

Cartography of New York City

From Wikipedia, the free encyclopedia

The **cartography of New York City** is the creation, editing, processing and printing of maps that depict the islands and mainland that now comprise [New York City](#) and its immediate environs.^[1] The earliest surviving map of the area is the [Manatus Map](#).^[1]

History of mapping in New York City [\[edit | edit source \]](#)

According to Robert T. Augstyn and Paul E. Cohen in their study *Manhattan in Maps: 1527 - 1995*, New York City is unique in that it is young enough that, unlike major European and Asian cities, and unlike other American cities of about the same age, its early maps have survived. Further, its founding as a city for European immigrants came during the early- and mid-seventeenth century, a golden age of mapmaking with its center in Holland. When New Amsterdam was a young colony, Amsterdam was turning out more accurate maps than ever before in history. As a commercial city, the merchants and seafarers of the new colony needed more and better maps so they could monitor and extend their commercial activities.^[2]

When the British took over New Amsterdam and renamed it New York, surveying and mapmaking continued, but at a slower pace, which was connected to the reduced rate of growth of the city under British rule, and the lack of close administration of the colony by the mother country than had been the case under the Dutch.^[2]

During the [American Revolution](#), New York City and its environs was an early battleground, and then the headquarters of the British. This provoked maps to be used in military campaigns, or in the defense of the city. New York became "the most thoroughly mapped urban area in America."^[2]

Indigenous mapping [\[edit | edit source \]](#)

There are no written records that directly reference mapping by the [Wappinger](#) or the [Lenape](#), the Native Americans who inhabited the New York City area before European colonization. However, scholars assume the Native Americans who lived on the land that now comprises New York City, as in other places, passed down a record of the spatial distribution of their resources and territory via an [oral tradition](#).^[3]

Trees of New York City

From Wikipedia, the free encyclopedia

The land comprising [New York City](#) holds approximately 5.2 million [trees](#) and 168 different tree species, as of 2020.^[1] The [New York City government](#), alongside an assortment of [environmental organizations](#), actively work to plant and maintain the trees.^[1] As of 2020, New York City held 44,509 acres of urban tree canopy with 24% of its land covered in trees.^{[1][2]}

The urban forest of New York City is visible  from space, seen here in a 2002 photograph taken by NASA's [Terra satellite](#).

History of trees in New York City [\[edit\]](#) [\[edit source\]](#)

Trees have grown continuously on the mainland and islands that now comprise New York City since the end of the [Pleistocene epoch](#).^[3] Trees have inhabited the lands in or around what is now New York City for over 300 million years, far before the existence of humanity.^[3] The first human settlement in the NYC area is dated as early as 9,000 years ago, this marked the beginning of human's permanently altering the [old-growth forest](#) ecosystem.^[4]

Humanity's impact of the trees in New York City greatly accelerated with [European colonization of the Americas](#) as the new settlers brought with them advanced metal tools and [tree processing technologies](#) paired with an appetite for lumber for domestic use and for export to others of the [Thirteen Colonies](#) and to the [Old World](#).^[5] While the Native American population lived off and with the [Northeastern coastal forests](#) relatively [symbiotically](#), the new European colonists, with their higher population density, sedentary housing needs, and agriculture techniques, diminished the need to harvest wild fruits from trees.^[5] The [New World](#) found itself rapidly deforested, New York City included.^[5]

higher population density, sedentary housing needs, and agriculture techniques, diminished the need to harvest wild fruits from trees.^[5] The [New World](#) found itself rapidly deforested, New York City included.^[5]

Native American use of trees [[edit](#) | [edit source](#)]

The [Lenape peoples](#) who inhabited the greater NYC area directly prior to [European colonization](#) relied on trees for food, shelter, tool materials, fuel, and medicine.^[6] The typical Lenape house, called a [longhouse](#), relied on the bending of the trunks taken from small trees to create a series of arches to serve as the frame.^[6] The Lenape used the [Zanthoxylum](#) tree as medicine for toothaches because chewing on the leaves or bark creates a tingling, or numbing effect in the mouth.^[7]

In 1624, at the time of the founding of [New Amsterdam](#), huge stands of [Oak](#), [Hickory](#), and [Chestnut trees](#) grew throughout the island of Manhattan.^[8] The very name "Manhattan" is recorded as originally referring to a stand of hickory trees with [wood suitable for bow-making](#), located at the southern tip of the island. At this time, the area now known as [Times Square](#) was a [Red Maple](#) swamp.^[8] The [Lenape](#) called [Governors Island](#): "Pagganck," which means "nut island," named after the areas abundance of [hickory nut](#) trees.^[3]

Native Americans made [use of fire in ecosystems](#) here as elsewhere, and some of the early Dutch colonists copied this practice.^[9]

The original forests and ecosystems of 1609 Manhattan have been reconstructed by the Wildlife Conservation Society's [Mannahatta Project](#).^[10]

Colonial use of trees [[edit](#) | [edit source](#)]

Fruit trees imported during the Dutch period included apple, cherry, peach and pear planted in prominent orchards.^[11]

At the corner of [Cherry Street](#) and [Franklin Square](#), was the "Cherry Garden" planted by [David Provost Sr.](#),^[12] and later operated by the brewer Richard Sackett as "Sackett's Orchard" with a [beer garden](#) and [bowling green](#).^[13] [George Washington](#) later lived at 1 Cherry Street, the location being notable as the nation's first presidential residence.^[3] Remnants of the orchard survived into the 1870s, when the last of the trees and Washington's home at 1 Cherry Street, were razed to build the [Brooklyn Bridge](#).^[3]

Lumber in Manhattan during the Dutch period was largely processed at the [Sawkill](#) saw mill, worked by a settlement of enslaved Africans.^[14]

Contemporary use of trees [[edit](#) | [edit source](#)]

In New York City, the harvesting of trees for lumber and the maintaining of orchards for fruit declined as forests and farmland was bought and developed to house the growing population of the city.^[15] Since the late 19th-early 20th century, the functions of the trees planted in the urban landscape and parks of New York City is to provide shade, help manage [rainwater runoff](#), and clean the [air](#) by absorbing some of the carbon dioxide produced by New York City's 18+ million residents.^[16]

In an effort to maintain and improve its [urban forest](#), New York City runs [tree planting](#) efforts through the Parks Department.^[17] As of 2020, [New York City Department of Parks and Recreation](#) is the steward of most of the 2.5+ million trees growing within New York City.^[18]

The NYC Department of Parks observes [Earth Day](#) and [Arbor Day](#).^[18]

Street trees as a metaphor for urban life were popularized in the 1943 novel [A Tree Grows in Brooklyn](#).^[19]

The tallest and oldest tree in New York City is a [Tulip Poplar](#) growing in Queens named the Queens Giant.^[20]

Old-growth forests [[edit](#) | [edit source](#)]

Of the Fruit Trees brought over from the Netherlands

Notable trees [edit | edit source]

In 1985, a community nominations process led to the selection of sixty-five "Great Trees",^{[23][24]} and in the 21st century some of these were [cloned through cuttings](#).^{[25][26]}

Notable living trees [edit | edit source]

Living trees

Name	Type	Location	Borough	Notes
Queens Giant	Tulip poplar	Alley Pond Park	Queens	A 134+ foot tall tulip poplar tree, believed to be the tallest and oldest tree in the city. ^{[20][27]}
Clove Lakes Colossus	Tulip poplar	Clove Lakes Park	Staten Island	A 119+ foot tall tulip poplar tree with 21+ foot circumference. ^[27]
Hangman's Elm	English elm	Washington Square Park	Manhattan	Planted in the 1790s. Believed to be the oldest tree in Manhattan. ^[28] It was rumored to be where traitors were hanged during the American Revolution, but this was determined to be unfounded. ^[29] The only recorded execution in this area was of Rose Butler , in 1820, who was hanged from a gallows in the city's potter's field about 500 feet from the elm. ^[30]
Magnolia grandiflora at 677 Lafayette Avenue	Magnolia grandiflora	Bedford–Stuyvesant	Brooklyn	A rare example of a flourishing laurel magnolia growing far north in New York, brought as a seedling from North Carolina and planted around 1885 by William Lemken. A New York City designated landmark . ^[31]
Survivor Tree	Callery pear	National September 11 Memorial	Manhattan	A Callery pear tree that survived the September 11, 2001 terror attacks at the World Trade Center . Taken off-site and nursed back to health by the NYC Parks department, the Survivor Tree was returned and replanted at the memorial site in 2010. ^[32]
Camperdown Elm (Marianne Moore)	Camperdown Elm	Prospect Park	Brooklyn	Planted in Prospect Park in 1872, a descendant of a unique growing Elm species from the Earl of Camperdown's Scottish estate. Among the first planted in the United States. ^{[33][34]}
James Madison Tree	Red Oak	Madison Square Park	Manhattan	A Red Oak grown on James Madison 's estate in Virginia and transplanted in 1936 at Madison Square Park to celebrate the 100th anniversary of Madison Avenue. ^[35]
The Dinosaur	English elm	Washington Heights	Manhattan	English elm tree, planted on the estate of the Morris Jumel Mansion in the early 18th century. George Washington allegedly stood under the tree on September 21, 1776, to watch the fire set by American rebels that burnt much of New York City. ^[36]
Boss Tweed Ginkgo	Ginkgo	Crocheron Park	Queens	A 150+ year old Ginkgo tree, alleged witness to Boss Tweed 's escape from the United States. ^[37]
Hare Krishna Tree	American elm	Tompkins Square Park	Manhattan	An American elm where the "Hare Krishna" mantra was chanted publicly in 1966 for the first time outside of India, marking the birth of the Hare Krishna movement in the West. ^[38]
Woodside Beech Tree	Beech	Woodside	Queens	A large beech tree estimated to be between 150 and 200 years old. ^[39]

Notable deceased trees [[edit](#) | [edit source](#)]

Deceased trees

Name	Type	Location	Borough	Notes
Weeping Beech	Weeping beech	Flushing	Queens	The original weeping beech tree located in Flushing was the mother of all European weeping beeches in the United States. After the original died in 1998, the location was replanted with new weeping beech trees. Even though the original is no longer living, the tree remains a New York City designated landmark . ^[40]
Gran Bwa	Unidentified large stump	Prospect Park	Brooklyn	A large tree stump formerly located by the lake in Prospect Park . The stump was carved into a sculpture and named after Gran Bwa , the Haitian Vodou spirit associated with trees. The Gran Bwa sculpture depicted a big human head, two small human faces, a lion and a legba . The stump was sculpted in the 1980s by a Haitian immigrant Deenps Bazile . ^[41] Communities and individuals recreating and worshipping in Prospect Park appreciated the tree stump sculpture until its removal. ^[41] The Haitian community gathered and still gathers at the Gran Bwa location to celebrate Bwa Kayiman . ^[41]
Tree of Hope	Elm	Lafayette Theatre, Harlem	Manhattan	Once considered the most famous tree in Harlem, the Tree of Hope was an elm tree growing outside the Lafayette Theatre in Harlem in 132nd Street, that musicians would touch for good luck. In 1933, part of the stump of the Tree of Hope was removed and gifted to the Apollo Theater; It now sits next to the stage at the Apollo Theater . ^[42] According to a report in the <i>New York Herald Tribune</i> , the tree got its name from a group of actors recently fired from a show that had gone bankrupt. Owed back pay, the group gathered at the tree of hope, hoping to see the manager and recoup their wages. Eventually the actors received \$6.43 in back pay. Inspired by the success of the actors, the tree became a meeting spot for actors in search of work. The actors and performers who rubbed the Tree of Hope for good luck included: Bojangles Robinson , Aubrey Lyles , Flournoy Miller , and many others. In 1941, Bojangles Robinson worked with mayor Fiorello La Guardia to plant a replacement tree in the old location of the Tree of Hope. ^{[43][44]}
Inwood Tulip Tree at Shorakapkok	Tulip poplar	Inwood Hill Park	Manhattan	A large Tulip Tree that grew to the height of 165 feet and a girth of 20 feet. The tree died 1932, at the estimated age of 220 years old. Some saw the tree as a last remaining link to the Wecquaesgeek who lived amongst the tree at Shorakapok. ^[45] A small monument now stands where the tree once grew. ^[45]
Stuyvesant Pear Tree	Pear tree	Stuyvesant Farm, East Village	Manhattan	In 1647, Peter Stuyvesant , the Dutch colonial governor, planted a pear tree on his farm, Stuyvesant Farm . ^[46] It stood here for two hundred years, with New York City growing around it. The 1811 street grid covered over the farm but spared the Stuyvesant Pear Tree. The tree remained there until February 1867, weakened by a massive winter storm and done in by a wagon collision. ^[46] A plaque marking the Stuyvesant tree's spot remains at the corner of 13th Street and Third Avenue. ^[46] In this neighborhood, pear trees are still planted to commemorate the original pear tree planted by Stuyvesant. ^[47] A Stuyvesant descendant gifted a cross-section of the original trunk to the New-York Historical Society . ^[47]

Stuyvesant Farm

From Wikipedia, the free encyclopedia

Stuyvesant Farm, also known as the **Great Bowery**, was the estate of [Peter Stuyvesant](#), the last Dutch *director-general* of the *colony* of [New Netherland](#), as well as his predecessors and later his familial descendants. The land was at first designated **Bowery No. 1**, the largest and northernmost of six initial *estates* of the [Dutch West India Company](#) north of [New Amsterdam](#), used as the *official residence* and economic support for [Willem Verhulst](#) and all subsequent directors of the colony.

In 1651, while serving as director, Stuyvesant purchased the land from the company. He capitulated the colony to the English in 1664 and went to Europe for three years, returning to retire to his farm in 1667. The land was kept in the [Stuyvesant family](#) for many generations into the American period, and was the namesake of numerous local sites and institutions.

History [\[edit\]](#) [\[edit source\]](#)

Before Stuyvesant [\[edit\]](#) [\[edit source\]](#)

Prior to [Dutch colonization](#), the land where Stuyvesant Farm sat was most likely used or inhabited by Native Americans. The [Wappinger](#) and [Lenape](#) peoples inhabited Manhattan, using the land as seasonal hunting grounds and also establishing permanent villages there.^[1] The [Dutch Republic](#) formed the colony of [New Netherland](#) in the early 17th century, and [Orr](#)

Before Stuyvesant [edit | edit source]

Prior to [Dutch colonization](#), the land where Stuyvesant Farm sat was most likely used or inhabited by Native Americans. The [Wappinger](#) and [Lenape](#) peoples inhabited Manhattan, using the land as seasonal hunting grounds and also establishing permanent villages there.^[1] The [Dutch Republic](#) formed the colony of [New Netherland](#) in the early 17th century, and Cryn Fredericks of the [Dutch West India Company](#) set out six estates north of [New Amsterdam](#) to be farmed to support the commanding officers of the colony. The land which made up Stuyvesant Farm was formerly part of two of these estates, the entire Bowery No. 1 and parts of Bowery No. 2 (bowery is an [anglicization](#) of the archaic [Dutch](#) word for "farm", spelled *bouwerie* or *bouwerij*).^[2] These boweries were laid out along a Native American footpath, part of the Northeastern [Great Trail](#) and later the [Boston Post Road](#), that would become known as the [Bowery Lane](#) after its destination at the Great Bowery.^[2]

In 1632, [Wouter van Twiller](#) took control of Bowery No. 1 when he became Director of New Netherland. During his stewardship over the farm he oversaw many improvements, including adding a house, a brewery, and barns. The largely self-sufficient farm's primary product is thought to have been the staple wheat, rather than a cash crop like tobacco. The building that would become Stuyvesant's Bowery Mansion was most likely a structure originally erected by the Dutch West India Company's carpenters in 1633. Van Twiller was fired in 1637 and when his replacement, [Willem Kieft](#), arrived in 1638, he found the colony in disarray outside of the impressive Bowery No.1. The [Manatus Map](#) of 1639 indicate only half of the six company boweries were in operation, referring to Boweries 2–6 as “five run down boweries of the Company, which stand idle whereof now, [in] 1639, 3 are again occupied.”^[3]

Under Stuyvesant [edit | edit source]

In 1645, [Peter Stuyvesant](#) was selected to replace Kieft as Director of New Netherland, and took on the role in 1647. On March 12, 1651, the company directors in Amsterdam authorized the sale of the farm with its dwelling house, barns, woods, six cows, two horses and two African slaves for f6,400 to Stuyvesant, acting through his agent Jan Jansen Damen.^{[4][5]} By the mid-17th century, an estimated 40 people were enslaved on Stuyvesant Farm.^[2] Stuyvesant was the largest private slaveholder on Manhattan; only the company of which he was director held more. Stuyvesant diminished free African-owned properties in the neighboring [Land of the Blacks](#) settlement by appropriating some of them to himself, through both purchases and fiat, though most stayed intact.^[6]

When England moved to take over New Netherland in 1664, a delegation of twelve met at Stuyvesant Farm to negotiate the [Articles of Surrender of New Netherland](#), and papers were later signed by [Johannes de Decker](#) on an English ship in the harbor.^[7] Terms were generous enough that Stuyvesant kept his estate and lived the rest of his life there, after a three-year trip back to the Netherlands until the [Peace of Breda](#).^[8]

After Stuyvesant [edit | edit source]

The property was inherited in [Stuyvesant family](#), sometimes with new land acquisitions.^{[9][10]} The family continued to hold slaves into the early 19th century.^[11] The family land area gradually declined into the 19th century as pieces were sold off, both commercially and in some cases to local institutions for a nominal price. The tract of land that comprised Stuyvesant Farm covered what is today's [East Village](#) and [Stuyvesant Town](#).^[12]
