The TALKING MACHINE WORLD

AND NOVELTY NEWS

Published Each Month by Edward Lyman Bill at 1 Madison Avenue, New York, January 15, 1907

Everyone's Attention

has been attracted to the Tea Tray line of talking machine goods by the first monthly visit of our little representative, "CHAT." This little paper is going to be worth while getting. Do you want your name on the list? If so, let us know.

The trade-mark T©T is found on the finest line of Amplifying Horns and Horn Cranes on the market. All Horns bearing this mark are hand finished in "baked on" oil colors, the only process that insures the permanent and lasting beauty of the Horn. If you want the best line of talking machine goods, you want the Tea Tray line. Why not send for our new illustrated booklet showing pictures and prices?

THE TEA TRAY COMPANY
OF NEWARK, N. J.

Entered as second-class matter May 2, 1905, at the post office at New York, N. Y., under the act of Congress of March 3, 1879.

The Horn on an EDISON PHONOGRAPH is the Dealer's Horn of Plenty

THE EDISON PHONOGRAPH brings in two kinds of money—the money that buys the Phonograph and the money that buys the Records. Both kinds come easily because the Edison best satisfies the demands of the music loving public.

It appeals beyond all other talking machines because of its clear, sweet tones, its mechanical excellence, and its convenient, distinct and popular Records.

Each Edison you put in a home influences sales in other homes, and all of these sales pave the way to Record sales, which mean a steady revenue to you for all time to come.

We are reaching almost every home in the country each month with our advertising, not only of the Edison Phonograph, but also of the Edison Gold Moulded Records. You cannot supply the demand which this advertising is creating with anything but Edison goods.

Write for catalogue, terms, and the name of a nearby jobber who can supply you.

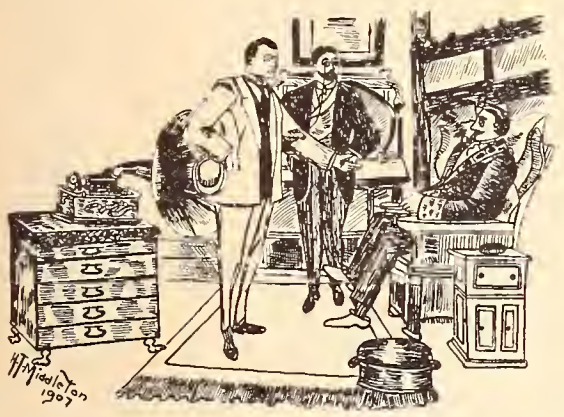
THE TALKING MACHINE CLUB.

A New Field for the Talking Machine Which Every Dealer Should Make It a Point to Develop—Something Worth Thinking Over.

Every fad which appeals to the public eventually leads the way to the organization of clubs for the better enjoyment of the same. The bicycle, automobile, gun and countless other pieces of machinery have been the means of bringing men together not only to engage in the sport which they afford, but in a social way as well, and why should not the talking machine in its present state of perfection, and with its wonderful entertaining ability do both of these things, thereby increasing its popularity to a vast extent and at the same time benefiting the dealer in proportion?

Talking machine clubs will be the proper caper ere long, there is no doubt of that, for the tens of thousands of people who are now infatuated with this great instrument are rapidly steering in that direction. If a man who has a talking machine visits a friend who is also a "talker"



crank, they are sure to compare notes and enter into an interesting discussion on the subject of amateur record making, the best horn, the most melodious brand of record, etc., and this, Mr. Dealer, is the club idea in embryo. It only needs the presence of another friend or two to form the nucleus of a booming phonographic organization. This club once formed will prove an intensely interesting and instructive pastime. Think for a moment of the wide field of amusement it will afford if the foundation is laid along the following lines, viz.:

We will suppose we are invited guests at a meeting of the record makers, which is being held at the home of our friend, John Jones, who, by the way, is president of the club, and a staunch friend of the talking machine. We arrive early and find Mr. Jones enjoying an after-dinner pipe in the comfortable depths of a reclining chair. He greets us cordially, and knowing that our errand is one of investigation, launches immediately into a vivid description of the workings of his club.

"The boys will not be here for a while yet," he says, "so I will give you a lift along the highway of knowledge before they arrive. In the first place, let me say that a talking machine club is 'the greatest ever' for both amusement and instruction, and I will prove my assertion in short order. We come together weekly, and at each meeting there is a programme of the very best professional records that can be procured, according to the varied tastes of our members, each of whom donates his share. Then during the latter part of the evening an original record contest is indulged in by a certain few who are chosen in turn, and a prize awarded for the best results. It is surprising, gentlemen, how many really good records are heard at these original contests. One week the instrument selected for record making will be the violin and every member who has been entered as a contestant will bring with him an original record of a violin solo made in his own home with the assistance of any available talent. We make absolutely no restriction so far as talent is concerned, but the recording apparatus must be that furnished by any of the different companies and not in any way of a professional or special character. The instrument is changed, of course, continually, and the human voice is also represented in our contests, ranging from the soprano to the basso. A suitable prize is awarded the victor in each contest, as I think I mentioned before, but the winning record becomes the property of the club, and is filed away for future amusement and reference. Our club is making rapid strides toward success, and we are about to show our appreciation for the people who have aided us by contributing their musical and vocal talent to our record library, as we call our stock of original records. We intend giving a banquet in their honor, upon which occasion speeches will be given and toasts drunk to the talking machine, past, present and future. That this banquet will be a swell affair goes without saying."

By this time the boys are coming in by twos and threes, and the meeting is called to order. It proves to be of great interest throughout, and the amateur part of the programme, which upon the evening of our call is composed of baritone solos, is very successful from a recording standpoint.

As we take our departure, we can but realize the excellent opportunity which a club of this kind affords the talking machine dealer. As every member must own a talking machine, and a good one at that, in order that he may do himself justice in the recording contests, it is of great advantage to a dealer who makes himself agreeable to the club, as it (the club) will naturally suggest his name to prospective members, and consequently increase his business with little or no effort on his part.

It will pay a dealer to think very carefully over the talking machine club problem, and when he is able to discuss it intelligently, he should go over it in detail with his customers, and aid them in establishing such an organization.

It is the greatest endless chain scheme for selling records that ever "came down the pike," and will do him a world of good. If his clientele of customers is of sufficient magnitude, he can start several clubs, and then the way those new customers will come in and buy everything in sight and cry for more will illuminate his countenance with "the smile that won't come off."

HOWARD TAYLOR MIDDLETON.

TALKERS KEEP TAB ON OPERATORS.

Dispute Between Telegraph Operators Results in Pertinent Suggestion.

In investigating the cause of the wreck on the Southern Railway, in which Samuel Spencer, president of the company was killed, a controversy has arisen between two telegraph operators, one of whom says he received a certain message and the other, who is alleged to have sent it, denies sending any such message. This dispute between telegraph operators opens up an entirely new use for the talking machine.

It is altogether practical to have a machine located beside a telegraph instrument so that there will be a complete record made of every click made by the key of the operator. To ascertain what message an operator has sent at any time, the phonographic record would only need to be revolved and the sounds would be as distinctly reproduced as if they had originally been made by a musical instrument. Any person familiar with the telegraphic code could read the reproduced sounds as easily as he could the original transmission.

With this check upon them, as The Railway World aptly says, railroad telegraph operators would be compelled to be extremely cautious, as an accurate record of their work would be subject to inspection at any time. The cost of installing talking machines would be nominal as compared with the loss of life and property in one disastrous wreck. The idea is entirely new and is suggested by the controversy of lawyers, but experienced telegraph operators express the opinion that this use of the phonograph will be of great aid in obtaining accuracy and in settling disputes if it is adopted by the railroads.

PHONOGRAPHIC RECITAL BY 'PHONE.

How a New York Dealer Managed to Make Some Satisfactory Sales of Records—May Make Recital a Feature Monthly.

Among the many humorous incidents related by the retail dealers in this city in connection with the holiday trade is the following: "It was about four o'clock Monday afternoon that one of my big customers called me up on the 'phone and said he wanted to present his wife with a dozen of the latest operatic records published; price no object. Would I kindly play them over the 'phone, as he did not have time to make the selections personally? At the time, there were about twenty customers in the store and I was short-handed, so I was in a quandary. I did not wish to disappoint or displease either lot, so I announced that for the next half hour I proposed giving a concert of the leading operatic singers, and invited all to listen to it, as they might never again have such an opportunity, and then placing the telephone receiver in such a position that it would receive the sound waves to the best advantage, I started in. As a result, I not only sold the dozen requested, but over a dozen more to the customers waiting in the store, and at the same time I did not lose a sale of the cheaper records.

"I am now contemplating giving a phonographic recital by telephone once a month, as I have enough customers who demand the best class of records. Of course, it would be essential to make such a scheme a success to have all my patrons on the line at one time, but by having notices of the hour and date of the recital sent out in advance, I think it could be accomplished. If the plan meets with the approval of ten of my patrons, I think I will try it, and if it meets with success will make it a permanent feature of my business."

AFRAID OF TALKING MACHINES.

The Russian Government Prohibit Their Use When Polish Patriotic Airs Are Used.

The Russian government, which is seeing ghosts every day now, designs to look upon the talking machine as a revolutionary vehicle, and is so scared that action has been taken against it. The story is told in the following cablegram which appeared the other day:

"The Russian government has forbidden the use of graphophones in Russian Poland when the discs or records reproduce Polish patriotic airs. All these found have been destroyed, and even the machines seized by the police. Some of the owners appealed to the courts, but the tribunals ruled that inasmuch as it was forbidden in Poland to sing patriotic songs in public, the same rule must be observed about the talking machines."

COLUMBIA CO. ENTERTAIN NEWSBOYS.

The Columbia Phonograph Co.'s Detroit branch recently gave an extended demonstration of their new records for the benefit of the newsboys of the city, who had met together in Gaines Academy. In addition to the graphophone concert, other talent also appeared and the Newsboys' Band rendered several selections.

TRADE CONDITIONS IN PHILADELPHIA.

Holiday Trade Cyclonic—Expansion Still the Rule at the Victor Co.'s Works—Good Reports from Heppe—A Pessimistic Salesman Afraid of Overdoing Things—Increased Cost of Raw Materials May Augment Price of Machines—Hawthorne & Sheble Co.'s Great Business—Something of Metropolitan Trade—Musical Echo Co.'s Advance—New Year Welcomed.

(Special to The Talking Machine World.)

Philadelphia, Pa., Jan. 9, 1907.

Business in talking machine circles the past month mainly rested on the holiday trade, of course, and it was a trade that brought joy to every one interested in the industry. Business was rather cyclonic—came quick and fast when it did come—but dealers and jobbers, wisely anticipating such a "coming," were prepared with the goods, and therefore buyers were enabled to get almost everything they wanted. Disappointment was felt, of course, by many firms that they could not get many goods wanted from the manufacturers, but on the "any-port-in-a-storm" principle, they sold and talked up stocks on hand, and with success. There are some bare-looking talking machine stores in Philadelphia to-day, and owners are concerned now in stocking up again. They all seem confident trade in due time will be good; in fact, thus far January business has been quite fair, all things considered. Supplies and equipment are always wanted, and salable.

The Victor Talking Machine Co., of Camden, N. J., made their many employes happy at Christmas by presenting each and every one of them with a plump turkey and accompanying "fixin's." This is the annual custom of the company, and tends to cement closer the cordial relations between employer and employe.

Trade conditions at the Victor plant continue about the same as reported last month. All hands are busy—extremely so, and every effort is being made to catch up with the never-ending inflow of orders. The two large buildings being added to the plant, when finished and occupied, will result in an increased output of talking machines and records, and such fact is cheering, of course, to the officials who are anxious to oblige patrons and who are doing all they can to do so. The new warehouse addition at Front and Linden streets is practically completed and occupied, but is not affording much relief, as delays in receiving equipment, etc., hold the Victor Co. back the same as many other large industrial corporations. The call for Victor-Victrolas continues unabated, and it proves conclusively that when the company can fill all orders for this fine instrument there "sure will be something doin'." Moderate weather has permitted work on the new laboratory building at Front and Cooper streets to go on, and the contractors are making commendable efforts to "push" construction work. When completed the new building, which overlooks beautiful Cooper Park, will be an ornament to that part of the city. The advertising policy of the company—placing advertising where it will induce buyers of Victors to buy of dealers, is one commended by the trade. In a sense the company are doing dealers' advertising, paying for what dealers would do if they "went in for advertising." The company have greatly increased their advertising throughout the country, and it is redounding to the benefit of dealers and jobbers.

Another "sponsor" for the now famous trademark Victor dog—the canine staring into the horn—has come to the front in Camden, and he is a colored man. "Yes, sah," he is reported as claiming, "I owned that 'ere Victor dog when he wuz a pup. You see, I owed Mr. Johnson fo'h bits, an' I couldn't pay it, so I takes the dog—his name was 'Rastus when he wuz a pup—I takes the dog up to Mister Johnson, an' I sez to him: 'Will yo' tak' de dog fo'h de fo'h bits?' an' he sez, 'I will,' and I done gib 'im 'Rastus. Lawd! I nebber specs at de time dat 'Rastus' picture wuz gwine all over de world!"

The talking machine department of C. J. Heppe & Sons enjoyed an exceptionally good holiday trade. A. M. Collins, of the retail department, fairly ran out of some goods, and W. J. Elwell, manager of the wholesale department, had to "jump in" and help out as well as look after large orders being shipped daily. In the piano player and player-piano department excellent business was the rule all during December. Small musical goods and merchandise were in brisk demand, of course, and when the rush was over all hands, though tired, were happy. The aggregate of sales were far ahead of a year ago at a similar period. Business so far for 1907 is quite satisfactory.

The World ran across a rather pessimistic talking machine salesman the past week, and maybe some of his "talk" is worth repeating. "Now, see here," he said, "the big talking machine companies and the jobbers and the 'bosses' are eternally preaching about 'booming sales' and 'pushing goods' and 'driving business.' Salesmen ought to be flesh and blood angels with one mania—sell machines, get the money! Now, that's all right; but you know there's two ways of looking at things. Can't you overdo 'em? Look what the doctors all say: Men of forty-odd years dropping off dead because they've overstrained, overworked, overworried. Take me. Here I've hustled like a demon, gone after 'bum' pay customers, talked harder than a ten-inch disc to sell talkers, been out in the wet, lost meals, got wet feet and the jawache, and dassant take a drink, by dad! It's the pace that kills! Virtue is all right; but give a man his 'grub.' Honesty is all to the mustard, but don't shove a salesman into the devil's camp. Being goody-goody, always-humping boy all the time gives you the undertaker."

S. S. B. Campbell and William L. Ziegler, who are conducting the affairs of the Disk Talking Machine Co., 13 North Ninth street, have been steadily increasing the sales of Zonophones and supplies, being, it is understood, exclusive jobbers for these goods in Philadelphia. Both being experienced talking machine men, they know how to increase sales and build up business. Holiday business with them was very good.

Said the representative of a manufacturing firm: "If prices of raw materials used in making talking machine goods advance much more in price, I feel sure manufacturers will have to advance prices, too, in order to secure fair returns for capital invested. It is almost impossible to secure spot delivery supplies of some materials."

Quietly, but nevertheless effectively, H. B. Rouillot, manager of the talking machine department of James Bellak's Sons, is developing a good trade in that field.

Snellenbergs made an effective window display the past month of Edison and Victor goods, and John McArthur, manager of the talking machine department was "Johnny-on-the-spot" in the matter of good sales.

One of the handsomest display windows in Camden, N. J., at holiday time was that of the Columbia Phonograph Co.'s branch office at 200 Broadway, capably managed by C. E. Gabriel. It attracted general attention and favorable newspaper comment. The store did the largest holiday business in its history.

Robert A. Morgan, Kaighn avenue, Camden, N. J., comparatively a newcomer in the retail talking machine business, did a very good holiday trade, and is pushing sales right along. He carries a well-selected stock of Edison and Columbia goods.

An odd phonograph concert was given near Christmas by the Linden Baptist Church Bible Class, of Camden, N. J. They wanted to "raise" enough potatoes for a benefit supper—so gave a talker concert and charged one "tater" admission. Mr. Phonograph was true-blue—he brought in two tubsful of "spuds."

J. A. Smith, lower Broadway, Camden, N. J., as disposed of is talking machine business and gone to New York to permanently locate.

Angry because an automatic talking macine in a North Eighth street penny arcade would not run, Joseph Riser the past month threatened to shoot Harry L. Birch, the manager, and was jailed. The incident points to the fact that complaints have been more numerous that disordiliness exists in many of the amusement palaces. Whether or no the managers are responsible it should warn them to be strict in maintaining good order lest their licenses to operate their arcades be revoked.

"Yes," said a Chestnut street piano player salesman, as he inserted a new roll, "we call this perforated music our rolling stock—and that's no freight rebate!"

The three large factories of the Hawthorne & Sheble Co. shut down to observe Christmas and New Years; but that was all. They have been running full tilt at all other times, and will continue to do so indefinitely, judging from the large and small orders comiug in from home and abroad points. The sterliug qualities of the company's artistic flower horns have placed them

ATTENTION

Edison and Victor Dealers

WE ARE KNOWN all over Pennsylvania as the largest Edison and Victor jobbers in the State.

WE ARE PIONEERS in the Talking Machine business and among the first to sell both these lines and OUR EXPERIENCE COUNTS in YOUR FAVOR.

IN ADDITION to machines and records we sell supplies of all kinds. We particularly call your attention to our fine line of CYLINDER and DISC CABINETS and our SUPER NEEDLES.

WRITE FOR PARTICULARS

PENN PHONOGRAPH COMPANY

17 South Ninth Street - - PHILADELPHIA, PA.

Reg. U. S. Pat. Off.

To Victor Dealers:

What are we doing for you?

This year we are spending for you $150,000 *more* in advertising than last year, that we may more effectively reach 56,000,000 people every month—everybody in the whole United States who is able to buy a Victor.

We protect you from price-cutting competition by maintaining one fixed, fair price to the customer for each style of Victor, and for each Victor Record. *Your* profit is just about *5 times our* profit—figure it out for yourself. For every dollar you make, we make but 10 to 20 cents.

Now, what are *you* doing for yourself?

Are you keeping *all* the different Victors in stock?

Do you get *all* the New Records each month?

Do you tell everybody what you have *for them*, and make them want it?

Are you seizing all your opportunities to increase your Victor business by strong local advertising, the most attractive window displays in your town, and frequent Victor concerts in your store? Do you talk "*Victor*" *all the time?*

If not, you are losing just 5 times as much as we are losing in your territory. Better think it over.

upon a firm, standard footing with the best class of trade everywhere horns are used—a proof that merits succeeds. The care exercised by the H. & S. Co. in manufacturing all of their products insures the popularity of the goods beforehand. Scientific and practical knowledge is given the work in every part and department, and the most modern machinery, equipment and apparatus is utilized to secure known high-grade results. The company are steadily developing new features, improvements and musical novelties, and 1907 will see some of them on the market, one being a moving picture-phonograph machine. E. A. Hawthorne, president of the company, is now at the main office and factory here, and will probably remain permanently in order, with Secretary Sheble to better handle the increasing volume of executive business.

Said one large jobber: "We have pretty well supplied metropolitan centers with talking machines, and now our road to further success lies among country and urban centers. We have already put in fair-sized stocks in country dealers' hands, and it strikes me we can sell a large quantity of machines to simply farmers alone."

By hard work Proprietor Adolph Weiss and assistants, of the Western Talking Machine Co., got everything into good shape for Christmas trade, at the new quarters, 41-43 North Ninth street. Business was such as to keep all hands busy early and late, and patrons were well pleased at the large selections they were enabled to make purchases from.

Along with other dealers, H. A. Weymann & Son did an exceptionally good holiday business, not only in talking machines and supplies, but in musical instruments, sheet music and pianos. The space devoted to the talking machine department, which was recently greatly enlarged, proved a timely aid during the holidays.

Visits to local retail dealers made by the World show that all of them did a splendid holiday business in talkers and accessories. "The business came in a heap, so to speak," said a Central Phonograph Co. representative; "but in the aggregate it was large and profitable." To the question: Was trade up to a year ago? several dealers reluctantly said it was not, and ascribed the cause of it to be too many now in the business. Said one dealer: "I have reached the conclusion I can't make a go of it with talking machines alone, and am arranging to put in a side line of jewelry and optical goods. Within a year you will see other phonograph men doing the same thing—taking on other lines in order to get along. In my opinion, the talking machine business in the East has struck its staple level. From now on it will have only such a field to feed upon, because so many have already purchased machines. Of course, novelties will help out sales; but records and supplies will be the main thing retailers will depend on, for, you see, most of them can't secure the trade which buys Victrolas and high-priced goods."

This view seems to be held by several retailers, although they take the situation philosophically, and are inclined to go ahead in business, even if they branch out with other lines or go into different fields. Perhaps the January lull after the holiday "boom" has tended to make some of them pessimistic—a frame of mind they will overcome when trade brightens up again.

Excellent location and the admirable concerts given in their auditorium helped the Musical Echo Co., Chestnut street, to do a "banner" holiday trade. And buyers were of the well-to-do sort who want the best regardless of cost. Manager Marschalk and assistants were well pleased with the amount of business done, and are by no means idle now, for trade continues fair to good.

The department store talking machine emporiums did a fine holiday trade as a matter to be expected, because they were jammed early and late with all classes of buyers, and talkers were duly exploited in various ways. One store claims to have sold 100 high-priced machines in one day, besides records, etc.

"Yes," said Mr. Lewis, of the Lewis Talking Machine Co., cheerily, "we did a bang-up holiday business, and we have lots to be thankful for. For instance, how glad we should be that the new pure food laws will not touch the phonograph business!" And the $100 talker said "amen!"

Louis Buehn & Bros., Penn Phonograph Co., Disk Talking Machine Co., The Keen Co. and the Columbia Phonograph Co., among the larger jobbing houses, enjoyed good holiday trade, and depleted stocks show that it must have been very good indeed. January business, with almost all of the jobbers, is reported "seasonable," and that conveys its own meaning. As one jobber put it: "We can't expect to have cake all the time."

Revolvers and horns have heretofore been the main instruments to agitate the welkin in honor of the incoming of a new year, but when gladsome 1907 came in recently several roysterers on Chestnut street had talking machines under their arms, all going and yelling such greeting as: "Here's to you!" "Hold me or I'll break loose!" "Hail! Hail! the gang's all here!" etc. "They save our throats, eh, Jim?" said one of the night celebrators to his companion. "That's swat," assented Jim.

HE WANTS TO TRADE THE MACHINE.

The editor of the Wellsville Globe has been breaking in a talking machine, and this is what he says about it: "We expect to get hold of some disgruntled subscriber some day and have him pour out his grievance into the machine so that we can keep it for use in after years, when we have quit the newspaper business and get lonesome for the old life.

"The machine is pretty well broke to use now, and will play anything from 'Il Trovatore' to 'He Came Right In, Turned Around and Walked Right Out Again,' with coon songs and farmyard medleys for a variation. In all there are about 45 records with the machine, which is proving so popular at the house that Mrs. Editor says that if she gets a chance she is going to trade the thing for a cow; that it won't take any more time to tend to a cow than to run the talking machine. So if you want to trade come in and let's talk it over. The machine and records are worth $41, and we've got a little silver to trade with it, if the cow's a good one."

WHEN PLACING YOUR HOLIDAY ORDERS

REMEMBER

That we are exclusive **VICTOR JOBBERS,** and that we are prepared to take care of your wants in this line, be they large or small. We have three large floors and basement devoted entirely to the sale of these goods, and carry a stock which is sufficiently large to take care of all orders received, promptly.

WE ARE THE ONLY JOBBERS IN NEW YORK CITY DEVOTING AN ENTIRE BUILDING TO THE VICTOR EXCLUSIVELY

NEEDLES — PERFECT — MEDIUM — QUIET

ALLURING PROSPECTS FOR CLEVELAND TRADE.

New Year Promises Well—Talking Machine Becoming a Necessity in Every Home Because of Its Educating and Refining Influence—Holiday Season Exceedingly Satisfactory—Year as a Whole All That Could be Desired—Handsome Holiday Windows of Columbia Co. Deservedly Praised—No Necessity for Closing Up Arcades—The News of the Month.

(Special to The Talking Machine World.)

Cleveland, O., Jan. 9, 1907.

The year 1907 opens with the most alluring prospects for the talking machine trade. The past year has more than fulfilled the most sanquine expectatious of the dealers, not alone in the volume of business transacted but in the very manifest desire on the part of the general public to purchase the best grade of machines, and the higher artistic class of music.

The talking machine has become the great musical entertainer and educator of the day. Every household possessed of a machine is daily giving pleasure and instructiou in the art, such as no other means can accomplish. It is remarked that Cleveland is advancing, and the hope is expressed that it will soon take a position among the advanced musical centers of the country.

There has been an extraordiuary increase in the demand for talking machines during the past three months and the holiday season accentuated it in a remarkable manner, the suitability and appropriateness of these instrumeuts being an acknowledged factor. The dominating demand was, and, is, for high-grade goods, and the Christmas trade was largely curtailed by the inability of the factories to furnish a sufficient supply.

"We closed an entirely satisfactory year's business for 1906" said Mr. Probeck, manager of the Columbia Phonograph Co. "The volume of business was largely in excess of the previous year, and there was a noticeable demand for the best grade of instruments. During the year we were compelled to increase the capacity of our store for both machines and records, in order to meet the increasing patronage. The 12-inch disc records are being called for more often and are becoming very popular. While December started in a little slow, it more than made up in the last three weeks, and the holiday trade was the best we ever had. The Monday previous to Christmas was the largest single day's business we ever transacted, and since then both cylinder and disc records sales have beeu immense. Prospects for the future are better than ever."

The Eclipse Musical Co. enjoyed a most satisfactory holiday trade. Mr. T. H. Towell, manager, said: "We had a phenomenal holiday trade, both in the wholesale and retail departments. It far exceeded our most sanguine expectations, and would have been very much larger had it been possible for us to get the goods desired from the manufacturers. There was a big demand for Victrolas—we couldn't during the holidays, nor can't now, get enough to supply the demand. The prospects are that trade will continue exceptionally good during the winter. The past year was the best we have had. Our increase in business was 75 per cent. over the previous year."

W. H. Buescher & Son report having had a splendid year's business, their sales amounting to about 50 per cent. more than in the previous year. "The holiday trade," said Mr. Buescher, "surpassed our most sanguine expectations. We never were kept busier than during the two weeks preceding New Year's. The sales of machines were the largest in our history, and were principally of the best grades. The demand for records is constantly increasing, especially the 12-inch, and sales are simply immense." A carload of goods piled up on the sidewalk in front of the store was evidence that there was "something doing" inside.

"The year wound up in a surprisingly satisfactory manner with me," said W. J. Roberts, Jr. "Our holiday trade was large, exceediug my fondest expectations. It kept us busy day and night, and it seemed as though it would never end. During the six months since re-starting in business, trade has been increasing from day to day, and prospects are most flattering. We have not been quite so busy since New Year's, but business is keepiug up in a remarkable mauner, and the sales of records is phenomenal.

Collister & Sayle report having had a good year's business—the best in their history. "The holiday seasou," said Mr. Sayle, "uearly completely cleaned us out. It was the busiest three weeks in our experience. Trade continues good, and we are constantly increasing our facilities to handle it.

Hugh Gulley, manager of "The Victor," No. 924 Prospect avenue, said: "If I had much more busiuess I could not handle it. December trade was far above expectations in spite of one or two dealers offering horns and cranes below current prices to induce the sale of certain machines and records, which is a violation of the agreement made with the manufacturers. The prospects for 1907 are good. I am getting new business every day, and the better class of trade. My stock is the most complete of any in the city." Mr. Gulley claims the credit of having made a sale of the highest price outfit ever sold in Cleveland.

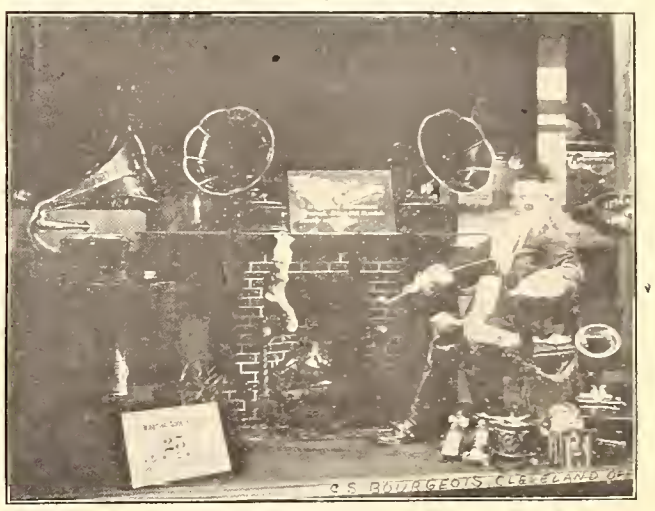
The Smith & Nixon Piano Co. state that since installing a talking machine department that branch of their business has been constantly increasing, and that they had an excellent holiday trade.

The manager of the departments at the May Co.'s, the Bailey Co.'s, Flesheim & Smith's, aud other stores who make a side line of the talking machine business, all report business good.

Cleo. S. Bourgeois, assistant manager of the Columbia Phonograph Co., designed and executed two show windows during the holiday season, which were the prettiest we have ever seen, and deserving of mention. One window was gotten up to represent a "den," and according to the designer, is his conception of what an ideal "den" should be. The window was closed in by a backing of green burlap, with a dado of buff color, giving the window a semblance of a room. Arranged around the window were various pieces of weathered oak furniture, including large, easy chairs, magazine racks, and on a large leather-covered table rested a Columbia disc grapho-

A CLEVER CHRISTMAS WINDOW.

phone, with an assortment of records. Pipe racks and fine pictures ornamented the walls, and on one side was a cellarette, with steins and a box of cigars visible through au open door. A beautiful art glass dome heightened the general effect, and the tout ensemble made the passerby wish he could enter and make himself at home, light a cigar and enjoy a few selections on the grapho-



ANOTHER GOOD IDEA IN WINDOW PUBLICITY.

phone. Cards in the window called the attention of the onlooker to the Columbia product, stating that: "With a Columbia graphophone you can hear operatic stars and vaudeville artists at will, iu the ease of your 'den.'"

The other window showed a room with a long, low fireplace, such as used to warm the homes of our forefathers. Large andirons held pieces of log, which were made to buru and glow in a very realistic manner. The logs were laid over incandescent lamps, covered with orange tissue paper, and the whole placed on a piece of wire screen, beneath which was placed a fan motor,

blowing the air upward. Small pieces of tissue paper were glued to the logs, and the upward draft setting them in motion gave the effect of flames, while the colored lamps, showing through the logs, gave the effect of red embers. The effect was so realistic that one old lady, after looking in the window for a while, was heard to remark that the authorities ought to stop people from making fires in their windows just for show. Family stockings hung from the mantel, all well filled. On the left side of the window stood a table, on which was a Columbia graphophone and some records. At the right of the window, seated in an easy chair, was a stuffed figure dressed in Santa Claus costume, and he looked very real, smoking his "church warden" pipe while listening to the music of the graphophone, which was evidently so alluring it interrupted his visit to other children, for his pack had fallen to the floor, disgorging a varied collection of toys. We could not blame the good old saint for lingering. The cheerful-lookiug fire and the music of the graphophone would entrance most any one, compelling a feeling that he would like to toast his shins at the grate and hear some good music. A card completed the window setting, reading: "A Columbia graphophone is the ideal Christmas present. It is a present the whole family will enjoy."

The Mayor of Akron, O., recently closed all the moving picture theaters in that city on account of the danger of fire, until he could look up the State law on the construction of theaters. He discovered no violation of the statutes, and the business is proceeding as usual.

Fire broke out in Shaw & Spencer's moving picture theater, No. 5507 Kinsmore road, a few nights ago. They were giving the second performance, and just as the room had been darkened the film took fire, resulting in a bright flash lighting up the auditorium. The audience hurried out safely, and the fire was extinguished, entailing a loss of a few hundred dollars.

The death of Robert Crooks, a singer of local repute, resulted from his neglect to insert a metal shield to screen the highly inflammable films from the intense heat of the arc light, which threw the views from the machine, with which he was giving a moving picture performance in a concert hall at 2219 Ontario avenue. Frenzied with fear when the films ignited and flared up into a blinding flame the crowd of men, women and children in the little room fought their way to safety in the street. Crooks lost his head, and instead of going down the stairway, jumped from a window, striking on the sidewalk below and meeting with instant death.

"I can't close up the penny arcades and moving picture shows on Sunday," declares the chief of police. "I don't see any necessity for it," he continued. "Those moving pictures, which serve to make some people's dull Sunday afternoons pleasant, are but a harmless diversion, and I fail to see any desecration of the Sabbath in viewing pictures and listening to talking machines. However, my personal opinion of the right or wrong of the thing doesn't prompt me to say that I cannot proceed against these forms of amusement. There is no ordinance against them."

Touching this same matter the city solicitor has notified the police officials that the operation of phonographs on the streets Sundays, as a means of attracting patrons to the moving picture shows, would no longer be tolerated. Sensational films, illustrating the gentle art of housebreaking and train robbing, are also tabooed, and the proprietors of the shows are returning their sensational films to the makers.

Burglars entered the penny arcade of L. H. Becht, at 903 Euclid avenue, Christmas night and stole $225. The money, all in pennies, was taken from the machines.

A very ragged specimen of humanity entered a talking machine store recently, and when asked what he wished said he was just listening to the music. He hung around for quite a while, and finally went up to one of the clerks, and said: "Gee, I would like to have one of them graphophones, but I haven't any money to buy one. I tell you," said he, "my condition just now is like this: If airships were a cent apiece, I couldn't buy the gas for the balloon."

W. C. De Foreest, of W. C. De Foreest & Son, Edison jobbers, of Sharon, Pa., was in the city December 31, visiting with the talking machine men.

PLEASING HOLIDAY REMEMBRANCE.

The Employes of G. W. Cole Receive Handsome Profit-Sharing Christmas Presents in the Form of a Percentage of Their Wages.

Another New York manufacturing institution has joined the profit-sharing movement. The Three in One Oil Co., No. 141 Broadway, whose factories are located at Rahway, N. J., distributed a healthy sized bunch of plums to their various employes as Christmas presents, the same being a percentage of the employes' wages for the year.

This co-operative sharing of profits is growing every year and ought to cement closer the mutual interests of worker and employer. Particularly at the holiday season of the year, should a profit -sharing plan appeal to the employes as they not only get a share of their earnings of the Three in One Oil Co. for the past year, but get the money at a time when it can be made to do a lot of useful and pleasure-producing things.

The prosperous condition of the G. W. Cole Co., who are the original and sole manufacturers of Three in One oil, is not at all surprising, as the volume of their business has been increasing wonderfully the past year; in fact, it has severely taxed the capacity of their factory at different times; but Mr. Slee, president of the company, has always insisted on being in a position to make prompt and immediate shipments to jobbers, no matter where they are located and how large their order for this famous oil may be.

J. A. Barrett was recently appointed buyer for the talking machine department of Millers, Roads & Swartz, the leading dry goods emporium of Norfolk, Va.

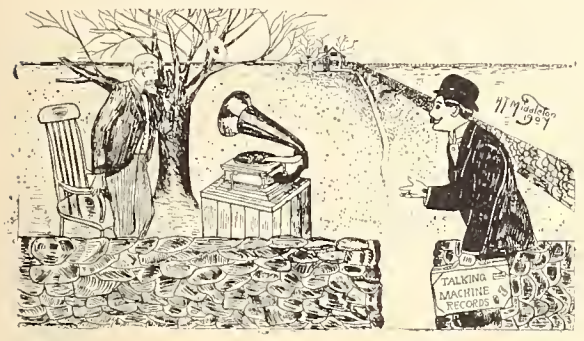
RECORDS OF THE OLD SONGS.

How a Talking Machine Salesman Used Them to the Benefit of His Firm.

An old man enters a talking machine establishment and sitting himself stiffly down in one of the hearing rooms, with his cane between his knees, asks to hear some of the old songs. The salesman in charge is a young man of character, with a due respect for old age, and accordingly he hastens to wait upon his venerable customer to the best of his ability. "Old Folks at Home," "Silver Threads Among the Gold," "Leaf by Leaf the Roses Fall," "Ben Bolt," "Annie Laurie," "Home, Sweet Home," and various others of the heart songs of our grandfathers' day are played one after the other, and the result is very satisfying to the old man who trudges home laden



"AT EVERY HOMESTEAD HE DRAWS REIN."

with a rich store of the melodies so dear to him.

As the dusk falls and the evening shadows gather, he will call his wife, his companion through fifty years, perhaps, of sunshine and storm, and together they will drink in rapturously the songs of their childhood.

The result is also satisfying to the young salesman because he has made a good sale for his firm, and at the same time his brain has given birth to a new idea, viz.: Push records of the old songs. He mentions his plan to his employers, and suggests to them that they advertise the old-time melodies in the country papers throughout the State, and if practical follow them up with a salesman later. As the rural advertising rates are very moderate, his employers consent. They do not have to wait long for results as almost every mail brings an inquiry or, better still, an order. Then another advertisement is inserted to the effect that a salesman will tour a certain locality on the following Saturday with a case of sample records, upon whose gleaming surfaces are engraved the songs of long ago. Then a list is given, embracing twenty or more of ancient melodies.

In due time the salesman starts upon his journey, and his success is phenomenal.

At every homestead as he draws rein and leaps from his buggy, his arrival is heralded most vociferously by the children of the farm, and he finds an enthusiastic audience everywhere.

One old gentleman has brought his talking machine down to the roadside, and sitting in his arm-chair beneath a gnarled and leafless maple, he greets the salesman eagerly. He has been longing for records of the old songs, but did not know they were obtainable.

"Folks is so set on ragtime nowadays that I thought the songs of my time was clean forgot," he says; "it certainly is a treat to hear 'em. Why, I feel like a boy ag'in when I hear them good old tunes. Put my name down fer the whole list, mister; winter's comin' on and them records'll help along the cold evenin's wonderful."

Dealers are very apt to let the records of the old songs lie neglected upon their shelves while they push the frivolous melodies of the present day. This is a very great mistake, as the latter will find a ready sale of their own accord, owing to their temporary popularity created by the music publisher and the theater.

In almost every home, city or country, there is a grandfather or grandmother eager to hear once more the songs which were so dear to them in the springtime of their lives, and you can increase your trade, Mr. Dealer, and at the same time create a deal of contentment by advertising the old songs along the lines above described.

This is not mere theory, but real fact, and a trial will prove it to you.

HOWARD TAYLOR MIDDLETON.

KINGS' SMILES TO BE CANNED

Fashions in Handshakes, in Court Etiquette and Other Ceremonies Handed Down in Moving Views—The Latest Fad in France.

Historians, artists and novelists centuries hence will know just how the great civic pageants of the twentieth century in France looked, for an official cinematograph will record all government fetes and ceremonies. The municipal photographer's snapshots give excellent representations of monarchs in regal gold and purple, visiting chieftains in gala attire and unpretentious frock-coated cabinet ministers as they appear on solemn occasions, but no hint of the formalities etiquette requires—the regulation bows and handshakes of the time. These the official cinematograph will supply.

Through it coming generations will know just how a king received a prime minister; it will register the smiles and gestures of royalty complimenting some famous author or actor; it will perpetuate for posterity's enjoyment the triumphal march of some Lord Mayor through gilded reception halls, followed by a retinue of obsequious liveried footmen.

All these official yet private mysteries, usually hidden from the public, will yield their secrets to the privileged cinematograph operator. After he has exhibited these highly interesting records before some music hall audience they will be preserved among the municipal archives for the benefit of curious ages to come.

TALKER IN HOLIDAY FESTIVITIES.

In the hospitals, public homes and missions for the poor, the talking machine was quite a favorite during the Christmas and New Year festivities. It was only necessary to attend any of these affairs to realize what a joy promoter is the talker and what delight and pleasure its songs and instrumental numbers bring to those whose lot in life is not a cheery one. It would be a very narrow man or a cold-blooded pessimist who would deny to the talking machine its rightful place as a musical educator.

Thomas Edens Osborne, the hustling talking machine factor at Belfast, Ireland, has favored us with one of his dainty calendars and a Christmas card as a holiday remembrance. The calendar contains a beautifully colored panel picture of a handsome girl, and the entire effect is most artistic, worthy of a place on any desk.

Quick Service

A great thing for a dealer, and every dealer ought to get it from his jobber or know the reason why. Repeated delays are dangerous to the carrying on of any business.

Quick service is one of the inducements we hold out for your trade and it's no mere will-o'-the-wisp. We mean it—quick service.

How quick! Shipments made the same day order is received. Could anything be quicker, or more satisfactory to you and your customers!

Quick service means not only that we are quick in sending out orders, but we have the right kind of goods in the first place—just the things you want and plenty of them.

There isn't a thing you can mention in Victor talking machines and records, trumpet horns, English needles, fibre cases and other specialties and accessories that we haven't in stock ready to send to you right now.

Try us and see. That's our challenge and, if what we say is true, it's worth your time to get in touch with us.

Write to-day for copy of our latest catalogue.

VALUE OF SEPARATE ROOMS.

Many a Sale of Talking Machines Is Lost Through Their Absence—Splendid Agents for Displaying Machines in Suitable Environment—Customers Like Them.

Almost every week we read of some progressive firm having their quarters redecorated aud in almost every instance the fact is mentioned that separate rooms have been arranged and specially decorated for the purpose of displaying the various lines handled.

The larger dealers everywhere are realizing that best results are obtained when a machine may be tested and its good points brought out to much better advantage, while it is separate from the general stock. Where the customer is confronted with only three or four styles he or she, as the case may be, is not confused, and a selection is more readily made because the mind is concentrated upon the contents of the parlor alone instead of an open wareroom, where other customers are examining and testing instruments. Of course, many dealers will remark that there will be the increased cost of fitting up the rooms attractively. Even so, it may be safely said that of five sales that are lost on the wareroom floor because the prospective customer could not arrive at a decision, two will be saved by the separate room where comfortably seated, among attractive surroundings, the tendency to find objections is reduced to a minimum and the salesman finds a more fertile field for his arguments.

And a word about the decorative treatment of these rooms. It is always best to consult a good decorator even at increased cost, for the after-results will warrant it. Then the style of decoration is considered. Say one be in Empire, always effective and alluring for great originality possibly in the application of its various forms. Fit the second out in Flemish style, imposiug, but nevertheless suggesting comfort, and why not an adoption of the German idea in the new art for the third room, a style beautiful for its broadness?

After the walls are treated in a satisfactory manner the furnishings should receive consideration. No matter what style the other decorations, an Oriental rug of good quality, not necessarily an expensive antique, hardly ever looks out of place, and always lends an air of richness to an apartment. Furniture, that is, chairs, settees and small desks, should, of course, conform with the general treatment. When the entire decorating and furnishing is completed a fine talking machine placed in such an environment has its effectiveness enhanced many fold.

The separate showroom is not a decided innovation, merely an evolution following the growing tendency to place talker selling on a higher plane rather than looking upon it as a purely commercial proposition, and even rehearsing the matter in a purely commercial light, the benefit accruing from an adoption of the above system for displaying talking machines will result in more big sales and increased profits that will pay the cost of the necessary alterations in a remarkably short time.

HERE'S A PARROT WITH A PAST.

Takes the Championship for Profanity—Owner Makes Some Choice Records—Now in the Next World.

Among the callers on Superintendent Hankinson, of the Society for the Prevention of Cruelty to Animals in New York, the other day, was a mild-faced little woman who carried a basket with a parrot in it. She complained that the parrot was rather disposed to an unlimited use of profane language, and had in its vocabulary a list of oaths that would shame the most hardened sea-dog. She related to the superintendent a number of incidents where the parrot had caused trouble and hard feelings, and wanted him transported to the great beyond, or some other place, so that he might be taken off her hands. She said that he belonged to her uncle, an old sea captain, who desired her to keep the parrot for him until his return from Scotland. She added: "He valued the parrot so highly that he had it talk in a phonograph before he went on his last trip, and carried the records away with him." The superintendent recommended that the easiest way out of the trouble would be to have the parrot stuffed, and gave counsel as to the proper steps in this connection.

L. R. PORTER CERTAINLY HUSTLED.

L. R. Porter, who handles the Victor Talking Machine Co.'s line in Brockton, Mass., recently received an Auxetophone and immediately began to acquaint his townspeople with the fact that it was fully worth the $500 asked for it. A special "ad" regarding the instrument was inserted in the local papers for several days, and it was exhibited at the Mid-Winter Fair of the Y. M. C. A. of Brockton. Also by special arrangement with the Association, the machine was exhibited at their regular Sunday services, when a series of selected records were reproduced in a most effective manner. Mr. Porter certainly hustled in the interests of the Auxetophone, and deserves his success in disposing of a number of the instruments.

TALKER AS SPIRITUAL FACTOR.

Used to Good Purpose by Western Clergyman in Covering His Big Parish—Better Than Some Ministers.

A clergyman of a Western city has been crowding his church on Sunday evenings by giving sacred concerts by means of a talking machine as part of the service. He maintains that a good preacher and a good talking machine will bring plenty of people to salvation.

This minister covers a tremendous territory, the greater part of which he has been unable to visit for a long time. He has also inaugurated a departure in this connection: he delivers his sermons into the talking machine and sends them around to these sections that he cannot visit, and on Sundays the people who assemble hold services of their own and hear the minister's sermon by this means.

It is needless to say that this clergyman is an enthusiast regarding the talking machine. He says that it is amazing what a wonderful part it is playing, not only in clean amusement and enjoyment, but as a spiritual factor it is proving worthy of more than passing notice. Some years ago no one could conceive that the talking machine would ever prove more useful than many ministers, and in many instances prove a greater aid in bringing people back to a belief in the Almighty.

NOW THE AUTOMATIC REPORTER.

The "automatic reporter" is the latest invention for newspaper aud business men. It consists of a small talking machine, easily carried. When the newspaper man wants a verbatim interview he springs his little machine on his victim and proceeds to ask his questions. The record is reproduced slowly and taken down on a typewriter. There is an adjustment to connect with the telephone, and there is where the inventor says it will appeal to the business man.

PHONOGRAPH FOR AUTOMOBILES.

Automobile horns are now being made decoratively. One of the new horns is in the shape of a frog—a great brass frog, squatting, with open mouth. The frog idea is carried out even to the note of the horn itself, the note being deep, metallic, short—a frog-like sound. The frog has two big green eyes, and a little lamp, lighted behind them at night, makes them shine splendidly. There is another horn in the likeness of a serpent. Above the open mouth is a little coronet-shaped light, and in graceful coils the body, over a yard long, runs back to the bulb beside the chauffeur's hand. An "ultra" horn, for those who want something extravagant and bizarre, has a phonographic attachment. This horn, shaped like a dwarf—a creature all head with mouth open—emits a hoarse "Look out." These improved automobile horns come from France, and they are very expensive.

E. N. CLINTZMAN'S EASTERN VISIT.

E. N. Clintzman, connected with the wholesale interests of Kohler & Chase, San Francisco, Cal., was in the East last month, where he visited the plants of the National Phonograph Co. and other large talking machine manufacturers. The Talking Machine World sanctum was also honored by his presence.

SOLD 400 MACHINES IN THREE MONTHS.

D. M. Yost & Co., talking machine dealers of Norristown, Pa., sold over four hundred machines within three months, and are in the position now where they cannot get stock sufficient to fill the orders on their books.

RECORDITE
CLEANS, PRESERVES, POLISHES AND LUBRICATES, DISC TALKING MACHINE RECORDS.
RECORDITE & Co
1905 PARK AVENUE
NEW YORK

5/1000 of an inch is a small space

BUT IT IS THE SIZE OF THE GROOVES ON A DISC TALKING MACHINE RECORD IN WHICH LAY THE SOUND IMPRESSIONS. UNDER A STRONG MICROSCOPE THEY LOOK LIKE THIS

It is readily seen how easily these minute grooves, which are little larger than a horse hair, can be filled with dust, grease from handling, chips of steel worn from the needles and other deposits.

Therefore when these grooves become filled, the sound impressions become clogged which prevents the needle from properly entering the grooves making correct contact

[SEE NEXT PAGE]

with the sound waves impossible. The result is a poor chattering reproduction, unpleasant and annoying to the listener, who usually condemns the machine, never realizing that a dirty record is the real trouble. *Recordite* will correct this. Dirty records are a most dangerous enemy to the advancement of the talking machine business. They are the poorest advertisement that can be had. *Recordite* will keep records in proper condition which will increase your sales a big percentage.

As oil is to machinery so is *Recordite* to records. Without it they soon become useless. Every dealer should have a stock of *Recordite* on hand especially now after the holidays, as thousands of persons who have received Talking Machines for Christmas, are open to everything to improve them. Write to-day for our circular. *Recordite* is put up in a neat, attractive box, ornamental to any counter.

NEW YORK CITY

RECORDS OF CITY NOISES.

Mrs. Rice Has Convincing Evidence That New Yorkers Are Suffering from an Overdose of Unnecessary Noises and Has Organized Associations to Eliminate Them.

The carol of the "Ole Clo's" man; the bugle call of the scissors grinder; the droning monologue of the huckster; the rumble of the "L" trains; the tinkling bells of the knife sharpener; the whirr and toot of the automobile; the wailing of the hurdy-gurdy; and the confused sound of screeching whistles and sirens and steamboats on the Hudson, these are just a few of the noises to which William Dean Howells, Archbishop Farley, Nicholas Murray Butler and a half hundred other noted people are to hear at the home of Mrs. Isaac L. Rice, East 89th street and Riverside Drive.

The records of these noises and many more, which have been taken carefully before 7 o'clock in the morning, will be turned on by Mrs. Rice herself, who has demonstrated by actual investigation that the unnecessary and hideous noises of the night as well as those of the day can and must be reduced, and that many of them will be entirely eliminated in the future.

It has taken more than a year of strenuous effort on the part of Mrs. Rice, with the cooperation of many persons prominent in this city and in Washington, to bring this about. Not content to rest there, she has organized a society to suppress the noises of New York which are not necessary. Next week, or just as soon as the articles of incorporation for the association are returned from Albany, the Advisory Board of that new and unique organization will meet at Mrs. Rice's mansion and listen to the noises which she has had taken as records upon a phonograph in order to show how disturbing they are.

"It is strictly for scientific reasons that I have had these records made," said Mrs. Rice. "They have been carefully taken, so that they will not exaggerate or diminish the sounds. They will convince the most indifferent, I believe, of the terrible crime of noise which nightly disturbs New York, and particularly the poor of New York. So great are the noises about some of our hospitals in congested central districts that in one instance within a year two patients were driven insane by the din.

"With the success I have had in stopping much of the noise of the river traffic, I feel positively assured we can in time control in large measure the other hideous and unnecessary noises."

SYSTEM OF TEACHING BY MAIL

Not Successful, Says C. G. Conn—Failed to Impart Benefits Expected.

The system of teaching instrumental music by mail with the aid of the phonograph records has for the present been discontinued by the C. G. Conn Co., of Elkhart, Ind. The method appeared feasible and advantageous. It was endorsed by good musicians, but nevertheless failed to impart the benefits expected from it. This was due to no fault of the musicians who had charge of the work of preparing the lessons. These gentlemen were conscientious and painstaking in their efforts to please. In some cases they succeeded; in others, money sent in payment for the lessons was refunded by request.

As one customer expressed it, "Mr. Conn could not afford to let anything bearing his name and portrait leave his factory unless it was first-class and beyond criticism." Mr. Conn's name and portrait is intended to express the highest endorsement. Musical instruction by phonograph under present conditions are far from perfect, and until they become so they will not be supplied under Mr. Conn's implied endorsement.

HERE'S A PHONOGRAPHIC ROMANCE.

Falls in Love With Record of Voice of Young Lady Who Has Made It—Meet and Marry.

"Will You Love Me in December as You Do in May?" sang Catharine Margaret Sheridan, of 162 York street, Jersey City, into a recording phonograph a little while ago.

And Patrick J. Rience, of 232 Grand street, same city, buying the record unsuspectingly, played it over again and again in his room and sighed and sighed and sighed.

The song fascinated Patrick not half so much however, as the rich contralto voice, and he fell in love with the voice and kept that phonograph going with that particular record at bat until all the wax wore off and the main spring of the motor gave out entirely.

Then one day Patrick took his phonograph to his music dealer for repairs.

"Also," he said, "give me all the records you've got of that May and December song, and if you have any guarantees to wear forever, I'll pay whatever price you name."

"Why, I know the girl that sang that song," said the dealer. "She lives just around the corner. I'll introduce you."

"If you do," said Patrick, "and if the lady'll have me, there'll be a wedding New Year's Eve."

They met, she would and there was.

And that reminds us. Why couldn't those matrimonial agencies who forward photographs of ladies desiring husbands, and which are labeled $10,000, $15,000 or $30,000 also send a record of the fair one's voice upon receipt of a nominal deposit to insure its return?

If he could manage to hear the shrewish tones of his bride-to-be while in anger, many a man would be saved a life of torture. Of course, the voice of a maiden of sixteen could be substituted for that of a widow of forty-five, but that is a common chance. Wife hunters have been fooled worse than that with fake photographs.

HUMAN TALKING MACHINE SUPPLANTED.

A barber in a western city, realizing the annoyance suffered by customers through the talking of his employes, has forbidden all unnecessary conversatiou on the part of the latter, and installed a large talking machine and a supply of high-class records with which patrons are entertained while undergoing the ministrations of the knight of the razor.

NEWARK, N. J., OPPOSED TO TALKERS.

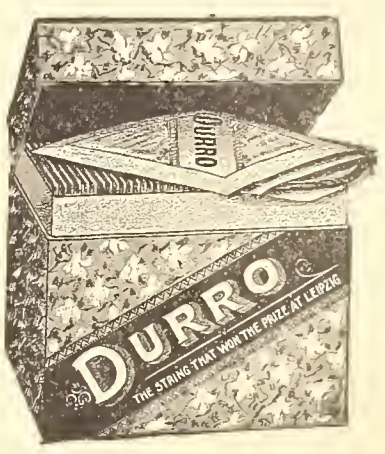
The city officials of Newark, N. J., recently brought sorrow to the hearts of the talking machine men by forbidding the playing of those machines in the doorways of stores or outside places of amusement if the neighbors object. This is the result of a recent ordinance.

The Central Camera Co., 31 Adams street, Chicago, is a new Zonophone jobber.

Do You Want to Make Money, Mr. Talking Machine Dealer?

Good, big money. The men who sent in an order for a sample line of our instruments were delighted with the results.

They found our instruments blended perfectly with the talking machine line, besides helping to make the store attractive. If you want to help out in the profits during the holiday season you can't go at it in a better way than with our specialties; your musical friends will come to you when they learn that you have the Durro violins, bows, strings, etc. They have a high standing.



We are judges of the excellence of all kinds of small goods, such as Accordeons, Mandolins, Guitars and Harmonicas, and carry a large stock, of which we offer at lesser prices, but which are superior to any on the market at the same price.

It will pay you to order a sample line at once. You will then see how profitable it is to devote a portion of your store to the exhibition and sale of small goods. Write for catalogue.

Make good money for the new year. It is easy with our help. We can tell you how and go with the business tide when it serves.

TRADE HAPPENINGS IN ENGLAND.

Business of Past Year Points to Greater Expansion During 1907—Big Possibilities if Taken Advantage of—New Ideas in the Trade—The Chrono Megaphone—Colquhoun and Childs to Visit America to Make Imperial Records—Outlook in Calcutta—Russell Hunting Co. Staff Dinner—Our Trade With Australia—Gen. Booth's Records—Pathe Freres Salon—Sir Thos. Lipton and Columbia Co.—The News of the Month.

(Special to The Talking Machine World.)

London, E. C., Jan. 6, 1907.

The old year has left us a story of unprecedented sales in the United Kingdom, while the new year shows promising signs of even greater expansion in the talking machine industry. Everything points strongly to this view. Manufacturers, factors and dealers alike, profiting by the early falling of sales last year, talk of using that infallible business getter—publicity. Outside two or three of the most prominent manufacturers, the lack of enterprise in this respect is in strong contrast to our American friends. Pushfulness, when business shows signs of falling-off; of all times, that is the time to advertise, circularize and travelerize. If the English concerns carry their words into effect and adopt some method of sustaining the demand, not only through the winter but the summer months as well, they will be showing practical evidence of the general opinion that the talking machine industry can be made an all-the-year-round trade of satisfactory proportions.

With so few restrictions, there is still plenty of room in Europe for open competition in both machines and records, yet the business done is out of all proportion to the population. Say, 15 million people—all possible customers—all open to consider a proposition, are surely worth making more energetic and pushful efforts to reach than in the past. Considered in this way the possibilities of the trade are enormous, and it only remains for British concerns to be first in the field with goods of quality that are worth exploiting by such liberal methods as indicated.

In the course of the next month or so, we shall see the advent of at least one indestructible cylinder record and two or three new discs; and as a sign of the times it is on the cards that the Gramophone & Typewriter Co. will be laying down a complete factory close to London city. It has suggested itself to me that with institutions that employ a number of travelers, it would be somewhat stimulating to them when times are bad, or in the dull season, if employers were to offer, outside the usual commission, a monthly bonus to the man that showed the best weekly sales for the past four weeks, or some other little encouragement along similar lines would perhaps be beneficial to both.

Chrono-Megaphone Exhibition.

A private exhibition of the Chrono-Megaphone was given recently in the Victoria Hall of the Hotel Cecil. The instrument is an improvement in certain particulars of the Chronophone, and both are inventions of Leon Gaumont, the famous cinematograph expert and scientist of Paris, and head of the firm of L. Gaumont & Co., London, Paris, Barcelona and Berlin. It has taken Mr. Gaumont, aided by an efficient staff, several years to perfect this ingenious and clever contrivance. By means of the megaphone, which is a distinct and most important part of the mechanism, the volume of sound can be increased at will.

Everybody nowadays has seen animated pictures. Mr. Gaumont has succeeded in making the figures sing and talk. Excerpts from musical comedies and grand operas are given with vivid realism, the characters (in colored costumes) moving as in real life, while, with a perfect system of synchronization, the words of the soloist and the harmony of many voices fit to a hair's breadth to the expression of the singer's lips. A pictorial chorus, which is in reality nothing but a shadow, sings sweet music, which also is as counterfeit as the picture. The operator can set the choristers moving and singing as in real life, and by and by it may be possible to entertain an audience a whole evening without engaging a single artiste or a band of music. The Chrono-megaphone will make its first public appearance at the London Hippodrome, and, duly installed, may in time usurp everything and everybody in stage life. There may be a decided advantage in the Chrono-megaphone—that, whereas our artists are but mortal, the records on this wonderful instrument will live forever!

Taurino Parvis Signs With Columbia Co.

The distinguished operatic star, Taurino Parvis, has recently come to an arrangement whereby his services as a record maker will be retained exclusively by the Columbia Phonograph Co. He has already had considerable experience in record making at the Columbia establishment in America, where, during an engagement at the New York Metropolitan Opera House, he recorded several operatic arias. These selections, which were issued on both 10-in. and 12-in. discs, presented the singer's rich baritone voice to such perfection that the Columbia Co. made him the present attractive proposition by which he agrees to sing solely for Columbia records. Signor Parvis has just completed a brilliantly successful season at Covent Garden. As leading baritone star there, he secured the most laudatory press notices for his superb singing and acting. While in London he recorded some further selections for the Columbia Co. These will be announced at a later date. The eminent vocalist insists that none of his records shall be published until he has tested and approved it, and as his discrimination is particularly critical, talking machinists can depend on securing records of the very highest musical and mechanical excellence when ordering Parvis discs.

To Make Records for Leeds & Catlin Co.

Amongst disc records that have lately come to the front, the Imperial takes an unique position,

Here is an Opinion from a Berlin Advertiser which tells of The Talking Machine World's drawing power:

"It is a great pleasure to us to be able to inform you that we have received an extraordinary number of enquiries from which it is evident that your journal is a splendid medium for advertising purposes—

Yours truly"

more especially on account of their general embodiment of tone purity than the price. Selections of all classes are listed, from comic to classical, the grand opera list calling for particular mention. The Imperial, however, is not so widely known in Great Britain as one could wish, but this condition will no doubt soon be reversed under the direction of Messrs. Gilbert, Kimpton & Co., who are factoring the record here for the Leeds & Catlin Corporation of America. D. H. Glendining spoke modestly but in enthusiastic terms regarding the Imperial, and his utmost confidence in that it would soon occupy a position of even greater prominence in English circles than now. The famous baritone, Ian Colquhonn, will visit America about the end of January on a special engagement to the Leeds & Catlin Co., and will make records of over thirty different selections. As showing the popularity of this well-known artist I may say that within two hours of the engagement, Messrs. Gilbert, Kimpton & Co. took an order for 750 of each of the thirty selections. The Imperial 1907 catalogue contains many fine contributions of all classes, and in great variety, by artists of repute. The reprint in the catalogue of a testimonial from Lionel S. Mapleson forms interesting reading as a tribute to the general excellence of the Imperial recording system.

International Favorite Record Co. Expand.

The International Favorite Record Co., late of Hatton Garden, are getting things into shape at their new quarters in City Road. The staff is to be increased, and the whole building, which has a floor space amounting to over four thousand feet, will be required to cope with the greater demand anticipated. Mr. Vischer, who has charge of the London arrangements, says any order can be executed usually upon the day of receipt, owing to their excellent system of supplementing stock within three days from their German headquarters.

Columbia Co.'s Handsome Window.

Thousands of children—and "grown-ups," for that matter—who were sightseeing in Oxford street during the few days preceding Christmas, must have been inclined to think that they had at least really discovered the much-sought yet ever-elusive Santa Claus when they reached the windows of the Columbia Phonograph Co. There, amid the snows on the housetops, preparing to make his wonderful descent by the chimney, stood the children's patron saint in all the glory of fur-trimmed cloak and hood, his sleigh laden with graphophones, and in his arms a veritable horn of plenty (of the graphophone kind) overflowing with similar good things—and really good things, too, for the genial old gentleman was represented as saying "Nothing but graphophones this year!" The excellent display of these instruments which the Columbia people were making was certainly such as to awaken in the minds of the little folk the hope that the prophecy was true and that Father Christmas' gift to each of them would be a Columbia graphophone, while from the crowded condition of the store it was evident that many a Santa Claus in ordinary human guise was profiting by the hint and taking home a graphophone to delight both old and young. The Columbia window was undoubtedly one of the best displays in London, and its power of attraction was illustrated in a most significant and amusing way only a few hours after having been dressed. A Boys' Brigade Band was marching down Oxford street playing a lively martial air, but Father Christmas and his graphophones proved too potent an interest for the young musicians, and the band broke down as every head turned to catch a glimpse of "Santa." The expressions of admiration to be heard among the crowd which was continually to be found before the window further demonstrated the interest the representation was arousing and testified to the alertness of the Columbia Co. in regard to the advertising possibilities of their new situation.

Reports on Holiday Business.

The American Talking Machine Co. report a good Xmas time. "Although we had an enormous stock and are continually receiving further consignments," said Mr. Nottingham, "our resources were put to a severe test in completely executing all orders." The Edison Bell Co. say: "This year's business has been best of all." Messrs. Murdock &. Co. report Xmas sales as unprecedented. "We are at it all the time," said Mr. Fulton, "and the new year trade prospects are very good." Mr. Howell; the popular factor, handling almost every talking machine line, spoke of good times, and expressed himself as well satisfied with last year's trade. His satisfaction with the new year, however, will demand a much larger turnover, as much general expansion in certain directions is anticipated. The Microphonograph Co., of Goswell Road, also report a splendid Xmas week, sales being considerably above the average. The same good report comes from the National Co.; Cook's, Ltd.; Barnett Samuels, Lyon & Co., and Lugton & Co., the latter having found it necessary to secure the building adjoining their present premises.

Trade Conditions in Calcutta.

I recently had the pleasure of an interview with Mr. Saific, manager for Hague, Moodc & Co., agents for the Gramophone & Typewriter, Ltd., in Calcutta. Mr. Saific was over here for a short time on matters respecting his agency, but he returns home in January. He spoke of the rapid strides the gramophone has made in public favor and the opportunities for further expansion of all talking machine lines in India. "There is no dearth of good Indian artists," said Mr. Saific, "but our great difficulty lies in getting them to record. Old Indian superstitions may partly account for it, but the fact remains nevertheless. We are, however, working slowly but surely, and the time will come when it will be considered the height of fame for all artists voices, so to speak, to be gramophoned."

Staff Dinner of Russell Hunting Co.

A very pleasant evening was spent on Friday, Dec. 21, at the Finsbury Town Hall, on the oc-

FROM OUR LONDON HEADQUARTERS—(Continued.)

casion of the annual staff dinner to the employes of the Russell Hunting concern. It was no bachelor's feast, as a glance over the well-filled hall revealed the graceful sex in large numbers. Interspersed between the men, they produced a very cheery and bright prospect, which their happy smiles but enhanced. It is safe to say that everybody did full justice to the seasonable fare provided. There was an abundance of good things, from which one may gather that the company, from that point of view, spared no expense in their efforts to obtain that which they strived for—and obtained—a highly successful evening. Among the many artists of repute who provided amusement after dinner, were several of the "Odeon," "Fonotipia" and "Sterling" contributors. One seldom meets with such an array of talent as in this particular instance. Their efforts were much appreciated, and will live long in the memory of their audience. The Russell Hunting orchestra met with a particularly warm reception, their performance being loudly applauded. During the course of the evening the usual toasts were proposed and duly honored. Appropriate speeches were made at intervals. The chairman referred to the rapid growth of the company since last year, an evidence of which was to be found in the large number of new members he noticed. Mr. Sterling was greeted with round after round of cheering of a sincerity unmistakable. He returned thanks, and in a few choice words spoke upon the good business done in the past and the splendid future prospects of the industry which provided the means of their livelihood. Charlie Howell was next on the programme on behalf of the factors. He called the trade a trade only since the expiration of patents which had so long retarded progress. This was certainly a matter that was being proven year after year by the gigantic strides made in all circles of the industry. Others spoke in succession; many pertinent references were made, some taking the form of compliments to the Russell Hunting Co., in that the industry has grown more proportionately since their inception than at any other time.

And when the time came for breaking up there was only one cry—unlike the gentleman's in the wilderness, it took the form of Oliver Twist's much abused cry "for more." All good things, even this, had its finish, but the good spirit engendered will live long in the memory of the company's employes and tend to foster the interest that makes each one mindful of their employer's success.

Marconi's Latest Invention.

Another marconigram reports that the great inventor's latest appliance is one for the transmission of radiograms between a moving motor car and a fixed station, or hetween two traveling vehicles. He also has ready and has experimented with an apparatus hy which wireless despatches will reach their destination without the possihility of being deciphered at any other point. That is all very well, but the man in the street asks "What is Mr. Marconi doing for improvement in sound reproduction?"

To Make the Seymour Indestructible Record.

I have it on reliahle authority (it will be public property by the time these lines reach America) that Henry Seymour, Ltd., is returning money in full to all their suhscribers, and arrangements are heing made to dissolve the company registered. This will in no way affect the appearance of the new Seymour indestructible record, to market which private capital has been subscribed to the required amount. I have the same authority for stating the fact that the new record, which will he awaited with much interest, is expected to put in an appearance this season. Later information is that Russell & Co. are financing the project to any amount. A temporary factory has already been taken at Eyre Street Hill, Clerkenwell, where operations will soon be in full swing.

Columbia Records by Gen. Booth.

General Booth is one of the most up-to-date men living. His most recent display of progressiveness consists in his making talking machine records. He has just dictated an eloquent address, giving in brief the aims of the Salvation Army and appealing for world-wide sympathy in the Army's religious and social work. This address will be reproduced on both cylinder and disc Columbia records, and in the near future all talking machine users may possess a souvenir of one of England's Grand Old Men. It is expected that these records will have a wide distribution throughout the English speaking world.

As announced in last month's World, the Columbia Phonograph Co. have concluded a contract with the Salvation Army under which they will have the exclusive privilege of making both disc and cylinder Salvation Army records. General Booth's address is the first of these to be made, but additional records by prominent leaders, soloists and others, as well as by the fine Headquarters Band will follow. These will be sold to and by the Salvation Army as well as to the public generally, and a part of the profits go to the Salvation Army funds for reclaiming the criminal and outcast and for aiding the unemployed. Every purchaser of a record will therefore contribute something towards the splendid social work which is such an important department in the Salvation Army activities.

General Booth has never before made a talking machine record for publication. He was very much interested in the whole process, proved to be exceedingly quick in understanding the requirements of the recording experts, was extremely accommodating, and at the finish of the work expressed himself as very highly gratified with the results ohtained. One of the principal reasons why he hesitated about making the records was the fear that they might not be good reproductions of his voice, but when he heard a rough test he was amazed and delighted hecause each word was clear and distinct and the volume was entirely satisfactory.

Good Business With Australia.

Even though the population of Australia is only about four million, the English record manufacturers are doing splendid business in the country as in other dependeucies of the British Empire. In Australia alone the Russell Hunting Co. have sold over 250,000 records in the last three or four months, which is sufficient testimony to the fact that the Sterling record has won over to its side the majority of Australian enthusiasts. Quoting from a letter sent to the company, one writer states that "the Sterling record beats all others," while another Australian gentleman pins his faith in the Sterling Special as the best for tonal qualities and general excellence. Such unsolicited expressions of approval are naturally very pleasing to those who do so much towards achieving the one and only ambition which inspires them to produce records next door to, if not "Perfection."

Lower Rates of International Postage.

Next year an important change in international postage will take place when the postal convention of Rome comes into effect. The postage of 2½d. from the United Kingdom to foreign countries will prepay a letter weighing up to one ounce, instead of half an ounce as now, and the Imperial penny post will cover letters up to one ounce to any part of the British Empire and to Egypt. And further, postage of letters to foreign countries, exceeding an ounce, will be reduced to 1½d. for each ounce after the first ounce for 2½d.

Old Lincolnshire Folk-Songs Reproduced.

Some old Lincolnshire Folk Songs, collected by Percy Grainger, were recently reproduced on a

LATEST NOVELTIES

The "Cordock" Concert Reproducer for Puck and similar type machines. Acknowledged by experts to be the finest reproducer on the market for small Phonographs, 50 per cent. louder than any other reproducer of its kind. For volume, clearness and distinctness of tone, it stands alone unequalled.

Factors should write for sample and wholesale prices, to

G. W. CORDOCK & CO.

High Street, Scunthrope, Linc's, England.

phonograph at the Royal Academy. Much attention has of late years been paid to the securing of folk-songs in various parts of England and Scotland, but those who desire some really unknown melodies should visit the northwest part of Ireland. Here is a district which would yield remarkable results for the enthusiast.

Some Interesting Gramophone Concerts.

An enormous gathering assembled at the Royal Albert Hall one recent Friday evening and enthusiastically applauded each item of a remarkable programme presented by the Gramophone & Typewriter Co. The instrument used was one that embodied an invention of the Hon. Charles Parsons of turbine fame. By means of an ingenious arrangement of air pressure in the special sound-box, the volume of sound was greatly increased. The most effective example of the gramophone's capabilities in reproducing the natural voice was demonstrated immediately after Miss Amy Castles and John Harrison had each sung in person, as their encores on the gramophone created as much applause as when they sang a few moments before in person. Caruso's ghost accepted an encore, as did the spooks of Madame Melba and other artists.

Besides the concerts on their own direct behalf, the Gramophone Co. have made a special feature of assisting any of their dealers who will arrange local demonstrations. The company bear the expense of bills, programmes, tickets, etc.; the dealer secures the right hall—and there you are. Many dealers in this way have built up their business and added considerably to their clientele, and incidentally to the advantages of the Gramophone & Typewriter Co. Only recently two very successful demonstrations were given by North London agents—W. F. Field & Co., and the Carlton Cycle Stores. In each case the respective concerts were largely attended, and a very enjoyable evening spent; fair business afterwards resulted.

Talking Machine to Teach French.

Another instance of the gramophone's usefulness is found in the report that the headquarters of the Farnham Grammar School will arrange for the use of the gramophone in the French classes in order to bring the French teaching up to date.

Pathe Freres Handsome Salon.

At 64 Regent street, one of the leading thoroughfares in the West End of London, Messrs. Pathé Freres have opened up a first-class retail reception salon for the purpose of popularizing and making known the merits of their new disc record and machine to the general public. A successful press demonstration of their new products was given recently, at which it was amply evident that their new system of recording was highly successful from the point of view of fullness and purity in reproduction. The salon is well and tastefully decorated, and as special accommodation is provided for customers to try over any record before purchase, coupled with the very central position and other features of this new departure, the salon should immediately prove a boon to the public and a complete success for Pathé Freres. From the same company comes to hand two well-got-up catalogues. One is devoted to Pathé's 11-inch disc record. Herein we find listed a large variety of selections under the headings of Instrumental, Vocal, Serio-Comic, and others, all in each case by artists and talent of the best obtainable. There is also a fine list of Hebrew records by J. L. Sirota and M. Gusowsky. The second catalogue contains illustrations and complete particulars of their disc machines and accessories. Both catalogues are well printed and of a comprehensive character. Dealers would find them exceedingly useful.

This Reception Room Is Popular.

Sterling & Hunting, Ltd., from time to time have made many successful alterations and additions to their "Odeon" and "Fonotipia" premises at 14 Hamsell street, but none so much of a boon to the trade as the new reception room recently provided. Here one may rest awhile to the tune of—well, anything one thinks to buy. It's getting to be quite a rendezvous, where dealers can meet to exchange ideas, and incidentally do business. At any rate, few leave the premises without a parcel, and few without one of the "Odeon" smiles that won't come off.

Sir Thomas Lipton Compliments Columbia Co.

Sir Thomas Lipton contributed an interesting two-column article to the "Weekly Despatch" of December 2 in "America's Amazing Prosperity." He cites many instances of the thriving character of economic affairs in the great republic, taking as one significant example the Columbia Phonograph Co.'s huge concern. This allusion, which will be of special interest to talking machinists, reads as follows:

"Another interesting illustration of the prosperity of the country I gleaned at one of the largest establishments in the world for the manufacture of graphophones and records at Bridgeport, Conn. The factory has more orders on hand than it can execute inside of a twelvemonth."

The London factory of the Columbia Co. is likewise so inundated with orders that it is running twenty-four hours a day, and the Paris factory is also working extra hours. This state of things gives some idea of the prodigious demand for Columbia graphophones and records.

Tom Child Will Sing for Leeds & Catlin Co.

It is expected that Tom Child will accompany Ian Colquhoun on his visit to America to record for the Leeds & Catlin Corporation. Other English artists of repute will follow if necessary, but efforts will be made to avoid the journey for others by opening up London recording rooms in the near future. The Imperial is factored in an enterprising manner in England by Gilbert

TOM CHILD.

Kimpton & Co., and on behalf of the American corporation it is intended to secure some good records by famous English artists, thus giving Americans the opportunity of appreciatiug our best talent. Mr. Glendining kindly furnished a few particulars concerning the first two artists he is sending over. In his opinion—and a right one, too—Tom Child is perhaps the best tenor in this country for sacred music. In an open competition to all comers he won first prize of 100 guineas, which is testimony enough in proof of his qualities. His popularity is on a par with Ian Colquhoun (baritone), who has many times received the royal command. In one day no less than four telegrams came asking him to sing at different functions—two from royalty, to sing the national anthem. Ian Colquhoun has also ap-

peared as principal baritone iu the celebrated Carl Rosa Opera Co. His stay in America will be short, owing to an early March engagement in London.

Application for Injunction Refused.

The National Phonograph Co., Ltd., applied to Justice Joyce in the Chancery Division for an injunction aud damages in respect to loss of trade due to the conduct of the Edison Bell Co. It was stated that the plaintiffs had placed the defeudants on their suspension or "black" list. Notwithstanding this, the defendants had procured 700 of the plaintiffs' phonographs through plaiutiffs' agents, who either acted in ignorance or in breach of their agreements. The plaintiffs complained that although defendants had uot sold under price, they sold their own records with the machines, which plaintiffs contended was detrimeutal to their business. Justice Joyce held that there was no evidence that defendants had incited the ageuts to violate their contracts with the plaintiffs, and that the latter had suffered any loss. The action entirely failed and must be dismissed with costs.

An Unique Record.

The novelty of a phonograph being heard through a phonograph, is presented in the Sterling record, entitled "The Absent Son." It describes a colloquy between an old couple anent their absent son. It occurs to one that it would be a splendid idea to hear the absent one's voice. Accordingly, a record left behind by the boy is put on a phonograph, and the voice singing "Home Sweet Home" is heard, accompanied by the delighted criticisms of the old people. Needless to say extra large quantities were ordered by the factors, and reports prove it to be much in demand.

The Potency of Advertising.

If proofs were wanted of the potency of advertising, it would be furnished by a post card recently received at the Columbia Phonograph Co.'s Manchester Branch. By reason of the peculiar form of address it bears, this card is somethiug of a curiosity. In place of the firm name, the words "Paris, St. Louis, Milan" appear. The unique successes gained by the company at the Paris, St. Louis and Milan Expositions have evidently been emphasized to some effect in Columbia advertisements.

Secure Prize at Milan Exposition.

The first prize has been awarded by the adjudicators at the Milan Exposition to the manufacturers of Fonotipia Celebrity Disc Records—an honor which deserves our heartiest congratulations.

Simpson & Co.'s Good Business.

Simpson & Co., of Shoreditch, are most enthusiastic over the present conditions of busiuess. In reply to a question, Mr. Simpson told me that cylinder records continued to lead the way as regards sales, but at the same time assured me that the demand for discs was increasing and it would not be so very long before the call for both would be about equal. Simpson & Co. laid in a stupendous stock in anticipation of a great rush at Christmas, aud events prove that it was well they did so, for to use Mr. Simpson's own expression, the business done far surpassed that of previous seasons leading up to Christmas.

Who Discovered W. H. Berry.

Who among talking "machinists" is not familiar with the name of W. H. Berry? The hundreds of comic records he has made for the Columbia Phonograph Co. have gained him a very wide constituency of admirers, and no wonder, for his excellent ennunciation insures that every item of bis effervescing humor is enjoyed. A few mouths back the "Daily Mail" stated that George Edwardes, the well-known theatre manager, had "discovered" Mr. Berry and offered him a prominent part in the cast of a play he was staging. Properly, enough, however, the Columbia Co. claimed that they had recognized Mr. Berry's powers long before. On undertaking his new role of principal comedian at Daly's Theatre, Leicester Square, Mr. Berry found himself at first so closely occupied as to have to forego his record making for a time. But the talking machine public may now enjoy some further editions of his sparkling comedy, for he has recently entered into another contract with the Columbia Co. He will sing exclusively for the Columbia Co., and his new items will be published in supplementary lists from time to time.

SOME RAPID TRAVELING.

Evan Williams as Great a Favorite in London as New York—An Interesting Account of His Travels.

Evan Williams, the well-known teuor, who recently appeared in concert in New York with much success, is a great favorite in London, and we clip the following from The Gramophone News of that city, which will be of interest to his many American admirers: "Mr. Evan Williams, the famous tenor, sang at a big concert in New York on a Friday; sailed for England to sing for us on the Saturday morning. Mr. Williams arrived on the Monday week, sang for us on Tuesday, Wednesday and Thursday, was photographed listening to his own records on Friday, and sailed for New York on Saturday, Nov. 15. This is nearly a record—a singer coming 3,000 miles to make twelve records. Mr. Williams is due to sing in America at a big concert within forty-eight hours of landing. Apropos of his records, we asked Evau Williams, who, by the way, is a Welshman, why he wanted to sing 'Jean,' 'Little Boy Blue' and others so softly. Mr. Williams' reason will be interesting to gramophone enthusiasts. 'When I sing,' says Mr. Williams, 'I must make a picture—I must see the whole scene which the words convey. Unless I can do this I am merely—forgive me for so putting it—a singing machine. "Jean" must be sung softly. Think of it; here is a man in his own room dreamily thinking of his dead love. He sings softly, of course. In "Little Boy Blue" I must keep piano all the time, for the little boy is lying dead. Hush! can't you see his pretty face. Unless the listener can also make a picture of my songs when listening to my records he or she would not be in sympathy with me. I want to get at the hearts of the people, not to excite their admiration for my singing. The words and the picture are everything to me. Do you think,' asked Mr. Williams, turning to us, 'your gramophonists realize what I try to convey?' We assured him that all our good friends asked for more and more of his records. Were we right?"

ALPHABET OF PROVERBS.

A grain of prudence is worth a pound of craft.

Boasters are cousins of liars.

Denying a fault doubles it.

Envy shoots at others and wounds herself.

Foolish fear doubles danger.

He has hard work who has nothing to do.

It costs more to avenge wrongs than to suffer them.

Knavery is the worst trade.

Learning makes a man fit company for himself.

Modesty is a guard to virtue.

Not to hear conscience is the way to silence it.

One hour to-day is worth two to-morrow.

Quiet conscience is quiet sleep.

Richest is he that wants least.

The boughs that bear most hang lowest.

Upright walking is sure walking.

Virtue and happiness are mother and daughter.

Wise men make more opportunities than they find.

You never lose by doing a good act.

A GREAT PLANT AT BRIDGEPORT.

The American Graphophone Co., makers of the Columbia phonograph, have installed a producer gas fuel plant at their great plant in Bridgeport, Conn., which has replaced all the illuminating gas formerly used for fuel purposes, and is said to have given better satisfaction than was derived from using illuminating gas, for the reason that the heats are obtained quicker, and, as the air blast necessary for illuminating gas has been done away with the attendant inconveniences due to soot and dust are avoided. The cost of the producer gas is approximately 30 cents per 1,000 cubic feet, which is practically one-third the cost of illuminating gas in Bridgeport for fuel purposes. The cost of fuel alone is about 15 cents per 1,000 cubic feet of gas, the additional 15 cents covering interest on the investment, depreciation and repairs on the plant, and attendance, all of which must be allowed for in comparing the cost with that of the gas as formerly supplied by the Bridgeport Gas Co. It is estimated that this new plant will save its cost within two years.

The plant has a total capacity of 60,000 cubic feet of producer gas per hour, the equivalent of 10,000 cubic feet of illuminating gas. The gas is used chiefly for heating wax kettles for melting the wax used in graphophone records, and also for japanning, soldering, heating type metal, and wherever illuminating gas was previously used. The plant includes three units of 200 horse-power each, or 600 horse-power in all, and is run continuously 144 hours a week. One man by day and one by night are all that are required for its operation.

Julia Marlowe, the well-known actress, is taking dancing lessons with the aid of a talking machine. In the production of "Johannes" she has the role of Salome, which calls for a dance. In order to get the music that she desires, and not to have pianist with her for all the time the actress had the music for the Salome dance put on her "talker."

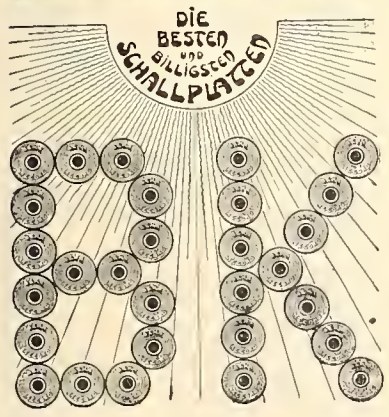
ADVERTISING A GREAT BUSINESS FORCE.

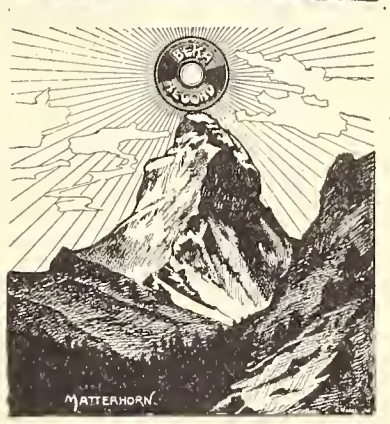
Some Splendid Illustrative Work Used in Connection With the Beka Record and Which Can be Utilized Most Successfully by Jobbers and Dealers in Their Publicity—Valuable Pointers Upon Advertising and How Cuts Can be Used to the Very Best Advantage.

To-day more than ever the one potent factor in business is advertising, and the man who does not wish to be left behind in the struggle for existence must see to it that he advertises, and not only must he give sufficient publicity to his article, but his advertisements must be of such a nature as to immediately attract the eye and practically force the reader to stop and read them.

The following few general rules to be observed in advertising may be well known to you all, but bear repeating as they are of pre-eminent importance to the success of your advertising.

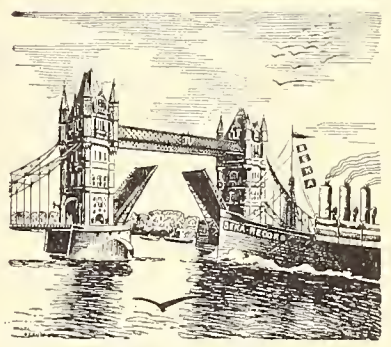
The two great advertising mediums for the business man are the trade journals and the newspapers. Every business man, whether manufacturing or selling talking machines, realizes the importance of patronizing the leading trade journals. It is the trade journal which is the business man's close companion. It is on his desk, and frequently it goes with him to his home where, after long business hours, he carefully scans its contents. The trade paper is the paper of the specialist, and no one can afford to overlook its importance and helpfulness to industrial pursuits. The trade paper is a stimulator, and a builder of industry in the broadest sense. The newspaper appeals principally to the public, and therefore a newspaper advertisement must above all be prominent, because we must not forget that on opening his daily the reader is presented with a bewildering mass of advertisements of every conceivable kind. Now a very simple way to obtain this prominence is to have plenty of white space around your advertisement. This at once singles it out from its fellows, and even the casual observer cannot fail to be attracted. The same ad-





DIE LEUTE SCHLAGEN SICH UM

BEKA-RECORD



Einseitig und Zweiseitig Bespielt

BESPIELTE SCHALLPLATTEN

Bombay

vertisement occupying the regulation number of lines and columns would probably not even call for a glance simply because it is one among the many.

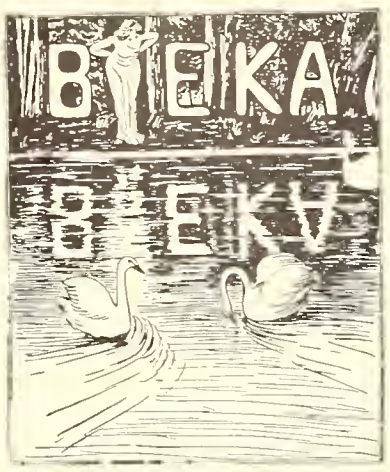
Be original! Do not consider it necessary to follow the beaten path. Originality secures attention, and this is just what you are aiming for. Once rivet the attention of the man in the street and he will very soon get beyond taking only a passing interest in your advertisement.

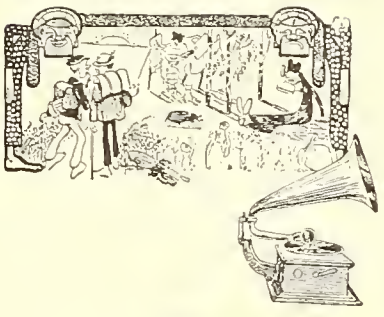
Be persistent! The answer very often met with, when asking how a certaiu advertisement is drawing, is: "Oh, it brought no results, so I have dropped it." Now, that's a mistake. Put yourself in the customer's place. Do you always respond to an advertisement the first time you see it, even if the article advertised is one you are particularly after. No; simply because there is always au abundance of offers, and you, as a prospective purchaser, wish first of all to try and find out which is the best and cheapest for you. Hence it is that an advertisement may appear time and time again and still not show any results, but you may depend upon it, if you are putting in the right kind of advertisement, success will come. Why the very regularity with which your advertisement appears—provided, of course, it is one calculated to draw attention—will impress it on the reader's mind, therefore be persistent.

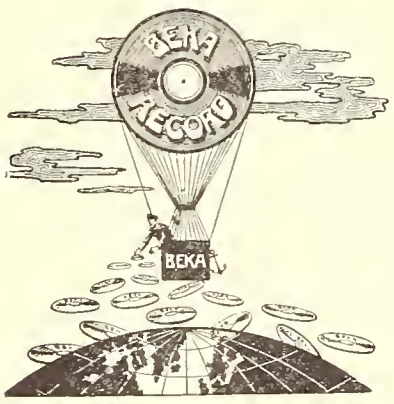
Avoid advertisements which oblige the reader to turn his paper upside down or at an angle, to enable him to read them. To the majority of people such an advertisement is not a novelty but a nuisance. It is putting a difficulty in their way.

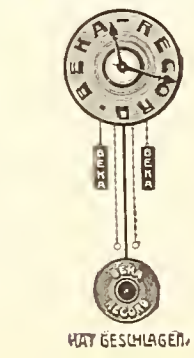
Except in special cases avoid a confusion of lines, fancy letters, decorative frameworks and the like, because all those things tend, as a rule, to detract the reader's attention from the advertisement. Choose clear, bold type, see that a good impression is obtained from your electro, and let the wording be short and to the point. A lengthy display of text is often bewildering to the reader, and besides takes up too much of his time.

It has been a pleasure to us to have had the opportunity of reviewing the Beka booklet, and we must confess that their manner of advertising appeals very strongly to us both by its originality and the fine discrimination which they have displayed in the choice of their subjects. A pleasant and restful tone characterizes each illustration, and while appealing to the artistic sense, the practical side of the question has not been lost sight of, and the text is so arranged as to force itself unconsciously on the attention of the









reader. You will observe that in some of the electros black is the dominant color, whereas in the others the whole effect is gained by a happy combination of graceful lines against a white background. Now the suitability of your electro for the particular advertising organ is very important, and in this respect it is well to remember that an electro with a white background can be used to advantage in a newspaper, because it is just here that your advertisement is thrown into strong contrast by its so to speak "empty" background, the other advertisements surrounding it producing a more or less dark tone by their close proximity to each other and the fact that in the majority of cases type matter is the principal factor. On the other hand, the electro, with a black background, looks well as a full-page advertisement in a journal or trade paper, because here the subject and text are both thrown into strong relief by the prevailing black, and the whole page produces a startling effect and commands instant attention.

The Beka Co., Berlin, some time ago published an advertising album, in which the electros were given on a larger scale, and the same created quite a sensation in the trade. They inform us that the electros appearing in the present booklet have been used in practically every country on the globe for advertising purposes, especially in India and China, where they have had remarkable success. They further state that they place these electros at the disposition of their regular customers entirely free of charge, and are prepared to deliver the same in any language desired. The Beka is evidently fully alive to the possibilities of advertising, and their offer should meet with a hearty response.

INCIDENT OF SPERRY FIRE.

During a fire which destroyed the talking machine store of N. A. Sperry in Hartford, Conn., recently, a fireman hearing a voice issuing from the rear of the store, rushed into the flames only to discover that his heroic action was for naught, for the sounds he heard came from a talking machine which had been started by the pressure of a stream of water.

AN ODD RECORD FROM MAP.

Dr. William H. Furness, a fellow of the Anthropological Institute of Great Britain and Ireland, has been lecturing before the Lowell Institute on "The Kayan and Kenyah Tribes of Borneo, and the Natives of Uap in the Caroline Islands." In connection with his very interesting remarks, Dr. Furness showed a number of moving pictures of various dances, of a medicine man curing a headache, and of a woman's dance. On talking machines Dr. Furness reproduced a love song by the belle of the island, the medicine man's charm in curing a headache, in attempting to quell a storm by threatening it, in counteracting the effect of a bad breeze, in driving away the spirits of dead people which have come back claiming that they were not honored enough. In all these charms the medicine men use a language which is not understood by them any more, the words having been handed down from generation to generation. It is believed to be the primitive Uap language.

RECORDS OF PATRIOTIC SONGS

Will be Seasonable Next Month, When Two Holidays Will Occur—Dealers Should Make Selections and Give Recitals.

The placing of seasonable records before customers is becoming quite the fad with many progressive dealers. During the coming month occur two holidays which are purely patriotic, and the average retail dealer will find it to his interest to prepare a list of records suitable for each occasion, and advertise the same to his customers. Lincoln's birthday, which is generally observed in the North, will prove a good time to push the many songs by Foster, nearly all of which are found on both cylinder and disc records; the songs of the late Civil War, and the band selections pertaining to the same period. Washington's birthday is observed in every section, and such records as "The Star Spangled Banner," "America" and the many kindred national anthems and patriotic compositions, both instrumental and vocal, can be featured to good advantage. This class of advertising is both economical and effective, and it can be made doubly interesting by giving a concert of the special catalogue prepared for each occasion several days in advance.

CLUE FROM A PHONOGRAPH.

Mrs. Rorer Recognized Husband's Voice—Wants Back Alimony.

While waiting for a ferryboat recently, Mrs. Grace E. Rorer, a Brooklyn school teacher, dropped a penny in the slot of a phonograph and then stepped back to listen. A high tenor voice sang one of the latest popular airs. Mrs. Rorer grabbed the arm of a woman who was with her.

"Do you hear that?" she asked excitedly; "that's Fred's voice."

Mrs. Rorer paid no more attention to the latest popular air, but examined the phonograph to learn its make. That same day she went to her lawyer and told him she had a clue to the whereabouts of her husband, Fred G. Rorer, who disappeared, and who for some time was tenor soloist at the Clinton Avenue Congregational Church, Brooklyn.

Her lawyer learned that Rorer was employed by the phonograph company when he was not busy on the vaudeville stage as a member of the Rialto Comedy Quartette, where, it is said, he earned $100 a week.

The lawyer learned that the Rialto Quartette was to be at one of the Brooklyn theatres last week. He appealed to the court, with the result that Rorer will have to appear to show cause why he should not be adjudged guilty of contempt of court for not paying alimony.

H. H. HOLLEMAN VISITING THE NORTH.

H. H. Holleman, president of the Texas Phonograph Co., Houston, Tex., accompanied by Mrs. Holleman and their son, have been spending the holidays in North Carolina, and are visiting New York this week for the purpose of calling at the Edison factory. They will make quite a stay in the North, as it is Mr. Holleman's intention to select a large stock of talking machine goods for the spring and summer trade.

J. B. Finlay, a music dealer of Danville, Ky., has moved to new quarters on East Main street, that town, and will engage in the manufacture of a phonograph horn of which he is the inventor.

Mr. Dealer!

Of course, you have your life insured. Neither could you rest soundly for even one night, had you overlooked the expiration of your fire insurance policy. You work faithfully early and late for the money that comes over your counter, and yet you dump that hard earned cash into a drawer, unprotected in any way against carelessness or dishonesty. A wise business man will account to the penny for every transaction. Why not start the new year right? Instruct your clerks in our system and let the "Victory" account for you. Send for catalogue.

A Progressive Age Demands Constant Improvement

In the early days when we first introduced Horns with Japanned Bodies for use on Talking Machines, it was our custom to bake the horns after applying the japan, so as to harden the coating. This method of finishing presented many advantages to a manufacturer, among which were the low price of japan and the quick method of completing the product. From an economic standpoint we were loth to abandon this process, but we found, through a series of costly experiments, that we could secure a far better and handsomer finish through a proper process of air-drying than could be obtained by the old method of baking.

Our improved method not only entailed a large increase in cost of materials, but necessitated, as well, extensive space, so as to permit of the air-drying process becoming effective, as well as additional care in handling the product.

The one great object we were after, and which we feel has been attained, is better product. With the materials and methods we employ, we secure a handsome, brilliant color effect and a coating that will not crack off. At the same time, it has the lasting properties of a baked process.

If you purchase Horns bearing our trade-mark you are sure of getting satisfaction.

Record Breaking Business During the Holidays —Jobbers Report Increase for the Year Varying from Twenty-five to Fifty Per Cent. as Compared With Last Year—Gathering of National Phonograph Co. Forces—Another Geissler in the Field—Wurlitzer Co.'s Good Showing—Edison Machines for the Philippines—Strenuosity of Babson Bros.—Talkers at the University of Chicago—Auxetophones for Bachelor's Quarters—Commercial Graphophones Make Great Showing at Hearing on Coal Car Shortage—Kreiling Specially Liked —Crescent Talking Machine Co. May Move Down Town—Phillips Succeeds Thompsons at Rothschilds—Kibbey Places Large Order for Automatic Specialties—The News of the Month in Detail.

(Special to The Talking Machine World.)

Chicago, Ill., Jan. 8, 1907.

Reports from all portions of the West indicate that the holiday business in talking machines was a record-breaker. November was an excellent month, generally ahead of last year, but December made a really unexpected showing, jobbers reporting increases varying from 25 to 50 per cent. over the corresponding month of 1905.

Locally, the retail trade showed a very large increase in the proportion of the better grade of machines sold. In the country this was not so pronounced, but still there was a marked tendency in that direction.

The new year has started out most favorably. Jobbers report orders for both machines and records as unusually liberal, indicating that stocks were run down to the minimum by the holiday trade in most localities, and that dealers are stocking up in anticipation of a steady business of large proportions. Liberal stock orders for records are being placed, and, judging from the large number of machines sold and which will bring the purchasers into the market as immediate buyers of additional records, this brisk buying by the retailer is thoroughly justified.

The latter part of last week witnessed the usual round-up of the Western traveling force of the National Phonograph Co. to meet their principals, discuss the past year's business and plan the campaign for another twelvemonth. This year the gathering was marked by the presence of both President W. E. Gilmore and General Sales Manager C. H. Wilson. Thursday night there was a little banquet at the Auditorium, at which it is understood the Edison emissaries were given hints regarding the company's plans, which served to still further stimulate their enthusiasm regarding the company's enterprise and the excellence of its product. Messrs. Wilson and Gilmore returned east Saturday. The Edison travelers who were present were: W. P. Hope, Wisconsin, Minnesota, the Dakotas and the upper peninsula of Michigan; G. A. Renner, Nebraska, Colorado, Wyoming, Utah, Montana, New Mexico and part of Texas; F. L. Fritchey, Indiana and southern Michigan; M. G. Kreusch, Iowa and Illinois; A. H. Kloehr, Kansas, Missouri, Indian Territory, Oklahoma and part of Texas; H. K. Miller, California, Washington, Oregon, Idaho, Nevada and Arizona.

Manager A. D. Geissler, of the Talking Machine Co., wound up a prosperous year, with abundant evidence of his favor with the powers above and his associates below. A fine nine-pound baby arrived in the Geissler home just too late to hang up his stocking. By way of compensation it is understood that as soon as Mrs. Geissler and son are able to undertake an Eastern trip some beautiful records, entitled "Angel Whispers," "The Boy's First Laugh," etc., etc., will issue from the Victor laboratory. In addition to his priceless gift from Heaven Mr. Geissler received a beautiful scarf pin, fountain pen and other reminders from his employes.

Although not able to make comparisons with a year ago, the talking machine department of the Cable Company starts the new year with a magnificent record. "The country never had such a holiday trade," said C. W. Long. "Our wholesale business during December was phenomenal, and the best part of it is that our daily sales so far in the new year have been almost up to both in volume and individual character."

C. E. Goodwin, manager of the talking machine department of Lyon & Healy, states in a circular letter to the trade that the year with them showed an increase of 50 per cent. over the previous one. Their holiday retail business was by far the largest they have ever known. Among the notable sales of last month was a $175 Victor outfit to Governor Deneen.

A. V. Chandler, city salesman for the National Phonograph Co., made only one New Year's resolution. He has foresworn baked potatoes.

The day before Christmas, Monday, was the biggest day in point of talking machine sales the Chicago branch of the Rudolph Wurlitzer Co. has ever known. The closing sales occurred at 11 p. m., when John Otto, manager of the retail talking machine department, sold a Victor-Victrola and records amounting to $265. Just as the deal was being closed Mr. Siemon, who looks after the wholesale talking machine business, came on a jump from his office on the entresol floor with a telegram from a Western dealer ordering a Victrola shipped by express, but it was too late, as the machine was the last one on the floor.

"THE PEOPLE WITH THE GOODS"

BABSON BROTHERS

G. M. NISBETT, Manager.

304 Wabash Avenue, CHICAGO, ILL.

Manager J. Blumberg, of the Chicago branch of the Regina Co., left Saturday, Dec. 22, for a visit to the factory at Rahway, N. J., and will be back about Jan. 10. Jack Wilson, Mr. Blumberg's assistant, spent the holidays in Detroit, and D. C. Laury and I. Sachs, who travel from the Chicago office, came in for the holidays and looked after the office in the absence of the others.

B. Feinberg, of the Western Talking Machine and Supply Co., leaves in a few days for a six weeks' Western trip, which will take him to the coast.

Loring Leeds, of the Leeds & Catlin Co., was a Chicago visitor the middle of December.

The Talking Machine Co. announce that they have been made distributors for the Petmecky needles for the States of Ohio, Indiana, Illinois and Wisconsin. In addition to their general catalogue, they have just issued an attractive booklet devoted exclusively to cabinets. It illustrates and describes a very complete line, both disc and cylinder.

W. C. Fuhri, district superintendent of the Columbia Phonograph Co., has been spending much of his time visiting the various branches in his territory since his appointment to his new position. Both St. Louis and Chicago showed an increase of something like 40 per cent. in December over the same month last year, he says.

C. F. Baird, the new manager of the Chicago office, has appointed F. A. Cass, formerly assistant manager of the instalment department, to be assistant manager of the Chicago office, the position formerly occupied by Mr. Baird, and a well-deserved promotion. The Chicago office has started out on a strong campaign with the dealers in the adjoining States, and a number of additions to the Columbia ranks are reported.

E. N. Clintsman, of Oakland, Cal., manager of the wholesale talking machine department of the Kohler & Chase, jobbers of Edison and Zonophone goods, was a recent Chicago visitor. He was on his way East.

J. Hollingshead, the manager of the Columbia branch at Joliet, sold a dozen disc records to an Italian the other day, who uses them as an aid in learning to play an accordeon. The man does not read music, but by speeding his machine as slowly as possible is able to follow the melody on his instrument, and by constant practice master the selection perfectly. Mr. Hollingshead has made a success of the Joliet office since he took charge a few months ago.

Dean Conant Worcester, Secretary of the Interior of the Philippine Islands, was in Chicago last month and called on George N. Nisbett, wholesale manager for Babson Bros. He left armed with letters of introduction to the officials of the Edison Co., and the superintendent of the laboratory. He intends using Edison machines and records in making anthropical studies of the various Philippine tribes, getting records of their war cries, the vocal and instrumental accompaniment to their various religious ceremonies, etc. Mr. Worcester is said to be the only white man who has witnessed the death dance of the head-hunting Negritos.

A. J. Morrissey left the latter part of last month for New York, where he will assume charge of the local instalment business of the Columbia Phonograph Co. Mr. Morrissey came to Chicago three years ago and went to work for the company's Chicago office as an instalment canvasser—his first experience in the trade. He soon worked up to the management of the instalment department and afterward took hold of the city wholesale trade, continuing in that position until his promotion.

W. C. Fuhri and E. C. Plume recently visited Davenport, Ia., and speak enthusiastically of the excellent business being done in that city on Columbia goods, both by the Smallfield Music Co. and also their own branch under charge of Mr. Herriman.

Babson Bros., in company with the other jobbers, had an exceedingly strenuous December. The immense stock of Edison records at the disposal of Wholesale Manager Nisbett was nobly equal to the strain, although there was some lively humping to keep pace with the demand on some types of machines. Telegraph orders for records and machines kept piling in up to nearly closing time the day before Christmas.

W. W. Parsons, manager of the commercial graphophone department of the Chicago office of the Columbia Co., not only is capable of working up a good thiug but knows how to make it reap the fullest publicity results. As told elsewhere in The World, Columbia graphophones were used to excellent advantage in hurrying through the evidence gathered here on coal car shortage. As soon as the machines were in operation on their errand of mercy, Parsons made a lightning descent on the newspaper and press association offices. The results exceeded his fondest expectations. All the papers had accounts of the use of talking machines at the hearing. The News had a column first page story in which the name graphophone was used, and the same was true of the reports sent out by the Associated Press.

Miss Elizabeth Wallace, dean of the junior college and a member of the faculty of the French department at the University of Chicago, has persuaded her Gaelic colleagues to adopt the "phonographic method" for teaching the freshmen to "parley voo."

No such revolution in pedagogical methods has been worked at the university, it is said, since Prof. Robert F. Harper, brother of former President Harper, invited his Sanscrit class to meet him at "coffee" in his bachelor quarters on Sunday mornings.

Miss Wallace's proposal, it is learned, has been adopted by the romance faculty and received the "O. K." of Acting President Judson. All it awaits is an appropriation of $500 for talking machines.

Under the new method the classroom will look like a laboratory, with rows of machines set on the tables and a nimble professor skipping around with a basketful of cylinders. The students will take their places before a phonograph, insert the tubes in their ears and release the mechanism, at the same time following on the printed page before them the phrases that flow from the machine.

This is called the "laboratory method," as distinguished from the "text-book," and is hailed as a great time-saver in getting the freshmen over the dull routine of "beginners' French." It will not be used at all in the more advanced classes, where the French authors are studied.

The above clipping from the Chicago Evening Post of Jan. 3 forms an interesting sequel to the appearance of L. L. Lewis, of the language course department at Lyon & Healy's at the University of Chicago's nineteenth educational conference, held Nov. 17. Mr. Lewis gave a half hour's talk on the I. C. S. method of language study with the Edison phonograph, dwelt on the value of the outfits as an adjunct to the work of the college professor, the saving of energy and time, etc. His work evidently "landed."

A retired capitalist living at the Auditorium has installed one of the Victor Co.'s Auxetophones in his handsome apartments. By use of a toue regulator and softer tone needle he finds that he can make the tone as soft as desired, while still getting the wonderful reproductions for which the machine is uoted. A great deal of the time, however, he uses the full volume of tone and do not find it in the least objectionable. Furthermore, the same man has given an order for anotner auxetophone for use on his handsome private yacht next summer.

V. W. Moody, sales manager for the Talking Machine Co., says that in a number of instances dealers in Chicago and surrounding territory had a holiday business double that of a year ago. One of his customers sold 526 machines between December 1 and December 25.

George Tresch, manager of James I. Lyons main retail store at 73 Fifth avenue, noted a materially increased demand for the larger and more expensive machines during December than ever before.

G. G. Huseby, of the Huseby Co., Milwaukee, was iu town January 7, buying goods. He handles Victor and Edison machines, and declares that his holiday business was double that of a year ago.

James Pickens, manager of the talking machine department of the James Hoyt Piano Co.,

THE CABLE COMPANY

Talking Machine Department

CHICAGO

Davenport, Iowa, was in the city after the holidays, stocking up on Victor goods.

The big windows of the Rudolph Wurlitzer Co. were noted for their handsome holiday displays. One was devoted to talking machines and the other to musical merchandise. Both were, of course, decorated in the conventional holiday greens. The talking machine window was given a massive architectural effect by the use of artistic two-column pedestals in white, on which were displayed Victor and Edison machines.

The Central Camera Co., 33 Adams street, enjoyed a fine holiday trade. This concern has made big strides the past year and has done some very aggressive advertising. They have made important improvements to the talking machine department on the second floor, including a new demonstrating room partitioned off on the street front, where plenty of light is afforded.

The Salter Manufacturing Co., manufacturers of talking machine cabinets, report that November and December were the biggest months in their history. Although they have commenced making record cabinets, in addition to their extensive line of music cabinets a couple of years ago, they issued their first complete record catalogue last fall, showing a number of attractive new styles. They proved distinct winners from the start.

Kreiling & Co., manufacturers of the Tiz-It all-metal horn connection for cylinder machines, reports a long list of dealers who have recently taken hold of their specialty in addition to the many who have handled it with excellent results for the past two years. The company commence the new year with additional facilities for meeting the steadily increasing demand for their product.

The Chicago Case Co. are more than justifying their reputation for carrying in stock cases of their own manufacture for all classes of machine. They have succeeded in keeping up with the constantly changing Victor models, an accomplishment which speaks volumes for the company's enterprise and aggressive desire to meet every possible demand of the trade.

Frederick Sheppy, proprietor of the Crescent Talking Machine Co., is seeking a downtown location, and by the latter part of the month will have a completely equipped shop in a central location, where he will do a general wholesale talking machine repair business, catering to jobbers and dealers. Mr. Sheppy is an expert of long standing, and should make a success of his new venture. Mr. Sheppy has invented an automatic brake, which fits any Victor machine and automatically stops the machine at the completion of the record. It works equally well with any size record. It also starts the machine automatically when the sound-box is placed in position. He expects to have it ready for the market in about a month.

Elmer A. Phillips, has been made buyer and manager of the talking machine, musical instrument and toy departments of Rothschilds, succeeding A. S. Thompson, who held the position for so many years. Mr. Phillips comes from the East. He was buyer of toys and sporting goods for Jordan, Marsh & Co., for many years, and for a time had the musical instruments and talking machine in his charge, but relinquished it because of the multiplicity of his duties. He appears to me a keen, energetic man of executive ability, and says that the big talking business of the concern will be featured to a greater extent than in the past.

H. C. Kibbey, of H. C. Kibbey & Co., has just returned from a visit to Binghamton, N. Y., where he left a large order for the electric pianos manufactured by the Automatic Musical Co., for whom he is the Chicago representative. Kibbey & Co., by the way, have in their extensive sales rooms in the Republic buildings, one of the most extensive displays of automatic coin-controlled amusement machines of all kinds to be found anywhere. They are agents for Caille Bros., of Detroit, and show their full line, besides many other goods in the coin-operated machines of all types. In fact, there is nothing in the automatic field that they cannot procure.

LYON & HEALY'S HOLIDAY WINDOW DISPLAYS.

Attracted Considerable Attention and Praise from Experts—Gives an Idea of How Window Space May be Advantageously Utilized and Made to Pay a Profit.

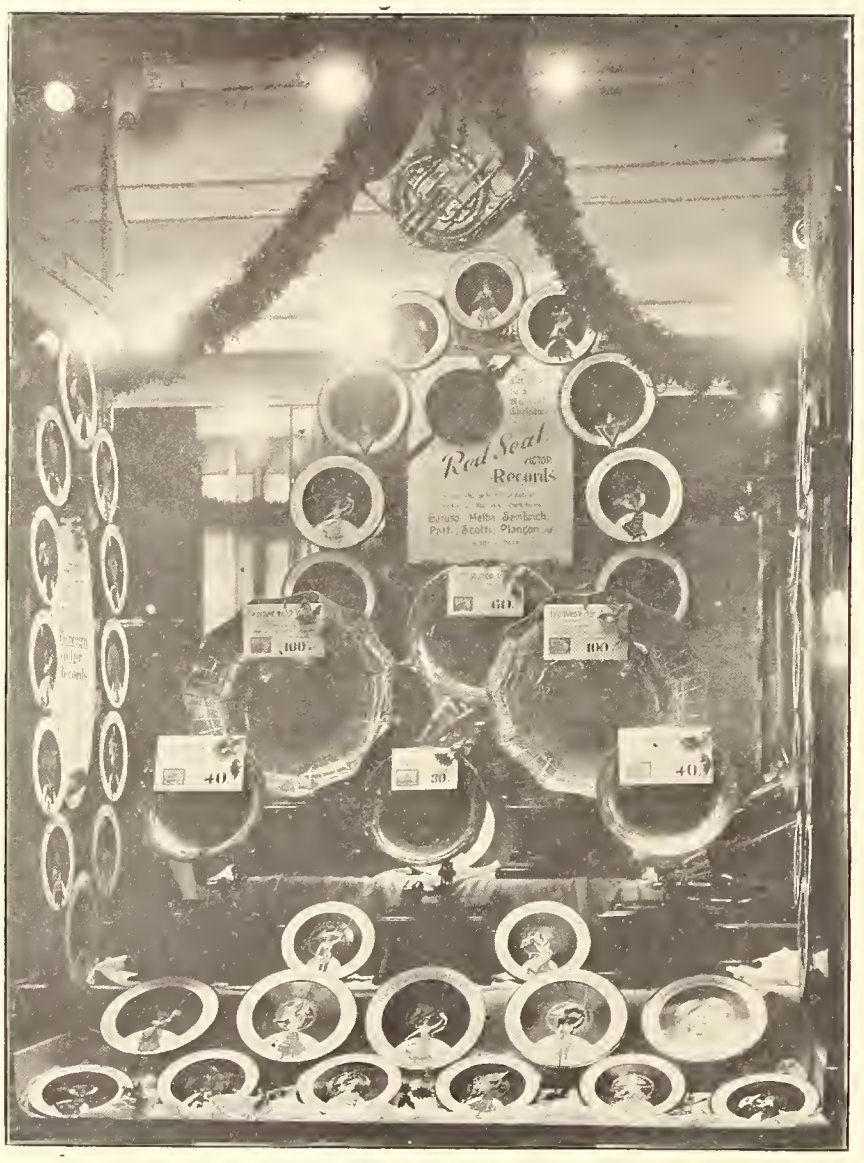
(Special to The Talking Machine World.)
World Office, 195 Wabash Ave.,
Chicago, Ill., Jan. 7, 1907.

Lyon & Healy's holiday window displays attracted a great deal of attention, and unquestionably proved an important factor in the big business done by the house during December. Eight of the thirty windows were devoted to talking machines. The accompanying illustration shows the elaborate display made in the window on the Wabash avenue front next to the main entrance. It was an "all-nation" Victor display and furnishes a fine example of special exploitation.

On each side and in the center of the window were large oval frames, to which were attached 44 Victor records, 36 ten-inch and eight 12-inch. These records consisted of national airs, folk songs and instrumental selections, representing no less than 24 different countries. Encircling each record was a white ring of paper bearing the title of the record. At the bottom and extending up over the record to some extent was attached a cut-out picture in colors of a girl clad in the costume of the country represented by the record and waving aloft its flag. These "flag girls" attracted a great deal of attention on the part of both Simon-pure Americans and those of foreign birth. It certainly called attention to the completeness of the Victor catalogue. Even flag girls from small countries like Portugal, Switzerland and Denmark, were noticed gracing records from their respective countries. One of the several large signs in the window read as follows: "If you want to gladden the heart of your German friends or your friends from France, Bohemia, Sweden or any other European country, why not secure some of the marvelous Foreign Victor Records? It is difficult to find anything that will touch the hearts of people more than their own sweet songs in their own native tongue." The center of the window was built up with a series of steps, on which were displayed various types of Victor machines bearing cards giving the price and a brief description.

On the Adams street side of the store eight windows were devoted to talking machine displays. Six of the windows were alike in general appearance. As in all of the other windows a beautiful green garland was hung from the center of the ceiling, but instead of band or orchestra instruments suspended by red ribbons the pendant was a large oval frame containing a crayon portrait of a Victor Red Seal artist. Those represented in the six windows were Schuman Heink, Emma Eames, Louise Homer Sembrich, Scotti and Plancon. To each frame were attached five of the singer's records. Each of these records was also framed in a white label bearing the title of the selection, but instead of the flag girl there was at the lower part of the circle a large V, 3 inches high and within which appeared a small cut-out picture of the artist. On the floor of the windows were displayed Victor machines and supplies. One of the signs suggested by Manager Goodwin, of the talking machine department, read: "The Victor Talking Machine is the most unselfish Christmas gift. Bought for one, it plays for all."

The seventh window on the Adams street side exploited the Language phono course department. Seated before an Edison phonograph was the life-size figure of a young woman with the hearing tubes to her ears and apparently following with the text-book before her. The window was fitted up to represent a cozy library scene and presented a "homey" look which could but appeal to the passer-by. The windows were, of course, the work of Ellis Hansen, the first window-trimmer, and who has become famous for his skill in procuring unusually effective results with goods which do not naturally lend themselves to the varied display furnished by other lines of trade.



LYON & HEALY'S HANDSOME WINDOW.

EDWARD H. UHL'S SUCCESS.

From a Humble Start He Has Become a Personality of Importance in the Talking Machine Trade—His Views Regarding General Conditions, Person and Prospective.

(Special to The Talking Machine World.)
World Office, 195 Wabash Avenue,
Chicago, Ill., Jan. 7, 1907.

From newsboy to western manager of one of the largest talking machine automatic instrument and musical merchandise houses in the country is the record made by Edward H. Uhl. When he was fourteen years old he commenced carrying papers for the News, of Indianapolis, his native city, and built up a profitable business. He developed salesmanship qualities which attracted attention. After four years of paper selling he spent seven years in the wholesale toy, notion and musical instrument departments of one of the large Indianapolis houses. Then came the opportunity to go with Rudolph Wurlitzer & Co., of Cincinnati, traveling Indiana and Illinois for them. He made good, and after two years his territory was extended to include that west of the Mississippi as far as Denver and north as far as Duluth.

As a result of his energetic and intelligent work, the western business increased to such an extent that the advisability of Chicago headquarters became apparent. The start in 1901 was humble, the Chicago branch consisting of one room in Kimball Hall, equipped with a desk and a line of samples, and Uhl when he wasn't out hustling for business.

Mr. Uhl soon saw the advantage of carrying a stock of goods. As always he moved carefully, and the addition of three rooms accommodated the initial stock. The business grew and removal was made to the third floor of 298 Wabash avenue. Another year brought with it the necessity of larger quarters for the wholesale and also a conviction that a retail store would prove a paying venture. The main floor, basement and the fifth floor of the same building were secured. Talking machines were added in both a wholesale and retail way at this time.

Horn Cases

ASK FOR OUR CATALOGUE

CHICAGO CASE MFG. CO., 142 and 144 West Washington Street CHICAGO

Last January, finding it impossible to get a long lease on the quarters and foreseeing a steadily growing business, Mr. Uhl made one of the important Wabash avenue deals of the year, securing a twenty-year lease on the Fisher property at 266 and 268 Wabash avenue, which was remodeled throughout, the main floor being devoted largely to talking machines. The store is one of the best arranged in the country, with its magnificent general salesrooms, admirably arranged private record rooms, with the general offices and wholesale talking machine department on the entresol floor.

The wisdom of securing so large a building has already been demonstrated, and the business has increased to such an extent that the occupancy of the entire building is evidently a matter of the not far distant future. Already the company carry as complete a stock of musical merchandise, Victor and Edison talking machines and automatic instruments as can be found anywhere. The growth of the busiuess has been the talk of the trade.

EDWARD H. UHL.

In an informal chat on trade conditions the other day Mr. Uhl remarked that while every department of their business had made a large increase in 1906 over 1905 he was especially surprised at the record made in automatic instruments. "You will find many people who think that the automatic musical instrument has reached its height," remarked Mr. Uhl, "but I am very sure that they are just as badly mistaken as were the anti-talking machine prophets a few years ago. I believe that the automatic musical instrument business is in its infancy, and that the next few years will witness the introduction of many new inventions which will greatly surprise the music-loving public. The time is coming, mark my word, when practically every hotel and restaurant in the country will possess an automatic instrument of some kind, representing either a complete orchestra or a complete band."

Mr. Uhl looks for a larger trade in 1907 than in 1906. The dealers with whom he has come in contact by mail and personally report that they never had such a holiday business, and the orders now being received speak of depleted stocks and confidence in a brisk trade to come. "It must be remembered," remarked Mr. Uhl, "that, notwithstanding the growth in popularity of the talking machine with the wealthier classes, the great bulk of the business is with those in moderate circumstances—the wage-earners. The numerous advances in wages the past three months has increased the purchasing capacity of these people, has given them confidence in the future and serves to loosen up their purse-strings. The farmers were never in better condition, and, take it all in all, the outlook prospects are in favor of the biggest year the trade has ever known."

VICTOR VS. LEEDS & CATLIN SUIT.

Decision Handed Down by Judge Lacombe in Favor of the Victor Co.—Fines the Defendants One Thousand Dollars for Contempt—Decision Appealed and Stay Secured.

The eagerly looked-for opinion in the case of the Victor Talking Machine Co., Camden, N. J., against the Leeds & Catlin Co., New York, was handed down by Judge Lacombe, Circuit Court of the United States, southern district of New York, on Jan. 5, 1907. The hearing was up November 30, involving proceedings for contempt of court in disobeying a permanent injunction, affirmed on review by the United States Court of Appeals, second circuit. The defense urged that the Berliner patent, which has been sustained twice on appeal, covered the machine only, but not the record. Judge Lacombe now decides it a "case of contributory infringement," and fines the defendant $1,000 for contempt, the collection being suspended pending appeal. The complete text of the opinion follows:

"Circuit Court of the United States, southern district of New York. Victor Talking Machine Co., et al., complainants, against Leeds & Catlin Co., defendant. Aside from any other questions arising upon this motion as to disobedience of injunction order, I am entirely satisfied from the proofs that defendants, not only in the instances set forth in complainant's moving papers, but in very many other instances, have manufactured and sold the records of claim 35 with the intent that they should be used in combination with the other elements of that claim in machines other than the 'mechanical feed.' Indeed, it is difficult to escape the conviction that the larger part of defendant's sales were contrived by them to enable the owners of reproducers purchased from complainant or its licensees to produce such musical pieces as such owners might desire to hear, through the co-operation in combination with such reproducers of records made by defendant instead of records made by complainant.

"No effort to restrict the use to which defendant's discs should be put by notice on their face or otherwise was made until after motion, and the affidavits are not as satisfying as they might be that such notice has since been affixed; and such notice might fairly go further and advise the purchasers that to use it on one of complainant's machines would make the user an infringer. This seems to be a case of contributory infringement—an entirely voluntary and intentional one—not in any wise excused by the circumstance that complainant had theretofore sold reproducers combined with other records to such owners. (Am. Graph. Co. v. Leeds, 87 F. R. 873.) Nor is the substitution of these new records, bought more frequently in order to increase the repertory of tunes than as substitutes for worn-out discs, and wholly unlike the toilet-paper in Morgan envelope case (which was destroyed by a single use) in any legitimate sense 'repairs.' (See Davis Electrical Works v. El. Light Co., 60 F. R. 276.) Nor is the advice of counsel a sufficient excuse, although where it has been honestly relied upon a heavy penalty will not usually be imposed, but only a sum sufficient to reimburse the moving party and act as a deterrent from future infringing actions.

"Defendant is found in contempt and a fine imposed of $1,000, one-half to United States, one-half to complainant. Collection will be suspended pending appeal."

LEEDS & CATLIN SECURE STAY.

Regarding the stay granted the Leeds & Catlin Co., in their suit with the Victor Talking Machine Co., decided in favor of the latter by Judge Lacombe on January 5, Louis Hicks, counsel for the former concern, furnished The World the appended written statement:

"Under the orders signed January 11, 1907, by Judge Lacombe, in the United States Circuit Court, the right of the Leeds & Catlin Co. to sell disc records for use on all mechanical feed device machines is again established. In addition the Leeds & Catlin Co. have the right, under the orders of the court, to sell disc records, pending appeal, on all licensed Victor, Columbia and Zonophone machines and all other machines licensed under the Victor Co.'s patent, No. 534,543, in replacement of the record thereof. On the settlement of the orders Judge Lacombe stated that the question raised was a pure question of law, which should be passed upon by an appellate court. Whether the Victor Co.'s patent on the swinging arm machine has expired or not is a question which the Leeds & Catlin Co. are taking to the Supreme Court of the United States."

E. F. Leeds, president of company, said to The World: "This stay clears the way for the suit which will determine whether or not the record is or is not an integral part of a talking machine and as to the validity of the existing patents. We are now in a position to continue the manufacture of records, and will continue to put out our monthly lists as heretofore, as the stay is indefinite and will continue in force until the decision of the suit, and of that we can foresee but one ending, and that in our favor."

NEXT MEETING OF ASSOCIATION.

The next meeting of the Eastern Talking Machine Jobbers' Association will be held to-morrow (January 16) at the Grand Hotel, 31st street and Broadway, New York. The session will commence at 2 p. m. As the hotel will be made the headquarters for the talking machine trade during the Automobile Show at Madison Square Garden, which will be open from the 12th to the 19th, a large number of representative jobbers are expected to be present. Formal notices to this effect were sent out by Secretary Jacot last Wednesday, which were accompanied by printed copies of the constitution and by-laws.

F. W. Woolworth, of F. W. Woolworth & Co., who own a chain of five and ten-cent stores, the president and controlling stockholder of the Musical Echo Co., of Philadelphia, Pa., has been investigating a large piano player manufacturing plant, contemplating removal from the Middle West to the East, providing sufficient capital can be raised, with a view of acquiring an interest. As Mr. Woolworth is rated at about the $10,000,000 mark, the people having the proposition in hand are sanguine he will advance the major part of the finances.

NEW YORK, JAN. 15, 1907.

TALKING MACHINE men who have watched the upward trend in everything in the industrial line are now asking if there will be an advance in wholesale prices of talkers during the present year.

As we view the field, it is a mighty difficult question to answer, for, according to all generally accepted rules in business, the manufacturers would be perfectly justified in advancing prices, because for months past they have had to pay increased rates for everything which enters into the composition of talking machines. We may say that each and every one of the metals used has been advanced materially. All of the finer woods have gone up at a surprising rate, and even the ordinary boxing lumber has advanced, so that it cuts no unimportant figure in the annual expense account. Labor, too, and general expenses have joined the upward trend in such a way that the talking machine manufacturers have found, after a general summing up at the close of the year, that they have been conducting business on a thin margin of profit.

IN fact, to-day, if it were not for the increased business that is conducted by the leading concerns the profits would be indeed small, for it must be conceded that the profit on a talking machine, when every legitimate expense has been charged against it, is very meagre. And still the tide of expense to market a product is steadily rising. Therefore, the retailers should understand that up to the present time they have been specially favored by manufacturers who have not increased their wholesale rates. In the meantime the manufacturers have sought by every possible way to reduce the cost of creating instruments without charging up to the retailer a fair advance. They have perfected systems in their factories, and have sought constantly to hold down the expense account by systematic application of rules in every department of the business. THE retail trade has profited to a considerable degree by these conditions, and it is doubtful, however, how long they may be continued in vogue. In Europe prices have been marked up, and it may be said that machines and records are sold at better prices than in the American market. Whether this advance will come or not we do not know, but it is well to understand the true condition of the manufacturer to the retailer, and what he has done thus far to give the latter every advantage which could reasonably be expected in a business enterprise.

THERE are some, however, who believe that a rise is inevitable. Of that we cannot say. It may be remarked that January of the present year opens up with brighter prospects than ever before, and there is no reason why 1907 should not surpass the year so recently laid to rest in point of business accomplishments. Labor is unusually well employed, and in the great centers of trade activity the weekly distribution of wages is enormous. Such conditions must materially benefit the local talking machine dealers, and in the great West there is every indication of an early spring trade and one of unusual trade strength. The farmers are in a better position to buy than ever before, and, judging from the demand for higher grade instruments, it is apparent that they desire the best.

It is surprising, when we consider the increase of sales in the high-priced instruments. They have steadily advanced in numbers until to-day it is no unusual transaction to dispose of a high-priced machine which only a short time ago would have seemed to be a rare trade occurrence.

JANUARY, of course, according to the traditions of the talking machine trade, is a dull month, and we wonder if its dulness is not accentuated by reason that a certain amount of energy is withdrawn from the selling department of business. Talking machine dealers have gotten into the habit of believing that January is a quiet month, consequently there is a lessening of energy, and January invariably lives up to its old-time record as a dull month.

Now, is this good business? Should not there be a determined effort to make January a record-breaker for increased business? We note from the advices which reach us from our various representatives in many cities that the talking machine men are using but little advertising space for the present month.

IT is a mistake to think that all of the sales have been made up to Christmas, and that it is necessary to sit down and wait for new business to develop after the holidays. Such a belief is a fallacy. There is always plenty of good business if a man goes at it right to win it. There is no surer way to lose trade than to remain inactive. A slowing up in the advertising department of the business means that the attention of the purchasing public is not drawn to the talking machine. The people are not attracted to their special merits by reason of the exploitation of the machines in the local papers.

IN our opinion January could be made a satisfactory business month. Its record in a trade sense would be pleasing if the right means were taken to accomplish the desired end. The manufacturers surely have kept up advertising splendidly in the magazines of great circulation; they are doing their part, but it is up to the members of the local trade to keep up the interest in talking machines. It should not be permitted to lag for a week nor a day. The best way to make 1907 a record-breaker is to use plenty of printers' ink; the investment will bring good returns; there is no doubt about that.

THE far-reaching effect of good advertising is surprising. It will build up an entire industry, and its absence will oftentimes shrink a trade down to a mere nothing—a shadow.

The decline of the American bicycle is largely attributed not to a trust combination, or not to the sudden popularity of the automobile, but to the fact that advertising was withdrawn from the great magazines and the local papers, with the result that interest languished, and the bicycle trade practically became obsolete.

In England the same condition existed until the manufacturers decided after a meeting to inaugurate a lively advertising campaign. This they did, and with the result that the bicycle factories have been running day and night in England to meet the requirements of their trade.

IT will not pay the talking machine people to drop out of local mediums, and the manufacturers cannot reasonably be expected to enthuse the local trade. The dealers must do that for themselves, and if they will take our advice they will start in now to exploit their product properly and not be satisfied with the idea that because many say January is dull that it should be in a trade sense. Trade is what we make it, and with general conditions so prosperous, and with the distribution of over $130,000,000 in dividends during the month, with a largely increased national pay-roll, with the trade activity everywhere, there is no reason why January should be a dull month in talking machine circles. It pays to keep everlastingly alert in order to achieve business success, and alertness is another name for working every possible avenue to acquire trade legitimately.

IT is probable in the next issue of The World we shall be called upon to announce some trade moves of considerable importance. These matters are now pending, and it is not deemed well to announce them in advance.

ONE talking machine man remarked recently that there were not enough trained young men to go round at present in the industry. The call was too great for them.

Quite natural. The industry has grown at such a phenomenal rate within such a brief period of time that we have not had time to raise and educate a sufficient number of young men to meet the entire demands of the trade. However, it may be said that there is to-day a dearth of steady, intellectual, ambitious young men in almost every trade. The question is, Are the younger Americans becoming too indifferent to the possibilities of trade and commerce? Are they not serious-minded enough to see that their future depends wholly upon their own ability to successfully fill positions? There are plenty of men who to-day have no knowledge of the inner conditions of a business. They do not seek to advance themselves by acquiring an intelligent insight into trade conditions. It pays to put thought and energy into any profession. Without the necessary concentration success is impossible.

HAPPENINGS IN THE EMERALD ISLE.

Prosperous Trade Being Enjoyed This Winter —Some Novelties in "Talkers"—Unique New Year's Greeting—The Whistling Language Exploited.

(Special to The Talking Machine World.)

Belfast, Ireland, Dec. 31, 1906.

North of Ireland dealers have been enjoying a specially prosperous winter's trade, and they look forward hopefully to the first three months of the new year for the completion of what they are certain will be a record seasou's output of talking machines and records.

Although the "Auxeto-Gramophone" (the nomenclature recently adopted by the Gramophone Co. for the Auxetophone) maintains its premier place in public estimatiou, the "Sheraton" gramophone and pedestal, which sells at £30 (or $150), has been much admired. It is of handsome mahogany, beautifully inlaid with satinwood, and occupies "the place of honor" in T. Edens Osborne's reception room.

The latest novelty—on view also iu same apartment—is "The Idealophone," though the "Discalarmophone" would be a more descriptive and appropriate appellation. Briefly, it is a disc instrument, the mechanism of which is set in motion by the lever attached to an alarm clock. The latter is neatly fitted in the cabinet of the machiue. A gramophone or other disc record takes the place of the "nerve-killing" bell and the sleeper is aroused from his slumber to "the melodious strains of music." The record used to demonstrate the machine is certainly "in harmony with the fitness of things," namely, "Rising Early in the Morning," a popular gramophone comic song by Harry Lauder.

Messrs. Smyth & Co., of Donegall street, Belfast (whose principal is R. Gordon Smyth, the popular traveling representative of the Gramophone Co.), report excellent busiuess. Their trade has been developed on price maintenance lines, aud they accordingly enjoy the confidence of their fellow traders, and furthermore, they congratulate themselves that their name has never appeared on any "Suspended List."

One of T. Edeus Osborne's recent novel experiences was a demonstration—in his well-known "sanctum" at Scottish Provident Buildings—of the most unique language in the world, the whistling language of the inhabitants of Gomera (one of the Canary Islands). A friend of his, Ernest E. Donnan, of Belfast, who resided for some time in "The Canaries" (and who is a phonograph enthusiast), fortunately had his Edisou "Home" with him during his sojourn there, and succeeded in securing three records of the whistling language, made under his supervision by two of the natives, Don Jose Placencia Herera and Don Ramon Santiago, in the capital of Gomera, San Sebastian. In ordinary conversation the inhabitants speak Spanish, but when out of talking range the whistling language is employed with which couversations can be carried on even when the speakers are separated by a distance of a mile and a quarter. It may be here stated that the British Anthropological Society has interested themselves in these rare records, and arrangements have just been completed for a reproduction of them before a meeting of the fellows of that association.

Gomera is an island rarely visited by "the outside world," although a mail steamer calls every ten days. For more than a quarter of a century scientists and travelers have, in their contributions to the press, enlarged upon the unique character of the whistling language, Gomera being the only knowu country where it is used.

It can be safely affirmed that the records alluded to are the first ever made of the Gomerian language by any talking machine. This island (Gomera) is specially interesting to Americans, for Columbus called thereat on his second voyage to "the new world," and Mr. Donnan visited and photographed the identical house in which the great navigator passed three nights, also the church, still in excellent preservation, in which he worshipped while in that far-away island.

The Gramophone Co. (London) are undoubtedly the most prosperous and "go-ahead" firm connected with the talking machine industry of Great Britain. The latest manifestation of it was at Christmas, when every dealer in the British Isles received a gramophone record, by means of which the manager (S. W. Dixon) expressed his own and the company's thanks for past favors and his best wishes, and those of the gramophone staff, for "A Merry Christmas and a prosperous new year. When this record was placed on a splendid "De Luxe" gramophone, a customer who was present, exclaimed: "Bedad! that's the first time I ever heard a Christmas card talk."

This being the last day of 1906 on which these jottings are being mailed, I desire to say that Belfast, the business center of Irelaud, greets New York, the commercial capital of the United States, and drinks to the health and prosperity of her "American cousins" with every good wish for their happiness during the new year, and especially of the "talker" section of Uncle Sam's family, and couples with the toast the name of one who is respected and esteemed all over the world, Thomas Alva Edison, whose inventive genius has contributed so much to the pleasure, amusement and education of vast numbers of every nationality.

SOME "CHATTY" LITERATURE.

Issued by the Tea Tray Co.—"Chat" as a Regular Visitor—Their New Catalogue.

The Tea Tray Co., of Newark, N. J., have recently sent out to their many frieuds a very attractive little brochure which they designate as "Chat." "Chat" is a bright little fellow, who carries a horn, of course, of "T. T." origin, in either hand as he makes his bow to the trade. It is the purpose of the company to issue this little booklet at regular intervals throughout the year, aud to have it replete with chatty little items regarding the talking machine business, and specifically treating of the Tea Tray products. No doubt the little fellow will receive a warm welcome at the hands o the members of the trade.

The very complete and interesting booklet issued by the Tea Tray Co., and referred to in the cover page of The Talking Machine World for December, has been highly praised for its typographical beauty, and the arrangement of its contents. It coutains illustrations and descriptions of all kinds and styles of horns, and talking machines as well as horn cranes and stands. This booklet is cleverly conceived, and must prove of great value to dealers and jobbers who desire to keep in touch with the products of the Tea Tray Co.

THE WINCHELL CO. ASSIGN.

The Winchell Co., of Boston, Mass., made an assignment for the benefit of their creditors on January 9, and J. N. Linscott, 48 Hanover street, that city, has been appointed assignee.

FRIEDRICH'S BIG BUSINESS.

The talking machiue department of Friederich's Music House, 30-32 Canal street, Grand Rapids, Mich., located on the third floor, is one of the most complete in the building. The house handles Victor, Edison and Columbia goods, and each make has a separate trying-out and exhibitiou room where numerous styles of machines and cabinets are shown. The record room is also of very large dimensions and contains several thousand records, disc on one side and cylinder on the other. A number of handsome machines are also displayed in the musical merchandise department on the main floor.

S. B. Campbell, formerly in charge of the New York office of the Columbia Phonograph Co., has become connected with the Disc Talking Machine Co., of 13 North Ninth street, Philadelphia, in an official capacity.

BUSINESS IS SATISFACTORY

With All Members of the Trade Is the Report at the Opening of the Year—No After-Holiday Quietness Evident This Year.

Jobbers are satisfied with the opening trade of the year, and feel gratified with the outlook. The past month has been one of great activity, and the jobbing contingent predict a better year than that of 1906. The manufacturers are still overwhelmed with orders, and on machines they find it difficult to meet the demand. The sales department of the National Phonograph Co. is still congested, and every effort is being made to fill back orders. The Victor Talking Machine Co. have been unable to catch up on Nos. 1 and 6 but are calculating to pull out of the woods before long. The Columbia Phonograph Co. are in the same predicament.

ECKLAND'S CLEVER BOOK.

O. W. Eckland, manager of the instalment department of the Chicago business of the Columbia Phonograph Co., is the author of a neat little booklet designed for the encouragement and instruction of the big force of instalment solicitors under his direction. Mr. Eckland is an instalment manager of mauy years' experience, having worked up from the ranks, and in this booklet he has crowded the results of his long and successful experience. We hope in our next issue to make some extracts from this publication, as we believe that they will prove of general interest.

A CLEAN RECORD SURFACE IS IMPORTANT

Very few people realize the importance of the record grooves on cylinder or disc records being free from dust or dirt. The frictional contact of the reproducer, sapphire or needle grinds the record engravings so that the record becomes badly worn where record grooves are not perfectly clean. On the disc record this causes a scratchy reproduction very quickly, and on a cylinder record cuts away the finer tones, which are so necessary to make a natural tone. Place record brushes for cylinder and disc records, provide a simple remedy for this trouble, as every record groove is automatically cleaned by a little brush 40 or 50 times before the sapphire or needle comes in contact with the grooves. A new style brush for the Victor tapering arm machine has been placed on the market, and the Blackman Talking Machine Co., of 97 Chambers St., New York City, who manufacture these brushes, have an advertisement in this issue giving full particulars.

ANOTHER $1,000,000 INCORPORATION.

Among the incorporations filed with the Secretary of the State of Maine this week, was that of the Automatic Phonograph Co., of Kittery, with a capital of $1,000,000, for the purpose of making sound reproducing instruments. President and clerk, H. Mitchell, Kittery, Me.; treasurer, S J. Morrison.

RECORDS BY ALESSANDRO BONCI.

The Columbia Phonograph Co., General, have secured the exclusive sale of disc records made by Alessandro Bonci, the celebrated Italian lyric tenor, now singing in grand opera at Hammerstein's Manhattan Opera House, New York. The Bonci records will continue to be manufactured by the Fonotipia Co. (G. Ricordi & Co.), of Milan, Italy, and only the gems will be selected. The first consignment of these records were sold before arrival, and were placed in stock only in the East. In a few weeks the company will have ready for delivery to the trade a new dise tone arm machine, type BN, especially adapted for iustalment purposes. It will be a $50 machine and a "seheme" eabinet, being introduced as a trade stimulator for the spring.

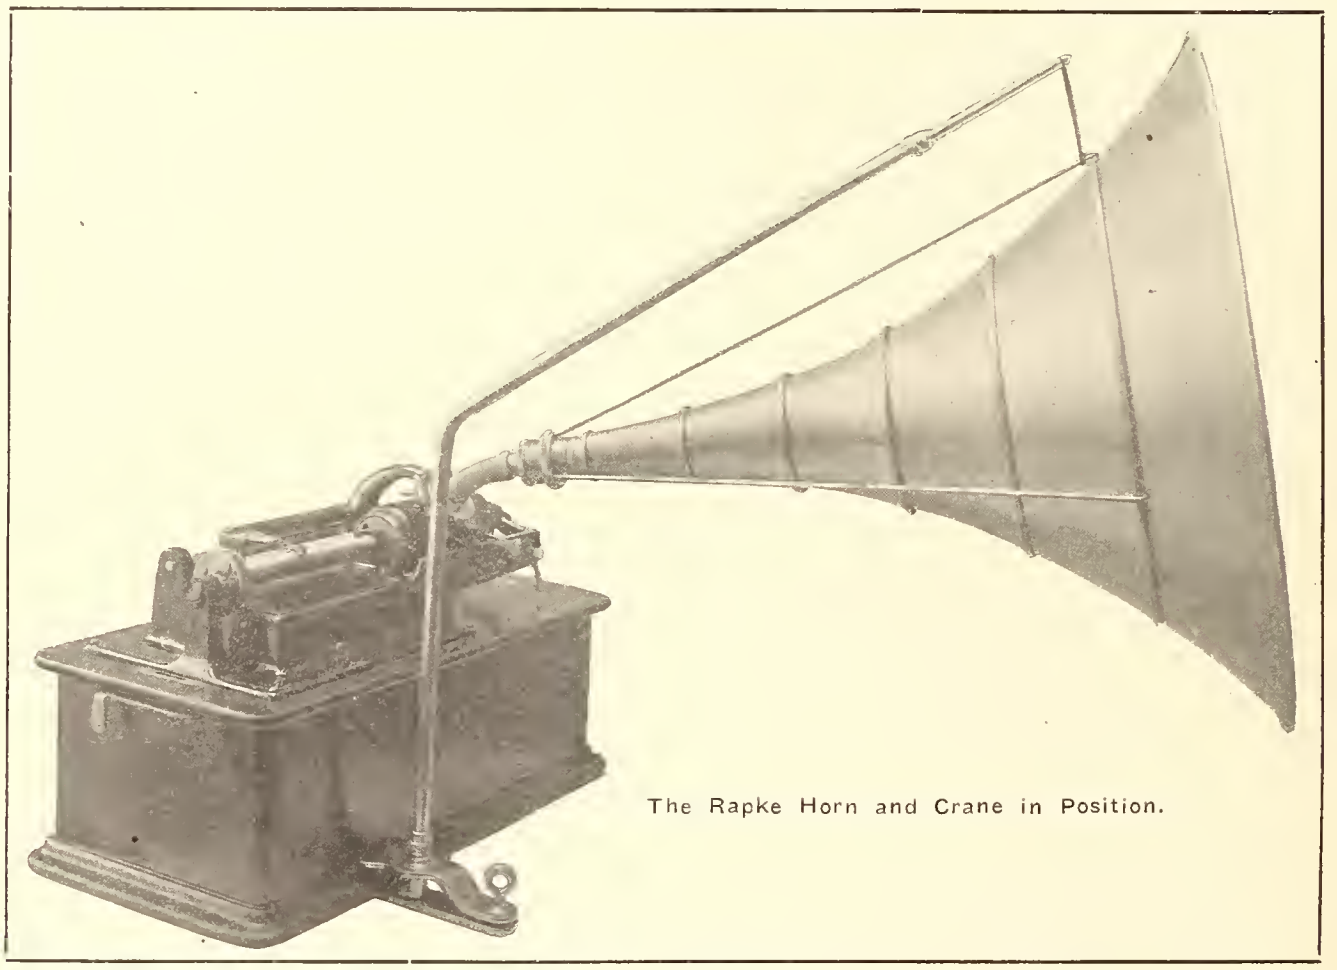
H. Ringel, of the New Jersey Sheet Metal Co., is making a very suecessful trip through the East.

New Year's Greeting to the Trade!

VICTOR H. RAPKE TAKES GREAT PLEASURE IN INTRODUCING HIS TWO LATEST SPECIALTIES

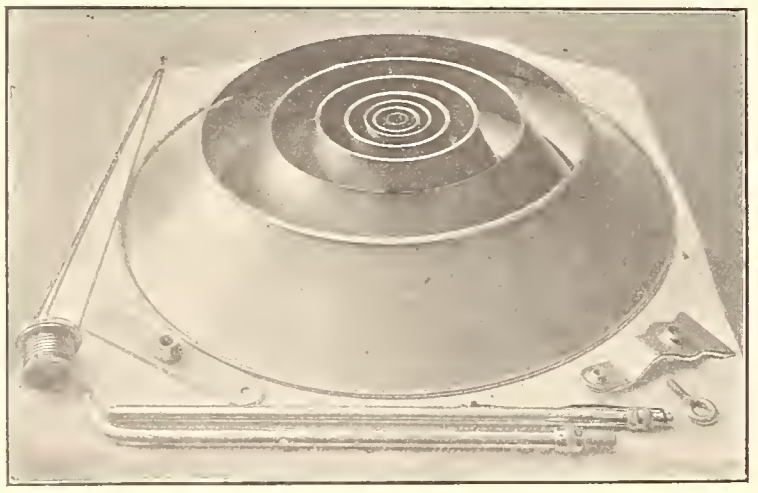
THE RAPKE HORN THE RAPKE CRANE

(Patents Pending)



The Rapke Horn and Crane in Position.

The horn reproduces the record naturally without that disagreeable metallic tone, and is entirely free of foreign noises, vibration or "rattle." Impossible to get out of order. Any person can set it up. Can be packed in small compass and sent through the mails. Can be put together or taken apart in a second. Locked or unlocked, this horn will sustain the weight of any man standing upon it. Can be used on any machine: Edison, Victor, Columbia, Twentieth Century, Zonophone, Auxetophone and all others.



Rapke Horn and Crane in Box.

The crane has been greatly improved and simplified. Cannot break. No castings used. No screws to lose. Cannot get out of order. Highly finished and nickeled.

Rapke's Specialties are sold only through Legitimate Representative Jobbers here and abroad :: :: :: ::

VICTOR H. RAPKE CO., MANUFACTURERS 255 E. 86th St., New York City

TRADE NEWS FROM ALL POINTS OF THE COMPASS

About February 1 the offices of the American Graphophone Co. and the Columbia Talking Machine Co., General, will be removed to the fifteenth floor of the New York Tribune building, recently enlarged, at the corner of Spruce and Nassau Sts. The entire floor will be occupied, and the offices are now being handsomely fitted up and decorated. This removal will place the entire staff and all the different departments together for the first time, a convenience to every officer and manager. They will have 2,000 square feet more in the Tribune building than in their present premises, 90 West Broadway, where they are scattered over three floors.

E. F. Leeds, of the Leeds & Catlin Co., New York, informed The World last week that they would be shipping their new line of cylinder records about the middle of the month. Loring Leeds expected to start on a two weeks' western trip on the 20th. Loring is a collector of fine books, pictures and violins, and of the latter he has several of the old masters, which he values around $2,000 each.

George Blackman, with the Blackman Talking Machine Co., New York, has been making a trip through Pennsylvania, and booked a batch of desirable orders.

The A. D. Matthews Sons, the oldest department store in Brooklyn, N. Y., have disposed of their talking machine stock and closed out that branch of their business. They figured as Edison jobbers and Victor dealers. John P. Kelsey, the manager of the department, is therefore at liberty.

Several talking machine concerns have been considering the opening of a branch retail store in the Arcade of the Metropolitan Life Insurance Co.'s beautiful marble building, which occupies the entire block bounded by Madison and Fourth Aves. and 23d and 24th streets. This is the home of The World.

Another magnetic talking machine is being heard of, and to bear the name of one of the large manufacturing concerns. The Telegraphone Co. claim to have the basic patents on such devices, and when the newcomer appears a stiff fight in the courts may be expected.

On the second of January Walter L. Eckhardt, manager of the Columbia Co.'s wholesale department, started Tom Murray and W. Morse on the road, to open up an active and aggressive compaign. C. S. Gardner is no longer on the company's wholesale selling staff, though he may assume another position in their employ

Edward Seymour, of New York City, at present conducting the Commonwealth Band and the Hamburg Concert Orchestra, also conducting a chorus of 150 at the Salem Reform Church, of Hamburg, Pa., and one of the world's greatest clarionet virtuosos, played a solo, "Down in the Cellar Deep," for the Telegraphone at the request of F. C. MacLean. Mr. Seymour was greatly pleased with the wonderful reproduction of this machine. The record was carried all over the West by Mr. MacLean and was heard by hundreds, all of whom were delighted with the reproduction, accuracy and clearness of the Telegraphone. The new models of the Telegraphone are a marked improvement over the previous machines, being more compact and greatly simplified. Mr. MacLean returned January 7, from a two months' trip in the West and East, where he interested the prominent jobbers in the dictating and amusement Telegraphone. Friday last he started for New Orleans and the Southwest, to be gone 60 days.

It is said a new line of red seal records is to be brought out by the Universal Talking Machine Mfg. Co., Newark, N. J.

Last week Walter L. Eckhardt, manager of the wholesale department of the Columbia Phonograph Co., General, made a short run from New York to Baltimore and Washington, D. C.

H. M. Holleman, an Edison jobber of Houston, Texas, is north on a visit of a couple of months, and last week was a visitor in New York City.

The National Phonograph Co., Orange, N. J., have announced a list of new German records made in the recording department of their Berlin office, to the number of thirty-five. Being made in Germany they are absolutely correct as to music, enunciation, etc., and they are sung by artists who sing in no other language.

Having sold their business, the Western Talking Machine Co., St. Louis, Mo., have been dropped from the list of Edison jobbers.

The Ball-Fintze Co., Newark, O., have opened a branch store at 108 West Third street, Cincinnati, Ohio.

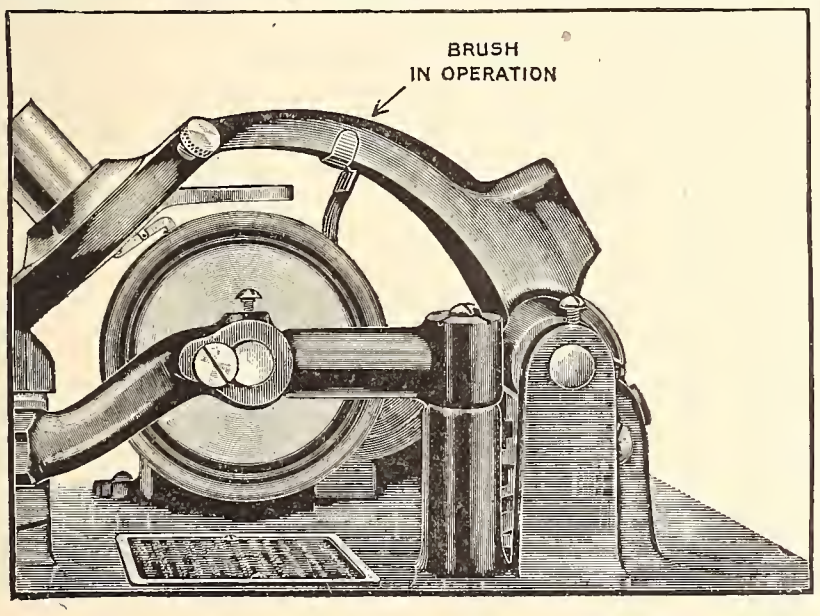
Sam Boord, of the Omaha Bicycle Co., Omaha, Neb., joined the ranks of the benedicts on the first of the year. They handle Edison and Zonophone goods, and Sam's matrimonial record will be heard of later. The World extends its heartiest congratulations on the happy event.

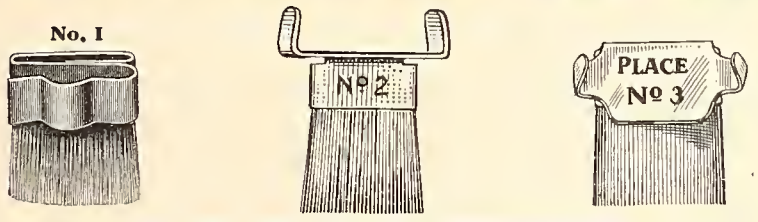
C. B. Haynes, Richmond, Va., writes he had a truly wonderful holiday season. Mr. Haynes is now the sole Edison jobber in that city.

The visiting jobbers in New York recently included G. L. Ackerman, of Scranton, Pa.; W. D. Andrews, of Syracuse, N. Y.; James Fintze, of Ball-Fintze, Newark, O.; Theodore F. Bentel, of Theo. F. Bentel Co., of Pittsburg, Pa.; W. J. Dyer, of W. J. Dyer & Bro., of St. Paul, Minn.; D. S. Johnston, of Seattle, Wash.; E. A. Clints-

THE PLACE AUTOMATIC RECORD BRUSHES *For EDISON PHONOGRAPHS and VICTOR TALKING MACHINES*

Patented Sept. 25 and Oct. 2, 1906. Others Pending.





CAN BE USED ON ALL PHONOGRAPHS

Removes lint and dust from record automatically. Saves Sapphire from wearing flat and prevents rasping sounds. Insures a perfect playing Record. It is equally as efficient when recording. It is too cheap to be without.

No. 1 fits Triumph. No. 2, Standard and Home. No. 3, Gem.

15 CENTS EACH

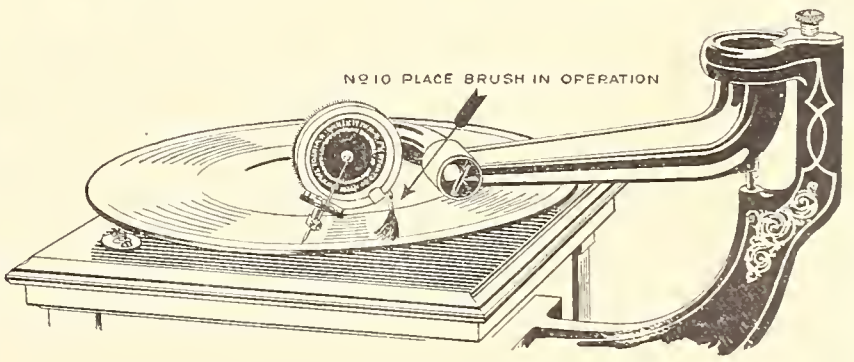
THE PLACE No. 10

DISC RECORD BRUSH

FOR

VICTOR EXHIBITION SOUND BOX

PRICE 25 CENTS



PRESERVES THE LIFE OF DISC RECORDS

Automatically cleans the Record Grooves and gives the needle a clean track to run in. Insures a clear Reproduction and prevents Record getting scratchy. Makes the Needle wear better. Dust and dirt in the Record grooves wear the Record out quickly and grind the Needle so it cuts the record. SAVE THE LIFE OF YOUR RECORDS.

BIG PROFIT FOR JOBBERS and DEALERS. Also FREE advertising matter. Prices restricted. Write for particulars NOW.

Manufactured by **BLACKMAN TALKING MACHINE CO.**

97 CHAMBERS STREET, NEW YORK J. NEWCOMB BLACKMAN, Proprietor

man, of Kohler & Chase, Oakland, Cal.; H. O. Pardee, of H. L. Ellenberger, New Haven, Conn.; A. J. Pommer, of Sacramento, Cal.; J. A. Rickard, of Schenectady, N. Y., and C. Carroll, of the Utica Cycle Co., Utica, N. Y.

After making a great success of their Trenton, N. J., store, which he opened, Robert L. Macnabb was transferred into the Greater New York territory by the Columbia Phonograph Co., general, as a mark of their appreciation. He is now the manager of their establishment on Broadway, Brooklyn, N. Y., and in that position has won several prizes offered by the company for the largest single month's business and the greatest expansion of trade shown by any individual store in New York City.

One of the enterprises in Youngstown that is doing a lot of growing is the Ohio Phonograph Co., which is managed and controlled by W. C. Norris. On Christmas Manager Norris banqueted the men who are known as crew managers in the different cities of the country where the Ohio Phonograph Co. are at present doing business. The banquet was given for the purpose of bringing the men together that they might become better acquainted with each other, and also for the purpose of talking over the affairs of the company. The Ohio Phonograph Co. was organized by W. C. Norris two years ago, and has grown to such proportions that to-day the company are said to sell 1,200 foreign-made phonographs per week.

After being in the piano business for thirty-five years, and known as one of the best men in the business throughout the Northwest, W. W. Warner, of Madison, Wis., has moved his piano warerooms from the store to the second floor of his building and put in talking machines instead. Mr. Warner has made a great success of his music business, and in making this radical change says he sees a brighter future for his talking machine department than he does for pianos. In fact, he frankly states that if any one had told him a year ago that he would make this move he would have called the person crazy. Mr. Warner is one of the exceptional instrument dealers who has amassed a comfortable fortune and who recognize the possibilities of the talking machine business at its proper valuation.

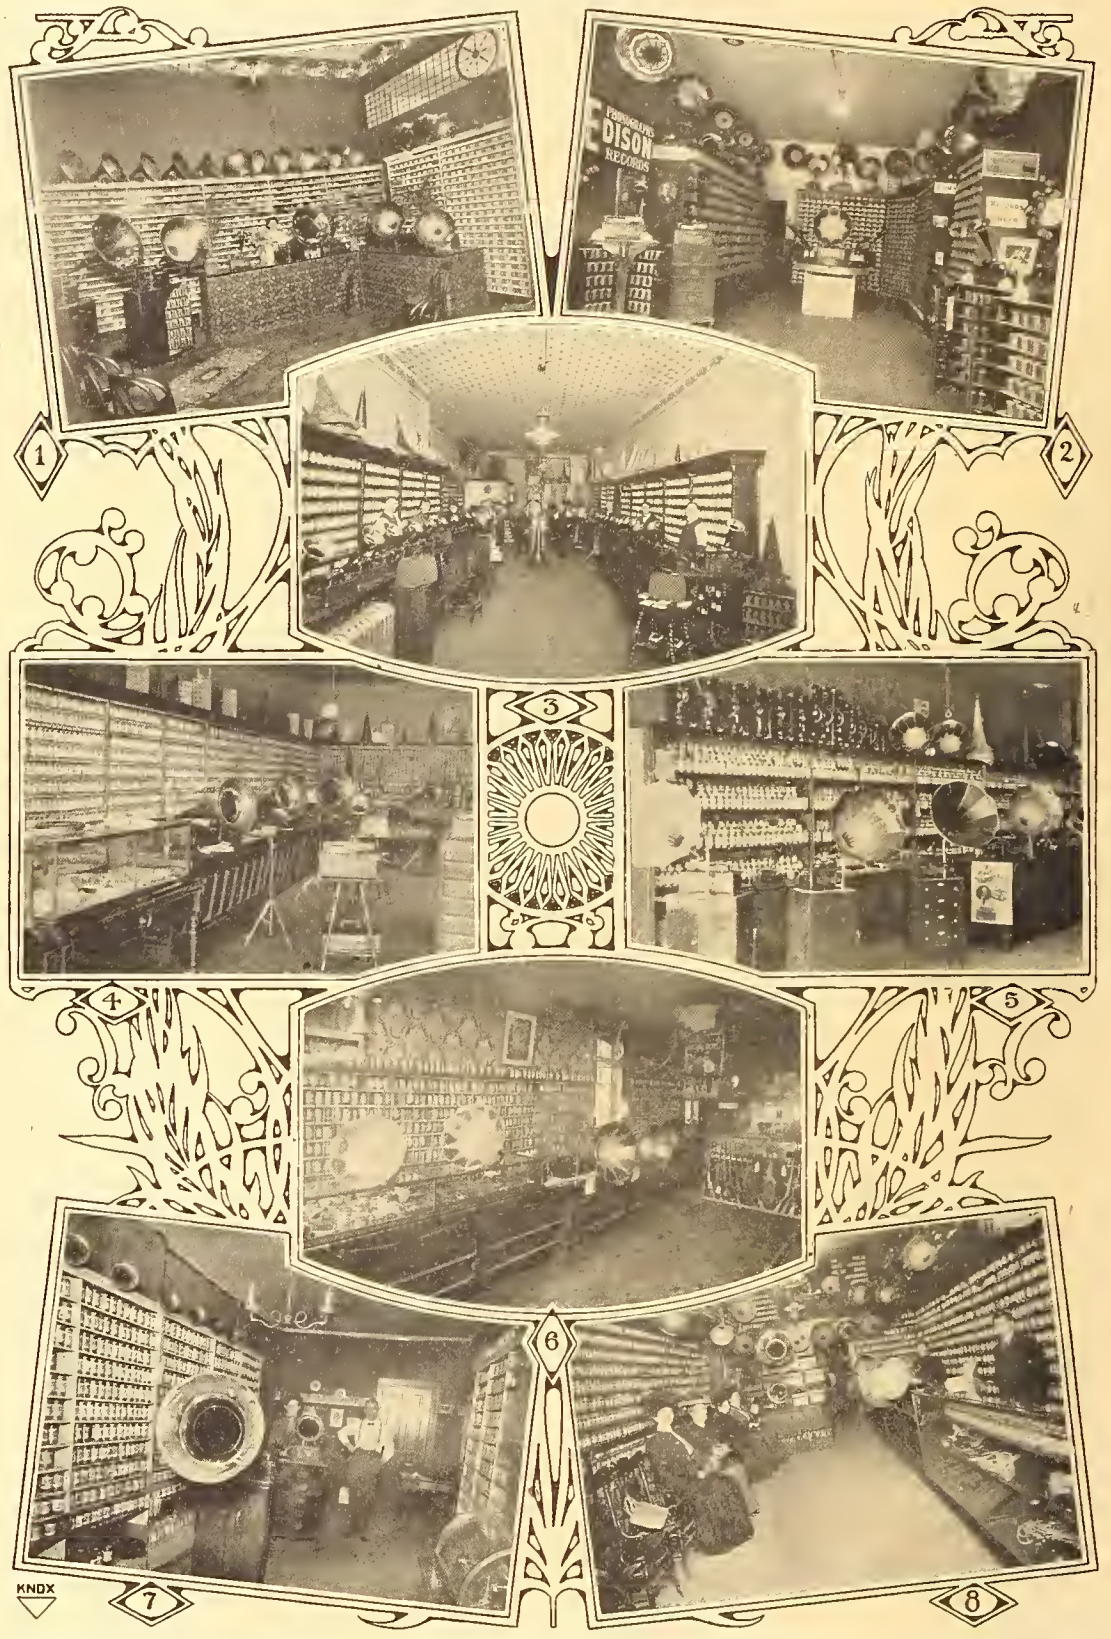
John W. McArthur & Son, Aberdeen, So. Dak., recently created Zonophone jobbers by H. A. MacMenimen are located in the midst of a great farming community and carry on a unique and very profitable business. They job wagons, pianos and a general line of musical instruments, and do a great trade in Edison goods. The firm have recently installed a system of selling talking machines on the deferred payment basis on a large scale, originated by Mr. MacMenimen.

The first list of selections for the Columbia's new "velvet finish" disc records, designed to sell for 75 cents retail, and be ready for the trade about the first of the year, will contain 500 titles. These have been taken as the expert choice of the company's store managers throughout the country. The new label, a fac-simile reduction of the catalogue cover, is a striking contrast in color arrangement.

After seeing the leading talking machine manufacturers and looking over the possibilities of the American market, Emil Pathé, of Pathé Frères, the famous record manufacturers of Paris, France, sailed for home last week. The firm have subsidiary companies in nearly all the European countries, and it is likely a similar branch will be established here. At one time Marcus Aurelius Miller had this scheme in tow.

Thomas E. Hough, the man with the automobile, Minneapolis, Minn., has opened up three new stores in the Twin Cities and is pushing the Zonophone line as well as the Victor and Edison goods. He is one of the most successful jobbers in the Northwest.

GROUP OF STORES OF EDISON JOBBERS AND DEALERS.



1. Taylor Bros., Houston, Tex. 2. Portland Phonograph Agency, Portland, Ore. 3. Minnesota Phonograph Co., St. Paul, Minn. 4. C. E. Wyeth, Newark, Ohio. 5. Frank Rogers, South Bend, Ind. 6. Geo. E. Buss, New Philadelphia, Ohio. 7. St. Paul Phonograph Co., St. Paul, Minn. 8. Spokane Phonograph Co., Spokane, Wash.

THE NEW RAPKE HORN AND CRANE.

Another Contribution by Victor H. Rapke Which Will Attract no Little Attention—The Rapke Co. Incorporated—Expect to Open Down Town Offices.

The Victor H. Rapke Co., of New York, have just placed on the market a new horn which has been highly praised by those who have had the privilege of examining it. In a chat with The World, Victor H. Rapke stated that the horn was built on correct acoustical lines, and added: "I have now overcome all obstacles and can reproduce the human voice correctly. My new horn carries the quality, gives the reproduction perfectly clear and without any vibratory influence. The natural sounds enter the narrow end, are conducted there through and emitted in magnified volume at the large end unchanged in quality.

"With my new crane," continued Mr. Rapke, "the trade are certainly pleased. One leading jobber writes, 'Your cranes are good—perhaps the best.' Another says, 'All out of your cranes, and it is a big seller.' I have scores of such letters, and it is very gratifying. I always furnish the highest quality of material in all the Rapke specialties, and in my page announcement in another part of this issue of The World, both of my latest specialties—the Rapke horn and the Rapke crane are illustrated and described."

On the 11th inst. the Victor H. Rapke Co., New York, was incorporated at Albany, N. Y.; capital, $25,000. Directors: Victor H. Rapke, Fannie Rapke and W. H. Miller, New York. The company expect to shortly open an office in downtown New York, doubtless on Chambers street, near the "bunch."

AMERICAN GRAPHOPHONE CO.'S ANNUAL.

The annual meeting of the American Graphophone Co. was held at the office of the company in Bridgeport, Conn., on January 14, 1907, for the election of a board of directors and the transaction of other business that may come before the meeting.

A new order book, specially ruled, with leather covers and bound with silk cord, has been sent their jobbers by the Victor Talking Machine Co., Camden, N. J., for the consumer to keep track of records used on the Victor Victrola. They are distributed gratis, and it is an excellent idea.

The Victor Talking Machine Co., Camden, N. J., were unable to fill the jobbers' requirements in time for Christmas trade, especially in Victor machines ranging from No. 3 to No. 6. Victor Victrolas were entirely out of the question.

Important to Leeds & Catlin Co. Dealers

RADIUM CYLINDER RECORDS

Our Company, through many years of hard, conscientious and well directed work, built up an enviable reputation all over the world as makers of Cylinder Records—enviable because our output so far surpassed all other cylinders made that our records were declared, by both dealer and public, to be a decided advance over everything of the kind on the market.

For some time past our Company has been manufacturing Disc Records exclusively (the Imperial is a product of our factory and we are proud of it—none better made anywhere). We have, however, now equipped our plant with new and up-to-date machinery and processes for the manufacture of Cylinder Records also, and we can and do assure our customers that the output will be fully up to the high standard heretofore attained by us.

It is interesting to note what Mr. Lionel S. Mapleson, well-known as one of the greatest living authorities on music in the world, has to say regarding our records.

Telephone Nos.

Telegraphic Address,
"Amidst, London."

PROPRIETORS:
THE GRAND OPERA SYNDICATE, LTD.
Secretary and Business Manager, Mr. Neil Forsyth.

Royal Opera Covent Garden, London, May 27, 1902.

LEEDS & CATLIN CO., New York.

Gentlemen:—Your matchless records have created a great sensation here, at the Royal Opera Covent Garden. All that hear them agree that your records quite eclipse those of all other makers. Although I live in an atmosphere of everlasting opera, yet when I require recreation I always find a real pleasure in listening to your artistic records, which are of uniform excellence. Of course your reputation is already made in America, but I thought you might like to hear that your fame has already extended to this side of the Atlantic. Believe me,

Faithfully yours, LIONEL S. MAPLESON.

The following is the February list of our Cylinder Records, which list will be rapidly and largely increased. We will, of course, keep in stock a complete assortment of the latest and most popular selections in songs, bands, orchestras, instrumental solos and dialogues.

Catalogues and other descriptive matter will be furnished on request.

FEBRUARY LIST OF RADIUM CYLINDER RECORDS

Manufactured by Leeds & Catlin Co., New York City.

101 My Little Drummer Boy (Mohr).....G. W. Myers
Splendid March song, drum effects.

128 Pedro the Hand-Organ Man. (Original.) Introducing organ and monkey: fight between Pedro and Irish woman, and finally the arrival of police patrol for poor Pedro....Spencer and Porter

The following is the exact legal position of the Leeds & Catlin Co. regarding its right to sell disc records:

Under the orders signed January 11, 1907, by Judge Lacombe in the United States Circuit Court, the right of the Leeds & Catlin Company to sell disc records for use on all mechanical feed device machines is again established. In addition, the Leeds & Catlin Company has the right, under the orders of the court, to sell disc records pending appeal on all licensed Victor, Columbia and Zonophone machines and all other machines licensed under the Victor Company's Patent, No. 534,543, in replacement of the record thereof. On the settlement of the orders Judge Lacombe stated that the question raised was a pure question of law which should be passed upon by an appellate court. Whether the Victor Company's patent on the swinging arm machine has expired or not is a question which the Leeds & Catlin Company is taking to the Supreme Court of the United States.

The attacks made upon the Leeds & Catlin Company by its competitors are conclusive proof of the superior quality of the Leeds & Catlin Company's product and the steady growth of its trade. Notwithstanding these attacks, we have for twelve years maintained our position against our competitors in the courts and in the trade.

TIMELY TALKS ON TIMELY TOPICS.

Whether the record manufacturers are rueing the day they lowered prices—just a year ago—seems probable from the general drift of talk leaking out from some of the plants and even discussed openly. Since then material of every description has advanced beyond the most careful calculations. Now this condition is cutting a figure in the production of the goods. F. M. Prescott, of the International Talking Machine Co., of Berlin, Germany, when revisiting his home in this country a few weeks back, frankly stated, in an interview with The World, that the American manufacturers of records and machines were working on too close a margiu. In other words, their selling prices were too low.

This expression of opinion is re-echoed by L. F. Geissler, general manager of the Victor Talking Machine Co., who, in a recent issue of The Music Trade Review, said: "Our great difficulty now is to maintain our selling prices at their present low level in the face of the enormous and frequent advances we are compelled to stand in costs of all raw material. The overhead charges, advertising and other expenses of a talking machine factory are appalling; and how to maintain the present selling prices (which are lower in America than in any other part of the world) is becoming a more serious question daily." This is gospel truth, every word of it. The manufacturing companies are bringing out new lines of records, larger sizes and of improved material, and on these goods a better price is realized, and rightly.

From correspondence and the reports of the road salesmen, it is gathered that the talking machine business is more prosperous in the West than in the eastern sections of the country. It may be greater efforts are being made to sell goods, or the talking machine is more of a novelty in the western territory. At any rate, whatever the cause, the heavier demand is coming from the Northwest and between Pittsburg and Denver. The East is by uo means slow, and the aggregate trade for the year runs into handsome figures, but the enthusiasm and vigor is not so apparent. As one progressive jobber explained, "there is probably more business as a whole, but it must be remembered more jobbers and dealers have come into the field, consequently it is divided up." The year that has just been entered is rosy with promise, and those in a position to know, freely predict a record breaker.

Mention of the growth of the trade in point of numbers is a reminder of a step said to have been taken by one of the big companies, in which a jobber of their goods was required to have out at least one traveling salesman. This reported move was subsequently denied, but the philosophy of such a movement is far from being out of order or heretical. A jobber is supposed to sell the dealer, and not simply be listed so as to obtain the extra discount that is utilized solely in retailing. Something of this kind will eventually come about, and it does not seem to be in the dim and distant future either.

There is a glorious and enthusiastic note, worth listening to and reflectiug upon, comiug from the National Phonograph Co.: "The curtain has rung down upon 1906 and with it has closed the greatest year that the Edison phonograph has ever known. In the language of the times, the year 1906 'made good' from an Edison standpoint. It opened auspiciously with trade in splendid shape and every indication pointing to a twelvemonth of great prosperity. Each new month since then has brought a greater volume of business than the previous one. Month after month the popularity of the phonograph has grown in an ever-increasing circle. To-day it occupies a position of unquestioned supremacy as the musical instrument of the masses, and it is rapidly fulfilling Mr. Edison's expressed wish that one may find its way into every home. Its merit has to a large extent dissipated the prejudice engendered by the early types of machine and by some of those even now before the public."

As a man of resources in his selling capacity, L. Kaiser, manager of the talking machine department of S. B. Davega, New York, is to be commended. His ideas are up to date and are nuggets of wisdom and common sense to a dealer desiring to make a success of his business. Besides, Mr. Kaiser is an inventor of no mean standing in the trade, and several of his improved devices are coming to the front.

Where American talking machines are subject to an ad valorem duty of 30 per cent. when going into Australia, by a new law, adopted October 2 last, if the goods are sent from Great Britain they are given a 10 per cent. differential advantage. In spite of this restriction, however, the Australian trade in our talking machines, records, etc., is increasing by leaps and bounds.

Since the rehabilitation of the Eastern Talking Machine Jobbers' Association the benefits conferred on its members are of the practical kind. The credit system adopted is self-recommendatory, is working admirably and preceding and during the holiday buying season it proved a sheet anchor of protection against undesirable accounts. The Association's meeting in New York during the Automobile Show came too late to be reported in extenso for this issue of The World, which was just off the press; but it goes without saying that the attendance was excellent and the results very satisfactory.

Last week the resolutions adopted at the meeting of the Edison jobbers ou July 20 last, and read at the banquet in the Waldorf-Astoria Hotel the same evening by the chairman of the committee, James F. Bowers, beautifully engrossed and framed, were received at the New York offices of the National Phonograph Co., 31 Union Square. The eugrossing is further enhanced by elegant illuminated lettering in gold and blue, an artistic border followiug out the same color scheme, into which are interwoven a faithful portrait of Thomas A. Edison at the top; W. E. Gilmore president of the company, on the left; F. K. Dolbeer, manager of the credit department, opposite, and C. H. Wilson, sales manager, at the bottom. A plain, rich gold molding, about three inches deep, incloses the resolution, the frame measuring 20 by 24 inches. Mr. Bowers transmitted the resolutions with a letter to Presideut Gilmore, timing their arrival so as to have them serve as a New Year's greeting besides. The committee having this matter in charge were: J. F. Bowers, of Lyon & Healy, Chicago; Robert L. Loud, Buffalo, N. Y.; Rudolph Wurlitzer, of Rudolph Wurlitzer Co., Cincinnati, O.; William D. Andrews, Syracuse, N. Y.; Sol Bloom, New York City.

At present this handsome testimouial of the Edison jobbers' appreciation of the courtesies extended them during the notable entertaiument by the company in July will be displayed in Mr. Dolbeer's office, but it will ultimately adorn the walls of Mr. Gilmore's sumptuous quarters in the company's new building at 10 Fifth aveuue, when completed.

Outside of the question of shortage in goods, no matter has troubled the manufacturers of records so much as the proposed revisiou of the copyright statutes. Of the legal aspects of the subject The World is confident the experts have covered fully, and little remains to be said, excepting in the nature of friendly commeut. For example, the bill contains 64 odd sectious, with paragraphical subdivisions running to the middle of the alphabet. That is the original draft courteously framed up by the Librariau of Congress for the convenience of the Congressional committees in charge. The public hearings last month developed a spirit of rancor and acrimony least surmised. The opponents of the bill handled their claymores in a vicious manner and certainly startled the sage legislators who are supposed to be the embodiment of all that is wise. Naturally a lot of claptrap crept into the proceedings, and hot air was on tap nearly every minute. Since that strenuous time the Register of Copyrights has gathered together the suggestions and changes which those interested would like made. Of course, these legislative helpings swell the length of the bill a half dozen times over, and just where the joint patent committees expect to get off, even the best informed are not prepared to say. The advocates of the proposed legislation declare some one has blundered, and are disposed to aver that Mark Twain's white flannel suit had a bad effect. Others assert the presence of Sousa and Herbert was detrimental. But the talking machine representatives seem pretty well satisfied with the outlook, and boldly declare no law will be enacted unless records are exempt.

With this turmoil it is not expected much progress will be made, as scarcely a branch of business affected but what has put in a "kick" of some sort. For instance, one of the oldest and best known book publishers in the country declared over his own signature as follows: "With all the energy and force which I possess I emphatically protest against the enactment of the copyright bill. Not only is it unjust to the American people, but it is complicated, harassing and annoying in the extreme." Now with such thought floating around, the record manufacturers may rest easy as to the passing of a harmful bill.

Collapsible horns are engaging the attention of the trade to a marked degree, and a great deal of curiosity is being evinced as to the ultimate outcome. In this community it may be remembered that Paul H. Cromelin, of the Columbia Phonograph Co., remarked once upon a time that the talking machiue of the future

Will it be noiseless and screetchless and scratchless?
Raspless and gaspless and hornless and brassless?

GRAND PRIX, PARIS, 1900 DOUBLE GRAND PRIZE, ST. LOUIS, 1904

GRAND PRIZE, MILAN, 1906

STORES IN ALL PRINCIPAL CITIES DEALERS EVERYWHERE

That the Telegraphone is one of the great big propositions in sound recording, all unbiased persons freely admit. The new models, covering the telephone, the commercial system and the amusement question, are certainly marvels of scientific development. The perfection of recording has yet to be mastered, beautiful as the results of the present day may be, and the Telegraphone is regarded as one of the instruments reaching toward this distinction with seven-league boots.

Recently a predilection for Milan-made records has developed. American manufacturers are looking for exclusive selling rights for the records of world famous singers who are controlled by a few celebrated Italian publishers. It must be acknowledged that the records manufactured in this center of ancient history and the best in modern music, are regarded as the finest in the art, and therefore they could be imported, plus the heavy duty, and still command a profitable price here. In fact, it is no longer a question of cost with the admirers of the talking machine—and their name is legiou; only furnish them the finest and they are satisfied. Briefly, the manufacturers are exerting every effort—sparing neither time nor money—to obtain the closest resemblance to the human voice and all its charming effects.

LEON F. DOUGLASS IN CALIFORNIA.

General Manager of the Victor Co. Snapped for The World—Steadily Improving in Health.

(Special to The Talking Machine World.)

San Francisco, Cal., Jan. 7, 1907.

The picture which I send herewith will doubtless interest the many friends of the Victor Co. throughout the country. The party with the

LEON F. DOUGLASS BUSY.

saw in his hand is Leon F. Douglass, general manager of the Victor Talking Maehine Co., who is now residing in San Rafael, Cal., working hard to recuperate his health which was broken down by his strenuous labors in connection with the development of the Victor business. It will be observed that just as he has finished a difficult task his Chinese cook is offering him a piece of pie—good old New England pie at that. Another member of the group is one of the four children, which constitute the Douglass family. Mrs. Douglass, by the way, is the daughter of Peter Bacigalupi, the progressive talking machine man of this city, and who has built up a tremendous business despite the destruction of his entire property by the great fire of last spring.

It will be interesting to Mr. Douglass' many friends to learn that he is steadily improving in health, thanks to the salubrious climate of Southern California.

Among the many firms who have recently adopted the Columbia commercial graphophone for handling their correspondence may be mentioned the Clement Talbot Motor Co., one of the best known motor houses in the world, and the British-American Tobacco Co., both concerns located in London, England.

John J. Flannery, Springfield, O., who has five branches in the Middle West, has taken on the Zonophone jobbing line. He is said to be the largest piano dealer in Ohio, making a speeialty of electrie players.

BOSTON FEELS HAPPY OVER TRADE PROSPECTS FOR YEAR

Conceded by Every Jobber and Dealer That the Year Recently Closed Was the Best in Trade History—That Rival of the Victor Victrola Looked for—Manager Cornell, of Steinert's in Optimistic Mood—Boston Cycle & Sundry Co.'s Tray System in Great Favor—Enlargement of the Columbia Quarters—Big Call for Mega Horns—Mr. Winchell Ill—Other Items.

(Special to The Talking Machine World.)

Boston, Mass., Jan. 10, 1907.

The first week of the new year finds every one in the talking machine trade in and about Boston happy over the prospects for getting orders, but in gloom over the prospects for getting the goods with which to fill them.

The year just closed was the best in the history of the trade, and it closed with a boom. The Christmas business in every store in town was exceptionally good, and there was a marked increase in the number of high grade instruments sold.

The chief matter talked of in the trade, aside from the inability to get goods from the factories, is the new instrument which it is understood the Columbia Co. are getting out, as a rival to the Victor Victrola. Its appearance is anxiously awaited here.

Manager Cornell, of the talking machine department of M. Steinert & Sons, is enthusiastie over the prospects for the new year. He is having no difficulty in securing orders. On his desk this week was a pile several inches high of unfilled orders, with more coming in every day faster than the goods to fill them can be secured. This department is making a specialty of the Topham disc record case, also the record and machine cases.

The tray system made by the Boston Cycle and Sundry Co. has been proving a winner. In one day this week, through the advertisement in the Talking Machine World, Manager C. G. Andrews received eight different orders from as many different parts of the country. Mr. Andrews is arranging for an exhibition of these trays at the big furniture show in New York soon.

Enlargement is in order at the Columbia Phonograph Co. this month. Five salesrooms have been added, thus giving the company three cylinder and four disc rooms. New salesmen will be added at once.

The wholesale department of the Columbia Phonograph Co. has been removed to 95 Summer street, where, under the charge of William L. Sprague, there will be inaugnrated a hot campaign for more business, as the enlarged quarters will afford ample opportunity to take care of it.

At the Oliver Ditson Co. a large demand is reported for the Victor grand opera records. The opening of the big new department in the New York store of the Ditson Co. will mean much more business for the Boston store, which is to be headquarters.

At the Eastern Talking Machine Co. the Victor dog which has graced the doorway has been muzzled, in accordance with the law that all dogs must now be muzzled here, because so many have gone mad. There is danger of this dog becoming mad, however, even if he is muzzled, for it seems that every person who enters the store, and they come in droves, stops to pat him on the head or see if his necktie is on straight. That would make any papier mache dog mad. There is an enormous demand for the Mega horns at this store.

Wholesale Manager Chamberlain reports a very great increase in the business during the past year. The salesmen in this store were recently "trimmed" in a bowling contest with the salesmen of M. Steinert & Sons, but now they are going after the blood of the Columbia Phonograph Co. boys.

M. A. Carpell, the cabinet man, was in town this week and took a carload order from nearly every store in town. This shows that some business is being done.

F. E. Winchell, the Summer street dealer, has been confined to the house for a week with pneumonia, but is reported as improving. The Winchell Co. are having a big trade on Reginaphones, Zonophones, the Victor and Edison lines.

TRADE NOTES FROM BALTIMORE.

Dealers Well Pleased With Holiday Business and All Looking Forward to a Greater Volume of Trade This Year Than Ever Before.

(Special to The Talking Machine World.)

Baltimore, Md., Jan. 7, 1907.

The boom in the talking machine business in this locality has continued unabated, and the outlook for the present year is exceedingly gratifying. With the closing of the accounts of 1906 all of the agents in the city for the many makes of the talking machines, state that the past year was one of the most prosperous in the history of the business, and that the sales of 1906 were far ahead of those of 1905. One well-known dealer in this city who handles the Victor talking machine stated that during the past year his sales of the Victor were double those of the precediug year, and before 1907 fades away he expects to double his business again.

"The most paying business I have done this year," stated Mr. Eisenbrandt, of the firm of H. R. Eisenbrandt & Son, "has been iu the talking machine line. During the past year we have almost doubled the sale of the Victor talking machines, and the outlook for the present year is exceptionally gratifying."

The firm of Cohen & Hughes also claim to be doing a remarkable business in the talking machine line. They say that never before have they known business to be as brisk so shortly after the holidays. The Cohen & Hughes people carry a full line of the Victor talking machines, as well as the Regina music boxes.

George A. Gustin, the Baltimore agent for the Columbia graphophone, said that 1906 was an unusually prosperous year, and that they are looking forward to an excellent business this year. During the holidays, Mr. Gustin stated, business was far ahead of what they expected it would be, and the fact that there has not been a lull in the business was more than they expected.

All of the local dealers claim that the greater part of their sales are for the high-priced machines, and that the low-priced instrument seems to be doomed.

LOOK OUT FOR STOLEN MACHINE.

The Eastern Talking Machine Co., of Boston, Mass., advise us that a Standard phonograph, No. 362,775, was stolen from a lease-customer of theirs at East Machias, Me., and it would be well for dealers to be on the lookout for this machine. It was stolen without the winding crank, and it is not improbable that dealers in the immediate viciuity of East Machias may be approached by some one who wishes to purchase a winding crank to complete the machine. The Talking Machiue World or the Eastern Talking Machine Co. would be obliged for any information regarding the matter.

MANAGER WANTS POSITION

An all round talking machine man, with ten years' experience as manager for the wholesale and retail department, is open for an engagement. State location and opportunity. "O. S.," care The Talking Machine World, 1 Madison Avenue, New York.

INVENTOR WILL SELL

INVENTOR HAVING VALUABLE TALKING MACHINE PATENTS requires capital for manufacturing purposes. Address, "Capital," care The Talking Machine World, 1 Madison Avenue, New York.

TRADE NOTES FROM THE TWIN CITIES

The Minnesota Phonograph Co. Have Developed a Great Victor Business—T. C. Hough Continues to Expand—Farmers Are Buying Talking Machines—Donaldson & Co. Close Their Talking Machine Department—The News of the Month in Detail.

(Special to The Talking Machine World.)

Minneapolis and St. Paul, Jan. 7, 1907.

The trade for 1906 shows a very satisfactory increase over that of the previous year. In addition, there is a constantly increasing demand for a better quality of machine as well as a higher grade of records.

The Minnesota Phonograph Co. had not handled the Victor until 1906, but during the past year they have developed into one of the largest customers of the Victor people in this section. "The results for the year have been more than satisfactory," said L. H. Lucker, the president. "During the holidays our trade practically doubled that of 1905. We did not have a Minneapolis store until December of that year, so we cannot make any comparisons, but, in the retail end it beat out our St. Paul store last year. The addition of the Victor to the Edison line made a big increase in our wholesale sales during the year. I anticipate even larger results in 1907."

T. C. Hough, exclusive dealer in Edison and Zonophone goods, opened one additional store in Minneapolis last year, and, in addition, secured much larger and more advantageous quarters for another store. He now has three stores in Minneapolis and one in St. Paul. "I have had by far the best year I ever had in the business," said Mr. Hough (who, by the way, is the pioneer talking machine dealer in Minneapolis), "and I feel more than satisfied with the present conditions of the trade. I look forward to a constantly increasing demand for talking machines, and feel confident that 1907 will be the most prosperous year we ever had."

J. W. Wheeler, in charge of the Columbia Phonograph Co.'s branches here, said: "The retail sales in both towns was very satisfactory, and we feel quite well satisfied with the results for the year. One feature of the trade is the demand among the farmers for talking machines. We have had very satisfactory evidences the past few months that their condition in this section is quite prosperous by reason of the sales we have been able to make them."

"The results for the year show a very satisfactory increase over those of 1905," said W. J. Dyer, of W. J. Dyer & Bro. "The removal of our talking machine department during the summer from the fourth floor down to the main floor greatly increased our sales during the fall and the holidays. The sale of records has increased wonderfully."

A. M. Magoon, in charge of the Victor department of the New England Furniture Co., said: "The results were favorable compared with those of a year ago. But the most satisfactory feature of the business is the constantly increasing demand for a better quality of selections, and a decreasing one for rag-time in the records. The sales also are mostly of the higher grade machines."

Kohler & Heinrichs, of St. Paul, who handle both the Victor and Edison machines, report a satisfactory increase in their business over a year ago, and are quite optimistic over the prospects for 1907.

William Donaldson & Co. closed their talking machine department about the first of December. The failure to make it a go in this instance was due to the fact that the department was not given the prominence in the store it deserved, and also that too many lines were carried—nearly every machine on the market being represented, so that it was difficult to give attention to any one individual machine.

With a weekly pay roll of $45,000, the National Phonograph Co., at their plant in Orange, N. J., employ 4,000 people and turn out over 100,000 records and 1,500 machines daily.

DIFFICULTY IN MAKING RECORDS.

Some of the Most Noted Singers Have Proven Dire Failures—May Irwin, the Famous Singer of Coon Songs, a Leading Example in This Respect—A Specialized Industry.

Innumerable instances are known where singers who have been successful before the public are dire failures as record makers. The latest instance is that of May Irwin, whose coon songs and methods of singing have won her great popularity and a fortune. Recently she essayed reproducing one of her vocal hits on a record, but the results were so weak that rejection followed. An expert, explaining the character of voice necessary aud the manner in vogue to obtain salable goods, said: "Record making is a specialized industry. The records are made by what are known as 'the talent.' All told there are not more than twenty people who make it a business to go around and visit the three large talking machine companies—the Columbia, at Bridgeport, Conn.; the Edison Co., at Orange, N. J.; the Victor Co., at Philadelphia; Leeds & Catlin Co., New York; Zonophone Co., Newark, N. J.; International Record Co., Auburn, N. Y. Everyone cannot sing iuto a talking machine. It requires a special talent to do it. You have to have a special kind of voice and a special technique. In singing certain notes they have to move close to the horns, and in singing other notes they move back. People who are singing these songs are constantly moving back and forth to produce the records. The words of the song are written in typewriting, because the talking machines are only capable of running for about three miuutes, and therefore an entire song cannot be given. They usually give one verse and two choruses. If the song is short, they give two verses with the chorus. Then by reason of the shortness of the record they frequently have the music scored out so as to fit on the machine."

"KNOCK-DOWN" SEARCHLIGHT HORN.

Compelled to Work Holidays to Meet Demand For These Creations.

The Searchlight Horn Co., of Brooklyn, are having a tremendous demand for their "Knock-down" horns, which have been widely praised by jobbers and dealers for their excellence of construction and finish. They are easily taken apart, boxed in a very small space, and put together without much effort. When in position the knock-down horn is as solid as if made in one piece. The volume of the demand for this horn has really exceeded the expectations of manufacturers, so much so that they have been compelled to work nights and during the holidays the past two weeks in an endeavor to catch up with orders. The jobbers state that the "Knock-down" horn is destined to be one of the big winners of the day, and they are placing some large orders for it.

AN UNIQUE CLOCK FOR GEO. W. LYLE.

Dec. 24 George W. Lyle, general manager of the Columbia Phonograph Co., general, was presented with a hall clock standing fully eight feet high and constructed of disc and cylinder graphophones and cabinets. The word graphophone takes the place of the ordinary dial time divisions; the pendulum is a seven-inch disc. The works are enclosed in a regulation machine cabinet, and the clock, which will occupy a conspicuous position in Mr. Lyle's new office, is an excellent timekeeper. Hayward Cleveland, manager of the Columbia Co.'s uptown Broadway store, is credited with building this unique clock, designed originally by W. N. Tyler, and the Christmas gift came as a tribute of the New York store managers to the recipient's ability and popularity.

I. Davega, Jr., New York, has been incorporated with a capital of $10,000 to deal in phonographs. Directors: R. L. Davega, I. Davega, Jr., and F. Ottolengui, all of New York.

REPORTER'S VIVID IMAGINATION.

Conjures a Weekly Talking Machine Recital in the U. S. Circuit Court of Appeals—Some Fanciful Remarks Based Upon Recent Talking Machine Litigation.

To those familiar with events the following from the usually correct and always brilliant New York Sun is the acme of absurdity:

"One of the weekly events of the Post Office Building is the graphophone concert given every Friday afternoon on the fourth floor by the Judges of the United States Circuit Court of Appeals. There is a great deal of litigation in that court just now over various features in various phonographic machines. To make up their minds regarding the working of these different features and how much if any infraction of the rights of another machine is made, the judges find it necessary to compare the machines in action. From this springs the Friday afternoon concert, it being on that day that the various phonograph cases are considered. Every variety of tune is played and there is always a large and silent but appreciative audience of Federal deputy marshals, lawyers and chance passersby in the corridor outside the judicial chamber."

As a matter of fact, on a Friday several talking machine cases have been argued in the United States Circuit Court of Appeals, a coincidence only, and some machines were in the courtroom as exhibits. They are never played, but are employed to demonstrate mechanical combinations, the explanation being more lucid to the honorable court when the actual working order is shown, and in which a record plays no part. The last case argued was that of the American Graphophone Co. against the Universal Talking Machine Co. and the American Record Co., on the appeal of the Jones duplicating patent, which was on the calendar for Friday, December 6, when some machines remained in court, though it was not actually reached until the Monday following. The imagination of a daily newspaper reporter knows no bounds, however. His "stories" are fast becoming, not transcripts of fact or truth, but word pictures in the same sense as stage presentations are exaggerated reproductions of scenes from life, often improbable if not ridiculous, but pleasing and entertaining withal.

CANADIAN TARIFF ADVANCED.

Owing to the fact that the Canadian tariff on talking machines made in the United States has been advanced from 25 to 30 per cent., and the tariff on British-made goods considerably increased, it is said by the various importers in that country that an advance in the prices of the goods will be absolutely necessary after the first of the year. The exact extent of the advance has not been decided upon as yet.

The Boston Cycle & Sundry Co., through J. W. Linscott sent out very attractive New Year remembrances in the shape of a small folder with a calendar on one leaf and a quotation from "Poor Richard" on the other.

S. Laroe & Son, Woonsocket, R. I., in addition to pianos, handle an excellent line of talking machines and records. Their assortment of records is very complete, as they endeavor to keep every number listed in the catalogues.

THE CONFIDENCE THAT WON.

A Story of a Slow Account, a Hibernating Customer, and a Self-Satisfied Salesman Who Did the Pushing and Awakening.

BY J. W. BINDER.
(Reproduced by permission of "System.")

"Beckert," exclaimed General Manager Jamieson, of the Amalgamated Phonograph Company, "that Columbus jobber's account is far from satisfactory. Not only does it not move, but collections are exceedingly slow."

Beckert was the manager of the jobbing sales department. He was a man who was at all times entirely satisfied with himself. His private opinion was that a mighty fine job had been done when the Beckert family was originated, and there is no doubt that he considered himself the finest specimen to date.

Perhaps this explains why he occupied the position he did. "Who sold that account?" he queried easily.

"You ought to know," answered the general manager, "it's a jobbing account."

"That doesn't follow, Mr. Jamieson. I think you had one or two jobbing accounts before I came with this company."

The sarcasm was not lost. There was hardly another department head who would have dared to attempt it.

The chief accountant in response to Mr. Jamieson's bell, after an examination of his ledgers, laid a transcript of the account before the chief. It showed that his account was four years old and that the average monthly sales had been decreasing, while the balance had been growing larger.

Beckert examined the figures. "Looks like one of old Pop Franklin's accounts," he said; and added, "all right, boss, I'll go out there on the night train. See you the day after to-morrow."

"Better take two days," called the general manager after him as he was going out of the door.

"One will be plenty," cheerily answered the disappearing wholesaler.

Eight-fifteen next morning saw Mr. Beckert, cleanly shaven and looking none the worse for his night on the sleeper, emerge from his hotel in Columbus. He was feeling perfectly satisfied with himself and the world in general; his plan of campaign was all mapped out and he was about to make his first move.

Entering the largest department store in the city, he walked through it at his leisure. He found no phonographs on sale. This he had expected. He was at the office of the store two minutes after nine. At ten-fifteen he emerged. He still smiled. He had a conditional contract to place his line in the store provided certain advertising arrangements could be perfected.

Now for his second move. The man with the unsatisfactory account was named Sutch. He had a big general hardware and sporting goods store in an excellent location.

Beckert entered; he walked through the store and after some search found the phonograph department in a space about twenty feet square in the rear of the store. He approached a clerk who had just closed a transaction with a customer involving the sale of two pounds of No. 6 birdshot.

"Good morning, sir, I would like to get a phonograph record, number 32,864."

The clerk looked over a pile of printed matter to find what shelf that series of numbers was on.

After about five minutes he said: "Sorry, sir, but we don't have it."

"Then," continued Beckert, "perhaps you can find me 32,854 or 32,856."

Again the search, and again the same result. This time the clerk volunteered the information: "I guess those are March records (this was June); we haven't them in yet."

"All right," said the genial Beckert, "I really didn't want them very much, anyway. Is Mr. Sutch in?"

"No, but I expect him any minute. Here he comes now."

"Good morning, Mr. Sutch," cheerily said Mr. Beckert, extending his hand. "I am Walton H. Beckert, of the Amalgamated Phonograph Company."

A surly, "Good morning, I can't see you now, come back after noon," was all he got in reply.

"Beg pardon," he suavely replied. "You'll see me right now, Mr. Sutch, and no other time. I have from now to 5:30 to either get your check for your balance and show you how to sell phonographs or to move the line into the store of Blank & Blank. Now let's get busy."

The hardware man seemed to get more time right away. "Come in here," he said leading the way into the private office.

"What do I owe your concern?" he asked.

"Seven hundred and fifty dollars," snapped Beckert.

"How much will you allow me for the junk out there?" asked Sutch.

"Not a cent," said Beckert. "We are in business to *sell* goods, not to take them back."

"But," said Sutch hotly, "I can't sell the stuff."

"I don't wonder at all," answered Beckert. "I tried my best to buy some a few minutes ago, but you either didn't have it or your clerk couldn't find anything that was less than two months old. Where do you think you are? In Russia? Do you think the people of Columbus who demand four and five editions of a daily newspaper will be satisfied to take phonograph records a year old? Great Scott! Get awake, man."

Beckert in action was a fine sight. Here was something he knew all about—selling phonographs and records. He was a specialist and he knew that he was; hence he proceeded to talk to Sutch like a missionary spreading the gospel. He dilated upon the possibilities of the business, sketched in a few brief sentences its magnificent growth, alluded to the profits to be made and closed by saying:

"Sutch, I want to tell you: if you will give me one of your good men and let me put that line up front, make a window display and put an advertisement in the afternoon papers, I'll show you before I get out of this town at 5:30 this evening that this business is not a joke.

"I'd rather convert you than move the line. What do you say? Is it a go?"

The fire and zeal, the absolute sincerity, confidence and conviction of the man had carried the day.

"All right—go ahead," was Sutch's reply.

"Not so fast," said Beckert. "Write me out a check for that balance first, and lose no time about it. I've got a little work to do to-day."

The check was written, handed over, and Beckert pulled out the form of an advertisement which he had drafted at the hotel that morning. He marked it ten inches triple, and said:

"Send that down to the *Leader* office by a boy. Tell him it must be in the noon edition. Tell them to charge it to Sutch."

The boy left on the run and Beckert with the shot-selling clerk got to work. There was no thought of lunch. The transformation went steadily and rapidly forward and by two o'clock a space in the front of the store had been cleared and the records and machines transferred. Beckert climbed into the window and fitted up a novel display in which a phonograph trumpet, a barrel, and a large square and compass played prominent parts. He placed one of the largest machines directly inside of the big doors and hired a boy to keep it going with popular selections from his sample case.

Soon a crowd began to gather and business began to move. Demands for the records which were being played were met by the suave Beckert with, "No, we don't have them; these are samples; our regular stock will be here to-morrow. If you'll leave your name and address we'll send them around."

To Sutch, who remonstrated, Beckert said: "That's all right, old man, I wired a four hundred dollar order to the factory in your name an hour ago. The records will be out by express to-morrow. This business is going to move from now on."

Sutch was game, and that Beckert was right is proved by the fact that to-day hardware and phonographs occupy adjoining stores; and if you ask Mr. Sutch the reason, he will tell you that the man who is to blame is Beckert.

General Manager Jamieson says: "Absolute confidence in yourself and in your goods leads to enthusiasm; enthusiasm sells goods."

And Beckert is still satisfied with himself.

According to the Chicago Tribune, C. E. Goodwin, of Lyon & Healy, joins leading business men in the general story of prosperity. He reports a better sale of talking machine outfits costing $150 to $175 than for the cheaper ones. Among recent purchasers of talking machines at Lyon & Healy's was the Governor of the State of Illinois, who selected an expensive outfit.

Robt. L. Loud, dealer in pianos and talking machines, Buffalo, N. Y., celebrated the closing of a very successful year by giving a smoker to his employes at the Hotel Lafayette on the last day of the old year. The affair was a very enjoyable one.

THE TELEGRAPHONE

Sings Like the Singer; Speaks Like the Speaker

UNLIKE THE OLD-STYLE TALKING MACHINES, WHICH ONLY PARODY THE VOICE—WHICH THE TELEGRAPHONE *DUPLICATES!*

If the "penny arcades" and automatic talking machines can pay the dividends they *are* paying, the returns from these enterprises when they use the Telegraphone, *as they all will*, will be trebled or quadrupled! The explanation is simple—here it is: The old-line phonographic machines, being purely mechanical devices, *cannot* entirely or perfectly reproduce speech or music, for the record cannot "take" but a portion of the sounds committed to it. The result is an *in*human parody of the human voice—a *screech* for a song; a *blast* for a ballad, and a scratchy cackle-like sound for the orator's or actor's speech.

Yet multitudes are amused, diverted and instructed by the present crude methods of *imitating* music or speech. Crowds flock to the little theatres given over to this form of innocent pleasure.

The TELEGRAPHONE records *precisely* what is sung or said into it and gives it out *exactly* as received. Having nothing mechanical about it—no scratches, squeaks, buzzes or explosions—THE TELEGRAPHONE SINGS LIKE THE SINGER AND SPEAKS LIKE THE SPEAKER.

FROM SCIENTISTS

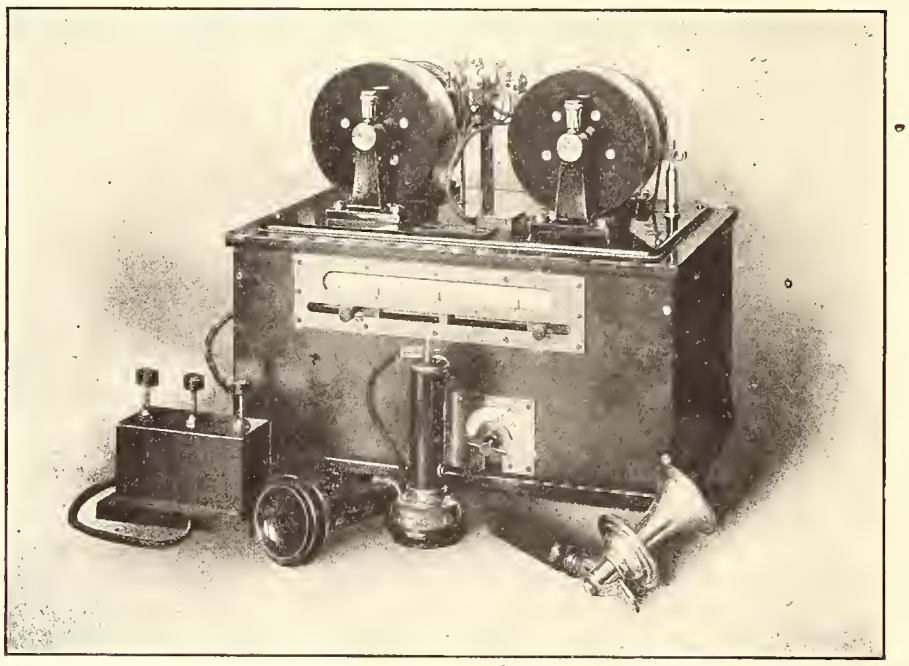
MR. ALEXANDER GRAHAM BELL, inventor of the Bell telephone, says: "I do not know of anything in the work of recent years in electricity more worthy of being presented to the readers of the Smithsonian report."

LORD KELVIN, the dean and most celebrated of all English scientists, writes: "Mr. Poulsen's TELEGRAPHONE is a very beautiful and interesting application of magnetism to record speech of the telephone. It seems to me likely to prove of greatest utility."

G. MARCONI, inventor of wireless telegraph, says: "The Poulsen TELEGRAPHONE is a wonderful and useful invention."

SIR WILLIAM PREECE, K. C. B., says: "It is one of those things which is going to open the eyes of all our physicists and scientists and theoretical men on the question of the molecular character of all magnetic and electric operations. This continual exchange of energy through electrical connections, through diaphragms and steel circuits, performed by this beautiful instrument of Mr. Poulsen's, is marvelous."

MR. NIKOLA TESLA says: "Mr. Poulsen has made a beautiful invention of scientific as well as practical value."



THE TELEGRAPHONE

An instrument that exactly duplicates the human voice, perfects the telephone and

SUPERSEDES THE TALKING MACHINE

FROM ENGINEERS

MR. DANE SINCLAIR, M. I. E. E., Chief Engineer of the National Telephone Company of London, says: "I got the Poulsen TELEGRAPHONE set to work under all the conditions one could possibly ask for and it was marvelously wonderful. It gave a distinct record of speech not to be compared with any heretofore."

PROF. WM. A. ANTHONY says: "After seeing the TELEGRAPHONE in operation in your office on Saturday, I am free to say that the results obtained from it are fully as surprising as those obtained from the telephone itself in '76."

MR. WM. STANLEY, of the Stanley Instrument Company, 145 Broadway, New York City, says: "The conditions necessary for proper operation are so simple and so inherent in the apparatus that it is next to impossible for it to get out of order or fail to do its duty."

MR. M. J. GAVEY, M. Inst. C. E., M. I. E. E., Electrician to the General Post Office Department of London, says: "An invention of the greatest scientific interest is the Poulsen TELEGRAPHONE, by which a telephone conversation can be permanently recorded on a steel wire and reproduced at any time."

Did You Get Any of the *First* Telephone Stock?

A MODERATE INVESTMENT SUGGESTED

Did You Get Any of the *First* Phonograph Stock?

THE AMERICAN TELEGRAPHONE COMPANY, with an authorized capital of $5,000,000, owns all of the patent and other rights of the Poulsen TELEGRAPHONE for the United States. To build, enlarge and properly equip its factory at Wheeling, W. Va., this company is offering 100,000 shares of its stock to the investing public.

The undersigned, the STERLING DEBENTURE CORPORATION, after a most exhaustive investigation, has underwritten this entire issue and unqualifiedly recommends the same to its friends and to the general public. The undersigned's examination into this enterprise disclosed a sound management, the Board of Directors being conservative, practical men of business and personal standing; patents so broad, comprehensive and protective that the United States and all other Patent Offices declared them to be *basic* patents, thus endorsing Poulsen's claim to discovery of an absolutely new principle in electro-magnetism; an earning capacity larger than those of the telephone or phonograph.

The stock is selling very rapidly and over half of it is already subscribed, and this initial issue will soon be absorbed. The present price is par, $10 a share, which may be paid in full at the time of subscription or in monthly instalments as desired. We most earnestly recommend *prompt* action to investors who desire to take advantage of this remarkable opportunity.

Types of the Danish TELEGRAPHONES may be inspected *and used* at our offices during regular banking hours and visitors are welcome, whether investment is contemplated or not.

To those who wish further or fuller information, and to all persons who wish a complete, illustrated description of this marvelous invention, we recommend the use, to-day, of the RIGHT-HAND Coupon, printed below. There is no obligation, implied or requested, beyond the mere mailing of the coupon. To investors wishing to reserve from 10 to 100 shares (the latter being the limit of single allotment) of the present issue at the present price, we suggest the filling out and mailing of the LEFT-HAND Coupon.

STERLING DEBENTURE CORPORATION

56 Wall Street :: NEW YORK :: FRED C. MacLEAN, Manager

APPLICATION FOR SHARES

STERLING DEBENTURE CORPORATION, 56 Wall St., New York:

GENTLEMEN—Enclosed herewith $..... in New York exchange, being my application for, and payment at the rate of $2 per share upon account of ..... shares of the stock of the American Telegraphone Company. This application is made with the understanding that I will complete payment in full therefor in monthly instalments as advised, or will accept a lesser allotment of shares at your discretion.

FOR SUBSCRIBERS

Every talking machine man who has already seen the TELEGRAPHONE will follow the dictates of simple prudence in making application to-day for as many shares of this stock (within 100, the limit of single allotment) as his means will permit. The allotment is being rapidly made and this advertisement may not appear again. Mail the LEFT-HAND Coupon to-day—you'll thank us for insisting.

FOR INFORMATION

The story of the TELEGRAPHONE will be of peculiar and engrossing interest to every reader of this paper—simply as a true but fascinating narrative of the most wonderful achievement of science since the electric light. Every intelligent person should want to learn about an instrument so revolutionary in its character. Mail the RIGHT-HAND Coupon to-day—you'll never regret it.

REQUEST FOR INFORMATION

STERLING DEBENTURE CORPORATION, 61 Pine St., New York:

GENTLEMEN—You may send your fully illustrated descriptive booklet, "THE TELEGRAPHONE: Its Business, Social and Scientific Uses," to the address below, upon the understanding that I am under no obligation to you in any way beyond the mailing of this coupon.

OPPORTUNITIES IN MEXICO.

Business Flourishing in the Republic South of Rio Grande—Some Trade Items Worth Reading—Dealers Who Desire Trade Connections With Talking Machine Men and Novelty Manufacturers.

(Special to The Talking Machine World.)

City of Mexico, Mex., Jan. 2, 1907.

The opportunities for talking machine men and manufacturers of coin operating machines in the Republic of Mexico are most encouraging. There are plenty of houses throughout the entire repub-

THE ESTABLISHMENT OF A. KIJ.

lic who desire to enter into business alliance with the manufacturers of such products.

It should be understood, too, that business in Mexico was never better than at the present time. To those uninformed regarding the progress of this marvelous country the present condition would be surprising. Mexico is rich, and its purchasing power is vastly increasing, and men in the particular trade to which The Talking Machine World appeals will be interested in learning of the splendid outlets for their goods in the republic south of the Rio Grande.

L. M. RODRIGUEZ AND ASSISTANT.

Here are a few business points which will perhaps interest The World readers: J. Kij, of San Francisco street, Guadalajara, Mexico, is a dealer who has worked up a splendid trade in that charming city. His photograph, together with an interior view of his establishment accompanies this sketch. This progressive Mexican merchant controls a large trade in his particular section. His credit is fine, and he desired something in the way of slot machines which he wishes to purchase direct from the manufacturer.

A. Quezada, Guadalajara, Mexico, desires quotations and catalogues of cinematographs. He expects to place a large sized order for this line of goods the coming year. He owns a well equipped store, and is after the agency of a good house.

L. M. Rodriguez, of Mexico, whose photograph appears in this issue, has a wide experience in the musical and commercial fields throughout the Spanish-American countries. Mr. Rodriguez states to The World that there is a splendid market in Mexico and Cuba, Porto Rico and Panama for talking machines and all kinds of musical novelties.

N. Raso, of the City of Pueblo, Mex., the leading piano dealer and owner of the most magnificent conservatory of music of that city, would like to secure the exclusive agency from a house manufacturing automatic pianos, self-players, mandolins, guitars, etc. He handles pianos of European make, and is most anxious to represent good houses in the above lines. He is a wealthy gentleman, a leading professor of the piano, a musical promoter. Mr. Raso has sold more pianos during the past year than any other concern in the southern part of Mexico.

A. Aucleto Rodriguez, of Torreon, Mexico, is after the exclusive agency of a good piano house manufacturing uprights, automatics and self-players. He owns a large hardware store in that city, and his extensive trade connections throughout the northern part of Mexico offer him an excellent field for this line.

Garriga & Co., Leon, Gto., Mex., are in the market for a first-class make of a piano self-player. While they are engaged in a paper mill business, they wish to place a cash order for one for their own use. This is a very wealthy firm, well known throughout Mexico.

THE DOUGLAS-VICTOR SUIT.

Papers Filed by Counsel for Complainants Alleging Grievances Suffered.

(Special to The Talking Machine World.)

Trenton, N. J., Dec. 31, 1906.

Last week papers in the suit of the Douglas Phonograph Co., jobbers, New York, against the Victor Talking Machine Co., Camden, N. J., were filed by Herbert N. Knight, counsel for the complainants, in the equity branch of the United States Circuit Court in this city. Believing that the defense will carry the case to the United States Supreme Court before a final decision is reached, the complainants have anticipated such delay by instituting suit for damages for breach of contract in the law branch of the same court, putting their claim at $100,000 for the six months which have elapsed since the contract with the Victor Co. is alleged to have been broken by the defendants.

The bill, a lengthy document, recites the grievances under which the complainants are said to have suffered in the loss of business. It directs especial attention to one clause of the contract that reserves to the defendant company "the right to cancel the contract at any time for any cause, or without cause, and without prior notification to the complainant," and which the complainant insists is one of the most arbitrary documents ever promulgated by a corporation having a monopoly of its business. Charges of conspiracy to cripple and weaken the office and selling force of the Douglas Phonograph Co., as well as other serious allegations are also included in the moving papers. The defense have thirty days in which to file their answer.

BUSINESS HAS STARTED TO GROW.

So Says Mr. Switky—Nonsensical to Claim It Has Reached Its Limit—Good Retail After Holiday Trade—How Exchange Proposition Would Pay—The Needle Question.

The new year has opened with a rush in the retail talking machine trade in this city, and the sales of records for the first seven days have far surpassed those for the same period of any previous year. There has been a steady demand for new talking machines, and mostly of the better quality. Benj. Switky, whose three stores, each located so as to reach different classes of trade, comments on the trade condition in this wise: "The idea that the talking machine business has reached its limit is the greatest nonsense. The business has just started to grow. Many who purchased cheap machines within a comparatively recent period are now exchanging them for the best made, and are continually adding to their stock of records. I believe that an exchange proposition that would permit the dealer to make a moderate allowance for old records would greatly assist the business. Many would buy machines if they could exchange their records when worn out, receiving some value, however small, for them.

"The matter of obtaining satisfactory needles has been agitating the trade for some time. The lack of uniformity of temper seems to be the greatest difficulty, and many come through without being properly pointed. The regularity with which even the most improvident meet their instalments on machines is another surprising feature of the business."

On the first of the year B. T. Burlingham, McGraw, N. Y., moved into new and larger quarters on Main street.

COPYRIGHT AMENDMENTS.

Some of Those Presented by Well Known Authorities and Published by the Register of Copyrights—Interesting to Talking Machine Men—Their Adoption to be Determined Later by National Legislature.

The Register of Copyrights, Thorvald Solberg, has compiled, for the use of the Patents Committees of the United States Senate and the House of Representatives, before whom the hearings were held Dec. 7, 8, 10 and 11, on the Copyright bill (Senate, 6,330; House, 19,853), the amendments proposed, together with other criticisms and suggestions submitted to the committees or received since by the copyright office. While the text of the bill spreads over sixteen printed pages, the changes, etc., leugthen out to 117 pages, and in which scarcely a sectiou or paragraph is exempt. In addition a separate pamphlet of 35 pages embodies "comment upon the bill" by the copyright committees of the American Bar Association and the Association of the Bar of the City of New York. The amendments credited to the talking machine industry in this formidable opposing array, including experts, attorneys, inventors, etc., follow:

By Paul H. Cromelin, vice-president Columbia Phonograph Co., General, New York—Strike out paragraph G of section 1, and its dependent clauses. Omit from the bill section 64 and substitute in lieu thereof the following: "Sec. 64—That in the interpretation and construction of this act the words 'production,' 'reproduction,' 'work,' or 'writing' shall not be deemed to include perforated music rolls used for playing mechanical instruments, records used for the reproduction of sound waves, or other mechanical devices designed for the production or reproduction of sound, or the plates, molds, matrices, or other means by which such mechanical devices are made."

By Horace Pettit, counsel to Victor Talking Machine Co., Camden, N. J.—Add to Sec. 1 (G) at the eud thereof the following: "Provided, That nothing herein contained iu clause (g) shall interfere with or supersede any rights under the patent laws. And provided further, That the owner or proprietors of the copyright as to the subjects included in this clause (g) shall grant license to any manufacturer upon the written request of any such manufacturer to make, sell, use, distribute or let for hire any of the said devices, contrivances or appliances upon tender of payment of a reasonable royalty for the same."

The American Bar Association suggested that clause F of section 1 be amended in this way: "To publicly perform for profit a copyrighted musical work, or any part thereof, or for the purpose of public performance for profit, or the purposes set forth in sub-section (b) hereof to make any arrangement or setting of such work or of the melody thereof, in any system of notation or form of record in which the thought of an author may be recorded, and from which it may be read or reproduced."

The New York Bar Association advised that subdivision G of section 1, the keynote of the situation so far as the trade is concerned, should not make it an infringement of a copyright to make or sell the machine capable of reproducing music, but only the unauthorized use of copyrighted music on such machines, and should therefore read:

"To reproduce to the ear the whole or any material part of such copyrighted musical work by means of any device, contrivance or appliance adapted to that purpose."

A number of antagonistic amendments submitted by representatives of the mechauical instrument interests also exempt records. The companies have notified the trade to feel no uneasiness over the outcome of this proposed legislation.

Giles B. Miller, an Edison jobber at Rochester, N. Y., died at his home in that city on December 9. He was seventy-six years of age, and had been in the piano and music business in Rochester since 1873.

WINDOWS AS SALESMEN.

Work Day and Night and Sundays—Pays to Use Them Intelligently—Best of Advertising and Should be Well Dressed Like Your Salesman—Some Timely Pointers.

Have you ever thought what an important member of your sales force the show window is? How it works all hours of the day and night, and even Sundays, it so desired, without complaining, calling the attention of the passing public to the beauties of the products you have to offer?

If you have realized the importance of the window do you know what a profitable investment is the time, energy and even money spent in dressing it attractively and convincingly? To produce results the goods must not be merely jumbled together, but must be so arranged that a story is told, a story of honest values and real merit. A properly dressed window, actually containing the goods, should prove more convincing than any ad. written. But in many cases that result is not attained.

A window is advertising and as certain and sure a medium as is newspaper space, but it is precisely the reverse of newspaper advertising. In an ad. the words stimulate the imagination to think how such and such an article will look and by suggestion create a desire for the article; a cut of the piano may or may not be shown, but in any case it is only to assist the reader to imagine the piano itself. The ad. gives the selling points and does not show the piano. The window, on the other hand, shows the piano itself and does not bring out any selling points. The imagination here is drawn on for facts.

Make your ad. so convincing and so clear that the reader is interested and you have a "prospect." Make your window so attractive and so suggestive that the looker is caught and you have a "prospect." Make the window a supplement of the ad. and you have a double hold on the customer.

When a customer is convinced regarding the desirability of an article before eutering the store through the medium of the "ad." and window, a great deal of the salesman's time is saved, which, in another case, would be used up in preliminary talk, and the time thus saved cau be applied to making another sale.

A window attracts the notice of passers-by—few people make a business of looking in them. They must be forced to look. If a window is filled with a large number of miscellaneous instruments it will not call the attention of the casual passer. The only one to whom that window will appeal is the merely curious, not the possible purchaser. Four or five machines, some of the latest horns and specialties, well displayed and in harmony with each other, will bring new trade and interest regular trade to the extent of creating a desire that was not already formed.

PETMECKY NEEDLES POPULAR.

The Petmecky Co., manufacturers of the Petmecky Multitone self-sharpening needles, Kansas City, Mo., are having a tremendous demand for these specialties which have won a splendid prestige not only in this country, but abroad. Their merits are broadly acknowledged and there seems to be a great future for this business.

THE VALUE OF SYSTEM.

The fact that the top rounds in the ladder of fame are never crowded is due very largely to a loose wheel in the business mechanism. It may be so small, and apparently unimportant, that it is not noticed, but allowed to run on and on until at last, no longer able to keep pace with its fellows, it drops from its axle, down among the whirling wheels below, clogging them and bringing the whole machine to an abrupt and disastrous standstill.

There are many of these little wheels, but the one which the talking machine dealer should watch most closely in order that his trade vehicle may propel him safely and smoothly up the steep grade to prosperity, is system. I can bring to mind no profession which requires so strenuous an application of system as does that of the talking machine.

A dealer may enjoy a large trade, be located advantageously, and have every chance for success, and yet fail utterly. Cause—lack of system.

Perhaps his stock of records is not arranged systematically, thus haudicapping him in waiting upon his patrons with becoming promptness.

Then agaiu his window may show neglect due to the same cause.

Thirdly, his business may suffer through the irregularity of advertisement.

Any one of the three forerunners of disaster named above will demolish the business machine sooner or later, and if allowed to work in unison they will, of course, hasten the end.

Therefore, the dealer who is wondering why success does not come to him as it does to his more lucky competitors and who is disgusted with his business and himself, need be disgusted no longer, for in system he will find a sure antidote for his trouble.

HOWARD TAYLOR MIDDLETON.

The private office of the Governor of New Jersey has just been equipped with a full set of commercial graphophones. The office of the Secretary of State has also been similarly supplied. The Columbia Record says en passant that "the introduction of the commercial graphophone into the executive mansion has nothing whatever to do with 'machine politics.'"

Wouldn't it Make You Hungry? No. 8602 — Short Stories By Frank Bush 9163

In this connection Mr. Bassett says: "We note that an Ohio dealer, doing business under the name of Knoske Music Store, has gone a little further than we intended should be done in the matter, and has forwarded an exact duplicate of our menu to the National Phonograph Co., who have inserted in the January issue of the Edison Phonograph Monthly, page 18, a fac-simile copy of this menu, purporting to come from Knoske's Music Store."

As a matter of course, the DeForeest people are very anxious that the originators of this menu should be properly credited and have asked us to reproduce it in The World.

GRAPHOPHONE FOR MRS. MARCONI.

Under the immediate supervision of Thomas H. Macdonald, manager of the Columbia factory at Bridgeport, Conn., one of the handsomest graphophones that has ever been constructed has been made for shipment in the near future, to Mrs. Marconi, wife of the wireless wizard, who has recently associated himself with the Columbia Phonograph Co. as consulting physicist. This beautiful graphophone is of the BD style, with specially finished mahogany cabinet, and the metal parts, as well as the horn, are done in gold. The motor is hand finished in nickel and gun metal, and nothing has been left undone to make the gift as pleasant a reminder to Mrs. Marconi, as possible, of her visit to the factory last autumn.

INCORPORATED.

The Universal Automatic Vending Machine Co., of New York, was incorporated at Albany this week with a capital of $50,000. Directors: G. G. S. Merry, Hartman Neuschafer, Henry Bischoff, New York.

George C. Steffen, manager of the Rohlfing Sons Music Co.'s talking machine department, is now a member of Milwaukee's City Council. He is regarded as a very capable official, one who will be a credit to the Cream City.

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York.

(Special to The Talking Machine World.)

Washington, D. C., Jan. 6, 1907.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past four weeks from the port of New York:

DECEMBER 10.

Adelaide, 507 pkgs., $15,350; Berlin, 257 pkgs., $2,935; Bradford, 50 pkgs., $249; Brussels, 1 pkg., $120; Buenos Ayres, 11 pkgs., $978; 35 pkgs., $1,084; 9 pkgs., $786; Calcutta, 5 pkgs., $197; Cape Town, 451 pkgs., $14,732; Cardiff, 7 pkgs., $389; 50 pkgs., $323; Corinto, 5 pkgs., $1,347; Glasgow, 81 pkgs., $1,684; Hamburg, 13 pkgs., $401; Havana, 27 pkgs., $305; 16 pkgs., $516; 14 pkgs., $328; Havre, 9 pkgs., $466; 28 pkgs., $1,415; La Guayra, 3 pkgs., $149; Leeds, 3 pkgs., $249; Liverpool, 126 pkgs., $807; London, 8 pkgs., $406; 31 pkgs., $1,848; 1,672 pkgs., $24,919; Manaos, 11 pkgs., $592; Manchester, 157 pkgs., $1,234; Montevideo, 43 pkgs., $3,483; Newcastle, 68 pkgs., $421; Oporto, 7 pkgs., $114; Santiago, 20 pkgs., $634; Sheffield, 112 pkgs., $855; St. Petersburg, 30 pkgs., $1,138; Trinidad, 5 pkgs., $135; Vienna, 4 pkgs., $134; Warsaw, 6 pkgs., $153.

THE TALKING MACHINE IN POLITICS.

The Approach of Presidential Election Offers a Rare Chance for the Talking Machine Dealer to Increase His Sales by Catering to Clubs, Stump Speakers, Etc.

Now that the first guns in the Presidential battle are being loaded, it is time for the talking machine dealer to know what a rare opportunity it affords him in the way of extending his business.

Every political club should have a talking machine, for it will prove invaluable in many ways. First of all, it is great for amusement purposes, and as an inspirer of patriotism, it has no equal. Then again, when the campaign is at its height and John Doe, the Republican candidate for President, has his staunch lieutenants scattered throughout the country fighting tooth and nail for their champion, if he wishes to create a perfect deluge of sensations, he will prepare a short, earnest plea, an oratorical speech in his own behalf, and speak it into a talking machine. The records thus made, he will circulate among his adherents, thus enabling thousands of people to hear his voice and to become captivated by it, who could in all probability be reached in no other way.

Let us go to a political meeting for a moment in order that we may see for ourselves how conspicuously the talking machine may figure there to advantage. The speaker of the evening is lauding his party and its leader, and with a great burst of eloquence he ends as follows:

"While the great man whom we desire to serve and who has chosen us as his faithful followers, cannot be with us in person to-night, we may still have the privilege of listening to his voice."

He turns to the talking machine beside him on the stage and touches the starting lever. Then a short address of the presidential candidate in all its vibrant mellowness comes from the horn, while the assembled multitude sits spellbound:

"My very dear friends, while not with you in person to-night, believe me, I am with you in spirit, and I wish to thank you for your earnest co-operation in the cause for which we are fighting, and which will eventually triumph. It is the cause of the right against the wrong, therefore, it must win! I call upon you to-night to use every worthy endeavor to aid this cause of ours, and I promise you on the word of your leader, the one chosen by you to bear the banner of your party, that when the victory comes, it will find the reins of government in the hands of an honest man."

As the last echo dies away, the audience breaks into wild and prolonged cheering, and the meeting ends with a feeling of assurance not to be denied. The people have heard the voice of their leader, and it pleases them. He has spoken to them a few well-chosen words direct from his heart, and they are satisfied. They have no fear now; their vote will be polled with perfect confidence.

Of course, the big election is rather distant, but, as stated above, the first guns are being loaded and before they are fired there will be many small ones for the dealer to practice on.

The talking machine will play a more prominent part in politics during the coming campaign than ever before. You may count on that, Mr. Dealer, and now is the time to lay the foundation for your campaign in that direction.

HOWARD TAYLOR MIDDLETON.

LINOTYPE AND TALKER COMBINED.

Compositors Setting Type Direct from Record on Commercial Machine.

The suggestion that newspaper reporters and editors could dictate to a commercial talking machine, and the linotype operators set their matter direct from the record, has become an absolute fact, and one of the large law printing houses in this city has adopted this idea. Several reproducing machines have been placed alongside of the linotypes, and as fast as the court stenographer can dictate his notes into the recording machines the records are sent to the operators. It has been found to save much time, and the results obtained are equal if not superior to those of the former method of setting the type from copy. Several other printing houses have taken the matter up, and if the trial now in progress continues to prove satisfactory, its general adoption is looked for. The great drawback to the plan lies with the dictator, who is liable to be inaccurate.

CHEAP PHONOGRAPHS CLASSED AS TOYS.

(Special to The Talking Machine World.)

Washington, D. C., Jan. 7, 1907.

The Board of United States Appraisers, in an opinion written by Judge Fischer and handed down December 28, 1906, the protest of Samstag & Hilder Bros. against the assessment of duty by the collector of customs at Boston, Mass., on an invoice of toy talking machines was upheld. The protest related to small phonographs of a cheap, flimsy character, incapable of accurately reproducing musical pieces or speech. The board sustained the importers' contention that they should have been classified as toys under paragraph 418 of the Tariff Act, and dutiable at 35 per cent.

TRADE NEWS FROM SAN FRANCISCO.

Enormous Business Transacted During the Holidays and the Dealers Unable to Supply the Demands—The Outlook Most Promising in Every Respect—Situation Reviewed.

(Special to The Talking Machine World.)

San Francisco, Cal., Jan. 1, 1907.

Two things stand out with distinctness in the talking machine trade of San Francisco. These are the shortage of goods and the record-breaking demand. Both wholesale and retail stocks are low, and in some of the higher-priced goods there is an absolute lack. Sherman, Clay & Co. have just got in a carload of machines and are still more than a thousand machines behind on orders. A similar condition prevails at all of the large stores.

The talking machine department of the new Fillmore street store of Eilers Music Co. is now in complete running order, and a big business is being done. A number of apartments, each provided with double sound-proof walls, have been fitted up.

The Columbia Phonograph Co. report that an enormous number of talking machines were purchased for Christmas presents. There has also been a heavy sale of Columbia commercial machines. Both lines are practically sold out at present.

Francis W. Downe, formerly of New York, who is now in charge of the commercial department of the Columbia establishment at this place, is now getting his department well in hand and is prepared to begin an active year.

Peter Bacigalupi, of Peter Bacigalupi & Son, also reports a shortage of stock. He is now closing the best holiday season he has ever had. In order to supply his trade he has had to buy goods from jobbers all over the east, and wherever he could get them. On the other hand, he has been approached by people from all quarters who want to buy Victor goods. He has also had a steady call for Edison goods.

The George J. Birkel Co. report the arrival of 200 Victor talking machines by express. These were particularly welcome, as the stock was completely exhausted and the coast jobbers were unable to supply the stock.

The capital stock of the Espinosa Phonograph Co., of Mexico City, Mex., has been increased from $150,000 to $200,000, and about $100,000 will be spent in remodeling the company's store.

TALKER ON THE STAGE.

The Columbia Amusement Co. have been producing an extravaganza at the Murray Hill Theater in this city, which is entitled the "Phonograph Girls." It is a musical skit in three parts, and the music is furnished by Columbia graphophones. All of the dances and songs are danced and sung to melodies produced on these instruments. Wherever this number has been shown it has been the hit of the show, and every dance has been encored to the limit. This is the first appearance of this act in this city, and many of the audiences who are not familiar with the up-to-date talking machine are greatly surprised at the splendid results obtained. In every city this part of the performance has acted as the best kind of advertising for the local talking machine dealers, and has done much to bring the Columbia products into the prominence that they so well deserve. After making its circuit the company will return to this city in February, and will show the merits of the graphophone to the residents of Harlem.

NEW HORN LINE POPULAR.

The Hawthorne & Sheble Manufacturing Co., of Philadelphia, report that their new line of artistic flower horns are meeting with a phenomenal sale.

NO DEALER

Can afford to be without a big supply of the wonderful PETMECKY Multi-tone Self-sharpening Talking Machine Needles.

It's the LOUD, SOFT, INTERMEDIATE TONE—all in one—NEEDLE. For use on all Disc Talking Machines.
PLAYS TEN RECORDS, any size, any make, THROUGH WITHOUT INJURY.
UNSURPASSED IN PURITY OF TONE PRODUCTION.

FAMOUS FOR STANDARD OF QUALITY UNIVERSALLY PRAISED.
Write or wire for samples of Petmecky Multi-Tone Needles, Interesting Booklet on Needle Lore, Testimonials and Price Quotations on 5,000 to 1,000,000 lots. Prompt deliveries guaranteed.

PRACTICAL SUGGESTIONS AND COMMENTS.

Wm. F. Hunt, the well-known talking machine man, writes as follows: "Since the appearance of my article in the November issue of The World, treating on the evils of 'aside effects' in records, I have learned that I am not alone in this opinion, but have received favorable comments on the article from several prominent talking machine men. I find that even many of the purchasers of this class of record are not favorably impressed by these noisy effects, but purchase the records for the reason that they contain some good joke or favorite song that they cannot obtain otherwise. The cheering after the rendition of a stirring patriotic air can safely be left to the listener; he will tend to that matter in better form than can be brought out by mechanical means if he is of a patriotic spirit, and if he is not, the mechanical applauding will inspire in him no change of feeling. Another thing which I wish to mention, is that in reproductions of a sketch nature, where mechanical effects are absolutely necessary, the effects are generally most unnatural. For example, the knocking on a door is much too loud in proportion to other sounds and sounds more as if one was trying to gain admission with a sledge hammer than tapping the door with his knuckles. I acknowledge that wonderful improvements have been made in the art of record making, but must say and believe I am right in my statement that these effects have been somewhat neglected.

How to Prevent Screws from Rusting.

It frequently happens that when it becomes necessary to remove a screw from a part of the motor of a talking machine, it has become so tight from rust that it is impossible to remove it without destroying the screw and some of the adjacent parts. If a screw is dipped into a mixture of graphite and oil before being screwed into place it will never rust and can be removed with ease at any time.

How to Prevent a Screw from Working Lose.

It sometimes happens that a screw on the governor spring is caused to work lose by the vibration of the governor when in operation, and retightening fails to remedy the trouble. Smash two or three of the upper threads of the screw and then screw into place firmly.

Oiling Reproducer Arm Sliding Rod.

The best way to oil the reproducer arm sliding rod on a cylinder talking machine is to wipe it with a small piece of cloth saturated with oil. This spreads the oil evenly and in a sufficient quantity. The trouble in oiling these parts with an oil can is that the oil flows too freely, causing it to run from the rod onto the machine and making same unsightly.

Leather for Belts.

For cylinder talking machines the essential features of belts are that they be of a first-class quality of soft pliable leather, of even thickness and width throughout their entire length, and when jointed that no extra thickness or lump is found by the joint; any belts that are uneven in thickness or width, or have a lump at the joint, will cause the mandrel to run unevenly, thereby causing a waver in the tone. The same trouble will be experienced if a belt is too tight or too loose; as, if tight, it pulls so hard on the driving shaft as to cause undue friction in the same; and, if too loose, it will slip on the pulleys, thereby causing the mandrel to run unevenly, which produces a waver in the tone, or what is technically called poor regulation.

The Sapphire Point.

Reproducing buttons made of glass instead of the regulation sapphire point should never, under any circumstances be used, as they will invariably spoil the records.

The Wearing Power of Records.

According to the National Phonograph Co., one Edison "gold moulded" record may be played from 300 to 500 times or more without much damage resulting, while another would be almost worthless after one hundred reproductions. Record wear depends entirely upon conditions and cannot be accurately judged.

Principle of the Telegraphophone.

Replying to an inquiry from a correspondent for information concerning the telegraphone, the New York Sun says: "The telegraphone depends on a principle of local magnetization discovered and made available by Waldemar Poulsen. The essential part of the instrument involves two spools in rapid revolution and a fine steel wire, a hundredth of an inch in diameter, rolled from one upon the other. As the wire passes through the recording part of the instrument it receives local magnetization from a small two-pole electromagnet articulated with the sensitive diaphragm of an ordinary telephone receiver. At each contact following the vibration of the diaphragm the wire is magnetized at that spot. In order to secure sufficient space between the magnetized localities the wire must be speeded to about three metres the second. If now the locally magnetized wire be run at the same rate through a reproducer the local magnetism of each spot attracts the magnet, this sets up in the diaphragm vibrations similar to those originally made by the receiving diaphragm, and thus the voice is reproduced. In another type of record a disc is similarly employed."

Machine Without Needle, Horn or Diaphragm.

It is said that a new talking machine that perfectly reproduces sound without the use of either needle, diaphragm or horn will be put on the market during the coming year. The records are said to be practically indestructible and capable of holding an entire opera, and will be very inexpensive to make. Those who have heard this machine pronounce it marvelous and say it is built on an entirely new principle. Although applications for patents have been made, considerable mystery surrounds the construction of this talking machine, but those who are financially interested in it promise that it will be ready for public examination by next fall, and express their entire confidence in its success.

GREETING

To every one handling Talking Machines and Parts.

Be it Known, that we have installed machinery for making

Screw Machine Products

up to 1 inch in diameter, and believe we can quote your attractive prices.

Send in your samples to

The Wallace Barnes Co.

Bristol, Conn.

SOME QUESTIONS ANSWERED.

Sykesider, Md., Dec. 31, 1906.

Editor Talking Machine World, New York:

Dear Sir—Please inform me through The Talking Machine World on the following questions:

First. Would I be infringing on the patent rights of the talking machine manufacturers of this country if I import machines and records manufactured in Europe and by offering them for sale?

Second. What is the duty on such imports and how figured? Thanking you in advance, I am, yours very truly, O. O. MILLAR.

First. If of the kind and type sold here, yes.

Second. Forty-five per cent. ad valorem.

UNIVERSAL CO.'S FINE QUARTERS.

The Universal Talking Machine Mfg. Co.'s new plant at Camp and Mulberry streets, Newark, N. J., is now in smooth running order. The floors are planned out to the best advantage for handling the business, and the offices are a marked improvement on the former Warren street premises in New York, affording more privacy and conveniences. Superintendent Haug, who has recently taken out a number of patents on sound boxes and tone arm devices, has not only a cozy office on the second floor, looking out on Camp street, but an experimental room fitted up with a modern equipment, as well as a record plant. President Royal also has his quarters on the same floor. The factory has a splendid light on all sides, from the basement to the top story. General Manager Macnabb is commodiously located off the general office on the main floor. The shipping facilities are excellent. On the fifth of the month John J. Foley and H. R. Bruder, the company's two travelers, left for their respective territories. Possibly President Royal may take a trip to meet the trade and get in touch as the new executive. In the event of Mr. Royal not being able to make the journey, Mr. Macnabb will go instead, and be away for several weeks. Mr. Macminemen last month completed a jaunt of 7,000 miles in five and a half weeks, going as far west as Denver, Col. It is likely he will hereafter remain at headquarters in charge of the sales department. By next month the company will have a new concert and a Royal Grand machine ready for the market, as well as a 12-inch record that will retail for $1, on which their new grand opera music will appear—four scores complete.

The American Talking Machine Co., Furey & McArdle, and the Piano Player Co., Omaha, Neb., have been bought up by F. J. McArdle, and will be run under his own name. He has recently taken space in Hayden Bros.' department store of that city and opened a very fine talking machine section.

THE COMMERCIAL GRAPHOPHONE

Endorsed by the Government Authorities—Used at the Recent Hearing on the Northwestern Coal Famine Case in Chicago—How Time Was Saved at President's Request.

(Special to The Talking Machine World.)

World Office, 195 Wabash Ave.,
Chicago, Ill., Jan. 8, 1907.

Although commercial talking machines have been in more or less extensive use throughout the country for some time past, they were placed in a new light at the Government hearing in the Northwestern coal famine case held in this city late in December. It might be said to have put the stamp of official endorsement upon the use of the commercial talker, and the success of the experiment should ensure their frequent use in Government matters in the future.

When the President commanded that evidence in the coal famine case be rushed, a battery of talking machines was placed in the Majestic Hotel in Chicago so that the testimony given at the hearing before the Interstate Commerce Commission in the Federal building might be transcribed in record-breaking time and started on its way to Washington almost before the witness had left the stand.

A relay of stenographers was kept rushing from the courtroom across the street to the hotel with notebooks jammed with testimony fresh from the lips of the witnesses. In the hotel everything was ready for speed. Into the rooms rushed the stenographer, and reading from his notes he would dictate the testimony into the receiver of a talking machine at the rate of 250 words a minute. As soon as a cylinder was full it would be taken from the machine by another stenographer, who would transcribe the record. Not waiting to see the result of his work, the first stenographer would hurry back to the Federal building and begin to take more testimony.

When E. W. McKenna, vice-president of the Chicago, Milwaukee & St. Paul Railroad, left the stand shortly before noon, two-thirds of his testimony had been taken and transcribed in typewritten form, ready to be shipped to Washington.

Thirty minutes after the session adjourned all the testimony was in and most of it was typewritten, ready to go to the President, but a trail of frayed stenographers filed out of the Federal building and graphophones were suffering from hot journals.

According to those in charge of carrying out the President's "hurry up" order, the world's record was made on this occasion in transcribing testimony. Under the old method it would have required three days to transcribe the evidence, but by the new method they reduced the time one-half.

Over in the Federal building J. W. Midgely, a former railroad official, began his testimony at 11 o'clock. A stenographer took a notebook full of it and made a record run to the graphophones. While Midgely was yet testifying, the voice of the stenographer could be heard repeating his previous words into a talking machine.

A moment later and the machine began to repeat Midgely's words to another stenographer, who took them down on a typewriter. Another stenographer rushed into the hotel with more of Midgely's words and began to feed them into another machine, which, when full, would begin to talk back to another stenographer. Still another stenographer dashed in and started a third machine.

A moment later a fourth machine was pressed into service. The room literally was full of Midgely's words, talking in four different sections. When the whole testimony was in, the number of machines gradually went out of service until, when the witness stopped talking in the Federal building, only one machine was in use.

J. B. Finlay, a music dealer of Danville, Ky., has moved to larger quarters in that city, where he will engage in the manufacture of talking machine horns.

ST. LOUIS BREAKS RECORDS

During Holiday Season—Trade Optimistic Over Outlook for 1907.

(Special to The Talking Machine World.)

St. Louis, Mo., Jan. 7, 1907.

The talking machine trade for the month of December has broken all previous records for the same month, and shows how very healthy the demand for amusement of this kind is. Every dealer in the city makes enthusiastic reports, and all are very optimistic as to the new year.

Manager Clancy, of the Columbia Phonograph Co., states that December was the best December they have ever had locally by a large increase, and that the larger proportion of the trade was on high-class instruments.

Manager Ramsdell, manager of the St. Louis Talking Machine Co., states that they had the best December on record, and that they sold a large number of their $200 instruments. He looks for a big year's business in 1907.

The Conroy Piano Co. had a heavy business in their talking machine department during December, and also a heavy sale on records.

The Thiebes-Stierlin Music Co. had a fine business in their new talking machine department, and Manager Brewer states that they had a big rush during the closing days of the holiday season.

Manager Walthall, of the talking machine department of the O. K. Houck Piano Co., states that their Christmas trade was a record breaker, and that they had a phenomenally large demand for records.

Marks Silverstone, president of the Silverstone Talking Machine Co., reports having had an exceptionally large trade during the month of December, which included a large sale of records.

The Koerber-Brenner Music Co., one of our up-to-date concerns, report having had a very large sale of talking machines throughout this territory during the last month.

NEW YORK CITY

A SATISFACTORY SALES FORCE.

A Talking Machine Man Gives Some Reasons Why Women Often Succeed Where Men Fail—Relates His Own Experiences.

One of the large talking machine dealers in a nearby city has taken up the matter of whether a man or woman is most satisfactory behind the sales counter. His experiences as related to The World are these: "I had a young man that was doing so well that he concluded he could do better on his own account, and no other help being available I took my typewriter from her work during the rush hours, and in a few days found that she was making some phenomenal sales. I watched her methods, as compared to those of some of the male clerks in my employ.

"I soon saw how she was taking sales away from the others. In the first place she was a born diplomat, and it only required a few words on her part to find out the circumstances and tastes of the prospective customer if a lady. If it was a machine that was wanted, the first thing she did was to find out what kind of one her dearest friends possessed, and then by a subtle suggestion persuaded her she ought to possess something better. And in almost every case the appeal to the customer's vanity worked. If it was simply a question of records, the tastes of the family and the customer were taken into consideration, and the way in which she would persuade them to add this, that or the other number to their repertoire was simply amazing.

"If it was a gentleman that was at her mercy (she had none), I could safely bet that they would spend double the amount that they had in mind, and go away with the resolve to call again as soon as possible. I do not mean to say that all young ladies could do as well, but I believe that they can do fully as well, if not better, in the sales department as the average young man. I will add more to my staff in the near future, and already have placed the one in question in that department of my business.

"I think in small towns and villages that the talking machine business is an ideal one for young women, particularly those who are not adapted for the more rigorous employments usually assigned to the gentler sex. I have now two who are selling machines on a commission basis, and both earn on an average of $18 a week, and at the same time maintain their self-respect to a greater degree than others who make a precarious living by selling books or who slave long hours at dressmaking or kindred work, and brings them into close contact with the most refined class of people in their neighborhood."

RECENT INCORPORATIONS.

Among the incorporations filed with the Secretary of State of Maine last week was that of the Royal Phone & Record Mfg. Co., of Portland, for the purpose of making and dealing in talking machines, with a capital of one million dollars. President, C. E. Perkins; treasurer, T. H. Gately, Jr., of Portland.

TALKER HELPED MINER HICKS.

L. B. Hicks, the miner whose entombment in a mine at Bakersfield, Cal., for over two weeks, and the efforts of other miners to reach him by tunneling thrilled the entire country, was cheered after the twelfth day by the music of a talking machine. Seeking for something to relieve the awful monotony of being penned in one position for days, Hicks requested music. The men at the upper end of the pipe that had been driven down to the entombed man, sang as best they could into its mouth, but without great result. Then a talker and a supply of latest records was brought. When the machine was started, the man who had faced a horrible death bravely for twelve days shouted like a child with a new toy.

"Make that machine rip out 'Down in a Coal Mine,'" he yelled.

"Can't," was the reply; "ain't got no record."

However, all the old familiar melodies that could be obtained were played for Hicks' benefit, and the surgeons said that the talker proved one of their greatest aids to keeping the prisoner's mind occupied and preventing him from brooding over his predicament, which, under the circumstances, would have possibly made him a maniac.

TALKING MACHINES IN AFRICA

Very Popular, Particularly in German Southwest Africa.

The phonograph and its various modifications have been spread all over the world, penetrating even into some of its dark and remote corners. It is an interesting story—that told of the traveler who first took a talking machine into the jungle of Africa with him. Upon hearing a voice issue from the funnel, the savage men, who were threatening the life of the explorer, fled in abject terror, and during the whole period of travel, as the wonderful news spread from tribe to tribe, the explorer was looked upon as a white god, who had at his command a terrible and amazing magic.

Some of the machines recently taken to German Southwest Africa have proved tremendously popular, and the natives never seem to tire of listening to the songs and music. One picture shows a gathering of black children as an attentive audience, with a dog in the foreground, which well might be the same intelligent beast that has posed for the well-known picture "His Master's Voice," and is listening just as attentively, though it is safe to say he does not hear his master's voice.

The concerns in America and Europe interested in the sales of talking machines confidently assert that the whole of the Dark Continent soon will be marked by them from the Cape to Cairo, So it may be, should this prediction prove correct, that the roar of the "fierce monarch of the forest," the trumpeting of the wild elephant or the roar of a tiger will be mingled with the melody of "Bill Simmons" or "Because You're You," writes a correspondent, breathed out from the mechanical throats of these American contrivances.

HAS DISCOVERED THAT VOICE!

"I have often wondered," said a friend of the editor's, "where the talking machine makers get the remarkable voices which the announcers of the next song or speech to be given by the machine use. But the mystery was solved to-day when I heard the conductor on a Brooklyn Rapid Transit train use just such a tone of voice in announcing stations. But still another puzzle now arises. Did the conductor have a voice of that sort originally, or did he acquire it from having heard it in the talking machine? Was it natural or a vitiated voice? I am writing for some light on that problem."

UNIFORM BILL OF LADING.

Decided Upon at a Recent Conference Between Eastern Railroads and Shippers.

The members of the talking machine trade in general will be interested to know the dispute over a uniform bill of lading, which has been carried on between Eastern railroads and shippers for the last six years, was recently settled at a conference in Washington, D. C., of representatives of railroads and the Illinois Manufacturers' Association and other organizations of shippers.

The principal points in dispute were whether initial carriers should be held responsible for damage or loss of shipments, and whether railroads could compel shippers to pay a premium of 20 per cent. over published rates in order to obtain compensation under the common law for lost or damaged freight.

The Carmack amendment to the Interstate Commerce law settled these two points in favor of the shippers. At the conference representatives of railroads agreed not to oppose the law on this point. They also agreed that bills of lading may be made negotiable as in the past.

The uniform bill of lading in a form satisfactory to shippers went into effect on all the Eastern railroads January 1. In all probability the same form will be adopted in a short time by the Western roads.

PHONOGRAPHITIS PREVALENT.

So extensive has been the demand for the Edison phonographs and records handled by W. A. Burr in Roseburg, Ore., that he has named the craze "phonographitis." Mr. Burr carries nearly every number in the entire Edison catalogue of records, and did a great business with the December list, including Christmas selections.

In the boot and shoe trade, as well as in a number of other industries the cheap phonograph as a premium machine is becoming quite a feature. A number of merchants who have tried this plan are most enthusiastic about its trade winning properties.

IMPORTANT "BRIEFS" FILED AT COPYRIGHT HEARING.

By Philip Mauro in Which Some Strong Points Are Set Forth and by Frank L. Dyer, Whose Logic Is Incontestible—These Papers Should be Read by Every Talking Machine Man Who Desires to Keep in Touch With Copyright Development.

Although unable to appear in person at the hearings, Philip Mauro, one of the best-known attorneys connected with the talking machine interests, filed an elaborate brief with the joint patent committees of Congress on the copyright bill, of which the following brief extract is his opening remarks, dealing specifically with "property in ideas" and paragraph G of section 1:

"Much of the argument by which it has been sought to support paragraph G is based upon a fundamentally wrong assumption, namely, that thoughts or ideas are property. There is no natural property in ideas after publication—i. e., after expression has been given to them. One may, of course, keep his thoughts to himself (and generally it were well for himself and others so to do), but the moment he has communicated them to the public they fall into the common fund, and there is nothing immoral, unethical, or a proper subject of animadversion, in thinking another man's thought, or in communicating it to others for their profit or entertainment. All talk about 'dishonesty' and 'theft' in this connection, from however high a source, is the merest claptrap, for there exists no property in ideas, musical, literary, or artistic, except as defined by statute. It is entirely a matter of convention or contract; and in framing legislation for the benefit of that worthy class of persons who devote their gifts and energies to the embodiment of intellectual conceptions in some useful, ornamental, or instructive form there are two parties to be considered, namely, the public and the producer; and it is the duty of our legislators to consider first the interest of the former, whom they represent, and whose servants they are.

"Not only so, but the Constitution has with great clearness limited the object to which such legislation must be directed. It is not to benefit a special class of workers, however deserving, but to promote the progress of science and the useful arts. That is to say, the interest of the public is to be considered as paramount; and the underlying theory of the entire patent and copyright legislation of this country is and has been to shape such laws as will induce and stimulate the greatest quantity and best quality of intellectual output along these definite lines. As individuals the members of the committee may entertain kindly and liberal sentiments toward authors, composers, etc., but as legislators they cannot properly be influenced by such sentiments to the enactment of any legislation which would not be clearly in the interest of the public.

"The writer would not care to enter opposition to the real interests of the composers, and it is a source of satisfaction to him to know that in attacking paragraph G, he is not opposing the interests of these public benefactors, but quite the reverse, although it has been artfully made to appear that paragraph G is in their interest.

"To assist in stripping from the arguments advanced in support of paragraph G, the superficial plausibility with which it is invested by an insincere appeal to the supposed 'rights' of the composer and author, we would point out that, of the enormous contributions added day by day to the common fund of ideas, but a relatively small number can find any monopolistic protection under the law. It is only when the ideas take the form of a literary or musical composition, or of an ornamental design, or of a useful improvement in an art, machine, or composition of matter, that they can be made the subject of protection under the laws. Ideas of treating diseases, of improving live stock, of producing new varieties of plants and flowers, of instructing children, of teaching the deaf and blind, of constructing houses and buildings, of landscape gardening, of conducting business enterprises in their manifold forms, and many other groups of ideas by which the public is benefited are the fond objects of no protectiug laws. Many and numerous classes of public benefactors continue ceaselessly to pour forth their flood of useful ideas, adding to the common stock of knowledge. No one regards it as immoral or unethical to use these ideas, and their authors do not suffer themselves to be paraded by sordid interests before legislative committees, uttering bombastic speeches about their 'rights' and representing themselves as the objects of 'theft' and 'piracy.' Certainly it cannot be contended in behalf of paragraph G that it is in the interest of the public, or that it has the slightest tendency to promote science and the useful arts. Such being the case it is improper legislation."

Frank L. Dyer's Arguments.

Another pointed argument was that made by Frank L. Dyer, representing the Edison Phonograph Works and the National Phonograph Co., who said in part as follows:

"I wish to say in the beginning that the statement which was made before this committee in June, to the effect that the Edison Co. were interested in any scheme or combination by which musical copyrights might be monopolized is absolutely unfounded, so far as those companies are concerned. They are unalterably opposed to those sections of the bill which relate to their business, including the section (subdivision 9 of section 1) which we are now discussing.* * * The thing which the law protects is not the idea, but the embodiment of the idea. A musical composition, if it is copyrighted at all, is copyrightable because it is a 'writing,' and can be read by the skilled person to whom it is addressed. That is to say, a collection of sounds or noises, the embodiment of music is not copyrightable; but a writing, which is addressed to musical people, is a thing which is copyrightable. A phonograph record is not a writing, as I contend, because it cannot be read, not only because of its minuteness and its enormous complexity, but because, as distinguished from the perforated rolls, of its variability. That is to say, a phonograph record of a particular piece may be played one day, and the next day the same piece may be played on the phonograph, and the two records will be absolutely dissimilar.

"Mr. Edison determined to experiment in that direction in the early days to see if it was not possible to read a phonograph record. He operated a phonograph and spoke the letter 'a' into it. That letter would require the length of about one foot, and would be represented by many thousand extremely minute vibrations. He examined with a microscope each particular indentation and made a drawing of it, so that at the end of two or three days he had what he thought was a picture of the letter 'a.' He tried it again with the letter 'a,' and he was surprised to find that the two pictures were absolutely dissimilar. Upon investigating the matter he found that the slightest change in the pronunciation of the letter, the slightest variation of a person's lips or vocal organs, resulted in the production of a completely different visible record, although to the ear it gave the same sound. That proves to my mind that a phonograph record is not a writing, because it cannot possibly be read. Some of the gentlemen present have stated that they understood a phonograph record could be read, but it is impossible to read it. It can only be heard through the ear.

"The present bill proposes two important departures in the law and seeks to protect: First, sounds themselves which impress the brain through the organ of hearing, and, second, records which of themselves give no indication of their subject-matter, but require to be used with a mechanical device to produce or reproduce the sounds. In other words, the bill proposes to protect the sounds themselves, so that any one who produces those sounds on a phonograph or a piano or vocally is an infringer. So the bill proposes to protect the sounds as distinguished from the embodiment of the sounds.

"The second absolutely novel proposition which the bill proposes to engraft on the statutes is that instead of protecting the embodiment of the idea which of itself is capable of giving to the mind of the observer the idea that was in the author's mind, it seeks to protect the records which give no indication of their subject-matter, but which require to be put on a mechanical device and which then operate to produce in the one case and to reproduce in the other the intellectual idea of the author.

"These are completely novel propositions in the copyright law. They have never been enforced in a single country in the world except in Italy. In the Italian courts not in an appellate court, I understand, it has been held that a phonograph record is an infringement of a copyright, and therefore that a copyright applies to the sound and not to the embodiment of the sounds. In France the courts have held that a phonograph record, if it merely contains sounds, is not an infringement, because the courts say a sound cannot be copyrighted; but where a phono-

Newark Tinware and Metal Works
53 N. J. R.R. Avenue, Newark, N. J.

graph contains words that have been copyrighted it is an infringement. The reason for that is that over a hundred years ago the French Government passed an act excepting from the operation of the copyright law music boxes which were imported into France in large quantities from Switzerland; and the court said that the law excepting music boxes from the copyright law would apply to those phonograph records; but if they contained copyrighted words they were an infringement.

"Yes. In Belgium, in Germany, in England and in this country, up-to-date phonograph records have been excepted from the operation of the statute. I think the record which we have before us gives a decision of the Court of Appeals in this district in which it was held by that court that a phonograph record was not an infringement of the copyright laws. No possible infringement of a copyright law, even under this act, could result from the making of the records themselves, because those records may never be used, or they may be kept until the rights have expired, or they may be sent abroad. An infringement would only be committed when the dual thing happened, when the record, which represents a part of the infringing act, is brought into contact with the machine which makes the reproduction. In other words, the infringement would have to depend upon the doctrine of contributory infringement, as it is known in patent cases.* * *

"In this business a composer's chance is small, since of the many thousand musical copyrights registered, only about forty are used each month. Under the present law composers have only to submit their compositions to the talking machine companies instead of the publishers. Under the present law and under the situation as it exists to-day the composers can be adequately protected, because in the talking machine business a scoop is just as important as it is in the newspaper business. If Mr. Sousa would come to us with one of his compositions and we should have an opportunity of putting that on the record three months ahead of our competitor, it would be of great value to us, and we could pay him very handsomely for that composition. So I think that so far as the composers are concerned they have the same opportunities that a newspaper reporter has, if he has what he considers a scoop. But, after all, why should composers be treated with any greater tenderness than inventors? They are both the creators of intellectual property. They are both referred to in the same clause of the Constitution. They should both be protected by the same laws. It is not a fact, as the gentlemen have so earnestly argued before this honorable committee, that the law contemplates the protection of intellectual property."

PROGRESSIVE MEXICAN CONCERN.

Is the Espinosa Phonograph Co. Who Increase Capital Stock to $200,000.

(Special to The Talking Machine World.)

Mexico City, Mex., Jan. 2, 1907.

The Espinosa Phonograph Co., which is the oldest talking machine company in the republic, having been established since 1891, are planning to increase their capital from $150,000 to $200,000. A reorganization of the officers of the company has taken place since the death of J. H. Wilkinson, who at the time of his death, November 20, was general manager of the company. Joaquin Espinosa now becomes president and treasurer, and Joaquin Espinosa y R., now becomes vice-president and general manager, taking over the active management of the business.

The head offices of this company are at Santa Clara No. 18½, the building being the property of the Espinosas. This building is undergoing the first stages of a complete reconstruction, which is to cost about $100,000. The building is now two stories high, and two more are to be added to it. The first and second floors are to be used as the general offices of the company, the sales room remaiuing in the front and lower part, where it has always been located. The additional floors are to be made into office rooms, thoroughly modern throughout, with elevator installation.

It is from these offices that the company now regulate the business of the branch stores and agencies throughout the republic. The Espinosa company have five stores and two agencies, or seven houses in the city. Besides this, it has branches in Queretaro, Guadalajara and Puebla, and agencies in twenty-seven other towns of the republic. It is the intention of the company to open up branch stores in Merida, Monterey, Guadalajara and Guanajuato soon.

The Espinosa Co., who are the exclusive agents for the Columbia Phonograph Co. in the republic, will soon issue their new catalogue of popular Mexican airs, which is undoubtedly one of the best collections in the republic. Some months ago Joaquin Espinosa y R., went to New York, taking with him the best artists procurable, for the purpose of making the records at the factory. It required three months to finish the work.

UTICA CRANE CO. INCORPORATED.

The Utica Crane Co., of Utica, N. Y., has been incorporated with the Secretary of the State of New York with a capital of $1,000, for the purpose of manufacturing talking machine cranks and fixtures. Those interested are William Harrison, Cora J. Harrison and George A. Rogers, of Utica, N. Y.

TALKING MACHINES AS TEACHERS.

(Special to The Talking Machine World.)

Chicago, Ill., Dec. 31, 1906.

Talking machines will become eligible for membership in the teachers' union if Dr. James F. Chvatal has his way. Declaring that the board is too poor to carry out the Post report unless a wholesale cut is made, Trustee Chvatal recently advocated the introduction of talkers in the public schools as "language teachers." He declared that the reform members of the board would find it far cheaper to buy a talking machine loaded with French and German cylinders than to pay the increases provided for in the Post report.

Dr. Chvatal said that at a future meeting of the board he will introduce a resolution calling for the purchase of these machines. He pointed out that they are being used in a number of the accredited private schools of language. "Then," said Dr. Chvatal, "we would have a teachers' union that would be quite harmless. It could send out its phonographic members to make speeches and should they become too socialistic the board could discharge them without trial."

CHATTANOOGA CO.'S QUARTERS.

(Special to The Talking Machine World.)

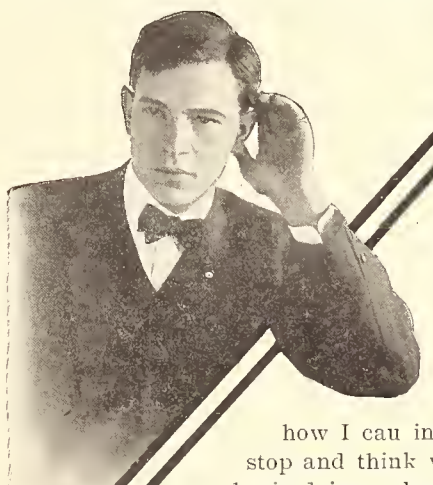
Chattanooga, Tenn., Jan. 8, 1907.

The Chattanooga Phonograph Co. have opened a handsome store at 929 Main street, this city, and are carrying the Columbia Phonograph Co.'s line. At present they have a complete assortment of both disc and cylinder machines and nearly 15,000 records. The company was organized by Frank H. Atlee, who acts as manager, with Russell Hardy as assistant, and it is their intention to cater to trade of the higher class.

HERE'S A COMPETENT WITNESS.

In a suit which recently came up for hearing before Judge Newburger in the criminal branch of the Supreme Court, a new use of the phonograph was brought to light. The witness was relating the substance of a private conversation he had with another man, and to confirm the accuracy of his remarks he stated that when he expected this party to call upon him he attached a megaphone to a phonograph and had it placed in an adjoining room so as to record their conversation.

The talking machine business of T. C. Hough, in Minneapolis, Minn., has increased so rapidly within the last six months that he has found it necessary to open two branches in different parts of the city. Mr. Hough handles the Victor and Edison lines.



Listen!

to the voice of the greatest and most perfect language teacher in the world. He says—I would like to tell my friends, the phonograph dealers, how I can help them, how I cau increase their business from 10 to 30 per cent.,—aud just stop and think what this means to YOU. Why there is a dealer out West who is doing a business of $I5,000 a year on his I. C. S. Language Outfits exclusive of his amusement records, outfits, etc.

This shows the possibilities that exist iu the

WHAT IS "GOOD WILL."

Interestingly Defined by Judge Lacombe.

In the talker trade good will often constitutes a big asset, and a United States judge, in a decision, discusses the question of good will in the following language:

"Good will has been defined as 'all that good disposition which customers entertain toward the house of business identified by the particular name or firm, and which may induce them to continue giving their custom to it.' There is nothing marvelous or mysterious about it. When an individual or a firm, or a corporation has gone on for an unbroken series of years conducting a particular business, and has been so scrupulous in fulfilling every obligation, so careful of maintaining the standard of the goods dealt in, so absolutely honest and fair in all business dealings, that customers of the concern have become convinced that their experience in the future will be as satisfactory as it has been in the past, while such customers' good report of their own experience tends continually to bring new customers to the same concern, there has been produced an element of value quite as important as—in some cases, perhaps, far more important than—the plant or machinery with which the business is carried on. That it is property is abundantly settled by authority, and, indeed, is not disputed. That in some cases it may be very valuable property is manifest. The individual who has created it by years of hard work and fair business dealing usually experiences no difficulty in finding men willing to pay him for it, if he be willing to sell it to them."

BIG TRADE IN CANADA.

According to the Canadian Music Trades Journal, everywhere in the Dominion the sale of talkers has been phenomenal, and has simply astonished the dealers by its rapid growth. One large retail piano concern handling talkers has found it necessary to appoint a thoroughly competent man to take charge of this department, and has given him two assistants. In the same establishment four months ago the trade was not regarded as particularly interesting, and was looked after by any salesman in the store who happened not to be busy. A demand has also arisen for good men to take charge of talking machine departments, and many firms are expressing eagerness to get hold of a really first-class man. A man with a knowledge of how to manipulate the machines combined with the qualities that go to make a good salesman, will have no difficulty in securing a position at a good salary.

A NEW YEAR'S SOUVENIR.

William Carleton, the talking machine dealer of 917-919 West Lake street, Chicago, Ill., favored his patrons with a unique photograph, to which is fastened a small calendar. The feature of the photo is a half-dozen miniature skeletons seated in tiny chairs placed on the surface of a disc record. Each figure is playing some instrument—a trombone, banjo, bass drum, etc.—and the concert is entitled "Ghosts of Music," upon the theory, perhaps, that the production of sound from a talking machine record approaches the supernatural. Mr. Carleton's name is also strongly in evidence, together with the lines he handles, which include Victor, Edison and Columbia machines and records.

For a Powerful Organ-like Tone the New

M. Hohner "TRUMPET CALL" Harmonica

Surpasses any mouth-organ that has ever been placed on the market.

No. 220. This instrument which has lately been offered to the trade is endowed with a phenomenal amount of tone power. The reeds are directly connected with a wooden sound-box, into which the tone passes, and finds an outlet through five Brass Trumpet Horns which protrude from the box. No Harmonica of this kind has ever been shown to the trade before, nor is there any which increases the tone so wonderfully. In the hands of an expert player this instrument can be made to sound like a church organ. In producing this instrument the house of Hohner has again shown great results from its constant effort to bring the Harmonica on the level with a high-class musical instrument. The mouth-organ has 10 double holes, 40 reeds, brass plates and is full concert.

SOMETHING MUST BE DONE

To Prohibit Jobbers Selling to Farmers or Others Who Buy Just Enough to Get Dealers' Prices Says C. D. Babcock.

Nicholville, N. Y., Dec. 19, 1906.

The Talking Machine World, New York.

Gentlemen: Referring to your article in December World, "Selling Machines in Small Towns," I can say from experience that unless something is done by the talking machine companies to prohibit jobbers selling to farmers or others, who purchase only the required amount to entitle them to dealers' prices, and carry an assortment of perhaps 100 records, that the talking machine business will be a thing of the past within five years, in the country districts at least. I call to mind one dealer who has had four or five sub-agents, which is not according to contract. This does not give a dealer a show, who carries a large stock of machines and records.

Yours truly,

C. D. BABCOCK.

EDISON STAFF OF ROAD MEN.

The territory traveled by road representatives of the National Phonograph Co. is covered by the following gentlemen:

J. W. Scott—Maine, New Hampshire, Massachusetts, Rhode Island and Connecticut.

George A. Hedden—Vermont and New York State, except Westchester, Putnam and Rockland Counties, Long Island and Greater New York.

J. B. Wilson—Greater New York, Long Island and New Jersey.

J. F. Stanton—Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, Kentucky and Tennessee.

W. H. Hug—Pennsylvania and Ohio.

H. A. Turner—Louisiana, Texas and Arkansas.

W. P. Hope—Wisconsin, Minnesota and Peninsula of Michigan, North Dakota and South Dakota.

G. A. Renner—Nebraska, Colorado, Wyoming, Utah, Montana, New Mexico; also the following counties of Texas: El Paso, Reeves, Farmer, Deaf Smith, Randal, Potter, Oldham, Hartley and Dallam.

F. L. Fritchey—Indiana and Southern Michigan.

M. G. Kreusch—Iowa and Illinois.

A. H. Kloehr—Kansas, Missouri, Indian Territory, Oklahoma and the following counties in Texas: Lipscomb, Hemphill, Roberts, Gray, Carson, Potter, Oldham, Hartley, Dallam and Sherman.

H. K. Miller—California, Washington, Oregon Idaho, Nevada and Arizona.

HOW TO STIMULATE SALES.

Some Pointers by a Piano Man Which Are Worth Consideration in Selling Talkers.

It is a peculiar trait in human nature that the more difficult an article is to obtain the more desirable that article immediately becomes. Anything easily obtained is not fully valued, for it is the effort required that makes it worth while. We always think more of anything obtained through hard work, for it takes the place of a reward for work well done.

A piano man—a student of man, by the way—takes advantage of this curious fact in making sales especially to women. If a visitor is undecided and cannot make a definite choice and promises to return later, Mr. Dealer marks one of the pianos "sold" in a conspicuous manner and puts it in a prominent place near the window, if possible where it may be seen from the street. Almost invariably that "sold" tag decides the question. That is the article wanted, and no substitute will be accepted. Mr. Dealer mentions how angry the original purchaser will be if she discovers the piano sold over her head, but in view of earnest entreaties he reluctantly allows the last customer to obtain possession of it. Then he gets a "sold" tag ready to put on for the next case of indecision.

It's a great game, and it is hard to say how it would work with talkers. If Mrs. Smith thought Mrs. Jones had purchased a concert machine she'd not be satisfied unless she would get possession of the same instrument or a more expensive one. Of course the public will be delighted when it learns of the scheme and boom the dealer's trade a whole lot—maybe. It is no worse than many schemes in use in certain portions of the trade, for even when it proves successful the customer is given full value for the money received.

A phonograph record containing the holiday greetings and congratulations of his father and mother in their home in England has been received by Rudolph Walters of 3002 Avenue B, Council Bluffs, Iowa. The record was made at a family gathering. Mr. Walters' two sisters sang a favorite duet into the machine. He has not seen the members of his family for years, and the sound of their voices in the phonograph was in the nature of a delightful surprise.

HIGH-GRADE RECORD CABINETS

FOR DISC AND CYLINDER RECORDS

¶ Help the sale of your high-grade machines with high-grade accessories.

¶ These new and improved cabinets do not conflict in any way with the sale of cheaper grades any more than a $40.00 Talking Machine conflicts with a $20.00 one. In style and construction they are fully *two years* in advance of any cabinets now on the market.

¶ Our own retail proves that there is a wonderful demand for these goods.

¶ Write for catalog.

¶ *Liberal trade discount.*

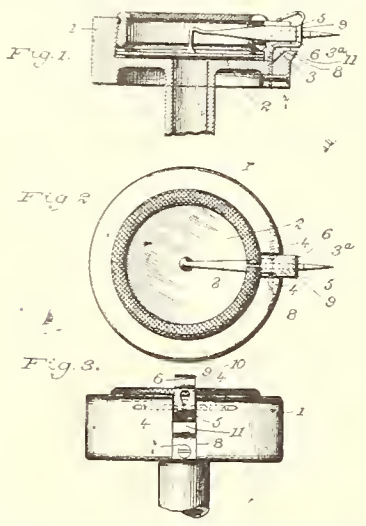
CHICAGO

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Specially prepared for The Talking Machine World.)
Washington, D. C., Jan. 7, 1907.

SOUND-REPRODUCER. Andrew Haug, New York, assignor to Universal Talking Machine Manufacturing Co., same place. Patent No. 838,326.

This invention relates to sound recording and reproducing apparatus in general, and as herein embodied is designed for use in connection with sound-reproducers of the type employing a detachable needle or stylus. The object of the invention is primarily to produce a device which will operate automatically or semi-automatically to detachably secure the needle or stylus in locked relation with the stylus arm, and thereby



dispense with the old form of set-screw heretofore employed for this purpose.

A further object of the invention is to cause such a device to perform a double function, the first being to secure the stylus in position, as above stated, and the second to coact with the stylus arm and maintain it in operative relation to the diaphragm under the required tension.

A device suitable for carrying this invention into effect is illustrated in the accompanying drawings. The inventor does not wish to be understood, however, as limiting himself to either the exact construction or arrangement shown, as various changes may be made therein without departing from the spirit and scope of the invention.

SOUND-RECORD AND SOUND-RECORD TABLET. Victor H. Emerson, New York, assignor to American Graphophone Co., Bridgeport, Conn. Patent No. 838,968.

This invention relates to sound records, and more particularly to a new sound-record tablet. It has been proposed heretofore to make sound-record tablets of celluloid and also of compositions containing shellac. Each of these substances possesses certain properties which render them desirable as sound-record material, but there are also certain inherent objections to their use. Shellac is expensive, and the records heretofore made of shellac-containing compositions wear out rapidly and also act to quickly destroy the reproducing stylus, such stylus requiring to be changed after each reproduction. When records are made of celluloid by impressing a matrix containing the sound record in reverse, the celluloid does not take a clear and accurate impression, with the result that the record is more or less defective. The inventor has discovered that if shellac and crocus powder or shellac alone be incorporated with the ordinary ingredients employed in making celluloid and the resulting composition employed as a sound-record tablet the objections heretofore existing to celluloid and to shellac are almost entirely eliminated, and a record of unusual quality is secured. This composition readily takes a clean-cut accurate impression from the matrix, producing a record of great durability and one which does not wear the reproducing stylus to nearly the extent experienced with the old record, many reproductions being secured from the same stylus, and hence without the annoyance incident to a change of stylus at each reproduction. Moreover, the amount of shellac, and hence the incident expense, is greatly reduced.

In the production of celluloid guncotton is dissolved with camphor, the ingredients being ground and thoroughly mixed and the composition then treated in a manner well known to persons skilled in that art. According to the present invention there is incorporated with the celluloid ingredients either shellac alone or shellac and crocus powder, preferably during or in advance of the grinding and mixing of the celluloid ingredients, and then proceeded in the usual manner of making celluloid.

The proportion of the various ingredients may of course be varied within limits; but the formula found to give the most satisfactory results

consists of adding twenty per cent. by weight of shellac to the usual celluloid mixture and (when crocus powder is to be used) ten per cent. by weight, of crocus powder. It is deemed preferable to dissolve the shellac in any suitable solvent, as alcohol, and after incorporation with the celluloid mixture the whole mass is mixed and thoroughly ground, just as in the production of celluloid. If desired, any suitable pigment may be added, and in all other respects the usual method of making celluloid is followed.

This new composition is a normally hard body, having many of the characteristics of celluloid, but differing therefrom in that it is harder and at the same time less yielding than celluloid. These properties make it much superior to celluloid as a material for sound records, since it gives a harder and smoother surface for the reproducing stylus, and it neither wears away the stylus nor is it worn by the stylus to the extent prevailing with record materials heretofore employed, particularly in what are known as the "zig-zag" form of records. In fact, a record made in a tablet of this new composition may be reproduced a great number of times without changing the stylus. Furthermore, since this material is less yielding than celluloid it does not "give" or yield laterally to the stylus, and hence produces a more accurate reproduction. This composition is formed into comparatively thin discs, and being hard and firm is capable of sustaining itself without the employment of any backing, though manifestly such backing may be used if desired. These discs then have sound record grooves formed therein by impressing a matrix into their surfaces under heat and pressure, as in the ordinary way of making a record on a celluloid tablet.

While the proportions above set forth have been found to give excellent results, it will be understood that the invention is not limited to the exact percentages named, since the benefits of the discovery follow to a greater or less degree when any appreciable quantity of shellac or its equivalent is incorporated, namely, a substitute for celluloid which presents a surface in every way better than celluloid or shellac for sound records.

PHONOGRAPH RECORD. Varian M. Harris, Chicago, Ill., assignor of one-fifth to Robert Burns, same place. Patent No. 837,927.

The present invention relates to that type of permanent cylindrical phonograph records in which a thin cylindrical record film is carried upon a cylindrical carrying mandrel that is adapted to have engagement with the ordinary tapering spindle or mandrel of a phonograph, and the object of the present improvement is to provide a simple and efficient structural formation and combination of parts in which a cylindrical record film of a tough and durable material and having such tenuity that in itself it will have no sound reproduction if unsupported is supported upon an intermediate carrying mandrel of a nature that will efficiently support such record film and which at the same time will materially aid in a faithful reproduction of the true and natural tones without any of the harsh and metallic qualities usual to the older type of permanent phonograph records, all of which are explicitly and comprehensively pointed out in the various claims filed with this patent.

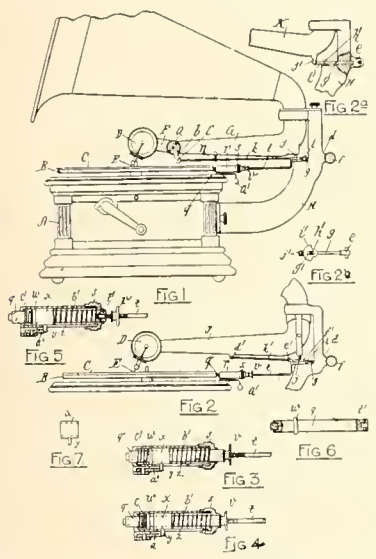
EDISONIA CO., Newark, N. J.

In the accompanying drawings, illustrative of the present invention, Fig. 1 is a detail longitudinal sectional elevation illustrating the present improvement applied to the tapering carrying spindle or mandrel of a phonograph. Fig. 2 is a side elevation of the submandrel of the present invention. Fig. 3 is a side elevation of the permanent cylindrical record film. Fig. 4 is an end elevation of the submandrel aforesaid.

Talking Machine. Henry A. Johnson, Providence, R. I. Patent No. 838,505.

This invention relates to an attachment which is adapted for use in that class of talking machines in which the arm which carries the sounding-box and the stylus is adapted both for elevation and swinging movement; and it consists in an improved mechanism for raising the stylus from the record plate and for simultaneously applying the brake to the record-supporting table. It also consists in the improved construction of the brake, which serves to prevent the rotation of the table.

In the accompanying drawings, Fig. 1 represents a side elevation of a talking machine provided with improvement. Fig. 2 represents a detail side view showing a modification whereby the improvement is adapted to another style of machine. Fig. 2a represents a detail side view showing another modification. Fib. 2b represents a top view of the circularly-curved elevating



means. Fig. 3 represents an enlarged axial section of the brake when the brake is in its disengaged position. Fig. 4 represents the same section when the brake is in engagement. Fig. 5 also represents the same section when the brake is in engagement. Fig. 6 represents a side view of the sliding bar of the brake. Fig. 7 represents a side view of the loose sleeve which is held upon the sliding bar of the brake. Fig. 8 represents an enlarged top view of the swinging arm which carries the swivel-jointed arm of the sounding box and the stylus. Fig. 9 represents a side view of the same, showing the stylus in engagement with the record plate and with the brake removed from its action upon the rotary table.

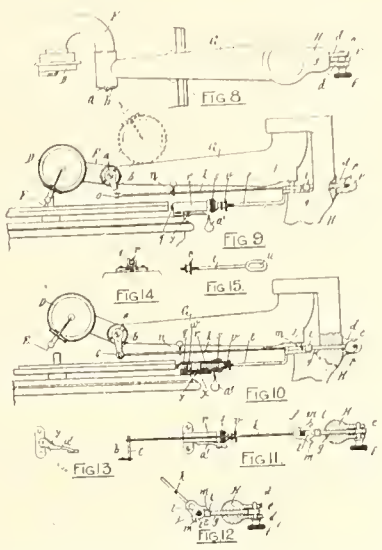


Fig. 10 represents the same side view, showing the stylus raised from the record plate and the brake in action upon the edge of the table, the brake mechanism being shown in section. Figs. 11 and 12 are detail views of the mechanism for raising the stylus from the record plate. Fig. 13 represents a top view of the cam-lever employed for holding back the brake. Fig. 14 represents an inner end view of the brake. Fig. 15 represents a top view of the connecting rod by means of which the brake is operated.

Phonograph Record or Blank. Thomas A. Edison, Llewellyn Park, Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 839,372.

The object of this invention is the production of a phonograph blank suitable for receiving a cut record corresponding accurately to sound waves and free from extraneous surface variation or disturbances, so that no sound will be reproduced other than that representative of the true record. When a matrix or mold is used so as to faithfully copy such a master as is described the resulting duplicates obtained from the matrix or mold by well-known processes are superior to records as now made, whether original or duplicate, in a number of respects, which will be pointed out..

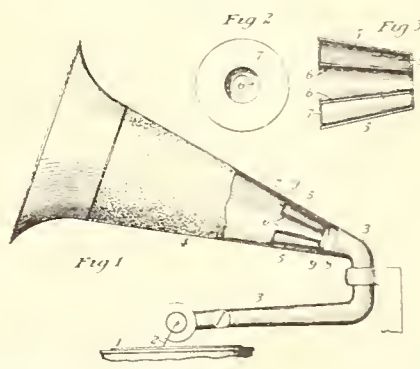
It is found that in order to produce an absolutely perfect master from which a corresponding matrix or mold can be subsequently made it is necessary to employ a material or substance which is perfectly amorphous and without crystallization, that is uniform in structure, at least for a sufficient depth within its surface to receive the record, that has sufficient adhesion to permit a substantially continuous shaving to be cut by the recording device, and that, finally, is of such a character as to be readily cut by the recorder in order that the latter may form a perfectly smooth record, which, while representative of the true vibrations shall not possess superfluous surface variations that at the present time and with present materials produce scratching and other extraneous sounds. When a material of this character is employed from which to construct the master, it is found that owing to its relatively soft character much less power is required to cut it, so that all of the sound vibrations will be recorded, even those representing the very weak overtones of musical instruments; also, that the depth of the record can be considerably increased so as to thereby permit very loud sounds to be recorded without danger of the recorder vibrating clear of the surface, and, finally, that a perfectly smooth record will be cut, even when very deep, with a substantially continuous chip, so as to entirely eliminate the scratchy sounds now due to the mere cutting of the present material.

Preferably the invention consists in the employment, for the manufacture of the master, of a neutral or nearly neutral soap soluble in alcohol and in hot water and by preference a soda soap, and in the manipulation of this material to put it into the required form for use in receiving a sound record.

Reference is hereby made to the accompanying drawing, which illustrates diagrammatically a master record embodying one form of the invention.

Sound Modifier. Charles R. Breen, New York, N. Y. Patent No. 838,297.

In the use of talking machines, phonographs, graphophones and other sound-emitting apparatus it is frequently desirable to modify or soften the sound emitted at the horn, as when the user employs the apparatus for his own sole amusement or when for any reason the full tone of the



instrument is not desired. This invention has for its object to provide such a sound-modifying attachment of improved and simple construction and adaptable for ready insertion in the horn and removal therefrom. It also has for its object the attainment of sound-resonating effects in the sound modifier, whereby a pleasing quality of modulated sound is produced.

Fig. 1 is an elevation, partly in section, of a horn with the sound modifier therein and of the upper part of the talking machine. Fig. 2 is a front elevation of the sound modifier. Fig. 3 is a central longitudinal section of the same.

Phonograph and Disc Holder. Walter C. Spurgeon, Milroy, Ind. Patent No. 839,902.

This invention has relation to phonographs and disc holders, and it consists in the novel construction and arrangement of its parts, as hereinafter shown and described.

The object of the invention is to provide a phonograph with a disc holding means, whereby any one of a number of discs may be brought into position with relation to the motor and the reproducer whereby the record may be produced. The discs are mounted on holders of special con-

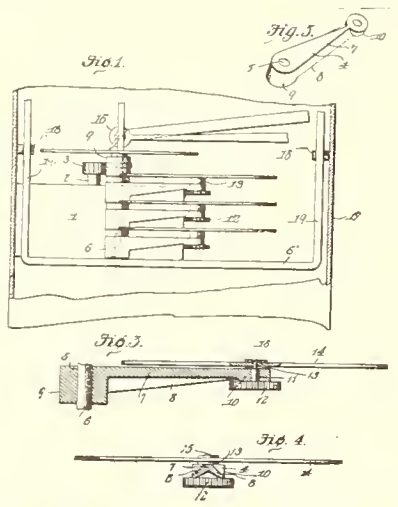
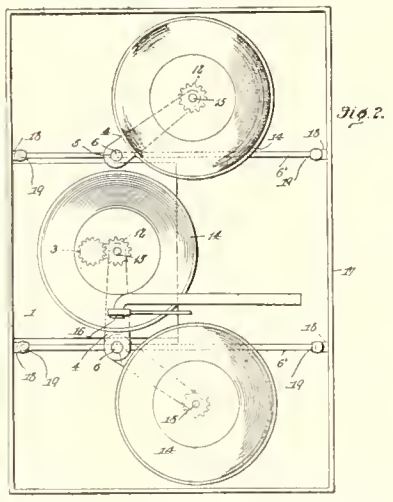
struction. The disc holder consists of disc-supporting arms journaled upon a vertically arranged shaft. Said shaft in turn is mounted upon a frame which is adapted to be moved up and down, a means being provided for retaining said frame of certain elevations. At the end of each disc-supporting arm is journaled a shaft. To the lower end of said shaft is fixed a gear wheel, and



to the upper end of said shaft the disc is attached. A gear wheel is fixed to the upper end of the motor shaft, and the said arms are adapted to be swung so that their gear wheels may be brought in mesh with the gear wheel on the motor shaft. A number of sets of arms are suitably arranged about the motor so that their discs may be operated by the same, and at the same time a single reproducer may be used for reproducing the record from any particular disc.

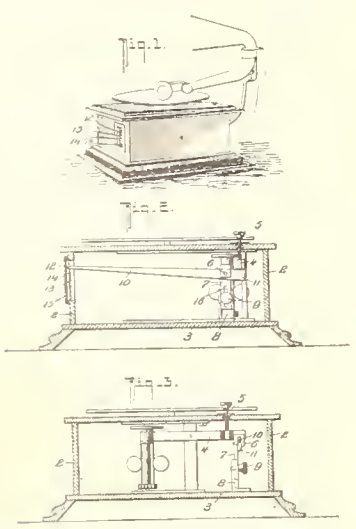
In the accompanying drawings, Fig. 1 is a sectional view of the casing, showing a side elevation of the lower part of one of the frames and a few discs, the top one being shown in contact with the motor. Fig. 2 is a top plan view of the casing, showing the arrangement of two sets of



discs. Fig. 3 is a longitudinal sectional view of one of the disc-supporting arms. Fig. 4 is a transverse sectional view of one of the disc-supporting arms, and Fig. 5 is a perspective view of one of the disc-supporting arms.

Gramophone Speed-Indicator. Clement A. Cornwall, Ashcroft, Canada. Patent No. 839,920.

This invention relates to an improved means



for indicating the movement of the brake-screw by which the speed of the mechanism, which rotates a gramophone record is controlled.

The mechanism by which a gramophone record is rotated is generally controlled by a small brake acting on the periphery of a rotatable part of the mechanism, which brake is operated by a screw threaded through the casing and bearing on the end of the lever to which the brake is attached. The movement of the screw to effect a variation of the speed of rotation is so slight that difficulty is experienced in setting the brake to give any desired speed. This difficulty is overcome by providing a light pointer which will multiply the movement of the brake screw or its lever and will indicate the amount of such movement on a graduated scale, so that if a certain position of the pointer is found to give a satisfactory speed for any particular record the corresponding number on the scale may be noted on the record and the brake control may be again set to that mark with some assurance that the same result wil be attained.

There are also other novel features in the arrangement and application of the device to which attention is drawn in the following specification, which fully describes the invention, reference being made to the drawings by which it is accompanied, in which Fig. 1 is a perspective view of a gramophone with invention applied. Fig. 2 is a vertical longitudinal section thereof, showing my invention and the parts immediately connected therewith, the remaining portion of the gramophone mechanism being omitted for clearness of illustration. Fig. 3 is a cross-section thereof.

Sound-Regulator for Phonographs. Arthur H. Ryder, New York, N. Y. Patent No. 840,089.

The object of this invention is to provide improved means for connecting the horn of a talking machine or other machine of the class specified to the machine proper, whereby the metallic vibrations or rasping metallic sounds usually produced by machines of this class are in a measure done away with and a more regular and musical tone or voice-tone produced, a further object being to provide an improvement of the class specified for use in connection with the delivery horns of talking machines and similar instruments, whereby the sound-waves are prevented from traveling around the horn in spiral curves and whereby the harsh grating or similar metallic sounds are to a considerable extent obviated and whereby the operator may at will regulate the volume of sound produced by the horn, a still further object being to provide a horn coupling for instruments of the class specified containing a supplemented vibratory device, and with these and other objects in view the invention consists in an attachment for instruments of the class specified constructed as hereinafter described and claimed.

The invention is fully disclosed in the following specification, of which the accompanying drawings form a part, in which the separate parts of the improvement are designated by suitable reference characters in each of the views, and in which Fig. 1 is a side view of the improved horn attachment for instruments of the class specified and showing the method of connecting it with the machine and with the horn;

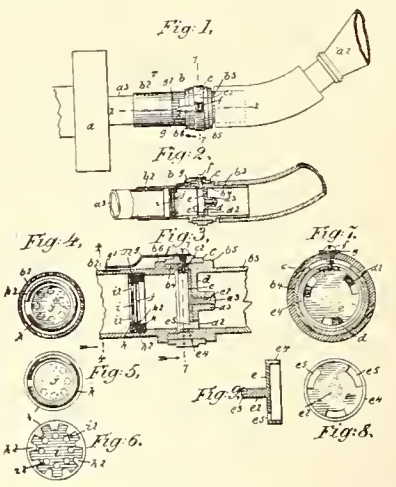


Fig. 2, a sectional view of the attachment on the line 2 2 of Fig. 1; Fig. 3, a view similar to Fig. 2, but showing the attachment proper on an enlarged scale; Fig. 4, a section on the line 4 4 of Fig. 3; Fig. 5 an end view of a supplemental vibratory device which is employed; Fig. 6, a reversed side view of the vibratory device shown in Fig. 5; Fig. 7, a section on the line 7 7 of Fig. 1 and on the line 7 7 of Fig. 3 and also a similar section through Fig. 2; Fig. 8, a side view of a valve plate which is employed, and Fig. 9 a transverse section thereof.

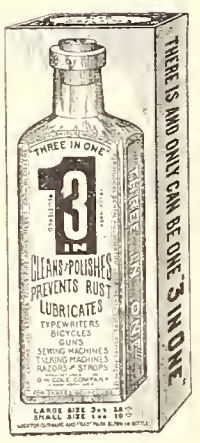
BIG DEMAND FOR CRANES.

There are three cardinal principles for a manufacturer to employ in order to create a large market for his product, first aim to make a satisfactory article, independent of cost; second, work on the manufacturing conditions so as to reduce cost of production to the lowest possible figure; third, figure close profits and large sales.

The Hawthorne & Sheble Co., of Philadelphia, have been manufacturing a line of patented horn cranes for some time past. These cranes have received the commendation of the trade generally, and in order to keep up with the growing demand, the manufacturers have been obliged to very largely increase their facilities. Increased production and improved methods of manufacture have enabled them to decrease cost of making, so that to-day they are marketing these cranes at prices that would have been impossible a short time ago. They report very extensive sales.

Use "3-in-One" Oil
"Oil" by Itself



"3-in-One" **never** should be **mixed** with any other oil. It's in a class all by itself—has been for 12 years. Keep it so for best results. Use it to lubricate, brighten and polish the various parts of all kinds of talking machines. Use it to keep disc and cylinder records clean. The "3-in-One" Book tells details. Get a copy from us or your jobber.

"3-in-One" is not only the best oil for your customers to buy—it's the best oil for you to sell. 50 and 100 per cent. profit—any reason why you shouldn't make it, same as other talking machine dealers are doing? 10c. and 25c. bottles. Your jobber is ready to supply you.

FREE sample bottle of "3-in-One" sent to any dealer on request. Just write to

With the Makers and Sellers of Automatic Specialties

A GREAT "AUTOMATIC" YEAR.

Was That Which Recently Closed—Every Department of the Slot Machine Industry Showed Marvelous Advance—Many New Machines Have Been Put on the Market and Our Foreign as Well as Our Domestic Trade Has Recorded Steady Growth Bringing Prosperity to All Those Engaged in This Line of Work—The Nickelodian Project Exceedingly Popular—The Value of the Automatic Piano as a Money Maker—The Situation Reviewed.

A retrospeetive glance over the past year's business brings forcibly to light the marvelous advanee in the slot machine industry. Everywhere is manifested this healthful condition of affairs, and manufacturers, jobbers and dealers are justified in their optimistic outlook for the year of 1907. At this time it has always been the custom among manufacturers to stock up for the annual rush that always occurs with the first warning of coming spring, but the continuous influx of orders has put this possibility beyond the reaeh of all, and the manufacturer is fortunate indeed who can supply the current demand. The present situation in this trade is an extraordinary one. There is not a firm that has not increased its plant beyond what a year ago would have seemed foolhardly, and yet not one that would not double its output if that were possible. The universal popularity of the penny arcade has undoubtedly been the greatest stimulator of the business. The men that first went into establishing these "poor people's theaters" did so on a gamble. They looked for pennies—behold these grown to millions. Two years ago men of wealth and position who were interested in these projects kept the fact secret—they were willing to reap all the benefit, but, because a business was founded and thrived from the smallest denomination in circulation, they were rather ashamed to acknowledge the connection. Now, however, they have changed their policy, and are proud of the association. It is a forcible illustration of the truth of the adage, "Save your pennies and the dollars will take care of themselves."

* * * *

Our foreign trade has increased to an enormous extent, and a tremendous field is open to this trade among the Latin-speaking races. Slot machines, especially the musical and moving picture types, are most popular among these people, those of American manufacture being universally used, notwithstanding that they are by far the most expensive. In price America cannot begin to compete with foreign countries on account of the tariff and trusts which keep raw material at such a high premium; but this is more than offset by the quality of the product, and no industry is more dependent on the wearing ability of its goods and the perfection of the workmanship envolved. Australia, Japan and China are monthly the recipients of hundreds of machines from this country, and every mail brings its quotum of rush orders to our manufacturers.

* * * *

For the man with but a small amount of capital to invest we should strongly advise that he look into the Nickleodian project. These moving picture theaters have many advantages even over the arcade. Firstly, the amount of money involved is comparatively small. Secondly, the field is more extensive, inasmuch as these places can be made to pay in even the smallest cities and towns, where to open an arcade would be but to court failure; in fact, all one needs is to rent some store on a fairly prominent thoroughfare (of course, the more so the better), one that can seat from 50 to 500 people, according to the size of the city. The decorations should be showy. A talking machine or automatie piano will serve as a crowd drawer. A generous amount of light (preferably electric) gives eheerfulness at night, and flashy bill posters arouse curiosity. As to the moving picture machine and films, manufacturers of these goods are offering the most reasonable inducements to investors. In the large cities, as before mentioned, the nickleodian has broadened out into vaudeville, and the old nickel admission fee increased to ten, fifteen and even twenty cents. These places, of course, are taking in large amounts of money, but in the small towns the original moving picture show is enough, and, as a starter, is less expensive.

* * * *

Automatic restaurants, of which New York has two, have not proved the popular successes here they have abroad. A new company has been formed, however, which plans to open such places in all the large cities throughout the country. Two recently opened in Philadelphia have shown encouraging results.

* * * *

There is another phase of this industry that has not been taken up seriously, and one which if looked into and thought over would be of vital interest to every talking machine dealer in the country, namely, that of agency rights for your town or district for various slot controlled devices. For example, we'll say Smith is a talking machine dealer of C——, Ohio, who has obtained the exclusive rights for handling a certain well-known automatic piano in his territory. He starts out one evening to visit the cafes in his vicinity with an eye to placing some of his instruments. Stepping into Jones' place he orders a drink for himself, and perhaps sets one up for the proprietor to get things on a friendly basis. The subject of pianos, as a paying addition to a bar, is brought up. Smith finally suggests the purchasing of an instrument from him; but Jones is not favorably impressed, and does not care to invest so much money in what he considers a doubtful experiment. Now is the time for Smith to play his trump card, and he does so in something like the following manner:

"Why, my dear fellow, I ask nothing of you except to allow me to place one of my instruments in your place here. It will cost you nothing, will add cheerfulness to the place and draw a crowd. Every week or so I will come around, collect the money and give you a receipt for it. I will continue this until the whole is paid for from its earnings or until you decide to pay the balance due yourself, when I shall, of course, turn the keys over to you."

Now, no sane man would refuse such a proposition as the above, and, in fact, it would only need to be used in extreme cases, rather than lose a sale. Now what is true of the automatic piano in cafes, drug stores, etc., is true of a large number of other machines. Good vending machines of all kinds will pay agents and operators in countless numbers of good locations to be found in all cities. Think it over. There's lots of money in it for those who will take it up. If you need advice of any kind, just drop a line to this department. Tell us what you want, and we'll do our best to put you next to the best people.

* * * *

In studying the present conditions in this trade we very much regret to find a mean spirit of rivalry among certain manufacturers, and many gross cases of unfair competition going on. This is the more deplorable under present circumstances when not one firm in this country can begin to keep abreast of their orders. It is bad enough when companies resort to the old knocking tactics, but when they go so far as to hire men to go around to various areades and by putting slugs into their competitor's machines—place them temporarily out of commission—and create the impression that they are a most

Some Facts Worth Considering

THE talking machine man frequently asks, "How can I increase my business?" The answer is easy. Place on a side line which takes but little space, which is attractive, and a standard in its particular line. Take the **Black Diamond Strings,** for instance. Steel and wound. New process. They are the finest manufactured. They are used by all of the prominent artists, and you will have a trade coming your way when it is known that you handle the "Black Diamond." Music dealers all over America, and all over the world for that matter, know full well the value of this product.

AUTOMATIC DRINKING MACHINES.

SUMMER AND WINTER BUSINESS.

Drop coin in the slot, the machine does the rest. Machines made for any coin. They register a clean glass and a clean drink. For delivery this Summer, orders must be received immediately.

EARNINGS:

Machines at 48 East 14th St., N. Y. City, are earning from $30 to $40 a day during winter, selling cider at 1c. per glass. In the summer earn from $40 to $80 a day.

One machine at 31 Park Row, N. Y. City, is now earning $20 a day. In summer months will earn $40 a day.

Ten machines at Coney Island took in $3,000 in 60 days, selling ice-cold water at 1c. per glass.

These machines sell all kinds of drinks—Lemonade, Orangeade, Root Beer, Celery Tonic. These drinks cost to make 4c. per gallon. When sold through the machine will produce 35 drinks to the gallon.

Machines Leased to Responsible Parties.

inferior instrument, said companies overstep the mark and deserve nothing better than disclosure and disgrace. Fortunately, these things have the happy faculty, like chickens, "of coming home to roost," and seldom need the interference of the press or outsiders, but work their own destruction.

* * * *

We are making an effort to interest the slot machine men in our paper. Each month there will be found interesting features so that it will pay to be a regular subscriber to The World. We have at great expense just obtained the most complete and only authentic list of slot machine men in Mexico, Cuba and throughout South America. This will be of inestimable value to manufacturers of these specialties who advertise in The World, on acconnt of the great demand for these devices in the above countries. In our advertising pages will be found a large number of excellent features. Possibly you are the inventor or manufacturer of some snch specialty. In that case we can find a market for your wares. Place your invention before the proper persons. You can do this in but one way, and that to advertise in a publication like The World, which will reach the purchasers of such devices.

* * * *

Of all the slot-controlled devices on the market that are made use of in the modern arcades none is more conspicuous than the antomatic piano. In all the large places this popular instrument is the magnet used to attract the attention of the passerby. No music is more generally loved than that from a good piano, none more repellant than that from a crippled one. Not another instrument is submitted to such a hard, constant grinding test. Hence the arcade man shonld look first for a good instrument with a clear, pure tone, and one that is built to best withstand the great wear put upon it.

HERE AND THERE IN THE TRADE.

Multiphone-Operating Co. Incorporated—The Dictograph Destined to Prove a Big Favorite—Valiquet Co. Will Soon Have a New Machine on the Market—The New York Vitak Co. Were Virtually Cleaned Out of Stock the End of the Year—Other Items.

The Multiphone Operating Co., 23 Park Row, have reincorporated under the laws of the State of New York with a capital of $1,000,000. The officers elected are: Edwin J. Selley, president; Peter J. Collinson, vice-president; Isaac Thorman, treasurer; William H. Pritchard, secretary; Julius Roever, general manager; Allison A. Pratt, consulting engineer, and Ole Severson, superintendent. This company have been forced to move their factory to larger quarters in order to turn out their mnltiphones quick enough to meet demands, and have just signed the lease for a six-story building at 92-94 Vandam street, this city, where they expect to be able to manufacture the machines at the rate of 100 to 150 per month.

If a little instrument which was exhibited to a number of interested observers at the Capital the other day is put into general use, members of Congress may sit in their committee rooms, or in the offices which will be provided for them in the new buildings now being erected, and hear what is being said on the floors of the House and Senate. People who haven't time or inclination to go ont to church may sit at home and hear their favorite minister deliver his Sunday sermon, and patients in hospitals may be cheered by hearing music played and snng in halls or chnrches in remote parts of the city. The appliance which makes all these wonderfnl things possible is called the "dictograph." It is the invention of K. M. Tnrner of this city. Mr. Tnrner was in Washington a day or so, but he was so unobtrnsive in his movements that not until the other day was it generally known that he had been conducting a series of tests at the capital.

The "dictograph" not only transmits sound, but magnifies it. It is somewhat similar to the ordinary telephone in its general principle, bnt it is not necessary for one to talk directly into its mouthpiece in order to be heard at the other end of the wire, and it is not necessary for the person at the other end to hold a receiver to his ear in order to hear. The General Acoustic Co., 1265-1269 Broadway, of which Mr. Turner is president, is now preparing to place these wonderful instruments on the market on a rental basis. Cheaper by far than a telephone, it is also a great time and money saver, and every firm, store, factory or other place of bnsiness will find them indispensable after once they learn their value.

The American Mutoscope & Biograph Co. suffered a small loss from a fire that broke out in their handsome warerooms at 11 East 14th street, on Monday, Dec. 24. All damages are fully covered by insnrance.

The Valiquet Novelty Co., 58 Colnmbia street, Newark, N. J., are starting off the new year with a rush. This company, which was formed less than a year ago, for the manufactnre of slot-controlled devices, has won for itself a great reputation, founded on the successive triumphs of their different machines. First came the "picture-phone," which won for them a host of friends and admirers. The "music phone" soon followed. This machine was the first successful slot-controlled disc talking machine placed on the market. The Valiquet Co. will shortly have their new "Gypsy Queen" fortune teller ready for shipment. This machine speaks your fortune in a soft modulated voice and will prove a great money getter. They are also preparing to turn out an attractive line of vending machines.

The Christmas, or holiday, season just closed has left behind it nothing bnt empty shelves at the factories of the New York Vitak Co. "Cleaned out" is what yon hear if yon drop into their main offices at 26 Cortlandt street, this city. Everyone is working overtime, and there really doesn't seem to be any prospect of a let-up, for orders are still piling it at an enormous rate for vitaks and films. Their new $30 machine, which they expect to have ready for the market abont March 1, will prove a great seller in the talking machine trade, and dealers and jobbers all over the country are getting their orders on file early to insure prompt shipments. One of the things abont this machine that especially recommends it to the talking machine man is the generons profit to be derived from its sale. As a selling proposition it can not be beaten—it literally sells itself. Then the film end of the business is a decidedly important feature and one that no one can ignore.

The new weighing machine now being gotten ready for the market by the Rosenfield Mfg. Co., of this city, is destined to add to the reputation of this progressive house.

MR. LOWE'S SHOCKING DEATH.

A victim of the horrible railroad wreck on the Baltimore & Ohio Railroad, near Terra Cotta, District of Columbia, December 30, was A. Lee Lowe, in charge of the Colnmbia Phonograph Co.'s commercial system in the Washington branch. Mr. Lowe's death was a shock to his associates, who speak of him as a capable and efficient man in his department, having been with the company two years, and on the first he had received a substantial increase in his salary in recognition of his services and ability. He was twenty-nine years of age, and leaves a widow and child.

FIRE DESTROYS LUTHER DAY'S STORE.

Fire destroyed the entire contents of the talking machine store of Luther Day, on Christmas night. No insurance. Mr. Day was in the habit of giving moving picture exhibitions on varous evenings, and on this occasion was entertaining about seventy people when a spark from the arc light struck a 1,200-foot film, immediately causing an explosion and blaze.

C. S. Gardner recently on the wholesale traveling staff of the Colnmbia Phonograph Co., will shortly engage in business for himself in Allentown, Pa., and will handle Columbia goods exclusively.

THE PEERLESS COIN-OPERATED PIANO

Whatever your business may be, things will move faster if you have music. The PEERLESS has been tried in Cafes, Billiard parlors, candy stores, etc. and in every case it has proven a success.

It makes no difference what your business may be, so long as it means dealing with the public you will find it profitable to have a PEERLESS Coin-Operated Piano.

Style D

The PEERLESS will attract customers, amuse them, and earn money for you that you would not otherwise get. The PEERLESS is built to last longer in constant use than any other coin-operated piano on the market. Ask any owner of a PEERLESS.

The first cost of the PEERLESS may seem high but the freedom from cost of repair soon proves it to be the cheapest.

Our catalogue "Easy Money" will tell you more about the PEERLESS. It can be had for the asking.

A Strong Point for the Dealer

Music Master

"I point to the only records that *never disappoint*:"

Columbia Disc and Cylinder Records

Columbia Records outsell all other makes, because *they never do disappoint* the purchaser.

They never disappoint, because in tone-quality and in construction PERFECTION is the watchword.

Columbia Records are free from disagreeable foreign noises so apparent in records that are but imitation of the genuine.

Any ***one*** of the superior points of ***Columbia Disc and Cylinder Records*** makes them outsell all others.

The combined points of excellence in ***Columbia Records*** is the reason for their extraordinary popularity, and is the ***reason why*** *every Talking Machine Dealer* should sell them.

REMEMBER—Columbia Records fit any standard make of machine, and they improve the efficiency of every machine on which they are used.

The Columbia system of advertising gridirons the country. It reaches *everywhere*. It reaches *everyone*. No one can escape its influence. It is creating a demand in every locality for ***Columbia Disc and Cylinder Records.***

Can you supply the demand in your locality?

If not, get in touch with your jobber at once. Put in a line of Columbia Records to meet the demand.

They are the *best made*, *best selling*, *best advertised* Records on the market.

FIRE EXTINGUISHERS

MANY people think our only line of manufacture is Talking Machine Horns and Horn Supports. This page shows some of our other products: Incandescent Street Fixtures, Hoods and Reflectors, known throughout the world as "Marten Specialties," Metal Trays, Fire Extinguishers and Metal Specialties of all kinds. We have spent large sums of money to originate and develop better goods and methods, and our success is due to our effort to produce goods of the highest quality and value.

The Dividend Feature of the EDISON PHONOGRAPH

THE national advertising of the Edison Phonograph has been doubled. Formerly we reached those who did not own a Phonograph and told them why they should. Now, in addition to this, we are reaching Phonograph owners and encouraging the sale of Records.

This Record advertising is proving as effective as our Phonograph advertising. The calls for our catalogue of Phonographs and our monthly list of Records have nearly swamped us. This interest on the part of Phonograph owners is most encouraging to us. It must be to you, if you sell the Phonograph and the Gold Moulded Records.

The sale of a Phonograph is really insignificant, in the matter of revenue to you, as compared to the steady, increasing sale of Records that follows. Record profits are daily dividends to the Edison Phonograph dealer and with the strong advertising campaign we are now putting back of them these dividends will grow in size with the months.

If you do not handle the Edison Phonograph and the Edison Records you are turning your back on big, easy dollars. If you have them but are not featuring them, you are not getting your share of the talking machine trade.

National Phonograph Co.

59 Lakeside Ave., Orange, N. J.

New York Office, 31 Union Square.

WE show here the Edison Record advertisement as it appeared in the February magazines. Grand Opera Records are the feature. The call for them will be supplied by some dealer in your locality. Why not you? If you have not a supply of the booklets describing the new February Records, write to your jobber for them.

Grand Opera for the Edison Phonograph

"Wilt thou recall that day" *from* "The Flying Dutchman"

THIS is the month of grand opera in New York. A new interest in the great singers of the world has been given by the opening of Hammerstein's Manhattan Opera House, and now New York City is the only city in the world where grand opera is given on a grand scale in two opera houses at the same time. This unusual interest in grand opera gives a special point to our announcement of five new grand opera records.

B 41 — "Nobil Dama" ("Noble Lady"), "Gli Ugonotti" ("The Huguenots")— Meyerbeer By Mario Ancona. Baritone Sung in Italian. Orchestra accompaniment

B 42 — "Guardate pazzo son' io" ("Behold Me, I am Mad"), "Manon Lescaut"— Puccini. By Florencio Constantino. Tenor Sung in Italian. Orchestra accompaniment.

B 43 — Gebet (Prayer), "Allmaecht'ge Jungfrau" ("All-powerful Virgin"), "Tannhauser" Wagner. By Mme Rappold, Soprano. Sung in German Orchestra accompaniment.

B 44 — "Bella siccome un angelo" ("Beautiful as an Angel"), "Don Pasquale"— Doniz-tti. By Antonio Scotti, Baritone Sung in Italian. Orchestra accompaniment

B 45 — "Willst jenes Tags" ("Wilt thou recall that day"), "Der Fliegende Hollaender" ("The Flying Dutchman")— Wagner. By Alois Burgstaller Tenor Sung in German. Orchestra accompaniment.

Comment on this list is almost unnecessary. Wherever music is known and loved these songs are great. Rappold, Scotti and Burgstaller have sung in grand opera all over this country. Ancona is Hammerstein's new baritone. Constantino is now singing in the South with the San Carlos Opera Company. Two selections are from Wagner including the always popular "Flying Dutchman." Puccini is of special interest not only on account of his "Madame Butterfly" playing here, but also on account of the fact that he is now visiting in this country and conducting his own operas in New York

If you love good music, go to the nearest Edison store and hear these grand opera records. These five make forty-five Edison Grand Opera Records. The complete list will be sent to any one on request. If you like grand opera music, write for it to-day. Ask for Grand Opera Selections, Supplement No. 5. Anyway, if you care for music, let us send you the following Edison Musical Library. Ask for it to-day, but it will not be mailed until January 28th:

The Talking Machine World

Vol. 3. No. 2. New York, February 15, 1907. Price Ten Cents

REQUISITES OF A GOOD SALESMAN

That Is for the Talking Machine Business, Interestingly Defined by an Expert—Why People Fail in This Field of Effort.

The education of a good salesman in a talking machine store is no easy matter, according to the heads of many of the successful establishments in this city. Many young men, who have afterwards been successful in other lines, have failed in this branch. When asked what he considered the greatest requisite in a good salesman, the manager of one of the prominent warerooms replied "Tact. Without tact, any young man is sure to fail. Diplomacy is a fine art, and nowhere can it be practiced to better advantage than in a store like this. Let me cite an instance of to-day. There was a big rush, and one of my best salesmen had two customers to care for simultaneously. One was a woman of wealth, who seemed to think on that account she should receive all deference, while the other was plainly a woman of the poorer classes who showed by her manner that she believed that her money, although less plentiful, was every bit as good as that of her wealthy neighbor. I noticed that he divided his attention about equally to the two, and when he played a record for one praised it to the other. When the selections had been made, each was satisfied that they had been treated according to their due, and were profuse in their thanks. It was his manner more than what he said that got him out of trying positions. Often customers come in to buy machines who have not fully made up their mind as to what they want. They may be wavering between a cylinder and disk machine. In that case a salesman should find out how much they want to spend, under what conditions a machine is to be used and who is to use it, and by a little tact obtain their interest in the one most adapted to their needs. He will explain the good and bad points of both kinds, so that customers will feel that no advantage is being taken of their ignorance.

"It is also bad policy to attempt to force a purchaser into investing in a more expensive machine than they had in view, but generally a few comparisons between the power, looks and tone will make them desire the best, and if they think they can afford the difference, they will give the extra few dollars. At the same time a salesman makes a great mistake in selling a customer a machine beyond their means, as when the time for payment becomes due, there is always a possibility of the collection dragging along. I regard it as a mistake for a salesman to try to load up a customer with too many records at a time. Frequent purchases always mean better sales. I have my force always take down the name and address of every patron, and when the new lists are issued, I have them mailed to them with the salesman's card enclosed. This makes the customers think the salesman has kept them in mind, and they appreciate the little courtesy, and they are sure to return and ask for him to wait on them. The result has been that we have hardly had a dull day this year, doing the best January business in our history, and I know that when one store has been doing a land office business, some of our competitors have been putting in time dusting off stock. Our stock does not get a chance to get dusty."

NEW USE FOR TALKING MACHINE.

Doctor Employs It as a Therapeutic Agent in Certain Forms of Insanity.

An eminent doctor has discovered a new use for the talking machine, and is using it as a means of effecting a cure in certain cases of insanity, and in soothing turbulent patients when everything else had failed. Of course this treatment is not expected to prove effective where the cause of insanity comes from being kept awake nights from the piano in the flat over head or the village band practising for a presidential campaign, but where the provocation has been from a lesser cause, beneficial results are sure to follow. The claim that the sedative properties of music is a cure for mental disorders has long been recognized and is verified by the citation of many eminent specialists on brain trouble. The variety of music offered by means of a talking machine will enable those treating a patient a wide scope of music, so that a rythm adapted to the particular case may be found. The only point brought up by the hospital attendants against this plan is that they may be placed among the list of patients by hearing the machine working overtime.

WINDOW DISPLAY.

A Splendid Form of Advertising That Is Open to Every Talking Machine Dealer, and Which Brings Big Profits to the Man Employing It.

The advance made in the art of window trimming in the past few years is as noticeable as that made in advertising. Any retailer who recalls the windows of ten years ago can't help but mark the contrast that greets his eye to-day. At that time the displays presented a conglomerate mass of everything in general, and not much of anything in particular. The passer-by had the same sight to gaze upon day after day, and no doubt wondered why people showed such poor taste.

But to-day it is another story. The idea of utilizing this valuable space has been grasped by every live dealer. Glance in these same windows and you see something. You see, back of the exhibit, the idea standing out bold and strong. The chances are that the moment you look it will flash into your mind how that display reminds you of the excellent ad. that appeared the day before describing the very articles you saw in the window.

A display to attract attention must possess sufficient originality to at once arrest the eye with an unique arrangement so harmonious and beautiful as to be truly artistic, as a publicity expert would probably say. The most cultured admire a fine exhibit. The most ignorant are influenced by it. Dollars and cents are hypnotized by it. The great mass of shoppers are swayed by it, and the merchant who is wise always remembers this.

STENOPHILE SOUND MACHINE.

A German Invention Which Reproduces Sounds Automatically by Syllables in Typographic Characters.

Consul J. I. Brittain writes from Kehl that, according to the Journal of Alsace-Lorraine, the Stenophile Rivort, recently invented by Charles Bivort, chevalier of the Legion of Honor and director of the Bulletin of the Halles, has given some very practical and interesting results. The machine reproduces sounds automatically, by syllables, in typographic characters. It is operated in the same way as the typewriter; has a keyboard which consists of twenty keys. Each key, upon being pressed, points the corresponding letter on a band of paper, which unrolls itself on a sort of pulley. The characters are the same as those of the usual alphabet. It is easy to read at first sight what the machine has written. It is simple, strong and light, and exacts in its management neither effort nor rigid attention. A child or blind man can easily learn to use it. It writes very swiftly, writing as high as 200 words per minute, without fatiguing the operator or annoying the orator by noise. By means of an interchangeable keyboard it can be used for all languages.

The machine was recently exhibited in the office of the Journal of Alsace-Lorraine in Strassburg, where it gave excellent results, reproducing both French and German with perfect facility. It is already in use in many schools.

MME. LINDE AN ENTHUSIAST

Regarding the Value of the Talking Machine as a Teacher and as a Means of Bringing Good Music to the Homes of the Benighted.

Rosa Linde, the American contralto, like so many of her confreres, is an enthusiast regarding the talking machine as an artistic factor. She became interested in the "talker" some time ago, when her husband displayed a desire to have her make some records of her voice. She went to the laboratory of the company in a very skeptical condition of mind; moreover, the day was a disagreeable one, and she felt anything but joyful. However, she made the records of the songs desired, and a week or so later she was invited by the president of the company to come to the laboratory and hear the result of her efforts. She was so confident that they were failures that she postponed the visit from day to day, but at last paid the visit. Her experiences as a record maker really amazed her, so beautiful and clear was the voice. As a result she was offered a very handsome sum of money to make records for the company, which she has since continued to do.

As an educational factor Mme. Linde considers the talking machine simply invaluable, and does not hesitate to say that it even cured herself of many vocal faults. When she heard her first record she realized certain vocal imperfections which she did not think existed. As a medium of entertaining friends she says it cannot be beaten. When asked to sing, you comply with the greatest of pleasure by simply starting on the machine, and thus you enjoy not only your own singing, but the company of your friends.

It would be difficult to find any talking machine man more enthusiastic than Mme. Linde is regarding the talker and its helpfulness to young singers as well as a valuable aid in disseminating high class music among the benighted in the smaller sections of the country—people who would never hear high grade music unless through some such medium as this.

"TALKER" FOR VANDERBILT HORSES.

In order to accustom his highly-strung thoroughbred horses to the crash of band music, Alfred G. Vanderbilt recently had a talking machine placed in the stable yard at Newport and the grooms led the horses back and forth before it, until their nervousness was dispelled. Mr. Vanderbilt will send a number of horses to compete at English horse shows next summer, where full military bands are much in evidence.

THAT FAMOUS VICTOR SIGN.

Among the hundreds of brilliant electric lighted signs along the Rialto, or "Great White Way" section of Broadway, New York, the one that attracts the most attention from its size and unique form is that of the Victor Co. The sign takes up the entire side of a building, and is about 50 feet square. Of course, it represents the dog looking into the horn with "His Master's Voice" underneath and the company's name in large letters above it.

MAKING HORNS IN CANADA

The Queen City Manufacturers, Ltd., a concern only recently organized, with offices at 474 Queen street West, Toronto, Ont., are carrying on the manufacture of talking machine horns in a very successful manner.

POULSEN'S LATEST INVENTION.

The Inventor of the Telegraphone Is the Author of a Mysterious New Energy Which Threatens to Revolutionize Accepted Beliefs and Mark a New Era in the World's Progress—Poulsen's Clever Associate.

Fleet ocean liners without steam or any other visible means of generating power; airships furnished with wireless energy, and telephone and telegraph stations connected by wireless ether waves only, are among the projected products of "tuned lighting," a marvelous new species of energy.

Poulsen, the Danish inventor, known as the Edison of Europe, predicts that tuned lightning will make wireless lighting, transatlantic wireless telephoning and telegraphy commercially possible very soon. Wireless ocean liners and airships will follow in due course.

At a remarkable demonstration in London lately before Prof. Silvanus Thompson, Sir William Preece and other distinguished scientists, Poulsen succeeded in lighting a series of arc lamps by means of his new and marvelous energy, which first passed through his own body. By means also of his wouderful electric waves sent into the atmosphere he fused a piece of copper suspended in midair without contact with wires or conductor of any kind.

The lighting of electric lamps without wires by energy passing through the human body opens up a wonderful vista of scientific accomplishment. By means of properly installed generating stations, Poulsen will soon be able to effect electric lighting at great distances; and this absolutely without wires.

From his Danish generating station near Copenhagen he is to-day sending most powerful charges of what is practically nothing but raw tuned lightning between points separated by long distances.

Modern warfare will undergo a complete revolution when the Poulsen generating stations come into working order. If he can light a town by wireless energy conveyed through the air alone, it will be a simple matter to explode at long range an enemy's mines, or even burn up his ships and armies.

Owing to these startling possibilities the British war office through its most skilled electricians and scientists is manifesting considerable interest in Poulsen's experiments. Up to the present, however, the Poulsen power is only utilized for improvement and convenience; not for destruction. Lord Armstrong, the famous cannon manufacturer, one of the wealthiest men in England, has evinced his faith in the new energy by undertaking to finance Poulsen to an almost unlimited extent. A big company has just been formed with Lord Armstrong as chairman, and it is anticipated that it will soon be possible to seud wireless messages across the Atlantic as rapidly and cheaply as ordinary telegrams.

But this is not all. Wireless trans-Atlantic telephones will be installed before very long; while wireless electric lighting has passed the experimental stage. It will even be possible—and that perhaps before the end of two years—to build ships that will receive their motor power from shore stations. This will result in immense saving of space, for the great amount of room at present taken up by the bunkers and machinery of a modern liner will be available for passengers and freight. If Poulsen can direct his electric waves with sufficient energy to operate an electric lighting station miles away the supplying driving power to ships should be a mere question of detail. This will also apply to air ships, which so far have been failures owing to the weight of their motors. With Poulsen's tuned lightning, however, the problem will be solved.

Poulsen is well known to the talking machine trade the world over owing to his having invented the Telegraphone, which is now being further developed and exploited by a New York corporation, as referred to so frequently in these columns. The possibilities of the Telegraphone both in the commercial and amusement worlds are simply marvelous, and such notable scientists as Kelvin, Graham Bell, Marconi and others have attested their appreciation of the merits of this wondrous instrument. Poulsen, by the way, has a number of other inventions under way which are quite Edisonian in their marvelous character.

Associated with Poulsen in his work is P. O. Pedersen, a mathematical genius. It is said that Pedersen thinks in figures. He can tell, without leaving his laboratory, just what is wrong with an installation, and his calculations are so marvelously accurate that they virtually amount to intuition.

HE'D BACK THE "WORLD"

For First Choice as an Advertising Medium—A Tribute from Mr. Carleton.

Mr. Carleton, whose specialty is phonographs and photographs at 917 West Lake street, Chicago, issued a very unique New Year's calendar which came in for some merited words of praise in The World of last month. Three days after the issue appeared, on January 18th, Mr. Carleton wrote us as follows:

"Gentlemen.—Were it in my 'line' to advertise I'd back The World for 'first choice.' I do not know what the results from an ad. generally bring, but your neat write-up on my calendar ("Ghosts of Music") brought me 51 requests for same. Thanking you for past favors, I remain Yours truly, S. Wm. Carleton."

Advertising results are just as satisfactory, Mr. Carleton, and we venture to say that there is no other trade paper published that insures better returns to its patrons. This is the result not merely of a large circulation, but of distribution among live people in every part of the United States and foreign countries.

HOW THE "TALKER" HELPED

To Reveal the Identity of an Austrian Who Was Stranded in Waterloo.

The talking machine has been found in still a new role, that of interpreter, in which field its worth was proven through a peculiar case in Waterloo, Iowa.

Not long ago a foreigner arrived in that city and, despite all efforts on the part of the police and citizens, nothing could be ascertained regarding his name or antecedents. All questions he answered in a peculiar language, which none of the local linguists could understand, and as a result efforts to provide him with the means of livelihood were but partly successful.

At last a brilliant idea came to W. H. Jannish, a talking machine dealer of that city, who persuaded the foreigner to speak into a phonograph in response to questions propounded through the medium of an improvised sign language.

The record was then sent to the language department of the International Correspondence Schools at Scranton, Pa., and proved to be in the Hovart dialect of Austria. The man's name was Theodore Yaleb, aud told all about his family in Europe as well as what he desired. As a result of this revelation the people of Waterloo are now helping to better Yaleb's condition.

CANADIAN DEALERS NOT AGGRESSIVE.

A Canadian talking machine wholesaler in couversation with The Canadian Music Trades Journal stated that the Canadian dealers, as a class, are not sufficiently aggressive in pushing the sundries end of this particular branch of the music business. He instanced record cabinets as one of the neglected lines. Certainly what business there may be in record cabinets should be captured by the man who sells the records and to him the public will naturally apply when cabinets are wanted. But the dealer is not to wait for the public to apply for cabinets. The owners of talking machines do not know that they want them aud will not know as long as they are not shown somethiug iu this line. They know they want something and are ready to try it if the dealer will only use his part.

MERELY A CHANGE OF NAME.

The firm name of the Wells Phonograph Co., 45 North Ninth street, Philadelphia, has been changed to Louis Buehn & Bro. The move involves no change in the standing or management of the business, however, as Louis Buehn has been the proprietor of the Wells Phonograph Co. for over five years. The concern are jobbers of the Edison and Victor lines, and have built up a large and successful business.

Many Southern dealers claim that while talking machiue owners in their section of the country like to hear high-class operatic and classical records played in the stores, when it comes to buying, ragtime and popular music has the call, leaving the records of better grade music to decorate the dealer's shelves and entertain him in idle hours.

ATTENTION

Edison and Victor Dealers

WE ARE KNOWN all over Pennsylvania as the largest Edison and Victor jobbers in the State.

WE ARE PIONEERS in the Talking Machine business and among the first to sell both these lines and OUR EXPERIENCE COUNTS in YOUR FAVOR.

IN ADDITION to machines and records we sell supplies of all kinds. We particularly call your attention to our fine line of CYLINDER and DISC CABINETS and our SUPER NEEDLES.

WRITE FOR PARTICULARS

PENN PHONOGRAPH COMPANY

17 South Ninth Street - - PHILADELPHIA, PA.

Reg. U. S. Pat. Off.

Are you that man?

We want the man who says:

"I am the *Victor* man for this community. I am going to get my share of the business that comes from the vigorous *Victor* advertising to the 56,000,000 possible *Victor* buyers all over the United States. The *Victor* people have always stood back of me, and they always will. I am not a big fellow, but I am growing. I don't have all the *Victor* business that I might, in my locality, but I am *going* to have it all, because there's money in it. I am sure of *Victor* quality, the business is easy, my profits are sure and protected, and the *Victor* people think as much of me as if I were one of their biggest dealers in their biggest city. I get a square deal and I pass it along to my customers."

Are you that man?

TAKES PLACE OF CHURCH CHOIR.

Talking Machine Now Used Instead of Choir in the Presbyterian Church in Nebraska City —Also Used by the Religious Stay-at-Homes.

It is now possible, with the development of the up-to-date talking machine, for the stay-at-home church-goer to lie in bed Sunday mornings and indulge in a religious service without benefit of clergy. The discovery that there were sermons in stones was made some time ago. Those in wax records, however, are of more modern origin.

It is a new departure in the phonographic enterprise, this special record of four-minute sermons and church hymns, but it has its possibilities. The demand first was felt for certain popular religious pieces, such as "Lead, Kindly Light," and "Nearer, My God, to Thee," sung by famous vocalists. These records sold like hot cakes, and made a big hit, especially in isolated communities where the religious music necessarily was of a primitive nature.

"You would be surprised," said the head of the talking machine department at Lyon & Healy's recently, "to know the great variety of subjects we supply. One of our favorites in the religious line is Charles M. Alexander's famous 'Glory Song.' We can supply you with a funeral sermon. You can hear it before you die, if you want to. If the law allowed it, we could seal the marriage vow by phonograph.

"As for regular sermons, of course, they couldn't be more than four minutes long. They would have to be snappy and to the point. The preacher never would arrive at 'fourthly, brethren.'"

The use of a phonograph in place of a church choir to attract the people to the house of God and to arouse a spiritual sentiment among the members of the congregations has, in fact, been adopted by a Nebraska preacher.

The origin and actual operation of this method can be credited to the Rev. Lester Gerard Leggett, D.D., of the First Presbyterian Church in Nebraska City.

The phonographic reproduction of sacred songs in a church was so radical a diversion from the usual method of furnishing music that the members of the Rev. Mr. Leggett's congregation were not only astonished, but the announcement of its use created widespread comment throughout the city.

Like every other modern method, the phonograph was installed after a certain amount of opposition, but after having been in operation for a short time it grew into favor, and within a short time practically the entire congregation was clamoring to know what songs were to be put on the phonograph on the next Sunday evening.

The phonograph has not only furnished an object of general conversation, with criticism and condemnation, but the size of the Rev. Mr. Leggett's congregation is estimated to have increased nearly 25 per cent.

The first night the phonograph was used, it was concealed at the side of the pulpit. Only a few in the congregation knew in what manner the music for the evening was to be furnished.

When the voice of Richard Jose, the famous tenor, emanated from the little room where the phonograph was concealed, wonderment spread over the countenance of every member of the congregation.

Following this, some of the songs that are sung by Trinity Church choir of New York were reproduced for the benefit of the worshippers with greater effect.

CUPID IN THE PHONOGRAPH.

Some Recent Instances Where "Dan" Has Been "On the Job."

In last month's Talking Machine World a story was told of Grace Rover, a Brooklyn school teacher who located a recreant husband by recognizing his beautiful tenor voice in a slot-machine phonograph, and thereby tracking him to his lair. Again there was printed a more remarkable tale of a young man in Jersey City who purchased a phonographic song record and fell in love with the unknown owner of the soprano voice recorded on it. Seeking out the dealer from whom he had made the purchase, he was introduced by him to the fair originator of the plaintive inquiry "Will You Love Me in December as You Do in May?" proposed and was married to her, his wedding gift to the bride being the priceless record which had been the means of bringing them together.

And yet people continue to ask, what's in a voice? As though love, beauty, tenderness, everything in life worth while were not better expressed by the cadence of a magic voice than by the perfection of a magic face. Ever since the telephone girl came into being and began her course of triumphant matrimony, we have needed no stale poetical quotations to remind us that the "excellent thing in woman" is indeed the most effective weapon in her whole armory of charms.

COLUMBIA CO. IN ALLENTOWN, PA.

(Special to The Talking Machine World.)

Allentown, Pa., Feb. 6, 1907.

The Gardner Talking Machine Co., distributors for the Columbia Phonograph Co., have opened a branch at No. 830½ Hamilton street, this city. C. S. Gardner, who had been with the Edison Phonograph Co. for ten years, and who was sales manager for the Columbia Phonograph Co. in New York City for a number of years, will be the temporary manager for the Allentown branch.

HEAVENLY AGENT DISCOVERED.

It was recently learned that a certain exponent of a new faith in Ohio who claimed to have received the "gift of tongues" direct from the Almighty, whereby, with the aid of the languages he could cast out devils, received his "divine" gift through several courses in language study through the aid of the phonograph. Of course the talker may have been a heavenly agent in this case, but indirectly—very indirectly.

WHEN PLACING YOUR VICTOR ORDERS

REMEMBER

That we are exclusive VICTOR JOBBERS, and that we are prepared to take care of your wants in this line, be they large or small. PRACTICAL SUGGESTIONS AND COMMENTS.

RECORDS OF PIANO SOLOS.

A subscriber of The World in Buenos Ayres writes: "In looking over the lists of the various compauies I fail to find any piano records, I mean those for the piano alone. Have any been listed, and if not, why not?"

For various reasons the manufacturers have found it rather difficult to turn out first-class piano records. I may say, however, that the National Phonograph Co. in last month's list have one of the best and most perfect numbers we have ever heard as a piano solo. It is that charming old song of Moore's, "Believe Me if all Those Endearing Young Charms," with variations. It is not only well played, but there is an entire absence of overtones and blurring, which has been the trouble with piano records in the past. The pedal is not used, and the piece is played pretty well on the middle and upper registers. The record is having a tremendous vogue in New York and elsewhere, and I am sure that our subscriber will be well pleased if he looks it up.

ON REPAIRING DISC SOUND-BOXES.

Under the above caption, John White has written an interesting article for our esteemed contemporary the Talking Machine News. The especial type under consideration is the exhibition sound-box of the Gramophone Co. He says: "The first consideration in a good playing machine is tone quality. Great volume is of no use whatever without the fine tone, and as recording has reached such a pitch of excellence now, the records are seldom at fault when a poor reproduction is heard. Generally the sound-box is at fault, though occasionally the motor will get out of gear through foreign particles getting into the finely meshed wheels, and causing an obstruction. Now and again, too, a machine may suddenly stop dead when playing with a sharp "click." This may be due to the governor breaking one of its springs, which lets the ball fly up and perhaps jam the motor, or maybe fly off altogether free from the works, and leave the motor still running and the balls still throbbing round unevenly through the mate being missing. This and other small repairs are easily treated.

"So far so good; but when the motor is running perfectly quiet and steady, you say, and the reproduction is harsh and uneven. What then? Well, all that is left is the tone-arm and the sound-box. As the tone-arm is only a tube to convey sound and a means to the end, if it is revolving easily and freely in both directions, there need be no trouble from that part unless it is leaking or a loose or faulty join is rattling. These details seen to, we come to the sound-box. Detach it from the sound-arm and examine carefully so that you may note its construction.

"The Exhibition type referred to is an excellent sound-box in every way. The stylus or needle-bar is caught at the lower end by two diametrically opposite springs, fastened to the sound-box body and at the diaphragm end fastened by a small screw and paper washer which holds it firmly yet pliantly to the diaphragm, the screw passing through from the inside of the mica. These springs are the leading feature of this sound-box, their reason for existence being to take up the high notes easily and yet retain the necessary sensitive power to vibrate the diaphragm when the faintest whisper passes through the needle on its way to the horn. Another and perhaps a better reason for these insignificant little springs is that they lengthen the life of the record by not attacking the line so solidly when the needle tracks the sound-waves.

"There is a certain rock, or give and take, between these two little fellow springs that tends to ease off the dead weight of the box and yet make it easier for the needle to follow the sinuous winding track. The diaphragm is a piece of mica—which is now very largely substituted for glass in reproducers in general, due no doubt to its greater tensity and lasting qualities in a sound-box.

"The size we are treating, 44 m/m, is just large enough to go into the sound-box shell, or outer case, without touching the edges, a great advantage, as it is insulated from the metal and will vibrate more easily. To secure it in place a thin film of cement is run on to the bottom tube or gasket (which tube ought to be pliable and lively or, if it is dead and hard, have a new one substituted), and then it is pressed lightly down into position. We are assuming that we have a repair in front of us.

"Should there be a hole in the diaphragm for the stylus bar screw to pass through, the rest is easy for a nimble pair of hands. In case there is not, the gasket, or tube for the back, should be adjusted and the back screwed on temporarily. Then the needle bar can be fitted carefully in place and the tension spring screws tightened so that the bar can just be moved and no more with a fair pressure from side to side along the little knife edges projecting from the shell. When this is done a needle point, or something similar, should be used to make the mark exactly where the screw should go through. This can be done best with a cork pressed on the back of mica, which prevents any scaling or splitting of the diaphragm. Fastening the remaining parts together is easy, except the fitting of the tiny screw and washer, which requires care and a steady hand. If the screwdriver slips it may penetrate the diaphragm and thus spoil your work.

"A jeweler's screwdriver is well worth having for these uses. Other types of sound-boxes with ordinary washers in them, should be reconstructed and fitted with cycle valve tubing, which is an efficient substitute for the white tough rubber tube, which we are familiar with, and is generally used. It need not be solutioned into a circle to fit the shell, simply joining the ends together when cut to size, and making a snug fit will answer the purpose admirably.

"The waxing of the finished diaphragm and needle-bar is a delicate operation, and can be done well by using the spoke head to melt the wax, a drop at a time—one drop going on to the foot of ueedle-bar and then heating the spoke head till dry of wax aud red-hot almost, touch the drop of wax and the foot lightly—the wax will spread in a complete circle. Repeat same on inside of diaphragm over screw. The back had better be taken off for this operation. If done well this ought to be equal to if not better than the majority of good sound-boxes."

SOME SUGGESTIONS FOR RECORDS.

A talking machine enthusiast makes the suggestion that makers of phonographs should, when they have made a master record, before altering the speed of the machine, run the record over again, at the same time also taking a watch and taking particular notice what time the first note in the accompaniment is played, the last note to be timed to a half-second. Then when reproduced there will be a good guide to go by, if the record is accompanied with a slip of paper stating exactly the time it is recorded at, and it will be a much better reproduction of the singer's voice. He says: "I am aware of speed indicators for machines, but every working man cannot afford to buy one, and I think this an excellent way of doing without one. I should also suggest that the slip of paper might have the singer's portrait and the words of the song printed on. I think that to have a ledge on both ends of the record would be an improvement. It would prevent the reproducer from slipping off the end, as it does sometimes if you are not there to stop it as soon as the tune is done. It should cause the phonograph to be better to listen to, as it would do away with flat tunes and galloping tunes, which one often hears when out walking. This is one great objection by some people to the phonograph. This refers also to all phonograph records besides songs."

ABOUT COLLAPSIBLE HORNS.

A Texas dealer writes The World as follows: "I have noticed that a number of collapsible horns have been placed on the market recently. Are these so constructed as to insure satisfactory results? I mean will they rattle, and augment still further any mechanical imperfections that may exist in the machine?"

There are collapsible horns now on the market that are most satisfactory in every respect. Of course care must be taken in putting the parts together and properly locking them. Many of the complaints about horns generally on the part of users are due not so much to the horn as to the carelessness in adjustment. Again a horn should always be thoroughly tested as to whether it has any loose seams. A horn with this defect will cause rattling in the reproduction, just as will the lack of attention to the collapsible horn, and this fault in many instances is mistakenly attributed to the reproducer. No matter how little rattle there may be in the horn, it will do much toward making the reproduction unnatural and unmusical—especially so in the more delicate selections.

A sermon could be written on the extraordinary ideas some people have about the use of

THE EASTERN TALKING MACHINE CO.

177 TREMONT ST., BOSTON, MASS.

Distributors of EDISON and VICTOR MACHINES, Records and all Supplies

Eastern Agents for HERZOG DISK and CYLINDER RECORD CABINETS

To the Trade:

Owing to the increased cost of material and the improvements we have made on all our instruments, we will be obliged to change the prices of all the different types.

On and after February 10th, the $15.00 Machine will be withdrawn from our catalogue.

THE PARLOR MACHINE will have a polished oak cabinet, new single spring motor that will run five minutes, small morning glory horn with 13½ inch bell; will list at $30.00.

THE CONCERT will have a new two spring motor the same as the Concert Grand, polished oak cabinet (much larger than the present style machine), red morning glory horn with 22½ inch bell; will list at $40.00.

THE CONCERT GRAND will remain about the same as it is at the present time, except that the price will be $50.00 instead of $45.00.

THE GRAND OPERA will also remain about the same as it is, except that it will have a horn to match the cabinet. You would really think the horn was made of wood; will list at $60.00.

THE ROYAL GRAND, our latest type, has a three spring motor, mahogany cabinet, horn finished and polished to match the cabinet; will list at $75.00.

All our instruments are equipped with Tapering Arm Attachments and Morning Glory Horns.

The Motors are interchangeable, all parts are alike and will fit the single spring, two spring or three spring. Less parts for you to carry.

We know these instruments will create a big demand. They are the best that money and brains can produce. We would like to have you compare these instruments with any other Talking Machines on the market, and, if not as represented, you can return them for full credit.

When the new prices go into effect, your discounts will remain the same.

Universal Talking Machine Mfg. Co.

Camp and Mulberry Streets **NEWARK, N. J.**

the talking machine and its parts. They think that the talking machine as well as the collapsible horn, or any kind of a horn, will care for themselves automatically, forgetting that the adjustment is as delicate as a watch, and needs the closest possible attention. Just compare the results from a machine that is carefully looked after with one that is left to care for itself. One is a perfect joy, and the other a destroyer of homes.

This disquisition is somewhat removed from the original question about collapsible horns, but it is excusable on the grounds that too much care cannot be taken in the matter of the horn, whether collapsible or regular, and it is not wise to blame the horn or the talking machine itself for lack of necessary attention on the part of the dealer or user.

ART AND MUSIC ACCEPT "TALKER."

This Interesting Fact Brought to Light in an Interview Afforded The World Representative by a Talking Machine Jobber.

"Hello! back again, are you?" cried my friend the jobber as I entered his private office. "That's right," I answered, meaningly, "and what's more, I'm after news." "Well, sit down and I'll see what I can do for you." He lit a cigar, having in the meantime handed the box to me, and with feet cocked comfortably on an unoccupied portion of his desk, indulged in deep thought while the smoke rings encircled the electric light bulb above his head and the silence grew intense. At last, with a final puff at his weed, he began:

"You no doubt remember when you were here before I convinced you that the talking machine had come to stay, and that it was a real instrument of musical merit and not a plaything?" "Yes," I answered; "and I guess I made that point sufficiently clear in my write-up, did I not?" He nodded his assent, then continued:

"I have added two interesting links to my chain of proofs since then, and I want to tell you about them. My boy, I have overcome the prejudice of two hitherto unapproachable skeptics, a musician and an artist, and my victories have done me more real good than the two substantial orders that accompanied them. The musician, Mr. Smith, we will call him, is a friend of mine now and a talking machine enthusiast. A month ago he considered the 'talker' a squeaking toy, fit only for children and fools, and numbered me among the latter. His change of mind came about as follows: There is an old German, 'Fiddling Louie,' they call him, who plays the violin on the street, in the hotel rotundas and wherever he is allowed to remain long enough to reap a little harvest of nickels and dimes. He came in here one day and asked if he might play for me. 'I blay you nice tune, Mein Herr, if you vill blease allow me,' he pleaded. 'All right, go ahead,' I answered, having a little time on my hands, and feeling an interest in the old man. 'I dank you, Mein Herr,' he cried, and then resting his chin upon his battered instrument, he began that beautiful selection by Schumann, Traumerei, and, say, maybe he didn't play it. The feeling, the touch and the wonderful sustained bowing of a master were in his rendition, and to say that I was amazed and pleased is putting it mildly. While I sat in an appreciative revery, an idea came to me, and I at once determined to work it out. 'You play well,' I said, 'and I wonder if we could not arrive at some arrangement for you to work here in the packing room. The work will be light, and then at times I would like to have you play for people who call. What do you say, is it a go?' 'You make me most happy, Mein Herr. I would like to start now alreaty.' Taking him at his word, I led him back to the packing department, introduced him to the boys, and he was soon contentedly at work. So much for that part of my idea. Now for the dramatic finale:

"Mr. Smith, the music master, soloist with the Criterion Orchestra, director of Mrs. McSnobb's Chorus of Society Buds, and the Lord only knows what else, is very wont to drop in at my sheet music counter for music. (We run a full line, you know.) Upon various occasions I had endeavored to interest him on the subject of talking machines. 'Bah!' he would cry in disgust, 'mechanical noise, my dear sir, is not music,' and the discussion would end then and there.

"One day he called, accompanied by the young Frenchman, Le Fevre, whose paintings of the ladies of the mighty four hundred are making such a furore just now. Being a very dear friend of Smith's, he, too, was an enemy of the talking machine. After Mr. Smith had made his purchases and they were about to depart, I asked them if they would not like to inspect the establishment. 'We have just made some improvements, and I would very much like you to see them,' I explained. They hesitated for a moment, seeming to depend one on the other, then Le Fevre broke the embarrassment by saying: 'Ve

vill be most—vat you call it?—deelighteed, M'sieu.' When we reached the packing room old Louie had just taken a machine from its case and was setting it up for test. 'Louie,' I volunteered, 'these gentlemen have called to hear you play. Is your violin handy?' The old German's eyes grew bright when they rested upon the face of Smith, for he recognized him from the many pictures of the great musician recently appearing in the newspapers. 'Mit bleasure, Mein Herr,' he cried, excitedly, and took his instrument from a shelf nearby.

During his brief preparation I had slipped a recorder on the machine and drew a stool within range. Louie sat down as I directed and began to play. Never had he played so well before, I am sure, for the sweet, sad strains of Traumerei came with such pathos and melancholy grace from his old fiddle that not only was I deeply moved, but the music master was deeply affected, and the Frenchman was actually using his highly perfumed handkerchief. When the last note died away and before it was possible for either of them to give vent to their admiration, I explained that the machine had recorded the selection, and that it would reproduce it at once. Rapidly changing to a reproducer, I pushed over the starting lever and stepped back to listen. After a slight whirr and swish the sapphire needle caught the vibrations of the violin and the reproduction began, and, thanks to the recorder, it was an almost perfect one. I saw in a moment that the game was over, and that I was on the winning side. The music master and the artist stood spellbound, paralyzed by the wonderful similarity between the original and phonographic rendition. At last Mr. Smith remarked: 'What is the price of that machine, Mr. Jones?' 'I tink I like vone, too, M'sieu,' echoed Le Fevre.

"Well, that's about all there is to tell. I sold them each an expensive outfit. Smith uses his machine to reproduce the voices of his pupils

KANSAS CITY, MO., U.S.A.

and show them their faults while Le Fevre has set his upon a massive aud highly ornameutal pedestal in his luxuriously appointed studio in the Art Building, where he plays selections for the entertaiument of his patrons while sitting for their portraits, and finds it a great help to him in his work. While in the store buying some records yesterday he explained his method: 'Eet has a soul, ze talking machine, M'sieu. Eet ees most vonderful. Ven I deesire to bring ze sad expression to ze face of my subject I put on ze Traumerei, aud ven I want ze gay laugh to come to ze lips and ze sparkle to ze eye, I put on ze quick air like ze valtz. I paint ze portrait more like ze life zan efer before, M'sieu, aud eet ees because of ze soul zat lives in ze machine. Eet ees magical, M'sieu.'

"That's the story, my boy," said the jobber in conclusion, and it proves just this: That there is no use doubting the talking machine's exalted position with the two most critical professions —music and art. Now that these two barriers are down, I have no fear whatever for the future. The talking machine has come to stay!" He emphasized this last remark with a bang of his fist upon the desk that made things jump, then turning to me agaiu, he said kindly but firmly: "You have my narrative and I have au engagemeut—so good-bye." I thanked him heartily and withdrew.

As I passed out of the office and closed the door behind me, I encountered a bent figure coming down the corridor with a battered violin. I paused for a moment, and then softly, from inside the office, came the strains of "The Waltz from Faust." Old Louie was laying a trap for more celebrities.

HOWARD TAYLOR MIDDLETON.

ATLANTIC PHONOGRAPH CO.

Purchase the Plant and Interests of the Talk-o-phone Co. of Toledo—Some Notable Personalities Connected With This Organization.

The Atlantic Phonograph Co., incorporated under the laws of the State of New York for $2,000,000, have acquired the plant and interests of the Talk-o-phone Co., of Toledo, O. The negotiations for the purchase have been pending for nearly a year. The officers of the company are: Nat L. Gartner, Gloucester, Mass., president; Albert L. Irish, Toledo, first vice-president and general manager; Thomas S. Gartner, Gloucester, secoud vice-president; Joseph L. Adrien, New York, secretary. Board of directors —Nat. L. Gartner, Albert T. Irish, Thomas S. Gartner, Joseph L. Adrien, Louis Strauss, George L. Clift, James E. Newell, Samuel W. Lipman, D. V. R. Manley. Messrs. Strauss and Lipmau are of New York; Messrs. Clift and Newell are of Syracuse, N. Y. Mr. Gartner is president of the Atlantic Seaboard Fish Co., one of the largest concerns of its kind ou the Atlantic coast. Mr. Manley is a prominent banker of Toledo, O. Clayton Reed, formerly New York manager of the Talk-o-phone Co., has no connection with the company.

When Mr. Irish, who is well known in the trade, was asked by The World for a statement, he said: "Just now we prefer to say nothing. We are not manufacturing records, but machines of a new design—just what, will be disclosed later. We are operating the Toledo plant to its fullest capacity, and it is probable we may be compelled to enlarge our facilities. Our general offices will be in New York at 71 Nassau street."

VICTOR MACHINE FOR FRITZI SCHEFF.

Fritzi Scheff, the famous singer, has had an expensive Victor talking machine installed in the special car on which she is now traveling through the South. Mme. Fritzi Scheff, who has scored a great success in "Mlle. Modiste," says she finds the Victor the greatest possible company in her travels. The sale of the Victor to Mme. Scheff was made by Sol Bloom, the well-known talking machine jobber, of New York.

TRADE ACTIVITY IN BOSTON.

Eastern Talking Machine Co.'s Big Orders—The Winchell Failure—Regina and Victor Line Go to Houghton & Dutton—The Talker on the Stage—Veale Takes Charge of Outfit Co.—Boston Cycle & Sundry Co.'s Good Reports—Other Items of Interest.

(Special to The Talking Machine World.)

Boston, Mass., Feb. 9, 1907.

February has started in with a rush for the talking machine trade. In every one of the jobbing houses here, and in each of the retail stores, there are many evidences to bear out the statemeuts of the proprietors that they are very busy. At the Eastern Talking Machine Co. The World was shown this week a single shipment of 2,000 records going to one dealer a little way out of Boston, and other orders nearly as large were being put together for other firms. The demand for high grade machines is still a feature of the trade, but there has also sprung up a demand for a high grade machine at a medium price.

To meet this latter demand, the Columbia Phonograph Co. have put on the market Type B N, a medium priced machine fitted with an aluminum tube arm, and this has met with instant favor. The dealers are taking to it like hot cakes.

An unfortunate incident connected with the talking machine trade here is the failure of the F. E. Winchell Co., reported briefly in last month's World, which were doing business at 90 Summer street, handling the Regina, Victor and Zonophone, also a line of musical instruments. It is not expected that the firms who have been supplying them with goods will lose much, if anything. The serious illness of Mr. Winchell, an enlargement of the business which results did not warrant, and too large a store for the capital, are the causes of the failure. Mr. Winchell will go South in an effort to regain his health, and Secretary Skelton, of the company, will probably join the staff of some other talking machine house. The Regina line and the Victor line go to the Houghton & Dutton Co., which run a talking machine department in connection with their department store. The assignee of the Winchell Co. is J. M. Linscott, of the Boston Cycle Co.

The graphophone has struck the theatrical business in good shape here. May Irwin is using one as a big feature in her play, "Mrs. Wilson-Audrews," and this week at the Lyceum, the Jersey Lilies Company has an entire act which is supposed to take place in the store of the Columbia Phonograph Co. There are plenty of signs giving the name Columbia around, a number of machines, record cases, etc., and, in fact, it makes a pretty good showing on the stage. It is one of the neatest advertising features seen here in a long time.

The Columbia Phonograph Co.'s local store here is constantly putting out some new ideas in advertising. For instance, hanging out over the sidewalk this week is a sign which reads: "Good Suggestion for To-day. A Larger Horn for Your Machiue." These suggestions are changed daily, and people who own talking machines get into the habit of looking for them each day. It is a big business getter.

W. H. Prestinary, representing the I. C. S., department of languages, has established headquarters at the Eastern Talking Machine Co., and is gathering in a very good crop of results. Business is booming, both at retail and wholesale. E. F. (Doc) O'Neil, who was formerly one of the valued members of the staff here, writes that he is traveling for the Victor Co. through the West. He has lots of friends here.

Business at the Zonophone Co., Post Office Square, is bigger this month than at any time since it started here in Boston. The Zonophone is a tremendous factor in the talking machine business here.

Mr. Lambo, representing the Auxetophone, has been calling on the trade here this week, instructing salesmen in the talking points of the big instrument, making repairs, etc. There is a big future for this instrument here.

Grand Opera records have the call at all the Victor stores, the Oliver Ditson Co. and M. Steinert & Sons' Co. sending them out by the boxload. Trade on the Victor instruments has increased enormously within the past six months. The demand is still greater than the supply, and it looks as if it always will be.

William R. Veale, who left the Read & Read Co. a few months ago to assume charge of the department of the Outfit Co., at Providence, R. I., returned to his home at Medford a day or so ago only to find that his father had died suddenly. He has the sympathy of the entire trade.

The Tray System still cuts a great deal of ice in the wholesale business done by the Boston Cycle & Sundry Co. Manager Andrews is greatly encouraged at the reception the trade has given this novel idea, and he is receiving orders from all over the country.

John and Selden Robinson have opened a talking machine store in the Robinson block, Rockland, Me.

GREETING

To every one handling Talking Machines and Parts.

Be it Known, that we have installed machinery for making

Screw Machine Products

up to 1 inch in diameter, and believe we can quote you attractive prices.

Send in your samples to

The Wallace Barnes Co.

Bristol, Conn.

Artistic Flower Horns

This does not refer to the ordinary, every-day Flower Horns on the market, but means

FLOWER HORNS of Artistic Designs;

FLOWER HORNS finished in brilliant, soft colors by our improved Air Drying Process;

FLOWER HORNS having interior floral decorations that are not gaudy, but perfect flower designs;

FLOWER HORNS that can be classed as works of art.

In manufacturing ARTISTIC FLOWER HORNS our motto has been not how cheap, but how good we could make them.

ARTISTIC FLOWER HORNS are made in numerous designs and colors, 24 inches and 30 inches in length, for both Cylinder and Victor Tapering Arm Machines. Dealers and Jobbers handling them are enthusiastic in their praises.

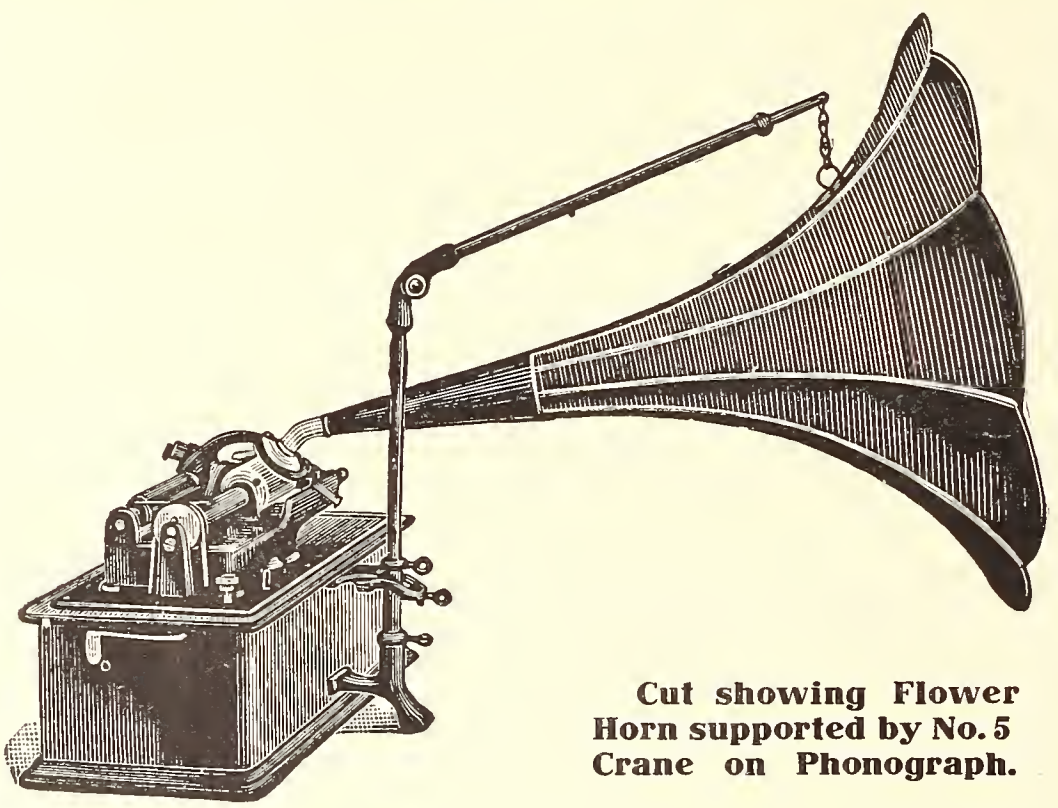
HORN CRANES

OUR Horn Cranes are classed as standard on the market. Beware of Imitations. Our Cranes are thoroughly covered by Letters Patent, and we are starting active proceedings against infringers. Our Patents cover many modifications that are not employed in our present product.



Cut showing Flower Horn supported by No. 5 Crane on Phonograph.

LIST PRICES:

No. 5 Horn Crane, - - -	**$1.75**
No. 6 " " - -	**1.25**
No. 7 " " - - -	**2.00**

You will always secure satisfied customers if you sell the H. & S. Horn Cranes.

Hawthorne & Sheble Mfg. Co.

PHILADELPHIA, PA., U. S. A.

COMPARATIVE FACTS

We use an air drying process in finishing all of our Talking Machine Horns in preference to a baked Japan. Sometimes we are asked why. We want you to know the reasons:

Baked Japan	Our Air Drying Process
If roughly handled will crack off	Cannot crack off
Will readily streak	Insures an even coating
Will show finger marks, etc.	Will not
Cannot be washed with soap and water	You can scrub
Can hardly be dusted or wiped off without showing some mark or blemish	Insures protection from rough handling
Has a paint like form, and frequently has a pimply surface or uneven waves	Is uniform without streak or blemish
Is not moisture proof or air proof, consequently atmospheric changes cause rust on metal. The rust shows through or japan cracks off	Is moisture and air proof

The largest and most prominent manufacturers of electrical goods, optical goods, etc., etc., formerly using a baked japan, now use an air drying process.

If you purchase Horns bearing this trade mark you will be securing Horns finished by the latest approved Air Drying Process, which are bound to give your trade satisfaction.

(Special to The Talking Machine World.)

Philadelphia, Pa., Feb. 11, 1907.

Talking machine jobbers and retailers report an improvement in business since the latter part of January, aud the improvement would probably be more marked if it were not for unfavorable weather conditions. Mild, wet weather, which favored colds and the grippe, was followed by almost blizzard-like days, and unquestionably had much to do with keepiug shoppers at home. Colds and minor ailments have put some members of the trade on the sick list, although in no case interfering with business. Taken all in all, trade is seasonable—about what can be expected at the mid-winter season.

The National Phonograph Co. opened an office the past month at room 1117, North American Building, where representatives direct from the Edison factory at Orange, N. J., are exploiting the merits of the Edison business phonograph. The so-called commercial field of talking machiues has not been "worked" very hard in Philadelphia, and the outlook is that the local branch office of the National Co. will have abundant success.

"The talking machine busiuess in the East is adjusting itself to conditions, in my opinion," stated a Philadelphia jobber. "The high-water demand for machines has been met and is over, and now trade is settling down to the level it will ultimately occupy, despite any amount of hustling or booming. To say that there is going to be a talking machine in every home is more of a myth than a reality. Regular, legitimate demand for machines is the trade we must look to in the future, backed up, of course, by the demand for records and supplies. In fact, sales of records and supplies are what we must chiefly rely on, and to an extent the business resembles that of selling sheet music. Improved talking machines will lead owners of common machines to discard them for better ones, but it is my experience that all owners of talkers haug on to them until they are only fit for the junk heap. And then, if tired of the machine, they are content to put it aside and pick up with some new hobby or fad. Understand me, I'm not a pessimist about the talking machine business, but I do believe in accepting conditions as we actually find them, for then we will not be disappointed over actual sales made. With the remarkable progress of sound-producing inventions, as well as electrical inventions generally, it is a question in my mind just how long the talking machine business will remain a distinct business. Isn't it apt to be taken over or absorbed by other industries until it virtually loses its own identity? If so, and a wider, broader business comes in, the dealer in phonographs of to-day will be benefited, and it will behoove him to accept opportunity as it comes. The harp preceded the piano. Maybe an unknown instrument will follow the talking machine, and it seems quite probable to me that such will be the case."

Both President Hawthorne and Secretary Sheble, of the Hawthorne & Sheble Co., are very busy at the main office, Jefferson and Howard streets, with the many duties connected with the company's constantly increasing business. The H. & S. talking machine horns and specialties are meeting with flattering success abroad, as well as in this country, and it is not so much a question with the company of getting orders as getting out the many orders on hand. The company's three large factories are running full-handed and full hours. The installation of additional machinery and facilities has permitted a larger output.

"Nearer, My God, to Thee," played by a talking machine in a Germantown avenue saloon led to the arrest of Charles Corey, a coachman, charged with having stolen the talker from Closson Bachman, his employer. Corey sold the phonograph to the saloon keeper. Policeman Bailey heard the religious air and, remembering that a number of sacred tunes were among the records reported stolen, he followed up the clew and secured information which led to Corey's arrest in New York.

Ninth street seems to be the favorite thoroughfare of Philadelphia talking machine jobbers, while Eighth street is popular with the retailers. Amusement arcade proprietors are fond of Eighth street, too.

"One of our men had a funny experience in South Jersey last week," said a representative of the Musical Echo Co., Chestnut street. "He was selling talkers in a rural village some fifteen miles from a railroad. He set up a Victor machine in the hotel and invited the good people to come in and hear it reproduce songs and monologues. Some of the natives had heard of a talking machine, but had never seen nor heard one, and many were the questions our salesman had to answer. One thin-faced, angular old maid was particularly inquisitive, and finally blurted out her opinion 'Young man,' says she, 'you have an educated poll parrot in that box. Oh! I'm wise! Don't tell me that round thing and tin horn can talk. Nixey!'"

Extensive preparations are being made for the business and office appliance show which will be held at Horticultural Hall, Feb. 16 to 23, inclusive. The National Phonograph Co. and the Columbia Phonograph Co. will make large exhibits. and as a large attendance is assured, the display should net satisfactory sales returns.

The Polack Amusement Co., which incorporated at Camden, N. J., the past month, will operate penny and uickel amusement arcades.

The talking machine department of Strawbridge & Clothier, under the management of Frank Butler, put out a good argument in favor of "talkers" the past week. "Pianos, stringed instruments, and a few of the wood-winds and brassers are all that can be played in the home, and all require much labor to learn. If you want to hear a good orchestra or a singer of note, or a band, you must go to hear it. But with a talking machine the situation is different. You have many instruments in one at home; the talking machine brings all music to your home." Strawbridge & Clothier's talking machine department is capably handled and good sales have been made the past month. Edison and Victor goods are carried, with a surprisingly full stock of records.

In a recent issue of the Public Ledger the talking machiue was utilized by Artist Williams in a clever cartoon. Newly inaugurated Governor Stuart is pictured seated in the Gubernatorial chair before a talking machine, mounted on a cabinet labeled, "The Machine." Inside the cabinet sits a typical grafter talking into a mouthpiece, and the grafter is labeled "The Gang." The cartoon is under labeled, "Not His Master's Voice."

Lit Bros. and Gimbel Bros., department storeists, inaugurated a "two weeks' industrial exhibit" the past month. Immense crowds attended both stores, and talking machine concerts enlivened the occasion as well as attracted many buyers. A similar industrial fair was also held by Strawbridge & Clothier, and the talking machine department was one of the centers of attraction.

S. P. Ferree purchased the corner property at Eighth and Chestnut streets, the past month for over $700,000, and it is to be leased to the Crystal Palace Co. for a huge amusement arcade. There will be talking machine, piano player, moving picture and numerous penny-in-the-slot devices—all going to make the largest amusement arcade in the city.

At a Chestnut street jobbing house The World met the grouchy clerk, and he said: "Trade journals, I take notice, are almost bursting with good advice for employes. They print lots of 'dont's' for clerks, office help and other workers; but it is blame little you see about what the 'boss' ought to do—and won't. Turn about's fair play, it seems to me, and I want you to favor me with putting this in your paper." He handed out a bunch of writing, headed "Some Don'ts for Employers," and this is what he had written:

"Don't watch your employes to see if they are watching the clock. Double anxiety only enlarges the worry."

"Don't hand out good advice unless you are willing to reward those who take it with a salary-raise hand out."

"Don't have so many rules that employes must lose time reading them. Time is money."

"Don't call down a clerk before a customer. It would be more humane to knock him down."

"Don't ask an employe to work 'til 10 p. m. without

45 North 9th Street, Philadelphia.

handing out coffee and sandwich money. He gets lemons enough during the regular shift."

"Don't get dippy on 'system.' Too much of it isn't good for the system."

"Don't preach 'A place for everything' unless you furnish the places."

"Don't expect a $15 man to wear a never-come-off smile on an $8 salary."

"Don't forget there's a band wagon as well as a water wagon, while spouting 'a bas demon rum.'"

"Don't blame the clerk with a bed, razor and chair because business is dull. Troubles exist everywhere."

"Don't expect double work of married employes—they can't help it."

"Last, but not least, quit don't-ing."

Anton Zalper, piano dealer, East Camden, N. J., has installed a moving picture arcade at 2708 Westfield avenue, and is doing well.

Retailers Butcher and Morgan, of Camden, N. J., duly exploited February records via printer's ink and report successful results. The talking machine and musical merchandise business of J. A. Smith, lower Broadway, is being closed out, previous to his retiring from business.

Reports from the Victor Talking Machine Co., Camden, N. J., show that business is not far from conditions heretofore reported, viz., all hands are extremely busy, the factories are running to full capacity, but it seems likely that before long orders can be more promptly filled than has been the case, owing to the overwhelming demand for Victor goods. Beyond question the Victor Co. have done everything they could to oblige the trade in filling orders and otherwise taking care of patrons.

"What is sauce for the goose should be sauce for the gander," commented a local jobber. "If the manufacturers of machines and records patent their ideas in order to make money, why should not composers have the same right under copyright law. Suppose composers should make phonographs—the kind covered by patents—through which to introduce their songs and compositions to buyers, wouldn't there be a kick? I don't think!"

"We have had a satisfactory month," reported Weymann & Son, Market street, referring to talking machine business.

"Wanted—To hire phonograph and records for entertainment," was a want ad. which appeared the past week in a local newspaper, and which suggests possibilities of future business for clever talking machine operators. Combined with a moving picture outfit, a professional operator might find a profitable field in giving entertainments at fashionable social functions at residences and suburban homes.

Louis Buehn & Bro., jobbers, 45 North Ninth street, have so thoroughly systematized their plan of record warehousing that any record wanted is found in a surprisingly quick time—a matter of gratification to their many customers. As they carry some 100,000 records in stock, it can easily be seen that their system is a model one. The firm reports good business with promising outlook.

Retail dealers in talking machines have pretty well filled up stocks depleted by the holiday rush, and are in good condition to meet current demands as well as early spring orders. At least three North Eighth street retailers are carrying side lines, such as jewelry, photographic supplies, small musical merchandise, etc. Some complaint is made that "too many are now in the business," but, as a rule, the retailers are vigorously pushing business—even to the extent of having salesmen make house-to-house visits. It is said one energetic salesman uses a horse and wagon—the latter filled with new and popular records. He visits the suburbs and, if they have a talker, reels off as many records as called for. In the absence of a talker he promptly lugs in his own, and plays the family party all the tunes they care to listen to. Needless to say he is doing a good business. He does both cash and instalment business. At the home of "deferred payment" customers, whenever he calls for his weekly payment, he generally manages to sell a few additional records.

"We've had a big demand for records like 'Nearer, My God, to Thee,' 'Rock of Ages,' and similar religious tunes," said a representative of the Lewis Talking Machine Co., South Ninth street. "Why the rush?" inquired the World. "Well, I'm no Hawkshaw the detective," said the representative; "but we have had a number of successful revivals, and—well, you can put two and two together, you know."

Jobbers report that many inquiries continue to come in for Victor Victrolas, and it is certain that every machine turned out by the Victor Co. for a long time to come will find willing purchasers. In fact, the demand for these wonderful creations has exceeded expectations.

The Keen Co., North Eighth street, are doing an excellent business in the International Record Co.'s records, of which a large stock is kept constantly on hand.

"Sound recording machines will probably succeed stenographers in courts of law in recording court proceedings," was the somewhat visionary prophecy of a local genius interested in talking machine matters. He could not state, however, how such a sound-recording machine would single out the voices of witnesses and court officials, leaving various courtroom sounds and noises out of the record.

The Penn Phonograph Co., 19 South Ninth street, have made a success in exploiting talking machine cabinets and carry the largest stock of these useful articles of furniture in the city. A large portion of their handsome salesrooms are given over to an exhibition of cabinets, large and small, of various designs and woods, and of various prices. Particularly fine are several cabinets designed for drawing rooms and parlors. The company reports seasonably good business in Edison goods.

JOHN DUNN'S PROTEST SUSTAINED.

The protest of John Dunn, Jr., against the assessment of duty by the Collector of Customs of Philadelphia, Pa., on an importation of needles was sustained, on January 25, by board No. 2 of the United States General Appraisers. This action was taken pursuant to the board's previous decision, known as G. A. 6,215.

Some Facts Worth Considering

THE talking machine man frequently asks, "How can I increase my business?" The answer is easy. Place on a side line which takes but little space, which is attractive, and a standard in its particular line. Take the **Black Diamond Strings,** for instance. Steel and wound. New process. They are the finest manufactured. They are used by all of the prominent artists, and you will have a trade coming your way when it is known that you handle the "Black Diamond." Music dealers all over America, and all over the world for that matter, know full well the value of this product.

National Musical String Co.
New Brunswick, N. J.

Did you ever have a customer

come into your store, ask for something you didn't have, and then walk out and get it of another dealer?

That's a way to lose business.

Suppose, instead of going to another dealer, he consents to wait until you send to your jobber for what he wants. Then suppose your jobber is slow in filling your order, and the customer comes in two or three times but can't get what he wants. You couldn't blame that customer for going to another dealer.

Your jobber's fault, but you lose the business.

The way to run your business is to have just what people want. Never let your stock run low on anything; but if it should, you ought to know right where you can replenish it immediately.

We can supply you with everything you need in Victor talking machines and records, fibre cases, English needles, trumpet horns and accessories of every sort. We send the goods to you immediately—same day the order reaches us—whether you are in a rush or not.

That kind of service is worth more to you than that of a slow-go-easy dealer, and yet it doesn't cost you any more. You might as well have it and not run the risk of losing customers.

Write to-day for our latest catalogue.

A SALESMAN'S REQUIREMENTS

To Win Success—Men Prominent in the Retail and Wholesale Departments Contribute Some Interesting and Helpful Hints to This Symposium on the Qualities Which Enable a Man to Succeed in the Talking Machine Business—Subject Discussed from Wholesale and Retail Viewpoints.

(Special to The Talking Machine World.)

Chicago, Feb. 9, 1907.

Many really valuable pointers will be found in the following symposium on the subject of the requirements of the ideal talking machine salesman. Some of the speakers speak from the retail and some from the wholesale point of view, but by different routes the same goal is reached. The subject will be continued and concluded next month, as some of the strong men in the local trade are still to be heard from. Your representative would be glad to receive contributions from anyone in the West who would like to express himself. Suggestions for other subjects which can be treated in a similar manner will also be gladly welcomed.

GEORGE M. NISBETT.—An agreeable personality has a great deal to do with the success of a salesman on the road. A salesman can accomplish the most good for his house and himself by taking time. Of course, I do not mean idling by this, but simply giving his customers the attention they deserve. He can often make himself solid with a dealer by spending three or four hours or even a day with him, instead of thinking that he must invariably leave town by the first train out after his arrival. The traveler should always give the dealer the benefit of his larger experience and the results of his observance of the methods of other dealers. Methods of caring for stock is one subject which he can often take up profitably with dealers who are open for suggestions. The whole subject of handling and sales methods, the demonstration of selling points, etc., lend themselves readily to treatment by the intelligent traveller always on the lookout for means of furthering the interests of his trade. Again, the average dealer will first show a customer a $10 machine and will then perhaps talk him up to a $20 machine and then stop. Now, if he will start out with the highest price machine first he will stand a good chance of selling him the better machine, and if he fails he has paid the customer a subtle compliment which at least makes him feel good and oils the sales channel. This just illustrates one way in which the traveler can aid his customer. Where a dealer is in a position to swing it I always believe in advocating the carrying of a complete stock of records—all the numbers. If the dealer has confidence in the salesman, the latter can easily convince him by sincere arguments, which it is not necessary to go into here, that he is not talking for himself and the larger sale merely, but that such a course positively results in great benefit and extension of trade to the dealer.

JOHN OTTO.—The successful talking machine salesman must possess a vast amount of patience. In fact, this quality is perhaps more necessary than with his brothers in other lines. Especially is it needful in dealing with the record proposition. If a customer comes into the store and is approached by the salesman in an offhanded manner he is likely to become discouraged at the outset. He must feel that his trade is valued. Then again if he does not like the first few records don't throw down the record with an air which says very plainly: "Oh, you don't know what you want, there's little use in bothering with you." The largest sales are often made to the "hard to suits" if they are handled right. Then again, the salesman, if he fulfills perfectly his high calling, must be an educator. He can take the person addicted to rag time and educate him to love the classics. In fact, everytime a ragtimer comes in sell him what he wants, but show him something else. Everytime he calls give him a little of the higher music—just enough to show him what the real thing is. It will work. My experience amply proves it.

C. W. NOYES.—No business on earth requires such a thorough knowledge of human nature as the talking machine trade, whether you take either the wholesale or retail point of view. More than that, the talking machines are largely a side line and the wholesale traveler must have transactions with jewelers, hardware dealers, sporting goods dealers, piano dealers and, in fact, merchants in almost every line. Now, it is necessary to have some knowledge of all these lines in order to see things from the dealers' standpoint and understand the peculiar conditions that he has to confront. Above everything else he must have a thorough practical and even mechanical knowledge of his own line if he makes the most out of it. A trifling service involving such knowledge often is the pivotal point on which a deal is swung.

A. V. CHANDLER.—Know your line. Know what you are talking about every minute. Put it all before your customer in a clear but comprehensive manner and carry a jolly and good old smile on your face—if you feel the smile, otherwise it will count nit. Cultivate the faculty of accepting a refusal to order just as pleas-

304 Wabash Avenue, CHICAGO, ILL.

antly as an order itself and stick stay by the game everlastingly.

E. C. PLUME.—Sticktoitiveness. "Never give up the ship." Second in rank in the qualities of the ideal salesman comes absolute faith in the line he represents, and the ability to inspire his customers with that faith. Don't knock. Give your customer the advantage of any ideas you may possess regarding the handling of goods. Give him facts that may help him. Remember that just the minute the customer finds that he can't rely on your statements he begins to lose faith in you and your product. The good salesman is able to go into the store of a customer and be asked what he thinks they need—after he has thoroughly gained the customer's confidence. Of course, this all applies equally to the wholesale and retail salesman. A customer will buy twice the amount of goods from a salesman in whom he can rely. Get thoroughly acquainted with your line and when asked a question never guess, but know absolutely. If you don't know absolutely get that knowledge and get it quick. Always remember that those who never do more than they are paid for never get paid for more than they do.

G. A. JENCKE.—He must know the machine he sells so that he can answer any question customers may ask, and they ask some pretty awkward ones sometimes. Study the machine carefully. Few salesmen know enough about the motor for instance. You must know your machine thoroughly. You can lay stress on its distinctive merits and every machine possesses these. Customers will even ask you embarrassing questions about needles, which to use for certain effects and why they produce certain effects. Right off the handle must the answer come. Customers lose confidence if the salesman doesn't know his business or has to search around for an answer.

C. F. BAER.—Above all, I should say that the good salesman must be truthful. Misrepresentation is always hurtful. If you are traveling, visiting the dealers, you must keep in personal corespondence with your customers. An occasional visit is not enough. The steady grind, steady canvass by one method or another is what wins out. See that your dealer's stock is in good shape. Never overstock a customer. No matter what a salesman may say that tends to annoy you, come back with a smile. See that the customer gets perfect attention. A satisfied customer is the very best advertisement you can have. Your individual personality is an asset. Never nullify it by aping others. By all means make yourself acquainted with the goods of competitors. But especially know your own goods from the ground up. Office management is a legitimate part of the subject I suppose. Well, the stock department, records, etc., must be kept in good shape. System, system, system. Primarily establish a correct method of inspection. Never let a machine or record go out of the house without a thorough examination before packing. A properly handled office and store force, good accounting system and a well managed collection department are integral factors of a successful business.

CHICAGO TRADE NOTES.

Recent Happenings in the Talking Machine Field Interestingly Chronicled.

(Special to The Talking Machine World.)

Chicago, Ill., Feb. 10, 1907.

Spiegels, the big downtown furniture house, are contemplating adding talking machines in quite an extensive way.

All the old amusement parks and the several big ones to be started the coming season are investigating the automatic machine proposition and betray much interest in the various new devices which are appearing on the market.

E. A. Hawthorne, of the Hawthorne & Sheble Mfg. Co., Philadelphia, was a recent Chicago visitor, spending several days in making the rounds of the trade, with C. W. P. Noyes, secretary of the company, and in charge of their western department.

The Western Talking Machine & Supply Co., Dillbahner & Feinberg, proprietors, suite 405, 6 Madison street, Chicago, have made arrangements with the various eastern talking machine and supply concerns whom they represent for the establishment of warehouse facilities in this city enabling them to make shipments f. o. b. Chicago to the Western jobbing trade. The company have something of peculiar interest to the trade, the particulars of which they will be glad to advise all inquirers via the mails.

H. T. Leeming, traffic manager of the National Phonograph Co., was a recent Chicago visitor.

A. V. Chandler, city salesman for the National Phonograph Co., is already making preparations for a visit to his baked potato farm on Goose Island next summer. It is whispered in the trade that Mr. Chandler has written Mr. Edison suggesting that the wizard conduct experiments with baked potato skins for diaphragm purposes. Furthermore, A. V. declares that at a recent beauty congress it was stated that the juice of the rinds of green baked potatoes made the best face lotion extant.

At the warerooms of H. C. Kibbey & Co., in the Republic Building, there is on exhibition an electric piano manufactured by the Automatic Music Co., of Binghamton, N. Y., and which has a mandolin attachment. The mandolin attachment carries the soprano notes above middle C, giving the realistic effect of a mandolin solo with piano accompaniment.

P. Haupert, of Ashland, Wis., is the manufacturer of Haupert's Record Display Racks, which he describes as a "practical and ornamental display rack for increasing the sale of talking machine records." It is designed for cylinder records.

The Chicago office of the Columbia Phonograph Co. has now eight sub branches in Chicago and the immediate vicinity. Manager Baer has adopted the method of making the store manager an active sales manager; he must skirmish out after business, directing the men in the field in person, figuratively speaking, and familiarize

BENEFITS WESTERN JOBBERS.

Leading Eastern Factories Conclude Arrangements for Chicago Warehouse Facilities.

We are direct factory representatives for large eastern concerns making *everything* in the talking machine line.

Our prices are *factory prices*, but as a result of arrangements just closed, we will hereafter *carry stock* for the benefit of the Western Jobbing Trade, *enabling us to make shipments F. O. B. Chicago.*

We have just swung a little deal on our own hook which will make *very interesting* and *highly profitable* reading for enterprising jobbers everywhere. Particulars for the asking.

Furthermore, let us give you a list of the goods we handle, and quote you *net factory prices.*

himself with all the problems they have to deal with. A good man stays in the store looking after the office and all the detail and store sales. Mr. Baer now has all the branch office force meet him one evening in the month at the store. They go out to dinner and returning spend the evening in exchanging experiences and planning for the coming double fortnight's campaign. Changes have been made at the Rockford office, Victor Green becoming crew manager and A. W. Schultz office and collections. At the Ashland avenue office A. Libben gets out into the field and a good man is to be placed inside.

Edward Blimke is now city salesman for the Columbia Phonograph Co., succeeding A. J. Morrissey, now in New York, and whom Mr. Blimke formerly assisted. He is making a fine record.

W. S. Thayer, who though still a young man, ranks among the pioneers in the talking machine trade and who has sold talking machines to dealers for many years has been made assistant manager of the talking machine department of the Cable Company, a position which his experience and ability peculiarly fits him.

Robert W. Young, of the Parks Music Co., who have a prosperous talking machine business in addition to their other lines at Hannibal, Mo., was a recent Chicago visitor.

Frederick Babson, of Babson Bros., has returned from a trip to the East.

B. Feinberg, of the Western Talking Machine & Supply Co., is in the East on a visit to the various manufacturing concerns whom they represent.

The Balmer & Weber Music House, one of the best known concerns in St. Louis, are considering the establishment of a talking machine department, and it is understood are now making arrangements for their lines. It is understood that they will confine themselves to retailing for the present.

EDUCATIONAL "POINTERS."

Instruction and Encouragement to Those Having to do With the Selling of Talking Machines—Some Excerpts from Mr. Eckland's Interesting Book.

(Special to The Review.)

World Office, 195 Wabash avenue,
Chicago, Ill., Feb. 4, 1907.

O. W. Eckland, manager of the instalment department of the Chicago office of the Columbia Phonograph Co., is the author of a clever little booklet for the encouragement and instruction of the big force of instalment solicitors under his direction. In the introduction he lays stress on the necessity of careful training and knowledge of his proposition by the canvasser if good results are to be obtained. It will be no violation of confidence to give you a few excerpts from Mr. Eckland's general talks to his men:

We insist then that you learn all the talking points of the machine you sell and that you do hard work in posting yourself concerning the construction of the article you sell. Do not say I will get a few ideas from some one that owns a machine and study the balance as I go along after I am in the field with my sample outfit! You no doubt say this in good faith, but you should be familiar with all points of the article you are selling in order to be successful. Is it not better to reap the benefits of a successful enterprise than to reap the regrets of lost opportunities? Remember that this is not a toy or a five-cent article that you are selling, but a high grade musical instrument far superior to anything on the market, that every man, woman or child appreciates if presented in the proper manner.

"Any system is better than no system" is an old but true saying. Every salesman should work to some prearranged plan; he should not depend upon chance or inspiration for his arguments, but should prepare them in advance to meet objections and conditions likely to arise.

Make the most of your prosperity, but be prepared for adversity. Be prepared for varying results. No business which is dependent upon the patronage of the public can expect the same amount of profit each day. The proprietor of a grocery store will tell you there are many days which bring him little trade and at other times his business seems greater than he can possibly attend to; but by keeping everlastingly at it fourteen hours a day, six days in the week, he makes the general average very good. You can't sell the same number of machines each day. Our best men testify to the fact that their most profitable work has often been accomplished immediately following a protracted period

of fruitless labor. There is a tendency on the part of the solicitor after a few days of unsuccessful effort to become discouraged and gradually work into a rut and carry on his work in a listless half-hearted way. This, of course, is disastrous and the good results which are sure sooner or later to follow bright, intelligent and persisteut efforts fail to come. Is the groceryman any less atteutive and obliging to his customers on Saturday because his busiuess was dull on Friday? Not at all. He is even more polite and active in striving to please them in order that he may make up as much as possible for the dull days. A solicitor is entitled to more credit for working earnestly and enthusiastically with every energy through a period which brings him little profit than for pushing his work when everything is prosperous and encouraging. If you are doing your part every day success must come.

After citing various objections made by the person who has never owned a machine, who pleads that their piano fills the bill, or that they have not the money to spare just now, etc., etc., the book closes with a few things to be remembered, from which we make the following excerpts:

Always avoid arguments with prospective customers.

Be earnest and enthusiastic at all times under all circumstances.

An evening's canvass in a man's home seldom fails to bring tangible results.

A careless agent can never succeed. He must know how to operate his sample machine, and never drop used needles on the floor. After introducing yourself intelligently, get your machine working as soon as possible.

The best answer to an objection is to anticipate it and never allow it to be made.

As soon as you find your prospective customer interested in any selection dwell upon that feature and press for the order, leaving all else alone.

Remember the house does not figure on the amount of orders it gets but the amount of good orders it gets. It is no honor or profit merely to appear in the arena. The laurels are for those who successfully contend.

THE POPULARIZATION OF RECORDS.

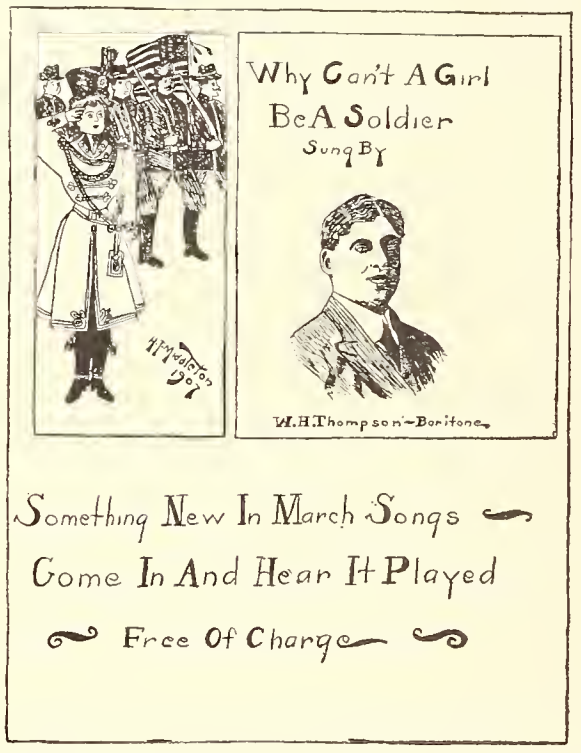
When They Appeal to Him as Good Sellers Will Pay the Talking Machine Man.

New ideas are invaluable to you, Mr. Dealer, because they are so hard to procure, and yet in order that you may succeed, it is imperative that you have them with you always. In these progressive days of push and hustle the public will not notice a man or an establishment without it is drawn by some attractive feature not to be met with elsewhere. Particularly is this true of the talking machine business. A dealer to draw custom must have his window act the part of salesman for him, and it is "up to him" whether or not the salesman is a success. Not the mere artistic dressing of the window will suffice, but there must be something there that will command attention through its oddity; that is, the display must be unique.

I believe that one good way to catch the public eye in this manner is to prepare a poster featuring some selection in the current record bulletins. Make your choice in such a manner that the selection may be sure to appeal to the casual passerby because of its title. Almost every month there are records listed which are somewhat eccentric as to titles, and it is from these that you should choose. For instance, there is a song listed in one of the talking machine record supplements for January which we will take as an example: "Why Can't a Girl Be a Soldier?" This title is attractive because it is unusual. When read it creates a sense of curiosity in the mind of the reader which will probably lead to an investigation. That investigation is what you are striving for, as it may mean more business for you. Therefore, you should acquaint the public with the fact that you have "Why Can't a Girl Be a Soldier?" in stock, and in order that this may be done attractively, the illustration shown below is suggested as a poster to popularize the selection in question. It should be of a size to permit of its being displayed prominently and artistically.

These posters are very easy to prepare, as there is usually some cheap lithograph to be procured at small cost that will illustrate the title of the selection. Then the artist's photograph should be placed alongside, a little appropriate lettering introduced, and the poster is complete. Photographs of the talent can be procured for this purpose from the Channel Studio, Orange, N. J., for a moderate sum, so that the entire financial outlay is trifling.

You will find, Mr. Dealer, that it will pay you to select a record each month and popularize it along the lines described above, for it will attract attention to your store and consequently bring you new customers. If after careful consideration, you deem a certain selection worthy of a little newspaper advertising, have a cut made of your poster and insert it in some local



paper for a day or two, and see if that does not help some also.

The popularization of individual records by means of posters displayed in show windows, I believe to be a method of cheap advertising that will prove very successful. At least, it is worth a trial, is it not?

HOWARD TAYLOR MIDDLETON.

THE VALUE OF GETTING TOGETHER.

The Monthly Reunion and Dinner of the Forces of an Establishment Is Becoming Most Helpful in Developing the Business of the House to Those Who Utilize This Method.

The method of increasing the value of employes by a mutual exchange of ideas and instructive lectures by authorities on the various departments of the business at monthly meetings is growing among progressive houses. In connection with the meeting a dinner is served at the expense of the company and general good fellowship encouraged in a social way.

The dinners are not elaborate, but are substantial, being patterned after the real "home" dinner. Employes are not compelled to be present; they are the invited guests of the company and may decline if they wish to do so. But naturally they are only too glad to enjoy the hospitality of the house, and to avail themselves of the valuable information imparted to them by experts in lines of goods which they have to deal with as managers, salesmen or in other capacities.

A feature of the meetings is the part which the employes play in the proceedings. The presiding officer is one of them. Each meeting elects the chairman for the next. The officers of the company are present, but remain in the background, mingling on an equal footing with the others, but always watchful to bring out best results and to see that all enjoy themselves. The audience is encouraged to ask questions of the speakers, that no obscurity may remain.

Of course such gatherings must be informal and friendly in the sense of the somewhat intimate relationship of those present, a condition which naturally becomes more pronounced on each succeeding occasion. And this suggests one result of the meetings which is already noticeable—the increase of friendliness of relations between employes in their work. To a certain extent barriers are broken down, not to the extent of undermining discipline, but in the fact that a oetter acquaintance brings with it a greater tolerance of the peculiarities of others. Men of different departments, who perhaps do not come into contact excepting where there is something to unravel or correct, are less apt to quarrel, to become antagonistic, when they have recently broken bread together. The contented family element of a business house is no unimportant one, for it plays its part in the esprit du corps without which no business can be carried out onto its full effectiveness.

Many houses in the piano trade have followed the custom of entertaining their employes at dinner on various occasions, but generally in a purely social way. It would be interesting to see how this very interesting scheme of mixing business and pleasure with dinners at regular intervals would work in our trade. There is no field wherein a complete understanding between the house and its men than in the retail talking machine field, and mutual good fellowship will bring about that result.

THE GREAT PLANT AT CAMDEN, N. J., WHERE THE VICTOR TALKING MACHINES ARE MADE.

VICTOR MACHINE AND RECORD PLANT ON COMPLETION OF SIX-STORY "L" EXTENSION. Office and Laboratory Building.

We are enabled iu this issue of The World to give an illustration of the principal buildiugs of the immense Victor Talking Machiue Co.'s plant in Camden, N. J., as they will appear wheu the six-story "L" addition to the plant is completed. The present floor space of the buildings is 122,400 square feet, and with the addition, which makes 109,800 square feet, there is a grand total of over five acres. We also show the original building in which the world famous Victor products were made—a contrast that tells its own story. The single detached building on the right of the main plant is in process of erection, and will contain the offices and laboratories of the company, each occupying two floors. All parts of the Victor talking machines as well as all records, with the exceptiou of the cabinets, are manufactured in the group of buildings shown in the picture. The cabinets are made in six factories, one located in Camden, and five others in sections of Pennsylvania and New York, convenient to the lumber markets.

Birth-place of the Victor

Wheu the mechanism aud other portious of the talking machines are ready for assembling they are sent to the shipping department located in a separate building some distance from the main plant. There they are put together, tested and packed.

The Victor Co. also maintaiu a complete printing plant, where all their printed matter is turned out. This department is also in a separate building. All the structures are of latest fire-proof construction, and were erected with a view to quality and safety first and cost second. The structures give an idea of the growth and extent of this great business, whose products are known the world over.

MIGHT HEAD HER OFF.

"Henry," said Mrs. Peck. "I am going to get a phouograph and talk into it, so that if I happen to die first you can still hear my voice."

"Perhaps," replied Heury, hopefully, "I will die first."

E. A. Hawthorne, of Hawthorne & Sheble Mfg. Co., Philadelphia, was in Chicago the latter part of January on special busiuess.

TRADE HAPPENINGS IN ENGLAND.

Weather Conditions Have Not Helped Trade—The General Outlook Is Healthy—A New Sound Box on the Market—Big Loss in Record Making Owing to Extreme Cold—The Shah's Graphophone—Records by Patti—Russell Hunting's New Building—Additions to Beka Record List—Recent Trade Changes—Interesting Interview With W. H. Glendening on Trade Possibilities in America As Compared With Great Britain—The News of the Month in Detail.

(Special to The Talking Machine World.)

London, E. C., Feb. 1, 1907.

Is the progress of this industry dependent upon the weather? It should not be to any very great extent, outside the summer holiday season, but one is forced to the conclusion that weather conditions enter largely as a fact to be considered in this question. Throughout the month of January we have experienced extreme cold and nasty climatic changes that keep the record connoisseur at home rather than in the dealer's showrooms. The retailer thereby suffers a temporary loss of trade, yet to be up to date he has to order his usual monthly stock of the new selections issued. The manufacturer, likewise the factor, must ultimately feel the slight business depression, and thus do we come right up against a force that is perhaps some explanation of the complaints of a fall in orders during the last few weeks. If sales fluctuate according to weather conditions, then it is up to the dealer to put forth his best efforts to secure more than average sales when the opportunity is present. Why should any one in the trade talk as though the season is over, for that is what some are doing. Don't believe it. October is a good month and January is usually as fair from the average sales point of view, while February, March and April always maintain an even demand, and will continue to do so, if only the suppliers will continue to create instead of leaving the demand to look after itself. All the various forms of publicity and other propulsion features of business must be more in evidence as the season wanes, else the sleepy dealer will sleep and the cycle agent will put aside his remaining stock until he can't sell bicycles, when he will expect to find the customers he has lost through neglect. No, Mr. Manufacturer, keep them at it, imbue them with the spirit of the industry as one worthy to foster during the off season, and your reward will eventually be evident in the increased turnover that must undoubtedly result.

Pathe Freres New Sound Box.

Messrs. Pathé Frères announce the introduction of a new sound-box, which will fit any make disc machine. This provides the public with the means to play the Pathé phonographic disc record on any disc machine of another make. In conversation Mr. L. H. Courant mentioned that business had slackened up a little just after Christmas, but sales are pulling up again now, and there are strong prospects of a return to the abnormal conditions which prevailed during the last few months of the old year. Dealers have given the Pathé record a great reception, some evidence of which may be gatnered from a visit to Lambs Conduit street showrooms, where there is always to be found a large number of buyers keenly alive to the importance of these new productions, and the sure popularity they are gaining. Mr. Courant informed me that the company are now putting out over 1,000 of their disc records every day, while the demand for machines is much ahead of supplies, although they are constantly receiving large consignments. Mr. Pathé has returned from his trip to the States, enchanted with his great reception there. He says the time was all the while most enjoyable to him, and pays a tribute of admiration to his American friends, in that he thinks they are the most courteous and businesslike people in the world!

Material for Indestructible Records.

Manufacturers of indestructible records will be interested to hear of a new discovery. Known as "galalith," a plastic substance is being made near Paris from the casein in skim milk—128.78 pints of skim milk furnishing 2.20 lbs. of galalith—which may supplant celluloid, and has the advantage of being non-inflammable.

How Weather Injures Records.

One result of the very cold weather experienced in January is found in the increased number of throw-outs at most of the factories. The extreme cold temperature affects records in many ways. It tends to make the material more brittle than is usually the case, and extra care has to be exercised in boring. In conversation with a large cylinder record manufacturer I was told that while in every department the regular amount of work was put in, there is a surprising difference in the number of records that finally reach the finished stage, inasmuch as a very low temperature is disastrous to good results. The very hot weather is not so much feared now that improved cooling appliances have been installed in most factories. But an even temperature is the ideal that all will aim for, irrespective of outside conditions.

Popularity of Zonophone Records.

Zonophone records seem as popular as ever, the majority of dealers reporting good sales. The February list is a very representative one, comprising band selections, ballads, comics, whistling solos, a duet and a concertina piece by S. Bartle. The comic list predominates in point of numbers.

Howell Bros. Confidence in Their Goods.

A folder to hand from Howell Bros., of St. Jonn street, Clerkenwell, reveals a novel form of salesmanship adopted by few factors in London. The folder advertises a disc machine styled the "Hero." It is good value for the money, but the interesting feature is a guarantee that should any part of the machine fail during a period of twelve months from date of dispatch Howell Bros. will replace such part free of charge. The cash price of the machine is three guineas, or it can be supplied on the monthly installment system for three pounds ten shillings.

The Graphophone and the Shah.

The death of the Shah of Persia has furnished the occasion for the relation of many anecdotes in the public press respecting his career. There are one or two incidents which may well be recalled for the special interest of talking machinists. When in Europe in 1900, His Majesty visited the Paris Exposition where he was greatly impressed with an instrument the Columbia Phonograph Co. were there exhibiting. This was the "multiplex graphophone grand," really three talking machines in one. It was equipped with three reproducers, operating simultaneously on specially prepared records bearing selections engraved in triplicate. By an ingenious arrangement, a separate horn was connected up with each reproducer, and a vigorousness of volume thereby secured which was truly remarkable. At the Shah's order, a similar graphophone, with most lavish decorative additions, was manufactured for his palace, and this Eastern ruler thus became the owner of the largest talking machine in the world. Later he acquired an instru-

PATHÉ FRÈRES—LONDON
PATHÉ FRÈRES—LONDON

ment which achieved a record in precisely the opposite direction. A graphophone of exceedingly minute dimensions, the smallest perfect talking machine ever constructed, was built by the Columbia Phonograph Co. to his order. The Columbia people had various dealings with the late Shah at different times, and the Columbia graphophones were among the most valued treasures of the romantic palace at Teheran.

Columbia Scheme Pleases.

The number of dealers taking advantage of the Columbia Co.'s scheme of supplying sample sets of new "Symphonic" records prior to announcement to the public, is growing month by month. The arrangement should certainly prove a very great convenience to up-to-date retailers, who are thus enabled to keep abreast of the times by acquainting themselves with the merits of new numbers and laying in a suitable stock ready for the orders following upon the announcement of the titles to the public.

The Seymour Indestructible Record.

Russell & Co. are working at high pressure just now in laying down the necessary plant at their factory for the manufacture of the Seymour indestructible cylinder record. Mr. Seymour expects to have things shipshape in a few weeks, but obviously no definite date can be given as to when the record will be issued.

Six New Records by Mme. Patti.

Lovers of Mme. Patti's beautiful voice will welcome the news that the Gramophone & Typewriter Co. have now issued six new records by the diva. The series comprises "Ah! non credea mirati," from "La Somnambula," in which opera, it will be remembered, Mme. Patti made her London debut; "Casta Diva" ("Norma"), the gipsy song from "Mignon"; Tosti's "La Serenata," "La Calesera" (a rich Spanish melody, given with unexampled verve and gusto), and "Kathleen Mavourneen," a rendering which will be a revelation to those who have not heard Patti sing this beautiful Irish melody. The records are splendid specimens of voice reproduction, but surely more wonderful is the art of the famous singer, the "Serenata," for instance, being marked by an extraordinary freshness and beauty of tone.

Pathe Freres New Sales Saloon.

Pathé Frères report a marked success attendant upon the opening of their new retail reception and sales saloon at 64 Regent street W. "The venture has shown good results right from the commencement," said Mr. Courant, "and when it is more widely known," he continued, "we anticipate that it will be the busiest talking machine center of the west."

Russell Hunting Co.'s New Building.

In the course of a chat with Mr. Manson, of the Russell Hunting Record Co., I was told that the company's new building in City Road will be ready for occupancy in March. It is proposed to house both companies, combining the production of the Sterling specials, Odeon, Fonotipia and Linguaphone records. As, however, this will necessitate more space than is available, additional rooms have been secured in the building adjoining, and thus the whole concern will be centralized in the district known as Phonoland. Dealers will find this arrangement, when completed, much more convenient than the present, which necessitates two journeys instead of one.

Big Output of Sterling Records.

The Russell Hunting Record Co. report that the month of January was a record month for them in respect to the output of Sterling specials—the record that's half an inch longer! What's in a catch phrase? Money! so say the Russell Hunting Co. Persistent advertising of the Sterling specials as "the record that's half an inch longer," has brought about instant recognition by the public whenever the name Sterling meets their eye—it's the longer record! That's the point to drive home, and that's the point that helps to steady a wavering mind. When it's a question of which to purchase have the record that's half an inch longer! It's a popular and a sales making catch phrase, and it bears the stamp of truth!

Increased Repertoire of Beka Records.

The Beka Record Co., of Berlin, are constantly increasing their repertoire of selections from the leading artists of the world. They list records made in almost every country, and these lists have recently been added to by some new Spanish selections of considerable merit. Mr. Ruhl, the company's sole agent for Great Britain and colonies, reports a splendid season, both in the Beka records and Carl Lindstrom machines. The latter firm are constantly expanding their manufacturing facilities in order to cope with the universal call for their disc talking machine, and such is the evidence of quality! A new list of Beka records is shortly expected, which will contain the usual good variety of renditions by only artists, etc., of repute.

Supplemental List of Columbia Records.

The supplemental list of Columbia records for January includes also the titles announced in previous supplements. A further list for February is just out. Any one, therefore, possessing the original Columbia catalogues, together with the January and February supplements, will have the complete lists of Columbia records to date. If any dealer or user is without any of these a post card to the Columbia headquarters will remedy the deficiency.

daughter of the European assistant general manager of the company.

Some Interesting Litigation.

A case of interest to talking machine men recently came before the Bristol bench. The prisoner was charged with attempting to obtain money by false pretences. It was alleged that he had inserted an advertisement for a "collector organizer." A witness testified that on his replying to the advertisement he received a letter purporting to come from the Columbia Phonograph Co., asking whether he was willing to make a cash deposit of £100 as security. Fortunately he showed the correspondence to the manager of the Cardiff branch of the Columbia Phonograph Co., with the result that the matter was put in the hands of the police. The case was committed for trial at the next assizes.

Empire Building Gramophone.

In the course of a series of tours which Colonel Hayes Sadler, the Governor of the East African Protectorate, has lately undertaken in the outlying provinces of that country, he took a gramophone with him, and used to give concerts to the natives after the formal part of the meeting was concluded. The gramophone always caused the wildest excitement among the natives, and they described the machine as the "great, big medicine." The Governor found that these gramophone concerts had a great effect in promoting a good understanding with these primitive people, and he concluded the proceedings on each occasion by explaining to the chiefs and headmen their position with regard to the British Government.

Sale of Gen. Booth Records.

The name and fame of General Booth are such as to ensure a most extensive sale to the excellent cylinder and disc Columbia records he has recently made, especially as the company are sparing no pains to announce to the remotest corner of the Kingdom that the living voice of the great Salvationist is thus available. A comprehensive advertising scheme has been arranged, and this, following on the preliminary announcements which have already appeared in the press, is sure to mean inquiries for the "General Booth Columbia Records" from every hand. A further incentive to the purchase of the records, if such were needed, is found in the arrangement that a proportion of the proceeds will go to the Salvation Army's fund for social reclamation.

Popularity of Imperial Disc Record.

The Imperial disc record is growing rapidly in favor with those English dealers who have got into touch with Gilbert Kimpton & Co. In the absence of Mr. Glendining, who has been on a trip to the Leeds & Catlin Co. in New York, I had the pleasure of a short chat with Mr. Howard, whose enthusiasm soon converts one into a staunch supporter of the Imperial. But these records speak for themselves, and dealers all over the world will soon be offered an opportunity of personally testing the qualities of the Imperial disc.

The American Talking Machine Co.

The American Talking Machine Co., as well as other concerns, are doing their utmost to keep up with the times. The "times" in this case is the growing and unprecedented demand for disc records, which has occasioned the company in question to open a quite separate department for the stocking and handling of flat records. Mr. Nottingham asserted in conversation that his firm could in consequence fulfil all orders to the tune of every title listed, and dispatch in a few hours if necessity demanded. It was rather interesting to learn that in the experience of this firm, as probably with others, the Edison-American selections sold in much larger quantities than the British titles; in fact, three to one, said Mr. Nottingham.

Fonotipia Disc Record Publicity.

Sterling & Hunting Co. merit the gratitude of all their dealers by the enterprise lately in evidence of advertising the Fonotipia disc record, not only in the daily press but also in selected society weeklies. The results to date have been distinctly encouraging, but when the company aver, as they have, that such publicity is in the nature of an experiment, we are inclined to believe that it's more in the nature of an investment from the point of view of influencing sales for their dealers and thus incidentally making splendid business for themselves, since the sale of a good record must mean many more sales as a result. Constant reiteration being the soul of publicity, we are able to foresee profitable results in a continuation of Fonotipia advertising. It is pleasing to see that other firms are getting into line, and there is plenty of room for it, too.

Takes Place of Military Band.

The efficiency of the Columbia "Premier" sound-magnifying graphophone as a substitute for a full military band has just been demonstrated in a very interesting way. At the musical exhibition in St. Petersburg, the directors arranged for the graphophone to replace the military band in the gallery of the hall for two hours each day. The unique value of this testimony to the Columbia graphophone is appreciated when it is remembered that the exhibition is controlled by musical experts and held in a city where military music has been cultivated to an unusual degree.

Offer on Operatic Records

Some time back a special operatic 12 shilling Fonotipia record was advertised in the London Daily Press, at a reduction of 75 per cent. The

PHILIP NEALE,

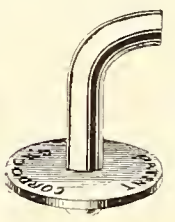
PHONO. EXPERT,

5 Chalk Farm Rd. LONDON, N. W

Talking Machines of every description repaired. Special terms to the trade. City address and price list on receipt of postal. No job too small—no job too large.

Have You a London Representative?

If your goods are not represented in this market, they should be, as there is a good opening for smart American Talking Machine Accessories or Noveities. Communicate with Box 100, Talking Machine World, office, 69 Basinghall Street, London, England.



LATEST NOVELTIES

The "Cordock" Concert Reproducer for Puck and similar type machines. Acknowledged by experts to be the finest reproducer on the market for small Phonographs, 50 per cent. louder than any other reproducer of its kind. For volume, clearness and distinctness of tone, it stands alone unequalled.

Factors should write for sample and wholesale prices, to

G. W. CORDOCK & CO.

High Street, Scunthrope, Lino's, England.

FROM OUR LONDON HEADQUARTERS—(Continued.)

idea was to introduce the product more widely to the talking machine public, and needless to say the fiue specimen record offered was extensively applied for at the reduced figure, with the result that to-day the certain success of these records is attributable not a little to this enterprising move. Before these lines reach England the experiment will have been repeated. The red herring this time will agaiu be a double-sided record, carrying on one side "Pagliacci" by the famous Italian tenor Giovanni Zenatello, and on the other side the miserere—Il Trovatore—by Talexis-Longobardi and chorus. Truly, this presents an opportunity that few will miss!

General Phonograph Co.'s Excellent Booklet.

The General Phonograph Co. have just issued a neat little booklet containing a full and complete list of every record put out since the ineeption of the eompany. It should prove of great use to all dealers. The "White" record is as mueh in demand as ever, but in spite of the up-to-date facilities of manufacture, supplies are yet a long way behind the orders. It is hoped to remedy this eondition in the future.

Howell Bros.' Originality.

With their usual originality, Howell Bros. have started 1907 by issuing £1,000 insurance coupons against accidents to all their customers. They do not, of eourse, expect all their friends to be unfortunate enough to sustain injury, but in these times of fast speed transit, it carries a certain amount of satisfaction to have an insurance eertificate in one's pocket. Are records being issued too rapidly by the manufacturers? Howell Bros say "Yes." The same title is issued by several manufacturers, and in some instances a dealer has to stock three or four makes. This cramps his buying, so that he cannot perhaps hold a good supply of other titles. Howell Bros. further urge a copyright on all records, ensuring one title, one make, and less confusion on the shelves. During 1907 this firm will eoncentrate all their energies on three makes of records, i. e., Zonophone, Sterling and Edison. "We shall specialize these lines," said Mr. Howell, "and shall thereby be in a position to supply better and quicker than formerly."

The Beka Meister Records.

The repertoire of the Beka Meister 12-inch double-sided records is chiefly of a elassical nature. The leading artists of the Continent have been secured, and every effort has been made to ensure perfect records from all points of view.

Artists Secured by Sterling & Hunter.

Two new operatic artists—namely, Watkin Mills and Ivor Foster—have been secured by Sterling & Hunting, Ltd., and will record on the famous Odeon double-sided disc, which will be sold at the exceptional price of 5 shillings.

Another departure by this company lies in the recent introduction of a new disc machine of a particularly pleasing type. Mr. Turner kindly demonstrated the capabilities of the new product to The World representative. The case is of handsome design, surmounted by the latest style in flower horns. The motor embodies many new, yet very simple, developments that stamp it "reliable." The tone arm is of an unique style in many ways, while the sound-box is claimed to produce the best possible reproduction from any record. A special feature is that there is absolutely no metal connection whatever between the tone arm fitment and the sound-box—a result produced by insulation. There are many ways in fitting the rubber washer, but in this case an ingenious arrangement produces the result indicated. This is a line dealers could handle with generous profit.

Mr. Glendining's Interesting Chat.

At an interview with Mr. W. H. Glendining, of the Imperial Record Co., recently our conversation veered round to a discussion as to the comparative sales of records in America and Great Britain, and the following is Mr. Glendining's expression of opinion why the American demand so far exceeds that of the United Kingdom:

"The estimated population of the United States of America is about 83,000,000 as against United Kingdom's 42,000,000. The American common-school system is acknowledged by modern experts to be the best of any system, either of to-day or any former period in human history, and thus at an early age an appreciation of the ethics of industrial economics is displayed with a freedom from corruption in commercial enterprise, although the eagerness for wealth outstrips almost every effort of restraint, as indicated by the most wealthy and prominent companies in the talking machine world having secret agreements to co-operate, not only for the exchange of benefits arising from each other's patents, but for stifling minor small opposing manufacturers by continuous litigation, etc.

"It is common knowledge that the United States of America produces more than one-third of the manufactured produets of the civilized world, over 90 per cent. of which is required for domestie demand, the balance, although comparatively small, makes America the greatest export nation on earth. There is no doubt in my mind, however, that the people of the United Kingdom have a more appreciative and trained knowledge of music in general than those of America, and thus, owing to the mechanical reproduction of sound not having hitherto been perfect, in spite of numerous testimonials of a number of the so-called world's leading artists, most of whom are financially interested by royalties; but now that the most eminent manufacturers are approaching that perfection, the British demand for records of the highest class will doubtless show a great increase, as at present the fringe only of the musically educated people of that country are beginning to recognize the merit and pleasure of having at will ideal reproductions of instrumental solos, orchestral, band and vocal selections. The ever-changing economic and modern methods of advertising schemes as adopted in the States is calculated, in my mind, to bring better results than the methods at present in vogue in this country."

A Columbia Novelty.

The latest novelty in window display to be introduced by the Columbia Phonograph Co. at their Oxford street premises takes the form of a "Columbia Grandfather's Clock," made of graphophone requisites. Many are the expressions of admiration on the part of passersby with regard to the ingenuity of the designer of this excellent advertising device.

Disc Record Albums..

As will be seen by reference to their advertisement in our columns, A. Lyon & Co. are specializing disc record albums and accessories at prices that allow of export to America and all countries. Dealers should get into touch with them for some good lines, including accessories for Edison and Victor machines.

Gen. Booth a Traveler.

Gen. Wm. Booth, the aged founder and head of the Salvation Army, who, by the way, has recently made a number of valuable records for the Columbia Phonograph Co., has mapped out travel tours for this year that might well tax the strengtb of a much younger man. This evening the General left here for Denmark, Norway, and Sweden, where for two weeks he will address two or three meetings a day. On Feb. 23 he will leave London on the "Minneapolis" for New York. He will spend two weeks in the American metropolis before proceeding by way of Canada to take the steamer "Minnesota" on April 1 for Japan. After traveling through Japan, Gen. Booth will go on to Peking. He will be baek in London by July to eommence another automobile eampaign through the British Isles. At the end of that trip, in October, he will again cross the Atlantic for a two months' tour of the United States.

The Gerber Carlisle Co., of Mexieo City, Mex., are making a speeialty of the Edison goods.

TIMELY TALKS ON TIMELY TOPICS.

Whether the copyright bill now before both branches of Congress is enacted into law or not it is certain the opposition manifested by the talking machine contingent was of a strength and sincerity that commanded attention and exerted great influence. With Paul H. Cromelin and Philip Mauro, representing the Columbia Phonograph Co., General; Frank L. Dyer, personal counsel of Thomas A. Edison, for the National Phonograph Co.; Horace Pettit, for the Victor Talking Machine Co., no stronger phalanx of talent and ability was in evidence at the committee hearings, submitting what many believe were unanswerable oral arguments and carefully prepared briefs. This splendid work has since been followed up by constant watchfulness on every move made in and out of committee on their part; and it seems now as if the battle royal waged by them against any provision in the bill calculated to interfere with, if not cripple, the industry will be fought to a finish, and they will emerge with banners flying.

On another page is given a cogent resume of the progress of the proposed measure to "consolidate and revise the acts respecting copyrights" (S. 8,190, H. R. 25,133), and the respective Patents Committees of the Senate and House "recommend that it do pass." As may be noticed, there is a radical difference between the two bills presented, the House and the minority of the Senate committee, the former unanimously favoring the contention of the talking machine advocates, with the majority of the Senate Committee intrenched on the other side of the fence. Though this Congress expires by constitutional limitation in less than three weeks, and much doubt is expressed as to the passage of the bill, still those in a position to know declare it will go through in some shape. The only serious hitch is between the attitude of the record, mechanical and automatic instrument manufacturers and the writers and publishers of music. Their combined opposition has so far prevailed against all the other various lines of business and intellectual and artistic endeavor interested. How long this condition of affairs will be allowed to continue no one pretends to say, as both sides are determined to stand by their guns unless a compromise is forced upon the music people, which is more than likely, according to the latest reports. In that event the bill will become the law of the land before March 4, and their inquiry will be who ate the canary?

Next to the development and improvement in records and machines is the extraordinary demand for artistically designed and beautifully finished cabinets. Scarcely a jobber of any importance but who carries some kind of a line in these goods, and manufacturers are responding to the call for yet finer examples and more ingeniously constructed articles of this kind promptly and with commendable intelligence. Houses famous for these specially elegant and comprehensive line of record cabinets, becoming weary of supplying ideas in connection therewith to the trade at large, are originating entirely new designs, which will be made the subject of patents and thereby relegating them to the realm of exclusive possessions. This is only fresh evidence of trade expansion, and is welcome. In this connection it may be well to note that a general caution has been distributed concerning the alleged infringement of a hornless cabinet patent, of which doubtless more will be heard in the near future.

An advance in prices for records may be looked for almost any time. One of the manufacturing companies has already made this announcement, covering a new line of goods, and at the same time intimates prices are likely to be withdrawn on the standard line. The cost of production has increased, not only for material, but the increasing charge for "talent" is also cutting sufficient figure to affect this item in no small way.

Mention of records recalls the small margin realized from the sale of the highest grade of solo operatic reproductions. An immense profit is generally supposed to be attached to these goods, especially as one foreign tenor of comparatively recent American introduction was reported as exacting two dollars and a half royalty —that is, the people controlling him—for each record. This piece of news evidently amused others interested in the exploiting of a famous Italian tenor, whose name is known everywhere. The last named is said to receive 50 cents royalty, while the manufacturing concern nets two and a half cents. Such a narrow margin is spoken of as absurd if it were not for the enormous publicity given the line in this connection.

Have too many dealers and jobbers been created? In some parts of the country this question is answered—and most emphatically—in the affirmative. Elsewhere the advent of new jobbers especially is regarded in a most favorable light. It is admitted the manufacturers are in nowise affected, excepting an increase of business follows the appearance of every addition to the trade, be it in one or the other branch. A couple of wide-awake, progressive jobbers were recently discussing this very matter, and both favored the listing of new establishments as rapidly as possible. Maybe, as the speakers are eminently successful in their respective territories, they were inclined to regard accessions to the trade through roseate hued spectacles. However this may be, their strong point was, in brief, the more the merrier; that is to say, forty dealers in a town were much better for the advancement of trade than two. If the latter, it was argued, they would simply sit down and wait for business to come to them. This was detrimental all around, whereas the greater number would be compelled to hustle, and this meant progress and increased sales.

One of the first government institutions to use the phonograph as a means of giving instruction in languages was the Infantry and Cavalry School at Ft. Leavenworth, Kansas. In his annual report for 1905, covering a part of the period of 1904, Captain Peter E. Traub, Thirteenth Cavalry, the chief instructor in the department of languages, makes the following statement relating to the use of the phonograph and the results obtained:

"The scope of the practical work was planned with a view to giving to each student officer, first a correct pronunciation and, in addition, such conversational fluency and facility as could be imparted in the brief period allotted to the department. The phonograph and texts of the International Correspondence Schools, of Scranton, Pa., were made use of for the sole purpose of giving a correct pronunciation. Each student officer was required to make six records. The first record did not count, but each one of the others was given a value of 6 as practical work, making a total of 30 for the course, thus leaving 70 out of the assigned weight, to be given to the examination.

"The student officers did such efficient work with the phonograph that no one was declared deficient in it, the lowest of the 46 officers receiving 91.47 per cent.

"By thus making use of the phonograph, lectures, quizzes, recitations and conferences, rapid progress was made in attaining to a very fair speaking knowledge of the language in forty lessons as is shown by the examination."

The Harry Davis Amusement Co., Jersey City, N. J., have incorporated with a capital of $750,000 for the purpose of operating phonographs.

STORES IN ALL PRINCIPAL CITIES DEALERS EVERYWHERE

TO EXPLORE PHILIPPINES

With a Landophone Outfit—To Secure Dialects of Fast Disappearing Tribes—Also Purchased a Victor and Many Records.

Last month an official of the United States Government stationed in the Philippine Islands visited Landay Bros., 400 Fifth avenue, New York, and after a practical demonstration in their studio purchased two Landophone outfits complete and 100 wax blanks, which will be used to secure and preserve the languages and dialects of the fast disappearing tribes in Uncle Sam's far distant possessions. Duplicates of these records will be deposited with the Smithsonian Institute, Washington, D. C., a collection recently enriched by a record of Kaiser Wilhelm's voice. The buyer in question at the same time ordered a Victor VI machine and a quantity of the latest popular, standard and operatic records for entertainment purposes while in the Orient and on the frontier of civilization. In connection with the use of the Landophone, the suggestion is made that if the blanks are slightly warmed or heated—on a radiator or in a stove oven—the cutting stylus will record the sound line more easily and distinctly, better and more satisfactory results following as a matter of course. This is the practice observed in the professional recording laboratories. Landay Bros., in speaking of their foreign business, said: "Such sales are not few by any manner of means, and for their consummation we are entirely indebted to The Talking Machine World, for we had no other way of reaching and cultivating the export trade. We never had better returns from any publication ever used for advertising purposes. The same is also true of our domestic sales. No words are too praiseworthy to express our appreciation of what we consider the best publication of its kind on the globe—bar none."

The Castle Talking Machine Co. have opened handsome quarters at 621 Madison Ave., New York.

CAILLE BROS. CO. IN NEW YORK.

The Well Known Manufacturers of Automatic Specialties Locate at 32 Union Square.

The Caille Bros. Co., whose amusement and trade stimulating machines are known the world over, have opened an Eastern office and export department at 32 Union Square, New York, where they will carry a full line of their specialties which include practically everything in automatic money-paying specialties. The office will be in charge of Arthur L. Bresler, who was the manager of their Detroit department. The opening of offices here is a move in the right direction, and insures a further expansion of their business.

EDISON'S SIXTIETH BIRTHDAY.

Inventor Announces That He Will Now Give Himself Over to Play—What This Signifies—Will Still Further Improve the Phonograph.

Thos. A. Edison, whose name will ever be honored the world over, celebrated the sixtieth anniversary of his birth on Monday last, February 11, with the announcement that he has retired as a commercial inventor and begun life as a scientist. He will in the future experiment with that subtle force which has made him—or which he has made, as the case may be—the greatest factor in modern life.

"I am through with work from a commercial standpoint," he said, "but of course that does not mean that I will cease to labor. I want to play with electricity—to see what I can learn about it and where different experiments will lead. I have been so busy all my life perfecting inventions for commercial use that I have had no time to do anything else, and there is so much that can be learned. Electricity is mysterious—perhaps in 500 years the world will begin to 'suspect' something definite about it.

"I want to better the phonograph, marvelous as it now is, before I become totally deaf. I have not been able to hear well for many years, you know. I think I can make the phonograph much more perfect."

Mr. Edison was the guest of honor at a dinner given by the employes of the Edison Laboratory in the Kruger Auditorium, Newark, Monday night. The event was in honor of Mr. Edison's birthday, and covers were laid for thirty-five guests. The dinner was arranged by thirty-five of the executive staff, managers, department principals, superintendents, etc., of the Edison works in Orange, N. J., with President Gilmore as "guide, philosopher and friend."

NATIONAL PHONOGRAPH CO. WARNING

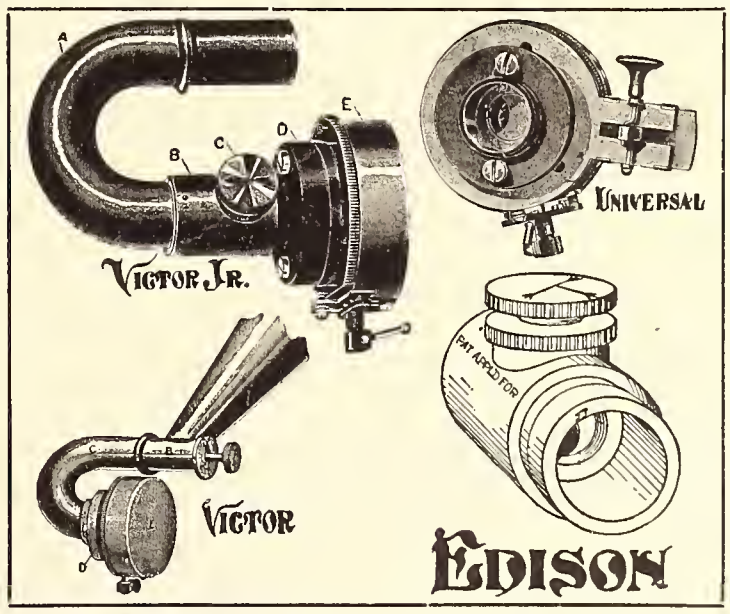
Regarding Edison Goods and Premium Machines—How the Practice May be at Variance With Conditions of Sale.

The legal department of the National Phonograph Co. warns the Edison jobbers or dealers against the handling of so-called premium or scheme machines in violation of their contracts. If these goods are taken on for the purpose of reducing the established or agreed-upon selling figure of the Edison machines, then the company states the practice is contrary to the conditions of sale, and constitutes indirect price cutting. The caution says, among other essential matters stated in detail: "We understand it has been suggested that a violation of our conditions of sale would be avoided in the exchange of machines, if the premium machine be accepted in exchange for a large horn and crane and other supplies, and charge, or rather pretend to charge, the full list price for the Edison machine. This suggestion, however, does not avoid our conditions of sale."

Among recent concerns on the Pacific coast who have added talking machines are the A. E. Bates Music Co., Santa Barbara, who handle the Edison and Victor; the Central Drug Store, Pomeroy, Wash.; the W. R. Truax, Santa Monica, Cal., who are handling the Edison and Zonophone.

WE REGULATE THE TONE

TONE REGULATORS FOR ALL TALKING MACHINES



THE "VICTOR" TONE REGULATOR, - - $3.00
For all Victor Tapering Arm Machines

THE "VICTOR, JR.," TONE REGULATOR, 1.00

NEW YORK, FEBRUARY 15, 1907.

REPORTS from our correspondents located in various cities indicate a fair activity in trade circles during the past month; in fact, thus far the year has been better from the business viewpoint than in the same period of 1906, and there is no question that conditions will materially improve as the season advances. The enormous distribution of January dividends in the various corporations is variously estimated from $100,000,000 to $150,000,000, and all of this vast sum is percolating through the various channels of trade, and it is but natural that talking machine men should secure a fairly good slice.

THE demand for the higher grade of talking machines continues to be excellent; in fact, so steady and insistent is the call for talking machine outfits of the higher grade that manufacturers are unable to supply instruments of this class as promptly as desired. When they commenced to manufacture the higher priced machines, they did not figure that they would immediately meet with the ready call for such a costly product, therefore they did not make preparations to manufacture them on the same immense scale which has characterized their operations with the cheaper lines of talking machines. They are, however, now making ample preparations to take care of the trade, and the shortage in the higher grade instruments will be gradually overcome.

THE only way that interest can be maintained and increased in the talking machine business is through the efficacy of advertising. If the talking machine manufacturers were to drop out entirely from public gaze, remove their advertisements from the magazines and trade publications, a slowing up of trade would immediately follow, and dealers would wonder why people were not as anxious to purchase talking machine outfits as formerly. Advertising is a great lubricator of business, and the great machinery turns much more easily through its assistance. In the magazines of great circulation the talking machine men have been splendidly represented, and one concern has paid as high as $5,000 for publicity in a single issue of a publication. All of these vast outlays assist the local trade in every section, and dealers should realize that manufacturers are ever alert in the promotion of the legitimate interests of the talking machine trade.

SOME dealers who have written us recently state that they have greatly profited by the advice given in former issues of The World, to keep their talking machine departments in an attractive manner. They find that by doing a fair amount of local advertising and getting up entertainments that they can augment the interest in the talking machine and naturally, as a direct result of these entertainments, make a good many sales. Talking machine establishments should be artistically equipped. A customer is frequently repelled when he walks into a poorly kept, unattractive establishment. Instead of warming up, and becoming enthusiastic over the performance of the talking machines he usually departs in a depressed state of mind. The more attractive the warerooms the better the business. We have noticed in our travels, which embrace every city of note in America, that the talking machine men are doing the best business locally who evidence the greatest euterprise in the conduct of their establishments.

MATERIALS of every kind, including all woods and metals which enter into the composition of talking machines, are steadily climbing up in price, and manufacturers are grappling with a problem which is a difficult one to solve, and that is, to hold to their present high standard of quality, and make a reasonable profit, without advancing their prices. They have been enabled to do this in a measure through the introduction of special labor saving machinery and perfect factory system; but up to a certain point, system works very favorably in decreasing the cost, but it cannot work wonders beyond certain fixed points. Manufacturers are compelled to pay frequent advauces in the cost of raw materials, and as a matter of fact, selling expenses have materially increased, so that if the manufacturers of talking machines and supplies, advance their prices, they would only be acting in accordance with rules which are recognized as correct in all lines of trade. Manufacturers in almost every line have materially marked up prices. Thus far the talking machine dealers and jobbers have been getting the benefit of low prices.

EVERY mouth we receive subscriptions from men who have just embarked in the talking machine business. It is surprising how many young dealers there are entering this branch of trade. We do not believe, however, that there is danger of the business being overdone. The more intelligent, progressive business men there are in any industry the better it will be for it, because the combined energy of all must, of necessity, widen the avenues of distribution. Plenty of good, bright, active men in the talking machine industry will help it; there is no question about that, and then there are so mauy other lines which blend perfectly with the talking machine business.

TAKE, for instance, the smaller musical instruments and automatic machines. All of these can be handled by the talking machine merchants without additional expense. Then, too, there are any amount of novelties, particularly in the electric line, which are quick sellers and make good profits. All of this sort of thing is good merchandising, and it will make the talking machine stores headquarters for novelties of all kinds.

IT should be understood, too, that the talking machine itself is showing a marvelous development all the while. A perusal of the columns of a single issue of The World will show to what new and varied uses it is constantly being put; in fact, the talking machine has become a valued accessory to modern life, not alone as an entertainer, but in a business aud educational sense as well. As time rolls on, other developments will occur, because this industry is destined to go forward on account of the association with it of live, energetic business men.

THE great talking machine enterprises of this country have not been built by chance. It was not luck which has developed this splendid manufacturing enterprise—luck is another name for hard work. Back of every one of these establishments has been plenty of gray matter and ambition to win. Because the talking machine industry has had up-to-date forces behind it, it has grown and developed far beyond boundary lines which were generally accepted as limitations years ago. There is no limit to the field of creative genius; as the business develops, force goes with it, and men move from one conquest to another until great accomplishments have been won in every line of commercial endeavor.

THE news columns of The World this month reveal some interesting facts concerning trade developments, and the courts are still busy straightening out some of the legal entanglements which seem inseparable from the talking machine business.

THERE have been recently many complaints regarding the damage done to disc records in shipment, and in nearly all cases it has been found that the injury was to records which were not enveloped—in fact, a number of jobbers are now enveloping disc records at their own expense. It was only recently that we saw some of the higher priced records seriously injured in handling, and all of this damage could have been avoided had the records been properly protected. The cry for enveloped records is now so loud aud insistent that ere long it will be the fixed rule of every concern to use this plan.

ADVERTISERS and subscribers in all parts of the earth commend The World for its progressive policy. Some of our European advertisers have written us that they have received a surprisingly large number of orders from the publicity which they have received in our columns, and we are constantly receiving letters from subscribers in every town and city of this country stating that they could not keep house without The World. Here is a sample from C. E. Bennett, Le Mar, Ark., who says: "Your journal gets better with every issue, and I can't see how any talker man can get along without it. I am very sure that any one who desires to keep informed in regard to the marvelous improvements constantly being made in this trade cannot afford to be without it."

"TALKER" LITIGATION DISCUSSED.

Judge Lacombe's Recent Decision Interestingly Reviewed by Horace Pettit—The Basic Berliner Patent Said to Include Records as Well as Reproducing Apparatus.

Horace Pettit, counsel for the Victor Talking Machine Co., in discussing the decision handed down by Judge Lacombe, of the United States Circuit Court, for the Southern District of New York, on Jan. 5, 1907, and which was referred to in last month's World, says "it clearly interprets the meaning of claim 35 of the Berliner patent, No. 534,543, which was first sustained by the United States Circuit Court of Appeals, for the Second Circuit, in the suit of the Victor Co., et al., vs. The American Graphophone Co. The decision of Judge Lacombe, just handed down, was in the contempt proceedings brought by the Victor Talking Machine Co., et al., against the Leeds & Catlin Co., for violating the injunction against the Leeds & Catlin Co., of October 27, 1906, by selling disc talking machine records intended to be used with the Victor Talking Machine Co.'s reproducing apparatus in accordance with claim 35 of the Berliner patent, No. 534,543.

"The United States Circuit Court for the Second Circuit, on October 12, 1906, affirmed the decision of Judge Townsend, of the Circuit Court, granting preliminary injunction against the Leeds & Catlin Co. for infringing the Victor Co.'s Berliner patent, but notwithstanding the said injunction the Leeds & Catlin Co. continued selling disc records, intending them to be used on talking machines in the combination of claim 35.

"While the Victor Co. always contended that such a sale and use of disc records was a contributory infringement of their claims 5 and 35 of its Berliner patent, No. 534,543, the decision of Judge Lacombe confirms this contention. This decision imposes a fine on the Leeds & Catlin Co. of one thousand dollars ($1,000); as the defendant intends to appeal, the fine and injunction, relative to these records, were stayed pending the appeal, provided the appeal be promptly taken; the order of the court of January 11, 1907, also requires that the defendant file monthly statements, and enter a bond of ten thousand dollars ($10,000).

Mr. Pettit said further, "that while it was expected by the Victor Co. that Judge Lacombe would so decide, it is a most important decision, in that it very clearly defines the scope of claim 35 of the Berliner patent, No. 534,543, which was first adjudicated and sustained by the United States Circuit Court of Appeals for the Second Circuit, in the suit of the Victor Talking Machine Co. against the American Graphophone Co., and later in the suits against the Leeds & Catlin and the Talkophone Co. He also stated that the meaning of claims 5 and 35 of this patent was very clear and explicit, and that the acts of the Leeds & Catlin Co. complained of, in selling disc records, was, as held by Judge Lacombe, contributory infringement." Mr. Pettit called attention to the portions of Judge Lacombe's decision, which said:

"'Aside from any other questions arising upon this motion as to disobedience of injunction order, I am entirely satisfied from the proofs that defendants, not only in the instances set forth in complainant's moving papers, but in very many other instances, have manufactured and sold the records of claim 35 with the intent that they should be used in combination with the other elements of that claim in machines other than 'mechanical feed.' Indeed, it is difficult to escape the conviction that the larger part of defendant's sales were contrived by them to enable the owners of reproducers purchased from complainant or its licensees to produce such musical pieces as such owners might desire to hear, through the co-operation in combination with such reproducers of records made by defendant instead of records made by complainant.'"

Judge Lacombe also said:

"'This seems to be a case of contributory infringement, an entirely voluntary and intentional one, not in any wise excused by the circumstance that complainant had theretofore sold reproducers combined with other records to such owners.—Am. Graph. Co. v. Leeds, 87 F. R. 873. Nor is the substitution of these new records, bought more frequently in order to increase the repertory of tunes than as substitutes for worn-out discs and wholly unlike the toilet paper in Morgan envelope case (which was destroyed by a single use) in any legitimate sense 'repairs'. (See Davis Electrical Works vs. El. Light Co., 60 F. R. 276.) Nor is the advice of counsel a sufficient excuse, although here it has been honestly relied upon a heavy penalty will not usually be imposed, but only a sum sufficient to reimburse the moving party and act as a deterrent from future infringing actions. Defendant is found in contempt and fine imposed of $1,000, one-half to United States, one-half to complainant. Collection will be suspended pending appeal.'"

Mr. Pettit stated further "that the recent decision of the United States Circuit Court of Appeals on the Berliner hard rubber record patent, No. 548,623, in no manner affected the scope of the decision on the basic Berliner patent, No. 534,543. The hard rubber record patent was of subsequent date, and, as held by the Court of Appeals, was strictly restricted to hard rubber Mr. Berliner's earlier patent, No. 534,543, sufficiently broadly covered both records and reproducing apparatus. Mr. Pettit also called attention to the fact that the Jones patent, No. 688,739, was not granted until December 10, 1901, a very much later period, and merely related to an improved method of making records, the basic patent being the Berliner patent, and that the recent decision of the Court of Appeals on the Jones patent in no manner interferes with the business of the Victor Talking Machine Co."

NEW COLUMBIA QUARTERS.

Remove to the New York Tribune Building.

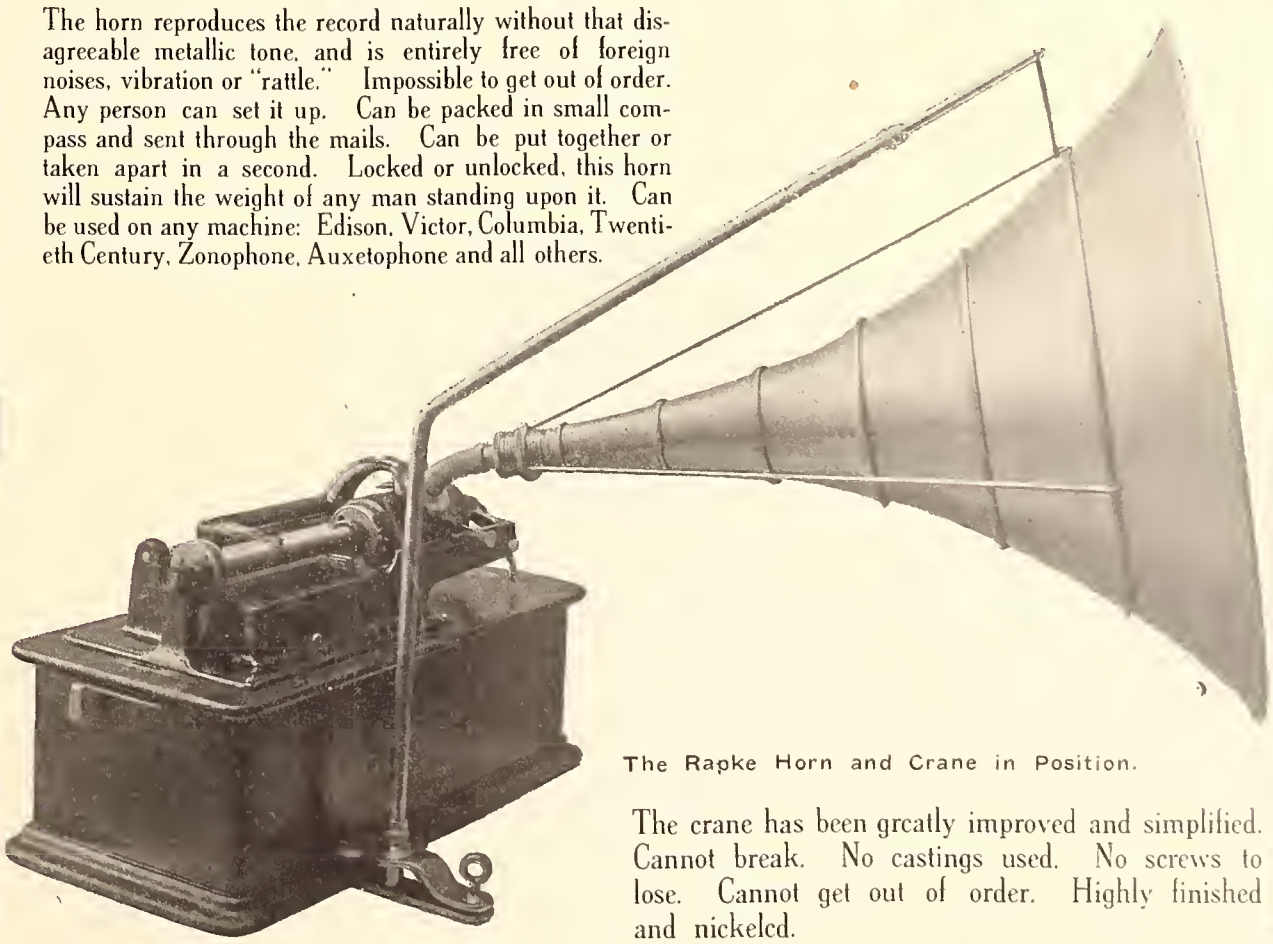
The new quarters of the Columbia Phonograph Co., general, on the fifteenth floor of the New York Tribune building, 154 Nassau street, New York, to which they removed February 1, are rapidly being arranged to suit the different departments. The entire headquarter's force are now comfortably located in these commodious quarters, representing the rapid and marvellous growth of this great company. When the interior decorations and furnishings are completed no company in the talking machine business will have such sumptuous offices for the entire executive staff. A special display of the company's products will be made here in connection with the wholesale department under the management of Walter L. Eckhardt.

RAPKE'S GREATEST INVENTIONS

The New Rapke Horn and Horn Crane

(Patents Pending)

The horn reproduces the record naturally without that disagreeable metallic tone, and is entirely free of foreign noises, vibration or "rattle." Impossible to get out of order. Any person can set it up. Can be packed in small compass and sent through the mails. Can be put together or taken apart in a second. Locked or unlocked, this horn will sustain the weight of any man standing upon it. Can be used on any machine: Edison, Victor, Columbia, Twentieth Century, Zonophone, Auxetophone and all others.



The Rapke Horn and Crane in Position.

The crane has been greatly improved and simplified. Cannot break. No castings used. No screws to lose. Cannot get out of order. Highly finished and nickeled.

Rapke's Specialties are sold only through Legitimate Representative JOBBERS here and abroad

VICTOR H. RAPKE CO., MANUFACTURERS, 255 E. 86th St. New York City

VICTOR CO. SUES DUPLEX CO.

Of Kalamazoo, Mich., for Infringement of the Berliner Patent.

(Special to The Talking Machine World.)

Grand Rapids, Mich., Feb. 11, 1907.

On the 5th inst. papers were filed in the United States Circuit Court, sitting here, by the Victor Talking Machine Co., Camden, N. J., against the Duplex Phonograph Co., Kalamazoo, Mich., charging them with an infringement of the Berliner patent. The Duplex Co. have been advertising a double-horn machine in the magazines direct to the public, and advising the consumer to buy direct from them and thus save "50 per cent. of the dealer's profit." This suit has been expected to be instituted for some time.

When F. D. Eager, secretary and general manager of the Duplex Phonograph Co., was asked for a statement of the case at issue, he said: "While we made talking machines, we manufacture no records, having contracts with the Victor Talking Machine Co., Columbia Phonograph Co., and International Record Co. for all records needed; in fact, for any of the supplies they make. The reproducer for our machine is made under patent No. 773,740, held and owned exclusively by us, and we do not in any way conflict with the other competitors in the field. I am a little surprised at the suit being brought."

TWO STORES CONTRASTED.

One Tells the Story of Success by Its Methods, Equipment and Plans of Doing Business While the Other Is Dying a Natural Death Through Sluggishness and Indifference.

An excellent illustration of progressiveness vs. sluggishness in retailing is afforded by two talking machine stores on a busy west side avenue in New York. One store has an attractively decorated window with an excellent assortment of machines displayed to advantage with appropriate and effective advertising matter. Inside the store, where sewing machines and patterns are also handled, the talking machine and record stock is placed in a prominent position near the door, where it is readily seen from the street, and where the sound of the record testing will attract the attention of passersby. Attractive signs are painted on the top and bottom of the window, a handsome gold and black sign is placed on the building, and a brilliant electric lighted sign of latest pattern is swung over the sidewalk, where it is bound to be seen. Naturally the proprietor of the store is making money and has a steady and continually growing patronage. In the next block is the second store, much larger in size than the first, but different in almost every respect. A cheap looking oil-cloth sign is nailed over the window with the word "Phonographs" upon it. Two more signs of similar nature "adorn" each side of the window, in which several machines are placed at random. In the space not filled by the talkers is shown a quantity of school supplies, post cards and similar goods. The interior of the store is poorly lighted and the talking machine stock placed toward the rear of the store, aud besides is not at all arranged attractively. The owner of this store is making only a living out of his business, and a good part of his trade is attracted to the locality by the advertising of his more progressive competitor.

It is a case like the one illustrated in the story of the two negro "hot corn" dealers. Oue darkey was a hustler. He marched up and down before his stand loudly crying his wares: "Hot co'u, hyars yo' fine hot co'n jes' from de field! Hyars yo' hot co'n." His lazier competitor on the opposite corner contented himself with exclaiming, during the intervals in the other's shouting: "Hyar too! Hyar too!" and taking what trade came his way.

There is nothing in waiting for business to come your way or in being satisfied with what your competitor leaves. Be on the band wagon with "bells on" so the cream of the trade will know you're in business. If there's any trailing to be done let the other man do it. If you can't make a business pay any more than living expenses and show a bank balance at the end of the year, close up and get a salaried job and save worry.

SALESMANSHIP MEANS PROFIT.

"What is salesmanship?" an expert asks, only to answer himself as follows: "The art of selling goods at a profit. If a man does not take into consideration the amount of profit he makes he is an order-taker and not a salesman."

There are times, however, when it takes a mighty good salesman to sell even at a loss. When a deadload of unsalable goods is becoming heavier on his hands each hour, he must get from under at any price.

MOISTURE IN STORE WINDOWS.

The talking machine dealer who has had considerable trouble with steaming show windows declares that he has hit upon the following device, which he has made a success:

"I use a box about seventeen inches square, with a number of holes bored in the top, front and sides. The box is then filled with unslaked lime, the lid is nailed down and the box placed in the center of the window, where it absorbs all moisture, leaving the window quite dry. The holes in the box should be covered with perforated zinc, and the box should be neatly painted. A display of goods will entirely hide the box from view."

THE MOST CONVINCING METHOD

Of Demonstrating Machines and Records May be Studied from the Customers Standpoint.

How many talking machine salesmen, while demonstrating the merits of a machine or trying some of the latest records for a prospective customer, stop to consider if they are using the most convincing method? Why not place yourself in the customer's place occasionally, reverse positions, as it were, and study for yourself the virtues and faults of your style of salesmanship? For instance, we have seen salesmen receive a request to play some late records, and taking a dozen or so out of the rack would place them on the machine successively without any comment, taking advantage of the time they consumed while playing to leave the customer and flirt with a girl or swap the latest stories with a friend, returning only to stop the machine and put on a fresh record. When all the records were played the customer was requested to name the ones desired without the least display of salesmanship. The result was that possibly three or four out of the number played were purchased. If a salesman aims to be successful he must put some effort into his work, for where three records out of a dozen will sell themselves a clever man can easily increase the same sale to include ten or so. In the instance brought to our attention the customer was in a humor to buy, and if the salesman had suggested a number of other popular records, commented upon their good points and caused the interest of the customer to center upon the records alone, the sale would have been much larger and the attention received would have prompted future visits on the part of the customer.

Another frequent mistake made, even by well meaning salesmen, is in believing that loudness is necessary in testing records for a customer. The entire musical effect of a lullably or ballad is spoiled if one is forced to listen to it issuing from a thirty-inch horn and through the medium of a reproducer sufficient to fill a hall with sound. This unnecessary loudness is especially annoying if the horn is pointed directly at the customer, while seated in a testing room of limited size.

A well-known New York jobber does better. He uses a home model machine and points the horn toward the ceiling, the listener getting the music "on the bounce," as it were.

The matter of talking machine selling would be improved a whole lot in many instances if the subject was occasionally studied from the standpoint of a purchaser instead of continually being viewed only from the vantage point of the salesman.

BUILT UP SUCCESSFUL BUSINESS.

Among those handling talking machines most successfully in Baltimore are E. F. Droop & Sons Co., who during the year and a half they have taken on talking machines have experienced a continuous growth of business. The company started with the Victor and Edison lines, being the only jobbers of the latter in the city. They at first had a small store, were soon compelled to secure more room in the same building, and now find it necessary to remove to an entirely new location to acquire sufficient room for their business.

A piano store has been opened in Thief River Falls, Minn., by Hans Angell.

JOBBERS MEET IN CHICAGO.

The Convention of the Central States Talking Machine Jobbers' Association Held Monday and Tuesday Most Successful—Many New Members Added to the Roster and Important Business Transacted—Next Meeting to be Held in Chicago on June 17 and 18.

(Special by Wire to The Talking Machine World.)

Chicago, Ill., Feb. 12, 1907.

The Central States Talking Machine Jobbers' Association held the largest and most enthusiastic meeting in its history here yesterday and to-day, about thirty firms being represented. The principal object of the meeting here at this time was to interest the Chicago and Illinois jobbers. This was done. All of the Chicago jobbers were present yesterday. The matter of establishing uniform prices on talking machine accessories was taken up, and several committees appointed to formulate resolutions for the purpose of bet'ering sundry trade conditions not satisfactory at present. The consensus of opinion was that the social side of the conventions was of great benefit. President Ashton was in the chair, and Secretary Whitsit in his accustomed place. The following new members were admitted: Minnesota Phonograph Co., Minneapolis; James Zimmerman, Peoria, Ill.; Harger & Blish, Dubuque, Ia.; McGreal Bros., Milwaukee, Wis.; James I. Lyons, Rudolph Wurlitzer Co.; the Vim Co., and Lyon & Healy, all of Chicago.

This morning the committee ratified the resolutions presented by the committee appointed yesterday. One limits membership in the association to talking machine jobbers. The Whitney & Currier Co., Toledo, O., were admitted to membership, and the executive committee was increased from three to five by the addition of L. E. McGreal and H. H. Blish.

The next meeting will be in Chicago; June 17 and 18, two days ahead of the convention of the National Piano Dealers' Association. At thirteen minutes to one o'clock this morning thirteen jobbers offered a toast and sent a telegram to Thomas Alva Edison, at his home in Orange, N. J., on the occasion of his sixtieth birthday. C. Berger, representing the Devineau Biophone Co., Cleveland, O., exhibited a biophone attachment for cylinder machines. The meetings convened in the Auditorium Annex, where the dinner was also given.

EDISON EXHIBIT SUCCESSFUL.

Display at the New York Furniture Exchange Brings Many Prospects—Notice Issued Regarding Suits.

The exhibit of the National Phonograph Co. in the New York Furniture Exchange was closed on February 2. Mr. Barklow, the manager, in speaking of the venture, said: "The exhibit, in my estimation, has been very successful, and we have in the neighborhood of 200 prospects. The company are very well satisfied with the results."

The company have printed the following announcement: "Jobbers and dealers in the State of New York, against whom suits were brought by the New York Phonograph Co., have recently been served by registered mail with a notice wherein that company's attorney calls attention to a section of a code which gives him a lien upon his clients cause of action. This does not effect or concern the jobbers and dealers, and no such notice was necessary to protect the attorney of that company, and we believe the real purpose of the notice is to create the impression that the New York Co. obtained a decision in its favor, which is not the case, in fact, the suits have not yet been brought to final hearing. The only hearing so far has been on the motion for preliminary injunction, which was denied." The matter was before the Supreme Court of Westchester County, N. Y., Judge Keogh presiding, on January 29, and S. Davega, jobber, New York, was called to the stand. The hearing was adjourned until February 16.

A $5,000 JOB WANTED.

Can you afford five thousand a year to first class manager. In this case man can make good. Proof of ability can be furnished and the goods delivered. "T. M. Expert," care Talking Machine World, Western Branch, 195 Wabash Avenue, Chicago.

OPEN FOR ENGAGEMENT.

Talking Machine man now employed as assistant manager in charge of Sales Department. A good window dresser, a thorough accountant, is open for engagement as manager. Large business experience; A1 references. A. M. T., care Talking Machine World, 1 Madison Avenue, New York.

SUCCESSFUL EDISON JOBBER.

C. B. Haynes Controls Fine Trade at Richmond.

The many friends of C. B. Haynes will be gratified to learn of the pronounced success which has attended his efforts since he flung his business banners to the breeze in Richmond, Va. Mr. Haynes has a splendid knowledge of the requirements of the trade gained through his long years of travel for the Edison interests. He caters specially to the dealers and carries at 602 East Main street, Richmond, Va., a splendid jobbing stock of Edison phonographs, Mega horns, Rapke cranes, and talking machine supplies of all kinds, so that he can meet the demands of the southern trade promptly.

SOME LATE CHICAGO NOTES.

Babson Bros. Erecting New Building—Recent Visitors to Western Metropolis.

(Special to The Talking Machine World.)

Chicago, Ill., Feb. 12, 1907.

Babson Bros. have commenced a building of their own on West Nineteenth and Morgan streets to cost $45,000, and which will be used entirely for their own business.

Edward D. Easton, president of the Columbia Phonograph Co., General, and Louis F Geissler, general manager of the Victor Talking Machine Co., Camden, N. J., were recent visitors here.

IMPROVEMENT IN BUSINESS

Is Reported in All Branches of the Talking Machine Trade This Week.

During the past week business has improved greatly in the East, and West it has assumed still larger proportions. Jobbers and dealers are pushing trade in lively fashion, and by the opening of spring sales will have mounted up materially; in fact, the spring business is expected to be heavy, and preparations to meet the demand for goods are being made on a suitable scale. The manufacturers are overwhelmed with orders and their plants are being run full up, and in some overtime is necessitated.

HORN TO HARMONIZE WITH CABINETS.

The Newark Tinware & Metal Works, located at 53-55 N. J. R. R. avenue, Newark, N. J., are winning prominence in the talking machine trade. This concern has at its head an accomplished mechanic, designer and originator, who has turned out a number of novelties. His latest contribution is a wood colored phonograph horn, which can be made to harmonize with cabinets of the various types of talking machines. The invention is referred to in their advertisement elsewhere.

NEWS FROM THE EMERALD ISLE.

Interesting Items That Will Command the Attention of the American Trade.

(Special to The Talking Machine World.)

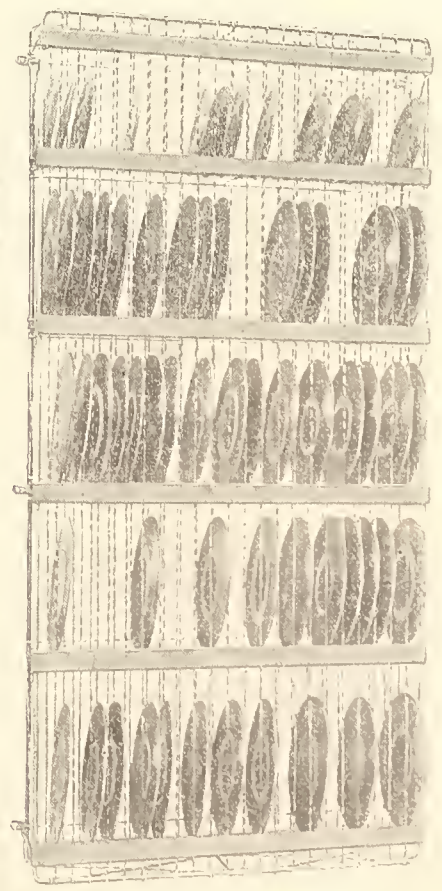
Belfast, Ireland, Feb. 1, 1907.

The new "Model D" disc machine of Pathé Frères, London only reached Belfast a few days ago. It has many novel characteristics. An unwearable sapphire replaces the steel needle, thus the trouble of changing the needle for each record is abolished. The records are 11 inches in diameter. The sound-box travels from center to outside edge of the disc, therefore in an opposite direction to ordinary gramophones or zonophones. The rendition of bands and instrumental selections is wonderfully good, and both machines and records will accordingly be good sellers.

The Columbia Co., London, are to be congratulated on having secured and placed on the market both a disc and cylinder record by General Booth (Salvation Army) who is such a prominent figure.

That well-known Belfast jobber, T. Edens Osborne, possesses a wonderful library of "home-made" records, including recitations and speeches of many public men of North of Ireland now deceased. The first two records of his collection are by his father, and were made when that gentleman was 91 years old. The steamship "Caronia," in December, and the "Etruria," during present month, fetched large consignments from New York of Edison machines for Mr. Osborne.

January has, as usual, been a dull month.



For DISC RECORDS

For carrying a large number of Disc Records in a wide variety of sizes, we urge you to get the

No. 2=D

having a capacity of over one thousand discs in the following arrangement:

200	- - -	8-inch
600	- -	10-inch
200	- - -	12-inch

Our New Catalog is ready.

Syracuse Wire Works

Syracuse, New York, U. S. A.

though the output of "talkers" has been equal to first month of 1906.

Zonophoue records are still "booming"; gramophone products in good demand; Edison goods moving steadily, Columbias having a fair sale; the demand for Sterlings greater than ever; Pathés selling freely and Edison-Bells and Whites being bought with avidity.

During the present month the Belfast municipal elections took place, which gave T. Edens Osborne an excellent opportunity of manifesting his enterprise and originality—the results of the polling were not declared until late in the evening. He then equipped an Edison "Standard" for recording purposes, made an arrangement with an operator at central telephone station to 'phone election results of each ward (or division of the city) the moment such were declared. On receiviug the figures he immediately recorded them on a blank cylinder and thundered them forth to a large gathering of citizens by means of the B. C. Sound-Magnifying Columbia graphophone, thus announcing names of the victorious candidates long before the evening papers could have them in type.

TRADE IS BOOMING IN WHEELING.

Excellent Reports from West Virginia—Increased Demand for High Grade Instruments—Messrs. Henry and Tyler Recent Visitors—Other News of Interest.

(Special to the Talking Machine World.)

Wheeling, W. Va., Feb. 12, 1907.

Local business is booming. Both of the piano houses, C. A. House and the F. W. Baumer Co., report exceptional business on high-grade machines. The former house is now making an aggressive campaign for cylinder business. Mr. Philips, who is in charge of same, states that lots of new business is coming his way.

The Columbia Phonograph Co.'s store, in charge of Ed. Shawtel, are conducting an active soliciting campaign, using their disc product as the leader.

Bard Bros. have a new proposition on to secure business. It is being worked through the grocery stores throughout the city and surrounding towns. They state that so far the results are very gratifying, and expect it to be a business getter for mouths to come.

W. E. Henry, the active head of the Powers & Henry Co., of Pittsburg, spent several days of this week here. His visit to the trade was appreciated, for he is without question one of the very best informed and most enthusiastic talking machine men in the country.

R. W. Tyler, formerly of this city, now engaged in the sale of talkers in Parkersburg, was a recent visitor. He is much pleased over the business done during the five months he has been in business for himself.

Mrs. E. P. Nelson, who has been connected with Bard Bros. since that firm bought the Hoehl & Gieseler Piano Co. store, has resigned her position, and will return to her old home in Maine.

SOME DENHAM "POINTERS."

Say Their Goods Will Not Supersede or Conflict With Regular Line.

In their recent booklet, "To Phonograph Dealers," issued by the Edwin A. Denham Co., importers and manufacturers of talking machine novelties, 31 Barclay street, New York, they furnish "some new suggestions for doubling your cash sales without violating any of the clauses of your price maintenance contracts." They are convincing and right to the point for wide-awake handlers of these "scheme goods," and as they say, "they are nowise iutended to supersede or supplant or conflict with the regular line, but to be regarded as a special line in its own field." The concluding chapter of the interesting booklet is "a note of warning, submitted with apologies, but made necessary by the fact that a number of dealers have used our machines as a medium for 'price cutting.'"

Among other things the firm say:

"Your price maintenance contracts all contain a clause to the general effect that neither more nor less than the regular list price of any phonograph may be allowed for it in exchange for any other machine. The list price of the Lyra is $4. Four dollars, but no more than four dollars, may he allowed for a Lyra in exchange for another machine. And (provided the Lyra is in good condition at the time the exchange is made) no less than four dollars may he allowed for it.

"The mere fact that the Lyra is worth more than $4, and that it can he sold at cousiderahly more than that at retail, cannot he accepted as an excuse for allowing more for it than its established list price. Furthermore, dealers who persist (as several have done) in advertising that 'the Lyra is a $7.50 machine,' or 'a $10 machine' and that 'it cannot he obtained anywhere for less' (thus giving the impression that that is its estahlished list price), violate indirectly both our regulations and those of the manufacturers of the larger machines."

SOME WORLDOGRAPHS.

Fred C. MacLean, general manager of the telegraphone department of the Sterling Debenture Co., New York, who is traveling the Southwest in the interest of this wonderful instrument, was in El Paso, Texas, last week. He is not to returu North before the first of March.

Last Friday, February 8, Charles V. Henkel, president and general manager of the Douglas Phonograph Co., New York, with his daughter, started on a Western trip, combining business with pleasure. On his way out he stopped off at Buffalo, N. Y., ran up to see the magnificent ice bridge at Niagara Falls, thence to Chicago, where he attended the meeting of the Central States Talking Machine Jobbers' Association, of which he is a member. Returning he visited Cincinnati and Pittsburg.

Recently B. Feinberg, of the Western Talking Machine & Supply Co., Chicago, "blew into" New York and the Eastern cities aboard his billy goat "after orders." He was accorded a warm receptiou, as Mr. F. is popular everywhere.

The Edison commercial phonograph has recently had its dictating and transcribing appliances radically improved. The new machines, brought up to date, are now on the market.

The Searchlight Horn Co., of Brooklyn, N. Y., report a continued expansion of their business. Their trade for January was larger than December, although it was a pheuomenal month with them. They are now working on a novelty—a knockdown searchlight horn, made of aluminum. These, which are being made to order for customers, present a most attractive appearance, being in dull or satin finish.

The Bonci records are now being made at the recording laboratory of the Columbia Phonograph Co., General, New York, by Victor H. Emerson. Alessandro Bonci has his "dates" the same as the other "talent." The results achieved are very satisfactory.

The Petmecky Co., of Kansas City, Mo., are having a wonderful demand for the self-sharpening multitone needle from all parts of the United States as well as foreign countries.

His many friends will be pained to hear that Len Spencer, of Spencer's Lyceum, New York, and well-known singing and speaking artist among the "talent," is in danger of losing the sight in his right eye. He is now under treatment, and every effort is being made to counteract the trouble.

John P. Kelsey, formerly manager of A. D. Matthews' Sons Co.'s talking machine department, is now with the Douglas Phonograph Co., New York, coveriug Brooklyn and the Long Island territory, under the special tutelage of the respected John Kaiser.

At the recent annual meeting of the Columbia Phonograph Co., General, the old staff of officers was re-elected, as follows: Edward D. Easton, president; Andrew Devine, Paul H. Cromelin, Edward N. Burns, vice-presidents; George W. Lyle, general mauager; G. Marconi, consulting physicist.

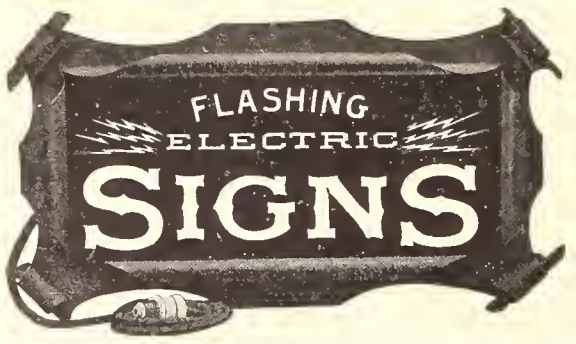
The Schmelzer & Sons Arms Co. had a very handsome exhibition of talking machines and supplies at the recent Implement Men's Convention held in Convention Hall, Kansas City, Mo.

James K. O'Dea, talking machine dealer, of Paterson, N. J., is erecting a handsome new building at 115 Ellison street, that city, to meet demands of his expanding business.

FOR SALE

50 PREMIUM DISC MACHINES.

WE GUARANTEE THEM TO BE ABSOLUTELY NEW and the best premium machine on the market. New Model, with powerful clock spring motor, 10 in. turn table, Concert Sound Box, Large Solid Oak Cabinet, 23 in. Black and Brass Horn, with supporting arm. These are not Talkophones and no offer accepted for less than the 50. Address, The Outlet Mfg. Co., Providence, R. I.



Attract Attention 24 Hours A Day

Artistic-Reliable-Inexpensive

THEY LITERALLY BURN YOUR AD. INTO THE MINDS OF THE PEOPLE

This artistic sign is made of Venetian Bent Iron with glass panel. The lettering is outlined with burnished gold and the display line studded with jewels, making a very attractive, high grade

DAY SIGN

Inside the sign are three electric lights of different colors (red white and green). These are switched on and off, automatically, by our patented thermo-flasher, producing an intermittent iridescent effect which is bound to catch the eye.

A Sure Trade Puller at Night

The glass panel is removable, and one with different lettering may he inserted as often as desired. The cost of running is about one cent an hour.

The Most Inexpensive Automatic Flasher on the Market

The illustration shows a single face inside sign 16x28 inches, outside measurement with six (6) feet of flexihle wire cord and attachment plug ready to attach to any incaudescent lamp socket, (lettering as ordered). Price complete $9.75 f. o. b. New Haven. We also make a small douhle face sign 18x30 inches for outside use, substantially the same as sign described, with square ornamental iron frame, all ready to connect. Price complete, $15.00. Extra glass panels for either sign (any wording), $2.00 each. OUR FLASHERS ARE FULLY GUARANTEED AND MAY BE RETURNED IF NOT ENTIRELY SATISFACTORY We are prepared to furnish designs for all kinds and sizes of electric signs for both inside and outside use, free of charge. Special prices for signs in quantities. Correspondence solicited. Write for our illustrated booklet No. 6, "POWER TO ATTRACT." AGENTS WANTED. Address

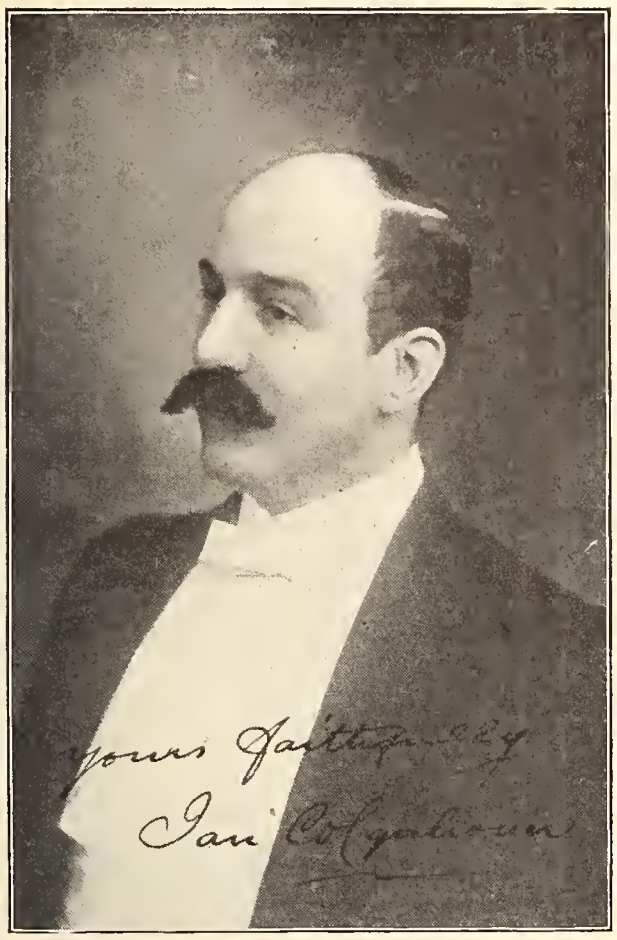
IAN COLQUHOUN IN NEW YORK.

The Celebrated Baritone Making Records for Leeds & Catlin Co.—Accompanied Here from London by W. H. Glendening.

Among the passengers who arrived by the steamship "Teutonic" from Liverpool the closing week of January was Ian Colquhoun, the famous baritone, who has long been a favorite at the Alhambra in London. He comes to the United States chiefly for the purpose of making twenty-five special records for the Leeds & Catlin Co.,



but it is expected, of course, that he will be also heard in some of the leading theatres. Mr. Colquhoun's voice is one of unusual range and quality and has come in for no small share of Royal recognition. He has sung with the Carl Rosa Opera Co. as well as other leading companies. It is said that during his present visit he will give a concert of old Irish songs. Mr. Colquhoun, who, by the way, was termed an Irishman by some of our daily contemporaries, was really born in Liverpool, where so many good Scotchmen and Irishmen come from, and in addition to his ability as a singer he is said to be successful as an inventor. The Colquhoun records are very popular in London.

In the course of a chat in The World sanctum Mr. Colquhoun spoke most optimistically about the future of the talking machine as an educator and stimulator of musical taste. It is not too much to say that his popularity in London will be duplicated in New York should he decide to make a longer stay than he intended.

* * * *

W. H. Glendening, of Gilbert Kimpton & Co., who handle the Imperial records in London, accompanied Mr. Colquhoun on his present trip. He is quite enthusiastic about the Imperial record and its future in London, and it is not improbable that during his present visit he will make arrangements whereby the sales of these records will be materially increased throughout Great Britain. Mr. Glendening has been in New York several times before, and is quite popular among those who have the privilege of enjoying his friendship.

OLD TIME TALKING MACHINE SUIT.

Officers of the Defunct National Gramophone Co. Sued by Stockholders—Verdict Rendered in Favor of the Defendants.

After a long period of litigation the suit brought against the defunct National Gramophone Corporation and some of its officers by a number of the stockholders had its final hearing in the trial term, Part X, of the Supreme Court, New York City, Thursday, Jan. 17, before Justice C. L. Guy. The case was given to the jury, which was locked up for the night, and who brought in a sealed verdict the next morning in favor of the defendants. The stockholders who brought the suit declared that they were induced to take stock in the corporation by Frank Seaman, who was the treasurer, and Frank J. Dunham, at one time vice-president and treasurer of the Universal Talking Machine Manufacturing Co., and others. They assert that they were deceived and brought suit to recover the amounts they subscribed at various times.

THE UTICA CRANE CO. ENJOINED.

(Special to The Talking Machine World.)

Utica, N. Y., Feb. 6, 1907.

Suit has been instituted in United States Court by the Hawthorne & Sheble Mfg. Co., of Philadelphia, against the Utica Crane Co., dealers in talking machines in Columbia street. The court is asked to grant an injunction against the Utica firm because of the use of an improvement in a crane for supporting horns in phonograph and talking machines. It is claimed by the complainant that the mechanism used is an infringement upon patents which it controls. A temporary injunction has been granted and the complainants also ask for an accounting of damages which they have sustained.

NATIONAL PHONOGRAPH CO.'S DINNER.

The complimentary dinner tendered by the executive staff of the National Phonograph Co., January 17, during the automobile show, at Martin's, New York, the guests included the following Edison jobbers: E. F. Taft, Eastern Talking Machine Co., Boston; C. J. Andrews and Mr. Corey, Boston Cycle & Sundry Co., Boston; T. H. Towell, Eclipse Musical Co., Cleveland, O.; C. B. Haynes, Richmond, Va.; W. D. Andrews, Syracuse, N. Y.; Louis Buehn, Louis Buehn & Bro., Philadelphia, Pa.; W. E. Henry, Powers & Henry Co., Pittsburg, Pa.; Louis J. Gerson, Musical Echo Co., Philadelphia, Pa.; H. E. Ellenberger, Pardee-Ellenberger Co., New Haven, Conn.; N. D. Griffin and C. Becker, American Phonograph Co., Gloversville, N. Y.; W. N. Davis, Forsyth & Davis, Kingston, N. Y. The company were represented by C. H. Wilson, manager of sales; A. Westee, secretary; Fred K. Dolbeer, manager credit department; L. C. McChesney, advertising manager; Wm. Pelzer and Jno. E. Helm, of the legal department; A. C. Ireton, B. R. Barklow, J. W. Scott, W. H. Hug, J. F. Stanton, of the sales department. Wm. E. Gilmore, president, who was expected to spend the evening with the "boys," was unavoidably absent. A "large time" was enjoyed all around, and "Scotty" accomplished the stunt of the night.

A. P. PETIT AGAIN IN HARNESS.

Perhaps it is needless to give the trade a formal introduction to A. P. Petit, who desires to assure

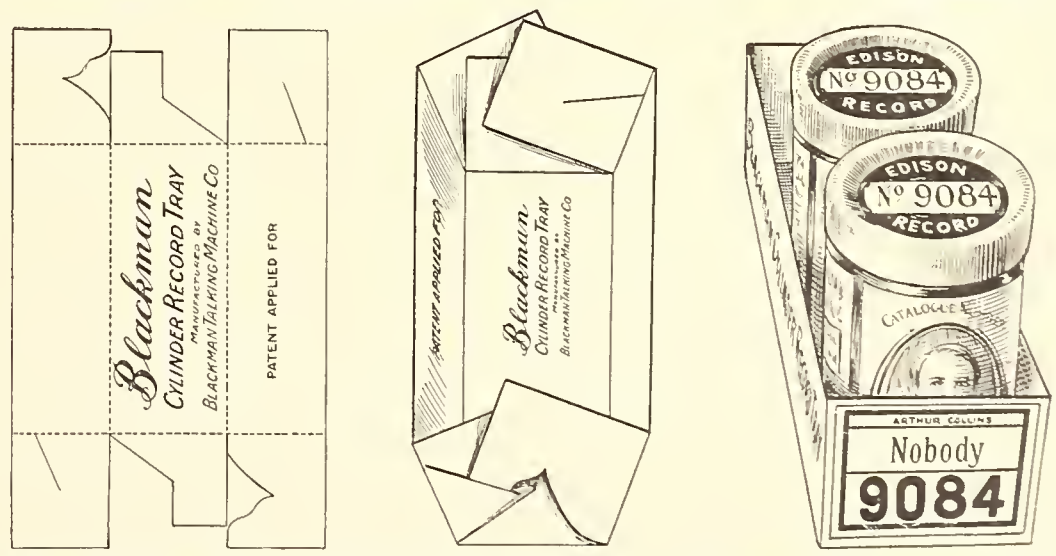
A. P. PETIT.

his friends in the talking machine line that he is still alive, actively engaged in the business, although having been very sick, but now fully recovered. "A. P." has not gone to Europe, or any other place, but is right "on the job"; and all his friends will receive a cordial welcome, if they care to honor him with a call, in his new managerial occupation with Landay Bros., 400 Fifth avenue, New York.

THE BLACKMAN CYLINDER RECORD TRAY

PATENT APPLIED FOR

A RECORD TRAY WITH RECORD LABEL FOR LESS THAN ONE CENT



We ship them FLAT and they can be FOLDED into a STRONG TRAY in a few seconds, as shown above. This tray, with the RAPKE Record LABEL, makes a HANDSOME looking stock and a SYSTEM that you can't beat. Full particulars on request.

SPECIAL DISCOUNT TO JOBBERS

BLACKMAN TALKING MACHINE CO.

(J. NEWCOMB BLACKMAN, Proprietor)

97 CHAMBERS STREET NEW YORK

To JOBBERS

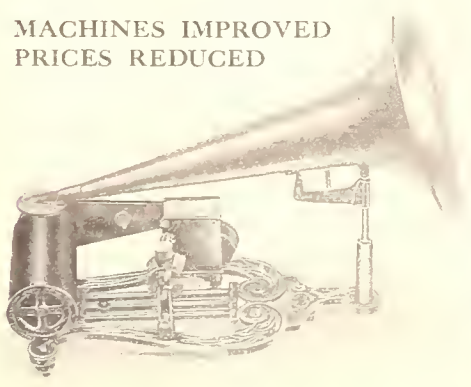
Your interests, **your** dealers' interests, **our** interests and the interests of the other manufacturers, are all identical.

"300 per cent. increase in purchases of records and machines" is the report recently made to us by one well-known jobber, referring to a West Virginia customer who is now working one of our schemes for the third time.

"$1,500 increase during the first month" is another report from one of the best-known jobbers in New York City, referring to a small dealer in a town near New York.

Results such as these, which are duplicated all over the country, seem to us to be a pretty good thing for **everybody** concerned.

Isn't it worth your while to interest **your** *customers in our selling schemes before your competitor obtains exclusive privileges for* **his** *customers?*



To PHONOGRAPH DEALERS:

SOME NEW SUGGESTIONS
FOR

Doubling Your Cash Sales

Without Violating Any of the Clauses of Your
PRICE-MAINTENANCE CONTRACTS
is the title of a New Booklet Just Issued by

The Edwin A. Denham Co.

31 Barclay Street, New York

IT contains particulars of some novel selling and advertising schemes invented and operated by some of the best-known Edison and Columbia dealers and jobbers in the country, in connection with the LYRA PHONOGRAPH.

No schemes are included except those which have been thoroughly tried out and have proved to be unqualified successes.

It includes an outline of our well-known Newspaper Circulation Scheme, along with others which possess the great advantage of not costing *any* money to speak of, even at the start.

Let us show you how you can procure, for yourself **exclusively,** a very large number of **new customers** for records and for larger machines.

Let us show you how you can at the very beginning get back the cost of the Phonographs, and how you can get rid of all your old records and old machines in a few days and clear your shelves for new, up-to-date stock. *And how you continue for months afterward to reap the benefit of having worked one of our selling schemes.*

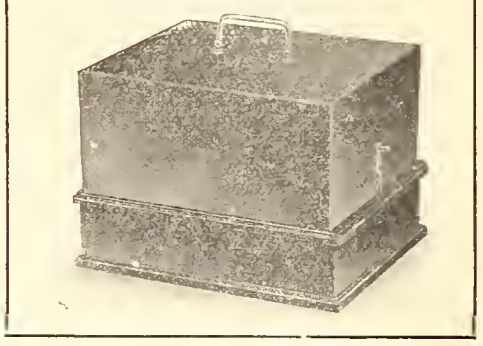
We require you to sign no price maintenance contract, nor do we expect you to buy your records or your larger machines from us. There are no strings attached to our machines or our selling schemes, with the single exception that we require that **no more than the established list price of the Lyra ($4) shall be allowed for it** when you accept it in exchange for a more expensive machine. This rule has been adopted to avoid any chance of our schemes conflicting in any way with the rules and regulations of the other manufacturers.

EXCLUSIVE PRIVILEGES GRANTED

Think of the advantages to a phonograph dealer of having the monopoly of an attractive "leader"—a popular article which his competitor cannot offer, and which is not handled by the local department stores.

OUR SELLING SCHEMES
will double your business in a fortnight. To double your business by any *other* means would cost you hundreds or thousands in advertising and many months of hard work.

WHY NOT WRITE US TO-DAY?



We Admit

that it takes about as much time and trouble to sell a $10 phonograph as a $30 one.

But, it requires comparatively no time or trouble at all to put out several hundred, or even several thousand, **Lyra** Phonographs, if you work one of our novel selling schemes.

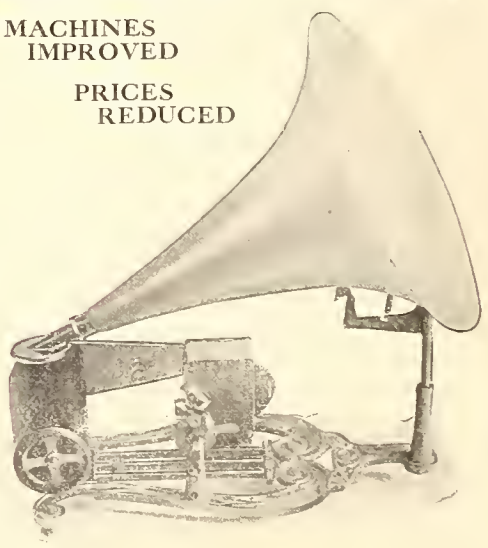
Our Phonographs are not competitors of the standard makes.

On the contrary, the chief mission of our machines is to create **new** *customers for you — to make phonograph users of people* **who otherwise would not buy phonographs or records at all.**

And every one of these Lyra owners will be under contract to buy records from **you** exclusively, and most of them will eventually trade in their Lyra in exchange for a larger machine.

Have you seen our new 1907 machines?

And our revised schedule of prices?



TRADE NOTES FROM INDIANAPOLIS.

Trade Most Satisfactory—Three Things That Have Benefited the Business—A Chat With C. F. Craig—Demand for Searchlight Horns—Edison Machines Installed by Mr. Wagener—Frank Lesley's Good Report—Other Items of General Interest.

(Special to The Talking Machine World.)
Indianapolis, Ind., Feb. 10, 1907.

Dealers are not trying to explain just why it is, but the fact remains that last month was one of the best in the talking machine history of Indianapolis. It is estimated that the sales of talking machines last month went at least 30 per cent. ahead of those of the first month of last year—that is, in the retail line; jobbers report even more glowing results than that. Just what has caused this increase in trade, the dealers are unable to explain—however, they have some reasons to offer and call atteution to some conditions which they believe have been conducive to business.

"There are three things which I think have benefited the trade," said Charles F. Craig, of the Indiana Phonograph Co., which handles the Edison machine. "Those three things are: (1) prosperity, (2) better machines, and (3) a full stock of machines and supplies. "There isn't any use to say that the weather and the general abundance of money have done it all, for they have not. Talking machines are being improved all the time and they are becoming more popular.

"Of course, a full stock and ability to fill orders promptly have had something to do with it. I have filled every order promptly this year. Last year I lost trade because I was unable to do so. I looked ahead this year and laid in a sufficient stock to keep my customers supplied. I have now on hand 65,000 records and have ordered more and will continue to do so. I want all the records I can get. Last year at the first of the year I ordered 25 Standard machines, 15 Homes and 5 Gems. At the first of this year I ordered all I could get of each kind. That simply shows the difference in the demand." Mr. Craig formerly had his place of business on Illinois street. He is now on Virginia avenue. He says he has done more business in the last month than he did the entire fourteen months he was on Illinois street.

A. B. Wahl, who does a jobbing business in Edisons and Talkophones, is well satisfied with his trade so far this year. He is finding an unusually brisk demand for the Searchlight horn, which is manufactured by the Searchlight Horn Co., of New York. The curve in this horn is more pronounced than in some other horns, and this is said to make the sound of the machine more satisfying. Mr. Wahl made a business trip to Cincinnati last week.

The Columbia Graphophone is proving satisfactory as a trade drawer at the Vaudette Theatre on South Illinois street. This theatre is owned by Gillingham & Zepp. "We have a small horn on that Columbia machine," said one of the proprietors, "but it gets the trade just the same."

"The Exhibit," on South Illinois street, R. Wagner, of Buffalo, proprietor, has just installed 10 new Edison machines, making now a total of 30 machines, all Edisons. "Business has been rather dull with us for a month," said the manager of "The Exhibit." "During the last week cold weather has gone against us. We have plenty of business even in rainy weather, but extremely cold weather keeps the people indoors. The Convention of the United Mine Workers last month helped us out slightly."

Edward E. Hill, who retails Edisons and Talkophones, has a unique design in his store on Massachusetts avenue. It is a large star, perhaps 7 feet in diameter, and arranged from small talking machine horns.

"My business last month was fully 30 per cent. better than it was during January of last year," said Frank Lesley, who handles all kinds of talking machines, including the Edison and Columbia. "I attribute this partly and in fact largely to advertising. I have been advertising extensively and I believe it pays. I find, too, that I am selling more high grade machiues than formerly. The public is calliug for the best iu the way of talking machines."

Thomas Devine, of the Columbia Phonograph Co., has arranged a display window with a view to quantity—that is, he has stocked one of his large display windows chock full of machines. In the center he has arranged a music rack bearing a number of cylinders. The rack is revolved on a disc and the cylinders form aerial swings. Mr. Devine made a business trip to Madison recently.

EDISONIA CO.'S NEW QUARTERS.

The Edisonia Co., of Newark, N. J., have just removed to their handsome new quarters at 67 Halsey street. For some time past A. O. Petit, the enterprising head of this house has been seriously hampered on accouut of lack of room in their old quarters. The new building—four stories and basement—is handsomely equipped. The first floor is devoted entirely to the Edison line, the secoud is occupied by the Victor product, both floors having a number of large, well-equipped trial booths. They are also fitted up with ladies' waiting and dressing rooms for the convenience of their retail customers. The third floor is devoted to their full line of cabinets, while in their large basement they have splendid facilities for handling their wholesale stock. The building is handsomely fitted up, and does credit to Mr. Petit.

BUSINESS GOOD IN CINCINNATI.

Manager Strief of the Wurlitzer Co. Makes Splendid Report—What Other Houses Say.

(Special to The Talking Machine World.)
Cincinnati, O., Feb. 11, 1907.

Mr. Strief, of the talking machine department of the Rudolph Wurlitzer Co., says that business has been exceptionally good in his line when the weather and flood conditions are taken into account. He further states that for the month of January, if the weather had not been so inclement and we had had no flood, their sales in the talking machine department would have amounted to $10,000. As it is, for the month of December, their business was 100 per cent. better than that of last December. Mr. Strief is especially gratified over the many sales they are making of "Victrolas." This company puts every disc in an envelope, and they have found it something that the customer more than appreciates. Joseph Dittrich, special representative of the Victor department of this house, has been making an Eastern trip.

At the Smith & Nixon Co. the report is that since they have added the talking machine department to their concern they find that their profits have increased materially. Their business for the month of January was somewhat hampered by the existing conditions, but the outlook for February, if the balance of the month can be judged by the first two weeks, looks as if the month would be a record breaker.

At the Columbia Phonograph Co.'s store business is excellent. It is said that their business so far this year has exceeded that of last year by a good margin. The show window of this store is certainly a business producer. The display is arranged so artistically that the eye of the passerby is immediately attracted and after that the machines talk for themselves.

The Consolidated Talking Machine Co., a West Virginia corporation, with their principal office in Philadelphia, have surrendered their charter and franchises and discontinued business.

A GUARANTEE

TO THE EFFICIENCY AND HARMLESSNESS OF

RECORDITE

The Ferguson-Hancock Laboratories

BLUE POINT, N. Y.

PROFESSOR GEORGE A. FERGUSON
(LATELY OF COLUMBIA UNIVERSITY)

H. IRVING HANCOCK
(CONSULTING CHEMIST)

Recordite Company, 1905 Park Avenue,
New York City.

January, 1907.

Dear Sirs:—We have made exhaustive chemical, physical and practical tests of **RECORDITE.** We report our findings as follows:

Laboratory Examination:

1 *Physically, RECORDITE is free from grit of any kind.*
2 *Chemically, free from any substance that can injure the surface, grooving or texture of disc records.*
3 *An ingenious, admirable and scientifically compounded preparation, wholly adapted to the purpose in view.*
4 *A stable preparation, unchanged and uninjured by the lapse of time.*
5 *May be applied to a DISC RECORD as freely as desired, without injury to the record, and without dulling or lessening the effect of RECORDITE in renovating the record.*
6 *A perfect chemical composition; we fail to find that any method can be devised for increasing the purity, harmlessness or EFFICIENCY of this composition.*

Practical Tests:

(Made on 12 disc records of varying ages)

The percentage figures below represent improvement in volume and clearness of phrasing. It would be impracticable to give figures denoting increase in sweetness of sound, but in every instance great improvement was noted in the sweetness of the tone of the record after treatment with ***RECORDITE.***

1 *Record one month in frequent use. Improvement after treatmeat, 25 per cent.*
2 *Record in use seven weeks. Improvement 29 per cent.*
3 *Record in use three months. Improvement after treatment with RECORDITE, 34 per cent.*
4 *Record four months old, much used. Improvement, 37 per cent.*
5 *Record much used during five months. Improvement after treatment, 47 per cent.*
6 *Record in frequeat use during six months. Improvement after treatment, 57 Per cent.*
7 *Record seven months in use. Improvement 64 per cent.*
8 *Record eight months in frequent use. Improvement, 70 per cent.*
9 *Record nine months old, much used. Improvement after treatment, 76 per cent.*
10 *Record in use a trifle more than ten months. Improvement, 83 per cent.*
11 *Record in use nearly eleven months. Improvement after treatment with RECORDITE, 88 per cent.*
12 *Record one year old, much used. Improvement after treatment, 90 per cent.*

It will be noted that, the older the record, the greater the improvement after the first treatment with RECORDITE. This is because, after one treatment, or in especially "bad" cases, two treatments, the old record is rendered about as good as it was when brand-new. A thorough application of RECORDITE may be made in a few moments.

Conclusions:

SEAL.

RECORDITE is fully as harmless to the grooving and texture of a disc record, and as effective in restoring its original tone, clearness and sweetness as is claimed for it by the proprietors of this compound. Moreover, each added application of ***RECORDITE*** *tends greatly to lessen the* ***"SCRATCHING"*** *sound common to* ***DISC RECORDS.*** *Taken altogether, an old record, treated with* ***RECORDITE,*** *is superior to a new record.*

(Signed) ***GEORGE A. FERGUSON*** *(Signed)* ***H. IRVING HANCOCK***

RECORDITE is meeting a warm welcome by the trade. In spite of its newness, jobbers are buying it in great gross lots. To satisfy the trade as to the harmlessness and efficiency of this product, we have had a laboratory test made by the famous professor, Geo. A. Ferguson, the report appearing above. Nearly every jobber now has a stock of Recordite. If you haven't, write at once. You can't get it in stock too quick. Recordite retails for $12.00 a dozen. Circulars and price list on application.

RECORDITE CO., 1905 Park Ave., N.Y. CITY

THE NEW COPYRIGHT BILL.

The Progress of the Measure Since the Last Issue of The World—The Difference Between the Senate and House Bills—The Latter Measure Favored by The Talking Machine and Perforated Music Roll Interests—The Minority of the Senate Committee Also Favor a Somewhat Similar Measure—The Developments Up to Date.

(Special to The Talking Machine World.)

Washington, D. C., Feb. 12, 1907.

Since the last issue of The World considerable progress has been made in the legislative endeavors to consolidate and revise the acts respecting copyrights. On January 29 Senator Kittredge, chairman of the committee on patents, reported bill No. 8,190, which the majority of the committee recommended for passage. A further report was made by him February 5 in support of the measure, signed by himself and Senators Knox, of Pennsylvania; Clapp, of Minnesota, and Lattimer, of South Carolina. The minority report was indorsed by Senator Mallory, of Florida, who presented it, and Senators Foster, of Louisiana, and Smoot, of Utah. Chairman Currier, of the House committee, also reported a bill (No. 25,133) on the same date of the one that made its appearance in the Senate, and which he also urged should be enacted into law. The following day a supporting report, agreed upon unanimously, was filed.

DIFFERENCE BETWEEN THE TWO BILLS.

The difference between the Senate and House bills is that in the provisions concerning the use of music for talking machine records, mechanical instruments, etc. In fact, the entire opposition is concentrated on paragraph E (G in the first draft), and were the music composers and publishers to consent to the exemption of record and perforated roll manufacturers, it is believed the bill would be passed quickly. Dealing with this phase of the measure the Currier report says in part:

"More time was given by the committee to the consideration of this provision (formerly paragraph G, now E) than was given to any other provision in the original bill. * * * Your committee felt that the public performance of a musical composition without first obtaining the consent of the copyright proprietor should not be prohibited in all cases, but only when the public performance is for profit. For that reason what was known as paragraph G in the original bill and the last part of paragraph E in the new draft have been eliminated. The only provision in the bill reported to the House regarding the reproduction of copyrighted music by mechanical means is found in paragraph E of section 1 as it now stands. Your committee believe that if this is enacted into law it will simply prohibit the public performance for profit of copyrighted music without the consent of the proprietor by any means whatever, whether mechanical or otherwise." Under this proviso the only records, rolls, sheets, etc., subject to royalty charges would be those used in the so-called vaudeville parlors, and wherever slot or talking machines, automatic pianos or players, orchestrions or any description of mechanical musical devices are installed in public places, as well as in instruments operated on the streets.

THE SENATE ANTAGONISTIC.

Senator Kittredge takes an entirely different view of this portion of section 1, and says: "Of late years an entirely new art has developed as the result of ingenious and elaborate invention. Many forms of machines have been made, purely mechanical in their nature, which are capable, when properly organized, of producing sound in the air, and a succession of sounds, which, when properly combined, form a good substitute for music rendered by voice or by a performer through the instrumentality of an instrument. These mechanical appliances have substituted and displaced in large measure the personality of the performer, and have made it possible to duplicate the skilful performer many hundreds of times by having the artist perform a piece of music before the machine and then mechanically reproducing the original made by the artist. The inventors of these ingenious and valuable machines are entitled to high credit for their ingenuity and for the benefit which they have bestowed upon mankind, and they receive a large pecuniary reward from the exclusive right to manufacture and sell their instruments, granted by the patent system of the United States. These inventions, ingenious they may be, are, however, as dead bones without the vivifying spirit of the musician. It is he who creates the thought they reproduce and sell. Without him they would be nothing."

In the minority report to the Senate, however, the position of the House Committee is unqualifiedly approved. This statement, which reflects the views of the trade, is carefully written, and more from a strictly business than a legal viewpoint. It reviews the history of the two bills and the hearings before the joint patents committee in connection therewith, and in referring to those portions of direct interest to the talking machine and allied trades says:

SUMMARY OF MINORITY REPORT.

"We are opposed to certain portions of the majority report . . . Two separate groups of business interests strenuously opposed the provisions of this section, viz.: (1) Manufacturers of pianos and pianoplayers operated by music rolls, and manufacturers of music rolls for use on such instruments; and (2) manufacturers of talking machines, etc., and manufacturers of records for use in connection with such machines.

"These interests most vigorously contended that paragraph 'g' [now 'e'] should be eliminated because (1) it was unconstitutional, (2) because if passed it would create a monopoly; (3) it would be extending the law of copyrights to lengths which all the countries of Europe that had legislated on the question had declined to go; (4) it is designed to inequitably benefit this alleged monopoly and the foreign owners of copyrights on foreign compositions, thereby granting to foreign composers or copyright owners rights which were refused them in their own countries and rights which those countries do not grant to American composers or copyright owners; (5) it invades the domain of the patent laws and fails to preserve that line of demarkation between copyrights and patents which has heretofore been carefully preserved.

"As to the alleged monopoly, this paragraph 'g' is said to have been injected into this bill by an association known as the Music Publishers' Association. The opposition to this paragraph contend that it was introduced for the benefit of the Aeolian Co. of New York, and for the purpose of giving that company a complete monopoly of the piano player and music roll business. . . . It is worthy of note that at no time did the Aeolian Co. disavow the charges made against it. . . .

THE ALLEGED MONOPOLY CONSIDERED.

"While there was no denial on behalf of the Aeolian Co., it was contended by counsel for the Music Publishers' Association that the contracts in question could only go into effect provided a decision favorable to them was obtained in what is known as the White-Smith case; and if the White-Smith case were lost the contracts failed. They contended that such contracts did not provide for legislation. The opposition contended that these contracts did provide for legislation, and in addition offered another series of contracts wherein legislation is specifically referred to. Whatever may be the truth in regard to these contentions, it is apparent that the enactment of paragraph 'g' into law would afford an opportunity for such a close organization as the Music Publishers' Association to organize precisely the kind of monopoly which it is contended would exist under the contract referred to. We think that no law should be enacted which would render this even reasonably possible . . .

"We are satisfied that copyrights should not be extended so as to cover mechanical reproducing devices. In the first place, it seems to be a clear invasion of the patent law and fails to observe the line of demarkation that has always been heretofore preserved between the copyright and the patent law. In the second place, we ought not to make such a radical departure in view of the fact that all the nations which have considered the question have refused to go so far. Thirdly, manufacturers who have invested many millions, relying upon the existing statutes to protect them in their investments, should not be despoiled for the benefit of the few. Lastly, the public should not be exploited for the benefit of a group who apparently intend and expect to obtain complete control of these industries. We therefore object to the paragraph in question, which is now contained in subsection 'e' of Section 1."

The foregoing, as above stated, was signed by the three Senators named, but Senator Smoot declined to indorse the appended:

SUB-MINORITY AGAINST PENAL PROVISION.

"The undersigned desire to emphasize their objection and opposition to another feature of the bill, which they think is worthy of serious consideration. They object to and protest against the first paragraph of section 21, beginning with line 11 and ending with line 18. The existing law provides for a similar criminal prosecution, with a penalty of imprisonment in the penitentiary; but we do not believe that it was the intention of Congress, when the existing law was enacted, or that it is the intention now, to establish a rule of action as harsh as this will prove to be.

"Why the infringer of a copyright should be subjected to a criminal prosecution, with the possible infliction of a penalty that will attach to him the badge of infamy, while the infringer of a patent right is subjected to no

NEEDLES MAY LOOK ALIKE, but HEARING NOT SEEING, PROVES THE QUALITY

We Want You To Hear Them At Our Expense. Write Now

¶ The best record will give poor results and be ruined if played with a POOR quality needle. The BEST Needle is the one that gives a GOOD REPRODUCTION from START to FINISH. The ordinary CHEAP and POOR quality needles on the market will only play right about half way through the Record. The Needle point is then worn flat, and the sharp edges on the side of the point wear the Record and make it scratchy.

¶ To give best results, Needles must be tempered hard enough to keep the point, and allow it to follow and fit the grooves, on all parts of the Record. It must also have a proper taper to insure correct volume and tone. After careful experimenting we have produced two styles of Needles that will stand every test, and prove the best at any price.

97 Chambers Street, New York City

criminal prosecution or penalty, we are unable to understand. It is an innovation in the policy to which Congress has adhered for very many years and is an innovation in the wrong direction. A casual reading of the bill will show that the copyright proprietor is amply protected by the numerous remedies afforded him by the bill, and that there is no occasion for the drastic deterrent proposed by the paragraph referred to.

ISSUES NOW SQUARELY JOINED.

Issue has now been squarely joined between the Senate and House Committees on Patents over the pivotal points in the proposed revision and codification of the copyright laws. Senator Kittredge will lead the battle for the protection of the interests of the music composers and publishers. Senator Mallory, of Florida, will lead the fight against the contentions of the composers and publishers in the Senate, and the same cause will be directed in the House by Representative Currier, of New Hampshire, chairman of the House Patents Committee.

The general belief among careful watchers of legislation is that there will be no copyright legislation during the twenty days that remain of the session; but, in spite of this general belief, it would not do for those interested in such legislation to rest on their oars, for both branches of Congress sometimes take sudden whims of activity and rush through in a hurry bills that are sometimes labeled as dead. Although the chances seem against them, both of the Committee chairmen, in charge of copyright legislation, declare that they will move every stone to secure legislation. Chairman Currier, of the House Committee, has brought his bill to the attention of Speaker Cannon, with the result that a special order now adorns the front page of the House calendar to the effect "that for the remainder of the session the bill to amend and consolidate the acts respecting copyrights shall have the privilege pertaining from committees under leave to report at any time." This gives the copyright bill a privileged status in the House. The only thing having a right of way over it in the House is the series of appropriation bills.

REPORTS SAY COPYRIGHT LAW WILL PASS.

Senator Kittredge said last week that he intends to call up the copyright bill, which he reported to the Senate, at the very first opportunity. He said he would have called it up on the floor of the Senate February 8 if opportunity had come. The Senator does not propose to wait until after the House has acted on the Currier bill. Chairman Currier does not intend to wait until the Senate has acted on the Senate bill. The bill first acted upon by one House will be sent over to the other House for consideration. In this status action may be taken at any time at either end of the Capitol. A sudden wind of activity might bring early legislation.

Members, generally, have not followed the copyright fight, although all have been deluged with petitions, many of which have been thrown into waste-baskets.

Members of the committees who framed the two bills will undoubtedly fight strongly for their respective intentions when the subject is actually taken up for consideration and passage. In a word, copyright legislation at this session seems unlikely, but is neither impossible nor improbable. The meat inspection law was passed at the tag-end of the last session of Congress in spite of pronounced opposition within a remarkably short time. Since the same thing could happen to the copyright bill, it would pay those interested in the measure to watch their p's and q's closely.

The final section of the Kittredge, or Senate, bill provides that it shall become effective July 1, 1907, while in the Currier, or House, measure the new law shall go into effect January 1, 1908.

A CHAT WITH PAUL H. CROMELIN.

When Paul H. Cromelin, vice-president of the Columbia Phonograph Co., was approached on this matter by The World, he said: "I consider this measure so important as to overshadow all other of our interests. I have been in Washington looking after the talking machine end for some time, and if necessary will stay there. The copyright bill is one of the most bitterly contested bills before Congress, and I will say that its passage, inclusive of any section inimical to the free reproduction of music on mechanical or automatic instruments, is improbable, if not impossible. I feel certain, however, the bill will go through in some shape, and if the talking machine and allied interests were exempt under its provisions, it would be enacted into law with a rush. The music composers and publishers are very unwise in not yielding this point, and a compromise must eventually follow, I firmly believe, for obvious reasons. With sub-section E as embodied in the Senate bill eliminated, the music people will have one of the best copyright measures ever framed."

Mr. Cromelin, who is president of the American Copyright League, has been bearing the brunt of the fight for the trade, and co-operating to advantage with the mechanical instrument people represented on the ground.

RECENT INCORPORATIONS.

The Gaumont Chronophone Co., of Cleveland, was incorporated with the secretary of the state of Ohio recently with a capital of $150,000 for the purpose of manufacturing the Chronophone, a combination of phonograph and moving picture machine. Incorporators: S. J. Wallace, Emma Wadsworth, W. A. Follin, Mabel Smith and C. B. Stannard. Robt. McKisson and Max Factkenheuer are at the head of the concern.

* * * *

The Perfectophone Co., of New York, was incorporated last week with the secretary of the state at Albany for the purpose of manufacturing talking machines; capital, $5,000. Directors: W. R. Osborne, J. J. Hayden and E. R. Breck, of New York.

* * * *

Recordite Co., New York, to manufacture phonograph supplies. Incorporations: Walter T. Sterns, William H. Corbitt, Charles D. Francis, all of New York.

JOBBERS' ASSOCIATION MEETS.

The Eastern Talking Machine Jobbers' Association Discusses Important Matters—Membership Increases and Committees Are Appointed to Obtain the Opinion of All Members on Important Improvements Proposed.

The last meeting of the Eastern Talking Machine Jobbers' Association was held on Wednesday afternoon, January 16, at the New Grand Hotel in New York City. About thirty concerns were represented, and the president, W. D. Andrews, of Syracuse, N. Y., presided. The out-of-town jobbers were better represented at this meeting than at any previous one, and it is evident that the advantages are more thoroughly understood, and the jobbers are taking great interest in the association, and working to get the applications of concerns in their vicinity who are not members.

Before the meeting was called to order a directors' meeting was held for the purpose of passing on applications for membership, and the following new members were elected: Landay Bros., New York City; J. B. Lengs' Sons & Co., New York City; Kirtland Bros. & Co., New York City; C. H. Haynes, Richmond, Va.; W. D. Andrews, Buffalo, N. Y.; A. J. Denninger, Rochester, N. Y.; John Rose, Astoria, L. I.; Regina Music Box Co., New York City; E. F. Droop & Sons Co., Washington, D. C.; Finch & Hahn, Schenectady, N. Y.

The following answered the roll call: N. D. Griffin, of the American Talking Machine Co., Gloversville, N. Y.; W. D. Andrews, Syracuse, N. Y.; E. F. Taft, of the Eastern Talking Machine Co., Boston, Mass.; A. O. Petit, of the Edisonia Co., Newark, N. J.; W. O. Pardee, of the Pardee-Ellenberger Co., New Haven, Conn.; John D. Miller, of the Penn Phonograph Co., Philadelphia, Pa.; W. E. Henry, of the Powers & Henry Co., Pittsburg, Pa.; Adolph Weiss, of the Western Talking Machine Co., Philadelphia; C. B. Haynes, Richmond, Va.; Louis J. Gerson and Henry E. Marschalk, of the Musical Echo Co., and A. C. Weymann, of H. A. Weymann & Son, Philadelphia; James K. O'Dea, Paterson, N. J.; Louis Buehn, of Louis Buehn & Bro., Philadelphia; S. B. Davega; I. Davega, C. V. Henkel, of the Douglas Phonograph Co.; J. Newcomb Blackman, of the Blackman Talking Machine Co.; A. H. Jacot, of the Jacot Music Box Co.; Victor H. Rapke, of the Victor H. Rapke Co.; J. Warner, proprietor of Kirtland Bros. & Co.; Benjamin Switky and Alfred Weiss, all of New York City.

Matters already under discussion at the previous meeting were considered and reports were made. The present plan of manufacturers issuing new records was taken up, and it was decided that a great improvement could be effected by having every manufacturer fix on a certain number of records the catalogue would contain, also the number of each kind of records to be issued every month, and the number to be cut out of the catalogue each year. It would also be a great help to the jobber and dealer if he knew how often an exchange proposition would be given. A committee was formed to get the opinion of all members on these subjects in order that a report can be made at the next meeting, and a plan provided to induce the manufacturers to effect improvements accordingly.

Another very important subject that was given careful attention was the present plan of allowing jobbers and dealers to sell talking machines on installments at the cash price, accepting, in some cases, nothing down and extending the part payments over a very long period. It was pointed out that this places the small dealer at an unfair disadvantage compared with the large dealer and especially department stores, and really forces an installment purchase on a customer who would willingly pay cash, if he effected some saving as against a purchase on the installment plan.

The sense of the meeting was also that the 2 per cent. discount offer was not handled in a satisfactory manner, as jobbers had, in many cases, offered or permitted dealers to take the 2 per cent. cash discount on payments, which really should have been made on a net basis, thus virtually cutting the wholesale price in this respect, and forcing upon themselves the allowance of very long terms where bills were not discounted. It was considered that the manufacturers could effect a set rule, and make it a part of their agreements, establishing a distinction between a machine sold for cash and on installments, and also regulate the allowance of the cash discount. A committee was appointed to draft a plan representing the opinion of the association on these subjects for action at the next meeting.

The subject of credits received particular attention, and the opinion was unanimous that the monthly reports issued by the secretary were very valuable, and an absolute necessity for the safeguarding of the credit interest of every member.

The meeting adjourned at 6 o'clock after adopting a resolution calling the next meeting to be held in the early part of April in Philadelphia. The association now has 49 members, representing almost all of the Edison and Victor jobbers in the Eastern States. It is expected to have 75 before the next meeting.

About 15 of the jobbers enjoyed an informal dinner at the hotel following the session. Later 10 of the members accepted the invitation of the Tea Tray Co., Newark, N. J., for a box party at the Broadway Theater.

Representatives from several supply houses dropped into the hotel to see friends among the jobbers, including: John H. B. Conger, secretary and treasurer, and C. Beecroft, manager of sales of the Tea Tray Co., Newark, N. J.; W. H. Locke, Jr., president, and D. W. Austin, of the Searchlight Horn Co., Brooklyn, N. Y.; William McArdle, with the Hawthorne & Sheble Manufacturing Co., Philadelphia, Pa.

WHO ORIGINATED THIS MENU?

The Buffalo Phonograph Co. Claim They Did One Year Earlier Than De Foreest & Son.

We are in receipt of a communication from the Buffalo Phonograph Co., 16 E. Seneca St., Buffalo, N. Y., in which they say:

"We note your article in regard to the Thanksgiving menu in which De Foreest & Son, Sharon, Pa., claim its originality. We are mailing you a copy of the Thanksgiving menu, which we got out in November, 1905. We had never seen or heard anything like this record menu before, and we believe the much disputed originality of this advertising scheme belongs to us. We trust you will be able to give us the credit for the originality of this in the columns of your paper. W. D. Andrews, of Syracuse, will vouch for having received one of these menus from us a year ago last Thanksgiving."

The menu referred to is gotten up in two colors, the text matter being as follows:

A manager for the talking machine department, which will be greatly enlarged and expanded, has been selected by Charles Bobzin to take hold when Charles H. Ditson & Co. move into their new building, now in the course of erection at 8-12 East 34th street, New York. The department will be located on the fourth floor, occupying about 50 by 45 feet—a third of the space—and fitted up with mahogany sound-proof booths and fixtures. H. L. Hunt, in charge of the firm's small goods, will have the supervision of both departments.

When the Eastern Jobbers' Talking Machine Association held their meeting in New York January 16, a number of those in attendance took advantage of the opportunity to visit the great plant of the Tea Tray Co., in Newark, N. J., the following day.

WE'VE GOT IT AT LAST

and it's unquestionably the finest piece of art and mechanism ever attempted after many months of careful and concentrated efforts.

It's a WOOD COLORED HORN.

Horns that are true and exact reproductions of oak and mahogany in the various shades—that appeal to the critical eye, are finished in rough and high polished surfaces.

A revelation in horns which add to the phonograph an extremely valuable acquisition.

Cabinets of the Edison Phonographs and Victor Talking Machines are readily matched.

Absolutely new and novel and cannot be distinguished from the natural wood.

Looks like wood—sounds like wood—and feels like wood. What more could be obtained in the construction of this horn? In all, the pinnacle of perfection has been reached.

If there's an improvement to be made, it cannot occur in this generation.

Many horn manufacturers are endeavoring to reproduce this horn with peculiar imitations, but the original is owned and manufactured by us exclusively.

Our morning glory flower horns have met with favorable comments wherever shown.
The decorations are without a doubt the prettiest and most artistic ever exhibited.
The enormous sales of these horns alone give evidence of their superior quality.
We make them in many colors and designs.
Are built of extra heavy tin insuring them of durability.
Carefully and scientifically baked which overcomes all doubt of fading.
Mr. Jobbers—write us at once and we'll quote you interesting prices.

MME. EAMES ON RECORD MAKING.

The Famous Cantatrice Writes Most Interestingly Regarding the Great Care Taken in the Making of Victor Records.

(From The Voice of the Victor.)

I wonder if the thousands of people who hear our records have an idea of the labor and thought that are expended by us in the making of them. It appears a very simple thing on the part of the singer. We have only to sing—they think—and the rest is purely mechanical.

There is no more nerve-racking experience than the singing for that cruel recorder which brings out and exaggerates one's least defects and to which one listens in a way blindfolded. If also by an error of judgment one stands too near or too far from the receiver the relative values of the tones are destroyed and one must begin again. That, however, can only be known days afterwards. To play it at once would be to destroy it.

When I first agreed to sing for the Victor Talking Machine Co. I looked forward to the making of my records as rather an amusing experience; I thought, as does the public, that one had only to sing and the rest was mere routine on the part of skilled workmen. There was a member of the Victor Talking Machine Co. present to "pose" me. One with a large experience of making these discs and who had "posed" my fellow singers.

I found a large room with one end cut off by a wooden partition out of which came a horn suspended in such a way as to be lowered or raised to the height of one's mouth. On the other side of this partition is the merciless recorder.

Once in position one awaits the signal to be ready, after which one hardly dares breathe, as everything is etched on the sensitive plate. At the next signal of two raps one must be ready to begin at once as the machine, like time and tide, waits for no one. Some of the pieces one sings also are so long that there is barely space for them on the plate, which is another reason for hurry. When one knows that possession of one's self and calm are necessary to good work from an artist, one can realize the reassuring influence of this kind of preparation. I made each song over on that first occasion two or three times in order to choose the best of each. I was to return in a few days to hear the result. What was my amazement to find that some of the records for which I had apparently sung the best had brought the least good results. I then realized that tne machine was a thing to be studied. That, although it was a great advantage to be "posed" for them by one experienced in making

MME. EMMA EAMES-STORY.

them, if one wished to make a really good record, one which would give some just idea of the real quality of one's voice, one must evolve some method as well out of one's own experience. To do that with a technique become almost second nature was no easy task. The varying distance one has to keep between one's self and the horn depends not only on the height of the note, but the way of attacking it. The soft and caressing tones that one gives in the tenderer passages, instead of being more lightly given, have to be made with the same intensity as the louder ones, only with a decrease in volume. Take, for instance, an aria one has already made one's own, which is sung almost unconsciously of its technique with only its atmosphere and intention in one's mind and while singing it go through the mental acrobats necessary to make a good record, and it is a cause for amazement that one can accomplish such good results. I realize that I am putting on record my voice, my phrasing, and my personality, and in the desire to obtain and to preserve only the best results of our united efforts I have caused to be destroyed more discs than I have kept. When I sang my first record also, that special orchestra as it is now organized, did not exist and the operatic airs lost much of their power and value by the piano accompaniment. Those records, however well I made them at the time, must be made again.

It is also, only when all circumstances are favorable that a really satisfactory record can be made. The receiver with its supersensitiveness is quick also to detect any signs of fatigue in one which may not even be apparent to any one in the room or to one's self. It takes care and research on the part of those who attend to the mechanical part of receiving your voice to reproduce it to the best advantage and for each singer, that has to be thought out and rehearsed and tried over and over again. Fortunately, those I worked with have saved me in a great way futile efforts and each disappointment has been a step nearer the accomplishment of a perfect result.

Our parents and their contemporaries have been able hitherto to overwhelm us with the impressions of great voices received in their own vivid youth. Thanks to the Victor Talking Machine Co. and its high standard and the conscientious artistic endeavor, we can still make our voices heard to coming generations when we shall be silent.

BOOMING AT ST. LOUIS.

Only Thing That Can Check Present Activity Is Shortage of Goods—January Trade Shows Twenty-Five Per Cent. Advance.

(Special to The Talking Machine World.)

St. Louis, Mo., Feb. 10, 1907.

Everything in connection with the talking machine business, both here and in this territory, are on the boom, and there is every indication that the only thing that can check it is the shortage of goods. The demand for the better class of machines is extremely good, and the trade on records is away beyond ability to supply.

Thomas P. Clancy, manager of the Columbia Phonograph Co., reports January trade to have been away beyond expectations, and that he is having a hard time supplying records for the demand.

Manager Ramsdell, of the St. Louis Talking Machine, states that their January trade was 25 per cent. better than the same month a year ago. He also states that they are greatly hampered by their inability to get goods fast enough. Mr. Ramsdell predicts that 1907 will establish a new record for sales on talking machines.

Louis F. Geissler, general manager of the Victor Co., and A. D. Geissler, manager of the Talking Machine Co., of Chicago, were recent visitors.

The O. K. Houck Piano Co. will move their talking machine department from the third floor of their building to the first.

W. C. Fuhri, district manager of the Columbia Phonograph Co., Chicago, spent two days here recently.

F. E. Mills, manager of the talking machine interests of the O. K. Houck Piano Co., Memphis, Tenn., spent two days here recently.

Manager Ketterer, manager of the talking machine department of the Conroy Piano Co., reports having had a good month's trade during January, and particularly so on records.

The Silverstone Talking Machine Co. have again enlarged their quarters by taking on two rooms. This gives them the largest talking machine quarters in the city. Mr. Silverstone says trade is very good with them, and he is well pleased with the outlook.

Plans are being perfected for the new talking machine department of the Balmer & Weber Music House Co. They expect to be ready for business about the 20th of this month.

The Val A. Reis Music House Co. report that they are having a nice talking machine trade.

The wholesale talking machine trade of the Koerber-Brenner Music Co. is reported to be extra good, and they are making large shipments of goods throughout their territory.

B. G. ROYAL ELECTED PRESIDENT

Of the Universal Talking Machine Co.—Will Maintain New York Offices—Vice-President Macnabb Discusses Recent Legal Decisions.

At a recent meeting of the board of directors of the Universal Talking Machine Mfg. Co. in New York, B. G. Royal was formally elected president; John A. Macnabb, vice-president, and Gus Veilage, treasurer. The company will maintain an office in New York City separate from the plant in Newark, N. J.

Mr. Macnabb, referring to decisions handed down by the United States Circuit Court of Appeals, second district, and by the United States Circuit Court, southern district of New York, said to The World: "The Jones decision does not affect the business of the Universal Co. in any particular. We will continue to fill orders, as we are not infringing on any patents claimed by any one. Our business is splendid; we cannot fill orders. Our new line of machines are just ready, but we will not be able to ship the goods for some time. The company will start on a campaign of magazine advertising as soon as our twelve inch records, listed at $1, are ready, which will be some time in March. The first lot of bulletins will contain 25 numbers. Our grand opera records, made in Milan, Italy, are expected to be on the market in April.

VICTOR CO.'S GREAT BUSINESS.

January Breaks Records—Cost of Production Still Ascending—Some Figures of Interest in This Connection—Losses Absorbed by the Company, But Offset by Increased Output.

Reviewing the status of the Victor Talking Machine Co.'s business for the past month, and its phenomenal increase, which was about at the same ratio as January, 1905, Louis F. Geissler, general manager, under date of February 4, writes as follows: "Our sales footings for January have just reached this office. Records are again being broken. The sales of this January, 1907, exceeded those of last January, 1906, by 66⅔ per cent., and that year exceeded the previous by about the same percentage, and, as the United States Steel Corporation would say, 'with a tonnage of orders on hand which seems almost insurmountable.' We congratulate our distributers on this magnificent start for the new year. We never witness these gratifying results without feeling a deep sense of obligation to our distributers and dealers and the influences which are making for these magnificent results."

INCREASED COST OF PRODUCTION.

On January 14 General Manager Geissler addressed an open letter to the trade on the increased cost of their products, submitting carefully gathered figures covering the essential items entering into the manufacturing and marketing of Victor goods, as appended:

"Our purchasing department has just submitted to our board of directors a statement of details, showing the actual as well as the percentage of advance in costs to our company on a large number of commodities which enter into the manufacture of our goods. Believing that it would be of interest to you, we have selected from the list a number, and wish to show you the percentage of advance in costs that we have had to stand since 1904 up to the present date on these staples, every bit of which has come out of our profits, there having been no advances in the selling prices of our machines and large reductions in the selling prices of records.

"Upon the thinking man this statement will make an impression, and we hope that the struggle we are making to absorb these heavy advances in the cost of manufacture ourselves (and which losses have only been recouped to us through the medium of a largely increased output, and refinement in manufacturing etc.), will cause our distributers and dealers to be more loyal than ever to Victor goods, and that every effort will be put forth during this year to thoroughly exploit the wares in localities and among classes of customers who have not been heretofore properly developed. We confidently expect 1907 to show as large an increase in our business over 1906 as that year, which was the most phenomenal in our business history, did over all preceding."

The articles in question follow, accompanied by the percentage advance in cost during 1907 over 1904:

Brass rod, 54 per cent.; brass tubing, 39 per cent.; sheet brass, 71 per cent.; brass blanks, 26 per cent.; sound boxes, completed, 32 per cent.; brass shells, 23 per cent.; steel springs, 25 per cent.; cold rolled steel, 7½ per cent.; steel tubing, 20 per cent.; steel balls, 50 per cent.; cabinets, 33⅓ per cent.; castings (large), 2 per cent. castings (small), 2 per cent.; screws, 10 per cent.; bolts, 69 per cent.; mica, 50 per cent.; felt, 28 per cent.; shellac, 56 per cent.; handles, 70 per cent.; nickel supplies, 12½ per cent.; belting, 10 per cent.; rubber goods, 21 per cent.; gasoline, 23 per cent.; waste, 27 per cent.; record material ingredients, 32 per cent.; copper annodes, 44 per cent.; copper circles, 31⅓ per cent.; excelsior, 40 per cent.; twine, 15 per cent.; ammonia, 16⅔ per cent.; asbestos, 20 per cent.; horns, 5 per cent.; machinery, presses, tools, etc., 15 per cent.; labor, 10 per cent.; packing boxes (for export), 50 per cent.; packing boxes (domestic), 10 per cent.; 10-inch boxes (pasteboard), 15 per cent.

Edward D. Easton, president of the Columbia Phonograph Co., general, returned Saturday last from his tour of inspection of the company's western branch houses, his trip extending to the Pacific Coast. He has been away for a month, and the tour seems to have improved his health materially, although that is always of the most vigorous character.

John J. Tischner, who handles Victor and Zonophone talking machines and various makes of records and sundries at 1014 Cambridge street, Camden, N. J., has favored us with a very pretty calendar for the current year, bearing a girl's face of the Christy type, entitled Miss New Year.

The Montenegro-Riehm Music Co. have succeeded C. A. Ray as Edison jobbers in Louisville, Ky. Mr. Ray, however, will remain as manager of the talking machine department.

The National Phonograph Co. are having a splendid demand for the records made by the various artists who are now singing at the Manhattan Opera House.

PACIFIC COAST ACTIVITY.

Clark Wise & Co.'s Good Work—Byron Mauzy's Special Rooms—Call for Best Grades at Sherman Clay's—Columbia Display—Busy Bacigalupi—Smith to Mexico City—Birkel's Victor Recitals—Increase in Country Trade Noted at Kohler & Chase's.

(Special to The Talking Machine World.)

San Francisco, Cal., Feb. 7, 1907.

Clark Wise & Co.'s large window display of talking machines and horns, which was put in about the first of the year, has proved so attractive that it has been allowed to remaiu. The talking machiue trade is the big end of this company's busiuess just at present. There is a greater demand than ever for admission to the Wednesday evening concerts, and the attendance has to be strictly limited. The compauy now have four Auxetophones in stock. One of these is showu in the window, and one is used iu the concerts. Twenty of the new Victrolas are on the way out.

Byron Mauzy has separate rooms in his new building for talking machines, which are keeping up very well. The Victrolas that were on exhibition last week have all been sold out. The display of Japanese horus has attracted marked attention.

Shermau, Clay & Co. report an increasiug demaud for expeusive aud high-grade machines. The Victrola, Mr. Sherman says, is the greatest success, as it is more suited for home use than the Auxetophoue, and less expeusive. The great difficulty now is that the public wants these machiues faster than they cau be brought in.

The Columbia Phouograph Co. have a large display of brass and Japanese horns in their windows, but there are few machines on hand, as they are sold as fast as they come in. The retail branch in the Eilers Music Co.'s store on Fillmore street is still doing a good business in spite of hindrances in the way of bad weather. A new retail store is being fitted out at the corner of Van Ness and O'Farrell. This will be one of the fiuest talker stores on the Coast. The fittings are to be in mahogany, and the place will be finished, it is thought, in two weeks.

Peter Bacigalupi finds business very lively, both here and iu the country. The new retail store on Mission street is attractiug a large trade, while the Fillmore street store keeps up as well as usual.

Leon F. Douglas, recently vice-president of the Victor Co., is regaining his health at his country home in Sau Rafael. Since resigniug his position on accouut of illness, he has beeu appointed chairman of the board of directors of his company.

Kohler & Chase find the talking machine side of their business picking up considerably since it has been in its permanent display room on the ground floor. This room is convenient and neatly fitted, with six small rooms in the rear for tryiug out records.

G. A. Smith, for two years manager of the Columbia Phonograph Co.'s agency in Portland, Ore., has left for Mexico City, Mex., where he will hereafter act as the company's representative. A. Glenn, who has acted as Mr. Smith's assistant at Portland, will now succeed to the management of the Portlaud house.

The George J. Birkel Co., of Los Angeles, Cal., are opening February with a series of Victor recitals.

The D. S. Johnston Co., of Tacoma, Wash., are giving a series of Edison concerts, the first one being given on January 19.

C. A. Neale, in charge of Kohler & Chase's talking machiue department, notes a great increase in the country trade. The country folks of this Coast are beginning to realize, he says, what a factor the phouograph is iu breaking the monotony of country life, and he has received frequent letters from the isolated mountain districts, telling what a revelation the machine has been to people who have never been able to hear music interpreted by the great artists. Kohler & Chase are now carrying a full line of Edison goods, for which there is a great demand, though Zonophones are holding their own very well, in spite of the lack of advertising.

COLUMBIA STAFF CHANGES.

City Sales Commercial Department Will be in Charge of Merwin E. Lyle—Hance to Yonkers—Ribbell Head of Special Force—A Visitor from Buffalo—Columbia Credit and Instalment Departments Consolidated.

Heury P. Roberts, who for a long time past has beeu in charge of the city sales department of Columbia commercial graphophone branch, has resigued from his counection with that company. The city department will in the future be under the charge of Merwin E. Lyle, the assistant to J. W. Binder, general manager of the commercial graphophone departmeut. The offices of this department have been removed from 353 Broadway to the new general offices of the Columbia Phonograph Co., General, on the fifteenth floor of the Tribune building.

* * * *

W. I. Hance, who has been connected with the Harlem office of the Columbia Phouograph Co., has been transferred to Yonkers, in charge of the company's store in that city. This store is under the direct supervision of J. D. Westervelt, manager of the Harlem branch.

* * * *

William S. Ribbell has been appointed manager of a special force of men who will look after the outside business from the Brooklyn store of the Columbia Phonograph Co.

* * * *

S. O. A. Murphy, who is manager of the new branch of the Columbia Phonograph Co. recently established at Buffalo, N. Y., and which is under the jurisdiction of the New York office at 353 Broadway, of which John H. Dorian is manager, was a caller at that office during the past week.

* * * *

The instalment and credit departmeuts of the Columbia Phouograph Co. have been cousolidated and will in the future be under the management of Messrs. F. A. Dennison and J. A. Morrisey, who will have offices at the Columbia wholesale warerooms at 353 Broadway. This change was made necessary by the greatly iucreased business in both of these branches being done by this company.

NO DEVIATION IN EDISON PRICE.

Geo. D. Hampton Piano Co., Newport News, Va., writes the National Phonograph Co. as follows: "Recently our Mr. Hampton accidentally came across a man who buys everything possible from department, bargain house and catalogue stores. In fact, the man makes a fad of this class of purchases. Incidentally the conversation drifted around to Edison phonographs, and he told Mr. Hamptou that he had written to every bargain house he knew, looked up all the catalogues of mail order houses, etc., and had been unable to strike a variation in price from that quoted in direct Edison advertisements, or the prices we had shown him on our wall as dealers' retail prices. Knowing the man as we do, we can realize what this means better than you. But it certainly proves the care you have taken to prevent injury to the trade and your goods by price cutting. And you will permit us to express our highest compliments to you for your thorough system and constant watchfulness regarding this particular feature of the phonograph and record business. As dealers we appreciate it most highly, as every one connected with the distribution of Edison goods must do."

The Cable Compauy's Richmond store, under the management of J. G. Corley, are pushiug the uew Victor talking machine line in a very aggressive manner. They have in stock over 10,000 records, including the latest operatic selections, and have already built up a most satisfactory trade.

W. A. Lawrence, of the Standard Metal Mfg. Co., Newark, N. J., and New York, who started on a western trip on January 21, returned east early in the month. He called on the trade in Philadelphia, Pittsburg, Ciucinnati, Chicago, Louisville, Ky., and St. Louis Mo., and booked a number of fine orders for their different patterns of horns.

Mr. Metropolis—You should see our new Hall of Records.

Miss Country—Disc or cylinder?

The Piano & Organ Supply Co., of Chicago, have recently installed fourteen additional automatic machines in their action department, and more are coming. This has been found necessary in order to cope with their growing business.

Do your Records make that SCRAPING, hissing, grating sound? If so,

Place New Horn on the Market—The Gaumont Chronophone to be Made in Cleveland by a Strong Organization—Is a Union of the Phonograph and Moving Picture Machine—Interesting Chat With Max Factkenheuer Regarding the Plans of the Company—Victrolas in Great Demand—The Commercial Graphophone Grows in Favor—Berger With Devineau—Death of C. W. Benton—Probeck's Good Report—Wm. McArdle a Visitor—Columbia Operatic Records Displayed—Talking Machines for Railroads—The News of the Month.

(Special to The Talking Machine World.)

Cleveland, O., Feb. 10, 1907.

On every hand is evidence of continued prosperity in the talking machine trade. The dealers are all busy, and the volume of business in January was exceptionally large. One cause, if not the principal one, traceable to the increase of customers and sales, is the increase in publicity. Dealers are giving more than usual attention to advertising, and circularizing, and with the more elaborate efforts of the manufacturers to sustain and increase the demand, as evidenced in the elaborate exposition of their goods in The Talking Machine World, a decided impetus to trade is manifest all along the line.

A noticeable feature of the business is the constantly increasing call for the best machines and records. Customers are no longer satisfied with the cheaper grades, and it is becoming quite common for those already possessing a machine to express their desire to trade for the best machine to be obtained, regardless of price.

More satisfactory receipts of shipments are noted than for some time past, and dealers are getting in large supplies preparatory to any increasing demands of the spring opening. There is a general optimistic feeling regarding the prospects, and the dealers all seem to be working with a view to the fulfilment of their desires.

The Devineau Biophone, an attachment to play disc records on cylinder machines, the invention of Louis Devineau, is meeting with public favor, and good sales are reported. The attachment is simple in construction, easily adjusted, and virtually makes two machines of one.

Mr. Devineau has also recently placed on the market a new horn. He says everybody who has tried it is enthusiastic over it. It is being manufactured by the Devineau Biophone Co., of this city, of which Mr. Devineau is president, and he states they are being flooded with orders.

The recent consolidation of the Smith & Nixon business with the Hallet & Davis Co. will make no change in the talking machine department, which will continue at the same address, 40-44 Arcade, under the management of Mr. Ritter, who reports business up to the usual standard.

Max Factkenheuer, manager of the Euclid Garden Theater, and of the Hippodrome, now building in the downtown section, returned from Europe a few days ago, bringing with him contracts that placed him and his associates in control of an invention which it is claimed promises to revolutionize the whole moving picture show business. He talks of this invention, its capacities and its future in an enthusiastic manner, but apparently quite in keeping with the reports of its success in the land of its birth.

"When I was in Berlin, in the interest of the new Hippodrome," said Mr. Factkenheuer, "I frequently passed a sign in front of one of the halls announcing that a certain grand opera artist would sing there that afternoon or some distinguished actor would appear, or that there would be a grand ballet headed by the premiere of the Royal Opera House. As the price of admission was put at only ten cents, I looked upon the thing as a huge joke, a kind of Coney Island flim-flam. Then it occurred to me that the German law was very stringent. If an act was advertised it had to be given in just that way. The theaters had to live up to the billboards or there would be trouble.

"This show was going right along, and I thought it couldn't be a fake or the police would have stepped in. So I invested ten cents, expecting to see something very ordinary. I was astounded. What I did see were moving pictures colored to the very hues necessary. And the figures in these pictures not only went through all the familiar motions as we see them in biographic pictures here, but they talked and sang. Everything was so adjusted that it was in perfect time. I saw, for instance, Herr Kraus, the tenor of the Royal Opera House, whom I had heard in Wagner just a night or two before, step to the front of the stage, open his mouth and then I heard his solo. It was perfect. I remember they gave the Sylvia ballet that afternoon, and I could distinctly hear the full orchestra just as well as if it had been playing, and the dancers kept time with it in every way. Why, I even heard the castonets as the dancers clicked them together.

"I was simply fascinated—rather, I may say, wild over the idea—and at once hunted up the man, Herr Meesters, who had invented the machine, and began negotiations for the rights to it. Then I came home and organized a stock company, and after a lot of hard work the company I represent has secured the rights for the United States, Cuba, Honolulu, Porto Rico and Alaska, to manufacture, sell and operate the chronophone. And we have the further right to the exclusive sale of all the talking and singing films that use the English language.

"Before our negotiations came to a head, Herr Meesters joined forces with L. Gaumont, the French inventor not only of the cinematograph but an improved phonograph as well as one of the biggest cameras in the world. He has improved upon the original Meesters machine and is a large stockholder in the $1,000,000 company I have just formed here to exploit this invention.

"Cleveland will be the headquarters, and we will have a factory here for the manufacture of the machines and films. It will be in charge of the foreman of Herr Meesters' factory in Berlin. It will take some time to build and equip the factory we contemplate, so I have ordered 100 of the German machines, and they will be here within a month or so.

"It is our purpose to lease the machines to exhibitors all over the country, and we shall operate our own theaters as well. I expect we shall have a circuit of 200 within a year, as our plans are far-reaching. All the foreign films will be on our list, but we shall make a specialty of American films.

"We shall have an agency in New York, where we shall arrange to get scenes from the big operas, with the great foreign stars singing in them. The Cleveland citizen for ten cents can sit down and for half an hour hear the great singers of the rival opera houses in New York act and sing for him just as they do on their own stages. We shall have all the foreign stars, too, the great dancers of the world, and scenes from the great plays. And I shall try to get the New York theatrical managers to let us give scenes from their successes before they come here.

"This chronophone is a union of the phonograph and the moving picture machine. It works synchronously, so that the speech goes with the action at the right time. You see and you hear as you would in life. Then the films are colored, and it will require little imagination when one sees and hears the scenes from plays and from operas, and sees the dancers and listens to the orchestras, to believe that everything is real. The chronophone is the most marvelous thing in the world in its line. I don't say this because I have control of it, but because it is so. It will revolutionize the present moving picture business, and will cut heavily into the regular theaters, too, when it gets to going all right. For ten cents we will give a show of some six features, and that will be fully as much amusement as the average person will want at a time.

"We are now looking for a site for the factory, and just as soon as the expert comes from Berlin

SEND YOUR ORDERS TO

GRINNELL BROS., DETROIT

Extensive VICTOR and EDISON Distributors

ENLARGED and excellently equipped quarters, devoted exclusively to the wholesale Talking Machine business, enable us to give service unexcelled for promptness and accuracy. Orders invariably filled same day received, and none but absolutely new goods sent out under any circumstances.

PERFECT GOODS
PERFECT SERVICE
PERFECT SATISFACTION

WE carry an immense stock of everything in VICTOR and EDISON goods—Machines, Records, Horns of every description, Cranes, Record Cabinets, Needles, etc. No matter where located it will pay you to open an account with us. Write for our Catalogues and prices, and DO IT TO-DAY!

Talking Machine Dept. GRINNELL BROS. Detroit, Michigan

we will begin its erection. In the meantime we will start with the 100 machines I bought while abroad. The pictures which the chronophone throws on the screen are the clearest I have ever seen, and there is no rasping noise in the music or voice."

W. J. Roberts, Jr., expressed himself well pleased with conditious. "Business," said he, "was very fine all during the month of January —much better than I had anticipated it would be after the unusual large holiday trade, but it is keeping right up, and if anything increasing. During the month I was compelled to iucrease my force, and if busiuess keeps up to the high mark of the preseut will soon have to enlarge the store. Sales of Victrolas are increasing, and the manufacturers are beginning to meet the requirements of the trade."

The commercial graphophone department of the Columbia Phouograph Co. is proviug a fine success. "January," said H. E. Jones, manager, "made good its promises, and developed iuto one of the largest month's businesses this department has yet experienced. The demand for commercial graphophoues was so active as to make it quite a task to procure a sufficient supply of them to fill orders. The new type commercial machine seems to impress all who see it as being close to absolute perfection for its purpose, and have been ordered faster than we can get them from the factory. The outlook for future business seems brighter than ever, and immediate prospects would indicate that February will run January close for action demand. Altogether it would seem as if, in the words of a customer, the day of shorthand is passed, judging by the constantly widening demand for our machines, and the invariable enthusiastic approval of those who install them in their offices."

L. L. Berger, now with the Devineau Biophone Co., was formerly (several years since) mauager of the Berger Phonograph Co., located in the Arcade, which was the old Edison Phonograph Co., the first talking machiue company established in Cleveland. Mr. Berger disposed of his interest in the company, and embarked in other enterprises until he engaged with the Devineau Co., introducing the biophone attachment to the jobbing trade.

W. H. Buescber & Son report trade excellent, and judging from the quantity of incoming and outgoing merchandise, they certainly ought to feel that the Lord is kind to them. "We have more trouble," said Mr. Buescher, "in gettiug supplies than we have in selling them. Our business is keeping up finely and increasing from month to month. Our sales for January exceeded the sales of the corresponding month of last year."

T. H. Towell, manager of the Eclipse Musical Co., No. 714 Prospect avenue, is a very busy man these days. He had promised your correspondent an interview, but left word with his assistant that he was so busy in the store, the city and out of town, that he hadn't a moment to spare. Business was reported to have been good throughout January, and was keeping up in fine style in both the wholesale and retail departments. Mr. Towell gives his personal supervisiou to the general details of the compauy's business.

Charles W. Bentou, who for the past twenty-five years had been city salesman for the Hallet & Davis Piano Co., retiring from their employ six months ago, was instantly killed at his home at Conneaut, O., February 1. Benton had been cleaning the snow from the roof of his house, and started to descend the ladder, when it slipped, precipitating him to the sidewalk, fifteen feet below, breaking his neck.

Mr. Probeck, manager of the Columbia Phonograph Co., stated the prosperous conditions prevailing for several montbs past, still continued, and that tbe volume of business was increasing. Sales of machines are being made daily, and the demand for records is large. The new Columbia 12-inch disc records, sextet from Lucia, overture to Semiramide, overture to Poet and Peasant aud Sweet Longing Romance, are selling well.

Hugh Gulley, No. 924 Prospect avenue, is having a fine trade. He stated he had an exceptionally fine run of business in January, and bad been compelled to put on extra help. "The demand for records," he said, "and of the best, is constantly increasing. I am completely sold out of Victrolas, and have several orders booked for future delivery, as soon as they can be procured from the manufactory. Conditions are all entirely satisfactory."

William McArdle, representing the Hawthorne & Sheble Mauufacturing Co., of Philadelphia, was in the city February 4. He stated business in the talking machine line was fine, and that he was receiving orders for large numbers of horn cranes. His trip West was ouly as far as Cleveland, and he returned via Youngstown and Pittsburg.

Business was reported rather quiet at Callister & Sayle's, except in records, for which there is a steady call. They have beeu stocking up with machines, records and supplies of all kinds pertaining to the trade, and are prepared to supply any demand.

The talking machine department of the May Co. is doing a fine business, as is also that of Flesheim & Smith, and the other stores making a side line of this business.

The Columbia Phonograph Co.'s windows present as neat and pretty appearance as ever this month. The record supplements of the company are placed to show a large red heart as a background for the picture of a lovely girl listening to a graphophone. The supplements are also used as a border around several large red hearts of paper. On the center of each heart rests a Columbia disc graphophone, while a handsome poster represents the Geisha mother of Puccini's "Mme. Butterfly," and is intended to advertise the selection, "Che tua Madre," an excerpt from this popular opera. Tbe second window shows the difference between the long and short mandrel graphophone. The one-half-foot record has a small foot rule laid alongside, and nearby a one-half-foot cylinder machine (type B F) has a rule attached to the mandrel, showing length of same. In the window is also a graphophone of the regular sbort cylinder size, tbe length of which is indicated by rules attached.

In investigating the cause of tbe wreck on the Southern Railway, in which the president of the road, Samuel Speucer, was killed, a controversy arose between two telegraph operators regarding the seuding of a train order. As a result of this dispute it is being advocated by railway officials to have a phouograph located beside the telegraph instrument of railroad operators so that there will be a complete, infallible record made of every click of the key of the operator. It is pointed out that to ascertain what message an operator has seut at any time the phonograph record would only need to be revolved and the sounds would be distinctly reproduced. Any person familiar with the telegraph code could as readily read the reproduced sounds as he could the original transmission. It is argued that with this check upon them railroad operators would be compelled to be extremely cautious, as an accurate record of their work would be subject to inspection at any time.

Hebrew Records that Delight the Purchaser

AND PAY THE BEST PROFITS

YOU will find that Hebrew Records bearing the Blue Label are the best kind of a selling proposition, because you can offer your customers

Superior Records at the Regular Price.

They possess that remarkable clearness and purity of tone which commend them to the most critical.

Put yourself in a position to handle the Hebrew Record Trade of your territory properly, and you will find it paying you handsome returns.

The United Hebrew Record Co.

257-261 Grand St. New York City

REGINA CO. EDISON JOBBERS.

Purchase the Edison Jobbing Business of Sol Bloom—This With Their Present Line Gives Them a Strong Array of Instruments.

The Regina Co., of 41 Uniou Square, have entered the lists of the Edison jobbers, having purchased the Edison jobbing business of Sol Bloom, at 3 East 42d street, during the past week. This move has been under contemplation for some time past, and its culmination in connection with their distributing privilege from the Victor Co., places them in a good position to conduct a vigorous wholesale campaign. J. B. Furber, the president of the company, left for a short trip through the West the middle of the week. The new tapering arm Reginaphone brought out by the Regina Co. is now on exhibition at their New York warerooms, and should prove a good selling proposition for their trade. It is a combination of one of their popular sized music boxes and first-class taper arm talking machine, the combination being put out at but a little more than the price of either one singly. Louis Silverman, their wholesale representative, is in town for a few days, and says that business on the road so far this year has been excellent, and that he looks forward to a record breaking spring.

TO CHANGE LOCATION.

George A. Gustin, agent for the Columbia Phonograph Co. in Baltimore, has decided to change the location of his headquarters from the present site, on North Howard street, to 222 West Lexington street. He will occupy the whole of the new building. The salesrooms will be of the most modern type. Mr. Gustin says that the new place will be ready for occupancy by the first of March.

TWO FUNDAMENTAL PATENTS FINALLY SUSTAINED.

Decision Reversing Judge Hazel in the Jones Duplicating Patent Handed Down Jan. 14—The Victor Co.'s Contention on Disc Material Set Aside—Essential Features of the Opinions Handed Down by the United States Circuit Court of Appeals in Cases That Vitally Affect Talking Machine Interests—Statement by Philip Mauro, the Columbia Co.'s Counsel.

A decision reversing the opinion of Judge Hazel was entered Jan. 14 in the United States Circuit Court of Appeals, second circuit, in which the validity of the Jones patent (No. 688,739, granted December 10, 1901), for duplicating disc records, was sustained. The case in suit was that of the American Graphophone Co., complainants, against the Universal Talking Machine Co. and the American Record Co., joint defendants. Judge Hazel, United States Circuit Court, southern district of New York, on February 19, 1906, held "that the patent in suit is anticipated by the prior act," and dismissed the bill with costs. This is considered one of the most important cases on talking machine patents that has been before the court in years, dating back to 1901, when the first suit was brought against the Universal Company by the patentee. Later the American Graphophone Co. acquired title to the patent, and was substituted as the complainant, and from time to time during the subsequent four years testimony was taken by both parties. Prior to May, 1905, when argument was to be heard by Judge Platt, the American Record Co. was proceeded against also, and then the latter prevailed upon the court to postpone the hearing until the fall, when both cases could be brought on simultaneously, and in the intervening period further testimony was taken.

The defense was greatly elated over Judge Hazel's opinion, and it must be admitted that fully nine-tenths of those at all familiar with talking machine patent matters declared the Jones patent would not be held valid. The complainants, however, thought differently, and carried the case up for review to the United States Circuit Court of Appeals, where argument was made before Judges Wallace, Lacombe and Townsend. Their decision, reversing the court below, was written by Judge Townsend, and of which the appended are the essential features:

PRIOR PATENTED PROCESSES REVIEWED.

The court below, upon a well-considered and exhaustive discussion of the patented process and of the prior art, and of the other evidence, held that the patent disclosed a patentable process, but said as follows: "The step by which the tablet is cut into or engraved by the lateral movement of the stylus instead of such undulations being traced or etched, was perhaps a step forward; old ideas and suggestions, however, which are found in prior publications, were used to produce the better result. This achievement did not involve the ingenuity of an inventor, but comes within the limit of the skilled in that class of workmanship."

The facts chiefly relied on to support this conclusion as to invalidity of the patent are the following: The patented process applied to cylindrical records of varying depth was described and shown in the prior Young patent, which purported to cover "Improvements in connection with (inter alia) gramophones," thus, it is claimed, implying the process applied to a disc. The prior Edison British patents referred to phonograms, "in the form of a disc . . . and the marks are to be either in straight lines, spiral, zigzag, or in any other convenient form," and stated that "the reproduction of the phonogram from a matrix . . . may be made upon a . . . plate." The prior unexpired Bell & Tainter patent, No. 341,214, was, broadly, for the process of cutting or engraving sound records in wax.

But, even if, for the sake of the argument, we assume the correctness of the assertions of the complainant, in this record and other wise, as to the broad scope of said Bell & Tainter patent and the effect of its disclosures, it is clear that no actual inventor of the improvement covered by the patent in suit would have been deterred by any such apprehensions from applying for a patent for such improvement. In fact, no such excuse appears to have been thought of or suggested by counsel or experts for defendant in the suit against the defendant, the Universal Co. The court record of the Bell & Tainter patent shows that the would-be improvers upon the art therein disclosed continually and persistently patented and defended constructions which embodied the inventions described therein. The defendant, the Universal Co., commenced its infringement of the patent in suit more than a year before the expiration of the Bell & Tainter patent. And the Bell & Tainter patent did not deter this patentee, Jones, from seasonably filing his application in 1897.

CONFESSED SUPERIORITY OF JONES' METHOD.

In view of the now confessed superiority and commercial success of the product of the patent in suit, it may safely be assumed that its inventor by obtaining a patent might at any time have secured, by license or otherwise, a substantial consideration therefor. In any event, he might have applied for the patent, and thus placed himself in a position to commence operations thereunder immediately upon the expiration of the Bell & Tainter patent. And it is a sufficient answer to the testimony of Berliner, quoted above, that he was not in fact deterred by any such considerations when he applied for a patent for the invention in suit before the expiration of the Bell & Tainter patent.

An examination of the Bell & Tainter patent shows that the assumptions as to its broad scope are without foundation. There is not a word of reference in the specifications to the engraving laterally of undulating records, or of any records of uniform depth. And the experience of complainant with said patent, and the evidence as to the experiments of Tainter, one of the patentees, in connection therewith, show that it never served as a disclosure of the process of the patent in suit. Even the complainant, which was the owner of the Bell & Tainter patent, never succeeded in obtaining a practical disc record until it adopted the process of the patent in suit.

As to the prior Edison patents, it is evident, as the court below suggests, that he "had in mind a record of the vertically undulating type." That he never had in mind the flat disc Jones record is sufficiently shown by the failure of defendants to introduce any evidence that he ever applied his invention to the production of such discs. The arguments based on the prior Berliner patents, as a disclosure of the process of the patent in suit, are sufficiently disposed of by the foregoing considerations, by the finding of the court below that "the series of acts described in the Jones patent produced a definite and useful result essentially different from that described in the patents to Berliner" by Berliner's failure to claim that said patents disclosed said invention, and by his oath in his application for a patent for said process that it was a patentably novel invention, and by the fact that the process of the patent in suit has completely displaced that of the Berliner process.

BERLINER NEVER DEVISED A DUPLICATING PROCESS.

Furthermore, Berliner, in his Franklin Institute lecture in 1895, described a method of making duplicates

HERE YOU ARE

RECORDOL

IT CLEANS, POLISHES, LUBRICATES

CYLINDER RECORDS

RECORDOL will improve an old cylinder record in appearance and tone 100 per cent. In fact make it like new. It will bring out the brilliant tone which is so sought after. It is harmless and efficient and can be applied in a few moments by anyone. Retail price $1.00 per box, containing enough to clean, polish, lubricate and preserve 300 Cylinder Records. It is put up in a neat can. Sample sent to anyone in the trade upon receipt of 50 cents, in stamps or P. O. Order. DEALERS CAN MAKE THEIR OLD STOCK OF CYLINDER RECORDS like new. Write at once for circulars.

RECORDOL CO., 108-110 East 125th Street, NEW YORK

from his etched zinc discs, and stating the objections to practical use, concluded that these objections would shortly be obviated. Ten years later, when he was called as a witness in this suit against the American Record Co., he fails to state that he ever overcame said objections or devised a practical method of duplication, but merely says that because of the Bell & Tainter patent, "I felt that there was no use in following up a method of cutting a record in wax or other solid material."

The Young British patent, No. 1,487, is manifestly the closest reference in the prior art, for it discloses substantially the process of the patent in suit applied to the production of vertically undulating grooves in a cylindrical record. . . . But the language of the Young specification would seem to indicate that the patentee, like Edison, had in mind the application of his process to cylindrical records only. . . . Furthermore, the steps in the specified process indicate that they are to be taken in connection with a cylindrical record, and involve the destruction of the original and the collapsing of the duplicate, with the consequent risk of injury.

The court below, in a full, fair and accurate presentation of all the material and salient facts in this case, has held that the patented process produced a novel and useful result, but that it was within the limit of the skilled workman. It is upon this latter point that we feel constrained to differ with the court below. We think that it gave too much weight to the effect of the disclosures of the Young patent. And we conclude, in the light of the prior art, that the changes from Young to Jones involved invention, because, inter alia, Jones was practical, Young was impractical. Young was before the public for six years before any "skilled artisan" succeeded "in adjusting the various elements so that a flat sound record of the type in question could be produced," and no one prior to Jones saw that it could be adapted to a practical disc record with lateral undulations; there were inherent objections to the practical production of varying depth records, which Jones found did not exist when the known or suggested processes were applied to laterally undulating grooves of even depth. If further evidence of the patentable novelty of the Jones process be sought, it may be found in the deposition of Charles S. Tainter, a graphic record of unsuccessful efforts, unrealized anticipations and abandoned experiments.

PERSUASIVE EVIDENCE OF INVENTION.

Where an existing process or device thus discloses what appear to be insuperable objections to practical operation, it is persuasive evidence of invention that an improver has the foresight and courage to break away from such disclosure and conceive of some new method involving a different principle; but it is also evidence of invention if one by taking a step forward sees that what appeared to be barriers to progress are mere obstructions to side-paths and by-ways, and that the road to a practical invention lies straight before him. The record of the litigation involving the patentability and infringement of the device employed in this new sound-producing art shows that inventors and skilled mechanics were engaged in a struggle to devise and construct improvements upon the existing devices, to overcome the objections to their practical operation and thus widen their field of use.

In the case at bar, it is shown that it did not occur to any one before Jones that the old use of the varying depth process on cylindrical records could be adapted to a new use with a uniform depth process on flat records with a useful and practical result.

The courts have generally found it inadvisable to attempt to define invention, and, concluding that there are no affirmative rules by which to determine its presence or absence in every case, have recognized and applied certain negative tests to establish want of invention. Walker on Patents, Sections 24, 29. But where, upon the application of these tests, the question of invention is still left in doubt, such doubt may be resolved in favor of the patent by evidence of successful results where others had tried and failed. This doctrine has not only been repeatedly asserted and applied by the United States Supreme Court, . . . but by this court in numerous decisions, where, as in the case at bar, it was argued that the means provided were so simple and obvious that they could not have involved invention. . . . (Here a lengthy citation from previous decisions to illustrate this dictum was quoted.) Upon the same ground, in Brown against Huntington Piano Co., this court sustained a patent for a minor improvement in making the adjustment of a music desk on a piano automatic.

In these circumstances, the disc produced by the patented process responds to the test of success where others have failed. But in addition to this inventive success it is also a commercial success. And this success is not subject to the criticism that it is due to extensive advertising, or the attractive manner of placing the articles before the public, or "the energy with which they were forced upon the market." Nor is the disc merely such an element of a device that its sales may be ascribed to the popularity of other elements thereof, or of the entire organism.

VALIDITY OF JONES PATENT ESTABLISHED.

The patentable novelty of the process of the patent is not only indicated by large sales, but also by the unassailable evidence of that most sincere form of flattering recognition, namely, imitation and appropriation by rival manufacturers. In short, it has, so far, supplanted all other methods previously used, that, apparently, all disc records are now made by said process, and complainant's chief competitor admits that it has discarded its own patented etching process and has substituted therefor the process of the patent in suit.

The validity of the patent is thus established by commercial success, resultant solely from inventive success, and such extensive public use as to supersede discs made by other processes, which is "pregnant evidence of its novelty, value and usefulness." As to the objections raised that the patent in suit covers a mere mode of operation, we concur in the conclusion of the court below that the process of the patent in suit was a patentable one.

The contentions in support of the defense of noninfringement do not require extended discussion. The defendant, the Universal Co., denies infringement, under a claim that its tool does not cut or engrave its soft material, but displaces it. It does not appear from the evidence that defendant does not use the patented process in making its commercial records. The result of an inspection thereof indicates that they are formed by "cutting or engraving upon a tablet of suitable material, by means of . . . a suitable stylus," as claimed in the patent in suit. Therefore, as this court said in Hemolin Co. vs. Harway Co., "if the defendants can prove to the contrary, they should do so."

The defendant, the American Record Co., denies infringement, on the ground that it does not impress the matrix of the patent "into a tablet of suitable material," because it interposes a process of making an additional matrix, not included in the patented process, and impresses this additional matrix into the material. In effect, it claims that although it employs the first process of the patent to make the matrix and the last process of the patent to make the commercial record, yet because of the interposition of a superfluous additional duplicating process it escapes infringement. It is unnecessary to refer to the authorities that such a claim is without merit.

The decrees are reversed, with costs, and the causes are remanded to the court below, with instructions to enter decrees for injunctions and accountings, in accordance with this opinion.

ECLIPSE PHONOGRAPH CO.

203 WASHINGTON STREET, HOBOKEN, N. J.

MAURO REVIEWS DECISION.

The Well Known Counsellor Furnishes an Interesting Analysis of Litigation.

Philip Mauro, counsel for the American Graphophone Co. (manufacturers of the Columbia Phonograph Co.'s products), in referring to the foregoing and appended decisions, said to The World:

"The United States Circuit Court of Appeals, in this circuit, composed of Judges Wallace, Lacombe and Townsend, have handed down three decisions which are of great interest to the talking machine trade, and very far reaching in their consequences. Two of these suits are on the well-known Jones patent, which covers the process now universally employed for the manufacture of disc sound records. The effect of this decision will be to give the American Graphophone Co. complete control of the manufacture and sale of disc sound records in the United States. The Victor Talking Machine Co. some years ago secured a license under this patent. No other company is as yet licensed.

"The third case was a suit brought by the Victor Talking Machine Co. against the American Graphophone Co. upon the Berliner patent for a hard rubber record. The Victor Co. contended that while the disc records of the present day are not made of hard rubber, they are made of a substance so nearly resembling hard rubber as to be an equivalent thereof, and to be fairly included in the scope of the Berliner patent. In the Circuit Court Judge Hazel held that the patent was limited strictly to hard rubber; and this decision the Circuit Court of Appeals has now sustained.

"These decisions are final, and as they proceed from the most eminent patent judges of the United States, they may be regarded as the termination of a long and very interesting litigation."

Judge Townsend also wrote the opinion on the appeal from Judge Hazel's construction of the hard rubber claims of the Berliner patent, which, after omitting the technical extracts from patent specifications and judicial decisions thereon, may be briefly summed up as follows:

Summary of Disc Material Decision.

"The court below reached the conclusion that the sound records of the defendant did not infringe the claims in suit, for the reason that said claims were limited in terms and in fact to an article of manufacture composed of hard rubber. An examination of the file wrapper confirms the correctness of this conclusion. It appears therefrom that the patentee [Berliner], by reason of the rejection of his broad original claims, was forced to substitute the narrower claims upon which the patent was finally allowed. . . .

"The patentee, having selected a well-known product, having well-known characteristics which made it desirable for reproducing records, invented and patented a novel means for overcoming the obstacle or objection involved in its use, and he is entitled to the benefit of this invention. But upon the familiar principles applied in such cases, his action was equivalent to a notice to the world that it could make any other duplicate records, provided they were not the records limited as specified and claimed in his patent. . . .

"If this patent had issued with a broad claim for an article produced by such process in materials other than hard rubber, said patent would have involved invention and would have been infringed by defendant. And in affirming the court below in dismissing this bill, we are merely applying the rule of law, stated above, in holding that the patentee abandoned or waived his right to insist upon such a broad construction of the claims for a product as would embrace the defendant's disc. . . . The fact that they look alike is immaterial. . . . The decision is affirmed with costs."

MME. NORDICA WITH COLUMBIA CO.

The Famous Operatic and Concert Singer Will Make Records Exclusively for This Company —An Important Acquisition.

The Columbia Phonograph Co. have made quite a stir recently by augmenting the list of notable artists who are making records for them. Only recently The World announced that Bonci, the famous tenor at the Manhattan Opera House, was now making records for the Columbia Phonograph Co., and this week another great personage has fallen in line in the person of Mme. Lillian Nordica, the celebrated artist who has sung with such great success at the

MME. LILLIAN NORDICA.

Metropolitan Opera House, and who is appearing this season with the San Carlo Opera company. Mme. Nordica is one of the most celebrated operatic and concert singers of the day, and her fame is world-wide. She is to sing exclusively for the Columbia Phonograph Co. It is expected that the Nordica records will be ready for the trade at a comparatively early date. It is hardly necessary to say that there has been brisk competition to secure this great artist, and that she has joined the Columbia forces is certainly something of which they can well feel proud.

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York.

(Special to The Talking Machine World.)

Washington, D. C., Feb. 6, 1907.

Since the first of the year Henry B. Babson, of Babson Bros., Chicago, has been east twice. His house is doing a great business.

KANSAS CITY'S STRICT RULING.

All Kinds of Automatic Musical Instruments Must be Removed from Places Where Liquor Is Sold—Columbia Phonograph Co. Remove.

(Special to The Talking Machine World.)

Kansas City, Mo., Jan. 28, 1907.

An edict has gone forth from the new county court of this county to the effect that automatic pianos, music boxes, talking machines, and, in fact, musical instruments of all kinds must not be allowed in saloons. After discussing the matter for more than half a day at a meeting recently an order was issued by the court demanding the removal of all musical instruments from the dramshops of Kansas City and its suburbs. The reason for the order, according to one member of the court, is to make the saloons as unattractive as possible. Keepers of dramshops violating the order are subject to arrest, and may have their licenses taken away.

There were in the city at the time the order was issued about 380 automatic musical instruments owned and leased by five different novelty companies. A majority of these instruments have been removed from the saloons, and are lying idle in the shops of the novelty companies. The dealers are hopeful, however. They say that the order is only an experiment, and that it will not be a long time until they will be able to place their instruments in the saloons again.

The Columbia Phonograph Co. will move their store to 809 Walnut street next week. The new location is provided with much larger display rooms than those in the former store, and testing rooms, with the latest improved acoustic properties, are to be built. When finished these rooms will be the first of their kind ever built in the city. The company have been located in Kansas City for eight years. An unusually brisk trade for this time of the year is reported by S. W. Smith, manager of the store. "We were forced to find a new location, because of the increase in our trade," he said. "Our stock will be doubled almost."

Listen!

to the voice of the greatest and most perfect language teacher in the world. He says—I would like to tell my friends, the phonograph dealers, how I can help them, how I can increase their business from 10 to 30 per cent.,—and just stop and think what this means to YOU. Why there is a dealer out West who is doing a business of $15,000 a year on his I. C. S. Language Outfits exclusive of his amusement records, outfits, etc.

This shows the possibilities that exist in the

TEXAS AS A "TALKER" CENTER.

Trade Unusually Active, Particularly in Northwestern Texas—20th Century Columbia Popular With Arcades—Dorsey Co. Using 15 Commercial Graphophones.

(Special to The Talking Machine World.)

Dallas, Tex., Jan. 5, 1907.

The talking machine business in this city as well as throughout the State, is steadily expanding and there is a growing market for all kinds of talking machine specialties. The people are becoming educated to the fact that the talking machine is no longer a toy, but an artistic entertainer which brings the best in the musical world to their doors. The local branch of the Columbia Phonograph Co. has been steadily enlarging its roster of new dealers throughout the northwestern part of Texas, the additions being quite numerous during the past few months. Since the Dallas branch has opened the demand for Columbia goods has greatly increased.

The Columbia Twentieth Century graphophone is at present very popular owing to its tremendous volume and purity of tone. It is used by moving picture shows, which are springing up like mushrooms in the larger cities throughout Texas. At the present time Dallas boasts of nine such places of amusement, and all of them seem to be flourishing.

The Dorsey Printing Co., of this city, recently held an office appliance show and made a special feature of the Columbia Commercial graphophone. They are at present using about fifteen of the machines in their establishment.

TOOK ALONG PIANO AND PHONOGRAPH.

William C. Smith, who recently inherited $1,000,000 by the death of his brother, "Pittsburg Phil," the race track plunger, is celebrating his sudden rise to wealth by making a trip to California in one of the most luxurious private cars of the Pennsylvania Railroad. The horseman is accompanied by his family and a party of sixteen of his neighbors from the Bronx. Mr. Smith also took along a piano and a phonograph for the amusement of his guests while they were not busy seeing sights.

Smith's Piano House, San Francisco, Cal., has put in a complete stock of talking machines, including several of the prominent makes.

For a Powerful Organ-like Tone the New

M. Hohner "TRUMPET CALL" Harmonica

Surpasses any mouth-organ that has ever been placed on the market.

No. 220. This instrument which has lately been offered to the trade is endowed with a phenomenal amount of tone power. The reeds are directly connected with a wooden sound-box, into which the tone passes, and finds an outlet through five Brass Trumpet Horns which protrude from the box. No Harmonica of this kind has ever been shown to the trade before, nor is there any which increases the tone so wonderfully. In the hands of an expert player this instrument can be made to sound like a church organ. In producing this instrument the house of Hohner has again shown great results from its constant effort to bring the Harmonica on the level with a high-class musical instrument. The mouth-organ has 10 double holes, 40 reeds, brass plates and is full concert.

WHY THE TALKER BUSINESS GROWS.

The growth of the talking machine industry in the United States is the marvel of the business world. Even the bicycle boom was not more striking in the rapidity and permanency of its growth. The reason for its volume is advertising. Considering the small number of companies engaged in manufacturing talking machines, it is the best advertised business in the country to-day, observes the Edison Phonograph Monthly. Every manufacturer is a liberal advertiser. The combined effect of their efforts is proving an irresistible power in breaking down prejudice and building up in its place a widespread demand for these unique musical instruments. The advertising done by the National Phonograph Co. helps its competitors and in precisely the same way we are benefited by the advertising of other companies. The effect upon the public of the combined advertising is to unconsciously arouse an interest in talking machines as a general proposition. A little later comes a desire to know about the different kinds. Then the announcements of each company perform their special function and the dealers do the rest.

The Columbia Phonograph Co. made an extensive exhibit of their commercial machines and the system in general at the business exposition recently held in Birmingham, Ala.

Stone's Music House, Fargo, N. D., has been conducting a series of concerts with the Victor Victrolas. This concern has been selling Victrolas as fast as they are received.

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

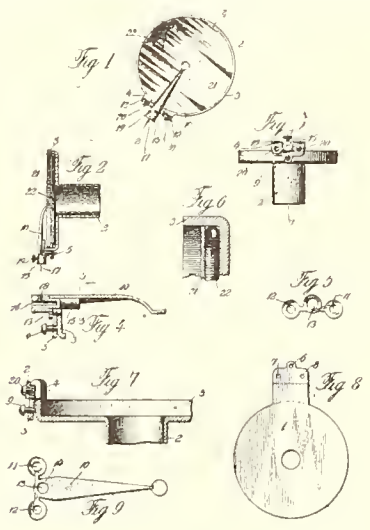
(Specially prepared for The Talking Machine World.)

Washington, D. C., Feb. 7, 1907.

SOUND-BOX. Louis P. Valiquet, Newark, N. J. Patent No. 840,974.

This invention relates to talking machines generally, and more specifically consists of a cheap and easily adjustable form of sound-box for use therein. The purpose of the invention is to produce a sound-box out of the smallest possible number of pieces of material by stamping and bending same into shape and at the same time produce a construction in which the stylus arm may be easily and permanently adjusted so as to leave the diaphragm free to vibrate under the best possible conditions.

The best form of apparatus embodying this iuvention at present kuown is shown in the accompanying sheet of drawings, in which Fig. 1 is a front view of a sound-box comprising the invention with part of the diaphragm broken away. Fig. 2 is a cross-section on line 2 2 of Fig. 1. Fig. 3 is a side elevation of a sound-box looking along the axis of the stylus-holding arm. Fig. 4 is a detail sectional view of the stylus-holding

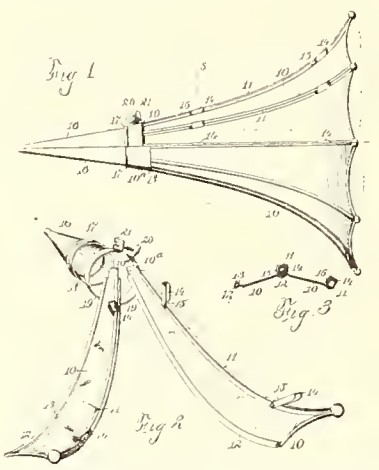


arm, needle holder and lug of the diaphragm holder, to which it is attached. Fig. 5 is a cross-section of the stylus arm taken on line 5 5 of Fig. 4. Fig. 6 is a detail sectional view showing the diaphragm and dampening ring assembled in the diaphragm holder. Fig. 7 is a detail sectional view of the diaphragm holder and stylus-holding arm lug in position thereon, said section being taken on broken line 7 7 of Fig. 3. Fig. 8 is a view of the blank out of which the diaphragm holder is stamped, and Fig. 9 is a view of the blank ont of which the stylus-holding arm and its attaching lngs are stamped.

AMPLIFYING HORN. Max Steiner and Mick Brenner, Newark, N. J. Patent No. 840,967.

This invention relates to a horn, and more particnlarly to that class of horns that are known as "amplifying horns," these being mainly used on talking machines and as megaphones. The invention is designed to provide a horn of this class that can be taken apart, the larger end of the horn and the major portion of its length being made of separable sections that will fit one on the other, so as to make a compact package for transportation or storage.

The invention is further designed to provide

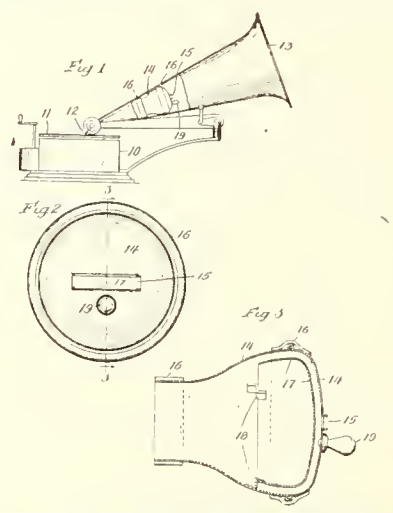


means for holding these separable sections when they are assembled to form the horn, and a still further object is to provide a means on the smaller end of the horn for holding all parts together, so that the small and large ends are rigidly and secnrely connected.

This invention is illustrated in the accompanying drawings, in which Fig. 1 is a half-elevation and half-section of the horn assembled. Fig. 2 is a perspective view of the elements making up the small ends of the horn and two of the separable sections that constitute the large or the flaring end. Fig. 3 is a section of two of the sections of the horn, this view being taken on line 3 in Fig. 1.

MODIFIER FOR PHONOGRAPHS. Ashley S. Thompson, Chicago, Ill. Patent No. 840,526.

This invention relates to and has for its object the reduction and the modification of the sound emitted from the horn of a phonograph for

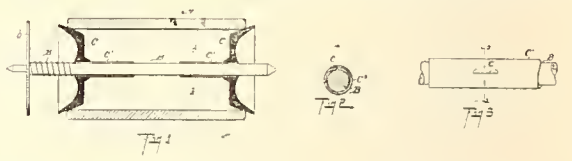


the purpose of softening the tone and removing the nnpleasant metallic timbre that is frequently present. In the accompanying drawings, forming a part of this specification, Fig. 1 is a side view of a phonograph or graphophone with a portion of the horn broken away to show the modifier device in place therein. Fig. 2 is a top plan view of the modifier, and Fig. 3 is a sectional view on the line 3 3 of Fig. 2.

MANDREL FOR PHONOGRAPH RECORDS. Cyrus C. Shingley, Hart, Mich., assignor to the Multi-Phonograph Co., Inc., Grand Rapids, Mich. Patent No. 841,727.

This invention relates to improvements in mandrels for phonographic records, and this improved mandrel for phonographic records is particularly adapted for use in phonographs such as illustrated and described in United States letters patent No. 773,164, issued on October 25, 1904, although it is desirable for use in other relations.

The objects of this invention are, first, to provide an improved mandrel for phonographic records by which the mandrel is properly centered; second, to provide an improved mandrel for phonographic records by which the mandrel may be readily adjusted longitndinally to bring the same into proper relation to the phonographic mechanism; third, to provide an improved mandrel for phonographic records by which the record is yieldingly snpported to allow the expression or contraction thereof under varying temperatnres. A structure embodying the features of this invention is illnstrated in the accompanying drawings, in which Fig. 1 is a central longitudinal view of the improved mandrel for phonographic records with the record in position there-



on, the mandrel shaft B, spring B', and friction wheel b being shown in fnll lines. Fig. 2 is an enlarged cross-sectional view taken on a line corresponding to line 2 2 of Figs. 1 and 3. Fig. 3 is an enlarged detail view showing the manner of securing the head C npon the shaft.

SOUND RECORDING AND REPRODUCING MECHANISM. Edward F. Shne, Washington, D. C. Patent No. 842,028.

This invention relates to talking machines, more particnlarly to that type in which a flat disc is employed for receiving a record in the form of a laterally wavy spiral groove of uniform depth cnt into the disc by a stylus operated by a vibrating diaphragm.

The object of the invention is to improve the reproduction of recorded sound by providing suitable means of simple and positive construction attached to the diaphragm of a talking machine which will cause the recording or transcribing stylus to travel in a direction at a right angle to the vibratory movement of the diaphragm and with a shorter amplitnde of vibration. With this construction is combined a straight nninterrupted passage for the sound-waves from the diaphragm for a sufficient distance to prevent them from being broken or mnffled before they are bent out of their course.

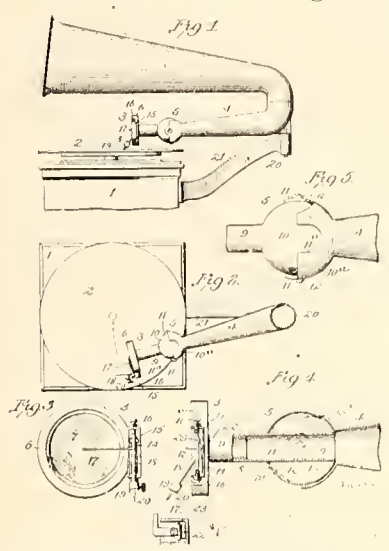
In the accompanying drawings, Fig. 1 is a view in side elevation of a portion of a talking machine with the invention applied thereto. Fig. 2 is a plan view of the same. Fig. 3 is a front



view of the sound-box and recording and reproducing mechanism on enlarged scale. Fig. 4 is a side view of the same, partly in section. Fig. 5 is a plan view of a detail of the invention. Fig. 6 is a sectional view on the line a a of Fig. 4.

PHONOGRAPH. Henry G. Bauman, Pittsburg, Pa. Patent No. 842,059.

This invention relates to certain new and useful improvements in indicators for phonographs, graphophones and like reproducing machines. The primary object of the invention is to provide a speed or revolution indicator for phonographs or like machines that will admit of adjusting the spindle of the machine to the same speed as was used in making the records, thereby insuring a clear and harmonious rendition of the music or speech in reproduction.

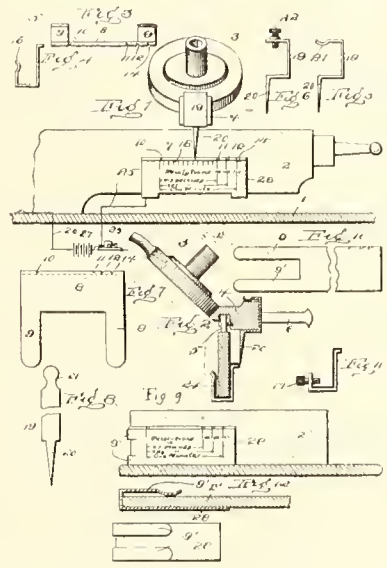
To this end the invention aims to provide a simple, inexpensive and durable indicator or register for phonographs that can be readily applied to the present type of phonographs by unskilled persons, thus permitting of the owners of phonographs obtaining the indicators and applying them for the purposes above specified.

It is a well-known fact that records are made to 120, 40 and 60 revolutions. This makes it necessary to adjust the machine so it will travel or carry the speaker arm to some given distances in seconds and to other distances in minutes. With the improved indicator attached to the phonograph the operator can quickly and accurately regulate the speaker arm to make the proper number of revolutions, no matter at what speed the record was recorded.

While the speed at which the record is made is known to the purchaser, there is no indicating device on the machine to show at what speed or number of revolutions the spindle is making, and while the machine may be regulated to a faster or slower speed it is necessary to use a device to indicate and regulate the revolutions to the same speed required to reproduce as that which was used in making the record.

The improved indicator permits of a clear rendition of the piece of music being reproduced by the phonograph record, this being accomplished by observing the number of revolutions or the speed at which the record traveled when receiving the piece of music, and when the record is placed upon a phonograph equipped with improved indicator the indicator will designate the speed at which the record should travel in order to correctly reproduce the piece of music carried by the record.

Fig. 1 is a front elevation of the slide-rest of a phonograph equipped with the improved indicator, also illustrating a portion of the speaker-



arm. Fig. 2 is a vertical sectional view of the same. Fig. 3 is a plan of the indicator plate. Fig. 4 is an end view of the same. Fig. 5 is a side elevation of a pointer used in connection with the indicator. Fig. 6 is a similar view illustrating a slightly modified form of construction. Fig. 7 is a developed view of the indicator plate. Fig. 8 is a similar view of the indicator pointer. Fig. 9 is a front elevation of a slide-rest of a phonograph, illustrating the same equipped with a slightly modified form of indicator. Fig. 10 is a developed view of the indicator illustrated in Fig. 9 of the drawings. Fig. 11 is an end view of the indicator plate illustrated in Fig. 1 of the drawings, illustrating a slightly modified form of fastening means used in connection with the same. Fig. 12 is a longitudinal sectional view of the slide-rest and indicator illustrated in Fig. 9 of the drawings. Fig. 13 is a rear elevation of the indicator plate illustrated in Figs. 9 and 12 of the drawings.

COMPOSITION FOR SOUND RECORDS. Emilien Jean Baptiste Brocherioux, Paul Joseph Tochon, Alfred Fortier and Leon Victor Marotte, Paris, France. Patent No. 842,070.

The object of this invention is the production of a special composition designed to be applied to the surface of paper, cardboard, pasteboard and other substances to form a film or coating on which sounds may be recorded and subsequently reproduced by means of a phonograph.

The invention is especially suitable for the production of phonogram cards and postal phonogram cards which, bearing the record, may be forwarded by post and read by the recipient by means of a phonograph.

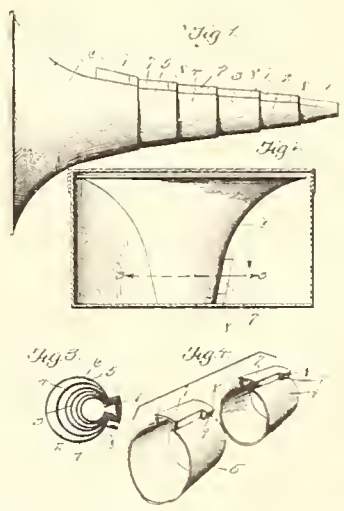
The composition is composed of permanent

white (barium sulphate), zinc white (light oxid of zinc), and a special encaustic (made by dissolving stearin in water in the presence of salt of tartar), hide glue and water in the following proportions: permanent white, 0.250 kilogram; zinc white, 0.125 kilogram; encaustic, 0.250 kilogram; glue, 0.187 kilogram; water, one-half liter.

The encaustic is itself prepared according to the following formula: Stearin, two kilograms; salt of tartar, 0.125 kilogram; water, 40 liters.

DELIVERING HORN FOR TALKING MACHINES. Willis J. Litts, Jaynesville, Wis. Patent No. 841,795.

This invention relates to talking machines and more particularly to a collapsible delivering horn composed of a series of sections and having novel means for holding each section of the series in locked relation when the same is collapsed and packed within a metallic tube for shipment. It also comprises novel means, so that when said



delivering horn is extended and also attached to a talking machine the same may be held locked in said extended position. This invention is a very efficient device, and may be manufactured with but little expense and sold very reasonably to the trade. The invention is illustrated in the accompanying drawings. Fig. 1 is a side elevation of the improved horn. Fig. 2 is a side view of the horn, showing the same collapsed and packed in a case, the latter being shown in section. Fig. 3 is a sectional view on line 3 3 of Fig. 2. Fig. 4 is a detail view of two sections of the horn, showing the same ready to be assembled.

ATTACHMENT TO HORNS FOR SOUND-REPRODUCING INSTRUMENTS. Overend G. Rose, Camp Meeker, Cal. Patent No. 842,707.

This invention relates to certain improvements in horns for sound-reproducing instruments—such as phonographic, graphophones and disc talking machines—and it has for its object the projection and analysis of the sound as it passes through the horn.

As generally constructed the horns for sound-reproducing instruments are open or unobstruct-

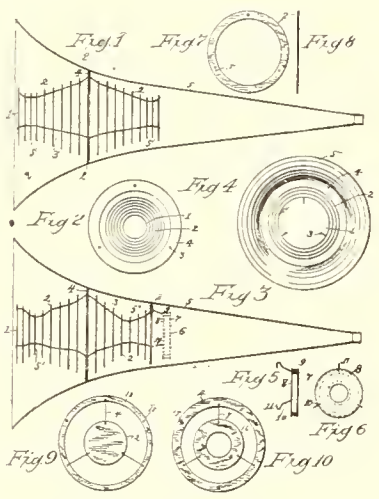
ed throughout their length, and are attached to the souud-box of the instrument in such a manner that when the diaphragm of the reproducer is vibrated the sound apparently comes from the interior of the horn and is correspondingly cramped or blurred, which renders it difficult to understand the human voice or to distinguish or separate the tones of the different instruments from each other.

It has been discovered that by providing the horn, preferably at or near the outer end, with a compound diaphragm, which is called a "projector and sound analyzer," the sound is repeated, as it were, from the diaphragm of the sound-box aud caused to apparently come from the mouth or outer end of the horn. Iu addition to this the tones of the different instruments are analyzed or separated, so that those of each instrument are caused to be repeated by and to apparently come from a portion of the diaphragm corresponding, respectively, with the relative positions that the instruments were stationed from the recording apparatus when the record was made; that is, the instruments that were situated at the least distance from the recorder will appear as coming from the outer or more exposed portions of the diaphragm, while those that were located at a greater dis-



tance will appear as coming from the portions of the diaphragm located within the horn or at a greater distauce from its mouth or outer end. By reproducing or transmitting the sound in this manner the vibratious from the diaphragm are more evenly distributed, and therefore more distinctly heard in all directions from the mouth of the horn than where the horn is open or unobstructed throughout its length, and by separating the tones of the instruments from each other a much more pleasing effect is produced than when the tones of all of the instruments are commingled promiscuously and projected more directly in the line of the axis of the horu.

An embodiment of the invention is shown in the accompanying drawings, in which Fig. 1 is a longitudinal sectional view of a horn for sound-reproducing instruments provided with one form of the invention. Fig. 2 is a transverse sectional view of the attachmeut, taken on the line 2 2 of Fig. 1. Fig. 3 is a view similar to Fig. 1, showing a different form of the invention. Fig. 4 is a plan view looking iuto the mouth of the horn. Fig. 5 is a transverse sectioual view of a sound-box for the attachment. Fig. 6 is a plan view of the same. Fig. 7 is a plan view of one of the discs, and Fig. 8 is an edge view of the same. Figs. 9 and 10 are modifications.

SOUND-RECORD TABLET. Byron B. Goldsmith, New York, N. Y. Patent No. 840,932.

This invention has reference to improvements in sound-record tablets, known in the art as "phonograph," "graphophone," and "gramophone" tablets, the object of the invention being the production of such tablets of a new composition of matter which possesses characteristics that particularly adapt the same for the making of sound-record tablets.

Heretofore commercial sound-record tablets have been made primarily of beeswax, afterward of mineral waxes, metallic soaps, hard rubber, celluloid and shellac, and with all or with most of these substances have been mixed, and particularly with shellac, other substances in a finely-divided state. In these tablets the record-grooves were according to the nature of the material employed, either cut by a suitable recording-style or were produced by transfer pressure from a suitably-prepared matrix. The cutting of a record-groove in record-tablets that are used for reproduction only has become largely obsolete, and it is now almost the universal practice to produce these record-grooves by transfer pressure from a matrix. For this purpose the record material must be moldable when the transfer is made and must then become hard and non-plastic. The materials now used are generally of a character that they become plastic when heated and hard at ordinary temperatures—that is to say, they are thermoplastic. Shellac, with admixtures of a variety of compounding materials, is the material which is most largely used, particularly in sound-record tablets of the gramophone type; but the price of shellac has more than doubled in recent years, and the cost of the tablets has increased in proportion.

This new composition for the manufacture of sound-record tablets consists of casein, either alone or with suitable admixtures, and a number of different methods can be used for working the casein into a mass into which the sound-record groove can be produced by transfer pressure from a suitable matrix. The most primitive method consists in taking the casein, slightly moistened, and subjecting it to heat and pressure under the matrix. Another method is to treat casein with solutions of borax or alkalies and working up the mass in such shape that the record-groove can be pressed iuto it by a matrix. The inventor has found that by mixing certain ingredients with casein he can produce a composition which when heated softens to any desired degree, so that when a tablet is formed of that new composition it will receive a sound-record groove by transfer pressure from a matrix with the greatest ease. These new casein mixtures are called "thermoplastic casein," and the name "converting agents" have been given to the substances which give the casein the valuable property of thermoplasticity. Some of the agents to convert casein into a thermoplastic state are alpha-naphthol, beta-naphthol, benzoic acid, carbolic acid, hydrochinon, kresol, pyrocatechin, resorcin, salicylic acid and urea.

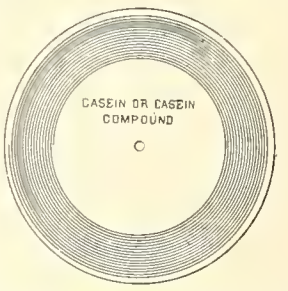
There are other substances which act as converting agents on casein, and the agents are not limited. The thermoplastic casein can be used for the formation of sound-record tablets in its pure state, and it can be mixed with other materials, such as are used as admixtures to shellac, in the production of gramophone-record tablets. It can be given any desired color, and it can be mixed with shellac.

The tablets may be made flat, disk shape, cylindrical, or of any other desired form, and they can be made all throughout their whole mass of thermoplastic casein, or this material may be applied iu a thin layer, either in a fluid or plastic state, upon a base of any kind.

Casein in any of the forms employed is much cheaper than shellac or shellac compounds or any other sound-record material known to the inventor.

The degree of hardness attained by the product in the cold state varies with the kind of converting agent employed, and ordinarily the new composition will be softer in the cold state and more plastic when heated when a quantity of converting agent is employed. Liquid converting agents will also ordinarily give a softer product than solid ones.

Iu the accompanying drawing is illustrated a sound-record tablet in the form of a disk, which



may be made of this improved record material; but the tablet may have any other suitable form and need not be made solidly of the new material, as hereinbefore described. The sound-record groove may be pressed into the mass by a matrix just as it comes from the mixing rolls, so that the tablet is formed by the same pressure which impresses the sound-groove, or the tablet may be first roughly formed aud allowed to harden, and the sound-record may then be impressed at any time thereafter by first heating the blank tablet to render it soft and moldable. Altogether the new sound-record material may be manipulated and applied like every other thermoplastic material—such, for instance, as shellac and its compounds.

A. D. Matthews' Sons, of Brooklyn, N. Y., have not closed out their talking machine department, as was stated last month. It is being continued on a larger plane than ever before under the management of C. W. Pease.

W. H. Thorne Co., Ltd., St. John, N. B., have recently been appointed Eastern Canadian agents for the Edison phonograph and gold moulded records and carry a full stock of each, thereby insuring satisfactory filling of orders and prompt deliveries.

Use "3-in-One" Oil
"Oil" by Itself

"3-in-One" **never** should be **mixed** with any other oil. It's in a class all by itself—has been for 12 years. Keep it so for best results. Use it to lubricate, brighten and polish the various parts of all kinds of talking machines. Use it to keep disc and cylinder records clean. The "3-in-One" Book tells details. Get a copy from us or your jobber.

"3-in-One" is not only the best oil for your customers to buy—it's the best oil for you to sell. 50 and 100 per cent. profit—any reason why you shouldn't make it, same as other talking machine dealers are doing? 10c. and 25c. bottles. Your jobber is ready to supply you.

FREE sample bottle of "3-in-One" sent to any dealer on request. Just write to

NO BETTER INVESTMENT

Can be Made by a "Live Man To-day Than in an Establishment Devoted to the Exploitation of Automatic Musical Instruments—Some of the Essential Points to Win Success Set Forth in Detail—Some "Pointers" Upon How to Start This Business—The Possibilities and Results Beyond Expectations.

There is no field of investment to-day which offers so large, certain and immediate returns as the "peuny arcade." It was but a few years ago that the "arcade" was introduced to supply the need of low priced, clean amusement parlors on crowded thoroughfares. From a small beginning it has grown to enormous proportions. One syndicate alone has within three years established throughout the United States a circuit of splendidly appointed places, representing a total investment of probably $1,000,000. However, like in every other business, failure is not impossible, and a few of the following remarks will be valuable to the prospective investor, and if followed out will prove a sure stepping stone to success:

* * * *

There are five essential points to be considered by those who desire a successful penny arcade: Location, high grade machines, catchy display cards, cleanliness and proper management.

To begin with, the most necessary thing of all is to get a store in a location frequented by the most people. This does not uecessarily mean that it must be in the leading shopping district—in fact, a store on a throughfare just before getting to the shopping district is preferable, as it will catch the people at a time when they are most apt to be looking for amusement. Stores of almost any size will be found adaptable to the business from 16 feet to 25 feet in width and 40 feet in depth upwards. To be successful, the place must be kept perfectly clean, attractively equipped and well conducted. Women and children are the best customers and should be carefully looked after. The room should be well illuminated, both inside and out. Any ordinary electrical supply shop can furnish the necessary equipment for the lighting, and for such of the machines requiriug electric light or power. This part of the work is inexpensive.

* * * *

In a very modest way oue of these places can be fitted up for six or seven hundred dollars, but, of course, as much can be spent iu the equipment as the location and the city would warrant. In a penny exhibit all kinds of amusement machines are desirable, but they should be up-to-date and of the very best make. The machines consist of phonographs, au automatic piauo, picture machiues, fortune tellers, souvenir post card machines, name plate and vending devices. 'In the physical culture machines there is the puncher, grip test, blower, lifter and other strength testing devices that are always well patronized. The larger the variety the better it will entertain the patrons of the place. These popular places of amusement may be given various names: "Penny Arcade," "Automatic Vaudeville," "People's Theatre," "Bijou," "Dreamland," "Penny Exhibit," etc. It is necessary to have good music, as it always attracts and holds a crowd. In most places an automatic piano is used, but others have adopted a large talkiug machine. Whatever music is used should be near the door, so it can be heard from the outside. The best location for the cashier's desk is about twenty-five feet from the front. As a rule it is safe to figure that the machines will take in about 10 per cent. more than the amount of pennies which have been sold. This enables the owner to estimate what the earnings should be if handled by others than himself.

Amusement parks and resorts have been found to be very profitable locations for arcades, and concessions in such places are very desirable and will bring in large returns. In many instances buildings are erected specially for this purpose, with an attractive front, and in some cases a tent is used, invitingly arranged. Generally these are worked on a percentage basis, and the amount that is paid varies from 20 to 35 per cent. of the receipts. Very often these concessions are bought outright for sums ranging from $100 to $1,000 for the season, but, of course, the price paid must be in accordance with the number of patrons frequenting the place.

* * * *

In ordering machines from the manufacturer, one should specify the size of coins to be used in operating the machines; also state "voltage" of electric light plant, and if it is direct or alternating. If alternating state the number of "cycles." We advise asking an official of the electric plant for this information, so as to avoid errors. This is important only when machines using electric lights or motors are ordered.

* * * *

Orders from foreign countries can be placed through any of the responsible export shippers, and it would be well to have them accompanied by one or more pieces of money with which machines are to be played. This will save time and eliminate all chances of mistakes iu construction.

* * * *

There are plenty of opportunities to place machines on a percentage basis—that is, where the proprietor is given a certain portion of the earnings. Generally 25 per cent. is given, and this is geuerous, as the merchant is benefited by increased business derived from having the machine around. Every kind of a store is suitable for some particular sort of machine. Weighing and vending machines pay big in well patronized dry goods, drug, talking machine and novelty stores. For hotels, cafés, cigar stores, billiard halls, bowling allies, etc., automatic pianos, talking machines, picture machines, the punchers, grip and lung testers, lifting machines, etc., are perhaps the most desirable. The places and opportunities are unlimited. Interurban electric railway lines, ferries and railroad stations afford good locations for scales and vending devices. Pleasure parks, pavilions, etc., should be and are among the best privileges for all sorts of machines. Now is the time to get busy and make some of this easy money.

MOVING PICTURES ON SUNDAY.

Justice Marean Enjoins the Police from Interfering With the Shows.

A motion was made on Feb. 1 before Supreme Court Justice Marean in Brooklyn for an injunction to enjoin the police from interfering on Sundays with the moving picture shows of the Globe Amusement Co. It was contended that there was nothing in the pictures objectionable and that the law did not prohibit such harmless exhibitions.

Justice Marean said: "The morals of the community cannot be affected by such shows. When I hear that the police have visited these places on a Sunday it gives me the impression that some places are closed up by the police to favor others."

"Ministers declare," said Assistant Corporation Counsel Lazansky, "that the shows are immoral and should be closed."

"Oh, that is because they want the people to go to their churches," Justice Marean said. "Ministers are behind some very foolish things. I see no violation of the Sunday law here. I'll grant the motion, but you may submit briefs if you like."

WHY PENNIES ARE SCARCE.

The scarcity of one cent pieces in circulation in certain districts is attributed in part to the arcades that have been springing up all over the country. Some of these have taken in as much as $280 in pennies in one day, aud as the store keepers and banks refuse to take more than a limited amount at a time, they are very slow in gettiug back in circulation, aud on account of their shipment to the subtreasury for exchange in many instances their dearth has caused considerable inconvenience.

MAMMOTH AUTOMATIC PIANO

Is to be Built for the Great Amusement Park in Chicago—Will be a Wonderful Creation Evidently, Judging from Description.

Among the wonderful attractions planned for the great $1,000,000 amusement park in Chicago is a "giant automatic piano," forty feet high, sixty feet long and with heavy copper-wound cables for strings. The action will also be built on colossal lines, having hammers of steel with three thicknesses of rhinoceros hide for buffing, and a striking force of over two hundred pounds to the inch. A liquid air machine will furnish the power necessary to grind out the repertoire, which at first will consist of fifty selections upon a roll fifteen feet wide and two miles long.

Complete plans for the installation of this mammoth instrument have not been perfected as yet. It was originally planned to have an interior construction by which visitors could witness all of the workings of the marvelous mechanical mechanism from the inside. A refreshment room was also provided for where visitors could enjoy a lunch to the music of the giant player. This feature was to have been made possible by a device by which the volume of sound could be deflected outward and the music reduced to comparative mildness on the inside. It was further planned to so arrange the giant music sheets that passengers could be taken upon them and carried from the ground to the upper stories inside the great player-piano. This part of it would operate much as did the Ferris wheel of the Columbian Exposition. In fact, a hundred novel features have been suggested and as often rejected because of their great cost or possible risk to life and limb of the crowds who would be attracted by the mammoth instrument.

There is much speculation as to what piano factory will be called upon to furnish the parts of the instrument, and who will be represented among those whose advertisements will appear on the blank portions of the music roll to be seen in succession as it moves over the tracker board.

RECENT INCORPORATIONS.

The Henry Davis Amusement Co., 15 Exchange place, Jersey City, N. J., have incorporated with a capital of $750,000, for the purpose of operating phonographs, musical machines, etc. Incorporators: William E. Walsh, W. J. McBujar and Roger Knox.

* * * *

The Spanish Trade Co. have incorporated, to manufacture, export and import all merchandise. Capital, $20,000. Incorporators: I. H. La Fetra and W. W. La Fetra and J. M. Vincent, all of New York.

* * * *

F. C. Newell Mutograph Co., Camden, N. J. Capital, $1,000,000. Incorporators: F. C. Newell. B. B. Avery, A. Evans Townsend.

THE MULTIPHONE IN CANADA.

The Canadian Multiphone Co., which concern owns the Canadian patents of the multiphone has opened up a one-cent amusement arcade in Hamilton. This is the first hall in Canada to be equipped with the multiphone, and it is very handsomely equipped. Twenty-one machines have been installed and as each machine has a capacity of twelve records the arcade's patrons have an extensive variety from which to choose. The best records will be put at the disposal of the public as they come out. E. R. Marshall, secretary of the United Multiphone Co., of New York, superintended the opening of the arcade at Hamilton.

UTILIZING OPPORTUNITIES.

An Interesting Chat on This Subject Which Will Convince the Most Skeptical That Money Can be Made in This Keen Age of Competition by Looking Up the Penny Arcade Proposition.

The chief difference between the man of success and the unsuccessful man is that the former is quicker to recognize and utilize opportunities for money making. Opportunities, however great, are of no value unless acted upon—unless utilized. They come to-day and are gone to-morrow. In this connection Caille Bros., the great manufacturers of automatic specialties, are laying before the public an exceptional opportunity for money making which is afforded by the establishment of penny arcades.

The illustration herewith shows a penny arcade or penny "exhibit," equipped by this enterprising firm. You can start one of these places in a modest way for an investment of $600 upward, and the investment will pay you a larger income than the same amount placed in any other business. This is one of the few fields for legitimate enterprise, where large returns are certain—not already overworked.

George W. Bennett, Youngstown, Ohio, started one exhibit a year ago, and now has two running in that city. He is realizing a profit of $1,000 a month.

Charles Kingsley, Lansing, Mich., opened a place a few months ago, investing $3,500. He cleared the original investment in six months.

Dreamland Co., Toledo, Ohio, opened some months ago and report a flourishing business—taking in on Saturdays as much as $285. They are now opening establishments in other cities.

These few instances are sufficient to illustrate the paying qualities of this business. Any city

A VERY ATTRACTIVE AND PROSPEROUS PENNY ARCADE OR EXHI

with a population of from 8,000 up, is suitable for a penny arcade.

As one of the largest makers of coin machines in the world, Caille Bros. have observed and know the "opportunities." They say: "You can have the utmost confidence in the truth and sincerity of our statement that there is no better paying business in the world. An early investigation and an opportunity to place other facts, equally interesting, before you, is solicited. If you have not received our booklet, 'What is a Penny Exhibit?' a copy will be sent upon receipt of your request. It contains advice to beginners and practical detailed information."

AUTOMATIC DRINKING MACHINES.

SUMMER AND WINTER BUSINESS.

Drop coin in the slot, the machine does the rest. Machines made for any coin. They register a clean glass and a clean drink. For delivery this Summer, orders must be received immediately.

EARNINGS.

Machines at 48 East 14th St., N. Y. City, are earning from $30 to $40 a day during winter, selling cider at 1c. per glass. In the summer earn from $40 to $80 a day. One machine at 31 Park Row, N. Y. City, is now earning $20 a day. In summer months will earn $40 a day. Ten machines at Coney Island took in $3,000 in 60 days, selling ice-cold water at 1c. per glass. These machines sell all kinds of drinks — Lemonade, Orangeade, Root Beer, Celery Tonic. These drinks cost to make 4c. per gallon. When sold through the machine will produce 35 drinks to the gallon.

Machines Leased to Responsible Parties.
Order now for next Summer's delivery.

How Pennies Grow Into $$

THE development of the penny arcade business has been phenomenal. Why? Because those who have gone into the business have been successful, and their success has stimulated others, and as a result, the trade has grown beyond all the estimates placed upon it years ago. ¶ An arcade may be easily run in conjunction with the talking machine business, and it will surprise proprietors to see how quickly a magnificently paying business will be developed. ¶ It surely should interest live business men when a paying adjunct can be added easily to their line. ¶ Years ago we saw the possibilities of coin operating machines as money making factors in our business life and we made extensive plans to meet all of the trade demands. ¶ We have the largest and best equipped factory in the world for the erection of coin operating machines. Our line embraces every kind of machine for arcades, novelty stores, talking machine establishments, cafes, hotels, saloons, drug stores. ¶ We shall be pleased to furnish illustrated catalogues showing the variety and attractiveness of our product. ¶ Take our word for it, there is no better paying business in the world, and the quicker you get in touch with it and acquaint yourself with its money making possibilities the sooner you will add materially to your income. ¶ It is one of the few fields for legitimate enterprise which have not been overworked. Investigate now.

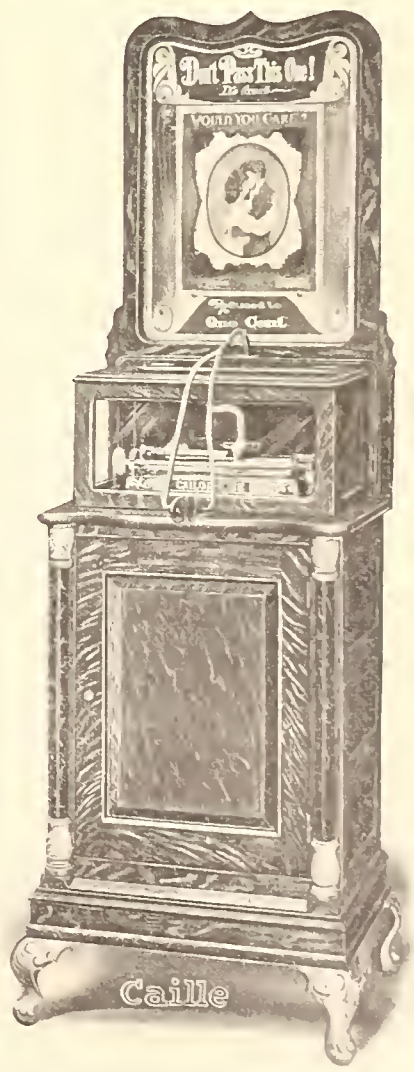
CAIL-O-SCOPE PICTURE MACHINE



CAIL-O-PHONE PHONOGRAPH

ABOUT THE AUTOMATIC PEOPLE.

The Mutoscope in South America—Drinking Machine a Favorite—New Song Machine—Strength-Testing Machines—How Much Heat Can You Stand?—Other News of Interest to Members of the Trade.

Marvin & Casler, whose offices are in the Times building, this city, are one of the oldest manufacturers in this trade. It is to them the slot machine industry owes the famous mntoscope machines. Under the name of the International Mutoscope Syndicate this firm have placed these great money makers in every part of the globe. Early in their career they sold the rights for the United States to the American Mutoscope Co., and several foreign countries are controlled by other firms. The remaining territory, inclnding Mexico and the South American countries, is still covered by the parent company. No arcade is complete without it, for moving pictures always did and always will have a wonderful attraction for the public. Men with even a small amount of capital will find in the mutoscope a lucrative investment.

One of the best money making slot devices on the market is that owned by the Automatic Drinking Machine Co., No. 3 Mercer street, this city. In fact, so remarkable are the returns from these machines that the company place them out on a rental basis, at so much a day, instead of selling them. Model A, which appears in the company's advertisement elsewhere in this issue, is handsome and unique, and suitable for all kinds of drinks. An idea of its profit making powers may be gleaned by writing for information.

A new illustrated song machine for which mnch is claimed by the inventor, I. N. Norcross, formerly of San Francisco, is soon to be placed on the market by the Hawthorne & Sheble Mfg. Co., of Philadelphia. This machine is of the cylinder record type and a number of important improvements are embodied. The pictures are absolutely under control of an involute escapement, which drops them accurately to illnstrate the song. This company, well-known as makers of talking machine snpplies, are destined to create a sensation with their new machine. A number of other devices will be forthcoming, all of which are new and unique, and which will add new life and zest to the arcade business.

The Climax coin operating machine for automatically selling various kinds of shelled nuts and loose candies is proving a great favorite. The Advance Machine Co., of Chicago, the manufacturers, make these machines with a base or for counter use. They pay well in stores of all kinds.

The Davey horoscope fortune teller is another successful machine for arcades. It has twelve slots, one for each month in the year, and delivers a card with horoscope or reading in accordance with the science of astrology.

"Healthy and pleasant way to warm your blood through your hands. How much heat can you stand?" This is the novel sign you face as yon stand in front of "thermo electricity," one of the new machines of Caille Bros., Detroit, Mich. Older machines have settled who has the best lungs, who can lift most, who can punch hardest, and who has a superior grip, but this machine will settle who can stand most heat, and at the same time serves for a double purpose by warming the hands, which is almost a necessity in winter and pleasant in the spring and fall. This machine is a tremendous drawing card for the penny arcades. In appearance the machine is very attractive. All trimmings are polished and nickel-plated. The dial is covered with bevel plate glass, and on top of the machine is an oil painting on solid board.

The Hercules shoulder and arm strength testing machine, a new physical culture device, is one of the most uniqne and attractive ever placed on the market. The public like it. All who see it cannot resist the temptation of lifting in several tests the enormous dumbbell. One of its best features is that it requires no care, gives little tronble and simply coins money.

HOW NICKELS MAKE MILLIONS.

Some Facts in This Connection by the Regina Co. That Will Interest.

Any arcade proprietor who is in doubt regarding the profit producing qualities of coin-operated musical instruments, that is, exclusive of talking machines, should be readily convinced by the proofs put forward in a recent folder issued by the Regina Co. in the interests of their extensive line of coin-operated instruments. Their latest advertising matter is headed "The New York Subway is Supported Entirely by Nickels," and reads in part as follows:

"It cost $50,000,000 to build it, yet it is a profitable investment even for that sum, though the profits come in five cents at a time. Stop and think of this when you are asked to invest in a coin-operated Regina.

"The man who loans money is content with 6 per cent. The man who goes into a mannfacturing business does not expect to make more than 10 or 15 per cent. Profit greater than that is almost miraculons. Yet we figured out last year from the testimonials of a large number of users of our coin-operated Reginas that the average profit was 136 per cent. a year. This means that an investment of $90 to $1,000, according to the instrnment bought, paid for itself and 36 per cent. additional the first year. If you know any investment that will beat this, we wonld like to hear abont it.

"That was last year. This year we have received another bunch of letters from enthusiastic users of our slot machines which bear even stronger testimony to the profits of coin-operated music makers in cafés, barrooms, restaurants, hotel lobbies, drng stores and other places where people congregate.

"There is only one moral in all this evidence: A Regina is a proposition on which you cannot lose money either way you look at it. It pays for itself, and more, in the patronage it brings to yonr place of business. It pays for itself, and more, in the nickels it actnally takes in. It pays an excessive profit in either case, so that yonr investment means excessive profits, if the evidence means anything."

PEERLESS PLAYERS IN GREAT DEMAND.

The Peerless piano players are in great demand this season for arcades and other pnblic places of amusement. This branch of the bnsiness is growing tremendously. The Peerless Piano Player Co., of New York, manufacturers, are constantly in receipt of letters like the following from the Central Amusement Co., 412 Youngerman Building, Des Moines, Iowa, who write:

Gentlemen—Please rnsh piano ordered. We need it badly; we depend on yonr instrument, and nse no other now. We think it is in a class by itself, and we will always be glad to recommend it for you. We can show any one in ten minutes why it is the best, because we know the piano game pretty well.

Very truly yours,
B. F. Elbert, President.

Nerve-racking shrieks from siren whistles on tugboats, little, squeaky blasts from freight locomotives, shrill sounds from Hudson River night boats and prolonged signals from ferryboats are all being duly recorded by residents of the upper west side. The choicest collection of night sounds that is to be found will be gathered by the people living along Riverside Drive.

These sounds are all being taken on phonographic records by members of the newly formed Society for the Suppression of Unnecessary Noises. When a full set is gathered the records will be used to entertain city officials and Albany legislators.

Started by Mrs. Isaac L. Rice, who conducted a successful crusade against nnnecessary tooting of steam craft, the society is receiving the cooperation of many prominent physicians and professional men. While they do not expect to make New York a city of perfect silence, they are hopeful of bringing about great improvements.

A new talking machine store has been opened at 4 Pleasant street, Fitchbnrg, Mass.

"CONFESSED SUPERIORITY"

OF

COLUMBIA RECORDS

Sweeping Decision of the U.S. Circuit Court of Appeals

not only declares our patent rights unassailable, but pays a remarkable tribute to the ***superior process under which Columbia Records are made.***

The Court refers to "***The now confessed superiority and commercial success of the product of the patent in suit,***" and sustains the patent in the following extraordinary tribute:

"The disc produced by the patented process responds to the test of success where others have failed."

"The patentable novelty of the process of the patent is not only indicated by large sales, but also by the unassailable evidence of that most sincere form of flattering recognition, IMITATION AND APPROPRIATION BY RIVAL MANUFACTURERS. In short, it has, so far, supplanted all other methods previously used, that, apparently, all disc records are now made by said process, and COMPLAINANT'S CHIEF COMPETITOR ADMITS THAT IT HAS DISCARDED ITS OWN PATENTED ETCHING PROCESS AND HAS SUBSTITUTED THEREFOR THE PROCESS OF THE PATENT IN SUIT."

These suits were brought against the manufacturers to protect our just rights, and this decision now gives us an opportunity to get closer to the trade rather than to annoy, and in order to give every dealer an opportunity to clean up all his old stock of disc records *without loss to him* (we to relegate them to the scrap heap), and in their place to secure a complete stock of Columbia Records, we make this exceedingly liberal proposition:

Up to and including March 1st, we will take off the hands of any dealer all unbroken disc records, OF ANY MANUFACTURE, on the exchange basis of Five for One

Full particulars can be promptly obtained from any Columbia Jobber, or by writing directly to us.

You can now replace your stock of OLD records of inferior quality with New Columbia Records of "CONFESSED SUPERIORITY."

It will enable you to stock up with our newest and most popular records and add greatly to your sales.

The demand for Columbia Records is unprecedented. We have been fully prepared for this, and can fill your orders promptly.

Get ready at once to reap your share of the profits.

"THE FINISH IS BAKED ON"

That's why a (T©T) Horn looks better and wears better than any other horn. To begin with, our "BAKED-ON" process demands that the very finest enamels be used. After the enamel is applied, the horn is placed in huge fire-proof ovens and subjected to several hundred degrees of heat. What is the result? The enamels, in baking, fill every pore of the metal and the very fibre of the metal becomes saturated. That's why the (T©T) Horns are superior. Any wonder then from the above, that the (T©T) Horn is known the world over as the most beautiful and most serviceable made? And you will find them the most satisfactory and profitable goods you can handle, too.

IS IT MECHANICAL ART?

Will the Artistic Profession be Superseded by the Artistic Machine?—Some Interesting Conclusions Drawn from Recent Developments in the Musical and Photographic Fields—How Dreams Become Realities.

There are few subjects as interesting to follow in these epoch-making days as the amazing progress of so-called "mechanical art." Indeed only few are desirous of grasping or comprehending the broad tendencies at present prevailing in the domains of music and painting in connection with this movement.

Perhaps any musician would consider himself insulted if he were asked whether his profession would ever be superseded by the talking machine, the orchestra, the pianola and other musical devices. In like manner any artist would take offense if he were asked whether photography, colored photographs and photographing in colors would ever make the painter useless and obsolete.

Both of these artists would express great contempt for mechanical art and yet the day may come when there will be no other kind. So far as their sneers are concerned, every labor-saving machine that has ever been invented has at one stage of its development been sneered at.

The programme is invariable. First of all it is denied that a certain thing now done by hand can ever be done by machinery. Then comes the invention, but for a long time it is regarded as turning out poor work, and there is still a demand for what is 'hand made.' Finally it is realized that the machine-made article is better than the hand made. A list of the machines that have had this history would fill a book, and among them would be the cotton gin, the knitting machine, the nail-making machine, the watch factory, the stamping machine and the shoe.

A multitude of others are still in the second stage, where not having been fully developed they are regarded as failures, and where they are still in competition with the old method, but they are improving every day, and it is simply folly not to foresee their ultimate success and superiority. The question is whether artificial music and artificial pictures belong to this class.

The musician says: "The mechanical piano player! Angels and ministers of grace deliver us. It has no expression, no character and no soul. Its time is perfect, but its very perfection is an imperfection. It can never take the place of the living performer." He is perfectly sincere about it, but if five years ago he were told that a machine could be made that might be placed in or up against any piano and play the most difficult music on it in perfect time he would have said it was impossible. Now that this has been accomplished he is certain that expression and finish can never be secured by that "music box" but he may be as much mistaken now as he would have been then.

The painter is just as contemptuous of the chromo and the colored photograph. "Of course," he says, "the photograph makes a truer and more minute reproduction of an object than the artist does, but that is rather a defect than a merit. A great painting is great because of what it does not reveal. Besides this the value of art lies chiefly in idealization, and it is impossible to photograph the ideal."

No one will deny the force of these objections, and yet they are no more forcible than those that were urged against the present state of photography. A few years ago any one who ventured to predict the photographing of colors would have been regarded as silly, but that very thing has been achieved and it is possible that every other effect now produced by the painter's pencil may yet be imitated and surpassed by the printing press, with the single exception of idealization, concerning the value of which there is some difference of opinion. Possibly people would be better off without it.

It is not meant, of course, that the musician and painter would be literally left without jobs. It takes musicians of a high order to manufacture orchestrions and artists of ability to color photographs or even to take them. Indeed, it is conceivable that in consequence of the cheapening of music and art there may be a greater demand than ever for musicians and artists, just as the sewing machine has given employment to more seamstresses than it ever displaced.

Music and pictures of a high order by machinery may be a mere dream, but not so much of a dream as the flying machine and wireless telegraphy were ten years ago.

FOREIGN TRADE EXPANSION

Is the Order of the Day With the National Phonograph Co.—Australian and Mexican Branches Enlarged—Conditions in India.

Owing to the growth of the foreign business of the National Phonograph Co., it has been found necessary to considerably increase the size of the offices in both the Australian and Mexican headquarters, with prospects of enlarging their other branches in London, Paris and Berlin at an early date to accommodate the demand. The Mexican office has succeeded in selling a fine outfit to President Diaz, of our sister republic. A peculiar situation is existent in National Phonograph affairs in India. Cheap outfits are deadwood, for the simple fact that talking machine purchasers in that country are either rich rajahs or English Government employes, the other classes being too poor to buy at all. Naturally the two classes mentioned want nothing but the best.

VALUABLE SALES POINTERS

Put Out by the Victor Talking Machine Co. Which Will Interest the Trade at Large.

The Victor Talking Machine Co. have been compiling some splendid literature for the benefit of their salesmen, and some extracts from it cannot fail to assist the readers of The World who are truly anxious to make a success of their business. For instance:

"Whatever you do, don't be satisfied with the business that comes to you of its own accord. That way of doing business was out of fashion twenty-five years ago.

"However small or however large your business may be you can make it bigger by giving thoughtful attention to pushing it. It isn't always the farmer with the most land that gets the biggest crops, and it isn't always the dealer in the biggest town or the salesman with the largest territory that makes the largest profits. The man who applies his labor most diligently and intelligently is the winner in the long run.

"To be asked something which you ought to know all about, and which you have had ample opportunity for learning, and to find yourself unprepared with the proper answer is an embarrassing experience, whether you are seven years old or seventy-five.

"Nothing is so humiliating to the salesman who understands the underlying principles of his business as to have a customer ask him some simple question, like 'How much will it cost me to get a Victor No. 4 with a K horn?' and not be able to answer on the spot.

"And even worse is the kind of man who comes in occasionally and actually knows more about your stock than you do yourself.

"The good salesman will learn his stock thoroughly from every point of view; the styles, the prices, the different combinations that can be made with advantage, the points where his stock differs from that of his competitors—and a score of other things. Of course he knows the exact place where each record can be found, so that he can hand it out the minute it is asked for.

"To have to run to a desk and consult a price list not only interrupts your work, but it produces an impression that business is so bad that you can't sell many talking machines, or you would be better posted about them.

"The salesman feels more confidence in himself, and he inspires more confidence in his customers when he has his facts in his head rather than in his pocket or in his desk.

"Know what you have on hand so that you may never miss a sale through an oversight. Have some system of keeping track of sales and ordering new stock.

"In Mark Twain's story of the Prince and the Pauper they finally detect the pauper, who has usurped the prince's place because he uses the great seal of state to crack nuts with. The dignitaries of the court argued—and very correctly—that a boy who was used to courts and their ways would never use the symbol of authority so disrespectfully.

"In the same way you can tell the prince among the salesmen by the way he handles the stock he sells. It is the poor salesman who bangs things around and lets them deterioriate for want of proper care.

"Respect for your stock should begin in your own mind. The outward care which you give to the arrangement and preservation of your goods is the reflection of something inside your brain—a something which should be carefully cultivated by every merchant.

TALKING MACHINE "TALKED"

In This Instance Without a Record and Startled Salesmen and Customers.

There was a startled audience in a talking machine store in this city one afternoon a couple of weeks ago. It happened in this wise: The store was well filled with customers, who were examining machines and trying records, when one of the unused machines suddenly exclaimed, "Try me, I want to talk." "Keep quiet, you disturb me," came from another that was playing a violin solo. "You squeak. Oil yourself," came out of a big horn at the far end of the store. "Give me a horn, I want to sing," squeaked a small machine that had been denuded of that useful appendage. In the meantime the customers were giving gasps of astonishment at the uncanny conversation, and some of the more superstitious regarded the machines as bewitched. By this time the horns, machines and even the records were engaged in sharp repartee. Finally it was discovered that a clever ventriloquist among the audience was the author of the commotion, and the machines settled themselves down to their accustomed duties.

HOW MUSIC PREVENTS INSANITY.

According to Lieut-Commander Robert E. Peary, the famed Arctic explorer, music is the most effective preventative of the insanity which often results from the terrible silence and loneliness of the Arctic regions. In view of this fact, Peary took upon his last trip both a piano player and a talking machine, which combination proved invaluable in keeping up the spirits of the party.

It may interest some readers to know that it takes from 10 to 20 records to make a Chinese song complete, and nearly every song deals with historical events in the lives of the Chinese rulers. Chinamen are ideal customers. They buy the best and always pay cash, some even paying in advance for records which they order.

HANDLING ONE OR MORE MAKES

Of Talking Machines Is Discussed Pro and Con —The Arguments Adduced on Both Sides Are Interesting, Agree or Disagree With Them.

The question of confiniug a dealer's stock to one or two makes of machines and records or carrying a general stock has been lately the subject of discussion by several members of the trade. Like all questions, it has two sides, and either argument is plausible until the other is heard. The advocates of a general stock regard the talking machine business like any other, purely a business proposition, and claim that a dealer should be able to care for his customers' needs, and no matter what they should call for, it should be in stock. As the dealers do not receive any extra concessious for booming one make of goods, they are free to sell all. One dealer who advocates this plan compares it to any well-equipped mercantile establishment, that carries all of the leading brands of its particular line, showing no discrimiuation. These houses, he argues, are the ones that invariably attract trade, as their assortment is so varied that a patron is not compelled to shop around in order to make selectious. Those who argue contrarywise say that a dealer has to trade upon the reputation of the goods he represents, and by announcing himself as a dealer in certain lines only, attracts those who believe that product is superior, and at the same time enables him to compare the merits of his line with that of some other. In addition, the duplicating of records by carrying various makes would be a nuisance and confusing to patrons. They also contend that this is an age of specialists, and those pushing one particular line do better than when several are mixed up.

PAYING EXPRESSAGE ON RECORDS.

At the recent meeting of the Ceutral States Talking Machine Jobbers' Association, held in Chicago, it was decided to make the dealers pay expressage on all record shipments. The jobbers hope in this way to save enough to counterbalance the increased price of records without raising the wholesale prices to dealers.

O'DEA'S NEW QUARTERS

In Paterson Will be Devoted to His Talking Machine Business.

James K. O'Dea, the talking machine dealer of 117 Ellison street, Paterson, N. J., is at present erecting a handsome two-story building at 115 Ellison street, the ground floor of which will be occupied by his talking machine and record stock, and the upper floor by the offices. The building will be of strictly modern fireproof construction.

Mr. O'Dea was at one time connected with his father in a dry goods store in which the latter had an interest. When his father sold out, Mr. O'Dea, realizing the future of the talker, put iu an extensive stock and prospered exceedingly. He rented his present quarters in 1902, just after the big fire.

HOW McCALLISTER CATCHES TRADE.

Wm. McCallister, who handles the Victor at 221 W. Baltimore street, Baltimore, Md., is one of those with the right idea of advertising and he gets results. One of his schemes that has proven successful is to carry an "ad" in the program column of a local theatre immediately following the names of the cast—a position where it must be read. The copy is changed each week and is framed to suit the title of the play running at that time. As au example we reproduce the advertisement appearing during the recent run of the Wizard of Oz.

PROGRAM CONTINUED.

Once upon a time the Wizard of Oz saw a bald headed man seated on the first row in the theatre. The bald headed man knowing he was a wizard, asked him what was a good thing for bald heads. The Wizard explained to him he thought at the present time hair was the best thing. Moral: A Victor record is the best record to make any talking machine talk and sing and is just as necessary as hair for a bald head. In "The Wizard of Oz" you will find selections that will please you in Victor records. If you have not a Victor Talking machine, write me and I will send one for you to hear, or call at my talking machine parlors. 10 records, 60 cents each, $7.20 per doz., $1.00 cash, 50 cents a week. Ask to hear Victor records, Nos. 4966-4972-4943-4969-4951-4974-4967-4973. Wm. McCallister, 221 W. Baltimore St. Victor records, machines, cabinets. Repairing of all kinds of talking machines.

Talking machine dealers in other cities might find it profitable to emulate Mr. McCallister's example.

SOME ADVERTISING POINTS.

There was once a prominent editor who instructed the beginners in journalism in these words: "When you have something to tell, begin at the beginning, tell the story, and when you have reached the end—stop!"

In other words, do not follow the custom of some of our European friends of telling a joke and then explaining it.

The modern writers of advertising seem to be learning this lesson. But there are still too many exceptions. There are too many who do not tell enough. Altogether too many who attempt to tell too much. There are no instructions more fatal than these: "I know this copy is too much for the space, but use the smallest type you have and crowd it in somehow."

CARUSO VISITS VICTOR PLANT.

Enrico Caruso, the famous tenor of the Metropolitan Opera House, and whose records have created quite a sensation, was among the recent visitors at the immense factories of the Victor Talking Machine Co. He was much impressed with all the wonderful equipment which was carefully explained to him, as he made the rounds of the plant.

The "Clarion" disc record recently put on the Canadian market is shipped in a heavy jute envelope with a window exposing the label, thereby greatly facilitating handling.

WHEN PLACING YOUR VICTOR ORDERS

REMEMBER

That we are exclusive VICTOR JOBBERS, and that we are prepared to take care of your wants in this line, be they large or small. We have three large floors and basement devoted entirely to the sale of these goods, and carry a stock which is sufficiently large to take care of all orders received promptly

AMERICAN TALKING MACHINE COMPANY
586 FULTON STREET, - - - BROOKLYN—N. Y. CITY

Largest Talking Machine House in the City

WHAT THE VICTOR COMPANY'S VICTORIES MEAN

The decisions of the United States Courts on the Victor Company's Basic Berliner Patent, No. 534,543, mean:—

1. That the Victor Company controls the disc reproducing machine, comprising the reproducer and the disc record, where the reproducer is vibrated and propelled by the record.
2. That the Victor Company controls this method of reproducing sound.
3. That the Victor Company controls the disc machines for reproducing sound from such records by this method.
4. That the Victor Company controls the disc records for use on these machines.

The United States Courts have sustained this Berliner Patent broadly (claims 5 and 35) in the following decisions:

Victor Talking Machine Company, et al., vs. American Graphophone Co., decision of the United States Circuit Court, for the Southern District of New York, filed September 28, 1905.

Victor Talking Machine Company, et al., vs. Leeds & Catlin Co., decision of the United States Circuit Court, for the Southern District of New York, filed April 26, 1906.

Victor Talking Machine Company, et al., vs. Talk-O-Phone Co., decision of the United States Circuit Court, for the Southern District of New York, filed April 26, 1906.

Victor Talking Machine Company, et al., vs. Leeds & Catlin Co., the decision of the United States Circuit Court of Appeals, for the Second Circuit, filed October 12, 1906.

Victor Talking Machine Company, et al., vs. Talk-O-Phone Co., decision of the United States Circuit Court of Appeals, for the Second Circuit, filed October 12, 1906.

The United States Circuit Court for the Southern District of New York, in a recent decision by Judge Lacombe, filed January 5, 1907, in the contempt proceedings in the case of the Victor Talking Machine Company, et al., vs. Leeds & Catlin Co., has held that these claims of this Berliner Patent included records as well as machines in the combination; and that a sale of such disc records for use in these disc machines was an infringement of the patent.

The Victor Company, therefore, controls the ***Basic Patent*** upon these machines and records.

According to the decision of the United States Circuit Court of Appeals, the Basic Berliner invention dates back to 1887.

Some of our competitors are advertising, with some flourish, a recent decision of the Court relative to a patent for an improvement in record making, which was invented about ten years after Mr. Berliner's invention. These records are intended for use in the combination of the Berliner Basic patent, and when so sold and used are subservient to it.

The Victor Company hesitates at anything like bragging, but some of the advertisements of its competitors make it necessary, in justice to itself, and the trade, to make this statement, so that the fact may be fully appreciated that ***the Victor Company is on Top.***

We have issued a license to the Universal Talking Machine Manufacturing Company and to the American Graphophone Company.

We trust the Dealer will duly note the foregoing.

MAY SALESMEN BE COLLECTORS?

A Subject That Has Given Rise to Much Controversy Discussed by Mr. Morrisey, a Talking Machine Salesman.

Many prominent business men and salesmen have contributed valuable opinions to the symposium conducted by Salesmanship on the question, "May salesmen be collectors?" One of the very interesting articles was that written by A. J. Morrisey, salesman for the Columbia Phonograph Co., as follows:

"Whether or not the salesman is the right man to make collections depends upon many things. The nature of the commodity which the salesman represents, the average size of his customers' accounts, the extent of his territory and his personal standing with the trade are all more or less influential in deciding whether or not it is wise for him to attempt to collect accounts as well as to sell goods. This firm has a carefully organized collection department, and our salesmen are not, as a rule, expected to concern themselves with collections.

"My personal experience, however, has been that oftentimes a salesman can collect an account from one of his own customers better than any one else could collect it.

"Occasionally, in any line of business, a perfectly reliable customer will allow his account to become overdue, and will even ignore the bills rendered, for no other reason than that he entertains some grievance against the house which the more tactfully than any collector in such case; if a collector is sent it is very possible that there will be trouble. Even if the collector succeeds in arranging a settlement it may be expected to follow that the customer with the grievance will transfer his account to some other firm.

"His account would perhaps have been saved, his obligation settled and his friendly patronage continued if the salesman with whom he had dealt in the first place had been delegated to make the collection. The salesman's knowledge of his customer would enable him to handle the matter more tactfully than any collector in such case; also the fact that the salesman had previously succeeded in arousing the confidence and good feeling of the customer (as he must have done to gain the order) counts for much. The customer would respond more readily to his advances and would feel that he was dealing with an acquaintance who was interested in him.

"I remember the case of a Bohemian dealer to whom I had sold a considerable bill of goods. There was no question about his ability to pay, but the fact remained that long after the account was overdue it remained unpaid.

"The Bohemian was politely invited, by letter, to pay, but he paid no attention. Invitations became more pressing, but he still ignored them. A collector was sent to call upon him and discovered that neither the dealer himself nor any one in his establishment could speak English; all the urgent letters from the house stating this dealer's position and enlarging on his delinquency had remained unread. The only thing they contained that was intelligible to the dealer were the figures indicating the amount of his bill, and this he considered was an unjust one. Being indignant at what he thought was an overcharge, he had simply let the matter drop until the collector called, at which time he managed to convey his sense of injury and his determination to have no more to do with it.

"As it was my customer, I undertook the business of collecting the account. I called with an interpreter and found that his attitude toward me was very different from his attitude toward the collector. It appears that I had made a favorable impression on him when I sold the bill in the first place.

"Explanations followed and it was easy to clear up a misunderstanding which the Bohemian had entertained with regard to the terms of the sale. So soon as he saw his mistake he was eager to put himself in the right; the account was promptly settled and he has placed further orders with the firm.

"Instances of this kind are not uncommon, and they show how important it is for the salesman to take occasionally the role of collector for his firm.

"When he can, in the manner described in the foregoing, save his house from losing a good customer, he performs as important a service as he does in securing the trade of new patrons. It is as much a salesman's business to prevent the forfeiture of old accounts as to secure new ones. So far from feeling resentment at having to act as collector he should feel an interest in this part of his work and take pains to do it well."

A GREAT EDUCATIONAL CAMPAIGN.

The International Correspondence Schools, Scranton, Pa., have built up their immense system of Education largely through widespread and judicious advertising so gotten up as to appeal directly to the interests of the majority of readers. They recently issued a booklet in the form of a savings bank deposit book with the apt introduction, "Turn time into cash," and containing reading matter of the most convincing character. One of the most successful series conducted by the International Correspondence Schools are the language courses through the medium of the Edisou repeating phonograph. The press all over the country have expressed themselves as most enthusiastic over language study by this system, and where agents have demonstrated the principle of language study, numerous orders have been taken from prominent professional and business men who realize its value.

WHO CAN RESIST IT?

The following which we take from a Western exchange "sheds light" upon still another instance where a talking machine proves of practical value: "A phonograph comes as near being human as the ingenuity of man can make it. When a person cannot be with you in flesh, or when a person's voice is heard in song or speech long years after departing this life, the phonograph takes a place among the seven wonders. After you have enjoyed several songs by the same person, especially if it is a lady, you want to hug the machine or bite a chunk out of the record. The very latest story told on the worth of a phonograph is how a farmer used it to encourage his hens to lay. It seems that they had taken to laying off instead of eggs. His neighbors' hens were keeping up a constant cackle, so taking a blank record he went over and got a copy of their hilarity. Returning he began repeating it to his own chickens. In less than ten minutes every nest was full, while several other hens stood around anxiously awaiting a chance."

DENVERITES LIKE THE "TALKERS."

Encouraging Reports from the Leading Dealers Regarding Business as a Whole.

(Special to The Talking Machine World.)

Denver, Colo., March 8, 1907.

Upon a recent visit of the Talking Machine World representative to the trade here he found business extremely brisk and the demand in most lines very gratifying. Last year was a wonder, but judgiug from the business so far in 1907 and preseut prospects all previous records will be eclipsed during the twelve months we so recently entered on.

W. W. Griggs, vice-president of the Knight-Locke Piano Co., who handles the Victor, Edison and Columbia lines, reported business to be most satisfactory, both at headquarters and in the various branches throughout the State.

The trade of the Denver Music Co. has increased to such an extent that the facilities for handling customers properly were entirely inadequate, necessitating the building of three trying-out parlors to be devoted to both Edison and Victor lines.

The Knight-Campbell Music Co. have all the Victor business they can handle, and perhaps a little more, as it is a hard proposition for them to get sufficient stock to meet the demand. They recently sold a very elaborate Victor Victrola outfit to General Palmer, the prominent millionaire of Colorado Springs, Colo., who is convalescing from a serious illness and uses the Victor to relieve the monotony of the sick room.

The Columbia Phonograph Co.'s branch, of which M. B. Henry is manager, have reached an average of over six machines daily which they have maintained for several weeks. The outfits are mostly medium and higher-priced grades.

UTILIZE EDISON COMMERCIAL SYSTEM.

(Special to The Talking Machine World.)

Cincinnati, O., March 8, 1907.

A branch office has been opened in the Union Trust Building by the National Phonograph Co. for the purpose of demonstrating their commercial system to the business man of this city. According to the manager, D. O. McCloud, the system has been taken up with much enthusiasm, and forty machines were installed within a few weeks after the opening of the office. The Rudolph Wurlitzer Co. installed the system in all their departments.

ATTENTION

Edison and Victor Dealers

WE ARE KNOWN all over Pennsylvania as the largest Edison and Victor jobbers in the State.

WE ARE PIONEERS in the Talking Machine business and among the first to sell both these lines and OUR EXPERIENCE COUNTS in YOUR FAVOR.

IN ADDITION to machines and records we sell supplies of all kinds. We particularly call your attention to our fine line of CYLINDER and DISC CABINETS and our SUPER NEEDLES.

TRADE HAPPENINGS IN INDIANAPOLIS.

Lively Trade Reported for the Past Month in All Branches of the Business—Learning Songs from Phonographs—Mazer's Plan of Selling Records—Craig's Big Trade—Devine's Unique Advertising—National Amusement Co.'s New Place—Excursions and Arcade Trade—A Newsy Budget from a "Live" Talking Machine City That Will Interest Readers.

(Special to The Talking Machine World.)

Indianapolis, Ind., March 9, 1907.

Talking machine companies in Indianapolis have had a lively trade for the last month, several things contributing to the increase, among them good weather and various trade schemes. One thing which has aided trado is the plan which has been carried out of placing chcap machines in the smaller talking machine establishments of the State. These machines are manufactured in Germany. They arc given away by the dealers in the smaller cities of the State, the person receiving them agreeing to buy a certain number of records. This has made a big demand for records and has increased the business of Indianapolis jobbers. It is said that the persons who receive these small machines free of charge are induced later to buy larger and better machines. This makes business on instruments better for the Indianapolis jobbers.

Edward E. Hill, on Massachusetts avenue, who sells Edison phonographs, says many poor people are buying talking machines that their children may learn the best songs. These people, as a rule, are unable to own pianos. They desire to have the best music in their homes for their children, and the talking machines have proved to be a great boon to them. Mr. Hill says that his business has increased greatly and he believes that this is one of the causes. The poorer class of people, and especially those living in the country, he says, are becoming educated to the talking machine music.

Geo. W. Maze, who has an establishment on Virginia avenue, started a talking machine wagon through the country a month ago, and he says the wagon has been enjoying an excellent trade. The wagon is loaded with talking machines of various styles, all of the Edison brand, however, and the canvass is made from house to house, much after the manner of the huckster's wagon maintained by owners of country stores. It is one of the ways of reaching the country people with talking machines suggested by The World some months ago, and is proving to be effective. The wagon probably will be kept on the road during the summer.

The Craig jobbing house, which sells Edison machines, has 5,000 March records ready to go out, and Mr. Craig says that he will without doubt order 3,000 more. His business continues good, he says, and he is able to fill orders promptly.

A. B. Wahl, on South Illinois street, who sells Edison machines, says that his trade last Saturday was better than any Saturday trade for several months. He has a store at Lafayette, which he says is doing a good business. Mr. Wahl is closing out his stock of Talkophone disc machines at reduced prices, and will turn his chief attention in the future to Edison machines.

D. K. Dolbeer, of the National Phonograph Co., New York, was a trade caller at the Wahl store recently.

Frank Lesley, who conducts a store on Massachusetts avenue, has been sick for several days, and O. O. Carter is in charge.

Thomas Devine, manager of the Columbia Phonograph Co.'s store, did some unique advertising on Washington's birthday. The Baptist Brotherhood, composed of a number of representative men of the city, chartered two interurban cars and went to Peru to attend a banquet. In the motorman's vestibule of the rear car Mr. Devine placed a B. C. Columbia graphophone. When stops were made at the various towns along the way this machine furnished the national airs. On the large aluminum horn of the machine the word Columbia was emblazoned in bold letters. Inside the cars Mr. Devine placed the smaller disc machines, and with these the passengers were supplied with popular songs and minstrel music along the way. The scheme made a great "hit" with the members of the Brotherhood.

Thomas Devine displayed in the window of the Columbia Co. last week one of the Columbia commercial graphophones run from an alternating electric current. The Columbia commercial machines are used in the offices of a large number of manufacturing plants and mercantile establishments here, and the machine in the window proved an attraction. Mr. Devine makes it a point to change the displays in his windows about twice a week.

The Columbia Phonograph Co. has had numerous inquiries for the Bonci records, and expects a good sale on these records when they arc received.

The National Amusement Co., which runs a talking machine and picture exhibit here on South Illinois street, expects to open their new place at Terre Haute by May 1. This company have erected a two-story building, 75 by 140 feet, at Terre Haute, on Wabash avenue. Seventy-five machines of various kinds will be installed, 15 of them talking machines. The company have not decided yet just what kind of machines they will use. A five-cent vaudeville will be conducted in connection with the exhibit.

The "Exhibit" on South Illinois street owned by R. Wagner, of Buffalo, has had a better business for the last few weeks than for several months previous—better, in fact, than since last September. This establishment uses Edison machines.

Managers of talking machine and picture parlors are wondering whether the railroads will run cheap Sunday excursions to Indianapolis this year. These excursions in years past have brought great patronage to these parlors, the places being crowded on such Sundays. The Indiana Legislature has just enacted a two-cent fare railroad law, and it is feared that this cheap rate will cause the railroads to cut out the cheap Sunday excursions. No excursions have been announced by the railroads as yet.

One of the talking machine houses of the city was subjected to a joke not long ago. They sent a machine to a man's home only to find that he had not ordered a machine. An investigation revealed the fact that the man had been a victim of practical jokers of all kinds for two years. Ambulances and hearses had been sent to his house by the jokers. The talking machine man advised the unfortunate victim of jokers to appeal to the police and he did, and in this way the daily papers of the city got a good "story."

AN ENJOYABLE MUSICALE

Was That Given Through the Medium of the Victor Talking Machine and the Welte-Mignon Recently.

One of the interesting musical entertainments of the season was given last week in the ball room of the New Willard, Washington, D. C., on the Welte-Mignon piano and the Victor Auxetophone. The recital was under the direction of E. F. Droop & Sons Co., and offered music lovers an opportunity to hear a series of great artists in the absence of these musicians.

The program included representations of the playing of Paderewski, Carreno, D'Albert, Edvard Grieg, Alfred Gruenfeld, and Mlle. Clothilde Kleeberg. Through the agency of the Victor Auxetophone such celebrated artists as Mme. Eames, Caruso and Scotti were heard.

The Welte-Mignon piano programme was notable. The celebrated interpretation of Chopin by Paderewski was reproduced in a marvelously interesting manner, and to those who know him well it seemed that the famous Pole was indeed at the piano. His delightful and delicate rendering of "Hark! Hark! the Lark!" and his own conception of his familiar "Minuet" were given. A Liszt rhapsodie brought Carreno to Washington, and Edvard Grieg's own interpretation of his "Norwegian Bridal Procession" was vividly brought before the audience.

Interspersed between the piano numbers were a series of vocal selections by Mme. Eames and several songs and interpretations by Scotti and Caruso.

The Recital, says the Washington Post, was the most interesting ever given under similar conditions, and gave an added proof of the degree of ingenuity which is being exercised in the manufacture and operation of these inventions.

In the Philadelphia store of the Columbia Phonograph Co., located on Chestnut street, a most effective window display was made in honor of Washington's Birthday. The main features were three revolving tables, the two end ones holding the latest model Columbia disc machine and the center platform an immense stuffed eagle bearing an American flag.

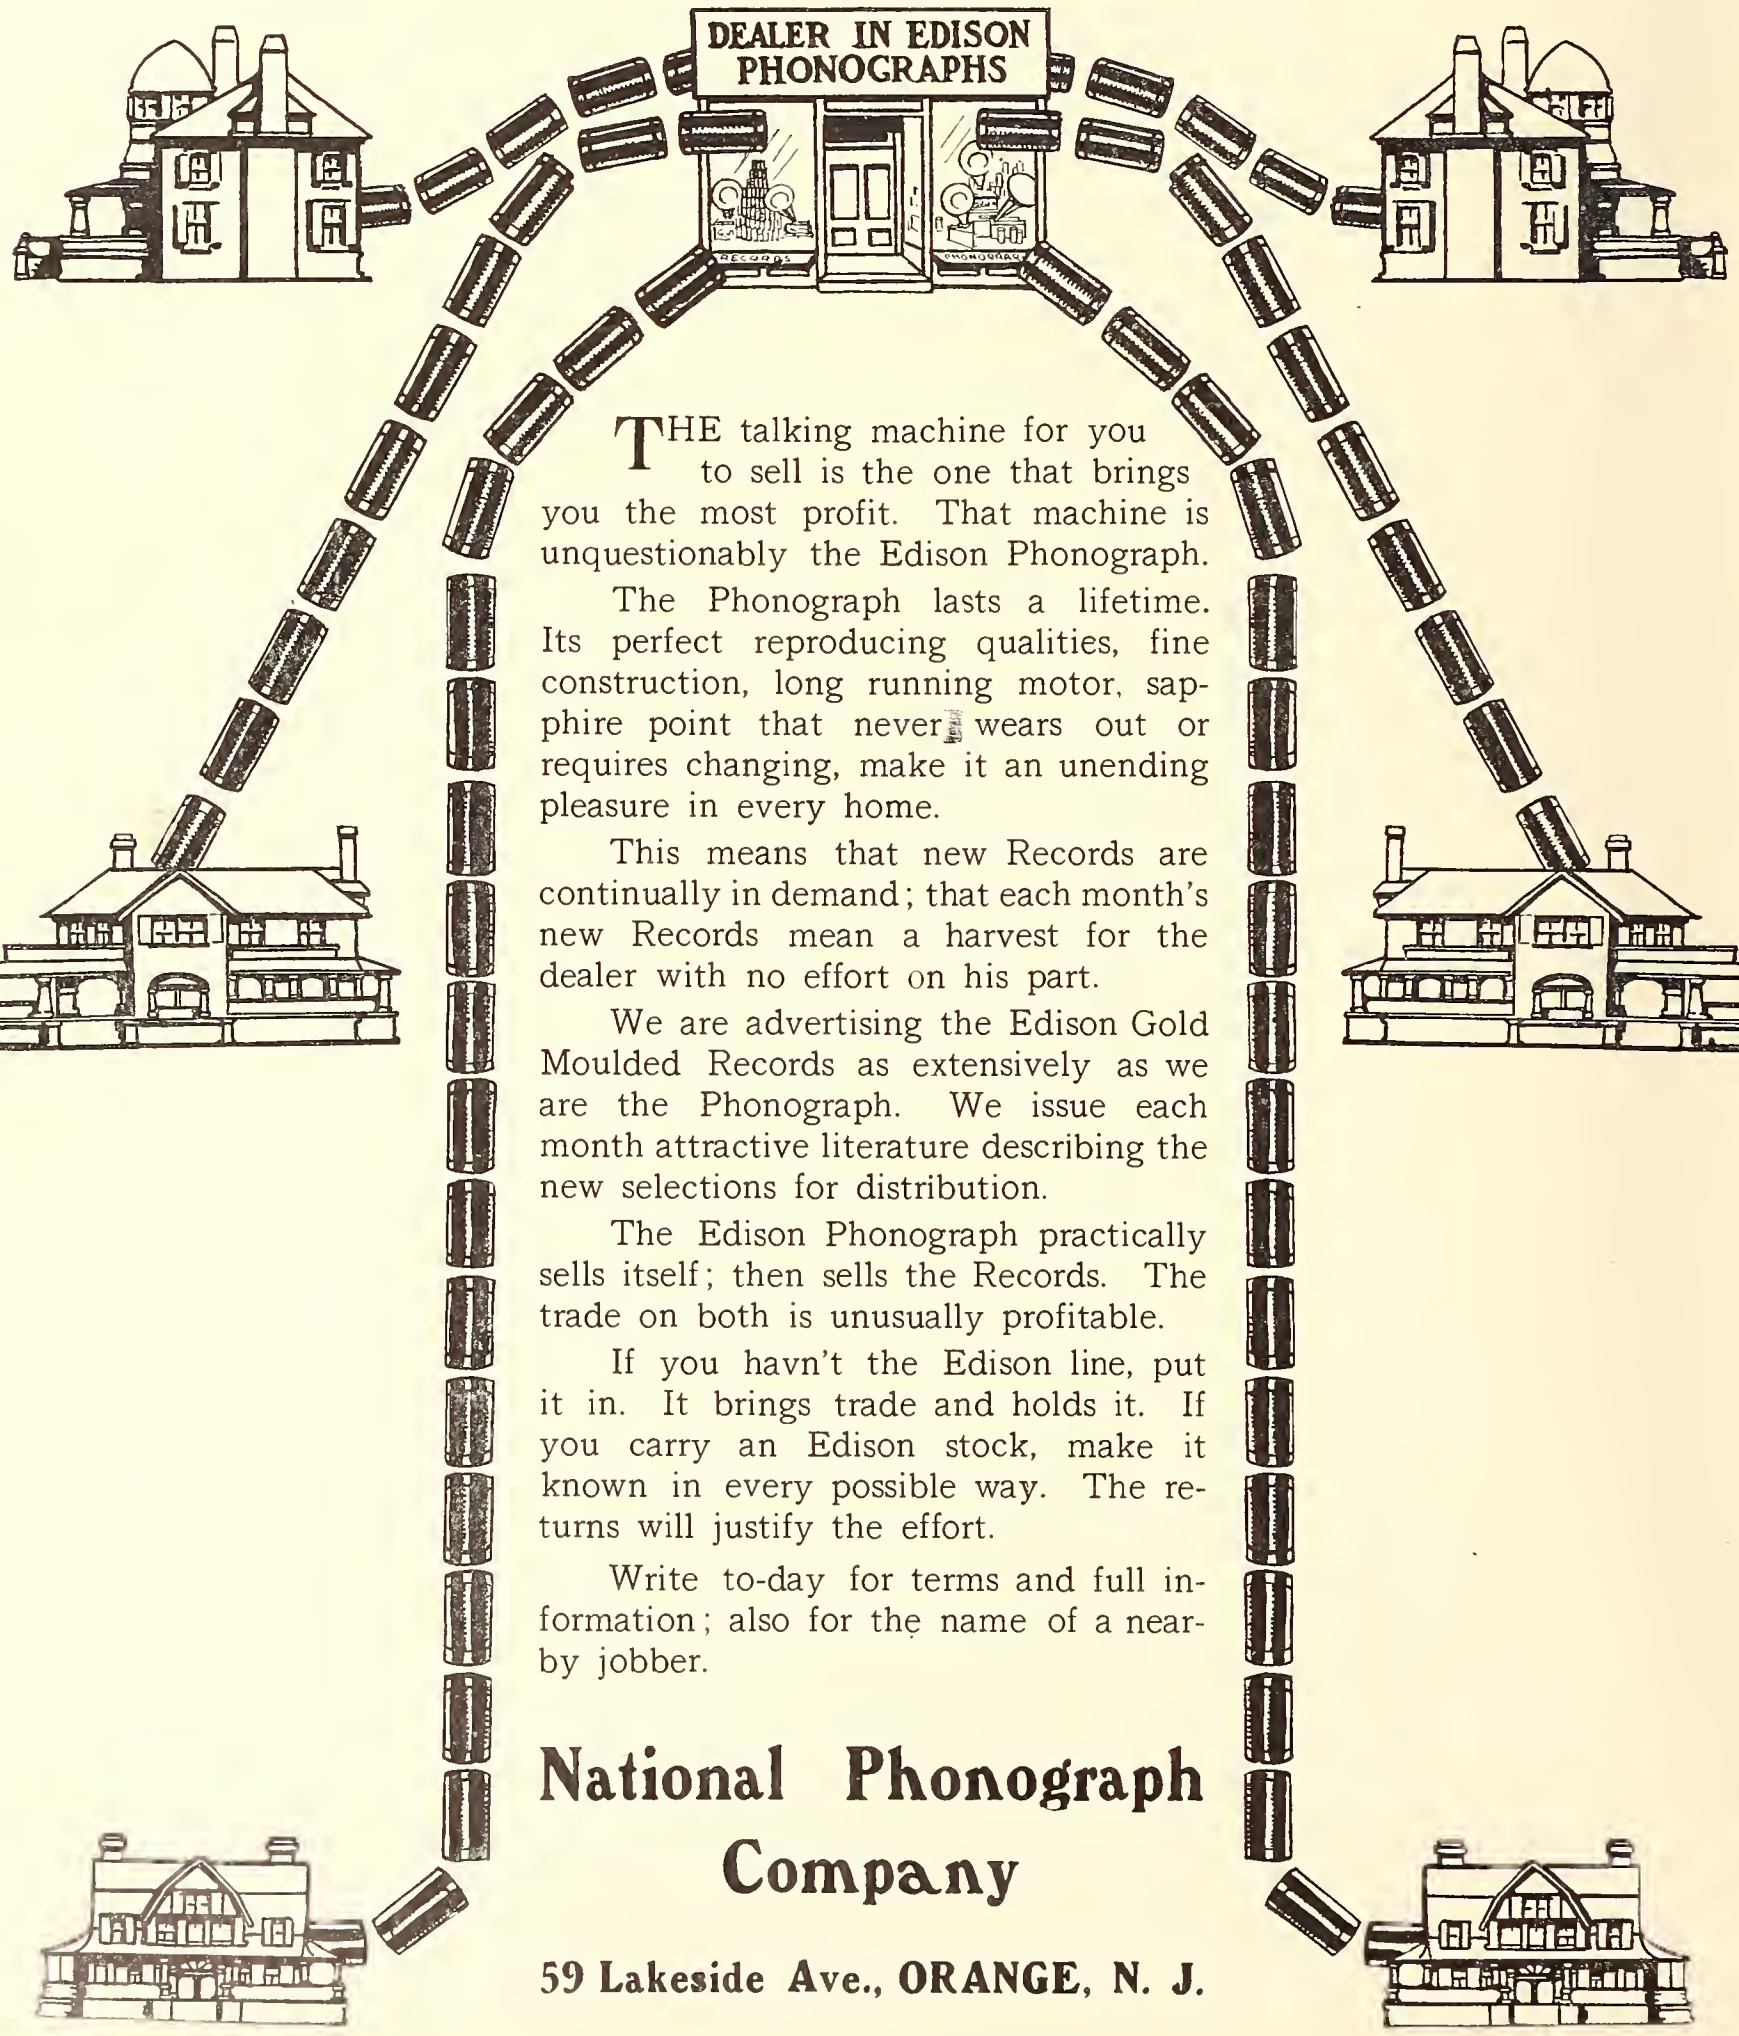
THE HOMES IN WHICH YOU PLACE

Edison Phonographs

ARE CHAINED TO YOUR STORE



THE talking machine for you to sell is the one that brings you the most profit. That machine is unquestionably the Edison Phonograph.

The Phonograph lasts a lifetime. Its perfect reproducing qualities, fine construction, long running motor, sapphire point that never wears out or requires changing, make it an unending pleasure in every home.

This means that new Records are continually in demand; that each month's new Records mean a harvest for the dealer with no effort on his part.

We are advertising the Edison Gold Moulded Records as extensively as we are the Phonograph. We issue each month attractive literature describing the new selections for distribution.

The Edison Phonograph practically sells itself; then sells the Records. The trade on both is unusually profitable.

If you havn't the Edison line, put it in. It brings trade and holds it. If you carry an Edison stock, make it known in every possible way. The returns will justify the effort.

Write to-day for terms and full information; also for the name of a nearby jobber.

National Phonograph Company

THE "TALKER" IN THE THEATRE.

The Views of a Prominent Stage Manager on the Subject.

As I approached the den of the stage manager walking through a maze of scenery and chorus girls I could but realize the great amount of effort required to produce a show on the elaborate scale now in vogue among all theaters of the better class. If the playhouse, behind whose curtain I was then trespassing, was a criterion, I determined that the quantity of brains, hard work and money required must be stupendous, for on every side the eye encountered examples of the artist's skilful brush, the delicate apparatus prepared by the electrician, and last, but not least, the intricate machinery used in the introduction of incidental effects so necessary in order that the drama or opera might be realistic as well as ornamental.

The manager greeted me very cordially, and became interested at once when I stated my errand. "So you desire to know my views as to the possibility of the talking machine being used in the theater, do you?" he asked. "Well, after some experimenting I am willing to volunteer the statement that it is practical, and the fact that I have one right here in this theater at the present time for use in case of a breakdown on the part of our regular wind and thunder producers is ample proof that I believe what I say, is it not?"

"It certainly is," I answered, eagerly, and then not wishing any opportunity to obtain further information to slip by me, I inquired: "Would it be asking too much if I expressed a desire to see your talking machine in action?"

"Of course, not; you're as welcome as the flowers in May. Come right along." He led me out into a corridor, and from there into a vacant dressing room. Here we found, set up ready for instant use, a talking machine of the compressed air type just recently placed upon the market. He selected a disc from among its fellows in the cabinet beneath the machine, adjusted it to the turntable and started the electric motor. "We will wait for the storm scene out in front there," he remarked, glancing at his watch; "it is about due. Yes, there it is now," he continued as the wild cry of a high wind, accompanied by thunder and rain, came to our ears from the distance. "Now we can turn our storm loose under cover of the other one without creating trouble on the stage," he explained, and dropped the sound-box needle on the record.

I jumped back with a cry of consternation that was almost akin to fear, for, without the slightest warning and with deafening intensity, swooped down upon us the high-pitched scream of a hurricane.

The manager laughed. "Rather realistic, is it not? Why, man, you're white as a sheet."

I admitted that I was *surprised* all right and expressed my astonishment that he was able to record with such wonderful volume of sound and naturalness of tone the combined elements that made up a hurricane.

"Very easy, my boy, when you know how. I simply had our storm outfit perform in front of the horn; the great volume is due solely to the compressed air attachment to the sound box. There are a number of other incidental effects in that cabinet, and if you will come around some time when there is no show on I will be glad to let you hear my whole collection. If some talking machine manufacturer will employ a theatrical expert, a man conversant with every phase of the incidental effect game, to teach his laboratory staff how to make records like I have here, he will make a heap of money and save us a lot of room and trouble. You can see for yourself how little space this outfit takes up in comparison with the area demanded by the machinery we are now using.

"I am a little shy about starting the ball to rolling myself, but I will be only too glad to join the band when the time comes for the theater to accept the talking machine. Yes, you may say for me that I consider the talking machine well adapted to take its place in the theater as a producer of incidental effects," he concluded in reply to my final question. Good bye.

HOWARD TAYLOR MIDDLETON.

EDISON WRITES YOUNG INVENTORS

Of Talking Machine Who Presented Him With an Example of Their Skill—Modesty of the Wizard Exemplified.

A unique phonograph, made by two Harrison, N. J., boys at a cost of 17 cents, was sent to Thomas A. Edison as a birthday gift recently. The machine is able to reproduce selections from any wax record, a practical demonstration of its powers having been given by the boys previous to forwarding it.

The phonograph is the work of Harry Clarkson, 14 years old, of 23 Davis street, and David Duncan, 14 years, of 408 Cleveland avenue. The work was done under the direction of Charles Weslow, of 331 Central avenue, Harrison, who has been instructing a number of young boys in mechanics for several months.

The articles used in the construction of the phonograph are: Cigar box, knitting needle, small spool, penny lead pencil, two small staples, two matches, half a dozen pins, 100 feet of soft wire, ball of twine, three pill boxes, penny hat pin, square foot of stiff paper and glass follower, commonly known as a sapphire.

The cigar box formed the body of the machine and on this the knitting needle was set with a pill box upon each end, forming the cylinder upon which the record rested. The two staples held the cylinder in place with the help of the matches placed between the needle aud staples. Ordinary pins were used in different parts of the machine to hold it together. The hat pin was used as a crank for the balance wheel, which was composed of the wire and twine tightly wound. The paper was made into a cone, at the small end of which was placed the sapphire, sealed on a pill box. A lead pencil stuck into a spool held the "horn" in place.

The idea of constructing the phonograph was conveyed to the boys by Mr. Weslow quite recently, and after several hours' work the young inventors were gratified to hear their home-made machine reproduce the songs and sayings on any of the Edison records. The device was offered to Mr. Edison as a birthday gift, and the inventor notified Mr. Weslow he would be pleased to accept it. Mr. Edison's letter was as follows:

"I duly received your letter of February 11, advising me that yourself and a few of your boys have constructed a phonograph which, from the reading of your letter, must be very novel, indeed.

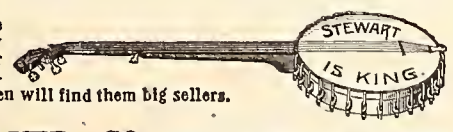
"I regret that I was not able to acknowledge this before as a birthday gift, inasmuch as my time is so fully occupied that I do not get my correspondence daily, hence the delay in answering you.

"I, naturally, am interested to see the very unique instrument that has been gotten out, and rest assured that in accepting the same I will examine it most carefully and then place it in my museum, properly placarded, so as to always remind me of the donors. You may, therefore, deliver same to me. In case I should be absent, kindly deliver to John F. Randolph, my secretary, who will see that it is brought to my attention."

The Castle Talking Machine Co., of which Edward del Castillo, a well-known New Yorker is the head, have opened very handsome quarters at 621 Madison avenue, near 59th street. This is in the heart of the fashionable residential section, and the line to be carried will be selected with the needs of the patronage to be expected from such a location in view.

STEWART

You can handle banjos easily and add to your income. Talking machine men will find them big sellers.



THE BAUER CO., 726-730 Girard Avenue Philadelphia, Pa.

The Petmecky Multi-tone Self-Sharpening Talking Machine Needle

"Chat," that bright, little fellow, who lives with The Tea Tray Company folks in Newark, New Jersey, in February said:

"A single strand of hair will cause a fellow to shove his plate of soup to one side, just as a single weak or bad feature in your goods will cause a customer to go elsewhere."

Over 200 dealers have written us since January 1st.:

"Your needles are all you claim for them, but I (or we) cannot give you an order until we sell out our present stock of other needles. They would be left on our hands."

Mr. Dealer:—Hundreds of dealers use the **Petmecky**, and the **Petmecky** needle *only* in demonstrating. Cannot you afford to try them too?

We positively guarantee the **Petmecky** needle to fulfill every claim made for it, or money back.

Samples of Petmecky needles, needle lore booklet, testimonials and prices on request.

HOPKINS A GREAT TRAVELER.

Returns for Short Stay in New York—Will Make Headquarters in Buenos Ayres—Interesting Chat With The Review—About Conditions in Various Countries in Europe.

After an absence of ten years, with the exception of two or three hurried trips on special business, Charles J. Hopkins, of the Columbia Co., returned to New York, February 16, aboard the "Kronprinz," of the North German Lloyd Line, bringing his wife, a Russian lady, her first trip to this side, and the baby. Mr. Hopkins has done more traveling and been connected with more branches of the Columbia Phonograph Co., General, than any other man in their service; in fact, he is said to be the only talking machine traveler who ever circumnavigated the globe in the interest of the business.

He was manager of the St. Louis, Mo., office

CHARLES J. HOPKINS.

when drafted into the foreign corps, becoming assistant manager of the Paris branch, where he stayed a year and a half. Then he went to England, from whence he started on his around-the-world tour, taking fifteen months, and during which he visited every country of the two hemispheres, excepting South America. On returning Mr. Hopkins became manager of the Columbia's house in Russia, with headquarters at St. Petersburg. Later he was transferred to be assistant manager in London, Eng., where he remained until ordered to report to the home office in New York, preparatory to going to South America, sailing about April 1, where he will be the general representative of the Columbia interests, with headquarters in Buenos Ayres, A. R.

Chatting informally with The World anent his experience abroad, Mr. Hopkins said: "In Europe the talking machine trade is booming. Business is carried on along different lines than in the States. The big jobbers, or factors, as they are termed over there—especially in Great Britain—carry immense stocks of machines and records, one concern in London always having 250,000 records—cylinders and discs of every recognized make—in stock. These factors act as a go-between for the manufacturer and the trade. The relations here have no parallel. Competition differs also. For example, price is protected or maintained in England only, elsewhere it is an open market for everything and everybody. You may imagine the result as compared with American methods. Quality keeps up, nevertheless, but the bulk of the business is on cheap grade goods. Higher prices are realized, however, on the better lines; in fact, the demand for the finer class of records is rapidly increasing.

"In Great Britain the growth of the cylinder business is marked, while in the continental countries—France, Spain, Germany, Russia, etc.—the preference is for the disc. Russia will have only discs. In the warm countries of South America the cylinder record is affected by the climate, and in less than a year they become mouldy instead of moulded. (This little joke on the side.) It is only in Mexico that cylinders hold their own. What occasions surprise to those acquainted with the European trade is the slowness with which records are put on the market here. In Europe records are 'mastered' and stock is ready for the trade in a third of the time taken by the American manufacturer.

"Another thing, only twelve records are listed monthly by the maker in England, and 50 per cent. of the business is from the monthly parcels. An exchange scheme, on a basis of three to one, is effective usually once a year, but the annual clearing up is in the spring. There is no demand abroad for any other than American machines, excepting cheap goods of German and Swiss make, and their sale is becoming insignificant. You can buy a machine for as low as $1 of this kind, but they cut no figure. There are no scheme or premium goods in the European market, and an attempt to work up an outlet for such grades in connection with publications has not met with much success.

"The Columbia Phonograph Co. have made great headway throughout Great Britain by establishing additional distributing depots or branch stores in Manchester, Glasgow, Cardiff and other places. The future of the business is exceedingly bright. Am I glad to get back? Well, you know I was from Missouri once upon a time."

RAFFLES BROUGHT THE CROWDS.

A New Brunswick Dealer Struck on a Happy Publicity Idea Which Brought Gratifying Results—It Is Worthy of Emulation.

We have received from R. Montalvo, Jr., a hustling talking machine dealer, of 209 Neilson street, New Brunswick, N. J., full details of an advertising scheme he worked successfully not long ago, and which he describes as the cheapest advertising he ever obtained. The plan hinged upon the Raffles game, a $50 Columbia graphophone being offered as a prize to whoever should discover the mysterious one, say to him: "You are the mysterious Mr. Raffles from Montalvo's Music Shop," and incidentally have in their possession a late edition of one of the local papers.

The newspaper referred to was not interested in the scheme directly, but in consideration of having possession of their paper made one of the requirements of the winner published each day one and two column articles regarding the progress of the chase. In each article Mr. Montalvo's name, the location of his store and the Columbia graphophone were frequently mentioned, and as the affair lasted eight days before Mr. Raffles was caught, Mr. Montalvo got more direct advertising, and that of a most interesting nature, than he could have purchased for many times the original cost of the machine.

From all appearances, the scheme is well worthy of adoption by talking machine dealers in other localities who appreciate first-class publicity.

HERE'S A WONDERFUL MACHINE

Will Write Letters in Character from Dictated Matter and Will Report Letters Automatically, Making Two Records at Once.

A Berlin firm announces that they will shortly introduce to the notice of the American public the latest wonder in modern office machinery. It is in the form of a machine that will not only write letters in character from dictated matter, but will report lectures automatically and make two records at the same time. One record is permanent, and is written in legible characters, like typewritten manuscript, while the other letter is in effect a phonograph record that can be reproduced at any time. The records are both made on paper and can be reproduced at the same time.

For instance, when a speech is being reported by the machine, the part that reproduces the human voice can be put in operation the same time it is writing, so that an editor may sit by it and omit any parts that he does not want to appear in print. At the same time the record is not injured in the least, and may be put away for future use.

For reporting cases in court it is a most wonderful device, for the exact words of the witnesses in the manner expressed are recorded, and when the record is made matter that is stricken out by the judge need not be written in the transcript, although it is recorded and may be used if necessary at any future period. We anxiously await this marvel.

GOOD ADVERTISING.

A $50 cash prize offered by the Victor Talking Machine Co., in their recent advertising competition, has been awarded to the M. Steinert & Sons Co.'s branch store in Fitchburg, Mass. The Victor Co.'s "Il Trovatore" records were used in a concert given in the spacious Steinert warerooms, and the event was advertised and written up in the newspapers in an unusually interesting and successful manner.

A talking machine department has been opened in the Oakland, Cal., branch of the Wiley B. Allen Co., by W. J. Foltz.

Enveloped Victor Records

are as clean and perfect as when they left the factory presses.

We are positively the only distributors carrying their entire stock in dust and scratch proof envelopes. The Victor Talking Machine Co. have just given you a chance to get rid of your damaged records. We know that you do not want to repeat the process of accumulating damaged stock, so we are sure you will send your orders to the ONLY distributors who can supply you with new, enveloped, perfect records.

TRADE CONDITIONS IN PHILADELPHIA.

Despite Unfavorable Weather, Sales Have Been Brisk in All Departments of the Business—New Ideas Keep Things Moving—Some Victor News—Attractive Columbia Announcements—Four Phonographs in Unison—What the Admen Say—Machine That Will Typewrite Words Spoken Into It—The Modern Romance—A Good Parrot Story—Is the Instalment Business Being Overdone—Closets for 'Talking Machine Records—Fad for Flat Hunters.

(Special to The Talking Machine World.)

Philadelphia, Pa., March 10, 1907.

Taking into consideration the fact that the weather, a greater part of the past month, has not been favorable to shopping and trade generally, business transacted in Philadelphia talking machine circles has been very good and reflects credit on the many energetic men in the trade.

Since the first of March weather conditions have been more favorable, and sales of talking machines, records and supplies have been quite brisk—a decided improvement over the previous few weeks, and retailers and jobbers are correspondingly cheerful. Without exception the large jobbiug houses are doing a good spring business, and the outlook, as they report it, is encouraging and bright—better by far than a year ago at the same period—as a more extensive field is being catered to aud the demand for talkers and records has correspondingly increased.

The enterprise of manufacturers in getting out timely records and improved phonographs has helped business and credit must be given them for the fact. The Victor Co.'s new 20-record opera, "Ernani," has met with good success, and the demand promises to equal if not surpass that for "Il Trovatore." The Columbia Co.'s March list of new records has induced good sales, and the products of other mauufacturers have also sold well.

The Lewis Talking Machine Co., 15 South Ninth street, have had success in closing out quite a stock of good, but slightly worn, supplies, etc. Mail orders were filled and this tended to induce buyers to make purchases as it saved them an outdoor trip in unpropitious weather.

The Keen Co., Eighth and Cherry streets, have pushed business via an "exchange of records" plan. New records are exchanged for old, and a cash "to-boot" consideration, and, of course, "exchauge" shoppers in almost all cases bought new records and supplies, and in a good mauy cases purchased new aud better talking machines.

Upon wharf property abutting the Delaware River near Cooper street, receutly acquired, the Victor Talking Machine Co., at Camden, N. J., will erect a large electric sign. It will be 25 feet high by about 80 long, and the famous trade-mark, Victor dog, will form a part of the sign. The large sign now on the main tower may come down, as buildings, steam and smoke, more or less, hide it at night.

The Victor Co. have their own fire fighting brigade, composed of employes, and that they are clever firemen was demonstrated March 1, when they turned to and helped save a manufacturing plant at Front and Linden streets from destruction. Varnish made the fire a fierce oue. Another good plan adopted by the Victor Co. is the employers' fire drill, which takes place at unexpected times upon signal. It teaches coolness to the employes and shows them how to vacate the factory in quick, orderly mauner, as possibly they may have to if a fire should actually occur. The sight of hundreds of girls and men suddenly appearing in the street is one nearby people take a constant interest iu.

Male employes, captained by L. Coleman, have formed the Victor baseball club, and are wearing a "chip on the shoulder" to be knocked off by any baseball club wanting trouble. The baseball club give a benefit March 26 at the Camden Theater, and tickets for it are almost all sold.

The Victor Co. sent their check for $100 March 2 to the Camden Police Pension Fund.

Weather conditions permitting the contractor resumed work on the Victor Co.'s new office and laboratory building at Front and Cooper streets the past two weeks. Usual conditions as to work prevail in all departments. All hands are very busy and large shipments go out daily. The records forming Verdi's opera, "Ernani," have made an instantaneous hit, while the first opera record series of "Il Trovatore" continue in demand as fast as they can be made.

Concerts given in their handsome chamber hall by the Musical Echo Co., Chestnut street, have stimulated sales for that energetic talking machine house.

The main office of the Columbia Phonograph Co., General, on Chestnut street, has put out a number of attractive announcements, and they have resulted in increased business. An offer to furnish a complete talking machine outfit at a very reasonable price has brought in many orders. The several retail branches of the company are reported satisfactorily busy.

The somewhat peculiar novelty of four phonographs, operating iu unison, and giving a quartette is said to have been successfully tried by several musical girls of North Philadelphia. Each of four girls own a good talker, and each girl made a one-voice record of the quartette—the soprano voice on one record, the contralto, tenor aud bass voices on three other records. The voices were attuned to B flat, and one piano was used in accompanying each singer. The four records on four phonographs—as much in unison and time as possible, were set going, and the quartette was reeled off. While the result obtained cannot be said to be wholly successful—the voices not keeping perfect time—it is "pretty good," and leads to the hope that future efforts will prove wholly successful. The idea is novel, and is referred to in order that others may take it up for experiment and fun. The object to be aimed at, of course, is to have the four records perfect in pitch, time and unison. A perfect quartette on four talkers will be quite a rarity.

Toone & Hallinshed, department storists, Kaighn avenue, have placed a large stock of Victor goods on sale. They say: "We are the largest dealers in Camden. No need to go to Philadelphia for your records." A Victor club, recently started, is meeting with every success.

W. B. Leigh has opened a moving picture, talking machine, etc., amusement arcade on Broadway, Camden, N. J., which is proving popular.

John Burns, a tramp, who stole a phonograph from a Pine street lodging house, was sent to jail for 30 days. His excuse for the theft was that the music of the talker offended his acoustic sensibilities and love for humanity impelled him to remove it to a place of innocuous desquietude.

Henry Albright, owner of an amusement arcade at Norristown, fell from a ladder at the Pottstown Auditorium while giving a show, and fractured an arm.

In exploiting their large stock of talkers Gimbel Bros. say: "A talking machine never has a cold or gets out of voice." They report good sales of Victor, Edison and Regina goods.

Strawbridge & Clothier's talking machine ad. man says: "We watch records with lynx-eyed care. Old or used records we never sell."

It is reported that a Philadelphia inventor is experimenting with "sound waves" with the view of mechanically recording them in such a way that human speech will be transformed into typewritten words. The idea presents so many apparent difficulties it seems impossible of practical results, but in view of all the many wonderful things that have been accomplished, it may be a machine or apparatus can be invented that will typewrite words spoken into it. The line the inventor is working along is said to be based upon the alleged fact that every word sound has a definite individual sound wave; that the sound wave, connected electrically with a sound printing apparatus will typewrite said sound (either the sound of a syllable or word) upon paper. Take the word "go." It is claimed that the sound of "go," making a certain definite sound wave, will affect the mechanism printing the word "go," and that mechanism only. The inventor, it is said, has gone far deeper into the matter than briefly outlined, but the writer, from lack of information, cannot give any details. A question or two arises at once: How can such a machine print wordless sound waves, such, for instance, as the squeal of a pig or the heart-breaking wail of a waiter who has missed a tip? The phonograph is, per se, proof that sound can be recorded. But how such sounds can be metamorphized into type printed words is a matter to try the mettle of the most expert delver in the science of acoustics. Marconi wireless telegraphy utilizes the sound-wave principle, and it is said the Philadelphia inventor utilizes the phonograph recording and wireless sound wave principles as well as another newly discovered principle whereby words are "sifted" from squeals, howls and all other sounds for the purpose of getting

45 North 9th Street, Philadelphia.

printed language. Imagine a business man talking into a recording machine, which in turn operates a word-sifting, word-printing machine and correctly typewrites an answer to a business communication! Should the projected machine "arrive," writing stands a chance of becoming a lost art. But what a boom such machines would give the talking machine business.

The plan to turn the old Sharpless Bros.' department store, at Eighth and Chestnut streets, into an amusement building, has fallen through. As mentioned last month in The World, it was proposed to have various phonograph, moving pictures and other arcades in the building.

The next quarterly meeting of the Eastern Talking Machine Jobbers' Association will be held at the Bellvue-Stratford, April 11. Judging from plans under way it will be a big affair.

Manager John McArthur, of the phonograph department of N. Snellenberg & Co., has been exploiting "Caruso" records with success. Upon request, customers were treated to the pleasure of hearing the famous tenor's voice on a splendid Victor talking machine, with the result, as a rule, that many sales of the records followed. The plan of Mr. McArthur proves that good sales are almost sure to be made when shoppers hear records played, even though they may not have asked for a particular record.

A phonograph record romance was sadly shattered the past month by a matter-of-fact secretary. First, the romance: Margaruite De Smyth, a pretty 19-year-old maiden, who works for the Blank Talking Machine Co., made a record on a cylinder several months ago as follows: "I am a maid of 19, and considered good-looking. Would like to correspond with a handsome man of 25, with a view to matrimony. My address is 204 Brown street, Camden, N. J." The record, with many others, was sent in a shipment to England and there, Lord Tuppence became its fortunate purchaser. He immediately opened up a correspondence with Miss De Smyth, friendship ripened into love, and last week the wealthy scion of nobility was married to the happy phonograph factory girl. They will reside at Bummcroft, the ancient castle of Lord Tuppence in Scotland." Questioned concerning the truth of the romance the busy secretary of the Blank Talking Machine Co. said: "Pretty story; but impossible. We'd fire the first girl we caught making such a record."

Louis Buehn & Bro., jobbers, 45 North Ninth street, have had good business the past month, and are busy on orders for spring trade. The house carries an unusually large stock of records and has an almost perfect system of filling orders quickly.

Organ recitals, given three times a day, have attracted large crowds to the music department of Strawbridge & Clothier and the talking machine department, as a result has been benefited. Manager Frank Butler and assistants have been very busy.

Considering the fact that James Bellak Sons have done little or no talking machine advertising, Manager H. B. Rouillet has found business in the talker line quite good. He has charge also of the player-piano and piano player department, in which trade has been seasonably good.

The Western Talking Machine Co., Penn Phonograph Co., H. A. Weymann & Son and the Disk Talking Machine Co. are among the jobbing houses that are well stocked in preparation for spring trade—trade which is already coming in with satisfactory volume for so early in the season. In every case the managers express confidence in the future and predict a brisk season.

"It's off," said a clerk in a 9th St. talker store; "I mean Liz an' me's parted for quits. Yo' see, 'twas this erway: Liz owned a poll parrot and I owned a talker. Liz goes away with her folks on a visit for a week and leaves the gab bird with me. Last summer I took a record of stevedores unloading ship—and, say, I can say bad words some myself, but the way that crowd of dock laborers said things burned the disc stylus. Every time I get mad I put that Sunday-school ballad on my phono' and sit down and enjoy myself. The night Liz sent me a lemon by mail was the night that stevedore lyric worked overtime and Polly Paresis stood hard-by and drank in every curse and didn't say a thing. Liz comes home, gets the parrot and on the way back said: 'Did o' miss me, pitty Poll?' 'Go to blank, you low-legged blank-et-ty-blank!' was simply Polly's starter. Liz's dad is a sky pilot. That bird consigned him to sheol ten times in two minutes, and called Liz's ma a—Gawd forgive me! I can't repeat it. They won't believe my story that Poll learned it from a record—merely say I must have started the profane language route young to become such a pastmaster. Yes; you can say the engagement is more than fractured—it's busted!"

Fond of violin and piano duets and having no violinist to play with her when most wanted, a Camden, N. J., girl, who is a good pianist, had several good violin records made for her Victor talking machine, and can now enjoy her chosen duets whenever she wants. She says the plan she follows is teaching her to become an expert accompanist on the piano, a department in which she was very deficient.

The question of selling talking machines on the installment plan, it is said, will receive the attention of the Jobbers' Association at an early date. Said one jobber to The World: "The installment business is already being overdone by department stores, and unquestionably it works a hardship to retailers who, with limited capital, are unable to give any great amount of credit. It is a question whether or no anything can be done toward abolishing or regulating the installment system. It seems to be an age of buying things a la installment—a little money down and a little a week. They tell me you can buy a tombstone now that way. Just think!"

"You are positive the house has every modern convenience?" questioned the North Philadelphia lady.

"Sure!" said the real estate dealer. "Why, see—here's a closet for talking machine records and——" She closed the purchase at once.

"Been busy the past month?" asked The World

Some Facts Worth Considering

THE talking machine man frequently asks, "How can I increase my business?" The answer is easy. Place on a side line which takes but little space, which is attractive, and a standard in its particular line. Take the **Black Diamond Strings,** for instance. Steel and wound. New process. They are the finest manufactured. They are used by all of the prominent artists, and you will have a trade coming your way when it is known that you handle the "Black Diamond." Music dealers all over America, and all over the world for that matter, know full well the value of this product.

National Musical String Co.
New Brunswick, N. J.

Don't let your jobber hold you back

There is no use trying to build up a larger, more profitable business and get on good terms with your customers, unless you have a jobber who co-operates with you.

He should keep you posted on the newest goods and be able to give your orders prompt attention. It's to his interest to do everything possible to help along your business. If he doesn't seem to see it in that light, the sooner you get rid of him the better.

Make it a point to always have what the people want, or if you just don't happen to have it, send for it and tell your customers when you will have it.

Our immense stock of Victor talking machines and records, trumpet horns, fibre cases, English needles and other specialties is always ready for you to draw on. We never let it get behind or fail to send out goods the same day the order is received.

You can't help but benefit by this kind of service. It takes away a lot of worry and enables you to take the best care of your customers.

It's worth finding out about.

Write to-day for our latest catalogue.

Reg. U. S. Pat. Off.

of a mid-town jobber. "Yes, indeed," was the sarcastic answer. "Been busy every minute—reading the rules, regulations and restrictions put out by the manufacturers I buy of. I've been too busy to sell any goods." This is not the spirit that wins. Better make money than fame.

Ewd. J. H. Smullen, who is covering State points for the Lewis Talking Machine Co., continues to "come home" with a fat order book.

R. Martin is installing an amusement arcade at 2412 North Front street.

Robert L. Gibson, who is pursuing experiments connected with an improved phonograph sound box, is said to be making successful progress.

McGREAL STILL EXPANDING.

Lease the Ogden Building Which Will Give One of the Largest Establishments Devoted to Talking Machines in the West.

(Special to The Talking Machine World.)

Milwaukee, Wis., March 6, 1907.

McGreal Bros., the hustling and progressive talking machine dealers, now located at 173 Third street, have leased the Ogden Building on Third street, which will give them much more space.

The building is a four-story, solid brick structure, located at 172-174-176 Third street. It has a frontage of 60 feet on the street, and extends back 150 feet. McGreal Bros., who are located across the street from the Ogden Building, will move their stock of phonographs to the new quarters about May 1. The store will be conducted in 174 Third street, and on October 1 the firm will take charge of the entire building.

The change is necessitated by the growth in the business of McGreal Bros. At the present time the wholesale business of the company is conducted at 317-319 Milwaukee street. This business will be moved to the new quarters. It is also proposed to enlarge the business of the company and the members of the firm stated yesterday that a new line will be added next fall. The building is to be renovated, and about $10,000 will be expended. The entire front will be remodeled as will the remainder of the building.

The members of the firm—L. E. and H. J. McGreal—began business on Third street in 1902. L. E. McGreal was a Western salesman for the Edison phonograph. The company was started in a small way with a small capitalization. The first year's sales amounted to about $60,000, while the sales last year amounted to over $300,000. In 1905 the company established a store on the south side at 439-441-443 National avenue.

HERE'S A KICKER FROM KICKTOWN.

Submits Five Special "Kicks" Which Afford Considerable Relief to His Mind.

Biloxi, Miss., March 2, 1907.

Editor Talking Machine World:

I herewith enclose you a few "Kicks from Kicktown." Some time since you published a letter along the line of protecting dealers from the barber shop, drug store trade, etc. I want to commend it, and add a leaf from my experience.

A few years ago I bought the first machine of a certain make that came to this city. At that time there was no agency for talking machines here nor anywhere on the Mississippi Gulf Coast. I took the agency for the machine, advertised it extensively. Friends laughed at me and said: "Do you think you can make anything on talking machines? They are a back number!" But I persisted, and gradually built up a little business. At first the company was kind to me, then after I had things fairly started a second-hand furniture store planted itself alongside of me and put in the same machine. I "kicked," but the company smilingly informed me they now protected no one; in fact, wanted all the dealers they could get. I got mad, and while not giving up this machine entirely, took on another at the solicitation of a traveling man, who assured me if I did not take it my rival would. At first this company was good to me, too, and then another furniture store got an agency also, while the first machine had secured still another dealer. My last advertising consisted of 10,000 newspapers, published by myself and distributed from house to house in four counties. My rivals do not advertise at all, but get the good of my efforts along that line, until disgusted. I am beginning to push other goods instead of putting all my time to building up business for other people. Question: Is it good to have a dozen dealers in one town to the discouragement of the one who originally built up the business?

Kick No. 2. Why do manufacturers think it necessary to put black horns on their cheaper machines? Do they think a talking machine parlor should look like an undertaking shop? Is not colored paint about as cheap as the black article?

Kick No. 3. Why are not the manufacturers more careful in sending out springs and motors? I have had trouble with even the most expensive machines. Often had to fix them as soon as they arrived. Poor springs, poorly put together, or soft brass bevel gears that break as soon as a spring breaks, consequently dissatisfied customers.

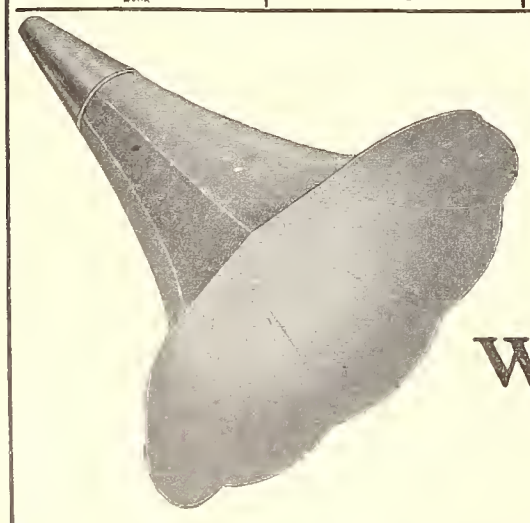
Kick No. 4. Can't some genius get up a sound-box which, by screwing one part against the other, will tighten the edges of a loose diaphragm? The sound-boxes of to-day seem to be made not to be easily repaired without the aid of an expert.

Kick No. 5. Why do not the dealers organize and give the manufacturers some agreements to sign? We have set our names to all kinds of damphool documents until patience has almost ceased to be a virtue. Here is one kicker that will go into an association to get up some agreements from the other side. Fraternally, only a dealer,

SUMNER W. ROSE.

DECLARE QUARTERLY DIVIDEND.

The American Graphophone Co. have declared a quarterly dividend of 1½ per cent., payable on March 15.



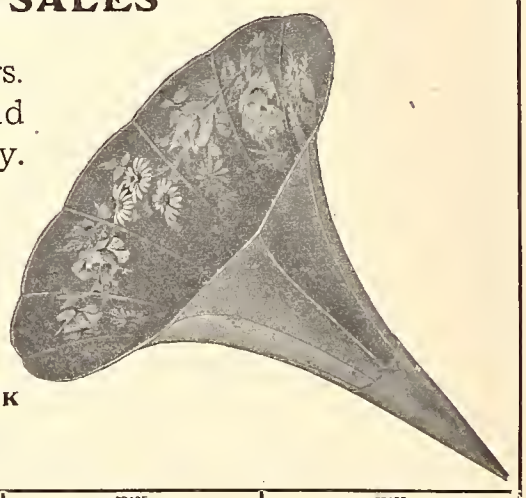
STANDARD HORNS ARE SELLERS

Because of their Beauty of Design and Finish, and Honest Workmanship throughout. Made on Correct Acoustic Principles, thereby augmenting both Volume and Quality of Tone.

WELL MADE CAREFULLY FINISHED AT RIGHT PRICES

GIVE ENTIRE SATISFACTION AND INCREASE SALES

We Carry a Variety of Styles to Please Particular Dealers and Purchasers. Dull finished Horns, also extra fancy and artistic color effects on brass, and brass nickel plated Horns. All our Horns hold their colors perfectly. Every Horn Fitted with Patent Thimble End.



STANDARD HORNS ONCE HANDLED ARE ALWAYS HANDLED

FACTORY: Jefferson, Chestnut and Malvern Streets, NEWARK, N. J.

PRACTICAL SUGGESTIONS AND COMMENTS.

KEEP POSTED ON ALL IMPROVEMENTS.

William F. Hunt, the enterprising dealer of Wanatah, Ind., writes The World as follows:

"To be a successful talking machine dealer it is very important that he should keep thoroughly posted on all the improvements that are brought out by the manufacturers in this line. As soon as a person buys a talking machine he becomes enthusiastic over the possibilities of improving the same, and he eagerly watches for the appearance of anything in that line, and the oftener you have something new to offer him the oftener he will visit your store. Great care should, however, be exercised to offer only articles which you have tried and which you know are practical and reliable in every way, and he will be your ever-confiding friend and customer. In the struggle to improve the phonograph there are a number of so-called improvements on the market which are fakes pure and simple. Do not try to sell these to your customers because they present a tempting profit. They are poison to your business, and will prove not profitable, but sadly unprofitable in the end. You do not have to put in a stock of any article until you have been fully convinced of its merits. Purchase a sample and give it a thorough trial. Many dealers are not successful because they do not treat their customers with due respect. It is to your benefit to do so. No matter how unpromising the prospects for a sale may be from appearances, I have yet to find the salesman that can judge the size of a man's pocketbook or the amount of the purchase a man intends to make; in fact, the customer himself does not know the latter. It will depend entirely on your own tactics, as to how large a purchase he will make. Be ever ready to give the customer any information along your line which he may desire, and always treat him with the best of courtesy, whether you think he will make a purchase or not. It is sometimes a hard thing to do, I know, but nevertheless it is a most important point in conducting a successful business. If a customer calls for anything you have not got in stock do not put him off by trying to sell him something which you know he does not want, but tell him that you would be pleased to order it for him, even if you know that you would not be making anything on the sale, as the express charges would eat up the profit. This plan is not altogether satisfactory; but as it is impossible to at all times carry a complete stock of everything in the talking machine line, it is better than to abruptly say to the customer that you have not got it and do not care to get it. Chances are that he would go to a competitor and purchase the article, and not only that particular article, but more, and continue to trade with him when through a little talk you could induce him to let you order the article for him and thereby retain his future patronage. Study the line which you carry thoroughly, so that you will be able to bring out all the good points in favor of it when you are trying to make a sale. When the customer once becomes convinced that you are handling the article, not only for what money there is in it but for the merits it possesses the sale is completed; all that is left for you to do is to wrap it up for him to take home. Furthermore, do not throw the literature sent out by manufacturers into the waste basket without proper notice, but read everything, and read it carefully. You may think you have not the time to spare, but take time—it is time profitably spent. You will add to your knowledge, as this literature is gotten up with brains. Above everything else keep posted on what is going on in the talking machine trade, and you can gain no better knowledge generally in this line than by regularly reading The Talking Machine World. It is a veritable cyclopedia."

SCRATCHING SOUNDS AND CLEANING.

An Edison admirer in New South Wales recently wrote the New Phonogram as follows: "What is the cause of the scratching sound which accompanies home-made records, and is there any remedy? Does the use of benzine or kerosene in cleaning off the surface of blanks affect the next record taken? We have tried numerous experiments and have produced very fair results, as far as volume and tone are concerned, but have not been able to get rid of the scratching or grating sound in reproduction of our efforts. There is, of course, a difference in composition between the blanks and the records sent out by you. Does this difference partly account for the trouble?"

The replies to these questions will be found useful to dealers who have such questions fired at them every day. "The troubles you complain of in making records are those common to all amateurs, and they show the difference between records made by the uninitiated and those who have spent years in experimental work. Much of the scratching sounds you refer to would be obviated if you could have your blanks properly shaved on a shaving machine. Shaved with a device attached to a phonograph or having the surfaces prepared with benzine or kerosene causes the roughness so objectionable. We doubt if you will ever be able to make smooth records with ordinary appliances. With all our knowledge of the work we are frequently unable to produce records as smooth as we would like to have them."

SPEED REGULATION OF DISC MACHINES.

Why, asks a correspondent of the Talking Machine News, of London, if, as has often been stated, the speed of a disc machine should be averaged for disc records, have a speed regulator at all? The question is a pertinent one," says our contemporary, "for it undoubtedly is the case that the speed regulator is very little used by the disc machine user. Still there are a large minority who do bring it into play, if only occasionally, and they would probably object to its being left out in new types of machines. I may say that I should myself, though without question it is neither so necessary or so often employed as with the cylinder type. And it might be advanced as an argument in favor of its abolition that the use of it is very often abused by people deficient in the musical sense with results which bring discredit upon the talking machine and its users. I should add, by the way, that, so far from there being a tendency on the part of the manufacturers to do away with speed regulators, the new Pathé machine—I am referring to the disc one, of course—is fitted with a speed indicator, as part of the speed regulator."

DOUBLE-SIDED DISCS.

"I think it is a mistake for the double-sided disc manufacturers to have selections of the same character on the same disc. I speak from the point of view of the user. Of course, it may have points of convenience, so far as the manufacturer and dealer are concerned. But it is obvious that if you have been playing, say, a violin solo you do not want to follow it, as a rule, with a second by the same artist, or indeed by any other artist. You want a band, another instrumental or a vocal. Of course, I know there are those who will say: 'But that is just what we do want; the second record is in the nature of a response to the cry of "Encore."' That is so, and still I think the general consensus of opinion is with me, and that most people would prefer the records on either side of the disc to be of an entirely different nature."

SPEED SCREWS.

"Some machines have speed screws with a flexible steel connection joining the actual screw with the brake on the governor disc. After long-continued use these are apt to lose their delicacy of adjustment, and it becomes difficult to obtain speeds intermediate between very high and very low. To remedy this, remove the flexible connection from the governor brake, put a drop of oil on the threads of the nut in which the connection plays, work it back and forth two

SEND YOUR ORDERS TO

or three times, then replace, and your speed screw will give as delicate adjustment as ever."

KEEPING TALKING-MACHINES IN REPAIR.

In response to several inquiries we may say that a concern is in process of organization, with abundant capital in New York, for the purpose of keeping talking machines in repair on a yearly contract. As the scheme now stands repair shops are to be opened in various parts of the city, and when the machine of a subscriber gets out of order he notifies the nearest station and the machine is put in perfect running order. The yearly fee is set at the modest sum of $2 or $3, and it is hoped that the majority of the half-million talking machine owners in the metropolis will take advantage of the plan. There is hardly a machine, no matter how carefully operated, that will not put at least $3 in the pocket of the repair men, so the proposition should prove attractive from its economical features. Just what the local repair men think of the proposition has not been ascertained. At present the concern have one loft in the lower section of the city, but branches will shortly be placed in different parts of New York and also in neighboring cities.

A QUEER MUSICAL INSTRUMENT.

Charles Hammond, of Chagrin Falls, O., is said to have perfected a queer musical instrument that is attracting considerable attention. It is in the form of a talking machine horn, which has been attached to a common fife. As a result of this union the sound of the fife is greatly intensified. Hammond will apply for a patent on the instrument immediately. He has named it the "fifonium."

THE DULCIPHONE MODIFIES THE SOUND.

In reply to an inquiry we may say that the latest addition to the Columbia graphophone is the dulciphone, an arrangement for modifying the sound to suit the operator. By its use, any volume of sound, from the loudest tones possible to the faintest conceivable, may be produced. It is a device, operated by a thumb-screw that presses directly on the diaphragm—the greater the pressure the softer the tones. Tests thus far made show no indication of any muffling of the sound, only its reduction. In the future all B. I. graphophones will be thus equipped.

F. M. PRESCOTT RETIRES.

The Well Known Talking Machine Expert to Return to This Country Next April.

F. M. Prescott, one of the best-known talking machine men in the world, and who visited his American home last fall for the first time in five years, will retire from the business permanently, and expects to be here again for good about the middle of April. Mr. Prescott has cut something of a figure abroad, and has amassed a handsome fortune. He organized the International Zonophone Co., subsequently acquired by the Gramophone & Typewriters, Ltd., London, England; later the International Talking Machine Co., of Berlin, Germany, which makes records for the Odeon Co., London, and the Fonotipia Co., Milan, Italy. The last named concerns were closely affiliated. It is Mr. Prescott's purpose to dispose of his entire holdings in these companies, and on his return to the United States will purchase a home in Summit, N. J., a fashionable suburb of New York City, where his brother, J. O. Prescott, resides. In this charming retreat the erstwhile occupant of a seat in the king row of talking machine celebrities will indulge his taste for fancy poultry, having a penchant for raising Leghorns. It will be remembered that W. Barry Owens, the discoverer of the Victor dog, and who also made his pile abroad as manager of the Gramophone & Typewriters, has a weakness for thoroughbred chickens, his ideas running to Plymouth Rocks, of which he has many fine specimens on his Martha Vineyard estate.

In order that the witnesses in a certain divorce case being tried in Asheville, N. C., might testify with perfect freedom, their testimony was taken upon talking machine records before a notary public in New York, and the filled records sent to the North Carolina court.

AIDS COURT REPORTING.

The Columbia Commercial Graphophone Used to Get "Copy" in the Harriman Hearing as Well as in the Famous Thaw Trial.

In two very important trials now engaging the public attention the Columbia commercial graphophone has played a very important part in reporting the proceedings. In one of them the Harriman hearing in the Federal Building, all of the testimony was dictated by the law reporters to commercial graphophones, while a force of twenty typewriters in the Astor House transcribed the proceedings. So expeditious did this method prove that by ten o'clock on the morning of the day following the close of the taking of the testimony the entire proceedings were in the hands of Mr. Loeb, the private secretary of the President. Under the old method, it would have taken fully a week to have obtained a correct transcription of the notes.

All of the testimony in the Thaw trial has also been taken in the same way, and every morning, when court opens, the full testimony is ready for inspection. The reporters for the daily papers have also adopted the use of the graphophone in transcribing their reports, and have in consequence been able to give far more complete details of the great trial than was possible under the old method.

DOUGLAS CO.'S BIG INVOICE OF NEEDLES.

The Douglas Phonograph Co. last week received eleven million talking machine needles in one shipment from Germany, it being one of the largest shipments on record in that line.

MRS. LOWE RECEIVES $7,500 DAMAGES.

Mrs. A. Lee Lowe, wife of the late A. Lee Lowe, the manager of the Columbia commercial department in Washington, D. C., who was killed in the B. & O. Railroad collision last January has received from that company $7,500 damages.

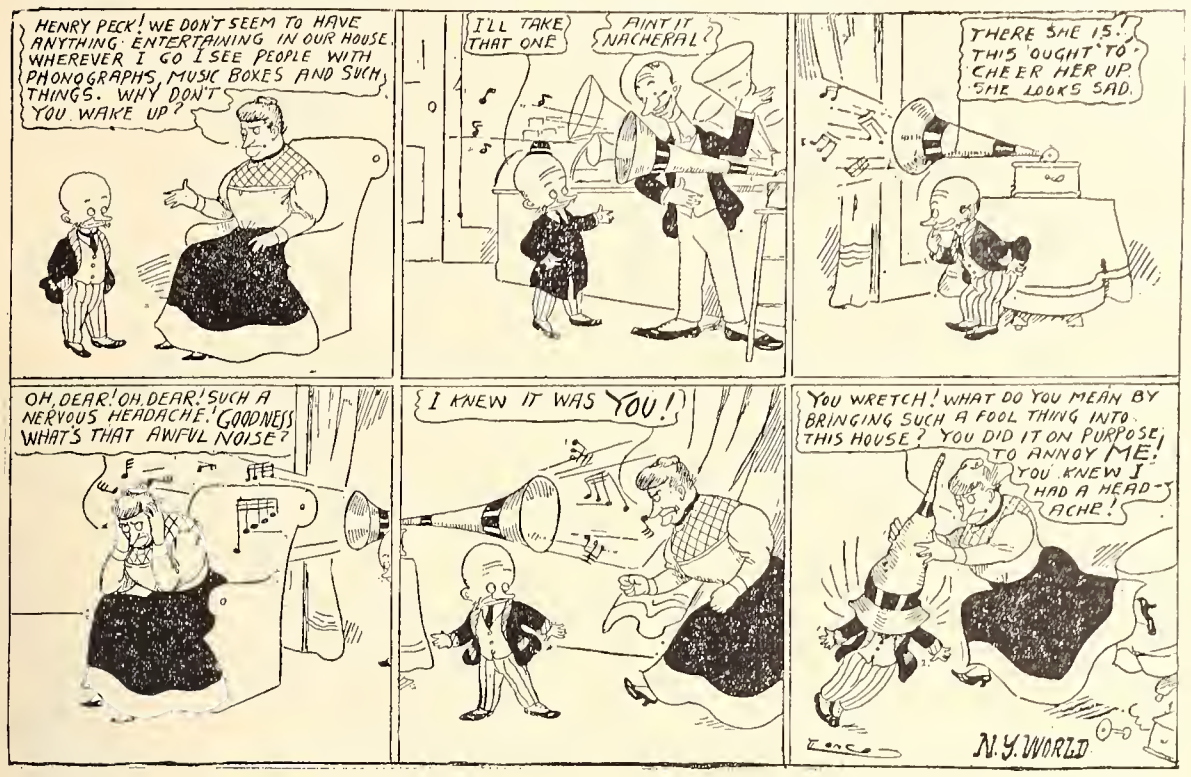
HENRY PECK BECOMES A TALKING MACHINE ENTHUSIAST—THE RESULT.



INCREASING THE POWER

Of a Talking Machine By Means of Compressed Air—The Form and Action of Sound Wave as Illustrated in the Auxetophone.

Heretofore it has been practically impossible to reproduce sounds "life size" on a talking machine. By using large horns it has been possible to concentrate the sounds produced by the diaphragm, and, by thus limiting the area over which they are projected, to give them a volume almost as great as that of the sounds originally impressed upon the record; but this concentration is secured at the expense of the quality of the tone, for to the sound waves produced by the record are added the vibrations of the horn itself, causing a harsh metallic sound.

The Victor Talking Machine Co. have just perfected a machine which produces sounds of greater amplitude than can be obtained in the ordinary talking machine, avoiding the objectionable features of the large horn. The auxetophone, as the new machine is called, comprises a small air compressor and a talking machine of standard make. The usual diaphragm is, however, dispensed with in the machine, and the needle or stylus which travels over the record operates a balanced gridiron valve through which the compressed air is passed. In operation the air issues from the valve in intermittent jets, which are modified in frequency and character by the action of the needle in such a manner as to reproduce the sound originally impressed on the record. The needle and valve act merely as a relay, while the sound is actually produced by the compressed air.

To more thoroughly understand the philosophy of the machine, it may be well to discuss the form and action of sound waves. It is a common error to compare sound waves with waves of water in which, as is well known, the particles of water oscillate vertically, or at right angles to the direction in which the waves are traveling. In sound waves, however, the oscillations coincide in direction with the travel of the disturbance; that is, instead of having alternate elevation and depression, the wave disturbance produces alternate areas of compression and rarefaction. As the wave disturbance takes place equally in all directions under normal conditions, it follows that sound travels through air in a series of ever-expanding spherical areas of compressed and rarefied air which have their center in the source of the sound. In only two particulars can these sound waves vary, one being the rapidity of vibration, which governs the pitch, and the other being the amplitude of the vibration; that is, the length of travel of the vibrating particles, or the density and rarefaction, and this governs the volume or loudness of the sound. In a pure tone the oscillations are rhythmical, but various quantities of tone are produced by interference with the rhythm of the oscillation. However, these irregular movements take place in the direction in which the sound is traveling.

With this brief description of the principles of sound, we may be better able to understand the exact operation of the compressed air attachment used on the auxetophone. In the usual form of talking machine, a diaphragm is employed which is connected with a needle in such a manner as to vibrate, causing alternate waves of compression and rarefaction to be emitted from the sound box. The compressed air apparatus is more powerful because when the valve is opened to permit the issuing of a jet of air, this air travels through a greater distance in a given time than would the air set in motion by the diaphragm; consequently, waves of greater alternate density and rarefaction are produced, giving a much louder and rounder tone.

The new machine with the compressor attachment consists of a cabinet in the lower portion of which is a 1-6 horse-power electric motor, direct connected to a blower. The air from this blower passes through a condenser, the office of which is to remove the moisture and oil it may contain. A flexible tube conducts the air from the condenser to a reservoir provided with a safety valve set to blow off at a pressure of four pounds. Thence the air is filtered and passes through a flexible tube to the sound box in which the valve connected to the needle is located. This valve is of a very delicate construction and responds to the slightest vibration of the needle. The record disc, which is of the usual form, is revolved under the needle by a spring motor, as in the regular talking machine. The electric motor which operates the compressor may be driven by power furnished from the city lighting system and may be started or stopped by means of push buttons at the side of the cabinet. One of the principal advantages of this improvement is that all the richness and mellowness of tone is retained. The new machine will, undoubtedly, prove of great value in large concert halls where machines of previous type have been of too low a power to give satisfactory results, says the Scientific American.

FLETCHER BROS. CLEVER PUBLICITY.

Fletcher Bros., the "Superior Quality Music House," of 93 Government street, Victoria, B. C., who handle the Columbia graphophones, advertise this line extensively in the local papers and take advantage of every opportunity to impress upon the public the merits of those instruments, especially the $50 aluminum tone-arm model. Prose not permitting a perfect description of the Columbia line, Fletcher Bros. recently ascended poetic heights as follows:

There's something sweet about the tone
Of a Columbia Graphophone,
That others imitate in vain,
Though they may try and try again.

There's beauty of appearance, too,
That cannot fail in pleasing you;
The pretty case, the handsome bell
Delight the eye and ear as well.

Durable? Well I should say!
'Twill outlast others many a day,
The price is low considering
That quality is everything.

There are the several reasons why
We urge of you to come and buy,
At Fletcher Bros.' store you'll see
The largest stock in all B. C.

Machines of every style and price,
You'll find no others half as nice,
We save you money and please you, too;
So bring your friends along with you.

The Oliver Phonograph Co., of 16 New street, Newark, N. J., have got a great number of reading notices in the local dailies in connection with their demonstration of the Victor Co.'s Auxetophone.

AT YOUR SERVICE

That is the whole story in a nutshell. Our whole attention is concentrated to care for your wants, and it is reasonable to suppose that we can give you better service than if we had a dozen different irons in the fire. Just try us with a sample order and give us an opportunity to "make good."

NEW YORK, MARCH 15, 1907.

ONE of the department heads of a great manufacturing concern in this industry writes to The World: "I am glad to see you emphasize in the columns of your publication the necessity of a man learning something about the talking machine business before he can hope to make a success of it. It seems to me the more you emphasize this point, the more force for good The World will be throughout the entire industry." No man can hope to make a success out of the talking machine business simply by purchasing a stock of goods and expecting the public will buy them and pay good profits without reasonable efforts on his part.

WE have endeavored at all times to impress upon our readers the advantage of acquainting themselves with every department of the talking machine business. We have urged the necessity, particularly among the music dealers, of creating sound-proof rooms and making the talking machine departments attractive in every particular, so that people will not only be interested in the machines, but the pleasing environment will give a selling effect which will be decidedly advantageous to the business. There is good money for the jobber and for the dealer in the talking machine business, but it requires effort, study and concentration to produce the right kind of results. It is necessary in all other trades, why should it not be in the talking machine business? Every business organization—no matter how large or how small—must be resolved to a comprehensive basis in order that success may be attained. There are many things to learn about talking machines, and "the man who knows it all" will find upon careful investigation much which he has left out when considering the business from a narrow viewpoint.

A TALKING machine salesman should feel interested in his work. Salesmanship may be defined as the knowledge of methods and the efficiency in practice which makes for success in any one of the many branches of the selling end of the business. The word "salesmanship" is broad in meaning; it covers not merely the work of the individual salesman who goes on the road and offers machines or who offers them from the floor of some wareroom, but includes the activities of all branches of the selling end of the business. Salesmanship, in its broad meaning of knowledge of selling methods and efficiency in selling, is even more essential to the proprietor in his work of organization than to the individual salesman in his work of developing individual prospects. Even the handling of the firm's credits may be well included as a department of salesmanship, as nothing has a more vital connection with re-orders of goods from a single customer.

BUSINESS for the past month has not been over brisk in the talking machine line, and complaints have reached us from a number of sources, which show that trade is not up to the expectations of many. Still, judging from reports, the total volume of business for February exceeded that of a year ago, a condition which shows that an advance has been made; but the great trouble has been that the American business man is never satisfied with making a moderate advance. He looks upon business as being dull unless the record of the previous year has been far eclipsed. We have been so accustomed to making these special advances in later years that nothing satisfies us unless the increase is of pretty good proportions. There must be some cessation in the climbing process, and it may be a good thing to have a little lull occasionally in business.

WE have taken pains to investigate the business conditions surrounding a number of geographical points, and the result of our investigations has been that we have observed a painful lack of progressiveness on the part of the men who have complained of the talking machine business. Business will not come to the man who will not let the people know that his doors are open. It would pay some of the leading concerns to send out a regular corps of experts whose duty it should be to train some of the dealers in adoption of their methods. A lot of men are simply going to sleep in rich territory. They have bought some machines, placed them in their establishments in an unattractive manner, and wonder why they are not doing business.

SUCH a class of men need instructions from manufacturers. The desired results are not reached by sending out literature. It requires more than that. They have got to send out men who can work with these merchants and coach them, show them how to display goods, how to keep their warerooms bright and attractive, their stock in good shape, and to let the people know through their local papers what a marvelous development the talking machine has reached. There are hundreds of thousands of people all over this country who are as yet in total ignorance of the splendid development of the modern talking machine. When they hear the name mentioned they immediately associate it with the crude creation of years ago before the fine work of our inventors had developed the product to such an interesting state.

TALK about the business being overdone! It is only the drones who are raising that cry. The progressive men are busy developing trade that pays, and there is plenty of it all around, if men would only use judgment, hustle and reason, in its development. When you hear a man saying that the talking machine business is dull to-day, you can make up your mind positively that it is not the general business which is wrong. It is his system that has gone astray, and what he needs is new ideas with which to bolster up his declining business structure. The business is all right, and the general conditions of the country are such that it warrants every man in this industry bending all his energies to the development of trade. The business outlook for the trade is excellent.

LABOR is universally employed at splendidly remunerative wages, and it should be understood that the wage-earners of this country are tremendous purchasers of talking machines. At the high wages now prevailing they are able to satisfy their inclinations in various ways, and many of them are delighted with the talking-machine as a home entertainer. So great has the demand become for the records from the class who are employed during the working hours that many retail talking machine establishments arrange to keep open during the evening, and enormous sales have been made during that period. It pays to work every business point possible to the utmost nowadays, and there are great possibilities in the talking-machine trade which will be appreciated more and more by those who have an intelligent grasp of the situation.

SOME jobbers have expressed surprise at the returns which they have received from modest advertisements in The World. To learn of this causes no surprise to us, however, because we have an accurate knowledge of the fact that the small dealer is a close reader of this publication in every section of this country. We are gradually adding to our lists of names, and the new subscribers who are coming in every month as a result of our extensive campaign of distribution is most gratifying. Every jobber who is represented in this publication may have the assurance that his advertisement is seen by all of the smaller dealers throughout the territory which is tributary to his market.

We try to keep up with the trade procession and to exert a helpful influence everywhere. That is the mission of this trade newspaper institution, and we endeavor to live up to our principles.

WE have been looking over the trade situation in Porto Rico, and it is surprising how popular the talking machine has become among the residents of that island. The total of Porto Rican trade last year amounted to nearly $40,000,000, which is several times the volume of business transacted during the old Spanish regime. Since the American occupation—in spite of the fact that we have not done our full duty by the residents—the island has advanced, and labor is being better remunerated than during any time in the history of the country. The Porto Rican will save money to buy talking machine records, and some of the houses there are doing a very satisfactory business, and the market will be constantly improving with the passing of each year.

ANOTHER "TALKER" AMUSEMENT.

Something New in Entertainments for Lovers of the "Graphs" and "Phones."

A banquet was given by one of New York's most select literary clubs the other night, and the chief entertaining feature was the talking machine. It was down on the programme as an absorber of toasts, and that the title was an appropriate one is clearly demonstrated by the following account of its success, or, perhaps, triumph would be a better word.

Beside each plate on the snowy cloth of the banquet table, showing in somber contrast with the gleam of silver and dazzling sparkle of cut-

THE TALKING MACHINE AT THE BANQUET.

glass around it, lay a small black cylinder; a new kind of napkin ring apparently, for thrust within it was a roll of milk-white damask. It held this office, 'tis true, but it had a more important duty to perform later in the evening which would completely overshadow its modest position as custodian of the napkin.

After the various courses had come and gone, and the subject of after-dinner speeches was in the air, the little black cylinder leaped into prominence and honor. It became the most honored of guests, for would it not soon be talked to individually by some great man or woman while the other celebrities present were forced to be content with a general distribution of the golden stream of oratory?

As the toasts were announced, a waiter placed before the lady or gentleman about to speak a talking machine. Then the little black cylinder was inserted upon the mandrel and the toast delivered into the horn.

At the close of the banquet, all the cylinders were carefully collected and given into the hands of the secretary, whose duty it was to place them in safe keeping until once again the club should call its members to their annual feast. When that time arrives there may be a vacant chair at the festive board; some member may have drifted into the deep, dreamless sleep of death, but even though the living voice may be silent forever, still a perfect reproduction remains engraved with delicate precision upon the glossy surface of the little black cylinder. While it cannot keep its members with it always, this literary club may retain among its archives the voices of those it once cherished through the wonderful genius of man which brought to light the eighth wonder of the world—the talking machine.

HOWARD TAYLOR MIDDLETON.

VICTOR CO.'S EXCHANGE PROPOSITION.

Bearing date of February 18 the Victor Talking Machine Co., Camden, N. J., have sent the trade the appended supplementary notice in part as follows: "We would call your attention to the record exchange proposition which was mailed on the 15th inst. This proposition is operative from February 20 to 28 inclusive, and enables Victor distributers and dealers to clean their shelves of all cut-out, dead or slow-selling stock, in exchange for what they have come to recognize as quick sellers in the Victor record catalogue. While we do not agree to inaugurate this exchange proposition at regular or specified periods, this * * * exchange proposition is of great importance to all music dealers throughout the United States, as well as to Victor dealers."

"TWIN CITIES" REPORT PROGRESS.

Minnesota Phonograph Co. Remove—Manager Luckers' Report—Hough's Four Stores Doing Well—Several Take on the I. C. S. Course—Adjustable Case Co.'s Record Case Specialties Appeal With Especial Force to Live Dealers—Other News of Month.

(Special to The Talking Machine World.)

Minneapolis and St. Paul, March 10, 1907.

The Minneapolis branch of the Minnesota Phonograph Co. moved last week into temporary quarters on 4th street, which they will occupy during March pending expiration of a lease on premises of which they will take possession the first of April. They are located at 526 Nicollet avenue, in the heart of the retail business section. Rents are so heavy in this section that this contemplated step would seem to indicate the prosperous character of the business of the company since it opened this branch a year ago last December.

"We had a good steady trade during February," said L. H. Lucker, president of the company, "and results were fully as good as during January, that is, for retail sales. In the wholesale department, the demand for both Victor and Edison goods is constantly increasing, and the outlook for the spring trade seems to be exceptionally encouraging. The only thing I have to kick about is because we cannot get the goods."

T. C. Hough reports an excellent month's business at his four retail stores. "The public is buying a much better grade of machine these days than formerly," he said, "and the outlook for a much bigger year than last seems a pretty safe prediction." Mr. Hough has just put in a good line of I. C. S. Language Outfits.

J. W. Wheeler, of the Columbia Phonograph Co., reports a satisfactory month's sales at the branches in both cities. "The public taste has improved considerably in the call we have for records," he said.

Theo. Severans, formerly employed by T. C. Hough, has just opened an attractive store on Nicollet avenue, in the Nicollet House Block. He is handling the Edison exclusively.

W. J. Dyer & Bro. reported quite a satisfactory month during February in their talking machine department, the demand for records being reported very good by Messrs. Mairs and Fuller, the managers. It was stated that the business showed a big increase over the same month last year. They have opened a new department to be devoted exclusively for the sale of the I. C. S. Language Outfits.

A. M. Magoon, in charge of the Victor Department for the New England Furniture Co., reported trade continuing steady, and of a very satisfactory character.

The Adjustable Case Co., of 3416 Second avenue, South, have recently put on the market an adjustable and expansive cylinder record wall case that is equally convenient for use in salesroom or home. In regular form the case consists of eight shelves capable of holding in all ninety-six records in their ordinary cotton-lined boxes, while with additional shelves the capacity of the rack can be increased to hold 144 records. Some of the advantages of this handy patent record wall case are: it is compact, exposes the title of every record to plain view, permits them to be kept in their original cases free from damage, may be hung out of the reach of children, fits any space and, above all, may be adjusted to meet all conditions through the removal or addition of shelves. A patent shelf edge permits the record to be withdrawn from the case with ease and without disturbing other records. In salesrooms the wall case is not alone useful for holding records, but may be used for window displays, holding light articles, novelties and jewelry, etc. The head on the edge of the shelf prevents the articles from sliding off when the shelves are hung at an angle, so many unique displays can therefore be arranged.

EDISON & WEBER SOUTH.

The Great Inventor and His Superintendent Arrange to Avoid the Rigors of Our Northern March—Will Rusticate South.

Feb. 25, Thomas A. Edison and his wife, accompanied by the latter's brother and wife, started on the "Florida special" for Fort Myers, on the Gulf side of the Everglade State, where they will remain for six weeks or more. Mr. Edison has a comfortable home of his own at this place, which is on a bay or estuary of the Gulf of Mexico, it being his regular practice to avoid the rigors of the Northern month of March by going South. The following day Peter Weber, superintendent of the Edison Works at Orange, N. J., also took his departure for Florida, and will be the guest of Mr. Edison at the Fort for a month. This is the first real vacation Mr. Weber has taken for years, and only rest and recreation are on his programme.

WE'VE GOT IT AT LAST

and it's unquestionably the finest piece of art and mechanism ever attempted after many months of careful and concentrated efforts.

It's a WOOD COLORED HORN.

Horns that are true and exact reproductions of oak and mahogany in the various shades—that appeal to the critical eye, are finished in rough and high polished surfaces.

A revelation in horns which add to the phonograph an extremely valuable acquisition.

Cabinets of the Edison Phonographs and Victor Talking Machines are readily matched.

Absolutely new and novel and cannot be distinguished from the natural wood.

Looks like wood—sounds like wood—and feels like wood. What more could be obtained in the construction of this horn? In all, the pinnacle of perfection has been reached.

If there's an improvement to be made, it cannot occur in this generation.

Many horn manufacturers are endeavoring to reproduce this horn with peculiar imitations, but the original is owned and manufactured by us exclusively.

Our morning glory flower horns have met with favorable comments wherever shown.
The decorations are without a doubt the prettiest and most artistic ever exhibited.
The enormous sales of these horns alone give evidence of their superior quality.
We make them in many colors and designs.
Are built of extra heavy tin insuring them of durability.
Carefully and scientifically baked which overcomes all doubt of fading.
Mr. Jobbers—write us at once and we'll quote you interesting prices.

TRADE BOOMING IN MEXICO.

The Outlook Throughout Our Sister Republic Is Healthy—The Espinosa Phonograph Co. Expect That Their Business During 1907 Will Average Fifty Per Cent. More Than Last Year—G. A. Smith the New General Manager Is Now in Harness.

(Special to The Talking Machine World.)

Mexico City, Mex., March 6, 1907.

The talking machine trade in this city, and, in fact, all over Mexico, is in a healthy condition, and a remarkable growth is experienced continuously.

An excellent idea of the state of the business may be gleaned from the record of the Espinosa Phonograph Co., the oldest and one of the largest talking machine houses in Mexico. This company have headquarters at Calle de Santa Clara, No. 18½, Mexico City, with branches throughout the country, and handle the Columbia line exclusively. At present prospects the business of this firm during 1907 will average 50 per cent. more than that of 1906.

G. A. Smith, the new assistant general and sales manager of the company, arrived in Mexico last month, and now has his work well in hand. Mr. Smith is a man of wide experience in the talking machine trade, having been connected with the Portland, Ore., branch of the Columbia Co. for several years.

STILL ANOTHER CLAIMANT.

Still another claimant to the authorship of the Thanksgiving menu which recently appeared in The Talking Machine World has cropped up. In this connection we are in receipt of the following letter from Harry Marsey, manager of the Buffalo Talking Machine Co., Buffalo, N. Y., who says:

"The Talking Machine World, New York:

"Gentlemen—Reading your article regarding that Thanksgiving menu which the Buffalo Phonograph Co. claim to have originated, I beg to state that I individually got that menu up. I worked on that article several nights before I got it to look and read as good as it does, and had quite a hard time convincing the Buffalo Phonograph Co. that it would make a hit, and since you printed it in your paper it convinced them that it really was something. They claim the honor of its origination, of course. I was in their employ at the time, and I presume that they have the right to the claim, but I should think that they would at least mention the fact that I was the one that got it up for them."

EDISON GRAND OPERA RECORDS FOR MAY.

Five grand opera records will comprise the National Phonograph Co.'s Supplement No. 6, for May, but are to be sold the public before April 27, as follows: B 46, "Tarantella" (Rossini), by Giuseppe Campanari, baritone; sung in Italian, orchestra accompaniment. B 47, "L'Air des Fleurs" de Siebel ("Siebel's Flower Song"), "Faust" (Gounod), by Mme. Jacoby, contralto; sung in French, orchestra accompaniment. B 48, "In diesen heil'gen Hallen" ("Within These Sacred Halls"), "Die Zauberflöte" ("The Magic Flute") (Mozart), by Robert Blass, basso; sung in German, orchestra accompaniment. B 49, "O Paradiso in terra" ("O Paradise on Earth"), "L'Africaine" (Meyerbeer), by Florencio Constantino, tenor; sung in Italian, orchestra accompaniment. B 50, "A tanto amor" ("To So Much Love"), "La Favorita" (Donizetti), by Mario Ancona, baritone; sung in Italian, orchestra accompaniment.

LARGER QUARTERS FOR O. K. HOUCK.

In order to better accommodate their tremendously increasing talking machine trade in Edison and Victor lines the O. K. Houck Piano Co., of St. Louis, Mo., have completed arrangements for the removal of that department from the third floor of their building to the first, or street floor. Preparations are already under way for the erection of special booths and sound-proof rooms, and when all the changes are complete the Houck Piano Co.'s department will be one of the handsomest and most convenient talking machine salesrooms in the city.

According to a recent decision of Judge Broyles, of Atlanta, Ga., in the case of S. P. Robbins, manager of a moving picture theatre in that city, it is permissible to use a talking machine for attracting attention, provided a rag is stuck into the horn to muffle the sound. Attorney for the defense promised to insert a sponge in the horn to absorb the liquid tones.

In addition to the many patents controlled by the Ideal Fastener Co., one has recently been issued on their O. K. Horn Crane. This patent is very broad, and as a member of the firm said, considerably strengthens the position of the company to stop any attempt of infringements upon their rights.

FREE SAMPLES
of Needles That Prove.

Playrite
TRADE MARK
NEEDLES
"THE NAME TELLS WHAT THEY DO"

TRADE HAPPENINGS IN ENGLAND.

Business Throughout Country Pretty Fair With London Somewhat Quiet—Whitlock's Latest Invention—Specialties Worth Investigating—Some New Catalogues—National Phonograph Co. Report Progress—New Factory for Gramophone & Typewriter Ltd.—Neophone Co. Organize—The Pessimist and Optimist Compared—The General Phonograph Co.'s New Disc Record—Some Remarkable Records—Russell Hunting Co.'s Removal—Hopkins Succeeded by Hanshue—Death of Arthur Smith Regretted—New Excelsior Disc Machine—Neophone Co. Affairs—Gramophone Heard in Opera and Concert—Other Items.

(Special to The Talking Machine World.)
World Office, 69 Basinghall Street,
London, Eng., March 1, 1907.

Reports indicate fair general business last month, notwithstanding the many cycle dealers who have relegated records to the background now that fine or cycle weather is with us. Seemingly, for no particular reason, London business is not so brisk as with provincial dealers; yet London has not been so bad as January expectations lead us to believe. In the provinces money is not so tight. London is provided with evening amusement in plenty, while some of the smaller country towns lack even a decent theatre, and in consequence fall back upon the talking machine, in which the people find equal consolation and enjoyment, judging from the present call for popular London titles. Money is spent more liberally, and consequently we find provincial trade proportionally greater than in London.

A Handsome Cabinet.

A handsome new showroom or concert platform cabinet has been designed by W. H. Whitelock, of horn fame. The front is of a very artistic appearance, decorated in gold and silver leaf, on a background of imitation bird's-eye maple wood. Standing over six feet high, it presents a striking front of a novel and original character. Collapsible table for machine and shelves for records fit on at the back, so that the operator cannot be seen by the audience. A specially designed horn is inserted through an aperture in front, the bell fitting flush from frontal view. The article is altogether of an ingenious nature, and reflects much credit on Mr. Whitelock's untiring efforts and fertility of brain.

Some Rauth Accessories.

In our columns will be found a list of a few cheap accessories put out by Mr. Rauth. American and colonial dealers would do well to write for prices, which allow of export. I have personally tested many of Mr. Rauth's productions, and have found them of good quality and reasonable in price. They are worth specializing by dealers, as I am told the margin of profit is liberal. Disc record albums, rubber and nickel-end connecting needles, etc., are much in demand, therefore inquiries should be made at once. By-the-by, Mr. Rauth is introducing a new disc record of a natural tone, particulars of which will be published probably next month.

American Talking Machine Co.'s Catalogue.

The American Talking Machine Co. (whose announcement will be found elsewhere) have recently issued their wholesale catalogue to the trade. The production is a veritable encyclopedia of everything relating to talking machines and records, containing as it does illustrations, detailed particulars and prices of every disc and cylinder machine and record, accessories, etc., upon the English market. The catalogue is recognized, even by competitors, as the most comprehensive ever issued, and the demand bids fair to soon exhaust the 10,000 which the firm had printed. Only legitimate dealers are invited to send trade card for this book to the company's headquarters at 31 Tabernacle street, London. It will also be seen from this firm's announcement that they require applications from suitable houses in every country, willing to represent them. Whoever distributes their products handles good things.

Artists for the National Phonograph Co.

Mr. Maryon, of the National Phonograph Co., spoke of the new artists his firm had recently secured. Miss Vesta Tilley, one of the new contributors, and undoubtedly one of the most popular comediennes of the day, has already recorded a first, i. e., "Following in Father's Footsteps," which has proved an enormous success. Miss Vesta Tilley has made an arrangement with the National Company whereby she records exclusively for them. Two other new artists, namely, Harry Champion and Harry Barratt, both comedians of popularity, have entered into contracts to record for the National Phonograph Co. Dealers will find records by these three artists much in demand and should therefore prepare by ordering in quantities, and early. General business, said Mr. Maryon, is excellent, considering the weather changes. Spring, naturally, invite people out, and we find they buy where the dealer is progressive enough to catch them, either with handbills, circulars, local newspaper advertising, or attractive window displays. "No, the season is far from the end with us," exclaimed my informant, in answer to a query. Yet some people have already convinced themselves we are on the fringe of the dead season.

An Interesting Ceremony.

Not long ago a very interesting ceremony was performed at Hayes, Middlesex, when the directors of the Gramophone & Typewriter, Ltd., accompanied by Edward Lloyd, the famous tenor, performed the ceremony of cutting the first sod of the new factory that is to be erected to cope with the enormous increase of business that the company of recent years has created. The party included Trevor Williams, the chairman of the company; S. W. Dixon, general manager; Mr. De la Rue, a director, and others. Edward Lloyd consented to step from his retirement at Worthing, and performed the ceremony with a silver spade, which was afterward presented to him. The occasion, he said, marked the beginning of an undertaking of great extent, which will give employment to a vast army of British workmen. The works cover eleven acres of ground, and the Gramophone & Typewriter, Ltd., has shown a wise discretion in the choice of the site, which is only half an hour from London by rail, and occupies a position closely adjacent to the Great Western Railway, where they will have a special siding. On the north is a canal, a cutting to which will be made for dealing with their freight.

International Neophone Co. Registered.

The International Neophone Co. was registered on Feb. 4, with a capital of £2,000, in £1 shares, to acquire from Neophone, Ltd., the right to dispose of the patents and rights of Neophone machines, records and accessories in all parts of the world except the United Kingdom, together with the businesses of dealers in Neophone and other talking machines carried only by Neophone, Ltd., in those countries, respectively. No initial public issue. First directors, Dr. W. Michaelis and J. Morley, 2 Tabernacle St., London, E. C.

Attending Annual Fair at Leipzig.

The annual institution or fair held at Leipzig, in Germany, has called away many prominent members of the talking machine trade. We hope the business and social time over there will have proved beneficial to all.

Gramophone Electioneering.

London County Council candidates have found the gramophone a most useful aid in electioneering, which saves them much of the weary strain of traveling and speaking. Speeches were delivered into instruments, which were then placed on carts and turned on at the street corners and other meeting places, and thus was surmounted the candidate's difficulty of being in more than one place at a time.

Gilbert Kimpton & Co. Pleased.

Gilbert Kimpton & Co. report a satisfactory condition of business in the Imperial records over here, and announce that their parents, the Leeds & Catlin corporation, are distinctly elated with the records made by Ian Colquhoun and Tom Child, which experts declare will reach a phenomenal sale in the States. W. H. Glendinning is expected back about the time these lines are in print.

Stocking Pathe Records.

British and colonial dealers are stocking Pathe phonographic disc records in goodly numbers, as the call is incessant. For the time of the year, said Pathe Freres, we are experiencing a most unlooked-for deluge of orders, which we are now able to execute without delay. The retail reception saloon in Regent street is gaining more and more popularity, and we are well satisfied with the result of our expenditure in that direction.

The Sterling Recorder Now Out.

March 11 (No. 5 issue), of the Sterling Recorder is now out, and the Russell Hunting Co. will be glad to send dealers a copy on application being made to the City Rd., London. This is the company's house organ and is brimful of interesting hints and helps for the dealer.

Zonophone Records Still Booming.

Zonophone records are still booming everywhere. Mr. Nottingham, of the American Talking Machine Co., says that business in this line is so good that they have entered into an agreement with the British Zonophone Co. for close upon 200,000 records!

By Our Pessimist!

Who made the talking machine industry? Cycle dealers! Who is killing it? Cycle dealers! Seventy-five per cent. of the retailers handling talking machines, etc., are cycle dealers, and the fact that the majority are now pushing cycles to the front and talking machines to the rear—some even covering them up to keep the dust off—speaks for a bad time to come.

The Optimist

answers: "The volume of business done by cycle dealers in the aggregate during the season was great, but the turnover of each individually was little, and will be, so long as they place talking machines, etc., second, the consequences of which are that the buyers have tired of excuses and have long agitated, in many incidental ways, their music retailers to stock records. The musical instrument dealer was hard to move, but he is now waking up, and it will be found that throughout the country 50 per cent. have interested themselves in records and machines. Therefore it will be apparent that the trade is getting into the hands of more suitable shop keepers—men more enterprising—men who will keep their patrons alive to the various companies' summer lists as well as during the winter time. Thus the industry has a better outlook, and although the advantages will not perhaps be felt so much this summer, the change from cycle to music dealer stirs the imagination to conceive a gramophone garden party or summer phonograph recitals on the lawn or elsewhere, which is a sure sign that we are nearing the reality of the thing!

Royal Approval.

The Gramophone & Typewriter Co. have been appointed by royal warrant makers of gramophones and gramophone records in ordinary to Her Majesty Queen Alexandra. Tribute of the best!

Concerning the General Phonograph.

Some interesting items and changes are announced by the General Phonograph Co. In conversation James H. White gave me some definite information regarding the new disc record which they have long contemplated issuing, and which will be an established fact by the time this is in print. I was shown the first master. It is on the Hill & Dale cut and phonograph principle of gold moulding applied to the disc. This principle has been obtained only after countless experiments spread over many weeks, and it is claimed the superiority of the gold moulded process ensures reproduction in a manner more lifelike than any other known process, known as the "White Phono-disc." The first samples (double sided) consisting of about 100 titles, will be ready shortly. While the price is still a matter to be fixed upon, I may say it will be popular, and allow a generous profit to the dealer. Mr. White said that he is contemplating introducing the phonograph disc in America by next season, and if the proposition matures, he will probably cross the herring pond in the near future to fix up all necessary arrangements for equipping a large factory, which will enable them to issue unlimited quantities of records by the leading English, Continental and American talent. General business, Mr. White averred, was excellent, particularly from Australia, where from one firm alone they had received an order for 140,000 cylinder records, partly through introduction by their advertisement in The Talking Machine World. "It has been found that the situation of the Euston Road building is so

inconvenient to the trade at large," continued Mr. White, "that we have decided to abandon our premises there, and take more ceutral offices in the district regarded as 'Phonoland.' In all probability our new place will be in the City Road. In the meantime the General Phonograph Co. invite dealers everywhere to forward a request for lists and trade terms to Euston Buildings, London, E. C."

Some Remarkable Recording.

The wonderful Mr. and Mrs. Zaucig—two persons with one mind—who have dazzled not only the people of America and Great Britain, but the whole world, by their remarkable exhibition of thought transference, recently recorded for the Gramophone Co. The experiment drew together an interesting little gathering. Professor McDougal came from Oxford, and one of the most attentive listeners was the editor of the Annals of Psychical Research. There were also Lord Northcliffe, Lord Montagu, of Beaulieu; C. Arthur Pearson, and Clement Shorter, and when it was over none of them confessed to anything other than wouderment and delight.

When Mr. and Mrs. Zancig arrived at 3 o'clock and were conducted upstairs to the laboratory where the experiment was to be made, they were obviously extremely nervous and highly strung.

On her side of the big brown paper screen Mrs. Zancig stood by her gramophone with tightly clenched hands, her mouth drawn in to the teeth, and eyes closed so tightly that the sight of the strained lids was almost painful. The fact that the lids were so closed while Mrs. Zancig received many of the questions and gave many of the replies, dispenses with the theory that those scintillating eyeglasses of hers and her husband's are in any way employed as agents in signaling. Though, to be sure, the high screen between them disposed of that theory, too.

The objects ranged on the table by Mr. Zancig's side represented without doubt the most difficult set of problems that Mrs. Zancig has ever been set to solve. Mr. Zancig was very pale and nervous, and as he stood shifting from one foot to the other, he kept flicking his hands so that his long, slim, bony fingers made a sharp cracking noise. But still his pale blue eyes smiled and glittered from behind his glasses as he made the now familiar little speech before he set to work.

There was, he said, nothing supernatural about his work and his wife's. He simply claimed that whatever he saw she could see, too.

Then with the rapidity of a bank clerk counting change, he began to pick up one object after another from the little table, calliug such questions as "What is this?" "Now this?" "Well, this?" into the instrument.

The answers came crisp and pat: "A pen," "A case," "A coin." "The date on the coin?" "1900."

These, of course, were common objects which must always be included in such a collection, but there were many things the like of which Mr. and Mrs. Zancig can never have seeu before. There were, for instance, a little child's kindergarten cube of variegated colors, a money-case which included every piece of gold and silver coined in this country; a patent appliance for clipping nails, a little Janus-like piece of carved ivory, having the head of a skeleton on one side.

So nervous was Mr. Zancig that now and again his rapidly working fingers fumbled at the article which he selected, and then Mrs. Zancig hesitated for the fraction of a second. Once or twice in response to his questions she gave the name of the object lyiug next to the one which he picked up, but this only lends color to Mr. Zancig's statement tnat Mrs. Zancig sees what he sees, and his explanation was that if his gaze wanders for a moment, Mrs. Zancig must of necessity go wrong.

Once her answer was curious. The object selected by Mr. Zaucig was a specimen of a dried Mexicau "smallhead." Mrs. Zancig's reply was, "A gentleman's face."

But apart from this she made no mistake, the most wouderful exhibition being when she gave the date, numb and price of a visitor's railway season ticket, and added, in the same breath, the name of the owner.

It may be said that the strain of the test was so great that it left Mr. Zancig almost distraught and Mrs. Zancig as pale as ashes.

The reasons which first gave rise to this idea of recording the Zancigs' questions and answers by gramophone are that even the swiftest shorthand writer in the world must toil in vain after their rapid questions and replies, and that no record in cold print can hope to give those momentary hesitations and those subtle inflexions of voice which the code theorists maintain are half the Zancigs' secret.

The Very Thing!

The lady with the armful of paper parcels was evidently in a hurry, and the fierce glare in her eye aroused the young bookstall clerk from his habitual afternoon reverie. "Look here," she said. "I want a book for my husband. It's his birthday, and I want it for a present. Show me what you have, and be quick about it! Nothing too expensive, mind you; and I don't want anything too cheap, either—do you hear? He's a mild-mannered man, and not fond of sports, so don't show me anything in that line. For goodness sake, don't offer me any of those trashy novels, and no matter how much you try to persuade me, I won't take anything in the way of history or biography. Come, now, I'm in a dreadful hurry, and I've already wasted too much time here. Of course, you don't know my husband, but from all I've said, can't you suggest something appropriate?" "Guess I've got the very thing," was the assistant s reply. "Here is a little volume, entitled 'How to Manage a Talking Machine.'"

Arthur Smith's Death Regretted.

The death, early in the month, of Arthur Smith, conductor of the London Military Band, caused many expressions of genuine regret among his friends of the Columbia Phonograph Co. and of sympathy for his widow. Mr. Smith was a prominent member of the Royal Society of

FROM OUR LONDON HEADQUARTERS—(Continued.)

Musicians, and was well known in military band circles. He was for some time a member of Sousa's Grand Concert Band, and toured over a large part of the States as principal cornet soloist, during which time a close friendship sprang up between him and the famous "March King." He was also a member of the Coldstream Guards Band, and for a considerable period was connected with the Queen's Hall Orchestra. From the latter organization, largely, he selected the musicians which he gathered together to form the London Military Band, the merit of whose performances is recognized by every user of Columbia Records. At the time of his death and for several years previously he was in charge of the military band instruments department of Messrs. Chappell. Having a very sunny disposition and cheerful manner, Mr. Smith made friends in great number, all of whom will genuinely feel his loss.

C. J. Hopkins to South America.

Charles J. Hopkins, so well known to the trade as assistant London manager of the Columbia Phonograph Co., has just received a new appointment under his company, which will give him a continent as scope for his abilities. He is to undertake the oversight of the continually increasing trade in Columbia productions in South America. Buenos Ayres will be his headquarters. He left this country on the 13th of February on the "Kronprinz Wilhelm" for New York, where he will meet the officials of the Columbia concern preparatory to entering on his new field. Already there has been the spice of commercial romance in Mr. Hopkins' Columbia career, for he has done a great deal of pioneering work, and has probably traveled more extensively for talking machines than any other man in the trade. He joined his company ten years ago, and after being assistant manager and manager of two branches in the States, he was transferred to this side of the Atlantic. His first European appointment was the assistant managership of the Columbia establishment in Paris. Then he undertook the direction of affairs at the St. Petersburg branch, and was afterward made assistant manager at London. His splendid successes in salesmanship marked him out for a world trip, and he traversed the globe in the interest of his company, visiting every country of importance except South America. The result of his tour was most gratifying, valuable connections being opened up practically everywhere. Mr. Hopkins' activities in this country brought him into touch with all the factors, and many of the leading dealers in the United Kingdom, and as he possesses the rare faculty of awakening feelings of personal friendship in his business acquaintances, the news of his new appointment will evoke exceptionally cordial good wishes throughout the trade for the realization of another brilliant chapter in a very interesting career.

Hanshue Succeeds Hopkins.

Mr. Hopkins' successor in London is W. E. Hanshue, who is new to the talking machine trade, but possesses an admirable faculty of getting along with dealers and brings to his new work a freshness of ideas and an enthusiasm that are sure to bring splendid results.

Russell Hunting Co. Removal.

The Russell Hunting Co. and Sterling & Hunting, Ltd., will be moving from City Road and Hamsell street premises into the new building not later than the March quarter, which date, by the by, is the end of their financial year. The new quarters are now rapidly nearing completion, and in a few weeks will be out of the builders' hands. I shall then be able to furnish a few particulars of what is regarded as one of the most conveniently arranged premises in the talking machine industry.

Neophone Co. Affairs.

Under the new manager, Mr. Parr, the Manchester quarters of the Neophone Co. are reported to be making phenomenal progress. Local dealers seem to be supporting this department well. In course of a short chat, Mr. Craies, of the London headquarters, mentioned that their factory is now in good working order, and going at great pressure to meet the call for the improved Neolite sapphire disc, which is fast being recognized as a formidable competitor of the Berliner-cut type. Australian business is on the increase. The Neophone Sidney agents, Messrs. Mason & Bohanna, find things booming just now, and are opening several new branches in preparation for the coming season, at which time we are in the height of our summer.

New Styles of Excelsior Disc Machine.

At the invitation of Mr. Vischer, I recently had a private view of two new styles in the famous Excelsior disc machines. Both were obviously of excellent workmanship and finish. The tone arms, it was claimed, are absolutely sound-tight, and in point of view of construction, are of an unique pattern. The works are well finished, the motor comprising an embodiment of several new principles. The sound-box also is of a new scientific construction, and reproduces most naturally, as was demonstrated. The cases are splendidly made—one in polished oak, the other of walnut wood inlaid, surmounted by flower horns of a pretty design. I should say the general qualities of these new Excelsior machines leave nothing to be desired. They will of a surety be fine sellers for English talking machine dealers.

Some Lyon & Co. Novelties.

A. Lyon & Co. are offering some particularly cheap lines, notably disc record albums, which are advertised elsewhere in these pages. These albums represent the latest in point of quality and adaptability. They have very strong cloth covers, fastened with a special clasp, while the inside slots are of a hard-wearing vellum style paper, which is guaranteed not to tear. The price is very low, and will allow American

jobbers and dealers to handle this line (in spite of tariffs) and show a good profit. The company will send their lists to any legitimate dealer applying. Messrs. Lyou & Co. are also sole factors for the Zonophone and Sterling Hebrew records, of which some splendid selections have recently been issued.

Favorite Co.'s New Lists.

The Favorite Co. are constantly adding new lists to their already fine repertoire of selections varied. Among the latest are some particularly good pianoforte solos, and other contributions of a classical nature, for which the demand, although not large in comparison with sentimental and comic records, is nevertheless steady.

Gramophone in Opera and Concert.

The gramophone is in evidence all over the country. Recitals are the order of the day, and it is safe to remark that such publicity is productive of good results for the company. A gramophone performance of the whole of Verdi's "Il Trovatore" was recently given a great ovation at the Chiswick Town Hall. Again at the close of the evening service at Gorleston Parish Church, a recital was given on behalf of a local distress fund. Truly, it is an instrument of many and varied missions!

Some Fine Odeon Records.

The Odeon Co. beg to call attention to some magnificeut band records issued in the March supplement, by the Imperial Infantry Band, also a new record by Madam Emmy Destinn and J. H. Scotland. Among the instrumental records issued for March will be found some very fine selections on the violin and 'cello, organ and banjo. The organ solos by Mr. Letorey, of Paris, will prove a very excellent record, and we believe oue of the finest organ records that has at present been recorded. They are also putting out a very fine violin record made by Miss Alice Liebman.

The New "Discodeon" Record.

The new "Discodeon" machine, just placed on the market by Messrs. Sterling & Hunting, has been an enormous success, and is in great demand, owing to the many improvements in this machiue, which has an eutirely new motor, walnut cabinet, tone arm and sound-box, the sound-box beiug made on a new principle and being insulated, and there is no metal connection whatever between the tone arm and the sound-box, which reproduces all records with the total absence of any metallic noises whatever, and also reduces the scratching noise to a minimum.

"Fonotipia" Advertisement Record.

The "Fonotipia" advertisement record, which was offered in the Daily Mail on Wednesday, February 13, created an enormous demand, and any one who was not fortunate in making use of this magnificent offer where they could obtain a 12-shilling double-sided record for four shillings 6 pence, can still do so by sending in a postal order for that amount, as there are still a few more to be had. Since this record was issued Messrs. Sterling & Hunting have received some thousands of testimonials testifying to the excellence of Fonotipia records.

PRICE MAINTENANCE CRUSADE.

The Practice of Underselling Fixed Prices Has Obtained Very Serious Proportions—A Condition That Calls for Immediate Rectification—The World Interviews a Number of Prominent Men in London on This Subject—Their Opinions Are of Interest.

(Special to The Talking Machine World.)

World Office, 69 Basinghall Street, E. C.,
London, Eng., March 2, 1907.

The iniquitous practice of underselling fixed-priced goods has obtained serious proportions in England, chiefly owing to the fact that the English law does not recognize a direct breach of contract on the part of the dealer who cuts the price. The red tape processes which have to be gone through, lead only to the granting of an order restraining a defaulter, and in consequence the practice goes on almost uninterruptedly. The manufacturers generally are doing their best to stem the tide, but little will result until such as are interested unite and work in combination with the factors to stamp out this ever-growing evil. Mr. Nottingham's opinion (given hereunder) seems very pertinent and one that, if adopted, would surely result in relieving the question more so than other methods now in force. The following are representative views on the matter:

The Columbia Phonograph Co.'s Views.

The Columbia Phonograph Co., General, say price cutting is ruinous to business, and they have always set their faces sternly against unfair trading. Having now introduced certain arrangements which simplify the legal processes by which their object may be secured, they are conducting their campaign against those who are guilty of this practice with greater vigor than ever. Within the last few weeks they have caused proceedings to be taken against five firms, succeeding in each case in restraining the price-cutter, and it is their intention to continue this policy consistently and persistently, irrespective of the standing of any offending firm or of the trouble involved in bringing the charge home to the delinquent party. All straight-forward traders will do what they can to back up the Columbia Co. in the determined stand they are taking against the "black sheep" among them.

A Factor's View.

John Nottingham (American Talking Machine Co.) expressed himself on the matter as follows: "I maintain that price maintenance is absolutely essential for the continued prosperity of the talking machine business in England. Some of the conditions upon which this result may be attained are: Firstly, the manufacturers must stand solidly together, and that they sell either to the dealer or to the factor, as they elect, but not to both. If a factor, he should not be permitted to work the factor's and dealer's business on the same premises, and before such factor supplies any dealer with goods of any of the manufacturers who are thus standing together, he should receive from the dealer a signed undertaking not to sell any of the goods of these manufacturers under their stipulated price, and in the event of him breaking this agreement by underselling, he should be immediately placed on the suspended list of the whole of the factors, so that unless he maintains the prices, he would at least have difficulty in obtaining supplies of any of these fixed-price goods. From the foregoing it will be inferred that all record and machine manufacturers should meet in conclave, and decide the conditions under which they will uphold the prices of their respective goods sold on the English market."

James H. White of the General Phonograph Co.

James H. White, of the General Phonograph Co.: "I gladly respond to the request of the representative of The Talking Machine World for my opinion on the benefits of price maintenance, believing as I do that it is the life of any trade where proprietary articles or even articles of well-known manufacture which have become popular with the public are dealt with.

"Having been connected for a period of about 12 years, previous to June, 1906, with the Edison interests, I have been in a particularly advantageous position from which to watch and study the benefits of price maintenance. I can remember distinctly when there was no attempt whatever in the talking machine trade to maintain prices, and the consequence was that matters got into a very chaotic condition; the machines and records were in the hands of undesirable shopkeepers (and even so-called merchants operating from private houses) who made their living and derived their advantage over legitimate shopkeepers by cutting prices. I am speaking now of the early days in the United States and Dominion of Canada; during the last five years this

condition has all been altered. I think it may fairly be said that the Victor Talking Machine Co. were the pioneers of price maintenance so far as the talking machine trade is coucerned, but happily their example was quickly followed by all of the reputable mauufacturers in Amcrica, each of whom introduced a price maintenance agreement which has been upheld time after time by the Americau and Canadian courts, and this agreement is, iu my opinion, almost wholly rcsponsible for the highly satisfactory condition of affairs and the unusual prosperity of talking machine and record manufacturers in America today.

"Although the price maintenance system in Europe is not as yet ou as sound a footing as is the case with America and Canada, I am most happy to observe the conditions improving almost daily.

"I remember well the conditions existing herc when we began invasion of European territory with the Edison products in 1902. It is a well-known fact that at that time prices of machines and records were being cut geuerally, and it was almost impossible to find two shops which were offering goods to the public at the same price. The consequence of this condition was that both wholesaler and retailer of talking machines looked at the business very indifferently and there was little or no enthusiasm. The price maintenance agreement was introduced in September, 1903, and the effect was simply marvelous. We received letters of congratulation from hundreds of dealers, both in the British Isles and on the Contiuent, and a new life immediately came into the business. This advantage was followed by vigorous prosecution of those who broke agreements, aud dealers immediately began to realize that they were really to receive protection, aud that their profits were assured. Orders under the new conditions came in so rapidly that it was almost impossible to cope with them, and it is safe to say that although the dealer was getting greatly enhanced prices for goods sold, he was doing at least ten times the turnover under the price agreement as compared with the old conditions. There can be no question but what manufacturers, factors, dealers and the public benefit from price maintenance in the talking machine trade. You will naturally ask how the public benefit. My opinion is this: Assuming that the manufacturer is reasonable and does not make the price at which the goods are to be sold to the public arbitrary, arranges his price so that there is a fair profit to himself, the factor and the dealer, a respectable margin is left to enable the manufacturer to carry on sufficient experimenting to bring his product up to the highest possible standard, and the publie buys this enhanced product at prices which are perfectly fair, and that they pay cheerfully so long as the goods are right; so that in my opinion the only evil that can possibly come from price maintenance agreements is from manufacturers putting an arbitrary price on their products, and happily the manufacture of talking machines today is iu the hands of people who are apparently too sensible to do this. I firmly believe that price maintenance is the life and soul of our trade to-day, and I do not believe that it is possible for a firm to prosper and keep abreast of the times without it."

Harold Godwin's Columbia windows for Washington's Birthday were the best ever.

DYER AND CROMELIN ANSWER PUCCINI.

Contentions of the Great Italian Composer on Copyright Riddled by Frank L. Dyer and Paul H. Cromelin Who Utter Some Vigorous Words That Shows the Talking Machine Men's Side of This Copyright Controversy.

Giacomo Puccini, rated the present day master of the Italian school of music, composer of "La Boheme," "Madam Butterfly," "Tosca" and other celebrated operas, has written the following letter on the status of the author in his relatious to the reproduction of music, in any form, without compensation:

"During my present visit to the United States I have been repeatedly catechised as to the copyright laws of my own country and requested to compare them with those of America. This I have always declined to do. I am inclined to be rather proud of the fact that my country is amoug the first in the world to extend to composers the right of controlling the reproduction of their works by means of any and all modern mechanical musical instruments, iucluding the talking machine. Of course, when our copyright laws were promulgated no such means of reproducing sound waves was dreamed of, still less than in America, where the modern talking machine was invented.

"But Italian courts have held that phonographs are within the copyright law on the broad principle that the originator is entitled to the use and control of his mental creations, regardless of the means whereby they are reproduced for the benefit of the public. And if the music box manufacturers desire to reproduce my melodies it seems to me that I should have the same liberty of selecting the medium and the method by which they shall be transmitted to the public as I have in choosing the managers and theaters to produce my operas.

"Furthermore, while I am heartily glad to note that eminent interpreters of my music, including fellow-countrymen like Caruso and Scotti, are not only paid princely honorariums for rendering solos from my operas into talking machines, but are also allowed liberal royalties on the sale of those records, it seems strangely inconsistent that the composer of those very themes should not be granted slight pecuniary recognition. To make this situation still more absurd, these records are so protected by patent that, were I to make a duplicate record of my own compositions, for which I have never granted them any right, these same manufacturers might have cause of legal action against me for infringement in hypothecating the product of my own brain and creative powers.

"Unlike operatic managers, who produce, and the publishers, who publish musical work, the manufacturers of these devices exercise no productive effort or stimulate or encourage original work in musical composition, which they exploit for their own gain. I am sure that the American people, who are firm believers in the principle of justice, equity and square dealing, will join hands with Italy in the suppression of this form of musical piracy."

Frank L. Dyer's Views.

Frank L. Dyer, general counsel for the National Phonograph Co., when asked his opinion of the foregoing remarks of Signor Puccini on the matter of copyright, said:

"No comparison can be drawn between Italy and the United States, because in this country we live under a constitution by which the powers of Congress are strictly circumscribed. Congress has no power to pass a valid copyright act that will apply to anything other than a 'writing,' and a phonograph record is not a writing under any tests that may be applied to it. Furthermore in this country the idea of copyright laws is not to protect authors or composers, as these gentlemen seem to think. The foundation of all copyright legislation must be the public good—the greatest good to the largest number.

"The object of copyright laws, as defined by the Constitution, is 'to promote the progress of science and the useful arts.' To achieve this object it was recognized that there should be monopolies, but they were properly restricted to 'limited times,' and were directed only to writings. The broad question involved, then, is whether the greatest good to the public would result from an absolutely close monopoly under which authors and composers might prevent the phouographic reproduction of their works, or whether the monopoly should give them only the constitutional right to publish and sell their writings. That the latter view is the correct one has frequently beeu decided by the American courts.

"Signor Puccini and the other composers who are so strenuously advocating a reformation of our copyright laws, seem to suppose that the credit for the popularization of their music is due entirely to themselves. As a matter of fact, the inventors of this country have created an entirely new art in which the composers had no hand whatever, although, broadly speaking, the

TALKING MACHINES

FOR SALE TO CASH BUYER

Address E. G., TALKING MACHINE WORLD, 1 Madison Avenue, New York

WILL SELL CYLINDER RECORD RACK

I have in stock one New Monarch Cylinder Record Rack, which cost wholesale $30 and freight. Am willing to sell it for $15. Address R. C. Bollinger Music House, Fort Smith, Arkansas.

MANAGER WANTS SITUATION

Young and energetic man would like position as manager for wholesale and retail Edison and Victor Talking Machine Department. Eleven years' experience in the business. Address, "Manager," care The Talking Machine World, 1 Madison Avenue, New York.

FOR SALE.

TALKING MACHINE AND PHONOGRAPH store; well established and profitable business, doing large instalment and cash business; good reason for selling—on account of having two places must sell one. Address S. P. Michlosky, care The Talking Machine World, 1 Madison Avenue, New York.

CHANCE TO BUY COMMERCIAL MACHINE.

$50 Commercial Machine nearly new. Brand new recorder, reproducer, ear-tubes. For sale only because of change of business. Dozen blank records thrown in. Big bargain. F. H. Curtiss, 3639 Locust Street, Philadelphia, Pa.

BIG BUSINESS OPPORTUNITY.

FOR SALE—Stock, fixtures and goodwill of Jewelry, Optical and Talking Machine business in a central Pennsylvania town where 30,000 people do their buying. Average monthly income in Talking Machine department $1,000 and practically no competition in this branch. Books showing growth and volume of business open for inspection. Present stock about $10,000, but could be reduced at option of purchaser. Other financial interests which will require proprietor's entire time after May 1st is the only reason for selling. A. G., care The Talking Machine World, 1 Madison Avenue, New York.

art of mechanical reproduction of music was old when the Constitution was adopted. I think it is too late now to attempt any radical change in the law that will alter the situation, iuterfere with vested interests, and instead of promoting the progress of science, act as a hindrance thereto.

Paul H. Cromelin's Comments.

Paul H. Cromelin, vice-president of the Columbia Phonograph Co., iu a chat with The World, said: "I regret that Signor Puccini, in his reported interview and alleged letter, has added absolutely nothing to the fund of information on this important subject. It sounds so much like a rehash of the old arguments we have heard so often by those who have been scheming to get control of the industry through the medium of copyright decisions and legislatiou that comment would appear to be unnecessary.

"As Signor Puccini is so proud of the actiou of the Italian Court a few points regarding the decision may be of interest. It is well to remember:

"(1) That although mechanical reproducers of music have been made and sold as long as we can recall, it was not until last year, July, 1906, that an Italian Court decided that such devices violate copyrights, and the case is on appeal, with an opportunity for still another appeal to a third court.

"(2) In so deciding the Court repudiated the action of its accredited delegates to the International Convention of Berne, which expressly made mechanical reproducers free, and the court in eudeavoring to find an excuse for such an extraordinary act, seeks refuge behind the weak statement that its delegates were appointed by the King, and as Parliament had not expressly confirmed the appointment, Italy ought not be bound.

"(3) Italy has produced more great composers perhaps than any other country. As a mauufacturer of mechauical reproducers of music, however, its position is of slight importance. A reading of the decision will convince any one that the predominant thought underlying it is the protection of its musical art as against the inventive and manufacturing capacity of other nations. The plaintiffs were Italian publishing houses and composers, the defendant, the Italian branch of a great, rich English company.

"I mean to cast no reflections upon the equity or justice of a decision rendered by an Italian judge, but I have had enough personal experience with European litigation under like conditions to make me wish that the parties to the actiou had all been citizens of the same country and to express regret that the principal defendant was a non-resident wealthy corporation.

"(4) It is well to recall that about the same time that the recent Italiau decision was reudered the English musical copyright act was passed (August, 1906), after eight years of deliberation. The English act expressly removes the mechanical players from the domain of copyright and leaves reproduction free to the people. Germany did the same in its musical copyright act of 1901. In no country in which the subject has been legislated upou has a talking machine sound record been declared a violation of copyright.

"The American people are, as Signor Puccini says, firm believers in the principle of justice, equity and square dealing. They know only too well the debt which the people of the whole world, including Italy, owe to the invention of the talking machine, and they are perfectly well aware of the fact that if any ordinary singer sang one of Mr. Puccini's arias into a talking machine it could not be sold or command any price whatever. They deny to Mr. Puccini, however, the right to exact tribute from the genius of a Caruso or a Scotti or to prevent such an artist from using the God-given talents with which he has been endowed, and from singing to an audience embracing the world, through the medium of that most marvelous of all inventions, the graphophone.

"They deny to Mr. Puccini the right to prevent any boy or girl studying vocal music from singing his music into a graphophone and making a record of it if he sees fit, and they refuse to send the boy or girl to jail for doing it.

"They refuse to permit Mr. Puccini to exact tribute from them each time one of his pieces is played on a mechanical instrument, talking machine or otherwise.

"They recognize in the talking machine a great educational force and power, which has done more to stimulate and encourage musical kuowledge than any other agency known, and while they grant to Mr. Puccini the most liberal protection in his writings, they refuse to part with that which they are eutitled to in return, which is the right to hear and enjoy the piece for which they have granted him the copyright. It would be pleasant indeed for Mr. Puccini if every time a band or orchestra played his pieces after they have purchased his music and paid him his royalty, they had to pay him an additional sum for each playing, but the American people do not consider this equity or justice or square dealing, and are not going to admit his right, legislatively or otherwise, to exact any such tribute.

"John Philip Sousa, in the hearings before the Congressional Committee, when the question of bringing mechanical reproducers under the domain of copyright, was being discussed, stated that he could compose better for $1,000 than he could for $600. Shades of Verdi, and of Wagner and of Mozart! when musical composition is reduced to the 'by the job' basis, like the whitewashing of a country fence, and our great composers write music for delivery on a given date at so much per yard!"

TO FORM BIG ENGLISH COMPANY.

Syndicate to Organize Large Company to Make Disc and Cylinder Records in London—Mr. Ed. Leeds Will Have Charge of Plant With W. H. Glendinning—Many Fine Records Made for English Market.

W. H. Glendinning, of Gilbert, Kimpton & Co., Loudon, who has been visiting New York for the past five or six weeks, returns home by the "Carmania" on Saturday. His visit here was for the purpose of placing orders for Imperial records, and incidentally to have some special masters made by Ian Colquhoun, the well-known baritone, and Tom Child, the noted tenor. Both of these gentlemen also return to England this week, but we understand that Mr. Child will return to the United States some time in April to take a twelve months' engagement as a singer in this city.

In the course of a chat with The World this week, Mr. Glendinning stated that during his present visit he had organized plans whereby on his return to London he will form a syndicate for the formation of a large English company with ample capital to make disc and cylinder records on a large scale. He also announced that the factory and laboratory in England will be in charge of Ed. Leeds, with Mr. Glendinning himself as assistant. The syndicate will be organized within the next three months, and the company ready for operation within nine months. The title of the new company has not been determined upon, but it is not improbable that it will be the Imperial Record Co. The records to be put out by this company will be of a high quality and sold on a competitive basis.

Mr. Glendinning expressed himself much pleased with the records recently made for him by the Leeds & Catlin Co., not only of Messrs. Colquhoun and Child, but of a number of other English singers whom he got together in this city. He also stated that they had secured records by three of the Metropolitan Grand Opera Company artists, and have arranged with Helena Frederika, soprano, Miss Coureen, and a number of other well-known artists to sing exclusively for this company. Mr. Glendinning is quite enthusiastic about the future of the talking machine business in Great Britain and the colonies, and expects with his new company to build up a large and profitable business.

DEAF MADE TO HEAR MUSIC.

A sensation has been caused in Paris by the discovery of Dr. Marcel Dupont, by which the deaf can be made to hear music. Dr. Dupont was introduced to the Academy of Sciences by Professor d'Arsonval, who informed that learned assembly of Dr. Dupont's wonderful invention.

Dr. Dupont exhibited his apparatus, which consists of a phonograph to which is affixed a microphone, the electrical current being derived from the accumulators. A scale of music is engraved ou the cylinder, and when the phonograph sets to work the microphone supplies an alternate electric current, the numbers of its stops corresponding exactly to the vibrations of the scale of music reproduced from the cylinder by the phonograph.

If a march, say, is put on the wax cylinder, the alternate electric current produces by its passage through the human organism the exact impression of the musical sounds of the music as given out by the phonograph.

Mr. Dealer.

Have you ever been caught short on your Edison Records and found that your Jobber could not help you out?

Have you ever lost a sale in consequence? Then you can appreciate the value of doing business with a Jobber who can fill your orders promptly.

We are the largest exclusive Edison Jobbers in the East, and carry the most extensive line of Edison Machines, Records and Supplies.

We guarantee immediate shipment of all orders.

ECLIPSE PHONOGRAPH CO.

Who's Who in the Talking Machine Industry

With a Few Illustrations by United States Judges

COLUMBIA PHONOGRAPH COMPANY, General

Sole Sales Agent for the

AMERICAN GRAPHOPHONE COMPANY

Creators of the Talking Machine Industry

In the beginning of the INDUSTRY was the GRAPHOPHONE, and without the GRAPHOPHONE there was not, could not have been, the INDUSTRY

The invention of the GRAPHOPHONE in Washington, D. C., by Bell and Tainter, in 1886, marks the beginning of the TALKING MACHINE INDUSTRY. The GRAPHOPHONE embodies five great cardinal points which are used to-day in every commercial and practical talking machine. These are:

(1) The process of engraving the original record on wax or a wax-like substance.

(2) The composition of which the record is made.

(3) A removable self-sustaining record—one which could be taken off the machine and played on another in any part of the world.

(4) A separate and distinct diaphragm for the reproduction of the sound, technically called the REPRODUCER, in addition to and independent of the stylus (RECORDER) with which the original record is made.

(5) The freely mounted reproducer automatically tracking the sound record.

Thomas A. Edison was one of the first persons to recognize the fact that an industry could be built upon the basic foundation which the GRAPHOPHONE afforded, and the so-called Edison Phonograph IS A LICENSED GRAPHOPHONE, which would be of no commercial importance without the principles first given to the world with the invention of the GRAPHOPHONE and which had lawful existence only when the Graphophone Company, after prolonged litigation, granted the National Phonograph Company the right to use its patents.

Judge Shipman in the U. S. Circuit Court in New York, in American Graphophone Company vs. Leeds, et al., referring to the earlier work of Mr. Edison, characterizes most of the descriptions as "confessedly vague," saying:

"It is confessedly difficult to know the interpretation which the writer placed upon some of the words which he uses."

But, said Judge Shipman:

"Bell and Tainter made an actual, living invention which the public are able to use, and a court is not called upon to struggle to decipher an anticipation in the unfinished work and surmises of earlier students of the same subject."—87 Fed. Rep. 873.

Pioneers and Leaders in the Art.

The Columbia Phonograph Company, organized in the city of Washington, D. C., in 1889, sole sales agent for the American Graphophone Company (1886), is the sole active survivor of all the companies originally organized to exploit the Graphophonic Art. First in the field it has always retained its proud position, and is recognized and known in every country in the world as the LEADER IN THE TALKING MACHINE ART.

Judge Platt, in the U. S. Circuit Court in Connecticut, in National Phonograph Company vs. American Graphophone Company, in dismissing the suit and deciding in favor of the Graphophone Company, said:

> "The Graphophonic Art may be said to have fairly begun with the invention of Bell and Tainter, Letters Patent No. 341,214, dated May 4th, 1886. This taught the public how to produce the commercial and transferable sound record."—135 Fed. Rep. 809.

Owners of the Fundamental Patents.

Judge Grosscup in U. S. Circuit Court in Illinois, in American Graphophone Company vs. Amet, said:

> "Bell and Tainter lay no claim to having conceived the idea of a mechanism whereby speech or sound could be recorded and reproduced. Much thought and experimentation, before their patents were completed, were expended upon the general conception of such an instrument. BUT THE FACT REMAINS THAT, PRIOR TO THEIR GRAPHOPHONE, THE CONCEPTION OF A PHONOGRAPH HAD NEVER BEEN MECHANICALLY WORKED OUT TO THE EXTENT OF PRACTICAL PERFECTION. THE GRAPHOPHONE, INDEED, SEEMS TO HAVE TAKEN THE PLACE OF ALL PREVIOUS MECHANISMS, AND TO HAVE ADVANCED BY A VERY LARGE SPACE, THE ART OF RECORDING AND REPRODUCING SPEECH AND SOUND."

And, speaking of the combination of the Graphophone and its record, he said:

> "SUCH COMBINATION IS THE MECHANICAL MEANS WHEREBY THE ART OF RECORDING AND REPRODUCING SPEECH AND SOUNDS IS FIRST MADE PRACTICALLY EFFECTIVE."—74 Fed. Rep. 789.

Every one who has watched the development of the talking machine art from year to year is perfectly familiar with the fact that all great advances worthy of note involving fundamental invention have been conceived in and seen their broadest development within the Columbia Company.

It will be interesting to recall a few memorable examples:

THE SPRING MOTOR, now almost universally used in talking machines, was first used in connection with the "BABY GRAND" GRAPHOPHONE, invented by Macdonald.

THE MECHANICAL DUPLICATING MACHINE (Macdonald's patent), by which commercial sound records were multiplied from an original.

THE GRAPHOPHONE GRAND (Macdonald's patent), which at the time of its introduction created a sensation and was widely copied by Mr. Edison, who finally admitted the validity of the patent and became a licensee on payment of substantial royalty. All high-grade modern sound records employ the principles of this invention.

THE MOLDED CYLINDRICAL RECORD, invented by Macdonald, and sold in large quantities more than one year before a competitor put its molded records on the market. In the case of National Phonograph Company vs. American Graphophone Company, already referred to as having been tried before Judge Platt in Connecticut, the testimony showed conclusively that Edison, notwithstanding the oft-repeated claim that he is the inventor of the so-called Gold Molded Record, had never up to that date, 1905, succeeded in making a practical and successful molded sound record. By his own testimony it was proven that the records extensively advertised under his name are made by a process which was really the invention of two of his employees years after our process, invented by MacDonald, had been perfected.

THE TWENTIETH CENTURY GRAPHOPHONE (Higham's patent), with its tremendous volume and marvelously natural tones. An epoch-making invention, involving highly original principles, and which is destined to play a most important part in the future history of the art.

The Modern Disc Talking Machine and Record.

In view of the recent advertisement of a competitor suggesting that they control the manufacture and sale of disc talking machines and records, it is only necessary to remind you that—

(1) The first disc talking machine was a GRAPHOPHONE.

(2) The first disc talking machine record was a GRAPHOPHONE record.

(3) Before Berliner conceived his uncommercial process of etching them, disc records had been made by others.

(4) Long before our boastful competitors were ever heard of we had licensed their predecessor, the National Gramophone Company, who admitted that they were using GRAPHOPHONE patents in order to make their product commercial, and who paid us substantial royalties up to the time of their dissolution.

(5) The Victor Company use our patented process to manufacture their records. They are licensed under our patents, and are absolutely dependent upon them to make a salable record.

These facts are placed before you merely in the interest of truth. We deem it our duty to remind you of them, so that you may not be mislead by their extravagant and unfounded claims. They would have you believe that they control the manufacture and sale of disc talking machines and records. **The fact is, they depend upon our process of manufacturing disc records, which is truly indeed the basic foundation on which they have built up their business.**

In American Graphophone Company vs. Universal Talking Machine Manufacturing Company and American Record Company, the U. S. Circuit Court of Appeals, New York Judges Wallace, Lacombe and Townsend, in a decision handed down January, 1907, bear testimony to this fact in the clearest and most unmistakable terms. These suits established the validity of our Jones patent No. 688,739, which covers broadly the current art of making disc records. After referring to "the now confessed superiority and commercial success of the product of the patent in suit," the Court says:

"The disc produced by the patented process RESPONDS TO THE TEST OF SUCCESS WHERE OTHERS HAVE FAILED." * * *

"The patentable novelty of the process of the patent is not only indicated by large sales, but also by the unassailable evidence of that most sincere form of flattering recognition, IMITATION AND APPROPRIATION BY RIVAL MANUFACTURERS. In short, it has so far supplanted all other methods previously used that apparently all disc records are now made by said process, and **COMPLAINANT'S CHIEF COMPETITOR** (referring to the Victor Company) **ADMITS THAT IT DISCARDED ITS OWN PATENTED ETCHING PROCESS** (referring to the Berliner patent) **AND HAS SUBSTITUTED THEREFOR THE PROCESS OF THE PATENT IN SUIT.**" (Referring to our Jones patent.)

This is pretty plain English, isn't it, and it is quoted from the decision rendered by the ablest patent law judges in America. If any bragging has been indulged in **the U. S. Circuit Court judges have been our mouthpieces,** and we have only to quote from a few decisions to more than sustain every claim which we make.

BUT, while it is gratifying to reflect on these tributes, coming as they do from such eminent authorities, poor indeed would we be if we felt that we depended upon them to maintain the superiority of our position or our product.

It is not because we are the creators of the talking machine industry that we make the best talking machines.

It is not because we are the pioneers in the business that we have established such an enviable reputation for COLUMBIA RECORDS.

We could not in these days of keen competition remain in the lead merely because we own the fundamental and basic patents.

BUT it stands to reason, and every one admits that all of these are important—very important factors in any business—and long experience has enabled us to know what the public wants, and by gathering together in THE LARGEST TALKING MACHINE FACTORY IN THE WORLD AT BRIDGEPORT, CONN., the best experts and most efficient workmen in the art WE HAVE BEEN ABLE TO PRODUCE THE BEST TALKING MACHINES AND THE BEST RECORDS OBTAINABLE. Of course, it is easy for us to say this of ourselves and our goods, but that it is the unbiased judgment of those who are best able to know is evidenced by the fact that at all the great INTERNATIONAL EXPOSITIONS, wherever the GRAPHOPHONE AND COLUMBIA RECORDS have been exhibited in competition, THEY HAVE ALWAY RECEIVED THE HIGHEST POSSIBLE AWARDS. AT PARIS, IN 1900, THEY RECEIVED THE GRAND PRIX. AT ST. LOUIS, IN 1904, A DOUBLE GRAND PRIX AND THREE GOLD MEDALS WAS THE AWARD. AT PORTLAND, IN 1905, THE HIGHEST AWARD, A GOLD MEDAL. AT MILAN, ITALY, IN 1906, THE GRAND PRIX.

To those who have been long familiar with the industry the above contains little that is new; but it may be interesting and instructive to others who perhaps have not understood heretofore that the Victor and Edison companies are operating under our license and explaining as it does why we subscribe ourselves

COLUMBIA PHONOGRAPH COMPANY, Gen'l

SOLE SALES AGENT FOR THE

American Graphophone Company

Creators of the Talking Machine Industry. Pioneers and Leaders in the Talking Machine Art.

THE LARGEST TALKING MACHINE FACTORY IN THE WORLD.

BALTIMORE IS A "LIVE" TOWN.

Talking Machine Business Good—Columbia Co. in New Quarters—Droop & Son Secure Large Building—Eisenbrandt Enthusiastic.

(Special to The Talking Machine World.)

Baltimore, Md., March 12, 1907.

The boom in the talking machine business in this city continues, and the prospects are that the present year will be one of the most prosperous in the history of the trade.

The local agency of the Columbia Phonograph Co. is now located on Lexington street, in the very heart of the retail business section of the city. They were formerly located on North Howard street, but there had grown to such an extent that the building was decidedly too small to accommodate their trade.

The building vacated by the Columbia Phonograph Co. has now been leased by the firm of E. F. Droop & Sons, of Washington, D. C., who for several years have had a branch store on North Charles street. Like the Columbia phonograph people, the Droop firm soon outgrew their establishment on Charles street, and were also forced to select other quarters, and after much consideration decided to lease the building vacated by the Columbia Phonograph Co. The building, which is four stories, has been thoroughly renovated, and large show windows have been placed in the building. The Droop firm, besides being the Baltimore agents of the Edison phonograph, are likewise jobbers for the Victor talking machine. The firm hopes to be in their new quarters by the first of April.

"Never before have I been so pushed with orders," said Mr. Eisenbrandt, of the firm of H. R. Eisenbrandt & Sons, "and the hard part of it is that no sooner do I get a new supply of Victor talking machines than they are all sold, and I am unable to supply the new trade. Last week I received a shipmeut of 63 magnificent machines, and by the time they arrived here they were all sold, and I was again left in the lurch. At present the demand is great, and there is no prospects for a let-up."

TO DINE MANAGER DORIAN.

The heads of the various staffs connected with the Columbia Phonograph Co. in this city and Brooklyn will tender a dinner to Manager Dorian at Kalil's restaurant on Park Row, on Monday, March 18, prior to his sailing for Cuba on a much-needed vacation. Covers will be laid for twenty-five, and it is expected that this will be an occasion long to be remembered.

JOBBERS TO BE ENTERTAINED.

(Special to The Talking Machine World.)

Philadelphia, Pa., March 12, 1907.

The meeting of the Eastern Talking Machine Jobbers' Association in this city on Thursday, April 11, at the swell Bellevue-Stratford Hotel, the Waldorf-Astoria of the City of Brotherly Love, promises to be a memorable event. While the members of the trade here do not care to disclose their plans of entertainment, there is no doubt a banquet, a theatre party and visiting points of interest on the "rubber neck" auto is on the programme. In other words, the historic hospitality of the Quaker City will receive an additional luster when the talking machine jobbers get here, and are looked down upon by the 40-foot statue of Billy Penn on the top of the City Hall. The meeting will convene at 2 p. m.

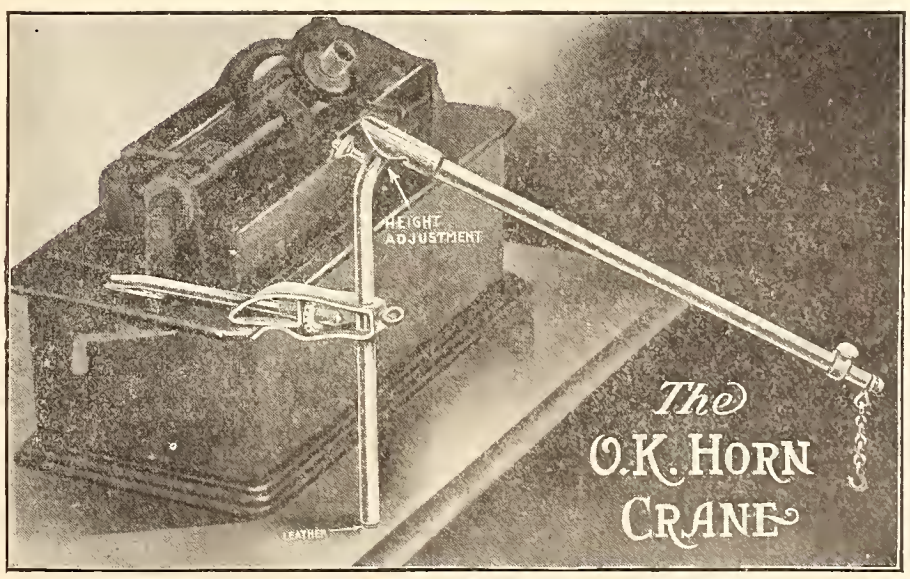
NOTHING SUCCEEDS LIKE SUCCESS.

Mme. Melba, the famous soprano of the Manhattan Opera Co., this week signed a contract whereby she will receive $50,000 in royalties for a number of songs which she will sing for the Victor Talking Machine Co. during the week ending April 2. This is probably the largest contract ever closed with a singer, at least by a talking machine company, and affords an idea of the extent and growth of this industry.

SIG. TOSI WITH COLUMBIA CO.

Umberto Tosi, of the Tosi Music Co., of Boston, Mass., will come to this city in a short time to take charge of the sale and production of the high-class grand opera records which the Columbia Phonograph Co. is now and will in the future place on the market. Sig. Tosi was formerly counected with La Scala Opera House, in Milan, and enjoys the personal friendship of most of the leading singers and musicians that are now or have been connected with that great center of song. This will be a special department, and it is believed will greatly add to the prestige of this company.

The Petmecky Co., Kansas City, Mo., makers of the popular Petmecky Multi-tone needles, have distributed among jobbers and dealers an attractive wall card with the followiug in black upon a yellow ground: "Petmecky Multi-tone Needles. Each Needle Plays 10 Records. 3 tones in 1." The card is 7½ by 9½ inches in size, and makes an excellent advertisement for the dealer, especially when hung in the window in connection with a display of disc machines and records.



(Patented March 12, 1907.)

Ask Your Jobber

THE IDEAL FASTENER CO., 143 Liberty Street NEW YORK CITY

BUSY TIMES WITH WURLITZER CO.

The talking machine department of the Rudolph Wurlitzer Co. has experienced an excellent trade in both Edison and Victor goods, and from appearances 1907 will eclipse the past year in every way. When it is stated that the wholesale talking machine business of the company during December amounted to over $40,000, and the retail to nearly $12,000, the extent of their trade may be realized. Raymond F. Strief, in charge of the mail orders, and Joseph Dlttrich, representing the Victor department, are both most optimistic regarding the future of the department and are out to break records this year—and they will do it, too.

SOLD 400 MACHINES IN THREE MONTHS.

D. M. Yost & Co., talking machine dealers of Norristown, Pa., sold over four hundred machines within three months, and are in the position now where they cannot get stock sufficient to fill the orders on their books.

HORNLESS PHONOGRAPH CO. ORGANIZED.

Among the incorporations filed with the Secretary of State at Albany on Monday last was that of the M. Schroeder Hornless Phonograph Manufacturing Co., New York. Capital, $500,000. Directors: Herman Schroeder, Cora Weisend, Auguste Blumner, New York.

MATTER STILL PENDING.

In last month's World mention was made of a suit for infriugement brought against the Utica Crane Co. by the Hawthorne & Sheble Manufacturing Co., in which it was stated that "A temporary injunction had been granted." This statement was incorrect. Up to present writing the temporary injunction asked for has not been granted.

"TALKER" IN CENTRAL AFRICA.

"Have you heard the man singing in a box?"

"No; where?"

"Up on Mouut Keyu. The white man has an iron thing which sings, just like witchcraft! I believe there is a man shut up inside!"

You might hear a conversation like this any day in one of the villages near to the Church Missionary Society station at Patigo, in the Acholi country, Central Africa. The people are very fond of listening to the talking machine, aud say all sorts of funny things when they cannot understand where the voice comes from. The laughing song is a great favorite, aud next come bugle calls. Most of all the Acholi people are fond of hearing their own songs, some of which they have sung into the machine. They sometimes say, "Leave that record in all day; it sounds beautiful!"

The March issue of "Chat" sent out by the Tea Tray Co. is, as its name implies, an unusually chatty number. It is admirably gotten up in every respect, and a good advertisement for the house.

The Powers & Henry Co., of Pittsburg, have purchased the entire retail stock of talking machines and records of the Theodore F. Bentel Co., which was recently damaged by fire.

A. S. Thompson, formerly in charge of the talking machine department of Rothschild & Co., Chicago, has assumed a similar position with Bullock's, the large department store of Los Angeles, Cal.

M. Buchner has joined forces with J. E. Price Jr., and started the Newark Talking Machine Co. at 595 Broad street, Newark, N. J. They are handling the Victor and Edison line.

H. C. Faber has removed from Colfax to Monongah, W. Va.

TIMELY TALKS ON TIMELY TOPICS.

The growth of the trade is along lines which the old-time jobbers are inclined to resent more and more vigorously. They are insisting the list of their numbers is growing altogether too rapidly for business comfort. In other words, while the manufacturing companies controlling the machine and record product are benefited by the expansion, the individual jobber is having his working territory split up, so that harder work for less aggregate results ensue. This is a condition difficult to handle satisfactorily to those concerned, and while The World has touched upon this question before, it seems to be coming to the front stronger than ever, and the trade at large believe the day will come when jobbers will be limited and dealers be accorded territory according to their ability to properly represent a line and with a disposition to carry a stock of goods of sufficient strength.

Congress has adjourned without day, and the copyright bill is dead. No more aggressive fight was waged against any measure before the Fifty-ninth Congress than that dealing with the reproduction of music or speech on talking machine records. In fact, it is admitted that had the record manufacturers and the music publishers been able to compromise their differences the bill would have been enacted. As it stands, the bill never came before either the Senate or House in a way to insure attention. A couple of attempts were made to bring it up in the Senate, but objections sent the bill to the foot of the calendar, and from this oppressive situation it was never rescued. On the last day of the session a minority report was filed on the House bill, which differs radically from that submitted by the majority, or, as first announced, a unanimous report. From this it may be surmised that when the bill again sees the light of the new legislative day on the assembling of the Sixtieth Congress the warfare between the music writers and publishers and the record manufacturers will be resumed with vigor, and no quarter asked.

Signor Puccini, the eminent Italian composer now visiting this country, and whose operas are the eujoyment of music lovers, has allowed himself to be "interviewed" by the American press agent on the question of compensation for the use of copyright music on records. While the signor displays a knowledge of the talking machine trade truly surprising—quoting statistics as if to the manner born—his plea is ex parte, and therefore expresses the views of an individual only. The "talk" accredited to him appears on another page, and is accompanied by a few illuminating observations from the trade point of view that are so broad in treatment as to carry conviction, excepting to prejudiced minds.

One of the most satisfactory developments of the business is the recoguition by the regular music trade of the fine possibilities of the talking machine proposition. It is strange that this line of business, concededly the natural avenue of distribution, should not have improved the shining hour ere this. Now the full force, effect and profits of this addition has been brought home, and music dealers everywhere are installing departments. The World has often pointed out the desirability of haudliug the line, and made it clear the results would be beneficial only from several points of view. It is, therefore, gratifying to record that common sense is prevailing at last, a fact the manufacturers and jobbers are more than pleased to comment upon most favorably.

F. M. Prescott, geueral manager of the International Talking Machine Co., Berlin, Germany, has transmitted to Senator Mallory, of Florida, who submitted the minority report on the copyright bill, opposing Senator Kittredge's views, a lengthy statement of his views on paragraph E, of section 1, which deals with the reproduction of music via talking machine records and the various mechanical or automatic instruments. He quotes the judicial status of the question in various European countries in support of his contentions, which are opposite to those expressed by Senator Mallory.

One of the recent "pateuts in the air" is a horn resembling the anatomical construction of the human throat. In other words, a device which is said to "break up" the sound and haud it out mellowed and smoothed out on an optional basis. That is to say, the "inveutor" has arranged—in his mind, of course—a series of gates that can either be utilized to iron away the "blast" or other foreign interference; or, if a brilliant, loud-sounding effect is desired, by pressing a button, these channel impedimenta are folded, and the amplifying horn is free and clear for the regulation resonating results. Great is the inventor, and his own noise is his prophet!

It is not generally known that among the staff of the Columbia Phonograph Co. in New York there is to be found a quartette of wonderful entertaining ability. Those comprising the quartette are "Billy" Kitchen of the sales staff; John C. Button, the president's private secretary; Earl Godwin, assistant New York manager, and "Spike" Godwin, in charge of the display advertising of the company. The Godwin brothers are old-time minstrels, "Billy" Kitchen has a big reputation as a club entertainer, and John Button possesses a bass voice of much power and beauty, and when they appear together their efforts constitute a treat not to be denied.

The Recordite Co., of New York, are making fine progress with their product. In the short time Recordite has been on the market they have succeeded in placing it on sale with almost every prominent jobber. Many concerns are now beginning to inaugurate extensive advertising campaigns, and the Recordite Co. are daily receiving calls for more goods. A prominent talking machine man said recently: "We firmly believe this article has come to stay, as it is one of the most necessary elements in the talking machine business." The Recordite people are preparing to use large advertising space in many leading publications, which will, of course, create a wide demand for their product.

THE "BAKE-ON" FINISH.

Important Facts That Everyone Should Know About This Method of Enamelling Metals.

WE HAVE BEEN ASKED BY MANY JOBBERS TO EXPLAIN, CLEARLY AND FULLY, OUR PROCESS OF "BAKING ON" THE FINISH OF OUR PRODUCTS. WE FEEL THAT IT IS DUE THEM, AS WELL AS OURSELVES, TO INSTRUCT THE WHOLE TRADE ON THIS VERY IMPORTANT POINT.

TO BEGIN WITH, THE TEA TRAY COMPANY WERE THE ORIGINATORS OF THE "BAKE-ON" PROCESS. THIS PROCESS WAS A METHOD OF COVERING METALS WITH A FINISH THAT BY BEING "BAKED ON" BECAME PART AND PARCEL OF THE METAL—A FINISH THAT WOULD LAST AS LONG AS THE METAL ITSELF. OF COURSE, IT TOOK A LONG TIME TO PROVE BY TESTING IN ACTUAL USE THAT THE "BAKED-ON" METHOD WAS CORRECT. TO GIVE IT A THOROUGH, AND AT THE SAME TIME A CONCLUSIVE TRIAL, A SERIES OF TESTS WERE ARRANGED FOR BY A COMMITTEE OF WELL-KNOWN EUROPEAN AND AMERICAN DEALERS. THESE TESTS WERE MADE IN THE FACTORY OF THE TEA TRAY COMPANY, WHICH, AT THAT TIME, WAS A VERY SMALL PLANT. THE TESTS WERE PURELY COMPETITIVE. EVERY KNOWN METHOD OF FINISHING METALS WAS BROUGHT INTO THE CONTEST. ARTICLES WITH THE VARIOUS FINISHES WERE PLACED IN TANKS CONTAINING HOT ALKALI. AFTER THEY HAD REMAINED IN THESE TANKS FOR SOMETIME, THEY WERE TAKEN OUT BY MEANS OF LONG IRON HOOKS. WHAT WAS THE RESULT? THE ARTICLES ON WHICH THE FINISH HAD BEEN BAKED WERE JUST AS GOOD AS THEY WERE BEFORE THEY ENTERED THE TANKS. ALL THE OTHER ARTICLES FINISHED BY OTHER METHODS WERE TAKEN OUT WITH EVERY SINGLE PARTICLE OF COATING REMOVED BY THE ALKALI. THEN TO FURTHER STRENGTHEN THE TEST OF THE "BAKED-ON" PROCESS, THE ARTICLES SO FINISHED BY THE TEA TRAY COMPANY WERE STRUCK WITH HAMMERS AND SHARP INSTRUMENTS, BUT THE SURFACE REMAINED ABSOLUTELY FIRM AND UNINJURED.

THESE TESTS NOT ONLY SHOWED THE SUPERIORITY OF THE "BAKED-ON" FINISH, OVER ALL OTHER FINISHES, BUT THEY ALSO PROVED THAT IT WAS THE ONLY FINISH THAT WAS ENTIRELY PRACTICAL FOR ALL PURPOSES. THEY PROVED CONCLUSIVELY THAT A FINISH THAT WAS "BAKED-ON" SO FILLED THE PORES OF THE METAL IT COVERS, THAT THE VERY FIBRE OF THE METAL BECAME SATURATED. IN OTHER WORDS, A "BAKED-ON" FINISH BECAME ALMOST INDESTRUCTIBLE.

IT IS A WELL-KNOWN FACT THAT THE BEST RESULTS ARE OBTAINED BY USING MATERIAL THAT REQUIRES GREAT HEAT IN BAKING. THE CHEAPER THE MATERIAL USED, THE LESS HEAT REQUIRED, AND HENCE INFERIOR RESULTS ARE OBTAINED.

OUR "BAKED-ON" FINISHES ARE SECURED BY SUBJECTING THE ARTICLE TO SEVERAL HUNDRED DEGREES OF HEAT; THEREFORE, WE ARE OF NECESSITY OBLIGED TO USE EXPENSIVE HIGH-GRADE BAKING MATERIAL, WHICH ARE CAREFULLY MADE AND NOT ONLY REQUIRES GREAT HEAT TO PROPERLY "BAKE-ON" TO THE METAL, BUT GIVES A MOST ELASTIC, SERVICEABLE AND BEAUTIFUL FINISH.

THE READER OF THIS ARTICLE WOULD NO DOUBT BE INTERESTED TO SEE THE INTERIOR OF ONE OF THESE HUGE FIREPROOF OVENS. THE COST AND MAINTENANCE OF OVENS OF THIS CHARACTER WHICH ARE ABSOLUTELY NECESSARY. EVERYONE KNOWS THAT THE SUNLIGHT AND OPEN AIR ARE FREE TO ALL AND COST NOTHING TO MAINTAIN.

THE PRIMARY AND NATURAL RESULT OF THE T. T. CO. "BAKED-ON" PROCESS IS THAT AN ARTICLE BEING COATED WITH THE VERY BEST ENAMELS AND THEN SUBJECTED TO A HIGH DEGREE OF HEAT, INSURES A FINISH THAT IS NOT ONLY BEAUTIFUL IN LOOKS BUT THAT WILL GIVE THE BEST SERVICE. WE BELIEVE THAT THE HIGH REPUTATION OF OUR PRODUCTS, WHICH HAVE THEIR FINISHES "BAKED-ON" IS SUFFICIENT EVIDENCE OF THE SUPERIORITY OF OUR METHODS. VERY TRULY YOURS,

ALBERT S. MARTEN, PRES.,

THE TEA TRAY COMPANY OF NEWARK, N. J.

TRADE NEWS FROM ALL POINTS OF THE COMPASS

The World acknowledges the receipt of the latest list of Beka Indian disc records, and their machine catalogue from the Talking Machine and Indian Record Co., Bombay, India; also their bulletin of Arabic records. Referring to these records, Valabhdas, Lakhmidas & Co., of which the foregoing concern is a special department to handle the Beka records and the kindred talking machine line, they say: "The Beka Indian records were made under our supervision late in 1905, and in such a short time their popularity is second to none in our territory. It may also interest you to know that the Beka expert, Mr. Bielefeld, is with us here, and we have taken about 150 Indian records up to now in our city, and shortly we will be traveling over the whole of India and making about 800 to 1,000 records in all the principal dialects of our country."

After their plans were completed the Talking Machine Supply Co., with offices at 400 Fifth avenue, New York, announce themselves in a position to furnish the trade with everything needful in the general line of supplies. Their stock of goods is large and entirely fresh, embracing a number of articles on which they are exclusive. With ample capital and facilities of the best, the company will be pleased to handle all business entrusted to their care promptly. Their formal announcement, in English and Spanish, to this effect, appears on another page. Arthur P. Petit, the general manager of the Talking Machine Supply Co., who is well known in the trade, started March 3 on an extended selling trip, and will visit the Pacific coast before his return East.

The commercial department of the National Phonograph Co. will exhibit the Edison business phonograph at the National Business Show, in Chicago, from March 16 to 23. Two large spaces will be occupied in the Coliseum, and a large force of men and women will demonstrate the machine, and the history of the phonograph will be illustrated from the original model of 1877 to the perfected voice-writing machine of 1907. Nelson C. Durand, manager of the department, left New York for Chicago on the 9th inst., to take charge of the exhibit in person. Edison jobbers and dealers are cordially invited to visit the show, for which tickets will be supplied by applying to the company's Chicago office, 304 Wabash avenue.

The D. S. Johnston Co., Seattle, Wash., and who also have a studio in Tacoma, Everett and Yakima, will build a handsome seven-story structure, 70 feet frontage, to accommodate their extensive talking machine, piano and general music business. The main floor will have 150 feet of plate glass, as the new building is at the corner of Third avenue and University street. The talking machine department will be on the second floor, subdivided into ten demonstrating parlors en suite. The premises will be occupied about the middle of August.

The Colnmbia Phonograph Co., general, will have an extensive and elegant display of the commercial graphophone at the National Bnsiness Show, which opens in the Coliseum, Chicago, March 16, continuing until the following Saturday. They will occupy two full spaces, in the most conspicuous part of the place, and an ample staff will be in attendance for demonstrating purposes. W. W. Parsons, manager of the commercial graphophone department of the Columbia's Chicago office, will personally be in charge of the exhibit, though J. W. Binder, general manager of the system, started from New York early in the week to be on hand for the greater part of the time.

Monday of this week John P. Kelsey, recently on the road for the Douglas Phonograph Co., assumed the management of the Bettini Phonograph Co., New York. Mr. Grunglick, who has filled this position for some time, takes up outside work for the company, looking after the city and nearby trade.

The Universal Talking Machine Manufacturing Co., Newark, N. J., recently placed a contract for general advertising with fifteen of the leading magazines. The first "ad." will appear in the April issues. The company are now doing the largest business in their history, several leading jobbers in the country handling the Zonophone line exclusively. Their March list of records is claimed by General Manager Macnabb to be the best ever offered by any company.

Last week Paul H. Cromelin, vice-president of the Columbia Phonograph Co., General, after the adjournment of Congress, and the consequent relegation of the copyright bill to the legislative limbo, returned to headquarters in New York and resumed his regular duties. Mr. Cromelin has been a bulwark of strength to the trade in the consideration of this proposed law.

P. A. Powers, Buffalo, N. Y., who was in New York for several days last week, returned home Thursday. While here he regaled his intimate friends with a unique and altogether enjoyable rendition of his favorite German operatic air, "Schnitzelbank," with variations. Pat is quoted as saying that if this stirring and mirth-provoking anthem were ever reproduced, he would place an order for 100,000 of the records.

The Bartlett Music Co., Los Angeles, Cal., speak of their department as the "talking machine suite."

Recently the Douglas Phonograph Co. received the following wire order for records: "Add messengers order two Irish Rosie, For Memories of Home, Two Care for Us; March." After a little study the mystery was solved, and songs of these titles were forwarded per instructions.

Kohler & Chase, San Francisco, Cal., have opened a branch jobbing house in Seattle, Wash., handling Edison and Zonophone goods.

Since the death of William Ross, of W. H. Ross & Son, Portland, Me., which occurred February 12, the business will be continued without change of name, with Frederick Smith, of the firm, as manager.

Among the jobbing visitors in New York during the past month were: H. Shields, Denver (Colo.) Dry Goods Co.; John N. Willys, Elmira (N. Y.) Arms Co.; Harry W. Weymann, H. A. Weymann & Son, Philadelphia, Pa.; W. O. Pardee, Pardee-Ellenberger Co., New Haven, Conn.; T. Coleman, R. S. Williams Co., Toronto, Can.

Harry H. Enders, recently with Powers & Henry Co., Pittsburg, Pa., is in business for himself now, having an interest in the Pittsburg Film Exchange (Moren & Enders), dealers in motion picture machines and films, and creators of illusions. He was in New York last month on business connected with the firm.

At the great musical exhibition in St. Petersburg, Russia, in December, the display by the Columbia Phonograph Co. was one of the most conspicuous and admittedly the prettiest one in the whole exposition, writes a correspondent. No other exhibit attracted anything like the crowds that flocked to view the Columbia machine, and who lingered near, whenever records were being played.

Thos. F. Murray, with his usual vigorous methods, has added a few more names to the honor roll of Columbia jobbers during his recent trip through the New England States. "Tom" takes great pleasure in having charged up to his credit, in the wholesale dapartment presided over by Walter L. Eckhardt, these firms: S. L. Crosby & Co., Bangor, Me., and the Household Furniture Co., of Bedford, Mass. He says: "Watch the list grow."

Jones Bros., Richmond, Va., recent additions to the roll of Columbia jobbers, are reported as doing a splendid business. In fact, to those who know, it is said the firm are bound to become the largest jobbers in the South. They have a number of branch stores.

Sol Bloom, New York, announces that on account of the tremendous increase in his Victor talking machine business, which he is now handling exclusively, he has disposed of his sheet music catalogue to M. Witmark & Sons. The reason for this move is greatly needed floor space for his new laboratory, now being erected on the third floor of his building, for the exclusive making of records for disc machines, especially those of and for private individnals desiring records of their own voices. Just A Word In Your Ear

Mr. Music Dealer:—

What efforts are you making to capture the Talking Machine and Record Business?

Do you realize that Columbia Graphophones and Records are as staple goods in the trade as pianos and sheet music? That there is an enormous, and greatly increasing demand everywhere for

COLUMBIA
DISC and CYLINDER RECORDS

among all classes of society—the rich, the well-to-do and the workers in office and factory?

The man who owns a piano buys a Columbia Graphophone for the sake of variety and for the excellent vocal selections.

The man who can't buy a piano buys a Columbia Graphophone, and becomes at once a regular customer for Columbia Records.

There is no dull season for the music dealer who sells Columbia Graphophones and Records, because they bring many more people to your store.

Selling Columbia Records stimulates the sale of sheet music—this is a known fact.

Columbia Records are most profitable for you to handle for several reasons:

They are so extensively advertised that everybody knows what they are and are ready to buy them.

They have purer, more natural musical tones than others, free from objectionable scratchy sounds.

They fit all makes of machines, which makes them universal favorites.

This is the only Company operating Record laboratories in the great musical centres of the world.

Any standard or popular musical number can be supplied from the Columbia list—and all the latest hits are brought out immediately.

Every up-to-date music dealer makes his store the musical centre when he sells Columbia goods.

If you are not in line the opportunity is here.

COLUMBIA PHONOGRAPH COMPANY, Gen'l

GRAND PRIZE, MILAN, 1906

STORES IN ALL PRINCIPAL CITIES DEALERS EVERYWHERE

in The World, Mr. Bloom has also given up handling and jobbing Edison goods. However, he will continue his retail store in Chicago and here.

According to Walter Stevens, manager of the export department, the foreign trade in Edison goods is expanding at a marvelous rate. In fact, its growth has been phenomenal, greatly due to the efforts and concentrated work of Mr. Stevens himself, an expert in his line. M. W. Waitt & Co., Vancouver, B. C., Canada, was created an Edison jobber last month. Their wholesale depot will be at Vancouver, and the branch at Victoria. Manager of Sales Wilson declares the business of the National Phonograph Co. was never in a more prosperous condition.

The Vietor Talking Machine Co. have filed suit in the United States Circuit Court at Grand Rapids, Mich., against the Duplex Phonograph Co., Kalamazoo, charging them with infringement of the Berliner patent. Judge Knapper had set February 26 as the day when the defendants should show cause why a temporary injunction should not issue.

The following have been created Columbia jobbers: Somers & Co., St. Paul, Minn.; Duffy, McInnerney & Co., Rochester, N. Y.; Jones Bros., Richmond, Va., with six branches throughout the State. A number of jobbers have been dropped, but the list will be materially lengthened by fresh additions, the applications of whom are now being considered by the company's wholesale department.

The free school for typists desiring to learn the use of the commercial phonograph, which is conducted by the National Phonograph Co., has proven very successful. Miss S. M. Robbins, in charge of the school, states that a bright pupil can master the details of the phonograph in about two days, and can find a good demand for operators in that class. The system has proven a boon to the blind, who can turn out work surprisingly free from errors.

"The Laboratory Association" now occupies the premises on West 23d street formerly possessed by the American Record Co. J. O. Prescott is the manager. An official statement in explanation thereof may be expected not yet, but soon.

A daily press dispatch from Tampa, Fla., says Thomas A. Edison, who is now sojourning at his winter home, Fort Myers, on the Caloosahatchie river, "has purchased land adjoining his property, and will build a laboratory, which will be his workshop for the remainder of his life." Like newspaper telegrams, too numerous to mention, there is nothing in it. Mr. Edison has always had a laboratory—at least for fifteen years—on his Florida place, so if he felt disposed to engage in any line of investigation the means were ready at hand.

At the Dog and Poultry Show held in Indianapolis, Ind., last month the music was furnished by a Twentieth Century graphophone, with a horn over forty inches in length. The machine was furnished by Thomas H. Devine, representative of the Columbia Phonograph Co., and was under the direct charge of F. W. Scheigert. Throughout the show the graphophone attracted hundreds of people, who seated themselves where they could enjoy the full beauty of its rendition, and a number of excellent prospects were thus secured.

The exchange proposition is keeping the Victor Talking Machine Co., Camden, N. J., busy. The shipments of stock to the factory have been on a great scale, but the goods are rapidly assorted and due credit given to the shippers. The Victor distributers are also up to their necks with handling their dealers on the same matter, and everybody concerned is glad its over.

Among the names of the purchasers of valuable stock at the bench show that lately closed in this city was that of J. H. Dorian, the manager of the wholesale department of the Columbia Phonograph Co., at 353 Broadway, who won the distinction of becoming the owner of "Young Mahomet," the son of the $5,000 "Champion Mahomet." Like his father, "Young Mahomet" is a big white bulldog, and has all of his sires good points, and the best judges say that in time he will be a champion of his class. Mr. Dorian is a great fancier and breeder of this class of dog, and among the noted ones in his kennels is "Nairods Pluto," son of Imported King Pluto and nephew of Champion Bernes, the last year's prize winner in New York, Boston and Philadelphia. Mr. Dorian has at present seven registered bulldogs in his kennels, four of which are imported and from the finest stock bred in England. At the last meeting of the Long Island Kennel Club, Mr. Dorian was unanimously elected as its secretary.

Business in the various branches of the trade is normal, with a tendency to more activity than for some time. Jobbers are overhauling stocks, improving store interiors, and furbishing up generally in anticipation of a quick movement of goods when the regular spring trade opens. The manufacturers report their factories steadily engaged on orders for immediate delivery.

Leaving Chicago last month on a pleasure jaunt and seeking for a rest from pressing business cares, W. W. Parsons, manager of the commercial graphophone department of the Columbia Phonograph Co. in the Windy City, first enjoyed the Mardi Gras gayety in New Orleans, going to Mobile and thence over to Havana, Cuba. He reached New York February 18, starting for the West later in the week, feeling as if his vacation had been vitalizing and diverting.

No further developments in the acquirement of the Talk-o-phone Co., Toledo, O., by the Atlantic Phonograph Co., the two million corporation, of New York City, are reported. Information relative to conditions in other manufacturing companies is said to be dependent on the final arrangements made on licenses or privileges under patents recently adjudicated by the court of final resort.

WHY NEW DEALERS ARE ADDED.

Not infrequently a dealer in Edison goods, who has been the only one in his town, complains when another is permitted to take up the line in the same place. Even though he has been doing but a small business and making no effort to push it, he still feels that he has not been given a "square deal" when the new man is supplied with goods. Many such dealers have soon found that this attitude was a mistake. They have learned to their great surprise that it helped their business instead of injuring it, remarks the Edison Phonograph Monthly.

Many a dealer has been aroused from his lethargy to a determination not to let the new man get ahead, and he has been astonished at the possibilities of the Edison business. He has advertised in his local paper, sent out printed matter and circularized possible buyers, all because of a desire to spite and possibly injure his new competitor. He has been amazed, however, to find the business coming his way. He has found the expenditure making money for him, instead of being the loss he expected. As a result he has become a live, aggressive dealer, carrying a constantly increasing stock and finding the business pleasant and profitable, instead of the annoyance it was in the old days.

Then, too, his awakening has been met in an equally aggressive spirit by the new man. . . . Not one time in ten does the signing of a second dealer in a town fail to increase the sales in that town many times. It happens sometimes that a dealer is pushing this business in a manner to cover this field thoroughly. In such a case it is a detriment to put in another dealer.

ZONOPHONE 10-INCH RECORDS FOR APRIL.

The Universal Talking Machine Manufacturing Co., of Newark, N. J., have just issued their latest list of ten-inch records for the month of April, as follows:

701 Floating Along—Romanza Two-step.....
702 Stabat Mater—Rossini .....
703 Voice of the Nation—March .....
704 Yankee Luck—March .....
HAGER'S ORCHESTRA.
705 Adorée—Valse Lente .....
706 Choristers—Waltz .....
707 Fanella—Intermezzo and Two-step .....
708 Paddy Whack—Characteristic March and Two-step
FLUTE AND SAXOPHONE DUET PLAYED BY FRANK S. MAZZIOTTA AND STEPHEN PORPORA WITH ORCH. ACCOM.
709 Voice of Love .....
SONGS WITH ORCHESTRA ACCOMPANIMENT.
710 All Through the Night.....Henry Burr
711 Bridge .....Peerless Quartette
712 He's a Cousin of Mine. .....Arthur Collins
713 I'd Like to See a Little More of You.....
Miss Ada Jones and William Murray
714 I'm the Kid that Built the Pyramid..Billy Murray
715 Kiss, Kiss, Kiss..Miss Ada Jones and Wm. Murray
716 Linger, Longer Girl.... Miss Alice Stevenson and Frank Stanley
717 Meet Me Down at the Corner.....
Miss Ada Jones and Len Spencer
718 Onward, Christian Soldiers....Peerless Quartette
719 Poor John .....Miss Ada Jones
720 Ramble Minstrels .....No. 1
721 Sound Advice .....Billy Murray
722 Sunday-school Picnic at Pumpkin Centre.....
Mr. and Mrs. Cal. Stewart and Peerless Quartette
723 Uncle Josh in a Department Store..Cal. Stewart

W. Long Goes to St. Louis—Hibbard to Join the National Forces at Orange—The First Appearance of the Auxetophone in Chicago—A Large Audience Delighted With the Programme—A. J. Pommer Co., of Sacramento, Secure the Agency for the Concert-o-Phone—Other Items.

(Special to The Talking Machine World.)

Chicago, Ill., March 9, 1907.

In this department last month the requirements of the successful talking machine salesman was made the subject of discussion, and incidentally some of the causes of failure were given either directly or inferentially. It gave the western representative a great deal of pleasure to receive these expressions. When he started down the line he thought he might find himself gathering about what he has obtained in past years in other lines—a choice selection of nice little space filler, namby-pamby platitudes, and all that. He didn't. He found a lot of energetic, thoughtful men who attacked the subject with genuine enthusiasm. Hardly any of them approached the subject from the same viewpoint, and they proved conclusively that they were not only injecting enthusiasm and energy in their work, but had original conceptions concerning it, and instead of being content to follow the traditions of the elders, were not afraid, after careful consideration, to embark on the sea of untried methods if they seemed to possess the unmistakable germs of success. Now, all this is very encouraging and is a powerful argument in favor of the perpetuity of the talking machine as a high-grade commercial proposition and an earnest of its continued development along artistic lines. It was intended to continue these interviews in the present issue, as a number of the leaders of the trade here were not included in last month's symposium. I have decided, however, to postpone this until next month, and instead to suggest one or two problems to be considered.

It must be remembered that the best and most experienced men, the men of capable initiative, independent thought and originality of method are very likely to be attracted to the larger trade centers where competition is the keenest, and where they will command good salaries. This is not invariably the case, but as a general proposition it is true. But go over the trade with a fine tooth comb in the large centers as well as in the country, and I am very sure you will find the average compensation paid salesmen and men occupying managerial positions to be inadequate compared with the sums paid men in other lines not requiring greater, if as great, general and special equipment.

It is absolutely true that I am consequently listening to wailing and gnashing of teeth because it is so difficult to find thoroughly capable salesmen and managers. The supply is not equal to the demand. Now there must be a reason for all things. It is manifest that there is plenty of promising raw material lying around loose. There are thousands upon thousands of fine, clear-headed young fellows employed in other lines, or just learning or preparing to begin to learn the game of business who would make splendid talking machine men. Thanks to our modern educational methods, faulty in some respects though they may be, a fair development of the mechanical faculty or power to grasp mechanical problems, coupled with a broad, general commercial sense and even an adequate general education is by no means as rare as it used to be. No longer can it be said that a man mechanically inclined must always be a mechanic and nothing else. Furthermore, like most generalizations it has never been true to the extent that the utterers of the fallacious dictum thought it was.

Now, the question is, why are not more of these fine, ambitious young fellows attracted to the talking machine trade, and if they do get into it, why do so many of them leave it in a short time for other pursuits? I, for one, believe it is because they see a better chance for reward in other lines. Now, on the other hand, I know plenty of instances where very fair salaries are paid, but they seem to be exceptions that prove the rule. I do not say that there are not many men who are willing to adequately compensate good men, but reverting to the original proposition, it seems to me that the fault is two-fold. In the first place it may be, and I believe in any number of cases is, the fact that dealers are not willing to pay a fair, if very moderate wage, to the young man who goes into a store to learn the business. Now, no matter how flattering the outlook may be, it is true that man cannot live by faith alone, and it is discouraging enough and a potent ambition dampener if, when after paying your board bill you find it necessary to say nay, nay, as the trolley stops opposite you and limit yourself to a ten-cent lunch at noon. When a job offers itself with less "future" but more substantial imme-

diate reward the temptation is such that few can resist.

In the second place, instances have come under my observation which lead to a belief that very many concerns in a trade when they get hold of a good man and arrange to pay him an inadequate salary, expect to see the world turned upside down in about a day and a half. They forget, especially if the new man assumes a managerial position, that his advent almost necessarily involves the inauguration of new methods and possibly a new sales policy. The adjusting process is never a rapid one, no matter how advantageous the changes may be and no matter how strongly they may appeal to the buying public. When a man employs another he expects results, and in the nature of things he must get them if the relations between the two are to continue. But the employer must remember that what business he has is the result of development and of untiring effort, that any future progress he may make must be along the same lines, although perhaps relatively more rapid, but that to expect the new man to make good in a large way in an incredibly short space of time is manifestly impossible, and that his business is not likely to increase in volume by leaps and bounds unless, indeed, he violates those laws prompted by wisdom and foresight which have saved the trade from demoralization, and thus cuts off his source of supplies of goods and makes himself a pariah and an outcast.

If the writer is wrong in his deductions he would be glad to be set right. Anyway, a full and free discussion of this matter in these columns would unquestionably prove interesting and even helpful. Correspondence on the subject is heartily invited by the Chicago representative of The World, and the names of the writers will be withheld from publication, if so requested.

The Cable Company have discontinued the wholesale talking machine business, which they consider as foreign to the piano business when conducted in a wholesale way. C. W. Long, who has been the manager of the department, and who is a thoroughly capable man of long and successful experience, goes to St. Louis, Mo., to assume the managership of the large wholesale and retail business of the St. Louis Talking Machine Co.

C. L. Hibbard, western manager of the commercial department of the National Phonograph Co., will leave in a few weeks for the factory at Orange, N. J., where he will assume an important connection with Nelson C. Durand, general manager of the commercial department. E. C. Barnes will continue to have charge of the company's local business on the business phonograph as in the past.

George M. Nisbett received a letter recently from a dealer in which he said he never failed to get 99 out of every 100 Edison records ordered of Babson Bros.

The first "public appearance" of the auxetophone in Chicago was made last Weduesday evening, when it was used in connection with a lecture by Prof. N. C. Corey in a lecture on "Grand Opera" at Music Hall, under the direction of F. Wight Neumaun, the famous Chicago impressario. The lecture was illustrated pictorially as well as musically, and proved a distinct artistic success. Prof. Corey traced the origin of the opera, described the opposition incurred at every step of its advance, and explained its original purpose, its dual nature, dramatic and musical, and the musical antagonism of these elements. The early days were marked by an excessive developmeut of the musical element, although Gluck made a strenuous but ineffectual effort to stem the tide. The conventional aria and its purpose, the exhibition of vocal virtuosity, were treated exhaustively and illustrated on the auxetophone especially by the mad scene from "Lucia," as sung by Melba. The speaker then weut on to describe the development of a race of singers, the Italians, and later touched on Meyerbeer's efforts to effect a compromise between the musical and dramatic. The question whether Verdi was to be considered in the light of a revolutionist was handled in a masterly manner. The great work of Wagner and the reforms instituted by him were handled in a thoroughly appreciative manner and at some leugth. The lecture concluded with a treatmeut of the modern Italian school. After a graceful introduction the lecture was plentifully interspersed with stereopticon views and selections on the auxetophone from the great composers referred to by the lecturer and interpreted by such artists as Homer, Eames, Campanari, Sembrich, Melba, Sembrich and Scotti in duet, Schumann-Heink, Caruso, Journet, Gadski and Tamagno—the latter being literally a voice from the dead, and such a voice! The numbers were vigorously applauded by the audience. About 500 of Chicago's musical elite listened to the lecture and to the auxetophone.

B. FEINBERG,
Of the Western Talking Machine & Supply Co.

O. D. Weaver & Co., northwest corner of Wabash avenue and Adams street, Chicago, are showing a very complete line of disc and cylinder record cabinets, selling to the trade only.

The Western Talking Machine & Supply Co., Dillbahner & Feiuberg, proprietors, have made arrangements with the various eastern factories they represent by which they have been enabled to carry stock in Chicago, thus shipping all goods in the future f. o. b. Chicago, thus effecting a distinct saving in freight to western jobbers. B. Feinberg, of the firm, is now on a trip through the Northwest, and will leave about April 1 on a trip to the Pacific coast. The firm have recently moved to new salesrooms and offices in the Willoughby building, 6 Madison street.

The Boyd-Harrison Co., electric pianos, etc., 6 Madison street, have moved to larger offices in the same building.

The Skelly Manufacturing Co., of this city, manufacturers of the Concert-o-phone Twentieth Century Columbia coin-operated machine, have appointed the A. J. Pommer Co., of Sacramento, Cal., Pacific coast sales agent, and Helriegel & Co., Philadelphia, sales agents for Pennsylvania.

Frederick Sheppy has been granted a patent for his tone regulator, which he has had on the market for over a year. Mr. Sheppy, by the way, is now fully equipped for doing talking machine repairiug for jobbers, and is rapidly building up a business of large proportions.

Lyon & Healy receutly issued a remarkably fine piece of advertising matter in the shape of a cut-out clock dial, or rather a series of them, showing the promptness with which orders for talking machines and records are filled. How this was illustrated is shown in the company's page advertisement in this issue.

Joe Wallace, head repair man at Lyon & Healy's, has taken unto himself a wife.

W. L. Briud, formerly with the Columbia Phonograph Co., has transferred his allegiance to H. C. Kibbey & Co., the well-known electric piano and coin-controlled musical and entertainment machine concern.

W. W. Parsons, manager of the commercial dictation machine department of the Chicago office of the Columbia Phonograph Co., has returned from a vacation trip to the South and to Cuba.

Charging his downfall to gambling and drink, Earl D. Floyd pleaded guilty to charges of having stolen $3,200 from the National Phonograph Co. before Judge Ball to-day and was given an indeterminate sentence in the Joliet penitentiary. Floyd said that he came from a respectable family in Michigan, had a good education and enjoyed a good salary. He began his stealings in a small way and afterward took larger sums, finally being forced to flee from the city. He was arrested in Sheridan, Wyo., and, it is said, was betrayed by a woman whom he intended to marry. The alleged peculations occurred shortly before the National Phonograph Co. closed their Chicago headquarters in June of last year.

A. D. Geissler, manager of the Talking Machine Co., goes to Phildelphia the latter part of this week to attend the marriage of his sister. He has made a new addition to his traveling force in the person of Roy Keith.

The "City of Brotherly Love," as Philadelphia is called, often proves an apt title, for besides loving one another, certain of its citizens are mentioned as treating another's property in a brotherly sense as though it were their own and incidentally decamping with same.

A young talking machine dealer in the outskirts of the town made a record of his dog's voice, which, by the way, had the habit of "singing" in dog fashion. Shortly afterward he sold a good machine on the instalment plan to a man who made the first payment and then vanished together with the outfit. After making the sale, however, the dealer missed his "dog" record, and judging the customer had stolen it, looked upon it as an excellent clue.

While walking through a distant part of the town shortly afterward, the dealer heard a dog's voice issuing from a certain house and recognized it as his lost record.

Investigation disclosed the missing machine and the purchaser, who, when cornered, paid the balance due rather than face arrest. The whole affair was a peculiar reversal of the well-known episode, entitled "His Master's Voice," for here the master profited by hearing his dog's "voice."

THE MONARCH REVOLVING RECORD RACK

The Monarch Revolving Record Rack, made by the Syracuse Wire Works, Syracuse, N. Y., has proven most successful in every particular. Sales of this specialty have increased at a wonderful rate until at present the demand for them comes from all parts of the world. Only recently, in fact, a large shipment of wire racks was made to the Argentine Republic, and where initial consignments are placed reorders are sure to follow, as the racks receive the unqualified indorsement of every dealer using them. A distinct advantage of the revolving rack is that one thousand records may be displayed in a space that permits shelving sufficient to hold only a few hundred, and besides, in the Monarch rack each record is placed in plain view and is easily removed.

THE NEW BONCI RECORDS.

The new Bonci records issued by the Columbia Phonograph Co. are now on sale, and the demand for them has been far greater than even anticipated. The last lot to come through are remarkable for their clearness and purity of tone, and the scratch that characterized some of the earlier product has been greatly eliminated. Most of these records are double faced, making them quite reasonable in price when it is taken into consideration that the purchaser secures two records fo rthe price of one.

TRADE NOTES FROM BOSTON.

Business Brisk All Along the Line—Leading Jobbers and Dealers Make Good Reports as to Present and Prospective Business.

(Special to The Talking Machine World.)

Boston, Mass., March 11, 1907.

"Don't talk to me about business! When a man has too much business so that he can hardly turn around because of the goods packed up waiting to be shipped out, he wants to wait until business slacks up a little before he talks. Just now I'm too busy sending out orders to think even of lunch or dinner." This was the way A. W. Chamberlain, wholesale manager at the Eastern Talking Machine Co., spoke this week. He showed The World representative a big pile of goods waiting to be taken away by expressmen, and more goods were being put into the basement for future orders. Mr. Chamberlain said that business had never been so good as now, and seemed to be growing better every week. The Eastern Talking Machine Co. are doing an especially good business on Victor machines, having disposed of over 300 in three weeks. Sager Midgeley, the actor, has just bought from this company an I. C. S. outfit in French, and a similar outfit was recently sold to a Japanese merchant here.

A. F. Rowell, formerly with the Winchell Co., has gone to Providence to assume charge of the National Phonograph Co.'s store there.

At the Boston Cycle Co.'s warerooms, Manager Andrews said this week: "It is only a question of time when every dealer will have the tray system for holding records. To-day there are more people carrying Edison records than ever before, because they can keep them handily. Where they used to carry a stock of, say, 200 or 300, they now try to carry every record that is out. With the tray system a dozen customers may stand before the racks and pick out their records, while the salesman is waiting upon other persons. Under the old system the dealer could only wait upon one customer at a time, because no one but he knew what the records were and where they were." Mr. Andrews is announcing this month some bargains in flower horns.

The Columbia Phonograph Co.'s salesmen ran up against the men from the Boston Cycle Co. this week on the bowling alleys, and "they were they'rn," to the tune of 1,170 to 1,115. The Columbia boys say they will wipe that score off next time. The wholesale department of the Columbia Phonograph Co. has been removed from Summer street to 17 Kingston street, where Manager W. S. Sprague says he is much better satisfied and has more room. Customers are calling for goods every day now, but it is impossible for the company to get them from the factory, especially on the higher grades. It is also impossible to secure cabinets enough to supply the demand.

The Victor business at M. Steinert & Sons Co., both wholesale and retail, is better this month than ever before, but there is still the handicap of not being able to get goods from the factory.

"Doc" O'Neil, traveler for the Victor Co., put in a couple of weeks here recently, endeavoring to place the Victor goods with some of the local piano houses as a side line.

The newly fitted up department for talking machines at the department store of Houghton & Dutton has been doing an extremely good business of late.

MORE NEEDLE POINTS.

The Heinz "57 variety" of pickles have long been a back number, when compared to the number of different kinds of talking machine needles on the market. In view of this it becomes quite important for each one to select his own variety, and the demand is created accordingly.

It is common for a customer, when referring to an unsatisfactory record, to tell the dealer that the record does not play right. When this remark is made to Mr. Blackman, proprietor of the Blackman Talking Machine Co., 97 Chambers street, New York, he usually tells the customer that this is caused by not using a "Playrite" needle, for he adds, "The name tells what they do."

Everybody cannot judge quality, for in most things it requires an expert. In the case of a talking machine needle it is different, for the opinion of the one who uses it is final, for he has simply to consider whether the needle will play a record perfectly from start to finish, and at the same time give a loud, clear and sweet tone.

Mr. Blackman also recommends his "Melotone" needle for people who stay home from church on Sundays and play rag-time music. The advertisement of the Blackman Co. in this issue gives further uses of "Playrite and Melotone" needles.

APPLY FOR INJUNCTION.

Friday, Feb. 15, the American Graphophone Co. through their attorney, C. L. A. Massie, argued a motion before Judge Lacombe, United States Circuit Court, Southern District of New York, to enjoin the Leeds & Catlin Co., New York, from employing the Jones process in the duplication of disc records. This was following up the decision of the United States Circuit Court of Appeals, second circuit, who recently declared the Jones patent valid, in the cases against the Universal Talking Machine Manufacturing Co. and the American Record Co. Louis Hicks appeared for the defence. The court gave both sides until the 21st to file supplementary briefs, but no further oral argument was heard. Decision was reserved.

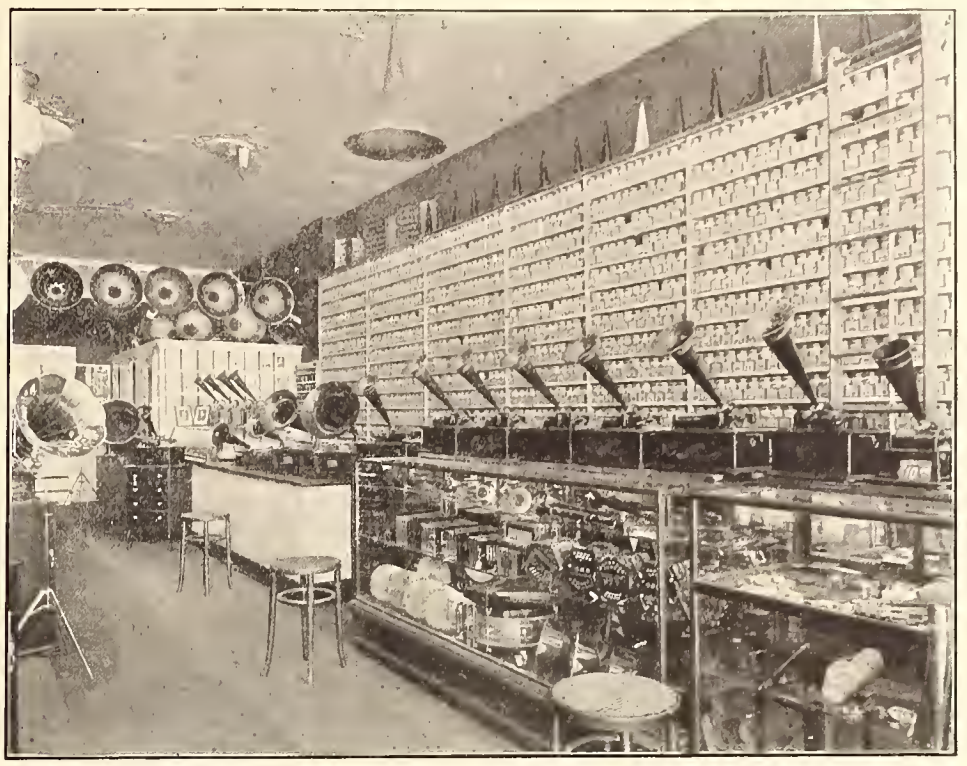
TALKING MACHINE DEPARTMENT CONDUCTED BY BRODBECK & CO.

In connection herewith we publish a view of the talking machine department conducted by Brodbeck & Co., of 51 South Fourth avenue, Mount Vernon, N. Y., who are said to be among the largest talking machine dealers in Westchester county. They handle the Edison and Victor lines, together with a complete assortment of record cabinets, horns and other sundries, and are a progressive, up-to-date institution.



SAN FRANCISCO NOTES.

Bacigalupi Doing a Large Business in Automatic Instruments—Big Order for Wurlitzer Co.—Sherman, Clay & Co. Have Nine Special Demonstrating Rooms—Exton Music Co., of Los Angeles, Enlarge—News from Many Points on the Pacific Coast.

(Special to The Talking Machine World.)

San Francisco, Cal., March 6, 1907.

Peter Bacigalupi, the prominent talking machine jobber and retailer, who is now doing something in self-playing organs, pianos, etc., has gone at the latter end of his business in the same big way that put him into the midst of things in the talking machine business. "Well, how many have you got?" he asked Mr. Gerlich, the factory representative of the Wurlitzer people, when the latter asked him the other day how many Wurlitzer instruments he wanted.

E. L. Andrews & Son, of Phoenix, Ariz., are planning to drop some of their outside lines and specialize on the Victor, which they find to bring good results.

Clark Wise & Co. have arranged a special department for cylinder machines and records, and are beginning to push these out to some extent.

Sherman, Clay & Co., with their nine separate demonstrating rooms for Victor goods, are doing even more talking machine business than last month. They received a fine lot of new records last week, which they are advertising widely.

The Columbia Phonograph Co. have opened their neatly fitted branch at Van Ness avenue and O'Farrell street, which proves to be a constant attraction. The business is still seriously limited by the scarcity of stock.

Kohler & Chase's phonograph rooms are doing good service. This side of the business is as important as ever, and frequently all five rooms are in use at once.

The Exton Music Co., Los Angeles, Cal., have redecorated and greatly enlarged their talking machine department and placed E. T. Delano in charge. They handle Victor, Edison and Zonophone lines. Mr. Delano, the new manager, is a man of wide experience, having been for some time with W. J. Dyer & Bro., of St. Paul, Minn., and later with Kohler & Chase, of San Francisco.

SEE THE DIRT, AND SEE THE POINT.

Have you ever noticed the point of a talking machine needle after it has played about half of the record? If so, it probably reminded you of a stick being dragged through the dirt. This proves that considerable dirt is in the record grooves, and, although the needle point rubs some of it out of the grooves, it also grinds some of it into the record, causing the record to become scratchy, and wearing the needle point.

J. Newcomb Blackman says he has overcome this difficulty by the Place No. 10 Record Brush, which, when once applied to the sound-box, automatically cleans each record groove 30 or 40 times through direct contact between the record and needle point. This saves the wear and tear on both the record and the needle, and insures a perfect reproduction. The advertisement of the Blackman Co. in this issue fully describes the No. 10 Brush for the Victor machine.

PORTLAND BUYING HIGH GRADES.

General Reports from Leading Dealers Are Most Satisfactory—People Want the Best in Both Machines and Records and Price Apparently of Little Consequence—Graves & Co. to Build Warehouse in Order to Relieve Their Business—Sherman-Clay's Big Sales—What the Leading Dealers Report.

(Special to The Talking Machine World.)

Portland, Ore., March 6, 1907.

Conditions among the talking machine dealers of this city are most satisfactory with the bulk of the demand for higher priced outfits. Sales of $250 to $300 are of quite common occurrence, especially where grand opera records are included in the outfits.

The Columbia Phonograph Co., whose Portland store is the distributing point for the entire State of Oregon and portions of Washington and Idaho, have been doing an immense business, especially higher priced machines and records. There is a great demand in the country districts for Columbia goods. The manager of the local headquarters is A. Glenn.

Good business is also the report of Graves & Co., who are Edison jobbers for that section of the Northwest. According to P. C. Graves, manager of the talking machine department, the company are contemplating the erection of a three-story warehouse in order to relieve the present crowded condition of their quarters. Graves & Co. also handle the Victor line as a retail proposition, and are thus in a position to capture their share of both disc and cylinder trade.

The Portland Phonograph Agency, E. B. Hyatt, manager, are also enjoying a full portion of prosperity. They also have experienced an unusual demand for high priced Edison outfits, and judging from the business done by them for the last two months, 1907 will prove a record breaker.

Sherman, Clay & Co. are much pleased with the showing of their talking machine department under the management of George R. Guppy. They have made some record sales of Victor outfits, and a bill amounting to a couple of hundred dollars does not worry them in the least. While the cheap machines have remained to litter up the shelves the high priced ones have gone out almost as soon as received, and it is found difficult to obtain goods of that quality in sufficient quantity to meet the continually growing demand.

The Gibson Co., who handle the Columbia line exclusively, report a strong demand for $50 machines, with the really cheap outfits hardly called for. Lipman, Wolfe & Co., a department store, who handle the Victor machines and records, report similar conditions.

N. A. SPERRY IN OLD QUARTERS.

N. A. Sperry, talking machine dealer, of Hartford, Conn., whose stock, as related in The World recently, was destroyed by fire, has reopened again at his old stand, 85 Pratt street, with a handsome stock.

F. K. Dolbeer, manager of the National Phonograph Co., who has been on a fortnight's trip West and South, returned East Feb. 19.

RECORDITE COMPANY, - 1905 Park Avenue, NEW YORK

HONORING THOMAS A. EDISON.

The Sixtieth Birthday of the Great Inventor Celebrated by His Associates With a Delightful Dinner and Reunion, Which Will Go Down in History as Unique.

When Thomas Alva Edison, the "wizard," reached his sixtieth birthday, February 11, his business associates celebrated the momentous date with eclat. The event was memorable for more reasons than one, and when his friends, in honor of the occasion, tendered him an informal dinner at the Kroeger Auditorium, Newark, N. J., he graciously accepted their hospitality. The affair was a beefsteak dinner, because Mr. Edison is opposed to elaborate display, being simple in his tastes and democratic in manner. The originator of the phonograph was in the best of health and spirits, was the first man on the ground, and with a red rose as a boutonniere and a genial smile, the only guest of the evening declared he felt like a young man, and his actions throughout plainly proved his words.

No more enjoyable time could be imagined than the several hours passed at the table, where stories reminiscent of the company's experience at various stages of developing the talking machine, were told by Messrs. Edison, Gilmore, Moore and others. The Edison "talent," including Harlan, Collins, Murray, Porter, Jandas and Frautzen, contributed the entertainment features. The hit of the evening was Walter Miller's song, rendered by the quartette, to the air of "Everybody Works but Father," as follows:

A man who liked work came to our town, a wonder, you all know;
His name is Thomas Edison, full of push and go.
He hired a lot of farmers, see them all around;
Ask him what he pays them for, and you'll never hear a sound.

CHORUS.

Nobody works but the old man,
He's at it all night long;
Tinkering with experiments
Until the break of dawn.
Gilmore just gives orders,
Weber does the same;
Nobody works but the old man.
Ain't that an awful shame.

There was a time when Edison would give no room to work,
He'd only build a lot of shacks, no wonder we did shirk.
But now it is quite the reverse, new buildings are so nobby,
The chances are he'll never stop, cement buildings are his hobby.

He's always, always at it, it's a wonder he ain't dead,
With only five hours sleep at night, so it has been said:
But if this sleep is not enough and of the proper kind.
He takes more in the day-time, but we're all blind.

He's working on a battery, perfect it soon will be,
He's trying every kind of dope to get electricity.
We'll put them in your autos and send Gilmore the bill;
If they can't climb up the steepest grade,
Just watch them go down hill.

To the melody of "Arrah Wanna," Collins and Harlan sang the following, framed up by Messrs. Cronkhite and Hird:

At the factory in West Orange, seated in his chair,
You can find the chief "Ileap Big Smoke" tearing out his hair;
Each day comes little Westee with a segar fine,
Cries the Boss, in accents frenzied, "Can't you read that sign?"

CHORUS.

Mr. Gilmore, Mr. Gilmore, we are proud of you,
You are tried and true,
You will never fret and stew.
In an office built of concrete strong,
You could make your henchmen smile,
If you'd only set us rules to let us smoke a little while.

At his desk he ponders deeply, letters by the score,
Mr. Gilmore, gen'ral manager, gee, but he gets sore.
In comes Walter Stevens with an armful of old truck,
Walter says, can you see me now, I can't go on, I'm stuck.

CHORUS.

Mr. Gilmore, Mr. Gilmore, up in the air you go,
It is hard we know,
Your job is a peach, oh, oh,
In a year or two your golden locks
All white will brightly shine,
Then the 5:10 train boys, come in late boys, may work overtime.

When you run a great big factory, you must have the dough,
Mr. Gilmore, heap much big chief, knows that it is so,
The Jobbers to the Waldorf came, from far and near did hike,
F. K. Dolbeer said to them, you may go as far as you like.

CHORUS.

Mr. Gilmore, the Committee, did their work up fine,
At the bar on time,
Didn't wait to get a shine,
They set the guests a lively pace,
In booze there was a boom,
Cocktails plenty, then said gently, charge it to the room.

Wilson, Dolbeer, Weber, Pelzer, Walter Miller, too,
Cronkhite, Hird and Len McChesney put up to you;
Shall we list the latest ballad, "Pedro and the Monk?"
Comes your answer, short and heated, "No, that thing is punk."

CHORUS.

Mr. Gilmore, Mr. Gilmore, we're surprised at you,
We thought it would do,
It should sell a few and when you
Found the sales reached fifty-two
Said with a smile so bland,
"It's the worst thing, but the rank thing sells to beat the band."

Among those present, the hosts of Mr. Edison, were the following: William E. Gilmore, president and general manager of the National Phonograph Co. and the executive head of the other Edison companies; Alphonse Westee, secretary; C. H. Wilson, general manager of sales; Frank K. Dolbeer, credit manager of all companies; William Pelzer and John E. Helm, of the legal department; Peter Weber, superintendent; Walter Stevens, manager foreign department; L. C. McChesney, advertising manager; A. T. Moore, manager kinetograph department; William M. Brodie, manager battery department; F. A. Burnham, Jr., sales manager Bates Manufacturing Co.; N. C. Durand, manager commercial department; Walter H. Miller, manager, and W. H. Cronkhite, critic of recording department; J. H. Moran, manager purchasing department; H. F. Miller, cashier; A. M. Hird, order clerk; E. F. Aiken, assistant superintendent; A. C. Ireton, assistant sales manager; C. S. Osborne, assistant credit manager; R. B. Bachman, laboratory superintendent; Fred Ott, assistant to Mr. Edison; H. I. Moyer, engineer of concrete construction; William Bee, manager Edison Storage Battery Co.

A "LIVE" MAN IN A "LIVE" CITY.

(Special to The Talking Machine World.)
Lincoln, Neb., March 6, 1907.

Lincoln, Neb., certainly deserves credit for being one of the fastest and most up-to-date talking machine towns in the West. There are no less than fifteen smart dealers who are all doing big things. The Columbia man, O. J. Junge, is deserving of special mention as being one of the grittiest, most progressive pushers of Columbia goods in the land. He is known throughout Nebraska as the "Talking Machine Man," and is practically responsible for the enormous strides of the talking machine business in that State. He has always got something new in the line of advertising to bring the graphophone to the public's notice.

INFLUENCE, CHARACTER, VALUE.

These Are the Requisites, Which Combined With Circulation, as in The Talking Machine World, Brings Results to the Wide-Awake Advertiser.

In a recent address, J. R. Mix, advertising manager of Scribner's Magazine, thus defined the qualities which give to a periodical advertising value, such a publication, for instance, as The Talking Machine World.

"What gives advertising value to space in a publication? Is it top of outside column, or next reading matter, or any other of the numerous things that advertisers so insistently demand?

"No, it is none of these things.

"Give me a publication that has influence, power, character; that is what I am after—that is what, as an advertiser, I am buying.

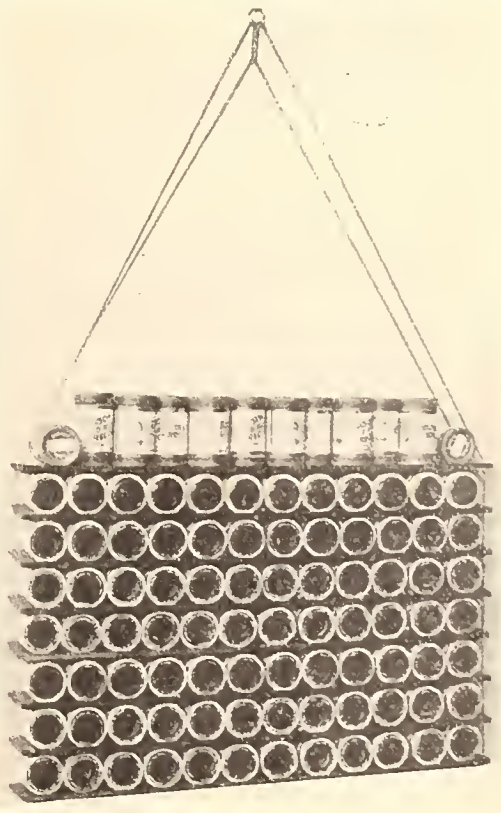
"I am purchasing a share of that power. I am building on that character. I am getting for my wares the confidence that the readers of that publication have in it. I don't care where the make-up man puts my advertisement in that publication. As long as he treats it fairly he cannot deprive me of a share in the influence which it exerts in the community.

"What the advertising agent needs is more honesty of purpose, more wisdom in the selection of mediums, closer study of the real needs of his clients. He needs to ignore any competition based on such a trivial thing as putting an advertisement at the top of outside column, right-hand page.

"Good copy counts for more than the privilege of location; a good selling plan for more than good promises; good judgment for more than any alleged influence.

"The agent must believe in his work, be sincere in his conviction of what is right and proper in the guidance of the advertising campaign submitted to his care.

"There is absolutely no room these days for the agent, or for the advertising man in any capacity, who is not capable of emphasizing that the thing he is selling is an influence as distinct, as tangible, as capable of being measured as an ounce of gold; and the value of which it is just as possible to estimate as is the value of a piece of cloth or twelve ounces of silver."



LOOK AT THIS!

A Record Rack for the home that holds 96 Cylinder Records. Can be retailed for $3.75 at a good profit to the dealer. Exposes 96 titles to view at one time. Insert the original boxes in the rack and remove the covers—that's all.

Keeps Record Surfaces Always Clean

Box remains in rack when record is withdrawn, weight about 8 lbs., packed solid, takes low freight rate. Can make prompt shipments.

Above illustration represents Cross Section of Shelf Bed with Record Box in position and Record partly withdrawn, showing stop bead which prevents box from coming out when record is withdrawn.

Patent Pending.

ADJUSTABLE CASE CO., MINNEAPOLIS MINN.

TEXAS PHONOGRAPH CO.

Are a Healthy Concern—Paid Dividend of 12 Per Cent. and Has Cash Surplus of $12,500.

A meeting of the board of directors of the Texas Phonograph Co., Houston, Texas, was held recently at the office of John G. Tod in the Commercial National Bank building. A report of last year's operations was rendered by President Holleman, who has recently returned from a four weeks' stay at the Edison factory. The following is an extract from the report:

"As president of your corporation, am pleased to report that the past year's operations have been highly successful and profitable. The company was not only able to pay the regular 12 per cent. per annum dividend rate established last year, but also earned a cash surplus amounting to $12,500, which is equal to 50 per cent. dividend on the $25,000 capital stock of your corporation. Early in the year 1906 contracts were entered into with The Post and other leading papers of Texas for the conducting of a comprehensive advertising campaign, which met with such enormous success that it became necessary to abandon the advertising on account of the Edison factory being unable to furnish us with an additional quantity of goods above that which we had contracted for in January. We have thus sold every dollar's worth of goods we could possibly obtain from the factory and even now the factory is several thousand machines and over three million records behind in their orders generally. While recently at the factory, however, I arranged for twice the quantity of goods this year that we were able to get last year and feel assured that our progress will not again be hampered by our inability to secure goods from the factory. We now have, thanks be to the virtue of newspaper ink, 250 merchants in Texas whom we supply at wholesale and over 3,000 retail customers, nearly all of whom have been secured through our advertising.

"I desire to express my appreciation of the able support rendered by the officers, directors, stockholders and employes in making the success that has been attained by the Texas Phonograph Co."

After adopting the president's report the resignation of S. H. Womble as secretary and director was accepted, Mr. Womble having been compelled by reason of his health to remove to the mountains of North Carolina, where he has opened a business in the same line and will buy his supplies through us. E. M. Parrish, formerly cashier of the Texas Savings Bank, who is a large stockholder in the corporation, was duly elected secretary and treasurer, and has assumed an active part in the management of the affairs of the corporation at 1019 Capitol avenue. The corporation is to be congratulated upon securing the services of Mr. Parrish. Although he has recently been engaged in the banking business, the mercantile line is not one foreign to him, inasmuch as for several years he followed mercantile pursuit and for a number of years prior to locating in Houston was one of the most prominent and best rated merchants in Nevada, Mo. The acquisition of a gentleman of such sterling qualities as those possessed by Mr. Parrish is certainly one of congratulation for the corporation and he will prove a worthy colleague for Messrs. Holleman and Swanson, who have worked so energetically during the past three years to advance the interests of the Texas Phonograph Co.

It was voted to appropriate the sum of $8,000 for publicity during the ensuing year, most of which will be used in the daily papers during the fall months, when it has been proven the best results in this line are obtainable from an advertising campaign.

I. C. S. COURSE POPULAR.

The Douglas Phonograph Co. are doing a great business in language courses of the International Correspondence Schools, in which the Edison phonograph is used. In one day recently fifty-three outfits were disposed of, forty-seven being French. The price of the courses will be advanced $10 shortly.

EDISONIA CO. "OPENING."

The Handsome Quarters of This Company in Newark Highly Praised by Visitors.

(Special to The Talking Machine World.)

Newark, N. J., March 4, 1907.

The new quarters of the Edisonia Co., in the Edisonia Building, 57 Halsey street, were thrown open for the inspection of the public last week, and elicited the highest praise from all visitors.

The new home of one of the oldest phonograph companies incorporated in this State is a commodious three-story building, and no expense was spared in fitting it up. The basement is a stock room, and the first floor a general salesroom. The second floor is divided into a pretty demonstrating parlor, offices, a record room for the Victor records, and the third floor is devoted to storing stock.

Almost every make and style of cabinet and phonograph is on exhibition, from the first invented to the latest $800 hornless machine. The company started in a small way, and the rapid growth and prosperity are due to business-like management.

In 1893 A. O. Petit, the president of the company, had several machines at Eagle Rock, under a little tent, and from that worked up his business, until the Edisonia Co. is one of the largest phonograph companies in the State. The president is a close friend of Thomas Edison, and upon the opening of the new quarters received a gold-plated "Triumph" phonograph and a mahogany cabinet from the wizard. On a gold plate attached to the gift is inscribed "Presented to A. O. Petit, by Thomas Edison, February 25, 1907."

THE HAPPENINGS OF THE MONTH IN CLEVELAND.

Spendid Reports Regarding Business—Still Difficult to Procure Records—The Leading Dealers Are Enthusiastic Regarding the Increasing Demand for the Better Grade of Machines and Supplies—Moving Picture Theatres Growing Everywhere—Leading Music Critic Speaks Favorably of These Enterprises—Big Order for a Devineau Biophone Co.'s Attachment—A Novel Show Window Gotten Up by Mr. Bourgeois During Automobile Show Week—News of the Month Presents Much That Is Novel and Exceedingly Interesting.

(Special to The Talking Machine World.)
Cleveland, O., March 9, 1907.

The prosperous situation of the talking machine trade noted in January prevailed throughout February, and has continued thus far into March. The favorable conditions under which the new year started out have continued, and jobbers and dealers have all been busy with orders for machines and records. Disappointment is still expressed over the inability to procure from the manufacturers goods with which to fill orders, many of which have been booked for weeks.

The fact is, everything pertaining to the talking machine business in this section is flourishing, and the only complaint heard is a shortage of goods. The expectancy of dealers is that this trouble will soon be overcome, which will add largely to their sales and peace of mind.

One of the busiest men in town these days is H. E. Jones, manager of the Columbia Phonograph Co.'s commercial graphophone department. He has installed a number in offices of the large business houses, and the demand seems to be constantly widening as their merit and convenience are impressed by Mr. Jones' demonstrations of their usefulness.

The Eclipse Musical Co., J. H. Towell, manager, report business excellent, and that the volume of trade in February largely exceeded that of the same month a year ago. "Especially in the wholesale department," said Mr. Towell, "we have lately been crowded with orders of large dimensions, covering the entire line of goods. In both the wholesale and retail departments our trade is constantly increasing. Conditions generally are good, and give promise of continued expansion in the talking machine line."

"I made sales of a large number of machines, including several Victrolas, during the month of February," said W. J. Roberts, Jr., "and you can say business has been and is fine. From the active manner of the March opening of trade it gives promise of an exceptionally large volume of business. The March records are selling well, and calls from the old lists are constant." Mr. Roberts has secured the services of Miss Ryan, the popular young lady formerly in charge of the talking machine department of the Bailey Co.

W. H. Buescher & Son had an excellent run of business during February in their Edison department, as well as Victor. They are also selling large numbers of the Lyra machines, its low price commending it to those unable to invest in the higher priced article. They report the sale of quite a number of the highest priced machines, both Edison and Victor, with good and constant sales of records. Mr. Buescher stated business was keeping up remarkably well.

G. J. Probeck, manager of the Columbia Phonograph Co., with a corps of assistants, is always busy. He said their last month's business was fine, and that it was continuing entirely satisfactory, that they were selling machines every day, and the call for records large and increasing. Mr. Probeck said many of their customers were anxiously waiting for Bonci and Nordica grand opera records, of which the Columbia Co. will have exclusive sale.

Hugh Gulley says he is and has been busy all the time since he started in business, with a constantly increasing clientele. "Our February business was good, and March has opened up in fine shape," said Mr. Gulley. "The new records are taking well, and I find it difficult to keep up the supply, some numbers having already been exhausted." Mr. Gulley has secured the services of Harry L. Tinker, formerly with the Columbia Phonograph Co.

Messrs. Hallet & Davis, who purchased the business of the Smith & Nixon Piano Co., are closing out the stock of pianos and will vacate the premises soon. They have taken the rooms Nos. 126-128, the Arcade, and will devote the space entirely to the talking machine business. They are fitting up the rooms in elegant style, and with the fine location will have the very best kind of demonstration facilities. The company report the talking machine trade good and growing.

The March Zonophone records are having a good sale, and are the best the Universal Talking Machine Manufacturing Co. have put out. Messrs. Flesheim & Smith, who handle the products of this company, report they are having a fine trade, and that their business is increasing. But for a substantial fire wall a fire next to Flesheim & Smith's a few nights ago would have put them out of business. As it was, they sustained slight damage from smoke.

Messrs. Collister & Sayle, who handle the Victor, report business very good and increasing. The sales of records they pronounce extremely satisfactory, and for the higher grades of music, Mr. Sayle said, they were experiencing considerable difficulty in having their orders filled with any degree of promptness, owing to the enormous demand on the manufacturers.

Several new moving picture theaters have within the past month started up in different parts of the city. One of the most recent is the "Eureka," by George Howald, on Superior avenue, near the Colonial Theater. Exteriorly and interiorly it has been elegantly fitted up, with a seating capacity of 215. It is claimed to be the finest motion picture theater in Cleveland. The musical accompaniment is a Twentieth Century graphophone.

The Columbia Amusement Co. has sold the slot machines and paraphernalia of three places to P. A. Powers, phonograph dealer, of Buffalo, and they are closing out the business, selling the machines to parties in different locations. Fifteen hundred dollars' worth was sold to parties in St. Louis. It is said bad management forced the Columbia Amusement Co. to make an assignment.

One of the musical critics of the city switched into a moving picture theater the other day, and speaks thus interestingly of his experience: "I was enticed into a place where moving pictures are exploited and was well paid for my curiosity, for I saw a realistic performance of Wagner's "Parsifal." It was almost as vivid in its realism as a bona fide theatrical production with living characters. Of course, it was all done in pantomime, but the dramatic action was intelligently explained by a lecturer as the play progressed.

"When to the moving pictures reproduction of the music is adequately added, the opportunities for hearing great artists and becoming conversant with the standard operas means much for our educational progress. In connection with the "Parsifal" production I heard Schumann-Heink in a Saint-Saens aria from "Samson and Delilah," and although the reproduction was hardly a perfect replica of this singer's artistry, it was sufficient to claim artistic attention.

"Imagine the boon to posterity it would be to have in moving picture the immortal Beethoven directing one of his symphonies, and it reproduced by the wonderful phonographic mechanism. Such artistic achievements are quite possible, as well as probable, in the near future. 'Parsifal' and similar moving pictures are but the experiments which portend a future perfection of the art of making ancient history a vivid and living reality."

Charles F. Brush, the inventor of the arc electric light, is having constructed an organ for the new Protestant Episcopal Cathedral, which will be opened at the diocesan convention this

In the Words of Others
"Sell I.C.S. Language Outfits"

The best proof that it will pay you to sell I. C. S. Language Outfits comes from the statement of dealers that have tried them. We have published several of these letters before; here is another one from the Denver Dry Goods Co. This is piling up evidence that you are losing profits of from 10 to 30 per cent. on your business if you are not handling these Outfits. The phonograph system is fast becoming recognized as the most perfect way in the world to teach foreign languages. As a commercial enterprise, the I. C. S. System has always paid dealers well in the past, and it is growing very rapidly. Wouldn't it be a good idea for you to write us today for full particulars of what we can do for you? Let us put our advertising to work for you. It will not only bring you customers for language work, but will increase your regular business. Send us a postal card NOW

THE DENVER DRY GOODS CO.

DENVER, COLO. 11/21/06.

International Correspondence Schools,

Scranton, Pa.

Gentlemen:

In reply to your letter of the 17th inst., will say we considered the demonstration of Mr. Mistraud very successful and while he was here we sold several Language Outfits. We have also sold some since he left us. We expect to advertise these Language Outfits during December as gifts as you may rest assured we will communicate with the parties to whom demonstration was given and who have not as yet made a purchase. We think the plan of advertising or demonstrating these Outfits is successful and leads to sales which could not be obtained otherwise.

We have placed several orders with you since the demonstration and would like to know if we could make arrangements to purchase whatever we need in this line through your Denver office as we have had to do several times recently; same can be billed to us by you. This would be quite an accommodation to us.

We will keep you advised from time to time of the results of sales on I. C. S. Language Outfits.

Yours very truly,

THE DENVER DRY GOODS CO.,

per

International Correspondence Schools

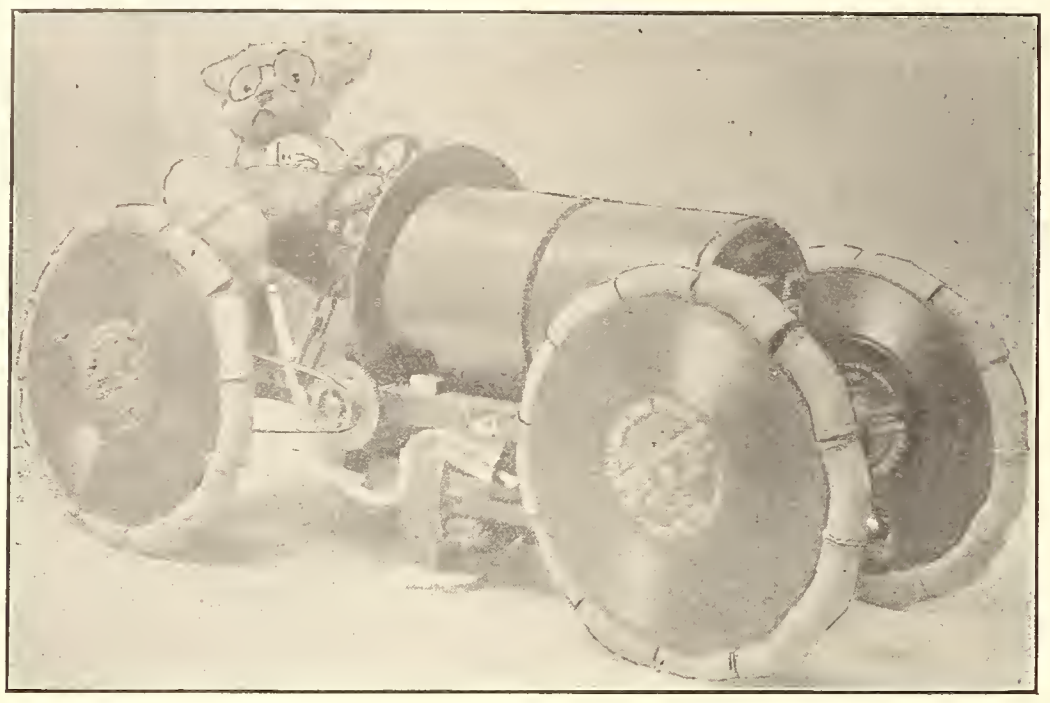
SCRANTON, PA.

spring. It will cost $25.000 and will be one of the finest in the State. The organ will be hidden behind a stone partition into which opeuings similar to windows will be let, and only the keyboard will be visible. Two parts of it will be mounted on the chancel—one on each side. A third section will be mounted near the entrance end of the nave. The keyboard will consist of four manuals.

A statute of 1906 makes it a felony to exhibit obsceue pictures, and includes "pictures inciting to crime." Under this statute the proprietor of "The American," a moving picture theater, was arrested and fiued a few days ago.

The Devineau Biophone Co., of this city, who manufacture an attachment whereby disc records may be played on any style of cabinet cyliuder machine, have received an extensive order for the attachment frcm the Rudolph Wurlitzer Co., of Cincinnati, and as the merits of the contrivance become more generally known and the value of it is proven a big demand is anticipated. The Wurlitzer Co. are making an extensive demoustration of the attachment, and have sold quite a number.

C. S. Bourgeois, assistant manager of the Columbia Phonograph Co., taking advantage of the recent automobile exhibition in this city, arranged a very clever show window with a "choochoo" vehicle as its motif. The small auto was maae up entirely of graphophone parts and records. The wheels were 7-inch disc records, around which were fastened rubber horn connections, representing tires. The bonnet was two grand cylinder records placed end to end. Side driving sprockets and chain were small pulleys and belts. The dashboard half of a 7-inch record. Gears, axles, cranks, etc., completed the machiue, as shown iu the photograph.



WINDOW DISPLAY GOTTEN UP FOR THE COLUMBIA PHONO CO., BY C. S. BOURGEOIS.

The little auto was shown going up a hill, guided by a small Teddy bear, with goggles, made by mica diaphragms held by wire. White cotton spread about the window represented snow, and dirt sprinkled along the hill represented ruts in the road.

A large card in the window notified onlookers that "the automobiles that we make may not be very fast, but our graphophones go so fast that our factory is working overtime to keep up with the demand." Other small cards distributed about the window were interesting, as they described the Columbia graphophone in automobile terms. Among others were the following: "Our motors run good in all kinds of weather. Columbia motors always keep good record time. Columbia graphophone motors need no 'muffler'—they run noiselessly. All speeds on one lever, also a powerful brake. If you have any breakdowns the written guarantee reduces the 'up keep.' Unlike an automobile, a Columbia graphophone is never 'tired.'" A small pile of broken cylinder and dis records was labeled: "Some records which we have broken in the past year." The window, with the auto as a center piece, surrounded by graphophones, records and the facetious cards was a center of attraction, especially to the thousands of automobilists in attendance at the exhibition.

BLACKMAN'S NEW DEALER'S PRICE LIST.

The Blackman Talking Machine Co., 97 Chambers street, New York, have just issued a very complete dealer's price list, in effect March 15. It is printed in a form that makes it very convenient for dealers to order goods, as both the retail and wholesale prices are quoted on Edison and Victor goods. The cover is a "warm red." Mr. Blackman says there will be no trouble in finding this price list among the ordinary pile of papers on most desks. Any talking machine dealer, who sends in a request on one of his business letter-heads, will receive a copy of this price list, as well as other information regarding the Blackman specialties.

LATEST NOTES FROM SAINTLY CITY.

Rapid Increase of Talking Machine Trade—Conroy Piano Co.'s Improvements—Big Columbia Business—Balmer & Weber Co.'s Department Open—F. K. Dolbeer a Visitor—William Woodward with Columbia Co.

(Special to The Talking Machine World.)
St. Louis, Mo., March 11, 1907.

Trade reports for the past month indicate that the talking machine business is increasing rapidly. An average of 25 per cent. increase for the month over the same period last year is reported by the dealers, and they are all decidedly enthusiastic over present conditions. There is a very large shortage of records, and some numbers are very hard to get. High-priced instruments and supplies have the call, and every concern here is participating in the demand for this class of goods.

P. E. Conroy, president of the Conroy Piano Co., states that their talking machine business is very brisk, and that it is away ahead for the first two months of this year compared with last year. He also states that they have opened a large number of new accounts during the last few weeks. This concern is having their talking machine department on the third floor altered, and when completed it will have room for 30,000 records. They fully comprehend the possibilities of the business, and are anticipating things in many directions. P. E. Conroy is one of the brainy, progressive men of this industry.

Manager Ramsdell, of the St. Louis Talking Machine Co., makes very favorable reports of business for several weeks past, and states there was a large increase for February over the same month a year ago. Their high-priced instruments are selling particularly well, and the wholesale trade is very large.

T. P. Clancy, manager of the Columbia Phonograph Co., reports trade for February and the early week of March to have been about 25 per cent. better than for the same period a year ago. The call is for the best class of instruments. They are having great difficulty in getting records. W. S. Byrd, traveler for this company, is now on a two months' trip through the West. Columbia visitors here recently were: G. M. Lyle, general manager Columbia Phonograph Co., and W. C. Fuhri, district manager, of Chicago.

F. K. Dolbeer, manager credit department of the National Phonograph Co., was a recent visitor here.

The Balmer & Weber Music Co. have opened their talking machine department on the third floor of their building and C. A. Cale, vice-president of the concern is giving it his personal supervision. They handle both the Edison and Victor lines. A feature of their opening was the sale of a $200 Victrola, and they have sold several since.

The Silverstone Talking Machine Co., who handle the Edison, Columbia and Victor lines, report an excellent trade, but are having trouble getting records.

Anthony Roose, credit man for the Columbia Phonograph Co., of Pittsburg, spent one day here recently.

William Woodward, who has been with the Conroy Piano Co.'s talking machine department for the past six years, has accepted a position as floor manager with the Columbia Phonograph Co.

Manager S. R. Brewer, of the talking machine department of the Thiebes-Stierlin Music Co., reports a fine trade in his department, and especially for high-class instruments. H. L. Brewer has been added as an assistant to S. R. Brewer in this department.

The Koerber-Brenner Music Co. report a very active demand for talking machines in their wholesale department.

E. B. Walthall, manager of the talking machine department of the O. K. Houck Piano Co., reports a splendid retail trade, but a great shortage on records. This concern will move from the third floor to the first floor about April, and their new quarters will be as fine as skill and art can make them.

The H. A. Phipps Piano Co. have a handsome talking machine department in the basement of their store, and are handling the full Victor line with good success.

HAYWARD CLEVELAND PROMOTED

By Manager Dorian—Becomes Superintendent of Stores—Recognition of a Hard and Faithful Worker.

Following the leasing by the Columbia Phonograph Co. of large central quarters at 35-37 West 23d street, New York, John H. Dorian, manager of the wholesale department, at 353 Broadway, announces the promotion of Hayward Cleveland, who for many years has been the manager of

HAYWARD CLEVELAND.

their retail department, at 872 Broadway, in the following circular letter sent out to the trade:

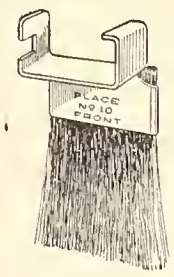
"To our Managers and Department Heads—Anticipating the consolidation of Branch A with this office, Mr. Hayward Cleveland, the dean of the New York managerial staff, has been appointed superintendent of stores in the local field, and will shortly take up with you in person the best methods to be adopted to carry out the purpose of making the New York organization the best local organization in the service. I am sure I need not bespeak for Mr. Cleveland your heartiest co-operation, as I have long been impressed with the feeling that the attainment of this object is no dearer to my own heart than to that of every manager and department head in our splendid organization. Mr. Cleveland's special field will be the devising of methods and the improvement of conditions affecting the cleanliness and attractiveness of window, stock and general store display; reduction of stock while increasing sales, and elimination of second-hand and dead stock from our stock problem; best methods of securing and preserving sound accounts, and of improving our collection showing and our cash business, and best methods of getting and holding custom at the least expense. While his duties will be specially in the lines indicated, however, the scope of his work will be extended as occasion may require, and managers and department heads are urged to consult with him freely, and co-operate with him to the fullest possible extent in everything pertaining to the development of the business in this territory. No rules now in effect will be changed, except by the writer; but all suggestions for the improvement of local conditions that do not involve a change from already established rules are to be received as coming from me."

A FEW NOTES ON THE WING.

(Special to The Talking Machine World.)
Omaha, Neb., March 5, 1907.

The Omaha Cycle Co. have sold out their retail department and are running nothing but a jobbing business, with splendid results. The Nebraska Cycle Co., on 15th street, report everything humming in their wholesale and retail talking machine line.

In the great popular demonstrations held in London, England, in connection with the municipal contest in that city, the talking machine has been much in evidence. In the parade of Feb. 23, which was over a mile long, there were over fifty "talkers" in line, which ground, or is it "sung," out fervid comments upon "wastrels" for the delectation of the great crowds along the route.

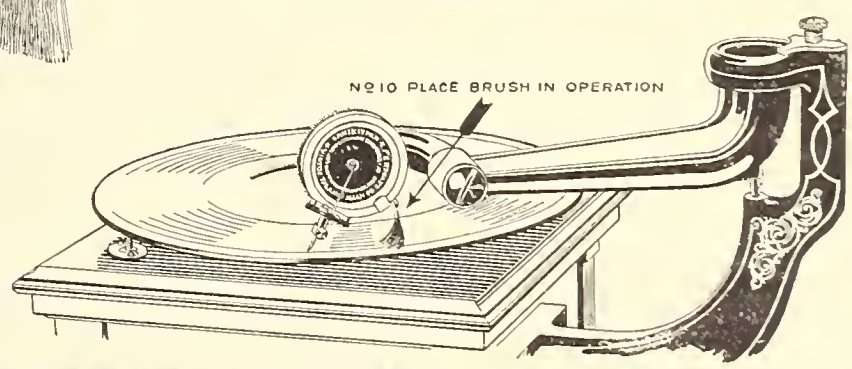


THE PLACE No. 10 Disk Record Brush

FOR VICTOR EXHIBITION SOUND BOX

PATENTED SEPT. 25TH AND OCT. 2D, 1906. OTHER PATENTS PENDING

PRICE, 25 CENTS



PRESERVES THE LIFE OF DISK RECORDS

¶ Automatically cleans the RECORD GROOVES and gives the needle a clean track to run in. Insures a clear Reproduction and prevents Records getting scratchy. Makes the Needle wear better. Dust and dirt in the Record grooves wear the Record out quickly and grind the Needle so it cuts the Record. SAVE THE LIFE OF YOUR RECORDS.

AFTER THE PIANO DEALER.

The Talking Machine Companies Are Making a Strong Effort in This Direction.

The piano dealer is often urged to install a line of talking machines, aud it is truthfully stated that many idle moments between piano sales may be turned to profit by pushing talking machines and records. The salesmen can sell talking machines as well as pianos, and therefore the only extra employe needed in the beginning would be a stock clerk to keep the records in order, and in most instances he could also handle the shipping end. When the talker business grows beyond the capacity of the available space and taxes the energies too severely, as is often the case, then the dealer is in a position to conduct his talking machine department as an independent venture with separate quarters and sales staff.

The talking machine jobbers have always realized what a wide field is to be found in the piano houses, and with a number of conservative houses in that line handling talkers successfully the jobbers are redoubling their efforts to install a line of machines and records wherever possible.

The Victor Distributing & Export Co. have, in fact, circularized the piano trade in their field very extensively, some of the matter being as follows:

"The Victor talking machines and records are recognized by the music trade as a distinctive 'musical instrument,' and are to-day a very necessary part of their stock, and an important factor in the profits of the business.

"If you have not placed the line, will ask your very earliest consideration of doing so, as we simply wish to appeal to you on the money there is in it. In the line of money makers, they have no peer. They rank in a class by themselves, as the profit only starts with the sale of the machine. What appeals to all business men is the absolute protection in price which assures them of a very large profit. As the means of drawing trade to your place of business, they admit of no comparison with any line of merchandise.

"If you are interested in making money, we would be pleased to submit our $500 proposition which would entitle you to the very best discount given by the Victor Talking Machine Co.

The establishment of T. Edens Osborne, the prominent talking machine factor of Belfast, Ireland, was the subject of an extensive article in The Nomad's Weekly of that city recently, and the hustling T. Edens himself was not forgotten.

Attract Attention 24 Hours A Day

Artistic-Reliable-Inexpensive

THEY LITERALLY BURN YOUR AD. INTO THE MINDS OF THE PEOPLE

This artistic sign is made of Venetian Bent Iron with glass panel. The lettering is outlined with burnished gold and the display line studded with jewels, making a very attractive, high grade

DAY SIGN

Inside the sign are three electric lights of different colors (red white and green). These are switched on and off, automatically, by our patented thermo-flasher, producing an intermittent iridescent effect which is bound to catch the eye.

A Sure Trade Puller at Night

The glass panel is removable, aud one with different lettering may be inserted as often as desired. The cost of running is about one cent an hour.

The Most Inexpensive Automatic Flasher on the Market

The illustration shows a single face Inside sign 16x28 inches, outside measurement with six (6) feet of flexible wire cord and attachment plug ready to attach to any incandescent lamp socket, (lettering as ordered). Price complete $9.75 f. o. b. New Haven. We also make a small double face sign 18x30 inches for outside use, substantially the same as sign described, with square ornamental iron frame, all ready to connect. Price complete, $15.00. Extra glass panels for either sign (any wording), $2.00 each. OUR FLASHERS ARE FULLY GUARANTEED AND MAY BE RETURNED IF NOT ENTIRELY SATISFACTORY We are prepared to furnish designs for all kinds and sizes of electric signs for both inside and outside use, free of charge. Special prices for signs in quantities. Correspondence solicited. Write for our illustrated booklet No. 6, "POWER TO ATTRACT." AGENTS WANTED. Address

Sign Dept. E. **106 PARK STREET, NEW HAVEN, CONN.**

When Aladdin Rubbed His Lamp

it did wonders. To-day anyone can do wonders with any talking machine by simply rubbing a little "3-in-One" on the metal surfaces—by lubricating the action points, polishing the wood case and cleaning the disc and cylinder records with this wonderful oil.

"3-in-One" is best to use, easiest to sell—most satisfactory to the buyer, most profitable to the dealer. Why aren't you selling it? Just use "3-in-One" once, to satisfy yourself. You'll sell it ever after to satisfy your trade. And, incidentally, you will make good money—50 and 100 per cent

Suppose you sit down right now and write us for a FREE sample bottle and the "3-in-One" Book. Better still, order a trial supply of "3-in-One" from your jobber. It will be gone before you know it—so will your customers' talking machine troubles.

REGISTERED. 3 IN TRADE MARK.

G. W. COLE COMPANY, Sole Makers of "3-in-One"

Broadway and Liberty Streets, New York City.

Do You Want to Make Money, Mr. Talking Machine Dealer?

Good big money. The men who sent in an order for a sample line of our instruments were delighted with the results.

They found our instruments blended perfectly with the talking machine line, besides helping to make the store attractive. If you want to help out in the profits during the holiday season you can't go at it in a better way than with our specialties; your musical friends will come to you when they learn that you have the Durro violins, bows, strings, etc. They have a high standing.

We are judges of the excellence of all kinds of small goods, such as Accordeons, Mandolins, Guitars and Harmonicas, and carry a large stock, of which we offer at lesser prices, but which are superior to any on the market at the same price.

It will pay you to order a sample line at once. You will then see how profitable it is to devote a portion of your store to the exhibition and sale of small goods. Write for catalogue.

Make good money for the new year. It is easy with our help. We can tell you how to go with the business tide when it swerves.

NO SPECIAL REGULATION

For Talking Machines to be Used by the Commissioners of the District of Columbia.

(Special to The Talking Machine World.)

Washington, D. C., March 4, 1907.

The Commissioners of the District of Columbia will not promulgate any regulation prohibiting the use of talking machines on the strects and in public places in and around the city of Washington. Hon. Henry L. West, one of the three members of the Board of District Commissioners, framed a proposed municipal ordinance of this character after receiving complaints to the effect that some lovers of these instruments had annoyed their neighbors with music and twelve days ago a public hearing was granted. Rear Admiral George W. Baird, president of the Board of Education, was one of those who took the lead in opposition to the public use of talkers near certain school buildings. The hearing indicated that the music machiues were more attractive to the children as well as to numerous adults than the public school system of the city. The talking machine interests were represented at the hearing by Paul H. Cromelin, of New York, who made a very favorable impression upon the Commissioners by his argument at the recent hearing. It was pointed out to the Commissioners that it would not be exactly fair to enact a sweeping "Blue Law" against the music machines just because there might be some abuses in their use just as there are other abuses in every municipality growing out of lack of moderatiou iu certain directions.

The Commissioners took the matter under advisement, and referred the legal aspects of the subject to the Corporation Couusel, who reported that, in his judgment, there was no crying need for the enactment of any new ordinance in the direction suggested. The corporation counsel pointed out there is already in existence a general "peace and order," sometimes termed a "geueral nuisance," statute in the District, which, in his opiuion, would reach any of the alleged abuses if good and sufficient grounds existed for complaint. The Commissioners were informed that under this statute complaint could be made by any one who will go into the police court and swear out a warrant alleging that some specific instance of the use of a talking machine may be an abuse and that upon the basis of such warrants the cases can be taken into the police court, where the abuse must be proven to the satisfaction of the judge, the whole question as to whether there has been a violation of the peace and order status being left to the court for decision.

When the Commissioners received this opinion from their official counsel they decided to abandon the promulgation of the proposed ordinance and to leave the matter to the courts under existing regulations. In the vicinity of Lincoln Park northeast it would perhaps be very difficult to obtain a complaint. Last summer a proprietor of a small store frontiug a park in that neighborhood used a large talker to attract trade. He played the latest tunes for about an hour every evening. The innovation was regarded as a daily summer evening concert and attracted many persons to the vicinity of the park every evening. There was no complaint made by the residents of the neighborhood where the improvised talking machine concerts took the place of the military band concerts granted residents of other sections of the city.

The Commissioners were told in connectiou with the suggestion of their proposed ordinance that Washiugton would be ridiculed and cartooned all over the country as a "jay" town if such an ordinance were adopted. There is no doubt that there are misanthropes here as elsewhere who would be glad to have even the public band concerts of the summer evenings stopped iu the public squares, and while thousands of citizens have been working for years to obtain these coucerts, and only several years ago induced the military authorities to consent to the donation of their post bands for the purpose, it is contended that it would be just as sensible to enact a sweeping ordinance against public band concerts as against the public use of talking machines where there is no abuse associated with the latter.

THE STAR RECORD

Is Now Being Placed on the Market by Hawthorne & Sheble Mfg. Co.—Carrying a Stock of Over 300 Selections.

The talking machine trade will receive a pleasant surprise, when they read the advertisement elsewhere in this issue of the well-known firm of Hawthorne & Sheble Mfg. Co., relative to their Star Record. The trade mark of "H. & S.," which represents "high standard" and excellence, will give added interest to the record business. Great preparations have been made to market the new product. Storage capacity for over half a million records has been prepared, and it will be their aim to keep in stock for immediate delivery every selection in their catalogue. They start business with about 300 of their latest and best selections, including bands, orchestra and instrumentals. List price of the 10-inch record will be 60 cents, and the dealer and jobber will be required to adhere strictly to established prices. Catalogues and terms to the trade can be procured by addressing the firm.

AUXETOPHONES SELLING WELL.

Despite the high price, $500, the Victor Distributing & Export Co., of New York, have placed a large number of Victor Auxetophones, many dealers buying them for use in their own stores, the advertisement being well worth the cost, owing to the great amount of attention attracted. Hahne & Co., the big department store, of Newark, N. J., have, in fact, replaced their band with an auxetophone for giving daily concerts, and the result has proven very satisfactory both to the firm and their customers. In one week recently the Victor Distributing & Export Co. disposed of five auxetophones, which, in view of their high price, is certainly a showing.

REGINA CO. EXPANSION.

The Regina Co., of 41 Union Square, have been greatly enlarging their wholesale talking machine department. This has been made necessary by the additional stock placed on their shelves since they became Edison jobbers. Among the changes has been the addition of a number of new disc record racks of a rather novel design, each partition being large enough to hold over a dozen records. It is their intention to carry a complete line of both Victor and Edison records, and a sufficient number of each so that they can take care of all orders that may be placed with them. This end of their business under the management of Charles C. Collier has steadily grown until it has assumed proportions that are far beyond their anticipations.

MR. DEALER

After the month of March the Phonograph business begins to slacken up. Now don't go to sleep, but write us, we can tell you how to do just as much business in Summer as you do in the Winter.

COLUMBIA CO. WIN OUT

In Suit Brought Against Louisiana Purchase Exposition Authorities by Victor Co. to Set Aside the Award of Grand Prize Given Columbia Phonograph Co.

(Special to The Talking Machine World.)
St. Louis Mo., March 4, 1907.

The Victor Talking Machine Co. lost their injunction suit against the Louisiana Purchase Exposition Co., by which they sought to set aside the award of a grand prize to the Columbia Phonograph Co. and the American Graphophone Co. by a decision of Judge Amidon, handed down on February 19 in the United States Circuit Court. The court sustained a demurrer to the plaintiff's amended hill on the presentation of the evidence to show that the Victor machines were awarded a grand prize at the World's Fair, and were trying to prevent a similar prize going to the rival companies.

"The complainants got all they asked for," said the court, "and they can't complain if a rival company was treated nicely." The Victor Co. alleged that the jury of awards was influenced by misrepresentation in deciding on the prizes.

PETMECKY NEEDLES IN GREAT DEMAND.

Reports for the year of 1906 show that the sales of the Petmecky Multi-tone Needles increased over 500 per cent. during that year and the manufacturers, the Petmecky Co., of Kansas City, Mo., expect to equal that record during the current year. The Petmecky Multi-tone Needle enables owners of disc machines to reproduce a record with any desired volume of tone, doing away with the necessity of keeping a supply of different needles for various records. With a Petmecky needle a loud tone is produced through the flat part facing the record, and a low tone results from the use of the sharp edge. Being self-sharpening, it is claimed that the Petmecky needle will play ten records.

The Victor "wood" horn is much in favor with buyers of the $100 Victor. It is supplied in mahogany or oak, cross-banded and beautifully finished, to match both machine and cabinet, and its tone qualities are highly commended. The horn, which in design and construction is patented, is also sold as an "extra."

For a Powerful Organ-like Tone the New

M. Hohner "TRUMPET CALL" Harmonica

Surpasses any mouth-organ that has ever been placed on the market.

No. 220. This instrument which has lately been offered to the trade is endowed with a phenomenal amount of tone power. The reeds are directly connected with a wooden sound-box, into which the tone passes, and finds an outlet through five Brass Trumpet Horns which protrude from the box. No Harmonica of this kind has ever been shown to the trade before, nor is there any which increases the tone so wonderfully. In the hands of an expert player this instrument can be made to sound like a church organ. In producing this instrument the house of Hohner has again shown great results from its constant effort to bring the Harmonica on the level with a high-class musical instrument. The mouth-organ has 10 double holes, 40 reeds, brass plates and is full concert.

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

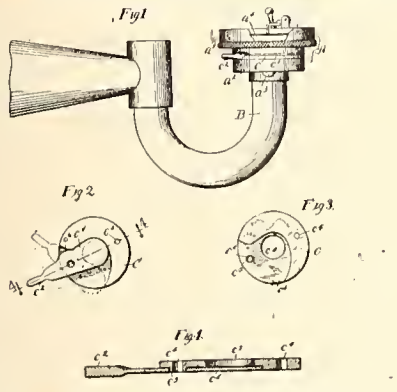
(Specially prepared for The Talking Machine World.)

Washington, D. C., Mareh 8, 1907.

SOUND BOX FOR TALKING MACHINES. Frederick Sheppy, Chicago, Ill. Patent No. 843,042.

This invention relates to means for controlling the volume of sound produced in the sound box of a talking machine, thus giving variety in expression and modifying the tones.

The sounds produced by talking machines are in many instances too loud for small rooms, causing echoes which mar the distinctness of utterance, and efforts have been made to avoid this difficulty by placing sound-muffling devices in the necks of the horns, which form features of such machines. It has been found that while such devices muffle the tones produced in the sound-box, they also impair the musical quality of the tones, giving them a harsh or metallic character, probably due to the fact that the metallic walls of the horn become in a measure sound-boards against which the sound-waves are projected by the checking or interruption



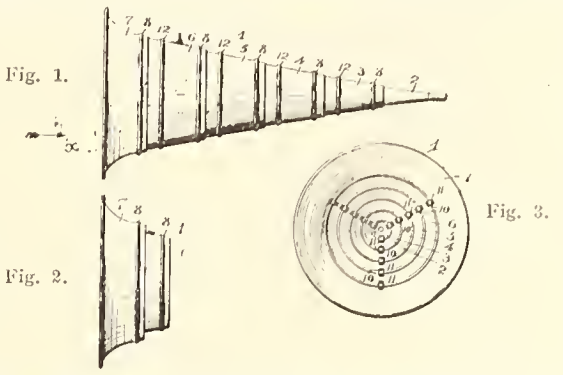
caused by the muffling devices. used. In this invention the difficulty has been avoided by modifying the sound-box itself, so that the waves are formed before passing to the neck of the horn.

In the accompanying drawings are illustrated a preferred adaptation of the invention in the following views:

Figure 1 is a view in elevation of a sound box, the attached gooseneck, and a portion of the horn, of a well-known form of sound-reproducing machine. Fig. 2 is a plan view of the improved sound-modifying attachment for sound boxes. Fig. 3 is a plan view of a portion of the device snown in Fig. 2, and Fig. 4 is an enlarged section on the line 4 4 of Fig. 2.

PHONOGRAPH HORN. Asher Maurer, Newark, N. J. Patent No. 845,007.

This invention relates generally to improvements in amplifying horns for phonographs and similar sound-reproducing machines; and the present invention relates more particularly to a novel eonstruction of horn comprising a number of eollapsible horn sections which can be nested one within the other to produce a very small package for carrying purposes, but which sections can be brought in an extended relation to produce a horn of the ordinary conformation ready for use. To accomplish this main purpose of the present invention, the horn sections are provided with binding means or friction devices arranged on one horn section and adapted to engage with portions of another horn section,

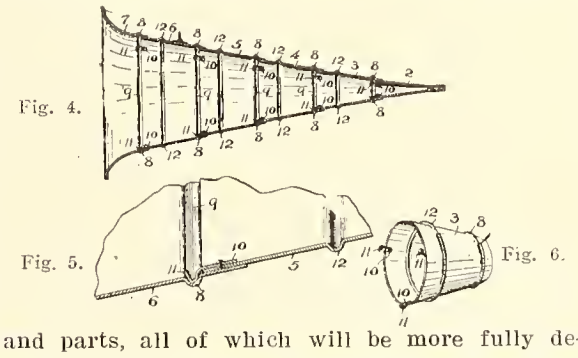


whereby the parts are brought in positive holding engagement to provide a rigid horn.

This invention, therefore, has for its principal object to provide a phonograph horn of the general character hercinafter more fully described, and, furthermore, to provide a collapsible amplifying horn, the horn sections of which may be quickly brought into their extended and rigidly-connected relation to produce a horn ready for use, but which can be just as quickly separated, so as to be brought into their nested relation to provide a package of very small size.

Other objects of this invention not at this time more particularly mentioned will be clearly understood from the following detailed description of the same.

With the various objects of my present invention in view the said invention consists in the amplifying horn hereinafter set forth; and, furthermore, this invention consists in the general arrangements and combinations of the devices



and parts, all of which will be more fully described in the following specification, and then finally embodied in the clauses of the claim which are appended to and which form an essential part of this specification.

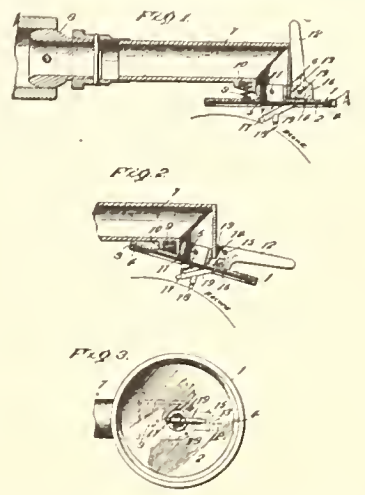
The invention is clearly illustrated in the accompanying drawings, in which

Figure 1 is a side elevation of a horn embodying the principles of the present invention, the horn sections being shown in their extended and rigidly-connected relation. Fig. 2 is a similar view of the horn, showiug the horn sections in their collapsed or nested relation; and Fig. 3 is an end view of the horn shown in Fig. 1 looking in the direction of the arrow X in said figure. Fig. 4 is a longitudinal vertical section of the horn shown in said Fig. 1. Fig. 5 is a detail vertical section of portions of two of the adjacent horn sections and one of the clamping or holding devices between said sections, and Fig. 6 is a perspective view of one of the said horn sections.

COMBINED RECORDER AND REPRODUCER. Thomas H. Macdonald, Bridgeport, Conn., assignor to American Graphophone Co., of Bridgeport, Conn. Patent No. 842,897.

This invention relates to recorders and reproducers for talking machines, and has for its object to obtain in one structure a device which can be used at will in connection with any suitable record tablet, either for recording sound-waves or for the reproduction of sound previously recorded.

With this object in view the invention consists of a combined recorder and reproducer, comprising a single diaphragm with a recording style and reproducing style both connected to the diaphragm, the whole being arranged so that the recording stylus or the reproducing stylus can be



shifted, the one out of contact with the record tablet and the other into contact, or vice versa.

More specifically stated, the invention consists of a single diaphragm, preferably mounted in a suitable casing or head, which casing or head is capable of being tilted for a slight distance upon a pivot or axis, on which it is supported, so that the diaphragm can be shifted into two different planes. On this diaphragm is secured a cutting stylus for the purpose of making a record, and a reproducing stylus (preferably rounded or spherical in form) for rubbing over a previously-made record to reproduce sound, the relative position of the two styluses being such that when the diaphragm lies in one plane the recording stylus only will rest against the record tablet, and when the diaphragm lies in the other plane the recording stylus will be shifted out of contact with the record tablet, and the reproducing stylus will be brought into contact therewith. Any suitable means may be employed for shifting and retaining the diaphragm into either one of the two positions above mentioned. As here shown, the diaphragm head or casing is connected to a tubu-

LARGEST EDISON JOBBERS
IN NEW JERSEY
GENERAL SUPPLIES
SEND FOR OUR PRICE LIST
EDISONIA CO., Newark, N. J.

lar shank, whose exterior surface is approximately that of a zone of a sphere, said shank being inserted a short distance into the open end of the conveying tube of the reproducer and pivotally connected to said tube. Reacting between the diaphragm casing and a suitable seat, preferably formed in the wall of the tube of the reproducer, is a stiff spring, while on the other side a cam lever is pivoted to the walls of the tube, the parts being so adjusted that when the cam lever is thrown into one position it permits the spring to throw the diaphragm casing, and with it the diaphragm, into position to bring the recording stylus in contact with the record blank or tablet, the tension of the spring being resisted on the opposite side of the cam lever of other suitable abutment. When it is desired to shift the recording stylus out of contact with the record tablet and bring the reproducing stylus in contact therewith, the cam lever is thrown down or shifted on its pivot, thereby tilting the diaphragm casing, and with it the diaphragm, into a different plane, and compressing the spring above mentioned. This action brings the reproducer stylus into operative position on the record tablet.

The inventive idea involved may receive a variety of mechanical expressions, one of which, for the purpose of illustration, is shown in the accompanying drawings, but it is to be understood that such drawings are for the purpose of illustration only, and are not designed to define the limits of the invention, reference being had to the claims for this purpose. It will also be understood that some features of the invention are not limited to a structure wherein both a recording and a reproducing style is employed.

In the drawings, Figure 1 is a vertical section through the center of the reproducer head and the neck or tube supporting the same, showing the diaphragm in a position to bring the recording stylus in contact with the record tablet or blank. Fig. 2 is a view similar to Fig. 1 with the parts in position to throw the recording stylus out of contact with the record tablet and bring the reproducing stylus into operative relation therewith, and Fig. 3 is a bottom plan view of Fig. 1.

PHONOGRAPH REPEATING MECHANISM. Lyman D. Kelley, Memphis, Tenn. Patent No. 845,645.

The principal object of the present invention is to provide a device of simple construction for automatically effecting the repetition of reproductions of the records of phonographs and similar machines.

A further object of the invention is to provide a device of this class which may be attached to any ordinary phonograph and in which provision is made for effecting very accurate adjustment in accordance with the starting and stopping positions of the record.

A still further object of the invention is to provide a device of this type which will automatically operate to restore the sound-box carriage to initial position after the completion of

Fig. 1.

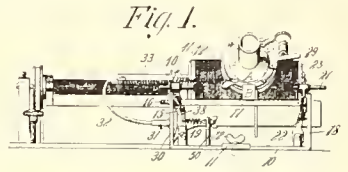


Fig. 2

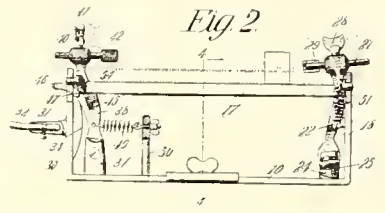

each reproduction so long as there is sufficient motive power to run the machine.

With these and other objects in view, as will more fully hereinafter appear, the invention consists in certain novel features of construction and arrangement of parts hereinafter fully described, illustrated in the accompanying drawings, and particularly pointed out in the appended claims, it being understood that various changes in the form, proportions, size, and minor details of the structure may be made without departing from the spirit or sacrificing any of the advantages of the invention.

Fig. 3.

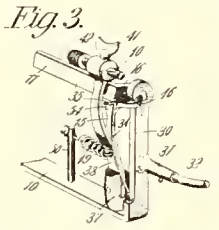

Fig. 4.

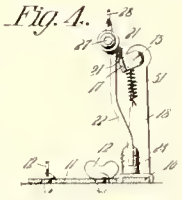


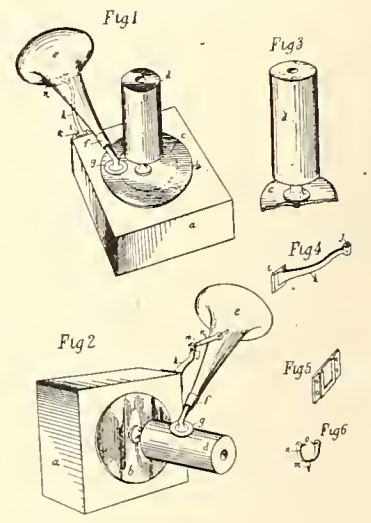
In the accompanying drawings, Figure 1 is a frout elevation of a repeating device constructed in accordance with the invention, showing the same applied to a phonograph. Fig. 2 is a front elevation of the repeating device, parts being broken away to more clearly illustrate the construction. Fig. 3 is a detail perspective view of one end of the attachment looking from the rear. Fig. 4 is a transverse sectional view of the repeating attachment on the line 4 4 of Fig. 2.

TALKING MACHINE. Charles Thomas, of Newton Abbot, England. Patent No. 842,983.

The object of this invention is to reuder gramophones or disc sound-reproducing machines convertible for use as phonographs or cylinder machines without practically having to secure to the former any other part than the cylindrical mandrel for carrying the record cylinders.

A further object is to provide a simple detachable means for the aforesaid purpose, such means being practically necessary parts of an ordinary gramophone, but particularly constructed or fashioned to suit the convertible machine, and thus avoiding an increase in the sale price of talking machines.

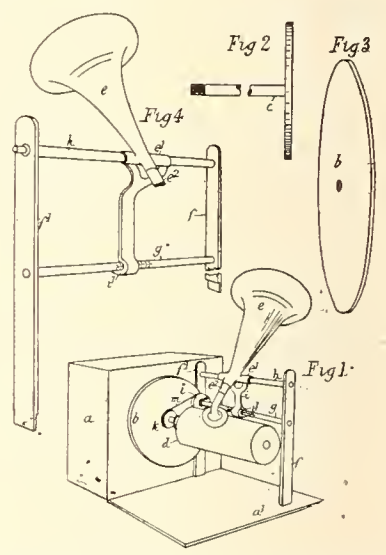
This object is obtained by the means illustrated in the accompanying drawings, in which all the figures are shown in perspective, and the following is a short statement of the same: Figure 1 shows a gramophone provided with a



detachable supporting arm and pivoted bracket for the horn. Fig. 2 shows the same apparatus disposed for use as a phonograph. Fig. 3 shows the mandrel. Fig. 4 shows the detachable arm. Fig. 5 shows a fixed base plate for said arm. Fig. 6 shows the pivoted bracket.

TALKING MACHINE. Charles Thomas, Newton Abbot, England. Patent No. 842,982.

This invention has for its object the provision of certain mechanical devices which will enable



a gramophone or disc-recording machine to be readily used for producing phonograph or cylinder records.

The accompauying drawings show how the invention is carried into effect.

Fig. 1 is a perspective view of a combined gramophone and phonograph provided with a frame carrying the horn and an Edison worm. Fig. 2 is a side view of the turn-table. Fig. 3 is a perspective view of a record-disc. Fig. 4 shows a separate view of the frame.

A SOMEWHAT WONDERFUL STORY.

J. A. Ingoldsby, a salesman for M. Steinert & Sons Co., in Springfield, Mass., was the victim of a peculiar theft recently. While riding upon a street car, Mr. Ingoldsby left a complete Victor outfit on the rear platform of the car and went inside. When he started to get off he discovered that the entire outfit had vanished. After a ten days' search on the part of the police the thief was arrested and convicted, which, by the way, is not the least wonderful part of the story.

AUTOMATIC FIELD IN REVIEW.

Where Small Outlay Brings Big Results—Spring Outlook—That Kansas Blunder—Try to Stem Progress—Nickel Theatres Pay—Summer Park Trade—Devices for Drawing Business to the Store—A Budget of "Thinks" That Will Stimulate the Man Who Absorbs Ideas and Uses Them in His Business.

In these days of rapid-fire amusement the tendency is in favor of mammoth enterprises and big effects, consequently there is a disposition to overlook opportunities that, while small, promise large returns for a limited investment. The slot machine is possibly one of the most potent factors in the amusement line that can be found to-day. Slot machines properly placed and intelligently used, may be made a source of profit far in excess of their cost. In fact, this device is more closely allied to the ideal than any person has an idea of. Everyone will agree that from a financial standpoint a railroad that requires no locomotives and uo train crew for its operation, and where the passengers themselves could sit in a row and work innumerable pedals, thus working themselves to their destination, would be highly satisfactory. Slot machines are almost that idea condensed. You furnish at small cost a machine. You also furnish at small cost the necessary material to fill the machine, and then you let the patron do the rest. He supplies the coin. He puts it in the machine himself, and he furnishes the requisite power to work it. Hundreds of these devices are now on the market, to which number manufacturers are coustantly adding, which keeps the public's interest alive.

* * *

With the advent of spring the automatic business has taken on flourishing proportions, the crowds being drawn out of doors by the warmer weather, they naturally turn for amusement to the open-air palaces of music. February business was not up to expectations, owing to weather conditions, but March's opening weeks seem to presage a period of unusual prosperity. Manufacturers are working hard to get their new types on the market. Many of these machines are unique and inviting enough to tempt the most skeptical, and reflect great credit on those "men behind the guns" whose brains and untiring energy keep pace with the changing taste of a fickle public.

* * *

We are in receipt of a letter from a Kansas City, Mo., dealer, in which he says: "An edict has gone forth from the officials of the county court to the effect that automatic pianos, music boxes, talking machines, and, in fact, musical instruments of all kinds, must not be allowed in places where liquor is sold, and an order has been issued by the court demanding the removal of all such instruments from the saloons of Kansas City and suburbs. The reason for the order, according to one member of the court, is to make the saloons as unattractive as possible. Keepers of dramshops violating the order are subject to arrest, and may have their licenses taken away."

Now, we are not by any means running a journal for the protection of the interests of liquor dealers, but this court ruling is such a direct stab at the automatic musical industry that we feel called upon to take up the other side of the question. All admit that music hath charms that appeal to all classes, rich or poor, educated or illiterate, that its influence is elevating. Therefore, why banish it from the only place of a social character open to the poor man? Is it not a narrow stand for the men appointed by the people to take? They have their clubs, and why not carry the law further and banish musical instruments of all kinds from them as well, since, according to the honorable gentlemen "from Missouri," music is conducive of over-indulgence in "liquid joy." The whole thing is a farce, yet if the spirit that animated the Kansas officials is allowed to spread, it will do great harm. Music in any form is an educator; more than that, it draws the mind from the sordid channels of every-day life. If the tones from a piano, operated automatically, or any other musical instrument, cheer and raise the load of worry from the shoulders of some poor, wretched man, even for a moment, is it Christianity or justice to banish this one ray of light from his life? Without a doubt the county court has a perfect right to issue the edict prohibiting the use of musical instruments in the cafes in its district; but whether or not such a law would stand the test of a trial in the higher courts is another question.

* * *

The opening of nickel theatres, where performances are held, say, every half hour, is a very good investment for the man with a small amount of capital, and, in fact, for any person, as the returns are very large. Moving pictures always did not always will have a strong attraction for everyone. These are the whole substance of the show, while if you have a good singer, illustrated songs give a desirable contrast and add interest.

* * *

A good advertising scheme now being used by some of the big theatres is to have Mutoscope pictures taken of some great stage favorite singing one of her hits. For instance, Vesta Victoria rendering her song "Poor John." The pictures are accompanied by the song itself, sung by the singer. Now for your billboards; get posters with Miss Victoria's pictures, then head them something like this: "Announcement extraordinary. Vesta Victoria, New York's favorite vaudeville star, will render her great hit, 'Poor John,' at this theatre, afternoons and evenings. This week only. Don't fail to come and bring your friends. Admission ten cents. Reserved seats for ladies."

* * *

By the rental system in vogue with the large film manufacturers one can obtain a constantly changing programme which is necessary for any great returns, especially in small towns, at a very low cost. This idea is a splendid one for the talking machine dealer. If your store is not suited for such a place, look for one that will seat anywhere from one to two hundred. But get one. If possible—in the smaller towns where the talker business is rather slow—it might pay to obtain the floor above your talking machine store, so that the public must pass through the store to get to the theatre. In that way you get an enormous amount of free advertising for your goods. After each song that is sung in the hall let the audience know that they can procure a record of it below. During intermissions have

REGAL
IS THE BEST COIN OPERATED PLAYER IN THE WORLD!

Wherever it has been placed, in arcades and public resorts, it has proved to be the biggest kind of a money-maker.

It makes dollars while you sleep, and the agency of the Regal Player is at once a splendid business asset for any live talking machine man.

Write without delay to

The Regal Piano & Player Co.,
889 Southern Boulevard, New York.

PIANOVA

The **Pianova** player is the best coin operating instrument on the market. It is made in the most attractive style.

The **Pianova** makes pennies grow into dollars—makes money while you sleep.

The **Pianova** is just the player for cafes and public places.

The **Pianova** is "it" of all coin operating players—it is made to play either in 44 or 65 note.

The **Pianova** is the ideal player for talking machine men. The agency will help you coin dollars—plenty of them.

The **Pianova** is not affected by climatic conditions. It does not "stick" or get out of order.

The **Pianova** will find a ready sale in your town. It sells on sight. It is easy to play and a stream of nickels is always going Pianovaward.

The Pianova Co.

117-125 Cypress Avenue

NEW YORK

your talking machine there and give various selections.

* * *

With the coming of spring, park and summer resort people are beginning to hustle around to prepare for the rush which always follows the first warm wave. Now it may seem a little premature for us to warn the prospective operators of slot machines to get their bids in now for locations. But so well have these devices paid in such places that desirable locations are at a high premium. Unless the operator has unlimited capital we would not advise him to open an "arcade" at a park, because unless a great deal of money is spent on lavish decorations, his place will pale to insignificance beside the immense and attractive shows on all sides of him. However, if he can obtain a number of locations for individual machines, by all means capture them, for they will prove a gold mine. A word here on what are the most desirable machines for such an enterprise might not be amiss. For general use the chocolate and chewing gum machines, and those of the weighing type, have the widest interest for the American people. A nickel machine has not as much fascination for them. When they expend as large an amount as five cents they want the returns to be something that comes across the counter from the hand of a clerk. What they get for pennies seems so much for nothing, and that sensation tickles their fancy as much as the bit of chocolate or chewing gum does their palate. The weighing machine, which is a little less popular than the vending machine, because it brings only a mental satisfaction instead of a material return for the penny, is perhaps the most paying of all slot-controlled devices at the parks, inasmuch as the cost of the machine and an occasional repairing is the only expense attached. The water machines are fast coming into popularity and are to be found in many of the ferry houses in and about New York City, but they have never been generally introduced in the streets and public places, as they probably will be at no distant time, to fill a decided want. At the St. Louis Exposition they were the most popular penny devices on the grounds. The tired sightseers knew that they were getting a glass of pure, filtered, carbonated water, and that satisfaction in itself is well worth a penny. These same machines can be used for vending lemonade, cider, etc. Other machines, as the card printing devices, name plate machines, pop corn and peanut venders, etc., are suitable for such purposes.

* * *

In face of the keen competition now prevalent among exhibitors who are located near one another, all sorts of devices for drawing business must be resorted to, and, of course, it is the man with the greater originality who will win out. The ideas employed by one man soon become known, and as a general thing the tricks are duplicated by others further away; for if his neighbor were to follow suit it would be acknowledging inferiority. Therefore, it is quite necessary for the busy exhibitor to keep his brainery working continually. An exhibitor in Scranton, Pa., has hit upon a good practical scheme for drawing popularity. He awards a prize for the man, woman or child who sells the greatest amount of tickets for him. Of course, the method of entrusting tickets must be systematized, and there are various ways to do it. For instance, if an exhibitor has established his integrity beyond all doubt he may demand full payment in advance for all tickets given out, furnishing his written guarantee to refund the price of all tickets returned to him unsold. Or, he may do this through some reputable, popular business man in the town. This will aid him and at the same time advertise that business man. The prize given to the winner of the competition in the case cited was $5 in cash, which shows that the scheme must have brought a paying amount of business. Another exhibitor in Greenfield, Mass., started up a ballot system by which the patrons voted for any lady in town. The one receiving the largest amount of votes was offered the choice of any article costing $25, to be taken from the stock of the local jewelry dealer. The result was that all the ladies electioneered, sending their friends flocking to the show, where the ballot box was located.

THE ILLUSTRAPHONE.

The New Coin-in-the-Slot Machine Manufactured by Hawthorne & Sheble Mfg. Co. Is a Wonder—Covered by Patents.

We were recently favored with an exhibition of the new coin-in-the-slot machine, the "Illustraphone," manufactured by the Hawthorne & Sheble Mfg. Co., of Philadelphia. The working parts of this device are of such simple construction and design, yet so mechanically perfect, that the first sample test machine has been operated over 1,500 times and has not failed to respond properly to each test. No coin-in-the-slot parlor or arcade will be complete without this money-making invention. The Hawthorne & Sheble Mfg. Co. have applied for several patents to protect their rights, and several have already been issued to them. Illustrated catalogues will be furnished on application.

AN INTERESTING NOVELTY.

The Automatic Novelty Co., 143-147 East 23d street, this city, announce in this issue of the World their new slot machine, "The Striking Clock." For some weeks a sample of this machine has been installed in the famous arcade on 14th street, this city, owned by the Automatic Vaudeville Co. Here it has undergone the most thorough tests and has proved to be a great money maker. A number of most unique features are involved. Don't fail to write them for further particulars.

Max Marx, former president of the Automatic Vaudeville Co., of New York City, and ofttimes called the father of the arcade business, has sold out his interest in the above company.

J. G. Humphrey is about to open up a moving picture theatre at 412 East Baltimore street, Baltimore, Md.

We have 10 styles.

The Value of Pennies

HOW PENNIES GROW.—Have you ever taken pains to investigate the profits made by some Penny Arcades? If not, you will be interested to see how pennies grow each week. They will grow into such a surprising number of dollars that the average man who has been satisfied with small profits, will be astounded.

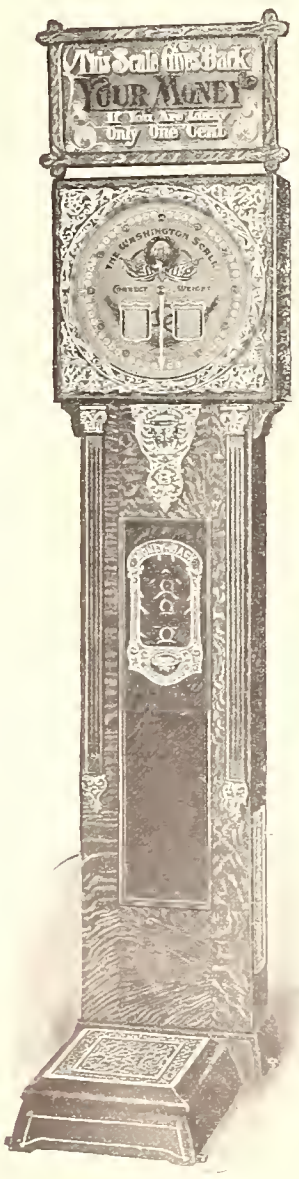
We can name a number of Arcades which are clearing from $1,000 to $3,000 a month.

The Penny Arcade business is only in its infancy, and there is plenty of opportunity to run these Arcades successfully in towns from 5,000 population up.

It would surprise some of those who are not informed to know of the enormous rentals which some Arcades pay in New York and other cities—but they return big profits to their owners.

They seem a natural adjunct to the talking machine business—a logical expansion.

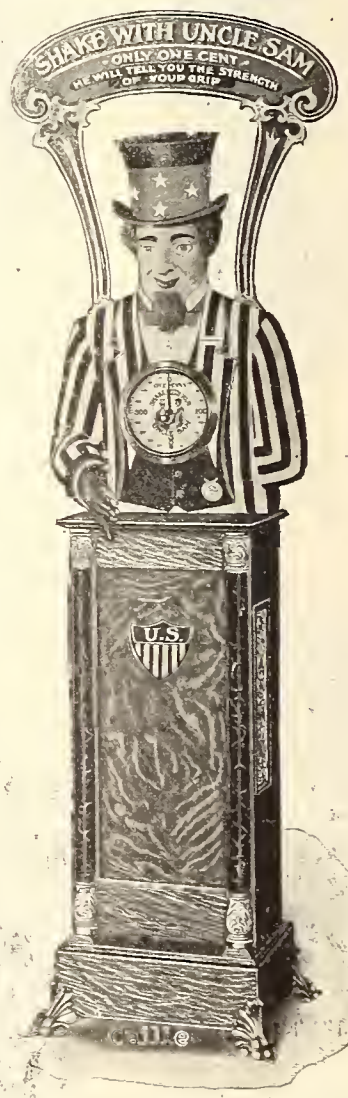
We have made a careful study of the Arcade business, and we have the largest line of novelties made by any concern in the world.



We can easily convince you that we are the specialists in this particular field, and that we can supply you with every possible need in the equipment of Arcades. Our coin-operating machines are almost endless.

We shall be glad to supply you with catalogues containing descriptions of our specialties. It will pay you and pay you well if you open an Arcade.

Don't delay this too long, for some other enterprising chap in your vicinity may put in one or two, and then after that, the opportunities may not be so large for you. Take our advice and act now.



THE CAILLE BROTHERS CO.

DETROIT, MICH.

Eastern Office, Export Department	Western Office
32 Union Square, New York, N. Y.	Republic Building, Chicago, Ill.

A PEERLESS TRIO—POPULAR WITH PIANO PLAYER PEOPLE.

According to his owners, Messrs. Alfred D. and Walter L. Engelhardt, the celebrated talking machine dog is far outclassed by the Roth & Engelhardt dog "Peerless," and like the instruments from which he derives his name, is a general favorite with all who know his great merits. The annexed picture of him and his popular and genial owners was recently taken at the Roth & Engelhardt factory at St. Johnsville, N. Y., the home of the Peerless coin-operated pianos. Alfred Engelhardt makes his headquarters at the New York business office, No. 2 East 47th street, and his brother, does his share in looking after the manufacturing end in St. Johnsville. They are two of the bright young men who are destined to be heard from in a big way in the branch connected with the talking machine industry.

WALTER L. ENGELHARDT. "PEERLESS." ALFRED D. ENGELHARDT.

A FEW TRADE POINTERS.

A. Esposito, proprietor of the "Arcade," formerly located on Speedwell avenue, Morristown, N. J., has moved his entire lot of machines to Newton, N. J., and has opened the "Exhibit" at No. 95 Spring street.

The Kudara Japanese Attraction Co. has been incorporated in Albany, N. Y., for the purpose of acquiring places of amusement and carrying on a theatrical business. The capital is $6,300 and the directors Yosaku A. Kudara, Leta P. Kudara and George Pratt, all of Buffalo.

A report from Akron, O., states that there are nine moving picture shows in that city, more than half of them showing to full capacity houses all the time.

The Park Theatre, Carson City, Nev., has found it necessary to display the moving pictures four nights each week to accommodate the large crowds that attend.

The Theatorium, Star City, Mich., opened up last week, and is reporting gratifying business. It is situated at 506 Midland street.

J. M. Ball is about to open a moving picture theatre in Bucyrus, O.

Clogston's block, Beverly, Mass., is to have a moving picture theatre and arcade.

A new moving picture show started at 29 West Colorado street, Pasadena, Cal., by Fred Fisher, of Los Angeles. It is called "Talley's."

William Boger has opened a moving picture theatre at 1217 Market street, Philadelphia, Pa.

J. E. Suits is about to erect a building on Tenth street, Douglas, Ariz., for W. W. Webb, which will be the home of the "Dime," a moving picture theatre which has outgrown its present quarters.

The Colonnade Theatre, on East Baltimore street, Baltimore, was opened March 4 with moving picture exhibitions, by S. Lubin, of Philadelphia.

Penny arcades and five-cent theatres are still increasing at a rate which shows no signs of

diminishing. As soon as one opens in a small town we find the local papers note the fact with the remark that they are getting to be "like the larger cities."

Stiles & Gerhart, who run the Vaudette on South Fourth street, Peoria, Ill., feature moving pictures and illustrated songs.

A new amusement parlor is to hold forth at 717 Penn street, Reading, Pa.

The Little Rock Amusement Co., recently incorporated, have established a moving picture theatre at 511 Main street, Little Rock, Ark.

Madden Voss, of Columbia, Tenn., is to run the Theatorium in Tuscumbia.

Simon Alexander has launched the first moving picture show in the Hyde Block, Cambridge, Mass.

Holyoke, Mass., is blessed with its full complement of arcades and moving picture exhibitions, three more having recently fallen in line.

The Taylor Moving Picture Co. have opened a theatre on North Main street, Taylor, Tex.

D. J. French and M. J. Morgan, 137 Washington street, Binghamton, N. Y., announce that they will soon open a moving picture theatre at that address.

Springfield, Mass., boasts of several attractive places where automatic creations are in demand.

The Jefferson County Amusement Co., capital $3,000, has filed a charter in Louisville, Ky. The sponsors are Carl A. Mitchell, L. A. Carson and Louis Olson.

The Kreiter Amusement Co. has been incorporated in Milwaukee, Wis., by William E. Kreiter, Cornelius A. Sidler and John M. Niven. The capital is $6,000.

The Monroe Pavilion Co., of Monroe, Utah, has been organized to erect a pavilion and to conduct a general amusement business. The capital is $10,000, and the backers named are Hans Tuft, J. E. Magleby, P. M. Lundgren and Walter Jones.

The Charles H. Wuerz Amusement Co., of Brooklyn, has been incorporated with a capital of $10,000, divided into shares of $100 each. The directors are: C. H. Wuerz, Leo Cappa, C. L. Robinson, M. D. Josephson, and C. A. Stramm.

AMERICAN MUTOSCOPE & BIOGRAPH CO.

The American Mutoscope & Biograph Co., 11 East 14th street, are the manufacturers and sole operators of the famous Mutoscope slot machine in the United States. This machine is universally known wherever these catch-penny devices are to be found. As to what operators think of them we will quote from a letter recently received from H. A. McAllister, of St. Louis, Mo.: "I have just purchased for $27,000 the building and lot directly opposite the union depot, this city, No. 1819 Market street, and will install an up-to-date arcade. I will be in the market for a number of your latest model Mutoscopes and want price on same. I wish to withdraw my deposit and in the future secure reels under bond. Send me three sets of blanks, as I am arranging also to sell my old types. The purchase of the profits I have accumulated from the above property is made possible mostly from the Mutoscopes, the most profitable legitimate slot machine ever manufactured. I think I have handled more styles of Mutoscopes than any other man in the world, and am selling second-hand machines to-day at the same price as I purchased new four years ago, it being the only machine I have ever handled that has no depreciation in value. Thanking you for your usual promptness, very respectfully, H. A. McAllister."

CAILLE BROS. NEW QUARTERS.

The Caille Bros. Co., manufacturers of coin-controlled machines, whose permanent eastern offices at 32 Union Square East, New York, are in charge of A. E. Bresler, will soon have a full line of 144 different coin-operated machines on exhibition—in fact, that number have been shipped from Detroit. The New York offices are located in close proximity to a number of successful arcades and will be the headquarters where the demands from the eastern States will receive prompt attention.

A POINTER FOR PENNY ARCADES.

The Recordol Co., 108-110 East 125th street, New York, are placing on the market a material in powder form that practically re-etches a cylinder record. We have been informed by them that a cylinder record was brought in a few days ago by the manager of a prominent penny vaudeville establishment. The record having been played over 1,000 times, of course, was practically useless. The record was treated with Recordol in the presence of the managers, and when placed upon the phonograph again gave a reproduction good as new. It also looked like a new record. The merits of Recordol are worth investigating, as it will enable the proprietors to keep their phonographs in first-class working order at small cost.

AND NOVELTY NEWS

Published Each Month by Edward Lyman Bill at 1 Madison Avenue, New York, April 15, 1907

YES, I've got several other makes of Talking Machine Horns in the place, but this is the best Horn that comes. It's name? Why, it's a (TCT) Horn. Beautiful! you say. Yes, it is beautiful. But every one of their Horns is a work of art. Will the colors last? Yes, they're bound to. Why? Well, the colors on a (TCT) Horn are "Baked-on" by a special process which makes them practically indestructible. They won't fade, or crack, or flake off. They can't. That's why a (TCT) Horn stands in a class by itself. I myself have proven that.

ZON-O-PHONE QUALITY

Have you heard the latest product?—the new Zon-o-phone 12 inch records?

They are the best we ever made, and that is saying a good deal, because Zon-o-phone records have taken high rank in the trade.

It has been our aim in presenting our monthly list of records, to offer to the trade the latest and best that money and brains can produce. Every Zon-o-phone record issued creates a demand for more of the same character.

If you have not handled Zon-o-phone records, you have missed a business opportunity. You will be convinced as others have been that there is a charm and fascination about the Zon-o-phone products which will win you business.

The Zon-o-phone twelve-inch records are retailed at one dollar each. The dealer's price is sixty cents.

The Zon-o-phone ten-inch records are retailed at sixty cents, and to the dealer forty cents. Complete catalogue ready for the asking. If you send an order for the Zon-o-phone, you will be convinced that our statement is not merely an idle one, regarding record quality, but one which conveys facts only.

We have never been content to rest on laurels won, but we are always striving to make betterments wherever possible.

The Zon-o-phone Tapering Arm instruments retail from $30.00 to $75.00 and are winning their full share of trade commendation. The motors are interchangeable, all parts are alike, and will fit single spring, two spring and three spring. A comparison of these instruments with others on the market will immediately make you a Zon-o-phone convert. You can increase your Spring trade materially through a business alliance with us. Let us take up the subject with you.

THE POWER OF SUGGESTION.

One of the Great Essentials in the Art of Salesmanship—How the Customer's Mind Can be Moulded and Business Materially Helped—An Illustration Points Out the Possibilities in This Connection When Properly Utilized.

Have you ever considered the power of suggestion as relating to salesmanship? It is as important to be able to present an article in harmony with the customer's ideas as it is to prove that the quality is suitable and price right. Where a customer is confined to a number of selected items a choice is made much more readily than if the confused contents of the whole shop are thrust upon him at once.

The power of suggestion in salesmanship was well illustrated recently in the wall paper field. Two women, one of whom had purchased a house with nearly a score of rooms which she desired repapered, went into one store, where the salesman was polite, but far from diplomatic. The parlors came first on the list. He simply placed two or three sample books of parlor papers on the rack and turned them over rapidly without comment. The array of a hundred or more papers so confused the ladies that they had to postpone immediate choice, and the same plan on the part of the salesman in relation to other rooms had a similar result, and the possible customer walked out of the store without any clear idea of what had been shown.

Strolling down the street the ladies were attracted by the window exhibit of another company. Going inside, "just to look around," they were approached by an affable young man who persuaded them to be seated, and was not long in getting the plans of the rooms. When it came to the parlor papers he took one book and began by showing heavy bronze papers. The ladies were not very enthusiastic, but when the heavy flowered patterns turned up they became interested, and at sight of a series of light and dainty French patterns they expressed their delight quite audibly. That was the salesman's cue. He had suggested various styles until he found what was wanted and confined himself to that. Instead of showing several hundred patterns for different rooms he confined himself to perhaps fifty of the light flowered order. The ladies were delighted, and when they were undecided between the shades he simply contrasted them with the papers picked for other rooms, when the one most in harmony was quickly chosen. The salesman did not force his superior knowledge and wider experience upon the customers, just studied their tastes and suggested only such things as he knew would most likely suit them. A few clever words in favor of or sometimes against a paper made the task of the ladies comparatively easy, and he took the order for paper for the entire house before they left the store.

What that wall-paper salesman did should interest many "talker" salesmen, even if the lines are totally different. When a customer drops in, don't hand him or her a catalogue and play the Sphinx. Better find out what style of music is preferred, a very simple matter, if the same party has purchased records before at your store, and then pick out a few desirable selections along that line from the latest lists. Instead of becoming weary of listening to records of his own unguided choice—perhaps only one out of three of which will appeal to him to the slightest extent—he listens to records, every one of which has some interest for him. If he likes light opera of the better sort he is bored with either extreme, "ragtime" or grand opera. If he likes vocal selections, don't make him listen to a band or vice versa. When he has picked out a number from which his final choice is to be made, suggest reasons why he needs every one; this because it is the hit of a popular opera; that because it is the work of a popular composer, and he will be thus prevailed upon to purchase several records at least beyond the number he originally intended to order. Learn to mould your customer's mind to the extent that it helps your business; don't appear insistent, simply suggestive, and you have another grip upon the art of salesmanship.

OPPORTUNITIES IN PHILIPPINES.

Rare Chance to Develop a Good Talking Machine Business—A Musical People Who Are Prospering—Interesting Chat on Conditions by a Recent Visitor to the Far East.

Talking the other day with a United States army officer who had just returned from the Philippines, he stated to The World that there were a great many opportunities for a live talking machine jobber in the city of Manila. "Any bright young American, after a six months' study of the country, could work up a business in talking machines and records that would be simply astonishing. The Filipinos are intensely musical. In the larger cities they are refined and cultured in their tastes and are rapidly accumulating money. Among these people grand opera records and high-priced machines could be easily sold in large numbers. Among the poorer classes there is also a good market, and in this connection the instalment plan may be tried with success. It is difficult to go to any large town throughout the islands and not find a band that plays far better than any to be found in a town in the United States of the same population. Moreover, there is a great anxiety prevalent to get the latest and best music, instrumental and vocal, from the United States. Wherever a talking machine is heard it is the center of a crowd large enough to cause a riot.

"On my last visit to the Philippines I took over a talking machine and a large number of records, and it would be impossible to describe the commotion they caused. One peculiar trait of the Filipino is his ability to memorize. I heard one of them whistling a song which he had heard two days before through the medium of my talking machine. It is a mistaken idea to believe that the Filipinos are savage, uneducated or unprogressive. The country is making splendid headway, and while the people have not lost their aspiration for independent government yet they are becoming greater admirers of American ways and American ideas, and it looks as if the Filipinos are in for a good long period of prosperity."

There is meat in this for the talking machine manufacturer and dealer. Are we covering the talking machine market in that country as we should? If not, the matter is worth remedying.

HOW HE HEARS FROM HIS FAMILY.

New York Traveling Man Is Up-to-Date and Receives Records from Home.

A man went into a music store in Kansas City recently with a phonograph record, which he asked the clerk to place in a machine and reproduce it for him. When the machine was started the sound of a baby's words and laughter came from the horn.

"Hello, papa! 'Ere's a tiss fum me en little Bob. I wush ood tum home."

For a full minute the baby's voice talked. Then came a few words in a woman's voice.

The man dabbed at his eyes with a handkerchief and said:

"That's my wife and baby talking."

He was a traveling salesman. His home was in New York.

"I wouldn't have missed that for a twenty dollar bill," he said to the clerk. I've been away from home six weeks now, and every Saturday evening I have received a record from home. I tell you, there's nothing so good as the sound of their voices. It beats a letter 200 city blocks. An' that's goin' some, too."

"How did he work that scheme?" the clerk was asked.

"Easily. In his home in New York is a talking machine. His wife simply puts a blank record into it and she and the baby talk into it. Then she mails it to him, and he has simply to put the record into another machine to have it reproduced."

The clerk said that it was becoming quite a fad for parents to have their babies talk into a phonograph record. Then the record was carefully put away to be kept until baby grew up.

"There'll be lots of fun with those records," the clerk said. "Imagine an old man listening to the prattle of his own baby voice!"

INDIA A FERTILE COUNTRY

For Talking Machine Trade—Great Interest Being Manifested in American Machines and Supplies—Class of Records Best Liked.

India is a great country for the talking machine, and every month thousands are being shipped to that point. That the dealers in these instruments are also growing in number, and that they can read English, is evident from the rapidly growing clientele of Talking Machine World subscribers in India. Every mail brings either inquiries anent advertised specialties or subscriptions. All this is a healthy sign and shows how the American machine and supplies stand abroad. Indeed, it is a matter of common knowledge that the talking machine trade with India is more extended and more profitable than with many other countries. The native who can command the price wants a talking machine, and the records he delights in are those which reproduce the native songs. A correspondent of the "Zeitschrift für Instrumentenbau" points out that records in the four or five different Indian languages command a ready and permanent sale; he also advises record companies to record the songs of the Indian dancing girls. In support of his advice he explains that the sales to the European population are very much more limited than to the indigenous peoples; and even if the western nations refuse to class the screams and cries which pass for Indian songs as music, it must be remembered that they gratify the taste of the majority of record buyers in India.

MUSIC IN THE CHURCH.

Talking Machine Rapidly Taking the Place of Choirs in Churches—Moving Pictures Next.

The Rev. L. G. Leggett, pastor of the First Presbyterian Church, in Nebraska City, Neb., who has become famous as the first minister to substitute the talking machine for a church choir, has had hundreds of communications from churches all over the country, asking particulars regarding this move. It is not improbable that within the next year hundreds of churches, particularly those in the smaller towns, will enjoy first-class singing through the medium of the talking machine. In Ohio, Indiana, Missouri, parts of California, and in a number of the eastern States the ministers are putting in talking machines with a full equipment of hymns, while several Catholic churches have secured the music of entire masses by several eminent composers. We notice that the Rev. Byron G. Olatt, pastor of the Central Christian Church, of Marion, O., has now gone further than having an automatic choir—he has been illustrating his sermons with stereopticon pictures thrown on the screen exemplifying the teachings of Christ.

THE TALKER AND DIVORCE.

Some Humorous Comments Made on the Employment of the Talking Machine in the Taking of Depositions in Divorce and Other Law Suits and What Ideas It Suggests.

The employment of the phonograph in the taking of depositions, in divorce and other lawsuits, suggests an idea which might, perhaps, be adopted by the widower or the widow, the divorcer or the divorcee, who marries again.

It has happened so often that it has begun to assume the dignity of an established rule, so it is said, that a man or a woman who has been previously married can hardly help telling his second wife or her second husband how good his first wife or her first husband was about a great many things.

There is nothing particularly harmful in this in itself. Harm comes out of it, however, when the second wife or the second husband, who has heard it a great many times—perhaps too many times—declares that she or he does not believe it. From this moment there must necessarily be strained relations in the once happy home.

When the wife, who up to this time has been willing to believe almost everything, after being informed by her husband, who was a widower, that his first wife was always ready for church just on the minute, says:

"William, I don't believe a word of it, so there!"

Or the husband, who has married a woman who was a widow, or who had, at least, a former husband, after being told by her that her first husband never thought of giving her less than $40 to buy an Easter hat, declares, impulsively:

"Mary Ann, don't tell me that; Tom Wilson never had $40 at one time in his life!"

Then is the time that there is need of something which will serve to heal the wounds that have been started and which, if allowed to fester, may eat into the very heart of conjugal love.

Why would it not be a good thing for all married people to preserve phonographic records, in duplicate, of the nice things they say to each other before they become separated, naturally or by the courts? Then when they marry again and talk about their former wives or husbands, and tell how good their former wives or husbands were to them, and their present wives or husbands question the statements made, the husband or the wife, as the case may be, need only find the particular record desired, and, by winding up the phonograph, present a happy marital scene to the man or the woman, his wife or her husband, who was becoming doubtful, discontented, and disagreeable, with the result that she or he becomes trustful, reasonable, and reconciled.

So far as we are able to see at present, the matrimonial phonograph record thought is one that deserves serious consideration, particularly in Pittsburg.

WHAT COURAGE MEANS.

Mr. Talking Machine Man, to make your business a thing of throbbing life, a slave to your will, who shall do your bidding faithfully and well, you must infuse into the heart of that slave the most sought-after of accomplishments among tradesmen, namely: Courage.

This is what Courage means, Mr. Dealer, and to have it, and the success that accompanies it, you must be

Constant in your efforts to please,
Obedient to the call of your business,
Unblemished in reputation,
Right there with the goods,
After more trade,
Gallant toward the ladies, and
Enveloped with new ideas.

HOWARD TAYLOR MIDDLETON.

The Spokane Phonograph Co., Spokane, Wash., recently received a very large shipment of Mega horns made by E. A. & A. G. Schoettel, of Maspeth, N. Y.

SENDING MUSIC BY WIRE.

Successful Experiments Between Wilmington and Philadelphia in Which Talking Machines Were Employed.

The Delaware & Atlantic Telegraph & Telephone Co., one of the companies in the Bell system, recently conducted successful experiments in the sending of music through their underground cables between Wilmington and Philadelphia, a distance of twenty-eight miles.

A phonograph was placed in a hotel in Wilmington, in such a position that it faced the telephone. The other end of the cable was attached to a receiver placed in a special booth in the store of Strawbridge & Clothier, in Philadelphia, and later on transferred to a booth at the Business Men's Exposition. At both places the tones proceeding from the receiver were as clear as though the music was produced in the next room. At the Business Men's Exposition the receivers were attached to a Victor Auxetophone with wonderful results.

USED PHONOGRAPH AS WITNESS.

According to a recent dispatch from Paris the talking machine has again played a very useful and novel role. The landlord of a residential house let his grouud floor to a coppersmith, the noise from whose workshop greatly disturbed the other tenants. One of them, instead of resorting to the complicated procedure of calling in experts, simply had the noise registered by a phonograph and brought action for damages against the landlord and coppersmith. By means of the machine he gave the court a correct idea of the nuisance complained of Judgment was given in his favor.

Kohler & Chase, the well known Edison jobbers at Oakland, Cal., who have opened a jobbing branch at 1305 Second avenue, Seattle, Wash., are sending out some very handsome cards to dealers, notifying them of this move.

TRUE- -TONE

YOU WANT THE BEST REPRODUCTION YOU CAN OBTAIN.

The **True Tone Box** will, as its name implies, give you a most perfect reproduction. The Best way to prove this is to try it for yourself.

We are so confident that a trial will please you and that you will desire to push the sale of the True Tone, that **we will send to any responsible dealer or jobber in the U. S. A. a box on trial.** If you like it, pay us the price and order more. If you do not like it, return at our expense.

This Box is the result of long and careful experiments and we are confident you will decide it is the best you have ever heard.

PRICE $5.00 REGULAR VICTOR DISCOUNTS TO DEALERS AND JOBBERS

MADE FOR STRAIGHT OR TAPER ARM VICTOR, ZONOPHONE OR COLUMBIA MACHINES. SPECIFY TYPE WANTED WHEN ORDERING.

AMERICAN TALKING MACHINE COMPANY

586 FULTON STREET, - - - BROOKLYN—N. Y. CITY

Largest Talking Machine House in the City

Every month all the purchasing people of the United States see a full-page advertisement of the Victor in the leading magazines.

Victor Talking Machines and Records

These customers are looking to you to supply their wants. It doesn't matter where you are located, you can't get away from this demand. There is just one way to meet it, if you are wide-awake and business-like in any sense of the word.

Show *every* Victor, from the Junior Gramophone up to Victor VI. Show the Victrola and the Aux-e-to-phone—they attract great attention and help sell the whole line while they sell themselves.

Keep all the Records, especially all the New Records, every month, and play them freely for any person who comes near your store.

Above all, keep everybody talking about you and the Victor; advertise in your local paper; give your window display close attention, and go out after trade with good circulars and free concerts.—**Then Watch Your Sales Grow.**

Victor Talking Machine Company

Camden, N. J.

Better try this method, if you haven't begun already:—Place your standing monthly orders for the new records with your distributer, and push this feature. (It keeps your customers calling at least monthly—they look for them.) Artistic Monthly Supplements furnished free for this purpose.

INDIANAPOLIS TRADE DOINGS.

Jay's New Repeater Praised—Columbia Co.'s St. Patrick's Window—Big Call for 20th Centuries—Wahl's Good Trade in Edison's—Covering Trade With Wagon—Trade 40 Per Cent. Better Than Last Year—People Becoming Better Educated as to Talker Possibilities.

(Special to The Talking Machine World.)

Indianapolis, Ind., April 8, 1907.

A. E. Jay, manager of the Kipp-Link Co., which sell all kinds of talking machines, has a new patent on a repeater, which he thinks will prove to be a decided success. This repeater is arranged so that the cylinder record slides back instantly as soon as the selection has been played and it is given again. It may be adjusted while the machine is running. It has other advantages which Mr. Jay believes will make it a success. The Kipp-Link Co. are enjoying an excellent trade just now, turning practically all of their attention to the jobbing business. "We would rather get an order out to a jobber on time than to sell a $50 machine at retail," said Mr. Jay.

Thomas Devine, manager of the Columbia Phonograph Co., made an unusual "hit" with a front display window on St. Patrick's day. The display attracted more attention than any similar window ever decorated in Indianapolis. Mr. Devine made a huge bank of nickel flowered horns in the window with an unusually large horn in the center. In this large horn he placed a bunch of shamrocks, and in the other horns roses of various colors. The St. Patrick's day parade passed the Columbia store, and the marchers were not so engrossed but that they saw the window. Later after the exercises of the day they came back to view it more critically and there was plenty of praise.

The Columbia Phonograph Co. are having an unusual demand for the large Twentieth Century machine. When it was first placed on the market here dealers were a little afraid of it because it seemed to be complicated in its machinery. This has passed away, however, and the company now are enjoying a good jobbing business in this line. The dealers all seem to be satisfied with it, and there is hardly a time when the Columbia Co. are not behind in filling orders for this machine. This company are also having a demand for their new model cylinder machines of regular types. The machines are so constructed that practically nothing can jar them when they are playing, and this seems to appeal to every one and makes a good talking point for the salesmen. No matter in what position the machine is placed the music is the same.

The Jersey Lillies Co., which appeared here at the Gayety Theatre last week, included in the show a scene representing an office of the Columbia Phonograph Co. All of the various departments were represented, and pretty girls posed as salesmen. A little burlesque was given in which a Twentieth Century Columbia machine was used to advantage.

A. B. Wahl, who is closing out his disc talk-ophones and turning his attention to Edison's, says that he is enjoying a good trade. His disc machines are going rapidly at reduced rates, and soon will have been disposed of.

George W. Maze, who handles Edison machines, says that his talking machine wagon "is doing only just fairly well now." This wagon was started out six or eight weeks ago in the charge of W. G. Power. Mr. Power is canvassing thoroughly the rural districts in this and adjoining counties. He is meeting with excellent weather, which makes traveling easy, but just now farmers are thinking about paying taxes and business is not quite as good as it might be. However, he believes there are better times ahead.

"Our business is not as good this month as it was last," said Charles Craig, who does an extensive jobbing business in Edison machines. "However, trade is 40 per cent. better than it was at this time last year. This good weather means that the farmers are busy at work, and therefore it is hard to attract their attention to talking machines.

"I believe, though, that the people generally are getting educated to talking machines, and that the prejudice against these instruments is being removed. Recently I went to call on a woman in the aristocratic section of the city. At first she said she would not allow me to play the talking machine in the house. Finally I persuaded her to let me try it, and knowing that she was religiously inclined, I put on a sacred record. I sent a machine up to her house that afternoon and got the money for it."

WILL IT BE "SOUNDERS."

Suggesting New Names for the Talking Machine—"Lyraphone" and "Sounders" Mentioned—Some Canadian Opinions.

Joseph M. Tees, of Winnipeg, recently took exception to the name "talking machine," claiming that nine out of ten people wauted those instruments for the music they reproduced so well, and not for their talking proclivities. He suggested as a substitute the word "Lyraphone." To this a correspondent of the Canadian Music Trades Journal takes exception and writes as follows concerning Mr. Tees' suggestion:

"Taken literally, the word 'Lyraphone' would about mean 'a harp which gives sound,' and in this sense is not suggestive, as the machines are by no means harps. The 'lyre' is an obsolete instrument, but the 'liar' we always have with us, and in the latter sense the name is probably suggestive enough, for we in the musical business (especially the salesman) are noted for our strict adherence to the truth—when it pays.

"We've been told that 'all men are liars,' but one does uot like to be continually reminded of this (as might be the case if this suggested title were to come into general use), for we must remember that the truth is not always palatable.

"The English language contains idiosyncrasies enough without iuflicting any more upon us, and in coining words for future use in 'English as she is spoke' we should endeavor to make them fit. 'Talking machiue' is a loug name; 'Lyraphone' is nearly as long, and in the general tendency of the age toward economy in business transactions we (or rather a good many of us) endeavor to save breath. The machines cannot well be described in one syllable, but may be, perhaps, in two. Let us see:

"The machines are 'souud reproducers,' and this name covers all the requirements, but is, of course, too long. Now, on the principle of Bret Harte's 'Sevenoaks, and then S'enoaks, and lastly Snoak,' let up, cut out the intervening syllables and we arrive at the word 'Sounders,' an appropriate enough title—odd, perhaps, until one gets accustomed to it, but both convenient and suggestive."

"3-IN-ONE" MOVES.

G. W. Cole Co. Take Fine New Offices in 42 Broadway Bldg., New York.

The sales of that famous oil, "3-in-One," have moved up at such a lively rate that the manufacturers, G. W. Cole Co., have found it necessary to move to more commodious quarters. Heuce the New York offices have been changed from the Washington Life Building to the new 42 Broadway Building.

The new offices occupy the major part of the third floor of a wing of the building. Here they have large, light, commodious offices for the transaction of business and for the officers of the company.

The history of "3 in One" oil has been one of expansion. Starting with a one-room factory in Asbury Park eleven years ago the business rapidly outgrew the manufacturing facilities at that location, and the factory was moved to Rahway, N. J., into a fine new building of their own construction. Within the past year the factory capacities have been doubled by brick building additions. The executive offices in New York expanded from one office to a suite of offices, and now to almost the entire floor of a wing of the new 42 Broadway Building. The expansion of the offices and the factory is significant only in that it is a substantial evidence of the greatly increased sale of "3-in-One" in every corner of the United States and in many foreign countries.

In a chat with a member of the company the other day, he said: "'3-in-One,' which is the original and only oil compound for lubricating, cleaning, polishing and preventing rust, was first discovered in a semi-accidental way by the G. W. Cole Co., who are and have been the sole manufacturers of the same since it was first put on the market."

An English paper tells of a young lady in Australia, who, desiring to compete for a scholarship iu vocal iustruction, sang into a talking machine and sent the record to a well-known teacher, with a request that he offer his judgment upon the quality of it. The opinion of the teacher was favorable, the young lady entered the coutest, and was successful in winning one of the scholarships.

To All Talking Machine Dealers

YOU buy Screws, Studs, etc., for repair work.

Why Not Try Us for Prices

CHILDREN AS A BUYING FORCE.

Their Cultivation by the Dealer Helps, as They Are a Great Persuasive Power in Getting the Older People Into Line as "Talker" Enthusiasts and Steady Customers.

How many talking machine dealers think of catering to the children in their locality? How many, if a group of childish faces appear in the doorway during a demonstration, assume an annoyed expression and run them off? And yet catering to the same children to a certain extent would undoubtedly mean increased business.

The dealer says: "Well, they only have a few pennies to spend, and it is a waste of time to show them a machine and records on which the monthly instalments alone would almost equal their yearly allowance of spending money." True enough; but think of the persuasive powers of children, especially the younger ones. They see something they want and set out to get it. No delay is tolerated. They want it and want it at once, and the father, no matter how little he cares for that special article, will in nine cases out of ten capitulate and dig into his "jeans," if the price is anywhere within his means. If the dealer has children of his own he will readily realize the effectiveness of children's teasing and coaxing, and why not have the teasing in the interests of a talking machine? An excellent plan is to devote Saturday mornings to recitals to which all children in the neighborhood, of the better class especially, should be invited. Play records of interest to them, band selections, laughable monologues and minstrel numbers, and the popular airs of the day, with perhaps some well-known patriotic melody thrown in. One company has produced a double-sided record, one side containing a personal address to a boy and the other to a girl. The idea of having the talker "speak for itself," as it were, makes an especially strong impression on the youthful minds and pleases them immensely. Answer all questions if possible, especially those relating to price, and impress upon their minds the musical advantages to be derived from the talking machine in the home. When the children return home the talking machine will be the sole subject of their conversation. All the dealer's arguments will be repeated, together with those convincing arguments that can be brought up by the young people when occasiou requires. They will do more for the dealer's cause in five minutes than a first-class salesman could accomplish in a week.

After they have attended a few recitals, even the most headstrong parent will reason seriously whether it would not be advisable, after all, to buy a talking machine outfit if only to keep peace in the family. Possibly he will buy only a low-priced machine at first, but in nine cases out of ten he will become so impressed with the instrument as an entertainer that he will be back to buy a first-class outfit in a remarkably short time.

Cater to the children. Remember, you expect to stay in business some time; they are growing up rapidly, and when they arrive at the income-producing age, you want to get some of it, so make yourself "strong" now.

NEW WIRELESS MUSIC.

Why the Wireless Telegraph Experts Around Have Been Charmed With the Strains of Sweet Music This Last Month.

Strange sounds that broke in on the dot and dash messages being received at the Brooklyn Navy Yard this last week by the operator sent him hot-foot in search of G. S. Davis, chief electrician of the wireless station.

"Come, quick," he said, breathlessly, "there's all kinds of music breaking in on us."

Davis put the receiver at his ears and listened. At first he heard only the Morse symbols of the message from the vessel at sea. Then came a burst of music. Chords and harmonies, coming evidently from out of the heavens, filled him with amazement. Then he recognized the overture from "William Tell." This was followed by Mendelssohn's "Spring Song," parts of "Il Trovatore" and "The Rosary." Ten minutes later Davis was on his way to Manhattan in search of Lee De Forest, of the Wireless Telegraph Co.

"What do you meau?" he exclaimed when he found Mr. De Forest at an uptown hotel. "For half an hour this afternoon grand opera and other music broke up Uncle Sam's conversatiou and frightened our operator half out of his wits. He thought he was listening to the singiug of angels."

He congratulated De Forest when the latter explained that the music was the result of a successful public test of the latest De Forest invention given on a recent afternoon at the Normandie Hotel, Thirty-seventh street and Broadway. For months Mr. De Forrest had been at work on apparatus capable of transmitting music through the air. By the means of high frequency pulsations and a transformer the music is seut out as waves of electricity, varying intensity in the waves reproducing the different notes.

The music was played into the trausformer at Telharmonic Hall, Thirty-ninth street and Broadway. Wires connected the instrument with a discharging pole erected on the top of the building. The receiving pole was placed on the top of the Normaudie Hotel. Wires ran from this to the receiving apparatus in a room on one of the upper floors. The receiver is identical with the apparatus used in taking all wireless messages.

The test proved not only that the age of wireless music had been reached and the dream of Edward Bellamy realized, but that of the wireless telephone as well. During the intervals while music was not being played the voice of the man operating the transformer could be distinctly heard. He inquired if the music sounded well and asked what other airs he should play.

Mr. De Forest, speaking of the latest achievement of science, said that while the present apparatus was capable of throwing the music waves only a few miles he hoped to improve it so that soon passengers on ocean liners a hundred miles at sea could enjoy graud opera airs.

It is the plan of Mr. De Forest to utilize the invention in supplying the public with music to order at their homes. With a central station equipped with a transformer of sufficient size music can be furnished at a trivial cost. All that would be required would be a receiving pole on the roof and a simple receiviug apparatus. By adding to the voltage and enlarging the transformer it would be possible to amplify the sound so that it could be heard through a megaphone in all parts of a room.

THE VALUE OF ACCURACY.

In No Business Is It So Important and Necessary as in That Devoted to Talking Machines.

Accuracy is synonymous with success, because without it a talking machine dealer cannot achieve greatness in the world of trade.

Accuracy means the careful inspection of records before they are shipped; the impossibility of a "come back" owing to carelessness iu making up a patron's order.

It means careful bookkeeping that will always show exactly how the business stands as to profit and loss, etc., and it also means the ability on the part of the "talker" man to satisfy his customers, because if he makes accuracy his hobby he will be able to tell them off-hand just what they want to know. If they ask for a record, he can give it to them at once, or if it is not in stock, he can inform them to that effect, thus avoiding a loug and perhaps fruitless search.

Accuracy is a time saver, because it embraces the careful and systematic distribution of records upon the shelves, a complete and alphabetical list of the uames of customers, and a general state of affairs that is very refreshing on account of the absence of confusion and disorder.

Accuracy is a word that every dealer who is climbing toward the rosy heights of glory and hopes to some day arrive at the summit, should have printed in big, glaring black letters upon a white card and hung upou the wall or on his desk, where it will stare him in the face at every turn, for

Accuracy is something
That will help him to success;
Something he should strive for;
A friend when iu distress.
If taken as a motto,
It will boost him up to fame.
You try it, Mr. Dealer;
It may help you do the same.

HOWARD TAYLOR MIDDLETON.

C. B. HAYNES & CO. EXPANSION.

W. V. Youmans, soii of G. E. Youmans, connected with the National Phonograph Co., at Orange, has purchased an interest in the talking machine business of C. B. Haynes, 602 East Main street, Richmond, Va., and the firm title will hereafter be C. B. Haynes & Co. The store adjoining the present quarters has been leased by the compauy, which will about double their floor space, and when alterations are completed they will carry one of the largest talking machine stocks in the South.

The Biggest Return from the Smallest Investment

YOUR profits depend upon the number of talking machines you sell and the time it takes to sell them. Machines that find no takers tie up money and money tied up is a losing proposition.

It's business, therefore, to devote your energies to an instrument that commands the approval of all who hear it:

THE EDISON PHONOGRAPH

The Edison sells without argument and always brings its price. Its superior construction and wonderful reproducing powers—its clear records, produced by the country's best artists and the powerful advertising in its behalf—make it the best proposition in the talking machine field. A small investment secures a representative stock. A little well directed energy means big returns.

Write us for the Edison proposition and the name of a nearby Edison jobber.

TONS OF CATALOGUES DESTROYED

By the Australian Authorities Through Failure of Exporters to Pay the Required Duty on Them—Shippers Should Note This Pointer.

Tons of American catalogues are destroyed every year by the customs authorities of Australia for the reason that business men to whom they are addressed by manufacturers and exporters of the United States decline to pay the duty of 3d., or 6 cents in American money, per pound assessed on them as advertising matter imported for distribution. This is a loss which cannot be estimated in dollars and cents. Because of negligence or unfamiliarity with the tariff provisions of Australia, these descriptive circulars, catalogues and price lists generally fail to reach their destination, and consequently all opportunity for trade which might be obtained through their perusal is lost.

This condition of affairs can be prevented if the following suggestions are followed: If the American exporter has his Australian mailing list in the home office he should carefully address the catalogues, and then by the same mail he should send to the comptroller-general of customs, or the postmaster-general, or the comptroller of customs at Sydney, Melbourne, Brisbane, Adelaide, Fremantle, or Hobart (Tasmania), as the case may be, a notification to the effect that he is sending to ——— by parcels post, via San Francisco or via London, ——— catalogues weighing ——— pounds, and enclosing ——— (dollars and cents, or pounds, shillings and pence) in payment of duty.

The official receiving this communication, with preferably an international money order enclosed, will immediately notify the postoffice authorities, and the catalogues will be forwarded to their destination without delay. The printed matter should be carefully weighed before it leaves the home office, and the money order, draft or check sent to the Australian customs or post office official should amount to 6 cents a pound full weight. This is the English method, and it has given uniform satisfaction.

MUSIC WITH EVERY SHAVE.

Brooklyn Barber Discovers Way to Win Customers.

Shaving men to music is the latest novelty in Brooklyn. An Italian barber, who recently opened a shop in upper Broadway, in the Bushwick district, is attracting customers to his place by means of music from an expensive talking machine, and his business rivals in the neighborhood are preparing to adopt similar methods to win back the trade they are losing.

When the new barber opened his shop he found that the field was already so well occupied that there was scarcely any business to be picked up. He was beginning to get discouraged at the end of the first week, when one day, upon returning from an errand in the neighborhood, he found a customer in the chair and his young assistant busy lathering the man.

The barber was the owner of a talking machine, and like all sons of sunny Italy, he had a lot of grand opera records, and while waiting for his assistant to get the customer's face in condition for him, commenced to play to relieve his feelings as to the lack of business.

"Ready," said the lather boy suddenly, and the barber came out of his dreaming.

The customer turned in the chair and looked impatiently at the boy.

"Play on, man; play on," he urged, addressing the barber. "Never mind the shaving; just play that over again."

The barber, pleased, played the air again. Then he shaved the customer.

"I'm very fond of music," said the man as he was leaving, "and if I could hear some more like that I'd come here oftener."

That gave the barber an idea. When the next customer came in, after a long interval, he played for him, too. That man, like the first, seemed to enjoy his visit to the shop immensely and became a regular patron. More and more customers were won in this way. Now the other barbers in the neighborhood, learning the secret of the newcomer's success, are installing automatic music-making instruments.

BEN REYNOLDS CO. ORGANIZED.

Ben Reynolds, a music dealer of Washington, Pa., has formed a company under the firm name of Ben Reynolds & Co., to take over his business. Charles Kochendarfer is president of the new company; James E. Mathews, treasurer, and secretary, and Ben Reynolds, general manager. The company have leased the old quarters for a period of ten years and are having the building entirely remodeled. One of the leading departments of the business is that devoted to talking machines, which is located in the rear of the main floor. A complete line of both machines and records is carried in stock, and the department is experiencing a rapid and steady growth.

T. EDENS OSBORNE'S "OUTING."

T. Edens Osborne, the enterprising talking machine factor of Belfast, Ireland, writes The Talking Machine World from Spalato (Dalmatia): "I am enjoying a delightful cruise around the eastern seaboard of the Adriatic. On my way here I spent some time in Paris, Lucerne (Switzerland), Verona and Venice (Italy). We have now left Abbazia, Fiume, and are proceeding to Gravosa and Ragusa and Cattaro in this wonderfully interesting country. Then on to one of the Ionian Islands—Corfu. Afterward we visit Syracuse, Messina and Palermo in Sicily; then for Naples, Genoa, Milan and the Italian and Swiss Lakes. Expect to reach home about the 4th of April. Kindest regards."

Mr. Osborne is one of the wise men of his generation, who recognizes that all work and no play makes Jack a dull boy. He adopts the plan annually of laying in a stock of energy by such trips as the above to meet all demands made upon his physique.

USED HORN AS FIRE TRUMPET.

A prominent New York railroad magnate is chief of a fire department in one of the suburban villages adjoining New York, and was recently awakened by hearing the midnight alarm pounded out on a locomotive tire that did duty as a fire bell. His suit duly donned, he looked about for his silver-mounted trumpet, but it could not be found. In a fit of desperation he seized the horn from the talking machine, and hurrying to the scene of the conflagration, bellowed his orders through it, to the satisfaction of the department and the amusement of the spectators.

STANDARD MUSIC CO. EXPANSION.

The Standard Music Co., of Chattanooga, Tenn., have been carrying on a lively advertising campaign in the interests of the Victor line which they handle. They used half-page space in the local dailies and made a feature of the dollar down and dollar a week proposition. They also published a list of fifty Chattanoogans to whom they had sold Victor outfits and who had expressed themselves as well pleased with their purchases. Such an argument is hard to beat.

D. W. Wile, Ashland, O., has purchased the stock of talking machines of Charles Smith, that city, and in future will handle that line of goods in connection with his stock of pianos, organs, music, etc., at his store on Orange street.

STEWART

You can handle banjos easily and add to your income. Talking machine men will find them big sellers.

THE BAUER CO., 726-730 Girard Avenue Philadelphia, Pa.

PETMECKY SPECIAL:

Some Statements and Some Replies

In a recent copy of a publication issued by one of the great talking machine concerns are to be found some statements to which we reply:

Statement: "Influenced by the advertising of these so-called marvelous (?) needles, some . . . . distributors and dealers have allowed themselves to imagine that they were really getting something better than was being supplied by the . . . . company."

Reply: The **PETMECKY COMPANY** has in its files thousands of unsolicited testimonials from these very . . . . distributors and dealers testifying to every single claim we make for the **PETMECKY Multi-tone needle.** In placing an order for **One Million PETMECKY** needles, one of these . . . . distributors writes us: "I surely gave them a very trying test both as to sound and durability. All I can say is this: I am unable to subtract anything from your broad assertions that you make for the needle in question. Therefore, they are all you claim for them. Most assuredly they are here to stay, and that is saying a heap in these days of rapid improvements and inventions.

Statement: "It is unreasonable to think that after playing a record you can turn the needle and use it again without detriment to the record. Persistent use of such needles will result in the destruction of every record played within a few months' time, and, of course, the record will be blamed, while the fault lies entirely with the needle."

Reply: The **PETMECKY Multi-tone Self Sharpening** needles are the only truly scientific needles on the market. They are sold with the absolute guarantee that each and every needle will play ten or more of the largest and finest records through with less harm than any other metal needle on the market to-day. One of the largest . . . . dealers in America writes: "We use them ourselves in exhibiting records, especially our best class records. You may be sure we would not use anything but the best needles on records running in price from $3.00 to $5.00 each." Another large dealer writes: "The writer took 16 twelve-inch red seal records and played them all with one **PETMECKY** needle. There was hardly any wear noticed at the point of the needle, and the records are all right yet."

Statement: "It is a well-known fact that when two moving substances meet, the weakest must give way; therefore it is far better that the needle be used but once than the more valuable record should fail in its functions."

Reply: Tell us, if you please, good sirs, the difference between using one ordinary needle once and 100 or 1,000 ordinary needles 100 or 1,000 different times. Especially when the ordinary needle is so constructed that the extreme sharp point cuts out the sound wave groove. The **PETMECKY** is so made that it sharpens itself just enough to give the smooth mellow tone without the rasping and "bellow" (the one positive proof of wear) prevalent in the ordinary needle, thus reducing the wear of the finest records to practically nothing.

Caught With the Goods

Let us all be fair—let us all be just—let us all be honest. On your word of honor, Mr. Dealer, in the use of the ordinary needle, do not your records show the most wear at the beginning, when all or nearly all of them are fairly good, during the last half after the first half is completely gone? Let us be honest—is this not proof absolute that the ordinary needles are too sharp and being of inferior case hardened steel wear very quickly?

In Conclusion

If necessary, the **PETMECKY COMPANY** offers herewith a handsome apology for not keeping a "great corps of scientists and experts" to know just what it is talking about. There was but one scientist ever connected with this company, and that was Mr. Petmecky, the clever inventor of the marvelous **PETMECKY Multi-tone Self Sharpening Needle,** as well as many other practical and useful articles which have had a world-wide sale for a generation.

The **PETMECKY Multi-tone Self Sharpening Needle** is guaranteed to be the most universally endorsed needle to-day. There is none better than the best. If ever the time does come that some clever genius perfects a better needle, then Good-by Petmecky.

PETMECKY—the Needle of Quality
The ONE and ONLY Needle Every Dealer Can SAFELY Guarantee.

TRADE HAPPENINGS IN CLEVELAND.

Steady Betterment in Trade the Past Month—High Priced Machines in Favor—Bailey Co. Handling the Victor and Edison Lines—Harry Markle's Latest Invention—The National Phonograph Co. Open Commercial Department—The Selling of Commercial Machines Discussed by H. E. Jones—Leasing Chronophones—The Arcades and the Church—Other Items.

(Special to The Talking Machine World.)

Cleveland, O., April 10, 1907.

Conditions generally during the past month have been favorable to the talking machine trade and dealers have all been doing a satisfactory business. There has been a regular steady demand for machines, while the call for records and supplies is constantly increasing, which is evidenced by the continued extensions and improvements forced upon the dealers, who, however ample the initiative arrangements, soon find themselves cramped for room in which to make a proper display and for demonstrating purposes.

Throughout this section of the State the talking machine business is flourishing, and the music is growing in popularity to an extent hardly appreciated by the dealers.

The Columbia Phonograph Co. are busy as usual. Mr. Probeck, manager, said: "Considering the season of the year, business is very satisfactory. We are expecting a lot of surprises to come along soon, which will boom the summer trade and make us all happy."

W. J. Roberts, Jr., was delighted over the recent sales of several of the high-priced machines. He stated business was unusually good, and the outlook one of great promise.

Messrs. Robbins & Emerson started in the talking machine business nearly two years ago at 256 The Arcade, and have just moved to the floor below, No. 145, the Euclid avenue entrance, where they have a larger room and altogether better facilities for conducting the business. It is really one of the most attractive talking machine stores in the city. Mr. Robbins' experience in the business dates back to 1894, when he engaged with the Ohio Phonograph Co., supervising the various electrical machines then in use. He remained with the above company during their existence, and with their successors until August, 1905, when the present company was organized. They handle the Victor and Edison machines and records, and are doing a very successful and growing business.

All the evidences of prosperity prevail at the store of W. H. Buescher & Son. Mr. Buescher stated that throughout March business with them was very brisk, and was keeping up in the most satisfactory manner, and that from the present outlook it means a busy summer.

The Baily Co., department store, have opened a new talking machine department, handling the Edison and Victor machines. They have fitted up demonstrating rooms on the sixth floor, which by reason of offering easy payment terms is generally crowded with purchasers. They carry a large stock of machines and a full line of disc and cylinder records. The company are advertising and pushing the business, and the manager stated they would have to take in four times the present space to accommodate customers.

"The March business was excellent," said Mr. H. Gulley, No. 924 Prospect avenue. "During the month we tripled our orders for red seal records. If not handicapped by manufacturers in getting goods, April will prove to be better than March. There seems to be no let up in business, and I am making preparations for a large summer trade. Prospects are very bright."

The Hallet & Davis Piano Co. have got their talking machine department in running order, in rooms 126 and 128, The Arcade, over their main piano store. Trade was reported very satisfactory.

The special Victor red seal records are taking well, especially the Rigoletto quartet by Caruso, Abott, Homer and Scotti. Collister & Sayle have sold a large number, and are having fine sales of the entire April list. They state business is keeping up fully equal to the winter trade, and that the past month was the best in several months. They disposed of a number of machines, and could have sold several Victrolas could they have been procured.

The Gottdiner & Wicht Co., No. 2084 West 25th street, claim to be the largest talking machine dealers in Cleveland. They are enterprising men, and are pushing for their share of business with energy, and are securing it.

Walter L. Eckhardt, general manager of the wholesale department of the Columbia Phonograph Co., New York, was in the city a few hours March 29, en route home from the West. He talked very enthusiastically of conditions in the talking machine line.

Harry Markle, of H. E. & Harry Markle, dealers in Edison phonographs, No. 403 Public Square, Nashville, Tenn., left for home April 1. Mr. Markle is the inventor of a multiplex phonograph intended for cylinder records, and had been in the city for the past two months perfecting and completing a working model of his machine. Dealers and others who have witnessed its operation, declare it is constructed on correct principles, and are profuse in expressions of admiration. Mr. Markle said it would probably be six months before it would be placed on the market.

The National Phonograph Co. have opened a commercial department in the Schofield Building, this city, with J. O. Hanna in charge. Their system, it is claimed, is considered perfect and the company will no doubt prove a keen competitor in this field.

P. A. Powers, the talking machine man of Buffalo, was in Cleveland, March 30. He expressed himself highly elated with business prospects.

H. E. Jones, manager of the commercial department of the Columbia Phonograph Co., believes that in business matters in these hurrying, skurrying days one should always take the short cut to results, and should be sufficiently informed to kuow how to. "It is remarkable," said he, "when one comes to think of it, that business men of to-day who are generally so thoroughly up to date in most things, should be so ignorant as they often seem to be, as to the practicability and convenience of the talking machine commercially applied.

"An experience recently had, with one of the largest business houses in this vicinity was almost amusing in this direction. The head of the house was approached, and said very urbanely, 'Kindly be seated. What can I do for you?' At this a general outline of the commercial graphophone's possibilities was launched into at the end of which the gentleman said with great earnestness. 'But these machines are not practicable, because how do I know that the man whom I am writing to has got a machine himself to read my letters from?' This may seem like pure romance to the average person who is not a commercial talking machine man, but it is nevertheless cold truth. Another misconception which almost invariably is encountered, when the machines have never been actually in use, is that the speed of the machine for transcribing can be so reduced as to make the record talk slow enough to enable the operator to keep up with it on the typewriter, and it is sometimes more difficult to get a man who is going to do the dictating to realize that the proper method is to cut the matter up into phrases of four or five words, than it is to get the typewriter operator to see that such is the proper method.

"It is really remarkable, though, the widespread use, which is increasing every day, which the commercial graphophone enjoys. From the most unexpected sources inquiries come, and even people who have before tried the machines and have been discouraged, are to-day again taking up the use of them eagerly.

"The principal difficulty which the commercial graphophone user finds in practice is the securing of capable operators of the machines who are at the same time good typists. Here there is an excelleut field for the commercial school that is sufficiently enterprising and abreast of the times to comprehend this new and daily increasing need, and take advantage of it.

"The opportunities for the company selling the machines to educate operators are very limited, because of the difficulty, in the first place, of getting operators to realize that this is an additional qualification for a position nowadays. The commercial school's position in this direction would be different, dealing with entirely inexperienced pupils and having the opportunity to educate them along all lines as well as merely in the direction of handling the graphophones. This difficulty, however, has not been so serious, but that a large number of large and small business houses in this district have seen fit to install the machines in their offices during the past month. Some of the largest concerns in the outlying district and cities have also either installed the machines or displayed sufficient interest in them to have trial outfits placed in their offices. Altogether it would look as if the often-talked-of day, when shorthaud would be a back number in the average business office were close at hand."

The "Family Theater" Co., a new local organization, have leased from the Gaumont Chronophone Co. one of their chronomegaphones, and are remodeling a building originally constructed for a vaudeville theater, at No. 1876 East Ninth street, where they will give exhibitions. The iuterior is being fitted up in the finest style, and will have a seating capacity of 600, furnished with up-to-date opera chairs. It will be an ideal moving picture theater.

The Catholic bishop of Cleveland, indorsing a crusade against Sunday dancing, in a public manifesto, takes occasion to also condemu the moving picture shows and penny arcades as being "mischievous as they are vile." He concludes: "I am in favor of Sunday baseball. God almighty never intended that the Sabbath should be a Puritanical one." The bishop may have reached his conclusions by reason of the fact that baseball is prohibited by statute, while the moving picture business is not.

Notwithstanding the large number of moving picture shows in town, most of them are doing well. "We aren't doing so badly here, said the proprietor of one of the 5-cent theaters. "We are clearing on the average about $1,800 a month, and I expect to do considerably better than that before the business wears out." "I didn't suppose you made that much in a year out of so small an establishment," said his acquaintance. "Why," said the man on the high tide of

THIS

CABINET

can be used for any make Talking Machine with or without head. If used with head the sound can be brought through mouth, if without, sound can be brought through column; records can be kept in column when head is used.

prosperity, "I know a fellow who gave up a $75 a month job and started one of these places in a location that you can hardly see, and although he has been there only a short time, he is clearing about $600 a month."

The Akron City ordinance under which Mr. Charles Decker was arrested, charged with operating a phonograph on the street, advertising a picture show, was declared illegal in habeas corpus proceedings, March 25.

REPEATING PHONOGRAPH CLOCK.

A Novel and Useful Creation Worked Out by a Clockmaker Downtown—Some Possibilities in Getting Lazy Men Out of Bed.

A downtown clockmaker has worked out a repeating phonograph clock, which in his belief will in a large measure supplant the old style of bell repeaters. His mechanical arrangement consists of a pair of cylinder records on which have been recorded the hours and each five minutes of the day. These are moved along a bar by clock work, and when it is desired to know the time, the pressure of a button throws the diaphragm into place, the record revolves and announces the time after this fashion—"two thirty-five." He says it is only a matter of mechanics to produce a clock that at the proper time in the morning will release a weight that will lift the clothes off of a bed and at the same time call out, "John, it's time to get up. Hurry on now, the breakfast is on the table and all getting cold. Come on, get a move on you, etc.," with such repetitions and variations as will be most pleasing and effective in assisting the slumberer in throwing off his torpidity.

AN ELECTRIC MOTOR HORN.

The electric horn for automobiles, an English device, is an electric buzzer, fitted to a common automobile "toot" horn. A brass cylindrical case contains a steel vibrating disc, held at its periphery by two flanges and two electro-magnets, and the rapid vibration of the disc caused by the magnetization and demagnetization of the magnets yields a sound which is magnified in volume and effectiveness by the horn. The current is provided by an eight-volt accumulator. The signal can be maintained as long as is necessary or desired, the blast being louder and more continuous than that of the ordinary wind horn, and with the switch on the steering wheel the driver can give his warning without removing his hand from the wheel.

A CLEVER COLUMBIA WINDOW.

The Skill of Harold Godwin Again Displayed at 353 Broadway Where He Conceived Something Entirely Original and Attractive —The New Marconi Records Featured in a Most Effective Environment.

The windows of the Columbia Phonograph Co., at 353 Broadway, under the able decorative ability of Harold Godwin, continue to attract crowds that at times almost block the sidewalk, and has become a model for many of the merchants along that thoroughfare. A recent display called attention to the new English song, "Riding in the New Electric Car." A diminutive trolley car ran around the window with a full complement of passengers, motorman and conductor. A dangerous crossing bore the sign, "Beware of Imitations," and "Stop-Look-Listen-Columbia Records."

The display of this week was wholly given up to the new Marconi records, of which a sample shipment has reached New York. The object lessons plainly show the remarkable qualities of these new products. A scale beam suspended from a beam stand has a Marconi record at one end and a feather at the other—a sign that aptly illustrates the fact that they are as light as a feather. Another corner has a record in an envelope, which has been through the post office, plainly illustrating that these records may be mailed with perfect safety without any packing. The two center displays are worthy of a careful study. Two records placed on edge have a continuous electric spark playing between them. An enormous spark coil capable of generating 300,000 volts is hidden under the window, and is used for this display.

The exhibit is to suggest the Marconi wireless telegraph, and as the record label bears a picture of Mr. Marconi, the effect is extremely pleasing. Another object lesson is the fact that the records are flexible. A small stand has been erected, underneath which is an electric motor with a specially designed shaft. This reaches up through the floor of the platform, and working up and down continually bends a Marconi record back and forth, while a sign asks: "How can you break a record like this?"—Music Trade Review.

TALKING MACHINE IN EAST AFRICA.

The Governor of British East Africa, while upon a recent visit to the wild trans-Tana districts, took along a talking machine, and the effect of its music upon the natives, a very primitive race, is said to have been wonderful to witness. In the Kenia forest, for instance, the natives could not be induced to come out of their retreats and meet the governor until the talker was started, when their curiosity overcame their fear and backwardness. Even then any unfamiliar sound proceeding from the machine, such as a bugle call, would cause the gallant warriors to retreat on the run.

A little more than a year ago the wife of an organist in Kansas City while visiting in Minneapolis, sang "My Rosary" for a talking machine record. Not long afterward she died. The phonographic record was sent to her husband. Occasionally he listens to the sacred song as sung by her, and it is a great comfort to him.

The Columbia will move their Yonkers store to 116 New Main street on May 1, where they will have much larger quarters in which to handle their increasing business. W. J. Hance is the manager.

GOOD REPORTS FROM ST. LOUIS.

Business Thirty Per Cent. Ahead of the Same Period Last Year—Walthall With Columbia Co.—Long Succeeds Ramsdell—Conroy Chats of Talking Machine Growth—Clancey's Good Columbia Report—Other Items.

(Special to The Talking Machine World.)

St. Louis, Mo., April 10, 1907.

The talking machine business still continues to boom, and trade for the month of March and the opening week of April is reported to be about 30 per cent over that for the same month a year ago. For the first quarter of the year business has maintained about this average, and the demand is for the best of goods. The record business is very heavy, and dealers are still suffering from a shortage of goods, and inability to get them as fast as needed.

E. B. Walthall, formerly manager of the talking machine department of the O. K. Houck Piano Co., left on April 1 to accept the position of manager of the retail sales department of the Columbia Phonograph Co. in Chicago. He left many friends here who wish him the greatest of success in his new field.

C. W. Long, formerly manager of the wholesale and retail talking machine department of the Cable Company, Chicago, has succeeded D. S. Ramsdell, formerly manager of the St. Louis Talking Machine Co., who has resigned to enter other business in Chicago. The departure of Mr. Ramsdell will be greatly regretted by all who knew him here, and his employes will remember him as a very kind and considerate employer. On the evening of March 21 Mr. Ramsdell gave a farewell reception to his former employes at his home, and during the evening they made him a very handsome present.

Charles P. Ramsdell, brother of D. S. Ramsdell, formerly stock clerk for the St. Louis Talking Machine Co., has resigned to go to Sioux Falls, S. D., where he will become a partuer in the Sioux Falls Talking Machine Exchange, which his brother, F. C. Ramsdell, conducts.

Mr. Ramsdell will be succeeded by L. A. Cummins, formerly connected with the talking machine department of the O. K. Houck Piano Co.

P. E. Conroy, president of the Conroy Piano Co., in speaking of their talking machine business, states: "I have been in the talking machine business twelve years, and the trade that we have had the first quarter of this year beats all records by a very large margin. Our trade throughout Kansas, Oklahoma and Texas, as well as other tributary States, has showed a phenomenal increase, and it is constantly growing, and the demand is for the best line of goods we carry." He added, "I consider this a remarkable showing in view of the fact that we are exclusively Edison dealers." Mr. Conroy will sail for a three months' tour of Europe in July, joining his wife and son, who are now in Berlin.

T. P. Clancy, manager of the Columbia Phonograph Co., reports a very fine trade for the month of March, and that their trade for the first quarter of the year will show nearly 30 per cent. increase over that of a year ago. The highest priced instruments are the best sellers, and the outlook is of the best. May Irwin, the actress, who recently played here, sang for some Columbia records, which will soon be on the market.

Marks Silverstone, president of the Silverstone Talking Machine Co., was called to Roanoke, Va., on March 26, by the death of his father. The funeral took place at Baltimore, Md., two days later. Mr. Silverstone returned the first week in April.

The Koerber-Brenner Music Co., report a fine talking machine trade for the month of April, and that everything is booming with them. A. Haas, one of their travelers, has left on a two months' Western trip.

The Balmer & Weber Music House Co. report a nice trade in their new talking machine department.

Manager Brewer, of the talking machine department of the Thiebes-Stierlin Music Co., reports an excellent business for the month of March, and that they sold a number of their highest priced instruments.

J. F. George Gunter, formerly with the St. Louis Talking Machine Co., has accepted a position as assistant to Manager Brewer, of the talking machine department of the Thiebes-Stierlin Music Co.

TO MAKE ELECTRIC SOUND DEVICES.

(Special to The Talking Machine World.)

Macon, Ga., April 8, 1907.

Citizens of the city of New York and of Macon made application in the Superior Court of Bibb last week for a charter for the American Callaphone Co. The application for charter recites that the capital stock is a million dollars and that half the amount has been paid in. The principal places of business will be Macon and New York. The applicants desire the privilege of increasing their capital to ten millions. The incorporators are A. G. Kaufman, L. J. Lippman and L. J. Waxlebaum, of New York City, and J. J. Waxlebaum and T. J. Carling, of Macon. The concern wished the right to manufacture and sell everything musical that reproduces sound by electricity or mechanical devices.

CRESSEY & ALLEN'S SHOW WINDOW.

(Special to The Talking Machine World.)

Portland, Me., April 9, 1907.

Cressey & Allen, the music dealers, recently had a window that attracted much attention. In the window was a turntable, seven feet across, and devoted exclusively to the display of Victor talking machines and appliances, the whole arranged in an artistic manner and making a very attractive display. The turntable was operated by electricity, and as it revolved, showing the many different machines, records, horns, etc., it gave the public a good idea of the class of goods to be found in the Victor parlors of this well-known concern.

Many a clerk has made customers for the store by being possessed of patience unlimited. Patience is to salesmanship what oil is to an axle.

THE AJAX—The Strongest Horn

Constructed in seventeen pieces of carefully selected, rust-proof sheet steel, thus giving the **AJAX** surprising strength, and **eliminates all danger in shipping and handling.**

ARTISTICALLY FINISHED HORN

Finished in light Enamel and Japan Colors. Baked in ovens built for the purpose. A positive proof against fading.

ATTRACTIVE HORN

THE AJAX is a horn of a very decided artistic appearance. A horn which you **will sell,** not keep.

We manufacture a complete line of Brass and Sheet Steel, Nickel Plated Flower Horns. Send for our new catalogue and prices—they will interest you. For further particulars, address

The New Jersey Sheet Metal Company

9-11 Crawford Street, Newark, N. J., U. S. A.

MUSIC OF THE JUNGLE

Reproduced by Prof. Starr Through the Medium of the Phonograph and Moving Picture Machine at His Interesting Lectures.

Prof. Frederick Starr, who returned some time ago from an extended visit to the African jungles, has been delivering a course of lectures at several of the leading universities on the lives and habits of the African cannibals, which have been interspersed with a number of love and war songs. Professor Starr did not waft the strains to the audience, but presented them by means of a talking machine, which he carried with him to the savage tribes on his 24,000-mile trip. He has recorded, he declares, all of the latest melodies of the pigmies, cannibals and barbarians of the Congo Free State.

Grand opera, he asserts, thrives among certain tribes—or at least something on the order of grand opera. Many of the cannibals were musically inclined—some with Caruso voices—and on certain festivities he was able to record the musical ceremonies.

The professor carried with him also a moving picture machine, and is therefore able to present a double bill to his classes. While the phonograph is reeling off the music the anthropologist throws the singer on a screen and sends him through his antics, which generally are quite varied.

THE TALKING MACHINE.

A Poetical Tribute by a Member of the Trade Which Is Worth Reading.

We are indebted to V. M. Hatfield, of the Hatfield Music House, Ossian, Ind., for the following tribute to the talking machine, which will be read with pleasure by our readers:

I have many home comforts and luxuries rare;
Diversions unnumbered that drive away care,—
Such as horses, and carriages, pictures and books;
Easy rockers, cigars, newspapers, and cooks.
I am fond of lawn tennis, and checkers, and cards.
To jovial companions I pay my regards.
But nothing affords me a pleasure so keen
As that musical wonder, my talking machine.

At the close of the day, when business is o'er,
I gladly escape from the cares of the store;
And flee to that hearthstone, where sunshine and cheer
Shed a radiance of welcome the whole of the year.
With the worries and cares of the day left behind,
A wealth of domestic enjoyment I find.
But the joys of the evening are heightened, I ween,
By that richest of treasures, my talking machine.

Some like the piano, while others insist
The organ stands first in the musical list.
The fiddle has friends, and so has the drum;
And even a bag pipe is music to some.
A cornet is pleasing; a dulcimer grand:
There's a ravishing charm in the village brass band.
I like all of these, and I have them. I mean
They're combined in my versatile talking machine.

Of heaven's rich gifts the most sensible choice
Is that envied possession, an exquisite voice.
A charming soprano, an orator bold,
Can quickly convert simple phrases to gold.
The well-rounded tones of a speaker has power
To hold an assembly through many an hour.
The world famous speakers I never have seen,
But I hear them at home, in my talking machine.

It sings like a bird, it cries like a child;
It scolds like a woman whose temper is "riled."
It puffs like a steamboat, it laughs like a clown:
It prays like a preacher when Satan's in town.
It swears like a parrot, it barks like a dog:
Declaims like a school boy, and grunts like a hog.
Its clever, its witty, its slangy, its green,
Its whatever you ask for, this talking machine.

There's one thing I recently happened to learn,
That a talking machine can serve a good turn.
There's an old-time adage you often have heard,
That a woman invariably has the last word.
I'm not much on argument, never could preach;
Like the ancient lawgiver, I'm tardy of speech.
So when the old woman gives vent to her spleen
I simply wind up my talking machine.

PETITIONING GERMAN GOVERNMENT.

The talking machine and record manufacturers of Germany are petitioning their government to prevent the revision of the Berne Convention so far as the free use of published music goes They maintain that the compulsory payment of royalties to composers or publishers would cripple their industry, which, after many losses and unexampled hard effort, is only just beginning to show returns.

BURKE CO. MAKE ASSIGNMENT.

Assets of the Brooklyn Co. Placed at $6,500 With Liabilities at $4,200—Business Is Being Continued—Thomas Burke Also Goes Into Bankruptcy.

On March 11 the Burke Talking Machine & Novelty Co., successors to Burke & Rous, 334 Fifth avenue, Brooklyn, N. Y., made an assignment to Leo Greenlinger. Their assets, face value, are placed at $6,500, with liabilities of $4,200. The business is being continued by the assignee, and it is probable the financial embarrassment is temporary; at least this is what the four leading creditors, whose claims aggregate over $3,000, are hoping. About the same time Thomas Burke, who was supposed to be the head and front of the company, went into voluntary bankruptcy on his individual account. It is claimed Mr. Burke had no financial interest in the company. The creditors are perplexed over the mixed situation.

LOVED WHAT HE ONCE DISLIKED.

Prof. Barili, the Well Known Musician a Great Admirer of the Talking Machine—Formerly Had No Use for One—Reason for Transformation.

Prof. Alfredo Barili, the well known Atlanta, Ga., musician, is the owner of a talking machine which he greatly prizes and regarding which there is quite a story. For a number of years, in fact, ever since talking machines were put on the market, they were Professor Barili's pet aversion. He registered an oath that he would never have one, and it only took the sound of a talking machine to set his teeth on edge. Last summer, however, fate conspired to make him the possessor of one, and, worse than all in his eyes, he actually played into one.

Professor Barili, as is well known, is a nephew of Adelina Patti, the famous singer. While visiting her last summer the agents of a talking machine company often induced her to sing into their machine. For years she had been importuned by various companies to sing for them, but the most flattering offers failed to tempt her. However, the particular talking machine company had made certain improvements which did away with her objections. She sang several songs to Professor Barili's accompaniment, and a short time ago she sent him a splendid machine with the records of her songs.

Professor Barili, in a chat with a writer in an Atlanta paper, says the occasion of her singing was an interesting one. Madame Patti was placed a certain distance from the talking machine, with a man behind her. As the range of the song was high or low she was moved rapidly forward or backward until it seemed that the breath would be jostled out of her; but, strange to say, her rather violent gymnastic exercise had no apparent effect on her and the records were well-nigh perfect. Considering Madame Patti's advanced age, of sixty-three, the records show her to possess a voice that is remarkable.

HENRY A. BISHOP ELECTED DIRECTOR.

On March 14, at a meeting of the American Graphophone Co.'s board of directors, Henry A. Bishop, of Bridgeport, Conn., was elected a member of the directory. The new director is a capitalist of note, widely known from his railroad connections, and at the present time is on the board of the following corporations: Western Union Telegraph Co., Connecticut National Bank, of Bridgeport; American District Telegraph Co.; also president of the Bridgeport Public Library and vice-president of that city's Board of Trade, besides being a director of every hospital, humane society and club in Bridgeport. Mr. Bishop is a graduate of Yale, and for many years was purchasing agent of the New York, New Haven & Hartford Railroad, and subsequently vice-president of the Western Maryland Railroad.

SALE OF USED TALKING MACHINES.

Upon the opening of their handsome talking machine parlors on the second floor of their building at Seventh and Main streets, Little Rock, Ark., the Hollenberg Music Co. held a sale of used "talkers," thus enabling people to possess a machine who would not pay the price of a new machine. This is said to be the first public sale of "used" machines.

The new prices on horn cranes manufactured by the Hawthorne & Sheble Manufacturing Co. have made such a hit that this company now have nearly one hundred hands working on cranes alone, and still they find it difficult to keep pace with the trade requirements. It is the old story—a good article sold at a popular price.

LOUIS BUEHN & BROTHER

FORMERLY

WELLS PHONOGRAPH COMPANY

offer to the dealers within several hundred miles of Philadelphia the largest stock of

Edison and Victor Goods

for their selection. Also a complete line of supplies and all the leading lines of

Horns, Cranes and Cabinets.

We make a specialty of supplying the needs of the dealer and promise the best possible service. If not already dealing with us it will pay you to get in touch with us. Prices on Horns, Cranes, Cabinets and all supplies for the asking.

HARMFUL LEGISLATION.

Proposed Changes in the Conditional Bill of Sale in the Connecticut Legislature Have Been Brought to the Attention of the Talking Machine Trade in a Forceful Manner by the Pardee-Ellenberger Co. of New Haven.

(Special to The Talking Machine World.)

New Haven, Conn., April 4, 1907.

The various legislatures, including that of Connecticut, have been giving much attention this year to changes in the conditional bill of sale, used so generally in the musical instrument business. The bill recently introduced in the Legislature of this State, and which later was transferred to the judiciary committee, has been the subject of much concern to talking machine dealers. Among the first to recognize how unfavorably this measure would act on the talking machine interests were the Pardee-Ellenberger Co., the enterprising jobbers of Edison phonographs and records, in this city, who at once issued the following illuminative circular to the trade:

"A matter of vital interest to every phonograph dealer in the State of Connecticut is the presentation of a bill before the present session of the Legislature relative to goods sold on conditional bill of sale, or lease, as it is more generally called. The present law on this subject is, to quote from Chapter 113, Public Acts of 1905, as follows:

"'Section 4684 of the Grand Statutes is hereby amended by inserting after the word "instruments" in the seventh line of said section the word "phonographs and phonograph supplies," so that said section as amended shall read as follows: all contracts for the sale of personal property, conditioned that the title thereto shall remain in the vendor after delivery, shall be in writing, describing the property and all conditions of said sale, and shall be acknowledged before some competent authority and recorded within a reasonable time in the town clerk's office in the town where the vendee resides; but the provisions of this section shall not apply to household furniture, musical instruments, phonographs and phonograph supplies, bicycles or to property exempt from attachment and execution. Approved June 6th, 1905.'

"The bill as presented at this time was to eliminate the words 'musical instruments' from the present statutes, and at the hearing before the Judiciary Committee, the author of the bill gave notice that he intended to introduce a substitute bill which would cut out the words 'Phonographs and phonograph supplies' as well.

"Relieved of all its legal verbiage it would mean that if this was enacted, the sale of every phonograph or phonograph accessory sold on lease would have to be acknowledged before a notary or other magistrate, and would then have to be recorded in the office of the town clerk in the town where the vendee, or customer, resides; otherwise the protection afforded the vendor, or dealer, by the conditional bill of sale or lease would be legally forfeited in case of an attachment by a third party. The inconvenience and expense of such a course, to say nothing of the objections of purchasers to have the details of such sales made public is so apparent that no comment by us is necessary.

"We were represented by counsel at the hearing and vigorously opposed any change in the law and also claimed the right for a hearing for the phonograph dealers at some later date should the substitute bill be presented.

"Should the author of the bill persist in his purpose to present a substitute bill or should any other attempt be made at any time to take away the present rights of phonograph dealers through change in the existing law, we hope every dealer in the State will request his Senator and Representatives to oppose such substitute bill. We, on our part, shall follow this matter, and by every legitimate effort protect, to the extent of our powers, our dealers from annoying, expensive and useless legal requirements.

"It may not be generally known that it was due to our initiative and efforts that in 1905 the words 'phonographs and phonograph supplies' were inserted in this statute, relieving the dealer beyond any question, from the necessity of recording conditional sales of these articles.

"The welfare and interest of our dealers is ours as well, and they can rest assured that, as in the past, we shall look after their interests and aid them in every way possible in the safe, secure and profitable carrying on of their business."

Thanks to the immediate action taken by the Pardee-Ellenberger Co., the dealers throughout the State have been petitioning their representatives in the Legislature at Hartford to fight hard against the passage of this measure and the probabilities are that it will not be reported favorably by the Judiciary Committee.

THAT MYSTERIOUS MACHINE.

Who tampered with the correspondence talking machine? is a question just now agitating many minds, and a still hunt is in progress for the mischievous person responsible for the unaccountable antics of a hitherto staid and sober talking machine, says the Washington (D. C.) Times. It had never behaved that way before, but the clerks in the bookkeeping division were treated to a rather spicy and entertaining vaudeville performance the other day before the thing was squelched. The enunciation of the talking machine is particularly loud and distinct, and when it said, "Oh, fudge! I'm tired of this," everybody in the room, including several ladies, immediately whirled about in their seats and gazed with astonishment at the spectacle of a talking machine going on a rampage. And a rampage it surely was. The voice was rich and melodious. After it relieved its mind of the way things should be run at the printery, it changed tactics and whistled a bar from "Hiawatha." Then the mournful strains of "Wait Till the Sun Shines, Nellie" were beginning to issue forth, when one of the clerks recovered her presence of mind sufficiently to turn the stop lever and choke it off.

Mrs. Whitson, proprietor of the Whitson Music Co., Albuquerque, N. M., is one of the women music dealers who have made a success of selling talking machines. She handles the Victor and Edison lines.

Some Facts Worth Considering

THE talking machine man frequently asks, "How can I increase my business?" The answer is easy. Place on a side line which takes but little space, which is attractive, and a standard in its particular line. Take the **Black Diamond Strings,** for instance. Steel and wound. New process. They are the finest manufactured. They are used by all of the prominent artists, and you will have a trade coming your way when it is known that you handle the "Black Diamond." Music dealers all over America, and all over the world for that matter, know full well the value of this product.

National Musical String Co.
New Brunswick, N. J.

Promptness

That's a word to conjure with! To build up a larger business; to draw your old customers closer to you; to make a good impression on new customers; to add a pile of dollars to your bank account.

How are you fixed to take care of your customers' wants? Is there anything in the talking-machine line that you haven't in stock—that some customer is liable to ask for and catch you napping? Would you be able to tell him or her exactly when you would have it? Could you be sure of keeping your promise?

That's when promptness counts—and it's largely up to your jobber. He must be prompt or you can't be. How does he size up when a similar line of questions is pointed at him? Reason out for yourself what his answers would be, and what they would mean to your business.

Our service is always right and particularly valuable when you get in a pinch. That is the time when you are sure to appreciate our promptness—the fact that we ship all goods the same day the orders are received.

Try us on anything you want in Victor talking machines and records, English needles, fibre cases, trumpet horns and other accessories.

Write today for our latest catalogue and see what a complete line of goods we handle.

STATION O

PRACTICAL SUGGESTIONS AND COMMENTS.

CONCERT HALL TRANSFORMATION.

In talking with a Westeru dealer the other day he stated that in the several stores which he controls he has so arrauged the establishments that he can turn them into regular concert halls tor talking machine recitals wheuever desired. On one side the demoustrating booths are so arranged that they can fold up, forming an ornamental background, while ou the other side the counter is portable and folds up right under the shelving. At the rear is a handsome little stage arrangement which virtually falls into place without any apparent effort. This, with a fair equipment of camp stools, or other furnishings, turn the place into a handsome concert hall that holds a goodly number of people. As compared with the expense involved iu fitting out the place, the results in increased busiuess are amazing. Here is a tip worth noting.

IMPORTANT TO USE NEW NEEDLES

Dealers should make it a point to impress on their customers the advisability of not using a cheap ueedle more than once. Very many good records are spoiled by using a poor needle over again, and oftentimes the disc is actually damaged. Needles are inexpensive enough, while records, particularly those of grand opera, cost too much to experiment with. The needle, wheu worn, becomes broad and blunt, and if used over wears off not only the impressions made by the recorder, but is liable to spread or break the thread, in which case the disc is absolutely useless, inasmuch as the needle will not feed past the break. This damage is impossible when the Petmecky needle is used.

HOW NEEDLES ARE MADE.

And this brings to mind that our readers will doubtless be interested in how needles for high-grade talking machines are made. In making them a carbon steel road about 3-16 inch in diameter is generally used. The first process cousists in reducing this rod to wire about 1-16 inch in diameter, that of the finished needle. The operations are as follows: The rods are first heated in an annealing oven, and then slowly ccoled in order to soften them. In this heating and cooling process they become oxidized or coated with scales. To remove these they are tapped with hammers, after which they are "pickled" in a solution of acid and water, and again heated in another oven much cooler than the first to remove the effects of pickling. They are then taken to the wire-drawing machine, where the 3-16 inch soft rod being drawn through a die plate about ⅛ inch in diameter, is reduced to No. 8 wire. Drawing compresses and hardens the metal, making it necessary to repeat the annealing process before another reduction in diameter is possible. Therefore, these operations must be repeated about five times before the requisite reduction to 1-16 iuch, or No. 16 wire is obtained.

PASSES TO THE FORMING MACHINE.

The long coil of small wire is now passed to a forming machine, in appearance like a lathe, which in spinning around the wire, as fed through it, straightens and cuts it into rods about 18 inches in leugth. These rods are gathered up and taken to a grinding machine, an ingenious special mechanism which points the ends of about 150 of them at a time. They are fed to it sideways, and are held in exact position, fed through and turned as they grind against the stone by means of rubber tired wheels or rollers. One set of ends being pointed, the rods are reversed and again fed to the grinder to point the opposite ends. The now double-pointed rods pass to the cutting machine. Its operator siezes a handful (about 100) pushes the ends agaiust a plate to even them, places them in the cutting machine agaiust a gauge plate set ⅝ inch from the shear, and touching a lever cuts off 100 rough needles at a stroke. Turning the bunch of rods, eud for end 100 more needles drop into the hopper. The shorteued rods pass to the next grinder and theuce to the next cutter, and so on until the rod is about used up.

HARDENING THE NEEDLES

The now rough needles are spread evenly to the depth of an inch over the surface of a heavy iron plate or tray, and while on this tray are heated cherry red in a special furuace, on being removed from which they are at once thrown into large double cans containing whale oil to harden them. These cans are kept in a water tank for cooling purposes. The inner cans have strainers at the bottom, so that when removed with needles in them the oil drains back into the outer cans, which always remain in the water. The needles, perfectly shaped and hardeued, but still in the rough and gummy with oil, are placed in a huge pan or trough, which slides back and forth with jerking motion (somewhat like that of an ordinary ash sifter) ou the top of what may be called a "washing machine." Here they are treated to a bath of soft soap or soda and water, as they roll about in the bottom of the pan. After a thorough shaking up in this soapy mixture they are drained, and while still damp are placed in a tumbliug barrel, or, in other words, a slowly revolving barrel, pivoted at an angle of about 45 degrees. About double their bulk in dry sawdust is mixed with them, and in a short time dries them thoroughly. They are then separated from their sawdust towel by a rather ingenious contrivance, which sucks off the dust and leaves the needles.

PREPARED FOR FINAL POLISH.

It is now necessary to prepare their surfaces for the final polish, and to do this they are scoured. A batch numbering several thousand is mixed with a pasty looking compound, and the mass is wrapped into a cylindrical canvas packet about 5 inches in diameter and 2 feet in length. Several packets, tightly bound around with strong rope, are placed in a machine called a "mangler," in which they are rolled back and forth between two slabs as one would make a roll of butter. After this careful rolling or massage treatment is continued for some time, the needles, by rubbing against each other in the scouring compound, are thoroughly cleansed and smoothly surfaced, and are taken from the packets. They are then given a rinsing in clear water, and another turn in the sawdust barrel, after which they are for the last time packed into sausage-like canvas casings and rolled this time with a fine polishing compound. From this last mauling they emerge as finished product, and are sent to the stockroom, to be weighed (not counted) into packets of 100 or more, as required.

FORTY-TWO HANDLINGS IN ALL.

There are about 16 processes between the steel rod and the finished needle, or, if we count the number of operations uecessarily repeated in the wire drawing, annealing process, pickling, hammeriug, etc., there are about 42 handlings in all, and yet in no case is a needle handled singly as such.

NOISES IN OPERATION.

J. H. Wilson, of Salt Lake City, Utah, writes to The World that some customers to whom he recently sold machines complain that when they put on a record there is a griuding noise like a buzz-saw in the machine, and asks for a remedy. With such a lack of detail, it is almost impossib e to auswer fully, but the reason for this grinding noise is generally found in the governing shaft. If the noise is so great as to be noticeable when the machine is playiug, it would be best to give the instrument a thorough overhauling. It may be well also to put in new motor suspeusion springs, which, if properly adjusted, make the machine practically noiseless.

HANDY OUTFIT FOR REPAIRING.

The same correspoudent inquires where he could procure a convenieut outfit for repairing machiues. In this counectiou we may say that

Michigan Dealers Should Send Their Orders to

GRINNELL BROS., DETROIT

ENLARGED and excellently equipped quarters, devoted exclusively to the wholesale Talking Machine business, enable us to give service unexcelled for promptness and accuracy. Orders invariably filled same day received, and none but absolutely new goods sent out under any circumstances.

PERFECT GOODS
PERFECT SERVICE
PERFECT SATISFACTION

WE carry an immense stock of everything in VICTOR and EDISON goods —Machines, Records, Horns of every description, Cranes, Record Cabinets, Needles, etc. No matter where located it will pay you to open an account with us. Write for our Catalogues and prices, and DO IT TO-DAY!

Try Us on Your Next Order! We Guarantee to Please You!

one of the best we know of is Kaiser's Handy Pack. It contains thirty small bottles, which are labeled blank for contents. They hold all needful supplies for repair parts for the reproducer and recorder, and will be found invaluable to dealer or repairer. The pack occupies a comparatively small space, being 12 by 14 inches, and can be secured through L. Kaiser, the inventor, 32 East 14th street, New York.

TROUBLES WITH SOUND BOXES.

"Many customers come in with their sound boxes and claim they are imperfect," said the repair man in a city talking machine store. "When I take them in hand I almost invariably discover that the screws that act as the tension on the rubber gasket that holds the diaphragm in place has become loosened or that a thick coating of dust has become attached to the edges of the diaphragm. The result of the former is a disagreeable rasp, which is ofteu attributed to the record. The matter of tightening them up is simple, and every dealer should carefully examine the sound boxes on the machines he sells to make sure that they have been properly tightened up or have not become loose in use in the warerooms. If the dealers would iustruct the users of talking machines to cover up sound boxes when not in use, and to dust them out occasionally with a fine camel's-hair brush, they will find their patrons receiving much greater satisfaction from their purchases. An accumulation of dust prevents the proper vibration of the diaphragm, and in consequence the tone is lacking in resonance, the same as that of a violin when a mute is placed on the bridge."

THE RUSTING OF NEEDLES.

"I have recently discovered that much of the wear on disc records come from the fact that the fine points on the needles now in use is extremely liable to rust," said a dealer to The World, "and I am now treating all of the needles used by me so as to prevent that difficulty, and am advising my patrons to buy in small packages. I think if the points could be treated to a thin bath of copper, much of this trouble would be obviated. When the point of a needle is attacked by rust the friction against the disc wears it away much more rapidly than is intended, and as a result, it is widened out to an extent that seriously damages the thiu walls, particularly when it is used on a 12-inch record. 1 make it a point to keep all needles in stock in the dryest place I can find, and even then I have opened new boxes and found the points imperfect. Were it not for the cost, I believe tempered manganese bronze would make an ideal material for needles, and I have made a few out of that metal and have found them to wear much better than steel, and practically free from ordinary oxidization. They can be made harder and given a higher polish than anything except nickel steel, which also might prove a good needle material."

SPECIAL SERVICE OF SONG

For Easter Heard Through the Talking Machine —How Good Music Was Enjoyed.

In a nearby suburban church, where the choir is composed of the rawest kind of raw material, it was decided to have a special service of song for Easter, but the progress was slow and very painful to the hearers. Finally a geutleman of the congregation, who possessed a good disc talking machine, took it to the rehearsal. The tenor was struggling with "The Palms." The record of that song by one of the best tenors was placed on the machine, and he was instructed to sing in unison with it. The first few attempts resulted in a dire failure, but eventually he won out. "Come All Ye Faithful," by a quartet, was used to drill the full choir with equal success. The result was a surprise to the congregation when Easter morning came. The timing of the records to the organ was accomplished by regulating the speed of the machine. The choir is now regularly practicing by the use of the talking machine as a leader, and the list of sacred songs published by the various companies is being carefully searched for all that can be used on the various occasions.

PIANO DEALERS MUST WAKE UP.

Will Have to Regard the Talking Machine as a part of the Legitimate Music Trade Business —An Interesting Chat on This Subject.

One of the leading piano dealers in a large Pennsylvania city, who carries a full liue of talking machines, recently said to The World: "I believe the time is at hand when the piano dealer will have to regard the talking machine as a part of the legitimate music trade business, and take steps to handle it as such. Since taking it up 1 have found it not only profitable from the sale of machines and records, but from the sale of pianos and music to the owners of the machines. I know that they have assisted in the sale of pianos by making the owners realize that the manual production of music is even a greater pleasure than the automatic reproduction of the machine. I have also fouud that the sale of music has been increased through their agency, the publishers to the contrary. Many of those who buy a record come back in a few days and ask for the published song, and I am now trying to keep copies of the words and music of the popular records in stock. In my store the talkiug machine department receives the same attention as does the oue devoted to pianos and organs, and the public will naturally prefer to go into a reputable piauo store to buy machines and records than to a place where the talking machine is the ouly article of musical merchandise, the combination being bicycles, caudy or some other wares foreign to that class of business. Of course, stores devoted strictly to the talking machine business are another thing, and they are tending to elevate the business wherever established if conducted properly. I find in many of the large cities the leading piano houses are doing the best talking machine business, and have a class of customers that will not go to variety or department stores."

An excellent talking machine busiuess is done in Margaretville, N. Y., by Charles Gorsch, who handles the Victor liue.

RECENT INCORPORATIONS.

The Standard Talking Machine Co., Chicago, have incorporated with a capital of $2,500 for the purpose of manufacturing talking machines. Directors: W. B. Walrath, Clinton S. Woolfolk, Robert L. Lane.

* * * *

The American Film Service, Chicago, have incorporated with a capital of $2,500 for the purpose of manufacturing moving picture machines and parts. Directors: Leo Schoenbrim, Joseph Burke, Charles Lederer.

* * * *

The National Cameraphone Co., New York, have been incorporated to manufacture moving picture machines, sound machines, give exhibitions, etc. Capital, $150,000. Incorporators: James A. Whitman, Francis Fitch, Arnold F. Wainwright, 42 Broadway, New York, and others.

* * * *

The Solon Vendophone Co., Armour, S. D., a foreign corporation, has filed a certificate of incorporation with the Secretary of the State of Wisconsin. Capital, $25,000. The principal place of business, Superior, with W. F. Albright as ageut.

* * * *

La Compania Edison Hispano-Americano (phonographs), Newark, was incorporated last week with the Secretary of State of New Jersey, with a capital of $25,000. Incorporators: John E. Heim, Hugo Boepple, Jr., John G. Van Blarcom.

Branching Out—Seymour Specialties—Decision in Edison Bell vs. National Phonograph Co. Litigation—Columbia Staff Changes—Visitors to Leipsic Fair—Plan for Permanent Talking Machine Exposition—Battistini Latest Gramophone Recruit—Other News of Interest.

(Special to The Talking Machine World.)

World Office, 69 Basinghall Street,
London, E. C., England, April 5, 1907.

The London talking machine trade is not in a very flourishing condition, the majority of dealers and factors reporting business as quiet during March. This is apparently not attributable to anything in particular, yet be it recognized that the cycle dealer knows more about it than any one. He will tell you that there is no demand for records, the season is over and so forth. It must be so—it is so, he has spokeu! And all we can do is to take up the pen in corroboration—more or less. I prefer the "less." Unfortunately the talking machine trade cannot at present be independent of cycle dealers collectively, but there will come a time—and in the not far distant future, too—when this class of shopkeeper shall be cut off the books as unfit to handle musical goods. "Unfit" in more senses than one. They are in the first place bad payers, cause a lot of trouble to the factors, while, as a rule, they are not too well educated, and in the majority of cases lack the essential elementary musical knowledge to sell records, however good a salesman they may be of cycles. And is it to be supposed that the record enthusiast could tolerate being served by such tradesmen who often wait upon a customer iu their dirty greasy overalls straight from the workshop? No, he demands to be served by a man decently clad, who is au fait with all the latest selections listed by the various companies; in fact, the talking machine salesman of the future must of necessity be associated in more appropriate surroundings than that usually obtaining in cycle shops.

At the American Talking Machine Co., I was recently discussing this matter with Mr. Nottingham, who advanced some pertinent views along the above lines. At the same time objection is taken to the man who mixes up tar, soap, shaving, etc., with the sale of talking machine goods. With the object of eliminating these jugglers in ordinary to all and sundry trades, Mr. Nottingham is shortly convening a meeting of factors to decide upon the best means of protecting the genuine dealer from such and other shopkeepers who stock a few records and obtain to order only. Said my informant: "To have to pay carriage on and supply a dozen or so records, not only entails loss of valuable time, with small financial benefit to us, but is grossly uufair to the dealer who makes a good show and sends large orders, and who, in a great number of instances, occupies premises a few doors off the man in questiou, who very often cuts prices as well. The chief firms have been approached upon this subject, and it is to be hoped that an agreement will be come to, to supply not less than a fixed quantity and at fixed prices. The effect of such reforms means the saving of considerable trouble aud office expenditure, and the trade all round will attain a much more satisfactory condition by giving encouragement aud protection to legitimate and enterprising dealers."

A New Double-Sided Disc.

The British Sonogram Co., Ltd., are the pioneers of yet another disc double-sided record, priced at 2 shillings. It is flexible and unbreakable, and can be sent through the post in just an ordinary envelope without any risk whatever. A good and varied repertoire by the best talent obtainable will be provided. The directors of this company include many well-known men, among whom may be mentioned Paul Mellerio as managing director, late of the British Zonophone and Gramophone companies; Mr. Hans Knudsen, of liquid air fame, will act as consulting engineer, while G. H. Burt will manage the works. The latter gentleman is perhaps better known in America, where he fouuded the Burt Co. some years ago. Others associated are D. J. Rees; secretary, Mr. J. Dempsey; sales manager, Mr. Sidney Smith; musical director, whose reputation as a composer and conductor is well known. The company have a fully equipped and up-to-date factory at Stockport, and it is their intention to secure London offices in City Road.

Edison-Bell Co.'s Latest Productions.

The Edison-Bell Co. announce that they will have ready shortly four new types of phonographs, which will be manufactured in their own premises. No. 1 will run two records, No. 2 four, No. 3 six and No. 4 ten records at one winding. The retail prices are £1 15s., £2 10s., £3 15s. and £4 15s., respectively. The "Gem" and "Standard" makes will be continued.

Novel Development of the Recording Art.

There is an action pending affecting a large motor bus company who have refused to accept a number of new buses from the manufacturers on the ground that they would not be licensed to run on the streets, owing to the very excessive noise made in running. In order to judge of the noise difference between these and other buses, Mr. C. R. Johnstone, chief of the Edison-Bell recording staff, recently took records both in and outside of a number of buses at midnight on the high road not ten miles from London. The results were eminently successful, and the records will be put in as evidence at the trial.

The "White" Record for Canadian Dealers.

In conversation recently with James H. White, of the Geueral Phonograph Co., he said: "In the last issue of The Talking Machine World you gave currency to the fact that we are receiving large orders from Australia for the 'White' record, I may say the extent of the order was far in excess of the number mentioned, which is significant of the fact that our special bid for the foreign and colonial trade has brought us much business. It may interest your readers to know that we have closed a contract with a large German firm to supply no less than one million records at the rate of 20,000 per week. This agreement will entitle the firm in question to supply the demand in both Germany and Austria. We shall ourselves supply direct to all other countries, and we especially invite application from Canadian dealers who do not handle the 'White' record. The preferential tariff allows of export, and we can supply to any extent. I am coufident there is a good field in Canada for cylinder record trade, and if necessary we shall send a representative to break ground in all the provinces, as the 'White' record provides a fair margin of profit to the trade." Apart from the cylinder record, the General Phonograph Co. will shortly have their "Phono Disc" ready, and have also started manufacturing a disc machine, which, from personal test, proved itself most reliable. The motor is well made, and will run two 7-inch or one 12-inch record at one wind.

THE NEW REX RECORD CO., LONDON

PATHÉ FRÈRES—LONDON

FROM OUR LONDON HEADQUARTERS—(Continued.)

The case is round and made of metal, the sound-box, fitted with a permanent sapphire pointed needle, reproduces a full and rich tone, and a special attachment is provided to play gramophone and other needle cut records, while the tone arm is surmounted by a prettily shaped flower horn of an exclusive pattern. The whole outfit retails at the extraordinary low price of £2, and shows a good profit for the dealer.

Russians Enjoy the Gramophone.

A Russian cruiser squadron recently paid a two days' visit to these shores. At the invitation of the King a select party of sailors journeyed to London sightseeing. In the afternoon a visit was paid to the Hippodrome, and what most interested the sons of the sea was the animated pictures and gramophone, so said a sailor visitor in conversation with a Daily Mail representative.

New Talking Machine Novelties.

Fr. Rauth's announcement (elsewhere) contains particulars of some fine talking machine novelties and accessories. He is also advertising cheap disc machines for export and genuine recording and reproducing sapphires. The Lyraphone double-sided disc record, which Mr. Rauth is handling in this country, is well supported by up-to-date dealers, who appreciate the advantages of these full-toned records, which provide a repertoire of an international character.

Russell Hunting Co.'s New Building.

By the time this is in print the Russell Hunting Record Co. will be housed in their new building at 13, 15 and 17 City Road, some particulars of which I shall give in our next issue. For the present the company announced a very special Welsh list of records, which are considered the best ever made. "Lilley," for titles, the well-known Cardiff (Welsh) factor, has placed the largest order received from the English factors. He writes in regard to these Welsh records: "Sales booming, everybody delighted and enthusiastic." Ted and Mary Hopkins and Tom Owen —three very successful and popular Welsh comedians—are at their best in these records, while Mr. David Brazell, baritone, records three of the popular Welsh selections in the native vernacular. There are also Welsh airs by Hunting's concert, and the Imperial Infantry bands. All fine sellers.

Seymour Phonograph Specialties.

F. M. Russell & Co. have issued a very neat and comprehensive catalogue of the "Henry Seymour" phonograph specialties, covering reproducers with various diaphragms, recorders, amplifying horns, tone analyzers, sound-tight joints, machine sundries, etc. The difference between the trade and retail prices show a fair margin of profit to the dealer. Anent the "Seymour Indestructible Record," I am authorized to say that the many difficulties which arose in equipping their temporary factory in Clerkenwell have been successfully overcome, but that the trade must not expect to be fully catered for until more plant has been laid down at the company's larger works in Willesden. We are now engaged in fitting up these works," said Mr. Palliard, "but until they are completely equipped we shall not possibly be able to meet the demand. This, judging from the enormous number of inquiries which we received even prior to the issue of our samples to the trade. The price of this indestructible record is fixed at 1s. 6d. In our next issue further particulars will be given.

Referee to Assess Damages in Edison-Bell Suit.

The case of the Edison-Bell Consolidated Phonograph Co., Ltd., plaintiffs, versus the National Phonograph Co., Ltd., defendants, in the High Court of Justice, Chancery Division, has created quite some attention in the trade. The cause of this action arose in consequence of a circular issued by the defendants on the 13th of September, 1905, of which the following is a copy:

"TO ALL FACTORS—MISUSE OF NAME 'EDISON.'

"In consequence of the misunderstanding that has arisen in the confusion of trade names The National Phonograph Company, Limited, who are the sole owners of Mr. T. A. Edison's autograph trade mark and the sole distributors in this country of his genuine phonographs and records, hereby give notice that they cannot supply their goods to any dealer who is handling or continues to purchase goods made in imitation of genuine Edison manufactures. To prevent misconception it is necessary to announce that this Company has no connection whatever, directly or indirectly with any other company in this country, and that no other firm has any right to the use of Mr. Edison's name, trade mark and present manufactures.

"THE NATIONAL PHONOGRAPH CO., LTD.,
"JAS. H. WHITE, Managing Director.

A writ was issued by the plaintiffs on the 21st of the same month, the claim being (1) a declaration that the plaintiffs are entitled to use the name 'Edison' in connection with their phonographic goods, subject only to the restrictions on such user imposed by clause 2 of an agreement dated May 6, 1904; (2) an injunction to restrain the defendants from publishing, issuing or circulating any circular, or other advertisement, calculated or intended to induce the belief, and from otherwise representing that the plaintiffs are not entitled to use the name 'Edison' subject to the said restrictions; (3) damages; (4) costs.

This action came for trial before Mr. Justice Neville on Friday, the 22d of March, and lasted until Monday, the 25th, on which day his lordship gave judgment in the terms stated below:

Counsel for plaintiffs stated that both they and their predecessors had, since 1892, used the name of Edison-Bell, under an agreement with Mr. Edison. Mr. Edison was a shareholder in the defendant company, which was registered with a capital of £100, and was an American company.

For the plaintiffs, Mr. J. E. Hough, manager, gave evidence as to the right of the company to use the name, and the consideration paid for such right by the predecessors of the present company, namely, £40,000, and also as to the injury to the plaintiffs' business caused by the

THE GENERAL PHONOGRAPH COMPANY, Ltd.,

26 Euston Building, Euston Road
LONDON, N. W., ENGLAND

FROM OUR LONDON HEADQUARTERS—(Continued).

issue of the said circular. Several of the plaintiffs' factors also gave evidence to the effect that they understood and fully believed that the circular referred to, and was aimed at, the Edison Bell Co. and their products, and indeed referred to them and no other. A number of witnesses who were called stated that they had been induced by the circular to withhold orders from the plaintiff company, but admitted that the real Edison goods were sold by the defendants.

For the defense Mr. Croydon Marks, who is a director of the defendant company, and the attorney in Great Britain of Mr. T. A. Edison, alleged that the circular was not intended to, and did not, in fact, refer to the Edison-Bell Co., but was intended to be applied to various wrongdoers who duplicated records, and who used the name "Edison" as applied to their commodities, electric rings, bicycles and the like.

Mr. Marks also stated that the circular was drawn by himself in conjunction with Mr. White, the then managing director of the company, but was issued by Mr. White during his, the witnesses' absence from London; in fact, three or four days after he had left England for America, and upon receiving a copy of the same while in New York, and after consultation with Mr. W. E. Gilmore, it was decided to cable to England to withdraw the circular, which was accordingly done, the circular being withdrawn on the 22d of the same month.

The learned judge, after having heard the counsel for defendant in reply, intimated to the plaintiffs' counsel that he did not require him to reply on the case, and proceeded to deliver judgment, in which he stated that the plaintiffs were entitled to judgment on all issues, and were entitled to an injunction against the defendants, who, although they had withdrawn the circular, had not withdrawn the innnendo, or definite statement that the plaintiffs were not entitled to the use of the name "Edison."

He also found that the circular was libellous and malicious, and that the plaintiffs were entitled to substantial damages, irrespective of the absolute proof of such damage, bnt that he would not assess damages, it being a matter which should and mnst come before an official referee for assessment. He also directed that the defendants must pay the costs and refused the application of the defendants' counsel that the payment of costs mnst depend npon the assessment of damages, as he found that whatever amount should be assessed the plaintiffs had in fact sustained damage and the costs must be paid by the defendants.

Various rumors have been floating about as to the amount of damages claimed by the plaintiff company. Having made inquiries I find that no specific amonnt for damages was claimed, that being a matter which mnst be left for the assessment of the official referee, who will be duly appointed.

Some Columbia Staff Changes.

The Columbia people have enlisted the services of H. T. Bristow, who has hitherto represented the Neophone Co. in the Eastern connties. The late export manager of the Neophone people, T. F. Bragg, is another recruit to the Columbia Co., who have given him the superintendence of their shipping department.

The position of assistant manager of the London branch of the Columbia Phonograph Co., vacated by C. J. Hopkins, whose removal to Buenos Ayres, we annonnced last month, has been filled by the appointment of W. E. Hanshue.

The managership of the office graphophone department of the Columbia Phonograph Co. has been put into the hands of W. Pike, lately with the F. E. Potter Advertising Agency. The extensive acquaintance with London bnsiness houses gained by Mr. Pike while with his old firm will stand him in good service in his new position.

A Remarkable Record.

A leaflet, which the Columbia Phonograph Co. are issuing to users of their records, calls attention to a most attractive composition by Francis Popy, entitled "Whistling Pierrettes Polka." This is recorded in splendid style by the London Military Band on Columbia cylinder and disc records Nos. 201,440 and 25,958, respectively. The piece is qnite exhilarating, and has all the charm of novelty, some original effects being secured by very pretty whistling passages. It evokes such admiration wherever performed that the Columbia Co. are publishing this special leaflet lest any nsers of Columbia records should overlook the nnmber.

The Leipzig Fair.

According to reports which I have received, the annual fair at Leipzig was a complete success in every way. Business during the week maintained a good average in comparison with previous seasons, but there were not so many talking machine novelties in evidence as has hitherto been the case. Among the important buyers who attended the fair were: George Murdoch and Ronald Fulton (J. G. Murdoch & Co.), Louis Sterling (Russell Hunting Record Co.), F. W. Nottingham (American Talking Machine Co.), Max Samuel and Mr. Balcombe (Barnett, Samuel & Sons), Mr. W. Herzog (New Polyphon Supply Co.), Swaine Stoddart (Parker Phone Co., Bradford), Mr. and Mrs. Charles Duwe; Mr. Ross (J. J. Stockall & Sons, Ltd.), O. Ruhl (Beka Record Co.), Mr. Harris (Harris & Co., Dublin), E. C. Paskell (Colmore Depot, Birmingham), and I. Lyon (Lyon & Co., City Road, E. C.).

Columbia at the University Races.

The Oxford and Cambridge University boat race presented an opportnnity of forcefnl advertising which the Columbia Phonograph Co. did not allow to pass. The thonsands of persons who had gathered to watch the fortunes of the rival blues were regaled for an hour and a half before the race by a lively graphophonic entertainment. The Colnmbia people had secured a launch, on which they carried some of their typical models and a supply of records. Flags and streamers were gaily displayed, announcing to the vast assembly the name of the firm and its specialities. Two graphophones were kept playing on the launch, the sound-magnifying "Premier" and the "Regal," the one at the stern, the other at the bow, confusion being avoided and two andiences reached simnltaneously by turning the horns in different directions. Up and down the Thames, first on the Surrey side, than on the Middlesex, the Colnmbia craft made its way to the accompaniment of expressions of approval shouted from the banks. All the arrangements were in charge of W. E. Hanshue, the new assistant manager of the London branch, who is to be congratulated on the very successfnl carrying out of an impressive bit of advertising.

Proposed Talking Machine Exhibition.

The other day we met J. Lewis Young, who is well known on this side of the water as one of the pioneers of the talking machine bnsiness, and whose ready pen is so frequently used to help along the talking machine indnstry. He informed me that he had been endeavoring for a considerable time to so arrange his affairs as would give him time to develop a scheme which he has had in mind for the last three years, namely, the installation of a permanent talking machine exhibition in London, and he has jnst got an option on some large premises in Phonoland, otherwise City Road, with a floor space of nearly 30,000 feet. The building is eminently adapted for the pnrpose, is being lighted by electricity, a passengers' lift is being put in, together with heating apparatns. The total cost of this alone being $10,000, while the rental of the building is $7,500 per annum, but as the exhibition will be held nnder Board of Trade regulations it is believed that there will be only the local taxation in addition to the rent.

It is well known that in nearly all the German towns there is a building controlled by the gov-

FROM OUR LONDON HEADQUARTERS—(Continued.)

ernment, which is called a Muster Lager, in which is to be found the manufacturing products of that particular town, and it occurred to J. Lewis Young that as there is not among the trade such confidence in the business as the capital invested in it should command, such an exhibition as he proposes would go far to impress all concerned of the wide scope and importance of the industry.

He says that very frequently when he meets a man whom he has not seen for some years, and he is asked what he is doing, and he replies, "Still doing something in talking machines," he generally hears a remark to this effect, "Oh, I thought that had all petered out long ago." This is not as it should be.

Further, the exhibition will be for the trade only, and it will be of an international character. Lewis Young, who will shortly be able to take the matter up, will act as curator or president, and will afford to inquirers every information necessary.

The exhibition will be controlled by a council of manufacturers and factors, and others interested in the trade, and it is intended that only firms who are actual manufacturers will be able to exhibit as such, and any firm who is found duplicating or stealing other firms' records will not be permitted to exhibit or to have a location in the building.

Information of interest to the industry will be sent to all manufacturers, factors, dealers, shipping houses, etc., and efforts will be made to interest a better class of dealers than now exists in this country. Also to induce the dealer to pay more attention to his stock and provide himself with goods in a business-like way, and not as is now done by thousands of dealers who just stock a few records and procure goods to order only. Nothing will be sold at the exhibition, and it will be the aim of the council to make the exhibition of such a benefit to the trade, that any manufacturer producing a new article will only be too anxious to have it exhibited in the councils exhibition.

Lewis Young rightly says that London is the Mecca of the world, that the talking machine is an international article, and derives its charm from the fact that it is not confined to any particular language or music, therefore, there cannot possibly be any sentimental objection to an exhibition of the character he proposes. He says he has devoted 20 years of his life to free trade in talking machines, and it was not until such free trade came about that the business became anything worth talking about.

He also says that he, like a great many other men who are pioneers, has been in the past, greatly misunderstood, because when he says "free trade" in talkers he does not mean that an inventor shall not have the benefit of his invention, but he says that he objects most strongly to an inventor getting the monopoly of an article and then refusing to supply it to the public or to act in a reasonable and business-like way in connection with his invention. Twenty-one years ago he dedicated his life and his money to the talking machine, as he believed in it, and he does believe in it now, but he has had a very hard road to travel and has several times fallen, as it were, by the way, but he is optimistic, and all he has striven for has come about, and he further believes that this exhibition idea is the best scheme of his life, as it will benefit the manufacturer, the factor, the dealer and the buying public.

In fact, he says, that having regard to the support he has already received, that if he opened the exhibition to-morrow there would be such an immense press boom that it alone would be worth all the money that has been expended in promoting the affair. As before stated, it is understood that nothing will be sold at the exhibition, and no orders taken. It is to be purely a standing advertisement of the industry, and is intended to create a great impression and introduce the goods.

The building is being prepared and unless some unforeseen circumstances occur it will be licked into shape in the course of a few months, and as the talking machine business here is a season's one, he hopes to have everything prepared by September next, and then to work the press for all it is worth, and so make the running for the talking machine trade for the season. Mr. Young's address is 69 Fore street, London, E. C., where any communications on this subject will find him. He rightly says that the affair cannot be organized without trouble and expense, and provided the latter is not too great for his pocket, there is every prospect of the success of the scheme.

A Pathetic Communication.

There are many homes where the talking machine is held in peculiarly tender regard because of its ability "to reproduce the sound of a voice that is still," just as the photograph recalls the vanished face and form. An affecting instance is furnished in a letter recently received from a Welsh miner by the manager of the Columbia Phonograph Co.'s Cardiff branch. The communication proceeds: "I suppose you read about the disaster that occurred here, in which six men were killed. My stepson was one of them, and a fortnight ago my brother-in-law died. I wish to have a cylinder machine because my son and brother-in-law have sung on records, and I can hear their voices again at home by having your Columbia Jewel graphophone in my home."

To Use for Lectures.

An office graphophone has recently been sold by the Columbia Co. to a Birmingham gentleman for use for lecturing purposes in conjunction with a limelight lantern.

Gramophone Progress.

Signor Battistini, the famous baritone, is the latest gramophone recruit. His records have proved a great success, and are said to be only equaled by Caruso. The marvelous range of voice and dramatic power displayed by this wonderful singer were greatly applauded at Covent Garden recently. The recording is all that one could wish, and the series of thirteen records give the public an opportunity of hearing Signor Battistini in some of his finest moments. We will print later a portrait of the great singer in his picturesque native costume. The whole thirteen records are 12 inch, and price at fifteen shillings each.

Reminder of Hook of Holland Disaster.

The sad disaster by the Hook of Holland has been reflected in several communications received by the Columbia Phonograph Co. in this city. Some few of the passengers and crew of the ill-fated "Berlin" apparently were users of the graphophone or interested inquirers, and letters addressed to them have been returned indorsed with the brief yet pregnant phrase, "Lost at sea," or notes have been received from other members of the victims' families, conveying the somber news at greater length.

Russians Afraid of the Columbia Record.

The talking machine is the latest suspect of the Russian Government. Newspaper reports have familiarized us with the arbitrariness of police methods in the Czar's dominions—the forcible entry into private premises in search of incriminating evidence against political progressives and similar behavior. And now the Columbia Phonograph Co. have had an unwelcome experience of official espionage at their Warsaw branch. Through some misapprehension, it was reported that revolutionary songs were being published on Columbia records, and the other Sunday, without any warning, the police pounced down on the establishment, took the manager into custody, and ransacked the stock of records. The search revealed no grounds for suspicion, yet the manager was held under arrest the whole day.

Exhibition of Office Devices.

At the exhibition of office devices and business aids to be held at Olympia from the 4th to the 13th of July next, the Columbia commercial graphophone is sure to attract its full share of attention.

PRICE CUTTING DISCUSSED.

Some Important Contributions on This Subject from Mr. Manson of the Russell Hunting Co. and Lewis Young—Both Advocate a Firm Attitude Against Price Cutters—Co-operation Also Essential—The Prices of Supplies.

(Special to The Talking Machine World.)
World Office, 69 Basinghall Street,
London, Eng., April 3, 1907.

The crusade against price cutting started in our last issue has attracted widespread interest throughout the trade. Leading members of the trade expressed some very pertinent opinions, and—hereunder we present some more. If the stability of this industry is to be preserved, fixed prices must be adhered to. All are agreed upon this vital matter, and it but remains for two or three of the prominent manufacturers to take the initiative in the formation of a better means of protecting trade than now existing, to put the industry on a firmer basis to the benefit of all.

Mr. Manson's Views.

W. Manson, the genial assistant manager of the Russell Hunting Record Co., writes as follows concerniug the very prevalent practice of cuttiug fixed prices:

"The attitude of my company toward price cutters is most conclusively shown by the legal actions which we have so successfully taken against many of these pests. I see that some of the other manufacturing companies are also taking steps to stamp out a practice, which, if allowed to continue, would make it impossible for the honest dealer to get a living. In view of the success which individual compauies have met with in their endeavor to insure dealers getting a good working profit out of talkiug machine records, I should be glad to see a combination of manufacturers formed, specially to deal with this question. It would then be possible to devise such a course of action as would effectively nip in the bud any attempt of pettifogging shopkeepers to indulge in such an unscrupulous method of attracting trade from their competitors. Talking machines and records have become so deservedly popular that it would be a thousand pities if the trade were to be upset by a handful of men who cannot build up a business by legitimate means. The Russell Hunting Record Co., Ltd., is determined to uphold its rights, and at the same time to protect those dealers who maintain the proper selling price of 'Sterling' records. Our efforts have created that feeling of confidence which is absolutely necessary for the development of trade, and we have received letters from numbers of dealers throughout the kingdom, congratulating us upon the firm stand we have assumed, and upon the success which has attended us in the actions we have undertaken, and they further state that it has given them heart to keep large stocks of 'Sterling' records, and to work all they know to bring the merits of our product under the notice of the public."

Some Interesting Views by Mr. Lewis Young.

"England is a country by itself, its laws and its people have all been bred, born and nurtured in freedom and in all transactions, whether it be in private life or in business, which has any resemblance to restraint, it is resented, and it has often been said by foreigners that they in business would just as soon take an Englishman's word as his bond, and this is no more strongly exemplified than the conduct of the British in Iudia, where the confideuce in the Englishman is so great that there was instituted a system of 'chits,' which is a great convenience to everybody. The system of checks again exemplifies the confidence which one business man has in the other.

"I remember when I was in business in Amsterdam some years ago not one firm in fifty that I did business with had a check book, whereas in England the smallest firm would never dream of paying actual specie when they could do so with a check. I mention these facts to show the inherent love of the Englishman for what they rightly or wrongly call freedom.

"The Englishman's idea of business is this: 'If I buy, say, a record for 16 cents I have got a perfect right to sell it for 17 cents, and if I am clever enough to run my business so that the one cent profit is sufficient to cover my expenses, it is purely a matter for myself, and not for the manufacturer to dictate to me what I shall do.' It is this view of the case which the dealer takes. He wants to be free and does not believe in the American system of price agreement which savors of a trust scheme which he won't have at any price. He thinks the obligation is on the part of the seller and in all our ordinary business transactions this is so.

"The British shopkeeper, be he ever so big and ever so wealthy, will be found frequeutly serving customers in his own store, aud he does not think it beneath his dignity. He does not also forget to offer his thanks to his customers for their kind patronage. On the other hand the Americaus, when they come to London, do not at all care for the manner in which we conduct our shops.

"The 'floorwalker' and obsequious salesman is all foreign to them, accustomed as they are to roam through their department stores at their own free will, and to practically serve themselves. This latter system largely prevails on the Continent. Certainly all attempts to restrict the man who pays for the goods has failed, and it has been held that the labeling of conditions on goods does not biud the purchaser unless he nas actually signed a contract. An eminent judge during the trial of a talking machine case the other day called the labeling practice 'all stuff and nonsense.'

"But I am quite sure that if the dealer were made to realize all the harm he does to the trade when he cuts prices he will generally be willing to act in a reasonable way, but unfortunately the manufacturers have not in the past approached the dealer with a smile and a big stick, but they have generally gone with two big sticks and a few bulldogs, and this to an Englishman and probably to any other man of any nationality, means fight.

"Take the case of one very large sportshouse here which for years stuck out, and is to-day cutting prices of many articles which I feel sure if they were reasoned with they would not do. I feel that the policy of writs and litigation in trade is not a good one. You may succeed with one, but immediately some one else, out of sheer devilment, comes up.

"Another point is this: The lack of harmony between the manufacturers themselves. This is very deplorable, because the remedy for the confirmed price cutter is for all the manufacturers to notify their factors not to supply any price cutter with any goods whatsoever. Of course, the price cutter will try to get them through his friends, but he will soon get tired of this, and will either go out of the business or come into line.

"Further, if we examine the list of price cutters we shall find that they are, as a rule, small people possessed of the peculiar characteristics of the narrow-minded, and who are of the class that we could very well dispense with in our trade, or they are those who make a capital advertisement out of it. I believe that as time goes on there will come into the trade serious people with more capital at command, and who will take a keen interest in the talker from a dilletanti as well as the profit point of view, and these small disturbers of our peace will drop out.

"I have but very rarely heard of price cutting in gramophone goods, and this comes about by the fact that the Gramophone Co. pick and choose their dealers, and if they find any of those dealers doing something which is against the best interest of all concerned they, to my own knowledge, send a represeutative to talk the matter over and try to arrive at a modus vivendi. In my opinion, price cutting can only be stopped by the co-operation of the manufacturers and the co-operatiou of factors, and by introducing into the business a better class of dealer altogether.

"It is, I suppose, generally known that in January, 1901, I introduced here the Edison goods, and spent a great deal of time and money in the work. Some little time ago a gentleman connected with the business informed me that he thought I was greatly to blame in the matter of the undesirable handlers—the cycle trade—because I had assisted at the commencement, or, rather, at the renaissance of the business, to bring them into it. My reply was one which can be confirmed by every one in the trade here, that when I started in the business there was not a single firm in Great Britain who bought 300 records at a time. There were no factors or

Talking Machines of every description repaired. Special terms to the trade. City address and price list on receipt of postal. No job too small—no job too large.

dealers in phonographs. The Edison-Bell Co., which had had the monopoly of the business here, supplied, as a rule, direct to the public, and the music trade which ought to have been the natural channel of distribution would not look at phonographs, and I call to mind the many times tnat even a firm like George Murdock & Co., who now devote a whole building to talking machines, showed Mr. Sinclair, who was then my partner, and myself the door.

"It was at that time heart-breaking work, and when at last we hit upon the idea of selling the goods to the cycle factors we thought we had done the best thing that human beings would do. But what has happened is this, the Gramophone Co. have gone on improving their products, they have been able to show to the music trade that the bicycle man has been doing good business in talkers, and that they have lost the sale of small goods such as flutes and violins through it, and further the music trade, after taking up gramophones, have found out that they can also sell cylinder records, and so to-day there is slowly but surely coming into the business a more reliable, gentlemanly and adaptable man than the cycle dealer. It will be seen at the same time that if the cycle dealer had not taken up the talker the music dealer would not have done so, for the reason that I have before given.

"Perhaps I am getting away from the question of price cutting, but I believe that these remarks taken as a whole have a good bearing upon the subject, and I hope that the day will not be long before manufacturers, both American and Continental, will meet in all friendliness, and make common cause against the price cutter. The talking machine industry has, in my opinion, not commenced, it is only in its infancy. Both the records and machines we have to-day, in my opinion, have not advanced very much, we have the same old wax records that we had in early days, except that the manufacturers have learned that by moulding it it becomes case hardened and gives a better result.

"The same people are making the same discs as they did 10 years ago. It is all old, and that being the case, there must be some room for invention, for improvement, for perfection, and when these attributes of the talker comes about a new era will dawn and machines that we have thought best to-day will be scrapped as were the old 'Bone Shakers' high bicycles and early motor cars. I myself am very pleased to think that we have not perfected them, because if they were so the business might soon come to an end. But I think it is good enough to go along with as you, Mr. Sturdy, say you are going to send my remarks to your ever interesting paper, permit me to wish to my old friends in what they proudly call God's own country, my hearty good wishes."

Mr. Tobin on Price Maintenance.

"On the question of price maintenance," said Mr. Tobin, "what is wanted is a protective association, formed mainly to look after the interest of legitimate dealers. As it is, the cutters are having a good time at our expense. It will be remembered that last year Mr. Tobin made a determined effort to secure co-operation in forming a retail protective association, but, unfortunately, his trouble met with little response from those best able to help. Nothing daunted he will, in the near future, make a personal canvass of prominent London dealers, from whom he will secure such a demand for redress as will compel manufacturers and factors to provide whole-hearted protection of their interests; and, why not? They can do it in the cycle industry, and, if a little more complicated, the same facilities for protection are offered in the talking machine trade."

TEXAS PHONOGRAPH CO.'S REPORT.

(Special to The Talking Machine World.)
Houston, Tex., April 9, 1907.

At a stockholders' meeting of the Texas Phonograph Co., held last week, a dividend of 3 per cent. was declared for last quarter, payable April 1. The March report of Treasurer Parrish showed an increase of $4,000 over business of February, over that of the corresponding month of last year, 300 per cent. increase in volume of business. This company has declared quarterly dividends of 3 per cent. for the past three years.

EDISON'S FISHING EXPERIENCE.

While Thomas A. Edison and his wife were fishing in Florida recently Mrs. Edison hooked a shark nearly six feet long. At the first bite the shark nearly pulled Mrs. Edison out of the boat, but upon Mr. Edison coming to her assistance the shark ran with the tackle, towing the boat after him, for some distance until exhausted, when it was dragged into shallow water, where Mrs. Edison's brother killed it with a harpoon.

NEW YORK, APRIL 15, 1907.

OUR reports for the month past indicate a very satisfactory condition existing in the talking machine industry, and it is believed that if there should come a lull in the general business of the country that this particular trade would not suffer as much as many of the others which we could enumerate. Talking machine men may feel that they rest on about as secure a business platform as any of the trades. The sales of high priced machines would probably drop off materially, but it will be a long time before a business depression would seriously affect the talking machine business. The talkers have a strong hold upon the people.

THERE is in some departments of the trade much difficulty experienced in filling orders promptly. It is impossible to get materials readily, and several of the largest concerns, when discussing these matters with The World this week, remarked that they have been hampered seriously in their factory output through their inability to secure raw materials as promptly as they desired. This is a serious matter, and ultra good times sometimes work out almost as much unhappiness as slow times. The most happiness in conducting a business is really found when times are moderately good. Everyone then is not rushing and crowding to the extent which they are in these busy days. Manufacturers find it difficult to keep up with their orders, and they are constantly compelled to write apologies and explain to their factors the reasons why they cannot send their orders along more promptly.

SPRING business may be said now to be fairly under way with the coming of seasonable weather, and both manufacturers and jobbers are fully occupied in supplying the demands of the trade. It would seem, if the price of metals continues to advance, that substantial raises in the wholesale price of talking machines must be made. It should be understood that there have been substantial raises in prices of brass, copper and various metals and woods which are used in the construction of machines. Thus far, the manufacturers have refrained from advancing prices, giving their jobbers and dealers the fullest advantage. Whether this condition will continue to remain as at present is rather problematical.

SHIPPERS have experienced considerable delay in the delivery of freight, and the result is not a little inconvenience to manufacturers primarily, and to the distributers and public ultimately. Notwithstanding efforts to overcome this troublesome condition of things, the delays in delivering materials to the factories and goods to the merchant is perhaps as serious as at any time, as the roads seem unable to cope with the great volume of business which is forced upon them. The disposition to control, not always along reasonable lines, and with grave danger of checking their enterprise, together with the intimate relation they bear to financial matters, have united in developing a condition of things which, notwithstanding the existing prosperity, is regarded as a possible menace to the continued commercial and industrial well-being of the country. A hope, however, is entertained that these disturbing influences may not go too far, and the confidence may not be unreasonably shaken.

FORTUNATELY the crops of the country are excellent and the agricultural prospects are more than brilliant. The divorcement between the great West and Wall street has been clearly established, and business outside of those districts directly affected by the financial fluctuations is sure to enjoy good commercial conditions. The consumption of goods of all kinds goes on apace, and the complaint among merchants of all lines, including talking machine men, is still of the difficulty of keeping their stocks full. While in some lines there is unquestionably more promptness in supplying goods, the many back orders placed long ago evidence the unrelaxed demands which are being made upon the factories. Sluggishness in collections is reported in some sections, but there is little serious danger experienced on this account.

A WESTERN dealer writing to The World says: "I am amazed to see the position of the talking machine industry, as evidenced by your splendid publication. To my mind, no talking machine dealer can afford to be without your journal, which gives so much of interest and of value to those whose interests lie along talking machine lines. The development of the industry has been phenomenal, and I believe that it must have been aided very materially by your publication, to which the trade certainly are under deep obligations." We have received a number of communications along similar lines, and it is surprising to those unacquainted with the actual developments of this industry how it has thrived and prospered during the past few years.

IT is of the most vital importance that every man who has invested dollars either in the jobbing or retail trade should keep himself thoroughly posted on all changes and improvements that are constantly being brought out by the manufacturers in these lines. There are brainy, intelligent men, hard at work, developing the talking machine to higher and better things, and that they have accomplished much is evidenced when we contrast the splendid product of to-day with the crude production of years ago. Then again, there are so many by-products, shall we say, that is, talking machine accessories, which are indispensable to those retailing the product.

EVERY talking machine man should have the latest and best devices which are put forth always in his store. He should be ready to give the customer at any time information along lines which are interesting to his caller, and the only way to do this is to keep in constant touch with trade developments. As one prominent manufacturer remarked: "There is no better way, nor can one gain greater knowledge from any one source, than from The World. It is the only paper in America devoted to the interests of the talking machine men, and it is broadening and increasing its influence with each issue."

THE men who succeed in all business lines today are those who keep in the closest possible touch with improvements and inventions in their line, and if there is a special field which is more productive than the talking machine industry in patented inventions just at the present time, we do not know where to locate it. Look over our record of patents and inventions each month. There is no other special industry outside of the electrical lines that can compare with it. Of course, there are a lot of inventions which are impracticable, which have not been developed up to the correct standpoint, but it is well to know of the bad inventions as well as the good, in other words, to know what everyone is doing in the talking machine industry. Keep in touch with it; keep posted. It will pay.

IT was only recently on a Western trip that a well-known jobber, while looking around for a copy of The World, asked his manager where it had been placed. He replied by saying: "I am never able to keep that paper for more than an hour: some of the boys will always pounce upon it, and when I wish to see it I am never able to locate it." The proprietor remarked: "That condition is a decided compliment to the paper, and if it is so useful to us I think we had better subscribe for half a dozen more copies." So this particular jobber has a number of copies coming to his establishment each month, and the educational force among his salesmen amounts to considerably more than the annual cost to him.

SALESMEN who read and who keep posted on conditions in their own industry are the ones who invariably increase their own income. It is the bright, up-to-date salesman who will win out, and the talking machine industry is aided materially by the influence of an army of young, bright fellows who are engaged in selling talking machines. Most of them know that it pays to watch developments, and to make themselves more valuable to their employers, learn more about the talking machine so that they can represent it in a more intelligent manner and interest their customers in a greater degree. There is no point too small to be overlooked in modern business, because it is a number of these small points when properly presented that make an unsurmountable argument. It is the little things in life that accumulate into the larger ones, and it is the small things in the life of a salesman which, if overlooked, will send him down the hill instead of up to greater prosperity.

NEWS FROM HERE AND THERE.

The Douglas Phonograph Co., 89 Chambers street, New York, have repainted the front of their store and all the signs a brilliant red, picked out in gold, making it one of the most conspicuous places on the street. Prismatic glass has displaced the former plate in the upper part of the display window, throwing a flood of bright light into the interior, and rendering the use of the electric incandescents entirely unnecessary. The company have recently acquired the sole agency in the Greater New York territory for the "Many-Use" oil.

M. B. Romaine, who recently returned from a two weeks' trip West on special business for the National Phonograph Co., calling upon the jobbing trade, will visit the New England States on the same errand at an early date. Subsequently he will probably go South.

As musical director for the International Record Co., Auburn, N. Y., G. Peluso has recorded a large number of fine instrumentals at their New York laboratory. Mr. P. is a well-known musician of many years' standing in the profession, and has been connected with several famous musical organizations. He is also regarded as an expect in instrumental sound reproduction.

At a session of the Grand Consistory of Scottish Rite Masons, recently held in the Scottish Rite Cathedral, New Orleans, La., the National Automatic Fire Alarm Co., of that city, loaned a Victor Auxetophone for the three days' convention. The machine was used during the musical ceremonies, and one of the old members of the order, who had never listened to anything of the kind, made a strong protest when he heard the Auxetophone singing one of Miss C. Morgan's sacred selections, believing there was a woman in the lodge room. The reproduction was so perfect that the majority of the lodge, being from St. Joe, Mo., had to be shown the machine. E. H. McFall, president and general manager of the National Automatic Fire Alarm Co., believes this to be the best unsolicited recommendation the Victor Talking Machine Co. ever received, and the incident was the general talk of New Orleans at the time, and to which was credited the sale of several Auxetophones that followed on its happeniug.

John P. Kelsey, the new manager of the Bettini Phonograph Co., New York City, assuming the position March 11, has inaugurated an entire new system of conducting the business, the complete change being effected on the first of the current month. Mr. Kelsey, lately secretary of the Eastern Talking Machine Jobbers' Association, is one of the best-knowu men in the Eastern trade, his connection beginning with the old North American Phonograph Co., the pioneer concern in the line, and which marketed the first machine invented by Thomas A. Edison, namely, the tinfoil record device. In short, Mr. Kelsey is one of the "old guard," though still reckoned as a man considerably on the sunny side of forty.

A. P. Petit, general manager of the Talking Machine Supply Co., after calling on the trade in the Pacific Coast territory, has started East, and will probably be in New York by the end of the month. He has touched all the principal intermediate points on his way West, and booked a splendid line of orders, goods to go forward immediately. Mr. Petit is greatly enamored with the manner in which the Western talking machine houses do business. Mayhap "A. P." will deliver a course of lectures on this interesting subject some day.

The New Jersey Sheet Metal Co., Newark, N. J., have just issued a handsomely printed catalogue containing illustrations and descriptions of the various styles of horns which they manufacture, as well as other specialties. The volume is destined to interest the trade. The New Jersey Sheet Metal Co. are having a big call for their sheet metal collapsible horn, which embodies many recent improvements. They report export trade good.

R. H. Morris, secretary and general manager of the American Talking Machine Co., Brooklyn, N. Y., who has been on the sick list for several months, returned to business a fortnight ago. His absence was keenly felt by his associates who cordially welcomed him back to his post of duty, and warmly congratulated him on his recovery, in which The World heartily joins.

The Victor H. Rapke Co., with the redoubtable Victor H., president, has equipped a new factory at 530-538 East 72d street, New York City, for the manufacture of the Rapke collapsible horn, crane and other specialties. They will also have installed a repair department, complete in every detail, for the "diagnosis and cure of sick talking machines." Mr. Rapke has purchased an automobile to gather up his patients in and about New York, guaranteeing to return them in sound condition. John Born, for thirty-two years superintendent of the Western Co., will occupy the same position with the V. H. R. & Co. The main office will remain at 225 East 86th street, the wholesale and retail departments at 1661 Second avenue.

F. M. Prescott, who recently retired from the International Talking Machine Co., Berlin, arrives on April 19 to reside permanently in this country.

At a meeting of the creditors of Sol Bloom held on Wednesday last, a settlement of his affairs was agreed upon. Payment of all indebtedness in full is to be made within twelve months in quarterly payments. As soon as possible the receiver will vacate and Mr. Bloom again assume management of the business.

A taper tone arm and horn has been brought out by a Cleveland, O., inventor for the Edison machines. An effort is being made to have the National Phonograph Co. adopt it officially.

You will find it Profitable

To handle our line of Musical Instruments and Musical Merchandise in connection with your Talking Machine business. Our large 500-page catalogue is free for the asking—send for it at once and get in touch with us. A small investment will put in a good stock. At any rate write, it will prove profitable to both.

THE RUDOLPH WURLITZER CO.

MANUFACTURERS AND IMPORTERS OF MUSICAL INSTRUMENTS AND MUSICAL MERCHANDISE

Cincinnati and Chicago

Concerning Perfect Records

MR. DEALER:—

A customer may ask you, "What make of record is the best?"

If you are a "Columbia man" you can reply with the incontestable fact that the best records are the

COLUMBIA RECORDS

The reasons are these:

EXPERIENCE in manufacture is as indispensable as genius in invention. The Columbia Company are the originators of the record industry, and consequently LEAD in experience.

The GREATEST and MOST ENTERPRISING INVENTORS in the field are Columbia men, whose genius has produced exclusively for the Columbia, ALL THAT IS NEW AND UP-TO-DATE.

OUR FACILITIES ARE GREATEST: the largest talking machine and record factory in existence, and we are the only company operating laboratories in all the great musical centres of the world, resulting in the BEST and GREATEST VARIETY OF MUSIC.

Through our superior knowledge of the best record material, as well as the art of recording, the SMOOTH and STAY PERFECT QUALITY of Columbia Records is supreme.

As Columbia Records always receive HIGHEST AWARDS when exhibited in competition with all other makes, the superiority of Columbia Records is beyond question.

These arguments are convincing because based on indisputable facts, such as the recent U. S. Circuit Court decision as to the superiority of the Columbia Record-making process.

You can lead the Record business when you deal in Columbia Records.

STORES IN ALL PRINCIPAL CITIES DEALERS EVERYWHERE

IMMENSE STOCK FOR BABSON BROS. HANDSOME NEW BUILDING.

(Special to The Talking Machine World.)
World Office, 195 Wabash avenue,
Chicago, Ill., April 10, 1907.

We present herewith a photograph of the fine new building which Babson Bros. are just completing at the corner of 19th street and Marshall Boulevard, on the west side, and which is a monument to the enterprise and remarkable progress of the firm who have built and will occupy it. The structure is five stories, pressed brick and stone, 150 by 80 feet in size. In the basement is the shipping room. The offices will be on the first floor, and the second, third and fourth floors will be given up entirely to stockrooms. The wholesale record stock will occupy the entire fifth floor. This floor has been designed especially for records, and has immense skylights running the entire length of the building. The firm has unobstructed light on all four sides of the building. They also own 400 feet of additional frontage on 19th street, and thus have plenty of room for expansion. The rear of the building is right on the C., B. & Q. tracks, and the firm have their own private switches in their own yard. The building was put up in less than sixty days by the employment of an immense force of mechanics working overtime. It is of the best and most durable construction throughout, and is one of the largest buildings in the world devoted exclusively to the sale of Edison phonographs and records, something which speaks volumes for the popularity of these goods and for the progressiveness and aggressiveness of Babson Bros., who, in the short period of eighteen months, have built up a business of over a million dollars per annum. The new building will be occupied by the time this paper goes to press, and within one week will be stocked with what they assure me will be the largest stock of Edison phonographs and records ever assembled under one roof.

BABSON BROS. GREAT BUILDING, NOW COMPLETED.

A special train of twenty cars will leave the Edison factories at Orange, N. J., to-day, April 15, loaded exclusively with over 8,000 phonographs and over a quarter of a million records, in addition to several carloads of horns and cranes, duly placarded with legends describing the character of the cargo, its origin and destination, and will arrive in Chicago the following Friday, going through to Babson Bros. direct. These goods will be placed in stock in the new building before they move in, and thus delay will be prevented in the filling of orders. When all the stock is in place they will carry more than a half million records. The bins for the wholesale stock will be on the fifth floor, and constructed after special designs of G. M. Nisbett, wholesale manager. The bins will have a total capacity of 2,000,000 records. In our next issue we hope to present interior views of this wonderful establishment together with portraits of its proprietors.

The Columbia Phonograph Co. have opened a new store at 421 South Front street, Mankato, Minn., where a large and complete stock of both machines and records will be kept in stock.

Mr. Talking Machine Dealer

If you are located in New England—

We Can Save You Money.

Our facilities permit us to ship goods on first Express after order is received. We **wholesale exclusively**—consequently everything is shipped in original packages as received from the factory—no played-out records, no second-hand machines.

We manufacture a number of talking machine accessories among which are our famous Tray Outfits. (If you are not using this system for carrying records in stock it will pay you to write us.)

The **Lynn Record Cases and Peg Boxes** are another of our products.

We also manufacture the **Wentworth and No. 10 Horn Stands.**

Special Lines and Special Prices on Flower Horns.

We solicit a trial order.

Boston Cycle & Sundry Co.,

J. M. Linscott, Manager
48 Hanover Street, Boston, Mass.

TRADE NOTES FROM CINCINNATI.

Business Satisfactory—Smith & Nixon Growth—Rudolph Wurlitzer Co. Doing a Magnificent Victor Business—Their Methods of Holding Trade—Automatic Department Has Become One of the Most Important in Their Vast Business—Columbia Co. Well Pleased.

(Special to The Talking Machine World.)

Cincinnati, O., April 8, 1907.

The talking machine business in this section is reported as being most satisfactory. Getting stock seems to be a harder problem than disposing of it, and higher priced outfits have the call. The Smith & Nixon Co. report that although somewhat hampered by weather conditions early in the year, the March and early April business bids fair to make a good showing.

The talking machine department of the Rudolph Wurlitzer Co., in charge of Mr. Strief, is having a record breaking trade especially in jobbing the Victor line. Joseph Dittrich, special representative of that department, who covers a broad territory in a thorough manner, is making a splendid record. The plan of the Wurlitzer Co. in placing each Victor record in a separate envelope, thus minimizing the danger of the records being scratched or otherwise damaged, has met with the hearty indorsement of both dealers and customers, especially the former. When a dealer can offer an enveloped record to a customer, the latter feels sure it has not been played over for demonstrating purposes or otherwise abused, and is likely to confine his purchases to the store offering such assurance. It also means that the dealer will have a smaller accumulation of damaged or unsalable stock.

The automatic coin-operated musical instrument department of the Rudolph Wurlitzer Co. also shares in the general prosperity of the house. The several styles of electric pianos ranging from forty-four notes to eighty-three, the Wurlitzer harp, mandolin quartet, the monster and the pianorchestra offer an assortment of money-making devices that should appeal to proprietors of hotels, cafes, stores, roller rinks and resorts of all kinds. The increasing demand for all the above styles well illustrates the growing appreciation of their money-making qualities.

The Columbia Phonograph Co.'s store always presents a busy scene. The popularity of the Columbia line never wanes, and so often do the owners of machines call for new records that almost every customer is known personally to the staff. The heavy selling is in medium and high-priced outfits. The various window decorations and stock arrangements at this store call forth unstinted praise.

military band organ, as well as a smaller style,

HAPPENINGS IN WHEELING, W. VA.

(Special to The Talking Machine World.)

Wheeling, W. Va., April 8, 1907.

The past month is one that will be long remembered by the inhabitants of this valley. We had a flood, not of the proportions we read of in connection with old Brother Noah, but had enough, thank you. It did demonstrate, however, how highly valued are talking machines, as many families lost all their personal property, excepting these entertainers.

Your correspondent visited many parts of the flooded district, and on several occasions was attracted by machines being played from second-story windows. The people were using this method of keeping up their own spirits and those around them. And well they might, for in several instances you could see their pianos floating around in what had been their parlors.

Of course, a visitation of this kind put a decided crimp in business, and collections are particularly slow. The first two weeks of March was marked by particularly good business, so the total business for the month was quite satisfactory.

Bard Bros. have recently closed their Market street store. Since getting their Main street building completely remodeled they found that the trade could be handled there to a better advantage than to have two stores so close together. The F. W. Baumer Co. were in the flooded district, but their loss amounted to nothing. They had ample warning, and removed their stock to the upper floors. The Peak-Friedel Piano Co. have moved to South Market street, where they have much more room. They are making many improvements, with a view to enlarging their talking machine department. The Columbia Phonograph Co.'s store has been enlarged to accommodate their growing business. Mr. Shortell, the local manager, is well pleased with the growth of same.

VICTOR VS. LEEDS & CATLIN CO. SUIT.

In the case of the Victor Talking Machine Co., Camden, N. J., against the Leeds & Catlin Co., New York, argument was heard in the United States Circuit Court of Appeals, second district, April 9. This is an appeal from the opinion of Judge Lacombe, Circuit Court, rendered January 5. Decision was reserved.

A marked increase in the business of the Columbia Phonograph Co.'s Holyoke, Mass., branch is noticed since they have been in the new quarters on High street. It is much better located for business than was the old store. R. E. Demarest is the local manager.

The Hawthone & Sheble Manufacturing Co. report their sales of artistic flower horns in March have exceeded any former record. Popular fancy has certainly been captivated by this attractive line.

The Douglas Phonograph Co. recently shipped a full line of Perfection talking machine cabinets to South America, all of them being intended for one style of American machine.

Eugene Reed, of Reed & Reed, Boston, Mass., was in New York Thursday to see Manager Macnabb, general manager of the Universal Talking Machine Manufacturing Co.

JOBBERS MEET IN PHILADELPHIA.

Sixth Quarterly Meeting Well Attended—Many Matters of Importance Transacted—Local Dealers as Well as the Victor Talking Machine Co. Entertain Visitors in Handsome Fashion—The Proceedings in Detail.

(Special to The Talking Machine World.)

Philadelphia, Pa., April 11, 1907.

The sixth quarterly meeting of the Eastern Talking Machine Jobbers' Association—and the first to be held in Philadelphia—convened this afternoon at the committee rooms of the Bellevue-Stratford Hotel. There was a large attendance of members and a number of important trade matters came up for discussion and action. Among them were the following subjects: Opinions as to the numher of records catalogs should contain and the proportion of different priced records; where listed; the question as to the number of new records advisable to be issued each month; the question as to how many records it is advisable to cut from the catalog each year and upon what basis; how often an exchange proposition is desirable, and upon what hasis. These subjects were discussed, it should he stated, by the jobbers, with the object of effecting amicable arrangements with the manufacturers to the end that both parties would he mutually benefited. Other subjects up for discussion were: The advisability of setting apart one or two discount days per month, days when the dealers can settle accounts and receive discounts. The instalment against cash payment proposition. In the past many dealers have sold talking machines on the deferred payment plan at the same price as they charged cash payment customers. It is believed customers should pay more when huying on the instalment plan.

The following jobhers and representatives of the firms named were in attendance at the business session: W. D. Andrews, Syracuse, N. Y.; Louis Buehn, of Louis Buehn & Bro., Philadelphia; J. Newcomb Blackman, of the Blackman Talking Machine Co., New York; Theo. F. Bentel, of the Standard Talking Machine Co., Pittsburg; John P. Kelsey, with the Bettini Phonograph Co., New York; A. J. Denninger, Rochester, N. Y.; E. F Droop, of E. F. Droop & Sons Co., Washington, D. C.; C. V. Henkel, of the Douglas Phonograph Co., New York; E. F. Taft, of the Eastern Talking Machine Co., Boston; A. W. Toennies, Jr., of the Eclipse Phonograph Co., Hoboken, N. J.; C. Forsyth, of Forsyth & Davis, Kingston, N. Y.; Louis J. Gerson and H. E. Marschalk, of the Musical Echo Co., Philadelphia; A. H. Jacot, of the Jacot Music Box Co., New York; Victor H. Rapke, of the Victor H. Rapke Co., New York; G. A. Stanley, of Stanley & Pearsall; I. Davega, Jr., Benj. Switky, New York; Albert C., Harry W. and William C. Weymann, of H. A. Weymann & Co., Philadelphia; William Warner, Easton, Pa.; Adolph Weiss, of the Western Talking Machine Co., Philadelphia; J. T. Williams, of the Victor Distributing & Export Co., New York; Max Landay, of Landay Bros., New York; John B. and H. F. Miller and T. W. Barnhill, of the Penn Phonograph Co.; Herhert T. Lewis, of the Lewis Talking Machine Co., Philadelphia; James K. O'Dea, Paterson, N. J., and H. L. Ellenberger, of the Pardee-Ellenberger Company, New Haven, Conn.

Oliver Jones, as representative of the Victor Talking Machine Co., Camden, N. J., assisted the Philadelphia jobhers in looking after the comfort of the visitors and carrying out the program of entertainment.

The business session was strictly executive, only members being permitted to attend. Little or no news as to the action taken at the business session was given out, it being the impression that as the matters concerned the parties interested and not the trade generally, it was best to say nothing at present.

From various sources it was gleaned that the jobbers decided the matters named as follows, although it should be understood this account is not official and may be suhject to correction: On the subject of the numher of records manufacturers' catalogs should contain opinions varied, although the general belief was expressed that manufacturers and jobbers would be henefited by having many less records issued, at least for a while. New records issued each month should be less hereafter than has been the rule, in order to "catch up," so to speak, with the amount of business already being called for. On the exchange of records question it was generally agreed that two or more exchanges per year would be desirahle; hut this question, as well as the others, depends upon an amicahle arrangement with the manufacturers. The manufacturers are naturally desirous of learnin what the jobbers, from experience, believe to he the best plan to pursue. for all hands interested, and at future conferences most likely a settled plan will be adopted and put into effect. It was deemed advisable to set aside one day in the month as discount day, when dealers settling accounts would be given the usual discount allowed in general commercial circles. Goods sold on the instalment plan should he charged more for, to the end that cash customers would be benefited and cash purchases encouraged. What per cent. additional the "deferred payment" customers will pay is a "trade matter" for obvious reasons, but the percentage will he the same with all johhers.

The committee which will have conferences with the manufacturers to determine the plan to he followed regarding the points, etc., named, consists, it is stated, of Messrs. Blackman, Marschalk and Taft.

It is prohahle the next quarterly meeting—in July—and which is also the first annual meeting (at which officers will be elected for the ensuing year) will be held in New York City.

President W. D. Andrews occupied the chair at the husiness session, and was ably assisted as usual hy Secretary Jacot. The treasury is reported in good condition, and the affairs of the association generally are in satisfactory shape.

The social side of the jobbers' meeting was thoroughly pleasing, and the visiting talking machine men were dined and entertained until all were satisfied of the hospitality of their hosts and the Quaker City generally.

The visiting jobbers while here were the guests of the Philadelphia Talking Machine jobbers and the Victor Talking Machine Co., of Camden, N. J., and the program of entertainment was varied and interesting. First, the visiting jobbers were domiciled from Thursday until Friday night at the Bellevue-Stratford and given to understand that they must feel perfectly at home, which they did. After the bnsiness session, a fine dinner was served the jobbers and invited guests in the Red Room of the hotel, and this pleasant function promoted sociability and friendship. Impromptu speeches were made, of course, and a general flow of wit and wisdom made Thursday evening one long to be remembered.

And it shonld be noted right here that the Eastern jobbers keenly enjoyed themselves and passed due resolutions of thanks to the City of Brotherly Love jobbers and the Victor Talking Machine Co. for hospitality received.

Later—Friday's Program.

Friday was devoted entirely to pleasnre. The trip to the Victor Co.'s plant in Camden, N. J., was made in the morning, and was enjoyable throughout. The members of the association were taken in charge by officers and representatives of the Victor Co., and shown all over the extensive premises. The new laboratory building, in conrse of constrnction, opposite the main plant, was greatly admired. Subsequently an informal luncheon was given at the cosy quarters of the Down Town Club in the Bullitt Building.

In the afternoon the visitors were taken in "Seeing Philadelphia" automobiles for a tour of the city, the itinerary including brief visits to the many historical buildings and places as well as a rather extended spin in Fairmonnt Park, along its famons drives and boulevards. After dinner at the Bellevue-Stratford the jobbers were escorted to the Broad Street Theater, where fifty seats had been reserved for them to enjoy George M. Cohan in "Fifty Miles from Boston."

While a majority of the visitors started for home late Friday night, a number remained over until Saturday and looked after business.

ZONOPHONE RECORD EXCHANGE PLAN.

The Universal Talking Machine Co., Newark, N. J., have notified their trade to the following effect:

"We have decided to make an exchange proposition for Zonophone records only. On the three for one basis, that is, allow yon to return one record, order three and pay for two. Records to be returned from April 15 to 25, 1907, under the following terms and conditions: We will take back Zonophone records only, black or brown material, allowing you to return 2 7-inch records and call them 1 10-inch; 1 9-inch record and call it 1 10-inch; 1 10-inch record and call it 1 10-inch; 1 11-inch and call it 1 10-inch. We will not accept any broken records or any other make and yon must order three times the number of records you are returning. Freight and express charges must be prepaid or records will not be received.

"Records will be connted as soon as possible and certificate sent to the dealer; then he must order three times the number of records he returns through the jobber or factory. Until you have ordered three times the number of records through your jobber or the factory, credit bill will not be sent to you. No bill of lading or express receipt for records returned dated later than April 25, 1907, will be accepted. As soon as the dealer receives the certificate from our office, he must order the records at once from the jobber. Dealers must not offer this exchange proposition to consumers."

W. D. Schultz, of Stanley, Wis., announces that hereafter he will handle the Edison phonographs and records, in addition to the Victor.

MARKS A PROGRESSIVE STEP

In Amplifying Devices—The Rapke Collapsible Horn Wins High Praise from Experts.

After being critically tested a well-known expert in the art of sound reproduction has freely and frankly expressed the opinion that the Rapke collapsible horn is a distinct improvement and marks a progressive step in amplifying devices.

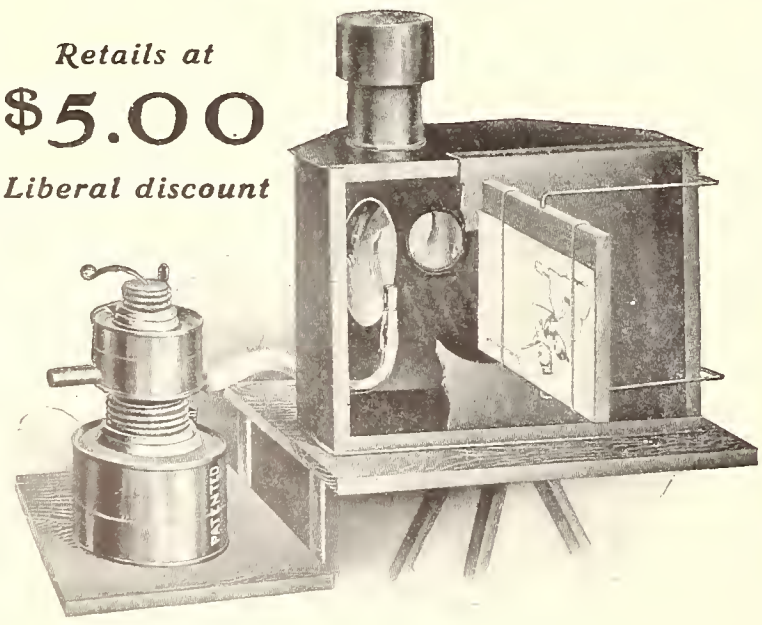
It is agreed that the less interference of vibrating sounds with the quality of the record tone is the sine quo non or indispensable condition of a horn. In this respect the Rapke collapsible horn is held to be nnique; the manner of its constrnction being such that foreign vibrations are eliminated, and the sonnd issnes forth in true, natnral tones, from which muffling and rattle are conspicuous by their absence. The horn is made in segments, or rings, and as the sound enters at the small end and proceeds toward the bell or enlarged part, the foreign vibrations are not carried forward, but become a negligible factor, and the tendency to "blast" on the high notes is obviated.

As Victor H. Rapke, the inventor, himself says of it: "I have now overcome all obstacles and can reproduce the hnman voice correctly. My new horn carries the quality, gives the reproduction perfectly clear and without any vibratory influence. The natnral sonnd enters the narrow end, is condncted there throngh and emitted in magnified volume at the large end unchanged in quality. The secret of the sncccss of this horn lies in the fact that it is built upon scientifically correct acoustical principles."

The Rapke horn is impossible to get out of order. Any person can set it up, and it can be pnt together or taken apart in a minute. It can be packed in small compass, and sent throngh the mails. Locked or unlocked, the horn will sustain the weight of any man standing upon it, and it can be used on any known make of machine.

The MYSTIC REFLECTOR
A POST CARD PROJECTOR

Retails at
$5.00
Liberal discount



NEW YORK, March 30, 1907.

The Mystic Reflector is so remarkable in its results that nothing but a trial can make a person realize its extraordinary merit. It is, indeed, a pleasure to commend it.

W. IRVING DAVIS, 32 Waverly Place.

NORTH AMERICAN EXPORT CO., INC.
31-33 Broadway, New York, March 30, 1907.

CHURCH SUPPLY CO., 10 Barclay Street, City.

Gentlemen:—In answer to your valued communication of March 29th, relative to the merits of the Mystic Reflector, we can only say that when same was recently demonstrated, we were greatly surprised at the results attained. It gives us pleasure to endorse same and from the opinions that we have had in the premises, we cannot help but appreciate that it is an article that will meet with great sale, and we are in hopes to place further orders with you in the near future. Wishing you every success, we beg to remain,

Yours very truly,
NORTH AMERICAN EXPORT CO., Inc.,
By J. E. SITTERLEY, Pres.

Can be used for ILLUSTRATING SONGS in connection with a PHONOGRAPH. A QUICK-SELLING SIDE LINE for the TALKING MACHINE TRADE. Dealers must order through their jobber.

CHURCH SUPPLY CO. 10 BARCLAY STREET NEW YORK

MAKE INDESTRUCTIBLE RECORDS.

The Indestructible Phonographic Record Co. Equip Laboratory in Brooklyn and Manufacturing Plant in Albany, N. Y.—Will be Ready for Market in August.

The Indestructible Phonographic Record Co., which, as reported in The World some time ago, have been incorporated in the State of Maine, with a capital of $1,000,000, expect to have their first catalog and sample records on the market early in August. They have secured a spacious factory at Albany, N. Y., which is splendidly equipped, with a capacity for turning out more than three million records a year. Their laboratory, which is in charge of a staff of competent men, is located at 352 Livingston street, Brooklyn, N. Y. Here all the "Master" records will be made and tested. They will make only cylinder records which will be sold at standard prices.

Professor Starr, who returned some time ago from the African jungles, where he secured a number of valuable records of the various races he came in contact with, has given his originals to the Indestructible Phonographic Record Co., and it is not improbable that these will be accessible for public use as well as preservation.

LEASE NEW QUARTERS.

The St. Louis Talking Machine Co., St. Louis, Mo., recently closed a lease for the ninth floor of the new Mills building at Seventh and Catherine streets, one of the most modern loft buildings in the city.

NYOIL FOR PHONOGRAPHS

We have for 40 years been producers of Delicate Oils for Watches, Clocks and Chronometers, and we offer NYOIL as the most delicate and effective article ever produced for the use of Phonographs.

McGREAL BROS. OPEN IN CINCINNATI.

Secure Central Quarters for Their Wholesale and Retail Business in That City.

(Special to The Talking Machine World.)
Cincinnati, O., April 10, 1907.

L. E. McGreal, of McGreal Bros., Edison jobbers and Victor distributors, Milwaukee, Wis., spent several days here recently arranging for the opening of Cincinnati wholesale and retail quarters. Mr. McGreal secured a lease of store now occupied by Florsheim & Co., 29 East Fifth street, for retail business, and large loft, Sixth and Main streets, for wholesale department. McGreal Bros. will carry a big line of Edison and Victor goods, and, it is presumed, try to equal, if not excel, their great success as talking machine merchants in Milwaukee, where they now are located and recognized as among the largest wholesale and retail concerns in the West. It is understood that they will job the Edison goods only here, but carry both Edison and Victor goods complete at their retail place. They will open on or about May 15.

"THE MYSTIC MIRROR"

Certain to be a Big Winner as Side Line With Talking Machine Dealers.

There is a new novelty on the market which will prove a great seller in the talking machine trade. It is called the "Mystic Mirror," and is an illustrated post card projector which throws any picture, or, in fact, any article on a sheet in all of its original colors. When one stops to consider the countless thousands who have the post-card craze, all of whom will be interested in this wonderful little machine, it is not hard to see that its possibilities are enormous. The Church Supply Co., who control the "Mystic Mirror," are offering them to this trade in the right way—namely, selling only through legitimate jobbers and giving both jobber and dealer a good margin of profit. For further particulars, see their advertisement which appears in this issue.

SOME BRIGHT THINGS IN "CHAT."

That always interesting little volume, "Chat," published by the Tea Tray Co., of Newark, N. J., is full of bright sentiments for April. We quote just a few to show the spirit of the text, and to whet the reader's appetite:

"There's something wrong with the man who slips down twiee on the same banana peel."

"It's a sad mistake to treat the public like a country cousin. The customer is examining into things on his own hook while you're sitting inside a glass case at a desk."

"Don't expect any man to have faith in your judgment if you call him a fool."

"Don't make the mistake of grumbling about your competitor. Make a noise like a winner."

"There's a good market for every good thing—but you must have the good thing. We make a number of 'good things' every one of which is a big selling success."

"It may look black on your side of the fence, but the chap on the other side may see a white fence. It all depends on the side you're on. Get on the white side. Keep the best lines of goods you can and then let the people know you've got them. You'll be gratified at the results."

"If all prayers were answered there would be no room in the streets for the automobiles and the wheel-barrow factories would have to close up."

MANAGER WANTED

We want a young man of experience to take charge of a retail talking machine store in Montreal. He must be competent and up-to-date and understand the business thoroughly. Give age, experience, salary expected and references. Berliner Gramophone Co. of Canada, Ltd.

MANAGER WANTED

One who understands the Edison business both wholesale and retail from A to Z, and wants to better his position. Address, "Confidential," care The Talking Machine World, 1 Madison Avenue, New York.

MANAGER WANTED

WANTED—Manager for wholesale and retail Talking Machine Jobber. Familiar with both Victor and Edison Lines. State experience, reference and full particulars. Good salary to right party. Address, "S," care The Talking Machine World, 1 Madison Ave., New York.

BURKE TALKING MACHINE CO. AFFAIRS.

Leo Greenberger, assignee of the Burke Talking Machine & Novelty Co. (bankrupts), advise us that by virtue of assignments, dated, respectively, March 11, 1907, and April 6, 1907, all the outstanding accounts of the Burke Talking Machine & Novelty Co. have been assigned to the Mechanics' Bank, of Brooklyn, the same to collect all the accounts due and apply it, after reimbursing itself for all the outlays made, toward the payment of their claim, as well as all other creditors. This terminates the assigneeship.

THE NEEDLE QUESTION DISCUSSED.

Some very interesting facts are to be found in the advertisement of the Petmecky Co., which appears elsewhere in this issue of The World. Some misleading ideas about the functions of the needle which they manufacture are set before the public in a correct and important light. This needle question is an all-important one, and no dealer can afford to overlook it, because a good needle is as valuable as a good record. In this connection the especial merits of the Petmecky needle must enter into consideration.

The True Tone sound box, manufactured by the American Talking Machine Co., Brooklyn, N. Y., for all types of horns and tone arms, in spoken of as giving the most perfect reproductions. This box is the result of long and careful experiments, and is the invention of one of the best-known experts in the country in this line of development.

NEW IMPERIAL PHOTOGRAPHS OF THE TALKING MACHINE ARTISTS

Wide-awake dealers are now supplying the demand for these photographs. They are attractively finished, each bearing the facsimile signature of the artist. The demand for these is very large among the users of the talking machine. It remains for you or your competitor to supply this. All orders must be placed through your regular Jobber.

THE CHANNELL STUDIO FOR PHOTOGRAPHY

483-485 Main Street

ORANGE, N. J.

TIMELY TALKS ON TIMELY TOPICS.

The complaint that inferior parts are being used and substituted for the original articles, when machines are under repair, is not only a serious charge, but has a foundation in fact. In this indictment is included the practices of jobbers whose methods are far from honorable. For example, no matter whose make of machine may suffer in consequence, the ultimate result is bound to injure the guilty parties also. If a machine fails to give satisfaction after being overhauled simply because some conscienceless conceru, instead of using genuine goods, employs "something just as good," when, in fact, the substituted parts are known to be inferior, the owner soon despairs of ever again enjoying records as they should be rendered, and finally throws it aside more in sorrow thau in anger. At the same time a customer may be irretrievably lost, and one less source of business cut off.

Perhaps the short-sighted dealer may be acting in good faith in buying springs, belts, handles, sapphires, needles, balls, feed nuts, etc., from jobbers or concerns who have imposed upon him. As a fact also a great many—too many, unfortunately—dealers regard price as the controlling consideration in buying goods, and when spurious articles are put in place of reliable parts in the repairing of machines, they commit a trade crime that never should be coudoned. The machine manufacturers are justifiably jealous of the reputation of their product, and when complaints reach them that they are not working satisfactorily, and an investigation reveals the dastardly practice above alluded to, they should adopt any means, no matter how drastic, to protect and perpetuate the high esteem with which their goods were regarded as they first came, "pure and undefiled," from the factory.

While Ricordi & Co. and Sonzogno, the music publishers of Milan, Italy, were successful in having the decision of the High Court against gratuitous reproduction of music on records sustained on review by the Court of Appeal, the latest decree came as no surprise. The Gramophone & Typewriter, Ltd., London, England, were the defendants, and hereafter tribute must be paid, not to the composers, but the several publishers who control the music in every stage of its employment. Naturally each country seeks to protect its interests as against the world, and the production of music being a great Italian industry, so to speak, Italy would naturally throw every safeguard around the so-called property of its citizens, international agreement or equity to the contrary notwithstanding.

When an exchange of records is announced by the manufacturer, an undertakiug ensues the magnitude of which only those handling the returned goods realize. Notwithstanding the explicit instructions given for shipping "dead" stock to the factories, it turns up in every imaginable shape, and the labor of straightening out, checking up and crediting the accounts of dealers and jobbers involves an amount of work and the exercise of patience little dreamed of. A case in point is that of the Victor Talking Machine Co., who have been literally overwhelmed by returns, receiving on an average of 187,000 records back daily. The National Phonograph Co. had the same experience, and now the Zonophone people have offered a like privilege to their trade, with doubtless the same proportional result before them. As yet the manufacturers here have not determined upon any fixed time for the housecleaning process, though abroad it is a regular yearly affair, with the clean-up in the spring. Perhaps this custom may be adopted in the United States, and then doubtless a permanent department will be established for that express purpose. In that event the embarrassment and annoyance of being 'all balled up" during the exchange period will be entirely eliminated.

Among the inventions in course of development for commercial or practical purposes is that of the Telegraphone. From time to time reports of progress have been made, and its evolution from a scientific wonder to a plane where its marvelous properties can be converted to the everyday uses of the work-a-day world is being closely watched. The latest advices regarding the Telegraphone is that the new model disc machine will be on the market inside of ninety days, and then startling progress will be shown in the mystic art of sound reproduction. The discs first used will be twelve inch, duplex or a continuous record, if need be, on both sides, but it is not necessary to stop the machine to turn the disc, the reverse record being operated by simply pressing a button when the obverse or face has finished. Larger records—15, 20 and 30 inch—may follow, the enthusiastic advocates of the Telegraphone say, and as for duplicating, it is claimed, by a magnetized strip of metal as a connecting link 10,000 records may be made at once. Truly wonderful! If these dazzling promises are actually realized in practice the acme of perfection would seem to have been reached.

In a recent informal chat with The World, B. G. Royal, president of the Universal Talking Machine Manufacturing Co., who has had years of experience here and in Europe, said that the small dealer was the actual distributer or backbone of the trade. Therefore manufacturers should aim to put out only the best possible records, goods that were sellers, and not load him up with dead stock. To attain this object the best talent, the most improved processes and the highest art should be exercised in maintaining tne best standard of excellence reachable. Mr. Royal was also of the belief that twenty-five records monthly were enough, and more than sufficient to meet every demand for variety and quantity. In comparing the trade abroad with

RAPKE'S COLLAPSIBLE HORN IMPROVED CRANE

To illustrate the compactness of the horn when collapsed or nested, 100 can be shipped in same size box used for sending an ordinary single horn.

We do not sell to dealers direct. All orders handled through jobbers. Orders filled strictly in rotation. Ask your jobber about **Rapke Specialties.** They will increase your business.

VICTOR H. RAPKE CO., MANUFACTURERS, 255 E. 86th St. **New York City**

American conditions, he was inclined to favor an opinion of the former's greater advancement for more reasons than one. As the gentleman is regarded in the inner circles as one of the best equipped men in the business, on broad grounds, he is likely to be heard from in no uncertain way.

The sale of the commercial or business talking —rather, writing—machine is increasing at a rate simply astonishing. Both the Edison business phonograph and the Columbia commercial graphophone are making great strides in the esteem of the mercantile world; and the energy, versatility and resourcefulness displayed by the management of this special department in the respective companies is of a high order of merit. It is believed this branch of the business is destined to assume great proportions, and the machines come into general use the world over. As with the entertainment sound-reproducing devices, foreign countries are again indebted to American inventive genius for this system.

On account of its high notes, all Edison horns are said to be tested by record No. 9400, "Love and the Bird." If a horn does not "blast" under this severe ordeal it will pass muster.

A sapphire reproducing point is used on the Pathé Freres disc records, and instead of using the lateral or zig-zag sound line, the vertical or undulating wave is employed. The results attained are a revelation, according to experienced talking machine men who have had the privilege of hearing these records.

An organization has been formed in Germany under the appalling name of "Bund der Sprechmaschinenhandler Deutschland," or, as interpreted, Talking Machine Dealers Association of Germany. Its success is assured, as it is organized for mutual benefit and protection.

The holiday season in Germany developed a strong demand for cheap machines, with which the factories were unable to cope. It is reported extensive additions will be made to the plants so as to have a supply of this class of goods in the future; or, as an esteemed contemporary, "Die Sprechmaschine," expressed it, "so that such calamities will not reoccur." We fail to see the "calamity" point, however distressful may be the other conditions.

The Universal Talking Machine Manufacturing Co., Newark, N. J., within the last few weeks, have adopted a new trade-mark, which will be used on all their products, literature, printing, etc.

WHY CUT PRICES?

The Attitude Assumed by Some Talking Machine People Contrary to Good Business Rules—Prices Should be Maintained and Fair Profits Returned.

The talking machine manufacturers, in regulating their contracts with their agents, have inaugurated a plan which could be followed with pleasure and profit by the members of the auxiliary trade, who supply various talking machine accessories.

The system under which talking machines are sold prevents the cutting and slashing of prices, thus securing to a dealer a fair margin of profit and saving the reputation of the instrument which he handles from slaughter. Why should not this same plan apply equally as well to talking machine accessories? Every business should pay a legitimate profit, and from some of the prices which we have learned have been quoted recently by some of the talking machine supply manufacturers, we are convinced that the profit is something which they have cut out entirely from their business. In fact, there are some horns sold at prices which afford no profits to the makers.

Now, a business which does not show a profit is not worth securing. No business man should fool himself with the belief that it pays to replace one dollar with another. It does not, for he is wasting his time and his energy, and with the talking machine industry in a healthy buoyant state there is no reason why every line of goods should not be sold at profitable rates. The additional cost would not be thought of by the retail purchaser as being any impediment to the sale.

Talking machines and accessories are not like staples bought by the same parties daily and therefore should return a fair percentage of profit.

BOSTONIANS IN GOOD HUMOR.

The Talking Machine Fraternity in the City of Culture Have No Complaints to Make—They Are All Doing Well With an Increasing Demand for the Better Grade of Goods.

(Special to The Talking Machine World.)

Boston, Mass., April 9, 1907.

The advent of spring finds the dealers in talking machines feeling in very good humor. Trade has been more than good for two months, and the prospects for the summer are much brighter even than last year, which was a record breaker in every store. Now that the dealers are able to get their orders filled a little more promptly than they have been able to before, the situation is relieved a great deal.

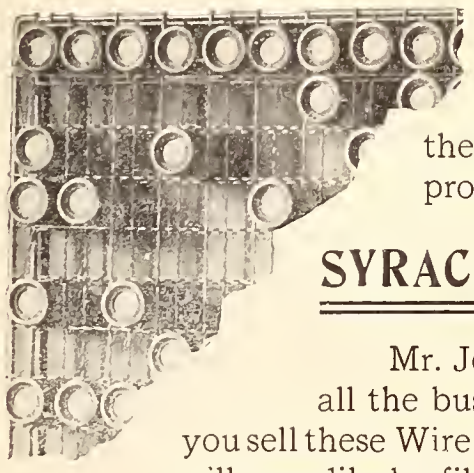
The M. Steinert & Sons Co. are giving more window space to the display of talking machines than they have been in the habit of doing, with the result that trade has increased quite a little. They have had a very attractive display during the past week. At the wholesale office trade is reported as being remarkably good, especially on the higher priced Victors.

The Eastern Talking Machine Co. are making great headway with the I. C. S. lesson idea, and already one or two of the Boston public schools are using the series for the teaching of German. The wholesale department here, under the management of Mr. Chamberlin, has been rushed with orders for several months.

At the Columbia Phonograph Co. the recently enlarged record rooms have been taxed to their utmost this spring. A fine demand for the better grade of goods is noted here, especially on the Columbia phonographs. The window display

Racks for Homes and Cafes

ARE YOU SELLING YOUR SHARE OF THIS TRADE?



There's a demand for Racks in homes where many records are kept; the proper storing of records after the number reaches fifty becomes a problem which is quickly solved by

SYRACUSE WIRE RECORD RACKS

Mr. Jobber and Mr. Dealer are you getting all the business you should along these lines? If you sell these Wire Record Racks you provide room which will speedily be filled with records—to your advantage.

You need our No. 123 Rack for this trade. Read descriptions of 100 and 200 Space Racks, Catalog page 2. If you have no Catalog, write for one to-day. Liberal discount to jobbers.

THE PARDEE-ELLENBERGER COMPANY

NEW HAVEN, CONN.

The only Edison jobbers, EXCLUSIVELY Wholesalers, in New England :: ::

is changed here several times a week, which adds to the attractiveness of the store.

Business at the Boston Cycle & Sundry Co. is reported as "better than ever, and growing better every day." Manager Andrews is pushing the sales of his new tray system which has "caught on" in the trade immensely. This company does a wholesale business that is enormous, and it covers every branch of the talking machine business. The new style carrying case which is made by this company is one of the best things ever invented for the comfort and convenience of users of the talking machine.

The new rooms given over to the talking machine department at Houghton & Dutton's department store are proving their worth every day. Business here is reported remarkably good and rapidly increasing.

THE OUTLOOK IN CUBA

For Talking Machines and Supplies Has Steadily Improved—An Interesting Chat on This Subject With J. H. Dorian Who Has Just Returned from a Trip to That Island—Columbia Branch Opened in Havana.

John H. Dorian, manager of the department of New York of the Columbia Phonograph Co., arrived home in this city last Saturday after a very pleasant trip to Cuba. While rest and pleasure were the chief objects in view, at the same time he could not resist the temptation to make a study of the conditions of that island with a view to future business. In regard to them, he said to The World: "With the improved conditions in Cuba, the scope for the talking machine has developed in a simply wonderful manner, and the cultivation of the field has not as yet commenced. While on the island I was one of a party that took a ride inland of 250 miles on an automobile, and everywhere we found talking machines or traces of them. They have become extremely popular with the native population, and to meet the demand for records in their native tongue, we will have a large list made specially for the Spanish-American trade, and to that end have arranged for some of the best Spanish singers to come to this country and make records at the Columbia laboratory. While in Havana we established a Columbia store and headquarters in that city, and have secured a manager that is thoroughly wideawake, and who will make the name "Columbia" known throughout the island. The Columbia graphophones at the present time have a large following among the Cubans, and they are daily growing more partial to the disc machines, although the demand for the cylinder variety is excellent. Civic conditions on the island have tended to bring business down to a much better basis, and under the present rule there is no reason why it should not become one of the most prosperous of the Spanish-American countries."

PITTSBURG'S RECORD BREAKING FLOOD.

(Special to The Talking Machine World.)

Pittsburg, Pa., April 3, 1907.

The scene herewith shows Penn avenue, from Seventh street to Water street, covered with six feet of water at the deepest part. In the square in the foreground are the stores of the Columbia Phonograph Co., and the Penn avenue store of Messrs. Powers & Henry. These stores were in the very heart of the flood. The boat to the left of the picture made a voyage on the first floor of the Columbia store. On this floor there was nearly four feet of water. The enterprising assistant manager, A. W. Ross, had painted and displayed a neat sign which read: "Flood your homes with good music." "Flood sales" have been conducted by all of the talking machine stores whose stocks were damaged by the unprecedented high waters.

THIS IS PITTSBURG, NOT VENICE, IN FLOOD TIMES.

EFFECTIVE ADVERTISING.

It is very difficult to introduce a good article to-day without distributing samples. The public seem to class all articles alike until they can put the goods to the test. It is very easy to sell goods of known value, and the distributing of free samples, although in most cases quite expensive, has proven to be the most effective way to quickly introduce an article of merit.

Mr. Blackman, proprietor of the Blackman Talking Machine Co., 97 Chambers street, New York, in discussing this subject, says that he makes it a point to give away samples of anything he manufactures, which does not cost so much that it would be practically impossible. In this connection it would be well for dealers and jobbers to refer to the Blackman Co.'s advertisement in this issue, in which they offer to furnish free samples of their specialties.

Fred C. MacLean, who had been traveling through the Southwest and in Mexico for the Sterling Debenture Co. nearly three months, looking after the commercial end of the Telegraphone, the wonderful sound recorder by means of electro-magnetism, returned to New York March 28.

WE'VE MOVED

TO
28-30-32 Division Pl.
NEWARK, N. J.

Outgrowth of the former premises compelled us to seek more spacious quarters.

Our rapid growing business demanded space; now we're prepared to handle any amount of business with disregard to size.

This change is simply the result of strenuous efforts in the direction of turning out goods that appealed to the trade.

Proper dealing—with *proper* goods at *proper* prices and deliveries at the *proper* time are the four essentials with which we built up a magnificent enterprise.

Our remarkable wood color horns, together with the famous morning glory and decorated horns are the products which won for us the distinction we're so justly proud of, and every possible means will be employed to further claim it.

Demands for these goods came from many points—in fact, various parts of the country—*North, South, East, West* and in consequence of this we branched out to Chicago.

The *Western Talking Machine & Supply Co.* will take care of our tremendous western business. Doesn't that give evidence of growth?

Expansion is the order of the day and we're still expanding.

Small decorated and plain horns 20 x 25 are our present leaders. They've proved very popular and we sold many—many more to be had. Get interested.

WRITE US—PHONE US—OR CALL ON US. However, let us know your wants.

VALUE OF WINDOW DRESSING.

One of the Most Important Departments of Publicity With the Pushing Talking Machine Man Is the Well Dressed Window.

Window dressing has come to be regarded as one of the essential features of store advertising, and at the present time the man who can arrange an attractive display is an almost indispensable factor in any place of business. It is only recently that the talking machine trade have recognized the fact that their store windows can be so arranged that they prove a magnet to every passerby. A jumble of machines, horns and records cannot be said to constitute a display; in fact, many of the windows seen would be greatly improved by being vacant. It is not required to have any elaborate mechanical contrivance to attract attention, although if unique they add to the appearance. One of the most attractive windows seen during the Easter season was a model of simplicity, combined with richuess. In the center was a large sized disc machine mounted on an attractive cabinet. Across the horn and twined around the cabinet was a broad purple ribbon. The floor and background was covered with a deep yellow cheesecloth and a few artificial Easter lilies were scattered carelessly on the floor. It was the acme of rich simplicity, but attracted the attention of thousands. Another window on a side street was a mass of small machines, without a single feature to attract the eye, and it was passed by without a glance from the pedestrians that thronged the thoroughfare. The proprietor of the store told The World that he did not have the time to fix his windows, and furthermore that he did not believe that it made any difference, anyway. But one thing was certain, he had few callers compared to his competitors who were progressive.

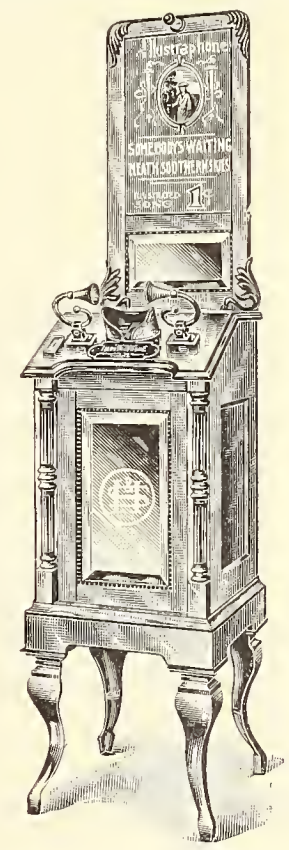
THE ILLUSTRAPHONE

A Combination Talking and Picture Machine Which Is Destined to Become a Big Winner.

(Special to The Talking Machine World.)

Philadelphia, Pa., April 11, 1907.

When the Talking Machine World representative called at the factory of the Hawthorne & Sheble Manufacturing Co. the other day he had



THE ILLUSTRAPHONE.

the privilege of seeing their latest production, which is called the Illustraphone. As its name implies, it is a combination talking and picture, coin slot machine. The pictures are simply wonderful and the way they come into view and harmonize with the sentiment of the song shows great care and artistic taste in getting them up. The cabinet is solid mahogany with beveled plate glass mirror in the front aud is mounted on nickel-plated legs. All details conceivable to make a perfect machine are covered. As soon as a person drops a coin in the slot, there is a little Pilot lamp lights up to indicate the machine is running O. K. The hearing tubes are superseded by their new Auditrumpets. The first machines placed in public locations average over $10 each per week. An illustration of the machine is presented herewith.

STILL ANOTHER USE FOR "TALKER."

Henry Grady, of Atlanta, Ga., has discovered a new use for a Victor talking machine. One day, while playing the machine in his home on Peachtree street, he noticed all the chickens on the place congregated under the windows, seemingly hypnotized by the music, and they remained apparently in a trance uutil the music stopped. Mr. Grady considers the matter so unusual that he will exhibit both machine and chickens at the next State fair held in the fall if the chickens do not recover from their enraptured state before that time.

The Hawthorne & Sheble Manufacturing Co. report a phenomenal demand for their Star records. Within forty-five days they have received orders for over 300,000 records. This is certainly going some, and speaks well for records and the reputation of the firm making them.

The Columbia Phonograph Co. have opened a new branch store at 941 Main street, Hartford, Conn. It is said to be one of the handsomest talking machine stores in New England.

HOW TO PRESERVE YOUR
Talking Machine Worlds

For some time past we have received numerous requests from subscribers for binders to hold the files of the paper, so that they would be convenient for reference purposes.

To supply this demand we have had a number of "Common Sense Binders" made, which will accommodate the Talking Machine World readers.

If you wish your Worlds filed always within reach, order a binder.

These binders are full cloth, with the title of the publication on the front in gold.

These will be supplied to subscribers, delivered to any part of the country for $1.25.

KEEP YOUR CUSTOMERS PLEASED

It is the Secret of Commercial Success
It Makes Good Business

THEY COME BACK.

60% of all persons who own PHONOGRAPHS, hardly use them at all. Their enthusiasm soon dies after they have bought a machine. Why? Because their RECORDS soon become scratchy and unmusical. Most people are not wealthy enough to keep constantly buying new records, and so they shove their PHONOGRAPHS aside. This is the worst thing that can occur, for the DEALER. It means the shutting off the purchase of many thousands records annually. The common cry is heard everywhere "I've got a PHONOGRAPH, but I never use it." This is caused simply by worn records and it is the purpose of RECORDOL to prevent this. By its use CYLINDER RECORDS are kept in perfect playing condition, which of course makes the owner use them, and that's WHAT YOU WANT. It keeps his interest up. He keeps using his PHONOGRAPH. He doesn't lay it aside and forget its existence. RESULT, he is anxious to hear new and more good music, and where under regular circumstances he may spontaneously buy 25 or 30 records a year, he will, when his interest is always up, steadily keep adding, which will average 100% more for the dealer in the long run.

RECORDOL, is a DRY POWDER. It comes put up in fine boxes which RETAIL for $1.00 each. We want you to try it, and be satisfied before you put it in stock. If you will fill out the attached coupon, inclose it with a 2-cent stamp and one of your cards, to show you are a dealer, we will mail you prepaid a sample of "RECORDOL." Write to-day. WE WANT AGENTS EVERYWHERE.

CUT HERE AND MAIL TO-DAY.

THE STANDARD TALKING MACHINE CO.

Of Pittsburg Who Took Over the Business of the Theo. F. Bentel Co. Are Building Up a Fine Business.

(Special to The Talking Machine World.)

Pittsburg, Pa., April 6, 1907.

The Standard Talking Machine Co., who recently took over the business and secured the good will of the Theodore F. Bentel Co., incorporated, are now in a position to take care of the trade in the same prompt and satisfactory manner that was the policy of the Bentel concern.

The Standard Talking Machine Co., incorporated, for the past two years were exclusive Victor distributers in this territory, but since the acquiring of the Bentel concern they are now Edison, Victor and Columbia jobbers and will conduct the business largely on the same lines as their predecessor. The personnel of the Standard Talking Machine Co. is as follows: George E. Grotenpond, president; M. S. Rocereto, vice-president; J. C. Roush, treasurer and manager, and D. O. Jones, secretary. The company, which was incorporated under the laws of Pennsylvania, has a capital of $25,000.

INVITES EDISON TO GERMANY.

Representative of Exhibition of Inventions Comes to America.

A cable to The New York Times from Berlin says: "A notable exhibition will be opened here in June under the patronage of the Emperor and the auspices of the Technical Society. It will consist of the newest inventions, and among the exhibits will be Lilienthal's airship, the latest inventions in wireless telephony, and Korn's photo-telegraph. A representative of the management is now in the United States for the purpose of trying to induce Thomas A. Edison to come here for the opening of the exhibition."

SELLING OF SCHEME GOODS.

National Phonograph Co. Issue Warning to the Trade on This Subject.

The National Phonograph Co. have notified their jobbers and dealers regarding the exchange of premium goods of whatever origin for Edison machines and records in connection with newspaper or magazine advertising schemes, as follows:

"All schemes involving the giving away or the disposal at less than current prices of any article whatever, or, for which advertising is considered a part payment, and which article is taken in exchange in whole or part payment for goods manufactured or sold by this company, is a violation of the conditions of sale governing the sale of goods manufactured and sold by this company; and any advertising or premium scheme which directly or indirectly involves the exchange or sale of goods manufactured and sold by this company, is a violation of such conditions of sale. All jobbers and dealers are hereby warned that after this date, all goods manufactured and sold by this company, must not in any way be coupled with advertising or premium schemes, or exchanged for goods of other make or nature involved in such schemes. Jobbers or dealers who hereafter dispose of goods of our manufacture in this way, will be immediately suspended from the advantages and privileges of our jobbers' and dealers' agreements."

Policeman Charles A. Jones, of Portland, Me., one of the oldest officers in point of service in that city, owned one of the first Edison phonographs in that city and at one time owned one thousand records, although he has since disposed of many of them.

Edmond F. Sause has been appointed assistant manager of the export department of the Columbia Phonograph Co., in recognition of his efficient services while connected with the company in other capacities.

MORE MELBA RECORDS.

The Famous Operatic Soprano Was Paid an Enormous Sum to Make Records for the Victor Talking Machine Co.

Some important additions to the beautiful records made by Mme. Melba for the Victor Talking Machine Co. will doubtless soon make their appearance owing to the fact that the great prima donna was prevailed upon to postpone her departure for Europe and spend a week making records exclusively for this company. This made the third time Mme. Melba delayed her sailing for home. Of course, the offer was extremely tempting to persuade one of the world's greatest operatic stars to extend her season, but —well, this is America.

MME. NELLIE MELBA.

Mme. Melba was booked to sail on the "Kron Prinz Wilhelm" on March 26, immediately after the ending of her season at the Manhattan Opera House, but the Victor contract caused her to wait until April 2, spending the entire week in making a series of records. In consideration of the immense advance payment and a liberal royalty on every one of her records sold, Mme. Melba binds herself not to sing for the purpose of making records of her voice for any person or party other than the Victor Co. and an associated corporation. No record is to be placed on the market without her approval, and orchestral or piano accompaniment as desired by the prima donna, and all other facilities are to be placed at her disposal by the Victor Talking Machine Co.

In connection with the making of her records, Mme. Melba paid a handsome compliment to Walter B. Rogers, conductor of the Victor Orchestra. She had originally intended to bring her own personal orchestra leader over from Europe, had, in fact, cabled for him, but upon witnessing the able manner in which Mr. Rogers handled the baton, cancelled her orders to her own conductor and placed herself under his direction entirely while making the records.

DUPLEX PHONOGRAPH CO.'S PLANT CLOSED.

The plant of the Duplex Phonograph Co., Kalamazoo, Mich., was closed on April 2, and all employes laid off in obedience to the injunction issued in favor of the Victor Co. by the Federal Court forbidding the former concern to manufacture machines pending the decision of the court in the suit of the Victor Co. for alleged infringement of patent.

Colonel F. D. Eager, manager of the Duplex Phonograph Co., informed the employes that while the shutdown would be of indefinite duration; should the suit go in favor of the Duplex Company operations would be resumed upon a much larger scale than heretofore.

Cressey & Allen, the talking machine dealers of Portland, Me., recently received a ton of Victor records in one shipment. Looks like business.

In the Words of Others "Sell I.C.S. Language Outfits"

The best proof that it will pay you to sell I. C. S. Language Outfits comes from the statement of dealers that have tried them. We have published several of these letters before; here is another one from the Denver Dry Goods Co. This is piling up evidence that you are losing profits of from 10 to 30 per cent. on your business if you are not handling these Outfits. The phonograph system is fast becoming recognized as the most perfect way in the world to teach foreign languages. As a commercial enterprise, the I. C. S. System has always paid dealers well in the past, and it is growing very rapidly. Wouldn't it be a good idea for you to write us today for full particulars of what we can do for you? Let us put our advertising to work for you. It will not only bring you customers for language work, but will increase your regular business. Send us a postal card NOW

THE DENVER DRY GOODS CO.

DENVER, COLO. 11/21/06.

International Correspondence Schools,

Scranton, Pa.

Gentlemen:

In reply to your letter of the 17th inst., will say we considered the demonstration of Mr. Mistraud very successful and while he was here we sold several Language Outfits. We have also sold some since he left us. We expect to advertise these Language Outfits during December as gifts as you may rest assured we will communicate with the parties to whom demonstration was given and who have not as yet made a purchase. We think the plan of advertising or demonstrating these Outfits is successful and leads to sales which could not be obtained otherwise.

We have placed several orders with you since the demonstration and would like to know if we could make arrangements to purchase whatever we need in this line through your Denver office as we have had to do several times recently; same can be billed to us by you. This would be quite an accommodation to us.

We will keep you advised from time to time of the results of sales on I. C. S. Language Outfits.

Yours very truly,

THE DENVER DRY GOODS CO.,

SCRANTON, PA.

FROM OUR CHICAGO HEADQUARTERS

195-197 WABASH AVENUE, E. P. VAN HARLINGEN, MANAGER.

Trade Conditions Healthy—Babson Bros. New Building Near Completion—Big Regina Trade—Cable Company Developing Their Retail Trade—Talking Machine Co. Remove to Larger and More Central Quarters—Columbia Twelve Inch Records Please—Handsome Exhibit Made by the Columbia Co., and the National Phonograph Co. at the Recent Business Show—Wurlitzer Co. Expansion in Chicago—C. W. Noyes Back from the Coast—Some Babson Surprises Soon—Other Happenings of Interest to World Readers.

(Special to The Talking Machine World.)
World Office, 195 Wabash Avenue,
Chicago, Ill., April 10, 1907.

The Western trade is in a decidedly healthy condition, thank you. Jobbers, as a rule, state that business during the first quarter of 1907 has shown a most gratifying increase over the same period of 1906. Collections are good and the trade generally is in a very contented frame of mind. Local retail trade is of very fair proportions.

That new building of Babson Bros., on the West side, is under roof. It has been put up in a remarkably short space of time, but nothing has been slighted. It is a splendid building in every way, and constructed to stay. That such a building should be erected for a concern in this business for distributive purposes alone is a magnificent comment on the permanency and immensity of the trade. Wholesale Manager Nisbett bought the Edison stock of the Cable Company, who are retiring from the wholesale business. The record stock amounted to something like 40,000.

C. E. Goodwin, manager of the talking machine department of Lyon & Healy, has gone East. While there he will pay a visit to both the Victor and Edison factories. He reports business as excellent.

Mr. Blumberg, Western manager for the Regina Co., says that his only trouble is to get goods enough to supply the demand. His business so far this year has been nearly double what it was in the same period of 1906.

At the Rudolph Wurlitzer Co., Manager Uhl was highly elated over the way bnsiness is swinging along. "Away ahead of last year," was his brief but comprehensive report. In the retail department Manager John Otto has secured a valued head assistant in Lewis Kean Cameron, one of the best-known salesmen in the city, for some years with Lyon & Healy, and later with the Cable Company. An aggressive and systematic advertising campaign has been started by the retail department.

The Cable Company are down to a retail basis now, but superficial indications would go to indicate that their department will speedily become one of the most important in the city. At the head, nnder Manager Joseph T. Leimert, who has general supervision of all the local retail interests of the Cable Company, is a most capable man, C. M. Le Roux, who has around him a competent force of assistants. They are going to cater to the very best trade handling the Victor line, and as soon as they are out the Columbia Marconi records. The department is going after things in the way that wins, and will have the distinction of being the only large retail concern in town outside of the Columbia Co.'s office devoting itself entirely to the disc product. Manager Le Roux says they are going after the Red Seal and Victor Victrola trade, and go after it hard.

The Talking Machine Co. are making another milestone in its progress by removing to larger and more centrally located quarters so far as the talking machine trade is concerned. The new quarters occupy an entire floor of the big building at 72-74 Wabash avenne. They will have more room than formerly, and will have the additional advantage of having everything on the one floor—a big advantage in the case of an immense jobbing business of this kind. Manager Arthnr D. Geissler deserves the congratulations of the trade for the remarkable progress made by the company since his incumbency of the managerial chair.

The Western Talking Machine & Snpply Co. are certainly a concern which must be reckoned with in a large way in the future. Messrs. Dillbahner and Feinberg are two young men, hustlers both of them, who are the kind of men who do things. As previonsly announced in these columns they are prepared to make shipments of horns, O. K. cranes and "Standard" needles, f. o. b. Chicago at factory prices, and are now in a position to ship goods from Chicago the day ordered, a big advantage to the Western jobbing trade. While Mr. Feinberg was away Mr. Dillbahner found things swinging in a manner which gave him something suspiciously like a case of nervous prostration, and he is now in his native State, Michigan, exercising his prowess as a mighty Nimrod and expert disciple of Isaak Walton.

The Salter Manufacturing Co.'s big factory on the West Side is busy taking care of the steadily growing demand for Salter cabinets.

Some of the recent 12-inch dollar record issues of the Columbia records are of the character calculated to increase and strengthen the Columbia prestige. Among them may be mentioned notably "I'll Sing the Songs of Araby," by Henry Burr; "Calm Breathes the Night," from one of

by Mr. Edison. Numerous samples of the company's latest improved direct current and alternating current machines were also exhibited. In connection with this exhibit was that of the Bates Manufacturing Co., another Edison institution, showing the Bates numbering machine. It was in charge of Frederick A. Burnham, of New York, manager of sales.

The Columbia Phonograph Co. had a fine exhibit to the right of the entrance as you pass into the building. They displayed the new model 1907 commercial dictation graphophone, of which the recording device is an especial feature. The type C. A. alternating current machine attracted much attention as it is available by concerns in comparatively small places, who have heretofore been compelled to use the spring motor graphophone. W. W. Parsons, who is the manager of the commercial dictation department of the Chicago office, was in charge, assisted by Paul M. Wood, C. A. Burgsten and Miss M. Ruckenbach and C. P. McDonald, a champion typewritist, as demonstrators. The exhibit proved to be a very big success, and Mr. Parsons has already had the pleasure of demonstrating to representatives of big local companies who have not yet come into the fold, but who give strong symptoms of warming up.

A set of the Bonci records has been received by E. C. Plume, wholesale manager for the Columbia Co., in this neck of the woods. He treated your representative to a recital. The records are superb.

J. A. Warren, formerly head of the collection department at the Chicago office of the Columbia Phonograph Co., has gone to Peoria to take charge of the Columbia office at that point. He is a young man who, while with the Columbia Co. only a few months, has had several important promotions. The Columbia Co. are quick to appreciate ability on the part of their employes. Mr. Warren is just the kind of a man to make a superexcellent branch office manager. Watch him climb.

C. W. Noyes, secretary of the Hawthorne & Sheble Manufacturing Co., is now on his way back from the Coast. He has with him an imposing outfit, consisting of three of the company's excellent new talking machines, together with samples of the new Star records. He is meeting with splendid success, and if reports are true, has taken enough orders to keep the factories running for quite some time.

The demand for Victor Victrolas continues unabated. It is still purely a question of supply.

Some of the talking machine stores in the outlying districts, not all by any manner of means, are doing some wonderfully effective window trimming. Topical windows and windows illustrative of specific conceptions are occasionally seen which do distinct credit to the creators thereof.

Babson Bros., it is reported, have some surprises to spring on the trade in the very near future.

E. C. Plume, Western wholesale manager of the Columbia Co., is on a trip to the Twin Cities.

Another case of the talking machine occupying an important place in a funeral service comes from Muskegon, Mich. At a funeral in Pentwater, a nearby town, after the last rites had been conducted by the preacher, a talking machine was placed on the casket and the mourners heard the voice of the dead man singing his favorite hymn.

Looks like a busy spring and summer in all sections of the West.

BANQUET OF COLUMBIA FORCES.

Members of the Chicago Office as Well as Many Guests Held Their Annual Banquet at Vogelsang's on March 20th—A Most Enjoyable Occasion—Many Impromptu Addresses Made by the Members of the Staff—Affair Will Go Down in History as the Most Successful Ever Held by This Company.

(Special to The Talking Machine World.)
World Office, 195 Wabash Avenue,
Chicago, Ill., April 8, 1907.

The Chicago office of the Columbia Phonograph Co. gave their annual banquet at Vogelsang's on Wednesday evening, March 20. The event was a most thoroughly enjoyable one, and more than that was deeply significant to the man disposed to look beneath the surface. The affair, it should be said, was largely the work of O. W. Eckland, the manager of the instalment department, although he had very able assistance from the other department heads and the members of the working force. The World representative was honored with a place at the speaker's table and was glad of it, as it enabled him to study the faces of the 125 animated talking machines (beg pardon, gentlemen, graphophones) who filled the cosy little banquet hall at Vogelsang's. There were the managers of the departments, prominent members of the office and collection force, all men of evident ability, and then the salesmen. The remarks made in these columns last month applied generally to store salesmen. While all the instalment solicitors are on a commission basis, there were men there who make on an average of $500 a month on a house to house canvass. A brighter, more intelligent lot of men you never saw, but, gentlemen, to the banquet. Toastmaster O. W. Eckland's introductions were very happy, full of intimate personalities and decidedly talkable. Toward the close of the evening, and after he had partaken of a demitasse of Vogelsang's coffee (there was no wine served), he burst forth into a rhapsody on the graphophone which cleared the smoke from the atmosphere and made every mother's son in the audience determine to be a better, truer man in the future. Your representative had an inkling of what was coming and had three court stenographers there to try to "take" Eckland. They got taken in. The immense philosophy and overpowering eloquence of Eckland's remarks palsied the brain, stilled the pen and made the stenographers in despair quit the hall and the business. While your representative is not sure he is right, he will try to the best of his ability to tell what Eckland was at. He informed the audience that according to the latest archæological discoveries the Columbia graphophone dates back to a period long before the Christian era. He presented a theory to the effect that Moses used a Twentieth Century graphophone in transmitting his decrees to the Children of Israel. He has it on good authority that Mark Anthony entertained Cleopatra with the strains of "Won't You Let Me Put My Arms Around You?" wafted from an XP record on a type AP graphophone. The wonderful oracles at Delphi and the other places were made possible, he said, only by disc graphophones concealed within the shrine. He also called attention to that new cabinet of Parsons as a modern development of this idea. All that civilization can give us, all the consolations of religion, and all the inspiration of poetry can be traced to the graphophone.

Brunnhilde could never have made her voice carry to the gods if she had not used the Twentieth Century. The small, still voice which Elijah heard in the mountain cave was undoubtedly from a type AU. He also has it on direct authority that the factories are now working on an order for a special machine for Gabriel, to be used in delivering the final trumpet toots.

Well, to go back. After the very bountiful repast had been discussed to the accompaniment of a magnificent type BD on one of the tables, Eckland started the flow of soul going by introducing W. C. Fuhri, district manager, who acquitted himself nobly.

Right here I would like to say that it is impossible to follow the law of proportions in referring to these speakers, as many of them, while very interesting and greeted with the greatest enthusiasm by the guests, yet treated the private business affairs of the company, and therefore only passing mention can in justice be made of them. Mr. Fuhri devoted himself largely to explaining the congestion in the company's factory and the reason why there has been delays in getting deliveries on certain types of machines. He said, however, that the company was getting in shape to fill all demands promptly, and went considerably into details. He thanked the men for the hearty co-operation and encouraged them heartily in their labor. A telegram of regret at not being present was received from A. D. Herriman, manager of the Davenport branch.

C. F. Baer, manager of the Chicago office, made a fine little talk, having to do mostly with the company's business. He was applauded to the echo.

E. C. Plume, western wholesale manager, made a talk which, unlike many of the others, it would be proper to report almost in full. Mr. Plume spoke in substance as follows:

"Mr. Chairman and Gentlemen—It is with a great deal of pleasure that I look around me and see the many enthusiastic and intelligent faces of the many Chicago office employes present here this evening, and I want to say that I have never before so much regretted the severance of my nominal connection with such a force of men. Many of you have worked for me, and with me, during my regime in charge of the retail departments of the Chicago office, and since that time many of you have become managers of the various stores under Chicago's jurisdiction. I want to say that there is room for all of you in responsible positions with this great concern, and that almost every man now in a position of responsibility and trust in our service has risen from the ranks. Some of you perhaps know something of my start in the service, but for those who do not know I want to say that I started with the Columbia Phonograph Co. in San Francisco quite a few years ago at a salary of $10 per week. Since that time I have filled positions in every branch of the service, and while the end of the business now represented by me in this territory (that of the wholesale department) naturally makes us work along different lines, I want to assure one and all of you of my hearty co-operation at all times, and desire to thank you for the co-operation which I have received from the various employes of the Chicago office and its branches. You have at your head a man who has also risen from the ranks, as has been the case with such men as your former chief, John H. Dorian. I might add before closing that Mr. Dorian also started in the company's service at $10 per week, and I hope to see every man who is present here this evening, and who is worthy of the trust, in a responsible position. You can do it, gentlemen; all it needs is sticktoitiveness and strict attention to business and the interests of the company. It is needless to say that I believe one and all of you will give Mr. Fuhri, Mr. Baer, and the department heads the co-operation which they will need to keep Chicago in its present position among the offices—that of first—and I think you are all with them in attaining this end; aren't you? (Cries of yes.) I thank you one and all for your forbearance

First Row (from left to right)—O. M. Kiess, W. W. Parsons, A. E. Thomas, W. C. Fuhri, E. C. Plume, C. F. Baer, O. W. Eckland, F. A. Cass, E. A. Parsons. Second Row (from left to right)—W. A. Ashleman, W. A. Everly, J. H. Parker, Geo. Cass, Geo. Remeinschneider, T. D. Waiss, O. Radix, V. E. Green, J. W. Bentley, A. Mortenson, G. H. Ingalls, J. J. Murphy.

ANNUAL BANQUET OF THE CHICAGO OFFICE OF THE COLUMBIA PHONOGRAPH CO.

in listening to one who is essentially not a speaker, but I assure you that I am with you, heart and soul."

About this time the Columbia Junior Quartet, made up of members of the Ashland avenue branch, began to get in their innings. The quartet consisted of Messrs. Libben, Allen, Brown and Levy, with Prof. Chas. W. Hawley at the piano. Mr. Libben sang several solos, accompanied by the quartet, and one or two alone. He has a rich basso cantate voice. His upper tones are especially beautiful; he sings with great dramatic feeling. We also heard Mr. Grimes in a couple of ringing baritone solos. Mr. Shatz gave us some very clever German impersonations. One of the most enjoyable events of the evening was Mr. Levy's topical song, "Having to do with Columbia Personalities," with the chorus sung by the quartet. Mr. Levy wrote the skits himself.

Three good salesmen, lots of luck
Get a store rid of the truck
Columbia Graphos always sell
If you push 'em hard as h——
We do like h——.

Work from early morn till late
Bring ten leases in we'll say
Six are cancelled, three rejected
One delivered, but defective—
No cash.

Mr. Baer he sits downtown
Calls up Ashland with a frown
Boys get busy, get the bis
So that Eckland will get his
May be.

When he does tell us this parable
We think Baer is quite unbearable
Pushing us like a Teddy Bear
Then we get business from everywhere—
Sometimes.

Then comes second Mr. Cass
What he says it sounds like brass
Boys get less business but more cash
It takes money to buy hash
A la boarding house.

Now such talk should spur us on
To work hard from morn till dawn
But if these two can't make us go
Then comes last not least you know
Oh Fuhri.

Him we tell our troubles all
That sometimes our orders fall
Because A1 is short on supply.
Then old Fuhri makes him fly.
Nothing but red tickets.

Now then this great aggregation
Of names is the combination
Mixed with energy and zest
Makes Columbia outsell the rest.
That's no joke.

We bear the cash right through old Fuhri
To Columbia just for glory
Take the banner lead us on
Hail Columbia Graphophone
Hurrah.

Mr. Green gave some talk on the practical problems and told something about his crew management and also of his training methods.

J. A. Corday made an interesting talk, and C. L. Cassidy also spoke, exalting the calling of the salesmen. Frank Cass, manager of the credit and collection department, gave a decidedly interesting talk and tried to clear up misconceptions on the part of the salesmen regarding the credit department. He showed clearly that a sale was never turned down without thorough investigation, and described the woes of the collector and of the credit man in a decidedly interesting and often humorous fashion. Mr. Libben, manager of the Ashland branch, urged the necessity of co-operation in every branch, and showed why, in his opiuion, the graphophone instalment solicitor had a lead pipe cinch as compared with salesmen in other lines. Mr. Johns, manager of the Detroit office, was greeted enthusiastically and spoke gracefully.

E. A. Parsons, who has again joined his brother, W. W. Parsons, in the commercial department, after an absence of two and a half years, brought the speech-making to an end in a strong and helpful address.

Among those who attended the banquet, or to whom invitations were sent, were the following: G. Abler, Mr. Allen, Benj. Arnold, W. A. Ashleman, Milwaukee, Wis.; L. Altenut, J. W. Bentley, Aurora, Ill.; J. F. Beattie, H. H. Brown, Maywood, Ill.; H. Braveman, Oak Park, Ill.; Wm. M. Breckinridge, Rockford, Ill.; Oscar Baer, G. Brown, L. Block, A. Busch, Chas. A. Bergsten, Edw. Blimke, Chas. F. Baer, J. L. Brouse, Tony Bertucci, R. Bowes, T. J. Blight, San Francisco, Cal.; Jos. Bentz, South Bend, Ind.; J. H. Bowling, F. J. Brogan, C. Balash, Mr. Blake, Davenport, Ia.; Mathew Conrad, F. L. Corcoran, Maywood, Ill.; C. C. Cassidy, Mr. Carlton, F. J. Connelly, Frank Coleman, Frank Cavanaugh, Geo. C. Cass, W. C. Clare, Harry A. Satisfactory Trade Reports Both in Wholesale and Retail—Meeting of the Jobbers' Association—Continued Victor Company Expansion—Mme. Melba Visits the Victor Plant—The National Phonograph Co. Enlarge Commercial Department—Manager Gouldrup's Good Report—Russell Baum Takes Charge—What the Penn Co. Report—Opera Records Discussed—The Philadelphia Talking Machine Co. and the Keene Co. Consolidate—Louis J. Gerson, of the Musical Echo Co. Enthusiastic Over Demand for High Priced Machines and Records—Eagen Joins Bellak Forces—H. H. Gibson's New Sound Box—Mr. Weiss' Report—Louis Buehn & Bro. Very Busy—Some Important Trade Happenings of the Month Presented.

(Special to The Talking Machine World.)

Philadelphia, Pa., April 8, 1907.

Cheerful news as to good trade conditions in Philadelphia talking machine circles is heard on all sides. Business in wholesale departments is especially good, and while Easter buying of new hats and frocks tended to make retail sales a little quiet, the depression was only temporary and the trade anticipates good near future business in retail selling.

Much interest has been taken in jobbing circles the past month in the first meetiug in this city of the Eastern Talking Machine Jobbers' Association—an account of which appears in another page. Credit is due H. E. Marschalk, of the Musical Echo Co., chairman of the local committee of arrangements, and the Victor Talking Machine Co., of Camden, N. J., for the thorough success of the "meet" and the pleasure given the large number of visiting jobbers and their friends. All the Philadelphia jobbers did their share to make the gathering a happy success.

"Always busy" is a fit description of affairs at the ever-growing plant of the Victor Talking Machine Co. across the river. In all departments orders are being turned out as rapidly as facilities will allow and care aud good workmanship will permit. As to demand: it is for everything the company makes from modest-priced talkers to the really remarkable machine, the auxetophone. On April 4 the Victor Co. took title to additional land on N. Front street, extending through to Delaware avenue. The property is 180 feet on N. Front. They also secured title to 40 feet front land on Market street. Buildings used by manufacturing companies now occupy some of the premises, but in time they will probably make way for new Victor plant additions. Kaighn & Draper, contractors, of Camden, N. J., are making alterations to the boiler-house of the company. Plans are being prepared for still another addition to the warehouse plant on N. Front street. It will be a five-story concrete building. Work ou the new laboratory building at the southeast corner of Front and Cooper streets is progressing rapidly.

Mme. Melba, prima donna, and attendants, visited the Victor plant the past month and were shown all that was to be seen, much to their pleasure and interest.

A steam whistle on the Victor warehouse at Front and Linden streets, is a new improvement and calls the many employes to work. They have dubbed the voluminous calliope "His Master's Voice." The large electric sign which was on the main rear tower has been removed.

Edward B. Bostwick, manager of the Philadelphia district of the National Phonograph Co.'s commercial talking machine department, has enlarged his office staff of employes in the North American Building, in order to take care of increasing business. Mr. Bostwick is having excellent success in introducing phonographs in commercial circles here, and is an energetic and tireless worker.

Referring to trade conditions, Manager John A. Gouldrup, of the Columbia Phonograph Co.'s main Philadelphia office, said: "Business has exceeded our expectations; it is far ahead of a year ago at a similar period—and it was very good then. I ascribe brisk trade to good business conditions and the fact that our Columbia employes have been hustling—activity and push has much to do with securing business, you know. Personally, I favor the proposed plan of the manufacturers to not issue so many new records every month. Matters have been at rather high pressure and business under the new plan will better adjust itself all around."

Maxwell Carrington, who has been an efficient assistant to Mr. Gouldrup here, was appointed manager of the Columbia Co.'s office at Lancaster, Pa., the past month, and has taken hold of matters with a vim that presages success.

Russell Baum, formerly connected with a prominent New York advertising house, has been appointed manager of the commercial graphophone department of the Columbia Co. "He has had a phenomenal month," said Mr. Gouldrup, referriug to Mr. Baum's hustling abilities, "and runs in orders so fast we hardly know what to do with them. Mr. Baum is certainly 'making good.'"

William Morse, jobbing house salesman of the Columbia Co.'s headquarters, stopped over here three days on his way South. He reports excellent business and is stirring things up lively.

Said the Penn Phonograph Co., 19 S. Ninth street: "Business with us is going along very nicely—not quite up to a year ago, which was unusually good—but very satisfactory on the whole. The prospects are for good steady business." The Penn Co. have just received a carload shipment of record cabinets of various designs and finish, from the Herzog Furniture Co., Saginaw, Mich. They are giving considerable attention to the cabinet end of the business, and as a result buyers are looking to them for the latest and best in cabinets and accessories.

E. G. Friedel has joined the salesmen's staff of the Penn Co. and will travel Eastern Pennsylvania. He is experienced and, as orders already sent in prove, energetic.

Speaking of "opera records," one large jobber said: "I find that the opera records are a pretty big proposition for the average buyer on account of the cost. The sales of complete opera records must be somewhat limited, it seems to me, as there are not many people who care to invest so much money at once, and buying an opera on the plan of a record at a time is hardly satisfactory. However, sales already made of the opera records prove the getting out of them was a success, artistically and financially, and I hope more will be put on the market in due time."

The Philadelphia Talking Machine Co., Benjamin Futernick, proprietor, and the Keen Co., jobbers and retailers, have consolidated and the Keen Co. have reorganized, with David Keen, president, and Mr. Futernick, secretary and treasurer. Application has been made to the Governor to increase the capital stock of the Keen Co. from $5,000 to $10,000. The large stock of phonograph goods formerly sold by Mr. Futernick, at 156 N. Eighth street, has been removed to the Keen Co.'s large warerooms at 132 N. Eighth street, and here the consolidated companies will conduct a retail and jobbing business under the firm name of the Keen Co. Speaking of trade conditions, Mr. Futernick said: "In retail lines it is a little quiet on account of Easter aftermath, out it is very good in jobbing lines. We now have such an enormous stock of Victor, Edison and Columbia records we scarcely know where to place it; we ought to have more room and will probably rent an annex for stock purposes. The Talking Machine World deserves credit for its lasting work in building up the talking machine business." A new state salesman will be added to the company's sales' forces.

In a trade chat, Assistant Manager Louis Jay Gerson, of the Musical Echo Co., 1217 Chestnut street, expressed decidedly optimistic views of the talking machine business, present and future. "Of our own business," said Mr. Gerson, "I can say that we are extremely busy in all departments. We have increased our force of employes to forty persons—in office, stock, shipping and retail sales departments—and that is outside of employes we retain in other ways. Our wholesale business is increasing very much and it is because we have the goods and can fill orders promptly—two things which count. We put in an order early for two hundred Victor Victrolas and we have been putting them out as fast as we can get them. We ascribe much of the success we have had in our retail department to the grand opera season. We had twenty grand opera nights in Philadelphia—from Conried; if we have Hammerstein and Conried both next season our business will be doubled. We sent circulars to patrons of the opera—setting forth the merits of our opera records, and then, using a follow-up system, secured most successful results. The 'Rigoletto' quartette and the other special red seal records of the Victor Co. have sold immensely well and to them we ascribe much of our success in sales the past season.

Mr. Dealer.

Have you ever been caught short on your Edison Records and found that your Jobber could not help you out?

Have you ever lost a sale in consequence? Then you can appreciate the value of doing business with a Jobber who can fill your orders promptly.

We are the largest exclusive Edison Jobbers in the East, and carry the most extensive line of Edison Machines, Records and Supplies.

We guarantee immediate shipment of all orders.

ECLIPSE PHONOGRAPH CO.

203 Washington Street **HOBOKEN, N. J.**

Said Manager H. T. Lewis, of the Lewis Talking Machine Co., 15 S. Ninth street: "New millinery and Easter suits had an adverse effect upon retail talking machine trade—but a temporary depression only, and I look to see business pick up again soon. In wholesale lines trade is very good and the outlook is bright. We are putting out a large quantity of records and supplies.

Trade being so good in the player piano department of James Bellak's Sons, 1129-1131 Chestnut street, H. B. Rouillet has been appointed exclusive manager of that department, relinquishing the talking machine department to James Egan. Mr. Egan was formerly with the North-Eastern Phonograph Co. and has both experience and vim. The Bellak firm have removed the phonograph department to the fourth floor of its large establishment and there Mr. Egan is putting in some excellent sales' work. It has been pointed out that the Bellak Co., with such a large and complete stock, seemed to be hiding its phonograph light under a bushel measure—but that plan now seems to be a thing of the past.

At the office of the Disk Talking Machine Co., 13 N. Ninth street, The World was informed that Howard H. Gibson was again with the company as retail office salesman and is having excellent success in pushing sales of Zonophones. He said of trade: "Easter festivities had some effect on sales, but it won't be quiet long and business is very satisfactory." William L. Ziegler is visiting state points and pushing sales with success. Robert Gibson and family are in Florida. Mr. Gibson has perfected a new taper arm and sound box which will be on the market shortly. We are putting out the goods, all right. So long—come in again."

Proprietor Adolph Weiss, of the Western Talking Machine Co., 41-43 N. Ninth street, said: "Trade is a little quiet, as it usually is Easter time, but I look to see it pick up shortly. Talking machines are luxuries—not necessities like shoes and clothing, and hence, we must look for sales to fall away when hats and Easter clothes have the upper hand. I look for improvements in talking machine lines and they will tend to make business good. Then, too, we will probably have an adjustment of talking machine affairs. It is only a question of time when a lot of small dealers will drop out—or be dropped—dead dealers will go, and it will result in benefit for the live men in the business. To be successful in the phonograph business now a house must carry a full and complete line. A few sales here and there by small dealers does not constitute success and spoils the trade of legitimate dealers."

J. N. Blackman, vice-president of the Blackman Talking Machine Co., New York, was a recent trade visitor and stated business was very good all along the line.

Louis Buehn & Bro., 45 N. Ninth street, reported the jobbing end of business to be brisk, while Easter had made the retail end a little quiet. It will quickly recover, however, and the outlook is promising.

Among new retail talking machine dealers stocked up by Philadelphia jobbing houses the past month are: Moore Bros. & Co., Plymouth, Pa.; W. M. Koch, Tamaqua, Pa.; William Kulp, Leadrockville, Pa. (Schwencksville P. O.), and Oswell & Schlang, York Road and Tioga street, Philadelphia.

M. La Homadieu, a successful retailer of Stroudsberg, Pa., was a recent trade visitor and left a number of good orders for phonograph goods.

Embassador Hugg, of the Edison Co.'s headquarters, was a recent visitor and carried a large, well filled order book.

News notes in a minor key are the failures of J. P. Jones, retailer at Sunbury, Pa., and the failure of Felix R. Bayley. Mr. Bayley was formerly in the phonograph business with John F. Ruaue. The partnership was dissolved and Mr. Bayley opened a store at 5004 Baltimore avenue. Mr. Bayley, individually, and trading as F. R. Bayley & Co., and as partner of the late firm of Ruane & Bayley, was adjudged a voluntary bankrupt. Liabilities, $14,501.28; assets, $10,976.54. Referee, T. M. Etting.

New amusements arcades have been opened here as follows: Mark M. Dintenfass, 1319 Market street; W. Saunders, 6300 Woodland avenue, and at 4028-4030 Lancaster avenue; name of owner not given.

The department stores have been giving Easter entertainments galore—as one manager put it, "from variety stage knockabout stunts to sacred cantatas," and the crowds attracted by the free shows have boomed trade in the talking machine departments. Good sales have been the rule for several weeks.

THE EDISONIA CO.'S HANDSOME NEW QUARTERS.

(Special to The Talking Machine World.)

Newark, N. J., April 11, 1907.

The Edisonia Co., who recently took possession of their new building at 57 Halsey street, have found that even with three floors and basement packed with stock, more room was needed to handle their growing business, and therefore they have signed a lease, good until 1915, for the entire building in which their branch store occupies the ground floor. The branch is devoted entirely to the retail trade, and extensive alterations already begun will greatly facilitate the handling of the many customers. In connection herewith is shown a view of the interior of the main store on Halsey street, with the handsome gold-plated Edison phonograph presented by Mr. Edison to A. O. Petit, president of the Edisonia Co., placed in the center of the floor, and which he greatly prizes. The Edisonia Co. are among the representative talking machine houses, not only in Jersey, but in the whole United States, and the future is full of promise for their further success.

(Patented March 12, 1907.)

For Edison and Columbia Machines
Ask Your Jobber

THE IDEAL FASTENER CO., 143 Liberty Street NEW YORK CITY

COLUMBIA AT JAMESTOWN EXPOSITION.

Elaborate preparations for the exhibit by the commercial department of the Columbia Phonograph Co. at the Jamestown, Va., Tercentennial are under way. One of the features will be a booth fitted up like a model office, showing how the commercial graphophones may be used to the best advantage.

The Columbia Phonograph Co. have opened warerooms at 30 Plume St., Norfolk, Va., where concerts are being given every Saturday evening.

TRADE NOTES FROM TWIN CITIES.

Minnesota Phonograph Co. Transfer Wholesale Department to Minneapolis—Their New Retail Store Splendidly Equipped—H. C. Hough Optimistic Over Outlook—The New England Furniture Co. Now Handle Edison as Well as Victor Lines—Big Call for Scandinavian Records—Other Items.

(Special to The Talking Machine World.)

Minneapolis and St. Paul, April 8, 1907.

The Minnesota Phonograph Co. have transferred their wholesale department from St. Paul to Minneapolis, and that end of the business will be carried on from quarters which have been opened at Fifth avenue south and Washington. The retail business in St. Paul will be continued at the old location.

This company's new retail store on Nicollet avenue in Minneapolis is not completed as yet, though it was occupied this week. It will be the best equipped talking machine store in the Twin Cities when the finishing touches are on. There will be eight separate parlors, so that eight machines can be running at the same time without one interferring with the other. It is located in the center of the best retail district of the city, where rents are the highest, and the experiment will be watched with much interest by other dealers who predict dire things for the company. L. H. Lucker, the president of the company, is very optimistic, however, of the outlook in the talking machine trade, and believes the growth of the business warrants such a move as he has made.

T. C. Hough, who operates four stores in these two towns, exploiting Edison and Zonophone machines, reports a steady trade, with a considerable increase over last year's business. He regards the outlook for the spring business as very encouraging.

J. W. Wheeler, manager of the Columbia Phonograph Co., reports the retail trade at stores in both cities as showing up well with a year ago. The new $28 disc machine has met with considerable favor, and is having a good sale, with excellent prospects for the spring and summer.

At the talking machine department of the New England Furniture Co., A. M. Magoon, who has charge, said: "We are not rushed, but we are doing business right along, and trade keeps pretty steady. The demand for records is good." The New England people have added the Edison machine to their list. They handled the Victor exclusively heretofore.

The Columbia Phonograph Co. have decided to put a number of Scandinavian records on the market, with a view to supplying the great Scandinavian element in the Northwest, according to Manager Jay H. Wheeler, of the Minneapolis store. The experiment has been tried of introducing records made by local talent, but was not successful. The company now intends to send representatives to Sweden, Norway and Denmark, who will make records of the folk songs and ballads of those countries as originally sung—a move that should prove successful.

UDELL CABINETS ABROAD.

The Products of the Famous Indianapolis Manufacturers Find Favor in South America—Valuable Addition to Dealers Stock.

The Udell Works, Indianapolis, manufacturers of fine record cabinets both for discs and cylinders, have experienced a most encouraging increase in their business, including their export trade. Only very recently a large order was received for disc record cabinets to be shipped to Buenos Ayres, and it is the intention of the firm to push their export business in a very energetic manner. The line of cabinets made by the Udell Co. is one that tends to promote trade for both manufacturer and dealer, being handsomely finished and built especially for holding records. They lend attraction to any parlor, and increase the attraction of the whole talking machine outfit.

MORE KICKS FROM THE KICKER.

Five New "Kicks" Covering a Variety of Subjects Which Cannot Fail to Interest the Many Kickers in the Trade.

Biloxi, Miss., March 23, 1907.

Editor The Talking Machine World:

Thank you for publishing my "kicks," and yet, while that which you have published has "afforded considerable relief to my mind," I feel as if there were some more kicks comiug, and that my reputation as a kicker will not be fully established until I have registered them.

Kick 1. Why do not dealers organize so they can kick to some purpose?

Kick 2. Why do record manufacturers, when they get a good singer, work them to death, and on songs their voices are unfitted for? Take Miss Ada Jones—simply "great" in "Keep a Cosy Corner in Your Heart for Me," and plenty of others. She is almost non-understandable in "Virginia Song," "If the Man in the Moon Were a Coon," "Waiting at the Church," and others, and these records are "dead ones," and the makers will not take them back—except as I shall tell in another kick. I have tried various poor records in several makes, thinking the first ones I received was the fault of recording in that particular brand of record, but I found that poor records in one manufacture were the same in all. What right has the manufacturer to foist on the dealer a record made by a singer whose voice does not suit the song, and then lecture us ou "how to sell records, and keep sweet, and please our patrons," etc., ad nauseum? We cannot please our patrons with any such records, and unless we force them on customers in some questionable manner, they are dead stock to us, and so a dead loss, as we are under contract not to cut the price, and that, by the way, brings me to

Kick 3. Why, only once in a long time are we allowed to exchange records with the manufacturer, who gives us just teu days, and is five days getting the news to us, and unless we can get the records—all nicely prepaid—to a given point to the minute in the other five days, we are out not only the records, but our express charges? By organization we could change all this, and every unsalable record would go back to the man who made it, for a record that would sell. Then the maker would devote his attention more to quality and less to quautity. We little dealers are "dead easies," and we don't know we have any rights that the manufacturers are bound to respect.

Kick 4. The manufacturers, smiling, tell us that the more agents they have in each town the more machines each agent will sell! "Yep!" that is perfectly clear! I have never seen any claim that needed so little explanation to prove it. But, Lord bless you! the manufacturers themselves refuse to take their own dose of castor oil. They are lawing the daylights out of each other over "infringements," in order to limit the number of factories, and, bless you, how one crows when he shuts up the other! That which is sauce for the goose seems to be gall and wormwood for the gander!

Kick 5. I have rebelled on the advice issued in wheelbarrow loads to always "smile and smile" to our customers. I have smiled so much my face aches, and my customers—a few of them—worked me to a frazzle; so I have faced about. A man a few days ago had me play cylinder records nearly an hour. He took three, then later brought a lady back with him. The lady carried two of the records which she wanted new records for, claiming I had sold the man two cracked records. I took the records, laid the money for them on the counter, and said to the lady, "That gentleman picked those records from the machine; when he left here they were in perfect order. I will not exchange them, but here is your money. I don't want any more of that gentleman's trade!" That "gentleman" never opened his pie aperture, but slunk away. I have soaked six customers this way, and didn't give them a "smile" of any sort, and I count myself ahead. There are times when a little manly self-assertion is needed in presence of those who conspire to beat you. Their "patronage" is the kind it pays you to get along without.

But this is enough kicks, as space with you is valuable. There are a lot more that might be made but which will do no good until dealers make them in an organized way. Fraternally,

SUMNER W. ROSE.

ENTERPRISING BUFFALO HOUSE.

The Buffalo Talking Machine Co., Buffalo, N. Y., is certainly "all there" with up-to-date ideas when it comes to advertising their business, especially locally. Not long ago they hired the well-known Hawaiian orchestra to render selections for recording while seated in the show window in full view from the street. The recorder was placed in front of the orchestra and customers desiring a certain selection could have the orchestra play it and take the master record away immediately. The scheme proved highly successful in every way and attracted record breaking crowds.

No Jobber in the United States can or will take better care of your

Victor, Edison and Columbia

RECORD AND MACHINE

orders than we will. If you are getting entire satisfaction where you now trade—**stick!** If not, and you have the cash—try us.

POWERS & HENRY CO.

101 Sixth Street PITTSBURG, PENN.

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York.

(Special to The Talking Machine World.)

Washington, D. C., April 5, 1907.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past four weeks from the port of New York:

MARCH 11.

Alexandria, 4 pkgs., $273; Antwerp, 7 pkgs. $350; Berlin, 113 pkgs., $1,860; Bombay, 9 pkgs., $212; Buenos Ayres, 30 pkgs., $3,439; Calcutta, 4 pkgs., $100; Corinto, 1 pkg., $110; Hamburg, 3 pkgs., $100; Havana, 7 pkgs., $268; Havre, 95 pkgs., $320; 3 pkgs., $122; London, 36 pkgs., $1,767; Montevideo, 15 pkgs., $1,799; Neuevitas, 21 pkgs., $140; Para, 4 pkgs., $342; St. Petersburg, 44 pkgs., $1,729; Sydney, 163 pkgs., $6,656; 141 pkgs., $3,000; Vienna, 7 pkgs., $235.

MARCH 18.

Berlin, 125 pkgs., $1,908; Calcutta, 50 pkgs., $558; Cardiff, 20 pkgs., $1,175; Genoa, 27 pkgs., $1,119; Georgetown, 6 pkgs., $121; Hamburg, 3 pkgs., $235; Havana, 6 pkgs., $586; 6 pkgs., $254; Havre, 58 pkgs., $1,120; London, 291 pkgs., $3,485; 2 pkgs., $132; Manchester, 20 pkgs., $1,075; Melbourne, 25 pkgs., $560; Natal, 4 pkgs., $197; Santos, 16 pkgs., $946; Santiago, 14 pkgs., $423; Singapore, 13 pkgs., $878; St. Petersburg, 8 pkgs., $349; 4 pkgs., $117; Vienna, 14 pkgs., $290; 11 pkgs., $487; Warsaw, 15 pkgs., $483; 9 pkgs., $184; Yokohama, 28 pkgs., $2,360.

MARCH 25.

Buenos Ayres, 156 pkgs., $10,747; 32 pkgs., $456; Cardiff, 4 pkgs., $200; Corinto, 5 pkgs., $150; 3 pkgs., $240; Hamburg, 1 pkg., $100; 30 pkgs., $6,000; Havana, 22 pkgs., $735; Havre, 3 pkgs., $160; London, 276 pkgs., $7,481; Para, 13 pkgs., $646; Rio, 20 pkgs., $1,472; Vera Cruz, 8 pkgs., $125.

APRIL 2.

Berlin, 27 pkgs., $836; Brussels, 126 pkgs., $326; Buenos Ayres, 58 pkgs., $2,401; Calcutta, 4 pkgs., $150; Colon, 8 pkgs., $258; Glasgow, 6 pkgs., $102; Lodz, 9 pkgs., $335; London, 82 pkgs., $3,408; St. Petersburg, 11 pkgs., $292; Vienna, 11 pkgs., $304; Warsaw, 14 pkgs., $363.

S. R. Leland & Son have opened a large talking machine department in their store in Worcester, Mass., and will devote much effort to it in order to make it the leading department of their business. A full line of Victor machines and records is carried in stock.

EDISON MEN PLEASED.

The Heads of Departments and Employes of the Various Edison Companies at the New York Office Report Progress of Edison Mutual Savings and Loan Association.

The Edison Mutual Savings and Loan Association, composed of the heads of departments and employes of the various Edison companies at their New York offices, 31 Union Square, declared its regular semi-annual dividend, the twelfth of the series of twenty-five weeks, March 20, and everybody was happy. The neat sum of $3,724 was handed out, with a smiling countenance, by Frank K. Dolbeer, the secretary-treasurer. In speaking of the association, Mr. Dolbeer said: "This is one of the most profitable and successful associations of its kind I have ever been connected with. For six years—since its organization—I have been treasurer, and handled $38,652, and every 25 weeks we divide up the proceeds, the result of loans among ourselves. As you see, we have the regulation constitution and by-laws, and the affairs of the association are looked after by a board of directors. None of the officers are paid for their services." The officers, besides Mr. Dolbeer, are: President, C. H. Wilson, sales manager; Walter Stevens, manager of the export department, vice-president.

PRELIMINARY INJUNCTION REFUSED.

Judge Lacombe Hands Down His Long Expected Decision March 25, in Favor of the Leeds & Catlin Co.

The long-looked-for decision in the suit of the American Graphophone Co. against the Leeds & Catlin Co., New York, involving the disc duplicating process of the Jones patent, was handed down by Judge Lacombe, United States Circuit Court, southern district of New York, March 25. It is brief, as follows:

"Irrespective of any other point presented on this motion, there is too much dispute as to the process by which defendants' discs were produced to warrant the granting of a preliminary injunction on affidavits. Motion denied."

A NEW DIAPHRAGM.

A. C. Mestraud, formerly of this city, and one of the best-known inventors in this field, has just perfected a new diaphragm, which is spoken very highly of by all who have heard it in use. For some time past his friends have been trying to induce him to place it on the market, therefore many will be glad to know he has taken the step and it is being introduced in an advertisement of the Acme Supply Co., Lincoln, Neb., which appears in another part of this paper.

BOON TO OVERWORKED FATHERS.

According to a New Jersey paper, a new and practical use has been found for the talking machine by a busy housewife of that busy state: "Mrs. Franklin, living in the east part of Atlantic City, N. J., has discovered a new use for the talking machine. She uses it to lull the baby to sleep while she goes about her housework as usual. She simply puts a lullaby song on the machine and starts it going and the baby drops off to sleep. The little one has developed a talent for music and objects seriously when the wrong kind of music is played for it.."

GROWTH OF DOUGLAS CO.'S BUSINESS.

Since John Kaiser has become sales manager of the Douglas Phonograph Co., New York, its business has greatly increased. President Henkel and John are practically invincible when it comes to laying out a selling campaign and adding new and irresistible lines.

J. W. Binder, manager of the Columbia Commercial graphopone department, made an interesting address upon salesmanship recently at a dinner given to their employes by Koening & Schurtz, wholesale grocers and importers. Mr. Binder spoke from wide experience and made some excellent points.

Sell Them The Best Oil—It Pays

The best oil that's made (that's "3-in-One") is none too good for your talking machines. No other oil is good enough. Any less-than-best oil is liable to make trouble between you and your customers. Why take chances? Why not take the good **easy** profit (50 and 100 per cent.) you would make selling "3-in-One?"

"3-in-One" is the **one** right and safe lubricant for phonographs, graphophones, gram-o-phones and all other disc machines. It makes the action points work perfectly. Prevents rust and tarnish on the metal surfaces. Polishes the wood cases. Keeps the records clean—just wipe them with soft cloth moistened with "3-in-One."

Suppose you just get a trial supply of "3-in-One" from your jobber and see what happens. Or prove its value to yourself by writing to-day for a FREE sample bottle and the "3-in-One" Book. Address:

THE "TALKER'S" SENTIMENTAL SIDE.

Will Appeal to Patrons When the More Practical Side Will Fail Utterly—A Fact Worth Noting and Acting on Accordingly.

Did you ever lose a customer, Mr. Dealer, because, although he admitted the mechanical accuracy and even the musical merit of the machine demonstrated, he claimed there was a lack of the human quality he had expected to find after reading the many advertisements landing the talking machine? Of course, you have, and in such a case it is "up to you" to prove to this gentleman's satisfaction that he is all wrong, and "that the human or sentimental side of the "talker" is very much in evidence. In order to do this well you must turn sentimentalist yourself, and be able to paint an amorous or pathetic picture of every vocal record on your shelves which deals with the subject of affection or tears. In other words, you must back up the assertion set forth in the back pages of the magazines that the talking machine is an instrument with a soul capable of producing thoughts of love or sorrow at the will of the operator. This is a strong assertion to make, I admit, but it is true, and, therefore, the proving is an easy matter.

When Mr. Doleful, or Mr. Sentimentalist, or even Mr. Skeptic calls and admits with the hesitancy, which, by the way, usually means no sale, that the "graph" or "phone" in question is no doubt a very nice machine, but that it does not have the certain something needed to stir one's thoughts to the higher things of life, to remind one of neglected duties, etc.; that is, the soulful influence felt only when listening to instruments played by human hands, it is time for you to paint a picture, Mr. Dealer, and in as bright colors as possible. Such pessimistic critics who call at your store, and there are a great many of them, I am sure, must be confronted with a weapon powerful enough to shatter their arguments against the "talker" with strenuous dispatch. One way to do this is to have an artist draw for you an attractive cartoon which should be reproduced in an appropriate size to harmonize nicely with the printed matter already on your table. This sketch should tell in a striking manner the story of the sentimental side of the talking machine. That one good cartoon will express more than columns of type is demonstrated in our daily newspapers every day, and I see no reason why the same rule should not apply to the "talker" trade.

The following is suggested for such a cartoon. As you will notice, it depicts a young girl listening to the strains of a talking machine, and as it pours out in sweet melody a song of the country, it paints a picture of her native village in such a realistic manner that she can see the snow-covered church wrapped in the pale moonlight, the little cottage once so dear to her—the place her childhood knew as home—and even the white waste of the fields. There are two old people out yonder in that little village who are waiting and praying that their only daughter may return to them. They have sent her many a quaintly worded appeal without effect, but at last, through the medium of the talking machine (through its sentimental side) she hears

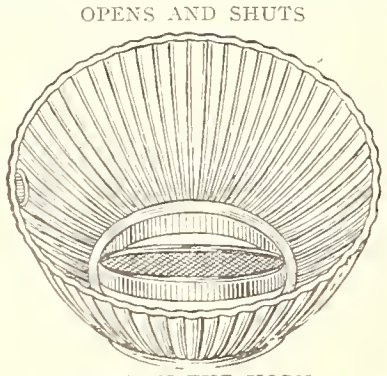
their call and realizes for the very first time its true significance. Yes, she will go home tomorrow.

When you hand Mr. Doleful or Mr. Sentimentalist or even Mr. Skeptic a copy of the above illustration, or one drawn along the same lines, and have an appropriate selection played for him as a sequel, "Ain't You Coming Back to Old New Hampshire, Molly?" for instance, you will see his pessimistic, critical or skeptical ideas evaporate as the morning mist before the sun, and his respect and patronage will both be yours.

HOWARD TAYLOR MIDDLETON.

W. H. Schultz, a talking machine dealer of Stanley, Wis., will in future handle Edison machines and records in addition to his Victor line.

OPENS AND SHUTS



GOES IN THE HORN

The Mello-Tone Attachment

Makes a Musical Instrument of a Talking Machine or Phonograph and is adapted to either the Cylinder or Disc Machine. ¶ Can be regulated while record is being played—from full volume with shuttle open to mellow tone when closed. ¶ Does away with the scratch and blast of the record and eliminates the metallic sound of the metal horn. ¶ Sample, with terms and prices to dealers. **Retail, $1.00 Each.**

MELLO-TONE CO., = Springfield, Mass.

NEW YORK PHONOGRAPH CO. SUIT.

Decision Handed Down by Judge Keogh in Favor of This Company—Counsel for the National Phonograph Co. Say It Bears Not on Merits of Case, But on Jurisdiction.

March 15 Justice Keogh, New York Supreme Court, Special Term, at New Rochelle, handed down a decision adversely to the defendants in the case of the New York Phonograph Co. against S. B. Davega, and 293 other Edison jobbers and dealers in the State. This is another move in this celebrated suit, which, in reality, is the outcome of an action previously brought against the National Phonograph Co., the Edison Phonograph Works and others for alleged breach of a territorial selling contract, dating back to the old North American Phonograph Co., the first company formed to market Edison's original invention. The defense, in the argument heard February 16, raised the point of jurisdiction and other reasons why the case should be dismissed, but the court, though not writing an opinion, filed the following brief memorandum: "The application to dismiss the complaint denied." The case will now be tried on its merits in the same court at an early day, according to Samuel F. Heyman, counsel for the New York Phonograph Co.

Relative to this decision the National Phonograph Co., when seen, made the following statement: "The decision by Justice Keogh in cases of the New York Phonograph Co. against various jobbers and dealers handling Edison phonographs, was not on the merits of the case, but merely on a motion as to jurisdiction; that is, as to whether the cases should be tried in the State or Federal courts. Justice Keogh holds that the cases should be tried in the State courts."

The New York Tribune, it appears, published the most absurd and misleading story in connection with the foregoing action of Judge Keogh. The National Phonograph Co. defended the suit, and S. B. Davega, the New York jobber, was the nominal defendant only in a test case which, of course, would apply to his co-defendants. The statement that the profits of Mr. Davega's sale of Edison goods for ten months were $100,000, is so ridiculous as to be scarcely worth mentioning, excepting that the trade is greatly injured in the eyes of the public, while the animus of its inspiration is only too evident. The case is a long way from adjudication, despite the silly tale from the same source, "that the defendants must account for their profits for six years, which, it is believed, will amount to about $31,000,000!"

COLUMBIA WHOLESALE QUARTERS

Will be Removed from 353 Broadway to 111 Chambers Street, New York, on May 1st.

The wholesale department of the Columbia Phonograph Co., at present located at 353 Broadway, will be moved to 111 Chambers street, near Church street, on May 1. In this store a sufficient stock to supply all the dealers embraced in the New York territory will at all times be carried. A retail department will also be opened in connection with the wholesale end. The wholesale department will be under the supervision of R. F. Bolton. This store, as well as the new one on West 23d street, will be under J. H. Dorian, of the New York office.

TALKER CONCERTS IN GERMANY.

In Berlin, recently, at the Tiergarten, an immense talking machine concert was heard, with over a thousand people present, who manifested their interest in this popular instrument. That such an assemblage was in attendance, notwithstanding the entrance fee asked, afforded much satisfaction to all interested. A week or so later a similar concert was given in the Crystal Palace, Leipsic. The attendance here was even larger and much more interest was manifested.

DIFFICULT TO PRONOUNCE WORDS.

Few people know how difficult it is to pronounce some words to a talking machine so that they will be plainly heard in the reproduction, says The Sound Wave. One leading article declares that the word "thrice" is his shibboleth. That which reached the ear in the reproduction unless the greatest care was taken, was the word "ice," which, of course, was not the one desired. The "th" sound is very difficult and never loud. The "r" is also hard to record clearly unless it be rolled.

DOUGLAS & CO.'S NEW SOUND MODIFIER.

In the near future the Douglas Phonograph Co., 89 Chambers street, New York, will place on the market a new and marvelous sound modifier that is claimed to outrank any similar device known. The modifier in question is so designed that no "leaks" occur and the sound is modulated by a series of shutters, and either a low, high or intermediate tone is secured; in short, the quality of tone that appeals to the ear of the critical and which is most desired to develop the finest musical effects of the record are certain.

Attract Attention 24 Hours A Day

Artistic-Reliable-Inexpensive

THEY LITERALLY BURN YOUR AD. INTO THE MINDS OF THE PEOPLE

This artistic sign is made of Venetian Bent Iron with glass panel. The lettering is outlined with burnished gold and the display line studded with jewels, making a very attractive, high grade

DAY SIGN

Inside the sign are three electric lights of different colors (red white and green). These are switched on and off, automatically, by our patented thermo-flasher, producing an intermittent iridescent effect which is bound to catch the eye.

A Sure Trade Puller at Night

The glass panel is removable, and one with different lettering may be inserted as often as desired. The cost of running is about one cent an hour.

The Most Inexpensive Automatic Flasher on the Market

The illustration shows a single face inside sign 16x28 inches, outside measurement with six (6) feet of flexible wire cord and attachment plug ready to attach to any incandescent lamp socket, (lettering as ordered). Price complete $9.75 f. o. b. New Haven. We also make a small double face sign 18x30 inches for outside use, substantially the same as sign described, with square ornamental iron frame, all ready to connect. Price complete, $15.00. Extra glass panels for either sign (any wording), $2.00 each. OUR FLASHERS ARE FULLY GUARANTEED AND MAY BE RETURNED IF NOT ENTIRELY SATISFACTORY We are prepared to furnish designs for all kinds and sizes of electric signs for both inside and outside use, free of charge. Special prices for signs in quantities. Correspondence solicited. Write for our illustrated booklet No. 6, "POWER TO ATTRACT." AGENTS WANTED. Address

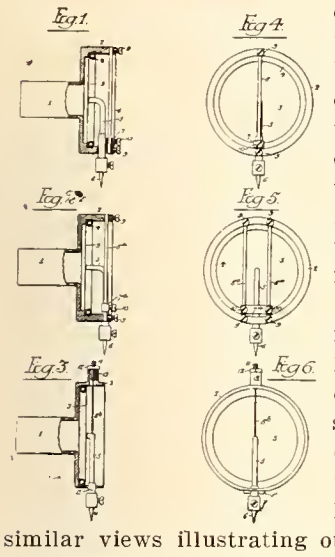
LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Specially prepared for The Talking Machine World.)

Washington, D. C., April 7, 1907.

SOUND-BOX FOR TALKING MACHINES. Edward D. Gleason, Philadelphia, assigner by mesne assignments, to Victor Talking Machine Co., Camden, N. J. Patent No. 846,024.

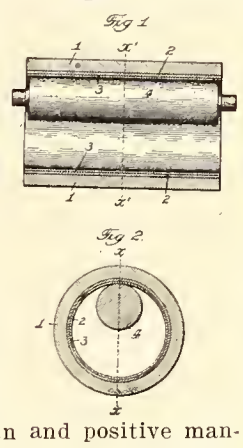
The object of this invention is to provide the stylus lever of a talking machine sound-box with an elastic connection or mounting whereby a certain amount of tension will always be imparted to the diaphragm and better results in reproduction will be attained than when such elastic connection or mounting is not provided.



In the accompanying drawing, Figure 1 is a sectional view of a talking machine sound-box constructed in accordance with this invention. Figs. 2 and 3 are similar views illustrating other embodiments of the invention; and Figs. 4, 5 and 6 are front views of the sound-boxes shown in Figs. 1, 2 and 3, respectively.

APPARATUS FOR DUPLICATING PHONOGRAPH RECORDS. Varian M. Harris, Chicago, Ill., assignor of one-fifth to Robert Burns, same place. Patent No. 846,411.

This invention relates to the manufacture of duplicate phonograph records of celluloid or otner like material, in which a mold is used having a negative matrix formed in its interior surface or bore, and into which negative matrix surface the duplicate phonograph record in the form of a thin-walled cylinder is pressed to impart to the periphery of such cylinder a positive impression from such negative matrix surface; and the object of the present improvement is to provide a simple and efficient apparatus for use in the described process, and with which the production of the duplicate records can be effected in a rapid, certain and positive manner, all as will hereinafter more fully appear and be more particularly pointed out in the claims.



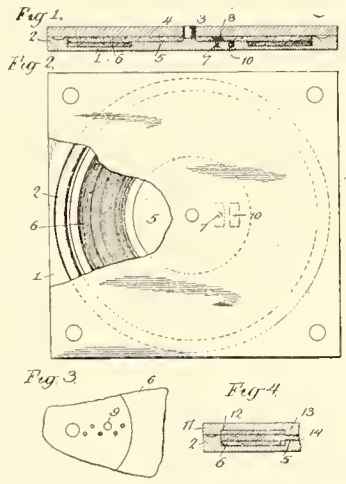
In the accompanying drawings, illustrative ot the present invention, Figure 1 is a longitudinal section of a primitive form of apparatus embodying the present invention, the section being taken on line x x, Fig. 2; Fig. 2, a transverse section of the same at line x' x', Fig. 1.

MECHANISM FOR MAKING SOUND RECORDS. John O. Prescott, Summit, N. J. Patent No. 847,820.

This invention relates to mechanism for making sound records of the disc type for use with talking machines by pressing a plastic composition upon a suitable matrix to form a disc having a spiral sound record groove in one or both of its faces corresponding to the spiral projection on the matrix.

The object of the invention is to effect certain improvements in the construction of the mechanism for performing the pressing operation, by means of which improved apparatus the records may be manufactured more rapidly and at a materially reduced cost.

Sound records of the disc type as now commonly constructed have the record groove formed on one or both faces adjacent the periphery, and the central portion of the disc is of less thickness than the portion having the groove therein. This central portion need not be of the greater thickness in order to give the requisite strength, and a saving of material is thus effected, and the shallow depression at the center of the disc may receive a label suitably marked with the name of the recorded sound and such other matter as is desired. This improved pressing mechanism is adapted for forming this depression at the center of the disc during the operation of forming the disc with the record groove therein without the provision and manipulation of additional parts, and hence without consuming additional time. To this end a matrix of annular form is employed. Either it is originally made of this form or a circular opening is cut in its center of a diameter but little less than that of the inner convolution of the spiral ridge for forming the record groove. Either one or each of the pressing members is provided with an annular depression in which the annular matrix fits snugly. To form this annular depression, the pressing member is provided with a flange bounding the outer edge of the depression and a central circular raised portion or projection, and this central projection is made of a height slightly greater than the thickness of the matrix. The matrix thus formed is placed in the annular depression in the pressing member with the projection extending through its central opening and beyond its surface, and the plastic composition is pressed down upon it and the top of the projection and between the outer wall or flange and a central stud. The second pressing member may have a plane surface or both members may be somewhat similarly formed when it is desired to make a disc having a record groove in both faces. A depression is thus formed in one or each of the faces of the record corresponding in size and depth to the portion of the projection extending beyond the surface of the matrix.

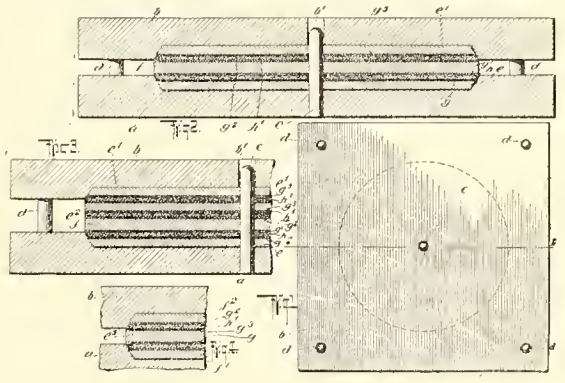


It is sometimes desired to provide sound records with an opening in or through the central portion in addition to the central opening to receive a stud on the turn-table of the talking machine. In accordance with this invention means are provided for positioning a stud upon one of the pressing members in any one of a plurality of positions varying in distance from the center. Studs of varying shapes may be employed to give the desired shape of opening in the disc, and the openings for receiving the securing means for the studs may be closed when not in use, so that the material will not enter therein.

An embodiment of the invention is illustrated in the accompanying drawings, in which Fig. 1 is a central section of the pressing mechanism. Fig .2 is a top view of the same, broken away in part, and Figs 3 and 4 are detail views showing modifications.

APPARATUS FOR MAKING FLAT TALKING MACHINE RECORDS. William Helm Hoyt, Wyoming, N. J. Patent No. 847,338.

This invention relates to the manufacture of flat records or disc records for talking machines, and has for its object to provide means for making a plurality of such records at one operation. Reference is to be had to the accompanying drawings, in which Fig. 1 is a plan view of an apparatus suitable for the purposes of the invention. Fig. 2 is a sectional elevation thereof on line 2 2 of Fig. 1. Figs. 3 and 4 are partial sectional elevations showing two other ways of carrying out this invention.



PHONIC APPARATUS. Alexander N. Pierman, Newark, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 847,687.

This invention relates to phonic apparatus of the type wherein a rotating friction wheel is

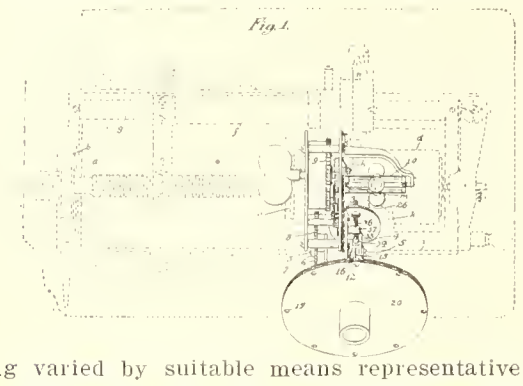
THE EDISONIA CO., NEWARK, N. J.

used in combination with a friction shoe pressed against the same, power being applied for rotating the friction wheel, and the pressure between the friction shoe and friction wheel be-

Fig. 1.



ing varied by suitable means representative of sound vibrations, thus producing variations in the amount of friction, which by suitable mechanical connections may operate a diaphragm or other phouic apparatus.

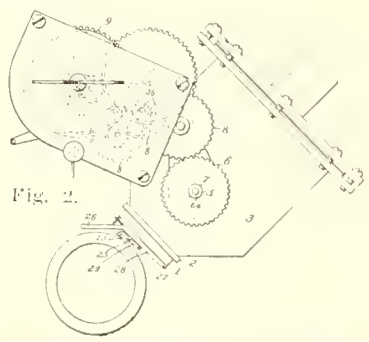


Fig. 2.

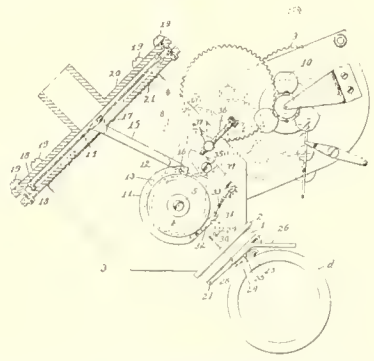
The invention relates more particularly to devices for reproducing sounds through the instrumentality of a phonographic record, the phouographic stylus being connected with said friction shoe and operating to vary the amount of friction.

Heretofore, as far as the inveutor is aware, the

Fig 3.



frictiou wheel has always been driven from a statiouary motor, and the said friction wheel has either been mounted so as to have no progressive motion or in case it has beeu mounted on a traveling carrier the driviug mechanism has been so arranged that the friction wheel may receive its power from the said stationary motor duriug its movement with the carriage. These devices are objectiouable, however, because they are not readily applicable to an ordinary phonograph and require special forms of instruments, which are expensive to construct and which in some cases cannot be used with an ordinary phonographic speaker.

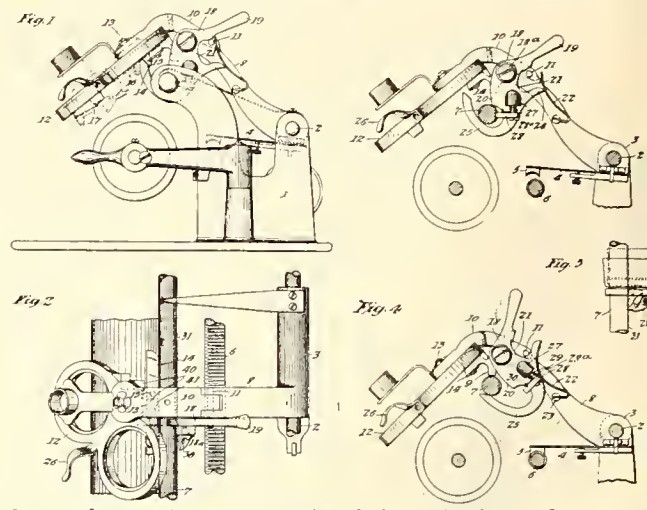
This invention has for its general object the provision of a mechanism of the character referred to and more particularly its application to a phonograph of ordinary construction, so that the mechanism may be interchaugeable with an ordinary phonographic reproducer without the addition of any parts whatsoever to the ordiuary phonograph. This object has been carried out by the mounting of a complete frictional reproducing apparatus upon a base which is adapted to fit within the ordinary carrier arm of a phonograph or other talking machine, the friction wheel being driven by a motor carried upon a suitable frame secured to or integral with the frame upon which the various operating parts of the reproducing mechanism are carried, whereby the friction wheel may be contiuuously driven during the progressive movement of the carrier arm without the disadvantages resulting from the use of a stationary motor, and without the necessity of increasing the strength or power of the usual phonograph motor to euable it to drive the frictiou wheel in addition to the work of driving the mandrel and feed screw.

Reference is hereby made to the accompanying drawing, in which Fig. 1 is a plan showing in dotted liues a phonograph of ordinary construction and in full lines au embodiment of the invention applied thereto. Fig. 2 is a side elevation of the improved reproducer looking from the left of Fig. 1, and Fig. 3 is a similar view, partly iu section, looking from the right of Fig. 1.

PHONOGRAPH. Edward L. Aiken, East Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 847,631.

This invention relates to phonographs, and more particularly to phonographs of the type showu in United States patent No. 772,485, granted October 18, 1904, to Weber and Hibbard, and has tor its object the provision of improved means for raising and lowering the arm which carries the reproducer or recorder and for causing the same to be stepped in a rearward direction whenever desired, said means being adapted to prevent accidental displacement of the recorder or reproducer with respect to the record surface, especially when the instrument is being used by beginners or those not particularly skilful in its use.

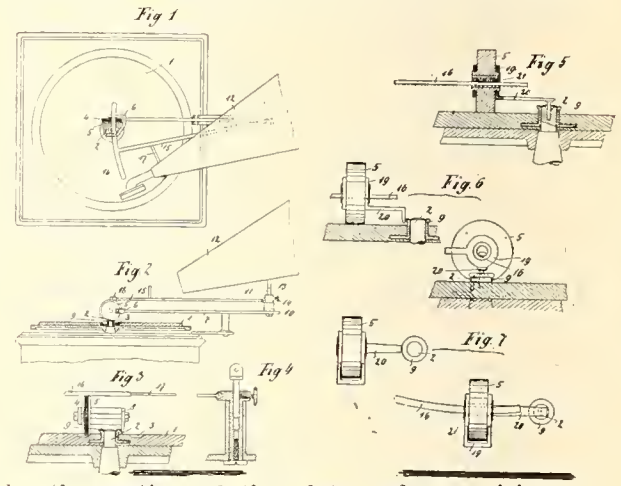
Referring to the accompanying drawings, Fig. 1 is an end view of a phouograph embodying the invention, the recorder or reproducer frame being elevated so that the feed nut is disengaged



from the feed screw. Fig. 2 is a broken plan view of the same. Fig. 3 is a view similar to Fig. 1, certain of the parts being removed for the sake of simplicity and clearness, and shows the positions assumed by the parts when the recorder or reproducer carrier arm is elevated and is being stepped in a rearward direction. Fig. 4 is a similar view, showing the parts when the recorder or reproducer is in operative position with respect to the rotating record or blank. Fig. 5 is a detail plan view of the mechanism for stepping the carrier arm rearward.

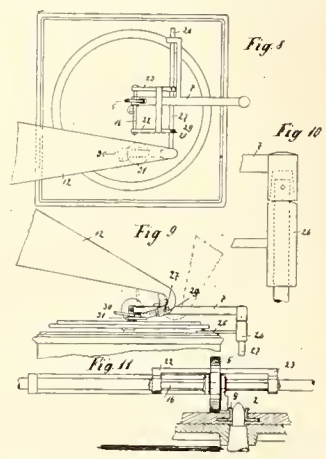
GRAMOPHONE MECHANISM. Eduard Wawrina, Vienna, Austria-Hungary. Patent No. 847,033.

The object of the present invention consists of a receiver mechanism for gramophones in which a displacing mechanism directly operated



by the motion of the plate and comprising a rotary part engaging the plate causes the receiving trumpet, connected in the usual manner with the reverberator and the stylus, to possess a motion toward the middle of the plate, and thus force the stylus to engrave spiral courses on the plate.

In the drawing the object of the invention is illustrated in three constructional forms by way



of example. Figs. 1 and 2 illustrate one constructional form in plan view and in side elevation and partial section, whereas Figs. 3 and 4 illustrate details of the apparatus. Figs. 5 to 7 show a second constructional form of the invention in longitudinal section, side elevation and plan, respectively, while Figs. 8 and 9 illustrate the third constructional modification, and Figs. 10 and 11 illustrate further details.

THE PROGRESS OF THE TRADE.

Arcade and Nickel Theatres Now in Full Swing —Importance of Holding Public Support— Slot-Controlled Devices in Department Stores —Theatre Managers a Little "Huffy" Over Progress of the "Small Fellows"—Trade Stimulators Interest the Public and Talking Machine Men Find a Profit in Handling Them—"Parlors" in the South.

The arcade and the 5-cent theatre business is now in full swing. The factories are runniug full blast, with overtime shifts, yet the incessant call is "rush." A number of new machines, which the arcade men have beeu anxiously awaiting, have been held up almost indefinitely on account of the congested coudition of the metal market. Orders placed six months ago at the foundries still remain unfilled, and manufacturers are kept busy makiug excuses for delays in shipments. One of the largest manufacturers while discussing trade conditions with The World, recently predicted an unprecedentedly brilliant business for 1907. "Never before," said the gentleman, "has this business been on so firm a basis, as at the present day. Of course, there have been a number of failures in the 'arcade' end of it, but in nearly every case these men had given the business little thought, but had opened up their parlors on the impulse of the moment. Their heads got turned at the prospect of making what they called easy money, and they did not stop to consider that it takes years of thought and study to learn just what the public want, and that it is no easy task to catch and hold the fickle public's fancy. The general trend of the demand seems to veer toward higher class productions, which, of course, means more money for all parties concerued."

* * * *

About a year ago The World called the attention of this trade to the possibilities opeu to agents and representatives of the various manufacturers in placing slot controlled devices in and about the department stores throughout the Union, and quoted the case of the Siegel-Cooper Co., of this city, who, at the time, had just opened an arcade in their building, adjoining the talking machine department. That this scheme was a paying one is evidenced by the number of others who have followed suit since that time. However, there are many such places that have not been approached on the subject. The men who are handling these machines should hurry up and grasp every opportunity in their territory. It is the time for the exploitation of these instruments. It is easy to prove the value of these machines—no proposition could be fairer to any one. You place the machines, the man makes you an initial payment, and agrees to pay you the balance at, say, $50 a month. Then he doesn't worry. The machine does the rest. The public files in, deposits the coin and furnishes the power. You have the key to the cash depository, and once or twice a month you call and collect the welcome cash, giving him a receipt for it. The purchaser doesn't get a chance to divert the money coming to you until all bills are settled. The experience of manufacturers, of at least the better class of slot controlled devices, is that the average monthly collections are in the neighborhood of $50, so it is easy to see about where all parties concerned come out on the deal.

* * * *

Theater managers along Broadway are getting highly perturbed over the growing popularity of the 5-cent theaters and slot machine arcades. They look down with scorn on what they call these "catch-penny attractions." That is, outwardly they do so, but all the time they are pulling wires at headquarters, in consequence of which the police are continually making themselves obnoxious. One provision of the law which demands only $25 per annum, the showmau's license, from the parlors aud moving picture shows, while theater permits cost $500, especially arouses the ire of our stage friends. Now, the only charge that can be made against the arcade or 5-cent theaters is that some of them put ou pieces of the "blood-and-thunder" type, depicting murders, hold-ups, train robberies and other crimes. This charge has led the managers of the new style theaters into hot discussiou with the uplifters of the public morals.

"Why should they criticise us," said the manager of one kinetoscope theater, "for puttiug on an occasional film showing a crime and uot attack the regular theaters, who run this class of plays nearly all the time? And then, why should they criticise us when we never put on a piece that is suggestive in the sense that many of the plays and the manner of costuming the chorus are at nearly all the so-called high class theaters?"

While the kinetoscope theater mauagers do not claim to be trying to elevate the state at 5 cents per elevate, their air of injured innocence seems to be rather becoming.

* * * *

It has well been said that with the majority of Americans the speculative nature is uppermost. You have only to appeal to it and interest is at once aroused. This is equally true, whether it is on a small or large scale. A good testimonial to the permanency of the speculative nature of man operating on a large scale is Wall street in this city and the various exchanges in the other cities. "Trade Stimulators" appeal to this known spirit of risk or chance so strong in every man. They interest and gratify that element in him at small cost to himself, aud they give him a fair show and "a good ruu for his money" against slight odds. The card or trade machine is simply an innoceut form of amusement for a penny with a chance to win merchandise. Talking machine men will find that if they want to add a good side line these slot devices will pay big. They are adapted to cafes, druggists, cigar stores, billiard rooms, etc., and as experience has demonstrated, that they will positively increase trade from 25 to 50 per cent. If a square deal is given, dealers will find no trouble in placing a large number in their territory.

* * * *

The latest thing in the South in the "penny arcade" line are the "parlors," which have been opened exclusively for the negro population. This enterprise, which was started by Augustus C. Faulkner, a prominent negro of Richmond, Va., has proven a great success. On account of racial conditions the colored man was, of course, ostracized from arcades frequented by the white population, and as in many places below the Mason and Dixon line, the negro is largely in the majority, the loss to the arcade man was apparent, more especially since the "darky" will invariably spend his last cent to hear a new song and have a laugh. However, the movement once started has spread like wildfire throughout the South.

THE PROHIBITIVE TAX

Proposed in a Bill Introduced in the Pennsylvania Legislature and to be Levied on Buildings Used for Talking Machine and Moving Picture Exhibitions.

Proprietors of arcades in Pennsylvauia cities and towns have banded together to fight against the bill proposed recently by Representative Moyer, of Lebanon, levying a tax on all buildings used for talking machine and moving picture exhibitions. The rate proposed is $1,000 in cities of the first class, $500 in those in the second class, $200 for those in the third class and $50 in boroughs and townships.

Proprietors of arcades containing penny-in-the-slot devices say rightly that the tax is prohibitive, and have raised a substantial fund to fight the measure iu Harrisburg.

PICTURE SHOWS THREATENED.

Health, Fire and Police Departments Make Objection to Some of Them in New York.

Commissioner Bingham, Dr. Darlington, of the Board of Health, and Deputy Fire Chief Binns held a conference at Police Headquarters two weeks ago, and decided to adopt measures to put out of business many of the moving picture shows in this city. The Police Department, the Board of Health aud the Fire Department have been receiving hundreds of complaints about the picture performances. Steps have not yet been taken to revoke the licenses of the nickel vaudeville playhouses.

CHICAGO, U. S. A.

March 27, 1907.

To The Trade:

NOTICE.

The attention of amusement parlor owners and other dealers in or users of coin-operated phonograph machines and combined phonograph and picture machines is directed to the fact that the machines manufactured by Mills Novelty Co. are broadly protected by letters patent No. 846439 granted to Herbert S. Mills, March 5, 1907.

The Rosenfield Mfg. Co. has placed upon the market a machine which constitutes a direct infringement of several claims of said patent. We hereby notify all concerned that it is our intention to prosecute infringers of said patent where necessary. The patent secures to us the exclusive right to manufacture, use and sell the patented machine, and friendly notice is hereby given that we shall insist upon a recognition of our patent rights.

Suit upon the above mentioned patent for an injunction and accounting has been brought against Harry Davis, who operates an amusement parlor in Pittsburgh, in which he is making use of coin-operated phonograph machines of the manufacture of the Rosenfield Mfg. Co. Similar action will be brought against other users as the infringement is brought to our notice, unless satisfactory settlement is made.

We are prepared to supply machines of our own manufacture to all users at a reasonable price, so that it is unnecessary for any dealer or user to purchase an infringing machine. We assume that the public will not knowingly infringe patent rights which have been secured to us, but deem it proper to give public notice to all.

Respectfully,

Mills Novelty Co.

ough trial by Mr. Kibbey, who has had a large experience in this line, and according to him, it will save fully $60 per week to the user. Lyon & Healy, the great music house of this city, have ordered 1,000 of these coin boxes; the Automatic Musical Co., of Binghamton, N. Y., have ordered 3,000; the Regina Co., Rahway, N. J., 1,000; and other concerns are rapidly falling in line. Mr. Kibbey is to be congratulated on his success, for a device of this kind has long been needed. During his recent Eastern trip, Mr. Kibby closed many big deals for his device.

TRADE NEWS FROM INDIANAPOLIS.

Decision to Run Excursions Sunday Will Help Arcades—Better Class of People Patronize These Resorts—All the Arcades Doing Well—"Peerless" for "The Exhibit"—Sutherland's New Arcade—Terre Haute Now Invaded—Other Items of Interest.

(Special to The Talking Machine World.)
Indianapolis, Ind., April 8, 1907.

Managers of talking machine arcades hailed with delight the decision of passenger officials of the railroads of Indiana handed down last week to the effect that Sunday excursions are not to be abandoned, but that instead they are to be run at lower rates even than those which prevailed last season. Since the last Legislature enacted a two-cent fare law there had been rumors that the Sunday excursion business was to be abandoned. This had caused unrest among arcade managers because Sunday excursions bring large crowds to the city each Sunday, and consequently bring business to the arcades. Passenger officials representing roads of Indiana and Ohio met at the Claypool hotel, and after a long session announced that the rates on Sunday excursions would be lower than ever this year.

One of the noticeable features in the arcades of Indianapolis is the change in the class of trade to which they cater. All of the arcades are introducing pictures and machines now which offer special attractions to women and children. A few years ago many were patronized liberally by the tougher element of the city. All this has changed.

"Our crowds, even on the biggest days, are always orderly," said F. L. Meier, manager of "the Exhibit" on South Illinois street, owned by R. Wagner. "We have many women and children, and we seldom have need for a policeman."

All of the arcades have had good business within the last month. The Sunday trade has been up to a higher mark than it was at the same time last year. This is due largely to the pleasant weather and the many interurban facilities. The interurban traffic on pleasant Sundays during the summer is something enormous, on some Sundays as many as ten or fifteen thousand coming to the city. The traction companies are all the time improving facilities, and it is believed that the arcade business from this source will be better this season than ever before.

"The Exhibit" on South Illinois street has just installed a new Peerless self-playing piano to attract crowds to its place. The instrument was bought at the Carlin & Lennox store.

The National Amusement Co. will open their new place on Wabash avenue in Terre Haute, April 1, and the amusement will include a 10-cent theater, a 5-cent vaudeville and a moving picture arcade. Sixty Mills machines have been bought, and will be installed in the new amusement place.

Manager Sutherland, who runs the Bijou 5-cent theater on East Washington street, has met with such success that he has started another similar amusement place on West Washington street, in the heart of the business district of the city. He has rented a large building, and it has been remodeled so that it has a most imposing entrance. He uses a Tweutieth Century Columbia graphophone to draw trade, and operates a Sterling Columbia graphophone behind the scenes when moving pictures are being displayed. For example, wheu pictures of a violinist are being shown he turns on a violin record behind the scenes, giving an excellent effect.

THE "VIRTUOSA" IS ALMOST HUMAN.

Something of This Wonderful Master of the Violin Whose Playing Reminds you of the Great Virtuosi—The Invention of H. K. Sandell and Made by the Mills Novelty Co.—Has Astonished Musicians.

(Special to the Talking Machine World.)
Chicago, Ill., April 8, 1907.

Among the latest inventions of automatic musical instruments that of H. K. Sandell, an expert electrical engineer, working for the Mills Novelty Co., of this city, is perhaps the most unusual. This ingenious wonder is an automatically operated violin, called the "Virtuosa," which plays with baffling skill the most delicate and intricate compositions of the world's greatest masters.

The Mills Novelty Co. spent three years and over $60,000 in perfecting this unique novelty. The Virtusosa is an almost human automaton, ingenious and unusual in construction, and is, so far as skill and ingenuity can make it, mechanically perfect, playing accurately and with the most marvelous execution, solos by such world-renowned artists as Paganini, Wieniawski, Kubelik and other famous musicians. It also renders duets and part compositions with magnificent string-orchestral effects. One of the most ingenious parts of its mechanism is that which causes it to produce the musical impressions peculiar to violin playing. It is hard to believe that by meaus of mechanically operated bows and fingers such wonderful technique, such beauty of expression, could be produced in this way. It has astonished musicians who have heard it.

George M. Cohan, the playwright said: "The first time I heard it (the Virtuosa) play my song, "The Grand Old Flag," I rushed to make the acquaintance of so fine a soloist, and discovered this marvelous piece of machinery." Prof. Hugo Heermann, one of the greatest living violinists, expressed astonishment that such magnificent music could be produced by purely mechanical means.

To produce music of this character and in this

Counting Pennies By Machines

Did you ever realize the amount of Pennies taken in at a *Penny Arcade?* Did you ever know that their number is so great that *special machines* have become necessary to save time in counting them?

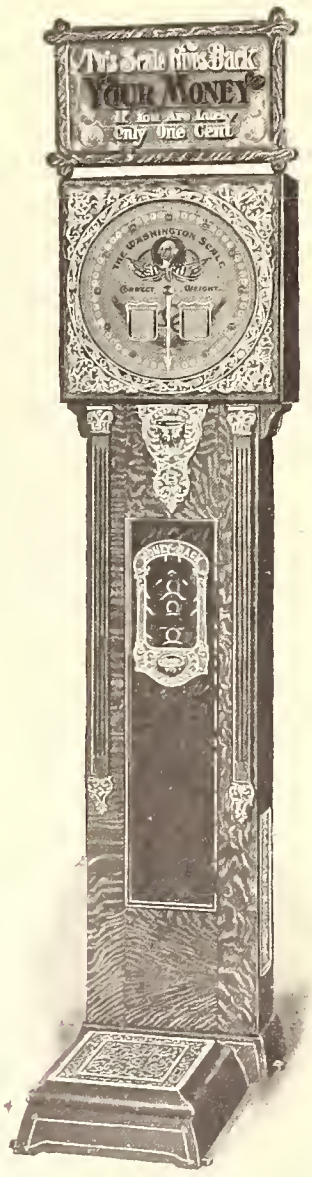
This being a fact, you will readily understand how such establishments can afford to pay such enormous rents in larger cities.

Their receipts are simply beyond realization, and proprietors of *Arcades* are always ready to pay almost any price for good locations.

Still the *Penny Arcade* business is yet in its infancy, and plenty of opportunities are open *right now* for starting such establishments with every assurance of success.

Large capital is *not* necessary to start a successful *arcade*, in fact the largest ones are the outcome of an early start with a modest investment.

Properly started, arcades are *always successes* in towns with populations from 5,000 upward.



We are ready to help you to start a Penny Arcade, and will give you the benefit of our 20 years' experience both as manufacturers and operators.

A *postal card* will bring you full details and our Handsome Illustrated Catalog for 1907.

Write us to-day, and don't allow an opportunity for securing a *big income* pass by you and be taken up by others.

Remember that none but Caille Machines possess "Caille Quality."

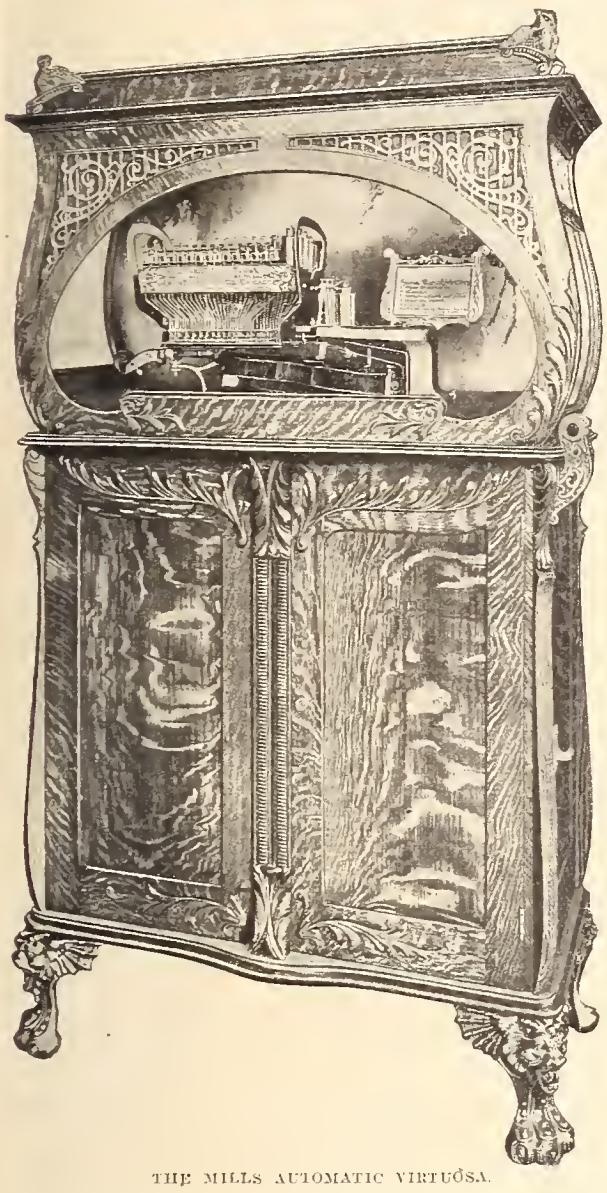
902 Republic Bldg., Chicago

manner naturally requires a machine of intricate mechanism and many clever devices, although the simplicity with which it can be operated is astonishing. So complete is the invention and its working parts that it doubtless will never have a rival.

The following description will give an idea of how complicated and yet how simple is the operation of the Virtuosa: A coin dropped in the slot turns on an electric current automatically. The motor starts and the power is transmitted by a vertical geared shaft to the violin in the upper section of the cabinet. A contact cylinder, carrying the paper music roll, fed by a secondary cylinder of rubber, revolves, and as the perforations in the paper pass given points contact is



THE MILLS AUTOMATIC VIRTUOSA.

made with one or more phosphor-bronze brushes and an electric current flows to finger magnets resting over the finger board. Each of these magnets attracts an armature connected with a finger operating rod acting upon the violin strings. The bow operating magnets are mounted on an arm which extends over the body of the violin and bridge, at which point four conical celluloid bows revolve, one for each string. The same current which controls the finger operating rods also acts simultaneously upon one or more of these magnets. Another magnet produces the staccato effect, the bow speed variator in the lower section of the cabinet, controlling the speed and pressure of the bows on the strings and the bow action magnet, producing the extraordinary hard actions of the bow, gives the effects of a bow operated by the human hand. The strings are of silvered steel, as the ordinary gut strings do not stand the hard wear nor changes in temperature.

One interesting feature of the Virtuosa is an ingenious device by which it can be tuned by operating a series of buttons. A child can easily be taught to tune the instrument, the work being practically automatic.

A romance could be written about the trials and tribulations incidental to every great invention. The inventor gets to a certain point where it seems that all the labor that he has expended has gone for naught, because of an unsurmountable obstacle which presents itself. Several of these crises occurred when the Virtuosa was being invented. One was at the time when the question of arranging a bow for the strings was considered. A bow was found impossible for a number of reasons, and to produce a satisfactory substitute was a long and hard problem. Finally the idea occurred to use celluloid discs instead of a bow; in other words, instead of bowing the string to have a separate wheel revolve upon each string. In order to obviate the wear on the string, which would result, the inventor placed a strip of rosin over the celluloid discs, which they constantly played against, the rosin only coming in immediate contact with the string, thus obviating any wear.

Of course, the important feature about the Virtuosa outside of its marvelous musical ability and its ingenious invention is the fact that it will earn a big income for its owner as a coin-operated musical novelty. Yet there is still another fact in regard to the Virtuosa making it unique in the field of automatic instruments, which is, curiously enough, that it increases rather than decreases in value the more it is used. This fact is patent, of course, to any musician who uses a violin, as he knows the more you use a violin the sweeter it grows in tone and the more valuable it becomes.

H. S. Mills, president of the Mills Novelty Co., was particularly interested in securing a high-class violin for the Virtuosa, and he was not satisfied until he had hired the best violin-maker to be had and set him to work in a corner of the big Mills' building. This violin-maker insisted on having the very best materials to work with, which finally resulted in the Mills Novelty Co. sending to Germany for a special kind of wood from twenty-five to thirty years old, which is used there in making rare violins. It is these splendid instruments which when used improve in tone and sweetness, and which are of such an unusual quality of workmanship that they give every composition played on the Virtuosa the character and effect of its being played by a celebrated artist. So rare an achievement in producing a mechanically perfect instrument so nearly human seldom occurs, and the Mills Novelty Co. have good cause to be proud of their new musical wonder.

AN OPTICAL PHONOGRAPH

As Well as Arc Lamp Grand Opera Revealed at the Recent Lecture of Mr. Duddell at the Royal Institution.

(Special to The Talking Machine World.)

London, Eng., April 2, 1907.

Among other wonders that rejoiced the hearts and stirred the imaginations of the audience at the recent lecture of Mr. Duddell at the Royal Institution was an exhibition of what may be called an optical phonograph. Mr. Duddell produced a long gelatine film—the width of that of the smallest pocket kodak—on which was "developed" the electrical record of that entertaining song, "A Little Bit of String." The record was shown in the form of a continuous series of vertical lines of varying length and interspace, and Mr. Duddell explained what its practical value might be. "We could take the record of a song sung by Patti, say, and regarding that as the pattern of perfection compare it with the optical record of the same song sung by an inferior voice, and see in what way and at what points the inferior voice fell short of the standart set."

Mr. Duddell showed "the pattern of his voice" on a screen by making weird vocal noises into a transmitter. The pattern appeared in the fluctuations of streaks of light on the screen and illustrated the "distortion and attenuation" of the voice in long-distance telephony, a difficult subject, and one which I do not expect you fully to understand," said Mr. Duddell; but the juvenile auditory clapped vigorously to affirm its power of comprehension.

Mr. Duddell's lecture embraced practically the whole development of modern telephony from the earliest "fumblings" after electrical transmission of sound down to the most up-to-date switchboard in a modern exchange. His audi-

ence was most impressed by an arc lamp which acted as a telephone. "We have here," said Mr. Duddell, "au arc lamp such as you will see in Oxford street or Piccadilly when you go home from here this evening. That arc lamp can be made to act as a telephone, and I will show you how it is done.

"Mr. Turbini will go into another part of the building and sing, talk or whistle, and you will hear it on the arc lamp." Mr. Turbini left the room, taking with him a microphone—an ordinary transmitter—attached to the arc lamp by an ordinary cord. And very melodiously Mr. Turbini whistled iuto his microphone—at any rate, a melodious whistle (a selection from grand opera was the morceau chosen) emerged from the arc lamp and distributed itself over the theater.

Mr. Duddell then went on to explain that the possibility of telephoning along a beam of light—which he had himself discovered independently, though anticipated by a German scientist—was more than a picturesque experiment; for by the use of silenium, which has the peculiar property that its resistance to electricity varies with the amount of light directed upon it, wireless telephonic messages have actually been sent seven miles.

THE CASE WAS DISMISSED.

Moving-Picture Show Man Wins a Victory in Court.

The graphophone with the big megaphone in front of a moving picture show at No. 243 Washington street, Brooklyn, continues to attract the attention of passersby, and the lawyers for Mrs. Elizabeth B. Estes, occupant of the only mansion left on Washington street, have admitted that they made a false start in their efforts to find power in the law to limit the volume of sound which may be legally spread broadcast in the atmosphere by a talking machine.

William Epspy, proprietor of the moving picture show, had been summoned to the Adams Street Court on complaint of Mrs. Estes, his next door neighbor. Mr. Camp, for the defendants, argued that the instrument was used only within the legal hours, and the case was dismissed.

NEWS FROM ALL POINTS.

The Fort Pitt Film Exchange have taken permanent quarters in the Home Office Building, Pittsburg, Pa.

The Five-cent theater in the McCullough Building, Davenport, Ia., is doing a rushing business.

A new kinetoscope theater will shortly be opened in the Wilkenson Building, Wheeling, W. Va.

The Colonial Moving Picture Theatre, 220 East Houston, San Antonio, Tex., receutly gave an entertainment for the benefit of the inmates of the orphan asylums, for which they were lauded by the citizens, and, more to the point, increased their business.

The Orpheum in Utica, N. Y., is making a hit with its new Sunday program.

The Southwest Amusement Co., of Los Angeles, Cal., will open a new motion picture show at the Empire Theater in San Diego.

W. B. Erwin, of Kansas City, will open a 5-cent theater at 236 Pine avenue, Long Beach, Cal.

Geo. Carnes is to open a nickel theater on North Main street, Bowling Green, O.

Chester Whipple will start another in North Baltimore, O.

Brice Bernard will break the ice at Napoleon, O.

Charles D. Silcox, Jr., will open a new theater at 3064 Richmond street, Philadelphia.

A moving picture show will be started on Virginia avenue, near Shelby, in Indianapolis, Ind.

A high-class Nickelodian will shortly be opened at the Union Block, Ottawa, Ill.

S. L. Costley and C. G. Hurnan are putting in two new moving picture shows, one on each side of Congress avenue, Austin, Tex.

Still another is to be added to the already large list in Waukegan, Ill., to be knowu as the Tichnor Crosby Amusement Co.

George E. McKean will open in Granite City, Mo.

Our New "Art-Tone" Horns

OUR New "Art-Tone" Horns are distinct works of art. These Horns are hand-painted in a series of superb floral designs, by a corps of expert artists. No transfers or decalcomanias are used in any part of the decoration.

The extreme dignity of the coloring and the superb beauty of execution are such as appeal to the most aesthetic and exacting buyers. To fully complete one of these Horns necessitates nearly five hundred touches of the artist's brush. But the exquisite results obtained more than justify all the pains we take in the decoration. May we not send you further interesting information ?

10-in. and 12-in. Star Records

BULLETIN No. 1 TO CATALOGUE "A"

THIS LIST, the first of our monthly supplemental bulletins, has been made up of records chosen after the most careful testing of a large number of excellent selections submitted by our recording department. The result is a collection of perfect reproductions and a variety that will appeal to each individual taste.

10-INCH STAR RECORDS

NATIONAL REGIMENTAL BAND.

5101. Under Arms March. As the name indicates, this is a snappy military air. It has a dash that assures its popularity.

5102. Honor and Glory March.

PICCOLO. Band Accompaniment.

5103. Sweet Birdie Polka. A most pleasing melody. Well sustained throughout.

BANJO. Orchestra Accompaniment.
By Vess L. Ossman.

5104. Motor March. Executed in Mr. Ossman's most brilliant style. It needs no further commendation.

XYLOPHONE. Orchestra Accompaniment.

5105. Iola Intermezzo.

CELLO. Orchestra Accompaniment.

5106. The Evening Star. A perfect reproduction of this well known and beautiful selection from "Tannhauser."

BARITONE AND TENOR DUETS.

5107. Over The Line (Sacred).

5108. Let the Lower Lights be Burning (Sacred).

5109. Iola. Another of the increasingly popular Indian songs.

BARITONE AND CONTRALTO DUET.

5110. Linger Longer Girl. A duet of unusual merit from the "Earl and the Girl."

DUET BY COLLINS AND HARLAN. Orch. Accomp.

5111. Gooda Bye John. This selection, from Victor Herbert's Musical Comedy "The Red Mill," is well sung and introduces in an amusing way Italian dialect and hand organ.

VOCAL QUARTETTES Male Voices.

5112. Ain't You Coming Back to Old New Hampshire, Mollie? This rural march song, which has been successfully featured by Dockstader's Minstrels, is excellently rendered in this record.

5113. Alice, Where Art Thou Going? One of the most popular march songs of the day, faultlessly sung by Billy Murray with quartette chorus.

MINSTREL RECORDS.

5114 Minstrel Record "E." Introducing "Crocodile Isle."

5115. Minstrel Record "F." Introducing "Moses Andrew Jackson, Good-bye." These two numbers are fully up to the high standard of excellence established by those previously catalogued by us.

TENOR SOLO. Orchestra Accompaniment.

5116. Meet Me, Sweet Kathleen, in Honeysuckle Time. A rural sentimental song that, as a record, is a pronounced success.

BARITONE SOLOS. Orchestra Accompaniment.

5117. Do Re Mi Fa Sol La Si Do. Featured in "Marrying Mary."

5118. Fare Thee Well My Old Kentucky Home. One of the best of the popular rural march songs.

12-INCH STAR RECORDS

NATIONAL REGIMENTAL BAND.

1212. Sextet From Lucia. Donizetti. No collection of records should be lacking this selection from Donizetti's most popular production.

1213. "Overture to Semiramide." Rossini. An Overture of universally known merit.

1214. "Overture to Poet and Peasant." Suppe. This selection, although from an opera not widely celebrated, has made the name of Suppe familiar to all lovers of light opera music.

MUSICAL MONOLOGUE.

1215. The Musical Yankee. A sketch in which the Yankee fully demonstrates his musical versatility and ability.

QUARTETTE, Male Voices.

1216. Old Black Joe. Sung with marked pathos and harmony.

NEGRO SHOUT.
By Billy Golden. Orchestra Accompaniment.

1217. "Turkey in the Straw." An old time favorite which, with striking orchestra accompaniment, is better than ever before.

To any jobber or dealer who will send a trial order for the above list of selections complete, we will agree to pay transportation charges on this one list in order that the trade can hear and judge of the quality of

ALWAYS CHANGE YOUR DISPLAY

Whether in Window or Store Interior—Lack of Change Means to be Behind the Times—Some Timely Remarks on a Vital Topic.

Have you ever been pleased with a certain thing, possibly the arrangement of furniture in a room or its decoration, only to become disinterested and finally actually bored with the very feature, perhaps, that originally attracted your attention, simply from the fact that lack of change made it monotonous? Then, why not profit by that lesson in arranging your store and window display? The store that never changes its fixtures, the location of its departments and the style of interior decoration or its window displays, is like the man who wears the same suit of clothes for years; it is clear behiud the times, and looked upon as a hopeless old fogy. Such stores depend on the arrival of new goods at intervals "to brighten things up," much on the same plan as the man with the same suit of clothes, who puts on a new tie once or twice a year.

Constant change and frequent novelty constitute a modern method of conducting a progressive and profitable business. A well-arranged and attractive store has almost an equal drawing power with the theater. If it is pleasing to women they will spend afternoons there with the primary object of being entertained; from that step bringing them up to a purchasing point is a comparatively simple matter. Make a special feature of afternoon recitals, change the program daily and have the titles printed on a slip with the numbers of the records and your name and address prominently displayed.

Change the arrangement of stock at least once in a month or six weeks or oftener if possible, aud give your store a fresh appearance. Try featuring a different style of machine weekly—nothing like it to arouse interest in your line and impress the visitors with the extent and variety of your stock.

The window display should be changed weekly. After a week or so it begins to lose its power of attraction. And a peculiar fact is that the more elaborate and prominent a display is the quicker it becomes boresome.

Of course, this constant arranging costs money, but the increased trade will repay it many times.

And, when catering to the ladies with matinee recitals, don't get the idea that your store must be arranged like a tea-room. It is just as frequently the income-producing men visitors who may be attracted during the evening hours who are most easily persuaded to buy machines and the latest records.

In changing your departments about, with a view to facilitating the service and adding to the convenience of trading or enhancing the appearance of the store, you will invariably find customers who will complain about it in this fashion: "Oh, dear, I can't find anything here any more; they're continually moving things around." And yet these same people would condemn you unmercifully and withdraw their patronage altogether if you never made any changes or did anything to improve the store. Let them talk! Every time they speak of changes it will advertise your business. People must have something to talk about, and the merchant who can furnish them with a subject for conversation should consider himself fortunate.

CLEVER SCHEME OF TALKER PUBLICITY.

Harry Marsey, manager of the Buffalo Talking Machine Co., Buffalo, N. Y., recently adopted a very clever plan of talker advertising which has brought excellent results. A card was inserted in the amusement column of the local papers of the same size and general style of the theatre aunouncements, and read as follows: "Your Own Theatre. Daily matinee; every eveniug. Dollar a Week with an Edison or a Victor." The rest of the space was given over to prices and short talk upon the advantages derived from owning a "talker."

PHOTOGRAPHING SPEECH.

The Pollak Virag Telegraphic System Adopted to Voice Photography by Dr. Morage—A Wonderful Development.

A wonderful system for photographing speech has just been unearthed in Paris and is called the Pollak Virag telegraphic apparatus. Although the invention is over seven years old, only recently has it been brought to the point of perfection, and it will most likely prove a valuable adjunct to the talkiug machine in certain circles, as while the later only reproduces the tones of the voice, the former will reproduce the voice iu a mauner that can be read instead of heard.

The Pollak Virag apparatus was origiually intended only for rapid telegraphy, being capable of transmitting over 650 words per minute through the medium of a roll of paper containing a series of perforators to correspond with the English characters.

This perforated paper, when placed in the transmitting apparatus, allows the passage of currents of different leugth in proportion to the size and position of the holes. At the other end of the telegraph wire is a mirror, which is caused to oscillate by these currents and before which is set a luminous spoke. The rays reflected from this mirror fall on a sensitive tape, which unrolls aud passes automatically into a revealing bath, and thence into a fixing bath, from whence the wet tape bearing the first words of the message emerged before the last words had been registered.

Adopting the Pollak Virag system to voice photography was the work of a Dr. Morage, who conceived the idea of substituting a microphone fo rthe manipulator, thereby causing the mirror to vibrate and register the flashes upon the sensitive tape. The vowels and consonants are represented by lines of various thicknesses and shapes. As yet no one has become sufficiently familiar with the marks on the photographs to decipher the words, but much progress has already been made in that direction.

TAYLOR BROS. STILL EXPANDING.

Taylor Bros., of Houston, Tex., found their talking machine business growing to such an extent that they were recently compelled to take the entire building at 1007 Capital street, that city, where they have fitted up one of the finest talking machine parlors in that section of the country. Taylor Bros. started in the "talker" business not many years ago with a small side line of Edison goods, but now they handle the complete Edison and Victor lines, and their business is still on the increase. The interior of their new quarters is handsomely decorated and well arranged, and make ideal talking machine salesrooms.

OPPORTUNITIES OF RETAIL SALESMEN.

To the ambitious salesman starting in the humbler ranks of business, all things are possible, for the salesmen of to-day are the merchants of to-morrow. The retail talking machine salesman, by virtue of his daily experiences, has a rare opportunity to practice and educate himself in the art of salesmanship.

The very fact that he is meeting people regularly affords him the opportunity of brushing against their opposition, and finally winning them to his point of view. If he makes the best of this opportunity, he will learn the art of selling goods and acquire a feeling of self-confidence, a mental and physical poise, an ambitious bearing, that commands quick attention from employers on the lookout, as they always are, to discover and engage ability.

INVENTS NEW MACHINE.

Hyman E. Markle Thinks He Has Got a Good Thing on a Multiplex Machine.

(Special to The Review.)

Nashville, Tenn., May 5, 1907.

Harry Markle, of the H. E. & Harry Markle Co., dealers in Edison phonographs at 403 Public square, recently returned from Washington, D. C., where he applied for patent rights on a multiplex talker machine, which is intended for cylinder records.

Hyman E. Markle is the inventor of the new machine, and it is stated by authorities that this machine "will revolutionize the talking machine idea." The model was constructed in Cleveland, O., at a cost of $1,259.

The model, which is on exhibition at Markle's store, carries twelve records on a Ferris-wheel-like arrangement, and is operated automatically by cushion to let the carriage down easy. The mechanism of the machine is very intricate, but is operated with less trouble than the old machines.

Mr. Markle stated that this machine could be manufactured and placed on the market for about $25. He stated further that a $100,000 company would be organized in the near future for the purpose of manufacturing these machines.

MELBA'S VOICE IS HIGH BLUE.

Purple Splashes in It—Englishwoman Connects Tints With Tones.

The translation of sounds into colors is no new idea, but Mrs. Northesk Wilson, lecturing in London, England., on the relation of colors to music, has made some interesting additions to the familiar comparisons.

She described Mme. Melba's voice as high blue, splashed occasionally with purple. Alice Gomez's vocalization, she said, suggested orange. Forbes Robertson had a violet voice speckled with green, which is the color of the depressed.

Mrs. Wilson contended that every sound conveyed an idea of color to those who were in a proper state of vibration. Blind people were particularly sensitive in this respect to both agreeable and disagreeable sounds. A raucous voice, according to Mrs. Wilson, gave a blind man a dirty green feeling.

GEISHA DANCES IN THE "TALKER."

A Geisha Club was recently formed among several young ladies of the Japanese colony in New York, for the purpose of giving exhibitions of the various dances of their country. Unable to procure a competent Jap band or a Yankee band that could interpret the Japanese music properly, they have ordered through S. Yano, Japanese correspondent for the Columbia Phonograph Co., a number of records of the Geisha dances, made at the Columbia Co.'s branch in Tokyo. It will be early fall before the records arrive in New York and the club can give a public exhibition.

The Kansas City Music Co., Kansas City, Mo., have put in a complete stock of Edison phonographs and Victor talking machines, together with an extensive assortment of records, and have entered the retail talking machine field in earnest. It is said they already have assurances of a successful trade.

MEXICO A FERTILE FIELD

For Talking Machine Exploitation—People Are Musical and Take Eagerly to the "Talker"—Splendid Business Being Done by the Mexican Branch of the National Phonograph Co., and the Espinosa Phonograph Co.—Conditions in Vera Cruz—How to Work Trade.

(Special to The Talking Machine World.)
City of Mexico, Mexico, May 4, 1907.

The Mexican Republic offers a wonderful field for talking machine exploitation, according to those in that business here. In fact, there are not enough machines and records imported into Mexico to meet the demand. This demand is not confined to the wealthy class, as might be supposed, but the laborers delight in the music rendered by the talkers, grand opera selections, Mexican songs and dances of various nations proving especially popular.

It is a very common occurrence here in this country to pass a home in the interior as well as on the outskirts of the city, and see the laborer who goes through the streets barefooted, or some who only wear the sandals without stockings, with one of the highest priced machines in their domicile playing classic and grand opera records, with the neighbors congregated about the door, who hope in the near future to be the possessor of one of these machines themselves.

The Mexican branch of the National Phonograph Co., at Avenida Orienta 117, in charge of Rafael Cabanas, has about all the business that can well be handled and often suffers from inability to get machines and records in sufficient demands.

This company make a specialty of Mexican records made by native artists of recognized ability. George Werner, of the headquarters recording force, was in the city for the purpose of making a new series of Mexican records. The popularity of Edison goods throughout the Republic is continually increasing and prospects are that the business for 1907 will exceed previous records by a large percentage.

A concern whose business shows how the talking machine trade wind blows in Mexico is the Espinosa Phonograph Co., of this city, who are Mexican agents for the Columbia graphophones. So rapidly is their business increasing they are contemplating adding two stories to the main building already two stories high, with 50 foot front and 100 feet deep, this despite the fact that they have four retail stores in Mexico City alone with branches throughout the interior. This firm do a great deal of outdoor advertising on billboards and railway sign boards. They also distribute many booklets, from which they get excellent results. G. A. Smith, formerly with the Columbia Phonograph Co., in Portland, Ore., is assistant general and sales manager for the concern.

Yes, the talking machine business in this Republic is assuming immense proportions, although hardly out of its infancy, and the States had better look to their laurels as talking machine users.

The Mexican is a natural lover of music. It is nothing strange to hear a "greaser" peon whistling selections from the latest operas. Music to be popular in Mexico must be such as is, or can be, understood by the people, whose taste in this direction is the direct result of Spanish teachings. Mexico boasts of a number of good composers, and the so-called folk songs are very numerous and in many instances pleasing even to foreigners. Dance music is preferred by the masses, and this is almost universal, if the national dances peculiar to the different sections of this country are accepted.

Consul W. W. Canada, of Vera Cruz, recently wrote the government officials at Washington regarding the sale of musical and other instruments in Mexico as follows: "There are two music dealers in Vera Cruz. In all the larger towns throughout the interior musical instruments may be purchased, but there are few who make this a special business; it is generally conducted in combination with other goods. Mexico City is the central point in this country for music dealers. This consular district offers a splendid field for the sale of talking machines, having a population of not less than 3,000,000, which number is increasing daily. It must not be supposed that the machines are unknown, but they have never been put before the public systematically. It is extremely doubtful if an old-fashioned business house here could be induced to send in an order, pay for the same at the place of shipment, take all shipping and packing risks, pay duties and take its chances on wrong declarations of merchandise on consular manifest, usually resulting in fines and double duties, and finally spend from four to seven days in clearing the goods from the custom house, on the unsupported statement of the manufacturer in his circulars.

"It has repeatedly been said that the American manufacturer who desires to cultivate trade with this country must do so in a systematic and thorough manner with a representative. After the manufacturer has established the business at this port he could proceed to another town, and so the entire field could be covered, and it is a large one."

NEW STYLE INTERESTS NEWARKIANS.

(Special to The Talking Machine World.)
Newark, N. J., May 9, 1907.

An interesting new type of Columbia graphophone is being shown at the local store of the Columbia Phonograph Co., at 10 Academy street. The machine takes six-inch cylinder records and has a tapering arm horn and three-inch swivel similar to those of the disc machine. The sapphire point is placed at the side of the record, which revolves toward it, and the reproducer is mounted on a spring, which enables it to follow the record very closely and produce a great volume of tone. The new machine, which has been greatly admired by many visitors, is at moderate price.

The Wise Piano House, Boise, Idaho, have equipped a complete talking machine department and will handle the Edison, Victor and Columbia lines.

$3.00 $3.00

TRUE- -TONE

NOTE THE NEW PRICE, $3.00 EACH, DISCOUNTS: JOBBERS 50%, DEALERS 40%

The Victor and the Victor Records

First the six *Victors*, then the *Victor Junior*, then the *Victrola*, then the *Aux-e-to-phone*, and we are working toward still greater things.

Our orders on hand now are *five times* as great as they were a year ago. This means that the *Victor* demand is increasing among the 56,000,000 people we reach every month, and will reach still more effectively next year with our $150,000 increase in advertising. And it means, too, that the dealers are wider awake and making more money out of *Victors*.

Go after *your* share of *our* increasing *Victor* business. Don't be just an "average" dealer, but build up your business beyond the limits of your community, and get *more* than your natural share. The biggest, and most successful dealers are spending from one to three thousand dollars a month in advertising on their own hook; and they are reaping a great reward.

Remember, you will get just as much *Victor* business as you deserve.

Victor Talking Machine Company

Camden, N. J.

Here's a good idea:—Place standing monthly orders for new records with your distributor, and push this feature. (It keeps your customers calling at least monthly—they look for them.)

"THE LORD'S OWN HORN."

A Humble But Moving Tribute to Ingersoll's Great Oratorical Powers Revealed i na Story Told by Remsen Crawford in the Broadway Magazine—A Classic in Its Way.

There was great excitement on our plantation when it became known to the darkies that "Marse Nat" had returned from New York and "brought a horn dat could talk like er man." "Uncle" John, better known as "Sugar" John in the neighborhood, because of his fondness for sugar cane, had never even heard of a phonograph. He had long predicted that the day would come when "they'd have steam buggies," and had felt vindicated when the first automobile went puffing through Lincoln County; but he was skeptical about the phonograph. He refused to believe that a horn could talk, and hurried along with his liveliest hobble toward the "big 'ouse," to see with his own eyes what it all meant.

We had no record for the machine giving a sermon or scriptural reading, which would have pleased "Uncle" John most—for he is a pious man—and, strangely enough, the nearest thing to it in our stock was the late Colonel Robert Ingersoll's oration, "At the Tomb of Napoleon." The record was adjusted, and after the phonograph finished with the preliminary sputtering and popping it began:

"A little while ago I stood by the grave of the old Napoleon," thundered the deep, sepulchral voice in the big brass horn, and a look of intense anxiety came over the face of "Uncle" John. He leaned forward; his gray beard crushed in the withered black hand he had raised to his ear.

"A magnificent tomb of gilt and gold," the phonograph went on, "and I gazed upon the sarcophagus of black Egyptian marble, where rest at last the ashes of that restless man!"

"Amen!" groaned "Uncle" John, just as he does when in the pulpit at camp-meeting times.

"I leaned over the balustrade, and thought about the career of the greatest soldier of the modern world. I saw him walking upon the banks of the Seine, contemplating suicide. I saw him at Toulon. I saw him putting down the mob in the streets of Paris. I saw him at the head of the army of Italy. I saw him in Egypt, in the shade of the pyramids. I saw him conquer the Alps, and I saw him mingle the eagles of France with the eagles of the crags. I saw him at Marengo, at Ulm, at Austerlitz"——

"Preach on, man, preach on!" shouted "Uncle John, who could no longer restrain himself. I wonder how an uneducated man who knew absolutely nothing about Napoleon and his great battles could become so emotional,

"I saw him in Russia," roared the relentless phonograph, "where the infantry of the snow and the cavalry of the wild blast scattered his legions like winter's withered leaves. I saw him at Leipzig in defeat and disaster, driven by a million bayonets back upon Paris—clutched like a wild beast, banished to Elba!"

"Praise de Lamb," groaned "Uncle" John.

"I saw him escape and retake an empire by the force of his genius. I saw him upon the frightful field of Waterloo, where Chance and Fate combined to wreck the fortunes of their former king; and I saw him at St. Helena with his hands crossed behind him, gazing out o'er the sad and solemn sea."

"Show pity, Lawd," sobbed "Uncle" John.

"I thought of the widows and orphans he had made," thundered the voice of Robert Ingersoll, striking his antithesis with telling effect, while "Uncle" John shouted aloud, "Dar, bless Gawd!" —"of the tears that had been shed for his glory; and of the only woman that ever loved him, pushed from his side by the cold hand of Ambition. I thought of these things, and I said to myself I would rather have been a French peasant and worn wooden shoes"——

"Ain't it de truth?" exclaimed "Uncle John.

"I would have rather lived in a hut with a vine growing over the door, and the grapes growing purple in the kisses of the autumn sun—I would rather have been that poor peasant with my loving wife by my side, knitting as the day died out of the skies, with my children about me —I would rather have been that man and gone down to the tongueless silence of the dreamless dust than to have been that imperial impersonation of force and murder known as Napoleon the Great!"

"Amen!" moaned "Uncle" John, slapping his hands and rubbing them on his ragged trouser legs in turns. It was explained to him that he had been saying "Amen" to the words of an infidel, a man who believed there was no God.

"Look heah, Marse Nat," he replied, "dat man say he don't believe in no Gawd—he may say he don't, but he's got Gawd Ermighty in ev'y word dat comes out uv his lips!"

He sat silent for a long time, rolling his eyes and moistening his lips with his tongue. He waited his word.

"And as for dat," said "Uncle" John at last, pointing a quivering finger toward the instrument which shone resplendent in the slant rays of the sun, "dat's the Lord's own horn."

ST. LOUIS TRADE EXPANSION.

Reports for the Past Month Showed an Increase of from 30 to 50 Per Cent. in Business—Manager Long of the St. Louis Talking Machine Co. Leases More Space—Silverstone Co.'s Good Report—Big Call for Reginaphone—O. K. Houck's Handsome Quarters.

(Special to The Talking Machine World.)

St. Louis, Mo., May 7, 1907.

The talking machine trade still continues to improve each month, and reports for April show that it has been much better than for the same period a year ago. The general increase reported will average about 30 per cent., but some concerns report a 50 per cent. increase, and the demand is for the best class of machines and high priced records.

Manager C. W. Long, of the St. Louis Talking Machine Co., reports an increase of about 30 per cent. for April over the same period a year ago, and that their business is constantly increasing. A. L. Owens has been appointed assistant manager to Mr. Long, and will have charge of the retail store at 916 Olive street. There have been a number of new attaches added to the force, and the retail store has been enlarged to twice its former size by the removal of the wholesale department. Mr. Long has leased the entire sixth floor, consisting of 7,000 square feet, of the new Mills building at the northwest corner of Seventh and St. Charles, for their new wholesale department, which has been handsomely equipped in a thoroughly modern manner. They have been in these new quarters several weeks, and Mr. Long announces that they are making a vigorous and energetic campaign for business, and with splendid results. This concern has a first-class amateur baseball team, handsomely representing them, and they are meeting all comers in this territory on the diamond.

P. E. Conroy, president of the Conroy Piano Co., reports trade as being exceedingly good with a steady increase each month.

T. P. Clancy, manager of the Columbia Phonograph Co., states that business is improving every day, and that their trade has been very big for the month.

A. C. Edwards, formerly with the Cable Company, Chicago, has accepted a position with the Columbia Phonograph Co.

W. C. Fuhri, district manager of the Columbia Phonograph Co., Chicago, was a recent visitor here.

The Silverstone Talking Machine Co. report business for April fully up to expectations. They have been appointed jobbers of the Edison, and have just received two carloads of the phonographs and records on which they will immediately open a vigorous campaign throughout this territory for the dealers' business.

J. P. Booker, manager of the talking machine department of the O. K. Houck Piano Co., reports trade very good, and that notwithstanding they have been all tore up in connection with the building of their new talking machine department, their business has been excellent. Their new talking machine department is probably one of the handsomest arranged affairs of its kind in the country. They have three elegant demonstrating rooms, which are fitted up in a perfectly modern manner.

Manager Brewer, of the talking machine department of the Thiebes-Stierlin Music Co., reports trade as being entirely satisfactory, and that they having a big demand for their reginaphone.

Mark Silverstone, president of the Silverstone Talking Machine Co., was married to Miss Amelia Stein, a popular young lady of this city, on Sunday, May 12. The happy couple left on a two weeks' Eastern bridal trip.

George W. Lyle, general manager of the Columbia Phonograph Co., was a recent visitor here.

A. D. Geissler, manager of a talking machine company, Chicago, was also a caller.

S. M. Field, manager of the talking machine department of the O. K. Houck Piano Co., Little Rock, was a recent visitor.

J. P. Booker, formerly connected with the talking machine department of the O. K. Houck Piano Co., Nashville, Tenn., has been made manaager of their talking machine department here.

PRACTICAL SUGGESTIONS AND COMMENTS.

THE IMPORTANCE OF OIL.

Dealers should impress on their customers the importance of using the very best quality of oil in their machines. It is unwise to use sewing machine, clock or other oils when by consulting the columns of The World announcements can be found of firms who make a specialty of oil especially for talking machines—an oil that will not clog or impede the progress of the machine. Of course oil should be used sparingly in all parts where friction occurs, and before re-oiling any part of the machine, all old or congealed oil should be carefully removed either with petroleum, benzoline or a mixture of both in equal parts, wiping off the machine afterward with a soft rag. In order to get the best results from the machine the utmost care should be taken with it, and dealers should impress this fact upon their customers to the end that they use the machine properly. Every purchaser of a machine who is enabled to use it intelligently and satisfactorily is a splendid missionary for the trade, hence the importance of furnishing all essential points regarding the best use of the machine to the end that the most satisfactory results are secured in the way of tone reproduction.

MACHINES IN PUBLIC PLACES.

Another matter occurs to us in connection with the foregoing remarks, and it is that dealers who sell talking machines for use in public places such as restaurants, confectionery stores, and numerous other places, where machines are utilized as a means of entertaining the visiting public, should call on these customers occasionally and observe how the machines are working. There is no better advertisement than a machine in such public places, provided, of course, that the reproduction is right. During a visit to one of the seaside resorts recently, five machines were discovered in use in public places, and four of them were in very bad condition. The records were worn out, the machine was poorly adjusted, and needed overhauling and cleaning. The instruments used were those of leading manufacturers, but they gave everybody who heard them a very wrong idea of the talking machine when properly used and handled. It seems to us that manufacturers and dealers would alike be serving their interests, if they looked up these machines, even at their own expense, and have an adjustor or expert call around and just show how the best tonal effects may be secured, and also give advice as to the best records to be used in such places. There are tremendous advertising possibilities in the talking machine at a summer resort when it is in good shape, and first-class records are used, hence the importance of taking to heart the tip here given.

A TIME CONTROLLED PHONOGRAPH.

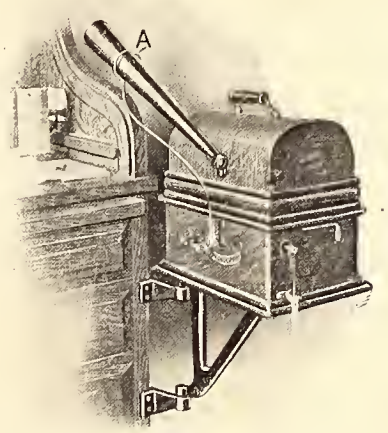
In The World of recent date we made reference to the fact that several inventors have been at work on a time-controlled talking machine that would awaken people in the morning, or be utilized for a number of other purposes, so that it may become a general necessity. The first inventor to go definitely on record is Dr. J. E. Hett, of Berlin, Ont., who has invented an arrangement of clock and phonograph, so that at any predetermined time of night or day, but especially in the early morning, sweet sounds may fill the sleeper's room and so awaken him. Now the sounds that are first impressed upon the brain may be a march by Sousa or a song by Melba or any other musical selection that may be desired, and as it is generally believed that the first thoughts which are induced on awakening by external suggestion cling to a person more or less tenaciously throughout the day, it is obvious that these should be sweet and pleasant instead of harsh and uncomforting. To determine the correctness of the above supposition the doctor commenced a series of experiments, and as the result of numerous investigations upon himself he became convinced of the verity of it, and in the end devised the combination which is here referred to.

THE MECHANISM IS SIMPLE.

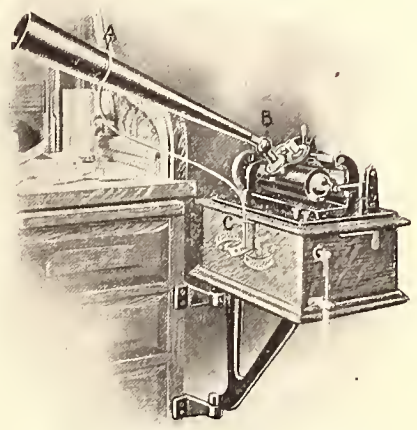
The mechanism is very simple, and consists of a spring, which trips a lever attached at one end to an ordinary alarm clock, while at the other end a cord which passes over a pulley is connected to the starting lever of the phonograph. The case contains three ordinary dry cell batteries, and when the alarm lever of the clock is tripped the phonograph is not only started but a miniature four-volt lamp is also turned on and lighted. The light may, however, be turned on or off at pleasure, and the phonograph operated likewise at will. The user of this invention will thus be able to afford the luxury of having a private singer, or grand orchestra awaken him from his slumbers, thus being better off than Andrew Carnegie, who, it is said, is awakened every morning by the melodious strains of a pipe organ, played automatically or by a well-known musician, something decidedly better than to be rudely aroused to the day's activity by the clanging gong of the 98-cent alarm clock.

HORN WITH SPECIAL PROPERTIES.

A new horn, constructed on correct scientific and hygienic principles, has been devised by Nelson C. Durand, manager of the Edison business



phonograph department of the National Phonograph Co., and which is now being used on all the business machines put out by this company. It is described as follows: "The ball joint connecting the machine enables the dictator to turn from the reproducer to recorder. The crane, which is detachable on the front of the phonograph, supports the horn, and, with the aid of the ball joint, where it is connected to the phonograph, the dictator can turn the horn entirely out of the way. The great advantage to the dictator lies in the sanitary and acoustic properties of the horn. The dictator may now speak in an extremely low tone of voice without having his mouth touching any of the hearing apparatus, and the horn at no time becomes dirty or ill-smelling, as in the case of the ordinary speak-



ing tube of the phonograph or the ordinary phonograph. The crane is so constructed that when the cover of the machine is put on, the horn is supported independent of the mechanism. When the cover is removed the horn may be instantly connected without having to hunt up an independent article from the desk or shelf where it may have been placed. The hands are free, and that is another advantage."

REGARDING MACHINE CONSTRUCTION.

"It is a strange thing that so many of the machine manufacturers in the construction of their machines seem to avoid the most obviously simple necessity for the perfect reproduction of sound, and that is to so construct their machine that it will allow the sapphire to play in its natural position, viz., on a dead center," says a critical reader of Sound Wave. "A good definition of this is to speak of it as a 'table' center. The sapphire must be dead on top of the record, and thus work on the line of the least resistance. Most of the machines on the market carry a floating reproducer, which is not capable of being played in this position. Either it will drag by being too far down, or will retard and give a dead reproduction by being too much the opposite way. It cannot be too much impressed upon

To the Dealers of Northern Ohio, Northern Indiana and all Michigan;

GREETING

Here's the newest thing out. **The BIO-PHONE.** Simply a clever device which can be attached in a minute to any Edison Phonograph and make it a disc-playing machine. **It makes two machines of one,** and is the sensation of the day. You want it for your trade. Let us have the order promptly. (See Cut).

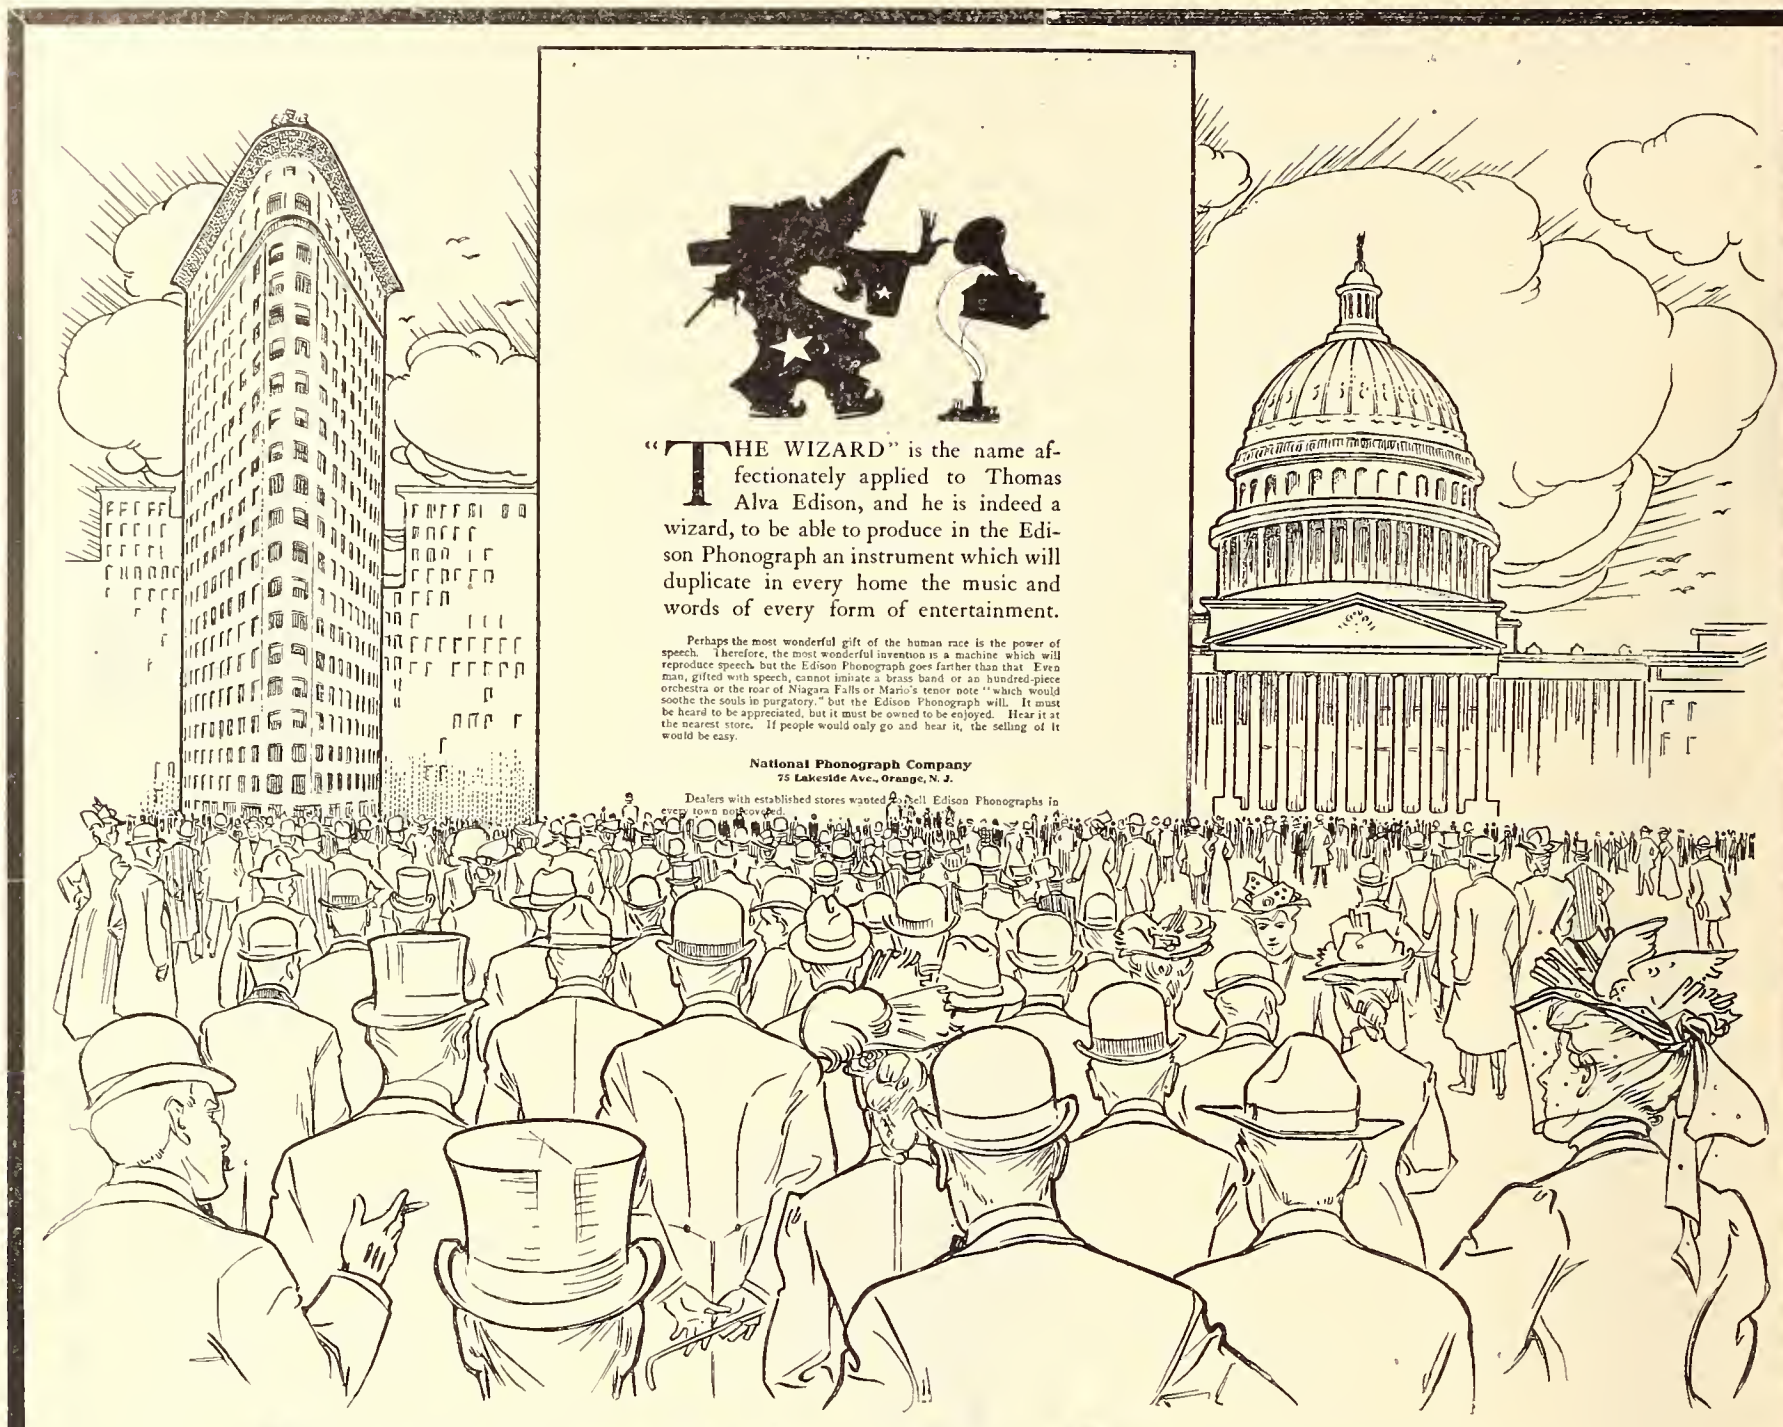
Here's another new one. An **Instantaneous Repeating Adjustment** for the Edison Phonograph. A little device quickly attached to any Edison Phonograph and will cause it to automatically repeat records as often as you wish. Every Phonograph owner buys one at sight. You want it for your trade. Let us have your order to-day.

And still another. The **New "S" HORN** for the Edison Phonograph. **Self-attaching,** requires no crane or stand, takes up no room, is out of the way, sells at sight. You want it. The demand is big and "first come, first served."

We want your trade purely on a business basis of delivered satisfaction. Anybody can claim, most everybody does claim, but **we deliver the claims.**

We want your orders for Edison Phonographs, Edison Gold-Moulded Records, Horns, and all Phonographic Supplies, because we keep our lines full all the time and have ample facility to ship the day the order is received.

American Phonograph Co., 106 Woodward Ave. DETROIT



Keeping Up the Interest in EDISON PHONOGRAPHS

IF the Edison Phonograph advertisements appearing in the newspapers throughout the country in any one week were made into one advertisement it would be taller than the Flatiron Building in New York and wider than the Capitol Building at Washington.

THIS advertisement is seen by 30,000,000 people every week and the interest it arouses is felt by every dealer handling Edison Phonographs and Records.

AN instrument good enough to make this tremendous advertising profitable ought to be good enough for you to offer as your leader. A stock of Talking Machines without Edison Phonographs is incomplete. It may be making good but it is not making all it can.

KEEPING up the interest is our part. We do it by producing a perfect instrument, by getting out each month all that is new and good in music and by advertising both Phonographs and Records wherever magazines and newspapers are read.

YOUR part is simply to carry the goods and use the helps we furnish in pushing them.

LET us send you complete information and the name of a nearby jobber who can supply you.

National Phonograph Co., 59 Lakeside Avenue, Orange, N. J.

?

¶ Do you like this issue of the World?

¶ Is it not worth something to you in your business?

¶ Do you receive it regularly?

¶ If not, why not?

¶ The fault is your own, for we've done our part in supplying you with a sample copy.

¶ Subscribe for it.

¶ That's the only way to get it.

¶ It is worth ten times the annual cost to you, whether your store is in Houston, Hong Kong or Hindoostan. We have subscribers in all these places, and they say "Yes."

¶ Be progressive and read the World. Your competitor takes it and he knows its value.

¶ It costs one dollar yearly in North America; all other countries, one dollar and twenty-five cents.

¶ Don't delay sending in your order; not soon, but NOW! We can handle anything in checks, postal orders, stamps, and, of course, cash.

the real student of the machine, in my opinion, that an absolute dead level for the play of the reproducer is an essential in which the closer the adherence the better the success."

REPLACING BROKEN SAPPHIRES.

Some valuable poiuters regarding the method used by experts in satisfactorily replacing broken sapphires, are given by a writer in The Talking Machine News as follows: "If sapphire or glass point ouly is broken, remove the dome containing same by runuing a few drops of hot water round the edge of latter, iu a short time this will loosen the cement holding it to the diaphragm and the dome can then be gently eased up gradually with the poiut of a penknife and removed. Then hold the dome gently with a pair of tweezers and with a red-hot needle push the broken piece of sapphire out. Hold the dome upside down and heat the shellac with a lighted match till it all runs together and covers the hole. Get a new sapphire; make a very shallow opening in the shellac through the hole with a hot needle, place the sapphire in it and heat the latter with a match, and while hot push it gently further into the shellac till just the ball end projects above the dome. In a minute or two, when the shellac has quite hardened, scrape the underside of dome carefully to remove all traces of old cement, put an extremely thin layer of Mendine or other strong adhesive, round the edge of the dome, and place it in position on the diaphragm, after removing any particles of cement on the latter by wiping with a piece of wet rag; then place a rubber band round the reproducer and over the dome in such a way as to press the latter firmly on to the diaphragm. Leave till perfectly set. Important point: Too much adhesive on the dome will weaken the reproduction; also never use glass points, as sapphire ones are now very cheap, and will certainly not wear out the records at a 100th part the rate of glass ones. Too much care cannot be taken in arranging the sapphires, as the point should neither be too large nor too small. Each is damaging to the record, the former wearing away the walls of the groove, the latter only touching part of the impressions, thus losing the tone and wearing away the bottom of the track.

SPEED ADJUSTMENT.

The matter of adjusting an Edison phonograph to a speed of 160 revolutions a minute seems to be a good deal of a mystery to many people. A little different explanation may serve to clear up the uncertainty, says The Phouogram. Every Edison gold medal moulded record is made with 100 lines to each inch. In a similar manner the main shaft running through and turning the mandrel is made with 100 threads to an inch. Therefore, running at a speed of 160 revolutions per minute the reproducer arm will travel 1.6 inches in one minute, or for more easier figuring, it will travel 2 inches in 1¼ minutes—i. e., 100 revolutions in one minute and 40 revolutions in a quarter minute. The reproducer arm must, of course, be lowered while making the test. If two marks, 2 inches apart, are made on the back rod it will require 1¼ minutes for the arm to travel between them if the speed is correct. Or, any one of a dozen different ways may be followed for counting the revolutions of the mandrel by sight or sound.

NOW USED TO CLEAN DISCS.

The plush pad formerly used on the silk hat has found a new field of usefulness. A phonograph dealer in this city has discovered the fact they are better adapted for dusting a disc record than any other device invented, and now every time he places a record on a machine for trial, he gives a quick, circular motion of the hand, and the record is clean. The fine silk threads, which in plush are rendered stiff, seem to get far down in the threads, and are sufficiently springy to throw out the accumulated particles. He advises other dealers to give this method of cleaning records a trial, and further says, no matter how new a record may be, if it has been exposed to the air for any length of time it should be dusted before being played. The result will be a recompense for the trouble.

PETMECKY SPECIAL

There is an old and true saying "Imitation is the sincerest flattery." When the ***Petmecky*** needle was conceived on scientific principles, and finally perfected, there was but one word which fittingly described its wonderful qualities—that word was **Multi-tone.** By simply turning the little needle, it was found that it gave out **three** separate and distinct tones, viz: **Loud, Intermediate** and **Soft.** Further it was found on account of its peculiar construction that the needle was self-sharpening, so that it could be safely used 10 to 20 times with little or no injury to the finest records.

The word **Multi-tone** could not be copyrighted by the inventor, Mr. Petmecky, and in consequence some makers of cheap, inferior, case hardened and "freak" needles, have seized upon the word **Multi-tone,** hoping to catch the trade. "You can fool some of the people part of the time, but you cannot fool them all the time." We earnestly ask you, Mr. Dealer, to try all so-called **Multi-tone** (**?**) needles, then try the genuine and **only Multi-tone** needle—the ***Petmecky.*** We gladly leave it to you to decide, knowing your choice will be, what that of thousands of others has been—the ***Petmecky.***

Let us be fair; let us be just. You know as well as ourselves, were other **Multi-tone** (**?**) needles as good or better than the ***Petmecky,*** you would smile at our claims, and we would save money by not advertising.

This notice is not in the spirit of brag, but solely for the purpose to be fair and just to our thousands of patrons, and to ask the fair and just consideration of all whose patronage we hope for and which is cordially and earnestly solicited.

The ***Petmecky*** is the **Loud, Soft, Intermediate** tone—all in one needle. Plays ten records any size or make; unsurpassed in purity of tone reproduction. Famous for standard of quality. Universally praised.

We positively guarantee the ***Petmecky*** needle to fulfil every claim made for it or money back.

Samples of ***Petmecky*** needles, interesting needle lore booklet, testimonials and prices on request.

TRADE NOTES FROM INDIANAPOLIS.

Manager Devine as Publicity Promoter—Big Call for Twentieth Century Graphophones—Arcade Business Growing—Increasing Demand for Edison Machines and Records Reported by Mr. Craig—Preparing for Summer Trade—Renting Records Being Tried by Mr. Lesley—Machines for Newspaper Men.

(Special to The Talking Machine World.)

Indianapolis, Ind., May 9, 1907.

Thomas Devine, of the Columbia Phonograph Co., pulled off a pretty smooth stunt in advertising the other day. Devine called up the city editors of the various papers and told them about the new Marconi velvet toned record, and that it was the first work of Marconi since the wireless. The editors were interested, and they sent reporters to see Devine. As a result he got reading notices of the record in all of the daily papers. Devine knows a newspaper story about as well as a newspaper man does, and as a result he never fails to get notice of something new. "I go on the theory that if I can give the newspapers a story they can afford to give me the advertising," he said.

The aluminum tone-arm cylinder machine invented by Thomas McDonald, head of the American Graphophone Co., has been received by the Columbia Phonograph Co., and is beyond the expectations of Mr. Devine, manager of the company. The machine has the tone of the disc machine, and is made so that the horn may be turned in any direction.

The Columbia Phonograph Co. are marketing many of the records made by the Society of Fonotipia, consisting of Milan artists. The Columbia Co. have the exclusive right to the sale of the Bonci records in the United States and Canada. Most of these records are double, and retail at $4 each. They are meeting with a popular demand.

Thomas Devine, of the Columbia Co., now has orders ahead for 15 of the big Twentieth Century machines. The great number of five-cent theaters over the State accounts largely for the demand for these machines this year. Last year there were few of these cheap amusement places. Now, however, there is scarcely a county seat town that does not have one or two five-cent theaters, and many of the larger cities of the State have five or six of them. The rage is on, and there is money in the business. One man at Muncie paid $300 for the use of 3,000 feet of film showing the passion play for one week. During the week he cleared up $1,000.

Charles Craig, proprietor of the Indiana Phonograph Co., which sells the Edison line, said that his business for March was a great surprise. It was much larger than he had expected. So far his business this year has been double what it was last year for the corresponding period. April has shown good results, he believes, though he has not footed up his books—this, too, in spite of house cleaning, moving and tax paying.

Frank Lesley, who handles all kinds of machines at 338 Massachusetts, is preparing for what he calls the advertising season. "These lawn fetes and social events, where they use talking machines, don't bring us much money, but they offer good opportunities for advertising," he said. "Usually the machines are donated for such events, but when people who attend them hear the music they begin to think about buying.

Mr. Lesley is one of the talking machine men in town who rents records. He is merely giving the rental business a trial, but just now he does not believe that it will pay. He says the profit will not justify the expense of keeping the records in order and looking after the rental. Mr. Lesley last week showed an attractive show window. It was an advertisement arranged on rollers, showing the names of the different machines and records handled.

The talking machine craze has struck the newspaper men of Indianapolis. Clifford Lee and Clarence Cummins, two reporters on a morning paper, have obtained machines for amusement during their leisure moments. Mr. Lee has an Edison machine in his apartments, and has fully 100 records. Mr. Cummins has a Columbia machine.

W. A. ASHLEMAN ENTERTAINS.

Messrs. Eckland and Parsons, of Chicago, and Many Others at His Home in Milwaukee—Remarks Made by Mr. Thomas and Mr. Eckland—Ashleman's Amusing Experiences.

(Special to The Talking Machine World.)

Milwaukee, Wis., May 4, 1907.

W. A. Ashleman, manager of the instalment department of the Milwaukee office of the Columbia Phonograph Co., gave a house warming at his home, 652 Marshall street, Saturday evening, April 20. Cards were indulged in part of the evening, after which an elaborate spread awaited the guests.

O. W. Eckland, manager of the instalment department, and W. W. Parsons, manager of the commercial department of the Chicago office, were among the guests.

Mr. Parsons regaled those present with amusing and entertaining stories of experiences on his recent trip to Cuba, which were told in his inimitable way.

Mr. Eckland made a very interesting talk to the instalment men, which was listened to with considerable interest. In response to an encore he recited a poem which was applauded to the echo.

A. E. Thomas, manager of the Milwaukee store, responded to a call for a speech in a happy way, and also thanked the men for their co-operation in assisting materially in keeping Milwaukee near the top of the list issued by the executive office each month.

Mr. Ashleman, the host, also told some very amusing experiences before and after he became annexed to the company. He remarked afterward that the benefit derived from the talks by Mr. Eckland and others were of such benefit to the men that it would not be long before they will all get together again and try to repeat the evening.

E. H. Lake, of Atlanta, Ga., has been made manager of the talking machine department of the Knight-Locke Piano Co., Denver, Col.

REMOVAL NOTICE

THE

MULTIPHONE OPERATING COMPANY

Has Removed from 23 Park Row to its New Office in the Washington Life Building

141 BROADWAY, NEW YORK CITY

The great and rapidly growing business of the company forced it to seek new and larger quarters. Nothing in the recent history of business enterprises has equalled the success of The Multiphone Operating Company. IT HAS ALREADY PAID EIGHT MONTHLY DIVIDENDS FROM NET EARNINGS.

Par Value of the Stock, $10. A small allotment IS NOW SELLING AT $5

This stock pays dividends of one per cent. a month on the par.

SENDING MUSIC THROUGH THE AIR.

Interesting Story of Dr. Lee DeForest's Latest Invention, His Wireless Transmitter—Wireless Telephony No Longer a Dream—Process Explained in Detail by Dr. DeForest.

In last month's Talking Machine World a story was told how the operator of the wireless station in the Brooklyn Navy Yard, idly catching the stray messages, was amazed to hear distiuctly notes of music, a bit metallic, it's true, but clear enough to be recoguized as the overture to "William Tell." The operator shouted in astonishment, and others rushed in to listen in equal amazement.

They were witnessing the first successful wire-

DR. DE FOREST SENDING A MESSAGE.

less telephony at a distance. These notes of music were traveling through the massive stone and steel of New York, five miles from Dr. Lee De Forest's wireless transmitter, which had been adjusted to an electrical musical apparatus—a fact which the Navy Yard operator, G. S. Davis, soon afterward discovered. Later it developed that the wireless operator on the steamship "Bermudian," and several less sensitive "amateur" stations in Brooklyn had also heard parts of the music.

In other words, wireless telephony is no louger a dream, and we may fancy the air about us filled with oral messages and strains of music which may be captured only by those whose receivers are "tuned" to the pitch of the transmitter. The claim of the inventors is that very soon it will be impossible to steal a message out of the sky, since a perfect, infinitesimal adjustment will be

J. L. HOGAN AT RECEIVING APPARATUS.

made between each transmitter and its appointed receiver.

Briefly stated, the wireless or radio-telephone, is just an ordinary telephone without any wires. It practically embraces the principles of the telephone and the wireless telegraph. You talk into a tuned portable transmitter and some other person listening at a similarly tuned receiver probably miles away will hear all you have to say and will answer you just as satisfactorily as if the connection had been made through "central."

Here is Dr. Lee De Forest's explanation of his work in wireless telephony to The World:

Dr. DeForest's Explanation.

"For a long time after the existence of the luminiferous ether was admitted, its service to mankind was supposedly limited to the propagation of the waves of light and heat from the sun. For not more than eight or nine years now this invisible, intangible ether has been put more and more to work transmitting the harsh, sporadic impulses from a noisy spark discharge, representing in their various combinations the jumble of dots and dashes of the Morse alphabet; wireless telegraph stations have multiplied over the face of the earth and the ocean, aud the patient, uncomplaining ether is more and more disturbed by these crude and unlovely signals.

Mysterious Powers of the Ether

"But now a new task, and it must be admitted a far pleasanter one, is given it. At last man, who has for untold centuries spoken by the medium air, and for a quarter century impressed his speech on electric currents imprisoned in the copper of telephone lines, has found that the tenuous ether can transmit his voice, his music and his song. And he finds that this marvelous atmosphere which his body feels not, which he cannot breathe or disturb by motion, which

GENERATING PLANT FOR THE WIRELESS TELEPHONE.

passes through him as he moves as air through the pores of a sieve—this ether, which permeates all matter and all space, can take up from the coarse air the most delicate vibrations of which the air is capable—those of audible sound and speech and music—and translate them into a silent, infinitely speedier vibration of its own. And after transporting the air's vibration through its invisible intangible motion, the ether can deliver it in the form of minute electric currents in an upright wire, where they surge and oscillate, yet still indiscernible by any human sense as sound, or sight, or touch, and inoperative in any electric telephone.

"But if those minute currents which represent human speech be now passed through the heated gases of a delicate little receiver called the "audion," they will be translated once more, this time into regular telephone currents, which, acting upon an ordinary telephone receiver, will again give rise to the sound pulsations of the air, and then the listening ear can recognize after all these translations, and despite all its disguises, the sound of the speaker's voice at the wireless transmitter miles and miles distant.

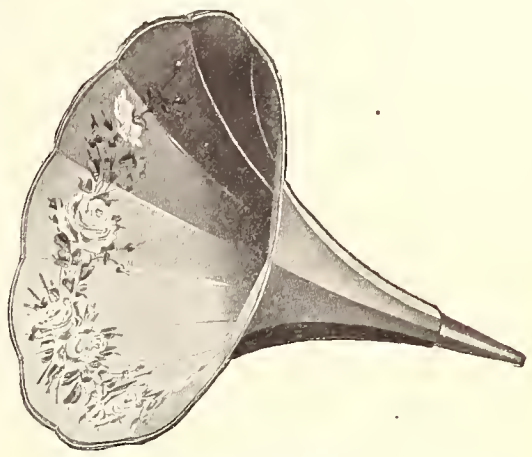
STEWART

You can handle banjos easily and add to your income. Talking machine men will find them big sellers.

THE BAUER CO., 726-730 Girard Avenue Philadelphia, Pa.

FIBRE **FIBRE**

The Mega



A Distinctive Product for a Discriminating Trade

PHONO MEGA HORN

PERFECT IN TIMBRE

Built on the Principle of the Sounding Board

DEMONSTRATE the "Mega" to your trade. You will note the difference immediately in your sales of machines and records. ANY ONE of our regular models will prove our argument sound. If you wish a better business try our suggestion. If your Jobber cannot supply you write to us direct. Let us send you our literature.

THE "MEGA" SCHEDULES

TRUMPET SHAPE

For Cylinder Machines

	Length.	Bell.
Junior "MEGA"	22 in.	13½ in.
Medium "MEGA"	27 "	17 "
Senior "MEGA"	30 "	23 "

Colors

Inside	Outside
Road Cart Red	Tuscan Red
Twilight Blue	Royal Blue
Lavender	Moss Green
Apple Green	Moss Green
Moss Pink	Moss Green

Gold neck—Gold hoop.

RECORDING "MEGA"

Length.....25 in. Bell.....6½ in.

Colors

Tuscan Red. Royal Blue.

Gold-neck—Gold hoop.

FLOWER TYPE

For Cylinder Machines

	Length.	Bell.
Junior Flower "MEGA"	26 in.	16½ in.
Senior Flower "MEGA"	32 "	23 "

FLOWER TYPE

For Victor Machines

	Length.	Bell.
Senior Victor Flower "MEGA"	26½ in.	23 in.

Colors

Crimson Magenta Violet
Royal Blue Old Rose

Blended inside and outside.
Green neck—Gold stripes—Gold edge.

FLOWER SHAPE, DECORATED

For Cylinder Machines

	Length.	Bell.
Junior Flower Decratd "MEGA"	26 in.	16½ in.
Senior Flower Decratd "MEGA"	32 "	23 "

FLOWER SHAPE, DECORATED

For Victor Machines

	Length.	Bell.
Senior Victor Flower Decorated	26½ in.	23 in.

Colors	Studies
Carmine	Poppies
Royal Blue	Roses
Violet	Pansies
Ivory Black	Chrysanthemums

(Black in Senior types only)
Gold neck—Gold edge—Gold stripes.

A Type, Style and Price for Every Requirement.

Broad St., Maspeth, Queens Co., N. Y.

"Every inflection of the voice, every little peculiarity of the sound, each note of a piano, the timbre of each instrument of an orchestra, played at the transmitter will be instantly transported and reproduced with perfect fidelity. The ether waves which represent the sound vibrations may have passed over miles of city or wastes of sea, through the walls of hundreds of buildings, or over the roofs of tallest towers. Nothing will retard or obstruct them, and those who stand between are all unaware of the silent voices or spirit music which may be passing them on every side. They are dumb to all save him who listens with the proper responder, correctly attuned to the electric waves. He alone hears the etheric "call of the wild," and when it speaks to him in the well-known accents of a distant friend, or when music from silent spirits, coming in from nowhere, sings to him the strains of some well-loved earthly melody, his wonder grows and he thrills at the weirdness of it all.

An Easy Step from Wireless Telegraphy.

"The mechanism which makes possible all this revolution in our methods of transmitting sound is very small and simple. It is but a step from the wireless telegraph transmitter, with its noisy, irregular spark and Morse sending key, to the radio-telephone transmitter, with its beautifully regular spark and its telephone-microphone, in which any one, however unskilled, may talk.

"It is a surprise to a layman to see the simplicity of this transmitter, and still more to learn that the same receiver which the wireless telegraph operator uses to read his Morse signals seems equally well to receive the vibrations which are speech-waves in ethereal disguise, and to translate these into the spoken word.

"The fundamental laws hold which obtain in radio-telegraphy, the same phenomena are observed; the same waves are employed. Only it is necessary, in order to have the ether waves reproduce the sound waves of the voice, that the number of sparks generated per second shall be so great that the sound of the spark itself becomes inaudible, lies far beyond the upper limit which the human ear can in any way detect.

"Each spark produces an impulse at the receiver, exactly like itself in nature, only greatly reduced in strength. Now, if these impulses follow each other too rapidly to be heard, the listening ear at the receiver hears no individual impulse, but it can (through the telephone) detect changes in the local current which are caused by changes in the intensity of the spark impulse at the transmitting station. And if the strength of the spark impulse is directly governed by the voice of one speaking into the transmitter, it is clear that the listener will be made aware of every inflection or shade of sound at the transmitter.

What Are Its Uses.

"In the radio-telephone transmitter I employ an ordinary carbon microphone, such as is on every telephone in the city and connect it in the wires which conduct the electric currents from my transmitter and antenna wires to the earth. Thus every change in resistance between the carbon granules affects the strength of the high-frequency currents going into the earth, and in this way also the strength of the electric waves which are radiated outwardly from the antenna. For the energy which is being radiated through the ether from the antenna is always equal to, or is governed by, the amount which can pass at the same instant down through the earth-wire into the earth's surface.

"Now comes the eternal question of the utilitarian, "What's the use?" the most pertinent question, by the way, ever asked. What is the use of erecting a wire and speaking a spirit whisper—of a metal noose and lassoing a ghostly voice—of attuning a new æolian harp and having it vibrate, not to the lawless songs of the wind, but to the rhapsodies of master musicians played in some far distant auditorium?

"What is the use when some distant mariner, fog-bound and lost, unacquainted with his bearings and the Morse code, can call to a listener on the nearest shore and hear in a still, small voice his name repeated and his whereabouts disclosed? Or perhaps he will hear an answering "Ahoy!" and be told that another craft steering a certain course is close upon him, and by steering oppositely avoid certain collision. What's the use, when a tug's captain can be in easy telephonic communication with his barge office miles away, or with the steersmen of his tow, even if the hawser has parted? Or when the admiral, on his bridge, can give his orders direct viva voce to all or any of the commanders in his widely scattered squadron? Or when a yacht owner, without the useless luxury of a Morse operator in his crew, can call his club miles away over the Sound? Farmers in sparsely settled rural districts can now subscribe to a radio-telephone exchange and be in close contact with distant neighbors miles away. Mining camps, mushrooming on a mountain side, can have their telephone with town months before the Western Union feels justified in running a wire. And when snow slides and storm have felled all wire lines the radio-telephone is unhampered, for the medium it employs lets the avalanche slip under it and the snow flakes sift unhindered through it. I am now at work on an apparatus of larger power, and before the season is over I am confident that radio-telephony over distances of twenty-five miles will be a reliable and commercial reality."

MAKING THE WALKER TALKER.

Edwin Walker, manufacturer of novelties, Erie, Pa., has put on the market what he calls the "Walker Talker." Another concern exploiting sound-reproducing devices is the American Callophone Co., with a million dollars' capital, and offices in Macon, Ga., and New York City.

FIRE IN REDLANDS, CAL.

In the recent fire which badly damaged the Avery Music Store, Redlands, Cal., a stock of Zonophone machines and records valued at $1,100 was completely destroyed. The insurance was only $850.

TRADE BOOMING IN SEATTLE.

Still Complaining of Inability to Get Stock—Sherman, Clay & Co.'s Fine Display in Remodeled Rooms—Edison Line Selling Well at Johnstons—Rose Being Heard from—Other Items of Interest.

(Special to The Talking Machine World.)
Seattle, Wash., May 7, 1907.

The talking machine trade in this section is growing to immense proportions, especially with the advent of spring and its pleasant weather. In fact, trade has been almost too large to be properly handled, dealers not being able to get a sufficient stock of machines and records owing to the delaying of shipments by the railroads covering the Northwest. Freights are months overdue, but with the opening of the roads better deliveries are looked for.

John C. Walling is one of the dealers who complains of his inability to get sufficient stock to meet the demands of his growing business.

C. H. Rose, formerly connected with Graves & Co., of Portland, and well known in talking machine circles on the Coast, has purchased the small goods and talking machine departments of Kohler & Chase and has temporarily installed them in the Waldorf building, Seventh and Pike streets, which location, although not the most favorable, is proving much better than was expected. Mr. Rose is an expert window dresser, and has fitted up some window displays that have attracted a great deal of attention and incidentally much business. Several large shipments of machines and records received by Mr. Rose enable him to meet the demands of his growing trade in a very satisfactory manner.

The D. S. Johnston Co., who handle the Edison line, report a large and increasing business in both machines and records.

Sherman, Clay & Co. recently displayed in one of their show windows a Victor talking machine recovered from the wreck of the Great Northern steamship, "Dakota," which went down near the Japanese coast not long ago. The exhibit was of special interest, as Seattle was the home port of the steamer.

The talking machine department of Sherman, Clay & Co. has been entirely remodeled and arranged in a way most convenient for properly handling the company's growing trade in that line. A new stairway has been built leading directly up to the department, this in addition to a modern passenger elevator for those who would ride.

Separate rooms for demonstrating the various styles of Victor machines, a ladies' reception room, handsomely furnished with easy chairs, writing desks, etc., and the manager's office, go to fill up the space allotted to the department, and from present prospects it will not be long before additional rooms must be built to accommodate the growing business.

CELEBRATE 50TH ANNIVERSARY.

The J. F. Schmelzer & Sons' Arms Co., the prominent talking machine jobbers of Kansas City, Mo., recently celebrated their fiftieth anniversary as a firm having started business in Leavenworth, Kan., in 1857.

McGREAL BROS.' NEW QUARTERS.

McGreal Bros., the prominent talking machine jobbers and dealers of Milwaukee, Wis., removed their retail department to their new building on Third street directly opposite the old quarters, on May 1, and the wholesale department will be moved in the fall, when certain alterations are made.

POWERS & HENRY CO. PUBLICITY.

The Powers & Henry Co., the progressive talking machine dealers of Pittsburg, Pa., recently secured the services of George P. Watson, who has made many yodling records for the large companies, to give exhibitions of record making in their store two hours each day for a week. Mr. Watson also explained the principles of record making to all those who were desirous of making their own at home. The event was extensively advertised in the local papers, everyone was invited, and the resulting sales of both machines and records were of a most satisfactory volume.

WM. E. GILMORE OFF TO EUROPE.

The President of the National Phonograph Co. on a Two Months' Business Trip—Graf to Succeed Schermerhorn at London.

Wednesday, May 8, William E. Gilmore, accompanied by his wife, sailed for Europe aboard the "Baltic," of the White Star Line, on a two months' business trip. He will spend some time at the various branch offices of the company in London, Paris, Berlin and Brussels. For nearly two years past John R. Schermerhorn, assistant general manager of the parent company, has been in charge of the London company, with the title of chairman of board of directors, and has also had a general oversight of the European branches. Mr. Schermerhorn will return with Mr. Gilmore in July and resume his duties at the Orange, N. J., offices. He will be succeeded in London by Thomas Graf as managing director. Mr. Graf has been the manager of the Berlin office since its inception, and his marked success in that position led Mr. Gilmore to choose him as Mr. Schermerhorn's successor. The heads of departments were at the pier to see Mr. and Mrs. Gilmore depart, wishing them bon-voyage and a safe return. It has been two years since Mr. Gilmore has been abroad.

"TALKER" TO ILLUSTRATE LECTURES.

The Y. M. C. A. is among the latest institutions to adopt the talking machine as an aid to students, the first experiment being in connection with the course in salesmanship, of which Carl H. Pierce, B.A., is official instructor. A lecture on salesmanship has been prepared requiring ten six-inch records in its production, and the result will be closely watched. Mr. Pierce is of the opinion that manner of speech and tone of voice have much to do with the success of study, and the printed page only indicates these, while a graphophone can give an actual demonstration. Columbia Commercial Graphophones will be used in the experiment.

BROWN TO INVADE THE EAST.

The Pacific Coast Hustler May Open in New York—Secure Zonophone Line for His Far Western Stores.

C. E. Brown, the hustling talking machine man of the Pacific Coast, and president of the Peerless Talking Machine Co., of San Francisco and Spokane, was a recent visitor to the Talking Machine World sanctum. In the course of a chat, Mr. Brown stated the outlook in the "talker" field on the coast was of the brightest business, increasing over ten fold within four years and still going. Last year, for instance, he sold nearly 25,000 machines in California alone.

With the Pacific Coast agency for the Zonophone recently secured by his company, still greater results are promised.

Mr. Brown stated that he would establish a store in New York at an early date, and would conduct it along hustling Western lines and in a way to open the eyes of many local dealers who believe they're "going some."

FORT WAYNE NEWS BITS.

Owing to the heavy demands of their piano business, the Packard Co., of Fort Wayne, Ind., have discontinued their talking machine department, but the several other talking machine dealers of that city are pushing their lines in an energetic manner, and report first-class business with excellent prospects.

A Mistake

The first talking machine was made from a rib.

Edison invented the first mechanical talking machine.

We are now jobbers of the Edison kind.

When you want goods you want them P. D. Q.

We have the goods, give you a square deal, and we want your business.

NEW YORK, MAY 15, 1907.

IT is hardly necessary to refer to the fact that the legal developments of the industry are impartially recorded in the reportorial columns of this paper. Neither should it be necessary to say that we are not trying suits in the editorial department of The World. We are leaving that matter entirely to the courts, and presumably thev are competent to carry out the duties imposed upon them. There are, however, some mighty interesting things coming along in this industry, and the legal departments of the various companies seem to be in splendid working order, and presumably the summer will not be an idle one with the various companies. Some may work overtime. There are new inventions coming out which their owners claim do not infringe in the slightest on any device which is now on the market, but one thing is certain, the men who are holding the coign of vantage today will not allow their preserves to be poached upon without strenuous resistance on their part. Whether or not the new inventions are actual infringements will make no difference in their attitude. The proposition is to retain a dominating position. After all, fighting to retain a position is pretty nearly human nature in every clime when we come to sum it all up.

BUSINESS for the month past has been rather sporadic. In some of the cities the jobbing and retail trade has been somewhat slow, bnt in other localities it has been far above the average, so April, 1907, stands considerably in advance of April, 1906. Collections, too, have shown a material betterment since the beginning of the present month. It would seem from the present outlook that we are going to have a spring trade of satisfactory proportions; at least, that is the way it looks to the man in the maintops of The Talking Machine World.

WHAT marvelous strides we are making toward greater business developments in the talking machine industry! One interesting illustration, showing to what extent this trade has grown, may be instanced in a recent shipment of Edison phonographs and records to Babson Bros., of Chicago. This single shipment amounted to over eight thousand phonographs and over a quarter of a million records. It required a whole train to transport this order, and a photograph of which will be seen in another portion of this issue of The World. The capacity of the bins for the wholesale stock of the Chicago firm to whom this shipment was made is over two million records. A glance at the reproduction of this particular train will be interesting because it is the high-water mark reached by a single shipment, and it forcefully illustrates the possibilities within this industry for manufacturers, jobbers and dealers.

ANOTHER instance emphasizing talking machine growth, is that of an Eastern concern, Hawthorne, Sheble & Co., who have just closed a contract with a California house, amounting to over $100,000. And still others—a manufacturing house, the Victor—has paid nearly $50,000 to a single artist, and spent $5,000 for a back cover in a leading journal. Another, the Columbia Co., a ten-million-dollar corporation, forms an alliance with the wireless wizard, Marconi, and still some of the wiseacres outside of the talking machine industry have spoken slightingly and even sneeringly of the talking machine.

WE emphasize the facts stated above because every talking machine man in America, and every other country, should know something of the development of this business, and the forces which have been instrumental in creating it. Every talking machine man, whether jobber or dealer, should take a pride in his business. The business warrants it. Its development has not been equaled within the same time by any other industry.

SURELY it is a record that we all have reason to feel proud of, and this publication is engaged in exploiting the accomplishments of talking machine men, so that the entire trade may be cognizant of what is going on in every department of the industry. We know of a single concern whose sales for April exceeded the business of April, 1906, by over $100,000. The talking machine business is decaying, is it? Well, we rather think not. And it is well to paste such statements of facts in your hat, or over your desk, or on your office walls, so that you can be reminded occasionally that you are in an industry that has got brains and progressive ideas working out its future.

IT is surprising, too, how the demand is growing for high priced instruments. We have seen within the past two weeks some models which will shortly be placed on the market, which show a distinct advance in talking machine development. Dealers consider that the sales of instruments from one hundred to three hundred dollars unimportant nowadays, or perhaps, it would be better to say that the sales of these high priced instruments occupy about the same relation to the lower strata of instruments that the grand piano holds to the upright creations.

AS The World has recently become in great demand among the piano dealers throughout the country, we find that quite a number of them have taken on talking machines. Therefore a word of counsel to them will be in order. We would say that the dealer who expects to add a talking machine line and treats it indifferently has failure awaiting him. Talking machines will not sell themselves any better than any other line of merchandise, but they will respond satisfactorily to proper treatment. Attractive rooms must be prepared in which the instruments may be displayed, and in order that the sale of talking machines does not interfere with the other departments of the music business, sonnd-proof rooms are imperative. The records can be tried in these rooms without the slightest annoyance to piano salesmen.

FIGURE on treating your talking machine department as a separate enterprise and get some one to assume charge who is in sympathy with the talking machine, who knows its possibilities and delights to show off its musical powers, and not one who feels a sort of spite against the talker. It is just as necessary to have a good talking machine man in charge of the department as it is to have a good piano man. The business must be treated fairly, else it will not show desired results. It will be found that the sale of records will be splendidly remunerative. We know of one dealer who sold to a single purchaser last year over $400 worth of records. While the percentage of profit is not unduly large, it is fairly remunerative in the record line.

THEN again let people know that you are handling talking machines. As a matter of fact, shout from the housetops your solutions of practically any problem confronting the business man of to-day, and back will come an answer chorus of advertising. Advertise your talking machine business. Let the people know locally that you are selling them. Seek out those who join in that advertising chorus, and with few exceptions you will find them more or less successful business men. They understand that advertising to modern business is what oil is to machinery. But advertising should be carefully planned, and all expenditures along these lines should be carefully watched. Knowledge of words and type, and the ability to write chatty introductory talks and striking headlines are not to be despised, of course. But it is the facts and not the fancy ways of telling them that influence people to spend money in your store.

THE talking machine in itself is rather of an interesting creation to advertise. It is capable of considerable elasticity. Go into the talking machine bnsiness to win. Make yourself a power locally and make your store talked about. We all know in the largest cities the biggest successes of to-day are the department stores, the proprietors of which expend vast sums annually in advertising, but in every city, every town and every hamlet, supremacy may be won locally among business men by paying strict attention to legitimate lines of publicity. The manufacturers have been helpful to the general talking machine interests by maintaining strict price regulations, so that the dealers have not had to stand a lot of cut-throat competition in the talking machine trade. In this particular the industry is distinct from all others, for there is hardly another line of manufactured goods which is not from time to time slaughtered in various parts of the country.

AS a matter of interest to talking-machine men we may say that the annnal convention of the Piano Dealers' National Association is to be held in Chicago, June 17 to 22, and the president of that organization has asked The World to extend to the talking-machine trade an invitation to attend.

SELLING IN THE SMALL TOWNS

Not a Snap—Some of the Many Disadvantages—Limited Record List—Machines Pay Better—A Country Dealer Tells His Woes to The World—A Statement Worth Reading.

"Selling talking machines in small towns and villages is not altogether velvet," a country dealer remarked to The World recently. "The great disadvantage we, who have a limited clientage, labor under is in the matter of records. No small dealer can afford to carry even a fraction of the great lists now issued, as the amount of capital tied up in this way invariably ties him up, and there is always some one who is sure to order what he has not got in stock. Then if he buys several numbers of each new list there is sure to be a surplus, and that is always the unsalable numbers, which become so much dead stock, and which will probably never be worked off again, we find that records which have a great sale in one section fall flat in another part of the country. Owiug to the restrictions placed upon us, when a record becomes the least worn or in any way damaged, we cannot sell it below the marked price, but can only turn it in at a loss. If we could exchange unsold records ou a reasonable basis, we could do more business, as then we would feel more like carrying a decent sized stock. I am now carrying two hundred dollars in unused and unsalable records, and the amount is continually growing larger. If I could have a clearance sale, I could possibly come out whole and have that amount to increase my stock of ready selling numbers, but instead I am compelled to cut down my purchases, and in many cases I take orders only. Selling machines is a much better proposition, as a dealer can sell one as new, no matter how much it has been tried out. I give concerts every Thursday and Saturday evening, and as the former is "market day" I have a good audience, and catching them with the money in their pocket, have no trouble in transferring a part of it at least to mine. The cylinder type is easier to sell than the disc in the rural districts, both on account of the price of the records and the doing away with the needle, which is a great bugbear to many. The average farmer has to count pennies closely, aud is favorable to the cheapest proposition at all times."

Some Facts Worth Considering

THE talking machine man frequently asks, "How can I increase my business?" The answer is easy. Place on a side line which takes but little space, which is attractive, and a standard in its particular line. Take the **Black Diamond Strings,** for instance. Steel and wound. New process. They are the finest manufactured. They are used by all of the prominent artists, and you will have a trade coming your way when it is known that you handle the "Black Diamond." Music dealers all over America, and all over the world for that matter, know full well the value of this product.

National Musical String Co.
New Brunswick, N. J.

THE "TALKER" AND THE PRESS.

A Fairer and More Appreciative Attitude Now Evident—Forcing Its Way Into Notice.

The daily press, which has posed in various lights regarding the talking machine, treating it humorously or scornfully, according to its mood, has at last began to realize that the "talker" is one of the wonders of the new century, and is a decided success, widening its field of usefulness in a truly marvelous manuer, and doing "stunts" rivaling the stories of the Arabian Nignts. This sudden and earnest appreciation of the talking machine by the press has spread all over the country, and as an example of opinion we take pleasure in reproducing an editorial appearing in the New York World of recent date, which coutains an abundance of good reasoning. It was headed "Voices of the Phonograph," and read as follows:

"Phonograph records of the voice of the German Emperor William have arrived in this country for preservation at the Congressional Library and at Harvard University. In the former place they ought to be but will not be filed with records by at least four Presidents of the United States. Nobody took steps to have these living documents prepared at Washington. The Smithsonian Institution has the dialects of Indians in phonograph form, but no utterances of statesmen. In America we have been busy with the scientific, sentimental and commercial application of the phonograph and have paid little attention to its use as au historical accompaniment.

"New York heard in 1903 the living voice of the dead Pope Leo XIII. Possibly an interest might be stirred up which would lead to such organized movements as those in Paris and in Vienna to preserve famous voices for other generations. Tamagno, the great Italian tenor, was the first singer to make a record for the French collection. In Vienna historic and educational records are filed with those made by singers. Mr. Hearst used the phonograph in the New York State campaign as a supplementary silver-tongued orator.

"Testimony by phonograph is no longer a novelty in the courts. There are also family records of all kinds. Phonographs are used to teach languages aud singing. At the funeral of a minister in Fairfield, Ill., the dead preacher's own voice was heard pronouncing the benediction, and similarly in the Cathedral of Cork there was a dead baritone's own singing at his own funeral.

"For commercial and entertainment purposes records innumerable are made by singers and actors, but the records have a place in statecraft as well. We may laugh at the Kaiser's egotism, but if it were possible to obtain, what would the American Government give for a phonographic record, say, of Lincoln's Gettysburg speech?"

In connection witn a very interesting story relating to the daily life of Pope Pius we read that "after dinner he chats with the members of his household, and of late some entertainment has been provided during these 'conversazioni familiari,' as they are called at the Vatican, owing to a talking machine presented to the Pope by an American Catholic of Baltimore. The Pope enjoyed listening to the music, sacred and profane, but some of the noble guards who patronize music halls made the startling discovery that several Neapolitan songs, which were quite unintelligible to the Pope, were not fit to be heard in the papal apartments and Mgr. Maggiordomo hastened to expurgate the 'talker's' repertoire."

C. Allen, manager of the Brockton (Mass.) Piano Co., has purchased an interest in the Reed & Reed Co., zonophone jobbers, Boston, and will take an active part in the management, though not relinquishing his relations with the piano concern.

Does your jobber jolly you along?

A jobber who is good on the jolly is generally poor on "delivering the goods."

Jollying customers isn't a part of our business policy. We don't need to jolly our customers, because we get there with the goods—every time.

Shipping the goods the same day the order is received is one of our rules that we never go back on. We have just the goods you want—a complete line of Victor talking-machines and records, disc cabinets, trumpet horns, English needles, fibre cases and all other specialties—and always have them in sufficient quantities to meet all demands.

We take good care of your orders and you in turn can take good care of your customers. You'll be "Johnny-on-the-spot" with the goods and won't have to work off a lot of excuses to the disgust of your customers.

What are you going to do about it? Get a pat on the back and put up with the jolly? Or get right down to business and make sure of getting the goods?

Why not write to-day for our latest catalogue?

SOMETHING NEW
Wood Finish Flower Horns

SOMETHING EXCLUSIVE
IN DESIGN AND FINISH

These horns are made of metal and finished so as to resemble Mahogany, or Antique Oak. The resemblance to finely finished wood is very pronounced.

For Cylinder Machines:

NUMBER	SIZE	FINISH
90	30 x 24	Mahogany
91	30 x 24	Antique Oak
92	24 x 20	Mahogany
93	24 x 20	Antique Oak

For Victor Tapering Arm Machines:

NUMBER	SIZE	FINISH
190	28 x 24	Mahogany
191	28 x 24	Antique Oak
192	22 x 20	Mahogany
193	22 x 20	Antique Oak

Our Wood Finish Flower Horns represent the highest degree of workmanship. They are hand rubbed throughout, and present a very handsome dull satin appearance.

PHILADELPHIA, PENNA., U. S. A.

MAKING CHURCH RECORDS.

How the Effects Are Produced So as to Please the Buying Public.

The laboratory of the National Phonograph Co., over which W. H. Miller presides, was the subject of an illustrated story in the Herald of a Suuday or two ago. The usual methods of making records were described in such detail as to make good "copy" for the average reader. When asked how these big church choir effects, these Easter anthems with the pipe organ and chimes are produced, the expert said:

"Just goiug to pull one off," he replied, as he led us to another room. It was cluttered up enough in there, too; a few old chairs, a table with a microscope on it and—the orgau and chimes. The chimes were a lot of iron pipes hung on a big wooden frame. But you should have heard the music those fellows got out of it—the quartet, the organist and the chap who rapped the iron pipes with a hickory stick! It was just as big and satisfying in that little room as the real thing in a cathedral, if you shut your eyes. But I must tell you something else about that. Swung and standing in various parts of the room were large white cloth screens, such as you see in photograph galleries for regulating the light. I had wondered what they were for and asked the expert.

"Wait a minute and you'll see," he said, as the singers took their places near the megaphone. The organ pealed forth a chord and the singers took it up for a phrase or two then stopped.

"Once more," commanded the expert. Then he began arranging those screens at queer angles with each other and let one down from the ceiling toward the megaphone. And then I saw. He was regulating sound waves just as a photographer regulates light waves.

"The phonograph records every sound, good or bad," said the expert, "and, lest any one should scrape his foot on the floor, for example, we use these screens to bunch the real musical notes, in order to hide the other possible noises. Besides, you see the organ and chimes are some distance from the singers, and the screens, as I have placed them, serve to throw the organ tones still further back and thus give the effect of space—as in a church."

The master records secured were most realistic and, despite the surroundings, abounded in that "atmosphere" one usually associates with a church.

A FEW FAMILIAR WHYS

Which Are So Often Heard by Dealers in Talking Machines and Which Will Never Die.

Editor Talking Machine World, New York:

Dear Sir—I have a few Whys and I would like your readers to answer if they can:

Why does a man, and more often a woman, tell you that they have the best machine ever made?

Why do they tell you that everyone that has heard it says the same?

Why do so many of them claim to have bought the first machine that came out?

Why do they claim to have a record that you know has never been made?

Why do they all know Edison personally?

Why do some of them break records and then tell you that you sold them in that condition?

Why do they think that dealers don't know anything? A READER.

May 5, 1907.

HERE'S A NEW WRINKLE.

Telegraph Operator Using Talking Machine in the Instruction of Pupils With Success.

The talking machine as an aid to education has been variously adapted, but it has remained for a suburban telegraph operator to use it in the iustruction of pupils. "Sending" is an easy matter, but to read by ear requires constant practice and to acquire it the learner must have some "send" for their benefit. The operator in question mounted an unusually loud sounder in a metal horn which was brought close to the reproducer of the talking machine. The result was a perfect record of the dots and dashes, and a record that the student could easily follow by reducing the speed of the machine and gradually increasing it as proficiency was gained. He is now experimenting on a device by which he can let his machine take a message off of one wire while he is busy on another, and believes that it can be done.

ENTERTAINS DINERS.

Philadelphia Restaurants Are Using Talking Machines Most Successfully to Entertain Their Patrons.

Philadelphia may be slow according to popular belief, but occasionally it springs something on the public that throws in the shade other cities with livelier reputations. The latest stunt in the Quaker City is the introduction of talking machines in quick lunch restaurants, concerts being given during the busy hours of the day. The fad has spread until a large percentage of the quick lunch houses patronized by thousands of businessmen are equipped with talkers as a means of regaling their customers with everything from ragtime to grand opera during meals.

The introduction of placing talking machines in restaurants was largely due to the efforts of Sales Manager Gerson, of the Musical Echo Co., who some time ago placed machines in several of the prominent cafes, although they were later removed owing to the strenuous objections of the orchestras regularly employed in the cafes. It was not long, however, before the other restaurant owners realized the value of the talker as a business bringer, and many were quickly installed.

One entire floor at 35-37 Arch street, Boston, Mass., is not sufficient to accommodate the talking machine department of M. Steinert & Sons Co., the piano dealers, so they are contemplating utilizing the entire building—seven stories—solely for talking machines and accessories.

(Special to The Talking Machine World.)

Chicago, Ill., May 9, 1907.

This has been a big news month in the Chicago and Western trade. First there was the arrival here of a solid train of phonographs, records and supplies, the biggest shipment to one concern in the history of the industry. Then there were a couple of big fires. One of them involved striking deeds of heroism by members of the talking machine trade. The other was confined mainly to an exclusive piano concern, but the smoke filled an adjoining building and caused excitement among the managers of several concerns in our line. The manager of one of these, the Western office of a big Eastern manufacturer of automatic machines lost for a moment his usual starch-fronted dignity and shinned down the fire-escape in a manner which must have made the ghost of Darwin rise up and call him blessed.

A Chicago man captured an order on the Coast notable in the annals of the trade. The concern that received the train shipment moved into the largest building ever constructed exclusively for the purpose of distributing talking machines. Another jobber occupied new and larger quarters and still another has secured new quarters for his wholesale department in order to divorce it from the retail. Preparations were further advanced for the entertainment of the hordes of piano and talking machine men who will attend the conventions in June, and there were any number of minor happenings of purely commercial interest or directly involving only particular individuals and their friends. All of these matters will be handled either in the regular Chicago letter or under special headings in this issue of The World.

On his recent trip to the Coast, C. W. Noyes, secretary and Western representative of the Hawthorne & Sheble Manufacturing Co., secured what is said to be one of the biggest deals of the kind in the history of the trade. It resulted in making Kohler & Chase, of San Francisco, the exclusive Coast distributers for the new Star machines and records. Kohler & Chase have as their territory California, Washington and Oregon, and the initial order was of a size calculated to make the optics of a telescope fish protrude a bit further.

Mr. Noyes' trip also included Los Angeles, Sacramento, Portland, Seattle, Spokane, St. Paul, Minneapolis and Milwaukee. He found business good all along the line and unquestionably better than last year. All the jobbers he visited told him that there was a ready market for everything they could get in the line of talking machine goods and supplies. Conditions in 'Frisco he found to be better than before the 'quake and fire. Merchants are getting high prices for both the necessities and luxuries of life. Laborers of all kinds are receiving big wages and money is very plentiful.

Hereafter the wholesale talking machine business of the Chicago office of the Rudolph Wurlitzer Co. will be handled entirely separate in every way from the retail, and new wholesale stockrooms, etc., have been leased at 336 Wabash avenue, between Congress and Harrison streets. The top floor of the seven-story building, 80 by 170 feet, has been secured. The new place is excellently lighted, and will enable them to carry a wholesale stock of both Victor and Edison goods and supplies three times as large as at present. They expect to occupy the new quarters about May 10. Manager E. H. Uhl and his assistant, Mr. Siemon, whose especial care is the wholesale talking machine business, deserve great credit for the manner in which they have built up the business and the manner in which they are catering to the demands of the dealers.

F. M. Atwood, a talking machine man whom Chicago once knew, is fast assuming a place among the most progressive of Southern jobbers. For some years he was with C. A. Ray, whose head store was in Louisville, and who had branch stores in various cities. In 1903 or thereabouts Mr. Atwood was manager of Ray's Chicago store, and was heartily liked and esteemed by the trade here. About two years ago he went to Memphis, Tenn., and opened a store of his own. He became an Edison jobber, and has built up an excellent trade among the dealers of Dixieland.

A. E. Thomas, of Milwaukee, the inventor of the Dolcer tone regulator, which he recently sold to the Columbia Co., is again in the field with an attachment for disc machines for catching used needles. It consists of an arm of sheet metal, which screws to the top of the machine cabinet with a ring attached to the outer end of the arm. Into this ring fits a small cup. The device is so placed, of course, that the needle

304 Wabash Avenue, CHICAGO, ILL.

drops into the cup when the screw or clamp, as the case may be, is released after the record has been played. The cup is instantly removable. Mr. Thomas has patented the device, and will market it himself.

George A. Jaencke, who came here a few months ago from Davenport, Iowa, where he managed the talking machine department for Robert Smallfield, and took charge of the retail floor at the Columbia Phonograph Co., resigned last month and went to Rock Island, Ill., where he has opened a store for himself

L. Kean Cameron, the well-known retail talking machine salesman, who recently went with the house of Wurlitzer, has been dangerously ill for several weeks past, but is now happily convalescent.

A man who is making a record as a wholesale talking machine and small goods salesman is Hans Schoessling, who is covering city trade for Rudolph Wurlitzer. Mr. Schoessling is one of the best 'cellists in the city, and has traveled with the orchestras of grand opera companies. It is rare indeed that a man who has followed professional lines exclusively is able to make a success of the business game, but Mr. Schoessling is proving himself a rarity in this respect.

Victor Green was pleased with the report of the Columbia banquet, but criticized slightly the reproduction of Eckland's speech as not being absolutely true to life. And Victor certainly ought to know.

Last month Lyon & Healy's sale of Victor Red Seal records was 100 per cent. ahead of any previous month, and this, too, in spite of the fact that Red Seal records have been showing large gains every month with this house for a year or more. The remarkable increase in April, Lyon & Healy state, was owing to the special list of twelve new Red Seal records with which they are again fully supplied. Their entire talking machine business showed an increase of 50 per cent. over April, 1907.

The Central Camera Co., 33 Adams street, are selling talking machines and records at $1 down and $1 per week, and announce a line of cabinets from $9 up, which they will sell on similar terms.

Arthur Geissler, manager of the Talking Machine Co., is receiving many letters from the trade, congratulating him on his efforts to cater to the dealers' need and convenience. Mr. Geissler believes in sinking his own personality in advising country dealers as to the best sellers in the new Victor monthly list, and instead of stating his individual preferences of those of his employes, is governed entirely by the opinions of the large Chicago dealers, who have the opportunity of hearing the records before ordering, something that the country dealers could do, of course, were it possible for them to come to the city for the purpose. But they don't have to do this. When Mr. Geissler gets a selection order from the country he immediately refers to the city dealers' orders, strikes an average on the demand for different numbers, and makes up his selection accordingly, thus giving the country man the advantage of the judgment of the dealers who have heard the records, and have ordered not merely on the strength of their personal preferences, but also on their judgment as to the commercial possibilities of the records. The Talking Machine Co. are now in their fine new quarters at 72-74 Wabash avenue, where they have established an excellent new system of stock shelving, and have the greatly increased facilities which the remarkable growth of their business has necessitated. They are shipping records the day received, and with an absolute minimum of "outs."

The Salter Manufacturing Co., of this city, are bringing out a new cabinet to be known as the Salter grand. It is very unique and is the invention of W. W. Parsons, the manager of the commercial department of the Chicago office of the Columbia Phonograph Co. The machine horn and all is placed inside the cabinet, but is easily reached through the side door of the cabinet for placing and removing the record, adjustment, etc. There is ample compartment for records immediately beneath the machine. When the cabinet is closed, and whether the machine is in operation or not, there is nothing to indicate that it is other than a music cabinet with the door on the side. The full volume of the tone issues through an invisible screen, handsomely decorated, and which appears to be only a part of the ornamentation of the cabinet. Mr. Parsons, in speaking of the Salter grand, remarked that "all the tone comes out while the scratch stays in." The Salter Co. have now ready for the trade a new catalogue of disc and cylinder cabinets, including several attractive new styles. It also contains one cut of the Salter grand, but a special catalog, devoted entirely to it, is now in preparation.

The May Victor bulletin, bearing on the cover an illustration in colors of a sweet young girl sitting on a flower-strewn bank and listening raptly to the carol of a robin perched among the apple blossoms above, reached the Chicago office of The World on an afternoon early in May, while a driving snowstorm was raging without. We could just hear that birdie singing.

The Oregon Journal, of Portland, Sunday, April 28, has over a half page devoted to a descriptive article, together with illustrations concerning R. La Barre Goodwin, the artist father of C. E. Goodwin, manager of the talking machine department of Lyon & Healy. Mr. Goodwin, Sr., has been residing in Portland for eighteen months past, and has recently completed what is known as the "Roosevelt Game Picture," and which is to be purchased by a prominent citizen of Oregon and presented to the President. The painting represents the door from Roosevelt's cabin in North Dakota. Leaning against the door is the old fowling piece that was owned and used by General Phil Sheridan while a resident of Oregon, and hanging from a nail in the door is a string of game killed by the artist while hunting on Columbia slough. In speaking of R. La Barre Goodwin's work, the Oregon Journal says: "Mr. Goodwin has a world-wide reputation as a painter of game and game birds. The chief characteristic of his work is tone and quality of color, with absolute accuracy of anatomical structure—a wealth of detail without hardness." Mr. Goodwin is as famous as a portrait painter

as he is as a pictorial exponent of game and game birds, and since he has been in Portland has painted portraits of several of Oregon's best-known citizens, one of which, that of Colonel L. L. Hawkins, will adorn the walls of the City Hall, and another that of Judge Bellinger, is for the United States Courtroom in the Government Building. His home is in Chicago, where he has a studio in the Fine Arts Building.

C. O. Arnold, of the Arnold Jewelry & Music Co., Ottumwa, Iowa, was a Chicago visitor the latter part of April. He retails Victor and Edison goods and is a Columbia jobber. He has built up a large business with the Iowa trade.

W. A. Dean, of W. A. Dean & Co., Sioux City, Iowa, accompanied by his two sons, who are associated with him in the business, was in the city recently, and called on E. C. Plume, Western wholesale manager for the Columbia Phonograph Co. Mr. Dean is a jobber of Columbia goods and general talking machine supplies, and intends greatly enlarging his jobbing operations in the near future.

G. Sommers & Co., the large general wholesale merchandise house, of Minneapolis, have recently become jobbers, handling the Columbia line exclusively. G. C. Knox, an energetic and experienced man, is in charge of the graphophone department. They are building up a fine trade among the dealers of the Northwest.

George W. Lyle, general manager of the Columbia Phonograph Co., visited the Chicago office the latter part of April.

E. C. Plume, Western wholesale manager of the Columbia Phonograph Co., had an experience last month which nearly resulted in removing one of the trade Adonises from the sphere of earthly activity. While in Minneapolis on a business trip he visited one of the best cafes in the city, and indulged in his favorite breakfast dish of country sausage and buckwheat cakes. He returned to the Minneapolis Columbia office and straightway began to feel faint. Inside of ten minutes they had to carry him out of the store feet foremost. They deposited him gently in a cab and took him to his hotel. The house physician gave one glance at Plume and got busy. He pronounced it a serious case of ptomaine poisoning, and said that he had been called not a minute too soon. For several days Mr. Plume was dangerously ill, and even after he came back to Chicago was unable to appear at his office for nearly a week. He considers his recovery a miracle in every way, as he declares it to be an actual fact that as he was carried out of that store in Minneapolis the strains of "He Done Me Wrong, or the Death of Bill Bailey," sung by Hughie Cannon, No. 1799, was being played on a graphophone for the delectation of a customer. A man who can successfully overcome a hoodoo like that should live to be a regular Methusalah.

HISTORY MAKING SHIPMENT.

Twenty-Seven Carloads of Edison Phonographs, Records and Supplies for Babson Bros. Constitute the Largest Shipment Ever Made—The Story of the Trip.

(Special to The Talking Machine World.)
World Office, 195 Wabash Avenue,
Chicago, May 7, 1907.

Babson Bros. certainly proved themselves to be history-makers last month. In the first place that wonderful train of twenty-seven cars full of Edison phonograph records and supplies arrived in Chicago a day ahead of schedule time. Then, too, they occupied their magnificent new building on the West Side. Finally, just to show that if especially favored by the gods it was due to their own efforts, and that they were not exempt from those annoyances and accidents which the whole blessed race is heir to, they had a fire.

The train left Orange, N. J., Monday night, April 15, via Erie Despatch, and after traveling a short distance laid over and thereover made only daylight runs until they reached Marion, O., Friday night. This remarkable shipment was made purely because of business necessity and because Babson Bros. needed the goods, and needed them right away. Their fine new building had to be completely stocked, so that they could maintain their reputation of filling all orders promptly and completely. On the other hand, Babson Bros. wisely determined to get all the advertising advantage possible out of this remarkable shipment. Therefore, they had the train start a week before they were ready to place the goods in the new building in order that it might pass through the principal towns at a time when the citizens and dealers could view it. The actual running time was fifty-eight hours; the rest of the time it was quietly snoozing on sidings awaiting the hour when people would be up and seeing.

While it was planned to have the train arrive in Chicago Sunday the schedule was changed by wire so as to have it in Hammond, Ind., which is, by the way, the western terminus of the Erie road's own track, Saturday morning, in order that the train might be met there by a party from Chicago and photographed. This necessitated making the run from Marion, O., by night. This distance of 300 miles was made in twelve hours.

The party which went to Hammond to view the Edison-Babson Jumbo train consisted of George M. Nisbett, wholesale manager of Babson Bros., whose efforts since he assumed this position last September have had much to do with making this enormous shipment necessary; A. V. Chandler, the jovial and energetic Chicago city representative of the National Phonograph Co.; A. E. Peterson, contracting freight agent for the Erie road, who had all the arrangements in hand from the start; Mr. Mellen, the official photographer, and last, but by no means least, the gentlemanly and courteous western representative of The Talking Machine World. The quartet left Chicago at 8.30 Saturday morning, arriving in Hammond about 9. To the great surprise of The World man, the big freight train had anticipated their arrival by nearly three hours. The World had supposed that it would be too much to expect a freight on time and had already arranged for a visit by the party to a big piano plant which constitutes one of the chief glories of Hammond. The visit was not made. Inquiry developed that the train was calmly awaiting the visitors, and the latter proceeded to walk the ties out to the Erie yards. There she was, 27 cars and caboose and headed by one of the biggest bull engines ever built in this country. Twenty-seven cars—count 'em—containing 300,000 Edison gold moulded records, of which 20,000 were of the May bulletin, 9,000 Edison phonographs, with Standards and Triumphs in the numerically, three cars of horns and supplies from the Tea Tray Co. and the New Jersey Sheet Metal Co. and a lot of their supplies, advertising matter, etc.

After we had recovered and had exhausted the English language in expressing our emotions, the work of photographing commenced. This necessitated pulling the freight out to the Steel Co.'s siding, so that an uninterrupted view of the monster could be obtained. Mr. Mellen, the photographer, selected his point of vantage and then found that there was a number of scrub trees in the way. While one of the train crew went for axes, Chandler climbed one of the trees and seated himself in the fort. The device worked; the tree fairly crumbled like an egg-shell, but Mr. Nisbett remarked that he thought it would be easier on Chandler at least to await the arrival of the axes. After all serious obstructions had been removed the train was photographed. This was an interesting process, owing to its great length, and required the use of several plates in order to secure the material for the single reproduction of the entire train which appears in this issue of The World.

By noon the train was in Chicago and pro-

IMPORTANT

One year ago we were doing a retail mail order business that amounted to many thousands of dollars a month. You remember that, Mr. Dealer.

It took a great deal of nerve to cut it out, but ***we did it,*** and established the only ***Exclusive Wholesale Victor Concern*** in the country. As a result our business has trebled.

We have been forced to move from our old place, which for fourteen years accommodated us, ***to larger quarters.***

Our customers extend from Maine to California. Why? ***Because we wholesale exclusively, therefore carry the largest stock in the country.*** Dealers feel that freight paid on one order filled complete is cheaper than on an original order and on a back order. Then too, the goods reach you in exactly the same condition as received by us from the factory. ***You might just as well be dealing with the factory direct.***

In these times of machine and record famine we are not turning down business. We want more, ***and we can handle it.***

You have probably signed our contract already. If not, ***do it to-day.***

Ask us about our proposition to handle your monthly order.

And remember two things, ***we wholesale exclusively,*** we don't want retail business, we ***are referring it back to you.***

If you come to the Piano Dealers' Convention, don't fail to come and see us, in our new home.

THE TALKING MACHINE CO., 72-74 Wabash Avenue CHICAGO

THERE'S a big new Catalog of Mechanical and Automatic Instruments, just off the press. Do you want a copy?

There's money in knowing the latest and best Mechanical Instruments, and in knowing the latest cash prices that you can buy them for.

This catalog contains life-like illustrations, complete descriptions and a deal of important information about

Lyon & Healy's Great Line of Public Music Instruments

including

Majestic Pneumatic Self-Players
Majestic, Jr., 44-Note Players
Nickel-in-the-Slot Pianettes
Circus Organs, Military Band Organs
Welte Orchestrions, Etc.

FROM OUR CHICAGO HEADQUARTERS.

(Continued from page 22.)

ceeded to the new building of Babson Bros. at the corner of West 19th street and Marshfield Boulevard. It took several days to unload the cars and place the goods in stock.

A special mention should be made of the excellent work in handling the big shipment of A. E. Peterson, contracting freight agent for the Erie road. He literally lay awake nights trying to provide against all chances of delay. Every detail was looked after personally by him, and he even went down to Meadville, Pa., met the train there, made arrangements for the balance of the trip and brought back with him a photograph of the train which he had taken himself. Peterson always does business this way.

It is hardly necessary to repeat here the remarkable history of Babson Bros. After years of successful experience in the talking machine business they started for themselves in October, 1905. In September of last year the wholesale department was established, in charge of George M. Nisbett, who for some years previous had been in charge of the western office of the National Phonograph Co.

Some idea of the magnitude of the business of the firm may be gleaned from the statement of F. K. Babson that this great shipment furnishes them with only about sixty days' supplies. In fact, they have received several additional cars from Orange since the big train.

A photograph of the building and a brief description were presented in last month's World. Another photograph and some essential details appear elsewhere in this issue.

LATER CHICAGO ITEMS.

(Special to The Talking Machine World.)

Chicago, Ill., May 10, 1907.

The Chicago Case Manufacturing Co., manufacturers of talking machine, record and horn-carrying cases, etc., have just moved from their old location on West Washington street to 241 South Jefferson street. Here they have more than double the amount of floor space of their old quarters, and will be able to increase their capacity and accumulate stock to a degree impossible before. The company make a point of manufacturing and carrying in stock cases for every type of every make of machine.

L. E. McGreal, of McGreal Bros., Milwaukee, will celebrate his fifth wedding anniversary this summer. He has a beautiful young wife and two fine little boys—Jack, who boasts three years, and a small brother. Mr. McGreal's friends, who know how pleasantly he is situated, connubially speaking, were no doubt surprised when they recently read in an Eastern trade paper that Mr. McGreal had just been married. By a strange coincidence a similar item appeared in a Milwaukee daily about a week before the item loomed up in the trade paper. Just how it happened is a mystery, but the fact is that when Mr. McGreal talks to a daily paper man he wants to do him all the good he can. He was probably once a newspaper man himself, and knows the exacting requirements of the city editor on a "dry" day. It is just possible that Mr. McGreal told the reporter something about the fine new building into which he is moving his extensive talking machine business, and when he finished with the building kept on talking. Anyway, the wedding story was published and Mrs. McGreal's maiden name was printed correctly. Just how the paper located the happy pair—and they certainly are still happy—half-way to the Pacific Coast on their wedding trip is somewhat hard to understand.

CHAMPION INSTALMENT SALESMEN

H. H. Goul Wins First Prize for Largest Columbia Sales Amounting to $3,083.13.

(Special to The Talking Machine World.)

Chicago, Ill., May 9, 1907.

Since May 1 H. H. Goul has occupied the enviable position of champion instalment salesman of the Chicago office of the Columbia Phonograph Co. At least, he won the prize offered by Manager O. W. Eckland, of the instalment department to the salesman rolling up the largest sales record during the month of April. Mr. Goul's sales during that month amounted to $3,083.13. He is very proud of the $25 gold piece he received for his remarkable accomplishment.

Fred Severa, who works out of the Ashland

H. H. GOUL.

avenue store, sold $2,600 worth of goods, and won the second prize of $10, while Max Gewald, of the Halsted street store, won the third prize of $5 on a $2,500 sales record.

BIG FIRE IN CHICAGO.

Healy Music Co. the Principal Sufferer—The National Phonograph Co. and Babson Bros. Were Not Largely Affected.

(Special to The Talking Machine World.)

World Office, 195 Wabash avenue,

Chicago, Ill., May 6, 1907.

A fire which badly damaged the building at 298-304 Wabash avenue, Monday afternoon, April 22, caused serious loss to several concerns in the talking machine and allied lines and caused vast excitement on Wabash avenue.

The Healy Music Co., of which Ray Healy, son of the late P. J. Healy, is president, was the principal sufferer. The Healy Co. occupied the first floor and basement and half of the third floor. Their stock consisted of pianos, player-pianos, small goods, talking machines, etc., and they were also retail agents for the Regina music boxes, of which they carried a large stock. A great deal of the stock in the rear of the building was burned up and probably all of the balance was badly damaged by water. The company's loss was fully covered by insurance, of which $45,000 is carried on the stock.

Among the other tenants of the building were the National Phonograph Co., on the sixth floor, which had its Chicago commercial machine, moving picture and battery departments on the sixth floor. They suffered considerable damage by water to stock and fixtures. The excitement on this floor at one period was something great, as a number of girls were working in the company's school for training typewriters in the use of the business phonograph. The flames at the rear cut off exit there and vast volumes of smoke were pouring up the stairway. This left only the fire escapes on the front of the building. Messrs. Harding, Barnes and the other men in the office were prepared to take the girls down to the street via this route, but they positively refused to go. The men bravely stood by the girls in spite of the frenzied cries of the people on the street and the assurance by some of the firemen that it was their only mode of escape. Finally the firemen reached the sixth floor, and then forced the smoke away from the stairway sufficiently for the sixth floorites to descend safely.

In the meantime a bad quarter of an hour was being experienced by the employes of Babson Bros., wholesale talking machines, on the third floor. Manager George N. Nisbett finally succeeded in getting his force, which also included several young women, safely to the street. Notwithstanding the fact that Babson Bros. carried an immense stock of phonographs and records on this floor their loss was comparatively light. Only a small portion of it was damaged, and that simply by water from the floors above. The greater part of the rows of bins were left perfectly dry and the stock untouched in any way. The total loss to Babson Bros. will not reach $1,000, and is covered by insurance. Shipping was delayed only a few hours.

The Healy Music Co. have secured new quarters at 212 Wabash avenne, which they will occupy as soon as possible. As in the past, they will handle Victor and Edison goods and the Regina line.

A poor little plaster-cast Victor dog went through a hard experience in the Healy fire. After the smoke had cleared away he was still in his place in the window, but his feet were damaged, his nose partly missing and his mouth twisted, so as to change the pleading, listening expression of his face to the most sorrowful woebegone one in the world.

THE WALLACE BARNES COMPANY

BRISTOL, CONN.

PACIFIC COAST HAPPENINGS.

Shortage of Victor Machines—Increasing Interest on Talker Business—Clark Wise Activity—New House in Los Angeles—Will Anti-Trust Law Affect Talker Business?—Details of the New Measure—Business Very Active Throughout the State and Outlook Satisfactory.

(Special to The Talking Machine World.)

San Francisco, Cal., May 4, 1907.

The scarcity of Victor machines on this coast has become so serious that Sherman, Clay & Co. are having a hard time to supply the demands. It now develops that the recent trip of P. T. Clay to the East was largely for the purpose of seeing what could be done to increase the shipments of Victor goods. The difficulty of getting goods from the factory is being accentuated by the slow freights.

Apparently the lively demand for and the general interest in talking machines has attracted the attention of live merchants in other than music lines. This is particularly true in the interior, where a number of general merchants and others have recently put in talking machines. The John Breuner Co., one of the leading furniture houses of Sacramento, has put in a line of Victor machines and records and is advertising to donate the freight on all machines ordered for out-of-town shipment. In some of the smaller towns of the interior several general merchants have put in a cheaper grade of machines and records to be used as premiums and as trade winners for the other lines sold in the stores. A Chicago jobbing house has a man out in California working up this trade.

Clark Wise & Co., of San Francisco, report that the Victor business with them is the most active department in the big music store just now. This trade is holding up well, notwithstanding the comparative dullness in other lines. The company's branch store at Eureka, Cal., is making a special effort on Victors and is doing a big business with them.

Eilers Piano House, of Portland, Ore., has opened a branch talking machine store at the town of Vancouver, Wash. The Eilers store at Portland has been giving a series of Ernani concerts on the Victor this week.

The Central, a department store recently opened at Los Angeles, Cal., has opened a talking machine department and is making its bow to the public by selling machines at cut rates.

The arrival of the new Victor record of the Rigoletto quartet has attracted a lot of interest here. All the leading houses are giving it some special advertising, and in Los Angeles a similar result has been achieved. In the latter city the Geo. J. Birkel Co. are using this record as a special drawing card for the company's Victor recitals.

Byron Mauzy is planning to give his talking machine department more prominence, and is already giving it more space in the store. He has secured the services of Edwin H. Youse, formerly with Sherman, Clay & Co., as manager of the department.

The Tacoma Phonograph Co., of Tacoma, Wash., has put in a line of sheet music in connection with their talking machine stock.

How will California's new anti-trust act affect the talking machine business in this state? It seems pretty certain that if the law is upheld, and lawyers say that it will be, there will have to be a change in the manner of selling talking machines. The new law says in part: "A trust is a combination of capital, skill or acts by two or more persons, firms, partnerships, corporations or associations of persons, or of any two or more of them for either any or all of the following purposes: To fix at any standard or figure, whereby its price to the public or consumer shall be in any manner controlled or established, any article or commodity of merchandise, produce or commerce intended for sale, barter, use or consumption in this state." . . . . "Every such trust as is defined herein is declared to be unlawful, against public policy and void." The punishment for violation of the act is a fine of not less than $50 and not more than $5,000, or imprisonment for not less than six months and not more than one year, or by both fine and imprisonment, each day's violation to constitute a separate offense. So far, the dealers have taken no action, but if some dealer should cut prices on talking machines and the manufacturer or jobber should thereupon refuse to sell him stocks something interesting might happen. Possibly dealers in other lines will be allowed to make the first test of the new law. It is understood that many handlers of cameras and supplies are in a good mood to give the Eastman Kodak Co. a taste of the new law.

Sherman, Clay & Co. have put in some new demonstration rooms for their talking machine department at the Seattle, Wash., store and are rapidly making this store one of the most complete on the coast.

Oscar E. Barringer states that he has resigned his position as sales manager of the Talkophone Co., of Toledo, O.

EVOLUTION OF THE RECORD.

The Remarkable Advance in the Art of Recording—The Human Voice Now Truly Photographed—Has Meant Time, Labor and Money, But It Is Worth It All.

Judging from the absolute perfection of some of the most recent records placed on the market it would seem as if the manufacturers are successfully overcoming the innumerable difficulties that existed in the past in the matter of making a perfect record. The receiver, with its remarkable supersensitiveness, never fails to absorb every imperfection as well as perfection of the voice as well as the surroundings. Therefore the voice must always be in perfect trim, never fatigued, because it reproduces in wax as clearly as a photographic lens records an impression on the sensitive plate; in fact, the singer's voice must be as fresh, as vigorous and even in better condition than when appearing before a critical audience at the Metropolitan. It is a well-known fact that some of the opera singers have worked over and over again in order to get a perfect record, and Mme. Eames has only recently stated that much of the success of her records is due to the care and research taken by those who have to do with the mechanical part of receiving the voice. Many hitherto futile efforts have been avoided and the ideal in voice reproduction has, in many instances, been approached.

The really perfect record represents in itself a tremendous amount of effort and care, and needless to say, expense, for the artist who makes it received a fabulous sum, while the time and labor involved in perfecting apparatus that is supersensitive, and records the perfect voice in perfect form, is beyond computation.

The artistic value of the talking machine record has been recognized by managers of opera companies within a recent date in a very emphatic way. It is said that Hammerstein heard several of the artists he subsequently engaged for the Manhattan Opera House by means of talking machine records, and in no instance was he mistaken in his first estimation of their vocal ability. Could there be a higher tribute to the perfection of the record than this?

WOOD WITH REGINA CO.

Wednesday John Wood, formerly with the Regina Co., New York, and recently in charge of the talking machine department of the Hahne Co., Newark, N. J., returned to the former firm as a salesman in talking machines and music boxes, retail.

WESTERN JOBBERS!

Are you aware of the fact that we are shipping promptly to our Western warehouse a sufficient quantity of horns of every description to satisfy your wants?

The warehouse is under the direct management of the Western Talking Machine & Supply Co., 6 East Madison Street, Chicago, Ill.—"Nuf Ced."

We are also making prompt factory shipments to our Eastern jobbers.

TRADE HAPPENINGS IN ENGLAND.

The Trade Situation Reviewed—Suit to Determine Whether Records Come Within Musical Copyright Act—British Sonogram Co. Working Along New Lines—Neophone Expansion Abroad—Sterling Factory to be Enlarged Activity in Manchester—Colquhoun Records Please—New Tone Arm Disc Graphophone—Robbery at Lyon Co.'s—Columbia Co. Open Retail Store in Paris—Some Notable Records by Leading Concerns—Dictaphone Popularity—Some Topical Advertising—Cheaper Post to Canada—Pertinent Comment on Current Happenings.

(Special to The Talking Machine World.)

World Office, 69 Basinghall Street,
London, E. C., May 5, 1907.

Trade still continues somewhat uneven in London, but the outlook bears a brighter aspect for the future. The following two or three months may naturally be slow in the home markets, yet it is gratifying to learn that colonial and foreign orders continue to increase, and while the manufacturers are busy in this direction, a goodly measure of business should accrue to the factors, more especially those who advertise or adopt some form of publicity which will attract and draw orders to their warehouses. The best way in which this may be accomplished is through the medium with a circulation extending to all parts of the earth, and obviously Mr. Factor such a medium is in your hands. There is a fine trade to be secured abroad, and the English factor can get his share even easier than the American or Continental jobber, whose advantages are considerably lessened by our preferential tariff system. True, manufacturers have their agents abroad, and even exclude English factors from certain markets, but there are other foreign markets open, and which are not too well catered to. Advertise a good and cheap salable article to get in touch, then its the factor's own fault if he cannot induce orders for other goods on which a better profit is secured, and thus build up a permanent export trade.

All British Manufacture.

"All British" manufacture is the keynote of the Edison-Bell trade. The announcement of four new phonographs is attracting widespread attention, and, said Mr. Hough, "already large orders have been placed, although we do not expect that they will be ready to market much before July. For the manufacture of these machines we are installing a complete set of special machinery of an up-to-date type, which will enable us to produce in large quantities, and sell at an exceptionally low figure. The phonographs embody several improvements protected by recent patents. Prizes (76 altogether) are offered for the best names suggested and adopted, under which the machines will be known. Certain names—Queen, Prince, King, Crown, Sceptre and Empire—already under consideration are, of course, excluded from mention by competitors.

Rauth's Attractive Lines.

Fr. Rauth again advertises some cheap lines which all dealers should take advantage of. He handles a good line of reliable motors for talking machines, also one for show stands, which will run about twelve hours with only one wind. Price, $5. "Hebrew" and Lyrophone discs are also splendid goods to trade with. Records of quality which allow a good profit to the dealer. Address, 9 Christopher street, Finsbury, London.

National Phonograph Co.'s Report.

The General Phonograph Co. report the home trade as none too brisk, but with other countries they are doing a fine business. The new proposed premises to be taken in City Road will be shortly decided upon.

Imperial Records Liked.

The Ian Colquhoun series of "Imperial Records," by reason of their wonderful sweetness in tone and clear enunciation, are being eagerly sought after. Gilbert Kimpton & Co. have reason indeed to be proud of this latest list.

Edison Grand Opera Records.

The National Phonograph Co. have issued their advance list of Edison grand opera records, comprising five new selections, three sung in Italian, one in French and the other in German. Two new artists of considerable fame appear in this list.

Phonographic Records and Copyright Act.

The case of Newmark vs. the National Phonograph Co., Ltd., and the Edison Manufacturing Co., raised the question whether or not songs—words and music—reproduced by means of phonographic records came within the musical copyright act. The plaintiff alleged that he was the owner of the copyright of both the words and music of a popular song, entitled "The Paralytic Hotel," of which the defendants had taken, or caused to be taken, phonographic records which they had sold in large quantities all over the world, and he claimed an injunction and damages.

The defendants admitted that they had manufactured records of the songs, but denied that they had infringed the copyright. Mr. E. H. Coumbe, on behalf of Mr. Isidore Newmark, a professional music hall singer, said that his client was the owner of the words and music of the song, which was popular at seaside records. It was very amusing, though, perhaps, not suited to the cold atmosphere of the court. The chorus ran:

"Sweet and bitter is the memory—
Decidedly such things ought not to be.
Oh, my dear, kind people, we uever shall forget
That paralytic hotel by the sea."

(Laughter.) That might not sound very amusing as he had rendered it. (Laughter.) Yet down by the sea and in certain music halls it seemed to have caught on, and, at any rate, plaintiff thought it was good enough for him to make "a hit" with it, and he purchased words and music, but found afterward that the defendants had "lifted" both, and his property became worthless to him, therefore he submitted that the plaintiff was entitled to au injunction and damages.

Mr. Leversedge, on behalf of the Edison Manufacturing Co., Ltd., explained that the company was not a manufacturing company, but one which existed only for the purpose of keeping possession of its name. The plaintiff examined said a friend of his bought a cylinder of the song, and the witness ground it out on a phonograph. Mr. Scrutton, K.C., on behalf of the National Phonograph Co., argued that the record on the cylinder was not a copy within the meaning of the act. The question had been decided in the case of "Boosey vs. White," in which the court held that a perforated roll was not a copy of a song. There was no evidence to show that the defendants had performed the song, aud selling the cylinder could not be held to be causing the song to be sung or performed in public, and he submitted that the defendants had a perfect right to sell the records for private performances, which did not constitute an infringement of copyright.

His lordship said it was clear that this was not a case which came under the copyright act. The records could not in any way be regarded as a

sheet of music. There must be judgment for both defendants, with costs.

British Sonogram Co. Forging Ahead.

The British Sonogram Co., some particulars of which I gave in our last issue, having now gone to allotment, will forge ahead along lines somewhat new to the talking machine industry. It will practically be a sort of co-operative company, in which privileged dealers (those who have taken up not less than ten shares) will receive an extra 2½ per cent. allowance over and above the usual trade terms, while those holding less than ten shares are most liberally dealt with through factors. The policy of the company is to deal direct only with the privileged dealers and factors. The latter will look after the supply to all other retailers. The "Sovereign" records, which I have heard were very good, but I was assured that an even greater degree of efficiency and perfection will be noticeable in future issues as entirely new recording plant was being fixed for this purpose, while Mr. G. H. Burt claims to have invented a new system whereby the recording art will bear a different aspect. Paul Mellerio, as managing director, brings along intense energy and a freshness of ideas from which I am sure splendid results will materialize for the shareholders, who, I would add, are supported by several of the best experts it is perhaps possible to obtain in this trade. Space will not permit of further remarks here, but I shall probably have more to say upon this company in my next report.

International Neophone Developments.

I have had an interesting interview with Dr. Michaelis, the inventor of the Neophone and sapphire disc records, which are now taking the world by storm. Several important firms have recognized the utility of Dr. Michaelis' invention, and are now manufacturing records after this principle. Others are contemplating recording similarly, and no doubt all these sapphire cut discs will be very much to the front during the coming season.

Dr. Michaelis told me that the new scheme of reconstruction for the British Neophone business had not yet been definitely adopted, but promised detailed news shortly. The International Neophone Co., Ltd., however, had been registered on the 1st of February, 1907, for the purpose of dealing with the patents, rights and trademarks of the Neophone machine and discs in all parts of the world, with the exception of the United Kingdom, and to act exclusively for the sale of Neophone goods in all foreign countries. The International Neophone Co., Ltd., is under the personal management of Dr. Michaelis, who is ably assisted in his work by Messrs. E. J. Sabine, O. H. Waetzig and C. Dunn, all well-known in talking machine circles, and experts in their particular departments. F. S. Liddall is secretary, and James Morley, solicitor to the company.

The International Neophone Co., Ltd., are just now making arrangements for making Japanese, Chinese and other Oriental records, and an extensive tour in Eastern countries is contemplated at an early date, with a full staff of recording experts, who will, on their way, visit and make records at Alexandria, Colombo, Madras, Calcutta, Kobe and Tokio, and probably in Hong-Kong and Shanghai. I listened to one or two Japanese records lately manufactured, and, although Japanese is not one of my pet languages from a talking machine point of view, the records are beautifully finished, practically faultless, and seem to be especially up to date in regard to enunciation.

"Elijah" by Gramophone.

At the Queen's Hall last Sunday a recital of Mendelssohn's "Elijah" was given in its entirety upon two large gramophones, and was much appreciated by the audience, who loudly applauded Mr. Edward Lloyd's record, "If With All Your Hearts," which was perhaps the gem of the evening. One newspaper report says: "Tinned oratorio as prepared by the Gramophone & Typewriter Co., is certainly not open to the same objection as sundry other tinned articles."

Sterling Factory to be Enlarged.

I have it on good authority that the Sterling factory will again be considerably enlarged during this summer. Some judicious additions to their present buildings are contemplated in order to cope with the increased demand for "the record that's half an inch longer," and by next season even better facilities of dispatch will be in force thereby.

Triumph for Pathe Freres.

Pathé Freres have scored another triumph in securing the services of Mme. Albani, who has sung several selections of a popular character for Pathé's 11-inch phonographic disc. Publication is expected shortly.

Beka Co.'s New Records.

Some new operatic records are announced by the Beka Co., also an additional list of seven-inch and 10-inch records by popular artists. Their Beka exchange offer is now in force.

The Sovereign Unbreakable Records.

The first list—comprising over 200 titles—of the new "Sovereign" unbreakable disc record, will be issued about the first week in May.

Russell Hunting an Automobilist.

Russell Hunting, the original Michael Casey, has just purchased an Argyle motor car, of which he is very enthusiastic. There are now quite a number of prominent talking machine men who drive their own cars, among whom may be mentioned Mr. J. E. Hough, of the Edison Bell Co.; Mr. S. W. Dixon, Gramophone & Typewriter; Mr. Newton, Newton & Co., and J. Lewis Young.

Russell Hunting Co.'s New Quarters.

LONDON, N. W., ENGLAND

FROM OUR LONDON HEADQUARTERS—(Continued).

pected to leave their old home very shortly now, as things are going ahead splendidly, and no further trouble is anticipated. Mr. Manson, interviewed, said the home trade is somewhat quiet, but their export orders show a considerable increase. The colonial business has started splendidly, and according to their Australian representative, is expected to surpass in magnitude that of previous seasons.

Great Activity in Manchester.

I recently had the pleasure of a short chat with Mr. Geddes, of Messrs. Richardson's, Manchester. He said: "While the London trade seems to be very quiet, we are at present fairly busy in and around Manchester and Liverpool. Manchester is the distributing center for over twenty good Lancashire towns, and there are quite fifty good points within a radius of a few miles that are simply teeming with large factories who provide employment for thousands of hands. As new mills are springing up all around, there is a constant influx of people, many of whom find their only musical recreation in the talking machine. The county of Lancashire is undoubtedly the most prosperous of all, and certainly holds the record for the greatest sales of talking machine goods. The Edison "Gem" has a wonderful demand upon it, and seems the most popular machine up north. In the provinces there is a fair all-the-year-round trade, and money is spent liberally, while in London itself the talking machine business is practically non-existent."

Pathe Freres Report.

Messrs. Pathe Freres express the opinion that tne next few months will see nothing startling either in sales or departures of interest; yet the Pathe phonographic disc and the new machines are attracting a continuous list of admirers among the better class dealers, and general sales are beyond expectations.

New Style of Columbia.

The "Regent" is the name of a new tone-arm disc graphophone which is just being announced by the Columbia Phonograph Co. It is to sell for £5.5, and from its splendid appearance and magnificent tone it is expected to vie in popularity with the "Regal." The sound box is exactly similar to those on the most expensive Columbia models, and has the patent needle-holding clip which renders a needle-holding screw superfluous. The motor is strong and durable and can be wound while running. Like all Columbia graphophones, the motor is instantly accessible. The horn is of the popular flower shape, handsomely enameled in red with gold stripes.

Daylight Robbery.

A somewhat curious robery was perpetrated on the morning of Thursday, April 11, last at the premises of Messrs. A. Lyon & Co., talking machine factors in City Road. Arriving about 9 o'clock that morning as usual, Mr. Lyon was surprised to find the door of his shop opened, and that a large number of disc records were missing. These fortunately were the only goods stolen, the previous day's takings having been banked the same evening. Investigation proved that the outer door had been opened as usual at 8 o'clock by the housekeeper, and it is surmised that entry was made by forcing Lyon & Co.'s door with a jimmy, between that time and about 8:45. Over 500 disc records are missing from the racks, representing a loss of £60 odd. A vehicle of some sort must have been employed by the robbers, and as at that time City Road is exceptionally busy, the very boldness displayed by the delinquents must have ensured absence from surprise.

Cheering Reports of Business.

The Columbia Co. report that business is booming. In America the deluge of orders makes the managers wonder if the calendar is wrong and the date is Christmas time instead of April. March was the biggest month in the company's history. The European branches continue to show gratifying growth, and one of them—St. Petersburg—has made a phenomenal jump to the front, in spite of the disturbed condition of Russia. The Columbia Co. have made a slight change in certain types of their disc and cylinder graphophones whereby the winding up of the motor is done with less effort, but with a slightly increased number of turns. The models affected are those with very powerful motors, and the change is one that will undoubtedly be appreciated by users of these instruments.

A Record in Odeon Sales.

To the dealer who complains of a bad trade the following will interest as exemplifying the fact that what one dealer can do another can. Here it is: The Odeon sales during March were better than October, November or December, better than any month of the season, and, in fact, said Mr. Turner, the March trade in Great Britain was absolutely a record in the whole history of the company. This prosperity shows that some dealers do good business, and it is only the man who lacks "enterprise" lacks "sales."

New Columbia Quarters in Paris.

In view of the growth of the Columbia Co. in France, the management has decided to open a handsome retail shop in Paris in addition to their present wholesale warehouse there. The new premises are situated at 20 Boulevard Montmartre, and comprise a splendid shop with first floor and two basements, having a magnificent frontage on one of the most convenient and prominent sections of the Grand Boulevards. The shop has a central doorway surmounted by a striking metal and glass marquee, with large windows on either side. The floor of the shop is tiled, the ceiling is decorated by fresco work, the woodwork of the front is mahogany, and the stairway leading to the upper floors is graceful and sightly. The general appearance of the place is most attractive, and when elaborated by the display of Columbia product will add another to the already long list of handsome premises on principal thoroughfares by which the Columbia people advertise so strikingly, and demonstrate to the public at large the dignity and stability of the talking machine industry and the importance of their own position in it.

Some New Sterling Records

Sterling & Hunting, Ltd., announce that their Odeon double-sided records (a series of eight), by Watkin Mills, will be on sale this month priced at 5s. each. Another popular artiste secured by this company is John McCormack, who will sing exclusively for Odeon and Sterling records. In conversation, Mr. Turner mentioned that the new Discodeon machines have given the satisfaction which has drawn much praise—and orders from the English dealers. "Odeon" needles—the needle that brings out all the music in a record—have been reduced from 3s. to 2s. per 1,000. Dealers please note!

Records by Sir Tollemache Sinclair.

A special supplement of recitation and other records made by or on behalf of Sir Tollemache Sinclair, the donator of graphophones to hospitals and asylums, has been prepared by the Columbia Phonograph Co. Sir Tollemache is an elocutionist, and has made several recitation records, consisting of famous poems, such as Hood's "Song of a Shirt," together with two of his own composition. The supplement announcing these records contains a fine portrait of the baronet and gives in full the words of the records.

The American Talking Machine Co.

At the American Talking Machine Co. I learn of many changes contemplated by next season which will facilitate quick execution of "waiting customers" orders, not the least of which will be the inauguration of a special town counter department. This, said Francis Nottingham, will tend to save considerably the time of our friends who, like us, have found "waiting" an evil, in this period of commercial hustle.

We have

taken this space to tell you that we are specialists in all and everything appertaining to the TALKING MACHINE INDUSTRY, from a complete outfit to the smallest accessory.

Our 72-Page Catalogue

(sent free on receipt of trade card) is conceded to be a complete cyclopædia of the trade.

OUR PRICES WILL SURPRISE YOU!

We want

a responsible firm in each country to carry samples and represent us on commission. Applications should cover references. We are the largest and oldest exclusive talking machine house in Europe.

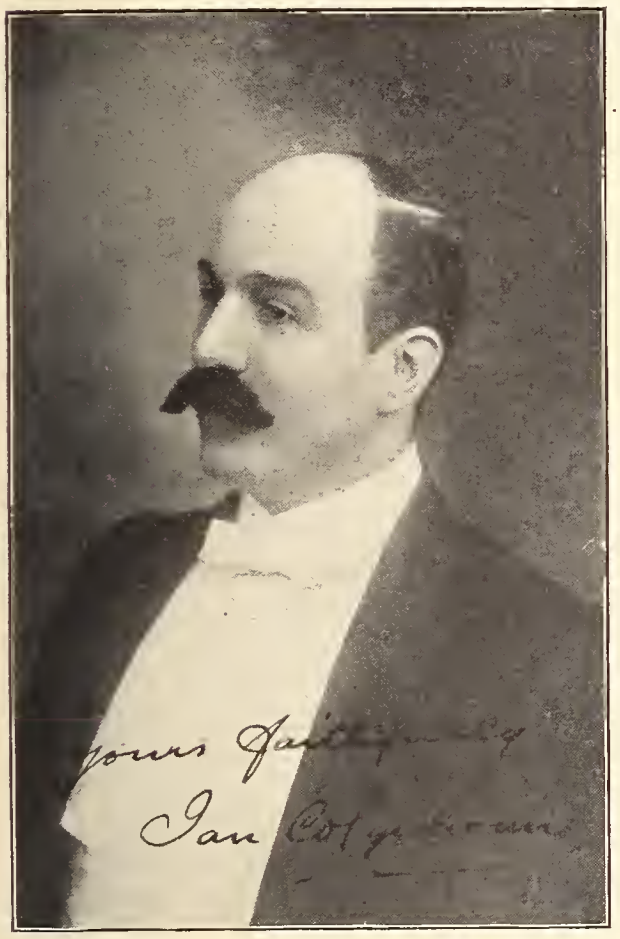
Praise for Colquhoun Records.

The Ian Colquhoun series of excellent songs on the "Imperial Records" is claimed to represent, from the recording point of view, a naturalness of expression as near human as it is possible to get. The following testimonial received April 17 by Gilbert Kimpton & Co., is of an unique character and expresses the appreciation of an eminent professor of acoustics, Cambridge:

"There is in the tone of these records a humanity almost uncanny with a charm most bewildering. Roundness and throat-born fulness of timbre as well as all that delicate modulatory



IAN COLQUHOUN.

light and shade, in fact, all that inexpressible nuance which goes to contrast the human being with the mechanical musical box are there. The singer has impressed his fire and passion upon the undulatory track and the listener is impelled to hark, and hearing, *feel*. To play them before a curiously condescending auditor reminds one of the words of Goldsmith, 'And fools who came to scoff remained to pray.'

"'The Death of Nelson' is *sung*. The melody is not thrown off the chest with an effect of a handful of marbles thrown along a corrugated roof. Compare the rendering of 'But dearly was that conquest bought, too well that gallant hero fought,' its telling rallentando and fervor of emphasis with the usual 'trip-it-merrily-o'er-the-lea' style of most stormers. The glorious victory of Trafalgar was received in England with exultation mingled with sorrow at Britannia's loss. Such a feeling breathes forth from the disc and one feels that he lives in that time of rejoicing and grief.

"More so, however, 'Will ye no come back again' lifts me out of the present back over a century and a half to the dreary, dead days of a music and art hating king. No stodgy, sombre, brown stockinged Hanoverian can claim my loyalty or love. The melodious cadence and deep delving soul awaking pathos I feel, and am at once a mourner for the fate of Bonnie Prince Charlie. Charlie lived upon and dearly loved the arts that make a man. No wonder he 'better lo'ed canna be.' The shade of Flora MacDonald must be here as I listen and together we mourn for the fair, brave and reckless Prince. These two crystallized echoes of Ian's heart and art make one wonder whether the original or the copy is the better of the two. What does the singer think?

"The other records, 'Rule Britannia,' 'The Englishman,' 'Allan Water' and 'To-morrow will be Friday,' in the same way are triumphs of expression. The quaint monastic humor of the last is well brought out and the pathos of 'Allan Water' reveals a master hand, for there is no slobbering sentiment about it. The first two make one a Jingo, but not of the fire-eating variety. If I had not in my mind the great gulf existing between these and other discs I hear and have heard, I should say that perfection has herein been achieved. Knowing the house that has produced them, I will reserve myself for their later efforts. I have confidence and believe that they will improve, but how I know not."

Now Called the "Dictaphone."

"Dictaphone" is the new name coined by the Columbia Co. for their office or business graphophone. It is expressive and plainly tells the purpose of the instrument. Among the most recent progressive firms to take up the Dictaphone method of correspondence are Butler & Tanner, printers, of Frome, Somerset, and Beston's Advertising Agency, of Birmingham. These firms have introduced Columbia machines with great success. Arthur Worsley has re-entered the service of the Columbia Phonograph Co. in the office graphophone department. Some clever literature bearing on the Dictaphone has just been issued by the London office. The improvements made on the machines as well as letters from many prominent people using them are referred to at length.

A Topical Display.

A bit of very interesting topical advertising is to be seen just now in the window of the Columbia Phonograph Co.'s establishment at 64 and 66 Oxford street, London W. It takes the form of a "Graphophone Air Ship." Attached to one of the Columbia models is the characteristic equipment of the Aeroplane—extensive wings, propellers and carrying car, the last being ingeniously constructed from disc records. A descriptive card bears the apposite legend:

> *"Daily Mail" Aeroplane Competition.*
> The Columbia Graphophone Represents the Highest Flight
> of inventive genius.

Coming at the present juncture when public interest is particularly directed towards the navigation of the air, through the enterprise of a leading daily and the Aeronautic Exhibition at Islington, the Columbia display is attracting a great deal of attention and the advertising moral cannot fail to be driven home.

Defense of Credit.

Credit is an essential part of trading, nay, more, it is an essential part of present day political economy. It is as necessary for the man who carries on a small business, as for the government which rules an empire. Therefore, there can be nothing fundamentally wrong in a credit system.

Further Endeavors to Maintain Prices.

The following is a copy of a letter sent last season to various factors by Mr. E. Oppenheim respecting the upholding of prices for "Industric" flower horns:

"Dear Sirs—Having been requested by a large number of factors to insist on the necessity of upholding all prices for flower horns, and feeling convinced that after the experience of the cutting of prices for brass horns among all the factors, that it would be in their interest that the repetition of this cutting should be if possible avoided, I have decided to ask all my customers not to sell flower horns to the dealer below the following prices. (Here follow the rates for various style horns). The prices to hold good until the prices to the factor have been reduced, when it will be necessary to enter into a new agreement. Any factors found selling the horns to the dealers below the prices and condi-

tions stated above will have his future supplies stopped. I ask you to kindly let me have a letter to the effect that you agree not to sell these horns to any dealer below the above mentioned prices and conditions. At the same time I should be glad if you would always at once inform me of the name of any factor of whom you have clear proof that he has sold flower horns to a dealer below the prices stipulated above."

Price Maintenance Crusade.

Several important contributions anent this question have unavoidably been held over for want of space.

Cheaper Post to Canada.

The Postmaster-General annouuces a reduction in the postal rate on newspapers, magazines and trade journals to Canada, on and after May 1, to continue, subject to modification, if necessary, for a period of four years. The present rate of 2d. per 2 oz. or 4d. per pound has proved such a handicap to British publications, in competition with those from America at a much lower rate, that they have been unable to obtain a footing in Canada. The new rate of ½d. per 2 oz. still stands, 1d. for every pound weight will have a far-reaching effect. More British newspaper advertisements will be read, less Americau, and consequently it means that Englisb goods will find a wider market, and commerce between England and Canada will largely increase, especially now that further preferential tariffs and other considerations under discussion at the Colonial couference, are likely to result in something definite and permanent.

Enterprising Irish Jobber.

T. Edens Osborne, the well-known talking machine factor of Belfast, Ireland, in his advertising makes some excellent points in favor of the "talker" as an entertainer in country homes. One of his excellent "ads." in the Ulster Echo was as follows, and proved very productive of results:

MUSICAL TALENT BY PARCELS POST.

Those who reside in the country village, on the farm, or far removed from the pleasures of town or city cauot now complain of the quietude, dulness or monotony of their lives, for just as the telephone aunihilates distance and enables people to converse with each other, though separated by hundreds of miles, so the Edison phonograph, Gramophone or Zonophone records, which can be conveyed through the post witbout breakage, will enable those who possess "talking" machines to enjoy the world's best musical talent in their own homes "far from the madding crowd." Records of celebrated bands, vocalists, etc., from 1 shilling each upward can be had from Mr. T. Edens Osborne, 4 Donegall Square, W., Belfast, who will send, post free, catalogues of instruments and records to prospective purchasers. He holds the largest stock of these goods in Ireland.

Very "Yankee-like" in character, is it not?

Decided in Columbia Co.'s Favor.

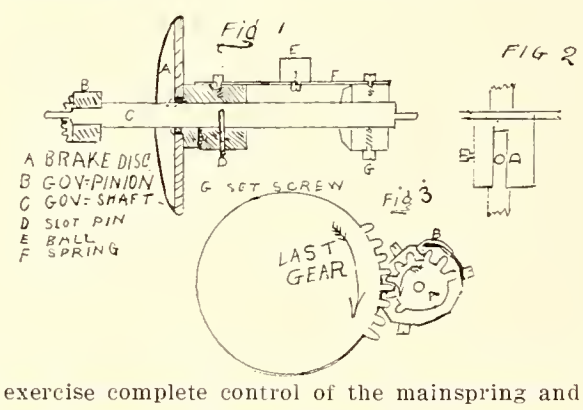
Recent advices from Berlin to the Columbia Phonograph Co. report that the litigation which has been going on for some time in Germany, involving tbe invention of the gold molded cylinder record, has been decided in favor of the Columbia Phonograph Co., with all costs assessed against the Edison Co.

IMPORTANCE OF THE GOVERNOR

In Talking Machines—How to Obtain the Best Results Distinctly Set Forth by Philip Neale, Talking Machine Expert of London.

The governor in a talking machine is everything that its name implies. Governor he is and governor *he will be;* he is the all-important factor; then a good and faithful governor we must have; how to obtain the best results is the object of this article. I shall try as much as possible to avoid all technical terms for the benefit of all readers.

The simplest way to recognize the duties of the governor is to know that its only duty is to



exercise complete control of the mainspring and the duties of the mainspring are to drive the motor and all moving parts.

There are governors of two weights, three weights and four weights. The two weights are generally used in disc machines and differ from the others only in one part; see Fig. (2) (D), which is used where the flat springs are long.

Now, it must be observed that any difference in the strength of the spring, or untruth of the brake disc (A) (Fig. 1) means a vibration in the motor. It is absolutely necessary then that the balls must be of the same weight and the springs from the same piece of steel. Now we will proceed to build a new governor. Take a piece of the steel ribbon (or flat wire), as it is called by metal dealers, and procure sufficient ribbon to build up your governor. Proceed by cutting three lengths, as per old ones, then with a hard triangle drill make a hole in the middle of each spring, neat screw the whole three on to *one* ball, now fix one set of end in the vise, with a brass support at the back and drill one lot of holes; now finish one spring and place in position on the governor, then take spring No. 2, screw on to governor and mark off carefully for third hole; same process for spring No. 3. Now put governor in its place, set motor running and watch the brake disc, if this is not perfectly true, take a small hammer and tap the disc from the outside until it runs perfectly true.

We next examine the governor pinion; if this is worn, the cheapest way is to replace by a new shaft and pinion, previously noting the position of governor on the shaft, especially the new "Gem."

Now we come to the *loose* pinion, and it will be interesting to note how a simple error in the assembling of this governor shaft and pinion has been the downfall of the best cheap machine on the market. By a loose pinion I mean one that is not fixed to the shaft. It is generally made of celluloid pressed fibre or some whalebony substance, which runs silently, but will not stand the strain of the sudden stop of the last gear (Fig. 3) (on which the stop lever works). This pinion is connected to the governor shaft by a wire book. (See Fig. 3-B). Now, this wire hook *should be* screwed to the governor shaft, so that the hook engages the leaves of the loose pinion (A Fig. 3), so that when the loose pinion is being pulled round by the last gear (Fig. 3) the governor will have to go, too; thus when the last gear is stopped by the stop lever the loose pinion is stopped also, but the governor and shaft continue to revolve until it runs itself down. This is as it should be, but alas! it is not always so, hence the mistake, the wire hook is fixed the reverse way. Do you see the mistake? What is the result? Why instead of the loose pinion pulling round the governor it simply induces it to go round by the pressure of the wire hook, the pinion often slipping round faster than the governor (causing a falling of the voice), sometimes going down with a rush, loosing the centers and often opening up a field for further trouble. The customer probably takes it to a local repairer, who examines it and can see nothing wrong, and without doing anything to it returns it to the customer, with a "it's all right now, sir; two-and-sixpence, please," the trouble still continues; the owner gets disgusted, gets rid of his bargain (?), which eventually comes to an untimely end.

PHILIP NEALE.

MULTIPHONE CO. IN NEW OFFICES.

The Multiphone Operating Co., of this city, have removed their offices to 141 Broadway, where they are occupying a handsome six-room suite. Since opening their new factory on Vandam street they have been in a better position to handle their rapidly increasing business. The Multiphone Co. expect shortly to put out something new in the line of talking machines for home use, which, of course, will be interesting news for the jobber and dealer.

Leeds & Catlin Co. have booked an order for one million Imperial records for export shipment.

GOOD REPORTS FROM CINCINNATI.

Sales Are for High Class Goods—Grand Opera Season Helped Things—Smith & Nixon Window Display—Rudolph Wurlitzer Co.'s Method of Cleaning Records Winning Wide Notice—Other Items of Interest.

(Special to The Talking Machine World.)

Cincinnati, O., May 9, 1907.

The talking machine situation in this city is extremely satisfactory. The sales running mostly in the larger types of Victor machines, a feature suggesting the popularity of the machines with the higher classes. The sales of "Victrolas," Victor Sixths and Red Seal records are the orders of the day, and the retail talking machine stores carefully fostered by the local distributor, The Rudolph Wurlitzer Co., are making the best of a magnificent territory.

The visiting talking machine man is invariably impressed with the splendid conditions of the trade. The dealers as a rule carry in stock the entire Victor catalog—including Red Seal records, as well as the entire line of Edison records. Entire harmony exists among the dealers who can often be seen comparing notes while visiting in the wholesale talking machine salesrooms of the Rudolph Wurlitzer Co.

The grand opera season naturally created a large demand for Red Seal records and was attended by a big demand for Victor "Victrolas." Caruso and Geraldine Farrar were the stars which outshone the lesser lights, and the recent sales of records rendered by these artists were phenomenal.

The Smith & Nixon Co. took advantage of the recent opera season with a timely window display—enlarging on the possibilities of the Victor, as an exponent of grand opera.

Mr. Silverman, the energetic manager of the Salm Talking Machine Co., which firm carry the complete catalog of Victor records, American and foreign, and Red Seal—reports an excellent trade in high priced machines and operatic and Red Seal records. The demand for the new six dollar quartet record has been a revelation even to this progressive firm, who are accustomed to doing things on a large scale.

We have had occasion to welcome a new talking machine firm, who will undoubtedly prove very active competitors, the Van Phonograph Co., a ten thousand dollar concern, recently incorporated—occupying an excellent location on upper Vine street. This firm will undoubtedly make a record in selling machines and set the pace for firms less favorably located.

George Link contemplates enlarging his store considerably to care for his increased talking machine business. He reports sales very brisk and is quite enthusiastic regarding the future.

The Victor exchange proposition has stimulated business wonderfully. The Rudolph Wurlitzer Co., being in excellent shape to take care of the tremendous demands made on their stock by dealers who had their exchange made redeemable through this firm. The up-to-date methods upon which their talking machine business is conducted has been thoroughly appreciated by the trade, as the big orders received from distant points demonstrated. Visitors have been surprised at the absolutely perfect condition with which their enormous stock is kept. As soon as a record is received from the factory it is cleaned by means of a pneumatic brush, which has a suction power of 25 lbs. This brush is passed over the surface of the record and removes every atom of grit, cleaning the dust which results from the mold, as well as any grit, which may have settled on the record while in stock at the factory.

The Rudolph Wurlitzer Co. are delighted with this method of cleaning records, and according to statements made by experts, they have found the only plan of removing the grit from the record groove. A cloth is unable to clean the minute record grooves, and merely serves to transfer the dust from the surface of the record and pack it into the groove. As soon as it became known that this apparatus had been installed—a number of retail customers brought their records to the talking machine department to be cleaned in this manner and the Rudolph Wurlitzer Co. propose to make this a regular adjunct of their retail repair department with every prospect of a flourishing business.

The talking machine department now occupies about 25,000 ft. of floor space of the large building now occupied by the company. The Edison commercial phonograph has been recently installed in their offices and this transcribing department is considered a "model" of its kind. A visit to the talking machine department of this company will certainly be a revelation to those who are not thoroughly acquainted with the marvelous growth of the business during the past two years.

EDWIN A. DENHAM CO. REMOVE.

The Edwin A. Denham Co. have removed from 31 Barclay street to 500 Broadway, New York, where more commodious quarters have been secured. The new premises are much more conveniently located. The company in a recent letter to their jobbers call special attention to their Lyra talking machines, picture-moving devices and a general line of novelties. Many of them are offered for sale for the first time in this country. They are making a big hit with their new reproducer for the recent type of talking machines, one of the chief merits of which is that it is so constructed that the reproducing point can neither fall out nor be pushed in. J. Grosbut, secretary of the company, recently returned from Europe, where he had been on a buying trip.

The second model of the hornless cabinet has been received at the headquarters of the Columbia Phonograph Co., General, in the New York Tribune Building. The design and finish, of mahogany veneer, are fine examples of workmanship, and Walter L. Eckhardt, manager of the wholesale department, who is responsible for this latest addition to the company's line, is particularly proud of his handiwork.

Mr. Talking Machine Dealer

If you are located in New England—

We Can Save You Money.

Our facilities permit us to ship goods on first Express after order is received. We **wholesale exclusively**—consequently everything is shipped in original packages as received from the factory—no played-out records, no second-hand machines.

We manufacture a number of talking machine accessories among which are our famous Tray Outfits. (If you are not using this system for carrying records in stock it will pay you to write us.)

The **Lynn Record Cases and Peg Boxes** are another of our products.

We also manufacture the **Wentworth and No. 10 Horn Stands.**

NEWS FROM "QUAKER CITY."

Business Reported Satisfactory—Honors for E. C. Miller—Weymann's New Building—Lewis Co.'s Display—A Chat With Adolph Weiss—Musical Echo Co.'s Success—New Keen Specialty—Activity at Bauer's—Other News.

(Special to The Talking Machine World.)

Philadelphia, Pa., May 10, 1907.

Trade for the past few weeks has beeu surprisingly satisfactory despite the continued bad weather. Victor records are scarce—not enough to go round, while the Edison and Columbia are finding a large market.

The talking machine trade will nndoubtedly be glad to learn of the appointment of E. C. Miller, head of the Penn Phonograph Co., of this city, as president of the Philadelphia Stock Exchange. Mr. Miller is one of our most influential bankers and brokers, and like everything else he undertakes has put the Penn Co. on a strong and enviable footing. F. W. Barnhill, secretary of the company, reports business very satisfactory. G. E. Friedel, the road representative, is keeping the wholesale department busy. Speaking of collections, The World's representative, while visiting, got a line on J. B. Miller, the popnlar treasurer, on the trail of delinquents with a pocketful of "Perfectos" for bait.

H. A. Weymann & Son, Edison and Victor jobbers, 923 Market street, have just leased the large five-story grauite front building, No. 1010 Chestnut street, and will take possession June 1. This building, which will give them 5,616 square feet to the floor, is undergoing extensive alterations. The entire basement and half of the first floor will be devoted to talking machines, the remaining half being turned over to sheet music. The second and third will be taken up by the pianos and small goods, the remaining floor to be used as a factory.

Lonis Buehn, president of Louis Buehn & Bro., reports business so far this month as of a high standard and 'way ahead of April.

The Lewis Talking Machine Co., who are enjoying the increased activity evidenced during the past two weeks, are carrying on an active campaign in Columbia goods in this territory, and are having an enormous demand for the new Marconi records. Their recent nnique window display at 15 South Ninth street, kept a crowd constantly in front of the doors. It consisted of a Marconi record tightly held upright in a groove, to the upper edge of which a stiff wire or rod was fastened, the rod at the other end being conuected with the revolving turn-table of an ordinary disc machine. This, when in operation, kept continually bending the record backward and forward, illustrating its flexibility and demonstrating its non-breakable qualities. They are having much success with the Petmecky needles, for which they are sole agents in this section.

Adolf Weiss, of the Western Talking Machine Co., reports trade as steady, and said: "To a large degree the days of immense booms and enormous profits in this business have gone by, and we now enjoy, what is in many ways preferable, a good, steady trade, with a fair margin of profit. No longer is the talker business a get-rich-quick enterprise, but a regular and substantial mercantile venture. Each man has his own particular line of customers who stick by him as long as he looks out for their best interests, aud a jobber has little to fear from outside competition as long as he keeps up to the times. Yes, we feel very well satisfied with the present condition of affairs."

The Musical Echo Co. are experiencing a large increase of business in all departments over last month, and their entire staff is kept on the jump to help the good work along. This company enjoy the reputation of possessing by far the handsomest showrooms in the East. When they first opened up many thought, "They'll never make it pay," but they reckoned without H. E. Marschalk and L. J. Gerson, the enterprising heads of this house. These gentlemen have effectually demonstrated that nothing is too good for this trade. They were after the high class trade, and if one could but see the carriages and automobiles that draw up at their door, he would not long be in doubt as to whether they have succeeded. This company are not, however, turning all their attention to the retail end of the business, for each detail in the wholesale is given their most careful attention, in consequence of which their list of dealers in Edison and Victor goods is gradually growing longer.

The Keeu Co., of this city, are about to place on the market a disc record rack, which will merit the attention of dealers and jobbers. Further details will appear in The World next month.

C. J. Heppe & Son, 1117 Chestnut street, report business in their talking machine department as excellent, the Victor and Edison running about even. They are carrying on an extensive advertising campaign, which has brought a pile of new business. This end of it is ably handled by I. W. Irwin.

The Baur Co., manufacturers of the famous Stewart banjos, are having quite a large demand for these instruments among the talking machine trade, with a good call for violins of the better class. This company are now preparing to issue a complete catalog of their line of musical instruments.

James W. Cooper, manufacturer of record cabinets in this city will shortly issue a new catalog in which will be shown a number of new and unique designs.

CALVE AT THE VICTOR FACTORY.

The Famous Cantatrice Makes Four New Records.

Just previous to her return to Europe recently Mme. Calve paid a visit to the Victor factory at Camden, N. J., for the purpose of making four records of operatic selections, including a Carmen number, for which she received a check of $6,000. After finishing the records contracted for, Mme. Calve made a beautiful record of the "Suwanee River" gratis as a token of good will.

While at the factory the prima donna took occasion to compare her records with those made by other great operatic stars, and took special delight in comparing her voice as reproduced from a record with that of the famous Patti.

A. BLACKMAN ANNOUNCEMENT.

The Blackman Talking Machine Co., 97 Chambers street, New York, have been selling large quantities of their folding trays for cylinder records, illustration and description of which appears in their advertisement in this issue. They regret to announce that, owing to the increased cost of material, it has been necessary for them to make a slight advance in the prices. The new prices are quoted in their advertisement, and take effect June 1. Any orders received prior to that time will be filled at the old prices, providing stock is not exhausted.

PRICE CO. OPEN IN NEWARK.

The Price Phonograph Co., who have opened their new place at 54-56 Clinton street, Newark, N. J., are carrying a complete line of Victor goods, record cabinets and supplies for the wholesale trade only. It is the intention of Mr. Price to cover the jobbing end exclusively, giving every dealer the best of service. There will be no retailing. This company have just got out some very handsome show cards in colors, which should prove exceedingly interesting to dealers. They are referred to iu their advertisement elsewhere in this issue, and have made a big hit. The Price Co. control several retail stores in Brooklyn, Poughkeepsie, Wappingers Falls, and they are preparing some new business getters for the trade. The Victor department at Newark is under the competent management of Clinton I. Price.

F. J. WARBURTON HONORED.

Frederick J. Warburton has been elected a vice-president of the American Graphophone Co., succeeding William E. Bond, whose continued illness rendered his retirement advisable much to the regret of his associates. Mr. Bond will, however, still hold office as chairman of the executive committee.

For a Powerful Organ-like Tone the New

M. Hohner "TRUMPET CALL" Harmonica

Surpasses any mouth-organ that has ever been placed on the market.

No. 220. This instrument which has lately been offered to the trade is endowed with a phenomenal amount of tone power. The reeds are directly connected with a wooden sound-box, into which the tone passes, and finds an outlet through five Brass Trumpet Horns which protrude from the box. No Harmonica of this kind has ever been shown to the trade before, nor is there any which increases the tone so wonderfully. In the hands of an expert player this instrument can be made to sound like a church organ. In producing this instrument the house of Hohner has again shown great results from its constant effort to bring the Harmonica on the level with a high-class musical instrument. The mouth-organ has 10 double holes, 40 reeds, brass plates and is full concert.

COLUMBIA CO.'S NEW QUARTERS.

Columbia Phonograph Co. Concentrate Their Two Broadway Stores at Nos. 35-37 West 23d Street, New York.

On May 1 the Columbia Phonograph Co. removed their stores, at 353 and 872 Broadway, to 35-37 West 23d street, New York. A new establishment was also opened at 111 Chambers street, making a fresh addition to "talking machine row," and where both a wholesale and retail business will be conducted. R. F. Bolton, formerly chief of the company's credit department, will be in charge of the latter place. As previously stated, both premises are to be remodeled and handsomely decorated.

WAREROOMS OF THE COLUMBIA PHONOGRAPH CO., 34-37 W. 23D STREET.

BALTIMORE'S TRADE HAPPENINGS

Presented Briefly, But Fully, for Our Readers.

(Special to The Talking Machine World.)

Baltimore, Md., May 8, 1907.

Despite the close proximity of the summer months, which has usually been the dead season for the local dealers, the wave of prosperity which struck the local talking machine dealers shortly before the winter holidays, continues unabated, and the local dealers are in great spirits over the prospects of transacting a heavy summer business. The business in local circles is unprecedented, and has grown to such proportions that several of the local piano firms have added a line of talking machines to their business. The jobbers in the city also report that their wholesale business is growing rapidly, and that they have their hands full in looking after orders.

After completely renovating the four-story building that was formerly occupied by the Columbia Phonograph Co., the firm of E. F. Droop & Sons have entered the building and are almost settled in their new quarters. However, many changes are yet to be made before their new quarters are thoroughly satisfactory. Besides a new display window, which was placed in the store at the expenditure of several hundred dollars, the interior of the building has been completely repapered from top to bottom. The first two floors are being used for display purposes, while the third and fourth floors will be used for the wholesale department. Joseph A. Grottendick, the local manager for the firm, said yesterday that business had almost doubled since they moved into their new quarters, and that the sale of the high priced talking machines continues to grow, and is one of the gratifying features of the business. They are also now carrying a complete line of the Edison phonographs as well as the Victor talking machine.

George A. Gustin, the local representative of the Columbia Phonograph Co., stated that their number of sales have greatly increased since they moved into their new quarters, which are considerably nearer the heart of the shopping district of the city. "Our business has improved wonderfully," remarked Mr. Gustin, "especially in the retail department, and our force is always on the go. Of course, the increase in business is in the retail department, while in the wholesale end the improvement is not so marked. The Marconi velvet tone records, which we have just recently acquired, are selling very fast, and seem to be popular. We are also doing a land-office business in the sale of high-grade grand opera records. Most of these records are the product of the Manhattan opera company stars, and sell from $3 to $5 a record. Notwithstanding the high price of these records, they are selling better than the cheaper 50-cent ones."

In order to show to the public the flexibility of the Marconi velvet tone records, Mr. Gustin has arranged a very unique display of the records on the walls, and they are tacked and hammered into many different shapes.

The well-known piano firm of Sanders & Stayman have just recently added a line of Victor talking machines.

The firm of H. R. Eisenbrandt & Sons, which several months ago was complaining because they could not get enough Victors to fill their orders, still declare that the talking machine department is the best paying one in the store.

TO INTRODUCE A FOLDING HORN.

The Ideal Fastener Co. are now introducing a new folding horn which is attracting widespread attention in the talking machine trade, and according to a member of the firm, "those who have seen it proclaim it a most ingenious and artistic device in every respect." He says further: "A remarkable feature of the new horn is that it may be opened or closed instantly, and in a very simple manner, there being absolutely nothing to get out of order. When open for use the horn is 32 inches long, with 24-inch bell, presenting very graceful lines. A complete success has also been attained with regard to sound, which is full and pure and identical with that produced by the best and most expensive wood horns. When folded and wrapped the horn has somewhat the appearance of a music roll, and may conveniently be carried under the arm or placed in a corner occupying no more room than an umbrella."

Some large orders have already been taken. Further particulars of the new horn will soon appear in this paper.

Though not quite prepared to make the official announcement, it is assumed that the National Phonograph Co. will put a new horn on the market in connection with their machine outfit, so as to make their proposition complete in every detail. The horn is of special design and finish, and those in the trade who have seen the article speak of it in the highest terms.

The death of O. F. Kauffman, of Reading, Pa., in the wreck of the Shriners' train in California, is deeply regretted.

TRADE NEWS FROM THE CITY OF CULTURE.

Trade Has Been Exceptionally Good Since the First of the Year—Jobbers Report It Difficult to Get Ample Supplies from the Manufacturers—Teamsters Strike Has Interfered Considerably With General Trade—Columbia Phonograph Co.'s Scheme for Developing Business—H. R. Skelton Joins Columbia Forces—"Doc" O'Neil Reports Fine Conditions Throughout the Country—Eastern Talking Machine Co. Activity—Boston Cycle & Sundry Co. Advance.

(Special to The Talking Machine World.)

Boston, Mass., May 9, 1907.

There seems to be nothing but good things ahead for the talking machine trade in Boston and vicinity this spring and summer. Trade since the first of the year has been exceptionally good, and the summer starts out with every prospect for a larger volume of business than last year.

The jobbers in and about Boston report the same old trouble of not being able to get their goods from the factories, and the retailers have the same old trouble of not being able to get their goods from the jobbers, but things are moving as rapidly as can be expected with the large amount of business that is being done.

The teamsters' strike in Boston has done a great deal to affect the jobbing trade, and many shipments are held up in the freight houses because there are not teams enough to take care of them.

The Columbia Phonograph Co. have started upon a new scheme for increasing the business, and the idea is working much better than even they anticipated. The scheme is to place a branch store in the various sections of the city, such as Dorchester, South Boston, the West End, etc., place a man in active charge with a younger assistant. Instead of sitting down all day, waiting for trade to come in through the door, this man goes out canvassing while the younger man remains in the store. The result is that a very large amount of trade is being brought into these branch stores, and, of course, it all centers at the big store on Tremont street.

Harry R. Skelton, until recently with the Houghton & Dutton Co. and the Winchell Co., has entered the employ of the Columbia Phonograph Co. as floor salesman. The Marconi velvet tone records of the Columbia Co. are in great demand now, and the house cannot get enough of them from the factory. The I. C. S. language course for the phonograph is also going well.

"Doc." E. F. O'Neil, the Victor representative, was in Boston this week. He reports very fine trade conditions all over the country, with the West exhibiting a good deal more hustle than the East. "Perhaps this is because there is so much uudeveloped territory there" he says. Mr. O'Neil is considering an offer to go to China for a couple of years as the Victor representative.

Wholesale Manager Chamberlain, of the Eastern Talking Machine Co., says of trade conditions: "I believe that we are entering upon the busiest summer the talking machine business has ever had. It beats me how this trade grows every week. The growth is very largely on the higher priced instruments, too, showing that people realize that the instrument is not a plaything, but a genuine thing of value."

Retail trade at the Eastern Talking Machine Co. is very good. A fine display of horns was made this week, and the new line of cabinets just received gives the store a distinctive air that is very pleasing.

The Zonophone Co. are putting out a combination writing desk and Victrola that is being sold in large quantities.

M. Steinert & Sons make a specialty of the higher grade Victor instruments, and their wholesale business has been more than satisfactory. There is a constant call here for the high grade machines.

There are few busier concerns than the Boston Cycle & Sundry Co., who are steadily developing their business in talking machine supplies. Their stock was never so large or in such demand.

EDWARD N. BURNS RETURNS

From a Visit to Mexico, Cuba, Porto Rico and Other Islands in the West Indies—Reports Business Excellent at All Points Visited—Paul Nicksie Will Represent Columbia Phonograph Co. in West Indies With Headquarters in Havana—To Visit New York.

April 29 Edward N. Burns, manager of the Columbia Phonograph Co.'s export department, got back to New York on the steamer "Esperanza," of the Ward line, coming direct from Vera Cruz. While in Mexico Mr. Burns had an experience with the recent earthquake disturbances that he does not care to have repeated in a hurry. He also visited Cuba, Porto Rico and other of the West Indies. Speaking of his trip Mr. Burns said: "Business is excellent in all these places, and especially so in Mexico. The ordinary or common people are very poor, but notwithstanding this condition they are buying talking machines in tremendous quantities, and not the cheapest by any means. Mexico is developing into one of the best countries in the world for goods of this kind, and all the companies are represented on the ground and doiug their prettiest to advance the sale of their line and booking great business.

"Paul H. Nicksie, formerly manager of the Columbia & Pan-American Express Co., will be our traveling representative in the West Indies, with headquarters in Havana. He will be in New York early this month to get in touch.

"I had a cable from Charles J. Hopkins, our South American representative, Monday, stating he had just arrived at Buenos Ayres, A. R."

B. F. ELLSWORTH GENERAL MANAGER

Of the Leeds & Catlin Co.—Will Relieve E. F. Leeds Considerably—Loring Leeds Back from Trip to the West.

B. F. Ellsworth, Jr., the new general manager of the Leeds & Catlin Co., New York, was at the factory in Middletown, Conn., in the early part of the week, returning Wednesday. The business of the company has grown so rapidly that to relieve E. F. Leeds, the president, of much detail, Mr. Ellsworth will hereafter give this work his special attention.

Loring Leeds, who is becoming known as the rapid American traveler, returned last week from a five days' jump West and back, bringing his usual plethoric bag of orders.

CLUETT & SONS' DEMONSTRATION.

Cluett & Sons recently held a most successful demonstration of the Victor Victrola at their store in North Adams, Mass., over a hundred persons being present by invitation. Only red seal records reproducing the voices of the grand opera stars, Caruso, Scotti, Sembrich, etc., were reproduced and the enthusiasm of the audience was most flattering. A number of newspaper men were present, with the result that the local papers were most liberal in amount of space devoted to the recital and unstinted in their praise of the wonderful machine and records.

Just before Mme. Calve, the famous cantatrice, sailed for Europe on the 2d inst., she called upon Landay Bros., 400 Fifth avenue, New York, and placed an order for grand opera records running into a large amount. Among them were many of her own beautiful voice. Calve is an enthusiastic admirer of the talking machine, and not long since the Victor Talking Machine Co. presented her with one of their finest machines. Caruso, Scotti, Melba and others of the great artists were frequent visitors at the Landay establishment, buying liberally of records for presents to friends and their own entertainment.

The following recently appeared in the "Advice to the Lovelorn" column of the New York Evening World, and proves what a serious influence the talker has on the matrimonial market. Whether the letter is a joke or not may be judged:

"Dear Betty—I am a widower living with my parents. They are very old, both about eighty years. Now, if they were to die I would be left alone. As I am a good cook and a tidy housekeeper, do you advise me to get married or buy a phonograph to keep me company? My salary is $20 per week. H. E." If you think a phonograph will satisfy your heart longings, by all means buy one. It will be much cheaper than a wife, and will only talk when you want it to.

Koehler & Hinrichs, talking machine dealers, of St. Paul, Minn., have found it necessary, owing to the growth of their business, to greatly increase their stock and department, in order to keep up with the volume of trade which is coming their way these days.

We are not Jobbers of **"HOT AIR,"** but

EDISON JOBBERS

THE EDISONIA CO., NEWARK, N. J.

EXHIBITORS AT JAMESTOWN.

Columbia Co.'s Fine Display—C. B. Haynes to Exhibit Edison Line—Roth & Engelhardt in Evidence With Self-Playing Pianos.

(Special to The Talking Machine World.)

Norfolk, Va., May 10, 1907.

The Jamestown Ter-Centennial Exposition is fast assuming a finished appearance as the host of workmen rush night and day, and although the visitors at the opening on April 26 were somewhat disappointed at the incompleteness of certain buildings, later visitors are loud in their praise of both buildings and exhibits.

The Columbia Phonograph Co. have a handsome booth at the Exposition, in which are displayed many novel designs of graphophones as well as the valuable features of the commercial graphophone system.

While the National Phonograph Co. will not exhibit directly, C. B. Haynes & Co., the Edison jobbers, of Richmond, Va., will display a full line of machines and records, being assisted from headquarters in arranging an attractive display. They will not compete for prizes.

Roth & Engelhardt have an elaborate exhibit of their line, including the Peerless automatic player pianos, and their specialties receive a great deal of attention from the visiting crowds.

INJURIOUS LEGISLATION "KILLED."

In last month's World extended reference was made to the bill presented to the Connecticut Legislature relative to goods sold on conditional bill of sale, or lease, and which, if it became a law, would have a decidedly injurious effect on the talking machine interests. The measure was strongly fought by the Pardee-Ellenberger Co., the enterprising jobbers of New Haven, who issued a circular to the trade stimulating opposition to it. Thanks to their efforts, the judiciary committee of the Legislature has reported unfavorably on this bill, and the matter is dead for the present.

CASES AGAIN POSTPONED.

Instead of argument being heard in the United States Circuit Court, New York City, May 10, in the suits of the American Graphophone Co. against the Leeds & Catlin Co., New York, and the International Record Co., Auburn, N. Y., both cases were sent over by Judge Lacombe for two weeks, namely, to May 24. In the Leeds & Catlin Co. case the motion for a preliminary injunction is to be renewed. The infringement charged is that of the Jones patent process for duplicating disc records, which was upheld by the United States Circuit Court of Appeals, second circuit.

A NOTABLE CALIFORNIAN

Is Peter Bacigalupi, the Famous Talking Machine Man, Who Has Triumphed Over Many Difficulties Since the Great Fire.

The illustration below shows something of the development in both avoirdupois and material goods that Peter Bacigalupi, the well-known wholesale and retail talking machine man of San Francisco, has experienced since the 'quake and fire. As stated some months ago in The World, Mr. Bacigalupi recovered rapidly from the catastrophe which swept away everything he had. He immediately commenced buying up ground leases and erecting temporary stores on Golden Gate avenue, which he either rented at high rate or used for various kinds of stores himself. His interests are indeed diversified, but the bulk of his personal attention is given to his several talking machine establishments, which are all doing a splendid business.

DUPLEX PHONOGRAPH CO. WIN.

Judge Knappen, United States Circuit Court, Western District of Michigan, second division, sitting at Grand Rapids on April 30, denied the petition of the Victor Talking Machine Co. and the United States Gramophone Co., Camden, N. J., in which they asked for a temporary restraining order directed to the Duplex Phonograph Co., Kalamazoo, for alleged infringement of the Berliner patent. The court refused the temporary order conditionally that the defendant prepare for trial of the case in October. The decision is brief. A report that the factory of the Duplex Phonograph Co. had been closed, was subsequently proven erroneous.

A HANDY HORN BROCHURE.

Dealers will find it convenient to consult the little brochure recently issued by the Standard Metal Manufacturing Co., 10 Warren street, New York. This booklet contains some very pleasing reproductions in colors of some of the many horns manufactured by this company. A work of this kind is always well to have within easy reach, and the company will be glad to forward copies of this work to dealers who desire same.

A "Searchlight" Communication

We were too late to have our new decorations ready for color work for this issue of The Talking Machine World, but beg to state that, while there is an honest difference of opinion between two prominent manufacturers of amplifying horns as to the merits of baked japan or air dried lacquer finish, we are prepared to deliver either kind and we warrant them at least equal to any other in the market. We also have a new line of superior decorations for people who like something artistic and are willing to pay for it.

THE SEARCHLIGHT HORN CO.

753-755 Lexington Avenue Borough of Brooklyn, NEW YORK CITY

BASEBALL TEAM AFTER "RECORDS."

We present herewith a photograph of the amateur baseball team made up of employes of the St. Louis Talking Machine Co., of which C. W. Long is manager. The team is willing to meet all comers in the St. Louis territory.

THE FEELING WAS MUTUAL.

Mr. Knagge was putting on his coat, preparatory to going to business, when there came a ring at the front door bell. He opened the door. A canvasser stood outside.

"I beg your pardou," said the canvasser, "but I'd like to show you a sample of our improved talking machine."

"I don't think I care to see it," replied Mr. Knagge.

"You are not interested in talking machines, perhaps?" ventured the other.

"I can't say that, either; but I have one already. Talks all day. Never needs winding up, and never runs down."

At this moment a high-pitched voice came floating downstairs.

"It isn't so!" exclaimed the person with the high-pitched voice. "But I've got a growling machine that runs whenever it's in this house!"

GENEROUS SUPPORTER OF SPORT.

Albert S. Marten, president of the Tea Tray Co., was the subject of much favorable newspaper comment during his recent sojourn in the South on account of his interest in stimulating all kinds of sports, notably golf and driving. He donated various prizes in this connection, and his generosity and enthusiasm did much to make the various events held very successful.

DEATH OF JOHN C. HAYNES.

John C. Haynes, president of the Oliver Ditson Co., Boston, Mass., and one of the notable figures in the music trade industry, died at his home in Boston, Mass., May 3, aged seventy-eight years.

QUITE A DIFFERENCE.

Here's a good one from "Chat": As the bootblack looked up and winked he asked:

"Which will yer have, Mister, a five or a ten-cent shine?"

"Why, what's the difference, my boy?"

"Oh, nuthin' much. Only one will last yer till yer gets across de street, and de udder will last year a hull week."

Many people buy the "shine-until-you-get-across-the-street" variety of goods, simply because there is a few cents difference in price. But it is just as much a matter of false economy as it is poor business.

H. H. STANLEY TAKES CHARGE.

H. H. Stanley, formerly of the Oakland, Cal., branch of the Columbia Phonograph Co., has come to this city to take the place made vacant by the resignation of T. T. Maxey, who had charge of the mail order department of that company at 353 Broadway. Mr. Stanley is an experienced talking machine man, and will ably fill the place.

HAS BUILT UP BIG BUSINESS.

That talking machines may be profitably handled by a department store is well illustrated by the growth of that department with the S. Kann Sons Co., Washington, D. C. This house does both a wholesale and retail business in Edison and Victor machines and records, and has a large Southern trade. Monthly sales average over $10,000.

On April 23 the United States District Court granted Sol Bloom, alleged bankrupt, an additional thirty days in which to continue the business. He is endeavoring to secure the consent of his creditors for his discharge in bankruptcy. The liabilities are placed at $25,000.

The Petmecky Co., Kansas City, Mo., report a steadily increasing demand for their needles, which they are disposing of in large quantities. The orders coming in from leading jobbers are steadily increasing.

A sheet music department has been added to the store equipment of the Bettini Phonograph Co., New York. Mrs. S. W. Crosby is in charge, assisted by a couple of young lady demonstrators, and a piano completes the equipment.

Eilers Piano House, at Spokane, Wash., is now giving regular recitals on the Auxetophone.

THE VICTOR CO. WIN SUIT

Against the Leeds & Catlin Co.—The U. S. Circuit Court of Appeals for the Second Circuit Holds That the Sale of Disc Records for Use on Victor Machines, or Infringing Machines, Is an Infringement of the Berliner Patent No. 534,543—Leeds & Catlin Company Held for Contempt—Will Appeal Again.

The U. S. Circuit Court of Appeals, for the Second Circuit, in a decision filed May 2, 1907, affirms the decision of the United States Circuit Court in the suit of the Victor Talking Machine Co., and holds the Leeds & Catlin Co. in contempt of court in selling disc records for use in connection with the Victor talking machines, or machines made in infringement of the Victor Co.'s Berliner patent, No. 534,543, claims 5 and 35.

The case was argued in the United States Circuit Court of Appeals on April 9, 1907, before Judges Wallace, Coxe and Hough. Judge Wallace has filed a dissenting opinion. The decision deciding the case being the opinion of the majority of the court, reviews quite fully the subject, and sustains the complainants' contention to its exclusive rights to manufacture, sell and use disc records, for use in combination with its reproducing apparatus, claimed in claim 35, operated in accordance with the method of claim 5 of the patent in suit.

The defendant contended, among other things, that it had a right to supply a purchaser of a Victor talking machine and records with Leeds & Catlin records, based on the so-called doctrine of "Repair," and alleged right of substitution of parts. The defendant also contended that the Leeds & Catlin records could be used on so-called "feed device machines."

The court, in passing upon the defenses, stated:

"On ample evidence the Court below found: that most of the sales of Leeds & Catlin records were knowingly made by the plaintiff in error to enable the owners of Victor Talking Machines to reprodnce such musical pieces as they wished, by the combination of the Leeds & Catlin record with said machines; that the Leeds & Catlin Co. made no effort to restrict the nse to which their records might be put until after motion to punish for contempt had been made; that tbe only effort at such restriction ever made was to insert upon the face of the records a notice to the effect that such record was intended and sold for nse with the 'feed-device machine'; that the records sold by plaintiff in error were far more frequently bought to increase tbe repertoire of the purchaser's Victor machine than to replace worn-out or broken records.

"In our opinion it is also established by the evidence that the 'feed-device machine' above referred to, was not at or before the time of beginning this proceeding a practically or commercially known reproducer of musical or spoken sonnd, whereas the Victor machine, embodying the claims of the Berliner patent here under consideration, was at such times widely known and generally used, and that the plaintiff in error knew, and sold its records with the knowledge, that if its outpnt was to be used at all by the public, it would be used with the Victor machine, and in the combination protected by the claims of the Berliner patent above referred to."

The court also said, in regard to the so-called "feed-device machine": "We regard the feed-device machine either as a curiosity or a pretence." Continuing the court stated:

"Upon these facts it is clear that the Leeds & Catlin Co. have made and sold a single element of the claims of the Berliner patent, with the intent that it should be united to the other element and complete the combination; and this is infringement (Heaton Peninsular, etc., Co. vs. Eureka Specialty Co., 77 F. R., at 297; adopted by this Court, Cortelyou vs. Lowe, 111 F. R., 1005).

"The facts above recited are scarcely controverted, nor is it denied that the above inference should ordinarily be drawn; but plaintiff in error seeks to avoid that result by asserting that the records under consideration are but temporary, perishable and unpatented parts of the patented combination, and therefore, under Morgan Envelope Co. vs. Albany Paper Co., 152 U. S., 425, free to be manufactured and sold by any one.

"This contention is not supported by the evidence. Disc records are fragile, i. e., brittle and easily broken; but they are not perishable, i. e., subject to decay by their inherent qualities, or consumed by few uses or a single one. Neither are they temporary, i. e., not intended to endure; on the contrary, we find them capable of remaining useful for an indefinite period, and believe that they usually last as long as does the vogue of the sounds they record."

As this decision is of much interest to the trade, we will further quote from the opinion:

"Again it is urged inasmuch as disc records are unpatented articles of commerce, which may be used upon tbe feed-device machine or lawfully exported to foreign countries, that no infringement can be alleged against tbe maker and seller thereof, because his product may be or is, in fact, used by purchasers as one element of a patented combination. This argument disregards the facts established herein. It is true that the doctrine of contributory infringement has never been applied to a case where the thing contributed is one of general use, or suitable to a variety of other uses; especially where there is no definite purpose that the thing sold shall be employed with others to infringe a patent right (Rumford Chemical Works vs. Hygienic Chemical Co., 148 F. R., at 866, and cases cited). But this plaintiff in error is shown to have manufactured and sold records for the express purpose of supplying the users of Victor machines; nor are such records staple articles of commerce (Cortelyou vs. Johnson, 145 F. R., at 935); on the contrary, they cannot be practically used within the United States except with the Victor reprodncer; for we regard the feed-device machine either as a curiosity or a pretense, while the foreign trade of the plaintiff in error is not interfered with by the injunction, nor affected by the order under review.

"It is further contended that those who purchase the patented combination in question without restriction, have lawful right to provide themselves with unpatented records made by any person whatever, by way of replacement and repair. We perceive no substantial difference in the meaning of these words. To return to use something injured or lost, or to substitute for something defaced or destroyed another thing substantially identical, is to repair. The right of general repairing has not been questioned; but what plaintiff in error has done is not to mend or better broken or other records, nor even to furnish new records identical with those originally offered by the Victor Co., but to place upon new discs such other sonnd records as are thought to command a market, and to induce users of the patented machine not to replace, but to increase their stock of recorded words and music.

"The right of repair is measured by the right of the owner of the patented article, and such owner when doing what is above outlined is no more repairing his machine than is one repairing a stereopticon—by changing the pictures therein to suit the whim of the person gazing through it.

"The final contention against the order below, admits that the record actuating the stylus is a vital part of the combination claims of the patent in question; but declares that any purchaser of the patented article may immediately substitute for even an essential element therein, any other element which he conceives better suited to his purpose; and, of course, if this be true such preferred elements may be freely manufactured and sold.

"We think this contention disposed of by Thomson-Houston, etc., Co. vs. Kelsey, etc., 75 F. R., 1005; for the right of substitution there recognized was specifically restricted so as to refuse 'authority to reconstruct or rebuild a combination which has been sold by the complainant'; and whenever a Leeds & Catlin record is placed in a Victor machine the patented combination is instantly reconstructed.

"The right of substitution rests upon the right to improve, pointed out by Clifford, J., in Chaffee vs. Belting Co., 22 How., at p. 223, and is different from the right to repair. But there is here no true substitution, and improvement is scarcely pretended. From a legal standpoint the discs of both parties are identical, because the grooving capable of actuating the reproducer is the same; what is substituted is but music or words, and what is improved either price or novelty in sound. These are but accidents, and no more important than the color of the disc. The true inquiry is whether the owner of a patented combination, the elements of which are durable, unbroken and in good repair, may buy from the patentee one specimen of a single element—from an outsider an indefinite number of identical specimens of the same element, and keep and use them all, under cover of the word 'substitution'; it further appearing that the element so procured and used is useful and commercially known only in respect of the said combination.

"We think this cannot lawfully be done, and affirm the order below."

Horace Pettit, counsel for the Victor Talking Machine Co., in commenting on the foregoing, says: "This decision practically sustains the Victor Co.'s contention that the claims of this Berliner patent, No. 534,543, control both the disc records and the reproducer which form the essential elements of the combination of this patent."

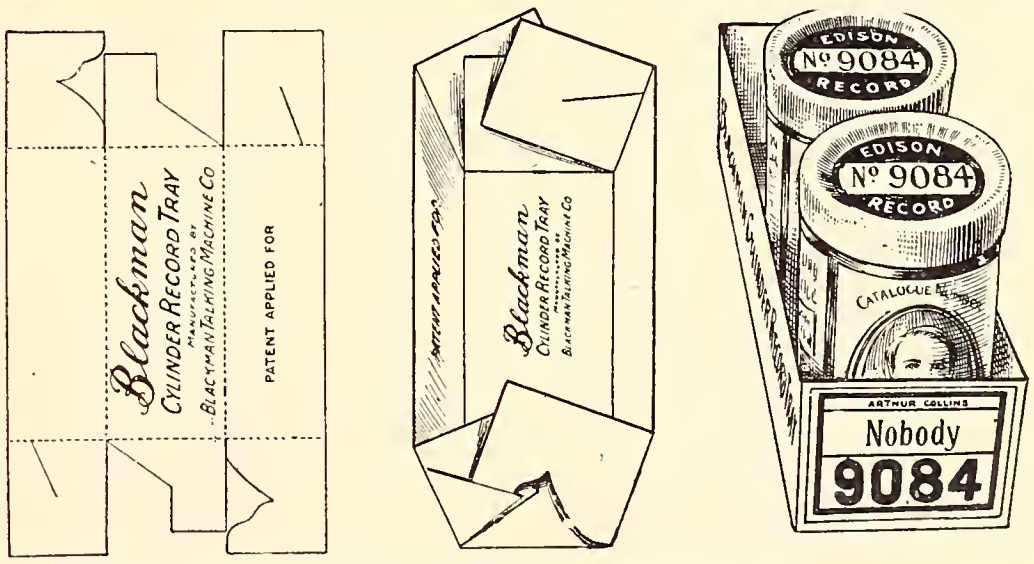
* * * *

When E. F. Leeds, president of the Leeds & Catlin Co., was asked by The World if an appeal to the United States Supreme Court on the foregoing decision would be taken, he said: "Most assuredly. The papers on the writ proceedings were filed Monday, April 6, by Mr. Hicks for our side, and Mr. Pettit prepared the case for the Victor Co. They both went to Washington, D. C., to appear before the court on Monday, the 13th. I feel certain we will win out eventually. Judge Wallace's dissenting opinion is good enough for us. Both the validity of the patent and the contempt proceedings are to be reviewed."

THE BLACKMAN CYLINDER RECORD TRAY

(PATENT APPLIED FOR)

A RECORD TRAY WITH RECORD LABEL FOR LESS THAN ONE CENT



We ship them flat and they can be FOLDED into a STRONG TRAY in a few seconds, as shown above This tray, with the RAPKE Record LABEL, makes a HANDSOME looking stock and a SYSTEM that you can't beat. Full particulars on request.

THE FOLLOWING PRICES ARE A SLIGHT ADVANCE OVER FORMER PRICE OF TRAYS, NECESSARY BY INCREASED COST OF MATERIAL. THEY ARE EFFECTIVE JUNE 1st.

MANUFACTURED BY

BLACKMAN TALKING MACHINE CO.

J. NEWCOMB BLACKMAN, Prop.

97 CHAMBERS STREET - - - NEW YORK

TIMELY TALKS ON TIMELY TOPICS.

During the past month the usual crop of lawsuits have been recorded. The Berliner and the Jones patents seem to be the crux of the situation, and what the courts have to say will be interesting reading to every branch of the trade. It is an acute condition, as it always is when basic patents are being determined. The owners of these inventions are maintaining their rights under the law, no matter what may be said to the contrary. This position must be accepted in ali manner of fairness, and until the edict of the higbest court in tbe land has been formulated, there should be but one opinion prevalent. It is a waste of time for the trade at large to fly in the face of these judicial decisions, no matter how closely the trade may be circumscribed. Facts are facts, and law is law.

In Australia the American-made talking machine holds the premier place. First on account of its supreme quality of manufacture, and then because the packing of the goods is all that could be desired. If the general line of American goods had as high a reputation as talking machines and accessories enjoy in Oceanica tbe sales would be increasingly larger and stand on a firmer basis.

Contracts have been made with the leading "talent" by one company, at least, fearing other concerns might "tie them up." It is an idea new here, but of no novelty to the foreign record manufacturers. This policy has been followed abroad for several years, with the result that pretty nearly everything worth having in Europe is corralled. To be sure, this is a far-seeing business arrangement that appeals to any man with common sense, and the charge of "monopoly" can scarcely be mentioned, even were the indictment drawn under the Sherman act, which happily does not apply to talking machine "artists." Under the agreement referred to Ada Jones, Len Spencer, Mr. Collins, Harry MacDonough and others are "fixed" with the company referred to for a term of years. At the same time the other recording laboratories have the value of their services. It looks as if the copyright bill introduced during the last session of Congress were working in advance of its actual enactment.

Commenting on the growth of the trade it may be mentioned in passing that one of the leading manufacturing companies had on their books in 1905 about 2,500 dealers. In February of this year they booked 12,000 dealers, and during the past twelve months "turned down"' 6,000. The latter were refused listing for various reasons, chief among which was that they were not reputable merchants in the sense that their talking machine line was not "featured" as strongly as the other goods they carried. Comment is superfluous.

Gentle rumor has it that the "swell" operatic singers are not above the despicable practice of grafting. That is to say, while these geniuses are enamored of the beautiful records they themselves make, at the same time when it comes to handing out "the price" they are very much averse to tbe "vulgar" habit. With their reputation these exceptional beings are firmly of the opinion the world is theirs, in a material as well as in an artistic sense. This means an order is supposed to be honored minus the cash. Think of this in the face of the report that the Victor Talking Machine Co. paid Melba $50,000 for a week's work!

Among the interesting things talked about in the trade is that the National Phonograph Co. are framing up a new contract. The changes are said not to be important, only as they serve to bridge over possible contingencies in a legal way. Another very important matter that seems to disturb the quid nuncs is that the company are contemplating issuing a disc record. To be sure, the company have always denied their entering into tnis field, though it is believed if an Edison disc were put on the market it would "cut some ice."

Heretofore when the company have been approached on this—we will say delicate mission for want of a better term—the officers have politely replied that Mr. Edison himself was opposed to the disc proposition. Not but what he could hand the trade an article they "could swear by," so to speak, but he is quoted as saying he did not care to "have the eartn." This mark of modesty is doubtless commendable, as the disc record, it must be admitted, seems to have such a liberal share of trade, really astonishing in its magnitude. The liberality with which the Edison Phonograph Works are planning their new works leads the trade to hazard this guess. F. K. Dolbeer, manager of the credit department —than for whose opinion everyone has the highest respect—smilingly denied the "soft impeachment." Now, if the smiling but energetic general sales manager, C. H. Wilson, had gone so far in his information to the newspapers to make the statement, it is true it would have given the trade pause. Also, it may be quoted that President Gilmore's trip abroad may also have a bearing. At the same time, with all this apparent official chat, until the National Phonograph Co. issue their ipse dixit it is idle talk. At any rate, we will see what we will see, as the philosopher remarked in a moment of aberration.

"Although the solution is as plain as the nose on your face, I had a problem to solve recently that has caused a lot of the boys a mental tie-up," said a New York talking machine dealer, who also sells bicycles. "A man came into my store and wanted to hire a bicycle for a certain length of time. He had only a two-dollar bill,

The KOMPAKT HORN

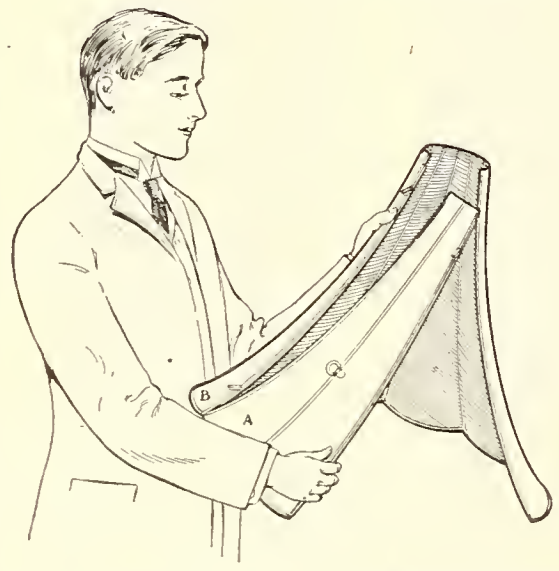
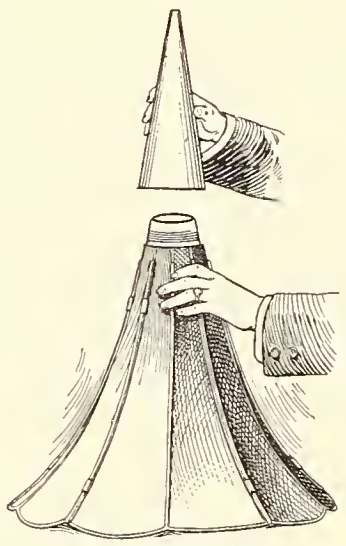
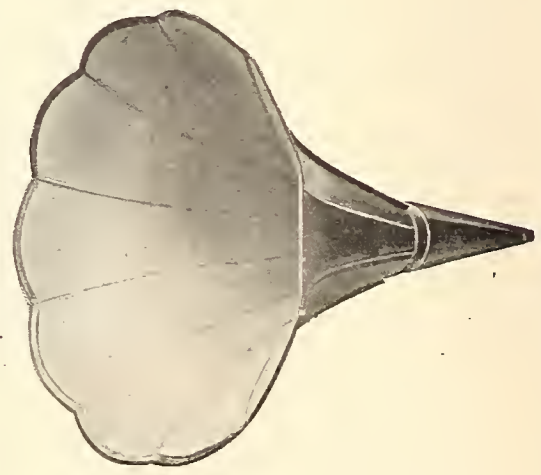
which anybody can put into use inside of one minute





Screw Tube



A new feature on the **Kompakt Horn** is the **Screw Nozzle,** which does away with Thumb Screws.

Worth Handling—Pays Large Profits

We manufacture a complete line of Brass and Sheet Steel Nickel-Plated Flower Horns finished in artistic designs and decorations. For catalogue and prices, address

The New Jersey Sheet Metal Company

9-11 Crawford Street, Newark, N. J., U. S. A.

and I told him the charge would be $3. He took the two-dollar bill to a pawnshop and pawned it for $1.50. On his way back to the store he met a friend to whom he sold the pawn ticket for $1.50. That gave him $3, and he came back and hired the bicycle. Now, who's out the dollar?"

C. M. Brown, advertising manager of the Victor Talking Machine Co., who is stationed at the factory in Camden, N. J., did a clever stunt in writing "Mrs. Van Puyster's Idea," which was published in the leading magazines. Now he has reprinted it as a booklet, on tinted pages and gotten up, including the large square envelope, in the swellest possible style. The leading jobbers and distributers have been just supplied with an ample stock, to be used where they will do the most good. The story itself is of irreproachable style—easy and attractive reading—with illustrations that lighten and brighten the text.

The latest sphere of usefulness opened to the talking machine is reported from Des Moines, Ia., where a blind medical student passed his examination through the medium of the talker and got his certificate to practice without any question. For a long time the authorities could devise no means whereby the student could be properly examined and, although he had completed his course, he could not get authority to practice. At last, however, the Attorney-General decided that the questions could be read to him and the answers typepritten by himself or dictated to a stenographer or talking machine, and the latter course was adopted.

B. G. Warner, a heavy stockholder in one of the large talking machine companies, has four retail stores in Brooklyn, N. Y. He only started in the business seven years ago, and his success well illustrates the great possibilities in the talking machine field.

Paul H. Cromelin, vice-president, is now at the Jamestown Exposition, where he will be off and on until its close.

CHARGE OF COLUMBIA PUBLICITY.

Geo. P. Metzger, a Well Known Advertising Expert Already Giving Evidence of His Skill.

Concerning the appointment of George P. Metzger as head of the general publicity bureau, Geo. W. Lyle, general manager of the Columbia

GEO. P. METZGER.

Phonograph Co., General, sent a special letter to the stores and agents, part of which follows:

"On April 15 we completed negotiations which had been in progress for some time, and were thereby enabled to round out our long-considered plan of organized and aggressive general advertising. This should eventually prove one of the longest strides we have ever taken—and we have been taking some good ones lately, too.

"Walter P. Phillips takes over the entire catalog department—everybody in the organization knows him and knows he has a man's job in front of him. Before long we will be ahead of our dates with catalogues and other similar printed matter. Constant special attention will be given to this most important subject.

"George P. Metzger's advertising work is better known all over the country than his name may be to the Columbia Co.'s sales force. He is in full charge of the department of general advertising, and his work is bound to bear the closest kind of relationship with that of every member of the Columbia selling organization. The general advertising department will be in no way separate in purpose from the other executive departments. Its business is not to be the publishing of clever literary essays or unmeaning art work. Its every effort will be directed toward the one primary object of more sales and less cost per sale."

BECOME ZONOPHONE JOBBERS.

The Douglas Phonograph Co., 89 Chambers street, New York, have become jobbers of the Zonophone line of disc records, of which they will carry an adequate stock to supply their trade at all times. J. F. Collins, formerly on the floor, is making his first selling trip, and is doing surprisingly well. Mr. Collins has a pleasing personality and understands the business thoroughly.

The Sanders & Stayman Co., Baltimore, Md., and Washington, D. C., have installed complete lines of Victor talking machines and records in both of their stores. Special rooms have been fitted up for the new department, and the line will be energetically pushed.

Just One Moment, If You Please!

¶ You know the necessity of getting good records; you know their impelling power to your business; you know that they will help your profits in a material sense; you know that an imperfect record sometimes drives customers away from your establishment, and you know that a perfect record is a "talker" in your behalf.

¶ You know all of these things are true, but

DO YOU KNOW

ZON-O-PHONE QUALITY?

¶ If you do, we know that you have ZON-O-PHONE records in stock, because after having once heard them you will be too good a business man to miss such an opportunity of forming an alliance with a concern that is producing records which sell, and records which create trade.

¶ Our monthly list of records contains no dead stock. Every record which we put forth has been thoroughly tested, and it has been a question of quality with us rather than quantity in our monthly lists.

¶ Then too, if you handle the ZON-O-PHONE RECORDS the ZON-O-PHONE TAPERING ARM instruments will command a share of your attention. These retail from $30.00 to $75.00. They contain special points of excellence all their own. The motors are interchangeable, all parts are alike and will fit single spring, two spring and three spring. It is our earnest endeavor to meet every requirement of the talking machine trade, and we have aimed to study the particular needs of this industry for some time. We are confident that we can please you.

The Universal Talking Machine Mfg. Co.

FACTORY AND GENERAL OFFICES:

Camp and Mulberry Streets, NEWARK, N. J.

BUSINESS NEVER BETTER

Is the General Report of the Leading Talking Machine Manufacturers of This Country—The Output for April and Opening Weeks of May of Both Machines and Records Phenomenal—Summer Outlook Good.

Business with the manufacturers of machines and records was never better. The last four weeks has witnessed a new high record at the plants of the Victor Talking Machine Co., National Phonograph Co., Columbia Phonograph Co., General, Universal Talking Machine Manufacturing Co., etc. Talking of the situation, F. K. Dolbeer, manager of the National Phonograph Co.'s credit department, said to The World recently: "The month of April was not only the best in the history of the company, but in both March and April our output was only limited by our capacity. That is what hampers us now. When our entire new plant is completed, then we will be in a position to take care of our trade much more satisfactorily. Business with us was never better."

INTELLIGENT SALESMEN WANTED.

The right-minded and progressive talking machine man is glad to have his clerks know more about buying, handling and selling than himself, and he will invariably help the ambitious man to know more every day. No employer of any store ever reached the point of so great knowledge that a rational employer wasn't willing it should be so. The greatest business men do not pretend to know the whole thing themselves, and the managers of great enterprises are always looking for some one who knows more.

What difference does this make to the clerk as an individual? How is he to gain anything by exerting himself to make sales? Had not his employer exerted himself to sell goods at the start he would never have had enough business to require the help of clerks, and if his clerks do not exert themselves to make sales his business will steadily decline.

So long as there are more goods sold and the demand for them is increasing all the time, so long is there a position for the good clerk and the probability of his getting more pay for the work he does.

DURAND VISITS WASHINGTON.

H. C. Durand, manager of the business phonograph department of the National Phonograph Co., of 31 Union Square, was in Washington, D. C., for several days during the past fortnight, exhibiting the Edison product to the heads of various government bureaus which contemplate the introduction of commercial talking machines. With the many merits embodied in the Edison he feels sanguine that he will secure a good share of the orders to be awarded.

Edward D. Easton, president of the Columbia Phonograph Co., General, sails for his annual European trip of inspection June 7. He will be accompanied by his son and a private secretary.

Splendid Business Opportunity

Big chance for talking machine man to secure an interest in a growing business located in a Southern city, which has never been canvassed and worked as it should have been. But one competitor in town. Great opportunity for right man. Address, "ACM," care the Talking Machine World, 1 Madison Avenue, New York City.

WHICH CAPITALIST

Could be interested in an entirely new talking machine without winding or electric drive? No spring. Great opportunities for the foundation of an international trade. Address, "Ennell," Berlin, O. 17 den Markgrafendamm 11, Germany.

MANAGER WANTED.

WANTED—An active and competent young man to manage the Victor and Edison department of a large music house in Eastern Penna. State experience and salary desired—Correspondence Confidential. W. K., care Talking Machine World, 1 Madison Avenue, New York.

Open for a Proposition

Having had nearly fifteen years' experience in the Talking Machine business, am open for a proposition off the road in order to work my original ideas in the wholesale and retail Talking machine business. Address, "Progressive," care The Talking Machine World, 1 Madison Avenue, New York.

RECORDS WANTED

WANTED—Cylinder and Disc Talking Machine records. State particulars and lowest cash price. Address, "Records" care Talking Machine World, 1 Madison Avenue, New York.

WANTED

Will pay spot cash for old style or second hand Edison Phonographs or Victor Talking Machines. Singly or in quantities. Must be cheap. Send full particulars to "J. R.," care Talking Machine World, 1 Madison Avenue, New York City.

TO YOU, MR. DEALER!

Let me write your ads. Publicity is the keynote of success. Thousands of active merchants owe their success to advertising. Why not number among them? Get Wise! I will write you a fair sample copy for $1.00. What have you to sell? Address, H. B. Kirsch, 173 Howard Street, Newark, New Jersey.

AT A BARGAIN
50 Disc Machines

We guarantee them to be absolutely new latest Model with powerful clock spring Motor, 10 inch Turntable, Concert Sound Box, large Solid Oak Cabinet, 23-inch Black and Brass Horn with supporting arm. Cut sent on application.

These are not Talk-o-phones and no offer accepted for less than fifty. Address, OUTLET CO., Providence, R. I.

Are You From Missouri?

MR. DEALER:—Do not fail to read this, it will interest you. Send us one dollar, and we will send you a sample of one of our business getting show cards, size 22x28, handsomely designed, and three of our small show cards, size 11x14, also neatly made up and illustrated, that we know will sell the records that you want to clear out. All you have to do is send us the numbers of the records and we do the rest. A trial order will convince you and after that you will not do without them as our many patrons will tell you.

SPECIAL FOR THIRTY DAYS ONLY

We make you up a set consisting of 12 monthly signs, size 22x28, everyone a work of art, for any show window, no two alike, also two of our instalment signs or business bringers, especially made for that purpose, size 22x28, and three of our illustrated signs to move any dead record or bad seller that you may want to close out, total in all 17 signs, and well worth double for $7.00. This is an exceptional offer, and one you cannot afford to miss. Fall in line and let us show you.

These show cards are made only for the Talking Machine Trade, and that will assure you that you are getting something that you really want, and something that will assist you in disposing of your stock.

PRICE PHONOGRAPH CO., 54 Clinton Street, NEWARK, N. J.

VICTOR DISTRIBUTORS

Have you been able to get your Victor goods promptly, if not, try us, as we are the only distributors who do not retail, and you get the goods just as we receive them from the Factory.

LARGE STOCK—NO RETAIL—QUICK SERVICE. Your goods shipped one hour after receiving your order. Send in your trial order.

AN INNOVATION IN CONNECTION WITH THE

"HEISE" SYSTEM OF Wire Record Racks

We have added to the value of the Syracuse Wire Record Rack for Disc Records by means of a heavy manilla envelope which is designed to protect the record from injury. In this new form, records can be stored in our Wire Record Racks with greater convenience and less possibility of injury than in wooden shelving.

Always Planning for the Dealer's Betterment

We are never content with "good enough"—Improvement is the watchword here—Have you one of our complete catalogues?

We are now preparing descriptive matter regarding this improvement in our Disc Record Racks. Send for it.

We Are Horn Specialists

Some Horn Facts

Whenever you see the trade-mark which appears on this page on your horns you may rest assured that you have the best procurable.

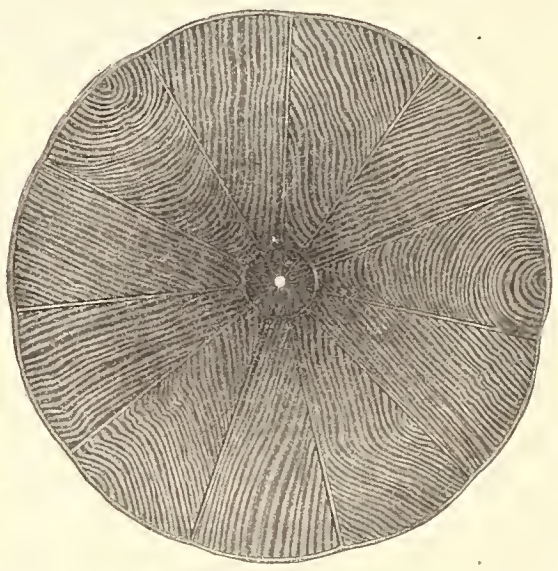
An experience of years is embodied in the "Standard," and our purchasers in all parts of the country know that our grade of workmanship insures durability and satisfaction.

The quality of our horns is absolutely the best.

There is no fading, cracking or flaking off. No rattle in seams. If you have the "Standard" in stock you have the best creation in the horn market.

To The Jobber

Many of the leading jobbers in this country handle the "Standard." It is our aim to thoroughly protect our jobbers in every particular, and our entire line of the various colors, shapes and sizes makes it a most desirable adjunct to every jobber's stock. There is an attractiveness about the "Standard" which places it at once in the artistic class.



Our new wood finished horns are perfect reproductions of mahogany, golden and Flemish oak, and will prove good sellers.

You'll find that our product in style and finish outclasses any in the market.

We supply leading manufacturers of machines with their horns. Our finish and quality must be right else our product would not meet with the demands of this trade.

To The Trade

You are entitled to have the best in the horn trade, and we know of nothing better than the "Standard." Do you know all about it?

We issue a little brochure in colors, showing illustrations of our various horns, which should be within reach of every dealer in the land. It is easy to tell from the illustrations shown in the booklet just what is newest and most desirable. The nearest jobber will probably have a complete line.

If you have not seen this little "Standard" brochure, write for a copy and we shall be glad to supply you.

TRADE NOTES FROM TWIN CITIES.

Growing Demand for Talkers—L. H. Lucker of the Minnesota Phonograph Co. Enthusiastic Over Conditions—Columbia News—T. C. Howe Handling the Victor—Dyer Expansion—Other Items of General Interest.

(Special to The Talking Machine World.)

Minneapolis and St. Paul, May 6, 1907.

There is an uplift tendency quite noticeable in the talking machine business in this locality. This is evidenced by the constantly growing demand for a higher grade of instruments, also for a better quality of records, particularly in the line of "Red Seal" records gotten out by the Victor house.

L. H. Lucker, president of the Minnesota Phonograph Co., is a man who acts the way he thinks. He is very enthusiastic over the future of the talking machine. His recent venture in occupying the first of last month one of the most expensive ground floor store locations on Nicollet avenue, in the heart of the best retail district of Minneapolis, would have made a timorous man stop and think twice. He considers the expense of rent a bagatelle, however, if he can get the business. And he seems to be getting it. The sale of records last month was big, while the sale of "Red Seal" records last week (doubtless due to the fact that Conried's company appeared here) was by far the largest they had ever made. Mr. Lucker also reports that his wholesale store sold more records in April than during any previous month.

W. A. Lucker, formerly in charge of the Minneapolis branch, has been transferred to the St. Paul store, while Mr. Lowey, formerly with the New England, but more recently on the road for the Minnesota Phonograph Co., will assume charge of the Minneapolis retail store.

J. W. Wheeler, manager of the Columbia Co.'s branch, reports quite a satisfactory trade during April. He reported a good demand for the Columbia disc machine, also a splendid sale of records last month, and those of the better quality.

T. C. Hough, with his four stores, reports a big increase in business over last year. Mr. Hough recently took on the Victor, though for several years he handled the Edison and Zonophone exclusively. He states that the sale of records has increased considerably.

W. J. Dyer & Bro.'s talking machine department also reports a very satisfactory trade, and much better than last year. This is in some part due to having moved from the fourth floor down to the first floor of the building last fall. The demaud for records, it was stated, was exceptionally good.

FRANK DORIAN ARRIVES

From Europe on May 4th—Left With President Easton and Others for a Short Trip.

Frank Dorian, the manager of the interests of the Columbia Phonograph Co. in London, England, arrived iu this city on the steamship "New York" on May 4, aud will make quite a visit on this side before he returns. In compauy with Edward D. Easton, president of the company, George W. Lyle, the general manager, and Walter S. Gray, of San Francisco, Cal., the Pacific Coast manager, he left last week for a tour of part of the New England States in Mr. Eastman's new Pierce automobile, spendiug the greater part of the week in making the trip, and calling at the leading Columbia stores.

THE KAISER UP-TO-DATE.

The Possessor of a Phonograph-Clock Which Reminds Him of Engagements.

In the practical department of this issue of The World, there is an extended description of a clock with phouograph appendage which is doubly iuteresting in view of the fact that we learn from Germany that the Kaiser also possesses a unique clock made for him by a Geneva inventor, which reminds the Emperor of business and other engagements. When the Kaiser, for example, wishes to be at the Chancellor's house at 10 o'clock in the morning, he speaks into the phonograph the night before, moves the pointer and is then called at the hour indicated. The phonograph graciously announces: "Your Majesty, now is the time to call the carriage to go to Chancellor Von Bulow's."

Moreover, when the Kaiser is at breakfast, the clock tells him a dozen or more things which he spoke into the phonograph the night before so as not to forget them.

SOME RECENT VISITORS

To the Headquarters of the National Phonograph Co. in This City.

Following is the list of visitors to the New York office of the National Phonograph Co. for the past month: H. Wondelich, J. Samuels & Bro., Providence, R. I.; L. E. McGreal, McGreal Bros., Milwaukee, Wis.; T. H. Towell, Eclipse Musical Co., Cleveland, O.; Fred. K. Babson, Babson Bros., Chicago; W. C. De Foreest, De Foreest & Son, Sharon, Pa.; C. J. Schmelzer, Schmelzer & Sons Arms Co., Kansas City, Mo.; A. Allen and J. Foster Davis, International Correspondence School, Scranton, Pa.; Peter Kelly, Jr., Peter Kelly, Montreal, Cauada; W. O. Pardee, Pardee-Ellenberger Co., New Haven, Conn.; Geo. R. Youmans, George R. Youmans, Waycross, Ga.; Thomas Wardell, Lowell, Mass.; E. F. Taft and R. Beck, Eastern Talking Machine Co., Boston, Mass.; A. E. Mandy, R. S. Williams & Sons Co., Toronto, Canada; C. B. Haynes, C. B. Haynes & Co., Richmond, Va.; Ben Lee Crew, Phillips & Crew Co., Atlanta, Ga.; J. L. Wagoner, Pittsburg Phonograph Co., Pittsburg, Pa.; W. D. Andrews, W. D. Andrews, Syracuse, N. Y.; C. N. Andrews W. D. Andrews, Buffalo, N. Y.; John Rogers and Mrs. Rogers, Knoxville Tyewriter & Phonograph Co., Knoxville, Tenn.; Ross P. Curtice, Ross P. Curtice Co., Lincoln, Neb.; Jas. Fintze, Ball-Fintze Co., Newark, O.; Thomas Hext, Hext Music Co., Denver, Col.; R. Wurlitzer, Jr., R. Wurlitzer Co., Cincinnati, O.; Charles N. Post and C. E. Goodwin and J. F. Bower, Lyon & Healy, Chicago, Ill.

Dollars for every Talking Machine Man and Arcade in America!

JUST LIKE FINDING THEM!
EASY MONEY TO BE SURE!

¶ If you have not handled coin operating machines, then you have neglected a great business opportunity.

¶ Did you ever stop to consider what a great earning capacity these workers have?

¶ The total of their combined earnings throughout the country would run into enormous figures, and while discussing this subject we are going to tell you about the best coin operating machine known. It IS THE PIANOVA and it takes in more cash than any player manufactured. It is the best coin operated piano created, and takes in a steady stream of coin so that the dealer gets his profit quickly.

¶ Some of the largest dealers in the country handle the Pianova, and they are most enthusiastic in their praise of its money-making qualities.

¶ Talking machine men will find it one of the most pleasing adjuncts to their business.

¶ It blends perfectly with the talking machine line. It can be placed in arcades and public places, where it will be a constant source of revenue to the dealer. Do not fail to look into the advantages of a business alliance with the Pianova player, and do not delay in writing, for delays are dangerous. Just drop us a line, and we shall be glad to take up this subject with you. There is no reason why you should not be making money out of this proposition, just as your neighbor is in a nearby town.

¶ Look up the Pianova possibilities, not soon, but NOW.

PENNSYLVANIA R. R. TRAIN WRECK.

Mystery Solved by Talking Machine—The World Representative and a "Talker" Enact the Roles of Detectives and Run Down the Criminals—A Victory Worth Recording in the Archives of the "Graph" and "Phone" Industry of This Great Country.

Every one has read with much interest, and traveling men with great trepidation, of the train wrecks which have followed one another with such rapidity during the past few months. A diabolical scheme thought out and executed with such cunning as to completely baffle every effort on the part of railroad officials and detectives was a pretty tough proposition for a newspaper man and a talking machine to tackle, but tackle it they did, and with very good results, as the following narrative shows:

Spinning along between Philadelphia and Pittsburg early one morning, comfortably lounging in a Pullman chair with a sample "talker" beside me and a case of records in the rack overhead, I was scanning the pages of my order book, when the train slowed down so precipitously that I was sent sprawling into the aisle amid an avalanche of baggage and bewildered passengers. Recovering my equilibrium, I rushed to the door and gazed out upon the spring landscape.

The train had come to a standstill by this time, so I swung off my car and ran up the track

FLAGGING THE TRAIN.

ahead of the locomotive. About twenty yards from the spot where our train had stopped stood a beautiful girl in the picturesque garb of a gypsy, and flung aloft in the breeze which eddied through her dark hair was a scarf of gaudy colors tied to the end of a sapling—a hastily constructed danger signal which had saved my life and those of my fellow-tourists, for just beyond the young woman, chained securely to the track was a heavy log of sufficient size to have sent us flying from the rails a mangled heap of flesh and debris.

"You do not know how the log came there, do you?" I asked her with a smile, my manner indicating that I believed her wholly innocent.

"No, Mister, I know nothing," she replied, but her eyes were on the ground and her cheeks and neck flushed crimson. "I come out to the track to watch the train go by, and when I see the big stick on the rails I take my scarf and wave it and the train stop; that is all."

"Do you tell fortunes?" I inquired.

"Yes, Mister," she answered, and still her eyes roamed everywhere but on my face. "Will you not come to our camp which lies yonder"—she pointed to a distant pine grove—"and have yours told? I tell you nice one for 50 cents, Mister."

"Yes, I think I will," I told her, and asking her to wait for me, I returned to the train for my traps. Then having informed the conductor that I would sojourn at "Gypsyville" for awhile, and being chaffed about allowing a pretty face to interfere with business, I found my comely fortune-teller and started with her for the home of her people. Arriving at the camp I was escorted up the steps of a gayly painted vehicle and found myself in a barely furnished room curtained off as a palace of palmistry and fortune-telling. I had scarcely seated myself and given my hand into the keeping of the dusky queen, when just beyond the curtain at the opposite side of the apartment, I heard some scattered fragments of conversation. Then the little maid at my side said, seriously:

"You have a long life line, Mister, and your hand shows great ability in solving mysteries. You should be a detective, Mister."

"Me a detective?" I questioned. "Oh, say!

"WILL YOU PLAY IT FOR ME, MISTER?"

that's rich. Why, my dear girl, I sell talking machines to make people happy, and if you will suspend operations upon my hand for a moment I will show you how this one works." She nodded a consent that was bubbling over with curiosity, and as I lifted the top from the cabinet which exposed the "talker" to view, she gave a little scream of childish delight.

"Oh, isn't it pretty! Will you play it for me, Mister?"

The buzz of conversation was still going on outside, and it had evidently become a quarrel, for the voices were high-pitched and tense with passion, but still I could not understand them. Taking advantage of a moment, when my companion was looking elsewhere, I inserted the horn amid the torn folds of the hangings, dropped the recording stylus upon the surface of the blank and pushed over the starting lever. Then extending my palm, within which sparkled a new silver dollar, I cried: "Take your reward, my fair one, and when you have finished with the reading of my fate, I will play you sweet music."

She dimpled and complied, telling me very coyly the same old story about the dark woman who would cross water and the light man with a bundle. When she had finished I readjusted the machine and played several records for her. It was at this time that I saw two rough-looking fellows with beards and tousled hair leave the camp and stalk off together toward the railroad.

The concert over I packed my belongings, and, inquiring the way to the nearest depot, struck off through the woods by the shortest route. When at last the waiting-room door of the station at Blanktown had banged behind me I carried a certain record of my collection to the window and scrutinized its polished surface as minutely as a jeweler might a diamond. It was the one I had set to gathering evidence behind the torn curtain in the gypsy van, and, thank heaven! it had not labored in vain, for I perceived that there was something engraved there. I had my machine ready for reproduction in a jiffy, and, slipping the record upon the mandrel, this is what came to me through the horn:

"Swish—swish—swish—shall we kill the girl? damn her!" "No," another voice broke in, "she looks good to me, and there's other ways of gettin' even besides killin', and more agreeable to us, too. You leave her to me; I'll fix her good and plenty." "Swish—swish—we must work further from this camp next time, though, Tony; and, say, the bent rail hereafter for mine instead of logs; it's safer." Then the first voice answered, "All right, get the horses ready and we'll try Forbes Crossing this very night. It's devilish quiet there, and that means a pretty fair chance of gittin' away with the swag, eh, pard?" The voice grew inaudible at this point, and with another "swish" the reproducer ball fell from the end of the cylinder. I placed the record back in its box, and, stepping to the window where tickets were sold, wrote a telegram, which read: "Chief of Police, Pittsburg, Pa.

"Have detectives at Forbes Crossing to-night. Two bearded men, tall and dark, from gypsy camp, near Blanktown, will attempt to wreck train by deflecting rail. They are the men you want."

I signed the message and handed it to the agent, explaining everything to him, and requested him to immediately forward the same to the proper authorities. He did so, and the men were caught that night while in the act of prying loose a rail. They are now in custody and have confessed.

When it comes to detective work, Mr. Talking Machine Dealer, the "talker" is certainly a winner, and, by the way, I have it on very good authority that the Pinkertons are about to adopt it, but, of course, that is confidential.

HOWARD TAYLOR MIDDLETON.

The Newark Talking Machine Co., of 545 Broad street, Newark, N. J., of which M. Buchner and J. E. Price, Jr., are proprietors, have their newly-opened business well under way in their handsomely appointed store. They handle both Edison and Victor lines.

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York.

(Special to The Talking Machine World.)

Washington, D. C., May 8, 1907.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past five weeks from the port of New York:

APRIL 8.

Buenventura, 4 pkgs., $120; Buenos Ayres, 5 pkgs., $783; Callao, 8 pkgs., $515; 2 pkgs., $32; Colon, 10 pkgs., $623; Corinto, 12 pkgs., $519; Genoa, 10 pkgs., $190; Glasgow, 5 pkgs., $195; Hamburg, 22 pkgs., $550; 206 pkgs., $1,326; Havana, 9 pkgs., $277; 23 pkgs., $919; Havre, 20 pkgs., $170; 8 pkgs., $330; La Guayra, 5 pkgs., $373; La Paz, 11 pkgs., $313; Liverpool, 1 pkg., $100; London, 43 pkgs., $2,826; 71 pkgs., $6,100; 20 pkgs., $1,500; 43 pkgs., $1,719; Manchester, 3 pkgs., $420; Manaos, 16 pkgs., $773; Matanzas, 5 pkgs., $104; Melbourne, 124 pkgs., $2,576; St. Johns, 31 pkgs., $740; Sydney, 334 pkgs., $11,826; 9 pkgs., $854; Trinidad, 13 pkgs., $196; Vera Cruz, 7 pkgs., $132; 19 pkgs., $963; Vienua, 11 pkgs., $435; Warsaw, 5 pkgs., $204.

APRIL 15.

Acajutla, 6 pkgs., $117; Berlin, 100 pkgs., $637; Bombay, 80 pkgs., $584; 31 pkgs., $378; Bremen, 1 pkg., $100; Buenos Ayres, 17 pkgs., $1,407; Corinto, 34 pkgs., $196; 1 pkg., $150; Frankfort, 3 pkgs., $104; Geneva, 7 pkgs., $390; 1 pkg., $70; 2 pkgs., $54; Guayaquil, 11 pkgs., $142; 5 pkgs., $141; Hamburg, 2 pkgs., $30; Havana, 24 pkgs., $2,279; 25 pkgs., $2,036; Havre, 25 pkgs., $546; Kingston, 2 pkgs., $155; La Guayra, 4 pkgs., $100; La Paz, 10 pkgs., $174; Limon, 6 pkgs., $100; London, 12 pkgs., $802; 122 pkgs., $7,865; 43 pkgs., $4,316; Manila, 5 pkgs., $137; Melbourne, 29 pkgs., $1,350; Molendo, 2 pkgs., $196; Natal, 4 pkgs., $196; Rio, 22 pkgs., $1,683; St. Petersburg, 15 pkgs., $585; Santiago, 60 pkgs., $743; Shanghai, 42 pkgs., $1,254; Singapore, 16 pkgs., $920; Soerabaya, 3 pkgs., $303; Trinidad, 7 pkgs., $150; Valparaiso, 9 pkgs., $949; Vera Cruz, 66 pkgs., $253; Vienna, 15 pkgs., $739; Yokohama, 224 pkgs., $11,841.

APRIL 22.

Argentine Republic, 21 pkgs., $2,469; Berlin, 3 pkgs., $2,070; 118 pkgs., $666; Bremen, 3 pkgs., $174; Brussels, 1 pkg., $306; Buenos Ayres, 15 pkgs., $417; 1 pkg., $110; Calcutta, 24 pkgs., $327; Colon, 3 pkgs., $200; 4 pkgs., $109; 1 pkg., $115; Havana, 6 pkgs., $293; 50 pkgs., $2,041; Havre, 55 pkgs., $2,406; London, 92 pkgs., $7,825; 62 pkgs., $2,979; Maracaibo, 67 pkgs., $322; Manchester, 6 pkgs., $113; Milan, 10 pkgs., $214; Montevideo, 10 pkgs., $717; Nassau, 13 pkgs., $130; Para, 7 pkgs., $264; Pernambuco, 13 pkgs., $241; St. Petersburg, 22 pkgs., $641; Surinam, 3 pkgs., $180; Smyrna, 4 pkgs., $159; Tromsoe, 3 pkgs., $100; Valparaiso, 4 pkgs., $144; 6 pkgs., $286; Vera Cruz, 8 pkgs., $255.

APRIL 29.

Barbados, 5 pkgs., $108; Bombay, 4 pkgs., $260; Buenos Ayres, 138 pkgs., $7,648; 1 pkg., $100; 60 pkgs., $4,570; Callao, 23 pkgs., $1,460; Geneva, 30 pkgs., $680; Grenada, 8 pkgs., $151; Havre, 143 pkgs., $1,822; Havana, 8 pkgs., $926; 7 pkgs., $212; Iquique, 1 pkg., $110; La Guayra, 10 pkgs., $645; Limon, 2 pkgs., $246; Londou, 4 pkgs., $233; 73 pkgs., $3,111; 8 pkgs., $506; Manila, 3 pkgs., $250; Melbourne, 8 pkgs., $318; 858 pkgs., $12,626; Montevideo, 9 pkgs., $664; Para, 7 pkgs., $397; 11 pkgs., $592; Santos, 6 pkgs., $1,126; Singapore, 5 pkgs., $130; Valparaiso, 27 pkgs., $3,391; 4 pkgs., $322; Vera Cruz, 6 pkgs., $300; Wellington, 10 pkgs., $200; Yokohama, 132 pkgs., $8,590.

MAY 6.

Adelaide, 3 pkgs., $130; Batavia, 15 pkgs., $437; Berlin, 104 pkgs., $603; Bombay, 32 pkgs., $1,715; Buenos Ayres, 34 pkgs., $739; Cardiff, 6 pkgs., $261; Geneva, 14 pkgs., $718; Havana, 112 pkgs., $1,901; Havre, 14 pkgs., $718; London, 33 pkgs., $1,409; 8 pkgs., $287; Milan, 32 pkgs., $552; Para, 13 pkgs., $638; St. Petersburg, 16 pkgs., $454; Santiago, 12 pkgs., $252; Sydney, 100 pkgs., $2,775; Vienna, 8 pkgs., $442.

BLOW AT CHEAP ARCADES.

Assembly Passes Bill Prohibiting the Admission of Children.

The Assembly at Albany on May 7, passed Assemblyman Prentice's bill, which prohibits children from being admitted to the cheap arcades. The bill provides that no children under 16 years of age shall be admitted in any place where any kinetoscope exhibition, movable panorama, exhibition of moving pictures or any device for the reproduction of vocal or instrumental music or for the reproduction of any other performance is publicly displayed or conducted.

TALKING MACHINE MEN SNAPPED

In Southern California After a Big Capture of Fish—Picture Verifies Sensational Piscatorial Stories Which Startled Chicago.

(Special to The Talking Machine World.)

Santa Catalina Islands, Cal., May 4, 1907.

In an interview to-day with your marine representative a large, leaping tuna said: "I have something interestiug for your paper. Some months ago I draped myself with a lot of seafoam and frighteued the wits out of an amateur photographer, who thought I was the ghost of Captain Kidd, I guess. He dropped his camera and fled. He's probably still fleeing. I got the camera and am becoming quite an expert. Here's a plate of a party of talking machine men. It was my first effort, but I think it a pretty good one. Take it along, if you want it. I shall be glad to get rid of it. All the female tunas in this district have been shedding such a vast amount of tears of longing and despair when gazing at those classic countenances that the ocean level has been raised a foot. My own daughters are neglecting their housework and their fiancés, and there will be no peace in my kingdom until the cause of the excitement is removed."

I am sending you this plate, and trust you will have it developed and printed. I hope it will reach you safely, as I have swathed it in cotton and packed it in ice. It is scarcely necessary for me to state that the gentlemen who are

TRIO OF "TALKER" FISHERMEN SNAPPED

posing so uobly against a background of mackerel and seabass are Ed. M. Clintzman, manager of the talking machine department of Kohler & Chase, San Francisco; George Exton, of the Exton Music Co., Los Angeles, and C. W. Noyes, of Chicago, secretary of the Hawthorne & Sheble Manufacturing Co. They were down here for three days last month, caught some fish, and, I believe, actually did break the hearts of a lot of leaping tunas.

The talking machine parlor of J. W. Sanders, Cleburne, Tex., was recently destroyed by fire.

The Stone Music Co., Fargo, N. D., have just placed their initial order for Zonophone goods.

A Permanent Feature.

THE making of the photographs of the talking machine artists is now a permanent feature in the talking machine trade. Every owner of a phonograph is interested in these photographs and it remains for you, Mr. Dealer, to supply this demand. You can accommodate your customers and make a handsome profit by doing so. Attractive printing matter is furnished you. Consult your Jobber in regard to these or write to us for information and list

The Channell Studio for Photography

483-485 MAIN ST. ORANGE, N. J.

HOW TO PRESERVE YOUR Talking Machine Worlds

For some time past we have received numerous requests from subscribers for binders to hold the files of the paper, so that they would be convenient for reference purposes.

To supply this demand we have had a number of "Common Sense Binders" made, which will accommodate the Talking Machine World readers.

If you wish your Worlds filed always within reach, order a binder.

These binders are full cloth, with the title of the publication on the front in gold.

These will be supplied to subscribers, delivered to any part of the country for $1.25.

BUSINESS DEPARTMENT

The Talking Machine World
1 Madison Avenue
NEW YORK

NEWS FROM ALL POINTS OF THE COMPASS.

The new red and gold front of the Douglas Phonograph Co.'s store, 89 Chambers street, New York, and the fresh interior decorations and improvements, are completed, an enhancement favorably commented upon by the visiting trade, of which a large number registered within the past two weeks. It is the most striking establishment on this busy street, easily discernible from Broadway or Church street. President Henkel is conceded to be one of the most progressive jobbers in the line, and their trade is by no means confined to this country, their foreign business being an important factor, which is constantly growing.

From an authoritative source it is learned that the new model Telegraphone—disc machine type—will not be ready for the market before the fall. Several sizes of disc records will be then included in an outfit. The officers of the company state that the work heretofore expended on a device that many believe will create a revolution in the method and practical results of sound recording and reproduction has been solely experimental. The American Telegraphone Co., the manufacturers under the patents, have removed their offices from 140 Nassau street to 41 Park Row, New York.

Walter Stevens, manager of the National Phonograph Co.'s foreign department, left New York April 22 for a trip to Mexico, and after visiting the branch office in the City of Mexico will look after general phonograph conditions in that very promising country for talking machines. He will be gone several weeks. The foreign department will also open an office in Buenos Ayres, A.R., S.A., under the title of La Compania Edison Hispanos, Americana, of which mention has already been made in The World. It will be in charge of Thomas J. Kennedy, who speaks Spanish fluently, and has been connected with the department for over two years. He left for his new post April 17.

H. N. McMinimen, late sales manager of the Universal Talking Machine Manufacturing Co., Newark, O., has been compelled to resign his position, ill health preventing him from traveling. He will remain at his home in Mt. Vernon, N Y., until entirely recovered. Mr. M. has been connected with the trade for nineteen years, starting with the old North American Phonograph Co., and is familiar with every branch of the business. The greater part of this time, however, has been on the road, and he is favorably known from Maine to California and from the Gulf of Mexico to Toronto, Can.

Leaving Chicago April 16, B. Feinberg, of the Western Talking Machine & Supply Co. (Dillbahner & Feinberg), made a smashing trip East, arriving in New York May 4, where he bought a large quantity of goods for immediate shipment West, an item of 25,000,000 needles being only a sample of the size in which he purchased. In the Central States, where his selling campaign was confined, Mr. Feinberg visited all the jobbing cities, not missing one. His order book tells the story, for he entered an order of some kind at every call. So flattering was his reception that he wishes to thank the trade for their cordiality and generosity. This hustler from the Windy City started West from New York May 10, stopping off at Buffalo and several other jobbing towns, aiming to be home in ample time to attend the quarterly meeting of the Central States Talking Machine Jobbers' Association next month.

When at the banquet during the convention of the Eastern Talking Machine Jobbers' Association in Philadelphia, Pa., last month, William Werner, of Easton, Pa., amused the diners by illustrating how he sold goods in Pennsylvania Dutch, challenging his hearers to understand or interpret what he said. Victor H. Rapke—the only one of the kind in the world—of New York, promptly responded, and not only clearly explained what Mr. Werner had been saying, but went a step further by giving a selling turn in French, German, Spanish, Italian and Indian, contributing greatly to the hilarity of the happy occasion. Victor is always ready for anything and everything in the "spooch" line.

F. E. Madison, formerly manager of the contract department of the National Phonograph Co., with headquarters at the New York office, succeeds A. C. Ireton as assistant manager of sales, the change being effected last week. This is in the line of promotion, and Mr. Madison has been warmly congratulated by his many friends on his good fortune, as it came solely on merit. Mr. Ireton becomes chief of the traveling staff, a new office. E. E. Davidson, of the clerical force, takes Mr. Madison's place as manager of the contract department. B. K. Barklow, associated with Mr. Ireton in the sales bureau, may accept a road position.

Unexpectedly, A. P. Petit, general manager of the Talking Machine Supply Co., New York, turned up in Philadelphia, Pa., in time for the banquet tendered the Eastern Talking Machine Jobbers' Association at the Bellevue-Stratford Hotel last month. He came as a total surprise to James D. Landay, who represented Landay Bros., Max staying home to "keep the pot boiling."

Thomas A. Edison, who has been at his winter home at Fort Myer, Florida, with his family since early in February, returned to Orange, N. J., about May 1. The famous inventor of the phonograph looks in rugged health and expresses himself as greatly benefited by his sojourn South. He is again at the laboratory deeply engrossed in new problems.

F. E. Winchell, late president and manager of the Langley & Winchell Co., Boston, Mass., has become connected with the Sterling Debenture Co., New York, in a fiduciary capacity. The latter concern have removed their quarters from 56 Wall street to 225 Fifth avenue. Fred C. MacLean is still on the staff.

Affable Charles G. Andrews, manager of the talking machine department of the Boston (Mass.) Cycle & Sundry Co., who has been confined to his home for a couple of weeks with sickness, is back at his post of duty.

Last month the Universal Talking Machine Manufacturing Co., Newark, N. J., added two more travelers to their staff, namely, T. R. Johnson, formerly with the Victor Talking Machine Co., Camden, N. J., Musical Echo Co., Philadelphia, Pa., and the Cable Co., Chicago, who will cover the South and Southwest. E. F. Manks, new to the business, is now in the Northwest. In their next bulletin three new singers will appear on the company's list of "talent."

Thomas (better known as plain Tom) F. Murray, an attache of the wholesale department of the Columbia Phonograph Co., General, presided over by the popular and capable Walter L. Eckhardt, was in New York for a few days early in the month. This gave Tom a chance to look after his Wall street investments that are said to be of a permanent nature.

Last month the Silverstone Talking Machine Co., St. Louis, Mo., became Edison jobbers. This makes three on the list in that city. The following were suspended: Nathan Abrahams and Parker & Cooley, New York City.

Charles Lytle, manager of the Universal Talking Machine Manufacturing Co.'s record testing department, which he believes is the greatest

In the Words of Others
"Sell I.C.S. Language Outfits"

The best proof that it will pay you to sell I. C. S. Language Outfits comes from the statement of dealers that have tried them. We have published several of these letters before; here is another one from the Denver Dry Goods Co. This is piling up evidence that you are losing profits of from 10 to 30 per cent. on your business if you are not handling these Outfits. The phonograph system is fast becoming recognized as the most perfect way in the world to teach foreign languages. As a commercial enterprise, the I. C. S. System has always paid dealers well in the past, and it is growing very rapidly. Wouldn't it be a good idea for you to write us today for full particulars of what we can do for **you?** Let us put our advertising to work for you. It will not only bring you customers for language work, but will increase your regular business. Send us a postal card NOW

D. H. CHEEDY, President. W. ROWE, V. Pres't & Manag. H. J. BAGLEY, Sec'y & Treas.

THE DENVER DRY GOODS CO.

SIXTEENTH AND CHAMPA STS.

NEW YORK OFFICE, 16 EAST 16TH ST.

DENVER, COLO. 11/21/06.

International Correspondence Schools,

Scranton, Pa.

Gentlemen:

In reply to your letter of the 17th inst., will say we considered the demonstration of Mr. Mistraud very successful and while he was here we sold several Language Outfits. We have also sold some since he left us. We expect to advertise these Language Outfits during December as gifts as you may rest assured we will communicate with the parties to whom demonstration was given and who have not as yet made a purchase. We think the plan of advertising or demonstrating these Outfits is successful and leads to sales which could not be obtained otherwise.

We have placed several orders with you since the demonstration and would like to know if we could make arrangements to purchase whatever we need in this line through your Denver office as we have had to do several times recently; same can be billed to us by you. This would be quite an accommodation to us.

We will keep you advised from time to time of the results of sales on I. C. S. Language Outfits.

Yours very truly,

THE DENVER DRY GOODS CO.,

International Correspondence Schools

SCRANTON, PA.

thing that ever happened, so proud he is of the job, was married April 7, and went to Philadelphia for a quick honeymoon. He returned to Newark, N. J., in time for the factory whistle on the morning of the 29th, feeling like a two-year-old and twice as happy.

What is considered a new and original plan for starting Edison dealers is being employed by T. F. Keeney and F. H. Silliman, traveling for the Pardee-Ellenberger Co., New Haven, Conn. They "hunt" in pairs, and since the first of the year have started sixty dealers. Both are spoken of as nice fellows, and deserving of all kinds of success, which they are reaping.

In addition to their new branch house in Cincinnati, O., at 29 East Fifth street, where they will job and retail, McGreal Bros., of Milwaukee, Wis., will also have a warehouse at South and Morris streets for carrying wholesale stock.

The branch of the National Phonograph Co., in Paris, France, has been removed from 31 Rue du Quartre Septembre to 42 Rue de Paradis. The new offices are much more commodious and better located for the rapidly growing Edison business in the French capital.

W. W. Massey, for some time head of stock at the Columbia Phonograph Co.'s store at 353 Broadway, New York, has been made manager of the company's branch on Broadway, Brooklyn. His old position was filled by Clifford Mailich, of the Passaic branch.

F. E. Ogden, of the Broadway, Brooklyn, store, has been transferred to the Flatbush avenue, Brooklyn, branch, while Arthur Burnham of the latter store will be in charge of the retail business of the company's new store at 111 Chambers street, New York.

Among the Columbia Phonograph Co.'s exhibits at the Jamestown Exposition is a new disc graphophone of the concealed horn type. The new machine is contained in a cabinet in which there is also storage room for three hundred records, and the retail price is $200.

Though the National Phonograph Co. have a number of crack salesmen in the Middle West, J. W. Scott, who travels New England, is said to top them all in the number of new Edison dealers created. The addition of dealers is the criterion of success, and in this "Scotty" has the lead, according to the veritable records.

While the National Phonograph Co. will not have an official exhibit at the Jamestown Exposition, C. B. Haynes & Co., of Richmond, Va., will, however, have a beautiful display of Edison goods on the spot, using part of the material, booth, etc., used by the National Co. at St. Louis and elsewhere. Haynes & Co. will also have special assistance from the factory at Orange, N. J., and the exhibit will be purely for advertising purposes, and is not entered in competition for awards or prizes of any kind.

H. Paulsen Van Stunbergh, Columbia Phonograph Co. traveler for Pennsylvania, was recently married to Miss Olive Marion Barrett, of Toronto, Canada, whom he first met while stationed at the Columbia branch in that city.

In different sections of the country it has become quite the thing for gangs of men employed on extensive construction work requiring considerable time, to contribute to a general fund for the purchase of a talking machine and records, whereby to lighten the evening hours in the camp. Near Indianapolis, where over five hundred men are busy erecting the $9,000,000 station of the "Big Four" railroad, a large Victor machine entertains every evening.

In pushing their product, the Columbia Phonograph retail department has utilized the newsdealers in and near the city as disseminators of their literature. Recently they had over 200,000 attractive circulars, about 10 by 18 inches in size, containing four of the Columbia combination offers folded in as many Sunday papers. At the bottom of each circular appeared the name of the nearest retail store handling their product. It proved extremely successful, and the Columbia dealers appreciate the effort of that company to bring them business.

Pat Powers, Buffalo, N. Y., who is spoken of as one of the smartest men in the trade, both as a jobber and dealer, was in New York recently on a brief visit. Mr. Powers has not only made a modest fortune from a shoestring, but at one time was a crack bicycle rider. Talking machines, bikes and real estate are his specialties.

The talking machine dealers of Philadelphia, particularly the Musical Echo Co., the Penn Phonograph Co., Weyman & Sons, Swisher, Lit Bros., the Wanamaker store and others are having an immense trade in Edison and Victor goods.

A new talking machine store has been opened at 854 Penn street, Reading, Pa., by Lewis P. Muthart & Son, the jobbers, under the title of the "Columbia Echo." A full line of Columbia cylinder and disc graphophones and records is carried.

The Hornless Phonograph Co., New York, recently incorporated, propose manufacturing a device said to resemble the Victor Victrola so far as the disposition of the horn is concerned. They also have in mind a submerged horn machine, which is familiar to the trade in Germany. At the present time capital is the chief requisite.

Leo Greenberger, assignee of the Burke Talking Machine & Novelty Co., Brooklyn, N. Y., has sent out the following notice to the creditors: "By virtue of assignments, dated respectively March 11 and April 6, 1907, all the outstanding accounts of the Burke Talking Machine & Novelty Co. have been assigned to the Mechanics' Bank of Brooklyn, the same to collect all the accounts due and apply them, after reimbursing themselves for the outlays made, toward the payment of their claim as well as other creditors pro rata. This terminates my assigneeship with the above mentioned corporation."

A talking machine store on the lower east side of New York handling Edison, Victor, Columbia and other lines of machines and records has put out a shingle hearing the name Caruso Phonograph Co. Nothing like being up-to-date.

R. H. Morris, president of the American Talking Machine Co., of 586 Fulton street, Brooklyn, N. Y., reports an excellent Victor business for the first four months of the year, with still better prospects for the future.

Robert L. Macnabb, brother of John A. Macnabb, general manager of the Universal Talking Machine Manufacturing Co., for some time in the employ of the Columbia Co., having charge of one of their Brooklyn stores, has started in business on his own account at Eighth avenue and 36th street, New York, with the moving picture proposition.

The Tietz Music Co., Albany, N. Y., who handle the Edison and Victor lines, are said to have sold nearly $1,500 worth to a certain talking machine enthusiast in one year, he having devoted an entire room in his residence to his machine and records.

The Thompson-Starrett Co., the well-known contractors and builders, have recently installed the commercial phonograph system, using fifteen Edison machines.

EDISON LETS OUT THE SECRET

Regarding His First Attempt to Raise Money for His Inventions—Tells the Interesting Story at a Dinner at Which a Number of Newspaper Men Were Present.

In one of the largest cities of the South, while making a trip through that part of the country, Thomas A. Edison was entertained at a dinner at which were present a number of well-known reporters. The dinner ended, Mr. Edison found himself surrounded by a group, and presently one of the newspaper men said:

"I suppose, Mr. Edison, that from the start you never had much trouble in getting your inventions before the public?"

"On the contrary," said Mr. Edison, "it was often very hard. I shall never forget my first experience that resulted in anything; it's quite a story."

"Tell us," came from all sides, while the reporters sharpened their ears and mentally their pencils at the same time.

"Well," began Mr. Edison, "I was young then, about twenty-three, and I had already invented a number of things which I felt were valuable, but no one wanted to advance me the money to allow me to prove their practicability. One day, feeling pretty blue, I tramped the streets of New York, a few lonely silver pieces in my pocket, and presently found myself in one of the fashionable streets. A lady, young, handsome and richly dressed, was just descending the steps of one of the palaces to a waiting carriage.

"'Who is the young lady?' I asked of the liveried dignitary who had conducted her to the equipage. The astonishment depicted on the man's face could not have been greater if I had asked him to name the stars in the Milky Way. Silently he turned on his heel and made his dignified way back into the mansion.

"'That's Miss Cymbeline Smart,' volunteered a man who was passing.

"'And that is Mr. Jenkin Smart's house?'

"He nodded and passed on.

"I knew from newspaper report and gossip that Mr. Smart was one of New York's richest men, and that Miss Cymbeline was his only daughter.

"I hesitated only a moment, quickly ascended the marble steps, rang, and shortly found myself facing Mr. Smart himself in a room which seemed half-library, half-office.

"'What do you want?' he asked.

"'I want to marry your daughter.'

"'Indeed! Who are you?'

"'An inventor.'

"'What have you invented?'

"'Nothing as yet that has been proved a success. I need money to perfect my inventions. I work in electricity.'

"While talking my glance strayed continually to the massive safe in front of which Mr. Smart stood. I knew his passion—his possessions.

"'Do you consider that safe burglar-proof?' I went on.

"'No,' he replied, 'not as long as the man who made it lives. This lock cost me six thousand dollars; before I got this the safe was broken into four times; presently this will be useless.'

"'Mr. Smart,' I said, 'I can fix an attachment on your safe that will not only render it burglar-proof, but will deliver into your hands any one tampering with the lock. If I prove this to you will you promise me your daughter?'

"'If you succeed I will give you one hundred thousand dollars,' he said.

"'I'm sorry; it's your daughter I want.'

"'Very well, then, my daughter if you succeed.'

"At twenty-seven minutes after eight the same evening I had perfected my attachment on the safe in Mr. Smart's presence. The following morning at ten, according to appointment, I again presented myself at the palace.

"'Your master was ill last night,' I said to the servant who ushered me in.

"'Yes, sir, he had a fainting-spell, sir, but he's quite well again this morning. You are to go to him at once, sir.'

"Mr. Smart was standing in front of the safe very much as when I had first seen him.

"'Good morning, Mr. Smart; how do you feel?'

"'Well, thank you; why should I not feel well?'

"'Mr. Smart,' I said, 'yesterday evening at thirty minutes after eight you had an electric shock which caused you to fall unconscious in front of your safe. And this morning at half-past eight you regained consciousness. Am I right?'

"'Yes!'

"'Mr. Smart, the same thing would happen to any one who tampered with your safe, and without any knowledge on his part of the electrical trap set for him.'

"'And suppose I had never recovered from this electrical shock?'

"'There was a risk, I admit; it was my first attempt on a person.'

"'And you knew exactly how long I would remain unconscious?'

"'Certainly, the apparatus was set for twelve hours. I might have set it for twenty-four hours. You will admit, therefore, that I have succeeded?'

"'Yes.'

"'And you will keep your promise and give me your daughter?'

"'I always keep my word; you have my permission, but my daughter refuses to give her consent. But, my young friend,' he went on, 'do not let this fact disturb you; I promise to buy all your inventions, and to give you at once my check for one hundred thousand dollars.'

"This," said Mr. Edison, glancing smilingly about him, "is the story of my first attempt to raise money for my inventions."

"And did you really sell this millionaire all your future inventions?" asked a reporter.

"No," said Mr. Edison, "I couldn't do that; I invented too many things."

"Is your faculty for invention a natural one?" asked one of the reporters.

"It is," said Edison, and then, with a twinkle in his eye, "I have proven that to you by inventing this story as fast as I told it to you."

Kohler & Chase's branch house at Seattle, Wash., has been removed from 1305 Second avenue to 710 Pike street. They are doing a great business in Edison and Zonophone goods.

(Special to The Talking Machine World.)

Cleveland, O., May 8, 1907.

In all departments of the talking machine business, both in the city and vicinity, reports are of the most favorable character. The dealers are all very optimistic, and are prepared, so far as the manufacturers make it possible, to do a big business. There is visible evidence that they are all very busy. While some cheap machines are sold the demand for high-grade ones is a feature of the trade, and many more would be sold if they could be obtained from the manufacturers.

The call for cabinets, horns and supplies generally is good and improving. The repair department in all the talking machine stores is becoming more and more an important feature of the business, and a number of experts are now continually employed at this delicate work.

The Eclipse Musical Co., long located at 814 Prospect avenue, have disposed of their retail business, including the accounts, fixtures, etc., to H. E. McMillin, and have leased an entire floor in the Erie Building, near Euclid avenue, where they will hereafter do a wholesale business exclusively. The change to more spacious quarters was made imperative, owing to the fast increasing business. The company now occupy 9,000 feet of floor space, affording the most desirable facilities for the prompt and efficient transaction of business. They have added over 100,000 records to their already large stock, and have greatly increased their supply of machines, cabinets, horns, etc., and now have the most complete stock of Victor and Edison goods in the Middle West.

The Talking Machine World's representative was shown through the offices and stock rooms, and noted the systematized order in which the immense stock is arranged. For instance, a large series of shelves have been arranged, where each Victor record is placed in an envelope and laid in flat as soon as received, which keeps them in perfect condition and prevents their warping. The business offices are nicely appointed, with all the up-to-date conveniences for expediting work.

T. H. Towell, president and treasurer of the company, is a very busy man, giving his personal supervision to the business. He ceased from his work long enough to explain the reason of finding him in new quarters, by saying that their wholesale trade had grown to such magnitude that they were simply compelled to seek other and larger quarters, where they could give the wholesale business their exclusive attention. He stated he was most gratified with results; that the April business was by far the largest since the company started, and that the prospects are looking good.

Business is reported unusually good by the Columbia Phonograph Co., "made so," said Manager Probeck, "largely by the new Marconi record, to which the public is taking very kindly. These records possess merits superior to any heretofore put on the market. They are practically indestructible. We placed one of these records in the street yesterday, where it was left until several teams, carriages and autos had driven over it. It was then brought in, the dirt wiped off, placed in the machine and it played perfectly. It was considered a pretty severe test by those who witnessed it. I had a very pleasant visit with George W. Lyle, general manager of the Columbia Phonograph Co., of New York City, who spent the day here, May 2, on his way home from the West. It was his first visit here in two years. He expressed himself much pleased with conditions as he found them throughout his entire trip. He said the business for the month of April was the largest in the history of the company."

One of the oldest, if not the oldest, musical establishments of the kind in the city, is that of H. E. McMillin. He started in business as a band and orchestra musical publisher, in 1883, at 127 Superior street. He purchased the wholesale, jobbing and importing business of the S. Brainard Sons Co. in 1889. On April 1 he purchased the retail talking machine business of the Eclipse Musical Co., taking over the entire business of that department, and moved it, together with his Superior street stock, to 2053 East Ninth street, where he occupies two floors of approximately 14,000 feet of floor space. One floor is devoted to the offices and retail department, and the other to the wholesale publishing business. He has set apart ample space for the talking machine end of the business, and the display and demonstration rooms have been fitted up in fine style, the latter being practically sound-proof.

Mr. McMillin said he was very much pleased with the way the talking machine business had opened up, and there was every indication of an equal patronage. "By opening this store," said Mr. McMillin, "it makes it now one of the few complete music stores in the country, where one can purchase anything in the line of music, from a jewsharp to a piano."

The National Phonograph Co., of Orange, N. J., have their branch of its commercial department in this city in full operation, in charge of J. O. Hanna, located in the finely equipped offices at 509 and 511 the Schofield Building. In an interview with Mr. Hanna he said: "This office will sell the Edison commercial system, conducted with the business phonograph, and has departments for the instruction of both dictators and transmitters, a repair and inspection department, and an employment bureau where girls can learn to use the business phonograph free of charge, and expert operators will be furnished customers on short notice.

"The new and improved Edison business phonograph has proven to be practical for any kind of correspondence, and is now being used by hundreds of the largest firms throughout the country. It has been demonstrated such a time-saver that any firm having heavy correspondence, or which employs more than two stenographers, can afford to be without it. The new machine has been so perfected that all of the old objections have been entirely overcome, and the conscientious operator finds his daily capacity for work, as well as his efficiency, as part of a great office force considerably increased by the use of the business phonograph. All departments anticipate a very busy season in this district."

W. J. Roberts, Jr., reports an excellent month's business in both machines and records, trade continuing steady and of a very satisfactory character. His trade is running to the better grade of machines and appliances. From the present outlook he anticipates a very successful year's business.

The Bailey Co. since installing the Victor and Edison talking machine department have been pushing the business. The manager said they sold thirty-four machines the first day they opened, and that the trade had increased to the extent of compelling them to add double the space originally set apart, and that they were still cramped for room. He stated the volume of business had been far beyond their expectations; that at first they had some trouble in getting records, but they now have a full catalogue list of both the Edison and Victor. They have a Victor auxetophone placed at the head of the stairway, near the elevators, on the sixth floor, which can be distinctly heard on the first or ground floor, where it attracts attention and draws crowds to the music department.

Hugh Grilley, 924 Prospect avenue, says his sales for April far exceeded those of March, including machines, records and cabinets, and that the way business has opened up this month May will prove better still. He said there was a big call for the May records, and that they were taking well.

Mr. Robbins, of the firm of Robbins & Emerson, says their recent move from the second to the first floor of The Arcade was a good one, as their business has materially increased, while their facilities for display and demonstrating are greatly improved. He stated business during April was exceedingly good, with a constantly increasing demand for records.

Cablitz Bros., 2224 Woodland avenue, S. E., have a very neatly fitted up store and are doing quite a volume of business. They cater to and have a considerable trade in foreign records, German, Hungarian and Jewish. They handle a full line of records and Edison and Victor machines.

"There is nothing new to report," said Mr. Busscher, of W. H. Busscher & Son. "Business continues good. We are selling a good many ma-

About Records!!

We are going to make some record statements which will interest every talking machine jobber and dealer in this country.

Every talking machine man knows that the cylinder records will break if they fall upon the floor; they will wear out and become scratchy and unmusical. Ours will not.

They are practically INDESTRUCTIBLE

We give up no space to announcements, no curved ends to the records. The entire 4¼ inches of surface is devoted to music thereby giving our records twenty-five per cent. more music than any other, and equally the same as the 10-inch disc records which sell for sixty cents and upwards.

We guarantee the highest grade of music, because we employ the services of one of the most talented musical directors. We have a perfectly equipped laboratory for the making of our Master Records at 352 Livingston Street, Brooklyn, N. Y.

We guarantee that every record will reach the dealer in perfect condition. No more broken records to charge up to profit and loss; no more complaints from customers that the dealers sold them cracked records which must be exchanged. No more annoyances from such sources.

You should have the best that modern skill can produce, and the **INDESTRUCTIBLE RECORD is the highest development** in this line. An investigation is invited. Our first catalogue will be out in August. Our price will be thirty-five cents per record with the usual discount to jobbers and dealers.

THE INDESTRUCTIBLE PHONOGRAPH RECORD CO.

226-236 Hamilton Street, Albany, N. Y.

chines, and there is no end to the call for records. The May lists are especially fine."

"The month of April evidenced a very active demand for the commercial graphophone," said Manager H. E. Jones, of the commercial department, "and a considerable number of new outfits of those machines were installed in business houses here and in this vicinity.

"The large number of unique uses to which the commercial graphophone may be put seems to have no end. As a case in point, a party is using it as a silent evidence gatherer of conditions existing in an adjoining building. It seems the offending concern has installed some sort of machinery which makes a most tremendous racket, shaking the buildings in the vicinity to such an extent as to make it almost impossible to do office work in offices where the graphophones are in use. Accordingly, this concern has rigged up one of our machines with a 26-inch recording horn and is making a series of records of the awful racket. What their purpose is I do not know, but the use of the machines for making records of this nature would certainly seem to be a novel departure. It is not known what the results are so far, but the operation is being watched with considerable interest.

"One of the greatest advantages of the commercial graphophone was brought out by the experience of a concern who now have a complete installation of our machines as a result of the incident. It seems that the head of the house dictated some seventy-five important letters to a young lady stenographer one morning, and, feeling ill at noon, she asked for and received leave of absence for the day. The following day she was still too ill to appear at the office and all the important correspondence was locked up in her note book, with the usual condition prevailing that no other stenographer in the office could read her notes. The gentleman in question had been circularized and called upon and the advantages of our system explained, and it immediately struck him that it would be very much more satisfactory in the present case if his dictation had been recorded upon cylinders, and therefore in shape to be transcribed by any intelligent typewriter, rather than to have it as it was, embodied in a lot of useless pothooks and scratches, that could only be translated by the young lady who made them. As to redictating all this correspondence to another stenographer, he decided that the commercial graphophone was worth while trying at any rate. He sent for me and was supplied with a trial outfit of machines, with the result that his office is now, as I stated, rather completely equipped.

"The business outlook for May appears exceedingly promising, because of the numerous prospects and inquiries constantly coming in. In conclusion, I assure you, it may truthfully be said that the commercial graphophone is booming."

Collister & Sayle report trade better and more satisfactory than it has been in a long time. They stated there was a big call for records, and that machines were selling well. "We are getting in machines more satisfactorily now," said the manager, "but the manufacturers are still away behind on orders for records. Our April business was fine, and it is starting in splendidly this month."

The Gottdiner & Wicht Co., 2084 West 25th street, are one of the oldest, if not the oldest, talking machine dealers in Cleveland. They have been in business over ten years and were the distributers for the Toledo Talking Machine Co. while they were doing business. They also put on the market some three years ago their own special machine, called the "Eagle Talk-o-phone," together with their own records. The company are now handling the Edison and Victor machines and records. "Since we have been in business," said Mr. Gottdiner, "we have sold a great many thousand machines, as many as 500 in one month, as well as tens of thousands of records. While sales are not as extensive at present we are doing a good, brisk business. We have been badly handicapped in not being able to get our orders filled by the manufacturers."

Flesheim & Smith, who handle the Zonophone, report business good. The manager said they were selling a good many 12-inch records and were making good sales of machines.

L. Hartwell, proprietor of the "West Side Phonograph and Talking Machine Store," 2058 West 25th street, has been in business fifteen months and has been very successful. He carries the Edison, Columbia, Victor and Zonophone machines and a full line of English, German and Hungarian records, and does all kinds of repairing. He is doing a business of between $5,000 and $6,000 per year.

"Oh, dear! I think about the biggest cheap skate at large is the man that tries to hear music for nothing," said the fluffy-haired girl who plays the piano in a music store. "That fellow who was just in here—and it wasn't his first visit—had me play at least ten of the new pieces, and I didn't see him buy a thing, did you? That always makes me sore," she continued, as she gave another touch to her hair. "A lot of these ducks that blow in here think I'm just a sort of entertainment committee. The boss pays me to play for people that want to pick out music and take it home with 'em. The next time any one makes me play for a quarter of an hour and starts out without making a selection, see if I don't call him back and tell him to come around again next winter—that it will be an open, free season."

The managers of the moving picture theaters of Cleveland have formed an organization to protect their interests. They have agreed to abolish objectionable pictures and outside phonographs, which have been the cause of much complaint. The organization claim there are plenty of good subjects without resorting to objectionable films.

The other day a talking machine dealer received the following order: "Please give me one box nails and screw." He wanted some needles.

The windows of the Columbia Phonograph Co., arranged by Mr. Cleo G. Burgeois, present a pretty and interesting appearance, advertising the new Marconi records. The color scheme is royal purple and white, the floor of the window being covered with alternate bands of those colors. In the center of the window a large scale beam is placed with a Marconi record on one pan and pulling down the other end of the scale is a feather. The point illustrated is the fact that Marconi records are light as a feather.

A small machine in the window is constructed to bend a Marconi record back and forth, showing that they cannot be broken. This machine is a source of great attraction to the passing crowd, to whom a record that can be bent, without breaking, is a novelty. Placed in another part of the window is a Marconi record with envelope, that has been through the mail (postage, 4 cents), showing that they can be mailed without any extra packing and come through without injury. A small postal scale in the window also shows the weight of the Marconi record placed thereon to be only 2 ounces. Fastened to the back of the window and made up of large silver letters is the new catch phrase pertaining to the new Marconi product, which is, "Wonderful as Wireless." This lettering, with appropriate lightning flashes, reminiscent of Marconi's wireless telegraph, shows up very well. A large framed picture of Marconi and numerous records complete the window, which certainly serves the purpose of the designer for advertising and attracting the attention of the public to this new product of the Columbia Co.

Phil Clay, of Sherman, Clay & Co., San Francisco, one of the largest jobbers on the Pacific Coast, was in New York in the latter part of April. While here, among other places visited, he called at the Talking Machine Supply Co. to see A. P. Petit, the general manager, whom he had the pleasure of meeting when in California recently.

NOTES FROM THE EMERALD ISLE.

Business Somewhat Dull in the North of Ireland —Latest Records of Unusual Excellence— Those by Patti and Battistini Much Admired —Osborne Concerts Prove Attractive—Other News from Isle of Saints.

(Special to The Talking Machine World.)

Belfast, Ireland, April 26, 1907.

Business in "talkers" has been dull in Belfast during the past two months, and this is to be specially deplored because users of gramophones and phonographs have—only temporarily, we trust—thus denied themselves the pleasure of listening to some of the finest monthly issues of new records that it has been the good fortune of jobbers and dealers to have on their shelves. Take, for instance, the six new records by the great prima donna, Mme. Patti, or the thirteen "Battistini" discs.

Two at least of the Patti selections are delightfully rendered, with such charming pathos, so dulcet and clear in the enunciation, that one feels it would be impossible to ever become surfeited with such a "harmony of sweet sounds." The writer of these notes considers that in the recording of "La Calesera" (Chanson Espagnole), Patti has eclipsed all her previous efforts. With regard to Battistini his success as a gramophone artist is so pronounced as to be only equaled by Caruso.

Edison products still hold the premier position in public favor, but, of course, there is always an excellent demand for "Sterling," "White," "Edison-Bell" and "Columbia" records, and the sale of Zonophone discs has continued to increase "by leaps and bounds."

A mammoth audience listened on Saturday evening, April 20, to an al fresco concert at T. Edens Osborne's depot, which has the palatial Belfast new City Hall at its vis-a-vis. The instrument used was the "B. C." Columbia S. M. graphophone, which captivated an immense crowd numbering not hundreds but thousands of citizens, who remained transfixed with its "sea of faces" uplifted toward the fourth floor of the premises from a window of which the 56-inch copper trumpet of the machine was projected. The selections were largely of popular airs and "pantomimic hits," with an agreeable blend of classical music. These Osborne concerts have become quite a "feature of the city," and many come by rail long distances to patronize these functions.

Mr. Osborne has just returned from an extended and delightful continental trip, and remarks that after a jobber or dealer has been compelled to work hard all winter in providing his customers with instrumeuts for dispensing pleasure and happiness, he should, if at all feasible, give himself up to what our French friends term "abandou," and spend a few weeks in visiting the beauty spots of the earth, thereby acquiring that valuable business asset—health, expanding his knowledge and getting rid of "brain fag." Good advice.

CHINESE FUNERAL SERVICE

By Means of the Talking Machine—How Many Mongolians Were Able to Follow the Rites of Their Faith Thanks to the Manager of the Victor Distributing & Export Co.

Owing to trouble between the rival Tongs in New York's Chinatown a Chinese family recently found it impossible to obtain the services of any one to read or chant their native burial service over the body of a child, and for several days all their efforts failed to remedy matters. As the child was a boy the full rites were absolutely necessary, and the poor Chinese were nearly crazy with anxiety. To add to their troubles the health officers learning that the child had been dead for such a length of time ordered its burial immediately.

As a last resort the family went in a body to the showrooms of the Victor Distributing & Export Co., and held an animated conference in Chinese jargon with the manager, Mr. Beekman, who, speaking only plain United States, of course understood exactly what they were jabbering about.

After singing two or three solos, duets and choruses and going through a whole performance one of the band finally cooled down sufficiently to explain the purpose of their errand. Although there was a quantity of Chinese records catalogued, the company staff thought they were merely folk songs or operas, and brought out the list merely in an effort to satisfy the Chinamen that their wants could not be satisfied. When the visitors read the list they fairly shouted with joy, and imagine Mr. Beekman's surprise to discover that he had in stock a record containing the complete Chinese funeral service, brass gongs and all. He now has that selection heavily underscored in mourning ink and labeled "Chinese Funeral Service."

Before leaving the Chinamen purchased several records in their language, and one of the most expensive machines.

A CAMPAIGN WITHOUT PURPOSE.

The New York Herald recently started a crusade against the many big electric signs along Broadway, claiming that they disfigured that thoroughfare and offended the artistic eye. Among the largest of the signs along the Great White Way is that of the Victor Talking Machine Co., at Thirty-eighth street, which is an enormous reproduction in electric light of the famous Victor trade mark, "His Master's Voice." After having only recently paid a heavy fine for offending public decency, it seems that the Herald should have something better to do than criticize the signs, the majority of which are decidedly artistic and which tend to add brightness and attraction to that wonderful thoroughfare.

Dinizulu, the great Zulu chief, has a large talking machine with which he entertains his guests, both savage and civilized. He also has an organ of American manufacture upon which he himself performs.

Why Not Have Your Customers BEAUTIFY as well as CLEAN

Their Talking Machines, Horns and Horn Cranes.

Note Easily Detached Cork.

PLATOL (TRADE MARK)

Works the Charm.

PLATOL (TRADE MARK) **SILVERPLATES and CLEANS**

Corrugated Carton for Bottles.

in the one simple operation of rubbing on. PLATOL does its work with little labor and small expense. PLATOL is delightful to use. Advanced Articles of Utility. **190-196 West Broadway, NEW YORK CITY.**

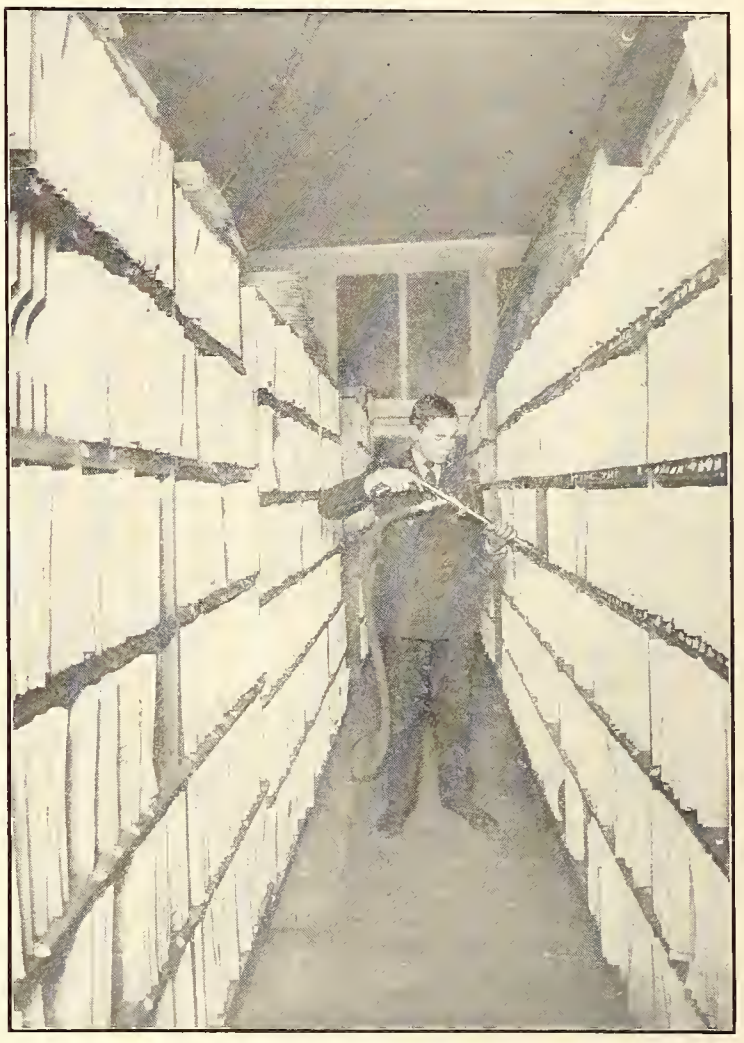
Removing Grit with Pneumatic Brush.



Daily Cleaning of Shelves.

VITAL IMPORTANCE

Do you know that the GRIT, which gathers in a Record groove chokes the reproduction, eliminates the finer notes entirely, shortens the life of the record by one-half, cuts your profit by damaging your stock and losing Machine Sales ?

Pneumatically Cleaned Records in Envelopes

Our entire stock is cleaned by subjecting the surface of each Record to the action of a Pneumatic Brush, which has a suction power of twenty-five (25) pounds, cleaning out the minute grooves, which no cloth can reach. After being cleaned the Record is placed in an envelope and reaches the Dealer in perfect condition.

WE STAND IN A CLASS BY OURSELVES. THE ONLY JOBBERS IN THE UNITED STATES WITH PNEUMATIC CLEANING APPARATUS

When you consider the immense value that clean, bright salable stock has, when compared with the damaged article—ordinarily carried by Distributors, and the complete shipments that we make, you will feel that you are getting 50% more for your money than when you buy from other sources.

It will pay you to buy from us, no matter where you are located. Send us your orders for Machines and Records.

Our Stock of Victor, Edison and Zonophone Machines and Records is the Largest in the West

CINCINNATI CHICACO

CONVENTION AFTERMATH.

Many Important Matters Attended to at the Meeting—Cash and Instalment Business Discussed—Membership Doubled—Those Present at the Various Gatherings.

The meeting of the Eastern Talking Machine Jobbers' Association, which was held in Philadelphia last month, just as The World was closing its last form, was the most successful held in the history of the Association. The aftermath of the meeting is interesting from many points of view, as some of the published reports do not represent the true feeling that prevailed at the session or the action recorded. The general feeling, as outlined at the banquet on Thursday evening, April 11, being that the organization was not presenting propositions emanating from a "big stick" source, but one of suggestion only, fostering a mutual feeling of interest between the manufacturers and jobbers, as one member expressed it, the manufacturing companies were a trust, but not a trust. That if a record was sold for $6 it was an article of luxury, that no one was compelled to buy, but in which full value was rendered to the willing purchaser. The association has doubled its membership in a year—from 30 to 62—with other applications pending.

The association adopted suitable resolutions embodying the views of the members regarding the cash and instalment proposition, and the cutting out and the exchange of records, which are to be presented to the manufacturers for their consideration. The suggested plan of returning defective records was also discussed, and resolutions covering the ideas of the organization were presented and disposed of in a suggestive way only. The committee appointed by President Andrews to carry out these resolutions were: National Phonograph Co.: C. V. Henkel, president and general manager of the Douglas Phonograph Co., New York; H. L. Ellenberger, of Pardee-Ellenberger Co., New Haven, Conn.; Louis Buehn, of Buehn Bros., Philadelphia, Pa. Columbia Phonograph Co., General; Benj. Switky; Herbert T. Lewis, Lewis Talking Machine Co., Philadelphia; C. N. Leng, of John S. Leng's Sons & Co., New York. Victor Talking Machine Co.: Henry E. Marschalk, of the Musical Echo Co., Philadelphia; J. T. Williams, of the Victor Distributing & Export Co., New York; E. F. Taft, of the Eastern Talking Machine Co., Boston. J. Newcomb Blackman, proprietor of the Blackman Talking Machine Co. ("the white blackman," as he is called) was appointed a committee of one to furnish the press with the proper information.

At the banquet President Andrews acted as toastmaster, and in the informal speeches made by the members the best of feeling was expressed for the manufacturing companies averring all the interests would work in harmony. Outside of the remarks made by Louis F. Geissler, general manager, and C. M. Brown, advertising manager, the remainder of the Victor Co. officials present, including Bert Middleton, secretary, and George H. Ornstein, sales manager, were excused on account of their modesty as public speakers. Mr. Geissler added to his reputation as a good fellow when telling a number of stories in German dialect at the Down Town Club luncheon. Naturally Victor H. Rapke was in evidence, and his horseless automobile trip in Camden to the factory from the ferry and various other incidents were characteristic.

The following new members were elected at the meeting: Iver Johnson, of the Iver Johnson Sporting Goods Co., Boston, Mass.; Pittsburg Phonograph Co., Pittsburg, Pa.; Texas Phonograph Co., Houston, Texas; J. Samuels & Bro., Providence, R. I.; W. D. Wilmot, Fall River, Mass.; W. D. Estes, Lewiston, Me. Since the convention another application has been filed, which makes the total membership 62, of which over thirty-five were represented at Philadelphia. The following is the official roster, including the above: F. K. Dolbeer (honorary), National Phonograph Co., New York; Oliver Jones (honorary), Victor Talking Machine Co., Camden, N. J.; American Phonograph Co., Gloversville, N. Y.; American Talking Machine Co., Brooklyn, N. Y.; W. D. Andrews, Syracuse, N. Y.; G. C.

MEMBERS OF EASTERN JOBBERS' ASSOCIATION, SNAPPED IN FRONT OF VICTOR CO.'S FACTORY, AT CAMDEN, N. J.

First row (sitting from right to left).—Louis F. Geissler, Victor H. Rapke, James Landay, S. B. Davega, W. D. Andrews, J. N. Blackman, A. P. Petit, James Keane O'Dea, G. T. Williams, H. C. Brown. Second row (from right to left)—Clinton G. Price, Homer S. Price, Henry E. Marschalk, I. Davega, Jr., Louis Buehn, H. F. Miller, Louis Jay Gerson, J. P. Kelsey, Chas. B. Bayly, Adolph Weiss. Third row (from right to left).—C. E. Collins, John Rose, J. L. Wagoner, Thos. Wardell, E. E. Buehn, W. M. Davis, R. M. Morris, H. G. Lewis, A. Wm. Toennies, W. B. Fulghum, Geo. D. Ornstein. Fourth row (from right to left)—C. V. Henkel, A. W. Barkelow, W. Werner, Jos. Sonfield, H. Koch, H. J. Shartle, Carl A. Droop, H. A. Weyman, A. C. Villard, C. N. Andrews, L. Lambert, Clement Beecroft, E. K. Smith.

Y.; Victor Distributing & Export Co., New York; John Wanamaker, New York; Tbomas Wardell, Lowell, Mass.; Alfred Weiss, New York; William Werner, Easton, Pa.; Western Talking Machine Co., Philadelphia, Pa.; Musical Echo Co., Philadelpbia, Pa.; H. A. Weyman & Son, Philadelphia, Pa.; Louis Buehn & Bro., Philadelphia, Pa.; Landay Bros., New York; John S. Lengs' Sons & Co., New York; Kirtland Bros. & Co., New York; C. B. Haynes & Co., Richmond, Va.; W. D. Andrews, Buffalo, N. Y.; A. J. Denninger, Rochester, N. Y.; John Rose, Astoria, N. Y.; Regina Co., New York; E. F. Droop & Sons Co., Washington, D. C.; Finch & Hahn, Schenectady, N. Y.; S. Kahn Sons & Co., Washington, D. C.; Lewis Talking Machine Co., Philadelphia, Pa.; W. H. Ross & Son, Portland, Me.; Price Phonograph Co., Albany, N. Y.; Neal, Clark & Neal Co., Buffalo, N. Y.

Among the guests at the various functions were: B. G. Royal, president of the Universal Talking Machine Manufacturing Co., Newark, N. J., who proved himself a royal good fellow all around; Clement Beecroft, manager of sales of tbe Tea Tray Co., of the same attractive city, with whom particular care was taken that of the flowered crockery placed before him at the various spreads, a certificate of "baked on" accompanied the outfit.

The next meeting of the association will be held in New York City, at one of the leading hotels, on July 29, when the annual election of officers will take place.

The Vine Co., Des Moines, Ia., have removed from 808 West Walnut to 204 Seventh street, where larger premises have been leased.

ONE OF ST. LOUIS' PROGRESSIVE TALKING MACHINE CONCERNS.

The Silverstone Talking Machine Co., St. Louis, Mo., of which Mark Silverstone is president, is one of the most progressive talking machine concerns of that city. He started in business there on July 22, 1905, at 923 Olive street, as a dealer in Edison machines, and on account of increasing business he was forced to move into larger quarters on May 1, 1906. The concern now has a very spacious store at 1010 Olive street, containing over 2,500 square feet, and equipped in a thoroughly modern manner. On November 24, 1907, they purchased the entire stock of the Western Talking Machine Co., paying cash for same, the latter company retiring from business. The company are now one of the most prosperous ones in this territory, and their business is rapidly increasing. Mr. Silverstone is not only a practical business man, but is an expert on mechanical construction, which has proved invaluable to him in the talking machine line.

GEO. T. STANDKE A HUSTLER.

Makes a Display That Attracts Public Attention in St. Joseph, Mo.

George T. Standke, manager of the St. Joseph, Mo., branch of the Columbia Phonograph Co., is a hustler of strenuous nature, with an all-abiding faith in his line of machines and records. If his company represent a certain article as having certain qualities, that's enough, he takes it upon himself to prove the fact to his customers in a most convincing way. When the new Marconi Velvet-tone records were first received in St. Joseph, Mr. Standke took one of them and demonstrated to a large crowd its indestructible features. He slammed it on the pavement, jumped on it with both feet; then he picked it up and played handball with it, after wbicb the record was placed on a machine and its tones reproduced without the least sign of injury. From the number of that style of record subsequently sold it would seem that the demonstration was most effective.

EXCHANGE OF OLD VICTOR RECORDS.

In order to retire the records made by Mme. Melba previous to the series made by her this spring, tbe Victor Talking Machine Co. recently made a very liberal exchange proposition to those dealers who still had the old records in stock. Tbere are seventeen numbers in the old list, and the Victor Co. offered to accept them on a three for one basis, the offer closing on May 15. It was stipulated, however, that orders for new Melba records only should accompany the returns. As the new records are 40 per cent. lower in price than the old ones and full cost price was allowed on tbe latter the liberality of the exchange plan may be realized.

Jobbers expressed themselves as highly pleased with tbe Victor Co.'s position.

A new line of flower horns is being placed on the market by the Hawthorne & Sheble Manufacturing Co., of Philadelphia, which are termed wood-finish flower horns. These horns are made of metal so as to secure the best acoustic results, and are hand finished so as to resemble wood. It takes a critical examination to detect that they are metal, and their handsome appearance will undoubtedly result in their meeting with a favorable reception by the trade.

The Detroit, Mich., branch of the Columbia Phonograph Co. has been moved from 272 to 242 Woodward avenue, where the quarters have been handsomely decorated and fitted with soundproof bootbs. The floor space of the new store is also much greater.

No Jobber in the United States can or will take better care of your

HOW A RECORD CAUSED TROUBLE.

A Young Man Becomes the Victim of a Rather Serious Joke Which Came Nearly Parting Him from His Loved One.

A cruel joke was perpetrated on a young man in New York recently, the results of which were much more serious than was the intention of the joker. Being employed in an office where a commercial machine was used, the joker conceived the idea of having the stenographer talk into the machine, giving the name of an old sweetheart of the victim, avowing undying love and breathing words of fond affection. To those listening to the recording the talk was immensely funny, but even then the dire results of its reproduction were unforeseen.

It so happened the young man kept his talking machine at the home of his fiance, and upon receiving the record, thought it would be a generous act to let her enjoy its contents with her.

Placing the record on the machine and starting it, he retired to the sofa, where his fair one was seated and placed his arm around her waist in approved fashion. She laid her head upon his manly shoulders and they settled down to enjoy the gift.

Everything was rosy while the record was giving forth preliminary squeaks, but when it said, "Dearest, beloved Willie, it is your own little Irene who takes this means of again telling you the old, old story, etc.," he saw things in a minute. There was no head on his shoulder, his arm encircled a bunch of atmosphere, and a solitaire ring flung with all the strength of a furious woman struck him between the eyes.

Poor Willie was dumbfounded and began to think. What is it has no fury like a woman's wrath? Can it be hell?

Explanations were useless. He had been proven faithless, not by letter, but by word of mouth. Irene did not sound like Mary in the slightest, even when pronounced by a tongue-tied girl, and to explain the difference was up to him.

After two weeks of earnest pleading Willie was taken back on trial, and his ring again adorned Mary's finger, but after that heartbreaking episode when he got a strange record it was tried out in the private parlor of the nearest dealer.

And any girl who talks in a certain tone of voice is regarded with suspicion that savors of alarm, even if her name is not Irene.

CHAS. M. TUTTLE'S FINE STORE.

Charles M. Tuttle, who handles the Victor line at 177 Market street, Paterson, N. J., has quarters of which he should be very proud. Comfort for his customers is one of the main considerations, and the store is arranged in a very homelike manner, with easy chairs, pictures, rugs, etc. He also has three sound-proof booths.
