Map

DEFINITIONS AND ABBREVIATIONS

1. Frequency.

a. The allocated frequencies in kilocycles appear in the Frequency Column. These allocations are the center frequencies of channels as defined in paragraph 8.

b. The small letters to the left of the frequencies have the following meaning:

(a) This frequency is shared on a secondary basis to Allied Military Operation.

(b) This frequency registered in Berne, "Liste des Frequences" for February 1942.

(c) This frequency has been cleared by inter-theater frequency boards for the type of service listed and subject to such limitations and notes as stated by clearing boards as regards this frequency and adjacent channels.

2. Emission.

a. The emission as shown in the Emission Column is that of the maximum band width authorized. In no event will signals of "A3" band width be used on frequencies listed for "A1" or "A2" only.

b. Emissions are classified according to the purpose for which they are used.

1. Continuous Waves:

Type AO. Waves, the successive oscillations of which are identical under fixed conditions.

Type A1 (Telegraphy). Continuous waves keyed according to a telegraphic code.

Type A2 (Modulated Telegraphy). A carrier wave modulated at one or more audible frequency or frequencies or their combination with the carrier wave being keyed according to a telegraphic code.

Type A3 (Telephony). Waves resulting from amplitude modulation of a carrier wave by frequencies corresponding to the voice, to music or to other sounds.

Type A4 (Special Broadband Operation). Waves resulting from the modulation of a carrier wave with multiple tones.

Type Fm (Frequency Modulated Telephony)

Type Fs (Frequency Shift Keying)

2. In the above classifications, the presence of a carrier wave is assumed in all cases. However, such a carrier wave may or may not be transmitted.

3. The maximum width of the frequency band of emission shall be as follows:

DECLASSIFIED E.O. 11652 SEC. 3(E) AND 5(D) OR (E) NNDG # 77S 0/5

TYPE OF EMISSION	CARRIER FREQUENCY, KC	MAXIMUM WIDTH OF FREQUENCY BAND OF EMISSIONS, KC.
A1	10- 100	0.250
	100- 1600	0.500
	1600—6000	1.000
	6000-20000	2.000
A2	100—6000	2.000
	6000-30000	6.000
A3	100—550	6.000
	550—1500	10.000
	1500—6000	6.000
	6000 and above	10.000
A4	Above 48000	120.000
Fm	to be specified	to be specified
Fs	do	do

3. Power.

a. Power, as indicated in the Power Column, is the power supplied to the antenna. In no event will the power input (product of the plate voltage and total plate current) to the final amplifier exceed four times the authorized power output, and regardless of other methods of measurement, operation will be considered legal if the power input is not in excess of this limitation.

b. Further power limitations are imposed for the use of specific frequency.

4. Class of Stations.

a. The use of an assigned frequency shall be confined to the class of stations designated for that particular frequency as indicated under the Class of Station Column.

b. The class of stations is defined as follows:

FA— Aeronautical Station: A land station carrying on a service with aircraft stations.

FC— Coast Station: A land station carrying on a service with ship stations. (A coast station may secondarily communicate with other coast stations incident to communication with ship stations.)

FST—Stationary Station: A land station other than aeronautical and coast, carring on a service with mobile or portable stations.

FX— Fixed Station: A station not intended to be moved and communicating by radio with one or more stations established in the same manner.

MN—Ship Station: A mobile station on board a ship which is not permanently moored.

MV—Vehicular Station: A mobile station on board a land vehicle, i.e. automobiles, trains.

P— Portable Station: A station which is intended to be moved easily and which is not ordinarily used while in motion.

RB— Relay Broadcast Station: A special station retransmitting signals, originating at a Broadcast Station, intended primarily for reception by a satellite network station for rebroadcast on the 550-1500 kilocycle broadcast band.

S— Special Station: A station on a special service, such as a service of navigational aids, time signals, meteorological bulletins, notices to navigators, press messages addressed to all, medical notices (medical con-

DECLASSIFIED E.O. 11652 SEC. 3(E) AND 5(D) OR (E) NNDG # 775075

sultation by radio), standard frequencies, emissions for experimental and scientific purposes, etc.

SAR—Aeronautical Radiobeacon Station: An aeronautical special station radiating omni-directional emissions and established primarily for direction finding by aircraft.

SARD—Aeronautical Radio Range Station: An aeronautical special station which provides radio range courses for aircraft.

SB— Broadcast Station: A special station transmitting signals intended primarily for general dissemination.

SFB—Standard Frequency Broadcast Station: A special station used to broadcast standard frequencies and standard time intervals.

SR— Marine Radiobeacon Station: A special station radiating omnidirectional emissions and established primarily for direction finding by ships.

5. Services.

The services mentioned under the Type of Service Column are the services for which allocated frequencies will be used. Authorization must be obtained for any other use than that specified.

6. Notes.

a. Under the Notes Column will be found the limitation symbols, applicable parts of certain limitations, and other information pertinent to the proper use of specific frequencies.

b. Designation of the transmitting and receiving locations has been made for the international circuits, showing in abbreviated form the commercial operating agency at the receiving end. These abbreviations have the following meaning:

AP	Associated Press Service.
AT & T	American Telephone and Telegraph Company.
C & W	Cables and Wireless.
MRT	Mackey Radio and Telegraph Company.
PW	Press Wireless Inc.
RCA	Radio Corporation of America Communications Inc.
UP	United Press Service.

7.

The term "Japanese Radio Stations" indicates all radio stations operated by the Japanese Government Ministries and such commercial agencies, guilds, etc, as may be authorized operation by the Ministry of Communications.

8.

An "authorized channel" is a portion of the radio spectrum, the width of which is the prescribed frequency band of emission plus twice the prescribed frequency tolerance.

9.

Channels are "adjacent" when the intervening frequencies, if any, are insufficient to accommodate an additional channel without overlapping authorized channels.

DECLASSIFIED E.O. 11652 SEC. 3(E) AND 5(D) OR (E) NNDC # 77501/5

TECHNICAL LIMITATIONS

1. The frequency tolerances of the radio stations using the assigned frequencies and employing amplitude modulation shall be as follows:

Stations operating from 10 to 550 kilocycles ...0.1%

Broadcast stations (550 to 1500 kilocycles) .....20 cycles

CLASS OF STATION	TOLERANCES (PER CENT) 1.5 TO 30 MC	30 MC AND ABOVE
Fixed	0.01	0.02
Land	0.01	0.02
Aeronautical special	0.01	0.02
Hydrological and Meteorological	0.01	0.02
Marine Broadcast	0.01	0.02
Marine Beacon	0.01	0.02
Portable	0.02	0.03
Mobile	0.02	0.05
Portable and Mobile 1 watt or less	0.05	0.10
Standard Frequency	0.00003	0.00003

2. The following additional limitations apply to the specifically noted assigned frequencies.

L1 Restricted to transmittion within _____ area only.

L2 Power in excess of that specified may be used in special locations upon application and approval for each such location.

L3 Restricted to use during daylight hours only. The term daylight hours means from local sunrise to local sunset.

L4 Not to be transmitted at any station within _____ area.

L5 Restricted to transmission during the period of time specified.

P1 Frequencies authorized for specified international point-to-point circuits may be used for domestic point-to-point provided such secondary operation is within the limitations indicated for the international transmitted circuit, and that such use is by, or coordinated with, the Japanese transmitting agency operating the international circuit.

P2 Frequencies authorized for Fixed Coastal Telegraph Stations as calling and working frequencies may also be transmitted by any mobile ship station when directed to do so by the Fixed Coastal Station for the specific purpose of communicating with the coastal station.

In those limitations having blank spaces the applicable parts, corresponding to the frequency in question will be found in the Note Column.
