted in Oudh, so framed as to secure village occupants from extortion, and exacting certain duties and responsibilities from the talukdars, who were confirmed in possession of everything they held at the time of the annexation in February 1856. In 1859 they received sunnuds or title-deeds.

TALUT and Jalut, Saul and Goliath. See Alliteration.

TALWAR. HIND. A sword. A wooden scythe used for cutting down plants for barilla burning. The ordinary curved sword has a slight curve and has a side guard.

TALWAR, a tribe in Mysore, who in the times of the Polygars contributed annually a ram and a pot of ghi.—*W.*

TAMAKU. HIND. Tobacco, Nicotiana.

Tamaku Kashmiri, Rhododendron campanulatum.
Ban tamaku, Verbascum thapsus.
Chilassi tamaku, Nicotiana rustica.
Gidar tamaku, Heliotropium Europæum, Verbascum thapsus.
Kakkar tamaku, Kalkatti tamaku, Kandahari tamaku, Nicotiana rustica.

TAMANGGUNG, at a Malay court the minister of war and police.

TAMARICACEÆ, the tamarisk tribe of plants in the E. Indies, comprise the genera Tamarix, Trichaurus, and Myricaria. Tamarix dioica, *Roxb.*, and T. Indica, grow in India even in saline soil, and are good for protecting banks. Roxburgh describes the Tamarix Indica, identical with T. gallica, and T. dioica (jhou). T. furas occurs in the drier

parts of the Doab, and in the neighbourhood of Delhi, where it is called Asul or Atul as in Arabia. The other species are also found in the Peninsula. Tamarices are bitter and astringent. In Denmark they are used instead of hops for making beer, and in some parts of Europe as a tonic remedy. Galls are formed on the T. furas, and are called Sumrut-al-asul, also Chotee mue. Those on the jhou are named Sumrut-ul-turfa, or Buree mue. T. gallica of Mount Sinai is at certain seasons covered with a kind of sugary exudation, said by Ehrenberg to be produced by the puncture of the Coccus maniparus. It is called Arabian manna, or Gazanjabin; it is unknown in the bazars of Bengal, and is not produced in India.—*Roxb.; Royle*, pp. 213, 214; *Voigt; O'Sh.* p. 332.

TAMARIND.

Tamar-ul-Hind, . ARAB.	Tamarindus, . . LAT.
Ma-gye, ... BURM.	Neghka, . . . MALAY.

Kamal, ... JAV.	Demer Hindi, . . TURK.

The tamarind tree, Tamarindus Indica, grows in the East and West Indies, the Eastern Islands, Arabia, and Egypt. It attains the height of 30 or 40 feet. Tamarind pods are from 3 to 6 inches long, and more or less curved. When ripe they consist of a dry, brittle, brown external shell, within which is the useful part, an acidulous, sweet, reddish-brown pulp penetrated by strong fibres. Within this is a thin membranous coat enclosing the oval brown seeds. The pulp, as analyzed by Vauquelin, contains citric acid, 9·40; tartaric acid, 1·55; malic acid, 0·45; bitartrate of potash, 3·25; sugar, 12·5; gum, 4·7; pectin, 6·25; parenchyma, 34·35; and water, 27·55. The fruit is used largely by the natives of India and Persia in making a sherbet or cooling drink, and also as a necessary ingredient in curries, to which it communicates a tartish flavour. The pulp allays thirst, is nutritive and refrigerant, and in full dose laxative. An infusion forms a very pleasant cooling drink, as does also tamarind whey. Infusion of senna with tamarinds is a useful laxative. Tamarinds are exported from India, packed in tins with or without syrup. Several varieties are distinguished, such as the red tamarind, the sweet tamarind, obtained from Persia; the dark tamarind, produced in Madura, one of the Eastern Islands; and the common or green tamarind, which is extensively produced throughout India. The red-coloured tamarinds are found in Gujerat, at Kheir on the Godavery, at Panderpur on the Kistna, and there are four trees in Madras. It is the best of the three Indian varieties. In preserving it for export, when the fruit is ripe, the shell or epicarp is removed, and the fruit placed in layers in a cask, boiling water being then poured over it. Another plan is to put alternate layers of tamarinds and powdered sugar in a stone jar. Tamarinds are exported both raw and preserved. Moochee bookbinders prepare a useful paste of the tamarind stones, which is called Pasay, TAM., by first taking off the brown skin and then boiling them down till they become glutinous. Tamarind seed powder, boiled into a paste with thin glue, forms one of the strongest wood cements. Tamarind seeds yield an oil of a pale bright-coloured fluid, and extremely light.—*Mad. Exh. Jur. Rep.; Ains.; Royle; M'C.; Faulk.; Tomlinson.*

TAMARIND FISH of Calcutta is made with the begti, Lates calcarifer, one of the Percidæ, preserved with vinegar and tamarind fruit. Lates calcarifer occurs in all the seas of the southern coasts of Asia, and is common in estuaries. It is greatly prized by Europeans. It is also made with white pomfret cut in transverse slices preserved in tamarinds. It is much prized as a relish. The begti is largely eaten in Bengal by Europeans.

TAMARINDUS INDICA. *Linn.*

T. occidentalis, *Gærtn.* | T. officinalis, *Hooker.*

This is a very handsome tree, of slow growth, but attains a great size, with a very extensive shady head. It is met with in gardens, near old temples, and in avenues, where it has been planted. It is a graceful avenue tree, and grows throughout Hindustan, in the Peninsulas, in Burma and the Archipelago, but is rare in the Panjab.

In Burma it rises to 90 or 100 feet high, and 12 to 15 in circumference. The branches extend widely, with a dense foliage of bright green composite leaves, very much like those of the sensitive plant. The flowers are in clusters of a beautiful yellow, veined with red. The pods hang like beans, are longer, darker, and richer than the tamarind of the West Indies, and are preserved without the addition of syrup.

Its timber is remarkably heavy and hard, much like lignum vitæ, and is used generally for shivers in blocks, and such purposes. It is dark-coloured and durable, is often finely veined, the heart-wood of old trees resembling ebony. The tree is apt to be hollow in the centre, which prevents large slabs being obtained. It is used in the manufacture of sugar and oil mills, naves, mallets, rice-pounders, and for furniture and building purposes, but silica is often deposited in its stem, and carpenters are very unwilling to work it up, on account of the great damage it causes to the best tempered tools. It is valuable for brick and tile burning. The trees grow to about 7 or 8 feet in diameter at the butt, while that of the body of the tree is about 5 feet. This part is seldom more than 10 feet long when it branches out into curves of various dimensions. Several large trees of the West Indian red tamarind grow in the south of India, and the Editor largely distributed the seeds through the Madras Board of Revenue. The tree is valuable from the quantity of fruit it produces, which is used medicinally in cookery. In India, the shadow of the tamarind tree is deemed particularly injurious to vegetation, and for people to reside beneath this tree is supposed, in India, to be unhealthy; but in the northern part of the island of Ceylon, people build their houses beneath the tamarind tree as the coolest site.

TAMARIX ARTICULATA. *Vahl.*

Faras, ... PANJ. | Arelei, ... SIND.

A moderate-sized tree of the Panjab and Sind, which grows very rapidly, often 10 to 12 feet in girth, and 60 or 70 feet high; 60 lbs. per cubic foot. It is used for Persian wheels, small ornaments, and for charcoal. The bark and galls are used in tanning, and the galls also as a mordant. —*Stewart.*

TAMARIX CHINENSIS, *Tatarinov*, is the San-chun-liu and Chih-ching of the Chinese.

TAMARIX DIOICA. *Roxb.*

Lal-jhao, ... HIND.	Ghazlei, Pilchi, . PANJ.
Rgelta, . . . LADAKH.	Rukh, Koan, . . ,,
Jhao, Lai, Kachlei, PANJ.	

Very common in Ajmir in the beds of rivers and near the great rivers of the Panjab. It is a very graceful shrub, with numerous small rose-coloured flowers in terminal drooping spikes. The Muki or tamarisk manna, used in confectionery, is said to be secreted by this plant in the cold weather. It grows up to 2500 feet in saline soil. It is a good plant for binding banks. The twigs are used for basket-making.—*Von Mueller; Roxb.* ii. p. 101; *Drs. Riddell, J. L. Stewart.*

TAMARIX ELEGANS, the Myricara elegans, *Royle.* It attains a height of 20 feet.—*Von Mueller.*

TAMARIX GALLICA. *Linn.*

T. Indica, *Roxb.*	T. gallica, *var.* T. Indica, *Ehrenb.*
T. epacroides, *Sm.*

Exudation—Gazanjabin.	*Galls*—Sumrut-ul-turfa, Ma-in, Buree mue, HIND.

The Indian tamarisk is a glabrous greenish plant with stiff twiggy branches, of considerable size in the Ajmir district, but the wood is there very inferior. In the Dekhan it grows abundantly as a small tree or shrub in the beds of many rivers, and affords shelter for all sorts of game. It is subject to the attacks of a cynips, which produces galls that possess astringent properties, and they are on this account used in medicine by the native doctors of India. The same property also renders them valuable in dyeing; baskets are made of the twigs, which are also used medicinally as an astringent. The galls are largely gathered in the Jhang, Gugaira, and Muzaffargurh districts, as also in Dehra Ghazi Khan district, where as much as 500 maunds are annually collected. The manna of Mount Sinai is produced from a variety of this plant, and consists of a pure sugar. It grows up to 10,600 feet on the Shayok in Ladakh, reaches 3 feet in girth and 30 high, and furnishes much of the steamer fuel in the Southern Panjab and in Sind; the wood is coarse-grained and often very red, and is used for Persian wheels, in turning, etc. In Ladakh, where wood is scarce, this is used for the handles of the sticks for polo or hockey on horseback. It adapts itself in the most extraordinary manner to the most diverse localities. It will grow alike in water and the driest soil, also in saline ground, and ascends the Himalayas to 11,000 feet. It is readily multiplied from cuttings, which strike root as easily as a willow, and push forth stems with unusual vigour. Hence it is one of the most eligible bushes for planting on coast sand to stay its movements, or for lining embankments. It furnishes material for a superior charcoal.—*Stewart; Royle; Roxb.* ii. p. 100; *Von Mueller.*

TAMARIX GERMANICA, *Linn.*, grows in Europe, W. Asia, and up to 15,000 feet in the Himalaya. It is useful as a sand-binding plant, particularly in moist places, also for solidifying precipitous river banks.—*Von Mueller.*

TAMBALA-VADU. TEL. A priest in a temple of Siva.

TAMBAN, also Tamburan. MALEAL. A prince, a raja, the title of the Cochin raja. Tamburati, a woman of the royal family of Malabar.

TAMBA PATRA. HIND. A copperplate grant or deed of gift.

TAMBI, Muhammadans of Ceylon, who excel as masons; perhaps the Tamil for brother.

TAMBIRA, in the Ahmadnaggur district, is a blight or disease occasionally attacking wheat, in which the grain assumes a copper colour and withers away.

TAMBOLI, a Hindu tribe of the Benares district. They grow the betel leaf, which, as also betel-nut, they sell. The betel leaf is among Hindus equivalent to a glass of wine after dinner among Europeans; it is also given in solemn asseverations or promises.

TAMBU, in Fiji, forbidden; the taboo of other islands.

TAMBUR. HIND. A drum of the European fashion.

TAMBURA, a sort of guitar. Tambura chherwala, a musical instrument.

TA-MEIN or Te-mi-ne. BURM. A garment or cloth in use with the Burmese women, broad enough to surround the waist, and slightly overlap there, where it is fastened by one end being tucked under the other, and it extends to the feet. It opens at every step taken by the wearer, exposing the greater part of one leg. It is the petticoat of the Burmese women. It is of cotton and silk with a zigzag pattern, the silken portion forming the skirt.—*Winter's Burma*, p. 56.

TAMHID. ARAB. A section of the Muhammadan creed. See Kalamah.

TAMIL, the name of a language and of a region where that tongue is in general use. The Tamil land is the same with Dravira, and comprehends all the districts in which that language is spoken, enclosing a portion of the eastern parts of the Peninsula. When the Dravira dominion was confined to the Chola, Pandya, and Chera principalities, its northern boundary was the Palar river. When the Chola princes colonized Tondamandala, it was extended westward to Tripati, in a line with Pulicat. Tamil was the language of three ancient dynasties of whom we have record, —the Chola of Tanjore and Combaconum, who were settled on or near the Cauvery and Colerun rivers, and who, as some suppose, gave their names to the Coromandel or Cholamandel coast; the Pandya, whose capital is now occupied by the inhabitants of Madura; and the Chera, who ruled at Kerala on the Malabar coast. Dravidian is a term recently applied to the vernacular tongues of the great majority of the inhabitants of Southern India. With the exception of Orissa, and of those districts of Western India and the Dekhan where Gujerati and the Mahrati are spoken, the whole of the peninsular portion of India, from the Vindhya mountains and the river Nerbadda to Cape Comorin, from the earliest period, appears to have been peopled by different branches of one and the same race, speaking different dialects of one and the same language; and scattered offshoots from the same stem may be traced still farther north and west, as far as the Rajmahal Hills and the mountain fastnesses of Baluchistan. Dr. Caldwell, excluding the Rajmahal, the Uraon, and the Brahui, designates as Dravidian nine idioms current in Southern India, viz. Tamil, Telugu, Canarese, Malealam, Tulu, Toda, Kota, Gond,

Khond or Kund or Ku; and it has been remarked that in the cultivated languages of the Dravidian tongue, Sanskrit words are not at all, or but very rarely employed.

Tamil is called Aravam by the Dekhan Muhammadans, and the Teling and Canarese races. The Tamil was formerly called by Europeans the Malabar language, but even the educated classes write it erroneously as Tamul. It was the earliest developed of all the Dravidian idioms, is the most copious, and contains the largest portion of indubitably ancient forms. It includes two dialects, the classical and colloquial, the ancient and the modern, called respectively the Shen-Tamil and the Kodun-Tamil, which so widely differ that they may almost be regarded as different languages. The Tamil language is spoken throughout the vast plain of the Carnatic or country below the ghats, the country termed the Carnatic Paen Ghat by the late Muhammadan sovereigns and by the British who have succeeded them, from Cape Comorin to Pulicat, and from the Bay of Bengal to the Eastern Ghats or eastern mountain range of Southern India. It is also spoken in the southern part of the Travancore country, on the side of the Western Ghats, from Cape Comorin to the neighbourhood of Trevandrum; and in the northern and north-western parts of Ceylon, where Tamilar formed settlements prior to the Christian era, and from whence they have gradually thrust out the Singhalese.

The Tamil race is the least scrupulous or superstitious, and the most enterprising and persevering, of all the Hindu people, and swarm wherever money is to be made, or wherever a more apathetic or a more aristocratic people is waiting to be pushed aside. The majority of the Hindus found in Pegu, Penang, Singapore, and other places in the east, where they are known as Klings, are Tamilians. All throughout Ceylon, the coolies in the coffee plantations are Tamilians; the majority of the money-making classes, even in Colombo, are Tamilians; and ere long the Tamilians will have excluded the Singhalese from almost every office of profit and trust in their own island. The majority of the domestic servants, and of the camp followers in the Madras Presidency, and along with its army, are Tamilians. The half of its army are Tamilians; and the coolies who emigrate so largely to the Mauritius and the West India Islands, were mostly of the Tamil people. Including the Tamil people who are residing in the military cantonments and distant colonies, and those in South Travancore, and excluding all Northern Ceylon, the people who, in 1881, speak the Tamil language are 13,068,279.

Ajmir,	1	Madras,	12,382,220
Assam,	242	N.W. Provinces,	477
Bengal,	1,623	Baroda,	46
Berar,	792	Central India,	428
Bombay,	8,971	Cochin,	37,256
Burma,	35,058	Hyderabad,	16,340

Coorg,	5,025	Travancore,	439,565

The Tamil people are, generally speaking, a dark-coloured and short-statured race, energetic, fiery, quarrelsome, but not vindictive. Most of them have embraced Brahmanism, but the non-Brahmanical and fragmentary tribes have a spirit and a devil worship, and worship the local deities called Ammun. Amongst the poorer of the Tamil people we find remnants of a belief in spirits, a veneration of black stones, a Shamanite diabolatry, indications of their earliest mythology. Tamil and Malealam writing characters were originally modifications of the ancient Tibetan. The Dravidian languages are written in alphabets derived from some prototype of Devanagari, scarcely from the actual Devanagiri. Tamil is written from left to right. Tamil labourers arrived in Ceylon in 1858 to the number of 96,000, and the number who took their departure was 50,000. Amongst the Tamil people, the Adima or Adimai were predial slaves attached hereditarily to the land, and only transferable with it. The Vellala are a Sudra race of Hindus who speak Tamil. They assume the honorific designation of Mudali or (pl.) Mudliar, meaning first man, and are chiefly farmers, but many of them are soldiers. Another branch of the Tamil race is the I'dyan, who take the honorific appellation of Pillai, meaning sons. These are of the herdsman race, and are less advanced in education than the Vellalar. Amongst the broken tribes in the Tamil country, the more prominent are the Pariah, and the Chakili, the Yenady, the Kadir, the Malai Arisar, and others. The Chakkili is a currier, a tanner, shoemaker,—the village shoemaker, known to Europeans as a chuckler,—one of the humble races of India, and corresponds to the Mhang or Mang of the Mahratta country, and the Chamar of N.W. India. They are held in great disesteem, and are the public executioners. The condition of the tanners is similar in Japan, where they are restricted to a particular locality, and are similarly employed.—*Census of* 1881; *Elphinstone's India*, i. p. 410; *Tennent; Wilson.*

TAMLUK, an ancient seaport town in the Midnapur province of Bengal. The district has an area of 621 square miles, and a population of about half a million. Its raja is of the Kaibartta or fisherman race, descendant of Kalu Bhuya, who succeeded to the State on the death of the last Rajput Peacock dynasty. Tamluk town is now 60 miles from the sea, but in the 4th century, Fa Hian sailed from here to Ceylon. In A.D. 635 it was visited by Hiwen Thsang, and was then washed by the ocean. It is at the mouth of the Ganges, well known between the 4th and 12th centuries. The people at the western mouth of the Ganges are called Damalipta or Tamalipta. Its fine temple was respected in the 18th century by the Mahratta hordes. It was long the site of an important salt manufactory when that was monopolized by Government. Although originally a centre of Buddhism, it has continued to be a place of great sanctity.

TA-MO, styled Boohi Dharma, a Buddhist missionary from India to China in the 6th century A.D.

TAMO GUNA. SANSK. The quality of darkness, the source of inertness and ignorance. See Guna.

TAMPI is a title used as a suffix in Travancore by the sons of princes, by Sudra wives, likewise by other male members of those families, and also by the members of certain other families who had received honours from sovereigns in ancient times.

TAMPING. MALAY. A package; sago tamping is baled sago, wrapped in the leaves of the pandanus.

TAMRA, in Siam, a book on house-building. On this subject there are elaborate text-books,

both in Burmese and Siamese. The Burman book contains the omens and signs with regard to all possible events and circumstances, and not merely to the process of building. The Siamese Tamra or Manual of House-building is more systematic. The theories in both works are based on and elaborated from the Shastras which record the customs of the Brahmans. The first thing the house-builder has to do is to find out the situation of the great dragon that encircles the earth with his body, like the Midgard serpent of northern mythology. This must be ascertained before operations are begun, for it will have a great influence, not only on the time of beginning the building, but on the way in which the foundations must be dug and the method of hoisting the posts into position. This the Burmese have recorded for them in a rhyme which every schoolboy can repeat. The Siamese are not less alive to the necessity of accurate information on the subject, and it is fully set out in the Tamra.

TAMRANAGARA or Cambat, metropolis of the Bala Raya in the 5th century.—*As. Res.* ix. p. 194.

TAMRAPARNI or Tambrapūrni, also called Porunnei, a small river of Tinnevelly, in S. India, sacred to the Hindus. It is the Σωλην of the Greeks. It rises in the Western Ghats, in lat. 8° 52′ N., long. 77° 51′ E., and runs eastwards to the sea; length 70 miles. See Striviguntum.

TAMRAPARNI, a small sea-coast town in Ceylon, from which the island was called Taprobane by Onesocritus, an officer of Alexander's army who accompanied Megasthenes. Colonel Yule (Cathay, i. clxxvi.) mentions as a legend that 'at the spot where the seven hundred men, with the king at their head, exhausted by (sea) sickness, and faint from weakness, had landed out of the vessel, supporting themselves on the palms of their hands pressed on the ground, they set themselves down.' Hence to them the name of Tambapanniyo (copper-palmed, from the colour of the soil).

TAMUNGONG, the title of the ruler of Johore.

TAN. Hind. The human body. Tan, man; dhan, body and soul and wealth. See Rudra Sampradayi; Vallabhacharya.

TAN, a handsomely-marked large snake of China, which is said not to be eaten, but its liver is prized as a medicine, and its skin is used to cover the San Heen or three-stringed guitar.

TAN, a boatman race of China who dwell in their boats. They are in all the Chinese rivers, similar to the Yao and Man tribes. The physique of the boat women is vastly superior to that of the house population, who designate them Suee ki or water-fowl.

TANA. Malay. A continent, a land.

TANACETUM TENUIFOLIUM. *Jacq.* The tansy, grows at 10,000 feet on the Sutlej, and is useful for flavouring puddings. Eight species occur in the Himalaya.—*Stewart.*

TANACETUM VULGARIS, *var.* crispum. The young leaves cut small are used in colouring and flavouring puddings, omelets, cakes, etc. The curled variety, T. crispum, used in garnishing, succeeds on the plains of India, and grows freely in any good soil.—*Jaffrey.*

TANBORA or Timboro, a volcano in the island of Sumbawa, in lat. 80° 20′ S., and long. 118° E. Its summit is between 5000 and 7000 feet above the sea, which washes the base of the hill for three-fourths of its extent. From the 5th to the 11th April 1815, the mountain emitted dust and frequent loud sounds. The dust caused a haziness in the atmosphere at places many degrees distant from Timboro, and the sounds were heard equally far off. Between 7 A.M. of the 11th and 12th the dust fell in such quantities at Bhima, 60 miles off, as to produce a total darkness. Pumice-stone of a brown colour was thrown out from the crater in immense quantities. Great fields of it, with scorched trunks and branches of trees, were found floating in the neighbouring sea, and much of these were thrown up on the shores of Bali, Java, Madura, Celebes, etc.

The sea made a permanent inroad at the town of Timboro, which it covered to the depth of 3 fathoms. Thousands of the people, on the peninsula formed by the mountain, and their houses, were destroyed. At Samanap, in long. 113° 57′ E., the explosions were heard for several days, and the dust caused a total darkness between 5 P.M. of the 11th and 11 A.M. of the 12th. At Somabaya, in long. 112° 58′ E., the darkness was complete between 6 P.M. of the 11th and 4 P.M. of the 12th; and the effects of the eruption were felt at Batavia, in long. 106° 51′ E., at Java Head, in long. 105° 11′ E., at Mouto, on the island of Barca, and at Bencoolen in Sumatra, in lat. 3° 48′ S., and long. 102° 28′ E., and at Macassar, in lat. 5° 10′ S., and long. 119° 88′ E. At Ternate, in lat. 0° 19′ N., and long. 127° 29′ E., about noon on the 11th April, the explosions were distinctly heard. —*Mr. G. A. Stewart in Jameson's Ed. Journ.*, 1820, iii. p. 389.

TANDA. Hind. A Binjara encampment. A caravan for transportation of goods on bullocks, bulls, and cows. A troop or company of traders or travellers.

TANDALI, Tandiani or Tundiani, nearly 17 miles from Abbotabad in the Hindu Kush, Hazara district, a sanatorium at a height of 9000 feet.

TANDAVA, a wild frantic dance of Siva over the destruction of the world, said to be danced by Siva occasionally for Parvati's pleasure. Tandava-talika, a name of Nandi, because he accompanies Siva in the Tandava dance.—*Dowson.*

TANDEL, Mahr., or Tandelu, Tel. A superintendent of any body of men on shore or on shipboard; commonly written Tindel.

TANDESWARA, the most famous and most honoured of the sixty-three special devotees of Iswara.

TANDOI, in Buunu, land watered by canals.

TANDOO. Arab., Jav. Palanquin, a sedan chair, a palanquin carried by two bearers.

TANDRI. Tam. Father, a protector. Tillitandri, parents, father and mother, equal to the Urdu Ma-bap.

TANDULA, among the Mahratta race, is the chewing of grains of rice as an ordeal; another is the Tapta-masha, or taking a masha weight of gold out of a jar of hot oil or butter.

TANDUR. Hind. An oven.

TANDYA or Tandaka. Sansk. The most important of the eight Brahmanas of the Sama Veda.

TANESSUR, 30 miles south of Ambala.

TANG. Hind. A girth, anything that tightens or narrows; hence Tangi, a defile.

TANGAL. Maleal. A priest of the Moplah Muhammadans of Malabar. They are regarded with a respect almost amounting to veneration.

TANGA MARA, a pirate race who in ancient times occupied the sea-coast from Kurachee to Lahori Bandar; one of their heroes, Rana Abaid, lived A.D. 1591.

TANGAR, a hill in the Tanna collectorate of Bombay, about 2350 feet above the sea. Its rainfall is about 80 to 83 inches. The plateau is about two miles long and one mile broad.

TAN-GAS-GUZ, the Arabic designation of the Uighur Turks who dwelt north of Tibet, their country extending from Khorasan to the China frontiers. They were Buddhists.

TANGEER, a bark of Macassar, used in making a lye for washing the hair, which it is said to cleanse and strengthen.

TANGGULUN, a hard wood of Java, of a close grain, and employed by turners for various small works.

TANGHAN, a small horse of Tibet, wonderfully strong and enduring; they are never shod, and the hoof often cracks, and they become pigeon-toed. They are frequently blind of one eye, when they are called Zemik (blind ones), but this is thought no great defect. They average £5 to £10 for a good animal in Tibet, and the best fetch £40 to £50 in the plains of India, where they become acclimated and thrive well. Giantchi (Jhansi-jeung of Turner) is the best mart for them in the eastern part of Tibet, where some breeds fetch very high prices. The Tibetans give the foals of value messes of pigs' blood and raw liver, which they devour greedily, and it is said to strengthen them wonderfully. The custom, Dr. Hooker believes, is general in Central Asia. Humboldt (Per. Nar. iv. p. 320) described the horses of Caraccas as occasionally eating salt meat. The Tanghan, Retangun, or Tanyan of Nepal, so much esteemed for their hardiness, come entirely from Upper Tibet, and are so sure-footed that the people of Nepal ride them without fear over very steep mountains and along the brink of the steepest precipice. The species which is indigenous to Bhutan has its title from the region in which they are bred, being called Tangun, vulgarly Tannian, from Tangastan, the general appellation of that assemblage of mountains which constitutes the territory of Bhutan. In the Dekhan, and throughout the S. of India generally, the small horses or ponies from Pegu and Acheen are called Tanghan by the Muhammadans.—*Turner's Embassy*, p. 22; *Hooker's Jour.; Smith's Nepal.*

TANGHIN, Cerbera tanghin, Tanghinia venenifera, *Poir.*, formerly used in Madagascar as an ordeal in cases of suspected crime or apostasy.

TANG-T'U-P'AU. Chin. Literally artillery; a class of drugs used for the successful attacking of disease.

TANJONG. Malay. A headland. Tanjong Batu Besayab, Tanjong Krassak, Tanjong Merrum, Tanjong Sumbuang are headlands in the Banca Islands.

Tanjong Awat, or Cape Caran, called also Mud Point, nine miles N.W. of Salangore.

Tanjong Basso, or Baceoun Island, in lat. 0° 20′ S., long. 103° 48′ E., distant 19 miles N.W. by W. from the Calantigas.

Tanjong Bato, or Point Pedro, 12 miles E.N.E. of Acheen road, terminates in a gentle slope, and is covered with large trees.

Tanjong Sampan Mangaio, the north extreme of Borneo.

TANJORE, a town which gives its name to a district in the Madras Presidency. The district has an area of 3654 square miles, and in 1881 a population of 2,130,383. It is bounded on the north by the Colerun, and it has the Bay of Bengal on the east. The delta of the Cauvery occupies the flat northern part of the district, which is highly cultivated with rice, dotted with groves of cocoanut trees. This part is thoroughly irrigated by an extensive network of channels connecting the different parts of the delta. South-west of the town of Tanjore the country is somewhat more elevated, especially about Vellum. Tanjore was conquered by Shahji, father of Sivaji, about 1659. The Mahrattas, in A.D. 1678, held Tanjore under Venkaji, brother of the Great Sivaji.

During the 18th century, the possession of this province was greatly contested. In 1762, the raja of Tanjore agreed to pay tribute to the Nawab Walajah of the Carnatic. In 1771, the Tanjore raja, Tuljaji, son of Pertab Singh, with the aid of the British, subjected the Polygar of Ramnad, but a peace being arranged unknown to the British, the raja was compelled to cede the fort of Vellum, and the districts of Koiladdi and Elangar. In 1773, the British made prisoners of the raja and his family, but he was restored, 11th April 1776, on a treaty to submit to the E. I. Company. In 1787, Tuljaji died, and was succeeded by his half-brother, Amir Singh. But Tuljaji had adopted Sarfoji, and after a time Amir Singh was set aside, and Sarfoji reinstated. Sarfoji died in 1832, and was succeeded by his only son Sivaji, on whose death in 1855, without male heirs, direct or collateral, the titular dignity became extinct. His daughter obtained a title of princess. He had three queens, Syudammal Bai Sahibah, Kamatche Bai Sahibah, and Pathuma Bai Sahibah. By the first of these he had two daughters, but, having no male issue by any of the three, he sent his prime minister to Poona for damsels from his own kindred. Seventeen were selected for the raja and his nobles, but on arrival they claimed to be the raja's brides, and threatened to destroy themselves, on which the raja married the whole of them, the British Government sanctioning Rs. 6,72,000 for the expenses. Even by these seventeen the raja had no male issue, and he took sixty-nine concubines, by whom he had thirteen daughters and nine sons. The raja died on Tuesday, October 29, 1855, in his 49th year.

Raja Sarfoji was exceedingly fond of Schwartz, helped him liberally with funds, and gave him lands at Canandagoody for a mission, and also the site on which the mission-house, church, etc., are built. He established a boarding-school for Schwartz, and gave him the cultivated lands at Sediangal, from the produce of which the boarders were supported. These lands still support the mission at Tanjore. He repaired the great temple at Tanjore, laying down stones all through the courtyard, and also performed for it the Koombabhashagam, or regilding of the Kalasam. He also repaired several other temples in and around Tanjore; all of which cost him Rs. 8,66,700.

The district from pre-historic times has been largely irrigated by means of canals and dams,

from the Cauvery and from the Colerun, but chiefly from the former, the Colerun, which forms the boundary of Tanjore, on account of its low level, being less utilized. The main branch of the Cauvery enters the Tanjore district 8 miles east of Trichinopoly, and spreads out into innumerable small channels, which form a vast network extending down to the sea, and converts the northern portion of the district into one rice-field. Near the western boundary of Tanjore, the Cauvery and Colerun approach each other, and here in some ancient time a masonry dam, called the Grand Anicut, has been constructed to prevent the waters of the Cauvery being drawn off into the Colerun, the bed of which is here 9 or 10 feet lower. It is said to have been constructed by a king of the Chola dynasty in the 3d century A.D. The works in the early part of the 19th century were improved by Captain Caldwell and Captain (Sir Arthur) Cotton of the Madras Engineers, by means of many regulating dams and calingulas or waste weirs. In the area of 900,000 acres now irrigated, the total revenue in 1875-76 was £463,350.

Upwards of 90 per cent. of the population are Hindus, 5 per cent. Muhammadans, and 3 per cent. Christians. Brahmans in 1871 numbered 126,757; the Vellalar, a great agricultural race, were 348,400; the Vanniar, labourers, 574,789; Pariahs, 306,569; Satani and Pandaran sectarians, 49,763. The Muhammadans are chiefly Labbai or Yonakar, a race of mixed descent from Arab fathers and women of the country. The largest towns in the district are Tanjore, Combaconum, Myaveram, Tranquebar, and Manaargudi. At Tanjore is a great Saiva temple, the finest of the pyramidal temples of India. In 1777, it was fortified by the French, and has not again been reconsecrated. The pyramid rises in thirteen storeys to a height of 190 feet. A figure of the bull Nandi faces the temple, and there are several smaller shrines in the enclosure. The sculptures on the gopuras relate to Vishnu, while everything in the courtyard is dedicated to Siva. It is said to have been erected in the 14th century by Kadu Vettiya, a Soran or Cholan king, and the statues of the courtyard may have been subsequent.

Romish missions date from the first half of the 17th century; and at Negapatam a French Society of Jesus, in 1846, founded the College of St. Joseph. In 1706, the German Protestant missionaries Ziegenbald and Plutschau established a Lutheran mission at Tranquebar, under the patronage of Frederic IV. of Denmark, and about the middle of the century the Reverend C. F. Schwartz established another mission; and missionaries are now proselytizing there under the Society for the Propagation of the Gospel. Tanjore is famed for its carpets, jewellery, repoussé-work, and copper wares.—*Pharoah's Directory; Imp. Gaz.; Horsburgh.*

TANK.

Tanken, . . Guj., Mahr. | Eri, ... Tam.
Talao, . . Hind., Pers. |

The tanks or artificial water reservoirs of India are the greatest of all the Hindu irrigation works. They are of two kinds,—one excavated and used for drinking water, bathing, and irrigation; the other formed by throwing a bund or dam across the mouth of a valley or across any sloping ground. The excavated tanks have stone or other steps all round down to the water, generally the whole length of each face; and in many instances temples have been erected around the edge, and little shrines down the steps. Many of the irrigation tanks are of vast extent, with magnificent embankments, in respect to their elevation and solidity. Some of them form lakes many miles in circumference, and water great tracts of country. As instances of this may be mentioned the Red Hill tank near Madras, the Vihar lakes near Bombay; and in Rajputana, the Raj-Samandar, the tank of Cumbum in the Kurnool district, of Ulsur near Bangalore, of Mir Alam near Hyderabad, and the Bhandara and Lachora reservoirs of Nimar approach the dignity of lakes. Also, a race known as the Ghorbasta, at some pre-historic time constructed cyclopean dams in the mountains of Baluchistan. The tanks of India are named according to their size. The ahar of the N.W. Provinces is a small pond; johar, a large pond; other tanks are called pokhar and talao, the last being of masonry; others are dabra, liwar, talari, and garhiya. Sagar is a lake tank of the largest size.

The existing tank irrigation in Southern India is chiefly ancient, and comprises innumerable tanks of all sizes, from what might be termed lakes downwards. These may be divided into three classes:—1. Those formed by the closing of the passage of a considerable river through a narrow gorge, in a range of hills, by means of a high dam or bund. 2. Those formed in the plains by embankments carried across the drainage of the country, and impounding the water of one or more streams; these tanks being often of great superficial area, but shallow. 3. Tanks which might be considered intermediate between the other two, having in general a greater length of dam than the first, and a greater depth of water than the second. Few examples of the first kind remain entire. The ruined Mudduk Masur tank, one of this class situated on the borders of Dharwar and Mysore, has a length of the main bund on the crest, 550 yards; present height, from 90 to 108 feet; width at the base, from 945 to 1100 feet; area of the lake at 90 feet depth, 40 square miles; contents, about 1400 million cubic yards of water. The area of the drainage basin, which was on the inner slopes of the Western Ghats, was 500 square miles. Mr. Gordon was engaged on a proposed restoration of this tank, but it was found that the present average rainfall would not suffice to fill much more than one-half of its ancient basin, and it was suggested that the depth should be reduced from 90 to 70 feet. This diminution in the supply was supposed to be attributable partly to the diminished rainfall, and partly to the construction of small tanks on some of the feeders, at a date subsequent to the completion of the great tank, which was assigned by tradition to the 14th or 15th century. The main bund was supplemented by two smaller ones, placed on saddles at some distance from it, in the range of hills; and it was by the breaching of one of these that the tank was ruined, as the principal embankment remained entire. There were no traces of a waste weir or by-wash of any kind. Of the second and third classes of tanks, some are ancient ones of great dimensions, such as the ruined Poonairy tank, in the Trichinopoly district, of which the embankment was 30 miles in length,

and the Veeranum tank, still in action, with a bund 12 miles long.—*Elph.* p. 163; *Carnegy.*

TANK, a town in the Dehra Ismail Khan district of the Panjab, formerly the capital. It is situated in lat. 32° 14′ N., and long. 70° 25′ E., and is at the foot of the Sulaiman Hills. Its chief, Sarwar Khan, devoted himself throughout a long reign to the amelioration of his territory and his tribesmen. Under his sway, the Daulat Khel changed from a pastoral to a cultivating people; and they still revere his memory, making his acts and laws the standard of excellence in government. By assiduous cultivation, it has acquired an aspect of prosperity and greenness which distinguish it strongly from the neighbouring tahsil of Kolachi.

TANKA, an ancient class of gold coins in the Peninsula of India, as the Padma Tanka. Tankam in Tamil means heavy (as gold); in Telugu, and in the Dekhani, a tanka was a sum of 16 paisa or dāb, and it gives the native name for a mint, Tangsal or Tankasala, a word said to be Sanskrit. Tanka would be any stamped coin, money in general; Tanka kasa, a gold ducat; Rama tanka, an ancient gold coin.

TANKHUL, a rude tribe near the source of the Irawadi.

TANKOEBAU PRAHOE, a volcano in Java, with a crater from which the eruptions of 1829 and 27th May 1846 issued. Dr. Horsfield visited it in 1804.

TANNING of leather is one of the manufactures where, with an unlimited supply of hides and first-rate barks, gums, and extracts, the goods turned out by natives of India are not of a superior quality. Inferiority of Indian leather may be ascribed to want of skill on the part of the currier, and the use of quicklime. This is probably owing to the very low rank of the artisans, for the art of leather production is well understood and successfully practised by the European tanners, the leathers made by them being scarcely inferior to that made in Europe. In the usual native process, the raw hides, on first being removed, are steeped in stone vats for four and five weeks in a strong pickle of salt and water; from ten to fifteen hides are placed in each vat. While steeping, a pint or quart of the milk bush, Euphorbia tirucalli, is thrown into each vat. This contains a considerable quantity of elastic gum, and is used for water-proofing leather, and rendering cords elastic. Currying the leather is the province of the wife, while manufacturing it for the market belongs to the husband. The basis of the skins of animals is composed of a substance to which the name of gelatine is given. One of the properties of this substance is, that when combined with tannin, it forms the compound of tannate of gelatine or leather material. Tannin obtained from various sources differs materially in some of its characters. The tannin of gall-nuts, which is that generally employed for chemical purposes, is sometimes called gallo-tannic acid, to distinguish it from other species. The tanning materials best known in Europe are the oak bark, Peruvian bark, and the barks of some of the acacias. The importance of oak bark has, however, been greatly diminished since the introduction of the sumachs, as Rhus cotinus, the Venus sumach, and R. coriaria, the hide or elm-leaved sumach; also of the Divi-divi, or Cæsalpinia coriaria; of Valonia, the acorn cups of Quercus Ægilops; of catechu and gambir, from the Acacia catechu and Uncaria gambir; of the Indian Myrobalans, the mimosa or wattle bark of Australia, the cork tree bark of Spain, and willow bark. Catechu has long been employed in India for tanning skins, and its tanning properties are so great that skins are tanned by it in five days. The Cæsalpinia coriaria, or Divi-divi, was introduced into India by Dr. Wallich in 1842. The produce of the kino tree (Pterocarpus marsupium), and catechu of the betel palm, are also employed. Dr. Heyne states that the morocco manufactured at Hurryhur was treated with salt and a mixture of water, and the milk of wild cotton (Calotropis gigantea).

In many parts of India the hides are so removed as to form a bag, into which the tan is placed, and the filled bag kept suspended for several weeks. Such leather is soft and flexible, and looks tolerably well, but it resists the rain indifferently, is easily penetrated by wet, and during the S.W. monsoon becomes as moist and flexible as paper dipped in water. When set aside it becomes mouldy, and very easily rots.

The following are the principal of the tanning plants of Southern and Eastern Asia:—

Acacia Arabica.
A. catechu, catechu.
A. vera, its fruit.
Albizzia, *sp.*
Alnus, *sp.*
Bauhinia variegata.
Bruguiera Rheedii.
B. eriopetala, bark.
B. parviflora, bark.
Buchanania latifolia.
Butea frondosa, kino.
Cæsalpinia coriaria.
Calotropis gigantea.
C. procera, sap.
Cathartocarpus fistula.
Carallia lucida, bark.
Careya arborea, bark.
Cassia auriculata, bark.
Conocarpus latifolia.
Diospyros glutinosa.
Eucalyptus, *sp.*
Hibiscus rosa Sinensis.
Garuga pinnata.
Glochidion, *sp.*
Hymenodictyon excelsum.
Juglans regia.
Kandelia Rheedii.
Nyctanthes arbortristis.
Pinus longifolia.
Pterocarpus marsupium.
Punica granatum, rind.
Quercus incana.
Q. infectoria, gall-nuts.
Rhizophora conjugata.
R. gymnorhiza.
R. mangle.
Rhus cotinus.
Rottlera tinctoria.
Salix, *sp.*
Shorea robusta.
Sysygium jambolanum.
Tamarix Indica, galls.
Terminalia, several species.
Uncaria gambier.
Zizyphus jujuba.

Divi-divi, catechu, tanghedu bark, etc., produce their effect rapidly, and the leather is durable.

The bark of Bauhinia variegata is made use of as a tanning substance in Sind and other parts of Asia. The bitter astringent bark and the galls of several of the tamarisk tribe are also well suited for the purpose.

The Tenasserim Provinces are rich in materials for tanning. The bark of the careya, and of half a dozen different species of mangrove, the fruit of the sea-cocoanut, and the peel of a species of ebony, all abound in tannic acid.

All attempts to hurry the leather-making process beyond a certain point, by the use of concentrated solutions of tan, etc., are for the most part failures, as the manufacture of good leather to a great extent depends on the process being conducted in a slow and gradual, but at the same time thorough and complete manner.

The currier and tanner of India is known as the Chamar, Chakili, Malla-vadu, Mang. They are held in great disesteem, and are the public executioners. The condition of the tanners is similar in Japan, where, as in India, they are restricted to a particular locality, and are similarly employed.

—*Wilson; Heyne's Tracts; Simmonds' Comml. Products; Prof. Solly in Jury Reports of Exhibition*, 1851; *Madras Exh. Jur. Reports; Stewart.*

TANPING is imported into Shanghai from the north of China in great quantity. It is a dry paste, the residuum or husk of a leguminous plant called Teuss, from which the Chinese extract oil, and which is used, after being pressed, as manure for the ground.—*Simmonds.*

TANSALA, a smoky quartz stone, like the smoky topaz or cairngorm stone.

TANSEIN, a mountain in Nepal rising 6000 feet above the sea.

TANSEN, a celebrated musician and composer who went to Gwalior in the beginning of the 16th century, and is buried there. He was a native of Patna, who had a great natural fondness for music, and had been attracted to Brindaban by the fame of Hari Das. The emperor's persuasions and promises prevailed upon Tansen, and he followed in the train of Akbar, to flourish in life, and acquire the celebrity of an incomparable musician in the annals of his nation. From a Hindu he became a convert to the Muhammadan faith, and his remains lie buried at Gwalior, where the tomb is overshadowed by a tree, concerning which a superstitious notion prevails, that the chewing of its leaves will give an extraordiuary melody to the voice. Dr. Hunter, writing in 1790, mentioned this, and 30 years later Lloyd found that it was still 'religiously believed by the dancing girls.' So strong was this belief, that the original tree died from the continual stripping of its leaves, and the present tree is only a seedling of the melody-bestowing tamarind.—*General Cunningham*; *Tr. of Hind.* ii. p. 69.

TAN TAE HOEY, a political union amongst the Chinese of Singapore. A description given of the initiation into this combination is as follows: —About seven o'clock they had all arrived, and commenced to eat and drink spirits. In an hour this finished, when they commenced to play on drums, etc. On this they all arranged themselves in order, sitting opposite the Datu (idol), but I observed that their faces were as red as the Bunga Rayah from drunkenness. Among them all there was one chief, who sat on a lofty chair, with two men standing at his right and two at his left. After them came eight men, with drawn swords, who arranged themselves at the right and left; then came one man who burned paper in front of the idol (sacrifice); after him came eight men with drawn swords, who guarded a man with dishevelled hair, and without any upper garment,— in fact, he had only a pair of trousers. This man came in front of the chief, and bowed down till his head touched the ground; the armed men on the right and left now advanced, shouting, and laid their swords on his neck; they remained silently in this position for a short time, when a man advanced to the candidate's side. The chief then spoke as follows in the Chinese language:— 'Who are you, and from whence came you? Who are your father and mother? Are they still alive, or are they dead?' These questions were explained to the candidate by the man who stood at his side, and were answered as follows:—'I am such a one, of such a country, and my father and mother are both dead.' Even if his father and mother were alive, he would be obliged to say they were dead, because no one whose father and mother are alive can be admitted into the society, as the existence of all those is as if they were dead to the world and its ties. The chief then said, 'Will you swear that your father and mother are dead?' he answered, 'I will,' and performed the oath by burning paper in front of the idol, saying at the same time, 'My father and mother are dead.' The chief then said, 'What have you come here for?' answer, 'I wish to join the Tan Tae Hoey.' These words mean the sky, the earth, and man. The chief then said, 'You are deceiving, your thoughts are not as your speech;' answer, 'I will swear that I am in good faith.' 'Then swear.' The candidate then, taking paper, burned it while he repeated his assertion. The chief then said, 'Are you acquainted with the rules of the society?' answer, 'Yes, I understand that I am required to take an oath by drinking blood.' The chief then said something, to which the following answer was made—'I promise not to divulge the secrets of the society to any one under penalty of death.' The chief said, 'Truly?' answer, 'Truly.' A vessel was then brought containing arrack and a little blood from each of the members of the society, and, with a knife, was placed in front of the idol. The candidate then, taking up the knife, made a slight cut in his finger, from which he allowed some blood to fall into the cup. The chief then said, 'Drink in presence of Datu Peking.' The candidate then drank a small cupful, of which the chief and all the confederates drank a little each in his turn. The chief then said, 'To-morrow go to our secretary, and ask him for a book; in that book you will find all our rules and secret signs; you will pay one dollar for it.' The chief then rose, and himself raised the candidate from his prostrate position; and now, being initiated, he can take his place among those who before would have considered him an enemy.— *Statement of Abdullah-bin-Abul Kadir Moonshee.*

TANTI. Mahr. A weaver race in Central India and Hindustan, many of whom are prosperous cultivators. Amongst the Ho of Singbhum, Tanti weavers, a helot race of apparently Hindu origin, are domesticated as essential constituents of every Ho village community. There are, besides, thousands of weavers in the Pan or Panwa, Ganda, Chik of the Southern Tributary Estates, and the Pab and Panika of the western districts. In feature these people are Aryan or Hindu, rather than Kolarian or Dravidian. They worship the Hindu gods, but are not restricted as to food articles. Their numbers in Chutia Nagpur are about 50,000.—*Campbell; Dalton, Eth. Beng.*

TANTIA TOPI, an active, intelligent leader in the Mutiny of 1857. His force was overtaken, and its leader captured and hanged.

TANTRA. Hind. A set of works of the Hindus, in use as religious books in inculcating mystical and impure rites in honour of different forms of the god Siva and goddess Durga. The principal of the Tantra books are the Syama Rahasya, Rudra Yamala, Mantra Mahodadhi, Sareda Tileka, and Kalika Tantra. These are in the form of a dialogue between Siva and his bride Parvati, in one of her many forms, but principally in those of Uma and Parvati, in which the goddess questions the god as to the mode of performing various ceremonies, and the prayers and incantations to be used in them. The observances they prescribe have, in Bengal, almost superseded the original

ritual of the Vedas. The followers of the Tantras profess to consider them as a fifth Veda, and attribute to them equal antiquity and superior authority. It may be inferred that the system originated at some period in the early centuries of Christianity, being founded on the previous worship of the female principle, and the practices of the Yoga with the Mantra or mystical formulæ of the Vedas. Tradition is silent as to the authors of the Tantra; they are mythologically ascribed to Siva, but they are not included in any of the ordinary enumerations of Hindu literature, and were no doubt composed after that literature was complete in all its parts. They are specified in some of the Puranas, to which they must be anterior. They have been but little examined by European scholars, but sufficient has been ascertained to warrant the accusation that they are authorities for all that is most abominable in the present state of the Hindu religion.

The great feature of the religion taught by the Tantras is the worship of Sakti,—divine power personified as a woman, and individualized, not only in the goddesses of mythology, but in every woman; to whom, therefore, in her own person, religious worship may be and occasionally is addressed. The chief objects of adoration, however, are the manifold forms of the bride of Siva, Parvati, Uma, Durga, Kali, Syama, Vindhyavasini, Jaganmata, and others. Besides the usual practices of offerings, oblations, hymns, invocations, the ritual comprises many mystical ceremonies and accompaniments, gesticulations, and diagrams, and the use in the commencement and close of the prayers of various monosyllabic ejaculations of imagined mysterious import. Even in its least exceptionable division, it comprehends the performance of magical ceremonies and rites, intended to obtain superhuman powers, and a command over the spirits of heaven, earth, and hell. The popular division is, however, called by the Hindus themselves the left-hand Sakta faith. It is to this that the bloody sacrifices offered to Kali must be imputed, and that all the barbarities and indecencies perpetrated at the Durga Puja, the annual worship of Durga, and the Charakh Puja, the swinging festival, are to be ascribed. There are other atrocities which do not meet the public eye. This is not an unfounded accusation, not a controversial calumny. Some of the books are in print, veiled necessarily in the obscurity of the original language, but incontrovertible witnesses of the veracity of the charges. Of course no respectable Hindu will admit that he is vamachari, a follower of the left-hand ritual, or that he is a member of a society in which meat is eaten, wine is drunk, and abominations not named are practised. The imputation will be indignantly denied. If the Tantra be believed, 'many a man who calls himself a Saiva or a Vaishnava is secretly a Sakta, and a brother of the left-hand fraternity.' No Hindu of reason and right feeling can say anything vindicative of a system which has suffered such enormities to be grafted upon it. No explanation could afford any plea, any suggestion, any opening for abuses of which he admits, when he dares to avow them in his own case, the shame and the sin.—*Wilson's Religious Practices and Opinions of the Hindus*, 33.

TANTUR. Arab. A bonnet worn by Druse ladies. It is a conical tube, about 18 inches long, of silver or copper plated, with patterns graved on it. It is fixed upon a cushion fastened to the top of the forehead, and inclines slightly forward. Over this is thrown a piece of white muslin, which falls down to the hips, and is used as a veil when they go abroad.

TANZIMAT, a reformed system introduced into most provinces of Turkey. Qu. Tazimat.

TAOU or Tao, doctrine of reason, a school of philosophy originated by Lao-tsze, also called Lao-Kiu, a contemporary of Confucius, born B.C. 604, died B.C. 520, at the age of 84. It was a belief in one universal spirit called Tau. Taouism in China is a recognised State religion, but it is corrupted, and Taouist priests claim to be able to expel ghosts from a house, expel noxious spirits from the sick, drive away spirits from the route of a funeral, expel spirits from a house in which a suicide has taken place, drive away spirits from the site on which a house is to be erected, and expel spirits from the pig-styes.

TAOU-TAI, a Chinese magistrate. Marco Polo, a traveller in Mid Asia and in the south and east of Asia during the 13th century, was at one time Taou-tai of a Chinese town, corresponding to the English mayor; but he is also a kind of lord-lieutenant of the county, and has judicial authority in his district, being, in short, a very powerful and responsible official.—*Frere, Antipodes*, p. 276.

TAPA. Turk. A mound, a tumulus; the tepe, tope, or st'hupa.

TAPA, a cloth made at Tahiti from the liber or inner bark of the paper mulberry, Broussonetia papyrifera. When well prepared, it is tough and flexible.—*Bennett*, i. p. 114.

TAPAN, a river on the N.E. of Mandalay, on the bank of which the town of Bhamo is built.

TAPAS, in Hinduism, penance. Tapas and Dhyan, in Buddhism, is abstinence and abstraction. The Tapas of the Buddhists was not penance or self-inflicted bodily pain like that of the Brahmans, but a perfect rejection of all outward things (pravrittika).—*Cunningham's Bhilsa Topes.*

TAPASI or Tapsi. Sansk., Tam. People who have renounced the world. If Brahmans, they are burned with clothing; if Sudras, sometimes seated on chairs and with limes in their mouths.

TAPASI MATCHI. Beng. Mango fish, Polynemus risua, *Buch.*, literally penance fish, being so called from the long streamers from its head, deemed by the Hindus to resemble the uncut hair of penitents and ascetics.

TAPHOZOUS, a genus of mammals of the subfamily Taphozoinæ, family Noctilionidæ. These bats inhabit the warmer regions of the old world and Australia. T. bicolor is said to be from the East Indies.

Taphozous longimanus, *Hardw.*

T. brevimanus.	T. fulvidus, *Blyth.*
T. Cantori.	Long-armed bat.

Found throughout India, and common in large towns, frequenting dark outhouses.

Taphozous melanopogon, *Temm.*, the black-bearded bat, occurs in Canara, and is common in Malayana. It is about 3¼ inches long, and in colour is brownish, mouse-grey above, light beneath.

Taphozous saccolaimus, *Temm.*

T. crassus, *Blyth.*	T. pulcher, *Elliot.*

The white-bellied bat, inhabits Madras, Burma, and Malay Peninsula.

TAPIOCA is obtained from the roots of two plants, Manihot aipi, *Pohl.*, the sweet cassava, and M. utilissima, *Pohl.*, the bitter cassava or tapioca plant. From the facility with which the bitter cassava can be rasped into flour, it is cultivated almost to the exclusion of the sweet variety, which contains in its centre a tough fibrous ligneous cord, which is absent in the bitter variety. The latter, however, contains a highly acrid and poisonous juice, which is got rid of by heat or by fermentation, so that the cassava bread is quite free from it. When the juice has been carefully expressed, the fecula or flour is washed and dried in the air without heat, and forms the Brazilian arrowroot of commerce; but when dried on hot plates, it becomes granular and forms tapioca. The plant is not dependent on the rainfall for its growth. About 2000 square miles of land in central Travancore are planted with it. The hill-sides are filled with the plant; and its adaptability to any soil, and its entire independence of the seasons and the water supply, induce the agricultural population to use it as an article of diet. With planting all the work of the planter ceases, except watching the plantations against robbers and wild beasts. Almost any soil, except arid sand, is congenial to the manioc plant. The ground is ploughed or dug up after a rain, and at once planted. Heaps of dried vegetation are sometimes burned, and the ashes turned with the soil before planting. The stems of full-grown plants are cut into pieces of about a foot in length, and laid horizontally in little pits dug in rows, each pit or cavity holding two sticks, one crossing the other. They are then covered with piles of dry leaves of trees, and over them small flat mounds of earth are thrown. The plants stand very close to one another, so much so that two plants per square yard is but a low average. They germinate in about a week, and it is essential that there should be one or two good showers of rain within a month after planting. An artificial tapioca is made with gum and potato starch. The granules of this are larger, whiter, and more brittle, and more soluble in cold water than genuine tapioca.—*Tomlinson; J. P. Langlois; Journ. Agri-Hort. Socy.* xii. p. 175.

TAPIRUS MALAYANUS. *Raffles.*

Tapirus Indicus, *F. Cuv.*	Asiatic tapir; Malayan do.
Babi-alu, . . BENCOOLEN.	Kuda-ayer, . . MALAY.
Le maiba, ... FR.	Saladang, . . SUMATRA.
Tennu, . . . MALACCA.	Gindol, . . ,,

The tapir is found in the Malay Peninsula, and in Sumatra and other islands of the Eastern Archipelago. It exceeds the American tapir in size. Of all living animals the tapir comes nearest to the extinct Palæotherium.

TAPIS, of Manilla, a thickly-woven silk scarf, six vara long, with oblique white stripes on a dark-brown ground. It is worn above the sarong.

TAPPA. GUJ., TAM., TEL. A stage of a journey; the post, the tapal, post-office; also a shaping block; also a piece of metal with a die or mould for producing a metal pattern in relief by hammering in soft metal.

TAPROBANE, an ancient name of Ceylon,—that used by Milton, who tells of people

> 'From India and the golden Chersonese,
> And utmost Indian isle Taprobane,
> Dusk faces with white silken turbands wreathed.'

The 6th chapter of the Mahawanso relates the arrival of Wijayo with 700 followers, and says they were tired, and supported themselves on the palms of their hands, from which the place was called Tambapanni or copper-palmed. See Tamraparni.

TAPTA-KUND. The town and temple of Bhadri-nath are situate on the west bank of the Alaknunda river, in the centre of a valley of about four miles long, and one mile in its greatest breadth. The east bank rises considerably higher than the west bank, and is on a level with the top of the temple. About the middle of the bank is a large cistern about 20 or 30 feet square, covered with a sloping roof of deal planks supported on wooden posts. This is called Tapta-kund, and is a warm bath, supplied by a spring of hot water issuing from the mountain by a subterraneous passage, and conducted to the cistern through a small spout representing a dragon's or a griffin's head. A little to the left of it is Surya-kund, another hot spring, running in a very small stream through a fissure in the bank. There is no basin or reservoir to receive the water. The principal idol, Bhadri-nath, is placed opposite the door at the farther extremity. Above his head is a small looking-glass, which reflects the objects from the outside; in front of him are two or three lamps (which give all the light the apartment receives, excepting from the door), diffusing such feeble glimmering rays that nothing is clearly distinguished. The idol is dressed in a suit of gold and silver brocade. Below him is a table, or board, covered with the same kind of cloth, which, glittering through the gloom, might impress the beholder with the idea of splendour and magnificence.—*Fraser's Himalaya Mountains*, p. 383.

TAPTA-MASHA or Tapta-Mukti. HIND. An ordeal to which Hindus suspected of wrong-doing are subjected. It consists of taking a masha weight of gold out of a jar of hot oil or butter or ghi. In 1807, this was tried before 7000 spectators on a young woman accused by her husband of adultery.—*Tr. of Hind.* i. p. 46.

TAPTI, a river of the western side of the Peninsula of India, which rises in the Betul district of the Central Provinces, in lat. 21° 48′ N., and long. 78° 15′ E., and after a course, including windings, of 450 miles, and draining an area of 30,000 square miles, it disembogues into the Gulf of Cambay. After leaving Multai, it cuts its way between two spurs of the Satpura mountains, the Chikalda Hills of Berar on the left and the range of Kalibhit on the right. Farther west, it passes through Kandesh, receiving the tributaries Purna, Waghar, Girna, Beri, Panjhra, and Siva. It narrows at the Harn phal or Deer's Leap, and then descends to the plain of Gujerat, and, on leaving the Dang forests, for 70 miles it passes near the Rajpipla Hills and across the Surat plain to the sea, being for 30 miles a tidal river. Tapti light-house, at the mouth of the river, opposite the island of Dumas, is on the mainland, near Vaux's tomb. It can scarcely be deemed a navigable stream, as at Surat, 17 miles from its mouth, it is fordable when the tide is out. The mouth is obstructed by numerous sands and a bar. The Ajunta caves — the most complete series of Buddhist caves in India without any mixture of Brahmanism—contain types of all the rest; they are in a ravine or narrow valley in the ghat south of the Tapti. At Baug, in a ravine or small

valley in the ghat on the north side of the valley of the Tapti, are three ancient Buddhist caves. On its banks are 108 spots, or tirthas, of special sanctity. At Bodhan, about 15 miles east of Surat, a religious gathering is held once in every 12 years. Ashvani Kuma and Gupteswar, about two miles up the river from Surat, are also held in esteem. Gupteswar is also a favourite place for burning the dead.—*Imp. Gaz.*

TAQDIR. Arab. In Muhammadan belief, the absolute decree and predestination of both good and evil, recorded in the preserved tablet. Fate is believed in by all, and is accepted as a consolation in every trial, and as an excuse or palliation for every crime. See Fate; Kaza; Kismat.

TAR. Hind. The palmyra tree, Borassus flabelliformis. Tari, palm wine, toddy, from the palmyra tree. Tadmor, the city of the palmyra tree, is Palmyra. The Corypha taliera palm is also called tar, tara, tal, or tala.

TAR, Pix liquida.

Heh-tuh-nau, . .	Chin.	Smola gesta, . . .	Pol.

Catrame, ...	It.		

Tar is obtained by burning pine and fir trees in a close smothering heap, with a channel through which the tar exudes. It is largely made in Russia, the United States, and Sweden. In Sweden and Russia from the Scotch fir (Pinus sylvestris, *L.*), by a process of dry distillation. Billets and roots of the pine being burned in a closed pit, the tar exudes, flowing into barrels, which are bunged for exportation as soon as filled. In the Himalaya, the deodar (Cedrus deodara) and the Pinus longifolia are thus utilized. Applied to wood, rope, iron, it is extensively used for resisting moisture, and is consequently in great request as a marine store. Tar water was long a celebrated remedy in the treatment of some chronic diseases of the lungs.—*Faulkner; O'Sh.; M'C. Dic.*

TARA, in Buddhism, the volumes of the sacred law. The two tables of Moses are, in Hebrew, Torah.

TARA BAI, daughter of Rao Surtan, a Solanki Rajput chief of Bednore in Rajputana. Rao Surtan was the lineal descendant of the Balhara kings of Anhilwara. Thence expelled by the arms of Ala-ud-Din, in the 13th century they migrated to Central India, and obtained possession of Tonk Thoda and its lands on the Bunas, which from remote times had been occupied (perhaps founded) by the Taks, and hence bore the name of Taksilla-naggar, familiarly Takitpur and Thoda. Surtan had been deprived of Thoda by Lilla the Afghan, and now occupied Bednore, at the foot of the Aravalli, within the bounds of Mewar. Stimulated by the reverses of her family and its ancient glory, Tara Bai learned military exercises, and joined in an unsuccessful attempt to wrest Thoda from the Afghans. Jai Mul, the third son of Rana Rai Mul, a Sesodia Rajput, proposed for her in person, and Tara Bai promised to be his if he redeemed Thoda, but before accomplishing this he rudely attempted access to her, and was slain by her indignant father. His brother Prithi-raj accepted the gage, and, relying on his honour, she accepted him in anticipation. She accompanied her husband in an attack on the Muhammadans when celebrating the Maharram; the lance of Prithi-raj and arrow of Tara Bai slew the Muhammadan chief, and their followers, rushing on, regained Thoda. Prithi-raj had been engaged in the war from the age of 14 to 23, when he was poisoned in revenge of an insult by his brother-in-law. He died at Komulver; and Tara, too late to see him in life, burned herself with his remains. Their ashes are in a lonely gorge opposite the temple of Mama Devi, where the road leads to Marwar.—*Tod's Rajasthan*, i. p. 673. See Tak.

TARA BAI, born 1627, was the widow of Raja Ram, son of Sivaji. After the death of her son, Sivaji II., she for many years exercised the authority of a sovereign, and carried on the war against Aurangzeb with great ability till that emperor's death. When Saho was released by Bahadur Shah, Tara Bai resisted his assumption of authority, and for five years carried on a civil war, till the death of her son, a person of weak intellect. Tara Bai was then set aside, and Sumbaji, younger son of Raja Ram, placed in power, only to be set aside by Saho, who assumed the sovereignty at Satara. The chief supporter of Saho was Balaji Wiswanath, a Konkani Brahman. Throughout nearly all the lifetime of Raja Saho she continued to maintain the claims of her son, Sivaji II., in opposition to Saho; and as Saho was without issue, and in his old age became imbecile, she entered into a plot with the Peshwa Balaji Rao, to make known to Saho that a posthumous son of Sivaji II. had been concealed by Tara Bai, and was still alive. At the moment of the death of Saho, the peshwa proclaimed the grandson of Tara Bai by the title of Ram Raja (A.D. 1750), and Damaji Gaekwar and Ragoji Bhonsla acknowledged the succession. But on Balaji entering on a campaign in the Nizam's territory, Tara Bai and Damaji Gaekwar intrigued against him. Tara Bai, unable to induce Ram Raja to assert his sovereignty, seized his person, and confined him in a dungeon, and proclaimed him an impostor. Balaji returned to his capital and put Tara Bai aside.

TARA DEVI, a mountain near Simla, composed of coralline magnesian limestone of fantastic shape, overhanging the road, and full of fissures and caverns.

TARAGARH, a hill fortress in the Ajmir Mairwara district of Rajputana, in lat. 26° 26′ 20″ N., long. 74° 40′ 14″ E. It is a health resort for the European troops of Nasirabad, perched on a crest of a height overhanging the city of Ajmir, and surrounded by inaccessible precipices. It was a stronghold of all the former rulers. On its summit is the shrine of Syud Husain, who was killed, A.D. 1210, in a night attack by the Rahtor and Chauhan.—*Imp. Gaz.*

TARAI, a British district in the Rohilkhand division of the N.W. Provinces, lying between lat. 28° 50′ 30″ and 29° 22′ 30″ N., and long. 78° 46′ and 79° 47′ E. Area, 920 square miles; and population, in 1879, 185,647 souls. It has a slope to the S.S.E. of about 12 feet per mile. The district is bounded on the north by the Kamaon Bhabar, on the east by Nepal and the Philibit division of Bareilly, on the south by the districts of Bareilly and Moradabad and the Rampur State, and on the west by Bijnour. The headquarters of the district are at Naini Tal, where the European officers reside from May to November. It is a long,

narrow strip of country running for about 90 miles east and west along the foot of the Himalayas, with an average breadth of 12 miles. At its northern edge, where the waterless forest of the Bhabar tract ends, a series of springs burst from the surface, and these, increasing and uniting in their progress, form the numerous streams that intersect the Tarai, running in swampy beds. The Deoha becomes navigable at Philibit; the alpine Kosi flows through Kasipur pargana. The Tharu and the Bhuksa have been its permanent inhabitants, and they withstand the malaria of the locality. They claim a Rajput descent.

TARAKESWAR, a village in the Hoogly district of Bengal, in lat. 22° 53′ N., and long. 88° 4′ E. Famous for its large shrine dedicated to Siva, resorted to by crowds of pilgrims all the year round. At the Sivaratri the three essential rites are,—fasting during the day, and holding a vigil and worshipping Siva as the marvellous and interminable Linga during the night. At the Chaitra Sankranti, on the last day of the month Chaitra (April), is the day of the swinging festival; but the votaries are now merely suspended by a belt, instead of by means of hooks pierced through the fleshy muscles on both sides of the spine.—*Imp. Gaz.*

TARAL, in the Mahratta villages, a guard of the gate. In the Mahratta villages, a low caste man employed as a porter, usually a Mhar.

TARAM. Tam. Taramu, Tel. The different classes of village lands.

TARANTARRA, in the Manja territory, the chief city of the Akali Sikhs.

TAR-ASUN, a kind of beer of China, made from barley or wheat, a prepared hop being added to the wort in brewing.—*Simmonds.*

TARAXACUM OFFICINALE. *Wigg.*

Liontodon taraxacum.	Dandelion.
Kan-phul, Dudli, . . Beas.	Dudu battnal, . . Sansk.
Baran, ... Chenab.	Radam, ... ,,
Yauraghi, . . Ladakh.	Shamaukei, . Tr.-Indus.
Dudal, ... Ravi.	Kha, Rasuk, . ,,

This plant is a native of Europe and the Himalayas. The inspissated juice of the plant, the infusion, decoction, and extract of the root, are strongly bitter, and prove tonic and diuretic; in large doses aperient. It is a favourite and useful remedy in the old hepatic diseases of persons who have long resided in India, and returned to a cold climate. The dose of the extract is 3 to 10 grains, thrice daily. Eclipta prostrata, *Roxb.*, the trailing eclipta, a plant of all India, is an excellent substitute.—*Stewart.*

TAR-BAN. Hind. A palmyra grove. Sandarban, Hind., a forest of the Sandar or Acacia sundra.

TARBUSH. Turk. A red cap worn by the Turk. It is a corruption from the Persian Sarposh, head-covering, head-dress. The Anglo-Saxon further debases it to Tarbrush. Fez, the other name for the Tarbush, denotes the place where the best were made. Some Egyptians distinguish between the two, calling the large, high, crimson cap Fez, the small one Tarbush.—*Burton's Mecca.*

TARBUZ. Hind. Cucurbita citrullus, the water-melon.

TARE, Fitch, Vetch, a pulse, Vicia sativa, cultivated in Great Britain principally for its stems and leaves, which are used in the feeding of sheep, horses, and cattle; and partly also for its seed, which is used in the feeding of poultry. —*Faulkner.*

TAREAQ FARUQ or Theriaca Veneta, the modern representative of the mithridatum of the ancients, is sold in little canisters in the bazars of India. On the paper wrapper are printed in Persian, 'the Theria of Andromachus, an invention of Theron the Presbyter. It is prepared, measured, and made public by me, John Baptest Sylvester, in the Rialto, by authority of the excellent Government physicians of ancient righteousness and of the council of apothecaries and learned physicians.' Andromachus was the physician to the emperor Nero. Tareaq is the Greek for treacle, but the drug contains opium.

TAREMOOK, known as Bail Kambar in Canarese, Ghassari in the Dekhani, Lohar in the Mahrati, is a wandering blacksmith of the Peninsula of India.

TARI. Hind. Palm wine from the palmyra tree. A general term for the palm wine of various palms. Nareli from the cocoanut palm, sendi from the date, and tari from the palmyra. —*W.*

TARI, of Chittagong, is the pod of a leguminous plant which grows abundantly in the hills, and is useful for tanning.

TARIKAT. Arab. A path. In the Muhammadan religion, tarikat means the path or way which leads, or is supposed to lead, to salvation.

TARIKH. Arab. A date, a history. Gibraltar is Jabl-tarikh, the mountain of the date. Sir Henry M. Elliot's posthumous History of India as told by its own Historians, gives extracts from more than a hundred Tarikhs in Arabic, Persian, and Turki.

TARIKH-i-BADAUNI or Muntakhab-ut-Tawarikh, written by Mulla Abdul-Kadir Malik-Shah of Badaun, and finished in 1595. It is a general history of India from the time of the Ghaznevides to the 40th year of Akbar. It contains a copious notice of the reign and character of Akbar, under whom the author lived.—*Elliot's India; Muller's Lectures*, p. 143.

TARIKH-i-ELCHI NIZAM SHAH, the history of Nizam Shah's ambassador, by Shah Khurshah, who died A.H. 972. This is a general history of the world, compiled from the best known Arabic and Persian sources. The author, in his account of the Safavi dynasty of Persia, tells us that he was sent by his own sovereign, Nizam Shah, on an embassy to Shah Tamasp, at whose court he remained a long time, and from whom he received an autograph account of his own career; of this the Elchi makes considerable use in his work, and it gives it great additional interest.

TARIKH-i-GUZIDA contains a good account of the Moghul dynasties.

TARIKH-i-HIND, a history of India written by Abu Rihan, a translation from an old Arabic history, made about A.D. 1216 (A.H. 613) by Mahomed, then residing at Uch in Sind. The ancient Arabic seems to have been written before A.D. 753. It is largely drawn upon by Nizam-ud-Din, Ferishta, Mir Masum, and others. Chachnama is a Persian work descriptive of the Arab conquest of Sind. The Arab occupation of Sind was only temporary. On their retreat, the territory reverted to the rule of native princes, and was practically independent until its absorption into

the empire during the reign of Akbar, in A.D. 1592, for the successes of Mahmud of Ghazni made no permanent impression on them. Up to the time of Mahomed, the races in Arabia had been quarrelling with and robbing their neighbours. But immediately on his demise, his followers and disciples, whom his teachings had made brothers, moved with a spirit of unanimity.—*Elliot's Hist. of India*, p. 9 ; *Elphin.* p. 264.

TARIKH-i-KASHMIRI, a Persian history of Kashmir in MS. Compiled by Hyder Malik, at the command of Sultan Jahangir, A.H. 1027 (A.D. 1617), from the Sanskrit Raja-Tarangini, and then continued from other sources.

TARIKH-i-RASHIDI, an account of the Khans of Jatah or Moghulistan, and of the Amirs of Kashgar from the time of Taghalaq Timur Khan to A.H. 952. It is the production of a learned and accomplished man, and in the two latter parts of a contemporary distinctly acquainted with the man and events that he describes. The minute details which the author gives of his own sufferings and the sufferings of his nearest relations during the period that followed the ascendency of Shaibani Khan in Mawar-u-nahar and Khorasan, of their escapes, adventures, successes, and discomfitures, let us more into the condition of the country and the feelings of the inhabitants than perhaps any other monument extant.' The author, Muhammad Hyder, commonly called Mirza Hyder, was a cousin of Baber, and while a mere boy fought by the latter's side on his victory over the Uzbaks in A.H. 917. He attached himself to the fortunes of his cousin, afterwards khan of Kashgar, and performed for him some brilliant military services, one of them being a successful invasion of Kashmir. On the death of the khan, Muhammad Hyder, who was in Tibet, hearing that his uncle had been put to death by the new sovereign, escaped to Lahore, where he was entertained by Baber's son, Kamran Mirza. In A.H. 946 he joined Humayun, whom he endeavoured to persuade to invade Kashmir, and, being unable to prevail upon him to do so, undertook the expedition himself, made himself master of the country, and ruled it for some years, at first in his own name, and later in that of Humayun. He was killed in a night attack by some rebel chiefs in A.H. 958.

TARIKH-i-SHER SHAHI or Tuhfat-i-Akbar Shahi, a book by Abbas Khan, son of Shaikh Ali, Sarwani, written by order of the emperor Akbar. It is valuable as the writing of a contemporary, but is prolix.—*Elliot, H. of I.* iv.

TARIKH-i-SUBAH-i-SADIK is dated in A.H. 1045 (A.D. 1635) by the author, Muhammad Sadik Isfahani.—*Ouseley's Travels*, ii. p. 405.

TARIKH-i-TABARI, a book which gives the earliest account of the rise of the Muhammadan religion. Its description of the mental agitation of Mahomed, his visions and his alarm at the alienation of his own reason, bear the liveliest marks of truth. A French version has been published in four volumes by M. Hermann Zotenberg, for the Oriental Translation Fund. The original was written in Arabic, and has been translated into both Osmanli and Oriental Turkish. Tabari was a native of Amol, the capital of Tabaristan. His name was Abu Jafar Muhammad ibn Yezid ibn Jerir. He was born A.D. 839, and died at Baghdad 922. He wrote a commentary of the Koran ; also a general history from the creation to A.D. 314–15, which was subsequently abridged and brought down to A.D. 1118–19 by George, son of Al-Amid, generally called Al-Macin.—*Elphin.* p. 256. See Tabari.

TARIKH-i-WASAF, composed, as appears by different dates, at the end of the thirteenth and beginning of the fourteenth century, by Abdullah Shirazi. The style of this work is much admired by the Persians, although in many places so obscure and difficult, that to most copies of it marginal explanations have been added. It contains the history of Hulaku Khan and Chengiz Khan.—*Ouseley's Tr.* i. p. 170.

TARKALANKARA, Sansk., from Tarka, the name of the nyana-darshana, and Alankara, an ornament.

TARKA SANGRUHA, an authoritative work on the Nyaya philosophy. It arranges all speech (vaidikam) into sacred, *i.e.* Vedic, and popular or profane (laukikam).

TARK-ASURA, in Hindu legend, a giant with a petrified head.

TAR KHAN is an old Turkish dignity, and distinguishes such persons as were free from taxation. In the oldest Turkish documents tarku means a letter of protection, a letter of nobility, and in Mongolian (Kowalewsky, p. 1760a), tarkha lakhu means to grant any one a privilege. Amongst the Turanian populations it is a word designating a rank, and amongst the Armenians of Georgia it indicates a freeman. Narshakhi and Tabari write it Terkhun, and suppose it to be a proper name. The Tar Khan title was bestowed by Chengiz Khan on two youths, Bata and Kashlak, who overheard Aung or Prester John making arrangements to destroy Chengiz Khan. From these are said to have descended the Tar Khan dynasties of Khorasan and Turkestan.

The Tar Khan dynasty of Sind are said to have been so denominated by Timur, having sprung from Eku Timur. When Tuktamish Khan was advancing against Timur, he was gallantly opposed by the great-grandson of Arghun Khan, Eku Timur, who fell in the unequal conflict. Timur, who witnessed the conflict, bestowed the title of Tar Khan on his surviving relatives. The origin of this titular term seems, however, doubtful, but it is an ancient one, as Tar Khan of Farghana hospitably entertained the last monarch of Persia in A.D. 703. Tar Khans are mentioned as officers under the Khakan of the Khazar, to the west of the Caspian Sea. Their rule extended to A.D. 1591-92, and with them expired the independence of Sind as a kingdom, its history from that date merging into that of the empire of Timur. Scions of the Tar Khan family still reside at Nasrpur and Thatta.—*Elliot, Hist. of India*, p. 500 ; *Arminius Vambery's Bokhara*, p. 27.

TARN-TARN, a town in the Amritsar district of the Panjab, in lat. 30° 28′ N., and long. 74° 57′ E., 12 miles south of Amritsar town. It was founded by Guru Arjun, son and successor of Guru Ram Das. Arjun built a temple in the town, and at its side a magnificent tank, and the waters are said to cure all persons who can swim across it.

TAROBA, a lake in the Chanda district of the Central Provinces, 14 miles east of Segaon, in a basin of the Chimur Hills. It is of great depth. The lake attracts many worshippers, wives yearning for children, and the sick praying for health.

It is believed to have been miraculously produced.

TARSHISH, of sacred history, is supposed by Sir. J. E. Tennent to be Gallc. But Tarshish seems to have been a name given to several places, one of them in India, as the Dante, Kapi, and Togai of the Hebrew Bible are Indian names for ivory, apes, and peacocks,—Dant, HIND., a tooth; Kapi, TAM., a monkey; Togai, a peacock.

TARSIUS SPECTRUM. *Geoff.*

Tarsius bancanus, *Horsf.*	Lemur tarsier, *Raffles.*
Lemur spectrum, *Pallas.*	Tarsier, *Buffon.*
Didelphis macrotarsus, *Sc.*	

The tarsier inhabits Sumatra, Banca, Bornco, Macassar, Salayer. Its habits are nocturnal. It is mild, gentle, and easily domesticated. It lives on the tops of trees in the largc damp forests. It eats fruits and small animals. The inhabitants have a superstitious dread of it.

TARTAR.

Wynstin,	DUT.	Roher Weinstein,	GER.
Crude tartar,	ENG.	Tartaro volgare,	IT.
Argol, Argal,	,,	Tartarus,	LAT.
Tartre-cru,	FR.	Tartaro,	PORT., SP.
Blanc et rouge,	,,	Winnui kamen,	RUS.

An acidulous salt, which exists in the juice of the grape, and is deposited in wine casks in the form of a crystallized incrustation more or less thick, which is crude tartar or argol. It is cither white or red, according to the colour of the wine. The former is preferred, as it contains fewer impurities than the red, but the properties of both are essentially the same. When good, it is thick, hard, brittle, and brilliant, with but little earthy matter. It is obtained from Florence, Naples, Sicily, and Cape of Good Hope, and is used in hat-making, gilding, dyeing, and in the preparation of tartaric acid.—*Waterstone; Faulkner.*

TARTAR, Tatar, or Tahtah, a term very vaguely and variously applied, but generally to Mongoloid races in High Asia. It is now out of use by all ethnologists. The Bhot of the Himalayan frontier of Tibet are called Tartars, as also are the Turks of Khoten and Yarkand or Little Bokhara, and the Manchu of China are called a Tartar dynasty. The Tartars of China, however, are Manchurian Tangus. The peoples who inhabit the vast regions of High Asia, bounded on the south by India, China, and Persia, on the east by the Sea of Japan, on the west by the rivers which disembogue into the Caspian Sea and Black Sea, and on the north by the Frozen Ocean, are all known in Europe by the collective name of Tartar. The term is applied to numerous half-civilised nations, who greatly differ from each other, to—

'The Tartars of the Oxus, the king's guard,
First, with black sheepskin caps and with long spears;
Large men, large steeds, who from Bokhara come,
And Khiva, and ferment the milk of mares:
Next, the more temperate Turkmans of the south,
The Tukas and the lances of Salore,
And those from Attruck and the Caspian sands;
Light men, and on light steeds, who only drink
The acrid milk of camels and their wells:
And then a swarm of wandering horse, who came
From far, and a more doubtful service own'd,—
The Tartars of Ferghana from the banks
Of the Jaxartes, men with scanty beards,
And close-cut scull-caps; and those wilder hordes
Who roam over Kipchak and the northern waste,
Kalmuks and unkempt Kuzzaks, tribes who stray
Nearest the Pole, and wandering Kirghizes
Who came on shaggy ponies from Pamere.'

'Les peuples qui habitent ces vastes contrées de la haut Asie, bornées au midi par l'Inde, la Chine, et la Perse, à l'orient par la mer du Japon, à l'occident par les fleuves qui se jettent dans le mer Caspienne et la Pont Euxin, au nord enfin par la mer glaciale, sont connus sous le nom vulgaire et collectif de Tartars. . . . Quoi qu'il en soit de l'origine de ce nom des Tatars, les Européens, qui l'ont légèrement altéré, s'en servent indifféremment pour designer une foule de nations à demi civilisées, qui different beaucoup entre elles, ainsi que la surite de cet ouvrage le fera vois. Dans ce sens, je crois qu'il est bon de conserver à ces nations le nom cellectif de Tartares, quoique corrompu préférablement à celui de Tatârs, qui paroît plus correct mais qui appartient à un seul tribu ne doit pas servir à designer les autres tribus en général.'

It was from Tartary those people came, who, under the successive names of Cymbrian, Kelt, and Gaul, possessed all the northern part of Europe. The Goths, Huns, Alans, Swedes, Vandals, and Franks were but swarms of the same hive. The name of Tatar, the terror of Asia and Europe, was applied promiscuously to all the nomadic warriors whom Asia in bygone years poured forth over Europe. Originally Tatar was a name for the Mongolic races, but, through their political ascendency in Asia after Chengiz Khan, it became usual to call all the tribes which were under Mongolian sway by the name of Tatar.

In linguistic works, Tataric is now used in two several senses. Following the example of writers of the middle ages, Tataric, like Scythian in Greek, has been fixed upon as the general term comprising all languages spoken by the nomadic tribes of Asia. Hence it is used sometimes in the same sense in which we use Turanian. Secondly, Tataric has become the name of that class of Turanian languages of which the Turkish is the most prominent member. While the Mongolic class—that which, in fact, has the greatest claims to the name of Tataric—is never so called, it has become an almost universal custom to apply this name to the third or Turkic branch of the Aral-Altaic division, and the races belonging to the branch have in many instances themselves adopted the name. These Turki, or, as they are more commonly called, Tataric races, were settled on the northern side of the Caspian Sea and on the Black Sea, and were known as Komanes, Pesheneg, and Bulgar, when conquered by the Mongolic army of the son of Chengiz Khan, who founded the Kapchakian empire, extending from the Dniester to the Yemba and the Kirghizian steppes. Russia, for two centuries, was under the sway of these khans, known as the khans of the Golden Horde. This empire was dissolved towards the end of the fifteenth century, and several smaller kingdoms rose out of its ruins, among which Krim, Kasan, and Astracan were the most important. The princes of these kingdoms still gloried in their descent from Chengiz Khan, and had hence a right to the name of Mongol or Tatar. But their armies, and subjects also, who were of Turki blood, received the name of their princes; and their language continued to be called Tataric even after the tribes by whom they were spoken had been brought under the Russian sceptre, and

were no longer governed by khans of Mongolic or Tataric origin.

It would perhaps be desirable to use Turkic instead of Tataric, when speaking of the third branch of the northern division of the Turanian family, did not a change of terminology generally produce as much confusion as it remedies. The recollection of their non-Tataric, *i.e.* non-Mongolic origin, remains, it appears, among the so-called Tatars of Kasan and Astracan. If asked whether they are Tatars, they reply no; and they call their language Turki or Turuk, but not Tatari. Nay, they consider Tatar as a term of abuse, synonymous with robber, evidently from a recollection that their ancestors had once been conquered and enslaved by Mongolic, that is, Tataric tribes. All this rests on the authority of Klaproth, who during his stay in Russia had great opportunities of studying the languages spoken on the frontiers of this half Asiatic empire. Though the word is very vaguely used, the populations to whom it is applied belong to one of three great groups, stocks, or families,—the Turk, the Mongol, or the Tungus. It is necessary to insist upon this, because, whatever may be the laxity with which the term Tatar is used, it is, in Russian ethnology at least, a misnomer when applied to a Mongol. It is still worse to call a Turk a Kalmuk. This is because the populations under consideration are the fragments of four Turkish kingdoms or khanates, the khanates themselves being the fragments of the great Mongol empire of the Kapchak. But this great empire itself was, more or less, the consolidation of at least two older kingdoms compressed into one. There were the Mongols of Temudzhin or Chengiz Khan. There were the Chaghtai Turk of Timur and his successors, whose origin was in the parts beyond the Oxus, Bokhara, and Ferghana. There were the three denominations of the Khazar, the Pesheneg, and the Cumanian, the Chaghtai being the Turk of the dynasty to which Timur belonged.

According to Mountstuart Elphinstone, the Tartar are divisible into Turk, Mongol, and Manchu. The greater part of Timur's army was Turk; and the Uzbak, who now possess Transoxiana, the Turkoman, who reside both on the Oxus and in Asia Minor, the wandering tribes of the north of Persia, and the Othmanli or Turk of Constantinople, are all Turk. The ruling tribe, and the greater part of the army of Chengiz Khan, was Mongol.

Tartars occupy Ladakh, except in the Dras valley. In all Tartar families there, the second son is made a lama, and the third a tola, both being forbidden to marry,—in a manner obliged to renounce the world, having no interest in their father's property at his death.

Of the black Tartars, who had come from Tartary with Timur, he had settled part in Turkey, and part in Khorasan. After his death they had dispersed. Nadir Shah had desired to reassemble them, and seven or eight thousand families had been brought together under Najif Ali Khan, the chief in whose service Is'hak Khan and his father was employed.

The Tzeremish resemble the Tartars in their external appearance, and they also wear their hair short; but their language is totally distinct, and they spring from a different origin. They are the original inhabitants of the province of Cazan and O-se-ta-our-han. — *Latham Nationalities of Europe*, i. p. 349; *Recherches sur les Langues Tartares*, pp. 1, 3; *Kennedy on the Origin of Languages*, p. 57; *Malcolm's History of Persia*, ii. p. 226; *Muller's Lectures*, pp. 284, 285.

TARTARA or Koh-i-Rasul, a peak of the Khaibar range of mountains, rising 6822 feet above the sea. It has been proposed as a sanatorium for the British troops of the Peshawur district.—*Lieut.-Col. MacGregor*, iii. p. 186.

TARTARIAN LAMB. Eng. Aspidium barometz, so enthusiastically described by Darwin in his Botanic Garden, has long been celebrated in China. The ingenuity of Chinese gardeners, taking advantage of the natural habits of the plant, form it into a shape resembling a sheep or other object.—*Williams' Middle Kingdom*, p. 275.

TARTUS, the ancient town of Orthosia, on the sea-shore opposite the island of Ruad, the Arphad of the Hebrew Scriptures, and the Aradus of the Greeks and Romans. It was from this place that the wood of Mount Libanus was conveyed in floats to Phœnicia, and not from Tarsus, which is a city in the interior of Celicia, 24 miles from Mersina, its seaport.

TARU or Khu-hta are the most northern of the tribes of Burma with whose language any acquaintance has been made. They speak a dialect of Pwo. The Taru dwell north and east of the Ka, and west of the Red Karen. The Burmese call them Belu, but they style themselves Khuhta. They shave the head, leaving two side locks.—*Mason, Burma*, pp. 642, 643.

TARWAAD, on the Malabar coast, a family community living according to the Marumakatayam rule of inheritance, or descensus a matrice, with a karnaven or head. A united family amongst the Polyandric races; in Malealam Tarawata. See Polyandry.

TASA or Tasha Murfa, a drum of a semicircular shape, played upon with two sticks, and invariably accompanied by the murfa.

TASADUQ. Arab. Alms, an offering, a sacrifice.

TASBIH. Arab., Hind., Pers. A rosary. A Muhammadan rosary consists of 99 beads, sometimes more, to stand for certain prayers. All Muhammadans usually carry a chaplet of this description. Amulets are also worn on the person as a protection from evil. These are portions of the Koran, or the whole book, written exceedingly small, enclosed in cases, and bound on the arm; cornelians and bits of coloured glass having the name of God and verses of the Koran engraved on them.

TASH, cloth interwoven with gold or silver thread. A fabric made at Benares and Lucknow.

TASHHIR. Hind. A public disgraceful punishment in the time of the emperors of India. The culprit had his face blackened, and was made to ride, with his face to the tail, on a donkey through the streets of the city. It was discontinued in British India about the middle of the 19th century.

TASHKEND, the capital of the Russian possessions in Central Asia, and the residence of the Russian Governor-General, has an estimated population of 120,000. A Russian town has grown up outside the ancient walls, and Tashkend is the superior of its former rivals, Khokand, Bokhara, and Samarcand. From one side to the

other the maze of streets stretch six miles across, and the circumference of the lofty clay-built walls is nearly seventeen. The supply of water is lavish, a broad canal bringing it from the Tchirtchik, sixteen miles distant, to the city walls, and with four branches and numerous ramifications convey it to every street in Tashkend. For miles the country is covered with orchards and gardens. Beyond the gardens is the steppe or prairie, stretching forty miles on the one hand, to the Syr Darya river, and, on the other, thirty miles to the mountains of Tchatkal. The steppe is thickly dotted with villages embosomed in orchards. From Kojend to Fort Perovsky, a distance of some 900 miles, and eastward as far as the Aksai and Kara Tau range, there is a stretch of fertile territory capable of being made one of the finest provinces in the Russian empire. Along this valley are evidences of former cities, compared with which Tashkend is an insignificant town, and its population a poor and obscure community.

TASHRIH-ul-AKWAM, a work by Colonel James Skinner on the origin of Hindu castes.

TASLIMAT. Arab. Obeisances to persons of rank.

TASMAH BAZEE, a term applied in Hindustan to a class of Thugs, professional murderers, who destroyed their victims by means of a tasmah or belt.

TASMAN. Abel Janssen Tasman, an eminent Dutch navigator, who in A.D. 1642 discovered New Zealand, also the Tonga Islands or Hapai group, and Van Diemen's Land, 24th November 1642, and named by him after Maria Van Diemen, the beautiful daughter of the Dutch Governor of Batavia. Owing to the prejudice which was found to deter British emigrants, the name of Van Diemen's Land was changed about the year 1840 to Tasmania, in honour of its susceptible and romantic discoverer. It was not known to be an island until explored by Flinders, who, with Bass, discovered Bass' Strait in 1799. Tasman discovered the Fiji Islands in 1643. The western shore of Tasmania is rocky and sterile, with reefs of three or four miles. The E. and S.E. coasts are bold. Hobart Town, the seat of government, is in lat. 42° 53½′ S., and long. 147° 22½′ E. It is built on the west shore of Derwent river, at the foot of Mount Wellington.

TA-SOUNG-DOING. Burm. The lamp-post festival in the month Ta-soung; before each house evening lamps are lit. It is the Chinese feast of lanterns, and supposed to be the great festival of the Pleiades, held in ancient times in November. Small fire-boats and rafts are launched, each with a number of lights on them, and as they float with the current are anxiously watched by the people who launch them. The same custom prevails in Hindustan. See Khaja Khizr.

TAT. Beng. Corchorus olitorius. Gunny, coarse matting made of sunn and other materials. A matted screen.

TA-TA-MI. Jap. House mats 5¾ feet by 3 feet, stuffed to a thickness of 2½ inches, and covered with a finely-woven substance.

TATHAGATA, one who goes in like manner; an appellation of Gautama, implying that he came in the same way as the previous Buddhas.—*Hardy, E. Mon.*

TATI BELLAM. Tel. Sugar from Borassus flabelliformis, palmyra sugar. Tati-chettu, the tree; Tati-gedda, also Tati-kalangu, the root; Tati-nar, the fibre; Tati-pandu, the fruit; Tati-kallu, the palm wine.

TA-TSIAN-LOO, the border town and customs station of Western China. Beyond this point, a handful of tea, a few needles, or a few yards of white or blue thread, are of more value than gold, silver, or copper coin; indeed, the latter are useless, while sycee silver and rupees are only exchanged at a considerable loss. Leaving behind the magnificent gorge of Ta-tsian-loo, with its perpendicular walls of mountains, travellers follow up the stream which, flowing through it, joins the Tatow-ho at the foot of the gorge; by noon they can reach the summit of the Jeddo range of mountains, which may be said to form the great natural wall of Western China. From this point, two days' journey brings them to the little town of Hokow, situated on the left bank of the river Yarlong, a tributary of the Kin-char or Yang-tse river.—*Geog. Soc.*, 1870.

TATTA, Thato, or Nagar Thato, a small town in Sind, in lat. 24° 44′ N., long. 68° E., on the right bank of the Indus, at the head of the delta of the Indus. It is built on a slight eminence at the foot of the Makli Hills, and is notoriously unhealthy. It was founded A.D. 1445, by a Samma prince, Jam Nizam-u-Din, and was pillaged by the Portuguese in 1555.

Maurice states that Tatta is the Daibul of the Persian tables of Sir William Jones. The statement is made by Ferishta, who was probably followed by Maurice; but Elphinstone shows (Book v. chap. 1) that Tatta cannot be the Dival or Dewal celebrated for the siege by the Arabs under Muhammad Kasim in A.D. 711. The point has been discussed also by Rennell, Burton, and many other writers, but with no satisfactory result.—*Cal. Rev.*, Jan. 1871; *Burnes' Sind.*

TATTOOING the body with various figures of animals or plants, or with scrolls, has been in use from the most ancient times. It was forbidden by Moses in the Levitical law; it was not known among the Copts, but must always have been in use among the Lower Egyptians. It was used by the Arab prisoners of Rameses, and is practised by the Egyptian Arabs and Arab women of the present day. On the return of Philpator to Egypt, he showed his hatred of the Jewish nation by his treatment of the Jews in Alexandria. He made a law that they should lose the rank of Macedonians, and he enrolled them among the class of Egyptians. He ordered them to have their bodies marked with pricks, in the form of an ivy leaf, in honour of Bacchus; and those who refused to have this done were outlawed, or forbidden to enter the courts of justice. The king himself had an ivy leaf marked with pricks upon his forehead, from which he received the nickname of Gallus. The fellaheen or country women of Palestine generally tattoo stars and dots, with gunpowder, on their foreheads, lips, chins, breasts, arms, hands, and feet. The tattooing of women is a practice very prevalent amongst several of the races in Persia, and dots and marks are used by Arab women. The Muhammadans of India do not tattoo or mark their skins in any way, neither men nor women, but most of the women of the Dravidian races mark their forearms, from the wrist to the elbow, with scrolls. The Kharria, Juanga, Munda, Ho, Kol, and Oraon girls have

lines tattooed on the forehead and temple, and dots on the chin and nose. The Singbhum girls have a tattooed arrow. Oraon boys have severely tattooed arms. The Ho use the mark of an arrow. It is called godna, also godni, by the Mahrattas. The Kharria women are all tattooed with the marks on the forehead and temples,—three parallel lines on the forehead, the outer lines terminating at the upper end in a crook, and two on each temple. The marks of the Juanga women are larger, and those of the Muuda are smaller than the Kharria marks. In Southern India almost all Sudra and Pariah women have tattooing marks on them. A blue line runs down the forehead to the root of the nose, a practice which some of the Sudra men and women of the Smarta Brahmans also follow. The women also have their forearms tattooed with flowers, and the men put a scorpion on the hollow between the thumb and forefinger of the right hand. These hand and forearm marks are for ornament, but the forehead mark is now regarded as a sectarian Hindu mark. The Khand, also higher Abor tribes, tattoo. The Abor Naga claus do not permit marriage until their faces are elaborately tattooed and disfigured; and the practice prevails among the Simang and Binua and other Ultra-Indian and Asianesian tribes. The Kol and Oraon women are all marked with the godna tattooing, the Agareah women (agricultural) on the arms and legs.

The faces of the Khyen women, near the Irawadi, are all tattooed over with deep blue marks, a custom introduced avowedly to make them unattractive, but is being discontinued under British rule.

Every male Burman is tattooed in his boyhood from the waist to the knees; in fact, he has a pair of breeches tattooed on him. The pattern is a fanciful medley of animals and arabesques, but it is scarcely distinguishable save as a general tint, excepting on a rather fair skin; tracing on various parts the figures of animals or plants, in a manner so pleasing that British officers have often been attracted to submit to the painful and barbarous process. Tattooing of the Burman lads is not unfrequently followed by sloughing and death. In Fiji this practice is confined to the women, the operation being performed by members of their own sex, and applied solely to the corners of the mouth, and those parts of the body covered by the scanty clothing worn by them. The skin is punctured by an instrument made of bone, or by the spines of the shaddock tree, whilst the dye injected into the punctures is obtained chiefly from the candle-nut, Aleurites triloba. They believe that the custom was commanded by Degei, their supreme deity. Neglect of this divine commandment is believed to be punished after death. In Polynesia the practice seems to have attained its culminating point in the Society Islands and the Marquesas, where both men and women submitted to it; in Samoa and Tonga, it is restricted to the men, in Fiji to the women, and altogether ceasing in the New Hebrides. Tradition, however, asserts that the custom was known in Fiji before its being adopted in Samoa or Tonga. Two goddesses, Taema and Tilafainga, swam from Fiji to Samoa, and on reaching the latter group, commenced singing, 'Tattoo the men but not the women.' Hence the two were worshipped as the presiding deities by those who followed tattooing as a trade.

A race in Japan tattoo their skins. Tattooing is practised in the Admiralty Islands, chiefly by the women. Most of the men have circular cicatrizations. Erskine, in his Course in the Pacific, mentions that the natives of the Samoan or Navigators' Islands have exactly the same fashion. The tattooing in Tahiti has greatly decreased; formerly the bodies were completely covered over with beautiful figures, exhibiting every variety of curve, with animals, flowers, and the sprigs and branches of trees.

Tattooing in the Society Islands was done by professional men who travelled about the country. The instruments used were bits of bone cut into the shape of small combs, and the soot of burned candle-nut.—*Skinner's Overland Journey*, ii. p. 208; *Montgomery*, p. 127; *Galton's Vacation Tourists; Sharpe's Egypt*, i. p. 344; *De Bode's Travels*, p. 85; *Dalton, Ethnol. of Bengal; Yule*, p. 151; *Jenkins' American Expedition*, p. 164.

TATVARAYAR, a Saiva ascetic of the 17th century, who was of the Tamil people. He wrote numerous works in the Tamil language.

TATWA SAMASA, a text-book of the Sankhya philosophy, attributed to Kapila.—*Dowson.*

TAU. CHIN. The various kinds of pulse which form part of the sixth of the sixteen classes into which all medicinal and natural history substances are classed, in the Pen Tsau, a Chinese work on medicine. Abrus seeds, cardamom fruits, nutmegs, etc., are all called tau. Tau-fu is pulse-curd.

TAU of the Egyptians, a cross, anciently a symbol of the generative power, was transformed into the Bacchic mysteries. Such a cross was found on the wall of a house in Pompeii, in juxtaposition with the phallus, with symbols embodying the same idea.

The mystic Tau, or standard of the cross, as it has been called, formed just half of the Labarum, or idolatrous standard of the pagans. The Labarum bore at once the crescent and the cross; the crescent as the emblem of Astarte, the queen of heaven, and the cross as the emblem of Bacchus.

TAURIS, the modern Tabreez, was the capital of more than one dynasty, and throughout the middle ages was a chief point of contact and trade between the Latin and oriental worlds. It has been identified, not only with Shushan of Esther and the Achmetha of the Apocrypha, but with the Northern Ecbatana and half-a-dozen other ancient cities of fame. Rawlinson, however, considers it not to be older than the 3d century. —*Yule, Cathay*, i. p. 48; *Mignan's Travels*, p. 334.

TAURUS, the name applied by ancient geographers to the lower and outer spurs of the Kurdistan range. There is no Taurus range, but the ancients supposed it to begin near the shores of the Archipelago, and extend 1000 miles to the sources of the Euphrates.—*MacGregor.*

TAUTANG, the name of a tribe whom the Heuma populations describe as living beyond their boundary. See Mowtu.

TAUT'H. SANSK. Father, supposed to be the Teuthes and Tot'h, the Mercury of Egypt.—*Tod.*

TAVALAM, a term which, substituting bullocks for camels, is equivalent to a caravan. The class of persons engaged in the traffic in Ceylon, of carrying light loads on pack oxen, who resemble

in their occupations the Banjara of Hindustan.—*Tennent, Ceylon*, p. 53.

TAVERNIER, JEAN BAPTISTE, Ecuyer, Baron d'Aubonne, a traveller in India from 1663 to 1669, and the history written by him merits mention for the fidelity of his description of countries little known. He was by birth a Swiss, and the son of a very able geographer; and he himself was the greatest traveller of his age. Besides his European travels in the early part of his life, he spent forty years in six journeys into Turkey, Persia, and India, and entered deeply into commerce, chiefly in that of jewels. He determined on a seventh voyage, but died on the road, at Moscow, in 1689, aged 84. The history of his six travels has been repeatedly printed, at Paris in 1676-77, at Rouen in 1713, in English in 1688. After the Jesuits, the earliest notices of India were by Bernier (A.D. 1658–1670), followed by Tavernier.—*Pennant's Hindustan; Bjornstjerna.*

TAVERNIERA NUMMULARIA. *D. C.* An undershrub of Afghanistan, Panjab, and Sind, one of the Fabaceæ. Its leaves are used as a poultice in sloughing ulcers.—*Murray.*

TAVIZ. PERS. A charm. The practice of binding sentences of the Koran on the arm would seem to be alluded to in Deuteronomy xi. 18: 'Therefore shall ye lay up these my words in your heart, and in your soul, and bind them for a sign upon your hand, that they may be as frontlets between your eyes.' The extract is usually a slip of paper with a quotation from Holy Writ, some curious spell to avert the evil eye, or a song to some dead saint. These are the characts of ancient days, commonly used in different parts of Europe. Most Muhammadans of India carry about with them or keep in their homes some form of taviz.—*Burton's Scinde*, i. p. 280.

TAVOY, a small island off the coast of Tenasserim, to the south of the mouth of the Tavoy river. It extends from lat. 12° 55′ to 13° 13′ N., and from long. 98° 17′ to 98° 23′ E., and is about 18 miles long by 2 broad. On the east there is an excellent harbour. The swallow that forms the edible nest, builds in its caves. Tavoy Island gives its name to a district on the mainland, with an area of 7200 square miles, and a population of 71,827 in 1872. The main range of the Yoma rises in places to a height of 5000 feet, and with its densely wooded spurs forms an impassable barrier between the British and Siamese territories. Gold is washed for; there are hot sulphurous springs, with a temperature of 119° Fahr., and saline springs at 144°, and valuable timber trees. Tavoy Island is the most northern of the group called the Mergui Archipelago. Tavoy town is on the left bank of the Tavoy river, and was taken by the British on the 15th September 1824. In the neighbourhood of Tavoy are two sacred lakes, two small currentless basins in the Pagaya river at the foot of pagoda-crowned precipices, 100 to 200 feet high. A fish, a species of barbel (Barbus Mortonius), is held sacred to the pagodas by the Buddhists, and come in shoals for rice thrown to them by passers-by, as fearless of man as the barking deer that drinks their waters.

TAWURI, T'hori, or Tori, a race dwelling in the desert of Rajputana. These engrossed the distinctive epithet of Bhoot or evil spirits, and the yet more emphatic title of sons of the devil. They ranked with the Bawuri, Khengar, and other professional thieves scattered over Rajputana, who would bring either your enemy's head or the turband from it. They are found in the t'huls of Daodputra, Beejnote, Noke, Noakote, and Oodur. They are proprietors of camels, which they hire out, and also find employment as convoys to caravans.

TAWWAF. ARAB. Circumambulation, the procession of the Muhammadan pilgrims round the Kaba at Mecca. Tawwaf bait Allah-ul-Harām, circumambulation of the sacred house of God, which the pilgrims are enjoined by the Koran to do seven times, the first three in a quick, the last four in a calm, ordinary pace; and each time that they pass the Black Stone, Hajar-ul-Aswad, they kiss it or touch it with the hand, which they immediately apply to their lips. The stone is set in silver, at the south-east corner of the Kaba at Mecca-i-Sharif, and is about seven spans from the ground. Tayf is the participle of the Arabic verb Tafa, which signifies to go round; but is especially applied to the religious ceremony of Muhammadan pilgrims going round the Kaba at Mecca. It is the encircling of holy places so often alluded to in the Old Testament, and still practised by Buddhists, Hindus, Christians, and Muhammadans. Psalm xxvi. 6 says, 'I will wash mine hands in innocency: so will I compass thine altar, O Lord.' Hindu women often compass their husbands, as in Jeremiah xxxi. 22. Hindus and Buddhists circle from right to left, Romish priests and Muhammadans from left to right. The Persian couplet says, Tuaf-i-Kaaba-i-dil kun, gar dili dari, Circle the holy place of your heart if you have a heart. The Hajar-ul-Aswad is set in silver, and is believed by Muhammadans to have fallen from paradise to the earth, along with Adam. It remained where it fell until the deluge, when it was again taken up to heaven, but was brought back by the angel Gabriel to Abraham, when he was building the Kaba. It is believed by them to have been white originally, but to have become black from being kissed by a woman when unwell. The Tawwaf is the Pradakshana of the Hindus.—*Hamilton's Sinai*, p. 152.

TAXATION. The taxation per head in the principal Native States stands thus:—Travancore, 3 rupees 12 annas; Patiala, 1 rupee 14 annas; Udaipur, 2 rupees; Jeypore, 2 rupees 10 annas; Jodhpur, 2 rupees; Ulwar, 2 rupees; and Sindia, 7 annas per head.

TAXIDIA LEUCURA, the Tibetan badger, Thumpha of the Tibetans, inhabits the plains of Tibet; total length, 37 inches, whereof the tail with the hair is 10 inches, and without it 7. The aspect is entirely that of a long-tailed badger, with somewhat smaller head and longer, finer fur than usual. The small head is conico-depressed, with remote ears and eyes, and sharp elongated face. The small pig-like eyes are situated midway between the ears and tip of the snout. The ears are oval, well developed, and tending to a point. —*Mr. Hodgson in Journ. Ben. As. Soc.*

TAXILA. General Cunningham has identified this ancient city with Deri Shahan, or Shah Dheri, a village in the Rawal Pindi district of the Panjab, in lat. 33° 17′ N., and long. 72° 49′ 15″ E. The existing remains extend over an area of six square miles, among them many large monasteries and st'hupas.

The Takka race originally held all the Sind-Sagur Doab; and Arrian describes their chief town, Taxila or Takshasila, as a large and wealthy city, the most populous between the Indus and the Jhelum (Hydaspes). The city stood a few miles north of the Margala pass, where several mounds still mark the sites of its principal buildings. Alexander the Great rested his army at this point for three days, and was royally entertained by the reigning sovereign. Fa Hian, a Buddhist pilgrim from China, visited Taxila about A.D. 400, and was followed in 630-643 by his countryman and co-religionist, Hiwen Thsang, who found that the seat of government had been removed to Kashmir.

The ruins consist of six separate portions. Of these, the mound of Bir, close to Deri Shahan, has furnished many coins and precious stones. Hatial, a fortified spur of the Margala range, probably formed the ancient citadel; it is enclosed by a round wall, and crowned by a large bastion or tower. Sir-Kap presents the appearance of a supplementary fortress, united with the citadel by a wall of circumvallation. Kacha-Kat is supposed to have been for the security of the elephants and cattle. Babar-Khana contains the remains of a st'hupa, which General Cunningham has identified with that of Asoka, mentioned by Hiwen Thsang. —*Imp. Gaz.*

TAXUS BACCATA. *Linn.* Himalayan Yew.

Rakhal, ... Beas.	Kautu,. . . . . Kash.
Nharey, ... Bhot.	Tuno, ... Kulu.
Thuneer, Zurnub, . Hind.	Dhnui kunt'h, . . Ravi.
Thunu, . . . Jhelum.	Chogu, ... „
Birmi, . Jhelum, Ravi.	Rakhai, Nyamdal, Sutlej.
Sungal, Postil, . . Kash.	Kadenru, ... „
Tung, ... „	Sarap, Badar, Trans-Ind.

This tree occurs in many parts of the Panjab Himalaya, up to the Indus, at from 5000 to 10,000 feet, but sparingly in almost all except in parts of Hazara, where it is pretty common. It is found in the Sutlej valley, between Rampur and Sungnam, at an elevation of 9000 to 10,500 feet. It has a hard, heavy, strong red wood, tolerably elastic, used for making native bedsteads, in some parts for jampan poles, buggy shafts, and on the Sutlej for bows. The wood of an old tree is of a fine red colour; it polishes well, and seems adapted for upholstery purposes; it is well fitted for turning, and Vigne states that in Kashmir it is used for making clogs. The leaves are sold in the bazars of the N.W. Provinces of India, under the name of burmee or zurnub, and are used by the natives as an expectorant in catarrh; administered in powder in doses of gr. xlv., or in decoction. Its appearance and form of growth vary much when it grows in the higher latitudes and when growing in deep forests. It is a large tree with naked trunk. It is often of great thickness, but seldom attains any great height; the thick trunk generally dwindles away or divides into branches at a few feet above the ground. On the skirts of the forests it is almost a prostrate bush, while on open slopes it becomes a stout, dense, and tabular branched tree. T. cuspidata, *S. and Z.*, and T. adpussa, *Knight*, are trees of Japan.—*Hooker*, i. p. 45; *Lt.-Col. Lake; Cleghorn.*

TAYAMMUM. Arab., Hind. Purifying the hands by rubbing with sand. When water cannot be obtained for their ceremonial ablution before prayers, Muhammadans clap the palms of their hands upon the sand, and draw them once or twice down the face and both forearms. This is performed once; it varies in different schools. —*Burton's Mecca*, i. p. 385.

TAYE, a fish of Japan, which sells at a high price.

TAYF. At a short distance, near the Bab-ul-Yemen gate, outside the town of Tayf, to the west, a five-sided block of granite, rising in a slant from the ground, is pointed out as the idol Lat. In its greatest length it measures about 12 feet, and 4½ to its highest edge. Another idol of the old Arabs, El Izzah, is within the town; like the Lat, it is an unhewn stone, with a depression or hollow on the north side, resembling a water-worn boulder. They are mentioned in the chapter of the Koran called the Star, liii. 19-23: 'What think you of El Lat and Izzah and Marrat, the third? They are but names you and your fathers have given them.' El Lat was adored at Tayf, but there is not only, Burton believes, no ancient authority for placing the worship of El Izzah here, it does not even seem to have been a stone, but rather the trunk of a tree or a wooden image, which was burned by Mahomed's order. The dimensions of the stones pointed out as El Lat correspond to the description given by Herodotus and his commentator of the idol Alilat, Αλιλατ or Αλιατ, whom he compares to Urania. Lat may not improbably have been such a stone as that pointed out to Hamilton. That it was this identical one, Burton cannot help doubting, notwithstanding the tradition of the place. Herodotus mentions another deity, Urotalt, Ουροταλτ, whom he identifies with the great Bacchus; but this can hardly be other than a slight corruption of the title of the Supreme God (Allah taalah), the r and l being easily convertible sounds.—*Hamilton's Senai, Hedjaz, Soudan*, pp. 150, 151; *Burton's Pilgrimage.*

TAYLOR, Dr. JAMES, author of Topography of Dacca, Calcutta 1840.

TAYLOR, Major JOHN, author of Travels from England to India in 1789, by the way of Venice, Aleppo, and over the Great Desert to Bussora.

TAYLOR, Colonel MEADOWS, rose in the Nizam's service. He wrote Memoirs of a Thug, 3 vols., 1840; also on Celtic Remains near Ferozabad, Dekhan, in Bom. As. Trans., 1851-52; also Tara, and other works of fiction.

TAYLOR, THOMAS G., Astronomer, Madras Observatory, author of General Catalogue of the Fixed Stars, from Observations made at Madras from 1830-43, 4to, Madras 1844; Result of Astronomical Observations made at Madras, from 1831-37, 4 vols., Madras 1832-38.

TAYLOR, Rev. W., of Madras, author of an Account of the Seven Pagodas, in Mad. Lit. Trans., 1844, i. p. 50; on Supposed Early Celtic and Scythian Vestiges in various parts of the Carnatic, ibid., 1847-48; editor of the Mackenzie Manuscripts.

TAYUMANAVAR, the greatest of Tamil poets, wrote in pure, plain Tamil.

TAZIA KHANA, the house of mourning, or Ashur khana. The Tazia, a model of the tomb of Hasan and Husain at Kirbala. The Muhammadans in India carry it in procession in the Maharram.

TAZKIRA. Arab. A notice of poets; any memoir.

TA-ZOUNG. Burm. An ornamented shed or roof over an image of Gautama.

TCH, in the English language, occurs only in

foreign words, and only then to meet the spellings of the other nations of Europe, in order to obtain the sound of the English ch, as in charge, chesnut, chivalry, and church.

TCHE-KIANG, a province in China, one of the most considerable in extent, riches, and population. It contains 11 cities of the first rank, 72 of the third, and 18 fortresses, which in Europe would be deemed large cities.

TCHERKAS or Tcherkess, the Circassia of Europeans, a country on the northern face of the Caucasus. It contains many tribes of various appearance and dignity; some of them allege an Arab descent, others are Tartars. The Chetchinzi were considered the most formidable of all the tribes which inhabit the innumerable rocky valleys of the eastern line of the Caucasus. Their predatory excursions, whether in large or small bodies, were not only a dread to their own immediate neighbours, tribes like themselves, though of less extent and power, but their sudden descents, ambuscades, and continued warfare, kept the disciplined Russians constantly on the alert. These lords of the mountains seemed never to rest, day nor night. Unwearied in their watch for prey, like lightning in attack, for they struck or were lost to sight as quickly. As the Muhammadan was the last religion attempted to be introduced amongst these people, they suppose themselves to be good Muslims, but they have not any knowledge of its doctrines. The bride brings a dower, consisting of cattle, etc., proportioned in value according to the wealth of her family. She is brought home to the house of her betrothed husband, and then the ceremony is completed by dancing, drinking, and carousal. From the custom of the sons never migrating from the paternal spot, families, from one stock, increase from single sheds to considerable villages. Each habitation of these people is separated into three divisions,—one for the women, another for the men, and a third for the horses and other cattle. The whole little establishment is then encircled by a fence of wicker-work or stones.—*Porter's Travels*, i. p. 62.

TCHING-TCHEOU, a first-rate city of China, in which a kind of plain earthenware is prepared, which the Chinese prefer.

TCHING-TOU-FOU, the capital of the province of Sze-chuen, is one of the finest towns in China, in lat. 30° 40′ N., and long. 103° 44′ E. It is situated in the middle of an admirably fertile plain, watered by beautiful streams, and bounded towards the horizon by hills of graceful and varied forms. The principal streets are of a good width, paved entirely with large flagstones, and so clean that you can scarcely, as you pass through them, believe yourself to be in a Chinese town.—*Huc, Chinese Empire*, p. 79.

TCHUNG KWOCK. CHIN. The middle kingdom, a name the Chinese designate China proper.

TE. CHIN. God, an abbreviation of Shang-Te, the ancient name for God in China. It is used in place of the second personal pronoun, which could not be employed without breach of reverence.

TEA.

Chai, AR., KASH., PERS., RUS., TURK.	Thé, ... FR.

Te, . . CHIN., DUT., IT., MALEAL., SP.	Black T.—Itam, MALAY.
	Green T.—Putch, . ,,
	Teh, Chah, . . . ,,

There is scarcely any country in the world in which a dietetic drink or beverage resembling tea is not prepared and in general use from some exotic or indigenous shrub.

The Mexico and Guatemala people infuse the leaves of the Psoralea glandulosa, Alstonia theæformis leaves are used at Matis, and the inhabitants of New Granada utilize the leaves of Symplocos alstonia, *Humboldt*, and likewise those of Gaultheria procumbens and Ledum latifolium. In Paraguay, under the name of Maté, the Ilex Paraguayensis is employed, as also its varieties, I. gongonha and I. theezans. In the Kurile Isles, the Pedicularis lanata. In British India, the stalks of the lemon grass, Andropogon citratus, are largely made use of. Also the 'tea of heaven' of the Japanese is the leaf of the Hydrangea Thunbergii, *Siebold*. Astoria theiformis is used at Santa Fe as tea. The leaves of Ceanothus Americanus, an astringent herb, have been a substitute, under the name of New Jersey tea.

The Kola is the Sterculia acuminata; the Kat'h or Catha, the Abyssinian tea plant, is the Catha edulis. Tasmanian tea is made from species of Melaleuca and Leptospermum, also from Corræa alba, Acœna sanguisorba, Glaphyra nitida, and the bark of Atherosperma moschata.

The Faham tea of Mauritius is from Angræcum fragrans, a fragrant orchid.

The two chief plants laid under contribution for tea are, however, the Chinese tea plant, and a species of holly peculiar to South America, producing the Paraguay tea.

The names by which the tea of the Thea Chinensis is known to the Chinese, viz. Ming, Ku-tu or Ku-cha, Kia, Tu, also show that several shrubs have furnished that country at various times with the tea-leaf in use at different periods or places. The term Ming belongs to the time of the T'ang dynasty, is still used in literary composition, and is often put on tea boxes. Ku-tu or Ku-cha are names for the chicory leaf, but also the present tea-leaf. The word Kia probably referred to the chicory, but also to the Sageretia theezans, a rhamnaceous shrub, the leaves of which at the present time furnish tea to the Chinese poor, to whom the proper tea-leaf is unattainable, owing to the high price to which the great exportation has raised it. Camellia leaves are perhaps mixed with it, but probably to no great extent. The refuse of packing houses is sold to the poor at a low rate. The name Tu is likewise still employed. During the reign of a prince of the Han dynasty, the use of the word 'tu' for the character 'cha' was interdicted, but the prohibition was evaded by omitting part of the Chinese character.

Thea Chinensis of Linnæus, the Camellia thea, *Linklater*, the C. theifera, *Griffith*, is, however, the plant which is to be noticed here.

Trade.—The immense traffic in the produce of this simple shrub affords one of the most remarkable illustrations of the enterprise and energy of modern commerce. Mr. Morrison, writing in 1843, says that the total exportation of tea from China was probably near 427,500 pikuls, or 57,000,000 lbs.; viz. to England, 40,000,000 lbs.; to the United States, 14,000,000 lbs.; and to all other countries, 3,000,000 lbs.; which, at 25 taels per pikul, amounts to a value of 10,687,500 taels, or 14,500,000 dollars. The increased facilities of communication, and with it the reduction of cost,

also the larger use of tea in lieu of alcoholic fluids, have so augmented the demand, that Great Britain alone, in 1882, imported about 211,080,362 lbs. Three-fourths of that quantity came from China, and about that quantity was retained for British home consumption, every person in the United Kingdom using, on an average, about 5 lbs. annually. Tea and coffee form the chief liquid food of whole nations, and must exercise a great influence upon the health of their people.

British India is now (1883) taking a large share in the commerce of this product. It imported in 1882–83, 2,751,085 lbs., value Rs. 19,30,515; and exported 57,766,235 lbs., value Rs. 3,69,95,085.

The London market cannot easily absorb the quantity of tea that now reaches it from India and China. In 1871 the exports of tea from India to all ports were 13,250,000 lbs., valued at £1,139,703; in 1881 they were 38,400,000 lbs., valued at £3,072,244. The consumption of Indian tea has increased necessarily in the ten years; but during that time China has largely increased her export, and it is commonly said in London that, for the time being, the supply of tea of one sort or another is in excess of the world's demand. The export of tea from China is not increasing; and the proportion of really good to unquestionably inferior tea that she ships is steadily declining. China, in 1873, exported 39,299,000 H. taels, and in 1882, 31,332,000, a tael being 12 oz. avoir. India is strong in high-class teas, and her planters should spare no pains to maintain the repute of those teas in European, American, and colonial markets.

There is no information as to the quantities of teas retained for home consumption amongst all the millions using it in the countries in the S.E. of Asia. There is a large export trade of tea from China, through Si-ning-fu in Kan-su, with Muhammadan and other tribes, who bring horses in exchange. The Russians established in Hu-peh have taken out of Chinese hands the making of brick tea for the Mongols, Siberians, and Kirghiz

The prices of the teas of China greatly vary. The Russian teas, brought by caravans, are the most expensive and are the best used in Europe. The Chinese themselves pay 7½ dollars per lb. for the Yen Pouchong teas. Full chests were exhibited in 1851 by Mr. Ripley of various Pekoe teas, some of which sell at 50s. per lb. in the China market; whilst 7s. was the very highest price any of the sort fetched in England, and that only as a fancy article. The plain and orange-scented Pekoes bring little in Great Britain. All caravan teas are purchased by the wealthier Russian families. The finest, however, never leave China, being bought up by the mandarins; for though the transit expenses add 3s. to 4s. per lb. to the value when sold in Russia, the highest market price in St. Petersburg is always under 50s. Among the scented teas are various caper teas, flavoured with flowers and the buds of plants belonging to the orange tribe, Magnolia fuscata, Olea flowers, etc. The Cong Sou-choung or Ning-young teas are chiefly purchased for the American market. Oolong tea was long the favourite drink in Calcutta, though less prized in England, its delicate flavour being injured by the length of the voyage. For delicacy, no teas approach those usually called 'Mandarin teas,' which, being slightly fired and rather damp when in the fittest state for use, will bear neither transport nor keeping. They are in great demand among the wealthy Chinese, and average 20s. per lb. in the native market. The dealers in China are very particular in the selection of high-sounding and felicitous titles for their several parcels, and often a particular parcel acquires such a name as to be eagerly sought after for each successive season.

In Great Britain there is so little demand for the high-priced teas, that in 1878 no tea in the market over 3s. per lb. found purchasers; in 1882 the best of the Indian teas were selling at 1s. 3d. per lb., and in 1883 prices were ranging from 6d. per lb. upwards.

In *Formosa*, tea is largely grown and exported to Foh-kien and Macao, where it is freely mixed with the Canton teas. Oolong tea is also produced in Formosa, and exported to the United States. Tea is grown in Cochin-China, but is considered inferior to that of China, being less strong and pleasant in flavour.

In *Japan*, 36,000,000 lbs. of tea were produced in 1871, the province of Suraga contributing 13,000,000 lbs. of that quantity.

What Indian tea is becoming to Chinese in Great Britain, Japanese tea is becoming to that of China in the United States. The loss to China in that quarter is even greater, for more than a third of the tea now consumed there comes from Japan.

Into *Java*, in 1828, the tea plant was introduced by the Dutch; and, so early as 1848, nearly 1,000,000 lbs. were exported to Holland. Mr. Jacobson, inspector of tea culture in Java, published a book upon the mode of cultivating this plant, upon the choice of ground, and the best processes for the preparation and manipulation of the leaves. On the mountain range which runs through the centre of the island, the tea gardens, extending from near the base high up the mountains, reach an atmosphere tempered by elevation.

In *Ceylon*, the cultivation of tea is become important. Begun about the year 1867, at which time about 10 acres were planted, it made small progress till 1875, when the acreage was estimated at 1080. Since then the increase has been more rapid, the area under tea at the close of 1880 being estimated at close upon 9300 acres. The exports for five years were—

1876,	757 lbs. Rs. 1,907	1879,	95,969 lbs. Rs. 85,229
1877,	2,105 ,, 3,457	1880,	139,752 ,, ...
1878,	19,607½ ,, 20,900		

This does not represent the whole annual outturn, there being a large local consumption.

In the Andaman Islands, tea cultivation promises success. On the 14 acres of tea which were under cultivation one season, the out-turn has been 411 lbs. to the acre for the twelve months.

History.—No mention of tea-drinking was made

by Marco Polo. Suliman, an Arabian merchant, who wrote an account of his travels in the east about the year A.D. 850, is quoted by Macpherson in his History of European Commerce with India, as stating that tea (sah) is the usual beverage of the Chinese; yet no other mention of the custom has been met with prior to the Jesuit missions to China and Japan, a little before the middle of the 16th century. Botero is quoted as speaking of it in 1590; Texeira, a Portuguese, about the year 1600, saw the dried leaves of tea at Malacca; and Olearius in 1638 found it in use among the Persians, who obtained the leaves from China through the medium of the Uzbak traders. Tea seems to have been first introduced into Europe by the Dutch East India Company, and to have found its way into London from Amsterdam. Tea, coffee, and chocolate are all mentioned together in an Act of Parliament of 1660, wherein a duty of 8d. is charged upon every gallon of chocolate, sherbet, and tea made for sale. How great a novelty it was is shown by Pepys' well-known entry, 25th September 1661:—'I sent for a cup of tea (a Chinese drink), of which I had never drank before.' It long continued to be imported in small quantities only, the East India Company having purchased in 1664, for presentation to the king, 2 lbs. 2 oz. of tea. In 1678 they imported 4713 lbs. of tea, it being then for the first time thought worth their attention as an article of trade.

In the six following years the entire imports amounted to no more than 410 lbs. According to Milburn's Oriental Commerce, the consumption in 1711 was 141,995 lbs.; 120,595 lbs. in 1715; and 237,904 lbs. in 1720. In 1745 the amount was 730,729 lbs. For above a century and a half, the sole object of the English East India Company's trade with China was to provide tea for consumption in the United Kingdom. The Company had the exclusive trade, and were bound to send orders for tea, and to provide ships to import the same, and always to have a year's consumption in their warehouses. The teas were disposed of in London, where only they could be imported, at quarterly sales. In 1740, 1,493,695 lbs. of tea were retained for home consumption. Two years afterwards, the quantity fell to 473,868 lbs., and in 1767 only 215,019 lbs. were retained. Next year the amount increased to 3,155,417 lbs.; in 1769 it was 9,114,854 lbs.; in 1790, 21,342,845 lbs; in 1836, 49,842,236 lbs.

An Act of Parliament in 1834 threw open the trade to China, and the imports into Britain of tea during the years 1838, 1852, and 1882 were as follows—

Years.	Black.	Green.	Total.	Home Consumption.
	lbs.	lbs.	lbs.	lbs.
1838,	26,786,000	8,215,000	35,001,000	36,415,000
1852,	55,525,000	9,175,000	64,700,000	54,724,000
1882,	...	...	211,080,362	165,079,881

Varieties.—In European commerce, various kinds are known, as Black Tea, Bohea, Brick Tea, Congou, Green Tea, Gunpowder Tea, Imperial Gunpowder, Hyson, Pukli Hyson, Hyson Skin, Pekoe, Pekoe-Souchong, Flowery Pekoe, Scented Pekoe, Pouchong, and Souchong.

The Chinese names given to the various sorts of tea are derived for the most part from their appearance or place of growth, but the names of many of the best kinds are not commonly known abroad. *Bohea* is the name of the Wu-i Hills (or Bu-i, as the people on the spot call them), where the tea is grown, and is not a term for a particular sort among the Chinese, though it is applied to a very poor kind of black tea at Canton; *Sunglo*, likewise, is a general term for the green teas produced on the hills in Kiang-su. The names of the principal varieties of black tea are as follows:—*Pekoe* or *Pecco*, 'white hairs,' so called from the whitish down on the young leaves, is one of the choicest kinds, and has a peculiar taste; *Orange Pecco*, called shang-hiang, or 'most fragrant,' differs from it slightly; *Hungmuey*, 'red plum blossoms,' has a slightly reddish tinge; and the terms, prince's eyebrows, carnation hair, lotus kernel, sparrow's tongue, fir-leaf pattern, dragon's pellet, and dragon's whiskers, are all translations of the native names of different kinds of souchong or pecco. *Souchong* or *Sian-chung* means little plant or sort, as *Pouchong*, or folded sort, refers to the mode of packing it; *Campoi* is corrupted from kan-pei, *i.e.* carefully fired; *Chulan* is the tea scented with the chulan flower, and applied to some kinds of scented green tea. The names of green teas are less numerous:—*Gunpowder* or *Ma-chu*, *i.e.* hemp pearl, derives its name from the form into which the leaves are rolled; *Ta-chu*, or 'great pearl,' and *Chulan*, or 'pearl flower,' denote two kinds of imperial; *Hyson* or *Yu-tsien*, *i.e.* before the rains, originally denoted the tenderest leaves of the plant, and is now applied to the young hyson; as also another name, *Mei-pien*, or 'plum petals;' while *Hi-chun*, 'flourishing spring,' describes hyson; *Twankay*, or 'beacon-brook,' is the name of a stream in Che-kiang, where this sort is produced; and *Hyson skin* or *Pi-cha*, *i.e.* skin tea, is the poorest kind, the siftings of the other varieties; *Oolung*, 'black dragon,' is a kind of black tea with green flavour. Ankoi teas are produced in the district of Nganki, not far from Tsinen-chan-fu, possessing a peculiar taste, supposed to be owing to the ferruginous nature of the soil. De Guignes speaks of the *Pu-'rh* tea, from the place in Kiang-su where it grows, and says it is cured from wild plants found there; the infusion is unpleasant, and used for medical purposes. *Congo* is a corruption of *Kung-fu*, signifying labour; and the *Moning Congo* is so called from being grown in the district named from the city of Wuning, meaning Military Rest. Chulan tea, mentioned above, is brought from Foh-kien; it is scented with the Aglaia flowers, and answers to the scented caper of foreign markets. In the tea shops of China, Lung-ching, Tsioh-sheh, and Yai-chai are names of good teas in high repute.

Culture.—The tea plant is multiplied by seed like the hawthorn, and therefore the produce cannot be identical in every respect with the parent. Instead, therefore, of having one or two botanical varieties of tea plant in China, there are in fact many kinds, although the difference between them may be slight. The seeds of this plant are gathered year after year in different climates, and in the course of time the plants in one district slightly differ from those of another, although they may have been originally produced from the same stock. But the plants of Canton, Hwuy-chow, and Wu-i are the same species, and the slight differences observed are the results of reproduction and difference of climate.

These differences, however, do not alter the

commercial value of the plants found cultivated in the great tea countries of Foh-kien and Hwuy-chow, where the finest teas are produced. While the tea shrub may have improved in the course of reproduction in these districts, it may have become deteriorated in others. For this reason, seeds and plants for forming fresh plantations ought always to be procured from the districts famed for the excellence of its produce.

Sir John Davis, Mr. Fortune, and Archdeacon Gray have given detailed accounts of the Chinese modes of its cultivation and manufacture.

The last-named author mentions that in China the seed is gathered in October, and perfectly dried in the sun. In February or beginning of March, the seeds are soaked for 24 hours in cold water, and are then deposited in cloth bags in a moderately warm chamber, usually the cook room. When partially dried, they are moistened with water, after which they are again partially dried, and then once more moistened; and this process is continued until they begin to sprout, when they are placed half an inch apart in thin layers of earth, spread over basket-work or matting. During the first four days, every morning they are well watered and exposed to the sun, and in the evening are sheltered in-doors. On the fifth day they are strong enough to be exposed at night, and when 4 inches high they are planted in the ground, each 2 feet apart. Hilly ground, as affording good drainage, which is of vast importance, is better adapted for the growth of the plant than flat ground.

The tea plant yields its first crop at the end of the third year. If stripped before this, it may be spoiled or seriously injured. After this age, if the annual stripping be omitted, the following year would be marked by a very poor and comparatively useless crop. There are three gatherings yearly. The first crop of leaves is gathered in the latter part of April, the second towards the end of May or in the early part of June, and the third about 30 days afterwards. Great pains are taken not to exhaust the plants by plucking them too bare. Despite every care, when 8 or 10 years old, they become unproductive, yielding only a few coarse leaves; and farmers cut the shrubs down to the stems to obtain new shoots and leaves in succeeding summers.

Before commencing their labours, the gatherers have to wash their hands, and they deposit the leaves which they pluck in clean wicker-work baskets. An expert labourer can, with comparative ease, gather from 10 to 13 lbs. of leaves in a day. The leaves are plucked with great nicety, not more than one being plucked from the stalk at a time.

Manufacture. — In making *Congou*, the leaves are spread out in the open air to dry. They are then for 2 or 3 hours trodden by labourers to press out any moisture remaining in them, and are again heaped together and covered with cloths, and allowed to remain for one night, during which they generate a heat which changes their green to black or brown, become more fragrant, and undergo a decided change in flavour. The labourers now rub the leaves between the palms of their hands, so as to twist or crumple them, and in this state they are dried in the sun, or, if rainy, baked over a slow charcoal fire. In this state they are sold to the proprietors of the tea hongs, who again give them a two hours' firing, and the bad leaves and stems are then picked out, the whole winnowed, and packed in boxes lined with paper. The colour of the leaves gives their special names of black leaf, red or brown leaf congou, Oonan congou, Ning-chow congou, and Ho-chow congou. Oo-pak congou comprises the numerous kinds of congou produced in the province of Hu-peh, and largely exported from the port of Hankow. Oonan congou is produced in the province of Ho-nan; the leaves have a greyish-blackish colour, and in some instances a tinge of red.

Ning-chow congou is produced in the N.W. of the province of Kiang-si, and its finest varieties at Wu-ning, a place S.W. of the city of Kiu-kiang, where, as also at Canton and Hankow, it is chiefly sold. Its leaves are of a brownish-black colour. Ho-how congou is produced in the N.E. parts of the province of Kiang-si, and on the north of the Bohea Hills. The Ho-how teas are almost all sent to Kiu-kiang for sale, small quantities to Shanghai, Canton, and Fu-chu. The Ho-how teas rank lowest of all; the finest Oo-pak teas consist of the best black-leaf teas. Fine Oonan teas are superior to those of Ning-chow.

Foh-kien yields the small and closely-twisted red and brown leaf congous, but the finest of this kind, called Kai-shan, come from a district near the town of Shama. The principal market for these teas is Fu-chu, but those produced in the southern part of the province of Foh-kien are sent to Amoy.

The best congou of the Kwang-tung province is called Tay-shan congou. The leaves are long and wiry, and of a brownish-black hue. Much of it is sold at Macao.

In recent years a good imitation of red-leaf congou, small and twisted leaves, has been made at Canton and exported to Great Britain, to which also the red-leaf sorts are sent, and in smaller quantities to the United States, packed in chests or half-chests of from 40 to 60 lbs. Tay-shan congous are packed in boxes from 20 to 30 lbs., and black-leaf congous in chests containing 85 to 110 lbs.

Souchong tea has the same reddish or brownish colours as the red-leaf congou. Souchong is a class of tea very similar to congou. Fine souchong is produced only in the N.E. part of the province of Foh-kien. The picked leaves are spread out in the open air to dry, then trodden by labourers, and piled for one night in large heaps, each of which is covered carefully with a cloth. Next morning every particle of it is carefully rubbed between the hands, and for three hours dried over charcoal fires. The method of making souchong is similar in all respects to that of making congou. The first crop of souchong is only fired once, but is afterwards exposed to the sun's rays.

Flowery Pekoe, a fancy tea, is little made. It is prepared from leaf-buds which are exposed to the sun to dry as soon as they are gathered and then sold to the wholesale proprietors of hongs, who finally fire the leaves over a slow fire, and then pack them. The leaves have a downy appearance, and vary in colour, some being yellow, some black. It is exported from Fu-chu, and a little from Canton, to England.

Oo-long tea is produced in the province of Foh-kien. It is of some importance in trade, and is exported from the Fu-chu and Amoy ports largely

to the United States and to England and Australia. In preparing it, the leaves when gathered are spread out to dry; they are then sprinkled or moistened with water, and eventually fired in the same manner as congou. The planters then sell them to the tea hongs, whose workmen pick out all the stems and bad leaves. After this, the leaves are again moistened with water and once more fired. When leaves have been collected sufficient to form a chop, they are all mixed together and once again fired. In appearance they are yellow, with a black or dirt-green tint; in form they are bold, irregular, somewhat wiry, and not closely twisted.

Scented Orange Pekoe is made in the provinces of Quang-tong and Foh-kien. Those manufactured in the Quang-tong province are called Canton scented orange pekoe; those from Foh-kien are Fu-chu scented orange pekoe. In their manufacture, the leaves are spread out in the open air to dry; labourers then rub them between the palms of their hands to impart a twisted or crumpled appearance to them, and they are sent in that stage of manufacture to the markets of Canton and Fu-chu, where they are immediately unpacked and baked over a slow fire, and mixed with the flowers of the Arabian jasmine. When they are supposed to have sufficiently imbibed the fragrance, they are separated from the jasmine flowers by means of sieves. Fine kinds of scented orange pekoe are twice scented. They are not fired a second time. The leaves of the Fu-chu scented orange pekoe are small and closely twisted, of a yellow colour, with a brownish or blackish tinge. The Canton scented orange pekoe is long, wiry, closely twisted, and black, with occasionally a yellowish or greenish tinge. The black colour is produced by a mixture of powdered charcoal. Scented orange pekoe is invariably packed in boxes, and is exported to Great Britain; a small quantity from Fu-chu to Australia.

Scented Caper is made in the same manner as the scented orange pekoe. It consists, in fact, of pellet-shaped leaves, separated by a sifting process from the leaves of scented orange pekoe. Those prepared at Fu-chu are yellowish and brownish or blackish, whereas those manufactured at Canton are black or brown, with an occasional tinge of yellow or green. The tea made into caper at Canton is grown upon an extensive range of hills in the district of Hok-shan, one of the counties forming the prefecture of Kwang Chu-fu. After being there well dried and fired, the leaves are forwarded to Canton, where they are made into caper by the following process:—17 or 18 handfuls are placed in each of the pans with which the tea hong is furnished, are moistened with water, and well stirred up by hand. Rendered thus soft and pliable, they are immediately put into small coarse sackcloth bags, each of which, when filled and tightly closed, has the appearance of a football. These bags are all arranged on the floor of one of the largest chambers of the hong, and are moved to and fro by labourers who stand upon them, and who, in order to roll them backwards and forwards with their feet without the risk of falling, support themselves by grasping long wooden poles. Under this process, the tea leaves in each bag assume the form of pellets or capers.

The coarser leaves are gathered from the finer caper, are well fired, put into wooden troughs, and cut into several pieces by means of choppers, not unlike in shape to large spuds, and by the same process are made into a tea, which is also called caper.

A very inferior kind of scented caper is made by mixing tea-dust with congee water and sifting it, giving it the form of pellets. Scented caper is exported to Great Britain.

Green tea is prepared as follows:—The leaves, as soon as they are plucked, are placed in iron pans over a charcoal fire for 2 or 3 minutes; they are then rubbed together for a short time, after which they are again fired for 2 or 3 hours, all the time being constantly stirred. With the fine tea, the leaves are constantly fanned during the first hour of the second firing, so as to preserve their green colour. After this process, they are packed and sold to the tea hongs, where they are a third time exposed for half an hour to the action of fire, and are then cleaned by the usual sieving, picking, and winnowing.

In manipulating green teas, much care and attention must be given to the separation of leaves which differ in size and shape. When separated, the leaves are sold to the foreign merchants. The small pellet-shaped tea are termed Gunpowder, and the larger-sized pellets are called Imperial; small-sized leaves which are wiry and twisted are called Young Hyson, whilst those of a larger size are called Hyson. Twan-kay is a term applied to leaves which are light, large, coarse, and irregular; and those that are skinny and broken are called Skin or Hyson Skin, also Hyson Twan-kay.

When these leaves have been separated and classed under their respective names, they are again fired — Gunpowder for 12 or 14 hours; imperial for 8 hours; young hyson for 10 hours; hyson for 8 hours; and twan-kay and skin for 3 hours. When each of these kinds is half-fired, small quantities of gypsum powder, Prussian blue, and turmeric are mixed with them to give them the desired tint. All green teas, whether fine or common, are mixed with these named ingredients, in such quantities as the tea-men desire. When the different kinds of green tea leaves have undergone the action of fire, they are well stirred up and fired once more for half an hour. Green tea is generally packed in half-chests, occasionally in boxes. The finest description is made in the neighbourhood of Wuyune, and is known by the name of Moyune. All green teas are forwarded for exportation to Shanghai, Kiu-kiang, and Ningpo.

Scenting.—Flowers of various plants are used in scenting by the Chinese, some of which are considered better than others, and some can be had at seasons when others are not procurable. Mr. Fortune prepared the following list with great care. The numbers prefixed express the relative value of each kind in the eyes of the Chinese, and the asterisks point out those which are mostly used for scenting teas for the foreign markets in the order in which they are valued. Thus the Mo-le and the Sieu-hing are considered the best, and so on:—

1 Rose-scented (Tsing moi-qui-hwa).
1, 2 Plum double (Moi-hwa).
2 *Jasminum sambac (Mo-le-hwa).
2, 3 *Jasminum paniculatum (Sieu-hing-hwa).
4 *Aglaia odorata (Lan-hwa or You-chu-lan).
5 Olea fragrans (Kwei-hwa).
6 *Orange (Chang-hwa).
7 *Gardenia florida (Paksema-hwa).

It has been frequently stated that the Chloranthus is largely used. This appears to be a mistake, originating, no doubt, in the similarity of its Chinese name to that of Aglaia odorata. The Chloranthus is called Chu-lan, the Aglaia Lan or Yu-chu-lan. The different flowers are not all used in the same proportion. Thus of orange flowers there are 40 to 100 lbs. of tea; of Aglaia there are 100 to 150 lbs.; and of Jasminum sambac there are 50 to 100 lbs. The flowers of the Sieu-hing (Jasminum paniculatum) are generally mixed with those of the Mo-le (Jasminum sambac) in the proportion of 10 lbs. of the former to 30 lbs. of the latter, and the 40 lbs. thus produced are sufficient for 100 lbs. of tea. The Kwei-hwa (Olea fragrans) is used chiefly in the northern districts as a scent for a rare and expensive kind of hyson pekoe,—a tea which forms a most delicious and refreshing beverage when taken à la Chinoise, without sugar and milk. The quantity of flowers used seemed to Mr. Fortune to be very large; and he made particular inquiries as to whether the teas that are scented were mixed up with large quantities of unscented kinds. The Chinese unhesitatingly affirmed that such was not the case, but notwithstanding their assertions he had doubts on this point. The length of time which teas thus scented retain the scent, is most remarkable. It varies, however, with the different sorts. Thus the Olea fragrans tea will only keep well for one year; at the end of two years it has either become scentless, or has a peculiar oily odour which is disagreeable. Teas scented with orange blossoms and with those of the Mo-le will keep well for two or three years, and the Sieu-hing kinds for three or four years. The Aglaia retains the scent longer than any, and is said to preserve well for five or six years. The tea scented with the Sieu-hing is said to be most esteemed by foreigners, although it is put down as second or third rate by the Chinese. Scented teas for the foreign market are nearly all made in Canton, and are known to merchants by the names of Scented Orange, Pekoe, and Scented Caper. The flowers are grown in and near a place called Tashan, in the Canton province.

Mr. Fortune thus describes the scenting process. In a corner of the building there lay a large heap of orange flowers, which filled the air with the most delicious perfume. A man was engaged in sifting them to get out the stamens and other smaller portions of the flower. This process was necessary, in order that the flowers might be readily sifted out of the tea after the scenting had been accomplished. The orange flowers being fully expanded, the large petals were easily separated from the stamens and smaller ones. In 100 parts 70 per cent. were used, and 30 thrown away. When the orange is used, its flowers must be fully expanded, in order to bring out the scent; but flowers of jasmine may be used in the bud, as they will expand and emit their fragrance during the time they are mixed with the tea. When the flowers had been sifted over in the manner described, they were ready for use. In the meantime the tea to be scented had been carefully manipulated, and appeared perfectly dried and finished. At this stage of the process it is worthy of observing that, while the tea was perfectly dry, the orange flowers were just as they had been gathered from the trees. Large quantities of the tea were now mixed up with the flowers, in the proportion of 40 lbs. of flowers to 100 lbs. of tea. This dry tea and the undried flowers were allowed to lie mixed together for the space of twenty-four hours. At the end of this time the flowers were sifted out of the tea, and by the repeated sifting and winnowing processes which the tea had afterwards to undergo, they were nearly all got rid of. Sometimes a few stray ones are left in the tea, and may be detected even after it arrives in England. A small portion of tea adheres to the moist flowers when they are sifted out, and this is generally given away to the poor, who pick it out with the hand. The flowers, at this part of the process, had impregnated the tea leaves with a large portion of their peculiar odour, but they had also left behind them a certain portion of moisture which it was necessary to expel. This was done by placing the tea once more over slow charcoal fires in basket sieves prepared for the purpose of drying. The scent communicated by the flowers is very light for some time, but, like the fragrance peculiar to the tea leaf itself, comes out after being packed for a week or two. Sometimes this scenting process is repeated when the odour is not considered sufficiently strong; and the headman in the factory said that he sometimes scented twice with orange flowers and once with the Mo-le (Jasminum sambac).

In *British India*, tea growing and its manufacture into the commercial product have become great industries. The name in ordinary use, alike for the plant and its products, is Cha. In Cachar the tea tree is called Dullicham, meaning white wood, from the light colour of its bark. It is called Phlap also Khlap by the Assamese, but also Misa Phlap in Muttack, and Heelkat in other parts of Assam. Chinese tradition points to India as the original home of the tea plant. 'A Brahman ascetic named Dharma went as a missionary to China. Wearied with a toilsome journey, he fell fast asleep on reaching his destination, and on awaking, angry at such weakness, he tore out his eyebrows. The hairs, taking root, became tea plants, the leaves of which he tasted, and he was soothed into mystic meditation.' Colonel Kyd in 1780 formed a tea-garden in Calcutta with plants from Canton, the nucleus of the Calcutta Botanic Garden.

It was not known to Europeans to be indigenous in British India till the early part of the 19th century. At the request of the E. I. Company, on the suggestion of Warren Hastings, Sir Joseph Banks in 1788 had drawn up a memorandum recommending the introduction of plants from China, and suggesting Behar, Rungpur, and Koch-Bahar as suitable regions.

But it was only in 1815 that a Bengal Lieut.-Colonel brought to notice the presence of the plant in the N.E. of British India. From that date the notices became frequent. Dr. Buchanan Hamilton early mentioned it as a plant of Assam and the Burmese territories there. In 1816 the Honourable Mr. Gardner found it in the Nepalese dominions; Moorcroft in Bussahir in 1821; Bishop Heber in Kamaon in 1824; brothers Bruce in 1826; and Dr. Corbyn in 1827. But the really practical discovery was made in 1819 by Mr. David Scott, Commissioner of Assam, who sent from Munnipur to Mr. G. Swinton, then Chief Secretary to the

India Government, a specimen of the leaves of a shrub which he insisted was a real tea. The very specimen is still preserved in the Linnæan Society of London. It has been said that they were brought to his notice by the two brothers Major R. and Mr. C. A. Bruce. The latter, the younger, had been trading in Assam previous to its annexation, and subsequently, in 1826, being in command of a division of gunboats in Upper Assam, he brought down with him some shrubs and seed, which were at once identified as belonging to the tea plant of commerce, and he subsequently, in 1833, brought it to the notice of Capt. Jenkins.

The tea had been found by Mr. Bruce on the Naga Hills; but in his latest account, published in August 1839 in the Journal of the Asiatic Society, he gives an account of the discovery of 120 tea tracts, some of them very extensive, both on the hills and in the plains.

In 1834, Lord William Bentinck, Governor-General, urged upon the Court of Directors the importance of cultivating the plant, and a committee, consisting of eleven European and two native gentlemen, was appointed to mature and carry out a plan for introducing the plant into such districts of India as seemed best suited to its culture. As it had been found in a wild state in Assam, the committee proceeded thither, established nurseries, and organized a sort of exploring service under Mr. C. A. Bruce.

Chinese seed and young plants were also introduced, and were found to thrive well. At first, progress was very slow and unsatisfactory. A sample of the produce of the new gardens was sent to the Directors in 1836, but it arrived in such a mouldy condition, that it could not be tested. It is said that this specimen merely consisted of green leaves, and that no attempt had been made to render it commercially valuable. Those in charge of the plantations knew nothing whatever of the process of manufacture, and in 1837 it was necessary to introduce Chinese tea-makers and artisans. Under their superintendence, consignments of Assam tea were forwarded to the Court of Directors in the years 1838-39, and were found, on arrival, to be of excellent quality, and commanded very high prices in the open market. So good was it that it at once attracted the attention of speculators, and a company, which was afterwards styled the Assam Company, was formed for the cultivation of the tea plant and the manufacture of tea in Upper Assam. Having thus seen the industry adopted by the commercial world, the Indian Government withdrew in favour of private enterprise, and handed over two-thirds of its establishment, gardens, and nurseries to the company. The remaining third was retained for a few years longer, and was subsequently disposed of (1849) to a Chinaman for 900 rupees.

But in 1850 the E. I. Company despatched Mr. Fortune to China to glean all possible information regarding the tea plant and the manipulation of its leaves, and to bring plants and seed of the best varieties, as also some experienced cultivators and work-people.

From 1863 to 1865, Calcutta went fairly mad about tea; speculators set to work at the purchase of enormous tracts of land in Assam and elsewhere, which were subsequently disposed of to limited liability companies at enormous profits. Eventually the bubble burst, and for a time the very name of tea cultivation fell into unmeasured odium. From 1866 to 1868, estates on which many lakhs of rupees had been expended, were sold for a few hundreds. Some shrewd capitalists, however, bought up the more conveniently situated plantations, and quietly developed their productive capacities. The rehabilitation of the Indian tea industry fairly commenced in 1869, and has continued to make rapid progress ever since.

The *India tea plant* flourishes from the confines of Afghanistan to the borders of Burma, from the 25th to the 33d degree of latitude, and from the 70th to the 95th degree of longitude. Tea grows on the Himalayas at an elevation of 7000 feet above the level of the sea, in the valley of the Doon, at the base of the Himalayas, an elevation of 2000 feet, on the banks of the Brahmaputra in Assam, and the Surma in Sylhet, at a very small elevation above the level of the sea. On hill or plain, from 1000 to 8000 feet above the level of the sea, the tea plant thrives well, and the only condition that it appears to require is a light and porous soil. Over this vast area, wherever tea has been planted, it has more than answered the expectations of growers. It is now cultivated to a great extent in Assam, Dacca, Koch-Bahar, Chittagong, Chutia Nagpur, Darjeeling, Terai, Kangra, Garhwal, Kamaon, Cachar, Sylhet, Dehra, Hazaribagh, to a considerable extent on the Neilgherry Hills, with smaller plantations on the Shevaroys.

Tea cultivation was undertaken on the Neilgherries about 1863, and although not much had been done there, it was clearly established that tea would grow, the plants attaining a large size, and yielding very fairly. Just when the matter was being taken up, coffee was introduced, for which the climate was found very favourable, and it practically superseded tea.

In 1872, the tea produced in the small gardens in the Neilgherry Hills amounted to only 80,000 lbs., and four distinct methods of manufacturing it were in vogue. In the following year, the quality of the Neilgherry tea had so much improved that its price ranged from 2s. 4d. to 3s. per lb. and upwards. There can be no doubt that these hills are well adapted for the growth of tea. Though better tea is turned out at higher elevations, larger quantities are obtained lower down, and Kotagherry, Kodanaad, Cunur, and the numerous ravines having any aspect but a S.W. one, will be found the most suitable localities for the formation of tea plantations. Forest land, if possible, should be secured; the less precipitous it is the better. And as drought is not unusual at certain seasons, care should be taken to provide for water being led to any part of the site selected.

Plants supplied by Government through Dr. Wallich were planted in the Shevaroy Hills about the year 1844, and had thriven well.

Culture.—Neilgherry and Shevaroy tea seed is very liable to rot before it germinates. The best way to prevent this is to crack the shell of the tea seed, place it immediately in a loose, rather open soil in shallow large flower-pots, apply steam below these pots for an hour every day, and about the fifth day the seed will begin to sprout. It is better to propagate tea in this way than to sow the seeds out, as many of them lie for months without

striking. In six weeks or two months the young trees may be transplanted.

In the year 1877-78, there were in British India 130,130 acres of mature plants under cultivation, in 2103 tea plantations. Of these plantations, 786 were in Assam, 221 in Bengal, 1041 in Kangra in the Panjab, and 53 on the Neilgherries, and the yield was estimated approximately at 36,143,045 lbs., the average yield in lbs. per acre of mature plants ranging in the several provinces from 101 to 395 lbs.

The tea plantations in the N.W. Provinces in 1881 were 90 in number, of 8562 acres.

In the Panjab, almost all in Kangra, there were 1422 plantations of 7466 acres, mostly small plots, owned chiefly by natives.

The joint-stock share market quotations of 14th February 1884 gave the present values of 86 tea companies, showing five at par, 16 at a premium. But the £20 share of the original Assam Company was selling for Rs. 550–560.

Age.—The tea plant does not yield leaves fit for the manufacture of tea until the third year; it increases yearly its produce until the eighth or tenth year, at which time it attains its maximum. From a series of experiments made in the hills and the Dehra Doon, full-grown plants yield tea in the proportion of 20 lbs. to the 100 plants. An acre of land contains from 1500 to 1600 plants; the yield of tea would therefore be from 300 to 320 lbs.

Manufacture. — In China, manual labour is alone employed in the processes of manufacture, from the green leaf to the commercial article. In India, machinery for preparing the leaves has been invented by Europeans. Mr. Joachimi suggested one to be moved with steam, and in 1866 three machines for dressing tea leaves were patented in England. A well-appointed Indian factory has a steam-engine of perhaps 20 horse-power, working rollers, driers, equalizers, sifters, etc., and the work is done more regularly, better, in a more cleanly way than by hand.

Testing.—Teas are repeatedly tested during the stages of manufacture, by pouring boiling water on a few leaves, to observe the colour, aroma, taste, strength, and other properties of the infusion. As many as fifteen drawings can be made from the best leaves before the infusion runs off limpid. In selecting all kinds of tea, the colour, clearness, taste, and strength of the infusion are the principal criteria; the weight of the parcels, taste and colour of the dry leaf, and its smell when strongly breathed upon, are also noticed.

In China, the infusion is sold in public houses in every town, and along public roads and the banks of rivers and canals; nor is it unusual for the burdened and weary traveller to lay down his load, refresh himself with a cup of warm tea, and then pursue his journey. The wealthy Chinese simply infuse the leaves in an elegant porcelain cup, which has a cover of the same material; the leaves sink to the bottom of the cup, and generally remain there without inconvenience, though occasionally some may float or rise to the surface. To prevent this inconvenience, sometimes a thin piece of silver filigree is placed immediately on them. Where economy is necessary to be studied, the teapot is used. Chinese use the best they can afford, generally the young leaves from old trees; they put a few leaves into a cup and pour on them water a little short of the boiling point, and drink hot.

Raw tea leaves, just as they are plucked from the bushes, and unmanufactured, are exposed for sale in the markets of China. They are sold at from three farthings to five farthings a pound; and as it takes about 4 pounds of raw leaves to make 1 pound of tea, it follows that the price paid is at the rate of 3d. to 5d. a pound; but to this must be added the expense of manipulation. In this manner the inhabitants of large towns in China, who have no tea farms of their own, can buy the raw leaves in the market, and manufacture the beverage for themselves and in their own way.

The tea of Mongolia is prepared by simply firing the leaves, so soon as plucked, seven or eight times in an iron pan.

The wealthy Japanese continue the ancient mode of grinding the leaves to powder; and, after infusion in a cup, it is whipped with a split bamboo or denticulated instrument till it creams, when they drink both the infusion and powder, as coffee is used in many parts of Asia.

Analysis of Tea.—The infusion made from tea contains gum, glucose or saccharine matter, a large quantity of tannin, and a peculiar nitrogenized principle called theine; this is identical with caffeine, and upon its presence many of the properties of tea depend. The amount of gum and tannin contained in a given sample of tea afford data by which its quality may to some extent be determined. Tea by many is looked on more as a luxury than of use to the human system; but Liebig, without entering minutely into the medical action of caffeine, theine, etc., says it will surely appear a most striking fact, even if we were to deny its influence on the process of secretion, that the substance, with the addition of oxygen and the elements of water, can yield taurine, the nitrogenized compound peculiar to bile.

Properties of Tea.—Lo Yu, a learned Chinese, who lived in the dynasty of Tang, A.D. 618 to 906, gives the following account of the qualities and effects of the infusion of the leaves of the tea plant: —'It tempers the spirit and harmonizes the mind; dispels lassitude and relieves fatigue; awakens thought and prevents drowsiness; lightens or refreshes the body and clears the perceptive faculties.' In Pereira's Materia Medica, we find the following remarks relating to the properties of tea:—'Its astringency is proved by its chemical properties. Another quality possessed especially by green tea, is that of diminishing the tendency to sleep. Tea appears to possess a sedative influence with regard to the vascular system. Strong green tea taken in large quantities, is capable, in some constitutions, of producing a most distressing feeling, and of operating as a narcotic.'

Brick tea in Hankow is made of two sizes. The large green brick tea is made by the Russian factors at Hawning, and at Tsung-yang in Hu-peh, and is sent through the Kalgan gate of the Great Wall. The small brick tea is much finer than the large, and the black brick tea is made in the same moulds. These teas go to the Siberians, the Buriat, the Tungus, and Kirghiz tribes, as well as the Mongols. The bricks are in a convenient form for barter. They are by no means an in-

ferior tea, and it is actually eaten, the leaves being chopped up with salt and butter or koumiss. The finer sorts are friable masses, and are packed in papers; the coarser are sewn up in sheepskin. In this form it is an article of commerce throughout Central and Northern Asia and the Himalayan provinces; and is consumed by Mongols, Tartars, and Tibetans, churned with milk, salt, butter, and boiling water, more as a soup than as tea proper. Certain quantities are forced upon the acceptance of the western tributaries of the Chinese empire in payment for the support of troops, etc.; and is hence, from its convenient size and form, brought into circulation as a currency over an area greater than that of Europe.

Green brick tea is made at Tung-shan in Ho-nan province from leaves which have fallen to the ground. These are put into wicker baskets, which are placed over slow fires, in iron pans filled to the brim with water, which is kept boiling, and the ascending steam permeates the mixed leaves in the basket. The contents are then placed in moulds, and eventually pressed with heavy weights. The process takes a month. Black brick tea is prepared in the same manner in three weeks. It is made at Sung-yang and Yang-lou-tung in Hu-peh province. —*Jameson's Ed. Jo.*, 1825, p. 378; *Baron F. TEA-HEIH-TU-SHWO. Chow-tsze was the originator of the second epoch of philosophical development in China. To him is ascribed the merit of having revived that distinct knowledge of the greatest truths which had been lost to the world for the thirteen centuries that had elapsed after the death of Mencius (Meng-tse). And he regained that knowledge by the independent efforts of his own mind, unaided by any master. Only two of his works have been preserved, the Tea-heih-tu-shwo and the Tungshat. He died in A.D. 1200; and in A.D. 1241 an imperial rescript ordered his tablet, with those of four of his immediate predecessors, whose works he had annotated, to be placed in the temples of Confucius, which are to be found in every district city throughout the empire. From that time to this, a period of six hundred years, his views of philosophy, morality, and politics have been supreme in China. At this day, his commentaries on the Yih King and the Four Books are learned by heart by millions of Chinese, with the text of these works. The Public Service Examinations cannot be passed unless this be done.

TEAK, Tectona grandis.

Sagwan, . . .	HIND.	Tek maram, . . .	TAM.
Jati, ...	MALAY.	Teku chettu, . .	TEL.

The teak tree grows in the southern and western parts of the Peninsula of India, in Malabar, in Canara, in the Wynad, in the forests of the Animallay Hills, also in Burma, N. Siam, Sumatra, Java, Celebes, Sumbawa, Lao, and the Shan States. Between Japara and Sourabaya several extensive teak forests occur. But Java is the only island in the Archipelago possessing teak forests which are available to any extent for the purpose of ship-building. In Sumatra, Celebes, and Sumbawa, the forests are so far distant from the sea, that the expense of land carriage prevents the natives from deriving any great advantage from its use. Teak is not known to inhabit the Malayan Peninsula. The teak forests in Pegu and Amherst, also those of the Wynad and Godavery, are exteusivc. The tree grows to a great size, attaining maturity in about eighty years, and is the best wood in India for ship timber, house-carpentry, or any other work where strong and durable wood is required.

Godavery teak varies much in density; much of it is finely veined; generally it is heavier than the Rangoon teak, but not equal to some from the Malabar coast.

Upon the whole, the Malabar teak seems the best. That of Rangoon is lighter and more open in the grain, and is preferred for masts and spars. The dark or heavy teak of the mountains bordering on the Godavery is very little if at all inferior to the Malabar, but a good deal of the Godavery teak is very open-grained.

The sap-wood is white and small; the heart-wood, when cut green, has a pleasant and strong aromatic fragrance and a beautiful dark golden-yellow colour, which on seasoning soon darkens into brown, mottled with darker streaks. It is moderately hard, exceedingly durable and strong, does not split, crack, warp, shrink, or alter its shape; when once seasoned works easily, and takes a good polish. A cubic foot, when seasoned, averages 42 lbs. It does not suffer if in contact with iron, and is rarely if ever attacked with white ants. It is used for house and ship building, for bridges, sleepers, furniture, and is also exported from India—

Linseed oil applied to teak brings out the veins of the wood very beautifully. For ship-building purposes, teak is superior to every other sort of wood, being light, strong, durable, whether in or out of water. The ships of war built of this timber were—

Ships of the Line.—Minden, Cornwallis, Melville, Malabar, Wellesley, Ganges, Asia, Bombay, Calcutta, Hastings.

Frigates.—Salsette, Amphitrite, Trincomalee, Seringapatam, Madagascar, Andromeda, Alligator, Samarang, Herald.

Sloops.—Victor, Chameleon, Sphynx, Cochin.

Teak wood is used as a rib-lining of the arches in the caves of Karli, and is said to be coeval with their formation, about two thousand years

ago. Pliny states that the beams in the temple of Apollo at Utica were in perfect preservation in his time, though they had then endured 1178 years. The teak furnishes an opaque, dull ash-coloured oil, which separates into two layers, an upper or dark-coloured clear stratum, and a lower and more solid deposit. Its chief use is for applying to wood-work of all sorts, either alone as a natural varnish, or in combination with certain resins.

A concretion of lime or gypsum is occasionally found in the shake of the teak.—*M. Ex. J. R. Records; Govt. of India F. D. Conservators' Reports; Mr. Earl; Mr. Gamble.*

TEAL.

Tulsia bigri,	Beng.	Cercedula, Cercevolo,	It.

Kriekente,	,,	Brach-hwyad,	,,

The teal is a swimming bird of the family Anatidæ and sub-family Anatinæ, and of the genus Querquedula, and several species are known. They are of somewhat slender make, and fly very rapidly. Teal have long been prized as a delicate food. Willughby remarks that for the taste of its flesh and the wholesome nourishment it affords the body, it 'doth deservedly challenge the first place among those of its kind.' In the Portraits d'Oyseaux 1557, the following quatrain celebrates its excellence, and alludes to its habits:—

'Bien peu souvent se plonge la sarcelle
Entre deux eaux, de lequelle la chair
Est delicate; aussi couste elle cher
Autant qu'oyseau qui soit petit comme elle.'

Accordingly it held a high place in ancient feasts. We find it among the 'goodly provision' at the banquet given at the enthroning of George Nevell, archbishop of York, in the reign of Edward IV.,—'mallardes and teals, 4000.' The price in the Northumberland Household Book is, 'Teylles, 1d., mallards being 2d.'

Q. crecca, *Linn.*, the common teal of India, is 14½ inches long. It is migratory, and breeds in the northern and temperate regions, but it is one of the most abundant, as also one of the earliest visitors to India. It arrives early in September, and frequents both tanks and rivers, often in immense flocks. Its flight is amazingly rapid. Large numbers are netted and caught in various ways to supply the tealeries. It is a night-feeder. It is most excellent food.

Q. circia, *Linn.*, the blue-winged or Garganey teal, is distributed over the greater portion of the Old World. It is even more abundant in India than the common teal, but is somewhat later in its arrival. It has a swift flight, occurs in vast flocks, and feeds at night. Vast quantities of this and Q. crecca are caught alive, some by large flap-nets, others by nooses fixed to a long line across a jhil, and in some places by a man wading, with his head above water concealed in a large earthen pot, several of which have previously been set afloat.

Q. formosa, the Japanese teal, is very beautiful; is likewise a native of North-Eastern Asia, being found in Japan and Manchuria.

Q. glocitans, *Pallas*, is the clucking teal of India. It is a rare bird both in Europe and in India, and appears to be most common in Northern Asia on the borders of Lake Baikal, and in China and Japan. It has a peculiarly loud clucking call, mok-mok-mok-lok!

The whistling teal is the Dendrocygna awsuree. Other species are Q. falcata, *Pallas;* Q. Javana, *Bodd.;* Q. Manillensis, *Mull. and Schl.;* and Q. numeralis, *M. and Sch.*—*Jerdon*, ii. p. 806.

TEASEL.

Fuller's teasel,	Eng.	Kratzdistel,	Ger.
Fuller's thistle,	,,	Cardo da cardare,	It.
Chardon à carder,	Fr.	Cardeucha,	Sp.
Weber-distel,	Ger.	Cardo peinador,	,,

This plant is the Dipsacus fullonum of botanists. It is cultivated in England; clothiers employ the crooked awns of the heads for raising the nap on woollen cloths, etc.—*M'Culloch; Faulkner.*

TEA-TASTER, a person who tests the qualities of teas in the Chinese ports, or in the London brokers' offices.—*Simmonds' Dict.*

TECOMA, a genus of elegant plants of the order Bignoniaceæ. Several species occur in India, and others have been introduced. T. jasminoides has pink flowers. T. radicans is a climbing glabrous plant. It grows against a wall by throwing out roots from its branches in the same manner as ivy. Its large flowers are called trumpet-flowers. T. stans is a small tree or ornamental garden shrub. Its roots are reputed diuretic.

TECOMA CAPENSIS, *Lindl.*, is the Bignonia Capensis, *Thunb.*, an elegant creeping plant with orange-coloured flowers, well adapted for covering a wall or running up a trellis-work; grown from seed in common garden soil.

TECOMA UNDULATA. *G. Don.*

Bignonia undulata, *Roxb.*

Bug-trora,	of Bombay.	Reg-dawan,	Pushtu.
Rohira, Lahura,	Panj.	Reodan, Rebdun,	,,
Luar,	,,	Khew,	Sind.

A small stiff-looking tree occurring in the arid tracts from Dehli westward through Hurriana and the Central Panjab to the Salt Range and Trans-Indus, where it grows up to 2500 or 3000 feet. Also in the Siwalik, and on the Beas below Kangra. This has perhaps the handsomest flower of any indigenous Panjab tree, and its gorgeous orange-blossoms make quite a show in some parts in the west of the province. Trees of four and five feet are not uncommon; but at Sirsa, near the Sutlej, are seen trees up to 7 or 8 feet girth and 40 feet high. The leaves vary greatly in size. The foliage is browsed by cattle. The wood is hard, close-grained, and strong, but is rarely large or abundant; used for making charpoys, spinning-wheels, and ploughs in the Salt Range.—*Hort. Garden*, p. 6; *M. E. J. R.; Eng. Cyc.; Riddell; Powell, Handbook; Stewart.*

TECTONA GRANDIS. *Linn.*

Segun,	Beng.	Saga,	Mahr.

Teak tree,	Eng.	Tek maram,	Tam.
Sagwan,	Hind.	Teku, Teku chettu,	Tel.
Shalduna,	of Jubbulpur.	Pedda teku,	,,

The places of growth and the character of the timber of this tree are noticed under Teak. The teak tree is of rapid growth, and the trunk grows erect, to a vast height, with copious spreading branches. In 25 years the teak attains the size of two feet diameter, and is considered serviceable timber, but it requires 80 years to arrive at

maturity. A forest patch of teak, when in full bloom, has much the appearance of a field of ripe corn when viewed from a distance, with a few spots of green interspersed; by this appearance the native hill people discover the trees of teak, and at one season cut around their roots to prevent the sap from asceuding the next year. The persons who work the forests of teak on the sides of the hills are thus able at a distance to distinguish the trees from the others. Mr. Conolly, about the year 1848, commenced planting teak seeds in Malabar, and since then additional land has been occupied by teak plantations. As the best method of rearing young trees, take a layer of fresh stable manure, three inches to be first strewed over the bottom of the trench, then four inches of decaying leaf-mould, then one inch of wood-ashes, and over this about six inches of a light sandy soil. The fine silt from the bed of a tank is the best. The seeds of some trees, like the tamarind aud nim, sprout most readily when put in very thickly in haudfuls at two inches from the surface. Some trees come up in three or four days, others in ten or twelve, while a few appear to have a particular month for coming up, and they remain in the grouud without germinating till a particular season. This has been remarked with the Adansonia and teak. It may occur with other trees. A good mode of rearing the teak tree is to steep the nuts in water for 36 hours, then sow them in holes four inches apart and half an inch under the surface, covering the beds with straw so as to prevent evaporation, and gently watering them every evening. The seeds sprout in from four to eight weeks. Teak does not frequently spring up under shade. The prevalence of other trees, therefore, over teak is a great hindrance to the growing up of seedlings in sufficient quantity to replace those trees that have been removed. Young teak is not injured by elephauts. It belongs to a family of plants, Verbenaceæ, that affords no fodder for animals; and Dr. Falconer satisfied himself, in passing repeatedly through forests infested with wild elephants, that they do not cause the slightest injury to young teak.

Tectona Hamiltonia, *Wall.*, Ta-hut, Ta-nap, BURM.

This species of teak grows on the banks of the Irawadi, at Segaen, Prome, Ava, and at the foot of Taong-Dong, and, from native descriptions, Dr. Mason imagines it is found iu the province of Yay. It flowers in March; its wood is inferior to that of T. grandis. — *Drs. Roxburgh, Wight, Falconer, Mason, M'Clell., Gibson, Cleghorn, Stewart, and Brandis; Mr. Rohde; Mr. Earl; Mr. O'Riley.*

TEE. BURM. Properly h'tee, the umbrella which crowns the top of a Burman praw or pagoda, without which it is not considered to be sanctified. In restoring that of the Shooay-dagon at Rangoon, which had been destroyed by an earthquake in 1769, the king of Ava attended with an army of 50,000 men.—*Cole. Myth. Hind.* p. 397.

TEEA, a Bornean weight, the sixth part of the mace; about 6¼ grains.—*Simmonds' Dict.*

TEEBA. HIND. Sand ridges in the desert of India.

TEEJA or Zeearat. HIND. Iu Muhammadanism, a visiting of the grave; also visiting the ālam or standards.

TEE-KA-LOUNG or Tha-ka-dat-ghee. BURM. A timber trec of maximum girth 3 cubits, maximum length 22½ feet. Abundant at Mergui and Tavoy. When seasoned, it floats in water. It is a durable, tough wood, used for bedsteads, housebuilding, and helves or hammer handles.—*Captain Dance.*

TEELUK, Tika, or Akshata. HIND. A mark placed by Hindus in the centre of the forehead. If a grain or two of rice be fixed on it, it betokens that the person has performed his devotions. Telak-Matti, HIND., a grey slate in Cuttack, also from Neilgherry in Orissa, used by Hindus for making the sect marks on their bodies.

TEEN. TAM. Obsolete. Grief, sorrow, distress, same as old English. Spencer sings—

'Of God's high praise, and of his sweet love's teen.'

TEEN. HIND. Literally earth, dust, or clay. Adam, according to Muhammadan belief, was created from it.

TEEN-CHAOU. CHIN. The Chinese empire.

Teen-chuh, the Chinese name for Iudia at the time of Christ.

Teen-choo-keaou, CHIN., the religion of the lord of heaven, the term used in China to designate the Roman Catholic religion.

Teen-chu-sze, a famous Buddhist monastery at Haukow in China.

Teen-how, literally queen of heaven, the goddess of the sea, called also Ma-tsoo-po. Every ship is furnished with this idol.

Teen-sin, China lunch, literally supporting the heart. See Tien.

TEEN-TSING-FOO or Tien-tsing, a Chinese city of great trade, particularly in salt, at the junction of the Eu-ho or Yun-liang-ho with the Pei-ho.

TEEN YARI. HIND. A name of the Shiah sect of Muhammadans, applied to them by the Sunni Muhammadans, because the Shiah reject the khalif Abubakr as the first successor of Mahomed, and claim the rule to have fallen to Ali.

TEER, properly Tevan, islanders, also written Tiyar, a race in Travancore, certainly immigrants from Ceylon. They occupy also Malabar, and are engaged iu cultivation. Their women have forms of great symmetry, with a clear light-brown complexion, uniform and brilliant. The chaste women of their class wear no covering on the upper parts of their bodies. Their name is also written Iynver or Juver; they are the toddy-drawers of Malabar, are a servile class who follow the rule of descent a matrice, and are polyandrous. On the Malabar coast they form a great part of the people; they are a fair, good-looking race, and until recently were treated as out-castes, and compelled to move from the road when a Nair approached. The Teer, educated in the Government schools, obtain service, are acquiring land, and are very well to do. They are fairer and more refinced looking than the Nair. Both the Maldives and Ceylon are named as their original country. —*Caldwell.* See Kummaler.

TEERAT'H. HIND. Any holy place of pilgrimage visited by Hindus or Jains. Amongst the most celebrated are the Ganges at Hardwar; the town of Benares, Mount Abu, Panderpur in the Dekhan, Triputty in the Carnatic, Conjeveram, and Ramisseram. At Mount Abu a group of five of the twenty-four Jain pontiffs are more particularly reverenced, and distinctively called the

Panch-Teerat'h ;—Rishubdeva is the first; Suntnath, the sixteenth ; Nemnath, the twenty-second ; Parswanath, the twenty-third ; and Mahavira, the twenty-fourth. Each has his sacred mount or place of pilgrimage (teerat'h), and each is recognised by his symbol or cognisance, viz. the bull, black antelope, conch shell, hooded serpent, and tiger ; and it is quite sufficient to find one of these symbols upon the plinth to ascertain the particular pontiff to which it belongs.—*Rajasthan*, ii. p. 724.

TEEREE, a small territory near Mussoori and Dehra Doon. Families of slaves lead to this day a grovelling existence, all around Barahaut, Ramonlie, Barraghad, and Danarghad, in the Teeree raja's territories. These unfortunates are of various Hindu castes, mostly low, and have been slaves from generation to generation. The men and women labour in open fields and in the house alike, and, except in very rare instances, absolutely devoid of all clothing. Their hovels afford no adequate shelter from the keen winds and biting frosts of a Himalayan winter. They obtain a bare sufficiency of the coarsest fare. All desire to escape into British territory, and whole villages in the Doon of Dehra are composed of fugitives fortunate enough to cross the watershed that divides Teeree from Mussoori. There would be a universal exodus of slaves, but for the vigilance of their taskmasters, who often capture runaways. These hapless bondmen behold the sale of their sons and daughters to buyers from a far country, and their moanings and regrets betray the internal agony that wrings their bosoms.

TEER-GHAR, in Bengal, a temporary structure for lodging a Hindu girl on the first occurrence of the menses. It may be outside the house, or in a corner of a room, enclosed on all sides by split bamboos, about a yard long, fastened by thread. This prevails throughout India.

TEESE OIL of Calcutta is the boiled linseed oil.

TEESTA, a tributary to the Brahmaputra. It rises in about lat. 27° 59′ N., and long. 88° 50′ E., and runs S.S.E. into the Brahmaputra after a course of 333 miles. It receives the Lachoong, 23 miles; Rungbo, 22 miles; Ranjit, 23 miles. It is navigable for craft of 6 or 7 tons as far up as Puharpur, 15 miles beyond the divergence of the Attree.

TEETH of animals, and teeth and tusks of elephants, form articles of commerce. The grinders or teeth proper are used for knife-handles and other purposes. The teeth of many carnivorous animals are used for necklaces and ornaments. Knocking out of the front teeth is a Negro custom, and a custom of Australia. Teeth are filed to a point in Brazil, and in Western Africa by the Otando, Apono, Tshogo, and Ashango tribes.—*Simmonds' Dict.*

TEHAMA, a political division of Yemen, in Arabia, extending along the whole sea-coast of that province washed by the Red Sea, with a varying breadth of from twenty to eight miles. Tehama is now a part of the Turkish empire; its principal cities are Hodaida, Lohea, Mokha, and Jezan on the sea-coast, with Zebid and Bait-el-Fakih in the interior. Zebid town lies near one of the most beautiful and well-irrigated valleys in the country. Though still possessing many mosques and other public buildings, with a handsome aqueduct, much of its ancient regal splendour has departed. It still, however, possesses an academy where the youth of Yemen and Tehama receive a liberal education, according to modern Arabian ideas, and is besides one of the chief meeting-places where the merchants of Egypt, Arabia, and Persia assemble.

TEH-CHAU. All the Banner garrisons of China, save those of Fu-chu, Canton, Liang-chau, Ninghia, Chwang-liang, Tai-yuen, Teh-chau, and the nine inner garrisons of the metropolitan cordon, send up a small number of officers and men to Pekin to be there taught their duties in the hunting suite of the emperor, should he repair to the preserves of Muh-lan, at Jeh-ho (Zhehol). These are in the keeping of a tsung-kwin (3a), two yih-ching (4a), eight fong-yu (5a), and eight hiauki kiau or subalterns, all under the orders of the tutung of Jeh-ho.

TEHERAN is known from repeated observations to be 3600 feet above the level of the sea. It is in lat. 35° 37′ N., and long. 50° 52′ E. The plain on which it stands consists of the debris of limestone and trap-rocks. It is surrounded by a deep ditch, towers, and a mud wall, embracing a circuit of eight thousand yards, with four gates ; that to the south leading to Isfahan, that to the north-west to Tabreez ; the other two look towards the hills in the corresponding directions. Outside the walls there are suburbs of considerable extent, several large caravansaries, and many enclosed gardens. Inside, the principal object is the Ark, or Royal Palace, which occupies a large space of ground adjoining the northern wall, and is completely cut off from the rest of the town by its own circle of bulwarks. At all its issues sentinels keep guard, and at night no one can traverse the streets which skirt it without the password.

Teheran is a mud-built city of 100,000 inhabitants. It was made the capital by the founder of the Kajar dynasty in 1788. It stands on a vast plain. Looking to the west and south, only the faint outline of distant hills are visible. Looking northwards, the Elburz mountains are seen rising from advanced spurs some three or four miles off, their loftiest peak, Demavend, its base hidden by intermediate ranges, and distant about 50 miles, towers high over all, 20,000 feet and more, into the sky.

The Elburz mountains at this part have an older and more romantic celebrity attached to them than the gloomy fame they derive from Hasan Sahib and his sanguinary followers. The ancient Hyrcania, a country of warriors who are reported to have carried a charmed life, lying immediately north of these hills, their passes became the scenes of more than mortal combats between the simply brave heroes of Persia and these magician chieftains. They are also noted for having been the place of refuge of the illustrious prince Zal.

In summer the thermometer ranges in the shade between 95° by day and 86° in the night, and the people then live in the cellars, and sleep on the house-tops, while the court retires to the shah's summer palace on the slope of Elburz, or to the tents under which the descendant of the Turkomans loves still to dwell.—*Porter's Travels*, i. p. 309 ; *Quarterly Review*, No. 269.

TEH-P'UNG-SHAH. CHIN. A substance

brought from Ho-hien in Kwang-si, used along with borax as a vulnerary.—*Smith.*

TEHR, the Himalayan wild goat, Hemitragus Jemlaicus, *Jerdon*, pronounced Tare, also Tahir. It is the Jharal of Nepal. H. hylocrius is the Neilgherry wild goat, the ibex of Neilgherry sportsmen. Capra ibex is of Europe; C. Caucasica, the Caucasian ibex; C. walie and C. Nubiana are of N. Africa.

TEIMENI, a tribe of the Aimak who dwell in the Jolga-i-Herat, from Kerrukh to Sabzwar; the few who have extended to Farrah being styled by the Afghans, Parsivan. Each member of the Char Aimak knows no greater enemy than the Afghan, and all attempts to form Afghan colonies amongst them have failed. The Teimeni are of a wild, warlike nature, though agricultural.

TEINOSTACHYUM ATTENUATUM. *Munro.* A hardy bamboo of Ceylon, growing on the mountains at elevations of 4000 to 6000 feet. It attains a height of 25 feet. T. Wightii, *Munro*, is a common plant on the western mountains of the Peninsula up to 3000 to 4000 feet.—*Baron F. Von Mueller; Beddome.*

TEJA-CARNA, son of Icshwaku, last king of the Suryapala dynasty.—*As. Res.* ix. pp. 154, 183.

TEJBAL. Hind. The seeds and capsules of the Xanthoxylon hostile; they are employed by the natives of Northern India as a remedy for the toothache, and also for intoxicating fish. They have a warm, spicy, pepper-like pungency, a property which is participated in by the bark and other parts of the tree. The term is, however, applied to the capsules and seeds of several species of Xanthoxylon and to other drugs.—*Faulkner; Ben. Phar.*

TEJPAT, aromatic leaves of Cinnamomum albiflorum or of C. tamala, also called in Hindi Tamala patra. Tejpata is also applied to leaves of laurus or C. Malabathrum, the folia Malabathri of the ancients, and in Bengal it is given to the leaves of C. nitidum, *Nees.* Their odour resembles that of cloves; the flavour is aromatic and hot. Tejpat-ka-Phul, Hind., cassia buds.—*Simmonds' Dict.; Ben. Phar.* See Malabathrum.

TEJUREH or Tajurra, the seaport of the Danakeli, is governed by the chief of the Danakeli tribe, who assumes the title of sultan. It is on the E. coast of Africa, and contains about 100 huts, with about 500 inhabitants.

TEL. Hind. Any oil. Tel-i-gandhak, petroleum. Tel-Multani, oil scented with orange flowers. Tel-Siya, lit. black or coarse oil, rapeseed oil. Karwa tel, oil of azadirachta seed.

TELA. Hind. A blight on sugar-cane, like a dark powder.

TELAGA. Tel. A species of Gardenia, of the Godavery forests and Dekhan; has a very hard wood, would be very good for turning.—*Captain Beddome.*

TELAGA-BODAS, the Guevo Upas or Valley of Poison, at the side of the volcano Papandayang in Java, is 500 feet below the run of the old crater, which is now the Telaga-bodas or White Lake. It is a small bare place with many crevices, from which carbonic acid is poured, and many dead animals—dogs, cats, squirrels, rhinoceros, tigers, birds, and snakes—are seen in it.—*Bikmore*, p. 53.

TELEGRAPH PLANT of India, Desmodium gyrans, remarkable for the spontaneous jerking of the lateral leaflets, which are alternately raised and depressed.

TELEGRAPHS. At the close of the year 1880 there were in the United States 170,103 miles of line, and during that year 33,155,991 messages were sent. The miles of wire were about 300,000. This does not include the lines used exclusively for railroad business. The other countries having the greatest length of lines are as follow:—Russia, 56,170 miles; Germany, 41,431; France, 36,970; Austro-Hungary, 30,403; Australia, 26,842; Great Britain, 23,156; British India, 20,631; Turkey, 17,085; and Italy, 15,864. On the 17th May 1854 the first message passed between Calcutta and Bombay. Telegraphic wires were successfully laid between Suez and Aden on the 28th May 1859. The Red Sea Telegraph was opened on the 1st October 1859. The telegraph system in Japan, which dates from 1871, comprised at the beginning of 1882, 3929 miles of line, with 9345 miles of wire. The Japanese language having no regular alphabet, it became necessary for telegraphic purposes to form a combination of Morse characters to represent the sounds of the syllabary known as the Katakana. This was effected by using the letters of the international code, supplemented by others formed of five dots and dashes (figures excepted), to produce a total of 47 signs.

TELI. Hind. In India, a term applied to oilmen shopkeepers, who make and sell oils,—a humble avocation. Kahān raja Kishn, kahān Ganga teli, Behold the distance between raja Kishn and Ganga the oilman. They were over three millions in 1881. They occupy a respectable position among the lower castes; nevertheless, the higher castes will not permit them to touch their food. Most of them manufacture oil as well as sell it. In Benares they have a considerable number of subdivisions, which for the most part do not intermarry or eat together.—*Sherring.*

TELINGA, the name of a people and their language dwelling in the Peninsula. The term is supposed by some to be derived from the Sanskrit words Tri-lingam, the country of the three lingams. The country is known as Telingana, and extends from Pulicat on the north of Madras, as far to the north as Ganjam, and westwards to Triputty, Bellary, Kurnool, Beder, and Chanda, throughout the regions where Telugu is spoken; by Europeans the Teling are styled Gentoo. See Telugu.

TELINGA POTATO. Eng. Amorphophallus campanulatus, esteemed a very wholesome food. The large dark-coloured flowers have a very curious appearance.—*M. E. J. R.*

TELINI, Indian blistering fly, species of Meloe or Mylabris cichorei. The wing-covers are marked with large spots of light-brown alternating with deep-blue. Another blistering fly is small, steel-blue, Cantharis violacea.—*Ben. Phar.*

TELL. Arab. A mound, generally ruins of some ancient city, as the mound or tumulus of Kala Jerablus, the ancient Carchemish, on the west bank of the Euphrates, rising in places 100 feet above the Euphrates. At Babylon, the Mujalibah, the Amran, and Jumguma mounds mark the sites of the palaces and temples of the mother city of Western Asia civilisation. At Nineveh, the Koyunjik and Nabbi Yunus mounds

mark the sites of the palaces of Assyria's kings; and at Kala Shergat or Assiu, at Nimrud or Kalah, in N. Syria, cities of the Hittites, and on the banks of the Lower Euphrates, those of the cities of the Chaldæans.

Tell-el-Yahudi, the mound of the Jews, is 20 miles from Cairo, on the site of Matarieh or Heliopolis, the biblical On. It has long been regarded as enclosing the site of the temple built by Onias, the Jewish high priest, who led the colony of his countrymen from Jerusalem to Egypt, when the holy city and its temple were desecrated by king Antiochus Epiphanes (B.C. 168). The description of this temple given by Josephus is that it was built on the site of a deserted shrine dedicated to the Egyptian goddess Basht, statues of which divinity had accordingly been found at Tell-el-Yahudi, and that it was finally closed by Paulinus, after the destruction of Jerusalem. Excavations were made in the mound in 1870, when it was found that it covered the site of a walled enclosure, about half a mile long and a quarter broad, the best preserved portions of the walls being 15 feet thick, built in three thicknesses, much as the walls of the tomb of Osiris at Abydos. In the enclosure were found a subterranean passage descending under a part of the mound still unexplored, several broken statues, and a square chamber, enclosed by walls of well-cut limestone blocks, and paved with finely-polished alabaster slabs. In this chamber were four detached pedestals, two of which are in the Boulak Museum. The walls have been burned into lime by the Arabs. The chief objects of interest were the decorations of the chamber, which were of tiles, of a type hitherto unknown before mediæval times. Many of these tiles were brought to the British Museum. The ornamental tiles are of various kinds; all have patterns upon them; but some are simply in relief, and glazed with the ordinary bluish-green glaze so well known in the little Egyptian sepulchral statuettes; others are inlaid with mosaics, others with brilliant enamels. No such work is known to have been used either by the Egyptians or Assyrians in decorating their walls, although painted bricks were common enough, and mosaic and enamelled work were commonly used by both nations in small objects of personal ornament. In Persia, inlaid enamelled tiles have been used for many centuries; but no antique specimens are known. The greater part of the tiles from Tell-el-Yahudi are purely Egyptian in design, and many of them bear a title of Rameses III.; but some others (always of a circular form and without hieroglyphics) are distinguished from the rest by having stamped upon them, on the reverse side, the Greek letters A and E.

TELLICHERRI or Tallacheri, a seaport town in Malabar district, Madras, lat. 11° 44′ 53″ N., and long. 75° 31′ 38″ E.; pop. (1871), 20,479, including 12,608 Hindus and 7080 Muhammadans. It is 412 miles from Madras, and 9½ miles S.E. of Cannanore. Its harbour has a natural breakwater formed by a reef of rocks 472 yards long, and a second parallel reef at a distance of 614 yards. Inside there is sufficient depth of water for a ship of 600 or 700 tons. The people are Moplah Muhammadans, Tiyar, Nair, and Mukwa.

TELMESSUS SERRATUS, a rare crab of the Gulf of Peh-chi-li.—*Adams.*

TELUGU is the language of Telingana, and the 17,000,358 people speaking it are partly subject to the British power, and partly to the Hyderabad State. The boundary line of this language may be roughly drawn from immediately north of Madras, where it meets the Tamil, by Kirkambari and Cuddapah to Bellary, where it meets the Canarese, skirting which it runs to the west of Beder to Dangapura and Murkunda; then, turning north and eastward and having Gondwana as its northern boundary, it rejoins the line near Vizagapatam, and at Chicacole it begins to meet Uriya. The most westerly spot at which it is spoken is the small town of Murkunda, about 30 miles west of Beder, and it reaches this by a wavy line running westerly from Sedashepet (Satyassi) on through Sungnani and Beder and Dungapura to Murghpetta or Murkunda; the villages in the whole of the line from Sedashepet to Murkunda, speak Telugu, Canarese, and Mahrati, and are called Si b'hasha basti, three-tongue towns. In ancient times, Telugu seems to have been spoken as far north as the mouths of the Ganges. This appears both from the geographical limits which the Greeks have assigned to the territory of the Andhra race, or Northern Telugu people, and from many of the names and places mentioned by Ptolemy up to that delta being found to be Telugu. Even now the Teling are tolerably pure along the southern boundary of Bustar, but Gond tribes are dwelling amongst them. Telugu is also called Telegu, Telinga, and Telunga, and its meaning is doubtful. It is the Andhra of Sanskrit writers, a name mentioned by the Greek geographers as that of a nation dwelling on or near the Ganges. It is the same language which, until lately, Europeans termed the Gentoo, from a Portuguese word signifying heathen or gentile. In respect to antiquity of culture and glossarial copiousness, it ranks next to the Tamil in the list of Dravidian idioms, but it surpasses all of them in euphonic sweetness. See Telinga.

The Telugu people are a taller and a fairer race than the Tamilar, many of the more northern of them being equal in stature to the Aryan Hindu of the north. They are more Brahmanical than the Tamilian races, and are as bold and energetic as the latter, though less restless.

The Telugu people are the most numerous branch of the Dravidian race, although the Tamil surpass them in restlessness and enterprise, and in that self-reliance which supports them in their emigrations. Including the Naik or Naidu (Nayaka), Reddi, and other Telugu tribes settled in the Tamil country, who are chiefly the descendants of those soldiers of fortune by whom the Pandiya and Chola kingdoms were subverted, and who number not less than a million of souls, and including also the Telugu settlers in Mysore, and the Telugu inhabitants of the Nizam's territory and other native states, the people who speak the Telugu language are ascertained (1881) to amount to seventeen millions. Tamil and Telugu roots are in the great majority the same, but peculiarities in inflection and dialectic changes have so modified the modern tongues, that they differ from each other as much as Portuguese from Spanish, Irish from Welsh, Hebrew from Aramaic, and Hindi from Bengali.

The Teling race are good farmers, carefully

storing the rainfall in artificial ponds or lakes. They have been good infantry soldiers, but are not horsemen; they repeatedly drove back the Golconda and Beder armies. A considerable portion of the force with which Lord Clive fought the battle of Plassey was composed of Telings, and, until late years, perhaps even now, Teling was the term given in Northern India to the irregular foot soldiers employed there. Those engaged in civil life push their way fearlessly amongst the other nations on their south and west; many of them are seafaring men, undertaking long voyages, and a portion of them in former ages conquered and held large islands in the Eastern Archipelago, where, under the term Kling, from the Kalingapatam rulers, the peoples of India are still known. The Telings are partly Aryan, partly a non-Aryan people, but most of them follow outwardly the Brahmanical teachings, though adhering to many unorthodox rites; they are sober and staid, little impressionable, and not easily excited. A body of them, known as Reddi, a very energetic, enterprising race, have held large municipal rights for centuries. An extensive colonization of Southern India, by the Teling race, took place under the Bijanagar dynasty, and they still exist there as distinct communities. The Reddi migrated from their original seats near Rajamundry over the whole of Southern India, and even into the Maharashtra country, where they are met with as far north-west as Poona, and are considered the most thriving ryots. The Reddi are large men, good cultivators. Many of those in the Cuddapah collectorate were, till A.D. 1865, addicted to dacoity. In their marriages, in the south of India, a young woman of 16 or 20 may be married to a boy 5 or 6 years old, but she lives with some other adult male, perhaps a maternal uncle or cousin, or it may be with the boy-husband's father, *i.e.* her father-in-law, though she is not allowed to form connection with the father's other relatives. The offspring of these arrangements are fathered on the boy-husband. When he grows up, the wife has become old or past child-bearing, and he adopts the same course.

The Telugu country is nearly twice larger than the Tamil, but is less thickly populated. Considerable colonies of Telugu people have been formed in the Tamil country, who retain their own language. The Telugu country, as a borderland, has been subject to the devastation and rapacious oppression of conquerors from a distance, who yet would not so far settle among its people as to blend and have common interests with them, or establish well-ordered governments among them. The whole face of the country—dotted with hill forts, destitute of irrigation, with (till lately) large tracts of waste land, bare of gardens—bears testimony to this. The fewness of flourishing towns and of large temples; the presence, in all the larger villages, of petty forts, and in most of the smaller villages of round towers commanding the doors of all the houses, from which to fire upon gang robbers; the style in which the best houses are built, everything being sacrificed to strength and security,—all have the same significance. The abject servility towards courts and cutcherries is shown by the term devaravaru, God, with the honorific plural, applied to a superior, while the genius of the language forbids the use of anything but the singular for the deity. The common word in use for saving or taking care of anything, as money, is dapettee, hide. Only after the Disarming Act, consequent on the 1857 mutiny, the people of all classes got out of the habit of carrying arms with them. Except along the coast, hardly any Europeans penetrated into the Telugu country earlier than the beginning of the 19th century, and only since its middle have the efforts even of Christian missionaries extended beyond the limits of the town where they established themselves. The Telugu people compared with the Tamil are physically a larger, handsomer, and more robust race, partaking much of the Aryan element. The tall forms, drooping (yet broad) shoulders, and regular Circassian features of the Rayat and Reddi races in particular, are in strong and favourable contrast to the general make of the Tamil people. They are of a free, independent spirit,—not so tractable or plastic as the Tamil people. Under the robbery and oppression of former rulers, they emigrated, or in their turn became robbers; slavery is unknown among them. Though they are very jealous for caste as far as they do observe it, and will make great sacrifices for it, nothing like the extreme homage paid by the southern out-castes to the superior castes is either demanded or yielded in the Telugu country. Not like the Tamil people, only tell the Teling a thing, and they'll do it quietly; say a word to a Tamil, and the Tamilar answer you. Servility is confined to the Brahmans and Muhammadans of courts and cutcherries,—regions where the immediate presence of the former rulers used to be felt. The Rayat has a firm, stolid attitude, and a free, steady stare. The people avail themselves with avidity of their rights as soon as they become aware of them. The abuses that prevailed under the supposed sanction of Government were countless, but wherever it became known that any one of them was unlawful, it soon passed away. Telugu people, with all their ignorance, are ever ready to petition and appeal and to fight for their rights to the last. They are very faithful and submissive to lawful authority. Sircar is a magic word with them; and it is hard to say what extent of wrong they will not endure, if they believe it sanctioned by Government. Whether it is that the hard rule of their former masters taught them submission, or whether the instincts of a people emerging on the whole under a kind Government from a state of desperate oppression and anarchy to one of prosperity are necessarily peaceable, or whether, again, the nearness of the Nizam's dominions to all parts of the British-Telugu country teaches them to appreciate their present masters,—resistance to official power is never in any case dreamed of. They will evade, cheat, run away, appeal,—anything but resist. You never hear of a riot among the Telugu people, though they are spirited enough. The Tamil sepoy may perhaps be the more smart and active; but for good behaviour, solid steadiness in the ranks, and discipline, the Telugu man carries the palm.

The Telugu people not only are a conquering race, but in times of oppression and famine, when other Hindus remain to die in crowds, are used to emigrate, and wherever they go they attain respectability among the classes to which they belong. A

large proportion of Telugu Brahmans, merchants and bazarmen in Madras, hold very fair positions in their respective ranks. A good sprinkling of Reddi is to be found as far south as Tinnevelly. The numerous body called in the Tamil country Badagar or Vaduvar, north-men, are Telugu, and belong to the kapu or rayat, or agricultural class. All the bearers and Waddaru in the south are of Telugu origin. The flow of emigration gradually ceased with the returning prosperity of the country, and the rapid improvement of the Telugu people under what little European influence they have enjoyed, is a fair index to their capabilities. Their towns are beginning to be something worthy of the name. Money and the marks of it are rapidly on the increase. In the Rajamundry district and other parts, the people have thrown themselves into the indigo and cotton trade; and by traffic, under immense disadvantages, they make the western as well as the eastern coast their own.—*Rev. Dr. Caldwell.*

TEMBILI. Singh. A variety of cocoanut in Ceylon, called king cocoanut, of a bright orange colour, and somewhat oval shaped.—*Simmonds' Dict.*

TEMBOW, or black-heart wood, grows in the Malabar forests to about 18 inches in diameter, and from 25 to 35 feet in height. It is a useful wood for general purposes in house-building, for native vessels, and implements of agriculture.—*Edye, M. and C.*

TEMMINCK, C. J., author of Coup d'Œil general sur les Possessions Neerlandaises dans l'Inde Archipelagique, Leide 1846.

TEMPLE, from the Latin templum, is the term by which Europeans designate the places of worship of the Hindus, the Buddhists, the Jains, the Japanese, and the Chinese. That of the Hindu is known also as the pagoda, a word the source of which has not been traced; but the Burmese call it prau, the Siamese wat, the Tamil people call it koil, the Telugu people call it gudi; by the Persian Muhammadans it is styled a But-Kada (But-Khana) or idol-house, and the Indian Muhammadans call it dewal, from Deo, god, and Alaya, a habitation. The better known temples of the Hindus in the south of India are those of Dwarka, Dewal or Somnath, Jejuri, Pandarpur, Triputty, Srirangam, Madura, Tanjore, Conjeveram, Ramnad, and Jaganath. Conjeveram is remarkable for possessing both a Saiva and Vaishnava shrine. Ordinarily, the Hindu temples of the south of India consist of the garbah-graham or shrine in which the vigraham or idol is kept. It is a square pedestal with one or more cupolas, and, where the cupolas are repeated, each is supported, one above another, by two bearers (dhari) at each of the four corners. There is a walled enclosure, at each corner of which, if a Saiva temple, is a figure of Siva's vahan, the bull Nandi; and if a Vaishnava temple, is a figure of Garuda, the eagle vahan of Vishnu. In front is the portico or arched colonnaded vestibule. In all the temples in S. India—such as Conjeveram, Srirangam, and others—the pilgrims are at liberty to go in and see the idol inside, without paying anything to the temple authorities. But at Triputty each pilgrim who wishes to have a look at the idol must pay one rupee for each visit,—one silver rupee, and not sixteen annas. Copper coins are no legal tender in the temple. Again, the stone idol here is dressed four times a day in different ways; and if pilgrims desire to see this they should pay one rupee for each visit. Again, if pilgrims wish to burn camphor before the idol, they will have to pay a rupee once more. In Rajputana the most celebrated temples are the Ek-Linga of Siva in Mewar; of Krishna at Nat'h-dwara; and the temples at Komulmer, Nadole, Mundore, Ajmir, Tamba-nagari, Kuraira, Barolli, Ganga-bheva, Dhumnar, J'halra Patun, Morakuro, Chitore, and Nagara.

In *Kashmir*, the whole of the building of Jyteshwara or Sankarachari temple is of stone, which is laid throughout in horizontal courses, no cement appearing to have been employed. This horizontal treatment is peculiar to most Hindu buildings in India, and is adhered to in all the ancient examples of Kashmir. The style of the Jyteshwara temple reproduces itself in all the Hindu Kashmirian buildings. The high-pitched pyramidal roof, the one, two, or more gables or pediments, the enclosing wall, and the character of the base mouldings, are features common to all.

In *Bengal*, the pediments and gables are slightly curved, and much more numerous; but alike in Kashmir and Bengal, the primary form was the square block surmounted by a pyramidal roof. The mode of elaborating the plan remained the same in both countries, and consisted in the addition of one or more projections to each of the original four sides of the square.

The various orders of Hindu sacred architecture are distinguished by the form of the sikra, which is the portion springing from and surmounting the perpendicular walls of the body of the temple. The sikra of those of Siva is invariably pyramidal, and its sides vary with the base, whether square or oblong. The apex is crowned with an ornamental figure, as a sphinx, an urn, a bull, or a lion, which is called the kallas. When the sikra is but the frustrum of a pyramid, it is often surmounted by a row of lions, as at Bijoli. In the mindra or cella is the statue of the god; the munduf, in architectural nomenclature, is the pronaos; the portico is the mandap or antarala.

In *Rajputana*, all temples dedicated to Bal-Siva, the vivifier or sun-god, face the east. The portico projects beyond the munduf; occasionally pilasters are placed on either side of the entrance to the munduf, serving as a support to the internal toran or triumphal arch. The Ek-Linga temple of Rajputana is of white marble, and of ample dimensions. Under an open-vaulted temple, supported by columns and fronting the four-faced divinity, is the brazen bull Nandi, of the natural size; it is cast, and of excellent proportions. Within the quadrangle are miniature shrines, containing some of the minor deities. Siva is represented with three eyes, hence his title of Trinitra and Tri-lochun, the Tri-ophthalmic Jupiter of the Greeks. From the fire of the central eye, according to Hindu belief, is to proceed Pralaya or the final destruction of the universe. This eye, placed vertically, resembling the flame of a taper, is a distinguishing mark on the foreheads of his votaries. But the ordinary marks on the foreheads of the Saiva sect are a round spot about the root of the nose, or a crescent on the forehead. The priests of Ek-Linga are termed Gosain or Goswami, which signify

control over the senses, and the high priests are celibates. The idol emblem of Siva is often called Bawa Adam or father Adam. The grand temple of Barolli in Rajputana is dedicated to Siva, whose emblems are everywhere visible. It stands in an area about 250 yards square, enclosed by a wall built of unshaped stones without cement. Beyond this wall are groves of majestic trees, with many smaller shrines and sacred fountains. Just before entering the area is a pillar erect in the earth, with a hooded snake sculptured around it. The body of the edifice, in which is the sanctum of the god, and over which rises its pyramidal sikra, is a square of only 21 feet; but the addition of the domed vestibule (munduf) and portico makes it 44 by 21. The whole is covered with mythological sculpture, without as well as within, emblematic of the great god (Mahadeo) Siva, who is the giver as well as the destroyer of life. In a niche outside, to the south, he is armed against the Dytea (Titans), the round-mala or skull-chaplet reaching to his knees, and in seven of his arms are offensive weapons. His cap is the frustrum of a cone, composed of snakes interlaced, with a fillet of skulls; the cupra is in his hand, and the victims are scattered around. On his right is one of the maids of slaughter (Jogini) drunk with blood, the cup still at her lip, and her countenance expressive of vacuity; while below, on the left, is a female personification of death, mere skin and bone, a sickle (koorpi) in her right hand, and its knob a death's head, which completes this group of the attributes of destruction.

To the west is Mahadeo (Siva) under another form,—a beautiful and animated statue, the expression mild, as when he went forth to entice the mountain nymph Mera to his embrace. His tiara is a blaze of finely-executed ornaments, and his snake-wreath, which hangs round him as a garland, has a clasp of two heads of Sehesnag (the serpent king), while Naudi below is listening with placidity to the sound of the dumroo. His cupra and kharg, or skull-cap and sword, which he is in the attitude of using, are the only accompaniments denoting the god of blood.

In the northern compartment is a picture disgustingly faithful of death and its attributes, known to the people as Bhookha Mata, or the personification of famine, lank and bare, her necklace, like her lord's, of skulls. Close by are two mortals in the last stage of existence, so correctly represented as to excite an unpleasant surprise. The outline is anatomically correct. The mouth is half open and distorted; and although the eye is closed in death, an expression of mental anguish seems still to linger upon the features. A beast of prey is approaching the dead body; while, by way of contrast, a male figure, in all the vigour of youth and health, lies prostrate at her feet.

Dhumnar, famed for its Buddhist caves, has also been at one time a seat of the Vaishnava sect, and at another a seat of the Saiva religionists. There is a gallery 100 yards in length, terminating in a quadrangular court, measuring 100 feet by 70, and about 35 feet in height, hollowed out of the cellular iron-clay rock, in the centre of which is the temple of the four-armed divinity, Chatur-bhuja or Vishnu, the ground plan of the temple being the usual mindra and munduf and portico. Vishnu, who is here adored as the four-armed, is placed upon an altar clad in robes of his favourite colour (pandu or yellow ochre), whence one of his titles, Pandurang. The principal shrine is surrounded by the inferior divinities in the following order:—First on entering are the Polea or porters, Ganesa is upon the right, close to whom is Saraswati, whose throne is on the tongue, and on the left are the twin sons of Kali, the Bhairu, distinguished as Kala, black, and Gora, fair; a little in advance of these is a shrine containing five of the ten Mahabedia or ministering agents of Kali, each known by his symbol or vahan, as the bull, elephant, buffalo, and peacock. The Mahabedia are the evil genii, invoked in 'jup,' or incantations against an enemy, and phylacteries containing formulas addressed to them are bound round the arms of warriors in battle. At the back of the chief temple are three shrines; the central one contains a statue of Vishnu as Narayana upon his hydra couch, with Lakshmi at his feet. Two Dyta or evil spirits appear in conflict close to her, and a second figure represents her in a running posture, looking back in great alarm at the combatants. Smaller figures about Narayana represent the heavenly choristers administering to his repose, playing on various instruments, the murali or flute, the vina or lyre, the muyoora or tabor, and the mudhung and thal or cymbals, at the sound of which a serpent appears rearing his crest with delight. From the south side the eye has an unlimited range over the plains beyond the Chambal, even to Mundisore and Sondwarra. Descending some rude steps from that place of view, there opens a cavern, the roof of which is supported by one of those singularly shaped columns named after the sacred mounts of the Jains. Here everything on one side is Buddhist or Jaina, on the other all is Saivite or Vaishnava. At the entrance to an adjoining cave are various colossal figures, standing or sitting, characteristic of the Buddhists or Jains. There are representations of the deified pontiffs of the Jains, and a group of five are the most celebrated of the twenty-four, and distinctively called the Panch-Teerat'h, viz. Rishubdeva, the first; Suntnath, the sixteenth; Nemnath, the twenty-second; Parswanath, the twenty-third; and Mahavira, the twenty-fourth. Each has his sacred mount or place of pilgrimage (teerat'h), and each is recognised by his symbol, viz. the bull, black antelope, conch shell, hooded serpent, and tiger; and it is quite sufficient to find one of these symbols upon the plinth to ascertain the particular pontiff to which it belongs. At the farther end of the cave known as Bhim's Bazar is a dagoba supporting the roof. Two columns, called Sumeru, support the roof, and as Sumeru mount is sacred to Adinath, the first pontiff, it is likely that he was here worshipped. There is an extensive piazza, supported by rows of massive square columns, all cut out of the solid rock, evidently a dharmsala for pilgrims, and on the exterior are numerous square cells, the apartments of the Srawak or Jain laity. There are also many Pausid-sala or halls of the Yati, or initiated disciples, who stand in the same upright meditative posture as the pontiffs.

Jain architecture is as distinct in character from the Brahmanical as their religion. There is generally a chasteness and simplicity in their temples, affording a wide contrast to the ela-

borately sculptured shrines of the Saiva and other polytheist sects of India. The design of the Jain temple at Komulmer is truly classic, and consists only of the sanctuary, which has a vaulted dome and colonnaded portico all round. A temple at Hallybede, about 60 miles N.W. of Seringapatam, in Mysore, is almost identical with that at Komulmer. But Colonel Tod found that Saiva sectarians had introduced into the Jain temple of Komulmer a massive monolithic emblem in black marble of the Hindu Jivi-pitri. At Kuraira is a temple of some celebrity, dedicated to the twenty-third of the Jain apostles, Parswanath. There are inscriptions recording its foundation in S. 11, and several from 1300 to 1350. The temple is imposing, and though evidently erected in the decline of the arts, may be considered a good specimen of the twelfth century. It consists of two domes, supported by numerous massive columns of a species of porphyry of close texture, excessively hard, and taking a fine polish. The capitals of the columns are filled with figures of the Jain pontiffs. The domes are of nearly equal diameters, about 30 feet each, and about 40 in height; under the further one is the sanctum of Parswa. There is a splendid colonnaded vestibule at the entrance, richly sculptured, which gives a very grand appearance to the whole edifice, but it stands in the midst of desolation. In the Tinnevelly district is a rock temple, Kalugumalei, covered with Jain figures and inscriptions. These inscriptions have been pronounced the oldest specimens of the Tamil language hitherto discovered. The Tamil character of the inscription is different from the Tamil character of to-day, but the germ of the present character is contained in it. In a field close to Nagalapuram, in Ottapedaram taluk, is a colossal Jain image. There is a small Jain image in the village of Kolatur, and it is worshipped by the natives, who apparently do not know what it is. There is another in the ancient village of Kolkhei, near to Sawyerpuram. Many cinerary urns in cromlechs, notably in Courtallum. There are many iron implements and exquisite pottery in them. The neighbourhood of the Jain image at Nagalapuram abounds with these urns. The old Jain temple, Kalugumalei, is dedicated to the god Subramanya, Siva's youngest son. According to the oldest legends, Subramanya is the god of war, and that the Jains in the south were cruelly exterminated by the Saivites is a matter of history. Each inscription designates the image above it a Tirru Meni, the usual term for a Jain saint. Some of the Jain temples around Mount Abu are grand, and large sums have been expended on them.

In *Southern India* the great religious institutions are Srisailam in Cuddapah, Conjeveram, Chellambram, Srirangam, etc. There are also many others of great architectural merit, very worthy of being depicted and preserved for the beauty of their sculpture and elegance of their design, such as the stone mantapam in the fort at Vellore, since used as an arsenal and cutcherry; the temples at Tanjore, Gangondaram, and Tribhuwanam, the ruins of Bijanagar, the pagodas at Leepichi in Bellary, and of Tadpatry in Cuddapah, with many others equally worthy of admiration in secluded and desert places, little known beyond their immediate neighbourhood. Nearly all the finest buildings of early times have been constructed of stone, while the edifices of modern times, that is since about the fourteenth century, comprising some of the most stupendous piles at present to be met with, are of brick.

At Satara, a Hindu temple erected to Vishnu by Anand Rao Bhikaji, Rasti, cost Rs. 2,16,250, and he built a Wada at Wai in A.D. 1789 at a cost of Rs. 1,02,000.

The mandap or antarala is the entrance-hall of a Hindu temple. In front of a Hindu temple is the dipmal, usually a monolith pillar, on which lamps are suspended.

A Buddhist temple has the gala or neck of the dagoba, the garbha (womb), the shrine, the dome, the h'tee, the finial, and umbrella on a Burmese dagoba. In China, at the entrance of Buddhist temples there are generally placed colossal figures or pictures of four great beings, possessing different attributes. They are the polia or warders of the place. The Confucian temples have by rights no images in them, the monumental tablet being the object of worship among the disciples of Confucius, and before which they burn incense and pray. In all other temples the idols are multitudinous, not only of Buddha himself in his three attitudes, contemplation, exhortation, and repose, but of many other deities, such as the god of war, the god of agriculture, the queen of heaven, and numberless others.—*Frere, Antipodes*, p. 229; *Tod's Rajasthan; Cole. Ill. Build. Kashm.*

TEMPLE, Sir RICHARD, Baronet, G.C.S.I., C.I.E., D.C.L., a Bengal civil servant, author of India in 1880, Men and Events of my Time in India (1882). Whether as regards the varied offices held by him, or the great extent of the countries in which he served or which he visited, he was never surpassed by any servant of the British Indian Government. Amongst other offices, he was Secretary to the Governor of the Panjab; he was Foreign Secretary to the Government of India, Finance Minister to the Government of India, Chief Commissioner of the Central Provinces, Resident at Hyderabad, Lieutenant-Governor of Bengal. He was Governor of Bombay, from which he retired after a service of 33 years. He was born at Nash-Kempsey in Worcestershire, 8th March 1826. He was educated at Rugby and Haileybury, and entered the Indian Service 8th January 1847, and his career was marked by a continuous series of successes. His minutes and reports are models of clear, precise, and yet picturesque official writing. It was he who digested and compiled the Panjab Report on the Mutiny, also the Panjab Civil Code, the Report on the Trans-Indus Frontier Tribes; and perhaps few know that when the publishers of the Calcutta Review hesitated about continuing it, he secured its reappearance by guaranteeing them from all loss.

TENASSERIM, or Tha-neng-tha-ri, a tract of mountainous country between lat. 11° and 17° N., lying along the E. coast of the Bay of Bengal, and between it and a high chain of hills about 40 miles inland. It is British territory, a division of the province of British Burma, comprising the seven districts of Amherst, Tavoy, Mergui, Moulmein, Shwe-gying, Tounghoo, and the Salwin Hill tracts. Area, 46,780 square miles; population (1881), 825,741 persons. These districts formed

the tract south of Pegu which British India conquered from Burma in 1826, and were for many years generally known under their official name of the Tenasserim Provinces. The mountains, 40 miles inland, are about 500 miles in length, and in parts exceed 80 miles in breadth, and in places 5000 feet high. The small town of Tenasserim, in lat. 12° 6′ N., and long. 99° E., is built on the Great Tenasserim river. A chain of islands, called the Mergui Archipelago, runs along the coast 15 or 20 miles distant from it.

Coal occurs in several parts of Tenasserim on the Great and Little Tenasserim rivers. At Mergui the beds are very extensive, from 9 to 18 feet thick, and about 16 feet from the surface. The principal mine is about 90 miles up the Great Tenasserim river. It was at one time worked by Government, but from want of management did not prove remunerative, and was abandoned. The Mergui coal was regarded by the coal committee as true mineral coal, but of inferior quality. A similar coal is found on the banks of Tenasserim north of the latitude of Tavoy.

The principal metallic ores are tin, antimony, iron, gold, and galena, those of tin being widely diffused, and are worked.

The races and tribes occupying Tenasserim are Burmese, Karen, Lawa, Selon or Selung, Shan, Siamese, Tavoyer of Arakanese descent, and Talaing or Mon.

TENDA. Tel. A lever for raising water, the Pakota of Europeans in the Tamil country.

TENDUKHERA, a small town in the Narsinhpur district of the Central Provinces, in lat. 23° 10′ N., and long. 78° 58′ E. Population (1872), 3034. It has iron mines, which are leased by the Narbada (Nerbadda) Coal and Iron Company.—*Imp. Gaz.*

TENGAH. Malay. A variety of the Rhizophora mangrove. It is exported to China, where it is used for tanning leather and fishing-nets, and is used locally as a dye, a decoction of it producing a deep-black colour when the cloth or substance has previously been dyed blue. It is plentiful in the mangrove forests on the coast and river-banks of the Province Wellesley.

TENGALAI, lit. the southern branch, a sect among the Southern Vaishnava, distinct from the Vadagalai or northern branch.

The Tengala follow the precepts of one Manavala Manumi or Ramyaja Matri, and the Vadagala claim Vedanta-chari or Vedanta Desica as their authority. Both of these saints were pupils of the same master, Ramanuja-chari, and neither sect speaks disrespectfully of the apostle of the other. Both sects worship Vishnu, and use the same rites, with some minor differences.

The Tengala and Vadagala, if of the same caste, may eat together and intermarry; but among no other sects are there such frequent and bitter quarrels. Tencalei means Southern Veda, and Vadacalei Northern, and in all probability the existing disputes have reference to the assumption of superiority of ritual on the part of some northern Brahmans settling in the south. The Tengala are most numerous in the southern provinces, and this fact would seem to confirm the view that the quarrel primarily arose from the northern people, the Vadagala, attempting to interfere with the established practices of the southern sect.

The great and really serious matter in dispute between the two sects is in regard to the mode of wearing the trident or caste mark. All Vaishnava wear their caste marks on the forehead in longitudinal form, while the Saiva wear theirs horizontally or as round dots.

Some old Sanskrit authority has laid down that the Vaishnava marks shall extend from the nose to the hair, but no one seems to know who the authority was, or in what book the statement was made.

This very dubious authority seems to have been the cause of the quarrels of the sects. The Vadagala or Northern Vaishnava say that from the nose means any part of the nose, and so begin their marks at the root of the organ, between the eyebrows. The Tengala argue that everything has a beginning, a middle, and an ending, so they begin their marks on the upper part of the nose itself, considering that the organ is divisible into three parts. The trident is the same in both sects, only that one carries the middle line a little way down the nose, while the other stops short at the root of the nose. Women of the Vaishnava sects do not wear the trident, but a single straight yellow line from the hair to the nose. This weighty matter is a cause of constant clashing between the sects. If an old temple of Vishnu is found with the trident carved upon it after the fashion of the Vadagala sect, they claim the temple and endowments as belonging to their party, and appeals are sometimes made to the law courts for the settlement of these disputes. All Vaishnava resort to all Vaishnu temples without any sectarian differences.

TENGGER MOUNTAINS, a range in Java connected with Gunungdasar, E. of Sourabaya, where a remnant of the people still follow the Hindu worship. These people occupy about 40 villages, scattered along this range of hills in the neighbourhood of what is termed the sandy sea. The site of their villages, as well as the construction of their houses, are peculiar, and differ entirely from what is elsewhere observed in Java. They are not shaded by trees, but built on spacious open terraces, rising one above the other, each house occupying a terrace, and being in length from 30 to 70 and even 80 feet. The door is invariably in one corner, at the end of the building, opposite to that in which the fireplace is built. At the interment of an inhabitant of Tengger, the corpse is lowered into the grave with the head placed towards the south (contrary to the direction observed by the Muhammadans), and is guarded from the immediate contact of the earth by a covering of bamboos and planks.

This terrace practice seems to have once prevailed in the Philippines. The inhabitants of the Serwatti Islands select the summits of hills or the brows of cliffs which rise abruptly from the sea, as sites for their habitations. The crest or extreme summit of the hill is occupied by a large waring tree, the Ficus Indica of Rumphius, beneath which the idols of the village are placed on square platforms of loose stones. Here the elders meet when any important matter is to be discussed. Below the tree the sides of the hills are scarped into a succession of platforms or terraces, on which are erected their oblong barn-like houses, with wooden walls and palm-leaf thatch. At Letti, a neighbouring island, where the hills are far

inland, the brows of the cliffs which overhang the sea are selected, and a similar mode of scarping into terraces is adopted when necessary. The same system also prevails at Baba and Timor Laut. The Serwatti islanders have a more general resemblance to the inhabitants of the South Sea Islands than to those of the Indian Archipelago. They are taller and fairer than the Malays or Bugis. They wear a waist-cloth made of cotton orof the bark of the paper mulberry, and allow their long wavy hair to float over their shoulders, or tie it at the back of the head. Their vessels, the cora-cora, are long and graceful, with low sides and great breadth of beam, high stems and sterns, which rise like horns at each extremity of the vessel, and are ornamented with festoons of large cowrie shells and bunches of feathers. Major Hamilton, H.M. 21st M.N.I., who had travelled in Java, mentions that he found the same system of terracing amongst the Malai Arasar or hill kings of the Pulney Hills in the extreme south of India.—*Raffles' Java*, i. p. 329.

TENGHE, a silver coin current in Central Asia. In Bokhara 24 make an English pound, but in Khiva 40.

TENIMBER ISLANDS. The groups of the Arafura Sea consist of the Tenimber, the Ki, and the Aru groups, with others of inferior significance. They are scattered over a considerable space, and vary in size from 70 miles in length to mere tufts of verdure floating in the sea, like baskets of grass and flowers, crowned by tall clumps of palm. The Tenimber Islands are inhabited by a race half savage in manner, whose villages, built on lime-stone hills near the shore, combine, with the varying outlines of the surface, the fresh and green aspect of the interior slopes, and the blue water in the channels between, to present a graceful prospect to the navigator's eye.

TENKAIA. Tel. Cocos nucifera, the nut. Several products of this useful palm receive distinct names, as Tenkaia bellam, sugar from the palm; Tenkaia gurutu, cabbage; Tenkaia kalu, palm wine; Tenkaia yennai, cocoanut oil. The cocoanut palm is called in Telugu by two names, Tenkaia chettu, and Kobbari chettu. Tennam kittu, Tam., cocoanut leaves used in thatching; Tenna maram, cocoanut palm; Tennam-kai, nut; Tennam-nar, the coir fibre; Tennam-kalu, the palm wine; Tennam oli, the cadjan leaf used for writing on with a style instead of paper and a pen.

TENNENT, Sir JAMES EMERSON, a Ceylon civil servant, author of Sketches of the Natural History of Ceylon; also of Christianity in Ceylon.

TENREIRO. Antonio Tenreiro, in 1520 was sent by the Portuguese Governor in India on an embassy to the Persian court. He went by way of Ormuz; and his narrative, which was published at Lisbon in 1763, is one of the earliest accounts we possess of the trade through Persia at the time when it first began to be affected by the competition of the Cape route.

TENTS are used as dwellings by all the nomade tribes of Asia, and by many of the races settled in towns. They are used throughout India by all travellers of any position, and during war are carried by the armies. They are made of cotton canvas, lined or unlined. A double-poled regulation tent, of four cloths throughout, with four feet verandah, complete, with carpets, bamboo chicks, purdahs, gunny bags, and ropes, 28 feet by 16 feet, will cost Rs. 670, and 23 feet by 14 feet will cost Rs. 520.

A single-poled regulation tent, of four cloths throughout, with four feet verandah, complete as above, 16 feet square, will cost Rs. 450; 12 feet square will cost Rs. 310.

Hill tents with four folds of cloth throughout, complete as above, 14 feet square, with two saiban, Rs. 265; 10 feet square, with two saiban, Rs. 200.

Swiss cottage tents, double fly, with saiban, complete as above, 16 feet square, Rs. 390; 12 feet square, Rs. 300.

Rowti, five cloths to the fly, and four to the kanat, complete as above, 16 feet by 14 feet, Rs. 210; 13 feet by 12 feet, Rs. 175.

Shamianah, 40 feet square and 12 poles, Rs. 400; 15 feet square and 4 poles, Rs. 90.

Bechobah tents, five cloths in fly, and four in kanat, as above, 12 feet square, Rs. 135; 8 feet square, Rs. 90.

Necessary tents and tents for servants, called pal, as also stable tents, are in use.

The pastoral races of Asia, who dwell in tents, make them of black felt. Indeed, the term nomade designating these migratory nations is from Namad, a felt.

The northern Arab calls the tent his house (beit). The covering (zhaher-el-beit) consists of pieces of stuff made of black goats' hair, stitched together according to the depth of the tent. Some tents are of goats' hair stuff, white and black. It effectually keeps off the heaviest rain. It is supported by nine poles or posts (amound or column), three in the middle and an equal number on each side. These several poles have distinct names. The middle ones are seven feet high; the side ones only five, which obliges the person who enters to stoop a little. The tent is open before, and closed on the sides and back part to keep out the wind. It is divided into two parts; the men's apartment (mekaad rabiaa) and the women's (maharram), separated by a white woollen carpet drawn across the tent, and fastened to the three middle posts. In the men's apartment a carpet is sometimes laid on the ground. They recline upon the camels' pack-saddles, the wheat sacks and camel bags being piled up round the middle post. The women's apartment is the receptacle for the cooking utensils, the butter and water skins, the provisions, and all the lumber of the tent.—*Robinson's Travels*, ii. p. 133.

TEPHROSIA, a genus of plants of the order Fabaceæ; about thirty species are known to occur in the south and east of Asia. Tephrosia candida, the fisher's tephrosia, contains the narcotic principle of the genus, and is used in the East Indies to poison fish, as T. toxicaria is in the West Indies. It is the Lehtia of Kamaon, and is a handsome white-flowered shrub of the Sub-Himalayan tract, Eastern Bengal, and Burma. T. apollinea is a native of Egypt, and yields a blue dye.

TEPHROSIA PURPUREA. *Pers.*

This small shrub occurs in the Panjab and North-West Provinces of India, from the Salt Range to Dehli, and is common on the eastern coast of the Peninsula. In Hurriana the twigs are used for making baskets. The root is bitter, and given by the native practitioners in dyspepsia and chronic diarrhœa, as an alterative tonic and febrifuge.—*O'Sh.* p. 292; *Powell*, i. p. 340; *Roxb.*

TEPHROSIA TINCTORIA. *Pers.*

T. hypargyrea, *D.C.*	Galega Heyneana, *Roxb.*
T. nervosa.	
Ceylon indigo, . . ENG.	Anil, ... SINGH.

This small plant is found in Mysore and in Ceylon. It yields a blue colouring matter, used for the same purposes as indigo.—*Roxb.; Voigt.*

TEPPA. TEL. The catamaran of the Coromandel coast.

TERA, the Buddhist temple of Japan.

TERAH, father of Abraham, Haran, and Nahor. He left Ur of the Chaldees for Haran (Harra), *i.e.* back towards Asroene or Sarug, on the way to Canaan. Abraham, Haran, and Nahor were born at Ur.

TERAH-TEZI. HIND. The first 13 days of the month Safar, during which Mahomed was seriously unwell. On the 12th or 13th day Muhammadans bathe and distribute food.

TERAI, a valley at the foot of the Himalayas, which varies in breadth from 10 to 30 miles. The Nepal Terai is called the Morung. The Terai is a belt of forest that runs along the foot of the Himalaya from Oudh to Assam. The sal and the sissoo trees grow abundantly, and their timbers are floated down the rivers Konki and Kosi.

The soil of the Terai is composed of alternating beds of sand, gravel, and boulders brought from the mountains, and the soil is generally light, dry, and gravelly. The large blocks are near the mountains, but the gravel beds extend for fully 20 miles south of the Sikkim mountains.

For nine or ten months, a disease, denominated by the natives the 'Ayul,' renders the Terai impassable even to the natives of the country. At the north foot of the Khassya, in the heavily timbered dry Terai, stretching for 60 miles to the Brahmaputra, it is almost inevitable death for a European to sleep any time between the end of April and November. Temperature in September, 77° to 80°; and in November, 75° to 77°. The Terai of the Nepal dominions is profitable from the revenue yielded by its productions. Valuable timber and turpentine, ivory, and hides are shipped down the Buri Gandak, on which river Segowlee is situated, to Calcutta. This district, along with Kamaon and other hill tracts, was ceded to the British Government after the Nepal campaigns of 1815 and 1816, which were undertaken in consequence of the systematic designs of the Nepalese to encroach on the territories north of Bareilly and Oudh, which formed part of the British possessions. According to the terms of a treaty assented to by the Nepal Government, the lowlands between the Kali and Rapti rivers, and further east up to the Gandak, were transferred to the British Government.

In the Terai which borders the Sarda river, no attempts have been made to utilize the land, to clear away the forest, to make roads, or introduce any scheme of drainage. For a few months in the winter, cattle graze on the prairies, but many buffaloes and bullocks are destroyed by tigers, in spite of the precautions taken to drive them home before sunset, and prevent their straying into the forest. Cattle, indeed, are very often pulled down in broad daylight, the shepherds in charge not daring to interfere. There are extensive swamps and jhils, overgrown with tall feathery grass, of which Bamania Tal is said to be the largest stronghold of tigers in the district. There are a few rhinoceeri in this swamp, where the reeds and grass are very dense. The Sikkim Terai gives us the Dhimal, the Bodo or Mechi, and the Koch, which latter also occupy the plains of Koch-Bahar, and the northern parts of Rungpur, Dinajpur, and Purnea.—*Hooker, Him. Journ.* i. p. 266; *Oliphant's Journey*, pp. 39, 173. See Tarai.

TERAIYAR is said to have been one of the twelve disciples of Agastiya. Three treatises on medicine bear his name, but their real authors are unknown, viz. Sikamani Venpa, Nadikottu, and fragments of a work on hygiene, Noyanukaviti.

TERI TOI, a river in the Kohat district, Panjab, formed by the junction of two streams, which rise in the easteru border of Upper Miranzai, and unite about 10 miles due west of Teri town; thence the river flows eastward until it joins the Indus.—*Imp. Gaz.*

TERMES, the White Ant; Termites (pl.).

Dewak, ... HIND.	Chellu, ... TAM.
Dotus, ... JAP.	Chathulu, . . . TEL.

Species of this insect are abundant in India, Ceylon, the Cape of Good Hope, and St. Helena, and attract attention from the large conical mounds of earth which they erect, and the destruction they produce in timber. The ordinary white ant has the head large and rounded, and, besides compound eyes, it has three ocelli, or simple eyes, situated on the upper surface; the antennæ are as long as the head and thorax, inserted in front of the eyes, and composed of about 18 joints. The abdomen is terminated by two small jointed appendages. As the lofty mounds of earth are all carried up from beneath the surface, a cave of corresponding dimensions is necessarily scooped out below, and here, under the multitude of miniature cupolas and pinnacles which canopy it above, the termites hollow out the royal chamber for their queen, with spacious nurseries surrounding it on all sides, and all are connected by arched galleries, long passages, and doorways of the most intricate and elaborate construction. In the centre and underneath the spacious dome is the recess for the queen,—a hideous creature, with the head and thorax of an ordinary termite, but a body swollen to a hundred times its usual and proportionate bulk, and presenting the appearance of a mass of shapeless pulp, weighing as much as 30,000 labourers. From this great progenitrix proceed the myriads that people the subterranean hive, consisting, like the communities of the genuine ants, of labourers and soldiers, which are destined never to acquire a fuller development than that of larvæ, and the perfect insects, which in due time become invested with wings and take their departing flight from the cave. But their new equipment seems only destined to facilitate their dispersion from the parent nest, which takes place at dusk, and almost as quickly as they leave it they divest themselves of their ineffectual wings, wearing them impatiently, and twisting them in every direction till they become detached and drop

off, and the swarm, within a few hours of their emancipation, become a prey to the night-jars and bats, which are instantly attracted to them as they issue in a cloud from the ground. Those that escape from the caprimulgi fall a prey to the crows on the morning succeeding their flight. The natives of India, also, in the morning, gather and eat them, fried with a little ghi, as they are pleasant tasted. One species of white ant, the Termes taprobanes, was at one time believed by Mr. Walker to be peculiar to Ceylon; but it has been found in Sumatra and Borneo, and in some parts of Hindustan. In Ceylon, Termes monoceros builds its nest in the hollow of an old tree, and, unlike the others, carries on its labours without the secrecy and protection of a covered way. The cobra snake generally makes its home in the caverns of the white ant, and it is believed to live on the termites within. At Vasarapad, near Madras, are many ant-hills with numerous cobra snakes. About one mile from Somerset, in the northern extreme of Queensland, at the eastern entrance to Albany pass, white ants have raised their hills to heights of 16 feet.—*Tennent's Ceylon*, p. 413; *Moresby*, p. 13. See Ants; White Ants.

TERMINALIA. This genus of plants is found in the tropical parts of Asia and America, and many of the species furnish valuable timber and other useful products. The genus belongs to the natural order Combretaceæ; about 17 species are natives of the E. Indies. The bark of T. arjuna is used in India in medicine for its astringency, and in dyeing, as that of T. benzoin in the Isle of France. The galls found on the leaves of T. chebula are powerfully astringent, and used in dyeing yellow and black; the ripe fruit of T. belerica is reckoned astringent, and that of T. Moluccana is like it. That of T. chebula, in an unripe state, and of different ages, has long been known under the names of black, yellow, and chebulic (Kābuli, from Kābul) myrobalans, and considered generally laxative. The fruits of T. citrina, T. angustifolia, and T. Gangetica are like that of T. chebula, and employed for the same purposes. The kernels of T. catappa have the same Hindi-Persian name, badam, applied to them, as to those of the common almond; they are eaten as such, and are very palatable. Dr. Royle had seen the tree as far north as Allahabad, in gardens. The kernels of T. Moluccana and those of T. belerica are also eaten. From the latter a gum exudes. A milky juice is described as flowing from T. benzoin, *Linn.*, which, being fragrant on drying, and resembling benzoin, is used in churches in the Mauritius as a kind of incense.

The more important species of the E. Indies are T. alata, arjuna, belerica, bialata, catappa, chebula, citrina, fœtidissima, myriocarpa, paniculata, proœera, pyrifolia, and tomentosa.

This large tree grows in the Panjab, in Bengal, in the Irawadi jungles, south-east of Surat, and in Canara and Sunda, but only by rivers and streams, mostly below the ghats. As a forest tree, it is rare in the northern parts of the Bombay side, but very common in the South Konkan, from Ramgarh southward, and there too always found in the vicinity of streams and rivers. It reaches everywhere a very large size. It is common throughout the Madrás Presidency, growing near the banks of rivers, up to an elevation of 3500 or 4000 feet; it is largely planted as an avenue tree, particularly in the Tinnevelly district, where it attains an immense girth, and is often furnished with very large buttresses. It is also found in Bengal, Bombay, and Burma. The wood is used for building, and boats are often made from it; it is inferior to the Terminalia tomentosa, but a valuable timber. It flowers in April and May, and the seeds ripen towards the close of the rains.

In the southern forests of Pegu, next to teak, the most valuable kinds of timber are T. glabra and T. arjuna, which present clean trunks of 6 to 8 feet in diameter, and 50 to 80 feet high without a branch. The bark is justly celebrated as an application to wounds.—*Col. Beddome, Fl. Sylv.; Mr. Gamble; Drs. Roxb., Voigt, Gibson, M'Clelland, J. L. Stewart, and Mason; Capt. Sankey.*

This very large forest tree has a straight trunk and a spreading head. It grows in Ceylon up to an elevation of 2000 feet on the open grassy plains, and it is found throughout India; is not uncommon in the Walliar jungles of Coimbatore, grows on the Siwalik tract, and at Peshawur, and occurs, planted, up to the Indus. Grows also in Goalpara, Sukanaghur, Gorakhpur, Dhomtola, Morung mountains. Flowers small, greyish-green, offensively smelling. The wood is white or yellowish, coarse-grained, and soft, but is used and is said to be tolerably durable; it answers well for packing-cases, coffee-boxes, and catamarans; grain measures are made from it; and in Malabar and South Canara the tree is sometimes hollowed out for canoes. The fruit is used in dyeing and tanning, and the leaves also for the latter purpose; the dried fruit is said to be similar to the Ægle fruit; an oil is expressed from the seed, which is used for strengthening the hair. In the Bombay Presidency it is found abundantly in all the inland and the coast jungles, but although one of the largest and finest-looking trees in the forest, straight, and of great scantling, it is there quite useless as a building timber, being immediately attacked by worms. Bark, when wounded, gives out a large quantity of an insipid gum. Its fruits are known as the belerie myrobalans; they are astringent, tonic. Kernels, tasting like filberts, eaten by the natives, and held to be intoxicating when eaten in quantity. It attains full size in 60 years; the people of Kangra consider it unlucky to employ it in house-building. It is a good avenue tree, is extensively cultivated for the sake of its dense foliage, and the leaves are considered the best and most nutritious of all fodder for cattle, particularly for milch cows. The oil from the kernels separates into two portions,—the one fluid, of a pale oil-green colour, and the other white, floccular, and of the

consistence of ghi. — *Madras Museum Report; Drs. Roxb., W. and A., Wight, Gibson, Brandis, M'Clelland, Voigt, and Cleghorn; Beddome.*

TERMINALIA BIALATA. *Wall.*

Pentaptera bialata, *Roxb.* | Lein-ben, ... Burm.

A large deciduous tree of the mountainous parts of India, with small greenish-yellow flowers, common in British Burma and the Andamans. A cubic foot weighs 39 lbs. In a full-grown tree on good soil, the average length of the trunk to the first branch is 80 feet, and average girth, measured at 6 feet from the ground, is 12 feet.—*Drs. Voigt, Brandis; Cal. Cat. This large, beautiful tree, with small purplish-green flowers, grows in all parts of the Moluccas, in both Peninsulas of India, in all parts of the Dekhan, and Bengal. It attains a large size in Malabar, where the wood is said to be much esteemed. Europeans call it the Indian almond tree, with reference to the oval and flattened shape of its drupe. The kernel, however, is cylindrical; it is eaten, and is palatable, resembles the almond in taste and composition, and yields an excellent oil. It is raised easily from seed, and in a good light soil, well watered, will in two years be ten or more feet in height, and give blossom. Its large leaf turns red previous to falling off. Captain Beddome says that as it occurs in the forests of the Godavery, the wood is very strong. It makes a good avenue tree. The bark and leaves yield a black pigment, with which the natives colour their teeth and make into Indian ink; the juice of the leaves and milk of the nut are used medicinally. One species of the tasar silk-worms feeds on the leaves.—*Useful Plants; Drs. Roxb.* ii. p. 430, *Voigt, Gibson, Wight, Cleghorn, O'Sh.; Beddome, Fl. Sylv.*

This tree grows in Ceylon, in both the Peninsulas of India, and northwards to Nepal, the Panjab, and Kābul, in Tenasserim, and in Canton province, and everywhere is a large tree. Colonel Beddome describes the wood as of good quality, and much used for building purposes; the heart-wood is yellowish-brown or dark-brown, hard and heavy, and makes good furniture, but is cross-grained and difficult to work. In Burma, yokes and canoes are made of it. The tender leaves, when scarcely unfolded, are punctured by an insect, and its eggs deposited therein, which by the extravasation of the sap become enlarged into hollow glands of various shapes and sizes, up to 1 inch in diameter; they are powerfully astringent, and make as good ink as oak galls; they also yield, mixed with alum, a good durable yellow dye. The fruit gives the black myrobalans, which are better than those of T. belerica; is an article of commerce for the large quantity of tannin which it contains. The fruit and gall-nuts are both used medicinally by the natives. Mr. Gamble says the bark is used for tanning and dyeing, and the unripe fruit is used for tanning, dyeing, and medicine, under the names balhar, zangi, and zangi har. 471,167 cwt. of myrobalans were exported from India in 1882-83, value Rs. 18,46,976; and Mr. Gamble says that in the southern circle of Bombay, the Forest Department in 1877-78, from the fruit of this tree, had a clear profit of Rs. 77,000. —*Drs. Royle, Cleghorn, Wight, M'Clelland, and Voigt; Mr. Gamble; Colonel Beddome; Thwaites; Powell*, p. 539.

This is a very large timber tree, often 70 to 80 feet to the first branch. It grows in Ceylon, is common in Mysore and throughout the Madras Presidency, up to an elevation of 3000 or 3500 feet. It grows in the Godavery forests, rises very

straight on the Animallays, and very fine on the Nullamallays in the Kurnool district; also in the forests of the Bombay Presidency and the Central Provinces, in Ondh, and in all the Sub-Himalayan tract from the Ravi eastwards to Darjeeling.

The wood is dark-coloured, very hard, heavy, and strong. It is much used in house-building, and for boats and canoes, solid wheels of carts, furniture, and other purposes. The ashes from its burned bark produce a kind of potash, which is eaten by the natives with betel leaf; the bark is astringent, and used for dyeing black and for tanning.

Colonel Beddome says the T. glabra of Roxburgh only differs in being more glabrous and having the bark nearly smooth, but the pubescence varies much, and is called Tella-maddi by the Teling people, and he is inclined to believe that the Pentaptera crenulata, *Roxb.*, also is only a variety.

TERMITINÆ, a section of Neuropterous insects, in which Latreille includes the genera Mantispa, Raphadia, Termes, and Psocus. These genera, however, are usually regarded as constituting three distinct families. The Termitidæ family is distinguished by the following characters:—Wings with few transverse nervures, folding horizontally; tarsi four-jointed; antennæ short and moniliform; body depressed. See Termes.

TERNATE, on the west coast of Gillolo, is a high island, but of small extent, being only about six miles long. Fort Orange is in lat. 0° 49′ N., long. 127° 30′ E. Several of these islands—Ternate, Tidore, Motir, and Makian—are only cones standing on the same great fissures of the earth. The base of Ternate volcano is beneath the ocean. Its circumference aronnd its shores is six miles, and its height is 5400 feet. Severe and destructive eruptions took place from it in 1608, 1635, 1653, 1673, after which the next was on the 26th February 1838, then on the 25th March 1839, on the 2d February 1840. In that of 1673, a considerable quantity of ashes was carried to Amboyna. In that of 2d February 1840, for fifteen hours the solid grouud rolled like the sea, but the heaviest ground-wave was at 10 A.M. of the 15th February, and the people then took to their boats. In this interval, great eruptions of ashes and hot stones fell like hail. Lava poured from the crater into the sea. For ten days, clouds of black smoke poured out. About midnight of the 14th, the shocks were more violent, and before 3.30 A.M. every house was levelled. Fissures formed in the earth, ont of which hot water rose for a moment, and then the earth closed again, to re-open at another place. Its population in 1865 was 9000.

The lower part of the monntain, behind the town, is covered with frnit trees, and hundreds of men, women, and children go daily to the mountain to bring in the fruit, dnrian, mango, lansat, and mangosteen. When Drake visited Ternate in A.D. 1579, the Portuguese had been driven out of the island by the sultan. Ternate with Batchian constitutes the ancient Moluccas. Milton sang of

> 'The isles
> Of Ternate and Tidore, whence merchants bring
> Their spicy drugs.'—*Par. Lost, Book II.*

The people are of three well-marked races, the Ternate Malay, the Orang Sirani, and the Dutch. The first are the descendants of the intruding Malay, who drove out the indigenes (who were no doubt the same as those of the adjacent mainland of Gillolo), and established a monarchy; their language is quite unintelligible. The Sirani are the Christian descendants of Portnguese.

Ternate town is at the foot of the mountains.—*Bikmore*, p. 306; *Wallace*, pp. 300-311.

TERNSTRÖMIACEÆ of De Candolle, the Theads, a natural order of plants, chiefly trees or shrubs, forming 28 genera, including 132 species, of which 57 occnr in the East Indies, in Java, Ceylon, both the Peninsnlas of India, the Khassya mountains, Assam, and Nepal, viz.:—1 Cochlospermum, 9 Ternströmia, 1 Anneslea, 1 Adinandra, 9 Eurya, 4 Cleyera, 12 Sanrauja, 9 Gordonia, 7 Camellia, 1 Thea, 2 Schima, ? Pyrenaria, 1 Reinwardtia, Actinidia, Stachyurus. The tea plant, the most remarkable of this order, is a native of Assam.

TERNSTRÖMIA JAPONICA. *Thunb.*

T. gymnanthera, *W. and A.*
Cleyera gymnanthera, *W. and A.*

Shwui muh si, . . CHIN. | Kymone, NEILGHERRIES.

A common tree on the Neilgherries and other elevated mountains on the west side of the Madras Presidency, from an elevation of about 4000 feet upwards, also in Ceylon. The wood is pinkish in colour, and much esteemed; it works well, but requires to be well seasoned; it is used for doors, rafters, and a variety of purposes. Another species of this genns, T. Penangiana, *Choisy*, is an evergreen tree of the Andamans and Tenasserim; and under the Burmese name, Puzzeen zwa, Wallich noticed a large timber tree of Tavoy, used for building.—*Beddome, Fl. Sylv.* p. 91.

TERRA JAPONICA is an old trade misnomer, formerly applied to the catechu, and still retained for gambier, an inspissated vegetable juice obtained from the Uncaria gambir, *Roxb.*

TERRAPIN.

Shwui-kwei-kiah, . CHIN. | Pai-kwei-pan, . . CHIN.

See Reptiles; Tortoise.

TERRIBLES, a dangerous line of rocks and sunken reefs, 10 or 12 miles W. from the N. point of Ramree river. A lighthonse on the S. Terrible was proposed to be in lat. 19° 23′ 30″ N., and long. 93° 18′ E.

TERRIORE, a large tract of woodland country, about 30 miles north of Trichinopoly, held by a Reddi.

TERRY, EDWARD. His voyage to India was published in 1655. It gives an interesting account of Surat and S. Walley, and of Tom Coryates' travels in the east, and death at Snrat in 1617.

TESTUDINIDÆ, a family of reptiles of the section A, Cataphracta or shielded reptiles, order Chelonia, and inclnding the genera Testudo and Homopus. In the East Indies are T. elongata, T. Horsfieldii, T. Indica, T. platynotus, T. radiata, and T. stellata. They are land tortoises. See Reptiles; Tortoise.

TETRACEROS QUADRICORNIS. *Jerdon.*

The four-horned antelope is of the sub-family Antilopinæ. It is of uniform brownish-bay colour

above, beneath lighter. Its length is 40 to 42 inches, height at shoulders 24 to 26 inches, anterior horns up to 1½ inches, and posterior horns 4 to 5 inches. It frequents jungly hills and open glades in the forests, abounds in the Eastern Ghats, occurs at the foot of the Himalayas, is rare in Sind and the Western Panjab, and is unknown in the Malabar forest, Lower Bengal, valley of the Ganges, Ceylon, and Further India. The spurious horns are so small as rarely to be met with in adult individuals, and are situated on two osseous bumps or risings (strongly marked in the cranium), from which they seem to be easily detached. These osseous risings are immediately in front of the true horns, between the orbits, rather in front of a line drawn across the forehead through the centre of the eyes, and become covered with black callous skin after the loss of the corneous tips. The true horns are situated behind the eyes, or between the eyes and the ears, inclining backwards with a scarcely perceptible curve forwards, straight, parallel, round, smooth, thick, and strong at the base, which has a few wrinkles, and tapering to a point; their colour black. Those of very old males were 4¾ inches in length, and had three strong wrinkles, and one imperfect one at the base. The doe has no horns, nor any bony projection above the eyes. The mammæ are four in number. The colour is brown, of various shades, not bright, but sometimes so light as to approach a dull fawn, darker than the cervicapra, but not so bright and deep as in the gazelle. The shade is browner on the hind quarters, and darkest on the middle of the back. It becomes lighter on the sides till it passes gradually into white in the middle of the belly, without the well-defined dark line of separation observable in the other two species. The fore legs, particularly above the knee, the inside of the fetlocks, the nose, and edge of the ears, are very dark. A narrow line between the fore legs, which gradually widens towards the hinder flanks, the inside of the arms and thighs, is white, as is the inside of the ear, in which the hairs are long, and arranged in indistinct ridges. The lachrymatory sinus is long, narrow, and parallel with the line of the nose. In its habits it is monogamous, and is always found in pairs, frequenting the jungles among the undulating hills of the Mulnad. It is never found in the open country, or among the hills on the eastern side of the district, neither does it ever penetrate into the western forests. The droppings are always observed in heaps in particular spots. It is said to be fond of licking the salt efflorescence of the soil, from which habit, it is said, the incisors of old individuals are often found to be much worn, and sometimes wanting altogether.

TETRAGONIACEÆ, a natural order of plants, of which two species, Sesuvium repens and Tetragonia expansa, occur in the East Indies, Sesuvium repens along the sea-shores, and Tetragonia expansa, *Murray*, is the New Zealand spinach, a coast and inland plant of Australia, New Zealand, China, Japan; useful as a vegetable, also as a sand-binding plant.—*F. von Mueller.*

TETRAMELES NUDIFLORA. *R. Br.*

T. Grahamiana, *W. Ic.*; Anictoclea Grahamiana, *Nim.*

Sandugaza, ... BENG.	Bolur, ... CAN.
Thit-pouk, . . . BURM.	

This is a tree of Ceylon, the Western Ghats, Sikkim, Garo Hills, Burma, and Andamans. It is one of the largest trees in the Madras Presidency, is of gigantic growth, and often with very large buttresses; it is not uncommon throughout the western forests of the Peninsula from Bombay down to Cape Comorin, and also in Ceylon; it is very abundant about the foot of the Neilgherries on the western side, and in the dense forests in the plains of South Canara; it sheds its leaves early in January, and flowers when quite leafless in February. The timber is said to be soft and worthless.—*Beddome; Gamble.*

TETRANTHERA, a genus of plants belonging to the order Lauraeeæ. T. Gardneri, *Thw.*, is a tree 40 to 50 feet high, of the Central Province of Ceylon, at an elevation of 4000 to 6000 feet. T. glaberrima, *Thw.*, a small Ceylon tree, growing at 4000 feet elevation. T. longifolia, T. ligustrina. T. iteodaphne, T. nemoralis, and T. ovalifolia of Ceylon, the last a tree 30 to 40 feet high, with T. Roxburghii of India and Ceylon, the Bo-mee-gass of the Singhalese. Wight also gives in Icones, T. glabrata, T. Panamanja. T. amara, *Nees*, is an evergreen tree of the Eastern Himalaya, Burma, and the Andamans, with a pale-brown wood. T. nitida, *Roxb.*, Kintonijam, BENG., name in the neighbourhood of Sylhet, where it is indigenous, and grows to be a useful timber tree of very great size. In the more remote forests which cover the Garo Hills, it is so large as to admit of being made into canoes of full 50 feet in length, for which purpose this tree is preferred.—*Voigt; Thwaites; Wight, Ic.; Roxb.* iii. p. 818.

TETRANTHERA CALOPHYLLA. *Miquel.*

Cylicodaphne sebifera, *Blume.*

Grows on the Neilgherries and on the Java mountains. A tallow-like fat is, in comparative abundance, pressed from the berries, and is used for the manufacture of candles. T. Japonica, *Spreng*, and T. laurifolia, *Jacq.*, of tropical Asia, are similarly useful.

TETRANTHERA GLAUCA. *Wallich.* An evergreen tree of the Eastern Himalaya and Eastern Bengal. It is the Sempat of Nepal, the Diglilati of the Mechi, and the Diglotti of the Assamese.

TETRANTHERA MONOPETALA. *Roxb.*

A middling-sized tree, native of the Peninsula of India, of Bengal, Oudh, the Siwalik, and Burma. Its cinnamon smelling leaves are given to silk-worms. The wood is used for agricultural implements. The bark is used in medicine, being considered stimulant, and after being bruised is applied fresh or dry to contusions, and sometimes mixed with milk or made into plaster. The leaves are used in Assam to feed the muga silk-worm, Antheræa Assama.—*J. L. Stewart; Gamble.*

TETRANTHERA POLYANTHA, *Wall.*, is a small tree of the Eastern Himalaya, Assam, and the Khassya Hills. In Assam, the leaves of this tree are used to feed the Antheræa Assama silk-worm, which produces the muga silk.

This tree grows in China, in New Holland, throughout India, in Assam, the Panjab, Siwalik tract, the Salt Range, to 2500 feet. Bark mildly astringent, used by the hill people in diarrhœa. It is the meda lakri of Hindustani druggists, and a favourite application to bruises and wounds. It is somewhat fragrant, and slightly balsamic and sweet. Tetranthera Roxburghii is a variable plant. The fruit is globose, black, and about the size of a pea, yielding a kind of greasy exudation, from which the Chinese manufacture candles of a bad quality, and which serves as a basis for salves. —*Cat. Ex.*, 1862; *Thw. En. Pl. Zeyl.* p. 255; *O'Sh.*; *Eng. Cyc.*

TETRANTHERA WIGHTIANA. *Wall.*

Cylicodaphne Wightiana, *Nees, D.C.*

Var. α. T. tomentosa. Leaves densely fulvo or fusco-tomentose beneath.

Var. β. T. glabrescens. Leaves sparingly puberulous or glabrous beneath.

A handsome good-sized or large tree, common in many of the western forests from Canara to Cape Comorin, from about 2000 feet elevation up to about 8000; it is very abundant on the Neilgherries, where it is called Keynjec by the Badaga. The wood is yellowish, with a satiny appearance, and a darker heart; it is used for rafters and various other purposes.—*Beddome, Fl. Sylv.* p. 293.

TETRANYCHUS PAPAVERÆ, *Scott*, the poppy seed mite, swarms in poppy seed granaries and their store pots; it multiplies with great rapidity. This, with species of Bruchus, also Calandra sitana and tipula, are the insects of Lower Bengal which attack the poppy seed in the granaries.

TETRAONIDÆ, the grouse, partridge, and quail family of birds, comprising the Perdicinæ and Coturnicinæ. The family belongs to the order Rasores, the gallinaceous or game birds. Naturalists include in this family the grouse, the partridge, American partridges, quails, and guinea-fowl. The grouse are peculiar to the northern portions of both continents. Partridges are found in Europe, Asia, and Africa, disappearing in the Malayan Peninsula except in its extreme west. Quails have the same distribution as the true partridges, but have a tendency to accumulate in the south-eastern portion of the Malayan Peninsula, where, with Turnix of the Tinamidæ, they are the only tropical gallinaceous birds. The guinea-fowl are natives of Africa.

Sub-Fam. Tetraoninæ or true grouse, as yet not observed in India.

Sub-Fam. Perdicinæ or partridges; those occurring in India may be divided into snow cocks and snow partridges, peculiar to the highlands of Central Asia and the Himalaya; ordinary partridges, comprising the francolin and chukor; grey partridges, wood partridges, and bush quail; the true partridges represented by the grey partridge of Europe, with one species from Tibet, and the great group of African partridges.

1. *Snow Cocks and Snow Partridges.*

Tetraogallus Himalayensis, *Gray*, Himalayan snow cock.
T. Tibetanus, *Gould.*
Lerwa nivicola, *Hodgson*, the snow partridge.

II. *Partridges.*

a. Francolins or meadow partridges.

Francolinus vulgaris, *Stephens*, black partridge.
F. pictus, *Jard. and Selby*, painted partridge.
F. Phayrei, *Blyth*, Burma.

b. Rock or sand partridges.

Caccabis chukor, *Gray*, the chukor partridge.
Ammoperdix bonhami, *Gray*, the seesee partridge.
A. Hayi, *Gould*, Arabia.

c. Grey or bush partridges.

Ortygornis Ponticerianus, *Gmelin*, grey partridge.
O. gularis, *Temm.*, the kyah partridge.

d. Wood partridges.

Arboricola torqueola, *Valen.*, black-throated hill partridge.
A. rufogularis, *Blyth*, rufous-throated hill partridge.
A. atrogularis, *Blyth*, Tiperah, Chittagong.
A. intermedia, *Blyth*, Arakan.
A. brunneopectus, *Tickell*, Tenasserim.
A. sphenura, —? China.
Perdix personata, *Horsfield*, Java.
P. Javanica, *Gmelin*, Java.
P. Charltoni, —? Penang.
P. punctulata, *Gray.*
P. oculea, *Temm.*, Malay Peninsula.
P. thoracica, *Temm.*, Philippines.
Rollulus coronatus, —? Malay Peninsula.
R. niger.

e. Bush quails.

Perdicula Cambayensis, *Latham*, jungle bush quail.
P. Asiatica, *Latham*, rock bush quail.
P. erythroryncha, *Sykes*, painted bush quail.

Sub-Fam. Coturnicinæ, Quails.

Coturnix communis, *Bonatere*, the large grey quail.
C. Coromandelica, *Gmelin*, black-breasted quail.
Excalfactoria Chinensis, *Linn.*, blue-breasted quail.
E. Novæ Guineæ, *Gm.*
E. Adamsoni, *Verreaux*, Celebes.
E. minima, *Gould*, Celebes.

Other of the quails are arranged by naturalists under the family Tinamidæ. Tetrao tetrix is the black-cock of Europe and Northern Asia. Mr. Atkinson, in the Altai, says black-cock shooting in September, when the first snow has fallen, is splendid sport. A common sledge, sometimes with one horse, at others with two, is prepared, and nearly filled with straw; upon this the sportsman sits down, and away the man drives into the forest, keeping a good look-out. When he sees the birds, he drives along till within rifle distance, and then stops. The sportsman must shoot the lowest bird; when this one drops, the others look down on their fallen mate, and remain quite still in the trees. I have more than once shot three out of the branches of the same tree, before the brood have taken flight. When the birds are going, the man gathers up the game, throws it into the sledge, and drives on again. In these woods it is not difficult to shoot from fifteen to twenty brace of black-cock in a day. This can only be done with a pea-rifle, which makes a very small report, and is certain in its effect.

The Himalayan snow cock, Tetraogallus Himalayensis, is the Jer monal of the N.W., but keeps to the open hill-sides, is harassed by the ring-tailed eagle, which never attacks it on the wing. It is 29 inches long, and weighs 6½ lbs. Eggs about the size of those of the turkey. T. Tibetanus is of the Snowy Range, and T. Caucasicus, *Pallas*, is of the Persian mountains.

The snow partridge, when rearing its young, if disturbed, exhibits all that distressful anxiety so common to its tribe. It does not counterfeit lameness like some, but walks away before the intruder, and calls out in the most plaintive manner, while the young squat close to the ground or creep beneath the stones.

The black partridge, Francolinus vulgaris, frequents grass meadows. Muhammadans of India compare its call to the words Subhan teri

kudrat, Show your power to-morrow! Others describe it as Lahsan, piaz, adrak, Garlic, onions, ginger! It is still abundant, though becoming scarcer.

Early in the morning the call of the male bird of the painted partridge may be heard to a great distance, Chee-kee-kerray, Chee-kee-kerray. The Chukor, HIND., or Atash khor, PERS., is the chukor partridge, Cacabis chukor of Jerdon, fabled by natives to be enamoured of the moon, and at full moon to eat fire. The two Persian words signify fire-eater. The chukor is common in all parts of the valley of the Indus, and throughout Tibet. In winter, when the hills are covered with snow, they are to be found in great numbers close to the rivers, even in the immediate neighbourhood of the villages; in general, when approached, they lie close among the crevices of the stones. Dr. Thomson was invited by the thannadar of Iskardo to be present at a hunting party, which he had arranged for the capture of the chukor, by surrounding a spot of ground, in which these birds are numerous, with a ring of men, who, approaching from all directions, gradually form a dense circle of perhaps a hundred yards in diameter. When the partridges are disturbed by a horseman in this enclosure, they can only fly towards the living wall by which they are surrounded. Loud shouts, and the beating of drums and waving of caps and cloaks, turn them back, and they are driven from side to side, till at last, exhausted with fatigue and stupid from the noise and confusion, they sink to the ground, and allow themselves to be caught by hand. The scene was a very striking one. The spot selected was a deep dell, full of rocks, but without trees. The sport, however, did not seem so successful as usual, six or eight birds only being captured. The hen of the chukor lays from 8 to 15 eggs. The grey partridge, Ortygornis Ponticeriana, is easily tamed, and will follow its owner about like a dog, even in the crowded streets. Muhammadans keep it in small cages, sometimes for fighting, as it is very pugnacious, and fights with great spirit and obstinacy. It readily utters its call, Pateela-pateela-pateela, when spoken to. It is used as a decoy for wild birds. The male bird of the covey, attracted by its call, is easily caught when fighting. The kyah partridge, Or. gularis, are found in wavy, thick grass, and in many places it can only be followed on elephants.—*Thomson's Travels*, p. 2; *Jerdon*.

TETRODON, fishes of the order Plectognathi. Instead of having distinct teeth as usual in the class, these have the jaws provided with a substance resembling ivory, formed somewhat like the beak of a bird, and fitted for crushing crustaceous animals and fuci, upon which they live. The Tetrodons are distinguished by the possession of four large teeth, the jaws being each divided by a central suture. These fishes are confined to the seas of warm climates; some of them, as also the Diodon, are called globe fishes. Species of Tetrodon are capable of inflating the abdomen, and in this state, when taken or handled, they emit a grating sound. They are also remarkable for tenacity of life, which they are capable of sustaining for several hours after having been taken out of their element. They have a peculiar, disagreeable odour, resembling that of Gobioidæ, which continues for several years in specimens preserved in spirits of wine. In the Malayan countries they are considered highly poisonous, and are even objected to as manure. Tetrodon skins are made into lanterns in China.—*Eng. Cyc.*

TEUCRIUM, a genus of unimportant plants of the natural order Lahiatæ, of which T. hotrys, T. leucosceptrum, and T. stolonifcrum occur in the East Indies. T. chamædrys of Europe and some parts of Asia, is an ingredient in the celebrated Theriaca andromachi, or tareaq farooq. The species are pleasantly fragrant. T. monostachyum, *Wallich*, of the Eastern Himalaya, Sylhet, and Khassya Hills, ascends to 7000 feet; coppices well. —*O'Sh.* p. 488; *Voigt*, p. 463.

TEUTHIS. *Linn.* All the species of these mollusca are supposed by the Malays of the Straits to be highly poisonous; they are not eaten, but set aside among offal of fish to be used as manure.

TEWARI is a corruption of Trivedi, and is the trihal title of Brahmans of N. India descended from men learned in their Vedas. They follow agriculture, are soldiers, cudgel-players, and boxers; many of them entered the Indian army.

TEXEIRA, a Spanish author, who translated, as the History of Persia, the first part of Mir Kond's great book in seven volumes, called Rauzat-us-safa. Texeira extracted thence his history, which he presented to the world in Spanish; but it has been since translated into French by Cotolendi. Texeira had travelled into Persia, and made himself acquainted with the language of that country. He finished his first part with an Abridgment of the History of the Khalifs, etc.

TEXTILE ARTS. The east has, from the earliest times of which we have any record, been famous for its textile fabrics; and India, notwithstanding the great mechanical inventions of the western world, is still able to produce her webs of woven air, which a manufacturer of the 18th century attempted to depreciate by calling them the shadow of a commodity, at the same time that his townsmen were doing all they could to imitate the reality, and which they have not yet been able to excel. Though the invention and completion of a loom for weaving would indicate a high degree of ingenuity as well as a considerable advance in some other arts, the Hindus were acquainted with it at a very early period, for in the hymns of the Rig Veda, composed about 1200 years B.C., weavers' threads are alluded to; and in the Institutes of Menu it is directed,—'Let a weaver who has received ten hales of cotton thread, give them back increased to eleven by the rice-water and the like used in weaving.'

That cotton was employed at very early periods, is also evident from the Indian name of cotton, Karpas, occurring in the Book of Esther, i. 6, in the account of the hangings in the court of the Persian palace at Shushan, on the occasion of the great feast given by Ahasuerus, — white, green, and blue hangings; the word corresponding to green is Karpas in the Hebrew. It seems to mean cotton cloth made into curtains, which were striped white and blue. Such may be seen throughout India in the present day, in the form of what are called purdahs. (Vide Essay on Antiquity of Hindu Medicine, p. 145.) The mode in which these are used, and the employment of the same colours in stripes, is still known as Shatranji, or cotton carpets. That the Hindus were in the habit of spinning threads of different materials, appears from another part of

the Institutes of the same lawgiver, where it is directed that the sacrificial threads of a Brahman must be made of cotton, that of a Kshatriya (second caste) of sana (Crotalaria juncea), and that of a Vaisya of woollen thread. The natives of India prepare fabrics not only of cotton, but also of hemp and of jute and other substitutes for flax; also of a variety of silks, and the wool of the sheep, goat, and camel, as well as mixed fabrics of different kinds. But it is for the delicacy of the muslins, especially of those woven at Dacca, that India was so long famous. From a careful examination of the cottons grown in different parts of India, as well as of those of other parts of the world, we find that it is not owing to any excellence in the raw material that the superiority in the manufacture was due, for English spinners say that the Indian cotton is little fit for their purposes, being not only short but coarse in staple. It is owing, therefore, to the infinite care bestowed by the native spinners and weavers on every part of their work, that the beauty of the fabric is due, aided as they are by that matchless delicacy of touch for which the Hindus have long been famous. According to one of their authors, 'the first, the best, and most perfect of instruments is the humau hand.' The Hindu weaver has been described as hanging his loom to a tree, and sitting with his feet on the ground. But this is the case only with the coarser fabrics; and a late resident of Dacca has given a minute account of the cotton manufacture of that district, and has shown that great care is bestowed on every part of the process. The spinning-wheel is usually considered to be an improvement upon the distaff and spindle, as modern machinery is upon the inexpensive spinning-wheel. In facilitating work aud diminishing expense, the spinniug-wheel was uo doubt a great improvement, and is still employed throughout India for the ordinary and coarser fabrics. But the spindle still holds its place in the hands of the Hindu women, when employed in spinuing thread for the fine and delicate muslins to which the names of Shabnam or Dew of Night, Ab-i-Rawan or Running-water, etc., are applied by natives, and which no doubt formed the Tela ventosa of the ancients; and those called Gangitika in the time of Arrian were probably produced in the same locality. Mr. James Taylor, of the Bengal Medical Service, in a report which was sent by the Court of Directors to India, gave much interesting information respecting the cotton manufacture of Dacca. He showed that the Hindu woman first cards her cotton with the jaw-bone of the boalee fish, which is a species of Silurus; she then separates the seeds by means of a small iron roller worked backwards and forwards upon a flat board. A small bow is used for bringing it to the state of a downy fleece, which is made up into small rolls to be held in the hand during the process of spinning. The apparatus required for this consists of a delicate iron spindle, having a small ball of clay attached to it, in order to give it sufficient weight in turning; and imbedded in a little clay there is a piece of hard shell, on which the spindle turns with the least degree of friction. A moist air and a temperature of 80° is found best suited to this fine spiuning, and it is therefore practised early in the moruings and in the evening, sometimes over a shallow vessel of water, the evaporation from which imparts the necessary degree of moisture. The spinners of yarn for the Chundeyrec muslins in the dry climate of North-Western India are described as working in underground workshops, on account of the greater uniformity in the moisture of the atuosphere. The Indian spinning-wheel is looked upon with contempt by those who look to the polish rather than to the fitness of a tool. Professor Cowper, than whom none was a better judge, observing that the wood-work of some of these spinning-wheels was richly carved, inferred that the strings with which the circumference was formed might have some use, and not have been adopted from poverty or from idleness. In making working models of these instruments, he has found that in no other way could he produce such satisfactory results as by closely imitating the models before him, the strings giving both tension and elasticity to the instrument. The spindles, moreover, being slightly bent or the hand held obliquely, the yarn at every turn of the spindle slips off the end and becomes twisted. The common dimensions of a piece of Dacca muslin are twenty yards in length by one in breadth. There are more threads in the warp than in the woof, the latter being to the former in a piece of muslin weighing tweuty tolas or siccas, in the proportion of 9 to 11; one end of the warp is generally fringed, sometimes both. The value of a piece of plain muslin is estimated by its length and the number of threads in the warp, compared with its weight. The greater the length and number of threads, aud the less the weight of the piece, the higher is its price. It is seldom, however, that a web is formed entirely of the finest thread which it is possible to spin. The local committee of Dacca having given notice that they would award prizes for the best piece of muslin which could be woven in time for the 1851 Exhibition, the prize of 25 rupees was awarded to Hubeeb Oollah, weaver of Golconda, near Dacca. The piece was ten yards long and one wide, weighed only 3 oz. 2 dwts., and might be passed through a very small ring. Though the cotton manufactures of India seem to have greatly fallen off, from the cheapness of English manufactured goods, the report of the Revenue Board, Madras, shows that up to the year 1871 weavers continued to increase in numbers. In the year 1850, it was stated by Dr. Taylor that, as the finest muslins formed but a small portion of goods formerly exported to England, the decay of the Dacca trade has had comparatively little influence on this manufacture, as these delicate manufactures still maintain their celebrity in the country, and are still considered worthy of being included among the most acceptable gifts that can be offered to her native princes; and he believes that the muslin being then made was superior to the manufacture of 1790, and fully equal to that of the reign of Aurangzeb. Fine muslins have been sent to the Exhibitions in Europe, from Dacca, from Kishengarh in Bengal, from Collar, in the raja of Travancore's dominions, as well as from Chundeyree in the Gwalior territories. Specimens of almost every variety of the cotton manufacture, such as the coarse garrha and guzzee for packing, clothing, and for covering corpses, with dosootee, etc., for tents, canvas for sails, towels, and table-cloths, aud every variety of calico, were sent from Nepal and Assam, as well as from along the valley of the Ganges, from

Bengal up to the Jullundhur Doab, in the Sikh territories; also from Cutch, Ahmadabad, Surat, and Dharwar on the western side of India; from the central territories of the Nizam, from Nagpur, and from the islands of the Indian Ocean. Fine pieces of calico and punjum longcloth were sent from Juggiapettah, in the Northern Circars, which was formerly the great seat of this manufacture. Some of the places noted for their manufactures did not grow their own cotton. Dacca no doubt grew most of what it required for its muslins, because the thread did not swell in bleaching, but it also imported cotton formerly from Surat, as well as from Central India. Azimgarh imports its cotton chiefly from the same source to which the Northern Circars was also formerly indebted, while Chundeyree imports its cotton from the distant valley of Nimār. The natives are acquainted with every kind of weaving, from guzzee and ganze, to striped, checkered, and flowered muslins. The last are a branch of art which has been long known in the east, and the mode of making which often puzzled weavers in Great Britain. In manufacturing figured (jamdanee) fabrics, Mr. Taylor informs us, they place the pattern, drawn upon paper, below the warp, and range along the track of the woof a number of cut threads, equal to the flowers or parts of the design intended to be made; and then, with two small, fine-pointed bamboo sticks, they draw each of these threads between as many threads of the warp as may be equal to the width of the figure which is to be formed. When all the threads have been brought between the warp, they are drawn close by a stroke of the ley. The shuttle is then passed, by one of the weavers, through the shed, and the weft having been driven home, it is returned by the other weavers. Most of these flowered muslins are unform in colour, but some are in two colours, and chiefly woven in Bengal. Specimens of double weaving in cotton, and showing considerable skill, with a pleasing arrangement of pattern and colours, were sent from Khyrpur, in Sind. These kinds are also woven in Ganjam. — *Royle on the Arts and Manufactures of India*, p. 487.

TEYAMMUM. Arab., Hind., Pers. The Muhammadan legal purification with sand, where water is not obtainable. See Bathing; Lustrations.

TEYNGA, in lat. 6° 52′ N., long. 121° 43′ E., is a small low island of the Philippine group, covered with trees, and is the most northern island of the Sulu Archipelago.

TE-YUH. Chin. Earth's prison. Teen-tang, the heavenly paradise. These correspond to hell and heaven.

TEZAB. Hind., Pers. Acid, lit. biting water.

Gandhak ka-tezab, sulphuric acid.
Nimak ka-tezab, hydrochloric acid.
Shore ka-tezab, nitric acid.
Sirke-ka-tezab, acetic acid, vinegar.

TEZBAL. Hind. Leaves of Xanthoxylon hostile, also of Cinnamomum albiflorum.

TEZIN, a river which rises in the Safed Koh, and after a course of 40 miles falls into the Kābul river at Tarobi. On the 22d October 1841, Brigadier Sale defeated here a body of hostile Afghans. But there fell here, on the 11th January 1842, the remnant of a British force retreating from Kābul, consisting of 4500 men, including followers (out of a total of 16,500 who had left Kābul a few days before). On the 12th and 13th September 1842, General Pollock while advancing was attacked by Afghans here, and repulsed them. —*MacGregor*, pp. 709, 710.

TEZKIRAH. Arab. A passport; also brief notices of men or things.

TEZPUR, a town in the Durrung district of Lower Assam. Copperplates were found here of supposed date the 10th century, with inscriptions in slightly modified Kutila character. They have invocations to Siva and the Brahmaputra river, and mentioning the boar incarnation and his descendants, also Vishnu, Krishna, and Lakshmi. This inscription records the grant of a village called Abisuravataka, on the west of the Ganges, to a Brahman of the Sandilya race, named Indoka. The donor is Vanamala of the dynasty of Bhagadatta.

THAB BAN. Burm. This Amherst timber is used for boat-building and making carts; timber sometimes 70 feet long. It is a teak, but rather heavier than the usual kind; sp. gr. 0·814.—*Cat. Ex.*, 1851; *Mr. Blundell.*

THA-BEIT. Burm. The alms-bowl of Buddha. See Kasgal-i-Ali; Patra.

THA-BY-KE or Tha-bay-kya. Burm. Described as a kind of oak growing in Amherst, Tavoy, and Mergui, not abundant, but scattered in all forests inland throughout the provinces; of max. girth 1½ cubits, and max. length 16 feet. When seasoned, it floats in water. It is a sufficiently light, yet durable, straight-grained, tough wood; used by Burmese for posts, building purposes generally, and various other objects; likely to prove excellent for helves, and would be unrivalled for shot boxes.—*Captain Dance.*

THADKI. Mahr. With the Mahrattas, a cenotaph of altar-like platform. It supports sometimes a stand for the sacred basil (tulsi-vrindawan), sometimes two feet (padma) in relief; others the linga. These are sometimes protected by a canopy. An instance of the latter is the thadki of the famous Ragonath Rao Bhat (Raghoba Dada), the father of the last Peshwa, whose ashes lie at Hingani, 3 miles up the Ganga from Kopargaon.

THAKUR. An idol, a deity. In Gujerat, a name of the idol Balaji; an individual entitled to reverence or respect. A title applied to the nobles of Rajputana, from Thakura, Sansk., honourable. Thakurani, a lady of rank, from Thakara, a lord. The title is applicable alike to Brahman and Rajput tribes. Thakurbari, Hind., or Thakurwari, also Thakurghar, Hindu place of worship, an idol house; lit. the Lord's house. See Saligramma.

T'HAL. Hind. A desert, sandy tract. See T'hul.

THALA. Hind. A large flat metallic dish.

THALAITI or Talaiti is the term applied to the town at the foot of every hill fortress.

THALAMITA, a tribe of crustacea.

1. *Sub-Gen.* Thalamitæ quadrilaterales.

Thalamita admete, *Edw.*, Red Sea, Indian Ocean.
T. chaptain, *Edw.*, Red Sea.
T. crenata, *Edw.*, Asiatic Seas.
T. prymna, *Edw.*, Australia.

2. *Sub-Gen.* Thalamitæ hexagonales.

Thalamita crucifera, *Edw.*, Indian Ocean.
T. annulata, *Edw.*, Red Sea, Indian Ocean.
T. natator, *Edw.*, Indian Ocean.
T. truncata, *Edw.*, Indian Ocean.
T. cullianassa, *Edw.*, Indian Ocean.
T. erythrosdactyla, *Edw.*, Australia.

THALASSINA SCORPIONIDES, the burrowing lobster of the Fiji Islands; so named from its scorpion-like tail.—*Hartwig.*

THALESAP, a lake on the north of Cambodia, 60 miles in circumference.

THALGHAT or Kasaraghat, a pass in the Syhadri Hills, in the Thana (Tanna) district of Bombay, situated in lat. 19° 43′ N., and long. 73° 30′ E., 65 miles north-east by north of Bombay city. The railway there is the north-eastern branch of the Great Indian Peninsula Railway.—*Imp. Gaz.*

THALICTRUM FOLIOLOSUM. *D. C.*

Meadow rue, . . ENG.	Shuprak, ... HIND.
Pili jari, ... HIND.	Burmoti, . . . PANJAB.
Mamiran, Momira, ,,	

This is found in the Sutlej valley between Rampur and Sungnam, at an elevation of 5000 to 8000 feet; at Mussoori, and generally on the Himalayas. The Makhzan-ul-Adwiah describes three kinds of mamiran, viz. Hindi, blackish-yellow in colour; Chini, dull-yellow; and Khorasani, dark-greenish.

Th. flavum is termed in France and England 'the poor man's rhubarb,' as a substitute for which medicine it is generally employed. The bitter root of the Indian species, in doses of 5 to 10 grains, acts as a tonic and aperient, and is given in the interval of intermittent fevers, and in convalescence from acute diseases. It promises to succeed well as a febrifuge of some power, and an aperient of peculiar value.—*O'Sh.; Cleghorn; Voigt; Powell.*

THALICTRUM RUBELLUM. *Smith.* Shingma, CHIN., grows in the Chinese provinces of Sze-chuen, Shan-si, and Kan-su. The root-stocks are used medicinally.—*Smith.*

THALLOGENS, a class of plants proposed by Lindley to include those flowerless plants which are distinguished by the absence of an axial stem. It includes all the Cryptogamia, with the exception of ferns and mosses.

Those of the E. Indies comprise the natural orders Confervaceæ, Fucaceæ, Ceramiaceæ, and Hymenomycetes, with the following genera:—

Confervaceæ, Confervids—		Ceramiaceæ, Rose tangles—
ulva.		callithamnion.
porphyra.		ceramium.
Fucaceæ, Sea Wracks—		chondrus.
sargassum.	dictyota.	rhodymenia.
fucus.	chordaria.	Hymenomycetes, Toad-stools—
laminaria.	bryopsis.	Agaricus.
zonaria.	codium.	

THAMAS KOULI KHAN, son of a shepherd of Khorasan, known to the world by his title of Nadir Shah.

THAM KHUAN. SIAM. Certain imposing ceremonies which mark the principal events or eras in the life of a Siamese, such as the shaving his head-tuft, his reception as a bonze, his marriage, the advent of a new sovereign, etc.—*Bowring, Siam*, i. p. 117.

THAMMAI. BURM. A tree native of Amherst; a strong, handsome wood, like Ægiceras, or box-wood.—*Cat. Ex.*, 1862.

THAMNOCALAMUS FALCONERI. *Hooker.* A bamboo growing at 8000 feet elevation in Kamaon and Nepal. Th. spathiflorus, *Munro*, is the small bamboo in the Himalaya from the Sutlej to Bhutan, at 8000 feet.

THAMUD and AD, two tribes of ancient Arabia before the time of Abraham. They are said to have been of gigantic stature.—*Catafago.*

THAN. HIND. A piece of cloth, a web of cloth.

THAN, a village in Kattyawar, to the north of the road from Wadhwan to Rajkot, 12 or 14 miles N.W. of Muli. It is one of the most ancient places in India, and the whole of the neighbourhood is holy ground. It is situated in the part of Surashtra known as the Deva Panchal,—so called, it is said, from having been the native country of Draupadi, the wife of the five Pandava brethren. One of the chapters of the Skanda Purana is devoted to Trineteswara and the neighbourhood. Population, 250,000 souls. Than was visited also by Krishna and his consort Lakshmi, who bathed in the two tanks near the town, whence one has been called Pritam, a contraction from Priyatam, 'the beloved,' after Krishna, so named as being the beloved of the Gopi; and the other Kamala, after Lakshmi. Within a few miles was the shrine of the three-eyed god Trineteswara, one of the appellations of Siva; and close to this, the celebrated kund, by bathing in which pool all sins are washed away. This kund was called therefore the Papnasnu or 'sin-expelling,' as the forest in which it was situated was called the Papapnodnuvana, or the Forest of the Sin-destroyer. Close to Than are the Mandhar Hills, distinguished by this name from the rest of the Tanga range.—*Imp. Gaz.*

THANA or Tanna, chief town of Thana district, Bombay, and a station on the Great Indian Peninsula Railway, 20 miles north-east of Bombay city; lies in lat. 19° 11′ 30″ N., and long. 73° 1′ 30″ E., and contains (1872) a population of 14,299.

Thana or Tanna district, lying between lat. 18° 47′ and 20° 23′ N., and between long. 72° 39′ and 73° 52′ E. Area, 4243 square miles; population (1881), 110,707 persons,—78,582 Hindus, 17,058 Musalman, 542 Jains, 1269 Parsees, 12,689 Christians, and 572 others. The Christians of Salsette and Bassein (about 35,000) are the descendants of the converts of St. Francis Xavier and his successors in the 16th century. The original converts were not obliged to give up caste distinctions, and their descendants have retained many of them, and a Thana Christian can still tell to what caste his family belonged before conversion. Indeed, Christians of the Bhandari, Kumbi, and Koli castes commonly call themselves Christian Bhandari, Kumbi, or Koli, as the case may be; and Christians belonging to different castes do not, as a rule, intermarry, though the restriction in this respect is not so rigid as among Hindus. All of them have Portuguese names, and show their attachment to the Christian religion by contributing very largely to their churches, and to the support of their priests. All Christian villages on the coast, and a good number inland, have their churches; and where a congregation is not large enough to keep a resident priest, one priest serves two or three churches. They live by cultivation, fishing, toddy-drawing, and every other employment open to similar classes of Hindus.—*Imp. Gaz.*

THANAH. HIND. A police station, a military post.

THA-NAT-KHA. BURM. A fragrant yellowish-coloured cosmetic made from the root and bark of the Murraya exotica and M. paniculata.

THA-NAT-THEE. Burm. A timber tree of Amherst, Tavoy, and Mergui, said to be abundant all over the provinces; of max. girth 3½ cubits, and max. length 30 feet. When seasoned, it floats in water. It is a durable, yet light wood, with a very straight grain, and is used for every purpose by the Burmese.—*Captain Dance.*

THANESWAR, a sacred town and place of Hindu pilgrimage in the Umballa district of the Panjab, situated on the bank of the river Saraswati (Sarsuti), in lat. 29° 58′ 30″ N., and long. 76° 52′ E., 25 miles south of Umballa. Population (1868), 7929.

Thaneswar or Sthaneswara is said to be derived either from the Sthana or abode of Iswara, or from the junction of his names of Sthanu and Iswara, or from Sthanu and Sar, a lake. The town is one of the oldest and most celebrated places in India, but the earliest certain notice of it under this name is by the Chinese pilgrim Hiwen Thsang, in A.D. 634, although it is most probably mentioned by Ptolemy as Batan-ka-isara, for which we should perhaps read Satan-aisara for the Sanskrit Sthaneswara. But the place was more famous for its connection with the history of the Pandus, than for its possession of a temple of Mahadeva, whose worship, in India at least, must be of much later date than the heroes of the Mahabharata. All the country immediately around Thaneswar, between the Saraswati and Drishadwati rivers, is known by the name of Kuru-kshetra, that is, the 'field or land of Kuru,' who is said to have become an ascetic on the bank of the great holy lake to the south of the town. This lake is called by various names, as Brahma-sar, Rama-hrad, Vaya, or Vayava-sar, and Pavana-sar. The first name is attributed to Brahma, because he performed a sacrifice on its banks. The second name is derived from Parasu Rama, who is said to have spilt the blood of the Kshatriyas in this place. The last two titles are derived from the names of the god of Wind, on account of the pleasant breezes which blew over the waters of the lake during Kuru's period of asceticism. This lake is the centre of attraction for most pilgrims; but all around it for many miles is holy ground, and the number of holy places connected with the Kaurava and Pandava, and with other heroes of antiquity, is very great indeed; but the list given in the Kuru-kshetra Mahatyma is limited to 180 places, of which one-half, or 91, are to the north along the line of the venerated Saraswati river.

Puranic legends attribute to it an antiquity long anterior even to the Pandus themselves. On its banks, Kuru, the common ancestor of the Kaurava and Pandava, sat in ascetic abstraction; here Parasu Rama slew the Kshatriyas, and here Pururavas, having lost the nymph Urvasi, at length met his celestial bride at Kuru-kshetra, 'sporting with four other nymphs of heaven in a lake beautiful with lotuses.' And a story of the horse-headed Dadhyanch or Dadhicha is perhaps even older than the legend of Pururavas, as it is alluded to in the Rig Veda: 'With his bones Indra slew ninety times nine Vritras.' In A.D. 1011, its temple was sacked by Mahmud.

The sacred lake, a pool of the Saraswati (Sarsuti), forms an oblong sheet of water, 3546 feet in length and 1900 feet in breadth. During eclipses of the moon, the waters of all other tanks are believed to visit this tank at Thaneswar; so that he who then bathes in the assembled water, obtains the consecrated merit of all possible ablutions. The country for many miles around is holy ground, and popular estimate sets down the number of sacred sites connected with the Kaurava and Pandava at 360. At all seasons of the year, a continuous stream of pilgrims pours towards the shrines of Thaneswar and the Kuru-kshetra. The number of visitors at the great festival formerly amounted to 500,000, but had dwindled away in 1872 to 30,000.—*Beng. As. Soc. Journ.* xxii. p. 673; *Cunningham's Geog. India*, pp. 330, 335.

THANNA. Hind. Custom-house, a police station. Thannadar, the chief of police of a station.

THANNA-DAN. Burm. A fruit tree of Amherst. It has a reddish-brown, heavy wood, fit for machinery or other purposes requiring great strength. It is exempt from attacks of insects, but somewhat liable to split.—*Cat. Ex.*, 1851.

THAN-THAT, an Amherst capital wood, used for stocks of various instruments.—*Cat. Ex.*, 1851.

THAN-THAT. Burm. Found inland up the Gyne and Attaran rivers in the Tenasserim Provinces. When seasoned, it floats in water. It is a capital wood, very durable; used by Karens for bows, for shoulder yokes, spear-handles, etc. Excellent for hammer-handles from its tough fibre.—*Captain Dance.*

THAORI. The Choora and Thaori were early in the nineteenth century in castes of robbers; the former from the Lakhi jungle, the latter from Mewar. Most of the chieftains had a few in their pay, entertained for the most desperate services. The Bahaderan chief had expelled all his Rajputs, and retained only Choora and Thaori. The Choora were highly esteemed for fidelity, and the barriers and portals throughout this tract were in their custody. They enjoyed a very singular perquisite, which would go far to prove their being the aborigines of the country, namely, a fee of four copper coins on every dead subject, when the funeral ceremonies are over.

THAR. Arab. The blood revenge.—*Burton's Pilgrimage*, i. p. 346.

THAR, a typical Nemorhœdus. It much resembles N. bubalina in colour, as well as by its short caprine tail, harsh adpressed hair, and vigorous make, suited to climbing lofty mountains. But the Thar is in structure as much more antelopine as the Takin is more bovine. The Takin is not much, if it all, inferior in size or bulk to the female yak; and, as seen from the front especially, with its lunate horns displayed and its short tail concealed, it would be at once pronounced to belong to the ox kind, close examination alone being likely to suggest any doubts on that head. Its massive form and peculiar proportions are quite bovine.

THAR, the forest goat, is the Nepal name of Nemorhœdus bubalina, called Eimu and Ramu on the Sutlej and Kashmir, and Serow in the hills generally. The other Nemorhœdus, N. goral, is the Gooral, or Himalayan chamois.

THAR and Parkar, a British district in the east of Sind, lying between lat. 24° 13′ and 26° 15′ N., and between long. 68° 51′ and 71° 8′ E. Area, 12,729 square miles; population (1872), 180,761,

or 14 to the square mile. It is bounded on the north by Khairpur state; on the east by the states of Jeysulmir, Malani, Jodhpur, and Palanpur; on the south by the Runn of Cutch; and on the west by Hyderabad. The Pat, or plain, its western part, rises 50 to 100 feet above the Sind plain. The Thar or desert portion consists of a tract of sandhills, which present the appearance of waves running north-east and south-west, and are composed of a fine sand. S.E. of the Thar is the Parkar tract. The peninsula of Parkar in its extreme S.E. juts into the Runn of Cutch. It is level, except in the immediate vicinity of the town of Nagar Parkar, where there are the Karuujhar Hills, composed mostly of syenite rock. It has hilly rocky ranges rising 350 feet above the surrounding level. There are sandhills also in this portion of the district; but towards the east they merge into a large open plain of stiff clay, through which, in places, limestone occasionally crops out.

The number of Musalman is returned as 96,604, and of Hindus, 62,500; the Christian community numbers 35; and Koli, Mengwar, Rahtor, and others, 21,622. The Soda tribe, formerly dominant in Thar and Parkar, are of Rajput origin, and martial in character. The Khosa are fine, robust, martial men, inured to fatigue and hard fare. They are brave and enterprising, but improvident. The Udejas came originally from Sind; they are a fine, athletic race, well-behaved, and have turned their attention to agricultural pursuits. The Bhils rank very low in the social scale, and are much addicted to theft. The language is a mixture of Sindi and Kachi; formerly, when Thar and Parkar was under the administration of the Political Agent at Cutch, all written correspondence was carried on in the Gujerati language.

Travelling in the Thar or desert portion of the district is very tedious and difficult, owiug to the sandhills which have constantly to be crossed. The climate of Thar and Parkar is somewhat similar to that of Cutch (Kach), and is subject to great variations of temperature, being excessively hot in the summer, and very cold iu the winter, the cold increasing as the sandhills are approached.

Snakes are very common, especially in the hot season. The wild hog, black partridge, and water-fowl are only met with in the Nara tract. The gor-khar or wild ass frequents the Parkar, and the hyæna and lynx, the Thar. The desert ponies are hardy and well made. Camels and horned cattle are bred extensively in the desert; large herds of the latter are annually driven to Gujerat for sale. Thareli, a dialect of Sindi, is spoken in the desert.—*Imp. Gaz.*

THARPANA. Sansk. Amongst the Hindu races, a water oblation, an oblation offered to the gods before eating, and an oblation in honour of the dead. Hindus, at the time of bathing, present water daily to the gods, to the sages, to the yaksha, naga, gandharva, apsarases, asura, vidyadhara, pishacha, siddha, and to their deceased ancestors. The tharpana should be performed three times a day. Brahmans wash the whole body before eatiug; the Kshatriya, Vaisya, and Sudra, only the hands and feet; they then assume the yellow silk wrapper, which covers them from the waist downwards, and is the sole article of dress worn at meals. In Gujerat, each person has a small oblong wooden stool to sit upon, and the food is placed on a similar stool or short-legged table. The vessels used are brass or copper, —a flat, round dish, containing bread and preserves, or condiments, and two or three cups of pottage and vegetables. The water-vessel, of silver or brass, with a small drinking cup set upon it, stands on one side. The second course is composed of rice and curds, or similar food. On great occasions, however, the fare is more varied and costly. Ablutions after meals are confined to the hands and face.

For the first meal the men of the family eat at the same table, then the women clean the same vessels, and use them for their own breakfast. The servants take their food after the family breakfast is finished, and they use different vessels. The men chew betel-nut after meals. They strive to avoid incurring defilement from the touch of a persou of lower caste. Such pollution, however, when it occurs, is remediable by the use of 'panch gavya,' or the five articles derived from the cow, and by fasting for the remainder of the day. The second meal, which is a lighter one, is eaten at about eight in the evening.

A Brahman traveller preparing for dinner makes a 'choko,' the floor of which he spreads with cow-dung and earth, moistened with water. When at home, his own 'rusodo' or cookiug-room is the place employed; but if necessary, the choko may he made under the shade of a hedge by the wayside, or in any other convenient place. Upon the choko he raises a little temporary stone, which he smears in like manner with cow-dung, and thereupon he cooks his food. The Purbeea, or eastern Brahmans, carry their exclusive notions upon this point to such a length, that brothers even are forbidden to use the same choko, nor may one take fire from the stone of another. Hence the saying, 'Twelve Purbeea and thirteen choko,' because with that number of Brahmans an extra stone would be required for the fire alone.

The Brahman, when his food is ready, before eating, performs the tharpana; that is to say, he fills a copper cup with water, and puts therein a few grains of barley, some sesamum, leaves of the sacred basil tree, sandal, etc.; then, holding some sacrificial grass, he fills his joined hands with water, which he pours back again into the cup, sayiug, 'I offer (make tharpan of) this water to all the Dev.' He proceeds to make similar offerings of water to men, animals, trees, rivers, seas, to the bhoot, pret, rishi, progenitors, and others. Then he mentions the names, as many as he can recollect, of his father's ancestors, his mother's aucestors, and his own deceased friends. He now performs the homa, or fire-sacrifice, by throwing a portion of rice and clarified butter into a little copper or earthen vessel containing fire, repeating, while so employed, the names of the Deva. The Brahman sets aside five portions of food, for cows, beggars, dogs, ants, and sparrows. He then takes a little of each dish, and offers it to the Deo, in a vessel containing five divisions. He now sits down to his breakfast; but before commencing repeats the gayatri over a handful of water, with which he sprinkles his own food, and three portions which he sets apart for Brahma, Vishnu, and Siva. The

first five mouthfuls he swallows are for the 'Panchpran,' or five airs supposed to be in the body and necessary to existence. At the conclusion of his repast, he deposits upon the ground a little of what remains, as an offering on behalf of the spirits residing in hell. Long practice enables the Brahman to acquit himself of the performance of this very elaborate and painful ceremonial in less time than is occupied in the description.

Brahmans observe practices of peculiar difficulty in order to maintain their superiority over the other castes. Of these the most strict is an observance of the Nagar Brahmans, called 'Nuven,' or purity in regard to food. The Brahman, having bathed, dresses himself in silk or woollen clothes, or if he require to use cotton garments, these must be dipped in water, wrung out, and dried in some place where nothing impure can touch them. Thus habited, he sits down to dinner; but he must preserve himself from numerous accidents which would render him impure, and compel him to desist from his meal. If he touch an earthen vessel he is defiled, unless the vessel have never contained water. The touch of a piece of cotton cloth, or of a piece of leather or paper, which he may accidentally have sat down upon, renders him impure; but if Hindu letters have been written on the paper they preserve him from defilement, because they represent Saraswati, the goddess of learning, the sakti of Brahma. If, however, letters be written on cloth or leather, these remain impure. Thus, if the Gita, or any other portion of scripture, be required for use at the time, it must be bound with silk, and not with cotton; leather must be avoided, and instead of common paste of flour and water, the bookbinder must employ paste of pounded tamarind seed. A printed book will not answer the Brahman's purpose, because printing ink contains impure water. Some think that the touch of deerskin does not defile. Raw cotton does not render the Brahman impure, but if it have been twisted for the wick of a lamp by a person not in the state of 'Nuven,' it does; and again, if it have been dipped in oil or clarified butter it does not. Bones defile, but women's ivory armlets do not, except in those parts of the country where they are not usually worn, and then they do. The touch of the child of the same caste who has not learned how to eat grain does not defile, but if the child have eaten grain it does. The touch of a donkey, a dog, or a pig defiles; some say that the touch of a cat also defiles; others are inclined to think that it does not, because, in truth, it is not easy to keep the cat out. If a Brahman who is in 'Nuven' be eating, or if he have risen from eating, the touch of his person defiles another Brahman who is in 'Nuven,' but has not begun his dinner.—*Forbes' Rasamala or Hindu Annals*, ii. pp. 256-259.

THARU appear to have been at one time a Gangetic tribe, dominant in Gorakhpur, and Buchanan Hamilton appears to connect them with the Tibetan invasion in the 7th century. The Tharu inhabit the forests; they are a wild, uncultivated, and extremely superstitious race, and assign to themselves a mythological beginning. Their villages are divided into certain circuits, marked off by the bhurra of Bheonhar, a self-created superior, whom these people believe to be inspired by Bhowani, and to whom they submit in every occurrence of their domestic lives. A bhurra is indispensable at every birth, marriage, and death, directs all religious ceremonies, and has supreme influence in the circuit to which he belongs. He has, however, to prove his inspiration before the assembled villagers by one of two methods, either by drawing seven times the flame from a lighted to an unlighted wick without bringing the two in contact, or by calling upon Bhowani, who is supposed to descend upon him, when the bhurra begins to dance and jump about violently, and convince the assembled crowds of superhuman powers by his movements and gesticulations. The bodies of the Tharu that die in advanced years are burned, but those of the young are buried; also, though their widows are allowed to remarry, a man may not marry the widow of his younger brother.

THATCH. In the S. of the Peninsula of India, the thatch in use with the people is made of palmyra leaves. It is the best thatch for houses, and the most durable. Next to it, in Madras, ranks in value the Cyperus textilis, which grows on the banks of rivulets in the low country, and is called Koary. The leaf of the cocoanut is a very perishable material, and only employed by the very poor. In the Dekhan a long grass is chiefly used. The Karen in Burma use the large palmated leaf of a tall wild palm, a species of Livistonia, but the Europeans and Burmese there use the atap, leaves of the Nipa fruticans. The Karen in Amherst province employ the tall grasses, Imperata cylindrica, Saccharum cylindricum, and S. spontaneum. Long grasses and sedges (Arundo, Saccharum, and Scleria) are cut and stacked along the water's edge of the Brahmaputra in huge brown piles, for export and thatching. In S. India, for thatch, the natives also use the straw of the common grains, called in Tamil Vakel or Vagghil straw (A. muricatum), and the spice grass (Andropogon schœnanthus), also the cocoanut leaves made into a kind of coarse matting called Tennam kittu. The Gabagaba, the midrib of palm leaves, particularly of the leaf of the sago palm, is much used throughout the Moluccas for building and fencing. The Bhare of Northern India is a jungle grass about 9 feet high, used for thatch and tatties. Its canes are called Nunre. Through almost all Arabia species of Panicum or Scirpus are used for covering the roofs of the houses,—slender coverings, but sufficient in countries where rains are unfrequent. — *Birdwood; Royle; Niebuhr's Travels*, ii. p. 34; *Hook. H. J.* ii. p. 373; *Ains.*

THATCHANAGANTHAM. SANSK. The southern solstice. See Avani Avattam.

THA-THANA-BAIN. BURM. Defender of the Faith. The title of the high priest or patriarch of all the Phoungye or Buddhist priests of Burma. —*Yule*, p. 165.

THATHERA, metal workers in Benares, distinct from the Kasera, although, to some extent, they work in the same metals,—iron, tin, zinc, brass, copper, and kasa or bell-metal.

THATUN, 40 miles N. of Martaban, on the Salwin river, supposed to be the Suverna Bhumi or Golden Chersonese. It was sacked by Anaratha, king of Pegu, A.D. 1080.

THATYAL, meaning the maimed, a wandering Gond tribe; also called Pendabarya, or minstrels of God; also Matyal, because their songs are

chiefly in honour of the goddess Mata. They make baskets.

THAU, the Tauutic emblem of the Egyptians, the hieroglyphic of the god Toth, was originally expressed, according to Kircher, by the simple figure of a cross, like the Greek T and the Coptic *dau*. The Hebrew *tau* is supposed to have been derived from it, though it has deviated from its shape. It is frequently found on the Egyptian obelisks, and was always regarded as a talisman of extraordinary potency. The original in Ezekiel is, 'Set a *tau* upon their foreheads,' instead of 'mark;' which sense the Vulgate preserves, 'Mark with the letter *tau* the foreheads,' etc.; upon which Louth observes that in the parallel passage in the Septuagint, το ημιου, a mark, should be *Tau ημιου*, the mark Tau. It is worthy of note that in the Samaritan character, in which Ezekiel wrote, it is agreed among the learned that the *tau* was formerly cruciform, corresponding in shape with the Tauutic cross and the English letter T. From this we learu that the crucifix was a sacred sign among the Jews, as well as the Egyptians, a hieroglyphic marking, the property of the deity. In this sense the language of Job is beautiful and appropriate:

> 'Behold, here is my Thau!
> Let the Almighty answer me.
> Surely I would take it upon my shoulder,
> And bind it as a crown to me.'

Count de Gebelin observes that in France, in the early ages of Christianity, during the ceremony of baptism, the officiating priest said, 'Crucis thaumate notare;' hence the Jews themselves, in the later periods of their history, fell into the error, as also did the early Christians; and even in modern times the potency of the wizard's charm and the fortune-teller's crawl is an article of vulgar belief. The phylacteries of the Jews, mentioned by our Lord, were strips of parchment inscribed with paragraphs of the law, which were worn on their caps and arms, and inscribed on their door-posts, to prevent the intrusion of evil agencies, as the root in the Greek, from whence the name is derived, signifying to guard or preserve, plainly shows. The Christiau heretics of the second century, especially the Gnostics, used gems, inscribed with the word Abraxas, for a similar purpose; but the 'curious arts' which the Ephesians abandoned, still maintaiu their hold upon the popular mind; and the Greek imprint the crucifix as a resistless spell. The all-potent word Abraxas, variously written Abrasax and Ias, occurs, referring to the Supreme Deity and Jesus. The 'curious arts' of the early Christians were condemned in the council of Laodicea, A.D. 364, can. 36; the fathers declaring that such phylacteries or charms were bonds and fetters to the soul, and ordering those who wore them to be cast out of the church. In the east, the Vaishnava and Saiva Hindu affix marks to their foreheads; Muhammadans defend their houses and persons with tawiz, passages from the Koran. It is a general custom amongst the Muhammadans of India of the present day to carry holy texts of the Koran on their arms and in their turbands, and to place charms on their door-posts.—*Du Cange, Glossar.; Voces Ligaturæ, Legationes, in Milner's Church History.*

THAVAN, meaning god, is the tribal title of the Maravar race of the S. of India.

THAWA, a lowland tribe mentioned by Dr. Campbell as inhabiting similar tracts to their neighbours the Mechi.—*Campbell*, pp. 50, 149.

T'HAY. The T'hay stock, the people of Siam. See India; Siam.

THAYETMYO, a military station in Pegu, near the British frontier. It gives its name to a district, of which it is the chief civil station, in lat. 19° 18′ 43″ N., and long. 95° 15′ 40″ E., on the right bank of the Irawadi. Thayetmyo signifies 'Mango city;' but this is said to be a corruption of 'That-yet-myo,' or 'City of Slaughter,' so called, as tradition alleges, from one of its early rulers, who killed his sons in order that they might not rebel against him when they grew to manhood. The district is 2397 square miles; pop. (1881), 169,560 souls. On the east and west are the Pegu and Arakan Yoma ranges respectively; and the face of the country, where it does not rise into mountains, is everywhere broken by low ranges of hills, many of which are barren and destitute of all vegetation.

Several salt and hot springs occur in Thayet district. 9½ miles north-north-west from Ka-ma is situated the spot where the curious manifestation known as the 'Spirit Fire' takes place. This is caused by the ignition by some unknown means of the gas which is stored up in subterranean cracks. Petroleum is found near Pa-douk-beng, 7 miles north-north-west from Thayetmyo; also at Bhan-byeng, about 9 miles from the same town.

The cotton of Thayet is perhaps the best in Burma. It is grown entirely in toungya clearings, and is generally sown with rice or sesamum. The cotton-cleaning machine consists of a framework of four posts, a bamboo pedal, a fly-wheel, and two cylinders placed close to one another, the upper one being of thin iron, and the lower somewhat larger and of wood. The bamboo pedal is attached by a string to the fly-wheel, and the wooden cylinder has a handle at the end opposite to the fly-wheel. With this apparatus, one operator will clean about 12 viss (43 lbs.) of raw cotton in a day, turning out about 4½ viss (16 lbs.) of cleaned cotton. It is also the largest tobacco-growing district in Burma. The plant is grown chiefly on sandbanks in the Irawadi, which are submerged during the rains.

Prome and Thayetmyo supply the greater portion of the catechu manufactured in British Burma. The mulberry tree is extensively cultivated for the rearing of silk-worms. The price of raw silk varies from £1, 10s. to £2 per viss (3·65 lbs.).—*Imp. Gaz.; Census* 1881.

THEA CHINENSIS. SIAM. The celebrated tea plant, one of the Ternstrœmiaceæ, a native of China, of Assam, and the regions south to the borders of Cochin-China. It has three varieties—T. Assamica, T. Bohea, *Linn.*, and T. viridis. It is the Camellia thea of Linklater. In China, so famed for its production, it is only known under cultivation. It must have been used in China from very early times. It is differently named in different parts of China, as Tcha or Cha, also Tha, whence we have Tsia, The, and Tea. In Persian works in use in India, tea is called Cha-i-Khatai, or tea of Cathay.

THEATRICAL REPRESENTATIONS are common among the Tamils, the Burmans, the Chinese, and the Malayanesians, but are of comparatively rare occurrence amongst the Northern

Hindus. In ancient Hindu times, plays were written for representation on lunar holidays, royal coronations, at fairs and religious festivals, marriages, taking possession of a house or town, and the birth of a son. Specimens of these dramatic writings were given in the translation of Sakuntala, by Sir W. Jones; in that of Prabodha Chandrodaya, or Rise of the Moon of Intellect, by Dr. Taylor of Bombay; in Professor Wilson's Hindu Theatre, and Professor Monier Williams' Nala and Damayanti. They seem to have been written for one performance, lasting for 4 or 6 hours, and to have been represented only once. With the Burmese, a dramatic representation lasts a whole day or more, and with the Chinese, even for ten days. Amongst the Athenians a piece was never performed a second time, at least under the same form. The ancient Hindu drama is in Sanskrit. The Burmese representations are stated by Mr. Oldham to be indelicate, but Colonel Phayre's opinion is not in accordance with that. In India, amongst the Hindus, traces of an inferior order of the drama are to be found in the dramatized stories of the Bhand (HIND.) or professional buffoons; in the Jatra of the Bengali people, and the Rasa of the Western Provinces. The *Bhaur* is a representation of some ludicrous adventure by two or three persons, carried on in an extempore dialogue, usually of a very coarse kind, and enlivened by practical jokes not always very decent. The *Jatra* is generally the exhibition of some of the incidents in the youthful life of Krishna, maintained also in extempore dialogue, but interspersed with popular songs. Radha, the mistress of Krishna, his father, mother, and the Gopi, are the ordinary dramatis personæ, and Nareda acts as buffo. The *Rasa* partakes more of the ballet, but it is accompanied also with songs; whilst the adventures of Krishna or Rama are represented in appropriate costume by measured gesticulations. The most recent dramatic Hindu writings are of a mythological and sectarial character.

During the 7th decade of the 19th century, there were frequent revivals of the Tamil drama at Madras. In China, companies of actors travel about the country, and engage themselves to committees of temples or guilds, or to wealthy individuals, for a week or more at a time. Admission is gratis; the play is carried on night and day, with intermissions for food. The female parts are taken by men. These representations resemble the Pooay of Burma. — *Wilson's Hindu Theatre.* See Drama; Literature.

THEBES, a ruined city in the valley of the Nile, the capital of an ancient dynasty of a people now forgotten; but here science and art once flourished.—*Catafago.*

THEGAI CHETTOO. TEL. A creeper of Ganjam, which is soaked and then beaten to extract its fibres.

THEIN. BURM. A chapel for the consecration of the Burmese priesthood, constructed on holy ground; an open pavilion, supported on four pillars, built over the large sitting gilt images of Gautama. The Albert Memorial in shape is similar to a thein.—*Yule*, p. 12.

THEINE. The properties of tea depend chiefly on the presence of tannin, of a volatile oil, and of a principle called theine ($C_8H_8N_2O_2$), which has been found to be identical with caffeine, and is a salifiable base. It may be obtained in white silky needles; has a mild, bitter taste; is soluble in hot, but sparingly so in cold water and alcohol. It has astringent and moderately excitant properties, chiefly affecting the nervous system, producing some degree of exhilaration, and of refreshment after fatigue. Its effects are well seen in the wakefulness produced. But it is thought by some writers to act as a sedative on the heart and blood-vessels; or, as Dr. Billing explains it, tea and coffee are sedatives, and relieve the stupor produced by stimulants or the drowsiness of fatigue, or other plethora, only by counteracting the plethoric state of the brain, induced by the continued stimulation of action, — thus merely restoring the brain to its normal state. Liebig (Anim. Chem. p. 179) has suggested that theine, as an ingredient of diet, may be useful in contributing to the formation of taurine, a compound peculiar to bile. Besides being useful as a diluent, it may often be prescribed as an agreeable and refreshing beverage; in some cases, especially when made strong, acting as an excitant, and at other times producing sedative and calming effects. Tea is very extensively cultivated in Kangra valley and Kullu, in Assam, and on the Neilgherries. Coffee leaves are infused in the same manner as the tea leaf, and the beverage coffee-tea is said to be in common use in Sumatra. The coffee decoction or new tea are valuable in opium-poisoning.

THELPHEUSA, a genus of crustacea, comprising—

Thelpheusa Indica, *Edws.*, Coromandel coast.
T. chaperon arrondi, *Q. and G.*
T. perlata, *Edws.*, Cape of Good Hope.
T. Leschenaultii, *Edws.*, Pondicherry.

THENG-BAN-SHA. BURM. A bast of Arakan, coarse looking, and of a reddish-brown colour, but divisible into a number of very thin layers, with a good deal of flexibility and some toughness.—*Royle.*

THENG-GAN. BURM. This wood, a native of Amherst, is employed for house-posts, carts, boat-building, paddles, and oars. It is an excellent compact wood, fit for gun-carriages. It is the wood in most general use for almost all purposes, but principally for large canoes, which form the bottoms of the native trading crafts; this is owing to its being more plentiful than most of the others, easily worked, and by killing the tree before felling, as with teak, is rendered capable of floating. This process, however, is rarely observed; the tree selected for working is felled and hollowed on the spot, and the canoe removed to the neighbourhood of the water to undergo the process of widening by fire; some trees producing by this rude process, canoes of 60 to 70 feet long, by 6 to 8 feet in breadth across the centre.—*Cat. Ex.*, 1851.

THEOBROMA CACAO. *Linn.*

Cacao sativus, *Lam.* | C. minus, *Gærtn.*

The smooth-leaved chocolate-nut tree, a native of Central and South America, now cultivated in several parts of India and the E. Archipelago, and extensively in the West India islands. Its large oval yellow cucumber-like capsules, about 5 inches long, hang from the sides of the trunk and branches. These are divided into 5 cells, each filled with 8 to 10 ovoid seeds, piled one upon another, and covered by a membranous and succulent aril. There are several varieties of these seeds or nibs, which are more or less

esteemed. The kernels of the seeds yield by pressure about one-half their weight of a fatty oil, commonly called butter of cacao, at one time much lauded for its medicinal properties. The seeds, pounded, digested, and boiled with water, with the oil skimmed off, and sweetened with sugar and milk, afford a wholesome and agreeable beverage. A tree in full bearing is said to yield annually 150 lbs. of seeds. Dried, roasted, and ground, they constitute cocoa; mixed with starch and finely ground, soluble cocoa. The cocoa as sold in the retail shops, however, consists either of the roasted kernels and husks, or of the husks only, ground to powder; it is sometimes made from the cake left after expressing the oil from the beans. Much of the cheap stuff sold under this name is very inferior, being made with damaged nuts that have been pressed for the oil, mixed with potato-flour, mutton suet, etc. Flake cocoa is cocoa ground, compressed, and flaked by machinery. Chocolate (from the Indian name chocolalt) is made by triturating in a heated mortar the roasted seeds, without the husks, 10 lbs. with an equal quantity of sugar, and about 1½ oz. of vanilla and 1 oz. of cinnamon, into a paste, which is put up in various forms. The mass of the common chocolate sold in England is prepared from the cake left after the expression of the oil, and this is frequently mixed with the roasted seeds of ground peas and maize, or potato-flour, to which a sufficient quantity of inferior brown sugar or treacle and mutton suet is added to make it adhere together. The chocolate-nut tree is seen in Tavoy gardens, and it brings its fruit to perfection. This tree has been introduced into Travancore, where it thrives well; the fruit is round, but smaller than that produced in South America. It thrives well in the Calcutta Garden. The nutritive properties of chocolate depend on a concrete oil or butter, of most agreeable flavour, of which 1000 parts of the seed yield 386.—*Drs. Royle, Mason, Riddell, and O'Shaughnessy*, p. 227.

THEOPHRASTUS, the contemporary of Aristotle, B.C. 300, mentions fishes (De piscibus) found in the Euphrates, which, in the dry seasons, leave the vacant channels, and crawl over the ground in search of water, moving along by fins and tail. He wrote also on plants, 'Peri phuton istorias,' and notices 500 plants useful in medicine.

THEOPHYLACTUS SIMOCATTA, a Byzantine writer of the early part of the 7th century. He describes the Taugas as a people and state very famous over the east, originally a colony of the Turkish race, then forming a nation scarcely to be paralleled on the face of the whole earth for power and population,—evidently the rulers of China.—*Yule.*

THEOS, Θεός, GREEK, God, Zeus, is merely deus in one syllable. Deus is Theos. Zeu in Pelasgic Greek is Jupiter; Seu, Su, or Zu, probably Spartan of Theus. The tri-glyph letters of the ancient Pali alphabet, 3 yods; in Arabic, 3 strokes.

THERAI or Terai, a forest or jungle tract at the foot of the Himalaya, varying from ten to thirty miles in breadth. No two climates and locations can be more dissimilar than those of the hills and terai, and no races are more distinct in their habits, manners, and aptitudes than the people of the hills and those of this jungle belt below. There is little or no terai or forest belt north-west of the Saharunpur district and the Dehra Doon; but thence eastwards this belt stretches along the foot of the hills through Rohilkhand, Oudh, and the Bengal frontier, up to Assam. A great part of the Oudh terai was transferred to the Nepalese. Dr. Campbell describes the people of the Nepal terai as a vast assemblage of bastard Hindus.—*Campbell*, p. 47. See Terai.

THERMOMETER. The subjoined table shows the boiling points of distilled water at different elevations, up to 17,455 feet:—

Therm.		Elevation.	Therm.		Elevation.
212°	=	0 feet.	195°	=	8,953 feet.
211°	=	529 ,,	194°	=	9,502 ,,
210°	=	1021 ,,	193°	=	10,053 ,,
209°	=	1534 ,,	192°	=	10,606 ,,
208°	=	2049 ,,	191°	=	11,161 ,,
207°	=	2566 ,,	190°	=	11,719 ,,
206°	=	3085 ,,	189°	=	12,280 ,,
205°	=	3607 ,,	188°	=	12,843 ,,
204°	=	4131 ,,	187°	=	13,408 ,,
203°	=	4675 ,,	186°	=	13,977 ,,
202°	=	5185 ,,	185°	=	14,543 ,,
201°	=	5718 ,,	184°	=	15,124 ,,

196°	=	8407 ,,			

—*O'Shaughnessy*, p. 37.

THERO. SANSK. A presbyter.

THESAURUS ZEYLANICUS, a botanical work by John, or the elder, Burmann, published in 1737, with 110 plates, containing figures of 155 plants, which are generally very characteristic and well executed. Burmann's work appears to have been principally drawn up from specimens collected by Dr. Paul Hermann, who was sent out to Ceylon in 1670, and remained till 1677, at the expense of the Dutch East India Company, for the purpose of describing all the plants and spices growing in that island. Hermann's Museum Zeylanicum was first published in 1717, although it appears to have been written many years before. Besides the plants of Ceylon, it contains many species collected at the Cape of Good Hope, unfortunately not distinguished from the others, a circumstance which afterwards led Linnæus into the error of considering them all natives of the east. Hermann's herbarium had been lost upwards of half a century, until chance threw it into the hands of M. Gunther (apothecary to the king of Denmark), who sent it to Linnæus, requesting him to examine it, and affix the names to the plants throughout the collection. Its great value, from the collector having been so eminent a man, induced Linnæus to examine the whole with much attention, and he was thereby enabled to form many new genera and settle many doubtful species. He published the result of his labours under the title of Flora Zeylanica, sistens plantas Indicas Zeylonæ insulæ, quæ olim 1670–1677, lectæ fuere a Paulo Hermanno, Professore Botanico, Leydensi; demum post 70 annos ab A. Gunthero, Pharmacopæo Hafniensi, orbi redittæ (Holm. 1747, 8vo, pp. 254, tab. 4). In an appendix, the new genera are concisely given by themselves, copied from an academical dissertation published under Linnæus' presidency, by C. M. Dassow.—*Wight's Prodromus*, i. p. 9.

THESPESIA POPULNEA. *Lam.*

Hibiscus populneus, *Roxb.*		Malaviscus populneus, *Ger.*	
Poresh, ...	Beng.	Bendi, ...	Mahr.
Poo-arasoo, . .	Can.	Bapariti, . .	Maleal.
Paras pipal, . .	Dukh.	Supara shavaka, .	Sansk.
Tulip tree, . . .	Eng.	Surya-gass, . .	Singh.
Portia tree, . .	,,	Pursa maram, . .	Tam.
Pahari pipal, . .	Hind.	Puvarasa maram,	,,
Imli Khorasani, .	,,	Gangaravi, . . .	Tel.

This handsome tree is generally met with in Ceylon and in Southern India, in avennes or lining roads, but is in most abundance near the sea. It is of quick growth, and yields a good shade, but is inconvenient on road-sides and in gardens, from the quantities of leaves it sheds, and the numerous large flowers which fall. It is commonly planted from cuttings, from which cause, perhaps, the tree is often hollow in the centre. It yields, when ripe, a very strong, hard, and durable timber, with a colour like mahogany, but its use is limited from the difficulty of getting it of large size. It is used for chairs in Madras. On the Bombay side, where it is found only near the coasts, it is much used in the construction of cart-wheel spokes, and for the timbers of native boats. The shoots are also in extensive use there as rafters for houses, and at all times fetch a good price when sold for this purpose. The Bombay Government formed plantations of this tree at Saknria in Alibagh, at Sat Tar, and in Colaba. The increasing scarcity of this tree is such, that wheel-spokes were at one time being paid for by the Gun-Carriage Department at 12 annas each. There are a pretty large number of these trees within the village precincts of many of the cultivators in the Konkan, but these are mostly reserved for the supply of choice rafters, afforded by the straight shoots of the tree, while the stem is most frequently hollow; and therefore the ripe wood, or such of it as remains, is worthless for ordnance purposes. Though of rapid growth, its wood is not in much use. Some Ceylon caterpillars sting; a greenish one, which occupies the Thespesia populnea at a certain stage in its growth, descends by a silken thread, and hurries away. The moth of this is supposed to be a Bombyx, near Cnethocampa. The capsules yield a yellow dye, which is used as a wash for cutaneous diseases, as is also the bark boiled in water, and the latter is given internally as an alterative.—*Stephens; Drs. Voigt, Wight, Thwaites, Gibson, Cleghorn; Captain Beddome.*

THEVENOT, the younger, was a great traveller. He was born at Paris, and died at Miana in Persia, about eight days' journey from Tanris, November 18, 1667. He was Monsieur Petis de la Croix's friend, so he took care to revise his Memoirs, and had them printed in three volumes in 1689? The first contains his travels into Turkey, the second his travels to Persia, and the third to India. An edition in five volumes was printed in Amsterdam in 1727. Monsieur Petis de la Croix, jun., the oriental interpreter to the king of France, being at Miana afterwards, disinterred his bones near the caravansary where they had been buried, and had them interred at Tanris, under the altar of the Capuchins Church there, in 1676. Mouri and other French writers confounded the two Thevenots, as appears from the Dictionnaire Historique of Ladvocat (Par. 1760), and the Nouvelle Bibliotheque d'un Homme de gout, tome iii. p. 454 (Par. 1777), styling him indifferently Fager, or the nephew, or the traveller. In Thevenot's journey through India, he sailed from Bosra on the 6th November 1665, and arrived at Surat 10th January 1666. He proceeded via Baroach to Ahmadabad, Cambay, Agra, Dehli, Allahabad, Burhampur, Goa, Golconda, Hyderabad, Masulipatam, Surat, Bandar Abbas, Shiraz, Kum Farsank, and died at Miana. Mordechin is noticed by Thevenot.—*History of Chengiz Khan*, p. 446.

THEVETIA NERIIFOLIA. *Juss.*

Cerbera Thevetii, *Linn.* | C. thevetis, *Don.*

The exile tree, is a common ornamental shrub in the gardens of the Peninsula and in Calcutta; grows to the height of 10 or 12 feet, with long tapering leaves, and blossoms throughout the year. Its juice is acrid. Two grains of its bark have been affirmed to be equal to an ordinary dose of cinchona. Wood worthless.—*M. E. J. R. Cat.; Madras Gardens; Riddell; Ind. Ann.*

THIAN SHAN or Tien-Shan, a mountain range in Central Asia. Semiretchinsk, or seven-streamed, is the southernmost of the three provinces that make up now the general government of the steppe. In the east are rich valleys of fertile black earth, and mountain gorges lying deep in forest recesses; but the most remarkable portion is the southern mountainous region of the Thian Shan, which, after the Himalayas, contains some of the most gigantic mountains in the world. The entire length of the Thian Shan is about 1660 miles, and its highest peaks everywhere exceed the limit of perpetual snow. It has plenty of peaks from 16,000 feet to 18,000 feet high, and one of them is said to exceed 21,000 feet. The glaciers of the Thian Shan are computed at not less than 8000; and there are numerous snow bridges, some of them a mile and a third in length, and 100 feet in thickness. General Kolpakofsky reports that he discovered the perpetual fires in the Thian Shan range of mountains; that the mountain Bai Shan has been found 12 miles north-east of the city of Kuldja, in a basin surrounded by the massive Ailak mountains, and that the fires which have been burning there from time immemorial are not volcanic, but proceed from burning coal. On the sides of the mountain there are caves emitting smoke and sulphurous gas. Mr. Schuyler also, in his Turkestan, mentions that these perpetual fires in the mountains referred to by Chinese historians were considered by Severtzoff, a Russian who explored the region, as being caused by the ignition of the seams of coal or the carburetted hydrogen gas in the seams. The same author further mentions that Captain Tosnofskey, another Russian explorer, was told of a place in the neighbourhood from which steam constantly rose, and that near this crevice there had existed from ancient times three pits, where persons afflicted with rheumatism or skin diseases were in the habit of bathing. Flames are also said to issue from Mount Hote Kesu, near Turfan, 420 miles further eastward. See Tien.

THILACUM. Tam. The sectarial mark placed by Hindus on their foreheads to indicate the sect to which they belong. The Smartta Brahmans and Saiva sect draw horizontal lines with ashes (vibudi) and sandal-wood powder, with a round spot of saffron in the middle.

The Madhava sect of the Vaishnava have perpendicular marks, with sandal-wood paste

and burnt incense, with a round spot in the centre.

The followers of Ramannja, another Vaishnava sect, usually mark a trident with white and saffron-coloured perpendicular lines. See Tilaka.

THIRST. The Eastern Arabs allay thirst by a spoonful of clarified butter, carried on journeys in a leathern bottle. Every European traveller has some recipe of his own. One chews a musket bullet or a small stone; a second smears his legs with butter; another eats a crust of dry bread, which exacerbates the torments, and afterwards brings relief; a fourth throws water over his face and hands, or his legs and feet; a fifth smokes. But to conquer the craving, be patient and do not talk. The more you drink, the more you require to drink—water or strong waters. But after the first two hours' abstinence you have mastered the overpowering feeling of thirst, and then to refrain is easy. —*Burton's Pilgrimage*, iii. p. 19.

THIRTANKARA, a sainted Jain teacher.

THITSEE, Burm., is the celebrated Burmese black varnish, obtained from Melanorrhæa usitatissima. In varnishing an article, the Burmese first give it a coat of the coarser kind. When this is dry, they lay a coat of a better quality over it, and finish with a coat of the best over all. Price, Rs. 120 for first quality, Rs. 80 for second, and Rs. 60 for third quality, for 365 lbs.—*Local Committee, Rangoon.*

THLEN. In the neighbourhood of Cherrapunji, in Assam, the people believe in Thlens. The original Thlen was a gigantic snake, a monstrous worm, which lived in a cave near Cherrapunji, and ate men and animals. One day, however, a local hero addressed himself to the task of overcoming the Thlen by guile. He drove a herd of goats to the mouth of the cave, and offered them one by one to be eaten. By degrees the monster became friendly, and learned to open his mouth at a word from the man, to receive a lump of flesh, which was then thrown in. These relations being established, the dragon-slayer heated a lump of iron red-hot, and heaved it into the Thlen's open mouth. This killed the Thlen, whose body the man then cut up, and sent the pieces to different people in various directions, with orders that each piece was to be carefully eaten. Wherever this was done, the people were troubled with no more Thlens; but one small piece, which nobody would eat, was left, and from this sprang a brood of serpents which still infest Cherrapunji. Now, when a Thlen takes up his abode in a house, there is no turning him out; he only leaves when he pleases, which is mostly when any of the property of the family is sold or given away. The Thlen brings wealth to a family, but on the understanding that he is supplied with blood. The people know when the Thlen is thirsty, by the appearance of some sickness or misfortune in the house. To satisfy his craving, a human being must be murdered. The victim's hair and fingers, and a quantity of his blood, are put in a bamboo tube, and it is believed that the Thlen appears in the form of a snake, and devours the body of the murdered person, which is materialized from the portions thus offered. After this the affairs of the household prosper. Many families in the hills are suspected to be Ri thlen, or keepers of a Thlen. In 1881 it is believed that three murders were committed with the object of appeasing a Thlen. One of the victims was an old woman, another a boy. In each case one or two persons were convicted; one man was hanged, and the rest were sentenced to imprisonment for life, or a term of years.

THODIKAN and Cicilly, in Southern India, are two towns on tributaries of the Puiswany and Nctravatty. The priests of the Hindu temples there have a legend that their god (Eswara) performed a journey from Kailasa to Thodikan on the back of a mahseer. These fish are therefore protected by the priests, and pilgrims feed them. They are exceedingly tame and numerous. Round the temple steps fish of all sizes, from 8 lbs. downwards, are thickly packed, scrambling over each other's backs into the air, and up the stone steps, and taking food out of the hand.

THO-JI-CHAN-MO, a plain in Ladakh covered with natron. In its centre is the Tsho-kar or White Lake, called by the Hindus of Chamba and Bisahar, Khari Talaó, or the Salt Lake, in lat. 33° 15′ N., and long. 77° 50′ E., at an elevation of 15,684 feet. To the south of the Tsho-kar is a small fresh-water lake that supplies the salt-water lake. It is a favourite haunt of the Kyang or wild horse.

THOMAS. Edward Thomas, a Bengal Civil Servant, editor of Prinsep's Antiquities, joint editor of Sir Henry Elliot's posthumous History of India. He wrote On the Coins of the Patan Sultans of Hindustan; On the Coins of the Kings of Ghazni, A.D. 961-1171; The Epoch of the Sah Kings of Surashtra; On the Numismatic History of the Early Muhammadan Arabs in Persia; On the Explanation of Oriental Legends to be found on certain Arsacidian and Partho-Persian Coins; The Initial Coinage of Bengal, introduced by the Muhammadans A.H. 600 to 800 (A.D. 1203-1397); the same, with a Supplementary Part, embracing the preliminary period between A.H. 614-634; also Comments on Recent Pehlavi Decipherments, with Contributions to the Early History of Tabaristan. 'Towards the end of August 1863, an unusually large hoard of coins, numbering in all no less than 13,500 pieces of silver, was found in the protected state of Koch-Bahar, in Northern Bengal. This accumulation, so singular in its numerical amount, is not the less remarkable in the details of its component elements. . . . It may be said to embrace compactly the records of ten kings, ten mint cities, and to represent 107 years of the annals of the country.'

George Thomas, a native of Tipperary in Ireland, who came to India as quarter-master of a ship of war. He deserted, and in 1787 he took service with the Begum Samru, and rose into high favour. He carved out for himself an independent principality at Hansi, where, to use his own words, 'I established a mint and coined my own rupees, which I made current in my army and country; . . . cast my own artillery, commenced making muskets, matchlocks, and powder; . . . till at length, having gained a capital and country bordering on the Sikh territories, I wished to put myself in a capacity, when a favourable opportunity should offer, of attempting the conquest of the Panjab, and aspired to the honour of placing the British standard on the banks of the Attock.' Thomas at this time had a revenue of four or five lakhs of

rupees. At one time he seems to have entered the service of Apa Kunda Rao, a principal officer of Sindia. In S. 1857 (A.D. 1801), for the sum of three lakhs of rupees, he put the Bhatti race into the possession of Bhatnair, but the succeeding year the Rahtor Rajputs again wrested it from them. After twice defeating Perron's troops, he accepted Lord Lake's terms at Hansi, 1st January 1802, and proceeded towards Calcutta with about one lakh of rupees, but he died near Berhampur, August 1802, and was buried in its churchyard.

St. Thomas the Apostle is generally believed to have proceeded to Arabia, and some say to India, and to be buried at St. Thomé or Mylapur, a suburb of Madras, where his tomb is shown in the Portuguese Roman Catholic cathedral. But there is much doubt both as to the places in which he laboured, and as to the place and circumstances of his demise. Even in the same cathedral at St. Thomé is a bone relic, sent from a former pope of Rome, and older traditions in the west assert positively that Thomas was buried at Edessa. There is a hill ten miles from Madras, called St. Thomas' Mount, to which, from unknown times, Syrian and Roman Christian pilgrims from all Asia repair; and at the Little Mount, at the Marmalong Bridge, six miles from Madras, is shown a cave where St. Thomas is said to have been killed. There are numerous native Christians in Madras and its neighbourhood, mostly the fishermen, but no tradition exists as to their conversion. Those near the Triplicane temple of Vishnu have houses built over temple ground, on the stipulation of pulling the idol car. Nicephorus declares St. Thomas to be the apostle of the Indians; and Gaudentius says, like Sophronius, that he died in India at the town of Calamina, which is no other than Mylapur, a place at a short distance from Madras. Marco Polo relates that St. Thomas was accidentally killed when at prayer in a wood, by a low caste man, who was shooting at peacocks, and that, as a consequence of this mischance, none of the poor man's tribe could ever enter the place where the saint lay buried. Gibbon says that 'Marco Polo was told on the spot that he (St. Thomas) suffered martyrdom in the city of Mylapur.' Dr. Fryer, who visited India about 1680, says that 'about this mount live a caste of people, one of whose legs are as big as elephants', which gives occasion for the divulging it to be a judgment on them, as the generation of the assassins and murderers of the blessed apostle St. Thomas, one of whom I saw at Fort St. George.' Some of the doubts as to St. Thomas the Apostle seem to have arisen from the martyrdom of a Christian named Mar Thomas. It is on record that Alfred the Great despatched from Britain an embassy under Sighelm, Bishop of Shireburn, to the shrine of the saint at Madras. This was in 883, and it seems little likely that if the legend of the death and burial of St. Thomas in the neighbourhood of Madras really arose out of the fact of the death and burial of Mar Thomas, —an event which took place only about half a century before Alfred's embassy,—there should have been at that time, either in Egypt or Great Britain, any confusion of an incident which occurred fifty years before with one that was at least eight centuries old. It is surmised by Gibbon and other writers, that the pilgrims were despatched from Great Britain, but never proceeded farther than Alexandria, where they 'collected their cargo of legend.' The Christians on the coast of Malabar trace their paternity to the Apostle Paul, who 'went through Syria and Cilicia confirming the churches.' They looked to Syria as their spiritual home. They owned the supremacy of the patriarch of Babylon. It appears that while the Indian bishoprics were under the authority of the Christian patriarch of Seleucia, an Armenian Christian named Thomas Cana took up his abode at Malabar, and some suppose that his name has led to the belief that Thomas the disciple visited India. Thomas is said to have founded seven churches in Malabar. According to Eusebius, it was Bartholomew who visited India. The Eastern churches believe that St. Thomas preached in Arabia Felix and Socotra, on his way to India, about A.D. 50, where he suffered martyrdom. And it is said that the rudiments of the religion of the cross were first implanted amongst the Himyarites by St. Bartholomew. It is also recorded that St. Pantenus was sent by Demetrius, Bishop of Alexandria, to preach in Arabia Felix, and that there he found traces of St. Bartholomew, amongst others a copy of St. Matthew's Gospel, written in the Hebrew character, which he brought away with him to Alexandria. In the reign of Tobba, son of Hasan, from A.D. 297 to 320, Christianity became more generally known in Arabia, and extended to Abyssinia, where the people, though surrounded by Muhammadan and pagan tribes, continue Christians till the present day. Subsequently, in A.D. 326, Frumentius was elected by Athanasius bishop of the Indians, and he contributed much to the propagation of the Christian religion; but whether Arabia or Abyssinia was the scene of his labours, is disputed. In A.D. 342, Theophilus Indus, a native of Diu, obtained permission to build churches in Yemen, one of which was located in Aden.—*Playfair; Kaye's Christianity in India; P. Vincenzo Maria, Viaggi*, p. 132; *Yule, Cathay*, ii. p. 378; *Huc's Christianity*, i. p. 2; *Growse.*

THOMSON, DR. THOMAS, a medical officer of the Bengal army, an eminent scientific botanist and traveller; author of Travels in the N.W. Himalayas, and, with Dr. Hooker, joint author of the Flora Indica. Dr. Thomson's botanical collections, made in the plains of N.W. India between 1842 and 1847, chiefly in Rohilkhand, Ludhiana, and the Panjab, amount to about 1000 species. His Himalayan collections were partly collected in Kamaon and Garhwal during short visits to these provinces in 1844 and 1845, but mainly consist of the herbarium collected during a Government mission in the N.W. Himalaya and Tibet, in 1847, 1848, 1849, in the course of which he visited, in 1847, Simla, Kanawar, Piti; and in 1848, Kashmir and the Panjab, Himalaya, Ladakh, and the Kara-korum pass. The summer of 1849 he spent at Simla and Ladakh. These amount to rather more than 2500 species.

THOR, of the Scandinavians, is the same as Sor or Sol, the sun, Surya. The ancient people of the north pronounced ss as th. Thor's battle-axe is the cross. Pattee is the Swastika of the Buddhist, and the monogram of Vishnu and Siva. Thor's symbol of governance was the last letter of the Samaritan alphabet, the tau or tao in its decussated form. It is the mark which the

prophet Ezekiel (ix. 4) was ordered to place on the foreheads of the faithful in Judah, and Indian women still place it on their stores of grain. It is placed on the jars of water from the Ganges and Indus, and in the south of India is used as the emblem of disembodied Jain saints. It is the mystical Tao Sze of the Buddhists, is the chief ornament on the sceptre of the Bon-pa deities of Tibet, and is expressed on the Artee or musical bell borne by Bal Govind. See Basant.

T'HORI, Tawari, or Tori, dwelt in the t'huls of Daudputra, Bijnote, Noke, Naokote, and Oodur. They own and hire out camels, but, like the Bawuri and Khengar, were great thieves, and were called bhoot or evil spirits, and sons of the devil.—*Tod.*

THORN, of Proverbs xxiv. 31, is supposed by Sprengel to be the Alhagi maurorum. The 'thorns' of Proverbs xv. 19 is a species of Solanum.

THORN APPLE, Datura, *sp.*

Jouz-mazil, . . . Arab.	Umana, . . . Maleal.
Datura, Beng., Guj., Hind.	Gaoz-giah, . . . Pers.
Kechubuh, . . . Egypt.	Banjdashti, . . . ,,
Pomme spineuse, . . Fr.	Dutro, ... Port.
Stechapfel, . . . Ger.	Krishna dhatura, Sansk.
Datura stramonium, Lat.	Kalu-attana, . . Singh.
Kachu-bong, . Malay.	Karu-umate, . . Tam.
Rotikubung, . . ,,	Nalla ummetta, . Tel.
Humatu, . . Maleal.	Tatura, ... Turk.

There are several species of Datura. The whole plant of D. fastuosa has a rank odour, which may be detected at a distance. All parts possess medicinal properties. The seeds are brownish or black, flattened, kidney-shaped, without odour, except when bruised, and have a bitter taste. For the purpose of facilitating theft and other criminal designs, the seeds are frequently given in India with sweetmeats, to stupefy merely, but not with the intention of killing, although there is no doubt that for the latter purpose it has also been used. The root, dried leaves, capsules, and seeds are recommended by European medical practitioners in India, to be smoked in cases of spasmodic asthma. The white-flowered thorn apple is D. alba, *Rumph.*; D. fastuosa, *Willd.*, is the purple-flowered variety. —*Faulkner; O'Shaughnessy.* See Datura.

THORNTON, EDWARD, author of a Gazetteer of the Countries adjacent to India on the North-West, including Sind, Afghanistan, etc., London 1844.

THOUSAND ISLANDS, a group of about 60 small islands in the passage from Batavia to Banca. The most northern is in lat. 5° 26′ S., long. 106° 32′ E.

THREE. This number in China is expressive of honour.—*Dr. Edkins.*

THRESHING. With the Hindus, when the harvest begins, a level spot is chosen for a threshing-floor, and made dry and hard. A pole 5 feet high is fixed in the centre, the grains are heaped round the floor, and the women break off the ears and throw them in. Oxen are then tied to each other and to the post, and driven round to beat out the corn.

THRUSH. The thrushes are birds of the family Merulidæ, which Dr. Jerdon arranges into wrens, short wings, ground thrushes, whistling thrushes, short-legged thrushes, babbling thrushes, true thrushes, and wren thrushes. The blue rock-thrush, Petrocincla cyanea (P. pandoo, *Col. Sykes*), is distributed over S.E. Europe and the temperate and torrid parts of Asia. By some it is supposed to be the bird alluded to in Scripture, 'the sparrow that sitteth alone upon the house-top.' P. longirostris, a long-billed variety, is common among the rocks of the N.W. Himalayas. It would seem that this is a permanent race of P. cyanea, and peculiar to the more northern regions. All Dr. Adams procured in Ladakh and Kashmir belonged to this variety. The hill blackbird or blue water-thrush (Myiophonus Temminckii) is one of the most beautiful and common tenants of the Himalayan streams. It builds its nest on the cliff over the mountain torrent. During incubation the male may be seen sallying forth, sporting from cliff to cliff; his melodious note, sounding sweetly among the roaring of the troubled waters, has a resemblance to that of the blackbird, but is softer. The blue of the body is more intense on the breast, and forms a gaudy halo across the forehead.

The pagoda thrush, Acridotheres pagodarum, is probably the bird referred to in Lalla Rookh—

> 'Mecca's blue sacred pigeon, and the thrush
> Of Hindustan, whose holy warblings gush
> At evening from the tall pagoda's top.'

The missel thrush, Turdus viscivorus, performs an up-and-down migration on the western ranges of the Himalayas, being found at high elevations in summer, and in the more sheltered situations of the valleys during winter. The black-throated thrush (Turdus atrogularis) is generally distributed over the woods and cultivated tracts of these ranges. The black throat is wanting in some varieties, and there are several well-marked similarities to what has been called the red-necked thrush (Turdus ruficollis), which Mr. Hodgson considers a distinct species.—*Adams' Sportsman in India; Jerdon.* See Birds, p. 377.

THRYSSA. This genus has the general aspect of the anchovy Engraulis, but the body is broader, the mouth enormous, and opening almost vertically. A species that inhabits Tenasserim waters may be denominated the Thryssa anchovy.—*Mason.*

THSUN or Tsum, a Chinese long measure nearly $1\frac{1}{4}$ inches.—*Simmonds' Dict.*

THUG, a class of murderers and robbers who sprang up under the first Muhammadan dynasties. 500 were executed in Etawa in the reign of Akbar. Thevenot, describing the dangers of the road between Dehli and Agra, advises travellers not to allow any stranger to come near, as the cunning robbers cast a running noose round the victim's neck and strangle him. Thuggee is, however, said by Colonel Meadows Taylor to be represented in the bas-reliefs of the temple of Ellora; but they seem to have become known to the British after the fall of Seringapatam (1799); and, on the discovery of thirty dead bodies in different wells of the Doab, Thuggeeism again came to the knowledge of the Calcutta Council, in 1810.

Dr. Sherrard of the Madras Presidency wrote about them in 1816. It was, however, on the reports of Captain Sleeman, about the year 1830, it became known that no part of the whole of India was free from these murderers, and a department was formed by the British Indian Government, empowered to suppress them. This was effected by the officers of the Thuggee Department tracing out the members of the gangs by inducing prisoners to become approvers, and reformatories were established to reclaim both the

children and the adult. By the year 1860 the gangs had become almost wholly destroyed. In nine years more than 2000 were arrested, 1467 were tried and convicted for the murder of 947 persons. Of these, 382 were hanged, 909 transported, 77 imprisoned for life, 92 for varying periods, and 21 acquitted; 11 escaped, 31 died while under trial, and 250 were admitted to be king's evidence (As. Journ., 1836). Between 1826 and 1835, 1562 prisoners were tried for the crime of Thuggee, of whom 1404 were hanged or transported for life; some of them confessed to over 200 murders. The Bhurtote or strangler was invariably hanged.

Many were kept at Jubbulpur in a central jail, where they were employed as wool and cotton weavers, and as tent-makers and carpet-makers.

It was a hereditary pursuit of families alike of Hindus and Muhammadans, both of whom practised it with the same conditions, ceremonies, and superstitious observances.

They had a slang language. The parties or gangs had fixed duties allotted to the members, as leader, persuader, strangler, gravedigger, and scout,—bold, resolute, active men, who received higher shares of the booty.

Their accomplices pursued every avocation, and gave information to those who more openly followed the profession. They usually travelled in considerable bands, sometimes numbering 200 or 300, but in such case they were broken up in parties of ten or more, who kept up communication, adopting all sorts of deceits, as merchants, travellers, etc., or in boats on the Ganges, and certain duties were allotted to each. The inveigler was called Sotha.

Thugs insinuated themselves into the society of travellers, and accompanied them until an opportunity occurred to murder them by strangling them with a handkerchief. The Hindu Thugs invoked the goddess Bhawani, but Muhammadans formed the largest number of the Thugs. As pirates and banditti of Europe made vows to Madonna, the piekaxe used for interments was devoted to Kali or Devi with much ceremony, and after each murder a solemn sacrifice (Tapooni or Tuponee) was made, in which sugar was offered to Devi.

Thug means deceiver. In some parts they are styled Phansigar, stranglers or hangers, from Phansi, HIND., a noose. In Tamil they are known as Ari Tulukar or Muhammadan noosers; in Canarese or Karnatica as Tanti Calleru, thieves who use a wire or catgut noose; and in Telugu, Warlu Wanlu or Warlu Vayshay Wanlu, people who use the noose. In Bengal the river Thugs were called Pungoo.

Thugs as a rule abstained from the murder of women, carriers of Ganges water, or of poets, of low castes, as washermen, musicians, dancers, artisans, oilmen, sweepers, fakirs, Sikhs.

Thugs worshipped the pickaxe which they carried for interring the dead.

The belonging to a Thug association is now an offence punishable with penal servitude for life, and Thugs may be tried in any sessions court without reference to locality. In practice, however, there was a good deal of speciality in the procedure. The Thuggee officers had the powers both of police-officers and of magistrates, for the apprehension of criminals and their committal for trial, but when committed, the accused were publicly tried in the ordinary way. There were special lockups and jails, so that both before trial and after conviction Thugs were kept apart from other prisoners. The proceedings were not subject to the control of the ordinary supervising officers, and in the early stages of the inquiry they were kept secret, statements being privately recorded, as by a procurator-fiscal in Scotland. The essence of the whole system was the conditional or partial pardon of some, in consideration of the disclosures which they made. A man must always be convicted and sentenced first; then he had a promise of reprieve and partial pardon on condition that he made a free and full disclosure of all he knew; he was still to remain under police supervision, and was liable to be remanded to imprisonment for life if he failed to fulfil the terms. This system was so worked, that once a beginning was made the information in the hands of the authorities was rapidly enlarged, a general distrust of one another was engendered among the criminals, the Thug jail at Jubbulpur, and the approvers living about it, became a great repertoire of information for all India, and in the course of a few years the crime was almost wholly extirpated. It would be a great mistake to suppose that when the system was properly managed the evidence upon which action was taken was scant or doubtful; on the contrary, in these cases there was a nearer approach to a quasi-mathematical certainty than in almost any others. The statements of one man were checked by those of others hundreds of miles off, without a possibility of communication, and the evidence was made to prove itself by the discovery of the bodies in the places indicated, the verification of the facts and circumstances of murders previously unknown, the recovery of the property, and in many other ways. At the same time, it must be admitted that such a system could only be worked by extraordinarily skilful and discreet men, such as arise on special occasions of great necessity, and that if there was any laxness or want of the utmost exactitude and care, it was liable to the greatest abuse. Even such relaxation as always attends the long existence of any special machinery was fatal to its full efficiency. Such a system is and should necessarily be a temporary one to meet an emergency. The time came when there was not wanting reason to suppose that the keenness of the weapon had led to its abuse, and that in consequence of an exaggerated belief in the power of the informers they were in some instances enabled to levy a sort of blackmail. Still, the cure was effected, and India has been enabled to lay aside the machinery.

Colonel Sleeman, the head and mainspring of the Thuggee Department, published an account of the system of crime and the machinery used for its suppression.—*People of India; Saunders' Magazine*, 1852; *Tr. of Hind.* i. p. 373.

THUJA, a genus of plants belonging to the natural order Pinaceæ, of the section Cupresseæ. T. orientalis, *Linn.*, the Chinese arbor-vitæ, grows in Siberia, Nepal, China, and Japan; and T. excelsa, *Bong.*, also grows in Japan, along with T. pendula, *Lamb*, the weeping arbor-vitæ of Tartary. See Evergreens.

THUJA ORIENTALIS. *Linn.*

Biota orientalis. | Peh-shu, ... CHIN.

This tree and the Cupressus thyoides furnish the cypress woods so largely used by Chinese

upholsterers; and these, with other trees, Chinese gardeners delight to dwarf and train into all sorts of animal shapes. The leaves of T. orientalis are used as decorations and garniturcs of presents, and as medicines. Its oily fruits are eaten.—*Smith.*

THUJOPSIS DOLABRATA, *S. and Z.*, a tree of Japan, called by the Japanese Asnero, is a very beautiful tree, growing to the height of 90 or 100 feet, very straight, and singularly regular in its tapering form.

T'HUL. Hind.

T'hur, ... Chald.	Sos, ... Gr.
Taarn, ... Dan.	Tur, Gr., Pers., Welsh.
Thurm, ... Ger.	Tor, ... Sax.

T'hul is the general term by which the sand ridges of the Rajasthan deserts are designated. The term is identical with the tor, thur, and tull of other languages; thus the Coptic t'hul has the same meaning. T'hul in Hindustan is from the Sanskrit St'hala, meaning ground, a tract, a district, and t'hul is the term by which the people designate the sandy desert tracts. The desert running to the Indus is marked with t'hul, rooe, and sand ridges, or T'hul-ka-tiba, some of them being very lofty. T'hul means an arid, bare desert; rooe is equally expressive of desert, but implies the presence of natural vegetation, in fact, the jungle of the desert. The word Maroost'hali is compounded of the Sanskrit Mri, to die, and St'hali, arid or dry land; which last, in the corrupted dialect of those countries, becomes t'hul, denoting tracts particularly sterile, the converse of the Greek oasis. Each t'hul has its distinct denomination, as the t'hul of Kawar, the t'hul of Goga, etc.

T'hul are numerous in Western Marwar, which is a corruption of Maroo-war, classically Maroost'hali or Maroost'han, the region of death. It is also called Maroo-desa, the country of death, which is synonymous with Mor-d'hur used by the bards; and though the term Marwar is now restricted to the country subject to the Rahtor race, its ancient application was to the entire desert between the Sutlej and the ocean.

The *t'hul of the Looni* embraces the tracts on both sides of the river forming Jhalore and its dependencies. Jhalore is one of the most important divisions of Marwar, but the region south of the river cannot be included in the t'hul. When the Pramara race held paramount rule in Maroost'hali, Jhalore was one of the nine castles of Maroo. Jhalore has only the desert plants, the jhal, babul, and karil.

The *t'hul of Tirruroe* intervenes between that of Gogadeo and the frontier of Jeysulmir. The name is from Tar, moist, and Rooe. The t'hul of Khawur lies between Jeysulmir and Barmair, and abutting at Giraup into the desert of Dhat, is in the most remote angle of Marwar. The Sahrai find pasture for flocks of sheep and herds of buffaloes in this t'hul.

The *Malli-nat'h t'hul* is also called Barmair, formerly occupied by the Malli or Mallani, of Chauhan, or, as some declare, of Rahtor origin; great numbers of camels, the best in India, are reared here.

Kherd'hur, the land of Kher, from the kher plant, and from it also called Kherala and Kheraloo, the home of the Kher, was formerly occupied by the Gohil race, who robbed the caravans or kafila as they crossed the desert. The Rahtor race drove out the Gohil, who became the lords of Goga and Bhownaggar near the Gulf of Cambay, and till lately swept the ocean as far as Sofala or the Gold Coast, as pirates and slave-hunters. Junah and Chotun are two ancient towns. Between Barmair and Nuggur Goorah is one immense rooe, containing deep jungles of khyr or kher, kaijri, karil, keip, p'hok.

Gogadeo-ka-t'hul, the t'hul of Goga, a name celebrated in the heroic history of the Chauhans, is immediately north of Eendovati, and one description will suit both. The sand ridges (t'hul-ka-tiba) are very lofty in all this tract; very thinly inhabited; few villages; water far from the surface, and having considerable jungles.

The T'hul or desert of drift sand in the Sind-Sagar Doab, has Leia, Muzaffarnagar, Dehra Ghazi Khan, Jampore, and Dhoondoo on its skirts. The sand lies in huge wreaths and hillocks, the latter often reaching the height of 40 or 50 feet above the general level of the country, which is for the most part destitute of vegetation; a few of the leafless pogh bushes, with some jhund and bur or peeloo, also occur, and there are occasional oases. There are small patches of ground free from sand, like little valleys surrounded by low hills. The soil is everywhere strongly impregnated with kullur (impure nitrate of soda).—*Tod's Rajasthan*, ii. pp. 296-300; *Annals*, ii. p. 289; *Captain Dias in P. P.* 265 *of* 1861.

T'HUL. Mahr. A place or spot; but amongst agriculturists a place where the holder has dug a well, built a bund, or planted trees, or made such improvements as entitled him to the uninterrupted possession of such field.

THUL-i-TAUBA, Arab., the hill of repentance, is on the Tigris, and is so named because of the tradition that when Jonah threatened the Ninevites, they went to this hill and vowed repentance. The Gaelic Tillee Beltein, *i.e.* the hillock of the fire of Baal, is a town in Perthshire, where the Beltane festival was held on old May-day.

THUNBERG, C. P., a Swedish botanist who visited Ceylon in 1777, author of the Flora Japonica, Lipsiæ 1784. He also resided in Java.

THUNBERGIA, a genus of climbing plants of the natural order Acanthaceæ, called after Thunberg. Amongst the species are T. alata of Zanzibar, T. angulata of Madagascar, T. fragrans of Hindustan and ghats of the Peninsula, T. grandiflora of all India, and T. coccinea, *Roxb.*, of Darjeeling. T. grandiflora has large flowers with no inner calyx; the leaves are angular, cordate; the anthers bearded and spurred. It hangs in beautiful blue racemes, and is adapted for covering trellis-work. T. fragrans has a climbing stem, with cordate acuminate leaves, somewhat angular at the base. A large beautiful creeper, N'way h'myo, Burm., with azure flowers, belonging to this genus Thunbergia, is a conspicuous plant in the forests of Burma. The species are handsome climbing plants, with a fragrant odour, with white, yellow, and blue flowers; they require a free, rich, sandy soil, and plenty of drainage. The large varieties with blue flowers should be planted out and trained upon pillars, trellises, or trees. Natives of the tropics; raised from seeds, cuttings, layers, and suckers.—*Rid.*; *Eng. Cyc.*; *Mas.*

THUOC, the Chinese Chih, cubit, or foot, and the generic name for the measure of length in Cochin-China, which varies according to circumstances. Those more commonly employed are—

	Metre.	Eng. Inches.
1. That used for measuring ships for the service of ports, ...	0·405	= 15·945255
2. That used for wood at Turon, ...	0·425	= 16·732675
3. That mentioned by Taberd in his valuable Anamitic Dictionary, ...	0·48726	= 19·18391346
4. That used by the king for measuring silks and other cloths in his transactions with foreigners, . . .	0·594	= 23·386374
5. That used by the natives in the Turon market, . .	0·61	= 24·01631
6. That used according to Morrison, ...	0·64968	= 25·57855128

—*Simmonds' Dictionary.*

THUPAWANSA, a Singhalese work containing an account of the death of Gautama Buddha, and of the manner in which his relics were disposed of.—*Hardy's Eastern Monachism*, p. 442.

THUYOPSIS DOLABRATA. *Sieb. and Zucc.* A majestic tree of Japan, attaining a height of 50 feet, with a stem 3 feet in diameter. It is of conical shape and drooping habit, delights in shaded and rather moist situations, and is used in China and Japan for avenues. It furnishes an excellent hard timber of a red colour.—*Von Mueller.*

THWAITES, JOHN, LL.D., an eminent botanist, long resident in Ceylon. He wrote a work on the plants of Ceylon. He was a doctor of medicine, and a fellow of many colleges. He died 17th June 1876, at Radcliffe House, Slave Island, Ceylon.

THYA, wife of Amenhotep III., on his demise succeeded to the regency of Egypt, during the minority of her son Amenhotep IV. He was the 9th king of the 18th dynasty, which began to reign about B.C. 1700. Amenhotep and Shoo-en-Aten, or slave of the disc, are supposed to be the same person, and he is figured at Tel-ul-Amarna. In him the line became extinct.

THYATIRA, now Ak Hissar. There is here a large sarcophagus just outside the town, with a long inscription to Scipio.

THYKA EUCHARIS, with species of cassida (tortoise beetles or ladybirds), species of aphis, coccinella, haltica, and locusta, are insects which attack the cold-weather or rabi crops in Lower Bengal.

THYMELACEÆ. *Lindl.* The Mezereum tribe of plants. The genera occurring in India are—Daphne, Linostoma, and Cansjera. Daphne viridiflora, *Wall.*, occurs in China; D. cannabina, *Lour.*, grows in Nepal and Cochin-China, and a soft, smooth, and tough paper, the celebrated Nepal paper, is made from its inner bark. This order of plants is very uniform in character, and is formed of shrubs or herbs with simple and alternate leaves, axillary or terminal flowers. An acrid stimulant principle abounds in most of the species hitherto examined, which possesses very valuable medicinal properties, though not devoid of dangerous powers, if taken in excessive doses. A crystalline substance named daphnine has also been separated from the bark of some species of daphne.—*O'Shaughnessy*, p. 599; *Voigt.*

THYMUS VULGARIS. *Linn.* Garden thyme.
Hasha, ... ARAB. | Ipar, ... HIND.

An erect plant, sometimes procumbent at the base, or clothed with a hoary pubescence. It is a native of the S.W. parts of Europe, in dry plains and on hills and uncultivated places free from woods. It has a pungent aromatic odour and taste, is cultivated for culinary purposes, used in soups, etc., and many varieties of it are met with in gardens. It is a delicate plant to rear; best by seed, grown in pots, but it may be increased by slips and dividing the root. It requires a sandy soil and free drainage.—*Riddell; Jaffrey.*

THYRSUS of Bacchus was brought by him from the east.

TIAGAR or Tiyagar Drug, a village and old fort in the South Arcot district of Madras, situated in lat. 11° 44′ 20″ N., and long. 79° 7′ 15″ E., 30 miles south of Trinomalai. Population (1871), 419. Between 1757 and 1780 it was regularly invested five times, and blockaded once; and although never carried by assault, it repeatedly changed hands between the British, French, and Mysore rulers. In 1790, Captain Flint, the defender of Wandiwash, beat off Tipu in two assaults on this town.—*Imp. Gaz.*

Benja patsja, . MALEAL.	Tal mani, ... TEL.

This annual plant grows in Chittagong and Travancore amongst rubbish in rich and rank soils. The juice of the leaves is applied to painful gum-boils and to repel pimples on the face; also used in inflamed or excoriated tarsi. In Jamaica it is used with castor-oil to relieve the pain of scorpion stings, and in the treatment of hydrophobia.—*O'Sh.* p. 497.

TIAU. CHIN. A string of copper coins varying in number from 160 to 1000.

TIBA, in the Panjab, inferior, sandy, dry soil. Tiba means hillock, and the term is especially applied to uneven sandy ground of a somewhat high level. See Bhur; T'hul.

TIBABAT, also Tibb. ARAB. The science of medicine. Tabib, a physician.

TIBBOO, a language of Northern Africa, spoken as far west as Fezzan and as far north as the oases of Angila and Siwah. The Tibboo of Lyon and Hodgson seems to belong to the Nubian class, and to be Libyan or Lybes.—*Latham, Rep. Brit. Ass.*, 1847.

TIBERIAS, a lake in Palestine, called the Sea of Galilee, from its situation on the western borders of that division of Palestine; the Lake of Gennesareth, from the neighbouring land of the same name; and Sea of Tiberias, from the contiguous city of Tiberias, now known by the name of Tabaria, the only large city existing on its shores. The lake is about 15 miles in length, and 6 to 9 in breadth. Lake Tiberias was the scene of one of Jesus Christ's miracles, Luke viii. 23, 24. The town of Tiberias is situated on its western shore. About a mile from the town, and close to the edge of the lake, are some hot springs enclosed by a small square stone building surmounted by a dome. Their waters consist of a strong solution of muriate of soda with a considerable intermixture of iron and sulphur. There are several other springs in the immediate neighbourhood, but they are not turned to account. The

place is known by the name of El Hamam, the baths. Its ancient Hebrew name, Emmaus, has a similar signification. The extreme depth of this lake, about 250 metres, is at its northern extremity, near where the Jordan enters it. The surface is 212 metres below the level of the Mediterranean, but the sides afford evidence that it must formerly have been level with that sea. Fishes of the genus chromis swarm in the lake (seven species were met with). The male of this fish is known to hatch its eggs by keeping them in the mouth and gills, and the young remain there some time after hatching.—*Robinson's Travels*, i. p. 124.

TIBET, a region in Central Asia, lying between lat. 27° and 37° N., and long. 72° and 105° E.; extends from Badakhshan in the N.W. to Sze-chuen in the S.E. The Gobi desert on the N. separates it from the eastern portion of Chinese Turkestan; it has the territory of the Eluths of Koko Nor on the N.E., the territory of the Si-fan or Tu-fan and Sze-chuen on the E., Yunnan is on the S.E., on the S. is the valley of Assam, Burma, Bhutan, Nepal, and British India, and on the W. is Little Tibet.

Tibet was reckoned by Gutzlaff in his Life of the Emperor Taou Kwang, p. 227, to comprise an area of 30,200 square miles, and to have a population of about six millions. Its table-land in the E. is about 4000 feet above the sea, but in Little Tibet it is between 11,000 and 12,000 feet.

Tibet is called by the Chinese Tsang or Si Tang, the word Tibet being from Tu-peh-teh (Tu-Bod). The Tibetans also designate their country Bod-Yul, as the Chinese likewise name it Fu-Kwoh, the land of Buddha. Mr. Trelawney Saunders explains that the Indian name is Bhot. Its native name is pronounced Pot, but properly Bod, which denotes both the nation and the country; but for distinction the country is called Bod-yul (Bod-land), a man of the country Bod-pa, and a woman Bod-mo.

The Tibetans, however, apply the name Pot or Bod to Middle Tibet, or to the two provinces U and Tsang (Duus-Otsang, pronounced U-tsang), the capitals of which are H'lassa and Zhikatse; hence a native of these two provinces is called by them especially Pot-pa.

The eastern part of Tibet is called K'ham or K'ham Yul, also Great Tibet.

The N.W. part, towards Ladakh, is called Nari.

Bhutan is, however, known to the Tibetans by several names, — Lho-pa-to, Lho-mon-k'ha-zhi, and Lho-bruk-pe-yul, or simply Lho, the south.

According to these divisions, Pot-pa or U-tsang-pa means a native of Middle Tibet; Kham-pa or Kham-ba, one of Eastern Tibet; Nari-pa, one of Western Tibet; and Lho-pa, a native of Bhutan.

The Chinese Government divides Tibet into two provinces, Anterior Tibet and Ulterior Tibet; but their maps retain the three divisions above mentioned.

U and K'ham are now styled Tsien Tsang, while Tsang and Nari (or Ari) are called Hall-Tsang, *i.e.* Ulterior Tibet.

Nari (Mnahris) is the most elevated, and gives rise to the sources of the Indus, Sutlej, Gogra, and Brahmaputra.

The Turk and Mongol races on the north of Tibet are called by the Tibetans Hor and Sok-Po (Hor-Sok). China (Gyanak, Tib.) is on the east; India (Gyagar, Tib.) is on the south. The hill people of India who dwell next to the Tibetans, are called by them by the general name of Mon, their country Mon Yul, a man Mon-pa or simply Mon, and a woman Mon-mo.

U-tsang is Tibet proper, and lies north of Assam, Bhutan, and Nepal, and has about 130,000 families. Its capital is H'lassa.

K'ham-Yul (K'hams-Yul), called also Potch'hen or Great Tibet, has China on its east. Its people are called Pon or Bon.

The northern part from Tsang to Ladakh is called Nari. The people are said to number 10,000 families.

Its four territorial provinces are—

Tsien Tsang, or Anterior Tibet, also known as Kham and Kham-do. It is nearest to the Chinese frontier.

Wei or *Chung Tsang*, Central Tibet, containing the seat of government, Lhassa, and the residence of the Dalai Lama, the great monastery of Potala.

How Tsang, Ulterior Tibet, or simply Tsang, containing the seat of government of the Panshen Lama, at Teshilumbo or Chashilumbo.

Gnari, Western Tibet.

Tibet is now governed by China through the Buddhist hierarch, the Dalai Lama, and in this manner it is a dependency of China.

Its present limits comprise only a part of the ancient region of T'u Fan, the people of which, the Si Fan and Tang-ku-teh (Tangut) were for many centuries the dreaded enemies of the Chinese. Legends attribute to the Sakya the civilising of the races, but their first historic king was Srougtsau Gampo, the seventh of the Sakya rulers, who introduced Buddhism, and brought all Tibet under his sway. He married a daughter of the Nepal sovereign (Pai-pu or Pa-pu-leh Kwoh, *i.e.* the Parbattiah kingdom), and also in A.D. 641 the princess Wen-Cheng, daughter of the emperor Tai Tsung of the Tang dynasty in China. For many centuries his descendants, with the title of Gialbo (in Chinese Tsan-pu) ruled over Tibet, but the Buddhist hierarchy gradually encroached, and in the 11th century the Sakya religionists began to usurp the exclusive power of the state. From that period the Sakya priesthood have been known as the Brug-pa, though also now designated Hung Kiao or the Red Church. The Sakya priesthood introduced marriage; but in the 15th century, Tsong-kha-ba, born A.D. 1417 at Si King, preached the celibate views of Sakya Muni, and insisted on the adoption of yellow robes. Before his death (A.D. 1478) he was the recognised spiritual leader of the Lamaist majority, and was acknowledged by the Ming emperor, who gladly welcomed him, as the Red Hierarchy had favoured supporters of the descendants of Kublai. The reformer left behind him two eminent disciples, on whom he laid commands, enjoining upon them that they should be born again generation after generation, as hubil'han, to practise the doctrines of the Great Conveyance (Ta-ch'eng, in Sanskrit Mahayana, the esoteric form of Buddhism). Hubil'han, in Chinese Hwa-shen, means transformed body, transformation, re-embodiment. The two disciples were designated respectively Dalai Lama and Panshen Lama. From that time the spiritual and a large portion of the temporal authority in Tibet, which had previously been engrossed by the Red Hierarchy, has been wielded by the suc-

cessive re-embodiments of Tsong-kha-ba's disciples, whose identity, on their reappearance in human form, has been merged, according to the legends that have subsequently arisen, in the personality of the two most exalted and revered of the divinities proceeding from the essence of Buddha himself. In the senior of the two, the Dalai Lama, the Bodhisattwa Avalokiteswara (the Chinese Kwan Yin) is believed to appear on earth; and in the person of the second, the Bodhisattwa Manchusri is recognised, this deity having preliminarily occupied the form, it is also fabled, of Tsong-kha-ba himself. The second in succession of the Dalai Lamas, in the course of a long career, laid the foundation of the existing hierarchical system in Tibet, establishing his seat of ecclesiastical rule at Lhassa, and organizing a body of lesser spiritual dignitaries, under the designation Hut-ukht'u, who, like the two supreme religious chiefs, were to be continued by a series of re-embodiments. Like the Dalai and Panshen Lamas, these spiritual chiefs of the Tibetan priesthood became popularly known as 'living Buddhas,' in Chinese Hwoh Fu, a term by which they are at present commonly designated. During the latter half of the 17th century, the authority of the Dalai Lama gained entire predominance in the greater portion of Tibet; the Gialbo or descendants of the ancient kings appear to have gradually faded into insignificance, whilst the authority of the Mongol princes grew more and more direct. Already, at a somewhat earlier period, Gushi Khan, the reigning prince of the Khoshot Mongols, had supported the Dalai Lama of the period against the claims of the reigning sovereign, and had been rewarded with the title of Nomen 'Han, or Prince (khan) of the Religious Law, an equivalent to the Sanskrit Dharma Raja. By the influence of Gushi Khan, the Dalai and Panshen Lamas, in A.D. 1642, were induced to despatch an embassy with tenders of allegiance to the Manchu sovereign, whose forces were then on the eve of effecting the overthrow of the Ming dynasty in China; and from this period relations of intimacy took their rise, developing themselves in time into the assumption, on the part of the Chinese emperors, of the sovereign tutelage of the Buddhist papacy in Tibet. This consummation was hastened by the wars undertaken towards the close of the 17th and in the early part of the 18th centuries by the Sungar chieftains, for the subversion of the authority of the Dalai Lama. The temporal administrator who, as regent under the Dalai Lama, had long conducted the government of Tibet, with the title of Deba, ruler or chief, was invested by Kang Hi in A.D. 1694 with the title of Tu-peh-teh-kwoh-wang or king of Tibet. But the authority thus established was ere long attacked by an invasion of the Sungars, and the Chinese armies which were despatched hereupon for the liberation of Tibet remained as conquerors of the country. For a time the Government remained in the hands of puppet nominees of the Chinese emperor, but in 1725 an outbreak directed against one of these gave a pretext for the appointment of two High Commissioners to control the affairs of Tibet on behalf of the Chinese Government. Further attempts at revolt led, in 1750, to the entire suppression of the temporal sovereignty in Tibet, and the government of the country was placed, thenceforward, in the hands of the Dalai and Panshen Lamas, aided by a council of four laymen, entitled Kalon or Kablon, *i.e.* Ministers of State, under the direction in chief of the two Imperial Commissioners or Residents appointed from Pekin. The government there, from that time forward, continued to be conducted on this basis, the authority of the Chinese administration being rendered the more complete by the long minorities which are entailed at each successive re-embodiment of the two supreme ecclesiastical dignitaries.

Yul-Sung or Lhassa, the residence of the Grand Lama, is the capital of Bhutan or Northern or Upper Tibet, also called Eastern Tibet and Tibet Proper.

Leh or Ladakh is the chief town of that part called Middle Tibet, called also Western Tibet; and Iskardo is the principal place in Little Tibet or Balti. The natives of Little Tibet describe Ladakh, Iskardo, Khaybalu, Purik, Nagyr, Gilghit, and Astor as distinct Tibets. Balti includes Hasora, Rongdo, Rong-yul, Shagar, Iskardo, Balti, Parkuta, Tolti, Khartaksho, Kiris, Khaybalu, and Chorbat. Ladakh includes Spiti, Zangskar, Purik, Suru, Hembako (Dras), Ladakh proper or Leh, Nubra, Rong, Rupshu, and Hanle.

Balti and Rongdo are on the Indus; Khartaksho, Tolti, and Parkuta are on the Sing-ge-chu; Shagar is on the Shagar; and Khaybalu, Chorbat, and Kiris on the Shayok.

Tibet includes the mountain valleys of the Indus and Brahmaputra, together with the whole axis of the Himalayas, and the heads of many of the valleys which descend on the Indian side, and which are situated beyond the mass of snow throughout a great part of the chain. Beyond the Indus and Brahmaputra are the southern slopes of the Kouen Lun.

The Tibetans do not recognise a continuous chain of mountains running parallel to the Himalaya; nor are they acquainted with Kouen Lun as the name of any mountain range. They are familiar with the Himalaya on the one hand, and call it Kangri, which simply means snowy region, and they know that the country of the Mongols or Mongolia lies parallel to it on the other hand.

Western Tibet is a country of such general elevation, that only in the province of Balti are villages to be found below a height of 6000 feet.

In 1845, a great earthquake was experienced in the province of Kham north-east of Lhassa. It was most severe in the district of the Dirgi Raja. About 3000 men were killed and a Gumba destroyed by the opening of the earth. About the year 1820, the district of Komp in the province of Kham was visited by a severe shock; one village was destroyed by the opening of the ground.

The routes from British India to Tibet are the Nilanghat pass at the eastern corner of Native Garhwal (Tehri), the Mana pass and Niti pass in British Garhwal, the Johar pass in Kamaon, and the Darma and Byans passes in Kamaon and at the extreme east of the Kamaon-Tibet frontier. The great Tibet road from India to Central Asia runs in the gorge through which the Sutlej passes.

Tibet is mentioned by Abu Zaid-ul-Hasan in A.D. 915, by Ibn Haukal in A.D. 950, by Abu Rahan in A.D. 1030, and by Edrisi in A.D. 1154.

Also the Jesuit fathers Grueber and Dorville returned from China by that route in A.D. 1661, just 400 years after Marco Polo's journey westward. They were the first Christians of Europe who are known to have penetrated into the populous parts of Tibet.

Fathers Andrada, Desideri, Horace de la Penna (1742), the monk Cassiano, Father Giorgi (1762). In 1774 Mr. George Bogle, and in 1783 Captain Turner, were sent on embassies, and in 1828 Father Hyacinth published in St. Petersburg a Chinese account of it.

In the 18th century China took the Ba-thang and Ly-thang provinces and added them to Sze-chuen, and added those of A-teu-tze and Tcong-tien to Yunnan. Since then Ladakh has been annexed to British India. On the other hand, in 1863–64, Tibet annexed the De-gné country.

During the progress of the first war with Bhutan in 1772, the British, having defeated their army with loss at the battle of Chichakotta, and driven the main body of the Bhutanese into the mountains, was threatening the capital Tassisudon. In these straits the Deb raja of Bhutan appealed to the Teshu Lama of Tibet for assistance. The Teshu admitted that the raja of Bhutan had deserved all punishment, 'as he is of a rude and ignorant race; and past times are not destitute of instances of his faults, which his avarice has tempted him to commit.' 'The Lama had reprimanded and admonished him to be submissive in the future; but as he has been thoroughly beaten, and is a dependent of the Lama's, the Teshu intercedes, declaring that further punishment would irritate both the Lama and all his subjects.' 'As to my part, I am but a poor fakir; and it is the custom of my sect, with the rosary in our hands, to pray for the welfare of all mankind. . . . And I do now, with my head uncovered, entreat that you will desist from all hostilities.' Hastings did desist, and it gave him a pretext for sending Mr. Bogle on a mission by way of reply. Mr. Bogle so won the friendship of the Teshu Lama, that when, a year or two afterwards, the latter, at the urgent request of the emperor of China, went to pay him a visit, and was received with all the honours of a divine person, he twice recommended the British to the gracious notice of the Brother of the Sun.

Csoma de Koros resided for many years in the country, engaged in philological inquiries. Drs. Thomson and Hooker and Lieutenant Strachey added largely to the knowledge of the country; and a convention agreed to at Chefoo by Sir Thomas Wade makes express provision for a British embassy to proceed to Lhassa, the capital of Tibet.

Races.—The inhabitants all belong to the Mongolian family. As a general rule, the Himalaya divide Hindustan from Bhotland, but there are Bhot in several parts south of the crest of those mighty mountains, in Garhwal and Kamaon. M'hon is the name given in Tibet to all the hill people between the plains of India and Tibet. The Tibetans and Nepalese are Mongols, and have all the characteristics of the Mongol race. The people of Leh, the Eastern Tibetans, call themselves Bhotia, or inhabitants of Bhot. They are not so tall and are stouter made than the Tibetans of Balti or Little Tibet. The Bhot of Ladakh is strong, hardy, short, and square, with a decidedly Mongol physiognomy,—by which is meant a flat face, broad cheek, depressed nose, very large ears, oblique and narrow eye curtained at the corners, black hair, and low stature, their average height being 5 feet 6·1 inches; the skulls are less Mongolian, having a capacity of 72 cubic inches, 80 cubic inches being a fair capacity for a European.

The Thorpa tribe dwell in Kara Tibet, S. of the Gobi. They are supposed to be descendants of the Uigur tribe.

The Hor or Hor-pa are a branch of the Eluth, dwelling to the north of Kara Nor, and are called by the Mongols, Saraigol or Karagol, and by the Tibetans, Sogh-po or nomades.

Mr. Brian Hodgson furnished vocabularies of the Si-fan and Hor-sok, and of the languages of Northern and South-Eastern Tibet, the Tho-chu, Lok-pa, Gyami, Gyarong, Hor-pa, Tak-pa, and Man-yak.

Trade.—All the inhabitants of the snow valleys trade; they reside from March until November in the valleys just under the ghats, where a scanty cultivation is carried on by their women, and whence the men take flour, rice, cotton, sugar, etc., into Tibet, bringing back borax, salt, and wool. But from November to March they abandon the Snowy Ranges for the banks of the Alaknanda about Kurupryag, Nandpryag, etc., and carry on interchanges with the traders at Najibabad. They use the Chour-gai or yak for transport; it carries 150 to 200 lbs. It is purchased at from 10 to 15 rupees. Gold, like all else of a yellow colour in Tibet, is sacred to the Grand Lama. The gravel of the northern steppes of Tibet yields gold in grains, but the value of the crude borax of the lakes surpasses, as an article of trade, that of the precious metal. Gold is found on the banks of the Basha stream in Little Tibet. Vigne had no doubt that the drun or marmot of Little Tibet are the 'ants as big as foxes,' noticed by Herodotus as throwing up gold. Nagyr is celebrated for its gold washings. Tavernier tells us (p. 156) that 'toward the Tibet, which is the ancient Caucasus, in the territories of a raja beyond the kingdom of Kashmir, there are three mountains close one by another, one of which produces excellent gold, the other granite, and the third lapis-lazuli.' Thokjalung, in latitude 32°, is the chief gold field of Western Tibet. It is a large desolate plain about 16,000 feet above the level of the sea; and in 1868 the pandit sent by Captain Montgomerie saw a nugget weighing 75 tolas, over 2 lbs. In Tibet the gold fields are said to extend from Rudok to Lhassa, or eleven degrees of longitude =700 miles. They also extend northerly to between Aksu and Ili. Numerous parts of Central Russia and China also contain gold.

Rank.—In Tibet, civil and military appointments are made by the Dalai Lama and the resident Chinese minister of Anterior Tibet. Their grades are five, the highest being equivalent to the Chinese third, but the button which declares a rank in China is worn only by the Tangut, who appear to succeed only to hereditary offices; the Lama wear no button, by reason of the peculiarity of their head-dress. In Anterior Tibet are 10 ying, cantonments, or encampments classed as great, 43 as middle-sized, 25 as small, and 14 as frontier posts. In Ulterior Tibet are

14 middle-class and 15 small ying. The tsan-tsan are supported by a contingent of 646 luh-ying from Sze-chuen under a yukih, a tusze, three captains, and six subalterns, who are distributed through both provinces; the native soldiery are but 3000,—1000 in Anterior, 1000 in Ulterior Tibet, 500 at Pingjih, and 500 at Dziang. They are divided into small sections of 25 under a ting-fung; five of these make three tai-fungs' command; two of these, a yu-fung's; two of these, a tai-fung's; there are six of the last in Tibet.

Clothes. — Tibetans of the higher class wear Chinese satins in the warmer seasons, and the same lined with fur in the cold; all others wear woollens in the warm, furs and sheep-skins in the cold weather, and never go about without boots. The common people never wash during the cold season; very sparingly at other times. The reason given for this being that the skin of the face cracks and ulcerates from the cold, if water is applied to it. The people of towns, who do not go much outside the house, wash occasionally, but the prejudice is strong against ablutions of the person, and it is equally extended to their clothing, which is worn in a filthy and greasy state. Soap is high priced, but little used in Tibet. There is in the country a plant resembling grass, the root of which, pounded with water, makes a lather, and is used for washing clothes.

The tea trade of Tibet is carried on in the form of blocks, weighing about 8 lbs., and which sell at from 12 to 48 shillings each.

Population in Tibet is sparse, the greater portion of the inhabitants living at heights varying between 9000 and 11,000 feet. Leh, the capital of Ladakh, and one of the most important commercial places of Western Tibet, lies 11,527 feet above the level of the sea. Gartok, on the Indus, is at a height of 15,090 feet. Every year, in August, a large fair is held there by several thousands of natives from almost every part of the Himalaya and Central Asia. The people encamp in the black or coloured cloth tents. This is certainly the greatest height at which man is known to congregate for mercantile purposes. Some of the other Tibetan summer villages, as Norbu (15,946 feet) and Puga (15,264 feet), are built on sites near which salt and borax are found, and serve only as occasional sheltering-places to shepherds.

Tibet has long been famous throughout Asia, and even in Europe, for its numerous herds of sheep, and the superior quality of the wool which they provide; with the rearing of these herds many of its inhabitants are exclusively occupied. In summer, the flocks are driven to pasture grounds, some of which reach an elevation of 15,000 to 16,349 feet, beyond which the Tibetan shepherds never venture.

In the Kouen Lun, even the foot of its southern (Tibetan) slopes is so elevated, that no villages or pasture grounds exist at all. On its northern slopes, 9400 feet is the limit of permanently inhabited villages (Bushia, 9310 feet); summer villages reach about 10,200 feet; and pasture grounds do not occur above 13,000 feet.

Religions. — Buddhism is the prevailing form. The people of Ladakh are Buddhists; those of Little Tibet are Shiah Muhammadans. Lama is the title of the monastic priesthood. In Tibet there are two ruling Lamas, the Dalai and the Teshu Lama. The former is the chief, and resides at Lhassa; the latter, the inferior, in the lamasery of Teshu Lumbo, near the town of Shigatze, on the river Sanpu or Brahmaputra, in the south of Tibet. The ordinary monk or priest in Tibet is the Gylong, above whom are the Lama or presidents, and below whom are the Tohba and Tuppa. The Tuppa is a probationer who is admitted into the establishment, to which he would attach himself at the age of 8 or 10, and receives instruction accordingly. At 15 he becomes a Tohba, and at 24 a Gylong, provided his acquirements be satisfactory. There are two sects, the Gyllupka, who dress in yellow, and the Shammar in red, the Shammar Gylong being allowed to marry.

Besides their Lamas, the Tibetan Buddhists have large numbers of nuns among them, who are not, however, subjected to restraint, but work actively in the fields, and one of them took service for a short distance as a coolie with Captain Knight's party. Slavery is a Tibetan institution. Polyandry is common.

Language.—Brother H. A. Jaschke of Herrnhuth finished the Tibetan-English Dictionary, on which he was engaged on behalf of the India Office for a period of eight years. Alexander Csoma de Koros dwelt for many years in Tibet, writing a dictionary. The sacred books of Tibet are in 100 to 108 vols. folio.

In Tibet, the cycle of Jupiter, Vrihaspati Chakra, is used. Their epoch occurs in A.D. 1025. Csoma de Koros mentions that in the Tibetan sacred books, three periods of their compilation are expressly stated, first under Sakya (B.C. 638 to 543); then under Asoka, king of Pataliputra, 110 years after the decease of Sakya; lastly by Kanishka, upwards of 400 years after Sakya. Boom, a Tibetan work in 12 volumes, contains tracts of the Elupka section.

Fairs.—There are twelve great annual festivals, viz. Bumteung, Kansupecha, Chushupecha, Gesupecha, Nesupecha, Gosungpecha, Gyajipecha, Lallupecha, Chindupecha, Dudupecha, Kagyurpecha, Lukphopecha. On the anniversary of the death of a chief Lama of a Gumba, there is a great festival and illumination. At Teshu Lumbu, three such are held annually. The Lhassea Morun festival of M. Huc is properly called the Lha-sa Meuhlum. It is the anniversary of the first proclamation of the religion of Buddha by Sakya at Lhassa.

Burials.—The Ch'hod-ten is a Buddhist temple. There are numerous Ch'hod-ten in Tibet, consecrated to the celestial Buddha, in contradistinction to the Dungten, which are built in honour of the deceased holy men, as a bone or relic receptacle.

In Tibet, where the dead are not burned or buried, but are exposed on high places to be devoured by vultures, there is a class of men who make removal of the dead their sole avocation. They are called Raga Tongden; they are a low race, held in dislike, and shunned, but they are generally rich. They go about to the living, begging and extorting money. When refused or ill-treated, they retaliate with abuse, which is often successful. 'Very good,' say they, 'you won't give us alms now: you will come into our hands some day, and we will put a rope round your neck, drag your body through

the streets, and throw it to the dogs;' and the latter part is the frequent fate of the poor man's body, as these men keep numerous dogs to devour the bodies. The bodies of the wealthy are carefully disposed of: they are carried in a litter to the top of a hill set apart for the purpose, the flesh cut in pieces, the skull and bones pounded in a mortar; and when all is ready a smoke is raised to attract the vultures, who collect in thousands to eat it up. The sovereign Lamas are, however, deposited entire in shrines prepared for their remains, which are ever afterwards regarded as sacred, and visited with religious awe. The bodies of the inferior Lamas are usually burned, and their ashes preserved in little metallic idols, to which places are assigned in their sacred cabinets. Ordinary persons are treated with less ceremony: some are carried to lofty eminences, where they are left to be devoured by ravens, kites, and other carnivorous animals. But they also have places surrounded by walls where the dead are placed. The Mongols sometimes bury their dead; often they leave them exposed in their coffins, or cover them with stones, paying regard to the sign under which the deceased was born, his age, the day and hour of his death, which determine the mode in which he is to be interred. For this purpose they consult some books, which are explained to them by the Lamas. Sometimes they burn the corpse, or leave it exposed to the birds and wild beasts. Children who die suddenly are left by their parents on the road. In Spiti, in the N.W. Himalaya, when a person dies, the body is sometimes buried, or burned, or thrown into the river, or cut into small pieces and burned. Admonitions are made over the body to the departed spirit, such as, Do not trouble yourself, you cannot enter it (meaning the dead body); in summer it quickly becomes corrupt, in winter it freezes and is too cold for you.

Marco Polo, writing in the 13th century, related that in Tibet they eat raw meat and worship images, and have no shame respecting their wives. In ancient times, according to Herodotus (Prinsep, p. 1), the Tibetans at the Persian court stated that they ate their dead. According to Dr. Scott (Asiatic Researches xv.), when the Bhoti of Upper Tibet fought with a Deb raja or governor, or with Pilos, if any one be killed, both parties rushed to obtain the body, and the successful party took out the liver and ate it with butter and sugar. They also mixed the fat and blood with turpentine, and made candles, which they burned before their idols. The bones of persons killed in war were used for musical pipes. They made beads from the skulls, or set them in silver as water cups to be used in their religious ceremonials. These are doubtless fables.

The Chinese have spacious burial-grounds at Lhassa and Digarchi, and there, as in their own country and wherever they reside, they are well cared for and ornamented. The Lhassa one is said to contain 100,000 tombs. In the time of Wangh, a celebrated raja of Lhassa, there was an insurrection against the Chinese, which ended for the time in the annihilation of the whole army, and the massacre, by the Tibetans, of the whole Chinese population. The funerals of the Chinese at that time were estimated at 4000. This massacre was punished by the emperor, and since that time the Chinese supremacy has been finally established all over Tibet. There was a petty insurrection in 1843, in which many Chinese were killed.—*Hooker*, i. p. 118; *Moorcroft's Travels; Cunningham's Sikhs; Journ. Ind. Arch.; Dr. Thomson's Tr.; Campbell; Timkowski; H. and Th. Flora Indica; A. Cunningham in J. A. S. of Bengal*, 1855; *Prin. Indian Antiq.; Rennell's Memoir; Trelawney Saunders' Geog. Mag.*, 1877; *Mayer, Chin. Govt.; Wade's Chinese Army*, 71, 72.

TIBIT, the term in use among the Uzbak of Yarkand for the pashm or wool of the shawl goat. Lieut. Henry Strachey supposed it to be the source of the geographical term Tibet, introduced to Europe by Marco Polo.

TICHODROMUS MURURIA, the wall creeper of S. Europe, is very common in the Himalaya, Afghanistan, etc., in rocky situations, and on the scarped sides of mountain roads. At a distance it looks like a very large grey and scarlet butterfly, as with expanded wings it noiselessly creeps over the rock, poking its long awl-shaped bill into every little nook and crevice.—*Adams.*

TICK, species of Ixodes.

TICKEL, Colonel, 31st B.N.I., wrote on the Birds of Borabhum and Dhalbum in Bl. As. Trans., 1833, ii. p. 569, and contributed largely to the stock of knowledge regarding the ornithology of Central India and Burma.

TIC-POLONGA, a name given in Ceylon to a poisonous snake about three or four feet long.

TID. Hind. A beggar's fiddle, a musical instrument.

TIDES. The usual vertical rise and fall of the tides along the shores of the Peninsula of India is small. In the Straits of Malacca and at Singapore it is from 12 to 14 feet; while in other parts of the world, in the same latitude, there is scarcely any variation. Upon the coast of Cochin-China it varies from 6 to 14 feet, and the periods and duration of the ebb and flood are by no means regular. In lat. 12°, on the same shore, there is but one tide in the course of 24 hours. At the head of the Gulf of Cambay, in lat. 22°, Horsburgh states that the perpendicular depth of the rise and fall of the tides is from 36 feet at the full and change of the moon. Also, in Surat road, it is from 20 to 21 feet, and from 15 to 17 in Bombay harbour; again, in the Gulf of Martaban, which is far within the tropics, the rise and fall of the tide, at the full and change of the moon, is 23 and 24 feet, and of Rangoon bar about 20 or 21 feet. In Gasper Straits, within 2½° of the equator, there is occasionally, from local causes, a rise and fall of 16 or 17 feet on the spring-tide, but this is rare in other places so near the equator. These instances show that very considerable tides occur within the tropics.

The range of the tides, however, greatly varies, from 1½ feet in the open ocean at the Mauritius to 20 feet at Rangoon, 21 feet at Mergui and Martaban, and 30 feet at Surat.

TIEFFENTALLER, JOSEPH, a native of Bolzano, in the Austrian Tyrol, who arrived in India A.D. 1743, as a Jesuit missionary. He travelled extensively, and wrote, in Latin, accounts of the country. He died at Lucknow, July 1785, but was buried at Agra, at the back of the old Catholic church built by Walter Reinhardt. —*Growse.*

TIEH-FAN. CHIN. A ferruginous alum, also alum earth.—*Smith.*

TIELLA, in Malayala and Tamil, a tree which grows from eight to twelve inches in diameter. Its strong, durable wood is used by the natives in the frames of country boats.—*Edye, Ceylon.*

TIEN-CHU, or Celestial Kingdom, a Chinese designation of China proper. Tien-Shan-hu, CHIN., means the lake of the celestial hills. Tien-tsin, CHIN., means celestial harbour.

TIEN-CHUNG-CHING-SIT, the Chinese feast of the middle heaven.

TIEN-DZA. CHIN. A title of the emperor of China.

TIEN-HOU-SHENG-MU, the Chinese queen of heaven, is the patron of seafarers. Previous to the first trip of the fishing season, or when new nets are made or old ones mended, the nets are spread out, candles are lighted, joss paper and incense are burnt, and sacrifices offered to propitiate the goddess. Tien-Hou was a native of the province of Foh-kien, and a member of the clan Lum. Her four brothers were merchants, and it is fabled that when absent at sea, their ship met with a severe storm, and their sister in a trance visited the ship, and dragged it into a place of safety. On the return of the ship, the youngest son said the eldest brother had been drowned at sea, but a lady had appeared in mid-heaven, and by means of a rope dragged the ship into a safe position. She died at the age of twenty, and her relatives declared that her spirit returned to the house once a month, and they concluded she had become a goddess, and erected a temple to her. Her fame soon spread, and she is worshipped at all times by numerous votaries, especially by fishermen and sailors. Her natal day, the 3d of the 3d month, is her festival.—*Gray*, p. 161.

TIEN-I is the Chinese celestial cure, a star supposed to have a beneficial influence upon invalids.

TIEN-PAK or Tien-pe-Hien is the principal place on the south coast of China where salt is produced, and several hundred junks are annually employed in transporting it to Canton. —*Horsb.*

TIEN-SHAN, according to Russian explorers, is a great alpine region, extending far to the south of Lake Issyk Kul, and forming with the Pamir and the Himalayas the mountain centre of the whole Asiatic continent. The axis of this Tien-Shan alpine region is apparently from N.E. to S.W., the elevation gradually rising to the S. and E., and sinking on the side of Kashgar much more rapidly. Lake Issyk Kul is 5300 feet above the sea-level; Lake Son Kul, 9430 feet; and the Tchatyr Kul, 11,210 feet. The main ranges run from N.E. to S.W., but are cut by other smaller ones running from N.W. to S.E. The centre is not the highest; the highest part of the whole region is the plateau or range of Ak-Shüraik. There are many peaks between 14,000 and 20,000 feet high. Khantengri, S.E. of the E. extremity of Issyk Kul, is estimated at over 24,000 feet.

The Tien-Shan or Celestial Mountains separate the Tarim from the Issyk Kul and Ili basins south and north, and stretch thence eastwards to about 120 miles east of Hami (Khamil), in long. 95° E. At this point the Tien-Shan consists of a single wedge, but expands westwards, and in the extreme west ramifies into several distinct branches, which spread out like a fan far into the Turkestan lowlands. Of these branches, the south-westernmost are the Alai and Trans-Alai, which stretch in parallel lines for 200 miles along the northern edge of the Pamir down to the Turkestan plains.

North of Khokand (Farghana), the most important western branch of the Tien-Shan are the Alexander mountains, 15,000 feet from the closed basin of Lake Issyk Kul.—*E. Schuyler, Turkestan*, ii. pp. 132, 133; *P. Arminius Vambery of Bokhara*, p. 13.

TIER, Teer, Teyar, a race in Malabar who form the mass of the field labourers, but their chief avocation is to collect and make coarse sugar from the juice of the palm. Their women are exceedingly pretty, with masses of long hair. They follow polyandric customs. Both men and women are generally handsome, with strong muscular frames; able to undergo much fatigue, and talkatively inclined. They do not encumber themselves with large wardrobes, a white cotton cloth wound round the waist, and reaching to the knees, being only necessary for their full-dress costume. The women sometimes carry a small piece of muslin over the shoulder, and draw it across the breast when a European approaches, but as white faces are not rare now-a-days, this habit is wearing out, and semi-nudity is the rule. A woman of easy virtue wears more decent apparel as a token of the laxity of her morals. Till lately Tyatti or females of the Tier caste did not lose caste by forming connections with rich and respectable foreigners. Since two or three have risen in the Government service to position they have put a stop to this practice.—*Markham*, 346.

TIFFIN. ANGLO-ARAB. Lunch, from Arabic Taffannun, refreshment.

TIFLIS, in lat. 41° 41′ 4″ N., and long. 44° 50′ 39″ E., is 6385 feet above the sea. It is the capital of the Russian Government of Georgia, and on both banks of the Kur river. The population of Tiflis is quite kaleidoscopic in the variety of its elements. Out of 104,024 inhabitants, 37,308 are Armenians, 20,390 Georgians, 10,574 Russians, 2186 Tartars, 2005 Germans, 1692 Persians, 1592 Poles, 1145 Jews, 388 Greeks, 293 Ossetes, 263 French, 227 Aissors, 163 Italians, 123 Turks, 123 Mingrelians, 81 English, Scotch, and Irish, 52 Lesghians, 37 Checs, 32 Gourians, 28 Swedes, 15 Lithuanians, 10 Latiches (?), 10 Roumanians, 9 Slovacs, and 8 Mordoins, Chouvaches, Kurds, and Circassians. The sexes are as unequally distributed; there are only 37,877 women to 66,147 men.—*MacGregor.*

TIGER.

Nimr, ...	ARAB.	Matcham, . . .	JAV.
Ch'ung, ...	CHIN.	Pilli, ...	TAM.
Bag, ...	HIND.		

Tigers occur throughout India, in the Malay Peninsula, Chinese Tartary, and Eastern Russia, but are unknown in China. The tiger uses its

fore-paw in self-defence and in fighting, but uses its teeth in catching its prey, grasping the neck. After killing, it frequently lets its prey remain till nightfall, when it returns to feed upon it.

The tiger ranges on the mountains of India up to 6000 and 7000 feet. In hot weather, it harbours near rivers, in thickets of long grass, brushwood, or amongst the tamarisk bushes of river islets. The tigers of Lower Bengal and Central India are particularly savage and ferocious. The average size of a full-grown male tiger is from 9 to 9½ feet, but occasionally in India a tiger is killed measuring 10 feet in length. On this point Lieut. Rice says (p. 50), 'This was the finest tiger we had yet killed; he measured 11 feet 11 inches, counting from the end of his nose, between the ears, to the tip of his tail. The largest tiger of all measured 12 feet 7½ inches long, and was stout in proportion, a perfect monster (p. 207); another measured 12 feet 2 inches, and was stout in proportion (p. 60); the largest tigress, 11½ feet [!] From the extraordinary amount of trouble she gave us before being killed, as well as from her great size, we all thought it must be a male tiger' (p. 213); another tigress is mentioned as 11 feet 1 or 2 inches (p. 216). Undoubtedly very extraordinary dimensions for tigresses to attain! The footprints of a very large tiger are noticed as 6 inches long by 5 wide. 'One tiger measured a few inches over 11 feet, and was exceedingly stout, with an extraordinary quantity of long hair about the face, and even had long curly locks down the back of his neck, much more so than in any we have before or since killed; this greatly added to his personal appearance.'

In 1881 (16th to 26th March), the Durbhungah shooting party shot for ten days, in Nepal and in North Bhagulpur, 12 tigers, 57 deer, 83 pigs, 7 hares, 7 floricans, besides smaller game, such as duck, partridge, snipe, and quail. The largest tiger measured 10 feet 5½ inches in length,—he was truly a monster animal. The largest tigress measured 9 feet 4 inches,—a very handsome and beautifully-marked animal.

Tigers catch the wild hog, the sambur and the spotted deer, and they often prey on cattle and seize villagers. They always retreat from opposition unless wounded or provoked. A herd of cattle will attack a tiger, and compel it to relinquish its prey. On one occasion, a herd of buffaloes rushed on a tiger that had seized their herd-boy, and compelled it to drop him. The wild boar sometimes kills a tiger. Tigers eat frogs, animals that die of disease, and also their own kind. They are partial to particular localities, and to old ruins, old temples, and three or four may be seen lying together on the tops of the walls. An old tiger will kill a cow about once a week, remaining near the carcase for two or three days, and sometimes longer, gnawing the bones before returning to its retreat.

Lieut. Rice mentions that, on skinning a dead tiger, 'we discovered a number of porcupine-quills in his feet, arms, and even face. These broken pieces of quill we had also met with on other occasions when skinning tigers, which proves that they must be fond of such food. The porcupine only feeds at night, when, doubtless, the tiger often meets him, and with a tap of his paw destroys him, in spite of his armour of quills.'

Tigers that have killed a man generally continue to take that food. In the Mandla district east from Jubbulpur, in 1856 and previous years, on an average between two or three hundred villagers were killed annually, and Jerdon found several villages of the Bastar country deserted owing to the ravages of tigers. Colonel Fraser thinks that Bastar is the great tiger nursery. The tiger is often hunted down by the wild dogs of India.

The Bhils declare that an old male tiger would certainly kill a young male if he caught him unawares at any time. Capt. M—— was once long kept awake at night at the town of Nundwass, by the terrible roaring of two large tigers, fighting over the body of a bullock one of them had just killed, close to the walls of the small town. Next morning a tiger was found dead by the bullock's side, and on following up some tracks a short distance, the inhabitants found another tiger also dead. Both were large males, covered with marks from each other's claws and teeth.

On one occasion, when following up a tiger's tracks, Lieut. Rice and his companions came upon a dead cheeta (or hunting leopard) that had just been killed by the tiger; he having, no doubt, surprised the cheeta asleep, for the marks of the tiger's claws, from which blood still was flowing, were quite plain on the body. On another occasion they found a hyæna that had been murdered by a tiger. The paw alone had been used to kill these victims, for there were no teeth-marks.

The tiger's presence is well known by the familiar yell of the kole balloo, or superannuated jackal; but it is at night mostly that his hideous voice is heard. The kole balloo is an aged, mangy, worn-out jackal, that has either left or been expelled his pack. Being perhaps prevented by his infirmities from any longer being able to get his own living by hunting in company with his fellows, he devotes himself to the service of some tiger. It is his business to discover and give warning of the whereabouts of any stray cattle or other animal he may find that will afford his royal master a meal, the remains of which, after the tiger has dined, he of course hopes will fall to his share.

Captain M—— says—'On one occasion we distinctly saw a large tiger by the clear moonlight several times pass and repass, within a score of paces from where we were sleeping out; in spite even, too, of the large fires kept burning around us, greatly to the terror of our servants, horses, and dogs. The old jackal howled frightfully all the while close at hand, and no doubt wondered when his meat would be got ready. We did not like to fire at this tiger, for fear, being but slightly wounded, he might charge among us; yet several times in the night he caused us to turn out and show a front. At last, towards dawn, he and the jackal took themselves off, to our great delight.' Jules Gerard, the famous French lion-slayer of North Africa, refers familiarly to the screech of the jackal, who generally follows the lion to eat the remnants of his meals.

A tigress has from two to four cubs at a birth, which remain with her till they are able to kill for themselves. A writer on this subject says—'I have shot seventeen tigresses enceinte, and have invariably found four cubs inside the mother.

I think my experience includes six or seven instances of this. But I have never seen more than three alive, and that number only at the stage of extreme babyhood, before they were old enough to begin hunting with their mother. In every instance that I have met with or heard of a tigress going about with half-grown cubs, the number of cubs has never exceeded two. From this you will see that my experience (small as it is) points to four as the normal number, of whom one or two are still-born, and to the number of cubs that survive extreme childhood being limited to two. The natives say that the father always eats one of his progeny.'

The clavicle of the tiger lies loosely imbedded among the muscles near the shoulder-joint, and is considered of great virtue by the natives of India. The whiskers are supposed to constitute a deadly poison, and are carefully burned off the instant the animal is killed; but in some parts of the south of India they are supposed to endow their possessor with unlimited power over the opposite sex; the claws are mounted in silver, and set as bracelets. The bones of the tiger, of the Leopardus brachyurus, and of the lynx, are sold in China, to form an ingredient in certain invigorating jellies, made of hartshorn and the plastron of the terrapin. Burmese and Malays eat the flesh of the tiger, for which they pay from 9d. to 1s. a lb., because they believe that by eating it they acquire the courage and sagacity of the tiger. The aborigines of Central India reverence, in a mild, inoffensive way, the sun, the moon, the tiger, and the bhoot or household spirits. They use tigers' claws as charms, and the most solemn oath of a Santal is on a tiger's skin.

In 1881 there were 647 persons killed by tigers in India, and how to destroy the tigers has been a subject of anxious thought in India. It is very difficult sometimes to make out a tiger when concealed in grass or bushes, for they will often lie very close, their skin being of the same colour as the dry grass and reeds around, while the stripes, even if seen, are easily mistaken for shadows cast by the strong glare of the sun.

Captain F. Nelson, of Siddapore and Peddacheroo, recommended poisoning tigers. Buffaloes or bullocks should be picketed in the most likely cross-paths in the jungle. As soon as one is killed, and any part eaten, a teaspoonful of strychnine should be inserted under the flap of the skin next the part eaten. The skin should be raised with a bamboo knife like a paper-cutter. No human hand should touch the carcase, and one person only should approach to insert the poison. A watcher in a tree would keep the vultures off till sunset, when he should quit the place. A writer says—'Australia has for years past most thoroughly dealt with the dingo or native dog,—I mean by the systematic use of strychnine. An Australian stockman troubled with the wild dog finishes his day's work by riding across country over which the dingo roams, trailing a paunch in an advanced state of decomposition, and he hangs at intervals upon the trees a bit of meat with a little strychnine enclosed in a slit cut in it. By these means over thousands of miles the wild dog has been absolutely extirpated, and many of the more recent settlers have scarcely ever seen one, in districts in which they were once abundant and most annoying.'

In Cochin-China, Malays obtain their livelihood by tiger-catching, the skin of this animal being valuable. Two Malays generally go in company, and travel over many parts of the country. Those who follow this business regularly, have chops or permits from the quong of Saigon, allowing them to build a hut for their use in any place they think fit. The hut is built on the top of four bamboos, from 15 to 20 feet high; and as the tiger cannot climb these, the two men can remain in it and watch their snares in safety. The snare consists of large leaves, or sometimes pieces of paper about six inches square, covered on one side with a substance of the same nature as bird-lime, and containing a poison, the smallest particle of which, getting into the animal's eyes, is said to cause instant and total blindness. They are laid about thickly, with the bird-limed side upwards, in the track of a tiger; and as surely as the animal puts his paw on one of the treacherous leaves, he becomes a victim; for, finding it stick to his foot, he shakes it, by which means other leaves adhere to it; he then probably rubs his paw over his head, in the attempt to rid himself of these leafy encumbrances, but they stick to his head and face; he then perhaps rolls himself on the ground, when he becomes fairly covered; and, while scratching and rubbing himself to get free, some of the poisonous bird-lime gets into his eyes, and blinds him. He growls and roars in agony, and this is the signal for his captors to come and despatch him. The Malays then skin the animal, and take away the parts of his body that may be valuable. They leave the carcase, well strewn with more leaves, as a bait for other tigers; they also ensnare other animals and birds in the same manner.—*Brown's Cochin-China; Jerdon; Blyth; Rice.*

TIGRIDIA CONCHIFLORA, the beautiful tiger flowers, open in the morning, and are of short duration; a second blossom appears on the same stem about the third day after the first has withered.—*Riddell.*

TIGRIS has two principal sources in Central Armenia, both of which spring from the southern slope of the Anti-Taurus, near those of the Araxes and Euphrates, and not very distant from that of the Halys. It was called Dijla by the Chaldæans; and the designation applied to it in the Scriptures is Hiddekel, a name which it bears at the present day among a large portion of the people living near its banks. The western branch rises at a spot which is about 20 miles westward of Arghani Maden; its course is north-eastward along the deep valley at the foot of the elevated ground of Kizan (4568 feet above the Black Sea), and, after having continued in the same direction towards the heart of Kurdistan, when a little more than 25 miles from the spring, it makes a sweep so as to take the direction of Arghani Maden, or nearly south.

Below Diyar Bekr the Tigris contains several islands. Its banks are thinly peopled, and the country about them is only partially cultivated; but the pasture grounds are rich, and well suited for the visits of the nomadic tribes which come occasionally to the river from the neighbouring countries. The windings of the Diyar Bekr river thus far have a length of rather more than 150 miles, whilst those of the tributary by Myafarekin are less than 100 miles. The Lesser Zab, or

Altun Su, is augmented by a considerable stream coming from Koh-i-Sanjak, a town of 1000 houses, and distant about 40 miles north, 35 miles east; from thence it becomes navigable by rafts. At their junction, the Tigris is about 500 yards broad, and a little below there is a kind of cataract, called Kelah, where the descent is so rapid that the river appears as it were to run down-hill. This place is much dreaded by the people when descending in boats; but it does not seem in reality to offer any serious impediment to the rafts so frequently passing between Mosul and Baghdad. After the Tigris has succeeded in forcing its way through the Hamrin Hills, at a spot called El-Fattha, on the left bank, there is an abundant supply of sulphur; and, directly opposite, naphtha rises in great quantities from the bed of the river. The Tigris may be considered as having an average width of 200 yards from Mosul to Baghdad, with a current in the high season of about 4¼ miles per hour. The country is highly cultivated from Mosul to Nimrud on both sides of the river; but from the latter place to Tekrit all cultivation nearly ceases; and it is but partially found in the tract along the river between Tekrit and Baghdad. The Tigris is navigable for rafts at certain seasons from the bridge of Diyar Bekr to Mosul, a distance of about 296 miles. Below the latter place it is more or less so throughout the year, and the descent to Baghdad is performed with ease and speed. Large rafts, supported by 200 or even 300 inflated skins, are much in use for the transport of goods, and when the merchants are on board, a small room is raised on the raft in order to give shelter from the sun and rain. During the flood season the voyage is performed in three or four days, whereas at another time it requires about fifteen days. The *Euphrates* steamer, under Lieutenant Lynch, went as high as the bund of Nimrud in 1838, and this officer made a map of the river, from Baghdad to Mosul, by trigonometrical operations between points which were determined by astronomical observations. The raft constructed to carry the Right Honourable John Sullivan from Mosul to Baghdad in 1781, was supported by 200 skins, and had on it a small cabin. Below the Tak-i-Kesra, or arch of Chosroes, and which marks the site of the ancient Ctesiphon, and a little lower down the remains of the ancient Seleucia, the continuations of the Tigris bear the well-known appellation of Shatt-ul-Dijla as far as Kut-ul-Amara, a small town on the left bank, nearly midway between Baghdad and Kurna, being about 178 miles by water from the former city, and 97½ miles directly S.S.E. from the latter. Lower down, after passing for about 40 miles through marshes and coming near the tomb of Ezra, the river resumes its former size and character, as it winds in the general southern direction to Kurna, which place is 232 miles from Kut-ul-Amara by the windings, and 144½ in direct distance. The whole course, thus briefly described, may be estimated at 1146 miles, which is little more than half the length of the sister stream, the Euphrates, from the sources of the latter to their junction at Kurna, but it discharges more water, owing to the numerous tributaries which it receives on its eastern side, among which may be particularly noticed the two Zab rivers, and the river Diyala. There are, however, only two feeders of any moment on the western side throughout the long distance from Diyar Bekr to Kurna. A considerable increase of the river Tigris takes place during the rains of November; subsequently it decreases, and swells irregularly at intervals, till the different feeders are bound up by the frost and snow of January in the Kurdistan mountains. This serious check retards for a time the swelling of the river, therefore its permanent rise, like that of the Euphrates, does not usually begin till the middle of March. There is an active commerce along the Tigris, between Basra and Baghdad, by means of large country boats, which go in fleets, and above the latter city it takes place chiefly by means of rafts from Mosul.

The regions through which the Tigris and Euphrates rivers run, and the countries intervening, have, since remote ages, been occupied by races who have taken a prominent place in history. Aram-Naharain is the Syria between the rivers of Genesis xxiv. 10 and Deuteronomy xxiii. 4. The greater part of what was called Mesopotamia in later times, constituted the territory of ancient Babel, and was the Aram-Naharain of Scripture. The same territory in Genesis xxviii. 2 is called Padan-aram, or Champagne Syria, both of which designations agree with the description of the country given by Strabo. He says that the Tigris washes the eastern side of Mesopotamia, and the river Euphrates its southern and western; whilst the Taurus separates it from Armenia on the north. Pliny is still more distinct: he says that Mesopotamia has the Tigris to the east, the Euphrates west, the Persian Gulf south, and the Taurus north, with a length of 800 miles and a breadth of 360 miles, the city of Charax being at the extremity of the gulf (lib. vi. c. xxvii). Mesopotamia extends above 10 degrees in longitude from Balis, in long. 38° 7′ 10″ E., to the estuary of the old Karun, in long. 48° 45′ 16″ E., and from the shores of the Persian Gulf, in 30°, to Sumeisat, in lat. 37° 31′ 5″ N.; its greatest width being about 170 miles from Jaber Castle to Husn Keifa, on the Tigris, and its extreme length nearly 735 miles. The irregular triangle thus formed has a superficies of nearly 76,117 square miles, including the shores of the gulf from the Pallacopas to the old Karun. The principal towns of Mesopotamia are Diyar Bekr, Husn Keifa, Jazireh, Mosul, Tekrit, Sammara, and Kut-ul-Amara along the Tigris; and along the Euphrates, Erzingan, Kemakh, Egin, Kebban Madeu, Malatiya, Rum, Kal'ah, Bir, Rakka, Deir, Rawd, Anah, Hadisa-el-Uzz, Jibba, Diwaniya, Lamlun, Sheikh-ul-Shuyuk, and Kurna; in addition to Suverek, O'fa, Haran, Seroug, Ras-el-Ain, Mardin, Nisibis, Sinjar, El Hadhr, Kerbela, Mesjid Ali, Samawa, Zobeid, and many other villages, both in the mountains and along the streams, between the two great rivers. Graue or Quade, Mohammara, and Basra are the ports; and the last, being the principal, is next in importance to Baghdad, the capital.

Races.—The races that have ruled here from the most remote times have been many, and remnants are still to be traced of former dominant peoples in the varied languages still spoken. The inhabitants of the region at present consist of

Arabs, Osmanli Turks, Kurds, Turkomans, Syrians, Jews, and Christians. Arabic is the general language; Turkish, Kurdish, Chaldee, Syriac, and Syro-Chaldæan dialects being the exceptions. The Sunni Muhammadan religion is prevalent; but in Upper Mesopotamia there are many Nestorian Christians, some of whom have become Roman Catholics, and Jacobite as well as Roman Catholic Syrians.—*Rawlinson; Bunsen; Rich; Chesney.*

TIGULAR or Tigalar, a term by which the Canarese people designate the Tamil-speaking race.

TIKA. Hind. A round piece of clay, paint, or tissue on the forehead of a Hindu. The application of the tika is a royal rite, and Rajput chiefs claim it as the symbol of investiture; but amongst Hindus generally, it means the circular mark made with coloured earths or unguents upon the forehead. The rana of Udaipur, the raja of Jeypore, and raja of Bilaspur, have it applied to their foreheads as a token of supremacy.

TIKA. Mahr. A pareel of ground, a field.

TIKA. Sansk. A commentary. Most of the Siddhantas which have been written by modern Hindu authors, such as the Arya, Parasara, and other treatises known by that designation, as well as the tikas of Bhaskara Charya, Varaha Mihira, and others, may be considered as commentaries on the four principal Siddhantas of the Hindu religion.

TIKAL, a Chinese weight, also money of account. As a weight, about 4¼ oz., or the 16th of the catty; as a money, reckoned at the third of a pound sterling. It is also called a lyang; another name in Burma for the kyat, a weight which consists of 252 grains. In Siam the tikal coin and weight is 236 troy grains, and its value in England is about 2s. 6d. sterling. Major Phayre believes the Burma name to be derived from Ta-kyat, one kyat. The tikal or kyat in Burmese weights is equal to 14 tolas, or 100 tikals are equal to 1400 tolas.—*Simmonds' Dict.*

TILA. Hind. Strips of the bark or sheaths of the moonj grass used by Dosalis. Tili of Muzaffargarh, the pith of the culm of sirki, Saccharum moonja.

TILA. Beng. A word commonly applied in Eastern Bengal to low and often isolated hills starting up from the plain. At the town of Sylhet there are several such, on which the houses of the European officials are built.—*Yule, Cathay*, ii. p. 516.

TILA. Hind. Gold, gold wire, gold thread. Tila-bat, the twister or maker of gold embroidery thread (gold on silk), or Kalabatun. Tila-kar, gold work of embroidery fabrics.

TILA, a gold coin of Bokhara, value 12s. 6d. Padshahi Tilasi, the gold tila of Bokhara. The Central Asia coin has three different values. There are the tila of Bokhara, of Khokand, and of Khiva. The last-named State, indeed, has one or two kinds. It is made of gold, the purity of which varies greatly, and in consequence its value fluctuates to a greater extent than even the changes of the money market would warrant. Of the three, the Bokharan tila is the most valuable, averaging from 11s. to 13s.; the Khokandian coming next, at about 8s. 9d.; and the Khivan last, at about 8s. 4d. The smaller Khivan tila is half the value of the larger. The result of an analysis by the Mining Department at St. Petersburg of the Bokharan tila showed that it contained rather more than 4½ grammes of pure gold, while the Khokandian had less than 3½ grammes of the metal. This analysis made it clear that the coin of Bokhara was fully entitled to the first place among the moneys of Turkestan. The tila has always been the legal tender in that part of the world.

TILAK. Hind. A kind of tunic worn by Meo women.

TILAKA or Viseshaka. Sansk. A mark with some coloured substance in the middle of the forehead. The sectarian mark on the forehead of a Hindu, but most of the non-Aryan races also use it.—*Hind. Th.* See Tika.

TILAK CHANDRA, a tribe of Bais Rajputs at Dundhia khera.

TILES.

Tuiles, ... Fr.	Ubin, Jobin, . . Malay.
Dachziegel, . . . Ger.	Tscherepiza, . . . Rus.

Tegole, Embrici, . . It.	Odugal, ... Tam.
Ganteng, Gandeng, Malay.	Penkalu, ... Tel.

Tiles are made of clay, and baked in an oven or in the open air to harden them. They are of various shapes and sizes, and are used chiefly for covering roofs, and occasionally also for paving floors and making drains.—*Faulkner.*

TILE-TEA, a kind of flat brick tea, of much solidity, made in China, and taken to Kiachta, where it is sold to the Armenians and Tartars, who distribute it through the Caucasian provinces and Eastern Siberia. The Kalmuk, Kirghiz, and Buratria nations consume the greater part of it. It is prepared in a different manner from common tea, being stewed with milk, butter, salt, and herbs, constituting rather an article of food than a dietetic beverage.—*Simmonds' Dict.*

TILIACEÆ. *Juss.* The Linden tribe of useful plants, consisting, in India, of the genera Corchorus, Triumfetta, Grewia, Berrya, and Brownlowia. The general properties are mucilaginous and emollient. Corchorus olitorius, the pat of Bengal, and C. capsularis, the ghi-nalita-pat, are cultivated for the fibre of their bark, which is employed to form cordage for agricultural purposes and boats, also to form gunny, a coarse cloth, and likewise to form paper. Triumfetta angulata is the bun okra of Bengal; several species of Grewia yield useful products, and Berrya ammonilla yields the valuable Trincomalee wood of commerce.—*Voigt.*

TILING, the race speaking the Telugu language. Tiling and Canarese people are almost of similar physical frame—have tall, graceful figures, but, as a rule, the Tiling are fairer than the Canarese. The great similarity of the two languages, Canarese and Telugu, supports the impression that they are of the same stock, who have separated in more recent times, and that circumstances have modified their characters and personal appearance. The inland tract of table-land country occupied by the Canarese, from the southern part of the Mysore country through Bellary in the Ceded Districts, up to Bijapur and Beder, is arid, and the soil yields as food crops, small millet grains, Eleusine coracana, Setaria Italica and Germanica, Panicum, and Penicillaria spicata, which even the humbler labourers of the south of India only use on pressure, when scarcity or dearth prevails; and a hot, arid climate, with a less nourishing food may have led to their darker complexions.

The Tiling people dwell from the shores of the Coromandel coast westwards to Beder, and three languages, Telugu, Mahrati, and Canarese, there commingle. In 1881, the number speaking Canarese was 8,336,008, and those speaking Telugu, 17,000,358.

TILSIM, pl. Tilasim. ARAB. A talisman or magical image, upon which, under a certain horoscope, are engraved mystical characters, on seals, images, etc., as charms against enchantment or fascination. They are often buried with treasure, to ward off discovery; or by being rubbed, command the presence and services of the Jin.

TIMAH. MALAY. Tin. Also Timah-putih and Timah-sari, called also Talagh. The Malay and Javanese term for tin, timah, is a word used in the Archipelago as a generic term for both tin and lead; the epithet white or flowery, putih and sari, being given to tin itself, and that of black, itam, to lead, a metal with which, being entirely a foreign product, the Malayan nations are but little acquainted.

TIMALIA, a genus of birds of the sub-family Timalinæ. T. pileata, *Horsf.*, the red-capped wren babbler, occurs from Northern India to the Eastern Archipelago; T. nigricollis, *T.*, T. erythroptera, *Bl.*, T. maculata, *T.*, and others, occur in the Malay Peninsula and E. Archipelago. T. pileata is not unfrequent in the groves and small woods which abound throughout Java. It often approaches villages and plantations, constructing its nest in the hedges. It is one of the social birds that delight to dwell in the vicinity of cultivation. Its flight is low and interrupted; and wherever it resides it is a welcome neighbour, in consequence of its peculiar pleasant note, which consists of a slow repetition of the five tones of the diatonic scale (C, D, E, F, G), which it chants with perfect regularity, several times in succession, and at small intervals of time. Dr. Horsfield remarked that the sixth tone was sometimes added; but as this required apparently an extraordinary effort, it was by no means so agreeable to a musical ear as the simple repetition of the five notes, which appear to be the natural compass of the bird's organs.—*Jerdon; Eng. Cyc.; Horsfield's Java.*

In contradistinction to dye-woods, woods for engraving, ornamental woods, etc., wood felled and seasoned, and fit for building purposes, is called timber, from Saxon, Timbrian, to build. Wood is a term commonly applied to those portions of the vegetable axis that are sufficiently hard to offer considerable resistance and solidity, so as to be used for purposes requiring various degrees of firmness and strength. Every flowering plant is composed of an axis and appendages of the axis; the former consisting of the stem and root, the latter of the leaves and flowers. In trees, shrubs, and undershrubs, the axis is said to be woody; in herbs it is termed herbaceous. In the former, stems are permanent, and do not die to the ground annually, as is the habit of the latter. A shrub, a tree, an undershrub, a bush are merely gradations of magnitude in perennial plants; woods valuable for purposes of art and manufactures are derived from all of them. But bulk and dimensions are necessary to make timber available for extensive use.

The trunk of a tree, with or without boughs or branches undressed, is termed round timber; when hewn into logs, square timber; when quartered, billets; when split, staves and lathwood; when sawn, deals, battens, planks, boards, and scantling. The stems or trunks of several kinds of young trees are called spars, poles, and rickers, also prop-wood and post-wood.

In the south of India, the stem of the palmyra palm, cut longitudinally in four, is called reeper, and nat'h is applied to squared timber.

Sap-wood is that part of the wood next the bark, and heart-wood, near the centre of the bole or stem. Sap-wood is softer and generally lighter-coloured than heart-wood; it decays more rapidly, and is more subject to attacks of insects. The proportion of sap-wood varies much in different trees. In many trees, such as those that produce the ebonies of commerce, the line of demarcation between the heart-wood and sap-wood is so strongly defined as to permit the application of those two parts of the timber to different economic purposes, and the sap-woods and heart-woods in such cases, though the products of the same tree, receive in commerce distinct names. In other trees the change from the sap-wood to the heart-wood is gradual; but in all cases the sap-wood preponderates in young trees, and the heart-wood in the old. Also, in trees that have not arrived at maturity, the hardness and solidity of the wood are greatest at the heart, and decrease towards the sap-wood. But in the mature tree the heart-wood is nearly uniform, while that of a tree on the decline is softer at the centre than it is next the sap-wood.

As with the animal world, so with the vegetable creation, trees have the three stages of infancy, maturity, and old age; and Tredgold (p. 196) tells us that the oak and chesnut trees, under favourable circumstances, sometimes attain an age of about 1000 years; beech, ash, and sycamore, of half that age. The plane tree, the Chinar of N.W. India, is said to live to a great age. If felled too young, there is much sap-wood, and even the heart-wood has not acquired a proper degree of hardness, and such timber cannot be durable. On the other hand, if the tree be not felled till on the decline, the wood is brittle and devoid of elasticity, is tainted and discoloured, and soon decays. The rule therefore is to fell the mature tree when the quantity of sap-wood is small, and the heart-wood nearly uniform, hard, compact, and durable: but too early is worse than too late. Therefore, for S.E. Asia, a tabular statement showing the ages at which its various timber trees reach maturity is very necessary, though still a desideratum. Dr. Brandis tells us that in British Burma, a full-grown teak tree of 9 feet in girth cannot be supposed to be less than 160 years old. And a writer has mentioned that teak should not be cut for timber under 80 years of age. In England, Tredgold tells us (p. 198) oak is never cut for timber under 50 nor above 200 years of age.

The vast extent of the regions of the East Indies,

their various climates and physical conditions, render it impossible that the same tree can produce the identical quality of timber in every locality where it grows. As an instance of this may be cited the majestic teak, which grows to an immense height in Malabar, on the Godavery, in Pegu and Tenasserim, and may be seen in the mountains of Bundelkhand, but is there only in the form of a moderate-sized shrub; and even where it presents the same form of a gigantic tree, as in Malabar and Pegu, the quality of the timber it yields is dissimilar. The timber of trees which grow in moist and shady places is not so close, substantial, or durable as that which comes from a more exposed situation.

The *preservation* of timber naturally arranges itself into the preservation of growing timber, and that of timber when felled. The preservation of growing timber is an art of considerable importance, and is cultivated in countries where timber is comparatively scarce.

The practice of thinning out plantations is of value, not only as affording a supply of wood, but, by admitting an increased supply of air and light to the remaining trees, their growth is greatly promoted.

Since the close of the 18th century, it has been an increasing belief that the climate of a country is greatly modified by the scarcity or abundance of its trees and forests. Forty years ago, in 1845, Assistant-Surgeon Balfour furnished the Madras Government with a memorandum of all existing information on this subject; it then became a matter of inquiry by a committee of the British Association; and it is now generally recognised that trees exercise a powerful influence on the climate of the region or district in which they grow. In a tropical country like India, therefore, the preservation of existing trees, and their extension in arid districts, is a matter of much importance. Dr. Cleghorn, in a report for 1860, suggested that the high wooded mountain tops overhanging the low country (such as Hoolicul) should be preserved with rigid care, and the forest there not be given over to the axe, lest the supplies of water be diminished. In order that the course of the rivulets should be overshadowed with trees, the hills should be left clothed to the extent of about half of their height from the top, leaving half of the slope and all the valley below for cultivation.

Teak is a ship-building wood; teak, sal, padouk, etc., are recognised ordnance woods; Trincomalee, Chittagong, and Coromandel rosewood, redwood, satin-wood, sandal-wood, snake-wood, mahogany, ebony, kyaboca, zebra, and tulip are furniture or fancy woods.

By far the greater part of the ornamental woods are derived from trees. There are, however, some remarkable exceptions. The wood of roots is different in structure from the wood of stems, and the same tree may furnish two very different kinds of ornamental wood, according as they are derived from its ascending or its descending axis. The wood of the inner portions of a stem may be of very different colour and quality from that of its outer parts. In the immediate neighbourhood of the origin of branches, it may exhibit varieties of pattern, such as to render it greatly more ornamental than elsewhere, and in some cases, when under the influence of morbid growth, reveals additional beauties, so as to be prized for qualities which in nature are defects. If a cross-cutting of teak, or oak, or mango be compared with a like portion of palmyra wood, the differences between them will be seen strongly contrasted. In the former, the layers of wood are ranged in concentric circles round the central pith, and are encased externally in a binding of bark, itself composed of distinct and differently organized portions. In the latter there is a uniform appearance throughout the section, the substance not being disposed in concentric rings, but appearing as if a bed or ground of one kind was studded with specks of another order of tissue. These dissimilarities indicate differences of the greatest structural importance in the economy of the respective trees. Corresponding with them are peculiar modifications of every portion of the plant's organization. Also the external aspect of the plants of either type is altogether unlike that of the other. The appearance styled silver-grain in wood is dependent on the cellular tissue of the medullary rays, and is therefore exhibited by exogenous woods only. It gives the streaks the glancing satiny lustre so ornamental in many kinds of woods. In the oak and beech this appearance is conspicuous. The inner layers of wood, after the tree has become aged, often become compact, and frequently different in colour from the new wood. They are then styled the heart-wood. Botanists term them the duramen, and apply the name alburnum to the outer layers or sap-wood. In the former the tissues have become dry and dense, and charged with solidifying deposits, so as to prevent them aiding in the ascent of the sap. Often, too, they become more or less deeply coloured, so as conspicuously to contrast with pale sap-wood. This difference is especially conspicuous in the ebony tree, the black portion of which is the duramen or heart-wood. In the oak they resemble ebony.

The main economic value of timber, apart from considerations of strength, durability, texture, and colour, will depend on the quantity in which it can be produced for the many purposes for which timber is indispensable; and in countries destitute of coal, the supply of fuel for manufactories, railways, and steam flotillas, as well as its domestic consumption, is an important item in the consideration of timber resources. The most important application of wood is in the building and repairing of houses and ships, and in the construction of machinery. For these purposes the larger trees which come under the denomination of timber are employed. In the moist climates of Southern and Eastern Asia, trees grow to a majestic height, but others are so destitute of verdure that even the castor-oil plant is valued for construction.

For all practical purposes, those woods appear to be best in which the cells are lined with resinous matter; those filled with hygroscopic gummy matter are for the most part of less value; they are seasoned with difficulty, and are always more liable to decay. The best woods are those having a strong fibre, protected from all external influences by a coat of resinous matter, or at least of a matter insoluble in water, and one which does not attract atmospheric moisture.

Some trees, while growing, secrete large quantities of silica, which is deposited in hollows or in the interstices of the woods. The tabashir of the hollow bamboos is a well-known example; the tamarind tree has so many portions of silica in its

stem, that the carpenters of the E. Indies object to work it; and masses of silica, of considerable size, have been got from the teak logs.

Teak.—In the years 1880-81 to 1882-83, the value of the teak exported from India ranged from 50 to 61 lakhs. That of other timber, with ebony and sandal-wood and other kinds, was 4½ lakhs, sandal-wood in 1883 being Rs. 4,02,931.

In the years 1880 to 1882, the timbers and woods of kinds imported into Great Britain under the designations hewn, sawn, split, planed, dressed, staves, and mahogany, ranged in value from ten to twenty millions sterling; those from British North America, Germany, Norway, Russia, Sweden, and other countries, ranged in value from £14,956,547 to £17,168,300.

Teak when young grows very rapidly. Trees ten years old have usually a girth of eighteen inches, measured at six feet from the ground; at twenty-two years, a girth of three feet is attained; but full-grown trees of nine feet in girth cannot be supposed to be less than 160 years old.

The strength and density of teak timber vary exceedingly, according to the locality where the tree is grown. The extremes observed in preliminary experiments were 40 and 50 lbs. per cubic foot, and 190 to 289 lbs. breaking weight. Malabar teak is by common consent ranked higher for naval purposes than Tenasserim or Pegu timber. The cause of its greater durability and power of resisting dry-rot, appears to depend chiefly on its more oily or resinous quality, and the greater density arising from its slow growth on the sides of hills. In Burma, the best teak-growing districts are Pegu on the Irawadi and Sitang rivers and in the Thoungyen valley, comprising 7312 square miles of forest. Tenasserim and Martaban include 520 square miles of jungle on the Salwin river banks. But even these forests are poor compared with the extensive tracts covered with teak to the north of the British boundary, especially on the feeders of the Sitang and Salwin rivers, and some of the tributaries of the Meinam or Bankok river. The trees also are, as a rule, much larger, and the shape of the stem more regular, in the forests of the Burmese empire, the Siamese kingdom, and the Karennee country. The tallest teak tree measured in Pegu was 106 feet high to the first branch.

Sal.—In Central India, on the Nerbadda river, extensive sal or saul forests begin to take the place of teak, which does not occur farther north than Jhansi. Along the whole Sub-Himalayan range up to 3000 feet elevation, and in a belt range from five to twenty miles wide at the foot of the hills, and over 1500 miles long, dense forest is found. Wherever the soil is elevated and dry, this is pure sal forest. In Kamaon, Oudh, and many other of the Nepal jungles, as many as seventy first-class trees per acre have been found, besides young trees from seed, at 200 or 300 per acre, growing up with the old. The ferry-boats used on the Gogra and other affluents of the Ganges are formed of single logs hollowed out and floated down from Nepal, one of which holds ten to fifteen men, with cattle and horses, costing £5 to £10, purchased from the Nepal boat-makers. Sal timber (Shorea robusta) is close-grained and heavy, but does not appear to be very durable, and on that account is inferior to teak; but in strength it surpasses the latter, and deserves to be considered the second best timber tree in India. The British sal forests may roughly be computed as follows:—Central Province, 2000 square miles; Kamaon and Garhwal, 600; Dehra Doon and Binjore, 400; Oudh, 250; Gorakhpur, 300. Both sal and teak trees take 100 years to grow.

Pine.—There are some excellent coniferous woods in the British hill provinces of Kamaon and Garhwal and the Panjab Himalayas. The Cedrus deodara is there of immense age and size, 40 feet girth and 250 feet high; its timber is nearly imperishable. Pinus longifolia occurs over all the lower Himalaya hills, covering an area of several thousand square miles. Its timber is equal to Norway pine. The Lagerstræmia reginæ is abundant throughout British Burma, and is used more extensively than any other, except teak, for the fittings of boats, sometimes for the hulls of canoes, in Rangoon for the knees of ships, and also now for ordnance purposes.

The padouk of the Tenasserim Provinces, Pterocarpus Indicus, is a beautiful, hard, compact timber.

The Straits Settlements are very rich in wood.

The Malay Peninsula also possesses many useful woods, and some four or five command a market, at very high prices, for Madras. They are strong, solid, and very durable, being principally used for girders, rafters, joists, and timber for bridges, standing the sudden changes of the climate remarkably well. One, the marrabow, is also used for furniture; it is not subject to dry-rot, and, when well seasoned, is known to last nearly half a century. A wood called boonoot, which is tough, hard, crooked-grained, and fibrous, is in general use for masts and spars of vessels.

Ceylon, although well timbered and rich in some ornamental and fancy woods, exports but little timber.

For the *preservation* of timber in moist places, remove and replace the sap, or so modify it as to retard or prevent decay. With these aims, the spontaneous ascent of the sap is encouraged by retaining the felled timber in an upright position; soaking the felled wood in water so as to dilute or remove the sap; and in the pneumatic processes, which are the most effective, the following have been used for impregnation:—Creosote of commerce (raw), carbolic acid, acetate of iron (raw), sulphate of copper, chloride of zinc, sulphate of zinc, perchloride of mercury or (kyan) corrosive sublimate, chloride of sodium (salt), sulphate of soda, saltpetre, borax, sulphate of iron, arsenic.

Various methods have been adopted to render wood less combustible, by saturating it with solutions of phosphate of soda, and muriate or sulphate of alumina, and chloride of calcium. A proposed plan is to impregnate wood with silicate of soda, and to coat its surface with a silicate. The impregnating of the wood is effected by putting it into a solution of the silicate. The surface of the wood is then washed over with a somewhat diluted solution of the silicate of soda. After an interval of at least two hours, a coating of thick lime-wash is applied over the silicate; and finally, on the following day, a strong solution of the silicate is applied over all. In this way a protective covering is given to the wood. The process may be used with benefit in the case of timber employed for wooden huts.

The following is a list of the relative strengths of a few of the Australian woods, and some of

the Indian woods; also their weights per cubic foot:—

	Lbs.	Strength.
Australian Woods—		
Tarra,	59	20,238
Tasmanian grey iron-bark,	64	24,400
Australian grey iron-bark,	64	22,500

Indian Woods—		
Sal,	64	18,500 average.
Teak, Indian,	55	15,500 average.
Teak, Moulmein,	42	11,520
Teak, Cochin-China,	44	12,100
Teak, Johore,	62	19,400
Deodar,	29·34	...
Chir,	26·67	...

A vessel built of the Australian woods, iron-bark, box, banksia, and tea-tree timber, and planked and lined with flood gum, blue gum, or black bust, and trenailed with iron bark, takes a high place at Lloyds'.

The preservation of the forests of India, and the search for timbers and fancy woods suitable for the purposes of the State and wants of the people, have long been objects of attentive interest to the Governments of India. Amongst the earliest of the scientific investigators we find recorded the names of Drs. Roxburgh, Ainslie, Wallich, Royle, Gibson, Falconer, M'Clelland, Graham, Wight, and Mason; while Mr. Edye, Colonel Frith, Captain Dance, Mr. Mendis, Colonel Benson, and Mr. Rohde applied a large practical knowledge of the qualities of timber to ascertain the woods suitable for the manufacturing industries of India. There have appeared on this subject—three editions of Balfour's Timber Trees, Timber, and Fancy Woods; Beddome's Flora Sylvatica; Skinner's Indian Timbers; Brandis' Forest Flora; and Gamble's Manual of Indian Timbers.

The timber trees belong principally to the following natural orders of plants, viz.:—

Alangieæ.	Dipterocarpeæ.	Rhizophoreæ.
Anonaceæ.	Ericaceæ.	Rosaceæ.
Apocynaceæ.	Euphorbiaceæ.	Rubiaceæ.
Areceæ.	Flacourtianeæ.	Salicariæ.
Aurantiaceæ.	Guttiferæ.	Sapindaceæ.
Bignoniaceæ.	Lauraceæ.	Sapotaceæ.
Bombaceæ.	Leguminosæ.	Sterculiaceæ.
Borasseæ.	Lepidocaryeæ.	Styracaceæ.
Byttneriaceæ.	Loganiaceæ.	Tamariscineæ.
Cedrelaceæ.	Magnoliaceæ.	Taxaceæ.
Cocoaceæ.	Malvaceæ.	Terebinthaceæ.
Combretaceæ.	Memecycleæ.	Tiliaceæ.
Coniferæ.	Moreæ.	Ulmaceæ.
Cordiaceæ.	Myrsineaceæ.	Verbenaceæ.
Cupuliferæ.	Myrtaceæ.	Zanthoxylaceæ.
Dilleniaceæ.	Olacineæ.	

There is no regular rule for determining botanical orders and genera by means of the wood, for in some cases the structure of the genera or species presents characters of very dissimilar type. But the woods of the Coniferæ are always recognisable by the absence of pores; those of the Cupuliferæ by the arrangement of the pores in wavy radial lines and a particular texture. The arrangement of the pores in short wavy lines is a character of the woods of the Sapotaceæ. Somewhat broad medullary rays often indicate the woods of the Dilleniaceæ, Rhizophoreæ, and Myrsineaceæ; a close and even grained wood, most species of the order Rubiaceæ; while the woods of species of Ficus are recognised by alternate layers of soft and firm tissue.

The pores of different woods vary, and Mr. Gamble gives the following examples:—Extremely small, Buxus sempervirens; very small, Acer pictum; small, Adina cordifolia; moderate, Bassia latifolia; large, Albizzia lebek; very large, Erythrina suberosa.

Mr. Gamble illustrates his terms for degrees of hardness by applying them to the timbers of certain trees:—Extremely soft, Cochlospermum gossypium; very soft, Sterculia villosa, Bombax Malabaricum; soft, Cedrela toona, Albizzia stipulata; moderately hard, Ficus Bengalensis, Tectona grandis; hard, Shorea robusta, Terminalia tomentosa; very hard, Dalbergia sissoo, Quercus semecarpifolia; extremely hard, Pterocarpus Santalinus, Hardwickia binata.

In all countries, most of the woods in general use have a variety of names; the local name varies often in the same district. Many have likewise a commercial name, by which they are known in the market, as Trincomalee wood, Coromandel wood, Chittagong wood, etc. There are cedars from several trees; every country has its own iron-wood, rosewood, black-wood, and ebony. The timber trees and fancy wood of Southern and Eastern Asia are about 1000 in number, but those in common use are not above 100. The following list contains the names of the principal trees which are felled for timber or fancy woods and useful purposes throughout the various countries in the East Indies:—

Abies dumosa, *Lindon.*
A. Smithiana.
A. Webbiana, *Lindl.*
Acacia Arabica.
A. catechu.
A. dealbata, *Link.*
A. Farnesiana.
A. ferruginea.
A. intsia.
A. leucophlœa.
A. melanoxylon, *R. Br.*
A. modesta, *Wall.*
A. pennata.
Acer cæsium, *Wall.*
A. Campbellii, *H. f.*
A. caudatum, *Wall.*
A. cultratum.
A. Hookeri.
A. lævigatum, *Wall.*
A. oblongum, *Wall.*
A. pictum, *Thunb.*
A. Sikkimense.
A. Thomsoni.
A. villosum, *Wall.*
Acrocarpus fraxinifoliis, *Arn.*
Actephila Neilgherriensis.
Adansonia digitata.
Adenanthera pavonina.
Adhatoda vasica.
Adina cordifolia, *H. f. et Bth.*
A. sessilifolia.
Ægiceras corniculata.
Ægle marmelos.
Æsculus Indica, *Colebr.*
Æ. punduana.
Afzalia bijuga, *A. Gray.*
Agathis loranthifolia.
Agati grandiflora.
Aglaia spectabilis.
Ailanthus excelsa.
A. Malabarica.
Alangium decapetalum.
Albizzia amara, *Boivin.*
A. Julibrissin, *Boivin.*
A. lebbek, *Bth.*
A. lucida, *Bth.*
A. odoratissima, *Bth.*
Albizzia procera.
A. stipulata, *Boivin.*
Alnus Nepalensis, *D. Don.*
A. nitida, *Endlicher.*
Alseodaphne grandis.
A. semecarpifolia.
Alstonia scholaris.
Altingia excelsa.
Amoora cucullata, *Roxb.*
A. rohituca.
A. spectabilis.
Anacardium occidentale.
Andrachne cordifolia.
Anisophyllea Zeylanica.
Anogeissus acuminata.
A. latifolia.
A. pendula.
Anthocephalus cadamba, *Bth.*
Antiaris toxicaria, *Lesch.*
Antidesma diandrum.
A. ghæsembilla.
A. menasu.
Aquilaria agallocha.
A. Malaccense.
Araucaria, *sp.*
Areca catechu.
Artocarpus calophylla.
A. chaplasba, *Roxb.*
A. echinata.
A. hirsuta.
A. integrifolia.
A. lacoocha, *Roxb.*
A. nobilis.
A. pubescens.
Atalantia monophylla.
A. missionis.
Averrhoa carambola.
A. bilimbi.
Avicennia tomentosa, *Jacq*
Baccaurea sapida, *Mull.*
Bambusa, Bamboo.
Barringtonia acutangula.
B. speciosa, *Forst.*
Bassia butyracea, *Roxb.*
B. latifolia, *Roxb.*
B. longifolia, *Willd.*
Bauhinia acuminata, *L.*
B. brachycarpa.

Bauhinia diphylla.
B. Malabarica, *Roxb.*
B. purpurea, *Linn.*
B. retusa, *Roxb.*
B. tomentosa.
B. variegata, *Linn.*
Berrya ammonilla.
Betula acuminata, *Wall.*
B. bhojputra, *Wall.*
B. cylindrostachys, *Wall.*
Bischoffia Javanica, *Bl.*
Blackwellia perpinqua.
B. spirale.
B. tomentosa, *Vent.*
Bœhmeria rugulosa, *Wedd.*
Bombax heptaphyllum.
Borassus flabelliformis.
Boswellia thurifera, *Roxb.*
Briedelia montana, *Willd.*
B. tomentosa, *Bl.*
Bruguiera gymnorhiza, *Lam.*
Buchanania angustifolia, *Roxb.*
B. latifolia, *Roxb.*
Bucklandia populnea, *R. Br.*
Bursera serrata, *Coleb.*
Butea frondosa.
Buxus sempervirens, Box.
Cæsalpinia sappan, *Linn.*
Calamus, Canes, Rattans.
Callicarpe arborea, *Roxb.*
Calligonum polygonoides, *Linn.*
Calophyllum amœnum, *Wall.*
C. elatum, *Bedd.*
C. polyanthum, *Wall.*
C. spectabile, *Willd.*
C. tomentosum, *Wight.*
C. Wightianum, *Wall.*
Canarium Bengalense, *Roxb.*
C. coccinco-bractcatum, *Kurz.*
C. euphyllum, *Kurz.*
C. strictum, *Roxb.*
Capparis aphylla, *Roth.*
C. grandis, *Linn.*
Carallia integerrima, *D.C.*
C. lucida.
C. Zeylanica.
Carapa Moluccensis, *Lam.*
C. obovata, *Bl.*
Careya arborea.
Carpinus viminea, *Wall.*
Caryota sobolifera, *Wall.*
C. urens, *Linn.*
Cascaria esculenta, *Roxb.*
C. glomerata, *Roxb.*
Cassia auriculata, *Linn.*
C. fistula, *Linn.*
C. Florida, *Vahl.*
C. nodosa, *Ham.*
C. Roxburghii, *D. C.*
Castanea Indica, *Roxb.*
C. Martabanica of Tavoy.
Casuarina equisetifolia, *Forst.*
Cedrela serrata, *Royle.*
C. toona.
Cedrus deodara.
Celtis Australis, *Linn.*
C. Caucasica, *Willde.*
C. tetrandra, *Roxb.*
C. Wightii, *Planch.*
Cerbera odollam, *Gærtn.*
Chavannesia esculenta, *D. C.*
Chickrassia tabularis.
Chloroxylon Swietenia, *D. C.*
Cicca disticha.
Cinchona, *sp.*
Cinnamomum glanduliferum, *Masn.*
C. obtusifolium, *Nees.*
C. tamala, *Nees.*
Clerodendron inerme, *Gærtn.*
Cocos nucifera, *Linn.*
Connarus speciosa.
Conocarpus latifolia, *Roxb.*
Cordia angustifolia.
C. fragrantissima, *Kurz.*
C. M'Leodii, *H. f. et T.*
C. myxa, *Linn.*
C. vestita, *H. f. et T.*
Coriaria Nepalensis, *Wall.*
Cornus capitata, *Wall.*
C. macrophylla, *Wall.*
C. oblonga, *Wall.*
Corylus colurna, *Linn.*
C. ferox, *Wall.*
Cotoneaster bacillaris, *Wall.*
Cratæva Roxburghii.
Cratoxylon neriifolium, *Kurz.*
Croton argyratus, *Bl.*
Cupressus funebris, *Endl.*
C. torulosa, *Don.*
Cylicodaphne Wightiana, *Nees.*
Cynometra bijuga, *Spanog.*
C. polyandra of Nepal.
C. ramiflora?
Dacrydium elatum, *Wall.*
Dalbergia cultrata, *Grah.*
D. frondosa, *Linn.*
D. lanceolaria, *Linn.*
D. latifolia, *Roxb.*
D. paniculata, *Roxb.*
D. sissoo, *Roxb.*
D. Ujjainensis.
Daphnephyllopsis capitata, *Kurz.*
Daphnidium elongatum, *Nees.*
D. pulcherrimum, *Nees.*
Dendrocalamus, *sp.*
Dillenia augusta.
D. Indica, *Linn.*
D. pentagyna.
D. scabrella, *Roxb.*
Diospyros chloroxylon.
D. ebenum, *Konig.*
D. exsculpta, *Beddome.*
D. hirsuta.
D. Kurzii, *Hiern.*
D. melanoxylon.
D. sylvatica, *Roxb.*
D. undulata, *Wall.*
Dipterocarpus alatus.
D. grandiflora.
D. Indicus, *Beddome?*
D. lævis, *Ham.*
D. tuberculatus, *Roxb.*
D. turbinatus, *Gærtner.*
Dodonea viscosa.
Dombeya melanoxylon.
Doona Zeylanica, *Thw.*
Drimycarpus racemosus, *H. f.*
Duabanga Sonneratioides, *Buch.*
Dysoxylum procerum, *Hiern.*
Echinocarpus dasycarpus, *Bth.*
Ehretia aspera, *Roxb.*
E. lævis, *Roxb.*
Elæocarpus lanceæfolius, *Roxb.*
E. serratus, *Linn.*, Ceylon.
Elæodendron Roxburghii, *W. and A.*
Embryopteris glutinifera, *R.*
Engilhardtia Colebrookiana, *Lindl.*
E. spicata, *Bl.*
Eriobotrya Japonica, *Lind.*
Eriolæna Candollei, *Wall.*
E. Hookeriana.
Erythrina Indica, *Lam.*
E. suberosa, *Roxb.*
Eucalyptus globulus, *Lab.*
Eugenia Arnottiana.
E. caryophyllifolium.
E. grandis, *Wight.*
E. jambolana.
E. Kurzii, *Duthie.*
E. Malaccensis.
E. myrtifolia.
E. obovata, *Wall.*
E. præcox, *Roxb.*
E. salicifolia, *Wight.*
E. spiculata, *Roxb.*
Euonymus Hamiltonianus, *Wall.*
E. pendulus, *Wall.*
Euphorbia tirucalli.
Eurya acuminata, *D. C.*
Excœcaria agallocha, *Willd*
Fagræa fragrans.
Feronia elephantum.
Ficus Bengalensis, *Linn.*
F. cordifolia, *Roxb.*
F. glomerata, *Roxb.*
F. hispida, *L.*
F. infectoria, *Willde.*
F. regia, *Miq.*
F. religiosa, *Linn.*
F. virgata, *Roxb.*
Flacourtia montana.
Fraxinus floribunda, *Wall.*
Garcinia cowa, *Roxb.*
G. elliptica, *Wall.*
G. purpurea, *Roxb.*
G. speciosa, *Wall.*
Gardenia gummifera, *L.*
G. latifolia, *Aiton.*
G. lucida, *R.*
G. obtusifolia, *Roxb.*
G. turgida, *Roxb.*
Garuga pinnata, *Roxb.*
Givotia Rottleriformis, *Griff.*
Glochidon ellipticum.
Gluta Travancorica, *Bedd.*
Gmelina arborea.
Gordonia excelsa, *Bl.*
G. obtusa, *Wall.*
Grewia lævigata, *Vahl.*
G. microcos, *Linn.*
G. multiflora, *Juss.*
G. oppositifolia, *Roxb.*
G. tiliæfolia.
G. vestita, *Wall.*
Guatteria longifolia, *Wall.*
Guettarda speciosa, *Linn.*
Gynocardia odorata, *R. Br.*
Gyrocarpus Jacquini, *Roxb.*
Haciloneuron Indicum, *Bedd.*
Hæmatoxylon campechianum, *Linn.*
Hardwickia binata.
Heritiera fomes.
H. littoralis.
H. minor, *Roxb.*
Heterophragma Roxburghii, *D. C.*
Hibiscus macrophyllus, *Roxb.*
H. tiliaceus, *Linn.*
Hippophaë rhamnoides, *L.*
Hiptage madablota.
Holarrhena antidysenterica, *Wall.*
Holigarna longifolia.
Hopea floribunda.
H. odorata.
Hopea parviflora, *Bedd.*
H. Wightiana, *Bedd.*
Hydnocarpus Alpina.
Hymenodictyon excelsum.
H. thirsiflorum, *Bedd.*
Ilex dipyrena, *Wall.*
I. theæfolia, *Wall.*
I. Wightiana, *Wall.*
Inga bijemina.
I. xylocarpa.
Isonandra Wightiana.
Ixora parviflora.
Jonesia asoca.
Juglans regia, *Linn.*
Juniperus communis, *Linn*
J. excelsa.
J. recurva, *Ham.*
Kandelia Rheedii, *W. and A.*
Kydia calycina.
Lagerstræmia hypoleuca, *Kurz.*
L. microcarpa.
L. parviflora.
L. reginæ.
L. villosa, *Wall.*
Larix Griffithii, *H. f. et Th.*
Laurus nobilis.
Lebidieropsis orbicularis, *Mull.*
Limonia acidissima.
Litsæa Zeylanica, *Nees.*
Lophopetalum Wightianum, *Wall.*
Maba buxifolia.
Machilus macrantha.
M. odoratissima, *Nees.*
Macropanax undulatum, *Seem.*
Magnolia Campbellii, *H. f. et Th.*
Mangifera caloncura, *Kurz.*
M. Indica.
M. sylvatica, *Roxb.*
Mappia fœtida, *Miers.*
Melanorrhœa usitata.
Melia azadirachta.
M. azedarach, *Linn.*
M. Indica, *Brandis.*
Meliosma Arnottiana.
M. dilleniæfolia, *Wall.*
M. Wallicbii, *Planch.*
Mesua ferrea, *Linn.*
Metrosideros vera.
Michelia champaca.
M. excelsa, *Bl.*
M. Nilagerica.
Microtropis ovalifolia.
Millingtonia simplicifolia.
Mimusops elengi, *Linn.*
M. hexandra.
M. littoralis, *Kurz.*
Morinda bracteata.
M. citrifolia.

Wendlandia exserta, *D.C.*
Wrightia antidysenterica.
Wrightia coccinea.
W. tinctoria.
W. tomentosa, *Rou.*
Xanthophyllum affine.
Xylia dolabriformis, *Blyth.*
Zalacca Wallichiana.
Zizyphus jujuba.

—*Drs. Wight, Powell, Stewart, Mason, M'Cl., Tomlinson; Cleghorn, Madras Ex. Jur. Rep.*

TIM-CHORNAM. Tam. The red mark, made of flour and turmeric or of safflower, on the foreheads of Hindus.

TIME. In most parts of the East Indies, the natural recurrences of night and day, of the moonless nights and quarters of the moon, and of the hot and cold and rainy seasons of the year, have been used as measures of time by the Hindus, who divide the month into two equal lunar portions, according to the increase and decrease of the moon. The measure of seven days for a week has only in modern times become known to the Hindus. They measured each month by the increasing and decreasing moon alone, and by the quarters. They have now copied the names of the week days from Muhammadans and Europeans. Even yet a Hindu dates his letter thus—On Monday, the 6th of the bright fortnight in Magha. The periods of time with the Hindus regulate their religious rites, and the Chinese worship heaven and earth on the 1st and 15th of each month.—*Ward*, iii. p. 18; *Dr. Edkins.*

TIMKOWSKI, GEORGE, author of Travels of the Russian Mission through Mongolia to China, and Residence in Pekin in 1820–21, with Notes by J. von Klaproth, 1827.

TIMOKO. For the hilts and sheaths of krisses the Malay make use of the 'timoko' wood of Java, of which the black and white variegated fragments are called 'pelet.' There are various kinds.

TIMOR, lat. 8° 21′ to 10° 23′ S., and long. 123° 30′ to 127° 15′ E. It is the largest and most southerly of the Molucca Islands. It is formed of high undulating mountains in the interior, though near the sea it is of moderate elevation. The Portuguese settlement of Dieli or Diely is in lat. 8° 34′ S., and long. 125° 40′ E., and on the north side of the island.

Timor means the east, and was probably imposed on this island by the Malays, to whose language it belongs, because this was the extreme limit of their ordinary commercial voyages to the S.E. The two languages of Timor are the Manatoto and the Timori; the first spoken at the N.E. end of the island, and the last used by many of the tribes as a common medium of intercourse. No alphabet has ever been invented in Timor.

Timor seems to form the N.E. end of the great range of volcanic islands, which extend N.E. and S.W. from Timor to Sumatra. It has only one active volcano, Timor Peak, near the centre of the island, which was blown up during an eruption in 1638, and has since been quiescent.

There are Malays and Chinese, but the native Timorese preponderate, and have nothing in common with the Malays, but are closely allied to the true Papuans of the Aru Islands and New Guinea. They are of the Papuan type; all have pronounced features, large, somewhat aquiline noses, and frizzly hair. The women talk to each other and to the men with loud voices, and with a self-assertion quite different from Malay women. The mountaineers of Timor are a people of Papuan type, have rather slender forms, bushy frizzled

hair, and the skiu of a dusky browu eolour. They have the long, somewhat aquiline nose, with the overhanging apex, whieh is so charaeteristie of the Papuan, and so absolutely unknown among races of Malayan origin on the eoast. There has been an admixture of Malay, perhaps of Hindu as well as of Portuguese, and the coast oceupants have wavy and frizzled hair, a lower stature, with less prominent features, and the houses are built from the ground. The houses of the Papuan mountaineers are raised on posts. The dead of the Papuau Timorese are laid on a stage 6 or 8 feet above the ground, sometimes open, sometimes covered, and are retained there till money for a feast can be obtained, when they are burned.

The S.E. eoast near Mount Allas is occupied by the Papuan race with frizzled hair in tufts ou the head. Mr. Earl says that some of the people on the table-land back of Dieli have opaque yellow complexions, with hair of a reddish or dark auburn colour, and that the hair of others is straight, fine, and of a reddish hue; and that every iutermediate variety of hue and complexion between this and the black or deep choeolate colour and the short tufted hair of the mountain Papuan is found in Timor, aud it is possible that the raees are there mixing, as its position is next to Papua.

The 'Pomali,' exaetly resembling the Taboo of the Pacific, is in full operation here, aud a few palm leaves stuek outside of a garden will preserve it from any thief. Iu the Malayan Miscellanies, published under the auspices of Sir Stamford Raffles at Bencoolen in 1820, lists of two languages of Timor and of the languages of the two small islands at its western end, Rotti and Savu, are given, amounting eaeh to 95 words.

From Timor to New Guinea there runs a long ehain of islets, forming as it were a wall of barrier to the S.E. portiou of the Arehipelago. In these islets the inhabitants speak many languages. By far the most ample and authentic aecount of them has beeu given by Mr. G. W. Earl, who says that in the S.E. parts of the Indian Archipelago, where opportunities of soeial intercourse between the various petty tribes are of rare occurrence, every island, every detached group of villages, has its own peculiar dialect, which is often unintelligible even to the tribes in its immediate neighbourhood. In some of the larger islands, Timor for example, these tribes are so numerous, and the eountry oecupied by many of them so extensive, that it beeomes impossible to form even an approximate estimate of their number. Of one language, the prevailing one among several languages of the island of Kisa, one of the Sarawati group in the chain of islets already mentioned, Mr. Earl furnished a vocabulary of 330 words. The Kisa is an unwritten tongue, but its vowels are the same as those of the Malay and Javanese.—*Earl*, p. 180; *Bikmore*, p. 127.

TIMOR LAUT, or the Tenimber Islands, form a group which consists of the large islaud of Timor Laut, the islands of Larat and Virdati, and the numerous small low lands fronting its northern side. Timor Laut means Timor of the Sea, or the Eastern Timor. It is about 70 miles long by 25 miles broad, lying between lat. 7° and 8° S., and long. 132° and 133° E. The Tenimber group is divided by Strait Egeron into a northern and southern portion. The other larger islauds are Seloe and Seirah on the west; Larat, Virdati, and Malae on the N.E. and N.

TIMUNI. The Char Aimak or four tribes are the Timuni, Teimeni, Firoz Kohi, and Jamshidi, all of them of Iranian origin, and all speaking Persian. The Timuni dwell at Gorian and Kuli, are seen on the western boundary of Herat, and in the villages and towns situated east of Iran, from Tarbat Shaikh Jam as far as Khaf. About a thousand of their families dwell near Herat. The Teimeni dwell iu the Jolgha-i-Herat, from Kerrukh to Sabzwar, the few who have extended to Farrah being styled Parsivan by the Afghans. Each member of the Char Aimak kuows no greater enemy than the Afghan, and all attempts to form Afghan colonies amongst them have failed. The Teimeni are of a wild nature.

TIMUR, also known as Timurlang or Timur the Lame, changed in Europe to Tamerlane. He was of one of those races of High Asia to whom in Europe the general name of Turk has beeu given. One writer describes him as an Uzbak Tartar; Latham deseribes him as a Turk, and says, whatever the Mongols were elsewhere, the Moghuls of India were Chaghtai Turk. They affected a Mongol lineage, just as Timur professed a descent from Chengiz; whilst the Chaghtai tribe to whieh he belonged took its name from Chengiz's huntsman Zagatai, and he believes that Chengiz himself eonnected his line with the Manehu. At any rate, his Mougol son bore the name of a Manchu predecessor. Again, he professed descent from a virgin. So did Apaoki and Kitan, both Manchus, before him. Also, the most famous of his aneestors was said to be Karachar Nevian or Teragay Nevian, the minister of Zagatai or Chaghtai, and the first eonvert to Islamism amongst the wild conquerors. In his memoirs, written by himself, Timur says, 'My father told me that we were deseendants from Abu-ul-Atrak (father of the Turks), the son of Japhet.' His father is described as a ehief who eommanded 10,000 horse. The country between the rivers Oxus and Jaxartes, known to the Arabs as Mawur-u-Nahar, had fallen to the share of Zagatai on the death of his father Chengiz Khan in 1227, and the land had been ruled by his deseendants for more thau a century, and Timur's grandfather was chief of the Berlas tribe. They claimed a remote descent from the same stock as Chengiz Khan.

Turghai (Thrush) was the name of Timur's father. Timur was born at Sabzwar, also called Shahr-i-Sabz, a suburb of Kesh, on Tuesday the 5th of Shaban A.H. 736 (A.D. 1333). Timur is a Turki word meaning 'it shall shake.' Each succeeding sultan of Mawur-u-Nahar had become more degenerate and more contemptible than his predeeessor, under the insolent independenee of powerful vassals. But Timur succeeded in attaining supreme power. At the age of 34 he ascended the throne of Samareand, and before he died he made himself master of Central Asia.

He overran Persia in 1386–87, and Kipehak several times between 1387 and 1389, in the latter year reaehing as far as Moscow. He took Baghdad in 1395, invaded India in 1398, invaded Asia Minor and Syria in 1400–1, and defeated and eaptured the emperor Bajazet at the battle of Angora, 20th July 1404.

He turned his arms, without the pretext of a quarrel, on the distracted empire of Hindustan.

He has recorded his exploits in his work entitled Political and Military Institutions, which was translated into Persian by Abu Talib, and from the Persian into English by Major Davy. 'I ordered,' he relates, '1000 swift-footed camels, 1000 swift-footed horses, and 1000 chosen infantry, to march and bring me information respecting the princes of India. I learned that Tonktumish Khan had been defeated by Auroos Khan, and sought assistance from me. Received information that the princes of India were at variance with each other; that Mahmud in Dehli, Mulloo in Lahore, and Sanring in Multan were hostilely disposed towards each other. The conquest appeared to me to be easy, though my soldiers thought it was dangerous. Resolved to undertake it, and to make myself master of the Indian empire, did so. Received then the news that the emperor in Rome had invaded my western provinces, and that the people of Georgia had conquered some of my fortresses in that country. Then I thought, if I pursue my conquests in India, Eran may revolt; therefore I regulated my kingdom in Hindustan, and marched from that country against the Roman emperor, whose provinces I conquered.'

Early in the spring of A.D. 1398 (A.H. 800), his grandson Pir Muhammad, who had been employed in reducing the Afghans in the Sulaiman mountains, crossed the Indus on a line with Uch, and soon after laid siege to Multan, which occupied him for upwards of six months.

While Pir Muhammad was thus occupied, Timur, who had proceeded against the Siah Posh Kafirs, had passed the Hindu Kush by the usual route to Kābul, left that city in August, and marched by Hariab and Bannu to Dinkot on the Indus. He crossed that river by a bridge of rafts and reeds, and marched to the Hydaspes (Jhelum), and down its banks to Tulamba, reducing the country as he passed. He levied a heavy contribution on Tulamba, which was afterwards sacked, and the inhabitants were massacred by the troops,—it is said without his orders. On the approach of Timur, his grandson set out to meet him, and left a garrison in Multan; they joined near the Gara or Sutlej, 25th October 1398.

Timur thence proceeded with a light detachment to Adjudin, where he met with no sort of resistance, and spared the town as it had the tomb of a famous Muhammadan saint. He then marched to Bhatner and (9th Nov. 1398) massacred the country people who had taken refuge under its walls. The place afterwards surrendered on terms, but the town was nevertheless burned, and all the inhabitants put to the sword. He then marched to Samāna, where he joined his main body, having slaughtered the inhabitants of every place he passed. From Samāna the towns were deserted, consequently there were no more general massacres. Many prisoners, however, were taken, and on reaching Dehli, Timur put to death all of them above the age of fifteen, to the number, it is said, of 100,000. Muhammad Taghalaq fled to Gujerat. Dehli surrendered under a solemn promise of protection, and on the 17th December 1398 Timur was publicly proclaimed emperor of India. But plunder and violence brought on resistance, which led to a general massacre; some streets were rendered impassable by heaps of dead, and the gates being forced, the whole Moghul army gained admittance, and when the troops were wearied with slaughter, and nothing was left to plunder, he gave orders for the prosecution of his march. On the day of his departure (A.D. 31st December 1398) he offered up to the Divine Majesty the sincere and humble tribute of grateful praise in the marble mosque which had been erected by the emperor Firoz on the banks of the Jumna. The booty carried off from Dehli is said to have been very great, and the men and women of all ranks whom he carried into slavery formed a number so large as to overstock the slave-market at Samarcand, and they were sold at two rupees the head; among them were many of the wives and children of a proud aristocracy. His soldiers are said to have had 150 slaves, and soldiers' boys had 20 slaves to their own share; and Timur secured for himself the stone-masons for the purpose of erecting a mosque at Samarcand.

He then marched to Meerut, where there was a general massacre; and afterwards crossed the Ganges and proceeded up its banks to Hardwar, where that river leaves the mountains. Several affairs took place with Hindus on the skirts of the hills, in which Timur, though now 65 years of age, exposed his person like a private soldier, and underwent great fatigue. He marched along the foot of the mountains to Jammu, then turned southwards, fell into the route by which he first advanced, and (A.D. 10th March 1399, A.H. 801) quitted India, leaving anarchy, famine, and pestilence behind him. For two months Dehli remained without a government, and almost without inhabitants; and for 36 years there was no kingdom of India, either in name or reality.

In his route from Kābul towards Hindustan, according to Sharif-ud-Din, he went by way of Irjal, Sheuuzan, Nughz, Banou (or Bannu), and thence to the Indus, at the very place where Jalal-ud-Din, king of Kharazm, fought with Chengiz Khan, and so heroically swam the river after his defeat, in 1221. Timur crossed an extensive desert in his way to Bhatnair, but on his return from the banks of the Ganges he proceeded to the north-west, along the foot of the Siwalik mountains, by Meliapur, Jullundhur, and Jummoo, to the Indus, which he crossed at the same place as before, and in the same manner; and returned to Samarcand by way of Bannu or Banou, Nughz or Nagaz, Kābul, Bacalan, and Termed. On his return to Samarcand, his first piece of justice was inflicted upon Dina, 'the greatest officer in all the land of Samarcand.' Timur had left him in the city as his magistrate when he departed, for six years and eleven months, during which time this man had neglected his duties; so Timur ordered him to be hanged, and confiscated all his goods. The justice inflicted upon this great man caused terror amongst the people, and the same punishment was ordered to be inflicted upon another man who had interceded for this magistrate. A councillor named Burado Mirza asked for his pardon if he paid a sum of 400,000 bezants of silver, each bezant being equal to a silver real. Timur approved of this, and when the man had given all he had, he was tormented to give more; and as he had no more, he was hung up by the feet until he was dead. Another piece of justice was inflicted upon a great man, who had been left in charge of 3000 horses when Timur departed, and because he could not produce them all, he

was hanged, although he pleaded that he would produce not only 3000, but 6000 horses, if he would give him time. He also ordered justice to be executed upon certain traders who had sold meat for more than it was worth, and upon shoemakers; and other traders were fined for selling their goods at a high price. The custom was, that when a great man was put to death, he was hanged, but the meaner sort were beheaded. On the 8th of January 1405, to invade China, he marched out of Samarcand, in a heavy fall of snow, and, crossing the Jaxartes upon the ice, he encamped at a place called Otrar. In February he was attacked by fever and ague, and he died on the 17th of that month, in the year 1405, aged sixty-nine, leaving 36 male descendants. Timur's body was embalmed with musk and rose-water, wrapped in linen, laid in an ebony coffin, and sent to Samarcand, where it was buried. Mirkhond mentions that he was subject to very severe attacks of illness, which not unfrequently succeeded to any change from violent motion in the field to perfect domestic repose.

Timur's autobiography was written in the Chaghtai Turki language. It is known as the Malfuzat-i-Timuri or Tuzak-i-Timuri, the Institutes of Timur. It was translated into Persian by Abu Talib Husaini, and dedicated to the emperor Shah Jahan, and was translated by Major Stewart. Thirty years after Timur's death, Sharif-ud-Din Yazdi wrote his Zafar Namah, and quoted from the diary of Timur's court. Timur, in his autobiography, relates his own intrigues, and takes credit for goodness and sincerity, with a mixture of cant and hypocrisy, with real superstition and devotion. He was essentially a wily politician, with courage, prudence, and address. Chengiz Khan was the more violent, Timur the more perfidious. Malcolm, History of Persia, says, 'Though one of the greatest of warriors, he was one of the worst of monarchs. He was able, brave, and generous, but ambitious, cruel, and oppressive.'

The furious blood-shedding that characterized his wars created a horror amongst all his Asiatic contemporaries. His Arab biographer, Ahmad bin Arab Shah, pictures him while crossing the icy plains of High Asia as met by the Spirit of Winter, which exclaimed, 'Hold in thy rapid course, thou savage tyrant.'

He died at Otrar. Feeling his strength giving way rapidly, he made signs for the Mullah Haibat Allah to perform the rites of the dying and read the Koran over his bed, and he expired in the early evening of the 7th Shaban, A.H. 807 (A.D. 17th February 1405). His body was brought to Samarcand, and placed alongside of that of his spiritual teacher, Syud Barke, who first had proclaimed Timur's career. His descendants afterwards ruled in India from A.D. 1526 to 1857. His native language was the Chaghtai Turki, which at that time prevailed from the Alagh-Tagh mountains to the Hindu Kush, and from the Caspian to the Gobi desert. On the death of Timur, his vast empire soon fell to pieces; yet the greatest and best princes that ever reigned in Muhammadan countries, were the descendants of Timur. They ruled in India until the year 1857, though only nominally from the first years of the 19th century. In 1857, by joining in a rebellion against the British, they made a final effort to regain supremacy, and the last emperor at Dehli was exiled to Rangoon in Burma, where he died in 1862. The descendants of Timur, and particularly Baber, Akbar, and Jahangir, brought many of the trees of their native countries into India. Baber, whenever he found leisure in the midst of his active life, diversified with multitudinous vicissitudes, formed a garden. Akbar followed up the plans of Baber, and introduced the gardeners of Persia and Tartary, who succeeded with many of their fruits, as peaches, almonds (both indigenous to Rajputana), pistachios, etc. The princes of the house of Timur, though despots by birth and education, present a more remarkable succession of great characters, historians, statesmen, and warriors, than any contemporaneous dynasty in any region of the world.

Of all the countries over which members of this Timur family once ruled, India alone has made any advance in material prosperity since the days of their power. Samarcand, the capital of Timur, became a heap of ruins, until restored by Russia in the 19th century. Andecan, the beloved home of Baber, is in the possession of Uzbak savages. The once rich and opulent Herat, the abode of learning, the brilliant capital of Shah Rukh and Husain Mirza, the native land of poets and historians, is now a ruinous Afghan fortress. Shiraz, made immortal by the songs of Sadi and Hafiz, where Ali of Yezd wrote the life of Timur, is an impoverished provincial town in the kingdom of the Kajar kings of Persia. Lahore and Dehli are noted for their gold-woven fabrics, and light silk muslin fabrics interwoven with gold threads, as well as for all kinds of work in tinsel or kalabatun.—*Elphinstone's India; Elliot's India; Ferrier's Caravan Journeys; Yule's Cathay; Rennell's Memoir; Markham's Embassy; Rajasthan; Vambery's Bokhara*, p. 163; *Malcolm's Persia.*

TIMURI. A tribe of the Aimak dwelling at Gorian and Kuh'sun on the western boundary of Herat, and in the villages and towns situated east of Iran, from Tarbat Shaikh Jam as far as Khaf. About 1000 of their families dwell near Herat.

TIMUR SHAH, second son of Ahmad Shah, succeeded his father as Amir of Kābul in A.D. 1773, and died in 1793. He left 36 children, of whom 23 were sons.

TIN.

Tin is one of those metals which were earliest known. Though it occurs in comparatively few countries, and though it does not occur in the native state, the acquaintance of the ancients with this metal is accounted for by the circumstances that the ore is found frequently near the surface, and is easily reduced by charcoal and a moderate degree of heat to the state of metal. Tin is found in England, Saxony, Bohemia, Hungary, Chili, Mexico, Billiton, Banca, and the Peninsula of Malacca. Malacca furnishes the purest tin, and Cornwall the largest quantity. India imports it chiefly from the Straits Settlements to a

varying extent up to 48,372 cwt., valued at Rs. 22,13,323.

Tin occurs in two states of combination, the peroxide and the rare double sulphuret of tin and copper; but it is from the former that the metal is almost entirely obtained. The peroxide is found —(1) In veins, where it is intimately mixed with several other metals, as arsenic, copper, zinc, and tungsten,—this is common tin-stone; and (2) in loose rounded masses, grains, or sand in alluvial soil, in which state it is called stream-tin. The former, when reduced to the metallic state, yields block-tin; while the latter yields grain-tin, which is the purer of the two, and it is brought into commerce in these two forms. Wood-tin is in reniform and botryoidal masses, or in wedge-shaped pieces, which have arisen from their partial destruction; the surfaces are generally water-worn. Stream-tin is evidently derived from the destruction of tin veins or lodes, the lighter portions of stony matter having been carried away by the water, which has rounded the fragments of the ore. Tin was used by the Egyptians. The Greeks and Romans obtained it through the Phœnicians from England. Tin with the Egyptians formed an ingredient in some of their metallic compounds for hardening copper, and they used the alloy for forming swords and spear-heads. Its use has long been familiar to the Hindus for tinning copper, and for various compounds with copper and tin, which are remarkable for their hardness, and for the fine sounds which they emit on being struck. Dr. Wight found that an alloy of 10 of copper to 2½ of tin was the best mixture which a native made in his presence. Ancient British spear-heads are found to consist of 1 of tin to 10 of copper, and an ancient knife, of 1 of tin to 7½ of copper. Mr. Aikin found that 8 of copper to 1 of tin formed the hardest alloy.

The European alloys of tin are as under:—1 oz. of tin to 1 lb. copper, a soft gun metal; 1½ oz., harder, fit for wheels to be cut with teeth; 1½ to 2 oz., brass ordnance; 2 oz., hard bearings for machinery; 2½ oz., very hard bearings for machinery; 3 oz., soft musical bells; 3½ oz., Chinese gongs and cymbals; 4 oz., house bells; 4½ oz., large bells; 5 oz., largest bells; 7¼ to 8¼ oz., speculum metal. The tin alloy is scarcely malleable at 2 ounces; it soon becomes very hard, brittle, and sonorous. Smiths of India render the mixed metal malleable with greater proportions of tin; so do the Chinese for their gongs and cymbals, by gently striking it while hot at repeated heatings. Some years ago bronze sheathing for ships was prepared on the same principle. Teling people call such malleable bell metal Akkansu. It is formed into vessels for containing acid food, buttermilk, etc.

The island of Banca, which is a continuation of the mainland of Malacca, is of granite, graduating into syenite, and flanked by silurian slates and quartzites. The ore was worked to a considerable extent during the 18th century by the sultans of Palembang, the yield having reached 4000 tons per annum. This production afterwards fell off very much, and when the Dutch obtained the island in 1821, it did not amount to half that quantity, although it now surpasses it, viz.:—1820-29, 1500 tons; 1830-39, 2700 tons; 1840-49, 4100 tons; 1850-59, 5200 tons; 1860-69, 4700 tons; 1870-77, 4400 tons. The average annual amount of tin per mine does not exceed half a ton, though the washings at Blinjoe average one ton per annum. The island of Billiton, as a tin-mining district, only dates from 1850, the yield for the first ten years being only 180 tons. Since then, however, it has risen so rapidly that between 1870-76 over 3600 tons were raised per annum. The population of Billiton has increased from 1400 in 1860 to 28,000 in 1876; of these a good number consisted of Chinese miners. There were only 400 of these in 1860, and 4300 in 1873.

The Malayan tin district or tin field is beyond all comparison the most extensive and the richest in the world, for it stretches from Tavoy in the 14th degree of N. latitude to Billiton in the 3d degree S. latitude, that is, over 17 degrees of latitude and 10 of longitude. The richest locality in the province of Tavoy is nearly opposite the city of Tavoy on the eastern side of the mountains. Mr. Ralph Fitch, who travelled in this part of the world in about the year 1586 or 1587, says—'I went from Pegu to Malacca, passing many of the seaports of Pegu, as Martaban, the island of Tavoy, whence all India is supplied with tin, Tenasserim, the island of Junk-Ceylon, and many others.'

Tin ore of the Malay Peninsula is stream-ore, and the nearer the mountains is the more abundant. The ore is imbedded in clay at from 6 to 50 feet below the surface, and is mined by Chinese. In the seven years prior to 1874, the value of the tin exported was upwards of 1¼ million sterling, the produce of thirty mines. The ground being marked out and cleared of vegetation, a square or oblong pit is sunk, varying in depth from 40 to 80 feet, through an alluvial deposit, and the ore extracted by a series of stream works. The stanniferous deposits occur in the form of regular beds, in which the binoxide of tin is associated with coarse sand and decomposed quartz, which are removed in baskets, arranged in heaps on the surface, and exposed to sun and rain for a month or two. The washing is conducted in wooden jutters, through which a stream of water is made to flow, the dirty ore or 'work' thrown into coarse wicker-baskets immersed in water in the wooden trough and shaken about; the metallic ore and finer particles of sand and decomposed quartz are washed through the crevices of the basket into the wooden trough, through which the stream of water flows, and is there kept in constant motion by several coolies with spades, by which means all the dirt and lighter particles of sand are carried off by the stream, and the heavy ore collected in the heap when the flow of water is stopped, and the metallic ore conveyed to the smelting shed. A funnel-shaped blast-furnace is used, 6 feet high and 4 feet diameter at the mouth. The sides of the trunk and funnel-hole are shaped and backed with clay. The fused matters escape from the cavity and flow continually into an exterior reservoir hollowed out for that purpose, from which the liquid metal is ladled out into moulds, shaped in moist sand. The trunk is filled with charcoal made from the gompos tree, and combustion is accelerated by a cylindrical blowing machine, worked by eight men, of which the nozzle is introduced by an aperture. When the whole mass is brought to a red-heat, the crude ore is sprinkled on the top of the burning embers, and kept constantly fed by successive charges of charcoal and mineral. Each charge consists of

30 pikuls of washed ore, containing from 45 to 60 per cent. of tin.

Both gold and tin exist in and about Mount Ophir. The depth of the gold mines is from 70 to 200 feet, and the process of pounding the rock and washing the gold dust is simple and rude. The tin is worked in the lowlands at the depth of a few feet, and some of the ores are so rich that they contain about 80 per cent. of the metal. The whole Malay Peninsula, from Mergui, Perak, and Queda (Kedah) on the north, to the islands of Carimon and Bauca, which were once probably connected with the mainland, in the south, is one rich deposit of tin, the same as that of Cornwall. It is the ordinary tin-stone or binoxide of tin. It occurs in veins, and also in rounded masses or grains. It is often beautifully crystallized, interspersed with decomposing granite, and is generally free from sulphur and arsenic. At the two extremities of the peninsular zone of elevation, Junk-Ceylon and Banca, tin-sand is diffused in such quantity that its collection has never had any other limit than the number of persons employed in it. In Junk-Ceylon and Phunga, about 13,000 pikuls are annually dug out of the soil. But in Bauca, without any improvement on the usual Chinese modes of excavating, washing, and smelting, the production increased from 25,000 pikuls in 1812, when it was a British possession, to 60,000 pikuls.

The tin ore in the island of Banca is cast into ingots, weighing from 20 to 60 lbs.; the purity of these bars is superior to those from the mines in Malacca. All that is of a superior quality which is brought to China in bars is called Banca tin, while the inferior is known as Straits tin. The former sells for about £17, and the latter for £14 or £15 a pikul.

The tin of Siam is worked in the provinces of Xa-lang, Xai-ja, Xamphon, Rapri, and Rak-Bhrek.

Tin mines of Larut, or, as they are called, Klians, in the Malayan Peninsula, are about 100, averaging 60 or 70 feet in depth, and 700 feet in circumference. There were in 1867, 12,000 Chinese at work, earning five to six dollars monthly. In their superstition, no one is allowed to go near the water-wheel with his shoes on, or with an open umbrella. The mines at Cassang near Malacca, north of Ayer Panas, cover a space of five or six miles. Since the Chinese began to work them in 1844, their produce increased from 146 pikuls to 12,000 pikuls in 1852.

The Malay and Javanese term for tin, timah, is a word used in the Archipelago as a generic term for both tin and lead, the epithet white or flowery (puteh and sari) being given to tin itself, and that of black (itam) to lead, a metal with which, being entirely a foreign product, the Malayan nations are but little acquainted.—*Horsfield on the Tin of Banca; J. of Ind. Arch.*, 1848; *Winter's Burma; Morrison's Compendious Description; M'Culloch's Com. Dict.; Mason's Tenasserim; Royle, Prod. Res. of India; Crawfurd's Dictionary; Mr. Rohde, MSS.*

TINCAL, borax, Sodæ biboras, from the Sanskrit Tinkana.

TIND. Hind. of Panjab. Wide-mouthed, round-bottomed earthen jars with which the Persian well-wheel is moved.

TINDAL, in India, a petty officer of native seamen, also the non-commissioned officer over gun and store lascars.

TINDU. Hind. Ebony of Diospyros melanoxylon, *Roxb.*, also of D. tomentosa. Tindu-kaki, Tel., D. tomentosa? Tinduki, also Tumiki, Tel., D. embryopteris, *Pers.*, probably Tindu-kaki and Tindula, should be applied to different trees, as D. tomentosa, D. melanoxylon.

TINFOIL, Beggud, Hind., is tin rolled into thin sheets, and employed with the addition of mercury to cover the surface of glass, thus forming looking-glasses, mirrors, etc.—*Faulkner.*

TINGHAE, a town and harbour on the south side of the island of Chusan, and fronted by many islands, between which are several channels leading to it. Tinghae city is one mile and eight cables in circumference, and is surrounded by a wall 14¾ feet high and 13 feet wide, surmounted by a parapet 14½ feet high. A canal nearly 33 feet wide and 3 feet deep almost encircles the city, and enters it near the south gate. Large quarries of hornstone porphyry are found in the N.W. extreme of the island. Salt, arrack, and mat manufactures occupy the people.

TINNEVELLY, chief town of Tinnevelly district, Madras, is 1½ miles from the left bank of the Tambraparni, lat. 8° 43′ 47″ N., and long. 77° 43′ 49″ E.; the district lying between lat. 8° 9′ and 9° 56′ N., and long. 77° 16′ and 78° 27′ E., having the Bay of Bengal on its eastern face, and a harbour at Tuticorin. This district formed part of the ancient Pandiyan empire. It was ceded to the British in 1801. It has twenty-six polygar estates paying tribute to the British. Romish Christian missions have been here since the 17th century. The two chief towns are Palamcotta and Tuticorin, the last famed for its pearl fishery. The Protestant missionaries who have laboured in Tinnevelly have been Pohle, Schwartz, Kohlhoff, Hough, Rhenius, and Caldwell. The southern coasts have many salt marshes, which were increased at the beginning of the 19th century by inundations. There are several streams, the largest being the Tambraparni. The district produces cotton and rice. The general appearance of the district is that of an extensive plain with small hills interspersed. The Anangol pass leads to Travancore. Between Tinnevelly and Travancore is a chain of fortifications or lines which were considered very formidable at the close of the 18th century.

Agricultural castes (Vellalars, Vanniars, Shanars) amount to 62 per cent.; Pariahs, 10·4 per cent. Paravars are all Catholics. The Shanars cultivate the palmyra palm, and make jagari from its sap. They claim to be the original proprietors. Christian missions have been successful among them. Devil-worship is common in the district, but especially among the Shanars. Some Brahmans have even taken up the local devil-worship. At Srivaikuntham is a mercantile subdivision of the Vellalar caste, the Nat'ha Kottai Vellalars (Fort Vellalars), who live in a mud fort, out of which their women are not allowed to go. The three most celebrated Hindu shrines are at Tiruchendur on the sea-coast, at Papanasam on the Tambraparni, and at Kuttalam (Courtallum) on its tributary the Chittur. At both the two latter places there are beautiful waterfalls at the foot of the hills. Kuttalam is also known as Ten Kasi, *i.e.* the Southern Benares. The scenery is very lovely.

Mr. James Fergusson (Hist. of Indian Archit. p. 366) cites the great Siva temple as giving a good general idea of the arrangement of large Dravidian temples. It is a double temple. The whole enclosure measures 508 by 756 feet. Like some other large temples, it contains a thousand-pillared portico. The Muhammadans are descended from the ancient Arab traders and their converts. They are found along the whole coast of the Tamil country, and are called by the British Labbai; they call themselves Sonagar or Yonagar.

Out of the total of 5176 square miles, 1112 are uncultivable. The palmyra palm flourishes in the almost rainless tracts of red sandy soil to the south. Pearl fishery here is very ancient. It is mentioned by Pliny (A.D. 130), by Muhammad-bin-Mansur in the 12th, and by Marco Polo in the 13th century. The Venetian traveller Cæsar Frederic (1563-81) describes the fishery in a way which applies to the present day. The colour of the pearls of the Gulf of Manaar is not good. The British first entered on the pearl fishery in 1796, since which time a total sum of nearly £120,000 has been realized, at a cost of not more than £600 a year.

Between 1830 and 1861 there were no fisheries, as the beds seemed exhausted, ascribed to currents produced by the deepening of the Pambam channel. In 1861 and 1862 the fisheries realized £37,858. Chank-shells are found all along the coast, and from time immemorial have been sent to Bengal and elsewhere. Since 1876 the fishery has been taken by Government management. In 1877-78 the profit was £2290. The divers were paid £2 for a thousand shells, and the price got by Government was £9, 2s. for each thousand of good shells. Throughout the district the average rainfall is only 24·79 inches. A fall of rain is always expected late in January, sufficient to raise the rivers and replenish the tanks.

According to Tamil tradition, Chera, Chola, and Pandiya were three royal brothers, who at first lived and ruled in common at Kolkai on the Tambraparni. Eventually a separation took place; Pandiya remained in the south; Chera and Chola founded kingdoms of their own in the north and west. 'The earliest Dravidian civilisation was that of the Tamilar of the Pandiya kingdom, and the first place where they erected a city and established a state was Kolkai, on the Tambraparni river. The leader of the first or most influential Brahmanical colony is said to have been Agastya. He is fabled to be still alive, and to reside somewhere on the mountain called Agastya Malai, from which the Tambraparni takes its rise' (Caldwell's Grammar, p. 118). He is the traditional founder of the Tamil language. The first capital of the Pandiyas was Kolkai, above named; the second and more celebrated was Madura. Kolkai is the Κολχοι μωδιον of Ptolemy (A.D. 130) and of the author of the Periplus (A.D. 80), both of whom speak of it as the headquarters of the pearl fishery, and belonging to the Pandiyan king. This place is now about three miles inland. — *Pharoah's Gazetteer; Imp. Gaz.* ix.

TINNUNCULUS ALAUDARIUS, the Falco tinnunculus, the kestrel of Europe, Asia, Africa, and the great Asiatic Archipelago, is very common in India, sometimes in large flocks. It is the commonest bird of prey in England and France.

The root is covered with loose papery bark, and its wood is composed of distinct wedges separated by depressed medullary rays. It contains much starch, and a bitter principle, is used by natives for colds and fever, in doses of six mashas, in cold infusion; also in leprosy and skin diseases. It is a useful demulcent tonic, a substitute for calumba or cetraria in the treatment of dyspepsia, also diuretic and febrifuge. Used in intermittent fevers, in which it is said only to diminish the cold stage; also in chronic rheumatism and debility after fever, and as a general tonic; and is said by some to be as powerful a febrifuge as Peruvian bark. The extract is made by boiling the root 12 hours in water, then straining and removing the woody fibres, and evaporating the liquor to dryness. It is said also to be made by squeezing out the juice of the cut root, adding water, allowing it to stand, and collecting and drying the sediment. The substance is white, very brittle, in irregular lumps, and contains a large quantity of starch.—*Powell; Roxb.; Wight; Voigt.*

TIPERAH, a corruption of Tripura, on the N.E. frontier of British India, is partly British territory, and in part under a native ruler.

The British province in 1872 had a population of 1,522,228 souls. It presents a continuous flat and open surface, with the exception of the isolated Lalmai range. All communication and transport are effected by means of boats, except during the few months of hot weather, when the village footpaths can be made use of. The Megna flows along the entire western boundary of the district, and is the only river navigable throughout the year by trading boats of four tons burden; but the Gumti, Dakatia, and Titas are navigable for craft of that size for a considerable portion of their course. The Muhuri, Bijaigang, and Borigang are all navigable by boats of four tons during at least six months of the year.

The chief aboriginal tribe of the district is the Tiperahs, of whom there were 3004. Among semi-Hinduized aboriginal tribes and Hindu castes, the most numerous are—the Chandal, numbering 81,155; the Jugi, a caste of weavers, 66,812; the Kayasth or writers, 82,804; and the Kaibartta, the chief agricultural caste of the district, 53,916. On the 31st January 1860, the Kuki or Lushai suddenly entered the district at Chhagalnaiya, burned and plundered 15 villages, murdered 185 British subjects, and carried off about 100 captives.

Hill Tiperah Native State adjoins British Tiperah, lying between lat. 22° 59′ and 24° 31′ N., and between long. 91° 12′ and 92° 24′ E. Approximate area, 3867 square miles; population, 75,792.

Tripura was dedicated either to Tripuradana, the sun-god, or to Tripureswari, the mistress of the three worlds. The worship of Siva was here associated with human sacrifice. In no part of India were more victims offered up. Till the

reign of Dharma Manik (A.D. 1407-1439), the number was 1000 a year; but Dharma ruled that human sacrifices should only be offered triennially. He appears to have been an enlightened prince. So late as 1852, some men of the Tunia Jum Mahals were tried for murder by sacrificing. This is a forest tract in the hills, and inhabited by the Mug, Chukma, Reang, and Tiperah races, and others, all more or less nomadic. The place of sacrifice was a cleared spot in the jungle, and staked round with bamboos about six feet high. The sacrificial pole is the Phula bans or bamboo, scraped and stripped at the edges, the hanging strips giving a rude notion of ornament. These sacrifices generally occurred once a year. During its celebration at Agartolla a gun was fired every evening at sunset, when every person hurried to his home. The religion now prevailing in Tiperah is a form of Hindu idolatry; but it is said that before the accession of Trilochun, they worshipped only natural objects, trees, stones, animals. A trace of that old faith is to be found in their present practice, by the Tiperah and Kachari people, and Garo, of sticking a bamboo in the ground during one of their religious festivals, and worshipping it, as Kols worship the sal tree. The sal tree and bamboo had to be dispossessed before the new settlers could derive any benefit from the soil. The Tiperahs number 34,727 persons. They are divided into 4 classes,—the pure Tiperahs, 27,148 in number, the class to which the reigning family belongs; the Jamaitya, or fighting caste, of whom there are 3000; the Nowattia, 2144; and the Reang, 2435. They are all of the same religion, and speak the same language. Their divinities are the gods of fire and water, of the forest and the earth; and sacrifices form an important part of their religion.

Tiperahs eat flesh of every description except beef, but, after the decease of a relation, abstain from flesh for a week. Both men and women are very fond of dancing. They are, as a rule, truthful and simple-minded. No man is looked on as a person of any importance till he is married. The Kuki and all the hill tribes worship local deities, said to be fourteen in number. The Tiperah raja, in addition to the hill territory known as Independent Tiperah, is the holder of a very considerable zamindari in the district of Tiperah in the plains. He receives his investiture from the British Government, and is required to pay the usual nazzerrana.—*Dalton's Ethn. of Bengal*, pp. 110, 111; *Records of Sudder Nizam at Adalat of Chittagong for* 1852.

TIPU, son of Hyder Ali, commonly known as Tipu Sultan, also Tipu Sahib, sovereign of Mysore, whose capital was Seringapatam. In the year 1783, the British and the Peshwa of the Mahrattas combined to attack Tipu, and on the 11th March 1784 a treaty of peace was concluded. But in 1789 Tipu attacked the raja of Travancore, whom the British supported, defeating Tipu. In 1790 the British entered into a treaty with the rajas of Calastri, Cartinaad, and Kotiote, also with the Nizam of Hyderabad, the Peshwa, and the raja of Coorg, to make war against Tipu, who was defeated by Lord Cornwallis on the 5th February 1792, and peace was declared on the 22d of that month and 18th March. In 1799, in consequence of Tipu's efforts to combine with foreign powers, war again broke out, and the British, the Nizam, and the Peshwa united against him. He was defeated by General Harris on the 27th March 1799, and was found amongst the slain in the storming of Seringapatam on the 4th May 1799. It is reported that when he heard that Syud Ghaffūr, his bravest commander, was killed by a cannon shot, he went to the post of danger, and afterwards fought like a man who was resolved to live or die a king. He was buried at Seringapatam, and after his death his children and other relatives were removed to Vellore, where a mutiny broke out in their favour, and then the sons were taken to Calcutta. The last of his sons, Prince Gholam Muhammad, died there on the 11th August 1872. The inscription engraved on the tomb of Tipu is,—

'Tipu Sūltān cho kard āzm-i-jahād
Haq ba ū mansab-i-shahādat dād.
Sāl-i-tārikh-ī-ū Shahīr bagūft;
Hāmi-i-dīn shāh-i-zamān baraft.'

'When Tipu Sultan resolved on a religious war,
The All-True gave him the dignity of a martyr;
Shahīr gave the year of its occurrence—
Defender of the Faith, King of the Age has left.'

The principal events of his reign were as under—

1783, 2d January. Began to reign.
1784, 11th March. Peace with Tipu.
1788, 8th May. He invaded the low country, and war declared.
1789, 29th December. He was defeated at Travancore.
1790. First campaign under General Abercrombie.
1791. Second campaign under Lord Cornwallis.
1791, 7th March. Pettah of Bangalore assaulted.
1791, 21st March. Bangalore taken.
1792. Third campaign.
1792, 6th February. Seringapatam fortified camp stormed by Lord Cornwallis' army, and taken.
1792, 20th February. Surrendered two sons as hostages (restored 1794), Tipu ceding half his territories, paying three kror and thirty lakhs.
1798. Second war with Tipu.
1799, 5th March. General Harris entered Mysore.
1799, 4th May. Seringapatam stormed, Tipu fell. Lieut. Lawrence led the forlorn hope of left column of H.M. 74th. He was father of Sir Henry, of John Lord Lawrence, and of Generals A. W. and G. St. P. Lawrence.
1799, 5th May. Sons surrendered as hostages.

TIRAH and Chura are fertile and well-peopled valleys, enjoying a cool climate; and it was not unusual for the Peshawur sirdars and others, who had an understanding with the inhabitants, to pass the warm weather in Chura. At Chura resided Khan Bahadur Khan, Afridi, who attained immense influence amongst his tribe from the circumstance of his attendance at court during the sway of the Saddozai. Shah Shuja married one of his daughters to, and on more than one occasion found an asylum with him. The Afridi occupy the eastern parts of the hills nearest Peshawur, and the Shinwari the western parts looking upon the valley of Jalalabad. The Orakzai reside in Tirah, intermingled with the Afridi, and some of them are found in the hills south of Peshawur. It was a malik or chief of this tribe who conducted Nadir Shah and a force of cavalry by the route of Chura and Tirah to Peshawur, when the principal road through the hills was defended against him. The Shinwari, besides their portion of the hills, have the lands immediately west of them, and some of the valleys of the Safed Koh range. More westerly still, under the same hill range, they are found south of Jalalabad, and are the neighbours

of the Khogani. There are also some of them in Ghorbund, and they dwell in great numbers bordering on Bajor to the north-west, where they are independent, and engaged in constant hostilities with the tribes of Bajor and of Kafiristan. See Khyber.

TIRE or Tyr. TAM. Sour curdled milk.

TIREH, amongst the Afghaus, the branch of a tribe or firqah.

TIRHO. SIND. A rude boat made in Siud of the leaves and stems of Typha elephantina, for crossing the Indus during its inundations.

TIRHUT (Tirhoot), formerly a district of Bengal, now divided into two districts of Darbhangah and Muzaffarpur, a tract of country between lat. 25° 28′ and 26° 52′ N., and between long. 84° 56′ and 86° 46′ E. Area, 6343 sq. miles. Muhammadans, 528,605; Hindus, 3,854,991; Rajputs, 225,419. Babhans (318,577) are the most numerous. Although lower than Brahmans or Rajputs, they nevertheless enjoy a higher rank than the Sudra castes. Kayasth caste (70,992) comes next; Goala, 526,683. Koeri (227,046), the best spade-husbandmen in the country; they are identical with the Kachi of the North-Western Provinces, and are the chief cultivators of the poppy. Kurmi (142,303), though generally engaged in agriculture, make good soldiers. Chamar, 171,793. The principal manufactures of Tirhut are indigo, saltpetre, coarse cloth, pottery, and mats.—*Imp. Gaz.*

TIRKHAN, a carpenter race in the Panjab. The Kaminan, the Tirkhan, Lohar, and Chamar, etc., are agricultural labourers, who receive certain dues for their work.—*Powell.*

TIRNI. HIND. A grazing tax. There are t'hul tracts of greater or less extent in the various districts of the Panjab, and some of them chiefly valuable for the grazing they yield to large herds of cattle, who pay 'tirni' or grazing tax to Government.

TIRSING and Khanda, double-edge swords of the Rajputs.

TIRT'H or Tirt'ha. SANSK. Any Hindu shrine or holy place to which Hindus make pilgrimages. In the Padma Purana, a guru, a father, a wife, a son, are considered tirt'has. Tirthan or Tirthan-kara, TAM., is a temple priest, a worshipping priest. Amongst the Jaina sect, a deified mortal who has passed out of the circle of transmigrations; he is worshipped. Tirt'ha or Indra, a branch of the Dandi sect. Tirthahalli, a municipal village in Shimoga district, Mysore, in lat. 13° 41′ N., and long. 75° 17′ E., on the left bank of the Tunga river, 30 miles south-west of Shimoga town. It derives its name from the number of tirt'has or sacred bathing-places in the Tunga. One of the hollows scooped out by the rushing water is ascribed to the axe of Parasu Rama, and at the Rameswara festival, held for three days in the month Margashira, thousands of persons bathe in this hollow.

Tirthankara is the generic title of the 24 deceased saints, persons held sacred by the Jains, deified mortals, viz.—

Rishaba.	Sitala.	Malli.
Ajita.	Sreyansa.	Manisuvrata.
Sambhava.	Vasu Pujara.	Nami.
Abhivandana.	Vimala.	Nemi.
Sumati.	Ananta.	Parsva.
Padmaprabhu.	Dharma.	Mahavira Swami or Vardhamani.
Supursva.	Tanti.	
Chandraprabhu.	Kuntu.	
Pushpadhanta.	Ara.	

TIRU, an adjective signifying venerable, divine, or sacred, prefixed to many names. In the south of India it is a prefix to holy places, as Tripatur, Triputty; also to many religious books and writers on religion as an attribute. It is the Dravidian dialectal change from Sri. Tirunama, the holy name. Tiruniru, the holy ashes. Tirunur undai, TAM., also Tirunut uudi, TEL., balls of cow-dung ashes. Tirupad, a titular appellation of the native princes of Malabar, as the Tirupad of Nelambur. Tirupati or Tripati, in lat. 13° 27′ N., long. 79° 26′ E., in the Carnatic, 4 miles N. of the Surnamuki. Level of the plain is 507 feet. Tiruvachaka, a famous Saiva work.—*Ad. Schl.; Wils.* See Nama; Tripati; Vibhuti.

TIRUCHARNAM. TAM. Curcuma longa, also a yellow paste of turmeric with which the forehead is marked with the Hindu sign of their sect.

TIRUKALYANA. TAM. Lit. the sacred or divine wedding, the name of a festival celebrated in honour of Iswara and Parvati, also of a festival celebrated in honour of Vishnu and Lakshmi.

TIRUKKAZ HUKKUNRAM, a temple 36 miles S. of Madras, well known to Europeans who visit it to see the kites fed at noon. The temple is now devoted to the worship of Siva, but an inspection of the inscriptions shows that it was once a Jain edifice, and Taranatha, in his history, in Tibetan, of Indian Buddhism, mentions this temple under the name of Paxitirtha, or, in the Tibetan corresponding name, Bird convent.—*Mr. Burnell on Inscriptions*, 1870, p. 6.

TIRUMALISAI ALVAR, one of the 12 Vaishnava Alvars. He is said to have written 206 stanzas, included in the Nalayira Pirapantam.

TIRUMAN. TAM. White clay with which the Vaishnava religionists make sectarian marks on their foreheads.

TIRU-MUKHU-STHANAM, a ceremonial by which the rulers of Travaucore honour their subjects.

TIRUMULAR, a contemporary of Agastiya. Legends connected with him are given in the Tirutonder Puranam. A treatise on medicine is attributed to him, Tirumular Vaittiya Vakadam, and a theological work, Tirumulamantiram, but both are spurious.

TIRUMURTI-KOVIL, a village in Coimbatore district, Madras, situated in lat. 10° 27′ N., and long. 77° 12′ E., containing a venerated shrine of the Hindu triad, with interesting rock sculptures. Pilgrims visit the shrine on Sundays all the year round. There is one large annual festival. The temple is built exactly on the watershed; that part of the stream on which it is situated flows into the Arabian Sea, and the other part, diverted by a dam, flows into a feeder of the Kaveri (Cauvery), and thence into the Bay of Bengal.—*Imp. Gaz.*

TIRUVALLAVAR, the literary name of the author of the Kural, a book of Buddhistics, in the Tamil language, generally acknowledged to be unequalled in any of the languages of India, and amongst the Tamils Tiruvallavar occupies the first place as a moralist. He is said to have been the son of a Pariah woman by a Brahman father, and to have been brought up by a Valluvan, a priest of the Pariah caste, at Mailapur, a suburb of Madras. His real name is not known, but he is generally supposed to have lived about the 9th century. During the reign of Vamsa Sekhara, a

Pandiya ruler, a college had been established at Madura, with a council or sangattar of 48 professors, whose successors seem to have abandoned the teaching of Tamil, and devoted their attention to the cultivation of Sanskrit literature. The influence of Tiruvallavar, however, induced the Pandiya ruler to reintroduce the Tamil, on which the professors are said to have drowned themselves; but the Tamil progressed, and in the course of the 9th century there appeared a number of the most classical Tamil writers, amongst whom were the poetess Avayar, and the poet Kamben, the translator of the Ramayanum. The Kural advocates moral duties and practical virtues above ceremonial observances and speculative devotion; but it inculcates respect to Brahmans and ascetics, and alludes to Indra and to various parts of the Hindu pantheon. It is a didactic poem, with maxims on the moral aims of man, full of tender and true ideas, but adhering to the view of transmigration of souls, from which release is to be sought in the Buddhistic method. His principal work is the Kural of short lines with four and three footed strophes, with initial rhymes and alliterations in the middle. It is a tradition that he was brother of Auveyai or Avayar. He lived at St. Thomé, and appears to have had an intimate friend called Elela Singan.

TIRUVASAKAM, a Tamil book by Manikkavasakar of the 8th century, held in high esteem by the Saiva sect. They say that persons who will not be moved by it, nothing will move.

TIRYAQ FAROOQ. Arab. This is the celebrated Theriaca Andromachi, of which the Teucrium chamædrys, the common germander, forms an ingredient. The words, however, are merely the Greek and Arabic for the best sorts of treacle, and this substance being esteemed in Baghdad as an antidote for snake-bites, Tiryaq has come to be applied as a general term for antidote. The substance is in much request in Beri-beri. This is a black extract, imported, carefully packed in a small tin box; a powerful stimulant. It is given in a sort of convulsive disorder called 'seet,' eatalepsy; one tola costs six or eight rupees.—*Genl. Med. Top.* p. 152.

TISTA (Tcesta, Trisrota), a large river of Northern Bengal. It rises in the Chatamu Lake, Tibet, but is said to have another source below Kanchinjinga in Independent Sikkim. After passing through Sikkim, the Tista is the boundary between Darjeeling and Sikkim for some distance, till it receives the waters of the Great Ranjit, in lat. 27° 6′ N., and long. 88° 29′ E., when it turns to the south, and, after flowing through the hill portion of Darjeeling district, passes through Jalpaiguri and Rangpur, and finally falls into the Brahmaputra below Bagwa in the district of Rangpur. The Tista debouches on the plains through a gorge known as the Sivak Gola pass. It has many old channels.

TITHE, the younger daughter of Kasyapa, the mother of the giants, the Titans or Daitya. See Genesis vi. 4.

TITHI, a lunar day, and also the anniversary of the decease of a parent, elder brother, etc. In Hindu reckoning of time, those lunar days on which the sun does not rise (Suryo-du-ya nahin) are struck out; those in which it rises twice are Virdh, or additional; and since, according to the Hindus, the Tithi is 22 min. 31·9 sec. less than the mean solar day, it is obvious such circumstances will occur about once in 64 days, or six times in the course of the lunar year. The Tithi of each half month are named after the moon's age, as follows:—

1 Prathami or Pratapada.	5 Panchami.	10 Dasami.
2 Dwitya.	6 Shasthi.	11 Ekadasi.
3 Tritiya.	7 Saptami.	12 Duadasi.
4 Chaturthi.	8 Ashtami.	13 Triadasi.
	9 Navami.	14 Chaturdasi.

The 15th from Shukla Pratapada is Purnima or full moon; and the 15th from Krishna Pratapada is Amavasya or new moon. The Hindu zodiac is divided into twenty-seven lunar mansions or Nakshatra of 13° 20′ each, probably originating in the revolution of the moon being performed in little more than 27 days.

TITLES, badges, and flags have been in use amongst all nations, through all ages. Rulers adopt them in order to assert for themselves their own chiefship, and they have conceded them as distinguishing designations to the eminent of their subjects. Even Mahomed carried the black flag of his tribe, although he in every manner opposed all attempts at music, poetry, and painting, and prohibited all representations of living things. Angels, he said, enter not into a house where is a dog or a picture; but the khalif vicegerents who succeeded him were less strict, and Abdul Malik is said even to have decorated the doors of a mosque at Jerusalem with portraits of their great apostles. At the battle of Bedr in the 2d year of the Hijira, the white flag of the Beni-Aus was unfurled. A little later Mahomed's own black standard led the Muslims to the sack of Khaibar, and the Abbassi khalifs continued the use of the black flag throughout their rule.

Ancient Egypt had a system of heraldry. In the 14th and 15th centuries A.D. the Muhammadans of Egypt had a system of heraldry, but it was not hereditary, and died out. But the Crusaders adopted the use of armorial bearings from the Saracens, and the Turk, Mongol, and Manchu distinguish their tribes and clans by banners of different colours.

In Europe, where,—whether it be by a crown or a collar; a star, a cross, or a chain; a medal, a device, or a seal; a spur of honour or a sword of honour; a mantle, a ribbon or scarf, or any of the standards designative of military or naval rank,—sovereigns recompense merit of every denomination without making the gifts burdensome to their subjects, neither the treasure of the State nor the Civil Pension List being in any way affected by such royal benefactions.

In Great Britain there are seen fifty-three titular insignia, besides nine or ten recognised Orders granted by allies, and the badges of the Orders of the Garter, the Bath, the Thistle, and St. Patrick are to be seen suspended by blue, green, red, and pale-blue ribbons. During the latter half of the 18th century, the fortunes of the British in India were much bound up with those of the Walajah family, nawabs of Arcot. Their chiefship may be regarded as a type of the short-lived monarchies of India; and Surgeon-Major Balfour in 1858 brought to the notice of the Government that from 1801 the Walajah princes had bestowed 890 titles on 704 persons, and had given also a great number of badges.

The titles which the Walajahi family had granted for Muhammadans were nawab, jah, umra, mulk, dowlah, jung, bahadnr, khan; and for Hindus, maharaja, raja, raja-raiau, rae-raian, bahadur, rae and wunt; and the insignia bestowed comprised the palki and nalki palanquins, the chour whisk of feathers; the chatri and aftab giri, sunshade and umbrellas; malbus-i-khas or royal robes, with the ali-band or full-dress belt; the overcoat or nim-astin, the khilat or robe of honour, with shawls and shawl-dresses, the do-shala, rumal-shal, shal-jama, aud the jama-i-durdaman or brocaded dress; and separate jewels were bestowed, or a complete set, the juahar sir-a-pa. To these had been added ensigns of royalty, standards, flags, and colours and eqnipage, with the siphar, shamshir, and pesh kabz, shield, scimitar, and dagger; the ālam, the naobut and naqara were the standard, the royal and martial drum, with the canopy, gong, and throne, shamiana, gharial, and musnud, and the fel-ba-saz-i-tilai-wa-jarib, the elephant with gold trappings and measuring rod. The highest of all the insignia was the mahi-maratib, or fish banner; but the titular military commandants were munsnbdars of 1000 to 5200, and in the civil executive were granted the iuk-stand complete, the Kalm-dan-ba-laoazama.

The British in India were slow to assume the regal prerogative of coining money in their own name, and the equally sovereign duty of honouring their Indian subjects with titular dignities. Until 1835, the East India Company, although they were virtnally independent rulers, continued to coin their gold and silver moneys in the name of Shah Alam, the titular emperor of India, and only in that year did the rupee bear the effigies of King William IV. Two years later, in 1837, the Order of British India of two classes, and the Order of Merit of three classes, were established to reward the sepoy soldiery for services in the field. But in the years 1855-56, the deaths of the Bhonsla rajas of Nagpur and Tanjore, and of the nawab of the Carnatic, closed the line of three native dynasties, and Surgeon-Major Balfour, while settling the affairs of the last-named prince, suggested to the Government to assume the royal duties of bestowing on the people appellations of dignity. There were in his office seven ex-servants of the deceased nawab, holders of titles, viz. Raja Girdhari Lal, Kriatwunt Bahadnr; Raja Eshwara Das, Dyawunt Bahadur; Raja Hulas Rae, Dya Bahadur; Raja Tej Bhan Bahadnr; Rae Rnttan Chund; Rae Futteh Chund; Terazish Khan Bahadur.

The necessity for a change in the old policy was great. The East India Company, whether as merchants or rulers, had paid their servants liberally, but their rewards were restricted to this pecuniary form, and since their sway ceased, other views have been acted on. Queen Victoria, on the 1st November 1858, assumed from the E. I. Company the rule of India, and subsequently, 28th April 1876, and at Dehli on the 1st January 1877, was proclaimed Empress of India; the royal style and titles of the Queen-Empress being Indiæ Imperatrix, Victoria, by the grace of God of the United Kingdom of Great Britain and Ireland, Defender of the Faith.

The Governor-General of India, Lord Canning, on the 24th December 1859, forwarded Surgeon-Major Balfour's letter to H.M. Secretary of State for India, then Sir Charles Wood, and since then there have been instituted the Order of the Indian Empire of one grade; that of the Star of India (1861 and 1866) of three grades; and in 1878 the Imperial Order of the Crown of India for ladies. These Orders may perhaps be still further extended in order to meet the longings aud wishes of the native communities.

The Queen-Empress of India rules over subjects from all the races of Asia, Aryan aud non-Aryan, Semite and Tnrk, Mongol and Manchu, whose rulers have handed down many regal and tribal epithets which the people prize. And Asiatic titles are not single designations to mark a rank or grade, such as duke, marquis, and earl, but honorific epithets, appellations of dignity, distinction and pre-eminence of civil and military bearing. The E. I. Company's Governor-General and the Government of India were early aware of and adopted these forms, but only for themselves. The seal of Warren Hastings, the first Governor-General, was very simple, describes him as—'The pillar of the State, the support in war, Mister Hastins, the devoted servant of the victorions king Shah Alam.'

A successor designated himself on his seal—'Cream of the princes, high in dignity, privy councillor of the illustrious throne of England, Lord Mornington, Governor-General of the kingdoms under the dominion of the English Company in the region of India, the devoted servant of the victorious emperor Shah Alam, 1212.'

A little later, a successor of Marquess Wellesley was styled—'The cream of the princes, mighty in dignity, high in honour, exalted in position, the noble of nobles, Sir George Hilaro Barlow, Baronet, Bahadur, Governor-General of the countries under the dominion of the English Company connected with the country of India, devoted servant of the victorions emperor Shah Alam, Bahadur, 1805, year 1220 Hijira.'

Later on, the seal of the Snpreme Government of India ran—'MDCCCXXXI., Seal of the Government of power and for the control and arrangement of the affairs of the conntry and islands of India, the high English Government, supreme in authority, 1831.'

Governor-General Lord Auckland's seal contains the words—'Zabdat-i-nao-nian, azim-usshan, mushir-i-khas-i-Huzur faiz mamur badshah kaiwan-i-barga-i-Inglistan, ashraf-ul-nmra, Lord George, Earl of Auckland, Governor-General, Bahadur, nazim-i-azam-i-mumalik-i-mahrusa-i-sarkar-i-Company Angriz Bahadnr matalaqa-i-kashwar-i-Hind; san Isawi 1840.' Which may be rendered—'Cream of the people, of exalted dignity, member of the Privy Council of His illnstrious Majesty the bountifnl king of England, the noble of nobles, Lord George, Earl of Auckland, the valorous, Governor-General, the chief administrator of the countries under the rule of the brave English Company, in the year of Jesus 1840.' The Persian is the language used.

The British, while establishing the five Orders ennmerated above, have not, as yet, imitated the native princes in the grant of insignia. The Ain-i-Akbari of Akbar's time names as regal insignia the aurang or throne, chattar or umbrella; the sayaban or sun-shade, and the kaukabah or golden stars, the alam or standard, the chattar-touq, and taman touq or collars. Three drums,

viz. the kowrekh or dimamah, the naqara, and dhol; with trumpet, viz. the kurna of metal, the sarna, the nafir, the sing, and sank'h or ehank.

In Alamgir's reign no one eould of his own aceord assume a chair, a palanquin, or an umbrella. A grant from the king was required to use them, and every one was punished who adopted them without authority. That emperer was styled Muhammad Mohi-ud-Din Abu-uz-Zafr, Alamgir Badshah Ghazi, year 12, year 1080; which may be rendered, Muhammad Mohi-ud-Din, father of victory, world conquering king, the vietorious, year 12, year 1080.

Timur had ₀°₀ as his arms, supposed to represent the three regions over which he ruled. His full title in the height of his power was Sultan, Kamran, Amir, Kutb-ud-Din, Timur, Kur Khan, Sahib-i-Kuran, meaning 'Sovereign, ruler, noble, polar star of the faith; Timur, of the lineage of sovereign princes, lord of the grand eonjunctious.'

The Yukti Kalapataru mentions five umbrellas of Orissa, viz. the Prasada, Pratapa, Kalasa, Kanaka-danda, and Nava-danda. The rajas of Cochin have as their insignia the palanquin with umbrella, the lamp, and the chank-shell.

The balaband or head-fillet is the diadem of the Greeks, and in Mewar is the symbol of honour. In the days of her grandeur, it was held equal to any cordon of Christendom. It consists of one or more cords of floss silk and gold thread, tied round the turband, the ends hanging behind the head. It was valued as the mark of the sovereigu's favour.

In 1808, Futteh Ali Shah, emperor of Persia, instituted the Order of the Lion and Sun, Sher-o-Khurshid, to decorate foreign envoys who had rendered services to his government, and it is now given to Persian subjects. In the treaty of peace with Persia of 4th March 1857, the emperor is styled 'His Majesty, whose standard is the sun; the sacred, the august, the great monarch, the absolute king of kings of all the States of Persia.' At the same time, his ambassador, then at the eourt of France, was styled 'His Excellency, the abode of greatness, the favourite of the king; Firokh Khan, Amin-ul-Mulk, the great ambassador of the mighty State of Persia.' This emperor takes as epithets, Ali Hazrat, Kawi Shokat, Shahnshah, also Ali Hazrat Aqdas Humayun, Shahnshah, also Sahib-i-Qaran; likewise Zil Allah, Shadow of God, and Hashmat Panah, Source of Dignity.

The honorific appellations adopted by the Asaf Jahi dynasty rulers of Hyderabad in the Dekhan have varied. In the 18th century it was Nizam-ul-Mulk Asof Jah Bahadur, Fatah Jung, commander-in-chief, devoted servant of Muhammad Shah, the king, as high in dignity as Solomon, 1140 Hijira, in the tenth year of his reign.

Later on, it was The faithful friend, the bravest man of his time, as high in dignity as Solomon, the conqueror of countries, Nizam-ul-Mulk, Nizam-ud-Dowla, Mir Nizam Ali Khan Bahadur, victorious in battle, Asof Jah, commander-in-chief, devoted servant of king Shah Alam Bahadur, the victorious emperor 19 (year of his reign); and the reigning prince (1884) is Mir Mahbub Ali, entitled Muzaffar-ul-Mumalik, Rustum-u-Dauran, Arastah-i-Zaman, Asaf Jah, Nizam-ul-Mulk, Nizam-ud-Dowla, Mir Mahbub Ali Khan Bahadur, Fatah Jung.

H.H. Nawab Sadik Muhammad, Khan, Bahadur, Grand Commander of the Most Exalted Order of the Star of India, is distinguished by the epithets Rukn-ud-Dowla, Nasrat Jung, Hafiz-ul-Mulk, Mukhlis-ud-Dowla, chief of Bahawulpur.

The ruling family here are Muhammadans of the Dawudputra race. In this territory since 1866 great improvements have been made by irrigation. The treaty of 22d October 1838 is that which exists between the States.

Nawab Mumtaz Ali Khan, Bahadur, is designated Jalal-ud-Dowla, Mustikil-i-Jang, chief of Dujaua.

Kalab Ali Khan, the Muhammadan ruler of Rampur, is styled His Highness Farzand-i-Dil-Pazir-i-Dowlat-i-Inglishia, Kalab Ali Khan, Nawab of Rampur, K.G.C.S.I. and C.I.E., the Persian words meaning Heart-loved Son of the British Government.

The prinee of Areot, a relative of the former Walajahi dynasty of the Carnatic, was styled Azim Jah, Umdat-ul-Umra, Amir-ul-Umra, Madar-ul-Mulk, Umdat-ul-Mulk, Azim-ud-Dowla, Asad-ud-Dowla-al-Angrez, Zahir-ud-Dowla (name) Khan Bahadur, Zu-ul-Fiqar Jang, Fitrat Jung, Sipah Salar, Amir-i-Arkatwa, Hind, G.C.S.I.

Rajputs and Mahrattas have surnames like the races in Europe. Rajputs' are, however, too extended to be utilized, but those of the Mahrattas are iu daily use. Also Hindu rulers and their dominions are sometimes distinguished by the family name of the sovereign, by the name of the capital, or by that of the territory—Sindia or Gwalior, Gaekwar or Baroda, Mewar or Udaipur, Holkar or Indore, and Marwar or Jodhpur.

Maharaja Jaya Ji Rao Sindia, the reigning sovereign of Gwalior, is of the Mahratta race, follows the Hindu faith. He is styled Mukhtar-ul-Mulk, Azim-ul-Iqtadar, Rafi-us-Shan, Wala Shikoh, Muhtashim-i-Douran, Umdat-ul-Umra, Maharaj Dhiraj, Ali Jah, Hisam-us-Saltanat, Maharaja Jyaji Rao Sindia Bahadur, Sri Nat'h, Mansur-i-Zaman, Fadvi-Hazrat Malikah Muazzamah, Rafi-u-Darjah, Inglistan, G.C.S.I. This is The absolute exccutive authority of the country, the mighty iu power, the high in pomp, the exalted in splendour, the magnificent one of the period, the elect of nobles, the great chief, the chief par excellence, the high in dignity, the great ehief Jyaji Rao Sindia, the valiaut, the lord, the conqueror of the age, vassal of Her Majesty, the Honoured and Exalted Queen of England, Grand Commander of the Most Exalted Order of the Star of India.

The Holkar family are Hindu Sudras of the great Dhangar or Shepherd race. They rule over the fertile Malwa province, and are wealthy. Jaswunt Rao died in 1811, and was succeeded by his son Mulhar Rao, who died in 1833 childless. Martand Rao was adopted as his successor, but was deposed by Hari Rao. Hari Rao died in 1843 childless, was succeeded by his adopted son Khandey Rao, who died in 1844, and was succeeded by adoption by Tukoji Rao Holkar, whose title is Tukoji Rao Holkar Maharaja Dhiraj, Rajeswar, Sawai, Tukoji Rao Holkar Bahadur, K.G.C.S.I.

Ch'hatrapati is Lord of the Umbrella, the source of the Satrap of the Greeks. It is taken by H.H. Maharaja Ch'hatrapati Sivaji IV. of Kolhapur, Bhonsla family, K.C.S.I.

Ch'hatrapati is assumed also by a Mahratta lady, another of the Bhonsla family, the princess

of Tanjore, who, as mentioned by Dr. Russell, when inquiring of the Prince of Wales as to his mother's welfare, styled Queen Victoria her sister. This princess is the daughter of the last raja of Tanjore.

Chiefs of the Mahrattas are known as the Pant Pratinidhi, Pant Amatya, the Ghatge chief of Kagal, chief of Ichalkaranji, chief of Sangli, chief of Mudhol, Patwardhan. There are several Ghorpara chieftains, one of them styled Narayan Rao Ghorpara, Amir-ul-Umra of Dutwad; the Ghorpara, also, of Kapshi, and Mudhol and Sandur.

Mysore is ruled by a scion of a race who have had many centuries of dominion, with periods of grandeur and depression. Chamrajendra Wadiar, born 1862, was installed 23d September 1868, and placed in charge in March 1881. His full title is Maharaja Chamrajendra Wadiar Bahadur, Raja of Mysore. He was an adopted son of the preceding ruler, and reigns under the Partition treaty of 1799. The emblem on the flag of Mysore is the fabulous bird of Hindu mythology, called in Sanskrit the 'Gunda Bhairūnda,' and the Canarese name for it is 'Gund Warrūnda pukshee.' This mythical bird has been the principal crest of the royal family of the Wadiars of Mysore since A.D. 1399. Regarding the Gunda Bhairūnda (Benfey, Sanskrit Dictionary), Gunda signifies the temple of an elephant. Bhairūnda, in its adjective form, means formidable. As a nominative, it signifies a form of Siva, and is also the name of one of the attendants of Durga. This fabulous bird has, in the animal kingdom of Hindu mythology, the foremost place. The most powerful elephant ranks below a lion, which ranks below the sarabha, a fanciful animal, which again is inferior to the Gunda Bhairūnda. The emblems of the Maharajas of Mysore are the sankh, or conch-shell; the chara, or quoit of war; the ankusa, or elephant goad; the kuthāra, or dagger; the makara, or alligator; the matsya, or fish; the sarabha, a fabulous animal; the salva, or lion; and the sacred bird above noticed.

The Travancore ruler is H.H. Sri Padmanabha Dasa, Vanji Bala Rama Varma, Kula Shekara, Kiritapati, Manne Sultan, Maharaj Raja Rama Raja Bahadur, Shamshir Jung, G.C.S.I., Maharaja of Travancore. The family name is said to be Threpathathu Swaroopan. Its princes' titles are Rama Varma, Carela Varma, Martandha Varma. The chank-shell is one of the insignia of this race, who claim to be Kshatriya, and follow Brahmanism. The chief of their subjects are the Nair, who follow the law of uterine descent.

Among great chiefs in the Peninsula are the Vizianagram, the Venkatagiri, the Bobili, the Beder rulers of Zorapur, the raja of Wanparti; and of other representatives of ancient dynasties may be named the Zamorin raja Poonithurakon Kunnalakonatiri. In 1766, a zamorin was beleaguered by Hyder Ali; he set fire to his palace, and voluntarily perished in the flames. Since that time the zamorins have been subject to Mysore, and then to the British. At the latter part of the 18th century, a raja of Bobili acted similarly.

The descendant of the great Rama Raja is the raja of Anagundee, whose title is Sri Mudrajadhee Raja, Raja Parameswara, Sri Virapratapa, Sri Vira Teroomala, Sri Viravenkata Ramarawya, Deva Maharawya Sumstan Vidaya Nagarum.

Of the chiefs of Mewar, some have the title of Raj, others that of Rawul; some take Rawut as their distinction. Sawai is an honorific epithet adopted by several princes of Northern India, also by the chiefs of Baygoo and Bejolia; and the Bheendur and Bednore chiefs take respectively Maharaja and Thakur. Sawai means additional, a quarter more, as if to say more than a man.

Of Patiala, in the Panjab, is H.H. Maharaja Rajindar Singh, Mahindar Bahadur, Farzand-i-Khas, Daulat-i-Inglishia, Mansur-i-Zaman, Amir-ul-Umra, Maharaj Dhiraj, Rajeshar, Sri Maharaja Rajgan, chief of Patiala.

Raja Bikram Singh, Bahadur, Barar Bans, Farzand-i-Saadat, Nishan-i-Hazrat, Kaisar-i-Hind, chief of Faridkot.

H.H. Raja Hira Singh, Mahindar Bahadur, G.C.S.I., Farzand Arjamand Akidat Paiwand Daulat-i-Inglishia, Barar Bans Sarmur, chief of Nabha.

Raja Pratap Sah of Tehri, Garhwal.

H.H. Raja-i-Rajgan, Raja Raghbir Singh, Bahadur, Grand Commander of the Most Exalted Order of the Star of India, Companion of the Indian Empire, Farzand-i-Dilband, Rasakh-ul-Itkad-i-Daulat-i-Inglishia, Councillor of the Empress of India, chief of Jind.

The Indian Government addresses the Rajput ruler of Jummu and Kashmir as 'His Highness Maharaja Ranbir Singh Bahadur, Grand Commander of the Most Exalted Order of the Star of India, Companion of the Indian Empire, Sipar-i-Sultanat (Shield of the Sovereignty), Councillor of the Empress of India, Honorary General in the Imperial Army, Chief of Jummu and Kashmir.'

Outside of British boundaries, the rulers and their chiefs have similar titles;

Rana Maharaja Jung Bahadur was entitled Thonglin-Pimma-Kokang-Vang-Syan, Commander of the Army, the brave, perfect in everything, Master of the Military Affairs, the Maharaja.

Minor titles in Nepal are Maharaj, Adi Raj, Kunwar, Rawul, Rawut, Sah, Bahadur.

In Burma, the figures of a peacock and a hare are painted on the king's throne; a peacock is borne on the royal standard, and Ne-dwet-bhu-Yeng, sun-descended monarch, is one of the royal titles. The throne is painted over with figures of the peacock, and the hare typifying the descent of the king from the Solar race and the human race, which is also directly laid claim to in the title Nay-twet Buyin, sovereign of the rising sun, with the titles Khattia, implying that he has dominion over the crops, and yaza, that he can instruct men in the laws. Ein Shemen is the special title of the declared heir of the Burmese throne. It means Lord of the Eastern House. The Tsalwee of Burma is a chain worn as a badge of nobility, and has been supposed to be derived from the Brahmanical thread.

The ruling king, The-baw's titles are Yettanabohng Nay-pyee-daw, ruler of the sea and land, lord of the rising sun, sovereign of the empires of Thuma-paranta and Zampu-decpa, and of other great empires and countries, and king of all the umbrella-bearing chiefs, lord of the mines of gold, silver, rubies, amber, and the noble serpentine; chief of the Saddan or celestial elephant, and master of many white elephants; the supporter of religion, owner of the sekya (Indra's weapon), the sun-descended monarch, sovereign

of the power of life and death, great chief of righteousness, and possessor of boundless dominions and supreme wisdom, the arbiter of existence.

The white elephant of the king of Burma is called Sin-pyoo-daw, or king of elephants. When he goes forth to take the air, he is shaded by golden and white umbrellas. He and the king share between them all the eleven white umbrellas in the country. The king of men has nine; the king of elephants two, but the latter has also four golden ones. Not even the heir-apparent has a right to use the white umbrella. He must be contented with his eight golden shades. The display of a white one would be regarded as a declaration of rebellion, and would result in his immediate execution.

Siam has six classes of district governors or royal stadtholders, of whom a Phya or Paya is the highest in rank.

Anak Agong, son of heaven, is the title of the rajas of Lombok.

Amongst other titles, those of the emperor of China are Tien-tsze, Son of Heaven; also Kwa-jen, the Man who stands by Himself; and Kwa Kuin, Solitary Prince. In China, small globes, or buttons, as they are called, of mother-of-pearl and other substances, are used for distinction. Faghfoor is a common title given by the Muslims to emperors of China.

A round metal or coral or mother-of-pearl or crystal ball or button is used in China to mark the rank of their wearers. The members of the highest rank or order of nobility wear a dark red coral ball or button on the apex of their caps; the second class have one of a light red; the third class have light blue; fourth, dark blue; the fifth has a crystal ball; and the sixth, one of mother-of-pearl; the seventh and eighth, a golden ball; and the ninth and lowest rank have one of silver. Each officer may be further distinguished by the decoration of a peacock's feather. This is attached to the base of the ball or button on the apex of his hat, and slopes downwards; it is worn at the back. Tseang-Keun, the highest rank or title, is bestowed only on the Manchu. Te-tae is the highest military title. State umbrellas of the Chinese are worn only by those to whom they are granted. They are variously marked. China people of humbler rank can use paper umbrellas only. Mark Antony was censured for having united the eagles of Rome with the State umbrellas of Cleopatra.

> 'Interque signa (turpe) militaris
> Sol aspicit cornopeum.'

Titles of Japan are Daimiyo, meaning Great Name; Kugé, nobles of the Mikado's court; Samurai, military retainers of the Daimiyo, who wore two swords. Sho-gun (now abolished), Shomiyo, territorial nobles.

In India and Persia the following words form parts of titular and honorific epithets and insignia:

—*Letter*, of 2d June 1858, No. 987, *from Surgeon-Major Balfour to Madras Government; Letter*, No. 27, of 24th December 1859, *from Governor-General, to Secretary of State for India; Records of the Government of India; Tod's Rajasthan*, i. p. 652; *Confidential Circular*, No. 2120, P., dated 18th September 1876; *Fytche*, p. 28; *Burman*, ii. p. 215; *Lane's Arabian Nights*, note 26, iii. p. 379.

TITSINGH, an officer of the Dutch East India Company, who wrote in 1819 on the Cérémonies usitées au Japon pour les Marriages et les Funerailles, and an English edition, 1822.

TIYAR, a race in Malabar, toddy-drawers and agriculturists.—*Wils.* See Teer.

TIYARI, a tribe of the Nestorians; the girls and women bathe, unrestrained by the presence of men, in the streams, or at the doors of their houses; the men neither heed nor interfere; their wives and daughters are virtuous.—*Layard.*

TO. Japan. China. To-Jin, a Chinaman. It is from the To or Tang dynasty of China, A.D. 618 to 906.—*Sir J. E. Reed.*

TOA, Hind., of Multan, a reservoir to receive the salt liquor in making saltpetre.

TOAD FISH, Lophius histrio. Another toad fish is the Round Diodon, Diodon orbicularis.—*Shaw.*

TOBA, a mountain range between lat. 32° 40′ and 33° 40′ N., and long. 66° 40′ and 68° 20′ E.; length 150 miles, extending N.E. from the N. side of Pishcen valley. The general elevation, 9000 feet; above Pisheen, 3500 feet. Tukatoo Hill, in lat. 30° 20′ N., and long. 66° 55′ E., is 11,500 feet. Country, though generally rugged, is fertile.

Tobacco was introduced to Europe from America about the middle of the 16th century, and is now extensively cultivated in most parts of the world. The name is from the West Indian tobacco pipe, tobogo or tobacco, and has been diffused with the product through most parts of Europe, Asia, Africa, and the Eastern Archipelago.

The East Indies have long possessed esteemed varieties of the various species of the tobacco genus Nicotiana, and increasing quantities and values of the tobacco, raw and manufactured, are being exported from India. Between 1851 and 1861, the value of the exported tobacco ranged between Rs. 1,98,270 and Rs. 5,83,360. This has largely increased as under:—

	Lbs.	Rs.		Lbs.	Rs.
1880-1,	13,673,141	14,08.310	1882-3,	11,101,796	11,55,433
1881-2,	10,530,325	11,50,376			

the largest shipments being to Great Britain, America, the Persian Gulf, and Arabia.

The quantities imported into India, however, have also been large; between 1880-81 and 1882-83, about 1½ million lbs., value 6 to 8 lakhs of rupees.

Great Britain imports annually from all countries about 51,000,000 lbs., value £2,500,000; in 1883, 57,193,065 lbs. of unmanufactured tobacco, value £1,846,382, of which 49,565,605 lbs. were retained for home consumption.

In several of the countries to which it has been brought, its use has been opposed, but it supplies some want to the human body, or affords some gratification, which indicates a want. It has rarely caused injury, is believed to render alcoholic stimulants less requisite, and the general belief amongst physicians and educated non-medical men is that it is useful as a narcotic stimulant, where there is much mental toil. The betel leaf perhaps excepted, tobacco is used more extensively than any other narcotic.

Muhammadans, in a religious point of view, regard the act of smoking as an 'act indifferent,' being of the class of biddate things, which, having come into existence after the death of the prophet, are therefore neither enjoined nor prohibited by him. It is stated in the Khulasat-ut-tawarikh that tobacco was introduced into India by the Portuguese in the latter part of Akbar's reign, and the beginning of Jahangir's. Jahangir, in the fourteenth year of his reign, when at Lahore, forbade the practice,—persons who smoked were to have their lips cut. Tobacco was introduced into Persia about the same time, during the reign of Abbas II. Several persons in Lahore, who contravened this order, were subjected to the tashir punishment, *i.e.* riding on an ass with their face to the tail, and their visage blackened, this peculiar punishment being inflicted for infraction of imperial mandates. The Makhzan-ul-adwiyah says tobacco was introduced by the Portuguese from the new world (Arz-i-jadid).

To discontinue the use of tobacco does not seem to be prejudicial to health. It and opium were once allowed to prisoners in British Indian jails, under the impression that their use, in some shape or other, was essential to the preservation of health in those who had from their youth upwards freely and continuously indulged in them. On this point the Bengal Medical Board had reported that from long and confirmed habit, tobacco smoking had with many adult convicts become not so much

a luxury as a necessary of life, comparable to salt and other condiments, which nature prescribes as indispensable adjuncts to meals, and the Court of Directors considered that discretion was necessary in withdrawing tobacco from persons who had always been in the habit of using it.

The Panjab, Lower Provinces of Bengal, and Madras authorities, however, have ruled that tobacco and opium can only be granted to convicts at the express direction of the medical officer, and then only in limited quantities and for limited periods, in cases where the general health appears to suffer by their sudden and complete withdrawal from old habitués.

Three years after the withdrawal of tobacco from prisoners in the Bengal Presidency had been accomplished, Dr. Mouat presented a report to the Government of Bengal, from which it appeared that of the fifty civil surgeons in charge of jails who had watched the effect of the order, thirty-three considered that the withdrawal of tobacco from the prisoners had not been attended with injury to health, and fourteen gave undecided answers.

Varieties.—Most of the tobacco of commerce, as that of Virginia, and also that of India, is yielded by Nicotiana tabacum. N. latissima, *Muller*, and N. fruticosa are other species. N. Chinensis, *Fischer*, is the source of the large Havannah cigars. N. rustica, *L.*, indigenous in America, and now found wild in Europe, Asia, and Africa, is the source of the Latakia (Laodicea), Salonica (Thessalonica), Syrian, and Turkey tobaccos. N. Persica, *Lindley*, is the Persian or Shiraz tobacco; N. repanda, *W.*, is the source of the small Havannah or Queen's cigars; and besides these are the species N. quadrivalvis, *Pæst.*; N. nana, *Lindley*; N. multivalvis, *Lindley*.

Several of the species and varieties are grown in the south and east of Asia, and in the Archipelago. Dr. Birdwood says that N. tabacum is cultivated in the Dekhan, and N. rustica northwards; also that N. Persica has been introduced into Bombay; and in the years 1860 to 1870, the seeds of the Shiraz, Havannah, Manilla, and Maryland species and varieties were largely distributed throughout British India. In China, N. fruticosa and N. rustica, *var.* Chinensis, seem to be the plants cultivated.

Manufacture.—The soils in which the species are grown have a great influence over the chemical components of the leaf, but the various processes followed in plucking the leaves, and curing and manufacturing them into the marketable forms of tobacco, also greatly modify its quality.

Tobacco, as it occurs in commerce, is of a deep yellowish-brown colour, soft, and pliable, a little clammy, with something of a honey, mixed with a narcotic, odour; the latter, however, is not obvious in the fresh leaves. The taste is bitter, acrid, and nauseous. But the peculiar and characteristic narcotic principle of this leaf is developed, after collecting, by a fermentative process, promoted by moistening the leaves with syrup or brine.

Culture.—The tobacco plant delights in rich forest soil, particularly where limestone prevails, on account of the potassium compounds which abound in soils of woodlands, and also because in the clearings of the forests greater atmospheric humidity prevails, needful for the best development of the finest kinds of tobacco.

Various districts, with various soils, produce very different sorts of tobacco, particularly as far as flavour is concerned; and various climatic conditions will greatly modify the tobacco plant in this respect. Thus, for instance, we cannot hope to produce Manilla or Havannah tobacco in colder climates. Virgin soil with rich loam is the best for tobacco culture, and such soil should always contain a fair proportion of lime and potash, or should be enriched with a calcareous manure and ashes, or with well-decomposed stable manure. It does not answer to continue tobacco culture beyond two years on the same soil uninterruptedly.

Latakia tobacco, according to Dyer, is prepared by submitting the leaves for several months to fumigation from fir-wood.

In most of the countries warm of the East Indies, tobacco is smoked in the form of rolled cheroots or cigars or cigarettes, and the natives readily improvise a cigar or pipe, by rolling the green leaf of a tree into the form of a cone, and filling it as a pipe is filled. In Bengal generally, and in Persia, the pure tobacco is rarely smoked; but various compounds are made and smoked in hookahs of various forms, the Nargyle or Narjil of Persia, the hubble-bubble of British India generally, and the highly ornamental hookah. Nargyle is a word derived from Narel, a cocoa-nut, for the primitive form of hookah is the narel or hubble-bubble, a hollow cocoanut shell half filled with water. On one side of the shell is inserted a pipe, which is connected with the fire-pan and tobacco-holder (chillam); and on the other side is inserted another tube, which goes into the mouth of the smoker. When the smoker draws, the smoke from the first pipe (the end of which is under water) is drawn up with a bubbling noise through the water, and is thus cooled and purified. The coil of flexible tube (necha) of the more elaborate hookah is made of a long coil of iron wire covered with cloth and ornamented; this was invented in Akbar's time. A hookah for smoking madhan (opium), with a peculiar-shaped chillam, is called Madhaki. In Lower Bengal the lower orders frequently smoke in companies, with one hubble-bubble or narel or kalli, which are the most ordinary and cheap forms. All sitting round in a ring, the pipe passes from one to another, each taking a few whiffs as it passes. This is never done by the higher orders, nor is it done in Hindustan. The sulfah form of hookah is the commonest in Kābul and Peshawur.

Dr. Covell, in Silliman's American Journal, volume vii., showed the components of the fresh leaves of tobacco to be—1. gum; 2. a viscid slime, equally soluble in water and alcohol, and precipitable from both by subacetate of lead; 3. tannin; 4. gallic acid; 5. chlorophyle (leaf green); 6. a green pulverulent matter, which dissolves in boiling water, but falls down again when the water cools; 7. a yellow oil, possessing the smell, taste, and poisonous qualities of tobacco; 8. a large quantity of a pale-yellow resin; 9. nicotine; 10. white substance, analogous to morphia, soluble in hot, but hardly in cold alcohol; 11. a beautiful orange red dye-stuff, soluble only in acids—it deflagrates in the fire, and seems to possess neutral properties; 12. nicotianine. Ac-

cording to Buchner, the seeds of tobacco yield a pale-yellow extract to alcohol, which contains a compound of nicotine and sugar. Analysis of five samples of tobacco :—

	Argillaceous soil.		Calcareous soil.

The important mineral substances present in Havannah tobacco, examined by Hertung, are, in 100 parts of ashes—

Salts of potash, .	34·15	Magnesia, ...	4·09
Salts of lime, . .	51·38	Phosphates, . . .	9·04

These substances being for the most part insoluble in earth, must have been dissolved during the growth of the crop.

Analysis by Professor Johnston (Lecturcs, 2d edition) of the ash of the tobacco leaf, and the composition of a special manure for tobacco :—

Potash, ...	12·14	Phosphate of iron,	5·48
Soda, ...	0·07	Phosphate of lime,	1·49
Lime, ...	45·90	Sulphate of lime, .	6·35
Magnesia, . . .	13·09	Silica, ...	8·01
Chloride of sodium,	3·49		
Chloride of potassium,	3·98		100·00

All the ingredients which are necessary to replace 100 lbs. of the ash of tobacco leaves are present in 144 lbs. of the following mixture :—

Bone dust, sulphuric acid, . .	23 lbs.
Carbonate of potash (dry), . .	31 ,,
Carbonate of soda (dry), . .	5 ,,
Carbonate of magnesia, . . .	25 ,,
Carbonate of lime (chalk), . .	60 ,,

A compost similar to the saltpetre beds which Napoleon employed so extensively in France, would be a good manure for tobacco lands, namely, calcareous matter, such as old mortar, dung, and the ashes of weeds or wood.

Growers in Cuba, Virginia, North and South Carolina, and the Philippine Islands select a high and dry piece of land of a siliceous nature, and combined with iron if possible. Tobacco will even lose its natural quality and degenerate by transplanting from one soil to another, although of the same temperature, and *vice versa*.

Throughout the East Indies the farmers grow the tobacco (each for his own use) upon the heap of rubbish at his own door, consisting of ashes, cow-dung, and offal of all kinds, a soil as fertile and as well manured as for the production of the poppy or opium. It is therefore often planted in the spaces enriched by animal and vegetable exuviæ, among the huts of the natives.

Several efforts have been made to extend and improve the tobacco industry of British India. In 1829, under the orders of the Court of Directors, samples of Maryland and Virginia seed were sent, accompanied by a paper by Captain Basil Hall on the Virginian method of cultivation and preparation. The tobacco grown from this seed was pronounced by dealers and manufacturers in London the best sample of Indian tobacco they had ever seen. In flavour and general appearance of the leaf it approached the descriptions usually selected in the London market for cigars and pipes, viz. Havannah, San Domingo, and Amersfoort, which commanded high prices in comparison with other tobaccos; and in 1831 a select committee of the House of Commons reported that a bale of tobacco from Gujerat had fetched 6d. a pound in the open market, being a penny a pound higher than the best American tobacco. But this excellence was far from general, and a considerable quantity of private growth, which was sent to England for sale, was pronounced worthless through defective curing,—being either mouldy and fit for nothing, or brittle and broken, and suited only for snuff. Still no fault was found with the quality of the leaf; and the possibility of growing really saleable tobacco having been demonstrated, repeated experiments have since been made to discover the most suitable soils and the best modes of preparation.

About the year 1876, the Indian Government established an experimental farm at Ghazipur, on the Ganges, 800 acres, and a planter from Virginia was employed to superintend the curing of the leaf, and Ghazipur tobacco is now well known over the North-West as being as good as, if not better than, most of the imported descriptions.

The *Shiraz* tobacco of Persia (Nicotiana Persica) is much esteemed for the delicacy of its flavour, and its aromatic quality. In December the seed is sown in a dark soil, which has been slightly manured (red clayey soils will not do). To protect the seed and to keep it warm, the ground is covered with light thorny bushes, which are removed when the plants are three or four inches high; and during this period the plants are watered every four or five days,—only, however, in the event of sufficient rain to keep the soil well moistened not falling. The ground must be kept until the plants are six to eight inches high, when they are transplanted into a well-moistened soil, which has been made into trenches for them; the plants being put on the top of the ridges ten or twelve inches apart, while the trenched plots are made so as to retain the water given. The day they are transplanted, water must be given to them, and also every five or six days subsequently, unless rain enough fall to render this unnecessary. When the plants have become from thirty to forty inches high, the leaves will be from three to fifteen inches long. At this period, or when the flowers are forming, all the flower capsules are pinched or twisted off. After this operation, and watering being continued, the leaves increase in size and thickness until the month of August or September, when each plant is cut off close to the root, and again stuck firmly into the ground. At this season of the year, heavy dews fall during the night; when exposed to these, the colour of the leaves change from green to the desired yellow. During this stage, of course no water is given to the soil. When the leaves are sufficiently yellow, the plants are taken from the earth early in the morning, and while they are yet wet from the dew, are heaped on each other in a high shed, the walls of which are made with light thorny bushes, where they are freely exposed to the wind. While there, and generally in four or five days, those leaves which are still green become of the desired pale-yellow colour. The stalks and centre stem of each leaf are now removed and thrown away, the leaves are heaped together in the drying-house for three or four days more, when they are in a fit state for

packing. For this operation the leaves are carefully spread on each other, and formed into cakes of sorts, the circumfcrenco from four to five feet, and three to four inches thick, great care being taken not to break or injure thc leaves. Bags made of strong cloth, but thin and very open at the sides, are filled with these cakes, aud pressed very strongly down on each other; the leaves would be broken if this were not attended to. When the bags are filled, they are placed separately iu a drying-house, and turned daily. If the lcavcs be so dry that there would be a risk of their breaking during the operatiou of packing, a very slight sprinkling of water is given them, to enable them to withstand it without injury. The leaf is valued for bcing thick, tough, and of a uniform light-yellow colour, and of an agreeable aromatic smell.

In the *Panjab*, in the years 1871-72, 92,500 acres were under cultivation for tobacco, and 5114 maunds were exported, valued at Rs. 29,184. The kinds of tobacco which are recognised are :—

1st. *Kandahari.* This is of a yellowish light colour, and has small indentated leaves like an onosma; with this kind of tobacco molasses or gur is not mixed, but as it tastes sweet, there is probably a small quantity of honey mixed with it previously; it is not twisted into any shapc, but the broken leaf is left in little pieces. The stalk of the plant is used in this variety to make tobacco, just as much as the lcaves, in fact therc is more stalk than leaves. *Kakar* tobacco is also grown at other places, and there is Lahori Kakar, Shikarpuri Kakar, etc. The kakar is known by its small size, and the leaves are more round than the others, which are long pointed.

2d. *Baghdadi.* The seed of this is very much sought after by cultivators, on accouut of the abundance of the produce. It is not imported from the place whose name it takes, but probably came originally from thence.

3d. *Noki*, so called from its pointed lanceolate leaves; of this there are two sorts, thc noki and the desi Panjabi.

4th. *Lambli*, a variety of which the leaves only are used; thc woody stalk is of no use.

5th. *Zarda.* This is the best quality of tobacco, being of the kind called noki.

6th. *Purbi*, from Hindustan, which is chewed with chuuam, supari (areca nuts), and catechu (kath); it is also smoked, but it is expensive.

7th. *Baingani.* This is very uncommon at Lahore; it is so called because its leaves arc shaped like those of the egg-plant fruit, Solanum melongena.

8th. *Surati*, from Surat and Bombay; it is strong and bitter like kakar.

The ground is carefully worked up by repeated ploughing, and manured with old dung and with saliferous earth where the soil is naturally deficient of salts.

Tobacco is grown in the highly-manured fields immediately around the village site, and brackish water is said to be the best with which to irrigate it. The seed is sown in the N. of India in August and September, and transplanted in October. Its first leaf-plucking is in March; a second is in May, yields about half that of the first crop.

The average produce of a bigha of 360 Ilahi yards square, is 12 standard man of dry leaf, and of first quality, selling at Rs. 5 the man, and Rs. 2 for the refuse stalk; of inferior quality at Rs. 3 the man.

In *Oudh*, the retail price of unmanufactured tobacco is Rs. 8 the man, and that of thrce qualities of manufactured tobacco for smoking, at 2 to 3 seers the rupee, at 5 to 6 seers, and at 13 to 14 seers the rupee.

In the *Bombay Presidency*, tobacco is largcly produced iu the Kaira and Kandesh districts. In 1871-72, nearly 43,000 acres were under cultivation, and 3,262,000 lbs. were cxported by sea to Bourbon, Mauritius, etc., valued at Rs. 5,64,485, and 112,000 lbs. were sent to other prcsidencies. Small quantitics of the fine Gujerat tobacco were sent to the N.W. Provinces. In 1839, Mr. Elphinstone, collector of Ratnagherry, grew some good tobacco from Shiraz and Kazcroon seed. About the same time, Dr. Gordon grew some at the Hcwra Gardens from American and Persiau seed. The Shiraz and Havannah species were grown at Baroach.

In the *Madras Presidency*, the most celebrated of its tobaccos are grown in the Northern Circars, and on some of the low sandy islands or Lanké formed at the mouths of the river Krishna, also in thc delta of the Godavery, wherc thc soil is peculiarly rich and fertile, the product being known as Lanka tobacco. For Lanka cigars, the Nicotiana rustica is still grown on the islets of the Godavery, where the cultivation is rapidly increasing and is rather famous. Thc tobaccos of Trichinopoly and Dindigul are celebrated, and are manufactured into cheroots for Europeans.

The Dindigul tobacco is grown on a carefully-cultivated red loam. Some of the highest-priced tobacco is grown on the rich dry land, but it is too pungeut for smoking. The vicinity of villages and the back yards of houses are much utilized. Heavy rains injure the quality; and as manures, the droppings of goats and shecp are uscd, also ashes, cattle-dung, urine, sweepings, and in Nellore saline earth.

The value of good tobacco in the district of Masulipatam is from 10 to 15 rupees a candy of 500 lbs., or about ½d. per lb. The best Lanka tobacco is from the Sitanagram island near Gutala, on the Godavery, and is sold usually at 40 rupees a candy on the spot.

The seeds of all the species, Havannah, Maryland, Virginia, Manilla, Shiraz, etc., have been widely distributed, and with somc success, and the produce was largely analyzcd by Mr. Broughton. In 1871-72 it was exported to the value of 5½ lakhs of rupees. The paucity in the soils of Madras of carbonate of potash prevents the tobacco plants obtaining sufficient of that substancc. The ashes of the Amcrican tobaccos contain from 25 to 35 per cent. of it.

Ceylon.—Tobacco is cultivated with some attention and success by the Singhalese of the western province, the Kandyans of the interior, and the Tamils of the northern districts of the island. In 1760, Ceylon produced a considerable quantity of tobacco, principally about Jaffna, a demand having sprung up for it in Travancore and on the Malay coast. The cultivatiou spread to other districts of the island, Negombo, Chilaw, and Muttra. Not long after the possession of the island by the British, a monopoly was created by an import duty of 25 per cent. ad valorem, and

in 1811 the growers were compelled to deliver their tobacco into the Government stores at certain fixed rates. The culture and demand thereupon decreased. In 1843, the duty on the exports of tobacco from Ceylon amounted to £8386.

In *Bengal*, the Surat, Bhilsa, and Sandoway (Arakan) varieties of tobacco are the most celebrated. The two first are found to be good for cultivation in the districts about Calcutta. That of Singour, in Bardwan, near Chandarnagar, sells at the price of the Arakan sort, though of the same species as that cultivated in the surrounding country; and the best Bengal tobacco is grown at and about Hanglee, in the Kishnagar district. The tobacco of Chunar, on the Ganges, and more especially that of Bhilsa, were celebrated throughout India.

In 1871-72, above 500,000 acres were under tobacco cultivation, chiefly in the districts of Rangpur, Tirhut, Purniah, and Koch-Bahar, and nearly 10,104,000 lbs. were exported, chiefly to Bombay. The farmers of Koch-Bahar trust mainly to their tobacco for the money for their rents, and in the Terai it flourishes in great abundance; the soil of the Terai is very favourable. It is grown in clearances made in the jungle by the cowherd races who graze buffaloes. They collect the dung on the clearance, and after a year bring it under cultivation. In the cultivation of the Bhilsa tobacco, immense quantities of manure are used, with much wood-ashes.

Arakan tobacco, grown at Sandoway, was brought to London, and was valued at from 6d. to 8d. a pound. Some very superior tobacco, which obtained the name of Martaban tobacco, was shown by Dr. N. Wallich to be from Arakan, and not from Martaban. He described it as having a fine silky leaf. Many people pronounced it the very best they had ever tasted, surpassing the finest imported from Turkey and Persia. An extensive tobacconist said: 'A finer and better-flavoured tobacco he never saw or tasted in his life.' One of the first brokers in the city said: 'The sample of leaf tobacco is certainly of a very fine quality, and appears to have been produced from some peculiar seed and a greatly-improved cultivation and cure.' By many manufacturers it was supposed to be from the seed of Havannah or St. Domingo tobacco. For smoking, it was compared with Maryland tobacco, having the same qualities, except the flavour, which is better, and more like Havannah. The colour and leaf, moreover, were pronounced excellent for cigar-making; but for that purpose the largeness of the principal stalk, and coarseness of the small fibres in the leaf, somewhat detracted from its value.

Tenasserim tobacco is used in Burma. The Karens raise it for their own consumption, and the Burmese both cultivate it and import it. In 1884 the Burmese are cultivating largely.

In the *Philippines* very fine tobacco is grown and the Manilla cheroots are celebrated all over the globe. The quantity of raw tobacco shipped from Manilla in 1847 was 92,106 arrobas, each about a quarter of a cwt.; manufactured tobacco, 12,054 arrobas; and 1933 cases of cigars. 5220 boxes of cigars were shipped from Manilla in 1844, 73,439 millions of cigars were shipped in 1850, and 42,629 quintals of leaf tobacco. The manufacture of cigars in Manilla is a monopoly of the Government of the closest description. The cheroot which now costs, free of duty, about one halfpenny, could be tendered for half that sum. The flavour of Manilla cheroots is peculiar to themselves, being quite different from that made of any other sort of tobacco,—the greatest characteristic probably being its slightly soporific tendency, which has caused many persons in the habit of using it to imagine that opium is employed in the preparatory treatment of the tobacco, which, however, is not the case. The cigars are made up by the hands of women in large rooms of the factory, each of them containing from 800 to 1000 souls. These are all seated or squatted, Indian-like, on their haunches, upon the floor, round tables, at each of which there is an old woman presiding to keep the young ones in order, about a dozen of them being the complement of a table. All of them are supplied with a certain weight of tobacco, of the first, second, or third qualities used in composing a cigar, and are obliged to account for a proportionate number of cheroots, the weight and size of which are by these means kept equal. As they use stones for beating out the leaf on the wooden tables before which they are seated, the noise produced by them while making them up is deafening. The workers earn from six to ten dollars a month for their labour; and as that amount is amply sufficient to provide them with all their comforts, and to leave a large balance for their expenses and dress, etc., they are seldom very constant labourers, and never enter the factory on Sundays, or, at least, on as great an annual number of feast days as there are Sundays in a year.

In *Java*, the residences of Rembang, Sourabaya, Samarang, Chimbou, and Tagal present districts suited for its culture. It has been carried on with success for a good many years in the residences of Treanger, Pakalongan, and Kedu, but only for the consumption of the interior, and of the Archipelago.

Celebes.—Tobacco is cultivated in Celebes, but merely in sufficient quantity for local consumption. It is exclusively grown by the Bantik population; the mode of preparation is the same as in Java; it is chopped very fine, and mostly flavoured with arrack.

The *Japanese* grow a good deal of tobacco for their own consumption, which is very considerable. They consider that from Sasma as better than that from Nagasaki, Sinday, etc. The worst comes from the province of Tzyngaru; it is strong, of a black colour, and has a disgusting taste and smell. The tobacco from Sasma is, indeed, also strong, but it has an agreeable taste and smell, and is of a bright yellow colour. The tobacco from Nagasaki is very weak, in taste and smell perhaps the best, and of a bright brown colour. The tobacco from Sinday is very good. The Japanese manufacture the tobacco well, and persons who cannot use other tobacco can smoke that of Japan with pleasure.

China.—Tobacco seems to have been introduced into China from the west, by way of Japan or Manilla, during the 16th and 17th century, but is now grown in most of the Chinese provinces. The species seem to be the Nicotiana fruticosa, and N. rustica, *var.* Chinensis. The Russians manufacture from it and from Mongolian tobacco large

quantities of cigarettes. The tightly packed leaves are cut up into very fine threads by means of planes, and, according to Lockhart, mixed with some yellow ochre, arsenic, and other compounds. Dr. Williams says that the leaf is sometimes soaked with a solution of opium. A tobacco of Lobelia and also coltsfoot tobacco are sometimes smoked in China.

Australia.—Tobacco is cultivated in New South Wales with much success. Australia produces a leaf equal to Virginia or the most fertile parts of Kentucky, but the great difficulty is to extract the superabundant nitre, which causes a rank and disagreeable flavour. In Victoria the yield is generally large, but the scarcity of dew in some of the districts hinders the production of the best kinds. The crude kinds are obtained with ease. —*As. Soc. Journals; Exhibitions, Reports, and Catalogues; E. Buck; Sir G. Birdwood; J. E. O'Connor; Von Mueller; Powell; Poole; Royle; Forbes Watson; Ure; Don Raphael Zaragoza; Smith.*

TOBAGO CANES. This walking-stick is a product of a palm, the Bactris minor, *Jacq.*, a native of New Granada and the West Indies.—*Seeman.*

TOBBA was the hereditary title of the ancient kings of Yemen. Samarcand was said to have been built by them, and a Himyarite inscription on one of the gates testifies thereunto.—*Yule, Cathay*, i. p. 190.

TOCHARI, a nomade Turki tribe, supposed by Lassen to be the Yeu-tchi, Yu-chi, or White Huns. He places them with their Aryan kings in Upper Bactria and Sogdiana. Towards the end of the second century before Christ they consisted of five tribes.—*Cunningham's India*, p. 40.

TOD, Colonel JAMES, many years Resident at Udaipur, in Rajputana. He devoted his leisure to the collection of the traditions, legends, genealogies, and literature connected with the Rajput race among which he was placed. He published the result of his inquiries in two very interesting quarto volumes, which contain some beautiful illustrations of Rajput scenery and architecture, entitled Annals and Antiquities of Rajasthan, also in his Travels in Western India, embracing a Visit to the Mountains of the Jains and celebrated Shrines of Hindu Faith between Rajputana and the Indus, London 1839.

TODA. This name is derived from the Tamil Toravam and Toram, a herd. The Toda have four or five clans, two of them nearly extinct, and one is endogamic. Their language is Dravidian.

They burn their dead, reverence the buffalo, and take especial notice of the bell suspended to its neck; bury weapons and personal ornaments with the remains of the dead. The men attain from 5 feet 4 inches to 6 feet 1 inch, but average about 5 feet 8 inches. The women range from 4 feet 10 inches to 5 feet 4½ inches, but average 5 feet 1 inch. The men weigh from 110 to 155 lbs., and women from 110 to 130 lbs. When Toda people meet who have been apart for some time, the young women fall on the ground before a senior, and the senior places first the right foot, then the left foot on the head. Women tattoo their arms, chest, and legs with dots. The Toga or Putkuli is worn by both sexes. The Toda is pastoral, but not nomade. They eat buffalo flesh on ceremonial occasions, but are not flesh-eaters in general. They have no weapons for the chase, neither spear nor net, nor do they construct traps or pitfalls. They are increasing in number. In 1870 the five clans numbered 713 souls, of whom 258 were men in the prime of life. The average number of children born to each woman is six, and they bear on the average from 17¼ to 37¼ years. The Toda salam to the rising and setting sun and moon, and speak a blessing on the house, 'May it be well with the male children, the men, the cows, the female calves, and every one.' The ancient bells are worshipped and attached to the necks of cattle, and called Konku-der and Mani-der, bell god, relic god. Each tirieri with its drove of cattle is in charge of the holy palal, who is regarded as a god. He is an ascetic milkman or priest, and the kavi-lal, an ascetic herdsman. No man must touch the palal or approach nearer than five yards. The Toda reverences the tudé tree, Millingtonia simplicifolia, a synonym of Meliosma simplicifolia, a plant of the Himalayas, Khassya, Sylhet, and Mishmi Hills, and in the Western Ghats from the Konkan to Courtallam. The dead have a lock of hair cut off, are burned with their face downwards, and with all their ornaments, and one or two buffaloes are sacrificed at the spot by being struck with the back of an axe on the head. The lock of hair and portions of the unburned skull are collected in a cloth and taken to the house, which continues closed until the final ceremonial. The slaughtered cattle are carried off by the Kota. Formerly many milch buffaloes were killed at the final interment of the portions of the remains that had been preserved, but since 1856 only two are sacrificed, amidst the wailing and lamentations of the relatives, who question the spirit of the deceased thus: 'Are you suffering from fever? Are your buffaloes thriving? Why did you leave us so soon? Have you gone to Amnor?' This final ceremonial is now-a-days postponed till several persons have died, and the relics are all preserved and presented together, and interred at the place of cremation. Old and barren cows are often sacrificed. The Madras Government on the 21st July 1820 ordered efforts to be made to repress their practice of destroying their infant girls, and it has now ceased. An old woman used to take the child immediately it was born and close its nostrils, ears, and month with a cloth, and it was then buried. The old woman got four annas as a present. The women are still (1874) fewer than the men, and the Toda woman consorts with four or five husbands. They crave for progeny, and in the manner of Genesis xvi. 2–5, xxx. 1–4, and xxxviii. 26, obtain it.—*The Todas, by Lieut.-Colonel W. E. Marshall*, London 1873.

TODAR MULL, the Kshatriya Hindu minister of Akbar, a great financier. Under his advice Akbar lightened the burdens that pressed on agriculture, abolished the capitation tax on the Hindus, abolished also the tax on religious assemblies and other imposts that weighed on the population. Todar Mull is described by Abul Fazl as entirely devoid of avarice, and quite sincere, but of a malicious and vindictive temper, and so observant of the fasts and other superstitions of the Hindu religion as to draw down on him the reproof even of Akbar.

TODD, Major D'ARCY, an officer in the Bengal army, who distinguished himself in political duties

when serving in Western Afghanistan at Herat. He wrote a Memoir on Masandaran.

TODDALIA ACULEATA. *Pers., W. and A.*

T. rubricaulis, *Willd.*
Scopolia aculeata, *Sm., Roxb., Rh.*
Paullinia Asiatica, *Linn.*

Kudu miris, . . SINGH.
Kaka toddali, . . TAM.
Mula karni maram, ,,
Konda kasinda, . . TEL.
Varagoki, ... TEL.
Varra kasimi, . . . ,,
Mirapa kandra, . . TIB.

This plant has prickly stems and branches. It is one of the most common bushes on the Coromandel coast, and extends to lat. 30° N. along the base of the Himalaya mountains. All the parts are very pungent, especially the roots when fresh cut. The fresh leaves are eaten raw for pains in the bowels. The ripe berries are fully as hot as black pepper, and have nearly the same kind of pungency. They are pickled by the natives. This has a small white root, about the third part of an inch in diameter, the bark of which is bitter and sub-aromatic, and is considered as stomachic and tonic. It is given in a weak infusion to the quantity of half a teacupful in the course of the day. The fresh bark of the root is administered by the Telinga physicians for the cure of the remittent called hill fever. Roxburgh believed that this tree is possessed of very valuable stimulant properties.—*Roxb.; O'Sh.; Mason; Voigt.*

TODDY.

Palm wine, Toddy, . ENG.
Sendi of date palm, HIND.
Tari of palmyra palm, ,,
Nareli of cocoanut, ,,
Tuwak, . . . MALAY.
Kallu, ... MALEAL.
Sura, Tari, Tadi, SANSK.
Khullu, . . TAM, TEL.

Toddy is the name generally given by Europeans to the sweet, refreshing liquors which are procured in the tropics by wounding the spathes or stems of certain palms, on which the sap and juices exude from the trunks or from the fruit-stalks. In the West Indies it is obtained from the trunk of the Attalea cohune, a native of the Isthmus of Panama. In South-Eastern Asia the palms from which it is collected are the gomuti, cocoanut, palmyra, date, and the kittul or Caryota urens. The gomuti palm, Arenga saccharifera, is fit to yield toddy when nine or ten years old, at the average rate of three quarts a day. On the first appearance of the fruit, one of the spadices is beaten with a short stick, on three successive days, with the view of determining the sap to the wounded part. The spadix is cut off a little way from its root or base, and the liquor which oozes out is received in pots of earthenware, in bamboos, and other vessels. When newly drawn, the liquor is clear, and in taste resembling fresh must. In a very short time it becomes turbid, whitish, and somewhat acid, and quickly runs into the various states of fermentation, acquiring an intoxicating quality. In Malacca, the gomuti, termed kabong, comes into bearing after the seventh year. It produces two kinds of Mayams or spadices,—male and female. The gomuti grows throughout many of the islands of the Eastern Archipelago, and is largely utilized by the people.

To procure the toddy or tari of the palmyra tree, the Borassus flabelliformis, at the season when the inflorescence begins to appear, and before the spathes have had time to burst, the toddy-drawer cuts off all leaves except three or four, and all or most of the spathes are effectually encompassed from end to end by thongs, to prevent the inflorescence from bursting forth. When thus tied, for three successive mornings they are beaten or crushed between the wooden battens, with the object of keeping them from bursting, and to encourage the flow of sap. On the fourth morning, a thin slice is cut from the parts of the spathes. On the eighth morning, a clear sweet liquor begins to flow from the wounded parts, and the toddy-drawer then ascends in the evening with pots or toddy receivers, in which he places the ends of the spathes, and leaves them until the morning, when they are found to contain a quantity of this liquor. The operation of attracting the juice is repeated every morning or evening until the whole spathe is sliced away. The trees are drained in this manner for several months of the year, seven or eight spathes yielding at the same time.

The toddy of the cocoanut tree (Cocos nucifera), called nira, is obtained from the flower spathes before the flowers have expanded, in a manner almost similar to what has been described of the palmyra palm. The spathe is tied with strips of the young leaves to prevent its expansion. It is cut a little transversely from the top, and beaten either with the handle of the toddy knife or a piece of hard wood, a process which is repeated morning and evening for five or six days in succession. The under part of the spathe is then taken off, to allow of its being bent, in which position it is retained by being attached to a leaf-stalk below. An earthen pot or leaf-basket is, a few days afterwards, attached to the end, and is every morning and evening emptied of the toddy which exudes into it, the quantity of which greatly varies. A little portion of the spathe is daily cut off.

Sendi toddy is procured from the date tree of India, Phœnix sylvestris, during the months of November, December, January, and February, in which period each tree is reckoned to yield from 120 to 240 pints of juice; but the mode of its extraction destroys both the fertility and the appearance of the tree. After removing the lower leaves and their sheaths, a notch is cut in the pith of the tree near the top, from which the toddy issues by a small channel, made of a bit of the palmyra leaf, into a pot suspended to receive it.

Palm wine is also extracted from the Caryota urens during the hot season. The quantities which are said to flow from it are immense, so much as a hundred pints during the twenty-four hours.

The taste of toddy in its fresh state probably varies according to the state of the weather and season of the year, which will explain the many comparisons given of it, to Poubon water, mild champagne, cider, ginger beer, perry, etc. In all eastern countries the toddy of these several trees is used for the same purposes. It is drank, though rarely, when fresh from the tree, and is then a gentle aperient, particularly useful in delicate constitutions. It is boiled down into a coarse sugar called jagari or gur, which is afterwards refined. It is fermented in the course of a day into a mildly intoxicating liquor, still known as toddy, of which several pints are partaken before intoxication comes on. It is also distilled into arrack, made into vinegar, and throughout all eastern countries it is employed as yeast, as it begins to ferment in a few hours after it is drawn. In the Peninsula of India the

ropes employed by the toddy-drawers to help them to climb the tree, are made of cow or buffalo hide, but in other countries the pliant tendrils of plants are sometimes employed. The ropes are sufficiently large to surround the tree and the body of the climber, who, by leaning backwards and throwing his whole weight on the rope, is thus enabled to retain each position he attains, while by drawing up his feet and shifting the thong in his hand to higher points, he gradually raises himself to the top of the tree. Accidents, however, are frequent and severe.

TODDY-CAT, one of the Viverridæ, Parodoxurus musanga, *Jerdon*.

TODDY-DRAWER—in Tamil, Sanar; in Malabar, Kattikaran; in Carnatica, Idiga; in Tamil, Sarai-kara; in Telugu, Kalal—is a person who draws and sells toddy, and makes and sells other spirituous liquors. In Mysore the toddy-drawers are the Hale Paik race, who speak Tulu.—*Wils.*

TODDY SHRIKE, Artamus fuscus.

TODRIA. Hind. Species of Cheiranthus; Todri safed is C. annuus, Todri surkh or lal, C. cheiri. Todri na-farmani is a Delphinium. Todri surkh is apparently the seeds of common cress (Lepidum sativum), but in all probability mistakenly, as all other specimens of cress are named halim or taratezak. Several of them are considered to be aphrodisiac. Todri safed is also Mathiola incana, *R. Br.*, the purple gilliflower.

TOFANGI. Pers. A matchlock-man, a musketeer, from Tufung, Pers., a musket.

TOGHA. Arab. A necklace, a badge of slavery; also the Toug, Arab., Toug or Jugum of the Romans.

TOGHRA. Arab. A royal signature; an order; the royal titles prefixed to letters, diplomas, or other public deeds, which are generally written in a fine ornamental hand. The celebrated Husain or Abi Ismail, vizir to the Seljukian sultan Masud, was surnamed Toghrai, on account of his excellence in this kind of writing. He is known to Europe by his admired Arabic poem, the Carmen Toghrai. Being taken prisoner in a battle wherein his sovereign was defeated by his brother Mahmud, he was put to death, A.D. 1120, by Mahmud's vizir, who hated him for his great abilities and superiority in writing the Toghra character.

TOHFAT-ul-MUJAHIDIN, a work by Shaikh Zain-ul-Abidin, giving an account of the proceedings of the Portuguese against the Muhammadans from A.D. 1498 to A.D. 1583.

TOINO, a gem much valued by the Kuki race. One was priced at Rs. 3000.

TOKA. Hind. A blight; a cotton blight caused by the insect Heliocopis cupido, or Dephescaria gossypium, etc., a weevil which attacks cotton.

TOKEN BESSEY or Toucam-baso is a large group of moderately-elevated islands, extending N.N.W. and S.S.E. Wangiwani, the most northwesterly, is visible from a distance of 21 or 24 miles; the body of it is in lat. 5° 15′ 30″ S., and long. 123° 33′ E.

TO-KIO, called Yedo by Europeans, the capital of Japan.

TOKKAY. Burm. A large lizard in Further India and the Archipelago, the Gecko of the Geckotidæ, which utters the sound of 'tokkay' in a loud, distinct tone, and a stranger, if not informed of the peculiar nature of the call, would certainly imagine the word to proceed from the lips of a human being. A French traveller there, whose name was Touquet, hearing the sound at night, responded 'Eh! bien,' and it was some time before they could persuade him that he had been holding a conversation with a lizard about twelve inches long.—*Mr. Earl*, p. 52. See Gecko.

TOL. Hind. A Hindu collegiate institution; that at Naddeya is famed.

TOLA, a weight containing 12 masha, and equal to 180 grains troy; the rupee of British India, a tola, is 180 grains, or 3 drachms apothecaries' weight.

1 tola	=180 grains.	
5 tolas	=1 chittak.	
16 chittaks	=1 seer=80 tolas	= 2·057143 lbs. avoir.
40 seers	=1 mun=(or maund)=	82⅔ lbs. exactly.

The tola in use by goldsmiths and jewellers has maintained a ponderary value of about 182 or 184 grains.

TOLA-PARIKSHA. Sansk. A balance ordeal. The accused is accurately weighed in a balance, and, after certain ceremonies, is re-weighed; if lighter, the accused is innocent. It is from Tolna, to weigh.

TOLKAPPIYANAR, the author of the oldest extant Tamil grammar. He is said to have lived in a town to the south of Madura. He was the chief of the twelve disciples of Agastiya, but he quarrelled with Agastiya, and established a separate school. He wrote the grammar called the Tolkappiyam, or ancient composition. It is the oldest Tamil work extant. Dr. Caldwell places it at the very commencement of the Jaina period, or about the 8th century A.D.; but it contains quotations which must belong to still earlier works. Much of the Tolkappiyam has been lost.

TOLON NOR, a Chinese town, walled, populous, and commercial. A depot for the Kiakta goods from Russia. The workmen are skilful in modelling and casting the bells, vases, idols, and other metallic implements of Buddhism.

TOLU BALSAM, Saint Thomas' Balsam.

Baume de Tolu, . . Fr. | Balsamo de Tolu, . . Sp.
Tolutanischer balsam, Gr. |

This is the concrete juice of the Myroxylon toluiferum. It is of a brownish-yellow colour, transparent, with the taste and odour of the white balsam of Peru.—*Faulkner*.

TOMAN. When Tavernier visited Persia in the 17th century, the toman was worth more than £3; since then it has gradually diminished in value. When Sir J. Malcolm wrote his History of Persia about the year 1820, it was worth £1; it since fell to about nine or ten shillings. Twenty rupees make a toman in Herat, which is equal to 6 rupees and 12 annas of India (or about 13s. 6d.). The toman of the Dushtistan is equal to 16 Persian rupees and 1 mahomedi; each rupee, 7 mahomedi; each of which in turn contains 8 pool-e-siah (black money, a certain copper coin); consequently a toman contains 904 pool-e-siah.

TOMATO.

Lycopersicum esculentum. | Liebes apfel, . . . Ger.
Pomme d'amour, . . Fr. | Pomo d'oro, ... It.

Tomato or love-apple is a vegetable of easy culture, does not require a very rich soil, succeeds best when trained on horizontal trellises; should be thinned occasionally of superfluous shoots;

shoots; raised from seed; used in sauces and in jants.

TOMBS. The tombs of Muhammadans have usually been of earth, or unbaked brick, but every material is employed, and names even are written on the tombs. The tombstone of a man is distinguished by a raised part in the centre, and that of a woman by a depression. The prevalent form in India of Muhammadan tombs of the wealthy, is a dark or black tombstone with verses of the Koran engraved on it, and covered by a cupola. Some of these are very magnificent. Those of the Adal Shahi dynasty at Bijapur and Gogi have attracted much attention, as also have those of the Bahmani dynasty at Kulburga, the Kutub Shahi dynasty at Golconda, and the Nizam Shahi at Ahmadnaggur. The cupolas at Roza, where Aurangzeb is buried, have not any display, and that of Aurangzeb is the least ostentatious. His daughter's tomb at Aurangabad is magnificent, and many of the tombs at Dehli and Agra are great structures. That of Mumtaz Begum, known as the Taj Mahal, is particularly remarkable. The reformers amongst the Muhammadans consider that unbaked brick or earth should alone be used. In Surat, near the mosque of Mirza Shami in Mulana Chakla, is a tomb constructed in the style of the 16th or beginning of the 17th century. Its windows of perforated stone are of rare beauty. In Sind, the more remarkable tombs are those of Mirza Baki Tur Khan, of Mirza Jani Beg Tur Khan, of Dewan Soof Khan, all on the Muklee range of hills near Tatta; and that of Nawab Amir Khan at Tatta, and that of Gholam Shah Kullora at Hyderabad, are all remarkable. Gholam Shah's tomb was commenced by himself in 1765 and completed in 1768. It is situated in the northern end of the upper plateau on which the city of Hyderabad now stands. It is built of burnt brick, with glazed tiles in the inside and out. The glazed tiles were made at Nussurpur, 16 miles N.E. of Hyderabad, once a town of great importance when the river Indus ran at its base. The tomb of Gholam Shah is surrounded by a wall 12 feet high, and is now very much dilapidated. The thirteen tombs, the burial-places of thirteen emperors of the Moghul dynasty of China, are famed in China. See Architecture; Sculptures.

TOMICUS MONOGRAPHUS or T. monographica, a beetle of Northern Europe of a very destructive character to felled oak. In 1860–62, it attacked the staves of the beer barrels of the commissariat in Lower Bengal and Burma, and caused much damage and loss by the escape of the fluid. It is of the section Rhyncophora. The soldiers playing on the name called it Tipsy Tommy.

TOMYRIS, the Getic queen of Scythia. Her opponent erected Cyropolis.

TONARENG, a nomade race dwelling in the great desert of Africa, very fair, with long hair, aquiline noses, high foreheads, and thin lips. They say their prayers in Arabic, and speak a Semitic tongue. Their arms consist of a long lance with a broad head, javelins six or seven feet long, with jagged hooks at the pointed end, a round buckler (darega) of buffalo or elephant hide from Soudan, a poniard, and a broad-bladed seimitar. See Semitic Races.

TONDAI-MANDALAM, an ancient name of a tract in Southern India extending from Nellore to the Colerun river, and including North and South Arcot and the Chingleput collectorate. It was arranged in 24 kottam or fortified districts. It is described as having been an ancient wilderness known as the Ramayanum Dandacaranyam, 'the forest of the punisher,' and was inhabited by the Knrumbar, a pastoral and half-savage race, who had their own chiefs, residing in kots or forts. They were conquered by an inroad of the Vellalar from the western portion of the Peninsula in the reign of Adanda Chakravarti, in an age supposed prior to the Christian era. The Vellalar race found the clearance of the forest a task of such difficulty, that some withdrew; and the others who remained had the peculiar privileges conferred on them by Adanda Chakravarti, which are called the Kani-atchi (acre-permanency). These have survived through the political changes of centuries, and are highly valued in a large portion of the old Tondai-mandalam.

TONDAMAN, an independent chief of Tondaimandalam. The present chief has been honoured by a title from the Viceroy. His ancestor greatly aided the British in their wars against the French. See India; Maravar.

TONGA ISLANDS lie between lat. 17° and 22° S., and long. 172° and 176° W., and consist of six principal islands. They were discovered by Tasman in 1642. The population number about 20,000. The Tonguese are real Polynesians, whilst the Fijians are of Papuan origin. They are also a much handsomer and taller people. In Tonga the women are not allowed to perform hard work; the women of Fiji carry heavy loads, do field work, and go out fishing.—*Galton; D'Ewe's China.*

TONG-KANG —? A boat or junk used in the seas of the Eastern Archipelago.

TONGLO, a mountain in Tonkin, lat. 27° 1′ 8″ N., and long. 88° 3′ 9″ E., in Sikkim, the most southern prominent point of the Singhalila ridge. The top of the mountain is 10,080 feet; the grove at the foot of the peak, with a small pool surrounded by rhododendron trees, is 9891 feet. Barometrical observations, taken simultaneously with those of Calcutta, give the height of Tonglo in Southern Sikkim as 10,078·3 feet. Colonel Waugh's, by trigonometry, 10,070·4 feet,—a remarkable and unusual coincidence.—*Hook. H. J.* i. p. 171; *Herm. Schl.*

TONGUS. The most western of the populations to which this name applies are occupants of the Lower Tunguska; some of whom call themselves Orotshong, and are called by others Tshapodzhir; the men who bear this name tattoo themselves. For the Tongus at large there is no general name, and different tribes designate themselves differently. The Manchu call all the tribes beyond the confines of Manchuria, Orotshong; the Lamut are of the sea-coast. All the Tongus belong to either Russia or China, those of China being the Manchu of Manchuria. The Manchurians, as a body, are perhaps somewhat ruder than the Mongols, and the Russian Tongus somewhat ruder than the Manchu. As a rule, they are Shamanists, and imperfect converts to Christianity, rather than Buddhists.—*Latham*, i. p. 267.

TONI, an Indian canoe, is the hollowed-out trunk of a tree; near Bombay, generally a mango tree.

TONJON, a sedan chair in use in India, open in front and on each side, carried by a single pole on men's shoulders.

TONK, a Native State in Rajputana, ruled over by descendants of the famous predatory leader Amir Khan, the companion in arms of Jeswunt Rao Holkar, who played a conspicuous part in all the dissensions which preceded the British settlement of Malwa. Amir Khan (born 1766) was by connection, habit, and disposition essentially a Pindari. Beginning life as a petty mercenary leader, in 1798 he had become commander of a large independent army in the service of Holkar in the campaigns against Sindia, the Peshwa, and the British, and in assisting to levy the contributions exacted from Rajputana and Malwa. In 1806, Holkar granted to him the State of Tonk, and he had previously received the district of Sironji. In that year, Amir Khan transferred himself and his army to the raja of Jeypore, then at war with the raja of Jodhpur; and, after crushing the latter, he changed sides and reduced the former. Having indiscriminately plundered both countries, he, in 1809, proceeded at the head of 40,000 horsemen (being joined en route by 25,000 Pindaris) against the raja of Nagpur. He was, however, warned off by the British Government, and, returning to Rajputana, his bands plundered the country. Eventually, in 1817, the Marquis of Hastings offered Amir Khan the sovereignty of all the tracts bestowed on him by Holkar, on condition of his disbanding his army, which consisted of 52 battalions of disciplined infantry, 150 guns, and a numerous body of Pathan cavalry. In this Amir Khan acquiesced. His artillery, with the exception of 40 guns, was purchased, and some of his troops enlisted in the British service. The remainder were liberally dealt with prior to disbandment, and the fort and district of Rampura were presented to the nawab by the British Government as a free gift. Amir Khan died in 1834, and was succeeded by his son Wazir Muhammad Khan, who did good service in the Mutiny. He died in 1864. He was succeeded by his son Muhammad Ali Khan. In consequence of abetting a treacherous attack on the relatives and followers of one of the chief feudatories of the State, the Thakur of Lawa, Muhammad Ali Khan was deposed by the British Government in 1867, and his son Muhammad Ibrahim Khan was placed on the musnud.—*Imp. Gaz.*

TONKIN is the cradle of the Cochin-China race, including under this name both Tonkinese and Annamese. Six of its provinces have Saigon for their capital, and up to the year 1883 were designated French Cochin-China. The Tonkinese and Annamese are of the same race, and their original settlement was in Tonkin. They speak the same language, but the pronunciation, and to some extent the orthography, differ, and the same remark is applicable to their respective connection with Chinese. The formation of all three languages is nearly identical, but Tonkinese, Annamese, and Chinese are mutually unintelligible. Three races occupy the peninsula, viz. the Chinese, the Cambojan Malays, and the Mongoloid aborigines, comprising the Moi, Loi, the Laos, and others who are equally connected with the Siamese Shans and with the Miao-tsze, Pai, Lo Lo, Sifan, and other hill tribes, to whom the Chinese have given fanciful and derogatory names. When the Tonkinese moved southwards, they drove these aborigines from the plain country into the hills, and these are now in the ranges to the west and in the kingdom of Tsiam-pa in the S.E. part of the Peninsula, where they occupy the mountains of the province Binh-Thuan, which, in 1883, the French declared annexed. Before the 15th century, both Tonkin and Annam were parts of China; but in the reign of Louis XVI. of France, the French acquired territory there, which has since been called French Cochin-China. Through a prolonged period it was a dependency of the Chinese empire, sometimes as a tributary kingdom, at others as a province of the empire. Tonkin Gulf is an extensive bight formed in the coast between the parallels of lat. 17° and 22° N., and which is rendered a deep inlet by the peninsula of Lui-chew-fu and the island of Hainan, which protect it, and in a great measure enclose it to the eastward. The entrance between Tigu Island and the south-west part of Hainan is about 110 miles wide. The Tonkin river, Thai Sinh, falls into the N.W. side of the gulf, the mouth of its western branch, called the Dornea (probably Sang-koi), being in lat. 20° 50′ N., and long. 106° 39′ E. Cachao, the capital of Tonkin, is about 74 miles up the river. In the entrance of this river there is but one flood and ebb in 24 hours, as occurs at the island of Basselan, near Mindanao, and the other islands in the Eastern Archipelago. The Tonkinese men and women are well proportioned, of an olive complexion, very much admiring the whiteness of the Europeans. Their noses and faces are not so flat as those of the Chinese. They usually wear their black hair as long as it will grow, being very careful in combing it. The common people plait it in tresses, and tie it like a great roll upon the top of their heads. But the nobility, men of law, and soldiers, tie their locks about their necks, that they may not flutter in their faces. They blacken their teeth and suffer their nails to grow, the longest being accounted the finest.—*Everard's Treatises*, p. 17.

TONKIN BEAN, Dipteryx odorata, a native of the woods of Guiana, is an oval, oblong, somewhat boat-shaped seed, one or two inches long, shining, with an oily surface marked with a network of wrinkles; colour purple-brown; odour very fragrant; taste slightly bitter, but very burning and almost caustic. They are employed as a perfume for snuff.—*Faulkner.*

TON-LE SAP, a great lake in Camboja, 60 miles long when at the lowest, but treble that when the inundation occurs. It contains many fish.

TONS RIVER rises on the northern side of Jamnotri, in lat. 24° N., and long. 80° 30′ E., runs N.W., E.N.E., N., and falls into the Ganges a few miles below Allahabad. Length, 165 miles. It receives the Satni, Behar, Mahana, Belun, and Seoti, including small streams; 13,000 square miles drained. It runs near Sahespur in Dehra and near Ramnuggur in Allahabad district.

TONSURE is practised by many religious orders. Rome has sometimes directed her clergy to cut their hair, and at others to let it grow. The races following Hinduism, the Afghans, Persians, Arabs, and Buddhists, shave their heads in whole or in part.

TOON. Tam. The timber of the Cedrela toona,

the Toona maram of the Tamils, a tree which extends over every part of India. The botanical specimens from Nepal having frequently a sixth part added, Dr. Wallich was induced to call that variety Cedrela hexandra. There is, however, a distinct species, Cedrela serrata, which may be readily recognised by the great length of its racemes of flowers, and may frequently be seen with Sapindus acuminatus growing in the close valleys within the Himalaya. The toon tree wood resembles its congeners, Chittagong wood and mahogany, and is much used for furniture all over both Peninsulas. It is of a reddish colour. —*Royle's Ill.; Mason; Holtzapt.*

TOORBUT HYDEREE is the hilly country between Meshed and Herat. Both sides of the high-road to within forty miles of that city were subject to Persia since 1833, and held directly under Meshed. Previous to that period, many petty chiefs, who were robbers, occupied the tract.—*Sir A. Burnes in P. P.*

TOOS and Malidah are loosely-woven flannel-like cloths, very narrow, made of excellent wool, used by the Bhotias, and by the well-to-do natives of N.E. India, as coverlets and sheets.

TOO-TEE, the Chinese god of wealth, or middle heaven; a Chinese festival.

TOOTH RELIC. The sacred tooth of Buddha is in the Mallagawa or Temple of the Tooth in Ceylon. There is much ceremony when this tooth is exhibited, various orders for the opening of the chamber are requisite before the bars may be taken down and the strong box unlocked. The tooth is enclosed in manifold caskets, one within another, becoming richer and more ornamented the nearer they are to the sacred relic. The last two or three are of very fine gold, set with rubies, diamonds, and emeralds; but these, like most oriental jewels, are roughly cut and ill set.—*Frere, Antipodes*, p. 185.

TOPASS, from Topi, HIND., a hat, a person wearing a hat; a Christian of mixed descent, chiefly of Portuguese origin, employed on ship-board as a sweeper.

TOPAZ.

Topase, ... FR.	Zabarjad, ... PERS.
Topas, . . GER., RUS.	Purperagan, . . SINGH.
Pokhraj, ... HIND.	Topacio, ... SP.
Topazio, ... IT.	Pushiaragum, TAM., TEL.
Ratna champaca, MALAY.	

The topaz of the ancients was the greenish-coloured substance now called peridot and chrysolite. The modern topaz is of a vinous orange colour, without any admixture of green. Topaz is so called from the island of Topazion in the Red Sea. Beautiful topazes of various kinds are found in the Burman dominions and in Ceylon. The topaz is divided by jewellers into two, oriental and occidental. Oriental topaz, ruby, emerald, and sapphire, consist of pure alumina, coloured with oxide of iron, varieties of corundum; and the occidental topaz contains a greater proportion of silex. The pink topaz of jewellers is the Brazilian topaz modified by the action of fire. It emulates the balas in tint and lustre. The colouring process is to envelope the stone, ready cut and polished, in German tinder, fastened with wire, and set on fire, and when fairly burned out, the topaz is found changed into a clear rose colour. One of the pencils being yellow and the other pink, the yellow is discharged by heat, leaving the pink unimpaired. Tavernier mentions (p. 150) that a large topaz was worn by the Great Moghul all the time Tavernier was in India. It weighed 181 rati and half a quarter, or 157¾ carats. It was bought at Goa for Rs. 1,81,000, or 271,500 livres.

TOPE, in Southern India, from Topu, Canarese and Telugu, a grove, usually of mango or tamarind trees. In bygone times these were largely planted throughout India in charity; owing to the diminution of the semi-religious feeling which formerly led to the planting of groves, and partly owing to the increased value of land, such deeds have now become fewer.

TOPE, a sepulchral, memorial monument, the st'hupa of the Buddhists; mound-like buildings erected for the preservation of relics. Such mounds occur at Sanchi, Bharhut, Bhilsa, near Benares, Tirhut, Behar, in Afghanistan, Tibet, Nepal, and Western Asia; also in various parts of S. India. On the demise of the Sakya Gautama Siddharta in B.C. January 543, his body was consumed, and his bones, divided into eight portions, were distributed amongst applicants, who erected st'hupas or topes over them—at (1) Rajagriha, an ancient capital of Magadha or Behar proper; (2) Visali, at Bassalor, north of Patna; (3) Kapilavastu, between Ayodhya and Gorakhpur; (4) Allakappo; (5) at Ramagrama, in the neighbourhood of Gorakhpur, and most probably (Sri-Rampura) the Selampura of Ptolemy; (6) Wetthadipo, most probably Bettiya; (7) Pawa was to the west of Visali, on the high-road to Kusinara; (8) Kusinara, equidistant between Benares and Visali, or in the position of Kusia on the Little Gundak; and (9) another tope was erected at Pipphaliwano, or the place of the charcoal tope, between Kapilavastu and Kusinara. The topes of Kābul and Jalalabad were opened by Messrs. Honigberger and Masson in 1835, and those between the Indus and the Jhelum by Generals Ventura and Court in 1833 and 1834. The topes near Benares were opened by Major Cunningham in 1835, and those at Sanchi and other places around Bhilsa were also opened by him and Lieutenant Maisey in January and February of 1857. Of the largest of the Sanchi group near Bhilsa, a plan and section of the building, with a short account of the various subjects represented in the sculptured bas-reliefs of the gateways, was published by Captain J. D. Cunningham in the Journal of the Asiatic Society of Bengal. In the topes dedicated to the celestial Buddha, the invisible being who pervaded all space, no deposit was made, but the Divine Spirit, who is Light, was supposed to occupy the interior, and was typified on the outside by a pair of eyes, placed on each of the four sides, either of the base or of the crown of the edifice. Such is the great chaitya or tope near Katmandu, in Nepal, dedicated to Swayambhunath, the Self-Existent, in which the eyes are placed on the upper portion of the building. A specimen of the regular chaitya is represented in the 3d compartment (inner face) of the left-hand pillar of the eastern gate at Sanchi, in which the two eyes are placed one above the other. Such also are the numerous ch'hod-ten in Tibet, which are dedicated to the celestial Buddha, in contradistinction to the dungten, which are built in honour of the mortal Buddhas, and which ought to contain some portion of their relics, either real or supposed. The first, ch'hod-ten, means simply

an offering to the deity; the latter, dungten, is emphatically a bone or relic receptacle. The same distinction is preserved in the Sanskrit terms chaitya and dhatugarba or dhagoba. The former is properly a religious edifice, dedicated to Adi-Buddha, while the latter is only a relic shrine or repository of ashes. The word chaitya, however, means any sacred object, as a tree, an altar, a temple, as well as any monument raised on the site of a funeral pile, as a mound or a pillar. Chaitya may therefore perhaps be only a general term for both kinds of mound; while dhatugarba or dhagoba is particularly restricted to the relic shrine.

The word tope is the same as the Pali st'hupo, and the Sanskrit st'hupa, a mound or tumulus, both of which terms are of constant use in the Buddhist books. St'hupa or tope is therefore a name common to each kind of tumulus, whether it be the solid temple dedicated to the Supreme Being, or the massive mound erected over the relics of Sakya, or of one of his more eminent followers. Tumulus, modo terra tumens, alias sepulchrum (Serv. ad Virg. Æn. ii. p. 713). In the Turkish word tepeh, which the Persians pronounce tappeh, signifying a hillock or small tumular mountain, we may fancy a resemblance to the Greek ταφος (sepulchrum) or ταφη (sepultura), and it is applied (though not exactly in this sense) to some of the sepulchral heaps near Troy.

From several passages in the Pali Buddhistical annals, it would appear that topes were in existence prior to Sakya's advent, and that they were objects of much reverence to the people. Sakya himself especially inculcated the maintenance of these ancient chaitya, and the continuance of the accustomed offerings and worship. In the sixth of his precepts to the people of Visali, the Passalæ of Ptolemy, he enjoins them to maintain, respect, reverence, and make offerings to the chaitya, and to keep up the ancient offerings without diminution. Sakya acknowledged the holy Muni, Karkutsanda or Krakuchanda, Kanaka, and Kasyapa, as his immediate predecessors. St'hupas had been erected over their relics in the neighbourhood of Kapila and of Benares. St'hupas had also been erected over supreme monarchs prior to Sakya's advent, for Sakya particularly informs his disciple Ananda that over the remains of a Chakravarti raja they build the st'hupa at a spot where four principal roads meet.

It is clear, therefore, that the tope or tumulus was a common form of tombs at that period. In fact, the tope, as its name implies, is nothing more than a regularly-built cairn or pile of stones, which was undoubtedly the oldest form of funeral memento. The topes were therefore of three distinct kinds—1st, the dedicatory, which were consecrated to the Supreme Buddha; 2d, the strictly funereal, which contained the ashes of the dead; and 3d, the memorial, which were built upon celebrated spots. Of the dedicatory topes, as it is improbable that any deposit would have been placed in them, we may plausibly conclude that the largest topes, such as those of Sanchi, Satdhara, and Bhojpur, were consecrated to the Supreme Invisible Adi-Buddha. Of the memorial topes, little is at present known. It seems nearly certain, however, that the great Manikyala tope was of this kind, for an inscription extracted from it, which begins with Gomangasa, 'of the abandoned body,' undoubtedly refers to Sakya's abandonment of his body to a hungry lion. This tope therefore dates earlier than the period of Fa Hian's Indian pilgrimage, in A.D. 400. The funereal topes were of course the most numerous, as they were built of all sizes and kinds of material, according to the rank of the deceased and the means of his fraternity. At Bhojpur, the topes occupy four distinct stages or platforms of the hill. The largest topes, six in number, occupy the uppermost stage, and were, it is believed, dedicated to Buddha; that is, either to the celestial Buddha, Adinath, or to the relics of the mortal Buddha Sakya. This view is borne out by the fact that the largest tope contained no deposit, and that the second and third sized topes yielded crystal boxes, one of which, shaped like a st'hupa, contained only a minute portion of human bone smaller than a pea. The gateways of the Sanchi tope belong to the first half of the first century of our era. The Amaravati sculptures are 300 years later than those at Sanchi, but the frescoes in the Ajunta caves are 300 years later than Amaravati, and belong to the time immediately preceding the decline of Buddhism.

The topes at Amaravati, Bharhut, Buddha Gaya, Muttra, and Sanchi have, as a feature of their style, highly ornamental rails. One at Bharhut was nine feet high.

Amaravati, its central dhagoba, was small, only 30 feet to 35 feet in diameter, or about 100 feet in circumference and 50 feet high. Amaravati was visited in the year 639 by the Chinese pilgrim Hiwen Thsang. It had then been deserted for more than a century, but he describes its magnificence in glowing terms. Many of its sculptured slabs had been brought to Madras, which Surgeon-Major Balfour placed in the museum that he founded, and then sent them to England, where they have been erected, with some others since received, on the wall of the great staircase of the British Museum.

Sarnath, a town near Benares, is famed for a Buddhist tope or st'hupa. It contains no relics, and was erected to mark a place where Buddha stayed. It is 93 feet in diameter, built of stones clamped together with iron. It is said to have been destroyed by the Muhammadans, A.D. 1017, before its completion.

Near Bhilsa, a town in Bhopal, are five or six groups of topes—at Sanchi, Sonari, Satdhara, Bhojpur, and Andher. They are in a district not exceeding ten miles E. and W., and six miles N. and S., and are in number between 25 and 30. The chief is the great tope of Sanchi, attributed to Asoka. Some of the topes contain relics of friends of Buddha and of missionaries. The Sanchi tope is 106 feet in diameter, and 42 feet in height. One at Satdhara is 101 feet in diameter. They are the best preserved of all the topes in India. The four gateways or torans of the Sanchi tope are covered with the most elaborate sculptures. The pillars are 33 feet to 35 feet in height. The sculptures generally represent scenes from the life of Buddha when he was Prince Siddharta, also scenes from the Jataka or legends; likewise the worship of trees, of dahgopas or relic shrines, the chakra or wheel, the emblem of Dharma, of Devi, or Sri, who became the Lakshmi of the following Hindu religion. The trisul emblem and the sacred feet are shown, and there are sieges represented, and fighting and triumphs, and others portray-

ing men and women drinking and love-making. At Sanchi, most of the women are figured nude, while at Bharhut no figure is entirely nude. The southern and oldest of the gateways of the tope at Sanchi was almost certainly erected during the reign of the first of the Andhra kings, in the first quarter of the 1st century; and the other three topes were erected in the course of that century. The last of the architectural monuments of this dynasty was the completion of the rail at Amaravati, about A.D. 450.

The Sanchi tope numbered 2 by General Cunningham contains the relics of the ten apostles who took part in the third convocation under Asoka, and afterward aided in the spread of Buddhism on the borders of India. No. 10 tope has the relics of Sariputra and Moggilana.

At Sanchi, love-scenes and drinking-scenes are represented, and at Muttra the female figures are nude. Each of the pillars found by General Cunningham when excavating at Muttra is adorned by the figures of naked women in high relief, well executed, richly adorned with necklaces and bangles, and a bead belt or girdle round their middles. Each stands on a crouching dwarf; and above each, in a separate compartment, are the busts of a male and female figure, either making violent love or drinking.

The Bharhut tope has numerous bas-reliefs, all representing some scene or legend, and nearly all inscribed with the names of the principal persons represented, with the title of the Jataka or legend.

About 100 topes have been found at Jalalabad, Manikyala, and in the region from the Indus to Kābul. Manikyala is situated near Jhelum, on the banks of the river of that name, called by the Greeks the Hydaspes. There are many topes there, one of which is 80 feet high, with a circumference of 320 feet. No coin of a Greek prince of Bactria has ever been met with in any of these topes. No coins have been found in any Indian topes; but in all the Afghanistan topes coins are found deposited with the relics. The topes have been examined by Dr. Honigberger (1835), Mr. Masson, Generals Ventura, Court (1833-34), and Cunningham, and were described by Professor Wilson in his Ariana Antiqua. The topes at Jalalabad differ from those of India in being smaller in size, taller in proportion to their breadth, and having a far more tower-like appearance, except the Sarnath example. The largest, at Darunta, is only 160 feet in circumference. This is the usual size of the first-class Afghan topes, the second-class being a little more than 100 feet, and many are much smaller.

These topes or tumuli, it is now admitted, are only cairns regularly built, and this mode of sepulture is supposed to be alluded to in the heaps, and graves, and tombs spoken of in Job xxi. 32, also xxx. 24, and in Jeremiah xxxi. 21; and cairns are still found scattered over all the northern parts of Europe and Asia, and down to Cape Cormorin in Peninsular India. Amongst others, the tumuli of Halyattes, Crœsus, etc., have never been properly excavated, and would probably yield most interesting archæological treasures, and perhaps pay for the work if attempted. Mr. Dennis, English consul, Smyrna, began to excavate the tumulus of Crœsus, but was obliged to stop short of the work. Chiefs of Nakello, in Fiji, were interred in tumuli. The tumuli over the Assam (Ahom) sovereigns are very extensive, and when opened, the remains have been found in massive timber coffins, with gold and silver ornaments, and, outside the coffin, various arms, utensils, and implements of agriculture. The same practice prevailed extensively in America, particularly in Peru. —*Ouseley's Travels*, ii. p. 112; *Cunningham's Bhilsa Topes; Fergusson, Rock-cut Temples; Masson.*

TOPI. HIND. A hat, a skull-cap. In India these are made of many materials and in varied shapes. Topi-jhalladar, a cap with a tassel, jhalla. Topi-wala, literally hat-fellow, a derogatory term employed by natives of India to designate Europeans.

TOP-KHANCHE, a border village on the Grand Trunk road. Chass was, on the old route viâ Hazaribagh, the village where Bengal and Behar on each other gaze, and where the traveller has to pass on from one to the other province. Hence the popular saying of the Hindustanis—

'Jab koi pâr hojâtâ Châss
Tab chhorta nahi ghăr ki âs.'

TOR. PUSHTU. Black. The Tor or Black Tarin, a tribe occupying Pishin; Spin or White Tarin, a Pathan tribe residing in the valley of Zawura, and in the open plains of Tull and Chutialli.—*Latham.*

TORA. HIND. A metal anklet ring of gold or silver. A plain ankle ring or chain-work for the ankle, with or without a fringe.

TORAH. HIND. A number of trays, containing various dishes of food, presented to others by great men, or the dishes set before guests at meals.

TORAMA. Amongst the Tartars, a dish of horseflesh boiled soft, and mixed up with turnips, carrots, and dumplings.

TORAN or Torana. SANSK.
Pailoo, ... CHIN. | Tori, Torii, . . . JAP.

A capital, an arch, an ornamental arch, a festoon; strings of flowers stretched across roads; also the gateway of the Buddhist and Hindu temples; also the doorway of the relic or memorial topes or st'hupas, usually in the form of an ornamented archway, but some are formed of upright pillars held together by cross-beams of stone. The most beautiful of these are at Bijanagar, Futtehpur, Sikri, Gaur, Jaunpore, and Sanchi. The Torii of Japan, literally bird-nests, are the sacred gateways of the temples of the Shin-to sect, and consist of two upright posts and a transverse beam. They are the portal over the entrance of the avenues leading to temples and shrines. The Toran in Rajputana is a symbol of marriage, and consists of three wooden bars, forming an equilateral triangle, having the apex crowned with the effigies of the peacock; it is placed over the portal of the bride's abode. At Udaipur, when the princes of Jeysulmir, Bikanir, and Kishengarh simultaneously married the two daughters and the granddaughter of the rana, the torans were suspended from the battlements of the tripolia, or three-arched portal leading to the palace. The bridegroom on horseback, lance in hand, proceeds to break the toran, toran-torna, which is defended by the damsels of the bride, who from the parapet assail him with missiles of various kinds, especially with a crimson powder made from the flowers of the palasa, at the same time singing songs fitted to the occasion, replete with double entendres. At length the toran is broken, amidst the shouts of the retainers, when the fair defenders retire. The similitude of these ceremonies to others in the north of Europe

and in Asia, increases the list of com-affinities, and indicates the violence of rude times to obtain the object of affection ; and the lance, with which the Rajput chieftain breaks the toran, has the same emblematic import as the spear which, at the marriage of the nobles in Sweden, was a necessary implement in the furniture of the marriage chamber. We discover in this emblem the origin of the triumphal arches of antiquity, with many other rites which may be traced to the Indo-Scythic races of Asia. The Rajput's toran, in its original form, consisted of two columns and an architrave, constituting the number three, sacred to Hari, the god of war. In the progress of the arts, the architrave gave way to the Hindu arch, which consisted of two or more ribs without the keystone, the apex being the perpendicular junction of the archivaults; nor is the arc of the toran semicircular, or any segment of a circle, but with that graceful curvature which stamps with originality one of the arches of the Normans, who may have brought it from their ancient seats on the Oxus, whence it may also have been carried within the Indus. The cromlech, or trilithic altar, in the centre of all those monuments, called Druidic, is most probably a toran sacred to the sun-god Belenus, like Har or Bal Siva, the god of battle, to whom, as soon as a temple is raised, the toran is erected, and many of these are exquisitely beautiful.—*Northern Antiquities; Tod's Rajasthan*, i. p. 271.

TORCH TREE or Torchwood. In India, Ixora parviflora, *Vahl.;* in Ceylon, a straight dried branch of the Pterospermum suberifolium is used for a torch; it is bruised into loose strips, and it burns freely and steadily. The Sarcocaulon, remarkable in its fleshy stem and spinose leaf-stalks, burns freely like a torch.

TORENIA ASIATICA. *L.* Caela dola, Sansk. A plant found in almost every part of India; is described by Rheede as having the juice of its leaves employed as a cure for gonorrhœa on the coast of Malabar. It has a brilliant purple flower.

Torenia cordifolia, *Roxb.*, Kaka pu, Maleal., an annual spreading plant; grows on the coasts of Southern India, and is used in medicine.—*O'Sh.; Eng. Cyc.*

TORI. Hind. A vegetable. Bhinda tori, Abelmoschus esculentus; Galar tori, Trichosanthes anguina; Ghia tori, Luffa pentandra; Kali tori, Luffa acutangula.

TORIKA are Japanese officers of noble blood, commanding troops, under the orders of the governors, whom they assist with their advice, and carry out their orders. The doosiu are assistants to the Torika, serve as guards, do duty on board ship and in guard boats. Each of the doosiu is required to maintain a servant. The karoo are stewards. The bugio are civil officers, of rank of two swords, who exercise a controlling power over collectors, interpreters, and other inferior officers.

TORPEDINIDÆ, the torpedo family of fishes, belonging to the order Plagiostomi, and the sub-order Raiinæ. Several genera and species occur in Indian waters, viz. :—

Torpedo marmorata, *Risso*, Indian Ocean, Cape, Mediterranean.
T. panthera, *Ehrenb.*, Red Sea.
T. Smithii, *Gthr.*, South Africa.
T. fusco-maculata, *Ptrs.*, East Africa.
T. occidentalis, *Storer.*
T. sinus Persici, *Kampfer*, Persian Gulf.
Narcine Tasmaniensis, *Rich.*, Australia.
N. timlei, *Henle.*, East Indies, Japan.
N. lingula, *Rich.*, China.
Hypnos subnigrum, *Dum.*, Australia.
Astrape Capensis, *Gm.*, Cape, Madagascar.
A. dipterygia, *Bl.*, *Schn.*, Indian Seas, China, Japan.
Temera Hardwickii, *Gray*, East Indies, Penang.

Narcine Indica, Astrape dipterygia, Temera Hardwickii, and Cysteocercus temeræ occur in the Malay seas. Dr. Cantor says large individuals of Narcine are of rare occurrence at Penang, but younger, from 3 to 6 inches in length, are taken at all seasons, and in or out of water they may be handled with impunity. Several species of fishes introduced into a jar filled with sea-water, and containing a large Narcine, showed no consequences from the contact, nor did they appear to avoid the torpedo. The food of this and the other Malayan Torpedinidæ consists of crustacea and testacea. Torpedo, the name of the principal genus, was founded by Dumeril upon the Raia torpedo of Linnæus, and some other species. The space between the head, the pectoral fins, and the branchiæ, is occupied by small vertical hexagonal tubes, which are filled with mucous matter, and largely provided with nerves from the eighth pair. The situation of these honeycomb-like cells, which constitute the electrical apparatus, is indicated on the upper surface by a slight convexity on each side of the head.

Risso described Torpedo narke, T. unimaculata, T. marmorata, and T. Galvani.

TORRENS, HENRY, a Bengal civilian who was Secretary to the Government of India from 1838 to 1845. He died August 1852. He translated the Arabian Nights, Calcutta 1839; wrote an Abstract of Traffic across the N.W. Frontier, in Bl. As. Trans., 1841, x. p. 677, Edin. Phil. Jl., 1841; on Native Impressions on the Natural History of Animals, in Bl. As. Trans., 1849, xviii. 778.

TORRES ISLANDS. The Great Torres Islands are the most western of the Mergui Archipelago, consist of two contiguous islands with some small islets near them, the centre of the western island being in lat. 11° 47′ N., and long. 97° 28′ E. The Little Torres Islands are a group of three or four small straggling isles 9 miles south by east of Great Torres.

TORREYA GRANDIS. *Fortune.* A tree of China attaining a height of about 60 feet, with an umbrella-shaped crown ; it produces good timber. T. nucifera, *Sieb. and Zucc.*, the Caryotaxus nucifera, *Zuccarini*, a tree of Japan, height about 30 feet. The nuts yield an oil which is used for food.—*Von Mueller.*

TORRIANO, Major, took the fort of Honore by storm on the 6th January 1783. From the 14th May he defended it against an army of 10,000 men, until the peace of 1784, when, having been reduced to eat rats and cats, on the 18th April he delivered it up, and left for Bombay with a remnant of 238 men, having lost 505 by death and desertion.

TORS. By the natural weathering of rocks exposed to atmospheric vicissitudes, the perishable parts are removed, and the more resisting portions remain. In rocks which manifest peculiar arrangements of joints or natural divisions, the blocks and masses defined by their intersections often appear in cubical, sub-columnar, and other characteristic shapes. To masses more or less characteristic in figure, left by the decay of surrounding parts in

prominent situations, the name of Tor is applied in the granitic tracts of Devon and Cornwall. Tors are of very frequent occurrence in the granitic rocks of Southern India, where, as in Hyderabad in the Dekhan, and in the Ceded Districts, the piled-up masses often are seen assuming the appearances of artificial structures.—*Newbold.*

TORTOISE. In Southern and Eastern Asia, there are about 50 species of land and fresh-water tortoises and turtles, and the more important may be thus shown :—

Sec. A. Cataphracta, Shielded Reptiles.

ORDER, CHELONIA.

Fam. Testudinidæ.

Testudo Indica, *Gmel.*, Galapagos.
T. radiata, *Shaw*, Madagascar.
T. stellata, *Shaw*, Vizagapatam.
T. platynotus, *Blyth*, Bardwan.
T. elongata, *Blyth*, Arakan, Tenasserim.
Homopus Horsfieldii, *Gray*, Afghanistan.

Fam. Geoemydidæ.

Manouria emys, *Gray*, Tenasserim.
Geoemyda grandis, *Gray*, Tenasserim.
G. tricarinata, *Blyth*, Chaibassa.
Cuora Amboinensis, *Daud*, Malacca, Tenasserim.
Cyclemis orbiculata, *Bell*, Burma.

Fam. Emydidæ.

Emys nuchalis, *Blyth*, Java.
E. Hamiltonii, *Gray*, Calcutta.
E. trijuga, *Schweigg*, Arakan, Madras.
E. nigra, *Blyth*, Tenasserim.
E. sebæ.
Tetraonyx Lessonii, *D. and B.*, Calcutta, Tenasserim.
Batagur lineatus, *Gray*, S. E. India.
B. Thurgii, *Gray*, Calcutta.
B. dhongoka, *Gray*, Central India.
B. Berdmorei, *Blyth*, Pegu.
B. ocellata, *Dum.*, Calcutta.
B. trivittata, *Dum.*, Nival.
Pangshura tectum, *Bell*, Calcutta.
P. tentoria, *Gray*, Indus.
P. flaviventer, *Gunth.*, Bengal.
P. Smith, *Gunth.*, Bengal.
Platysternum megacephalum, *Gray*, Martaban.

Fam. Trionycidæ.

Emyda granosa, *Gray*, Calcutta.
E. Ceylonensis, *Gray*, Ceylon.
Trionyx Gangeticus, *C. and V.*, Bengal.
T. Guntherii, *Gray*, Arakan.
Chitra Indica, *Gray*, Hoogly.

Fam. Chelonidæ.

Sphargis coriacea, *Linn.*, Tenasserim coast.
Caretta imbricata, *Schweigg*, Bay of Bengal.
Cayana olivacea, *Eschech*, Bay of Bengal.
Chelonia virgata, *Schweigg*, Bay of Bengal.

Testudo greca inhabits a part of Syria; the T. geometrica, an African species, is found also in the island of Ceylon. Of Trionyx, several species inhabit the rivers of Southern Asia. One has been observed in the Euphrates, which is perhaps identical with the Trionyx of the Nile, also found in Hindustan. The Ganges maintains the T. Gangeticus, peculiar, so far as is known, to that river; another, the T. granosus, which forms the passage to the Emydes, is found also on the coast of Coromandel; while two others, T. stellatus and T. subplanus, have been observed from Bengal to the island of Java. The Trionyx of Japan belongs most probably to the first of these, which would thus be nearly as widely diffused as the Emys vulgaris, of which a local variety is found in the islands of that empire. The other Emydes of the south-eastern portion of Asia are E. tectum, E. megacephala, so characteristic in its heavy or unwieldy form; E. tetrionyx, intermediate between the Emydes and Trionyx, and a native of the river Irawadi; E. Spengleri varieties are known in the isle of France, Ceylon, Penang, Malacca, Sumatra, Java, Borneo, and China; E. couro inhabits China, the southern point of Celebes, and the islands of Penang, Java, and Amboyna; while E. trijuga has been found in Java.

Tortoises are eaten in the Pacific Islands. A small fresh-water tortoise of China, called Luh-mau-kwei, is provided with a growth of green conferval filaments of an inch or more in length. It is kept in bowls and fed on fish and shrimps.

The tortoise is sacred in the eyes of the Buddhists of China, because it is believed to undergo no transformation.

The kites carry to a height the small fresh-water tortoise Emyda punctata of Central India, and drop it so as to break the shell.

Testudo elephantina, the gigantic land tortoise of Aldabra, found only in Aldabra, a small island in the Indian Ocean, N.W. of Madagascar; is now nearly extinct. One specimen, a male, weighed 870 lbs., and although known to have been more than 80 years old, was still growing at the time of its death. Other tortoises of great size occur in the Seychelles Islands. The colossal tortoise, Colossochelys atlas, discovered in the Siwalik tract, is extinct. Ancient mythological conception represents the world as supported on the back of an elephant, itself sustained upon a tortoise. This ancient wide-spread notion (common to the ancient Pythagoreans and the modern Hindus) had in it, before Falconer, an obvious incongruity, in that the greatest land animal of the world was figured as supported on the back of an animal of a size comparatively insignificant. His discovery of the Colossochelys, however, removed this incongruity. For in the very same formations in which it was discovered, relics were also found, identical with the existing Emys tecta; on this ground, Dr Falconer conjectured that human eyes might have witnessed the Chelonian monster alive, and watched its toilsome march. This association together of fossil animals and man as contemporaries was indeed remarkable, as it took place at a time so long anterior to that in which the antiquity of man began to receive attention from men of science generally.—*Siebold, Fau. Jap. Chelonii, per C. J. Temminck and H. Schlegel, in Magazine of Zoology and Botany*, i. 199; *Gunther, Reptiles; Smith, M. M. C.*

TORTOISE-SHELL.

Ecaille de tortue, . FR.	Sisk, Kurakura, MALAY.
Schilpad, ... GER.	Sisik panu, . . . ,,
Kachakra, GUJ., HIND.	Kulit-panu, . . . ,,
Scaglia de tartaruga, IT.	

The scales of the turtle are extensively used in the manufacture of combs, snuff-boxes, in inlaying, etc. The goodness of tortoise-shell depends mainly on the thickness and size of the scales, and partly on the clearness and brilliancy of the colours. The tortoise-shell of the Eastern Archipelago is considered superior to that obtained from Singapore, the African coast, the West Indies, the Laccadive and Maldive Islands. In Ceylon, at Point de Galle, the marginal pieces of tortoise-shell are used in the manufacture of bracelets and necklaces formed of a chain of shell; those resembling amber in appearance bear a higher price than such as are formed of the darker shell. In Ceylon there is a great demand for tortoise-shell

for the manufacture of combs, which are worn by men as well as women among the Singhalese. In the numerous excesses into which English costume has been carried, the size of the back comb worn by ladies has never attained that of the Singhalese men, who also wear a narrow, long bent comb across the fore part of the head. Five pounds is a moderate price for a tortoise-shell back comb, which increases in value according to the size and quality of the shell. Hair-pins of tortoise-shell are worn by the Ceylon women, gold and silver being substituted for full-dress; these hair-pins are among the articles purchased by passengers in the steamboats. Tortoise-shell, termed Sisik panu, literally tortoise scales, is the only part of the turtles held of much value by the natives of the Indian islands. Turtle are found in all the seas of the Malay and Philippine Archipelagos, but the imbricated kind that yields the finest shell is most abundant in those of Celebes and the Spice Islands, as far as the coast of New Guinea. The parties chiefly engaged in their capture are the Baju, maritime hunters of the Archipelago, of whom the turtle is the principal game. These people distinguish four species of sea-turtles, to which they give the names of kulitan, akung, ratu, and boko. The last is the panu of the Malays, and the green esculent turtle, of which the carapace is of no use, the animal being valued only for its flesh to sell to the Chinese and Europeans, for among the Muhammadans it is unlawful food. The three first-named species all yield a marketable shell. The ratu, which signifies king or royal turtle, is said to be of great size, measuring from five to six feet in length, but is not often taken, and the shell is of inferior value. All the finest shell is afforded by the first, the kulitan, the name, in fact, signifying shell-turtle, and is from the karet, Caretta imbricata, the hawk's-bill turtle. The back of this creature is covered with 13 shields or blades, which lie regularly on each other in the manner of scales, five on the middle of the back and four on the sides; these are the plates which furnish the costly tortoise-shell to art. The edge of the scale or of the back is further covered with 25 thin pieces joined to each other, which in commerce are known under the appellation of feet or noses of the tortoise. The value of the tortoise-shell depends on the weight and quality of each head, under which expression is understood the collective tortoise-shell belonging to one and the same animal. Tortoise-shells which have white and black spots that touch each other, and are as much as possible similar on both sides of the blade, are, in the eyes of the Chinese, much finer, and are on that account more greedily monopolized by them, than those which want this peculiarity, and are, on the contrary, reddish, more damasked than spotted, possess little white, or whose colours, according to their taste, are badly distributed. The caprice of the Chinese makes them sometimes value single heads at unheard-of prices, namely, such as pass under the name of white heads, which they also distinguish by peculiar names. Such heads as, possessing the above-named qualities, are very white on the blades, and have the outer rim of each blade to the breadth of two or three fingers wholly white, and the weight of which amounts to 2½ catties (qualities which are seldom found united), may be valued at one thousand guilders and upwards = £24 per lb. avoirdupois. The feet or noses of the tortoise-shell are only destined for the Chinese market; whenever the two hinder pieces are sound and have the weight of a quarter catty or thereabouts, which is very seldom the case, they may reach the value of fifty guilders and more. The whole shell of a turtle seldom weighs more than three catties, notwithstanding it is asserted that there sometimes occur heads of four and five catties. Tortoise-shells are also sometimes found, of which the shell, instead of thirteen blades, consists of a single undivided blade; the Orang Baju call this kind, which very seldom occurs, lojong or loyong.

The akung also furnishes tortoise-shell (karet), but the shell being thin, and of a poor quality, much less value is attached to it.

The boko, called panju by the Malays, is the common sea-turtle, which is of no other use than to be eaten. To these sorts the panjubui ought to be added, being the common turtle, with a thick shell, like that of the proper turtle, but of poor quality, and therefore of trifling value; so also the akung-boko, which is distinguished from the common boko by its much larger head.

The ratu, lastly, furnishes a sort which is distinguished by its peculiarly great size, the Orang Baju asserting that it is usually twice as big as the largest tortoise-shell turtle, and therefore five to six feet long and even more.

The Baju catch the turtle by the hadung, the harpoon, and the net; or by falling upon the females when they resort to the strand to lay their eggs, which is almost the only way by which the inhabitants of the coast catch this animal. So soon as they have got the creature in their power, they turn it on its back, when it is unable to recover itself. It sometimes also enters the fishing-stakes.

When the Baju catch a turtle, they kill it immediately by blows upon the head. The tortoise-shell adheres so fast to the shield, that, if they at once pulled it off, there would be danger of tearing the shells, and they usually wait three days, during which time the soft parts become decomposed, and the shells are loosened with little trouble. When they wish to remove the shell immediately after the capture, they separate it by means of boiling water. This object can be accomplished by the heat of a fire, in the application of which, however, a danger is run of injuring the shell by burning it. The Indian islands furnish the largest supply of tortoise-shell for the European and Chinese markets, the chief emporia being Singapore, Manilla, and Batavia, from which are exported yearly about 26,000 lbs.; and one-half of this quantity is from Singapore. Mr. Morrison tells us that the best tortoise-shell comes to China from the Spice Islands and New Guinea. The green turtle average 350 lbs. each, and the hawk's-bills about 250 lbs. Although a strong prejudice existed against the hawk's-bill as an article of food, it is at least equal to the other. He saw newly-hatched turtle running about in every direction, and among their numerous enemies was a burrowing crab (Ocypoda cursor), which runs with great swiftness along the sandy beaches. The price varies from 1000 dollars down to 200 per pikul, according to quality.—

M'Gillivray, Voyage, i. 51; *M.E.J.R.; Morrison, Comp. Des.; Crawfurd; Journ. Ind. Archi.*, 1839.

TORTOSA, the ancient seaport of Mount Libanus, is opposite the island of Aradus, the modern Raad. It was from this Tortosa that the wood of Lebanon was conveyed to Phœnicia, whence, for ship-building, it was carried on camels' backs to the Red Sea, and it is this town which the translators of the Hebrew Scriptures have rendered Tarsus.—*Rob.* ii. p. 70; *Catafago.*

TORTURE is perhaps practised in India, unlawfully, more particularly the various modes of compressing and binding the limbs and chest, and burning and branding. The latter practice still lingers throughout the Bengal Presidency, and prints of the chillum and hata are by no means rare. In Afghanistan is a form called squeezing of the head. A leathern strap, made to fit the head and the ends sewn together, has two sticks fixed to its interior sides. It is placed on the head so as to have both sticks facing the temples, after which the executioner begins twisting the strap; the sticks pressing on the temples produce an intense suffering. Another kind of torture is to hammer under the nails thorns and splits of reed. The Dandazani, practised at Benares, consisted in fastening a man's arms behind his back with a cord, which is twisted round by a stick. In Sundrazani, the victim was struck with a double flapper of thick leather. In the Awangilli, the victim had to stand erect with a foot on each of two round pots, so far apart as to render it difficult to retain that portion. — *Calcutta Review*, January 1871; *Elliot.*

TORUD GOPA. Hind. A dye-stuff, said to be prepared from the dung of cows which have been fed on 'keshu,' the flowers of the Butea frondosa. Used in ophthalmia, and to make the 'tika' on the forehead.—*Powell.*

TOSHA. Hind. Double felt of Amritsar; a mattress, a quilt. Tosha-khana, a wardrobe of royalty, a storeroom.

TOTA-KAHANI. Hind. A book containing the tales of a parrot; it is called in the Persian Tutinamah. Its original, the Suka Saptati, seventy tales, is in Sanskrit.—*Dowson.*

TOTANUS CALIDRIS, common redshank of Europe, Asia; very common in India. T. fuscus, the spotted redshank of Europe, Asia; common in India. T. glottis, the greenshank of Europe, Asia, Africa, Australia; stragglers obtained in N. America; very common in India.

TOTARA, the most valuable timber tree of New Zealand is the Podocarpus totara.

TOTEM. An early stage in religious progress is that which may be called totemism, or the worship of natural objects. The savage does not abandon his belief in fetishism, from which, indeed, no race of men has yet entirely freed itself, but he superinduces on it a belief in beings of a higher and less material nature. In this stage everything may be worshipped,—trees, stones, rivers, mountains, the heavenly bodies, plants, and animals. A family, for instance, which was called after the bear, would come to look on that animal first with interest, then with respect, and at length with a sort of awe. The habit of calling children after some animal or plant or gem, is very common. In China the name is frequently that of a flower, animal, or such like thing. In India, amongst the slave girls of the Muhammadan harems, the nargas, the sosan, the narcissus, the lily, etc., are in common use as names. In Australia, the totem, or, as it is there called, kobong, is almost in the very moment of deification. Each family, says Sir G. Grey, adopts some animal or vegetable as their crest or sign, or kobong as they call it; but it is more likely that these have been named after the families, than that the families have been named after them. A certain mysterious connection exists between the family and its kobong, so that a member of the family will never kill an animal of the species to which his kobong belongs should he find it asleep; indeed, he always kills it reluctantly, and never without affording it a chance of escape. This arises from the family belief that some one individual of the species is their nearest friend, to kill whom would be a great crime, and to be carefully avoided. Similarly, a native of Australia who has a vegetable for his kobong, may not gather it under certain circumstances, and at a particular period of the year. Here we see a certain feeling for the kobong or totem, though it does not amount to worship. In America, on the other hand, it has developed into a veritable religion. The clan name of a Rajput race, Sesodia, is from the hare. So also among the Khonds of India, the different tribes take their designation from various animals, as the bear tribe, owl tribe, deer tribe, etc. The Kol of Nagpur also are divided into 'keeli' or clans, generally after animals, which, in consequence, they do not eat. Thus the eel, hawk, and heron tribes abstain respectively from the flesh of these animals.—*Lubbock, Origin of Civil.* p. 173.

TOTTI, of the Tamil people, is a village servant who waits upon the villagers. The domestic Totti does the humblest part of the house work.

TOTTYAR, a race of Coimbatore, who settled there from the north.

TOU. In the midst of a Tartar camp is a standard formed of a long pike, to which are attached seven white yaks' tails, one above another. These standards are called tou by the Chinese; and doubtless it is from them that the name of the Turkish standard, the 'toug,' has been derived. 'It is,' says Cuvier, 'with the tail of the yak, a native of the mountains of Tibet, that those standards were first made which are still in use among the Turks.'—*Regne, Animal*, i. p. 270; *Huc's Christianity*, i. p. 121.

TOUBA TREE, Anglo-Arab., of the Muhammadans, a fabulous tree which is mentioned in the Koran.

TOUNGHOO, properly Toung-ngu, a town of the Tenasserim Province of British Burma, in lat. 19° N., and long. 90° 18′ E. It is built on the right bank of the Sitang river, is a military cantonment, and is the headquarters of a district to which it gives its name, lying between lat. 17° 37′ and 19° 28′ N., and between long. 95° 53′ and 96° 53′ E. Area, 6354 square miles; population in 1872, 86,166 souls. The district is crossed by the Pegu Yomas, and the Poung-loung and Nattoung chains, covered for the most part with dense forest.

According to the palm-leaf histories, A-thawka (Asoka) in B.C. 321 sent for the chiefs of Toung-ngu, and, giving them various relics of Gautama, directed them to transport them to Toung-ngu, and to erect pagodas over them.

Philip de Brito y Nicote seized this country in the name of the king of Portugal, and entered into an alliance with Maha-thi-ha-thu-ra-dhamma-raza, but he quarrelled with Nat-sheng-noung-thi-ri-maha-dhamma-raza, and captured Toung-ngu. Pegu was eventually conquered by the king of Burma in 1612, and Toung-ngu never regained its independence.

The population consists of Talaing, Arakanese, Khyeng, Ya-baing. The principal manufactures are silk, saltpetre, and gunpowder. The Ya-baings and Karens rear silk-worms.

TOUNG-THA, children of the hills, of Burma, speak numerous dialects, and worship the deities of the elements, and spirits of the hills and streams.

TOUNG-THU, a tribe occupying the valley of Salwin, from lat. 18° to 20° N. The Toung-thu dwell between the Sitang and the Salwin, and in Amherst Province, and are in their dialect more closely connected with the Yuma languages than with the Burman. The Toung-thu has a large glossarial agreement with Karen, but it has special affinities with the Kumi and other Yuma dialects, and particularly with the Khyeng. The Toung-thu are Islamized Chinese, and are said to resemble the Annamese, but as their dress resembles that of the Annamese, this may create deception. Those who occupy a portion of Amherst Province are the only people there who understand the plough. This has a metal blade. They are esteemed good cultivators.

TOUNG-YA. Burm. A form of hill cultivation carried on by burning the jungles. The Toung-ya of Burma and Arakan is the Dhai-ya of the Central Provinces, the Joom of the hill tracts of Chittagong, and Kumari of S. India.

TOUR, Cytisus cajan.

Togari, ...	Can.	Tur-dhal, ...	Hind.
Pigeon-pea, . . .	Eng.	Tovaray, purpoo, .	Tam.
Large dhal, . . .	,,	Kandi papu, . . .	Tel.

This is sown in fields at the commencement of the rains in June, and sometimes much later; it is ripe in December. The seeds are sometimes ground into flour, or split like dry peas; for the latter they are an excellent substitute. It is partly sown along with ragi, like bullur, and partly in full in dry lands.

TOURMALINE has many valuable and beautiful forms, amongst them the rubellite of Ava and Siberia. Tourmaline and rubellite are boro-silicates of several bases. Tourmaline is a corruption of the Ceylon name. It varies very much in transparency. On account of its property of polarizing light, it is used largely in the manufacture of polarizing instruments. *Yellow tourmaline* from Ceylon is but little inferior to the real topaz, and is often sold for that gem.

White tourmaline of an inferior quality is often offered for sale in Moulmein under the name of Ceylon diamonds, but they are usually made from green tourmaline by exposing it to heat.

Red tourmaline or *rubellite* occurs in Ceylon, Burma, and Siberia. It is a fine stone, and of great value when free from cracks and flaws. The finest have all the richness of colour and lustre belonging to the ruby.

Yellowish-grey and *hyacinth-brown* varieties are chiefly brought from Ceylon.

Schorl or black tourmaline is found in Madura in great abundance, also in quartz near the mouth of Tavoy river on the east side, and also at the foot of the eastern mountains near the head-waters of the Dahgyaine, north-east of Moulmein. In both places the crystals are numerous, and in Tavoy they are large.

Green tourmaline, when clear and fine, is valuable for gems, and specimens which cannot be distinguished by the eye from beryl are brought with the Ceylon diamonds. Beryl scratches quartz, but tourmaline is scratched by quartz.—*Mason*; *Dana*, *Mineralogy*; *Bristow*, *Mineralogy*.

TOUS-LES-MOIS, Canna edulis, *Ker*. Starch from the tubers is commonly used by invalids. The microscopic granules of Tous-les-mois are larger than those of any other starch used as food.

TOWER OF SILENCE is a designation of the elevated structure raised by the Parsees, on which are lodged the remains of their dead. In Bombay, on the N.E. crest of Malabar Hill, are situated two towers of silence. From the Gowalia Tank Road towards the north, a winding avenue leads to the gateway at the top, on which is an inscription that none but Parsees may enter there. The gateway is also reached by a sort of giant staircase, half a mile long, which, starting from the Gaundavi Road, close to Back Bay, comes almost straight up the hill. The grand staircase is shaded by palms and other trees, and it is the route along which the dead are borne. The visitor on passing the portal is in a kind of small court-yard, from which he can only advance by mounting some half-dozen steps. On the right is the Suggree, a low stone building open on all sides, in which prayers are offered for the dead. When the mourners are numerous, they group themselves round the building, see all that goes on within, and take part in the prayers. The dead are never taken within the Suggree. Beyond the garden, on the undulating summit of the hill, looking towards Malabar Point, is the park-like grass-covered tract in which, at irregular intervals, are the towers of silence, where the dead are laid. The towers, of which there are six, are round, and on an average from thirty to forty feet high, and about as much in diameter; one or two are, perhaps, higher. They are built of stone, the walls being some three feet thick, and they are all coloured white. There is no window, and only one door, covering a small aperture about a third of the way up. To this aperture access is obtained by a narrow stone causeway, up which the bier-bearers of the dead alone may venture; no one, except the bearers who are set apart for the purpose, approaches within thirty paces of them. Inside, on the lock pavement, spaces are marked out on which the dead are placed to await the vultures, and pathways are marked out for the bearers to walk upon without defiling the place where their unconscious burdens are to rest.

When a Parsee dies, his body is at once washed and purified, and if there be time, it is carried to the towers before sun-down. If death take place, however, after, say, three o'clock, when there would not be time to gain the towers and pray becomingly before dark, the body is kept till the early morning. Having been rendered undefiled, it is clothed in white, and prayers are offered at the house by the family and friends. None may henceforth touch it. The women of the family take a last look, and the light bier on which it has been placed being covered with a white shroud, it is carried by the bearers to the hill. No vehicle

can on any account be used; no one must even follow in a vehicle; the whole journey, no matter what the distance, must be made on foot. All who form part of the cortege must have been washed and clothed in white, and to touch any one would be to become defiled. The women in some cases wear mourning—black, but the men never. No woman attends a funeral; the female relatives of the dead always remain at home on that day, but they may and do go afterwards to the garden near the towers to pray.

Carrying the body and following it in procession, holding scarfs passed from one to the other, those forming the cortege wend their way slowly to the foot of the steps leading to the top of Malabar Hill; ascending these, they reach the crest in a quarter of an hour, and the priests go through the sacred ceremonies in the Suggree. When the prayers are over, the body is borne to the foot of the causeway leading to the door of one of the towers. Here the face is uncovered so that all may take a last lingering look; it is covered again, and the form disappears into the tower.

The towers are scattered over a large and park-like enclosure, secluded by its elevation from every eye. Outside the lofty wall which encircles the whole space, there are hundreds of acres of land, partially cultivated, which the Parsees claim, and which, while in their possession, they have carefully kept as a sort of neutral territory between the domain of outsiders' bungalows and that of the towers. What goes on inside, therefore, no one can see; but what happens is this. Some fifty vultures make their abode in the lofty palms within the enclosure; seldom indeed do they go beyond the trees in the rough ground outside the vast compound. There is nothing of a sacred character ascribed to these useful but unclean birds. They are regarded simply as creatures who remove the dead, and the grounds about the towers of silence have nothing of the hideous taint of the charnel-house. A magnificent view bursts upon him who stands on the Suggree steps and looks across the island and the bay beyond. The white walls of innumerable bungalows and public buildings are seen through a forest of palm trees, over the tops of which you see, in the middle distance, the great sea, which is the harbour. Beyond rise Elephanta and other mountain islands; towards the south is the fort, with its public buildings glistening in the sun; while Back Bay with Colaba beyond make up another and only a less beautiful picture.

TOWQ. Arab. A collar or ring, worn round the neck. See Togha.

TOWYAH. Sind. A grain measure of quantity, ranging from 3¾ lbs. to nearly 7½ lbs. for different grains.

TOXOTES JACULATOR. *Pallas.* The food of several examined, consisted of remains of crustacea. In the Straits of Malacca this fish occurs, but not numerously, at all seasons. It is eaten by the Malays, who record its habits in the denomination ikan, signifying a fish, sumpitan, a blow-pipe.

TOY CART, a Sanskrit play, the Mrichikata, by Kalidasa, translated by Professor Wilson. This play is supposed to have been written by king Sudraka; over what kingdom he reigned is not ascertained with certainty. Professor Wilson remarks in his introduction to the Toy Cart, p. 9, that it may be safely attributed to the period when the sovereign Sudraka reigned, whether that be reduced to the end of the 2d century after Christ, or whether we admit the tradition chronologically, and place him about a century of our era. These specimens of the Hindu drama show how little is the change in the customs of the Hindus since the plays were written.

Playthings for children to amuse themselves.

TRACHILOBIUM HORNEMANNIANUM is the copal tree of Zanzibar. The gum copal or gum anime from it is found in the earth on the east coast of Africa, and often where no copal-yielding trees now exist. Specimens of the leaf, flower, etc., obtained from the semi-fossil gum, agree in all respects with those of the living tree. The peculiar and more valuable properties of the buried gum anime are supposed to be from a chemical action, the result of a long retention in the earth.

Copal, called gum anime in the London market, occurs on the E. coast of Africa from Panjan to Mboamaji, and an endless supply is obtainable. The whole of the Zanzibar coast produces the real copal of commerce. Raw or jackass copal is exported in considerable quantities from Zanzibar. The ripe or true copal is valued by its colour. The clearest and most transparent pieces bring the highest prices, after them the light amber, lemon and dark-yellow, and red. Sometimes the gum, like amber, contains drops of water, bees, tics, flies, and other insects. The diggers do not excavate to the depth of a man's waist, and the copal occurs in a red sand underlying blue clay. The Tr. Hornemannianum tree yields now a second-class gum-resin, but the same tree did yield the anime resin which has been buried for thousands of years under the soil, and there been changed. In many cases a change in the level of the land seems to have taken place since the old trees yielding the Sanifariol anime died, for copal is often found in the ground where the tree is now lost or rare.—*Dr. Kirk; Capt. Burton.* See Resins.

TRADES and Tradesmen. Amongst the races in the East Indies many are keen traders, engaging in extensive transactions with distant countries. The Bhattiah, Natha-Kothi, Marwari, and Banya Hindus, the Parsees, the Povinda, Bora, Moplah, and Labbai Muhammadans, the Bugis of the Archipelago, are not surpassed in enterprise by the mercantile men of any race. The trade of the Arabian Sea, Red Sea, the Persian Gulf, the east coast of Africa, and of the Eastern Archipelago has been in the hands of the races of Southern and Eastern Asia from the times that the Buddhist religion prevailed, and the Marwari race, who are of the Jain sect, still pursue it; and it is a proof of the tenacity with which races follow mercantile pursuits, to find the Marwari from the desert of India spread throughout the

country as its great financiers, with transactions in all parts of Asia.

The Bhattiah Hindu race occupy all the great commercial centres from the north of Rajputana to the western coast of India, and to the shores of Arabia and of Africa, as far south as Mozambique, residing there for years together, or as temporary visitors during the trading season. They belong to a Vaishnava sect who follow the teaching of Vallabhacharya. Amongst them are to be found the keenest of traders, and yet the most sensual of voluptuaries; intellects remarkable even among Hindus for acuteness and subtlety; sometimes an obtuseness of moral consciousness which would startle a galley-slave, but in rare exceptions a simple devotion to truth which would do honour to a Christian martyr. Hindu merchants, tradesmen, and artisans of India are mostly all associated in classes, sects, castes, or guilds, who do not intermarry, and seldom eat with others. The blacksmith, goldsmith, coppersmith, carpenter, and stone-cutter are the five artisan castes, komsala or kansala, in contradistinction to the five learned castes. The artisan castes all wear the poitu or sacrificial cord; they do not revere Brahmans, and they carry their dead to the grave and inter them in a sitting posture; the leather-workers' dead are deemed unclean.

Such social customs of the Hindu traders, however, are peculiarities of their respective guilds, and in no way affect their business habits or occupation in their intercourse with the, to them, outer world. For over two thousand years the people who have been dwelling on the coasts of the Arabian Sea, sometimes at one town, sometimes at another, have been actively engaged in commerce with the nations of Western Asia and Europe, and when disturbed by conquering races at one place, they have found shelter at another. The British have only been in India since the 17th century, but in that time three great cities, which had absolutely no previous nucleus, have grown up around their fortresses.

In 1881 Bombay had a population of 773,196; Madras, 405,848; and Calcutta and its suburbs, 684,658. Kurachee, in the year 1840 a small fishing-place, has now 73,560 inhabitants; and in the thirty years from 1852, Rangoon has grown from 25,000 to its present (1881) population of 134,176. India, with a population in British territory and in Native States of 253,891,821 souls, has 3,057,522 mercantile men, general dealers, carriers by land and sea, or engaged in storage; and in Bombay, Calcutta, and Rangoon will be found the representatives of every civilised race on the surface of the globe, all earnestly engaged in trade. That they are largely immigrants is shown by the fact that British Burma, in a population of 3,736,771, has 245,239 more men than women.

The closing years of the 15th century saw Portuguese ships rounding the Cape of Good Hope, and a century later companies began to be formed by European nations for trade with the East.

The Portuguese trade was a royal monopoly. An English E. I. Company was formed in 1600, and a Dutch Company in 1602. There have been six French companies,—1604, 1611, 1615; Richelieu's in 1642, Colbert's in 1644, and Company of the Indies in 1719. A Danish E. I. Company was formed in 1612, and another in 1670; a Scottish Company in 1695, Spain's Philippine Company in 1733, Austria's Ostend Company from 1723 to 1784, and a Swedish Company, 13th June 1731. But it is since 1833, when steamboats began to run in Indian seas, and since Count de Lesseps completed the Suez Canal in 1868, that its commerce has received its chief development, and its foreign trade in the past forty-three years has grown as under:—

TRADESCANTIA AXILLARIS. *Willde.*

Nir pulli, . . . CAN. | Gola gandi, . . . TEL.
Baga nella, . . . HIND.

A native of moist pasture ground, used medicinally. The Tradescantia genus belongs to the Commelynacæ, or spider-wort tribe, natives of America and India; twelve species occur in the East Indies.

Tradescantia discolor, *L'Her*, Rhæo discolor, *Hance*, is known as the oyster plant, as its inflorescence is enclosed in two bracts resembling a bivalve shell.—*Roxb.* ii. p. 118.

TRADE-WINDS blow continuously from one direction, and are so called because of the facilities which they afford to trade by sea. They differ from monsoons, which blow one-half of the year from one direction and the other half from an opposite or nearly opposite direction. There are two trade-winds, the north-east on the north of the equator, and the south-east to the south. Like all winds, these are put in motion by the heat of the sun, and are directed by the daily rotation of the earth. The belt or zone of the S.E. trades is broader than that of the N.E. trades. Its current even crosses the equator, and invades the belt of the N.E. trades, and discharges itself into the region of equatorial calms. Ships sailing on the ocean calculate on meeting the trade-wnds

and monsoons in certain parallels of latitude, and sail for weeks with their ropes and sails unaltered. When the N.E. and S.E. trades meet, the equatorial calms are produced, in which constant rain prevails; it is the condensed vapour of the ocean. Trade-winds, in the Pacific Ocean, blow from the N.E. between lat. 9° and 27° N., and from the S.E. between lat. 3° and 25° S. But there is on the polar side of the north-east trade-winds an immense area of arid plains for the heat of the solar ray to beat down upon, also an area of immense precipitation. These two sources of heat hold back the north-east trade-winds, as it were, and when the two are united, as they are in India, they are sufficient not only to hold back the north-east trade-wind, but to reverse it, causing the south-west monsoon to blow for half the year instead of the north-east trade.

The south-east trade-wind seldom blows beyond lat. 10° S. between October and March. In the other months its influence is felt more to the north, but seldom up to the equator, and then so much altered in character that it may be said the zone between 10° S. and the equator is the region of œculian winds and calms. While the sun is south of the equator in January, February, and March, the space does not lie on a parallel, but occupies a diagonal belt from Sumatra to the Mauritius. In April, the winds, as a rule, are very light over all the Indian Ocean, northward of 10° S. This is the period when the great change of season occurs, and the many currents are each striving for mastery.

The Mauritius lies in the S.E. trade-winds, and there the influence of the sun during the day is to double the velocity of the wind, and to impress upon it a more truly easterly direction.

In the trade-wind regions at sea, evaporation is generally in excess of precipitation, while in the extra-tropical regions the reverse is the case, that is, the clouds let down more water there than the winds take up again; and these are the regions in which the Gulf Stream enters the Atlantic. Along the shores of India, where experiments have been carefully made, the evaporation from the sea amounts to three-fourths of an inch daily. The effect of diurnal rotation upon the currents of the sea is admitted by all—the trade-winds derive their casting from it; it must therefore extend to all the matter which these currents bear with them, to the largest iceberg as well as to the merest spire of grass that floats upon the waters, or the minutest organism that the most powerful microscope can detect among the impalpable particles of sea-dust. Investigations show that in the Atlantic Ocean the south-east trade-wind region is much larger than the north-east, that the south-east trades are the fresher, and that they often push themselves up to 10° or 50° of north latitude; whereas the north-east trade-wind seldom gets south of the equator. The peculiar clouds of the trade-winds are formed between the upper and lower currents of air. The zone of the north-east trades extends on an average from about 29° to 7° N. And if we examine the globe, to see how much of this zone is land and how much water, we shall find, commencing with China, and coming over Asia, the broad part of Africa, and so on, across the continent of America to the Pacific, land enough to fill up, as nearly as may be, just one-third of it.—*Maury's Physical Geography.*

TRAFALGAR, a word of Arabic derivation, from Tarf-el-Gharb, the side or skirt of the west, it being the most occidental point then reached by Arab conquest.—*Burton's Mecca*, i. p. 9.

TRAGA. Hind. A self-immolation practised by Bards and Charans, the self-shedding of blood to enforce demands. There has long prevailed in India a practice of hiring a person of a religious class, generally of the Bard or Bhat tribe, to threaten to injure himself unless redress were given. The person so hired threatened to kill or wound himself, or some other person, unless the demand he made were complied with. It has been put down by law. But the practice of traga, or inflicting self-wounds, suicide, and the murder of relations, formed a strong feature of the manners of the people of Rajputana. The practice was common in Kattyawar to the Bhat and Charan of both sexes, and to Brahmans and Gosain, and has its rise in religious superstition; and although tragas seldom wore a very formidable aspect, still they were sometimes more criminal, by the sacrifice of a greater number of victims. The traga ceremony borders much upon the Brahman practice of dharna, but is more detestable. The Charan, besides becoming security for money on all occasions, and to the amount of many lakhs of rupees, also become what is called fa'il zamin, or security for good behaviour, and hazir zamin, or security for the appearance.

Under the equal rule of the British, the practice has seldom been resorted to in their territories. A late instance, however, occurred on the 22d July 1861, at Nuriad, in the Bombay Presidency, on the occasion of the civil power proceeding to levy an income-tax. The Bhat and Charan claimed exemption from all taxation, and their threats being disregarded, they and their women cut and stabbed themselves in their faces, arms, and chests with their katars or daggers; several lost their lives. In 1806, a Bhat named Kunna, of Veweingaon, became security in a large amount to the Gaekwar's Government for Dasajee, the chief of Mallia; to enforce it, the traga of their child was made. A Charan is said to have slain his own mother to deter a chieftain appropriating land belonging to the Charan. Captain M'Murdo says that in 1844 traga was largely used in the country between the Indus and Gujerat.

Shahghassi Nur Muhammad was married to the daughter of Dhai Bibir, who was living when the British forces captured Kalat in 1839; when the town was entered, he put her and his other wives to the sword.—*Masson's Journey*, ii. p. 94; *Colburn's United Service Magazine*, 1861. See Sacrifice.

TRAGACANTH, Gum tragacanth.

Samagh-ul-aswad, Arab.	Kattira, . Guj., Hind.
Samagh-ul-katira, . ,, .	Tragacantha, . . . Lat.
Gommi astraganti, . Fr.	Kurn, ... Pers.
Traganth, ... Ger.	Vadomocottaypisini, Tam.
τραγακανθα, . . . Gr.	Badam vittu banka, Tel.

The gum tragacanth of commerce is a product of several plants. Tournefort adduced as its source Astragalus creticus of Lamarck, a native of Mount Ida in Crete. Labillardiere describes A. gummifer, a native of Mount Libanus in Syria. Olivier names A. verus, inhabiting Asia Minor, Armenia, and Northern

Persia. In Crete and surrounding islands, this gum is gathered about the end of June from the A. tragacantha. Arab authors describe it by the name kasira or katira, for which, in the north-west and in the Peninsula of India, a katira is substituted, produced by Cochlospermum gossypium, and another in Pegu, according to M'Clelland, by several species of Sterculia. Dr. E. Dickson, when in Kurdistan, collected plants which he ascertained to yield a tragacanth. Dr. Lindley determined that the white or best variety is yielded by A. gummifer, and the red or inferior kind by his A. strobiliferus. Gum tragacanth is largely employed in calico-printing, and it has many uses in the arts and in pharmacy. The finest kind occurs in twisted, vermicular, rounded, or elongated pieces, almost transparent, whitish, brittle, inodorous, with a slightly bitter taste. It is also found in large tears, of a vermicular form, a reddish colour, and mixed with impurities. The vermiform is the variety usually brought to England, while the latter is commonly employed on the continent.—*M'Cul.; Royle; M'Cl.; O'Shaugh.; Ainslie; Waterstone; Faulkner.*

TRAGIA CANNABINA. *Linn.*

Kanchkuri, . . .	Dukh.	Sirru canchuri, .	Tam.
Casaghinnie, . .	Sansk.	Chinna dula-gondi,	Tel.
Kurunduti, . . .	Tag.	Revati dula-gondi,	,,

This plant, belonging to the order Euphorbiaceæ, occurs throughout British India. Its hair stings like that of the common nettle. The dried root has but little taste or smell, though with an agreeable odour when fresh. It is considered as diaphoretic and alterative, and is prescribed in decoction, together with other articles of the same class. An infusion of it is also given in fever.—*Ains.; Roxb.*

TRAGIA INVOLUCRATA. *Linn.*

Bich'huti, . . .	Beng.	Shorigenam, .	Maleal.
Bet-ya?	Burm.	Dustparisha, . .	Sansk.
Cauchorie, . . .	Hind.	Dula-gondi, . . .	Tel.

The hairs sting violently; the roots are given by the Hindu Baid, Vytia, and Vaida herbalists as an alterative for correcting the habit in cases of constitutional cachexia, and in old venereal affections attended with anomalous symptoms. Rheede, speaking of the root, says, 'Conducit in febre ossium, ac servit pro pruritu corporis.' He further adds, 'In decocto data, urinam suppressam movet.'—*Ains.; O'Sh.*

TRAGOPOGON GRACILIS, a plant of the Himalaya mountains; its leaves are eaten like lettuce.

Tragopogon porrifolius, *Linn.*

T. sativus, *Gat.*		Salsify, ...	Eng.

A plant of the order Matricariaceæ, an excellent vegetable, cultivated for its white roots, which are mild and sweet flavoured; requires culture similar to carrots; held in high estimation by the French. The young shoots are sometimes used as asparagus, which in flavour they resemble. It is raised from seed.—*Jaffrey.*

TRAGOPON, a genus of birds of the family Phasianidæ. T. duvaucelli, *Tem.*, now referred to Pucrasia macrolopha, *Lesson*, the purkhas pheasant of the Himalayas, and T. Hastingii, *Vigors*, is a synonym of Ceriornis melanocephala, *Gray*, the horned monal or Argus pheasant of the Himalayas.—*Jerdon.*

TRAGOPS BENNETTII.

Antilope quadricornis, *Blainville.*

Ravine deer, . .	Eng.	Chikara, ...	Hind.
Goat antelope, . . . ,,		Kala-sipi, . . .	Mahr.

The Kala-sipi, or black-tail, so called by the Mahrattas on account of the deep black colour of the tail, is of a bay-brown colour, and has the end of the nose and tail black; the face streaked; chest, belly, and inside of limbs white; the feet are black or brown. It is found on the rocky hills of the Dekhan, and, according to the report of Colonel Sykes, differs from many other antelopes in not being gregarious, there being rarely more than three or four found together in the same company, and not unfrequently a solitary individual.—*Eng. Cyc.* p. 241.

TRAGOSITA MAURITIANA, a beetle from the Mauritius, largely distributed through means of the sugar bags.

TRAI BIDOK and Trai Phum are Buddhist books of Siam. According to the Buddhistic doctrine, matter is eternal; the existence of a world, its duration, destruction, and reproduction, all the various combinations and modifications to which matter is liable, are the immediate result of the action of eternal and self-existing laws. The Trai Phum is much venerated in Siam. It is not an original work, received among the immense collection of canonical Buddhist books called Trai Bidok (in Burman, Bedegat), but a compilation made in the Buddhist era 2026, A.D. 1784, when the king of Siam, in the presence of his nobles and retinue, proposed a series of questions to the chief hierarch, priests, and learned men, of which they were able to answer some, but some they could not answer.—*Rev. J. T. Jones in Jour. Ind. Arch.* v.

TRANQUEBAR or Tarangambadi, a seaport town in the Tanjore district of Madras, in lat. 11° 1′ 37″ N., and long. 79° 53′ 44″ E. In 1612, a Danish E. I. Company was formed at Copenhagen, and in 1616 their first ship arrived in India. It is said that the captain, Rodant Crape, to effect a landing, wrecked his ship off Tranquebar. He contrived to reach the raja of Tanjore, from whom he obtained land 5 miles long and 3 broad. Tranquebar was taken by the British in 1807, with other Danish settlements in India, but restored in 1814. It was bought by the British from Denmark in 1845, at the same time as Serampur, for a sum of £20,000. Tranquebar was the first settlement of Protestant missionaries in India; was founded by Ziegenbalg and Plutschau (Lutherans) in 1706. The best known of Ziegenbalg's successors was Schwartz (ob. 1798). Six per cent. of the inhabitants are Labbai Muhammadans.—*Imp. Gaz.*

TRANS, a Latin word in use amongst geographers of Europe to indicate a country on the further side of rivers or mountains, as Trans-Indus, Trans-Himalaya. Cis, another Latin word, is used to indicate the countries or region on the nearer side, as Cis-Himalaya, Cis-Indus.

TRANSIT DUTIES, or Sair, were in India exacted by every native chief, and were continued in part by the British Government, but were finally abolished in Lower Bengal in 1836; in the N.W. Provinces, between 1834 and 1836; in the Bombay Presidency, in 1837; in Madras, in 1844; and in other parts on their subsequent acquisition. Several of the native princes followed the

example. The net revenue abandoned in Madras was £310,000 annually.

TRANSMIGRATION of the soul is believed in by all Buddhists and all Hindus. The Egyptians maintained that, after death, the immortal soul migrated into the bodies of birds, beasts, or fishes, and other animals, and that the gods took refuge in the bodies of animals, from the wickedness and violence of men. Pythagoras, and after him Empedokles, adopted these doctrines, and, according to Heraclides, Pythagoras used to say of himself that he remembered not only what men, but what plants and animals, he had passed through. Pythagoras also said he remembered that he had inhabited four bodies, and it is he to whom Virgil alludes in the lines—

'Ipse nam nemini, Trojani tempore belli,
Penthoides, Euphorbus, eram.'

Empedokles likewise declared of himself that he had been first a boy, then a girl, then a plant, a bird, and fish.

The Greeks and Celts worshipped Apollo under the title of Carneios, which, according to Theocritus, is derived from Carnos, who, having prophesied the misfortunes to the Heraclides in their inroads ou the Peloponnesus, one of them, called Hippotes, slew him. One of the titles of Krishna, the Hindu Apollo, is Carna, 'the radiant,' from Carna, a ray; and when he led the remains of the Hericula in company with Baldeva (the god of strength) and Yudishtra, after the great international war, into the Peloponnesus of Saurashtra, they were attacked by the aboriginal Bhil, one of whom slew the divine Carna with an arrow. The Bhil claim to be Hyvansa, or of the race of Hya, whose chief seat was at Maheswar on the Nerbadda. The assassin of Carna would consequently be Hyputa, or descendant of Hya. As Krishna lay dying, he bid the Bhil not to be distressed, as he (Krishna) had slain the Bhil in a former birth.

The Bards of the martial Rajput races say that there are two distinct places of reward, the one essentially spiritual, the other of a material nature. The Bard inculcates that the warrior who falls in battle in the fulfilment of his duty, 'who abandons life through the wave of steel,' will know no 'second birth,' but that the unconfined spark (jote) will 'reunite to the parent orb.'

The doctrine of transmigration through a variety of hideous forms, may be cousidered as a series of purgatories. The aim of a Hindu's life is to make sure that it be the last of him. For it is virtual, if not defined and acknowledged, annihilation that the Hindu strives after; it is the destruction of consciousness, of individuality, of all the attributes and circumstances which make up what we call life.

In Buddhism, one of the established laws is the belief in metempsychosis, or the migration of the souls of animated beings.

The traditions of the Buddhists of the present day claim for Sakya, the Buddha, a recollection of 510 migrations.

In the Tibetan Buddhist creed, the doctrine of transmigration is shown, and final absorption into Buddha is put forward as the reward of a virtuous life. There has been some misapprehension regarding the Buddhas and Bodhisatwas, the regeneration of the Grand Lama being considered as an exceptional case of a Buddha returning amongst mankind. Mr. Hodgson truly calls the divine Lamas of Tibet Arhanta, but he believes that a very gross superstition has wrested the just notion of the character to its own use, and so created the 'immortal mortals, or present palpable divinities of Tibet.' In the Nouv. Jour. Asiat. xiv. p. 408, ii., Fra Orazio says that 'Lama sempre sara coll' istessa anima del medesime Ciangc'iub, oppure in altri corpi.' Remusat was not aware of this fact when he stated 'les Lamas du Tibet se considerent eux-memes comme autant de divinités (Bouddhas) incarnées pour le salut des homes.' But the explanation which Major Cunningham received in Ladakh, which is the same as that obtained by Fra Orazio in Lhassa, is simple and convincing. The Grand Lama is only a regenerated Bodhisatwa, who refrains from accepting Buddhahood that he may continue to be born again and again for the benefit of mankind. For a Buddha cannot possibly be regenerated, and hence the famous epithet of Sathagatha, 'thus gone,' and Sugata, 'well gone,' or gone for ever.

Tibetans believe in six forms in which a living being may be re-born, viz. Lha, Tib., Deva, Sansk., spirits or gods; Mi, or men; Lha Mayin, or evil spirits; Dudo or Johsong, brutes, beasts; Yidaga, imaginary monsters; and as the inmates of Nyalba or hell, or Naraka. All Hindus believe in the transmigration of souls. The fact of transmigration none of their systems dispute; it is allowed by all; as a man casts off his old garments, and puts on new ones, so that soul having left its old 'mortal frame, enters into another which is new.' This is based on the philosophic belief that the soul has a separate existence. There are, however, various opinions.—*Oriental Linguistic Studies; Hodgson; Sonnerat's Voyage; Cunningham, Bhilsa Topes; Elphinstone's India; Bunsen's Egypt; Tod's Rajasthan; Tennent's Christianity.*

TRANSOXIANA, literally beyond the Oxus, is the Mawar-un-Nahr of the ancient Arab writers. It consists of the northern half of the tract of country vaguely known as Central Asia, is chiefly a plain country extending from those eastern chains of hills, which, as the extreme spurs of the Tian-Shan, reach nearly to Samarcand, and sink with a rapid declension down to the shores of the Caspian Sea. With the exception of a few table-lands, and some bits of hard clay or loam, —called by the inhabitants Takin or dry, barren country,—the soil consists chiefly of black or yellow sand, and the only land really fit for cultivation is that lying on the slopes of the hills or on the banks of rivers and canals. In spite of this, the fertility of Bokhara and of the two other khanates has passed into a proverb, for their products are both excellent and various, and owe their source to the Zar-afshan river.—*Vambery's Bokhara*, p. 31.

TRAP, in geology, is a term applied to older volcanic rocks which have flowed over or between other rocks, assuming the form of stairs (Trappa, Sw., a stair), and distinguished as eruptive trap, overlying trap, interposed trap, and trap-dykes. Trap, in its mineralogical structure, is of augite, hornblende, or basalt. The greatest outburst of trap in the world is that which was first described by Colonel Sykes as the trap formation of the Dekhan. It extends from Nemuch, in lat. 24° 27′ N., to the banks of the Kistna, over an area of 250,000 square miles.

In Central India, volcanic trap-rocks are observed

to spread east and west from Nemuch in the form of basalt, basaltic greenstone, greenstone, and greenstone amygdaloid, and southwards by Ujjain and Saugor across the Vindhya, assuming the structure of columnar basalt in the steep descent to the Nerbadda. Crossing this river, the trap is seen to spread over all the Aurangabad province down through Kandesh and the Konkan to Bombay, and southwards to Malwan, in lat. 60° N., its southern limits being observed south of Punderpur, through Bijapur to the right bank of the Kistna, in the valleys near Homnabad, where it is found beneath, but never penetrating the laterite hills south and east of Beder, and at Maharajapetta, 30 miles west of Hyderabad. The eastern edge of this vast tract of trap-rocks, after crossing the Nerbadda to the south, skirts the town of Nagpur in Berar, passes Nandeir, and to the westward of the city of Hyderabad to its southern limit, just mentioned. South of this, as well as to the eastward, the trap only appears as great dykes, from fifty to a hundred yards broad, which run east and west parallel with each other. These dykes can at places be traced for 150 miles, bursting through the granite and other rocks, tearing the highest of the hills asunder, and filling the chasms and crevices with its dark and compact structure. In these dykes the elements of the trap-rock assume a variety of appearances,—greenstone, porphyritic greenstone, basaltic greenstone, hornblende rock, and basalt. They are particularly numerous in Hyderabad, the Balaghat, Ceded Districts, Carnatic, and Mysore, almost to the southern cape of the Peninsula, and, with very rare exceptions, run due east and west.—*Colonel Sykes; Carter's Geology; Barometrical Sections.*

TRAPA, a genus of plants belonging to the suborder Trapeæ (Hydrocaryes, *Link.*), the water-nut tribe of plants. There are 5 species in Europe, Siberia, East Indies, and China. In some parts of India, great care is taken to preserve the seed for planting the following season, which is done by treading it into the beds of tanks and such places. The fruit is fit to be taken at or about the close of the rains. In China, the kernel is used as an article of food, being roasted or boiled like the potato. Mr. Fortune saw three distinct species or varieties, one of which has fruit of a beautiful red colour. Loureiro mentions T. Cochin-Chinensis, Siebold describes T. incisa, and Roxburgh T. quadrispinosa, from Sylhet.—*Fortune; Royle; Jaffrey; O'Sh.*

TRAPA BICORNIS, *Roxb.*, Ling-koh, Ling, Link, CHIN., grows abundantly in the lakes and ponds of Hu-peh, in China. It is distinguished from T. bispinosa by its two horns being recurved and very obtuse. In China, the fruits of Trapa bicornis are much sought after as food.—*Roxb.*

TRAPA BISPINOSA. *Linn.*

Karim-polam, MALEAL.	Sringa takamu, . ,,

This grows in both Peninsulas of India, in Bengal, Peshawur, Kashmir, the Panjab up to 5000 feet, in Nepal and China. Its flowers are small, white, flowering in May and June, fruiting in the cold season. Its fruit is sold in the bazar and eaten by the natives, and in China, the Panjab, Kashmir, and Gujerat it forms an important article of food. During the Holi festival, its flour is mixed with a dye procured from the flowers of Butea frondosa. The fruit in flavour resembles a chesnut, is eaten both raw and cooked, especially by the Hindus of N.W. India, as it is phalahar, *i.e.* may be eaten in their fasts. It abounds so much in starch, that it may be easily separated from the seeds. In Kashmir, miles of the lakes and marshes, etc., are covered with this plant. Moorcroft states that in his time in the valley it furnished almost the only food of at least 30,000 people for five months of the year, and that from the Wular lake, ninety-six to one hundred thousand ass-loads were taken annually, the Government drawing 90,000 rupees duty on it, and maharaja Ranjit Singh got more than a lakh of rupees from this plant. In the N.W. Provinces, the cultivation of the species is extensively carried on by the Dhimar castes, who are everywhere fishermen and palanquin-bearers, who keep boats for planting, weeding, and tending this water crop. The holdings of each cultivator are marked out in the tank by bamboos, and they pay so much an acre for the portion they till. The rent paid for an ordinary tank is about Rs. 100 a year, but Rs. 200 or 300 are paid for a large tank. But the plants cause such an increase of mud, that a tank is quickly spoiled by them, and the cultivation is not allowed where the tank is required as a water reservoir. When the tanks become dry in May or June, the nuts or bulbs are gathered into a small hole in the deepest part of the tank, and when the rains commence each shoot is broken off, wrapped in a ball of clay, and thrown into the water at different distances. They at once take root and grow rapidly, and cover the surface of the water with their leaves; their fruit ripens in October. The yield of a standard bigha is 2½ man = 205 lbs. 15 oz., which sell at 10 seers the rupee. The deeper the water the better the crop. Green singhara sells at one maund of 24 seers per rupee, and dry at 18 seers per rupee. Singhara flour sells at 8 and 10 seers per rupee. The produce of one seer of seed in a good season is about 20 maunds. The water-nut is as regularly planted and cultivated under a large surface of water, as fields of wheat or barley on the dry plains. The long stalks of the plants reach up to the surface of the water, upon which float their green leaves; and their pure white flowers expand beautifully among them in the latter part of the afternoon. The nut grows under the water after the flowers decay, and is of a triangular shape, and covered with a tough brown integument adhering strongly to the kernel, which is white, esculent, and of a fine cartilaginous texture. The nuts are carried often upon bullocks' backs two or three hundred miles to market. They ripen in the latter end of the rains, or in September; and are eatable till the end of November.—*Roxburgh; Voigt; Sleeman's Indian Official*, i. p. 102; *Powell; Stewart.*

TRAPA NATANS. Fau-ling, CHIN. This European species grows also in China. It is remarkable for its fruit with four spines, being of a blackish colour and large size; its seed is good to eat, whether raw, roasted, or in soups, and is somewhat like a chesnut in taste. It was known to the Romans by the name Tribulus. Pliny says (lib. xxi. c. 58), 'About the rivers Nilus and

Strymon, the inhabitants gather it for their meat.' —*Eng. Cyc.; Fortune; Honigberger.*

TRAPA QUADRISPINOSA. *Roxb.* This plant is grown in Sylhet, and its fruit is like that of T. bispinosa, *Roxb.* T. tricornis is the Ki-shih of the Chinese.

TRAP TREE, a species of Artocarpus which furnishes the gutta used as birdlime. The fibre of the bark is used at Singapore for fishing-lines, cordage, and nets.—*Royle.*

TRAP-TUFFA. A variety of this rock, sometimes white, sometimes greenish or purple, found in Bombay and many other parts of India, resembles laterite in the quality of being easily cut when raised, afterwards hardening on exposure to the air. It is used as a building-stone, and suits well for basins, troughs, and aqueducts; it is not very extensively employed.

TRAVANCORE, a principality in the extreme S.W. part of the Peninsula of India, ruled by a maharaja of the Kshatriya race. At the close of the 17th and commencement of the 18th century, the present territory was under several petty chiefships called Etadda Pulleymar, the capital of one of which was Tiruvancod, between Udiagherri and Anjengo. The present race of ruling sovereigns claim descent from Cheraman Perumal, who was reigning in the south about A.D. 352. During the 16th and 17th centuries they continued steadily to suppress the smaller states, the last of which were swept away by Wanji Perumal, who reigned from 1729 for 30 years.

No authentic history of Travancore in early times is extant; but tradition states that the whole Malayalam coast was reclaimed from the sea by Parasurama, and colonized by certain Brahmans, known as Namburi, whose rule, after lasting for a considerable time, terminated in B.C. 68. The Brahmans then elected Kshatriya chiefs to rule for periods of twelve years. This system of electing a new ruler every twelve years lasted for four centuries. The last and greatest of these rulers, Cheraman Perumal (Viceroy of Chera kings), at his death divided his dominions among his vassals.

Travancore is also called Veynad, also Tirupapur Swarupam; the eastern coast people call it Kerala, also Malealam; and it is also called Kurma Bhumi, in contradistinction to the east coast, which is styled Jnana Bhumi, also Punnea Bhumi. The uterine brothers of the maharaja are designated princes by the British, with the honorific prefix of Highness. There are ten titular designations in that kingdom, all hereditary; they are suffixed to the names of the persons holding them. The revenue in 1877–78 amounted to Rs. 55,26,199, of which the land revenue furnished Rs. 16,32,012, and the customs Rs. 12,26,661. The tenures by which lands are held are Janm, Madambimar, and Sirkar. The Janm is a hereditary freehold, but lapses on sale to the Government. The Madambimar are freehold, but held at raja bogum or sovereign's pleasure.

Travancore was overcome by Tipu in December 1798, but he withdrew from it on learning the approach of Lord Cornwallis to Seringapatam. From that time until 1808 there were internal dissentions, but in that year a war broke out against the British, which was suppressed, and in 1811 the Resident, Colonel Munro, assumed the duties of a Dewan, until 1814.

There are several seaport towns, but Anjengo and Tanguncherry belong to the British. The Perriar is the finest river in all the western coast. It is navigable for small craft for sixty miles, but during the dry season its mouth is closed. There is a succession of marine lagoons connected by navigable canals extending for 200 miles along the Travancore, Cochin, and British coast, from Chowghat to Trevandrum, and to connect these, after the middle of the 19th century, the Travancore State began to cut through a promontory 6 miles in breadth.
