

Record

A CORRESPONDENT writes: "D. LeRoy Topping died on July 20 in Honolulu, after a long illness. He was born in North Harpersfield, N. Y., on November 2, 1861. Mr. Topping was interested in botanical field work, particularly in ferns, assembling large and important collections not only from various parts of the United States, but also in the Philippines, where he served for many years; in Siberia, where he served with the American Red Cross following the World War; in British North Borneo, particularly on Mount Kinabalu, and in the Hawaiian Islands, where he has lived since his retirement in 1922."

ARNOLD ARBORETUM, HARVARD UNIVERSITY
JAMAICA PLAIN
MASS.

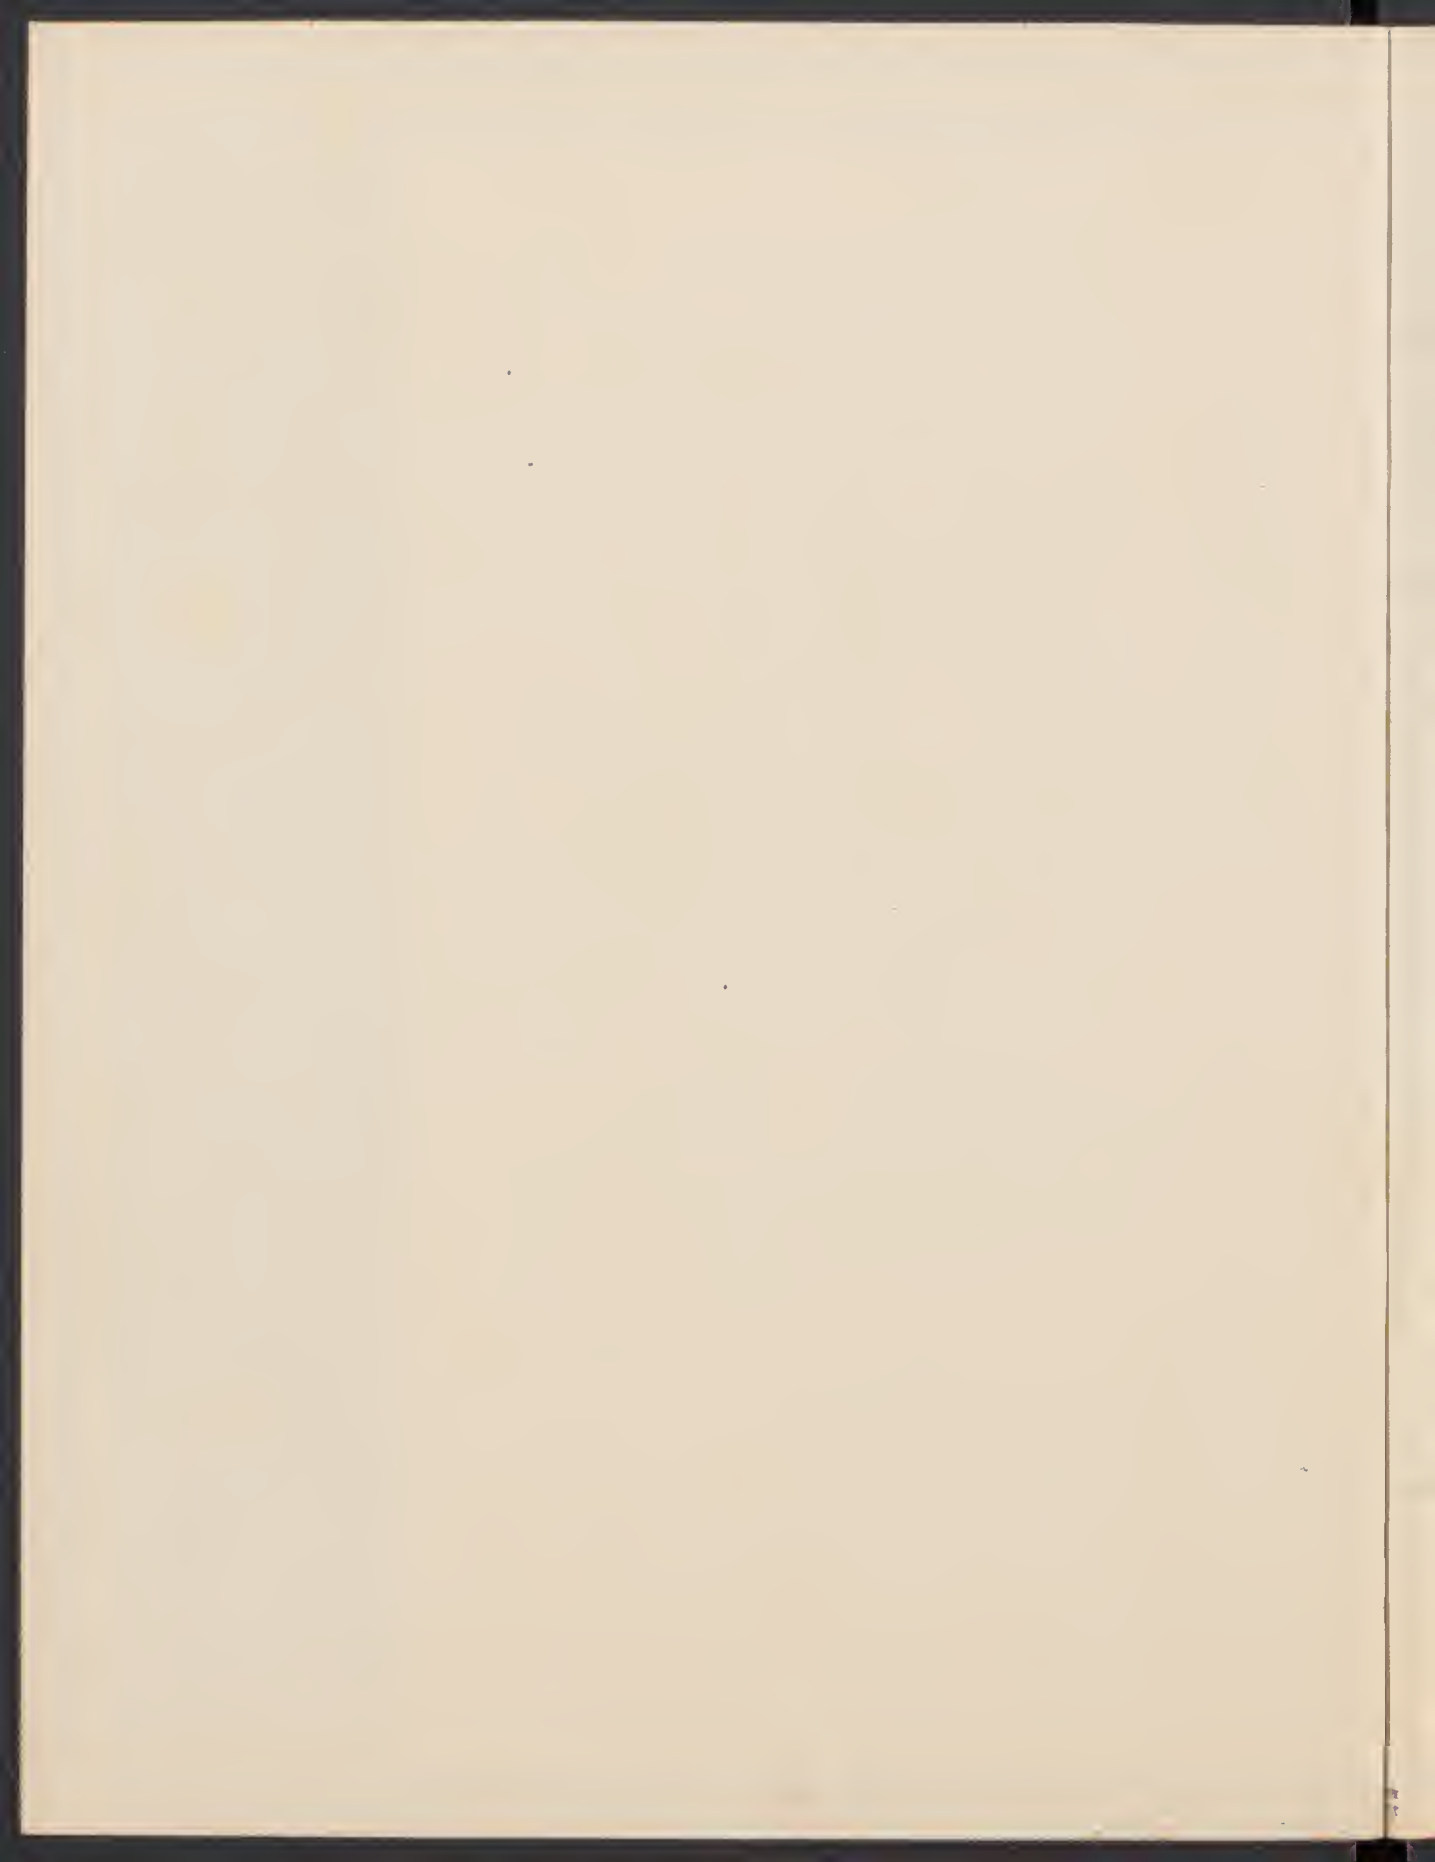

Nov. 1, 1940

Dear Mr. Weatherby:

Ottop Degener of Honolulu sent the Topping book via Mrs. Merrill, and asked that it be placed in the Gray Herbarium. As I acquired from Degener a reasonably representative set of Topping's ferns which eventually will find their places in the Gray Herbarium, it seems that its library is the proper place for Topping's lists and account of his Mauna Balu trip.

Very truly yours

I.D. Merrill

Sandaker B. H. B.

XX

Please note the spelling of Kina Balu with two capitals. I have my heart quite set on this spelling.

Minitindok Gorge is the same as my Lobang Gorge on my labels and I think the Clemens marked theirs the same as I did as we did not know that it had any specific name until we saw Noultons article.

Shall probably think of many more things for you to note later on but this is all for the present.

Yours sincerely
Topping.

Jan. 17th. 1916.

ASCENT OF MOUNT KINABALU.

In forwarding the following account of a recent ascent of Kinabalu for publication, His Excellency the Governor writes as follows:—

“The report of the ascent of Kinabalu made by Miss L. S. Gibbs during February was written at my request by Mr. D. R. Maxwell, Assistant District Officer, Province Keppel, who accompanied that lady. It is characteristic in picturing the expedition as merely a prolonged picnic and I am glad that I am able to record that Miss Gibbs, who was a guest at Government House on her return, whilst giving me a general account of the ascent and of her observations on the botany of the mountain, her special object, informed me also of the vicissitudes which were reduced to a minimum by the way in which Mr. Maxwell managed the expedition at practically a moment's notice since he was not warned to be in readiness. Miss Gibbs paid a tribute to the consideration shown for the comfort of every individual, which was done without impeding progress in any way.

We shall look forward with great interest to the publication of Miss Gibbs' report and in the meantime must congratulate her on being not only the first lady who had made the ascent, but also on the fact that in the interests of Botanical Science she chose the long route via Tambunan, a journey of many days entailing more hardship and discomfort than the actual ascent.”

Mr. Maxwell writes as follows:—

As the ascent of Kinabalu will perhaps be again attempted this year, it may not be out of place to write a report on my ascent with Miss L. S. Gibbs.

GEOGRAPHY OF ULU KADAMAYAN.

Several mountain streams have their source round Kinabalu (*a*) Kadamayan, the main tributaries of which are Kenatak (minor) and Kulapis which flows down from Tenampak, the divide to Bundutuhan and Interior.

(*b*) Kiulau which joins Kadamayan between Kaung and Gahin.

(*c*) Heia Heia which is a tributary of

(*d*) Penokok which is a tributary of

(*e*) Datrobang which is a tributary of

(*f*) Kenataki

all of which hence flow into the Kadamayan a little way above Kaung.

The largest of the above rivers, except of course the Kadamayan, is the Datrobang and all of them run in their own valleys between spurs running out from Kinabalu. They are also all on the S. side of the big Marai Parai spur which culminates in Mt. Nukok (known by Bajaus as Saduk Saduk) under the base of which is Kaung. On the other side of Marai Parai rise the river Melambun (or Limbun) and the bigger river Penataran. The Melambun flows into Kadamayan immediately below Tambatuhan and the Penataran still further seawards.

These rivers all join Kadamayan on the true right. The only river of any size joining Kadamayan on the true left to the ulu is the Kiamat which has its mouth almost opposite Kiau.

The spur of Kinabalu up which one mounts to achieve the ascent of Kinabalu is really the beginning of that range of hills which separates the Interior from ulus Tempasuk, Tuaran, Papar, &c., and extends to near Pangli.

STAGES OF ASCENT.

Headquarters are naturally at Kiau and the first stage is from Kiau to Lobang, an overhanging rock called after a small mountain stream which flows into the true left of Kadamayan. It runs just below the cave and hence there is no difficulty about water. The accommodation is ample for a large number of coolies although water would probably run down the rock in wet weather. The deepest part is however, with a few kadjangs, capable of being made quite weather proof. The best way to reach Lobang is to follow the hill from

which were washed out by the rains. The prisoners were also engaged to clear several small ships. *Leila Road*.—The remounting of this road is near completion, but the roller will have to be kept on for a little time longer to roll it down.

ALIC. JOHNSTON,
Supt. of Public Works.

Tawao.
JANUARY.

F. W. D.—Coolies were employed in cleaning the road at the N. of plain, and deepening ditches. On 20th owing to the non-arrival of rubber seeds, Mr. Morrell was able to let 15 of his coolies join my gang in reconstructing the Estate Road N. of the river to the nursery, about $\frac{1}{2}$ mile in length. The hedge on the W. side was cut down, (land owners were as usual under the impression that the road was their boundary) and the fence was moved back by them to the true boundary. The road will thus get the necessary sunshine with 66 feet of open land. No permanent planting had been done on the encroachment; heavy rain has interfered with the work. The Contractor completed his three ballards for the wharf. His work was delayed by the previous absence in Sandakan of the *Chantek* which Government had agreed to tow his timber. He lost one raft in trying to sail it over. *Corrie Harbour Coal Co.*—During the month 2,646 tons of coal were mined, 2,295 tons were exported including 455 tons in bunkers, 297 tons were sold locally, and 1,127 tons were sent to Sandakan. I visited the Mines on 10th, and returned early on 13th. A Chinese cooly who did not get an empty tub soon enough to please him struck his mandore underground between the eyes with his pick—shaft as the man was riding on a car being drawn up the incline. Fortunately the mandore was dragged aside in time with only a fractured nose. I gave the cooly 2 years R. I.

My Trip. to Buenos.

Oct. 2.

After a most strenuous forenoon's work in the office I endeavored to take a "port tiffin" first, but at 2.30 my telephone roused me and I was informed that the S.S. "Bonaventura" would sail at 3. I had to rush to dress and get to the boat only to learn that the time set for sailing was 4 and we finally set steam at about 5 in a down-pour. Blush every place on deck was roasting but we were spared out of the line of rain and passed by *de corragidos* with a fine sunset over *Mt. Mariscal*. Struggled with luggage in my stateroom which I think will be the only one I shall find it to. Had our dinner at seven, Spanish style with its "vino tinto" of which I am very fond; soon after I went to bed on deck on a Filipino cot several sizes too short with all the bed clothes ^{also} several sizes too short but the strenuous day's work has tired me so, that stretching out on a bare board would be welcome.

Sun.

Oct 3

Was so tired that I could not sleep much last night. Had some tea and wash early, my ship board luxury and then tackled the Spanish bath: two barrels of water, one "sajado" and one "cubel" and a small can painted red which I smeared over myself.

Am arising off my tired-to-death feeling and am reading the odds and ends of my papers and magazines and writing up my diary.

Once we can close to some very fascinating looking islands: rocky and wooded to the top: might be interesting botanically as they seemed uninhabited.

It has been cloudy most of the day with occasional showers - a very restful sort of day.

Sat out on deck after dinner and talked with Dr. Loomis, Lt. Shanks and a Mr. Beach, the only Americans aboard. Ran close to some light land in the evening and during the day the Gen. Forbes passed us and we met the U.S. "Cuba" To bed soon after 8 on deck.

Mon.

Oct. 4

Was awake before light and had tea and toast on deck and then my "tin-can" bath. We had an early breakfast just as we came to anchor at Cebu. Dr. Pearson and I went ashore together, walked over to the club and then we got a rig and dived around the towers, a much cleaner and better looking place than I expected. The boat was due to sail for Zamboanga at 9 but with the usual Spanish "mañana" habit did not get away until 11. Dr. Pearson, Capt. Shanker & Mr. Beach all left the boat at Cebu. As we left Cebu three U.S. torpedo boat destroyers steamed out along side of us but soon left us in the distance. Nothing much to see on the run from Cebu to Zamboanga: reached the latter place at about 6 but I did not go ashore. It has a beautiful location at the foot of a high mountain *Guerra de Negros*. (The term of *Negros*.) I did some botany in the evening and went to bed quite early. Every body is ashore.

Tues.

Oct. 5'

It is early to bed and early to rise with me. Had my tea and wash on deck and then my "tin-ware bath". Dressed and had breakfast on time and then Mr. W. Graw P.C. and another chap whose name I do not know, and myself went ashore in the launch. I spent all the time ashore in collecting shells: also paid a hereta for a job: got about 25' new species for my collection. Then charmed with Demaguite and would like to spend a vacation there, came aboard at 10 but we did not sail until 12.

There are very heavy dark clouds ahead of us. The run along Quinal Regua is very attractive.

I took a siesta after tiffin and then read some botany from Merrill's book and fixed up one book of four old Dr. Robinson's field labels. Had my tea in the P.M. and at dinner time we struck the storm that loomed up ahead of us. The rain and wind has made an awful roar and the sea is getting high. Not much sleep on deck a head of me.

Wed.

Oct 6

I woke in a most joyful night with the wind, rain and high seas. Had practically no sleep at all and awakened daylight and also a night of the Island of Mindanao and of Zamboanga a little later.

Had my tea and went early and breakfast and then packed up and we rounded a corner 8. It is still quite raining. I took a rickshaw up to the "Palace or Plaza Hotel and arranged rooms.

Met Mr. McButcher on the street - dropped in to Albert's drug store, met Paul Tairon and Mr. Beoley at dinner. Mrs. Moore took Mr. McButcher and me down to the hospital in the P.M.

Visited around with numerous people and looked and wrote up my diaries.

Zambo is a most attractive looking place.

After dinner a Mr. Newton, a Pub. Works man took me to the club and we had some drinks and then I got to bed at about 10.30

Thurs,

Oct. 7.

The Jan to my church bell awoke me at about 5.30 and it was up by six. Had my bath and breakfast by seven. Dropped in on Mr. Saleby and then on Geager and Fairson. I found in the bath.

I wandered around the streets and went to the market. Saw Dr. Cook of North York Lane on the street and also met Col. Trumb.

Went around to the All Butcherin and chatted until noon: the padre and I looked over the church.

Took a rixta after tiffin and then called on the Dr. Baker's but they were out: met Judge Howard on the street and went around to the house and called on Mrs. Howard. Walked down to the pier and met Mr. & Mrs. Parlor there.

After dinner Fairson took me around to Mr. Demaison where I played pool all the evening. I visited with a Mr. Allen. Had a very heavy rain just before we came home. Has been dark and threatening all day.

Frid.

Oct. 8

I was up at about six and had my bath and an early breakfast. Ran in on Sallee and then started down the beach towards the James Hospital; collected some shells and then stopped at the hospital and called on Miss Riddle. Wandered on down through the Moro Village and then struck on to the beach and collected shells until about one and then came back for tiffin with Miss Riddell and Mr. Burts. Miss R. took me over to see the weaving.

I got back here at about four, had a bath and changed clothes and then made a call and had tea with her, and Mrs. Peter Trumb; most charming people. After dinner I called on a Mr. Cameron, an engineer but he was out.

Logged around the hotel, walked down to the wharf to see the Pomular and then home; looked over my shells and got to bed early.

Sat.

Oct. 9

I was up at about six and had my bath and soon after breakfast I walked out through the park, a most delightful place. Bought two shells of a Moro and then wandered on out the sea wall and collected some shells: some one stole the chambered nautilus that I had just bought. I got back to the hotel in time for lunch.

Soon after lunch I took the road out to San Jose which led me down to the beach and then I followed up the shore and collected many shells. Had to take off my clothes to get across one stream.

Got back in time to change before dinner.

After dinner Mr. M. Hutchins and I went around and called on Mr. Cameron, the engineer whom I found most interesting. Came home at about 10 and went to bed.

Luzon

Oct. 10

I was up before six: had my bath and an early breakfast and at 7.30 joined Mr. Cameron Mr. Rawlins Mr. Buckingham and two Filipino engineers and we walked out about 3 miles and then walked up through the gorge where they are to build the waterworks: we waded the river ~~for~~ several times and saw some most attractive scenery and interesting plants I gathered some of Descom Puntcher's Lumbang nuts. We stopped at the nursery gardens on the way back, had home in time to lounge before dinner.

After tiffin I joined the other fellows and went to the bill game. Met Dr. Baker there.

After the game I went to the Transport "Liscum" and met Chaplain and Mr. Clemens and we walked out into the scrubland & then came back and I had dinner with them. I was pretty tired and went to bed at nine

Nov.

Oct. 11.

I was lazy about getting up and had breakfast alone.

I did some running around town first, then came home and cleaned up some books and did up some writing.

Walked down to the hospital and finally stayed for tiffin with Miss Riddle and Mr. Burk. Had some sport with two other kids who were dealing coconuts. Came back with the idea of going to San Ramon on the 3 o'clock bus but it left at 2.30. Went home and took a siesta and at about five got up and had my bath and changed clothes.

After dinner all the others went to the 'movies' as I wandered down to the wharf and then to the Army and Navy Club: met Dr. Baker, Hair and Mrs. Parker and other army and constabulary people: we drank till for the drinks and visited until about 10.30.

110
 Oct. 2

Went out early and the first to break fast and took the bus "Frank's Flyer" out to Ryals, a very charming road back of the way along the beach walked from Ryals out to Sam Ransom Pearl Colony and met Mr. Cooley and Mr. Brinton the Dist. Supt. We drove over to the house and stayed around till lunch time; met Mrs. Cooley a most charming woman. Took a little ricksha and then Cooley drove me all around the estate, a wonderful place and wonderfully managed. The rain drove us in but later we looked the figgering over, came back for tea.

Went into the prison and saw the men at meals

Had a most gorgeous sunset.

After dinner we walked down to Mr. Chamber's house and he gave us a concert on his viololo. It has been a most charming and interesting day.

Wed.

Dec. 13

Had a long, very hard night which kept me awake some, had an early bath and breakfast and came into Jambounga on the truck with Mr. and Mrs. Crowley; a charming morning's ride.

Went to the S.D. office, the barber shop and then looked around my room until noon.

Went up to Prisoner's room and visited while and then took a long walk in the ^(salt works) ~~vicinity~~ and met Blair (Det. Rev.) on the way. Came back about four and Sallee and I went down on the beach and collected some shells.

Had my bath and dressed before dinner.

Staid around the hotel and listened to the music and watched them dance while.

Blair, Herritt and I walked down to the wharf and had a smoke.

Came to my room and tried to read but the mosquitoes were so bad I had to go to bed.

Thurs,

Oct. 14

... but my usual
 time and had breakfast with the
 others. Walked down to the wharf
 and looked over the Straits Steam
 Ship Co's Belanger; then back to the
 hotel and then down the beach
 collecting shells and stopped
 at the hospital to say good-bye
 to Miss Biddle. Went to the office
 and paid for my ticket to Jesselton
 72.20 and then home for tiffin

Took a little walk and
 then packed up; went over to
 Saleeby's and had some cream
 with him and Gov. Gilhauser
 and at five went down to
 "Belanger" with my luggage;
 called to see Gov. Bryant but he
 was out.

Came back to the hotel for
 dinner and at 8, went aboard
 my boat and we sailed
 for Johs at nine. I did a
 little unpacking and sat
 up on deck for a time. It is
 a beautiful night, with an
 opal moon. Retired at 10

Fri.

Feb 13

Did not sleep well last night on account of my watch; was up early and we came to anchor at Solo at six; I had tea and my bath, breakfast at 8.30 and then went ashore at once. Mr. Bingham Brent on the street and walked through the Moro market with him; he was leaving for his industrial school. Went to the Army and Navy Club looking for the Bleniers; met Major Chapman and some other officers there and found that the Bleniers have gone on the mountain. After tiffin on the boat I called on the Fairs where the Bleniers are stopping and Mr. F. and I packed up their things; Mr. F. came to the boat and we had tea, then to the tennis court and then to the Fairs for a drink. The Bleniers came in about dark and we hurried them on the boat. We were to sail at 2 but did not get off until 7. After dinner I loafed on deck until about 10. It is a beautiful moonlight night.

Sat.

Oct. 16

My stateroom was so hot that I went up on deck and slept as much as possible with my nose in the air. Was up early and had tea and my bath and breakfast at 8.30. I spent most of the forenoon in watching the blenners put their plants in press; helped Mrs. Blenners with some of the ferns. We got into Sandaker B. N. B. between 12 and 1 and came up to the wharf. A Dr. Orme and another gentleman called on us.

After tiffin my mouth became so painful that I walked up to Dr. Orme's house; had tea with him and the warm tea caused the abscess in my mouth to break giving me great relief. Later we went out for a walk and saw many interesting plants and I collected two *Lygodium*; came home with Dr. Orme for dinner; we had a little chat on botanical things and then he came down to the boat with me. The Dr. is a most interesting and charming man.

Sun,

Oct 17

I had a good nights sleep last night: was awake for a most gorgeous sunrise: had tea and wrote up my diaries and had breakfast at 8.30: started out almost immediately and took the road leading down the coast: found many of the ferns in common with the P.I.: got a very interesting epiphyllum? in a lime stone cave.

I got pretty warm and reached the boat at 12 just a head of a shower: had a bath and changed before tiffin.

Put my plants in press in a shed on the wharf. Dined and had tea and then Dr. Orme came and we picked up the bleasens and went for a walk out toward the insane asylums and found many interesting things: got trace of *Lygodium dichotomum*? Had a most delightful time with Dr. Orme. Loafed on deck after dinner and went to bed early.

Mem.
Oct. 18

I was up early and had tea and changed the skins on my plants before breakfast. The Captain and Mr. Blumens and I started out on the same road we walked last night. The Captain killed a long snake about 6 feet, a most beautiful green. Everything was most interesting. I found some fine specimens of *Lygodium dichotomum*? and a few other interesting forms and one little tree which we think may be the ushoganu tree. I left the Blumens in the field and came home and had my bath before tiffin. Went out in the native quarter in the afternoon and did a little shopping; got my coat fixed and some money changed and wrote some postals.

We sailed for Kaddah at about 6.30.

I put my plants in press after dinner and went to bed on deck at about 10.

Tues.

Oct. 19

I was awake again, the sunrise which was very beautiful. We came into Kudat at about 10: saw a Chinese junk in the harbor. Roberts the wireless man took Mr. Thompson a fellow passenger and myself down the beach and showed us the wireless station which was not working on acct. of Rajah Brooke's birthday. There was an amount of *Pithecolobium dulce* and *Casearia* trees along the way. I collected a few beach plants: two *Euphorbias*, a *Castolaria* and one milk-urd vine.

After tiffin the blennies and I went out on the hillside: I found the place covered with a puzzling *Lygodium dichotomum*? also collected a few other ferns, a *geranium* and a *conopseid*. Gathered some *Clitoria* seeds and some lilies for Roberts. Visited with Roberts for awhile after dinner and then sent my plants in press and went to sleep on deck.

Wed.

July 27

I was up very early, and had my tea on deck and caught a distant view of Bine Kain as we came into the harbor of Jesselton. We anchored at about noon: finished up my packing and stayed on the boat for breakfast. Paid 1.50 for duty on 400 cigarettes and my coat and then we put our things on the train and took them off at the Bine Kain; The Chaplain and I met the Resident on the street; then took the train to call on the Hon. Gen. but he was busy with his mail and could not see us: so very sorry.

I spent the afternoon in getting settled, running around the town and doing some shopping, getting up some postcards and arranging the driver on my account.

collected an acre piece and just before dark went out and collected some edibles.

The new house is a much more comfortable place and we are

very happy here

Thurs,

Oct 31

Turned around a little in the morning but had to be cautious as I had on my best white suit. At ten the Chaplain and I went up and made our call on the Gov-Gen; found him a fine type of the Britisher; he was pleasant; gave us some maps of Kinsalu and a letter to the Resident.

We walked home and my first collection was a member of the grape family. The Chaplain stopped to talk with the school masters and I did some collecting in a salt marsh where I got a *Xyridaceae* and a *Burmanniaceae*.

At three we called on the Resident and found him a very pleasant keen shrewd sort of chap and offered to render us any help he could. Worked at my plants the rest of the day and collected a few things.

At night Mr. Clement and I indexed a part of Miss Gibbs report of Kinsalu. We had a fine view of Mt. Kinsalu from the Governor's Office.

Fri

Oct. 22

Was up at six and had my bath. Mrs. Clemen got into her cravalls and we climbed up the hill to the Lustrous lookout station but could not see King's Bay.

We discovered a large swamp on the other side and waded for that and found no end of interesting things: ceratopteris thalictroides by the thousand. We waded through the swamp after edges etc and at about 11 o'clock we were loaded down with things; Mrs. Clemen wanted to continue on but decided the matter and came home. Put a few things in mess after tiffin and then I went up through a ravine on the hill side after a certain plant which I found in quantities. Kept on through the jungle up to a path and followed that down to opposite the Custom House; got some interesting ferns, a adiantum or kind say? Worked until 10.30 at my plants and writing up my diaries.

sat.

Oct 23. It was raining when I got up but nothing daunting so I fixed for it and took the 8.47 train out to Victoria Barroetz. An Englishman asked of the Chaplain "was the little chap was" meaning the blessed one who was in her own self and midday blessed. We walked up through the golf course, collected some rain-dew and a new fern of *Blechnum* in a swamp. Walked through a rubber plantation and then struck upon a hill-side where we found two localities for the pitcher plants, *Sepentes gracilis*, the thing we set out for; collected many other new and interesting things. By chance we came by Mr. Roberts' house but could not stop on account of the train. Put in plants and changed drivers and talked over things botanical. Wrote a lot of postals. The Chaplain threw up a press of mine by mistake. I wrote up my diaries and and got to bed at about 10.30

Sun
Oct. 24

I was awake early and heard it raining, but as I have practically finished my collecting here at present, did not mind. Got up at seven and had my bath and then took bath, changed my dress in the engine house across the street.

The blennius went to Chinese market and I walked down the beach by the custom house; collected an *Exora* and a few ferns; some fertile fronds of one that I have looked many times for.

Also looked for shells but only found three or four.

I had a stiff climb up the hill through the bracken and then followed along on top of the ridge; got in just before one and had my bath and changed clothes. Put some plants in press and changed dress again. Went up to the business part of town and bought some candy. Began a letter to Lina + Dove and Maurice.

Mon

Oct 25

Had heavy rains during the night; we got up early and went to the engine for my presses and found the whole thing a mass of cinders; a most distressing experience; later I went over and down under. I managed to dig out a few things with the beam and I put in new presses. The Chaplain and I called on the Resident to make a few inquiries and then we did a little shopping.

In the afternoon we began our preliminary packing and tying things up preparatory to the trail. I had to buy paper to replace my drawers.

It has been a very busy work of the afternoon. Had a little talk with a fellow who has just come in from Koto Belud. In the evening I finished my letter to Ling here and as could then turned into bed and went to bed at 10.30. I begin to feel now as if I should get to Kina Balu

26

I was up early and had my bath and before breakfast walked up on the hill and had a view of Kings Basin.

Looked after my plants and then the shop in and I did some final shopping. I wonder what we have forgotten.

I went to the library and did some money changing and also deposited some money with Darby & Co. Roberts dropped in for a chat and then I did some more packing. Took all my plants out of press.

I took the 4.20 train up to the hospital station and walked up to Roberts house; we had some tea and then we took quite a long walk and nearly lost our way but got in at dark. I stayed for dinner with him and had a chat later; walked home and finished up my packing and turned in between 10 and 11. Now had a strenuous day of it.

Wed.

Oct 27.

There was much noise on the
 beach last night and that with
 my thinking of our getting was
 disturbed in sleep. I finally
 got up at about 5, and was all
 ready with my luggage at six.
 We were on the beach for some
 but did not sail (The King Balm)
 until 8. Had breakfast aboard
 and had a fine sail up the
 coast with good views of Mt
 King Balm and arrived at
 Hankan Bay, apparently in town
 at 11. There we found coolies
 to take our luggage and after
 a walk of a mile and a boat
 ferry we found pens and
 pack cattle. "Banfield" my man
 rode my pony and I walked
 fully half the way; most of
 it through a low swampy plain
 and I got pretty wet. I rode
 the latter part of the way and
 we reached Kato Belud at 5 and
 found Mr. Brattenberg the District Officer
 waiting for us. Went to our house
 and later to explain and I dined with
 him. I stayed for a chat & drink & then

Kamran & Kato Belud

Thurs.
Oct. 28

I was up a ~~not~~ few hours
ix, had my bath, a couple of
~~the~~ crackers for breakfast and
then packed up and a ~~right~~
we started with 2 coolies and
3 ponies. "Banfield" and I have
taken turns riding all the
day. All the forenoon we
rode through rolling country
and at noon stopped for
tiffin of rice, meat and crackers;
my first meal and it tasted
might good.

We had a long stretch of
rolling and ~~more~~ ~~or~~ ~~less~~
cultivated country but
later in the afternoon it
began to get more wild
and rugged and our path
wound around the hillsides
through thick jungle.
Quite late Mrs. Clemens and I
walked a head and it was
dark ^{6:45} when we got to the rest
house at Wabayo. The coolies
came a little later; we had a
dinner of salmon & biscuits and
a dessert of Macintosh Topped

5:50 ft

Frid.

Oct. 29

I was up at six and went to the river for my bath; We had our first rice and beans for breakfast. I started out for Hany at about 7 leaving the Chaplain and Mrs. Clemens putting up plants. Banfield packed with me and carried my press; I saw many interesting things but collected almost nothing but ferns. I lunched along the way on my can of rice and beans and did not see all the Colemans during the day. Banfield and I got into Hany at about one and cleared up the urch house and when the coolies came I found ~~up~~ the house, unpacked my things, put my plants in press, wrote up my journal and a note to Bettlesberg and had my dinner at 7. The Colemans got lost out in the dark and the men went out with lights for them; they got in at 8.15. I had my smoke after dinner and went to bed at about 9.

Wabayo to Hany - Misses

Oct. 30

Sat.

I was up at six and went down to the river for my bath; we had an apology for a breakfast and then we packed up and all left Kuning together; had to wade the river several times and then we climbed up some hills and kept on the river much of the time; had some wonderful views of Niua Balu along the way. I saw but saw little in the plant line that I wanted to collect. We got to Nian at about one just a herd of a little sprinkle, the first rain we have had since we left Jemeltan. I have spent all the afternoon in fixing up the house and getting things settled. It seems to be only a convenience to far as the kolomens are concerned. Humpoh the present chief and Sumpak and Lamsak called on us and showed their letters of recommendation. We had dinner by candle light and I soon went to bed.

Sun.

Oct. 31

I was awake several times in the night with different noises and got up at six and worked at the village spring. Bought some very good bananas this morning; bought oranges + pencils yesterday. After breakfast while the Obenous were having family prayers I went for a little walk and collected a few ferns and a bryozoa. It looks like a rainy day and the clouds cover King Balu.

Put my plants in press and showed "Banfield" how to change drawers.

We had a picked up lunch and then I walked a little way towards Baring and collected some of the old familiar ferns and one orchid in fruit. Our "public reception room" has visitors all the time. Bought a chicken and are planning for a real dinner.

Banfield, my cook turned us out a really fine dinner to which we did justice. Then I had my smoke and went to bed with my clothes on.

Mon.

Nov. 1

The Chaplain and I squared our accounts and he paid up 16.09 to balance things to date.

This is my 54th birthday. I had my usual preliminary performances this morning and at about 9 I packed up some crackers and chocolate and started out with Sam-pat, Thavilanda's guide. We went straight up the hill back of the rest house until we reached the ridge, followed just under that for a way and then dropped into the valley on the other side. Collected a curious omnivore and some more curious omnivorous forms. I tried to follow the stream up to the top of the spur but it was covered with dead bamboo; found a path up to the left and I climbed up that and ate my lunch facing the Maria Parai? spur & came down again and crossed the gulch and collected a most curious parasite? at the base of a tree. Reached home at one o'clock of a rain. Put my plants in press. The Chaplain has been deluged with with orchids brought in by the Durango, subsp. smoke and bed. A delightful day.

1882

Apr. 2

I was up early, bath, breakfast
writing up journal, changing dinner
and after the bloomers left I took
old Sumprat and started down
one of the gullies for the river:
old Sumprat has seen his best
days: objects to anything but the
good paths and fine country. I did
not collect much excepting some
common ferns. Got to the river
soon after 12 and had my lunch
there and the rain set in soon
after and I had no very much
time of it: followed up the river
aways and then came up ^{another} ~~the~~
of the gullies and so home.

Saw a large mass of an epiphytic
orchid. (maroon + yellow) which the
Dissicans had been bringing into
the creek house.

Got home at about 2, had more
lunch, dry clothes, changed dinner
and did some leafing.

I looked after dinner, then
had my smoke, looking down
the valley from my door.

Was in bed before 8.

Wed.

Nov. 3

I was awake quite early and up before six. Lacked only the breakfast, changed some dress and at about 10.30 I took two small Durams with me and climbed up the ridge back of the rest house and dropped down into the same valley where I went Monday but I went down the stream instead.

I found quite a few ferns to collect, some of them new and others familiar. Climbed straight up out of the gully and came to the edge of a rice field where I sat down and ate my lunch, then climbed up on to the ridge again and followed it on to the end, on the top I collected my first bamboo. Reached home in time for a late lunch then some putting plants in press, changing dress, supper, a smoke and then the writing of my journal and then to bed.

Tues,

Nov. 4

I was awake during the night and was up early. The Chaplain and I packed a few things and at 7.30 we started with Lamah as guide and three other Durums for Lobang Pass. We very soon dropped down to the river bed and followed up the stream for a long time, fording the river many times, usually by jumping from rock to rock and found it pretty strenuous; but the rope bore from my shore and we tied it up with a string. I collected a few ferns along the river. After we left the river,

I found the growth much more interesting and we had some very steep climbing and at 1.30 we reached Lobang Rock, a gigantic thing which offered good shelter.

We built a fire and had our lunch of rice and bacon. It rained all the afternoon and I dried the clothes. At about dark we had our dinner of rice and sardines.

We fixed up our blanket roll and went to bed soon after both under the same blanket.

Friday
Nov. 5

Did not sleep any last night as I am used to sleeping alone. Was up at eight and went to the stream for a wash and then I tried breakfast of salmon and biscuit but it did not go very well. The Chaplain had a great display of orchids and at 9.30 we started on the return trip to Kian. I collected quite a few ferns on the first part of the trip and Chaplain found a large white orchid about 6 feet high. It did not seem so long this time before reaching the river. I made a miscalculation on a rock and landed in the river and got quite wet.

We stopped 12.45 for lunch under a big rock. Near the bamboo bridge we took a ^{new} trail that led up along the hill side. I was very tired when I got in. Had some tea, a bath, my clothes, looked over some plants and finished up my journal and then to bed. The Chaplain and I rate the trip a great success.

Sat

Nov. 6

Dad not put in as much sleep as I expected to last night and was up at day-light. After breakfast I put my new plants in press and changed driver. Put my blankets out in the morning sometime but we had a little rain before lunch time.

I have had rather of a lazy day of it: in the afternoon I fixed up my notes, wrote up some field labels, stood around and watched the Captains put up his orchids and we have had some talk with some of the head men like Sunpat and Lamat about going to the top of the mountains. We added numbers, to the list of our reptiles, at lunch time.

We had our usual rain in the afternoon and after dinner I sat at my front door and smoked and watched the night come on. This is a wonderfully quiet and restful place.

Sun.
Nov. 7

I was up before it was fairly light and looked after the breakfast: made a mess of the prunes and oranges which I had cooked. To the Chaplain and I walked up to the newly made grave on the hillside and then down the slope, then came back after Mrs. Blumens and with three small boys we went up on the German Lane spur which we found most interesting and I brought back a lot of new ferns, saw some hestants and other new things. Got in at about 12 just ahead of the rain. I put my plants in press in the P.M. and changed all my tires. Then I looked after our chicken dinner which we had about dark and then I came in at my front door and watched the light fade in the west and the darkness come in until only my 3 coors was all that showed against the sky. Smoked into the darkness and then to bed.

Mon.

No. 1

I was awake with the sun
again and up early. No collecting
to day but I had a great
longing to go to the Kumban
Spur where we were yesterday.

It was a beautiful bright sunny
morning and I improved it by
putting up dress net and
changing them twice which kept
me very busy all the forenoon.

In the afternoon I sorted out
some clothes which I did not
wish to take on the mountain
and changed my dress net
more.

In the morning Sampat and
Lamat and a "holy man" made the
arrangements for our going to
the top; I paid \$1. Some money for
tickets and \$2.22 for the spirits.
Tunpoh is walking but late in
the afternoon came to the house for
the first time in 3 days. For
dinner we had "bladi" stalks cooked
as greens, only fair. Tried to steam
steak on my stove but it buckled then
sat at my door and watched the
night come on again.

Suez
Nov. 9

I saw an ash tree early and up
before the light and sat at my
door and watched the door come
in. My brother and Mrs. Coleman
showed me some opium, saying that
a boy had brought in and so
I took him up on the western slope
of Gunung Smeru and collected
a quantity of it in a newly
cleared rice field.

Came home and had time to dry
some clothes and change dress
before noon.

It was rather rainy in
the afternoon, and I began the
packing for the mountain; I
fixed up the "chow"; some clothes
and specimens which I took
up to Sumprat's house in the
late afternoon. Nearly all day the
house has been full of coolies
and kampoh has been around
and I think tried to stir up
some discord. Had a late dinner
and then I sat at my door
and smoked and watched for the
night.

Wed

Nov. 10

* was up at 5:30 and stirred up the boys and then - and all the business of packing up and getting off. Her. blum is insisted upon drying plants and delayed packing. She and Chaplain left with some of the coolies at about 8 but I waited until about 9:30 to get someone carry his trunk. Had a wait near the gorge for another coolie for the same thing. I found some ophioglossum by the way. Early in the gorge I proceeded to fall in the river and turn the heel of my other shoe. Then it began to rain. I stopped at the big rock where I am to leave my "paper sandwich factory" for a little lunch and again quit before I left the river it finished it. Had the climb up to Lobang Rok in a down pour. Found the blumers all dry in bed while for the trunk I blew in at about 2:45 with cold, cross cold tired. Got into dry clothes, had dinner, songs by the blumers for the benefit of my display of temper, a smoke and then bed on the ground.

Thurs.

We are very cramped for room, every thing nearly
 is wet and misery and I am wet at all in
 bed with Paka-Paka; I long for the next house at
 Nov. 11

and the snow for my shoes.

learned not sleep last night
 and was up early and after
 a cold breakfast I got into my
 wet clothes and at 7.30 to Colman
 and I left at 7.30 and the captain
 and police from White Bluff looked
 after the coolies. We got to Com-
 burranzou at about 10 and made
 a little stop and found some
 interesting things. The Colman
 left me there and I moved
 on slowly and soon the rain
 came on and as I went higher
 up I got very cold and had
 much difficulty in climbing
 and getting my breath; I saw
 many interesting things but
 was so cold and worried that
 I did not care for plants. I
 sat down in the rain and ate
 my lunch in the rain then
 felt better and reached Paka-
 Paka at about 4. Things were very
 wet but I had dry clothes and
 soon felt better. "Banfield" was
 done up and made a great fuss,
 said Sherlock Holmes, the Captain's
 being man was finished.

ii
Nov. 12

I was up early as I could not sleep on account of the cold. I had a session with "Confield" in regard to repairs in his house keeping arrangements. The Chaplans went down the trail to see about the Chinaman's "Sherlock Holmes". No such Sumpat and Babay, the only men; then we went with them up to the Sacrificial Rock where they deposited raw & cooked rice, egg, cheese, lard, meat etc and went over their string of charras and called to the mountain. I turned around camp.

I was about 3.30 I took my boy and went down the trail towards Sambucan to find the Schizer in a "grassy place" I collected some along the way and then walked until fire but could not see it. Had some most wonderful views of the valley below and got back to camp at about 6. I looked after our chicken dinner, our chicken being the only one that survived the trip up, and then to bed.

Sat

Nov. 13 This was the day of our ascent of
 Kina Balu (Pomjak, the native name) We
 set off at 7.30 and at the "Surgical
 Rock" the Captain fired a salute of 1
 gun, the other shells would not go; soon
 we came to the Granite Gap; some
 of it very steep and smooth, but
 later we followed the seams in the
 rocks. Had some fine views of
 the valley below. Stopped to collect
 along the way and I found a
 butterfly in bloom. When we came
 up through Lewis Gulch? we found
 it very cold and somewhat fog-
 gy and the natives, Sumpab, Lamah
 Bayay and 4 coolies got down to
 consult. Lamah took the lead and
 at a little lake near the base of
 Lewis Peak we found a little
 sheltered nook and had our
 lunch of crackers, cheese and
 chocolate. Lamah again took the
 lead and we climbed to the
 top of Lewis Peak collecting some
 ferns, and almost everything
 that grew, by the way. In a
 cove at the peak we found

several bottles containing the
 records of former ascents, viz
 Capt Leammouth Royal Army and party
 who made the survey of the top,
 Miss Gibbs who made the ascent
 for botanical purposes, Foxworthy
 of the Forestry Bureau Manila,
 Hamilton of the Sarawak Museum?
 Pilg? and some others. It was
 bitter cold we deposited our "Pine
 Honey Pickle" bottles with our record
 and then came down. I found a
 very delicate little parsley on
 the way down. We packed up our
 plants, I had a smoke to warm
 me and we turned over our view
 west to Lamak, Sempak & Baryang
 and much regretting our entire
 lack of any view from the top
 we began the descent in the
 same way. We collected some by
 the way and I came on ahead
 with Lamak and my boy and
 got into camp at 4. A very suc-
 cessful trip considering the time
 of year and weather, dry clothes,
 supper, a smoke and then bed.

Sun,

Nov 14

Could not sleep last night and and when I got up in the morning I found my feet, hands and eyes were bed^d, wet from the cold I think. Put my plants which I had collected for the last two days in press[#] and by that time it was noon.

Again I started out with my boy and went down the trail a short distance where I found the ichigee and collected it to my heart's content.

In the forenoon I took my boy across the stream and collected a little.

On my way back in the P.M. I collected but little and after coming back to camp I put all the things in press and changed dresses and waited for the bellmen for dinner which we had by candle light. Have an enormous appetite. This is to be our last night at Paha-Paha for which I am very thankful.

Hou.

Nov. 15

Slept a very little last night for the first time. There was all the confusion in breaking camp and we had what could hardly be called a break fast. At 8.40 I started with Sumpat and my boys for Lobang. I loitered at the first open place to enjoy the sunshine and collected to my heart's content. Took it very slowly and was glad to get into the warmer altitudes. Had a wonderful fine view of "Pumjah".

At about 500 feet above Namtuou you see Sumpat showed me where Ong sui, the chaplain's Chinese man "Sherlock Holmes" was buried. He sleeps high in the mountains which he wished to do as a pilgrimage.

At Namtuou you see I stopped for lunch and had sunshine and rain together. Found the way down very steep and slippery, and I reached Lobang at 4.45. Got tea, dry butter, making camp and supper of amotes and corn, a smoke and some entertainment.

Tues.

Nov. 16

I had a good sleep last night to first for some time. The morning was not all gone out of hands & feet. I was up early and busied myself about camp all the forenoon in trying to dry clothes, paper drives, going through my press and writing out my collection of yesterday.

After tiffin, with which we had an annam plant cooked or steamed which the hospital had been gathering, I began putting my plants in press. It was a most miserable occupation to do the things and most of the forenoon. I had about four and had a cup of hot water. Then changed the drives on my big press of the same plant.

I began writing by one noon and it poured most of the P.M. The rainiest day we had had.

Kanfield cooked us some corn meal mush for supper which we ate with milk and molasses and enjoyed very much.

Wed.

Nov. 17

Either the heede or the arum greens affected my kidneys and I was up three times during the night.

Was up at about day light and after break fast I took Sumpah and my boy and we descended down the Kiam trail away and then followed up a ravine until we were above Lobang Rock.

I collected quite a goodly number of ferns and had some tremendous steep down hill going.

I put up my plants in the afternoon which is always a pleasure.

I had all my work out of the way early and looked after our supplies of rice and beans and had to wait for the elements until after dark. We had some rain in the afternoon but it cleared up before dark.

Had our supper by lantern light and sat up until 9 o'clock which is very late for us.

1st Nov. 21.

Nov. 18

did not sleep at all last night and was up at daylight. soon after breakfast the captain, sumphat, my boy and I started out to see the falls of the Hadama an area. We collected some on the way but I did not get a very good view. Left the captain and sumphat and I went up until we struck the Punturangi trail and then back to Lobang at about noon with a head of the rain.

The captain came in later working with Had some jerridge & milk for lunch. Put my plants in press in the afternoon and then began my packing up. There has been some talk in the idea of going to Sim for a week about the blinners deciding to stop at the Lobang camp.

As usual we waited supper for the captain until after candle light. Thank God it is my last night under present conditions.

Frid.

Nov. 19

Got up at midday, thinking
 it was morning: found the women
 cooking their stew and I caught
 "bamfield", looked at my watch and
 then went back to bed. Got up
 before day light, did some party
 packing and eating breakfast to
 get it, and I got off with my
 coolies at about 8.30 with Sumpah
 and my boys. Did some collecting
 and found the river rather high
 but Sumpah helped us wade
 where it was very rough. Stopped
 at the big rock and had our
 lunch in the sunshine. Have been
 so pleased with the idea of being
 at Kiam alone. Reached Kiam at about
 1.30. Had some tea and rice and
 began to feel the same when
 the blessing blew in. The greatest
 disappointment since I began
 my trip. Had to change my things
 around & the old regime of being
 a commissioner to the blessing
 began again. Had an early
 dinner, a note at my front
 door & then bed. Am not at all happy

Sat.

Nov. 20

I was awake very early and had a nuke while the stars came in vainly and slowly. My house-keeping for the family began again.

I put in the the morning going through my freezer and baking out a lot of dry things. They looked better than I expected. I had just finished up this work when Mr.

Buchenburg, D.O. from Vista Belud arrived. I stopped my work for a visit with him and to look after the tiffins.

Then I fresh up my plans that I collected the day before and finished that up at about 3.30. It has been a very wet day, raining off and on.

I gave up the the the afternoon to visiting with Mr. B and looking after the culinary department. Mr. B. contributed with cold fish to our course dinner and I fixed some mush.

B. and I had a little chin and water before going to bed.

Sun,

Nov. 21

We did not get up so early and took our time with our breakfast. After breakfast I had my bed in cushions and made up of my own the dead blinman's (Sherlock Holmes) things: I bid in his blue coat for my boy. B. left us soon after and then I took Sunpak and a boy and went up on the Gumban Spur and did a lot of collecting. Found *Helminthostadys*? and several other good forms. Did not get back until after lunch time and so finished up the rice and chicken left over from breakfast. I put my plants in press and had a big box of them.

It has been rather rainy and windy and I worked with my door shut.

We had an early dinner. I tried to write up my notes by candle light but soon gave it up and went to bed.

Hawaii

Nov, 22

I was up early as usual and it was a beautiful clear sunny morning. We had a very good breakfast then Chaplain and I took Sumpah and 4 boys and started at 7:15 for the Marai-Parai Spur: went over the ridge back of Kikus, then two lesser ridges of rice fields, found *Ophioglossum* in one, crossed the Dehumbung river and then up on a ridge which Sumpah called Marai-Parai Spur then dropped down to the Kiri taki river, very small and then up a steep slope to a cave under a rock (12,15) which the natives call Sudi-kou, had some cold lunch and then went up on the open spur of Low, St. John, Newland and Min Gibbs. Found *Schizaea* and many interesting ferns on the way up; also *Asplenites* *Pogon* (?) Had a heavy rain, Sumpah fled to camp; I went back, changed my clothes and we had took rice and wine, (the Chaplain's salmon) for dinner, then a smoke and to bed.

Tues,
 Nov. 23

Was in such a cramped place last night that I could not sleep. Sat up and watched the fire and roused the camp up at 5.15. We had some hot breakfast and got into our smoke dried clothes. Went back up to the open spur and then Sumpah let us go into the jungle instead of showing us the trail. Finally found the trail and we climbed up to about 7000? and at 10 turned back to camp. I found another fine and heavy sweater. We had some cold lunch and packed up and at 11.45 we started for home. Had but little rain on the way back and the trail was the best we ever had. I did almost no collecting and got into Thian at 3.30 Had my bath, then a chicken dinner, then a chaplain and I settle up finances and then we all wrote up our notes by candle light. I notice a mouse in the blankets.

 I went through all my ^{press} ~~press~~
 and took out the dry things and
 crammed them on the other. By
 that time it was a stop for early
 tiffin. I had Sam's help
 me fix my dry things for ship-
 ping and then put my "Lac's Parai"
 things in press and was superb
 tired out when I got through.

It has been a beautiful sunny
 day all day, the first one we
 have had at Pinar. I settled

Thurs.

Nov. 23

Thanks giving day. I was
 away this morning and after a
 early breakfast I finished up my
 packing and Captains and Mrs. Coleman
 came down the trail a little way
 as I said my farewell to them ^{at 7.30}
 Even the whole camp me a farewell
 Would love to live a year at Kien
 if I could be alone. It has been
 a bright and beautiful day and
 I soon dropped down the mountain
 with my boy and six coolies (3 mules)
 crossed the river high up the stream
 and came into Kien a different
 way from what we went up: more
 attractive. Reached K. at 10.15 and had
 a little lunch and a smoke. Then
 I unpacked changed my dress
 out in the sun, collected a
 few ferns, two new ones as
 far as I can tell and that has
 made up my day.

So how there is a relief that I
 am alone. Had a dinner of rice
 and sardines. A lovely sunset in
 Kien-Balm, like the "Alpine Glow" and
 then to bed soon after dark.

Fri
Nov. 26

Was out during the night and got an extra blanket. Was up at 5 and stirred up the woks packed up, had breakfast and was off for Tibayo at seven.

It seems good to have a wide smooth trail once more. I stopped all along to collect, some interesting *Delaginella*, some new ferns, one a beauty and quite new to me and as I came to the rest house at Tibayo a new *Lycopodium* for me. The Rest House looked most attractive in the sun in comparison to my first impressions after dark and the prospect of no supper. It has been clear and bright, hot for the first time for weeks. Lunch, a bath in the river and then fussing with plants took up most of my afternoon. It was raining for a time but finally cleared up.

Sak.

Dec. 27

I had a nose operation in the
 and was up soon after five,
 packed up first and then had
 breakfast and left at 7. I walked for the
 first two hours up over the ridge
 and down to a little stream,
 shady and very beautiful.
 At about 9 I took the pony
 and rode and my boy as
 well as the one in care of the
 horse dropped behind. It was
 hot and fine in the sun. I got
 into the rest house at 11.30 and
 and waited for my boy to come
 with my lunch. Left there shortly
 after one and reached Thota
 Belud at 3.30. Mr. Buchenbury
 (P.C.) is away but I took possession
 of his house. Had afternoon tea
 seemed mighty good, fixed up
 some specimens, went to the
 office and then wrote up
 my notes did a little pre-
 liminary packing and then I went
 to bed. Am pretty well tired out
 and can a little more from riding.

Sun,
Nov. 28

I was up at about 5.30 rounded up the boy, had my bath and made a breakfast off of tea, bread and jam. Had to wait for the coolie to bring the horse and for the coolies to pack up and set off at 7.20. Walked for an hour and a half over the foothills and collected two *Flourensia* and some fruit of *Scaevola Merrillii* and a *Lygodium*, then rode the pony in to Tengcholan which I reached at 12.30 and expected to meet Brackenbury but heard he had changed his mind. Had lunch and waited for coolies until 2.45, then took a boat down through the mangrove swamps, a little rain in the meantime; reached Tazew at 3.15 and found a pony & coolies waiting for me and I rode into Tazew in about an hour, crossing one deep river in a boat. I stopped with the boat D.L. whom I found most hospitable. Had a drink and bath and then we had dinner together and a chat. It has been a most frightfully long day and I am about as tired as any day of my trip.

Mon.

Nov. 29

I was out at 6 and had tea and
 rest with Beakenbury, Cook and two chiefs
 who were stopping with him. I started
 out at 7:15 and rode a pony to Meng-
 Labong, saw Harsilla and a pipe work
 but did not stop to collect it then.
 At Meng Labong I took a boat and came
 down the Tuaran River and after two hours
 walked over a little ridge and there
 took another boat with six men
 and set out for Jesseltown. Had some
 water but after I got within sight
 of J. a very bad storm came up,
 the rain came down in sheets, and
 very heavy wind and the seas were
 so bad that we shipped water, could
 not get any land and we had
 to change our course and I thought
 we would never reach land.
 We finally slacked up a little and
 I got into the Customs at about 3:30
 and got to the Rest House just
 ahead of another steamer port. Had tea
 looked up my luggage, opened up my
 clothes and specimens which are with
 had dinner & wrote up my notes of
 Almost the most severe wrecking day that

lead
last

Wed,

Dec 1

Went out to the river and set traps in my camp, after a rather successful day. The wind drove out in the sun and the water was in the pit opposite. A few more traps had burned in the fire. Got into an awful jungle and were about killed when I saw back. Put the plants in press and arranged things all the rest of the forenoon.

Had some fishing and was and made progress in setting things in shape.

Went out to the P.C. and there met one of my fellow passengers. The P.C. had invited me out to dinner but I had to decline.

Had a sprinckle early in the P.M. Went to Darby and got out my ticket to Sandakan. Found that my boat is to be a little late. Took it easy in the P.M. and read "Lester's" and "The Year" all the time. I was rather tired and went to bed at 10.

1 Mrs.
Dec. 2

was rather better and
 in the night it was cold
 enough for a bank some
 the time. We went to bed and
 enjoyed the luxury of tea & bath
 in my room. I took some
 & took some plants out of
 and also took out those I had in
 my trunk which will very much
 be, had good sun and made
 much progress and after this
 I put the things in
 boxes, thank you. Some of them
 are rather badly damaged.

I walked up to the Mission
 to see the teacher about developing
 some pictures for the children;
 found him an insufferable prig but
 gave the work to suit the elements
 collected a couple of hours and
 then did some shopping. Had some
 crackers and milk in the forenoon
 a luxury I could not have in the
 mountains. After tea I undressed and
 lodged. Put on my clothes for dinner
 and wrote to Roberts and began
 my letter to the Captain.

Fri.

Dec. 3

I was awake early and at 5:30
 day light. Had my tea and wash
 on my balcony, furred a little
 with plants, had breakfast at 8:00
 and took the 8 o'clock train to Victoria
 Barndi, walked by the rail road
 and collected a lot of the *Blechnum*
 in the swamp and then around
 through the rubber plantations and
 saw the sap (latex) running, then
 came around by Mr. Roberts house
 which was shut up, ran to catch
 a train and then found I was an
 hour off in looking at my watch.
 Got home soon after tea, put some plants
 out in the sun & then had my cup
 of crackers and milk. After tiffin
 I went down the sea shore after a
Lindsaya and found a little fern, a
 something like a *Leptochilus*. Put my
 plants in press before tea. Had some
 heavy rains in the P.M. The Mission
 School teacher brought back two films
 with 11 failures. Wrote a little
 more on my letter to the Chaplain.
 wrote up my notes and then
 to bed, a very tired individual.

Sat.

Dec. 4

I was up at .10 and had my tea and toast and then breakfast at 7.30. At eight I went up over the hill and dropped down into the garden gate where Mrs. Clemons and I went out every day; I collected 3 *Regiella*s, 5 ferns, one pipe wort, an unknown shrub and a *banhina*; was very tired when I got back. Put some clothes and specimens out in the sun and then had some ^{cracker} ~~bread~~ & milk. Began my general packing, then found away at specimens some more. Went up town and after tea I began packing up my specimens for good; finished them and had my bath before noon.

I constantly fear the year that the Clemons will come on to see less and go back on the same boat with me. I wrote up my notes & planned to go to the N. with some letters but the election is so intricate with it, so I will stay at home and stay.

Sunday
Dec. 5.

I was up as usual by daylight with tea and toast in my room and then breakfast at 7.30. At eight I went up over the hill again and dropped down the other side of the swamp and picked up a few things including 3 *Lygodiums* which bring my numbers up to 602: have no more desire to collect unless I see a new fern. The trees (*Spathodea campanulata*) with their red blossoms in front of the rest house are a joy to me.

The Belangor came into harbor as I was having tiffin: packed up nearly everything and then walked down to see Capt. Campbell and find she sails to-morrow at 5.30. Changed dress again. Bought some cards and wrote them opened up a bundle of specimens and changed driver. Loafed around and took it rather easy: had my dinner about seven and then went to bed.

Mem.
Dec. 6

Had some heavy rains in the night. I was up before day-light. Had my tea and went up stairs and then back fast.

The first thing in the morning I finished up my packing, then went to the P.O. and the R.R. station for the train, to stop for my luggage; had rain and then sun all the forenoon, and it was fairly clear at 12.15 when I took my luggage to the boat. A great load off my mind.

A great relief to leave Jerusalem.

I came back to the Post House for tiffin, then settled up my bill (did not tip the head boy on acct. of the poor service) and then waited for the rain to stop; walked down to the Belanger at about 3.30 changed my clothes and then had some tea. The Cofn had a tea party but I did not join it.

We sailed for Tuedah shortly after six: it is quite rough and I was a little uncertain towards the close of dinner: the storm is getting very bad. To bed at 10.

Tues.

Dec. 7

Had a horrible night of it with the thunder, lightning, wind rain, and the noise of the boat: I think the boat anchored during part of the night. Daylight was a great relief. Had tea & wash in bed at 6.30 and as I had tender ears & wounds & richness, my breakfast slow and finally got up at 10.30 and had my bath & dressed.

We got into Tundak, in a heavy wind storm at about 12, and it has been terrific all the afternoon with spells of rain: it is the tail of a Philippines typhoon.

I went ashore for a few minutes in the afternoon and bought some fresh cards but it was so windy there was no pleasure in walking. Only one of the British passengers speaks to me - I ~~neither~~ want to borrow money nor an invitation to dinner. Am very thankful we are tied up to the wharf rather than at sea.

Watched the storm from deck while after dinner and then to bed.

Wed.

Dec. 8

The storm howled pretty much through the night but died down some towards morning. Was restless during the night and was up by daylight. Had tea and wash on deck; and we sailed for Sandaker at about 7. I felt lazy and tired and went back to bed and had breakfast there at about nine and got up and had my bath and dressed at 10.30. Loafed on deck until tiffin time. The clouds broke away in the morning and there has been quite a little sunshine but high wind and rough sea. We sighted the Bogayan Sulu Islands in the afternoon.

It has been mostly a day of rest and plain loafing; had a few little chats with a Mr. Maxwell-Hall, Dr. Ormer's friend. I sat up on deck in the evening and had my solitary smokes until about 10 o'clock, ran down to some small islands and then to bed.

Thurs.
Dec. 9

We anchored in the bay at Sandakan about 11 o'clock last night. I was up early and had tea as usual with Mr. Maxwell-Hall. Had my bath & dressed early and went ashore and bought some post cards before breakfast. The Capt. and I had the meal alone. I took some specimens out of press, then went to Darby & Co and bought my ticket, & then went around and called on Mr. Matthews & Dr. Foxworthy - changed some money and called at the office of "Herald" and then Foxworthy took me up to the house and Matthews & Dr. Ome joined us at lunch - a very delightful meal. I went down to the boat and Dr. Ome & Foxworthy came down for tea. I collected a little *Ophioglossum* in Matthews garden & saw some of the *Cassia fistula* in blossom. We sailed for Jolo at about 6. I am the only 1st class passenger. The Capt. and I dined together, had a little chin on deck later and then to bed.

Friday
Dec. 10

I was up at about my usual time and had tea on deck and breakfast later. Loafed on deck and looked at the white sand-dusted beached islands and longed to explore them; also spent some time looking over English picture papers. Soon after noon we reached Jolo and after medical inspection we got up to dock at once.

Went ashore after tiffin and hunted up a barber. Met Major Chapman & Capt. Bitter, shipper of the *Gilbert*; tried to get passage to Manila on her but failed, so Major Chapman agreed to send me on the *Transpork* on Monday. Went aboard the *Delauger* and packed up my things & took them to the Jolo Hotel and then went and called on the Fanez and stayed for dinner and spent the whole evening; a most hospitable couple.

I went back to the hotel at about 10.30, a most inviting place run by an Australian woman, and then to bed.

2 sh,
200.11

I was in camp early but the
sunrise gave nearly 2 and the life
out of me. I was up faintly
early and had a rotten break-
fast. I opened up a couple
of bundles of specimens and
found them all T.W. Then I
started down to the club and
met Major Chapman and spent
the rest of the forenoon in
talking dice for the drinks
and listening to stories.

Came home at about 10
and had some tiffin, and
then took a long walk; had
a bath but I doubt whether
any cleanliness was gained.

I loafed around until time
for dinner which was some
later.

After dinner I sat out on
the veranda and at about
7 I walked down to the station
and then to the club where a
trap was set. Met the Gunnar
(Bohrer) and a lot more officers;
was dice and some drinks
Got to bed about 11.

Sun

Dec. 12

I went to the a. m. and
 and had tea and lunch
 in my room and then
 water. The pub is practically
 all the ferns going through
 my specimens and found only
 one bundle with any wet ones
 in and I dried these out in
 the sun. Walked around by the
 club but it was very quiet
 there. I finished up my speci-
 mens after lunch, wrote up my
 notes, read a little, played
 some solitaire and about five
 went around and called on
 the Fours and stayed for a
 while Dutch papers and then
 we played some crib through
 bridge at which I won out.
 Had quite a heavy shower
 late in the P.M.

I walked around by the
 club on my way home
 but it was practically deserted
 and I looked over a magazine
 or two and then home and
 to bed.

and was deep snow with
last night but could not
get any back until 1.15
and found mid had my
last fish.

It has been a very bright
clear day and a smooth sea.
I took some more literary
digests in the morning and
then spent the rest of the
forenoon watching a bridge
game.

Took a little more in
the afternoon, watched more
bridges and took a visit
and then changed my
clothes for dinner.

It has been a very
pleasant evening and
I have not been very
unhappy.

Have no ambition to do
anything but watch the
bridges some and read up
until after 11.

It has been a very
pleasant day.

a small exercise
and had some chocolate and a
smoke and then my bath at
6.30. I miss my car to
see much.

the car bridge and we
bridge seen as described.
I had no ambitions to
read we watched a tide
come in and then took a
little note with my clothes
is.

In the afternoon it was much
the same thing over again;
watched more bridge and
then undressed and had a long
lazy time of it and barely
got up in time to change
my clothes for dinner.

It has been quite calm
and smooth all day, just
a little rain in the forenoon.
We are in sight of land this
P.M. - Luzon & Mindoro I think.
