NEW SALES CONTRACT

Of the National Phonograph Co. Went Into Effect October 1st—Some Important Changes Made—The Quantity of Goods a Jobber Must Order to be Listed Has Been Raised—Interesting Chat With General Sales Manager Dolbeer Regarding This New Agreement.

As noted the new conditions of sale contract and price list to Edison jobbers and dealers went into effect October 1. A number of changes have been made by the National Phonograph Co., chiefly to prevent practices in selling both undesirable and violative, if not in letter at least in spirit, of the agreement which this supersedes. The quantity of goods a jobber must order to be rated has also been raised, and on this question F. K. Dolbeer, general sales manager of the company, said:

"I have been misquoted in some particulars regarding the minimum quantity of goods an Edison jobber must handle in the course of a year, and it is arranged according to the importance of his locality or the population of the city in which he does business. The quantity ranges from the lowest, that of $12,000, to $25,000 annually, the latter amount applying to New York City. As to the classification of the other cities or places I would rather not be quoted.

"The dealer's minimum remains unchanged. In the dealer's agreement we have made one important change which must be observed by jobbers and dealers. At the foot of the dealers' agreement will be found two statements which jobbers must complete. (a) In the case of a new dealer, the jobber must state when the initial order was shipped complete and the quantity of goods purchased. (b) In the case of an old dealer the jobber must state one jobber through whom the dealer signed, the date of the previous agreement, the address from which the dealer previously signed, and the date of first order. This information should be taken from the agreement exhibited by the old dealer. (c) All dealers' agreements must be countersigned by the jobber."—The Music Trade Review.

THAT SACK OF WORRIES.

A certain talking machine dealer carried a sack under which he groaned and complained unceasingly. From none could he take help or comfort. And as he slowly journeyed on, toiling under his heavy burden, the Angel of Knowledge came to him and spoke kindly, saying: "What carriest thou?"

And the man made answer surlily: "My worries."

Then the angel smiled pityingly upon him and said: "Let us look into thy bundle and examine thy worries." And they looked in; but, lo! the sack was empty.

"Surely," cried the man, "there were two great worries, too heavy for man to bear. But—ah, yes, I had forgot—one was a worry of yesterday, and so it is gone."

"And the other?"

"That—that was a worry of to-morrow, and it is not yet here."

Then the angel smiled upon the man with infinite pity, saying: "Listen! He who bows himself down under the worries of yesterday and to-morrow wears himself out for naught. But he who carries only the worries of to-day hath no need of a sack for his sorrows. If thou wilt cast this black thing aside, and give all thy strength and cheer and courage to the things of to-day, real misfortune never can overcome thee."

Whereupon the talking machine dealer did as the Angel of Knowledge suggested and is living happily with the world, enjoying good health, and increasing his bank account.

AN ART VICTOR AT DITSONS.

Chas. H. Ditson & Co., 8-12 East Thirty-fourth street. New York, are displaying a gold-plated Victor talking machine, of which the cabinet is finished wholly in gold, in one of their roomy show windows. The solid mahogany record cabinet is also a beauty. This is the first machine of the kind brought out in their trade, and it attracts marked attention.

THE PHONOMETER

(PATENT APPLIED FOR)

The Only Talking Machine Speed Meter

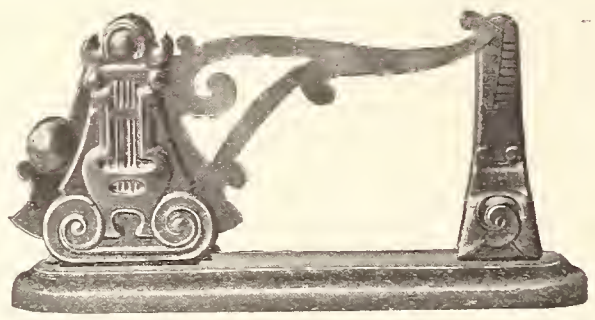
Instantaneous in Action. Permanently Effective. Absolutely Accurate.
FOR USE ON ALL DISC MACHINES

REASONS WHY ALL DISTRIBUTORS AND DEALERS SHOULD HANDLE THIS NEW AND BIG SELLING NOVELTY

I. BECAUSE it is **absolutely accurate.**

II. BECAUSE it indicates the speed of all disc machines **instantly.**

III. BECAUSE by its use each and every record can be reproduced at the correct speed, and all musical records (vocal or instrumental) **reproduced in the same musical key (or pitch)** that the artists originally sang or played the selections.



RETAIL, ONE DOLLAR.

IV. BECAUSE the **voices** of Caruso, Melba and all the other vocal artists, speaking records of celebrities, the tone qualities of solo instruments, etc., **cannot be faithfully reproduced** from records and thus bring forth the individuality of the artists or instruments, the tone quality and life-like realism required, **if the machine is not accurately and properly regulated.**

V. BECAUSE you can sell a **Phonometer** to every machine or record customer upon demonstration.

VI. BECAUSE it becomes an **absolute necessity!**

VII. BECAUSE **the Phonometer** is for sale by and receiving the highest endorsements of the following Distributors of Disc Machines:

VALUE OF SHOW WINDOW ADVERTISING

Some Important Suggestions on This Topic from the Pen of Ellis Hansen, a Trade Expert, Who Gives the Benefit of His Knowledge to the Subscribers of The Talking Machine World—Pointers That Cannot Fail to Stimulate and Benefit Everyone Engaged in the Talking Machine Business—How Windows May be Made to Pay a Good Profit.

It has been established beyond a doubt that the store show window is the best advertising medium that the retail dealer can employ.

The actual goods themselves can be displayed in the show window with the advantages of effective lighting, harmonized colors, artistic arrangement, attractive show cards and all the auxiliary devices which have been created the past few years to aid the window trimmer.

The big department stores were the first to recognize the commercial value of well dressed windows, and to-day nearly all the large establishments have skilled specialists in charge of their windows.

While newspaper advertising is very valuable many small dealers, particularly those in the larger cities, are prevented from using it on account of its cost. Window space involves no extra expense, as the rent of the windows is included in that of the store and must be paid for whether utilized or not.

By the exercise of a little ingenuity really effective trims can be made with a very moderate outlay of money, and window fixtures can, of course, be used over and over again.

The primary function of a window display is to sufficiently interest the casual passer-by, to make him pause and give the goods shown a closer inspection. But you cannot expect to attract the busy man or woman to your windows unless you exert intelligently directed effort to that end.

Fortunately talking machines and records are very suggestive and lend themselves to varied and attractive display at the hands of the resourceful window trimmer, more readily than one who has not had experience in this line might imagine.

As a matter of fact, in the course of a long window trimming experience with various classes of goods I have found none more interesting to work with than that wonderful and novel addition to musical merchandise, the talking machine.

The methods which I have found most effective in exploiting the talking machine can best be indicated through the medium of the cuts of windows and the detail illustrations accompanying this article. It is difficult perhaps to deduce simple rules for the guidance of beginners which would apply at all times and at all places, but a few general principles may be developed.

Don't fill up your window with a large variety of miscellaneous articles. If you cannot give up an entire window to talking machines devote a section of the window entirely to them. For the best results, however, a "solid" window of talking machines and records is indispensable.

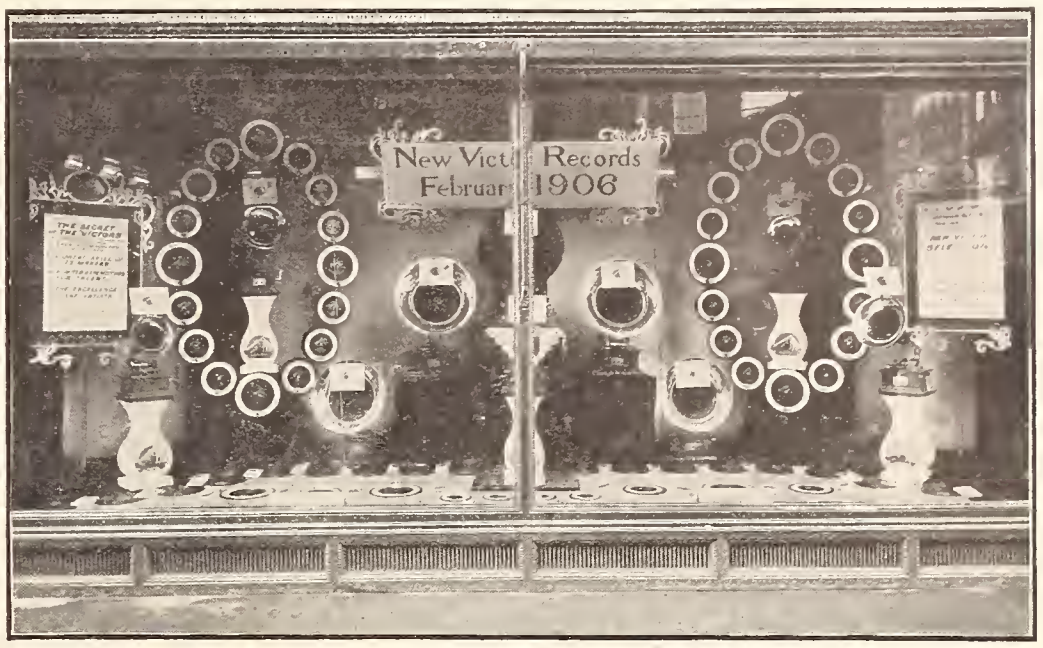

FIG. 1. ILLUSTRATING THE MONTHLY SUPPLEMENT.

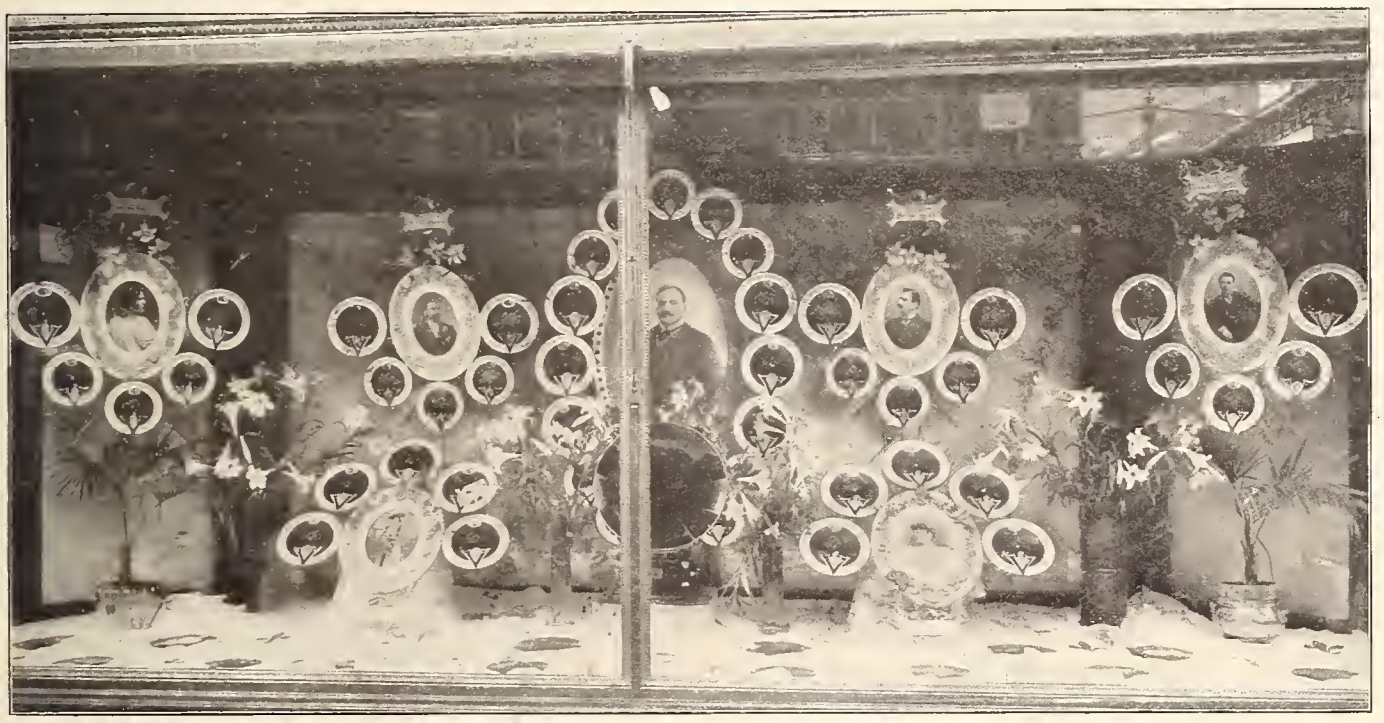

FIG. 2. COMBINATION EASTER-GRAND OPERA DISPLAY.

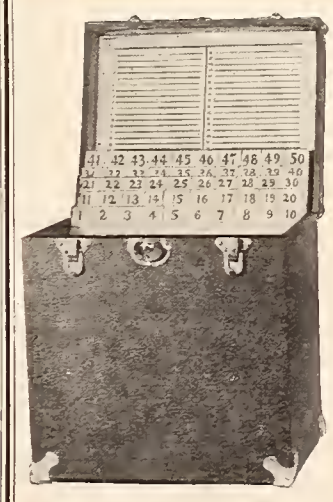
Again, many dealers who are anxious to make the most attractive displays possible fail to get the best results because they ignore half, and as my Irish friends would say, "the larger half," of the problem, namely, the records. In the long run it is from the sale of records that the dealer makes the greater proportion of his profits. It is the record that makes the talker interesting and valuable. The fact that the outer appearance of records does not indicate the important part that they play in the game is only one more reason for the trimmer to apply his wits and make the display of them as interesting and dramatic as possible. The fact that the printed title is too small to be easily read from the outside of the window led me to devise the circular label or paper ring which, it will be seen, I have used in most of the windows illustrated, and detail cuts of which are also presented. These labels furnish ample space for the card writer to print the title of the record and the name of the artist. These labels, as will be elsewhere explained more



SOMETHING NEW IN RECORD CASES

The "Knickerbocker" Pegless

Made to carry cylinder records in cartons, thus furnishing double protection from dust and accident. When desired case can be used as suitcase or satchel; made in 12–24–36–48–72 and 96 record sizes. We also make cases with pegs and for disc records. The Knickerbocker "Made Right" Record Cases have character. They are easy to sell and stay sold.

Ask for Catalogue.

THE KNICKERBOCKER CASE CO., La Salle Ave. & Michigan St., CHICAGO, ILL.

fully, cau be made iu different styles, the plain ones for ordinary records, and the more elaborate ones for expensive records.

A distinct and symmetrical design is best adapted for a talking machine and record window. For such a display, a centerpiece is necessary. A large circular or oval frame of wood may be used, with records attached to it, and

FIG. 3. HOLIDAY ALL NATIONS DISPLAY.

with a machine in the open center. Or you can have an arch or a large lyre, similarly outlined in records, or whatever design you choose, bearing in mind always that the center is the most important part of the display and that when the central device is once decided upon the surrounding trim will almost suggest itself. Circles or ovals are better adapted for the framework of the central and also the secondary devices than squares or triangles, on accouut of their more graceful lines.

Steps are very useful as with their aid you can show a great many goods in a small space without crowding, but even these are best made in semi-circular form although it requires more effort to make them in this shape.

Do not place your talkers too near the window pane as they make a much better appearance a few feet from the glass.

The floor space in front of the main trim can be used for catalogues, supplements, and small talking machine accessories.

Always raise your trim to the center of the window and never fail to dress the upper part as carefully as the lower.

Avoid what are called "floor trims." They do not attract one unless he deliberately stops to look into the window, something very few people do nowadays. You must force your wares on the passer-by, and if he merely glances your way something must meet his eye to attract his attention and excite his interest.

Pictures of popular talking machine artists are very useful, and can be turned to profitable account in connection with a number of records made by the "star" portrayed. Such a display, however, should not be kept in the window for more than a week.

Whenever there is occasion for a national holiday display, small flags should be used in connection with the labels on records of national airs and patriotic music. Four large flags make a nice center decoration for a display of this character.

I shall now suggest a few talking machine displays, which so far as I know, have never been at tempted before.

If you handle sheet music a very interesting display can be made ly selecting as many popular song records as you have corresponding sheet music. Attach each record to the sheet music of the same selection with a small ribbon, but do not allow the record to hide the title page of the sheet music. Small, neat cards covering the point of juncture between the record and the music should read something on this order:

X ——————————— X
| THIS TOPICAL SONG, |
| MORE POPULAR THAN EVER, |
| SUNG BY BILLY MURRAY, |
| NOW READY FOR |
| YOUR TALKING MACHINE. |
X ——————————— X

A display of this sort would not only advertise your sheet music but also your talking machines, and would be bound to result in increased sales of popular song records.

Dealers who get carload shipments of talkers and records, or whose ambitions run in that direction, can make a very clever display if the size of the window permits.

Stretch a piece of sheeting on a framework about two feet from the window pane. On this paint a picture of a freight car. This should not be at all difficult if you are at all handy with the brush, or it would not cost much to enlist the services of someone who is. On the car should appear the name of your best-known local railroad, together with the capacity sign, chalk marks and labels of various kinds, such as are usually seen on the ordinary freight car. Now cut out the door opening and paint another piece of canvas, placing it about four feet back of the first piece so as to give the effect of the interior of the car. Make a solid bottom so far as it can be seen, and fill up the car with a number of boxes and cases bearing the trade-mark of the company from whom the goods are supposed to have come and marked also, of course, with your name and address. The cases may, of

FIG. 5. DISC RECORD LABELS.

course, be empty, but are supposed to contain talking machines and records. Get a wax figure such as used by clothing stores, dress it up like a tramp and place it in the car before a couple of cases, which the tramp is supposed to have broken open, and is now listening delightedly to the strains of some new popular song. In front of the car wheels the different styles of machines may be shown, also a sign calling attention to the car, although the picture itself should be self-explanatory.

For stores that sell band instruments a very interesting display could be made by showing the various instruments used for solo records in connection with records in which they are used. For instance, you can use in such a display a violin, cello, harp, trombone, cornet, clarinet, saxaphone, euphonium, flute, piccolo, banjo, mandolin and zither, as all of these instruments are recorded. Attach the records to the corresponding instruments and place a fine talking machine in the center, above all the other instruments.

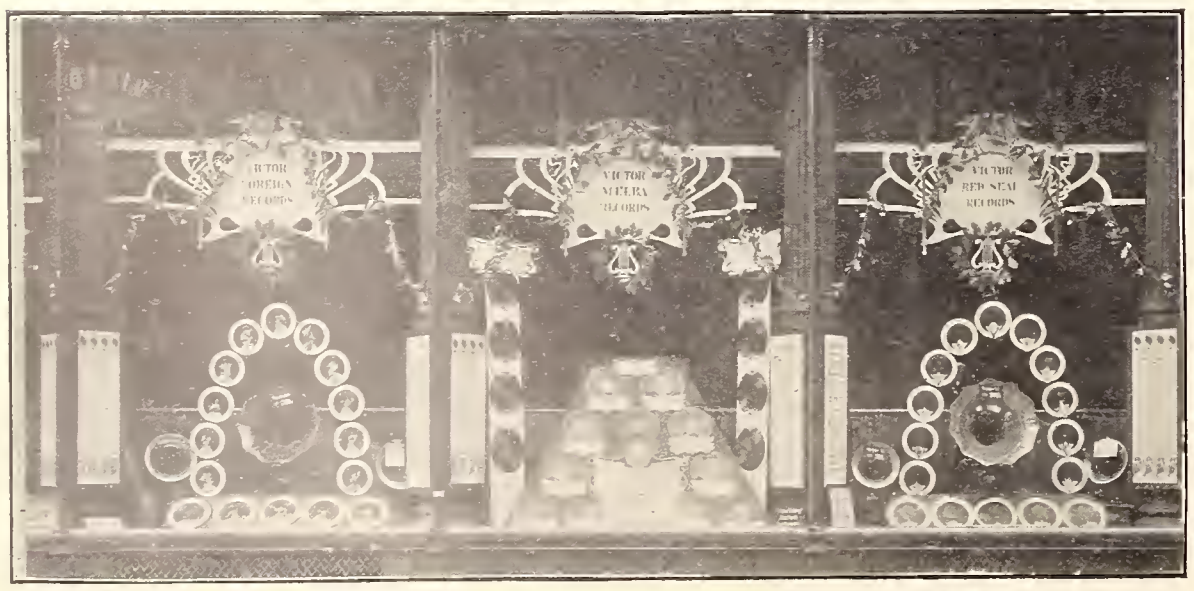


FIG. 4. EFFECTIVE RECORD DISPLAYS.

Now run different colored ribbons from all the instruments and corresponding records to the talker and in front near the window pane place a large card calling attention to the fact that the talking machine is the only instrument that plays all other instruments, or words to that effect. A display of this kind will do much to make the people who see it realize what a wonder the talking machine really is, and it will inspire

FIG. 5. DISC RECORD LABELS, PRICE CARDS, ETC.

those who already have machines with a desire for more records. It cannot fail to prove a big record selling display.

To make an attractive Easter window take one or two high-grade machines and from twelve to sixteen religious records, particularly those breathing the Easter spirit. Attach artificial Easter flowers to the records, and if you can afford it, place a large bouquet of natural Easter lilies in the center of the display. For a centerpiece cut out of thin boards a large fluer de lis six feet in height and cover with records. Small fluer de lis may be cut out of cardboard and gilded, and be placed, alternating with records, on the floor of the window.

These are just a few suggestions, but you will be surprised how many good ideas will come to you if you simply sit down for an hour and concentrate your mind on the subject.

Neat show cards and price tickets should be used liberally. It does not pay to spoil an otherwise excellent display with poor sign work.

Try to make your show cards harmonize with the general scheme of the display, but bear in mind that a simple, clear type of letter is the most easily read. The object of a show card or price ticket is to call attention to the goods and not by over-ornamentation to itself.

It is surprising how many window cards one sees which are practically illegible because the card writer tried to get an artistic effect and sacrificed readibility thereto.

In wording show cards use the simplest, most direct language at your command. Avoid high-flown phrases. Be brief and to the point, and try to write as you would talk to a customer. Do not attempt to sound the praises of your goods in metrical form. Poetry is out of place in a show card. and the chances are that by using it you will nullify the effect of an otherwise good business announcement.

What the window gazers want is the plain truth about the goods displayed. Never make an assertion regarding them that the good will not fully justify.

Show window advertising has the first "say," but remember that the goods themselves have the final word.

Just a word about window lighting. By all means use electricity as liberally as your circumstances will permit. A brilliantly lighted window possesses strong drawing power. Many a merchant is trying to get along with too few lights. In many cases one or two lights may make the difierence between a poorly lighted and a well lighted window. This kind of "saving" is little short of reckless. In modern store construction the window lights are always concealed. That is the window is flooded with light without the lamps being exposed to view.

Get the very best reflectors you can buy. The first cost is a little more, but you get a stronger and better light, with less electric current, and the saving in your elecric light bill will be much greater than the difference between the price of a poor reflector and that of a good one.

Change the incandescent bulbs as soon as they grow dim, make it a point to clean both lamps and reflectors every time you change your window display.

In small stores with only one or two windows and where the hiring of an expert window trimmer seems out of the question, the proprietor or one of the clerks should take up the window trimming, give it thought and study, and devotc enough time to it to do it properly.

If the first window you trim does not satisfy you do not be discouraged, but make a study of the work of the bc:t windows both in your own and other lines in your own and adjoining towns. A trip to your nearest large city would be found well worth while.

Of course absolute cleanliness is a prime requisite of an attractive window. The glass should be frequently cleaned and care be taken to keep the goods in the window free from dust.

Displays should be changed frequently. Furthermore the merchant who never varies from a certain style of decoration and display will find it difficult to attract attention to his windows.

Avoid the mistake of considering yourself a consummate artist just because your common sense and good judgment make people talk about your windows. Many a man has lost a good position because he has overestimated his abilities.

Above everything don't crowd your windows. There is nothing more effective than a simple

Recommended as Best By those Who Know Best

Every dealer who would like to add to his business a feature that will increase it from 10 to 30 per cent. should give his consideration to the following recommendation.

"The undersigned E. E. and Minister Plenipotentiary of His Majesty, the King of Spain, to the United States, has much pleasure in stating that the words for the study of the Spanish language as prepared by the International Correspondence Schools, of Scranton, Pa., which I have carefully listened to, are the most perfect rendering of the pure Castilian pronunciation. I consider them invaluable to the student of our language, and cannot too much praise their efficiency and convenience." EMILIO DE OJEDA.

This official endorsement is the highest possible recommendation for the efficiency and accuracy of the I. C. S. Spanish Course, and plainly tells the characteristics of

I.C.S. LANGUAGE SYSTEM
WITH
Thomas A. Edison
PHONOGRAPH

This system of language instruction is in use at the U. S. Government War College at Washington, and the phonograph system has been lately adopted by the University of Chicago, and everywhere it is being recognized as the coming method of language instruction. Phonograph dealers all over the country have been very successful in handling the language feature in connection with their other business. There is no reason why *you* cannot do the same—there is no reason why *you* should not do it next month, only because of your own indifference and negligence to write *now* asking for further particulars. Don't you think it worth while to find out more about such a feasible means of increasing your business ?

Write us a postal to-day.

INTERNATIONAL CORRESPONDENCE SCHOOLS, SCRANTON, PA.

artistic arrangement of a few attractive machines and records. Simplicity is very often disregarded and more trimmers err in crowding windows than by displaying insufficient goods.

However, when you use "stage effects," such as scrolls, flowers, ribbons, flags, colored electric lights, and all those things which special occasions and holiday seasons give an excuse for, always remember that after all, these are to be used only as a means of attracting attention to the goods, and of showing the latter to the best advantage. They must not be permitted to distract the attention from or obscure the goods you have to sell.

No matter how beautiful and artistic a trim may be, if it does not result in sales it is not a good trim, because it does not serve the purpose for which it was intended.

When you change your display carefully clean not only your machines and records, but also the show cards, pictures and window accessories that you have used in connection with the trim. All these things should be carefully wrapped, labeled and stored in an accessible place when not in use. They belong to the firm and should be taken as good care of as the stock. Thoughtless fellow employes may ask you for some of the trinkets you have used in a display, but I consider it bad policy to encourage such requests. They may be of small value, but you may find very good use for them some day, and in the long run save money for the house.

DESCRIPTION OF ILLUSTRATIONS.

Figure 1 shows a window dressed for Sherman, Clay & Co., of San Francisco, and which won the $50 cash prize offered by the Victor Company for the best window entered in their competition early last year. This window was an illustration of the monthly supplement, and exhibited all the records issued for February, 1906. The color scheme was in cream, white and gold. The records were arranged in two large ovals, each record having a circular label, such as described elsewhere, giving in bold letters the name of the selection and the name of the artist. In the center of each oval, and at three points in the foreground were machines displayed on pedestals with transparencies of the trade-mark lighted from behind with electric globes. In the background were five large machines. At the extreme right and left were two signs in gilt frames with the trade-mark worked into the frame. One of these signs exploited the Victor product. The other announced that Sherman, Clay & Co. could supply from thirty-five to fifty new Victor selections every month, and asked those interested to step inside, add their name to the firm's mailing list, and receive a descriptive catalog monthly.

Figure 2.—This display has a history. It was never taken out by human hands. It was made for Sherman, Clay & Co., in anticipation of the grand opera week in April of 1906, and was in when the building was destroyed by the terrible quake and fire of April 19. Unusually large photos of seven of the stars who were to appear were the features of the display. Around each portrait were grouped "Red Seal" records made by the artist. Each record had the circular label with the large V in which was set a small but distinct picture of the singer. Surmounting the large picture of each artist was a fancy, cut-out, gilded sign, giving the name of the artist. Back of each wall-group were two brass rods, crossed, and on the end of each rod was mounted a small frosted incandescent lamp. Scattered through the display were artificial Easter lilies and small incandescent lamps resembling lily buds. Only one machine was used as this was primarily a record window. This machine, a Victor 6, was placed on a piece of plate glass about six inches from the floor. The floor of the window was overlaid with white bunting and scattered here and there were fleur de lis, made of pasteboard and gilded. Natural Easter lilies and palms aided in suggesting the Easter season. This window was also a prize window.

Figure 3 shows one of the several talking machine windows dressed for Lyon & Healy for the Christmas holiday season of 1906. In the center and on each side of the window were large oval frames to which were attached Victor records. It was an "all nation" display, and the records consisted of national airs, folk songs and instrumental selections, representing no less than twenty-four countries. At the bottom of the label and extending up over a portion of the record was a cut-out picture of a flag girl, clad in the costume of the country represented by the record and waving its flag. The center of the window was built up with a series of steps on which were displayed various types of machines, each with a card giving price and description. One of the large signs suggested that the person who wished to gladden the hearts of his German friends or those from France, Germany, Sweden or any other European country, could find a most acceptable gift among the foreign records.

ELLIS HANSEN.

Another sign exploited the talking machine as the most unselfish Christmas gift. "Bought for one it plays for all."

Figure 4 shows the talking machine and record display used by Lyon & Healy during the week of June 17-22 last, when the great piano conventions were being held. In the first window were shown foreign records and three machines. The second window was devoted entirely to Melba records, and in the third were shown Red Seal records by different artists. The upper part of each window was occupied by a large scroll, with a circular opening in the center for the sign. Garlands of oak leaves arranged in graceful loops, decorated and connected these scrolls. On either side of each design were fastened torches cut out of cardboard. Suspended from each scroll was a wreath of oak leaves with a lyre cut out of cardboard in the center. In the first and third windows the records were arranged on half-oval shaped framework, while in the center window the Melba records were shown on a large triangular-shaped board, and on uprights on either side of this centerpiece. The different labels used are described elsewhere. The photo gives a good idea of the general arrangement.

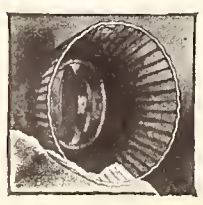
Figure 5 is a group showing the various labels used for records and machines. The labels, adorned with flag girls, are used for foreign records. The first one represents, of course, America. These flag girl pictures can be obtained at most stores where souvenir postcards are sold, and you will find nearly every country in the world represented by young girls clad in the National native dress, and with the National flag. The figures must, of course, be cut out carefully and pasted on the label. These circular labels are easily made out of thin cardboard. The circles must be a quarter inch less in diameter than the record, so that the edge of the record may be seen beyond the label. In the cut it will be noticed that the Irish selection label is smaller than the German and the American, as the record happens to be a ten-inch record, while the other two were twelve-inch. The Red Seal records have in the lower center a large "V," which, of course, stands for Victor, with the picture of the artist in the open space of the letter. The pictures of the singers are obtained from the catalogs and supplements issued by the manufacturers of the records. The smallest of the records shown is intended for an eight-inch inexpensive record. It is less conspicuous than the others, but serves its purpose well. The circular label is attached to the record by means of two small clips on either side of the lap of the record. The only clip that I have found suited to the purpose is Dennison's No. 37 cardholder. In order to avoid the monotony arising from the use of only the circular labels I have devised others which are used occasionally with excellent effect. Two of these are shown in the illustration. The upper design is cut out and bronzed, while the inside is left unbronzed, so as to permit the writing of the text. The lower card is an art nouveau design, treated in two colors. I have used it for Melba records, as seen in the window shown in Figure 4, and the graceful lines of the design will be found to adapt it beautifully to the exploitation of high-grade records. The torch shown in the cut is cut out of cardboard and treated in bronze and water colors. It is a very useful ornament and can be used in a great many ways in window decoration. The small price card is intended for machines. The trade-mark is cut out and pasted on the card. If different styles are shown each one should have a card. These cards should be similar in general appearance with the exception of price and style name.

* * * *

The author of this article, Ellis Hansen, is a man able to speak with authority on the subject of window trimming in general, and on the displaying of musical instruments and talking machines in particular. He has had long experience in trimming all classes of windows, both in Europe and America, but for several years past has devoted himself exclusively to musical instruments and talker trims. His remarkable work for Sherman, Clay & Co., of San Francisco, attracted wide attention, and when the great earthquake and fire last year brought business temporarily to a stop in 'Frisco he was immediately engaged by Lyon & Healy. His expertness and originality are evidenced by the beautiful displays which characterize the imposing frontage of the big Chicago store. Mr. Hansen explains concisely the prime requisites of talking machine window trimming as he views them. He suggests some original trims and devices thoroughly within the reach of the dealer in the small town, as well as in the large city. The illustrations and descriptions of windows, labels, show cards and decorations will be found decidedly suggestive and helpful.

PHONOGRAPH AIDS REHEARSALS.

Milton Aborn rehearsed the chorus of the new opera company he is preparing for the Lincoln Square Theatre last week with the aid of a phonograph, it being impossible for the principals to attend. The instrument gave the solo numbers and the chorus followed the cues.



MELLO-TONE

Attachment a great improvement for the *Talking Machine* or *Phonograph.* Produces tones natural. Eliminates all metallic sounds and blasts. Regulates and mellows the tone. Can be adjusted while machine is playing. Goes in the horn, opens and shuts.

MELLO-TONE CO., SPRINGFIELD, MASS.

The Devineau Biophone

An Attachment to Play Disc Records on any Cabinet Cylinder Machine

(PATENTED 1907)

A SPLENDID DISC SELLER!

WITH THE
DEVINEAU BIOPHONE
owners of the cylinder machines are enabled to add to their repertoire the magnificent selections of the greatest operatic singers of the world.

The DEVINEAU BIOPHONE is equipped with an aluminum tone arm and our patented sound box producing a full, perfectly natural sound.

The attachment can be connected or removed in a few seconds.

It is operated by friction so that neither gear nor belt is needed in its operation. No screw, no bolt to mar the cabinet. No need of removing the attachment while playing a cylinder record.

Any horn, the "IDEAL" included, can be instantly attached to the Biophone.

Three twelve-inch disc records can be played at one winding on the Edison Standard machine.

The DEVINEAU BIOPHONE is a splendid piece of accurate mechanism, handsomely finished.

A most attractive and useful addition to any cabinet cylinder talking machine either Columbia or Edison.

RETAILS AT 15 DOLLARS

TRADE HAPPENINGS IN CLEVELAND.

Business Picking Up and Dealers Are Optimistic Over Fall and Winter Outlook—Victor Dealers Taking Advantage of the Splendid Publicity of the Victor Co.—Columbia Co. Open Handsome Branch Store—Roberts Rearranging Store—Victrolas in Great Demand—Buescher's Big Record Business—Probeck's Cheery Report—Many Furniture Dealers Installing Talking Machine Departments—Nathan & Skall's New Talker Department—A Talking Machine Put to Novel Use Recently—A Tip for Boarding House Keepers—Other News.

(Special to The Talking Machine World.)
Cleveland, O., Oct. 7, 1907.

There has been mention made in some quarters of trade being slack, but little complaiut, however, is heard as to business conditions in Cleveland talking machine circles. Dealers nearby unanimously say they are busy and that the fall and winter outlook for trade is good. Business is picking up and conditions all point to a remarkably good seasou. It is noticeable that large and increasing interest is being shown for the higher priced machines and records.

The dealers are all wideawake to their interest, and are taking advantage of the new Victor record advertisements, appearing in the dailies on the twenty-eighth of each month, by extensively advertising themselves. The dailies of September 28 contained a whole page of talking machine advertisements. Local dealers are earnestly exploiting their business with uot a little manifest rivalry.

J. Fisher, representative of the Victor Talking Machine Co., Camden, N. J., spent several days in the city recently, looking after the interests of the company.

The Columbia Phonograph Co. have opened a branch store at 1831 West Twenty-fifth street, for the convenience of West Side patrons. It is under the management of Cleo. S. Bourgeois, formerly, and for several years, assistaut manager of the East Side store. The new store, 20 by 80 feet, has been fitted up with an eye to convenience and comfort, and is very attractive. One side has been fitted with racks for 10-in. and 12-in. and the new Marconi records, with a capacity of 5,000. The rear of the store has been arranged with racks exclusively for cylinder records. The first talking machine repair department on the West Side will be a feature. The main store is wholly given to an exhibit of machines, cabinets and records, and demonstration. The room is amply illuminated with large combination gas and electric chandeliers, and the show window by a very large art dome radiator, specially designed, and made by Mr. Bourgeois. The store was opened on the 3d, and business is working up in an encouraging manner.

"Business during September," said W. J. Roberts, Jr., "was fairly good, and since the first of October has been perceptibly increasing. We are selling machines, including Victrolas, right along, and there is a big demand for both the Edison and Victor records, and notably the Red Seal." Mr. Roberts is making improvements in the rearrangement and adornment of the store, and preparing for the fall trade.

"Business is on the up grade—picking up finely," said Phil H. Dorn, manager of the talking machine department of Collister & Sayle. "We are selling a good many machines and the call for records is unprecedented. We are unable to supply the demand for Victrolas, owing to the inability of the manufacturers to supply them. Above others they commend themselves to all who see them. I anticipate a big fall business."

Robbins & Emerson, on the Euclid avenue floor of The Arcade, are doing finely. Mr. Robbins said that their trade all through September was good, and had started in fine in October, and is daily improving. "We are selling a good many machines," said Mr. Robbius, "and there is a large and steady demaud for Red Seal and all the Victor records. Victrolas are still in greater demand than the manufacturers can supply. We have several orders booked for future delivery." Mr. Robbins thinks the new Edison horn is fine and will give satisfaction.

At the store of Hugh Gulley business was reported fair, comparing favorably with the trade a year ago this time. "There is a good demaud for Victor Auxetophones," said Mr. Gulley. "I have made sales of two since the first of the month. Edison machines and records are moving rapidly. The new October Red Seal records are selling fine. I expect the fall busiuess will be quite as good, if not better, than last fall's."

"Business," said Mr. Buescher, of Buescher & Sou, "is good, quite as good as we could expect at this season. We are selling the usual number of machines, and making large sales of the October records, both Victor and Edison. Business is daily improving and we sball undoubtedly have a fine fall trade." The company now have the largest stock of Red Seal records they have ever carried, and are well stocked with goods of every description in their line.

Mr. Probeck, of the Columbia Phonograph Co., reported that business was very good indeed considering the season of the year. He stated they were makiug sales of machines and that the demand for records was excellent, especially for the Marconi record. "We have just enlarged our commercial department," said Mr. Probeck, "to three times its former size, iu order to make room for a stenographer's commercial school aud because of the increase of business in that department." H. E. Jones, manager of that department, has just returned from a two weeks' vacatiou and business trip to New York, where he spent much of his time at the factory posting himself on the new commercial product which the company are about to put on the market.

The Gottdiner & Wicht Co. have just put in a full line of Edison aud Victor Red Seal records, which they nave not heretofore carried, and have enlarged this department of the store, vastly improving it. They have placed on sale in the drug stores of the city, boxes, with their label, containing 1,000 needles, in euvelopes of 100 each. They have done this for the convenience of talking machine owners. Business was said to be fairly good aud daily improviug.

Brown Bros., 2040-44 Ontario avenue, one of the oldest and largest furniture stores in Cleveland, have opened a talking machine department, with demonstration rooms, fitted up in fine style, on the second floor, conveniently near the elevator. They have installed a large stock of Columbia machines, and latest styles of cabinets, and are shelving a complete list of records, including the Marconi. Henry L. Tinker, who has had several years' experieuce in the talking machine business, has been engaged to take exclusive charge of the department. He is thoroughly equipped to successfully conduct the business, and is energetically pushing it.

The Bailey Co. report that their sales of machines in September exceeded those of any previous montb, including several Victrolas. They are selliug large numbers of records and conditions generally were said to be very satisfactory.

At Flesheim & Smith's business was reported very quiet—scarcely anything doing. The company have added the Victor to their heretofore exclusive Zonophone trade.

H. E. McMillen's trade in the talking machine line is growing, and he is doing a fine business in the musical instrument trade generally. His private record trial rooms are finely appointed and comfortably arranged for patrons. He stated he was having a large and increasing sale of records.

Nathan & Skall have fitted up a very fine talking machine department in the balcony on the ground floor, which is nicely arranged, with cozy demonstration room. They have taken on a full line of Edison and Victor machines, and both disc and cylinder records, and make a fine display of cabinets. Miss Ryan, formerly with the Bailey Co., is in charge of the department, and said business was opening up most encouragingly.

Bings, furniture dealers, 522-28 Prospect avenue, have established a talking machine department in the basement, under the sidewalk. They handle the Edison and Victor machines.

"The talking machine was put to a novel use recently by a customer of ours," said a local dealer. 'The gentleman stated that at his boarding house there was a descendant of Eve whose rag chewing proclivities were becoming unbearable. She was then away on a vacation, and the gentleman, with other boarders, had evolved a scheme which they thought would put a quietus to her volubility for a time at least. A graphophone was purchased, with a selection of suitable records, and the machine set up in the parlor. The lady returned and on her first appearance in the room the graphophcne was set in motion every time she attempted to talk, and the machine outclipped her at a merry gait. Hoarse and red in the face from her efforts to be heard above the machine, she dashed from the room, nearly falling over a little girl who was just entering with a tray containing a large lemon, with card attached, bearing the name of the loquacious lady. Several days after she returned to the house to give the expressman directions regarding the destination of her trunks. The gentlemen are still patting themselves on the back, while the victorious graphophone now nightly produces sweet music for the edification of the boarders." It is possible this scheme might prove a godsend to other boarders similarly afflicted.

At the new pleasure ground, the "White City," in Manchester, Eng., a Columbia BC graphophone has been supplied to provide the mysterious music of the mermaids on the "Mystic River." The effect as one sails down this still, strange underground stream is quite awe-inspiring.

TRADE NOTES FROM INDIANAPOLIS.

Devine's Clever Window Design—Chinese Mayor Likes the Talker—Twentieth Century Graphophone Used to Attract at State Fair —Woman Swindler Harassing Local Dealers —Craig Says Business for September Was Twenty-five Per Cent. Better Than for Same Month Last Year—Nickel Theatres Making Good Headway—This Business Growing.

(Special to The Talking Machine World.)

Indianapolis, Ind., Oct. 4, 1907.

The trade in talking machines is rather quiet just now but dealers are uot in the least discouraged because they believe sales will be lively during the fall. Good coru prospects, they say, as well as a good outlook in all other kinds of crops, make the prospects unusually bright.

Thomas Devine, of the Columbia Co., has a clever window design. He has arrauged one large horn to represent a bell. A disc record is used as a clapper and colored ribbons extend from the bell to various parts of the windows. Other and smaller horns also are suspended to represent bells. They are brass and nickel horns. Mr. Devine has just received his first shipment of the new model Columbia $30 cylinder machines, known as the type BQ. They embody the aluminum tone arm principle heretofore confined solely to the disc product. The shipment had hardly been unpacked before it was sold. Mr. Devine predicts a great sale for this machine.

W. C. Fury, district manager for the Columbia Co., was in the city one day last week. His headquarters are at Chicago. He spoke favorably of trade conditions in the West. He predicted that the fall trade would be the best known in the history of the talking machine industry.

William G. Simpson, who runs a photograph gallery ou East Washington street, will start a five-cent theater a few blocks from his gallery.

Moy Kee, the Chinese mayor of Indianapolis, has just started for his old home in the Orient. For a long time Moy has owned a Columbia disc graphophone and when he started for the East he took his machine with him. Moy is one of the big Chinamen in Indianapolis, as he was especially decorated by Prince Pu Lun when that distinguished Chinaman was in Indianapolis a few years ago.

During the State Fair the E. Rauh & Sons, manufacturers of fertilizing material, used a Twentieth Century graphophone to attract visitors to their booth. The plan was so successful that they have decided to follow it out in this kind of work all over the country. George Halk, who had charge of the exhibit, believes that it is the best plan he ever tried.

The woman swindler has appeared to harass Indianapolis talking machine dealers. A well-dressed woman bought an Edison outfit at a certain store in the city and paid $5. She gave a fashionable number so that the machine might be delivered. She said it was a surprise for father and ordered it delivered at the rear porch. When the boy arrived she was there. She told him to set the machine up on the porch just ready to play so she could move it into the house at lunch time and surprise father. When the collector visited the place the next day the people who lived at the house had never heard of a talking machine. They said they had been away from home for a month. The talking machine man hasu't found the woman yet.

The Kipp-Link Co. report good sales in their new place on Washington street. They are well located and their rooms are excellently arranged, especially for the jobbing trade, to which they devote special attention.

Charles Craig, of the Indiana Phonograph Co., who handles Edison machines, says that his business for September was good. He says that his business last September was 25 per cent. better than it was during September of last year. Two weeks ago he says the farmers declared that all the crops needed was two weeks of nice weather. They have had the two weeks of nice weather, he says, and he sees nothing to prevent excellent crops, and therefore an excellent talking machine business during the fall and winter.

Five-cent theaters have been booming in Indianapolis within the last month. A number of new places have been established and others are being planned. Managers of those places uow runuing say that profits have increased at a rapid rate during the last month. Some of them make the statement that their income has increased one-third. Others place the increase at a less figure but all say that there has been an appreciable increase. A part of this is attributed to the cool weather. Such places usually are better patronized iu cool weather than they are in hot weather. However, the comparative increase on account of cold weather has been greater than that of previous years. The managers of penny arcades also have noticed an increase in business from this source. The excursion business has ceased and not so mauy visitors are coming to the city on Sunday, but the increase in business due to the advent of the autumn season has in a way made up for this.

John F. Truelock, who has been running the new Bijou Theater in West Indianapolis for six months, is about to open another theater at Aurora, Ind. Mr. Truelock is a strong believer in the business getting ability of the Twentieth Century graphophone.

Mr. Swain, of the Indianapolis Calcium Light Co., this week opened a five-cent theater with moving pictures, on South Illinois street, near the new Majestic Theater. His theater will be known as The Annex. It will have the advantage of the crowds who come from the New Majestic as two performances are given each night at the Majestic. His theater so far has done an excellent business. It is uuder the management of Mr. Phillips.

The stock company which controls the Manhattan Theater on West Washington street have opened a theater on North Illiuois street, just across the street from the Traction and Terminal Building. This theater is managed by M. Barton, who is also manager of the Manhattan. The new theater will catch many of the country people who come into the city over the interurban lines. All interurban lines center at the Traction Terminal station.

John Gillingham, who is a part owner of the Vaudette Theater, but who spends most of his time at his Detroit house, was in the city a few days last week.

Mr. Sutherland, who controls the Bijou and the Bijou Dream Theaters, has secured a lease on a prominent North Pennsylvania street location and will open another theater early next year. He has not made public the exact location but it is known that it will be in the business portion of the city.

WORTH ONE DOLLAR PER.

Enthusiastic Reader Says He Would Pay a Dollar a Copy for The World Before He Would be Without It.

We are in receipt of complimentary letters from subscribers to The World in all countries and here is an excerpt from a communication received from Alfred H. Pettifer, Sidney, New South Wales. He says:

"Please see that I have all numbers after this as I would not miss an issue for a dollar a copy. It is without doubt the best paper published in the world devoted to the talking machine trade and one of the best of trade papers published. No dealer in talking machines can afford to be without it even at $10 a year. I wish you the full measure of success which you richly deserve."

D. J. Young & Co., of Calgary, jobbers of the Columbia lines in that section of Alberta, Canada, are rebuilding their store and remodeling it with a view to taking care of a rapidly increasing business. A year ago Young & Co. bought their first Columbia goods and are now enthusiastic graphophone people.

TRADE GLEANINGS FROM THE "HUB"

The Increased Orders for Records Indicate Improved Business—Enormous Developments of the Victor Business With the Ditson Co.—Boston Cycle & Sundry Co.'s Specialties in Demand—Iver Johnson Co.'s New Building—Manager Yerkes Reports Columbia Expansion—Eastern Talking Machine Co. News—Weidener in Charge of Steinert Branch Stores—Other Items.

(Special to The Talking Machine World.)

Boston, Mass., Oct. 14, 1907.

A good indication of the hopefulness of the retailers for the fall trade in talking machines here is the fact that their orders for the November records are larger than those for the October records. Trade with the retailers here has been steadily climbing since September 1, and this, of course, is reflected in the business of the jobbers.

One disturbing element, however, in the jobbing business is the new idea of "machine and equipment" supplied from the one source—the factory which makes the machine—and the consequent cutting off of competition between manufacturers of the supplies heretofore obtained separately from the machines. More than one jobber in Boston is beginning to feel the effect of this change in policy. There is a fear generally expressed that it will react upon the business, too, because customers have decided opinions of what supplies they desire and the "equipment" which comes with the machines is, in many cases, not what they exactly desire. However, the near future will tell what the result will be.

The new talking machine department of the Oliver Ditson Co. is now in good running order. Manager Winkelman is mightily pleased with it, and those familiar with similar departments throughout the country and abroad do not hesitate to declare that it is the very best in the world. No expense has been spared to make it so, for the enormous development of the Victor business at the Ditson store warranted unusual endeavors to give the department the space and facilities it needed. It certainly was very much to Manager Winkelman's credit that he could do such a big business in his cramped quarters at the rear of the store.

The Victor business is growing rapidly in Boston. At the store of M. Steinert & Sons the wholesale business is being pushed extensively. J. G. Weidner has charge of the branch stores, and as soon as possible the store will be enlarged. More room is badly needed by Mauager Cornell, for the wholesale business has developed very greatly under his management.

Since the C. E. Osgood Co. took hold of the Columbia line for jobbing their business has increased greatly among the dealers. Their retail business on Victors and Edisons has also grown within the past year. The company are now giving ample window display space to the talking machine department and find that it pays to do so.

The new order of things with the National Co. —furnishing machines and equipment—finds the Boston Cycle and Sundry Co. with a large lot of sundries on hand for immediate disposal. Manager Andrews finds business "tip top," and he declares that the fall trade is going to be big. He is making a feature of an improved tray for holding records on the shelves, and of the Lynn carrying cases which form a very desirable line for dealers to carry. The Edison line is exclusively carried here.

Within six months the Iver Johnson Co. will have a fine new eight-story building for their exclusive use near the building now occupied by them on Washington street. It will be erected with every modern facility, and the talking machine department will have a fine floor all to itself, and an opportunity to expand even more than it has done under Mr. Boyd's able management. A very big Edison business is done here, and much more could be done if there were better display space.

Manager Yerkes, of the Columbia Phonograph Co., has just returned from a business trip to the New England stores and finds them in a very healthy condition. The business done by the Columbia company here has been doubled within the past year. A new branch store has just been opened at Portland, Me., under the charge of John W. Dunn, formerly of the Portland Talking Machine Co., and for ten years with E. Gately in Boston. The Columbia Co. now operate six branch stores in the city of Boston and eighteen throughout New England. The sale on the new BQ tapering arm machines is very large, and they are being received enthusiastically by the dealers. Speaking of trade conditions, Mr. Yerkes said: "While we are never satisfied, still we are fully satisfied."

The new electric elevator at the store of the Eastern Talking Machine Co. is now nearly completed, and in a week will be carrying passengers up to the top of the building, where a fine new sales floor has just been opened. Changes in the sales force are being made to take care of this new floor. S. J. Freeman has been placed in charge upstairs, while W. J. Fitzgerald has been put on the street floor to work in conjunction with J. L. Gately. Mr. Gately, by the way, has just returned from his vacation, and, as he says, "still boards at Stone's." Wholesale Manager Chamberlain reports trade as improving each week, with unusually good prospects for a good winter's business. The Victor business on high-priced machines still holds up well, and the Edison line keeps step with it.

"Doc" O'Neil, the Victor ambassador, returned this week from a visit to Maine cities, and he brings very encouraging news regarding business. He is planning to establish a number of jobbers in cities and towns outside of Boston.

SOME TRADE POINTERS

Which Will Prove of Interest to Talking Machine Men.

The man who can't attend to customers with a coat on might do in a barber shop, but he is certainly out of place in any store where ladies trade.

It takes more thau a big store full of goods to keep the people thinking about you. The people think about the things they are constantly told to think about.

Better that the cleanliness of your store go unnoticed than that anyone have occasion to remark upon the presence of dirt or cobwebs.

The man who is always waiting for the demand is never ready for it when it comes. Don't be afraid to buy goods for the busy seasons just because there isn't much doing now.

There's money in side lines if you get the kinds there's money in. Don't be too quick though to take up the proposition of the fellow who has something you can make a million on.

The same old showcase arrangement month in and month out, no matter how many new goods, look like the same old stock. Change things around if you want to attract attention.

It isn't the largest ad. that is the best ad. What would you think of a man who took the largest size pair of shoes in order to get the biggest value? The shoes must fit and the ad. must fit.

Between the drilling of the plebes and the marching of the highest class lies a vast amount of routine that wasn't fun. The work that makes any success may not be fun, but it's absolutely necessary.

Don't tie yourself to the wrong side of the street just because you have been there a long time. It takes a radical change to make a big success. If you want to be noticed do something noticeable.

The man who tries to get along without his trade or aavertising journal at the end of the race will find himself among the also ran. Mighty few men can run a business successfully on their own brains alone.

WM. McARDLE HEARD FROM.

William McArdle, representing the Hawthorne & Sheble Manufacturing Co., Philadelphia, Pa., under date of September 26, writes briefly from London, Eng., as follows: "On your way over town, 'please give my regards to Broadway.' By the way, or buy the booze, if you happen to meet anybody taking up a collection, give them the 'glad hand' for me. Have you seen the new Stars? H. & S., I mean. Front page—hurrah! 'Irish in London.'"

L. B. GRAVES TAKES CHARGE.

L. K. Parks, formerly vice-president of the Talking Machine Co., of Los Angeles, Cal., has been succeeded by Louis B. Graves, for several years manager of the Bartlett Music Co.'s sheet music department. Mr. Parks will still remain a stockholder in the company.

BUY IN BOSTON!

You can save time and money by making your purchases from us. We wholesale exclusively, carry an enormous stock of talking machines and records, and make a specialty of shipping goods out immediately after the order is received. No delays, and you can supply the needs of your customers almost as quickly from us as from your own shelves.

Devoting, as we do, our entire time to wholesaling and manufacturing, we are in position to cater to the interests of New England talking machine dealers in a better manner than any other concern.

Among the specialties which we manufacture is the best tray outfit on the market; also horn stands and record cases. Just now we are making special prices on horns.

Let's take up the matter of trade with you.

Boston Cycle and Sundry Company

48 HANOVER STREET BOSTON, MASS.

Capital + Experience + Organization = Satisfactory Service

What do you say to *that*, *Mr. Dealer?*

You know how the *VICTOR* and *EDISON* business has grown—is growing—is going to grow. A Jobber cannot be a *Jobber* in the true sense of the term, and he cannot fill all your orders *complete* the *same day they are received* if he lacks either Capital, Experience or Organization.

A Bid for Business

Our bid for your Talking-Machine business (*Victor and Edison*) is based on the fact that we have the *Capital*, the *Experience* and the *Organization* needed to *get the order out to-day*, *complete*, *and just as ordered.*

With the busiest fall season on record coming on, it means much to you to know where you can get the *best Wholesale Service.*

If you will send us a *trial order to-day* (large or small), you will find us with the *biggest*, *best fall stock of VICTOR and EDISON goods in the history of the trade and we will give you a vivid example of how we can take care of all your orders.*

Will you send us a *trial order to-day?*

Lyon & Healy

CHICAGO. CHICAGO.

Remember { 1—We refer all retail inquiries back to you.
2—We sell Dealers on *installments.*
3—We insure your records against breakage.

(RECORD INSURANCE is our latest idea for helping the dealer. **Ask about it**)

(Special to The Talking Machine World.)

Chicago, Ill., Oct. 5, 1907.

The trade is more than pleased with the way business has been opening up of late. In a retail way, locally, September was somewhat quiet, but gained considerably in strength from about the middle of the month, and the first week in October has rounded up in a fine, healthy volume of trade that has kept the stores and departments very busy, and has evidenced the fact that the fall business is distinctly on. The higher-grade machines are distinctly in evidence.

Jobbers say that September showed a distinct increase over last year. Dealers are ordering liberally, new contracts are coming forward in a decidedly satisfactory manner, and all indications are for a cracking big winter and holiday business. As the new Edison outfits are getting into the dealers' hands and they are able to test the attitude of their customers the objections that were made when the idea was first announced are heard less and less, and jobbers speak of a steadily growing volume of liberal orders.

Arthur D. Geissler, general manager of the Talking Machine Co., made a flying trip last week to the Victor factory at Camden. He reports the great plant liberally booming in all departments. He was greatly impressed with the new office building now completed, and which is one of the finest and best appointed structures of the kind he has ever seen. The new cabinet factory is working full limit, with the result that the company is rapidly catching up with the phenomenal demand for Victrolas.

Charles E. Brown, the sales manager for the Leeds & Catlin Co., will hereafter make Chicago the base of his operations. He will bring his family to Chicago to reside and will open an office in Chicago, from which he will look after the trade from Indianapolis to San Francisco, spending a great deal of time on the road. Later he also expects to open an office in 'Frisco. He is very enthusiastic regarding the big future before the new Sun records.

George W. Lyle, general manager of the Columbia Phonograph Co., spent a couple of days at the Chicago office the last week in September.

The latest from C. E. Goodwin, of Lyon & Healy, is the inauguration of a record breakage insurance department. Most dealers he finds quietly submit to a small loss on record breakage in their shipments rather than go to the trouble of collecting from the carriers. In the course of a year this is likely to amount to a goodly sum. By the payment of a trifling premium the firm will insure a dealer against breakage any quantity of Victor records shipped by Lyon & Healy. On receipt of the report of the breakage the dealer is immediately credited with the amount of the damage, and Lyon & Healy take the responsibility of collecting from the railroad through their well-organized traffic department.

E. C. Plume, western wholesale manager for the Columbia Phonograph Co., returned last week from a two weeks' trip to St. Paul, Minn., Duluth and Iowa points. He reported trade as excellent with Columbia jobbers all along the line, and his trip will result in the establishment of several new jobbers, among them George W. Getts, of Grand Forks, N. D., and J. Blumberg.

Joy fairly radiates around the wholesale talking machine house of James I. Lyons. Rapidly increasing business undoubtedly has much to do with it, but a fine little daughter, who recently made her appearance in the house of Mr. Lyons' right-hand man, Joseph S. Reynolds, undoubtedly forms a contributary cause.

George M. Nisbett, wholesale manager for Babson Bros., has been spending the greater part of his time on the road the past six weeks, and has visited a large proportion of the dealers in Illinois, Iowa, Missouri and Wisconsin. He found the dealers he called upon in a very contented frame of mind. Fully 75 per cent. of the trade called upon reported that they had done more business the past summer than a year ago; the balance found trade fully up to last year's record. Without exception the dealers are all looking for a prosperous winter and holiday trade. Furthermore, Mr. Nisbett was especially pleased with the hearty reception he received on all sides, and the satisfaction expressed with the service that Babson Bros. were giving them on Edison goods.

Babson Bros. recently placed a record-breaking order with the National Phonograph Co. for 32,140 machines, to be delivered between September

BABSON BROTHERS

"THE PEOPLE WITH THE GOODS"

G. M. NISBETT, Mgr. Wholesale

19th St., Marshall Boul. & California Ave., Chicago, Ills.

15 and February 27, the shipments averaging about 1,300 machines a week. Four solid cars of records were recently received at the Babson Bros. building on one day.

Important changes have been made in the talking machine quarters on the third floor of the Rothschild department store, which greatly facilitate the work of the department and the handling of customers. Instead of two rooms as heretofore, with no opportunity of getting individual customers off by themselves, a regular store has been built separate from the other departments on the floor, but abundantly lighted by the glass partitions on three sides. Entering from the west you find yourself in a general sales room, where all types of Edison and Victor machines and cabinets are on display, and where concerts can be given to small audiences. Beyond this are four private record demonstrating rooms, two on one side the passageway devoted to Edison goods and two on the other devoted to the Victor. Beyond these is another room given up mainly to small goods, which also come under the management of Elmer A. Phillips, buyer, and his assistant, W. M. Baach. Mr. Phillips says that they are carrying a more complete stock of Victor grand opera records and are having a nice trade. He is pleased with the new Edison outfits and is showing them in his window display on the ground floor and has already made a number of good sales.

Lyon & Healy will have a fine display at the Farm Implement Show at Brooks' Casino, to be held during the next two weeks coincident with the Corn Exposition at the Coliseum. They will have a fine showing of machines on the stage, the center of which will be occupied by the Auxetophone, which will give stated concerts. In the rear of the stage there will be private sales rooms.

Wide interest is being manifested in the wooden needle made by the B. & H. Fibre Needle Manufacturing Co. It is being pushed vigorously locally with apparently excellent results. Mr. Hall, of the company and the inventor of the fibre needle, says that the orders coming from some of the largest dealers in the country are decidedly gratifying. Aside from the immense improvement in the tone quality the argument that the life of a record is prolonged indefinitely, when only the fibre ueedle is used on it, appeals very strongly to machine owners who naturally welcome a means by which they can avoid the necessity of replacing their favorite high-priced records.

E. H. Uhl, manager of the Chicago house of Rudolph Wurlitzer Co., says that while wholesale talking machine trade was quietest during part of the summer it has been showing a steady increase since August, making a gratifying showing, as compared with last year. All reports from dealers indicate a strong demand the balance of 1907.

The Cbicago Stand Co. report a fine demand on the Phoue-arm, their new taper arm attachment for Edison machines. A number of leading jobbers have taken hold of the new device and are having an excellent sale on it.

The Chicago Case Co. are having a fine trade on both cylinder and disc record cases, and have a large stock on hand, enabling them to make instant shipment at all times.

The Skelly Manufacturing Co. report an excellent demand for the Concert-O-Phone, their coin-operated machine, equipped with the Twentieth Century Graphophone. The patron has the choice of twenty-five selections, as the magazine holds that number of cylinder records. It is operated by spring motor, thus permitting its use anywhere. Some important improvements have been recently made. The records are now automatically changed, where formerly the patron had to manipulate a slide bar for that purpose. Now all he has to do after depositing his nickel in the slot is to set the iudicator to the desired selection and turn the crauk a couple of times. This winds the motor and shifts the record on to the mandrel. At the expiration of the record it is automatically shifted back to its place on the magazine. A friction clutch on the gear makes it impossible to overwind the spring, thus avoiding possibility of breakage.

Mr. Skelly is also bringing out the Concert-O-Phone for home use. It is practically the same as the other machine, except that it is in a flat top cabinet 4 feet instead of 6 feet high, and is operated without tbe coin attachment. Among the advantages for home use are the small handling of records necessary, in the protection from breakage by children, and the fact that the machine stops automatically at the expiration of the record.

The fine sales room of the Caille Bros. Co., manufacturers of coin-operated musical and entertainment machines, in the Republic building, this city, are now in charge of George R. Gibbs, who came from the factory at Detroit a few days ago to take charge of the western office. H. C. Kibby, who formerly had the representation here, retires to give his attention to his other interests, especially the manufacture of perforated music rolls under the Hart patents, for which he has formed the Kibby Manufacturing Co., with factory at Division and Milton streets.

M. J. Kennedy, a well-posted electric piano man, has been made the Chicago representative of the Automatic Musical Co., of Binghamton, N. Y., and will establish an office and salesroom for them here.

The J. P. Seeburg Piano Co. have been incorporated, with a capital stock of $10,000, to market the Cremona electric piano made by the Marquette Piano Co. Mr. Seeburg, the president of the new company, continues as manager and director of the Marquette Co.

J. Blumberg, western manager for the Regina Co., is well pleased with the demand for Regina pianos, the fact that it is the only instrument of the kind operating with a spring motor, making it a seller in small towns where there is no electric current. The latest styles with the added feature of the mandolin orchestra effect are meeting with great favor. An excellent trade is being done on the Reginaphones. Mr. Blumberg is expecting a visit next week from J. B. Furber, general manager of the company.

The wide-awake salesman will often find customers where the somnolent would fail to see them entirely. A woman with a marked French accent went into a Wabash avenue store the other day and said she would like to look at music cabinets. The store does not handle the article in question, but does carry talking machine cabinets. The manager of the talking machine department, whom she addressed, instead of dismissing the lady with the declaration that they had not what she wanted, tactfully got her into one of the private talker demonstrating rooms and showed her the only thing in the cabinet line they had, explaining that while a disc or cylinder record cabinet was not adapted for sheet music their goods were the best for the purpose for which they were made, and incidentally asked her if sbe had a machine. No, she had not and wouldn't have one. Oh, just let me show you something that will please you, replied the salesman. It didn't take him half a moment to put his hand on a popular record by a Freuch artist. The woman listened delightedly, and the upshot was the sale of an outfit. She hasn't bought a record cabinet yet, but that will undoubtedly come in time.

One of the biggest talking machine deals made for some time is that by which the Spiegel-May-Stern Co. will handle Columbia Graphophones exclusively both through their big mail-order house in Chicago and at their various retail furniture stores in many of the principal cities of the country. They are preparing to spend a large amount of mouey in advertising the mail-order proposition, and their advertisements are already beginning to appear in the leading popular periodicals. Although they had uot begun to ship goods the first of the month, their initial shipments from the Columbia's factory to the Spiegel-May-Stern people had aggregated $100,000. Departments in the company's various stores will be established as rapidly as possible. St. Louis will be the first to open a department. At the main Chicago store, 182 Wabash avenue, the talking machine department will occupy quarters on the sixth floor adjoining the piano department, which is also being established. Four handsome private record rooms are being built. Frederick Sheppy, a well-known local talking machine man, will look after the talking machine depart-

DEALERS

Write your nearest jobber for samples and prices of Standard Needles.

Standard Needles are made from the finest high-grade steel wire, highly polished and evenly tempered. Points gauged to proper size and will not cut the records. They are to be had in the following grades: Extra Loud Tone, Loud Tone, Medium Loud Tone, Medium Tone, Soft Tone and Peerless or (Musical Tone).

ment at this store. The mail-order business will be conducted from the general mail-order headquarters on South Sangamon street, which is under the direct supervision of A. H. Spiegel, while Mr. Goldsmith has direct charge of the talking machine mail-order business. The Spiegel-May-Stern deal was the work of E. C. Plume, western wholesale mauager of the Columbia Phonograph Co.

The Auxetophoue has made its eutrance into Chicago moving picture theaterdom. It has chosen for its debut two of the largest and fiuest places of the kind in Chicago, or, for that matter, in the country. The big machines have been installed in the Bijou Dream on State street and Fairyland on Milwaukee aveuue. They are used entirely inside the theaters for the illustrated song act and are giving great satisfaction to the managemeut of the theaters and to their audiences.

E. C. Pluue, western wholesale manager for the Columbia Phonograph Co., is on a trip which will take him to Minneapolis, St. Paul, Omaha and probably as far west as Denver.

Chicago's Bohemian population are quite excited over the Victor Co.'s twenty new Bohemian records. The list includes eight teuor solos by Fr. Belac, and twelve duets by the same singer and A. Bartos. The popularity of the new records here is augmented by the fact that both the artists are Chicagoaus. Chicago's Bohemian population is equal to a city of about 250,000 and is found on the southwestern side, centering for the most part around 18th and Blue Island avenues. There are seven or eight Bohemian talking machine dealers, and five of them are to be located within half a dozen blocks on 18th street.

Virginius W. Moody, sales manager for the Talkiug Machine Co., when seen ou the 26th of last month was found busily engaged making up selection orders for the large number of dealers who have standing orders of this kind with the company, trusting to their acquaintance with the views as to their salability of the records of the local dealers who have au opportunity to hear the monthly records in person.

W. W. Parsous, manager of the Chicago commercial Gramophone department, is a decidedly busy man. He gets out after the big ones himself, and frequently has uot the time to attend to his correspondeuce during the office hours. When this happens he fires his line of talk into the machine he always keeps at his home, and the next morning apears at the office with a neat carrying case containing the records, which he turns over to his operator, who transcribes them while he is again out in the field.

Rudolph Wurlitzer, Sr., his wife and Howard Wurlitzer were all Chicago visitors on Sept. 25. This was the first time the elder Mr. Wurlitzer has beeu in Chicago siuce the removal of the Chicago branch to the present big Wurlitzer building at 266-268 Wabash avenue, and he was extremely well pleased with what he saw. Howard Wurlitzer spoke eucouragiugly of the general business situatiou, and said they looked for a big winter both in talking machines and automatic instruments.

J. W. Bergstrom, of the Bergstrom Music Co., Honolulu, is a Chicago visitor to-day, on his returu home after a visit to the East, during which included a three days' visit to the Victor factory. Mr. Bergstrom is the Victor distributor for the Hawaiian Islands. He has a big trade with the Caucasian population, and sells a large number of the Victor's Hawaiian records, made in the islands by George K. Cheney, to tourists, who are glad to take away reproductions of the native music. He also has a large trade on Chinese records with the Celestial residents of the islands, and looks for a fine business with the Japs on Victor goods when the Victor Co. get out their new list of Japanese records the first of the year. Mr. Bergstrom says that the islands are enjoying a high degree of prosperity.

B. Feinberg, of the Western Talking Machine & Supply Co., returned from the East the first of the month. He had a successful trip, getting a good business from the central States jobbers he visited on the way, and arranging for the representation for some attractive specialties.

L. C. McChesney, advertising manager of the National Phonograph Co., was a recent visitor.

LACK OF HARMONY.

JOBBERS KEENLY INTERESTED IN NATIONAL ASSOCIATION.

Officers Hard at Work During the Past Month Perfecting the Organization—Much Literature Being Prepared to Stimulate Interest in Association Work—Chat With Prsident Bowers on Accomplishments to Date—Association Incorporated in Illinois.

(Special to The Talking Machine World.)

Chicago, Ill., Oct. 7, 1907.

No time is being lost by the officers of the National Association of Talking Machine Jobbers in getting the new organization in thorough working order and in inaugurating a campaign that shall have for its object the enrollment on its membership list the name of every jobber in the country who has the advancement of the best interests of the trade at heart.

President James F. Bowers spent Sunday recently in Columbus with Secretary Perry B. Whitset. Together they went over the minutes of the Buffalo convention getting them in shape for permanent record, arranged for attractive and effective stationery, and prepared a rough draft of a letter which has since been sent to all members and jobbers of the country not now members setting forth the advantages of joining the association and enclosing a copy of the by-laws of the organization.

"The consolidation of the Eastern Talking Machine Jobbers' Association and the Central States Talking Machine Jobbers' Association gives the new national organization a membership of approximately one hundred," said Mr. Bowers. "This is certainly a magnificent start and with a body national in its scope and with so strong a personnel we should hope soon to be able to boast that our organization is absolutely national in fact as well as name.

"The readers of The Talking Machine World are already well posted regarding the organization of the new national association. It only remains for me to say that the whole spirit shown at Buffalo was to create an organization that should actually work towards the betterment and improvement of the talking machine business as a whole, bearing in mind that the interests of all branches of the trade, manufacturer, jobber and retailer are in the last analysis one and the same.

"It is needless to say that every question that comes before us will be considered fully in its bearing both on the different branches of the trade and the public. We have reason to be proud of our industry, the remarkable advancement it has made not only from a scientific but from a commercial standpoint—the clean high-grade lines on which it is conducted. We shall undoubtedly be able to do much towards the further education of the public as regarding the intrinsic merit and artistic value of the talking machine, and its potency as an educational factor.

"I want to emphasize the fact that this association will at no time play favorites. The smallest member of the trade is just as welcome as the largest and will receive equal attention and consideration."

"The members of this trade," Mr. Bowers continued, "must bear in mind that the preliminary work of placing an organization of this kind on its feet of necessity moves slowly. The organization in its executive committee is headed by the best men that could possibly have been chosen for the work. They all are men of affairs and are not to be hurried or stampeded into unwise things. There is bound to be more or less friction in getting all the parts adjusted and the bearings working smoothly, and members must have patience. Gentlemen of the trade will remember that Rome was not built in a day. What is worth doing at all is worth doing well, and to do anything well requires a reasonable amount of time. Furthermore, members of the trade should pay no attention to statements made by irresponsible parties who have no interest in the association and no standing whatever in the trade from any point of view."

J. F. BOWERS, PRESIDENT NATIONAL JOBBERS' ASSOCIATION

TO INCORPORATE THE ASSOCIATION.

Acting in accordance with the authority conferred at Buffalo steps were immediately taken for the incorporation of the association. After investigation it was found that the laws of Illinois are particularly favorable to organizations

of this nature, and a charter secured from the Secretary of State at Springfield. J. F. Bowers, treasurer of Lyon & Healy; E. H. Uhl, western manager for Rudolph Wurlitzer Co., and James I. Lyons, proprietor of the jobbing house of that name, appear as the incorporators.

COMMITTEE ON RESOLUTIONS APPOINTED.

President Bowers has appointed the following committee on resolutions: Chairman, J. N. Blackman, New York; E. P. Ashton, Detroit; H. M. Holleman, Houston, Tex.; B. J. Pierce, Kansas City, Mo., and A. H. Jacot, New York.

IMPORTANT RESOLUTION ADOPTED.

The following important resolution adopted at the Buffalo convention has been given out for publication:

"Whereas, It has come to the knowledge of this association that a practice obtains among certain jobbers and dealers of selling talking machines upon instalments at the cash price without interest,

"Resolved, That this association regards such practice as a distinct cutting of price and should not be continued."

Edward H. Uhl, of Chicago, had the honor of christening the National Association of Talking Machine Jobbers. A number of different names were suggested, but it was Mr. Uhl's suggestion that was finally adopted.

Special attention of the talking machine jobbers of the country is called to the official invitation to become members of the National Association, which occupies a page elsewhere in this paper.

DEALERS INVITED TO DISCUSS

Their Experiences in the Matter of Instalments Through the Columns of The Talking Machine World—Mr. Wilmot's Suggestion Worthy of Consideration—An Exchange of Ideas on the Methods of the Different Dealers May Prove Exceedingly Interesting.

Fall River, Mass., Oct. 4, 1907.

Editor Talking Machine World:

Dear Sir—I have been highly impressed with the recent literature of the Victor Co. on the subject of instalment sales, and presume that you have also read it. Instalment business in bicycles and talking machines has been a very satisfactory business with me for a good many years, particularly so with talking machines, but the longer I am in this business the more I realize that there is a lot to learn from the experience of others.

Where could this experience be more advantageously discussed than through the columns of The Talking Machine World, providing you think well of the suggestion? For this reason, it has occurred to me to submit the idea to you, to ask experienced instalment dealers to describe the methods found best for handling a proposal to buy on instalments, in a pleasant easy manner, to the end of learning whether a person is worthy of such credit, and without giving offence, or making other mistakes.

Some most desirable people are so extremely sensitive if any questions in this direction are asked them that there is danger of losing a good customer. In big cities like New York no doubt requiring references is right, and expected by the public, but in smaller cities it is different. Trusting you will accept the suggestion in the spirit in which it is offered,

Very truly yours,

W. D. WILMOT.

MORE RECORDS BY MME. SEMBRICH.

The Great Soprano Adds to Her List of Records for the Victor Talking Machine Co.

Mme. Sembrich arrived in New York recently —much earlier than usual, owing to the fact that she is to give a concert tour preparatory to the opera season, and more particularly, she had an engagement to make a number of records for the Victor Talking Machine Co. The wonderful development in the art of recording has made the latest grand opera records marvels of perfection. Mme. Sembrich, when seen one evening last week at the Hotel Savoy, said that she had lost twenty pounds by walking the Alps.

"Mountain climbing is my favorite 'sport,' you know," declared the Polish singer. A lively gesture of both arms nearly collapsed a half-dozen funnels of various American inventions in the line of talking machines that filled her boudoir. For she had spent all of the days singing songs into leaden tubes for what she calls "those raycords."

"See!" laughed the singer. "It is, as you say in English, that the little pitchers have the big ears. But these can hear so much. I sing and sing; no audience, no kind hand, bright flower, nothing. Your clever mechanics make for the singer new tasks, a new public and a new art.

"My reason to come to New York so early in this season is the fact that I had a promise made to spend ten days in making these 'raycords' for the Victor Co. After that I go on my concerts, then opera very many weeks, and in the spring again concerts.

"Mahler? You have heard him in Vienna? Ah, I am looking forward to sing Zerlina in 'Don Giovanni,' and Susanna in 'Le Nozze di Figaro,' under direction of Herr Mahler. That Mozart music shows you new beauties under his baton. I sing first in 'Rigoletto,' on a Friday, too. I don't think that I sing new roles this season, but I shall be in revivals of those operas that were not given at the Metropolitan last year, like 'Il Barbiere di Siviglia,' and 'I Puritani,' with Signor Bonci as well as Signor Caruso.

HOW THE PARSON WAS CONVERTED.

Had a Grouch Against Talking Machines and Denounced Them as Worldly Pastimes, But Readily Acknowledged His Error When He Saw Their Helpful Influence.

The story is told of a minister who is greatly opposed to worldly amusements, with a particular grouch against musical instruments. He recently denounced the talking machine as a great influence for evil, and walking with a friend past a talking machine store the other day he noticed quite a crowd of men filling the doorway, and said to his friend: "There it goes again. The talking machine, I venture to say, is reeking out some nasty rag-time song." As the pair came in front of the store there were seven men in the doorway, three young fellows, three middle-aged and one about thirty, and to stand close, two had an arm thrown around their neighbors' shoulders.

They stopped for a moment in front of the window, for the layman was curious to know what new popular song had so fascinated these men in the lunch hour. To the surprise of both and the ministerial gentleman especially, they found it was no new song, but the beautiful hymn, "Lead, Kindly Light," that the talking machine was giving, just as it had been sung by a quartette choir. The look of amazement on their faces was a study. This an evil influence? The minister had to admit he passed his sentence on the talking machine without evidence. He went on his way rejoicing, and thinking, if that choir could have seen those men, every singer would rejoice in having sung a hymn that will reach thousands of busy men of all classes, and make them, if only for a moment, think of the Light of the World.

VIEWS ON INSTALMENT SALES.

The Victor Talking Machine Co. have recently issued a very interesting volume entitled "What Victor Distributors Say About the Instalment Plan," which gives the bona-fide views of a number of representative firms regarding the merits of the system. The general verdict is that the selling of machines upon instalments is more satisfactory than cash sales, as the purchasers are more apt to go for records to the store where they bought their machine. In glancing over the list one sees the names of those who may be classed as "Who's Who" in the industry which should afford convincing proof of the value of the system.

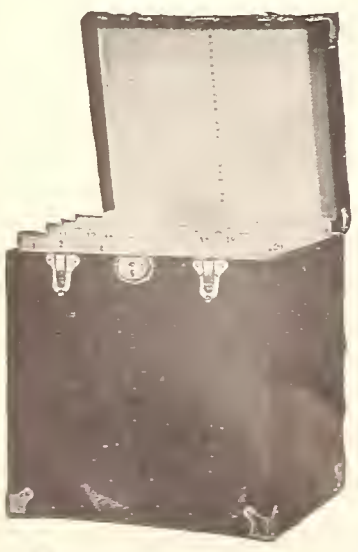
Lyon & Healy, for instance, state that they increased their talking machine sales fully 300 per cent. by the instalment plan, while Grinnell Bros, of Detroit, claim that of the 5,000 talking machines sold by them during 1906 fully 75 per cent. were on the instalment basis. Cressey & Allen say they owe the success of their talking machine department to that system, and they all unite in saying that the payments have all been met with surprising promptness, while only in isolated instances have machines been lost.

Among the firms who brand the instalment system as a success are Carstensen & Anson Co., Salt Lake City; the Powers & Henry Co.. Pittsburg; Cohen & Hughes, Baltimore; Walter B. Moses & Co., Richmond, and others equally prominent.

L. Michaels will shortly open a store iu Wenatchee, Wash., for the sale of talking machines and musical merchandise.

Record and Machine Cases

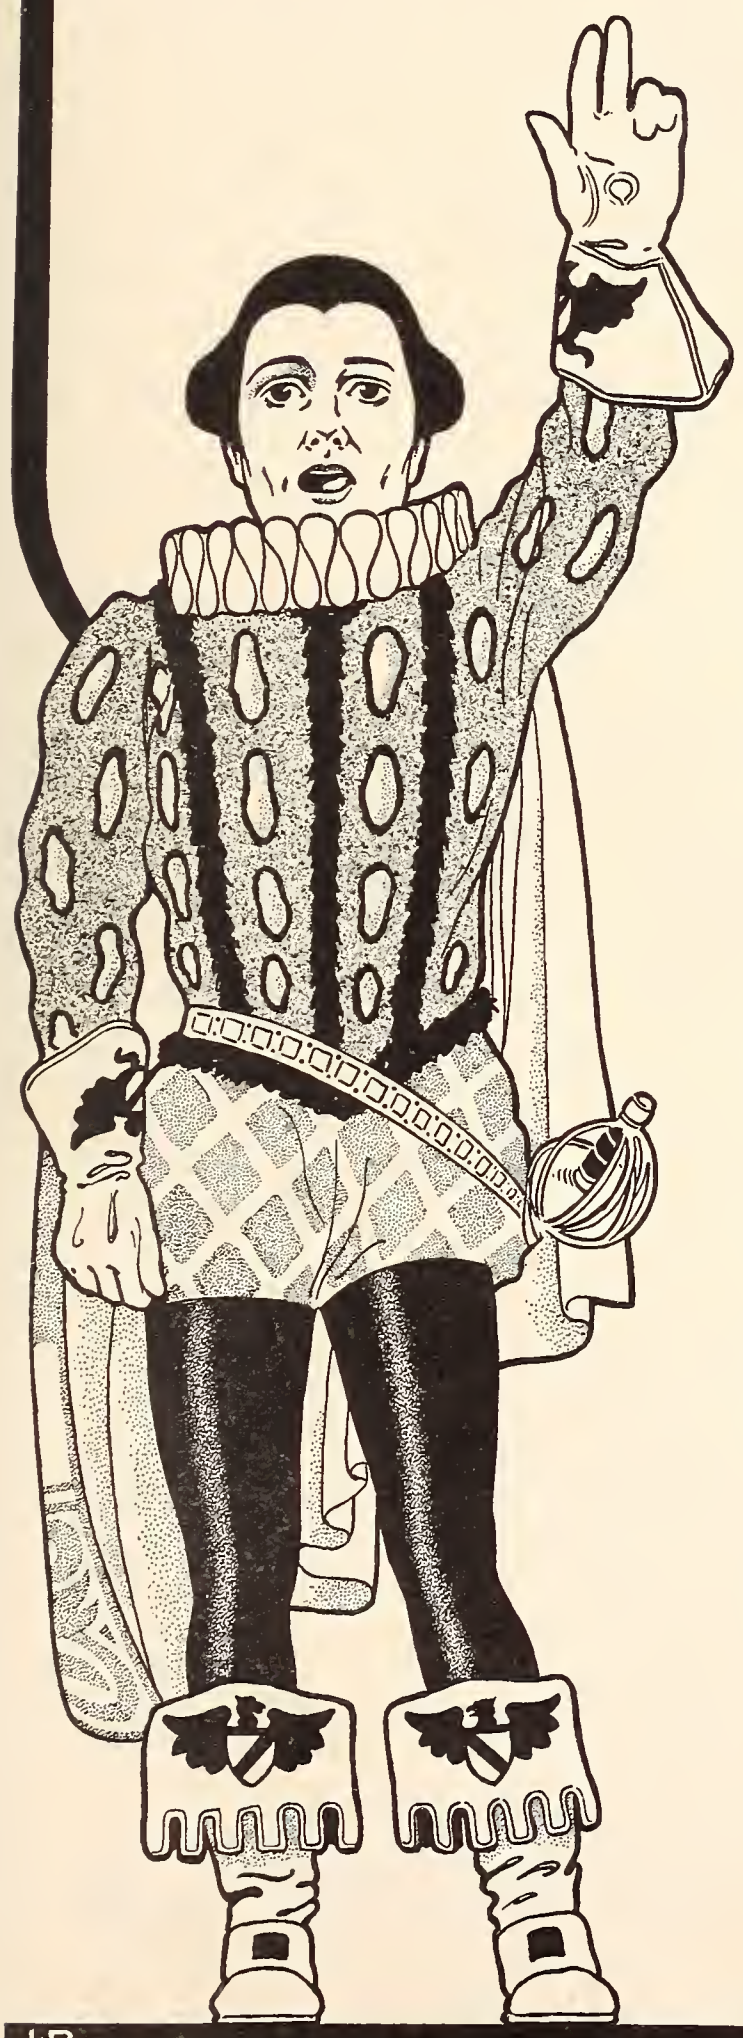
We manufacture a full line of cases for Cylinder and Disc Records, Machine Cases and Horn Cases. Carrying goods in stock, we can make prompt shipment. Our quality is the best, and prices right. Ask for our catalogue.



CHICAGO CASE MFG. CO.

241-247 S. JEFFERSON ST. CHICAGO, ILL.

"Gentlemen The King"



The "ART-TONE" Horn has been proclaimed the King of all Flower Horns. And rightfully so.

These Horns have a richness, dignity and beauty that is superb. Compared with other Flower Horns, their position in the Horn world is truly regal.

"ART-TONE" Horns are noted for five points of perfection: 1. Purity of tone-reproduction. 2. Strength of construction. 3. Graceful outlines. 4. Richness of designs. 5. Permanence of finish.

Every "ART-TONE" Horn is a true work of art. They are all *hand-painted* in oil colors; the colors are "baked on" by a special process that insures a brilliant and lasting finish.

You won't know what a *perfect* Flower Horn means until you see the "ART-TONE"

OHIOANS PUSHING AHEAD.

The Leading Jobbers and Dealers Well Pleased With Trade Development—P. B. Whitsit Optimistic Over Outlook—A Run Around the Trade Tells Story of Trade Advance.

(Special to The Talking Machine World.)

Columbus, O., Oct. 9, 1907.

Business is reported very fair here by dealers, after having experienced rather a quiet September, owing to the fact that Columbus had a homecoming and a State fair. While every means of advertising was taken advantage of during these festivities, it seems that the vast crowds that attended were here more for sight-seeing than for buying.

P. B. Whitsit, general manager of the Perry B. Whitsit Co., Edison and Victor jobbers, is very enthusiastic regarding the coming season. He reported to a World representative that his house had done a nice business all during the summer months, and felt assured that business during the coming six months would break all records made in previous years. To sustain this prediction he showed a wad of sixty orders for Edison machines with new equipments, each order calling for from two to twelve machines.

W. H. Hug, representing the National Phonograph Co. in Ohio, was a recent visitor in this city. He reports business good, and gives it as his opinion that prospects were never better for a good fall and winter business.

The Columbus Piano Co., Edison and Victor dealers, have recently been made jobbers of the Columbia product.

The Buckeye Talking Machine Co. have one of the most appropriate stores in the city. Besides having a large and handsomely fitted salesroom for displaying the Edison and Victor lines, they have in addition three nicely arranged booths for demonstrating records. Miss Nellie Ryan, manager, reports business as good.

Sam W. Goldsmith, Victor talking machine representative, spent several days in the city last week. He says that his compauy are still far behind on their orders for Victrolas. Mr. Goldsmith stated that last month was one of the best he had ever experienced.

Frank A. Drake, of the Perry B. Whitsit Co., returned last week from an extended trip through the East, having gone east from the Talking Machine Jobbers' Association meeting, which was held in Buffalo last month.

W. H. Snyder, who handles the Edison and Victor lines, is preparing for a large business. Mr. Snyder is one of the warm supporters of the talking machine business. To The World representative Mr. Snyder said in part: "Business has been good and prospects are excellent."

VALUE OF SIDE LINES.

A Timely Talk on a Subject of Interest to Talking Machine Men Who Desire to Utilize Their Space to Best Advantage.

In New York and other large cities it is customary among retailers situated on the prominent thoroughfares to add one or two side lines to their regular stock a little previous to the holidays.

This annual stock-expansion is based on the psychological principle that when a man or woman possessing a goodly filled holiday purse enters an establishment for the purpose of gift-buying, he or she is first unconsciously attracted and then interested in the articles displayed. This eventually leads to a sale of some of the goods. That the same dealers continue to work the plan year after year is pretty good evidence that it pays to anticipate the desires of holiday buyers.

During a chat recently with an influential talking machine retailer, this very subject was under review. This dealer named a number of novelties that might be exploited with fair success, but none seemed to make such a genuinely favorable impression as did a line of musical instruments. He recalled that last year he could have sold a number of good violins and mandolins; in fact, he has frequent calls the year round for strings and other trimmings.

It is really remarkable that, as is evident, so many talking machine dealers should neglect to cultivate a trade in musical merchandise, especially in view of the large margin of profit that is realized in retailing this line. In proportion to the amount of money involved in each sale, the percentage of profit on musical instruments, such as violins, accordeons, guitars and mandolins, and on strings, is much higher than on "talkers."

In carrying a side line of these goods it is not often necessary to employ a lot of capital. A few hundred dollars judiciously spent will buy a very representative line of goods. Neither is a thorough knowledge of musical instruments necessary. Any man of ordinary intelligence and ability can handle the line successfully, and it fits in with the talker business exactly.

That there is a splendid opportunity for the local "talker" dealer in hundreds of towns is indicated by the statements of the seasoned men who travel for the leading jobbers. They report that in many cities and towns such a thing as an up-to-date stock of musical instruments is unknown, and that in consequence 99 per cent. of the local demand is supplied by the retail catalog houses.

This outside competition could be knocked galley-west by a home merchant because he could afford to sell the same goods at lower prices or better goods for the same price.

GROWTH OF SOUVENIR CARD FAD.

Between seven and eight millions of souvenir postcards made in Europe are brought into this port every week day, according to a statement made this week by a United States Customs official. The importation of these cards has caused a great amount of additional work for the Inspectors at the Appraisers' Stores. If the fad continues to grow, the Government will be obliged to hire more help.

MAESTROPHONE NOTICE

We beg to apologize for the delay in shipment of some of our reproducers to our various customers throughout the States, England, Canada, Mexico and in fact all countries from whom we had the honor of receiving orders, but we can assure all comers that orders will be attended to more promptly in the future, as we have doubled our factory force.

Special inducement for this month only

For the benefit of those few who have not as yet sent in an order for a sample Maestrophone, we have decided to make a special price for a single reproducer to apply to all, whether dealer, jobber or individual.

Upon receipt of $7.50, or $5.00 and one Edison Model C. reproducer we will send, postpaid, one sample Maestrophone Reproducer. If you are a dealer or a jobber we will credit you with the difference between the regular price and your proper discount on any future order.

This is a money-back proposition. If reproducer is not satisfactory, return to us and we will immediately return to you the amount sent.

Send no order without remittance in full. This does not reflect on your credit, but is merely a rule necessary to the proper conduct of our business.

Usual discount to jobbers and dealers on orders for six or three respectively. References: any state bank in Lincoln, Nebraska.

Kindly send full remittance with your orders and make them payable to

COLLECTIONS OF RARE RECORDS

Are Becoming as Much in Vogue as Rare Autographs—Making Records at Home More Popular With Critical Users of Talking Machines—Some Interesting Records.

There is no doubt but that as home recording becomes more understood and carefully studied, collections of records will be made just as to-day collections of rare autographs arouse much interest and obtain enormous prices when put up at auction. The prices of records should be infinitely higher for, after all, what value has a scrawling signature when compared with the living voice? What would not Americans give to hear Poe recite some of the poems which have placed him among the immortals, or what value could be placed upon a record of Longfellow or Emerson?

Some years ago when the talking machine was making a great stir in England, Robert Browning, the poet, was asked to make a record, says an exchange. His memory was prodigious and on being pressed to recite his celebrated poem, "How we brought the good news to Ghent," started off boldly, but, owing perhaps to the novelty of the occasion, utterly forgot the third line. His attempts to recall it and nis interjections were faithfully recorded. He apologized to his hostess but she said she would value it all the more on account of its uniqueness. Browning is dead and gone, but there are Browning Clubs all over the country, but what value could be placed upon the record he made?

In London there is a private collection—one of the most interesting and valuable in the world—which contains a number of records made by Lord Tennyson, the late poet laureate. One of the finest of his was "The Charge of the Light Brigade." The same collection has an address in the eloquent language and vibrant voice of the great statesman Gladstone. There are records made by the great African explorer Stanley. The Prince Louis Napoleon, only son of the Emperor of the French and the Empress Eugenie—the unfortunate prince killed during the Zulu War—made a record in his native tongue. Florence Nightingale made one in 1890 for the exhibition held in London for the benefit of the surviving heroes of Balaclava (the charge of the Light Brigade) and contained the following words from that pioneer of army nursing: "God bless my gallant comrades of Balaclava and bring them safe to shore—Florence Nightingale."

It is easier to make records now than it was when Florence Nightingale said this, and cheaper too. Record collecting is certainly the most interesting collection possible and would gain many devotees if sufficiently known. Dealers should never lose an opportunity for talking home records to customers. The fact that they cannot approach the professional record has nothing to do with it. The little affectations of voice, strange inflections, etc., which would never be found in the professional record would add to the value of the home record, for it would add to the naturalness and lifelike effect produced.

TRADE NOTES FROM TWIN CITIES.

Great Expansion of the Talking Machine Business Reported from Minneapolis and St. Paul—What the Leading Jobbers Report to The World When Interviewed This Month.

(Special to The Talking Machine World.)

Minneapolis and St. Paul, Oct. 10, 1907.

Talking machines are having great vogue in Minneapolis and St. Paul, and every dealer both in the jobbing and retail branches reports a great expansion in business over 1906, month for month, showing a substantial increase in volume. In a great many homes they have become indispensable, and this applies not only to the homes of the plain people, but they are winning favor where wealth and culture abide.

A. M. Magoon, manager of the talking machine department of the New England Furniture Co., jobber for the Victor machines, says that he is having a highly satisfactory trade in the Victor Victrolas at $200 each, and these are going into the very finest homes in the Northwest.

T. C. Hough, jobber of Edison phonographs, reports a steadily increasing business in this old standard, the local and outside trade being equally satisfactory.

The order of the National Phonograph Co. relative to the horn equipment went into effect in the Twin Cities on October 1. It caught quite a number of dealers with more or less horns on hand. As a general rule they will comply with the order to the letter, but hope that some method of disposing of their old horns will present itself.

Another busy concern is the Minnesota Phonograph Co., who report a substantial increase in trade this fall as compared with previous years. They report their business steadily expanding, and are unceasing in their efforts to help their dealers and advance their interests generally.

GOLD MEDAL FOR COLUMBIA CO.

Splendid Exhibit Made by This Company at Jamestown Deservedly Honored.

The jury of awards on the exhibits of musical instruments at the Jamestown Exposition have awarded a gold medal to the Columbia Phonograph Co. for their handsome display of machines, records and accessories. The exhibit made by this company was one of the most attractive in Jamestown, and its honors were well deserved.

Occasionally a disc record's last note or two in some of the operatic reproductions are flat. Henry Stein, a floor salesman with Landay Bros., noted this imperfection in the trio from "Faust," and found he could remedy this flaw, intensely disagreeable to persons of musical education, by simply turning the indicator two pegs or degrees forward when this part of the record was reached. It is effective, as several tests proved.

YOU NEED A LEADER FOR YOUR FALL TRADE

Our Latest Phonograph

FREE:

NEW GRAND OPERA REPRODUCER

PREMIER MODEL (1908 Type)

FACTS

ABOUT OUR NEW PREMIER TALKING MACHINE, 1908 Model.

POWERFUL MOTOR—*Guaranteed* to play more than one record.

NEW ANTI-SLIPPING DEVICE—To prevent producer from sliding on record.

REINFORCED BASE—Preventing breakage in transit.

NEW GRAND OPERA REPRODUCER FREE—Twice the size of the ordinary—hence the volume of sound doubled—with *curved* neck and *indestructible cap*. Supplied in *addition* to the ordinary reproducer.

LARGE FLOWER HORN—In gold and other beautiful colorings. Seamless horn of pure aluminum furnished if desired.

TWO REPRODUCERS WITH EACH MACHINE

OUR NEW MODELS are vastly superior in construction and tone to our old styles. They are without exaggeration equal in reproduction to the $20.00 talking machines of standard makes.

OUR PRICES are ridiculously low. Send for our new schedule.

EXCHANGE SYSTEM. Full credit allowed for all old model phonographs returned to us whether originally purchased from us or not.

WIRE RACKS for cylinder records: 8 ft. high, 4 ft. wide and 16 inches deep. Each rack accommodates 1,224 records. Each compartment holds six records standing up, in card board box. $12.00 each.

DISC MOTORS—We carry a fine line of Swiss and German disc motors.

THE EDWIN A. DENHAM COMPANY, (Incorporated) IMPORTERS, MANUFACTURERS, COMMISSION MERCHANTS

Main Offices, 498-500 BROADWAY, NEW YORK

BERLIN SAN FRANCISCO

TIMELY TALKS ON TIMELY TOPICS.

There is no denying the fact that the talking machine has finally been stamped with the seal of fashion and therefore its future is assured in the estimation of the public. To be accurate, however, the far-sighted firms in the trade have long since been satisfied of the stability of the business as a staple line, and their investments have been shaped accordingly. Aside from this, attention may be directed to the large and increasing sale of high-priced goods, articles in whose manufacture the greatest talent and the most finished skill have contributed. These are well-known facts, and this utterance may seem commonplace or platitudinous were not still further evidence forthcoming from time to time.

A late development along this line came to the surface when an estimate for redecorating and refurnishing the mansion of a member of New York's "400" was recently sought. Among other items specified was a complete talking machiue outfit, with the essential equipment, the cabinet, etc., to be constructed in a manner to harmonize with the music room environment. The dealer who was called upon to supply the details for the talking machine end of the commission was only too eager to submit his figures and suggestions and, at the same time, he was more than gratified at this additional compliment to what is certainly regarded as a necessary piece of furniture in every well-regulated family.

It has been argued time and again that the preference for either the cylinder or disc machine is clearly defined. Many enthusiasts possess both types, aud when price is a secondary consideratiou this is the most satisfactory course to adopt. It is conceded that as much real pleasure is derived from contrasting the different results produced by the two methods of sound reproduction as there is in comparing the tonal qualities of various musical instruments. When expenditure is the controlling factor, then a choice must be made, and each has its devotees and advocates, if not favorite partisans. Under these circumstances, experts say, when a selection is made it is considered final, and therefore there would be no market for an hermaphrodite machine. Still that remains to be seen, and the taking of testimony, as the legal sharps are wont to observe, has not been closed. Until that time comes, a suspensiou of judgment is in order. This, every new invention is entitled to, and from what is now known the problem is about to be solved with Devineau's creation.

A record maker of experieuce, in discussing the curious difference between the sale of the same melody in sheet music form and when recorded, said: "A piece of music that may be a success as a vocal might prove, and not infrequently does prove, a dire failure as a record; that is, from the point of salability. In other words, what will sing well will record indifferently. When, however, effects or climaxes or novelties, like chimes, the piccolo, the drum, etc., can be introduced, the sale of the record is materially increased. Possibly it may be nothing new to the trade, but it takes just as much effort and exploiting to create a selling record as it does for a piece of music. Publishers should understand that while the record manufacturer has free access to all music, copyright or not, as the law now stands, his risk of gaining a market for his records is equally as great, if not more so, than his in issuing the composition. The initial expense is very much greater, to say the least, and therefore, in my opinion, considering the extra publicity given the publisher's product through the record and the subsequent increased sale thereof, the financial benefit is about equally divided; a stand-off, as it were."

Possibly anticipating the struggle bound to ensue during the coming session of Congress over the copyright bill, the first guns of the campaign are being fired by both sides to the controversy. Last month appeared an interview with Paul H. Cromelin, vice-president of the Columbia Phonograph Co., General, and an acknowledged authority on the subject of copyright as applied to the reproductiou of music or speech by mechanical means. He is sanguine that the national legislature canuot afford to stand in the way of twentieth century progress as strikingly exemplified by the talking machine industry the world over. His argument is fortified by an array of facts, citing past aud pending litigation and judicial decisions rendered in various countries. A coincidence to this discussion are the receut advices received from Berne, Switzerland and Milan, Italy, also printed last month. At Berne, where an international conference of literary and artistic ownership closed its sessions on August 31, the congress, it is reported, were "particularly anxious that publishers and composers should be protected against mauufacturers of mechanical musical instruments." Following the statement, made by an Italian music publisher, that an American talking machine company were payiug great sums of money for famous artists to make records of their voices, and quoting the alleged handsome dividends paid stockholders by the same concern, the conference voted that such companies should be required to pay the owners of copyright for the music used. This action was recommended for the adoption of the next congress to be held in Berlin, Germany, in 1908.

The well known and unique trade-mark of the National Phonograph Co.—a counterfeit presentment of the wizard, with his characteristic signature beneath—is established and recognized in every civilized country of the globe, and while the case in point concerns the marketing of another product, of which he was also the originator, the fact that the manufacturers thereof had, with the greatest assurance, appropriated Mr. Edison's name in order to falsify his position before the public, was very sensibly enjoined by a judicial order. The facts are immaterial to the discussion here, the principle of wrongful and illegal use being sufficient.

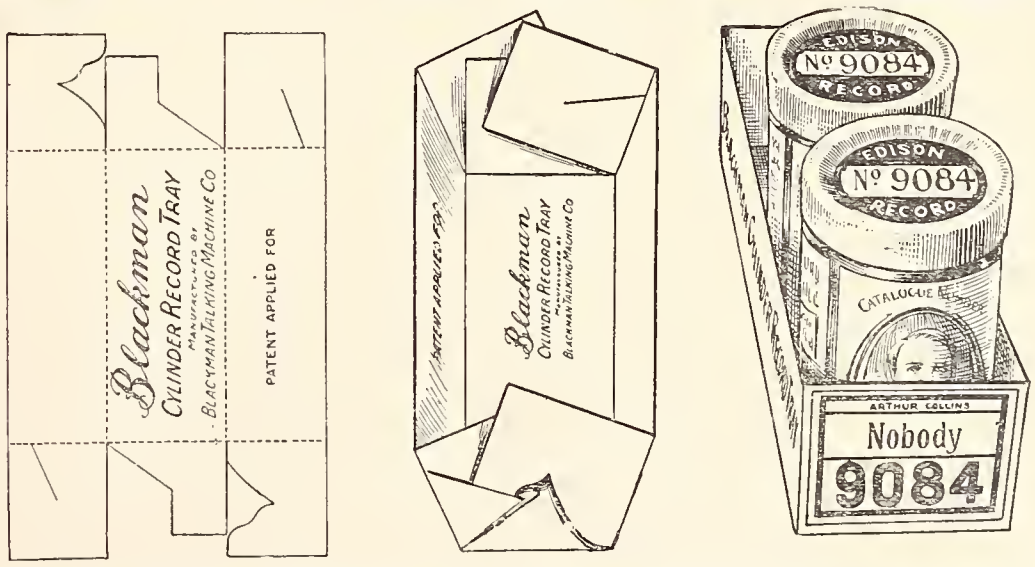
Strauge as it may appear, the manufacturers of talking machines in which the new designs and handsomely finished record cabinets are the attractive feature, are being hampered by the scarcity of workmen. That is to say, since the advent of the Victor Victrola, the disc machine seems to have taken on a new lease of life, a development scarcely calculated upon by its progenitors. Now the so-called "hornless" cabinet is on the top wave of success and the demand is difficult to meet because of a shortage in cabinet-makers capable of building this line of goods. One prominent manufacturer, who had originated an eutirely new creation in this description of cabinet, calculating he would have it ready for the fall trade, never got beyond the model in white, as no cabinet-ware manufacturer could accept his order and guarantee delivery until after the first of the year. The circumbient air was blue for a quarter of an hour after the receipt of this facer, but inquiries in all directions were of the same tenor. It is a curious state of affairs, to be sure, and the only satisfaction to be derived from its contemplation is that the country is not going to the demnition bowwows nor is it drifting on the rocks, as the professional financial croakers and conscienceless politicians would have every one believe.

Now a combination of music publishers and record makers is being gossiped about. A five million dollar corporation is to swing the leading publishers in line as a financial proposition, and then there is to be a recording laboratory caudal appendage, whose work is to be confined solely to reproducing exclusively the music of the houses "standing in." The promoter of the talking machine end of the scheme is wise to the patent situation, for he claims to have a record and a machine—disc, of course—outside of any known

THE BLACKMAN CYLINDER RECORD TRAY

(PATENT APPLIED FOR)

A RECORD TRAY WITH RECORD LABEL FOR LESS THAN ONE CENT



We ship them flat and they can be FOLDED into a STRONG TRAY in a few seconds, as shown above. This tray, with the RAPKE Record LABEL, makes a HANDSOME looking stock and a SYSTEM that you can't beat. Full particulars on request.

THE REGINA COMPANY

Factory and Main Office, RAHWAY, N. J.
Broadway and 17th St., N. Y. 259 Wabash Ave., Chicago

Manufacturers of Regina Music Boxes, Reginaphones, Reginapianos, Regina Sublima Pianos and Regina Chime Clocks.
Distributors of Victor Talking Machines and Edison Phonographs.

invention, and which the owners thereof "cannot touch." Well, under the circumstances, we will see what we will see when, at the time of supposed fruition, this wonderful combination of hitherto antagonistic elements comes to the front, if ever.

While the music trade are now rapidly waking up to the profit-earning possibilities of the talking machine proposition, the traveling salesmen who are watching this development with a shrewdness born of experience, declare the dealers in that trade do not handle the line as they should. The chief complaint made by these pioneers, who blaze the trail for their converts to follow, declare piano houses having talking machine departments seldom have skilled floor salesmen competent to create enthusiasm and hold the undivided attention of the prospective buyer. Granting they are familiar with the selling points of pianos or small goods, without talking machine training they are as "sounding brass or the tinkling of a cymbal." That is without a fair knowledge of the lines in stock the salesman does more harm than good in endeavoring to handle trade.

Too many music stores, the knights of the grip aver, are seemingly indifferent to this shortcoming. Evidently they believe anybody can put a record on, wind up the machine and let it go. If questions pertinent to the operation of the machine, care and handling of records and other inquiries appertaining thereto are made, the attendant is more frequently ignorant thereof than fully informed. Vague or generalizing replies tend to cool the ardor rather than arouse additional interest, and the sales lost in this way are said to be legion. Besides the amount involved in the purchase of a talking machine is considered small, as compared with that of a piano, hence the alleged indifference. There are exceptions to these strictures in the music trade, and they are rated by the road men as keen, bright business men, but who always know a good thing when they see it.

Conversing on the management of stock and the stimulation of sales a jobber whose energetic yet conservative, but well-nigh successful methods, are beginning to be recognized in the trade beyond the purview of his own immediate locality, remarked: "I do not depend upon my own resources by any manner of means, though I give the business unremitting study, watching every development with the hope of working out an improvement in some branch. I invite, not only my heads of departments, but the salesmen, and everybody else who has the handling of goods, for suggestions in the course of friendly and informal conversations. You would be surprised how much valuable material I have gleaned in this way. To be sure, a great deal of it is crude, but the kernel is there, and in the hands of one familiar with the trade their practical application is an easy matter. You know the old saying about trifles making perfection, but perfection is no trifle. Well, that is the theory I work upon, and it pays big."

The moving picture machine, a kindred line and a correlative of the trade, has finally reached the eminence, for the first time, it is believed, of figuring in a love romance. The writer of "The Scarabs," in the Saturday Evening Post, introduces the apparatus in an exceedingly clever manner; in fact, the crux of the story is embodied therein, the denouement being developed smoothly and plausibly. The talking machine, however, has done duty in many kinds of fiction, and has been faked by daily newspaper writers time out of mind. The so-called records made by machines in the next room when a diabolical plot is being hatched, and the subsequent revelation of the conspirators' machinations by reproducing the "conversations" in court is a travesty that everybody knowing anything about such goods laughs to scorn. The "brilliant" writer, on the other hand, thinks he has made a discovery. Under such circumstances a record could not be made in a thousand years.

The phonograph, of course, registers the voice, writes a Paris correspondent of the Pall Mall Gazette, but Dr. Marage, a medical practitioner here, has invented a curious instrument which, in a certain sense, takes a vocal photograph. When you sing to the instrument it does not sing back at you, as does the Edison apparatus, but it gives a legible transcript in dots and dashes. It is a sort of Morse telegram as well as a photograph. The doctor, indeed, has adapted his invention from a new telegraph instrument which is capable of transmitting 40,000 words a minute. By its means the music teacher can show ocularly to his pupil that he is singing out of tune. The line is blurred and irregular instead of following an even course such as would be the "Caruso line." The invention will be useful, the doctor thinks, in telephony. It will save disputes, as there will be a record of the conversation at either end, so that when the talker says "forks" the listener cannot afterward maintain that it was "spoons." The machine is as yet quite in the experimental stage, and the doctor makes no extravagant claims. At the same time it may prove a useful and admirable invention when a further development has taken place.

Another device for adapting a cylinder machine to the use of disc machines is being shown—a private view, as it were. The appliance is simplicity itself, and the jobbers who have examined and tested the "improvement" are rather inclined to favor its introduction. The first invention of the kind was regarded as too high priced and rather complicated; but its follower is made to sell at an attractive figure, with the adjusting mechanism simple in construction and positive in action. No part of the machine is disturbed, excepting the readjustment of the horn, and so far as cursory inspection would warrant the passing of judgment, the sound reproduction loses little if anything in the change from the round to the flat record. Another point urged in its favor is that the sale of disc records will be greatly enlarged were this device to prove successful when submitted to the wear, tear and unmerciful handling most talking machines are subjected to in ordinary usage by the public.

A GO-AHEAD "TALKER" CONCERN.

We present herewith a clever snapshot of the busy store of the Oliver Phonograph Co., of Newark, N. J. They have built up a fine business with the Victor and Edison line, and the picture itself tells progressiveness.

NATIONAL ASSOCIATION BY-LAWS.

A Strong Body of Officers Representing All Sections of the Country—The New By-Laws.

Talking machine men everywhere are interested in the new National Association of Talking Machine Jobbers. The executive committee of this new association is composed of good workers and men who are widely known and respected in the trade. The officers are: James F. Bowers, of Chicago, president; W. D. Andrews,

SECRETARY PERRY B. WHITSIT.

Syracuse, vice-president; Perry B. Whitsit, Columbus, secretary; Louis Buehn, Philadelphia, treasurer. The executive committee is composed of Lawrence McGreal, Cincinnati; C. V. Henkel, New York; C. W. Hickok, Toledo; W. E. Henry, Pittsburg, and E. H. Uhl, Chicago. It will be seen by this list that the East and West is well represented on the official roster of the association; the by-laws which are presented below should be closely read, as their perusal will explain fully the objects of the association.

BY-LAWS.

ARTICLE I. *Name*—This Association shall be known as the National Association of Talking Machine Jobbers.

ARTICLE II. *Object*—The object of the Association shall be the promotion of all subjects which appear to be for the betterment and improvement of the talking machine business.

ARTICLE III. *Location*—Chicago.

ARTICLE IV. *Officers*—The officers of the Association shall be a President, Vice-President, Secretary and Treasurer who, with five (5) members of the Association, shall constitute the Executive Committee of the Association, all of whom shall be elected by ballot for a term of one (1) year, or until their successors are duly elected and qualified.

ARTICLE V. *Annual Meeting*—The annual meeting of this Association shall take place on the third (3d) Monday of September of each year at a place to be designated by the Executive Committee.

ARTICLE VI. *Duties of Officers and Executive Committee*—Section 1. It shall be the duty of the President to preside at all meetings of the Association and Executive Committee. He may call special meetings at his discretion and shall call special meetings of the Executive Committee at the written request of three members.

Sec. 2. In the absence of the President, the Vice-President shall preside at all meetings and shall perform all other duties and be clothed with all the powers of the President. In the absence of both President and Vice-President from meetings of the Association, a majority vote of the members present at such meetings shall elect a presiding officer.

Sec. 3. The Secretary shall notify each member of the Executive Committee of all meetings, and each member of the Association of every meeting of the Association. He shall make and keep a true record of all meetings of the Executive Committee and of the Association. He shall issue all authorized notices to members, conduct the correspondence of the Association, and perform such other duties as shall be directed by the Executive Committee. He shall have general executive management of the Association, subject only to the direction of the President and Executive Committee. He shall collect all dues and assessments and all other moneys due to the Association, and shall pay the same over to the Treasurer to be deposited.

Sec. 4. The Treasurer shall be charged with funds of the Association and shall furnish such bond as the Executive Committee may require. All disbursements shall be made by him. Disbursements and payments shall be made by checks signed by the Treasurer after bills have been approved by the President. He shall keep a book of record of all receipts and disbursements, making a report to the Executive Committee at each regular meeting of the Executive Committee and the Association at its annual meeting.

ARTICLE VII. *Salaries and Expenses*—Section 1. The Secretary only shall be paid a salary, which shall be the sum of Three Hundred Dollars ($300.00) per annum, payable quarterly.

Sec. 2. The expenses of the members of the Executive Committee shall be paid out of the Association, and shall be limited to actual railroad transportation for such meetings of the Executive Committee as they attend, excepting the annual meeting.

Sec. 3. The cost of the Surety Bond of the Treasurer shall be paid out of the funds of the Association.

ARTICLE VIII. *Membership*—Section 1. Any person, firm or corporation in good standing engaged in the jobbing of talking machines may become a member of this Association. For the purposes of this Association a jobber shall be one generally recognized as such by the Executive Committee.

Sec. 2. Application for membership shall be made in writing to the Secretary, with remittance covering the amount of the semi-annual dues.

Sec. 3. All applications for membership shall be referred to the Executive Committee, who shall have power to elect.

Sec. 4. The election of new members shall be by ballot by the Executive Committee, and it shall be necessary for the election that the candidate shall receive the vote of two-thirds of the members of the Executive Committee.

Sec. 5. Each person, firm or corporation so elected on receiving notice of such election from the Secretary shall be entitled to the privileges and subject to the penalties of membership.

Sec. 6. Every member, whether individual, firm or corporation, shall be entitled to cast one vote in person or by proxy at the annual election, and on all questions on which members may vote.

ARTICLE IX. *Dues*—Section 1. The annual dues of this Association shall be Fifteen Dollars ($15.00) payable in advance, semi-annually, October 15th and April 15th.

Sec. 2. Any member in arrears sixty (60) days in the payment of dues shall forfeit all rights and privileges of membership.

ARTICLE X. *Order of Business*—(1) Calling of the Roll; (2) Reading of the Minutes of previous meeting; (3) Reports of Officers; (5) Reports of Standing Committees; (5) Reports of Special Committees; (6) Unfinished Business; (7) Election of Officers; (8) New Business; (9) Adjournment.

ARTICLE XI. These By-Laws may be revised or amended at any regular meeting of the Association, or at a special meeting called for that purpose, provided that notice of such revision or amendment has been sent to each member of the Association at least thirty (30) days before said meeting, and that such revision or amendment be passed by a two-thirds vote of the members in person or by proxy.

There will shortly be added to the by-laws a section devoted to the credit bureau established to post members on the standing of dealers.

THE

Hohner Harmonica Drumophone

The 20th Century Novelty

The latest Novelty on the market; just imported from Europe; a regular Hohner Harmonica with drum attachment; will please old and young. A whole band in itself. Anybody who can play a Harmonica has no difficulty in playing the Hohner Harmonica Drumophone.

OVER 100,000 SOLD DURING THE PAST YEAR

The drum which is attached to the Harmonica has a real skin head, same as is used in a regular snare drum. A very clever, patented device enables the player to accompany his music with a drum-like sound which will considerably increase the pleasure derived from an ordinary harmonica. It practically gives him two distinctly different instruments at the cost of one. In spite of this fact, the Drumophone is not in the least bulky and can easily be carried in the coat pocket. Each instrument is packed in a separate, handsome cardboard box.

The Drumophone is put up in a very attractive manner, with strong but simple mechanism, well made of first-class material at the lowest possible price, to enable rich and poor to get one of these highly entertaining instruments.

We have just closed a contract with the manufacturer for his entire output, for distribution in the United States, which places us in a position to offer these Drumophones at the exceptionally moderate prices as quoted below.

A RUN AROUND THE TRADE IN MICHIGAN.

General Conditions Excellent and Big Trade in Talking Machines Being Done With the Farming Community—The American Phonograph Co.'s Handsome Quarters—E. P. Ashton a Force for Good in the Trade—Grinnell Bros.' Go-Aheadedness—A Visit to Grand Rapids.

(Special to The Talking Machine World.)

Detroit, Mich., Oct. 10, 1907.

During the last two or three weeks I have personally visited many of the important cities of Michigan and have had an opportunity of discussing talking machine conditions with the leading talking machine men in this section. I find that the trade throughout this State is in excellent condition, and in the smaller towns big sales are being made to farmers. Everywhere the prospect is fine for a big fall and holiday trade.

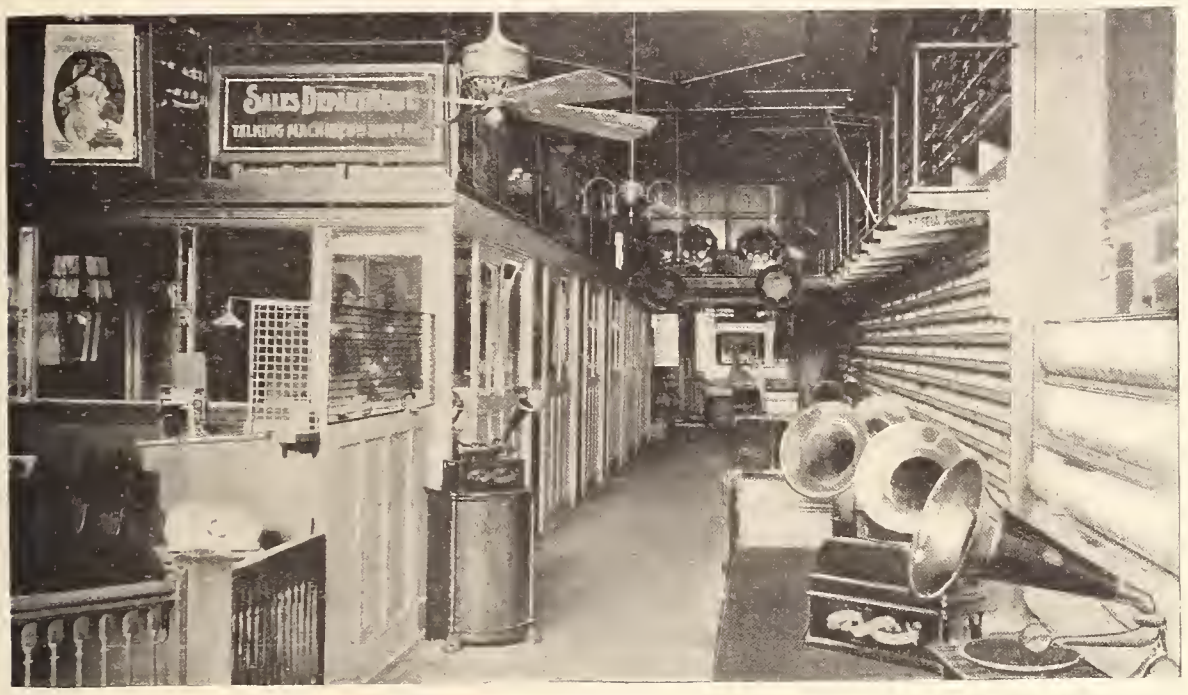
The two jobbing points of Michigan are Detroit and Grand Rapids. In this city the American Phonograph Co. and Grinnell Bros. carry on a big jobbing business in talking machines, the latter concern having branches in a number of the important cities in Michigan. In Grand Rapids Julius A. J. Friedrich is the only jobber in talking machines.

E. P. Ashton, of the American Phonograph Co., whose splendid establishment is at 106 Woodward avenue, is an enthusiastic National Association worker. He took a warm interest in the association's doings at Buffalo and believes that all jobbers should swing into line and become members of the national organization. He was president of the jobbers' association of the Middle States at the time it disbanded at Buffalo and has done splendid work for years along organization lines.

The American Phonograph Company have a splendid stock of talking machines. I had an opportunity of listening to a biophone attachment, which can be placed on an Edison machine and will accommodate a disc record. This is about the most surprising invention which I have seen recently in the talking machine trade. This is manufactured by the Devineau Co., of Cleveland, O., who also make an aluminum horn, which was illustrated in last month's World.

The branch of the Columbia Phonograph Co., which is at 242 Woodward avenue, is doing a fine fall trade. Manager Johns says that there is an excellent demand for high-grade instruments.

Max Strassburg, manager of the talking machine department of Grinnell Bros., attended the convention at Buffalo. Mr. Strassburg is an enthusiastic talking machine man, knows his business thoroughly and is developing a splendid trade in this department for the big Detroit house, which has branches scattered all over Michigan.



AMERICAN PHONOGRAPH CO.'S HANDSOME WAREROOMS.

E. P. ASHTON

Summing up the talking machine trade in this city and elsewhere in the State, I think that it portends great things for the fall.

E. Percy Ashton, manager and treasurer of the American Phonograph Co., Detroit, Mich., has developed a wonderful business in Detroit and adjoining territory. It will be seen by reference to the illustration of the American Phonograph Co.'s warerooms, shown on this page, that the company have quarters of more than usual attractiveness. Here a splendid retail trade is carried on, and a jobbing trade as well, which has assumed large proportions.

Mr. Ashton has confidence in the talking machine business; he has made a deep study of it, and is well satisfied with what his work has accomplished in the building up of the splendid business of the American Phonograph Co. He carries at all times a complete line of Edison goods, also equipments and supplies of all kinds, so that nearby dealers can be promptly supplied. A specialty is made of shipping orders immediately after they are received, and talking machine dealers may rest assured that their interests will be carefully looked out for by Mr. Ashton and his associates.

Now Listen:

Ye Royal Good Fellows

The Dealers of Michigan, Northern Ohio and Indiana

WE are "loaded to the brim" with the new equipment—the new Edison Outfit; we have full stocks of Records; we have coming several carloads of Record Cabinets direct from one of the leading makers of the country, and are in position to name you mighty attractive discounts. ¶From every way you look at or expect best trade results we are right at your elbow to "deliver the goods." The satisfaction in business is the money it brings; we can help you to this satisfaction. Send in the orders—we ship goods the same day.

American Phonograph Company

106 WOODWARD AVENUE, DETROIT

A PROGRESSIVE GRAND RAPIDS MAN

Is Julius A. J. Friedrich Who Has Built Up a Splendid Business in Victor, Columbia and Edison Machines in His City.

(Special to The Talking Machine World.)

Grand Rapids, Mich., Oct. 6, 1907.

This city is commonly termed the Metropolis of Western Michigan, and business here this fall in the talking machine line seems particularly good. The leading man in this section of the country in the talking machine, as well as musical line, is Julius A. J. Friedrich. He is distributing agent for the Victor, and in his retail line includes the Columbia and Edison machines as well. Mr. Friedrich, while chatting with The World, remarked that he looked forward to a very brisk season in the talking machine line. Mr. Friedrich is one of the oldest and most respected dealers in Michigan. He came to this country after having a very complete education in his native Germany, in 1868, and after a career of teaching he joined his brothers in a music store in this city in 1873. In 1884 through the sad death of one of his brothers, the entire business management fell

Talking Machine Dealers—Attention

¶ Grand Rapids is the Hub of Western Michigan and we carry at all times a splendid stock of Victor Talking Machines, Records and Supplies so that we can supply the needs of nearby dealers promptly. All orders sent in receive immediate attention, so that talking machine dealers of Michigan can rest assured that their orders will be promptly attended to when received by us.

JULIUS A. J. FRIEDRICH

VICTOR DISTRIBUTOR

30 and 32 Canal Street - Grand Rapids, Mich.

upon his shoulders. He has developed his business steadily, and now occupies an entire four-story building, and also an upper story of an adjoining building, and carries in stock such well-known pianos as Weber, A. B. Chase, Fischer, Franklin, Hobart M. Cable, and others. His line of sheet music and musical instruments is the largest in Western Michigan.

Mr. Friedrich has four sons, three of whom assist him in his business, and the other being connected with the Overton Co., manufacturers of piano stools and benches.

Dealers near Grand Rapids will find that Mr. Friedrich has a splendid stock of talking machines, so that he is in position to fill promptly wholesale orders.

TRADE NOTES FROM BALTIMORE.

Business Shows Steady Uplift in Various Directions—Machines Being Used in Public Places With Excellent Effect—Sanders & Stayman Co. Become Columbia Jobbers—Other Comments of Interest.

(Special to The Talking Machine World.)

Baltimore, Md., Oct. 7, 1907.

The talking machine business in this city continues to improve more and more each mouth, and the month of September has not proved any exception to this encouraging condition of the trade. The purchasers are not confined to the members of private families, but the machines are being used with good effect in public, both as a means of advertising certaiu retail trades and, at the same time, for the purpose of entertaining customers. This is particularly the case at the latest and most up-to-date bootblacking establishments throughout the city. The machines are not kept in continual motion every moment of the day, so that they might in time become a nuisance to the business people and residents in the neighborhood, but are played only when customers are having their shoes shined. The fact that records of the latest popular airs and selections from the various high-class operas are used almost exclusively in these places makes it a pleasure for the customers to patronize the parlors where these machines are used, while, if the customers are compelled to wait a while in consequence of a rush, the time does not drag, but proves enjoyable while the music plays.

The scheme of the bootblacks has become so popular that other places have put it into execution. Lunch rooms, for instance, make the noon hour of their patrons pleasing by having this particular kind of music while the customers eat their sandwiches and drink their coffee or milk. There have also been several public amusement parlors open, in addition to those already going, where the very latest selections are played on the Edison records.

These particular incidents have tended to make the talking machines exceedingly popular and prove an excellent advertisement, for in many cases the hearers become convinced of how cheap it is to have a musical instrument for the entertainment of friends or for their own entertainment at home instead of going elsewhere to seek their enjoyment.

One of the most important announcements in connection with the talking machine trade in this city is that the Sanders & Stayman Co., of this city, intend to take up the agency of the Columbia machine in Baltimore and Washington. The company, of which G. Wright Nicols is presideut, have made rapid strides since they have added the talking machine feature to their large piano business. The success of the machines has been such that the firm have been compelled to make several alterations and additions to their salesrooms for the purpose of making room for the proper display of the machines and the comfort of customers. In connection with the trade during September Mr. Nicols says that the sales have increased, and he has every reason to believe that the talking machines will become even more popular than ever during the coming winter. It is expected that George A. Gustin, the present agent of the Columbia machine, will close out within a week or two and turn the agency over to the Sanders & Stayman Co. by that time.

The Victors continue to hold their own for popularity. Messrs. H. R. Eisenbrandt & Sons report that the trade for the month of September was excellent and prospects are for a great year for the machines. Many sales were made during the past week, while records of the latest songs have been in great demand.

Similar reports are made by members of the firm of E. F. Droop & Sons Co., of which Joseph A. Grottendick is manager, who handle the Edison and Victor machines. A number of the machines have been disposed of during the past month, as well as have records of operas and popular selections.

LATEST COLUMBIA WINNERS.

The rivalry among the retail stores of the Columbia Phonograph Co. in Greater New York to win cash prizes is becoming quite keen of late, and the company officials are pleased to report that as a result of the system the volume of business for the past two months has increased to a round figure over a year ago. Cash prizes are awarded to salesmen, collectors and managers the first of every month, and each employe looks forward to each date with considerable interest. For September, based on the largest volume of business, also for an increase over August, G. M. Stearns, of the Grand street store, in Brooklyn, captured both first and second prizes. S. Halpin, salesman at the New York office, won first prize on sales, and F. W. Walker, collector, for the best record for the month.

The G. A. White Piano Co., Fairbury, Neb., attracted much interest to their store recently by a unique method of furnishing talking machine music to the public. The contrivance consisted of a large horn hung in front of the store. To this horn was attached a telephone receiver and from this receiver telephone wires ran back into the store and attached to a transmitter at the phonograph. When the instrument played the sound was carried to the large horn in front of the store by means of a fifteen-cell battery. It was a clever advertisement and attracted a large number of people who were interested in the novelty.

THE COPYRIGHT QUESTION

Discussed from the English Standpoint by a Writer in Truth—This Review Is Timely in View of the Agitation in This Country.

An important and difficult question which has long been engaging the attention of those immediately concerned, and of which a good deal more is likely to be heard in the near future, is that concerning the relations of the owners of musical copyright on the one hand, and the various talking machine and piano player companies on the other, who, as the law stands at present, are enabled to reproduce their works to any extent with perfect freedom. By general admission this state of affairs is exceedingly unsatisfactory. Not only the composers and publishers, but also the talking machine and piano player companies themselves are beginning to recognize this, and I believe it is a fact that they would willingly come to an equitable understanding if such could be arrived at.

Unfortunately, as matters stand, even with the best intentions on both sides, such an arrangement is hardly possible. As those who have followed the question will be aware, the matter is governed at present, so far as this country is concerned, by the copyright act of 1842, as interpreted in the case of Boosey against Whight. In that case it was held, after due consideration, that the perforated rolls employed in the piano player were protected by the well-known article of the Berne Convention exempting "mechanical musical instruments" from the operation of the ordinary copyright law.

The clause in question of the Berne convention was, of course, never intended originally to apply to such things as piano players and talking machines, which had not then been thought of, but was inserted at the instance of the Swiss manufacturers of musical boxes, musical clocks, and the like; and, such being the case, it was held in the court below that the more modern contrivances were not protected by the clause. On appeal, however, this judgment was reversed by Justice Stirling, and his decision has governed the matter ever since. In the opinion of many lawyers there was good reason for thinking that if the case had been taken to the House of Lords this judgment would have been upset in turn.

Boosey & Co., music publishers, however, did not adopt that heroic course, and so Justice Stirling's judgment still holds. Only a few months ago a similar action, which raised the same point (Newmark against the National Phonograph Co., Ltd., and the Edison Manufacturing Co., Ltd.), was brought by a music-hall singer and song-writer, who maintained that the reproduction of one of his songs constituted an infringement of his copyright; but Boosey against Whight was promptly cited against him, and he lost the day. Meauwhile the piano player and talking machine industry has been steadily growing, until to-day it has attained enormous dimensions, the whole business having been built up on the basis of free reproduction of the most popular copyright music of the day.

The law being such as it is, the companies can hardly be blamed, since, as I have pointed out already, it is a paradoxical feature of the situation that, even if they desired to do so, it is impossible for the companies and the copyright owners to come to terms while the law remains in its present condition. For suppose a talking machine company were willing to recognize the claims of the copyright owners whose music it reproduced, by paying royalties thereon, or in some other way, there would be nothing whatever to prevent any rival from reproducing the same works without fee or license, and this being the case, any sort of understanding or arrangement is naturally out of the question.

The only question is how to terminate this undesirable state of things, which, it may be noted, has within recent years engaged the attention of the lawyers all over Europe, and also in America. Various plans have been suggested. Some have proposed an attempt to get the Boosey against Whight decision reversed. More recently the notion has been put forward that the publishers could proceed against the companies under the copyright act of 1902, aimed, it will be remembered, at the suppression of street piracy. The argument would be that this act provides for the seizure and destruction of "pirated copies" of copyright musical works, and the suggestion is that though it proved, as everyone knows, quite ineffective to suppress the particular form of piracy at which it was aimed, it might conceivably be held to cover the case of phonographs and piano players. It is doubtful, however, if the courts would hold that such forms of infringement were covered by the act, and it is probable that fresh legislation will be required eventually.

As to the precise form which such legislation should take, this would naturally be a matter for negotiation, though there seems no reason why an understanding which would give satisfaction all round should not be readily arrived at. So far as the talking machine companies are concerned, it is understood that they would be perfectly willing to further such legislation, and to pay royalties to the copyright owners, though they would probably oppose any suggestion to give the composers or publishers what might be called exclusive dealing powers in this matter.

That is to say, they take the view that the reproducing companies should have the right of universal access to all published music on a fixed royalty basis, so that it should not be in the power of composers or publishers to enter into exclusive arrangements with any single firm after the manner which has already been adopted in many cases on the continent. Another point which the companies make is that they in their turn should be protected against the unauthorized reproduction of their records by rival firms. As it is, they appear to have no redress, or none of a very ready character, against this particular form of piracy. Both from the composers' and the reproducing companies' standpoint, therefore, it is evident that the existing law stands decidedly in need of amendment.—Truth, London, Eng.

NEW HAVEN, CONN.

THE COLUMBIA SYMPHONY GRAND

The Name by Which the Much Admired Columbia Product Is Designated, Reflects Great Credit Upon the Originality and Resourcefulness of the Manufacturers.

It is at times difficult to convey in a photographic reproduction an accurate idea of a manufactured product, and the illustration shown herewith does not do full justice to the new Symphony Grand graphophone.

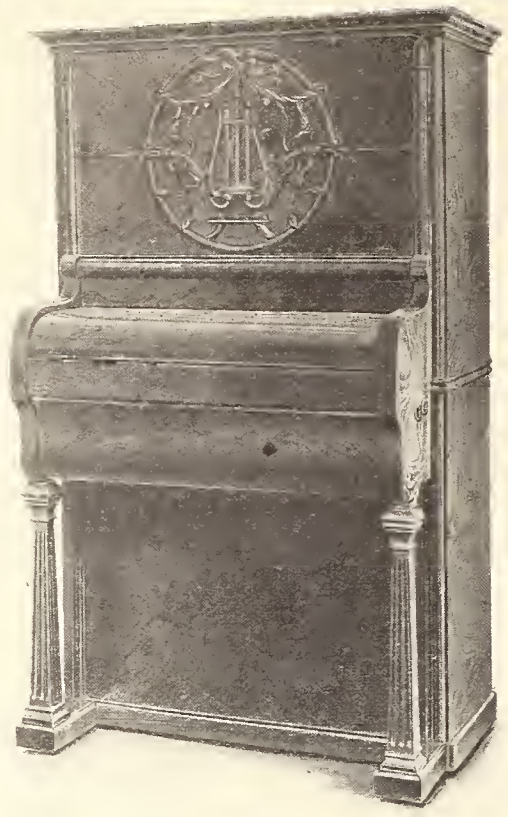
It will be seen, however, that its lines are more than ordinarily graceful and will at once appeal to the aesthetic tastes of purchasers. It is encased in carefully selected mahogany, and throughout the closest attention has been paid to detail work.

If the illustration showing this Columbia Symphony is inadequate a mere word description falls far short of conveying to the reader a comprehensive idea of its musical possibilities. Its splendid musical attributes have been warmly praised by critics who have been charmed with its marvelous reproductive powers.

The name Symphony Grand is indeed an appropriate one as it is a talking machine with grand environments.

Records are removed and inserted by merely opening the hinged lid in front, and the racks for records are so situated that the doors, even when wide open, cannot disclose the record racks. The top of the cabinet is fixed, permitting of its use as a shelf for bric-a-brac. The sound is led up into the upper part of the cabinet through the famous Columbia aluminum tone-arm. In the Symphony Grand it is fitted with a dolcer attachment, so that the volume of sound can be controlled at will.

The sound waves are thrown out through the richly carved, silk-backed grill, with ornaments on front of the case. In this upper part of the cabinet is built an acoustically perfect sound projector, which diffuses the sound from the cabinet without deterioration and with wonderful sweetness and purity of tone. The Symphony



COLUMBIA SYMPHONY GRAND.

Grand graphophone is equipped with a motor for revolving the record at an absolutely uniform rate of speed, and which will play a dozen selections at a single winding.

This new creation retails at two hundred dollars, and though only recently announced it has created widespread interest, and veteran talking machine men pronounce it one of the greatest successes of the year.

"MADE IN THE UNITED STATES."

That the fame of the United States manufacturer is on the increase in the talking machine accessory department as well as every other line there is not the least doubt.

When, in competition with English and German manufacturers, the product of a United States manufacturer is sold in England, Scotland, Ireland, Germany, Russia, Norway, Egypt, India, Japan, Mexico, Central and South America, as well as in Cuba and Canada, it becomes evident "made in the United States" is a mark that means more and more each year for superiority of quality.

This tells the experience of Petmecky, of 346 Broadway, New York, patentee and manufacturer of improved Petmecky Multitone needles.

The large department store of Ceasar Misch, in Bridgeport, Conn., has added a new department devoted exclusively to talking machines. The Edison line will be handled.

1855—1906

All our cases are made from select lumber, covered with a genuine book cloth, imitation of seal grain leather. An inside flange, which is cut from the solid wood, forming the top, thus giving strength and keeping out dust and dampness, is a point I claim exclusive to our case. Cylinders are made on especially constructed machines and are correct size and uniform diameter. By my special method of fastening in, they are absolutely secure.

TRADE NOTES FROM GOLDEN GATE.

Sherman, Clay & Co. to Move Wholesale Department to Their New Building—Allen Fibre Horn Grows in Popularity—R. S. Smith to Open in Seattle—Kohler & Chase's Expansive Business—Ambassador McCarty's Good Report—Exton Co. to Handle Talkers.

(Special to The Talking Machine World.)

San Francisco, Cal., Oct. 3, 1907.

Sherman, Clay & Co. will soon move the wholesale department of their talking machine business into their new building, where the salesroom will be on the third floor. The wholesale stock, however will be carried in the basement, which will afford room for a large quantity of goods.

The Columbia Phonograph Co.'s baseball team recently played a game with Sherman, Clay & Co.'s team, beating them by a score of 22 to 21. A return game was played on September 29. The Columbia boys are trying to get up a baseball league among the various music houses in San Francisco and around the Bay.

Byron Mauzy reports an astonishing increase in the volume of business in his talking machine department during the past few weeks. The Eastern advertising he has been doing of late on the Allen fibre horn is said to have been productive of most gratifying results, and many inquiries have been received on the strength of it. The new jobbing catalog has just been issued.

The Columbia Phonograph Co. are to add a number of outside men to the force of the retail store at Van Ness avenue and O'Farrell street, in charge of P. H. Beck.

Mr. McCarty, of the talking machine department of Sherman, Clay & Co., was with Mr. Clay on his recent trip to the north, and has just returned. He reports a flourishing business in all the branch stores throughout the Pacific Northwest. Spokane is to be made a new distributing point for Victor goods, and a $30,000 stock will be carried there, to supply the trade in Idaho, eastern Washington and Montana. These territories will be covered by travelers with headquarters at Spokane, and the whole distributing business of that section will be in charge of G. Russel Guffy, who has been transferred from the Portland store.

R. S. Smith, formerly manager for the Wiley B. Allen Co. in Oakland, Cal., will open within the next few days in Seattle, Wash., with a complete stock of talking machine goods. He has put in large orders for Victor lines with Sherman, Clay & Co.

The wholesale talking machine business of Kohler & Chase is done from both Oakland and Seattle at which places they carry a full line of Edison, Star and Zonophone goods, as well as a general line of supplies for the various makes. The Oakland house occupies a two-story building at 917-921 Wood street, in charge of E. N. Clintsman, and 250,000 records are carried in stock at this store. The Seattle house is located at 708-710 Pike street, with H. P. Rothermel as manager. In addition to these wholesale centers Kohler & Chase conduct two stores in San Francisco, a retail store in Oakland and retail stores in Seattle and Sacramento.

The Exton Music Co. recently put in a stock of Star talking machines purchased through Henry Pottegetter, with the talking machine department of Kohler & Chase, San Francisco. The talking machine interests of the Exton Music Co., under the active management of E. F. Delano, has made rapid strides and improved considerably. An elaborate campaign of advancement is planned for fall, Mr. Delano being ambitious to make the department one of the most complete in the city. The company, by the way, are doing an excellent business with the Edison line, having a separate room set apart for displaying those goods.

CALL FOR MAESTROPHONE SPECIALTIES.

The demand for Maestrophone specialties continues to increase throughout the trade. A. C. Mestraud, their clever inventor, is now making an extended business trip through the West, the results from which have been highly satisfactory. The new reproducers especially are looked upon by those who handle them as a marked development in many ways, and while just at present this company's outfit is somewhat limited enlargements are now under way which will put them in a position to guarantee prompt shipments.

ARNOLD SOMLYO HAS A "STAR."

Arnold Somlyo, the eastern representative of the Baldwin Piano Co., Cincinnati, O., and also widely known in musical circles for his intimate acquaintance with operatic stars and high-grade professional singers, has a Hungarian soprano on his staff—a new arrival—with a voice of wonderful flexibility and compass, which he is desirous of having reproduced on records. The Columbia Record Co., General, have been tendered the first opportunity for a test, and Mr. Sombyo is sanguine thousands of the records of this new nightingale—with an established European reputation, however—can be sold in this country, where he believes at least 10,000,000 Hungarians now have their permanent homes.

PRICE LISTS IN SPANISH.

For their export department the Talking Machine Supply Co., New York, have issued their first Spanish price list—"Lista de Precios Netro de Partes de Represto y Accessorirs para Maquimas Parlantes." It is a brief, yet comprehensive, compendium of the various essentials and requisites used in connection with the standard makes of all American talking machines. The company are especially strong on needles, their brands, including "Exhibition," "Star," "Odeon," "Loudtone," "Lightone," "Opera," "Spear," "Auxetone," "Klingsor" and "Dauer." They import 5,000,000 needles weekly from their German factory.

Daniel J. Brennan has opened a complete talking machine store on Main street, Avoca, Pa.

TRADE HAPPENINGS IN ENGLAND.

Business Has Been Quiet and This Is Attributed to the Unusually Fine September Weather—Just the Time, However, to Emphasize Publicity Work—New Cylinder Record Introduced to the Trade at Nine Pence—Disc Records Making Splendid Headway—New Plant of the Gramophone Co.—Russell Huntings' Views—Edison Bell Exchange System With Private Owners—A Letter to the Trade The Premier Co.'s Plans—Freight Shipments—Columbia Publicity—Odeon Concerts in Aid of Lord Mayer's Cripples' Fund—Hawthorne & Sheble Line in London—Progressive Young Firm—National Phonograph Co.'s New Plant—Interesting Gaelic Records.

(Special to The Talking Machine World.)

London, E. C., Oct. 6, 1907.

My last report breathed rather of good things to come than otherwise, but I am sorry to say that trade conditions of the last few weeks have been very bad indeed. Everybody is complaining, and the general consensus of opinion puts it down to the fine weather we have had this September. The cycle factor cries the loudest. He says the bad summer adversely affected cycle sales, and now when the talking machine comes along, instead of being worse, the weather has blossomed forth into the hottest September experienced for some years past. There is not the slightest doubt that this is the reason, but holidays are practically over now, and the people have returned prepared to consider any good amusement proposition for the winter. Few proposals have been issued in this direction, True, the National, Odeon and Graphophone companies are doing good publicity work, but where are all the others? The only time—if there is a time—to hang up on advertising schemes, is when business is good, not when things are quiet—for that is just the opportunity to stimulate trade, and make a good effort to wake up sleepy buyers.

Usually the most backward, cycle factors have now made their season's arrangements for handling talking machine goods. I would urge a word of caution in the matter of distribution. Cycle factors are too apt to issue goods on long credit indiscriminately. Last year there was an enormous crop of failures among cycle dealers, who, in a good many cases, are here to-day and gone to-morrow. If factors exercise more discretion as to the class of man they place goods with, and reduce credit terms, they will undoubtedly feel and appreciate the good result which will surely be apparent in the profit and loss account at the end of the season.

I would like here to make reference to the new cylinder record which has been introduced to the English market at ninepence. It is a good record and the initial venture of the Premier Co. deserves credit as an enterprise; but it is going to considerably upset the already very unsettled market. Quick to realize the changed order of things, the Edison Bell Co. have issued a circular, particulars of which will be found elsewhere, announcing a very liberal exchange system for all old or unsalable stock which practically brings the record down to the new price level—ninepence, with a greater profit for the dealers. Some litigation will also result from the same source. Stanley Kirkby, the well-known artist, has made records for the "Clarion" record, which the Edison Bell Co. claim is a breach of contract, as they consider he is under exclusive engagement to them. The matter cannot be fully discussed at the present time, but in my next report I shall no doubt have further to say in regard to this, and certain other actions which are in view.

Disc records continue to make surprising headway, and in the matter of actual sales it is no exaggeration to say that they now exceed the cylinder issues.

New Line of Disc Machines.

Constantine Craies & Co. have their line of new disc machines now ready, and lists will be forwarded dealers upon application. The machines are solidly made of the best quality material, and are of British manufacture. This company also supply various sundries and talking machine adjuncts besides factoring all makes of disc records.

Completing Their Factory.

The Gramophone & Typewriter Co. are pushing ahead in the completion of their new factory at Hayes. Two sets of six-cylinder gas engines have been recently installed, together with other machinery, and it is expected the whole plant will soon be completed and ready for business.

Mr. Rauth's Trip to the Continent.

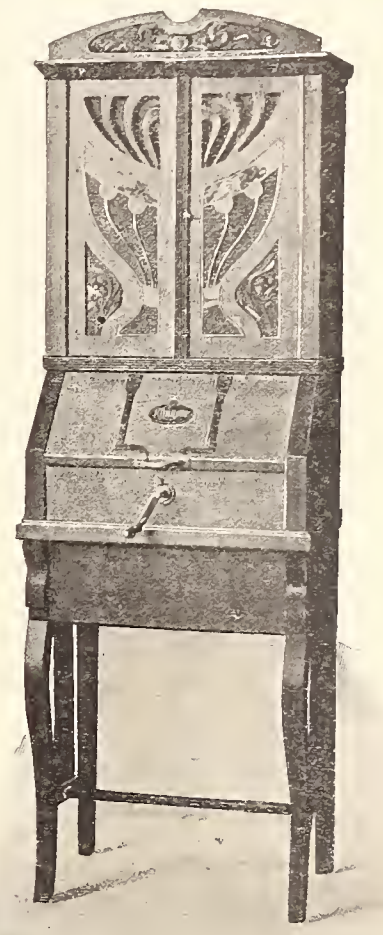
Fr. Rauth recently made an extended business trip to the continent, and while there his many trade friends will be sorry to hear that he was unfortunately laid up with illness for over a month. He is now making good progress towards convalescence. Mr. Rauth announces a change of address from Christopher street to Lloyd's Chambers, Worship street, Finsbury, E. C.

Making Greek and Turkish Records.

Report comes to hand from the International Record Publishing Co. that recording experts have been sent to Athens to make Greek and Turkish records. All the best singers are under contract, notably Moroates, Floraones and Vebiarili, among others, and a splendid repertoire is promised. These records will be handled by the sole selling agents, Constantine Craies & Co., Bunhill Row, London.

Klingsor Cabinet Very Popular.

The Klingsor cabinet machine is gaining remarkable popularity in the United Kingdom, and is the subject of praise on all hands. In conversation, Mr. Maurice stated that he is shortly visiting America and would be willing at all



A HANDSOME KLINGSOR CABINET.

times to receive particulars of novelties, with a view to considering their chances in the English market. Messrs. H. Lange's successors are more widely known in pianoforte circles here and abroad, having been established as long ago as 1854.

Russell Hunting Co. on Future Prospects.

The Russell Hunting Co. are sanguine as to future prospects, and although the fine weather has somewhat upset the early opening expected for this season, judging by orders received, said

The International Favorite Record Co., Ltd.

45 City Road, LONDON, E. C., ENGLAND (Wires: Vischerite, London)
and 213 Deansgate, MANCHESTER, ENGLAND

FROM OUR LONDON HEADQUARTERS—(Continued.)

Mr. Manson, a remarkably good season is in store. Among a good list for October I notice farther records of Gilbert and Sullivan's famous opera, "H. M. S. Pinafore," and with those titles already issued these will complete the entire opera. A large body of operatic artists was specially trained for several weeks, with the result that both solos and choruses from this celebrated work are excellently reproduced, and in spite of the enormous expense entailed the Russell Hunting Record Co. have decided not to make any advance on their usual price of one shilling. A handsome souvenir descriptive list of all the titles in this production has been issued, and in which there appears photos of some of the artistes who have contributed, together with a brief but interesting resume of the plot in the "H. M. S. Pinafore" opera.

Barnett Samuel & Sons' New Catalog.

Messrs. Barnett Samuel & Sons have just issued their new catalog for this season. It is beautifully produced, and no expense or trouble has been spared to make it of practical use to the dealer in every way. It contains illustrations and full particulars of every reputable phonograph, disc machine, cabinets, accessories and parts of all kinds. Special attention is called to the Dulcephone machines, needles, albums and other specialties; all of which are reasonably priced goods of the best quality.

Edison Bell Co.'s Systematic Publicity.

The Edison Bell Co. are great believers in systematic publicity, their latest scheme consists of an enlarged record box—the illustration shows the comparison—which is being mailed to dealers for show window or sign purposes. The idea has caught on and the demand is far-and-away ahead of supplies.

Exchange System With Private Owners.

In the following circular the Edison Bell Co. introduce an exchange system with private own-

ers. They say: "The Edison Bell leads the way and now takes in exchange all your old records in part payment for new E. B. gold moulded Xtrlongs. Look up your collection—pick out the worn-out—the cracked—and those you want to get rid of. Take them to an Edison Bell dealer and he will allow you threepence each in exchange for the same number of new modern up-to-date Edison Bell records. This is equivalent to a reduction in the price of the best shilling record in the world to ninepence by your returning the material when the record engraved upon it is no longer serviceable to you—you then have had all your value out of it—your shillingsworth in fact—we ask you to return the useless cylinder—just as you would an empty case after using the contents. In this case it is the wax material alone which is of value. So it does not matter if the cylinder is cracked or broken, so long as you bring all the pieces. To render this offer extensively serviceable we will accept any standard make of 'wax' record, brown or black. Private users may now look out all their 'worn-outs' and those they want to 'clear out,' renew their collection with latest subjects, and in future they can always keep right up-to-date at ninepence per record by applying to any Edison Bell dealer."

Edison Bell Co.'s Letter to Dealers.

The Edison Bell Co. have issued to phonograph dealers the following concerning their system of exchange with the public:

"The enclosed circular 'speaks for itself,' and from it you will see that we propose to open up a great avenue of business, now closed, because phonograph owners, even enthusiasts, are 'full up' with records—will not throw any away—and have for a long time agitated for some means of disposing of those they have worn out or become tired of. It only remains to explain to the dealer how we propose to deal with him. The actual transfer of the old material to us and the records in return to the dealer must be between the dealer and ourselves without the factor's intervention, as it would entail too much trouble on the factor to be bothered with it, besides increasing the cost by too much handling. But the transaction will be done through the factor you name. He will give you credit for the returned material, and charge the records to your account, there will, therefore, be no interference whatever between you and your factor in respect to your account. We shall provide forms giving all particulars and instructions as to despatch, etc.

ADDRESS

EDISON BELL, 39 Charing Cross Road, London, England

FROM OUR LONDON HEADQUARTERS—(Continued).

"We will allow you ninepence per pound for the old material, which will be about one and one-half pence per record, you must be careful that each record offered in exchange is complete, if broken you want all the pieces. You thus receive ten and one-half pence per record, Standard or Xtrlong, and at the same time oblige your customers. If you will keep the old material until you get ten pounds or over, we will pay the carriage, any less quantity you must prepay it. For every pound of old material returned you must at the same time order six new Edison Bell records to replace the six you have sold to the public as represented by the returned material. This does not increase your stock, but only restores that you have sold.

"None but Edison Bell records may be supplied under these conditions, any attempt to obtain credit for material otherwise obtained will be a breach of faith, and we shall refuse to give credit for such material and decline to allow the sender any future participation in the system, but any make of wax records may be accepted from the public. Customers making exchanges are likely to make further purchases to the dealer's advantage and we trust he will do all he can to further the Edison Bell business. We have a desire to assist the dealer in every possible way in meetiug this frequently expressed want, at the same time he will see that his participation is entirely voluntary. We shall gladly receive expressions of dealers' opinions as to their anticipation of the effect of this new departure in the business."

The Dictaphone Grows in Popularity.

By the constant receipt of orders for the Dictaphone the Columbia Co. are more than ever convinced and satisfied with the value of their exhibit at the recent business exhibition at Olympia. Mr. Winston Churchill and Pearson's Engineering Co. have placed orders, and even the Postmaster-General has fallen under the influence of the very necessary Dictaphone. Its ability cannot be denied by the meanest intelligence; business firms all over the world use that inanimate tube—through which their words are engraved upon the revolving cylinder, which in its turu speaks to the stenographer. Wonderful as it all is, the Columbia Co. have always some little improvement under test, and it is safe to predict that we shall see increased advantages as time goes on. In the course of conversation Mr. Shields mentioned that the disc record sales were on the increase each week, and the double-sided record had created quite a stir in talking machine circles; the demand being much in advance of deliveries.

Long Distance Piano Player.

Napoleon Bird, the champion long distance piano player, has been challenged by David Monks, of Bolton, who says he is prepared to play from memory against Bird or auyone else for £100 a side. Several interviews have taken place between the two players but no definite decision has been come to.

A New Cylinder Record—at Ninepence!

It has come—has the nimble ninepence—or rather, a high-grade cylinder at that price. As announced in our last issue, the Premier Manufacturing Co. has been formed to exploit the "Clarion" record at a popular price. The first list of twelve titles contains nine vocal records (with orchestral accompaniment) by such good talent as Stanley Kirkby, Frank Miller, Vincent Hards, Miss Eva Terry, Jack Stewart, etc., and other records by the Premier Concert Orchestra, and Military Band. Those records which I have heard embody a natural purity of tone quality and distinctness in voice articulation, and I must confess I had not expected to find sucb good all-round quality at the price of ninepence. The record is well finished, is made the full length of the mandrel, and, I understand, its constituent parts differ somewhat from others, and, in consequence, the "Clarion" is a long-life record. In the course of an interview, W. T. Forse stated they have an up-to-date factory at Wandsworth, with a floor space of over forty thousand square feet. The plant is already in full swing, but owing to the very heavy demand another com lete set of machinery is in course of erection, so that in a short while they will be in a position to double their output. The Premier organization consists of George Ison, musical director; C. R. Johnstone, recording expert; G. C. Hallet, sales manager; W. T. Forse, general manager, and others equally well known in the trade. The distribution policy will be along the best lines. The number of factors and dealers will be limited, and no overlapping will be allowed in any one district, so that there is no possible excuse for anybody cutting prices. Should a dealer indulge in this practice he will be no longer allowed to handle the Clarion record, and will have the mortification of seeing his competitor on the list in his place. Such is good policy, and the Premier Co. will have the thanks of the whole trade in their efforts to introduce this industry on a more staple basis.

The New Australian Tariff.

The exact particulars and terms of the new Australian tariff have now been published. Twenty per cent. on all kinds of talking machines and adjuncts is the rate fixed for Britain, while other countries are taxed up to 30 per cent.

The Board of Trade Returns.

Compared with July last year, the Board of Trade returns issued recently, show an increase of over £7,000,000 in British exports. For the first time in the history of British trade exports including re-exports exceed for seven months the £300,000,000 mark.

New Bill of Lading.

The United States trunk railway lines have agreed to a new form of bill of lading, which holds the initial railway and its connections liable for a shipment from British ports, from the time it is delivered to the company until

The "KLINGSOR" Cabinet Disc Machine

No. 165.

The novelty and advantage over all other Talking Machines lies in the following points in construction: (1) No unsightly Horns; (2) a handsome upright Cabinet and Machine combined; (3) perfect running, and complete lack of scrape and noise, as well as the following principal features:

The combination and use of the stringed piano wires and double sound board. By this scientific invention the instrument loses all harsh and metallic tone, and the sound waves being thrown on the wires, the volume is doubled without the usual corresponding harshness. There can be no doubt that this "KLINGSOR" Machine will be as great a commercial as it is a scientific success.

The Cabinet can be delivered in any wood and made to any size or design, to fit any space.

The Franco-American Exhibition.

Several pianoforte manufacturers have secured space at the Franco-British Exhibition to be opened next May at Shepherds Bush, but I have not yet heard of any talking machine manufacturer who will be represented. It is to be hoped that traders in our industry will consider the matter.

Columbia Phonograph Co.'s Publicity.

The Columbia Phonograph Co. have just issued two very attractive and useful catalogs dealing with their machines and well known symphonic cylinder records. The latter is classified in numerical and alphabetical order, and contains a complete list of titles published up to and including October, 1907, in Symphonic, Premier and Premier Classics. The machine catalog is illustrated with all cylinder and disc types the company manufacture. Dr. Marconi's association is emphasized, and it is expected, in his capacity as consulting physicist and experimentalist to the Columbia Co., he will make some important improvements in further perfecting both records and machines. As usual with the Columbia productions the two catalogs are well gotten-up, and Mr. Shields merits all praise for the attention and care given thereto.

Beka Record Sales Have Doubled.

A very satisfactory condition of trade exists in Beka records and Carl Lindstrom disc machines. Against last, this month's Beka sales are practically double, said Mr. Rühl, and the cycle factor who is usually the last to fix up the season's supplies has now completed his arrangements and settled down to business. Out of the many factors in the United Kingdom, with the exception of one or two, all handle C. Lindstrom machines, and if for no other reason, from this very encouraging report, one can form a good opinion of the unusual proportions trade has reached in this direction.

Simpson & Co. in New Quarters.

Simpson & Co. are now comfortably settled in their new quarters, 1A New Inn Yard, Great Eastern street.

The first of the series of twenty Odeon concerts in aid of the Lord Mayor's Cripples' Fund, and under the patronage of the Lord Mayor, was given at the Holborn Town Hall, on Friday, September 6. Sir John Kirk, the secretary of the Ragged School Union, presided, and inaugurated the concerts in a short speech. Sir John Kirk, it may be mentioned, was connected with the Lord Mayor in the administration of the Cripples' Fund from its inception, notably with the distribution of Christmas hampers to the cripples. In the special record made by the Lord Mayor and recited by the Discodeon talking machine during the evening, this fact was touched upon, so that the fact of Sir John Kirk acting as chairman proved a decidedly happy thought. The record, which was used on an instrument without any adventitious aid, was singularly clear, and it was stated that, considering the Lord Mayor to be inexperienced in the art of speaking for talking machines, the record was exceptionally successful.

Among the artists who appeared during the evening were: Watkin Mills, Frank Arthur and Miss Ada Florence, whose songs were repeated, after they had sung them, by Odeon records played on the instrument. This severe test occasioned much interest from the audience, who by their hearty response, were evidently well pleased with the lifelike reproductions of the Odeon records. Other artists who generously contributed to the good cause were: Mabel Manson, Olive Venning, Bernard Turner, W. Donovan, and others. A number of records by Kubelik, Bonci, Madame Destinn, the Grenadier Guards' Band, were included among the entertainment, and evidently much enjoyed.

The audience was an appreciative one, and this successful opening of the series of Odeon concerts augurs well for the remainder, some of which have already been given with equal success. The concert at Shoreditch Town Hall September 27 was attended in state by the Lord Mayor and sheriffs.

Trade Customs.

The term "trade customs" in some quarters appears to be the modern synonym for malpractices. The term is a cloak, is not in many instances honest and in an equal number of instances exists to evade the law. The law should recognize no trade custom which is not straight dealing.

Hitch in Arrangements.

We have not yet seen the Seymour indestructi-

FROM OUR LONDON HEADQUARTERS—(Continued).

ble record, which was promised us some good time back. We nnderstand that it is not expected to be marketed this season, owing to a serious hitch in the arrangements. Mr. Seymour has entered an action in the High Court against Messrs. Rnssell & Co. for breach of contract, and heavy damages are claimed.

Hawthorne & Sheble Lines in London.

Mr. McArdle, representing the Hawthorne & Sheble Co., has broken good ground in London with the result that Messrs. Barnett Samuels will handle Nos. 3, 5 and 6 cranes, and No. 19 horn stand, while the General Phonograph Co. have taken over the famous Star disc records and machines. Mac has abont finished np business here for this season, and expects to leave for the continent some time during the first week in October. He will possibly make his way home via 'Frisco. At the time of my call a cable was just to hand announcing the safe arrival of Mac's better half, who had returned home ten days or so previonsly.

The Favorite Record Well Liked.

Practically a young firm here, the International Favorite Record Co., have in a very short time achieved most remarkable results towards the end wnicn all record companies have in view. With "Natnre" as onr standard so we must jndge. Disc records have come as near to perfection as it is possible to obtain under the present system of recording, and any improvement can therefore only be obtained by strict attention to details. And it is just in this direction that the Favorite records excel. The October list before me contains the first English selections recorded in London, and having played these over, I can endorse the majority as excellent in tone, while the distinct clearness of voice, and instruments, stamp these records as "good sellers." The Earl of Lonsdale's splendid band contribntes no less than six pieces, and among the artistes I see snch well-known talent as Tom Child, Stanley Wentworth, Wilfrid Platt, Louis van Hes, Mme. Ada Hawes, Will Terry and Adrian Romer. Complete lists will be sent to all dealers upon reqnest. The London branch is under the able guidance of A. Vischer, who has seen much experience in the talking machine industry.

A Handy Trade Tally.

A handy and most complete trade tally comes to hand this month from the American Talking Machine Co., who are nndonbtedly one of the most enterprising firms in the factor's domain, in respect to the issue of publicity matter. This present list nnder review will be fonnd particnlarly nseful to retailers as, classified under their respective headings, one can see at a glance the trade price of each individual cylinder and disc record, pnonographs, disc machines, horns, stands, reprodncers, recorders, springs, albums, and every conceivable part or accessory of use to the talking machine pnblic. Fnrther, in support of their customers, the American Talking Machine Co. will shortly issne a descriptive illnstrated catalog containing interesting information upon, and the retail prices of, every machine, record and accessory they carry. In this dealer's terms will be protected as stated, and he may therefore have no fear in handing the catalog to his customer for perusal.

Life in the Hop Fields.

The Kentish and Herefordshire hop fields have this season seen a larger number of pickers than on any previous occasion, and naturally it has become increasingly difficult to provide snitable diversion to the more exciting pastime of chasing isolated wayfarers in the lonely lanes aronnd the hop fields. Last year the qnestion was, to a great extent, solved by the use of the talking machine, and so snccessful was the experiment that it has been repeated this season with the additional aid of a ventriloquist. E. A. White, of Beltring, has near four thousand men, women and children on his 145 acres of hops, and on three nights a week he keeps them interested and happy by means of talking machine concerts. In conversation Mr. White stated that the music hall song is the favorite. They won't listen to Melba or Patti on the small machine, but ask for the latest ditty on the large one—something with a chorns which they can all join in singing, and the greater the volume of sound the better they like it.

NATIONAL PHONOGRAPH CO.'S NEW PLANT.

Imperial Disc Record Much in Evidence.

The Imperial disc record has, of late, been a good deal in evidence at such fnnctions as garden parties, carnivals, and the like. Many favorable press notices have been secured, all of which is good publicity.

National Phonograph Co.'s New Plant.

In order to properly handle their ever-increasing record bnsiness in Great Britain the National Phonograph Co. have found it absolutely necessary to erect an extensive factory at Willesden, near London, devoted exclnsively to that branch of their business, all the machines, as is generally known, being made at the company's immense plant at Orange, N. J., U. S. A. Up to the present time all the records were made either at the main factory at Orange or at the Belgian works of the company, but it has been found impossible to snpply the English market from these sources, hence the new London factory.

A very good view of the new plant is given herewith, although its large proportions cannot be appreciated from the picture. The offices are handsomely fitted up with the most np-to-date appliances, snch as telephones, filing cabinets, etc., occupy two floors of the main building. The buildings in the rear are devoted to the monlding department, equipped with the latest machinery for turning, finishing and lettering records; the engine, dynamo rooms and gas making plant, and shipping and stock rooms. The latter are fitted up with record racks from floor to ceiling, and nave a capacity for storing thousands of records.

About 600 hands are employed at the new factory, every facility being offered for affording them comfort during both work and rest hours. The plant has a capacity of fifty thousand records per day, which may be increased when necessary.

Some Odeon News Items.

The Odeon October Snpplement introduces a new feature, for it states on the front that, taken with the complete catalog in Angust, it comprises a complete list of the records.

Elgar's "Salnt D'Amour" forms one of the numbers played by the Grenadier Guards on the latest list of Odeon records. It is distinctly refreshing to hear this Elgar masterpiece played as it should be. Mr. Williams, the bandmaster of the Grenadier Guards, may well say after this that his band have never made better records.

The Odeon Co. lay special stress on the fact that at their concerts, in aid of the Lord Mayor's Cripples' Fund, the instrument employed is the cheapest model of their popnlar Discodeon—namely, that priced at £5 10s. Their object in selecting that was to demonstrate that even the lowest-priced model is capable of doing the best work. It is no light matter to expect an instrument without adventitious aid to fill some of the largest halls in London, bnt that is what the Discodeon has done. The Odeon Co. argue from this, and rightly, that what is good to amuse audiences of from 600 to 1,400 people, is surely

Apollo

Disc Machines and Sundries

Catalogue Sent on Application by the Manufacturers

Constantine Craies & Co.
101 Bunhill Row, London, Eng.

¶ We are the sole selling agents for the world for The International Record Publishing Co., Ltd., and are open to make special discs by arrangement in any part of the two hemispheres.

¶ We are the largest factors of the new Pathé 8½ inch disc record in the world. This record retails at 1/6, and is the talk of the trade in England.

¶ We have one of the largest export houses in London, so know how to deal with your orders.

¶ Catalogues of all makes of machines and records sent on application.

¶ Apollo disc machines are the only machines that play both the phonograph cut and the gramophone discs to perfection.

¶ Types of Apollo machines range in price from £2.10.0 to £6.6.0.

equal to any demand upon it. It may be added that only a slightly lengthened copper horn was employed, and no sound amplifying apparatus whatsoever.

One of the best known siffleurs in the world is Guide Graldini, and it was a happy moment of the Odeon Co. to secure this artist to whistle "The Whistling Bowery Boy"—a tune that really requires a good experienced person to mouth. This, with the still popular "Mattiche," is one of the best whistling records we have heard.

The assistance proffered to dealers by Messrs. Sterling & Hunting has, we are informed, been largely accepted, quite a number of dealers expressing their willingness to identify themselves with Odeon records by undertaking a systematic distribution of the advertising matter supplied. Dealers who have not yet taken advantage of this offer should write to the company for particulars.

The "Oireachtas" and Sterling Records.

The Dublin Evening Telegraph has the following interesting story. It should be added that the "Oireachtas" is an annual gathering of the Gælic clans for the purpose of literary and musical competitions:

During the Oireachtas at the Rotuuda last week a novelty was introduced by the enterprise of Mr. John O'Neill, South King street, who made arrangements with the Russell-Hunting Record Co., of London, to send over their recording representative, Mr. Quirke, with a special apparatus, to take records for him of some of the speakers' and singers' voices and the iustruments played on the occasion. Close on one hundred records were made, including speeches in Irish, traditional songs, Scotch-Gaelic songs, flute solos, and piano solos, and, notwithstandiug the difficulties, some excellent reproductions of the voices and instrumeuts were obtained on the phonograph. Among the many who made records were: Dr. Douglas Hyde, short address in Irish; Mr. Lane, traditional songs; Mr. Colin Campbell and Mr. MacCracken MacDonald, Scotch Gaelic; Rev. Father McCafferty, Mr. P. Morgan, Miss Cissie O'Byrne, Mr. T. O'Carroll Reyuolds, Mr. John Lawless, Mr. Tom O'Moore, Mr. Cathal McGarvey, Mr. Donncadh O'Finn, and Mr. Martin Fitzgerald, songs; Mr. J. A. Doran, piano solos; and Mr. Feach Hugh O'Byrne, flute solos.

TRADE NOTES FROM LIVERPOOL.

Dealers Expect Good Season Notwithstanding Severe Competition—The World Representative Has Interesting Chat With the Leading Talking Machine Men.

(Special to The Talking Machine World.)

Liverpool, Eng., Oct. 4, 1907.

Hustle and bustle is right along the line here. Many of the leading dealers have magnificent displays. Every dealer is expecting a big season, but apparently competitiou will be very keen, both in cylinders and discs.

One of the oldest dealers, Jake Graham, who carries a large and compreheusive stock of Gramophone, Sterling, Edison and Zono. records and machines, expressed every satisfaction at the past summer season's sales. He states that the business is steadily increasing during the warmer weather and a very satisfactory smile is the result.

At Messrs. Carne & Sons, Ltd., Scotland Road, Mr. Young, who has the management of the talking machine department, was very enthusiastic over business generally. Handling a good nrmber of various makes of machines and records, and with the experience of several branches, he gave it as his opinion that the cylinder trade is likely to be considerably upset by the phonograph disc, which is to retail so cheaply, and anticipates that the sales of cylinders will in consequence go down considerably in the future.

One of the largest wholesale factors in the North is the Johnson Talking Machine Co., and one of the best-known persoualities in the trade is W. A. Johnson, the managing director, who received the representative of The Talking Machine World with a very contented smile. They devcte themselves solely to the talking machine trade, and supply dealers (wholesale only). His men cover the whole of the British Isles, doing an enormous turnover which is steadily increasing. He is special factor for Edison, Edison Bell, Sterling and Columbia cylinders and machines. In disc goods he has huge quantities of Zonophones and Odeons.

Messrs. Archer & Sons, 5 St. George's Crescent, Liverpool, is another first-class house, with a very excellent trade. As a retail depot their position is unique. In the center of both the shipping and home trade one cannot fail to notice the very fine display they make with Gramophone, Zonophone and Odeon, etc., which they specialize on, holding at all times a good up-to-date and reliable stock.

In Manchester street the Reliance Co., Ltd., and Messrs. Jordans are opposite each other. At the latter house alterations are in progress for additional stock room, so that a much larger trade is expected than previously experienced. At the former house a good window display exists and a separate department controls the talking machine trade.

MANCHESTER TRADE HAPPENINGS.

Looking Forward to a Large Trade—Many Recent Visitcrs—Columbia Co.'s Good Display—The Matter of Credits Discussed—Handling of Objectionable Records—New Cylinder Records Make Their Debut.

(Special to The Talking Machine World.)

Manchester, Eng., Oct. 1, 1907.

The fine weather that has prevailed here during the greater part of September has somewhat retarded the sales in the talking machine business generally. The holidays are nearing the end, and although trade has not yet opened up in earnest, large stocks are already laid in by most dealers. Necessary alterations are taking place in some of the depots for the arrival of later stock, so that it looks like a busy season ahead.

The North has been a very happy hunting ground for a great many travelers lately. Most of the London houses have sent representatives, showing that great expectations exist in the minds of those who cater for, and who supply the dealer. We noticed Messrs. Pathé Frêres, Ltd., Schneider & Co., Murdoch & Co., Bernard Andres, the New Polyphon Co., and others.

We are sorry to say that Mr. Burrows, the well-known factor here, has been seriously indisposed, but by the time these lines are in print we hope he will be enabled to return to business again.

Enquiries for machines are coming in steadily. The Favorite record promises to become exceptionally popular. Zonophone October issue has some exceedingly good numbers. Messrs. Pathé Frêres, Ltd., are pushing very hard for the trade here. Their new 8½-inch disc, double sided, to sell at 36 cents retail, appear to be exceptional value. They issue a good list, besides which a special inducement is offered by the reduced price of their sound box, which is now to retail at 1.20, instead of 1.80, as formerly.

"En passant" whilst mentioning Pathé discs, the great drawback experienced by the dealer is the necessity of using their special sound box, in place of the usual one that plays in a vertical direction. In the near future, however, a little contrivance may probably be put on the market, which will avoid this difficulty. We are not in a position to disclose what it is, but hope to do so later.

The Columbia Co., who have a branch here, have a good display, aud are putting on the market a new 10-inch concert disc at 36 cents (3s.) each, having a record upon both sides. Their machines, we hear, are in good demand—the Regal being specially asked for. We have recently had a visit from Miss Ruth Vincent, who appeared at the Princess Theater in "Tom Jones." Having a fine selection of records by this lady the company made a special feature of them during the lady's visit, which lasted a fortnight, with the result that more stock had to be wired for. Miss Vincent wrote quite a nice note, saying how much she appreciated them, both as regards tone and quality.

BREAKERS AHEAD.

Notwithstanding the past season's business haviug been so satisfactory, and, without being in any way pessimistic, one canuot but regard the future as being fraught with difficulties. In many cases orders have been taken and contracts settled by dealers without giving due regard as to what they can do later on. The consequence is that many are overloaded already. With fine weather, such as we are now enjoying, the sales

The Finest Example of Phonographic Art Yet Produced!

The New Process Long

"CLARION"

Gold Moulded Cylinder Record

Sufficient testimony is the TREMENDOUS ORDERS we have received. A good opportunity for a smart commercial house to do real business in U. S. A. with these records. Write us, the manufacturers.

THE PREMIER MANUFACTURING CO., Ltd., 81 City Road, London, E. C., England

FROM OUR LONDON HEADQUARTERS—(Continued).

by many retailers are insufficient to meet expectations, aud the result will be that with the large uumber of manufacturers now in the field (and almost tumbling over one another to get orders) lengthened aud possibly indiscriminate credit will result, besides huge stocks, which, owing to the rapid changes that are made month after month in titles, meaus that a great part of it will be obsolete within a very short time, leaving the dealer to move the best way he can, goods that are nearly unsalable. What the results may be can only be anticipated.

Overloading, huge and perhaps bad stock, iu a few months' time will possibly cause a drop, and as soon as the season wanes off a little, the "side-liuers," who ouly handle records to fill up a few months' slack time, may job the balances of their stocks off at any price to clear; in fact, confidential whispers already exist that many would like to shift some they already have.

To avoid this every buyer should know exactly the selliug proportions of every record he handles, otherwise he may be bitten. Localities vary in tastes, and according to this the dealer should judge what his sales may be. So far the season promises well, but expectations are one thing and realization is another, aud our advice to one and all is be careful, but when sure, go right ahead.

VULGAR RECORDS.

It is a thousand pities that some record makers cannot refrain from making records of this class; latterly, in some cases, the songs have degenerated to an alarming extent, some purchasers buying only those of a very questionable taste. In chatting with a large dealer in the North of England recently, he said quite frankly he was very sorry to see it, and although he sold them because they were asked for, nevertheless he did not like them, nor did he like selling them. There is no credit whatever in making records of this description, and it is a class of trade which is highly objectiouable to most music lovers, who are generally of a refined taste. The people who purchase records of this type are not quite the class of customer the dealer admires for his musical tastes, and without mincing matters the sooner makers leave off pandering to tastes of this class the better will the trade become. No records, whether of cylinder or disc, should be made that cannot be played at home before the children. The records industry should be to elevate and improve the mind, educating all up to a better sphere, but for goodness sake, don't let us make folks worse than they already are.

ANOTHER NEW CYLINDER.

Auother new cylinder record has made its appearance in the North. Made by the Premier Record Co., of London, it is called the Clarion. The size of it is knowu as "extra-long," similar to that of the Edison Bell. The finish is good, and results are also good. From what we hear a large sale is predicted for them, aud at the price sold retail ninepence (18 cents), large business should result.

YES, AND ANOTHER NEW DISC.

The Melograph disc record, 10-inch, double sides, is being put on the market by a Liverpool house, where a new company has been formed for this purpose.

We understand that the recording will be done in Liverpool, but at present the records are being pressed in Berliu. The retail price of these records will be thirty pence each (60 cents). From this, however, an allowance is to be made by the dealer to the retail customer of sixpence (12 cents), for his old record if returned at the time of purchasing the new one. Dissatisfaction exists, however, as the dealers consider that the company should also allow them sixpence (which will be allowed customers), instead of which we hear that only threepence (6 cents) will be allowed by the works.

SOME LATE NOTES FROM LONDON.

National Phonograph Co.'s Circular—New Manager for British Sonogram Co.—Other Items.

(Special to The Talking Machine World.)

London, Eng., Oct. 7, 1907.

The following circular under date September 30 has been issued to Edison dealers by the National Phonograph Co.: "For your information we enclose herewith a list of 254 selections which will not appear in the next issue of our catalog. Our only reason for omitting them is to keep our list within limit and thus allow dealers to keep a comprehensive stock of all titles. To do so necessitates about 350 additional racks each year, and we therefore consider it necessary to comply with the demand of the trade by curtailing our list to the same extent as far as possible. The records will not be withdrawu from our lists before January 1, and our object in sending this advance notice is to enable dealers to dispose of what stock they may possess. There should be no difficulty in doing this as the records are all old favorites and include many titles which phonograph owners will always desire to possess. Should you require further supplies, we can fill orders until our present stock is exhausted, but no further shipments can be made after January 1. Kindly handle your stock accordingly. A quantity of the enclosed folders has been printed for distribution to your patrons. You can secure supplies from your factors who will receive deliveries about October 1."

The British Sonogram Co.

F. H. Spicer, who has seen good service in this industry with the Gramophone and Odeou companies, is announced as the new manager of the above concern, in the place of Paul Mellerio, who resigned his position on the board of directors some few weeks back. Interviewed by The World's representative, Mr. Spicer stated that new and improved records of up-to-date selections under Hans. Kundsen's (of liquid-air fame) system will be issued by the time these lines appear in print. I am authorized to state that although adverse rumors have been going around in regard to certain internal difficulties, the British Sonogram Co. are now placed upon a surer basis altogether, and the busiuess will be continued along the vigorous and original lines already mapped out.

Lower Rates of Postage.

On and after October 1 the letter postage rate to foreign countries will be 2½d. for the first ounce and 1½d. for each additional ounce. Thus a letter weighing two ounces would cost tenpence under the old conditions while now it will only cost fourpence.

The Edison Phonograph at North Pole.

Walter Wellman, the special correspondent of the Chicago Record Herald, the explorer who hopes to reach the Pole by airship, has taken an Edison home phonograph to beguile the dreary hours in the frozen North. It was presented by the National Phonograph Co., together with a hundred records and a number of blanks, and is now being used in the expedition's headquarters at Dane's Island, on the northwest coast of desolate Spitzbergen, which lies in the Arctic seas, six hundred miles from the North Pole. Iu his latest despatch from this inhospitable region, Mr. Wellman, after speaking of bear hunting and preparations for the ascent, writes: "To-night, June 10, we had an Edison phonograph concert after supper."

TRADE IN LOS ANGELES.

Sale of Grand Opera Records Is Going to be Unusually Large.

(Special to The Talking Machine World.)

Los Angeles, Cal., Oct. 6, 1907.

At present trade is gradually creeping to a satisfactory climax, although the summer trade was somewhat quiet. No dealer could get all the stock he needed to supply his trade. Everybody is looking forward to and preparing for the biggest holiday trade yet, and the coming opera season is expected to increase the sale of operatic records, which are the largest end of the trade with most dealers here.

THE DENHAM PREMIER MACHINE.

The Edwin A. Denham Co. call attention to the Denham Premier machine, which, they state, "is an improvement on the old styled models which have been marketed in this country in the past. The machine is equal in reproduction and loudness of tone to more expensive machines, and there is no question but that a dealer could increase his sales by using this

Denham machine. The Denham Co.'s new Grand Opera reproducer, illustrated herein, is a clever invention which should enhance the value of the machine cousiderably. This Graud Opera reproducer, as well as an ordinary reproducer, is supplied with every machine. The flower horn, in various colorings, which accompanies the Denham machines, is also very attractive. Not the least remarkable feature about the machine is the low price that the Denham Co. ask for it."

The Denham Co. are just about to issue a catalog on their various lines of house furnishing goods, toys, advertising novelties, premium articles, talking machines, etc.

THE ROCKY MOUNTAIN REGION

Is Proving a Great Market for Talking Machines, Records and Supplies—Trade Conditions in Denver Carefully Analyzed After Interviews With Leading Dealers and Jobbers.

(Special to The Review.)

Denver, Colo., Oct. 7, 1907.

That the coming autumn and winter will be the best ever experienced in the talking machine trade of the Rocky Mountain region is the consensus of opinion among local dealers. Prospects are unusually bright at this time, and business is reported brisk at all the larger music houses handling talking machine goods as well as at the agencies. In the agricultural sections of Colorado the harvest has been a bountiful one and the trade has already begun to feel the influence of the returns from good crops. A large percentage of local business during the past two weeks has come from outside the city.

Commenting on this feature of the trade, W. W. Knight, the pioneer music house man and head of the Knight-Locke Piano Co., which is now pushing its talking machine department considerably, says: "The talking machine is a godsend to the farmer, the miner and other busy toilers who haven't either the time or the patience to learn to play a piano or other musical instrument and for whom the purchase of a player-piano or a piano and player would be a greater financial burden than he would care to undertake even in prosperous seasons. He can buy a talking machine and get any kind of music that he may desire by selecting his records and turning the crank, and this simple road to art appeals to every busy man of moderate circumstances, and it appeals to his family. We have been having an unusually large inquiry from this class of the retail trade of late."

M. B. Henry, former manager of the local branch of the Columbia Phonograph Co., is now at the head of the Knight-Locke talking machine department. Mr. Henry and other Knight-Locke talking machine representatives are all very optimistic over the present trade outlook. The Victor Victrola is selling splendidly, and this style is moving as fast as it is received.

Several of the local department stores are handling talking machines, but most of these have allowed this part of their business to lie dormant during the past summer. They are now preparing to revive the talking machine department in anticipation of the holiday demand. The Golden Eagle store is planning to increase its stock and average a larger display during the month.

W. F. Standke, Jr., is the new manager of the local branch of the Columbia Phonograph Co. He has been manager of the Memphis (Tenn.) branch for the past two years, and was formerly connected with the Columbia houses in Kansas City and St. Louis. Although his examination of the local field has not been very extensive, because of his brief residence here, Mr. Standke says he has found conditions unexpectedly favorable.

"I find," he states, "that the demand for higher-priced machines is much greater here than elsewhere—in the South, for instance. The inquiry here is nearly always for the better class of goods, and we sell many more expensive machines than cheap ones. In fact, the way the high-priced goods sell has surprised me. The public wants only the best, is willing to pay for it and will have no other. Only to-day I had for a customer a homely old woman from a mining camp in the western part of the State. Her appearance was very uncouth, and I thought when I saw her that she would buy only a cheap machine, but she asked for and bought one of our very best styles and a large assortment of records to go with it."

J. L. Woodward, until recently with the Columbia company's St. Louis and Chicago offices, is acting as an outside salesman for the local branch.

The new type B. T. of the Columbia graphophone, with the hidden horn and large disc cabinet attached, has arrived at the local agency. It is taking well and Manager Standke is predicting a big run on it when the public becomes acquainted with its merits. Type B. C., with the aluminum attachment, is also making a favorable impression on the local trade.

The Hext Music Co. have become jobbers for the Victor goods and now carry a full line of styles from that house. Business is fair and the outlook good, Manager A. J. Mertes says:

"August was the best month that the talking machine department of the Denver Music Co. had since the holiday of last year. September trade was better and October is opening well. Edisons are the best sellers with this house at the present time," is the announcement of Manager Henry C. Benny, who since coming to Denver one year ago from C. J. Heppe & Sons Co., of Philadelphia, has also had occasion to remark the general western demand for first-class talking machine goods: "My experience here has been that the Western people are better spenders than the Easterners when it comes to buying any kind of music-producing instrument," says Mr. Benny. "Indications for fall business seem very good."

Mr. Benny has been at the head of the Denver Music Co.'s talking machine department for the past six months. Prior to that time he was with the Denver Dry Goods department store in a similar capacity.

John Pass, the largest of the smaller dealers in talking machines, says business is good in medium-grade machines, but is inclined to be conservative.

A good summer season and a steadily increasing fall trade is the news from the Knight-Campbell Music Co., which has the Victor for its leader.

Branches of the commercial department of the National Phonograph Co. have been established in Minneapolis and Duluth by Western Manager Barnes.

Among the prizes to be awarded on Liberal Arts Day at the Jamestown Exposition, October 16, will be two talking machines and complete equipment for same, the total value being $300.

Reciprocity

Give us your trade---We will give you success.

Why send your orders to a distributor who can give you nothing in return—no service, no ideas, no prospects? Every dealer is within easy reach of one of our two Talking Machine Depots. Write us to-day and ask us what we can do for you in particular.

The greatest stock in the United States lies in our warerooms awaiting your demands.

We can submit business methods and advertising schemes to you that will result to your profit. As the best known Music House in America we receive an enormous number of inquiries for Talking Machine Goods—We refer all inquiries to the local dealer.

Write us to-day. You have nothing to lose and everything to gain.

TRADE HAPPENINGS IN PHILADELPHIA.

Business Somewhat Uneven—Victor Sales Stimulated by Advertising—Public Exchanging Old Machines for New—Dealers Anxious to Get Edison Equipments—New Contracts Readily Signed—Columbia Business Excellent—Increasing Demand for Star Records—Alterations at Buehn Bros. Completed—Disc Talking Machine Co. Making New Record in a Business Way—Heppe's Talking Machine Department Move to Ground Floor—Excelsior Drum Works Expansion—Incorporation Recorded—Emil Bauer on Road Trip—Other News of Interest.

(Special to The Talking Machine World.)

Philadelphia, Pa., Oct. 8, 1907.

Business conditions during the month of September were somewhat varied. There were ups and downs, some parts of the State showing up unusually promising and others not so much so. On the whole the jobbers of Philadelphia enjoyed a prosperous month. October so far has been doing wonders, and bids fair to exceed all other past records. The causes for these are numerous. Victor sales have been wonderfully stimulated by the new advertising campaign now being carried on by that company. The new style Victrola cabinets are creating a good deal of favorable comment in the trade—the only trouble being that recent purchasers of the old machines are in many cases puttiug up a strong fight to get them exchanged for the new. "What can you do if they insist," says one jobber. "If a person pays $200 for a talker why he has some grounds, or thinks he has, for complaint in not getting the latest, and as these people are in most cases big record purchasers, you can't very well afford to antagonize them. If they are buying on the instalment plan they refuse to finish payments. What gets me though is how they got wise, inasmuch as the new cabinet has not been advertised yet, and only a few sold. And also what will we do with the old styles?"

Everyone handling Edison goods seems happy over the new policy of the National Co. in furnishing outfits complete. However, if the company would only hurry the equipments along, the jobbers would be pleased. The new dealers' contracts are being freely signed, and in most cases are accompanied by a substantial order, which, of course, is perfectly satisfactory to the jobber.

The latter have all sigued their contracts, the only criticism made being that $25,000, the sum stated should have been at least doubled. The main reason being that in most, if not every case, it would knock out the department store from the list. And after all this would only be just. These firms, simply because they buy in large quantities, are allowed all the privileges given to the legitimate houses. They never try nor would if they could sell wholesale. Cutting is a common occurrence—with many—and they are the main cause of so many failures in the dealers' ranks, especially where the latter are located near large cities. As one jobber said in speaking on the subject, "Manufacturers ought not appoint firms as jobbers unless they have men constantly on the road pushing the wholesale business. Let them set any figure at all within reason for the right, and then protect the middle man as long as he continues to stand to the agreement. As it is every time a department store is appointed a jobber, they rob us of a customer that rightly belongs to us, without any advantage to themselves. Hence no matter how good business is we have to hustle, to make our accounts show up satisfactorily on account of the small margin on which wholesaling is now being done. Again these stores are put in a position where it is impossible for the dealer to compete with them."

The jobbers here have gotten together and obtained bids on large quantities of lumber for nesting the new Edison horns, and thereby are able to get an exceptionally low price. This is a good idea for others to follow, the National allowing twenty-five cents on each horn for such a purpose. Another Philadelphia idea is as follows: Many people complain about the plain black horn and want a decorated one. So one man obtained the services of an expert artist and had him decorate a number in various designs, adding one dollar to the price. Remember though there is always more profit in selling an extra horn where it is possible, and the latter device should only be fallen back on in the case of necessity.

In regard to Columbia business one word expresses it—"Excellent," the new machines and records of this company having stirred the buying public up wonderfully.

Zonophones are constantly growing more popular in this State, and the outlook is most promising.

The New Star product is making a big hit for the short while it has been out, the records especially being in demand. In fact the record business, generally speaking, has been phenomenal for this time of year. Some of the dealers claiming a big percentage of the increase being due to premium machines they are selling especially among the poorer classes. With such conditions and with the present outlook there is therefore every reason for thankfulness.

Alterations at Louis Buehn & Bro., 45 North Ninth street, have just been completed, and everything is in shipshape. This company experienced the best September business in their history, and Ed Buehn, the popular juuior partner, who is now out on the road, is keeping the home office on the jump to keep up with the orders he is getting. As was announced in their advertisement in the September issue of The World this company have a new complete line of disc and cylinder record cabinets of their own, which they are offering to the trade at exceptionally attractive figures. Some new styles have been added. No. 125 cylinder holds 350 records, and is made in oak. No. 105 disc holding 252 ten- or twelve-inch records, mahogany, with a swelled front. For other particulars see their advertisement in this issue.

The Penn Phonograph Co. report business up to the first fairly good, with October flying bright colors. This firm are one of the most enterprising in the State, and are now collecting some things that will do much toward increasing dealers' business in side lines, such as supplies, etc. They have just been appointed sole agents for the famous Petmecky Multitone needles. A mighty clever little device, by the way, is their new automatic stop for home phonographs.

The Disc Talking Machine Co. are obtaining marvelous results with the Zonophone line in this and neighboring States. Their methods are somewhat unique and decidedly new, but then with McMenimen at the helm this is understood. This popular talking machine man has originated some mighty interesting ideas which his dealers are getting, and which are bringing the business to them. Don't fail to write him about them; it will be worth your while.

George W. Lyle was a recent caller at the Columbia headquarters on Chestnut street. His visit was principally for the purpose of placing his son, Harold, in the military academy at Chester.

An important change has just taken place at the C. J. Heppe Co.'s warerooms on Chestnut street—namely, the removal of the talking machine department, which formerly occupied the fourth, to the ground floor, and thereby hangs a tale. This move has for a long time been urged by the manager of this department, but was not considered until it was shown that this department was doing as big a business as that devoted to pianos.

If the way business is now coming in is any indication this winter will be a banner season for talkers—such was the report at Weyman's, where everyone is rushed on orders.

Emil Bauer left on Monday on a long western trip. He will call on the talking machine trade en route. Mr. Bauer is of the Bauer Co., manufacturers of the famous S. S. Stewart banjos, guitars and mandolins. Business in this line of goods is very brisk all over the country, and has been so for the past six months.

The Excelsior drum works of this city have removed to new quarters on the northeast corner of Tenth and Market streets. For some time past A. G. Soistman, the president, has been contemplating this change on account of their inability to handle their enormous business in the old building. They now, however, have the largest drum factory in the world, covering a floor space of over 50,000 square feet, and employing in the neighborhood of 200 hands. September proved to be the biggest month in the history of this firm, and October is not falling off any so far.

The Keen attachment, manufactured by the Keen Phonograph Co., has proved a great seller.

OUR UNEQUALLED LINE OF TALKING MACHINE

RECORD CABINETS

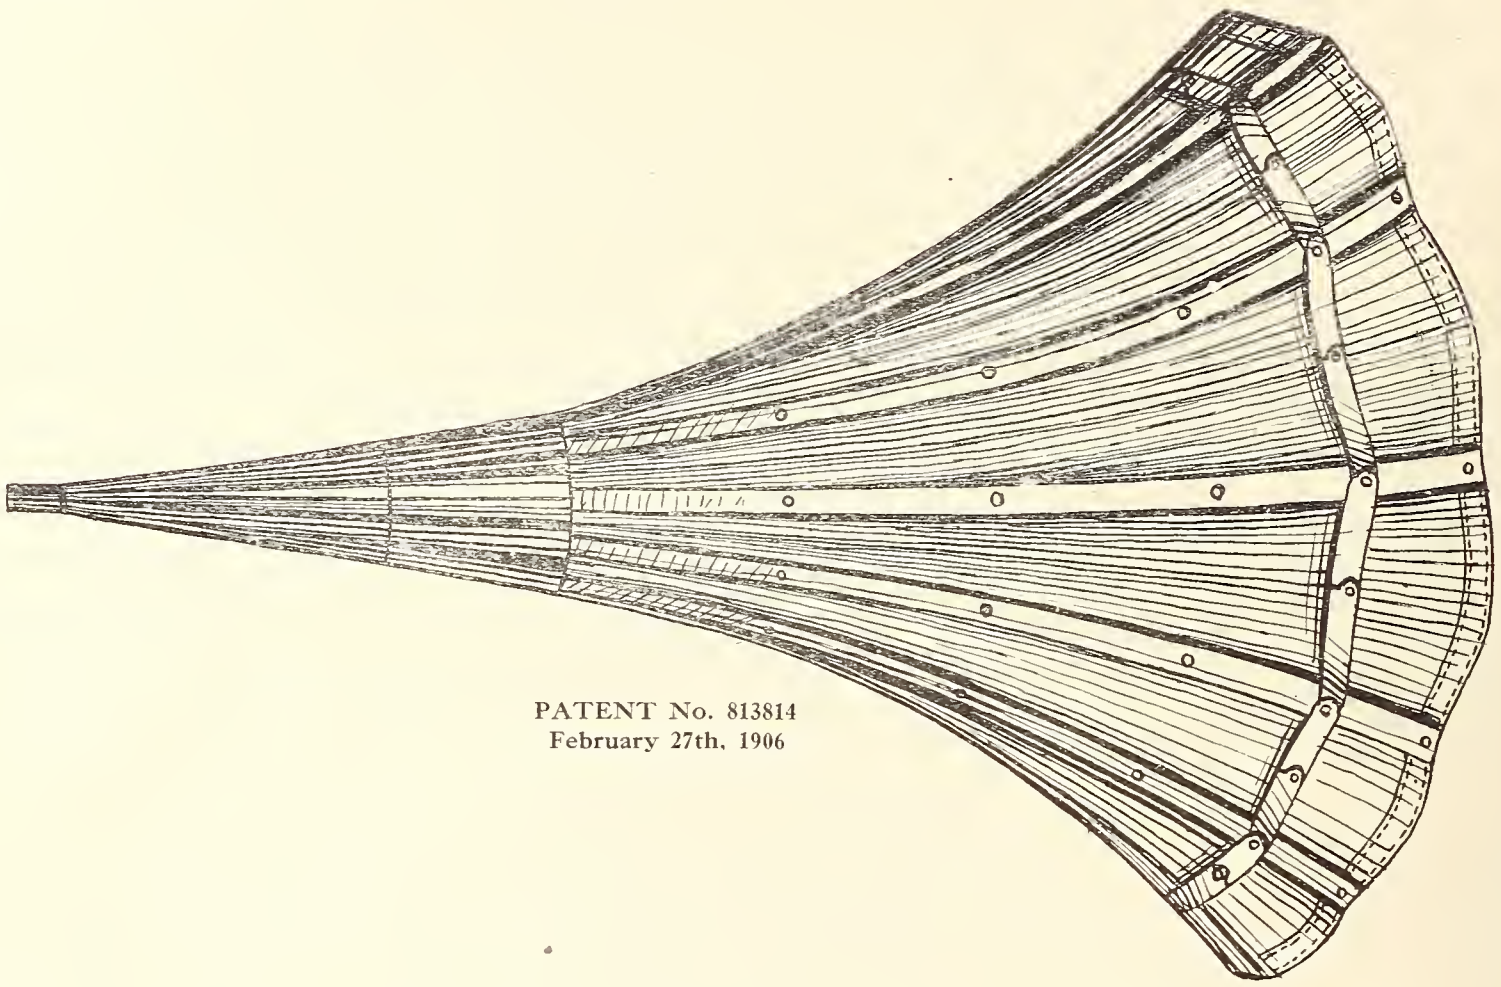
Liberal Discount to Established Dealers

LOUIS BUEHN & BRO., 45 North 9th Street PHILADELPHIA, PA.

The Munson Folding Horn

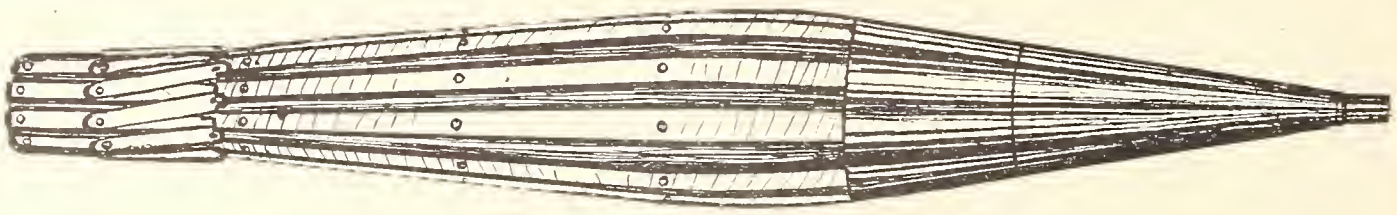
The latest one-piece indestructible horn for all cylinder and taper arm disc machines; can be opened or closed in 30 seconds.



PATENT No. 813814
February 27th, 1906

Made of selected "LEATHERETTE" with spring steel ribs. This horn insures a sweetness of tone impossible with the sheet metal product, and when closed can be carried as conveniently as an umbrella or placed in the lid of a trunk.

We guarantee all of our horns against rattle or blasting.



Retail
$5.00

Made in solid colors—Gold or Black, Hand Decorated or Plain.

Sold Only Through Jobbers

Liberal discount to the trade. Will be ready for shipment on or about November 15th, 1907.

The Folding Phonographic Horn Co., Inc.

Office and Salesrooms

650 & 652 Ninth Ave., - New York City, N. Y.

This practical device can be used on any cylinder machine and does away with the cumbersome stand.

The Musical Echo Co., of this city, are enjoying an especially brisk trade at the present writing, and providing things keep moving at the same pace will run ahead of last year's business.

Harbach & Co., the well-known moving picture agents, have just received a number of new novelties from the other side. Don't fail to write them.

The Excelsior Drum Works, Camden, N. J., to manufacture drums and musical instruments, was incorporated with the secretary of the State of New Jersey on Tuesday last. Capital, $125,000. Incorporators: James W. Pepper, Howard E. Pepper and Adolph D. Soistman.

JOBBERS AND DEALERS BENEFIT

Through the New Schedule on Net Prices of Edison Gold Moulded Records Which Go Into Effect Oct. 1.

The National Phonograph Co., through General Sales Manager F. K. Dolbeer, have notified jobbers and dealers that on and after October 1 the net price of Edison Gold Moulded records will be changed somewhat, the list price, however, remaining as heretofore at thirty-five cents, or four dollars and twenty cents per dozen. There will be no change, however, in the price of grand opera or concert records. They announce further that they will issue to all jobbers a credit mem. on records (except grand opera or concert) shipped and invoiced to them from September 1 to September 30, 1907, inclusive. They will, in turn, permit all jobbers to rebate retail dealers on all records shipped and billed to said dealers from September 1 to September 30, 1907, inclusive.

They state: "This change in price is to be made effective in order to reimburse the jobber for possible loss by breakage in transit; and on and after the date mentioned we will not entertain or make good to either jobbers or dealers, any claims for breakage in transit, nor will you be permitted to do so with your dealers. We have, for some time past, realized that the jobber should obtain a larger profit on records, thereby not only covering the possible loss by breakage before referred to, but enabling him to realize a fair margin of profit on the many small orders received by him from retail dealers. We still purpose replacing any and all Edison records that may be received in a defective condition through manufacturing causes." (This paragraph applies to dealers also.)

The Talking Machine Store has been opened at 103 South Howard street, Akron, Ohio, by Gomer Griffiths and Carl Glover, of that city. Edison phonographs, Victor talking machines, and a full line of accessories will be handled.

NEWS OF THE MONTH FROM THE SAINTLY CITY.

Jobbing Trade for the Past Four Weeks Has Been Steadily Growing in Activity—Improvement Also Noted in Retail Trade—P. E. Conroy Returns from Europe—Optimistic Over Trade Outlook—Talking Machine Stores Handsomely Decorated During Visit of President Roosevelt—C. W. Long's Cheery Report—Talking Machine Men Married—Marks Silverstone Reports Progress—May, Stern & Co. Open Their New Talking Machine Department—Koerber-Brenner Music Co. Well Satisfied With General Business.

(Special to The Talking Machine World.)
St. Louis, Mo., Oct. 8, 1907.

The jobbing trade for the month of September and the opening weeks of October showed a good volume of activity with a nice increase for the same period over that of a year ago. The retail trade, too, was good, and there is a general feeling among all the jobbers and retailers that the fall and winter demand will be very large and greater than ever before. Several houses are enlarging their record capacity so as to be in shape to supply all orders.

P. E. Conroy, president of the Conroy Piano Co., arrived home the latter part of September from a three months' tour of Europe, and states that their talking machine business is improving each day. He feels very optimistic as to the fall and winter trade, and reports that his firm are adding a line of new accounts right along.

The annual visit of the Veiled Prophet here on October 1, in connection with fall festivities, and that of President Roosevelt on October 2, was the cause of some very elaborate window displays among the talking machine dealers. Those that were particularly handsome were the St. Louis Talking Machine Co., the Columbia Phonograph Co., the Conroy Piano Co., and the Thiebes-Stierlin Music Co.

C. W. Long, manager of the St. Louis Talking Machine Co., returned recently from a several days' business trip to Indiana. He reports his firm's trade for September very good, with a very substantial increase over the same month of last year. He states that all indications point to a very heavy fall and winter trade.

A. L. Owen, assistant manager of the St. Louis Talking Machine Co., and Miss Rose Buechel, of this city, were married on Tuesday, October 1. Both the contracting parties are well known and very popular.

Manager T. P. Clancy, of the Columbia Phonograph Co., makes very favorable reports on trade conditions with his concern, and reports the sale of a number of their new $200 symphony grands.

David C. Mehlin, assistant manager of the Columbia Phonograph Co., and Miss Mae O'Donnell, of this city, were married on September 19. They took a two weeks' honeymoon trip through the Southwest.

Marks Silverstone, president of the Silverstone Talking Machine Co., states that their jobbing trade is very good and increasing each day. He also reports retail trade and the demand for records on the increase. Mr. Silverstone has just returned from a week's business trip through Illinois. V. P. Powers has been added to the traveling force of the Silverstone Talking Machine Co., and will represent the concern through Southwest Missouri.

The Koerber-Brenner Music Co. report that their talking machine trade is very satisfactory with the best kind of prospects for an immense fall and winter trade.

D. K. Myers reports that the jobbing trade on Zonophones is excellent with a most favorable outlook from now on.

W. C. Fuhri, district manager for the Columbia Phonograph Co., was a recent visitor here.

May, Stern & Co. have opened up their new talking machine department. It is located on the seventh floor of their building, and is one of the handsomest equipped departments in the city. Three customer's rooms have been fitted up in a most elaborate manner. This concern and all its branches in other cities have got up a very nice catalog on the Columbia phonograph (the only machine they handle), containing cuts of the different kind of machines, and also including a list of records. It is a very neat book.

J. F. Geo. Gunter, assistant to S. R. Brewer, manager of the talking machine department of the Thiebes-Stierlin Music Co., has resigned.

A. A. Knapp reports trade improving very nicely and that he is having a splendid record demand.

Marks Silverstone, president of the Silverstone Talking Machine Co., states that in answer to an advertisement he had in The Talking Machine World last month he received replies from dealers located from coast to coast, Canada, north and south.

BARD BROS. EXPANDING.

Bard Bros., the talking machine dealers of Wheeling, W. Va., have announced that they will shortly build an annex to their present store in that city. The additional space is necessary despite the fact their building was remodeled and considerably enlarged only about a year ago.

DO YOU KNOW?

That every order we fill is time stamped when it reaches us and when it is shipped. That we never hold an order over night. That orders are filled completely and goods shipped in factory condition. That is the service we are noted for—Is it worth anything to you? Try us and be convinced. We handle nothing but the Victor line. We know nothing else but "Victor." We are the only Exclusive Victor Distributors in Missouri. *Why not get together?*

ANENT INSTALMENT CONDITIONS.

The Development of Instalment Feature of the Talking Machine Business Discussed by a World Subscriber in Indiana.

Evansville, Ind., Sept. 30, 1907.

Editor Talking Machine World:
New York:

Dear Sir—It is very entertaining to one who has watched the development of the instalment feature of the talking machine business to see the efforts the trade is making to change the conditions they have created.

About seven years ago a firm in Philadelphia began this feature of selling machines, one dollar down and one dollar a week. The writer helped to spread the news west. The trade generally said it could not be done as the losses would be too great. We carried these comments back to Philadelphia. The pioneer firm was interviewed and they reported that out of eighteen thousand dollars' worth of machines sold their losses amounted to three machines, or about one-half on one per cent.

This so encouraged the trade that they gradually dropped into the game. Many dealers, not so much to become missionaries, but rather to get the long profits, became jobbers, and began selling on the instalment at the cash price. This discouraged many of the small dealers, and because they could not follow this pace dropped out, while many others hung on by "their eyebrows."

So Mr. Jobber-Dealer smiled at the way he wiped out competition. One morning we awoke, and picking up our morning paper, read the flaring ad. "Nothing Down. Pay Later On."

This had the same effect as hitting a drowning man on the head, and some more small dealers went down and only a few bubbles (bad accounts) mark the spot.

Later on some other big fish got into the puddle, with just as much money and more nerve, and have rushed the pace so fast that Mr. Jobber-Dealer and Mr. Nothing-down-and-a-little-later-on are much in the plight of the man who yoked himself up with an ox, when the ox started to run away the man called, "Here we come, darn our fool souls, some one head us off." They want the manufacturers to help them let loose.

There never was a greater injustice done the smaller dealer than this ruinous practice, and I am glad to see the fowls returning to their roosts.

There is a great volume of business done on the instalment plan, and the buyer has always known that he had to pay more than when he bought for cash. It was up to our jobber-dealers to spoil this class, as well as the cash customer, by allowing him to elect which plan he wanted, the price being the same in either.

But, now, how shall we get out of this rut?

If you look around you you will find a firm that "cuts a good deal of ice" in the talking machine business, and they get an additional 10 per cent. on time sales.

Now that we have a National association much could be accomplished if the members are not afraid to trust each other.

You, Mr. Big Dealers, are the ones who led us astray, now be the Moses to lead us out of the wilderness. Get right yourselves and the smaller fry will follow.

H. H. M(YERS),
Winona Lake, Ind.

ANDREWS' SPECIALTY.
QUICK SHIPMENTS.

WE are mid-way between the East and the West and dealers can rest assured that our facilities are unsurpassed for quick shipments. Prompt attention is given to all orders and dealers are surprised to know how quickly they receive whatever they order from us. ¶ We carry the most complete stock of Victor, Edison and Columbia machines to be found in Western New York. We are always ready, a sort of "Johnny on the spot" you know, to rush shipments through so that our customers shall suffer no delay. ¶ If you have not done business with us you will find it to your advantage to do so. We carry aside from machines a big stock of all equipments and talking machine accessories of every nature.

BASEBALL MANAGER HONORED

By the Presentation of an Expensive Graphophone—The Appreciative Address to Manager Clark Also Delivered Through This Medium—A Great Occasion for Pittsburgians.

(Special to The Talking Machine World.)
Pittsburg, Pa., Oct. 7, 1907.

One of the features of the last baseball game of the season on the Pittsburg grounds was the presentation of a Columbia disc graphophone to Manager Fred Clark, by Mr. Barney Dreyfus, the club owner. Just before the game was closed by Umpire Johnston a beautiful BD disc graphophone in all of its mahogany glory, resting upon a mahogany cabinet, with its silver horn reflecting the rays of the sun, was carried to the home plate. The players of the home team, as well as their opponents of the day, the Philadelphia Club, gathered around Manager Clark to witness and enjoy his surprise. It was not enough that he should be presented with a graphophone, but most fittingly the presentation speech, with which Mr. Dreyfus gave Mr. Clark this little remembrance, was repeated by the great BC cylinder graphophone. The record for this speech had been made in the commercial office of the Columbia Phonograph Co., in Pittsburg. The mechanical proxy of the little owner of the big club told Mr. Clark how his home would be brightened, and his evenings enlivened by this machine while he was out upon the farm. Mr. Dreyfus said that he knew Mr. Clark had wanted one of these machines, but that Mr. Clark, being rustically inclined, was not likely to purchane one for himself. He said that he knew that it was one of the great mysteries why a farmer would rather spend his money for bad smelling fertilizer than to purchase a melodeon or a plush album for his home. He remarked that while Mr. Clark himself might be behind the kitchen stove, rubbing hog tallow on his boots, or perhaps out in the woodshed cleaning the barnyard soil off his overalls, his children could be in the parlor making merry. Furthermore it would not be necessary for Mr. Clark to send for Si Perkins when his family wanted to have a frolic. Si Perkins and his antediluvian fiddle would not be needed with a graphophone in the house. No, by heck! He could have all the music he wanted right to hum.

Following the speech delivered by graphophone Mr. Clark turned on his own machine with some beautiful new records, and entertained the thousands of people on the grand stand and bleechers. Their appreciation was fully attested in loud applause. Whenever the horn was turned from one end of the stand to the other the yells of those deprived mingled with the cheers of those who were receiving the benefit of the music. Altogether it was a very brilliant affair.

A. P. PETIT ON THE PACIFIC COAST.

A. P. Petit, general manager of the Talking Machine Supply Co., New York, was on the Pacific Coast last week, calling on the jobbers in Seattle and Portland, Ore.; San Francisco and Los Angeles, Cal. From thence he goes to Texas and so on to Mexico, but will have no time to run over to Havana, Cuba, as he is a week behind now on his route schedule, and instead of returning the middle of November will not reach home before December 1. Mr. Petit's health is good and his business better.

Fletcher Bros., of Victoria, B. C., are making arrangements for an extensive addition to their premises to accommodate their rapidly increasing graphophone business. Two or three years ago this firm opened up a department with two or three machines on the counter and a few dozen records, that included a very limited repertoire. At the present time their stock embraces in the neighborhood of 10,000 disc, and as many cylinder records, and never less than from fifty to one hundred machines. Mr. Fletcher states that this department has grown to larger proportions than any other part of the business, and they are delighted with the results.

SUN RECORD

HAVE YOU HEARD IT?

If Not, Listen!

Would you like a brilliant record, with absolutely true tone reproduction, satin finish, no scratching sound when running, embodying all of the latest and best music, specially arranged, and produced with finest effects? If so, buy the "Sun," and find what you are in search of.

DEALERS ATTENTION!

OLD RECORDS EXCHANGED

Dealers can keep their shelves free from out-of-date stock; consumers can turn in their old records for new.

The consumer may buy three Sun Records, pay for two, return one old Disc Record (any make).

NO PRICE CUTTING WILL BE ALLOWED. MUST BE SOLD TO CONSUMERS AT 60c. EACH

As we sell only one Dealer in a Town, each Customer of ours has an Exclusive Proposition

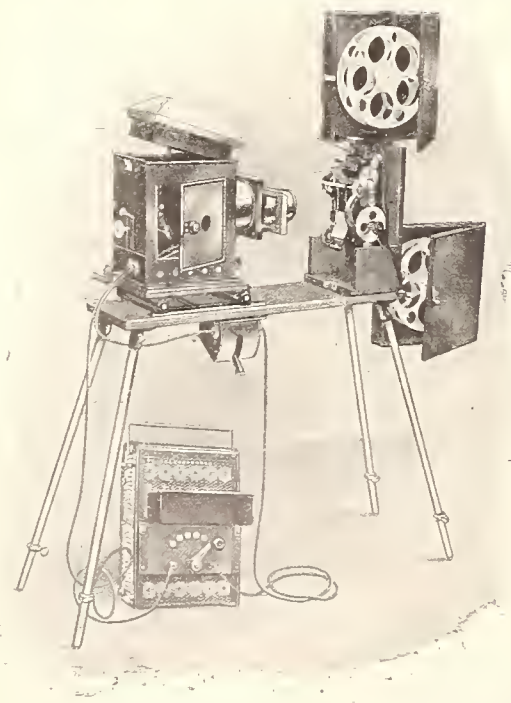
REGARDING PROGRAM ADVERTISING.

A timely warning is given talking machine dealers by the Canadian Music Trades Journal regarding the inadvisability of advertising in even oue program during the coming season. As that paper truthfully says: "Talking machiue dealers should have their minds made up now as to the attitude they are going to assume towards program advertising this season. It will not be long before they will have to express themselves one way or the other aud as they start so they may expect to continue during the rest of the concert season. A great many dealers last year decided it was much better when approached hy a church, Sunday-school, or society committee to dip down and hand out a one, five or ten dollar bill as the inclination might suggest or the pocket warrant and enter it in the church and charity account instead of burdening the advertising account with it. Program advertising is usually given out of kindness and advertising done in this way is seldom of any account. The loan of a machine, record, etc., may be suhstituted for the advertising sometimes, and if this will satisfy the dealer may he thankful, but in any case it is better to hand out the actual cash and keep the advertisement out of the medium rather than establish a precedent which will not be overlooked by all the other program promoters in the town.



DEALERS!

Are you selling the Kinetescopes and Moving Picture Machines which are being used in your town? If not, you are losing money which belongs to you. We furnish you the machines and everything necessary to make a complete outfit.

PORTER'S CLEVER ADVERTISING.

Featuring Victor and Edison Records With Great Success in the Local Papers.

L. R. Porter, the talking machine dealer of 34 High street, Brockton, Mass., has been carrying on a very lively and interesting advertising campaign in the local papers, in the interests of the Edison and Victor records, which he handles. Each day he carried a small ad. for the Victor and Edison alternately, and every one formed interesting reading. A special record was featured each day with some terse matter regarding it. As a sample of Mr. Porter's business getting publicity, we append the following, which appeared recently:

"OUR BEES ARE BUSY BUZZING."
THEY ARE MAKING
"HONEY BOY"
FOR US.

It will come out of the COMB Sept. 28th, sung by Billy Murray, with Orch. Accp., and whistling chorus, on a 10-inch. VICTOR RECORD, No. 5207, price 60c.; and by Frank Stanley on an 8-inch VICTOR No. 5235, price 35c. Also on Oct. 26th, sung as a "Duet" with Orch. Accp., by Reed Miller and Reinald Warrenrath on an EDISON RECORD, No. 9670, price 35c. We predict a very large sale for these records. Orders booked now will be ready for delivery on the above dates. "BEE WISE," don't get left. Send us your order for one at once and we will save it for you. Send it to-day.

L. R. PORTER.

34 High St. Brockton.

PROFIT IN THE VICTOR

When Sold on Instalments—Some Timely Comments on This Subject.

Louis F. Geissler, general manager of the Victor Talking Machine Co., in an interesting letter sent out to the dealers regarding the advantage of instalment sales, makes the following interesting points worth noting:

"You make five dollars to our one on every Victor sale. If it is worth our while to go into the expense of developing this plan, and do all the advertising which we are doing to help it along, it is certainly worth your while to make some effort to get your five dollars to our one.

"Selling Victors on instalments is ten times as easy as selling any one of numerous other articles. There is more enjoyment in the Victor to attract a customer. There is more enjoyment in the Victor to keep him paying his instalments. There is more business that comes out of selling Victors on instalments. Every time a customer comes iuto the store you can play the new records for him and sell him new records. What do you get by playing a piano for him, or an organ, or letting him sit down in a chair? The instalment plan sells more records than the cash plan, and an instalment purchaser comes into your store regularly once a week, and he is sure to huy one or two new records for cash almost every time he comes.

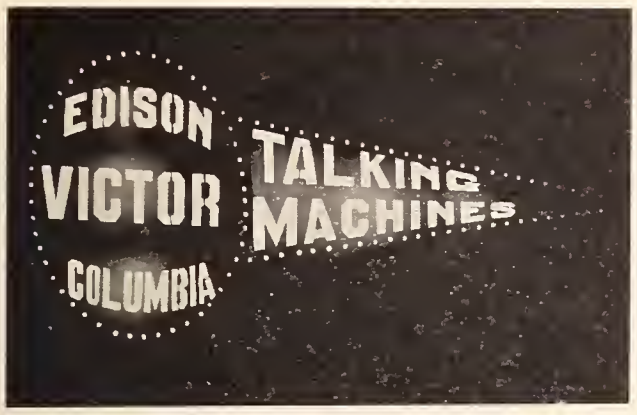
"If mail order houses huudreds of miles away can do business in your territory under their plan, you can do several times as much business under the Victor instalment plan, with the Victor goods to recommend it."

The British agency for the horn cranes and floor stands made hy the Hawthorne & Sheble Mfg. Co. has been placed with Baruett Samuels & Sons, of London, and that for the Star line of records with the General Phonograph Co.

ATTRACTIVE NIGHT SIGN

Devised by Mr. CaJacob for His Store—A Few Trade Pointers.

A very attractive sign for the exterior of a talking machine store is that conceived by A. C. CaJacob, a dealer of Wapakoneta, O., and which is illustrated herewith, as it appears at night. The entire sign is made of galvanized iron, the horn being eighty-four inches long, with a bell forty incnes in diameter. The letters were cut



out by a tinsmith and backed up with glass, painted white, the outline of the horn being indicated by holes punched along the edge, as shown in the picture. The body of the horn is painted in aluminum, the inside being shaded from a dark to a light green. The sign is the same on both sides and is about six and one-half inches thick, the interior being lighted in fine shape by six four-candle-power lamps. We are informed that the total cost was less than $30, being very low in view of the results obtained.

In submitting the accompanying photograph Mr. CaJacob offers some interesting points on the way to develop talking machine trade, which are worth noting. He says: "I believe the average dealer does not make his place of business conspicuous enough with signs, and while some may think this an expensive sign for a dealer in a small town, yet my experience is to the contrary. I have a separate room in the rear of my jewelry store that I use for the talking machine department and while I call it a side line yet the sales in this department will be close to $3,000 this year. I carry the entire catalog of records of the three leading makes: Edison, Victor and Columbia. The possibilities of the talking machine line can only be appreciated by those who push it hard and carry a full stock of machines and records. A dealer must at all times be able to deliver the goods."

SELLING CAMPING PARTIES.

The Question of Selling People in the North Woods—Some Good Prospects Overlooked During the Past Summer.

In looking over the summer business one talking machine dealer ridiculed the idea of doing any great amount of business with camping parties claiming that many of those he approached said they wouldn't be encumbered by a talking machine, horn and supply of records even for the enjoyment of the music after a day's tramping. They claimed that their kits were enough to pack when tramping and took up all available space when canoeing.

Let the question be granted. There is another point from which to view prospects in that direction. In the great north woods of New York State there are hundreds of "camps," or temporary boarding houses. Every one of the numerous lakes in that region is fringed with these resorts, inhabited by vacationists from the cities on pleasure bent. What better field could be found for the work of a talking machine salesman? There are very few machines in the section and those are not of recent pattern. Pianos are not numerous for the reason that it would not pay to purchase an instrument simply for use in the summer months.

On one of the lakes in the Fulton Chain there was one talking machine and a very limited supply of records, among over a score of camps, and the way that poor machine had to work almost every evening at impromptu dances and other entertainments was simply shameful. The camp where it belonged was always the destination of the numerous canoes and skiffs that navigated the lake after nightfall.

One resident and camp landlord upon being questioned stated that if a salesman had visited the camps early in the season he could have disposed of at least a dozen good machines, and outfits on that one lake alone, but that he, the landlord, when on a trip to the city, found so little time at his disposal after attending to pressing business, that he never had the opportunity of going into a talking machine store to choose an outfit.

Of course this season is practically over, but the hint might well be followed early next season by dealers located even a hundred miles or more from summer resorts and a salesman sent to canvass the different hotel or camp owners. It will mean business of good proportions.

ANOTHER CLEVER WINDOW

Arranged for the 23d Street Warerooms of the Columbia Phonograph Co. by Harold Godwin—A Very Ingenious Arrangement.

Harold Godwin, in charge of the window-dressing department of the Columbia Phonograph Co., recently completed his second series of exhibits in the concern's establishment, 35-37 West Twenty-third street, and it goes without saying that same is attracting most favorable attention. The display arranged in the west window depicts a dandy in town making direct for Smith's store, one who deals in up-to-date graphophones and records. The scene is a rural one with "ye olde fashioned houses" as a background, with spreading elms and green sward to give it tone. In fact the scene carries one back to the picture books and nursery rhymes of long ago, and of pleasing memories. The dandy is followed by a boy and a dog and what gives greater emphasis to the advertising scheme is that the dandy, boy and dog are fashioned from notes of music and staffs. The sign suspended above the scene reads "There's A Dandy Tune in Town."

15,000 RECORDS DESTROYED

By the Fire in the Basement of A. B. Wahl's Store in Indianapolis.

(Special to The Talking Machine World.)

Indianapolis, Ind., Oct. 5, 1907.

A fire in the basement under A. B. Wahl's jewelry and phonograph store in the Grand Hotel building, 119 South Illinois street, shortly after 6 o'clock a. m., on Sept. 28, destroyed 15,000 Edison phonograph records, each one in a pasteboard box. There were also many pine crates. The fire started near the front of the basement presumably from the network of electric wires just under the ground floor. Mr. Wahl said the records were worth thirty-five cents each, and unless the salvage is considerable his loss may amount to several thousand dollars. The firemen worked fifty minutes. The loss is covered by insurance.

TRUTH OF REPORTS QUESTIONED.

Paul H. Cromelin Has Some Doubts as to Report of Proceedings at Berne Convention Cabled to New York—No Truth in Statement That Bar Association Had Taken Action in Copyright on Musical Works.

The authenticity of the cable despatches relative to the conference on copyright matters, reported as having closed its sessions at Berne, Switzerland, on August 31, are gravely questioned by Paul H. Cromelin, vice-president of the Columbia Phonograph Co. He informed The World, recently, that the information conveyed in these reports was part of a deep-laid plan with nefarious intent, and was misleading, if not absolutely false, as he was in Lucerne about that time, being there, to some extent, specifically to inquire into the copyright situation, and if a conference of the kind referred to had been going on he would have heard of it without a doubt. Mr. Cromelin further added that an alleged report from Washington, D. C., published recently in one of the music trade papers, declaring the American Bar Association had adopted a resolution definitely endorsing the prohibition of copyright musical works in reproductive form, was also absolutely untrue. The association, he averred, held their annual meeting in Portland, Me., at which Alfred H. Walker, the well-known patent attorney, legal writer and counsel for the Connorized Music Co., was present. The only action taken by the association, Mr. Cromelin said, was the mention of both the Senate and House bills, but neither was endorsed or recommended for passage by Congress.

MRS. HECKER IS VICTORIOUS.

Another case of the talking machine coming out victorious over efforts to suppress it reaches us from Cleveland, O., where neighbors protested against the playing of the machine by one, Mrs. Hecker, until 2 o'clock in the morning or later. Despite the fact that there were several neighbors on hand to testify that they couldn't sleep the court decided that Mrs. Hecker could play her machine as long as she pleased.

"My husband likes to hear that machine when he comes home from work," said Mrs. Hecker in her own defence. "Here's one that's real good," and the lady put "Waltz Me Around Again, Willie" on the machine and spun it off. Then she put the "Whole Damn Family" on the machine and ripped it off, too. "When we get kind o' tired and sleepy and feel like goin' to bed we put on a hymn. Here it is. It's called 'Blessed Assurance.' Real musical, too. I certainly do like the good old-fashioned hymns." Then the church choir rang out with "Blessed Assurance," Mrs. Hecker listening with angelic face.

According to the witnesses it was the rendition of the "Whole Damn Family" that stirred up all the fuss. "I don't mind 'Blessed Assurance' so much," said one of the complaining neighbors, "even if I do hear it twenty-seven times a day. But the 'Whole—ahem—Family'! Lord!"

APPEALING TO PIANO DEALERS.

In order to increase the list of piano dealers handling talking machines, the Victor Distributiug & Export Co., of New York, have been conducting a special campaign with that object in view. The company have sent a number of strong letters to a list of selected dealers with very satisfactory results. One of the letters sent out was as follows:

"Dear Sir—The Victor talking machines and records are recognized by the music trade as a distinctive 'musical instrument,' and are to-day a very necessary part of their stock, and an important factor in the profits of the business. If you have not placed the line, will ask your very earliest consideration of doing so, as we simply wish to appeal to you on the money there is in it. In the line of money makers they have no peer. They rank in a class by themselves, as the profit only starts with the sale of the machine. What appeals to all business men is the absolute protection in price which assures them of a very large profit. As the means of drawing trade to your place of business, they admit of no comparison with any line of merchandise, etc. Thanking you in advance, we remain, etc."

Now is the time to hustle for trade.

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

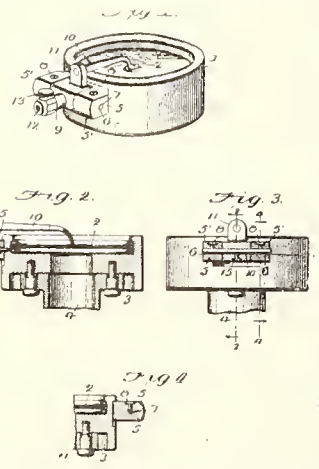
(Specially prepared for The Talking Machine World.)

Washington, D. C., Oct. 6, 1907.

MOUNTING FOR THE STYLUS-BAR OF TALKING MACHINES. Leon F. Douglass, Philadelphia, Pa., assignor to the Victor Talking Machine Co., Camden, N. J. Patent No. 865,088.

One object of this invention is to produce a mounting for the stylus bar of a sound box of a talking machine, in which the stylus bar may be more directly, perfectly and efficiently mounted than heretofore, and the position and the tension of the stylus bar with respect to the diaphragm may be quickly and easily adjusted.

Heretofore the sound boxes in which the stylus bar has been mounted upon a torsional device for giving a tension thereto, or for holding said stylus bar in position, the torsional device or spring has been attached rigidly to the casing of the sound box and to the stylus bar, and no means have been provided for the axial adjustment of the stylus bar so that its pressure or tension in relation to the diaphragm may be varied, and this lack of adjustability of the torsional mounting for the stylus bar is a disadvantage which reduces the efficiency and quality of the reproductions by the sound box.

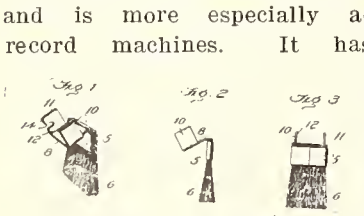


Briefly, this invention comprises an improved torsional mounting for a stylus bar which may be easily adjusted by means of suitable holding or clamping devices located in both the stylus bar and the bearings for the torsional device.

Figure 1 is a perspective view of a sound box having this improved stylus mounting secured thereto; Fig. 2 is a transverse sectional view thereof taken on the line 2—2, Fig. 3; Fig. 3 is a sectional view of the mounting taken on the plane passing through the torsional spring or wire perpendicular to the plane of the diaphragm; Fig. 4 is a sectional view through one of the arms of the improved mounting taken on the line 4—4, Fig. 3.

CLEANING ATTACHMENT FOR SOUND-RECORDS. J. Newcomb Blackman, East Orange, N. J. Patent No. 865,674.

This invention relates to means for cleaning the records of sound-reproducing instruments, and is more especially adapted for disc-record machines. It has for its purpose to provide a cleaning implement adapted to this type of instrument, having means whereby it may be easily assembled in operative relation to the record-disc and removed therefrom when desired. In the practical use of such disc-record, sound-producing instruments objection exists that the reproduction is clouded; that is, it is not as clear and distinct as it should be, and this difficulty arises because of the fact that the sound grooves are not perfectly clean, small dust particles collecting therein. Very slight particles of dust in the grooves detract materially from the clearness of the sound reproduction, and so far this difficulty has never heretofore been taken care of in disc-record instruments. This invention consists in a cleaner adapted to be supported in operative relation to the record disc, as hereinafter described.



In the accompanying drawing illustrating that which is regarded as the best known embodiment of the invention—Figure 1 is a perspective view of the cleaning implement; Fig. 2 a side elevation thereof; Fig. 3 a front elevation thereof; Fig. 4 a rear elevation; Fig. 5 illustrates the same connected to the sound-box of the instrument; Fig. 6 a perspective of a disc-record, sound reproducing apparatus with the cleaning-implement in operative relation to the record, and Fig. 7 a similar view showing the sound-box and the cleaning implement attached thereto shifted to inoperative position.

TALKING MACHINE ATTACHMENT. Henry Koch, Rahway, N. J., assignor to the Regina Co., same place. Patent No. 865,398.

This invention relates to the class of machines commonly known as talking machines and has for its object to provide machines of this description with a device for readily inserting the stylus into the stylus holder of the sound-box or reproducer.

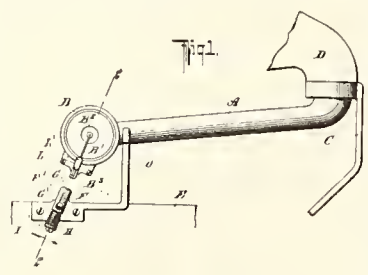


Figure 1 is a side view of as much of a talking machine as is necessary to illustrate the invention and Fig. 2 is a sectional view thereof on an enlarged scale taken on the line 2—2 of Fig. 1.

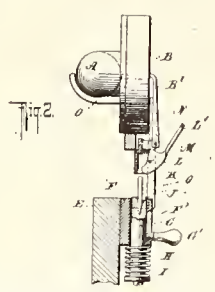
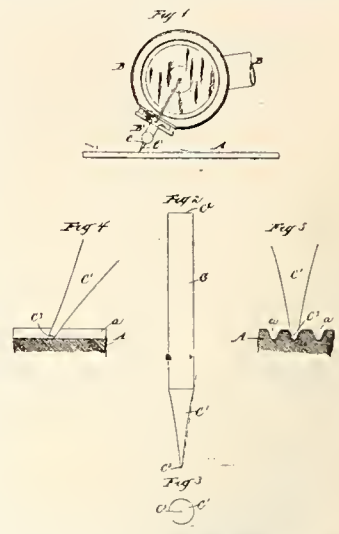


NEEDLE FOR TALKING MACHINES. Charles L. Meyers, Jersey City, N. J. Patent No. 866,950.

The invention relates to needles used in instruments of the talking machine class for engaging in the groove in the record and transmitting sound vibrations induced thereby to the diaphragm of the reproducer, and the object of the invention is to provide a needle which in cooperation with the record groove and sound-box, will reproduce the record clearly and distinctly, with marked lessening of "scratch" and increased fidelity to true tonal qualities.

Figure 1 is an elevation of a portion of a record and sound-box showing the improved needle in place. Fig. 2 is an elevation or side view of the needle alone, on a greatly magnified scale. Fig. 3 is a corresponding end view. Fig. 4 is a section through a portion of a record, on a still larger scale, showing the point of the needle in elevation, in a record groove. The line of section being the center line of such groove. Fig. 5 is a corresponding section and elevation. The line of section being transverse to the grooves.



TALKING MACHINE HORN. Henry Koch, Rahway, N. J., assignor to The Regina Co., same place. Patent No. 865,399.

This invention relates to horns for talking machines and has for its object to provide a means for pivotally supporting said horn, which means is adjustable so as to vary the distance between the pivot and the reproducer or sound box.

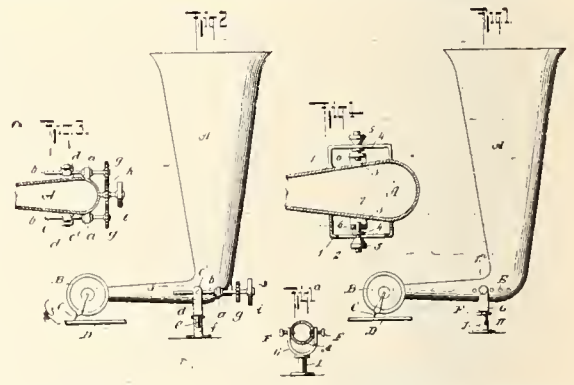


Figure 1 is an elevation of as much of a talking machine as is necessary to illustrate the invention; Fig. 1a is a section thereof on line 1a—1a of Fig. 1; Fig. 2 is an elevation of another form of this device; Fig. 3 is a horizontal section thereof on the line 3—3 of Fig. 2, and Fig. 4 is a horizontal section of still another form of the invention.

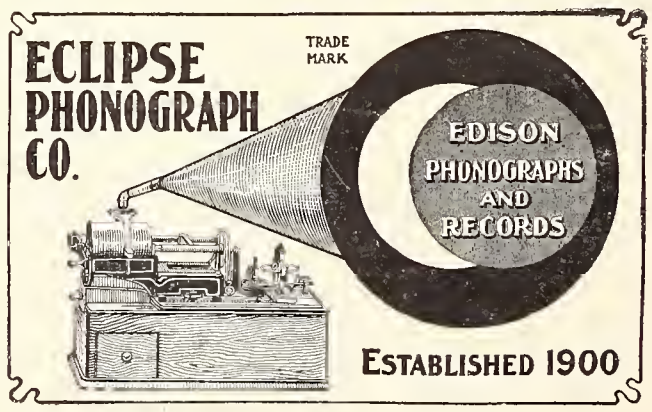
SPECIAL NOTICE TO DEALERS

We have just added a complete line of

ZONOPHONE MACHINES AND RECORDS



and will devote our whole attention to meeting the demands of the trade for these and

Edison GOODS

If you desire anything in **Horns, Cranes, Cabinets, Needles, Disc Record Envelopes** and **Small Supplies,** don't fail to write us.

We carry a large, fresh stock of goods, and our facilities enable us to make all shipments on time.

ECLIPSE PHONOGRAPH CO. 203 Washington Street HOBOKEN, N. J.

DISTRIBUTORS FOR IKONOGRAPHS AND FILMS

REPRODUCER FOR PHONOGRAPHS. William Schubert, Rahway, N. J., assignor to the Regina Co., same place. Patent No. 865,435.

This invention relates to reproducers for phonographs and has for its object to construct devices of this kind in such a manner that the needle or stylus of the reproducer will always travel along the center of the grooves of the record.

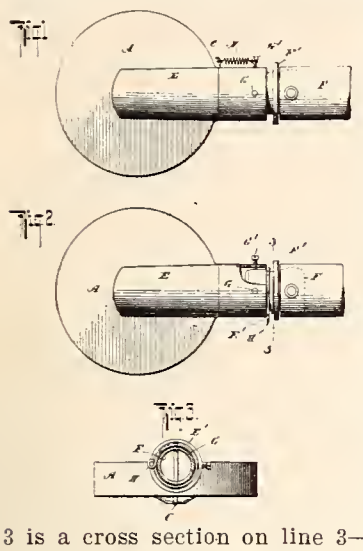


Figure 1 is a plan view of a reproducer with the improvement applied thereto; Fig. 2 is a similar view of another form of the invention, and Fig. 3 is a cross section on line 3—3 of Fig. 2.

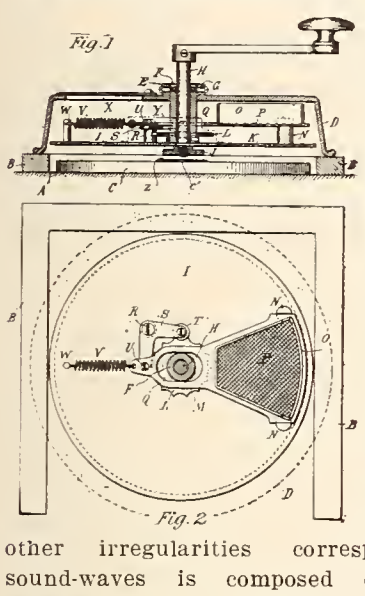
SIEVE FOR USE IN MAKING DISC SOUND RECORDS. Thomas H. MacDonald and Frank L. Capps, Bridgeport, Conn., assignors to American Phonograph Co., same place. Patent No. 865,716.

This invention relates to the production of disc sound-records, particularly records made in accordance with the Hoyt and Gavin patents of January 2, 1906, No. 808,842, No. 808,843 and No. 809,263. According to these patents, the body or main portion of the disc which carries the sound-record is composed of a comparatively cheap material, while the surface thereof containing the impressions or other irregularities corresponding to the sound-waves is composed of a more expensive material which is peculiarly adapted to the purpose. The former material (or equivalents therefor) will hereinafter be designated as "ordinary stock" or simply "stock," while the more expensive material intended for the surface of the record will be designated as "glaze." It is desirable, of course, to use as little of the glaze as possible, and at the same time to insure the presence of a sufficient amount; and it is also desirable that this glaze be uniformly distributed throughout the surface of the record.



The present invention consists of a machine or apparatus for insuring these two purposes, viz.: The employment of just the right amount of glaze, no more and no less, and the uniform distribution of the glaze.

Figure 1 is a vertical section through the apparatus, and Fig. 2 is a plan view of the same with the stationary casing removed.

SOUND BOX FOR TALKING MACHINES. Eldridge R. Johnson, Philadelphia, Pa., assignor to the Victor Talking Machine Co., Camden, N. J. Patent No. 865,105.

This invention relates to sound boxes for talking machines, and more particularly to novel means for mounting the stylus bar of such a sound bar, having for its object to provide a mounting that will make the box extremely sensitive to accurately reproduce the recorded vibrations.

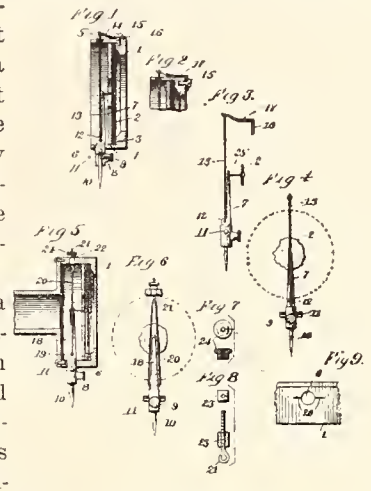


Figure 1 is a sectional elevation of a portion of the improved sound box showing the stylus bar and its connection in position therein; Fig. 2 is a sectional view of a slight modification of the means for producing an elastic tension; Fig. 3, a detail view of the stylus bar and its suspension detached from the sound box; Fig. 4 a front elevation of Fig. 3; Fig. 5 a sectional elevation of a modified form of the means for producing a tension upon the stylus bar; Fig. 6 a front elevation of the stylus bar and its connecting parts, shown in Fig. 5, detached; Figs. 7 and 8 show means for varying the tension upon the suspension shown in Figs. 5 and 6 and Fig. 9, a view showing a portion of the edge of the sound box.

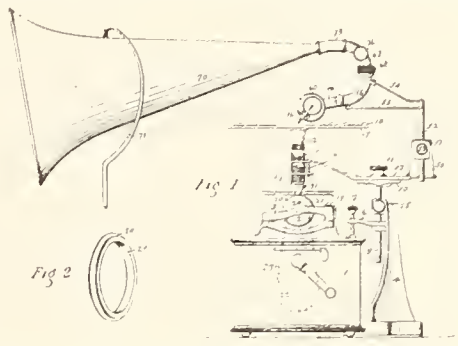
PHONOGRAPH. Louis Devineau, Cleveland, O. Patent No. 865,769.

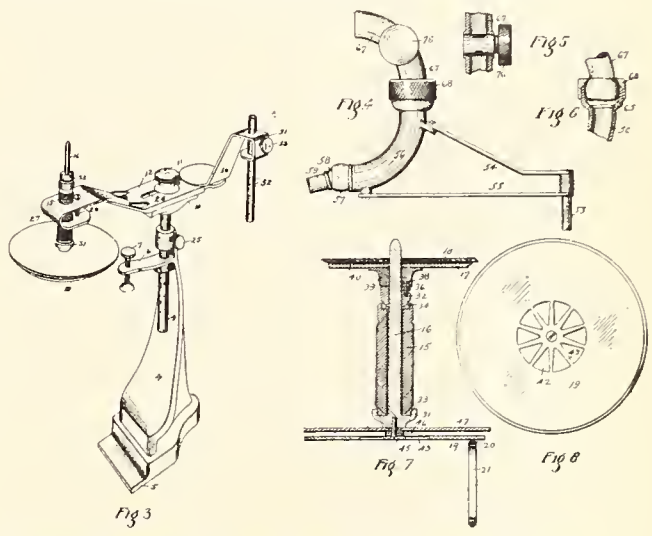
The object of this invention is to provide mechanism whereby either disc or cylinder records may be used on the same phonograph. More particularly the invention comprises an attachment for a cylinder phonograph arranged to properly rotate disc records.

Figure 1 is an end view of a phonograph with the arrangement and with a suitably supported horn; Fig. 2 is a perspective of the driving ring; Fig. 3 is a perspective view of the disc-rotating mechanism detached; Fig. 4 is enlarged side view of the supporting pipe for the reproducer and horn; Fig. 5 is a section showing a valve in such pipe; Fig. 6 is a section showing a ball joint in the pipe; Fig. 7 is a vertical section through the disc-carrier and its shaft; Fig.



8 is a bottom plan of the horizontal driving disc.

Among the twelve claims made is the following: "The combination, with a cylinder-phonograph having a mandrel, of a standard adapted to be clamped to the box of the phonograph, a vertical rod adjustably mounted in said standard, a cross plate carried by said rod, a sound tube and reproducer, an adjustable swiveled support therefor carried by the cross plate, an adjustable barrel carried by the cross plate, a shaft in said barrel, a disc at the upper end of said shaft



adapted to carry the record co-operating with the reproducer, a disc at the lower end of said shaft, and a friction ring adapted to fit on the mandrel and engage the last mentioned disc."

REPEATER FOR PHONOGRAPHS. Sidney B. Yerion, Seattle, Wash. Patent No. 866,552.

This invention relates to talking machines, and its object is to provide a mechanically operated attachment to such a machine whereby the music rendered by the reproducer may be automatically repeated either in whole or in part.

In the accompanying drawings forming part of this specification, Figure 1 is a front elevation of a phonograph with devices embodying the invention attached; Fig. 2, a fragmentary plan

This Show Case and 50 per cent. Cash Profits are yours

Hohner Harmonica Display

SHOW CASE and HARMONICA ASSORTMENT

This offer consists of an excellent assortment of the best selling HOHNER Harmonicas, to retail at prices ranging from 25c. to $1.00, and a first-class show case, made of the best material and perfect in every respect. The assortment is made up of seventeen different styles, with not a dead seller among them. Each style comes in a separate package which is labeled to show at what price its contents can be retailed for and contains an assortment of keys. The case is made of solid quarter-sawed oak, plate glass, and is specially designed for displaying Harmonicas. The instruments appear on an elevated platform, under which there is room to store a small stock. With every case a number of price-tickets are given which can be placed on each instrument to display its retail value.

THIS IS WHAT YOU RECEIVE:

4 dozen Assorted Harmonicas, to retail at 25c. each	$12.00
2½ dozen Assorted Harmonicas, to retail at 35c. each	10.50
2 dozen Assorted Harmonicas, to retail at 50c. each	12.00
½ dozen Assorted Harmonicas, to retail at [illegible]c. each	4.50
½ dozen Assorted Harmonicas, to retail at $1.00 each	6.00
Total retail value of Harmonicas	$45.00
Value of Show Case, at least	12.00
Total Value	$57.00

Your Gain A Show Case which will last indefinitely 50 per cent. Cash Profit on your investment.

Size of case: 20¾ inches wide, 24¼ inches long, 14 inches high.

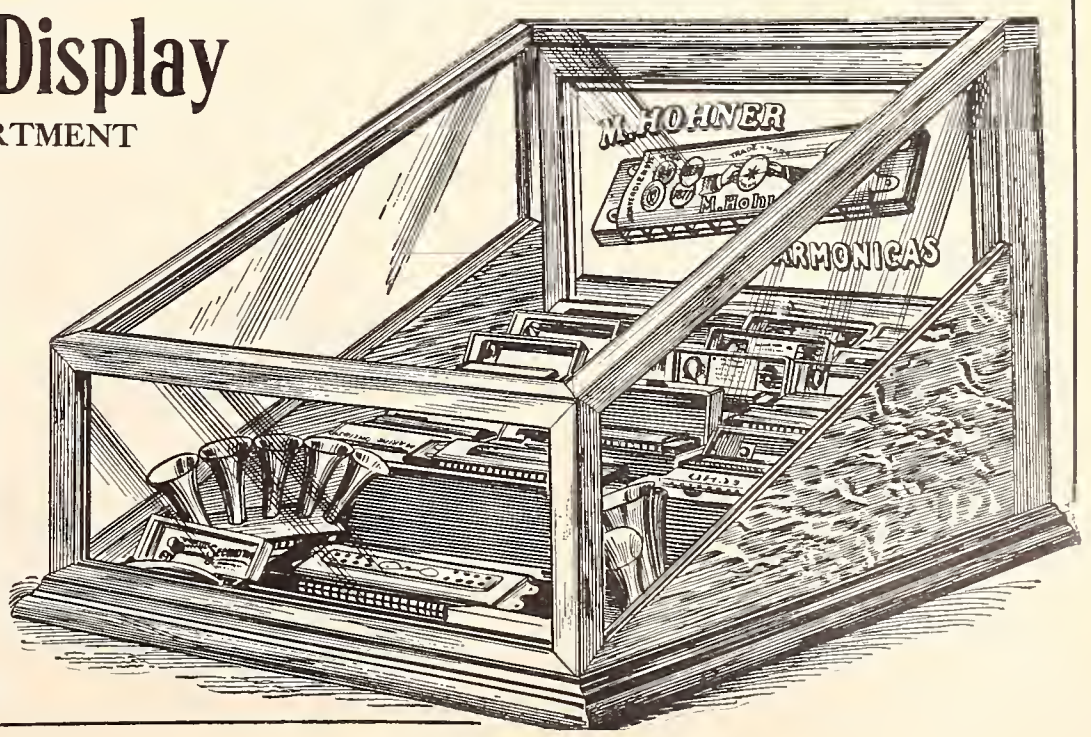
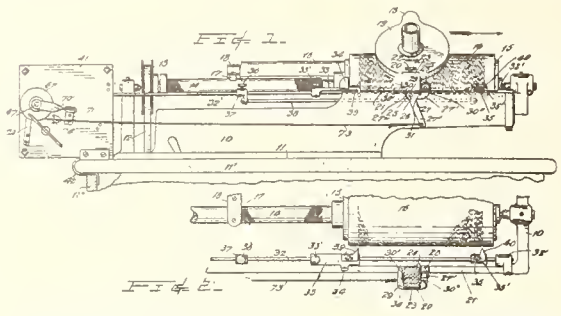
Canadian Office, 76 York St., Toronto



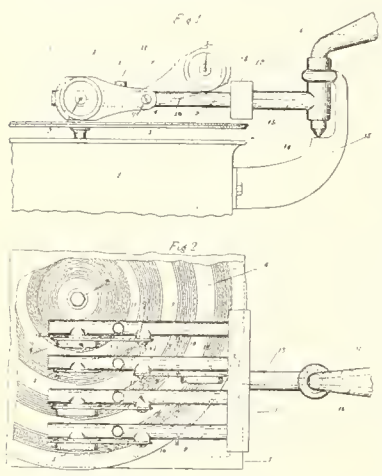
view of the same with the reproducer omitted; Fig. 3, an enlarged plan view of a portion of the apparatus; Fig. 4, a front elevation of the parts shown in Fig. 3 with a part of the frame work



broken away, and Figs. 5, 6 and 7, detail perspective views of parts of the inventiou shown detached.

MULTIPLE GRAMOPHONE. Alexander T. Moore, New Orleans, La. Patent No. 865,344.

This invention relates to a multiple gramophone and particularly to a structure employing a plurality of souud boxes in connection with a single reproducing disc. The invention has for an object to provide means whereby a plurality of sound boxes may be used either independently, or conjointly in connection with a single horn. A further object is to provide means whereby the sound boxes may be thrown in or out of operative position relative to the conducting tubes upon which they are supported.



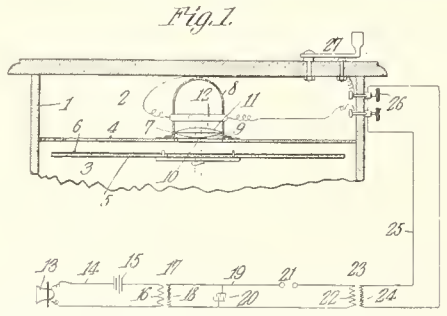
In the drawing Figure 1 is a side elevation of the invention, and Fig. 2 a top plan thereof.

RECORDING AND REPRODUCING SOUNDS. John F. Dirzuweit, Philadelphia, Pa. Patent No. 865,574.

This invention has reference to improvements in recording and reproducing vocal and other sounds. The object of the invention is to produce a photographic record of sounds by electro-actinic means and to reproduce the recorded sounds by luminous rays varied in intensity in accordance with a photographic record of the sounds and producing by these variations in luminosity electric vibrations which, in turn, set up air vibrations corresponding to the recorded sounds.

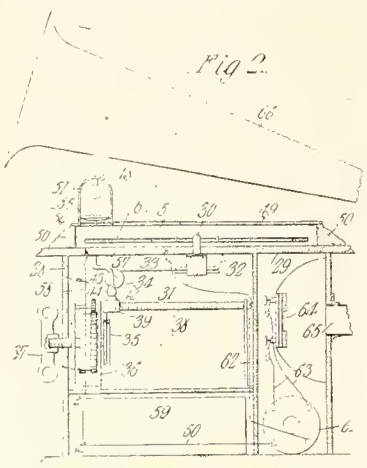
The recording of the sounds is performed

Fig. 1.



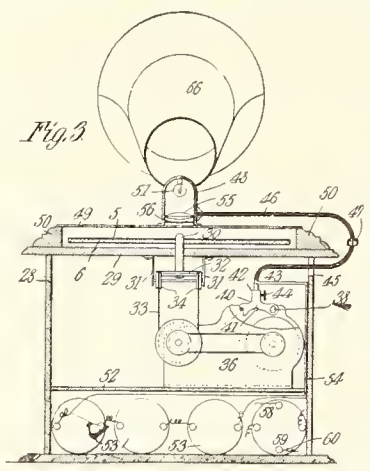
photographically by first setting up electric vibrations in a suitable charged circuit and then transforming these electric vibrations iuto light vibrations, the intensity of which are varied in accordance with the original sounds. These variable light vibrations are transmitted to a movable sensitive film in such manner as to impinge thereon so as to produce, when the film is properly developed, a line the light transmitting properties of which vary in proportion to the variations of the original sound waves. Structurally considered, this portion of the invention comprises a sensitive microphonic transmitter suited to strong currents. Included in the microphonic circuit is the coarse wire winding of a suitable transformer and the secondary circuit of this transformer is included in a circuit across which is branched a condenser and in which is included a spark gap and the primary coil of a high tension transformer. The secondary coil of the high tension transformer is closed through a Tesla tube which, when active, radiates highly actinic rays. These rays are gathered by a suitable lens and projected as a bundle of small area upon a photo-sensitive film otherwise protected against actinic light. With such a structure electric vibrations are set up by the sound uttered against or otherwise reaching the microphonic transmitter and these electric vibrations are ultimately transformed into light radiations from the Tesla tube, which light radiations vary in accordance with the sound waves impinging against the microphone. Consequently, the photo-sensitive film is affected by the light in direct proportion to the intensity thereof and when the film, after being subjected to the light, is developed there appears thereon a light-obstructing line varying in light-obstructing properties in accordance with the original sounds acting on the microphone.

Fig 2.



The invention comprises in conjunction with the recording of sounds, as set forth, the reproduction of sounds from such a photographic record, and this reproduction is made by passing a light-beam through the photographic record aud thereby obstructing the light-beam to an extent developing upon the density of said record and its light-obstructing properties. This light-beam of varying intensity is caused to act upon a suitable selenium cell which, in turn, controls a charged electric circuit including a telephonic receiver. This latter is located in a suitable resonator or sound-amplifier by which the sound waves produced by the receiving diaphragm are amplified to a sufficient extent to become distinctly audible to a considerable distance.

Fig. 3



The invention therefore consists, first, in the recording of sounds photographically by the varying intensity of a source of light in accordance with sound waves, and then in reproducing such record by varying the light coming from a constant source of light by the interposition of the record in the beam of light, and converting the light variations into sounds through the intermediary of an electric circuit the resistance of which is varied by the variable light-beam all as set forth in the claims.

Figure 1 is a longitudinal sectiou of so much of a recording machine constructed in accordance with the invention as is necessary for the understanding thereof, with electric circuits coacting therewith shown diagrammatically; Fig. 2 is a central section, with parts in elevation, taken through a reproducing machine constructed iu accordance with the invention; and Fig. 3 is a section through the structure of Fig. 2, at right angles to the section shown in Fig. 2 and also having parts shown in elevation.

EDISON NOT OSTENTATIOUS.

An excellent anecdote is going the rounds, being illustrative of Thomas A. Edison's lack of regard for ostentation. Some years ago Mr. Edison was presented with a beautiful Swiss watch by a European scientific society. That the gift was really a magnificent timepiece may be judged from its value, which was $2,700. After some time the makers began inquiry to find out if the watch was giving satisfaction. This interrogation brought to light the fact that Mr. Edison makes little use of the valuable gift. Instead he buys a stem winder, costing $1.50, breaks the chain ring off, and thrusts it in his trousers' pocket. If it becomes cloged with dirt he squirts a little oil into it by way of encouragement, and if it proves obstinate after this treatment he smashes it with a hammer and buys a new one.

The Kaiser has talked into a phonograph. Every German may now hear his master's voice.

IMPORTANT VICTOR LETTER.

Cautions Customers of the Inroads of Mail Order Houses—Asks if Dealers Want Their Trade Stolen from Them.

To our contracted Victor dealers:

Do you know that you are being robbed?

Do you realize that mail-order houses in the big cities are selling talking machines in your territory to people who ought to buy Victors of you?

Do you appreciate that this is a large and immensely profitable business which is being stolen from you; that it rightly belongs to you; and that you can have it just as well as not if you want it?

What will you do about it?

You wouldn't sit still and let a thief walk off with your cash box.

Will you let these mail-order houses walk off with your trade?

You don't have to. You are not bound and gagged. There is a way to beat them at their own game.

How do they do it? How do they reach from a thousand miles away into your town and take customers right out of your hands?

How do they bear all the expense of big national advertising, and other heavy expenses; and take all the risk of long-distance shipping, damaged goods, bad debts, and thieving customers and still make big money?

Because the business is easy, because these obstacles amount to very little even at long distance, and because there is big money in the business.

If it is easy for them it is very, very easy for you. You have the confidence of your townspeople and you are right near them where you can see what is going on and whom to trust. You have no big advertising to do, no long-distance shipping, no risk of damaged goods, and about a tenth the mail-order house risk of bad debts.

You have got the mail-order houses beaten to a standstill. We will give you a plan that will enable you to take full advantage of the situation.

You can do all the business and make all the money that they make in your territory and more.

You can make more sales than they do; give more satisfaction to customers; and make more profit on every sale.

This is no "pipe-dream." You can do it. We can show you solid facts and figures to back up this assertion. It is not a theory nor an experiment. You don't have to "feel your way." The way is already mapped out, and clear for the one who is willing to go ahead. We have the whole problem worked out in practice from beginning to end. Many Victor dealers are already making large profits on the instalment plan.

We start by showing you how the plan is working with some of our distributors. Read the book enclosed herewith, "What Victor Distributors Say About the Instalment Plan."

You see that most of them started by distrusting the plan, but end by considering it the most important and profitable feature of their business.

We have a larger and more complete book telling about the Victor instalment plan, telling every single step of the way.

How to get the money to start with, if you haven't it already; how to sell the goods; how to make terms; how to keep track of the business, and collect instalments promptly without worry or bother; how to insure your investment; and how to make small sales grow into a big safe profitable business. We have the whole plan laid out and will send it to you if you want it.

That is the whole question. Do you want this plan?

Are you in earnest to get what belongs to you?

Will you let thousand-mile-away competition break in and ruin your business field? Or will you begin right now to build a stone wall around it?

Will you let your trade be stolen while you sleep? Or will you reach out your hand and grasp the profit yourself?

We are willing and eager to do our part.

A short time ago we turned down a quarter-of-a-million-dollar order from one mail-order concern. In the course of a year we reject millions of dollars in business that would come into unfair competition with Victor dealers. That shows our attitude in the matter.

Our enormous advertising sends business right into your hands. Our fixed policy prevents cut-throat competition and insures your profit. Now here is the opportunity to make this profit many times bigger, easier and safer than ever before, and at the same time to head off a new form of competition that is invading your territory, and which we cannot control; but which we can assist you to meet and to beat.

Do you want this assistance? Can you and will you make use of it? Will you co-operate with us in this earnest effort to protect your own business? It is all up to you.

Please tell us just where you stand on this question.

Are you selling Victors on instalments? If not, why not? What are your objections? Will you give the instalment plan a fair trial if we show you the way?

Shall we send you our complete plan of "How to Sell Victors on Instalments?" This doesn't commit you in any way.

Yours very truly,
VICTOR TALKING MACHINE CO.,
Louis F. Geissler, Gen'l Manager.

P. S.—Please answer this letter to-day while your mind is hot on the subject.

BOHEMIAN AND FINNISH VICTOR RECORDS

The latest additions to the great Victor list of foreign records are twenty Bohemian records, and as many more in Finnish. The Bohemian records comprise eight tenor solos by Fr. Belac and twelve duets by Fr. Belac and A. Bartos, while the Finnish list consists of twenty tenor solos by John M. Eriksen, chiefly folk songs. As is usual with the Victor Co. both sets of records were made by artists of recognized ability, and the results are most pleasing. The new records will be listed in the next edition of the foreign record catalog.

C. E. Miller, who has had several years' experience in the talking machine business, has been appointed manager of the Buckeye Talking Machine Co., Toledo, Ohio. The Buckeye Co. run three stores in Ohio, with Toledo as headquarters.

MOVING PICTURE AND AUTOMATIC MACHINES

AN IMPORTANT SIDE LINE

For Talking Machine Dealers Is the Moving Picture Machine—Those Who Are Giving Attention to This Branch of the Business Are Winning Gratifying Results—Some Remarks in This Connection Worth Reading.

When the idea of incorporating the moving picture with the talking machine was first brought to the attention of this trade it was viewed skeptically, but as the great future for this device was forced upon them by the progress made by the manufacturers of these specialties, the jobbers were not slow in meeting events half way, in consequence of which this trade now control one of the biggest commercial enterprises ever undertaken, and one whose far-reaching influence can only be compared to its twin brother, the talking machine. It would be hard to find two businesses which have so much in common and which are technically so different. "What the talking machine is to the ear the motion picture is to the eye," is now an old expression, but one which sums up the situation.

* * * *

It is true in a measure that the moving picture of to-day is but a substitute for the reality, but so was the talking machine at one time. As we have before stated the jobbers in this trade have come forward and shown a willingness to push the moving picture machines and films among their dealers. They are being helped materially by the manufacturers, who are spreading the news broadcast through the medium of advertising, but this is not all these gentlemen are doing. Work at the factories is being pushed to the limit, and money is not counted in the effort for improvement. Accessories such as lamps, burners, tanks, stands, illustrated song-slides, etc., are being brought out which will add materially to the profit in handling this line, and dealers will find it indeed a big thing for them—if displayed and pushed properly. We add the foregoing condition for the following reason: In a recent tour of the country we came across a number of firms who had neglected to push this end of their business and consequently had become general "knockers." Now it's a certainty that unless the people know that a dealer has an article they will not come to you to buy, neither will an article sell itself. To give a machine a fair show to demonstrate what it can do is not only bare justice to the manufacturer—it simply shows good business sense. Now when the article in question is an entirely new one this is still more necessary for the public's taste must be educated up to the point of purchasing before there is any chance for success.

* * * *

If you have taken this enterprise up, Mr. Dealer, don't use halfway measures. Devote a liberal amount of space in your window to attractive displays; keep clean, bright outfits in the front of your store—where everyone who enters your store can see them; post yourself and your salesmen on all matters pertaining to it, so that they can talk intelligently; do some advertising in your local papers and get the people in your store, then give entertainments. If you do these things, Mr. Dealer, there is little question of your success in selling moving picture machines and films. At any rate you have done yourself no harm by drawing the public's attention to your establishment, and can feel satisfied that you have given a square deal all around—and have run no chance of losing a good thing.

"PENNY-IN-THE-SLOT" POST-OFFICE.

Penny-in-the-slot post-offices are the latest things in London. The busy man who wants stamps or a packet of postcards has only to drop his money in the slot indicated, press a button and his wants are supplied. Two automatic machines for supplying penny stamps and sixpenny packets of postcards have been placed in the portico of the General Post-office. The mechanism is controlled by the weight of the coin, and is so delicate it rejects all spurious money.

An enterprising dairy company of London, England, has placed penny-in-the-slot milk delivery machines outside its depots. From the door of a depot protrudes a brass spout with a handle and a slot at the side. A penny is put in and on turning the handle a half-pint of milk comes out. When the shops are shut the supply of milk continues, to the convenience of many.

SOME AWKWARD SITUATIONS

Have Resulted from John Wade's Out-Door Acting for Moving Picture Machines—The Apostle of Realism—One of the Best Known Figures in the Picture World.

Acting out on open-country roads is full of possibilities for adventure. John Wade, New York's most conspicuous moving-picture hero, has had experiences that do not fall to the lot of the average actor. It is their very realism that has brought success to the moving-picture machines, and the attaining of that realism is full of perils.

Mr. Wade's face is one of the best known of the actors in America, though he never appears upon any stage. Ninety-nine out of every hundred patrons of vaudeville theaters know his face well, but few have ever heard his name. They have seen him week after week enacting the most startling scenes from real life, but they have never heard him speak.

For years Mr. Wade traveled about the country as a pantomime actor. He earned a reputation for cleverness, and when the public began to ask for more and more moving pictures he forsook acting before the public to act before the picture machine.

Instead of representing one character a year, Mr. Wade represents dozens of different characters. While theater-goers in New York are laughing at his antics or holding their breath at his hair-breadth escapes, hundreds of others in every city from here to San Francisco are watching the same here in a dozen different scenes.

As the hero rescued from an upturned boat, Mr. Wade has taken many a deliberate plunge into the Hudson River. And hundreds of people on the shore have watched the operator of the moving-picture camera record the whole event dry-shod from the deck of a nearby boat.

Many of the scenes shown by the moving-picture machine require as careful rehearsing and as competent acting as though they were to be presented by the men and women themselves on the stage. A studio, as completely equipped as any theater, adjoins Mr. Wade's apartments, and there many of the pantomime acts are pictured.

One of the first acts to be photographed for moving pictures in the studio nearly resulted seriously for the actors. Mr. Wade and his company of pantomimists were busy rehearsing the first act of a modern Bill Sykes story. As the brutal husband, returning home intoxicated to beat and strangle his wife, Mr. Wade was acting with all the ability he possessed. Directly in the rear of the studio employes of a factory saw the whole performance, and, not guessing its significance, made a rush for the studio to rescue the supposed unfortunate victim of Mr. Wade's attack. A hurried retreat to a well-barricaded closet and numerous explanations alone saved Mr. Wade from pretty severe handling by the indignant men.

The second act of the same little tragedy had

THE TALKING SCALE

"IT SPEAKS YOUR WEIGHT"

The Invention of the Century

The Talking Scale is an automatic device which calls out in a clear and audible tone the weight of the person standing on the scale, after placing a coin, either a penny or a nickel, as may be arranged in the slot. This scale is not an experiment, but a method of combining two well-known perfect machines, a scale and a Phonograph. The advantages of this scale are manifold. It is one of the most meritorious inventions that has been brought before the public in many years, and the greatest money-getting slot machine ever invented. It is a positive novelty, and the voice is so loud and distinct that when it calls out the weight it attracts others to use it. As soon as set up it begins to earn money at once without expense. The mechanism is the simplest of any coin controlled scale. No motor required.

(From New York *Sunday Sun.*)
LIVE TOPICS ABOUT TOWN.

"'The man in the box' is the hit of Broadway. The bars are crying for more of him. Not since the gambling machines were pulled out and sent to junk has there been such a nickel-eater."

(Cleveland *Plain Dealer,* Monday, Jan. 14, 1907.)

"'I speak your weight' is pretty much the limit. It is the ne plus ultra of mechanical egotism."

(The Providence *Sunday Journal.*)

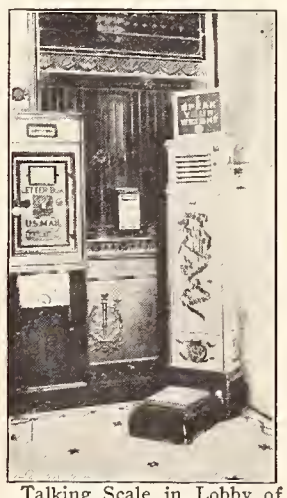
"There are no musical or fortune-telling attachments to the new weight machine. It doesn't need them to attract custom."

EARNINGS OF TALKING SCALES.

Faust's Cafe, St. Louis, Mo., 1 scale (16 days), $84.35.
Kinsley's Restaurant, Chicago, 1 scale (6 days), $63.45.
Automatic Vaudeville Co. Amusement Parlor, 14th St., New York City, 4 scales (60 days), $400.
R. H. Macy's Department Store, New York City, 6 scales (52 weeks), $1,275.

Talking Scale in Lobby of the Whitcomb House, Rochester, N. Y.

Talking Scale in Adams Dry Goods Co. Dept. Store, Sixth Ave., New York City.



Talking Scale in Lobby of the Catlin Building, Hartford, Conn.

We Make Pennies Grow

If you deposit your savings in a bank, you may earn 3 per cent. or possibly 4 per cent. Invest them in a Penny Arcade and your investment will net you 150 per cent. to 300 per cent. per annum. LET US PROVE IT TO YOU.

Let us show you how you can gain an independent income by an investment of $600 and upward.

We will start you, assist you in every way in making your establishment a profitable one, and give you the benefit of our 20 years' experience both as operators and manufacturers.

WE WILL SEE THAT YOU MAKE A SUCCESS, for *your success* will mean *our success*.

Given a fair location, and that is easily found in any town with a population of upward of 5,000, your investment will be returned to you in four or five months, after which all receipts are CLEAR PROFIT.

Just now is the *time to start* and take advantage of the spring and summer season.

Your town certainly should have an ARCADE. If there already is one in operation, YOU start another better one and show that you are up to the minute and a hustler.

If you are now operating an ARCADE, improve the same by adding CAILLE MACHINES and CUT DOWN REPAIR BILLS.

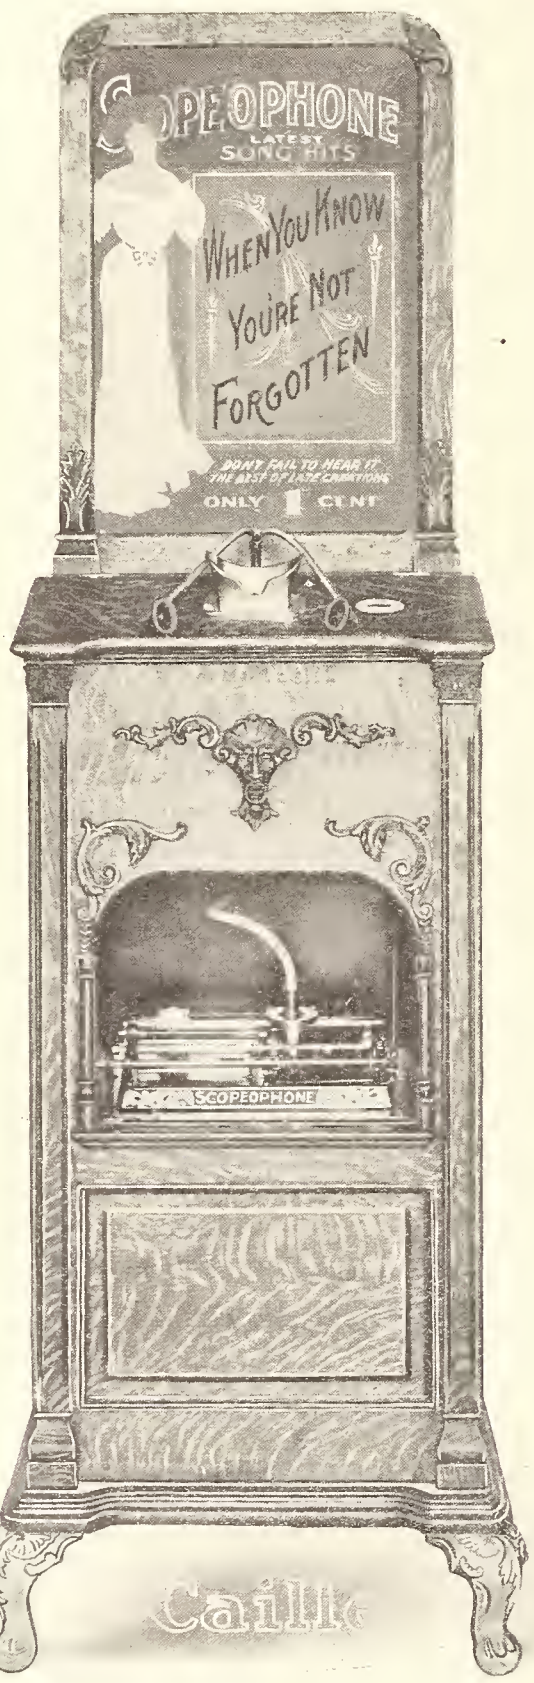
No machines like CAILLE MACHINES for showing big receipts!!

The public prefer Caille Machines, as they always work and always work correctly. They never are out of order.

No scales like CAILLE SCALES, and we make 5 different styles, all of them absolute leaders.

But we also make the famous CAILOSCOPE and have recently patented the CAILOPHONE, both of which machines outdistance anything on the market.

In fact we make *257 Varieties*, all of them "*Caille Quality*," which means excellence in every detail of construction, mechanism and appearance.



THE SCOPEOPHONE
Illustrated Songs

A Postal Card will bring you our handsomely illustrated Catalogue for 1907, showing the largest line of coin controlled machines manufactured in the largest plant in the world devoted exclusively to the construction of automatic devices. WRITE TO-DAY and be First on the Ground.

Western Office:
902 Republic Bldg., Chicago

almost as exciting a climax. Unlike any other actor in the country, Mr. Wade has as his stage, one day the studio, another the Hudson River and still another the country roads of Long Island or New Jersey. As a finale to the Bill Sykes pictures Mr. Wade is shown as being tarred and feathered by indignant neighbors in the disguise of White Caps. For want of a better place the outskirts of a little town in New Jersey were selected as a good place to make the pictures. The affair had gone along swimmingly uutil the sheriff, who had been warned by an excited villager of the outrage by White Caps, rushed to the scene with a posse of citizens and threatened to arrest the whole company. Explanations turned the laugh on the sheriff, but they came only just in time, for the posse was armed with shotguns and was in no humor for joking.

One little scene in the River Pirate pictures that have long proven a great success in the vaudeville theaters was turned into a good laugh on Mr. Wade and his assistants at its first rehearsal. The stealing of a huge safe was successfully accomplished and photographed in Mr. Wade's studio. But the second act, which showed the safe being transferred to the pirate's yacht at anchor in the North River, was not so successful. A large wooden safe, painted exactly to resemble the one stolen, was carted down to the river's edge and placed in a small boat. The unusual proceeding served to attract a large crowd along Riverside Drive, as chronicled by The World. The passage of the boat from the shore to the yacht, which was to be interrupted by the arrival of the police boat and the casting of the safe into the water where it would sink to the bottom, had been nearly completed. True to schedule the police boat appeared and with a mighty heave the safe was pushed over the boat railing into the water, but instead of sinking it floated gracefully away. The spectators had a good laugh at the expense of the actors and the entire scene had to be gone over again.

ACTIVITY IN CLEVELAND.

The Mutograph the Latest—Arcades Doing Well—The Fire Insurance Question—To Operate the Wurlitzer Instruments—Film Exchange Co. Capitalize—Stereopticans in the Schools—A Budget of News.

(Special to The Talking Machine World.)

Cleveland, O., Oct. 8, 1907.

The "Mutograph," au electric bulletin priuting device, has been given publicity in the daily prints, and is attracting attention. It is a permutation dispiay apparatus in which the matter to be read is mechanically engraved on an endless belt, and appears in white relief on a black background, passing on a moving belt before the spectators. The first machine, constructed iu this city, has been on exhibition several days. The F. C. Newell Mutograph Corporation has been organized under the New Jersey laws, with a capitalization of $1,000,000 common stock. Its headquarters and manufactory is in Cleveland. The inventor, Mr. Newell, is president and cousulting engineer; B. F. Avery, vice-president and general counsel; Charles E. Kennedy, formerly manager of the Cleveland Plaiu Dealer, secretary, and W. E. Felling, treasurer.

The company are placing one of the machines in the Daily Leader office, of this city, and are negotiating with parties here and in other cities. The system of installing is on the rental plan.

The large number of five- and ten-cent theatres is evidence that they are popular resorts of amusement. In a recent bulletin the State Fire Marshal says: "The moving picture show has achieved popularity more rapidly than any other new form of entertainment ever did. The Edison factory is turning out 150 machines a day. The number of these machines in Ohio being large, they constitute an important fire danger, because the film, which will explode at a comparatively low temperature, is exposed to electric sparks and the heat from the light which illumines it. Many of these theatres are in old buildings, where rent is low, and uearly all are in the business district where conflagration nazard is greatest.

"Two or three such accidents occur each week in the State, and the fire loss from them would be enormous but for the fact that the chiefs of fire departmeuts, backed by the fire marshal, have required that the machines have fireproof surroundings. This precaution will not prevent the stampeding of the audience when an explosion occurs, and the fire is usually beside the ouly exit.

"The booth for the machiue should be metal lined, aud the film should be uuwound from a metal box and simultaneously rewound in another below, and each should have an automatic shutoff to close it when the film parts. The nickel theatres have increased in numbers so rapidly that trained operators are difficult to be obtained. It is well nigh impossible to extiuguish fire in celluloid, because it has within itself oxygen to support its combustion. It makes the hottest kind of fire."

The Cleveland Automatic Musical Ageucy, F. D. Witt, manager, has opened an office and wareroom in the Flatiron Buildiug, Prospect avenue and Huron Road. The agency are placing and operating the entire line of Wurlitzer automatic musical instruments, aud carry in stock a complete assortment of their manufacture. Mr. Witt stated business was opeuing very encouragingly having already placed a number of iustruments.

The National Moving Picture Supply Co., 1703 East Fifty-fifth street, report business unusually good. Their trade covers the entire field in moving picture machines, supplies, films, song slides, etc. The company are at preseut installing several moving picture shows for different parties, and operate one of their own at the above location. Edward Kohl, manager, said prospects indicated a splendid fall trade.

The Toledo Film Exchange Co., capitalized at $30,000, is a new incorporation of that city.

Three young men recently cleaned up $500 iu a potato speculation. One of the number was made custodian of the profits until a division could be made in the evening, at his house. He placed the money in a phonograph for safekeeping, but when he came to look for it discovered it was gone. He was disgusted with this one record of the machine.

The stereopticon, to supplement the use of maps used in geography and history, is the latest device introduced into teaching methods in the Clevelaud public schools. The supervisor of these two branches of study has worked out a comprehensive course in which is provided a series of stereopticon lessons. C. F. Duttou, one of the high school teachers, who is the inventor of the inexpensive instrument to be used, aided in working out the plau. "These stereopticon lessons are by uo means to be a picture show," said the superintendent. "Only eight or ten slides will be shown at a time, and each will be exhaustively presented. By this means children will be able to get a vivid idea of landscapes and noted places."

An eight-year-old product of sunny Italy may be a degenerate, but undoubtedly possesses the instinct love of music inherited from his ancestors. A few days ago he got into the home of a neighbor and withdrew $60 in cash richer than when he entered. He at once invested his capital in a talking machine, moving picture machine and accessories, and presented the outfit to the young son of the neighbor he had robbed, which generous gift led to the discovery that the money was gone. His unfortunate business entanglemeut was adjusted in juvenile court.

There has been considerable agitation between the natural gas company, the city authorities aud the public occasioned by the rumor that the company intended to install slot meters. Without referring to the reason for objections, at a recent meeting with the council committee, the manager of the company denied the rumor.

LATEST CUSTOMS RULINGS.

Miniature Cinematographs Are Dutiable as Toys—Other Decisions.

In a decision by I. F. Fischer, the Board of United States General Appraisers sustained last week a claim filed by A. H. Ringk & Co., of New York, regarding the rate of duty applicable to miniature ciuematographs intended for the amusement of children.

When the articles were entered at the Custom House the Collector decided that they were dutiable at 45 per cent. ad valorem under the provision in the tariff for "manufactures of metal," but the importers raised the contention that the merchandise should be regarded as "toys," with a tax of only 35 per cent. After a consideration of the evidence the members of the customs tribunal reached the conclusion that the cinematographs are "toys" withiu the meaning of that term as used iu the tariff.

AWARDED GOLD MEDAL.

The Peerless Coin Operated Player and Other Peerless Specialties Honored at Jamestown Exposition.

Roth & Engelhardt, proprietors of the Peerless Piano Player Co., of New York, were awarded a gold medal for their splendid display of automatic instrumeuts made at the Jamestown Exposition. Their exhibit was one of unusual attractiveness and was admired by practically everybody with musical inclinations who visited the Exposition. The honors wou by Roth & Engelhardt were indeed well deserved.

SOME DISSATISFIED ONES

Are to be Found Among Those Arcade Men Who Find Their Profits Are Cut Down Somewhat for Various Reasons.

Many are the grumblings heard this fall in the slot machine field. The dissatisfied ones are found mostly among arcade owners, who find business not up to expectations. We do not mean that these men are losing money, but rather the interest on the money which they have invested has dropped from the almost unbelievable hundreds to more staple figures with the decimal in the neighborhood of the tens. Notwithstanding the premium at which ready money is now held, a safe investment with an assured interest of twenty to thirty per cent. profit is not to be sneezed at. The fact is this trade has become spoiled in a measure by the enormous earnings secured during the early days of the business, so that in these days of retrenchment many arcade men find it difficult to understand that conditions have changed somewhat. Whatever failures have occurred in this business have been brought about in nearly every case by carelessness or rather indifference to the fact that big profits could not continue for all time.

A study of the present situation will reveal the fact that there is little to complain of. The arcade has come among us, and it will continue —with such changes as progress will compel—to fill its niche in the world of amusement. Like in the race for the gold fields of Alaska many struck pay dirt first; more found all desirable locations occupied and returned minus the fares. and plus the experience; a few, however, struck the deep veins where millions lay to be uncovered only after the work of years.

This is paralleled somewhat in the arcade field. When the first arcade opened its doors to the public it was found that it was a profitable venture; thousands without any experience in the business went into it and had some dim idea that all that was necessary was to open up and count their money. Many of these people have, however, foundered on the reefs of failure.

MAY BE USED FOR PICTURE THEATRE.

The Shubert Theatre, of Brooklyn, closed down for a short season because it cannot be made to be a vaudeville theatre. The lease has three years more to run and there is a report prevalent that Lubin, the moving-picture man of Philadelphia, is negotiating for a sub-lease.

NEW DEVICES THIS FALL.

This fall will see a number of new devices which the manufacturers have been at work on, and though they have not been shown publicly, report has it that they are marvels of mechanical skill.

EXHIBITED AT MUSIC SHOW.

The Display of Peerless Players Made by Roth & Engelhardt Much Admired.

Among the several exhibits of automatic pianos at the National Music Show recently held at Madison Square Garden, New York, perhaps the one which attracted the greatest share of attention was the exhibit of the Peerless Piano Player Co., Roth & Engelhardt, proprietors. We illustrate herewith one of the instruments which especially appealed to visitors. This piano was finished in rich Flemish oak, mounted on a platform to match, and the front portion of the case was cut away in order to expose the interior which was lighted by electricity. The instrument is of the coin-operated order, and plays from continuous music rolls. The Peerless coin-operated pianos are known throughout the country for their wonderful money-making qualities, so nothing more need be said here upon that subject.

Columbia disc and cylinder records fit any "talking machine" and make it almost as good as the Columbia Graphophone.

Finest tone, longest life, widest choice. Prove it for yourself. Go into any of the 9,000 stores where Columbia records are sold and listen.

Do you realize how much this argument means to the five or six million readers of the leading magazines?

Do you realize that as soon as the owner of a "talking machine," of whatever make, can be shown that we ourselves believe Columbia Records to have the "finest tone, the longest life, and the widest choice," he is pretty sure to think it's about time to get acquainted?

And that when he gets to that point he is going to take us at our word and "go into one of the 9,000 stores where Columbia Records are sold and listen?"

Cash in your share!

Record Cabinet Bargains

Nos. 100 201–210

If you know what the value of a Cabinet is, you will place your order for these offerings at once. To those dealers who don't know we guarantee that they can make no mistake in taking advantage of this opportunity.

No. 100 Cylinder $11.50
Golden Quarter Sawed Oak Only.
Finished and polished on all sides.
Capacity 120 Records—4 shelves, 30 pegs each.
Height 32 in., width 18 in., depth 20 in.

No. 201 Disc $11.50
Genuine Mahogany Only.
Finished and polished on all sides.
Capacity 150 Records, 75-10 in. and 75-12 in. Records.
Height 32 in., width 18 in., depth 16 in.

No. 210 Disc $13.50
Golden Quarter Sawed Oak Only.
Finished and polished on all sides.
Capacity 150 Records. 2 Rows 10 or 12 inch.
Height 34 in., width 18 in., depth 16 in.

No. 221 Disc $16.50
Genuine Mahogany Only.
Finished and polished on all sides.
Capacity 225 Records, 150-10 in. and 75-12 in.
Height 39 in., width 17 in., depth 16 in.

No. 260 Disc $25.00
Mission Quartered Oak Only.
Finished and polished on all sides.
Capacity 225 Records, 150-10 in. and 75-12 in.
Height 46 in., extra height for motor.

This is a Combination Cabinet. The Machine and Record Cabinet in one Design, Mission Style. A desirable cabinet for a Den, Living or other room finished or furnished in Mission Style.

TALKING WITHOUT WIRES.

Wonderful Developments in Carrying on Conversations—Human System a Great Dynamo.

The human voice can carry fifteen hundred miles, and human ears at that far distance hear the spoken words.

This, according to Dr. Andrew McConnell, of Birmingham, Ala., is the future and perfected wireless telegraphy.

Dr. McConnell declares that he has proved the truth of his assertion by holding such long-distance conversations, through developing his own and another's receptivity to electric waves.

The claim sounds extravagant, but Dr. McConnell has an accumulation of facts in years of experimentation to prove his theories, and these are embodied in a book recently published.

In this book the author rehearses the achievements of electric science. He cites the fact that a few weeks ago the process of sending photographs by wire was demonstrated by Prof. Korn, of Germany. Thomas J. Clark, of Detroit, has made a full success of a wireless telephone through the earth, and says that he will soon be talking by wireless telephones with all parts of the world. Recently a telephone was made a success on a rapidly moving train, so a passenger could call up his office or home at any time and train despatchers locate a moving train. Paulson, "the Danish Edison," has invented a speaking telephone that will record on wire any conversation, so that when a business man is out one can call over the 'phone and say what he has to say, and when the man comes back he can turn on the conversation and even keep it as a court record.

Dr. McConnell follows all these discoveries with the assertion that there is a new electrical world outside of all this. "We must admit," he says, "that all these wonderful electrical discoveries are from dead, inorganic matter. There is another field more important. Is not the energy in a plant, in an animal, and in man of a higher order, more vital than the energy of a dead mineral?

"Men have never understood what life is. I have made experiments which prove to me that human energy is electricity produced by chemical change in the cells, on the same basis as the electricity from a voltaic battery.

"In 1775, Galvani, by accident, found that the electrical current would make a dead frog's legs kick as if alive. In 1828, Nobili placed a live frog upon the circuit of a galvanometer, an instrument to detect the presence of an electrical current, and the frog deflected the needle thirty degrees. The first experiment proved that electricity will do the same work that animal energy will, and the second proved that a live animal has electricity, which is almost conclusive proof that animal energy is electricity.

"The voltaic battery is on the principle that an acid and alkali when united by a moist and porous subject will generate an electric current. The mucous membranes of the body are alkaline and the skin exudes an acid.

"All scientists agree that chemical action produces electricity. Shleiden found that the cell, the basis of life, is in a chemical change. Splanzani and Hunter found that breathing is a chemical change. Priestly found that digestion is a chemical change. Baxter found that all secretions produce electricity. So every process of life produced electricity.

"Emile Bachier can now turn electricity from the dynamo into a mild magnetism that will penetrate the pores of the person sitting between the poles and revitalize him in a few minutes like a night's sleep or will cure him of nervous prostration and make him feel young again. Two doctors in San Francisco, by having a man swallow the electrodes of a telephone, found enough electricity in the human body to send a message over the telephone wire."

DON'TS FOR ADVERTISERS.

Still a Few More Hints Which Talking Machine Advertisers Will Find of Interest.

Don't expect the earth. Advertising will undoubtedly bring you a good slice of it, but you really can't bank on miracles in these enlightened times.

Don't indulge in falsehoods or exaggerations. Make good your promises.

Don't become too sure of your goods. It will only create suspicion.

Don't think a big advertisement is money wasted, and that a small one is just as good. You will realize your error when it is too late. Your advertisements must have breathing room or they will have a very short reach. Also they must ring true.

Don't try to show off when the solicitor calls. He may be in the show business himself. If he gets fresh, make good with him by returning

DON'T NEGLECT ILLUSTRATING YOUR ADS.

courtesy for insolence, and his freshness will evaporate and a great respect for you will take its place.

Don't neglect illustrating your advertisements as profusely as is consistent with good taste, as your prospective patrons will be drawn toward you fastest by the picture route.

Don't use cheap stationery. It stamps your whole business as shoddy. First-class stationery is a criterion of a first-class business.

Don't forget that some people whom you desire to reach may not know you at No. 23 Broad street. Make it more clear to them by saying: "Just 'round the corner from the Aldine Hotel," or "across the street from the Grand Central Depot." They will be able to locate you at once if some promiuent place is mentioned as being near you.

Don't be a haggler, a skin-flint, a knocker or a bluffer. Members of the above fraternity may flourish for a time, but their Waterloo is just ahead; you can bank on that with your last sou.

Don't roast the publisher when he makes a mistake in your copy. The man who does uot make mistakes is as yet unborn. Just allow an error or two to go by without comment, and watch his appreciation of your leniency and his frantic endeavors to give good service in the future.

Don't stop advertising. Change your talk frequently and keep moving.

Don't forget that the other fellow is entitled to the same fair show you demand for yourself.

HOWARD TAYLOR MIDDLETON.

UNIVERSITY TAKES UP MAIL STUDY.

The State University at Madison, Proposes to Teach Foreigners the English Language by Correspondence.

The latest thing planned by the Correspondence-Study Department of the State University at Madison is practical home study work in the English language for persons of foreign birth who have recently arrived in this country.

There is a large foreign born population in Wisconsin. Many who have been in this country for a period of years, because they live and work in communities in which little or no English is spoken, lack the opportunity of learning English.

This teaching will be carried on wholly through the mails. Instruction is given at first in the foreign language where necessary. This is supplemented by the use of a phonograph by which pronunciation may be perfected. The whole instruction is made so simple and plain that anyone who can read and write may learn. Either individuals or groups may be taught by this method.

This plan has been proven a success by the International School of Correspondence. It is elementary and practical, like much of the correspoudence work given by the university, and designed to be helpful to the men and women who seek a better education but cannot go to school.

DEVELOPING PROSPECTS.

How W. D. Wilmot Has Built Up a Large Instalment Business May Interest Readers.

W. D. Wilmot, proprietor of the Wilmot store, Fall River, Mass., and who in addition to sporting goods, musical novelties and toys, carries a very complete line of Edison, Columbia and Victor talking machines and records, has built up a flourishing instalment business along original lines. He informs The World that he is very careful to whom he sells on a time contract and consequently has few repossessions. A slip is furnished salesmen taking an order, upon which he enters the facts of the case as he finds them in the course of conversation. Instead of directly asking the prospect for references he is asked to name his friends who own talking machines and his reliability may readily be judged by making judicious inquiries among them. By taking this course many sales are made to men who would resent a salesman asking them point blank for references. The names of the talking machine owners acquired in this manner are also profitable additions to the regular mailing list and excellent prospects for record sales.

USED THE WRONG RECORD IN CHURCH.

Church circles in Oklahoma are still agog over an incident which happened at Faxon, O. T. At the close of the sermon in Red Rock district, Sunday morning, the Rev. J. A. Ballinger, a Baptist minister, announced to the congregation that inasmuch as those who had promised to provide special music had not appeared, a brother had been prevailed upon to bring his phonograph and introduce a religious specialty therefrom. The Edison was placed upon the pulpit Bible, a nice new record set on the cylinder and the lever started. In a few seconds the minister and his congregation were startled into hilarity when the machine began the reproduction of "Waltz Me Around Again Willie." The lever was closed, the music stopped, and it was with difficulty that the minister swayed his congregation into a state of mind receptive of a pious benediction.

The Indestructible Record Co., of Oil City, Pa., a Pennsylvania corporation, with a capital of $1,000,000, has been chartered in West Virginia.

NEWS FROM SOUTHERN CALIFORNIA.

Dealers Making Great Preparations for Holiday Trade—Many Visitors from Out of Town at Warerooms of Los Angeles Jobbers—Good Business Being Transacted in Spanish Records with Mexico—Active Campaign Being Carried on by Leading Jobbers with Decided Success—Business Steadily Expanding in This Growing Section of the Pacific Coast.

(Special to The Talking Machine World.)

Los Angeles, Cal., Oct. 31, 1907.

Out-of-town dealers are making great preparations for the holidays, orders are coming in from all parts, and so are the dealers. Mr. and Mrs. G. L. Robins, of Porterville, are making a short visit for pleasure and business combined. George L. Snider, of Kern City, while in this city added the Zonophone to his liue of Edison goods and will carry a complete line of Zonophone records. Miss M. E. Sullivau, of San Diego, who has charge of the talking machine department of Theale & Co.'s store in that city, has paid a visit to Los Angeles, placing a nice order for Victors and records, with Sherman, Clay & Co. E. M. Clark, an Edison dealer of Hemet, Cal., has spent several days in this city, leaving an order with Southern California Music Co. for Edison phonographs of the new equipment. The Santa Barbara branch of the Southern California Music Co. has just opened its talking machine department after a general remodeling, under its new manager, W. J. Reynard, who has charge of that department, while the Riverside store of the same firm is undergoing a similar treatment. J. B. Brown Music Co., of Los Angeles, are advertising their instalment plan extensively and are making a big gain with it. Charles Ruggles, manager of Shermau, Clay & Co.'s wholesale Victor branch, has just returned from a trip around the "Kite," visiting the dealers of Redlands, Riverside, San Bernardino and other important towns where he has enthused the dealers with the new Victor instalment plan. He has also put in a full line of Victors with The Wiley B. Allen Co., of San Diego, where all dealers seem to be as busy as bees. The new Spanish catalogs of Victor records have been welcomed by the dealers, as they add a great deal of ease to handling the trade for these goods for which there is a great demand in this section, owing to the fact that there are a great many Spanish and Mexican residents in and about Los Augeles. The trade from the sister country (Mexico) is remarkably good and has proved to be a great field for dealers in this city for both wholesale and retail. Some dealers have devoted separate departments to this class of trade, with clerks and correspondents to take charge of it. Juan de la Fuente, of the Southern California Music Company, reports a number of recent sales to visiting residents of Old Mexico. The Exton Music Co. have been selling a number of uew "Star" machines, for which they are agents, and their recently added Edison department has been a great success.

Manager Stidham, of the Columbia Phonograph Co.'s branch, is much pleased with the business in the new location on Broadway. The increase in business has been great over last year and with the new Symphony Grand and new type B. Q. Cylinder Graphophone (the latest Columbia improvements recently received). He expects to do the biggest business that company has seen in this city. The new "Marconi" disc records have added a great deal to their business and are proving a great success. The select catalog of these records will please any owner of a talking machine.

The Talking Machine Co. are just putting the last finishing touches on their new Edison department, which is complete in every detail, carrying in stock all sizes of machines and a full catalog of records, both foreign and domestic.

Mr. Geissler, of The Geo. J. Birkel Music Co., is very much pleased with the results of their Victor department. Since being enlarged it has taken most all his attention. He is very proud of his system of keeping the stock and says it can't be beat for convenience and accuracy.

A. J. Caldwell is in this city with the view of opening a new store in the near future. He formally owned an Edison and Zonophone business, which he sold to Avery & Co., of Redlands, Cal.

Robert Ingersoll, Pacific Coast agent for the Regina Co., and Mr. "Wurlitzer" Gerlich, have both been making a stay in this vicinity calling on the dealers and gathering orders.

RECORDS FOR THE SPIRIT WORLD.

Ah Wing Tong, Deceased, the Bearer of Some Extraordinary Records, Addressed to the Ancestors of Countrymen in the Great Beyond.

Every little while a story goes the rounds of a new use fo" the talking machine and Chinatown in New York has furnished its full quota of these stories. The latest from that section, however, takes the palm and sheds still further light on the wisdom of the Celestial.

Ah Wing Tong, a Chinaman with much pedigree but very few material possessions, after a few years' struggle to win success in this country, got discouraged and gave up the ghost very suddenly. His friends kept the death secret until a wandering settlement worker discovered it and reported the matter to the police. When an officer visited the single room which had been occupied by the deceased he found a large gathering of friends, but no casket. There was a big packing case in the corner, however, and upon inquiring regardiug the whereabouts of the corpse the Chinamen present pointed to the case and informed the policeman that the body had been placed in it for shipment to China, where it was to be buried among the acres of graves occupied by the ancestors of the deceased.

The matter was reported to the Board of Health who sent an officer to investigate the case. Upon the box being opened the corpse was discovered, tightly packed therein, while all the remaining space was taken up by a talking machine and numerous records. Iu order to get at the bottom of the matter the officer had his interpreter try the records on the machine. The first contained a sort of introduction from Ah Wing Tong to his ancestors in the Great Beyond, as follows:

"From your humble and obedient servant, Ah Wing Tong, man-born child of Ah Wong Tong and his gracious mother, Yakamo, whose lovable spirits now sit with Confucius.

"Greeting: My lowly and unworthy spirit will shortly join those of my exalted ancestors, and from those countrymen who have honored my despicable home by mourning my sudden departure, I have the great pleasure of bearing a message to their honorable ancestors who have also gone before. They desire in this devil land the protection of their ancestors, and give their honorable promise that much incense will they burn at the little temple in the big city, should much wash work prove that their honorable prayer is answered.

"To the Great One who sees everything and knows not injustice, Confucius."

The other records tried by the officer were very ingenious considering that they came from Ah after he was dead and were mostly addressed to spirits gone before, asking various favors. From the size of the collection each mourner must have sent a message to nearly every one of his ancestors and Ah, who was to be the bearer, had unselfishly failed to include for himself a single favor.

After the proper regulations had been filled and a leaden casket—bought by subscription from the mourners—had been filled with the corpse and as many records as it would hold, the messages were sent on their way, consigned to a point in Southern Manchuria.

IT DRAWS COMPOUND INTEREST.

The trouble with most advertisers is that they expect immediate returns from their ads. One advertiser illustrates the principle of advertising in this way: "The money expended for advertising is the same as if placed at compound interest." The profits from the advertising are virtually the interest on the investment. The sums spent for advertising are properly chargeable to capital account because the resulting good will is something that has value, which if the advertising has been properly done can usually be sold for the face value of the investment. The rate of interest is determined by the skill with which the iuvestment is made. Just as the quickest way to increase invested wealth is by compounding the interest, so the quickest way to realize results from advertising is to compound the returns.

PHILIP T. DODGE ELECTED DIRECTOR.

Philip T. Dodge, president of the Mergenthaler Linotype Co., and one of the distinguished figures in the financial world, has been elected a member of the executive committee of the American Graphophone Co., succeeding the late Wm. E. Bond. This adds another illustrious name to the many composing the executive board of this great organization.

Big profits in "grand opera" for Victor dealers

Oscar Hammerstein, the famous impresario, has startled the musical world by his bold and colossal project to extend grand opera to six principal cities of the United States.

Long before Hammerstein's plans took shape, the *Victor* had made grand opera a permanent institution in every city, town and village in the land.

The *Victor* has been a tremendous force in creating the popular demand for grand opera. And Hammerstein has simply sized up the situation and taken advantage of it.

The great public is ready and eager for fine classic music, especially grand opera. *Victor* dealers everywhere are pushing *grand opera*, and selling an increasing number of *Victor* Red Seal records.

Why don't you do the same?—and get your share of the rich profits by satisfying this great and growing demand for Red Seal records in your territory.

NEW USE FOR TALKING MACHINE.

To be Utilized in Dolls and Other Expensive Toys—Conversation Can be Carried on or Stories Told Just as Desired.

One of the latest developments in the talking machine line, which is destined to create quite a furore, is the use of a miniature talker with indestructible record, in the body of a doll or any other form of toy desired—even the much-talked-about Teddy bear.

That there are immense possibilities in this direction goes without saying, for the sale of expensive toys of all kinds in the United States reaches into millions of dollars. For many years all our inventors and improvers have been struggling over the problem of getting a lilliputian talking machine. Many things have retarded their progress; first, it was the machine, then the record, but now it is claimed that an American firm have mastered all the difficulties. Therefore in due course we will find a new line of talking dolls and other specialties in the toy line winning no small share of attention and consideration. Records can be used which will run for about two or three minutes, and the dolls can carry on a conversation or tell a story just as the occasion may demand. There are also possibilities in this line through the application of the principle to advertising figures. It is a big field, and we shall have more to say about it in due course.

MUSIC FROM THE GROUND.

Electric Music Goes Astray and Crowds Enjoy a Free Concert.

Every now and then the police had to "shoo" a crowd from the middle of Broadway, at Twenty-sixth street, one evening recently, so that the cars and cabs could keep running. The crowds were enjoying a free concert. Through the holes in the iron cover of an electric conduit man-hole, sweet strains arose and quivered on the chill air.

Persons in the crowd offered varying explanations as to the source of the music. "A little German band is practising in the sewer so that the usual bricks wou't hit them," said a hard-faced man who had walked down from Forty-second street. At the moment "Lohengrin" was being filtered through the iron cover. Then was heard "Kiss Me Good-Bye and Go," with a flute obligato.

"Some sentimental composer who is not appreciated has buried himself alive," murmured a lovely girl who was going to supper with another girl's brother. "He is playing his swan song."

Generous persons dropped nickles and dimes through the holes of the cover to reward the hidden musicians. A very small fortune awaited the return of employes of the New York Electric Music Co. in the morning. This company send music over wires, make arc lights sing, and will give you a shock in B flat if you order it. One of their wires was leaking, that was all.

The experts had discovered that there was a leak in the wires, but it was after 5 o'clock when the electricians sent out discovered the exact spot, Broadway, at Twenty-sixth street, whose music, heavenly made, was going ballooning, so to say. It was then too late to repair the leak; the plant was closed. So the electricians left attached to the leaky wire their testing apparatus, which is a receiver and transformer in miniature, put the cover on the manhole and went home to await the morning. Hence the mystery.

VALUE OF COMPETITION.

A Trade Stimulator and a Friend When Needed Ofttimes—Helps to Force on Us a Realization of Our Weaknesses and to Inaugurate Reforms—Accomplishes Many Results.

Truly, our competitor is a better guide and adviser than our friends! He sees our weaknesses, to which our friends, in their nearness, are blind. He sneers openly at our faults when our friends preserve a well meant but unjust silence.

Even while the shallow praises of our friends fill our ears, we hear the chortle of competition.

And when headlong impulse threatens to drag us into entanglements, it is the thought of competition that keeps us careful and saves us from foolishness.

Does personal vanity tempt us to erect an extravagant and needless plant? Competition cautions us to go slowly—we may need our reserve capital to meet its onslaught.

Are we stubborn with our trade, are we pig-headed in pursuing policies that provoke our customers? Competition brings us to a realization of our weakness, and forces us to wreathe our souring correspondence with good-natured welcome.

Are we dozing off into the slumberland of "letting well enough alone?" Competition will wake us up and enable us to shake off the sleep of business death.

Are we losing interest in our daily work? Has its monotony made us listless? Competition will add spice and spirit to the task.

Are we lagging behind the requirements of an exacting market? Competition will spur us on to lead and not to follow—to initiate, not to imitate.

Are we content in the thought that we are holding our own? Competition will give us a spirit of spunk and hustle that will make the days too short for our purposes.

Competition is greater than greed, as an incentive; more powerful than ambition as an energizer; more lasting as a stimulant than high purpose.

It cannot hurt us unless we run from it. We can make it a blessing instead of a curse. We can make it help us rather than retard us.

JOHN J. ROBERTS.

McARDLE'S CLEVER ADVERTISING.

One of the best advertising schemes ever inaugurated by a talking machine dealer was successfully carried out not long ago by Frank J. McArdle, proprietor of the Piano Player Co., Omaha, Neb. After the close of the summer season of band concerts at Hanscom Park, the largest and most popular public park in the city, he received permission to place one of the talking machines on the veranda of the refectory where the musicians were formerly located, and on each afternoon the thousands of people lolling about the park sat about in the vicinity of the stand listening to the music from the horn.

The novel manner of providing music free to park patrons was given publicity by the local press and the attendance was always good. Meanwhile, Mr. McArdle grasped the opportunity to spread information regarding the machine that was playing. He also took advantage of the Ak-Sar-Ben festivities held in that city to advertise the machine, and day after day, when thousands of visitors from the surrounding country and States were in the city, enormous crowds, completely filling the street in front of his store for an entire block, would stand listening to the program from the mouth of the horn on the second floor.

ALPHABETICAL LIST OF RECORDS.

The Victor Talking Machine Co. have just sent out an advance copy of their "Alphabetical List of Records," domestic edition, which contains the following Victor records: All instrumental records made in America; all vocal records made in English; Red Seal and German records.

Records in other languages and instrumental records made in other countries, especially for foreign trade, will be found in the Foreign Alphabetical Catalog to be issued shortly.

Beginning Feb. 1, 1908, alphabetical and numerical catalogs will be issued every four months, to wit: February 1, June 1 and October 1, 30 days after each complete record catalog. These catalogs are not issued for general distribution—they are for the use of Victor dealers only.

Will the people in your locality be able to get every one of these records at your store? They're going to know about them all on November 29th—the simultaneous opening day throughout America for the sale of December *Victor Records;* the day we advertise the complete list in leading daily newspapers all over the country.

You know how sales have increased since we began this newspaper campaign. You know how it has added to your profits. You know how important it is to have all the records so that you won't miss a sale. You know that there are no records like *Victor Records*—and the people know it, too.

They buy month after month, not simply because the records are new, but because they are perfect musically as well as mechanically, and have that sweet, clear tone that is ever a delight.

H. C. FABER'S CRITICISMS

On Store Methods as "Discovered" by Him on a a Recent Visit to Pittsburg—Places Himelf in the Purchaser's Place and Utters Some Pertinent Comments Worth Noting.

Monongah, W. Va., Oct. 21, 1907.

Editor Talking Machine World, New York:

Dear Sir—The old saying, "Every dog has its day," fits the writer all over. I had several of them all in a bunch, lasting eight days. Got it into my head to hear Brother Sousa while he was in Pittsburg about the middle of last month, so on the "kears" we got. When we arrived I was both "dry aud thirsty," aud worst of all I was among strangers. Being among strangers did not have a bad effect on me, for I knew that I would be welcomed (or I thought I would) at any of the big stores where talking machines were handled, but I found that this was all a myth.

In the first place, I made up my mind that I would not make myself known to any of them, or even hint that I was interested iu the talker line, but walk in or stand on the outside and appear interested in their displays, and see what kind of treatment a strauger received, thereby getting some pointers for my own busiuess. In all I made four visits—that is, initial or first visits, and here they are as I made them:

Without getting too personal, will state that the first place I dug into kind of "upsot" my bearings. We (my wife and I) stood out in the drizzling rain in front of No. 1, peeped in and saw a lady and a man. Both of them saw us, as they looked at us several times. They could not help knowing that we were interested in the goods they had in the windows, but, outside of the lady winding up a machine and the man looking over an alphabetical catalog, they paid no attention to us. I called this a "wet" reception and passed on for the time to the next place.

Then we walked up Liberty street and went into a dark-looking place, and a young man asked us what we wanted. I replied that we were just looking around, so he bowed politely and went back to a desk and resumed his duties. While I got wet in the first place, I got kind of hot in No. 2, and was for making a run out of the city, as we were near the station, but my courage returned, and, with my hand on my pocketbook, we made a bee-line for the hotel and had dinner and then rested for the balance of the day.

Getting our bearings next morning, we tried a place upstairs on Wood street. While we did see a few machines and some records, we felt sort of chilly sensatious all about us, and, as I am subject to them (chills, I mean), we got down them stairs as quickly as we could and into the sunshine (the sun was shining, which is unusual for Pittsburg), and we felt much improved, so I came to the conclusion that No. 3 was not for my business, and said that we would quit "rubbering" and look elsewhere for satisfaction and courtesy.

Baseball was in session then, so we asked a bluecoat to tell us the way, etc. We concluded that we would walk and see the sights as we went along. He directed us to go to Sixth street, follow Sixth street to the bridge, cross the bridge, etc., so we started. We had no idea of seeiug any more talkers, but what was our surprise when we had nearly reached the bridge to see some of those flower horns and that dog-gone dog looking right square into one of those horns, innocent like and real cute, too. A circular sign stated that it was Powers & Henry Co., and that kind of got me, as my front name is Henry and I had a "hankering" to see what kind of power was in there. I saw a man making for the door, and "Come in" was said by him so invitingly that we accepted. Well here it was entirely different. He asked us to have a chair, and then tried to make us feel at home. He did not know who we were or what our business was. I must say that politeness and good behavior rule here, as I saw a number of people come in and all were treated alike, whether the toiler with his dinner-pail or the party who had just left his auto on the outside. This, in my estimation, is the key to their success, as all were accorded the same treatment. After noting the way that people were received and treated, I presented my Victor identification card, and then all was plain sailing. Mr. Shirley seemed to have everything pertaining to the business at his finger ends, and if their business all the time is as large as they did in the few days that the writer was there, this firm must indeed be a power in the trade.

Mr. Levin, of this same house, is pleasant-mannered and seems to haye a level head on his shoulders. The head of the house, Mr. Henry, was out of town, and consequently I did not get a chance to meet him. His business was in safe hands, though, and from all appearances, politeness and good manners are the drawing cards, sure.

Both the Victor and Edison lines were pleasingly displayed. The firm had an excellent exhibit at the Exposition, all enclosed in glass, probably 15 x 18 feet. Sousa was at the "Expo" in all his glory, and he surely made a "Hit" with a capital "H". This old band master is doing lots of advertising for the records that reproduce his compositions. I know this to be a fact, as the Dutchman said, "It worked both coming and going." I mean by this that Sousa has a drawing power that is never failing. For instance, in the past month there have gone from here 123 people solely to hear Sousa. Not one of this bunch would have gone had it not been for Sousa. They were all from this neighborhood, and went for the sole purpose stated above. A good percentage of them have machines, and, of course, nothing will do but they must have records of the selections Sousa played while in Pittsburg. There are, of course, some who do not have machines, but will have them now as soon as pay day comes around, so as they can make the first payment.

Iu closing this letter, I wish to add some advice, and this is that all beings who work in "talker" departments or stores surely ought to memorize "Rules for sales force" on page 6 of

PERFECT MEDIUM QUIET NEEDLES

THE NAME OF THE NEEDLE DENOTES THE TONE IT WILL PLAY

The **BEST NEEDLE** made **IS** the **ONE YOU WANT** to use. **WE** do not **HANDLE** anything but **FIRST CLASS GOODS** and **YOU CAN DEPEND UPON** the quality of **EACH STYLE** of **NEEDLE** to be **A1.**

AMERICAN TALKING MACHINE CO.

586 FULTON STREET, BROOKLYN—N. Y. CITY

September World, then perhaps they won't turn would-be customers away unknowingly. Will state that had I been treated civilly in all the places I visited, perhaps I would have more places to deal, but as the matter stands I am satisfied, want no apologies, and the Powers & Henry Co. suit me. I pay as I go, and therefore ask no favors of anyone, especially after having gone through the process of a wet, a hot, and a chilly spell all in one town. Very truly yours,

H. C. FABER.

THE PHONOGRAPH GIVES EVIDENCE.

A resident of Portland, Me., told of a case that was tried recently before one of the civil courts of his city and in which a phonograph played the principal part.

"It was a little matter of a debt that brought the parties before the judge," he said, "and the man sued stoutly denied ever having borrowed a cent. It was alleged by the plaintiff that the transaction took place in his rooms, and that the defendant had given a verbal promise to pay inside a month.

"After the defendant had sworn solemnly that the whole thing was a fabrication, the plaintiff's lawyer quietly produced the phonograph, which his client had in his rooms on the day the debt was claimed to have been contracted, and set it in motion.

"Immediately the conversation in question was repeated, both the defendant's and the plaintiff's voices being clearly recognizable. The defendant had to pay up.

"I was in court at the time, and I never saw any man appear so devilishly embarrassed as the accused when he was compelled to admit that he had deliberately lied."

DON'T USE DEAD PHRASES.

"Chestnuts," says the reader, "I've heard that before!" when his eye bumps into the following phrases:

"Come early and avoid the rush."
"We defy competition."
"Give us a trial and be convinced."
"We beg to inform you."
"Below cost."
"Square dealing."
"We aim to please."
"If you don't see what you want, ask for it."
"Buy here and save money."

Properly blend the new and the old. "Be not the first by whom the new is tried, nor be the last to throw the old aside."

Be plain, pungent, pointed.

Fixed rules cannot be laid down for advertising. A method that may be desirable for one line of goods may be a failure in another. Men study, observe results and adapt themselves to situations.

SAN FRANCISCO'S GREAT PROGRESS.

All Branches of Talking Machine Business Report Increasing Activity—Looks as if Approaching Holiday Season Will Mark New Era in Sales of Talking Machines and Records—People Getting Settled in Their Homes and Need Musical Solace—Allen Fibre Horns Are in Good Demand—Their Especial Merits Defined—Sherman, Clay & Co.'s New Quarters—Talking Machine Concerts Well Supported.

(Special to The Talking Machine World.)
San Francisco, Cal., Nov. 7, 1907.

In spite of the fact that other branches of the music trade are inclined to be a little slow in San Francisco, the talking machine departments everywhere seem to be coming ahead very satisfactorily. With the approach of the holiday season, more inquiry is heard for machines, and the record trade is on the increase.

The Columbia Phonograph Co. report a considerably better business than last month. W. S. Gray, the Coast manager, is now in Portland, where he met George W. Lyle, general manager of the company, a few days ago. They will proceed together down the Coast, and are expected here about next Wednesday. They received the first Symphony Grand Graphophone a few days ago, and began using it in the daily concerts on Thursday afternoon. Mr. Clancy, of the Oakland branch, received an instrument of this type over a week ago. The men in that office are keeping up their customary activity, and have a good deal of trouble in keeping supplied with popular styles, such as the Type BQ.

A ginger-meeting was held Thursday night of last week, but Mr. Gray was not present, as he had to be in Sacramento. C. J. Moore, formerly of the San Francisco office, is now in charge there, assisted by H. A. Marehand, who has for some time been in the Oakland branch. There has been a rapid improvement there for the past few weeks. Mr. Gray is now getting out a "Columbia Bulletin," a sort of official publication of the company on this coast, designed to keep the various branches in touch with each other. This paper includes the reports of "ginger-meetings," the standing of the different departments, and lists of the most successful salesmen.

Clark Wise has again resumed his evening talking machine concerts, which are a greater success than ever, as the Auxetophone makes the concerts more attractive than they were before. As the holiday season approaches, the evening crowd grows to larger proportions, and last Wednesday evening Mr. Wise had a well-filled hall.

Peter Bacigalupi & Sons were short of stock for a long time, but they have been ordering for the holiday trade, and belated shipments now coming in are crowding them for room. To accommodate what is now arriving, they have secured an additional room, which is now well filled up.

C. D. Blaine, formerly of Arroyo Grande, Cal., has opened a store in San Luis Obispo, Cal.

Alfred Widdop, before the fire with Byron Mauzy, has opened with a large stock of talking machines in Fort Bragg, Cal.

The Allen Fiber Horn, made in Japan, and for which Byron Mauzy, of San Francisco, is sole distributer for the United States, is claimed by the maker to possess numerous points of excellence which commend themselves to the general public. Mr. Mauzy states that "the tone reproduction is absolutely natural, and does away entirely with all metallic vibrations. It is the lightest horn manufactured, and is also the most durable and the cheapest. Not being of metal it does not rust or tarnish and it will fit any machine. The Allen Fiber Horns are made by hand, of a Japanese rice fiber material. It is finished with a beautiful lacquer, put on by a new patented process in a permanent glossy jet black color. They come plain and decorated, the inside of the bell of the decorated horns are hand painted by talented Japanese artists, in the style peculiar to the Flowery Kingdom. Various scenes in Japan are depicted as well as many of the native flowers. Japanese artists as well as artisans are not paid any more in proportion for their talent than a Japanese laborer, consequently this Fiber Horn could not be manufactured in any other country at five times the cost."

P. Bacigalupi, Jr., is out of the city this week on a quail hunt.

Sherman, Clay & Co. have now about completed their stock of talking machines at the new store, and are resuming the wholesale business, which has been interrupted for the last ten days on account of moving. The retail stock is not quite in order, but this part of the business is expected to open up Monday. Mr. McCarthy believes the downtown trade will be as large as ever, and it will be conducted in far more convenient surroundings.

The Southern California Music Co.'s store in Riverside, Cal., have been refitting their phonograph department, and opened again for business at the beginning of the week.

The Eilers Piano House of Portland, Ore., attracted a large crowd last week at the opening of its new talking machine parlors, which are said to be as handsome and up-to-date as any in that city. The trial and demonstration rooms are enclosed with double sound-proof glass walls, windows and doors, and are fitted up in individual color schemes.

Byron Mauzy's new talking machine catalog has now gone to press, and will be out in about a week.

NEW YORK, NOVEMBER 15, 1907.

REPORTS from World correspondents in every section of the country show a decided activity in trade during the first half of this month. In fact the talking machine situation as we view it broadly insures a holiday trade of unusual proportions. There are some lines, of course, which have been hit heavily. The horn situation has not been fully cleared up, but the demand for special horns is growing steadily, and there will also be a number of other talking machine specialties announced in the columns of The World within the very near future, which will interest talking machine men everywhere.

SINCE the appearance of the last World we have had quite a shake-up in financial affairs in this city, but happily the shake-up did not affect points outside of New York and here but temporarily. It is well to remember that for some months past we have been going downstairs and are so much nearer the ground that no great fall is possible, particularly a fall from the roof, and the little tumble which we had recently is now practically cleared away and all the obstacles which have blocked recuperation have been also removed. In such times business men must not lose their heads. They should not be misled in the slightest by the cry of the pessimist. Our great financiers managed the local situation admirably and the attitude of the Government, through the Secretary of the Treasury, immediately restored confidence and with the greater number of millions of gold which is coming from Europe, the financial foundation is secure. It does not pay to look on the dark side of things, because if one persists in doing that too long the result is an absorption of an amount of pessimism which must of necessity injure one's chances in the battle for trade.

WE have a splendid yield of crops and large foreign requirements and no necessity of expending the profits in paying debts. The farmers will spend their seven billions or more for goods and the demand will quicken industry as nothing else can do. The mines, too, are adding to the wealth of the country and nearly a half billion of gold mined promises a new basis for credit. In fact the one great trouble which faces the great shipping and transportation companies is how to find cars to get the ripening crops to the seaboard and to bring back wealth from other nations who have no option but to purchase supplies from us.

IT is well to remember, too, that our last flurry in financial circles was promptly succeeded by a year better than the preceding year—a year of prosperity. If we compare our wealth with the condition of the country not longer ago than 1903 the figures will be stimulating. Between the two estimates of our total wealth in 1900 and 1904, 1903 intervened, and yet the total raised from 88 billion to 107 billion. When we talk of loss we must remember that nothing can reduce our coal area perhaps seven times all Europe's. When Wall Street is depressed we must remember that the sun is still shining and we should do better to think more of realities. We should devote more time to developing business along legitimate lines than to sitting down and crying pessimism. The talking machine industry is capable of big things and the men in it are not to be diverted in the slightest from great accomplishments by any little temporary flutter in the financial world, and the quicker this truth sinks into the hearts of the readers of The World, the better it will be for them.

THE officers of the National Jobbers' Association are already doing good work and it should be understood that the moves of this organization are made with the welfare of the entire industry at heart. No hasty action will be taken on any important subject, and it is believed by those whose interests are large in the industry that much good may be accomplished by concerted action.

WE have received a number of communications from readers bearing directly on the editorial appearing in last month's World anent the record situation. Dealers should lose no opportunity to keep all record stock moving and there are plenty of good sellers that are permitted to remain in stock without being properly pushed by salesmen. Profits from the record end of the business are substantial and every effort should be put forth to increase the sale of records. Every bit of advertising which is put out exploiting new records or old ones has been helpful to the trade and we should recollect that it is by constantly keeping wares of every kind before the public that a demand is accentuated for same.

THIS publication reaches not only exclusive talking machine dealers in all parts of the world but it is read by many thousands of men in other departments of trade who carry talking machines as a special line. Probably there is no paper published which has such an extensive circulation outside of the regular trade as The Talking Machine World. The following letter received from D. M. Rodgers, a dealer in furniture, carpets, hardware and lumber, in Corning, O., will show advertisers how The World is regarded by outsiders and the advantage of carrying business announcements in its columns.

"I receive several splendid furniture and hardware trade journals, but The Talking Machine World, a copy of which you recently sent me, is one of the most interesting trade papers I have ever read. From the copy mailed me I have already ordered goods for my talking machine department and am corresponding with other advertisers for supplies required. I have been selling talking machines for several years but I found many new things in your journal that will be of great benefit to me in this part of my business. I am obliged to you for the sample copy and gladly enclose my check for $1.00 for The Talking Machine World for one year. It would be cheap at double the price and every talking machine dealer ought to have it. I wish you continued success."

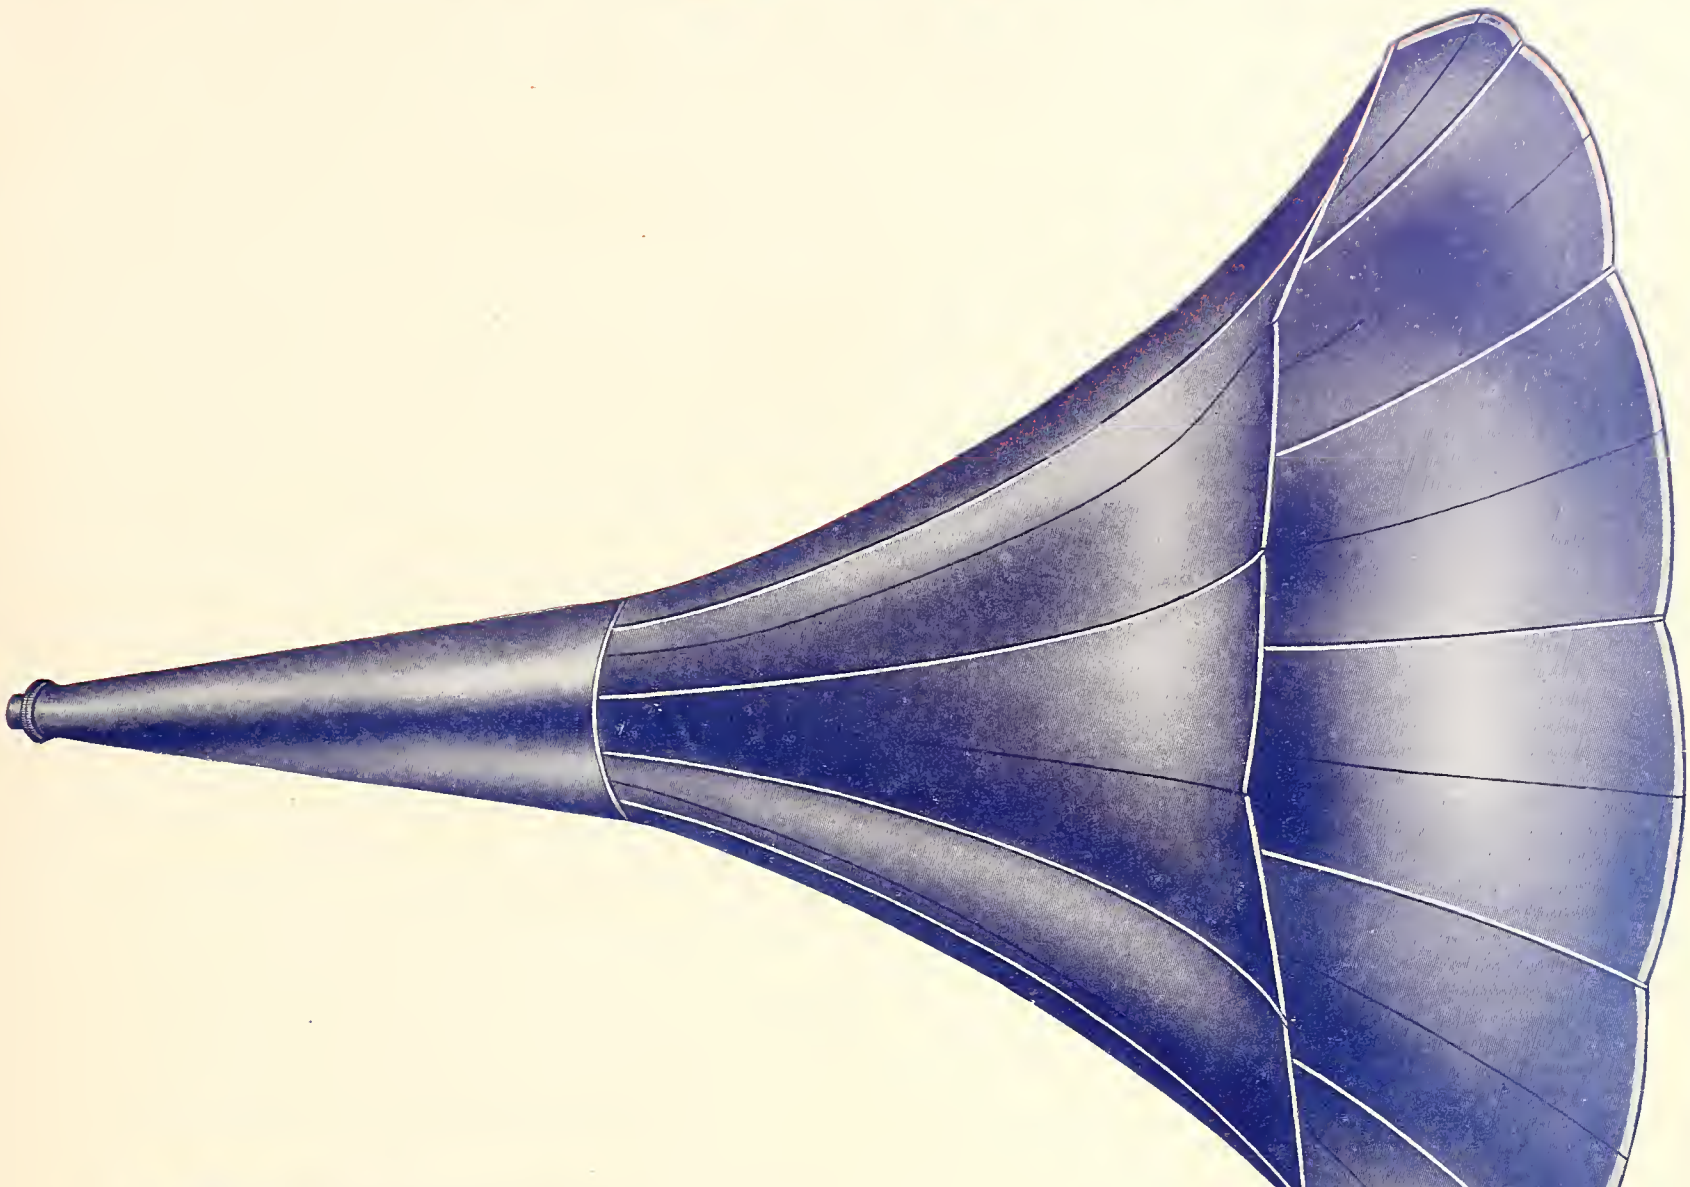
WE have had an opportunity recently to study the trade situation in the Central West and have discussed business conditions with prominent jobbers and retailers all through that vast country. It is gratifying to note that they view the business condition with great optimism. In fact they are looking forward to a splendid fall and holiday business. It should be understood that the great agricultural section of America is but little affected by Wall street conditions. While stock speculation in a way may be indulged in in every part of the country yet not to the extent that it is in New York and the East. Therefore as we view the business outlock the great Central West will absorb more talking machines for the next few months than any other similar period since the industry was established. This opinion is formed after a close analysis of the conditions in the various western cities. The South, too, is going to give a good account of itself. The Pacific Coast while perhaps not up to the average will continue to be a good point for the distribution of talking machine products.

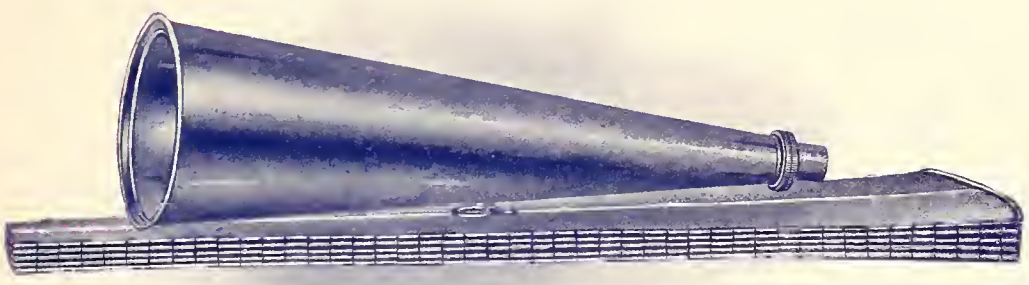
IT would be an excellent plan for the managers of talking machine establishments throughout the country to have a family meeting of their employes at least once a month. At such times matters which directly relate to the talking machine business can be broadly discussed and there will be an interchange of ideas which will benefit all. Points will be brought out regarding the selling of talking machines which will materially assist the younger salesmen and again we have never known any salesman too old to learn. The higher the ability in the selling end of the business the more sales and the better sales. Talking machines will not sell themselves by any means, and when we consider that we have outfits which retail for as high as $500 it will at once be seen that the field affords opportunities for good salesmanship qualities.

FREQUENT cabinet meetings composed of the selling staff will result in increased profits in the business department. No doubt of that. We have studied the effect of these meetings in other lines and have found them to be extremely beneficial, and we know that the talking machine industry would profit by occasional open discussions of the problems of the trade.

The entire force may be welded together in a more harmonic whole through a better understanding of actual conditions. And through this knowledge a better presentation of the talking machine may be made to the purchasing public. No points should be overlooked which make for business success to-day.

THE SEARCHLIGHT FOLDING HORN





Patent No. 771441
Oct. 4, 1904

Patent No. 12442
Jan. 30, 1906

THE ONLY PRACTICAL, COLLAPSIBLE HORN IN THE WORLD

Style—Blue (Baked Japan)—Gold Striped.

For all Edison and Victor Machines except Victor I.—For all Columbia Machines

Size, 23 x 28 Cylinder; 23 x 21 Disc. Boxed, 3½ x 7 x 20 Inches.

ARE YOU "ONE"?

DO not be ONE of the shouters that the horn trade is dead.

You havn't the right horn, that's the trouble.

Put in a line of our horns and use our printed matter.

Your customers will do the rest.

Samples in your window will advertise your business.

Send to your jobber. If your nearest jobber does not have our full line, write or telegraph to us.

SEARCHLIGHT HORN CO., 755 Lexington Ave., Brooklyn, N. Y.

CHEERY TRADE REPORTS FROM MILWAUKEE.

All Branches of Business Make Favorable Reports Despite Financial Flurry—People of Foreign Birth Large Purchasers of High Class Records—Talking Machine Men Remodeling and Enlarging All Along Line—Laurence McGreal to Occupy New Store Around Dec. 1st—Flanner Installs Talking Machine Department—What a Run Around the Trade Reveals.

(Special to The Talking Machine World.)

Milwaukee, Wis., Nov. 8, 1907.

Despite financial stringency, with its dulness in all lines of commercialism, the talking machine business in Milwaukee during the past four weeks has been gratifying. Wholesalers and jobbers report business even rushing. Retailers, on the other hand, declare that things are not that rosy, although the business they are doing is above the average and payments in most cases are cash.

The usual dull months of 1907, July and August, brought exceptional trade to local jobbers, and the months of September and October were even better.

Milwaukee and other Wisconsin cities have been taking hold of talking machines in a new phase, which is, of course, not new in other sections. It is the commercial machine. Many business houses are introducing the talking machine for correspondence work, and stenographers as a rule like the method. It has opened a way for young women who have not learned or who have not had an opportunity to learn shorthand.

THE COLUMBIA CO.'S WAREROOMS.

Another feature that impressed The World's representatives is the change in opinion of people of Milwaukee. A year ago the talking machine was regarded as a luxury beyond the ordinary person's means. To-day even the poorest classes enjoy it. They are substituting the costly pianos in the homes of the middle classes.

Nevertheless, the middle and wealthy classes are users of talking machines. This accounts for the numerous sales of the higher priced cabinet machines reported by Milwaukee jobbers.

The entrance of the foreign element into Milwaukee trade is gratifying to dealers. Only the other day a number of Greeks walked into the Columbia branch here with a dozen records in their native tongue, and found much enjoyment in the weird and fanciful folklore of Greece. Thus it is with other races and peoples.

The accompanying picture is an interior view of the Columbia Phonograph Co.'s store, and shows the main salesroom and office. But one third of the store is shown in the view. Another room containing the stock of Columbia records is directly in the rear of the room shown. The company's repair shop is on the second floor.

"Business is almost too good," said A. E. Thomas, speaking of trade conditions to The Talking Machine World. "We are doing more business than we can really attend to, and our agents throughout the State are enjoying the same prosperous business. The demand for talking machines is steadily increasing, and the month just past has been the best in our history. Collections are excellent and we are more than satisfied with the results."

About the best indication of good business is the enlarging and remodeling of talking machine stores, and more improvements are being made by dealers this year than ever before.

Lawrence McGreal, State agent for the Edison and Victor talking machines, is making preparations to entirely occupy the new building on Third street, recently leased from George W. Ogden & Co., by December 1. Alterations are now being made and Lawrence McGreal, who will conduct the business under his own name after entering the new store, will have about the finest phonograph store in the country. The salesrooms and exhibition parlors in the new location will be double the present rooms in size. Eight sales booths are being installed, and the entire building will be remodeled into an up-to-date store. The McGreal house has a large storehouse at 317-319 Milwaukee street, where they have their surplus stock of goods.

Joseph Flanner has just installed a talking machine department in his large music house on Broadway. In speaking of the business, Charles H. Iddings, manager of the department, said: "The Victor Victrola promises to be the leader, among high-priced machines, in Milwaukee. I have just sold two of these instruments and our order for more Victorias has been sent. There is considerable call for them."

Retail talking machine dealers say that the wholesale dealers and jobbers have painted business far brighter than it really is. While business may be as good with them as they say, the retailers for the most part report business fair, while some of them say it is quiet.

Mr. Huseby, of The Huseby Co., 312 Grand avenue, said: "Some may tell you business is rushing, but it has been far from what it should be." The Huseby Co. deal in Edison and Victor machines.

George Eicholz, 1340 Fond du Lac avenue, says that while business has been rather quiet he cannot complain. Fall prospects are bright and he anticipates a good Christmas business.

Goerke & Krienitz, 839 Third street, reports business somewhat slower than last year at this time.

Max Schucht, 1509 Vliet street, says: "Business is not what it should be at this time. The wholesalers may be doing the business, but among the dealers a greater demand would be welcomed.

Joseph Schostak, 481 Third street, is enjoying a fairly good trade in the talking machine business. Oscar Bach, who has a large store at 2202 Vliet street, is having a big run on records, with good purchases of new machines.

OLIVER'S PECULIAR EXPERIENCE.

Story That Could Well Form Plot for Novel.

A. C. Oliver, a farmer located near Ypsilanti, Mich., had a peculiar experience with a talking machine not long ago, during which he lost and later recovered the machine in rather a roundabout manner. The "talker," however, appears to be the hero of the story. Not long ago Oliver and his wife drove to Ypsilanti, leaving the farm in charge of their hired man, T. M. Dixon. When Farmer Oliver returned that night he found his farm, but the hired man had flown. With Farmhand Dixon had gone Mr. Oliver's talking machine and the accompanying records.

The curtain rises on the next scene set in Jackson, Mich., during Oddfellow week, and finds Dixon no longer a plowboy, but traveling musician. He exhibited in saloons. While glasses clinked merrily and voices rambled on in conversation, Dixon dispersed tunes with the disconsolate phonograph. Then the hat went around. Many who failed to contribute nickels "set 'em up" for the musician. In an unguarded moment and under the warming effect of too many shupers, Dixon confided that he was an Oddfellow. The men of the links sought in vain for the mystic passwords and grip from the musical "Oddfellow," and falling upon the prevaricator, threw him out.

Dixon, disgruntled, went straightway to police headquarters to complain and to recover his beloved phonograph. The police told him he was drunk, and he was locked up.

Farmer Oliver had occasion to visit Jackson, and while sauntering along a street heard the strains of a familiar song floating out from a second-hand store. Now Oliver's phonograph had a reproducing apparatus, and the song he heard was from a record into which his daughter had sung.

Dixon had sold the phonograph to pay his fine. The machine is back in its accustomed place on the Oliver farm.

To claim a better plan of work and withhold it, may lose friendly criticism, build a doubtful reputation and gain resentment. On the other hand, an explanation and a few whacks from the knocker's hammer might prove the plan to be mere punk and so clear away the cherished rubbish for better things.

THE UTICA AUTOMATIC STOPPER

¶ This splendid device is for the Edison Home Phonograph. It stops the machine when the record is finished. The Automatic Stopper is sure to be in large demand among users of the Edison. The retail price is 25 cents. ¶ Place your order through your jobber; if unable to get them of your jobber, write us. We will furnish a sample to any dealer in the United States or Canada on receipt of 15 cents, if the name of your jobber accompanies the order.

POINTS IN CATALOG MAKING.

Some Plain Facts Which Will Interest Those Living Consideration to Talking Machine Literature—The Views of an Expert.

Of the making of catalogs there seems to be no end. Manufacturers', and jobbers', as well as retailers' catalogs, of machine records and sundries, issued to increase the patronage of the store, reach our desk. While some of them demand commendation, others exhibit not a few flaws that surely must detract from their utility and efficiency. The making up of a catalog is no easy task, and the following hints may prove an aid:

The first consideration is the paper to be used. For half-tone illustrations this should be coated stock, but for ordinary printing sized and supercalendered stock will answer. The first costs about seventy-five per cent. more than the latter. As to the number of pages in a catalog we will have nothing to say. This depends on the length of the line to be shown, though of course it is not necessary nor practical to illustrate the whole line. We have seen comparatively small catalogs that carried more weight than elaborate and bulky ones.

Half-tones show to the best advantage on pure white stock. To select a tint or allow one to be forced upon you by the paper dealer is a mistake. White stock is difficult to make. It shows imperfections more plainly than does tinted. Hence, the paper dealer's anxiety to show the superiority of the tinted stock.

But do not forget that owing to the whiteness of the paper, opaqueness is an essential. You must strive for a perfect sheet in a light weight that is as nearly opaque as possible. If your cuts show through from the other side it is an imperfection that will be a great detriment to your book.

An attractive cover is as much an essential as any other feature of the catalog. Covers are being made in half-tones, zinc etchings and by lithography. The first named, though lately come into use, is accomplishing best results. A first-class cover printed in three colors from half-tones will accomplish more at a less cost than either of the other methods.

Next comes the question of engravings. In considering your expenditure for half-tones, bear in mind that the individual cost of each plate is but a small item in the total amount. The mistake that most catalog compilers make is to "save at the spigot and lose at the bung." They give way to the temptation to save a dollar or two on individual cuts, with the result that their finished book is below the standard of their up-to-date competitors.

As a matter of fact, this is the poorest sort of economy. The more attractive the book the better the advertisement, and if your merchandise and prices are right the more liable you are to have the best results. The better the cut the better the impression upon the prospective customer, and the clearer the details the more likely the sale.

Having secured the paper stock and having arranged for the illustrations, do not try to crowd too much into a given space. It is a greater fault to crowd a catalog than to crowd a newspaper or magazine advertisement. One of the most successful catalogs of the past season was that in which a smaller number of cuts than usual was placed on a page and the size of the illustrations was greater. Therefore, they had as much advantage over the others as a department store has over the little notion store around the corner.

It is better to cut your line if you have not the space; show fewer articles and display them better. If you have never tried this you can afford the experiment. You need not be afraid of the results. Actual experience has proved that the returns are better from a page of this kind than from one that is overcrowded.

Another precaution is this. Do not drive hard bargains and expect unexcelled results. You should get your paper maker, engraver and printer personally interested in your work. You cannot do this by driving a sharp bargain. They are constructed on the same lines as yourself. You would not take any special interest in work from which you felt the profits had been cut. You would simply handle it in the ordinary manner and get rid of it with the greatest possible dispatch.

So it is with the men who furnish paper, printing and engraving. They will not watch with special care that you get a perfect sheet of paper; that the plates are carefully etched and finished; that only the good grade of ink is used; that the press is not speeded too high; that the sheets are not turned and run again while wet nor bound before they are dry; in fact, that in every particular, from start to finish, as much care is taken as though the work were for their own use.

It you flatter yourself that you can hoodwink any of these men into doing something special for you without paying properly for it, you are simply robbing yourself of possible business.

The foregoing points will prove valuable if borne in mind by any members of the talking machine trade who contemplate getting out some special holiday literature, or in fact any form of catalog.

RECORDING LABORATORIES TAKE NOTE.

Those in charge of the recording laboratories of the various talking machine companies might use to advantage the new system to be used in arranging the orchestra of the New Theatre to be built in New York and which will have the support of many wealthy men. According to Heinrich Conried, who will be the director of the new house, the orchestra will be so arranged that by pressing a button the various portions of the floor may be raised or lowered in order to increase or decrease the volume of tone of the different sections of the orchestra. Mr. Conried claims that the new scheme was adopted owing to the fact that in the majority of orchestras the brasses usually drowned the tones of the violins, when on the same level. By changing the levels at will, however, perfect proportion of volume may be maintained. Not a bad system for the talking machine man to investigate when it is considered what difficulty is often experienced in arranging bands in the proper position for recording.

The Emperor of Germany is manifesting the liveliest interest in the moving picture machine, and has ordered a most expensive outfit to be installed in his yacht, the Hohenzollern. He is particularly interested in the views taken of the recent naval and military maneuvers in Germany.

Get ready for Christmas

Better look over your stock right now and make up your mind what's needed for your holiday trade. Then place your order so that you won't be caught off your guard when the Christmas rush sets in.

We are ready to help you put your stock in shape now, and later on we can be of still greater help when it comes to filling the gaps.

No matter how complete your stock may be at first, you will more than likely find yourself running short on this, that or the other thing, and some quick work will be necessary to fill your orders—Christmas trade can't wait.

Then it's a case of putting your jobber to the test—and you don't want him to fail you in such an emergency.

You can't trip us up with "rush" orders. We're always "right there with the goods." We have a large and varied assortment of Victor talking machines and records, record cabinets, fiber cases, English needles, trumpet horns and all other accessories. And we always make shipment the same day the order is received—always; Christmas or any other time.

Write to-day for our latest catalogue as a starter toward getting acquainted with our prompt and valuable service.

The Victor Distributing and Export Company
77 Chambers Street New York

HE FOUND IT WORTH WHILE.

BY ERNEST WERNINCK.

"So you are going to Marshton for your vacation, are you?" said the manager to the keen young clerk.

"Yes, sir. I catch the seven-twenty to-morrow morning."

"What do you intend doing there? Rather quiet little place, isn't it?"

"Yes, sir; but there is good fishing in the creek, and that's what I'm after."

"Well, I hope you will enjoy yourself. Of course, if you can sell a dozen or so talking machines while you are there, we won't have any objection."

"I'll do what I can, sir."

"Thank you, my boy! I know you will."

It was some two months after the above conversation that the same manager received the following letter:

"Marshton, Pa.

"Dear Sir—Your statement for $123.60 to hand, which I will settle as soon as I am able. I have sold none of your goods. I would have done better to have thrown away the old goods I had than to take your Mr. Green's advice to send them to you in part payment of a new bill. Yours respectfully, Charles Mitchell."

The manager answered briefly as follows:

"Mr. Charles Mitchell, Marshton, Pa.:

"Dear Sir—Your favor of recent date to hand, and I much regret to hear of your inability to move the goods on hand. I have spoken to our Mr. Green and he has asked me to inquire of you if you have taken his advice and cleared out one of your two windows containing stationery, etc., and made a display of the machines and colored horns. Assured that you will settle your account with us as soon as you are able, and wishing you better success. Yours respectfully, A. Blakslee, Manager."

It was less than thirty days after this that the followiug letter was received by the manager:

"Marshton, Pa.

"Dear Sir—Enclosed please find check, $123.60, in full settlement of my account. I had not done what Mr. Green suggested until I received your letter, but on receipt of same I immediately acted on the idea and made a very effective window. I had an inquirer while I was arranging the wiudow and he came in the next day and bought the $30 machine for cash. A few days after I sold the $45 disc machine, also for cash, to a farmer who lives about fifteen miles out, who had never been in my store before. Please send me two more $30 machines, by express, at once, as I have some splendid prospects. With kind regard to Mr. Green. Yours respectfully, Charles Mitchell."

The Hext Music Co., Denver, Col., have been appointed Victor jobbers. They have well arranged talking machine quarters.

McGREAL'S FINE QUARTERS.

Will Carry a Large Wholesale Stock in New Quarters at 172-176 Third Street—Harry Krienitz Takes Over South Side Branch.

(Special to The Talking Machine World.)

Milwaukee, Wis., Nov. 2, 1907.

Lawrence McGreal, the large talking machine jobber of this city and Cincinnati, will soon move his wholesale stock into his new headquarters building at 172-176 Third street. The wholesale will occupy the entire third floor or 7,500 square feet of space. The shelving and fixtures are now being installed. The retail department on the first floor is excellently arranged with ample stock shelving and fine oooths for both Edison and Victor business, but extensive improvements are soon to be made, including a cosy recital hall in which Victor concerts are to be given daily. Mr. McGreal says that his jobbing business for October was considerably ahead of 1906 and indeed has shown a steady increase the whole year. His new branch house at Cincinnati is making a satisfactory showing.

Mr. McGreal has just sold his South Side branch at 439 National avenue to Harry Krienitz, formerly in his employ as salesman and shipping clerk, but more recently a member of the firm of Goerke & Krienitz, 835 Third street, Mr. Krienitz withdrawing to engage in business for himself.

READ THIS CLIPPING!

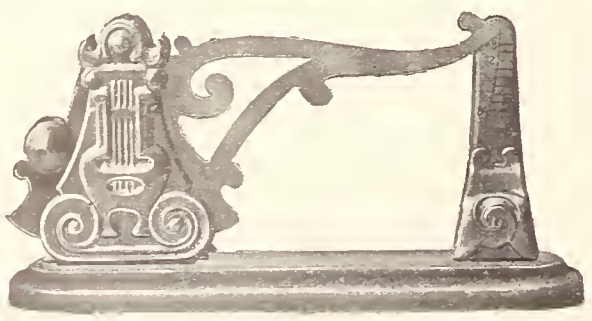
Every distributor and dealer should realize the great importance of correct speed regulation, for it means greater satisfaction to customers and greater increase of sales.

(From the October Issue of *The Talking Machine World.*)

GETTING THE SPEED RIGHT.

The Victor Talking Machine Co. have recently emphasized the wisdom of dealers teaching customers how to test the speed of the turntable occasionally. The proper and easiest method is as follows: Place a piece of white paper under the record and count the revolutions for half a minute or a minute. See that the turntable revolves at the uniform speed of seventy-six revolutions per minute. Specific instructions for adjusting the speed regulators accompany each machine. To obtain the true Victor quality, strict attention must be given to this point. Much of the old prejudice against talking machines is due to machines being operated by persons who absolutely disregard the speed; hence the pitch is often far from correct and the reproductions suffer accordingly.

THE PHONOMETER (Patent Applied for)



Absolutely Insures Correct Speed Instantly and Permanently!

REMEMBER THIS: The *voices* of Caruso, Melba and all the other vocal artists, speaking records of celebrities, the tone qualities of solo instruments, etc., *cannot be faithfully reproduced* from records and thus bring forth the individuality of the artists or the instruments, the tone quality, etc., if the machine is not accurately and properly adjusted.

Instruct your salesmen to demonstrate the Phonometer to every machine or record customer, for it bears the endorsement of all leading distributors and jobbers.

RETAIL, ONE DOLLAR

DEALERS—Write your distributor immediately for sample and attractive advertising matter, etc.

TALKING MACHINES FOR MODERN LANGUAGE TEACHING.

Rev. A. H. Fish Writes of the Splendid Work Accomplished in Teaching Languages by Means of the Talking Machine—Brings Into the Class the Atmosphere of the Language as Well as Its Correct Intonation, Pitch and Articulation—Destined to Exercise Wide Influence.

The Rev. A. H. Fish, B.A., B.Sc., a prominent teacher, being connected with the Arnold House School at Chester, recently contributed an interesting article on the phonograph for modern language teaching to the School World. He said:

My own acquaintance with the use of the phonograph in teaching dates only from the last summer holidays, and for that and other reasons my knowledge is very far indeed from being that of an expert. I had already found some acquaintance with phonetics exceedingly useful in regulating and supervising the French teaching in my own school, especially in the case of the many boys (and teachers) whose ears were not sufficiently quick, or whose interest was not sufficiently keen, to enable them to learn by simple imitation of a native teacher. But I found myself confronted by several difficulties. The first was the apparent want of uniformity of pronunciation among native Frenchmen. The second, the much greater want of uniformity in their explanations of our mistakes. The third was the impossibility of getting anything like enough correctly pronounced French to train my own ear to analyze differences which I felt existed, but which I could not permanently fix.

I had begun to think of the phonograph as a possibility, when chance threw in my way the opportunity of which I am about to give some account. Early in August of 1905 I found myself in the town of Grenoble, with four or five weeks to spare and no definite plan for their employment. I had always fought shy of holiday courses, but an examination of the Grenoble syllabus, especially the announcement of the Laboratoire de Phonétique Expérimentale, directed by M. Théodore Rosset, Maître de Conférences de Philologie Française, open daily from 6 a. m., decided me to devote to work a holiday which should have been spent on the Alps of the Dauphiné. A holiday course at one French university is probably, with the exception of the Laboratoire de Phonétique, very like that at any other. Of Mr. Rosset's course on French Philology and phonetics, of which extending as it did over three months, I heard only a part, a word must be said. German in thoroughness and originality, French in lucidity and grace, these lectures were among the most instructive and stimulating I ever heard. Much of the matter, though new to me, would doubtless have been familiar to students of French philology, but the lecturer's use of the "mot phonétique" (the phrase pronounced as one word) to explain difficulties of sound change and accent change would, I fancy, be new to most. The majority of the students were from German and Italian universities; many were French, a few Russian, and still fewer, perhaps, not more than half a dozen, English.

At one end of a long deal table in the Laboratoire de Phonétique there was a large phonograph, manipulated by a courteous and ever-smiling attendant; from the phonograph long-branched glass and rubber tubes, terminating in pairs of ear-caps; round the table, each with a book in front and ear-caps in place, a dozen or so men and women; you enter, take your seat and put on your ear-caps; the attendant indicates the number of the piece being produced; when your turn comes, you choose the piece; you have it repeated a second or a third time. There is a large selection, but the favorites number perhaps a dozen. Thus you hear the same pieces again and again till you know them by heart. You come and go as you please.

Each student taking the class purchases a book of coupons. Each coupon, costing 50 centimes, admits him to a reading lesson, in which the student is taken individually by a demonstrator and reads for about fifteen minutes the extracts which he has previously heard on the phonograph. The demonstrator corrects, criticizes, explains. After a certain number of such lessons have been taken and a certain progress made, the aspirant is allowed to read to M. Rosset, who gives further advice. Always one is sent back to the phonograph. "Ecoutez, toujours écoutez." "Le même morceau—cinquante fois?" "Ce n'est pas trop, monsieur."

Then there were additional attractions in the shape of demonstrations by M. Rosset, in which we took part. We were shown how to construct the artificial palate, to take wax models and construct for ourselves and use artificial palates. We recorded the idiosyncrasies of our national and provincial pronunciation of vowels and consonants on smoked paper revolving on a drum. We compared these against the trace made by M. Rosset. The eye aided the ear in correcting our faults. If with all this we still failed to hear or produce a pure sound, there were other resources. Silver wires, bent into various shapes and sterilized in a Bunsen flame, were introduced into our mouths and the tongue thus compelled to its proper position. In my own case the é fermé (under the tonic accent), as in donné, was the chief offense. It was quite free from the objectionable dipthongal intonation, and I passed my demonstrator all right. But M. Rosset would have none of it. He insisted that my é fermé was the é moyen (as in léser), or the first é in été, and when I failed to hear, as well as to vocalize, the difference, he compelled me to do so by means of the wire before mentioned. Unfortunately, I am on the wrong side of forty, and I am afraid that, except perhaps in slow reading, my é fermé will ordinarily remain é moyen. But at any rate I can hear the distinction.

M. Rosset was good enough to make a number of records for me. Mechanically, they are not always perfect; a few words are occasionally blurred. But the voice reproduction is admirable, and they are by far the pleasantest and most clearly articulated records I have come across. Two points must, however, be attended to: First, the record should, if possible, be heard through rubber tubes and ear-pieces. By means of glass or ebonite forks this can easily be arranged, so that a number of boys can listen at once; second, it is most important that the speed of reproduction should be as nearly as possible that at which the record was made. If this is not attended to, a most unpleasant effect is produced. This is particularly the case when the speed is too high. The voice then becomes most disagreeably shrill and nasillarde. I have seen a few turns of the regulating screw change an expression of pained horror on the face of a Frenchman to one of satisfaction, if not gratification.

Mechanical reproduction of speech will not supersede the living teacher, but it will undoubtedly help his work. In the first place it will, if he be an Englishman, immensely help to keep his own pronunciation of French or German up to the mark, or, better still, in a condition of improvement. When a language has been learned in childhood it may be possible to keep its sound forms instinctively permanent, so that they will resist the erosive influence of the constant use of another speech for a long time. But even to this, as is well known, there are limits. French spoken by Frenchmen who have been long and continuously in England is much more easily understood by Englishmen than that spoken across the channel. Boys who, having learned from a French governess, pronounce almost perfectly at ten or twelve, come home from public schools with an accent increasingly British. English modern language masters who have resided perhaps one or two years abroad lose in the absence of an audible standard their sense of the finer distinctions which they have acquired. No form of teaching which depends upon the exercise of the senses can long resist a process of degradation, in the absence of a standard to which one can resort. The private use of the phonograph, then, appears admirably calculated to keep the teacher's ear alive to the distinctions he has acquired until he can perhaps again refresh it at the original source.

Second, I have found an occasional use of the phonograph in school to be very useful. It brings into the classroom, as it were, a breath of French atmosphere and intonation, pitch and articulation immediately and unconsciously become less English and more French. I do not think however, it ought to be used too often. Its regular use is only adapted to keen, persevering and discriminating boys, who might perhaps be allowed to have voluntary access to it.

Again, it gives the class, and this is by no means to be despised, a certain confidence in their English teacher, and this the more as they notice the closer approximation of his French to that of the phonograph. Further, few of us are perfect, or nearly perfect, and I think it is

only fair to tell the class, or let the quicker of them find out their teacher's own faults. This has happened more than once in my own case in preparing lessons with the boys, and in every case reference to the French master has supported the phonograph. It may be said, Why not make the reference without the phonograph? The answer is that it is exceedingly difficult to get the necessary repetition of the same unvarying sound. It is the singer's resort to the piano for a note. It gives no trouble and it does not vary.

Limitations, of course, there are, and possibly some dangers. There is a tendency in too close imitation of many records to a most unpleasant nasalization or voix nasillarde, which seems to be a not uncommon defect among uneducated Frenchmen, and for this and other reasons I would certainly deprecate its use in class by a teacher whose own ear had not become fairly accustomed to good French. Further, as Professor Rippmann has pointed out, it must not be supposed that, at present at all events, the phonograph can be used as a kind of dictionary for the pronunciation of isolated words. Most of the extracts available are spoken too fast for that. But some exercises which I possess go very far in this direction. It is not a matter of the rate of the phonograph, but of the rate at which the word is spoken. But in my opinion the pronunciation of isolated words by a beginner is a matter for close imitation of the position of the vocal organs of the teacher, which is impossible in continuous speech.

REALISTIC ACT.

A Moving Picture That Was Really Natural.

Approaching the door of a beautiful country home in Belvidere last Sunday in the act of saying farewell to my hostess, my attention was attracted by a superb painting which hung at the side of the entrance, says a writer in the San Francisco Call. The scene was a landscape, and was surrounded by a deep gilt frame. The landscape depicted a stretch of water, with a cloud-flecked sky, steep banks and tossing trees. Apparently a high wind was blowing. It was a magnificent work of art, full of unrivalled lights and shades and with a strength and virility about it which was amazing. I turned for a last look and rubbed my eyes, for I thought I must be dreaming. The picture was moving! Not the framed picture itself, but the objects—the water, the trees, even the clouds in the exquisite stormy sky. An indefinable, inscrutable change came over the pictured landscape even as I gazed. In amazement I turned to the owner of the remarkable painting and mutely questioned with my eyes. She laughed outright.

"Don't worry," she said, "you are not the only one who has been puzzled by that painting. It really is a painting, but by the great artist Nature. You are looking at the real thing, and the frame is only placed there to give the natural objects the effect of being a picture. We had a section of the wall cut out and the frame fitted around it. Is it not an idea?" And I thought it was.

CREDITS AND PERSONAL EQUATION.

Why the Credit Man Should Personally Know His Customers and Why Character Must be Considered as Well as Finances.

A man who has spent all his life in the giving of credits and to collection of claims, declares that the personal equation should cut a much larger figure in transactions of this sort than it does in many establishments. The credit man should better know his men; know them personally when possible.

A conversation between the two is a great feature in the way of protection. The credit man does not need to uncover his purpose. He can put it on the ground of a better personal acquaintance. During the confab he can learn a lot that he needs to know, if he is not utterly destitute of diplomacy; a great deal more than the other man ever dreams of.

One of the things that he should certainly learn in such conversation is the names of business concerns with which the applicant for credit has dealings. A record of these names should be made as soon as it can quietly be done. These people are not only an excellent line on the man himself, but would be valuable should he move or run away. A good plan is to reach these people by telephone as soon as possible, for the man at the other end of the line will tell a great deal more vocally than he would set down on paper.

RICHARD JOSE ON RECORDING.

Well-Known Song Writer Tells of His Impressions in the Art of Recording His Famous Songs.

"Dick" Jose, the well-known contra-tenor and author of "Silver Threads Among the Gold," was recently asked by Ashton Stevens, of the San Francisco Examiner, whether there was a great deal of mystery connected with recording for talking machines, or if there was any secret in singing for that purpose.

"Secret," replied Jose; "it's the most secret thing in the world—for the singer. You're locked all alone with the band in a big bare room Your back is to the musicians and your face to a bleak blank wall through which protrudes a solemn horn. Into this horn you sing. Not a soul in sight. A bell rings—one. That is to get ready, for the receiving instrument is so sensitive that if you moved your sleeve against your coat the sound would register. Somebody outside presses the button—two. The band starts the prelude, then you sing, turning neither to the right nor left, always looking and singing into that protruding horn. And you can't even let out a breath after your last note; you must close your lips on it and wait for the little whirr within the horn to cease."

"When do you hear the result?"

"In hardly no time. And if you are new to the game it nearly kills you. When I first heard my own voice I turned clammy all over and shook like a frightened child. I had to be quieted down before I could go on with the next ballad. No man knows what his own voice sounds like till he hears it reproduced by a machine; he can't know otherwise; his auditory apparatus is too closely mixed up with his vocal machinery—he can't get the distance!"

WELL TO STORE MATERIAL

For Use in Advertising—The Wise Man Should Watch Every Medium for This Purpose.

The dealer who writes his own advertising will readily appreciate the advantage of having certain material stored away for use when his brain is tired and proves sterile in the matter of live ideas. An excellent scheme to follow in order to have such material on hand for sudden use, is for the dealer to watch every paper he reads for new advertising ideas whether they are used in connection with his business or not. The leading monthly magazines are especially valuable for studying up-to-date advertising matter, and if close attention is given to the collecting it will not be long before the dealer has a valuable assortment of samples of the experts in advertising writing. Where a very striking ad is used in relation to some other line it may be used with better effect, as a direct competitor has not already stolen its thunder. Striking headlines and good arrangement are rather to be considered than the general text, for to obtain results that must be original and tell a direct story.

J. Newcomb Blackman, proprietor of the Blackman Talking Machine Co., New York, has honestly earned his trade title of "The White Blackman." His business has been steadily growing, due entirely to the chief's sturdy and sterling character in dealings, the management, of which is spoken of admiringly even by his keenest competitors.

Recommended as Best By those Who Know Best

Every dealer who would like to add to his business a feature that will increase it from 10 to 30 per cent. should give his consideration to the following recommendation.

"The undersigned E. E. and Minister Plenipotentiary of His Majesty, the King of Spain, to the United States, has much pleasure in stating that the words for the study of the Spanish language as prepared by the International Correspondence Schools, of Scranton, Pa., which I have carefully listened to, are the most perfect rendering of the pure Castilian pronunciation. I consider them invaluable to the student of our language, and cannot too much praise their efficiency and convenience." EMILIO DE OJEDA.

This official endorsement is the highest possible recommendation for the efficiency and accuracy of the I. C. S. Spanish Course, and plainly tells the characteristics of

I.C.S. LANGUAGE SYSTEM
WITH
Thomas A. Edison
PHONOGRAPH

This system of language instruction is in use at the U. S. Government War College at Washington, and the phonograph system has been lately adopted by the University of Chicago, and everywhere it is being recognized as the coming method of language instruction. Phonograph dealers all over the country have been very successful in handling the language feature in connection with their other business. There is no reason why *you* cannot do the same—there is no reason why *you* should not do it next month, only because of your own indifference and negligence to write *now* asking for further particulars. Don't you think it worth while to find out more about such a feasible means of increasing your business ?

Fibre Needle Display—Ikonograph Exhibition—H. H. Myers Interesting Story—Columbia Graphophone Club Meets—Babson Bros. in Receipt of Hosts of Letters from Satisfied Dealers—All the News of the Month.

(Special to The Talking Machine World.)

Chicago, Ill., Nov. 2, 1907.

The work of the National Association of Talking Machine Jobbers is going on apace. President Bowers is in almost daily communication with Secretary Whitsit. Furthermore, he intends spending a day in the near future with each of the members of the executive committee in their respective homes, going over the work of the association and familiarizing himself with their views and the conditions in their respective sections.

Up to October 26 Secretary Whitsit had received applications for membership from 71 jobbers. "This isn't so bad," remarked Mr. Bowers, "when it is remembered that it is almost double the membership of the Music Publishers' Association which has been in existence for many years. At the same time we must keep up a very energetic campaign for membership. There are quite a few members of the two old associations who have not yet sent in their formal application accompanied by the semi-annual dues of $7.50. This is probably due either to neglect or pressure of business at this season of the year, but I am sure that they all realize the importance of the matter and will hasten to correct the oversight when their attention is called to it. Again, I want to emphasize that we want every jobber in the country, large or small, as a member of this association. This is necessary if the organization realizes in fullest degree its beneficial mission to the trade at large. I trust that not only the executive committee but every member of the association will make it their duty to speak or write to every jobber with whom they have an acquaintance, urging him to join our ranks. Personal solicitation tells in trade association as well as in church work, and it's the kind of work that we need. Seventy-one representative jobbers can accomplish a great deal, but to realize the greatest good for all we must have at least a big majority of all the jobbers in the country. Secretary Whitsit is firing letters at the trade right along, but these official notices are often overlooked. The personal solicitation from friends is a strong way in which to supplement the work of the officers."

Virginius W. Moody, who for the past two years has been sales manager of the Talking Machine Co., left on the 30th for New York to take the position of sales manager of the Victor Distributing & Export Co. Mr. Moody is followed by the very best wishes of the Chicago trade, with whom he has become very popular in the two years since he made his entrance within our gates. After a road experience with the Victor Co., he came to Chicago to assume the position of sales manager of the Talking Machine Co. at the same time that Manager A. D. Geissler assumed the general management of the big jobbing house. Mr. Moody is doubly assured of success in his new field by the appearance of a mascot in the person of Virginius, Jr., who arrived a few days before his father's departure and who will shortly follow him East.

Mr. Moody's successor at the Talking Machine Co. is Roy J. Keith, a brisk, clean-cut young college man, who, in the year he has traveled for the Talking Machine Co., has won hosts of friends, swung some very sizable deals and has "made good" in a large way.

A. B. Benjamin, of the Benjamin Temple of Music, Danville, Ill., was in Chicago last week on his return from a two months' Western trip undertaken for health and recreation. Mr. Benjamin handles everything in the musical line, including talking machines. He carries the Victor, Edison and Columbia goods in a retail way and is working up a good jobbing trade on the Star machines and records of the Hawthorne-Sheble Mfg. Co., regarding which he is very enthusiastic.

Loring Leeds, of the Leeds & Catlin Co., spent several days among the Chicago trade this week.

George W. Lyle, general manager of the Columbia Phonograph Co., spent several days at the Chicago headquarters en route to the Coast, visiting some of the principal Western offices of the company on the way.

Arthur D. Geissler, general manager of the Talking Machine Co., has recently purchased a commercial graphophone outfit, and during the rush season dictates much of his correspondence at home in the evenings.

At the Milwaukee office of the Columbia Phonograph Co., Manager Thomas was found the other day very well satisfied with current busi-

BABSON BROTHERS

"THE PEOPLE WITH THE GOODS"

G. M. NISBETT, Mgr. Wholesale

19th St., Marshall Boul. & California Ave., Chicago, Ills.

ness and preparing for a holiday business of good dimensions. W. A. Ashleman, who looks after the instalment department of the Milwaukee office, has recently had the instalment end of the Detroit office also put under his charge, and manages to keep his not insignificant avoirdupois oscillating steadily between the two points.

Rudolph Wurlitzer, Jr., of the Rudolph Wurlitzer Co., Cincinnati, was a recent visitor at the company's Chicago house.

George Gibbs, the new manager of the Chicago office of the Caille Bros. Co., Detroit, says that the company are having immense success on their new "vacuum post card machine." This unique machine has ten compartments, so that ten different kinds of cards can be sold. A suction carrier, operated by a sliding knob, is placed over any stack of cards the operator desires. The coin is then dropped in the slot, and the machine will automatically deliver the top card over which the suction arrangement is set.

The Hoeffler Mfg. Co., of Milwaukee, who have long been the Wisconsin State agents for the various automatic instruments of the Rudolph Wurlitzer Co. and the Regina Co., besides being extensive distributors of electric pianos, have recently added talking machines at their fine new store at 306-308 West Water street. They handle both Victor and Edison goods and the big 50-foot display window is devoted almost entirely to these goods. An Edison machine, equipped with the Phone-Arm attachment, occupies a conspicuous place in the display. The talking machine department occupies the first floor of the building and five large booths have just been completed. They are of mahogany and French bevel plate glass. J. H. Becker, formerly with McGreal Bros., and a talking machine man of long experience, is in charge of the talking machine department.

Frank Novek, talking machine and musical instrument dealer on California avenue, near 22d street, is just moving into a new building of his own at the juncture of those two streets. Mr. Novek handles the Victor and Columbia lines and has worked up a splendid trade in his locality.

The home-preserving mission of the talking machine is illustrated by a story told by Joe Vesey, of the retail talking machine department of Lyon & Healy's, and which he declares to be absolute fact. Recently he sold a $100 Victor to quite a well-known citizen. A week later the wife came in to select some additional records. When Mr. Vesey asked her how she was pleased witb the machine she replied in enthusiastic terms: "Why, do you know, we are the owners of a very fine piano and our cat and dog have always shown great displeasure when it was played and have left the room in quick order. Since we have got the talking machine, however, it is different. The animals like it. The cat used to invariably leave the house in the evening when the piano was played and stay away all night, but now he stays in the house and listens to the music." The way to keep "Tom" at home has become quite a by-word around Lyon & Healy's.

So far the financial flurry seems to have had very little effect on the talking machine trade. Locally, October made a gratifying showing in point of retail sales. Although in a few instances dealers report that the pace set the first week in the month was not fully maintained, all state that October was ahead of the corresponding month of last year.

Jobbing trade is good. October showed a strong improvement over September and in the majority of cases local jobbers, and jobbers in other Western cities, as reported by travelers, find that their October sales made a fair advance over the record a year ago. The only adverse feature is that of collections, which show a disposition to drag.

The new Edison outfits have not had all of the depressing effect on the horn trade that was feared. Salesmen report quite sizable sales of decorated horns to Western jobbers and that the latter are steadily disposing of their old stocks

Shipments of the new Edison outfits are coming forward in better shape, although there is some complaint that while the machines are shipped with cranes the horns do not come until several days later. There has been a marked delay in shipment of additional equipment—new horns and cranes for machines bought under the old regime. There is reason to believe that few dealers let sales escape them because of this fact, but it is believed that the National Co. will not criticize their action under the circumstances. One jobber, in speaking of the matter, said: We find that the objections first made to the new Edison deal are dying out and that the trade is taking nicely to the idea. This is evidenced by the volume of orders. However I think I voice the opinion of the trade at large when I say that I sincerely hope that when any of the companies make any radical change in the future, they will inaugurate it say in June or July and not wait until the busy season begins. This will allow the adjusting process to take place with less friction and interference with business.

Zelie de Lussan, the famous soprano formerly with the Metropolitan grand opera forces, but now appearing in vaudeville, was heard at the Majestic last week. She took occasion to call at Lyon & Healy's and listened to her own voice through the medium of Victor records.

The Cable Company closed their Chicago retail talking machine department to-day. They discontinued jobbing talking machines from Chicago several months ago.

The new graphophone department of the Spiegel furniture store at 182 Wabash, opened the middle of last month and is doing a fine business under the management of that experienced talking machine man, Frederick Sheppy. No expense was spared in the fitting up of the department and the record rooms are unusually beautiful. Solid party walls separate the rooms. The mural decorations are very artistic, the quiet neutral tints of the Orient prevailing.

A solid window display of talking machine needles is, to say the least, a rarity, but that is just what one can see this week at the Columbia's store at 88 Wabash avenue. The window is devoted to the new B. & H. fibre needle. Hundreds of the imported bamboo poles from which the needles are made are used in constructing an immense booth. The floor is carpeted with factory waste and the evolution of the fibre needle from the pole through the various stages to the finished needle is shown. It is a striking display and is attracting much attention. The The Rudolph Wurlitzer Co. also have a window display of the fibre needle, but on a smaller scale.

CHICAGO STAND CO.

RUFUS T. BRADY, *Manager*

86 East Lake Street

CHICAGO

(*Continued from page 24.*)

The Chicago branch of the Rudolph Wurlitzer Co. are doing some unique exploitation of the Ikonograph moving picture machine for which they are distributors. Three nights a week an Ikonograph exhibition is given in one of their windows, the sheet being placed against the pane and the views being thrown on it from the rear. The Ikonograph Co. are to be congratulated on their loyalty to the trade as exhibited in their magazine advertisements in which the prospective purchaser is referred to the nearest talking machine dealer.

E. C. Barnes, Western manager of the business phonograph department of the National Phonograph Co., has opened an office in Milwaukee in charge of E. C. A. Bergston, an experienced dictation machine man and who has been with the Chicago office for some months. C. A. Reed, another of Mr. Barnes' former assistants in Chicago, is in charge of the recently established Minneapolis office.

Louis F. Murphy, for the past year in charge of the Spokane, Wash., branch of the Columbia Co., has been made manager of their Memphis, Tenn., branch. Mr. Murphy is a protege of District Manager Fuhri and learned the business under the latter at St. Louis.

The Knickerbocker Case Co. have made another departure in bringing out their new pegless case for cylinder records in fibre as well as in the regulation style, wood, cloth covered. This enables the dealer to satisfy any demand that he may have for a cheaper case and yet the fibre case is extremely sightly and is well made and durable.

L. L. Lewis who, as mentioned elsewhere, has been appointed manager of the National Phonograph Co.'s interests in Mexico, leaves Monday for his new field of labor. His successor in charge of the phonographic language department at Lyon & Healy's will be Mr. Newman, who is new to Chicago, but is an experienced phonograph man with long experience iu selling the I. C. S., language outfits. He will arrive on November 11.

Jobbers report an excellent demand for the new foreign records of the Edison Co.

William E. Curtis, the famous special correspondent, has often said that you can put a good newspaper man off at a station where the whole population consist of a man and two pigs and he can find a good "story." Equally true is it that the alert salesman can uncover business in the most unusual places and under untoward circumstances. H. H. Myers, who travels Michigan, upper Indiana and eastern Illinois for the Columbia Co., writes C. F. Baer, the local manager, of an experience which aptly illustrates the above.

While on a train in a little crowd of traveling men the other day he conceived the idea of a concert "on board." He got a "BQ" cylinder machine from the baggage room and set it going. Soon he had the whole car for an audience. The result was that he sold the outfit to an entranced passenger and when he arrived at his destination Myers bought another similar outfit and handed the dealer the retail price. He thought it a joke uutil the salesman explained that he had simply made a sale for him.

The Columbia Graphophone Club held an enthusiastic and well-attended meeting on the evening of October 17. After a fine dinner at the restaurant adjoining the headquarters, the crowd went back to the office and under the soothing influence of selected perfectos proceeded to business. In two years the Chicago office has held the pennant in respect to monthly instalment sales with two exceptions. It lost to Pittsburg a year ago and last August New York won first place, which Chicago regained in September by a small margin and its now nip-and-tuck between the two cities. Plans for perpetuating Chicago's supremacy were laid and President Eckland and many others exhorted themselves hoarse. Never at any of the local gatherings of the Columbia force has there beeu such an energetic aud spontaneous display of eloquence. The president closed an impassioned address by offering first and second prizes of $25 and $10, respectively, to the salesmen making the best sales records in October.

Lyon & Healy have just issued a new catalog of "Union Park" cabinets, made at the company's factories in this city. It shows a fine line of disc record cabinets.

James I. Lyons is steadily strengthening the organization of his extensive wholesale talking machine business. He has just placed M. F. McFarland in charge of his stock. Mr. McFarland was with the Talking Machine Co. for eight years, and is an expert order filler. Mr. Lyons says that his shipments of November records were fully 30 per cent. in excess of October, and he considers the outlook for a big holiday trade as extremely bright.

Babson Bros. have a host of letters from dealers acknowledging the receipt of inquiries from the firm and reporting sales to the prospects given. Some of them appear in the firm's page advertisement elsewhere. Among the dealers who have visited the big Babson building at 19th street, Marshall boulevard and California avenue recently, were: Charles E. McLareu, Mt. Pleasant, Ia.; C. A. Forresty, Adel, Ia.; Con Hogan, the well-known bliud talking machine dealer of Ashland, Wis., and J. M. Vreeland, Gibson City, Ill.

R. A. Wise, of Clark Wise & Co., was a visitor at the Talking Machine Co. the latter part of the month, on his way East. He said that general business in San Francisco has been largely at a standstill of late, the talking machine trade being practically the only one that has not been seriously affected. He recalled the fact that at the time of the earthquake and fire a talking machine constituted the sole salvage of many families. Mr. Wise looks for a speedy betterment of conditions, especially so owing to the election of Dr. Taylor as mayor.

Loring Leeds, of the Leeds & Catlin Co., has been in Chicago for ten days past and has landed some very large orders. Charles E. Brown has given up the idea of opening a Chicago office and will return to San Francisco, where he will at once open an office for the Leeds & Catlin Co., representing them in the territory west of the Rockies.

B. Feinberg, of the Western Talking Machine & Supply Co., has returned from a swing around the loop—St. Louis to the Twin Cities and return. H. F. Thompson, of the Petmecky Needle Co., of New York City, was here last week and made arrangements with the Western Talking Machine & Supply Co. to become the Western distributors for the Petmecky Multi-tone needles. Mr. Feinberg says they expect to carry considerable stock in Chicago.

LEWIS GOES TO MEXICO.

Becomes General Manager of the National Phonograph Co's Interests in That Country.

(Special to The Talking Machine World.)

Chicago, Ill., Nov. 6, 1907.

L. L. Lewis, who for the past two years has had charge of the sales department of the language home study outfits at Lyon & Healy's, Chicago, has been chosen by the National Phonograph Co. to act as their general manager in Mexico, with headquarters at Mexico City.

Mr. Lewis prepared himself for this important position by mastering Spanish, using one of the I. C. S. Language Home Study Outfits, that he has made so popular in Chicago. Thus by following the advice he has given to his friends—"Learn a foreign language at your own home during your spare time"—he has won his promotion to a very important position. In his new field Mr. Lewis will devote his time and energy to the work of popularizing the Edison phonograph as the perfect music producer, and the acquisition of this excellent salesman speaks volumes for the brilliant future of the Edison Phonograph in Mexico.

Walter Stevens, manager of the foreign department of the National Phonograph Co., was in Chicago this week and made the appointment.

TALKING MACHINE CO.'S HANDSOME QUARTERS

Splendidly Equipped in Every Way for the Conduct of Their Large and Growing Business—Some Views of Their Premises at 72-74 Wabash Avenue That Will Prove of Interest.

OFFICE, TALKING MACHINE CO.

(Special to The Talking Machine World.)

Chicago, Ill., Nov. 7, 1907.

Your representative spent a very interesting hour with Arthur D. Geissler, manager of the Talking Machine Co., studying their system and method of filling orders.

The accompanying illustrations of the Talking Machine Co. do not give an adequate idea of this great concern's orderly and systematic method of carrying on their business. One of the most striking innovations is their system of identifying the most popular selling records. Their record room, as the illustration shows, is enormous, the working stock filling the first seven rows, surplus being carried in original packages on the top rows. Each bin of the working stock has a tin cover which serves the purpose of excluding the dirt and dust which every talking machine man knows are the worst enemies records have. These tins also hold the record titles and surplus tag; title tag giving number, name of record and who made it, while the surplus tag gives the exact number of that particular record in surplus at all times. The title tags are of different colors. The one hundred best selling records bear green tags, the one hundred and fifty next popular bearing red tags and the two hundred and fifty next most popular, yellow tags.

RECORD STOCK ROOM.

On asking if this selection would be generally popular, the writer was informed that the selection was not made up by the Talking Machine Co.'s sales record, but averaged up from the opinions of the five biggest heads of talking machine departments in the United States. The same method applies to the twelve-inch, eight-inch and Red Seal records.

It is now possible for the company's salesmen to take selection orders from dealers for any quantity or style of records, feeling sure that the Talking Machine Co.'s choice will prove popular.

In order to supplement this system this concern has issued a two-page folder, listing all of these records, asking their dealers to check off those records they have in stock and send in an order for the balance. Mr. Geissler claims this idea has been immensely popular and some excellent stock orders have been forthcoming. He maintains that the dealer realizes now is the time to stock up for Christmas, for when Christmas comes, if the dealer has not the goods on hand, people have not the time to wait for the dealer to order them.

MACH INE STOCK ROOM.

HORN CABINET STOCK ROOM.

The horn stock room shown on this page represents the usual method of carrying horns, with the exception that Mr. Geissler has had his bins

Record and Machine Cases

We manufacture a full line of cases for Cylinder and Disc Records, Machine Cases and Horn Cases. Carrying goods in stock, we can make prompt shipment. Our quality is the best, and prices right. Ask for our catalogue.

CHICAGO CASE MFG. CO.

241-247 S. JEFFERSON ST. CHICAGO, ILL.

built a certain width for each particular horn so they may be piled uniformly and an inventory taken at a glance. This is very important when one realizes that at times, fifteen hundred horns are carried in stock.

In looking at this immense stock, the corresponding machines, the record room, containing one hundred and fifty thousand records, and capable of holding two hundred thousand, one gets an idea of the immense proportions to which the talking machine business has grown. Two years ago, the Talking Machine Co. were doing thousands of dollars of retail business. Shortly after Mr. Geissler took hold of this concern the business grew to such proportions as to warrant the giving up of the retail end of it. Now their business, in an exclusively wholesale way, is three times as large as formerly.

RAPKE'S NARROW ESCAPE.

Got Into a Nasty Predicament While Cleaning His Automobile and Might Have Been Badly Burned—Hard to Kill a Good Man.

On November 4 Victor H. Rapke, the well-known Edison jobber, Victor distributer and inventor, had a narrow escape from a serious injury by burning. He had been repairing his automobile, and had finished cleaning his hands and arms with gasolene when the bunch of waste he had been using in the work caught fire from what was believed to be an extinguished lamp on the machine. The gasolene on his person blazed up instantly, and but for his quick action in having sand thrown upon him Mr. Rapke might have sustained wounds of a very serious nature. It was a narrow escape and the injury to his arms and hands were extremely painful. After medical attention the irrepressible Victor was on the street the following day, driving his automobile. By the end of the week he was contemplating a trip to Washington, D. C., to install his new disc record cabinet and label system in the establishment of E. F. Droop & Sons Co. The system is one of Mr. Rapke's latest creations for carrying a stock of disc records where envelopes or racks are not employed. The cabinet is an ingenious construction, and enables the dealer to ascertain how many records of any number or title are in stock at a glance and without handling the goods.

A. P. Petit, general manager of the Talking Machine Supply Co., New York, finished his trip through the Far West and into Mexico on the 15th. He has been away since early in September, and has covered all the principal cities between New York City and San Francisco, visiting the entire jobbing trade. Mr. Petit's report of orders taken and business accomplished is of the most roseate character.

TRADE HAPPENINGS IN PHILADELPHIA.

Business Somewhat Quieter, but on the Whole Satisfactory—A Prominent Jobber Throws Some Light on the Exchange Proposition—Presents a Panacea Which He Says Would Obviate Possible Price Cutting—Other Interesting Matters Come Up for Consideration—Activity With Penn Phonograph Co.—Miss Madeline Edison Buys Records—Numack Presents "Il Travatore"—Edison Commercial Outfits for Adams Express Co.—Expansion With Weymann.

(Special to The Talking Machine World.)

Philadelphia, Pa., Nov. 9, 1907.

Wholesale business in talking machines in this city for the past month, while not by any means over-brisk, has been fairly satisfactory. This let-up, however, to a great extent was overcome by the remarkable spurt in local retail trade. Collections fell off considerably on account of the stringency in the money markets, but there is every reason to expect that this is but a temporary slump, for it is a fact that scarcely a city in the country can boast of so firmly established banking institutions as this city.

A good deal of criticism is being made of the exchange proposition now in vogue with the manufacturers. One suggestion made by a prominent jobber in this city was: "Owing to the large number of cut-out records issued by manufacturers of talking machine records, I would submit the following suggestion which would obviate the possible price cutting which now exists and will become more general as the jobber and dealer accumulate records which are unsalable through the fact that they are no longer in the catalog, namely, that the manufacturer hold the number of domestic selections, say to not over 1,500 numbers, and at the end of six months, perhaps in June and January, cut out as many numbers as they catalog during that time, allowing the jobber and dealer to return same in exchange for an equal number of records, selecting from the catalog any numbers issued up to six months previous. I suggest this in the interest of the manufacturer as well as in that of the trade in general, as it would stop the jobber from ordering too heavily on the latest popular records, and thereby swamping the manufacturer on certain numbers. A proposition of this kind would be to the interest of the manufacturer, as a jobber would naturally order heavier, knowing if any of the records were not sellers, that sooner or later he would get full credit for same. Dealers also would not hesitate to carry big stocks for the same reason. This would therefore do away with the shortage on stock which ofttimes occurs through the jobber's or dealer's lack of confidence in a selection of a selling record, and incidentally do away with lost sales due to this reason."

While a large number of dealers have signed the new Edison contracts without question, there still remain many who have not returned them to their jobbers, thereby causing the latter considerable delay in sending them to the factory. To offset a condition of this character it has been suggested that the National Phonograph Co. in the future set a specific date by which all contracts must be returned to the jobber. In case of a violation, said jobber is to refuse to fill any order until the contract is signed. The new shipping regulations of the National Co. have met with the hearty approval of the trade in general, as it places the dealer in a position to serve his trade at the same hour as the jobber. Heretofore the jobbers have had the benefit of placing the new records on sale several hours in advance of the dealer, but now all are put on an equal basis.

The present plan of the factories in requiring only a small initial purchase in order to become a dealer, irrespective of the population of the town or city in which he is located is thought by many to be erroneous. As one jobbing house expressed itself, the factories should do as manufacturers of other exclusive lines—have a minimum quantity set, and then increase the initial purchase according to the population. In all the large cities there are hundreds of very small dealers who meet a demand for goods created by the advertising of the larger dealers and jobbers, which prevents these advertisers from enjoying the best results from the money expended in this manner. If there were fewer of these small fry who order from hand to-mouth, there would be more encouragement for the reputable houses to advertise locally, thereby giving greater prominence to the goods and a corresponding increase of retail business.

The Penn Phonograph Co., of this city, report business as satisfactory, wholesale trade being fairly good and the retail excellent; in fact, in the latter department their books show a decided increase over the corresponding month last year. This company are going after wholesale trade in their usual progressive manner, and at present have a number of excellent sellers on hand, notable among which are their exceptionally fine line of talking machine record cabinets, an advertisement of which appears in this issue. Their new automatic stop for Edison Standard and Home machines is a mighty clever little device and one that is worth investigating. Dealers

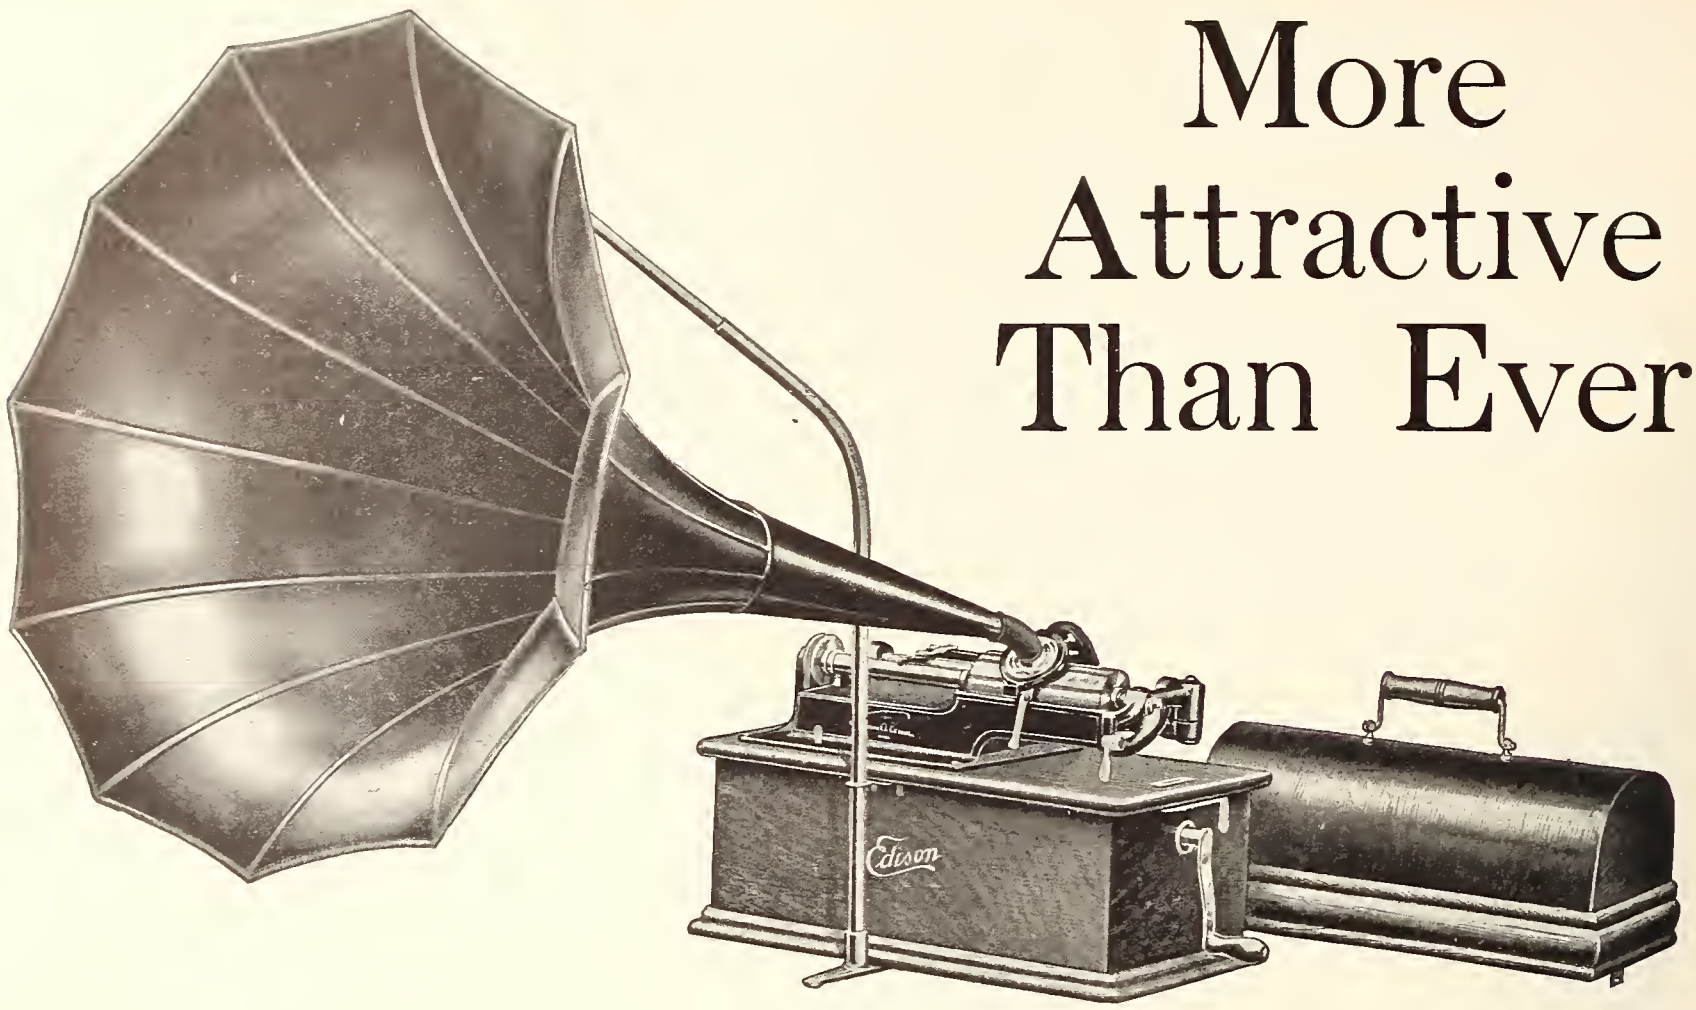
THE PENN PHONOGRAPH CO., 17 South Ninth St., PHILADELPHIA, PA.



More Attractive Than Ever

The new Horn and Crane of the EDISON PHONOGRAPH affords just the needed touch

The one thing which the Edison Phonograph needed to make it complete has been added—a large, handsome, prettily shaped horn, supported by a nickel-plated swinging crane.

Each model has now been so equipped, and in each case the proper size and shape of horn is furnished to produce the best possible results.

This new equipment means much to Edison dealers. It means that the carrying of a stock of horns is no longer necessary; that the sale of an Edison Phonograph includes the sale of a horn and a protected profit to the dealer on both.

The cutting of prices on horns has always worked a hardship to those dealers who maintain prices. This is now eliminated, as all dealers must sell the Edison Phonograph, complete with horn, at the full price.

The new complete Edisons are more attractive than ever, and the fact that each model now includes everything necessary to perfect work, with no extras to buy, is sure to appeal to possible purchasers. The slight advance in price on account of the new improvements is really not a higher price, for purchasers have always paid an extra price for a horn out of the dealer's stock. The dealer now sells a horn when he sells the Phonograph, gets full price and makes a liberal profit on it.

If you do not handle Edison Phonographs, this new feature is an added reason why you should. Write for new catalogue and full particulars; also for the name of a nearby jobber who can supply you with Edison goods.

The National Phonograph Company 59 LAKESIDE AVENUE ORANGE, N. J.

desiring Petmecky needles will fiud them headquarters.

Louis Buehn & Bro. are eujoying very good business all along the line, and report the outlook as equally promising. Ed. Buehn left ou the night of the 6th for his usual trip through this and neighboring territories.

H. N. McMenimen, geueral manager of the Disc Talking Machine Co., said: "Trade locally is excellent, and while dealers have been a little backward for the past month, indications point to a big spurt in this department inside the next two or three weeks."

Henry Winkelman, manager of the Oliver Ditson Co., of Boston, and R. L. Morris, of the American Talking Machine Co., of Brooklyn, were recent visitors to this city.

Miss Madeline Edison, daughter of the great inventor, and several of her girl friends, made a flying visit to the offices of the Penn Phonograph Co. recently to purchase a number of dance records to be used for that purpose at small affairs of this kind held at her Alma Mater, "Bryn Mawr." This form of entertaiument is becoming daily more popular at the colleges. Mr. Dealer, get wise.

J. Numack, 209 Federal street, Camden, N. J., is one of the most enthusiastic admirers of the "talker" in the country, and is always trying new stunts. Being of a mechanical turn of mind, he has just completed a miniature stage with complete settings for the opera of "Il Trovatore," every part being acted out by little marionettes made and dressed for each part. He has purchased the complete set of these records from a Victor jobber in this city, and now has the whole perfected. The performance occupies two hours, and is said by those fortunate enough to have witnessed it to be little short of supernatural.

The Adams Express Co., of this city, have installed a complete equipment of Edison Commercial outfits in their new headquarters on Eighteenth and Market streets.

The new line of talking machine record cabinets handled exclusively by Louis Buehn & Bro., of Philadelphia, are creating widespread notice throughout the United States, Canada and Mexico, and dealers who have taken them on are finding them big sellers. No. 125 is one of their new cylinder cabinets. It holds 350 records and is gotten up in a highly artistic manner, one of its strong points being that of compactness, as it is but very little larger than others containing but 200 pegs.

H. A. Weymann & Son, since removing to their new quarters on Chestnut street, have greatly increased their talking machine business. This company are pushing their other lines with great success in this field, and dealers who are handling side lines find it of great convenience and saving in express charges and time to buy all their stock from this one house, as all orders, no matter how diversified, are shipped out by them intact. Sheet music is one of their specialties, and interested parties will fiud their stock complete. Their new complete line of catalogs will be sent upon request.

C. J. Heppe & Son are laying especial stress on their talking machine department, in consequence of which they report business excellent in both wholesale and retail departments.

Emil Bauer, the well-known manufacturer of the famous S. S. Stewart banjos, guitars aud mandolins, just returned from his western trip and reported business excellent iu that section. Mr. Bauer leaves again shortly for a run up through the East. The factory on Girard aveuue is being kept busy on the western shipments, and some large orders received from New Zealand will keep them so for several weeks.

ESTABLISHED 1864

MAX LANDAY AT VICTOR PLANT.

Expansion of Victor Factories Amaze Him—Mr. Geissler's Splendid Work—More Room for Landay Bros.—Victor Victrola for Col. Thompson's Yacht—To Make World Trip.

Max Landay, of Landay Bros., New York, visited the factory of the Victor Talking Machine Co., Camden, N. J., recently, and under the guidance of L. F. Geissler, general manager, was shown the various departments of the company. Of course, his main object was to inquire into the surety of obtaining a supply of machines that would be adequate to their wants for the fall and holiday season. Mr. Landay, in speaking of his interesting visit to the mammoth plant of the company said: "I was astonished at the marvelous growth of the plant only within a comparatively brief time. I was greatly impressed with the work Mr. Geissler has accomplished, for it represents skilful application in business affairs that amounts almost to genius. The new office building is splendid, and I understand the company will remove their recording laboratory from Philadelphia to Camden, into premises that are ideal. Mr. Geissler showed me the vaults where the masters are to be kept, and the facilities and surroundings for this important work could not be improved upon, so far as I could see. In the general office a line of forty bookkeepers is an impressive sight. It seems to me Mr. Geissler has not only kept step with the marvelous development of the Victor business, but has worked wonders besides."

The pressure for additional room has become so persistent with Landay Bros. that they have been obliged to surrender their office quarters in the rear of their store, 400 Fifth avenue, and occupy the basement. Alterations to this end are now under way, and when completed will find the firm in a better condition to handle their increasing business. The rooms vacated will be turned into demonstrating rooms, fitted up and decorated in harmony with the establishment.

Col. Thompson's yacht, now fitting up for a voyage around the world, is to be equipped with a Victor Victrola, in fine figured satinwood. Landay Bros. are supplying the outfit.

The recording laboratory of the International Record Co. has been removed from 152 East Twenty-third street, New York, to the factory, pressing plant and general offices in Auburn, N. Y.

A DECISION OF GREAT INTEREST

Handed Down Recently by the United States Circuit Court of Appeals Which Has a Special Bearing on Contracts in This Trade.

With the marvelous growth of the talking machine business the protection of patents governing the essential mechanical features of machines, records, etc., are of supreme moment. The courts have adjudicated nearly every point in controversy, but the time for "splitting hairs" has arrived, because of the immense values involved. The Victor Talking Machine Co., Camden, N. J., possibly in view of certain loose ideas pertaining to their property prevailing in the trade, have issued the following statement, published in "The Voice of the Victor":

"The Victor Talking Machine Co. never had any doubt as to its legal rights in relation to its dealers' and jobbers' contracts, and its license system, based upon its patent rights. What it has done in these matters it has done after due and careful consideration, acting always under the advice of counsel. When the United States Circuit Court of Appeals rendered the decision in our favor in the new leading case of the Victor Talking Machine Co. against the Fair, the principles of law involved were very carefully and fully considered, establishing the Victor Co.'s rights. Occasionally, however, some 'doubting Thomas' appears, and it is for the benefit of any who should doubt the Victor Co.'s legal rights in connection with its license system and jobbers' and dealers' contracts that we would call attention to the recent decision of Judges Grosscup, Baker and Kohlsaat, in the United States Circuit Court of Appeals for the seventh circuit, in the case of the Rubber Tire Wheel Co. against the Milwaukee Rubber Works Co. The decision in this case, which was rendered April 16, 1907, emphasizes several important points of law which bear directly upon the question.

"The Rubber Tire Wheel Co. began their action to recover royalties on account of defendant's use, under a license system, of a patent for improvement in rubber-tired wheels, which royalties the defendant had failed and refused to pay. The defendant's main defense was that the license system was in violation of the Sherman anti-trust act and of the Wisconsin statutes of 1898, which prohibit Wisconsin corporations (defendant was one) from entering into any arrangement or contract intended to restrain competition in the supply or price of any commodity constituting the subject of commerce within the State.

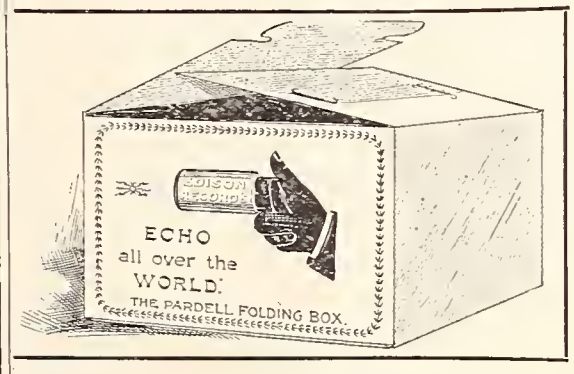
"In rendering their decision, the court made the following very pregnant statements: 'The Wisconsin statute is eliminated, . . . because a State cannot subtract from the right conferred upon a patentee and his assigns by the Federal laws. . . . For the protection of the physical or moral health of its citizens a State may restrain the use of the corporeal thing or article brought into existence by the application of the patented discovery, . . . but such a laying on of hands does not touch the monopoly of the Federal grant.

'Under its constitutional right to legislate for the promotion of the useful arts, Congress passed the patent statutes. The public policy thereby declared is this: Inventive minds may fail to produce many useful things that they would produce if stimulated by the promise of a substantial reward; what is produced is the property of the inventor; he and his heirs and assigns may hold it as a secret till the end of time; the public would be largely benefited by obtaining conveyances of these new properties; so the people through their representatives say to the inventor: Deed us your property, possession to be yielded at the end of seventeen years, and in the meantime we will protect you absolutely in the right to exclude every one from making, using, or vending the thing patented, without your permission.'

"Citing the Victor Talking Machine Co. against the Fair: 'Congress put no limitations, excepting time, upon the monopoly. Courts can create none without legislating. The monopoly is of the invention, the mental concept as distinguished from the materials that are brought together to give it a body. Use of the materials, as noted above, may be enjoined as injurious to the public; but that does not invade the monopoly. Use of the invention cannot be had except on the inventor's terms. . . . Patented articles, unless or until they are released by the owner of the patent from the dominion of his monopoly, are not articles of trade or commerce among the several States. . . . . The only grant to the patentee was the right to exclude others, to have and to hold for himself and his assigns a monopoly, not a right limited or conditioned according to the sentiment of judges, but an absolute monopoly constitutionally conferred by the sovereign lawmakers. . . . The patent is valid throughout the United States, and is enforceable against everyone who is not able to shield himself behind an erroneous decree. The control of prices and output, . . . did not deprive the public of any right.'

"It is further shown that a system of contracts between the owner of the patent and its licensees fixing uniform prices is altogether legal. Applying this opinion to the Victor Co.'s jobbers' and dealers' agreements and license system, it is readily seen that neither the Sherman anti-trust law nor any State statutes are violated, and further, the conditions of license noted on the labels attached to the machines and records, as regards price, alterations, etc., hold good against each and every person coming into possession of Victor products. Carrying out the analogy, note that the monopoly granted to the Victor Co. is absolute and unlimited, and is enforceable against any one, preventing the making, using or selling of Victor goods until they are released from the monopoly granted by the United States patent laws. Realizing our legal rights in this matter, as we have always been advised by our counsel, and knowing that the strict maintenance of a one price system lends zest to the life of the talking machine business, the Victor Co. will continue the policies and rulings already inaugurated for the greatest good of the greatest number of Victors dealers." This is a clear and explicit statement, worth close study.

Pardell Folding Box



No. 3 Holding Three Cylinder Records
" 6 " Six " "
" 12 " Twelve " "

Dealers imprint in lots of 500

¶ A Folding Container for three, six or twelve cylinder records. These boxes are being very generally used by phonograph dealers and are the most convenient package for delivering records to customer. Made of heavy cardboard and shipped "knocked down."

¶ Special quantity prices to both dealers and jobbers.

The DEVINEAU BIOPHONE

An Attachment to Play Disc Records on Any Cabinet Cylinder Machine

(PATENTED 1907)

A SPLENDID DISC SELLER!

WITH THE
DEVINEAU BIOPHONE
owners of the cylinder machines are enabled to add to their repertoire the magnificent selections of the greatest operatic singers of the world.

The DEVINEAU BIOPHONE is equipped with an aluminum tone arm and our patented sound box producing a full, perfectly natural sound.

The attachment can be connected or removed in a few seconds.

It is operated by friction so that neither gear nor belt is needed in its operation. No screw, no bolt to mar the cabinet. No need of removing the attachment while playing a cylinder record.

Any horn, the "IDEAL" included, can be instantly attached to the Biophone.

Three twelve-inch disc records can be played at one winding on the Edison Standard machine.

The DEVINEAU BIOPHONE is a splendid piece of accurate mechanism, handsomely finished.

A most attractive and useful addition to any cabinet cylinder talking machine, either Columbia or Edison.

THE DEVINEAU BIOPHONE
attached to a cylinder machine.

SPRINGFIELD, MASS.

WITH THE TRADE IN DENVER.

Manager of the Denver Dry Goods Co. Reports Increase in Wholesale Trade—H. T. Leeming Working for Lower Freight Rates on Horns —Doucet Takes Charge of the Denver Music Co.'s Talker Department—Mapel Music Co. Branching Out—Other News of Interest.

(Special to The Talking Machine World.)

Denver, Colo., Nov. 10, 1907.

"Our wholesale trade during the month past was fully 100 per cent. better than it was for October of last year, while our retail trade for the month fell off 40 per cent.," is the unusual statement of trade conditions made by A. Mitchell, Jr., head of the talking machine department, wholesale and retail, of the Denver Dry Goods Co. Mr. Mitchell does not attempt to explain the decrease in retail business in Denver, but attributes the great improvement in wholesale demand to the general prosperity prevailing in the agricultural sections of Colorado and other western States. Holiday buying has not really started yet, he says, and is not expected to begin before the first of December, since retailers have come to depend on the Denver dry goods people for prompt shipments when new stock is needed in the talking machine line.

The Denver Dry Goods Co. are Rocky Mountain jobbers for the Edison machine and supplies, with Colorado, Wyoming, part of Nebraska, part of Kansas, part of New Mexico, and a portion of Utah as its territory. Mr. Mitchell states that business has been especially good in Wyoming and that four new dealers have been supplied with stock during the past week. Edison goods are handled exclusively. Their stock of records usually runs about 65,000, but in some busy periods goes as high as 100,000. The trade in records is flourishing, but without any unusual features at this time.

H. T. Leeming, of Orange, N. J., traffic manager for the National Phonograph Co., was in Denver recently encouraging and assisting Western talking machine men in their efforts to get freight rates on amplifying horns reduced. The Western rate on horns is one and one-half times first-class, while in the East they are shipped as just first-class. The local talking machine men have been working for two years for this reduction and have taken the matter up with the Western classification committee of the railroads, but have been unsuccessful to date. The outlook is considered very bright, however, for a cheaper rate in the near future.

C. S. Gardner, the new Pacific Coast representative of the National Phonograph Co., has been spending several days here, visiting G. L. Renner, the Colorado representative. Mr. Gardner has been traveling in Ohio for the company.

Manager W. F. Standke, Jr., of the local Columbia Phonograph Co. agency, is expecting quite a run in Eduardo Castellano records as a result of the recent visit of the Italian tenor to Denver in concert with Bessie Abbott, the soprano. Sig. Castellano was given an enthusiastic reception, and a good demand for his records has started since his appearance here. In honor of the singer's visit, Manager Standke made a special display of Castellano records and advertising literature in one of his Sixteenth street windows.

J. A. Doucet has taken charge of the talking machine department of the Denver Music Co., and will handle all the small musical goods for this store. Mr. Doucet has been selling musical merchandise for the past twenty-five years, fifteen years of which experience has been gained in Colorado and elsewhere in the West. He was for five years in charge of the Denver Music Co.'s branch at Durango, and has also represented them in Silverton and other towns of this State. He sold talking machines when they were first introduced in Colorado and handled the old Victor crank machine twelve years ago.

Speaking of trade conditions here, Mr. Doucet has this to say: "There has been a little falling off in business with us due to the unsettled financial situation, but our trade is still good. The Denver Music Co. are pushing the talking machine department, and intend to make this one of the most important ends of the business. We are handling the Victor and Edison goods, which, I think, are the two best machines made." The Denver Music Co. buy their Victor goods direct from Lyon & Healy. The Knight-Campbell Music Co., are the principal local Victor jobbers.

M. B. Henry, formerly local manager for the Columbia Phonograph Co., has left the talking machine department of the Knight-Locke Co., of which he assumed charge about six weeks ago, and has gone to Philadelphia. He will probably locate in the East. No permanent successor has been named by the Knight-Locke people, but J. E. Younkers is temporarily iu charge of the department. E. H. Lake, who was head of this Knight-Locke department until August of this year, passed through Denver this week on his way to San Diego, Cal., where he will make his home in the future and probably engage in the talking machine business. The Knight-Locke Co. have just received a new shipment of Victor Victrolas.

The Mapel Music Co., which have been handling talking machines in a small way for some time, intends to branch out within a week or so and increase this part of their stock for the holiday trade. A good many inquiries for machines are reported by Miss Agnes Mapel, daughter of the president of the company, who says her firm will probably give more attention to the talking machine business soon.

TRADE NOTES FROM KANSAS CITY.

Talkers Take Testimony for Interstate Commerce Commission—How Valuable Time Is Saved.

(Special to The Talking Machine World.)

Kansas City, Mo., Nov. 9, 1907.

The report of the Interstate Commerce Commission which is composed of testimony being taken in several Western cities where trials are scheduled is being pushed to completion by the aid of graphophones. It is found that infinite time is saved by this method which is used generally through the East, but is comparatively new in Kansas City.

The testimony, being originally taken in shorthand by a court stenographer in the city where trial is held, is spoken by the stenographer into the graphophone from his notes, after which the records are sent here to a law reporting company, where the records are heard on graphophones by operators who put them in typewriting.

In this way one court reporter by transferring his notes to the graphophone records can keep four or five typewriters busy whereas if he had to write his own notes he could not get very far, considering the large volume of testimony.

PRELIMINARY INJUNCTION GRANTED.

Judge Kohlsast, United States Circuit Court, Chicago, on October 25 granted a preliminary injunction in the suit of the Edison Kinetograph Co. against the Selig Polyscope Co. The court sustained the decision affirmative of the Edison patents rendered previously by the United States Circuit Court of Appeals, Second Circuit. The main points covered were the ratchet feed and the camera known in the trade as the Selig and Lemaire device, which were held to be infringements of the Edison appliances. The case is considered of more than ordinary importance in the moving picture field.

On October 14 E. H. Phillips was appointed manager of salesmen of the National Phonograph Co., with headquarters at Orange, N. J. For twenty years he was with H. L. Judd & Co., New York City, and is regarded as a gentleman of wide experience and marked ability. The World wishes him the fullest measure of success in his important post.

Soft and True

sweet and clear, are the sounds that come through our Wooden Phonograph Horn. Neither metal nor any other material can transmit tones in all the richness of their original quality as the wood horn can and does. No talking machine, however excellent in itself, can give perfect results with any but a wooden horn. Ours are made of 2-ply Veneer, highly polished, in Golden Oak and Mahogany. The bell is polished brass, lacquered. Morning Glory style also, if you want it.

Wooden Phonograph Horn Co.

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York.

(Special to The Talking Machine World.)

Washington, D. C., Nov. 6, 1907.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past four weeks from the port of New York:

OCTOBER 15.

Aberdeen, 74 pkgs., $478; Bristol, 47 pkgs., $828; Brussels, 5 pkgs., $184; Berlin, 194 pkgs., $1,455; Cardiff, 63 pkgs., $555; Christiansand, 2 pkgs., $165; Colon, 20 pkgs., $784; Glasgow, 75 pkgs., $666; Guayaquil, 6 pkgs., $603; Hamburg, 177 pkgs., $1,300; Havana, 6 pkgs., $260; 6 pkgs., $197; Havre, 7 pkgs., $211; Liverpool, 4 pkgs., $210; 37 pkgs., $304; London, 839 pkgs., $9,889; 17 pkgs., $912; Manchester, 45 pkgs., $427; Newcastle, 31 pkgs., $211; Para, 13 pkgs., $791; Port au Prince, 5 pkgs., $124; Rio Grande de Sul, 43 pkgs., $1,346; Rio de Janeiro, 9 pkgs., $278; St. Petersburg, 10 pkgs., $707; Southampton, 2 pkgs., $298; Tampico, 9 pkgs., $295; Trinidad, 8 pkgs., $125; Vera Cruz, 14 pkgs., $505; Vienna, 8 pkgs., $118.

OCTOBER 22.

Algoa Bay, 2 pkgs., $150; Bradford, 20 pkgs., $137; Buenos Ayres, 25 pkgs., $1,206; Callao, 3 pkgs., $267; Cardiff, 7 pkgs., $220; Corinto, 43 pkgs., $1,485; Geneva, 6 pkgs., $300; Hamburg, 4 pkgs., $198; Havana, 5 pkgs., $136; 9 pkgs., $634; La Paz, 9 pkgs., $169; Leeds, 45 pkgs., $284; 50 pkgs., $309; Liverpool, 140 pkgs., $944; 3 pkgs., $244; 168 pkgs., $1,126; London, 14 pkgs., $683; 28 pkgs., $1,868; Manchester, 56 pkgs., $366; Manila, 20 pkgs., $773; Melbourne, 33 pkgs., $758; Newcastle, 45 pkgs., $334; 40 pkgs., $334; Port Limon, 7 pkgs., $156; Santiago, 26 pkgs., $680; Shanghai, 66 pkgs., $2,760; Singapore, 17 pkgs., $506; Sheffield, 41 pkgs., $276; 40 pkgs., $267; Sydney, 9 pkgs., $515; Vera Cruz, 47 pkgs., $1,830.

OCTOBER 29.

Bombay, 4 pkgs., $136; Callao, 7 pkgs., $971; Central America, 16 pkgs., $269; Colon, 6 pkgs., $219; 8 pkgs., $1,262; Glasgow, 85 pkgs., $878; Havre, 13 pkgs., $659; London, 5 pkgs., $375; Manchester, 16 pkgs., $262; Manaos, 6 pkgs., $300; Melbourne, 14 pkgs., $171; Neuvetas, 21 pkgs., $128; Rio de Janeiro, 23 pkgs., $1,032; St. John, 3 pkgs., $103; Valparaiso, 14 pkgs., $918; 7 pkgs., $373.

NOVEMBER 4.

Berlin, 179 pkgs., $1,362; Bradford, 27 pkgs., $184; Brussels, 389 pkgs., $2,750; Cardiff, 55 pkgs., $352; Glasgow, 17 pkgs., $920; Havana, 26 pkgs., $1,426; Havre, 8 pkgs., $231; Hongkong, 5 pkgs., $153; Leeds, 50 pkgs., $310; Liverpool, 131 pkgs., $888; 13 pkgs., $875; 130 pkgs., $875; London, 5 pkgs., $160; 34 pkgs., $1,321; 559 pkgs., $13,070; Manchester, 58 pkgs., $605; 83 pkgs., $501; Melbourne, 21 pkgs., $12,895; Newcastle, 45 pkgs., $334; Para, 14 pkgs., $553; Panama, 15 pkgs., $604; Port Limon, 2 pkgs., $143; Santos, 4 pkgs., $424; St. Petersburg, 26 pkgs., $1,779; Shanghai, 33 pkgs., $1,104; Sheffield, 41 pkgs., $276; 41 pkgs., $276; Stockholm, 6 pkgs., $755; Trinidad, 8 pkgs., $105; Vienna, 30 pkgs., $1,201; Warsaw, 5 pkgs., $125; Yokohama, 216 pkgs., $11,560.

VICTOR RECORDS BY HARRY LAUDER.

The Victor Talking Machine Co., Camden, N. J., have made records of the three songs used by Harry Lauder, the great Scotch comedian, who is now touring the country, with his first or present engagement at the New York Theatre, New York. His songs, of which the masters were recorded in London, Eng., are: "I'm Smiling in the Battle for the Money," "Stop Your Ticklin', Jock" and "My Scotch Blue Bell." Lauder is said to be one of the most inimitable and popular character artists in his special line before the public, receiving the modest (?) stipend of $3,500 weekly for his sketch, with the records great sellers besides. On Election night Max Landay invited the entire clerical force of Landay Bros. to attend a Lauder performance as his guests, with supper following. The party had a most enjoyable evening, and Max was happy in their pleasure. By the way, the Landay firm have erected a new and strikingly handsome Victor sign over their place at 400 Fifth avenue.

CASE WILL BE TRIED SHORTLY.

The Edison Phonograph Monthly says: "Our readers have been informed from time to time of the many attacks which have been made on this company by James L. Andem, formerly of Cincinnati, O., on behalf of the New York Phonograph Co., and other licensees of the defunct North American Phonograph Co. So far, these suits have been futile, and we confidently expect that they will never in the slightest degree interfere with our business or in our relations with jobbers and dealers. We are sure that our friends will be interested in hearing that Andem, last month, was indicted by the Federal Grand Jury at Trenton, N. J., for forgery in connection with one of these suits. The charge is a most serious one. Andem is at present awaiting trial, having furnished two thousand dollars bail. We understand that the case will be tried shortly, before Judge Lanning, of the United States Circuit Court, Trenton, N. J."

As an illustration of how the new Edison Ideal phonograph, that retails at $125, is selling, C. B. Haynes, of C. B. Haynes & Co., Richmond, Va., says he received a machine at four o'clock and before six of the same day it had been snapped up. A half dozen inquiries for others followed, but he was unable to get another for some time. The company are away behind on orders for the Ideal. The cabinet and cover of this splendid machine is mahogany, piano finish, the mechanism and parts being oxydized bronze finish throughout, and it is extremely handsome in appearance.

Sapphires—Maestrophone

¶ We are ready to supply the trade with the highest possible grade of sapphire reproducer points for all makes of reproducers at the lowest possible price. These goods are perfect in every sense of the word and no pains or expense have been spared to make them ideal. Made personally by Arthur C. Mestraud and guaranteed in every way.

PRICES

Button Sapphire point for Edison C. reproducer	6	$2.10
	12	4.00
	50	14.50
	100	26.00
	500	112.00
	1,000	210.00
Highest Grade Ball Sapphires for Columbia Spring contact or general use	12	3.75
	100	25.00
	1,000	200.00

Xtralong recording stylus, with very deep, hollow ground, sharp cutting edge. Unquestionably the finest recording sapphire ever made, regardless of price, $5.00 per dozen, $38.00 per hundred.

¶ Money back if not entirely as represented. ¶ All orders must be accompanied by cash or will be sent C. O. D. ¶ Two per cent. discount on cash with order.

WORTH $ TO YOU

¶ THIS is a pretty fair sample of a trade paper is it not?

¶ Subscribers in all parts of the world do not hesitate to say they couldn't keep business house without this publication being a regular visitor.

¶ Go through it carefully from cover to cover. The variety of news, the educational features, the technical matter, and the correspondence and departmental work united make an invaluable repertoire for any one interested in talking machine lines.

¶ It costs but a dollar to receive it for twelve months. All countries outside of the United States and Mexico, $1.25.

¶ We publish also THE MUSIC TRADE REVIEW—the oldest music trade publication in this country, and many do not hesitate to say, absolutely the best and most reliable in every respect. It is published every Saturday and contains from fifty to sixty pages of trade and technical news, covering every department of the music trade line. Regular subscription $2 in the United States and Mexico. All other countries $4.

¶ We publish some technical works which are interesting to those who care to obtain an accurate knowledge of the piano. "Theory and Practice of Pianoforte Building" is the only work ever produced in the English language covering the subject of pianoforte history and construction. It is profusely illustrated with original drawings, cloth bound, and contains about two hundred pages. Sent, postpaid to America and Mexico, $2. All other points, $2.20.

¶ We also put forth The Piano or Tuner's Guide which is a standard work on tuning and so conceded by competent authorities. This is a book of convenient size, containing about one hundred pages. Cloth bound. Price, post paid, America and Mexico, $1. All other countries $1.10.

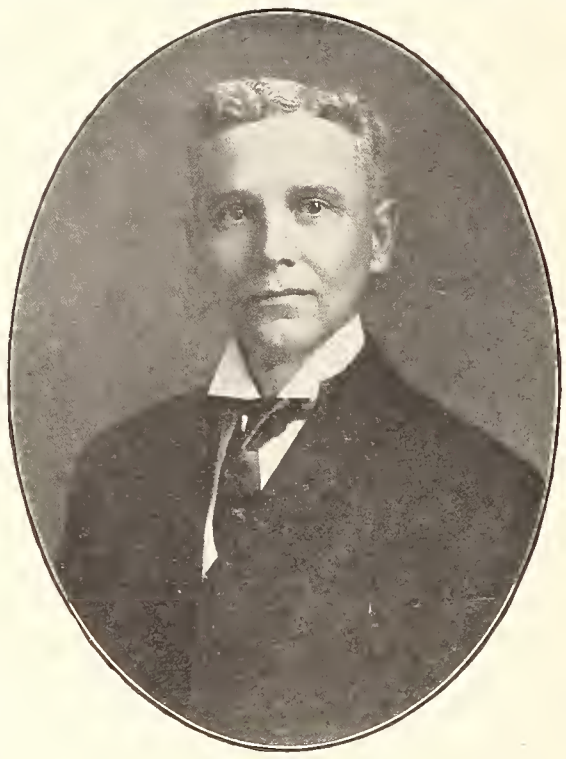
¶ Dealers and tuners should have these books.

EDWARD LYMAN BILL
1 MADISON AVENUE
NEW YORK, N. Y.

DEVELOPING EXPORT TRADE.

An Interesting Chat With Walter Stevens on the Great Work Being Done in South America—A Great Talker Center.

In the course of a pleasant chat on the export business of the National Phonograph Co., Walter Stevens, the chief of that department, remarked: "It is unnecessary to dwell upon the tremendous expansion of the National Phonograph Co.'s foreign trade; that is an old story, but we are proud of it nevertheless. Would we rather bring the artists here or send the experts away to make records depends? We have never had any trouble, because our reproducers have been the best men, and their equipment such that the



WALTER STEVENS.

finest results have been obtained. You know, the corps we sent to Mexico brought back what our committee of skilled inspectors declare are the finest they ever heard—instrumentals, vocals and talks. At the present time we have a corps of Cubans doing work in the laboratory under the capable direction of Walter Miller, who, you know, stands at the head of the list in his line. We are also bringing a number of people from Buenos Ayres, S. A., for the same purpose. They are now en route. Of course, we could send our men down there, but at the present time we are so busy in the laboratory that we cannot spare a man, and as we want these records right away, of course we had to bring the Argentinians—artists, each one—to New York.

"The company, however, are arranging to equip a special corps of recorders, to go into all foreign countries and stay there permanently, shifting from place to place as directed. We find this is the only solution of obtaining foreign records—lines that are unmistakably of the home flavor—for they mean substantial business present and prospective."

RECORD SYSTEM; ITS EFFECT ON SALES.

Although Edison records are one price some dealers sell five times as many as others and yet carry no larger stock. Their methods of getting the business are practically the same, but they discourage a prospective record customer through their lack of system in carrying a stock of records.

A dealer may have a large stock of records, but if he does not carry them under a system that enables him to immediately lay his hand on any record called for, or notify the customer that it is not in stock, he discourages further requests and loses the customer to the more up-to-date dealer, who realizes the necessity of system.

Would you give your thirty-five cents to the dealer who needed ten minutes to look for a record and then finally saluted with "not in stock?" Would this encourage you to ask him for another record when the same thirty-five cents would secure that record elsewhere as quick as you can ask for it in the store of another dealer?

There is one way that dealers can compete for record trade, though they cannot cut the prices. Carry a complete line of records, use a system, whereby the records are carried in trays with the record label on the front, so that the customer can see just what records are in stock and avoid the looking-up process. Even the dealer who carries a small stock can operate under the same system and he will be able to place an order for all records that he needs in a few minutes, thus avoiding the tendency to wait until he has time.

It is not the time that worries the dealer who has no system, but it is to avoid the trouble of looking all through a mixed-up stock of records to find out what he should order. This subject has been studied very carefully by J. Newcomb Blackman, proprietor of the Blackman Talking Machine Co., and in order that dealers in all parts of the country can adopt the tray and label system, he has invented a folding tray, which is shipped flat and sells at a surprisingly low price. The collapsible feature saves space and weight in shipping, and enables jobbers to carry the trays in stock without inconvenience. The Blackman Talking Machine Co. are bringing this tray to the attention of dealers and jobbers through an advertisement in this issue.

E. F. DROOP & SONS CO. PUBLICITY.

E. F. Droop & Sons Co., the Victor talking machine jobbers, have been doing some excellent advertising in the interests of that line in Washington, D. C. In the Washington Post of November 3, for instance, they carried an advertisement occupying nearly three entire columns, devoted to the exploitation of the Victor talking machines, and the copy was interesting reading. The new Victor parlors of the company at 923 Pennsylvania avenue are nearly completed, and when the decorations are finished will be among the handsomest in the South. They give daily concerts at which the Auxetophone is used, and they are proving to be a paying proposition.

AUXETOPHONE FOR COL. THOMPSON.

Stanley & Pearsall, New York, recently sold a Victor Auxetophone to go aboard Col. Thompson's yacht, now fitting up for a trip around the world. The colonel had already laid in a Victrola, so that he and his guests will be amply provided with music for the entire voyage.

The Eiler's Piano House, Boise, Idaho, and the Koerber-Brunner Co., St. Louis, Mo., are new Edison jobbers.

NEWS FROM MONUMENTAL CITY.

October Trade Not Up to Expectations Owing to a Trinity of Troubles—Sanders & Stayman Co. to Employ Manager for Talker Department—Victor Line With Kranz-Smith Piano Co.—Droop & Sons Expect Large Holiday Trade—Columbia Co. Maintain Their Own Store—All the Latest News.

(Special to The Talking Machine World.)

Baltimore, Md., Nov. 7, 1907.

Baltimore's home-coming week, the recent election, and the financial upset, the local talking machine dealers believe are responsible for the lack of business which they have experienced during the past month, which was the poorest of the year. This was a great disappointment to dealers, as October has generally been the month when business begins to pick up rapidly. Now that financial affairs are righting themselves, and the election shouting is over, the dealers are living in hopes that the present month will be a prosperous one, and that with the coming of the holiday season business will show forth in its old form, as Baltimore has always been a prosperous city as far as the talking machine business is concerned.

There are few changes to report in local circles and little news. G. Wright Nicols, president of the Sanders & Stayman Piano Co., who is now handling the Columbia graphophone as well as the Victor talking machine, is contemplating engaging the services of an experienced salesman for the handling of the new departments, which have proven to be such a prosperous side line to the piano business. Mr. Nicols started with a few Victor talking machines as a test, and now handles an unusually large business, and reports that it is growing.

On the opposite corner of Charles and Fayette streets is the piano firm of Kranz-Smith Piano Co., who are now carrying a line of Victor talking machines, and have an excellent display in their show windows.

E. F. Droop & Sons, of 231 North Howard street, who are jobbers for the Edison phonograph, report that business has been rather quiet during the past month, but the prospects point to a heavy holiday trade, as many of the retailers are taking large stock.

H. R. Eisenbrandt Sons, jobbers for the Victor talking machine, also report a pleasing outlook, and are preparing for a heavy holiday trade.

An item appeared in my last letter to The World to the effect that it was expected that George A. Gustin, resident manager of the Columbia branch, would close out that branch. This report is untrue, as the Columbia people will maintain their own store here, Sanders & Stayman Co. being jobbers only.

The new British patent law goes into effect on January 1 next. Some of its provisions are of great interest to American manufacturers and inventors. The provision which is the pith of the law is to the effect that if the manufacture of an article is exclusively or mainly carried on outside the British Kingdom, a patentee must prove that it is manufactured to an adequate extent at home or give satisfactory reason why it is not so made.

INFLUENCE OF THE "TALKER"

On Children, the Subject of an Interesting Discussion in the October Number of the Ladies Home Journal—Pointers That Are Worth Noting by Wide-Awake Record Makers.

In the October number of the Ladies' Home Journal there was an interesting discussion of the influence of the talking machine over children and to what extent that influence was for good or evil. Although the story was intended for home readers the manufacturers might find a number of valuable suggestions therein that might be adopted to advantage in their record making departments. The most pertinent portion of the article was as follows:

The astounding fact that twenty-five millions or more of what are called "records" for talking machines, etc., were sold in this country last year behooves parents to be a little more watchful than they are as to the kind of entertainment which is being furnished in their homes. The young undoubtedly get the keenest enjoyment out of this comparatively new form of entertainment and it is the customary habit of parents to buy, or allow to be bought, what is called "light popular music" that "the children like." No word can be said against light, popular music, so long as it is good music. It does not necessarily follow, as many believe, that good music is heavy and lifeless. A good march, well performed, is good music; good to the ear and good to the spirits. But this is not true of the flimsy trash that is being bought so generally and which parents are permitting to come into their homes. We cannot, perhaps, expect our young people to listen exclusively to the voices of Caruso, Scotti, or Melba, or Sembrich—although much good can be accomplished by interjecting a "record" of these singers. It is, perhaps, asking too much of our young people to listen with delight to the singularly beautiful voice of Michailowa as she sings Godard's "Lullaby" from "Jocelyn." Still, there is a happy medium.

These talking machines have within them tremendous possibilities for good, and it depends entirely upon the records we allow ourselves or our young people to purchase for them. Through these instruments we can get music into our homes that could be introduced in no other way. The surest educative influences upon the young are those which we exert through their forms of play and in their times of merriment. Accustom them, through one of these machines, to good music—popular music, if you like, but good—and you lay the foundation for one of the greatest sources of mental enjoyment and moral uplift that can come to the human mind and soul. But let these records pour forth the trashy and worthless so-called "melodies," with their accompanying verses of vulgar slang and coarse innuendo, and you set a standard of musical taste to your children that is as morally dangerous as it is musically misleading. There is no surer way for a man to love good music than that he shall hear it in his home when he is a child. Then when he hears the trashy song, and worthless ditty he will place it, by comparison, where it belongs. It would be an excellent idea if parents would go over the "records" in their homes and do a little sifting. A wise elimination here would not be amiss.

NEWS FROM THE TWIN CITIES.

The Past Month Has Witnessed the Biggest Business Ever Transacted in Talking Machines and Records in the Twin Cities—C. Howe Takes the Agency for the Starr.

(Special to The Talking Machine World.)

Minneapolis and St. Paul, Nov. 6, 1907.

October saw the biggest month's business in talking machines that the Twin Cities ever have seen. Figures are not given out for obvious reasons, but the dealers without exception declare that they never have had such a month as the past one.

T. C. Hough, the pioneer dealer in talking machines in the Northwest, has just added the Star machines, manufactured by the Hawthorne & Sheble Manufacturing Co., of Philadelphia, to his line of goods, and this week received his first consignment of machines. He expects to do a nice business for the new machine. Mr. Hough's other consignments for this week include 100 Edison phonographs and 25,000 Edison records, which will not last long at the present rate.

Arthur M. Magoon, manager of the talking machine department of the New England Furniture Co., which is making a special drive on the Victor machine, is jubilant over the October business. "It is the best we ever had," he says, "and the most we ever could ask for would be that it continue."

L. H. Lucker, of the Minnesota Phonograph Co., spends all his time in the wholesale department on account of the great demand for Victor and Edison machines, in both of which the house does a jobbing business. He reports the call for records simply is unprecedented and makes an unusual amount of work.

VICTOR AUXETOPHONE PUBLICITY.

A more pretentious, larger, as well as handsomer catalog, has been issued by the Victor Talking Machine Co., Camden, N. J., descriptive and illustrative of their Victor Auxetophone ("the Pneumatic Victor"). The cuts, superb halftones and marginal sketches, beautifully printed on coated paper enclosed in a deckle-edge rough-coated cover, makes a pamphlet that is a fitting vehicle for the interesting story of this wonderful discovery in talking machine inventions.

The November Graphonotes, issued on behalf of the commercial graphophone department of the Columbia Phonograph Co., General, with J. W. Binder, the manager, at the editorial helm, is up to the mark in brightness and cleverness. Mr. Binder has always a cheerful suggestion that commands thoughtful attention. The November idea appearing on the title page and running as follows, to wit: "Each day brings its petty round of irritating concerns and duties. Play you the man. Do what is to be done with laughter and happiness. Let cheerfulness abound with industry and count that day worth while in which you have accomplished that which makes for the betterment of your fellows."

A descriptive circular of the Phon-Arm attachment, with an illustration of the device, has recently been sent to Edison jobbers and Victor distributers, who take pains to call the attention of the trade to the advantages claimed for their specialty by the Chicago (Ill.) Stand Co., its manufacturers.

In response to requests from the trade the National Phonograph Co. have issued a special price list for horns and cranes independent of the regular equipment.

COPYRIGHT LEAGUE MEETS.

First Reunion Since Congress Adjourned Held Nov. 12—President Cromelin's Exhaustive Report Covers the Situation Very Thoroughly —Rights Granted Composers in Foreign Countries Compared With the Position of Their Confreres in This Country.

The American Copyright League, of which Paul H. Cromelin, vice-president of the Columbia Phonograph Co., General, is president, held its first meeting since the adjournment of Congress in the spring. This conference was held at the Hotel Astor, New York, November 12, at 10 a. m. In his letter notifying members of the meeting, among other remarks bearing on copyright, President Cromelin said: "Senator Kittredge, of the Senate Committee on Patents, has reported a bill which is in many respects far more radical than the original copyright bill with its famous "Paragraph G," and a strong effort will be made to pass this bill early in the coming session. . . . Nothing more important confronts manufacturers and dealers in mechanical musical instruments of all kinds than the proposed change in the copyright law."

Mr. Cromelin also addressed the following letter to The World, which embodies the statement or report he submitted to the League at the aforementioned meeting, viz.:

PRESIDENT CROMELIN'S STATEMENT.

Editor Talking Machine World:

In response to our request for a statement regarding the attitude of the American Musical Copyright League toward the pending copyright legislation and your desire for information as to the rights granted composers in foreign countries, would say:

In the message of President Roosevelt to Congress, December, 1905, he urged the necessity for a revision of the copyright laws, and said among other things:

"A complete revision of them is essential. Such a revision to meet modern conditions has been found necessary in Germany, Austria, Sweden and other foreign countries, and bills embodying it are pending in England and the Australian colonies. It has been urged here, and proposals for a commission to undertake it have from time to time been pressed upon the Congress."

We thoroughly sympathize with the effort to revise and codify the copyright laws, and in so far as this effort relates to the copyright on musical pieces, the American Musical Copyright League approves of and cordially endorses in the main the added protection to composers which the Currier Bill, H. R. 25133, provides. We protest, however, most vigorously against the section of the Kittredge bill, Senate Bill 8190, which brings the various mechanical reproducers within the domain of copyright, and gladly inform you of the way in which this same subject has been disposed of in various foreign countries.

The Berne Convention of 1886 expressly exempts mechanical reproduction of music from the domain of copyright. The countries represented and participating were: Germany, France and colonies, Italy, Great Britain and colonies, Japan, Belgium, Deumark, Spain and colonies, Algeria, Norway, Sweden, Tunis and Luxembourg. The only countries which have made the matter the subject of special legislation are Austria, Germany and England. In the Austrian copyright law of 1895 we find an express clause making mechanical reproduction free. Section 36 reads: "The manufacture and public use of instruments for the mechanical reproduction of musical works shall be no infringement of copyright in music."

In 1901 the German musical copyright law was passed. By an express clause "the sale of discs, plates, cylinders, strips and other parts of instruments which serve mechanically to reproduce musical composition is permitted."

In England, in 1906, the British musical copyright law was passed. The subject had been under consideration for eight years, and strenuous efforts to include mechanical players were made by the same interests who are now seeking to have the offensive sub-section E, section 1, of the Kittredge bill enacted into law. As in this country, contracts had been secured in advance, and the same scheme for obtaining a monopoly of the mechanical player industries was on foot. Instead of permitting this, the English bill, after providing penalties for pirating musical compositions, says: "Provided, that the expressions, 'pirated copies and plates,' shall not for the purposes of this act be deemed to include perforated music rolls used for playing mechanical instruments, or records used for the reproduction of sound waves, or the matrices or other appliances by which such rolls or records respectively are made."

LITIGATION INVOLVING THE QUESTION IN VARIOUS COUNTRIES.

When Congress adjourned in March, suits involving the question whether talking machine sound records were a violation of the rights of composers were pending in France, Italy, Hungary and Belgium. The same interests seeking the legislation here have stirred up the subject by litigation and unsuccessful attempts to secure legislation abroad. In France it has been held that to reproduce a musical composition by means of a talking machine record is no violation of the composer's rights. The court, however, decided that the use of the words did infringe. The case is on appeal and will probably be reached in the Supreme Court next year.

In Italy a similar suit is pending, the plaintiffs being Italian publishers and composers, the defendants the Gramophone and Typewriter Co., Ltd., of London, a British corporation. The lower court decided in favor of the publishers, and this was sustained by the Appellate Court. In its opinion the court makes reference to the fact that Italy was a party to the International Convention of Berne, which made mechanical reproducers free, but it adds: We find that the Italian delegates to the conference were appointed by the king but not confirmed by Parliament, and therefore Italy should not be bound. Thus does this court impeach the action of the representatives of Italy at the conference of the International Union at Berne, notwithstanding that their credentials were not questioned by the delegation assembled. The court goes on to say that if it was important for Switzerland to protect its music-box industry, it is also important for Italy to protect its composers. The decision seems based on national expediency rather than upon a broad treatment of the subject from an international viewpoint. The case is on appeal to the Supreme Court.

In Hungary a similar case is being tried. The Inferior courts decided in favor of the publisher. Since Congress adjourned, however, in March, the Supreme Court in Hungary has reversed the action of the lower courts, and, as is the custom under the Hungarian practice, has referred the question to a commission of experts, to determine whether a sound record should be considered within the domain or copyright. If the commission decides that it should not be so considered, the case is dismissed. If the commission gives as its opinion that the sound record is a violation of the composer's rights, then the court orders a new trial, for it is convinced that the matter was not sufficiently inquired into nor thoroughly considered at the first trial.

The Supreme Court at Belgium, May 2, 1907, since the adjournment of Congress, has decided in a case before it that talking machine sound records do not infringe the composers' copyright. The complainants were Puccini, an Italian, and Massenet, a French composer, the defendants being Pathe Frères, French manufacturers of talking machines and records. This is the first case to be finally decided by the highest tribunal in any country involving this question. In

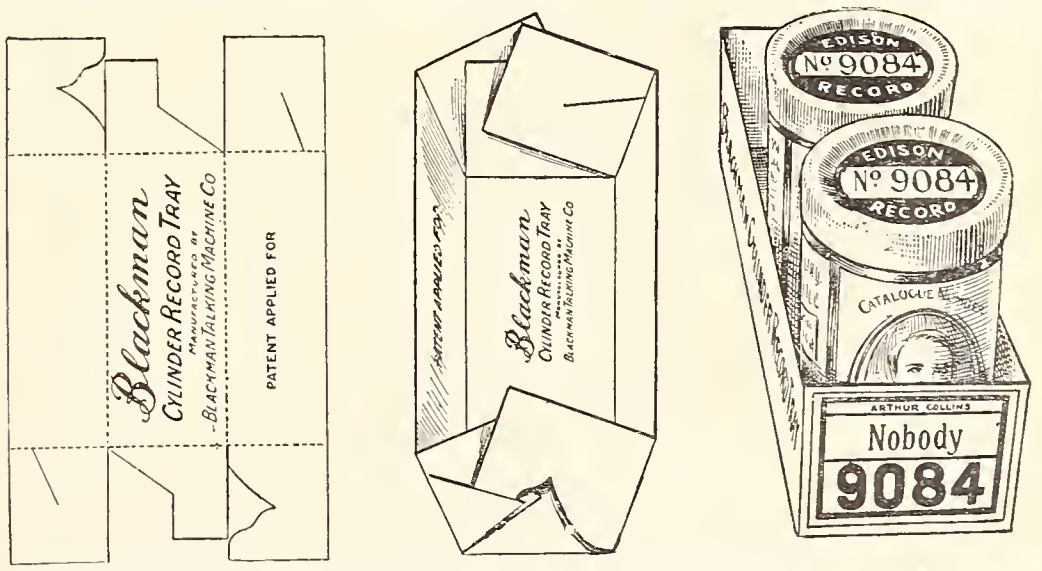
INCREASE YOUR RECORD SALES

BY USING

THE BLACKMAN CYLINDER RECORD TRAY

(PATENT APPLIED FOR)

A RECORD TRAY WITH RECORD LABEL FOR LESS THAN ONE CENT



The BLACKMAN Folding Trays for Cylinder Records are shipped FLAT and can be FOLDED into STRONG TRAYS in a few seconds, as shown above. This tray, with Rapke Label, makes a handsome looking record stock and a system you can't beat. The labels act as Silent Record Salesman and the customer can point to the record he wants to hear. Adopt this system and your sales will not only increase but it will never take more than a few minutes to make up a Record order.

Nothing Succeeds Like Success

Multiphones Going West

The Western Multiphone Company has been granted the exclusive privilege of operating Multiphones in the vast territory west of the Mississippi River. This company will be financed and operated along exactly the same successful and proven lines and under the same experienced management that made the Multiphone Operating Company a success.

The Multiphone Operating Company controls the territory west of the Mississippi River and north of the Mason and Dixon line and first offered its stock over a year ago at $2.50 per share—par value $10. Since then it has paid fourteen consecutive monthly dividends of 1 per cent. on the par value and the stock is now selling at $10 per share and will go much higher.

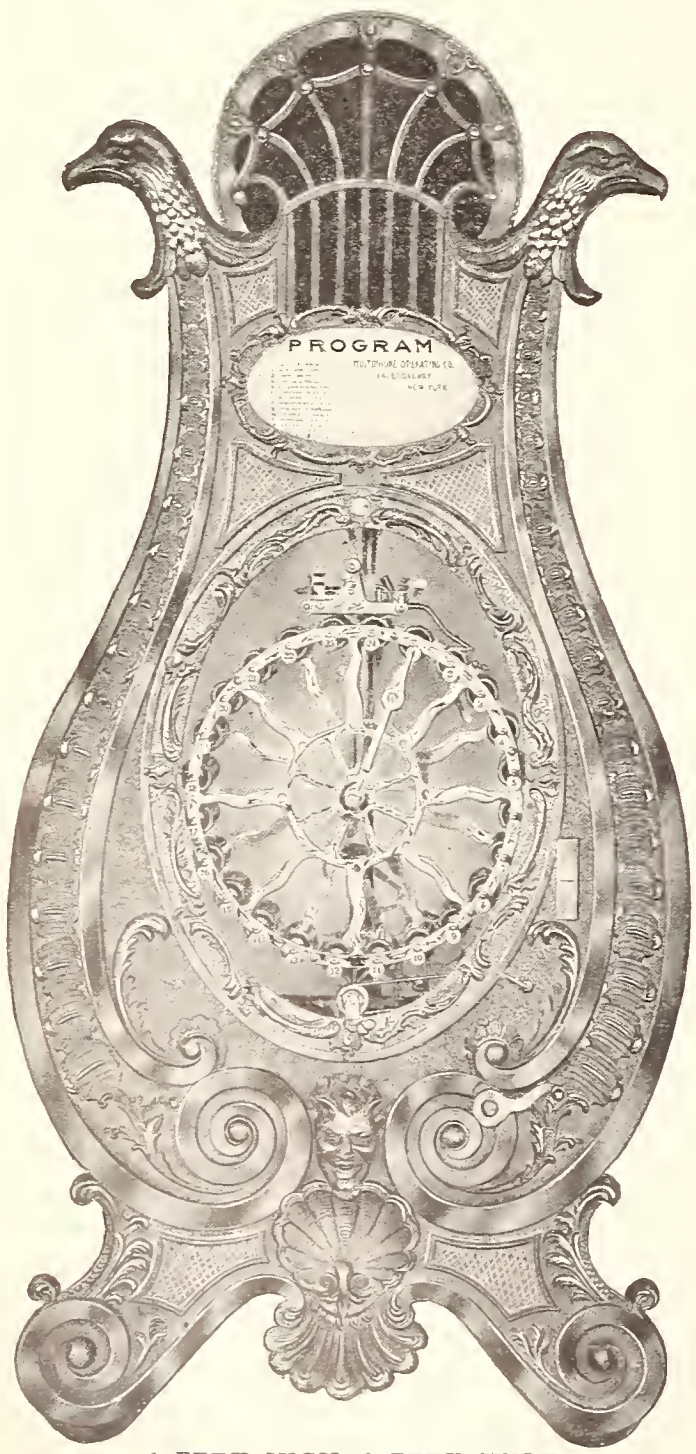
This remarkable record proves beyond a doubt the great earning power of the Multiphone. Under the mutual profit-sharing plan of operation, it offers the safest high dividend paying investment that the public has ever had an opportunity of getting.

The Western Multiphone Company made its first offering of stock two weeks ago, allotting 50,000 shares of the par value of $10, full paid and non-assessable, to be sold at $2.50 per share. This allotment has already been subscribed, mostly by stockholders in the Multiphone Operating Company. There is no better possible recommendation for the management of the business than this one fact.

A second allotment of 50,000 shares is now offered at $3.00 a share and will not last long, so do not put off investing until you have to pay a higher price. Apply for prospectus to-day.

Our plan of operation is unique. Your entire investment is used to purchase new Multiphones. Every new Multiphone means an addition to the earning power of the business and all the net earnings are applied to dividend account. It is a mathematical certainty that the more Multiphones placed on the market, the higher the dividends are bound to be.

THE MULTIPHONE



8 FEET HIGH, 3 FEET WIDE
18 INCHES DEEP

The Company has absolutely no fixed charges.
Multiphones are not sold.
It is the stock we sell.
Send for prospectus and application forms.

reaching its decision, the court sustains the action of the lower court, which reached its conclusion after "considering that these apparatus cannot be assimilated to the writing, or tbe uotation by an engraving process, of the tboughts of the author, that they have notbing iu common with the conventional signs permitting reading or comprehension of the work to which they are related; that, isolated from the rest of tbe Instrument. they remain in the actual state of human kuowledge without and utility; that they are only one organ of an instrument of execution."

CONDITIONS SUMMARIZED.

It will tbus be seeu that in every country where the matter has been a subject of legislation laws have been passed exactly the reverse of what is proposed in the Kittredge bill, and the mechanical reproduction cf musical compositions is expressly permitted. Also, that in the only country iu which a case has been fiually decided by the highest court involving this question, in Belgium, the court by its decision makes mechanical reproductions free; that in France the Appellate Court has declared the mechauical reproduction of a musical composition to be lawful, but the case is on appeal; that in Hungary the whole matter is suspended pending a decision of the questiou propounded to the Commission of Experts, and that in Italy the decision favoring the composers is on appeal.

A case is now pending in the Supreme Court of the United States involving the question whether a perforated roll used in a piano player violates the composers' copyright under existing law. This is the famous case of the White-Smith Publishing Co. against the Apollo Co. The real plaintiff is the manufacturing concern that is seeking the monopoly of the piano player and music roll business. This concern caused the suits to be entered, and is paying the expenses involved.

In the trial court Judge Hazel decided that the perforated roll did not infringe. This decision was sustained by the unanimous opinion of the Circuit Court of Appeals in New York, Judges Townsend, Lacombe and Coxe. Tbe matter is to be now finally passed on by our Supreme Court. It is expected that the case wil be reached sometime in December.

Should the Supreme Court reverse the decision of the lower courts and decide that the perforated music roll does not infringe, the object sought by tbose who are endeavoring to monopolize tbese industries will have heen secured. Tbey can accomplish tbeir purpose either by a favorable decree in the courts or by the passage of the Kittredge bill or a hill of substantially the same teuor by tbe Congress. The subject is of paramount importance to all manufacturers of mechanical musical instruments in the United States and to all citizens, and we most earnestly desire tbat it be settled at the earliest possible date.

It is not my purpose to endeavor in this communication to indicate the numerous reasons why, even if constitutional, the objectionable sub-section E, section 1 of the Kittredge bill, or any similar clause, should not he embodied in our copyright laws. These reasons are fully set forth in the two printed reports of the arguments before the Committee on Patents of the Senate and House of Representatives conjointly, June 6, 7, 8 and 9, 1906, and December 7, 8, 10 and 11, 1906.

ADVANTAGES GAINED BY FOREIGNERS.

It is important, however, to add that tbe rights proposed to be granted to American citizens under tbis bill may also be enjoyed by citizens of foreign countries in those cases where the country in which such foreigner resides grants to citizens of tbe United States substantially the same protection as it grants to its own citizens.

As already shown, in no other country do composers enjoy the extraordinary rights which the Kittredge hill proposes to give them. It follows, should the bill become a law as reported, that every other country will gladly give our citizens the limited rights which it confers on its citizens, in exchange for the extraordinary privileges which its citizens will obtain from us. And, in actual operation, this must uecessarily mean that every man, woman and child in the Uuited States who purchases a talking machiue record, a piauo roll, a music box sheet or any of the other numerous mechanical forms of records, will be compelled to pay tribute in the shape of composers' royalties ou every record purchased. They are to be penalized every time they want to hear the best in music (and the best comes from Europe), for the benefit aud enrichment of a few European publishing houses aud composers who, in league with certain manufacturers, are secretly behind this legislation, and who hope, by its passage, notwithstanding the fact that they enjoy no such privileges in their own country, to enormously enrich themselves at the expense of the people of the United States.

We are sure that Presideut Roosevelt had no such purpose in mind when he sent his original message to Congress in respect to the codification of our copyright laws. We shall use every legitimate effort in the coming fight to remove this objectionable feature from the Kittredge bill, and shall urge upon Congress, in the interest of international copyright, the passage of such a bill as will bring our laws into conformity with the laws of England, Germany, Austria and the other great powers in respect to this important subject.

Very truly yours,

PAUL H. CROMELIN,
President American Musical Copyright League.

The meeting of the American Copyright League, at the Hotel Astor, New York, on Tuesday, was attended by more than three-fourths of the members. Paul H. Cromelin, vice-president of the Columbia Phonograph Co., General, presided, and I. S. Dillingham, Jr., general manager of the Tel-Electric Piano Co., acted as secretary. The report of Mr. Cromelin, which appears above in full, was read, with a general discussion following. Various measures to advance the cause of record manufacturers were adopted, including the printing of a pamphlet containing the essential facts of the copyright discussion, an appeal to individual Senators and Representatives, and publicity of the question through the press. Harry F. Leeds, Jr., of Leeds & Catlin Co., and Wm. Shillaber, Jr., president of the Tel-Electric Co., New York, were appointed a press committee. The funds for continuing the fight were contributed on a liberal seale, and much earnestness was displayed in the proceedings, which extended over several hours. The main work of upholding the contentions of the League before Congress was placed in the hands of the executive committee.

The talking machine trade was represented by Paul H. Cromelin, of the Columbia Phonograph Co.; Frank L. Dyer, of the National Phonograph Co.; Harry F. Leeds, Jr., of Leeds & Catlin Co.; T. D. Merwin, with the American Graphophone Co.

The case of the Victor Talking Machine Co. against the Duplex Phonograph Co., of Kalamazoo, Mich., was resumed in Grand Rapids last Friday before Judge Knappen, in the United States District Court.

THE ALLEN FIBER TALKING MACHINE HORN

HERETOFORE there has been a certain amount of prejudice, especially by those musically trained, against the Talking Machine on account of a peculiarly unpleasant "blast" or metallic sound foreign to the record.

This rasping sound is due principally to the horn, which in the first place, is manufactured of metal, and secondly is generally not constructed upon scientific principles.

This fault is corrected by using the ALLEN FIBER HORN, made by hand, of a Japanese rice fiber material, finished with a beautiful lacquer, put on by a new patented process in a permanent glossy jet black color.

THE TALKING MACHINE TRADE IS SOUND.

It Is Built on a Solid Foundation and Will Stand Any Shock—The Business Situation Demands Coolness and Not Nervous Hysteria—Business Men Should Not Lose Their Nerve—Nor Should There be Wholesale Retrenchment to the Extent of Impairing the Selling Strength of a Business Enterprise—Now the Time to Stand and Pull Together.

Talking machine men should not be alarmed in the slightest degree over the business situation. It may be that large factories in various lines of trade will be compelled to close temporarily. That is the natural outcome of conditions wherein it is almost impossible for business establishments to secure the currency desired. The talking machine industry is in a healthy condition. It has a splendid foundation and will not be easily shaken. Jobbers and dealers should cease talking hard times and go straight ahead with their business plans. The credit of the talking machine trade is unimpaired, and the industry is on a substantial and enduring basis.

The present is, of course, a good time to use a fair amount of conservatism in the conduct of business, but conservatism can be overdone, and a sales force may be reduced to a point where its efficiency is seriously impaired, and where its business getting qualities are reduced to a very low point. Men should not get rattled over the present conditions. We want confidence restored in every line, and if the business men at the head of large enterprises lose their heads they will naturally help to continue the present unsettled condition in the financial world.

We have got to pull together, and pull strongly and thus the united strength of all will help to bring the trade of the country where it should be. It is not the time to do too much paring in legitimate expenses. A good selling staff is necessary at all times, but now impress upon the salesmen the necessity of making good sales—quality sales. It is not the time to cut down too much in advertising. Let your business light shine. It is rather time for good, cool business judgment and not to let the blood in one's pedal extremities become congealed.

Here's a mighty important bit of information which will show the strength of the Victor talking machines with the trade and public, and should encourage dealers in talking machines everywhere.

It is learned upon excellent authority that the Victor business for 1907 up to October 1 far surpassed that of the entire year of 1906. Furthermore, notwithstanding the financial crisis in New York the October sales were a very large percentage over those of October a year ago.

Naturally such news as this, showing the strength of the Victor and the progressiveness of the men directing this great enterprise, should act as a stimulus to the talking machine trade generally. Keep doing things that is the best way to drive away pessimism.

Many of the leading men of the talking machine industry have not hesitated to express themselves in the most optimistic manner concerning the outlook for this special industry. Albert S. Marten, president of the Tea Tray Co., Newark, N. J., stated to The World, when asked to express his views on the business situation:

"In this industry there are many solid concerns which are well buttressed round with financial strength of an unassailable kind. What we need to help matters along in the right way is confidence. The men who get scared and withdraw their money from the banks are the ones who are helping to continue the financial stringency. In such times as these men should not lose their heads and become frightened. The country is big and strong and we have a natural wealth which will help us out of any kind of depression."

SOME COMMENTS BY A LAYMAN.

A prominent daily newspaper, commenting on a meeting of talking machine men, makes the subjoined "wise" remarks: "Speaking of 'records,' there is no record of any one at that convention of agents and experts, who have made fortunes in these records, who had the thought to ask why the man who had invented the stock ticker, with its neat little tape, had not invented a similar device for recording the conversation of the talking and singing machines. A more clumsy and crude invention for recording speech is hard to find than the wax cylinder. If the news of the financial world can be reproduced every day in Wall street on a film of paper it is strange that phonographic communication could not be recorded in a similar way." No end of experiments have been made to accomplish this "simple" trick, but so far without success. The recording experts declare it is impossible.

DAVEGA'S FINE RECORD.

In point of business existence, S. B. Davega is spoken of as the oldest talking machine jobber in New York City, twenty-seven years being his record. Another attribute, seldom talked of except in circles that know, is that Mr. Davega has never failed to discount his bills from the first year he opened his establishment to the present time. Both of these claims accord him unusually honorable standing in the trade, of which he is certainly a credit.

TIMELY TALKS ON TIMELY TOPICS.

An endless topic of conversation and reminiscence is the romance of the talking machine business. The novelty of the discoveries, the oddity of the inventions, the glamour of their development never cease to arouse interest and provoke discussion. A group of jobbers not long since were engaged in this pleasant and instructive exchange of chat, when Max Landay, of Landay Bros., New York, told this story: "You know our place, 400 Fifth avenue, was the residence of Robert J. Ingersoll, the great atheist, eloquent orator and famous lawyer. Our recital hall, as we call it—a circular room with lofty ceiling—was the dining room. The other day the daughter of Bob—I forget her name now—came into the store to hear some Red Seal records, and spoke of the curiosity aroused in being once again in the building, at one time her father's home. After looking around and noting the changes, she turned to me and said as we stood in the recital hall: 'It is certainly a strange coincidence, now that the place is occupied by your business, but in this very room the talking machine was born. Here Thomas A. Edison and Emile Berliner made records of the voice of my father, Col. Ingersoll, and with great success, too.' Of course, I was more than gratified to hear this, but what was best of all the charming lady, who then and is still known the country over as one of the finest women in the land, gave me a nice order for a Victor 6, a record outfit of no small size and one of our handsomest cabinets." This narrative closed the session for the day, and Max was awarded the prize.

Machine and record manufacturers are reported as conferring on some form of united action to circumvent and, so far as possible, put a stop to the use of so-called spurious parts in repairing. This matter has been mentioned in The World before, in connection with the action taken by the National Phonograph Co., who have taken steps to prevent what is indubitably an injury to their product. The substitute of glass for sapphire reproducing points, fraudulent feed nuts, inferior springs, etc., it is held, are detrimental to proper reproduction, or to the standard guaranteed when genuine parts are employed. Owners of machines are often surprised with the remarkable change of tone and quality of sound after their property has passed through the hands of the repairer, who thinks no one will be the wiser if other than the parts supplied by the original manufacturer are substituted. Complaints follow, of course, and it is therefore in a spirit of self-defense and of good faith toward the public that the manufacturers are co-operating to stamp out this evil, for such it is. As yet no definite plan has been decided upon, but it is safe to say when repressive measures are adopted the trade at large will be the beneficiaries.

The success of the National Talking Machine Jobbers' Association is now assured, as fully 75 members are now on the rolls, and the interest taken in its affairs widespread. The system of exchanging credit information formerly used by the Eastern Talking Machine Jobbers' Association has been adopted by the national body, and is also working with the same admirable effect it did with its originators. The well-filled treasury of the now defunct eastern association has been distributed to the members on the pro rata basis, while the books, blanks and other material have all been turned over for the information and guidance of the national officers charged with executive functions. Those who felt inclined to question the success of a national movement are more than satisfied the problem has been solved, and are also among its most enthusiastic supporters.

The distinctions that are now made in litigation bear a close resemblance, in many instances, to the hair-splitting process. Illustrations of this find abundant proof in the legal warfare over patent claims. One of the latest examples is furnished in a case now pending, and in which testimony is being taken. The point raised is, Does an elastic or tension feed interfere or conflict with a spiral feed on the disc record? Experts on both sides are equally and firmly positive as to their respective contentions, and some of the exhibits to be presented for the court's consideration and judgment, when the hearing comes on, are of ingenious conception and novel construction. Supporters of the tension feed idea admit that while their mechanism is an old principle, still its application and practical working records decided invention in the development of operation.

Export trade in talking machines is growing so rapidly as to surprise those not familiar with the data. Great quantities of goods are taken by European countries, and the American made articles always have a "look in," no matter to what part of the globe they are shipped. The trade most assiduously cultivated, however, is that in the Spanish-American countries—Mexico, Central and South America. In this section of the world price is not the sole factor in competition for orders. Machines and records come from everywhere under the sun, and the patent situation is nil. Under these conditions some pretty tall hustling would be expected, and it is; but goods of United States origin finally control in the last analysis. The German manufacturers dump shiploads of cheap machines and inferior records in the Spanish-American markets; but notwithstanding the price and their controlling the banks, with a large number of resident merchants of their own nationality as allies, they make comparatively little headway against the Edison, Victor, Columbia or Zonophone lines.

The Germans have imitated every model of machine made by the American manufacturers, but the material used is always "to the bad," and their methods of construction faulty, so that their standing is not flattering with jobbers or dealers who know a good thing when they see it. What is the consequence? Ask the managers of the export departments of any of the concerns quoted above. The inquiry will be greeted with an indulgent smile, and then they will "lay it all over" the European "stuff" with facts and figures to prove the impregnable and unassailable position of the American talking machine, and why it is leaving the party of the first part at the post in every deal of any consequence. The Spanish-Americans cannot be fooled more than once, if then; but his second order is invariably placed for talking machine goods the brands on which are guaranteed of the "best made," bar none.

The adoption by dealers of some system for keeping track of their records is becoming recognized as almost obligatory in order to conduct their business as free from confusion and consequent monetary loss as possible. Much inventive skill is being shown in devising and constructing appliances for this purpose. The desirability, not to say advisability, of installing some plan with this end in view, is strongly urged by the Edison Phonograph Monthly, as follows: "Dealers everywhere are putting in systems for carrying their stock of records. Firms making a specialty of furnishing these record systems to the trade, say that the demand is little short of phenomenal. . . . When he uses the most approved methods for carrying his stock, he is able to make sales in the least time. By being able to instantly put his hands on any record desired, he makes the sale at the smallest loss of his own time and a corresponding satisfaction to his customer in getting what he wants with the least delay. . . . They (dealers) are losing time and money by not putting in an adequate system for carrying their record stock."

These observations are not only absolutely true and to the point, but also very timely. It is also noticeable that with the trade awakening to the importance of arranging and carrying record stock so as not only to know exactly what is on hand, but also to be able instantly to make any selection desired for sale as named, inventions and improvements to make these systems simpler and more efficient are constantly appearing, proof of which is abundantly furnished in The World's advertising columns. The dealer, with his record stock in other than in easy, accessible shape, possibly depending on memory to locate goods, cannot hope to successfully compete with a man who has introduced systems and methods in this particular branch of the business.

The Cable Piano Co., of Menominee, Mich., have fitted up a section of their salesroom for a concert hall and the sale of talking machines. Public concerts have attracted crowds all the month. They are presented gratis, and consist of classical and popular pieces on the Victor and Edison machines.

Rapke's Specialties FOR ALL Talking Machines

THE LATEST

Rapke's Disc Record Cabinet with Labels

Records Protected from Dust or Injury. Lay Flat in Sliding Drawer. Cannot Warp. Made to Suit any Size Business. Takes up Less Space than any Other System. VICTOR H. RAPKE, 1661 SECOND AVENUE NEW YORK CITY

BOOKER JOINS SILVERSTONE FORCES.

(Special to The Talking Machine World.)

St. Louis, Mo., Nov. 11, 1907.

J. P. Booker, formerly manager of the talking machine department of the O. K. Houck Piano Co., has accepted a position as traveling representative for the Silverstone Talking Machine Co., and will cover the State of Missouri for this concern. He is now on a three weeks' trip through the State.

Geo. W. Lyle, general manager of the Columbia Phonograph Co., and W. C. Fuhri, district manager of the same company, were recent visitors here.

A. H. Kloehr, representing the National Phonograph Co., was a recent visitor here.

In their advertisement, elsewhere, the Norcross Phonograpn Co. claim that their "vulcanoid diaphragm, absolutely unchangeable and indestructible, is unaffected by moisture or temperature, is uniformly loud, clear and brilliant in all climates and under all conditions. It is adaptable for both disc and cylinder reproductions."

RECORDS OF INDIAN MUSIC.

A systematic study is being made of the music of a number of Indian tribes in the Far West with a view to collecting their songs and preserving them. A good deal of money has been raised for the purpose, one of the principal subscribers being J. Pierpont Morgan. A staff of competent musicians is now in the field securing talking machine records, and it is expected that several years will be required to complete the work. The Bureau of Education at Washington is now engaged in the preliminaries of an investigation of the subject of musical education in the United States, as statistics relative to this branch of education have never before been collected.

MUSIC FOR THE DEAF.

Experiments are being made to bring music within reach of the deaf. It is not expected that they can be made to hear the tones of instruments or that any sound will ever reach them. The idea is to have vibrations reach them through the muscular sense, the theory being that the vibrations will have the same effect on them as musical sound does on those who can hear. The apparatus to be used is a talking machine and a microphone attached to accumulators. The phonograph reels off a tonal scale to the microphone in an intermittent current, and the muscular sense is reached and vibrations carried to the brain.

There is an increasing interest in the indestructible records made by the Indestructible Phonographic Record Co., of Albany, N. Y., whose announcement appears elsewhere. They are individual in many respects.

This Then

will inform you that our new issue of photographs of the Talking Machine artists, were ready on October 1st. These are neatly framed and each packed in a separate mailing box, protecting them and making them convenient for handling.

Dealers will find these framed goods ready sellers, also very attractive for window or store decorative purposes. We will mail you a sample of either framed or unframed, on receipt of price; unframed 35c. each, framed 50c. each.

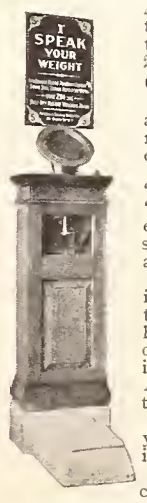
INCREASE YOUR INCOME

One of our customers in Chicago writes that the receipts from two of his Talking Scales is equal to a fair salary. Another customer in Anderson, Ind., writes that he placed one of his Talking Scales at the State Fair at Indianapolis, on which 2,500 people weighed themselves in one day.



Comments from a few of the Leading Newspapers

The Providence *Sunday Journal*: "There are no musical or fortune-telling attachments to the new weight machine. It doesn't need them to attract custom."

From the Buffalo, N. Y., *Daily News:* "The latest novelty is a machine that 'speaks your weight.' One of these is on exhibition at the Lafayette Hotel. It consists of an ingenious combination of a scale and phonograph."

From the Atlantic City, N. J., *Press:* "It is hard to imagine the wonderment that fills those who hear this voice of mystery, and highly amusing to listen to the assortment of explanations that follow. Mr. Dunlop is the first to introduce this machine in Atlantic City, and it is safe to say that they will be winners."

From Cleveland *Plain Dealer:* "'I speak your weight' is pretty much the limit. It is the ne plus ultra of mechanical egotism."

If interested write to-day for illustrated circular and price list.

THE HIT OF THE SEASON

The Drumophone with Hohner Harmonica

Everybody is going wild about it
Harmonica players insist on having it

The latest Novelty on the market; just imported from Europe; a regular Hohner Harmonica with drum attachment; will please old and young. A whole band in itself. Anybody who can play a Harmonica has no difficulty in playing the Drumophone.

The drum which is attached to the Harmonica has a real skin head, same as is used in a regular snare drum. A very clever, patented device enables the player to accompany his music with a drum-like sound which will considerably increase the pleasure derived from an ordinary harmonica. It practically gives him two distinctly different instruments at the cost of one. In spite of this fact, the Drumophone is not in the least bulky and can easily be carried in the coat pocket. Each instrument is packed in a separate, handsome cardboard box.

IT'S UP TO YOU MR. DEALER

If you wish to participate in the coming harvest, don't fail to send in your order at once, and don't fail to make it a good sized order, for when the rush comes, you will wish you had them.

A GREAT NOVELTY FOR THE HOLIDAYS

No. 2446. Hohner Harmonica, 14 Double Holes, 28 Reeds, Tremolo Concert; Brass Plate, Heavy Nickel-Plated Covers; size of drum, 6½ x 4¼ inches, with Skin Head and Three Pearl Buttons for Operating.

Per dozen	**$6.50**
Per gross	**70.00**

Above prices are net, except cash discount.

These are the Genuine Drumophones with Hohner Harmonica

Beware of Worthless Imitations.

No. 2447. Hohner Harmonica, 20 Double Holes, 40 Reeds, Full Concert, Brass Plates, Heavy Nickel-Plated Covers; size of drum, 6½ x 4¼ inches; with Skin Head and Three Pearl Buttons for Operating.

Per dozen	**$8.50**
Per gross	**90.00**

Above prices are net, except cash discount.

A Great Novelty—A Great Seller
Order a Good Supply

To supply the demand for a 50c. Article, we have the following smaller Drumophone with a single reed harp:

No. 2445. Harmonica has 10 Single Holes, 20 Reeds, Brass Plate, Heavy Nickel-Plate Covers; size of drum, 3 x 5 inches; with Skin Head and Two Buttons for operating.

Per dozen	**$4.20**
Per gross	**46.00**

Above prices are net, except cash discount.

The demand for this Novelty is beyond our expectations—order now

Send in your Holiday orders now. Orders filled in the order they are received—don't be too late

The Rudolph Wurlitzer Co.

Sole Distributors for the United States
CINCINNATI—CHICAGO

GENERAL PHONOGRAPH SUPPLY CO.

Make Their Bow to the Trade—Carrying a Fine Line of Specialties.

While a very complete description, accompanied by faithful illustrations, of their "Truetone" amplifying horns is furnished in the striking double-page advertisement of the General Phonograph Supply Co., 57 Warren street, New York, appearing elsewhere, the trade should not miss the forceful claims advanced for handling this desirable line of goods. The company,

THE EUREKA SPECIAL LINE.

though recently established, is composed of men well known and highly esteemed for up-to-date business methods, and a thorough knowledge of what development and improvement in goods means to the progressive jobber and the aggressive dealer.

The company's other specialties, of which more will be heard later, include, among several articles, the Eureka carton cabinet for cylinder records. Of this distinctly novel line, which will doubtless appeal to every owner of cylinder records and the trade in general, they say: "The record-carrying trays or drawers are divided into quadrille sections to accommodate the original cartons in which cylinder records are sold. The merit of the flannel-lined carton cannot be contradicted. It protects the delicate sound waves from damage and from the accumulation of dust, and decreases the possibility of breakage to a minimum. The construction of the Eureka carton cabinet for cylinder records permits these cartons to be utilized for the precise purpose for which they were originally intended—the perfect and practical protection of their contents; and the record can be taken out of the cabinet without removing the carton or box."

CHAS. V. HENKEL.

Another very clever device originated by the General Phonograph Supply Co. is the Eureka alphabetical index for the cataloging and ready location of cylinder and disc records. Of this they speak as follows: "The ordinary index card furnished with record cabinets provides merely for a list of the records contained in the cabinet. It is frequently necessary to search through the entire list, to locate a desired record. The Eureka alphabetical index locates any cataloged record immediately."

It may interest the trade to know that Chas. V. Henkel, president and general manager of the General Phonograph Supply Co., and the inventor of the larger number of their new lines, has been and is still president and general manager of the Douglas Phonograph Co., bringing that concern up to their present high standing as a successful concern.

TRADE NEWS FROM COLUMBUS.

Business as a Whole Satisfactory—Big Order for Edison Records—Some Recent Visitors—A Chat With P. B. Whitsit.

(Special to The Talking Machine World.)

Columbus, O., Nov. 11, 1907.

Talking machine business in this city and locality during last month is reported as good, generally. Perry B. Whitsit, speaking for the Perry B. Whitsit Co., reports that his house's business showed a nice increase this October over the same month of last year.

W. H. Snyder, Edison and Victor dealer here, is one of the foresighted dealers. In anticipation of his late fall and holiday trade he placed this week with his jobber orders for 1,000 Edison records and several hundred Victor records. Mr. Snyder is not one of the kind who believes he will have cause to regret his actions.

A. P. Petit, of the Talking Machine Supply

EXCLUSIVE
Talking Machine House

Did you ever stop to think, Mr. Dealer, why it is to your advantage to deal with an exclusive talking machine jobber? The advantages are many.

Since our talking machine business is our bread and butter, is it not natural that we should give our dealers every attention?

We figure our pleased customers as our main asset and handle them with the same care we do our bank accounts.

Our lines are Edison, Victor and Columbia cylinder. Our stock of these goods is not only enormous, but that which is more essential—complete.

When you need goods on a moment's notice for the Holidays, remember we are the people to order from in a "pinch."

Perry B. Whitsit Company, 209-213 South High Street, COLUMBUS, OHIO

Co., New York, was a visitor in the city this week. He was headed east after an extended trip through the west and southwest.

Miss Nellie Ryan, former manager of the Buckeye Talking Machine Co., succumbed to the charms of Dan Cupid last week. This is a tinge of romance in the fact that her husband is F. J. Pierson, manager of the Buckeye Talking Machine Co., Springfield, O. Mr. Sims is Miss Ryan's successor.

Tom Murray, representing the Columbia Phonograph Co., called on his jobbing trade here during the week. He was amply rewarded for his trouble by taking a nice lot of orders for Columbia machines and records.

Dealers here to a man are highly elated over the Edison exchange proposition. The fact that they will have to order only double the amount of records returned will work no hardship on them and naturally feel very kindly towards the National Phonograph Co., for so liberal an exchange.

DEATH OF MRS. ECKHARDT.

In the death of his mother, which occurred at Baltimore, Md., November 3, Walter L. Eckhardt, manager of the wholesale department of the Columbia Phonograph Co., General, has sustained a severe loss, as the relations between the two were of the closest and most affectionate nature. Mr. Eckhardt was appointed executor of the estate, and in attending upon his mother's final illness and cares incidental thereto, being the only surviving son, he was away from business until Friday of last week. Being the sole legatee, the distribution of the property was left entirely to his judgment, a delicate task that he accomplished to the satisfaction of relations, friends and various societies of which his parents, conspicuous members of Baltimore's German social circle, were highly honored members.

Outside of their export trade, which is of magnificent proportions, the National Phonograph Co. are reported as doing a yearly domestic business amounting to $6,000,000.

JUSTICE DENIES MOTION.

Moving Picture Shows on Sundays Illegal But No Less So Than Regular Theatres.

That five-cent moving picture shows given Sundays are no worse than those given at from 50 cents to $2 admission, is the view of Justice Aspinall, of the Supreme Court, Brooklyn. In denying a motion to enjoiu the police from interfering with Sunday exhibitions in a five-cent arcade in Jamaica Justice Aspinall said Monday:

"If moving picture exhibitions are public shows, theu surely the exhibitions in the larger halls are equally so and should be governed by the same law. Why this discrimination on the part of the police? It is un-American, unfair and unjust; but law is law. I must be governed by it and act accordingly."

A FRIENDLY MANAGER.

An open friendship between employer and employe—the individual friendship between a manager and each of his men—is of great value to a business. It begets a loyalty that nothing else can.

A man said recently: "Whenever I feel a little blue I go and have a talk with Mr. Smith, and I come out feeling fine. We may not talk about what I had in mind, but I feel encouraged just the same." I had often heard of Mr. Smith's success with his business and with his men, and this seemed a fair explanation of that success.

Such an interchange of friendly confidence brings out the best there is in the men—or shows what they lack. It enables a manager to get in touch with the ruling motives of his men, and to learn how each individual should be treated in order to get the best results. In other words, it enables him to consider intelligently the personal equation.

Men are like the keys on a piano: you can get music or discord out of them according to the way you play upon them. It is refreshing to observe the growing recognition of this fact, and to see how oppression is decreasing in order that spontaneity may be utilized. It is good to know that it pays to be friendly, and that the business world is rapidly finding this out.

STUDYING THE VEDDAH RACE.

While en route to Java not long ago Dr. Moskowski, of the Prussian Academy of Sciences, visited Ceylon for the purpose of studying the Veddah race, the earliest inhabitants of the island. This people are cave-dwellers and barbarians, and speak a peculiar language of monosyllables. Dr. Moskowski succeeded in making a number of excellent phonographic records of their speech, and also obtained a considerable amount of kinematographic films illustrating their mode of life.

The Douglas Phonograph Co., New York, have issued a miniature newspaper, entitled Douglas Items, edited by the versatile and capable president and general manager, C. V. Henkel, and of which the initial (October) issue has been received. The suggestions offered to the trade are briefly set forth, of which the following are samples: "With the first number of Douglas Items we desire to state that our object is mainly to call attention to the Douglas Phonograph Co. That's what we are in business for. Incidentally our endeavor will be to stimulate your interest in the phonograph business. What we don't know about the business might fill the Astor Library, but the little we do know we trust may be to some advantage to our dealers. We may tell you a lot of things you have forgotten, but our purpose will have been accomplished if we are the means of refreshing your memory." And so on in an interesting way. An order blank for the December advance list of records is a feature of this breezy little four-page sheet.

The Pastime Amusement Co., Trenton, N. J., have been incorporated with a capital of $20,000 to handle moving pictures, phonographs and other amusement devices. Directors: Annie L. Minich, Mamie M. Minich and Mary A. Minich.

To You, Mr. Jobber

We are now ready for Fall trade with a complete line of Standard Horns. The same quality, standard and finish are not only upheld, but improvements have been made so that our product is second to none on the market. Our reputation for reliable horns is well known, and we propose to add to that by creating the finest horns that can be located anywhere.

TRADE STANDARD MARK

You will make no mistake by making a Standard alliance. Place your order now and you can be sure of prompt shipment. We make a specialty of filling orders. Be on the Standard side and you'll be all right. We are prepared to promptly fill all orders for artistically decorated Standard horns for the holiday trade.

TRADE CONDITIONS IN MICHIGAN.

Jobbers and Dealers Throughout the State Are Feeling Optimistic Despite the Upheaval in the Financial World—Believe That the Trouble Is Only Temporary and Are Settling Down to Work for Trade With That Determination Which Insures Success.

(Special to The Talking Machine World.)

Detroit, Mich., Nov. 9, 1907.

The jobbers and dealers throughout Michigan are not pessimistic regarding the business outlook. I have talked with some of the well-known trade leaders of the industry here and they figure that we are bound to have a big holiday trade. It looks that way, and every effort should be made to push the business.

E. Percy Ashton, president of the American Phonograph Co., has a splendidly equipped establishment and he is doing a fine trade. Mr. Ashton gives the closest personal attention to his

JULIUS A. J. FRIEDRICH.

business; he is a thoroughly practical man, and as a result the business of the American Phonograph Co. has gone ahead by leaps and bounds. His trade in Edison goods extends not only well over Michigan, but in adjoining States as well.

Max Strassberg, manager of the talking machine department of Grinnell Bros., predicts a good holiday business. Grinnell Bros. have a fine wholesale trade and conduct through their own branches alone a big business throughout the State of Michigan.

A prominent Michigan jobber is Julius A. J. Friedrich, of Grand Rapids. Mr. Friedrich carries in stock a splendid line of talking machines and accessories, and he is in a position to fill orders promptly. He is one of the best-known figures in the music trade line in Michigan, and he is always ready and anxious to serve his customers in a most satisfactory manner.

Michigan is a big State for cabinet work, and the Cadillac Cabinet Co., whose factory is in Detroit, manufacture a fine line of talking machine cabinets which are meeting with great demand from jobbers in every section. Some of the new Cadillac designs are most attractive, and are selling rapidly in all sections.

One of the most peculiar records ever made, I think, is one to which fate forced me to listen, one evening late in July, under circumstances which gave a beauty of pathos and sentiment to a record—otherwise worse than "junk." I had dropped in for a sociable five minutes with an old friend of the family and his wife, who were sitting on the veranda near an open window through which a large sized Edison was pouring the most bewildering conglomeration of diversified auricular punishment that ever emanated from human habitation. Yes, even worse. As I had not heard the entire record, the "selection" was reproduced from start to finish. Children's voices in happy, excited tones of abandoned delight, were jumbled together with juvenile efforts on a variety of primitive musical (?) instruments; a silver tinkling of falling glass—interrupted and overshadowed by a series of "dull thud," etc., etc. The old lady smilingly explained: "It does me so much good to listen to that record. They won't be home again for three weeks and—a grandmother does so miss the prattle of the little ones." "Yes, I remember last Christmas morning, when that record was made, and it was awful, we thought at the time; Teddy caught his foot in his new drum and rolled downstairs, George shot the globes off the chandlier with his air rifle, and so many things happened to make one nervous; but, until they all get back home again, I wouldn't take a thousand dollars for that record of noise."

The following Edison jobbers have been placed on the National Phonograph Co.'s suspended list: Frank W. Wheeler, Great Barrington, Mass.; Rothfuss Piano Co., Blissfield, Mich.; Willmar Furniture Co., Willmar, Minn.; D. Reinhorn, Newark, N. J.; G. A. Birdsall, Albany, N. Y.; Charles W. Askew (Gregory, Askew & Co.), Ashtabula, O.; W. E. Sapp, Dayton, O.; H. E. Rouser, Bellevue, O.; J. M. Bunnell, Johnstown and Phillipsburg, Pa.; E. H. Fortney (Exchange Cigar Store), Titusville, Pa.; H. E. Randle & Co., Whitney, Texas.

At a recent meeting of the directors of the National Phonograph Co., Orange, N. J., William Pelzer, of the legal staff, was elected vice-president. The office had been vacant.

Loring L. Leeds, general sales manager for the East of the Leeds & Catlin Co., returned to New York from a trip to Chicago, on November 4.

TO THE VICTOR DEALERS IN WESTERN MICHIGAN:

¶ We are Victor Distributors, always carry a full line of Victor Goods and can fill your orders for machines, records and supplies promptly. Grand Rapids is the metropolis of Western Michigan. Numerous railroad trains and electric cars are leaving this city daily in all directions and will bring your goods to your door within a few hours and at a small expense. Ordering from us means a saving of time and money. Try us.

TRADE HAPPENINGS IN ENGLAND.

The Business Situation Reviewed—Record Question Approaching Crisis—The Demand for Discs Overpowering—Much Recent Trade Literature of Merit—Tribute to McArdle—Berne Convention Discussion—Talking Machine as a Campaigner—General Phonograph Co.'s Growing Business—Success of Odeon Concerts—Another Talking Machine on the Market—Records of the Sheffield Choir—Important Announcement of Russell Hunting Co.—Offer a Bonus on Purchases Which Will Greatly Interest the Trade—McCormack the Irish Tenor Makes Great Hit—Trade Reports from Different Points in the Provinces Most Optimistic and a Marked Contrast to Those Heard in London.

(Special to The Talking Machine World.)

London, Eng., Nov. 5, 1907.

From the very excellent Provincial reports published elsewhere in this department, it will be seen that the season opened in earnest with the month of October, and I am glad to say, although September conditions in this city were anything but encouraging from the dealer's point of view, London trade shows a distinct advance now that the chilly weather has set in, and the cylinder record market is more accustomed to the changed order of things. In the latter department of this industry the various shilling record companies have taken the bull by the horns, and in certain instances advantages have been offered to dealers which practically means, sooner or later, actional recognition of the new price level which the Premier Manufacturing Co. introduced with the ninepenny "Clarion" record. The Edison-Bell Co.'s new arrangements with their distributing agents and the public amounts to the same thing as a reduction to ninepence, while elsewhere will be found full particulars of a very generous scheme initiated by the Russell Hunting Record Co., whereby their dealers obtain the advantage of bonuses estimated to value £10,000 per annum. This, with their exchange offer, gives the dealer a larger profit than any other cylinder record, and the company further state that this arrangement is the best guarantee of price maintenance, as those who cut prices will at once lose the bonus and free exchange privileges. No particular announcements have yet been made by other companies, and while no doubt they will be looked to with expectancy, retailers must not be surprised either way, as it is surely best for manufacturers to sit tight for the present, and act only in accordance with the trend of events.

The situation, however, is still very acute. Even since writing the above I am advised by the Edison-Bell Co. that their records are actually reduced to ninepence. The revised price to dealers commence with Oct. 28, and Nov. 11 for the public. In a further interview, Mr. Wm. Manson, of the Russell Hunting Record Co., states most emphatically that "Sterling" records will be maintaiued at the old price. At the moment they have no thought of coming down to ninepence, relying upon quality and popular lists to carry them through the storm. This seems to us good policy, since hasty action can have only one result in the present overloaded condition of both factor's and dealer's stocks. In this direction the National Phonograph Co. issued circulars in October inaugurating a two-to-one exchange (time limit now expired) of unsaleable surplus and broken records, from their dealers and factors. Coming at this time the scheme has evoked much appreciation from the trade. The opportunity of overhauling and lightening their stocks has, needless to say, been seized with avidity and the result is a largely increased demand for Edison records at one shilling.

Some Prosperity Pointers.

In the disc record domain business appears to be exceptionally good, and all indications point to the fact that sales far exceed those of the cylinder type. Discs generally are more popular than ever; especially is this the case with double-sided records for which the demand is unprecedented in the whole history of the talking machine trade. This applies particularly to the Gramophone and Columbia companies. Frank Dorian, European general manager of the latter concern, writes me that their September business was considerably in excess of the average for similar months over a period of eight years. Their fiscal year closed with the end of September, and the full year's business showed a very gratifying increase over that of previous years. Moreover their October trade promises to establish yet another record, and altogether there is every reason for anticipating yet another year of record-breaking business. This is very satisfactory, as also is the report which Trevor Williams gave the delighted shareholders of the Gramophone and Typewriter Co. "Sell Consols and buy Gramophones," was his advice, for after paying a bonus of 15 per cent., in addition to a dividend of 15 per cent. paid during the year, there remains the large carry-forward of £586,665, an increase of £99,489 on the surplus brought forward last year. The profits made during the year amounted to 52 per cent. on the capital, and the 30 per cent. distribution compares with 20 per cent. last year. It was stated that the business prospects were most exceptionally good. New factories have been or are being opened at Barcelona, Paris and Calcutta, while at Hayes a new London factory is in course of completion. As the company long ceased to make typewriters, it was resolved at this meeting to drop the word "Typewriter" from the company's name. It was interesting to learn that the total dividends paid during the seven years of the company's trading have amounted to the value of the ordinary capital, with a bonus of 20 per cent.

Bribes for Business.

Philip Johns, managing director of Philip Johns, Ltd., printers, of Worship street, Finsbury, appeared at Old Street to a summons under the Prevention of Corrupt Practices Act, charging him with corruptly giving to Albert Connor about £40 as an inducement for certain favors in business transactions with Connor's employers. Connor had to arrange the printing matter required by the Gramophone and Typewriter Co., and introduced the firm of Johns, Ltd., in place of a printer named Nettleton. It came to the knowledge of the Gramophone Co. July last that their servant had been receiving considerable sums as commission on the monthly accounts paid to Johns, Ltd., and at an interview with Mr. Johns he admitted having paid Connor 5 per cent. The defendant, in the box, denied corrupt motive. He said that Connor had in 1904 suggested the commission, and he had agreed. It was usual, and hard to get business without. He contended that even after paying Connor 5 per cent. on the monthly totals, the Gramophone Co. saved about 15 per cent. The magistrate said the only thing he found extraordinary was that he was limited to imposing so very inadequate a penalty as £50 under the act. He fined Mr. Johns that sum, and a further sum of ten guineas as costs. It was intimated that there would be an appeal. Connor was also fined £50 and two guineas costs.

To Print British Edition.

A British editiou of that very interesting little house organ, the Columbia Record, is to be issued from the London offices of the Columbia Phonograph Co.

Gramophone Delivers Speech.

At a concert given by the Gramophone Co. at the Albert Hall in aid of the Lord Mayor's Cripples Fund, the Lord Mayor was seated alone on the platform, while a gramophone above him delivered a speech, the record of which he had previously made. Over 9,000 people were present, and between £500 and £600 was collected for the fund.

The Ways of Advertisers.

Many and varied are the ways of advertisers. Some are content with the modest circular, others with newspaper space or electric sign, while now and again we see something entirely orig-

POWER

WILL ASTONISH YOU

inal, that at once produces in us that enthusiasm and interest which has perhaps cost the enterprising advertiser much anxiety and not a little expenditure of money. In this connection the latest dodge is an illuminated overcoat. The other night I saw a well-dressed young man standing on the curb at the corner of Aldwych, when suddenly letters, apparently of fire, made their appearance across the back of his overcoat, and as quickly vanished. Passers-by rubbed their eyes and stared in astonishment as the illumination again and again came and went at intervals. It was just a new development of modern advertising, the light being switched on from an electric battery carried in the pocket. The inevitable crowd gathered, with the inevitable result—a policeman shouldered his way to the front, and the agent of an enterprising advertiser was "moved on."

The Latest Record Catalog.

Yet another record catalog has been issued. This time from the Favorite Co. It is complete and up to date, with all and varied selections tabulated accordingly. The cover is a replica of that famous show card of the Favorite Co., depicting the turf favorite ahead with the Favorite record, and printed in colors, it is not only appropriate but very striking also. While the company issue lists and literature in English, it is a thousand pities that the tabulation and introduction in this catalog is only printed in German. In this case it may not perhaps be particularly disadvantageous, but a duplication in English would certainly have simplified matters.

Influence of Music on Growth.

"It is now a scientifically proved fact that music exercises a great influence on the growth of the hair," says the Paris journal Ménéstrel. It is with good reason that great musicians such as Paganini, Liszt and Paderewski are represented with a growth of hair which Absalom might have envied. Science has proved that stringed instruments have a favorable influence on the growth of the hair, while brass instruments act in the opposite direction. Everyone has probably observed that a bald violinist is as rare as a bald horn player is common. Wood instruments, such as the flute, seem to have no pronounced influence either way.

Great Demand for Beka Records.

Report comes to hand of very satisfactory business with Beka records and Carl Lindstrom disc machines, which are now very popular products with the English trade. Mr. Rühl, the London agent, is enthusiastic over future prospects, and expects to make an even better showing than last season.

List of Clarion Records.

No 2 list of Clarion ninepenny records, by the Premier Manufacturing Co., carries some very excellent selections, which, from what we have heard, will undoubtedly be good sellers. Mr. Forse states that their venture in introducing a record at ninepence has met with a remarkable success from both the dealers and public alike. The former are placing substantial orders, and in consequence—even with a double plant, the company have about as much as they can handle.

Mr. McArdle Homeward Bound.

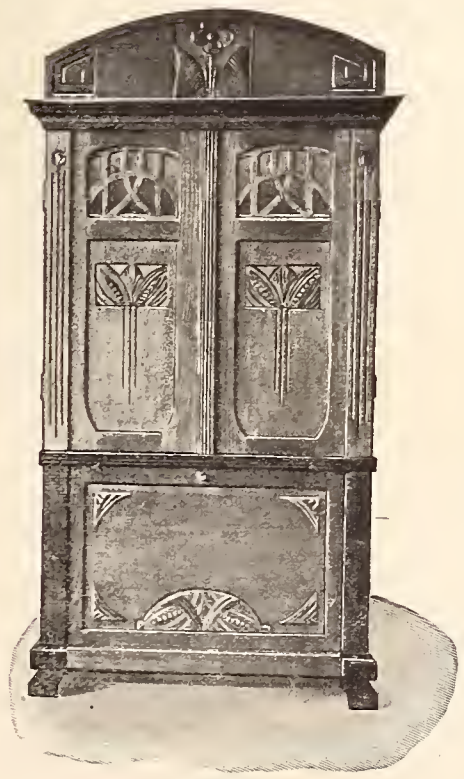
Mr. McArdle, the popular representative of the Hawthorne & Sheble Co., will have returned to the bosom of his family by the time these lines appear. He sailed on the Lusitania, which left Nov. 3, and en passant wishes to express, through the columns of The World, his deep appreciation for the many little courtesies extended to him by members of the trade, or as Mac himself would put it, "Little kindnesses which get right up to the human side of a man." This was his first trip to England, and I would say, the short time considered, Mr. McArdle has shown a wonderful grip of matters material and otherwise concerning this market, and his quickness to adapt himself to prevailing conditions has won golden opinions from all those who have come into contact with him, besides enabling him to overcome many difficulties which are inseparable from the marketing of American goods this side. He leaves us with the best of wishes, and an assurance of a hearty welcome upon his return next spring.

The Truth of the Berne Conference.

Further to our reports in last issue concerning the relations of musical copyright to talking machine records, the European correspondent of The World has obtained the following information which may be accepted as authentic:

The International Congress, dealing with literary matters and especially with copyright, was held a short while ago at Neufchatel. The question which was specially discussed before the Congress was that of talking machines, mechanical musical instruments, and that which affects both the artists and the editors. The well-known head of the editing firm, Ricordi, called the attention of the Congressmen to the damage which the above-mentioned instruments caused to composers, and he pointed out that certain American and English firms, after having paid to famous artists, such as Tamagno and Melba for having sung into their talking machines, fabulous sums which varied between 75,000 francs, 20,000 francs and 50,000 francs, have still been able to distribute a dividend of 25 per cent. These damages are not only of a material nature but also of an artistic one, since the composers of music are not at all consulted in regard to the ability, in the interpretation of their operas, which the artists chosen for record reproduction, might possess. The Congress decided that the best way to safeguard the rights of composers and of editors of music would be an understanding with these same manufacturers of musical instruments and talking machines. As will be seen from the foregoing the conference was quite unbinding. Next year there will be a further meeting at Berlin, attended by the German Government, a commit-

The "KLINGSOR" Cabinet Disc Machine



No. 250.

The novelty and advantage over all other Talking Machines lies in the following points in construction: (1) No unsightly Horns; (2) a handsome upright Cabinet and Machine combined; (3) perfect running, and complete lack of scrape and noise, as well as the following principal features:

The combination and use of the stringed piano wires and double sound board. By this scientific invention the instrument loses all harsh and metallic tone, and the sound waves being thrown on the wires, the volume is doubled without the usual corresponding harshness. There can be no doubt that this "KLINGSOR" Machine will be as great a commercial as it is a scientific success.

The Cabinet can be delivered in any wood and made to any size or design, to fit any space.

FROM OUR LONDON HEADQUARTERS—(Continued.)

tee of authors, and of the manufacturers of musical instruments—mechanical and otherwise. The manufacturers are doing their best to prevent unfavorable determinations, but prospects are very bad. As far as Germany is concerned the Reichstag has to speak the last word, but little is expected from this quarter, as it will be remembered, the Reichstag in 1900 accepted the bill that makes all music rolls for piano players tributary to the authors or the music publishers.

New Records by George Platt.

The name and reputation of George Platt are well known all over the North and Midlands, and the many admirers of this popular Lancashire baritone will be very pleased to learn that he has just made four splendid disc numbers, which appear in the Columbia supplement for November.

Russell Indestructible Records.

The first list of the Russell indestructible records—containing eighteen titles—has just been issued to the trade. It contains several popular selections by well-known artists, and I learn, other good lists are to follow shortly. Interviewed by The World's representative, Mr. Russell stated that orders are coming along very satisfactorily, and he is confident of a wide demand this season. In a leaflet to hand, the company say their industructible record is pure in tone, practically everlasting, and will not cause any injury to a genuine sapphire.

Still Another Record List.

The first list of the new twelve-inch Musogram record is to hand. Besides announcing the issue of many popular pieces, it contains particulars of the patent multiplex sound box, which is interchangeable; being applicable to all disc machines without additional parts. It will play either a phonograph or needle-cut record—adapted only by a mere turn of the wrist. The Musogram is made on the phonograph-cut principle.

A New Columbia Catalogue.

A new catalog of Columbia disc records, containing complete repertoire of ten-inch single and double-face records, has just been issued by the Columbia Phonograph Co. It has a handsome cover in colors, is most conveniently arranged with numerical, alphabetical and classified indexes. Godfrey James, "the singing collier," is one of the latest recruits to Columbia record makers.

The Talking Machine in Politics.

Both the Conservatives and the Liberals, in their forthcoming political campaigns, will make considerable use of the talking machine in the furtherance of their cause. At night, it is intended to give lantern lectures, and the aid of the gramophone will be called upon for records of short, telling speeches, and political verses set to topical tunes. Apart from swinging political songs, the records will deliver three-minute messages or sentiments from well-known members of the respective parties. It is a matter of question whether or not the audience will take the records seriously, and even if they do, the machine is at a distinct disadvantage, because, as a certain wag has said, it cannot deal with hecklers, and in an uproar, its voice would be drowned entirely.

Recently in Paris.

Four men in the service of a cinematographic company had a sham fight in the street, representing a struggle between an apache and policemen. On the former producing a knife the crowd, believing him to be in earnest, rushed upon him, and he was rescued with difficulty.

How Bishop of Ely Reaches Crowds.

The Bishop of Ely, who is known as the motoring bishop, because of his fondness for traveling by motorcar, owing to the increasing proportion of his audience at a recent open-air meeting at Cambridge, had resort to a megaphone, through which he was able to reach the ears of everyone present.

Imperial Disc Record Literature.

A new catalog of Imperial disc records has been issued containing complete lists of vocal, instrumental and other selections. It is a very useful guide to the dealer, and from the point of view to get-up, is superb. Sales Manager Howard is responsible for the beautifully designed cover, which is excellently worked out, and deserves much praise. Imperial records are being vigorously pushed by Gilbert Kimpton & Co., and as the result of judicious advertising in October, they have been introduced to thousands of new clients. A sample record was offered at one shilling sixpence, and the response from the public was most satisfactory. Hundreds of orders were received each day, and in consequence the staff were kept hard at work very late each night for some weeks. The samples gave general satisfaction; dozens of repeat orders following at the full price, in each case accompanied by testimony of the best in praise of the general excellence of the Imperial record.

American Talking Machine Co.
31 Tabernacle St. LONDON, ENGLAND

General Phonograph Co. News.

A recent visit to the offices of the General Phonograph Co., in Worship street, was productive of some interesting information in connection with their new factory at Warschauerstrasse, 34-44, Berlin. Mr. White stated that the plant is now in full swing, and deliveries have already commenced on account of the continental contract for one million records per annum. Apart from this very excellent European business the White gold-moulded record is selling very largely in Australia and other colonies, where it is a great favorite. And at the time of my call a consignment of no less than 48,000 records was being shipped to Australia—and this was but the usual monthly order. The General Co. are doing a fair trade with Canadian dealers, but they believe there is a good field open for other dealers to take up the sale of the White record, for which special terms are offered. This firm are going ahead fast with the Neophone disc—manufactured under the White system of gold-moulding applied to the phonograph-cut record—full particulars of which will be found in our advertisement pages.

The Tone-Arm Graphophone.

A tone-arm cylinder graphophone is the latest product of the inventive talent which has its home in the Columbia Phonograph Co.'s factory. The trade will well remember the instant success which followed the first equipment of the Columbia disc graphophone with the aluminum tone-arm, and now the same company have led

"There's Money in Them"

$TERLING RECORD$

"STERLING" "SPECIAL" Records are the only records you can obtain which enable you to say to your customers: "These are the greatest value in cylinder records in the world." You can say this because the "STERLING" "SPECIAL" is

"THE RECORD THAT'S HALF AN INCH LONGER"

No other cylinder offers such good value, no other cylinder has ever caused such a sensation by its sheer merit as well as its increased length. No other record will sell so freely among your customers. No other record needs so little introduction. "STERLING" "SPECIAL" RECORDS will fit any standard make of Phonographs.

Price 1s. (25 Cents) Liberal Discount for Export

Talking Machines of every description repaired. Special terms to the trade. City address and price list on receipt of postal. No job too small—no job too large.

the way with the adaptation of this device to the cylinder type. The new model, appropriately enough, is called the Crown. It is equipped with flaring, tone-enforcing flower horn. The crane or stand and rubber tube connection hitherto necessary for use with a large size horn are now dispensed with. The model is very compact, and is similar in general appearance to the Columbia disc graphophones. The reproducer is of the famous Lyric type, and the Crown will retail at six guineas and a big demand can reasonably be counted on.

Odeon Concerts Most Successful.

The series of twenty Odeon concerts, organized and carried out by Messrs. Sterling & Hunting, resulted in a large cheque being handed to the Lord Mayor on behalf of his Cripple's Fund. We congratulate the company upon their generosity in bearing the entire expense in connection with the concerts, and trust that they will result in a largely increased trade. Naturally a great amount of work was occasioned in the preparations of such entertainments; the success of which, I may say, was largely due to the indefatigable and untiring efforts of the Hon. Sec., Mr. Herbert C. Ridout.

A Clever Window Display.

Another topical window display is to be seen just now at the Columbia Phonograph Co.'s premises in Oxford street. The present Diabolo craze furnishes the inspiration for the idea. By ingenious combinations of cylinder and disc records, the typical sticks and spools used in this game of the season are presented in colossal size. Of course, with the present widespread interest in Diabolo nearly every passer-by pauses to look at the exhibit, and an effectively placed window card ensures that no one can well leave the window without there being driven home to him the point which the Columbia people of course wish to enforce, viz., that as a means of ever-gratifying entertainment there is nothing to equal the Columbia graphophone.

Record Singer Brings Suit.

Wilfrid Platt, a professional singer, of Norwood, sued the General Phonograph Co., makers of the White gold-moulded record, to recover fourteen guineas, due under a contract. The plaintiff's counsel said that in consequence of the way he sang "The Bedouin's Love Song" and "Rocked in the Cradle of the Deep" for record making, an agreement was entered into whereby the plaintiff was to receive six guineas a month and to sing three songs a month. Subsequently the plaintiff complained that he had not been paid, and the defendants stated that they were making arrangements for him to resume his singing. The plaintiff denied that he was nervous while he was singing in the record trumpet, accompanied by the orchestra. He had a deep bass voice, and it might have vibrated more than some other quality of voice. The managing director of the defendant company said that the plaintiff was very nervous in front of the horn. Is it usual for a bass voice to produce more vibration? No; a tenor voice will produce more vibration than a bass voice. The witness added that the records were not entirely satisfactory. The plaintiff's counsel produced some press notices of the records, made from his singing, in which the plaintiff was described as a "basso profundo of great promise." (Laughter.) The witness said he did not agree with all that appeared in press notices. The judge gave judgment for the plaintiff for three months' salary.

NOTE NEW ADDRESS

Greeting to Marconi.

One of the very first messages to be sent over the new wireless trans-Atlantic service just inaugurated by the Marconi Co. was one to Dr. Marconi from the Columbia Phonograph Co., reading as follows: "The Columbia Phonograph Co. hasten to greet Dr. Marconi, their consulting physicist, and to extend their heartiest congratulations upon his magnificent achievement of what, even a decade ago, would have been regarded as the wildest dream of a chimerical visionary. Accustomed as this generation is to the marvelous, the harnessing of Nature's forces to transmit, without physical connection, telegraphic messages from one hemisphere to the other, overwhelms the mind by its mystery and magnitude. Your name, associated with this stupendous accomplishment, will never be forgotten to the end of time."

In the summer of 1906 Dr. Marconi associated himself with the Columbia Co. as consulting physicist. Ever since that time the company have watched with the greatest interest the progress of the inventor's experiments, and they share the feeling of personal gratification in his final triumph.

Cylinder Companies Very Much Alive.

Just at this time when the cylinder record market is so unsettled it is perhaps not unnatural to find that the air breathes whispers and rumors of trouble in more than one camp. In a good many instances it is mere idle gossip and consequently not worth the space to contradict. Still, in that some little disquietude may remain in certain quarters, I take this opportunity of giving out the assurances that all the cylinder companies are still very much alive; some index of which situation may be gathered by the very excellent report from the General Phonograph Co., printed elsewhere in this department. The increased competition that all cylinder concerns will feel, can only result in more records than ever being sold, and the ultimate outlook seen only by the survival of the fittest.

Due in the States Shortly.

Mr. Maurice, head of the firm of Lange's successors, may be expected in the States shortly.

Constantine Craies & Co.

The first consignment of master records has been received in London from Athens. They will be pressed here and distributed by Messrs. Constantine Craies & Co., who are the sole selling agents. The new disc machines put out by this firm have created quite a stir and substantial orders have been placed by the trade.

Another New Record.

Another new record is on the market. It is called the Era, and made both with single and double-sided pieces. From what I have heard the Era appears to be a record of general excellence in finish and tone quality. Intended for home and export trade, it will be exclusively handled by Messrs. Murdock & Co., Barnett Samuels, and the New Polyphone Supply.

A New Disc Talking Machine.

The "Simp" disc talking machine is another new product. It emanates from the Italian Talking Machine Society, Ltd., of Milan, who are represented in London by Mr. St. Dyktor. The "Simp" is particularized by a new patent sound box containing a double diaphragm—carried by two separate tone arms, which allows the application to the machine of two trumpets, so that the operator can turn either at will. By this means the sound is diffused in all directions and does

away with the necessity (in others) of turning the machine. The case of this machine is beautifully finished and contains a drawer for the records.

The Sheffield Choir.

The event of the month is unquestionably the issue of eight titles of the long-sought Sheffield choir records, by the Odeon Co. These records are the most powerful tribute imaginable to the art of the recorder, for they embody the work of the most famous choir in the world, a choral organization that startled all Europe when in 1906 it toured Germany and Rhineland, a choir that has been sent for by the Canadian musical authorities to bear witness to the skill of scientific conducting. It is claimed by the Odeon Co., and not unfairly, that these records by the Sheffield choir constitute a new standard in the art of recording the human voice, and the results prove that the difficulties which have hitherto existed in the making of choral records have at last been surmounted. It will be a source of considerable gratification to the Sheffield choir to know that they, with Dr. Coward, have achieved what others have been unable to do with any degree of success.

A Concise and Handy Reference.

Form No. 2, or the October issue of the Wholesale Trade Tally, has been sent out by the American Talking Machine Co. to their dealers. As mentioned in my last report, it contains quotations and all necessary particulars of talking machine goods on this market, and is a most concise and handy reference for the trade.

A Novel Spectacle.

The novel spectacle of the Lord Mayor listening to the Lord Mayor speaking occurred at the Shoreditch Town Hall, on the occasion of the Odeon concert in aid of the Lord Mayor's Cripple's Fund.

Instrument Which Gives Correct Record Speed.

Everyone will welcome the new model of the Discodeon, which embodies a real speed indicator —a feature unknown in the past to all but the most expensive machines. This speed indicator takes the form of a circular disc, marked in a half circle with figures from 60 to 85, and fitted on the right hand of the cabinet a few inches from the winding-key. A button in the center has attached to it a hand, and the setting of this hand to any number automatically results in that number of revolutions per minute being given to the turntable. Nothing could be simpler and more effective, and the device is sure to appeal to those who like to know that their records are playing at the correct speed. Even with those records which are not marked with the speed it now becomes a simple matter, with this instrument, to find the speed at which each should be played and mark the record accordingly.

Russell Hunting Co.'s Important Notice.

The Russell Hunting Record Co., Ltd., have issued the following important notice to dealers:

"Dear Sirs—We have for some time past been considering how we can further interest the legitimate dealer in the sale of our records, and at the same time show our appreciation in a substantial manner of the efforts you have shown in the past, and are still showing in the furtherance of the popularity of the 'record that's half-an-inch longer.' Since the Sterling record was launched on the market in July, 1905, we have sold five millions, and this without the aid of advertising (except in the usual trade journals). We owe our success to (1) the high quality and standard of our records, produced by the best artists obtainable, and (2) the interest, energy and enthusiasm of the dealers who have helped us. In order to maintain our trade and increase it, we believe we can only do so by working on these lines. As far as quality is concerned, we are using every possible means to improve same, as is instanced in the splendid results in the recording art which we have achieved in our 'H.M.S. Pinafore' and 'Merry Widow' selections.

"To still further stimulate the dealers' interest and energy we have decided to offer a bonus on purchases. On the basis of our last year's sales this bonus will amount in value to over £10,000. In addition to this we will give all 'bonus' dealers a free exchange of Sterling records, not on two or three to one basis—but absolutely free. Not in March or April—but in August, upon the opening of the season."

The bonus proposition is practically as follows: Certificates are issued to the dealer with each purchase of Sterling records, and in August, 1908, the certificates are to be returned whereupon the bonus distribution will be made on the following basis; on total purchases of 250 to 750 Sterling records one halfpenny per record, 751 to 1,500 three farthings, and over 1,500 one penny per record. The bonus will take the form of extra Sterling records at the regular wholesale rate.

The matter of exchange is so arranged that a dealer may return unsalable records during the month of August, 1908, provided they do not exceed in number one-twelfth of the total of his purchases during the bonus period. A new record will be issued for each one returned, the only expense to the dealer being that of carriage charges.

The offers will act as a great encouragement to the dealer to increase his sales during the year and thereby reap the extra profit. The total value of the bonus distribution is about £10,000.

Records by John McCormack.

John McCormack, the young Irish tenor, who recently achieved such wonderful success upon his initial appearance at Covent Garden in Cavalleria Rusticana, has been exclusively engaged to make disc records for the Odeon Co., and quite a number have already been cataloged. It is understood that the publicity attaching to Mr. McCormack's appearance at our leading opera house resulted in his "Savourneen Deelish" record on last month's Odeon list running out of stock.

TRADE REPORTS FROM THE PROVINCES.

LIVERPOOL A VERY BUSY CENTER.

(Special to The Talking Machine World.)

Liverpool, Nov. 4, 1907.

Right bang ahead—this is the only expression suitable for the village on the Mersey. Everybody is saying how well the talking machine trade is opening out here. First-class shows are in all the leading houses; the displays in many cases being magnificent. In Church street, one of the very finest thoroughfares (and well known to all visitors in the States), Messrs. J. B. Cramer & Co. have a grand position, and under the able guidance of Mr. Sinclair make a fine show of Gramophones, Odeons, Zonophones, etc., concentrating upon disc goods solely. Their display reflects the greatest credit upon the window dresser, and is well compensated for by the crowd of sightseers usually gathered around it.

On the other side of the street, William Lea is also showing gramophone goods. In conversation with The Talking Machine World representative, he said this was the only line he touched in talking machines, his business being chiefly in high-class pianos, music, etc., with gramos as a side line.

Messrs. Dibbs, Ltd., 7 Ranelagh place, confine themselves to disc and cylinder goods. R. Smith, the manager, is right up-to-date. Graphophones, Zonophones, Odeons, with Pathe as an extra special leading "boom" line, and Edison, Edison Bell, Sterling and White, in the cylinder department, means that a fully comprehensive stock is kept. A good window display also tells here. Recently Messrs. Dibbs, Ltd., purchased a second business in this city—that of McKinley, of During road. In addition to this, the headquarters of Messrs. Dibbs, Ltd., are at Douglas, Isle of Man. Altogether, the outlook in this house is of the brightest. Incidentally, Mr. Smith said Petmecky needles were "going"—one customer stated he could use one 20 times instead of 10. According to this, then, Petmecky needles do not apparently wear out, but keep on "wear-in(g)."

Alterations are the order of the day at Jake Graham's combined with a rush of orders.

The Reliance Co., Ltd., Manchester street, where the manager happened to be in, was also busy. South African export orders were having his undivided attention. A good range of goods and a special department is given to the talking machine branch of this business, and the season looks very promising.

Apollo

Disc Machines and Sundries

Catalogue Sent on Application by the Manufacturers

Constantine Craies & Co.

101 Bunhill Row, London, Eng.

¶ We are the sole selling agents for the world for The International Record Publishing Co., Ltd., and are open to make special discs by arrangement in any part of the two hemispheres.

¶ We are the largest factors of the new Pathé 8½ inch disc record in the world. This record retails at 1/6, and is the talk of the trade in England.

¶ We have one of the largest export houses in London, so know how to deal with your orders.

¶ Catalogues of all makes of machines and records sent on application.

¶ Apollo disc machines are the only machines that play both the phonograph cut and the gramophone discs to perfection.

¶ Types of Apollo machines range in price from £2.10.0 to £6.6.0.

FROM OUR LONDON HEADQUARTERS—(Continued.)

Messrs. Thompson, Mossford & Co., 16 South Castle street, are a large firm of exporters who do a good trade in talking machines and phonos. Up to this, they have devoted themselves to the export branch entirely. Now, however, they are branching out into the home trade, and pushing the wholesale factoring business in the North, with every prospect of doing a large and lucrative business in the near future.

Talking machine recitals and concerts are becoming the order of the day. The Gramophone Co. recently had a trade show here and concert afterward, which we hear very good accounts of.

Now Messrs. Pathe Frères, Ltd., are arranging with Messrs. Crane & Sons, Ltd., of Scotland road, to have one of their high-class "Pathephone" concerts at an early date. In the words of their very able representative, Mr. Thompson (popularly known as Pathe-Thompson, by the way), "they intend to have a big slice of the trade," and their Pathephone concerts, which will be held in all large northern centers during the next few months, are, in fact, an open invitation to "let 'em all come." We were pleased also to hear that Messrs. Pathe Frères, Ltd., had sold the entire October output of their 8½-inch disc records many weeks ago. The 1,000 lot buyer at the present moment has to be satisfied with 100 or 200, so that healthiness, bustle and progress reigns supreme at Lambs Conduit street, London, W.C. By the way, we offer P. Mellerio (late of the Sonogram Co., Ltd.) our sincere congratulations on the position he has accepted at Messrs. Pathe Frères' establishment. With his intimate knowledge of every detail of the trade, long experience, etc., Mr. Mellerio will, no doubt, prove a great acquisition and further extend the trade of Pathe Frères, Ltd.

A Talk About Melograph Discs.

As stated in our last issue, the Melograph Disc Record Co., Ltd., is the latest addition to disc manufacturers in Liverpool. The initial capital is £5,000 ($25,000) as a start, later to be refloated into a much larger concern altogether. The registered offices are at 22 Sir Thomas street, and the general manager is Thomas Ellis. Well known in the trade, and with ten years' experience in Liverpool, controlling the business known as "The Gramophone Supply Stores," of Lime street, Mr. Ellis was good enough in a special interview with The Talking Machine World representative, to give the following particulars as to the intentions of this company. In the first place, all Melograph discs are recorded in Liverpool by well-known bands, singers, artists, etc. At present, however, they are being pressed in Berlin, but later they will be manufactured throughout, as well as recorded at the company's works in Liverpool, which are in contemplation. The price of the records, which are 10-inch duplex (or double-faced), are 2s. 6d. each (50 cents). Dealer's discount is one-third and 2½ per cent. prompt spot cash. No factors will be appointed, the Melograph Co. preferring to supply the dealers direct.

A very special feature of the business will be to take back in part exchange for every new record one old 10-inch disc of any make, for which the retailer is to allow the customer 6d. (12 cents). The dealer, however, is not allowed the full amount like the customer, but the value of the material only, i. e., 3d. (6 cents). In comparison with some of the very best-known records, the Melograph is equal in tone (if not better), and the price is just half. In the first batch of records placed upon the market, sufficient could not be made to keep pace with the orders received, proving the large and existing demand for popular-priced goods. Another feature is this—all Melograph records are full records, with 4½ minutes playing duration on each side, or two records giving a nine-minutes' reproduction, one and a half minutes longer than the average disc. By the way, also, local talent in every town will be specially catered for. Wherever one of their dealers find a good local artist, and who considers that records by this particular artist or band will sell in that locality, records will be at once made. This will greatly help sales in all districts, both for maker and dealer alike. Altogether, the Melograph Disc Record Co., Ltd., look like doing exceptionally well in the future. Melograph discs play with a needle, and it is not a phono cut disc.

MANCHESTER NOTES.

(Special to The Talking Machine World.)

Manchester, Nov. 4, 1907.

Business is booming in Manchester, right along the line. Mr. Crossman, of the Columbia Co., Market street, states that he is head over heels in sales, the present demand being beyond all expectations. Their double-faced 10-inch concert records, selling at three shillings, are "the" titbits of the trade. We were also shown a new cylinder machine, type B Q, which is an extraordinary fine model, fitted with a taper tone arm, similar to a disc machine. The circumferential radius of the reproducer is obviated by a very clever, extensible, sliding movement, incorporated in the connecting portion of the swinging arm and reproducer, enabling the reproducer to travel along the record in a parallel movement. The results are exceptionally fine. It is, without any doubt, one of the most advantageous improvements made for many years.

Their disc machine, the "Regal," at eight guineas, is selling faster than the supply admits; in fact, Mr. Crossman states he is fairly "hung up" in the sales of this machine and cannot get sufficient of them for present requirements. The other factors and merchants are experiencing a big rush for goods.

We were glad to see that Mr. Burroughs has recovered from his indisposition, and hear that he is exceptionally busy. Mr. Parr, the well-known representative of the late Neophone Co., has joined Mr. Burroughs as special representative. With Mr. Parr's intimate knowledge of the business, bonhomme, and energy, Mr. Burroughs will, no doubt, find our friend a great acquisition. We wish Mr. Parr every success.

At Robinson's, Deansgate, the rush during the past few weeks has been exceptional. Reprophones are selling well. In this house also shortage of stock is being experienced.

The Favorite records have taken on immensely. Certain numbers of these, also, cannot be made fast enough to satisfy the demand. Export trade here is good, inquiries coming in from all parts of the world, and, generally speaking, up to the present date, sales are 50 per cent. better than last year.

BURY, LANCASHIRE.

(Special to The Talking Machine World.)

Bury, Nov. 5, 1907.

Bury.—This prosperous little town is doing exceptionally well in talking machine goods at the present moment. The leading traders here are as follows:

W. Harrison, the Bury Phonograph Stores, 11 Rochdale Road, who concentrates entirely in phono and disc goods, his principal lines being Edison, Edison Bell, Columbia, Odeon and Zonophones. He has also this year taken up Pathe disc machines, and reports very good results in sales with them. He is sole agent for Bury for these goods, and expects a very large turnover. Mr. Harrison's business has increased so much during the past three or four years that he is now thinking of adding the next shop, to obtain additional room for his increasing business.

S. Morris, the well-known dealer, has two establishments, 31 Bolton street and 13 Boulton road. He handles Gramophones, Zonophones, Edison, Edison Bell and Sterling, and reports trade exceptionally good. F. Warburton, 75 Bolton street, also handles both disc and cylinder goods, reporting also business very satisfactory. Read, Franklin & Co., the well-known musical dealers, of Stanley street, are also dealers in gramophones and zonophones. Their principal trade, however, is pianos and musical instruments, the talking machine business being a side line. In conclusion, Bury is busy; in fact, booming.

YORKSHIRE NOTES.

(Special to The Talking Machine World.)

Bradford, Nov. 5, 1907.

Leeds, Bradford, Halifax and other large Yorkshire centers are unquestionably the chief cylinder markets for the United Kingdom. The factoring done by the wholesalers is enormous, as regards quantity sales, and peculiarly enough, although the people of Yorkshire are severely critical as regards record music, the disc trade boom is hardly being felt. Later, no doubt, it will come, but at present cylinders are the rage.

In Bradford there are several first-class houses, as follows: At Messrs. Thomas Dyson's, Ltd., Manchester road, under Mr. Tidswell's manage-

ment, they do a large wholesale trade only, confining themselves solely to the cylinder record and phonograph business. Their chief lines are Edison and Edison Bell, with all kinds of accessories.

The Parker Phone Co., Ltd., Market street, confine themselves to talking machines and phono goods only. They are factors for Zonophones and records. In addition, they stock Odeons, Favorites, etc. For phono records they factor chiefly Edison and Sterling, and do a good wholesale, as well as a retail business. Well situated in one of the busiest thoroughfares, their very fine show attracts considerable attention from all passers-by. In conversation with Mr. Stoddart, who is the managing director, he paid The Talking Machine World the most flattering testimonial, saying "it was the very best paper ever produced or issued, connected with the trade, and not only was he a subscriber from the first, but would not be without it under any consideration." Mr. Stoddart, by the way, also has two other depots—one at Halifax, besides another in Bradford, all doing well.

A. Moore, 5 Manchester road, makes a specialty of sapphires of all kinds, grinding them on the premises, in all the various sizes and patterns that are necessary for either use on cylinder or disc records. His two special lines are—one with a sphere ball, size 75 mm., for reproducing, and a special Bettini pattern, hollow-ground recording sapphire. The former, owing to its small size, gets thoroughly into the most minute sound grooves, thus giving a very full volume and better tone. Regarding the recording sapphire, it is ground concave with a very full hollow center, giving thereby a deep, regular and clear cut, particularly necessary for professional recording, and although Mr. Moore makes a specialty of sapphires, he also does a good general musical instrument trade, of the usual miscellaneous nature, and also has a good position and very attractive display.

R. J. Appleton, of North End Parade, confines himself solely to the wholesale and works thoroughly the whole of Yorkshire, in all kinds of discs and phono goods. He specially pushes Columbia and Pathe discs, the latter going specially strong just now. In cylinder goods, Mr. Appleton has a good range, concentrating upon Edison and Clarion. This Clarion cylinder he also is sole Yorkshire factor for, and expects enormous business with it, the price being low, 9d. (18 cents) retail, opens up visions of trade at such a popular price that has never been thought of before. Mr. Appleton is exceedingly optimistic as regards the future, and hopes to break all records this season as regards sales and output.

"ROBINSON'S" The Talkeries
213 Deansgate
Established 1904 **MANCHESTER, ENG.**

LEEDS, YORKSHIRE.

(Special to The Talking Machine World.)

Leeds, Nov. 3, 1907.

Leeds is, without any doubt whatever, one of the finest and up-to-date places in Great Britain. The Yorkshireman is noted generally for his keen appreciation of music, and from the highest to the lowest, one and all are severely critical.

The leading dealers in Leeds are as below: Messrs. Hilton & Co., of 84 and 90 Briggat. R. Hilton is one of the most courteous gentlemen in the trade. Originally one of the oldest and largest pianoforte manufacturers in the north of England, the talking machine trade with them commenced in a small way many years ago. Gradually developing, Mr. Hilton was compelled to take another establishment, on the other side of the street, making it a separate adjunct from the original business. The trade growing larger and larger with him, necessitated the separation of the wholesale business from the retail. This has now been accomplished by taking a long lease of a huge warehouse at 28 Acre street, under the management of W. J. Ribbons. Under this gentleman's guidance we had the pleasure of going over this warehouse, which has been fitted up with the latest and most up-to-date conveniences possible. We may safely say, without fear of contradiction, that it is the largest and most complete factor's establishment in the North of England. Consisting of several floors, splendidly lighted, we estimate the cubic measurement of each floor at about 700,000 square feet. (Each floor is large enough to play a full-size cricket match.) The departments are many and various. The ground floor consists of (a) stores, where anything up to 10,000 machines can be stocked comfortably; (b) packing room, where three or four packers are employed at high pressure all day long; (c) the disc record department. Mr. Ribbons showed us quite a new system they have as regards sending out new records, which is very good. Every record that is put into stock, upon arrival is placed into a semi-transparent envelope, with a lapped edge, that is gummed. It is sealed up and every dealer is supplied with the records so sealed, which is a guarantee that the record is an absolutely new one. This is owing to the fact (and we have every reason to believe it) that a good many records, that are sold as new, are absolutely worn out before they are handed over to the customer. In this case it cannot possibly occur. We congratulate Mr. Hilton on this new idea, which is decidedly good. Packed along the huge warehouse were thousands upon thousands of Edison records. We should estimate roughly that there are probably 100,000 of these in stock alone. This is also a separate department. Further on we come to the Sterling portion. Every record Sterling makes is kept in stock, and the quantity here is also enormous. Edison Bell also have a special department by themselves.

Another feature of this establishment is a portion of which is set out for show purposes only, quite distinct from the stock warehouse. In this portion is a range or show of everything that is sold, so that the dealer can walk into the showroom and see absolutely the latest, and also any odd part in detail, that he may want for repair or sale purposes.

On the floor above a very commodious range of offices has been placed. Typewriters, telephones connecting every part up to the central office, are in full swing, and every department, by the way, is linked up together, exactly on the American principle.

The repair department next catches our eye. This is a special department, in which repairs only are executed. There are several repairers constantly employed, and from the huge amount of work we saw before them it looked as though they have got an income in view, for some time to come.

In conversation with Mr. Hilton and his able lieutenant Mr. Ribbon, we gather that trade has been exceptionally good with this firm. They are factors for all leading lines, are right bang-up-to-date, and have the three essential qualifications in their favor that lead to success, namely, youth, unlimited enterprise, and energy, and financial standing of the highest. We wish Messrs. Hilton & Co. the very best success.

Messrs. H. F. Scott, 5 Albion street, Leeds, is also another very first-class wholesale and retail factor. Situated in the heart of the city, within a stone's throw of all the principal stations, Mr. Scott reports business as very good. He is wholesale factor for Edison, Edison Bell, Sterling, Zonophones, etc.; also retail agent for the Gramophone Co. Mr. Scott has a very fine establishment, and keeps also a large stock of the above goods. Exceptionally courteous and painstaking in his business methods, with the help of Mrs. Scott, who is personally in the business, we are pleased to say that this gentleman is doing a satisfactory and increasing trade, and is looking forward to the future with the happiest anticipations.

In Upper Mill Hill, Messrs. R. J. Appleton & Co., of Bradford, have a wholesale branch, under the superintendence of R. N. Appleton, Jr. Their sales are, as in Bradford, practically devoted to Edison, Clarion and Columbia cylinders, with Columbia and Pathe discs and machines. Mr. Appleton reports very good business in Pathes, and expects the season to be a record one.

The Talking Machine World representative, while in Leeds, received the most eulogistic remarks as regards the value of The Talking Machine World to talking machine dealers. In one house the very kind remarks made the writer blush, and proves that The Talking Machine World not only leads the way but is far in advance of any other paper published; so indispensable to every dealer in our particular industry.

SECURE NEW QUARTERS.

The Victor Distributing and Export Co. will not go back into their old quarters, 77 Chambers street, New York, destroyed by fire a few weeks since, but have leased several lofts at 83 Chambers street, which will be used for warerooms, the offices remaining at 256-257 Broadway, rooms 600 and 605, for the present. Ample stock has been secured in the new place, which about doubles their former premises. The arrangement of the floor space is also much more advantageous, and the facilities for handling business far superior in every way. J. T. Williams, general manager, who has been a victim of blood poisoning in the face for three months, at a time fearing he would lose his nose, has fully recovered, and is enjoying again his former good health and excellent spirits, a piece of news his many friends will be glad to hear.

GEO. W. LYLE RETURNS.

Geo. W. Lyle, general manager of the Columbia Phonograph Co., General, who has been on a trip of inspection of the western offices and stores, going to the Pacific Coast, returned to headquarters in the Tribune Building, New York, on the 11th. He has been traveling since October 21.

Among recent callers at the New York offices of the National Phonograph Co. were the following: Louis Buehn, of Buehn & Bro., treasurer of the National Association of Talking Machine Jobbers, Philadelphia, Pa.; C. Carroll, Utica, N. Y., Cycle Co.; Lewis J. Gerson, with Musical Echo Co., Philadelphia, Pa.; J. Foster Dares, with international Correspondence School, Scranton, Pa.; E. F. Taft, of Eastern Talking Machine Co.; C. B. Haynes, of C. B. Haynes & Co., Richmond, Va.; G. L. Ackerman, of Ackerman & Co., Scranton, Pa.; D. R. Harvey and S. J. Francis, of Iver Johnson Sporting Goods Co., Boston, Mass.; Thomas Wells, dealer, Calumet, Mich.

TRADE GLEANINGS FROM THE "HUB."

Retail Trade Has Shown a Slight Slackening—Noted Singers for Columbia Co.—Osgood Co. Stimulating Trade—Oliver Ditson Co.'s New Talker Department—Boston Cycle & Sundry Co.'s Good Report—New Elevator for Eastern Talking Machine Co.—New Quarters for Iver Johnson Co.—Estes Piano Co. to Handle Victor Machines—W. J. Fitzgerald to Entertain His Fellow-Salesmen Thanksgiving Eve.

(Special to The Talking Machine World.)

Boston, Mass., Nov. 13, 1907.

November finds the talking machine trade in Boston not quite up to expectation. The retail trade among the Boston dealers has shown a slackening and this, of course, has been reflected in the number of orders sent to the jobbers. The unusual tightness in the money market is largely responsible for this. That it will soon ease up is the belief and the hope of everybody.

The heads of departments at the Columbia warerooms here were much pleased this week to learn that many of the European singers of fame, whose voices can be heard through the medium of the Columbia records, have joined the Manhattan Opera Co., in New York, this year. This will have the effect of stimulating trade on the Columbia's grand opera records, for the names of Melba, Nordica, Schumann-Heink, Zenatello, Mary Garden, Cazauran and others are gold dollars in the way of trade.

The C. E. Osgood Co. are stimulating the retail trade very materially this month by reason of their gift of photographs of the grand opera singers to purchasers of records. This is the only house in the city that advertises to do this, and the result is good. This house does a general jobbing business now on the Victor machines and reports business as satisfactory.

The local newpapers have been very generous in their use of photographs of the new Victor department in the store of the Oliver Ditson Co., the past week. The photographs do not do the new store justice. It is, without question, the finest talking machine department in the country and Manager Winkelman is mightily pleased over it, so is General Manager Bobzin, of the Ditson stores. Business has increased with a big bound since the new store was opened, and the various display rooms are in constant use. A feature of this new store is the room reserved for the stock. There over 150,000 records can be kept in perfect safety and convenience. There is also a fine shipping room and repair room. The new department is on the second floor of the Ditson Building, much handier for everyone than before, when it was on the sixth floor.

Manager Andrews, of the Boston Cycle & Sundry Co., is an enthusiast over the Edison as a jobbing medium, and over the merits of the tray system, which his company handle. "We find that our business on this tray system has increased far beyond our expectations, and is still growing, so what excuse have we to find fault with the condition of business," he says. This company have increased their facilities for making the carrying cases for records which they have put on the market.

At the Eastern Talking Machine Co. the new steel elevator for passengers, running to the top of the building, has been installed. A new steel ceiling and walls have been put in also. Men are now at work turning the third floor into a salesroom and when this is finished the store will be equipped about as well as it is possible for a store to be. As to the amount of business which the Eastern Talking Machine Co. are doing, Manager Chamberlain, of the wholesale department, this week showed to The World representative a single shipment of 42,000 Edison records which had just come from the factory. That is going some.

Only the fact of its present limited quarters prevents an enlargement of space for the talking machine department at the Iver Johnson Co. Business has increased here very materially during the past year. A new eight-story building is now being constructed on an adjoining lot, and by spring the department will probably be placed in new quarters, as it deserves.

The agency for the Victor machines, etc., has just been taken by the Estes Piano Co., on Tremont street. Mr. Estes will divide his store by a partition, so that he can give up space to display rooms. This ought to be a good location for the Victor, as there is no other talking machine dealer in that vicinity.

The Read & Read Co. have done a very satisfactory business in their ground floor store on Essex street. The Edison line is made much of here and the window display is unusually good at all times.

A feature of the window display at the Columbia warerooms this week was a large red mill, upon which were printed the names of songs from "The Red Mill," which can be had on Columbia records. The musical comedy of that name is now playing in Boston.

W. J. Fitzgerald, of the sales force at the Eastern Talking Machine Co., is to entertain his fellow salesmen of the store at his home on Thanksgiving Eve with a turkey dinner. He declares that he is going to board up the mirror and hide the glassware, because he knows it is going to be a "rough house."

Are You Ready?

Fall business is here and the Holiday trade with all its rush will soon be upon us. Are you ready to take care of your trade in a prompt and satisfactory manner?

You will find us always ready to help you out at all times. We carry the biggest stock of talking machines and records to be located in New England, and we make a specialty of shipments immediately after orders are received.

No matter where you are you will find that we can serve your interests, and serve them well. If you come to Boston take time to look over our establishment. You will be impressed with our stock and we can demonstrate to you our ability to save you money in many ways.

Aside from talking machines, we carry accessories of all kinds, such as horns, stands, record cases and tray outfits. We have our own factory for specialties. We shall be glad to figure with you on anything which you desire in the talking machine line. Let us take up the subject of business with you.

Boston Cycle and Sundry Co. 48 Hanover Street BOSTON, MASS.

SECOND EXCHANGE PROPOSITION.

Subsequent to sending out the details of a second exchange proposition, which is to be a permanent regulation annually hereafter, the National Phonograph Co., Orange, N. J., publish the following additional explanation:

"The exchange proposition is one of the many features of the business of the National Phonograph Co. which makes it strong with its jobbers and dealers. It provides the yearly opportunity of the trade of returning to us all surplus, cut out and defective Edison records at no other expense than packing them and paying freight charges on them. It is true that jobbers and dealers are required to order two new records for every one returned, but ample time is given in which to do it so that the larger order works no hardship to any one. When we state that the last exchange proposition that we had brought back one and one-half million records, some idea will be gained of the stocks carried by the trade and of the loss to this company that the exchange causes. It is really a loss of the jobber's price on each record, for practically all of the new orders given in exchange would come to us anyway. The plan is really nothing else but a gift of so much money to our trade, and we doubt if a parallel to it can be found outside of the talking machine industry. It is a liberality, however, that pays handsomely in the cordial relations that exist between the trade and ourselves."

SPEED REGULATION IMPORTANT.

One need not be a talking machine expert to realize the importance of having the record revolving at proper speed when perfect results are desired. The leading talking machine and record manufacturers have made special efforts to impress upon the owners of the machines the fact that naturalness can only be obtained by having the records reproduce at the same speed at which the recording is done, or as in the case of most disc records at a speed of seventy-six revolutions per minute.

One great difficulty experienced by the majority of the users is in determining exactly the number of revolutions per minute the record is revolving, but that problem is solved by the Phonometer, recently put on the market by the Phonographic Music Co., Brooklyn, N. Y.

The Phonometer is instantaneous in its action, thoroughly accurate, and is sold at a price well in reach of every talking machine owner. It is being handled by many of the leading jobbers all over the country, who will send sample and quote prices upon request.

It has been announced by Manager Sherwood of the company that the success of the Phonometer has prompted the manufacturers to prepare several other useful phonographic novelties which will be put on the market early next year.

Frank H. Stuart, who now represents the Hawthorne & Sheble Mfg. Co.'s product—Star machines and records, silk-finished and other horns, as their Eastern selling agent, is no stranger to the trade. He was formerly on the company's selling force and knows the business from A to Z. He has been calling on the jobbers in his territory recently.

Owing to the fact that the twenty-eighth of this month, the simultaneous opening day for Victor goods each month, falls on Thanksgiving Day, the usual advertisement of 600 lines carried in prominent papers throughout the country each month by the Victor Talking Machine Co., will appear on the following day, the twenty-ninth. The various jobbers and dealers have been notified to that effect.

The Name—The Product

THE REGINAPHONE—rather an attractive name is it not? but the name is not half as attractive as the product, for the REGINAPHONE without doubt is one of the best selling talking machine novelties on the market.

It is a talking machine and a Regina music box combined in a single instrument and you know the Regina music box is the world standard as far as music boxes are concerned.

The REGINAPHONE

is made in several sizes and styles, all of which are equipped with a splendid talking machine mechanism and with the best motor you ever saw in a talking machine.

It is the best seller in a long list of Regina novelties and now the Holiday season is coming on novelties are most desirable. The REGINAPHONE as a Christmas present will be much sought for and you can brighten up your entire stock through this novelty. It you have not seen it, write for a sample on ten days' trial.

We manufacture Regina Music Boxes, Reginaphones, Regina Chime Clocks, Reginapianos and Regina Sublima Pianos.

A "TALKER" COURTSHIP.

An Interesting Sequel to a Story Which Appeared in the June World.

(Special to The Talking Machine World.)

Hainesport, N. J., Nov. 7, 1907.

Those of The World readers who perused "The Talker's Power" in the June issue may be interested in the following, which is a true sequel to that article:

The Hainesport Mining & Transportation Co. employ a great many Italians at their immense sand banks here, and while on an inspection tour of the works the other day, the writer was amazed to find, toiling diligently among his fellows, and humming an air from "Il Trovatore," Ignacio Guissepi, the child of sunny Italy who figured so prominently in a former tale.

The story lust in the brain of the reporter immediately bubbled to the surface, with the result that he entered into conversation with Ignacio:

"Are you not the gentleman who, in company with a Mister Johnson, colored, drove a coal wagon in Philadelphia a few months ago, and while in the act of unloading a consignment of "Lehigh" in front of the residence of Mr. Kane, on North Fifty-second street, became so enthused by the very air you were humming just now when I accosted you, that you dropped your shovel and indulged in a dance of your country while Mister Johnson?——"

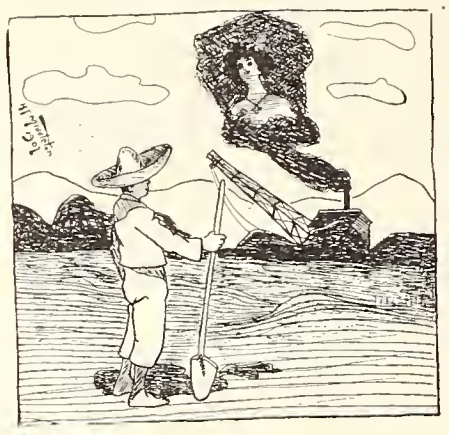
"Stoppa! You no talka to me 'bout da foola da nig'. He very mucha no good. He no getta da shove'; me throwa da coal; breaka da rib."

"Yes, I heard all about it," replied The World representative, "but I do not think it was quite fair in you, Ignacio, to chastise the colored gentleman for stopping work to dance to the accompaniment of a talking machine when you had just done the same thing yourself."

"You tinka you know lotta; you no know nutting; I tella you——" Just then the foreman came along and the Italian went to work with a will, causing a blinding sand storm to arise with his strenuous shoveling. When the foreman's back was turned, he threw down his shovel, and wiping his perspiring brow with a gay bandana, resumed his explanation: "I gotta da girl in Italy. She sing a da song lika da talk' machine. When I hear, I getta da love; when I getta da love, I gotta to dance. Da foola da nig', he no getta da love; he only dance to maka da fun of a me. I getta da mad; soaka da nig'."

"Oh! I see, you have a sweetheart waiting for you in your native land. Are you going to her soon?"

"You betta you life; soon I maka da mon'. I buya da talk' machine; send it to Italy. Rosa, she singa da song; senda da rec' backa to me. I taka da rec' talk' machine store, Mount Holly; heara da song; getta da mooch home seek. Throwa up a da job nexta week; taka da boat,



"I GOTTA DA GIRL IN ITALY."

go lika da hell, Italy. Very fina da ting, talk' machine, vat you tink?"

"Ignacio," answered the reporter, "your story has pleased me much, for it has added another page to the "talker's" book of victories. I thank you and wish you every happiness when you join your fair Rosa beyond the seas."

"Dats alla da right, she damn fina da girl," he confided by way of conclusion, and then his face aglow with the golden prospects of a happy home and pretty wife which the future held out to him, he resumed his labors.

TRADE IN THE NATIONAL CAPITAL.

E. F. Droop & Sons Co.'s Talking Machine Department Has Been Greatly Enlarged, the Winter Sales Have Begun Most Encouragingly—Hugo Worch to Relinquish Sales of Machines—What a Run Around the Trade Reveals—Expect Good Holiday Trade.

(Special to The Talking Machine World.)

Washington, D. C., Nov. 9, 1907.

The talking machine business in the National Capital has not been quite up to the mark during the past month, but the outlook now appears more prosperous.

The Columbia Phonograph Co., of which H. C. Grove is the local manager, state that November has begun with large sales in records and machines. This establishment has had charge of the exhibit at Jamestown and much of Mr. Grove's time has been spent there.

The talking machine department of E. F. Droop & Sons Co. has been greatly enlarged; in fact, one-half of the ground floor of the establishment is now devoted to this class of merchandise. A large stock of instruments has been installed, while the walls are lined with records almost to the ceiling. The testing room and storage department are also to be found inviting. The winter sales have begun encouragingly and fair prosperity is predicted for this department of the Droop house.

It was only recently that Sanders & Stayman added the talking machine to their piano establishment. Already they have found it necessary to increase the space originally given to these instruments. They are not only retailers, but they do wholesale as well, and by this means supply small establishments in outlying districts. The recent sales have not been great, though the past month has been generally good.

The sales of the Victor machines at John F. Ellis & Co. have only been fair. Record sales have been especially good.

S. Kann & Sons Co. do much distributing in outlying districts, and within a few weeks the Christmas trade will start in with its usual activity.

J. E. Whitson reports poor sales in machines, but a fairly good trade in records. "Honey Boy" has been especially popular.

Not long ago Hugo Worch opened a talking machine department in his piano store. When speaking to him recently of this class of merchandise he said: "I shall give it up, as our time is too much taken with other trade."

JUDGE HAZEL DEFERS CONSIDERATION.

The argument, in contempt proceedings, on the injunction decree of the New York Phonograph Co. against the National Phonograph Co. and others, was argued before United States Circuit Judge Hazel Thursday of last week in New York City. Louis Hicks and John C. Tomlinson appearing for the complainants, and C. L. Buckingham and Wm. Wallace, former presiding judge of the United States Circuit Court of Appeals, for the defendants. At the close of the hearing Judge Hazel announced he would not be able, on account of the pressure of his judicial engagements, to take the case up for consideration before December.

SOME POINTERS TO BE CONSIDERED.

Rubber stamps are excellent things in their way. They are a help and convenience when used properly and in their right place. They may also be a detriment. They are useful in the office for stamping bills paid, sales checks paid or charged, affixing the dates, etc., and in other such uses.

A very good and attractive window card can be made with rubber stamps in the hands of a skilful operator, but they were never intended to cut the printer out of a job.

The business man who tries to do his letterhead and billhead printing with a pad of cheap paper and a rubber stamp stamps himself as a cheap man.

Such a man will surely lose caste among business men, just as surely as the individual who tries to cut a figure in society by using rubber-stamped visiting cards.

The expense incurred by the use of good business stationery is money wisely invested. It commands respect and attention.

SOL BLOOM'S NEW STORE.

After many delays in remodeling and decorating, Sol Bloom, the Victor talking machine distributer, opened his new store, 40 West 34th street, New York, last week. The interior color scheme and lighting arrangements are striking, and the handsomely dressed windows attract the passersby like a magnet. Mr. Bloom believes he has the star location in the city for retail trade. His business occupies two floors of the building. The qlace is worth visiting.

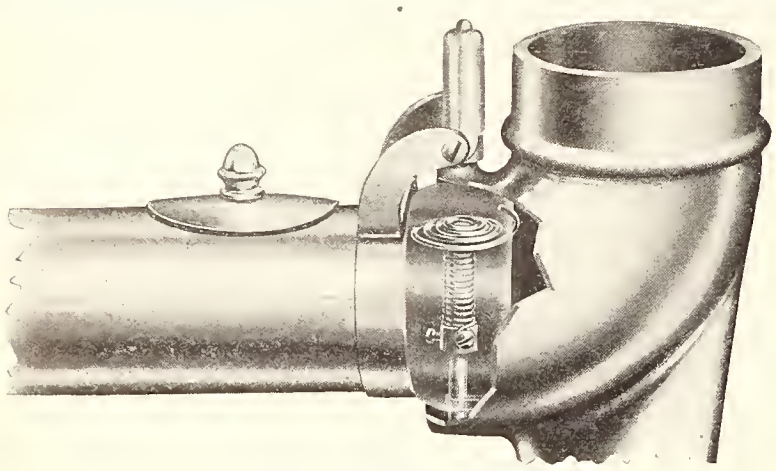
NEEDLE AND DISC FRICTION.

Its Reduction if Not Elimination One of the Problems of the Hour—The Important Contribution Introduced in the Star Talking Machine Worth Consideration.

As the actual reproduction of sound nears perfection, it is becoming more evident that much remains to be done in lessening the friction between the needle and the disc record, to reduce scratch, improve the tone and prolong the life of the record.

In this field, the device of which one detail is pictured herewith, is most successful. This is the automatic yielding-pressure feed used by the Hawthorne & Sheble Manufacturing Co. in their "Star talking machine."



AUTOMATIC YIELDING PRESSURE FEED.

The automatic yielding-pressure feed consists of the spiral shown above, acting in combination with the gravity feeding device illustrated in the front cover advertisement of this number of The World, to exert a yielding pressure on the sound-arm, swinging the needle positively toward the center of the record. The spring engages, as shown, with the inner end of the tone arm.

The motion of the needle is thus entirely independent of the pull of the record groove. As a matter of fact, the only mechanical action of this groove is that it restrains the needle from swinging immediately to the center.

The result is that the needle is kept in intimate elastic bearing with the inner wall of the record groove, and does not rebound between the walls of the groove. From this follows logically the reduction of scratch and wear. The manufacturers report that in a recent laboratory test a "Star" record taken at random from stock was played several hundred times in a "Star" machine fitted with the yielding-pressure feed, and at the end of the test was still in serviceable condition. Moreover, since the inner wall of the groove contains the most distinct record waves, the needle is held in precisely the position to realize the full tone possibilities.

The "Star talking machine" contains no single element more far-reaching in its effects than this feed device, which is fully covered by patents.

SALESMEN SHOULD NOT VENTURE HERE.

The talking machine as a thing of joy is certainly "in bad" with a Bensonhurst man, Ernest Lasche by name, who blames one of them for his marital troubles. In fact it is charged that the combination of the talking machine and a star boarder were responsible for the loss of Lasche's wife, who eloped with the latter, after a wooing in which the machine played a prominent part.

About a year ago Lasche met Dunn and invited him to occupy a room in his house as the star boarder. Each night the two men and Lasche's wife sat around the table in the dining room listening to the various assortment of songs as played by the talking machine. Pretty soon Lasche noticed that his wife seemed to have a strong preference for "Nothing to Love but Jim," whenever Dunn happened to be in the room, and the playing of the record was accompanied by what Lasche called making "talking glances," cast by his wife in Dunn's direction.

Things grew from bad to worse. One day Lasche came home for a mid-morning meal and found Dunn there. Quite a scene followed. When he came back again that night all the furniture was gone with the exception of a three-year-old baby boy who was gently humming as his papa came up the steps, "Nothing to Love but Jim."

He has advised talking machine salesmen not to venture around his section of Bensonhurst.

NEW USE FOR THE PHONOGRAPH.

There have been many stories of the usefulness of the talking machine in the field of medicine, but according to the latest reports from Chicago it is soon destined to supersede the gold cure for chronic "souses." Dr. J. Cameron Horenstone is said to be the discoverer of the talking machine remedy and he claims that it never fails. The plan is described by the doctor as follows: "Our method is very simple, after all. We have perfected a new phonographic device that can be carried by a man in his pocket. For instance, a wife who has a drinking husband desires to have him cured. She has exhausted all the known cures, in addition to putting things in his coffee. She takes the phonograph, adjusts it so that her husband's foolish ramblings are recorded, and springs it on him the next day when he is sober. Hubby is generally so disgusted that a permanent cure is effected."

Imagine being lined up in front of an innocent little machine, which reels off in one's own voice, sadly thickened by potent libations, a string of distorted and disconnected remarks. Certainly, if the scheme is practicable, it ought to effect a permanent cure.

THE HUMPHREY RECORD CABINETS.

New Catalogue Shows Latest Styles, Which Is Worth Investigating.

The Humphrey Bookcase Co., with plants at Detroit, Mich., and Elkhart, Ind., are making a line of talking machine record cabinets which unites simplicity of design and beauty of finish in a marked degree. They have been manufacturing these cabinets for more than four years, and their product affords unmistakable evidence that they have studied the field thoroughly.

The line includes eight styles of disc record cabinets, conspicuous among them an exceptionally attractive cabinet designated as No. 106, built of genuine San Domingo mahogany with fluted mahogany columns, rubbed and polished, intended to match the No. 6 Victor machine in detail. Another cabinet which is out of the ordinary is designated as No. 247 Sectional Cabinet. This is made in the form of a sectional bookcase, and is designated to fit in with book sections or other sections made by the Humphrey Bookcase Co.

Six styles of cabinets comprise the line for cylinder records—all of them well designed and worthy of investigation.

We illustrate in these columns cylinder record cabinet No. 120, a very neat design, at a popular price. This will hold 200 cylinder records—is 32½ inches high, 24 inches wide and 18 inches deep. It is furnished in selected quartered oak or mahogany, all four sides and top being rubbed and polished.

The announcement of the Humphrey Co., which appears elsewhere in The World, will be read with interest.

The callers at the National Phonograph Co.'s New York offices recently, among others, included Henry E. Marschalk, Musical Echo Co., Philadelphia, Pa.; C. B. Haynes, C. B. Haynes & Co., Richmond, Va.; Fred Babson, of Babson Bros., Chicago, who came in on the morning Twentieth Century and started back in the afternoon of the same day—always on the rush.

THERE'S A TIME TO LET GO—

Let go of old methods, if you want to be up among the leaders in your line of business. You must watch every spot where there is a chance for profits to leak and stop the leak.

NEW SHIPPING DATE FOR RECORDS.

General Manager of Sales Dolbeer of the National Phonograph Co. Issues Important Letter on This Subject.

Under date of October 25, F. K. Dolbeer, general manager of sales of the National Phonograph Co., sent the appended letter to the trade bearing on the new shipping date for records. The company in this step coincides with the views and wishes of the National Talking Machine Jobbers' Association, who had requested this concession on the merit of economy as well as convenience in handling their other lines. The letter and accompanying explanatory remarks follow:

"Commencing with the December records, which under our present system would be placed on sale November 27, would state that we have decided to permit our jobbers to ship the monthly records to dealers at 2 p. m. on the 24th of each month, the records to be placed on sale at retail simultaneously at 8 o'clock on the morning of the 25th. In cases where the 24th of the month falls on Sunday, shipments may be made to dealers at 2 p. m. on the 23d, thereby enabling the dealers throughout the country to place them on sale at 8 a. m. on the 25th inst. Where the 25th of the month falls on a Sunday or a holiday, shipments may be made at 2 p. m. on the 23d and the records placed on sale at 8 a. m. on the 24th of each month. Any jobber or dealer who makes shipments of records or places them on sale in advance of the hours specified herein, violates the terms of his agreement and will be dealt with accordingly.

"The changes embodied in the above notice have been decided upon in deference to the wishes of jobbers and dealers, repeatedly expressed during the past year. The notice acts as an amendment to those sections of the new agreements covering the time for shipping and putting new records on sale. The changes have been sought by the trade for a twofold reason. The advance in date has been desired in order that dealers might have a better opportunity to realize on the sale of new records than afforded by the later date and thereby be in a better position to pay their bills and earn the cash on the 5th of next month. The shipping hour has been advanced to 2 o'clock on the previous day to give dealers an opportunity to sell at the same time and on the same footing as their jobbers. This has not been possible under the present plan, which in many instances has been a hardship to the dealer.

"Order blanks and other forms of printed matter in connection with both December and January records had been printed before and above action was decided upon and the trade will understand that the new dates for shipping and selling supersede those shown on such forms. In deciding to permit dealers, as well as jobbers, to have the new records in their possession on the day before they can be sold, we are showing our implicit faith in the 12,500 dealers selling Edison phonographs and records. We believe that every dealer will appreciate the extent to which this course will benefit him, and that he will no more permit a new record to be played, sold or leave his possession until the established selling hour, than he would violate his pledged word. To not live up to the new conditions will be considered by us as the rankest ingratitude. We shall exercise unusual vigilance in seeing that records are not sold ahead of time, and each and every dealer detected doing so, will be suspended without warning. We sincerely hope that we shall not be called upon to apply such drastic measures."

MATERIALIZATIONS OF JOS. JEFFERSON.

Do you believe in ghosts? If so, you will probably enjoy a seance with George Ober, actor, and J. A. Whitman, inventor, who, on the fourth floor of 27 West Twenty-seventh street, are entertaining their friends daily with materializations of the late Joseph Jefferson in the role of Rip Van Winkle.

These seances are exhibitions of the Cameraphone, a device in which Mr. Whitman unites the salient features of the moving picture and the talking machine. Startling results are obtained in exact reproduction of celebrated stage scenes in which the presence of the actor is admirably simulated.

The late Joseph Jefferson was greatly interested in Mr. Whitman's work, and he recited his most famous scenes from "Rip Van Winkle" for the cameraphone shortly before his death. His fatal illness prevented him from carrying out a cherished desire to pose for the accompanying pictures, but George Ober, who is at the head of the J. M. Hickey "Rip Van Winkle" company has acted as a substitute, and the Catskill scene, where Rip climbs the mountain amid the storm, his awakening twenty years later, and his final recognition by his shrewish wife and his daughter are reproduced with wonderful verisimilitude.

Costumes, scenery and the recognizable voice of Joseph Jefferson contribute to the startling realism of the effect, and a considerable audience of scientists and writers yesterday applauded the first public exhibition of Mr. Whitman's device given in New York.

BUILDING UP FINE "TALKER" BUSINESS.

The talking machine department of Charles H. Ditson & Co., New York, under the able supervision of Harry L. Hunt, has greatly extended its business since occupying their present sumptuous quarters. The firm are enthusiastic supporters of this branch of their business and are using the daily papers freely exploiting the Victor line, not in an ordinary way, but according to methods that measure up to success. The text of their "ads" is along original lines, crisp, bright, terse, and the accompanying cuts are of original designing, drawn by artists who can tell an entire story pleasingly, yet convincingly, in the clever manner in which the sketches—something entirely different—are handled.

W. W. Rose is arranging to open piano warerooms in Vincennes, Ind.

BENJ. SWITKY (SOLE SALES AGENT) 27 E. 14th St., New York

TRADE NEWS FROM INDIANAPOLIS.

Kipp-Link Co.'s Immense Stock of Edison Goods —Report a Business Increase of Forty Per Cent.—W. M. Bird to Look After Commercial Graphophone Business—Crane's Good Report —Talking Machine Used by Choir Director.

(Special to The Talking Machine World.)

Indianapolis, Ind., Nov. 6, 1907.

The Kipp-Link Co., who make a leader of the Edison machine, are having great success in their new place on East Washington street. This company have in stock 12,000 records and 1,000 machines and are fully prepared for the business of the winter. Their salesrooms are well equipped and well lighted. The company have a reception room and a salesroom which may be used by jobbers who come into the city. In one room are kept fancy machines and fancy music cabinents, all of an unusually artistic style. The company have been in their new headquarters for two months, and they report that business during the last month has shown an increase of 40 per cent. over the same month last year. The large electric sign of the Kipp-Link Co. is one of the attractive features along Washington street at night. It is the only large electric sign in its block along the north side of the street.

The Columbia Phonograph Co., of this city, Thomas Devine, manager, have employed Warren M. Bird to look after their commercial graphophone business in this city. Mr. Bird has had a wide experience in the business world. Before beginning duties with the Columbia Co. he was with the Van Camp Packing Co.

E. H. Thomas, formerly with the Keystone Blue Print Co., of Philadelphia, has been employed by the Columbia Co. to look after the "gang work." He has twelve men working under his direction in Indianapolis and reports business unusually good.

Fred Purdy, editor of the Sun, and Ernest Bross, editor of the Star, are owners of Columbia cylinder machines which they use to while away the leisure moments when they are not pushing the blue pencil.

Charles Craig, of the Indiana Phonograph Co., which handles Edison machines, says that his business for the last month has been good, although it has been rather quiet for a few days. Mr. Craig has a full stock of records and machines and is fully prepared for the winter business.

The financial stringency has caused little difficulty among the talking machine men in Indianapolis. Banks here have gone on a checking basis, and it has been impossible to get any sums of money of any size, but it has affected business very little.

The 5-cent moving picture theaters of Indianapolis are having a dull period just now. This decrease in business is probably due to the great number of such places that have been opened, as well as to the opening of the regular theater season. Indianapolis has fifteen or twenty moving picture shows and more are being started every day. The city has five theaters, one more this year than ever before. The latest moving picture show has been started by J. McNulty on Market street, just off Illinois street. It is a good location.

Dr. Willis, the choir director of the Meridian Street M. E. Church, one of the largest churches in the city, has a new use for his talking machine. He takes records of the music of his soloists, and then when the records are placed on the machine he uses them for critical purposes. Dr. Willis has a high opinion of the graphophone as an aid in his musical work.

T. F. Murray, jobbing salesman of the Columbia Phonograph Co., was in Indianapolis the early part of last week and bagged two orders of unusual proportions. He reports business good.

Thomas Devine, manager of the Columbia Co., has been featuring the Marconi record during the last month.

TALKING MACHINES IN CHILE.

Consul A. A. Winslow, at Valparaiso, Chile, in a recent report, had the following to say of the talking machine business in that country: "The commercial gramophone and business phonograph are receiving some attention here of late, and there are a few in use in this city. I believe there is a good future in this country for these labor-saving appliances. There are practically no stenographers in Chile, and these instruments are destined to take the place of this shortage in the head offices of the larger commercial houses in this country. Since the great advance in wages during the past two years all labor-saving devices are in greater demand."

DOUGLAS EMPLOYES DINE.

The Baseball Club and Other Members of the Douglas Phonograph Co. Enjoy a Great Time.

On the evening of Oct. 26 the Douglas Baseball Club, composed chiefly of employes of the Douglas Phonograph Co., gave their annual beefsteak dinner, vaudeville and smoker in Cosmopolitan Hall, New York. The guests numbered about seventy-five, including the ballplayers and their friends, and after an excellent dinner was disposed of and thoroughly washed down, and the cigars lighted, the entertainment of the evening began.

As a mark of their esteem the club united in presenting C. V. Henkel, president of the company, and to whose kindly efforts and active interest the club owe a large part of their success during the past season, with a very large bromide enlargement, showing every member of the team, with Manager Kelly in the centre of the group, the same being handsomely framed. John Kaiser, sales manager of the Douglas Co., made the presentation speech in behalf of the club, and acquitted himself very creditably. Mr. Henkel was deeply moved by the spirit shown in the gift and in a few words expressed his appreciation.

The entertainment offered was excellent and the guests spent a very pleasant evening. Representatives of The Talking Machine World were in attendance, as was also Victor H. Rapke and George S. Blackman, with the Blackman Talking Machine Co., the only others connected with the trade outside of the Douglas Co.

THE TALKING MACHINE SUPPLY CO.

A. P. PETIT, General Manager. 400 Fifth Avenue, New York, U. S. A.

NEWS OF THE MONTH FROM THE SAINTLY CITY.

Business for Early Weeks of November Shows Steady Improvement Although Trade Has Been Uneven—Auxetophone Concert at the Missouri Athletic Club Pleases Manager Long of the St. Louis Talking Machine Co.—Conroy Reports Fine Jobbing Trade —Ikonographs Sell Well—May, Stern & Co. Open New Department—Thiebes-Stierlin Co. Take on Edison Line.

(Special to The Talking Machine World.)

St. Louis, Mo., Nov. 5, 1907.

Trade for the month of October from a jobbing standpoint has been fairly good, with a gradual improving tendency which indicates that November and December should prove to be excellent months. The retail trade here for the same period has been rather quiet, which can be explained by the fact that one week of the month was devoted to carnival festivities, and another week was practically given over to the balloon contests, both weeks proving to be very dull weeks for the talking machine interests. A much better condition is expected to prevail from now on until the first of the year for the holiday trade is always large.

Manager Long, of the St. Louis Talking Machine Co., reports that their October trade showed up very well, and that he expects a great deal more activity from now on. The retail branch of this concern recently gave a concert one evening on one of their Auxetophones at the Missouri Athletic Club. It took place in the dining room, and it produced much enthusiasm among a very select audience that heard it. The baseball team of this concern closed the season recently with a record of one game lost, which surpassed the record of any other amateur club in the city.

Miss Clara Goetz, formerly with the Columbia Phonograph Co., has accepted service with the St. Louis Talking Machine Co.

P. E. Conroy, president of the Conroy Piano Co., states that they have been hampered considerably by not being able to get Edison goods. He reports a good jobbing trade, and looks for a large trade from now on.

D. K. Myers, of the Zonophone Co., reports jobbing trade active, and particularly so in the South.

Marks Silverstone, president of the Silverstone Talking Machine Co., reports the jobbing trade moving along well. He has some good sales on the Ikonograph, the new moving picture machine. He is working on a second edition of Phonographic Advice, which will come from the hands of the printer shortly.

May, Stern & Co. opened their new talking machine department on October 29, with Miss Sadie Rosenblatt. The department contains five rooms and is decidedly complete. They conducted a special sale on the opening day, and reported that their trade was good.

The Thiebes-Stierlin Music Co. have added the Edison line to their talking machine department and they were placed on sale Friday, November 8.

A. D. Geissler, manager of the Talking Machine Co., of Chicago, was a recent visitor.

Mr. Brown, Western sales manager for the Leeds & Catlin Co., was a recent visitor here.

WRITING A WINDOW CARD.

A Show Card Writer Who Has Done Some Good Work for Talking Machine People Makes Recommendations Which Will Interest.

Proper tools and colors are among the essentials for effective show card work. A show card writer of experience recommends red sable pencils for brush work, and Soennecken and other round pointed pens for neat, quick and generally satisfactory work, and colors known as distemper colors are recommended. To bind the colors and prevent them from rubbing off, gum arabic is used as a sizing. Some of the various kinds of ready-made show card ink also give good results. The most chaste and effective combination for general purposes is black lettering on a white ground. Another important consideration is neatness in execution and lay-out. In the first place the matter should be carefully centered and proper attention given to spacing both of lines and words, and the lay-out carefully planned before the card is begun. One writer recommends dry lamp black ground in gum arabic, with about one-third Letterine, as a good material for show card writing. Zinc white ground in the same way, together with an equal amount of white Letterine is stated to make a good white for use on nearly all shades of board. A good list of colors for the purpose are cobalt and ultramarine blue, English and American vermillion, burnt sienna, French carmine No. 40 French striping bronze, lemon yellow, light green and chrome green No. 2. These are all bought dry and mixed as required. Considerable artistic talent is to be found nowadays in the production of illustrated show cards, although for those who have not the requisite ability to paint a little picture of some kind there are various ways of getting around the difficulty. One of these is to cut out a picture and paste it on, running scrolls, borders, edge-lines, etc., as required. Another way is to place the picture against a window pane, mark around the outline with a soft lead pencil, then lay on the card in the position required and run over the outline from the front side. The paragraph is very useful for enlarging, which may also be done by marking out the card and the picture into squares and drawing in the picture in sections in the scale required.

NEBRASKA CYCLE CO. EXPAND BUSINESS.

(Special to The Talking Machine World.)

Omaha, Neb., Nov. 6, 1907.

The Nebraska Cycle Co., of this city, have taken the store-room, adjoining their place of business, and fitted it up very handsomely. The corner store-room is devoted to the talking machine business, and the basement, which runs under both rooms, is devoted to wholesale.

Their greatly increased wholesale business has necessitated the addition of this extra space. They are both Edison and Victor jobbers.

VIEWS ON INSTALMENT SYSTEM.

Some Recent Literature Issued by the Victor Co. Showing the Value of Instalment Business—What Lyon & Healy and the Powers & Henry Co. Have to Say on This Subject—Some Statistics That Are Most Forceful.

Having full faith in their instalment system and proof from many dealers that it is a huge success, The Victor Talking Machine Co., are busily trying to convince those dealers who have not taken it up of the great opportunity they are letting escape, and it might be added that the literature sent out by the company in that connection is of a most convincing character. One of their latest booklets upon the subject of instalment selling is entitled "Burgle the Burglar." A few of the opening paragraphs afford an excellent idea of the contents of the booklet and also of the general strong style of the Victor arguments. The matter reads as follows:

"If you had just discovered that a burglar climbed into your window last night and got away with a good bunch of your money, you would be mighty interested.

"If you knew he would try the same thing again to-night, you would come pretty near being excited over it. And you would set about stopping it in a hurry.

"Now, unless you are selling Victors on instalments, something a good deal worse than burglars is happening to your business every day. And we want to help you stop it. We want to send you a book that shows just how you are being robbed right and left. Robbed of good business and large profits—and how to stop it.

"It shows how you are making only one dollar where you might just as easily make from five to ten. It shows how this counts up in a year (according to the size of your territory) to hundreds or thousands of dollars, clear loss to you.

"It shows how other Victor dealers all over the United States have succeeded in stopping this robbery and loss; and are now doing a bigger and safer business than ever before; and making many times more real money.

"It shows how you can do the same. It shows how to sell Victors on instalments by a carefully worked-out systematic plan which cuts out risks and multiplies profits.

"It shows exactly how this is now being done by small dealers as well as large; in all kinds of territories and among all kinds of people.

"It explains every step of the way from beginning to end—how to get the capital, if you haven't it already; how to sell the goods; how and whom to trust; how to keep track of sales; how to insure prompt payments; and how to build up the business into a solid permanent gigantic sucess.

"The information in this book throws a clear full searchlight on the Victor instalment business that throws the little mail-order dark-lantern completely into the shade.

"The powerful *business weapon* which this Victor instalment plan puts into your hand turns the puny mail-order gun into an utterly harmless affair."

The foregoing excerpts are more than supported by the evidence given in letters from the leading Victor distributers of the country, as published in the company's pamphlet, "What Victor Distributers Say About the Instalment Plan." The appended are taken from the batch, representing the best houses in the country:

Lyon and Healy, Chicago.—"We regard the Victor instalment proposition as one of the best features of our business. At the beginning we had many misgivings and felt about the same as every new dealer does before giving it a trial, but we went at it in earnest and can now say without hesitation, after five years of experience, that these machines can be sold on very liberal payments with practically no loss whatever. There is no article on the market, that we know of, that is as good to sell on instalments; in fact it is the only line we can call to mind where there is something to look forward to besides the collection of the instalments after the sale is made. The Victor instalment customer invariably buys more records when he comes in to make his payments, and we can truthfully say that he does meet his payments promptly.

"It is our belief that the reason for our great success is found in the fact that when a Victor outfit is sold to a customer he has a great value and appreciates it. Much more could be said in favor of the instalment plan, but to sum up the situation we might say where the dealer offers a liberal plan of easy payments he can easily increase his business three or four hundred per cent. and invariably sell a higher grade of machine than he could otherwise, with the result that the purchaser is both pleased and proud of his investment. If every talking machine dealer who is not already advertising the Victor on easy payments could know as well as we do what a splendid thing it is from every standpoint, we are sure they would go into it at once. It is putting it mildly to say that it is a good instalment proposition; it is the best."

Powers & Henry Co., Pittsburg, Pa.—"We have been selling Victors on instalments for a number of years and with the greatest success. We have always made it a rule to add 10 per cent. to the list price of the goods, for instance, selling a Victor 2d on time for $33, and we will make the terms as low as $1 down and $1 per week. Our losses are so small that they are not worth while taking into account, our experience showing that 99 44-100 per cent. (with apologies to Ivory Soap) of our customers are honest. By adding the 10 per cent. a dealer could afford to lose every seventh machine and still be making a good margin of profit.

"In all the experience the writer has had in the instalment end of the talking machine business and the thousands of machines sold on this plan, there has never been a single loss exceeding 50 per cent., and we have, since running our present business, lost but four machines, and we have yet to take our first case to court. A very small percentage of our instalment sales we reclaim, and we have never found it necessary to do anything further than brighten up the goods with a little 'elbow grease' and possibly put on a new horn. We firmly believe that any dealer can double his business by selling on the instalment plan. We have in mind a number of dealers who, we believe, could quadruple their business in this way, and we think that the time is not far away when they will take up the instalment proposition and get the results they are entitled to."

ANDREWS' SPECIALTY.
QUICK SHIPMENTS.

The Holiday season will soon be here and is your stock in good condition to take every advantage of it?

We can help you to win Holiday trade and to keep your stock complete in every detail.

We job the Victor, Edison and Columbia machines and there's no jobber outside of New York who carries the varied line of instruments which we do.

Our geographical location is unsurpassed for taking care of Eastern and Western trade by prompt shipments.

We carry everything in the talking machine line, so that if you want rush orders in anything pertaining to talking machines or accessories do not hesitate to call on us.

We are well situated to help you out. Try us.

JOINS UNIVERSAL CO. FORCES.

J. D. Beekman Becomes General Sales Manager of the Universal Talking Machine Mfg. Co.—E. G. Evans Also With Company—Mr. Moody Succeeds Beekman at V. D. & E. Co.

Though the change has been delayed by untoward circumstances—the illness of General Manager Williams and the fire—J. D. Beekman, sales manager of the Victor Distributing & Export Co., New York, has severed his connection with that company to become general sales manager of the Universal Talking Machine Mfg. Co., of Newark, N. J. This is in the nature of a promotion, and Mr. Beekman had calculated on assuming his new post October 1. As it is, he took hold last week. E. G. Evans, formerly with the Victor Talking Machine Co., Camden, N. J., and recently manager of the Alexander-Elyea Co.'s talking machine department, Atlanta, Ga., will take charge of the Universal Co.'s correspondence. John Macnabb, of course, remains general manager, and will give more attention to the record department, which is developing along lines of which the company may well feel proud. V. W. Moody, lately with the Talking Machine Co., Chicago, will take Mr. Beekman's place with the V. D. & E. Co.

UNIVERSAL CO. MAGAZINE PUBLICITY.

General Manager Macnabb, of the Universal Talking Machine Co., has inaugurated an exceedingly strong advertising campaign, setting forth the merits of the Zonophone line in all the leading magazines and newspapers in the country. The page work in "Pearson's," "McClure's," "Everybody's," "Metropolitan," "World of Today," "Sunset," and the Associated Magazines was of an especially powerful character, and should reap for wide-awake dealers a raft of new business. Zonophone dealers were all notified of this new move in their favor by a circular letter, which in addition set forth in concise form the list and dealers' prices and the profits derived from sales.

INSTALL "TALKER" DEPARTMENT.

A large talking machine department for the sale of the Victor line has been installed in the Spokane, Wash., store of Sherman, Clay & Co., and George Guppy, formerly of the Portland, Ore., house of the company is the manager. C. P. Little succeeds Mr. Guppy at the Portland store of the company.

PRACTICAL SUGGESTIONS AND COMMENTS.

A progressive dealer in a Western town and a subscriber of The World since its first issue writes as follows: "As a dealer keenly interested in the talking machine and its developmeut I have always maintained that the operation of a phonograph or talking machine is an art, hence I believe all dealers should make it a point to impress on customers not to be content with merely what the machine produces, but they should know how to operate and coutrol the machine so as to get the best results at all times. This needs time and patience, and the operator is splendidly rewarded. The difference between a machine indifferently operated and oue in the hands of 'one who knows' is like the music rendered by a little German band and a symphony orchestra. I have made it a point in selling a machine to give the following pointers to my customers, and I repeat them here so that the good results which I have achieved in this field may apply to a larger area; if worthy of consideratiou:

HOW TO GO ABOUT IT.

"When you buy a talking machine treat it as you would your best friend; see that it runs smoothly and even. To insure this the bearings and cog meshes should be oiled, but not too frequently, as oil collects dust, and when placed too thickly has a tendency to increase rather than reduce unevenness. The driving bell should be taut, and where it has a tendency to slip powdered resin should be applied to the inner surface. Work fine graphite, made to a paste with a lubricating oil, into the folds of the spring so that it pays out even. Cover the machine carefully to keep out dust, as this is certain to make the machine run badly and cause wear on the friction parts.

IMPORTANCE OF THE HORN.

"While the selection of a horn for the machine is rather a matter of taste yet it has been found that for a room of average dimensions a thirty-inch horn gives the best results. If the machine is played in a larger room, a larger horn will of course be necessary. Wheu a large horn is used, it is sometimes suspended by a chain from the stand, and in playing loud records there is a tendency to rattle. This can be avoided by using a rubber band instead of a chain. Also see that connection between the horn and the reproducer is perfectly airtight, otherwise part of the sound waves is lost.

SPEED AND SOUND REPRODUCTION.

"Another important matter to be considered is speed. An effort should be made to have the sounds reproduced as near the same voice as they were originally sung as possible. As a matter of fact a tenor song can be made to appear as a baritone if played slowly and vice versa. It is always best, if at all possible, to have every record run off at 160 revolutions a minute. An expert who has gone into this matter gives the following procedure: Remove reproducer from machine; put a record on mandrel, so that it will hold a piece of paper, which must project from the end to enable you to count the revolutions. Screw the regulator down, and, with a file, make a notch on the head to act as a pointer. Set the machine going and put your finger in such a position that the paper will touch it at every revolution. Count how many times it does so during a minute, and note down the number. Now give the screw one complete turn up, and proceed as before, and go on until you know the maximum. With the table thus obtained beside you, any desired speed can be got without trouble or doubt. A new record can be tried at various speeds, and when the best result is arrived at, the number of revolutions should be marked on the box for future guidance. Finally the table, or stand, for machine must be very firm. A marble or glass slab under the machine will make a great difference. Be careful that the machine is quite level, otherwise the reproducer point will lag behind, or drop forward with equally disastrous results to the reproductions.

FIRST CLASS REPRODUCER NECESSARY.

"Of course, good effects are impossible without a first-class reproducer. While it is the effort of manufacturers to turn out a perfect reproducer, yet many of them do not track properly, so that impressions of the souud waves are not fully reproduced to the detriment of both volume and tone. Blasting or other sounds are often corrected by adding weight to the reproducer, but it is best if anything is wrong with the reproducer to consult with a talking machine dealer who will give you the best advice how to master the difficulty.

REGARDING RECORDS AND THEIR CARE.

"Regarding records: It is always best to keep them stored in a place that will be cool and dry and free from dust. Care must be exercised in their use aud handling. With ordinary precautions they will prove of the greatest pleasure to users. Interest in the machine and its use will be amply repaid by reproductions that will be a source of unending delight to yourself and your friends."

THE WEIGHT OF THE SOUND-BOX.

In the previous article reference is made to adding weight to the reproducer, aud the following, which we clip from "The Talking Machine News" of Loudon, is very pertinent in this connection: "The weight of the sound-box and the consequent wear on the record are fruitful sources of discussion among users of disc machines. The statement that a heavy sound-box gives a louder reproduction and at the same time wears out the record more quickly than does the use of a light box is of interest, especially to those who can afford more than one box. To other folk discussions on the point are apt to prove irritating, for however desirous they may be of ensuring to their records a long life while getting the fullest and best reproduction from them, they must content themselves with the one box they possess. To satisfactorily settle the question G. W. Mansell has invented a smart and simple little apparatus which, when attached to a tapered-arm gramophone, enables the operator to alter the pressure of the sound-box on the record at will. The principle is simplicity itself. The appliance consists of a shaped bar of metal which can be quickly and easily attached to, or removed from, the machine. It acts on the familiar see-saw principle. One end of the bar carries a moveable weight, the other end supports the sound-box. This weight can be moved backwards and forwards and its position decides the pressure of the sound-box on the record. The difference in the volume of sound when the box is only lightly pressing on the record is much less noticeable than one would expect, though, of course, the lessened wear and tear on the record is obvious. The weight bar carries a marked scale so that the correct pressure for a particular record can be noted. The attachment is a simple and practical little contrivance which will commend itself to the careful owners of tapered-arm machines."

RECORDS OF THE SAXOPHONE.

H. G. S., Barbara, Cal., writes: "In many records, both in accompaniments and instrumental pieces, an instrument is used which seems like a 'cello and yet at times sounds like a reed instrument. What might it be? Are there any records made of this instrument—that is complete solos?"

If it is not the 'cello it must be the clarinet or saxophone, most likely the latter, as it is employed very effectively by the orchestras making talking machine records. The saxophone is used to blend the brasses and wood-wind, and is an instrument of rare charm when properly played. We are not aware that the record manufacturers have listed any special saxophone solos, but it is employed in many numbers in an obligato, like the clarinet and flute. On this subject it would be best to correspond with the manufacturers.

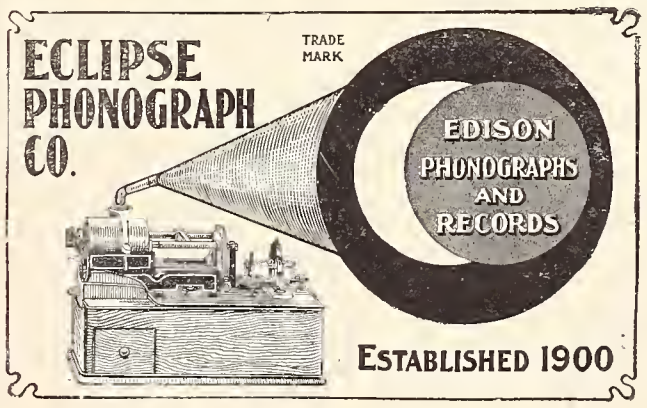
FROM THE MILWAUKEE VIEWPOINT.

The Milwaukee Wisconsin, in a recent issue, endeavored to throw light on the mysteries of talking machine recording in the following squib: "Singing for the various phonographic companies has come to be quite a source of income with many grand opera artists in New York. They get fabulous prices for a few minutes' work, as their records are extremely popular, and some of them sell at the price of an orchestra seat at the opera house. Some singers of lesser rank sing often enough in this way almost to equal their salaries for stage appearance; but what is not generally known is that some of them have two names—for public purposes. They will sing under their own name an operatic selection from some production in which the public knows them well, and then will render a popular ballad or standard song, using another name. These latter records are not so expensive as the operatice selections with the popular uame, but the voice is just the same." It is hardly necessary to say that some of these assertions will be news to the trade.

SPECIAL NOTICE TO DEALERS

We have just added a complete line of

ZONOPHONE MACHINES AND RECORDS



and will devote our whole attention to meeting the demands of the trade for these and

Edison GOODS

If you desire anything in **Horns, Cranes, Cabinets, Needles, Disc Record Envelopes** and **Small Supplies,** don't fail to write us.

We carry a large, fresh stock of goods, and our facilities enable us to make all shipments on time.

ECLIPSE PHONOGRAPH CO. 203 Washington Street HOBOKEN, N. J.

DISTRIBUTORS FOR IKONOGRAPHS AND FILMS

A LEAF FROM THE PAST.

A Photograph of the Delegates to the Fourth National Convention of the National Phonograph Association—Some of Those Who Are Pictured Are Still Playing Their Part in Developing the Industry.

While the talking machine business is comparatively young it is well to preserve and cherish the landmarks of one of the most interesting industries in the world. The accompanying portrait group is one of these, picturing the delegates to the fourth annual convention of the National Phonograph Association, which was held in Chicago, at the Victoria Hotel, September 20, 1893. The cut is made from an original photograph, for the courtesy of which The World is indebted to Loring L. Leeds, eastern general sales manager of the Leeds & Catlin Co., New York.

AN HISTORICAL PHOTOGRAPH.

So far as can be recalled to Mr. Leeds and Victor H. Emerson, manager of the recording laboratory of the Columbia Phonograph Co., General, the following are in this pictorial bit of history: First row (reading from left to right)—H. D. Goodwin, A. O. Tate, A. W. Clancey, Richard Townley Haines, (1) William S. Gray. Second row (reading from right to left)—L. E. Evans, August M. Sampson, ———, ———, J. O. Clephane, James L. Andem, Thomas R. Lombard, (2) E. D. Easton, George Tewkesbury, Lewis Glass, ———, ———. Third row (reading left to right) — ———, R. F. Cremelin, E. A. Benson, ———, R. L. Thomas, (3) Victor H. Emerson, S. S. Ott, ———, ———, Merwin E. Lyle, (3) Leon F. Douglass.

Of the above group only four are still engaged in the trade: (1) Walter S. Gray, now manager of the Columbia Phonograph Co.'s San Francisco office; (2) E. D. Easton, without doubt one of the most eminent men in the business to-day—as well as a pioneer, to whom everybody bows their acknowledgment—president and founder of the American Graphophone Co. and the Columbia Phonograph Co., General, New York; (3) Victor H. Emerson, whose paramount position is referred to already; (4) L. F. Douglass, chairman board of directors Victor Talking Machine Co., Camden, N. J., now residing in Los Angeles, Cal. The others have either gone over to the silent majority or are in other lines.

These meetings were held for the express purpose of exchanging views on the best ways and means of marketing the Edison phonograph, at that time the only talking machine then known. The same subjects that now hold the trade's attention were discussed at the time, the proceedings being subsequently printed in substantial book form for permanent preservation.

EDISON'S MANY INVENTIONS.

Speaking of Edison brings to mind that Dr. Reyburn, who is writing the reminiscences of Charles Sumner in the Washington Post, refers to him, in his recent contribution, as follows: "Sumner was present, I remember, when Thos. A. Edison first came to Washington to display the phonograph, which had just recently been invented. Roscoe Conkling, who was always quite vain, was there, too. Mr. Conkling wore a little curl on his forehead, and when Mr. Edison's machine repeated something about a little girl with a little curl right in the middle of her forehead, the New York Senator thought that, of course, the remark was made for him, and Mr. Edison had to apologize."

"PURPOSE" THE CORNERSTONE

Of Success in the Business World as in All Lines of Effort—Some Casual Cogitations.

You may set up a bull's-eye, you may load a rifle and fire it as many times as you have cartridges, and unless you have an aim you will not hit your bull's-eye, save through accident. "Great minds have purpose; little ones, wishes"—and there it is in a nutshell. How aimless is the game most of us play! What are we aiming at? Three meals and a bed? It would seem so, by our lives.

Put your finger on the life of any man who has "made good," who has achieved something of success, and you find purpose, set and steadfast, says Barstow, in the "Furniture World." There was no guesswork, no trying this and that, in the hope that through a miracle something would come of it. The day of miracles is past. This is a time for direction, for specialism and for purpose of the adamant kind.

It doesn't matter what your friends say or think; it doesn't matter if you do not find applause for your every act. Believe in yourself, take enough stock in your work to back it up, and keep your purpose so clearly in view that you will never lose it for a minute.

You want to make a success in your line. Have an eye for the detail that the aimless man overlooks; do all the work that you can and keep at it. Learn all you can, no matter how much outside your regular line it may seem; keep at it and work. That's purpose.

William McCallister, who is a talking machine jobber in addition to handling housefurnishing goods, bicycles and sewing machines, at 221 West Baltimore street, Baltimore, Md., has several prosperous branch stores, one of which is devoted exclusively to the sale of sewing machines. Mr. McCallister issues a monthly pattern sheet from the latter store and takes advantage of the fact to advertise the various lines of talking machines carried at his main store. He claims that that form of publicity has brought excellent results. Mr. McCallister is a Victor jobber and sells both the Victor and Edison lines at retail. He states that the talking machine business in Baltimore is in a most prosperous condition and that sales so far this year have far exceeded those for the corresponding period of 1906, especially in the wholesale.

SATISFIED CUSTOMERS ARE A DEALER'S BIGGEST ASSET

We compliment the Talking Machine Trade on their quick indorsement of our **Unexcelled line of Plain and Artistically Decorated Morning Glory Horns.**

Every One Sells Another

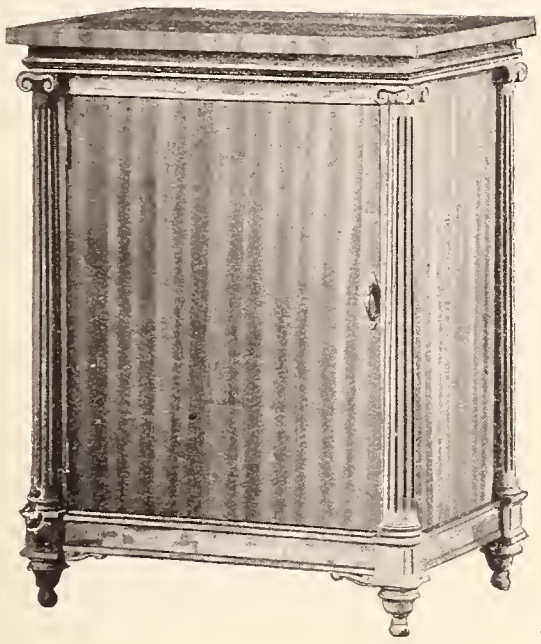
HUMPHREY



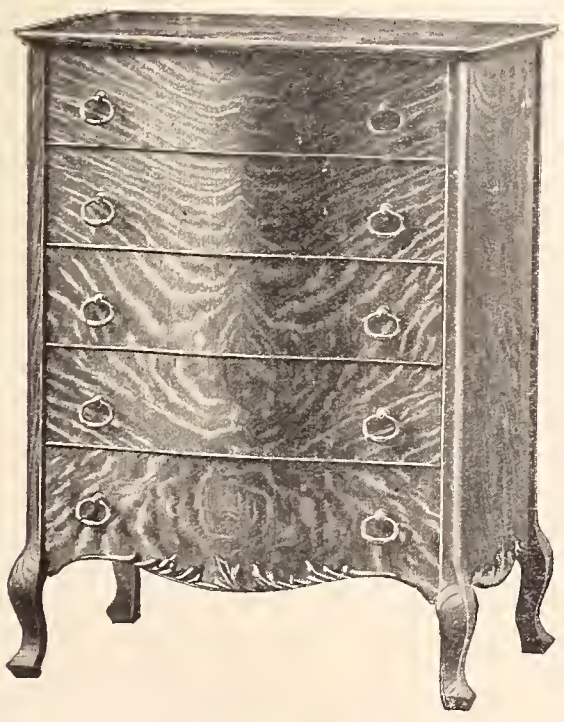
Phonograph Record Cabinets

"The Kind It Pays to Sell"

¶ Phonograph Record Cabinets designed to meet the needs of phonograph users—that describes the HUMPHREY line. Beauty, quality and practical convenience are the leading features—HUMPHREY Cabinets sell on sight.

¶ Our line is complete—Record Cabinets to suit any class of trade—"low priced," "medium priced" and the more expensive kinds—and, no matter what the price, the quality and finish of HUMPHREY Cabinets is high class—superior to anything else you can buy. Price and quality considered, we've got every other line beaten—no doubt about it.

OUR HANDSOME NEW CATALOG IS READY—SEND FOR IT



¶ Let's demonstrate to you, as we've already done to hundreds of dealers, that you can make more profit selling HUMPHREY Phonograph Record Cabinets than by letting the other fellow sell them. "The early bird gets the worm." Write to-day for our handsome new catalog.

HUMPHREY BOOKCASE CO.

Manufacturers of Sectional Bookcases and Phonograph Record Cabinets

DETROIT, MICH., U. S. A.

TRADE NOTES FROM BELFAST.

A Big Run on Edison Machines—Disc Instruments and Records Growing in Favor—Public Recitals Attract Crowds—Desire Larger Phonograph—Klingsor Machine Exhibited.

(Special to The Talking Machine World.)

Belfast, Ireland, Nov. 2, 1907.

The anticipated big business in talkers is almost un fait accompli already, although only a month of the winter season proper has elapsed. The run on Edison cylinders since price was lowered to one shilling has eclipsed all that was dreamed of by the dealers; the fact is that manufacturers of other records retailed at same figure, will have to "look to their laurels" in the stiff struggle for supremacy now raging on this side of the Atlantic.

There is no disguising the fact that disc instruments and records seem to be gaining in public favor, and it accordingly behooves all those connected with the phonograph industry to stimulate their inventive faculties so that even better instruments and records than those we have been accustomed to may be evolved. Why is it that no phonograph has yet been invented which can compare in loudness, combined with purity of tone and distinctness, with the Aux-e-to-phone, which can be heard perfectly in the largest halls of the British Isles?

The Ulster Hall, Belfast (seating accommodation about 2,000), is packed every Saturday evening by audiences which are spellbound by the perfect rendition of a specially selected classical program of band and instrumental pieces, songs by Melba, Patti, Tamagno, Caruso, Scotti and Battistini and other celebrities inimitably reproduced by the Aux-e-to-phone with a clarity of enunciation and loudness of volume which it would be impossible to obtain by any phonograph yet on the market.

Why don't the National Phonograph Co. manufacture a mammoth phonograph and gold moulded concert records (say 12 inches long) to compete with the machine specially alluded to?

The opinion obtains that so far as evolution is concerned, the phonograph seems to have almost reached finality, but the writer of these notes does not endorse that view, believing, as he does, that there is still a big field for developing the potentialities of cylinder instruments, and he hopes that the editor of The Talking Machine World will wield his potent pen in stimulating each inventor of his great country to apply his fertile brain to the improving and perfecting of the prototype and precursor of all talking machines—viz., the phonograph.

A novel type of disc machine was shown in Belfast about the middle of October, the "Klingsor," and as the premier jobber was favorably impressed with its ingenious construction, its tone and the sweetness of its reproduction, he placed at once a sample order for a couple of instruments—one at 12 guineas and the other at 18 guineas. He reserves further expression of opinion as to the merits of this German invention until next issue of The Talking Machine World.

The immense popularity of Zonophone records is freely commented upon in local trade circles. Odeon—especially band selections—are in good demand, and the same remarks apply to 12-inch Columbia discs.

Another consignment of Sovereign records (double-sided) to hand. Several large monthly shipments of Edison phonographs have also reached Mr. Osborne from America. The other popular makes of phonograph records, Sterling, White, Pathé and Edison-Bell still continue to sell freely.

The Saturday evening out-of-door phonograph concerts, to which Belfastonians are indebted to Edens Osborne, continue to be most popular.

TENACITY WORTH ACQUIRING

By Every Dealer Who Really Wishes to Succeed.

Tenacity, Mr. Dealer, is a faculty that you must acquire in order that the many obstacles which beset your path may be thrown aside, and success crown your efforts along the highway of phonographic achievement.

This word "Tenacity," which is so suggestive of the bulldog, is nevertheless the most dependable of all your many friends. We have spoken before of Accuracy, Courage, Courtesy and Push, and dwelt somewhat upon their good qualities, but believe me, Mr. Talker Man, Tenacity is the best ever, because if properly nourished, it will eliminate from your mind the remotest idea of a possible failure. In other words, if the trait of Tenacity is developed along the right lines, you cannot fail. It is the force that will keep you chained to your desk even though a vision of a pretty girl at a daintily appointed table in a quiet restaurant confronts you, while it whispers to you softly, "Duty before pleasure, sir." Stick-to-it-ive-ness will be your motto; the banner beneath which you fight, and as surely as the sun will rise to-morrow morning, it will lead you on to victory, for stick-to-it-ive-ness is synonymous with Tenacity.

To be Tenacious, you must

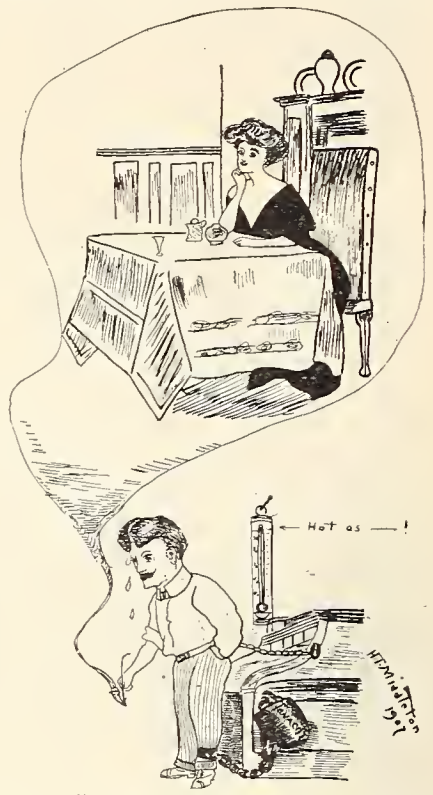
Take proper care of your patrons, no matter how few they are,

Establish among those patrons a reputation for reliability,

Never say "fail," when the wolf howls at the door,

Always wear the smile that won't come off,

Courageously meet adversity and vanquish it,



"A VISION OF A PRETTY GIRL."

In time of famine think of the feast that must come,

Take chances, for no risk no gain, and

You will win out all right if you're Tenacious.

HOWARD TAYLOR MIDDLETON.

THAT "DISSATISFIED FEELING"

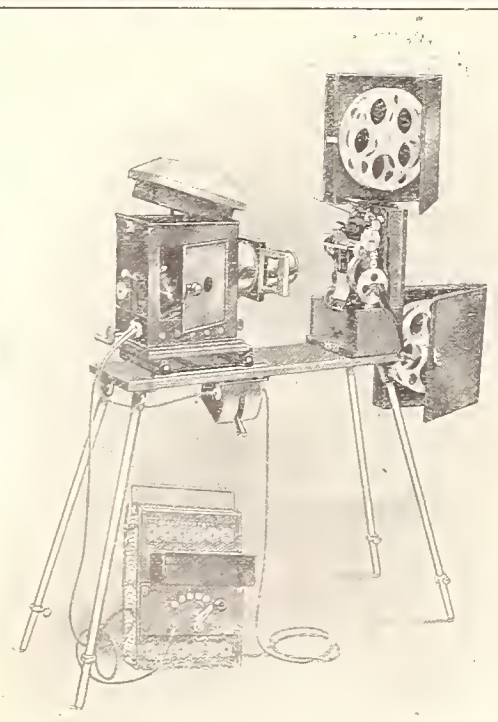
Comes Over Every Sales Force—How It May be Handled With Success.

Now we're going to do a bit of moralizing for your staff's sake, young and old. May not appeal to all of you; will to some we know, and should to all. It's about that insidious disease which periodically attacks salesmen and is known as the "dissatisfied feeling." How do you handle the thing, anyway? Make big bluffs, do you? Say that you can get along without Smith, Brown or Jones and wind up by letting Jones go.

Jones is sorry he spoke, so are you, and both would have it different, but dignity wouldn't let things adjust themselves amicably. Now, Mr. Dealer, a word in your ear. When the wave strikes your staff or any part of it, don't pretend to shut your eyes and think it wisdom to preserve what you call discreet silence. Take the man that's got under the influence and talk to him—not pleadingly, but with a view of helping him. Show that human nature is a tricky proposition—never was satisfied and never will be.

Tell him that, though he's trying to give his situation the icy hand, there are scores of equally capable men ready to step in when he steps out. Of course, it's his privilege, you say, to exercise freedom of action in what concerns himself, but if the dissatisfaction is only a temporary squirming, not because conditions are irksome or salary inadequate, but merely that restless, indefinable feeling that attacks every mortal at some period or other, one is more than justified in stepping from the beaten path and speaking a word of warning, of encouragement, too, that a generally speaking faithful employe may be spared the humiliation of eating humble pie.

Of course, where an employe thinks of changing for a larger field, with the possibilities of more remunerative positions, the case is different. A commendable ambition for every employe to have, we say, that some day or other he will get to the top of the heap. What we're bringing forth for your consideration is the wisdom of counteracting, in as far as you can, the influence that more or less attacks the ranks of employes everywhere, urging at certain periods a change, for no earthly reason, though, but the sensation of making a change. Oftener the change is for the worse than otherwise.



DEALERS!

Are you selling the Kinetoscopes and Moving Picture Machines which are being used in your town? If not, you are losing money which belongs to you. We furnish you the machines and everything necessary to make a complete outfit.

Write to-day. Easy money.

PATIENCE A NECESSITY

In the Talking Machine Business as in Every Other Industry.

No talking machine manufacturer, jobber or retailer has ever succeeded without patience, or failed if he has used it to the very best advantage. It is the "whole show" in the "talker" trade, because it stands for "get there."

There are so many people with a grouch against everything in general and talking machines in particular—people who would kick if they were playing football, and the chances are that you furnish the most satisfactory outlet for their spleen. Let us suppose that a member of the Grouch Fraternity has purchased an outfit at your store. He calls upon you a few days later with blood in his eye. "Your goods are rotten!" he roars. "The blamed machine won't run; the records slip on the mandrel; the reproducer cuts the records; in other words, the whole outfit is a disgraceful substitute for a talking machine and its accompaniments."

After you have digested this fiery tirade against your wares, do not tell your outraged patron to go to Hel-ena, because, in all probability, he would not go, anyway, and your profanity would only excite him the more. You will find it much more diplomatic to be patient. Place a cool hand upon his feverish brow (figuratively, of course) and assure him of your sincere regret that such a deplorable error should have been made. Ask him to bring in the mutilated corpse and explain to him in a soft and silky voice that you will do all in your power to bring about a resurrection. When he returns once more with the junk that he sarcastically remarks was once a talking machine, and reiterates that it is a disgrace, etc., make an exhaustive examination in his presence. You find, of course, that the belt is too loose; the records were not shoved on the mandrel hard enough to allow them to work properly, and that the recorder was used instead of the reproducer in the rendition of his phonographic program. At first thought, this is not your fault at all, but simply dumbness on the part of your patron. Think again! Did you mention all the facts necessary to make him an accomplished "talker" operator at the time he made the purchase of you? No, you did not; you told him the machine was a wonder, which was true, but you should also have tested it thoroughly, as it may have lost its adjustment somewhat while in transit between the factory and your store from jar or other causes. It was also "up to you" to explain the difference between the reproducer and recorder, for although they are labeled, everyone does not realize just what the names stand for; in fact, you should have dwelt at some length upon every detail connected with the operation of the machine in question. If this had been

"YOUR GOODS ARE ROTTEN!" HE ROARS.

done in the first place, your customer would not have developed a chronic case of grouch, nor would you have narrowly missed losing his patronage. Adjust the instrument accurately for him; play a record upon it to prove that it is running just right; take the blame upon your own shoulders, and send him home a happy man.

You can make your grouchy customers love and honor you, Mr. Dealer, by playing the game of patience with them.

HOWARD TAYLOR MIDDLETON.

A CLEVER DEVICE IS ALL-TONES.

A new and very clever little device is the "All-Tone," manufactured by "All-Tones" Co., of Newark, N. J. This invention consists of an improved rubber horn connection, combined with which is a patented shutter which works on the inside and acts as a sound modifier. This allows the most delicate shading in operating the machine and is a great addition to the "talker." It retails at 10 cents and fits all cylinder machines. A new "Victor" modifier is now under construction.

LOWER PRICES FOR OPERA RECORDS.

The Victor Talking Machine Co., under date of October 25, advise the trade that the following numbers of the "Il Trovatore" opera series of 10-inch records, viz.: 61,153, 61,154, 61,155, 61,156, 61,157, 61,158, 61,159 61,160, 61,161, 61,162, 61,163, 61,164, 61,165, 61,166, and the following numbers of 12-inch records of same, viz.: 71,028 71,029, 71,030, 71,031, will be reduced on January 1, 1908, to 60 cents and $1 each, respectively, at retail. The following numbers of the "Ernani" Opera series of 10-inch records, viz.: 61,167, 61,168, 61,169, 61,170, 61,171, 61,172, 61,173, 61,174, 61,175, 61,176, 61,177, and the following numbers of 12-inch records of same, viz.: 71,032, 71,033, 71,034, 71,035, 71,036, 71,037, will be reduced on January 1, 1908, to 60 cents and $1 each, respectively, at retail. In this connection they state:

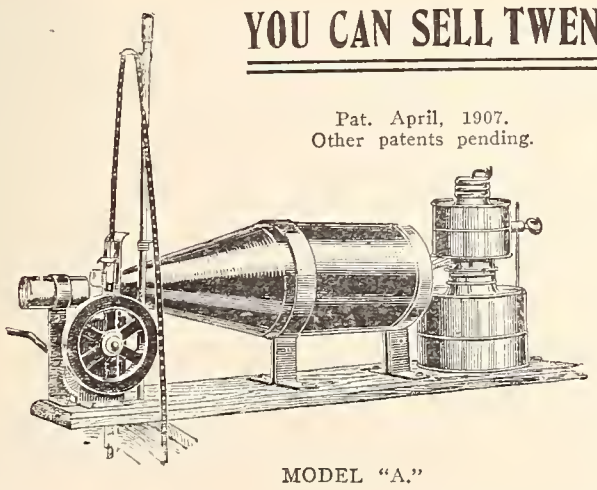
"Our 'Selling' and 'Record' Committees, in a joint meeting recently, decided that it would be a wise move to reduce the opera series to the lowest possible price on such numbers as we could, as it would increase the sale and interest, among the more moderate circumstanced Victor owners, in operatic works."

The Hopkins Bros., of Des Moines, Ia., have a remarkably well equipped wholesale and retail talking machine department in their large sporting goods store. They report business conditions excellent.

Theodore Terry, of the Victor Talking Machine Co.'s traveling staff, arrived in New York recently from an extended Mexican trip.

YOU CAN SELL TWENTY VITAK—Model A—MACHINES TO ONE OF ANY OTHER MAKE

Pat. April, 1907.
Other patents pending.



MODEL "A."

WHY? Because we manufacture and sell over three hundred "Model A" VITAK MOTION PICTURE MACHINES per day, bringing the cost of manufacture down to where no one can compete.

The VITAK, model A, is a small motion picture machine for home use, and is just what everyone is looking for, as it is within his means. The film is one-third the size of the standard film and has twice as many pictures to the foot. Being greatly improved over last year's model, it is the most salable article you could handle for the following reasons:

1. **The mechanism is not only made with new devices but is nickeled throughout.**
2. **The baseboard is of cherry and highly polished.**
3. **The rod that holds the film is now metal instead of wood.**
4. **With each outfit 25 feet of film is included (3 different films).**
5. **It is equipped with either acetylene or 100 C. P. stereopticon electric lamp.**
6. **It throws a picture 2 feet wide.**
7. **It can be used as stereopticon by using VITAK stereopticon views.**

50,000 satisfied customers throughout the United States. Retail price complete with 25 feet of film F. O. B., New York, Acetylene outfit, $10.00; Electric outfit, $15.00. Samples sent to dealers upon receipt of list price, less 30 per cent. discount.

BEEKMAN'S FAREWELL DINNER.

The New Sales General of the Universal Talking Machine Mfg. Co. Entertains His Former Associates of the Victor Distributing & Export Co. at Dinner on Saturday Evening.

On October 26 J. D. Beekman, now general sales manager of the Universal Talking Machine Mfg. Co., Newark, N. J., gave a farewell dinner to his former office associates in the Victor Distributing & Export Co., of which he had been sales manager, at Little Hungary, on East Houston street, New York. The guests sat down at 7:30 and finished along toward the midnight hour. Of course, everybody congratulated the host on his promotion, their good wishes for his continued success being made in happy phrases and with much sincere feeling, to which Mr. Beekman made fitting reply, returning his thanks. The menu was up to the Victrola standard. Those present were: General Manager Williams, J. D. Beekman, A. D. Doty, S. W. Williams, John Van Horn, F. H. Millar, A. J. Whitbeck, E. G. Evans, Virginius W. Moody and P. E. Connell.

Mr. Beekman started west last week to be gone for several weeks, and will call upon the entire talking machine jobbing trade in the interest of the Zonophone lines.

COLUMBIA CO. TO MARCONI.

Officers of the Columbia Co. Send Heartiest Congratulations to Marconi on the Marriage of Great Britain and Canada Through Wireless Telegraphy—The Wireless Wizard Is the Consulting Physicist of the Columbia Co. and a Wonder in These Wonderful Days.

As might be expected in connection with one of the greatest events in the progress of the world, the announcement made recently that Marconi had established a transatlantic wireless service between Glace Bay, Nova Scotia, and Clifden, on the Irish coast, has been given extended mention in the daily press. Marconi is a doer of things, and wireless telegraphy between the old world and the new has now become an actual fact. Its tremendous influence on the world in general can hardly be estimated at this moment.

This remarkable achievement is of special interest to the talking machine trade, inasmuch as Marconi, the inventor of wireless telegraphy, is the consulting physicist of the Columbia Phonograph Co., and it goes without saying that the connection of the wireless wizard with this great institution can mean but one thing—that the Columbia graphophones and records are destined to mark a still greater advancement—for Marconi's connection with any and everything means progress.

On October 18, immediately after the news of Marconi's great achievement had reached New York, the Columbia Phonograph Co. sent the following telegram of congratulation to their consulting physicist:

"Signor G. Marconi, Glace Bay, Nova Scotia: Accept hearty congratulations in your epoch-marking achievement. One of the great events of the World's history. Edward D. Easton, president, George W. Lyle, vice-president, Columbia Phonograph Co."

On October 19, Marconi replied as follows: "Edw. D. Easton, President Columbia Phonograph Co., New York: I thank you and Mr. Lyle most sincerely for your kind message and flattering expressions. Marconi."

The first announcement of the new Columbia Phonograph Co.'s Marconi records was made a few weeks ago. Although these new records have been introduced to the trade but a short time, the success they have achieved has been most gratifying to the company.

UNIQUE RECORD SECTIONAL CABINET.

One of the most "Unique" specialties ever placed on the talking machine market is the new disc record sectional cabinet, which is controlled by Benj. Switky, the popular Victor jobber, of this city. For some time past this gentleman has been keeping his eyes open for something in this line that had the merits necessary for a big seller. That he has been well repaid for his patience will be readily seen if one but glances at his advertisement, which appears in this issue.

J. O. Prescott, for the past few years manager of the Hawthorne & Sheble Mfg. Co.'s recording laboratory in New York, is no longer connected with that house. He left last week for a fortnight's hunting on Long Island, and on returning he may have something of interest to announce to the trade relative to his work in a fresh field.

TOPHAM'S CASES

are the original and standard. Build up your trade by carrying the standard rather than the imitation.

1855—1906

All our cases are made from select lumber, covered with a genuine book cloth, imitation of seal grain leather. An inside flange, which is cut from the solid wood, forming the top, thus giving strength and keeping out dust and dampness, is a point I claim exclusive to our case. Cylinders are made on especially constructed machines and are correct size and uniform diameter. By my special method of fastening in, they are absolutely secure.

JAMES S. TOPHAM

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

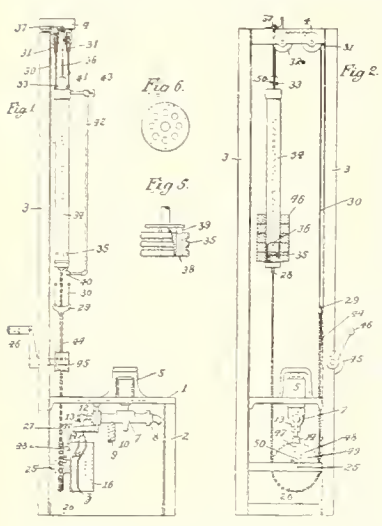
(Specially prepared for The Talking Machine World.)

Washington, D. C., Nov. 7, 1907.

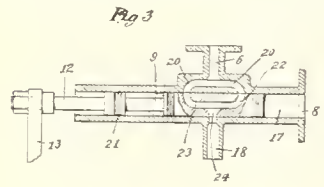
PHONOGRAPH RECORD MAKING MACHINE. Charles A. Reiners, Hoboken, N. J., assignor to Evans Phonograph Record Co., same place. Patent No. 866,219.

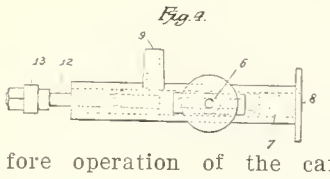
The object of this invention is to provide a machine for producing phonograph records which will insure a perfect and uniform product, at the expenditure of as little labor, time and power as possible.

In carrying out this invention the inventor makes use of a frame or table carrying the usual chamber for holding the blank within an interiorly configured matrix to which blank there is first admitted steam or other heated fluid under pressure to soften and expand the blank into the matrix. Means are provided for then exhausting said steam and for admitting a cooler fluid, preferably compressed air, to cool and shrink the blank to permit its removal. This operation is old and well known in the art and needs little explanation.

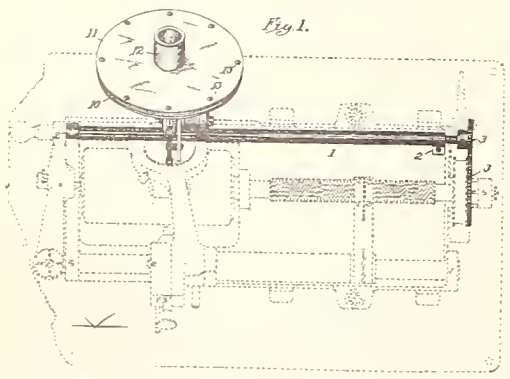


According to this invention means are provided for determining the length of time to be occupied by the foregoing cycle of operation, which is effected by means of a dash pot cylinder and piston weighted so as to slowly fall by gravity and operatively connected to the valve means for controlling the said cycle of operation. Means is also provided for proportioning the length of time in which the various or different fluids have access to the matrix chamber during such cycle. A cam is used for this purpose which is operated by a single slide valve stem for connecting said chamber with steam, exhaust or air pressure. There is also provided means to insure a proper initial position of the cam and valve before operation of the cam, whatever be the elevation to which the cylinder is raised.



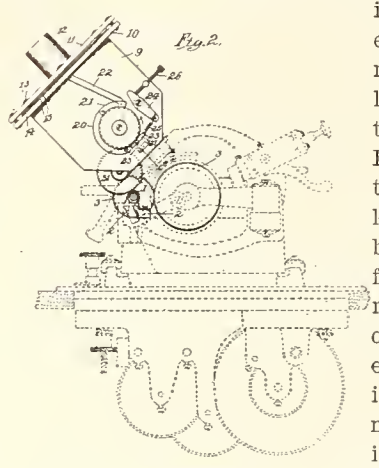


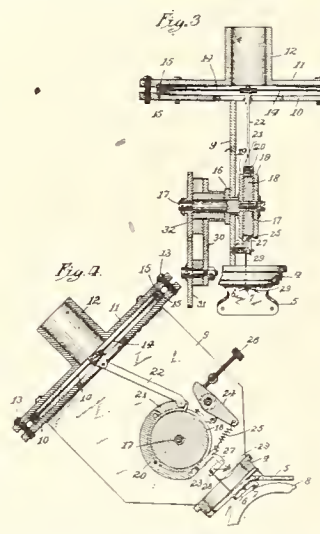
In the drawings, Figure 1 is a side elevation of a machine of the invention; Fig. 2 is a rear elevation of the same with the cylinder partly in section; Fig. 3 is a central longitudinal section of a preferred form of valve; Fig. 4 is a plan of the same; Fig. 5 is a side elevation partly in section of the piston, and Fig. 6 is a plan of the same.



FRICTION REPRODUCING ATTACHMENT FOR PHONOGRAPHS. Alexander N. Pierman, Newark, N. J., assignor to the New Jersey Patent Co., West Orange, N. J. Patent No. 867,597.

This invention relates to sound reproducing devices of the type wherein the diaphragm is vibrated by means of a friction shoe engaging a continuously rotating friction wheel, the friction between the friction shoe and friction wheel being varied by varying the pressure of the friction shoe on the friction wheel, such variation in pressure being effected either directly or indirectly by the sounds to be reproduced. Devices of this type are well known and have been suggested for effecting the reproduction of ordinary sounds either directly as in the case of megaphones or indirectly as in the case of telephones or phonographs. The suggestion has also been made of actuating the friction block by means of levers, in order that the friction may be increased and thereby permit the reproduced sounds to be augmented. Examples of these suggestions are found in British patents to Hope-Jones No. 15,245 of 1890 and to St. George No. 3,473 of 1880.

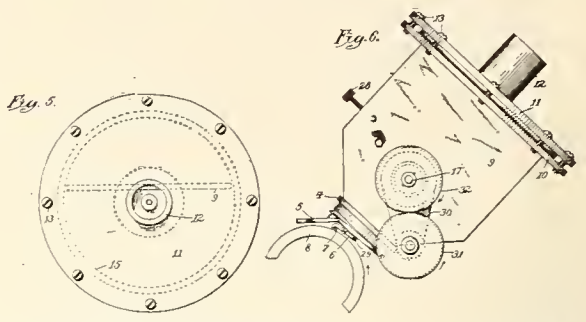


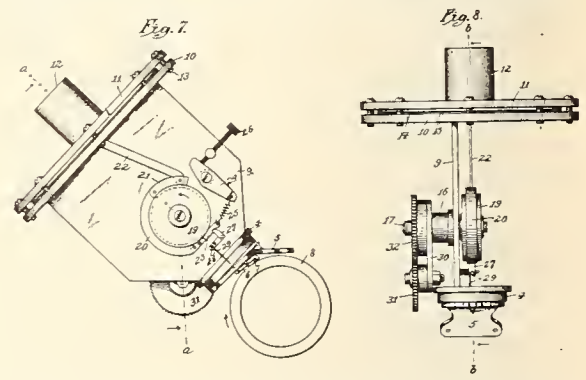


This invention relates to improvements in apparatus of this type in its application to phonographs and allied talking machines, and the object is to provide an attachment for the purpose which can be readily applied to a phonograph at small cost and without interfering with the effective operation of the same.

The invention has particular reference to the means whereby the friction wheel may be continuously rotated while at the same time the friction wheel and parts co-operating therewith may be progressed longitudinally with respect to the record; also to the means for varying the leverage between the reproducing stylus and the friction shoe and further details of construction and operation.

In order that the invention may be better understood attention is directed to the accompanying drawings forming a part of this specification and in which Figure 1 is a plan view, showing in full lines an improved attachment applied to a well known type of Edison phonograph, the latter being illustrated in dotted lines, Fig. 2 an end elevation of the same, Fig. 3 a sectional view on the line *a*—*a* of Fig. 7, Fig. 4 a section on the line *b*—*b* of Fig. 8, Fig. 5 a plan





view of the diaphragm box, Fig. 6 a side elevation of the attachment showing the reproducer stylus in engagement with the record, Fig. 7 a side elevation similar to Fig. 6, viewing the attachment from the opposite side, and, Fig. 8 a front elevation of the attachment.

SOUND BOX FOR TALKING MACHINES. John H. Elfering, Camden, N. J., assignor to Victor Talking Machine Co. Patent No. 867,259.

The object of this invention is to provide such a construction in sound boxes that the parts of the casing thereof may be easily adjusted to give the correct pressure upon the parts for holding the diaphragm in position. Heretofore, in the construction of souud boxes, it has been customary in some instances to force the parts of the casing of the sound box together, so that the same are retaiued relatively in position by friction. The difficulty has been experienced

To All Talking Machine Dealers

Why Not Try Us for Prices

Remember, we make only to Specifications or Samples, which you must send in.

THE WALLACE BARNES COMPANY

BRISTOL, CONN.

in this manner of assembling the parts of a sound box arising from the fact that the exact amount of force to produce the requisite pressure upon the parts for holding the diaphragm, cannot be accurately determined, thereby causing considerable variation in the efficiency and quality of reproduction in different sound boxes. This invention is designed to efficiently overcome these objections.

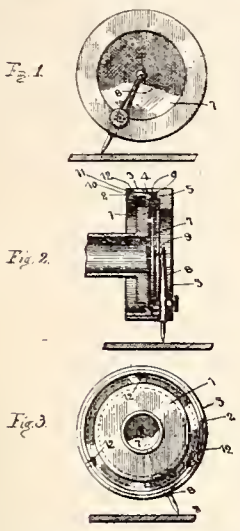

Figure 1 is an end elevation of a sound box embodying my improvements; Fig. 2 is a central, longitudinal, sectional view thereof, and Fig 3 is a rear elevation thereof.

Figure 1 is an end elevation of a sound box embodying my improvements; Fig. 2 is a central, longitudinal, sectional view thereof and Fig. 3 is a rear elevation thereof.

Sound-Conveying Device. Edwin H. Modley, Ardsley, Pa., assignor of one-half to Hawthorne & Sheble Mfg. Co., Philadelphia, Pa. Patent No. 868,612.

This invention relates to sound-conveying devices and has reference, more particularly, to means whereby the sound conveyed by the device can be modified as desired, as to tone, magnitude, etc. The invention is of particular utility in connection with talking machines both in recording sounds and in reproducing the sounds recorded, although the same may be used in other connections with highly beneficial results.

It is well known that the best reproductions from records of sounds of different character can be obtained only by using mechanism specially adapted for the reproduction of the particular sound, that is, a reproducer which will give the most faithful reproduction of a record of a vocal selection would give an inferior reproduction of an orchestral or instrumental solo selection. For this reason, in order to obtain the best results it is necessary to have a number of reproducers and to use one or another according to the character of the record to be reproduced. Moreover, it has been found practically impossible to make amplifying horns and sound boxes so near alike to every part as to give reproductions which are the same in tone pitch, resonance, etc. Also, in recording sounds, it frequently happens that certain tones cause what is known as "blasting" and a faithful reproduction of such a tone cannot be obtained.

The object of this invention is to provide a sound-conveying device having adjustable means therein by which the sounds conveyed by the device can be modified and their volume, tone or pitch regulated at will. In this way when the device is used to convey sounds to be recorded to a recording diaphragm and stylus, the objectionable blasting can be avoided by an adjustment of the movable parts; also, when the device is used to convey sounds reproduced, it is unnecessary to substitute one reproducer for another when changing from a record of one character to one of another, and the slight differences in sound boxes and horns may be readily compensated for, so that the most faithful reproduction of the original sounds can be obtained.

In the preferred embodiment of this invention adapted for use in connection with sound-reproducing means, there is provided a body located within the sound-conveying tube leading from the reproducer and movable within the tube so that its position determines the shape of the interior of the tube, adjusting devices being provided whereby this body can be moved to and locked in the desired position from outside the tube. By means of such an adjustable modifier not only can the pitch of the reproduced sound be regulated but also its character can be changed from one which is rather hollow and resonant to one which is much more sharp.

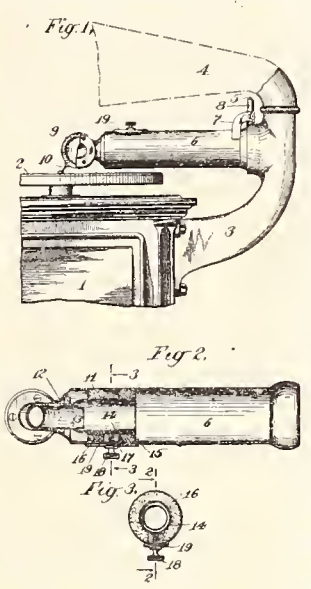

Figure 1 is an elevation of a portion of a talking machine; Fig. 2 is a longitudinal section of the tone-arm thereof, inverted to better illustrate its shape, the section being on line 2—2 of Fig. 3, and Fig. 3 is a transverse section on line 3—3 of Fig. 2.

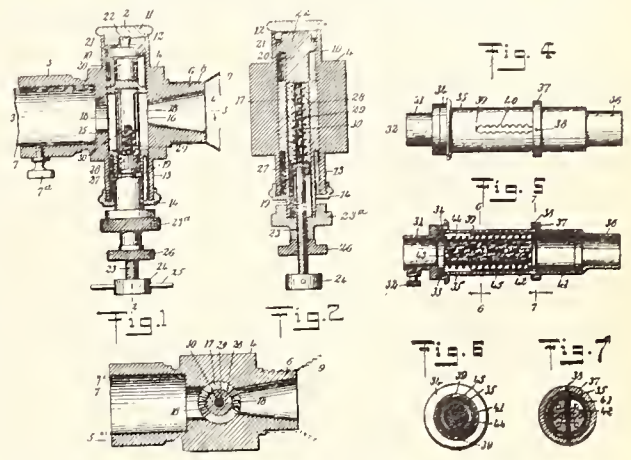
Attachment for Talking Machines. Alfred Dee Pinckney Weaver and John Edward Carney, Montgomery, Ala., Weaver assigning to said Carney. Patent No. 867,773.

This invention relates to sound recording and reproducing machines, including all types of talking machines.

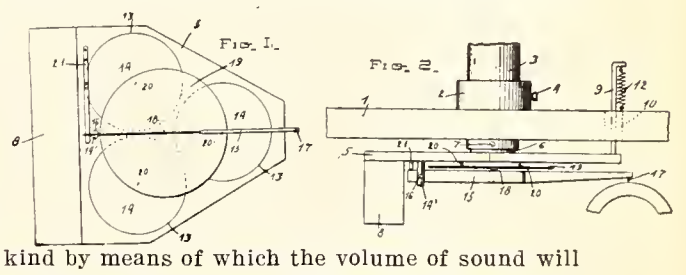
Reference is made to the accompanying drawings, in which Figure 1 is a fragmentary, horizontal section through the attachment, showing how it is connected with the horn and with the recorder or reproducer, as the case may be, of the talking machine, and also showing the porous material for breaking up the resonance of the air column; Fig. 2 is a central vertical section upon the line 2—2 of Fig 1, showing more particularly the internal construction of the attachment and the details of the porous material used for destroying the resonance of the air column; Fig. 3 is a section upon the line 3—3 of Fig. 1, looking in the direction of the arrow, and showing the cylindrical grid used for containing the porous material, and also for adjusting the device so as to regulate the volume of sounds; Fig. 4 is a plan view of a modified form of the attachment and showing the movable collar used for controlling the degree of compression of the porous material; Fig. 5 is a central section



through the construction shown in Fig. 4 and showing the material used as a compressible mass of sponge rubber encircled by a spring for restoring the mass after compression; Fig. 6 is a vertical cross-section upon the line 6—6 of Fig 5, looking in the direction of the arrow and showing the concentric arrangement of the mass of sponge rubber, the spring encircling the mass, and the telescopic tubes encircling the rubber and spring; and Fig. 7 is a vertical cross section upon the line 7—7 of Fig. 5, looking in the direction of the arrow and showing the pin for holding the telescopic tubes in various predetermined positions, thereby regulating the degree of compression of the sponge material.

Sound-Reproducer for Graphophones. William Hart, Kirksville, Mo. Patent No. 867,821.

This invention relates to improvements in sound reproducers for graphophones, and the object of the invention is to provide a device of this



kind by means of which the volume of sound will be greatly increased and made more clear and distinct.

In the accompanying drawings, Figure 1 is a side view of a sound reproducer constructed in

accordance with the inveution; and Fig. 2 is a bottom plau view of the same.

Method of Making Molded Flat Sound-Records. William Helm Hoyt, Wyoming, N. J. Pateut No. 867,975.

This inventiou relates to methods for making molded flat sound-records for talking machines and has for its obpect to cheapen the cost of manufacture of such articles without impairing the efficiency or wearing qualities thereof.

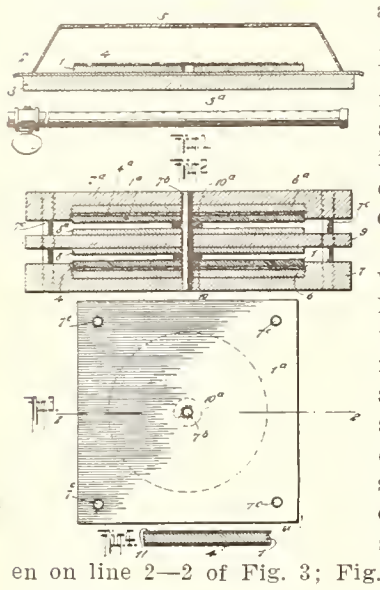

Figure 1 is a vertical section illustrating one of the steps of this method; Fig. 2 is a vertical section showing the mold employed, at a subsequent stage of the process, the section being taken on line 2—2 of Fig. 3; Fig. 3 is a plan view of such mould, and Fig. 4 is a cross-section of part of a record made according to this invention.

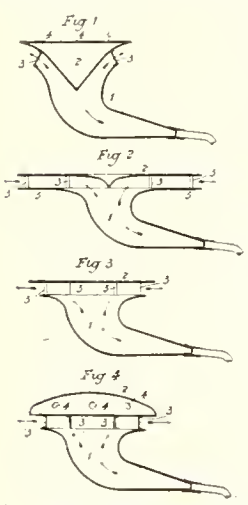
Trumpet or Horn of Sound-Reproducing Instruments. Roland Revell, West Hampstead, London, Eng., assignor to Thomas Knight Barnard, Stroud, Eng. Patent No. 867,836.

This invention relates to horns for sound-reproducing instruments, and particularly to deflectors for such horns. The object of the invention is to provide a satisfactory deflector which may be attached at the mouth of the horn and is so constructed as to afford au aunular aperture through which the sound issuing from the horn is deflected practically horizontally in all directions at ouce. In connection with the deflector, the inventor prefers to add also a sounding board which may, for effect, be perforated.

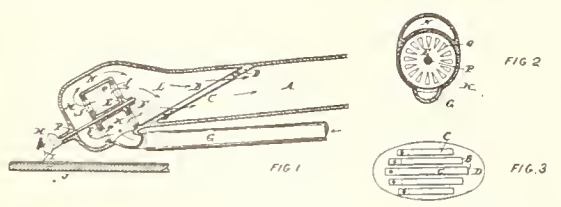


In the accompanying drawings Figure 1 is a vertical section of a horn provided with deflector and its accessory sounding board; Fig. 2 is a vertical section of a horn showing deflector without a sounding board; Fig. 3 is a vertical section of a modified form of the deflector, while Fig. 4 is a vertical section of the same, provided with a sounding board.

Sound-Reproducing Machine. Robert L. Gibson, Philadelphia, Pa. Patent No. 868,771.

The object of this invention is to provide a sound-reproducing machiue which shall cause a forced current of air to be put into sonorous vibration under the application of a reed or reeds and a control valve, which is vibrated by the stylus, in turn put iuto a state of vibration by the traveling record tablet.

Heretofore sound has been reproduced by causing a blast of air to be forced through the amplifier or horn, and during its passage interrupting



the uniformity of its flow by the action of a valve vibrated by the stylus. The objection experienced by this type of machine has been that the sonorous sound necessitates a continuous flow of the air through the valve in large volume and thereby consumes a large amount of air. As the air has to be forced by a motor, the great quantity of air required to flow through the open valve structure makes the machine expensive to operate and costly to make on account of the size and strength of the motor and blower required.

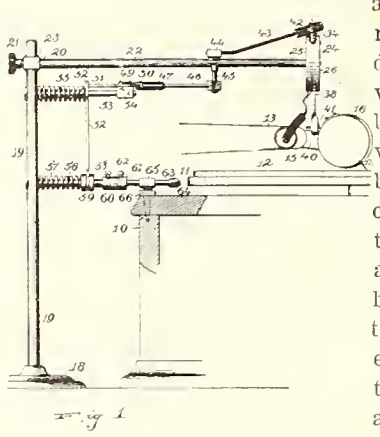
More specifically, the object is to reduce the quantity of air necessary for circulation and thereby reduce the cost of operatiou. The object is further to reduce the cost of the machine and at the same time produce a more sonorous and pleasing tone to the sounds emitted.

In carrying out this invention the inventor has provided a continuous air passage from a blower to the horn or amplifier, and in said passage interposes a reed or reeds free to vibrate and also a valve controlled by the record tablet through the stylus, which valve controls the pulsations of air passing to the reed or reeds in accordance with the amplitude of the vibration of the stylus.

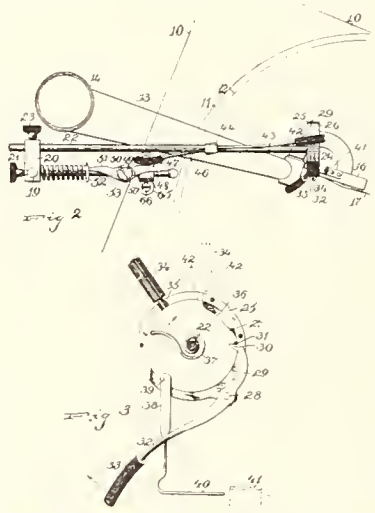
Figure 1 is a sectional elevation of a sound reproducing mechanism embodying the invention; Fig. 2 is a transverse section on line 2—2; and Fig. 3 is a plan view of the reed portion removed showing a multiple reed arrangement.

Stop Mechanism for Talking Machines. John C. Stuckey, Elizabeth, N. J. Patent No. 869,749.

This invention relates to a device to be placed alongside of a talking machine, and preferably alongside of a disc machine, and is designed to provide a means for lifting the needle, with its sound-box, from the record on the completion of the record, and is adapted to be adjusted before the record is started so that when the proper time arrives the device will be operated to lift the needle out of engagement with the disc.



Another object of this invention is to provide a device of this kind that operates a brake so that when the needle is lifted, the machine is



automatically stopped so that if the operator is absent from the machine when it completes its record, the machine will stop and the needle is lifted away from the record and there is no further reproduction of any sounds. This device saves considerable winding, as the record will not rotate any more than is necessary to complete the reproduction. There is wear and tear saved on the works of the machine, and a better exhibition of the machine can be given with this automatic stoppage of sound on the mechanism.

The invention is illustrated in the accompanying drawings, in which Fig. 1 is a side view of an improved device showing its relation to a talking machine, and Fig. 2 is a top view showing a portion of the machine and its relation to the device. Fig. 3 is a face view of the tripping mechanism that releases the machine to stop the rotation of the disc, and also the means for lifting the sound-box and the needle from the record.

WHAT'S THE MATTER WITH TEXAS?

Any manufacturers of talking machines who contemplate moving or who desire to move to great Southwest, will no doubt be interested in the following item which recently appeared in the Austin (Tex.) "Statesman." "Now that Texas has demonstrated beyond the cavil of a doubt its ability to sustain a piano factory, what is the matter with the idea of manufacturing talking machines? Let's keep the push wheel right in behind the manufacturing industry. One successful factory will beget a half dozen or more other factories."

A double page advertisement of the National Phonograph Co. in the October 26 issue of the Saturday Evening Post, cost $4,200. The company have recently inaugurated a new publicity campaign and increased their appropriation materially.

COLUMBIA SALESMEN CONFER.

The Seventy Ambassadors of the Columbia Phonograph Co. Have Heart-to-Heart Talk With Manager Dorian Regarding the Introduction of a New Feature of Teaching Telegraphy by the Aid of a Graphophone.

Manager John Dorian had one of his heart to heart talks with 60 or 70 Columbia salesmen at the 23d street store, New York, recently, at which he discussed the "bull dog" spirit in going for and keeping after business. The salesmen were the pick of New York's selling talent, and Mr. Dorian paid them a high tribute for their already excellent records. Mr. Dorian, who is noted as a dog fancier as well as a business getter, offered a fine bulldog as a prize to the branch making the best showing for the ensuing quarter. The occasion was of especial interest because of Mr. Dorian's introduction of a new feature of the business—teaching telegraphy by the aid of a graphophone. The Electric Novelty and Talking Machine Co., of Bridgeport, Conn., have arranged with the Columbia Phonograph Co. to handle this system, which consists of 16 disc or cylinder telegraph lessons, executed by two of the best telegraphers in the United States. A lesson key and a telegraph key and sounder accompanies each complete outfit, at an expense of $18.50. Graphophones may be secured at regular catalog prices. This method of teaching telegraphy has the enthusiastic endorsements of such high officials as Vice-President Charles P. Bruch, of the Postal Telegraph Co., of New York; Assistant General Manager John C. Barclay, of the Western Union Telegraph Co., and many experts who pronounce it the quickest, most scientific and in every way the best way of learning telegraphy yet invented. As the new state and national labor laws will cause a demand for several thousand additional telegraphers almost immediately, there will doubtless be a big run on these telegraph lessons.

One of the inventors of the new system, who was present and heard Manager Dorian's magnetic speech, remarked afterward that, although his weekly earnings had long since many times exceeded the stipend of a local salesman he felt moved to remove his coat and enlist in the competition for the bulldog prize.

The window display of the Graphophone system of teaching telegraphy has proven a magnet of drawing power for that institution recently.

P. Godwin, the clever Columbia window decorator, has scored another triumph—this time a spectacular one. Occupying nearly the whole of the eastern window of Columbia Co.'s store at 35-37 West 23d street is an immense arch constructed of wood and paper, painted to represent solid marble. Across the top is the following inscription: "Columbia records fit any talking machine and make it almost as good as the Columbia Graphophone." Suspended from the arch by heavy metal chains hangs a huge block of the same imitation stone, weight supposedly 9,000 pounds, on which is written: "This argument carries weight," as a finishing touch. The background is filled with the latest model machines. Judging from the crowds who stop to admire, this publicity is of the right kind.

STEWART
You can handle banjos easily and add to your income. Talking machine men will find them big sellers.

THE BAUER CO., 726-730 Girard Avenue Philadelphia, Pa.

CLOSING OUT DEAD COMPANIES.

A motion was granted by Justice McCall, of the New York Supreme Court, Oct. 26, for the appointment of a receiver of the International Graphophone Co. in an action brought by Attorney-General Jackson to dissolve the company, which has ceased to transact active business. Its plant and property were transferred to the Edison United Phonograph Co. James F. Lynch will be appointed receiver. The company was incorporated in 1880, with an authorized capital stock of $5,000,000. An officer of the National Phonograph Co., on being asked as to the status of the aforementioned companies, said: "Both are dead ones and of no earthly interest to the trade."

JUDGE WALLACE IS RETAINED.

Judge Wallace, recently retired as presiding justice of the United States Circuit Court of Appeals, second circuit, and who has been on the Federal bench for thirty years, has been retained by the National Phonograph Co. He will argue their side before Judge Hazel, United States Circuit Court, southern district of New York, in the case of the New York Phonograph Co. against the National Phonograph Co. and others in contempt proceedings. Judge Wallace has heard on appeal all the talking machine cases of note for the past six or seven years, and is expected to make an argument that will be notable in American jurisprudence. The question at issue is the decree signed by Judge Hazel May 2, 1905. Louis R. Hicks and John C. Tomlinson appear for the complainants.

John N. Willys, of the Elimira (N. Y.) Arms Co., also W. O. Pardee, of the Pardee-Ellenberger Co., New Haven, Conn.; C. B. Haynes, of C. B. Haynes & Co., Richmond, Va., and Henry Winkelman, manager of the talking machine department of Oliver Ditson Co., Boston, Mass., were in New York recently.

Henry Stern, head salesman of Landay Bros., New York, who was compelled to take a short vacation on account of illness, is back again at his post of duty in prime condition.

MOVING PICTURE AND AUTOMATIC MACHINES

SIDE LINES A NECESSITY

To the Small Talking Machine Man Who Has All the Equipment for Handling a Larger Business—Specialties That Will Fit in With the Talker Trade and Pay a Profit.

Notwithstanding the large number of dealers throughout the country who are now successfully handling side lines in connection with their talking machine department there still exists a strong antipathy, or indifference to "branching out." Somehow or other the idea of specialization has predominated and they have overlooked the countless opportunities which surround them. And doubtless one cannot devote too much brain matter to the "talker," as there is always something that can be improved or something added. But there is no reason why there should be any less attention paid to this department simply because one branches out. Take the success of the department stores as an example. Almost every salable article can be found under their roofs. How do they manage it? Simply by "system." Each department is under a competent head who is held responsible for its showing and the training of the men under him. In a small way, Mr. Dealer, you can do the same thing. Your "talkers," we will say, are being handled in a first-class manner, but the income from this one line is not large enough to stand the expense of increased rent or cost of living. "What ought I to do?" you ask. Study your customers, find out their wants, and then set about gratifying them, or as many of them, as offer a good margin of profit. Here are a few suggestions which it would be well to consider:

Stationery and school supplies is a line that can be carried profitably by talking machine dealers, and the demand is a continuous one. Certain standard brands which have been on the market for years sell well at all times. In connection with this line pencils, assorted pens and those of the fountain type should be carried, as not only do they naturally go together, but the profit from their sale is considerable. Illustrated post cards are another important addition to this department; in fact, so great is the demand for these little remembrances that they rightly deserve the first consideration, and any dealer who neglects handling them is losing a lot of good money. Views are probably the most popular, with comic, birthday and holiday cards a close second. Novelties in this line, such as pin cushions, match scratchers, Teddy bears—and those made from leather are big sellers.

* * * *

Talking machine dealers who have tried small musical merchandise as a side line have been well pleased with the results accomplished. Musical merchandise blends perfectly with the talking machine line and has a drawing power which assists the dealer. Banjos, guitars, mandolins, violins, accordeons, harmonicas, drums, and all kinds of small instruments can be displayed attractively and without taking up but little floor space, and a big holiday trade won if handled rightly.

Discoursing on the selling merits of musical instruments brings to mind four especially good ones, i. e., the famous Peerless automatic pianos, manufactured by the Peerless Piano Player Co.; the new and wonderful Sublima piano of the Regina Co., and the products of Wurlitzer and the Pianova Cos. These are all big guns in the hands of a wideawake dealer and should by no means be overlooked. In the regular line of slot-controlling devices, the new vacuum post card vending machine, manufactured by the Caille Bros., is a mighty good investment. While the Card Printer Co. have a winner in their machine by that name. For amusement parlors the Mutoscope still stands alone among its kind.

* * * *

Many of the dealers are now carrying sheet music, with great profit, in connection with their talking machine business, and buying the pieces as the new records come out. Nearly every family has a piano nowadays, and it is obvious that if a member likes a record very much, he would be inclined to purchase the selection in sheet music form, or, vice versa. And sometimes also not for the music alone but to obtain the words, all of which are often indistinguishable through the machine. In some stores the department is maintained with a view to increasing the number of visitors to the store. This is accomplished by placing a piano in the department and employing some one to play any piece in stock that may be requested by the visitors. In this way the store is made more entertaining, and at the same time many catchy pieces of music, or talking machine records, are sold that perhaps would have been slow movers.

In many of the stores the popular pieces are mentioned at very low figures, in their advertisement, with the stipulation that no mail orders will be accepted. This serves to bring the purchasers into the store, and is a material aid toward the selling of your other lines of goods, and other pieces of music. Frequently it is a good plan to advertise to give away a sheet of music to each customer who purchases a stipulated amount of talking machine goods or in connection with a sale of one specific article. It is not necessary to tie up a lot of money in establishing a sheet music department; on the contrary, a moderate sum will suffice. One large publisher estimates that the cost of stocking a department with enough music to make a good showing is under $200 and The World will be pleased to furnish, upon request, a list of such stock as it would be advisable to carry, together with other details. In case you did not care to invest in a piano, it would be gladly furnished by any dealer with the permission to place his card on it and also any sale you might make through its use he would give a certain per cent. on, thereby adding materially to your profits.

A line of cameras, photographic supplies, cheap watches, safety razors, sporting good (at this time of year—skates, sweaters, hockey sticks, etc.), make attractive side lines. Electric novelties and countless other merchandise lies waiting for the man with push and ambition to handle them. If Nature has endowed you with these gifts make use of them and quit crying "poor business," and get a move on. No man can be a success who sits still and waits for trade to come to him. Nothing will sell itself. The old saying, "The man who would in business rise, must either bust or advertise," is very much to the point and should be taken more to heart.

NEW PLACES JUST OPENED.

THE SUCCESSFUL PENNY ARCADE.

Important Points to be Considered by Those Desirous of Succeeding—Business That Can be Made Profitable if Given Proper Consideration—Should be Conducted on a High Plane.

There are five essential points to be considered by those who desire a successful penny arcade: location, high grade machines, catchy display cards, cleanliness and proper management. To begin with, the most necessary thing of all is to get a store in a location frequented by the most people. This does not necessarily mean that it must be in the leading shopping district—in fact, a store on a thoroughfare just before getting to the shopping district is preferable, as it will catch the people at a time when they are most apt to be looking for amusement.

Stores of almost any size will be found adaptable to the business from 16 feet to 25 feet in width and 40 feet in depth, upwards. To be successful, the place must be kept perfectly clean, attractively equipped and well conducted. Women and children are the best customers, and should be well looked after. Any rowdyism should be at once suppressed, as this will cause them to shun the place. The room should be well lighted, both inside and out. Any ordinary electrical supply can furnish the necessary equipment for lighting and for such of the machines requiring electric current. This part of the work is inexpensive. In a very modest way one of these places can be fitted up for six or seven hundred dollars, but, of course, as much can be spent in the equipment as the location and city would warrant. In a penny exhibit all kinds of amusement machines are desirable, but they should all be up-to-date and of the best make. The machines consist of phonographs, an automatic piano, picture machines, name plate and vending devices. In the physical cul-

ture machines there is the puncher, grip test, blower, lifter and other strength-testing devices that are always well patronized. The larger the variety the better.

It is necessary to have good music, as it always attracts and holds a crowd. In most places the automatic piano is used, but others have adopted the talking machine. Whatever music is used should be near the door, so it can be heard from the outside. The best location for the cashier's desk is about 25 feet from the front, and for the convenience of the patrons it is well to have boys with pennies going around to give change. As a rule it is safe to figure that the machines will take in about 10 per cent. more than the amount of pennies sold. This enables the owner to estimate what the earnings should be if handled by others than himself.

MOVING PICTURES IN ITALY.

Enthusiastic Reception of Scenic Views from America—Some Tips for Film Makers.

(Special to The Talking Machine World.)

Washington, D. C., Nov. 4, 1907.

Vice and Deputy Consul E. Santi reports as follows regarding moving pictures in Milan: "Milan, the center of Italy for the moving-picture machine trade, has already about forty such theaters. Every available hall is being turned into a moving-picture show, while nearly every second and third rate theater and 'cafe chantant' finishes the evening's entertainment with a few cinematograph pictures. During the dull summer season even the larger theaters are used. The films come chiefly from London and Paris. Italy also has a few film-making firms, the chief of which are to be found in Turin and Rome. Occasionally films are exhibited from the United States.

"There is an important future for American makers of films, if the manufacturer will put himself in line with the French and English competition. At present the chief French, English, and Italian firms have local representatives, who generally also run exhibitions. These representatives in Milan buy so many copies of the pictures and send them to the most important cities of Italy, so that the latest novelty appears in all of them at practically the same time. The films can be bought on the market at 5 cents per foot. The average picture has about 950 feet, although they vary from 65 to 1,350 feet. As they wear out they are sold cheaper and cheaper until unserviceable and are then thrown away. The consulate is informed by one of the most important exhibition proprietors that nearly all the celluloid films are made by an American firm in Rochester, N. Y., and that they are considered the best in the world.

"Dramatic and tragic scenes, natural scenery of an interesting nature and comical farces are sure to fill the hall at any time in Italy. The Italian loves to see living scenery; for instance, a moving-picture view of Niagara Falls was a huge success here a short time ago. The Italian also likes to see typical scenes of national life, such as, for instance, bull fights in Spain and winter sports on the snow and ice in Switzerland. Railway scenery is very acceptable, as are views of large towns. Pictures of the larger towns in the United States would be a huge success in Milan. Occasionally typical scenes from American life have been thrown on the sheeting, such as cowboy life and train wreckers. The Italian is disgusted, if not already surfeited, with pictures of singing and dancing women; neither does he like fantastical scenery from fairy tales. American film-making firms should see that the film headings are printed in Italian. Pictures with foreign titles are not appreciated in Italy.

"The consulate has been informed that American picture machines are not liked in Italy, being too complicated for the operator. The person interviewed by the consulate said that he has been in the trade for several years, has used all kinds of machines, and has found that the best are those where the operator's attention is not required in looking after the mechanism, but in watching the films themselves. In the case of American machines, he had to devote all his time in looking after the machine, thereby not paying any attention to the films, which wore out in half the time they otherwise should have done."

SOME IKONOGRAPH NOTES.

Occupying New Quarters—Stereopticon Attachment the Latest—Their Latest Films.

The past month has brought not only a raft of new business to the Ikonograph Co. of this city, but they have made a number of changes which are of interest to the trade. They have removed to larger offices at 125 East 23d street, where they have established their shipping room so as to be able to personally inspect every machine sent out, thereby ensuring a perfect stock for the jobber and dealer.

A new addition has been made to the Ikonograph, namely, a stereopticon attachment, which can be used on all machines by removing the front plate and adjusting the slide holder. Work on the "Travelogues" (or printed matter and slides for illustrating different tours in all parts of the world) is being pushed. They will be prepared to fill orders by December 1. The following are a few from their new December list of films: "Wild West Series"—(1) "The Holdup of the Stage Coach," (2) "Cowboy Sports," (3) "Attack on the Prairie Train," (4) "Western Sharpshooters," (5) "Cowboys Riding a Wild Steer."

The Ikonograph Co. have just issued one of the handsomest 1908 calendars, from a strictly artistic point of view, that it has been our pleasure to inspect for many a year. It is entitled "The Spirit of the Orchid."

CHANCE FOR MAKERS OF AUTOMATICS.

"La Compagnie Generale d'Amusements" is a late incorporation under the seal of the province of Quebec. According to the letters patent it is the purpose of the company to operate a chain of theaters similar to the Nickelodeons in the States, and the headquarters will be in Montreal. It would seem that the new company would be in the market for electric pianos and other mechanical instruments used in that class of theaters, and manufacturers should follow the matter up. The directors of the company are: Ludger Hamelin, J. A. Hilaire Hebert, Joseph Alcime Hurteau, Lambert Belair, Charles Louis Talioretti, Arthur Larente and Domina Gagne.

THE NATIONAL PICTURE MACHINE CO.

Among the incorporations filed with the secretary of the state of Delaware recently was that of the National Picture Machine Co., of Philadelphia, for the purpose of manufacturing moving picture machines, motion pictures, films, etc. Capital, $100,000.

N. Y. VITAK CO.'S LATEST MODELS.

The New York Vitak Co., of 180 Lafayette street, New York City, have greatly improved their Model A motion picture machine. The mechanism is of highly polished nickel throughout, the baseboard of a beautiful cherry finish and the whole machine has the appearance of a very high-class article. It is certainly a wonderful little machine and we would advise everyone to see and examine it.

The same company will have on the market within the next three months their Vitak Standard Model, which operates standard size films. No expense has been spared with this model and it will be used in homes as well as theatres, churches, etc. This is a strictly high-class machine and has been highly praised. It will be entirely of metal, including the stand. They will be glad to give any further information.

MAKING MOVING PICTURES.

Some of the Dangers That Encompass the Maker of These Delightful Entertainers—Many Thrilling Adventures Both Sought and Unsought Have Fallen to the Lot of the Man Who Depicts Life in Action.

The moving picture show is a delightful exhibition enjoyed by thousands, and because one can witness apparent hairbreadth escapes free from danger we smile with satisfaction at the tricks of the camera. But in the effort to reproduce realistic scenes the modern snapshotter for the moving picture concern does not always depend upon camera tricks. Frequently he gets the real thing, and sometimes, much to his dismay, he encounters risks that make his hair turn gray. The recent death of a man tied to the rails for a moving picture concern, which hoped to give a thrilling exhibition of robbers killing their man in this horrible way, is a point in question. Through some mistake of the train dispatcher a train was sent over the rails at the wrong time, and the man was killed before the camera.

Another instance of this kind, though not so fatal in its result, was that of taking a picture of a storm and wreck at sea. All the elaborate paraphernalia were taken out into the ocean off Coney Island. It was to be a realistic scene of the sea, and the day was rough enough to suit all. The old dismantled schooner which had been towed out for the purpose of a wreck had been too hastily patched up for the occasion, and it suddenly foundered with a dozen men on board. There was then a real shipwreck, and for half an hour everybody turned to the rescue of the amateur seamen. Unfortunately the camera man forgot his work in the excitement and failed to get some of the best pictures of the day.

An amusing instance happened on Long Island Sound last summer. The camera man had improvised a scene of modern pirates boarding a private yacht and sandbagging the crew. Everything went well until a revenue cutter hove in sight, and then the would-be thieves met more than they bargained for. The revenue men boarded the yacht, roughly overpowered the actors in the scene, and, in spite of explanations and expostulations, carried them ashore prisoners.

The modern camerist can take "fake" pictures so easily to-day that usually it is not essential to run any great risk. He takes the photograph of a mountain, and then of a man in the act of climbing it. A few minutes later he stumbles, and the fall from the perilous height is faked successfully enough for all essential purposes. But there is one series of moving pictures that represents the real thing. It was taken in the Alps, and the fall of the man was genuine. It was not intended so by the party, but at the critical moment the man lost his footing and fell headlong down the slope. In horror the rest of the party looked at the falling man, but the camera operator was a nervy chap, and, realizing that he had the chance of his life, he coolly took shots at the unfortunate one until he disappeared in a bed of snow hundreds of feet be-

low. Yet to many this real series of pictures would have no greater naturalness than many of the faked photographs thrown on the screen. The man, however, was not killed, but lived to enjoy the scene of his rapid descent pictured on the canvas.

Biographic pictures of wild animals are the most difficult to get, for animals cannot always be made to act for the picture man. Sometimes "dummy" wild animals are made up and put through antics, but they do not come up to the real thing. So the biograph man frequently haunts the wilderness in the hope of picking up something unusually fine. There are several excellent pictures of moving moose swimming across lakes, with the hunters on their trail, and of bears climbing trees or turning angrily upon their pursuers. But a genuine fight with a grizzly bear and a man is a gem worth preserving. Such a picture was taken two years ago in the Rockies by a veteran biograph camera man. He had been camping out with an old guide and bear hunter for nearly a month, but no game had come their way.

"If we track a grizzly you must tackle him, hand to hand," the camera operator had jokingly said several times.

"I'll do my part all right," replied the guide.

Then to the surprise of both one day they stumbled upon a genuine grizzly. The animal snarled and was inclined to edge away, but the sudden clicking of the camera startled the beast. True to his profession, the man with the camera had thought only of his work and nothing of his danger. Picture after picture was being reeled off before the bear had decided upon what course to pursue. Then, angry at this queer-looking instrument, the grizzly turned and rushed toward it.

"Hold him! Hold him, Pete," the snapshotter cried, addressing his guide.

"Hold nothing!" was the surly reply.

With a quick, short-range aim he shot directly at the bear. The bullet took effect, but did not kill the animal. With a snarl of rage he turned upon the guide and caught him with both front paws. There was a moment of fierce fighting. The guide tried to strike a home thrust with his knife, but the bear's hug was crushing the life out of him. Meanwhile the biograph was reeling off pictures so fast that the continuous click of the instrument sounded like a prolonged buzz. Death, however, came to the help of the guide, for the bear rolled over with one final growl. When the guide regained consciousness again his companion was wiping the blood from his wounds. In his enthusiasm he was muttering:

"Great! The greatest picture ever taken! It will make my fortune!"

The old guide raised himself on his elbows, and, glaring at the young man, said:

"Take your old pictures away or I'll smash them! You're a darn, driveling idiot or a cowardly cur to see a man killed by a bear and do nothing to help him. Git now, or I'll shoot the whole bunch!"

The angry man was in earnest, and the two parted, each unable to understand the point of view of the other.

Devotion to a profession is a splendid thing to see, but sometimes it may be carried too far. Two venturesome men representing a biograph company were camping in Florida last winter. They were picking up realistic scenery, especially such as lagoons, desert lakes, and wild swamp views, not expecting any real life scenes worth taking. One noon they slept in a dense cypress swamp tired out with their day's tramp. One of them was awakened by a noise. Rising from his position he saw to his surprise a large rattlesnake slowly winding its way across the sleeping form of his companion. At first he was paralyzed with fear, and then remembering his mission in those wilds he crept to his instrument and began to focus it. The big rattlesnake turned and surveyed him angrily. The rattle awakened his companion. The man operating the camera called softly:

"Keep quiet, Jim, there's a rattler on you. If you move he'll strike. Pretend you're dead."

Then with cool deliberation he snapshotted the angry snake. Every contortion of the body was taken, from the rattle of the tail to the slow shaking of the head. The snake had coiled for a spring on the chest of the recumbent man, and a false move on his part would have invited death.

"Just a minute more, Jim," the operator kept repeating, as he worked the instrument.

It seemed like an hour to the frightened man, but it was only ten minutes before the last picture was taken. Then the operator closed his instrument with a click, and turned to induce the snake to depart. He finally approached near enough so that with a long stick he could strike the swaying head a heavy blow. When the snake was killed Jim fainted.

Another series of pictures was taken from real life in Florida where an accident nearly proved fatal. The man had discovered a huge bull alligator in one of the swamps, and enticed him from the log toward the camera. The alligator had to approach the camera in order to reach the water, and backing up slowly the man snapshotted him in many living attitudes. He was so absorbed in his work that he scarcely noticed where he was stepping. Once he permitted the alligator to get so close to him that he was in danger of being hit by the tail.

Suddenly he stumbled and nearly fell backward in the lagoon. He caught himself just in time, and then hearing a sharp click back of him jumped nearly five feet. There, within a few feet, was another big alligator waiting to take a snap at his legs. One more backward step would have carried him within reach of the second monster. When the man recovered his nerve after this exciting experience, he smiled with joy at the thought of his "scoop," but inwardly he was saying that he wouldn't repeat it for any number of good moving pictures of alligators.

THE NICKEL THEATRE.

O Shakespeare, come and sit with us! Here are such theatre glories
As you, O million-peopled Soul, had loved! Yor you told stories
The crowds could see—yea, though the poems swept over their brains blind,
So much were women and men your words you spoke to all mankind.

It's a thick black room and a rough rude crowd—the real strong human stuff—
A screen's before, a beam of light rules through the air—enough!
Lo, on that beam of light there darts vast hills and men and women,
The screen becomes a stage; here's Life, blood-red with the living human!

In but ten minutes how we sweep the Earth, unbaring life,
Here in Algiers and there in Rome—a Paris street—the strife
Of cowboys, swinging lariat ropes—the plains, the peaks, the sea—
Life cramped in one room or loosed out to all Eternity!

Lo, now, behold the dead salt desert, the trail-lost man and wife,
A child clutched to her breast! They toil through sand, they cry for life,
They stagger on from hill to hill—now far, now near—their cry
Breaks through our hearts, their fight is ours, we love them as they die!

Yet, in ten minutes we drink Life, quintessenced and compact,
Earth is our cup, we drain it dry; yea, in ten minutes act
The lives of alien people strange; the Earth grows small; we see
The humanness of all souls human; all these are such as we!

O at day's end, and after toil that dragged the heart in the street,
What utter glory to forget, to feel again the beat
Of the warming heart with light and life, and love's unearthly gleam,
Till Dreams become our Living World, and all the World's a Dream!

Now we have lived the pain of others, now we have drunk their joy!
It gives us new heroic grip upon our day's employ!
O Shakespeare, here Earth's dimmest brain can draw strength from great stories!
The millions grasp their heritage of Art, the theatre-glories!

—James Oppenheim in the New York Times.

The majority of those who have given the advertising proposition serious thought seem to concur in the opinion that 2 per cent. of the gross total sales is the proper amount to devote to that purpose, though there are some who think 3 and 4 per cent. is not too much. Advertising is as serious a matter as purchasing goods, aud naturally whatever amount is placed in the proper mediums will prove most profitable.

TYPE E

THE MUTOSCOPE

For Amusement Parlors, Penny Arcades, etc., has proved itself to be the greatest money earner of all coin-operated machines. In fact it has made the "Penny Vaudeville" what it is to-day. The privilege of free exchange of pictures keeping them fresh and up-to-date, make it always attractive. Our New Type E Mutoscope, besides being handsomer in design, possesses many improvements in mechanism over former models.

SATISFACTION
ALL WAYS
WITH PEERLESS COIN OPERATED PIANOS

Mr. Dealer:

"DON'T"

Don't stop to think what you have lost by not handling PEERLESS before. There is still some open territory if you hurry. One dealer reports a net profit of $5,000 per month from his Peerless Department alone. There is business to be had in your locality, business to satisfied customers with large payments, because the Peerless will pay for itself in from seven to ten months.

Peerless quality always brings a high rate of profit, and there is no medium on earth to compare with these instruments as real money-getters for all those who handle or own them.

EVERY PEERLESS PIANO CAN BE OPERATED FROM AN UNLIMITED NUMBER OF COIN BOXES ON TABLES OR IN ROOMS

Extracts from Easy Money Catalog—Suggestions for Salesmen

THINK OF THE MONEY YOU WILL MAKE

One Peerless Piano took in $350 in 27 days. Whatever your business may be things will move faster if you have music. Our Peerless has been tried in cafes, billiard parlors, drug stores, hotels, candy stores, etc., and in every case has it proven a success. It does not matter what your business may be so long as it means dealing with the general public. You will find it profitable to have a Coin Operated Piano. It will attract customers, amuse them, and your satisfaction will come from the coin box, which will earn money for you that you would not otherwise get, as well as an increase in patronage.

Once more the PEERLESS coin operated PIANOS are classed by the nation's experts as the LEADERS.

They were awarded the Gold Medal and Highest Award at the Jamestown Exposition.

"BQ"

The New Cylinder Tone Arm Graphophone

A new Cylinder Machine with the famous Columbia Aluminum Tone Arm and a Flower Horn.

Compact and convenient. No rubber tubing, no horn crane, no horn stand. Retails at $30.

This is decidedly the greatest improvement in the evolution of cylinder "talking machines."

Everybody remembers the instant success that came to the Columbia *Disc* Graphophone when first equipped with our Aluminum Tone Arm.

We have now adapted the Aluminum Tone Arm to the Columbia Cylinder Graphophone.

It is a scientific fact that aluminum metal has the remarkable quality, when used as a sound conveyer, of wholly eliminating all false vibrations and producing a soft, full, perfectly natural tone, impossible to obtain from any other metal. The Aluminum Tone Arm on this new model does away entirely with any of the hollow horn tone that is unavoidable in the ordinary construction.

This model BQ machine is very compact, and very similar in general appearance to the Columbia Disc Graphophones, the horn swinging *over,* rather than away from the cabinet, occupying hardly more space than the cabinet itself, and wholly dispensing with the awkward, unsightly horn crane, horn stand and rubber tube connection.

The motors are noiseless in operation, and the cabinets are beautifully designed, made of the finest selected oak and hand polished.

Every machine is equipped with the Lyric Tone Reproducer.

Sound box has only six parts—and those parts without complications. One piece—a simple lever—between the needle and the diaphragm.

Its diaphragm and air chamber are designed in the relative proportion to give the fullest resonance.

Its workmanship makes it exquisitely sensitive to adjustment.

Simplicity, design, and workmanship produce its notable tone quality and freedom from breakage and repairs.

The Star is the coming talking machine.

Mr. Dealer:—

Compliments of the Season.

As usual we have seasonable goods for the trade. Too many to enumerate and detail in this limited space.

Truetone Amplifying Horns

"Made entirely of wood." List Price, $6.00, $7.50 and $15.00.

Eureka Carton Cabinets

For Cylinder Records. A new and practical idea. List Price, $15.00 to $25.00.

Searchlight Folding Horns

The Best of the kind. Just the thing to carry around. List Price, $6.25.

Alltones Sound Modifier *For Victor Taper Arm*

Practical and Perfect. Adds no weight to speaker and retails for only 50c.

Eureka Alphabetical Index

For Cataloging Records so they can be found. Stimulates Record Sales. Price 25c.

For the Wise and Progressive Dealer we have Bargains that will find a ready sale right now. All new—regular goods that we have either decided to discontinue or have too large a stock, viz.:—

Horns of Every Description at Unusually Low Prices
Fiber Carry Cases for Disc Machines and Disc Records
Cabinets for Disc and Cylinder Records to suit any purse

Every Dealer in our territory should have his name on our mailing list.
It will pay you to keep in touch with us.

The Talking Machine World

Vol. 3. No. 12. New York, December 15, 1907. Price Ten Cents

A WORLD JOKE DEPARTMENT?

What do You Say About the Scheme—Read Earl Godwin's Letter—Send in Some Contribution and Inaugurate the Department.

The following communication received from Earl Godwin of the Columbia staff is well worth reading. It is chatty and full of humor. Mr. Godwin suggests that we form an association for the suppression of talking machine jokes. Would it not be better to form an association for the encouragement of really good jokes? Why not have a Joke Department in The World to which every one could make a contribution when something really good came his way? Some of these would find their way to daily papers. In this way we may form an offset to the horrible puns which are perpetrated on the talking machine in the columns of the daily papers. Surely among the thousands of readers of The World in all countries we ought to bring out some really good snappy stuff once a month and we would suggest that everyone who has something really good on the talking machine forward it to The Talking Machine World.

New York, Nov. 18, 1907.

My Dear Mr. Bill—A question of vast import has been uppermost in my alleged brain for several weeks past and I am impelled to take my typewriter in hand and direct these few lines to you, hoping that you or your subscribers may answer my riddle.

Why is it that there is not a good joke to be found among the myriad bits of so-called wit that paragraphers, humorists, artists and newspaper men of all description use to ridicule the talking machine? If there is a really humorous newspaper paragraph or picture to be fonnd among all the thousands of articles that have been written on this snbject it has escaped me, and I have made a diligent search. I have in an old scrap book of my father's one of the first jokes (?) ever perpetrated on the subject. It is dated back in the early seventies and goes on to say that now the phonograph is invented, canned sermons may be sent to Africa where the cannibals may eat the record instead of the missionary. Ha! ha! ha! Isn't that perfectly killing? Oh, don't make me say it again, it nearly splits my side when I read that ancient paragraph.

That is among the very first, but you would think that the march of progress wonld improve the stuff that newspaper jokes are made of, wouldn't you? Bnt in the talking machine joke case it has not. Even F. P. Adams, the bright funny man of the Evening Mail falls down terribly when he attempts a bon mot having a talking machine in his neighbor's flat for a foundation. Then that weak-kneed, pasty-faced, dyspeptic joke about A Woman and A Talking Machine, the point being that one talking machine in the house being enough would not that make you weep?

Let us form an association for the Suppression of Bum Talking Machine Jokes. I think we will do contemporary literature and humor a world of good.

I admit that it is a very serious subject, one about which it is hard to twine the tendrils of a real blossoming joke. I am something of a joker myself (some folks think I am something of a joke) and I live in the midst of a humorous and witty family with brilliant scintillating neighbors, well versed in talking machines and humor, but not one of them has produced a joke worth mentioning. I will give a good cigar to the man who sends me a real joke, embodying the talking machine. There! Yours very truly,

Earl Godwin.

Some people want to kill the bnsiness talking machine so they won't have to kill the hours it would make for them.

IMPORTANCE OF THE PROGRAM.

Dealers Called Upon to Furnish Entertainments at Private or Public Functions Should be Most Particular as to the Make-Up of the Program for These Purposes.

There are many times when the talking machine dealer is called upon to furnish the musical portion of the entertainment at either private or public functions and the choice of a suitable program is a matter that should receive most careful attention. Each number of the program should be in perfect harmony with all the rest if the proper impression is to be created. It is hoped that none of our readers will emulate the example of a talking machine salesman who had charge of a machine and records at a special meeting of the local literary society and who followed a magnificent Caruso number and an aria oy Melba with one of the popular coon songs of the day. Needless to say the last number was received with audible exclamations of disappointment from the majority of those present. If the program is to be a popular one an occasional coon song is all right, but a sudden jump from grand opera to ragtime is hardly according to musical taste. Great musicians would never be guilty of such a contretemp, and the talking machine has got to be used with exactly the same discretion. Giving a program does not mean simply sending a machine and a promiscuous collection of records, at least it should not any more than a singer might be expected to go to a concert, and take along the first things that came handy. The talker is the singer's proxy and owes the audience as much consideration. There are many songs of the better class that may be used to relieve a very heavy operatic program, but ragtime, never.

A BUSINESS REFLECTOR

Show Windows Reveal Lines Upon Which a Store Is Conducted—Must be Up-to-Date in Appearance—Merchants Should Accord to Windows the Attention Their Importance Requires—Advantages Accrue from Frequent and Varied Changes.

The show window is a mirror. It reflects much. It reflects the managerial policy of the firm. It reflects the condition and class of the merchandise dealt in. It reflects the alertness or backwardness of the buying organization, as the case may be. It reflects shiningly just whether the store is conducted upon progressive up-to-date lines or whether it is one of those dreamy standstill establishments which exist in spite of themselves and their unenterprising proprietors.

Yes, the show window is the mirror which opens to public view the entire store and its concerns. Being such an important adjunct of progressive storekeeping the show window should come in for a good portion of the talking machine man's attention.

No store can ever hope to attain a reputation as an up-to-date store unless its windows present an up-to-date appearance. As the window is so is the store. That's the conclusion—the logical conclusion—at which the public arrives.

If the window dressing falls into a rut the casual observer is very apt to conclude that the store is also in a rut. And is there anything more deplorable in connection with merchandizing than this same rut evil?

It is rather remarkable that the windows of some stores have that "sameness" about them all the time. One would think that the proprietors or window dressers or whoever it may be who were responsible for the appearance of the front, would instantly recognize the advantages which come from varying the appearance of the front. It would seem that they would tire of the old and threadbare bargain and special sale theme and delight in presenting some novel features to the passerby. Instead of sticking to the same window display policy year in and year out they, it would seem, might experiment.

ADVERTISING A CREATIVE FORCE.

Has Created New Enterprises and Added Wealth to the Country—Six Hundred Million Dollars Spent for Publicity in This Country.

Some firms advertise to get business, but the wiser ones advertise to make it. Advertising to get business is the use of publicity to sell staples that the public is buying somewhere else, and results merely in the transfer of so much traffic from Peter to Paul. Advertising that makes business educates the buying public to new commodities and new methods of purchasing. In the long run it is the most remunerative sort of advertising, for it increases the buying capacity of the average man and the volume of trade. Publicity that creates two dollars' worth of business where there was but one is good for the advertiser, the buyer and the world in general.

Advertising is naturally a creative force. Since it has been applied to modern commerce there have been created dozens of commodities and branches of trade that did not exist before its advent. The six hundreds of millions of dollars annually spent for publicity in the United States have set many hundreds of millions of dollars running in wholly new channels. Look into the magazines this month. There are many old commodities and enterprises which have adapted publicity to their uses, but fully half of the ads are those of firms and commodities which advertising has created out of nothing.

COPYRIGHT LITIGATION IN FRANCE.

An interesting light was thrown upon the copyright situation in France at a recent meeting of the Gramophone & Typewriter, Ltd., in the following statement: "Copyright litigation in France has been going on for the last two years. To-day the position is practically unchanged and we are awaiting the decision of the Cour de Cassation, or Supreme Court, in Paris. We are advised that we are likely to be successful and we are encouraged in the hope of success by a recent decision given in our favor on almost entirely identical lines by the Supreme Court in Belgium. On the other hand, we have to record an adverse decision in the lower courts in Italy, against which we are, of course, appealing."

INTERESTING DISCUSSION IN RUSSIA.

In view of the fact that talking machines have been used at a number of funerals in Russia, the newspapers have entered into a spirited discussion as to the propriety of such a departure. Mlle. Volska, a well-known concert artiste, when on her death-bed sang a funeral hymn into a phonograph, and requested that the instrument should be permitted to reproduce her voice at her graveside during the funeral service. Her wish was granted, but Father Klimoff, the priest who permitted the innovation, was punished by the Holy Synod, and now both priests and public are divided into opposing camps as to whether there was anything irreverent in the performance.

The Hall Music Co., who opened up a talking machine store in Kansas City, Mo., some three months ago, are carrying a fine line of Edison and Victor goods. This company bear the distinction of being the only exclusive talking machine store in Kansas City, with the exception of the Columbia Phonograph Co. branch.

"TALKER" AMONG SAVAGES.

Dr. Pöch's Studies of the Natives of New Guinea—With the Camera, the Phonograph and the Cinematograph He Has Brought Home Accurate Records of the Songs, Dances and Customs of Primitive Tribes.

This picture shows a group of New Guinea natives singing into a phonograph for the benefit of science. The record which the machine made has been filed with hundreds of others in the Academy of Natural Sciences, Vienna. They were secured by Dr. Rudolf Pöch during his ethnological researches in the second largest island in the world in 1905 and 1906.

While these twelve men were singing Dr. Pöch was standing at one side with his camera, and he caught this photograph. The natives belong to the Baifa tribe and live in British New Guinea.

Dr. Pöch spent about two years wandering from one tribe to another. He lived with a dozen or so tribes in the German, British and Dutch possessions. No ethnological expedition to New Guinea has returned with richer results, and Dr. Pöch attributes his success largely to the fact that he made almost daily use of the camera, the phonograph and the cinematograph.

His records of the native songs are all the more important because many of them are religious or ceremonial songs and are the accompaniment of ceremonial dances; and both dances and songs have been handed down for generations. Many of the songs are not at all melodious, while others are not unpleasing.

It was difficult to record all of some very important songs. Those of the Yassi-Yassi people, for example, have the peculiarity of growing softer and softer toward the end until they die away entirely.

It was found better to pose the singers in a group before the machine rather than to record the songs during the dances. In many songs, for instance, boys have an important part, but their position in the dance is at a distance from the other singers and their notes are not so clearly recorded, so boys and men are grouped for making the record. All the dances, whether purely social or having a deeper meaning, are accompanied by singing.

The phonograph served many other purposes. Fine records were made of many words, phrases and speeches in the various languages. Some of these tongues have gutturals and other peculiarities which are very difficult for a foreigner to reproduce, but usually they come out very clearly in the phonographic record.

Then many records were secured of the sounds evoked from musical instruments. By no other methods could these sounds be exactly reproduced.

It was not very long ago that the note book and pencil and a few measuring instruments were about the only artificial equipment of the anthropologist. To-day he is bringing home with him striking representation of many forms of native life recorded by ingenious instruments.

Dr. Pöch returned to Austria with a remarkable collection of cinematographic pictures. He is showing the dances to European audiences, which at the same time hear the songs accompanying the native dances.

Some of the moving pictures are complicated affairs. One of them begins in the forest in semi-darkness, where it was impossible to secure good clear views on the films. The dancers passed out of the forest to the plain and Dr. Pöch could not secure all phases of this ceremony.

Many of the sets of moving pictures, however, are entirely successful. He shows a lot of girls bearing on their shoulders large earthen pots which they have filled with water at the brook and are carrying home. He shows a social group of women seated on the grass and puffing away at long pipes.

The barber, whose razor is a splinter of obsidian, is shaving the cheeks of a customer, whose grimaces plainly betoken that the razor needs honing; and the natives are seen sailing their boats, engaging in farming operations, making weapons and doing many other things. Perhaps the most entertaining of these moving pictures are those which show the games of the children. Thus the cinematograph is contributing living documents that throw clear light upon many phases of primitive human culture.

NEW GUINEA NATIVES ENJOYING THE TALKING MACHINE. Courtesy New York Su

ADVERTISING NOT AN EXPENSE.

Judicious advertising is not an expense but an investment. There are millions of demonstrations that it pays good dividends. Most successful business concerns consider their annual appropriation for advertising as necessary as their appropriations for executive management, rent, insurance, etc. The only problem is how to utilize the advertising appropriation most judiciously.

The Christmas gift that is most appreciated is the one that is useful; likewise the advertisement that is most effective is the one that is kept, not merely glanced at and thrown away.

A useful article like a pocketbook, card case, memorandum book, diary or something of that kind bearing an advertisement is carefully preserved because of its usefulness and intrinsic value, and it is a perpetual reminder and business puller for the concern whose name it bears. It works year in and year out and every day in the year. It works morning, noon and night and all day long. It is always at work, pulling for business. Isn't that better than a one-time advertisement? Certainly it is. Advertising novelties that are kept for daily usage are the cheapest always.

The man who only half tries doesn't even half make good.

HAPPENINGS AT THE CAPITAL.

Business Has Fluctuated the Past Four Weeks —Christmas Trade Already Evident—Commercial Graphophones for Government Departments—Droop & Sons' Handsome Talker Quarters—Whitson Reports Progress—S. Kahn & Co. to Retire from Business—Cannot Make Their Department Pay.

(Special to The Talking Machine World.)

Washington, D. C., Dec. 4, 1907.

The talking machine trade fluctuated during November and early December, though the month as a whole was better than October. The middle of the month was very dull, but within the past week or two business has picked up wonderfully and the dealers are more ready to talk. That is a sure sign when trade is good. Some of the large establishments felt the financial finrry of New York, but it did not last long.

Christmas trade has already begun in most of the establishments. This is particularly true of the Colnmbia Phonograph Co., where business has taken a lively turn, in both instruments and records. H. C. Grove, the local manager, is much pleased. He has just completed the dismanteling of the Jamestown exhibit and will now be able to give more time to Washington affairs. He states that while the Exposition was a failure financially itself, the Columbia Phonograph Co. did some excellent business. It took a number of orders for instruments of all grades, and especially did it make progress with the introduction of the commercial graphophone, in many business houses. This has come to be quite a feature in Washington in the Government Departments, all of them using these machines in one or more of their branches. The local firm just closed a big deal whereby several commercial graphophones will be used by the Law Reporter.

Since the opening of the new talking machine department at E. F. Droop & Sons' Co., this establishment has perhaps the most commodious quarters in the city. The several demonstrating rooms give opportunity for the hearing of more than one record at the same time without conflict. In the extreme rear of the department is a small room for the demonstration of the Victoria and such high class instrnments. The Regina music box is also featured as well as the Welte "Mignon," the famons player which produces the exact expression of the artist without any manipulation of the instrument.

Report from Sanders and Stayman's talking machine department is fair for the past month, but it has already improved for December. Record sales have been particularly fine.

T. J. Whitson is in a very good humor now, as business has increased recently in both instruments and records. He says: "We are having a very good rnn on "Ring Ont the Bells for Christmas," by the Edison Concert Band, which has a beautifnl chime feature in it.

In the window of John F. Ellis & Co. is an attractive display of "Lyra" phonographs with little red flower-shaped horns which at once attract the passerby. These have become a Christmas feature in this establishment.

While the foregoing speaks well for the condition of the talking machine in Washington, there is one establishment which is jnst waiting for a pnrchaser of its stock to go out of bnsiness. This is the talking machine department of S. Kahn & Son Co., one of the large drygoods stores. Trade has been so bad for the past few months that a detriment is only being worked by trying to keep up appearances. S. Kahn & Son Co. have decided to discontinue their talking machine department, which has been in existence for about two years. At present there is a very large stock on hand of all grades of talking machines, music boxes, cylinder and disc records, and fancy and plain horns. It is the wish of the manager to dispose of these to some one local establishment, but exactly how the deal will be made has not yet been determined. "There is no wisdom in retaining a department," he said, "which is losing money. We have always been independent of any music firm and have until the past few months done excellent business. Even in the summer we are having a big trade in supplying small establishments in outlying districts. Perhaps the financial condition in New York is responsible, or perhaps the music stores are monopolizing the pnblic. At all events we will soon sell our stock and go ont of bnsiness."

EDISON ON WIRELESS TELEGRAPHY.

Says the Possibilities of the Thing Are Limitless—Takes Seven Years to Perfect the Great Invention—Interesting Chat With the Inventor of the Phonograph.

The wonderfnl success of the wireless system of despatches to and from Europe has been the subject of much comment in the daily press, and Marconi has been highly praised for his energy and ability in this field. The New York Times has recently been receiving all its news from Europe by means of the Marconi wireless telegraph. Thomas A. Edison, when seen relative to the latter achievement, said:

"This thing is in its infancy yet. It is easy to see that. This yonng fellow Marconi does not know a tenth part now of the possibilities of wireless that he will learn in the next ten years. The possibilities of the thing are limitless. We to-day cannot imagine the things that they will be doing with it a few years to come.

"The obstacles in the way now can easily be overcome. As for a ship getting ont in the ocean and taking off the messages from the cnrrent, or another man setting up his apparatus and interfering with the connection, these things can be prohibited by law.

"Yon know that a great invention was never perfected in less than seven years. When a man has made his discovery he has just begun. Then he has to work for years and years before he has the thing anywhere near completed. We do not know what makes these waves that we call electricity go across the ocean in this way. We don't know anything about it. It is contrary to all the known laws of nature and science. All we know is that they do go, and that they carry messages with them.

"Just stop and think what we will be able to do with them when we find ont what they are and the laws that control them. I tell you this thing is only beginning, and in a few years there will be developments along this line that will startle even the most sanguine dreamer of to-day."

COMPETENT TO FILL THE POSITION.

Music dealers frequently get letters that are works of art in their way, but one of the palms should go to the E. R. Austin Music Co., Dayton, O., who received a letter in response to an advertisement for a talking machine salesman. The applicant announced that he was at present employed in a grocery store in a neighboring town and went on to say: "The reason I prefer a change is this, they are more like idiots around here, it is not fit for a person to be inside, for it is not healthy, for they loaf around the grocery and spit all over the floor, so you can see it is not healthy and I cannot say anything if the boss does. I tell him, but it does not do any good. I get good wages, five dollars a week, horse kept, board and washing, but the wages does not make a fellow's health." The best of references are offered and an early reply requested. At last acconnts the writer of the letter was still working in the sordid and demeaning atmosphere of the grocery."

UNCLE JOSH'S LECTURE RECITALS.

Cal Stewart, the widely known originator of the "Uncle Josh" records, has been making an extensive trip through the West demonstrating just how the records were made. Many music stores who handle talking machines engaged him to make "Uncle Josh" records for the benefit of their patrons, and the entertainment he offered was amusing and instructive in the extreme. Mr. Stewart entitles his work "Lecture Recitals."

Now, let everyone put their shoulders to the wheel and get bnsy.

We've got the people into the habit of looking for the list of new *Victor Records* which we publish each month in leading daily newspapers of America. They not only look for the list—they buy the records!

Get these people into the habit of coming to your store for their records. Have the records they want, play any they want to hear, cultivate their trade, and you'll soon have them as regular customers.

There is always a demand for *Victor Records*, for on no other records can people get that full, clear, musical tone-quality. It pays to have such records. It pays *best* to have the complete list.

Now is the time to place your order so that you'll be ready on December 28th—the simultaneous opening day for the sale of January *Victor Records*.

Victor Talking Machine Company

Camden, N. J., U. S. A.

Berliner Gramophone Company, of Montreal, Canadian Distributors.

HOLIDAY TRADE IN BALTIMORE.

Activity Is Fair in Volume Although Trade Is Not as Active as a Year Ago—Victors and Reginaphones Sell Well at Cohen & Hughes—Droop & Son Doing Well With the Edison—Reports from Other Trade Authorities.

(Special to The Talking Machine World.)

Baltimore, Md., Dec. 3, 1907.

The talking machine dealers in this city are busy now with their Christmas trade. The popularity of these music machines is demonstrated daily by the increasing demand for them as holiday presents. While, on the other hand, the sale of records is ever on the increase in consequence of the fact that so many new and up-to-date ones can be obtained each month. Special sales are the order of the day with many dealers. Another feature of the business is the fact that many new retail stores have been opened up in this city the past month, according to the statement of the jobbers.

H. R. Eisenbrandt, of H. R. Eisenbrandt & Sons, states that retail business has fallen off somewhat, but that their jobbing department is exceedingly busy in furnishing several new retailers, which the firm has installed, with talking machines and records.

Messrs. Cohen & Hughes, who handle the Victor machine, are, also, the local agents for the combined music box and talking machine, the Reginaphone. The firm report that the sales of both machines have been rather good during the past month and that the indications are for a good trade during the days preceding the holidays. The firm are, also, conducting a special sale of Victor cabinets as desirable Christmas offerings to those who have not the ready cash to be owners of Victor machines. Messrs. Cohen & Hughes have arranged a nothing-down payment plan, which is to pay for what records the purchasers take with them and begin paying for the machine later on.

The Hollingshead Co., 220 West Fayette street, report having a great success with the sale of Victor machines and records.

Similar reports are made by G. Wright Nicols, manager for Sanders & Stayman, who are handling the Victor and Columbia machines. As a matter of inducing and encouraging prospective buyers they are holding daily concerts at their warerooms, Charles and Fayette streets.

Messrs. E. F. Droop & Sons, agents for the Edison machines, have been doing a nice business during the past month and, like the other dealers, look for a great improvement from now on until the holidays are over.

MELBA'S VOICE IN HIGH BLUE.

Purple Splashes in It—Englishwoman Connects Tints With Tones.

The translation of sounds into colors is no new idea, but Mrs. Northesk Wilson, lecturing in London on the relation of colors to music has made some interesting additions to the familiar comparisons. She described Mme. Melba's voice as high blue, splashed occasionally with purple. Alice Gomez's vocalization, she said, suggested orange. Forbes Robertson had a violent voice speckled with green, which is the color of the depressed.

Mrs. Wilson contended that every sound conveyed an idea of color to those who were in a proper state of vibration. Blind people were particularly sensitive in this respect to both agreeable and disagreeable sounds. A raucous voice, according to Mrs. Wilson, gave a blind man a dirty green feeling.

UNIQUE SECTIONAL DISC RECORD CASE.

We are informed by Benj. Switky, sole sales agent for the "Unique" sectional disc record case, that in the short time since they began marketing, this case has obtained a foothold in no less than twenty-two States of the United States, with inquiries still coming in by almost every mail. "It fills a long-felt want" is the general opinion of the various writers. It is the first attempt at furnishing "sectional" cases for the talking machine trade, and while it is truly unique and covered by patents, Mr. Switky admits that the scheme is not original, but was inspired by the success of the well-known Wernicke sectional bookcases.

INTERESTING WINDOW DISPLAY.

Mechanical Figures for Which Music Is Furnished by the Talking Machine.

A most interesting window display has been arranged by a toy dealer, whose shop is located in the heart of the retail district, and its chief features are twelve mechanical figures, representing negro banjo and violin players, fancy dancers, etc. The figures were imported from Germany on special order for a wealthy broker and were made for use with a talking machine. The vocal, band or orchestral selections rendered by the talking machine accompany the performances of the acrobats, dancers and jugglers, rendering it possible to give an exhibition that will compare very favorably with that of professional performers. In fact, so natural and life-like are they, that it is difficult to realize that the violinist, standing at the other end of the room, the entrancing strains of the intermezzo from "Cavalleria Rusticana" filling the air with melody accompanying the graceful sweep of his bow, or the laughing plantation darkey picking on his banjo, with all the vigor and abandon of life, that rollicking melody, "Bill Bailey," are but mechanical toys, and that the music swelling forth full toned, natural and with all the sweetness of the original, emanates from a talking machine. Yet so it is, and it adds another to the already long list of the talking machine's achievements which embrace many widely differing spheres of usefulness.

The Charlottesville Graphophone and News Co., Charlottesville, Va., who formerly handled the Columbia line of machines and records exclusively, will in the future handle a complete line of Victor goods, pushing both lines impartially.

PERFECT MEDIUM QUIET NEEDLES

THE NAME OF THE NEEDLE DENOTES THE TONE IT WILL PLAY

The **BEST NEEDLE** made **IS** the **ONE YOU WANT** to use. **WE** do not **HANDLE** anything but **FIRST CLASS GOODS** and **YOU CAN DEPEND UPON** the quality of **EACH STYLE** of **NEEDLE** to be **A1.**

MELLO-TONE

Attachment a great improvement for the TALKING MACHINE or PHONOGRAPH. Produces tones natural. Eliminates all metallic sounds and blasts. Regulates and mellows the tone. Can be adjusted while machine is playing. Goes in the horn, opens and shuts.

RETAIL PRICE $1.00 EACH. Discounts and Samples sent to dealers on application.

MELLO-TONE CO.

SPRINGFIELD, MASS.

PACIFIC COAST TRADE NOTES.

Notwithstanding the Financial Flurry the General Situation Is Sound and Talking Machine Men Are Much Better Off Than Are Those in Other Industries—Kohler & Chase Notes—Byron Mauzy Activity—Phonographic Records of Mission Indians—Clever Victor Advertising by Sherman, Clay & Co.

(Special to The Talking Machine World.)

San Francisco, Cal., Dec. 4, 1907.

The situation in regard to talking machines on the Pacific Coast is much more encouraging than that of any branch of the musical merchandise trade. This business goes on apparently without interruption, and without any perceptible falling off on account of the financial troubles. Even the most pessimistic of the piano dealers still report a steady activity in the talking machine departments, and the outlook, in comparison with other lines, is very satisfactory.

Kohler & Chase's local talking machine department, now under new management, is beiug enlarged and rearranged and the stock is in fine condition. The business has improved somewhat, even this month, and the Edison line has run far ahead of any recent record. The company find that these goods need to be put forward strongly, but the result of a little extra work has been very pleasing. Star goods also are moving well, and their position has now become fully established.

Byron Mauzy is still working hard on his jobbing busiuess in talking machine goods, and his efforts have so far been greeted with a very pleasing degree of success.

W. S. Gray, of the Columbia Phonograph Co., says that the city business is still keeping up, and so far this month shows an improvement over October's sales. This week a special feature is made of the Type B I Graphophone, with a large window display on Van Ness avenue and advertising in the papers.

T. T. Waterman, of the department of anthropology of the University of California, has just returned from Southern California, where he secured valuable phonographic records of the famous eagle dance of the Mission Indians for the anthropological museum of San Francisco. This department has been doing a great deal of this work for some time, using, as a rule, the Columbia instrument.

The Graves Music Co., of Portland, Ore., are greatly enlarging their stock of Edison goods, several carloads of machines and records being received last week.

McNeil & Co., large handlers of Edison and Victor goods in Stockton, Cal., have occupied a new store on the corner of Weber avenue and Sutter street.

During the visit of Sousa and his band to the Pacific Coast, and particularly San Francisco, Sherman, Clay & Co. had the exclusive advertising privilege of the programs and made splendid use of it. They carried a talking machine ad on almost every second page as well as at the bottom of the program page, and under those Sousa numbers of which records are made there was a caption in small type stating that this selection could be obtained of Sherman, Clay & Co. This plau was followed throughout, and it is hard to conceive of anything so effective as a means of stimulating interest in the talking machine. On the closiug pages of the program there appeared a full list of the Victor records, selections which are played by Sousa's band. If the talking machine dealers on Sousa's concert route would duplicate this effort it would certainly mean a boom in Sousa records as well as in the leading selections which he plays. There is an idea here worth considering by every live dealer who desires to bring home to the musical public the importance of the talking machine, and the wide extent of the music which it is possible to render through this medium.

THE PHONOGRAPH HEARSE.

Berlin Young Woman Patents Plan for Providing Funeral Notes.

A young woman of Berlin has filed a patent designed to fill a want which has not so far been keenly felt. She proposes to supply for funerals the phouograph hearse—designed perhaps to intensify the grief of the mourners.

The hearse is of the ordinary build, hut two megaphones are introduced as part of the decoration. They are to be situated at the forward upper angles, and being handsomely gilt, they will serve in the first place as representations of Gabriel's trumpet.

Under the driver's seat will he placed the mechanism by which the phonograph will be controlled. The choice of the style of music and the selections will depend on the bereaved relatives or the last wishes of the deceased. Those who prefer vocal music can have hymns and dirges as rendered by well trained quartets ground out as the hearse passes through the streets to the cemetery. Others if they choose may select funeral marches as performed by brass bands.

The inventor thinks there is a great future for her idea. The installation of the apparatus is relatively inexpensive and she thinks people who want to make their funerals impressive will pay liberally for the music.

ATTRACTIVE ENCLOSURES PAY.

In almost every departure of commercial work, retail, wholesale or mail order, a small amount of money invested in neat and attractive envelope enclosures will prove profitahle. Such enclosures should he well printed, carefully written, and if your specialties will permit it they should also be carefuly illustrated.

They should consist of from six to a dozen pages on good quality and should be used only to accompauy the personal letter. They will not pay any small concern, to send them out promiscuously everywhere. For promiscuous advertising, the circular or hooklet on ordinary good book paper will bring almost as good results and is considerably cheaper than the super-calendered paper, which also costs considerahly more to print.

The office of first-class enclosures should be explanatory altogether. But the small dealer or merchant may have a cheaper folder listing several of his specialties, quoting the price and inviting an order. These enclosures will pay the mail dealer exceptionally well, and no communication should be sent out without them.

Where the business will justify it, advertising novelties, such as calendars, fans, match scratchers, etc., will be found quite remunerative, as they will be kept a long time and if something is printed on them showing that the offer is of long standing it will be even more so. Some such phrases as: "At any time within the next 10 years, we will fill your order for," will give them the impression that the offer is lasting and the company reliable.

HOW ROBBERS WERE AIDED.

Music as an ally of rohhers was tried in Chicago one night last week. After holding up Henry C. Kohl and four customers in Kohl's saloon at 867 West Chicago avenue, three young desperadoes forced the victims into the icebox and turned on a phonograph to drown the cries of the prisouers. While the saloonkeeper and his victims were shouting the musical robbers chaffed with an unsuspecting policeman on the street corner and escaped.

The Duplex Talking Machine Co., of Philadelphia, has heen incorporated with the Secretary of the State of Delaware, to deal in amusement devices with a capital of $60,000.

NEW YORK, DECEMBER 15, 1907.

SINCE the beginning of the month business conditions have steadily improved, and gradually confidence has turned the tide of business depression so that it is fast receding, and the stringency which commenced through the loss of public confidence is growing more remote all the time. It is now conceded that the recent financial upheaval was only a currency flurry rather than the beginning of a serious panic, which had its origin in over speculation. We had been traveling at a pretty rapid pace and we were brought up with a round turn and have paid the penalty for our unnatural rapidity of movement. There never was perhaps such an unreasonable panic started in the history of this country. The panics of the past invariably have seen the warehouses of manufacturers filled with goods which had to be put on the market at prices less than cost in order to enable the manufacturers to meet their obligations, but no such condition exists to-day. Most of the factories from which the wholesale merchants of the great cities can buy their wares are sold out of all they can produce for months to come.

IN this country the farmer is the great actual producer, and how is the farmer situated to-day? He has abundant crops which are in keen demand for the food of the world, and they are bringing exceptionally high prices. It should be remembered, too, that the export trade of this country in almost every line of staple products has increased tremendously in the past few years, and whatever we sell to other nations brings us what we most need at the present time—gold. Then it was only a few years ago that the farmers were heavily in debt. To-day they are not only out of debt but are lending money. Surely such conditions are not the proper setting for a panic. The contrasts between the industrial conditions in the United States to-day and those that attended the panic of 1893 are many. They are so many, in fact, as to cause wonder that the happenings of the past two months should have prompted such frequent reference to that period. Foremost of the direct causes of that panic was the fear that the parity of the gold and silver could not be maintained, and out of this therefore developed financial difficulties. Railroad receiverships right and left were in part the result of hostile railroad legislation; collapse of enormous real estate booms; the breaking down of an overstrained system of credit and the culmination of bad business methods of years and large crops abroad and little demand for American wheat.

HOW different the conditions to-day. A large demand for everything that is produced either in factories or from Mother Earth; the country on an established gold basis, which aids in the growing sentiment in respect to the slaughter of values; the gathering together of competing interests in almost all lines in trade which has resulted in a better understanding throughout all trade of the conditions under which business may be safely done. In the steel trade the situation of the present year has already brought the heads of important companies together in consultation. Such a thing would have been impossible in 1893. There is a sharp contrast between the panic of 1893 and that of 1907, and it hardly need be pointed out which method of meeting a critical situation is more conducive to a quick recovery.

TRADE in the talking machine line is, of course, affected by conditions which prevail in other trades. All business interests are closely interlocked, and it is surprising when these conditions are understood how well the demand for talking machines has been maintained in the various sections of the country. At the outset of the panic there was naturally considerable timidity noticeable in this trade. That, however, has been replaced by confidence, until to-day the talking machine interests may be said to be on a fairly satisfactory basis, everything considered. We have interviewed a number of the leading business men in the talking machine trade during the past two or three weeks, and they have not hesitated to express themselves in the most optimistic manner regarding trade conditions. W. E. Gilmore, president and general manager of the National Phonograph Co., was asked by The World to give his views relative to future business, with particular reference to the talking machine trade. Mr. Gilmore is at the head of a great business institution, and his views therefore are obviously of interest to The World readers everywhere. Mr. Gilmore states:

"We have not in the past, nor can I say that have we as yet perceived any perceptible change, so far as our own business is concerned. Our shipments of phonographs, records and supplies therefore continue in the same relative weekly proportion as they have in the past, and the orders heretofore placed with us have not been decreased to any material extent by cancellation. Naturally, we have not expected additional orders for phonographs, in view of the fact that our jobbers and dealers have anticipated their requirements some time since, but the new orders that we have been receiving for phonographs have, if anything, been better than we had anticipated. So far as records are concerned, the first orders received for the December supplement exceeded in volume any month in the history of the business. We accumulated during the past summer a very large stock of machines to take care of future requirements, and it is well that we did so, for the reason that the recent financial stringency has compelled us to reduce our working forces somewhat, due entirely to the fact that we were unable to obtain the necessary currency to take care of our pay-rolls, and which stringency, we thoroughly believe, will be of short duration.

"SO far as the future is concerned," continued Mr. Gilmore, "we are very optimistic, and statistics indicate that, be the times good or bad, amusement features are about the last things to be affected. By this I, of course, refer to amusements of all kinds in which, naturally, the talking machine industry must be considered one of the principal factors, particularly for the reason that the prices bring the apparatus within the reach of everybody. I would here add that our collections as a whole, up to this date, have been in every way satisfactory and, if it is the case with us, then we must naturally feel that it must likewise be the case with our dealers and jobbers generally. In conclusion I can only say, further, that the present financial condition will, in our opinion, be but short-lived, and we look forward to an increasing and profitable business."

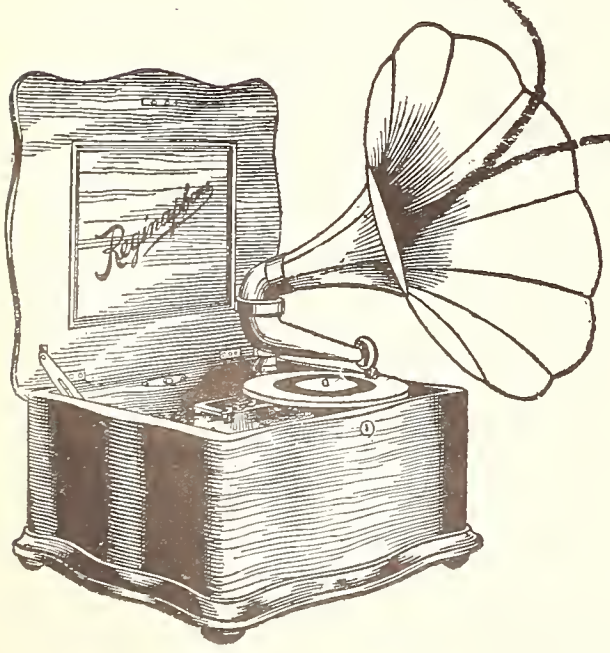
Surely there is an optimistic ring throughout this great industrial leader's remarks, which should encourage everyone to work. We should all do our full duty to aid in the restoration of confidence, and if every man faces the situation resolutely and does his share it will help matters materially. Paper values have crumbled, but the products of the earth and mines are still with us. There has been no great calamity, no plague, earthquake or fire; therefore if we have confidence in each other and confidence in the future of the country, as we should have, the dollars which have been laid away in hiding places will soon be performing their proper function as a circulating medium among our people.

IT is a very inopportune time for anyone who has the interests of the talking machine trade at heart to issue literature calculated to disturb the existing conditions between jobbers and manufacturers. Certainly the manufacturers have exhibited their liberality and broad-mindedness in every way in their dealings with the trade, and in such times as these the man who attempts to cultivate friction between the creative and selling force of the industry is acting unwisely, to say the least.

A WELL-KNOWN member of the talking machine trade who has just returned from Europe, said: "I was very much surprised to find the important position which The Talking Machine World occupies in trade circles abroad. In every city which I visited, in Great Britain and on the Continent, I found The World referred to in a manner that was most complimentary to its policy. To have won such a world-wide position is indeed a compliment to American trade journalism, and as long as the policy of The World is so fair and broad towards all interests, there is no occasion for any other publication. One good talking machine paper like The World is worth more to the industry than a half dozen little nondescript sheets."

Coming from such a high source we appreciate these complimentary words, and we may say that there is not a day passes but that we are in receipt of a number of communications from readers scattered all over the earth who say they find this publication of great value.

The Regina Company
wishes all Nations
A Merry Christmas,
and a
Happy and Prosperous
New Year.



PHONOGRAPHS ON THE STAGE.

Always on the Side of Justice and Truth and Opposed to the Villain of the Play—A Story in This Connection Worth Reading.

Let it be placed to the credit of the phonograph upon the stage, that it is always found on the side of justice and truth, and rigidly opposed to the machinations of the villain. Many times the hero and the Edison phonograph have disconcerted the black-browed, cigarette-smoking scoundrel, whose snares have been set for the beauteous heroine. The writer recalls an instance, one of the earliest perhaps of the kind, in which the phonograph dominated the entire play, and proved indeed a "god out of a machine."

At a little town of Provence, in the South of France, where the people still speak the soft provencal patois, hardly to be understood elsewhere, there was an enterprising citizen who managed the little playhouse when, on festive occasions, it delighted the townsfolk. The fame of the great Paris Exposition of 1889 drew him to the capital, and the thing that impressed him most was the first exhibition in France of the Edison phonograph. He was further impressed by the notable attentions paid to Mr. and Mrs. Edison by M. and Mme. Carnot, the President of the French Republic and his wife, and the great ovation they received from the Parisians. Finally he purchased a phonograph, and with the aid of a friend wrote a vivid drama to be performed at his little theatre during an approaching holiday. The house was crowded because it was rumored that something extraordinary was to take place. The play itself was not remarkable, except that it took the phonograph back to the 17th century. The hero was terribly good, the villain execrably bad and the heroine a virtuous and pious maiden who supported an aged mother. The phonograph saved her from abduction in the first act, for as she was about to take a leafy lane leading to a friend's cottage, the phonograph, ingeniously placed in a tree and operated by unseen hands, cried out "Prenez-garde! Prenez-garde!" ("Beware! Beware!") Being a good girl, she took this as a message from heaven and fell on her knees gracefully, thereby frustrating the villain. The climax came when in the last act the two principal villains met at the village inn and selected a large room as the place in which to discuss their most diabolical and sanguinary scheme. Before commencing they went around the apartment, stabbing inoffensive draperies with their swords so that no concealed spy should hear them. Foolish men! If they had only gazed at the ceiling, where, amid the grimy oaken beams the phonograph was performing its virtuous work, they would never have been betrayed. As they had settled the last details, in rushed the hero, the heroine and the rabble. Folding their arms, polished insults on their lips, the villains denied everything. The hero took a ladder and brought the phonograph to view; he slipped a prepared record on it, and lo! the whole plot was made clear. It was found that the hero was of reality a count and the heroine defrauded out of her rights. The audience was enraptured, and the only man who expressed dissatisfaction was the local doctor. "Why," he demanded, "does the machine instead of reproducing the provencal talked by the villain, speak with the purest Parisian French?" This is what had happened, but as the villains had plotted so noisily, no one had needed to gather details from the phonograph.

The manager folded his arms majestically. "It is nothing!" he said. "If monsieur reflects, he will remember the phonograph Edison comes from Paris." Everyone admitted that the dissatisfied doctor was fairly and squarely beaten.—The New Phonogram.

PRODUCING NET PROFIT.

Some Practices That Will Increase the Net Profit of Talking Machine Men More Quickly Than Others—Pointers in This Connection.

Net profit—your final aim—is, of course, a product of every move you make. But there are some practices that will increase net profit more quickly than others, and among them are good buying, keeping expenses down, keeping collections up, taking advantage of cash discounts, watching investment in every line.

Good buying is not merely a matter of securing lowest prices. The merchant who secures a fair price in a short time so that he has plenty of time to devote to his selling and service methods is a better buyer than the merchant who gets a lower price, but in doing that uses so much of his time that his selling and service are neglected.

So in keeping expenses down it is not always a merchant who succeeds in lowering his expenses to the lowest possible figure who thereby increases his net profit the most. There is a point where paring of expenses should stop. That point is where to cut expenses lower would reduce efficiency.

Keeping collections up is extremely essential to the production of net prices. For without the actual money in hand no profit can be counted. Taking advantage of cash discounts is as direct a way of increasing net profit as is the keeping up of collections.

But all the merchants together who fail to do good buying, to keep expenses down, to keep collections up and to take advantage of cash discounts—all those merchants together are less numerous than those who neglect the watching of investment in every line.

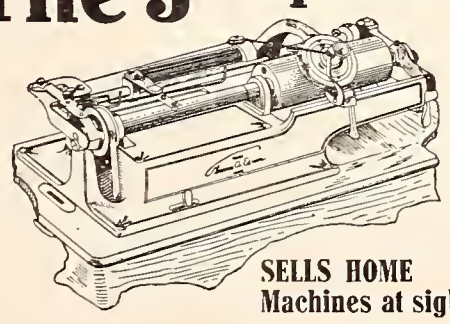
Yet of all the means of producing a net profit there is none quite so important as this watching of investment everywhere. Your sales go up or down with the number of the items you expose for sale—not with increase and decrease in the quantities you own of the various items. Own a six weeks' supply when a two weeks' supply would carry you safely until you could get a fresh lot in from market and you have needlessly tied up so much of your investment as is represented by the excess four weeks' supply. On that amount of the excess four weeks' supply you lose not only the interest on itself and the cost of the storage, but also the loss of the profit you could have earned on other goods which might have been bought and paid for with that amount. Omit from your consideration none of the things like those mentioned that can directly affect the production of a net profit. And omit consideration of no incident in your selling or your service that might indirectly affect the production of a net profit.

But to no one thing give more attention than to the watching of investment in every line you carry.

The J. L. Leonard Co. is the title of a new concern in New Orleans, La., who will handle Victor and Edison talking machines and records in addition to a large stock of kodaks and stationery.

The Atlanta, Ga., branch of the Ludden & Bates Southern Music House has added Columbia graphophones and records and a line of sheet music to their stock.

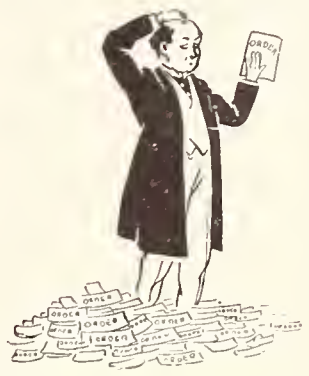
The J Repeater



SELLS HOME Machines at sight

Can be attached in five minutes. No drilling. Returns in less than one second. Noiseless, speedy and sure. Sold by Jobbers everywhere.

ACME REPEATER COMPANY, - INDIANAPOLIS, IND.



What will you do with your "last minute" business?

The closer it gets to Christmas, the greater will be the rush in your store. There will be lots of "late comers," and it's as important to take care of them as anyone else.

If you happen to be out of what they want, tell them you'll get it for them—and live up to your promise. You can do it if you send us your orders; provided, of course, that distance doesn't put it out of the question.

What may be impossible with other jobbers is easy for us, because

(1) We never let our stock run down. No matter how great the demand, we always keep it complete, and you can get whatever you want in Victor talking machines and records, record cabinets, trumpet horns, English needles, fiber cases and other accessories whenever you want them.

(2) We always ship all goods the same day the order is received.

Remember these two facts when the "last minute" trade comes along. Don't promise the impossible, but consider carefully whether you wouldn't have time to send to us for anything you want.

It will pay you to take a few minutes of your time now to write for our latest catalogue, and be prepared for all emergencies.

The Victor Distributing and Export Company

256 Broadway, NEW YORK

LATEST I. C. S. NEWS.

Special Demonstrations at the Regina Co. and Gimbel Bros. Bring Good Results—Italian Records Being Prepared—Prestinary Succeeds Lewis at Lyon & Healy's.

The Regina Company, 41 Union Square, New York City, with the assistance of one of the salesmen from the International Correspondence Schools have been conducting a special demonstration of I. C. S. Language Outfits, in which they have operated a window display with a living figure—a young lady studying her language lesson with the aid of the I. C. S. Outfit; she listens to the perfect pronunciation from the master records, at the same time reading the foreign text and the English translation in the textbook. Later, after having apparently mastered the pronunciation, she makes a record in the foreign language on a blank cylinder with the aid of the recording instruments, which accompany the outfit, and thus compares her own pronunciation with that on the master records, which is perfect. The demonstration was a marked success. Several outfits were sold and about 100 prospective purchasers lined up. The large crowds which collected in front of the store kept the police busy clearing the sidewalk for pedestrians.

During the two weeks from November 18 to 30, a demonstration of I. C. S. Language Outfits was given at Gimbel Brothers, Philadelphia, who are conducting a window display in connection with the demonstration.

Professor Edoured Lamaze, dean of the School of Languages, International Textbook Co., is now at the Edison recording works in New York, superintending the making of Italian records for the Italian course of the I. C. S., which will probably be ready for sale by the first of the year. The services of a native Italian, thoroughly educated in the language, has been obtained and before moulds of the perfect master records are made the pronunciation will be criticized by leading authorities in the Italian language.

W. H. Prestinary, who has been with the department of languages for some time, has been appointed to succeed L. L. Lewis as language demonstrator for Lyon & Healy, in Chicago. Mr. Prestinary is a native of Costa Rica, and in addition to Spanish, his mother tongue, speaks fluently several other foreign languages.

INDIANAPOLIS TRADE NOTES.

Retail Trade More Active Than Jobbing—Leading Members of the Trade Discuss the Situation—Sommers & Co. Put in Columbia Line—Luther Day Starts Film Exchange.

(Special to The Talking Machine World.)

Indianapolis, Ind., Dec. 7, 1907.

The talking machine business in Indianapolis and in fact all over Indiana during the last month has not been very satisfactory. One noticeable feature is that the retail business is better than the jobbing business. All dealers interviewed say that this condition holds good. The only explanation for this is that the business men are a little more chary about making investments and loading up with stock than are those who buy at retail. There is no hesitancy about investing in one machine but there is some hesitation when it comes to buying a number of machines as in the case of the jobber. Talking machine dealers, however, are not frightened for they believe it will be a question of only a very short time until the jobbers are ready to buy as usual. They go on the theory that if the man who buys at retail is not afraid to buy, the jobber will not hesitate very long.

Charles Craig, of the Indiana Phonograph Co., who handle Edison machines, attributes the dull business in part to the failures of the farmers to complete their fall work as early as usual. He has advices from over the state, he says, that the farmers are far behind in their work. The Indiana company will place their order next week for 15,000 records to complete their orders on exchange. This company usually order about 45,000 records each year on exchange, sending in to the company about half that many. Charles Craig, of this company, who has been keeping in close touch with financial conditions, believes that the banks will begin making full payments in cash at least by the first of the year. He looks for a nice increase in business of all kinds as soon as this change is made.

The Kipp-Link Co., who handle Edison machines say, that the retail business has gone ahead of the wholesale business. At this store it is the belief that the good effects of the reaction in the money market will be felt soon. They say money conditions have only slightly affected the retail business. They have, however, had an effect on the wholesale business. Jobbers are not buying as heavily as they did. Members of this firm are not in the least frightened by conditions and believe that business of all kinds will be restored to its normal proportions within a short time. This company are well supplied for the trade as they have 120,000 records in stock. The Kipp-Link Co. are drawing a nice business with their finer class of goods. This company show some elegant talking machine outfits, including art music cabinets.

Warren M. Bird, who is working under the direction of Thomas Devine, of the Columbia Phonograph Co., is having great success in selling commercial talking machines. So far he has been working among the big factories on the outskirts of the city. He will begin to work the big wholesale houses and factories nearer the central part of the city. The greatest difficulty he has to encounter, he says, is his inability to get machines with which to supply customers.

D. Sommers & Co., big household furnishers, have put in a full line of Columbia machines for sale at retail. They go on the theory that talking machines have become a household necessity instead of a luxury and believe they should carry machines in connection with their other household furnishings. This is one of the largest and most exclusive house furnishing stores in the city.

Business has been a little quiet for the five-cent theaters and the penny arcades. Receipts, however, have been as large as they usually are at this time of the year. Money conditions seem to have had no effect on these lines of business. The new five-cent theater on Market street opened up for business last Saturday. A new five-cent theater in West Indianapolis used a novel plan to get business. A prize of five dollars was offered for the most beautiful baby, the beauty to be determined by voting and the right to vote going with tickets. The increase in business justified the expenditure of the five dollars.

Luther Day, who, for a number of years has been active in the talking machine business at Winchester, has just opened a film exchange bureau on Ohio street. This is the second bureau of the kind in the city. The other bureau is owned by the H. Lieber Co., who handle art goods. These bureaus will sppply films to theaters all over the country. There are seventeen five-cent theaters in Indianapolis now.

Talking machine dealers have not noticed much yet in the way of Christmas trade. They do notice, however, that the payments made on machines now are larger than usual and this is encouraging. Bad weather has militated somewhat against the talking machine business during the last month. The weather has been uncertain and this is always bad for business.

RECEIVER FOR BALTIMORE HOUSE.

Mortimer B. Hall has been appointed receiver for the talking machine business of James B. Stonebraker and Harry M. Martin at 325 North Howard street, Baltimore, Md., conducted under the firm name of Martin & Co. Judge Corter, in the Circuit Court No. 2, placed the amount of the receiver's bond at $2,000. The petition for a receiver for the business was made by Mr. Stonebraker of the firm, who declared that the firm was insolvent and that differences had risen between the partners.

Recommended as Best By those Who Know Best

Every dealer who would like to add to his business a feature that will increase it from 10 to 30 per cent. should give his consideration to the following recommendation.

"The undersigned E. E. and Minister Plenipotentiary of His Majesty, the King of Spain, to the United States, has much pleasure in stating that the words for the study of the Spanish language as prepared by the International Correspondence Schools, of Scranton, Pa., which I have carefully listened to, are the most perfect rendering of the pure Castilian pronunciation. I consider them invaluable to the student of our language, and cannot too much praise their efficiency and convenience." EMILIO DE OJEDA.

This official endorsement is the highest possible recommendation for the efficiency and accuracy of the I. C. S. Spanish Course, and plainly tells the characteristics of

I.C.S. LANGUAGE SYSTEM
WITH
Thomas A. Edison
PHONOGRAPH

This system of language instruction is in use at the U. S. Government War College at Washington, and the phonograph system has been lately adopted by the University of Chicago, and everywhere it is being recognized as the coming method of language instruction. Phonograph dealers all over the country have been very successful in handling the language feature in connection with their other business. There is no reason why *you* cannot do the same—there is no reason why *you* should not do it next month, only because of your own indifference and negligence to write *now* asking for further particulars. Don't you think it worth while to find out more about such a feasible means of increasing your business?

JOIN UNIVERSAL CO. FORCES.

A. T. Whitbeck and S. C. Burns Latest Additions to the Staff of the Universal Talking Machine Mfg. Co.—Traveling Manager Beekman Has Had a Successful Trip.

The forces of the Universal Talking Machine Co. have been further strengthened by the addition of A. T. Whitbeck, who is favorably known to much of the talking machine fraternity throughout the East. His apprenticeship in the business was served several years since under the guidance of Mr. Ornstein, of the Victor Talking Machine Co. and as the subsequent success of Mr. Whitbeck will bear testimony, he was under the tutorship of a most able hand. Since severing his relations with the Victor Talking Machine Co., Mr. Whitbeck has been associated with the Victor Distributing & Export Co., where, we understand, many new laurels were won. While it is true that they most reluctantly relinquished their claim upon Mr. Whitbeck, it seems though that the winning manner of General Manager MacNabb proved as irresistible with him as it has with the other desirable material which this company have recently acquired.

The Mississippi Valley representation of the Universal Co. received a new member recently in the person of Samuel C. Burns, of St. Louis. Although this is Mr. Burns' first experience in the "talker" line, we understand that he is of the same lineage as the "Tommy" Burns of pugilistic renown and should he have fallen heir to some of the accomplishments of his distinguished relative, we have no doubt but that all arguments will be settled in his favor.

Traveling manager Beekman, who is now homeward bound from his six weeks' trip in the middle west, has been meeting with much success since his departure. Although he believes that many of the orders taken would have been much larger had financial affairs been more favorable, he reports that the outlook for Zonophone business is exceptionally good in all points that have been visited and that 1908 will, without doubt, be the best year that the Universal have had in their history.

ANDREWS' SPECIALTY. QUICK SHIPMENTS.

The Holiday rush will soon be with you, and probably there will be many things in connection with the talking machine trade that you would like in a hurry. You may have a rush order now and then for something which you want to get over night. Remember that quick shipment of orders is our specialty. We are right on the spot, and on the job, so to speak. We can fill from Buffalo or Syracuse shipments an hour after the order is received, and we can reach almost any part of our territory quickly.

If you are short of holiday goods of any kind, just let us know and we can help you out immediately.

W. D. ANDREWS

Seneca, Cor. Wells Street, Buffalo, N. Y.

HEARING AND CONTROLLING THE SOUND.

The Lewis hearing tube sound controller, illustrated and described in this issue, is one of the latest improvements in the talking machine line, and the person who desires to improve and control the sound of his talking machine will undoubtedly desire one of these useful and interesting devices placed in the horn. It controls the sound from the smallest to the largest amount, distributes the volume and improves the tone. It also has a hearing tube combination which greatly increases its value and usefulness that can be used on disc as well as cylinder machines, and is adapted to all sizes of horns. This device was invented and is manufactured by Nathan L. Lewis, of New York. According to Mr. Lewis it is the first time that it has ever been attempted to take the sound through hearing tubes and control the sound at the same time from the inside of the horn. It saves all annoyances, as it is not necessary to remove the horn or interfere with the machine in any way. Dealers will do well to send for illustrated circular, so as to comprehend the necessity of having this article in stock to meet the demand that is bound to develop as soon as its merits become known. It is strongly covered by several patents, which are pending.

VICTOR DISTRIBUTING & EXPORT CO.

Will Not Remove to Their New Quarters Before February.

Not before Feb. 1, 1908, does the Victor Distributing & Export Co. expect to remove their temporary executive offices from 256-257 Broadway to 83 Chambers street, New York, the permanent headquarters for the future, and where the stock and warerooms have been located since fire destroyed the former premises at 77 Chambers street, on Oct. 9. The Chambers street place, well known as the New York offices of the National Phonograph Co. before the removal to 31 Union Square, is now being remodeled and fitted up to suit the business, and as the lofts run through to Reade street, a depth of about 180 feet, ample room will be afforded for the V. D. & E.'s expanding trade. Early in the new year they also expect to lease an additional loft, making three in all, with the offices on the third floor. An elevator, sadly lacking at 77, is a convenience visitors and buyers of the company will greatly appreciate. This adjunct will also add to the happiness of General Manager Williams, who proposes fixing up and decorating the entrance in keeping with the best Victor traditions.

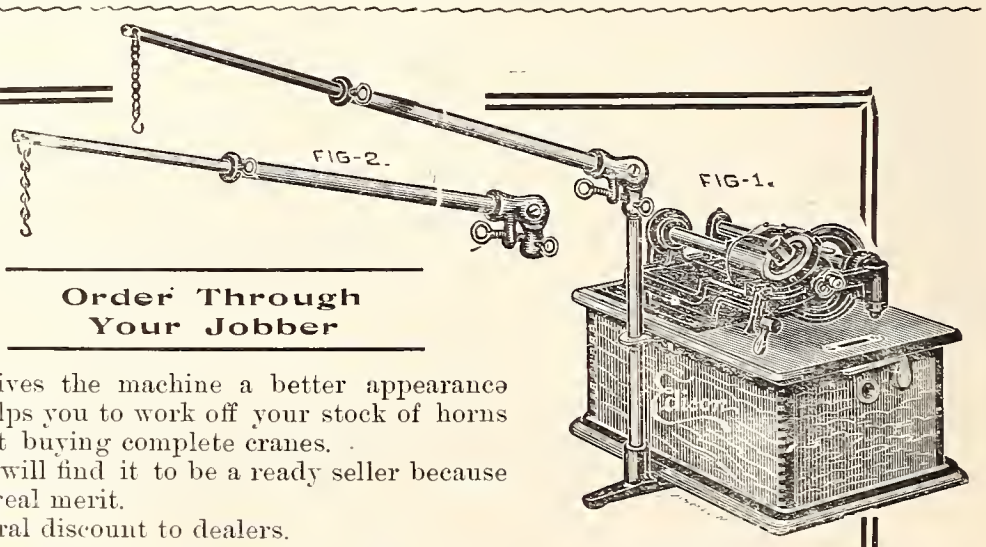
Last week A. T. Whitbeck ceased to be connected with the Victor Distributing & Export Co., and has joined the traveling staff of the Universal Talking Machine Mfg. Co., under the assignment of Sales Manager Beekman, of Newark, N. J. The Universal Co. are increasing their road corps, and will enlarge and improve the advertising campaign. In short, go after the "game" for all it is worth, and with hammer and tongs.

CARD FROM NATIONAL PHONOGRAPH CO.

The National Phonograph Co. have formally notified Edison dealers that unless they sign the new agreement by Jan. 1, 1908, their names will be removed from the files and mailing lists of the company, and they will not be entitled to the dealers' discounts, as they will be considered no longer interested in the sale of Edison goods.

The Gramophone & Typewriter, Ltd., in order to handle their continental trade in a more direct manner, are erecting record factories in Paris, France, and Calcutta, India, and have recently completed a third factory in Barcelona, Spain.

Adjusting Device for the Edison Crane



Order Through Your Jobber

MR. DEALER:

This is what you've been looking for. With this attachment you can use *any horn* with the Edison Crane. It also enables you to put a complete crane inside the Home cabinet.

It gives the machine a better appearance and helps you to work off your stock of horns without buying complete cranes.

You will find it to be a ready seller because it has real merit.

Liberal discount to dealers.

UTICA CRANE CO., Makers, Utica, N. Y.

RETAILS AT $1.00

THE HOLIDAY SEASON.

A Few Christmas Hints for the Progressive Dealer.

Christmas is almost upon us, bringing with it the good cheer and blithesomeness of holiday time, and that means, Mr. Dealer, that it is up to you to get busy with your "talker" shop and transform it into a thing of beauty in honor of the auspicious occasion. There is nothing more attractive at this season of the year than an artistically decorated store. Has your place of business made its Christmas toilet? If not, I beg to submit the following as a suggestion:

Festoon your walls with holly or some other member of the evergreen family, and have all your pictures—those of Thomas A. Edison, the Victor dog, Miss Columbia, etc., and also those of the talent which adorn your walls—draped with sprigs of green. Display your posters, of which innumerable designs are available, to the best advantage, and have a pile of literature where every newcomer can see, inspect and peruse it. This done, turn your attention toward the show window. Do not by any means neglect that. It will mean all kinds of long green and new customers if you go the limit and give the public a surprise they will remember. To do this you must convey a message to them that can only be imparted through a knowledge of the "talker," and a keen knowledge at that. Watch the newspaper and magazine advertisements of the different talking machine companies, most of which contain hints for window display in the illustrations accompanying them, and select the one that particularly appeals to you. This done, have the scene which the illustration depicts transferred to your window, and the deed is done.

Another matter worthy of careful consideration is your Christmas advertisement. How would it do to put out something like this, properly displayed, of course?

"To everybody—those who already own talking machines, and the rest who will eventually do so—Christmas greeting.

"We are in business for your good. We have your interests at heart, and this being the case, we want you to know about our goods.

THE TALKING MACHINE

makes an ideal Christmas gift because of the

many pleasures it embodies in one instrument. In fact, it is not really an instrument, but a diminutive theatre in which perform at the will of the audience, and at a very small financial outlay, the greatest concert bands and symphony orchestras, the most skilled instrumentalists, and the wittiest comedians of the world. Wonderful, is it not?

"Call upon us at your convenience, and it will give us much pleasure to tell you in detail just how you can own one of these machines on practically your own terms. Come to-day! John Jones, No. 18 Broad street, Blanktown, New York."

HOWARD TAYLOR MIDDLETON.

THE COPYRIGHT CAMPAIGN.

The Report Submitted by President Cromelin at the Recent Meeting of the American Copyright League Has Been Printed and Forwarded to Members of Senate and House.

Paul H. Cromelin, vice-president of the Columbia Phonograph Co., General, as president of the American Copyright League, printed his report submitted at the meeting held in the Astor House, New York, November 14, in pamphlet form, and on November 30 despatched a copy to each member of the United States Senate and House of Representatives, so as to reach them in time for the opening of Congress Monday. Batches of this interesting document, which appeared in The Talking Machine World for November, were also sent to the leading daily and weekly newspapers throughout the country and other places where they will do the most good. The presentation is in Mr. Cromelin's lucid style, and as he is an adept in convincing statements, the facts, criticisms and accompanying arguments will carry weight. It is in brief form and arranged according to the approved rules of a methodical barrister.

BETTINI PHONOGRAPH CO. RETIRE

From Business and Lease Their Premises at 156 West 23d Street.

The Bettini Phonograph Co., organized by a number of dealers in New York, Brooklyn and Union Hill, N. J., on a jobbing co-operative basis, and located at 156 West 23d street, New York, have quit the business. The scheme failed to work, notwithstanding the potent prophecies of Marcus Aurelius Miller, the promoter. Their store is now occupied by the Alcohol Utilities Co., who acquired the lease for the remainder of the term. Guy G. Warner, Brooklyn, and Fred Loeffler, of Union Hill, both successful and well-to-do dealers, were the moving spirits in the enterprise.

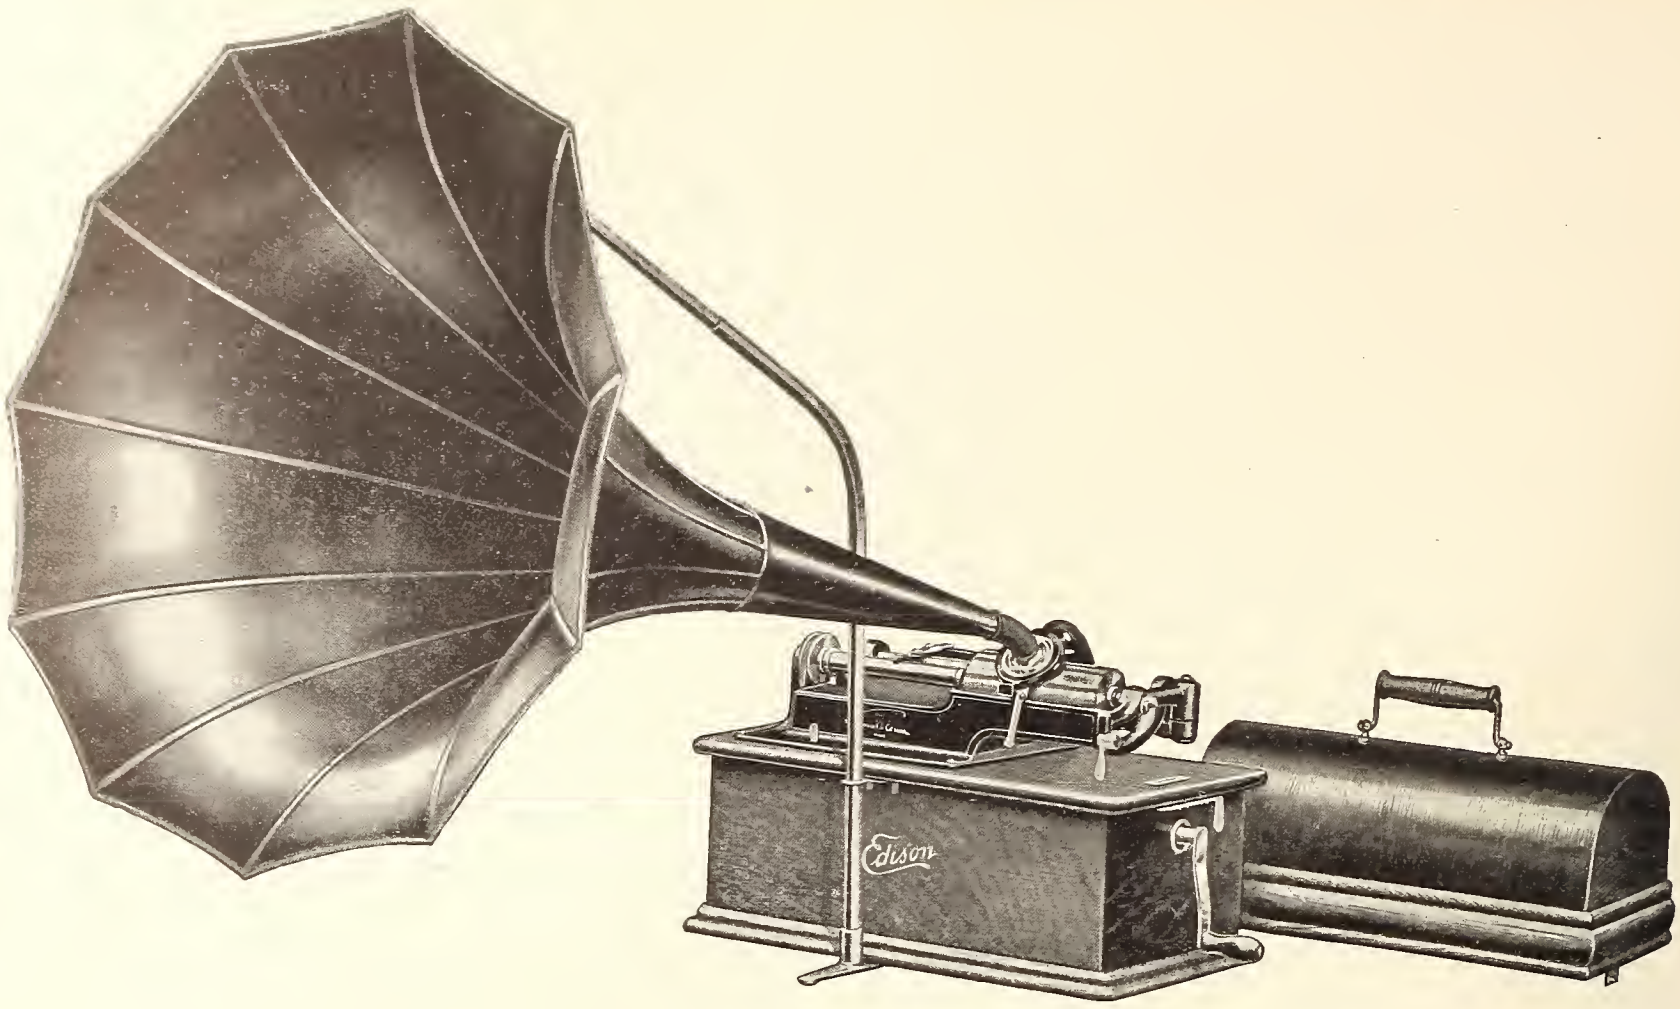
BENJ. SWITKY (SOLE SALES AGENT) 27 E. 14th St., New York



When You Sell an Edison Phonograph You Sell a Complete Instrument

Heretofore the sale of talking machines and the sale of horns have been two distinct transactions. This was because no talking machine had a satisfactory horn.

Now the Edison Phonograph has its own horn and swinging support. The horn is large, handsomely shaped and exactly adjusted to the instrument's needs. It sets the Phonograph off, attracts interest and best of all, it pleases purchasers every time.

The horn business has always been a drawback to the trade. It led to price-cutting which affected profits, necessitated carrying a large stock of horns and complicated selling methods generally.

Now the customer gets the best and most suitable horn to be had; as a part of the Phonograph, pays the price for both in one transaction, and the dealer makes a good profit on both. This new equipment is making new records for dealers in Phonograph sales. Are you getting the benefit? If not, write us for full information and the name of a nearby jobber who can supply you with whatever you need.

TRADE HAPPENINGS IN PHILADELPHIA.

The Talking Machine Industry Stands First in the Matter of Business Activity—Conditions Analyzed—The Depression Has Stimulated Many of the Over-Confident Ones Into Activity and They Are Going After Trade—A Clever Window Advertisement—Selling Methods That Should be Reformed—A Chat With Mr. Miller—Weymann's Song Hit—Louis Buehn & Bro.'s Satisfactory Business—Bauer's Special Sale—Other News of Interest.

(Special to The Talking Machine World.)

Philadelphia, Pa., Dec. 4, 1907.

After a general survey of conditions in practically all the mercantile trades represented in this city, your correspondent was very much pleased as well as somewhat surprised to find the talking machine industry standing among the first on the list, and when one considers that among these compared lines fully half represent absolute necessities of business and life such as clothing, food, furniture, etc., the record is almost unbelievable. In comparison with other similar lines such as pianos, small goods, etc., while the latter businesses are far from bad, they are not equalling the showing made by the "talker." I am now speaking not so much of the volume of business but what is more important, the quality, in other words, conditions from a financial standpoint. It is true that trade is not quite up to last year's standard, but the jobbers in this city to a man report a very satisfactory showing in both wholesale and retail departments, and notwithstanding the recent stringency in the money market, dealers, although not always discounting their bills, are at least well within the safety limit. Of course, there are exceptions to every rule, and as in all trades there are men in this, who are unprincipled and carry their business from one house to another on the rob-Peter-to-pay-Paul plan, but since the Philadelphia jobbers began to co-operate and exchange confidences on credits this undesirable element is fast being weeded out.

They say that "necessity is the mother of invention," accepting which one cannot help but see that the passing depression in the market has had at least one desirable effect on the talking machine dealer; it has forced him to wake up to the fact that he can't always expect trade to come to him without going after it. There are a lot of bright, capable men in this trade but altogether too many of them, on account of the extreme popularity of the "talker," have fallen into the impression that the world owes them a living and that being a dispenser of these enchanted goods they don't need to trouble about working for business. It is hardly necessary to say that their awakening gave rise to many complaints and not a few predictions that the world and the talking machine business were due shortly to vanish in smoke along with their dreams. Be that as it may, these would-be citizens of the Garden of Eden have begun to realize that windows were intended for display and that newspapers offered an assured entree into the most exclusive homes, making use of which knowledge they have found perhaps to their surprise that after all it's a pretty good world and that if handled rightly there is no business productive of better results than that of talking machines.

A rather clever collective advertisement of talking machine men has been appearing each month in the "North American" simultaneously with the larger record announcements of the manufacturers. By this arrangement dealers are enabled to get the full benefit of Edison and Victor advertising at a very nominal cost to themselves, and we would recommend it to the trade in other sections of the country as worthy of attention, if it has not been already adopted.

As we predicted in last month's World, December opened with a true holiday swing and, while it is yet too early to accurately estimate the volume of business that will be done before the first of the year, indications point to a most satisfactory month. Dealers are commencing to order more heavily and jobbers are finding but one fault, namely that the factories are taking ten days to fill 50 per cent of their orders, and while, of course, this is sometimes exasperating, it demonstrates clearly that business must be at least fairly good throughout the country. In perusing the magazine and newspaper columns the World man has noticed a growing tendency especially on the part of small firms to advertise talking machines on a free trial or nothing down and a dollar a week (or half that sum) plan, and it seems to him that those firms have adopted a short-sighted policy. In the first place it shows that there is a weakness somewhere in their make-up. For a man must have but little confidence in his line or else very poor address, who cannot convince another if he has the slightest intention of buying, that a machine and outfit are worth a fair deposit. Certainly this is true if the public has money to spend and if on the contrary it has not, there is all the more reason for caution inasmuch as there is certainly little profit to be derived from allowing anyone, especially an inexperienced person, the liberty of experimenting with a machine and wearing out and breaking records gratis.

The Penn Phonograph Co., of this city, express themselves as being very well satisfied with the way things are going. Mr. Miller, the treasurer of this company, was for some time connected with the department store business, and being well acquainted not only with the talking machine but almost all other lines handled by these houses is therefore so peculiarly well fitted to give a broad view of the present conditions that we take the liberty to quote him as follows: "The more I see of other lines of trade, the better satisfied I am with the talking machine. No! our business is not quite up to last year's but that is no reason to complain. 1906 was from start to finish a phenomenal boom, and one that no sane man could expect to continue. On the contrary this year's trade has been steady and could be relied upon and I look for perhaps even better things to come in 1908." This company are among the largest and oldest in the State and their careful attention to the needs of their dealers have won for them a big and loyal following.

C. J. Heppe & Son are enjoying big business in their talking machine department, especially in the wholesale, as their dealers throughout the state and adjoining territory are doing well. Collections are remarkably good, but retail instalment lease accounts are below what they should be, though not seriously deficient.

H. A. Weymann & Son have made a decided hit in this trade with their new publication, "Ev'ry Ship Will Find a Harbor," which is on the January list of Edison records. This song was advertised by them in the November issue of the World at a remarkably low figure and dealers all over the country are sending in their orders for it, and other sheet music published or handled by this house. This line fits in perfectly with the "talker" business and as there is big profit in it many are putting in a complete stock. If you have not seen this song, don't fail to write for a sample copy.

Reports from the Columbia headquarters in this city were to the effect that December has opened brisk with a bright outlook. The Symphony Grand machine is having a great demand among the better classes, but the New B. O. aluminum tone arm cylinder machine is most decidedly "it."

The Columbia Co. closed their Eighth street branch about a month ago in order to better concentrate their efforts, and have found the results more satisfactory.

Walter Eckhardt, wholesale general manager, Wm. Morse, from the New York wholesale staff and Wm. Halfpenny, manager of the Bridgeport branch were recent visitors to this office.

Business for the past month has been fairly satisfactory with Louis Buehn & Bro., and since the first of December has shown a marked increase. This company are having a big call for their exceptionally fine line of record cabinets and are shipping goods all over the country. Ed. Buehn, the popular junior member of the firm, left on Tnursday for his usual run around the trade. Louis Buehn started for Pittsburg on Saturday to attend the meeting of the officers and committees of the National Association, which was held on Sunday the 8th in that city.

Emil Bauer, the manufacturer of the Stewart banjos, Bauer mandolins, guitars, etc., has just returned from a most successful eastern trip. This firm are now holding a grea. liquidation sale to close out all the stock on hand, this is not being done because of any dullness in the trade, but as Mr. Bauer stated he wants to start the new year with a clean sheet.

The Disk Talking Machine Co., of this city, are enjoying a good business. This company are Zonophone jobbers for this territory.

"THE PLEASURE IS DOUBLED AND YOUR COST IS REDUCED

WHEN YOU BUY

ZON-O-PHONE RECORDS

COMPARE THEM WITH OTHERS AND BE CONVINCED."

The money spending people of the country are being constantly confronted, through the leading magazines, with the foregoing statement. As a result, inquiries as to where Zon-o-phone goods can be bought are pouring in. These are referred to the dealers in that locality. Who's getting them in your town? Are you?

Tapering Arm Zon-o-phones begin at **$20.00** in oak, and extend to **$75.00** in mahogany

Zon-o-phone 10 inch Records 60 cents

Zon-o-phone 12 inch Records $1.00

Are you sure, Mr. Dealer, that you are pushing the best Talking Machine line—not alone best in quality but best for profitable results?

If it isn't the Zon-o-phone, you are deceiving yourself in both cases. May we not enlighten you?

WINTER GAYETIES IN THE SOUTHLAND

Present Golden Opportunities to the Talking Machine Dealer.

Now that the social tide is running sonthward and the lovers of balmy weather are hying themselves to Florida and the other winter resorts where they can revel in all the delights of the summer season, from a bath in the ocean to a lawn fete, it is time for the "talker" man whose establishment is situated within the bonndaries of the Sonthland to realize what an opportunity awaits him in many a hotel and pleasnre gronnd

THE TALKER IN THE SOUTHLAND.

to introduce the prince of entertainers, the talking machine.

All the large hotels which bask 'neath Sonthern skies engage instrumental or vocal soloists, and often a whole orchestra for the entertainment of their guests, bnt the results obtained are usually inferior.

There is nothing so satisfying to the mnsic lover while promenading the veranda or dining in the palm room or grotto as the seductive strains of a waltz well played or the sweet notes from the throat of a skilled vocalist, but in the average hotel this is not possible to any great extent, because of the inability of the management to obtain artists of merit. Snch high prices are charged by talent who "make good" that their services are prohibitive. It is right here that the talking machine becomes a veritable "Johnny on the spot," and it will take bnt a single demonstration on the part of the dealer to prove its worth. Instead of a squeaky orchestra or the throaty nasal vocalist, the vibrant mellow tones of the greatest concert band or the snperb voices of Melba, Caruso and Scotti are always on tap, and in all their original beanty.

The hotel man may say he does not want "canned mnsic," but when the dealer can prove that the "canned" article he has to offer is far superior to the raw material now in nse by the hotel man, he will have no difficulty in making a sale.

The talking machine is particularly appropriate for hotels. Whether it be placed in the ballroom for dancing or on the lawn for an evening concert, it will be enjoyed far more than any indivdnal band, vocalist or instrumentalist, because of the great variety and high character of its selections.

All judges of good mnsic prefer Melba, the operatic soprano, to Dolly Dimple, the vandeville sonbrette, and Herbert's Symphony Orchestra to Krausmeyer's German band, therefore, every hotel in the Sonth to-day shonld know of the talking machine for the mnsic it affords is as superior to that now in vogne there as Melba is superior to Dolly Dimple and Herbert to Kransmeyer.

HOWARD TAYLOR MIDDLETON.

GENERAL DENIAL FILED

In Suit in Chancery Brought Against Thos. A. Edison and Co-Defendants by the New England Phonograph Co.

On Nov. 29 a general denial was filed in Newark, N. J., in behalf of the National Phonograph Co., Thomas A. Edison and his co-defendants, in the suit in chancery brought by the minority stockholders of the New England Phonograph Co., who complained that they suffered damage by reason of the alleged violation on the part of the defendants of certain alleged territorial license rights of that company. The answer makes reference to similar suits bronght against the defendants by the complainants. The answer denies that there is any valid claim whatsoever and appends as a snpplement to the answer, in the form of exhibits, every contract and agreement made by Mr. Edison pertaining to the phonograph business, inclnding the original made with Jesse H. Lippincott, who organized the North American Phonograph Co.

The answer also states that the terms of this contract, which required the North American Co. to pay Mr. Edison $500,000 and certain royalties, were never fulfilled. It was said that Mr. Edison's experience with Mr. Lippincott resulted in a loss of $400,000. Such rights as the New England Phonograph Co. obtained, the answer declares, were secured nnder the terms of a lease made by the North American Co. The defendants aver that such rights ceased with the insolvency of the North American Co. In 1900, the defendants further aver, the complainants secnred certain shares of the New England Phonograph Co. in an attempt to revive that corporation and to endeavor to enforce the terms of its old license. To make this effective, the answer says, the complainants named called a meeting and made contracts with James L. Andem, whose name will be remembered in connection with the apparently endless suit of the New York Phonograph Co. and a half-dozen others against the same defendants, empowering him to bring suit against the National Phonograph Co. and other Edison phonograph interests, or to settle with him or them for $10,000. The case will be heard some time this winter.

EXPORT TRADE EXCELLENT

Says Edward N. Burns Who Grows Enthusiastic Over Its Development—An Interesting Chat on "Live" Subjects of Interest.

For an expression of practical views on talking machine affairs few in the trade equal Edward N. Burns, a vice-president of the American Graphophone Co., also manager of the export department of the Columbia Phonograph Co., General. Talking informally on the situation with The World recently, among other things he said:

"The export trade is excellent and growing stronger month by month. During the present financial squall, when domestic business has felt the shock and its chilling effects more or less—now happily passing away—the export end shows like a luminous star in a moonless night. Our department has never been stronger or in a more flourishing condition, from every point of view. In fact, we are drawing on the home people for an extra supply of goods; taking everything in sight to send abroad and satisfy our clamoring foreign jobbers and distributers.

"Coming back to the domestic trade, I think the present flurry will squeeze out a great many small dealers. I do not say they are undesirable, but it must be admitted that the trade is too much cut up, and if current conditions would retire a lot of these little fellows, practically destitute of capital and always a worry, and possibly a menace to the jobber, it would not be an unmixed evil. Another thing, a dealer is called upon to carry too large a record stock, a good proportion of which remains dead on his hands. Therefore, he has either to get rid of these goods or increase his capital, both of which are not infrequently impossible.

"What is the remedy?" continued Mr. Burns. "Cut down the monthly list. Why should twenty-five selections be forced on the trade monthly? There is no reason for it. After the monthly lot of records reach the dealer, the sales practically cease for the remainder of the month, the customer waiting for the new batch, and so on unto the end of the chapter. Again, why should the dealer be loaded up with unsalable goods—'dead ones?' My idea would be that as soon as a piece of music became popular place the record in the hands of the dealer at once, and not wait for a month or two, so he would get the benefit of the hit. For example, 'The Merry Widow' stuff. In the course of three months a list of some size would accumulate, and in issuing a quarterly instead of monthly bulletins I would select at least twenty-five of the proved good sellers and print the selections separately so the dealer could keep in touch with the 'live wire' records and replenish his stock accordingly.

"In my judgment very often the popular music offered is not fit, from a selling point, to be recorded, and very often five and even less are worthy to be reproduced. Now, however, it is twenty to twenty-five a month, and many of the selections are the veriest trash, stickers from the start, and from these the dealer orders his stock—is compelled to—and becomes in consequence overloaded. The quarterly bulletin, with intermediate quick-selling records—ones for which there are a pressing demand—should be substituted for the present monthly list, under which the dealer is a sufferer and his grievance in connection therewith is well founded and therefore entitled to consideration and relief."

READY TO SLIDE.

Why Some Men Climb the Business Ladder and Others Go Down the Toboggan Slide.

Pick out ten men and set them to work on the same job. Keep them at it long enough to have them really know what the work is; 'till the novelty wears off.

"Inside of three months," says Barstow, of Boston, "you will have four of them on the toboggan, ready to slide because of the insurmountable difficulties which they have had to meet! They spend their lives on new jobs.

Three more will last out a year and then the same trouble comes up reinforced by the lack of newness in the game; it's the same old grind, day after day; there are too many things to meet; the line is rotten; the house doesn't back you up; his competitor has better stuff and the prices are lower.

And they quit.

Within the next three years two more men will lay down on the job with the same old reason—difficulties. Among these are staleness, lack of promotion, not enough money, largeness of the head and private quarrels. It's the ten little nigger story all over.

Out of the ten, there is one man, one big man who surmounts all the difficulties or goes around them, and he's the man who finally marries the boss' daughter and is taken into the firm with his name over the door, like the books in the Sunday school library.

It isn't a question of brilliancy, nor of unusual ability, but of hard determination, beat-it-out-no-matter-what-happens sort of a view of life. Question: If it takes a man sixteen years of hard work to become manager, how long will it take a stamp-licker to use up all the jobs in the city? That's where the tramps, drunkards and suicides come from.

Take it home now and try it on yourself. What came up to-day that made you feel sick? What was it that made the firm look like a rotten apple to the customer? What big order did you lose? What sort of a grouch did you carry home?

Yes, it was bad, heaven knows, and we get these setbacks all the time and there is no compensation. The man above "lays down" on us and we have all the dirty work to do. There's just money enough in the job to keep a cat on respectably.

All right, and again all right. You be the tenth man and stick; there's a time coming when you will be the man who has overcome all the difficulties and have won out. That's what all are working for. If you think this thing over slowly about three times, you will have received a measure of good that will last 'till the end of your days.

While the Flurry in the Financial World Has Been Felt in the West Yet the Talking Machine Trade Has Escaped Any Great Degree of Depression, Leading Jobbers and Houses Stating That the Falling Off for December Did Not Exceed Ten Per Cent.—Decided Picking Up Noticeable During the Past Ten Days—Clancy Takes Charge of the Wurlitzer House in Chicago—Western Salesmen of the National Phonograph Co. to Hold Their Annual Conference—A Chat With A. V. Chandler—C. E. Goodwin Optimistic Over the Situation—Prestinary With Lyon & Healy—Some Clever Babson Bros. Literature—Hansen to San Francisco—Arthur Geissler Has Been Visiting—Some Changes in the Directorate of Lyon & Healy—Success of the Kreiling Specialties—Other Items.

(Special to The Talking Machine World.)

Chicago, Ill., Dec. 7, 1907.

While it would be useless to deny the fact that the talking machine business has felt the effects of the financial upheaval, men in the trade express surprise that the slump was so small, considering the general unrest and uncertainty. One of the largest jobbing houses here state that the decrease for November was but 10 per cent. from last year's figures.

In the past week or ten days there has been a very noticeable picking up; orders previously held up have been ordered forward and new business has been coming to hand in a very satisfactory manner. The general feeling now is that conditions are rapidly returning to a normal state, and that while it is probably too much to hope that this month can realize the volume of business of last December, which was one of the largest, if not the largest, in the history of the trade, it will leave little cause for complaint. From all that can be learned the retail trade in the large cities suffered the most from trade contraction in November. Many dealers from the smaller towns who have been in Chicago the past week or so say that their trade has shown practically no falling off, and that they look for a good holiday business.

As your St. Louis correspondent has no doubt informed you, T. P. Clancy ("Tom" Clancy, as he is familiarly known), recently resigned as manager of the St. Louis branch of the Columbia Phonograph Co. to take charge of the automatic instrument department of the Chicago house of the Rudolph Wurlitzer Co. He assumed his new duties this week. Mr. Clancy's successor at St. Louis is E. B. Walthall, who came to Chicago from St. Louis, where he had had charge of the talking machine department of the O. K. Houck store, and took charge of the retail floor as manager of the Columbia Phonograph Co., at 88 Wabash avenue. Mr. Parker, now in charge of the Columbia Co.'s Milwaukee avenue branch, will come down town to headquarters, as retail floor manager, the first of the year.

W. C. Fuhri, district manager for the Columbia Phonograph Co., returned last week from a visit to the headquarters at New York. He reports that the company's officers are confident of rapid return to normal business conditions, and that this has been reflected by a steady resumption of activities at the factory, which were partially suspended during the height of the "flurry."

The usual annual conference of the western salesmen of the National Phonograph Co. with the executive heads will occur about the first of the year, when F. K. Dolbeer, general manager of sales, and E. H. Phillips, general manager of salesmen, will be here to confer with the men on matters of mutual interest and plan the campaign for 1908.

There will be a big gathering of moving picture men in Chicago on Saturday, Dec. 14, when the United Film Service Protective Association meets in convention at the Grand Pacific Hotel. Temporary organization was effected at Pittsburg last month, and at the coming meeting permanent organization will be effected, constitution and by-laws adopted and officers elected. According to a resolution adopted at the Pittsburg meeting the purpose of the association, the membership of which is composed of the film exchanges throughout the country, is to work in co-operation with the importers, jobbers and exhibitors of films and accessories to improve the service now rendered the public and to protect each other in the matter of credits and all other conditions affecting their mutual welfare. Among the principal reforms that the association expects to be accomplished is the elimination of sub-renting of films and the practice of selling second-hand films. The renter is to retire every film purchased after it has been used for a certain length of time to be decided upon by the association, by its return to the manufacturer, who will make the renter an allowance for such returned goods. These measures will save the public from having their eyesight and patience ruined, and will, of course, protect the trade from price-cutting competition.

Charles Armstrong, a progressive Edison dealer of Clinton, Ia., was a Chicago visitor this week.

E. J. Radius, proprietor of the Roseland Music House, at 1131 Michigan avenue, in the suburb of Roseland, has handled talking machines for some years and has evidently found it profitable, as he has recently extended the space devoted to

Special Notice to Dealers

During November, 1907, we referred to our dealers **461** inquiries. **64** of these were sent out on the 29th and 30th.

December will exceed the average of Nov. 29th and 30th

talkers and has enlarged his stock, carrying the complete Edison catalog and increasing his Victor stock as well. Another progressive dealer in Roseland is G. S. Hobbs, who has long handled the Edison line in a large way, and is an aggressive advertiser through the medium of the Roseland papers and the circular route.

Mr. Kitchen, a recent addition to the western traveling force of the National Phonograph Co., was recently in Chicago on his way from the factory, where he had been posting up, to his territory, the State of Iowa. M. G. Grusch, who travels Illinois for the National people, was also in the city for a day.

A. V. Chandler, the city salesman for the Edison people, lost not a ripple of his "jolly old smile" during the fiuancial "flurry." "Business has been quiet the past month among the retailers throughout the city, but by no means stagnant," he said. "Machine sales fell off somewhat, but record sales kept up decidedly well. Jobbers are evidently not pessimistic regarding future sales, as my orders for February records are equal and in some instances larger than usual."

At Lyon & Healy's, C. E. Goodwin was disposed to be optimistic regarding the outlook. "Neither our wholesale or retail trade has suffered to the extent one might imagine from the depressing atmosphere created by the daily newspaper accounts of financial conditions," said he. "Of course, we may experience some contraction of business for a month or so. When Mr. Farmer and Mr. Villager get a shock that makes them tighten up their purse strings, they do not always loosen up the minute the metropolitan dailies begin to tell of improved conditions. They may really have little reason for economy, but are inherently conservative. I do not look for any prolonged period of retrenchment like that followiug 1893; the country is too prosperous and the recovery from the shock must he rapid. December has opened up very well indeed with us, considering the circumstances. Down in the retail department last week they took a number of orders for Victrolas for Christmas delivery, one man huying five, one for himself and the others for presents."

Walter F. Gordon, manager of the talking machine department of the Phillips & Crew Co., Atlanta, Ga., called on the local trade last week. He reported southern husiness as of very satisfactory dimensions.

The Viascope Mfg. Co., of Chicago, which has been manufacturing moving picture machines for several years, are about to put a machine for home use on the market. It will be known as the "Home Viascope" and will retail at $40. R. S. Prybil, well known to the talking machine trade, formerly a Victor traveler, has allied himself with the Viascope Co. as manager, and will push the Home Viascope vigorously. He is now taking orders for January shipment. Mr. Pryhil's offices and salesroom are at 914 Steinway Hall building. The factory is at 112 Randolph street.

Arthur Caille, president and treasurer of the Caille Bros. Co., of Detroit, was a visitor at the Chicago headquarters of the company in the Republic building last week.

L. B. Glover, formerly of the assembling department of the Victor Talking Machine Co., at Camden, has come on to take charge of Lyon & Healy's repair department.

W. H. Prestinary is the new manager of the phonographic language department at Lyon & Healy's. He is an experienced talking machine man and has long been connected with the International Correspondence Schools, and has successfully demonstrated the language outfits at many of the large eastern talking machine concerns. L. L. Lewis, the former manager of the Lyon & Healy language department, and who resigned to become Mexican manager for the National Phonograph Co., returned to Chicago last week, after posting up at the Edison factory, and left for his new field of labor.

G. M. Nisbett, wholesale manager for Babson Bros., is and always was a notahly modest man. Consequently, it seems perfectly natural to read the legend, "We are not blowing our own horn" on the cover page of a neat booklet just issued by "the people with the goods." The book carries out the spirit of the caption. Thirty-nine of the forty pages are devoted entirely to the publication in fac-simile of letters from dealers acknowledging the receipt of inquiries for phonographs, reporting sales as a result, and praising the company for their prompt delivery of Edison goods and supplies. Mr. Nisbett says that for a week last month business showed a slight falling off, but speedily resumed its normal condition.

E. H. Uhl, western manager for the Rudolph Wurlitzer Co., reported that talking machine sales, after a temporary halt, are moving along in a very satisfactory manner, and that the prospects were for a fair holiday trade.

Ellis Hansen, formerly window trimmer at Lyon & Healy's, and the author of the excellent article on window exploitation of talking machines and records, which appeared in the October World returned from a visit to his old home in Denmark last week, and after hurried farewells, left for San Francisco, where he will assume his old position with Sherman, Clay & Co., with whom he was connected up to the time of the 'quake.

Arthur D. Geissler, general manager of the Talking Machine Co., was in Detroit the latter part of last month and found the American Phonograph Co., Grinnell Bros., and F. J. Schwankovski all doing a fair business in spite of the late lamented flurry. He just happened to be in Ann Arbor the day after the U. of M. and Pennsylvania foothall game, which was won by the latter. He declares that a bunch of keys and a knife constituted the total pocket assets of every one of the thousands of students as a result of their loyalty to the college team. Mr. Geissler returned this week from a visit to Philadelphia and New York. He found the Victor factory makiug shipments at a rate which certainly did not indicate that 1907 was going to boast of a talking machineless Xmas. With the Talking Machine Co. hoth orders and collections have shown a marked improvement in the past two weeks.

George Ornstein, manager of the traveling force of the Victor Co., was a recent Chicago visitor.

J. D. Beekman, sales manager for the Universal Talking Machine, was a recent Chicago visitor.

Frank Dilbahner, of the Western Talking Machine & Supply Co., returned from a northern deer hunt in time to eat venison with his family Thanksgiving.

C. W. Noyes, secretary of the Hawthorne & Sheble Mfg. Co., expects to publish a revised edition of the C. W. N. handbook of the phonograph. This valuable little book met with a very large sale years ago when first published, and will now be brought up to date with many new features.

James I. Lyous, the veteran Edison jobber, has made several short trips lately, paying friendly visits to some of his old customers, to whom he sold phonographs, etc., since 1900. Mr. Lyons says his sales are increasing steadily and that he looks for a large winter trade.

Hosts of fair Edison transcribers around town are putting in their spare moments writing essays on "What the Edison Business Phonograph Has Done for Me," in the hope of winning one of the three prizes of $25, $15 and $10 offered by the Edison commercial department's Chicago branch for the best efforts. Manager Barnes says that the returns so far are decidedly gratifying both iu number and quality.

Even the innocent and henevolently inclined talking machiue is sometimes made to serve base uses. Three youthful robbers held up a West Side saloonkeeper and four customers the other evening, shut up their victims in the ice box, and before they left turned on a talking machine to drown the cries of the prisoners.

C. N. Post has retired from the house of Lyon & Healy, selling his stock to the other stockholders and resigning as president and director. His successor as president is Robert B. Gregory,

formerly vice-president. The other officers are: J. P. Byrne, vice-president and secretary; Paul Healy, vice-president; J. F. Bowers, treasurer; Marquette A. Healy, assistant secretary and treasurer. These constitute the directorate. Marquette Healy, the only new addition to the directorate, is a young man with whom many of Lyon & Healy's talking machine customers are well acquainted, as he spent some time in that department, as he has done in all the other branches of the business of the great house in order to fit himself for the larger destiny awaiting him as one of the heirs of his father, the late P. J. Healy. The changes above mentioned were consummated at a meeting of the directorate Friday afternoon, December 6. There will be absolutely no change in the policy which has built up the jobbing and retail business of Lyon & Healy to such great dimensions. The talking machine department of late years has become one of the most important factors in the business of the great institution, and the department is making steady progress under C. E. Goodwin, who has been its manager since its inception. Mr. Post is a wealthy man and has at least no present intention of again engaging in active business.

According to the reports received from Kreiling & Co., of this city, manufacturers of the Tiz-It all metal ball and swivel joint horn connection, this clever device is amply justifying its name. It is now handled by leading jobbers throughout the country in steadily increasing quantities, and its fame has spread abroad, as nearly every mail brings foreign inquiries and orders.

The Tiz-It can be used on all Edison phonographs and Columbia cylinder graphophones, and the new model has a tapered bent tube that fits all makes of horns.

SOME POINTERS ON SALESMANSHIP

Some Timely and Pertinent Remarks by a Practical Member of the Trade Which Should be Read With Interest and Profit by Members of the Talking Machine Trade in All Parts of the World—Some of the Requisites to Success in This Special Field of Effort.

BY L. KEAN CAMERON.

Much has been said and a great deal written on the subject of salesmanship in general, but I wish to confine this article to the sphere of the retail talking machine salesmen, in particular. And by talking machine salesmen I mean all those engaged in selling any and every description of disc or cylinder machines and records.

There is a great demand, especially at this time of the year, for first class salesmen who thoroughly understand the talking machine business in all its phases. The demand far exceeds the supply, and I believe I am safe in saying that in this big country of ours there are not one hundred first-class A1 talking machine salesmen, when there should be ten, yes, twenty times that number.

What is the reason for this? Of course the business is in its infancy and some will say that they "have not had the time to look up the fine points," and they "must not be compared with salesmen of leather or dry goods, etc., who have had the benefit of years of experience of others before them in their lines, for advice and direction." This may be true to a slight degree, but I think that most salesmen new to the talking machine business merely seek the path of the least resistance and try to gradually absorb a slight working knowledge instead of digging down into the depths and learning everything of importance and value on the subject. It is like learning a new language. If you go among Frenchmen you will acquire a superficial conversational knowledge of the language in a couple of years, but, if one buckles down to his French grammar, lexicon, etc., putting his mind upon it with the determination to learn, he will speak the language grammatically correct in half the time.

Take the ordinary person who starts in a talking machine department of any of our large music houses. He learns the prices of the different machines and records, and after a time is able to distinguish the different styles of machines and horns from each other, sometimes. He has a dim idea, sometimes, that different sizes of machines have a different tone, sometimes. He can tell you, sometimes, why this difference exists and, sometimes, he can't. And he can't more times than he can. You see this "sometimes" business is a big thing and managers of talking machine departments and houses should take pains to eradicate this uncertainty among their salesmen.

Now, I do not wish to be understood as being pessimistic, but these views are merely the result of a tour of observation to the different talking machine departments and establishments in New York and Chicago, where I think one should get some idea or present conditions. I am glad to say, though, that these conditions are being gradually bettered, thanks to the labor aud forethought of certain large manufacturers of talking machines and phonographs, who have mailed to all dealers and salesmen of their goods, correspondence lessons in machine salesmanship, which have done a great deal to alleviate these conditions, by giving to all who took the pains to conscientiously study them a better appreciation of the value of knowing their goods. And I am personally indebted to the publishers of this magazine, and I am sure many others are, for the valuable material and suggestions which I have from time to time received through the medium of the Talking Machine World. I think it is the duty of all heads of departments and proprietors of talking machine houses to see that each salesman in his department gets his magazine regularly, and to impress upon them the importance of carefully reading it, thereby gaining much valuable information which would otherwise be lost. The insignificant expense to the department would be more than balanced by the added interest of the salesman in his work.

A talking machine salesman should know his goods from A to Z and back again. Else how will he be able to explain in an enlightened manner to his customer the desirability of such and such an instrument. The department manager should every two or three weeks call his salesmen together and go carefully over the selling features of each style of machine, explaining to the salesmen the difference in tone between certain styles, and the cause of the difference; also the effects produced by horns of different sizes and materials and the effects of different needles on the life of a record and on the tone production. He should endeavor to make clear in the minds of his salesmen the principles upon which the tone is reproduced by the soundbox or reproducer, and give them an idea of the process of manufacture of the records, for many a time does the customer ask, "Well, how are these records made," and "What is the difference between the cylinder and the disc records?" The usual answer I have found to this, is, "Oh, one is round and made of wax and the other is flat and is not made of wax." So the customer knows about as much as he did before he asked. Let the department manager explain and make clear all these points to the salesmen. The best methods of selling should be discussed unreservedly and in this manner will a great many of the cloudy points be cleared.

The salesman personally should endeavor to post himself thoroughly concerning the stock. Don't stop at merely learning the prices and to distinguish the different machines and records,

[The author of this article, Mr. Cameron, writes with intimate knowledge of his subject. He is a successful retail talking machine salesman of nearly a decade's experience, and is now connected with the Chicago house of the Rudolph Wurlitzer Co.]

but go deeper into it. Experiment with the machines. Observe the effect of the different size horns and the horns of different materials. Familiarize yourself with the names of all the parts of the motor and the work each does. If convenient, take a machine apart and put it together again and learn to diagnose a case when a machine does not run properly. Have your sample machines in perfect condition, running smoothly; and above all things don't let your reproducer or soundboxes blast and rattle, for nothing will kill your sale quicker than a poor reproduction. Do not use for exhibition purposes old, worn-out, scratchy records, and also do not try to dispose of records you have been using in your rooms to some E. Z. Mark. He may be easy, but when he observes that his records are not as smooth as some he has heard, he will go to that place where they were smooth and you lose a good customer. Remember that you must impress your prospective customer with the quality of the tone reproduction of your machine as well as the quality of your selling talk.

It is very important that you have a selling talk. Don't merely talk at random on all styles and sizes of machines, but have a plan of campaign. In my own case I have very successfully used the following method:

I have composed a selling talk embracing, as it were, an introduction to the machines, a general statement as to their quality and respective strong points, and a few indirect questions to get an idea of the amount willing to be paid and the style of the machine desired, whether disc or cylinder. This will give you the opportunity to then dwell upon the merits of one particular machine which it is evident he can afford. Do not make the mistake of trying to sell him too expensive an outfit, as the idea of such a large amount involved may discourage him and he may refuse to buy altogether. And yet, if he can afford it, impress upon him the advisability of owning a machine with which he will be perfectly satisfied, a machine of perfect tone, quality, strong motor, etc., here entering into a description of the machine suitable to his needs.

I have written and rewritten my selling talk, polishing here and revising there until it embraces the strongest arguments at my command. This I committed to memory and no matter when or how interrupted will arrange to pick up the thread at the right place and continue until the psychological moment arrives. Then stop talking. Now it is just as important to know when to stop as it is to know what to say. Many sales are talked to death and others meet the same fate at the mouth of the horn, for salesmen often make the mistake of playing too many records. Don't be an entertainer; sell goods. The talk must be memorized so well that certain parts can be changed at a moment's notice as demanded by the difference in customers, for no two men are alike and therefore your talk must be adapted to all sorts and conditions. Make your selling talk such a part of yourself that it flows as easily and gracefully as impromptu conversation. This method I have found very successful as it enables one to bring his strongest and most brilliant arguments to bear, where otherwise his talk would start nowhere and end about a half a mile this side of the same spot.

There are two things I have discovered you cannot select for another man: One is his necktie, the other his talking machine music. So don't try his patience by playing things you are fond of. Find out how his tastes run and put these records on the machine. Try to get at ease, but not familiar with your customer, for then the battle is partly won. Get him to talk and express his opinion on the machine and the result is easier. The hardest man of all to do business with is the man who sits in his chair like a wooden image and never opens his mouth or cracks a smile. Try different styles of music until something thaws him out. You cannot tell what the result will be. Once you make the right impression things begin to happen. This was illustrated forcibly just a few days ago. A gentleman and his wife walked into the store the other day and in answer to my question asked to be shown the different styles of machines. I went through my regular formula, had them seated in one of our private salesrooms and was playing a record or two to get a line on his tastes. After a couple of good quartettes and some orchestra music he seemed to fancy a sixty dollar outfit but could not make up his mind. I saw immediately there was something lacking in my endeavor to make an impression, but I had one more card up my sleeve, so to speak. So, placing a duet by two of the great operatic stars on a two hundred dollar machine which he had not noticed, I started it going. The effect was magical. He was entranced. "Now," he said, "that is something like it. Why didn't you show that to me in the first place. It is simply marvelous."

Now, I had led him up to that and by degrees put him in a mental condition to fully appreciate the beauty of the best machine by comparing it with others of the same make, only smaller. This man had to be treated in this manner, otherwise I would have lost the sale entirely, or at the most sold him merely a sixty dollar outfit when he was capable of paying more and willing to do so.

Study your customers and remember that all men cannot be treated alike. What impresses one tires another, and vice versa. Always try to meet a man on his own ground. If he is easy going, good natured and wants to talk and enjoy himself while he is looking at the machine, be thou likewise. If, however, he is taciturn and cold, don't attempt gayety with him or he may think you frivolous and your arguments will have no weight whatever. Endeavor to gradually thaw him out by your studied politeness and tact, and when you see him interested in some certain records or machine attempt to draw him out on that article. Find his particular hobby in the musical line and notice at the end of a half an hour or so the change in him. Study your customer's taste in music and remember the kinds of things he likes. Make a list of your important customers for your own use, and by each name a memoranda as to the class of records he buys. Write him a personal letter each month and tell him you have something of especial interest which will be sure to strike his fancy. You will be surprised when you figure the results of these special efforts and realize that you have made sales amounting to two or three hundred dollars which otherwise would have been lost. Besides, your customers will appreciate the interest you have taken in them and will stick to you, and keeping old customers is just as good and important as making new ones. Don't let a prospective customer bluff you. I am sure there are some who will try it. They will go so far as to intimate that they know as much or more about your business that you do yourself. The best and only way to avoid this is not to give him the opportunity. Know your goods from beginning to end, and no matter how hot and heavy the cross examination some people put you through you will come out victorious in the end.

There are times when we must be firm, especially with the fair sex. The other day an elderly lady and her granddaughter came into our department having been attracted by the window display. She wished to send a machine to her country home and was taking a general survey of all styles and makes. In giving her the prices of the different machines I had a dim idea she was not really hearing all I said, merely for the reason that she did not listen. However, she decided on a certain machine with a special horn amounting to fifty-one dollars. The next morning she telephoned in and changed her order to a larger outfit, which I had priced to her the day before at sixty-eight dollars, saying she would be down to the store in a couple of hours, as she could not understand the price I made her over the phone. After she arrived I happened to again mention the price of the outfit. "Sixty-eight dollars," she really yelled. "Why you told me yesterday it would be only sixty, and here you are trying to raise prices on me, taking advantage of my ignorance of the machines and by misrepresenting things, trying to steal my money. I just won't have it. You may cancel the order." And she stewed and fumed, ranting and marching up and down the room. I let her rant for a while. Maybe I was a little mad, but it was righteous anger, but with no show of temper, I said: "Madam, you are

G. M. NISBETT MGR. WHOLESALE.

very unjust and decidedly mistaken, but under the circumstances I think it is the best thing you could do. For really if you think that it is the policy of our establishment to treat people in the manner you suggest you would naturally not wish to take a machine from us. In fact, under such conditions I prefer not to sell you the machine, so we will call the matter off. I am very sorry but really I could not conscientiously allow you to purchase a machine, under that impression." When her daughter, who was with her this time, saw the turn affairs had taken she interrupted with, "Mother, I don't think you should let a matter of merely eight dollars stand in your way." So, at that I knew I had won the day on really something very nearly a bluff. But there was nothing else to do. With that kind of character to deal with, firmness was my best weapon. Had I tried to humor her she would have only been more positive that I had intended taking advantage of her and would have left the store in a rage. But seeing that I was firm and unyielding, she, after a short time acknowledged she must have misunderstood me and when she left, after paying half down on a seventy-five dollar outfit she was in the best of spirits and wondering what she would wear to the theatre that night. And so it goes. One must keep his wits about him and his eyes open.

Cultivate an easy flow of language, not necessarily brilliant but each sentence full of meat and to the point. Be interested in the wants of your customer whether he is going to buy a thirty-five cent record or a two hundred dollar machine. If a record customer does not know exactly what he wants, suggest some little gem of a piece to him and if you do happen to strike something he likes he will usually be so pleased with the discovery that he will invariably call for more like it on the spot. In a tactful way suggest to him that you would appreciate any mention he might make of the establishment to his friends. I am sure I have sold over three thousand dollars worth during the last year on that little suggestion alone. Oh, there are hundreds of little things to do to boost the sales. Use your brains. Be original, even if you fail now and then. You are bound to win in the end if you only have the determination, backed by brains. With the determination to succeed engraved on his mind and planted deep in his soul a man will stick to the roads which lead to success. Great success is more a mental than a physical problem, and though the fools may laugh at the idea of one becoming successful merely because he made up his mind to do so, it is still a deep truth and will become more widely acknowledged as the results are known. Make up your minds, brother salesmen, to be the best talking machine salesmen in the country. Realize the broadness of the salesman's position and his importance and prepare yourself accordingly. Stick to your determination and watch the results in your sales reports. You will be more than repaid. For I thoroughly believe "We are not what we think we are, but what we think —we are.

THEO. F. BENTEL RECOVERING.

The many friends of Theodore F. Bentel will be glad to learn that he is rapidly recovering from a recent surgical operation for appendicitis, and is now at his home in the Delmar Apartments, Germantown, Pa.

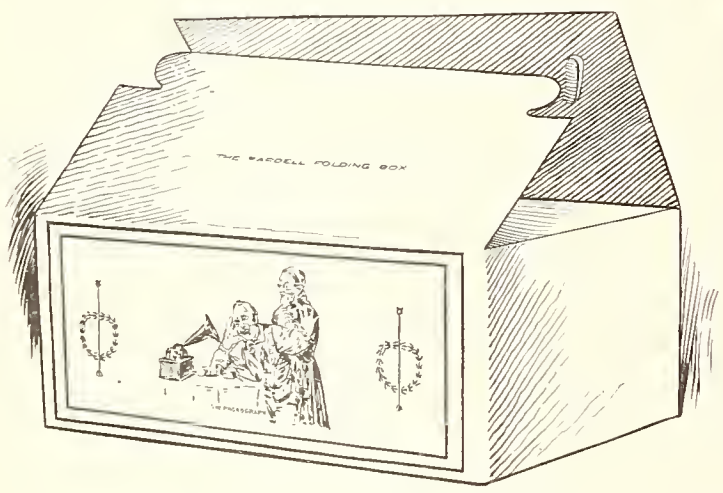
A CLEVER FIBER NEEDLE WINDOW.

The accompanying illustration shows the solid window display devoted to B. & H. fiber needles recently made at the Columbia headquarters, 88 Wabash avenue, Chicago, and which was referred to last month. For a specialty window it was worked out in a most effective manner and reflects great credit on Mr. Bartlett, the window trimmer. The background, canopy and sides were of bamboo poles, of which the needles are made, forming a regular Indian native booth. The floor was strewn with factory waste. From the horns on the floor flowed cornucopia-like, fiber needles in various stages of manufacture, with descriptive cards telling the story of the evolution of the needle.

WINDOW DISPLAY OF B. & H. FIBER NEEDLES.

C. S. Gardner is again with the National Phonograph Co., traveling on the Coast.

The Pardell Folding Box



THE most convenient package for delivering records to your customers. Many times you can sell "just one more record to fill up the box" by using them. Many dealers throughout the country use them. Do you? If not, try a sample lot; the cost is trivial.

No. 3 Pardell Box, holding three cylinder Records, $1.25 per hundred.

No. 6 Pardell Box, holding six cylinder Records, $1.75 per hundred.

No. 12 Pardell Box, holding twelve cylinder Records, $2.50 per hundred.

Write your jobber for them; if he cannot supply them send us $5.50 and we will send a hundred of each size, CHARGES PREPAID, to any part of the United States or Canada.

TRADE NOTES FROM ST. LOUIS.

Manager Long Says the Financial Scare Is Over, That Any Ill Effects Are But Temporary, and That Business Will Steadily Improve—Farmers Well Fixed Financially—Conroy Takes on the Ikonograph—T. P. Clancy Leaves for Chicago—Thiebes-Stierlin Co.'s Edison Rooms—A Trip Through the Koerber-Brenner Establishment—Some Recent Visitors to the Saintly City.

(Special to The Talking Machine World.)

St. Louis, Mo., Dec. 9, 1907.

Trade reports for the month of November, both from the jobbers and dealers, show that business was fair, with an improving tendency.

Manager C. W. Long, of the St. Louis Talking Machine Co., has just returned from a trip through Missouri and Kansas, taken for the purpose of determining the effect of the recent financial flurry on trade in general, and the direct effect on talking machine dealers. He was well pleased upon his return with the results of his trip, both from the amount of orders taken and from the healthful condition business in geueral seems to be in. It is his opinion that the financial flurry and scare is practically over, and that the talking machine dealers are going to feel very little ill effects. While produce and live stock have been reduced considerably in price, thus affecting the farmers, farmers in general have had such a prosperous year that it merely means a smaller amount of money to their saving accounts, and only in a small way will it affect their general purchases.

As one farmer expressed himself, that while he had received $300 less for his hogs than he would have had he disposed of them the first of October, at the same time the price he received was one that under ordinary conditions he would have considered very fair, and he felt prosperous enough to fulfil all plans he had mapped out for himself and family. That the dealers throughout the territory are of the same opiuion as Mr. Long is substantiated by the amount of business he did while away.

P. E. Conroy, president of the Conroy Piano Co., reports that trade has been fair for them during the past month in their talking machine department, and he looks for a good volume of business this month. This firm have recently added the Ikonograph, the picture machine.

T. P. Clancy, manager of the Columbia Phouograph Co. for the past year, and formerly manager of the talking machine department of the Conroy Piano Co. for ten years prior to this, resigned on Dec. 1. Mr. Clancy has accepted the position of manager of the Northwest automatic instrument department of the R. Wurlitzer Co., with headquarters at Chicago. He leaves here with the well wishes of a very large number of friends, who will miss his congeniality and good fellowship, and it can be said that he leaves a very meritorious record as a progressive, hustling and business-producing young man.

E. B. Walthall, late mauager of the retail sales department of the Columbia Phonograph Co., Chicago, aud formerly manager of the talking machine department of the O. K. Houck Piano Co. here, a very efficient and well-known talking machine man, succeeds Mr. Clancy.

The Thiebes-Stierlin Music Co., which recently added the Edison line to their talking machine department, have just completed a very handsome Edison room for the entertainment of their customers.

J. P. Booker, traveler for the Silverstone Talkiug Machiue Co., is in from a three weeks' successful trip through Southwest Missouri. He leaves shortly for a trip through Illinois.

W. C. Fuhri, general western manager of the Columbia Phonograph Co., with headquarters in Chicago, was a recent visitor here.

Mr. Kloehr, traveler for the National Phonograph Co. through Missouri, was a recent visitor here.

Miss Sadie Rosenblatt, manager of the talking machine department of May, Stern & Co., opened recently, reports an excellent showing for the short time they have been open.

The most impressive feature of a trip through the extensive stock rooms of the Koerber-Brenner Music Co., of this city, is the air of activity which seems to pervade every corner. How this concern could build up such a successful trade in so short a time is truly a marvel. Whatever cause has contributed to the immeuse growth, it remains an undeniable fact that the busy scene is one of unusual force. Victor talking machines and Edison phonographs with all their accessories are carried here in endless profusion; the stock is complete to fill the needs of the great southwestern trade. By cateriug to the increasing demand of the many live dealers of this sectiou the Koerber-Brenuer Music Co. are constantly adding to the volume of their sales. A pleasant feature of this business is that it is an exclusive jobbing house. They do not sell a single article at retail. They have no special friends to favor and they cannot ship a worn record. That this feature is a mighty influence in the trade may partly account for their remarkable success.

The Cady Cabinet Co., the enterprising manufacturers of talking machine cabinets, Lausing, Mich., will show their full spring line at the New York exposition, to be held at the Grand Central Palace, January 13 to February 1, 1908. They report an excellent demand for talker cabinets.

NEW COPYRIGHT BILL INTRODUCED

In the House of Representatives on the First Day of the Session of Congress by Chairman Currier—Some Changes in the Bill from That of Last Year—The Latest News from Washington Will Interest Talker Men.

(Special to The Talking Machine World.)

Washington, D. C., Dec. 9, 1907.

Contrary to expectations the new copyright bill (No. 243), was introduced into the House of Representatives on the first day of the session, on December 2. The Hon. F. D. Currier, chairman of the committee on patents, in the last Congress, and who will continue to hold the same position in the present body, framed up a measure, after a number of conferences since the adjournment in March last, with prominent talking machine, mechanical instrument and perforated musical roll manufacturers and attorneys representing their interests. The result is seen in the first section, paragraph b, of this bill (the italics being the new portion), which covers adequately and satisfactorily what they have contended for from the start, reading as follows:

"Section 1. That the copyright secured by this act shall include the exclusive right—

"(a) To print, reprint, publish, copy and vend the copyrighted work;

"(b) To * * * *arrange* or adapt it if it be a musical work: *Provided, that the words 'to rearrange or adapt it if it be a musical work' shall not, for the purpose of this act, be deemed to include perforated rolls used for playing musical instruments, or records used for the reproduction of sound waves, or the matrices or other appliances by which such rolls or records are made.*"

The talking machine people declare that if the Senate will embody this section in their bill, it will be all over so far as they are concerned, but the shouting. Those parts of the Currier bill that will also interest the trade relate to the punishments for infringement, contained in the appended sections:

Sec. 28. That if any person shall infringe the copyright in any work protected under the copyright laws of the United States such person shall be liable:

(a) To an injunction restraining such infringement;

(b) To pay to the copyright proprietor such damages as the copyright proprietor may have suffered due to the infringement, as well as all the profits which the infringer shall have made from such infringement, and in proving profits the plaintiff shall be required to prove sales only and the defendant shall be required to prove every element of cost which he claims, or in lieu of actual damages and profits such damages as to the court shall appear to be just, and in assessing such damages the court may, in its discretion, allow the amounts as hereinafter stated, but such damages shall in no case exceed the sum of five thousand dollars nor be less than the sum of two hundred and fifty dollars, and shall not be regarded as a penalty:

Third. In the case of a lecture, sermon, or address, fifty dollars for every infringing delivery;

Fourth. In the case of a * * * musical composition, one hundred dollars for the first and fifty dollars for every subsequent infringing performance;

(c) To deliver up on oath, to be impounded during the pendency of the action, upon such terms and conditions as the court may prescribe, all articles alleged to infringe a copyright;

(d) To deliver up on oath for destruction all the infringing copies or devices, as well as all plates, molds, matrices, or other means for making such infringing copies as the court may order.

Sec. 31. That any person who knowingly and wilfully and for profit shall infringe any copyright secured by this act, or who shall knowingly and wilfully aid or abet such infringement, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be subject to a fine of not less than one hundred dollars nor more than one thousand dollars and stand committed to jail until said fine and costs are paid.

Sec. 42. That no criminal action shall be maintained under the provisions of this act unless the same is commenced within two years after the cause of action arose.

Sec. 43. That in all actions, suits, and proceedings under this act full costs may be allowed and the court may award to the prevailing party a reasonable attorney's fee as part of the costs.

Sec. 67. That this act shall go into effect on the first day of July, 1908.

As a number of new members will be added to Mr. Currier's committee, hearings will be again given, but they are not likely to come on until after the reassembling of Congress in January following the holiday recess. In the Senate it is likely Senator Clapp, the ranking member of the Patents Committee, of Minnesota, will succeed Senator Kittredge as Chairman. It will be remembered Senator Clapp voted for the majority report on the Kittredge bill submitted in the 59th Congress, and which was diametrically opposed to the contentions of the talking machine advocates. The accession of the new member, vice Kittredge, may therefore make all the difference in the world when a new bill is considered by the Senate Committee, as this single vote carried the day before. Therefore the announcement of the Senate committee, which is not named by the Vice-President, except pro forma, but by the two political parties, is important.

STORIES OF LIFE IN THE FAR NORTH.

(Special to The Talking Machine World.)

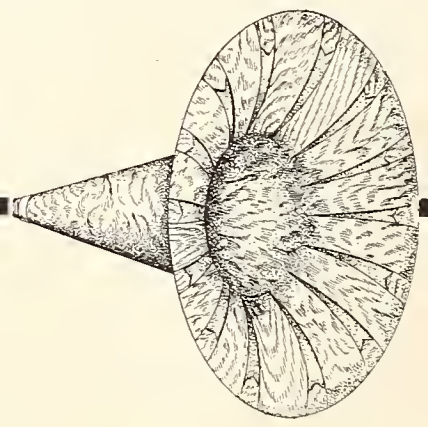
Houston, Tex., Dec. 8, 1907.

Ben F. Frymier is in Houston, from Alaska, the guest of his sister, Mrs. Ingham S. Roberts. Mr. Frymier, though a young man, is one of the pioneers of Alaska, having gone there with the first gold rush, and in that time has annexed a number of valuable mining claims. He tells many interesting stories of life in the Far North.

The white people live principally on canned goods, and one day a phonograph was brought to Nome which excited the greatest curiosity of the Indians. After hearing for the first time one of the instruments an old Indian remarked, "Humph, canned white man."

Mr. Frymier will remain in Houston until after the long night and will then return to the Klondike. The phonograph mentioned was an Edison Home, shipped to him by the Texas Piano & Phonograph Co., who now have on exhibit at their Main street store several Esquimaux records taken by Mr. Frymier.

Puccini, the celebrated composer, is also up in arms against the record and moving-picture makers for appropriating his music willy nilly. This piece of news comes from Milan, where he has consulted the "body of jurisconsults representing the interests of the Society of Italian Authors and Composers." They advised him that the action of the talking machine manufacturers in this respect "constitute a real and grievous infringement of the authors' copyright bill," and therefore Puccini has decided to take action against such companies in the United States. Mascagni, another eminent composer, is about to adopt similar tactics, and will act in accord with Puccini. Unless the law is amended in their favor their chances of enjoining record makers from using their music are slight and their efforts will prove abortive.



The Horn of Truth

—the one that transmits tones truly, correctly, *must* be made of wood. No other material will answer. No matter how good the talking machine, you cannot expect satisfactory results from any but a wooden horn. Ours are made of two-ply veneer, highly polished, in Golden Oak and Mahogany. Polished Brass, Lacquered Bell. Morning Glory also, if you want it.

TRADE HAPPENINGS IN DETROIT

Detroit Jobbers and Dealers as a Whole Are Most Hopeful Regarding General Conditions—Many on Investigation Find That the Volume of Trade Has Equalled Last Year Notwithstanding the Cry of Stringency—Plenty of Money Which Will Find Its Way Into Circulation as Soon as Confidence Is Restored—What a Run Around the Trade Reveals.

(Special to The Talking Machine World.)

Detroit, Mich., Dec. 9, 1907.

Kenneth M. Johns, manager of the Columbia Phonograph Co. store at 242 Woodward avenue, probably is one of the most optimistic of the dealers in the talking machine trade in Detroit. He says that in spite of all that is said about financial depression it is an actual fact that his store did more business in November this year than in November, 1906.

"I think that a great many business men in all sorts of business are proue to be seized with a miniature panic in their own minds which blinds them to the actual condition of affairs," said Mr. Johns. "I was talking with a dealer the other day who was deploring bad business conditions and he said business was far behind last year. Just out of curiosity I asked him to foot it up from some memorandum and to his surprise he found that he had actually doue a few hundred dollars more business this year in November than last. November last year was not a particularly good month, but no one cried panic. It is just the same with the closing of the stove works (one of Detroit's largest industries, employing thousands of men). Mauy people have thought this was a very bad sign, but they do not stop to consider that the stove works have closed every year at this time for many years back and nothing has been thought about it. So it is with the music business generally. Because there has been gambling on Wall street every business man is prone to attach some sinister importance to every little slackening of business."

S. E. Lind, of the Mazer Phonograph Co., 45 Michigan avenue, selling Edison, Columbia and Victor machines, said yesterday that business had been good from the opening of this new store last May, up to about three weeks ago, when there was a falling off. Mr. Lind, however, says that prospects are good for holiday trade, and that, surprising to say, considering the depression talk, the collections have kept up very well.

E. P. Ashton, manager of the American Phonograph Co., at 106 Woodward avenue, says he has no complaint. He said yesterday that the prospects are excellent for a holiday trade, and that while collections and the general retail business has kept up well, there has been a surprising activity in the wholesale trade, the small towns appearing to be blessed with more prosperity than the cities. This probably is particularly true of the farming communities. It has been commented upon generally by the general uusic trade, as well as the talking machine men, that the farming population has more cash than the city people. The crops in Michigan this year have yielded big profits, not particularly due to particularly good crops, but because of high prices which have prevailed.

C. A. Grinnell, of Grinnell Bros., said the other day that the talking machine business in the city was not quite up to the mark, but that out in the State it had been better, but that the situation in the city was what might be called fair, with promise of some good holiday trade.

A STRIKING STREET SIGN.

As previously referred to in The World, the Victor Talking Machine Co. have one of the most striking electric advertisements to be seen on the "Gay White Way." It attracts contiuual attention. The sigu is 30 feet high by 20 feet wide, and can be seen for many blocks below Herald Square. The celebrated picture of the dog listening to his master's voice is traced out on a black background with hundreds of miniature electric light bulbs, while the disc on the instrument ingeniously revolves, giving one the impression that the machine is playing a selection, and you almost expect to hear the strains of some popular air. The picture is painted in colors, and with vari-colored bulbs makes a decidedly pretty picture to look upon.

NORCROSS WOOD DIAPHRAGM.

In a chat this week with Mr. Norcross, of the Norcross Phonograph Co., New York, he expressed himself well pleased with the manner in which the trade have taken hold of his wood diaphragm. He said: "There have been many experiments toward the utilization of wood for diaphragms, but no practical result has been had up to the present invention. It is only necessary to hear this device to concede that a new era in diaphragms has been ushered in."

Record Cabinets

Gentlemen of the Trade

We have without exception the most attractive lines in Record Cabinets now on the markets—handsome and novel in design—excellent in finish, and we are naming prices that master the market. The dealer who handles our lines will control the cabinet trade of his territory. Write for the proof and write quick.

American Phonograph Company
106 WOODWARD AVENUE DETROIT, MICH.

¶ P. S.—We are State Agents for Michigan for the wonderful IKONOGRAPH Moving Picture Machine Write for literature and prices

¶ We have just originated the "slickest" Contract Form, and will be pleased to sell you a supply. They are put up in pads, and can be filed in the ledger. Simply great. Send for sample and prices.

THE DIAPHRAGM IS KING

OUR LATEST NOVELTY IS THE

WOOD DIAPHRAGM

When subjected to the impact of sound wood is the most resilient of all known substances. This is proven by its successful use in violin bodies and sounding boards for pianos. No other material can take its place. By a new and novel process we have succeeded in making a four-ply composite diaphragm, two of very thin wood and two of cotton stalk tissue, all of which is compressed within a thickness of 6/1000ths of an inch. The reproduction by this diapbragm is truly marvelous. Every detail of sound and tone finesse that is capable of being recorded is brought out by this invention. It proves conclusively that the art of recording has been far in advance of the methods of reproduction.

PRICE, INCLUDING CROSS HEAD AND LINK, $1 EACH.

VULCANOID DIAPHRAGMS

Are proving their worth. They are absolutely unchangeable and indestructible—loud and brilliant in tone.

PRICE, INCLUDING CROSS HEAD AND LINK, 50c. EACH.

Norcross Phonograph Co., New Lang Bldg., 662 Sixth Ave. (39th St.) NEW YORK CITY

TALKING MACHINE MEN MEET.

The Executive Committee of the National Association of Talking Machine Jobbers Transacts Much Business of Importance at Its Meeting at Pittsburg on Monday.

(Special to The Talking Machine World.)

Pittsburg, Pa. Dec. 9, 1907.

Yesterday the executive committee of the National Association of Talking Machine Jobbers met at the Hotel Henry. The entire committee, with the exception of E. H. Uhl, of Chicago, with the Rudolph Wurlitzer Co.'s branch house, were present, as follows: J. F. Bowers, president, of Lyon & Healy, Chicago; W. D. Andrews, vice-president, Syracuse, N. Y.; Louis Buehn, treasurer, of Buehn Bros., Philadelphia, Pa.; Perry B. Whitsit, secretary, of P. B. Whitsit Co., Columbus, O.; Lawrence McGreal, Milwaukee, Wis.; C. V. Henkel, of the Douglas Phonograph Co., New York; C. W. Hickok, of the Whitney & Currier Co., Toledo, O.; Wm. E. Henry, of the Powers & Henry Co., Pittsburg, Pa. The sessions lasted all day, commencing at 10.30, adjourning for luncheon at 1, reassembling at 2, and closing at 6.

The meeting was of an executive order and therefore none of the proceedings was disclosed. The chairman of the association's press committee, Mr. Henkel, subsequently stated that matters of great importance to the welfare of the trade were discussed, informally, but in the most animated manner. The membership now numbers ninety of the representative houses of the country, but there are still a large number that should join, as their assistance and co-operation are strongly desired. The committee would therefore be pleased if the jobbers who had received application blanks would fill out and forward them to Secretary Whitsit, qualifying at the same time. Such matters as the committee recommended for favorable action will be reduced to proper form and shape for presentation at the next meeting, which will be held February 17. No place has as yet been selected, but it is probable New York will be named.

* * * *

The Talking Machine Jobbers' Association is well worthy of the support of every jobber in the United States. It is officered by serious-minded business men who are giving considerable of their valuable time to the association interests with the direct object in view of bettering the talking machine conditions in every way possible.

It should be understood that this organization stands for the advancement of the industry. It is not run in the interests of any particular coterie of talking machine men but in the interests of all, and the officers should have the generous support in their work by the talking machine jobbers.

The only way an organization can succeed permanently is to have a good membership among whom is a fair percentage of actual workers. Things don't come easier in the association line any more than in any other department of life. It requires good hustling to bring results, and if the men who are now guiding the organization are fairly supported in their work, as they should be, there is no question as to the permanent good which this association will accomplish in this industry.

The membership is steadily growing and there is no reason why anyone should hold back from participation in the workings of the association. The officers earnestly desire the co-operation of all who have the good of the industry at heart.

HOW THE PHONOGRAPH WAS INVENTED.

The story of how Mr. Edison came to invent the phonograph has been told many times and with many variations, and it may not, therefore, be without interest to relate exactly how the wonderful "talking machine" came into existence, says the Strand Magazine. Briefly, then, the invention of the phonograph was the result of pure reason based upon a very happy inspiration. In his early work with automatic telegraphs operating at high speeds, Mr. Edison had occasion to experiment with embossed strips impressed with dashes and dots thereon, which were moved rapidly beneath a stylus to vibrate it. It was observed that this stylus in vibrating produced audible sounds. A small thing such as this would pass unnoticed by the ordinary observer as of no interest, but to a mind that is not only intensely alert but highly analytical it was regarded as a curious phenomenon. At this time Mr. Edison was actively working on his telephone experiments, so that his attention was largely absorbed by matters connected with acoustics. Simply as a matter of inspiration the idea of a talking machine occurred to Mr. Edison, and, remembering his experiences with the automatic telegraph transmitter, he concluded that, if the undulations on the strip could be given the proper form and arrangement, a diaphragm could be vibrated so as to reproduce any desired sounds.

The next step was to form the proper undulations in the strip, and the idea was then suggested to Mr. Edison's mind that these undulations could be produced by sounds themselves, which could then be reproduced. When this strip of material capable of being impressed by complete conception was reached the phonograph was produced. Obviously, the change from a sound waves to a cylinder, of such material of which the sound waves could be impressed in a spiral line was a refinement of the original conception which simply involved mechanical considerations. It is, therefore, rather an interesting fact that in the development of the phonograph the reproduction of the sound preceded the original production of the record.

Moving picture machines and films are becoming more popular each day, and dealers handling them are realizing what the manufacturers claim, that they are an ideal line for the talking machine trade.

HOW DO YOU ORDER DINNER?

¶ You don't eat half your meal in one Restaurant, because they serve that portion to your liking, and then the other half in another place.

YOU EAT IT IN ONE PLACE

¶ You patronize a Restaurant where they fill your entire order to your taste and give satisfactory service.

BLACKMAN DON'T RUN A RESTAURANT

¶ No,—but BLACKMAN fills orders for the most Hungry Dealers and serves them with EDISON and VICTOR goods as they want them assorted, and the service is the best.

¶ Will you continue making out **two** orders every time you need some EDISON and VICTOR goods, and wait for **two** shipments, pay **two** expressages, etc.

BE UP-TO-DATE, ORDER FROM BLACKMAN

¶ **Blackman** keeps a FULL LINE of all EDISON and VICTOR goods, therefore SAVES YOU MONEY, for you need only make out ONE order, pay ONE expressage.

¶ Send in an order NOW and depend on BLACKMAN for your holiday needs.

¶ There is NO WORRY on BLACKMAN'S part about "Making Good," and there will be none on your part after a TRIAL for "Satisfaction at Blackman's costs no more than Dissatisfaction elsewhere." Blackman's Competitors are the only ones worrying about him "Making Good."

TRADE NEWS FROM MILWAUKEE.

Ample Proof That It Pays to Advertise Is to Be Found by the Success of Those Who Practice It—Business Steadily Improving—How Lawrence McGreal Helps His Clients in Their Campaigns for New Business—National Phonograph Co. Establish Branch Office in Railway Exchange Building—Campbell Opens New Store—Retailers Report an Average Business for This Season of the Year.

(Special to The Talking Machine World.)

Milwaukee, Wis., Dec. 11, 1907.

"It pays to advertise," the modern proverb of business, has found favor in Milwaukee. Because "It pays to advertise" and they do advertise, Milwaukee talking machine dealers are doing good business at a time when trade in other lines is dull. Undaunted by the scarcity of currency and troubled conditions in the business world, dealers—jobbers, wholesalers and retailers—set out at the beginning of the trouble to create a market. Big "ads." in the daily newspapers and in magazines, well written, and well calculated to bring returns, have had their effect.

The Christmas season finds Milwaukee jobbers in an expectant mood—not over-confident, nor too optimistic—plugging away for dear life. They are going out after the business, and they are getting it. If hustling counts, here is where the dollars should stack up.

Easy payment plans are the rule. One dollar down and a dollar a month thereafter has been featured in the newspaper "ads." The result is that scores of high and low priced machines have been sold, where, if large payments were insisted upon, the sale would be lost.

Collections on the easy-payment sales are good, but the same does not hold good on other sales. Milwaukee dealers are finding it rather hard to make prompt collections. Yet this has not cast pessimism among them. They are "watching the East for a light to break," and after the first of the new year better conditions are confidently expected.

An improvement in business is noted all along the line. Four or five weeks ago dealers were ready to drop everything and give up in disgust. Shortly afterward business began to pick up slowly and gradually, and the dealers covered up any "blues" they may have felt by giving out reports of good trade. They don't have to do that to-day. Business is really there. There was an object in covering up the gloomy side. Had they come out with dark reports there would no doubt have been a bad time for retailers. Thus trouble was averted and no one is the wiser.

A. E. Thomas, manager of the Milwaukee branch of the Columbia Phonograph Co., Grand avenue, says: "Business is better than it has been for some time. While collections are a bit slow, I can't complain. There seems to be a general revival and stimulation in trade, which I am glad to say we are sharing. I look for an excellent Christmas trade."

Lawrence McGreal, successor to McGreal Bros., Edison jobbers and Victor dealers, reports good business at both the home office here and at the Cincinnati branch, which he opened about five or six months ago. He is now busy in jumping from one chair to another, while a small army of workmen is remodeling the big five-story building at 172-174 Third street, leased by Mr. McGreal for his Milwaukee house, and the prospects are that it will not be ready for occupancy until January 1 at the earliest. Patrons are being taken care of in the same manner as usual, however, there being little actual inconvenience because of the rebuilding.

Mr. McGreal's plans for the new store indicate that he means to make it a model of its kind. All facilities known to the business world will be installed. He has something new in the line of exhibit rooms, record vaults, and stock rooms. Cozy rooms for customers are planned.

Mr. McGreal is a man who believes in advertising. He goes farther than that. He helps his clients in their campaigns for new business. He secured scores of agents in all parts of Wisconsin last spring by advertising, and he is now offering all of these men or firms aid in getting new business. His motive is, to be sure, no selfish one. He knows how, and he has no desire to keep all he knows to himself. Mr. McGreal's long experience in the talking machine line has shown him, he says, many things of benefit to the man who buys and the man who sells.

December records, by means of liberal advertising, were eagerly taken by owners of machines. The financial stringency seems to have no effect on the sale of records. They are not considered a luxury, but almost a necessity, and the owner of a machine does not hesitate to put a few dollars into this form of amusements.

The National Phonograph Co., who have established a branch office in the Railway Exchange Building, reports progress in the introduction of its commercial phonograph. The use of these machines is becoming general in Wisconsin, and sales have been frequent. The commercial phonograph is now recognized as a valuable aid to business, and local court reporters are using them for transcribing testimony and other court records.

The retailers as a rule find business "only average." Prospects at the beginning of the holiday season, however, would inspire confidence. The Huseby Co., Grand avenue; George Eichholz, 1340 Fond du Lac avenue; Oscar Bach, 2202 Vliet street, and others report same conditions. They have laid in large stocks in anticipation of increased business and are now awaiting results.

George Campbell, for many years associated with McGreal Bros., and more recently with Lawrence McGreal, the successor, has opened a talking machine store at 326 Grove street, near National avenue, Milwaukee, and he will handle the Victor and Edison lines. Mr. Campbell is experienced in the talking machine lines, and he is welcomed into the fold by his fellow-dealers. His former employers join with them in wishing him success.

This Then

will inform you that our new issue of photographs of the Talking Machine artists, were ready on October 1st. These are neatly framed and each packed in a separate mailing box, protecting them and making them convenient for handling.

Dealers will find these framed goods ready sellers, also very attractive for window or store decorative purposes. We will mail you a sample of either framed or unframed, on receipt of price; unframed 35c. each, framed 50c. each.

HUMPHREY BOOKCASE COMPANY, Detroit, Mich.

COURAGE IS THE BEST ANTIDOTE

For Financial Panics Such as the Country Has Just Passed Through.

(Special to The Talking Machine World.)

Chicago, Ill., Dec. 9, 1907.

Edward C. Plume, philosopher and western wholesale manager for the Columbia Co., contributes the following anent the "situation."

"Courage must lead us in any great undertaking. How many men have thrown up their hands at a time when a little more effort—a little more patience—would have achieved success. If, instead of giving up to his fear, a man would persist in keeping prosperity in his mind, and assume an optimistic attitude, conducting his business in a systematic, far-sighted and economical manner, actual failure would be comparatively rare, for when a man loses courage and grip, he is not in a position to make the effort which is absolutely essential to carry him to victory.

"Level-headed, conservative business men throughout the country are more optimistic, and they say that business generally was never more satisfactory, the volume which has been done during the present year will greatly exceed that of last year, and that the demand for a better and higher class of talking machines, as well as other goods, is quite general. Collections are good, and the fall business promises to be as large as last year. Bank clearings, according to newspaper reports, show a marked increase over those of 1906, which in itself was an unusually large year in this respect. From all parts of the country come reports of prosperity, and that business, instead of decreasing, is expanding vigorously. But lack of courage stills initiative. Work done when one is suffering from a sense of foreboding or fear, has little value, strangling boldness, daring, and even individuality. The man who lives under a perpetual shadow of impending disaster, with the continual dread that something is going to happen to his business, is in no condition to ward off a disaster which might otherwise have been turned into victory.

"What we most fear is always something that has not happened. It is not a reality, for it only exists in the imagination of the man who lacks the courage to say to himself and to his fellows: "There is no failure except in no longer trying. There is no defeat except from within, no really insurmountable barrier save our own inherent weakness of purpose.'

"Spasmodic disturbances are bound to come now and then, but future panics cannot last long. Business is too well organized throughout the country. The men of years ago are dwarfed in comparison with the men of to-day. Wisdom isn't bought; it comes with experience, and it has told us that courage and confidence will do more toward preventing so-called hard times and panics, such as we have just passed through, than any other force."

CANADIAN DEALERS APATHETIC.

Do Not Appreciate in a Fractical Way the Value of Publicity Inaugurated by the Berliner Gramophone Co., Which Is Similar to That Conducted by the Victor in This Country.

Canadian dealers do not seem to have shown a practical appreciation of the advertising being done by the Berliner Gram-o-phone Co., of Canada, in the dailies throughout the country, says the Canadian Music Trades Journal. It was expected that on the first of every month, as the advertisement of records appeared, it would be surrounded by the announcements of the various handlers of Berliner or Victor machines and records. In some instances this was the case, but in many cities and towns it was quite overlooked. Owing to this fact the following circular letter has been sent out to Berliner and Victor dealers: The large record advertisement which has been appearing in the leading papers in Canada for the past three mouths will not appear in December, as it has been decided that it would be much more satisfactory at this season of the year to advertise the machines instead. As to the continuation of the record advertisements, we have decided not to insert these ads. again in places where the local dealer will not help the sale of records by advertising that he has them for sale. We have before us copy of a newspaper printed in Cleveland, O., wherein the Victor records were advertised on Sept. 28 last; the dealers in Victor goods in Cleveland filled the entire page, with the exception of one column of reading matter, thereby making seven solid columns of Victor advertising, and every dealer who advertised had the records for sale. The Canadian dealers do not seem to have taken advantage of this exceptional advertising opportunity as the dealers in the States, and, notwithstanding our continued advice and our many suggestions regarding this advertising, we have found it impossible to interest some dealers sufficiently to see the advisability of doing their share of the advertising. We have therefore concluded to discontinue the advertising of records in such places where the dealer will not advertise the records, as well as stock the monthly list, as we feel that it is simply money wasted in advertising in places where the dealers do not let the people of the town know where the records are sold or where they do advertise the records but do not have them in stock.

NO SETTLEMENT IN SIGHT.

Rumors of any kind of a settlement iu the New York Phonograph Co. suit against the jobbers and dealers of New York State, are denied as absolutely without foundation by Vice-President Pelzer, who is the legal adviser at the National Co.'s New York headquarters. He characterized the report as absurd, no matter what "the other side" are saying with that end in view.

A merry Christmas to all our readers.

Now For Christmas

IN NEW ENGLAND there will be a good many talking machines purchased for Christmas presents, and we want to remind all of you talking machine dealers of New England that we can supply your demands quickly.

If you have any late orders from customers for something that you haven't in stock, remember we have the biggest line of talking machines and accessories to be found in New England. We job exclusively, and we can fit you out in anything which you desire in the talking machine trade, whether machines, records, horns, carrying cases, etc. You can turn to us and we can relieve your cares.

We can fill orders shortly after they are received so that you should not lose a single sale by reason of not having the goods in stock.

The Boston Cycle and Sundry Co. 48 Hanover Street BOSTON, MASS.

BOSTON'S BUDGET OF NEWS.

Holiday Trade Is Developing Much Better Than Expected—Grand Opera Records in Good Demand—Columbia Co.'s "Red Mill" Window—Manager Andrews' Optimistic Views—Iver Johnson & Co.'s New Building—The New Department of the Ditson Co. Attracts Increasing Custom—Jobbing Business Good with Osgood—Many Sales of Victors at Steinerts —The Zonophone Featured by Read & Read.

(Special to The Talking Machine World.)

Boston, Mass., Dec. 10, 1907.

December finds the talking machine jobbers "up to their eyes" in filling orders, and the retailers doing a very good business, with the prospects excellent for a decided increase in volume of trade before the Christmas holidays.

Boston is a great field for the talking machine at this time of the year, for people buy a great many of them for Christmas presents, and now that the grand opera records are more easily obtainable by persons of moderate income, the demand for them has increased steadily.

The coming of the San Carlo Grand Opera Co. to Boston this month means a great deal to the Edison people, for Constantino, the Spanish tenor, whose voice is recorded on many of the Edison records, is the leading tenor with this company.

Wholesale Manager Chamberlain, of the Eastern Talking Machine Co., reports an unusual demand for grand opera records from dealers in nearby towns. Business has increased very materially at this company's store since the new elevator was installed and the additional floor space was opened to the public use. Even "Speedy," the porter, has taken a new lease of life and "get busy." The I. C. S. French and Spanish records are in good demand here, as the company are advertising them extensively.

At the Columbia Phonograph Co. the "Red Mill" window proved so good a drawing card that it was kept running much longer than is usual with a window display at this store. Retail Manager Blakeborough makes quite a specialty of his window displays here. He says he finds a perceptible jump in the volume of the day's business when he has an unusually novel arrangement of decorations in the windows.

"I think business this season is going to break the record, even if it has been just a little bit dull up to the present time," said Manager Andrews, of the Boston Cycle & Sundry Co., this week. "I find that the dealers out of town are very confident, and trade in town seems to be brightening up, so that it is all reflected in orders to us. Our jobbing business has increased very materially within the past month, and the Christmas trade is now in sight."

Foundations have been laid for the new eight-story building of Iver Johnson & Co., and it will be ready for occupancy in the spring, so that the talking machine department will have the necessary space then to transact its growing business.

The fine new department under the charge of Manager Winkelman at the Oliver Ditson Co. has more than "made good" the past month, since it was opened. A big jump has been made in the volume of business within the past three weeks, and Mr. Winkelman's perpetual smile has visibly broadened. "I honestly believe," said he this week, "that the Victor machines and records are the greatest things that ever happened. I only wish I could get enough of them from the factory to supply all the people who want them. It shows what judicious and original advertising will do, when combined with the merits of the goods that are advertised."

At the C. E. Osgood Co. the jobbing department has made good progress and the retail room is doing good business. The plan adopted by the firm of giving the talking machine department the whole of one of its enormous windows for a display once in a while has worked to the vantage of the department in many ways. The window is so big that a fine display can be made.

At Read & Read's store business is reported as "seasonable." This firm make quite a feature of the Zonophone and do a big business on the medium-priced machines.

The Victor department of M. Steinert & Sons Co. is making the most of its limited space, and doing an excellent business. Doc. O'Neill, of the Victor force, was a caller at the store this week and carried off a big order for Victrolas.

OPEN MANY BRANCH STORES.

The Regina Co. Now Control Three Retail Establishments in New York in Addition to Their Headquarters at Broadway and Seventeenth Street—Divide $8,000 in Cash Among Their Employes as a Mark of Appreciation.

Progress is the watchword of the Regina Co., as is indicated by their recent expansion in the retail department. In addition to their headquarters at Broadway and 17th street, branch retail stores have been opened within the last month at 3 West Forty-second street, 21 and 23 West Thirty-fourth street, and at 213 West 125th street, in the heart of the Harlem shopping district. The new stores were opened at a most opportune time to capture a large share of the holiday trade, and being under perfectly competent managers, should add greatly to the success of the company's business.

In order to show their appreciation to their employes of the share they had in building up the business of the company during the past year, the Regina Co., on November 23, distributed over $8,000 cash among the various employes according to their position and length of service. The occasion of the distribution was a memorable one in the history of the company. A large room in the factory was decorated and arranged as a banquet hall, and upward of 225 people sat down to a bountiful repast as the guests of the company. After the dinner each employe was presented with a bank book showing to his credit his share of the profits. It was stated that the employes received about 50 per cent. of the amount the directors had reserved for themselves, a magnificent expression of appreciation.

The Lewis Hearing Tube Sound Controller

[PATENTS PENDING]

For all Disc and Cylinder Machines

Simple, Useful and Ornamental

Sells at Sight With Big Profit to You

By its use a person can enjoy absolute privacy without being disturbed or annoying others. It improves the tone. Controls it. The sound at all times retains its natural timbre, as it does not produce any false noises. It will shunt the sound in the horn or hearing tubes or both at the same time, and can be used for recording as well as reproducing.

A Strictly New Device—Nothing Similar to it Ever Placed on the Market

Jobbers and Dealers will find this article for their own use for demonstrating records, superior to the so-called Sound Proof Rooms. No outfit complete without one. Be up-to-date and send in your trial order now.

Retail Price, complete with 6 feet of tubing and one V, and two ear tubes, $5.00.

IMPORTANCE OF DRESS.

One of the Essentials That Never Fail to Help in the Talking Machine Business—This Does Not Mean Extravagance or Loud Dressing But Rather Neat, Attractive Apparel.

The old proverb that "clothes do not make the man" might have been all right in its original sense but it cannot be properly applied in the present-day business world. Clothes, good clothes, have carried many men to success who would long ago have fallen by the wayside had they not been saved by their neat appearance.

Good clothes are as great a necessity to the talking machine salesman as to men in any other line of business. With the growing appreciation of the talker by the better classes the matter of dress is becoming still more important, for while people in the lower social scale are impressed by a neatly attired salesman those of the higher class demand refinement in appearance of those with whom they deal.

Good dressing does not mean the wearing of waistcoats, cravats or hosiery of such loud hue that they drown the music of the records when demonstrating, nor yet a suit of lavender hue containing six-inch checks. As quietness and dignity of demeanor bespeak refinement so do the same qualities apply to clothes. The traveling men as a class are good dressers, for they have learned that by close attention to that detail they may obtain entre to presence of their prospective customers where no amount of smooth talking could have accomplished the result had their appearance not been impressive. And being impressed with the quiet dignity of the salesman the merchant is much more willing to listen to his little business talk. Why shouldn't this rule hold good in the retail end? It's worth while for it does not take long for small sales to grow into large totals, and a pleased customer helps boom the business by praising it to his friends. Be as comfortably shabby as you please out of sight, but when you're doing business look your best, for when you are looking smart and successful, why, you're doing business all the time. You don't see it? Why should you wear your new suit to sell records in? Hasn't it struck you that customers prefer to be served by a smartly dressed person, and that they unconsciously gravitate towards the shop in which they are to be found? The old-fashioned tradesman may have had time to attract customers by his inherent qualities of mind, etc., but you've got no time for that sort of thing. You don't want a few customers to appreciate you for what you are. There's not a sufficient turnover in that direction. You've got to be too busy to know all your customers. Don't you think it better to have six hundred customers who judge you on your appearance than sixty who value you for your goodness of heart. So look smart and prosperous for the benefit of the six hundred. And a good heart isn't any the worse for beating against a new waistcoat.

LEGEND OF THE "LUCKY BUG" OR BRAZILIAN BEETLE.

In a far-off country, reached only by a long sea voyage from here, there has existed among its inhabitants (who were mostly Portuguese) since long before the time of their first emperor —Don Pedro—a superstition that in the years that a certain bug or beetle, which inhabited the dense forests along the shores of the Amazon river and its tributaries, and extending back to and up the sides of the mountains, are plentiful, the times will be good and its people healthy, prosperous and happy; but in the years that frequently happen when there are none of these bugs or beetles to be found in the forests, then these superstitious people predict all kinds of disasters, including "wars, pestileuce and famine," is it at all strange that these beetles should be called "lucky bugs"?

Regarding superstitiou among the inhabitants of all nations, it is said none are free from the belief in certain charms, or hoodoos. Many of our own people believe that seeing the new moon over their right shoulder, or carrying in their pocket the left hind foot of a rabbit, will bring them "good luck." On the other hand the sailors of all ports believe that the commencement of a voyage on Friday will bring disaster of some kind to the ship before it reaches its destination.

In this country (Brazil) the young man's first gift to his inamorata is a Brazilian beetle or "Lucky Bug," mounted in some form of jewelry or ornament, as a charm, which is believed to bring "good luck" to the wearer.

A TRUE TALE TERSELY TOLD.

Dull store,
Dim light;
Deserted floor
Day and night.

Business bad,
Debts oppress,
Boss sad,
Awful mess.

New lights
Various names,
Store bright,

1855—1906

All our cases are made from select lumber, covered with a genuine book cloth, imitation of seal grain leather. An inside flange, which is cut from the solid wood, forming the top, thus giving strength and keeping out dust and dampness, is a point I claim exclusive to our case. Cylinders are made on especially constructed machines and are correct size and uniform diameter. By my special method of fastening in, they are absolutely secure.

TRADE HAPPENINGS IN ENGLAND.

Distinct Indications of Trade Progress the Past Month—Settlement of Railway Strike a Decided Help to Business—Great Demand for Ninepenny Records—Disc Record Trade Grows Larger—Christmas Titles Quite Numerous—New Volume on Thomas A. Edison in Great Demand—Poulsen, the Inventor of the Telegraphone, Now Working on Wireless Telegraphy—The World Complimented—Austria Increases Duty on Phonograph Records—Star Machines Selling Well—Visit of Swazi Chiefs Much Discussed—The Trade Situation Analyzed by the Governor of the National Bank of London—First Batch of Greek Records Received by Constantine Craies & Co.—The Possibilities of the Cinematograph Discussed—What a Run Around the Provincial Trade Reveals to the World Correspondent—Other Trade Notes.

(Special to The Talking Machine World.)

London, Eng., Dec. 5, 1907.

The past month has shown distinct indications of trade progress in the face of many drawbacks. And although it must be admitted that the season so far has not developed to the extent of even time last year, in view of the very unsettled conditions prevailing in quite a number of trades and professions throughout the country, our present prospects are particularly encouraging for December. Fortunately the threatened crisis in the cotton and railway industries, thanks to the mediation of the board of trade, have both terminated satisfactorily. Had this been otherwise—with all its consequences, it is not too much to say the talking machine industry would have suffered to quite a considerable extent. At the present moment, it is true, money is somewhat tight, but now that America has about swallowed all the gold it can conveniently handle, satiety is the outcome, and the world's money markets will soon return to more settled and normal conditions.

And now Mr. Dealer, you are preparing to make a good and attractive show for Christmas? Many dealers have already set out their windows in a manner well calculated to catch the Christmas buyers—to bring them right in, and to clinch a substantial sale. At this time a little extra outlay in publicity matter and local advertising is usually profitably spent if an average amount of care is displayed in getting up something striking, and dealers who do this will of a surety be well satisfied with the result.

From conversations with the various London cylinder record companies I am of opinion that the ninepenny record will quite outbalance sales of higher priced products even though lists are not perhaps of equal merit. I should not care to venture an opinion as to whether or not a record showing such small profit to the manufacturer can weather the test of time, but I do say that the splendid quality offered is remarkable at the price.

Some good publicity in the daily press has lately emanated from the Edison Bell Co., and we should like to see a little more in this direction from other companies. The Columbia and Edison companies are well to the fore, but with other firms this sort of advertising does not seem so popular.

With the disc record firms business appears to be on a much sounder basis than is noticeable with tube records. And it becomes more apparent each day that the disc is the record of the future. This, of course, is not to imply that cylinders will gradually cease to be manufactured, but suggests that with nine out of ten converts to the talking machine, the disc will have preference. One factor to this end may be found in the fact that discs are more widely advertised than cylinders. The Imperial record, for instance, has been the center of some smart publicity schemes of late, and as a consequence Messrs. Gilbert Kimpton have the satisfaction of knowing that the popularity of their record will forever after be on the increase. By judicious advertising in the future they will maintain and strengthen this happy condition by reaching a wider circle of friends all the time.

Generally speaking it is noticeable that the various December lists in point of the quantity of Christmas titles are not quite up to last season's standard. Still some excellently appropriate selections are offered, and dealers should make the most of these at the right time. Other good titles should not be forgotten, as otherwise the retailer will find he is at a loss to rid his shelves of these during the after Christmas temporary quietness of business.

Premier Co. List Thirty New Selections.

The Premier Manufacturing Co., makers of the now famous Clarion cylinder record at ninepence, have listed over thirty excellent selections for the months of November and December. Many comprise special adaptations of a pleasing variety for Christmas enjoyment, from which it is manifest the company intend to build up a repertoire of exceptional merit. The Clarion record is proving remarkably popular among phonographists, as apart from the price, the quality is A1. Two most striking showcards have just been issued by the Premier Co. From an artistic point of view we should say these stand more than equal to the best, while the illustrations themselves are musically appropriate. Dealers would find these showcards an attractive addition to their showrooms.

Specially Designed Price Tickets.

Specially designed price-tickets are being put out by the Columbia Phonograph Co. for their popular Regal, Regent, Jewel and Trump graphophones. The name and price of the respective instruments are strikingly presented, a distinctive color-effect being utilized for each type. These tickets will help to set off an artistic store or window display, and should, therefore, be secured by all dealers who are handling these selling lines.

Thomas A. Edison Much Discussed.

It has been estimated that if everything that has ever been written aud published about Thomas Alva Edison were collected and republished in book form it would make a library of—possibly a thousand or more volumes. But there is always room for another book about Mr. Edison if it is good, and the latest, "Thomas Alva Edison; Sixty Years of an Inventor's Life," by F. B. Jones (Hodder & Stoughton, London), 6s. net, is perhaps the best. It is by no means an exhaustive "Life," but all the most striking facts of Mr. Edison's wonderful career are put before us with a wealth of anecdote and a conscientious striving after reality not easy of achievement in this case, where so many apocryphal stories had crept into being, and must be recognized and scotched before the author could give us a faithful presentment of the man as he is. It is a most fascinating book, and will undoubtedly be very much in demand.

Milan Branch's Proud Display.

The Milan branch of the Columbia Phonograph Co., General, has recently received a bronze shield in certification of the grand prize secured by the graphophone and Columbia records at the Milan International Exposition of last year. It is now displayed in the window of the Milan shop, where it is attracting much atention. The shield is a fine specimen of Italian art, and will serve as a gratifying record of the award. It represents an improvement on the diploma usually presented by exhibition authorities; we understand, indeed, that in this case, the shield is given in addition to a diploma.

Wireless Telephone.

From Copenhagen comes a report that Valdemar Poulsen is engaged in the completion of a wireless telephone station. In consequence of improved microphones and other apparatus telephoning without wires has already proved successful—even over quite long distances. Mr. Poulsen states that while every day brings further progress and experience he does not wish to begin wireless telegraphy and telephoning between Denmark and England or America until they are quite able to compete with the present cables. Mr. Poulsen claims that by his systems of using "undamped" waves, he can forward at least seven times as many words as Marconi's system of sparks. When Mr. Poulsen lectured

POWER

WILL ASTONISH YOU

FROM OUR LONDON HEADQUARTERS—(Continued.)

in London last November he showed that his undamped waves produce vibrations so rapid as to compare with those of a tuning fork, as contrasted with the "explosion" of the ordinary wireless system.

Activity With the Columbia Co.

Notwithstanding the complaints from some quarters that the talking machine business is dull the experience of the Columbia people tells a very different story. The sales of this company during the last few months have far excelled all previous "bests," and the tide of prosperity continues to run strong. So great is the popularity of their new improved types of graphophones that orders come in as fast as the instruments can be turned out. The demand for Columbia records is on the same gratifying scale. Especially are the new double-face discs in great and growing favor.

Exports Into Canada.

United Kingdom imports into Canada increased by £2,300,000 in the first five months of the Canadian fiscal year. Dominion exports to the British Isles falling to £300,000.

United States imports into Canada increased by £3,150,000 and exports to the United States decreased by £250,000.

New Label Displayed.

A new label has been designed for the double-face disc series recently put on the market with such success by the Columbia Phonograph Co. The label is distinctive in character aud readily recognizable by intending purchasers by its rich chocolate-colored ground, upon which the lettering in gilt shows up particularly well.

"Pinafore" Records Popular.

The Pinafore series of Sterling records appear to have reached a most successful sale. "It is very gratifying to us," said Mr. Manson, "to note the exceptional praise and welcome accorded to this issue, and I may say, orders from the colonies are particularly heavy, while every day brings repeats from the home trade." The twentieth of December list of Sterling specials is full of choice pieces, including about a dozen special Christmas titles, which will no doubt be well sought after. The Russell Hunting Co. are always alert to any useful improvements to embody in their recording, and in this connection they claim, a distinct advance in volume production has been reached by a little invention of Mr. Hunting's, which by increasing the power of the recorder, produces records of much greater volume, clear and full, without detriment to the musical quality. This is in evidence with the December selections, and dealers would do well in bringing these welcome items to the notice of their customers.

American Talking Machine Co. Busy.

Among the busy factors may be mentioned the American Talking Machine Co., of Tabernacle street, who are in the happy position of being satisfied with all things except perhaps the amount of statements ready for receipt. But then, money is scarce and collections slow in consequence. So reports Mr. Nottingham, who was too busy to say more. But does he want to?

Talkers for Christmas Trade.

Readers who would welcome hints for making the most of their talking machines this Christmas season—and that surely means practically all our readers—should not fail to apply to the Columbia Co. for the special list of Christmas programs they are issuing. The choicest seasonable selections are gathered into six happily arranged programs, three for disc users and three for cylinder users, the whole being presented in a neat folder, containing a few words of appropriate introduction, with a charming cover design suggestive of the same "good cheer" as are the varied contents of this Christmas publication.

Columbia Co. Honor the Kaiser.

On the occasion of the Kaiser's recent state visit to the city, the Columbia Co.'s premises in Oxford street, lay of course on the direct line of route of the procession. Their display of flags contributed to the general gaiety of the thoroughfare, and the packed mass of sightseers in the neighborhood were regaled as they awaited the arrival of the procession with selections on a Columbia sound-magnifying graphophone, played from one of the upper windows, while appropriate national martial music from the same effective source greeted the approach of the Imperial carriage.

Well Satisfied With Results.

W. Lionel Sturdy, Esq., London, E. C.

Dear Sir—We have the pleasure to inform you that we think very highly of the results of our advertisement in your paper—The Talking Machine World. We have had several enquiries from many parts of the United States and the Dominion of Canada. Again expressing our satisfaction, we are, dear sir, faithfully yours,

THE INTERNATIONAL FAVORITE RECORD CO., LTD.,
ALBERT F. VISCHER.

Tariffs on Talking Machines.

In certain foreign countries our manufacturers' products are practically excluded from the market owing to the very high protective tariff which those countries have built up in support of home industries. While any and all classes of foreign cylinder or disc record manufacturers have free entry into the English markets owing to a non-existent duty, English record manufacturers besides having to put up with this competition on their own ground, either have to export at a ridiculously small profit on the two half-pennies for a penny basis or lay out capital in establishing suitable factories in those particular countries. Obviously this is a condition of affairs which needs remedying, and in this direction it behooves all talking machine men to plump for tariff reform whenever and wherever the opportunity arises to register a vote. Apropos of the foregoing it is interesting to learn that in view of the duty on phonograph records entering Austria having been increased from 24 to 124 kronens, the General Phonograph Co., of

The "KLINGSOR" Cabinet Disc Machine

No. 250.

The novelty and advantage over all other Talking Machines lies in the following points in construction: (1) No unsightly Horns; (2) a handsome upright Cabine and Machine combined; (3) perfect running, and complete lack of scrape and noise, as well as the following principal features:

The combination and use of the stringed piano wires and double sound board. By this scientific invention the instrument loses all harsh and metallic tone, and the sound waves being thrown on the wires, the volume is doubled without the usual corresponding harshness. There can be no doubt that this "KLINGSOR" Machine will be as great a commercial as it is a scientific success.

The Cabinet can be delivered in any wood and made to any size or design, to fit any spacc.

H. LANGE'S SUCCESSORS

21, LITTLE PORTLAND STREET — OXFORD CIRCUS, W.

Telephone No.: 1239 CENTRAL — *Established 1854* — *Telegraphic Address: "LANGIUS, LONDON"*

FROM OUR LONDON HEADQUARTERS—(Continued).

London, have lost no time in raising negotiations with their trade friends with a view to the erection of a manufacturing plant in Vienna. Mr. White further stated that their German factory has now been working nearly two months, and is giving the utmost satisfaction all around. The whole of the product from this plant is sold for a year to come, and the record, made on the same principle as the White gold-moulded record, will be sold on the continent under the title of the Echo, at the price of one mark. Questioned as to the agency which his company holds for the Hawthorne & Sheble Star machines, Mr. White spoke of a consignment of over two hundred machines which had already been sold, and in this direction prospects were distinctly encouraging. The last list of White gold-moulded cyindler records covers over a dozen titles by well-known artists, and their general good quality is well maintained.

Universal Co. Open Up.

The Universal Talking Machine Co. are a new firm established in this city. They factor Columbia, Favorite and Pathè machines and records, besides which they will issue All-British disc machines of superior quality, ranging from two to twelve guineas.

Swazi Chiefs Visit Gramophone.

The Swazi chiefs who are at present visiting London were not so surprised with what they saw as one would suppose. They like music. Soon after their arrival in England they bought a gramophone and a quantity of records and at every spare moment since they have brought it out and set it going. Last week they went to the Gramophone Co.'s offices to make a record themselves. Standing in a circle, with Chief J. Vilakazi in the center, they recorded a message to the King, which was first recited in the soft and sibilant Swazi language, then translated as follows: "Hail, your Majesty! We, the members of the Swazi deputation, have come here to put before your Majesty protestations of our loyalty and affection from the whole Swazi nation and the Queen Regent." To complete the record they all together gave a Swazi cheer, "Bayete!" with a stamp of the foot.

Light from the Comic Journal.

Bacon—Are you doing anything to relieve the sufferings of your neighbors?

Egbert—Yes; I've just sold my phonograph!

Burglars at a Music Shop.

Francis, Day & Hunter, the music publishers, are the victims of the latest London burglary. Their premises in Charing Cross road were broken into recently in a daring manner, and a sum of £100 in gold was taken from a safe, the back of which was ripped open. The thieves, who broke in through the roof, also ransacked the letter box which it is estimated contained between 300 and 400 letters, and it is impossible to say how many contained cheques or postal orders.

Possibilities of the Cinematograph!

Lecturing before the Royal Photographic Society, F. Martin Duncan said that before long it might be possible to secure cinematograph records of the changes undergone by the parasites in malarial fever. We can only express the hope that the records will not breathe too much of the reality of the thing!

New Discodeon Welcomed.

The introduction of a reasonably priced instrument which will give the correct speeds of the records has been justified by the welcome accorded to the new discodeon at £5 10s. The Odeon Co. report remarkable sales of this really fine instrument, and have received most glowing testimonials as to eminently satisfactory results which it gives. The speed indicator apparently was just what was required by those taking an intelligent interest in the talking machine.

McCormack and Caruso.

One of the organs of the music trade last month referred at some length to a criticism passed by a writer upon the fact that the young Irish tenor at Covent Garden, John McCormack, had been styled the "British Caruso." This critic took exception to the fact that anybody should associate Mr. McCormack with Caruso, and the musical journal gently but firmly points out that in at least five journals the names of Caruso and McCormack have been linked together, and therein by "five musical critics of repute." As the Odeon Co. have starred Mr. McCormack heavily as the "British Caruso," the foregoing is interesting to all as showing this claim to be well justified.

The Favorite Record Co.

Mr. Vischer, of the Favorite Record Co., says, and rightly too, that his product is gaining in popularity all the time. He denies that there is anything of a "boom" on and yet is sure the Favorite will be found a "boon" to all those dealers who have not yet written for terms of trading. The latest lists include special operatic selections (double-sided 3s.), for which already large orders have been placed. This list will also include a double pianoforte solo (really a duet played on separate instruments) which is perhaps a novelty of its kind. I have not the slightest hesitation in saying that the tone-quality of Favorite records is absolutely perfect, and to those who have not yet heard them, a revelation is in store. Dealers and the trade everywhere are invited to get into touch with the Favorite Co., 45 City Road, London, E. C.

New Cunarders and Mails.

In connection with the greatly increased speeds of the new Cunard liners Lusitania and Mauretania, representations have been made to the postal authorities with a view to re-arranging the despatch of the American mails so that letters may be posted at a later hour in this country and still reach America at the same time as now. It is pointed out that the Lusitania has been obliged to wait off Sandy Hook for several hours on Thursday night before proceeding into New York harbor at daylight on Friday. The suggestion is that some way should be devised of utilizing this delay by a later despatch of mails upon this side.

The postal authorities promise their close consideration of the matter, and it is to be trusted that some arrangement may be come to by which an "extension of time" in the despatch of the mails may be accomplished.

Homophone Double Sided Records.

Bernard Andres & Co. have just issued the December list of homophone ten-inch double-sided records, and I note several good Christmas titles are listed.

First Batch of Greek Records.

The first batch of Greek records have been received at the offices of Messrs. Constantine

The Russell Hunting Record Co., Ltd.
13, 15 and 17 City Road, London, E. C., England
Australasian Representative, H. A. PARKER, 19 Hunter St., Sydney, N. S. W.

PHILIP NEALE,
PHONO. EXPERT,
5 Chalk Farm Rd. LONDON, N. W.
Talking Machines of every description repaired. Special terms to the trade. City address and price list on receipt of postal. No job too small—no job too large.

Craies & Co., and supplies are now ready for delivery to the trade. Substantial orders are already in hand. Maintaining that these records represent the finest voice-reproduction on the market, the company expect they will create an exceptionally good demand. In machines and records, Sidney Aldridge reports good business, and is well satisfied with the reception accorded their new line of Sheraton styles in disc machines, which style, by the way, is very much in vogue just now.

Fire at Cinematograph Factory.

The Hepworth cinematograph factory at Walton-on-Thames was the scene of a very disastrous fire last week. Very considerable damage was done, and worst of all one of the employes, a lad named Lane, through a reason unknown, was unable to escape with the result that he was burned to death.

Sir Felix Schuster Discusses Trade.

Sir Felix Schuster, governor of the Union Bank of London, in his presidential address to the Institute of Bankers, gave a grave warning of the signs of reaction in trade. Reviewing recent events in the money world, he claimed that our market had stood the test well. Apart from the crisis in America, the condition of affairs appeared to offer every ground for satisfaction. But the remarkable activity in trade and high prices for commodities such as have prevailed all over the world, he said, "cannot be without their effect. Working expenses have so increased that many were compelled to put all available profits into their business, or to sell investments, or to borrow heavily." We bankers on both sides of the Atlantic will do well to bear in mind that the too easy granting of credit to institutions and firms without sufficient working resources of their own is not rendering those institutions a good service. Continuing Sir Felix said: "Indications point to restriction rather than to expansion, not only in this country, but all over the world. A period of extraordinary activity is invariably followed by a reaction, and signs are not wanting that such a reaction is at hand. The development of trade has proceeded at somewhat too rapid a pace, and in consequence available capital has not been adequate to meet the demands made simultaneously from so many quarters."

Some Handsome Show Cards.

Some very effective showcards have been prepared by the Columbia Phonograph Co., General, for advertising their special repertoire of 12-inch disc records. The general design of the cards is an enlarged facsimile of that of the attractive cover of the company's catalog of 12-inch records. All who have seen this striking cover will remember that it presents the portrait of the famous Columbia artist, Miss Ruth Vincent, in a particularly striking setting secured by fine shading effects. In the window cards, however, a series arrangement is followed in regard to the portraits presented. Thus, on some of them, the portrait of Miss Vincent is featured; on others, that of David Bispham, and so on through the list of principal contributors to the Columbia 12-inch repertoire. Dealers may secure these showcards, which are of artistic as well as advertising value, by applying to the Columbia people.

NOTE NEW ADDRESS

Records by Godfrey James.

The fine Columbia disc records made by Godfrey James, the "Singing Collier," should have a big sale, especially as particular interest will be aroused in town after town as Mr. James visits the local music hall in course of his engagements. To enable dealers to secure this good trade the Columbia people have issued a striking window bill, showing the full-length figure of the miner vocalist in his working clothes, with the pit shaft forming an appropriate background. Dealers will appreciate this attraction for their windows.

Mme. Thornton's Record.

Day after day, in the newspaper notices of the Royal Opera season, at Covent Garden, one sees the name of Madame Edna Thornton, the famous contralto, referred to as a fine artist. As many already know she has been secured by the makers of Odeon records to record exclusively for them, and this month sees the issue of her first record. One of the two selections is the sacred song, "God that Madest Earth and Heaven." This record (with "When All was Young," on the reverse—also a model of artistic treatment) is one that will be prized by all who possess it, and if Madame Thornton's future work even touches this standard, few will complain.

A Few Columbia Notes.

The Columbia people are making strong advertising use of two of the distinctive features of their disc graphophones—the needle-holding clip and the sound-regulating "Dolcer."

"The Host of Christmas Fare" is the happy motto which adorns the illustrated cover of the December supplement of Columbia records, and the figure of the snug family butler bearing on his tray the Columbia graphophone gives a most taking pictorial presentation of the idea.

An enterprising Wisbech dealer, Mr. Rouse, of Lynn Road, recently rendered very acceptable help to a local church organ fund by furnishing an excellent musical program on a Columbia graphophone at a whist drive.

The Columbia "Regal" disc graphophone proved its acceptability as a versatile public entertainer at a grand concert held at the Aintree Institute on the ninth of November. The instrument was lent by the Manchester branch of the Columbia Co. A choice selection of records was rendered, and the graphophone shared the honors of the evening with such distinguished musical combinations as the Volkslied Quartet and the Liverpool Pageant Choir.

A "Stering" Acrostic.

In a recent number of the Sterling Recorder, issued by the Russell Hunting Co., of London, England, some live hints on salesmanship appear under the heading of "The Art of Selling," and a suggestive acrostic, reading as follows:

See that you have what your customers want
Talk to your customers with the confidence of one who knows.
Educate them to regard you as their dealer.
Remember that tastes differ and
Look to your records to see that they embrace all tastes.
Introduce new records as soon as they are issued.
Never let a customer go away dissatisfied, and
Go out after customers with steady advertising.

What He Called Him.

"Dad!"

"Yes, my son."

"A man that manages a balloon is called an aeronaut?"

"Yes, my boy."

"And a man who drives an automobile is called a chauffeur?"

"Yes, my boy."

"Well, what would you call a man who runs a phonograph?"

TRADE REPORTS FROM THE PROVINCES.

SOME LIVERPOOL NOTES.

Liverpool, Eng., Dec. 2, 1907.

Trade, generally speaking, has been pretty good since our last letter. The merchants aud dealers here have exceptioually good shows, and report that the more expensive machines are now beginning to sell freely. As foretold in The Talking Machine World for October, overstocking in many cases has caused, and is causing, severe price cutting. The price cutters are not generally the respected music depots, but some firms of cycle agents, who handle talking machine and phono goods as a side line for a few months only. To show to what extent this is carried on, one of the firms here are advertising 10,000 titles of Edison, Edison-Bell, Sterling, Columbia and Pathe gold-molded cylinders at 7½d. (15 cents) each, as well as genuine gramophone needles at 6½d. (13 cents) per box of 200. Disc records are also being advertised at 10½d. (21 cents) each. The harm that this does to genuine talking machine dealers is irreparable, for it leads people to believe that fancy profits are the order of the day, whereas they are not.

Notwithstanding the various agreements in force in this country, it is evident that they are not strictly adhered to, or supplies are being obtained from sources that are not legitimate. We very much regret that this has commenced so early in the season, for it augurs bad for the later trade. We respectfully desire to call attention of the various manufacturers to this class of business, which should be stopped as speedily as possible.

Firms who handle talking machine and phono accessories, such as bicycle agents, and others whose interest in the trade only lasts two or three months, are in many cases giving up the phono business entirely. Many houses, who last season stocked these goods in considerable quantities, have this year decided not to handle them, and in their place have taken up footballs, airguns, and other articles of a like nature, which, in our opinion, is more suitable than phono and talking machine goods.

We were pleased to learn during a chat with Mr. Ellis, of the Melograph Disc Co., of this city, that they were doing exceptionally well, and that they had not been able to keep pace with the orders for their disc records. Altogether, the Melograph Co. are booming their goods here very well.

LANCASHIRE, YORKSHIRE, AND CHESHIRE NOTES.

In the smaller towns, although largely populated, we hear exceptionally good news.

Messrs. Noble & Sons, of Altrincham, Cheshire, are the leading house in this district for talking machine and phono goods. They handle nearly every good record on the market, both disc and cylinder, but make a special point of pushing Pathe discs principally, getting through an enormous quantity. Under the able guidance of Frank B. Noble their special talking machine department is making great strides. Very progressive and right up-to-date, this firm report exceptionally good business up to the preseut time, and anticipate the future with the greatest satisfaction.

In Warrington, Tom Boothroyd, the well-kuown musical agent, states busiuess is waking up very well. Handling the best class of goods only, he has recently taken up "Favorite" records, and considers that there will be exceptionally large sales for these in the future in his neighborhood.

In Colne, Mr. Bradford does a nice business in talking machines, etc. He also complains severely of price-cutting by cycle agents and others in the town; otherwise, he has every reason to believe that the present season will be a good one.

In Manchester, the cry is, geuerally speaking, shortness of supplies. At all the leading houses buyers are waiting either for one thing or another. The factors who handle Pathe goods here caunot get sufficient, by auy means.

The Columbia Co., we are informed, have been short of machines for two months past; otherwise, with them their trade has increased this last season to double that of 1906. Discs are still selling very well, and the trade appears to be generally dropping cylinders, with the exception of genuine Edisons. Owing to the reduced price, 1s., the other makers do not appear to be holding their own, by any means. Export trade is better altogether this month.

We understand the Manchester Corporation will, iu all probability, give next season a continuauce of gramophone recitals, as rendered lately by Mr. Gray, of this town, the latter ones being very successful.

At the recent gramophone concert here, given in the Free Trade Hall, the proceeds of which were to be given to the Lord Mayor of London's Cripple Fund, a sum of £94 was realized and handed over to this beneficent charity.

In Sheffield, phonographs and talking machines are handled in a variety of ways. In one instance a chemist is showing them by the side of proprietary articles, such as tooth powder, soaps, etc. In another case, phono and disc machines were shown in the same window as second-hand clothes. It is very much to be regretted that window dressing in this town is so exceptionally backward. With one or two exceptions Sheffield is, without doubt, the worst town in the north with regard to window dressing.

Mr. Hebden, of 125 Pinstone street, has practically the best show in the town. Clean, smart and up-to-date, he specializes upon gramophones and disc machines principally, as well as gramophone, Odeon, Zonophone and other disc records. He reports business as very good so far, but expects to do a much larger trade, in the next six months, than he did last year.

Messrs. Shingler & Co., of London road, are catering for disc and cylinder cabinets for the trade generally. From what we saw they are apparently very serviceable articles, selling at a reasonable price, and may be had in either oak, walnut or mahogany.

The Sheffield Phonograph Co., Cambridge Arcade, report business as very good both in discs and cylinders. D. P. Primrose also stated that he had a large number of inqulries for his record reviver. Handling a fairly comprehensive range of goods, this firm appear to be doing very well.

Looking in upon G. Gilbert & Co., the well-known horn manufacturers, we were informed that business, generally speaking, was good. They are wholesale agents for Edison, Columbia and Clarion cylinders, with a good range of machines, and concentrate their disc trade upon Columbias solely. The special line that Mr. Gilbert caters for is metal horns of various shapes and designs, for both cylinder and disc machines, the sizes ranging from 12 to 56 inches, with which they do a good trade.

FROM THE EMERALD ISLE.

Gramophone Co.'s Concert a Great Success—Bijou Grand Pleases—Disc Machines Gain in Popularity—Auxeto-Gramophone Heard in Public Recitals—Free Talker Concerts Help Trade in Belfast—Room for Larger and Louder Phonograph.

(Special to The Talking Machine World.)

Belfast, Ireland, Nov. 30, 1907.

The action of the Gramophone Co. in organizing a most successful concert at Albert Hall, London, in aid of the Lord Mayor's Cripples' Fund, is beyond all praise. More than 9,000 people attended the function, with the result that over £500 was raised for the fund. The traders of Belfast, and indeed all users of gramophones in the city aud district, were delighted that such a substantial sum had been thus acquired for a most deserving charity. The Gramophone Co.'s most artistic souvenir of the concert has been mailed to your editor by Mr. Osborne, who feels sure he will be charmed with such a genuine work of art—a production of the printer's handicraft which has called forth the encomiums of many pressmen on this side of the Atlantic.

A new model of gramophone designated the "Bijou Grand," arrived in Belfast about the middle of November, and was sold by Edens Osborne within twenty-four hours at £35. It constitutes a charming piece of furniture capable of gracing the drawing-room of a palace. Its appearance

FROM OUR EUROPEAN HEADQUARTERS—(Continued.)

is most attractive, but what is even more important it is the machine par excellence for home use.

His opinion of this new type of gramophone bears out the view expressed in his last notes to The Talking Machine World, namely, that disc instruments seem to be rapidly evolving whilst cylinder machines are—not exactly in statu quo—but in a como state. There is no disputing the fact that disc machines are gaining in popularity, and are more in demand than cylinder types; this state of affairs only intensifies the foregoiug opinion as to the marked improvement in reproduction, etc., of the former.

The Auxeto-Gramophone still continues very much in evidence in Belfast, especially at the Saturday evening Ulster Hall organ recitals. During a recent visit of the Chief Secretary for Ireland to Belfast this world-famed instrument rendered twenty-eight items during the one and one-half hours which preceded the public meeting held to welcome him, and was accorded most enthusiastic applause by au audience numbering over 3,500.

At a couversazione held immediately after the new palatial Municipal Technical Institute was opened by the Lord Lieutenant of Ireland early iu November, both gramophone and phonograph (lent for the occasion hy Mr. Osborne) were used to demonstrate their suitability as teachers of modern languages, and it can he confidently stated that the machines excited the keenest interest, on account of the clear rendition of French lesson records, heard hy crowds of visitors, who were loud in their eulogy of the perfect articulation of every word and syllable of the lessons.

As an example of the up-to-date nature of the Gramophone Co.'s advertising methods two free concerts were organized by them iu Belfast, and were held on November 18. Applications for admision tickets amounted to treble the seating capacity of the Ulster Hall (one of the largest in Ireland). These functions were eminently successful, and as was intended by the said company, helped their Belfast dealers considerably to popularize their products.

Business in Edison machines has not been as extensive during present month as was anticipated, and though the sale of records has been satisfactory, it is somewhat disappointing to traders who were looking forward to an abnormally large output. It is hoped that December will be a record month, though your humble scribe does not feel very sanguine in this matter, geueral business being somewhat dull owing to a phenomenally high hauk rate.

When will there be put on the market a phonograph as loud and clear in the reproduction of songs, etc., as the Auxetophone? The latter instrument popularizes disc machines, and a mammoth phonograph would be equally efficacious in reviviug the demand for cylinder talkers.

THOMAS EDENS OSBORNE.

TRADE CONDITIONS IN GERMANY.

The Talking Machine Trade as a Whole Is Prosperous—Manufacturers Are Rushing Their Plants to Keep Up With the Demands—Beka Records Made in Almost Every Conceivable Language—The List an Endless One—Deutsche Telephonwerke Issue New Catalog Describing Their Complete List of Specialties—International Zonophon Co. Novelties—Talking Machine Trade Society Formed to Combat Price Cutting—Phonographic Fountain the Latest—Interesting Literature on the History of the Talking Machine—A Talk on Exports.

(Special to The Talking Machine World.)

Berlin, Germany, Nov. 30, 1907.

The talking machine trade throughout the country is at present in a most prosperous condition and the prospects are that it will remain so for an indefinite period. The various manufacturers are rushing their plants at capacity to keep up with the demand and several have found it necessary to build additions to their factories.

The Beka Record, G. m. b. H. of Berliu, who have what is said to be the largest catalog of international records ever compiled, are continually adding to their catalog and at the present time have records in nearly every known language now in use. The completeness of their list is illustrated in the fact that in Chinese alone they have records in six different dialects and in Hindustanee nine dialects. This company have branch houses in the principal cities in both Europe and Asia of both their recording and sales departments.

The products of the Deutsche Telephonwerke, Ltd., Berlin, are also in great demand, as their merits are appreciated by the trade. This concern are devoted to the manufacture of motors, soundboxes, soundarms, etc., for talking machines and have recently issued a new catalog illustrating aud describing their complete line, including all the late additions. The motors made by this company are possessed of many exclusive features that strongly appeal to everyone in the trade who tries them.

The International Zonophon Co., M. b. H., are busily engaged in prepariug their Christmas repertoire, which is now practically ready for the trade. One of the novelties offered in the new list is "Die Herzen von Berlin," which is one of the reigning successes at the Metropol Theatre.

A meeting of the Talking Machine Trade Society was held last month in order to discuss the best method for combating price cutting and other unfair forms of competition during the coming season. Several remedies were suggested, but the meeting adjourned without any of them being adopted.

Ernst Holzweissig Nachfolger, the well-known Leipzic firm, recently attracted the attention of the trade and the public with what might be described as a phonographic fountain. The contrivance was practically a combination of a talking machine, a fountain and an aquarium and was between seven and eight feet high. The contrivance attracted a great deal of attention especially from the younger element and a number of the machines were purchased by many of the leading restaurateurs as drawing cards.

At a meeting of the German Association of Mechanics and Optics, recently held in Frankfort, Germany, a most interesting lecture was delivered upon the history of the talking machine from 1887 up to the present day. The lecturer said that last year one international gramophone company alone produced 15,000,000 plates and 200,000 instruments, aggregating 65,000,000 marks (mark = 23.8 cents) in value. Adding the output of the other smaller works manufacturing these articles in Germany, the total value of the production in 1906 would amount to 80,000,000 marks. "This branch of industry employs about 15,000 people," the lecturer continued. "The demands made on the capacity are sometimes heavy and pressing; thus, in one single week 10,000 plates representing popular airs of one new operetta were turned out and delivered. There are very few mechanics able to transfer the airs and melodies from the cylinders, and the artists whose rendition of the songs are thus mechanically fixed received high compensation."

The latest joke going the rounds in German talking machine circles is told as follows: "What's the difference between a phonograph

record and a Dutch simpleton?" "One's a hollow cylinder and the other a silly Hollander." How does that sound to you Americans?

Alb. Schön, the prominent Berlin house, who made extensive additions to their plant about a year ago, have had their business increase to such an extent since that time that further additions have been found necessary and the extra buildings will soon be in course of erection.

Herr Grosse (Charlottenburg) was fortunate enough to obtain records from Caruso, and arranged a Caruso evening, held in the Blüthner-saal last month. The program attracted a large and enthusiastic audience.

The various German talking machine houses doing an export business are equally interested with those in other industries, in the work of the commercial experts attached to the various consulates-general. With reference to the duties of such commercial experts, it is stated that it is intended that they should supplement the functions of consuls-general in a practical way. It is especially their duty to assist commercial agents sent abroad from Germany by practical advice, and to show them the proper way whereby to find a market for the products of German industries. They will also call attention to dangers which threaten German trade either through omissions of its own or through foreign competition, and to noteworthy innovations—as, for instance, the use of new raw materials and processes of working them, new inventions, improved working methods, and other valuable economical phases which exist in the district of the consulate-general. It is furthermore their duty to report on everything which might prove of interest to German industries or trade.

They have also to call the attention of foreign consumers to the products of German industries, the usual terms of sale, and the favorable transportation facilities. It is therefore the duty of these commercial experts to study all questions of a commercial technical nature and others of practical value for the promotion and extension of the exports of German manufacturers. It will be readily noted that these experts could render very valuable services to the German exporters. So far, however, it appears that the interested circles have not availed themselves of their services in a desirable degree, which is stated to be due to the fact that their existence is not yet sufficiently known.

The Phillips-Buttorff Mfg. Co., Nashville, Tenn., have recently taken on a line of talking machines. This department is under the management of C. H. D'Zevalos.

Manufactured by
BLACKMAN TALKING MACHINE CO.
97 Chambers Street, New York

TEXAS A BUSY TRADE CENTER.

Interesting Budget of News from Houston—Jobbers and Dealers Hustling and Getting Results—Not Concerned About the Financial Upheaval in the North.

(Special to The Talking Machine World.)

Houston, Tex., Dec. 9, 1907.

The talking machine trade of Texas is making good progress despite the financial tightness which has just recently struck this section. Three out of five dealers approached stated that there was no perceptible decrease in sales and that in comparison with last year, same period, the sales were 25 per cent. ahead for 1907. The other two dealers consulted claimed that cash sales had decreased among their customers, which were of the higher class.

Alkemeyer's department store has added a line of phonographs and talking machines.

C. I. Hudson & Co., the big furniture instalment house, have become Victor dealers. During their third week's sales it is said that they placed thirty-one machines.

Taylor Bros. have inaugurated the "dollar down, dollar a week" plan on Victors, but are holding the Edison at their old terms. Competition caused the change of attitude on Victors, but the Edison dealers are all standing pat for larger payments down and as yet not a single one has been known to accept less payment than $5. Manager Baldwin, himself a former resident of Orange, N. J., is enthusiastic over the business.

Wilton & Co., who have been large dealers in Edison and Victor goods, have recently become jobbers of the Star machine. Their large holiday stock has just arrived.

C. N. Fisher, the oldest talking machine dealer in Houston, has made a snug fortune from the business and is about to retire and merely collect the revenue he gets from the large number of coin slot machines he has in operation.

Goggan Bros., Victor dealers here, have adopted the "dollar down" selling scheme.

General Manager Beekman has just made a thorough tour of Texas and established two jobbers and a large number of dealers for the Zonophone. Beginning January 1, the Universal will put a regular traveling salesman in Texas.

I. M. Bame, formerly of Denver, but not representing the Victor Talking Machine Co., has been here for the past week, having completed a successful tour of the State, and reports accession of several new dealers to the Victor ranks. He is now going over the territory again, his house having cut out all except Texas and will keep him constantly in this field.

Houston's big jobbing house, the Texas Phonograph Co., the general manager states has not laid off a single employe or cut any salaries, although business is not quite as brisk as they had anticipated. Machine sales have fallen off, but record sales have increased. The gross sales for November were ahead of November, 1906. This company job Edison and Zonophone lines, and handle Victor as dealers. The corporate name is Texas Piano & Phonograph Co. H. M. Holleman is president; J. G. Tod, vice-president; W. G. Burchfield, treasurer and general manager. Four years ago, when this company was started by Holleman and Burchfield, neither of them knew much of the talking machine business, but they proved apt scholars and now know every feature of it. After a year's service, Mr. Burchfield gave up active work in the store, but retained an investment in the company. This threw all the detail work on Mr. Holleman for the ensuing two years. A few months ago Mr. Burchfield resumed his active work and has since been in charge. Mr. Holleman says he has just found the true meaning of being "president," by being able to take a long vacation in August and September, attend the jobbers' meeting in Buffalo, and a banquet, and have a good time generally, and never get a line or word of inquiry from the home office until he returned home greatly invigorated and refreshed.

General Manager Burchfield has employed C. M. Bryant, of Terre Haute, Ind., as manager of the piano department.

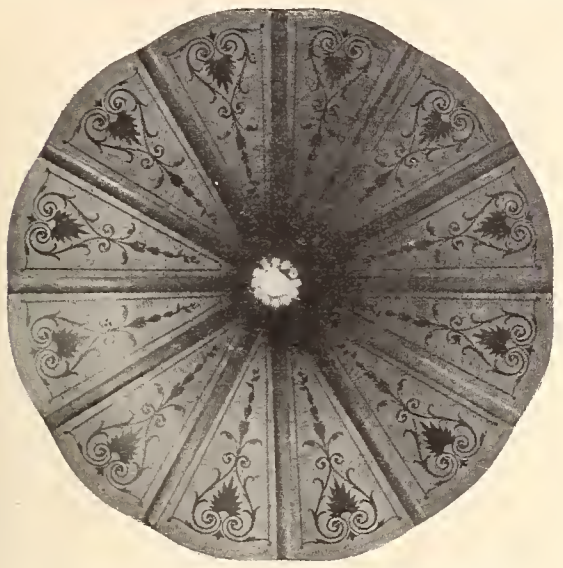
SPECIALTIES MUCH IN FAVOR

Are Those Being Placed on the Market by the General Phonograph Supply Co. of New York —Their De Luxe "Truetone" Horn and Carton Cabinet Win a High Degree of Favor.

The formal announcement in last month's World of the General Phonograph Supply Co., 57 Warren street, New York City, has been followed by the receipt of many orders from every section of the country, and abroad, likewise, for their "Truetone" amplifying horns. In other



BELL OF DE LUXE "TRUETONE" AMPLIFYING HORN.

words, a quick appreciation has been shown this excellent line of goods in the most practical manner. The company have now added to their line a De Luxe "Truetone" horn, both patterns shown having mahogany backs, with the bells decorated in genuine marquetry, as depicted in the accompanying illustration. The designs are handsome and appropriate, and the effect elegant. One is marquetry mahogany and the other marquetry maple. They list at $15, with the usual discount to the trade.

The carton cabinet is also a winner without a doubt. The company expected to have a full line out for the holiday season, but unavoidable delays have interfered with this consummation so devoutly wished. They are prepared, however, to fill orders promptly for cabinets and horns. The carton cabinet is only made so far in lower price goods, but they will soon have a higher grade in designs. Besides the General Phonograph Supply Co. are to have a number of other specialties that will stimulate trade, goods that are to be restricted as to price and protected so as to guarantee a fixed profit to the jobber and dealer.

CREDITS WELL SCRUTINIZED

Says General Manager Lyle in Forecasting Business Conditions—Excellent Reports from Columbia Branches—Good Christmas Trade Predicted.

George W. Lyle, general manager of the Columbia Phonograph Co., in a chat this week regarding business conditions in the talking machine industry, referred enthusiastically to an editorial which appeared in The Music Trade Review of December 7, in which manufacturers, jobbers and dealers were advised to seek quality rather than quantity sales just now.

Speaking for the Columbia company, he said that reports from all the offices showed a large increase in the amount of cash business done, and that he felt sure the financial flurry which had so upset conditions for a short time and threatened business in general was not an unmixed evil, but was likely to direct attention to the subject of credits more closely than ever before with a beneficial result all around.

Mr. Lyle said the prospects were excellent for a fine Christmas business. There was nothing to prompt the belief that there would be a marked shrinkage in trade next year except to the extent that the manufacturers and dealers would curtail it in a more careful scrutiny of credits, and as this could only result in placing the whole industry on a sounder basis we can face the new year with a feeling of thankfulness and renewed hope and belief in the permanence of a healthy demand for talking machines and records and continued growth of the industry.

VICTOR CO. BRING SUIT.

Suits have been instituted by the Victor Talking Machine Co. against the Hawthorne & Sheble Manufacturing Co., claiming infringement on the Berliner patent 534,543 relating to disc machines. Other patents alleged to be infringed cover hollow arm machines. Hawthorne & Sheble Co. in their answer to the bill of complaint deny the allegations set forth.

MUCH IN DEMAND DURING HOLIDAYS.

In a chat last week with J. Charles Groshut, sales manager and secretary of the Edwin A. Denham Co., New York, he spoke in a particularly enthusiastic way of their line of Premier talking machines, which are proving great sellers these holiday times. "The reports from dealers handling them," said Mr. Groshut, "are to the effect that the prospects are that there will be larger sales this Christmas than for many previous years. This may be due to the fact that the hard times have made people desire a cheaper machine; anyway I may safely say that they are getting a tremendous value, for the reproductive qualities of our instruments have come in for the highest praise from both dealers and purchasers."

Mr. Groshut also stated that in the recent action which they brought against the Ball-Finze Co., of Newark, O., for a bill of goods which they refused to pay for, has resulted after a jury trial, in a verdict in their favor.

The Sonora News Co., City of Mexico, Mexico, is managed by an American on the hustling Yankee plan. In addition to handling talking machines in a large way, they also act as general distributors for periodicals, newspapers, books, toys, etc., and occupy relatively the same position in the ancient Mexican capital as the American News Co. does in the United States.

An alleged new invention of Pittsburg, Pa., celebrity is the Marsoniphone, which is said to give the record "a more natural and less metallic tone." This title is dangerously near that of Marconi.

LEEDS & CATLIN NEWS.

E. F. Leeds, president of the Leeds & Catlin Co., New York, is divided as to whether he should go south with his family for the winter or spend the severe weather at Lakewood, N. J. Loring F. Leeds, general sales manager for the East, may go to Chicago before Christmas, and then the trip may be deferred until after the first of the year. Charles E. Brown, western sales manager, is now on the Pacific coast, where he will remain indefinitely.

STEVE PORTER AN INVENTOR.

In addition to cutting something of a figure as a monologist and quartet singer for the records, Steve Porter is also of an inventive turn of mind. His latest is totally outside of the trade, being a spiral hairpin, which Steve declares has "see that hump" skinned a mile. The application is now in the Patent Office, and the broad claims for this origination is said to place the inventor on the ground floor of potential wealth.

On Guard

DON'T carry your Records in a haphazard manner. The right system of carrying and displaying them means a big profit to you.

"The Heise System" of

Wire Record Racks

solves the proper handling and selling of every kind of records.

Our new catalog shows a wide variety of styles and sizes carried in stock ready for immediate shipment.

TRADE NOTES FROM COLUMBUS.

Dealers Enjoying a Nice Business—Collections Poor—Other News.

(Special to The Talking Machine World.)

Columbus, O., Dec. 12, 1907.

Talking machine dealers in this vicinity are enjoying a very nice business, although it is not quite up to expectations. Merchants in other lines are complaining, however, and are all hoping for the "holiday shopping season" to open up as in former years. They figure that the rush is sure to come very soon.

Perry B. Whitsit Co., through Perry B. Whitsit, state that business was brisk during November. Mr. Whitsit also took occasion to say that he never knew of collections being harder than at the present time.

J. F. Bowers, of Lyon & Healy, Chicago, and president of the National Talking Machine Jobbers' Association, spent November 24 in Columbus, the guest of Perry B. Whitsit, secretary of the association. A great many matters of importance to the trade were talked over.

W. H. Snyder, Edison and Victor dealer, reports a number of sales the past month. Like other dealers, though, he is expecting things to brighten up considerably during the next two weeks.

Among the talking machine men who spent Thanksgiving at their homes in this city were F. L. Fritchey, representative of the National Phonograph Co., in Michigan and Indiana, and S. Shirley, with Powers & Henry, Pittsburg.

The Buckeye Talking Machine Co., who operate stores in five cities in Ohio, Columbus being one of them, are well pleased with the business done so far, and are anticipating an increase in the next month.

Henry Goldsmith, piano dealer, probably the first man who ever handled the Edison line in this city, and who sold out his entire talking machine business in June, 1902, is certainly to be numbered among those who now believe the business is in its infancy. He placed his order this week with the Perry B. Whitsit Co. for full lines of Edison and Victor goods. Mr. Goldsmith is frank enough to admit that he made a mistake in ever disposing of his stock of "talkers."

The Columbus Piano Co. are doing a nice business with talking machines. They are jobbers of Columbia goods and dealers in Edison and Victor.

PREPARING EFFECTIVE COPY.

Some Pointers for Dealers Who Prepare Advertisements for the Local Papers.

Many talking machine dealers who are writing the advertising copy for the first time, and in fact a number of those who have had considerable experience in that line, are frequently at a loss as to the proper way to proceed in order to get the best results or how to lay the matter in the most attractive way. A partial solution of the adwriting problem was found in an article recently contributed by a practical advertising to "Brains." The subject was, "How to Write a Headline," and read in part as follows:

"Why don't you give the writing of introductory lines more consideration? You consider carefully every point that you are to bring out in each item. Then why not spend more time on the introduction? The introduction is really the key to the advertisement, and should give the motive and purpose of each advertisement. If any sort of a special sale is being conducted, it should give the reason for this sale and tell it in an interesting manner. If it's a regular daily announcement, the introductory gives the ad. writer an opportunity of saying something about the store's every-day life; about its policy, its methods of doing business, etc. The introduction is often the turning point. Many times a casual perusal persuades the reader to investigate further. Many times the introduction secures the confidence of a reader. And confidence has much to do with making sales.

"If you can build your introduction to include some of the following principles, it cannot fail to develop the business of your store and make your publicity campaign more successful. First, make it interesting. Develop a style that will catch and hold the reader's attention. Second, make it creative of confidence in your store. Give it a tone of good-will. Third, make it brief. Don't try to give the entire history of your store in one announcement. Don't tire out the reader with long-winded statements. Cut out all superfluous "hot air." Don't use big words. Fourth, have these lines set so that they can be easily read. Imagine yourself trying to read twelve or fifteen lines of 10 point type set the entire width of two pages. Imagine a reader's state of mind on arriving at the end of the fifth line while hunting around for the beginning of the next one.

"There is just one method of reading such an introduction: to put the paper on a take and take a yard-stick to follow the lines. Most people don't happen to have a yard-stick handy, so your ad. doesn't get read. Try shortening up the lines considerably. Experiment on an introduction four or five columns wide, and see how much better you like the effect. Set the lines in larger type. To sum up the whole matter, make it easy for people to comprehend. A whole lot of matters in this world depend upon how easily they are settled. Whether you are a man or a woman, consider how many times a day you adopt one plan in preference to another because it is easier, although the other may offer equal advantages. An ad writer has accomplished considerable when he has persuaded people to read his announcements. He certainly hasn't accomplished anything if people do not read them. Therefore make it easy and they'll read."

PRACTICAL MAN WANTS POSITION

Can you use the services of a practical man who understands the mixing of a composition as good as any in the market, and the pressing of disc records? Can erect up-to-date pressing plant and take charge. No objection to leaving for foreign country, if required. Address "EXPERT," care The Talking Machine World, 1 Madison Avenue, New York.

J. J. WILLIAMS MARRIED.

John J. Williams, one of the hustlers in selling commercial graphophones in New York City, was married on November 24 to Lottie Mabel Purvis, of the same place. A brief wedding journey to Atlantic City, N. J., was taken by Mr. and Mrs. Williams. They will reside in apartments on West 144th street. The World offers congratulations.

The talking machine department of Chas. H. Ditson & Co., exclusive distributors, New York, has been increasing its wholesale business rapidly. Their sales to dealers are growing.

CREATION OF PRESTIGE.

One of the Aims in Advertising Which the Adman Should Never Overlook.

Selling goods, through the primary, should not be the sole aim of advertising. Equally important is the establishment of prestige. In one sense, indeed, it is more important, seeing that, if prestige be gained and maintained, sales will follow.

Realizing this, there are those whose aims in advertising are very simple—"elemental," some would say. One of these is to familiarize the public with a name; the other, to make it one to conjure with.

But is it true that such aims are crude? Should enhancement of prestige be considered secondary and subsidiary to making sales? Or should a general and prospective good be sacrificed to a specific and immediate gain?

With prestige, what, within the pale of possibility, cannot be accomplished? Without it, how rough the road and hard the sledding!

To the writer it's an open question whether one-half the newspaper space monopolized these days by leading departmentists in our large cities would be necessary, even warranted, were it not for dubious character or entire absence of prestige.

Yet examine the ads. in any of our large cities and what do you find? Self-presented bouquets as to bigness of stores, completeness of stocks, superlativeness of qualities and up-to-dateness of methods.

These boasts are true or not true. If true, the alleged conditions are apparent, thereby rendering iteration and reiteration unnecessary; if not true, the public—for the most part observant and discriminating—will detect the overdrafts and, thereafter, be inclined to deduct from subsequent statements from the same source a liberal discount.

Prestige is not to be gained by protestation—but by performance. No firm's fair name and fame were ever built up by words, however well chosen or cleverly combined, but by deeds, and deeds of the right kind.

VICTOR RAPKE'S LUCKY THIRTEEN.

On Friday, December 13, at thirteen minutes of ten o'clock a. m., Victor H. Rapke, who lacks one of having thirteen letters in his name, called up The World to say he discovered he had received thirteen checks—"all from good people in the trade"—for depositing. Victor also calculated on meeting thirteen dealers and jobbers before the day became history.

TIMELY TALKS ON TIMELY TOPICS.

A question of more than ordinary moment is the accumulation of records in the hands of jobbers and dealers. The latter claim they have been compelled in times past, where a state of congestion on orders existed at the factories, to "go it blind" in buying. Naturally this claim has been something of a haphazard proceeding, and instead of having an active, quick-moving stock, they found themselves possessed of a quantity of "dead ones." Now, how to reduce this trouble to the smallest proportions is a problem engaging the attention of the trade, and of which no practical solution has yet been offered. Opinions and so-called "views" are plentiful, no two being alike. It is to be expected that differences must necessarily exist, and probably the record manufacturers and representative jobbers of the country will get together on this subject, as they have on other matters in dispute, settling them to the entire satisfaction of both.

The manufacturers argue that in offering the exchange proposition the evil of a surplusage of records is lessened. It is contended that when this product is bought it should stay sold, and not be turned back on their hands. For example, the National Phonograph Co.'s latest exchange has resulted in having 2,500,000 records sent back to the factory, valued at about $300,000. This is no small amount, and goes to prove that the question of this accumulation of records is deserving of more than cursory attention. Elsewhere is published an interview with Edward N. Burns, vice-president of the American Graphophone Co., well worth careful reading. He believes the list of monthly selections is altogether too long, but also makes a strong point of the dealers neglecting to push the sale of any but the latest records. He points out that a real, live, progressive dealer should not overlook the excellent numbers in the regular catalogs of the manufacturers, especially when these titles, if properly exploited, would keep the entire stock in a state of activity, rather than in one of comparative dormancy. The blame for slow sales may be ascribed in no small measure to a lack of energy and enterprise on the part of not a few dealers. The manufacturers may yet establish a yearly exchange, which would always be a relief, but so far no official announcement from any of the companies has been made.

Naturally with the aggressive trade inseparable from the talking machine business, novel propositions inevitably appear. Among others is the idea that dealers should look after the uses to which the machines are applied. Not in a public way, of course, but with private owners. It has been suggested that dealers should follow up each machine sold, and in the event of its neglectful use, so to speak, whether from lack of repair, proper adjustment, or indifference, some investigation should follow to remedy the seeming falling off on sales of records. The executive committee of the National Association of Talking Machine Jobbers at their meeting in Pittsburg, Pa., on the 8th inst., proposed a novel way to surmount the difficulty of accumulating dead stock. In the first place it is proposed that owners of machines who possibly may have gotten weary of their machine, so to speak, for reasons that repairing or adjustment were necessary, should be looked after. Secondly, machines in a home may be improperly placed and therefore the full pleasure of the outfit cannot be enjoyed. Thirdly, the records are not properly filed or looked after in a way that would make them easy of access. In other words, 70 per cent. of the talking machines distributed are said to be dormant, and what remains to have them placed in an active state is a little more attention on the part of the dealers who have sold machines and then forgotten all about the transaction. The excuse offered is that this means "a big job," but its probable benefit should be readily realized. More detail work, to be sure, but the sale of records would be measurably increased.

When a receiver was recently appointed to take charge of a financially embarrassed concern of some importance, his name was apparently unknown to the public. To satisfy the doubting Thomases of his ability and to reveal his identity as a fit person to manage the affairs of the company in trouble, he announced that in "1901 I acted as receiver for the National Gramophone Co." This is one of the defunct bodies whose name has been almost forgotten, and belongs in the limbo of litigation; but that reference was sufficient, it seems, and the court handed over the "soft snap" without a moment's hesitation.

Contrary to expectations the Hon. Frank D. Currier, of Vermont, chairman of the Patents Committee of the House of Representatives, a position he will retain in the present Congress, introduced a copyright bill on the day of the first session, namely, Dec. 2. Over 10,000 bills, dealing with every subject under the sun, almost, were handed in by their presumably proud authors, or "by request," and in this vast grist the proposed new copyright act appeared. Chairman Currier reiterates the position he occupied in the last Congress on the exemption of talking machine records and matrices from the prohibitive sections of the bill, only he is more specific now, and distinctly provides that the reproduction of sound waves of a musical composition shall not be included in copyright ownership.

The bitterness displayed in foreign quarters when operations, or rather intentions to invade the American market with infringing devices are summarily checked by the patent laws of the United States, is not to be wondered at. The owners of the inventions that have made the American talking machine admired and sought after in all parts of the civilized globe would naturally lead to the manufacturing of base imitations. Such goods sell readily enough abroad, unless they run up against the real article, and then their career is of subsequent brevity. Now and then a European maker essays to market a product here which is so clearly an infringement of patent rights that it is a wonder the attempt was ever made. So long as the patent is interpreted by the courts and its measure of protection is defined under the law, for that period the restrictions can be none other than binding and prohibitive. Certainly the reaping of a golden harvest in the way of a profitable business will continue to arouse the cupidity and envy of many men. That is human nature. Until the patents in question expire by limitation or are declared invalid by judicial decree, hands must be kept off of other people's property or there will be trouble and vexation of spirit. This truth should be so well known as not to need repetition in The World.

Liberal advertising in the best magazines and newspapers of the country has characterized the publicity campaign during the past year on the part of the great machine and record manufacturers. Not only has the appropriation for this purpose been materially augmented, but the quality, tone, appearance and strength of these published announcements have been likewise improved. The letter press is pleasing and convincing, while the illustrations tell their own story, and in such a way as to be of vast service to jobbers and dealers throughout the country. Apart from the force and effect of what is really magnificent advertising, the trade proper should supplement and support this broad and telling service by local work. One helps the other, and only a little ingenuity and cleverness is needed on the part of the dealer to make effective use of the general campaign carried on by the companies to his own personal benefit and profit.

The story goes that Thomas A. Edison, the inventor of the phonograph, has always refused to have a record made of his own voice, and none is in existence. The World was therefore surprised to hear a gentleman, whose name is pretty generally known throughout the trade, say that he actually had in his possession a record made by Mr. Edison years ago in the early stages of the business, when the talking machine was emerging from its nebulous existence as a scientific wonder, a laboratory marvel, with only a glimmering indication of its great commercial possibilities.

According to this account, vouched for as absolutely correct by the narrator, Mr. Edison made the record—the old white record, "antedating the war"—of his voice for the President of France at the time of the first Paris exposition, in which he related his personal experience in

"Oliver's All-Tones"

Newark, N. J., U. S. A.

visiting first the leading American cities and then those in Europe. In giving these facts The World's informant said: "I have this Edison record, and money could not buy it at the present day, as I prize it as among my most precious possessions. Mr. Edison recorded it himself, and even now I will not put it on the machine for fear it may be injured in some way. He made it for the French president, and first he briefly described his impressions of the prominent American cities, and it is amusing to hear the wizard's voice again when the record, in reproducing, says: 'New York, known for its tall buildings; Baltimore for its pretty girls; Philadelphia is very quiet; Pittsburg, the smoky city, where you want to wash your face.' And so he went on to say something of Chicago, Cincinnati, St. Louis, San Francisco, etc. Then he takes up the European cities, and speaks of them in a similar half-humorous, semi-serious strain.

"Some day, if you are around," continued the party, who seemed pleased he could boast of having something that no one else is supposed to have, "I will be happy to show you—The World—this record and perhaps put it on the machine again to show that I have the real goods and no fake." Possibly some other veteran in the business may shed further light on this interesting relic of the trade's troublous early days, when money was poured out in a steady stream to perfect the talking machine, not a few men going "broke" in the process, but none losing their enthusiasm or their abounding faith in the ultimate success of sound reproduction. Many of them have disappeared from the stage of activity, but Thomas A. Edison still remains as fond of his great discovery as at the first time when he finally succeeded in reproducing the first intelligible sound of the human voice.

OMIT JANUARY SUPPLEMENT.

No record bulletin will be issued for January by the Columbia Phonograph Co., General. Relating to this, and giving the reasons for the omission, the company, on Saturday last, through Walter L. Eckhardt, manager of the wholesale department, sent their jobbers the following letter:

"After careful consideration we have decided in our mutual interests to omit the January supplement to our general record catalog. Therefore no selections covering the month in question will be distributed, notwithstanding the fact that we have been to considerable expense in the preparation of the masters and matrices for selections that appear in our confidential advance list mailed you under date of November 5. We feel that the trade will welcome this decision, owing to the fact that January is one of the best record selling months, and in the absence of a special January list many standard records, which have lain dormant on your shelves, should be readily disposed of, especially as the holiday buyer first desires the old familiar selections, standard operas, etc., which are listed in the general catalog."

DAVEGA CASE RECENTLY APPEALED.

The appeal of the National Phonograph Co., et al., against the New York Phonograph Co., involving the so-called Davega case, from the decision of Judge Keogh, Supreme Court of Westchester County, was recently argued in the Appellate Division of the Supreme Court, second department, in Brooklyn, N. Y. This brings the matter, in which S. B. Davega, an Edison jobber and dealer, New York City, is the nominal defendant in a suit, instituted against every other Edison jobber and dealer in the State, for alleged invasion of the complainant's alleged territorial selling rights with damages, before a tribunal of five judges for review. The case has been in and out of the Federal courts for a number of years, and a string of lawyers has appeared from time to time on both sides. Judge Keogh, in his very brief opinion of a half dozen lines, sustained the rulings of the United States courts and gave judgment, so an appeal could be taken for a definite settlement of the question at issue. After the hearing and the filing of briefs decision was reserved. No matter what the outcome may be in the appellate division, a motion for a review by the New York Court of Appeals, the court of last resort, will follow. The issues at stake in no wise concern or affect the trade, as it is a legal scrap of purest ray serene.

A CLEVER INVENTOR.

One of the clever members of the talking machine trade is Louis Devineau, of Cleveland, O., whose picture is shown herewith. He is the inventor of the biophone, an attachment to play

LOUIS DEVINEAU.

disc records on any cabinet cylinder machine, which has won high praise in the trade. He is now working on many new devices which are destined to keep his name before the public in a larger way in the near future.

DECORATED FOR HOLIDAYS.

Christmas greens and holiday decorations were placed in the store of the Douglas Phonograph Co., New York, on Monday. Long, graceful festoons of holly are hung the entire length of the spacious floor, being caught up at intervals along the sides, and from the center of each circle of vivid green depends a bell of brilliant red, the largest, 2 feet across, being hung near the Chambers street entrance. A large banner, 12 by 15 feet, was also thrown to the breeze on Monday in front of the Douglas Co.'s store. It is of deep blue with white lettering and attracts much attention.

The Chattanooga Phonograph Co., Chattanooga, Tenn., had an exceedingly clever window display during Thanksgiving week, advertising the song "Turkey in the Straw," a Victor record made by "Billy" Golden.

ACROSS THE CONTINENT.

Theodore F. Bentel Tells the World of Some of His Interesting Experiences of a Trans-Continental Jaunt—Trade Conditions on the Pacific Coast—Across the Desert Country—Scenic Wonders of the Far West—Finds the Talking Machine World Looked Upon as the Bible of the Trade.

Readers of The World will be interested in the following story related by Theodore F. Bentel, formerly a well-known Pittsburg jobber. Mr. Bentel, who is now secretary of the Hawthorne

ON A MOUNTAIN JOURNEY IN COLORADO.

& Sheble Mfg. Co., Philadelphia, returned not long ago from a transcontinental trip, and when asked by The World to relate some of his experiences together with views formed upon the various localities which he visited, said:

"After twelve strenuous years of talking machine experience in Pittsburg, and having disposed of my business and cleaned up as it were, I decided to take what I felt was a much needed rest, and concluded that there was no trip that was more inviting than a trip to Sunny California, and therefore I accordingly on the first of May purchased round trip tickets for myself and party, and left on the Pennsylvania Special for Chicago, where I made close connections with the Golden State Limited on Rock Island via Kansas City, Denver, etc., stopping off at Kansas City, where I called on the leading talking machine jobbers and formed some very pleasant acquaintances, and by the way, while at Kansas City I had a very amusing experience. One of the members of my party had some friends living some thirty-five miles south in the interior of Kansas, in a small town of some 700 or 800 inhabitants, and we decided to run down and make a day's visit, which we accordingly did, arriving there in the afternoon.

"The next day while walking up Main street I happened to glance in the window of a general store and saw a talking machine, which, of course, attracted my attention at once. I decided to go in and investigate, as I could not resist the temptation. I accordingly did so and found therein a representative from a large Chicago house soliciting an order from the merchant. I waited an opportunity and made myself acquainted with the salesman and learned the house he represented, the heads of whom are personal friends of mine. I accordingly felt that here was an opportunity for me to help the salesman out, who assured me he was in trouble, accordingly we got the merchant between us and the story briefly told is this: we sold him twelve machines and over three hundred records as an initial order; the salesman was duly thankful to me and left that night.

"The next morning on my way to the depot I was stopped by the merchant who had a serious look on his face, which at first glance led me to believe that he had had a disturbed dream, and of course I was expecting him to say almost anything, but to my surprise his first question was when was I going to leave town. I told him I was then on my way to the depot to return to Kansas City, and asked him why. His reply was if you will allow me I will go to Kansas City with you, as I have decided from the talk I had with you yesterday, and your telling me of your past experience as one of the pioneers in the talk-

CAR IN WHICH CALIFORNIA, ARIZONA AND NEVADA WAS TOURED.

ing machine business to put in a complete line, and therefore if you will allow me I will, as above stated, go with you to Kansas City, and ask you to make a further selection of goods for me, as I want to become a full-fledged talking machine dealer." It is needless to say that I was very glad to have him go with me, and I assisted him in purchasing a bill of some $700 worth more. I have had numerous letters from him since my return home, in each one of which he speaks in glowing terms of the success he is having in the talking machine business, and that he feels sure in a little while he will be one of the largest talking machine dealers in the State of Kansas.

"From Kansas City I took the Limited to Denver and spent three days in Denver, a part of which time I called on the trade. I also renewed some old acquaintances. I found the talking machine business in Denver in a very healthy condition indeed, and I was especially interested to note the high-priced machines that they were

selling; also the complete stock of all the up-to-date machines and supplies. The same was also true of the dealers at Colorado Springs and Pueblo.

"From Pueblo I took the Denver and Rio Grande Railroad passing through the Grand Canon in Colorado, which is noted for its grand scenery, reaching Salt Lake City (our next stop) the next day. Salt Lake City was indeed a surprise to me, as it was my first visit to Salt Lake, and of course I had formed my own peculiar ideas as to the kind of a city it was, and the surprise was indeed an agreeable one. I found it a strictly up-to-date city in every respect. The same was also true of the talking machine dealers, who were quite numerous, and all spoke encouragingly of the business, and from the class of goods that they handled and the enthusiasm displayed I feel quite sure they are finding the line a profitable one.

"From Salt Lake City we took the San Pedro line direct to Los Angeles. This line passes through the Great Deserts of Nevada, and for miles aud miles, and hours and hours we passed through nothing but barren desert. It was extremely hot weather and our party suffered considerably therefrom. However, we arrived in due time the second morning after leaving Salt Lake, in beautiful Los Angeles, which is certainly one of the garden spots of California. We arrived just one week after the Shriners' meeting at Los Angeles, and of course found the city still decorated with Nature's most beautiful garb, namely, flowers; which, as you know, grow in profusion there. We found the street crossings, arches, lamp posts and buildings—in fact, everything, decorated with flowers in greatest profusion. We also found the talking machine business very prosperous. The Southern California Music Co., the largest jobbers in the city, had two very large windows entirely devoted to talking machines, although they are a large music house, handling all the leading pianos and other musical instruments. I also noted the fact that the other talking machiue dealers made exceptionally fine displays in their windows, not only in the quality of the goods displayed, but also the attractive manner in which they displayed them. In fact, I found this also true of dealers in numerous other small towns which I visited through Southern California.

"We spent some six weeks in and about Los Angeles taking numerous automobile tours ranging from two to eight and ten-day trips, going as far east as Arizona, south in Mexico, and north into Nevada. While on one of these trips I had the pleasure of visiting a number of gold, silver and copper mines, among the latter was the great Hecla Consolidated Mines, located near Youma, Ariz., and within a few miles of the Mexico line, where I saw mountains of copper ore just ready to be taken out and marketed, and in a personal talk with the superintendent he assured me that there was more ore exposed than they would be able to market during the present generation. I did not doubt this statement from the amount that was exposed to my view.

"Arizona is certainly a remarkable State in a number of ways. At sunrise, about four o'clock in the morning, the thermometer registers 80; at ten o'clock 120, and at three in the afternoon, which is the hottest part of the day, it registers 135, and even with this high temperature we positively did not suffer from the heat on account of the dryness of the air. As you know in this country meat can be kept for an indefinite time without becoming putrid. It was also very interesting to note that no man is allowed to leave camp without first shouldering a canteen of water and arming himself with a long stick; the water to quench his thirst, and the stick to be used for defensive purposes, as rattlesnakes and gila monsters inhabit this section of the country in profusion. It was nothing unusual to find a four-foot rattlesnake coiled up ready to challenge you any moment. This section of the country is also inhabited by another specie of snake, known as the side-winder, whose sting is equally as poisonous as the rattlesnake, and more to be feared than the rattlesnake, because they give you no advance warning such as the rattler does. This country is also frequented with mountain sheep and coyotes. There are also a few bears and antelopes.

SNAPPED AMID ARIZONA CACTUS.

"On our return trip we passed through Frisco and we were there just at the time when the street-car strike was at its height, and this fact, together with the desolate condition of affairs, made beautiful Frisco anything but attractive. It was not only dangerous to travel afoot but likewise in cabs or any other kind of conveyance, to say nothing of the street cars. I found the talking machine jobbers and dealers at Frisco, while they were located in most cases in hastily put up buildings, yet they were all doing business just the same as if they had not been visited only a few months previous by the terrible earthquake, and they are certainly to be admired for their pluck and enterprise.

"From Frisco to Portland is twenty-eight hours' ride through a very beautiful country. The natural scenery, particularly as one passes through the Shasta Mountains, and views the numerous natural geyzers and the snow-capped mountains, is a sight long to be remembered.

"The city of Portland is certainly beautifully located. The same is also true of the location of the various talking machine jobbers and dealers, who are all as busy as nailers, and here too I found the stock strictly up-to-date and complete in every detail.

"The same was also true of Tacoma, Seattle, Spokane, Butte, St. Paul and Minneapolis.

"We arrived in Chicago the morning of July 3, and reached Pittsburg the morning of July 4, very much improved in health, and likewise in knowledge and impressions of the talking machine business, and while I have, as above stated, handled talking machines for the past twelve years, and during that time have been asked by numerous people as to whether I did not fear that the talking machine would meet the same fate that the bicycle did, yet I never lost faith and always maintained that the talking machine business is still in its infancy, and while this claim was true five years ago, it is equally so today, and I have no hesitancy in saying that the talking machine is like the piano, a household necessity, the sale of which is only in its infancy."

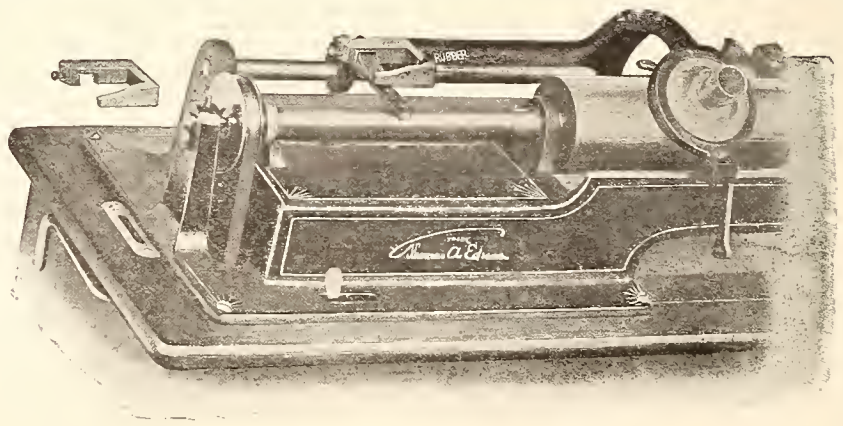
Continuing Mr. Bentel said: "Here are photographs illustrating some of the scenes along the way which may interest the readers of your very valuable paper, and with respect to the latter, permit me to say that I found all the talking machine dealers that I visited had copies of The Talking Machine World, and in a number of instances they admitted, that it has become, like the Bible, a household fixture."

"SHADOWGRAPH" WINDOWS.

Window displays can be made attractive by adding shadow pictures to your display. This is easily accomplished in the following manner: The drawing of "shadowgraphs" is done upon squares of wrapping paper pinned to the wall, a person is seated in front of the paper and betweeu that and a light, and the profile of the face is then easily outlined upon paper with a pencil, after which it can either be cut out in the ordinary manner and pasted on a black paper-muslin background, or the effect reversed by filling in the center with a jet black marking ink, care being taken not to overrun the outlines, nor to apply so freely as to moisten the paper to such an extent that it will pucker up, and thus spoil the general effect. Puckering of paper can be avoided by pressing brush dry as possible on side of ink receptacle before applying to paper,

THE UTICA AUTOMATIC STOPPER

¶ This splendid device is for the Edison Home Phonograph. It stops the machine when the record is finished. The Automatic Stopper is sure to be in large demand among users of the Edison. The retail price is 25 cents. ¶ Place your order through your jobber; if unable to get them of your jobber, write us. We will furnish a sample to any dealer in the United States or Canada on receipt of 15 cents, if the name of your jobber accompanies the order.



UTICA CRANE CO., Makers = = = = = = Utica, N. Y.

following the interior of the outlines first and then filling in slowly, only trying to cover a small surface at a time, with a comparatively dry brush. Talking machines, records, horns, all kinds of supplies and novelties may thus be drawn and pasted up and down the side edges of window. The silhouette of clerks can thus be taken and placed in window under which may be placed an announcement card asking patrons of the store to see if they can guess which clerk, waiting on customers, is the one who has cast such a shadow in your window. The writer only makes these few suggestions to start your window dresser thinking upon the subject, as no end of ideas can be worked out in this way and space forbids my elaborating further aside from the foregoing remarks.

CLEVER VICTOR LITERATURE.

Some Illustrated Booklets Just Issued to Stimulate Holiday Trade.

"The Victor for Every Day in the Week," an illustrated booklet of eight pages and cover, intended to stimulate holiday sales with the public, was sent the trade recently by the Victor Talking Machine Co., Camden, N. J. Primarily this clever and original bit of literature is intended for the boys and girls, but the "children of a larger growth" will also find much to amuse and instruct them relative to the Victor line. Each day has a special illustration in colors and a separate story, both snappy and spirited. The appended preface indicates the happy character of this little work:

"To Mothers:—In presenting this little book, the Victor Co. hope to instill a love of wholesome entertainment in every child. Experience has proven the refining influence of good music, and there is no way in which such a variety of music, by the leading artists of the world, can be so readily and economically brought into every home as through a Victor. To make 'Home' the dearest and best place on earth to boys and girls, is every mother's foremost thought. The Victor will lend more help, and do more towards accomplishing this, than any other one thing, next to mother love."

Publicity Manager Brown is as full of helpful advertising ideas—all in forceful form and attractive appearance—as an egg is of the proverbial "meat."

NATIONAL PHONOGRAPH CO. NOTES.

A special price list on horns and cranes apart from the regular equipment on all models of machines has been made by the National Phonograph Co. This in no wise affects any prices heretofore coupled with the company's new agreement that went into effect on October 1. Their horn output is not yet up with the demand, though the factories are running capacity in order to reach this desired end.

The Edison Ideal phonograph, the $125 machine, with solid mahogany cabinet and cover, and oxidized bronze metal fittings, has proven a great seller. The National Co. are exerting every effort to fill orders, which have multiplied rapidly since the Ideal was placed on the market.

The past few weeks the following jobbers were visitors at the New York offices of the National Phonograph Co.: E. F. Taft, of the Eastern Talking Machine Co., Boston, Mass.; C. B. Haynes, of C. B. Haynes & Co., Richmond, Va.; S. T. Francis and C. L. Harvey, with the Iver Johnson Sporting Goods Co., Boston, Mass.; J. Foster Davis, I. C. S., Scranton, Pa.; Louis Buehn, of Buehn & Bro., Philadelphia, Pa.; G. L. Ackerman, of Ackerman & Co., Scranton, Pa.; Thomas Wells (dealer), Calumet, Mich.; Lewis J. Gerson, of the Musical Echo Co., Philadelphia, Pa.; C. Carroll, of the Utica Cycle Co., Utica; J. N. Gladstone, London, Eng.; Theo. Bentel, Pittsburg, Pa.; H. Wunderlich, with J. Samuels, Providence, R. I.; F. A. H. Silliman, with Pardee-Ellenberger Co., New Haven, Conn.; J. A. Reichkard, of J. A. Reichkard & Co., Schenectady, N. Y.

During Hard Times Inexpensive Phonographs Sell Very Well

FACTS ABOUT OUR NEW PREMIER TALKING MACHINE, 1908 MODEL:

POWERFUL MOTOR—Guaranteed to play more than one record.

NEW ANTI-SLIPPING DEVICE—To prevent reproducer from sliding on record.

REINFORCED BASE—Preventing breakage in Transit.

NEW GRAND OPERA REPRODUCER FREE—Twice the size of the ordinary—with curved neck and indestructible cap. Supplied in addition to ordinary reproducer.

LARGE FLOWER HORN—In gold and other beautiful colorings. Seamless horn of pure aluminum furnished if desired.

Two Reproducers With Each Machine.

Our Latest Phonograph **FREE**

New Grand Opera Reproducer

$2 **$2**

PREMIER MODEL (1908 TYPE)

Sample Premier Phonograph, $2.00 Cash With Order.

EXCHANGE SYSTEM—Full credit allowed for all old model phonographs returned to us, whether originally purchased from us or not.

WIRE RACKS for cylinder records: 8 feet high, 4 feet wide and 16 inches deep. Each rack accommodates 1,224 records. Each compartment holds six records standing up in cardboard box. $12.00 each.

SATISFACTORY REPORTS FROM SOUTHERN CALIFORNIA.

Every Man Has Put His Shoulder to the Wheel and Confidence Has Supplanted Any Temporary Feeling of Pessimism That Prevailed—Holiday Trade Outlook Satisfying—Birkel's Display of Red Seal Records—Columbia Co.'s Good Report—Call for Victrolas at Sherman, Clay & Co.'s—Campbell Goes to San Francisco—Southern California Music Co.'s Recitals Attract—Edison Co.'s Good Report—Some Recent Visitors to the City—Talking Machine Used by Treble Clef Club—Mrs. Spooner One of the Optimists from San Diego.

(Special to The Talking Machine World.)

Los Angeles, Cal., Nov. 29, 1907.

Trade reports for the month are very satisfactory, echoes of the recent money stringency being faintly heard by some of the dealers. Every man has his shoulder to the wheel and is as confident as if nothing had happened. It took the people a few days to get used to "bank scrip," which is now used very freely, especially for cash purchases, which seem to be the greatest part of business, outnumbering credit and iustalment sales greatly. The pleasant weather helps business a great deal. The near-by mountains are still free from snow and the sun is always shining.

The outlook for holiday trade is brilliant and satisfying. Fiske & Co.'s store is filled with Edison customers. They have taken the jobbing agency of the Indestructible Record Co.'s product, of which they have just received samples. They are planning a campaign for wholesale business in these new records, which seem to be winners.

The Bartlett Music Co.'s "closing-out sale" is in full blast; they are retiring from the small goods, sheet music and talking machine lines to make room for pianos and players.

The Geo. J. Birkel Music Co. are making a splendid display of Red Seal records in their show windows, choosing a very attractive style, the windows being draped and backed in red with circular cards of white around each record, with the name of the selection and rendering artist thereon, making a catching contrast.

The Columbia Phonograph Co. report wholesale trade quiet, but retail going ahead very fast. Manager Stidham says the company have enough stock on this coast to run them for some time to come, and has no fear of not being able to supply the demand either for wholesale or retail. Their cylinder business doesn't seem to be as good as it should, while the disc end makes up for it.

Sherman, Clay & Co. are preparing to fill all back orders for Victrolas, which is the best kind of news to the dealers, all of whom have been greatly handicapped by not being able to get enough to supply the great demand for them. William Campbell, who has been with them for a long time, has gone to San Francisco to join their forces in that city.

The new Victor Red Seal records of the voice of Ellen Beach Yaw are receiving great welcome, owing to the fact that Miss Yaw is a native of this city and has a great circle of friends here. Dealers contemplate a great sale of them.

The weekly recitals of the Southern California Music Co. are being held in the smaller hall on the second floor of their building, while a large Aeolian pipe organ is being installed in "Chickering Hall," which is being remodeled and refinished, after which they will resume the regular concerts of before. Carl R. Haemsch, who has been cashier in their talking machine department, was suddenly called to his home in Knoxville, Tenn., by the news of his sister's illness. He has already expressed a longing for Los Angeles, and it is hoped he will return to his old post. The Southern California Music Co. have received a number of valuable orders through Juan Fuente, who has just returned from a short trip to Ensenada, Lower California. This little Mexican city is a great field for anything musical and is sending a great many orders to both San Diego and Los Angeles. Mr. Winship is making his first trip south for Kohler & Chase, of San Francisco. He says the "Star" line is receiving lots of attention all along the coast, from new dealers.

The Edisonia Co. are doing a good volume of credit business and have recently sold a Twentieth Century graphophone to a moving picture theatre for illustrated song work. W. C. Hauser, of Dinuba, Cal., is making some changes in his store to accommodate his fast-growing business for Edison goods. N. L. A. Cody has paid a visit to this city and left behind an order for Edison goods. Robt. C. Avery, of Redlands, and C. H. Short, of Pomona, both Edison men, were also here for a few hours last week. They report trade as being generally good and getting better. The arrangement of prices on Edison horns and cranes by the National Co. has greatly pleased some dealers, who didn't favor the first system and could not see it in a satisfactory light.

At a recent meeting of the Treble Clef Club at Choral Hall, in the Auditorium of this city, a talking machine played an important part, being used to reproduce voices of great stars in the leading arias of the opera. This means that some of the greatest critics and leading musicians have taken earnest interest in the talking machine as a musical instrument, while heretofore they have pushed it aside for lovers of ragtime and comedy.

Mrs. E. J. Spooner, in charge of the talking machine department of the Southern California Music Co.'s San Diego branch, made a visit to this city of a few days in the interests of her department. She says the people of the southern city have not felt the slightest change from the financial slump and wouldn't know it had happened but for outside reports. That store has just come forth from a general remodeling, and has now a much better appearance and accommodates a complete line of Edison machines and records, aside from the regular stock of Victor and Zonophone goods.

FACTORS THAT LED TO SUCCESS.

Talking Machine Employe Tells the Secret of His Progress to the World and It Is Goodly Reading.

A talking machine employe who has won a large measure of success, when asked by The World during a recent chat, what especial factor led to his success, he said:

"Take as much interest in your employer's business as if it were your own.

"Do not expect to get all you can and give nothing. Do a little more work than is demanded.

"Be prompt. Show that you have an interest in your work above the desire for an extra half hour in bed in the morning. You can't come down half hour late every morning and impress your employer with the idea that you are a wideawake, active man or woman with an interest in your work.

"Do your work well to-day—you won't have to do any of it over again to-morrow.

"Be cheerful and willing. A sullen countenance is not pleasant to look upon by either an employer or a customer. Remember, your pulling power with a customer is one of your assets. The reverse will be your loss. Be courteous. Do not thrust your troubles and inharmony upon those around you. It is a poor investment.

"Be conscientious. Don't take too much interest in ball games, theatres, parties, etc., or you may find that you have not much time left to give to your work. Don't have a relation die too often. Funerals sometimes grow monotonous to an employer during the baseball season or on matinee afternoons.

"Do not make the same mistake twice.

"Do not let your thoughts be always woolgathering if you expect to earn an increase of salary on pay day.

"Do not shirk your work and be always thinking of the money side of the proposition. Give good value for the money you receive, and you will be sure to succeed.

"Put yourself in your employer's place and figure out what kind of an employe you would hire to get the most out of our business. Then set ourself to try to be that employe.

"There is no short, easy road to success."

RESUME EVENING CONCERTS.

(Special to The Talking Machine World.)

Cincinnati, O., Dec. 7, 1907.

The Rudolph Wurlitzer Co. recently resumed the series of Saturday night talking machine concerts that proved so successful last winter, with the interesting feature that the Ikonograph or home moving picture machine is demonstrated at the concerts. As a rule, about 50 Victor records are played over, and many of those played are ordered by members of the audience after the concert is over. A large room is especially devoted to the concerts, and it is crowded on every occasion.

ALLENS PAPER PHONOGRAPH LACQUER HORN

PAT. JAN. 9TH 1906. No. 1022.

明治三十九年壹月九日
實用新案登錄第壹〇弐弐號

MANUFACTURED BY
WM. J. SCHROTH
KOBE, JAPAN.

None Genuine Without This Trade Mark

THE ALLEN FIBER TALKING MACHINE HORN

HERETOFORE there has been a certain amount of prejudice, especially by those musically trained, against the Talking Machine on account of a peculiarly unpleasant "blast" or metallic sound foreign to the record.

This rasping sound is due principally to the horn, which in the first place, is manufactured of metal, and secondly is generally not constructed upon scientific principles.

This fault is corrected by using the ALLEN FIBER HORN, made by hand, of a Japanese rice fiber material, finished with a beautiful lacquer, put on by a new patented process in a permanent glossy jet black color.

Beautifully Decorated by Talented Japanese Artists

CAN BE USED ON ALL TALKING MACHINES

A HUMOROUS DISCUSSION

Overheard Recently in Which the Merits of the Talking Machine, Automatic Piano and Similar Contrivances Were Brought to Light in a Manner Most Interesting.

An apt illustration of the old adage that "Every crow is the blackest," as applied to the talking machine and mechanical piano, was given in a recent issue of a Portland, Ore., daily. Quite a little lively discussion has been created among the owners of talking machines, automatic pianos and similar contrivances by a city ordinance just put in force forbidding the use of such contrivances between the hours of 10 p. m. and 7 a. m. As an indication of the manner in which the general run of suburbanites received the ordinance the following discussion was reported as having taken place upon a suburban car on the way to the city one morning right after the ordinance had gone into effect:

"I see by the papers," began the man with the religious air, "that the city fathers have placed phonographs, electric pianos and other noise-makers under the ban. It is a wise step, for every evening, when we hold services at our church, there is a man on the next block who strikes up some profane tune, such as 'The Congregation Will Please Keep Their Seats,' 'For Dat There Chicken Am Mine,' 'There Was I a-Waiting at the Church.' The other evening he played 'Snuggle Up Closer,' and when one of the deacons went over and requested him to desist he changed the disc and played 'Everybody's Picking on Me.' It was an outrage."

"Yes," said the commuter with an electric piano in his house, "them talking machines are fierce. Sousa was right when he called it canned music, and I'm glad the council is going to can it some more. There's a fellow lives four blocks from me and he rips off his talker concert from the time he eats supper until the milkman comes."

"And there's a duffer lives four blocks from me," sneered a straphanger, "who has an electric ivory pounder that has about as much melody as a circus calliope. I've got a talking machine, but that electric contrivance makes so much racket, despite the distance, that I can't hear my own music until after he has gone to bed."

"Neither talking machines nor electric pianos can play music," said the religious man.

"And the people who lead in the singing at church don't know music," asserted the talking machine owner.

"And from what I've observed," added the electric piano proprietor, "the people who have the worst voices are those who persist in going to church. They sing so bad at home that they go to church and join in the crowd, knowing there is safety in numbers."

"Talking machines aren't as discordant as concert singing at church," chipped in the talker enthusiast.

"But," interrupted the religious man, "think of the cause in which the congregation sings."

"Huh!" grunted the electric piano player, "charity covers a multitude of sins, but congregational singing is beyond redemption."

The little man with hair down to his shoulders had squirmed in his seat during this dialogue. Even a country constable would have spotted him for a music teacher.

"Music, pah!" he exclaimed. "None of you know what music is. What music is there in a talking machine? None, nothing but noise and squeaks. What music is there in an electric piano? It sounds like a riot. Mechanical pianos! Pooh! Pooh!"

"Say, you!" cried the passenger with a bundle of pianola rolls in his lap, "I'll bet I can beat you playing anything from 'William Tell' to 'So Long, Mary,' and with one foot. There's no blue notes when I pump a tune. You're sore because the first aid to the man that likes music, but doesn't know one key from another, is knocking you out of pupils."

"It's rank discrimination on the part of the council," declared the talking machine owner.

"Anyway," observed the man with the motor music, "I can't see why there should be discrimination. They want the manufactured music shut off at 10, but they will let some girl, who mistakenly imagines she has a voice, or some dub who plays by hand, bellow and pound all night."

"It's unconstitutional," chimed in Mr. Lawyer. "A man's house is his castle." Then addressing the pianola expert, the talker man and the electric piano passenger, "Here's my card. If you wish to test——"

"Transfer for North and South Portland," shouted the conductor.

The ordinance is in effect and down to date no arrests have been made for its infringement.

A DISTINGUISHED VISITOR.

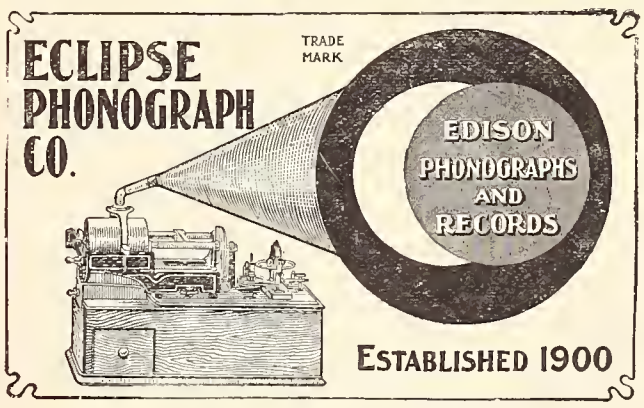
A distinguished visitor to the metropolis is J. Victor Castran, of Castran Hermanos, one of the leading talking machine jobbers in South America, of Buenos Ayres, A. R. He has been here a fortnight, coming up the coast, on a trip of which he speaks in anything but complimentary terms. He will avoid the harassing features of this lame and inadequate service by returning home via Europe. Mr. Castran, who acquired his commercial education in New York, is a hustler after the approved Yankee pattern, at once looked up his old friends, Edward N. Burns, manager of the Columbia Phonograph Co.'s export department, and Henry J. Hagan, manager of the Universal Talking Machine Manufacturing Co.'s recording laboratory, both of whom he had met in Buenos Ayres, and appreciated their high qualities in a business and a social way.

The offering last week of the "Nassau" 10-inch record, a stencil, of course, for 39 cents, by R. Macy & Co., the New York department store caused something of a sensation in the trade. The wise ones judged a legal scrap on patent grounds was invited by this bold step into the boasted territory of prohibited prices. But "we shall see what we shall see."

SPECIAL NOTICE TO DEALERS

We have just added a complete line of

ZONOPHONE MACHINES AND RECORDS



and will devote our whole attention to meeting the demands of the trade for these and

PRACTICAL SUGGESTIONS AND COMMENTS.

CAUSES FOR POOR RESULTS IN TONE.

The Victor Talking Machine Co. have just issued seven booklets giving "instructions for the assembling, operation and care of the Victor talking machine," covering the various styles of machines which they manufacture. These booklets are issued for the benefit of Victor purchasers, and it is safe to say that in no way will they derive so much satisfaction and pleasure from their Victor as by following closely these instructions for its operation and care. They are superbly printed; the text matter is written in a most illuminative way, while the illustrations help to make plaiu any technical difficulties. At the close of the volume they give the following causes for poor results in tone reproduction which are really worth printing for general consideration: 1. Needle Not Tight in Sound Box.—Should the needle-clamp screw on the sound box not to be tightened sufficiently, the sound box will fail to give full reproduction and a clattering sound will be heard. 2.—Using Needle More Than once.—A steel point under weight moving over the hard composition of the record must either wear itself or tear down the walls of the sound-wave groove; hence our advice to use only Victor quality needles at all times. 3. Loose Sound Box.—If the sound box is not firmly locked into the horn a rattling sound may be emitted on certain records. 4. Sound Box Out of Adjustment.—The effect produced by a sound box out of adjustment is very similar to that caused by a loose needle. 5. Insufficient Oil.—Bearings.—Dry bearings may cause a grinding noise and prevent machine from playing records through to completion. Friction Leathers.—Dry friction leathers will cause the governor to run irregularly, thus preventing uniform speed of turntable. Springs.—Should springs release with a jerk or a jump it indicates that they need lubricating with graphite. 6. Record Covered with Gritty Dust.—Gritty dust on records will not only grind out the record rapidly, but will cause a harsh or rasping reproduction. 7. Incorrect Speed.—Should the turntable be revolving too rapidly or too slowly the reproduction will be faulty. Test machine occasionally for 76 revolutions per minute.

THE PIANO AND REPRODUCING.

An inquiry of rather general interest is that which appeared in the New Phonogram recently, and is as follows: "Does it injure a record or reproducer to accompany a record on the piano? Several friends of mine who own phonographs say that it does." Answer.—"Your question raises a very interesting point. Usually a record cannot be harmed by the ordinary noises which occur during the times it is being played, noises such as talking voices, etc. But an instrument of such enormous range as the piano which goes an octave below the lowest instrument in an orchestra—the double bass—and a third above the highest—the flute—does set up vibrations to which the reproducer is forced to respond. This results in the making of certain secondary sounds which are apparent only to the trained ear of a musician and tend in a measure to affect the record."

SHOWS VIBRATIONS OF LIGHT.

The acoustic oscillograph is the name of an instrument designed by G. Bowron, of London, which is arranged to show vibrations of light corresponding to the sound waves generated by a talking machine. The sound waves impinge on a thin diaphragm, which forms one side of a small gas chamber. The gas flowing through the chamber issues through a small orifice and burns vertically as a long, narrow flame. Every variation in the sound waves from the machine produces a corresponding alteration in the height of the flame, notes of 1,000 vibrations per second producing a ready response. Such rapid vibrations cannot be perceived by looking directly at a mirror revolving on a vertical axis and placed a short distance away. Normally, the reflected flame is seen as a band of light across the mirror, but immediately the music begins it is cut up into numerous tongues of flame, the size and appearance of each flame depending on the pitch and amplitude of the note producing it, its shape being also affected by the timber of the note—that is, by the number of harmonics present. The general appearance in the mirror resembles that of a row of saw teeth, which are arranged in groups varying in size and shape. The gas jet described above is known as Koenig's manometric flame. Considerable difficulty has been found in arranging the apparatus in conjunction with a disc talking machine, but these difficulties have been overcome, and the apparatus now works with sufficient sensitiveness without perceptible reduction in the volume of sound produced.

THE MATTER OF HORNS DISCUSSED.

"The flower horn is now the popular variety for both disc and cylinder machines without a doubt, but from a tonal point of view it is not nearly so good as the ordinary seamed brass (not to mention the seamless) trumpets, says The Sound Wave. It has been conclusively proved—in fact, any user can prove this for himself—that the tendency to blasting and 'trumpetyness' of high notes is more pronounced with a seamed trumpet than with the brazed join variety, and the flower horn has any number of seams, whereas the ordinary brass horn has but two. Metal is a conductor of sound, and the vibrations of the diaphragm are not only rendered audible by the air which the trumpet encloses, but the whole area of the horn itself vibrates. The powerful agitation caused by very loud sounds makes the seams rattle together, which tends to spoil the reproduction. One of the objections to the use of brass as a material for sound amplifying is the fact that it 'colors' the tone—i. e., renders it 'brassy.' This can be obviated by giving the horn a heavy coating of enamel, as it deadens the vibratory power of the metal. Much of the rattling of seamed trumpets can also be reduced by the same means, and it is not too much to say that this is the reason why the majority are so treated by the manufacturers. A new silk-covered horn is being placed on the market shortly, and it is certainly a great improvement on anything of the kind now obtainable. Silk is a non-conductor of sound and a most efficient reducer of sound vibration. Horns so covered practically do not vibrate at all, and the reproduction with the new invention thus only consists of the vibration of the air, which further reduces the admittedly small mechanical effect of present-day reproductions, and marks a further step toward the ideal of all talking machine manufacturers—absolute naturalness of tone."

It should be understood that the foregoing views are not in any way the opinions of the manager of this department, inasmuch as the likes and dislikes of horn users are innumerable.

INVENTS SOUND PRODUCING HEAD.

A resident of Elgin, Ill., is said to have invented a sound producing head for disc talking machines and to have received letters patent therefor. It is a small appliance which is fastened to the needle and greatly intensifies the sound; has been given a thorough trial and is reported to have been very satisfactory. The same man has also invented a tone modifier, which has been on the market for several years. He is now at work on a fourth improvement for the talking machine.

CLEANING DISC RECORDS.

In reply to an inquiry, we may say it is true there is nothing so annoying as disc records in which the dust collects in the tracks. But this trouble can easily be obviated by the use of a brush which is patented and sold by the Blackman Talking Machine Co. It is a splendid contrivance, and will relieve the trouble of which our correspondent complains.

Success is the outcome of direct effort. The success that is dependent solely upon the result of others is not success, but luck, fate of Providence. Success is perseverance—the keeping one object, one aim, one thought constantly in view—the bending of every energy to gain the goal in sight—the continuous drop of water that wears away the hardest stone. This is success. The shortest road to success is to strike right at the heart of the matter and not be sidetracked into some other road. Business success depends upon striking at the heart or the mind of the people, not once, but many times, with a story convincingly and well told.

FLOWER HORNS THAT SELL AT SIGHT

Back of every horn we sell is a guarantee of high quality. They are the handsomest and most attractive line manufactured to-day. All we ask is that you compare them with any others on the market as to construction, color or decorations. We are willing to abide by your decision.

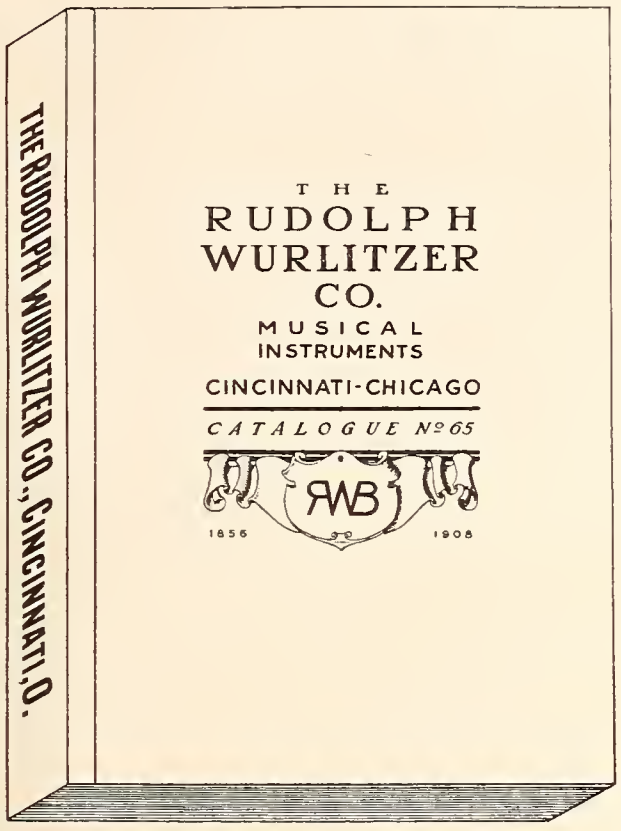
EVERY TALKING MACHINE JOBBER AND DEALER

should have a stock on hand for the Holiday Trade. We have endeavored to anticipate every possible emergency, and are prepared to take care of eleventh-hour orders.

We have made many customers on prompt shipments and efficient service. Try us.

NEWARK TINWARE & METAL WORKS, 28-30 Division Place **NEWARK, NEW JERSEY**

Our New 1908 Catalog



IN issuing this, our 65th Edition Catalog, it has been our intention to make this the most complete catalog of Musical Instruments and Musical Merchandise in existence.

How well we have succeeded we are willing to leave to the good judgment of every dealer, who is fortunate enough to secure a copy. This catalog will be appreciated by every dealer, not only as a ready reference and guide to everything musical, but as a money-saver and guide for correct prices.

In looking over the Catalog you will find that we have added many new lines; particularly worthy of mention are the following, for which we have secured the sole American Agency:

The world renowned Spaethe Accordeons, the incomparable Moenning Flutes, the celebrated "Farny" Clarionets and Violins.

Aside from the above we have added hundreds of new items throughout the Catalog. Our stock has been most carefully selected and will be found the largest and most varied in the United States, enabling us to fill all orders with promptness and satisfaction.

This Catalog is for the exclusive use of the dealer, and if you have not received a copy, notify us at once and we will forward same immediately. Thanking our many friends for their liberal patronage in the past, we hope that this Catalog with its many new items will enable you to give us a larger share of your business in the future.

THE RUDOLPH WURLITZER CO. Cincinnati :: Chicago

Now Ready! If you have not received a copy, Write for It!

"Trutone" Gut Strings

The only Gut Strings made in America that are equal, if not superior, to the Genuine Italian Strings.

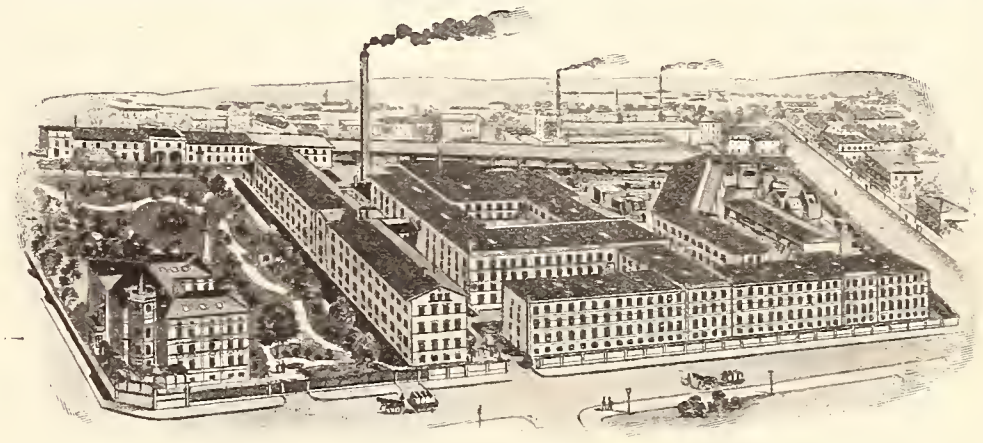
¶ It has often been tried to make a string in America that would give perfect satisfaction, but not until the introduction of the "Trutone," has this been accomplished. The Italian Solo Brand is perfect in every respect. The size is of even thickness throughout, the material the best obtainable. Besides these strings are positively guaranteed. The prepared "Damp Proof" is especially adapted to Solo Playing in the open, as it will withstand any moisture or prespiration, and like the "Italian Solo" String has all the features of the highest priced Italian Strings made.

¶ The Banjo and Guitar Strings are made with the same care as the Violin Strings, and can be furnished in both brands.

¶ Each string is furnished in separate envelope, plainly marked with both number and letter, also with name of instrument and brand. A Bundle consists of 30 strings in fancy pasteboard box. Remember, every String is Guaranteed.

We are Sole Distributors of these Celebrated Strings. Dealers should not overlook the "Trutone" Strings, and put in a full line.

For a Complete Line See Our Catalog



LARGEST FACTORY OF ACCORDEONS IN THE WORLD.

Spaethe Accordeons

THE Spaethe Accordeons which are recognized the standard of the world, have many valuable improvements. The reeds which form a special feature are the best made. They differ from any other make inasmuch as each single reed constitutes a plate in itself; each single plate can be easily removed with its reed attached and replaced by the owner of the instrument himself without having to send it to the repair shop, thereby saving a great deal of time and expense. The reeds can be bought singly and will correspond with the balance, each reed being marked at the factory with the note it represents.

Recognizing the Merit of these Accordeons, we have secured the Sole American Agency. For a Full Line See Our New 1908 Catalog.

Would advise dealers to order at least a few samples.

THE RUDOLPH WURLITZER CO. CINCINNATI CHICAGO

TALKING MACHINE MEN OPTIMISTIC.

Careful Inquiry Among Manufacturers and Jobbers Reveals the Fact That Holiday Trade Will Not Fall So Far Behind Last Year as Expected—It Has Been Later in Starting, but Will Continue Later in the New Year.

Careful inquiry among jobbers and manufacturers reveals the comforting fact that the holiday trade will not fall behind last year's high mark to any appreciable extent. While it has been late in starting—due to the monetary disorgauization—rather was under way when it was checked, it again bloomed out last week and is certain to be maintained until the close of the regular season. Jobbers in the East are sanguine sales will go much beyond the record before the close of the year, and the western trade cannot see it in any other light.

F. K. Dolbeer, general manager of sales, National Phonograph Co., said: "For a few days I must confess to feeling a trifle disturbed over the financial situation, but now I am extremely optimistic regarding trade for the remainder of the year. Our road salesmen were instructed to report conditions exactly as they found them in their respective territory, so we could get a line on business. These statements are very encouraging. In the far West the outlook is especially bright; so much so that jobbers are anticipating payments. Collections are equal to a year ago, as I find in going over the accounts. The company have had a few cancellations and some shipments are deferred, but a number of orders are accompanied by instructions to rush the goods. The factory is up on the delivery of machines, but slightly behind on records, owing to the exchange proposition. There is not the slightest doubt in my mind that trade will be brisk and strong."

J. T. Williams, general mauager of the Victor Distributing & Export Co., said: "Business has improved very much during the past week, and our holiday trade promises to be heavy. Our reports from the West are of an excelleut tenor, but to my way of thinking the South is the coming section for business development."

C. V. Henkel, president and general manager of the General Phonograph Supply Co., said: "Undoubtedly business has assumed a brighter aspect. Our inquiries for goods have increased, and the holiday trade, now getting into swing, looks very promising. The financial strain is disappearing and collections are improving."

J. Newcomb Blackman, of the Blackman Talking Machine Co., said: "Yes, business has picked up this past week.. October's sales went ahead of the same month last year, and November will certainly equal November, 1906. Under the circumstances I call this very satisfactory. Collections might be better. Many of our dealers who are tied up in the suspended banks must be treated with leniency; or even if they are running behind some on their accounts, that is, those who have had previous good records. I find other jobbers are pursuing the same course, and to me this seems the only policy to follow. On the whole, however, with underlying conditions sound, the talking machine business cannot help but regain whatever it may have lost during the financial flurry, and perhaps a little bit more. The accumulation of record stock that cannot be moved, excepting possibly with an axe, is the live question of the day. Its avoidance or minimizing is a problem the manufacturers should do their best to aid in solving."

A. P. Petit, general manager of the Talking Machine Supply Co., said: "During the last ten days business has been simply fine—new trade. Let me tell you the holiday sales at retail will be surprisingly large. The live dealer should not be caught short of stock in any line. I have been keeping close watch on this part of the trade, and know what I am talking about."

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York.

(Special to The Talking Machine World.)

Washington, D. C., Dec. 6, 1907.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past four weeks from the port of New York:

NOV. 11.

Berlin, 181 pkgs., $1,460; Colon, 1 pkg., $100; Glasgow, 8 pkgs., $452; Guayaquil, 4 pkgs., $179; Havana, 14 pkgs., $273; 27 pkgs., $120; 11 pkgs., $399; Kingston, 5 pkgs., $275; Liverpool, 1 pkg., $79; London, 9 pkgs., $441; 452 pkgs., $11,148; Rio de Janeiro, 46 pkgs., $1,240; St. Petersburg, 20 pkgs., $832; Savanilla, 8 pkgs., $555; Southampton, 2 pkgs., $75.

NOV. 18.

Antwerp, 1 pkg., $1,100; Asuncion, 6 pkgs., $206; Berlin, 10 pkgs., $445; 174 pkgs., $1,137; Belfast, 32 pkgs., $579; Buenos Ayres, 216 pkgs., $1,526; Bradford, 65 pkgs., $405; Cardiff, 66 pkgs., $624; Dublin, 27 pkgs., $200; Glasgow, 12 pkgs., $960; Gothenburg 5 pkgs., $270; Havana, 13 pkgs., $666; Havre, 10 pkgs., $225; Hamburg, 1 pkg., $100; La Guayra, 3 pkgs., $104; Leeds, 11 pkgs., $460; Liverpool, 15 pkgs., $2,735; 13 pkgs., $754; London, 24 pkgs., $1,428; 963 pkgs., $11,561; Manchester, 9 pkgs., $366; Milan, 22 pkgs., $365; Montevideo, 5 pkgs., $500; Paramaribo, 3 pkgs., $174; Para, 13 pkgs., $546; Pernambuco, 3 pkgs., $380; Progreso, 10 pkgs., $287; St. Petersburg, 16 pkgs., $472; Vera Cruz., 21 pkgs., $685; Vienna, 8 pkgs., $205; Wellington, 4 pkgs., $158.

November 25.

Alexandria, 9 pkgs., $486; Berlin, 182 pkgs., $1,505; Bombay, 6 pkgs., $225; Bradford, 34 pkgs., $230; Buenos Ayres, 2 pkgs., $144; Cardiff, 55 pkgs., $352; Colon, 15 pkgs., $551; Guayaquil, 6 pkgs., $116; Fremantle, 1,734 pkgs., $26,873; Hamburg, 18 pkgs., $423; Havre, 23 pkgs., $1,236; Leeds, 65 pkgs., $388; Liverpool, 3 pkgs., $125; London, 2 pkgs., $100; Mauila, 3 pkgs., $127; Manchester, 63 pkgs., $408; Melbourne, 6 pkgs., $122; Natal, 10 pkgs., $148; Newcastle, 56 pkgs., $415; Sheffield, 41 pkgs., $300; Sydney, 46 pkgs., $1,070; St. Petersburg, 36 pkgs., $3,384; Trinidad, 10 pkgs., $331; Wellington, 13 pkgs., $265.

December 2.

Bristol, 12 pkgs., $556; Cardiff, 58 pkgs., $514; Havana, 10 pkgs., $167; 8 pkgs., $1,131; Havre, 5 pkgs., $154; Iquique, 2 pkgs., $135; Leeds, 65 pkgs., $388; La Guayra, 5 pkgs., $112; Liverpool, 38 pkgs., $251; London, 4 pkgs., $131; 580 pkgs., $8,231; 666 pkgs., $9,433; 18 pkgs., $1,203; Manchester, 59 pkgs., $375; Milan, 6 pkgs., $365; Montevideo, 10 pkgs., $188; Newcastle, 56 pkgs., $406; Progreso, 12 pkgs., $429; Rio de Janeiro, 107 pkgs., $3,128; Sheffield, 40 pkgs., $264; Yokohama, 43 pkgs., $1,627.

THE BITER BIT.

The quack medicine vendor entered Antonio's residence just in time to see that gentleman hand a crisp twenty dollar bill over to a talking machine salesman in conclusion of a deal.

He made a very poor canvass on top of this—without success—as he expected. Feeling riled, the medicine man said somewhat sharply to the Italian:

"Can you tell me where to find some place?"

"What place you want?" answered Antonio.

"I want a place," said the other, with all the sarcasm he could conjure up, "where there are none of these darned talking machines!"

"Sure," quickly answered the swarthy one, showing his white teeth in a broad smile, "you tak Marriucia steamboat to H——, no talka machina there!"

ERNEST WERNINCK.

PRODUCING THE "S" SOUND.

A writer in The New York Commercial says that for a long time Edison's phonograph refused to say "specia"—it dropped the "s" and said "pecia." To produce that single sound he needed something delicate enough to receive impressions not more than a millionth part of an inch in depth, and yet rigid enough to carry the needle up and down, exactly reproducing the vibrations which had made the impressions. The scientists told him there was no such substance in existence.

"Then we must produce it," insisted Edison. They declared it could not be done, because the qualities which he demanded were inconsistent and exclusive of each other. He declared it could be done, because it must be done, and he did it—but Edison worked eighteen hours a day for seven months to secure that single sound. That is the story of success since the world began. Difficulties yield to enthusiasm.

ARCARO PHONOGRAPH CO. INCORPORATED

The Arcaro Phonograph Co., Pittsburg, Pa., have been incorporated with a capital stock of $5,000. Directors: A. G. Arcaro, Nicholas Arcaro and Mrs. Philomena Arcaro.

Harry L. Marker, who has been abroad, principally in the Far East and India, on recording work for the Columbia Co., returned to the United States recently via Europe.

9744	Tbim Were the Happy Days.....Steve Porter
9745	In Monkey Land Medley...Edison Military Band

SON'S JOKE ON KING GEORGE.

"Everybody Works But Father" Played by Talking Machine to Care-Hating King of Greece Causes Much Amusement.

Try to imagine the King of Greece being greeted by his son, Prince George, with "Everybody Works But Father," excruciatingly played and bellowed by a gramophone, says the Paris correspondent of the World. However, the tune and the words were singularly appropriate, for King George bears the cares of state as if they were a feather and has the happy faculty of amusing himself, especially in Paris, while his ministers "work" over puzzling state problems.

Those here who best know the King are vastly amused by a story, one of many which Prince George, who married Princess Marie Bonaparte, the other day let loose.

When some American warships were cruising in the Mediterranean Greece's "Sailor Prince" visited the flagship. The officers set going a gramophone which, among other tunes, played "Everybody Works But Father." Prince George, who, like his father, speaks English and half the other languages of Europe, perfectly, was highly delighted by the air and words and exclaimed: "By Jove! I must get that record and play it for my father. I know it will please him down to the ground."

The Prince had a long search for the record, but he never forgot his purpose. Recently in Athens the Prince gave a dinner to some of his closest friends, and invited his father, who arrived late. As the King entered the room the words and music of "Everybody Works But Father" assailed his ear, which is nicely critical musically. But he saw the joke instantly and nobody laughed more heartily.

TRADE BRISK IN FORT WAYNE, IND.

(Special to The Talking Machine World.)

Fort Wayne, Ind., Dec. 7, 1907.

Despite the poor business conditions reported in the various portions of the country, the talking machine trade in this city is in a very satisfactory condition, and in fact is on the increase.

The Fort Wayne Phonograph Co., for instance, have put in an extensive stock of Edison and Victor machines and records, and have expanded their business considerably.

The Columbia Phonograph Co. are carrying on an active advertising and sales campaign under the direction of Manager Bert Duseler. They find an excellent demand for their better grade of machines and are making a large percentage of cash sales.

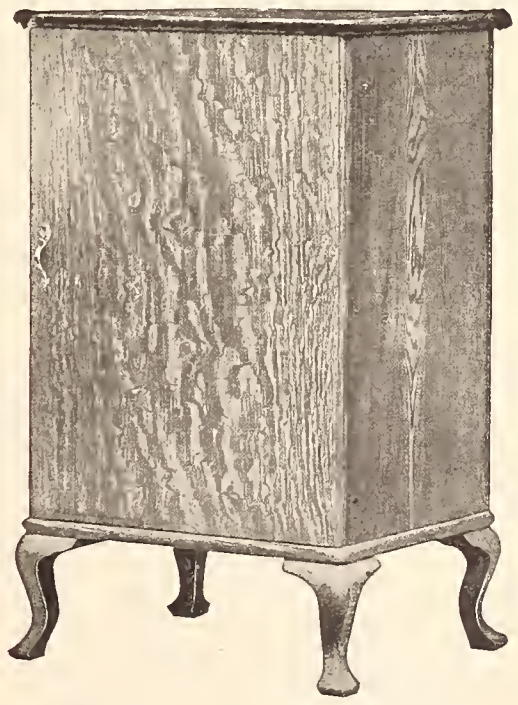
Among the other dealers who have largely increased their stocks for the holiday season is Guy Conklin, who has just added a large stock of Victor goods.

Every house is on the hustle for business, and all report that they are getting it in satisfactory quantities.

VICTOR CHRISTMAS POSTER.

A large and handsomely colored poster for Christmas window display has been sent out by the Victor Talking Machine Co., to their dealers. The central figure of the poster is old Santa Claus, who is seen entering the top of a chimney bearing on one arm a fine Victor machine. Above is printed, "A Victor, the perfect gift" and below, "The joy of one is the pleasure of all." The coloring effects of the poster are excellent and it is sure to form an attractive addition to holiday store decorations.

William E. Henry, of the Powers & Henry Co., Pittsburg, Pa., dropped into New York last week on special business, giving The World a call.



No. 426. DISC RECORD CABINET

Made in Golden Oak and Mahogany; holds 170 12-inch Disc Records.

Cabinets With a Reputation.

The

Udell Works

of Indianapolis, Ind.

wishes the Talking Machine Trade a fine Holiday business and a prosperous New Year. We have now in construction a line of Cabinets for Disc and Cylinder Records that will prove to be "Record Breakers" from the standpoint of sales to the wise dealer who writes now for illustrations and prices.

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Specially prepared for The Talking Machine World.)

Washington, D. C., Dec. 7, 1907.

APPARATUS FOR COATING DISCS AND SIMILAR ARTICLES. Thos. H. Macdouald and Frank L. Capps, Bridgeport, Coun., assiguors to American Graphophone Co., same place. Patent No. 870,569.

This apparatus is for use in the preparation of disc sound records, and comprises a hopper or sieve, a compound conveyer, a heating-box, a return conveyer, and suitable actuating mechanism. The object of the invention is to carry

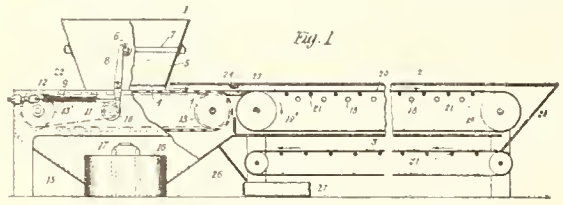


Fig. 1

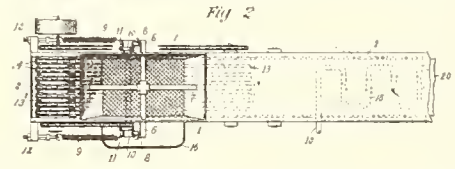

Fig. 2

forward the ideas suggested in the Hoyt & Gaven patents of January 2, 1906 (Nos. 808,842, 808,843, and 809,263), and as more particularly set forth in certain other pending applications. The particular purpose of this apparatus is to place upon suitable discs of paper or the like the proper quantity of "glaze" which is to constitute the surface of the disc sound records. In the drawings Fig. 1 is a side view partly broken away, and Fig. 2 a plan of a portion of the apparatus.

STYLUS FOR SOUND-REPRODUCING MACHINES. Samuel Levin, Highland Park, Ill. Patent No. 870,300.

This invention has reference to improvements in the reproducing point or stylus for sound-reproducing machines, and its object is to provide a stylus which will give a mellow and soft-toned reproduction, more particularly from flat or disc-shaped records wherein the sound record is represented by a sinuous groove of even depth. The

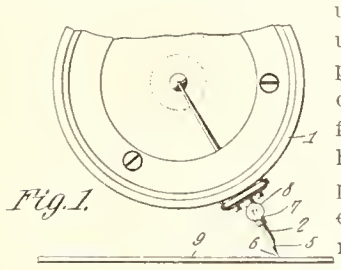

Fig. 1.

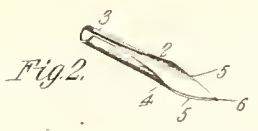

Fig. 2.

usual form of stylus used with sound-reproducing machines of the type wherein flat record tablets of hard, resistant composition are employed, is that of a steel needle having the point sufficiently sharp to follow the groove. Such needles not only wear away themselves but also wear away the walls of the sound-groove and in a comparatively short time the finer sound waves, representing the overtones, are either destroyed or distorted; and these delicate tones, which impart to the reproduced sound that characteristic known as "quality," having been destroyed, the reproduced tones become harsh and unnatural and disagreeable to the ear. Also, the improved stylus obliterates the harsh, disagreeable scratchiug or scraping noises which are found so obtrusive when the hard steel ueedles are employed for the reproduction of sound from the resisting tablets of hard material.

The invention cousists essentially in making a stylus of semi-elastic, non-resonant, homogeneous material with a cylindrical or nearly cylindrical portion adapted to fit into the stylus socket provided at the end of the stylus lever actuated by the diaphragm of the sound-reproducing sound box, and the other or free end of this stylus is preferably widened aud then narrowed to a point and suitably curved or beut to make this part cf the stylus elastic yet strong aud resisting, and more particularly resisting in the plane of travel of the stylus when under the impelling action of the sound waves.

Fig. 1 is a side elevation, upon an enlarged scale, of a portion of a sound-reproducing sound box with the improved stylus in place therein; aud Fig. 2 is a perspective view of the stylus upon a larger scale than is shown in Fig. 1.

FOLDABLE PHONOGRAPH HORN. Julius C. Stocker, Pittsburg, and Darrell A. Welsh, Mount Oliver, Pa. Patent No. 870,698.

This invention relates to horns and is particularly adaptable for talking machines and other musical instruments. An object of the invention is to provide a horn, capable of beiug collapsed, whereby the same may be carried in the pocket at the time of transporting the machine to which the horn is to be attached, or upon shipment or storage of such horn, where it will be seen that a large number may occupy a small floor space. A further object of the invention is to provide a collapsible horn, made up of telescopic sections, said sections having means whereby they may be securely locked to each other when in use, and to provide means for holding said parts from displacement when the horn is not in use.

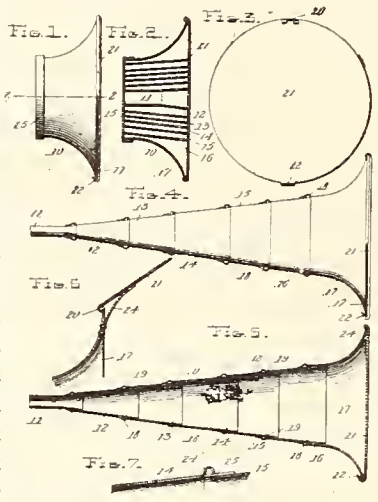

Fig. 1. Fig. 2. Fig. 3. Fig. 4. Fig. 5. Fig. 6. Fig. 7.

In the drawings: Fig. 1 is a side elevation of the horn collapsed. Fig. 2 is a section therethrough on the line 2—2 in Fig. 1. Fig. 3 is an eud view. Fig. 4 is a side elevation of the horn exteuded. Fig. 5 is a vertical longitudinal section therethrough. Fig. 6 is a detail section. Fig. 7 is a modified form.

TALKING MACHINE NEEDLE. Frederick D. Hall, Chicago, Ill. Patent No. 870,723.

This invention relates to improvements in talking machines, and has for its object the production of a device by means of which the quality of the tone produced is greatly improved. A further object is the production of a device for reproducing the sound from the record disc without materially injuring the disc itself. A further object is the production of a practical and inexpensive device for reproducing the sound from the record disc.

Fig. 1 represents a perspective view of a talking machine showing the device in position.

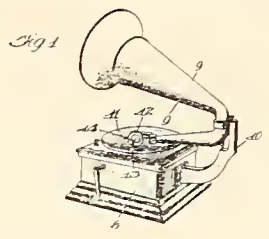

Fig. 1

Fig. 2 represents an enlarged view of the reproducer showing the reproducing needle in place. Fig. 3 is a cross-section on line 3—3 of Fig. 2, looking in the direction indicated by the arrows. Fig. 4 is a bottom view of the improved needle. Fig. 5 is a side elevation of the improved needle. Fig. 6 is a cross-section on line 6—6 of Fig. 5, looking in the direction indicated by the arrows.

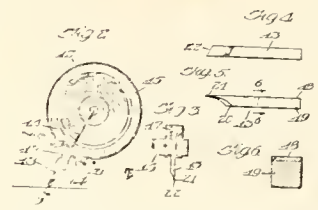

Fig. 2. Fig. 3. Fig. 4. Fig. 5. Fig. 6.

TELEGRAPHONE SYSTEM. George Morin, Havana, Cuba. Patent No. 871,726.

This invention relates to telegraphone systems, the more particular object being to so connect the telegraphone with line wires as to enable the instrument to be easily controlled from a distance. The invention further relates to provision for preventing undue waste of the available record space upon the movable member bearing the record.

This invention further relates to means whereby a person may leave a telegraphone in such condition that during absence of the person the telegraphone will automatically receive a message intended for the person and will, under proper conditions, reproduce this message carefully. The invention further relates to certain details of construction whereby the general efficiency of the telegraphone and parts associated therewith are generally improved.

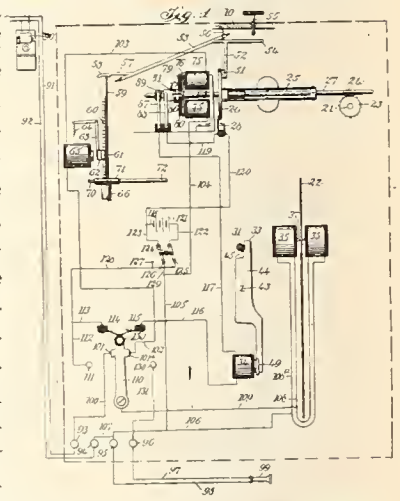

Fig. 1

Fig. 1 is a diagram showing the wiring of the system, a delicate relay connected with this wiring and adapted to be actuated by the human

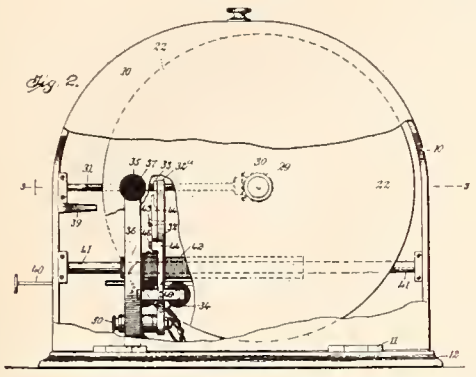
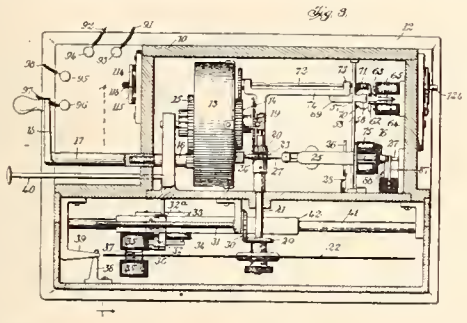
THE WALLACE BARNES COMPANY

BRISTOL, CONN.

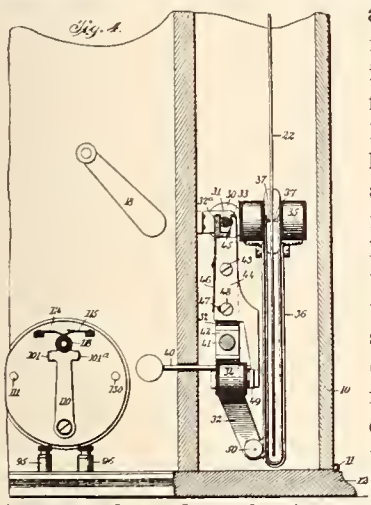
voice for the purpose of controlling certain movable parts and thereby preventing undue waste of the souud record of the telegraphone, this view also showing meaus operated electrically from a distance for starting the telegraphone



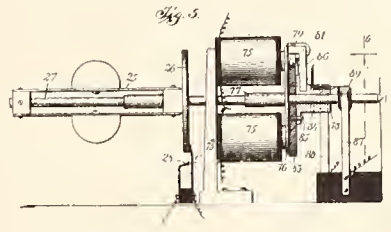
into action and for stopping its action upon the expiration of a predetermined time limit. Fig. 2 is a side elevation showing a part of the telegraphone mechanism and casing containing the same, certain parts being broken away. Fig. 3 is

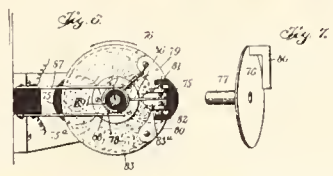


a horizontal section through the casing showing the telegraphone mechanism, including a revoluble disc sound record, means for controlling a traveling carriage, and traveling magnetic mechanism co-acting with this record; this view further shows the relay above mentioned, aud also a part of the means for starting and stopping the telegraphone; Fig. 4 is an enlarged fragmentary section upou the line 4—4 of Fig. 3, looking in the direction of the arrow and showing the record disc, the magnetic mechanism co-acting therewith for recording and reproducing sounds and mechanism controllable from a distance for stopping and starting the travel of this magnetic mechanism. Fig. 5 is a plan partly

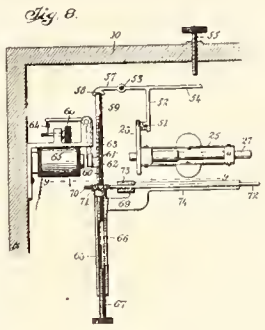


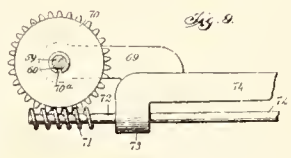
in section, showing the relay controllable by the human voice for governing the motion of the magnets 35 relatively to the center of the disc 22. Fig. 6 is a vertical section upon the line 6—6 of Fig. 5, looking iu the direction of the arrow and showing the coutact forming a part of the relay 75, this coutact being opened and





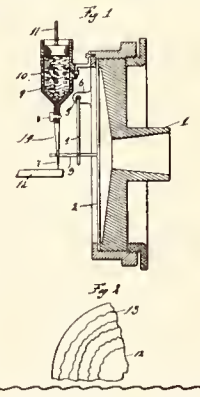
closed by sound-controlled agency from a distance; Fig. 7 is a perspective of the armature of the relay 75, this armature being controllable by so-called "magnetic drag." Fig. 8 is an enlarged fragmentary elevation of the mechanism operated electrically from a distance for stopping and starting the spring motor of the telegraphone, the casing 10 in this view being shown in section; and Fig. 9 is an enlarged fragmentary plan of the worm 71 and worm gear 70 used for turning the screw 59 (see Fig. 8), incidental to stopping aud startiug the spring motor of the telegraphone.





PRODUCTION OF SOUND RECORDS. Isidore Kitsie, Philadelphia, Pa. Patent No. 871,511.

This invention relates to the production of sound records. Most of the sound records are to-day produced by what is called the "cutting-stylus," and the systems now employed differ from each other in that one reproduces the sound-waves by the depth of the cut and the others reproduce these sound-waves by removing an etch-resisting film on a solid plate. In all these cases a resistance is offered to the move-

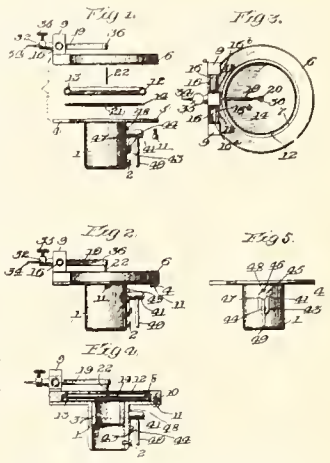


ments of the stylus, and through this resistance these movements are greatly retarded. The records therefore cannot reproduce the voice in its natural amplitude. It is the aim of the inveution to obviate these difficulties.

In the drawing, Fig. 1 is a cross-section of a recording mechanism attached to the vibrating diaphragm. Fig. 2 is a plan view of part of a record. In Fig. 1, 1 is the mouthpiece, and 2 the vibrating diaphragm connected to the guide 3. This guide is yieldingly guided by the lever 4 supported at 5 by the projection 6; 10 is a reservoir containing the fluid 9; 8 a valve to open or close the orifice of said reservoir; 11 are the means to force the fluid out of said reservoir; 14 is a flexible connection conuecting the orifice 7 with the reservoir 10; 12 is the material adapted to have deposited thereon the opaque line; and 13 are the recording lines.

SOUND-REPRODUCING HEAD. Curtis A. Smith, Elgin, Ill. Patent No. 871,000.

The present iuvention relates to improvements iu sound reproducing heads for sound reproducing machines, aud has for its object the production of a head wherein there are means for controlling the volume of sound delivered to the audieuce. A further object of the invention is the production of a simplified means for providing a fulcrum for said stylus arm.



In the drawings: Fig. 1 is a side elevation of the various parts of the sound head separated but in position for assembly. Fig. 2 is an elevation of the assembled sound head. Fig. 3 is a top plan view of the sound head. Fig. 4 is a sectional view of the assembled sound head, taken on liue X X of Fig. 3. Figs. 5, 6, 7 and 8 are detail views showiug the constructiou of the new muting device. Fig. 9 shows the various parts going into the construction of the new lever or stylus arm. Fig. 10 is a sectional view showiug the various parts in Fig. 9 assembled to form the

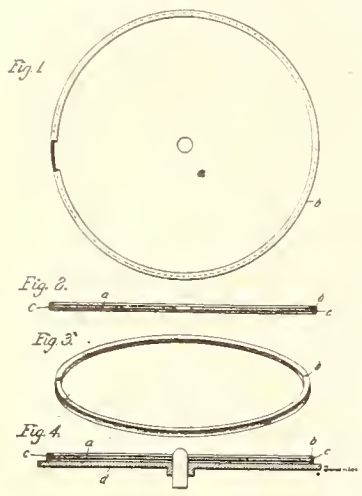
stylus arm or lever. Fig. 11 is an enlarged perspective view of one of the members forming the bearing or fulcrum for the stylus arm or lever. Fig. 12 is a vertical sectional view through the stylus arm aud its bearing assembled with the head.

Sound-Reproducing Record-Disc. William I. Sherwood, New York, N. Y., assiguor to Phonographic Music Co., Brooklyn, N. Y. Patent No. 871,370.

This invention relates to improvements in sound reproducing record discs of talking machines, whether separate from or combined with the turn table of the machiue; and the objects of the invention are mainly to provide a serviceable, reliable, and characteristic record disc, and to improve the effects intended to be produced.

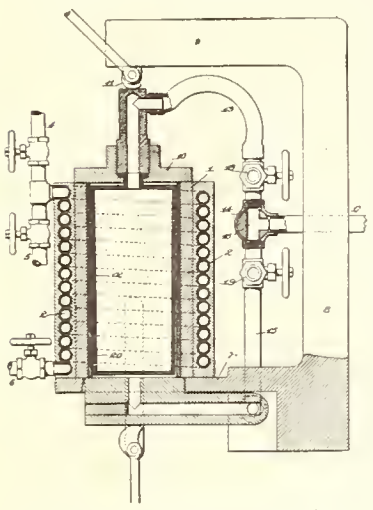


With these main ends in view, this invention consists of certain features of construction and combinations of parts, as shown in the accompanying drawings.

Fig. 1 is a plan view of the improved record disc, part broken away. Fig. 2 is a diametrical transverse section thereof. Fig. 3 is a perspective view of the peripheral ring of the disc detached. Fig. 4 is a transverse section of a turn table of a talking machine showing the improved disc resting thereon.

Method of Duplicating Sound-Records. Jones W. Aylsworth, East Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 871,554.

This invention relates to an improved method for duplicating sound records from matrices or molds by the expansion of a blank, and is adapted particularly for the making of records from relatively hard material, such as hard rubber, celluloid and similar compositions, although the invention may be used for making records from wax-like compositions, such as those now employed iu the art of making duplicate phonograph records by a molding operation.



In order that the invention may be better understood, attention is directed to the accompanying drawing, forming part of this specification, and in which is illustrated a sectional view of an apparatus suitable for carrying out the inveution.

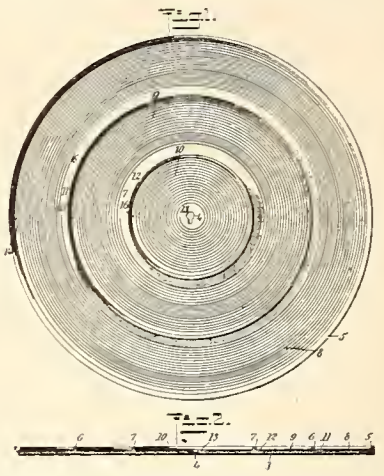
Multogram Record. August Hoffman, New York, N. Y. Patent No. 870,961.

This invention relates to records used for talking machines, the more particular object being to provide a record with a multiplicity of record tracks for the purpose of increasing the amplitude and volume of the sound vibrations. This invention further relates to means for separating the various record tracks from each other, so as to prevent a stylus from one of these record tracks moving into another.

This invention further relates to means for increasing the physical strength of the record and for protecting the record track against injury when the record is handled or shipped.

This invention further relates to providing the revoluble record member with improved meaus, whereby the operator is made aware of the proper portions of the revoluble member upon which to place the stylus needles in order to bring into registry the various record tracks.

Fig. 1 is a plan view of a disc-record embodying my improvements; and Fig. 2 is a central



cross-section through the same, showing the form and disposition of the annular beads used for strengthening the record and for protecting the record-tracks.

WORTH $ TO YOU

¶ THIS is a pretty fair sample of a trade paper is it not?

¶ Subscribers in all parts of the world do not hesitate to say they couldn't keep business house without this publication being a regular visitor.

¶ Go through it carefully from cover to cover. The variety of news, the educational features, the technical matter, and the correspondence and departmental work united make an invaluable repertoire for any one interested in talking machine lines.

¶ It costs but a dollar to receive it for twelve months. All countries outside of the United States and Mexico, $1.25.

¶ We publish also THE MUSIC TRADE REVIEW—the oldest music trade publication in this country, and many do not hesitate to say, absolutely the best and most reliable in every respect. It is published every Saturday and contains from fifty to sixty pages of trade and technical news, covering every department of the music trade line. Regular subscription $2 in the United States and Mexico. All other countries $4.

¶ We publish some technical works which are interesting to those who care to obtain an accurate knowledge of the piano. "Theory and Practice of Pianoforte Building" is the only work ever produced in the English language covering the subject of pianoforte history and construction. It is profusely illustrated with original drawings, cloth bound, and contains about two hundred pages. Sent, postpaid to America and Mexico, $2. All other points, $2.20.

¶ We also put forth The Piano or Tuner's Guide which is a standard work on tuning and so conceded by competent authorities. This is a book of convenient size, containing about one hundred pages. Cloth bound. Price, post paid, America and Mexico, $1. All other countries $1.10.

¶ Dealers and tuners should have these books.

RECEIVER FOR TALK-O-PHONE CO.

Harry H. Ensign, Manager of the Plant, Appointed Receiver by the Courts—The Move Not Unexpected by the Trade.

(Special to The Talking Machine World.)

Toledo, O., Nov. 30, 1907.

After the reorganization as the Atlantic Co., Talk-O-Phoue Co., of this city, and its successor, the Atlantic Phonograph Co., of New York, have gone into the hands of a receiver. Harry H. Ensign, the manager of the plant, was appointed to this office by Judge Morris, of the City Court, on Friday last, on the application of the Mica Mfg. Co., New York, and George A. Graydon. Graydon alleges that the Atlantic Phonograph Co. has paid nothing toward a judgment for $101.47 which he secured against it in the city court; that the assets of the company consist principally of the plant on Central avenue, which, he says, has been locked up for a considerable time and is depreciating for want of care. The Talk-O-Phone Co., it is said, has no assets except a large block of stock in the Atlantic Co., which is in the hands of trustees, and, the plaintiffs say, should be administered by the court for the benefit of the creditors.

The Atlantic Phonograph Co. was incorporated early in the year, under the laws of New York, with a capital of $2,000,000, and A. L. Irish was the president. He had also held the same office with the Talk-O-Phone Co. The former's office was first at 71 Nassau street, in the same building with their attorney, Louis Hicks, whose name stands high up on the roll in connection with talking machine litigation for the past ten years. Subsequently the Atlantic Co. removed to 1 Madison avenue, but they gave up their offices about six weeks ago, and since then their whereabouts have been unknown. It is learned that after the Atlantic Co. became successors to the Talk-O-Phone Co., which had been in a moribund condition for some time, they took over the latter's book accounts and indebtedness with the plant here, that has been spoken of as one of the best systematized equipments in the country. Later the Atlantic Co. negotiated an arrangement with the Columbia Phonograph Co., General, to operate the plant in supplying premium or stenciled machines. This agreement has evidently been abrogated, for after Mr. Ensign had qualified as receiver in the sum of $10,000 for each company it was proposed that he make some effort to revive the contract which the concern has with the Columbia Phonograph Co. for the disposition of its output.

After a more or less tempestuous career the National L. Gorton, a wealthy merchant, largely interested in the fishing business at Gloucester, Mass., became interested; but Mr. Irish has, it is understood, been always connected with the concern, and was looked upon as their intimate authority on its affairs when "high finance" was involved.

TRADE NOTES FROM TWIN CITIES.

Despite the Scarcity of Currency Business Has Kept Up Fairly Satisfactory—New England Furniture Co. to Enlarge Their Talking Machine Department—A Chat With T. C. Howe the Veteran Dealer.

(Special to The Talking Machine World.)

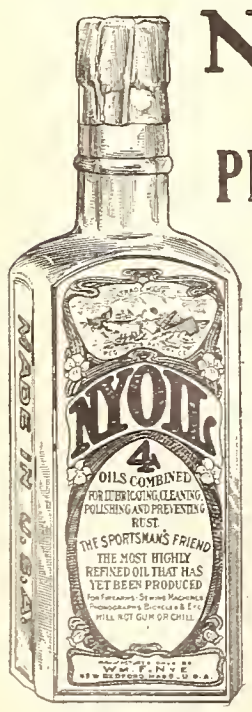
Minneapolis and St. Paul, Dec. 5, 1907.

Talking machine dealers in Minneapolis and St. Paul find little cause for complaint as yet, for they have not been seriously affected by the strain on the circulating medium.

The New England Furniture Co. will greatly enlarge their talking machine department, more than doubling the floor space. The new room which will be as fine as any in the city will be devoted exclusively to the Victor machines, while the Edisons will have the old room all to themselves.

"Our sales are greater than ever," says T. C. Hough, the veteran dealer of the twin cities and distributor for the Edison phonographs. "We have no difficulty whatever in disposing of our goods and our traveling men are still on the road. Collections are not as good as they were, that is to say our customers are slower in making payments. At the same time we know that they are all right and are assuming that the financial clouds will blow away in a month or two."

Of the other score or more dealers in the twin cities it is believed that the majority are doing fairly well under the existing conditions.



NYOIL FOR PHONOGRAPHS

We have for 40 years been producers of Delicate Oils for Watches, Clocks and Chronometers, and we offer NYOIL as the most delicate and effective article ever produced for the use of Phonographs.

CREDIT MEANS CONFIDENCE.

Points of importance to be considered when passing on credit risks are, first, character, capacity, honesty and prompt attention to business. This may seem strange to some, but the last to be considered is capital. A dishonest man can do more harm with capital than he can do without it. The most important thing of all is character, which cannot be too closely scrutinized. A man's habits are an important factor. Lack of regularity and thriftiness, coupled with the absence of industry, will, in time, wreck any business despite of capital. With a good character and capacity capital, if not possessed, can be readily acquired. A man with good standing and capacity, with but small means, is in a better position to cope with the perils of a mercantile business than a man with a bad character, good ability and capital. A man with small means who pays his bills and meets his engagements promptly is a much more desirable customer than a man with large capital that is indifferent to meet his obligations and appointments. Never give nor accept an accommodation paper or put your name on it; it is a seducing fraud.

R. E. Bell.

BRADLEY WITH SONORA CO.

P. B. R. Bradley, more recently with the International Record Co., Auburn, N. Y., is now the sales manager of the Sonora Chime Co., New York, the latest to step into the limelight with a talking machine, for marketing which the Victor Talking Machine Co., Camden, N. J., has entered an infringement suit. Though called for a hearing in the United States Circuit Court, several adjournments have been taken. It is supposed to have been argued yesterday.

OUR NOVELTY DEPARTMENT

PAYING SIDE LINES FOR THE TALKING MACHINE TRADE

Judging from the many communications which have reached the office of The Talking Machine World during the past three months there is an increasing demand among talking machine men for all kinds of novelties which may be handled as a side line in their business. They possess all the machinery—an attractive, well lighted store, a good display window, up-to-date advertising ideas and an alert selling staff, competent to cater to the requirements of all who may visit the store—provided of course they have the goods to supply the demand. Many of these dealers state that with the slacking up in the sales of talking machines there is a rare opportunity for manufacturers and jobbers of novelties to make new connections in a profitable field.

• • • •

There can be no question but that the talking machine field to-day offers the best opportunity for live manufacturers and jobbers of all kinds of novelties, inasmuch as the men composing this industry are progressive in the fullest sense of the word. The line of business they are in is especially attractive; it draws the people to the store and gives them a chance of selling side lines to good advantage. Moreover it is practically a virgin field inasmuch as the majority of these people have not heretofore handled specialties outside of the "talker" line to any great extent. Side lines of all kinds fit in most effectively with talking machines. As a matter of fact the talking machine store is the rendezvous for people desiring new thiugs and is usually conducted by men of new ideas. The business has been long enough established now to give its members a standing commercially and financially; therefore novelty manufacturers or jobbers are not dealing with an experimental or nondescript class, but merchants of the highest standing who have demonstrated their position in the community and have built up a great enterprise which is paying them well.

* * * *

It is safe to say that there are twenty thousand talking machine dealers in the United States whom The Talking Machine World reaches directly or indirectly. There are thousands more in the South American continent and Canada, while there is still a large constituency of talking machine men in England, France and Germany, where The World has undoubtedly one of the largest followings of any American trade paper, all of whom are anxious to become acquainted with American novelties. As a matter of fact nothing sells as well in Europe as really meritorious American novelties, and in England, particularly more than here, the talking machine dealers are great believers in side lines; hence it is safe to say that publicity in the novelty department of The World must bring a larger percentage of returns than any other medium extant, inasmuch as it is reaching a new field composed of men most anxious to get acquainted with quick selling and profitable novelties.

* * * *

Perhaps one of the best selling and most profitable side lines now before the trade is souvenir post cards. These are gotten out in all conceivable designs, some of them veritable works of art which are worthy of framing. Almost every conceivable subject is treated of, and they have, in many respects, proven a most educational and delightful pastime. Through their dissemination every part of the world has been brought closer together, and through the aid of recent inventions, such as the postal-graph and Mystic Reflector, we have mediums of entertainment somewhat like that of the moving picture machine. The extent of this business may be estimated when it is known that two million cards are mailed daily, which means an income to the Government in one cent stamps of twenty thousand dollars a day. Indeed, the income from this source is helping to wipe out the deficit in the post office department, inasmuch as the average cost of the Government to trausport the mail is about eight cents a pound, while the Government receives $1.20 for every pound weight of post cards mailed, thus the Government nets $1.12 a pound, almost double the profit derived from first class mail matter.

* * * *

Unquestionably the souvenir post card "fad" is the most far-reaching and all pervading the world has ever known. It is wrong, however, to use the word "fad," for the post card has come to stay. When we consider the sales of post cards we may form an idea of the extent of this industry from the fact that hundreds of thousands of men are employed making the paper, doing the engraving, designing and printing for these specialties. Then there are innumerable devices for displaying and selling cards, one of the cleverest and most recent being the new vacuum post card vending machine put out by Caille Bros. Co. In fact, the number of clever display cabinets and other means of showing these specialties are entirely in keepiug with the growth of the industry. American ingenuity is best revealed in this field for new ideas are ever foremost in anticipating trade needs.

Another line of novelties in which tremendous strides have been made is in the electrical field. The commercialization of electricity, and the greater diffusion of knowledge regarding it, is one of interest to millions of youngsters and grown-ups for that matter, and novelties have been produced which are amazing in their excellence as well as in the educational value back of them.

Musical instruments of all kinds, especially what are known as small goods—band instruments, violins, guitars, banjos, zithers, mandolins, harmonicas, accordeons, mouth organs, drums and other novelties in the musical line—are proving extremely profitable and never fail to attract and augment trade. Novelties in the stationery line are innumerable, and the latest productions are amazing in their extent and attractiveness. Some clever ideas where celluloid, metaloid and aluminum are employed have proven big sellers, and are destined to win some consideration from talking machine people. In smoking novelties and leather goods a wonderfully fine line is being produced. Indeed, one marvels at the clever specialties produced in this line. Of sporting goods novelties there is no end. They are all splendid sellers in season, and the line is a most extensive one. Popular priced jewelry and rustic wood novelties, stylographic pens, shaving outfits, rubber goods, are also proving to be quick sellers and worthy of consideration.

* * * *

The field of American novelties is a very large one and steadily growing, and it is one that appeals with especial emphasis to talking machine people for the reasons we have stated at the openiug of this talk. They have all the facilities, the ability and the progressiveness to enable them to win out, and moreover it is a well-known fact that there is a splendid profit in novelties—a profit that is equal to, if it does not surpass that received from selling talking machines.

ORIGIN OF PICTURE POST CARDS.

Stated That the Idea Originated in France During the Franco-Prussian War—Later Taken up by Germany and Austria and Now Has Captured America.

Who originated the idea of picture post cards is a matter of dispute. But meager information can be obtaiued on the subject. It is said that M. Leon Besnardeaux, a bookseller and stationer, conceived the idea in 1870 during the Franco-Prussian War.

There were forty thousand soldiers in camp in his vicinity. The supply of envelopes was limited at the time, being difficult to obtain, and this wideawake stationer thought that the men would appreciate having some way of letting their friends know of their euvironment and life in the camp without the necessity of writing long letters and the consequent hustle for envelopes.

He tried the experiment of having cards engraved with cannon, tents and various things which might prove of iuterest to far away rela-

tives and sweethearts. The soldiers promptly took them up. The first supply was soon exhausted, and he issued a second set. However, when the camp broke up the issue of cards was discontinued and forgotten at the time.

Some years later it was taken up by Germany and Austria, but attracted little attention at first. One story goes that a German was the first to print an object of interest on a card with a cordial greeting thereon and send it through the post, paying regular letter rates. Some say the industry developed from this simple beginning.

OUR MONTHLY REVIEW.

[We solicit inquiries from our subscribers who are desirous of any information in regard to paying side lines which can be handled in connection with the Talking Machine. We put you in direct touch with the leading manufacturers. When in doubt, write us, care the Novelty Department.]

The most potent factors in selling post cards to-day are variety and quality. Collectors have become more and more discriminating and the dealers who show a wide range of subjects well executed are increasing their sales and profits. Realizing this the Raphael Tuck & Sons Co., Ltd., are continually searching the field for new and striking designs, and to their already extensive line have just added several series which cannot fail to attract attention and be in great demand. They consist of the following subjects: "Cupid's Telephone," "U. S. Military," "Sea Side Tactics," "Life on the Plains," "Would You Like a Job Like This," "College Girls," "The Stork and Baby Series," "The Wild West," "Alligators," 'Cuba," "Porto Rico" and "Manila." The latter subjects are all in the famous "Oilette" series, and will be a valuable addition to this department, as it is most extensive and takes in all the places of any importance in the world. Exquisitely reproduced in local coloring with descriptive paragraphs on the address side these cards are having an enormous sale, especially among discriminating buyers, and dealers cannot afford to be without them.

In nine cases out of ten the storekeeper who is constantly giving you a tale of bad times or poor business is the man who fails to add new life to his stock. One of the most recent contributions to the list of new things on the market is a most timely and up-to-date assortment of clean, humorous post cards being introduced by W. S. Heal, 34-36 Cooper Square, this city. They are published on a fine grade of cardboard stock and in highly lithographed colorings and are as follows: "The Fraternal Series," "Lemon Family," "Owls," "Little Hayseed," "The Cupid Series," "The Candy Kid," etc. This company have also a complete line of leather post cards and novelties. Their illuminated match scratcher sells on sight. Samples will be sent free to the trade on application.

From photographs or other suitable copy the Gatchel & Manning Co., of Philadelphia, make engraving plates from which dealers or jobbers can have printed on an ordinary type printing press souvenir post cards. These local views always sell well, and by making their own the talking machine man can not only have something exclusive but can thereby double his profits. The G. & M. Co. also make a specialty of designs for advertising: letterheads, follow-up cards, etc. Don't fail to put your name on their mailing list. It will pay you.

Two of the greatest feats of science in the line of architecture were the construction of the new Singer and Metropolitan buildings (The World headquarters) in New York City, 41 and 48 stories high respectively. Post cards of these are in great demand and can be had from Arthur Livingston, 194 Broadway, New York.

The utility of "Silk Po" cards published by the Fabric Art Co. have caught the public fancy.

These cards instead of being lithographed or stamped on paper are, as the name implies, painted on silk or other cloth material. This is simply stuck on cardboard for mailing purposes and can easily be removed. They are a decidedly useful little novelty and can be made into very attractive pillows, pin cushions, patch quilts, etc. The range of subjects is very large and dealers will find them worthy of prompt attention.

A line of cards most artistic, of fine execution and beautifully colored, are the new glazed postals manufactured by Julius Bien & Co. They cover a wide range of subjects from the sublime to the ridiculous. It would be a crank indeed who could not find just what he wanted. Among others the following subjects are noteworthy: The Child's Journals or "Want Series," "Simple Life," "Affinity," "Country Life," "A Full Day," "Christy College Girl."

"Buy a post card of any scene you may desire; pay five cents for it and mail it to your nearest friend, sweetheart, wife or parents and at the same time receive a $500 accident insurance policy good for 24 hours and payable to the one to whom the card is sent in the event of accident or death within the time specified," is the scheme boiled down of a southern post card manufacturer. The idea being, of course, to boom this business, at the same time increasing the dividends of a certain well-known insurance corporation. At the time of purchasing the card a number is stamped upon it, corresponding with the number of the policy, which is signed by the purchaser, who thereby becomes entitled to insurance to the amount of $500 within 24 hours after the time canceled upon it at the post office. Further than this it is said that the post cards yield a profit of 100 per cent. to those selling them. Here is an idea that certainly has the element of novelty.

Not to be outdone by the times a post card manufacturer in this city has issued a very catchy line of "Affinity" cards. Each contains a reply card attached. He or she enters an opinion of you on it and returns same. Retail price 10 cents, with a big margin of profit for dealers.

The ideal post card rack manufactured by Ed D. Denss, of Sheboygan, Wis., is something decidedly new in this field. It is collapsible and will fold up into one piece about the size of an umbrella. It displays the cards to great advantage, the rack not being visible when cards are seen. It holds 1,000 cards + 48 displayed.

One of the handsomest and most complete catalogs that it has been our pleasure to see in many a day is the new one, with special discount sheets, of the Manhattan Electrical Supply Co., who are headquarters for all sorts of novelties or, as this catalog terms it, "something electrical for everybody."

Chas. Wolf, of Loessig & Co., who sailed for Europe an the S.S. "Augusta Victoria" on Oct. 24, is expected back about Dec. 15. Mr. Wolf has been making a careful selection of new novelties and post cards for next season's business, and will undoubtedly bring back his usual amount of big sellers.

The European Commission Co. has just been incorporated under the laws of New York State. The members are J. B. Weinberg, Herman Strauss and James Sturgeon. They will act as foreign representatives in the United States, Canada and Mexico for a number of European manufacturers of post cards, booklets, calendars and novelties.

The Edwin A. Denham Co. have just issued their new talking machine and novelty catalog for 1908.

The new Bamford & Co.'s catalog is certainly

a very interesting one, and dealers contemplating adding post cards to their line will find it valuable.

In accordance with a decision made by General Appraiser Fischer, post cards ornamented with feathers cannot be classed as lithographic prints or printed matter, therefore the duty on these goods is 50 per cent. Post card albums are dutiable at 85 per cent ad valorem.

The Automaphone Construction Co. have just been incorporated under the laws of New York State with a capital of $10,000. Directors: John M. Leavitt, 366 West 50th street, New York; Len Spencer, 44 West 28th street, New York; Jacob Greenblatt, 346 Chester street, Brooklyn, N. Y. The "automaphone," as it is called, is a combination of the talking machine and animated figures or automatons, thereby making it possible to give minstrels or vaudeville in its entirety, and though wholly mechanical, strikingly realistic. The factory, which is located in 43d street, is now working overtime on outfits ordered months ago by various theatres and nickelodeons, and the demand is steadily growing.

One of the big sellers of the season is the Affinity post card published by the F. L. Harding

Novelty Co., 318 Broadway, New York. This card comes with pink, blue, red and yellow bows attached, each bow having appropriate reading for the color. The recipient, whether man or woman, is supposed to take off the bow representing his or her sentiments and attach it to the reply card opposite the line which expresses those sentiments. The purchasing public has taken hold unexpectedly well and sales are much larger than the publisher had any reason to anticipate. The cards, really two in one, retail for 10 cents each and go to the dealer at $3.00 per 100. They are furnished assorted for men and women.

Of all the new post cards, "The Black Hand" series, drawn and published by Walter Wellman, stand alone for their unique originality. These cards are excruciatingly funny and are bound to be big sellers wherever shown. Mr. Wellman is one of our best known cartoonists, and his admirable work has won him a host of friends and followers. Write for his catalog, which shows his complete line.

The William Mann Co., of Philadelphia and New York, have secured the Philadelphia agency for the Roneo Copier. This is the dry copying machine which has made such a hit in England and is just being introduced in this country.

The A. & E. Post Card & Novelty Co. have just added a beautiful and highly artistic line of floral and birthday cards to their already extensive stock.

Martin Lowenberg, of the firm of E. J. Samson & Co., has just returned from Europe, where he obtained a number of new and catchy novelties for 1908.

The Globe Novelty Post Card Mfg. Co., of New York City, capitalized at $10,000, has been incorporated. Julius Grabenstein, of Brooklyn, is named as a director.

The Artistic Post Card Novelty Co. has been incorporated in New York; capital stock $1,000.

The Curt Teich & Co., Inc., manufacturers and wholesalers of post cards, albums and supplies, have just brought out their new dust and burglar proof post card display cabinet. This is made with a glass front, which prevents theft or handling, but shows every card clearly. A very neat case made from weathered oak, in either mahogany, golden oak, mission or gun metal; holds 1,800 cards, displays 68, and gives a substantial tone to a store.

SIDE LINE SUGGESTIONS.

On account of the prevalence of the collecting mania, dealers who are or intend laying in a supply of post cards should not neglect having a complete assortment of albums on hand. They are good sellers and at the same time something standard that does not go out of date, thereby leaving the retailer with a lot of dead stock on his shelves.

A great deal of the success of a post card dealer depends on how he displays and handles his stock. A clean-cut, neat store is a powerful if silent salesman. Dealers therefore should take especial pains in selecting cases, stands and other office fixtures and not get anything shoddy or cheap.

A good assortment of stationery, fountain and stylographic pens, pencils, crayons, rulers, etc., are always a good thing for dealers to have on hand, as they are all necessities and sell well. However, in this as in other lines, there are good, bad and indifferent articles, and on the selection depend whether or not they will prove a satisfactory side line. Playing cards and other games can easily be added and will ofttimes help materially toward meeting the landlord's bill.

Jobbers and dealers cannot lay too much stress on attractive window displays, one of the most important features of which is that of striking window cards or signs. Of these, those of the decalcomania type stand unexcelled for beauty, cheapness and adaptability. They keep the public in constant touch with your goods night and day, and are great trade instigators. If you are a manufacturer you owe it to your trade to investigate their virtues.

In connection with your album line leather specialties can be carried, such as pocket books, cigar and cigarette cases, match boxes, etc. Pyrographic outfits and other kindred novelties will make it a strong trade puller.

"Opposites attract" was never better demonstrated than in this trade. We have reference to the hundreds of dealers who are doing a thriving business combining jewelry and talking machines. Anyone looking for a side line that offers a chance for the small as well as the largest investor would do well to investigate the jewelry field. Big inducements are offered and there are many novelties in connection with the regular stock to offer—catches, rings, pins, medals, etc., are always in demand. Why not put yourself in a position to cater to it?

Postal cards bearing particles of glass, metal, mica, sand, tinsel or other similar substances, are unmailable, except when enclosed in envelopes with proper postage attached, or when treated in such manner as will prevent the objectionable substances from being rubbed off or injuring persons handling the mails. This ruling should be considered by both manufacturers, jobbers and dealers.

IMPORTANT POST OFFICE RULINGS.

According to a new ruling of the post office post cards enclosed in a transparent envelope having a hole in the corner showing one cent stamp will not go through the mail at that rate. A two cent stamp must be affixed.

According to another recent ruling of the department, the attaching of sheets of paper, bearing either writing or printing to a post card is no longer forbidden. Illustrations, writing or advertisement may appear on the back of the card, and on the left third of the face.

EMPIRE POST CARD & NOVELTY CO.

The Empire Post Card and Novelty Co. of New York was incorporated last week with a capital of $6,000. Directors: Morris Levin, 403 Pennsylvania avenue; Morris Blumenfeld, 132 Floyd street, Brooklyn; Samuel Goldberg, New York.

MOVING PICTURE AND AUTOMATIC MACHINES

SITUATION LOOKS BRIGHT

For Dealers in Automatic and Moving Picture Specialties Notwithstanding the Much Discussed Flurry in the Financial World—The Past Year Has Seen Great Strides in a Popular Moving Picture Machine—Some Comments in This Connection.

Notwithstanding the recent financial slump, things look exceedingly bright for dealers handling moving picture machines and films; in fact, this business has suffered but very little, and unless something unforeseen happens there will be a rich Christmas harvest for these enterprising retailers. Much of this steadiness has been due to the increased exertions on the part of the manufacturers. These men did not "rest by the wayside," but the minute they felt a relaxation on the part of the buyiug public, they began to double their advertising space, push work on new models, and in every way possible keep things stirred up.

The passing year wituessed the first serious effort to market a moving picture machine for the home in this country. In this short space of time the progress has beeu phenomenal. To-day there are at least four large manufacturers of these devices, and nearly a quarter of a million machines distributed about in the United States and Canada. One of the best proofs of the demand for these remarkable entertainers is found in the enormous amount of advertising space devoted to them by the mail order houses. You ask why is it that more of the manufacturers do uot bring their product to your attention? The answer is simply that they have nothing to sell you, their factories being kept working overtime to supply these somewhat despised mail order concerns. And again, but few dealers, and, in fact, some large jobbing houses, know but little about marketing a new product; they are too conservative to inaugurate a successful pioneer campaign. They often will be induced, through the glibness of the mauufacturer's agent, into placing an initial order, but there they stop, and instead of spreading the news broadcast, when the new line arrives, shove it into an out-of-the-way corner where it will not—so they term it—interfere with their regular business. In taking stock at the end of six months, low and behold! the manager finds himself loaded down with that ——— ——— line he took on—just the same stock, only a little rusty, shop-worn, etc. Does he mend his ways? If a man of brains, he does, and the poor abused merchandise does not follow the usual course of being consigned to the bargain counter or else promptly checked up to profit and loss, and sold for old junk.

Nineteen hundred and eight will witness many startling changes in this field. This industry, now, as it were, taking its first steps, will have developed strength and its already rapid progress be greatly accelerated. Competition will grow keener, and therefore in accordance with the laws of commerce, the product improved. Our readers will remember that we predicted some three months ago that it was only a matter of a short while before the moving picture camera would be ready for home use. This longed-for device has at last been perfected and will shortly be ready for the market at a price not prohibitive. This will open up a new and rich field for exploitation, and one that will throw the regular kodak in the shade. But while, of course, the sale of this new camera is bound to be large, it is impossible to estimate the incentive value it will have for the home moving picture industry at large. The moving picture camera can be operated by anyone who can operate an ordinary kodak, with but little practice. It will be especially suitable for taking animated photographs of surf, a fast-moving train, etc., the only difficulty being that of properly focusing and running the film through at the right speed. Consider the proposition a moment in its eutirety. Here you have the moving picture machine, constructed along the most approved lines aud at a price sufficiently low to suit the common purse, and at the same time high enough to afford you a handsome profit. Next in line are the films, an endless list from which can be chosen subjects to suit all classes and in the way of supplies—lamps, stands, rewinders, generators, illustrated song slides for use with the talking machiue, etc.

The animated camera is the last link in a chain that certaiuly is long enough and strong enough to hold your trade and gather in any stragglers in the crowd. Think it over, weigh it before deciding, and if you find it to your liking, go into it feet first, but keep your eyes open and don't let a single opportunity escape you in letting the public know that you are in the business first, last aud for all time.

SUCCESS IN ARCADE BUSINESS

Can Only be Achieved by Knowing the Public and Providing the Machines That Satisfy.

One of the most successful men in the arcade business in chatting with The World recently emphasized the necessity of knowledge in order to achieve success. He said:

"In the first place experience in catering to the public's taste is a most necessary factor to success in this business. You must study their humor and know all the machines ou the market, be able to tell each one's shortcomings, where and when to feature each and how. In the second place, the large cities are nearly all well supplied with these places of amusement, but they are cosmopolitan to a great extent and anything that is new will draw a crowd. Towns and villages are narrow and set in their views and reflect the characteristics of their citizens; introduce a jarring element in your enterprise and failure stares you iu the face. To harmonize perfectly with your surroundings is your only hope of success, and to do this is difficult, to say the least, for an outsider. If anyone desires to invest money in slot machines, I should most decidedly advise "operating," by that I mean the purchase of a number of good money makers such as automatic pianos, talking machines, mutoscopes, vending devices, etc. Get locations for them, these are innumerable, and is easily done by either paying so much for the location, or, better yet, on a percentage of the earning basis. This forces or rather instigates the owner of the place to push your machine into popularity for his own advantage. This is done by a system of slugs given to the proprietor who will start the ball rolling when a crowd is around, by their insertion. You have the key to the cash box and are therefore assured of a square deal."

WHAT YOU CAN DO WITH ONE CENT.

The Age of Automatics Has Made the One-Cent Piece More Valuable and Brought Many Joys to Those of Limited Means—Some Enlightening Facts in This Connection That Are Worth Reading.

Have you noted the growing importance of the one-cent piece?

A thousand schemes have been devised to lure it from your pocket. They ask for only one cent. No larger fortune is needed to make the purchase complete. You may be fed, you may be entertained, amused or instructed, you may be assisted in repairing your clothing.

But the real interest in these purchases for a penny is in the future—the near future—for the number and variety of them increase daily. Soon for a cent, or at most for a nickel, almost everything that is necessary to life, with a host of things that contribute to its enjoyment, will be offered and placed convenient to the purchaser.

In London, an enterprising dairy company has placed penny-in-slot machines outside its depots. A penny is put in and on turning a handle a half pint of milk comes out. An extension of this system is planned, so that bread and groceries can be obtained at all hours from slot machines on the streets.

In nearly all the railroad stations in and about New York now there are penny-in-the-slot machines that furnish soda water in glasses that are automatically cleaned.

If you look far enough in New York including the seashore resorts you will find an astonishing list of articles served from these slot machines. You will even see that the milk slot machine is not confined to London, but for a cent a small glass is served from a mechanical cow.

There are ladies who sustain their streugth iu shopping tours downtown long past the noon lunch hour—even being able to join in the conflicts of the bargain counters—with chocolate from one-cent slot machines.

There are machines that yield, in return for a penny in the slot, ice-cream sandwiches, salted peanuts, a cigarette, a drink of cider, an electric shock for your nerves or your rheumatism, your fortune told on a card, a box of matches, scent for your handkerchief or the original slot-machine product—chewing gum.

Then, of course, there is the penny arcade, with its long aisles of slot machines that produce music of an endless variety in phonographic reproduction and moving pictures of everything under the sun, from a prize fight to the Papal procession in St. Peter's or the battle of the Yalu River.

So the uses of the slot machine grow and multiply. The lone penny and the single nickel represent possible purchases in vast variety. At ten thousand street corners and store entrances and railway platforms are penny-in-the-slot weighing machines. There are almost as many outdoor penny-in-the-slot chocolate and chewing-gum servers. A small piece of chocolate sustained the Japanese soldier on a long march on which he was forced to travel swiftly and lightly. The slot machines are teachiug New Yorkers the economical value of the same rich aud concentrated food.

It is easy to foresee that tabloids of other

foods will be found in the one-cent automatic service—tabloids of groceries, of bread, of cheese, of compressed meat, of collar buttons, of self-adjusting "bachelor" buttons, of safety pins and shoe laces, ancient sheet music and unbound fiction.

From a combination of three or four penny-in-the-slot machiues soon it will be possible to get a luncheon. In the penny arcades there is evidence of progression to that point. Tabloids of medicine, especially tonics, are already offered.

From the nickel-in-the-slot machines you may now extract a handkerchief or a photograph of yourself on a postal card among the great variety of their offerings.

But the willingness with which the great moving public in the city parts with its one-cent pieces makes the interest of the dealers center in the evolution of the penny purchases. Their scope will be vastly extended.

EDUCATIONAL FEATURES

Of the Moving Pictures Are Not Always Recognized by the Critics of the Public Shows Where These Devices Are Used—They Also Afford Amusement and the Keenest Possible Pleasure to People of Limited Means.

(Special to The Talking Machine World.)

Philadelphia, Pa., Nov. 5, 1907.

The five-cent shows that exhibit moving pictures seem to have got into the limelight through the rumpus kicked over the noise made by the orchestras and talkiug machine horns in Philadelphia, yet the Quaker City has bigger nuisances than melodies of this sort and bears them without a grumble.

It has not been charged against any of the moving picture shows that the views shown are immoral or improper. There is a great deal of nonsense, but this is an age of funmaking and the comedies on the screen are often very much superior to some of the stuff that passes in high class theatres as vaudeville and lacks the vulgarity often found in large entertainment houses.

There is, however, a distinct educational feature to the moving pictures that their critics fail to recognize or admit. Many of the views are of scenery in this and other couutries and the audience is taken through some of the most striking sections of mountains and along lakes of marvelous beauty. The moving pictures have made us acquainted with a large section of the globe and they portray life in many aspects, solemn, ludicrous, as well as many features of activities.

There is relaxatiou in the nonsense of the scenes depicted in some of the films and many a weary man and tired woman have been led to forget their ills for the time by the merriment of these shows.

Again, the moving picture shows afford a very reasonable amusement offer at a low figure. Before the discovery of the process for depicting life upon the canvas, stereopticon lectures were often high-priced forms of entertainment, but many of these pictures now projected upon the screen are as good as those for which ten times the admission fee was asked in the old lecture days.

If there are objectionable features, it will be an easy matter to suppress such adjuncts, but the popularity of the moving pictures is attested by the crowds that attend the performances every day in every town in which they are exhibited.

ANENT MOVING PICTURE FILMS.

May be Sent Into Canada for Exhibition Purposes and Returned Free of Duty.

(Special to The Talking Machine World.)

Washington, D. C., Dec. 7, 1907.

Replying to a direct inquiry, the Treasury Department on Nov. 30, ruled that moving picture films may be sent into Canada for exhibition purposes aud returned free of duty. The text of the Secretary's letter follows:

"Moving picture films sent into Canada for use for a time and afterward returued to the United States, whether of domestic or foreign origin, may be exported aud returned under the provisions of Department circular 64 of Oct. 29, 1907."

The Board of General Appraisers, on Nov. 21, decided that flimsily constructed cinematographs were dutiable as toys under paragraph 416 of the tariff act.

On the same date the Treasury Department iuformed the collectors of customs throughout the country: "Commercial samples of drummers, whether of domestic or foreign origiu, may be sent into Canada and returned to the United States in the manner provided in paragraphs 7 and 8 of Department circular 64, of Oct. 22, 1907."

REGARDING SUNDAY CLOSING.

The radical decision of Judge O'Gorman, handed down the past week, whereby all places of amusement, including the theatres and opera houses, will be closed hereafter in New York on Sundays, necessarily affects those popular abiding places of the poorer people, the nickelodeons and other places where moving pictures are displayed. It is now expected, however, that this antiquated law will be repealed, and that New Yorkers will be given a chance to spend their Sunday afternoons in some other place besides the saloon, which is always open for business. New York is too cosmopolitan a city to be governed these days by laws that were passed when people held less liberal ideas about the observance of the Sabbath.

COLORADO MOVING PICTURES.

Mr. and Mrs. Edward H. Kemp, who are now visiting New York, are probably the best advertisers the state of Arizona has, and they do it by showing that wonderful country in their series of colored views and motion pictures.

Mr. Kemp is famous in the West as a student of the Hopi Indians. He has made many trips into their country, and in some cases has been successful in obtaining the motion pictures of the sacred dances of the tribes.

Last summer Mr. and Mrs. Kemp were most fortunate in securiug moving pictures of this weird ceremony, in which the priests carry in their mouths rattlesnakes and reptiles of various descriptions. This is a prayer for rain, and the Hopi Indians believe that the snakes, going back into the graves of the dead, communicate with the spirits.

COIN OPERATING MACHINES

Greatly Effected in Countries Which Voted "Dry."

The wave of reform which is sweeping this country has had a decided effect on reducing the demaud for coin operating machines in the districts which have voted to go "dry." A. W. Miller, of Kansas City, Mo., recently advertised his stock of coin operating machines for sale in The Music Trade Review.

He says "On account of the fanatic order of the Governor of this State ordering all music and musical instruments stopped in cafes where intoxicants are sold I cauot very well move these instruments into some one else's territory and as half of this State and the State of Kansas is totally temperance I want to get away from here by January 1st."

MACHINES MUST BE USED INSIDE

(Special to The Talking Machine World.)

Independence, Kan., Dec. 4, 1907.

The three 5-cent theatres in this city will have to draw in their horns. The city council last night instructed the city marshal to order the proprietors to keep the talking machines, used for advertising purposes, inside the buildings. It is the intention of the council to keep most of the noise inside, too. If enough of it gets out to annoy the marshal he is given permission to go inside and confiscate the machines on the ground that they are a nuisance.

RECENTLY INCORPORATED.

Blum & Rosenthal, of New York, was incorporated recently for the purpose of handling automatic pianos, with a capital of $1,000. Directors: Nathan B. Blum, Rockaway Park, L. I., and Albert Parks, of Boston, Mass.

The Buffalo Film Exchange, Buffalo, N. Y., have incorporated to manufacture moving picture films, talking machiues and records, with a capital of $20,000. Directors: J. A. Schuchert, F. A. Schuchert and E. W. McIntyre, all of Buffalo.

TYPE E

THE MUTOSCOPE

For Amusement Parlors, Penny Arcades, etc., has proved itself to be the greatest money earner of all coin-operated machines. In fact it has made the "Penny Vaudeville" what it is to-day. The privilege of free exchange of pictures keeping them fresh and up-to-date, make it always attractive. Our New Type E Mutoscope, besides being handsomer in design, possesses many improvements in mechanism over former models.

SATISFACTION

ALL WAYS

WITH PEERLESS COIN OPERATED PIANOS

"DON'T"

Don't stop to think what you have lost by not handling PEERLESS before. There is still some open territory if you hurry. One dealer reports a net profit of $5,000 per month from his Peerless Department alone. There is business to be had in your locality, business to satisfied customers with large payments, because the Peerless will pay for itself in from seven to ten months.

Peerless quality always brings a high rate of profit, and there is no medium on earth to compare with these instruments as real money-getters for all those who handle or own them.

EVERY PEERLESS PIANO CAN BE OPERATED FROM AN UNLIMITED NUMBER OF COIN BOXES ON TABLES OR IN ROOMS

Extracts from Easy Money Catalog—Suggestions for Salesmen

THINK OF THE MONEY YOU WILL MAKE

One Peerless Piano took in $350 in 27 days. Whatever your business may be things will move faster if you have music. Our Peerless has been tried in cafes, billiard parlors, drug stores, hotels, candy stores, etc., and in every case has it proven a success. It does not matter what your business may be so long as it means dealing with the general public. You will find it profitable to have a Coin Operated Piano. It will attract customers, amuse them, and your satisfaction will come from the coin box, which will earn money for you that you would not otherwise get, as well as an increase in patronage.

Once more the PEERLESS coin operated PIANOS are classed by the nation's experts as the LEADERS.

They were awarded the Gold Medal and Highest Award at the Jamestown Exposition, 1907.

"We announced the B Q as a "Columbia sensation."

And it was.

Just as we expected, only more so.

And getting still more so every day.

The combination in a cylinder machine of all the points of convenience and tone quality that have made so great a success of the Columbia Disc Graphophone was bound to create excitement, and it's bound to keep it up.

We are rushing work on the B Q model and intend to keep as close to our orders as possible, but the machines are being sold about as fast as they are being shipped, and that means just one thing: *Get your orders in!*

The compactness of the machine *alone* would sell it.

The aluminum tone-arm *alone* would sell it.

This B Q Columbia is one talking machine model that you *can't* lose on

—Unless you lose sales by not ordering soon enough.

Columbia Disc and Cylinder Records fit any talking machine and make it sound almost as good as the Columbia Graphophone—and the whole country is finding it out!

It's a message to *you*.

COLUMBIA PHONOGRAPH CO.
TRIBUNE BUILDING, NEW YORK

The Columbia "B Q"

the success of the year

A $30 Tone-Arm Cylinder Graphophone with Swivelling Flower Horn. No rubber tube, no horn crane, no horn stand.
